A monumental work, the greatest of its kind, the importance becoming better realized with use. Complete in four handsome quarto volumes, embracing about two thousand pages, with many more than that number of original illustrations. Orders will be accepted for the full set only. \$20.00.

DAHLIA, THE. By Lawrence K. Peacock. 30c.

A practical treatise on the habits, characteristics, cultivation and history of the dahlia.

FARMERS' CYCLOPEDIA OF AGRICULTURE. By E. W. Wilcox, Ph.D., and C. H. Smith, M.S., Assistant Editors in the Dept. of Experiment Stations, U. S. Office of Agri. Price, Cloth, \$3.50; Half Morocco, \$4.50.

This is a new, practical, concise and complete presentation of the whole subject of agriculture in its broadest sense, including field crops, garden vegetables, fruits, nuts and other economic plants, and also all farm animals, dairy farming and poultry. Other farm subjects, such as manures, fertilizers, principles of feeding, soils, drainage, irrigation, spraying, veterinary medicines, etc., are thoroughly discussed. Every bit of this vast mass of new and useful information is authoritative, practical and easily found. An important part of the book is its very complete and elaborate index, with cross-references under both scientific and common names, so that any information wanted can be found at once. There are between 6,000 and 7,000 topics covered in these references, making a most perfect index to agriculture. It contains about 700 royal octavo pages (9 1/2 x 7 inches) and nearly 600 half-tone and other original illustrations.

FLORICULTURE, PRACTICAL. By Peter Henderson. Illustrated. \$1.50.

A guide to the successful propagation and cultivation of florists' plants. Nothing has been left unsaid that bears on the subject.

FLOWER GARDEN, ENGLISH. By W. Robinson. 751 pages; 450 illustrations. \$6.00.

A treatise on the style, position and arrangement, with hints as to color effect and general design, with illustrations of well-known gardens and plants. Also a dictionary of hardy plants for the flower garden, including a few trees, shrubs and evergreens, together with cultural directions.

FORCING BOOK, THE. By Prof. L. H. Bailey. \$1.00.

In this work the author has compiled in handy form the cream of all the available information on the subject of forcing vegetables under glass.

FUMIGATION METHODS. By Willis J. Johnson, formerly State Entomologist of Maryland. Profusely illustrated. 5 x 7 inches. 250 pages. Cloth. \$1.00.

A practical treatise upon new cheap, simple and effective means of exterminating insect pests and various other vermin in field, orchard, nursery, greenhouse, mill, granary, elevator, car, ship and other enclosures. A timely work for fruit growers, nurserymen, gardeners, florists, college and experiment station workers. The book should be in the hands of every horticulturist, florist, and nurseryman in the country.

FRUIT HARVESTING, STORING, MARKETING. By F. A. Waugh. Illustrated. 5 x 7 inches. 250 pages. Cloth. \$1.00.

A practical guide to the picking, storing, shipping and marketing of fruit.

GARDEN BOOK, THE PRACTICAL. Containing the Simplest Directions for the Growing of the Commonest Things about the House and Garden. By C. E. Hunn, Gardener to the Horticultural Department of Cornell University, and L. H. Bailey. Second edition. 250 pages. Many marginal cuts. \$1.00.

GARDENER'S DICTIONARY, JOHN-SON'S. Handsomely bound in one volume. \$4.00.

The habitat of each variety is given, along with the date of its introduction. The cultural directions are brief and to the point. Insect foes, diseases and their remedies are fully described.

GARDENS, PICTURESQUE, HENDERSON'S. 160 pages, 9 1/2 x 12 inches, 340 illustrations. Handsomely bound. \$2.50.

GREENHOUSE CONSTRUCTION. By Prof. L. E. Taft. Cloth, 12mo. \$1.50.

A complete treatise on Greenhouse structures and arrangements of the various forms and styles of Plant Houses for professional florists as well as amateurs. All the best and most approved structures are so fully and clearly described that anyone who desires to build a greenhouse will have no difficulty in determining the kind best suited to his purpose.

GREENHOUSE HEATING, BEST METHODS OF. 10c.

A pamphlet containing a reprint of thirteen essays on Greenhouse Heating, with diagrams. These essays, which are all written by practical flower growers, discuss all systems, each competitor advocating that best known to himself.

GREENHOUSE HEATING, DEAN'S SYSTEM OF. By Mark Dean. Handsomely bound. \$2.00.

Tells how to determine the area of any greenhouse; to ascertain the amount of radiation necessary to heat the same; to place the heating pipes to best advantage; to figure what the pipes and fittings will cost; to set up a boiler.

GREENHOUSE MANAGEMENT. By L. E. Taft. Illustrated. Cloth, 12mo. \$1.50.

This book forms an almost indispensable companion volume to Greenhouse Construction. In it the author gives the results of his many years' experience, together with that of the most successful florists and gardeners. In the management of growing plants under glass.

HOW TO MAKE THE GARDEN PAY. By T. Greiner. \$2.00.

This work, written by one of the most experienced and skillful horticulturists in the country, embodies a vast amount of practical and useful information, all original matter.

LANDSCAPE GARDENING. By Samuel T. Maynard. 12mo. 338 pages, 168 figures, including many full-page half-tones. Cloth. \$1.50.

LANDSCAPE GARDENING. By Samuel Parsons, Jr., ex-Superintendent of Parks, New York City. Fancy cloth. Illustrated, large 8vo. \$3.50.

Practical hints on lawns, the laying out and arrangement of large and small parks, cemetery plots and railway station lawns; also on the subjects suitable for planting.

MARKET GARDENING, SUCCESS IN. By W. W. Rawson. Illustrated. \$1.00.

This work is written by one of the most successful market gardeners in New England, who gives here the results of his life-long experience in the growing of vegetables out-of-doors and under glass, with special adaptation to the climate of New England.

MUSHROOMS, HOW TO GROW. 10c. A valuable little pamphlet.

MUSHROOMS, HOW TO GROW THEM. By Wm. Falconer. Cloth. \$1.00.

This is the most practical work on the subject ever written in America. The author describes how he grows mushrooms, and how they are grown for profit by the leading market gardeners, and for home use by the most successful private growers.

NURSERY BOOK, THE. By Prof. L. H. Bailey. \$1.00.

This is a complete hand-book of propagation of plants treating on seedling, separation and division, layerage, cutting, graftage, including grafting, budding, inarching, etc. It tells plainly and briefly what everyone who sows a seed, makes a cutting, sets a graft, or wants to know.

ORCHID CULTIVATORS' GUIDE BOOK, THE AMATEUR. By H. A. Barberry. Illustrated. Cloth, 8vo. \$2.50.

In plain, concise words the author gives easily understood instructions on all the important points belonging to every-day work in the culture and management of orchids.

PEONY MANUAL, THE. By C. S. Harrison. Illustrated. 5 x 9 inches. 64 pages. Paper, 30c.

A manual on the propagation and the cultivation of the Peony. The first work on this popular plant in the English language. The author has had many years' experience and is reckoned one of the most successful growers of the Peony in America.

PLANT BREEDING. By L. H. Bailey, Professor of Horticulture in the Cornell University, N. Y. 293 pages. Cloth, 12mo. \$1.00.

PRUNING BOOK, THE. By L. H. Bailey. Illustrated. Cloth, 8vo. 530 pages. \$1.50.

The author takes particular pains to explain the principles of each operation in every detail. Specific advice is given on the pruning of the various kinds of fruit and ornamental trees, shrubs and hedges.

ROSE BOOK OF THE. By A. Foster-Melliar. Illustrated. 5 x 7 inches. 352 pages. Cloth. \$1.75.

In this new, thoroughly revised and enlarged edition, the author, who is recognized as one of the most successful rose growers of England, gives here full details of practical rose culture.

ROSES IN POTS, THE CULTIVATION OF. By Wm. Paul, F.L.S., F.R.E.S. 75c.

SOIL, THE: ITS NATURE, RELATIONS AND FUNDAMENTAL PRINCIPLES OF MANAGEMENT. By Franklin H. King. Crown 8vo. 303 pages. Cloth, 75c.

The book is clear, instructive and accurate. It will richly repay everyone interested in soils to get this book and read it.

SHRUBS, ORNAMENTAL. By Lucius D. Davis. For Garden, Lawn, and Park Planning, with an Account of the Origin, Capabilities and Adaptations of the numerous Species and Varieties, Native and Foreign, and especially of the New and Rare Sorts, Suited to Cultivation in the United States. Large 8vo, fully illustrated. \$3.50.

SPRAYING OF PLANTS, THE. By E. G. Lodeman, Instructor in Horticulture in the Cornell University. \$1.00.

SWEET PEAS UP TO DATE. Written and compiled by the eminent specialist, Rev. W. T. Hutchins. Illustrated. 10c.

A handy booklet containing the latest information on the sweet pea, as regards cultivation, varieties, etc.

TOMATO CULTURE. By J. W. Day, D. Cummings and A. I. Root. 150 pages. Illustrated. Paper. 35c.

A valuable treatise, embracing field culture, forcing under glass, and raising plants for market.

VEGETABLES, OPEN-AIR. By Henry A. Dreer. 25c.

A small book for busy people, giving latest methods of best gardeners, when to begin work, how to treat the soil, how and when to sow seeds, how to manage growing crops, how to treat insect and fungus enemies, etc.

VEGETABLES UNDER GLASS. By Henry A. Dreer. 25c.

This is an up-to-date review of money-making Winter work; work within the reach of everybody, everywhere. It quotes the words and ways of successful market gardeners, especially at Philadelphia and Boston, and gives pictures (from photographs) of frames, forcing houses and various horticultural devices.

VINES AND VINE CULTURE. Considered the best book on Grapes. By Archibald F. Barron, ex-Superintendent of Royal Horticultural Society's Garden, Chiswick; Secretary of the Fruit Committee. Demy 8vo, handsomely bound in cloth. \$1.50.

VIOLETS, HOW TO MAKE MONEY GROWING. By W. Saltford. Paper, 25c.

Hundreds of Other Books Described in Our Complete Horticultural Catalogue. Send for Free Copy

A. T. DE LA MARE PTG. & PUB. CO., Ltd., P. O. Box 1697, 2 Duane St., New York

HARDY PERENNIAL PLANTS

It is difficult to find anywhere in this country a more complete and numerous collection of Hardy Perennial Plants than we now carry at our PALISADES NURSERY, and are prepared to fill orders promptly with good plants, as described, true to name. Of the standard as well as the newer kinds, some of which are mentioned below, and for others see Perennial Catalogue.

For the use of prospective buyers in large quantity those marked with an X signify special price by the thousand on application. S signifies new and desirable kinds of recent introduction and specially worthy of attention.

Table listing various perennial plants such as Achillea ptarmica, Aconitum barbatum, and others, with prices per dozen and per 100.

LUCAS & BODDINGTON CO., 812-814 GREENWICH STREET, N. Y. City

Corner Jane Street Telephone, 1063 Chelsea. PALISADE NURSERIES, SPARKILL, N. Y. Importers, Exporters and Growers of SEEDS, BULBS and PLANTS.

CLUB AND SOCIETY DOINGS

PITTSBURG AND ALLEGHENY (PA.) FLORISTS' CLUB.—The April meeting, held last week, was not quite so well attended as usual. The wet weather was to blame, besides, many of the members are very busy just now—that is, the growers, and they did not care to come to town. The subject for the evening was Easter plants, flowers and novelties. Four new members were elected, several names proposed for membership, and about a dozen were dropped from the roll, being delinquent in dues. There was a good display of plants, cut blooms and fancy baskets, the latter being made by H. Bayersdorfer & Co., of Philadelphia, who made a most elaborate show of novelties in fancy baskets of all sorts. D. B. Long, Buffalo, shipped some Easter novelties in his line, but they did not arrive in time for the meeting. E. F. Barker, of New York, sent some pretty pamphlets on the white heather. The Phipps conservatories, Schenley Park, showed a fine lot of pot plants—hyacinths, tulips and narcissus of the best sorts. The best white was La Grandesse; best pink, Gertrude; best blue, Grand Lilas; best yellow, Ida. The tulips were fine; also a good collection of narcissus and a few plants of Scilla sibirica and fritillarias. Blind Bros. exhibited plants for Easter trade—fine grown Crimson Rambler, Boston and Piersoni ferns, hydrangeas, Harrisii lilies, narcissus, tulips, hyacinths, ficus, araucarias. J. Bader showed some good azaleas, of which he has a large stock

Co., all of Denver, and J. E. Braldwood, of Colorado Springs, were exhibitors. Two plants of Adiantum cuneatum and O'Brieni attracted universal attention. They were grown by Robert Kurth, foreman for the Colfax Avenue Floral Co., and were very handsome specimens. A vase of Adonis carnations, staged by E. E. Peterson, was good enough to travel in any company.

The newly elected officers are: President, J. A. Valentine, Denver; first vice-president, William Henry Evans, Colorado Springs; second vice-president, G. Fleischer, Pueblo; treasurer, R. S. Mahan, Denver; secretary, N. A. Benson, 1352 South Sherman avenue, Denver.

The by-laws were amended making florists' employees eligible to membership and changing the date of annual meeting to the second Tuesday in February each year.

THE STATE FLORISTS' ASSOCIATION OF INDIANA held its annual Spring show in the horticultural rooms at the State House, Indianapolis, Tuesday, April 4. The exhibition was very satisfactory in that a large amount of stock was shown, of exceptional quality. Much of the stock was retained by the exhibitors, but enough remained to be auctioned off to aid the project financially. Among the out-of-town exhibitors were E. G. Hill Company, W. W. Coles, Kokomo, Ind., and H. Weber & Sons, Oakland, Md. The regular monthly meeting of the society was held in connection with the show. Judges Wm. Billingsley, Frank Harritt and John Hartje awarded the following premiums:

Twelve Assorted Hyacinths—First, Fred Huckreide

variety as none other than Mrs. Robert McArthur, the club should induce Wm. P. Craig to withhold the distribution of stock until the controversy was decided. But as many orders are already shipped, and the chrysanthemum, if it is Mrs. Robert McArthur, is a good thing, the distribution will go on, leaving the question in dispute for the Chrysanthemum Society of America to decide next season.

Bowling matters were given more prominence by new blood being inserted in that committee; and in anticipation of the convention next August a tournament will soon be started. DAVID RUST.

NEW ORLEANS (LA.) HORTICULTURAL SOCIETY.—Accompanying a letter dated March 19 but which reached us on April 3, having evidently found its way to Chicago, C. W. Eichling sends us the under-noted communication, with the request that it be published with the view of bettering existing conditions:

At a meeting of the New Orleans Horticultural Society a discussion arose as to what redress the receiver of a worthless shipment of cut flowers, or plants, would have. Most of the florists receive their shipments C. O. D., without the privilege of inspection. In many cases flowers arrive in a damaged or worthless condition, the express company collects the money for them, and the receiver is the loser.

Experience teaches us that when flowers are in a condition for long distance shipment, and the proper care is taken in packing, they will arrive in good condition and will last in a good refrigerator for several days. Carnations and roses have often been held for a week in salable condition. This proves beyond a doubt that something was wrong with flowers that arrive in bad condition, with the ice compartment intact on arrival. The express company, which usually gets the blame from the shipper, is exonerated as long as a piece of ice arrives in the box. Either the flowers were not long enough in water before shipping or they were too far advanced when cut. The latter seems to be the main trouble, and can easily be avoided.

The New Orleans Horticultural Society has taken action on the question. A committee of three was appointed, to which every case is to be submitted where flowers or plants arrive in bad conditions. The committee will inspect the shipment and place the blame, if possible, and will assist the receiver of bad lots to recover his loss, be it partial or total. The names of shippers will be brought before the meeting and their methods discussed. Impartiality and justice are the principles on which the committee will act, and great improvement of condition, for which there is ample room, will be expected.

A shipper of an honest package cannot reasonably refuse inspection of goods before he demands payment. When American Beauty arrive with a purplish hue, they are ripe for the dump, and the shipper of such flowers knew full well how old they were when packed. When the outside petals of Bride and Bridesmaid are decayed and the flower opens the moment it is lifted from the box, it is time to rush it to some charitable institution as a gift, provided it does not drop before it gets there. We know that with carnations there are a number of circumstances not altogether within the control of the shipper, that may cause the flowers to go to sleep; but in many cases, loss can be avoided by careful selection for long distance shipping; and as far as New Orleans is concerned, shippers will have to be very careful in the future if they want to hold and increase their trade in the Crescent City. New Orleans is a large buyer of cut flowers, and relies for its supply entirely on the North. Not a rose or carnation is grown in New Orleans. The receiver of a bad lot cannot go to the wholesaler and buy; he is entirely helpless, loses his stock, and is unable to supply his trade. These are the conditions that compelled the New Orleans florists to take some action in the matter for mutual information and protection. Personal letters to some of the large shippers have been fruitful of good results; promises have been made which, if adhered to by the shippers, are bound to increase their New Orleans trade.

What has been said in regard to flowers holds good for plant shipments. Express rates to extreme distances are high, and a lack of judgment on the part of the shipper has cost us many a hard-earned dollar. Many a time we pay expressage at the rate of \$4 to \$5 per hundred pounds on boxes three times their necessary weight, and for balls of beautiful, rich soil, sawdust and paper, doubling and trebling the original cost of plants. And the plants themselves: How do they compare with the high-sounding adjectives in the advertisements? Our trade papers are often made the agents for unscrupulous and fraudulent shippers. It is for such cases that our committee is appointed, and no doubt its vigilance will effect an improvement in existing conditions.

THE ILLINOIS STATE FLORISTS' ASSOCIATION is the name of a new organization formed a few weeks ago, and one that is full of business. It already has a bill for an appropriation before the Legislature which bids fair to pass. Much credit will be due to the lobbying skill of the association's committee should the bill pass; they went at it like veteran politicians. To those concerned I beg to advise that the association is now duly incorporated, under the laws of the State. We already have fifty members, and solicit the application of every florist in the State of Illinois. Send same at once to H. Hasselbring, Department of Botany, University of Chicago, Chicago, Ill. JAMES HARTSHORNE.

Hydrangea Monstrosa.

Our illustration represents a house, 150x25 feet, containing 1,400 plants in 6 to 8-inch pots of Hydrangea monstrosa, at the establishment of J. W. Dudley & Son, Parkersburg, W. Va. The picture was taken April 1, 1905. Mr. Dudley says: "This variety is larger and has more vitality than any other hydrangea."

HOUSE OF HYDRANGEA MONSTROSA

Growers, J. W. Dudley & Son, Parkersburg, West Virginia

in fine shape. The Valley Greenhouses had fine pot plants of Harrisii lilies, about a dozen or more buds to each—pretty good for 9-12 bulbs from which they were grown; also cut tulips, narcissus and hyacinths. Mr. Zimmerman, of Dixmont, showed cut lilies, hyacinths, tulips and narcissus. Mr. Chandler, of T. Meehan & Sons, was a visitor at the meeting.

"Bedding Plants and Pansies" is the subject chosen for the May meeting of the club.

The answers to the queries from the question box were read by the secretary, and were most interesting, particularly one on fungus in propagating beds, and it was suggested that all should be published in the trade papers. E. C. R.

THE COLORADO SOCIETY OF FLORICULTURISTS held its annual meeting in the rooms of the State Board of Horticulture in the State House in Denver, March 24. There was a large attendance, and the enthusiasm displayed showed that the florists of the State are awakening to the value of such meetings. The papers read were "The Propagation and Culture of Roses Under Glass," by J. A. Sked; "Colorado Soils," by Professor Longyear, of the State Experiment Station; "Hardy Roses and Their Usefulness for Various Phases of Gardening," by John Berry, and "Dahlias; Past and Present," by W. W. Wilmore, the well known dahlia specialist. The discussions following these papers were very interesting, especially upon the manner of caring for hardy roses in winter and the destruction of insect pests. The discussion concerning growing American Beauty a second year under glass, brought out the fact that Bernhard Boldt had exceptional success in that line the past season. A vase of this variety exhibited by Mr. Boldt grown from these two-year-old plants were a very fine lot.

There was a fine exhibit of carnations and roses. The Colfax Avenue Floral Co., N. A. Benson, Mrs. R. Mauff, E. E. Peterson, Bernhard Boldt and the Park Floral

& Son; second, Henry Rieman. Two Pans Tulips—First, Bertermann Bros. Co.; second, Fred Huckreide & Son. Six Cinerarias—First, Bertermann Bros. Co.; second, Henry Rieman. Six Cyclamen—First, Bertermann Bros. Co. Six Primulas—First, Henry Rieman; second, Bertermann Bros. Co. Three Azaleas, pots not to exceed 8 inches, and two Lilac Plants—Bertermann Bros. Co. were first and Henry Rieman second in both classes. Henry Rieman was first in the class for two spiræas; Fred Huckreide & Son second. For general display covering 24 square feet of space, Bertermann Bros. Co. was first; second, Henry Rieman. Twelve White Roses—W. W. Coles took first prize with Ivory; second with Kaiserin Augusta Victoria. Twelve Red Roses—W. W. Coles, second. Twelve any other color—First, E. A. Nelson; second, W. W. Coles. Twenty-five White Carnations—First, Baur & Smith; second, E. G. Hill Co. Twenty-five Pink Carnations—First, John Hartje; second, Baur & Smith. Twenty-five Red Carnations—First, E. G. Hill Co. Twenty-five any other color—First, John Hartje; second, Bertermann Bros. Co. Twenty-five blooms Daffodils—First, Bertermann Bros. Co.; second, F. Huckreide & Son. One Hundred Blooms Sweet Peas—First, Baur & Smith. I. B.

PHILADELPHIA FLORISTS' CLUB.—Those who came to the meeting on Tuesday last were disappointed in not getting wise about what kind of coal to burn; the essay committee and the essayist did not mutually understand each other. But we got the worth of our money about chrysanthemums. Wm. P. Craig has the sole agency for Henry Faust's white variety Dorothy Faust, recognized as the best flower for use from November 15 to December 15. Henry Eichholz, of Waynesboro, Pa., wrote the club that, inasmuch as some experts had proclaimed this

Review of the Market

NEW YORK.—The cut flower trade is in anything but a settled condition, and prices are not at all what they should be for the quality of stock available.

Violets, also, are a drug, and it does not seem that enough money is got out of some of them to cover the express charges. The peddlers offer 75c. per 1,000 and store keepers are using but limited quantities.

BOSTON.—Comparatively quiet business has been the general ruling for the past week. While prices have remained low, yet there has been a general cleaning up of stock during the latter part of the week.

CARNATIONS, always selling flowers, hold their own very well; the quality is superb and prices run generally from 1c. to 3c., with 4c. and 5c. for fancies. Bulbous stock of all kinds is plentiful, but prices remain remarkably firm for these flowers.

CHICAGO.—A season of Summer dullness seems to have settled over business. Starting in a week ago, a decided decline in prices has occurred, and from present prospects will continue until the Lenten season is over.

AMERICAN BEAUTY roses are in sufficient quantities to meet all demands; extra fancy stock is selling well, but other grades move slowly, at low prices. The supply of Bride and Bridesmaid is far in excess of the calls; prices have fallen considerably since last report, and from all appearances will remain as now.

PITTSBURG, PA.—Trade in cut flowers has been very dull lately, and everyone is looking forward to the end of Lent when something better is expected by all. Even funeral work has not been over-abundant lately.

ST. LOUIS.—The over-supply and low prices reported in last issue still exist, and there seems no relief in the near future. Some of the retailers are taking advantage of the low rates, and are offering stock at tempting figures in order to stir up some activity in transient trade.

INDIANAPOLIS.—Unseasonable weather is still with us. Trade is fairly good, but cannot come near being equal to the supply of stock at present, which beats all records for the first of April.

WASHINGTON, D. C.—Business shows a slight improvement over that of last week, yet the supply is greater than the demand, which keeps prices at low ebb. Extra fine American Beauty could be had at from \$3 to \$7 per dozen, while fine Kaiserin Augusta Victoria, Souvenir du President Carnot, Bride, Bridesmaid, Ivory, Meteor and Golden Gate brought from \$1.50 to \$2 per dozen.

WASHINGTON, OHIO.—The Washington Floral Gardens, comprising three acres of ground, on which are extensive greenhouses, have been sold by Mr. and Mrs. Helfrich to Robert Buck, of Greenfield, for \$5,000.

LOS ANGELES, CAL.—Miss Ethelind Lord has opened a flower store at 328 West Third street.

HUDSON, MICH.—John Allwood, of Hancock, Mich., has purchased the greenhouse of P. Thomas, and will move his family to this place. Continued poor health was the cause of the retirement from business of Mr. Thomas, who will move to Quincy.

GREENSBURG, IND.—The greenhouses here, operated by Draper & Clark and The Greensburg Floral Company, formerly owned by Mrs. Demer, but recently sold to Henry Bentlage, of Wisconsin, have consolidated under the name of Clark & Bentlage. Ira Clark, who is well acquainted with the business in Greensburg, will have charge of the trade, and Mr. Bentlage, who is an experienced grower, will look after the greenhouses.

BALTIMORE, MD.—Glut is about the best word to express the condition of the market this week; it is simply impossible to unload at even extremely low prices. The Exchange has hardly room to-day (Wednesday) to handle the stock without throwing out the flowers left over for one day.

NEW BEDFORD, MASS.—Trade is very dull, with a little funeral work to help out matters. Carnations and roses are coming in in fine shape. Violets are about over, a few from outside frames being of very good quality.

CINCINNATI, O.—The less said about business the better. Stock simply poured in all last week, and the demand failed to provide an outlet, so that a very severe loss was the consequence.

CLEVELAND, O.—Bulbous stock is coming right along. Plenty of fine tulips, daffodils, Roman hyacinths and kindred stock, is available. Roses are looking especially well. The store windows are very attractive now.

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

ROCKLEDGE, FLA.—A. L. Hatch has discontinued his business here and will remove to Christmas, Orange County, Fla. He does not expect to resume at that point.

SUFFERN, N. Y.—Percival Van Orden has decided to discontinue his greenhouse work here.

WASHINGTON, OHIO.—The Washington Floral Gardens, comprising three acres of ground, on which are extensive greenhouses, have been sold by Mr. and Mrs. Helfrich to Robert Buck, of Greenfield, for \$5,000.

LOUISVILLE, KY.—The Maxwell Manufacturing Company have succeeded the Tobacco Warehousing and Trading Company.

LOS ANGELES, CAL.—Miss Ethelind Lord has opened a flower store at 328 West Third street.

HUDSON, MICH.—John Allwood, of Hancock, Mich., has purchased the greenhouse of P. Thomas, and will move his family to this place. Continued poor health was the cause of the retirement from business of Mr. Thomas, who will move to Quincy.

GREENSBURG, IND.—The greenhouses here, operated by Draper & Clark and The Greensburg Floral Company, formerly owned by Mrs. Demer, but recently sold to Henry Bentlage, of Wisconsin, have consolidated under the name of Clark & Bentlage. Ira Clark, who is well acquainted with the business in Greensburg, will have charge of the trade, and Mr. Bentlage, who is an experienced grower, will look after the greenhouses.

FIRMS WHO ARE BUILDING.

FAIRBURY, ILL.—Krug Bros. are erecting a large greenhouse for carnations.

PARK RIDGE, ILL.—Emil Buettner will build ten new greenhouses. The contract has been awarded to B. V. Morris, of Des Plaines, Ill.

BAY CITY, MICH.—Boehringer Bros. have broken ground for the erection of three additional greenhouses, each 19x100 feet.

KENNETT SQUARE, PA.—Walter Scarlett is building new greenhouses on his premises in West State street.

Two Points of View.

The following lines were received by A. Dallas, Waterbury, Conn., after filling with seeds one of his store windows, which previously had contained flowers and plants:

THE CITY WOMAN.

But yesterday this window was A bower of red and green; A restful spot, for those who passed, Amid the busy scene Of toil and hurry, one bright spot Of beauty here was placed— But now how changed—by bags of beans This beauty is effaced!

THE FARMER.

I don't deny them flowers was nice; I kinder liked to see 'Em blow'n' there as I went by. But then, it seems to me That Winder now looks mighty nice, With all them bags of beans, Because they speak of plantin' time— You can't eat reds an' greens.

THE CITY WOMAN.

How sordid! how devoid of sense, Of beauty you must be, To think of naught but planting beans, When birds on every tree Are singing loud the songs of Spring. When flowers would lift the soul To thoughts of what is pure and high; Don't grovel like a mole.

THE FARMER.

I ruther guess if you should come To see me at our farm, Next Summer, when the beans are growed, It wouldn't do no harm; I ruther guess that you would eat With relish, them same beans, An' wouldn't even stop to think Of birds, an' reds, an' greens.

Has Cut Out All Others.

Have cut out all magazines and papers this year to economize, but can't do without your paper. Mass. F. G. BROWN.

A Sensible Subscriber.

I like The Exchange very much, and as long as I am in business I hope to be a subscriber. RICHARD MAGERRALL, Nova Scotia.

THE E. G. HILL CO.

THEIR TWO GRAND NEW CARNATIONS

MY MARYLAND AND JESSICA

MY MARYLAND is already well and favorably known, having been exhibited freely at the various flower shows and florist club meetings the past Fall and Winter, and in every case elicited the highest praise and most favorable comment. We pick this variety to quickly and easily displace all other whites for first honors, not alone in exhibition, but in commercial points as well. We claim for it a robustness of constitution quite unequalled in any other variety and an ease of culture that will delight the heart of the grower. The great vigor of both parents (Norway x Lawson) seems united and improved upon in this variety.

In **JESSICA** we have in the red and white variegated class, what My Maryland will prove among white. It is descended through several generations of variegated seedlings of Heiss Keller and Bradt extraction on the one side and Lawson on the other. A strong, thrifty growing variegated seedling bearing the seed. It is a trifle heavier in growth than My Maryland and just Lawson height. Aside from these differences and the color, the description of My Maryland applies to Jessica. Under favorable conditions four inch blooms are not uncommon. We pick Jessica to win over any other variegated variety.

Both of the above are free propagators. We are thoroughly familiar with them and know what they will do. We will be in a position to deliver stock early and on time, and assure the trade that no disappointments will result on that score.

We have already booked many orders. It pays to be early. Orders booked are subject to cancellation by the buyer if unsatisfied with either variety, up to the time the cuttings are received.

Price: \$2.50 per doz.; \$12.00 per 100; \$100.00 per 1000

Carnation Breeding.

(C. W. Ward, before the Breeders' Association, at Champaign, Ill.)

The present carnation with which we are working is the product of several centuries of culture and hybridization. It is an open pollinated species and mother plants can be used both from the hybrid plants as well as inbreeding upon the same plants, or upon the same variety. Once secured from seeds a variety is easily perpetuated by propagation from cuttings, which are secured in abundance and may be easily rooted. Improvements in varieties may be made by bud selection and bud variation as well as from seed variation, due to hybridization. In raising varieties from hybridized seed very few improved sorts are produced, the proportion being about one good variety for each one thousand hybrids grown.

Up to the present time, I have been breeding for color alone, basing my work upon the theory that any laws developed in color work would hold good when applied to the development of other desired qualities.

The tools which I use in my work are very simple indeed, consisting of a pair of delicate tweezers and a microscopic magnifying glass. The method employed is to find the anther just bursting, so that the pollen is in a condition of dry powder. The anther is removed by means of the tweezers, and the pistil of the flower desired to be fertilized is lightly touched along its entire length by the pollen bearing anther.

In order to do my work with reasonable method, I have divided it into sections as follows:—Crimson section, comprising crimsons or scarlet-maroon in color; dark pink section which comprises all rose, cherry and deep pink tones; light pink section which comprises the light salmon or Daybreak tints; scarlet section, which comprises all of the colors which may be termed red or scarlet; white section, comprises only the creamy white and snow white tints; yellow section, yellow variegated with scarlet, crimson or pink upon yellow grounds, as the yellow varieties are almost invariably marked with pink, scarlet or some other tint; white variegated section, comprises varieties of a light pink with scarlet or crimson markings. The blue section comprises varieties showing some tendency toward the blue in color. This latter section has not as yet produced anything that might be termed a blue, as invariably there is enough pink in the make up of the color to shade the tone into purple or mauve. The crimson, dark and light pink, scarlet and white sections have been fairly well fixed, but the yellow, white and pink variegated and blue sections will be very difficult to fix, as they are essentially mosaics and there is a constant tendency towards variation in all hybrids produced from them.

The bulk of my profitable varieties can practically be traced to the variety General Maceo, which was the result of a cross between the English variety, Winter Cheer, and Mr. Dornier's American variety, Meteor. The original plant of Maceo had a very peculiar habit, being almost a climber, and was dug from the frozen ground after all supposed good sorts had been taken into the field, its only recommendation being an intensely colored large bloom on a plant having a habit somewhat resembling a creeping grape vine in growth, but by selection from bud variations, it was built into an immensely profitable commercial variety.

In hybridizing carnations we sometimes meet with what is termed seed

sports. These have been invariably light pink varieties (more or less marked with crimson edgings and stripes), that have been produced by crossing crimson sorts which had comparatively pure crimson pedigrees for several generations.

Aside from its commercial importance, there is a sentimental side to carnation growing. The production of new hybrids, which are distinct improvements upon existing sorts, is always a pleasure and serves to keep one thoroughly interested in the Divine Flower, and amply repays for the close application necessary to produce practical improvements.

How I Commenced Carnation Culture.

Some fourteen years ago while walking down Broadway in New York City, a Greek flower peddler pushed under my nose a bunch of clove scented carnations. The delicious fragrance reminded me vividly of the old home garden with its little plots of Paisley pinks, and I became at once interested in the blooms. Being at that time out of business, I took up the growing of carnations, believing that if chrysanthemums, roses and other flowers could be improved by hybridization and culture, the carnation ought to respond to similar methods; and in this view later experience proved I was not at fault.

Commercial Importance of the Carnation

At the present time the commercial value of the carnation grown in this country has risen so that the calling may be considered one of the substantial professions. The annual value of the carnation product reaches five to six millions of dollars when we consider both the sales of plants and flowers, and the capital invested possibly may amount to fifteen to twenty millions of dollars, taking into consideration the value of the real estate and buildings devoted to carnation culture.

The improvement in the carnation which has resulted in giving us flowers three times the size that they ordinarily were, with stems four to five times as long, has produced a general advance in the price of the carnation which seems to keep pace with the increased demand. When I first undertook the growing of the carnation, fifty cents to one and two dollars per dozen was considered the retail price. At present two, three, six, sometimes eight and, in rare instances, ten dollars per dozen is secured. When I first entered the business fifty cents to one dollar up to four dollars per hundred as the maximum price were the wholesale rates. At present two, four, six, eight, ten to fifteen dollars are ruling prices, and at certain seasons as high as twenty-five dollars per hundred are secured for the best and most perfect blooms.

We have about two acres under glass devoted to carnation growing, the annual sales from which run from \$30,000 to \$36,000, netting a fair annual profit of \$10,000 to \$12,000.

Much has been said and written about the value of a single variety of new carnation. So far, I am informed, at least five varieties have been sold on a basis of \$8,000 to \$10,000 per variety. One at least upon a basis of \$20,000 for the variety, this being the scarlet sort, Robert Craig, one of my own seedlings, a half interest in which was sold last year for \$10,000, and the Mrs. Lawson, which netted as much as the Robert Craig. The Robert Craig variety will not be disseminated until the season of 1906, and already orders have been entered for some 375,000 plants, which will probably be

increased to 400,000 plants before the season of dissemination is closed.

Naming Carnations.

The naming of a new carnation is quite a puzzle to the originator and he usually selects the name of some beautiful lady, some particular friend, some important personage, a bird, the names of planets or something that will serve to describe, or produce an impression of the characteristics of his flower. In naming my own productions, I have honored the varieties with such names as Governor Roosevelt, The President, Mrs. Roosevelt, Viola Allen, J. H. Manley, Robert Craig and the Cuban Patriots, General Maceo and General Gomez.

The Carnation in Politics.

The carnation has frequently been used in a political sense. It was the McKinley emblem and the campaign flower during the campaign which elected McKinley and Roosevelt, and during that campaign the various carnation growers throughout the country donated many thousands of flowers to decorate the buttonholes of those marching in the political parades. At the present time, the American Carnation Society decorates the grave of the lamented President McKinley with carnations each year on the 29th of January.

The carnation is extensively used as a decorative flower. It lends itself to almost every use in which flowers are suitable. Its varied and delicate colorings, its magnificent pungent refreshing odor, and its long keeping qualities render it probably the most valuable of all florists' flowers.

RED SPORT CARNATION

The great "bread and butter" holly-berry pink. Early and continuous, sure crop for Christmas, never splits, strong healthy grower. 2 1/2 to 3 in. flower on a long wiry stem that well supports the blooms; an easy doer and an all around money maker. "Nough said." Price, immediate delivery, 12 for \$1.50; 25 for \$2.50; 50 for \$4.00, all postpaid. \$6.00 per 100; \$60.00 per 1000.

Queen Louise The standard white, strong healthy, well-rooted stock \$1.25 per 100, postpaid; \$10.00 per 1000.

Washington, D. C.
Effects of Past Winter.
The past Winter has been one of the longest and coldest that we have experienced in Washington for many years, yet, strange to say, apparently deciduous trees and evergreens have not suffered nearly so much as they did the preceding Winter. The weather during the latter part of March was more like that of May, which has caused the deciduous trees and shrubs to advance rapidly. Forsythias and several of the early varieties of magnolias are in bloom. This condition makes the Spring planting period much shorter than in places further north of us.
Park Planting.
George H. Brown, the landscape gardener of Public Buildings and Grounds, has a large force of men at work, making new plantings in Potomac Park. This is one of the series of parks that have been reclaimed within the last few years from the Potomac River, and the only one so far that has been improved. It has a speedway along the river front for about a mile in length, which cost in the neighborhood of \$70,000. Mr. Brown, who has been in his present position for many years, has remodeled all the older parks that were laid out by Downing, and the newer ones are his own creations. Of these parks, all visitors to Washington are loud in their praise, but when Mr. Brown gets through with Potomac Park it will be an object lesson in landscape gardening worthy of emulation. Those who come to the convention, who make park plantings a study, will do well to pay this park a visit. M. C.

St. Louis.
News Notes.
Arnold Ringler, salesman for W. W. Barnard & Co., Chicago, is with us this week.
George M. Kellogg, of Pleasant Hill, Mo., spent Sunday in St. Louis.
Among the florists who will act as judges of election to-day (Tuesday) are Theo. Miller, F. Kalish, C. C. Sanders, J. J. Beneke, Robert Beyer, George Windler and Charles Juengel.
Ed. Buechel, manager of the Riessen Floral Company, is around, but still on crutches.
The wholesale house of George Augermuller has opened up for business at 1324 Pine street, and is receiving some fairly good stock of all kinds.
The meeting of the Florists' Club will take place next Thursday afternoon at 2 o'clock, in Odd Fellows' Building. President Juengel expects a large attendance, as some very important matters will come up for discussion. ST. PATRICK.

Buffalo., N. Y.

News of the Week.

George Reichert has severed his relations with Byrnes Bros. as grower at their Williamsville greenhouses.

W. F. Kasting was in Erie, Pa., looking after his interests there on Tuesday of this week.

Beginning on Wednesday of next week will see inaugurated the first local attempt at holding a Spring show, which will be given under the enterprise of the Sweeney Company's department store, and who have the managing aid of the local club under Chas. H. Keitsch's supervision.

John F. Cowell, of the Buffalo South Park's Botanic Gardens, recently spent a goodly period in the Panama Canal zone, on a collecting tour. Some new things of interest were secured, and in his characteristic thoroughness he announces some nomenclature corrections to result.

Columbus, O.

The Week's News.

The Park Commission, of which G. W. Latimer is president, has decided to consult at an early day with a number of landscape gardeners before adopting any special plans for the extensive park and boulevard system around the city.

Mrs. M. E. Kraus, who has been running a neat little store on South High street for the sale of cut flowers and plants, has removed to new and more commodious quarters near by, and is preparing for an extensive early Spring trade.

The plans of the Florists' Association in distributing flower seeds among the school children, at about actual cost, have been carried out quite extensively; and the chrysanthemum plants will be given out in due time. Some of the parents and teachers were inclined at first to complain a little because "five-cent" packages were not furnished for one cent each, but they soon got ashamed of the position they had taken.

The local florists are beginning to get busy, and are anticipating an immense Easter trade, and at fair prices. The only drawback to the situation is that the warm, open weather is hastening the flowers along faster than they would like.

Cleveland.

News Items.

It is remarkable the quantities of bone fertilizers that are used on lawns in the Spring. It is difficult to educate the people to put it on in the Fall. It takes one whole season to dissolve, and users wonder why they do not get immediate results.

John Kirchner has just completed four houses, each 12 by 65 feet.

H. R. Carlton is sending in a lot of fine Governor Herrick violets.

Miss Anna L. Westman is in the hospital, suffering from a nervous collapse.

Easter lilies are quite plentiful, and the stock looks good; quite free from disease.

O. G.

Pittsburg.

News Notes.

W. P. Craig, of Philadelphia, was a visitor during the week.

Joseph Jordan, a florist living on the North Side, died last week.

For the next few weeks there will be plenty of flower shows in the city. The Pittsburg and Allegheny parks will each have a grand display. The large private conservatories of A. R. Peacock, on Highland avenue, and those of Henry C. Frick, will be opened to the public this week, and until after Easter.

W. C. Beckert, the Allegheny seedsman, is very busy, with his whole force of employees working overtime.

E. C. REINEMAN.

Louisville, Ky.

News Items.

The sincere sympathy of the craft is extended to Miss Alice Miller, 247 West Jefferson, and Miss Emilie Miller, of the staff of Mrs. C. W. Reimers, in the loss by death of their father.

Ross Walker, for some time at Youngstown, O., has returned home, and is now connected with the establishment of his father, Wm. Walker.

David Weller, foreman for Wm. Walker, has been compelled to give up his work, by order of his doctor, caused by the state of his health.

Louisville was honored, April 4, by a visit from President Roosevelt. While his visit was too brief to cause a flurry in our business, it did create a mighty gathering of his people.

Pierson Boilers
 For Steam and Water
 are unsurpassed for efficiency and economy

Messrs. Righter & Barton, Madison, N. J., write: "August 5, 1904. The two Pierson sectional hot water boilers installed for our new honoree one year ago gave exceptional satisfaction during the past winter, the most severe for many years, easily fulfilling what was expected of them, at the same time proving to be economical. We found them very easy to manage, that they responded promptly and heated the water in short time, thus giving splendid control of temperature in houses when sudden drop took place outside."

GROWERS

YOU want to have the reputation for PERFECT BLOOMS. YOU want your TRADE TO INCREASE and your REPUTATION to spread. You can secure all this by using NICOTICIDE in your houses, either as a fumigant or spray. It will clean out the pests, no doubt of that, and the experience of users through many years shows it is SAFE. The cost per can is not so low as some other preparations, but the WORK DONE is so great—THAT'S THE POINT! Send along your address and we will see if we cannot make you one of our customers.

The name of OUR preparation is NICOTICIDE.

New Scarlet Carnation Cardinal

SPECIAL OFFER

Having been very favorably impressed with this Carnation, we purchased a large stock of it, securing early delivery, with the intention of growing it for the New York Market, but we have received such a large number of orders for our new Carnation **ROBERT CRAIG** that it has become necessary for us to devote the space intended for the Cardinal to stock plants of Robert Craig for propagating purposes. Therefore, our selected stock, consisting of 3,000 plants from 2-inch pots, is now for sale. It is in especially fine condition and we are certain will prove a very profitable investment for any florist who needs a first-class fancy scarlet.

LOUISIANA

The Grand Prize Canna

We exhibited at St. Louis 34 varieties of Cannas, all of which were originated and introduced by ourselves. On this exhibit we fairly won the Grand Prize, the only Grand Prize awarded to Cannas at the St. Louis World's Fair.

LOUISIANA is a Giant Orchid-Flowering Canna. It was exhibited at St. Louis as an un-introduced seedling and attracted much attention. The flowers are enormous in size; vivid scarlet in color, and covered with a glowing velvety sheen. It is a great bloomer and has splendid green foliage.

65 cts. each; \$5.00 per doz.; \$35.00 per 100

Including Mont Blanc, the only white canna; Buttercup, the very best yellow canna; Brandywine, the best crimson-flowered bronze-leaved canna; Gladiator, the most striking yellow-spotted canna; Betsy Ross, the best pink canna; we offer 65 varieties, the most complete and largest stock of Cannas in America. Ask for list and prices.

ELIZABETH NURSERY COMPANY, Elizabeth, N. J. Mention the Florists' Exchange when writing.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION.

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierpont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

JAMESTOWN, N. Y.—R. E. Sheldon has opened a seed store in the rear part of the Mitchell Building.

CLEVELAND, O.—The cold snap of the last few days has given the seedsmen a chance to get caught up a little on their orders and package goods. Wm. Brinker reports quite a demand for Noroton Beauty potatoes. O. G.

NEWPORT, R. I.—It has been cold and rainy for some days and as a result trade has lost some of its snap. That April will be the best in years with the seedsmen there can be no question; everything now seasonable is going clean, and buyers are very eager. There has been quite a little delay all the season thus far, getting goods from the railroads, and it has bothered the seedsmen a lot.

William B. Scott & Co. have had a very busy week in their seed department; especially have sweet peas of the better grades been selling freely. Every season there is less call for cheap seeds, the run of trade wanting the best, being willing to pay accordingly. F. W.

ALBERT LEA, MINN.—It now seems to be definitely settled, says the Standard, that the Thompson Seed Company, a reliable and extensive concern now located at Farmington, will this year move to Albert Lea and become permanently established here in the raising of improved kinds of seeds, developing new varieties and making this the distributing point for a large and growing business in this line. O. C. Thompson, the principal man in the company, has a reputation throughout the Northwest of being one of the best seed experts and growers in the country, and his reliability is everywhere recognized. His plan is to organize a company having a capital of \$25,000, of which \$20,000 is to be paid up. Of this, Mr. Thompson will put in \$10,000, including valuable machinery and cash, and he desires farmers and other citizens to subscribe for the other \$10,000, which will be issued in shares of \$100 each. Already farmers have signified an intention to take up stock, assist in building up the enterprise and sharing in the undoubted profits which will accrue in the business.

Alfalfa, says a recent bulletin of the Agricultural Experiment Station, can be grown successfully, under proper conditions, in all counties of Wisconsin. On the station farm the American variety of alfalfa has equaled in every respect the so-called Turkestan variety; the seed is less expensive and free from noxious weed seeds. There seems to be no advantage in sowing the Turkestan variety, as its origin is of doubtful character, and it seems quite conclusive that the major portion of the Turkestan alfalfa seed sold is so in name only.

HENRY F. MICHELL CO.

Importers and Growers 1018 Market St., Phila., Pa. Mention the Florists' Exchange when writing.

FISCHER'S GRAND PURITY FREESIA

A magnificent, snowy, glistening white of very large size and great length and strength of stem. A dozen sprays make as fine a showing as a dozen white carnations and can be used wherever carnations are used for decorative purposes. A truss bearing from eight to eleven buds, of which six are frequently open at one time, make an immense flower. It is of great substance and bears shipping without bruising. Stems can be cut two feet long and are as rigid as sticks. It is very prolific in bloom, producing three to four rich shoots of eight buds each, besides the main flower. Bulbs no larger than dried wax beans of this grand Freesia make as large a flower as the large bulbs, only the stems are shorter. All growers should try some of this Queen of Freesia, for when once grown always grows. Price for large bulbs, \$4.00 per 100; \$30.00 per 1000. 500 at 1000 rate. A discount on 5,000 and 10,000 lots.

 Mention the Florists' Exchange when writing.

Erfurt Seed Report.

Our main season for the export of seeds is now practically at an end, although supplementary orders keep coming in. The continental season is also waning, and only those firms who do a retail business are still in full activity.

Attention is now turning to the outdoor operations. The weather, although mild for the time of the year, has not hitherto been favorable for the preparation of the ground, alternate snow and rain having waterlogged it, but an improvement is now perceptible and all hands will soon be fully engaged in the initial labor for the harvest of 1905. The Winter has not been such as pleases the gardeners here, who like plenty of snow to protect the plants and hard frost to pulverize the ground and destroy the various insect pests. The half-hardy flower seeds and tenderer vegetables such as tomatoes, are already sown under glass for planting out at the proper period.

Sales have in most articles been satisfactory. Many sorts of beans, such as scarlet and white runners, Pale Dun, Osborn's and Flageolet Victoria Dwarf, are cleared out and inquirers from all sides have to remain unsatisfied. In leeks, almost a complete clearance has been effected, and stocks have not been so low for many years; practically only the local Erfurt sorts are still on hand. Certain onions, such as Strasburg and Straw-colored, are also exhausted, and Zittau nearly so. Owing to the high prices ruling for bulbs, there is likely to be a shorter average put out than usual, so that higher prices may be looked for next season. Spinach has also sold well, and very little is left in stock.

On the other hand, radishes have not moved off very briskly and plenty of seed is still in warehouse. Cabbages, too, have been in poor demand, in fact, quite a drug. The last crop having been a most bountiful one, stocks on hand are large and prices low. As the growth is excellent it would perhaps be advisable to buy already for next season, in case of a rise. Other articles have had about normal sales. Next season's biennial crops are mostly in promising condition.

As was only to be expected, we have run out of some flower seeds. Marigolds, certain classes of aster, such as Mignon, dwarf phloxes, Lobelia Crystal Palace compacta and coreopsis are sold out, and most other leading articles have gone fairly well. The plantations of biennial and perennial flowers have come well through the Winter, and are looking very promising, especially pansies, forget-me-not, and double daisies.

The greater part of the season's novelties have gone off like hot cakes, and the beautiful Schizanthus Wisetonensis, has taken a great leap in popular

favor, the demand having far exceeded the possibility of supply.

Oversea trade has been about up to the average in America, though the tariff war with Canada has hampered business a good deal. Trade with South Africa is still dull, owing to political conditions, but Anstralla, having recovered from the droughts of a season or two ago, is now buying freely.

Referring to some remarks by Mr. R. Dean in a recent issue, regarding the doubling of flowers, I may say the watering of stocks has not, as far as our gardeners' experience goes, any appreciable effect on the percentage of doubles obtained. This is a tendency inherited from many generations, and kept up by constant selection and unremitting care in culture. The origin of the double Ten-Week Stock is not on record, nor is it known to have appeared spontaneously in its native habitat of Southern Europe.—Horticultural Trade Journal, England.

World's Fair Flower Show.

The following letter, which is self-explanatory, has been received by Chairman J. C. Vaughan, of the World's Fair Flower Show Association:

My Dear Mr. Vaughan:
 I was very much astonished this morning to receive check for \$40 for 20 per cent. dividend on a principal of which only 20 per cent. was ever called. You and your co-laborers certainly should receive great credit for the way you handled the World's Fair Flower Show.

I presume you and Mrs. Vaughan are now back from your trip, and trust that Mrs. Vaughan is very much improved in health and strength. Sincerely yours,
 W. ATLEE BURPEE.
 Phila., March 23, 1905.

WORCESTER, MASS.—The seed stores are in full swing, but the cold weather has retarded planting and kept the trade down a little. Prices, with very few exceptions are about as last year.
 CAROLUS.

Indianapolis.

The Week's News.

Sidney Smith, of Baur & Smith, has returned from a five months' visit to Texas.

John Rieman is again able to be about.

Subscriptions for the large chrysanthemum show of 1905 are more than promising; florists and business men are contributing to the fund in the same liberal way as in 1903, so that the coming show will no doubt be the "best ever."

A local newspaper recently stated that the city florists were blue and nearly despondent because of the poor business anticipated at Easter; that most of the stock to be sold at that

time was in cold storage, and that the best plants would be out of the market. Several prominent florist firms were quoted. The fact of the matter is, that the reporter had seen a like story in an Eastern paper and wanted to apply it to Indianapolis. He was told differently but of no avail, as he had a story to write which would be conspicuous and out of the ordinary, doing a great injustice to the local trade. A suggestion would here be in order. No matter how serious the flower situation for Easter may be, or how great the difficulties to be overcome, do not mention these to customers or acknowledge it in the local papers, as it certainly will do the trade much harm, for no amount of advertising will convince a customer differently after reading an article dealing with "cold storage" flowers, and "plants blooming three weeks ahead of time," or that "the best flowers are faded before Easter this year." I. B.

CATALOGUES RECEIVED.

Steady Advertising.

The most successful advertisers of this country are the steady advertisers; the men who plan campaigns in great detail; the men who have started advertising in a modest way and have increased their appropriations as the results became apparent. These men have never been foolhardy enough to believe that they could scale the heights of prosperity at a single bound, or could count on past advertising to carry them along on "downy beds of ease" through the present. Advertising gathers force as it goes—stop it for any length of time and you have to make up for the loss of momentum. The merchant or manufacturer who drops his advertising during dull seasons is dropping his oars in midstream and letting the current bear him backwards.

Account, of course, must be taken of times and seasons. There is no use in throwing away money for general appearance's sake. The shrewd business man will strike while the iron is hot, will push after business most strongly when there is a direct demand that he is equipped to satisfy.

He will keep his name before the public week in, week out; will try to create a demand by carefully considered advertising, will not stand still and let the sheer force of inertia carry him backwards.

The man who believes in steady advertising and distributes his appropriation judiciously throughout the year will meet with greater returns than the chap who spends the same amount in two or three big plunges and then lies back to regain his wind. This is no mere theory.

Steady advertising, used with judgment during dull periods, serves not only to make them less dull, but has also a cumulative effect whose full fruition is gathered in the husier season. It must, of course, be used with judgment. Attempts to force trade that is absolutely unseasonable are farcical.—Printers' Ink.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSEYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

MECHANICSVILLE, IA.—The Graham Nursery Company has been incorporated; capital \$10,000. Incorporators: H. F. Coulver and J. M. Graham.

BRIGHTON, N. Y.—Chase Brothers & Company will erect an immense new nursery plant in Brighton, moving from present quarters on University avenue and East Park, having sold its present buildings. The plant will cost \$50,000 and will consist of two large buildings giving 40,000 square feet for storage and packing rooms.

FLUSHING, N. Y.—P. A. Keene sold his entire stock, and with it the controlling interest in the Bloodgood Nurseries, April 5, to Ferdinand Hoffmann von Waffenstein, a landscape architect, with offices in the St. James Building, New York City. The name of this nursery, which was established in 1790 by James Bloodgood, will be retained as the Bloodgood Nurseries, Inc. It is the intention of Mr. Keene to re-engage in the nursery line, and that gentleman is seeking an interest in some well established business, or to act as a representative thereof.

Teas' Weeping Mulberry.

One of the most important ornamental trees of a weeping character is Teas' weeping mulberry, an illustration of which was published in The Florists' Exchange in February, 1905. It is said of it: "Teas' weeping mulberry was an accidental seedling, discovered by John C. Teas in the Summer of 1883, in a block of Russian mulberry trees which he was then growing to supply the great demand for trees for 'timber claims' in Western Kansas." Mr. Teas, a practical nurseryman, saw at once the utility of such a tree when grown as a weeper; it took but little time for it to become known; and it is to-day one of the most popular of weeping trees. The specimens are formed by grafting them on tall stems of the common Russian stock, doing the work early in Spring, just before the buds push into growth. It needs a stock almost quite straight, as do all grafted weepers. When the foliage is on the weeping mulberry it is little matter whether the stock is straight or not, as it is not seen; but in Winter it is, and then a crooked stem is an eyesore. To get a strong, straight stock there needs setting out a lot of strong young plants of the common kind, and these to be cut down to the ground. If fairly strong, they will make height sufficient for grafting the first year. Should they not do so, cut them down again the Winter following, when they will surely make height enough. A good height at which to graft seems fixed in the trade as being about six feet. The one we photographed is of such a height. Even if desirable, it is not often stock can be had easily of much taller growth; and really, as the picture shows, one does not want a weeping tree of the character of the mulberry of much greater height.

This tree is the most pleasing when it is pruned back almost or quite to the top of the crown every Spring. It then makes a young growth which will reach the ground before the Summer ends; these new shoots are always clothed with better foliage than older ones, and a beautiful object is the result. The one before us has been so pruned; and what could be handsomer in its way?

It has been suggested that stock for grafting could be had quickly by using the Japanese one, *Morus japonica*, or the native red species, *Morus rubra*; and so they could, as both appear stronger growing than the Russian. But it would have to be seen whether the Japanese one would be hardy enough to take the place of the Russian in cold climates. *M. rubra* would be, of course; but there seems but few seedlings of it obtainable in nurseries, although the tree is wild in our woods.

The weeping mulberry bears fruit, just as those of typical growth do; and this may be considered an additional merit by some persons, while it would be objectionable to none. JOSEPH MEEHAN.

Liriodendron Tulipifera (Crimson?)

An enterprising advertiser in Gardening Illustrated has this to say of our old friend the tulip poplar:

"*Liriodendron tulipifera* (the tulip tree), so called because of its immense, wide crimson blossoms, resembling a tree covered with dazzling crimson tulips; it has large, handsome foliage, very hardy, and is in every way a magnificent tree for lawn or shrubbery." Well, this would indeed be a tree among trees. Unfortunately, this tree does not produce flowers anything like crimson tulips; the flowers are greenish yellow, blotched bright orange; beautiful, if not crimson. Aside from the mistake in the color of the flowers, the tulip tree well deserves the prominence the

advertiser referred to gives it. In foliage, growth and flowers it is all that could be desired. It is rather hard to consider it as a tree to be grown for the sake of its flowers, because of its lofty growth. It has to attain some age and height before it blooms, and when this stage is reached the flowers, many of them, are so far overhead that they cannot be enjoyed and admired as they would be were they nearer the ground. Ordinary trees, when full grown, are 80 feet or more in height, and when in rich river bottoms, where they often grow, they have been known to reach over 100 feet, with a trunk of 6 feet in diameter. As a rule, the trunk is not thick in proportion to its height.

To enjoy its flowers as much as possible, it is better to head the tree back when young, and again from time to time as it grows. This tends to make of it a spreading tree, with branches near the ground, where the flowers can be seen when they expand in late Spring.

As it is, many a one has never noticed the blossoms of the tulip tree, large and beautiful as they are.

Preparing for Layering.

When layering is anticipated—and what nurseryman is there who does not layer—this is the time to prepare "stools." This is done by cutting down some strong plants, pretty well to the ground. This causes fresh shoots of great strength to spring up, and these are the ones to be layered. If the plants are not now in a suitable place for layering, set them out at once, where there will be no disturbance of the layers

TEAS' WEEPING MULBERRY

when made; and let there be sufficient room to permit of the shoots being bent down in the layering and still be room to allow of passing between the rows for weeding and other purposes. There are many ways of propagating shrubs—green cuttings, hard-wood cuttings, layering and other methods. Layering gives strong plants in less time than the others. Put down as soon as there is sufficient length, in early Summer, the greater number of shrubs will have made a good bunch of roots by Fall; and many can be set out the next season. When no particular need of cutting off the layers appears, it is much better to leave them undisturbed until Spring.

Elm and Maple Seeds.

Should no freezing weather follow now, appearances indicate a good crop of sliver and red maple seed, as well as of the early fruiting elms and red birch. It is a curious fact that if these seeds are sown at once when ripe they germinate and make nice plants the same season. They need gathering when careful watching tells us that they are about ripe, and the watching must not be relaxed, for in a few days after they are ripe they are blown away. An odd feature in connection with these seeds is that they are all

of trees that grow in damp ground or along water courses. The birch, as it grows here, is found always along the edge of streams; and the love of a damp place by the *Ulmus fulva* and *U. americana* is well known; the same of the red maple. These trees ripen their seeds in a month or six weeks from the opening of Spring. In the vicinity of Philadelphia the maples and elms are in flower now, and should fine weather continue, the seeds should ripen early in May. The sowing should not be later than a month after gathering; better earlier. If not sown until Autumn, but few will grow.

Flowering of Rhododendrons.

When selecting rhododendrons, buyers will favor their own interests by picking out plants but moderately set with flower buds. When every shoot is capped with a flower bud, it means a great display the same season, but no blossoms at all the next. The nurseryman, or florist, who may be selling the plants will be thanked in the end for calling a prospective customer's attention to this fact, as so many do not know it; and, of course, will take the plants having the greatest number of buds, not knowing there will be none the next year. Should the plants have six shoots to them, take those having, say, three with flower buds and three without. The three without will be those that will flower the year following.

The flowering, together with the transplanting, is enough for the plant for the one season, and no more can be asked. When rhododendrons are in positions where they have been for years, and are strong and thrifty, they will occasionally form flower buds from shoots made behind a flower head; but it is so exceptional that it may be considered they do not do it. I have never known newly transplanted rhododendrons to do it. When well established, large plants are once in good growth, there are always some shoots in both stages—some with flowers and some not—so that blossoms are assured every season.

Situation for Japanese Maples.

It is puzzling to find just the right place to plant a Japanese maple. If in a fully exposed place, the leaves scorch in Summer. If in a too shady one, their rich colors fail to develop. If possible to plant them where they escape two or three hours of the noonday sun, it will suit them better than any other place. Besides this, they need a good lot of moisture in the soil. Not a wet place, but where the roots will be in moist soil, as this will insure some coolness of the roots as well. Those who grow the stock for sale will find it a paying business to plunge the pots in the Summer, in a bed of leaves, sand, or some other material easily handled; and if sales are not expected the same season, place them in a spot almost entirely shaded. They will grow the better for it, even if not so well colored.

Of all the sorts in cultivation, the blood-leaved *A. polymorphum atropurpureum* is the most esteemed. Just when the leaves are fully expanded in Spring, the red color is intense. It is then that the florist who has a lot of this maple in pots finds a great demand for them, for it is at this period of the plant's development one of the most striking features on a lawn. It is a mass of red color, just like a bed of red flowers. The sort mentioned is the most popular of all, but not far behind it is the purple cut-leaved variety, *A. dissectum atropurpureum*. The finely dissected foliage is its chief attraction; but in addition to this there is a half-drooping habit, an umbrella shape, as it were.

All of the Japanese maples are much called for; and those who have a stock in pots find sale for them all Summer long. In fact, pot shrubs and trees are now looked for from those who sell such stock.

JOSEPH MEEHAN.

PAMPHLETS RECEIVED.

MANNING'S MONOGRAPHS, NO. 1.—Berry-Bearing Plants. Published by The Reading Nurseries, J. Woodward Manning, proprietor, Reading, Mass.—An excellent, complete and serviceable booklet, fully describing an interesting class of plants, and giving valuable information as to their adaptability in planting arrangements. Illustrated.

An English carnation specialist has two houses containing about 10,000 plants of American varieties, which he is growing in benches. The chief sorts are Mrs. T. W. Lawson, Enchantress, Fair Maid, Harry Fenn, Floriana and Governor Roosevelt. He has given preference to American carnations, says the Journal of Horticulture, from the fact that they are easier to grow, have a stronger constitution, are much freer in flower, and are quite perpetual. He is able to secure from them blooms all the year round, while from English varieties he has to wait until the early Spring. The flowers are sold at Covent Garden market, and realize satisfactory prices.

Certain terra-cotta flower pots have been held by the general appraisers to have been properly classified under paragraph 96, tariff act of 1897, as plain earthenware.

Herbaceous Plants for the Open Border.

Read by William Reid, gardener to Sidney and Austin Colgate, before the New Jersey Floricultural Society, April 7, 1905.

I don't think there is a more interesting class of plants than hardy herbaceous plants. They give us a show from earliest Spring until hard, freezing weather sets in. They never get monotonous, as every week something different comes into bloom. The ideal place, in my opinion, for a herbaceous border is at the edge of a lawn with a background of shrubbery. In such a position the plants show to the best advantage. Also they and the shrubs harmonize well together. But a border alongside a wall, or fence, is also an excellent position. A herbaceous border around a kitchen garden looks well, too, but in such a place I would drive in posts and have a trellis of wire behind the border, so that I could grow all the different varieties of vines.

A herbaceous border does not show to good advantage unless it has a background of some kind. In planting the border I would endeavor to plant each kind in masses, or groups by themselves; the effect is more striking than having the plants all mixed up.

The preparation of the border is another very important matter; unless a good depth of good soil is afforded good results will not be secured. To have good success, one should have at least two feet of good soil, with perfect drainage. If the soil is of a sandy or gravelly nature, I would dig it out and replace it with good soil, using plenty of good, rotten manure in its preparation. I am well aware of the fact that a good many hardy plants like light, sandy soil; but, in general, they all flourish in good, rich ground.

In planting the border, I would prefer early Fall for the work, say about the latter end of September or the beginning of October, with the exception of such plants as candytufts, gaillardias, helianthus, also some of the sunflowers. My experience has been that sometimes these get Winter killed transplanted late in the season. By planting at the time mentioned they will have a chance to get good root-hold before hard, freezing weather sets in. And they will make a better showing the following Summer than if planted in Spring, for the reason that sometimes we get a hot, dry spell of weather early in the season which gives them quite a check.

In regard to covering the border for the Winter, my practice has been for a good many years, with good success, to spread good, rotten manure in between the plants, and level it off nicely in the Spring with a rake. Leaving it on the surface helps to keep the ground moist and cool, and prevents the ground from baking; also tends to keep down the weeds.

But I would not cover plants of an evergreen nature with short manure, as they would be very apt to rot if the weather should be mild during Winter. I would much prefer to use marsh hay, or anything of a similar nature.

To have the border look its best I would, by all means, at least once a week, go through it and cut off all dead flowers, with the exception of any that I wanted for seed purposes; this adds greatly to the appearance, and, besides, the most of them will bloom longer by doing so. Be sure to keep the hoe going to keep the weeds down. It is a very easy matter to keep down the weeds when they are small; a scuffle hoe is best for the work.

I would plant all the various kinds of Spring flowering bulbs, such as Winter aconite, snowdrops, scillas, crocus, fritillarias, chionodoxas, daffodils and others. Not in hundreds, but thousands of each kind by itself. They are more effective in masses than a few scattered here and there. And when they are through flowering I would plant hardy annuals, such as Phlox Drummondii, scabiosas, zinnias, marigolds, calliopsis, Dianthus chinensis, salpiglossis and others. For that purpose I would make a sowing of the above named annuals about the second week in May.

I will now name those which, in my estimation, are the most choice of all the herbaceous plants. There are others equally as good, but it would take too long to describe them. About the first to bloom is the Iris reticulata. It is a bulbous plant, growing about a foot high, with violet purple flowers. Then we have the hepaticas, with white and pink flowers; they do best in a shady position. Arabis alba, or rock cress, is a low growing plant, with white flowers, very pretty for the front of the border; easily raised from seed or division. Alyssum saxatile compactum is another beautiful plant with yellow flowers; a mass of it is very effective. It is easily raised from seed. Phlox subulata, or moss pink, is a handsome evergreen creeping plant; there are several varieties, and all are beautiful, being very easily raised from cuttings in September. Planted in a shady place, they root in a short time if kept moist. The Dielytra spectabilis, or bleeding heart, is one of the handsomest of all the herbaceous plants, blooming early in Spring with beautiful foliage, and racemes of heart-shaped red and white flowers. The variety eximia is a dwarfier plant, with fern-like foliage and smaller flowers, blooming more or less all Summer. Corydalis nobilis is another beautiful plant belonging to the same order with handsome foliage and yellow flowers. They are readily increased by division. The aubretias, or purple rock cress, are beautiful low growing plants, with various shades of purple and pink flowers; easily raised from seed. The epimedium is another ear-

ly blooming plant, very pretty for the front of the border, with pink, white and yellow flowers, increased by division. The doronicums are very showy plants with large, yellow, daisy-like flowers, growing about two to three feet high. The geums are very pretty, with red, strawberry-like flowers; the double varieties are the best. They are best raised every year from seed, as they are liable to rot out during Winter. The trolius, or globe flower, are handsome, easily blooming plants, with beautiful foliage and globe-shaped, yellow blooms; height when in flower, about one foot. Then we have the early flowering Veronicas, crenoides and rupestris, low growing plants, with blue flowers lasting quite a long time. There are other varieties of veronicas which bloom later in the season, but I think the best of all is Veronica longifolia subsessilis, which flowers about the latter end of August and September. It is very easily raised from cuttings or by division. Aster alpina is another beautiful dwarf plant, with large blue flowers and yellow centre, growing nine inches high, flowering about the third week in May. It does best in light, sandy ground; in heavy soils it is very apt to not come out during Summer; at least, that has been my experience. It is readily increased from seed, or by

plenty of water when coming into bloom. They are better for being transplanted every three or four years; unless that is done they die away in the centre and eventually die out altogether. I prefer to transplant them about the latter end of September.

No garden should be without the different varieties of lychnis; they all do well in full sunlight, are of the easiest cultivation, but my experience has been that some of them like to be transplanted about every two years or so, especially Lychnis flos-cuculi and L. viscaria splendens flore-plena. September is a good time for dividing them. I think the two varieties named are the best. But, of course, we cannot get along without L. chalcedonica and L. Haageana. The latter embraces quite a variety of colors, from purest white through all the various shades of red, pink and crimson. The two varieties named are readily increased from seed.

The spiraeas are a beautiful class of plants, doing best in partial shade in moist ground. A few of the best varieties are S. aruncus, S. filipendula fl. pl., gigantea, venusta, palmata, ulmaria, fl. pl.

Another very showy plant is the Thermopsis caroliniana, growing about four feet high, with clover-like foliage and spikes of yellow, pea-shaped flowers. After being planted I always found it best to disturb them as little as possible. To increase your stock the best way is to raise them from seed sown as soon as ripe. They require staking. Campanulas are another very beautiful class of hardy plants; a good many are evergreen. There are also some I would not care to plant in the border on account of their weedy nature. Campanula carpathica, white and blue, is very choice for the front of the border; so is the C. rotundifolia (blue bells of Scotland). C. persicifolia, white and blue, double and single, are very handsome, growing from two to three feet high. The above named varieties are raised from seed and by division. We must not forget the Canterbury bells, Campanula media, which are biennials. I prefer to sow seed of these about the middle of July, and winter in cold frames, planting out about the latter end of March in masses by themselves.

The digitalis, or foxglove, are beautiful, tall-growing plants, suited for the back of the border. I have found it best to raise them every year from seed, and treat them the same as the Canterbury bells, as they seem to have a habit of dying out after flowering. But any plants that do survive the Summer I would cover up with marsh hay for the Winter, and they will make a glorious showing next season. Sweet Williams are capital subjects planted in masses near the front of the border; are easily raised from seed, but be sure you get a good strain, and sow some every year, as they, too, have a habit of dying off during Summer. They require covering with marsh hay for the Winter. Aquilegias, or columbines, are charming plants with a great variety of colors, including white, rose blue, purple, yellow and scarlet. A. coerulea, the Rocky Mountain columbine, is one of the best, with blue and white flowers. A. chrysantha is another good variety with yellow flowers, about the latest of all to flower. A. Skinneri is another good variety, with red and yellow flowers. There are a great many more varieties too numerous to mention. It is best to raise some every year from seed, sowing in Spring, as a good many of the older plants die out during Summer.

Peonies are among the most beautiful of all the herbaceous plants for the garden, very stately in their growth. Their flowers are very fragrant, and the colors are simply grand. No garden should be without a good collection of them; besides, they do well in the shade, where other plants would not grow. I think one of the best, also one of the oldest, varieties and earliest to flower is Paeonia officinalis, double dark red. Seen from a distance, the effect of this is simply grand. I have found that September is the best time to transplant peonies.

The delphiniums are another very desirable class of plants for the garden. They are mostly tall growing, and are of very easy culture. From seed sown in Spring they will bloom the Summer following. But of late years they have been attacked with a disease which cripples the foliage and flowers, rendering them worthless for cutting purposes. I don't know of any remedy for it; but my plan has been to dig up the plants attacked and throw them away.

The oriental poppies are very showy plants, with handsome foliage and large flowers of various shades of red. A clump of them seen from a distance is very effective. After they are through flowering, the tops can be cut down and annuals planted in their place. The Iceland poppy, Papaver nudicaule, is very pretty, too, with yellow, orange and white flowers. They are much dwarfier growers than the oriental poppies. Sown in February, they will bloom the same season in May and June. The gaillardias are very important plants, with red and yellow flowers, blooming all Summer until late Fall; they are very easily raised from seed. It is best to cover them with marsh hay for the Winter; and I would not advise to transplant them in the Fall, as they are apt to rot out during Winter. Gypsophila paniculata is an elegant plant, growing about three feet high, with small white flowers, and grand for cutting purposes; very fine for mixing in with a bunch of cut flowers, giving them a nice, airy effect. It is raised from seed, and when once established should be left alone, as the plants don't like being disturbed. Coreopsis lanceolata is another fine plant, blooming all Summer, with yellow flowers. I would advise cutting off the dead flowers once a week; otherwise the plants won't bloom so freely. To keep up stock of them, sow some seed every year, as the old plants die out occasionally. Clematis Davidiana, integrifolia and recta are fine for the border. C. Davidiana is readily increased by di-

(See page 498)

division. I was almost forgetting to mention the saxifragas; that is, the broad-leaved section. They are about our first plants to flower in Spring, and very often they get nipped by late frosts. I would also be sure to include the armerias, or sea pinks. They are fine for the front of the border. Armeria maritima and A. formosa are both good, with bright pink flowers. One of the most beautiful Spring-flowering plants is the Iberis sempervirens, or candytuft, with flat heads of flowers of the purest white; easily raised from cuttings, by division or seed.

And now we come to the Iris family, which is often called the orchid of the garden. They are all very ornamental and present a wide range of delicate colors, flowering from early Spring to the middle of July. The German iris are all grand, blooming in May and the early part of June. They all do well in ordinary garden soil. I would advise not to plant them too deep; otherwise they are liable to rot, if the ground is too rich. Then we have the Japan Iris, which are considered by many to be the best of all, with large single and double flowers, often nine to ten inches in diameter, with a great variety of colors, from purest white, through all the various shades of purple, lilac, pink and deep maroon. They like rich, moist ground, and, if possible, I would give them

Dreer's Select List of HARDY PERENNIALS

We offer here only the most **Showy and Decorative Sorts**, including varieties suited for **CUT FLOWER** purposes. These varieties are marked with an asterisk (*).

For the most complete list of Hardy Perennials offered in America, see our current Wholesale List.

This important branch of our Plant Department has been completely reorganized during the past year, and we are now able better than ever before to supply almost any demands and to execute orders promptly.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns the first season. This, in most instances, is a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

HENRY A. DREER, 714 Chestnut St., Philadelphia, Pa.

Mention the Florists' Exchange when writing.

vision. The other two named varieties can be raised from seed. Sown in a cold frame in November, they will come up the next Spring.

If I were limited to one class of hardy plants I would choose the Phlox decussata. They are grand, and have such a variety of colors, flowering all Summer from early June till hard frosts set in. By cutting off the seed vessels they branch out from the stems and keep on flowering. They are easily raised from cuttings, seed or division. I used to sow the seed, from selected flowers, in November in a cold frame, and they would all germinate and come up in the Spring. Then I would transplant the seedlings and all of them would flower the same season. Any poor varieties I threw away and kept the good ones. By practicing this method one will gradually get a fine collection in a few years.

The helianthus, or sunflowers, are plants of very easy culture, with showy yellow blossoms, but there are some of them I would not care to have in the border on account of their weedy nature. A few of the best are *H. multiflora*, with large single flowers. *H. multiflora* fl. pl., with double yellow flowers, I think, is about the best of all. The *H. Maximilliana*, grows about eight feet high, and the latest of all to flower. I prefer to transplant them in the Spring. The rudbeckias are very similar to the sunflowers. *R. golden glow* is a tall growing plant, with double flowers, requiring staking. *R. subtomentosa* is a fine variety, growing about four feet high. *R. speciosa* makes a fine display with its yellow blooms and dark centre. *R. maxima*, with glaucous foliage, grows from four to six feet high, with large, yellow flowers and a dark conelike centre.

Stokesia cyanea is a beautiful, late blooming plant with deep blue, aster-like flowers. To have it do well it requires a well drained situation, in sandy loam; otherwise, it is apt to die out during Winter. It can be raised from seed. *Scabiosa caucasica* is another beautiful plant, with blue flowers, requiring treatment similar to the *stokesia*.

English Horticultural Notes.

DAHLIAS.—Now that attention is centered upon dahlias, our National Dahlia Society has published up-to-date additions to the select lists in its Catalogue. It is of interest to notice that the shows and fancies have practically remained the same for the last ten years, the additions in novelties being chiefly with singles, pompons and cactus varieties. I do not know whether American growers rely much upon English dahlia raisers for novelties, but a list of a few of the best may have its value. The best of those being sent out this year comprise: Blush Queen, Cockatoo (white and yellow), T. Parkin (terra-cotta), Rosy Morn (peach), Ella Kraemar (rose pink), J. B. Reding (the best of all orange yellows), Tricolor (a fancy cactus), Harbour Light (orange red), Mont Blanc (pure white), and Alexander (dark crimson). The chief introducers are Messrs. Stredwick, of Silverhill Park, St. Leonards-on-Sea.

COLONIAL FRUITS have been brought specially to notice in London through the instrumentality of the Royal Horticultural Society. An exhibition of Canadian, Nova Scotian and British Columbian fruit and other produce was held a couple of months back; and a second show, on similar lines, to display the produce of colonial possessions south of the equator—Cape Colony, Rhodesia, Australia, including the West Indies—was brought together on March 30 and 31. Though somewhat limited, the exhibition was, nevertheless, educational and interesting, tending to instruct the ordinary gardener as well as his leisured superiors, in the fruit and vegetable products of British possessions in distant parts of the globe; and I am sure these inaugural exhibitions will prove to be the first of an important series during years to come.

narrower, heavy bottom. These can either be placed in bowls or fitted into the necks of exhibition flower vases. Then there are different forms of rustic displays, which are cast from moulds in various angular, winding, graceful patterns, with tubes affixed.

There are now no breast sprays for ladies in London. Fashion has decreed that the beautiful spray (i. e., the loose, elongated breast bouquets hitherto worn) superseded by cluster posies—hideous things which we hope will speedily pass out of sight. Imagine carnations, lily of the valley, and similar flowers being packed into a round clump like a tiny football having a bunch of stalks as thick as a broom handle. Whoever was responsible for the origin of the cluster bouquet we do not know, but simply because it is "the fashion," swivel-minded women have adopted it.

DEATH OF WILLIAM PAUL.—I learn of the death of William Paul, the veteran florist and nurseryman of Waltham Cross, as I write these notes. Mr. Paul was 83 years of age, and his life covers the rise of horticulture and floriculture in our land. His specialties were roses, camellias and hollyhocks, but indeed he was distinguished generally as an all-round nurseryman. He was author of the "Rose Garden," a huge work of great merit. The business is continued by A. W. Paul, his son.

J. HARRISON DICK.

A California Freesia Field.

Our illustration, though a large one, affords but a partial view of a field of freesias on the ranch of Rees & Compere, of Long Beach, Los Angeles County, California. The field contained some five million freesia plants in flower.

The firm's bulb farm is located near Burnett, three

FIELD OF FREESIA ON RANCH OF REES & COMPERE, SIGNAL HILL, NEAR LONG BEACH, CAL.

The monardas are very showy plants, with brilliant scarlet flowers; a mass of them seen from a distance is very effective. They are of very easy culture, doing well in the shade or full sunlight.

Platycodons, or Chinese bell flowers, with blue and white bell-shaped blossoms, are fine for the garden, growing about two feet high. They require staking. The best way to increase them is from seed, as they are hard to divide. The boltonias are very useful plants for the garden, fine for cutting, resembling asters, but much more refined in appearance. *B. asteroides* grows about six feet high, with white flowers. *B. latisquama* grows from three to four feet high, with delicate pink flowers. They can be increased from seed or division.

Physostegia virginica is a fine late blooming plant, with showy spikes of pink flowers; it grows from four to five feet high, and is fine for cutting. Increased by division. The *Anemone japonica* gives us a fine show when flowers are getting scarce, blooming in September and October. Valuable for cutting, lasting a long time in water. The plants are not very hardy in heavy soil. It is best to give them good protection. Tritomas, or red-hot poker, are grand, late blooming plants, with showy spikes of red and yellow flowers, very effective in masses, but they are not very hardy. It is best to lift them about the latter end of November, and heel them in in a cold frame.

Beauty of Nice Stock.

This variety shown in the illustration was flowered in five-inch pots at the greenhouses of Mr. Henry Graves, of Orange, N. J., where its delicate pink blooms were in great favor for dinner table decoration. It does even better planted in the bench.

EDWIN THOMAS.

JAPANESE PLUMS were, of course, on view among many other subjects; and as good samples from South Africa are now fetching 4 to 6 shillings per dozen in the London shops, it would seem that there are openings for a commercial supply from other quarters. This race of oriental plums is found to be too tender to be cultivated outdoors in Great Britain, even against walls. That may seem strange, but, so far, this is what those who have tried them say. Culture and forcing under glass would seem to be the alternative.

THE POTATO BOOM, which had echoed throughout the length and breadth of the land for nearly two years, has "gone under," as was expected by lookers on. Northern Star has gone almost completely out of fashion, and is a glut on the market, while Eldorado, small tubers of which fetched 2s. 6d. each only a few months ago, and then as a favor, are now obtainable at the usual rates.

VARIOUS.—Erica Wilmoreana grandiflora, shown recently by W. Cutbush & Son, of Highgate, London, is immensely superior to the type. The flowers are pink, tipped white, and the plant is somewhat like a good form of *E. hymalis*.

Ornamental tubs for large plants and for shrubs are conspicuous at our shows. They are made of polished, stained oak, in various shapes and sizes, and have brass coopering; that is, brass (or copper) bands. Cheaper imitations of the best soon appear, however, and the originators apparently have no real copyright on their articles. The same may be said in the case of the three or four patterns of floral displays—those inventions for the effective and easy display of flowers and light foliage. The "floral aid" is made of pretty stout wire in loops, joined to a solid zinc base. Bruce's displays are formed of convex, circular plates of tin, through which round holes are punched, and this is fixed by wires that taper to a

miles north of the beautiful seaside town of Long Beach. Rees & Compere claim to be the largest and oldest growers of freesias and oxalis in the United States. They also grow large quantities of other bulbs, such as Chinese narcissus, hybrid tigridias, zephyranthes, ornithogalum, amaryllis, etc.

A recent number of *The Revue Horticole* contains an extract from the proceedings of the Horticultural Society of Prussia on the subject of the curing and forcing of bulbs. One of the speakers said he had found that small bulbs of hyacinths from Berlin forced more easily and better than large Holland hyacinth bulbs. Another speaker remarked that that difference was caused, at least in part, by the method of drying the bulbs. Formerly the Holland specialists allowed their hyacinth bulbs to dry in the sun in the open air; these bulbs gradually gave off their humidity, drying evenly right through. They forced well, thanks to the excellent curing, but they lost much of their bulk, and, as a consequence, their market value. Thus the Hollanders have modified their mode of procedure, and now cure the bulbs in heated sheds. The bulbs so treated dry externally, but retain more humidity inside, losing less of their bulk. As they have been cured less thoroughly, they lend themselves less to forcing than the bulbs dried in the open air, and blossom slower.

In the London (Eng.) suburbs, says the *Leicester Post*, a young gardener of good training, who is out of a situation, makes ends meet in this fashion: He calls on villa people and offers to describe correctly the trees, plants and shrubs in their gardens—giving the botanical and common names—of course, for a consideration. He attaches to each a label, neatly inscribed with its designation.

Saving Mushroom Spawn.

(140) We have growing in a greenhouse, among roses, four distinct and different varieties of mushrooms, one being very large, numbers frequently getting as large as an ordinary teacup before fully expanded. We are very desirous of saving spawn to put under the benches this coming Winter, and would ask you to let us know, if possible, which would be the best way to preserve the soil in which the mushrooms are now growing. As we are very desirous of growing the two larger varieties, it has caused us a good deal of trouble among roses, killing fully 35 per cent. of them, and has cut down the quality of the roses, as well as all flowers in the greenhouse. The soil was gotten off of a place which in former years was used as a pasture for stock; it all contains mushrooms. We have had a continual fight to keep the plants healthy. S. NURSERY.

—Your mushroom crop is a spontaneous one, and it has destroyed your rose crop; therefore, don't grow any more mushrooms among your roses. The next question is: Are these large mushrooms a good marketable variety? If they are, try them on a limited scale; if they are not, don't grow them at all, but instead stick to the regular commercial sort. Further, if they are marketable, are they as productive in weight per square yard of bed as is the common mushroom? If they are, all good and well; if they are not, then let them alone.

Now, how to save the spawn of the big mushrooms: If the spawn is well run through the rose bed, you must let that bed get dust dry and the spawn inactive, then save this spawn-infested earth for use in your under-the-bench beds next Fall; but even then there is no certainty whatever that there will be any living spawn in that soil after it has been dried and stored. Spawn-saving is an entirely different thing from mushroom growing. The usual way is to spawn a manure bed and when the white mould-like spawn has permeated the manure, don't allow it to produce any mushrooms, but let the manure get bone dry—the drying won't hurt the mould or spawn—and save it in a cool, dry place until needed for use next season. A good way would be to get a load or two of dryish horse droppings and a little cow manure, mix together, and get a little of your spawn-infested earth from the field and mix all together and throw into a shallow heap to heat gently, and cover over with some bare chopped sod from the field. If there is any spawn at all in that material it will start to grow and soon permeate the whole heap, giving the manure a white, thready, mouldy appearance; then take this manure and naturally dry it, and save it dry and cool. This should be good spawn, and can be successfully used in impregnating regular beds. But, altogether, home-made spawn is such an uncertain quantity, most folks are likely to have best results from the regular commercial bricks.

WILLIAM FALCONER.

Fertilizers for Carnations.

(140) We have ten thousand feet of glass devoted to carnations, and have great difficulty in getting cow manure, which we use with a turf soil, moderately heavy, from pasture, with very good results. Can we use bone meal and sheep manure instead of cow manure, and get as good results? If so, in what proportion? BEGINNER.

—Sheep manure used in the proportion of one part manure to seven parts of soil, with a 5-inch potful of bone meal added to each wheelbarrow full of soil at the time of filling the benches, will give good results; though if barn-yard manure, either from horses or cows could be had, we would prefer to use that.

Scale on Rose Plants.

(141) Please give me some remedy for scale on rose plants. We have about 100 rose bushes and on them is a white scale. They are hardy roses. W. H. L.

—To kill the scale on the roses, syringe them with a strong solution of tobacco water, repeating the operation every 4 or 5 days until the scale is removed entirely.

Hall Insurance.

(142) Please inform me if you know of any insurance against hail. A. B.
—For particulars as to hall insurance write to John G. Esler, Saddle River, N. J., secretary of the Florists' Hall Association.

Vincas.

(143) When I put my young vincas in the field should I cut them back? Also at what time in the Spring should I cut the plants back to have nice ones for Spring sales? W. E.

—Do not cut back the vincas at any time; it is the long trailing shoots that make them useful. To have nice Spring stock of medium size, propagate new plants early in Autumn.

THE WEEK'S WORK.

Timme's Timely Teachings.

The Care of Young Stock.

At this, his busiest time, the grower is very apt to overlook the needs of his young, fast-growing stock. The preparations for Easter cannot be slighted; we cannot afford to neglect anything now that promises to recompense us for all the care and vigilance exercised for months. When we have our heads and hands full with all the details of our Easter business, a great deal of work, also demanding our closest attention at this time of the year, will be considered of less importance, will be postponed, or only half done; and thus it happens that, while we add a few dollars more to the gain in one place, we lose a good many dollars in another. Then, too, the stock for this late Easter takes up a lot of our most valuable bench room, and this at a time when it is badly needed for the thousand and one things which constitute the plantsman's stock-in-trade, all of it demanding more room, air and light.

Hotheds and cold frames furnish an outlet for much of the stock, and never before have I seen so many outdoor frames put up as this Spring. But in shifting plants from the houses to these frames some judgment should be exercised. The fact that some of the tender plants, such as geraniums, coleus or alternanthera, are most in need of more room, should not lead the grower to adopt the unwise measure of transferring such plants to the outdoor frames first of all. If the weather be ever so warm and Spring-like, a good gardener knows the date and is not easily deceived by an alluring premature spell of warm weather, which induces a rapid, tender growth and renders the plants all the more susceptible to injury by a belated heavy frost, which may at this season be expected at any time. There are any number of other more hardy plants which would be greatly benefited by a transfer from the houses to the frames, that could with proper protection be safely carried through any severe and prolonged spell of bad weather. In this manner, more room for the tender plants in the greenhouse would be gained, and the cautious grower runs no risks.

In the effort to gain space and in order to clear a much needed bench, many varieties of half-hardy plants, being perhaps thoroughly pot-bound, are planted into the field altogether too early, because the sunshine of early Spring and a balmy air has made the grower believe that Winter has gone and Summer has come. Ever since, some eight or ten years ago, I lost about five thousand of my best carnations by a heavy frost very late in April, a few days after they had been planted out, taken directly from a warm greenhouse bench, I practice patience, and am ready to advise care and caution. Unless the young plants of asters, carnations, etc., are well hardened off in outside frames, they should not be planted in the field before the last week in April or the beginning of May.

Much stock of this class is grown in small pots—a good way to raise them. If they can be planted out before they become too root-bound or if the time can be spared to give them another shift into larger pots—but a bad plan if this cannot be done. In the earlier days of Spring, with all the ventilators wide open, it is almost impossible to keep any batch of 2-inch potted plants in good shape. Some of the kinds, after a most thorough drenching, will again be killing dry in a few hours, and the man in charge, knowing that they have been watered, will not get around to them until next day. Here lies the cause of much failure, much disappointment, much loss. If such stock is undergoing this kind of retrograde culture for any length of time, it finally ceases to grow, becomes a most inviting prey to insects and disease. Its roots become a shriveled, inert, lifeless mass, and the very best of subsequent treatment will fail to make these plants profitable stock or even worth having.

If the young stock was worth the raising and is of any value at all it deserves to be taken good care of; and if the time cannot be spared for the proper treatment of all the plants under culture, it is plain that the grower, in his greediness, has undertaken more than he can creditably carry out; or that, in his perversity, he has been unable to secure the ideal employees—one as great a drawback to good gardening as the other. By far the best way to save young stock that is pot-bound and total or partial ruin is to take the plants out of the small pots before the roots become matted and to heel them into some loose material such as spent hops, decayed manure, moss or even porous soil, if possible in a cold frame. Here they can stay until they can be safely planted out and can be kept in good shape with ease and little labor. If they are fast-growing, healthy plants they will, in any of these materials, form an abundance of nice, white new fibers around the ball of earth, which, in planting out, will take a hold of the soil at once. It takes less time to follow this plan than to repot the plants, and it is in every way better for the young

Headquarters for Easter Plants

Blooming Easter Week, or before if desired. Now ready for immediate shipment. I am noted and have a reputation for the past fifteen years for raising and shipping Choice Easter Plants throughout the land. Nine houses and ever so many hot-beds crowded with them, in better condition than ever before.

Azalea Indica. My specialty; 3 houses full of my own importation, the cream of Ghent productions. We sell none in the Fall; therefore they are not picked out for the Fall trade. We force them only for our customers' Christmas and Easter trade. Mme. Van der Cruyssen, the people's choice, the best of all pink varieties. Plants covered with buds, as round as an apple, 60c., 75c., \$1.00, \$1.25, \$1.50 to \$2.00 each. Other best varieties, all shades. White, double white; Bernhard Andreae Alba, white; Empress of India, Professor Waltere, Illustre, Paul Weber, Joseph Vermoir, and many others, 60c., 75c., \$1.00, \$1.25 to \$1.50 each.
Lilium Harrisoni and Japan Multiflorum. H. F. Michell's special bulb; 6 in. pots, 5 to 6 buds to a plant, 10c. per bud. Under 5 buds, 12c. a bud.
Cineraria Hybrida. Best strain, all shades, 6 in. pots, \$2.00, \$3.00, \$4.00, \$5.00 per doz.
Hydrangea Otaksa, pink (a fine white including), 6 in. to 7 in. pots, \$1.00, \$5.00, \$6.00, \$9.00 to \$12.00 per doz.
Spiraea. Two houses full. Floribunda, Japonica and Blondine, 6 in. pots, large bushes, \$3.00, \$4.00, \$5.00 per doz. Compacta, \$2.00 to \$3.00 per doz. Gladstone, unusually fine this year, full of buds, perfect jewels, \$6.00, \$7.00, \$9.00 per doz.
Roses. American Beauty, 5 in. 36c. to 40c. each; 6 in. pots, bushy, 25 to 30 in. high, 50c. to 75c. each; Hardy Roses, including Hermosa, 5 in. to 5 1/2 in. pots, \$3.00, \$4.00 to \$5.00 per doz.
Begonia. President Carnot, Flambeau, three varieties in all, 6 in. pots, \$3.00 to \$1.00 per doz.; 4 in. pots, \$1.80 per doz.
White Daisies. 6 in., \$3.00 per doz.
Hyacinths. Raised from first-size bulbs. Grand Maitre, blue; Gertrude, pink; King of the Blues and La Grasseuse, white; \$12.00 per 100.
Double Narcissus or Von Sion. Double Nosed Daffodil, 3 bulbs in a 5 1/2 to 6 in. pot, \$2.00 per doz. pots. Tournesol, best selling double Tulip, 3 in a 4 in. pot, \$1.50 per doz. pots.
Araucaria Excelsa. 25 to 34 in. high, 4, 5, to 6 tiers, 7 in. pots, \$1.50 each.
Ficus Elastica (Rubbers), 6 to 7 in. pots, 25 to 35 in. high, \$6.00, \$9.00 to \$12.00 per doz.
Moon Vine. A. W. Smith's Hybrid, \$5.00 per 100.

The material ordered from you arrived in good shape. The bill has been O. K'd and sent in and will be paid shortly. Please accept my thanks for material sent gratis.
 O. M. MORRIS,

They Harm

WHEN THEY SHOULD HELP
The up-to-date florist has no use for that member of his profession who, running counter to all the prescribed rules of good business, cuts his prices, or, worse still, gives away his goods for nothing, or next to nothing, in an effort to gain trade.

The same up-to-date florist, to be consistent, should have no use for any medium which, established presumably to further his interests along all legitimate lines, inserts his competitor's advertisements free, or at a greatly reduced rate to that which he himself is being charged.

The man who gives away his stock free, and the paper that prints its advertisements free are on a par—both are drawbacks to business. It's their prerogative, of course, to conduct their own affairs in this unbusiness-like manner; but both harm; they never help.

You get a fair show to sell your goods on an equal footing with your competitor when you advertise in The Florists' Exchange. We carry no Dead Heads in our columns. Our advertisers do business on up-to-date business methods; they pay for their advertising space; are satisfied with doing so; because that paid for advertising space pays them.

The Florists' Exchange has a higher opinion of the trade it represents than to consider any member engaged in it an object of charity. It puts a higher estimate on the craftsman's business acumen and standing than to insult them by even offering to insert their advertising for nothing, or next to nothing. It has a higher opinion of its own value than to consider that its advertising space is not worth paying for.

You are in good progressive company when you join The Florists' Exchange advertisers. You pay for the work The Florists' Exchange does for you; and that work is always well and effectively done. In short,

Advertising in The Florists' Exchange Pays the Advertiser. Because the paper is conducted on legitimate principles. A trial will convince you that this is so.

BIG BUSINESS ASSISTANT TO SAVE TIME, QUICKEN SALES, AND AID YOU PLEASE YOUR CUSTOMER, WE HAVE PREPARED Cultural Directions COVERING A NUMBER OF THOSE PLANTS AND BULBS MOST LARGELY IN DEMAND

Chicago.

News Notes.

The growers in and around the city will have a fine collection of lilies and other flowering plants for Easter. A few firms have been unable to hold back their stock, which will cut down the supply considerably, but without doubt the quantity will be equal to, if it will not surpass that of former years. There will not be such a large quantity of tulips, as the growers of these have found it impossible to hold them to this date.

The E. P. Winterson Company is receiving large shipments of Southern grown bulbous stock. The firm reports trade in shrubs and hardy herbaceous stock beyond expectations.

The Benthley-Coatsworth Company anticipates a fine cut of roses for Easter trade.

George Reinberg will have a fine crop of American Beauty ready.

Mr. Howe, of The Howe & Taylor Wire Manufacturing Co., has sold his interests in the firm to Mr. Taylor, who will continue the business at the firm's stand in the Flower Growers' Market.

A. G. Prince, formerly in the wholesale business here, was in the city the other day buying materials for a large range of glass which he is to erect in Iowa City, Ia.

Geo. F. Crabb, of Grand Rapids, Mich., was also in town for a few days this week, looking over the Grand Rapids Floral Company's stand in the Flower Growers' Market.

P. J. Foley and James Hartshorne, of Joliet, were at Springfield, lobbying in the interest of the Florist State Appropriation bill. From latest reports everything looks favorable for its passage.

Geo. Wienhoeber is expected home from his European trip this week. Hopes are entertained that he has fully regained his health.

Harry Papworth, of New Orleans, La., was in consultation with the building and construction people here. He contemplates building.

A well-attended meeting of the club was held on Thursday night.

Arnold Ringier is home from his Western trip well satisfied with the trade outlook.

Stollery Brothers have an Easter novelty in the form of a hollow earthenware egg, which can be filled with water, and overgrown with grass. An opening allows one to place any kind of small flowers in the egg, making it an attractive object for retail work.

R. J.

St. Louis.

News Notes.

Henry Berning has been sick all of the past week, but is reported somewhat better.

Carl Beyer has been confined to his room for the past ten days with a sprained foot; from last accounts he was improving and will be out bowling soon again.

George Augermiller, who opened his new commission house last week, is doing a nice business, and is receiving quite a little stock of good quality.

For the grand opening of a large retail furniture house this week, Ostrtag Bros. had a dozen large floral designs to furnish.

Ed. Gerlach is now head man at Kuehn's wholesale house.

C. C. Sanders reports a large order for trees and shrubs from the city, to be used in the parks.

At Union Market all the flower stands are open for business, and good sales are reported.

The stores of Walbart, Byers, Weber, Ellison, Kallish and Miller are making attractive displays of blooming plants. The plant trade is reported good at these places.

Fred Meinhardt, the Koenig Floral Co. and the rest of the florists up near the cemeteries report a heavy demand for planting, with more orders ahead than they can attend to.

O. R. Beneke, son of J. J. Beneke, is spending four weeks at Hot Springs, Ark. He is expected back by the end of this week.

The Sunday law is in full force here, and they say that the florists come under its operations. It will be quite a novelty for the boys to stay home a full day Sundays, especially those along Grand avenue, where some of them never close.

Joseph Hensel, who has a store at

Taylor avenue and Olive street has bought the place of J. H. Billington at 5700 Easton avenue. Mr. Billington will leave for Washington, D. C., soon, to fill a Government position in the Department of Agriculture.

Nine florist bowlers rolled three games on Monday night. Theo. Miller was high with 504; Beneke and Kuehn tied for second, with 491; Fred Weber came in third, with 443. Robert Meinhardt and Henry Lohrens joined the club Monday night. ST. PATRICK.

New Bedford, Mass.

News Notes.

The Florists' Club held its monthly meeting last Monday night, most of the members being present. Richard E. Noffitz gave an interesting talk on bulb culture, which was followed by a general discussion.

Spring planting has now commenced in earnest, and large gangs of men are at work, both in the parks and commons. R. H. Woodhouse has secured the contract for planting some 500 trees in the town of Dartmouth. This work is under the direction of the Dartmouth Improvement Society.

H. A. Jahn has a fine white carnation seedling which local growers say excels White Lawson.

Lilies will be all right for Easter, while other bulbous stock and azaleas are being retarded. Easter coming so late this year, a good many flowering plants, such as primroses, cyclamen, etc., will be past their blooming season. Everything points to a good trade, with a plentiful supply all round.

HORTICO.

Worcester, Mass.

News Items.

There seems to be no end of new stores on or near Main street. Within a distance of less than half a mile there are ten florists. H. E. A. Lange is the last one to come into line and open up a second store. He has started a flower department in a grocery store, just opened.

The Worcester Conservatories have also made a new departure. They have opened a retail store, and placed on the street one of the handsomest turnouts of the kind in Worcester.

If Easter stock proves abundant prices will have to be dropped to close out the goods.

Horticultural Hall has seen a new experiment tried—evening lectures. The attendance has not been large, but A. A. Hixon, secretary of the society, was much encouraged with the way the public grasped the new idea.

CAROLUS.

Newport, R. I.

News Notes.

Charles E. Wheeler, representing the Bowker Insecticide Company, of Boston, Mass., was with us this week and secured many orders for his firm's specialties. J. C. Hillebrand, of the General Bulb Company, of Vogelenzang, Holland, made his yearly call a few days since. The Eastern Chemical Company, of Boston, Mass., who have been introducing their various concentrated fertilizers here for several seasons, were again looking after their trade last week here through their D. M. Pray. Henry A. Dreer, of Philadelphia Pa., was represented here last week by F. W. Creighton, who is very much pleased with the general outlook in all sections for a fine season's business.

F. W.

Cleveland, O.

News Notes.

The flower stands in the new market house are beginning to take on some life, with the approach of Easter. The ladies who control these stalls vie with one another in making their places gorgeous and showy. About four or five days before Easter a show will be held by these ladies, with orchestral music to enliven the proceedings. Charlesworth's store, on Euclid avenue, is well stocked with all sorts of salable plants. Smith & Fetters held their opening Monday, the 10th, at their new store. The interior decorations are superb. Gordon Gray says his orders for vases and baskets are coming in rapidly.

O. G.

THE STANDARD TREATISE ON GARDENING.

THE GARDENER'S ASSISTANT

New Edition.

UNDER THE DIRECTION AND GENERAL EDITORSHIP OF

WILLIAM WATSON

Curator, Royal Gardens, Kew.

Thoroughly Up-to-Date; The Recognized Authority on Gardening; Most Distinguished Contributors; Lavish in Illustration; Indispensable to Practical Florists and Gardeners, to Country Gentlemen and the Amateur. A Complete Encyclopedia of Gardening. The Leader Among Gardening Books.

For the past half-century THE GARDENER'S ASSISTANT has maintained its unique position as the standard treatise on practical and scientific horticulture.

The publishers in this new edition have given this monumental work such a complete remodeling, revision and extension as will enable it to hold in the twentieth century the place which it worthily filled throughout the latter half of the nineteenth. It is so thoroughly up-to-date, and is so comprehensive in scope, as to constitute a complete encyclopedia of all that is known about the science and art of gardening. No one who wishes to excel in gardening, either as a business, or a hobby, can afford to be without it.

THE GARDENER'S ASSISTANT is a compendium of all operations of the garden and arboretum; from the formation of the garden and plant-houses to the cultivation of all kinds of plants, whether for use or ornament: trees, shrubs, herbaceous and alpine plants, stove and greenhouse plants, orchids, ferns, succulents; fruit, both under glass and in the orchard or kitchen-garden, and vegetables of all kinds.

Everything has been done that could be done to elucidate the text by the free use of illustrations. These represent recent gardening appliances, houses, heating apparatus, flowers, trees, diagrams, schemes for laying out the garden, methods of pruning, etc. In fact, wherever a picture would be useful a picture is given. Moreover, in addition to the black-and-white text illustrations, there are twenty-five full-page black-and-white plates, and eighteen colored plates of flowers and fruits, specially prepared for the work by eminent artists.

THE FIRST PORTION of the work deals with GENERAL PRINCIPLES; THE SECOND PORTION is devoted to directions for the CULTIVATION OF DECORATIVE PLANTS OF ALL KINDS—stove, greenhouse and hardy trees, shrubs and herbaceous plants; THE THIRD PORTION treats upon FRUIT CULTIVATION in all its branches, both under glass and outside; and THE FOURTH PORTION upon the GROWTH AND MANAGEMENT OF VEGETABLES AND HERBS.

THE GARDENER'S ASSISTANT has been made the SOUNDEST and MOST PRACTICAL, as it is unquestionably the NEWEST and MOST UP-TO-DATE, Book on Horticulture.

SEND FOR PROSPECTUS.

We have obtained the exclusive right to the sale of this invaluable work in the United States. It is elegantly printed, on thick, durable paper, in two handsome imperial 8vo. volumes, substantially bound in Roxburgh, half leather, cloth sides, marbled edges, about 1300 pages.

PRICE, delivered free, by express, to any part of the country, cash with order, \$15.00. Money refunded if not satisfactory. Or, we will send purchaser the two volumes on receipt of a first payment of \$4.00 and six monthly payments thereafter of \$2.00 each.

A. T. DE LA MARE PRINTING AND PUBLISHING CO. Ltd., P. O. Box 1697, New York
Publishers and Proprietors THE FLORISTS' EXCHANGE.

The value of THE GARDENER'S ASSISTANT has been endorsed in this country by many of our leading gardeners. It can be purchased on easy monthly installments and should be in the hands of every gardener desirous of being thoroughly conversant with all the developments of his business.

We are Headquarters for all books in print touching on Horticultural Subjects. Write us for a Catalogue.

This week's index will be found on page 505.

News of the Week in Brief.

We are credibly informed that wild smilax will be scarce for Easter.

There are good prospects of the appropriation bill in favor of the Illinois florists being passed.

The Sunday closing law in St. Louis is in full force; it is said the florists come under its operation.

Our obituary column this week contains the names of Col. Nicolas Pike, William Paul, Charles O. Saunders and E. H. Howland.

Present indications are that stock for Easter will be in sufficient supply to meet the demand. In some of the Western cities bulbous flowers and violets are expected to be short.

W. Atlee Burpee & Co. and The Florists' Exchange have each subscribed \$10 to the Eckford Testimonial Fund. Prompt remittances by others desirous of contributing to this fund are respectfully requested.

A thunder-storm passed over Pittsburg and vicinity this week, doing much damage to greenhouse glass. The storm recalled the memorable one in the same locality in 1893. Some of the ice balls measured 5½ inches in circumference.

Vice-President J. R. Freeman, of Washington, D. C., presided at the meeting of the Board of Directors last week, in the absence of President Vaughan, who was unable to attend owing to the illness of Mrs. Vaughan. The board was entertained at a banquet by the local florists. The program for the August meeting, as so far outlined, appears in this issue. Treasurer Beatty will offer a prize for the best essay on "The Ideal Employer."

THE NEWPORT (R. I.) HORTICULTURAL SOCIETY met last Wednesday evening in Mercury Hall. President Sullivan was in the chair, and a very large gathering of members was on hand. A long list of new members was acted upon, and the following were unanimously chosen: Samuel Langford, Henry A. Burgess, Charles Ritchie, James Matson, William B. Scott, Howard Ward, Frederick J. Butt and William C. Elliott. The report of the advertising committee of 1904 was presented and accepted by the society; and a new committee elected to carry on the work so well begun last season. The chief duties of the evening were the correction and approval of the prize schedule for the Rose and Strawberry Show in June. It was also voted that after the present time all committees to award prizes at the shows of the society shall be residents of this county.

P. W.

THIS WEEK'S SUPPLEMENT.

The Sunken Garden, Fairmount Park, Philadelphia

The sunken garden, Fairmount Park, Philadelphia, has often been illustrated, its beauty and its unique feature making it an object of more than usual interest to almost everyone. This garden was made to add to the attractions of the Centennial Exposition in 1876; and as the late Charles H. Miller was in charge of the flower gardens at that time, it was, no doubt, his conception. That the idea was a good one, the admiration of all those that saw it in that year testifies, as does the fact that from that day to this it has been kept in exactly the same condition as it was then, the only changes occurring being the using of different plants from year to year.

The sunken garden, as the picture shows, is some four or five feet below the surface of the paths on its sides, so that the visitor looks down on the mass of color, and can see the whole formation at a glance. As will be seen, it is of great length, stretching away from Horticultural Hall, which appears in the illustration, toward what is known as George's Hill, though it really ends at one of the main thoroughfares through the park, Belmont avenue. One can stand at either end—that at Horticultural Hall or the one at Belmont avenue—and enjoy the treat the rare blending of color gives. The festooning of the banks, the ends of the festoons meeting in little circular beds of flowers, adds to the chief attraction, that of the central mass of flowers.

We can hardly enumerate all the varieties of plants that have been used there. Of course, there are certain sorts which must be employed for color effect, but there are changes every year, so that the same plants are not used in the same beds two years in succession. Alternantheras, echeverias, coleus, acalypha, variegated stevia, centaurea, crotons, cannas and like plants are used, and in flowering plants, mainly geraniums, the aim being the proper blending of colors to form a harmonious whole.

The planting out is done according to the hardness of the sorts used. Geraniums go out first, and crotons and coleus last, the last two being planted toward the close of May.

It was feared, at first, that in seasons of heavy rains the water would accumulate in the sunken garden, to the injury of the plants, and in its history this has occurred once or twice. Heavy rains late in Summer hurt a bed or two of coleus on two occasions, but the occurrence is so rare that it is but little feared.

The fine avenue of trees lining the bed is of the oriental plane. They are now grand specimens, having been planted at the time the bed was made. They are in exactly the position such a tree demands. There is ample room to develop; they enhance the imposing sight of the bed, and the seat beneath each one adds to the comfort of those who wish to sit down and admire the beautiful view presented.

JOSEPH MEEHAN.

Rosarians vs. Carnationists.

The New York Florists' Club on Monday evening last spent about a couple of hours, protracting its session until nearly midnight, in an endeavor to establish something, the definiteness of which had already been assumed, viz., "Why Are Carnation Growers More Progressive Than Rose Growers?" The assumption of greater progressiveness on the part of the men who cultivate the divine flower seems to have been prompted by the fact that at monthly meetings, both of the local club and elsewhere, when special nights had been set apart for the rose men to make a display of their specialty, they failed to materialize in the same numbers as did the carnation men when afforded a similar opportunity. The discussion also elicited the information that the effort to obtain new varieties of roses was not put forth by the American rosarian to the extent that it could and should be, having in mind the results, pecuniary and otherwise, accruing from successful work of this kind. The relative ease with which new varieties of merit of the carnation could be obtained, as against similar results from the rose, seemed to have little or no weight with the critics of the alleged non-progressive rose man in the general plea of progressiveness made for his quondam rival—the carnationist.

Some of the claims advanced in favor of the carnation men were: That "as a class, they were more liberal, more energetic and determined to push their flower to the front than are the rose growers. The rose grower has had the advantage (disadvantage) of having a certain amount of self-conceit, owing to the fact that the popularity of the rose has been of long standing, while the carnation grower knew that in order to get a standing he had to get out and hustle, and make things ring." The temperature necessary for the work of the rosarian was also set forth as militating against his progressiveness, making him less energetic than the carnationist, who basks in the blessing of a ten-degree lower temperature, thus stimulating his activity and enterprise.

So far as making displays at club meetings are concerned, we do not think that any fair comparison of enterprise can be made between the two specialists under consideration. Novelty is the attraction for the majority of club members; these the

carnation men can stage in numbers on the evening set apart for the purpose, whereas owing to the dearth of new varieties of roses, the rosarian is handicapped in this respect, and any display of standard sorts would create but a passing interest. At some general exhibitions, and even at some of the shows of the American Rose Society itself, however, the rose men have shown an amazing lack of the progressive spirit which usually goes with an intelligent class of cultivators, such as rose growers must necessarily be and are.

In regard to the endeavor to obtain new varieties of roses, superior to existing kinds, we can hardly agree that energy or desire in this respect is at a low ebb among the commercial florists of America. The work is at best a difficult, disappointing and discouraging one, essayed by many, successfully accomplished by a comparatively few. Our standard writers on the subject of multiplication of roses by seed have made special note of the drawbacks attending the operation by the commercial florist. Parsons, a recognized authority, says: "There is no branch of rose culture possessing more interest for the amateur, with whose leisure its prosecution is compatible. The constant care and attention (and, we would add, ability) required, in order to ensure success, place it in a great measure beyond the limits of a large commercial establishment," and certainly outside the effort of the majority, if not all, of the small ones, where profit in what is produced is the great desideratum.

Ellwanger says: "Roses of the past have, for the most part, been the product of nature unaided by the hand of man. * * * There are a few instances recorded where artificial crossings have been resorted to, with successful results, but the number of such operators has been very limited. * * *"

Foster-Melliar, an English author, says: "It is hardly worth while to undertake it (raising new roses from seed) except on a somewhat large scale; only a very small portion of the seedlings will be found worth anything at all, a good many coming single, and of those that are pretty good few will be found to be any advance upon existing kinds. A great deal of patience will be required; it is sometimes as much as six years before a representative bloom can be got, and two or three years more at least, perhaps twice the time, may elapse before a good stock of the sort can be worked up."

The lack of available information and instruction relative to the proper carrying out of the work in question has also been commented on by these authors. Ellwanger says: "Very few who have engaged in this work have given us any information that will be of use to those who wish to experiment." A similar condition, it is said, prevails in England. Whereas, in the case of the carnation, almost every grower of these plants has his "pet seedling," proving that the process of obtaining new varieties of carnations from seed is very generally understood and quite satisfactory results are often obtained.

Were the work of raising new roses from seed as easy of accomplishment as is the obtaining of new varieties of carnations by a similar process, we venture the assertion that the needed so-called progressiveness and intelligence on the part of the rose grower in America is available. And because that work is so precarious and difficult, we are inclined to give an extra modicum of credit to the men who have conquered the difficulties besetting their path, and who have given us something new in roses of which as a trade we can well be proud.

Any discussion of the nature of that indulged in by the New York Florists' Club so assiduously can not, we think, conduce to anything definite. It is a good thing, however, for all of us to have our shortcomings discovered and disclosed, to see ourselves as others see us, as it were. This leads to defects being remedied, deficiencies eliminated; spurs ambition, stimulates desire, and altogether tends to general advancement—especially when the way is shown how conditions can be bettered, which, unfortunately, as we see it, the discussion referred to failed to do—in the most vital points at least.

The American rose grower and the American carnation grower stand on one common plane, on an equal and gratifying footing, in that each has demonstrated, by his skill, that he can and does cultivate his specialty to a degree of excellence unsurpassed anywhere else in the world; that each has succeeded in gaining for his specialty a deserved popularity reached by few, if any other horticultural products. Progressiveness has entered very largely into bringing about this result. The same progressiveness continued will maintain, and we hope advance it; each moving forward and reaching out as fast and as far as the advantages, limitations and drawbacks of his work will permit.

The Eckford Testimonial.

The first American subscription toward the Eckford testimonial comes from Messrs. W. Atlee Burpee & Co., Philadelphia, and is acknowledged as under. Others interested in this movement (details of which were set forth in our issue of April 8, 1905, page 456), and desirous of helping it forward, will confer a favor by making a prompt remittance to this office, so that the total amount subscribed may be forwarded to the English committee, having the matter in charge, as soon as possible. The English admirers of the veteran sweet pea specialist have decided to make the fund a shilling one (25c.), and already a considerable sum has been subscribed.

OUR READERS' VIEWS

President Fisher Explains.

Editor Florists' Exchange:

In your issue of March 25, I read with interest the copy of Mr. Butler's letter of "Appreciation" as copied from the Gardeners' Chronicle, of London, Eng. But for the fact that some of the statements contained therein have proved misleading to the trade in this country, and my silence should tend to strengthen those erroneous impressions, I had intended taking no notice of the errors, making every allowance for lapse of time, and Mr. Butler's advanced years.

Mr. Butler's memory is at fault when he states I went to Mr. Pease, of Hutton Hall, Yorkshire. It was to Mr. Pease of Woodside Gardens, Darlington, Durham, John McIntyre, gardener. From this place I came to America two years later (in 1884), calling on Mr. Butler and other London friends previous to sailing from Liverpool.

The main point I want to correct is regarding the importation of carnation seed. Mr. Butler is quite correct in writing that he used to send me cyclamen seeds. He did so for three seasons, in quantity, as I then made a specialty of this plant for market. But to date I have not yet imported carnation seed in any form. Since making a specialty of carnations I have grown about half a dozen English sorts to test their blooming qualities, under same treatment as our standard American varieties, but always with the same result, viz., cut the first blooms in February, March or April. I brought over two sorts, Princess May and Butler's Scarlet, cuttings of which Mr. Butler kindly sent me on sailing from Liverpool two years ago. Princess May produced its first bloom March 25, 1905, and Butler's Scarlet, to all appearances, will not expand its first flower earlier than next May. Both have been grown in a high temperature of 50 to 52 degrees all winter. Winter Cheer, sent out by Cannell & Sons, of Swanley, Kent, was the only imported variety that proved at all free under same treatment, but owing to its short stem was discarded years ago. C. W. Ward, of Queens, N. Y., has used this variety in crossing, with good results. So far I have not used any imported variety, either as a seed or pollen parent. Any success I may have attained has simply been through careful culture and selection—in my opinion the only sure basis to work upon.

PETER FISHER.

The Commission Man and His Defects.

Editor Florists' Exchange:

I notice in your issue of April 1 that "The Gatherer" comments on the "comment" caused by the paper I read before the New York Florists' Club. Put forward as a "feeler," says "The Gatherer." Is "The Gatherer's" scribble a feeler too? Is he acting as a catspaw for those behind the gun? If so, it indicates a lack of courage on the part of those who compose the "local circles;" they ought to be able to pull their own chestnuts out of the fire.

That I intended to "incite discussion" is a guess in the right direction. I certainly expected that the matter would be thrashed out on the floor of the club, and hoped that the discussion would result in some benefit to the business grower as well as handler. But there was no discussion; bearding the lion in his den had no result. As regards my "information," I got that on the spot—ocular demonstration—and it is safe to say that many other growers have experienced the same "jar," although they seem to have a strange reluctance, or diffidence, about speaking of it in the right place, notwithstanding the fact that it touches their interests so closely. "The Gatherer's" little bit of second-hand philosophy is not worth notice, seeing he hasn't got the nerve to sign his own name; and by accepting his invitation to "specify," I would put myself in the unsophisticated class along with himself and those who are handling him. Evidently "The Gatherer" has seen something himself; it is up to him to "specify" and tell who those "one or two merchants" are, who give evidence of "defects" and "incapacity."

But my paper was not got up to "condemn" nor injure any merchant or class of merchants. The average merchant of the "class" referred to is a mighty nice fellow, and I will add good looking, too—especially when he is looking over six square feet of boiled shirt front at a club dinner, but, until he can answer in the affirmative the questions put in that paper, it will be safe to assume that there is room for reformation in "local circles."

However, the matter is of vital importance to the carnation grower; in fact, it touches the whole carnation industry. It is of such importance that I think the American Carnation Society ought to take it up, for, what is the use of the raisers and introducers of new varieties sending out those that will not stand rough handling? Those more delicate varieties are without doubt the most beautiful and desirable, but if the commercial grower has to avoid them the raiser will have to confine his efforts to raising rough varieties, that will stand shipping and the handling they get in the average commission store.

In conversation with Robert Kift the evening he visited our club, he told me of the trouble and loss he

had at one time from carnations going bad; he also described his method of getting over the difficulty. If that gentleman could be induced to publish his experience, it would make very interesting reading. Of course, Mr. Kift being a retailer, has an incentive which the commission dealer has not; his flowers enter his store at a stated price, consequently all loss falls upon himself, not the grower.

The commercial flower seems to belong to nobody in particular after it is given into the expressman's hands, until it is sold to the retailer, and at that time it is worth only what it will fetch after being handled, not in most cases what it was worth when it left the greenhouse. The loss falls directly on the grower, and I would just suggest to him that the curbstone is not the place to grow!

JOHN BIRNIE.

Colonel Nicolas Pike.

Col. Nicolas Pike, soldier, author, and naturalist, descendant of a long line of scientific men, and a relative of Capt. Zebulon R. Pike, for whom Pike's Peak is named, died in St. Vincent's Hospital, New York, April 11, 1905, from paralysis, with which he was stricken Friday morning.

The Pike family were Puritans, landing in New

THE LATE WILLIAM PAUL.

(See page 498.)

England in 1635. Col. Pike was born in Newburyport, Mass., eighty-seven years ago. In early manhood he settled in Brooklyn, where he first identified mastodon bones and teeth exhumed near Jamaica. Through Daniel Webster he obtained the appointment as United States Consul in the Island of Mauritius, in the Indian Ocean, where he made a great collection of birds, fishes, algae, and shells. He presented to Cambridge University more than 800 drawings of the fish of the Indian Ocean, and received letters of thanks from Prof. Agassiz. He had previously been Consul-General in Portugal and there made a study of the grape fungus in the vine growing districts of Portugal and advised the use of sulphur to destroy it. For an essay treating of the zoology of Mauritius he was awarded a gold medal by the governor of that island. His work "Sub-Tropical Rambles in the Land of the Aphanapteryx," dealt with Mauritius. Returning to this country his home in Brooklyn became a mecca for students of natural history.

He was a friend of S. F. B. Morse, was a member of several scientific societies of Europe and this country, and was actively interested in measures to preserve song birds and insectivorous birds from destruction. In the Civil War he rendered service in the organization of new regiments, particularly of the Thirtieth of Brooklyn, and was in charge of a camp of instruction at Williamsburg, and did notable work in adapting photography to the needs of the army.

Among the curiosities he leaves is a three-sheet

autograph letter from Washington to his uncle, Nicolas Pike, commending him as the author of the first arithmetic published in the United States. He also possessed the camp chest presented to Dr. David Livingstone by Sir Moses Montefiore. Col. Pike was perhaps best known as an authority on venomous reptiles. He leaves a wonderful collection of birds and spiders and, like Audubon, shot and mounted his own ornithological specimens.

Last year his extensive and valuable collection of algae was secured by the New York Botanical Garden.

Col. Pike was twice married, but had been a widower for many years. He leaves two sons, Joseph Trevett Pike and Gordon Pike. Funeral services will be held at the Stephen Merritt establishment in Eighth avenue this Saturday afternoon at 2 o'clock, and the interment will be at Newburyport. The Florists' Exchange was proud to number the deceased and his late wife among its closest friends. Both were contributors to its columns in the early days of our paper's existence, and the encouragement then received from Colonel and Mrs. Pike was stimulative and highly appreciated.

Edward H. Howland.

Edward H. Howland, florist, of Oak and Appleton streets, Holyoke, Mass., died at his home, April 11, of pneumonia after a week's illness. He was born in Ceylon 54 years ago and had lived in Holyoke 25 years. Mr. Howland was a Mason and a member of the Second Congregational Church, where he had charge of a Sunday school class. A widow and one son survive.

Charles O. Saunders.

Charles O. Saunders died Thursday, April 6, at his home in Everett, Mass. He was born in Waterford, Me., in 1846, but had lived in Everett since early youth. He conducted the Belmont Hill Nurseries and a real estate business. He was chairman of the board of health in 1892, and had served on the park commission. He was a prominent member of the Belmont M. E. Church. A widow survives.

Gathered and Gleaned.

"I am but a gatherer and a disposer of other men's stuff."

A pertinent, or, perhaps, some may regard it as an impertinent, question, was put to me the other day, viz., "Do writers on the care and cultivation of plants run out?" In a general way they do, and there is every evidence in some of the trade and amateur papers to-day bearing out this assertion. Floriculture in its many and varied phases is a very comprehensive subject, and, unlike fiction, for instance, does not permit of any drawing on the imagination, if regard is to be had for the truth. No man during a lifetime can acquire by experience sufficient knowledge of all of the phases of floriculture to become an expert in every one of them. His writings, therefore, to be of greatest value must be confined to certain circumscribed aspects; in other words, he must specialize. And, in the natural order of things, he must sooner or later cease to produce original material except in so far as new "wrinkles" connected with his specialty develop with which he himself is familiar. Some florist writers there are who know their limitations; and names once familiar in the columns of our trade papers are no longer found there, though the writers still live and move and have their being. Others, again, like the brook, go on forever, grinding out the selfsame stuff in its season, clothed, it may be, in a little different language, but practically the same. Unless to new readers, this latter material has little, if any, worth; and to old readers, who are in the majority, the notes become monotonous and tiresome. They might well be styled "So and So's Reminiscences of Plant Culture;" or, better still, some such reference as "See pages — and — of the issues of last ten or fifteen years," would fit the case. All admire the man who knows when he has given to the world all he does know, and stops; there are various opinions of him who, gifted with the ability of transmogrifying verbiage, continues to sate subscribers with dished-over messes week in, week out. Novelty in writing, and in writers, has a charm. Such we are not likely to find in those whose writing day and generation has passed, which with the average writer on cultural matters may be put down as the end of the second or third season. THE GATHERER.

Job as a Poet (?)

The accredited poet-laureate of the trade—J. Austin Shaw—himself an acknowledged expert on doggerel verse-making, sends us such a criticism as only a recognized authority can, on Job's recent rhyme appearing in these columns. The criticism is a most impartial and fair one, not at all prompted by jealousy, or solicitation for his own and "Phil's" laurels. He states the "acrostic" has settled in his mind that we ourselves and Job are two, and not one, as he had erroneously concluded previously; we "could not have been guilty of such a crime. Terrible rhyming, isn't it?" he says. We admit the premises and are truly thankful for such consideration. The "poet laureate" adds this significant inquiry: "Who in h-l can he be?" showing that even poets (?) are guilty of profanity, and are inquisitive beyond measure.

Easter Novelties and Suggestions

With the near approach of Easter, the retail florist is perfecting his arrangements for the making of a grand and impressive display. With the object in view of giving our readers some suggestions along that line, we had our photographer take a few pictures at the ware-rooms of Reed & Keller, dealers in florists' supplies, showing the newest things for Easter effects, introduced by that firm. At a time like Easter, display means everything to the retailer, and the more varied and novel the show window is made, the better are the chances of success, provided, of course, that fresh flowers and plants are the most prominent features in the display. Baskets and ham-

into the inside of the egg, provides plenty of room in which to hold either a cluster of flowers or a few small plants.

Figure No. 2 shows another egg, but in a different kind of a nest—a miniature wheelbarrow, finished in white and gray, very effective, but perhaps not so artistic as the egg in the nest.

Figure No. 3 illustrates a chariot in the form of an egg, to which is harnessed young ducklings, with a newly hatched chicken perched on the rim of the egg holding the ribbons. The chariot filled with flowers makes a very dainty piece, and is one that will commend itself to almost every retailer.

Fig. 3. EGG CHARIOT DRAWN BY DUCKLINGS

Fig. 2. EGG IN WHEELBARROW

pers will always be in good taste; they have come to be recognized as a standard commodity with the florist, and change so little in their shape and design that they no longer are looked upon as novelties, and are, therefore, of not so much importance for the purpose of making an elaborate display as are some other flower receptacles which we wish to mention here.

We realize that the retail artist is in a class by himself, and usually presents the offer of any advice pertaining to his business. His work is to create new ideas, to offer something original, to be a leader and not a follower; at the same time, the few illustrations here offered, being original and unique in their designs, may carry helpful suggestions to some craftsman who is on the lookout for something new and seasonable for his Easter trade.

Figure No. 1 represents a monster egg resting in a nest of straw and birch twigs. The design is almost 36 inches high and about 30 inches wide. The upper part of the egg is open, and a zinc pan, fitted

Figure No. 4 represents a wine keg, with spigot and all complete, excepting the contents, which in this case will have to be cut flowers or plants, instead of liquid. This device is finished in gray color, and is very ornamental, but it will hardly have as wide a popularity as some of the others for Easter purposes, though for celebrations of a purely festive character, the wine keg will form an appropriate symbol, and, filled with blossoms, would make a very suggestive centre-piece.

Figure No. 5 shows a pretty arrangement that would naturally remind one more of the coming of Spring with its incidental field sports than it would of Easter. Eggs have been associated with Easter festivals for ages, and no doubt always will be. The golf set here shown, however, is something new, and makes a very desirable receptacle for a few long stemmed lilies or American Beauty roses.

Figure No. 6 illustrates a flower holder in the form of an old well house with swinging bucket—a very pretty and quaint design, likely to prove of real interest to all country bred folk. This design is not exactly new, nor is it intended particularly as an

Fig. 5. GOLF SET

Fig. 6. OLD WELL HOUSE WITH SWINGING BUCKET

Fig. 8. EGG-SHAPED FLOWER HOLDER

Fig. 1. EGG IN NEST

Fig. 4. WINE KEG

Easter novelty, but, believing that it has never before been illustrated, we include it among the other original pieces here shown.

Figure No. 7 is a pretty plant holder in the form of an old-fashioned windmill made in papier-mache, finished in a dull gray color, and very suitable for a few small plants of bright colors.

Figure No. 8 is an egg-shaped flower holder, finished in pure white, with cords and tassels complete, and suitable for hanging purposes. This is a very rich looking device, and one that should become quite popular.

We present also a few examples of arrangements of flowers in baskets that will be of more or less interest. Figure No. 9 shows a basket of sweet peas; the flowers are in water, and the basket is of ordinary design, made of birch twigs and trimmed with pussy willows. One side of the basket contains white flowers; the other side held blooms of a pink color. A bow of pink gauze ribbon on one side of the handle gives a finishing touch to the piece, and adds little to the cost of this inexpensive design.

Figure No. 10 shows a few violet plants in a round handle basket, with pussy willows intermixed about the sides, and a knot of white ribbon.

Figure No. 11 represents a basket filled with dwarf pink azalea, with loops of pink gauze ribbon on one side. Pussy willows are also used in this basket, as are a few sprays of asparagus. It will be seen that the pussy willow can be employed to great advantage for these inexpensive baskets, and it is at all times appreciated by flower purchasers. For the opportunity of showing the three baskets above mentioned, we are indebted to Alex. Warendorff, Broadway, New York.

Figure No. 12 shows a basket of small plants of the new rose, Mme. Norbert Levayasseur, the Baby Rambler. This is an excellent way to arrange this dwarf rose for decorative purposes. Several plants are grouped in an ordinary shallow basket, the pots being covered over with a surface of green sheet moss. This photograph was taken in the store of David Clarke & Sons, Seventy-fifth street and Broadway, New York.

SOME PRETTY EASTER OFFERINGS.

Fig. 9. SWIFT PEAS

A Few Easter Thoughts.

BY KINVARA.

It will be a record breaking Easter. The entire continent is prosperous, and the American people are in the humor to spend their money freely, provided value and honesty are offered and utilized. We are extremely optimistic, and looking back down the long boreen (road) of over twenty years' experiences in New York City, we can in all confidence predict that (atmospheric conditions agreeable) this Easter will be notable, yes, far beyond all others, considering conditions.

Never before in the history of New York was there such good taste displayed (generally speaking) in plant basket work as last Christmas, and your successes then will, if offered, result so at Easter; the only difference being that material is cheaper and the variety unlimited.

There is money in baskets of plants, far more than in specimen plants. They will always be popular, but it depends on the economy of art, or, rather, its naked richness. For instance—extreme cases excepted—there is no necessity to indulge in high-priced baskets, ribbons, laces or meaningless frills. Floriculturally considered, these are not luxuries; they are inappropriate, unnecessary, ill effects. But there is an unbounded scope for individualism in

simple, right-colored baskets, cheap, but unlabeled-colored ribbon and, above all, intelligence in selection of plants and their arrangement. The American people and the florists' pockets are getting tired of putting plants into baby carriages and surrounding them with silly flourishes.

Suppose we go to our supply man and select a few dozen simple handle baskets; the commoner and rougher, the better they are. We choose many sizes, for we want to sell them at anywhere from three to ten dollars each. We get some cheap tins, or even butchers' wax paper, and cover the interiors; then some clean, wet sphagnum and sheet moss. We fill one basket with yellow pansies; another with white and yellow; another with purple and some with all colors—just pansies—good and full, hanging over the sides, and just a bow of ribbon on the handle to give a festive touch. Then we fill a few with one, others with vari-colored *Primula sinensis*; some with polyanthus, others with *Primula vulgaris*, *Primula obconica* in its many varieties, *Primula stellata*; small, well flowered cyclamen, auriculas, the despised little daisy, *Bellis perennis*, *Phlox subulata*, dwarf nasturtiums, or the many beautiful, unappreciated things that can be had from growers. We have not forgotten violets; but a stale violet is something more than an insult; consequently, unless their modesty is enhanced by their fragrance, we prefer to touch them not. Here's a basket of myosotis. What is more acceptable to a memory? Just look at this lone little basket of crocus, with the cluster of snowdrops where the rosette of baby ribbon is tied. That green-colored

lutter basket we will fill with jonquils, tulips, a dwarf lily and fill in and fringe it with pansies, using any color but purple. Here's a green basket for nothing but small ferns, *Pandanus Veitchii* and *Draena terminalis*. The big basket, or hamper, we can fill with foliage and flowering plants.

Out of fifty baskets we need not have two alike, in fact, inasmuch as human nature is selfish in demanding exclusiveness in novelty, or beauty, it is wisest not to present duplicates, no matter how beautiful your made-up work may be—at least, not until you've made the sale and satisfied the customer of having purchased that exclusive one. There can be no wrong done in calling flowers by their old-fashioned names, or stretching a point in order to gratify the whim of some weak, but well meaning customer.

The growers are offering some magnificent plants this year—plants that require nothing but clean pots, good treatment, and fair appraisal. Many specimen palms, foliage plants and ferns will be sold if offered rightly, and though plants may look charming when massed in greenhouse or store, when they are singled out and offered to the critical buyer, defects may be pointed out. It is then that the little, simple, artistic touch may add twenty-five per cent. to the value of the subject.

If you have cause to feel proud of any particular plant, or arrangement of plants, put it where its good points will show to advantage; and it should be the care, as it is the duty, to have plants delivered in as good condition as when they were purchased. A vast amount of valuable time can be saved and much grat-

ification afforded by handing customers, or attaching to plants, the simple, printed cultural directions to be had at a low price from The Florists' Exchange office.

Our country is so vast in extent, climatic and other conditions render it impossible to adopt any general rule except that of fair dealing. It is admirable for the small grower or country town retailer to aspire to the positions attained by the leading florists of the great cities, but their customers are not so exacting. Little knowledge need they of the expensive trimmings, the costly things that are necessary to maintain the individualisms of those who cater to millionaires, and those who would be. Five hundred or a thousand dollars' worth of ribbons, and the same amount for baskets, are in many cases used for Easter trimmings. Poorly grown plants and stale flowers made these enormous expenditures necessary. That skimpy pan of lily of the valley or other bulbs; that dirty flat of roses needs have something done to it ere the city buyers will consider it. Some day, we may have more ornamental pots and pans to grow holiday stock in; then there will be no necessity to put a dollar plant into a two-dollar basket. With the advent of better stock, thousands of dollars' worth of frills now used can be diverted into floriculture proper.

This year there will be an increased demand for cut flowers, and it is the duty of growers to furnish these in the best possible condition. It is a crime to send out ninety per cent. of the violets usually delivered on Easter Sunday. They are bunched by growers without any regard to the flower's peculiar susceptibility. The age of the blooms, the pasty smelling boxes, and the general indifferent manner of make-up and delivery only tend to kill the popularity of one of Flora's gems. What is said of the violet can, in a way, though, nevertheless, important, be said of the rose, the carnation; in fact, of any flower or material. There is not much difference between a sleepy carnation and a faded rose.

This Easter being unusually late, the great danger to guard against is having stock too far advanced. Both immediate and lasting effect is desirable, and the utmost care is necessary in order to create both. You might single out a bunch of those elegant carnations, arrange them in a cheap vase and put them on your counter; the same with the rose, or a combination of flowers. They may exact due homage from some appreciative eye, and open up some tightly clasped purse. A box of flowers, packed for distance, or local delivery, can be placed where it may be inspected to be admired. It is your part to suggest methods and mediums of supplying wants. Pack flowers with a view of their good condition on arrival, rather than their arrangement satisfying your own eye. Any kind of stock is costly; make provisions for its proper care.

Some Good Easter Plants.

ANDROMEDA SPECIOSA is one of our rarer native shrubs which responds well to forcing, and would make an attractive decorative plant. Although a na-

DESIGNS SHOWING REVERSIBLE CREPE PAPER
H. Bayersdorfer & Co., Philadelphia, Pa.

tive of the Southern States, it is perfectly hardy in Massachusetts. Like many of the Ericaceae it is half evergreen. A glaucous form is the most conspicuous, though, perhaps, not so showy in bloom. The flowers in the shape of small bells are borne in racemes on slender pedicels, and are very pretty.

GENISTA RACEMOSA is always a popular Easter plant and if well grown makes a very fine subject for decoration. The illustration represents the plant as grown in 6-inch pots by A. Leuthy & Co., of Roslindale, Mass. David Lumsden, of this firm, who takes charge of the growing department, says that they have much better success with these plants by grow-

ing them indoors all Summer in houses that will have been emptied of bedding plants. The plants are propagated in January, cuttings being taken with a heel. They are potted in February, and grown on, being shifted and sheared as required. Many of them are flowered the first year in five-inch pots, and sell readily as small plants.

A FINE POT COMBINATON of decorative plants is made by using Pandanus utilis as a center, filling up with crotons, marantas, perises and nephrolepis, Asparagus Sprengeri, tradescantia and panicum being used as hanging plants.

CARYOTA MAJESTICA is one of the newer generation of caryotas, and although it may never prove valuable as a commercial plant it will always find favor among lovers of palms. The illustration represents a fair specimen, in a six-inch pot, as grown by A. Leuthy & Co., from plants imported by them from Sander & Sons, of St. Albans, Eng.

J. W. DUNCAN.

Bayersdorfer & Co.'s Novelties.

The illustrations herewith show a few of the many styles of wicker baskets, lined with zinc pans, the top part of open work interwoven with wood fibre ribbon in color, suitable for holding plants, and make most acceptable Easter offerings. The reversible crepe paper, also being placed on the market by this enterprising firm, is finding great favor with the retail trade.

Other illustrations of baskets will appear next week.

WICKER BASKETS AND WOOD FIBER RIBBON
Introduced by H. Bayersdorfer & Co., Philadelphia

CARYOTA MAJESTICA

HAMILTON.—There is every indication of a very early Spring. Easter plants are the all absorbing topic at present. Azaleas are mostly too early. Geranias are also getting pretty well fast. At several growers' places the Easter lilies are pretty well forward, and the prospects are that plants will be none too plentiful. Cut flowers are plentiful at present.

Harry Marshall has a fair showing of plants, despite the fact that every available corner is filled with bedding stock for his park contract.

Alfred Bailey is doing a good trade in funeral work. A large bench of callas is producing a bumper crop, which promises to hold till Easter.

The Webster Floral Company is busily engaged with orders from its mail-order trade. Fred Foster is now with them, doing floral work.

The City Council is purposing supplying beech and maple trees to citizens at cost. Many new streets are being opened up in the industrial section of the city, and this is being done to encourage street planting.

The Canadian Florist, the trade paper published at Toronto, is deceased. We all mourn its demise, for with all its faults we loved it still. It was Ca-

New York.

The Week's News.

The retail business throughout the city is quite lively at present, but it runs more to the filling and placing of window gardens, than it does to the handling of cut flowers, there being little going that calls for the use of flowers at present, owing, no doubt, to the nearness of Easter. Window displays are mostly confined to flowering plants, and judging from the variety and character of the Easter stock of these already on hand, this late Easter will find the trade just as well prepared to meet all possible demands as it has been in other years, when the festival occurred much earlier in the season.

The prolonged session of the Florists' Club meeting on Monday evening, owing to the question box taking up so much time, is a theme of interest among some of the members of the club. Some are in favor of limiting

ers and dealers in bulbs, etc., will move, on May 1, from 17 Battery place, to No. 12 West Broadway.

C. W. Copp, of the Agawan Lodge conservatories, Flushing, N. Y., is offering the ten greenhouses, together with their contents, for sale. The range of glass embraces 24,000 square feet, and is filled with carnations and sweet peas.

The Feder Florists' Supply Co. has been incorporated, with a capital of \$1,000, to manufacture florists' supplies. The incorporators are: F. Richards, 854 Rogers avenue, Brooklyn; S. Richards, 323 Crescent street, Brooklyn; C. Geller, 230 North Twenty-seventh street, New York.

Wm. Engren, Woodhaven, N. Y., is building three new greenhouses, each 100 feet long; the A. Dietsch Company, Chicago, is supplying the material.

A young son of Anton Schultheis, College Point, has been quite ill with gastric malaria, but is now recovering rapidly.

Thomas Murray, for many years gardener on the Duvall county seat, at Islip, L. I., and an expert vineyardist, died April 3, at his temporary home in that village, aged 80 years. His wife, to whom he was married in England a

Philadelphia.

Easter Outlook.

As usual, preceding a holiday event, business the past week has been rather quiet, with a large quantity of flowers on hand. As a general rule, the cut flower men do not quite know how to estimate the trade for next week. The plant growers, in many cases, are having difficulty in keeping back some stock, mostly some varieties of azaleas and pot roses. Azaleas appear to be rather scarce, several of the large growers being already sold out.

Several of the retail stores report that this Lenten season has been the best for many years, they having done much more business than is usually looked for at that time.

The Week's News.

H. Bayersdorfer & Co. had a large shipment of Easter goods on the steamship Alvanna, which was in collision in Halifax, N. S., harbor two weeks ago and had a hole stove in her. The

CRIMSON RAMBLER BRIDGE, NEW YORK.

BOWLING ALLEY — GREENHOUSE.

From the April issue of Möller's Deutsche Gärtner Zeitung.

nadian, and, of course, that covered a multitude of shortcomings. It is puzzling when one considers the fact that Canadians cannot maintain a trade paper. It is probably puzzling to you, Mr. Editor, to understand why we look any further than the interesting columns of The Florists' Exchange. I guess we are averse to being dependent; but it looks as if we shall have to reconcile ourselves to the very excellent American papers. We shall not be badly off if we do, though.

BEAVER.

Orange, N. J.

Michael Cox gardener for twelve years for Thomas A. Edison, Esq., Llewellyn Park, fell downstairs while carrying coal at his residence on Stanton street, breaking his spine. He lingered for two days and died last Saturday. He was an expert rose grower.

J. B. D.

OMAHA, NEB.—J. H. Hadkinson, who had charge of landscape gardening for the St. Louis Exposition, has been employed by the board of managers for the State Fair, at Lincoln, to superintend the work at the Fair grounds during the five months between now and Fair time. Mr. Hadkinson will superintend the construction of the new buildings, the setting out of trees, and the improving of the appearance of the race track by leveling the infield and seeding it.

the number of questions to one only for each meeting night, so that full justice can be done the subject, and still give the members plenty of time to get home before midnight.

If New York is to be represented at the bowling tournament of the S. A. F. O. H. in Washington, next August, it is now a good time to begin and get a team together. Suitable alleys should be found, where practicing can be done the next three months.

Sander & Sons will hold their usual auction sale of orchids, in Cleary's Horticultural Hall, on Tuesday, April 25. There will then be exposed to sale a number of new orchids offered for the first time; also quite a large consignment of plants suitable for cutting or for the trade.

James Weir's Sons, at their greenhouse in Bay Ridge, Brooklyn, have their usual quantity of lilies for Easter, and the majority of them will be in on time. There has been a large percentage to throw out on account of disease, etc., and, like all other collections of lilies, whether bought for multiflorum or giganteum, they are sadly mixed up, the collection evidently containing six or seven different types of *L. longiflorum*. Hydrangeas are in particularly fine shape here; two houses of geraniums, that are just coming into flower, are a grand lot, and will be a welcome addition to the flowering plants for Easter. Azaleas also are grown in large quantities and are timed nicely for the occasion.

Ralph M. Ward & Company, import-

half century previous, died a month ago. The couple were childless.

Jacob Wiese, a Buffalo, N. Y., florist, has been spending a few days in the city.

The plant exhibits at the club meeting last Monday evening were of a very superior order, including a fine plant of the new geranium Telegraph, from Thos. Devoy & Son, Poughkeepsie, N. Y.; Bougainvillea Sanderiana and Epiphyllum truncatum coccineum, from Pankok & Schumacher, White-stone, L. I.; several large plants of Crimson Rambler roses, from the Hinode Florist Co., White-stone, L. I. The largest exhibitor of the evening was Louis Dupuy, White-stone, L. I., who staged a very meritorious collection of Easter plants, among which were Erica ventricosa Bramplia, E. persoluta nana, E. marmosa alba, E. hybrida, E. amirabilis and E. Franklin-scens. Hydrangeas blue and pink, also H. Thomas Hogg and its red-stemmed sport, H. John Hogg. Several plants of clematis in bloom, a large standard plant of the double pink lilac, Michael Buchner, several plants of the Baby Rambler rose, Mme. Norbert Levavasseur and a dwarf yellow rose, provisionally named Pearson yellow. The two chief novelties in Mr. Dupuy's collection were *Crassula hybrida coccinea* and *Acacia plumosa cordata*, both of which created favorable impressions as being most desirable subjects for Easter work. Two specimen marguerites, bearing numerous blossoms, completed one of the most interesting exhibits ever seen in the club's parlors.

steamer was repaired temporarily, and reached this city Wednesday evening. The work of unloading went on all night, and the goods will be shipped this week.

Lord & Burnham Co., through D. T. Connor, their representative here, have sold to Lawrence Thompson, of Kennett Square, Pa., material for four houses, each 20x100 feet.

Sidney H. Bayersdorfer, the 17-year-old son of H. Bayersdorfer, is now in the store waiting on customers, and also goes out soliciting orders from the trade locally.

John Walker, of Walker & McLean, Youngstown, O., spent a few days here the end of last week, looking up Easter stock.

DAVID RUST.

Syracuse, N. Y.

Work on the parks has begun a month earlier than usual—the earliest in five years. The appropriation for this work is \$3,000 less this year, so there can be no improvements.

The pupils of Townsend School have just received 200 packages of flower seeds from Congressman M. E. Driscoll.

P. R. Quinlan has returned from Cuba.

announce the completion of arrangements whereby they will, beginning in January, 1906, disseminate jointly with

THE E. G. HILL CO.
THEIR TWO GRAND NEW CARNATIONS

MY MARYLAND AND JESSICA

MY MARYLAND is already well and favorably known, having been exhibited freely at the various flower shows and florist club meetings the past Fall and Winter, and in every case elicited the highest praise and most favorable comment. We pick this variety to quickly and easily displace all other whites for first honors, not alone in exhibition, but in commercial points as well. We claim for it a robustness of constitution quite unequalled in any other variety and an ease of culture that will delight the heart of the grower. The great vigor of both parents (Norway x Lawson) seems united and improved upon in this variety.

In JESSICA we have in the red and white variegated class, what My Maryland will prove among whites. It is descended through several generations of variegated seedlings of Helen Keller and Bradt extraction on the one side and Lawson on the other. A strong, thrifty growing variegated seedling bearing the seed. It is a trifle heavier in growth than My Maryland and just Lawson height. Aside from these differences and the color, the description of My Maryland applies to Jessica. Under favorable conditions four inch blooms are not uncommon. We pick Jessica to win over any other variegated variety.

Both of the above are free propagators. We are thoroughly familiar with them and know what they will do. We will be in a position to deliver stock early and on time, and assure the trade that no disappointments will result on that score.

We have already booked many orders. It pays to be early. Orders booked are subject to cancellation by the buyer if unsatisfied with either variety, up to the time the cuttings are received.

Price: \$2.50 per doz.; \$12.00 per 100; \$100.00 per 1000

WE ARE THE
MAKERS OF

SIX NECESSITIES FOR FLORISTS

Model Glazing Point

I Model Glazing Point

Absolutely without a rival; made of zinc and cannot rust. Wherever used, a necessity. Sold by single pound and upward.

II III Model Carnation Support

Two-ring and three-ring models. Made of galvanized wire. Needed in every and used in nearly all greenhouses. No florist can afford to be without these supports.

Model Extension Wire Carnation Supports

IV Model Rose Stakes

Looped or straight. Made of the best galvanized wire. Light but very strong. Absolute proof against rust. Try them.

V Model Pot Hangers

These are wonderful; once used, you will be unable to get along without them. They are made in two sizes: Model "A" to fit pots up to 5 inches; Model "B" to fit pots up to 10 inches. They are adjustable and wonderfully handy. The only practical device for converting ordinary flower pots into hanging baskets.

Model Tomato Support

VI Model Tomato Support

No raiser of TOMATOES can afford to be without these supports. They are similar to our Carnation Supports but made of heavier and stronger galvanized wire. Now is the TIME for TOMATOES, so try them. You will thank us. These supports are perfect for use on heavily flowered plants, such as dahlias, peonies and chrysanthemums.

The Landscape Artist
RESIDENTIAL SITES AND
ENVIRONMENTS

.. BY...
Joseph Forsyth Johnson
F. R. H. S., CONSULTING LANDSCAPE
GARDENER AND GARDEN
ARCHITECT

A KNOWLEDGE of landscape work which will enable one to undertake successfully the work of gratifying the desire of cultivated people for tasty, attractive surroundings for their houses, be they 25 x 100 ft. plots or broad acres, is well worth all the effort that may be required in the learning. If you study "Residential Sites and Environments," a practical work by a practical man, easily read and assimilated, it will give you a knowledge of the essentials and possibilities of landscape gardening that will enable you to avoid costly errors and to make your own home grounds, or those of your customers, a "joy forever." Illustrated with over fifty descriptive Plans, Diagrams and Illustrations, with lucid descriptive text and all necessary information for the laying out of Home and Public Grounds, showing principles and adaptations of planting suitable to all requirements from Villa to Mansion. Superbly printed, in new clear type, on the finest wood cut paper; cloth. Price, \$2.50, by mail, postpaid.

Some Nonsensical and Improper English Names.

Editor Florists' Exchange:

A paper like The Florists' Exchange ought to do something toward securing correct and proper English or common names for plants. Probably over one-third of the plants of economic or ornamental importance are known by pseudonyms rather than by their proper names. It simply illustrates the fact that our English language is a barbaric jumble at the best, a hash composed of the mixture of all languages of earth, the same as our people.

Nevertheless, it is safe to assume that all plants of economic or ornamental importance should have some reliable name, and a leading paper like The Florists' Exchange should assume the lead in this direction.

Anyone consulting our leading catalogues would think that geraniums were among our leading florists' bedding flowers—our prevailing house plants. This is entirely untrue. There are very few geraniums in cultivation, and as far as I have ever discovered, all cultivated ones are hardy outdoor annuals or perennials, not one that I ever learned of ever being grown as an indoor ornamental or Summer bedding plant.

In looking over the catalogues we occasionally see some one advertising "pelargoniums" or "Lady Washington" or "pansy geraniums." All this simply complicates nonsense, for one would be led to think that only these few species are pelargoniums, an entirely false assumption, it being a fact that all plants called geraniums, coming originally from South Africa, are not geraniums at all, but all are pelargoniums. It is just as correct to call a strawberry a rose as to call a pelargonium a geranium. To continue calling a plant false names is simply perpetuating a lie. Of course, a pelargonium, our most common house plant and florists' flower, belongs to the geranium family; so does the strawberry to the rose family, the onion to the lily family. Shall we call strawberries roses and onions lilies?

The spelling of peony as "peony" is an unwarranted barbarism, as the word cannot be correctly pronounced the latter way of spelling. It is folly to drop an ancient and honorable name and pronunciation for a silly, unwarranted fad. Some object to preserving a diphthong in the English language. Well, if a substitute should be made, it should at least be of approximate value. I challenge any one to demon-

strate that the English long sound of "e" approximates that of "æ" in peony. It cannot be used correctly as a substitute.

Now for a bit of history of one of our most valuable hardy perennials, and then I shall give the correct pronunciation of the word. It has been assumed that the name peonia was from that of the ancient and fabled god Pæon, who, it is claimed, used the peony as medicine. It is all very true that Pæonia officinalis has long been used as a medicine. Careful research establishes the fact that, like the peach (Latin, persica—Persia), this plant derived its name from the country where it first became known to the world at large—Pæonia—a country once east of Macedonia, now a portion of Turkey in Europe. This country was known to the Romans as Pæonia, and to the Greeks as Paiones (I use Roman for Greek letters here). Now, "ai," alpha iota, is the Greek diphthong approximating the Roman "æ." Now we should consider some important facts: None of our vowels are pronounced the same in other languages as our own—in all other languages "a" is sounded as in all, "e" as in bay, "i" as e in me, and in modern English only do we find the sounds we commonly use not common in ancient English even.

Now in "æ" we have a combination of "a" as in ball and "e" as in may. In "ai" Greek "a" as in ball and "e" as in me, not just the same as the Roman sound, but its nearest Greek approximation. Now try this Roman sound and you will find it something like our common modern English long "i," but broader. Therefore, if we listen to the printers' and faddists' klicking, let us use our nearest common modern English approximate, "i" as in pine, mine, etc. Thus, not "peony," but "piony," it being evident that our English word must spring from the Roman and Greek names Pæonia and Paiones. Therefore, our grandmothers used vastly more correct language when they said "Piny," than do our modern faddists who squeal out "Peony," and dub an American association by that silly, barbaric name, so totally unwarranted by actual facts. By the way, the history of the country Pæonia is very interesting. It was a most ancient country. How it obtained its peculiar name I don't know, but it certainly gave its name to our beautiful modern flower.

Hereafter, let us be at least as approximately correct in our pronunciation of "peony" as were our grandmothers, who simply omitted one syllable, an abundant proof that our more educated English forefathers pronounced the word correctly, and pronounced it as "piony," "i," as in time, being our nearest modern approximate to the Roman "æ" in Pæonia. By the way, I should have said the Greek Paiones preceded the Roman Pæonia, the people of Pæonia being more nearly related to the Greeks than the Romans, and more ancient than the latter.

It is not correct to say "tulip poplar," there being no such tree. Neither is it correct to call *Liriodendron tulipifera*, "Whitewood," the latter properly belonging to a poplar. The tulip tree (*Liriodendron tulipifera*) is not a poplar, and no more related to one than a hazel bush is to a pansy, but of the magnolia family. Alfalfa is not a clover, but a medick, the latter coming from ancient Media—originally pronounced "May-dea."

It is not correct to say "Soy bean." The Soy is no more a bean than the strawberry is a rose. The Japanese name "Soja" is pronounced "Soya," not as we sound "j," but as our English forefathers and modern Danes, Norwegians and Swedes sound it still. In old English, "j," "i" and "y" were used for the same sounds indiscriminately. Other nations still follow the old practice, the French sounding "j" something like "zh," and Spanish like "h" in Scotch "loch," a very difficult sound for an American.

The so-called cowpea is neither a pea nor a bean, no correct English name for this Chinese plant. I suggest a name of approximate value to Latin, vign, pronounced "veen," for those of genus *Vigna* and *Dolich* (doleek) for those of genus *Dolichos*.

There is no such plant as the Irish potato. The potato is not Irish, but a pure American. The so-called sweet potato is not a potato, but relative of the morning glory; proper name would be *Batata*.

The plant so commonly called "yam" down South is not a yam, but a large variety of sweet potato or *batata*—no more like a yam than a morning glory is like an Indian corn plant. The cinnamon vine is the Chinese yam. The word corn is properly generic, not specific, or by common English practice applied to all grains of the grass family having value as food. wheat, rye, oats, barley, etc., are indiscriminately called "corn" in England. The true name of our grain is maize, not corn, long cultivated by our native Americans, mis-called "Indians." I might say that although Columbus mis-called the aborigines of our land Indians, this country was named after an aboriginal tribe, the Ameriques (Amerikes), still living not far from the Panama region—not after Amerigo Vespucci, that Spanish adventurer—as our geographers commonly teach us—commonly, but falsely. Some disgruntled individual may kick at this and call me radical, but must an honest man be compelled to perpetuate lies to satisfy popular ignorance?

Perhaps no floral name is more barbarically misapplied than that of the lily. The 45 or 50 species of the genus *Lilium* are properly lilies, but no others. Plants entirely unrelated are dubbed "lily." Plants of the genus *Castalia* (misnamed *nymphaea*—this name properly belonging to our common yellow Northern pond "lily," so called) are dubbed water lilies, and they are no more like true lilies than the sunflower

Spring Show at Buffalo, N. Y.

The Spring flower show, given by the Sweeney Co.'s department store, under the auspices of the Buffalo Florists' Club, conducted by Chas. H. Keitsch, opened on fairly prompt time Tuesday, April 11. While a lack of some expected entries was noticeable, the space was well occupied, and quality was conspicuous, as a rule worthy of commendation. The exhibition was free, intended to progress advertising conditions.

On Wednesday, April 12, the subjoined awards were made by Judge Roderick Cameron, Niagara Falls, Ont.

Lilies, twelve in 7-inch pots—first, Scott Floral Company; six in 7-inch pots—first, Wasson Floral Company, Orchard Park, N. Y.; second, Scott Floral Company; third, same firm. Single, in 10-inch pot—first, Scott Floral Company.

Azaleas, six plants no less than three varieties—first, Chas. Sandiford, gardener to Mr. J. J. Albright, Buffalo; second, same; third, Scott Floral Company. Three plants, any variety—first, Chas. Sandiford; second, Scott Floral Company. Best single plant, any variety—first, Chas. Sandiford, second, same; third, Scott Floral Company.

Rhododendrons, three plants—first, Chas. Sandiford; Sandiford; second, same; third, Scott Floral Company.

Roses, six hybrid perpetual plants in no less than three varieties—first and second, Chas. Sandiford. Three plants of Rambler type—first and second, Chas. Sandiford.

Tulips, flat, 24x12, single red—first, Louis H. Neubeck; second and third, Scott Floral Company. Flat, 24x12 inch, single yellow—first and second, Scott Floral Company; third, L. H. Neubeck. Flat, 24x12 inch, single white—first and second, Scott Floral Company. Flat, 24x12, single, any other color—first, L. H. Neubeck; second and third, Scott Floral Company. Flat, 24x12, double, any color—first and second, Scott Floral Company. Pan, 12 inches in diameter, single red—first, Scott Floral Company; second, Chas. Sandiford; third, Scott Floral Company. Pan, 12 inches in diameter, single yellow—first and second, Chas. Sandiford. Pan, 12 inches in diameter, single white—first, Chas. Sandiford. Pan, 12 inches in diameter, single, any other color—first, second and third, Chas. Sandiford. Pan, 12 inches in diameter, double, any color—first and second, Chas. Sandiford; third, Scott Floral Company.

Hyacinths (Dutch), pan, 12 inches diameter, white—first, Chas. Sandiford; second and third, Scott Floral Company. Pan, 12 inches diameter, blue—first and second, Chas. Sandiford; third, Scott Floral Company. Pan, 12 inches diameter, pink or red—first, Chas. Sandiford; second and third, Scott Floral Company. Twelve single pots, white—third, Scott Floral Company. Twelve single pots, blue—first, L. H. Neubeck; second, Scott Floral Company. Twelve single pots, pink or red—second, Scott Floral Company.

Narcissus, flat, 24x12 inches, Von Slon—first, L. H. Neubeck; second and third, Scott Floral Company. Pan, 12 inches in diameter, Von Slon—first, Chas. Sandiford.

Lily of the Valley, three 8-inch pots—first, L. H. Neubeck; third, Scott Floral Company. Spirea, six plants—first, Scott Floral Company; second, Chas. Sandiford; third, L. H. Neubeck. Orchids, best collection in bloom—first, Chas. Sandiford. Begonias, collection no less than 12 plants—first, Theodore Venneman, gardener to Geo.

Urban, Jr., Buffalo; single plant, any variety; second, Theodore Venneman.

Stove and greenhouse plants, twelve plants in no less than six varieties—first, Scott Floral Company; second, Theodore Venneman. Best collection of forced bardy shrubs—first and second, Chas. Sandiford. VIDL.

THE GARDENER'S ASSISTANT.—It is

with great pleasure I note you advertise this book. It was first gotten up by the late Robert Thompson, superintendent of the Royal Horticultural Society's Gardens at Chiswick, London. Mr. Thompson was then one of the best and most experienced all-around gardeners in Europe, if not the very best, and his field of observation, practice and experiment was greater than that of any other man then living. It was the first book on gardening I ever owned. About 38 years ago I subscribed for it in monthly parts, 2s. 6d. a part. My wages was only 6s. a week. It was complete in 12 parts and then I had it bound, and that old and well-thumbed and blackened volume has a place of honor in my library to-day. It was my text-book for many a year. But the same Gardener's Assistant to-day is a new book, increased immensely in size, modernized in every particular, and that, too, by the Curator of the Royal Botanical Gardens at Kew, London, a man who has the best opportunities of any man on earth for knowing what is newest among plants and most modern in gardening.

The foregoing commendation, which appeared in THE FLORISTS' EXCHANGE, issue of January 7, 1905, was written by Mr. William Falconer, one of the very foremost practical horticultural experts in America. Mr. Falconer is a graduate of Kew Gardens; was Curator of Harvard Botanical Garden; Head Gardener for C. A. Dana, Esq.; then became Superintendent of Schenley Park, Pittsburg, and is now Superintendent of Allegheny Cemetery; he was also the first editor of "Gardening."

Send for Prospectus and Price.

THE FLORISTS' EXCHANGE, P. O. Box 1697, N. Y.

is like a palm tree. The African calla is dubbed "calla lily;" it is not a lily at all, but an aroid, just as much a lily as the skunk's cabbage is. Trillium grandiflorum is dubbed "white lily" or "wood lily." Is not trillium sensible enough for a common name?

Various irids, nerines, amaryllis, crinums and other plants of the great Iris and Amaryllis families are idiotically dubbed lilies. Even the common spiderwort, not even a lily, is dubbed "spider lily." Fritularias are also dubbed "lilies."

It is properly strawberry (wandering berry), not strawberry; harsh radish, not horse radish, and the horse chestnut is not a chestnut at all, but a so-called huckeye, another fanciful name, no more a chestnut than an apple tree is.

But the culmination of barbarism is reached in styling a tuber-bearing sunflower "Jerusalem artichoke." In the first place, the plant is not an artichoke—this name is properly applied only to the artichoke (Cynara scolymus), the large, undeveloped flower-heads which furnish a dainty dish when cooked—and it does not even belong to the same tribe of the great family Compositae, as does the artichoke. Furthermore, it is a genuine American, a pure native, and never saw Jerusalem, unless carried there—very doubtful. The name Jerusalem, so miserably misapplied, seems to be derived from the Italian girasol, sunflower, barbarically mutilated by unpardonable ignorance. Locust is applied to the carob, common locust, honey locust, to various grasshoppers and bugs. Some writers make a horrid mess in trying to reconcile the name locust to all these things.

And then the name cactus—a family name, comprising many legitimate genera and species—certainly enough to properly bear the name cactus—must be misapplied to every succulent of no matter what genus, tribe, order or series. In ignorant parlance, the aloes, gasterias, tillandsias, agaves, and even cactylodons, echeverias and sempervivums, are all "cacti," and none of them bear any but the remotest relationship to cacti. Some phylloceati bloom at night and they are dubbed "night blooming cereus."

The Syrian hibiscus is barbarically dubbed "Althea, Rose of Sharon." The althea is a hollyhock, and this shrub is a hibiscus, and it does not even belong to the order Rosales, let alone being a rose.

Balsam is applied to a multitude of plants. The so-called balsam of our flower gardens is dubbed "lady slipper," as are also calceolarias, cypripediums and selenipediums. And such gushing sentimental twaddle as "Black-eyed Susan" is applied to thunbergias, rudbeckias and what not!

Let us have decent, reliable, common English names and banish all false names and silly nonsense from our English nomenclature.

Torridor Combustion Regulator.

Editor Florists' Exchange:

The late test of the Torridor Combustion Regulator at the New York store of Messrs. Hitchings & Co. resulted in some very interesting disclosures. The device was first applied to a No. 17 corrugated boiler, but it was found that with that style of boiler steam was generated so fast that the experiment was unmanageable, and had to be abandoned. Experiments of a different character with this same style of boiler will be carried out later. But this trial demonstrated the fact that this style of boiler, old as it is, has great efficiency as a conservator of large volumes of heat of moderate temperature. Further experiments with a simple direct draft steam boiler showed that it, as well as many of the newer styles of boilers, depends for efficiency on a very intense degree of heat being generated in the combustion chamber. It was shown that, other things being equal, the more intense the heat, the greater is the relative proportion of heat absorbed. The writer has never claimed for the Torridor that it is of value in those cases where high intensity of heat is a necessity as is the case in very cold weather in undersized boilers. Heat is only thus secured by a very hot passage of gases in the chimney which is uneconomical in practice. It was shown that if a very shallow bed of fuel was carefully stoked and continually kept free from ashes, enough air for combustion can be taken through the grate to effect as complete a combustion as can be secured through the down draft through the Torridor; but this is a condition which does not exist in the case of household and greenhouse heaters where a large and thick bed of fuel is fed and then left to itself over night. In such instances, we get conditions which, with direct and free draft through the grate, produce a strong and relatively complete combustion early in the night, which, as the ashes accumulate, the air for combustion is more or less shut off, the fuel is baked and the gases driven off incompletely combined with air, and hence are unburned; there is a lesser production of heat through the latter part of the night. But if most of the air for combustion is supplied from above the fuel mass, as is the case of the Torridor supply, the combustion is more equably effected all through the night and more completely effected. Every one who has given the Torridor a careful trial agrees as to this equalizing effect in burning fuel when this device is used, and the economy which is effected must be largely due to this action, although damper and check draft effects must be given some credit for the result secured. It seems to be practically impossible to prostrate just what the economy in using this device

will be in any particular case. The only way to find out is to try it. There are cases in which it cannot be attached to a heater, but whenever it can be applied, more or less benefit can be secured by its intelligent use.

J. M. W. KITCHEN, M. D.

JOHN FARRELL

Retired After Fifty Years' Active Service as a
Gardener

Fifty Years a Gardener.

Of the many men brought into public prominence by the Madison Square Garden shows in New York, John Farrell will be remembered particularly for his grafting work on the chrysanthemum. Last month marked the thirtieth anniversary of his service at Baronald, the seat of Mr. William Barr in Llewellyn Park, Orange, N. J., and his retirement from active work after his long and faithful labors there at the age of seventy years. He had previously been in the employ of Josiah H. DeWitt, George Thorpe and Richard Purdue. Between seventy and eighty first premium cards adorn the ante-room of the range of glass houses at Baronald, and the certificates and testimonials he has received would fill a large chest. It was from here that the chrysanthemums Baronald, Miss Alice Broom, Mrs. William Barr, John Farrell (named and introduced by T. H. Spaulding), Jim Dandy, Jessie King and Cumo had their origin. Mr. Spaulding offered John Farrell \$25 for a bronze, but this and many other meritorious and unique sorts Mr. Barr still prefers to keep as his private property.

Mr. Barr's collection has been an inspiration to many, and he has welcomed flower lovers with a generous hospitality. T. H. Spaulding, when the owner of the nearby estate of "Castlewood," was a frequent caller upon John Farrell, and it is believed that he received his first knowledge of chrysanthemums from Mr. Farrell. The late Peter Henderson was also a frequent visitor and was in the habit of saying "John Farrell claims that he does not know anything, but he gets there all the same." John Thorpe, Samuel Henshaw, Wm. R. Smith and Andrew Carnegie have likewise been visitors, and the late M. Doane loved to linger among the varied plants which have always been a feature of this place.

When rheumatism made it difficult for Mr. Farrell to go out at night, the New Jersey Floricultural Society recently honored him by making him an honorary member.

J. E. D.

A recent report of the Connecticut Experiment Station contained an account of the garden flea hopper (*Halticus uhleri* Girard) injuring smilax under glass. This is a small black bug which has caused much injury to various plants in various parts of the country. The plants attacked are beans, beets, red clover, cow pea, potato, chrysanthemum, morning glory, egg plant, cabbage and pumpkin. Tobacco fumes were employed in the smilax house, but did not kill the flea hoppers; hydrocyanic acid gas was next tried, with greater success. Spraying with kerosene emulsion has been recommended as a remedy, and, says the report, doubtless common soap and water would serve the purpose if strong enough, and applied as a spray.

CARNATIONS

EASTER

Coming so late this year, there is a general opinion that plants will be too far advanced by that date. The wise Florist will send his cut flower order early to meet such an emergency.

SEND FOR QUOTATIONS.

CLUB AND SOCIETY DOINGS

Society of American Florists and Ornamental Horticulturists.

Meeting of Board of Directors.

The annual meeting of the executive board was held at the New Willard Hotel, Washington, D. C., on Tuesday, Wednesday and Thursday, April 4, 5 and 6, 1905. In the absence of President J. C. Vaughan, Vice-President J. R. Freeman occupied the chair. There were present also Ex-President Philip Breiteneyer, Treasurer H. B. Beatty, Secretary Wm. J. Stewart, Directors H. M. Altick, Theodore Wirth, W. H. Elliott and E. V. Hallock, Ex-Presidents Wm. R. Smith and W. F. Gude, Professor Galloway of the U. S. Department of Agriculture, and Secretary Moseley, of the Interstate Commerce Committee.

The report of the secretary indicated a continuous prosperous condition in all departments, and the treasurer's report showed the largest cash balance on hand in the society's history. Various committee reports were presented and approved. Professor Galloway addressed the board on behalf of the Department of Agriculture, offering the co-operation of the department in the arrangement for the entertainment and instruction of the society at the convention next August.

The program for the convention, so far as completed, provides for the customary opening exercises on the afternoon of Tuesday, August 15, and president's reception in the evening. Nomination and election of officers and other routine work of the society will share the morning sessions of Wednesday and Thursday, with several papers on subjects of interest, and the evenings of these two days will be devoted to stereopticon lectures under the auspices of the Department of Agriculture. Among the papers presented will be one by Oglesby Paul, of Philadelphia, on "Landscape Gardening," or a kindred subject; one on "Helps to Floriculture in the South and Southwest" (not yet assigned), and on "American Bulb Growing," by Professor A. J. Pieters. In addition, a competition is to be arranged for, and prizes will be offered by Treasurer Beatty for the best essays on the subject of "The Ideal Employer."

The consensus of opinion in the board favored a policy of broader publicity in the society's work, closer affiliation with the daily newspapers, and for fuller press reports than heretofore, and the dissemination of general horticultural information in every community of the country, particularly through the medium of the public schools. A bronze medal was appropriated to be placed at the disposal of Miss S. B. Sipe for award to the school children of the city

of Washington for the encouragement of horticulture. Favorable action was taken toward the appointment of a committee to report on the feasibility of preparing a concise and practical text book for use by Boards of Education to be disseminated through the various florists' clubs.

The National Rifles Armory on G street, N. W., between Ninth and Tenth streets, was selected for the exhibition, the upper and lower halls to be used for this purpose, and the proffer of Carroll Hall, adjoining, was accepted for the use of the society for its meetings. Should the exhibition overflow the accommodations in the Armory, an additional hall is available in Masonic Building.

A fine special exhibit will be made by the Department of Agriculture, and a silver medal will be offered for the best display of cut flowers in vases. It was voted that the exhibition be allowed to remain open during the sessions of the society as an experiment. George H. Cooke, recommended by the Washington Florists' Club, was duly appointed superintendent of the exhibition.

Wednesday afternoon was set apart for the bowling tournament, and Messrs. Phil Hauswirth and John Westcott were appointed to act with the local sporting committee. The bowling alleys selected are located on Eighth and E streets.

The following final resolutions were unanimously adopted:

We, the members of the executive committee of the Society of American Florists and Ornamental Horticulturists, in meeting assembled, regret the circumstances that have made necessary the absence of our president, J. C. Vaughan, and that we could not avail ourselves of his experience and wisdom in the deliberation of this committee. We wish to state, however, that his place was most ably and satisfactorily filled by our vice-president, J. R. Freeman, and we hereby wish to express to him our appreciation of his many kindnesses while in and out of the chair.

We wish to extend our heartfelt thanks to each and every member of the Washington Florists' Club, and especially to the accomplished President, W. F. Gude, for their untiring kindness and courtesies, and particularly for the delightful entertainment with its most beautiful decorations.

And further to the management of the New Willard Hotel for the courtesies, and to the daily press for their full and accurate reports of our meetings.

Finally, the committee is greatly impressed with the great work the Hon. James Wilson, Secretary of Agriculture, is doing along all the lines of horticulture, and the willingness of this department to cooperate with this society in every possible manner, and for the individual interest shown by Professor B. T. Galloway during our stay.

WM. J. STEWART, Secretary.

MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY.—At a meeting on April 7, at Oceanic, N. J., it was decided to hold a rose, sweet pea and strawberry show on June 16. At that meeting, N. Butterbach will read a paper on "Hybrid Tea and Tea Roses for Bedding Purposes." Mr. Hale exhibited some excellent amaryllis, Enchantress of India, and two other hybrids, which scored 90 points. Mr. Brington, gardener to Mr. Hess, showed some finely colored Prosperity carnations, scoring 90 points; his Enchantress received 80 points. The prizes for the assays on "Rose Culture under Glass" were presented to the prize winners. I. A. Kettel surprised the winner of the first prize, Charles Wengert, with a beautiful silver cup, and N. Butterbach presented the winner of the second prize, J. G. P. Kennedy, with a silver shaving cup and brush. The recipients expressed their gratitude for the beautiful prizes and treated the members to two boxes of cigars. The judges of the evening were: W. W. Kennedy, J. A. Kennedy and Wm. Turner. B.

NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY.—The regular monthly meeting of this society was held at the Glen Cove greenhouses on the afternoon of April 5. The attendance was not particularly large, owing probably to the rainy weather, and the rush attending Spring work. Exhibits were plentiful, nearly every member contributing something. A vase of that grand red carnation, Robert Craig, furnished by the Cottage Gardens, Queens, L. I., graced the exhibition table. Special mention was made of a new seedling white carnation, raised by Felix Mense, Glen Cove greenhouses. Mr. Mense has named it Dosoris, and, judging from his stock, it shows itself to be a profuse bloomer and of robust constitution. The flowers are full, well built, and, apparently, non-bursting. Another new seedling carnation, dark pink, was exhibited by Mr. Myers, superintendent to G. R. Sheldon, Esq. The flower was large, full, with highly fringed petals. A beautiful specimen plant of a white Cineraria stellata showed an enormous wealth of blossoms. A dish of peas was also shown, the variety being Gradus. They had been grown under glass. The seed was sown around December 20, and pods were ready for pulling during the first week in March. A standard gardenia, profusely flower-budded, and showing the marks of high culture, was exhibited by T. Harrison, superintendent to E. R. Ladew, Esq. It was decided, until further notice, to hold the meetings in the evening. JOHN F. JOHNSTON.

THE KENTUCKY SOCIETY OF FLORISTS held its monthly meeting at the store of Mrs. C. W. Reimers, Louisville, with an excellent attendance present. The society decided to hold a display of sweet peas and other seasonable flowers at the June meeting, and to invite the public to attend, free. November 14 to 18 is the date set for our chrysanthemum show. A. R. B.

THE NEW JERSEY FLORICULTURAL SOCIETY.—William Reid, gardener to the estate of Sidney and Austin Colgate, Orange, N. J., read a paper upon "Herbaceous Perennials for the Open Border" at the regular monthly meeting of this society, held on April 7. The chief points dwelt upon were: Continuous bloom, backgrounds, planting for harmony and effect and massing, season of planting, soils and protection in winter. The essayist included a judicious list of plants. Mr. Reid made some particularly happy suggestions as to supplying gaps with annuals kept in reserve. The impression made by the excellent judgment displayed caused the request for a copy of the paper for publication, in addition to the usual vote of thanks.

The usual display of high-grade roses, carnations and orchids from the estates of Mr. John Crosby Brown (Peter Duff), Messrs. Sidney and Austin Colgate (William Reid, gardener), Mr. A. C. Von Gaasbeck (William Bennett, gardener), Mr. Henry Graves (Edwin Thomas, gardener), Mr. William Barr (Arthur Bodwell, gardener), and Mr. Chas. Hathaway (M. Hornacker, gardener). Of special interest were the new rose Wellesley, exhibited by John N. May; a new seedling carnation from Hornacker (certificated); Empress of India amaryllis, from Peter Duff, and Lady of Barnald amaryllis, brought from Florida by Mr. Barr in 1888, and flowered by Arthur Bodwell. Two new members—Thomas Jones, of Short Hills, and James Lang, of Orange—were elected. M. J. McKernan, secretary of the Elks Society, was made an honorary member in recognition of services to the society. A letter from Mary A. Latterbury, of the Orange Educational Society, asking for the donation of seeds and plants, was referred to individual members. J. B. D.

NEW YORK FLORISTS' CLUB.—A well-attended meeting, a beautiful exhibit, and a session which lasted until nearly midnight, were the features which characterized the gathering of the club on Monday evening, April 10. President Traendly occupied the

chair. The secretary's minutes included the reading of the new rules and regulations governing awards, made at the meetings, which are as under:

Rules Governing the Exhibition of Novelties and Disseminated Varieties.

Novelties.

The following rules governing the exhibition of novelties, etc., have been submitted by the Committee of Award of the New York Florists' Club, and adopted by that body, March 13, 1905:

Rule 1. The committee requires that the initial exhibit of new varieties of flowers or plants be made at a regular meeting of this club, and the exhibitor shall notify the secretary at least ten days prior to the meeting at which he proposes to exhibit.

Rule 2. Anyone showing a novelty with the intention of obtaining the club's indorsement in any way, the committee may recommend, shall conform to the rules laid down by them for their guidance, as herein stated.

Rule 3. Any exhibit of a novelty in cut flowers at a regular meeting, if considered of sufficient merit by the committee, they, or at least three of them, shall be empowered to visit the place where it is growing, and if, after careful examination of the same, they deem it of sufficient merit, they shall award accordingly; but if, in their judgment, it appears advisable to defer the award till a second visit shall be made, they shall be at liberty to so decide.

Rule 4. The highest award for flowers or plants shall be the silver medal of the club, the next the certificate of the club, the next "highly commended," the next "honorable mention."

Carnations.

Rule 5. In judging carnation flowers at the exhibition in the club's meeting room, the scale of points adopted by the American Carnation Society shall be adopted, as follows: Color, 25; size, 20; calyx, 5; stem, 20; substance, 10; form, 15; fragrance, 5. Should the variety judged score 85 points or more, a preliminary certificate shall be granted to it. In judging the variety where it is growing, the following scale shall be used: Condition, 15; productiveness, 15; color, 15; size, 15; calyx, 5; stem, 15; substance, 5; form, 10; fragrance, 5. Should the variety score 85 points or more, the final award shall then be made. If it fail to score 85 points or more, the preliminary certificate shall be withdrawn and public notice given of said withdrawal.

Roses.

Rule 6. In judging rose flowers at the exhibition in the club's meeting room, the scale of points adopted by the American Rose Society shall be used, as follows: Size, 10; color, 20; stem, 15; form, 15; substance, 10; foliage, 15; fragrance, 5; distinctiveness, 10. In judging the variety where it is growing, the following scale shall be used: Condition, 15; productiveness, 15; size, 10; color, 15; stem, 10; form, 10; substance, 10; fragrance, 5; distinctiveness, 10. The stipulations for award on carnations shall apply also to roses.

Chrysanthemums.

Rule 7. In judging chrysanthemums at the exhibition in the club's meeting room, the scale of points adopted by the Chrysanthemum Society of America shall be used as follows: Commercial Scale. Color, 20; form, 15; fullness, 10; stem, 15; foliage, 15; substance, 15; size, 10.

Exhibition Scale: Color, 10; stem, 10; foliage, 10; fullness, 15; form, 15; depth, 15; size, 25. The final award shall be made on chrysanthemums at the initial exhibition in the club's meeting room.

Plants in Pots or for the Open.

Rule 8. When a new plant, such as will be grown in pots or in the open ground generally is brought to this club's meeting, if the committee is sufficiently satisfied as to its distinctive merits and other qualities, they shall be empowered to give final award without further examination.

Rule 9. In judging plants or flowers other than the foregoing, the committee may use a scale of points adopted by a special society covering the exhibit, if any exists; or they may judge them by any other method at their discretion.

Rule 10. All reports of the committee shall be entered in a book kept for said reports; all reports shall be signed by the members making same.

Rule 11. The committee recommends that the expenses necessarily attending the traveling, etc., to examine novelties where they are grown shall be paid by the exhibitor. We further recommend that after the initial exhibit has been made in the club's rooms and the committee requires further investigation, that the party exhibiting such novelty shall be notified by the secretary that if he wishes the committee to go to the place for further examination he must forward the amount in cash to the secretary of this club necessary to cover mileage, etc. The chairman of this committee shall first ascertain what such expenses would be and advise the secretary of the amount, and in no case where the money is not sent in advance shall the committee be authorized to make the visit.

Disseminated Varieties.

Rule 1. Competitive exhibits of flowers or plants already disseminated shall be judged by the scales governing same as provided in the rules for novelties, excepting roses. In case of the latter, the following scale shall be used: Size, 15; color, 20; stem, 20; form, 15; substance, 15; foliage, 15.

Rule 2. The awards under the rules for disseminated varieties shall be: First, "award of excellence for culture;" second, "award of merit for culture."

Rule 3. All exhibits at club meetings not embraced in the foregoing shall be judged by a special committee appointed by the presiding officer with the approval of the club.

Rule 4. Should less than three members of the committee of award appear at a meeting when exhibits are to be judged, the presiding officer shall, with the approval of the club, appoint others to act temporarily; the power thus granted to expire at the close of the meeting.

Special.

When the committee visits the place where plants or flowers are grown, for the purpose of making final inspection.

ion, at least three of the committee must be present before final award is made. That all notices to visit places where plants or flowers are to be judged shall be sent out by the chairman of the committee of awards.

COMMITTEE OF AWARDS.

PATRICK O'MARA, Chairman.

Committee present, Messrs. Duckham, Miller, Lenker, O'Mara, Totty.

The foregoing rules were read section by section and adopted separately, then adopted as a whole.

CHAS. H. TOTTY, Secretary.

February 13, 1905. Professor W. G. Johnson was elected to membership, and Gerard Dryer proposed.

In making his report for the committee of awards Mr. O'Mara referred to the magnificence of the exhibition, which, he said, showed a spirit of rivalry and progress, and must benefit those bringing their displays to the meeting; it must result, also, in developing the aesthetic sense of the members, inducing a spirit of emulation among those who are growing stock. The committee gave the Hinode Florist Co., Whitestone, L. I., for Crimson Rambler roses, an award of excellence for culture. Louis Dupuy, Whitestone, L. I., a similar award for ericas, for dwarf Crimson Rambler, double lilac, blue hydrangea, marguerites, clematis, and Acacia plumosa cordata, an award of merit for culture; for Crassula hybrida coccinea, a certificate of merit. The committee was favorably impressed with the possibilities of the last-named plant. Pankok & Schumaker, Whitestone, L. I., received an award of merit for culture for their Epiphyllum truncatum, Bougainvillea Sanderiana. A similar award was made to Thos. Devoy & Son, Poughkeepsie, N. Y., for geranium Telegraph. Votes of thanks were tendered the exhibitors. In speaking of his exhibit Mr. Devoy said that the geranium shown exhibited its worth as a greenhouse plant, and it would be hard to excel it as such, in his opinion. Mr. Dupuy, referring to his specialties, said that the plants he had shown were not very plentiful in this country, neither were they very profitable; the latter was one reason why he grows the stock. (Laughter.) Heaths required in Summer a great deal of moisture which the New York climate in July and August does not practically afford. The blue hortensia he had imported two years ago from Europe; it had been sold quite extensively, but had given a good deal of disappointment because of the fact that it did not bloom well. It was a hortensia, not a hydrangea, there being quite a distinction between the two kinds of plants. The reason of its not blooming well, he thought, was because it had been propagated too fast, besides being grown indoors. Planted outside in the Spring, and given ordinary cultivation, any one could succeed with it. It could be easily forced, in six weeks, and as soon as the flowers open they show the blue

color. Asked as to the possibilities of the crassula Mr. Dupuy replied that it was a plant very common in the markets of London and Paris. The flower was of excellent substance, and the plant itself would prove very valuable for early Summer, being in full beauty about June. It could be easily propagated; from the specimen which he had obtained from a French grower about two years ago, he now had 6,000 plants; it throws out a large number of shoots. The type from which this crassula was secured was a later bloomer, not flowering before the middle of July. Mr. O'Mara asked the speaker whether the plants of the blue hydrangea, had been specially treated to get the color. Mr. Dupuy responded that the plants had been grown in specially imported soil; he had tried, in the case of ordinary Hortensia japonica, the use of alum and sulphate of iron and produced a blue color, but there was no stability to it. The water he uses is hard. Mr. O'Mara stated that some years ago Peter Henderson & Co. acquired a stock of the hydrangea called acuminata, which was afterward found to be the same as the red branched hydrangea, but his firm had had it for several years before the red branched one appeared under that name. H. acuminata he considered the best pink hydrangea. He cited a case where this plant had been set out-of-doors and grown for a number of years in ordinary soil in a Jersey garden the blooms coming a magnificent blue; with cuttings taken from that plant the flowers had all come pink. A case similar to this was mentioned by Mr. Dupuy in relation to Hortensia japonica; all over Long Island the blooms on this plant, of a blue color, could be seen in gardens, but in the case of cuttings from them the blooms were of a pink color. Mr. Butterfield asked the speaker as to whether Hydrangea azurea, so called, was a distinct variety. Mr. Dupuy replied that it was a commercial name given to the plant on account of the flowers always coming blue, with him, it being actually the Hortensia rosea, a plant which gave flowers of different colors, ranging from pink to blue; it was not a separate variety.

President Traendly called attention to the fact that he had recently seen children, ranging from 12 to 16 years of age, turned away from the greenhouses in Prospect Park, Brooklyn, N. Y., and suggested that the club take up the matter. This resulted in quite a discussion as to the beneficial effects of admitting children to flower shows and to public greenhouses, and a committee of three, composed of Messrs. Butterfield, Langjahr and Reimels, was appointed to approach the authorities of Brooklyn, protesting against the debarring order and to have it, if possible, rescinded, it being also suggested that an hour could be set apart when children could visit the greenhouses, and extra watchmen afforded to prevent any vandalism or destruction on the part of the little ones.

The questions from the question box were then taken up. The first, "Why are carnation growers more progressive than rose growers?" was answered by C. W. Ward, of Queens, as follows:

Why Are Carnation Growers More Progressive than Rose Growers?

I believe that, as a class, the carnation growers are more liberal, more energetic and determined to push their flower to the front than are the rose growers. Again, the rose grower has had the advantage of having a certain amount of self conceit owing to the fact that the popularity of the rose has been of long standing, while the carnation grower knew that in order to get a standing he had to get out and hustle and make things ring. Again, the rose grower is working under an average temperature ten degrees higher than is the carnation grower. Now you know that inhabitants of tropical climates are much less energetic than those of temperate climates. The temperature of the carnation house approximates a temperate climate, while the temperature of the rose house approximates the tropical climate; consequently I consider the rose grower a tropical inhabitant and the carnation grower a temperate one.

Again, the carnation grower has the advantage of having a better following than has the rose grower when you consider it from one point of view, and that is, that it is more plastic under the hybridizer's management, and it is much easier to produce new varieties of carnations than it is to produce new varieties of roses.

Again, the facility with which the general public has accepted the improvement in the carnation, and the promptness with which it has awarded the efforts of the carnation hybridizer has acted as a strong stimulus to the carnation men throughout the country and infused into them a degree of energy and progressive spirit that has carried them on enthusiastically in their work, and produced the splendid results in increasing business which has benefited the entire florist trade—grower, commission men and retail dealer alike. Further than this the deponent saith not.

This matter was creative of a very lengthy discussion, participated in by Messrs. O'Mara, Butterfield, Wheeler, Lenker, Scott, Wallace, Harry May, Endgren, and others, in which the rose grower and the carnationist each found his champions. It was pointed out that the carnation men had the advantage of the rosarian in the ease with which new varieties could be secured, creating greater interest in the divine flower by commercial florists, at least. On the other hand, it was stated that the rose man did not advertise his goods, through public exhibitions, as largely as he might do. It was also shown that the men who had attempted the cross-fertilization of the rose, such as E. G. Hill, John Cook, M. H. Walsh, Jackson Dawson and W. A. Manda, had secured results which showed great improvement over varieties imported from Europe. Mr. Wheeler did not believe the carnation men were really more progressive than the rose men; the former had a flower that responded more readily to progress than the rose. The discussion was an interesting one, and instructive in

so far as it showed that the rose men were inclined to rest on prior laurels and did not seize the advantage afforded of displaying their goods to the same extent as did their brethren who cultivate the divine flower; advertising being considered a mark of progress, whereas non-advertising demonstrated a lack of the progressive spirit.

James T. Scott replied to the question "Is floriculture more advanced in this country than in Europe?" He spoke as follows:

Is Floriculture More Advanced in this Country than in Europe?

The question is a somewhat knotty one. No matter how well disposed one may feel toward the land of his adoption there is that something voiced in the words of Sir Walter Scott:

"Breathes there a man with soul so dead,
Who never to himself has said
This is my own, my native land."

An opinion thus given is liable, therefore, to be biased in a degree, no matter how honestly we may endeavor to face the question.

If we should confine ourselves solely to commercial floriculture, the answer would be a negative one. There is, no country in the universe where flowers are grown (especially in the winter months) for the millions to such perfection as they are here but the range of variety is in a great measure restricted. If we eliminate the rose, carnation, and violet, there would be little left, indeed; and looked at from the broadest standpoint, these three items could scarcely be said to cover the field of floriculture. Financially, this country is able to support these luxuries better than they are supported in Europe. The working classes over there find it a hard enough struggle to make money enough to keep body and soul together, without any of these added luxuries. Even if they had the money, it would be impossible to supply these grades of flowers at the same cost. The winters over there are cold and dull, with scarcely any sunshine, and during the summer it is necessary to keep firing constantly. Under these conditions it is impossible to produce the same grade of flowers at the same cost as we do here. The wealthy classes over there mostly rely on their own greenhouses for all their flower supplies, and the commercial florist, as we know him, is scarcely known on "the other side" at all. Covent Garden is largely a plant market, although during the early spring months lots of bulbous stock finds its way there from the Scilly and Channel Islands and from the south of France. The modest flower girl is found on the London streets in spring and summer, but there is not enough money in the operation to entice the Greek; and the millionaire commission man can only be fattened in such a broad and wealthy country as America.

To every European, the cultivation of roses, carnations and violets as done in this country is quite a revelation, but here it ends, and floriculture in its broader sense

seems to be largely sacrificed for this. Moreover, the tendency is to run to specialties, most times to carnations or roses alone, or vice versa, and the floricultural training of the young man in the business is therefore but superficial. No doubt he may be able to make just as good a living as if his knowledge were broader, but, from a floricultural standpoint, his training has never been finished. There are, of course, many exceptions to this as there are in anything, but those who have surmounted the barrier have done so from energy and strength of character in spite of the system, rather than because of it.

There are a few private places in this country where floriculture is just as far advanced as it is in Europe, instances: at Gould's, Rockefeller's, Untermeyer's, Border's, Ogden Mills', Dinsmore's, D. Willis James', J. Crosby Brown's, F. L. and Oakes Ames estates, Percival Roberts', Wanamaker's, several estates in Lenox and Newport; but the majority of private places here are run too much on a semi-commercial basis, for what can be got out of them; and everything is figured down to dollars and cents—merely a place where the floral essentials necessary for society events are produced more conveniently and cheaper perhaps than they can be produced in the open market; or because a whim of fancy or society's dictates demand that all up-to-date people must have these things to be in the height of fashion; just as the up-to-date spirits demand that the wealthy must own fast horses, or an expensive automobile. They largely own these things from a spirit of caprice to excel and outdo others less fortunate in the possession of the world's goods. A big bunch of flowers appeals to any nature however primitive, but how few of even those who own greenhouses will take up one small flower in their hand and admire it for the sake of the flower itself? In the language of the poet:

A primrose by the river's brim
A yellow primrose is to him,
And nothing more.

How few appreciate the spirit of the poet Burns as he was about to turn under with the plough-share a modest daisy, the first harbinger of Spring:
Wee, modest, crimson-tipped flower,
Thou'st met me in an evil hour,
For I maun crush among the stoure,
Thy tender stem,

To spare thee now is past my power.
Thou bonnie gem.

If we were to leave out the men who are directly interested in floriculture here for a livelihood, and the wealthy whose case has already been dealt with, what would be left? The poorer, everyday, working people have no love for rural beauty, and the flowers that clothe the roadways have not for them even a passing interest. How different from the old world homes where every cottage has its garden; where the roses and the honeysuckle mingle with the morning glories against the whitewashed walls of the humble dwellings; where the pathway that leads to the door has a border of flowers on every side! The edging may be of boxwood or oftener of the common saxifraga (or London Pride), or double daisies, or, sometimes, armerias (sea pink), *Cerastium tomentosum* (snow in summer). In the border behind, the snowdrop appears before the snow has left the ground, followed in quick succession by crocus, daffodils,

aubretias, grape hyacinths, primroses, iris, polyanthus, wallflowers, adonis, campanulas, veronicas, starworts, woodruff, pyrethrum, lupines, delphiniums, monkshood, ranunculus, anemones, phloxes, peonies, pansies, violets, trilliums, potentillas, and other things far too numerous to enumerate. In these small garden spots they contrive to have things in bloom from early spring until late in the fall, when the Christmas roses have to be protected from the keen biting winds with spruce branches. Flowers to these humble old world cottagers are a source of everyday delight. Few plants are bought or sold; their incomes deny this. But a spirit of good fellowship, largely enhanced by mutual tastes, enables them to barter backward and forward, and newer things thus find their way gradually into every garden. The children are reared in this atmosphere; they learn the names of the various flowers as they come and go; as other children become familiar with the names of the various household articles. As a boy, I could name every flower that grew in my father's garden, as well as every tree which grew in the district, and I was no exception. When the day's work is over men turn to their gardens for recreation; often also, from necessity, for all grow their own vegetables, which otherwise they would have to go without, their income often being insufficient to spend on needed staples. In every cottage window is to be found a wealth of bloom; it may be of geraniums, pelargoniums, or fuchsias only, but always enough to make the home look cheerful and bright. Every little country village has its annual flower show and the keenness of competition surpasses, in its own small way, a Madison Square Garden exhibition. The beauty of it is, that all are competent judges, and the minutest details are keenly scrutinized.

The love of flowers, and the love of the beautiful in nature, appeals not to those whose thoughts are sordid, whose one desire is to make money or to shine before the glaring footlights of a superficial society.

This is a comparatively new country, and men have been busy up till now developing it. Liberty loving subjects of all nations have flocked to these United States where aristocratic rule is unknown, and where one man is as good as another. Again the spirit of Burns prevails: "A man's a man for a' that;" but our work is just beginning. Ours is a missionary calling. There is here a fresh field for labor. There is here the material to work upon. There is here the wherewithal to work with; and if the work remain unfinished, it will be largely our fault.

Is floriculture in this country as far advanced as it is in Europe? No; not yet.

Questions to be answered next meeting are: "Are the street merchants and peddlers beneficial or detrimental to the florist business from the standpoint of the grower, the retailer and the commission man?" "What are the essential qualifications of a judge of cut flowers and plants?" "What are the most desirable features in a rubber plant?" and "Who is Job?" At the next meeting also there will be a display of bedding plants, and, probably, a talk on the subject by growers. An amendment to the by-laws, relative to the duties of the secretary and treasurer, also to increase the former's salary, will be discussed at that time.

Boston.

Effects of Past Winter.

Not in years have so many hardy plants suffered from the Winter effects as the present. While the two previous Winters have been considered the most severe on record, yet there has been something about the one just past that has caused death and destruction among many plants hitherto considered hardy enough for any New England Winter. Especially destructive has the Winter been on nearly all kinds of evergreens, rhododendrons and kalmias suffering perhaps as much as anything. Common hemlocks even, of large size, have suffered a great deal, and the common red cedar, of which many were killed a year ago, has again suffered quite badly. All of the finer evergreens have suffered more or less, and while it is yet too early to say what the death rate will be among deciduous shrubs, there is no question but that it will be heavy.

News Notes.

William Anderson, well known as the superintendent of the Bayard Thayer estate, at South Lancaster, underwent an operation for appendicitis on Sunday of last week. We are glad to hear a favorable report of Mr. Anderson's recovery, although he is still confined to the Clinton Hospital.

Joseph L. Galvin, the popular manager of Galvin's Back Bay store, is very ill at his home suffering from ptomaine poisoning. Mr. Galvin had been recovering, but we regret to hear that he had a relapse, and is now very ill.

Mayflower, the native species, has made its appearance this week for the first time this season.

E. Sutermeister, of Hyde Park, is bringing in some very fine Spanish iris.

W. H. Elliott is sending in some of the finest Liberty roses ever seen in Boston.

Welch Bros. are handling some fine Adiantum Croweanum, being the sole Boston agency for handling the same. They are also handling exceptionally fine American Beauty from cold-grown houses. This firm has been shipping large quantities of Easter lilies in cases direct from the growers.

A number of the prominent men in the trade visited the greenhouses of W. W. Edgar on Wednesday, to examine his fine stock of plants grown for the Easter trade.

Chas. E. and J. Robinson, of the firm of H. M. Robinson & Co., are visiting New York this week. The former will also go to Washington before his return.

John Walsh, manager of the Park street flower market, is confined to his home with sciatica.

Macmulkin is handling large quantities of yellow Marguerites and expects to have a cut of ten thousand blooms for Easter.

Kidder Bros., of Lincoln, are bringing in very fine single violets for so late in the season.

Doyle is handling some very well-grown plants of pelargoniums, which are quite attractive.

H. M. Robinson & Co. have on hand a fine stock of wild smilax and bunch laurel for Easter decoration purposes.

Mann Bros. are bringing in some well-grown Pink Rambler plants to the Park street market.

E. J. Harmon, of Portland Me., was in town this week, looking up plants for the Easter trade.

J. W. DUNCAN.

Pittsburg.

News Notes.

The Pittsburg Florists' Exchange, of which P. J. Demas is the proprietor, expects to be in their new quarters, at 228 Diamond street, in time for Easter business. They will occupy the entire building, which is four stories high.

Flower Shows.

Flower shows have been all the rage in Pittsburg and Allegheny the past week or more. The conservatories in the two cities have excellent exhibitions, and the private conservatories, particularly those of H. C. Frick and A. R. Peacock, which were open to the public, were very fine. David Fraser, gardener to Mr. Frick, has a fine display of orchids, besides other seasonable blooms. Although the hail-storm did a little damage to all these places, they will be open to the public until after Easter.

Alexander J. Guttman,

WHOLESALE FLORIST,

52 W. 29TH STREET

TELEPHONE.
1664-1665 MADISON SQUARE

New York, April 13, 1905.

Retailers:

For Easter we can supply you with a complete line of cut flowers. Our assortment of new and standard varieties of Carnations and Roses is unequalled, as are also our Violets, Valley, Tulips, Daffodils, Lilies, Callas, Gardenias, Asparagus, Maiden Hair, Mignonette, Sweet Peas, etc. There is not a variety of flowers that you cannot obtain from us at the lowest market rate.

Very truly yours,

Alexander J. Guttman.

Mention the Florists' Exchange when writing.

A Damaging Hail Storm.

Hailstones, the like of which have not been seen in and around the city since the memorable storm in 1893, caused several deaths, thousands of dollars' worth of damage, frightened many people, and stopped outdoor operations of every sort for about ten minutes on April 10 shortly after noon. Conservatories and picture galleries suffered most from the ice balls, which measured 5½ inches in circumference. The damage to greenhouses will be very heavy. The fine conservatories in Schenley Park and those in the Allegheny Park suffered a great deal, both by broken glass and destruction of plants. The private conservatories of H. C. Frick and A. Peacock, the finest in the city, were damaged considerably. The private places of R. H. Boggs and J. Craig, in the Sewickly valley, were also badly damaged. John Patton's and the Pennsylvania Railroad's greenhouses, at the same place, were damaged considerably. Among the commercial growers the heaviest losers were John Bader, at whose place about 1,000 lights of glass were broken, but the plants were not much damaged. Randolph & McClements on Forbes street, near the park, and also at their Highland avenue place, suffered quite a loss. A. W. Smith, on Mt. Washington, was likewise a heavy loser.

E. C. REINEMAN.

News Gittings.
 At this writing, 2 p. m., April 10, a severe thunder storm, accompanied with heavy hail, is passing over us. The temperature is 72 degrees.

Chas. L. Baum, Knoxville, Tenn., was in the city on his way to Richmond, Ind. He reports a fine business, and says that at Christmas he sold American Beauty roses at \$12 per dozen, which is the highest price they ever obtained for them.

There was nothing doing at the last regular monthly meeting of the Cincinnati Florists' Society; there not being a quorum present.

The S. A. F. Trade Exhibit.

I notice in one of the Chicago trade papers a discussion going on relative to the S. A. F. O. H. awarding something substantial to the exhibitors at its meetings. As a member of the society I think the only and best award the organization could make, would be to keep the trade exhibit open at all times during the convention. The exhibitors care nothing for the honorable mention, certificates, etc. They go to the convention with their goods for the express purpose of selling them, and for revenue only. They pay their money for space, and you will find these exhibitors are not very happy and pleased when the sergeant-at-arms comes howling through the hall, endeavoring to drive the members into the meeting room.

The members who attend the annual meetings of the S. A. F. O. H. know full well the hours when the meetings are called to order, and if these men have the best interests of the society at heart, you will find them in their chairs, all attention. Give the exhibitor all that he pays for, and there will be no necessity for offering prizes, medals, certificates, etc.
 E. G. GILLET.

Kalamazoo, Mich.

Trade Items.
 Van Bochove & Bro. are now rushing the erection of their new plant and a large and increasing force of men is kept busy at work. Water has been piped through a six-inch main from the city water-works, and the firm hopes to start planting roses sometime in May. At the old plant the firm has been most successful again with roses, American Beauty being especially fine the past season.
 W. C. Cook expects to open a sales-room for Easter trade, and as a downtown office besides. Mr. Cook finds business quite satisfactory this season so far.

James Fraser, whose location brings him a large Easter and Summer trade, is this season especially well fixed for a big business right on from now. Mr. Fraser was re-elected the Eminent Grand Commander of the Knights Templar Lodge here, and according to the local papers presided with grace and ease at the annual banquet held by the order after election of officers.
 S. B.

WILKESBARRE, PA.—Ira G. Marvin has leased the property formerly occupied by Eldridge & Co., on South Franklin street, and will erect a modern new flower store on the site. The new building will be of brick, two stories high, and will be 20 by 80 feet. The front will be of French plate glass, while the interior will be furnished with a vault in the basement, with heat attachment. The first and second floors will be equipped with refrigerators, while large plate-glass skylights will be put in place on the roof.

Beneficial Bacteria.
Dr. G. F. Moore, pathologist in the Department of Agriculture, delivered a very interesting lecture last Saturday afternoon at the National Museum, under the auspices of the Biological Society, on beneficial bacteria. He gave a detailed account of the experiments made by the Department in the distribution of nitrogenous bacteria to farmers. It is in the form of dried bacteria that this new fertilizer is furnished to the farmer in order that the experiments might be conducted under favorable conditions, packages of salts and other foods for the bacteria are sent with it. The contents of the Government packages are mixed in a gallon of water, and with this water the seed is wet. When sown it carries the bacteria with it, so that when the roots begin the bacteria can produce the nitrogen-producing nodules. Dr. Moore stated that out of 5,000 reports on experiments made last year, 80 per cent. were favorable, the failures being due to disobeying directions or similar causes.

Club Meeting.

There was a good attendance at the club meeting last Tuesday night, when four new members were admitted. The secretary announced that Miss Sipe, of the Normal School, an active member of the society for cultivating backyards and otherwise promoting a love of flowers among the city juveniles, had written him offering to give an illustrated talk before the Florists' Club at any time or place the club might designate. Miss Sipe's offer was accepted, but as the club room is on the fourth floor of Schmidt's Hall, it was proposed to try and obtain a hall for the occasion which would be more easy of access.

The Florists' Club entertained the board of directors of the S. A. F. O. H. at a banquet at the New Willard on Wednesday night, April 5, when about forty members were present. Small & Sons kindly decorated the table for the occasion. A vase of Peter Bisset's new rose stood on the sideboard, and was very favorably commented upon. Vice-President Freeman acted as toastmaster. Among those whom he called upon for a few remarks were: Professor B. T. Galloway, of the Department of Agriculture, who spoke of the cultivation among children of the love of flowers. W. R. Smith spoke of the good the florists had accomplished; E. A. Moseley, secretary of the Interstate Commerce Commission, told of the good the commission was doing with reference to railroad rates which would eventually benefit the shippers. W. H. Elliott, Philip Breitmeyer, W. F. Gude, Peter Bisset, John Hammer and several others were called upon. At the conclusion Philip Breitmeyer thanked the club on behalf of the board for the courtesies shown them during their visit.

A Very Common Result.

I have received more orders through your paper than any I advertise in.

Our Gallery of Fine Specimens

Plate 97

Copyrighted, 1905, by A. T. De La Mare Plg. & Pub. Co. Ltd., New York

THE SUNKEN GARDEN, FAIRMOUNT PARK, PHILADELPHIA, PA.

One of the remaining attractions of the Centennial of 1876. Its original conception has been maintained, different plants being used from year to year. The festooning of the banks, the ends of the festoons meeting in little circular beds of flowers, adds to the chief attraction—the central mass of bloom. The fine avenue of trees lining the bed is of the Oriental Plane. They are in exactly the position such a tree demands.

New Scarlet Carnation Cardinal

SPECIAL OFFER Having been very favorably impressed with this Carnation, we purchased a large stock of it, securing early delivery, with the intention of growing it for the New York Market, but we have received such a large number of orders for our new Carnation **ROBERT CRAIG** that it has become necessary for us to devote the space intended for the Cardinal to stock plants of Robert Craig for propagating purposes. Therefore, our selected stock, consisting of 3,000 plants from 2-inch pots, is now for sale. It is in especially fine condition and we are certain will prove a very profitable investment for any florist who needs a first-class fancy scarlet.

LOUISIANA

The Grand Prize Canna

We exhibited at St. Louis 34 varieties of Cannas, all of which were originated and introduced by ourselves. On this exhibit we fairly won the Grand Prize, the only Grand Prize awarded to Cannas at the St. Louis World's Fair.

LOUISIANA is a Giant Orchid-Flowering Canna. It was exhibited at St. Louis as an untraced seedling and attracted much attention. The flowers are enormous in size; vivid scarlet in color, and covered with a glowing velvety sheen. It is a great bloomer and has splendid green foliage.

65 cts. each; \$5.00 per doz.; \$35.00 per 100

Including Mont Blanc, the only white canna; Buttercup, the very best yellow canna; Brandywine, the best crimson-flowered bronze-leaved canna; Gladiator, the most striking yellow-spotted canna; Betsy Ross, the best pink canna; we offer 65 varieties, the most complete and largest stock of Cannas in America. Ask for list and prices.

FISCHER'S

GRAND FREESIA PURITY

A magnificent, snowy, glistening white of very large size and great length and strength of stem. A dozen sprays make as fine a showing as a dozen white carnations and can be used wherever carnations are used for decorative purposes. A truss bearing from eight to eleven buds, of which six are frequently open at one time, make an immense flower. It is of great substance and bears shipping without bruising. Stems can be cut two feet long and are as rigid as sticks. It is very prolific in bloom, producing three to four rich shoots of eight buds each, besides the main flower. Bulbs no larger than dried wax beans of this grand Freesia make as large a flower as the large bulbs, only the stems are shorter. All growers should try some of this Queen of Freesia, for when "once grown always grown." Price for large bulbs, \$4.00 per 100; \$30.00 per 1000. 500 at 1000 rate. A discount on 5,000 and 10,000 lots.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION.

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierpont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

FLORAL PARK, N. Y.—John Lewis Childs has secured possession of Frank Banning's new seedling gladiolus, known as Reuben H. Warder, and expects to offer it to the trade next season.

NEWPORT, R. I.—The George A. Weaver Company is advertising largely sweet peas that have been treated with "nitro-culture." Both gardeners and seedsmen alike are watching the results of this matter with much interest. The Weaver company has also offered prizes to its customers for the best bunches of this flower grown from this treated seed.

PORTSMOUTH, VA.—There are few people in Portsmouth who know that just beyond the city limits there is one of the finest and largest flower farms in this country. Started two or more years ago as an experiment, by an English firm, it is now an established business and yields a large revenue. The idea of ten acres in nothing but flowering narcissi, is one that is hard for the average mind to grasp. The farm is owned by the Hubert Bulb Company. Every day, at this season of the year, Manager J. Guille may be seen at the express offices supervising the shipment of the most remarkable truck that is shipped out of Norfolk county, famous, although it is for everything the soil produces.

He states that there is an excellent market for the product of his farm and that just about this time of year he is shipping every day about 25,000 blooms to New York, Baltimore, Boston, Pittsburg, Philadelphia and other points. Good prices are realized, too. About \$1 per 100 is the present ruling price, and at some seasons this is higher.

Mr. Guille says that the soil hereabouts is very fine for the purpose to which he is adapting it. After a search all over the country, the firm he represents selected this point on account of its equable climate and soil conditions. It was necessary to make extensive experiments before this decision could be reached. These experiments, as stated, however, have resulted most successfully and the future of the industry is assured.—Star.

 Mention the Florists' Exchange when writing.

DILL AND PARSLEY SEEDS.—In the protest of Harry Hawley against the assessment of duty by the collector of customs at the port of Galveston, on the authority of G. A. 5272, the Board of General Appraisers sustained the importer's contention that certain dill and parsley seeds should have been classified under paragraph 548, tariff act of 1897, relating to aromatic seeds which are drugs.

CORN IMPROVEMENT IN INDIANA is the title of Bulletin 105 (March, 1905,) of the Purdue University Agricultural Experiment Station. It is stated that "much of the seed corn sold by so-called seed corn dealers is nothing more than crib corn. This state of affairs can be remedied only by the purchasers insisting on being supplied with corn on the ear, and accepting it only after they have satisfied themselves as to its quality and germinating power. All honest dealers will guarantee their corn. There are a number of good dealers in the State who breed their own corn, and these men deserve to get a good price for what they offer for seed."

European Notes.

Our dreams of a complete termination of the Winter have been rudely dispelled by an attack of cold north winds accompanied to-day with a heavy fall of snow. It is to be hoped that this check will be but temporary, for vegetation is now so far advanced that the destruction would be terrible in its effects both on seedlings and yearling plants. The March and April broccolis are now in full head, and are showing signs of serious injury inflicted by night frosts. The later and more valuable varieties are so well protected by their foliage that they may be accounted safe. Early and delicate sorts of turnips cause us the greatest anxiety, as they are dying off without any apparent cause. Rutabagas of the Monarch and Best-of-All type are also doing so badly that holders of reliable stocks decline to sell except at an advanced price.

The heavy trade in garden seeds done during the months of February and March has been succeeded by the inevitable slump. As a result, the timid dealers are falling over each other in their efforts to dispose of any small surplus they may have on hand. Consequently, the advertising columns of the trade papers teem with quotations which, assuming the goods are genuine (quite an assumption, by the way, in many cases), are far below the first cost. Only the greedy bargain hunter benefits by this folly, and they not infrequently find that they have paid too dear for their whistle.

English horticulture has just lost one of its few remaining grand old men in the person of William Paul, the eminent nurseryman and seedsman of Waltham Cross. While he was truly an all-round man, he will be chiefly remembered for his work as a rosarian in which he achieved a distinction second to none. An untiring worker, a diligent student, combining with a keen intellect a most gentle and affectionate disposition, a man whose word was his bond both in its letter and its spirit; the soul of honor, utterly incapable of anything sordid or mean; his long life of 83 years has closed serenely and beautifully as a perfect autumnal day.

EUROPEAN SEEDS.

P. S.—The extraordinary heat now prevailing in Southern Spain (112 degrees F. in the shade), is quite out of the seed growing region.

Lonicera Tatarica Grandiflora.

But few shrubs are better known in collections in this country than the Tartarian honeysuckle, *Lonicera tatarica*. It is to be found among old shrubs planted thirty years ago, and, to-day, it is still called for when planting lists are being made up. It is not that this bush bears large and showy flowers, for it does not; but they are very pretty, and they come in early Spring, and are unlike the flowers of any other shrub blooming at that time. The flowers of the common Tartarian honeysuckle are light pink in color. Those of the one before us, the variety grandiflora, are also pink, but they are of double the size of those of the common one, and being arranged nicely along the length of the shoots, as is the case with all of the species, it is a bush admired by everyone. As said heretofore, it is still called for on planting lists, because of its dissimilarity to other shrubs in habit of growth and style of flowers.

Spread of San Jose Scale.

In a recent issue of *The Florists' Exchange*, Alexander MacLellan suggests that the spread of San Jose scale is done by bees, the scale attaching itself to the legs of the insects when they are visiting the flowers of fruit trees. As the young of the scale are not hatched until some time after the trees are out of flower, they could not be carried from tree to tree at that time, but, later, when the trees are in fruit and the fruit tempts the bees, it may be that some scale insects would be carried about in that way. In the vicinity of cities, such as Philadelphia and New York, fruit trees are daily visited by English sparrows, and this bird more than any other is the cause of the spread of the scale. A cat may occasionally climb a tree, and a robin or some other bird will visit it at times, but the sparrow is daily hopping from branch to branch and from tree to tree, spreading the scale.

Situation for Trees Not Wholly Hardy.

Those in the Northern States who desire to experiment with trees from a warmer climate would have the best chance of success were they to plant them in not over deep soil and on high ground, where the wood would have a chance to ripen up thoroughly before Winter set in. This is already followed by many in the case of fruit trees. It is known that peaches grow very late in low ground, and not being over hardy it is an undesirable thing to have occur. These trees are, therefore, not set out in deep ground, where it is known they will have severe weather to encounter in Winter.

one has done. And it was a cold one, freezing, and freezing hard every day almost. But with all the cold there was a deal of snow. The ground was well covered with it, and it was not in one or two great storms, but in over twenty falls. This made the air moist and kept the ground covered. Practically, there are no losses among the trees. Small evergreens were snow-covered, and the larger ones were preserved by the moist air. Even yews, which are often browned badly on their southern sides, are in good condition this year.

Last Autumn one of our neighboring planters set out several hundred American Arbor vitae, bushy, three-foot specimens. The rows ran east to west. The block is in very good condition, excepting the outside row on the north, which is badly hurt, as it caught the sweep of the wind. It shows what protection would have done for them had it been given. As it is, they were sacrificed to save the others.

A few rhododendron leaves are scorched here and there, but not many. And this brings me to say, is there one among all the rhododendrons with such hardy, grand foliage as *R. Everestianum*? To me, it seems one of the very best for foliage.

Get Seeds Sown.

At this time of the year nurserymen are at their wits' ends to know which thing to do first. Planning in Winter is a help, but, plan as one may, all that should be done, and in rotation, it is impossible to do. The seasons are not always the same, and when one comes rushing along, as this Spring has, right on the heels of Winter, it is hard to follow the best of planning. This all leads me to the subject of sowing tree seeds. Nearly all firms have some to sow, and nothing so conduces to success as getting them into the ground early. As an example, look under any maple tree that had seeds on it last Fall, and the little seedlings will be found already making their leaves. What acts against the success of the seeds growing when sown late is that the heat of the season comes on them before they have started their growth, and the moisture, too, has been lost. The present time, early April, is an ideal period to sow. In fact, it could have been done still earlier to advantage this season, the ground permitting it. Those nurserymen are wise who prepare their beds in the Fall, as so many do. They lay out the ground, smooth it off roughly, leaving nothing to be done in Spring but a final smoothing before the seeds are ready. Then in go the seeds the very first days the soil can be worked into proper condition.

Evergreen seeds are greatly helped by early sowing. The little seedlings will do far better in Summer if well advanced in Spring, as they will be if sown early. And not nearly as much damping off occurs in April as in May.

Transplanting Hollies.

A great deal of the trouble met with in transplanting hollies, evergreen magnolias and many other broad-leaved evergreens, comes from not cutting off the foliage. Many of these trees are almost without roots, and when transplanted with leaves left on them there is no way to sustain the foliage and tree, and the latter dies. When the leaves are taken off it places the tree in the position of a deciduous subject, and then, well pruned, as a deciduous tree should be, its chances of living are very good.

Many a specimen of the English holly is sold to parties for Christmas. If these trees are kept in some cool, damp place for the Winter, the leaves being first cut off, and the pruning then done before planting in Spring, their chances of living will be very good.

It is customary for southern nurserymen to cut off the leaves of *Magnolia grandiflora* before delivering them to their customers, and it has been suggested that trees of it in the North would winter better were the leaves cut off on the approach of cold weather.

Many have tried the transplanting of hollies direct from the woods, and, usually, have failed. But this need not be. If dug and kept damp from the time they are taken out until replanted, well-pruned, and the leaves cut off, success will follow, as many an experiment has proved. The holly will break freely from the old wood.

JOSEPH MEEHAN.

A Handy Device.

Since the adoption of wire stakes for roses, growers have felt the great necessity of a better method of fastening the stake to the small guy wire that is run overhead for the purpose of steadying the stakes, and holding them in an upright position.

Through the courtesy of Mr. Blake, 26 Boerum place, Brooklyn, we illustrate herewith a patented device called Blake's Patent Lever Clip, which will prove a great boon to all growers. The device is so constructed that it can be placed in position on the stake and the guy wire in an instant, and becomes at once immovable. All who have spent time in wiring, or tying the rose-stakes to the guy wire, will at once see the great advantage this clip will afford over the old method of tying. The cost of the clip is very small in comparison to its utility, and it only needs to become known to be used by every grower.

LONICERA TATARICA GRANDIFLORA

The bush illustrated is of rather less upright growth than usual, but it is none the less beautiful because of this. To bring about the shape seen, but little pruning must be done, for when cut back closely it forms strong shoots, of an upright growth, with but few of the smaller twigs which give grace to such a bush.

In addition to the grace of bush and the attraction of its flowers, berries succeed the blossoms, which, in some cases, are valued more than the flowers are. In nearly all varieties the berries are red in color, which is the case with those of grandiflora. As the berries are not ripe and of their brightest color until Summer comes, the attraction of the bush at that season is more noticeable than at its period of flowering. And in many nursery catalogues it is the berry-bearing quality that is dwelt on rather than that of flowering when mention is made of these *Loniceras*. This is the case with *Morrowi*, *bella candida*, *Ruprechtiana* and others, as well as those before named. In *Standishii* the berries, red in color, form and ripen in a very short time, embellishing the bush as early as the close of May. *Standishii*, and another, *fragrantissima*, are valued for their very early sweet-scented flowers, which open in the first days of Spring; and in addition to this *fragrantissima* is very near a true evergreen.

JOSEPH MEEHAN.

A correspondent wrote me recently from Minnesota of his efforts in testing the sweet gum there. In the first place, he should get his supply from trees growing as far North as he possibly can, and he should then plant them on dryish ground, where the growth will be short, stocky and well ripened by the time Winter comes. All trees from warmer countries demand this. The evergreen magnolia from the South will live in the vicinity of Philadelphia in such a situation, but when in deep soil it grows so late that its wood is too immature to stand the cold of Winter.

High ground and not over rich is the place for every tree regarding which doubt exists as to its hardiness. Give them such a position, and then mulch the ground well on the approach of Winter, and if they do not live through it nothing more could have been done for them.

Effects of the Winter.

Now that buds and blossoms are on our trees, the time is here when we can say what harm, if any, the Winter has done us among trees and shrubs. So far as concerns Eastern Pennsylvania the harm is almost imperceptible. I have no recollection of a recent Winter which left so little evidence of its passing as this

Dreer's Select List of HARDY PERENNIALS

We offer here only the most Showy and Decorative Sorts, including varieties suited for CUT FLOWER purposes. These varieties are marked with an asterisk (*)

For the most complete list of Hardy Perennials offered in America, see our current Wholesale List.

This important branch of our Plant Department has been completely reorganized during the past year, and we are now able better than ever before to supply almost any demands and to execute orders promptly.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns the first season. This, in most instances, is a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

Table listing various plants such as Acanthus Mollis, Achillea Filipendulina, Adonis Pyrenaica, Agrostemma Coronaria, Ajuga Reptans, Alyssum Saxatile, Anemone Japonica, Aquilegia Blandia, Chrysantha, Coreopsis, Dianthus, Digitalis, Erigeron, Geranium, and others, with columns for price per doz and per 100.

Heating.

(144) I wrote you about heating greenhouses a week ago. The house in which I have a three-inch flow and three two-inch returns on each side, heats the distant end of the house all right, but the end where the return enters is about 5 degrees colder. The house is 17x100 feet, three-foot walls. Would it do to run a three-inch flow to house, on entering house, divide three-inch into two two-inch pipes, running under purlins one-half way down roof to far end, and returning three two-inch pipes on each side? I name two-inch pipe as I have plenty of it. I desire a temperature of 40 degrees in zero weather. Wouldn't this give me a better temperature at the near end of greenhouse, instead of being 5 degrees colder, or would I lose too much heat by using two-inch pipe? W. C. P.

—This difficulty is not unusual in heating jobs of this kind. It can be overcome in your case by increasing the returns on the boiler end of the house. You have at present three two-inch returns on each side. We would suggest that at a point 50 feet distant from the boiler end you place an extra return on each side, making four returns on each side for the 50-foot run nearest the boiler. This will increase the temperature five degrees and your house will have more uniform heat. These extra pipes can be run in the form of a separate coil from the overhead main at a 50-foot point distant; or the present return could be enlarged to four pipes by the use of a side branch in the shape of a Y piece. I would not advise dividing the three-inch overhead main into two-inch. Make your connections from the present three-inch main. U. G. SCOLLAY.

I have a small tubular boiler, 6 feet in height, grate 2 feet in diameter. I have two small houses I wish to heat with steam. They are 17 1/2 by 35 feet each, even span, 9 feet to ridge pole, 5 feet to eave of house, 18 inches of glass on sides. The temperature never falls below 16 degrees. I want to keep a night temperature of 60 degrees in both houses; all pipes under benches, if possible. I would like to know if this boiler will do at all for heating one or both houses. If so, I would like some information on piping, size of pipe, placing of boiler, height of smokestack, etc. SUBSCRIBER.

—The capacity of the boiler named is about good for 1,800 feet of one-inch pipe. It is, therefore, more than large enough to do the work mentioned. As it is desired to run all the pipes under the benches, I would advise running a 1 1/2-inch main to the far end of each house, dropping toward the far end, and placing a coil of one-inch pipe on each side of the houses, said coil to consist of four one-inch pipes. Have these one-inch coils drop from far end to boiler. It will be well to place a one-inch valve on each of the one-inch pipes, both on the far end and the end nearest the boiler. This will allow shutting off as many pipes in each coil as the weather demands. The main return entering the boiler can be 1 1/2-inch pipe. Place the boiler in the pit, so that the top of the boiler will be about one foot below the return end of the one-inch coils. The height of smoke pipe will be governed by surrounding conditions. Two feet above ridge of houses will do, if nothing prevents good draft. U. G. SCOLLAY.

Greenhouse Building.

(145) I am contemplating the erection of some greenhouses very shortly, and would like to ask you a few questions regarding same. 1. Is there such a thing as an opaque or yellow-colored glass that would obviate whitewashing in Florida, and what would it cost per square, say 40,000 feet? Would it be an advantage, as 80 to 90 degree weather is the rule and not the excep-

tion, even in Winter? 2. Would you set the system of houses broadsides north and south, or east and west? 3. Would low pressure steam heat be preferable to hot water heating in this climate of sudden low temperature down to 20 degrees, lasting usually three to four days? 4. Could I save the expense of an irrigating system of pipes by converting by means of a shut-off valve the steam-heating pipes into water pipes, using both alternately, as the case required? C. F. S.

—In the matter of using opaque or yellow-colored glass to shade the house, and obviate the use of whitewash, I would say that in cases of this kind ground glass has been used. It is usual, in palm houses, to use ground glass, and to sometimes even whitewash or paint it. There is a glass, ribbed on one side and ground on the other, which has been used to some advantage. This does not even require painting or whitewashing. Using yellow-colored glass, we would not advise. Prices for this glass can be obtained from the various advertisers in The Florists' Exchange.

The correspondent does not state for what purposes he intends to use these houses, so that our reply must be somewhat guarded. Regarding the aspect of the houses, they may run either north or south, even span, or east and west, three-quarter. Hot water heat would be preferable, in my opinion. The system of piping may be arranged that some of the pipes in the various heating coils can be connected up, and arranged with valves to the water supply, and these pipes used in connection with bibb cocks to supply the house for watering purposes. In doing this, however, great care must be used in the valve arrangement, as trouble might result. U. G. SCOLLAY.

Soil for Mignonette.

(146) How many years after having been used in greenhouse for mignonette must soil be left in grass before fit to use again in houses? Given a good soil from newly plowed sod, could all fertilizing of mignonette be done by a top dressing or by liquid feeding for A1 cut flowers? S. E. B.

—Soil that has been used in the greenhouses and put back on the land should remain there three years before being used in the greenhouse again. It would be better to mix the manure with the soil than to depend altogether upon a top dressing. If one can have a constant supply of liquid manure, and knows how and when to use it, there is no better method of feeding any kind of plant; and mignonette could certainly be grown to perfection in that way.

American Beauty in Open Ground.

(147) Will it be suitable to plant out American Beauty roses in the open ground, and how should I fix the soil? I have also plants in hotbed from seed; they come up but they rot away at the root. Can you give me a remedy for this? L. K. N.

—For planting roses outdoors, the soil should be worked deep and have a heavy dressing of manure mixed with it. If the land is at all moist, it should be properly drained. For this purpose, American Beauty is no better than many of the other hybrid varieties; neither will it produce as good flowers as when grown indoors. The reason the seedling plants are rotting is no doubt because they have been left in the seed bed too long, and have become too crowded. To avoid this, transplant them into other soil as soon as they are large enough to handle; also see that they get ventilation whenever possible.

Decorative Asparagus.

(148) Can Asparagus plumosus and A. Sprengeri be field grown for seed or cutting in Southern Virginia; and would they stand the Winters? How soon will strong seedling plants bear seed; or how soon would they be large enough to commence cutting? What is a string, as commercially sold, and how prepared for sale? B.

—Whether or not the varieties of asparagus mentioned can be grown profitably for seed or cutting in the South can only be answered by actual

THE E. G. HILL CO.

THEIR TWO GRAND NEW CARNATIONS

MY MARYLAND AND JESSICA

MY MARYLAND is already well and favorably known, having been exhibited freely at the various flower shows and florist club meetings the past Fall and Winter, and in every case elicited the highest praise and most favorable comment. We pick this variety to quickly and easily displace all other whites for first honors, not alone in exhibition, but in commercial points as well. We claim for it a robustness of constitution quite unequalled in any other variety and an ease of culture that will delight the heart of the grower. The great vigor of both parents (Norway x Lawson) seems united and improved upon in this variety.

In JESSICA we have in the red and white variegated class, what My Maryland will prove among white. It is descended through several generations of variegated seedlings of Helen Keller and Bradt extraction on the one side and Lawson on the other. A strong, thrifty growing variegated seedling bearing the seed. It is a trifle heavier in growth than My Maryland and just Lawson height. Aside from these differences and the color, the description of My Maryland applies to Jessica. Under favorable conditions four-inch blooms are not uncommon. We pick Jessica to win over any other variegated variety.

Both of the above are free propagators. We are thoroughly familiar with them and know what they will do. We will be in a position to deliver stock early and on time, and assure the trade that no disappointments will result on that score.

We have already booked many orders. It pays to be early. Orders booked are subject to cancellation by the buyer if unsatisfied with either variety, up to the time the cuttings are received.

Price: \$2.50 per doz.; \$12.00 per 100; \$100.00 per 1000

News of the Week in Brief.

A Grand Rapids (Mich) florist has a white sport of Mme. Abel Chatenay rose.

George Cook, of Washington, D. C., is superintendent of the S. A. F. Trade Exhibit this year.

Lily flowers are being shipped from the Bermudas to the United States for Easter, as usual.

Fred Burki, of the Bakertown (Pa.) greenhouses, has some promising sports of Asparagus plumosus.

T. P. Langhans, president of the Pittsburg and Allegheny Florists' Club, lost his father by death last week.

On April 7 the widowed mother of Luther Burbank celebrated her 92d birthday at their home in Santa Rosa, Cal.

Carl Jurgens, Jr., son of the well-known bulb grower, of Newport, R. I., was married on Monday last to a Washington (D. C.) lady.

The suitability of Porto Rico as a locality for the growing of the Farquhar lily, is being investigated by R. & J. Farquhar & Co., of Boston.

P. C. Reynolds, a writer on horticultural subjects, and at one time secretary of the Western New York Horticultural Society, is dead at the age of 78 years.

Hail storms occurred the past week in Kansas, Kentucky and Ohio. Some greenhouse glass was broken, most of which was insured in the Florists' Hall Association.

The Illinois State Florists' Association has been incorporated. A report states that an appropriation by the State of \$15,000 (half the amount asked for) has been made for the purpose of this organization.

The A. H. Hews Company, flower pot manufacturers of Cambridge, Mass., have offered a silver cup, valued at \$25, as a prize to be competed for at the Boston show of the American Carnation Society next January.

The cool weather of the past week has been helpful to forward plants, and a drawback to those retarded. Still there is every indication of a plentiful supply of stock for Easter. Some azaleas in the East are reported passe.

The Boston Gardeners and Florists' Club discussed the subject of alleged degeneration of the rose and carnation at its last meeting. The majority of the members were of the opinion that improvement rather than deterioration is the order of the day.

New York's Plant Market.

It is gratifying to note that the recent remarks concerning a plant market for New York, appearing in our issue of April 8, are receiving consideration from the metropolitan daily press. The following are some of the comments thereon that have appeared:

For years the wholesale florists who supply the New York trade have urged the city to build and lease to dealers a public market, but without success. Now the hope of getting a municipal building is weakening, and The Florists' Exchange, a trade paper, has been investigating the flower and plant sections of Covent Garden Market, London, to show the practicability of establishing a similar institution here. Covent Garden Market is a proprietary exchange, and the flower and plant sections are very profitable to its owner, whose principal difficulty appears to be to furnish room enough to meet the demands for space in the buildings. The plant and flower trade in New York is an important and remunerative branch of commerce. Many of the dealers have acquired wealth in it, and the capital to build a great central market could be raised without difficulty. Properly conducted, such a market in New York would unquestionably prove profitable, and sooner or later it will be established. At present the plant growers meet their customers in the open air, or under a tent, and their facilities are entirely out of proportion to the volume of the business they do.—New York Sun.

Spring and Easter, the season of flowers, makes a certain editorial in The Florists' Exchange appeal as particularly timely. A London correspondent of that periodical had written an article on the workings of the Covent Garden flower market. The editor of the local paper queried "Why has New York no Covent Garden?" Why, indeed, when we want to buy Easter lilies and Spring flowers with which to remember our friends, may we not honor the flowers by our prettiest clothes, and make a real nice social occasion of it by going to market, seeing everybody we know, and choosing our blooms in comfort. I know just one smaller Western city in which that is done. In Cincinnati every woman who dresses her prettiest Saturday afternoon to do the matinees or Fourth street—their miniature Broadway—invariably visits the flower market before she takes her car to the hilltops. It is a quaint, beautiful brown building on Sixth street, occupying a block in length—a monument to one of the smoky city's many philanthropists. Every Saturday afternoon in the Winter is a notable reception to various blooms, but the Saturdays before Easter and Palm Sundays are veritable social crushes. Carriages crowd the block as if at society's smartest wedding, while pretty girls, women, and men in all classes of life make their way to honor the flowers. Such little sentimental customs are not bad, and even busy New York would have time for them if the conditions were suitable. One can scarcely picture a social occasion at Canal or West streets; still even that situation might do if the environment were made sufficiently attractive. New Yorkers have a way of going far to find what they like.

Now, if they would only all stop talking about who should give and who shouldn't, and all such tiresome details about money, but just seek some kind philanthropist here who wanted to give us a flower market.

The hopes of the city erecting such a building seem as remote as ever. This year again the florists present their wares under the tents of Canal street. Yet the flowers, are not they all and more of the decorative part of Easter? Surely they brighten the lives of everybody through the year. They cannot be sufficiently honored.—The Globe.

A New Publication.

THE COUNTRY CALENDAR.—This is another addition to the latter-day list of periodicals devoted to the subject of outdoor employment and enjoyment; life in the country in its many and varied phases, civic improvement and kindred matters that, happily, are at present largely engaging the attention of the American people. The scope of the journal is not at all conveyed by its title, which seems to us a most inept and meaningless one for the purpose intended. The Calendar is a handsomely illustrated work, its initial number covering a diversity of subjects from the favorite sport of ex-President Cleveland to Lobsters under Government Management, the Truth about Lightning Conductors, and Horace Greeley as a Farmer. Yachting also finds a place in its pages; and automobiles are not forgotten. The gardening end of the magazine is represented by an article on Growing Roses in the Garden, by M. H. Walsh; notes on the vegetable garden and orchard, pruning shrubs, and others. There is a wealth of excellent reading in the periodical, enhanced by the beautiful accompanying illustrations; in fact, pictorial effect rather than purely practical instruction seems to be the aim, pictures being often more convincing and informative than the written word. Covering such a multiplicity of subjects as does the magazine, it is just possible that full justice cannot be done to any one of them; yet the Country Calendar, in our opinion, augurs well to take a foremost place among the periodicals of its class. We wish it every success in its varied mission. It is published by The Review of Reviews Book Company, New York, at \$3 a year; 25c. a copy.

PAMPHLETS RECEIVED.

THE AMERICAN CARNATION SOCIETY.—The report of the proceedings of the fourteenth annual meeting of this society, held at Chicago, Ill., January 25 and 26, 1905, is being distributed by Secretary Herr. It contains the reports of the judges on exhibits, a stenographic account of the society's deliberations, a list of the carnations registered in 1904-05, and a list of the members of the organization. All the papers read at this meeting were valuable, the one on carnation diseases and the ensuing discussion being particularly interesting. The volume gives in itself full value for the yearly dues, which are \$2. A fine portrait of President Hartshorne forms a frontispiece.

Jonathan B. Morey.

Hon. Jonathan Barnhart Morey, an old and highly-respected citizen of Dansville, N. Y., died at his home on April 10, 1905, of consumption, after an illness lasting for a year. For many years he was a member of the large nursery firm of Sweet & Morey. In 1885 they dissolved partnership, Mr. Sweet continuing the business, and Mr. Morey forming a co-partnership with his son, J. B. Morey, Jr., the new firm being known as Morey & Son. Mr. Morey was 68 years of age. He served as Assemblyman from his home district with distinction, was a leading citizen of Dansville for many years, and active in the business and political life of the village. Besides his widow, he leaves one daughter, Mrs. Herbert Chase, of Huntsville, Ala., and two sons, J. B. Morey, Jr., and Sidney Morey.

Platt C. Reynolds.

Platt C. Reynolds died April 13, 1905, at his home, 35 Meigs street, Rochester, N. Y., April 13, 1905, aged 78 years. Deceased was born in Northeast, Dutchess County, N. Y. He was a son of Isaac and Sarah Reynolds, with whom he removed to Palmyra when a boy of 10 years. He went to Rochester in 1864. For a third of a century he held editorial positions on several of the leading farm journals of the State, among them the American Home Journal, of which he was agricultural and horticultural editor for about twenty years. He contributed frequently to the columns of Green's Fruit Grower, of which he was horticultural editor for several years; the New York Tribune, Ohio Farmer, New England Farmer, the Country Gentleman, and others. He held the place of secretary for the Western New York Horticultural Society until his illness compelled him to retire. He leaves a widow and three daughters.

The Late William Paul, V.M.H., F.L.S.

An Historical Review.

By the death of William Paul, at the age of 83 years, British horticulture has sustained a loss similar to that of the American confraternity on the decease of Thomas Meehan. William Paul was born a few years prior to the date when the steam engine on a railroad was established, and the introduction of the hot-water heating system for greenhouses was coeval with his entry into the world. His father was Adam Paul, a Scotsman, and in this connection it is remarkable to notice that our Veitchs and Laings, Russells, Wallaces and Barrs—all of them leading London firms at the present day—were originally started by native-born Scotchmen. William Paul was early acquainted with the leading men of horticultural fame sixty years ago. Loudon, a Scotsman, who was father of British horticultural journalism, and that is the earliest of all horticultural journalism, was at the height of his great fame in 1830-1840, and Mr. Paul knew him intimately, having dined with him at his home in Bayswater, then a center for the fashionable dilettante of the thirties. Loudon died in 1843. The deceased gentleman was also contemporary with, though much younger than, Dr. John Lindley, Sir Joseph Paxton, Robert Fortune, the renowned collector of Chinese plants and introducer of the tea plant into India; the Rev. J. M. Berkeley, the fungologist, and Dr. Robert Hogg, the pomologist.

Being of an active, enterprising mind, Mr. Paul was in the forefront of all the progressive movements during his time. He was a member of the committee of the National Floricultural Society which became established in 1851, and was the sole surviving member of that body at the time of his death. The formation of that society was owing to the suspicion that arose against George Glenny, the most noted and influential florist of that and a slightly prior date. His word was practically law, and awards to novelties were not always impartially bestowed; hence the society. This society became the Floral Committee of the Royal Horticultural Society in 1858, which still exists.

Mr. Paul's young manhood coincided with the changed practices in fruit tree culture, with the introduction of mowing machines, and with the earliest distinctive achievements in cross-breeding and hybridizing. What changes have been wrought since the application of the knowledge of sexuality in plants is amply demonstrated in the gardens all over the world to-day, and it is gratifying to find that the achievements by hybridization and selection have lately been greatly augmented by the skillful work of an American citizen, Luther Burbank. However, it was in England that the earliest work of this nature became known. Regarding fruit tree culture, which the Anglo-Saxon race in the United States is developing so rapidly and so extensively nowadays on true

scientific lines, it may be remarked that when William Paul was over 20 years of age, root-pruning was all but unknown and rarely practiced as an aid towards producing fruitfulness. Grafting on the Paradise and on the quince stocks for apples and pears respectively had only shortly before begun to be practiced, and the methods attempted for the suppression of insect and fungoid pests, most of the latter being only slightly understood, were often extremely ludicrous. But the forerunner of your American Emory fumigating box was surely our grandmothers' crinoline of 60 years ago, which, we are assured, were used over gooseberry bushes, which could then be fumigated from below.

These things I mention to show how varied, and, we may say, advanced, have been the changes experienced during the lifetime of one representative horticulturist. From the days when science was not, to these latter days when science probes all—it is a step.

French roses long held sway in England, but Mr. Paul was one of the earliest to begin crossing and raising good, improved English varieties, and his fame and that of the firm he founded, rests largely on roses. He separated from his elder brother after the father's death, so that the present extensive general nursery and seed business at Waltham Cross, a few miles from London, was entirely built up by himself, assisted latterly by his son, Arthur William Paul, who will carry it on without change. The camellia, the hyacinth and the hollyhock were other plants upon which the late Mr. Paul spent a great deal of labor.

As an author he will be best remembered by his *magnus opus*, "The Rose Garden," the first edition of which appeared in 1848, a notable date in many respects, political and social; and the tenth edition of the same work was published last year. It remains as a monument to him, and is the most complete and exhaustive book on roses. Some of his books have been translated into several languages, his list, as an author, comprising with the above, "Roses and Rose Culture," the "Rose Annual," extending from 1860 to 1881; "The Handbook of Villa Gardening," "American Plants, Their History and Culture," and numerous shorter essays and articles. I believe his collection of old horticultural, floricultural and arboricultural books was the most complete private assortment in this country, numbering hundreds of volumes, and all catalogued.

J. HARRISON DICK.

OUR READERS' VIEWS

The Needs of the Rose.

Editor Florists' Exchange:

What is called for more than anything else in rose culture, it seems to me, is the development of hardiness and free-blooming qualities, combined with beauty of flower and fragrance. Much is being done in this respect already. In time we shall have a class of roses with all the free-blooming qualities of the teas, joined to the sturdiness of the hybrid-remontants. Then, when a sure catholicon for the thrips out-of-doors, is invented, the rose millenium will have arrived.

GEORGE H. ELLWANGER.

Rochester, N. Y.

A Branching Tulip.

Editor Florists' Exchange:

In your Question Box, on page 406, I note that C. C. had a tulip bulb of the Proserpine variety that produced two blooms. May I be permitted to say that this is of frequent occurrence with this variety, especially if very large bulbs are planted in good soil. Two years ago I had fully 10 per cent. with two flowers in my own garden, which in a clump of nine bulbs planted in a specially favorable position and left until they ripened off, six developed this peculiarity. It is of no commercial value, as the later bloom is always very small.

S. B. DICK.

London, Eng.

The Torridor.

Editor Florists' Exchange:

Our late experiments at Hitchings have led us to conclude that much of the benefit we have received from the use of The Torridor for the past four years in our greenhouses is due to the equality of the rate of combustion during the whole night by a non-interrupted air supply delivered to the top of the fuel mass. If a thick mass of fuel is not kept free from ashes, the air spaces are clogged, and much of the gaseous fuel is unconsumed, because sufficient air is not supplied. Hence, to get a sufficient temperature in the latter part of the night, a too high early evening temperature and a larger supply of fuel must be provided.

J. M. W. KITCHEN.

Growing Freesia.

Editor Florists' Exchange:

A few weeks ago I promised to give your readers my method of freesia culture, and I think the present will be a good time for a few remarks on the subject, as growers of freesia, and, perhaps, others who have never grown it but intend doing so, will soon be thinking of laying in their stock of bulbs. And, perhaps, my way of treating freesia will be of interest to some.

I have grown freesia ever since I have been in business, and have always found it profitable, as it can be grown where a great many other things cannot. This year, which has been a very poor one indeed for most all sorts of cut flowers, I had no trouble in disposing of all my freesia, at a good profit; in fact, one dealer took all I had, which was from 250 to 350 bunches, nearly every day, showing that for fine freesia there is always a good market, as there is a scarcity of first-class stock.

Freesia is a plant that has a certain time for growing, and if good flowers, with long stems, are wanted, it must be planted at that time, or as near as possible, which is in August. It has often been advised to plant freesia at different times to prolong the cut of bloom. Now those who advise that have evidently never grown freesia, or are not acquainted with its habit of growth. Freesia will start naturally to grow in August, whether planted or not, and the longer it is kept out of the soil after its natural growing time the more it suffers in loss of vigor. The freesia has to make its full growth of foliage before it starts to form its new bulb, which it does in early November; then all growth practically ceases until the bulbs have nearly reached full size. It then commences to throw up its flower stem, which comes from the new bulb and not from the old one. The only apparent use of the old bulb is to grow the foliage stem until the new bulbs begin to form, which commences like a swelling around the base of the stem, where it is connected to the old bulb. As soon as the swelling takes the form of a bulb, it throws out one and sometimes two large, thick roots, from which it supports itself, and then is entirely independent of any support from the old bulb, which commences to dry up, as its usefulness is at an end. The new bulb then devotes its energies to sending up the flower stem and growing the family of young bulbs, which are found clustering around it.

Our belief to-day is, so far as the season's work has demonstrated, that we have derived the best results from your paper.

H. BAYERSDORFER

Philadelphia, April, 1905.

So much for the habit of the freesia. Now I will tell you how I grow it. About the end of July I commence to get my benches ready for planting, which latter is done in August. I use all my benches under the long span, in which I put five inches of rotted sod (but any good light loam would do as well) with one part manure to three or four of the rotted sod. After leveling I make marks by pressing a piece of plaster lath edgewise across the bench, six inches apart, the entire length of the bench. These marks are made for the purpose of keeping the rows straight. Over these marks I make seven circles with an inverted three-inch pot. That many circles is for a bench 3½ feet wide; a wider bench will hold more, a narrower one less. The edges of the circles in the rows will be about two inches apart, and between the rows three inches apart. Now, on these circles I press six bulbs one inch apart, so that they are from a half to an inch below the surface, or far enough so that they won't be knocked out when the bench is covered, which is done by merely rubbing over the top with the hand. After covering, the bench is thoroughly watered. Freesia requires lots of water; the plants can never be given too much, for wherever there is a drip on the bench all winter the best flowers and the largest bulbs are found.

Then the first step toward the support is taken. I nail sticks on both sides of the bench, on the outside, which project above the bench about eighteen inches. It is dropped (four-inch mesh). It is lowered as far as it will go, so as not to interfere with the weeding of the bench, until the freesia, which grows up through the wire, needs to be supported. The wire is then raised very easily any desired height, by merely lifting it up at each stick, as it isn't fastened. The wire makes the finest support imaginable. When once stretched in place, there is no further trouble. It can be got in any width and of any sized mesh. I intend to use as a carnation support a seven or eight-inch mesh.

Freesia can also be grown in boxes five or six inches deep, but the great danger in growing them that way is from dryness. They cannot get the water they require grown in boxes or pots, unless given extra attention.

Now, a few words about the time of blooming. They can be brought into flower by growing them in a rose temperature (I usually cut my first blooms from the 8th to the 12th of January) in a temperature of 45 degrees at night. Those in the warm houses bloom first. I started cutting on March 15th in a house that was planted at the same time as those I cut in early January; the difference in temperature made the difference in time of blooming. The late blooming house was kept just above freezing; the flowers in it were grand in March. Freesia should be heavily shaded to keep the flowers from becoming small.

R. FISCHER.

The Commission Man and His Defects.

Editor Florists' Exchange:

I have no desire to prolong the discussion of a subject which can but prove as profitless, as the original accusation which caused it is without foundation, so far as, in my opinion, the commission man who is up-to-date and knows his business is concerned. But I would just like to point out that Mr. Birnie's second contribution is as illogical as his first effort, when he attempted to tell the New York Florists' Club the chief characteristic in a carnation, by offering a criticism of the commission man's methods of handling the flowers, a criticism, too, which seems to have been based on "average" work, and not on superior service in this respect, which latter is largely available and in operation, if one will only look for it.

It is not clear what Mr. Birnie means when he says that the matter "is of such importance that the American Carnation Society ought to take it up." If he refers to the keeping qualities of the flowers, I might inform him that that subject has been considered by that society time and again, as well as other important subjects designed to benefit those who support the society, and those who don't. But neither the American Carnation Society nor the commission man can be held responsible for the inefficiency that produces flowers which will not last.

True to my motto, I have gathered a few remarks that will show the other side of the commission man. The following is from a paper, also read before the New York Florists' Club, by Mr. Shaw:

"And you wholesale florists, what has Easter in New York been to you through all these more than thirty years? You who have demonstrated your necessity, and by your tact and energy have added a thousand-fold to the prosperity of the grower, and covered the wide land with glass thereby until every hamlet has its greenhouse and the reflection from the sea of crystal can be seen from every hilltop! Your nath has not been and is not all roses. You have established centers of distribution, through which the retail business of this city has been developed to its present wonderful proportions, and by your system only could such results have been accomplished. I know much of your faithfulness to duty, your watchful devotion to your growers' interests, your promptness, your generosity, your frequent sacrifice of self that those who entrust their welfare to your care may be content. And I believe you are appreciated more and more as your value and necessity are realized. Time seems to be with you an after consideration. I never hear you complain of long hours, and I have seen you hustling often through the live-long night. Where would the retail florist business be without you? A plimpy gasping for existence! In such a city as ours your value, your power, your necessity are dovetailed into the growing and retailing departments of the trade so thoroughly, so harmoniously, that you are a fixture as long as plants grow and flowers bloom. And you deserve to be; we cannot do without you."

What follows further is taken from the editor's "say" of the new horticultural paper published at Boston:

"The distribution of the vast quantities of flowers used for the Easter festival would be an impossibility without this agency (the cut flower commission men), which by energy and industry has widened the market for the grower and brought the remote dealer in direct touch with the sources of supply. The commission dealer is the producer's best friend and prosperity for one means prosperity for both."

These citations seem to be the outpourings of hearts fully convinced that acknowledgment of worth should be made, and from their similarity the honest convictions of "two minds but with a single thought." So far as my knowledge and belief goes, the words were uttered and written by men who know whereof they speak, men who would spurn to act as a cats-paw, men with no axe to grind.

And I submit to any reasonable reader if the results attained and the conditions brought about, as these are set forth above, could have been reached, were the commission dealer the careless, reckless handler of stock which your correspondent tries to hold him up to be?

THE GATHERER.

THE NEWPORT (R. I.) HORTICULTURAL SOCIETY has just completed arrangements for two exhibitions this year. For several years past the exhibitions of this society have been held in Masonic Hall, but the growth of the society and the greatly increased number of exhibits each year, together with a generous increase of interest on the part of the Summer residents, gave reason to suppose that if a more commodious as well as a more fashionably located place for these exhibitions could be obtained, still greater success would result. With this end in view the Casino, the great rendezvous of fashion, on Bellevue avenue, has been secured for the society's exhibitions. The first, an exhibition of roses, fruit, flowers and plants, will be held in June; the other, a grand exhibition, embracing all the main features of former ones, with several new and attractive classes in addition, the whole to make the greatest horticultural show ever held in this city, will be held in August. The premium schedules are to be printed and issued to the number of three thousand. David McIntosh, Ledge Road, Newport, R. I., is secretary of the advertising committee.

Impressions of Canadian Horticulture.

(Read by Edgar Elvin before the Montreal Gardeners and Florists' Club, April 1, 1905.)

I seem to have been allowed down to the above-mentioned topic. If I were to take any cultural subject, which one would much prefer, you would no doubt meet me with the general retort that "It would not do for this country." I am further informed that one must be at least two years here before one has attained the necessary conditions of plant life. To both sweeping generalizations one feels inclined to respond with a equally emphatic protest. As to the first I admit that to any man whose life has been a continual study of changing environments the phrase to greet him with is not radical revolution of his past, but gradual adaptation to his present. As for the two years' probation, that depends altogether on the man and the use he makes of his opportunities. But may I say at the outset that there is no profession where dogmatism on either side is so utterly out of court. There may always be some incidental detail out of sight which may change or modify one's whole position. My duty to-night is to act as a sort of mirror to all present. Whether you will be perfectly pleased with your own reflection is as yet an open question. It is not usual in good society to tell a man at first sight what you think of him; neither is it always good policy to put a window in one's own mind for all to gaze into; but you will bear with me for a few moments, and perhaps I shall be doing you some small service. In any case, it is a good thing sometimes to be seen with fresh eyes, from the point of view of an outsider. Scotchmen, since the time of Burns, have been asking for some power to see themselves as others see them; they will not readily take offence or need conciliating.

I admit at the outset that my qualifications to act

union and a larger trade with Great Britain. It would be a good thing if in matters horticultural we could have free trade within the Empire, and as wide a door as may be compatible with self-protection to all outsiders. At any rate, we ought to seek deliverance from all narrow and short-sighted methods; our views ought to be as generous as Mother Nature, as wide as our business, that is as broad as the world from which our materials are drawn.

A Spacious Country.

My first impression of Canada was that of spaciousness. Things are on the grand scale. One has the feeling of breathing a larger ampler air. This factor of mere size alone it seems to me has reacted on the Canadian mind. His mental faculties seem to take a wider sweep than the usual island-bound Britisher. This applies not only to his outlook on life but is vigorously applied in his business. He thinks in continents and is at home in the wholesale trades. Your born or naturalized Canadian gives the impression of great physical vigor. A sharp grip of life, a breezy optimism seems to possess him; a certain attitude of self-confidence betrays itself in his speech, walk and general aptitudes. How much he owes to a bracing climate, to a freedom of opportunity, or a growing consciousness of prosperity and consequent independence, are questions which might well set the ball rolling in debate.

The Canadian's Capabilities.

While I admire your Canadian in many respects, I do not think the average man in our business is as well informed in all-round horticulture as those at home. He is a good specialist; but his general knowledge has been largely limited by his opportunities. Then, again, I might briefly point out what seems to

these exceptions, I have a great admiration of his business capabilities, and, taken all round, he is a very fine fellow, indeed.

The Canadian Florists' Stores.

After the men, we come to the stores. One is immediately struck with the really magnificent carnations and roses. For length of stems, richness of coloring, largeness of blooms and general aristocratic appearance, they quite outclass those usually seen in florists' shops in the old country. Cyclamen, too, with long flower-stalks well up above the foliage, were very good; only from Kerr's of Liverpool have I seen finer. Poinsettias and chrysanthemums were fine, but not extraordinary. Lorraine begonias had some fine examples. Spring bulbs are of good quality, and well handled. Foliage plants are only of medium quality. The Christmas dressing of the stores and windows was in good taste, and the trade done a revelation. But, speaking generally, the conditions of the windows leave much to be desired. With one or two conspicuous exceptions, they present a slovenly and often bedraggled appearance. In this respect you are behind the florist in the old country, who always looks well to his windows. The introduction of a little pleasing novelty, and a more pleasing blending of the material to hand, would be fully appreciated by the flower-loving public. As to floral and decorative work I can hardly speak; but from what little I have seen, and the catalogues I have reviewed, there appears to be greater originality of design here than in the old country, though in this respect there has been a great awakening during recent years across the water. The tendency in both cases is toward a more open and natural arrangement and simplicity in designs. The Boston laurel and southern smilax as decorative subjects were both new to me; both are very effective on a large scale.

The Plant Houses.

We turn now to the plant houses. These are spacious, admirably fitted for flower-growing by the bench method, insuring, as they do, the maximum of light and air. But for plant growing I prefer smaller houses, as in the old country. The question of steam versus hot water for all subjects is a debatable one. While I quite see the necessity of a brisk heat for flowering and forced stock in a Winter like this, my opinion is that for an ideal plant atmosphere there is nothing like hot water heating, insuring greater equilibrium of temperature for growing subjects and not drawing too much on the reserve forces of so many that need a partial rest during Winter. Then there is the question of the hose pipe. My own feeling is that there is a temptation to overdo it in the Winter time; especially does this apply to pot plants. Whether it is harmful to use the cold water direct from the mains, or whether aired water would not give better results, is a question I should like answered. I am persuaded that you have here in Montreal as fine a plant-growing climate as can be desired, with a water which has traversed every strata and holds in solution almost every kind of plant food. There is, perhaps, a danger in these advantages to induce a certain disregard of detail which in a less favorable state of things would lead only to a moderate success. To point to only one example: Everything seems to be grown in one soil, and that not always of the best. A more exact scientific method of working might give the highest possible results. Given a man with capital, capability and courage, there is here a splendid opportunity to show what can be done in the way of pot plants; especially in choice ferns and fine foliage stock. What a magnificent climate for crotons and other stove subjects! How dendrobiums would thrive and ripen up in this brilliant sunshine! What splendid vine canes could be produced! I feel certain that even such Winter and Spring subjects as cinerarias, herbaceous calceolarias, streptocarpus, etc., could be well done, in spite of certain obvious difficulties. Sutton's and Dickson's new dwarf, star-shaped pink and white cinerarias would be well worth a trial.

More Variety Needed.

I should like to put in a plea for more variety. The position of the rose and carnation we may regard as unassailable. We hope so. But perfection itself may become icily faultless, splendidly nil, when it is reproduced to satiety; and I feel sure the people would respond to something that would combine and associate well with the Queen of Flowers. Further, in this connection, I share with you a growing faith in the boundless possibilities of progress in this great Dominion. In its train there is sure to come that development of the arts and luxury of life which is the basis of our business. There will probably grow up a civilization which will eclipse all the courtly and artistic splendors of the old world. Horticulture will open up a new field by supplying a large private garden trade, as in the old country. A few years hence, we who are on the ground will be regarded as the pioneers of our profession. It is our duty to keep our eyes on that future and anticipate its needs. The man who can add to the enjoyment of life will not only do a good thing for himself but he will earn the lasting gratitude of his kind. We may not be able at present to lead the way in hybridization, but it is possible to make experiments with the innumerable

BENCH OF CARNATION ELBON. Grower J. H. A. Hutchison, Oxford, Pa.

as guide, philosopher and critic are of the slenderest type, having only been with you some four months; on the other hand, it has been my privilege to see much that is best in British horticultural life.

I shall endeavor to be to the point, and I trust that at any rate we shall be able to raise a first-class debate, which may be of some service to all and the greatest to him who now speaks with you.

Comparisons are Odious.

To begin with, I should like to protest against the fashion in some quarters of making odious comparisons with British methods, usually to the depreciation of the latter. The chief duty of a born Britisher is not to sow or perpetuate rival antagonisms with our old countrymen. Such an attitude in any son of the Empire is not worthy the grand old race from which we have sprung. As a newcomer, may I say that horticulture in Britain is not yet in extremis; on the contrary, it was never so full of vigorous life as today. It is true there has been a certain metamorphosis in the trade. The great old firms, perhaps, do not do the same business as of yore; but there has sprung up a host of small growers and florists to meet an increasing demand. The love of flowers was never so strong as now, as witness the magnificent shows so well patronized in London and the great provincial cities, and also the increased attention to gardening subjects by the weekly newspapers and monthly magazines.

The United States Canada's Model.

I note that the model of Canadian florists is the United States. That is natural and, perhaps, inevitable; but with its turbine steamers reducing the passage time there may come what is to be desired—a closer

me certain defects in his constitution. In the first place, he is inclined to impatience with all who do not conform to his own type. "Wanted, a Hustler," is a common advertisement. Now your hustler may be, and often is, a mere bustler, or a bungler, and sometimes a mixture of both. Your hustler is set over against the man with quiet but clear intelligence, and often with a single superficial view. The latter is outclassed, and suffers temporary eclipse. Now, I put it to you, that there is no business where an exact, well-balanced judgment is as often required; where a little carelessness and inattention to detail count for so much, as in ours; where a seemingly trivial error will leave most ruinous marks on the year's account. There is not an uncommon type of mind which is not given to glibness or quickness of reply; it may be slow, not because it cannot see, but because it sees so much. This man sees not only the subject in hand, but is seeking and seeing its inter-relations also. Thoroughness is his motto and perfection his aim; everything counts with him, but being sure of his ground and certain of his feet, he will pursue it with all the energy he may possess. The sort of man who is not always in frenzied haste, he can afford to pause and wait. The sort of man who always wins in the long last, but not readily understood by your Canadian.

Then, too, I have noticed the danger of a bragging, boastful egotism which so often spoils the man who has achieved a partial success. You may retort that too often it is a too bumptious Britisher who is the innocent cause of these outbursts. Not always; it seems to me rather like the reflector, of the time spent on this side of the water. There can be no objection to the statement of facts as facts. It is the irrelevant trotting of them out to the disadvantage of the listener which is so offensive. There is a specially strong temptation to overstatement in our business, but nowhere perhaps has it been so exalted as one of the virtues of the trade as on this continent. With

good things which are being raised, or introduced, by others across the seas. While your climate will always limit the area of your choice, especially in hardy subjects, seeing that you have an extreme Winter and a tropical Summer, still there is here, as well as indoor, a wide field for investigation.

Canada vs. Great Britain.

You may ask what do I think of Canadian horticulture at present, as compared with that of Britain? Well, I feel inclined to agree with a gentleman of high standing over there, who said to me before I set out that I was going to a land where horticulture was in its infancy. I do not think he had adequately gauged the progress already made; but, having seen a little, and heard more, I should indorse his statement. When I look to the future I cannot but feel we are in the embryonic stage. This Canadian seedling will become a mighty tree at length, wherein all horticultural interests may find room beneath its spreading branches. It is to that future that those of us who are young, or on the right side of Dr. Osler's age limit, naturally turn; and, in closing, I should like to point out lines which we may take in shaping that part of it which may come within our reach. In the first place, we should emphasize the need of a greater pride in our profession. Yes, gentlemen, profession; not trade. Horticulture has not as yet received that public and social respect which has been the lot of other professions, and to which we are justly entitled. We do much to sweeten and refine public life. We have a grand business, and we ought to take a more legitimate pride in it.

ourselves, I am sure we should say that, in our best moments, our greatest pleasure was our joy in this work; the luxury of creating and overcoming. In our business, it is true, as the old proverb has it, "The virtue is in the struggle and not in the prize." Or, as Emerson so finely puts it, "The best reward for a thing well done is to have done it."

Leaders Wanted.

Then there is the duty of doing our level best to make horticultural exhibitions a greater success. It is a pity that the metropolitan city of Canada cannot do better things in the way of shows.

Then, too, what a miserable show in the way of horticultural news in Canada. There surely is room in this vast Dominion for a first-class national paper. When it appears, we ought, by subscriptions and contributions, to support it. I am convinced that what is needed now is capable leaders—men who will gather up and focus all the aspirations of their less able brethren; men of wealth and influence to devote both to the advancement of horticulture in the way that Sir Trevor Lawrence and Baron Schroder are doing in the old country; statesmen of the front rank to do for some flower what Mr. Chamberlain has done to popularize the orchid; growers like the Rochfords, May, Paul and Veitch; hybridizers like Heal, Kelway, Suttons, and Dicksons of Ireland. Given such leaders, the people, with their deep love for novelty in flowers, will readily respond.

In conclusion, I feel I ought to say how I appreciate the work which this club is doing, as also the general

Carnation Elbon.

We are indebted to J. H. A. Hutchison, of the Locust Greenhouses, Oxford, Pa., for the accompanying illustration showing a bench of this new carnation, which has been named Elbon by the grower. Mr. Hutchison says the variety was originated by Roney Bros., West Grove, Pa. He has been growing it for two years. The flower is a deep red, of medium size, strong stem, very fragrant, and a good keeper. The plants root easily. He finds it does best in a warm house. Mr. Hutchison further informs us that the picture does not do the variety justice; the wealth of bloom not showing up well. "It is the greatest bloomer I ever grew. From one bed, 3x40 feet, we have been cutting from 250 to 300 flowers a week."

Nephrolepis Piersoni Elegatissima.

The Gardening World, London, England, in its issue of March 25 last, has a very interesting article on the development of some of the various forms of *Nephrolepis exaltata*—viz., the Boston fern, *N. Piersoni*, and latterly, *N. Piersoni elegantissima*, or the Tarrytown fern. Of the latter, the following technical description is furnished:

"We should say the frond is ovate bipinnate-pinnatisect; that is, it is twice pinnate and the pinnules are divided again nearly to the base. The result is a frond of remarkable density. The internodes of the leaf-stalk have not become developed in proportion to the enlargement of

INTERIOR VIEW

EXTERIOR VIEW

THE NEW STORE OF JULIUS BAUER, CINCINNATI, O. (See page 402, March 25 issue.)

There is, perhaps, no profession that calls out so many faculties and so ministers to that many-sidedness of our common nature as ours. Horticulture has produced some of the grandest possible types of character. One needs both character and brains to be a first-class horticulturist. The day is past when any man who devotes his life to this work should be looked upon as a social inferior. Our compensations are not at all commensurate with what we put into our business, on the material side, without this added indignity. Somebody put it tersely by saying that an all-round gardener was expected to have the knowledge of a king's counsel, with the wages of a laborer; and we all know that a florist millionaire is about as rare as a white crow. If we do not achieve this distinction of making money, we may all make our business minister to that character which is the only true aristocracy. It is for us to lift our business to its proper place in the life of the community.

A Plea for Idealism.

Then I should like to put in a plea for idealism. We ought to be satisfied with nothing less than the best. We possess this in degree, for it was the love of the beautiful that first drew many of us into it. We need it in large measure as the days pass. The man who does not love plants for their own intrinsic worth will not get the best out of his material. To quote again, Dean Hole's classic saying: "He who would grow beautiful roses must first have beautiful roses in his heart." In a word, the ideal must be incarnated in thought before it can be materialized. What are we all after? Not merely the pleasure of counting the numbers on certain dirty pieces of paper, necessary as that may be. If we were to ask

friendliness to strangers that I have noted among its members. It is surely a good thing to meet in this way in such a genial atmosphere, to talk over without bitterness those things that pertain to our common interest. May the club prosper as it deserves! I rejoice in the freedom of this land. It is a goodly land and a large, and if not exactly a land flowing with milk and honey—or dollars for that matter—it is at least the land of an equal opportunity. It is a great privilege to be on the ground in this, the experimental stage. It is an honor to take any part, however small, in putting in the foundation of what will one day become one of the greatest English-speaking nations. Here, if anywhere, may be realized Thomas Carlyle's ideal dream of freedom. Let every man become what is possible for him to be. Let him expand to his full growth. Let him cast off all artificial conventionalities, and especially all noxious adhesions. Let him show himself at length in his own shape and stature, be they what they may.

WINDOW GLASS.—The demand for glazing purposes has been increased by the more settled weather conditions, accompanied with warmer days. The car-load trade from factory is reported as continuing somewhat light. The fact that prices were reaffirmed the last of March, that labor troubles may be anticipated among glass workers, and the high price of foreign glass lead some to believe that no lower glass prices will rule this year. Local quotations are as follows: First two brackets, single, 90 to 90 and 15 per cent. discount; larger sizes, both single and double strength, 90 to 90 and 10 per cent. discount from jobbers' list.—The Metal Worker.

the pinnæ; consequently, we find the latter greatly overlapping each other, and at the same time placed one over the other almost horizontally, so as to give them the proper space to flatten out. The result is a frond of great depth from back to front, and this can only be appreciated by looking at the frond sideways.

"We may still further notify our readers that we have not yet seen the end of development, even in this remarkable plumose form of *N. exaltata*, for a fourth form has arisen in the nursery of the same firm, and is even more finely divided than the Tarrytown variety."

TEA GROWING IN SOUTH CAROLINA.—Stimulated by the experiments at Pinehurst, S. C., the American Tea Growing Company has been organized for conducting tea culture at Rantowles, Colleton County, near Charleston, and has seven thousand acres of land with seven hundred thousand young plants in the nursery ready to be transplanted. A thousand acres of tea will soon be under cultivation with the best prospects for success, as the industry now seems to have been carried beyond the experimental stage. In order to extend the industry, the United States Department of Agriculture has recently established an experimental tea garden in Texas. The industry is being constantly developed and extended at Pinehurst under the direction of Dr. Shepard, and from a few acres with a production of several hundred pounds of tea, there are now approximately one hundred acres in cultivation with an annual outturn of approximately nine thousand pounds of manufactured tea.—Bulletin 96, South Carolina Agricultural Experimental Station.

TALES OF A TRAVELER.

Mexico City.

San Antonio is the eastern gateway into Mexico, and thirty-six hours' travel brings one into the capital city of our neighboring republic. The country through which the national lines of Mexico pass are full of interest, and the scenery is constantly varied. Between San Antonio and the Mexican border are great fields of scrub vegetation, noticeable chiefly for the luxuriant growth which mistletoe makes in this section. All throughout this region mistletoe is seen in great profusion, and the occasional razor-back under the mistletoe only adds to the reasons for being shy of the seductive parasite. Intermixed with the oceans of cacti are now and then well-tilled gardens and farms, which break the monotony and relieve the eye. A great deal of the country between the American border and the City of Mexico is devoted to the raising of cattle and sheep; and as the traveler passes through this country the mansions of the owners of these vast tracts of land make an interesting contrast with the mud or straw huts of the common Mexican.

The Native Beverage.

One of the features of the farming within the section north of Mexico City and south of San Luis Potosi, are the immense fields of the native plant maguey, from which is produced the native beverage of the Mexican. This liquid, pulque, is taken from these plants when they have attained the age of seven years, and is of a milky white color, with a flavor very similar to that of the corn beer, for which the Scandinavian races have such a liking. In growth and appearance these plants resemble the yucca of California, and on maturity they are worth to the owner the sum of seven dollars. After being robbed of this fluid the plants die and their places are filled with others, which will, in time, be a source of supply of this enticing fluid.

The City's Attractions.

The City of Mexico is the most interesting city which it has been my pleasure to visit, and unless one knows the capital city of this vast country below the Rio Grande he has no idea of what the best of Mexico really is. History tells us much of our sister republic, but it does not picture the beauties of the City of Mexico as it is to-day. Never have I seen more industry displayed by a municipality in the paving of streets, and the streets of this city, as they are to-day, will be hard to surpass. President Diaz has been a prime factor in all the improvements which have been carried out so systematically; and knowing the future of his country depends on the improvement of the cities, the bettering of traveling facilities, the starting of manufacturing as a home industry, and a better understanding of agricultural methods, he has done much toward bettering the condition of the masses and is awakening an interest in a better mode of living.

Extremes are the rule in Mexico, and there is practically no middle class in the republic. The people are either very rich or very poor, and labor is at a minimum. Farm labor would be high at thirty-five cents per day in Mexican currency, and this at the present rate of exchange would be less than eighteen cents per day in United States currency.

The methods of handling ornamental plants in the city are still very crude and only this cheap labor, where combined with the fact that only the wealthy

SCENE IN THE FLOWER MARKET OF MEXICO CITY, MEX.

attempt anything in this line, makes possible the results which are being attained without modern tools and the knowledge of how to use them. The houses of the wealthy show that flowering and ornamental plants are admired. The city is filled with small parks which are, as a whole, extremely well kept, and the growth of plants and trees when well cared for, is most luxuriant. The barefooted laborer with his jug of water on his head, caring for the irrigation of these private gardens, is a common sight, while in some places mammoth watering pots are used, showing that the tendency toward improvement is gradually being felt. I saw a hose in use in but one place, and this notable example was in the private garden of President Diaz where a gasoline engine, an artesian well and a fine hose were being used to irrigate a lawn.

The White House of Mexico.

"El Castillo de Chapultepec," constitutes the "White House" of Mexico; and this immense castle on the rock, which is so famous in history, is surrounded by an immense park in which the whole republic takes pride; for the gardens about the palace, and the drives, are the best examples of the art of landscape gardening in the entire republic. On this immense rock, which overlooks the city, is the castle and the private entrance of President Diaz, reached by means of an elevator, the shaft for which has been hewn from solid rock, and this without the aid of modern tools, and must have entailed an incalculable amount of labor. On the exterior this immense rock is far from smooth, and the breaks and crevices in the surface

are filled with shrubs and flowering plants. The inner court of the castle was one mass of bloom on the occasion of my visit, the last week of February, and the plants show the care and attention so lavishly bestowed upon them by those to whom these gardens are entrusted. The bougainvilleas and another climbing shrub, or vine, of which the only name I could learn was "gloria," divide honors with the ivy geraniums, which are so abundant, and the heliotrope, which makes such a wonderful growth in this climate.

Near the entrance to the castle a magnificent collection of araucarias is to be seen by those who possess the proper credentials, and these numerous specimens are by far the most perfect of any I have had the pleasure of seeing.

Parks and Gardens.

The Oriental gardens at the "Castillo de Guadalupe" present an interesting scene, and the semi-tropical climate of the City of Mexico seems well suited to the many Oriental plants with which this most attractive garden is filled.

The "Zocolo" is, perhaps, the largest park controlled by the city proper, and many fine trees and shrubs are carefully cared for here. Some hardy roses have been planted among the collection of semi-tropical plants, but on the occasion of my visit they were half dormant. They show, however, the tendency of the people, and the fact is worthy of comment from the standpoint of the lover of plant life, who admires a tendency toward better gardening.

The Flower Markets.

The flower vendor in the street is everywhere, and the varied masses of color which he is so anxious to offer to even the most casual observer make a striking contrast with the person of the vendor and his surroundings.

The flower market proper is situated in the "Zocolo," or park, and has been made a government concession. Stalls are rented out to those who take the part of the wholesaler, and the competition is strong among the dealers for the attention of a supposed customer. There are no retail flower stores in this city, and those who buy must either patronize the vendor on the corner or submit to the appeals and entreaties of those who supply these same dealers from the stalls in the "Zocolo."

The tombs of those who have belonged to the higher classes and who have been either fortunate, or unfortunate enough to lose their claim on a mortal existence before entering into rest, make business for the flower vendors. The made-up design is the feature of the flower market, and the primary object in this work is size. Color claims precedence over all other qualities, aside from size. If the departed be well loved, his tomb, for years, will be always covered with flowers, and every morning large numbers of ready-made designs are to be found on the sale tables of these stall merchants. An interesting feature of these tombs is the fact that a tomb may be bought for a term of seven years, or as a perpetual resting place for the departed. In the case of the seven-year interments, the friends of the departed make the best of their opportunity and begrudge nothing to the tomb while it still contains the remains of their departed.

The framework of these immense designs is of wood, and this wood being green can be readily bent to the desired form. The backing for the flowers is damp hay or straw. Not a single specimen of wire is in the entire make-up of a design of this character, and a great deal of ingenuity is needed by the artist in the handling of material to make it adhere to the desired

HOME OF A MEXICAN FLORIST

spot. Everything is massed, and the object is merely to fill the necessary space with little or no reference to the quality of the material used. The flowers are, with care and patience, fastened by thread to small sticks, and often inserted in bunches to fill the space more rapidly. Crosses and wreaths are abundant, and a basket will be often found in the collection. Flat bunches are unknown in this place, where quantity is the chief essential.

Callas are abundant, and in great profusion are poppies, stocks, pansies, white and blue violets, cut bougainvilleas, sweet peas, marguerites, cannas, azaleas, iris and gardenias. The only roses are the native pink ones, which are cut with long stems, and these flowers, in large bunches, are everywhere. Geraniums seem to be great favorites with the people, and the market is always filled with them. The Lady Washington type does well here, and is seen everywhere.

A palm much resembling *Areca lutescens* is used here in making up bunches. One of these so-called wholesalers wrote out for me the name "Camedor," signifying this palm. A wild adiantum is also used largely in the making of bouquets for table use, and the canyons furnish this fern, which is really a close rival in the frond of our *Adiantum cuneatum*.

As a whole, the market is one big discord. Mingled with the entreaties of the anxious salesmen and saleswomen is the song of birds (for here also the vendor of feathered beauties has a place), and the chattering of the monkeys, which there are no organ grinders to buy. The spectacle of this market in full blast is not soon forgotten, and should not be missed by the visitor to this most interesting city.

A majority of the flowers come from within a very short distance of the city and they are usually fresh. Their method of handling them with a little bunch or a corsage bouquet is unique. Long spears of grass are wound into the stem, for example, of a bunch of violets and the whole presents the appearance of a violet plant on a load of green fodder.

We can, however, learn from them a great many things and take advantage of points which they can teach in originality. And then, too, the flower merchant in Mexico has learned from his experience with the American. "Cuanto vale" (how much) you say to the dealer, and you get the reply, "cinco pesos" (five dollars). "Too much," you say. Quick as a flash the reply comes back, "How much will you give?" And the price accepted will be at most one-fourth of what he asks if you are wise and have paid your initiation fee into the Mexican method of selling flowers.

So far as climate and scenery are concerned Mexico City is far ahead of our far-famed California. A matter of opinion, perhaps, but general opinion among those who know both places. And if you visit the City of Mexico you will find vegetation that will be interesting, parks that are beautiful, and a clean nice city ready to welcome those who come, as one should come, ready to take things as they find them. The florist of the United States who will spend the early hours of the day in the flower market of the city will be repaid for his trip.

W. R. PIERSON.

Our London Letter.

BY A. HEMSLEY.

THE ROYAL HORTICULTURAL SOCIETY.—At each of the fortnightly meetings we seem to get larger and larger attendances and also more exhibits. At the meeting held on March 23 the exhibits were extensive and varied, and during the afternoon the hall was thronged with visitors. And it is gratifying to note

FLACHQUERO DRAWING PULQUE, THE NATIVE MEXICAN BEVERAGE, FROM THE MAGUEY PLANT

that new Fellows are joining at each meeting. To give a full list of the interesting exhibits would take up much space, but I will refer to a few of the most interesting features. In daffodils, which were prominent, King Alfred, a large golden yellow trumpet variety, was quite the most attractive as a market sort, quite eclipsing Golden Spur. In pure whites there is no rival to Peter Barr, yet it may be some time before we may see this in the market, and for ordinary cut purposes it will never take so well as the best yellows and bicolors. Of bicolors, the best noted was Duke of Bedford, a large flower of good substance. Crimson Rambler roses from H. B. May were good, also Little Pet, white, and Mme. Norbert Levayassens (the Baby Rambler). Clematis were also good from the same exhibitor. The carnations from Messrs. H. Low & Co., Enfield, included some good things, mostly of the American type. Of the newer sorts raised by this firm Fascinator, rose pink, and Coronation, cerise pink, large full flowers, were very good, and should prove valuable additions. Messrs. Ambrose & Son also had some carnations. Flamingo was in good form and secured an award of merit, and the previous week it gained the same distinction at the Royal Botanic Society's meeting. Lillian Pond and Harlowarden

were also well shown. From Messrs. Paul & Son, Cheshunt, came an interesting collection of new flowering shrubs. The hybrid deutzias were well flowered and very pretty. A new tea rose, Warrior, large, deep petals, crimson, with a pink shade in center. A number of pot plants were shown, all carrying good blooms on long stems, and good foliage of a dark shade of color. This will certainly make a useful rose. Though said to be a tea, it had a suggestion of the China in it. The roses from George Mount, of Canterbury, were superb, especially Mrs. J. Laing and Captain Hayward.

Messrs. Cutbush & Sons made an extensive exhibit. Erica Wilmoreana grandiflora gained an award of merit. They also had good carnations, General Kuruki, their new scarlet, being very fine. Messrs. Boyes & Co., of Leicester, are giving much attention to carnations, and have raised some good varieties. Dr. W. G. Grace, a rich crimson scarlet, with large fringed petals, good calyx, and sweet scented, with long stems; Lady Carlisle, a fine pink, and Lady Wright, white, slightly suffused with pink. The above all show some affinity to the American varieties. A. F. Dutton, who has done so much toward bringing the American varieties to the front in this country, promises us some good things of his own raising. This enterprising grower is making great headway. His new nursery at Iver, Bucks, where he has put up a most convenient block of houses, is now in good going order. I may add that Mr. Dutton has adopted the American system of planting on benches with great success.

Crowea angustifolia, for which Messrs. J. Veitch & Sons, of Chelsea, were given an award of merit, is a neat and pretty plant, of slender growth, with small, narrow leaves, from the axils of which are produced numerous starry pink flowers. It is an old introduction from West Australia, yet, as a pot plant, it is one of the prettiest things we have seen, and should make a good commercial subject.

THE ROYAL BOTANIC SOCIETY had their first Spring show on March 22. Though not extensive, it was most interesting, there being a nice variety of subjects. Messrs. Hill & Son, of Edmonton, put up a very large and interesting collection of ferns, for which they were awarded a gold medal. *Platycerium* were a feature. *Nephrolepis* were also good, and included some fine examples of *Piersoni*, also of *Scottii*. Mr. Hill speaks well of this latter, and though it has failed to gain a certificate, it will evidently make a good market fern. *Osmonda Hillii*, a fine variety of the North American *O. gracilis*, gained a first-class certificate, and the same award was given to *Pellea robusta*, a strong growing form of *P. hastata*. The long pinnate fronds were of a rich, deep green, with a bright surface. The new *Polypodium glaucum giganteum* was well shown.

J. R. Box, of West Wickham, showed some splendid plants of *Begonia Gloire de Sceaux*. I am surprised we do not see more of this fine begonia, for it is certainly one of the best things we have for this time of the year. *Begonia Triomphe de Lorraine* is another which is worth looking after. Messrs. T. Cripp & Son, of Tunbridge Wells, does this variety well.

Cyclamen were splendidly shown at the Botanic by J. May, Twickenham. They were of the giganteum type, with large flowers standing well above thick, leathery foliage. Mr. May has been growing cyclamen for the past 30 years, and evidently understands them. His strain cannot be beaten. A silver gilt medal was awarded by the R. H. S. and a large silver medal at the Botanic.

GATHERING FLOWERS IN FLOATING GARDENS, MEXICO

CLUB AND SOCIETY DOINGS

The American Carnation Society.

The report of the society will be ready for distribution in a short time, and will be sent to paid-up members, to the many who are in arrears or who would like to see this report and are not members, should they send \$2 to Fred Donner, Jr., Lafayette, Ind.

Mrs. A. H. Hews & Co., Cambridge, Mass., offer, for the meeting and exhibition in Boston next January, a cup to the value of \$25 for "the best collection of carnations (from varieties), 25 blooms of each," to be shown in special vases. This prize will be open to all seedlings of named sorts, and with no restrictions as to color.

Any other firm, or grower, who desires to give special premiums for this exhibition, can report them to President Peter Fisher, Ellis, Mass., or to the secretary, ALBERT M. HERR, Lancaster, Pa.

THE LENOX (MASS.) HORTICULTURAL SOCIETY held its regular meeting on April 15, 1905. President R. A. Schmid was in the chair. A cultural commendation was awarded to George H. Thompson, gardener for H. H. Cook, Esq., for carnation Prosperity. Several subjects were discussed during the evening, such as: Roadmaking; what is the best slope and shape for a greenhouse to grow flowers and plants during the Winter? What is the advantage of two-inch pipe over four-inch pipe in heating a greenhouse? And other similar subjects. C. O. D.

ILLINOIS STATE FLORISTS' ASSOCIATION.—Articles of incorporation for the Illinois State Florists' Association were filed in the office of Recorder Geist April 10. The incorporation was licensed by the Secretary of State March 20. The incorporators are: James Hartshorne, Carl Fricke and J. F. Lees and the first board of directors, James Hartshorne, J. C. Vaughan, W. N. Rudd, P. J. Hauswirth and John Willius. The principal office of the association is on East Washington street, Joliet, Ill. Its object is: "For the advancement of the greenhouse industries and for making researches into diseases of flowers, plants and vegetables; for the purpose of finding or developing a remedy for such diseases."

WASHINGTON (D. C.) FLORISTS' CLUB.—President Gude called a special meeting of the Florists' Club on the 14th inst., when considerable business was transacted pertaining chiefly to convention matters. George Cook, superintendent of the trade exhibit, was authorized to make a deposit, and to secure a written guarantee for the use of the National Rifles Hall during convention week. Secretary Bisset announced his intention of resigning owing to press of private business, but upon the earnest solicitation of all the members present, he consented to hold over until the next meeting. The following were elected chairmen of committees: J. R. Freeman, Sr., finance; J. W. Freeman, hotels; E. A. Moseley, entertainment; W. H. Ernst, bowling. M. C.

NEW BEDFORD (MASS.), HORTICULTURAL SOCIETY.—At the last meeting of this society on April 11, carnations were exhibited by some of the members. R. N. Woodhouse showed some Fair Maid which were well done; he also had a vase of Challenger, a scarlet. William Keith staged Enchantress and Mrs. Lawson. James Garthley, gardener to Mr. H. N. Rogers, Fairhaven, also had a nice vase of carnations. Peter Murray read a paper on Gloire de Lorraine begonia, which was followed by a general discussion. It was voted to change the meeting night from Tuesday to the second Monday evening of each month, as most of the members could not attend on the former night. It was decided to have a rose exhibit at the meeting in June, for members only. It is expected to have some noted grower give a talk on the rose at that meeting. HORTICO.

ST. LOUIS FLORISTS' CLUB.—Eighteen members attended the interesting meeting of the Florists' Club, last Thursday afternoon. Most of the growers reported being busy, and could not be present. President Juergel himself was unable to attend, also Vice-President Pilcher, so Ex-President Beneke occupied the chair. Quite a lot of routine work was disposed of, after which the show and building committees reported progress. The constitution committee had a lengthy report to make, as the sections had to be adopted seriatim. Finally, with a few changes, the constitution and by-laws as submitted was adopted. George H. Augermuller, wholesaler, H. F. W. Aue, and C. H. Foreman, of Louisiana, Mo., growers, made applications for membership.

The club's eighteenth anniversary will be celebrated in September. The trustees were instructed to prepare an entertainment for the members and their families. It was decided to accept Frank Weber's invitation to hold the September meeting at his place. The meeting adjourned until May 11, at which time an interesting program will be presented by the trustees. ST. PATRICK.

THE MORRIS COUNTY (N. J.) GARDENERS' AND FLORISTS' SOCIETY held its regular meeting on April 12. Many gardeners and florists, in addition to regular members, were present. Roses and carnations were there in plenty, and of a very high standard. John E. Haines, Bethlehem, Pa., staged four magnificent vases of carnation John E. Haines, scarlet. It was awarded a certificate of merit. His Star of Bethlehem, yellow, received honorable mention; Imperial, variegated, and a pink seedling, were highly commended. H. Weber & Sons, Oakland, Md., sent a vase of My Maryland, securing a certificate of merit; also a vase of the striped carnation Jessica, which was awarded a certificate of merit. Guttman & Weher's scarlet carnation Victory was brought by Mr. Guttman and shown in splendid form, receiving a certificate of merit. Our home growers were on hand with specials of real merit. Wm. H. Thomas had a vase of mixed carnations, for which he got a cultural commendation. John Heeremans' mixed carnations and Wm. Duckham's vase of Enchantress each receiving a cultural commendation. L. A. Noe staged magnificent vases of American Beauty, Bride and Bridesmaid roses, securing cultural commendations. J. R. Mitchell had vases of Bridesmaid, Bride and Souvenir du President Carnot; cultural commendation. M. McNulty's American Beauty received honorable mention. The judges were: A. Herrington, C. H. Totty and William Duckman. Messrs. Haines and

J. A. VALENTINE, DENVER
President-elect Colorado Society of Floriculturists

Guttman made neat speeches at the request of President Heeremans, and each received a vote of thanks from the society. Robert M. Schultz and Andrew McKendry were proposed for membership. E. R.

BOSTON GARDENERS AND FLORISTS' CLUB.—The regular monthly meeting was held Tuesday night, President Wheeler in the chair and an attendance of about fifty. The secretary for the entertainment committee reported a balance of \$104.69 after paying all expenses connected with the recent banquet to the visiting members of the American Rose Society. The report of Mr. Farquhar, chairman of the committee of awards, was accepted and a new committee appointed to take further action and bring the matter to a definite head at the next meeting. It is to be hoped, too, that this will be accomplished, and settle a matter which has been dragging for months. Two new members were elected. Julius Heurlin was elected a member of the executive committee in place of Harry Wilde, resigned.

A letter was read from A. L. Pierce, vice-president of the A. Hews Company, saying that they would like to have the members of the club visit their pottery on Saturday, the 29th inst. This the executive committee had agreed upon, and a very profitable outing is expected, with a view to learning something more about flower pots than many of the members know.

On the exhibition table was a vase of very fine spikes of Lillium candidum grown by W. N. Craig. Mr. Craig said he had good success with this variety, which they liked much better for decoration purposes than L. Harrisii or longiflorum. He said the reason of so many failures in recent years with this lily was that the bulbs the growers got hold of were largely Turkish grown, and were practically worthless for forcing. The best bulbs of this lily, he said, came from the north of France, and were of a small size. He plants three bulbs in an 8-inch pot. One of the main points to insure success is to leave them out

of doors until they are well frozen. Those exhibited, he said, were taken into the greenhouse about January 10, and grown in a temperature of 52 degrees at night.

A committee was appointed, on the recommendation of Mr. Finlayson, to take some action to try and stop the re-naming of plants of American origin by English growers and vice versa.

Instead of the regular lecture, the main portion of the evening was given up to a general discussion on the following: "In view of the rapid deterioration of roses, carnations and other florists' flowers by propagation from plants grown under forced conditions, would it not be well to consider the matter of procuring stock for forcing from plants grown under natural conditions, such as would obtain further south, where the climate would permit open ground culture all the year round? It would seem that many varieties valuable to the trade are too soon rendered useless, and that hybridization, too, is adversely affected by the above cause, and that a remedy should be found." This question was thoroughly discussed by Messrs. Palmer, Montgomery, Elliott, Stevens, Sim, Finlayson, Wheeler, Craig and others. Mr. Montgomery said that he was astonished to hear of any deterioration with the rose, and stated that roses were stronger and better grown now than they had ever been. To prove his assertions he illustrated with leaves of Bride, showing where now these leaves had seven side leaves or leaflets instead of five as they did when originally grown.

Mr. Elliott said that so far as he was aware instead of deterioration in roses and carnations in recent years there had been a great development and improvement, and that any of the older varieties of twenty-five or thirty years ago could be grown to-day and with such an improvement over what they were in those days that they would seem like different varieties entirely.

Mr. Stevens claimed, as did Mr. Finlayson, that carnations did deteriorate and named a lot of old varieties that were good in their day, but which were not considered of any account to-day.

Mr. Elliott pointed out that this was not deterioration, but was caused by a "bug," which was to be found in this locality, that that "bug" was no other than Peter Fisher, who could be found up in Ellis and who had developed and introduced a race of carnations showing such an improvement over these old varieties that they would not be looked at to-day.

The arguments of the various speakers seemed to prove that this deterioration question was incorrect, and that in almost every case there had been a great development and improvement in the various species. After the discussion the club was entertained to some songs by Frank Connell, a young Brookline gardener. Refreshments were served and a very instructive and enjoyable evening was spent.

The next meeting will be held May 16, when Dr. Jackson is expected to lecture on the peony.

J. W. DUNCAN.

FRUIT UNDER GLASS.

Pot Fruits.

Ten or fifteen years ago the cultivation of pot fruit was limited to a very few places. To-day there is quite a quantity of fruit produced in this manner. While I would not advocate it on a large scale, still this method of culture is worthy of consideration. Pot fruits, provided they are properly handled, will be attractive and interesting from the time trees come into blossom till the fruit is fully developed.

When fruit trees are grown in pots, or tubs, the latter much to be preferred, the roots will keep cooler during the hot Summer months. Pyramids and half standards are the best. The aim should be to keep those trees in a symmetrical form; this must be attended to from the start, otherwise the strong shoots will take away all the nourishment, with the result that the weaker shoots will die; and, in the course of a few years, there will be an ungainly, unattractive tree.

I remember, some six or seven years ago, while visiting the well-known nursery of Thomas Rivers & Son, England, I got an idea of what may be obtained by this mode of culture. Trees were there, twenty years old, perfect pyramids in shape, grown in 18 and 20-inch pots; trees from 10 to 12 feet high and 6 feet through at the bottom, carrying an average of 130 peaches to the tree, splendidly developed fruits. Probably the most cherished and prized tree on the place at that time was a peach tree in a pot, forty-six years old—the first tree that was ever grown in a pot there. Whether or not that tree is alive to-day I cannot say, but at that time it was in good condition and had carried a crop of thirty peaches that season.

As stated, pot trees should be kept in as shapely a form as possible. To accomplish this we should not rely much on the Winter pruning, but rather attend to the Summer pruning, as it is an easier matter to regulate the sap with the young wood. When the trees have started into growth, or the shoots are about two inches in length, and where the shoots are numerous, I should disbud some of them, although it is not necessary to do much disbudding to trees that are confined in this way. Rather resort to pinching the surplus shoots back, say to three leaves. The aim is to form fruit spurs for the following season. Judgment should be used to have enough foliage all over the trees; but avoid crowding. The main shoots should be pinched at the fifth or sixth leaf, and any shoots, during the Summer, that are inclined to take

the lead, should also be pinched. Such treatment keeps the trees in nice shape, and very little Winter pruning is required. This method of treatment is suitable for peaches, nectarines, pears, and plums.

Toward the latter part of Summer, when the fruit is gathered and the trees set outdoors, they are inclined to make a little growth again. This should be allowed to persist. If pinched back, it seems to throw the sap back to the fruit buds, more particularly with the pear than any other fruit.

To be successful other things are just as important, and among these is airing when the weather is so changeable in Spring. While orchard house fruit delights in plenty of fresh air, sudden changes must be avoided. If pears, for instance, receive a severe check, we can say our work is gone for a whole year.

As the fruit begins to swell, thinning should be done by degrees, making the last thinning when the fruits are about the size of walnuts. It depends a great deal on the condition of a tree how much fruit one should allow it to carry. If a tree is extra vigorous, it is benefited by carrying a fairly heavy crop. Take a peach tree in a 15-inch square tub. Such a tree should be capable of carrying 50 good peaches; that is, a well-furnished tree.

Watering and feeding should be carefully looked to. It is a mistake to start feeding until the fruit is swelling nicely. Assuming the trees were potted last Fall (or, at least, they should have been), it takes them some time to root through the new soil; but when the roots begin to come to the surface, feeding is in order. Without doubt, one of the best things is manure water from the cow barn; still, I think, a change of food rather than keeping to one thing entirely is most beneficial. But where I use chemical fertilizer once, I should use farmyard manure twice. Good results can be had with Thompson's manure and Ichthemic guano. Both are high grade fertilizers, but should be used with judgment.

WM. TURNER.

Wall and Trellis Plants.

The list of hardy climbing plants is by no means small, yet it could be extended considerably by an additional resource to worthy subjects, which, though not hardy, would contribute a large share to the making of a pictorial scene during the months of Summer and Autumn. As Winter's iron grip relaxes and Spring's soft touch is felt, we look forward with a pleasure to the opening possibilities of making some original touches to our previous efforts, and the material for doing so is, I think, not lacking, even while we may confine ourselves to things which are strictly hardy.

Taking the clematis family alone, we have five or six beautiful species, perfectly hardy, with a large

number of garden forms, and few hardy climbers afford so good a display of bloom as the clematis, their season of flowering covering three and four months, making altogether a pretty serial. The adaptability of the species, *paniculata*, *vitalba*, *virginiana* and *montana*, for covering, with their jungle growth, any unsightly place and transforming it into a floral charm, is well known; while the less rampant, but more beautiful garden hybrids, as *Jackmani*, *Countess of Onslow*, *Star of India*, *Duchess of York*, *Duchess of*

Edinburgh and numerous others, come more suitable for wall or trellis work.

To plant a subject with the far-reaching abilities of the kudzu vine (*Dolichos japonicus*), for instance, in a space which would be far more suited to the little *Jasminum nudiflorum*, is nearly as bad as to expect the little Alpine plant to thrive and flourish 'neath a scorching sun; so with this thought in view, we should at least come nearer a successful issue, though we all must perforce often do the best we can, rather than the best we know.

Planting too thickly is a danger which should be avoided, for large growing permanent shrubs, such as wisteria, *Cydonia japonica*, magnolia and others, which are likely to remain in the same position for many years, often fail to come up to their maximum of growth and beauty through being cramped for room in root as well as branch. Moreover, it is well to remember that wall and trellis plants often suffer from drought during Summer, and this should be alleviated by a good mulching and occasional watering. Much also may be done to mitigate this evil before planting by deep digging and trenching, and by supplying the soil with a good measure of well rotted manure, for it is the soil that contains a fair percentage of humus which retains its moisture the longest.

The question of aspect plays a very important part in the success of plants, for where one plant may flourish and be happy on a wall with a southern exposure, another would be ruined by the bright sunshine succeeding a frost. Take the ivy (*Hedera helix*) and its many varieties, for example. It is known that ivy plants, which were afforded a northern aspect or a position shielded from the sun's direct rays during Winter, have pulled through a severe time in quite a respectable way; while others, which received the opposite conditions, were but sorry objects in the Spring. This principle, then, stands out prominent, i. e., do not give a southern exposure to those plants which are naturally evergreen, or those which push their flower-buds early in the year.

Plants whose hardiness is not fully assured will find the shelter of a wall the right thing for them, while protection can be more easily given them during Winter.

Abelia rupestris, a pretty Chinese plant, is one which should do all right under these conditions, and its many little pale pink blossoms, produced in late Summer, would be better seen against a wall than in bush form. Others which may be mentioned are: *Fuchsia Riccartoni*, *Cistus laurifolius*, *Ceanothus americanus* and *Viburnum macrocephalum*. The latter should find a place in every collection. *Chimonanthus fragrans* is another suitable wall plant, and is among the very earliest shrubs to flower, keeping the little Winter flowering jasmine company. Many more are mentionable and a judicious planting of those at our command will assure us an unbroken succession of bloom for eight months out of the year.

The Easter Outlook.

This has been a busy week for the plant growers. The weather during the first four days of the week was unusually cold for this time of the year; Monday morning quite a frost occurred in this vicinity, and tender plants left out without protection suffered quite severely. The cold spell has had some beneficial effects, however; particularly to the violet growers did it come in just right, and no doubt saved for Easter a crop of flowers that, if the weather had continued warm, would have been past and gone before Easter arrived.

This late Easter has proved too much for a great many azaleas, and there are rumors already of the available supply of good fresh plants falling short of the demand, so much of the stock being too far advanced to be classed as strictly first-class. Pot lilies are seemingly quite plentiful. Some growers are delivering at 10c. per bloom, and others are charging 12c. To an outsider this seems a great difference in price; but there are lilies and lilies, and when the buyer has the opportunity of seeing both grades, he immediately sees the difference and buys the best.

The show windows of the retailers are a blaze of beauty with plants of all descriptions. Raffia pot covers, together with plain satin ribbon, are being used more freely as accessories than anything else. At Thorley's, lilies are set up in the green raffia baskets, or pot covers, with a bow of green satin ribbon tied just beneath the flowers, the ends allowed to reach almost to the pot. Here are also a number of fine plants of Cattleya Mossiae suspended from the ceiling, every plant carrying a mass of exquisite purple flowers, adding a richness and color to the window that only the aristocratic orchid possesses. There is also a novelty in the form of lily of the valley, growing in a common hanging wire basket. The top, sides and bottom are completely covered with foliage and flowers, and, while somewhat stiff in their general appearance, the baskets as a novelty will no doubt take well.

J. Fleischman has been utilizing some of the golf sets, and chariots drawn by ducklings as flower holders in his windows during the past few days, and they have been a great attraction. Lilies were placed in the golf club-holder, and in the egg-shaped chariots, lily of the valley. All were finished with pale blue ribbon, and the window in its entirety was the best one we have ever seen this dealer display.

News Items.

Flowering plants have been featured in the auction rooms this week to some extent, though there is plenty of hardy stock yet being disposed of under the hammer.

The plant market at Canal and West streets is being held under the canvas tents, and if one wants to see the inner side of the plant industry, let him take a peep under this canvas market about 3 o'clock in the morning.

At the Arbor Day exercises of the public school in Orange, N. J., Frederick W. Kelsey addressed the pupils on the Essex County Park system, the public planting of trees, and forestry. Jaes. Smits, nurseryman of Naarden, Holland, was in this city this week. He has made arrangements with Ralph M. Ward & Co., for the latter to represent his firm in future in the United States and Canada.

Mr. and Mrs. Carl Jurgens, Jr., have been spending a part of their honeymoon in town.

L. E. Thompson, of Troy, N. Y., is in the city, and will become an associate of B. Slinn, wholesale florist, the firm name to be Slinn & Thompson.

The sympathy of the craft will go out to Henry B. McKnight, a life-long resident of Jersey City, in the death of his oldest son, William Steele McKnight, a promising young man 22 years of age. The deceased was very popular, and had a large circle of friends.

Hail Items.

WICHITA, KAN.—A hail storm, on March 27, did considerable damage here. Nearly every florist plant was hit. A large percentage of the sufferers carried hail insurance.

ANCHORAGE, KY.—The Anchorage Rosehouses of Charles Raynor were hit by a hail storm on the 10th inst. Several hundred feet of glass were broken. He was insured in the Florists' Hail Association.

Cincinnati.

News of the Week.

Last Monday we were having thunder showers and hail, with the thermometer at 72; Tuesday we had fires going, a raw wind blowing, with ice in some sections; and at 2 p.m. Tuesday the thermometer registered 50 degrees. But with all this, I do not think lilac or other outdoor flowers are hurt any, and I am quite sure the fruit in this section is all right up to this time.

Orders for Easter are coming in slowly, but I suppose by Saturday night we wholesale men will know what the demand was.

C. S. Ford, of New York, is in the city.

A Visit to Grand Rapids.

The writer spent one day in Grand Rapids, Mich., the past week. Everybody was busy looking after their Easter plants. Crabb & Hunter have a fine lot of multiflorum lilies that will be in; the stems are a little short, but the blooms are extra good. Eli Cross uses every inch of space around his greenhouses; Crimson Rambler, Ulrich Brunner, Magna Charta, and American Beauty roses in plants were fine, but to me the houses of lettuce were a grand sight. Violets were looking good here, also. At the Grand Rapids Violet Company's place I found Mr. Dietrick, the foreman, busy syringing the American Beauty plants; they will have a nice Easter cut. Mr. Hoppe has a new white rose, a sport from Mme. Abel Chateau; not bad, either. He also has a new pink rose, but I was not so favorably impressed with it.

I was surprised to see the magnitude of the business that Henry Smith has on his shoulders—two hundred acres of fruit to look after, to say nothing of the many greenhouses, and he is still building. He employs forty men to conduct his business. Some were spraying for San Jose scale, which, by the way, is very bad in this section; others were busy on asparagus beds; others plowing; some building greenhouses, and others working in the greenhouses. Mr. Smith grows nearly everything needed by a retail store; he employs four young ladies to look after the store end. Mrs. Smith, his mother, a very estimable lady, is kept busy collecting her rents and looking after things in the absence of her son. One day in Grand Rapids is not enough, but was all I could spare this trip.

E. G. GILLETT.

St. Louis.

News Notes.

J. G. Hayden, of Milwaukee, selling florists' boxes for Hummel & Downing Co., called on the trade last week.

On the occasion of the inauguration, for the second term, of Mayor Wells, last Tuesday, a number of large floral designs were sent to the City Hall. A large decoration of plants in the Council Chamber made the place look very attractive. Ostertag Bros. had most of the work.

The restoration of Forest Park is progressing more rapidly than was expected, and Mr. Kessler, the director, says that by the latter part of July the park will be fully restored.

Professor Wm. Trelease has returned from his long trip, and is again in his office at the Missouri Botanical Garden.

Edwin Loydt, a gold fish merchant, opened a flower store at 918 North King's Highway last Thursday.

The St. Louis Palm Company made a full size piano on Monday for the opening of a large piano house. The design was well executed.

Henry Berning and Carl Beyer, who were reported sick last week, are again about and attending to business. Both have fully recovered.

The Plant Growers' Association held a meeting Wednesday night, in Louisiana Hall.

John Burke and family left last week for California. Mr. Burke says he may go into business there. If not, he will return and re-enter the business in St. Louis.

The two teams of the florists' bowlers came together again on Monday night, team No. 2 winning two of the three games played. Beneke was high with 513; R. Meinhardt, second, 485; and Kuehn, third, 484. A special match between these teams will be played next Monday night. ST. PATRICK.

Chicago.

News Items.

Warmer weather prevails. Easter trade has taken fresh impetus and a great volume of business is being done. Stock is in fine condition.

Thursday's trade immense; all stock sold. Prices have held up to quotations. Carnations more plentiful than expected, but not over-abundant. There is a good demand for smilax and asparagus. Lilies are scarce, the demand being greater than expected. Other bulbous stock is selling exceedingly well.

John Holden has sold his store to Julius Ujesen and assumed immediate possession. Mr. Holden contemplates a western trip in the near future.

Vaughan & Sperry have bought Grand Rapids Florists' Association, assuming lease of stand in Flower Growers' Market, giving them much needed space.

Richard Padghan and Henry Muir have started a store at 135 Wabash avenue. ROBERT JOHNSTONE.

Newport, R. I.

News of the Week.

Carl Jurgens, Jr., was married in Washington, D. C., last Monday to Miss Florida Hubbard, of that city. There was a very elaborate display of flowers from the Jurgens greenhouses here, including American Beauty roses, lily of the valley, and other bulbous stock, for the growing of which Mr. Jurgens is noted.

Mr. and Mrs. Henry J. Hass have issued invitations for the marriage of their daughter, Miss Josephine Charlotte, to Mr. Thomas Livingston, at the United Congregational Church, at noon, Wednesday, April 26. Miss Hass has for many years been the greatest help to her father in the Thames street store; in fact, she took full charge of the retail flower business.

S. Nickelsen has commenced advertising "Gentlemen's places taken care of by the day, month or year." There are several gardeners here who do this work, and all are doing well.

Zeigler decorated for the Adair-Griffith wedding last week. Many palms and other foliage plants were employed. The bride's bouquet was of Bride roses in shower form; and the bridesmaids carried pink roses. F. W.

Indianapolis.

News Items.

A girl baby has been born to Mr. and Mrs. Martin Nelson.

The show windows of the Indianapolis retailers are particularly beautiful. John Rieman has his elaborately trimmed with azaleas surrounding a large cross, mounted with doves at each side. A. Wiegand & Sons have their large window filled with artistically arranged Easter plants. Bertermann Bros. Co.'s windows are beautiful with masses of Crimson Rambler roses tied with large bows of yellow ribbon, surrounding an immense cross of lilies and miniature lights. Wm. Billingsley has put forth unusual efforts, and as a result has an unusually nice Easter display.

John Hartje and the Indianapolis Plant & Flower Company are making elaborate preparations for the sale of their new pink carnation Candace. From a retailer's standpoint it certainly has qualities superior to any of the existing varieties.

Visitors: J. A. Peterson, Cincinnati, and George R. Scott, Chicago. I. B.

CANADIAN NEWS

LONDON, ONT.—The Easter wholesale trade is now in full swing, and from present indications no more will be left on hand for retail purposes than can easily be disposed of. Shipping orders for lilies are generally somewhat lighter than the average. Other seasonable lines are about the average, or a little higher. Pelargoniums are very popular, and Gammage & Sons' big stock of splendid plants is moving very rapidly. In cut flowers, for purposes other than church decorations, carnations are the leading favorites, followed by roses. Cut stock of all kinds is plentiful, and the quality is excellent.

The change from almost Summer heat to cool days and frosty nights has checked outdoor bulbous stock, which at one time promised to be in full bloom by Easter. The only novelty to be seen at present is a fine lot of the miniature azalea Chas. Enke, at Gammage & Sons. These are very pretty little plants, and should be very popular.

Washington, D. C.

Work of Gardeners' Association.

The Washington City Gardens' Association has commenced operations for the present season, and according to the report that has been made, there have been more applications for garden plots than the association can possibly supply. This important line of work was set on foot last year in this city, the object being to encourage the utilization of the vacant lots surrounding the city for the growing of produce. Working plans for the gardens are developed and put into operation under the superintendence of a practical gardener. Professor B. T. Galloway, of the Department of Agriculture, who is a member of the board of managers, states that there is no difficulty in securing land, owners of vacant lots being glad to have them kept clear of rubbish and weeds. The rules governing the gardens are few. An applicant is allowed a garden of from one-fourth to half an acre, on condition that he will cultivate it well throughout the season. A failure to observe the rules causes him to forfeit his land. In regard to the supplies for the garden, the association furnishes the seed, fertilizer, and plows the land, and lends or sells the tools at cost. Last year about eighty lots were cultivated, each averaging about one-eighth of an acre. A number of the gardeners produced a sufficient supply of potatoes for their families during the Winter. This system is modeled after that in operation in Philadelphia. M. C.

BALTIMORE.—John Cook is sick in bed with an attack of la grippe.

The American Carnation

HOW TO GROW IT

A Standard Work Written by Request of the Publishers of The Florists' Exchange

By C. W. WARD

Quarto, cloth. Price \$3.50, postpaid

The Carnation in America has reached a status and importance in the florists' industry possessed by no other flower of modern times, and a practical work on the subject of the cultivation of the plant has become an urgent necessity. This want is fully and completely met in the present volume, which furnishes the results of years of actual experience of the author, who is recognized as being among the foremost of carnationists in America.

The scope of the book will be gleaned from the subjoined table of contents:

History and Development of the Carnation.—The Carnation in America.—The Commercial Importance of the Carnation Industry.—The American Carnation Society.—Use of Carnations as a Decorative Flower.—General Greenhouse Culture.—Soils.—Manure and Fertilizers.—Propagation and Shipping of Young Stock.—Treatment of Young Stock Preparatory to Planting Out.—Field Culture.—Lifting and Planting Carnations from the Field.—Treatment After Benching.—Picking, Packing and Shipping Carnation Flowers.—Insects and Preventives.—Diseases and Injuries.—Packing and Shipping Field-Grown Plants.—Forcing Houses for Carnations.—Bench Construction.—Sub-Irrigation.—Heating Carnation Houses.—Carnations for Summer Blooming.—Bedding and Hardy Carnations.—Carnations for Field Culture.—Raising Carnations from Seed.—Cross-breeding and Fertilizing.—Varieties.—Sports and Variations.—The Ideal Carnation.—Traits and Peculiarities.—Various Classifications of the Carnation.—List of Varieties for Different Localities.—The Future of the Carnation.—Its Commercial Aspect and Prices.—Who Shall Engage in Carnation Growing?—Does It Pay to Do Things Well?—Calendar of Operations.—Carnations in California, Canada, in the West, the East, the South.

It will at once be seen that a work of this nature should be in the hands of every florist who desires to keep abreast of the times, and to make the growing of carnations, by the most modern methods, a profitable part of his business.

The book is profusely illustrated by original engravings from life made especially for this work. Handsomely printed from large, clear type on fine enameled paper.

A. T. DE LA MARE PTG. & PUB. CO. LTD.

Review of the Market

NEW YORK.—Business in cut flowers has shown a general, gradual improvement as the week has progressed, and now as we get close to Easter we find prices on nearly every grade of flowers assuming holiday proportions. The few cool days experienced have been of decided advantage to some things, and there is every indication that there will be a full supply to meet whatever demand a busy Easter might bring. American Beauty roses have advanced steadily from day to day; 35c each was a quoted figure for Thursday for some of them, and it is expected in some quarters that 50c each will be realized before Sunday.

Bride and Bridesmaid have also made material strides toward better values; 10c and 12c has already been obtained for specials, and another advance is looked for within the next day or two.

Violets became scarce in the beginning of the week, and they jumped to 75c and \$1 per 100. It is now believed that there will be a fair supply of violets for Easter owing to the recent cool weather.

The stock coming in now is certainly of better quality than has been usual for several weeks past, and if there is a supply of good flowers for Sunday, they will no doubt sell at prices far in advance of those quoted for to-day.

Carnations are not behind in the struggle for higher values, and prices on these have doubled up all around. Lilies are yet going at 6c and 8c each, a few only reaching the 10c mark. Lily of the valley is a little firmer, and narcissi have made progress toward better prices. Cattleyas are moving fairly well, and values are on the increase. Smilax is a good thing just now, almost fetching fancy prices. Adiantum and asparagus are also in good demand. Trailing arbutus is much in evidence, but does not seem to go with any snap. Gardenias are quite plentiful, and these will no doubt go well for Easter, though they have not been selling satisfactorily for some time.

PHILADELPHIA.—There is every indication of a very good Easter business. The plant growers are already well sold out; in fact, azaleas of any size have been gone for two weeks. We had three cold nights in the early part of this week, when the thermometer ranged from 24 to 30 degrees in different locations around here, and it was cool all day following, so that some plants are rather more backward than wanted, as everyone was holding them as cool as possible, anticipating warm days. The only plants seen too far advanced are some pot roses and some lilies.

Up to Wednesday afternoon cut flowers are scarce. Carnations are in brisk demand, and prices have advanced 100 per cent., choice stock being offered as high as \$3 per 100. American Beauty roses have also advanced; \$5 per dozen is now being asked for the best. On Monday last evidently some growers did not know how to figure the market, as choice stock of American Beauty was sold at from \$2.50 to \$4 per dozen.

All the wholesale houses are doing a good shipping trade; in fact, on Wednesday they were unable to fill all orders. Indications point to a busy time next week; numerous weddings and social affairs are booked. DAVID RUST.

BOSTON.—There has been slight advance in prices so far this week. There is no scarcity of stock whatever. In roses American Beauty remain in practically the same state as last week. Bride and Bridesmaid are moving somewhat more freely; the quality of all these is all that can be desired.

Carnations show more activity, especially in colored varieties. White sorts have had little call the past week, nor are they likely to be much in demand for Easter. Lilies are now plentiful and of first-class quality; in this respect there is a decided improvement over those seen last year. Bulbous stock has been somewhat firmer, although there is little advance in price. Lily of the valley remains firm; it is of excellent quality. Sweet peas are very fine. Violets, which it was feared would be scarce, are yet to be had in sufficient numbers to supply all demands, and many growers have a reserve stock for the end of this week. J. W. D.

CHICAGO.—Trade during the past week has been very good. Shipping business was all that could have been desired. On Saturday last Easter prices could be said to prevail; the supply had shortened up, especially of carnations. Roses were not so scarce; in fact, they were rather plentiful. During the fore part of the present week prices took a decided advance. The supply was short and this will no doubt continue until after Easter. From appearances a shortage in some lines is sure to prevail, being most noticeable in carnations. Bride and Bridesmaid roses will no doubt be in sufficient quantities to meet all demands, especially in the medium grades. First-class stock will not be so plentiful—these latter are high priced; in fact, commanding nearly as high values as during Christmas week.

Plants in bloom will cut quite a figure here. Crimson Rambler, American Beauty,

hydrangeas, tulips in pots and pans, azaleas, lilac, hyacinths and lilies about constitute all the flowering plants that will be used. Lilies are better than ever before. Other flowering stock is also in fine condition and large quantities are being sold. Prices on these are the same as in former years. Boston ferns are being disposed of in large numbers, also Asparagus plumosus nanus and A. Sprengeri in pots. Nothing is heard of in the way of novelties.

The supply of American Beauty roses will be ample to meet all demands; some of the larger growers of these will have a fine crop at that time. Extra good stock will command a good price, as also will the medium grades. Mme. Abel Chatenay will be in good shape, never having been in better condition than at the present time. Good flowers are coming in from nearly all the growers of this popular rose. Liberty will be in good crop and of exceptionally good quality.

Carnations were in short supply the fore part of the week, but it is expected the supply will be ample to meet all demands, as without doubt growers are holding back these to a good extent. Violets at present writing are very scarce; and whether the supply will increase later on in the week is very hard to say. Those that will come in will be poor in quality, the season being too far advanced for them to be of much account.

Outdoor grown bulbous stock is accumulating on the market and is sold very cheap. Home grown tulips are not overplentiful, bringing a good price. Sweet peas will not be overplentiful, as but few are now being received. Smilax and asparagus remain at about the same prices as quoted last week. R. J.

INDIANAPOLIS.—As usual, just before a large holiday, business is very quiet. A small quantity of funeral work is on hand, and some orders are being taken for Saturday and Sunday. Stock is accumulating rapidly, and all indications point to a plentiful supply for Easter. The cold weather of the past few days has been a bore to the growers, and much bulbous stock will be on hand that was not expected to be in good condition the coming Saturday. The local firms are expecting and preparing for an unusually busy time. Prices have advanced but little. Select Bridesmaid, Bride and Golden Gate wholesale at \$3 per 100. Liberty are in fine condition and bring \$3 to \$12 per 100. American Beauty are more reasonable than in former years; select 36-inch stems sell at \$3 per dozen; 24 to 30-inch stems, at \$2 to \$2.50, and 15 to 20-inch at \$1.50 per dozen.

Fancy carnations are selling at \$3.50 per 100; medium grades are plentiful at \$2.50 to \$3 per 100; 75c. to \$1.50 a dozen are the customary retail Easter prices.

There are enough lilies to supply all demands, but the quality is hardly up to the standard. 12 1/2 c. wholesale and 25c. retail (per flower or bud) is asked for them. Few, if any, violets are in the market. Select sweet peas are plentiful at \$1 per 100. Lily of the valley is selling well at \$4 per 100.

With the exception of tulips, hyacinths daffodils, plants are in excellent condition for so late a date, and wholesalers are reporting a satisfactory sale. Good azaleas are in demand at fancy prices. Crimson Rambler roses are in excellent condition, but the supply is limited.

The growers at Tomlinson Hall Market have a heavy supply in reserve for Saturday, and record-breaking sales are anticipated. I. B.

PITTSBURG.—Business the past week has been fair. For Palm Sunday quite a lot of flowers were sold. The supply continues ample, with prices somewhat advanced. Lilies seem abundant, also callas. For Easter prices from 10c. up is about the

figure. There are plenty of roses and carnations. Bulbous stock is coming in heavily, and the supply will likely hold over Easter. Sweet peas are in fair demand. Violets seem scarce.

Plant trade is lively, and more and better stock is offered this year than last. Azaleas are in fine condition. Genistas, hydrangeas and Crimson Rambler roses take the lead. There is lots of bulbous stock in pots and pans. The outlook is for a good business for Easter; orders are coming in well; and if the weather is at all good a big trade is expected on Saturday.

Joe Jones opened up a flower stand on Liberty street principally for the sale of plants for the next few months. The location is a good one, with a large store-room. E. C. R.

NEW BEDFORD, MASS.—The past week has been a very good one, so far as the cut flower trade is concerned, but the weather has been anything but pleasant. On the 17th, snow fell for a few minutes in this section. Funeral trade has been good, with a scarcity of flowers. There will be an ample supply of stock for Easter, at good prices. H.

ST. LOUIS.—Trade conditions of the past week were about the same as last reported, only that funeral work was more plentiful and the plant trade improving greatly. Some extensive preparations are being made by the florists for Easter. There will be plenty of extra fine plants and cut stock in all lines; prices have already stiffened on all grades. On Monday and to-day, Tuesday, stock was coming in rather slowly, and we hope that the growers will not hold it back for later in the week with the expectations of a large price.

The following list is what the commission men say stock is going to cost (beginning Thursday) for Easter: American Beauty, fancy, \$5 to \$6; extra, \$3 to \$4; medium, \$1.50 to \$2, and shorts, 75c. to \$1 per dozen. Others in the Bride and Bridesmaid class will run on an average \$3 for choice, first \$6 and shorts \$4 per 100. Carnations, fancy, will go as high as \$5; firsts \$3 and \$4, and common \$2 per 100. Lily of the valley, \$3 and \$4; Paper White narcissus and Roman hyacinths, \$3; callas and Harrisii lilies, \$12.50 to \$15 per 100; tulips, \$3 to \$5; Dutch hyacinths, \$4 to \$6; sweet peas, 50c. to 75c.; Von Sion, \$3 per 100; smilax, 15c. per string. All other greens remain the same. ST. PATRICK.

WASHINGTON, D. C.—There has been a slight improvement in business this week. The past few days have been decidedly cooler, which has had the effect of retarding stock somewhat, and will improve it very materially. Roses promise to be scarce, especially American Beauty, which have brought from \$9 to \$12 per dozen. Bride, Bridesmaid, Ivory, Golden Gate, Souvenir du President Carnot and Kaiserin Augusta Victoria realize from \$1.50 to \$3, while Liberty has brought \$2 to \$3 per dozen. The local supply of carnations is limited, at from 50c. to \$1 per dozen. Lily of the valley sells at \$1.50 to \$2 per dozen. The supply of local-grown violets is exhausted. New York stock brings 75c. to \$1.25 per 100; Lillium Harrisii, 25c. each flower; lilac, \$2 to \$3; jonquils, 35c. to 50c. per dozen; sweet peas, 25c. to 50c. per bunch. Cherry blossoms have played a very prominent part in the decoration of store windows this week. M. C.

BUFFALO.—Indications would point to good conditions for Easter, but the weather of the last week or more has been that Wintry in character as to make dealers timid about placing orders. Store men mention orders booking a bit slowly, though, buyers show liberality as regards fair prices. Some presage a scarcity for the demand in carnations. Roses promise to be ample for the calls; and violets are being looked up. The quality of the blooms promises good. Owing to the recent cold, some lots of blooming stock will not get into expected condition for sales. At Kasting's wholesale stand, the roomy

rear parts of the ground floor are being occupied with a big lot of lilies, both plants and cut stock, sufficient to fill many orders. VIII.

PROVIDENCE, R. I.—Prices on cut flowers for Easter are not quoted by local growers as yet, but we do not anticipate any surprising increase. The one problem is the department stores selling Easter plants at quotations away below the trade price. Good lilies in pots are quoted, wholesale, at 10c. to 12c. per bloom, but these stores are retailing lilies at 12c. per bloom. This, of course, is creating a good deal of worry; but there is no way of meeting this kind of competition at present, and the store florists must be content to handle top-grade stock at only a fair profit. C. S. MACNAIR.

NEWPORT, R. I.—The weather has turned sharply cold for so late in the month; for several nights ice quite thick has formed, and as a result trade has slackened for the moment. Our florists are now booking orders for lilies and other Easter stock and present indications point to a very satisfactory trade, in which plants will far outsell the cut flowers. In fact, plants have steadily gained in favor here for Easter year by year. It is too early to say much about prices. F. W.

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

WOODHULL, N. Y.—Clare Colvin will build a greenhouse here and engage in the florist business.

WORCESTER, MASS.—The Worcester Conservatories have opened a retail flower store at 400 Main street.

MONTECITO, CAL.—Oscar Keezer has purchased ground here, and will establish a nursery and greenhouse business.

WEST SENECA, N. Y.—John Avery has opened a flower stand at the corner of Ridge Road and South Park avenue.

TERRE HAUTE, IND.—Fred Wunker & Sons have leased the ground on East Wabash avenue opposite the Highland Lawn Cemetery, and will move their greenhouses there.

PAWTUCKET, R. I.—The business of the Rhode Island Greenhouse Company has been purchased by James Barclay, florist, Herkimer, N. Y. The greenhouses cover 40,000 square feet.

ATLANTIC CITY, N. J.—Congdon & Landolt have opened a florist establishment at 1315 Pacific avenue. Mr. Landolt, who was formerly employed in Baltimore and New York, states that the outlook for success is very bright, and that indications point to brisk Easter trade.

We can't do much with a "Just front" grower

who knows that all tobacco powder is the same cigar and tobacco store trash he gets at his cigar store or from his seed man and JUST WON'T ask for our booklet, that is full of the sayings of his fellows, that read: The H. A. S. Co.—Please send 200 lbs. FUMIGATING KIND TOBACCO POWDER; best thing I have struck to date; got some from a neighbor. A. G. LAKE, Wellesley Hills, Mass. The H. A. S. Co.—Send 200 lbs. BLACK STUFF FINE for dating; the like in action we have not yet seen. KIMMERLE & MINDL, Newark, N. J. He JUST WON'T believe that 95 per cent. of all the growers that send for our free five-pound trial sample bags of THE FUMIGATING KIND (for fumigating) and THE BLACK STUFF FINE (for sprinkling), have purchased not once, but again and again, after the trial. WHY BE A JUST WON'T when you can have these free five-pound trial sample bags; yes, two of them if one won't do. All we ask is for you to pay the express charge on them. Ask now. Don't be a "JUST WON'T."

Cyclamen.

One of the leading features in greenhouse-plant culture and market-plant traffic is to-day—and has always been—the cyclamen, the alpine violet of the lay gardener. Habit, structure and coloration of foliage and bloom and general appearance make it the ideal market plant; and of all the plants raised and sold throughout the entire year, none equals the cyclamen as a subject for the dwelling house or living room.

Cyclamen persicum giganteum is of all the varieties the one most favored by growers as the least difficult to raise to perfection from seed. And of this variety the seeds are offered by all the firms who deal in seeds, but there is so great a difference as to quality in the various strains that any grower who depends annually for his supply of cyclamen seeds on his purchases from unknown or in any way doubtful sources, runs a pretty good chance of laying out his money and a full year's time, care and labor for a measly lot of plants, which, when he compares them with those of other florists, do more in stunting his pride as a grower than any other failure. In the course of time he learns that not all strains of cyclamen seeds are what they are cracked up to be, and that to deal with reputable, reliable firms only is, after all, the best policy. The grower is fairly sure of success in this culture if he takes the trouble of saving his own seed from carefully selected stock set aside for this purpose. Our most successful plantmen have followed this course for years.

The seeds may be sown at almost any time of the year, but will give best results if sown just after they have attained their greatest size and have become fully ripe. The proper time for commercial florists to sow the seeds of Cyclamen persicum is from the end of July to the beginning of October. I have found that the sowings made in the first half of September proved most satisfactory. As a suitable soil for the germination of the seeds very sandy leaf-mold alone is to be preferred to any other mixture, or to anything heavier or richer. The seed pans should be placed in a cool and heavily shaded frame. (Remember that this is meant for the beginning of September, and only for the seed boxes.) The seeds must be kept moderately moist, not wet, and as an aid to this end a thin layer of finely broken up or chopped sphagnum moss on the top of the seeds will do good service.

In from four to eight weeks the plants will be of a size to justify, or rather to demand a pricking off or a transplanting into other boxes containing the same kind of light, porous soil. The cooler weather of the Autumn will, from now on, promote a rapid, healthy growth and shading need only occasionally be resorted to as a protection against the hot rays of the noon-day sun. The watering of the young plants requires care and judgment. They should never dry out clear through; nor should they ever be in a soaked condition. Many a promising lot of seedlings was sent to Hades through the sins of commission or omission of a careless, thoughtless workman who believed himself a gardener.
 Mistakes as to shading are also frequently made. Cyclamen plants, young or full-grown, need no heavy shade from early in the morning until late at night, or on cloudy days. All they want in this respect is a light covering with lath frames, or easily handled, light muslin frames, at the hours when the sun is hottest and the air killing dry; and, besides this, a regular, even moisture at their roots and an abundance of pure, fresh, freely circulating air.
 The young plants are carried through the Winter on a greenhouse bench, affording all the light possible, and in a temperature of about 55 degrees. A transplanting becomes necessary whenever it is found that the roots are beginning to bend on the inner side of the pot, no matter whether the top growth has kept pace with the rapid root formation or hardly shows much real development, which latter is often the case during the dark days of the waning year.
 In the Spring, after all danger from untoward spells of weather is past, the plants again take up their quarters in outside frames, now needing considerably more room. In August, the final shift into the selling size pots is given. I prefer, in this culture, to use new pots at every transplanting, and for the last shift a little heavier soil, mixed with a small quantity of soot, obtained from the cleaning of chimneys.
 The first few premature and stray flower buds must not be allowed to develop into open flowers, and should be pinched out until a uniformly distributed set of buds has formed. From the time that these buds are plainly visible to the time when the plant is in full bloom, a period of from eight to ten weeks is required. As soon as the flowers show color, no more water should touch them, while the foliage should still be regularly sprinkled. Fumigation must also be discontinued at this time, lest the flowers be ruined. It is a good plan to plunge the pots into a proportionally deep layer of fresh tobacco stems, which will serve several good purposes.
 Old plants of cyclamen that have done blooming should be watered only just enough now to keep the roots from shriveling. In the month of August the old soil is to be shaken from the roots, and the plants are repotted into new pots and into new earth. In doing this, the base of the corm should only just be sunk below the surface of the soil and nearly the entire body of the corm be above ground. A partial rest from early Spring until August is needful in the case of old plants, but young seedlings should be held at as rapid and uninterrupted a growing pace as possible, from the germination of the seed until the plants are fully developed and ready to bloom.
 FRED. W. TIMME.

THE WEEK'S WORK.

Timme's Timely Teachings.

Spring Trade.

Growers of potted plants and bedding material have had no reason to complain of a sluggish trade, or unsatisfactory prices, in any of the last two or three seasons. This branch of our business is full of life and vigor and a falling-off in this line of trade in the near future need not be feared.

Now when the rush of Spring trade is again close at hand—a trade of far greater magnitude and importance to the great number of wholesale and retail plantmen than even the greatest Easter activity—let us all try to deal in nothing but the best, and let us also endeavor to stick to good, up-to-date prices, that will grant a decent margin beyond the cost of production, prices which should give no rise to periodical complaints on this score. Let us neither give thirteen nor eleven for a dozen, neither the baker's nor the skinner's dozen, but an honest gardener's dozen of twelve. And if any of us are in the habit of giving in an extra, let this be a good one, a rare thing for that matter, rather than any crippled, unsalable plant, which will, in nearly every case, persist in being in the front when our goods are judged.

In laying out and planting grounds, in filling vases and window boxes, in executing orders of all kinds, let us be honest, upright business men; let us bear in mind that a job well done begets future business, brings patronage and is a credit to our trade. Anything which for some reason or another may have proved a failure with this or that grower should not be smuggled into large orders, as is so often the case. Either tell your customer you have none of it in good shape, or, if you take the order for good plants of that kind, then procure them from some other grower, who has been more fortunate in raising them. The mere fact that any grower has a lot of plants which failed to do well does not entitle him to first-class prices for the same.

Easter.

After the most judicious planning, the most careful preparations of many months, the great holiday is at hand. May all the forethought, anxiety, labor and outlay prove fruitful. May the expectations of every florist who looked forward with watchful, hopeful eyes to a lively, profitable Easter business, be fully realized. I shall not try, at this the eleventh hour, to string out a lengthy set of Easter hints, well knowing that all those to whom they might prove helpful will find but little time to read just now. This little time, however, will suffice for the following few

Reminders.

The most experienced and reliable person in the entire crew should be entrusted with the making up of large orders to be delivered at a certain hour. Let him attach the cards and see to it that this or that plant is duly labeled, stacked or dressed, as ordered, and let him supervise the sending out of every order.

Be sure to accurately book every order, the name and residence of purchaser, the number, name, grade and price of plants or flowers, whether paid or charged, and when to be delivered with name and number of the recipient. Always, no matter how busy you are, take your full time in doing this part of the business.

Make certain that every plant before it leaves your place is thoroughly watered. The plants, having been handled and shifted about more than usual, need watching in this respect. A plant almost dry at the roots when it leaves the store, will, after a journey of a mile or more, be unrepresentable.

If you happen to have any help on the place too slow-witted to be of any real assistance otherwise, set him to washing the pots of plants that might probably still find a buyer. But do not let him get his hands in on the orders already made up.

Experienced, nimble fingers should attend to the dressing of plants and pots. A lady is the proper person for this sort of work, which should be done just before the plants are to be delivered. Crepe paper, matting and ribbons are to be used in a manner calculated to enhance rather than to hide the natural beauty of plants and flowers.

Make a reasonable charge for the dressing of plants, for any extra labor, frills, ruffles or fringes, when the buyer insists on having these extras, and is perfectly willing to pay for them. Indeed, most of them would think less of their purchase were it otherwise.

By all means do not get ruffled yourself. Do not fret, worry or lose your temper through any cause whatever. Some mistakes will likely be made, something probably go wrong. Correct the mistakes and overlook the breaking of a pot or the loss of a plant.

The florist with a good portion of business capacity is fertile in resources, gifted in the matter of overcoming difficulties and mishaps. He is not easily confused by details. May his path be strewn with roses and his Easter eggs be golden! FRED. W. TIMME.

DAHLIA Kaiserin Augusta Victoria

THE BEST WHITE DAHLIA IN EXISTENCE.

My own importation. I control the entire stock of it. Flowers double, of the purest white, 4 to 6 ins. in diameter; a wonderful bloomer, stems 12 to 18 in. long; plants 3 to 3 1/2 feet high.  CUT FLOWERS AT WHOLESALE

Pittsburg.
 The Week's News.
 Polite's new store on Fifth avenue in the Arcade building opened up last week, and is doing a nice business. This is one of the best retail stands in the city, being on the most prominent square.

John Bader and Blind Bros. opened up their stands in the market, and will remain for the season.
 A. W. Smith had a fine wedding order last week, one of the best of the season. The decorations were very attractive.
 J. A. Peterson, of Cincinnati, O., was in town last week and disposed of a fine lot of plants. August Rhotert's representative, Mr. Darrow, of New York, was also here on business.
 H. Langhans, father of T. P. Langhans, of the Pittsburg Cutflower Company, died last week.

W. C. Beckert, the Allegheny seedsman, has returned from Bermuda. Mr. Beckert had a very pleasant trip, a smooth sea both ways. Hartsii lilies are looking fine, and flowers were being shipped to the United States as usual for Easter.
 Wintry weather for four days, lots of snow and the thermometer as low as 27 degrees, did some harm to trees and shrubs, but was beneficial to bulbous stock and other blooming plants under glass, holding them back for Easter trade.

A visit to the Bakerstown rose plant last week showed everything in fine shape. The cut for Easter will be very large. F. Burki has certainly built a model plant, up-to-date in every thing, equal to anything in the country. Carnations, grown by many thousands, are in the best possible condition; the young stock for this year's planting could not be better. Adonis showed up very strong. Flamingo and Lady Bountiful are favorites. Fred Burki looks to be as good a white as is on the market, and will be grown heavily this year. William Scott is still grown, but this is the last year for it. Roses are also in good condition. General MacArthur and Mme. Abel Chataenay were strong. - Bride, Bridesmaid and Perle des Jardins are the main crop. A good lot of Mme. Cusin are grown and a small batch of the old favorite, Bon Silene. The asparagus house is quite a feature, and very profitable; several plants, sports of A. plumosus, promise to make a sensation, being more elegant in appearance and just as strong in growth as the type.
 E. C. REINEMAN.

PORTLAND, ORE.—Luther Burbank will, for the first time, make a complete exhibit of his strange plant products at the Lewis and Clark Exposition, which is to be held in Portland this coming Summer. The exhibit will contain all the more famous products, and is sure to be found of unusual interest. It will be one of the most noteworthy attractions of the Western World's Fair, which will have, besides, many other things well worth making the overland trip to see.

Easter Outlook.

The outlook for the Easter trade is so far very encouraging. Wednesday being a holiday (Patriots' Day), somewhat interfered with shipping arrangements, and will cause an extra rush on the latter days of the week. While it is yet too early to say what will be the extent of the cut flower trade, there is no question but that the plant trade will far exceed that of any previous year. Lilies in pots are much finer than last year, and there is every indication of a plentiful supply. Crimson and Baby Rambler roses are quite numerous. Azaleas will, perhaps, not be so plentiful; while there is abundance of genistas, ericas, hydrangeas and such plants.

The Week's News.

A fire started in some unaccountable way in the delivery wagon of Arthur H. Fewkes, of Newton Highlands, while on one of Boston's busiest streets with a load of plants, on Saturday afternoon. Fortunately, it was extinguished before much damage was done. W. C. Stickel has sold his North Cambridge establishment to John McKenzie, who conducted a greenhouse establishment in the same neighborhood. Mr. Stickel will devote his entire time to his plant at Lexington.

In my notes on Easter plants last week the illustrated plant of Andromeda speciosa was grown by Mr. Shad, of the Bussey Institution; the other accompanying illustrations by A. Leuthy & Co.

James Farquhar, who has been in Porto Rico all Winter, in the interests of growing his firm's new lily, sailed for home on Wednesday.

W. H. Elliott has returned from Washington, having also spent a few days at New London, Conn.

Hoffmann has some fine forced peonies from his own greenhouses at Mount Auburn.

Wm. Sim, who was experimenting with retarding a lot of violets in frames for the Easter trade, has a fine lot in prime condition.

Visitors this week included Ernest Wienhoeber, Chicago, and W. C. Langbridge, Cambridge, N. Y.

Buffalo, N. Y.

News Notes.

The J. H. Rehstock Company will occupy several store front spaces right next to their store, as annexes, giving a chance for a fine display.

Rachel M. Rehstock sports a new delivery wagon, as an accessory demanded by her expanding business. Palmer & Son have engaged a large delivery type of auto for this week's special use.

Recent visitors included Robert Bard and P. R. Quinlan, of Syracuse, the former acting as judge of cut blooms at the Sweeney flower shop last week, and E. B. Sage, of Red Rock, Pa.

VIDI.

WE ARE THE MAKERS OF THE

Model Glazing Point

Acknowledged By All To Be the Best

SOME TESTIMONIALS.

THE SEYMOUR GREENHOUSES, Seymour, Ind.
 March 21, 1905.
 PARKER-BRUEN MFG. COMPANY, INC.,
 1133 Broadway, New York.
 Dear Sirs:—Your favor of March 18th received, also catalogue. In regard to your Glazing Points we would say that we like them better than anything we ever used before, being easier to drive and holds glass very firm. Would not think of using anything else. You may expect an order for more when we need them.
 Yours truly,
 M. A. BARICK.

ARENDT BULB CO., Tamoroa, Ills.
 April 5, 1905.
 PARKER-BRUEN MFG. COMPANY, INC.,
 1133 Broadway, New York.
 Dear Sirs:—We are now using your Model Glazing Points, and they seem to be better than any we have tried—and we have tried them all. We use them on Hot Bed Sash, where they would soon show their weakness—if any. We see no reason why they should not be called The Best.
 Yours truly,
 ARENDT BULB CO.

GEO. E. VOORHEES, Morristown, N. J.
 April 3, 1905.
 PARKER-BRUEN MFG. COMPANY, INC.,
 1133 Broadway, New York.
 Dear Sirs:—In regard to your Glazing Points I would say that I have carried them for the past two years and have sold quite a quantity of them, and they have proven satisfactory. I still carry them in stock.
 Yours very truly,
 GEO. E. VOORHEES.

G. J. BAGSHAW, Fairfield Rd., Victoria, Canada.
 April 5, 1905.
 PARKER-BRUEN MFG. COMPANY, INC.,
 1133 Broadway, New York.
 Dear Sirs:—Your Model Glazing Points are the best yet. Please send me two packages more. Enclosed please find \$1.32, and oblige,
 G. J. BAGSHAW.

San Francisco.
 News Jottings.
 Summer weather is in full swing here. Easter stock is now abundant; but right in the presence of this warm weather growers of roses, carnations, orchids and lilies, notably the Burlingame growers, E. W. McLellan & Co., Superintendent Thos. W. Breed, of the Meyer nursery; H. G. Hardy, at San Mateo, and Demoto Brothers, of Elmhurst and Fruitvale, are encouraging the cut flower dealers in the hope that their hold-back tactics will enable them to supply stock equal to the Easter day demand.

The other name of the Meyer nursery referred to is Glenwood Nursery. It was established one year ago last June, and has already grown into a plant now representing twenty-one houses and 145,000 square feet of glass. The first three concerns mentioned are located in San Mateo county, the one other peninsular county, joining San Francisco on the south. And since San Mateo is now penetrated by the electric car system of the United Street Railway Company of San Francisco, these growers, and hundreds of other San Mateo growers, are gladly expressive of the transportation facilities afforded, exceedingly so just now in view of the current report that the United Street Railway Company is planning to supply the San Mateo growers with cars specially adapted for the flower trade.

On April 7 the widowed mother of Luther Burbank was 92 years old, and many were the birthday tokens of friendship and esteem she received, some, as usual, from the far away town of her birth, Sterling, Mass. Whenever he can cast aside the thousand cares that his work imposes upon him, Luther Burbank and his mother have a chat together, and particularly on the annual occasion when her birthday comes around he devotes almost his entire day to her.

Pierson Boilers

For Steam and Water are unsurpassed for efficiency and economy

Messrs. Righter & Barton, Madison, N. J., write: "August 5, 1904. The two 'Pierson' sectional hot water boilers installed for our new houses one year ago gave exceptional satisfaction during the past winter, the most severe for many years, easily fulfilling what was expected of them, at the same time proving to be economical."
 "We found them very easy to manage, that they responded promptly and heated the water in short time, thus giving splendid control of temperature in houses when sudden drop took place outside."

FISCHER'S

GRAND FREESIA PURITY

A magnificent, snowy, glistening white of very large size and great length and strength of stem. A dozen sprays make as fine a showing as a dozen white carnations and can be used wherever carnations are used for decorative purposes. A truss bearing from eight to eleven buds, of which six are frequently open at one time, make an immense flower. It is of great substance and bears shipping without bruising. Stems can be cut two feet long and are as rigid as sticks. It is very prolific in bloom, producing three to four rich shoots of eight buds each, besides the main flower. Bulbs no larger than dried wax beans of this grand Freesia make as large a flower as the large bulbs, only the stems are shorter. All growers should try some of this Queen of Freesia, for when "once grown always grown." Price for large bulbs, \$4.00 per 100; \$30.00 per 1000. 500 at 1000 rate. A discount on 5,000 and 10,000 lots.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierpont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

ATCHISON, KAN.—The Mangelsdorf seed house contemplates building another warehouse on Main street.

SHENANDOAH, IA.—The Western Seed Company, of this city, J. R. Ratekin, manager, has been closed up and the business placed in the hands of H. I. Faskett as receiver.

MOSCOW, IDAHO.—M. J. Shields & Co., the wholesale seed firm of this place, has filed charges with the postal authorities alleging that someone in the local post office burned part of the firm's mail, consisting of 700 postal cards at one time on the twenty-second day of February, 1905. The matter is being thoroughly investigated.

DES MOINES, IA.—This week the Iowa Seed Company celebrates the thirty-fifth anniversary of its business in Des Moines. The business was first established in a small way by S. L. Fuller, in 1870, and the name changed to the present title in 1886. This week is also the twenty-eighth anniversary of the connection with business of Charles N. Page, president of the American Seed Trade Association, who has been the treasurer and general manager for nearly twenty years.

BULB GROWING IN CALIFORNIA.—In our issue of April 15 we presented a picture giving a partial view of a freesia field on the ranch of Rees & Comper, of Long Beach, Cal. The following further particulars concerning this firm's business are now submitted:

"Our ranch is situated on the southern slope of Signal Hill, one of the old landmarks of Los Angeles County, 2½ miles from the city of Long Beach, overlooking the Pacific ocean and reached from Los Angeles City in thirty-five minutes by the Huntington Beach branch of the Pacific Electric Railway, which passes through the ranch. We have some sixteen acres under close cultivation, about one-half being devoted to flowering bulbs for the Eastern markets, and the remainder to choice vegetables for the Los Angeles markets. Our bulb crop is principally of freesias, of which we are now preparing to harvest four acres. We also raise in quantities the celebrated Grand Duchess oxalis, Bermuda, Buttercup, amaryllis in varieties, including Mr. Comper's celebrated hybrids, many measuring eight inches and over in diameter, also hybrid gladioli, tritonia, chlidanthus, and many other kinds.

"Our cultivation is principally by horses where rows are wide enough to utilize them, though a great deal has to be done by hand—weeding and digging where beds are small and rows narrow, in experimental beds mostly. Our soil is of the best, being of a light sandy nature, that takes water readily and is quickly susceptible to cultivation. Our water is derived from artesian wells, and is piped all over the place, and can be used either in flumes, ditches, or by sprinkling.

"Our climate is equable, only having

had three very light frosts this season, and no damage done whatever.

"We are now preparing to harvest our freesia crop, which is a laborious operation, the bulbs having to be dug by hand and sifted in coarse screens two by four feet, then the bulbs picked in proper condition to thoroughly clean, out and carried to drying tables until grade and pack for shipment."

European Notes.

Forty-two hours' rain at a stretch is a little too much of an April shower, and has served to dampen our spirits very considerably, and at the same time over-fill our water courses. As, however, the temperature continues warm (April 13 was the warmest day since October 16) vegetation continues to make very rapid progress, and an early season seems probable.

The onion boom is over. The flooding of our western markets with Egyptian produce of fine quality has caused a reduction in price of fully 50 per cent. While it lasted, it distinctly benefited the seedsmen, both as regards prices and quantity of seed sold. In all the leading lines the clearance is complete, and as the acreage planted for seed is very small, much higher prices must be paid next year.

The trade in agricultural seeds has opened up in good style, and already some of the most useful varieties are difficult to procure. A remarkable change in the public taste is evidenced by the extraordinary trade in the intermediate varieties. In England, Golden Tankard and Tabor's Gatepost; in Germany, the Eckendorf; and in France, the giant yellow intermediate have sold so well that reliable stocks are practically exhausted. This leads, unfortunately, to a lot of indifferent goods being put upon the market, and the sale of these, with the resulting disappointment, does an immense amount of harm, as it leads unthinking farmers to condemn what they would otherwise approve.

Turning to a more agreeable subject, one may venture to express the hope that the limit of size in cineraria blooms has at last been reached. During the past few days Mr. James has placed before the writer individual blooms measuring six inches from tip to tip. The flowers were of good form and substance, and of the ringed type so much esteemed in your country, but as they were growing on very dwarf plants they were too crowded to be pleasing. A giant pure white self, about three and one-half inches in diameter, will doubtless prove valuable for florists. In cyclamen the only notable feature has been the vastly improved form of the Papilio or butterfly strain, and the appearance of a deep red crested variety known as the Bush Hill pioneer strain.

The milder weather has brought the pansies on very rapidly. Madame Perrett still leads the way, but a giant form of Fle King runs her very close. Dobbies are repeating their last year's triumphs with their superb strain, which, although grown in Scotland, have not a particle of Scotch blood in

ROSES! CLEMATIS!

To close out our surplus on these items we are making low quotations on

Strong 2 Year Dormant Plants—Crimson Rambler, White Rambler, Pink Rambler, Yellow Rambler, Mme. G. Lulzet, Magna Charta, Frau Karl Druschki.

them. The lovely sweet-scented violas, from the same enterprising firm, are beyond all praise.

EUROPEAN SEEDS.

HOLLAND BULB NOTES.—Recent hail and snowstorms caused a little uneasiness, and did some damage. The flowers of hyacinths were heavily damaged and are cut off now. The foliage of hyacinths and tulips has apparently suffered from the severe cold, and shows signs of the sickness which we call "fire." If we cannot suppress it by cutting away the infected parts of the leaves, it will cause considerable loss.

This year trams and trains were not so crowded with visitors to our flower fields as in previous years, on account of rainy weather on the two Sundays on which the visits were made.

Last week the green sales of hyacinths commenced. There was a good demand especially for white, red and pink, and high prices were obtained. Up till now the bulbs generally look very well, but I fear that in a few weeks tulips and hyacinths will show that they suffered more than we think. In Europe there is a great demand for our bulbs this season on account of the failure of French cut flowers last winter.

COMING EXHIBITIONS.

PENNSYLVANIA HORTICULTURAL SOCIETY.—The schedule of prizes for the Fall exhibition, which occurs November 7 to 11 inclusive, has been issued by Secretary David Rust. The annual show of the Chrysanthemum Society of America will be held in conjunction with this exhibition. The local society offers its usual inviting list of premiums, and so far those of the C. S. A. are as follows, competition being open to all:

Vase of six blooms, of variety Mrs. William Duckham. Three prizes. Gold, silver gilt and silver medal offered by W. W. Wells, Earlswood, Surrey, England.

Six blooms each, of six varieties, introduced in 1904 and 1905. One prize silver cup, offered by F. R. Pierson Co., Tarrytown, N. Y.

Twelve blooms, with stems not less than twelve inches long, of any of the introductions of 1905. Three prizes, \$12, \$8, \$5. Offered by C. H. Totty, Madison, N. J.

Copies of the schedule can be secured from Secretary Rust, Horticultural Hall, Broad street, Philadelphia, Pa.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

GOVERNMENT NEEDS NURSERYMAN.—An opportunity to enter the Government service in the Philippines is afforded by a vacancy in the position of nurseryman at a salary of \$1,200 a year. An examination will be held on May 10 covering botany, practical questions in agriculture, horticulture, and general nursery work. Training and experience count for 30 per cent. in the rating. The age limit is from 18 to 40 years. Graduates from agricultural schools will be given preference in appointment.

THE FUNGUS DISEASES OF THE CRANBERRY form the subject of Farmers' Bulletin No. 221 of the Department of Agriculture, Washington, D. C. The cranberry blast, scald, and rot are caused by parasitic fungi. These diseases can be controlled by a proper application of Bordeaux mixture. At least five applications should be made during the season. No interval of more than fifteen days should elapse between the applications, the last of which should not be made earlier than August 15. The bulletin gives formulae of spraying mixtures, methods of application, etc.

Althaea Hedges.

The good old althaea, or rose of Sharon, has again become a favorite shrub for planting. That it used to be years ago is evidenced by the many old hedges of it to be seen on old estates near our large cities. There is a good deal to be said in favor of this shrub. There are numerous colors of flowers to select from, so that in planting a hedge one could have an assortment of colors, one contrasting with the other, if preferred to all one color. Another great advantage is, that it can be pruned all that may be desired, which is not the case with many other flowering shrubs. The althaea blooms from shoots of the same season's growth; therefore in the Winter season it can be cut to any extent without harm to its flowering, and the pruning insures a hedge of fresh, young shoots. It is the lack of this pruning that so many old hedges of this shrub show. The knife had not been used on them; they had grown at will, and became simply a boundary line marking and not a hedge. The althaea, when first planted, should be cut down almost to the ground, and it should undergo the same treatment the year following. There will then be a bushy base to the hedge, which, with proper pruning, need never disappear. Then every Winter shapen it nicely, cutting wherever desired, keeping in mind that the knife can do no harm, the flowers coming on the new wood. An advantage to the planter of the althaea is that it can be set out later than almost any other shrub, being very late starting into growth.

Salix Babylonica.

The Weeping Willow, as *Salix babylonica* is called, is known to every one; in fact, aside from those who grow willows for commercial uses, the weeping and the pussy willow are all that the name willow takes in. The weeping willow is to be found where the climate will permit of its growth, wherever civilization has found its way; and everywhere it is valued for its drooping, graceful habit, which seems so well suited to a peaceful waterside, where it is so often planted. Alongside a quiet lake or other body of water it seems much in place, its quiet, drooping character seeming to exactly fit the surroundings. When waters are swift running, or where scenery is rugged, it is not so much in character as where more peaceful features prevail.

The mistake is not uncommon of supposing that the weeping willow must have a quite wet place to grow in. This is not the case at all. It will grow, and grow well, in any ordinary situation, but it prefers one wet, or, at least, damp. We do not think it matters how wet a place it is, provided the water drains away. It does not like stagnant water; no more does any tree!

Some of the prettiest specimens of this willow are often met with in is damp and yet not too meadows where the ground much so to prevent the growth of a general assortment of trees. The one seen in our illustration is not even in a very damp place, and yet see how well it has grown!

Bontantes tell us that the name *S. babylonica* was suggested to Linnæus by the 137th Psalm:

"By the rivers of Babylon there we sat down; yea, we wept when we remembered Zion: we hanged our harps upon the willows in the midst thereof."

The weeping willow requires early planting in Spring to do well. Like the larch, if deferred until the buds push, it does not transplant well; whereas, as everyone knows, planted at the proper time, a bare stick will grow.

So far, the weeping willows in our country represent only the pistillate form of it. Some have supposed the one grown under the name of *Salamon* is the staminate weeping willow, but this surmise is not been verified that we are aware of.

Weeping Forsythias.

In early Spring no prettier sight greets one on a lawn than the drooping *Forsythia suspensa*. The older one, *F. viridissima*, is handsome, and a requisite wherever shrubs are, but besides the bright yellow flowers *suspensa* gives us, the drooping character of its growth is most pleasing. *F. viridissima*, left to itself, does not make a compact bush, although a little pruning quickly converts it into one. *F. suspensa* is of a drooping habit naturally. When its arched, drooping

branches are full of their yellow blossoms in the first weeks of Spring, the effect is very gratifying. Permitted to grow as it will, it forms a drooping mass, very pretty, but not as handsome as when it is of a standard form. This form can be given it by training. Drive a stake into the ground and tie to it a vigorous young shoot. Head it off at about 5 feet. In the course of a year or two the shoot will be self-supporting, when the standard is made.

Set on each side of a path, as other standard plants are, these golden bells are so beautiful that many a pair is now being planted for the purpose, as it is the first of all shrubs to flower in the Spring, the forerunner of many other beauties to follow. As pot or tub plants, all of the golden bells—as *forsythias* are called—are beautiful, and there would be but little trouble for florists to dispose of numbers of them for Easter when grown in pots, in standard shape, and in full flower.

This Spring the golden bells make more display of flowers than has been seen for many a year, and all have escaped the heavy frosts which occurred in these parts the 16th and 17th of April.

Setting Out Layers and Cuttings.

The setting out of layers and of cuttings made during the Winter is one of the first things to be attended to in the Spring. Early planting is, we all know, something of great value, yet to far too many nurserymen it is something they know of only by name. All kinds of work is pressing; that of filling orders is among the chief, and often the planting of stock of cuttings, layers, young seedlings, and the sowing of seeds are the last things done instead of the first. This ought not to be, and need not be. A planning ahead would remedy it. There should be a special gang of men for all such work, and the task of planting and sowing should be taken hold of at the proper time. Besides the advantage to all stock of early planting, there are some sorts—the Japanese snowball for one—which must be set out early to have it do well. It pushes early and will not endure late planting.

When cutting off layers from the parent plants there will be a somewhat long and curved end containing the roots. It is not always practicable to cut these ends partly away, the roots being on them, mostly. When setting these layers in the prepared trenches, place the ends all one way, and remember how placed. Then when digging time comes, they can be dug out by digging behind the roots, as it were, and the roots are not severed in the process. And when planting out layers and all stock, see that all bruised roots are cut away, leaving a clean surface at the ends of each. The fibres come from these clean-cut surfaces; and fungus is not enticed.

Propagating Dimorphanthus.

This is the time to dig up some roots of the *Dimorphanthus manschuricus* for propagating purposes. Cut into lengths of two or three inches and set in rows, a few inches underground, every piece should make a plant. The *dimorphanthus* has been placed with the aralias of late. Many will prefer it to the common *Aralia spinosa*. Its shoots are thicker, its foliage broader, and its flowers a week or two in advance of it.

Both the *Dimorphanthus manschuricus* and *Aralia spinosa* are unpromising looking in Winter. Their prickly shoots are somewhat repelling. They make up for this in Summer, with their large pinnate leaves and immense heads of flowers. And with the disappearance of the flowers the wine-colored berries come; and, being in such large heads, they are really more attractive than the flowers. There is a third aralia now becoming one of others in collections—*A. japonica*. It has darker-colored wood than the others. All are propagated in the same way—by root cuttings, and also by seeds.

Ligustrum Lucidum.

Referring to what Professor Massey says of *Ligustrum lucidum* in a recent issue of The Florists' Exchange, I can indorse all he says of its merits. It is not only as evergreen as a holly; its foliage is far prettier, being of a bright, shining green. And it may be, the plant which I had for trial was not in the best place for it to give it a chance to survive the Winter. The ground is deep, and so favors late growth. At any rate, it was partly killed the first Winter after its Spring planting, and wholly killed the next. But I have another place for one where the soil is less deep, and where it will ripen its wood better, and one shall have a trial there.

I have trouble with *Magnolia grandiflora* in the same way. It grows so late in the season that the wood has not time to thoroughly ripen, and it gets partly Winter-killed in consequence. A slow growth promotes hardness.

It takes a good deal of scheming on the part of us poor northerners to find out just what such plants as those above mentioned require, and when we do find out we have not always the situation we know would be best.

JOSEPH MEEHAN.

ORIGIN OF A COMMON SAYING.—George P. Rowell, in his "Forty Years an Advertising Agent," now running in *Printers' Ink*, says it was the late Jim Fisk who gave rise to the phrase, "Gone where the woodbine twined," as applied to securities that had been pledged; that is, "spouted" in the vernacular of the Street. "As the Virginia creeper, misnamed woodbine, commonly grew over the waterspout, on New England farmhouses, the expression, in Fisk's active fancy, seemed appropriate."

SALIX BABYLONICA—WEEPING WILLOW.

KILLING FROST IN MIDDLE TENNESSEE.—Killing frosts occurred at Dechard, Tenn., Sunday and Monday mornings, April 16 and 17, doing immense damage to grapes, all garden truck, and vegetation of every kind. The wind blew a gale of extreme bitterness all day Sunday, and at nightfall subsided, and on Monday morning an inch of ice was seen on all standing water, and a great sheet of frost covered the ground. The thermometer stood at 23 degrees. All of the wholesale and retail nursery people have lost everything, even the June buds and all of the dormant buds have been entirely killed. The loss is estimated at one million dollars. The nurserymen will, perhaps, have to call in nearly all of their traveling representatives, something like 150 men, scattered all over the United States.

The Ohio Agricultural Experiment Station, at Wooster, O., is devoting attention to forestry investigations. Bulletin 153 is devoted to a discussion of some trees suitable for posts, poles and ties, with cultural suggestions and financial possibilities, including catalpa, locust, mulberry and the Osage orange.

Announcement

OUR OFFICES HAVE BEEN REMOVED TO LARGER QUARTERS AT
12 WEST BROADWAY.

BULBS.

YOU SHOULD BUY THEM OF US.

□□ WHY □□

BECAUSE—WE SUPPLY THE HORSESHOE BRAND

The quality is excellent.

They are up to size.

You get the value of your money.

They are secured from the most reliable sources of supply.

We save you time and money by supplying you an article which will bring good results. Good results bring good returns.

We make prompt deliveries in season.

We are properly located to receive, examine and dispatch the goods.

It is our particular business. We are not seedsmen; we have no retail business to care for.

EVERY FLORIST SHOULD GROW BULBS—

They take up very little greenhouse room.

WRITE US FOR PRICES.

RALPH M. WARD & CO.,
12 WEST BROADWAY, NEW YORK.

American Association of Nurserymen.

Program for Thirtieth Annual Meeting, to be held at West Baden Springs, Indiana, June 14, 15, 16, 1905

Wednesday Morning, June 14, 10 O'Clock.

Calling to order, President W. W. Kirkpatrick, Texas. Welcome to Indiana, Andrew J. Rhodes, Indiana, 10 minutes.

Response for the Association by the President, 10 minutes.

President's Address, 15 minutes. Reports of Secretary and Treasurer, 15 minutes. Reports of Committees:

Tariff, Irving Rouse, New York, 5 minutes. Legislation, Charles L. Watrous, Iowa, 5 minutes. To Edit Report, J. Horace McFarland, Pennsylvania, 5 minutes.

To Meet Western Freight Classification Committee, Peter Youngers, Nebraska, 5 minutes.

To Meet Eastern Freight Classification Committee, William H. Moon, Pennsylvania, 5 minutes.

To Meet Southern Freight Classification Committee, Herbert S. Chase, Alabama, 5 minutes.

Transportation, E. Albertson, Indiana, 20 minutes. Discussion by G. L. Taber, Florida, and members, 10 minutes.

"The Cost of a Tree," Harry L. Bird, Michigan. Discussion by Aubrey Frink, Florida; J. Horace McFarland, Pennsylvania; Herbert S. Chase, Alabama, and members.

Nomination of State Vice-Presidents.

Wednesday Afternoon, 2 O'Clock.

Election of State Vice-Presidents, 5 minutes. "Grading Nursery Stock," L. A. Berckmans, Georgia, 15 minutes.

Discussion by members, 10 minutes. "The Low Prices of Ornamental Stock," Charles Maloy, New York, 15 minutes.

Discussion by members, 10 minutes. "The Grape, the Commercially Neglected Fruit," T. V. Munson, Texas, 15 minutes.

Discussion by members, 10 minutes. "Experimental Orchards for Nurserymen," L. C. Corbett, U. S. Department of Agriculture, 30 minutes.

Discussion by members, 15 minutes.

Wednesday Evening, 7:45 O'Clock.

By aid of the stereopticon the extremely interesting papers of the evening sessions will be fully illustrated. It has been the endeavor of the Committee to make this year's program an eminently practical one, and we believe all the subjects presented are of unusual interest to every member. As the room must be darkened, members are respectfully requested to be present at 7:45 sharp.

"A Tree Garden to Last a Thousand Years" (stereopticon), J. Horace McFarland, Pennsylvania, 40 minutes.

Discussion by J. Woodward Manning, Massachusetts, and members, 10 minutes.

"Soil Inoculation" (stereopticon), Dr. George T. Moore, U. S. Department of Agriculture, 60 minutes.

Discussion by J. H. Hale, Connecticut, and members.

Question Box.—A great many questions have been suggested to the Committee for discussion, but it has seemed best to consider them through the Question Box. Questions will be received by the Secretary or the Chairman of the Program Committee until Thursday p. m. and will be answered on Friday.

Thursday Morning, June 15, 9:30 O'Clock.

"The New Horticulture," H. W. Stringfellow, Texas, 25 minutes.

"Best Methods of Improving Our Standards in Trees, Fruits," G. L. Taber, Florida, 25 minutes.

Discussion by members and W. O. Reed, Indiana, 20 minutes.

"Quality vs. Quantity," Prof. John Craig, New York, 20 minutes.

Discussion by members, 10 minutes. "Plants in Department Stores," Howard A. Chase, Pennsylvania, 20 minutes.

Discussion by members, 15 minutes.

Thursday Afternoon, 2 O'Clock.

"Office Management," Thomas B. Meehan, Pennsylvania, 25 minutes.

Discussion by Charles J. Brown, New York, 5 minutes; William Pitkin, New York, 5 minutes.

"The Fruit Exhibit at the World's Fair," William B. Stark, Missouri, 20 minutes.

Discussion by J. S. Butterfield, Missouri, and members, 15 minutes.

The session will adjourn at 3:30 p. m., when the American Nurserymen's Protective Association and the Nurserymen's Mutual Protective Association will hold their annual meetings as per notices of the respective secretaries of those organizations.

Thursday Evening, 7:45 O'Clock.

This is an executive session and members only will be admitted. At Prof. Hedgecock's request the Association has agreed that no report shall be made of his lecture in any paper, nor in the annual report, excepting as he may direct. It is understood that members by their presence agree to this arrangement and will fully respect the wishes of Prof. Hedgecock, and will not give out in any manner any information received from the lecturer.

"Packing, Packing, Trading and Shipping Fruit" (stereopticon), J. H. Hale, Connecticut, 30 minutes.

Discussion by members, 20 minutes.

"Crown Gall and Root Knot" (stereopticon), George G. Hedgecock, U. S. Department of Agriculture, 60 minutes.

Discussion by C. L. Watrous, Iowa, 5 minutes; J. H. Hale, Connecticut, 5 minutes, and members.

Friday Morning, June 16, 9 O'Clock.

Election of officers, 10 minutes. Selection of place for next Convention, 20 minutes. Appointment of Committee on Resolutions, 10 minutes.

New business, 10 minutes. "Refrigeration of Nursery Stock and Storage in Cellars," Madison Cooper, New York, 30 minutes.

Discussion by members, 30 minutes. "Excluding Advertisements Quoting Prices," J. M. Irvine, Missouri, 20 minutes.

Discussion by Theodore Smith, New York.

Friday Afternoon, 2 O'Clock.

"The Evolution of Importing," James McHutchison, New York, 20 minutes.

Discussion by Hiram T. Jones, New Jersey, 5 minutes; Andre L. Casusse, New York, 5 minutes; F. L. Atkins, New Jersey, 5 minutes.

Answers to questions deposited in Question Box. Reports of Committees on Exhibits, on Final Resolutions, on Program; and Announcement of Committees.

Adjournment.

Friday Evening, 7:00 O'Clock.

Fruit Banquet.—This is a special feature and it is hoped will be an enjoyable one. Many members have kindly agreed to contribute liberally fruits in season in their respective sections, and a choice selection is now assured. Native wines are also expected. Prominent members and well known speakers will respond to toasts, and the dinner will be presided over by one of our leading members, J. H. Hale acting as toastmaster. Tickets will be issued at a reasonable price per plate and must be secured from any member of the Program Committee, or the Secretary of the Association, up to Thursday night, the 15th of June. There will be dancing after the banquet, the music being furnished by the Baden Springs Hotel Company.

Saturday, June 17.

A special excursion has been arranged to Mammoth Cave, Kentucky, and details will be announced in advance. Members wishing to take in this excursion must apply to the committee before Friday at 2 p. m.

English Horticultural Notes.

A GREAT INTERNATIONAL SHOW.—Possibly some of the readers of The Florists' Exchange have already had an intimation of the great international horticultural exhibition that takes place in our northern capital (Edinburgh, Scotland) on September 13, 14 and 15, this year. Some folks here are saying that it is going to heat all records. That is rather a premature conjecture, but I am in close communication with the organizing secretary, and he is hopeful of a great show. Let me explain that it is instituted by the Royal Caledonian Horticultural Society, which was established in 1809, and which occupies in the northern part of Great Britain the same comparative influence that the Royal Horticultural Society occupies in England. At one time it had its own experimental garden, and was altogether a very influential body; but times and societies change, so that the gardens and also the publication of the "Memoirs" of the society were given up. Though there is very little prospect of the Royal Caledonian Horticultural Society being in possession of a garden of its own, still it is active, and has resumed the series of "Memoirs" publications, while every year it holds two big shows, one in April or May, and the other in September. I believe it is fifteen years since an international horticultural show was held in Edinburgh.

By way of emphasizing the importance of this society, I would say that it is subscribed to by the leading gentry of Scotland, as well as by the nurserymen and notable head gardeners. It possesses a membership of 600 to 700, and has a fruit and vegetable committee of 33 gentlemen; a floral committee of 38, and a scientific committee of 17, exclusive of the finance and exhibition committees which comprise the council. A well-known politician and landed gentleman, Lord Balfour, of Burleigh, is president, and his influence, combined with that of a few leading members, has had an admirable effect on Scottish horticulture. So long as I remember, let me say that the secretary's name and address is Mr. P. Murray Thomson, S. S. C., 5 York Place, Edinburgh. The enthusiasm that Mr. Thomson has infused into his office has had a greatly stimulating effect.

With reference to the coming international exhibition (schedules of which can be obtained from the secretary) the chief features are:

(1) Sections of schedule, 6; fruits, plants, cut flowers, vegetables, amateurs, open. (2) Classes, 253. (3) Prizes, total, £1,400. (4) H. M. the King presents a silver cup, and there are numerous other cups and medals. (5) Grapes will be a leading feature; first, for a collection, £15 cash, challenge trophy and gold badge. (6) Collection of hardy flowers, first 200s. (7) Roses, largest, first prize 100s. (8) Collection of vegetables, prizes £21, £15, £10 and £5 (in one class).

These are some of the leading features. Then there are prizes for:

(9) Fruit grown abroad, open to any country. (10) Collection of apples, in a space not exceeding 8 by 5 feet: First, 200s.; second, 140s.; third, 100s. (11) Collection of pears, in a space not exceeding 8 by 5 feet: First, 200s.; second, 140s.; third, 100s. (12) Collection of any fruits (not preserved), in a space not exceeding 8 by 5 feet: First, 200s.; second, 140s.; third, 100s.

Competitors must give two weeks' notice to the secretary of their intention to compete, and also mention the port where the packages will be landed, to enable the committee to make timeous application to the Board of Customs to pass the same without opening. See also show regulation 17.

All foreign fruits or plants must be addressed as under, when the exhibitor cannot accompany them, and must be carriage paid: To the Committee of the International Fruit and Flower Show, 18 Waverley Market, Edinburgh.

This package contains fruits (or plants) only. From

The packages must be delivered not later than midday on Tuesday, September 12. Intimation by letter must also be given to the secretary one week before the show that such packages are to be sent.

With the foregoing particulars I have very fairly summarized the best points of the program, and as Edinburgh is one of the classic cities of the world, with a population of fully 350,000 souls, and lastly, as the date is the finest in the year for a trip to Scotland, we may reasonably hope to have the pleasure of entertaining many American friends.

J. HARRISON DICK.

Baby Rambler Rose.

Editor Florists' Exchange:

We send you five plants of Baby Rambler rose. We consider these very thrifty plants, considering their age. The cuttings were struck February 11, and the plants were potted March 8. The plants are, as you will see, on April 20.

Those who had Baby Rambler rose last year seem to have had trouble in growing it on its own roots; so we send you these plants in order that you may see how quickly this rose may be grown on its own roots when conditions are favorable. Out of 10,000 cuttings there were not 5 per cent. that did not root.

West Grove, Pa. THE CONARD & JONES CO.

[We show herewith an illustration of one of the plants referred to by the Conard & Jones Company. The pot seen was the only one available in this office for photographing purposes, the plants having reached us in the usual shipping paper pots. The plants have certainly made excellent growth, and were in first-rate condition, carrying nice clusters of well-developed blooms.—Ed.]

BABY RAMBLER ROSE

Growers Conard & Jones Company, West Grove, Pa.

Efficiency of Pumping Plants.

A preliminary report is issued by the Office of Experiment Stations of the United States Department of Agriculture as Circular No. 59 of that office. A large number of pumping plants have been tested to determine their efficiency and the cost of raising water. This circular gives the reports of a number of these tests, the final result in each case being given in the form of the cost of fuel for raising water 30 feet to cover one acre of ground to a depth of 18 inches. Under the various plants reported on, this cost varies from 90 cents to \$3.60.

Laboratory tests of typical pumps have shown that for every speed of pump there is a definite head at which each pump works at its highest efficiency, and that there is a definite speed which is most effective for the operation of the pump under a given head. The table which follows shows the heads under which one pump tested gave the greatest efficiency with the given rates of speed.

EFFICIENCY OF PUMPS WITH DIFFERENT SPEEDS AND HEADS.

Revolutions per minute.	Feet.	Efficiency.
500	17.0	63.2
696	25.4	67.6
800	28.5	69.8
893	40.6	70.9
1,004	51.4	69.4
1,102	61.3	68.9

Further laboratory tests were made to determine the most efficient position for a pump when water is to be raised a given height; that is, what division of this head between suction and discharge gives the best results. The test showed that with a lift of 40 feet efficiency increased as the pump was placed nearest the water supply.

Data were collected from a large number of owners of pumps regarding the amount of water used and the cost of raising it. The reports from 12 of these pumping plants show an average depth of 1.24 feet of water applied at an average cost of \$6 per acre. The gross crop returns from 24 orchards irrigated with water supplied from pumping plants averaged \$136 per acre.

CRIMSON RAMBLER ROSES

We have a specially fine lot of our own growing on own roots, two and three year old, with strong canes, in splendid condition for present planting and offer them until sold as follows:

Selected Extra Strong 3 year old, 4 to 6 ft. canes, many branches, \$15.00 per 100; \$125.00 per 1000. Strong - 2 year old, 3 to 4 ft. canes, \$12.00 per 100; \$100.00 per 1000. Strong - SECONDS, 2 year old, fine plants for growing on for forcing purposes \$6.50 per 100; \$55.00 per 1000. 25 sold at 100 rate; 250 at 1000 rate. See list of Surplus Perennials on front page.

Preparations for Field Planting.

If the carnation field received a liberal coating of manure and was deeply ploughed last Fall, it will now be in excellent shape for working. This can be done to best advantage with a disc harrow, which will pulverize the soil very fine to a depth of about six inches if it is properly weighted down. If the field has not been ploughed in the Fall it should be given a coating of manure and chemical fertilizers, if needed (but chemicals are seldom used in the carnation field; if the soil is moderately rich, a little manure is all that is required), and deeply ploughed and pulverized finely just before planting. Be careful not to plough when the soil is too wet, otherwise there will be trouble with the cultivating later on.

Planting in the Field.

See that the field is well drained and in good condition before planting; nothing is worse than planting carnations in hard, lumpy soil. Plant in rows, 14 inches apart, and 12 inches apart in the rows. If you have the room, it is better to plant in beds, four rows to a bed, with a two-foot walk between the beds. Besides the additional light and air, the walks give ample room for topping, etc., without having to tramp down the beds. Of course, the beds can be dispensed with if you have not got the room to devote to them, and the planting be continued in rows 14 inches apart. This distance gives the plants plenty of air and light, and affords plenty of room for cultivating both lengthwise and crosswise, with hand cultivators, which are generally preferred to the horse cultivators, as there is less danger of harming the plants. If the acreage is large, leave an eight-foot crosswalk, or roadway, every three or four hundred feet. This enables one to drive across the field with a wagon, and makes it handier for both planting and lifting the plants. These roadways are unnecessary when the field is small.

The Young Plants.

Keep a close watch on the young plants, and maintain them in a good growing condition. It is better to run them a little on the dry side, but do not allow them to suffer from extremes. Do not neglect the topping; go over the plants and pinch all that are large enough to enable you to break

announce the completion of arrangements whereby they will, beginning in January, 1906, disseminate jointly with

THE E. G. HILL CO.
THEIR TWO GRAND NEW CARNATIONS

MY MARYLAND AND JESSICA

MY MARYLAND is already well and favorably known, having been exhibited freely at the various flower shows and florist club meetings the past Fall and Winter, and in every case elicited the highest praise and most favorable comment. We pick this variety to quickly and easily displace all other whites for first honors, not alone in exhibition, but in commercial points as well. We claim for its robustness of constitution quite unequalled in any other variety and an ease of culture that will delight the heart of the grower. The great vigor of both parents (Norway x Lawson) seems united and improved upon in this variety.

IN JESSICA we have in the red and white variegated class, what My Maryland will prove among white. It is descended through several generations of variegated seedlings of Helen Keller and Bradt extraction on the one side and Lawson on the other. A strong, thrifty growing variegated seedling bearing the seed. It is a trifle heavier in growth than My Maryland and just Lawson height. Aside from these differences and the color, the description of My Maryland applies to Jessica. Under favorable conditions four-inch blooms are not uncommon. We pick Jessica to win over any other variegated variety.

Both of the above are free propagators. We are thoroughly familiar with them and know what they will do. We will be in a position to deliver stock early and on time, and assure the trade that no disappointments will result on that score.
We have already booked many orders. It pays to be early. Orders booked are subject to cancellation by the buyer if unsatisfied with either variety, up to the time the cuttings are received.

Price: \$2.50 per doz.; \$12.00 per 100; \$100.00 per 1000

THE JENNINGS STRAIN. Fine stock, choice colors. Cold frame plants in bud and bloom, ready March 20. Price \$1.50 per 100.

E. B. JENNINGS, Lock Box Southport, Conn. 254. Grewer of the Finest Pansies. Mention the Florists' Exchange when writing.

COLEUS

2 1/4 in., \$2.00 per 100.

HELIOTROPE

2 1/4 in., \$2.00 per 100. Cash with order, please.

W. H. PARSIL, Summit, N. J. Mention the Florists' Exchange when writing.

IVY

Hardy large leaf variety, bushy, 4-5 ft. high. 5 in. pots, \$16.00 per 100. Rooted cuttings, very strong, 5-8 eyes, \$1.25 per 100; \$10.00 per 1000.

JOHN RECK & SON, Bridgeport, Conn. Mention the Florists' Exchange when writing.

HEADQUARTERS FOR ENGLISH IVY

English Ivy, from 3 1/2 inch pots, strong and bushy, 3 plants in a pot, \$3.00 per 100; \$50.00 per 1000. Big value for the money. Cash with order.

LOUIS C. PILAT 154 Main Street, OSSINING, N. Y. Mention the Florists' Exchange when writing.

GERANIUMS

Table with 2 columns: Variety and Price. Includes 10 Varieties, Alternantheras, Asparagus Plumosus, Verbenas, Camas.

CASH OR C. O. D. JOSEPH H. CUNNINGHAM, Delaware, Ohio. Mention the Florists' Exchange when writing.

them between the joints, about three inches above the level of the soil. This gives a good base for the foundation of the new plant. Varieties that have a straggling growth do better if pinched low; two or three eyes are enough to leave on such sorts. If more eyes are left, the plants are apt to become very straggly before housing time.

See that all the plants that are large enough are topped before planting in the field. Considerable time is saved by pinching them while on the benches, and it is much easier than pinching in the field. Give the plants a good watering before planting out, as it may be the last one they will get for some time, and will help get them established should a dry spell follow the planting. If there are any signs of green fly on the young plants, buy a can of Nicotinic acid or To-bak-in (either will do). Use a two-inch potful of To-bak-in, or, if you prefer the Nicotinic acid, fill a 2-inch pot to about one-quarter of an inch from the top, dilute with three gallons of water, apply with a spray pump having a very fine nozzle, and spray late in the afternoon, getting the spray in the center of the plant as much as possible. If this is done carefully there will be very few greenfly alive in the morning. Should any be left, repeat the operation in the afternoon, give the plants a syringing the next morning, and they will be nice and clean. Spray them once every two weeks, with either of the above insecticides, and you will not be troubled with greenfly at all.

Don't Neglect Old Plants.

While busy with the Spring planting do not neglect the old plants, if good flowers are expected for late Spring and Summer. The south side of the benches should be given a mulch of old manure, or soil, to prevent the edges from drying out so often. Even after the mulch is on, the edges will have to be gone over and touched up once or twice between waterings to have the benches dry out evenly.

The varieties that fade easily should have been shaded ere this; if not already done, the work should be attended to at once. Whitewash is the best shading to use. Sprayed over the glass evenly with a force pump, or a hand syringe, it makes innumerable spots or blotches which break the force of the sun's rays, and admit light enough to prevent the plants becoming soft, as they are liable to do if the glass is covered, as when the shading is applied with a brush.

Thrips and red spider, at this season, when we are crowded with work, are apt to get the start of us unless we are very vigilant. Nicotinic acid will keep down the thrips, but you must keep everlastingly at it. Fumigate once a week, vaporizing the insecticide either with the lamps or by applying it to a steam pipe with an oil can, or painting it on the pipes with a brush, then turning on the steam, and it will do the rest. One gallon will fumigate strongly 50,000 square feet of ground space, and if used as a preventive will cover more space. As to red spider, it is easily kept down by a judicious use of the hose. As the weather gets warmer, spray the houses two or three times a week. Keep the walks well dampened and clean; if there are any weeds in them, pull them out. A lot of weeds in a dry walk near a hot steam pipe will form an ideal resting place for red spider, and should be destroyed at once. G. W. FRENCH.

COLEUS

Table with 2 columns: Variety and Price. Includes 12 Varieties, Double Petunias, Seedling Petunias, Centaurea Gymnocarpa, Vinca Vine, Primroses.

CASH OR C. O. D. JOSEPH H. CUNNINGHAM, Delaware, Ohio. Mention the Florists' Exchange when writing.

CARNATIONS

ROOTED CUTTINGS. FINE HEALTHY STOCK

This week's index will be found on page 577

News of the Week in Brief.

Ralph M. Ward & Co. have removed to 12 West Broadway, New York.

Some of the rose men answer in this issue the charge of non-progressiveness recently made against them.

The conditions governing the S. A. F. O. H. prize essay contest on "The Ideal Employer" appear in this issue.

The business of the Western Seed Company, of Shenandoah, Ia., J. R. Ratekin, manager, is in the hands of a receiver.

Wm. Elliott & Sons, seedsmen, New York, have postponed their removal from Dey street to Fulton street until July 1 next.

Clucas & Boddington Company, New York, will remove May 1 to 131 West 23d street to a location more suitable for transient trade.

Kansas City will have a flower show the week of November 13 next. The prize list will equal that of former exhibitions held here.

A. Whiting, the veteran florist, of West Hartford, Conn., who was for years a regular attendant at the S. A. F. conventions, is seriously ill, and there is little hope of his recovery.

The sympathy of the trade will go out to John T. Temple, of Davenport, Ia., whose wife died on April 19. Also to George Reinberg, of Chicago, in the death of Mrs. Reinberg, which occurred Saturday, April 22.

The bill asking the Illinois State Legislature for an appropriation to be used in experimental work on behalf of the florists by the State University of Illinois has been killed. An effort will be made to resurrect it.

The American Association of Nurserymen will have a "fruit banquet" at its annual meeting at West Baden Springs, Ind., June 14 to 16. All seasonable fruits will be available at the feast, as well as several brands of wines. J. H. Hale will act as toastmaster. The banquet will be followed by dancing.

American "tree carnations" are now extensively advertised in the English horticultural journals. One ad. says of Enchantress: "Unquestionably the most beautiful Winter-flowering carnation ever seen in this country. * * * This grand variety has created quite a sensation, and stands in a class by itself."

The issuance of helpful pamphlets containing cultural instructions, lists of plants for various purposes, etc., is becoming quite common with the most progressive, up-to-date seed and plant houses. The latest publication along this line to reach us is one entitled "Beautify the Home Place," issued by the Iowa Seed Company, of Des Moines, wherein the subject of landscape gardening is succinctly treated.

The Eckford Testimonial.

THIS WEEK'S SUPPLEMENT.

Acer Campestre Australe.

What is known as the common, or field maple, of England, is one of the prettiest and most useful of all the smaller growing species. Very many maples are of tree-like character, but *Acer campestre* is of shrub-like appearance, although attaining a tree in stature as it perfects its growth. When grown to but one stem when young, it makes a small tree and of tree-like habit; otherwise, allowed to grow as it will, it becomes of bushy outline, as shown in the accompanying illustration. This illustration is of a specimen growing in the white lot, not far from the President's grounds, Washington, D. C., and is one of several trees there, all so beautiful in appearance that we had a difficulty in deciding which to photograph.

Our specimen is not the typical form of this maple. There are numerous forms of it, many of them quite distinct; and, in fact, when a bed of seedlings is raised there are usually in it plants varying in character from others. One form of it, with much larger leaves than the type, is known as the Austrian maple, and this is the one seen in our illustration.

With age, our maple has rough bark, with deep fissures; and this has caused it to carry still another name—cork maple; but the bark is hardly of a character to warrant the applicability of this name.

In many of the parks of Washington, D. C., this maple has been planted, and, as the picture will suggest, from its style of growth and pretty foliage there is many a position it would grace. And it is no wonder that, in that city, as well as in many others, it can be found used to a great extent. There is this to be said, too, in favor of its use: it can be readily transplanted at the proper seasons—Spring or Autumn—and it flourishes in any ordinary situation.

It has been suggested that the typical form of this maple would make a good stock for the working on of the many pretty Japanese sorts; perhaps it would, and those who have it could make trial of it, but those who can obtain the common Japanese maple, *A. polymorphum*, have found it all sufficient for the purpose. But for the variegated leaved and other varieties of *A. campestre*, it is what should be used, the increase being by grafting, budding or inarching.

As to its own propagation, it seeds freely, and if the seeds are sown soon after they ripen, or if kept moist and sown in Spring, they grow readily. And this hint may be of use to all those who handle maple seeds. It is certain that, if allowed to become dry by exposure to air for a month or two after ripening, but few of them will grow. JOSEPH MEEHAN.

BOOKS RECEIVED.

JAPANESE FLORAL CALENDAR, by Ernest W. Clement. Publishers, The Open Court Publishing Company, Chicago.

The author of this delightful little volume was a resident in Japan for some time, and he now tells his American countrymen something of the flower, or flowers, popular each month in that interesting country, with some folk lore, poems, or other description thereof, illustrating his remarks with numerous beautiful pictures. The following represents the modern Japanese floral calendar: January, pine; February, plum; March, peach; April, cherry; May, wistaria; June, iris; July, morning glory; August, lotus; September, "seven grasses;" October, maple; November, chrysanthemum; December, camellia. Each of these has a chapter devoted to it, and the customs of the country in celebration of the respective festivals are entertainingly discussed. The cherry is the "prince of flowers in Japan," and the pale pink is the only one that takes first rank among cherry blossoms. The beauty of the trees in blossom is thus charmingly described by the late Lafcadio Hearn:

"When, in Spring, the trees flower, it is as though feeblest masses of clouds faintly tinged by sunset had floated down from the highest sky to fold themselves about the branches. * * * The reader who has never seen a cherry tree blossoming in Japan cannot possibly imagine the delight of the spectacle. There are no green leaves; these come later; there is only one glorious burst of blossoms, veiling every bough and twig in their delicate mist; and the soil beneath each tree is covered deep out of sight by fallen petals as by a drift of pink snow."

The popular conception of the lotus is illustrated by the following quotation:

"Though growing in the foulest sline, the flower remains pure and undefiled. And the soul of him who remains ever pure in the midst of temptation is likened unto the lotus. Therefore is the lotus carved or painted upon the furniture of temples; therefore, also, does it appear in all the representations of our Lord Buddha. In Paradise, the blessed shall sit upon the cups of golden lotus flowers."

The festival of the chrysanthemum has been practically merged into the Emperor's birthday, which comes on November 3. It is said that there are almost 300 different shades of color in about 800 varieties of chrysanthemum raised in Japan. In November, 1902, in the Imperial Gardens, Tokyo, there was one plant with 1,272 blossoms, each 2 1/2 inches in diameter. According to Mr. Conder, "the yellow kind ranks first."

A few remarks on the simple flower arrangement of the Japanese form the closing chapter. This art is considered by the "little brown people" as an "elegant accomplishment," and an important item in the education of women of rank. "But it appertained also to men of rank and of culture who might have retired from active life to the leisure of literary and esthetic

pursuits." It has been stated that those who engaged in this "fine art," would possess the following ten virtues:

"The privilege of associating with superiors; ease and dignity before men of rank; a serene disposition and forgetfulness of cares; amusement in solitude; familiarity with the nature of plants and trees; the respect of mankind; constant gentleness of character; healthiness of mind and body; a religious spirit; self-abnegation and restraint."

Copies of this very interesting little work can be procured from The Florists' Exchange.

PAMPHLETS RECEIVED.

THE SCHOOL GARDEN, by Professor L. C. Corbett, Horticulturist Bureau of Plant Industry, Department of Agriculture, issued as Farmers' Bulletin No. 218, is a useful publication and will be found, by teachers and others interested in this important work, of great service. The bulletin covers the subjects of planting vegetables and flowers; laboratory exercises, such as the studies of soils, roots, stems, leaves, different cuttings, grafts, etc. List of plants for window boxes and specimen plants for school rooms are furnished, as well as plans for the decoration of the grounds, with suitable trees and shrubs. The bulletin is profusely illustrated.

Mrs. Dunkley.

Mrs. Dunkley, of the Dunkley Floral Company, Kalamazoo, Mich., died at her home on Tuesday, April 25. The cause of death was heart failure. The funeral was held Saturday afternoon, April 29.

Mrs. John T. Temple.

Mrs. Josephine Temple, wife of John T. Temple, florist, Davenport, Ia., died at her home on North Brady street, on Wednesday night, April 19, after a lingering illness.

The deceased, whose maiden name was Josephine A. Hearn, was born in London January 21, 1846, and came to America with her parents when but 4 years old. She was married to Mr. Temple on December 30, 1863, and during their 37 years of married life they have lived at the present family homestead. In addition to the husband, Mrs. Temple is survived by three brothers, all living in the Dakotas.

The funeral was held on Friday morning from the home of Mr. Temple's sister, Mrs. Walter Downs, 1941 Brady street, interment being at Pine Hill Cemetery.

Society of American Florists and Ornamental Horticulturists.

President Vaughan has appointed E. B. George, of Painesville, as vice-president for Northern Ohio.

Prize Essays.

At the recent meeting of the executive board in Washington, D. C., it was voted to offer three cash prizes of \$25, \$15, and \$10 to be awarded for the first, second, and third best essays, respectively, on the subject of "The Ideal Employer," the essays not to exceed fifteen hundred words each. The prizes are donated by Treasurer H. B. Beatty.

Those wishing to compete are requested to send their completed manuscript to the secretary not later than July 15. The manuscripts should be unsigned, but the full address of the writer should in all cases accompany same. The awards will be made by a competent committee, and the names withheld until after a decision has been made.

WM. J. STEWART, Secretary.

Appreciation from Far-Away Australia.

Editor Florists' Exchange:

Please find enclosed \$2 P. O. O., in payment of subscription to The Florists' Exchange, which I find a most interesting paper, comparing favorably with any English periodical of its class. It deals with most subjects in such a way that one cannot fail to be benefited by reading them. Carnations and chrysanthemums are chiefly my lines, and through reading the various articles on these I have become possessed of some very fine varieties, such as Prosperity, Stella, Peru, Enchantress, Harlowarden, Ethel Crocker, and others in carnations. There is one thing I should like to impress upon your raisers, viz., do not go for size at the expense of the calyx. Also, when a new variety is raised, see that it is distinct from existing kinds, as I find in several whites and pinks it is only in habit of plant you can find a difference. Sleepiness may be constitutional in some; coddling causes it in others. So far as rust is concerned, with me Lillian Pond is a rotter. It must be in the, say, blood, as all other kinds are free owing to a limestone soil and good drainage. Where you house in Winter, we flower outside, which shows you what our climate is at that time.

Nephrolepis Piersoni is a fine thing.

JAMES BEGGS.

North Adelaide.

OUR READERS' VIEWS

Curled Leaves on Ten-Week Stocks.

Editor Florists' Exchange:

Regarding the question in your issue of March 25, page 406, on "Curled Leaves on Ten-Week Stocks," I beg to say that it is not the temperature that is responsible for the curling of the leaves, but there must be another fault in the cultivation. Most likely the soil is kept too wet, so that the roots have rotted. Stocks must be watered in Winter and Spring very carefully; they can stand to be dry, even very dry, much better than damp. The soil may look even very dry on the surface, but the plants will look, and they are, much healthier than if the surface of the soil is kept moist. My seed beds of ten-week stocks very seldom have a watering from the time that the seeds have been sown—that is, about February—up to the time that the plants are planted, from the beginning of April to the middle of April. When the leaves show a bluish-green color, then it is time to water; but as long as the leaves are of a fresh, green color the plants require no watering at all. When the leaves become curled, the soil is too wet, and the roots rot. If kept perfectly dry, they will make fresh roots, and in a short time the plants will show a healthy appearance again. But if such pots, or beds, are watered again, the leaves fade, or wither, and the plants die off. A matter requiring attention is to give ten-week stock plants as much air as possible.

FREDERICK ROEMER.

Germany.

Rosarians vs. Carnationists.

Editor Florists' Exchange:

This subject leaves room for endless discussion. There are several reasons why the men who handle and grow carnations seem to be more progressive than rose growers. We should consider that carnations are soft-wooded plants, requiring less attention, and are easier grown than roses. They are more continuous bloomers and free from thorns, consequently it is easier to pack them. The carnation plant also requires less time, after its removal from the field into the greenhouse bench, also less skill, to bring it into good blooming condition; then we should not forget the lower temperature it will grow and thrive in as compared with the average rose plant.

Another strong factor also helps the carnation grower: as the plants are not difficult to grow from seed, he has a far better opportunity to keep his stock renewed than the grower of roses.

In this locality the carnation growers outnumber the rose growers probably forty to one, and are annually getting new recruits, because a man can engage in the business of growing carnations with limited capital and little or no experience, and if he is industrious he generally succeeds.

The carnation grower has smooth sailing compared with the average rose grower at the present time. He will come in contact with plenty of snags in the near future, as the continuous breeding of the plant under glass will have a tendency to weaken the stock; and while the size of the flowers may be increased, it will likely be at the expense of other desirable qualities, such as hardiness and vitality.

On this matter of vitality in plants, I think Mr. O'Mara struck the keynote when he stated at the New York Florists' Club meeting that, in his estimation, the most important quality in a rose or other plant is its constitution. The writer is well aware that the wholesale man does not care a snap about the constitution. But there are other men besides the wholesale commission men to whom this matter of constitution in plants means volumes. At a later date the writer may have something to say on the subject of constitution in roses and other plants.

If rose growers have not advanced in the same proportion as other plant growers, who and what are responsible for this? There is a glorious future for the rose grower and breeder; there are noble workers in the rose field, men who are giving us new types of such beauty and hardiness that they will grow and thrive as the oak of the forest. Such will be the hybrid rugosas in the near future.

West Grove, Pa. ANTOINE WINTZER.

Editor Florists' Exchange:

"O, wad some power the giftie gie us

To see oursel's as ithers see us."

Why are carnation growers more progressive than rose growers? Mr. Ward seems to have settled this question to his entire satisfaction. He tells his audience that we are conceited. "O, Lord, deliver us from such a slur." Let Mr. Ward read the above lines of poetry, think and ponder over them, and next time, when making a speech, he will be careful to choose his words. I never knew a real lover of the most beautiful of God's flora to be in any way conceited, or who acted in any sense to give Mr. Ward, or anyone else, that impression. Then he goes on to say that we have no energy. Does he class such men, leaders in the profession, as May, Montgomery, Hill, Cook, Elliott, Dawson, and I could give an endless list—shades of Dean Hole—does he say the above men have no energy? Look at their places and see if it was luck, "blind luck," or energy that has made the places those men either preside over or own.

I am at a loss to understand how, why or where Mr. Ward gets his definition. We read that in Panama, when 75 men are wanted they have to hire 100 to get the above number at work; probably Mr. Ward got Panama confused with America proper. I know

a pair of rose growers in Boston—Wm. Anderson and John McFarlane, "braw laddies"—who don't look like tropical inhabitants, and as far as energy goes, though burdened somewhat with flesh, they are hustlers. They are a good sample of what can be produced in a tropical climate.

In conversation with several wholesalers, whose words are above impeachment, they say that the sales of roses are far in excess of those of carnations. Will Mr. Ward kindly explain this? There surely has been some hustling done to obtain this result. The rose men have been educating the public by producing a high standard of excellence, while the carnation men have been bringing out new varieties and following along under the protecting wing of the Goddess of Flora. A few years ago John Thorpe predicted the three-inch carnation. Some people stood aghast, and were troubled about John's sanity. He saw there was room for improvement in his favorite flower, and the carnation to-day is a long way from being at the top.

"Where McGregor sits, that's the head o' the table." Where the rose sits she commands the admiration and respect of all flower lovers, carnation men not excepted. Burns says: "Ye roses on your thorny tree, the first o' flowers."

I wish we could have a discussion on this matter. I believe The Florists' Exchange would gladly give the use of its columns to a healthy argument on the situation. But it seems to me the best way to settle the argument would be this: Next year let both societies meet in Boston. Couldn't they unite in giving their exhibitions at the same time, in the same hall? The committees of both societies could meet and arrange the details. If they do this, and agree, I will dress up in kilts, get John Birnie to lend me his pipes, and play Mr. Ward up Huntington avenue to the exhibition to the tune of "Wha'll be king but Charlie?" and he will probably admit, after seeing the rose in all her glory, that she is the peer of any other flower, and that the rose growers of America are not, nor have not, been asleep, nor have they lost any of their old-time energy.

Natick, Mass.

ROBERT T. MCGORUM.

Growing Freesia.

Editor Florists' Exchange:

In my article "Growing Freesia," in last week's issue, there are several slight mistakes in punctuation which I would like to correct, as the article would be very misleading if left as it is, especially to those who have never grown freesia. With your permission I will repeat the last paragraph:

"Now a few words about the time of blooming. They can be brought into bloom for Christmas by growing them in a rose temperature. I usually cut my first blooms from the 8th to the 12th of January, in a temperature of 45 degrees at night. Those in the warmest houses bloom first. I started cutting on March 15, in a house that was planted at the same time as those I cut in early January; the difference in temperature made the difference in time of blooming. The late blooming house was kept just above freezing; the flowers in it were grand. In March the freesia should be heavily shaded to prevent the flowers from becoming small."

I desire to say a few more words which I would have done last week only for the fear of taking up too much of your valuable space. It is about the care of the bulbs after the flowers are cut. I save all my own bulbs. The stock I have had been grown by me for 22 years. In all that time I have never purchased any fresh stock, for the good reason that there is not any to compare in quality to mine, which everyone can testify to who has seen my flowers; exploding the theory that it doesn't pay to save your own bulbs. After the bulbs are done blooming the foliage is cut off, about two inches above the earth, and the bulbs are ripened off by gradually withholding the water if the bench room isn't needed. But if the room is needed, I lift the bulbs out with as much earth as possible, using a trowel, and put them under the bench to ripen off, which answers just as well as leaving them on the bench, only it is a little more trouble. Then on wet days, in June, they are picked out of the soil and put in flats, or boxes, until all are done. They are then sifted through sieves of different size mesh to sort the bulbs into sizes. I save all my bulbs, both large and small. The large ones are sold and the small ones I plant. Those of the large ones left unsold are also planted. The culture I gave in my article of last week was for large bulbs. The small ones I plant in rows, two inches apart, and one inch between the bulbs in the rows. These bulbs are about the size of dried wax beans, and as small as peas. From these I cut fine flowers. The only difference is that they are shorter in the stem than those produced from large bulbs. I wouldn't think of planting bulbs so small of the ordinary freesia, nor would I advise anyone else to do so.

If there is anything else concerning freesia that I can answer at any time, I shall be pleased to do so.

Great Neck, L. I.

R. FISCHER.

Damaged by Lightning.

PEKIN, ILL.—George A. Kuhl's greenhouses were struck by lightning on the afternoon of April 21. Damage was done to the extent of \$2,000 or \$3,000. The bolt struck the large smokestack, and cement blocks, brick and debris were hurled in every direction. The cement, bricks, and pieces of plaster rained through the glass roofs about the greenhouse, and the interior resembles a wrecked building.

The Commission Man and His Defects.

Editor Florists' Exchange:

"The Gatherer" is evidently a pessimist. He believes, or pretends to believe, that our little controversy will be profitless. I beg to differ from him on that point. That there are delinquents in the commission dealers' ranks "The Gatherer" himself admits, and what has been written on the subject will no doubt direct the attention of those delinquents to the error of their ways, and induce him to reform, mend their methods and be "up-to-date," just like those "up-to-date" commission men whom "The Gatherer" has discovered by "looking" for them. It will also be apt to cause the grower to start out on a quiet hunt for those "up-to-date" places, thereby benefiting himself and increasing the "up-to-date" man's business.

But there may be different ideas of what "up-to-date" handling means. Some time ago, in passing through the commission district, I saw a box taken from an express wagon, slid across the sidewalk, rolled down the steps and turned end over end into a commission store, without a word of remonstrance from the commission man, and that box did not contain "green goods" either. Now, from the grower's standpoint, that is not up-to-date handling, and a big percentage of the carnations classed as sleepy in the average commission store are not sleepy at all, only bruised, and have a shopworn look, caused by such treatment as I have described above, and supplemented by the handling touched on in the paper read before the New York Florists' Club.

"The Gatherer" hints at "inefficiency" on the part of the producer. Where is the grower who can produce flowers tough enough to stand such treatment? The market gardener handles his cauliflower with far more care!

The "poet's" flowery effusion reads nice, but he is only playing to the gallery. He knows that there are only two nights in the year (Easter and Christmas) that the commission man has to "hustle through the live-long night," and, no doubt, it pays, or he would not do it. Picturing the commission man as part martyr, part philanthropist, puts him in a new and rather ludicrous light. That question, "Where would the retail florist business be without you?" is a good one, and the answer is better. According to the "poet," the commission man is the pooh-bah of the flower industry, carrying retailer and grower alike on to fortune, "sacrificing" himself for their benefit at every opportunity, never "complaining," because he has nothing to complain about.

"We cannot do without you," chants the poet. That is true. The commission man is a necessary evil under existing conditions; but there is no reason why those conditions should continue to exist. Let every grower who sells what he produces in New York join the New York Market Florists' Association, an incorporated body, organized for the express purpose of getting a suitable building in a suitable locality, in which to sell plants, flowers, nursery stock and greenhouse products, at wholesale. Only growers admitted to membership. It is worth inquiring into. The seed is sown, and we hope to grow into a vigorous plant. The commission man will do business in the proposed market as the grower's agent, pure and simple.

I will pass over the Boston editor's bouquet, and, as regards that "axe," I will reserve my opinion.

JOHN BIRNIE.

CLUB AND SOCIETY DOINGS

THE TRI-CITY FLORISTS' ASSOCIATION met last week at the home of Henry G. Pauli, on Elm street, and Eastern avenue, Davenport, Ia. Adolph Arp, superintendent of Central Park, read a splendid paper on "Shrubs and Herbaceous Plants," which was discussed by the members present. Music was furnished by Miss Helen Pauli and Harry Bills of Davenport and Henry Meyer, of Rock Island. The next meeting of the association will be held on May 11, at the home of Florist Henry Gaethje, of 1607 Second avenue, Rock Island. The meeting will take the form of a farewell event for Mr. Gaethje, who contemplates leaving during the latter part of May for a three months' trip to Europe.

MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY.—The meeting of this society was held in Red Men's Hall, Oceanic, N. J., April 21. The winners of the prizes for "Fruit Culture Under Glass"—Percy Hicks first, and Harry Griffiths second—read their respective papers. The two gentlemen are employed at Mr. M. C. D. Borden's estate, under Wm. Turner, superintendent. Both of the papers were so fine that it was no easy matter for the judges to give their decision. We have often read papers on "Fruit Culture Under Glass," but we have never before had a chance to read papers which covered the ground so completely as these, and the two gentlemen, although assistant gardeners, can take up the pen in competition with any experienced fruit grower. "Chrysanthemum Culture" is the subject on which essays were handed in to the secretary last night, to come up for prizes at the next meeting. H. A. Kettel exhibited the following tulips: Canary Bird, Pink Beauty, Belle Alliance, and two pæonia-flowered varieties—pink and yellow. The two latter are really beauties, and I am sure will be grown more extensively in this part next year. They scored 95 points. Wm. Turner exhibited some beautiful *Catleya Mossie*, which received 95 points, and some fine *Lælia purpurata*, seven flowers on a spike, and beautifully marked, which also scored 95 points.

B.

TALES OF A TRAVELER

Lower California.

Until one has traveled the State of California to some extent he fails to realize the amount of territory which the State embraces. "Southern California," according to general usage, means Los Angeles and the section about that city, including the orange-growing sections about Redlands and Riverside and the points along the coast which are so easily reached from Los Angeles, such as Redondo and Santa Monica. Lower California embraces a section of country which is as large in area as many of our Eastern States, below Los Angeles and bordering New Mexico.

Passing from Los Angeles to San Diego, which is the center of this lower section, we pass Oceanside, which is perhaps next to Redondo in the quantity of flowers produced. Practically everything is grown out-of-doors, and Los Angeles is the market for the output.

San Diego is situated within a few miles of the Mexican border, and the harbor gives it a great many advantages commercially, while the climate is considered ideal by those who have come to San Diego to make their home because of the even temperature and the climate. As a town it is one of residences and not a commercial town. It is a town with less transient trade than many which are more in the line of travel, although many tourists make their way to

covered by Mr. T. S. Brandegee, a noted botanist of this State, and in company with the discoverer Miss Sessions visited this remote locality and secured about 2,000 seeds in 1903. The palm is named *Erythea Brandegeel*, and now that these seeds have germinated Miss Sessions has, so far as is known, all the stock of this palm that there is outside of its native locality. It is a palm of the fan-leaved type, and a very slow-growing plant.

Cocos plumosa is largely grown here, and finds a ready sale for street planting. Three small greenhouses are used as propagating houses, and the lath structures which are so typical of California are used for asparagus and numerous other plants which require a moderate shade. In the field are some 12,000 carnations, and a large quantity of bulbous stock, as well as a plot of roses. The nursery comprises some fifteen acres, and the variety of the stock grown makes it an interesting place to the visitor.

A nicely equipped store on Fifth street, of which I am able to show you a photograph, handles the product, and a capable corps of assistants is there to serve those who buy flowers in semi-tropical Lower California.

W. R. PIERSON.

Spring Show at San Francisco.

The fourth annual Spring flower exhibition of the Pacific Coast Horticultural Society, in conjunction with an elaborate charity exhibit given by the Pacific Coast Forest, Fish and Game Association, was held in

FLOWER STORE OF MISS KATE O. SESSIONS, SAN DIEGO, CAL.

Coronado, passing through San Diego to this beautiful resort across the bay.

Some fifteen years ago Miss Kate O. Sessions began growing flowers in San Diego, and to-day she stands as a floricultural leader in Lower California. Miss Sessions is a noted botanist, and her love for flowers and plants has brought about an interest in them, and her business ability and floricultural knowledge have built up a large and profitable trade in cut flowers in an almost tropical climate. It was my good fortune to spend the morning of February 13 among the various parts of the nurseries of which Miss Sessions is the owner, and to see what can be done when perseverance is combined with skill in the production of good stock, which is grown in a climate so dry that irrigation only can be depended upon for moisture.

The leading feature of the nursery is the poinsettia fields, and there are here some 8,000 plants which have been grown for cut bloom. Los Angeles and San Francisco open a market for cut poinsettias, and this immense field was a mass of color when cutting began in December. The blooms were shipped from here by the thousand, and that is saying a great deal when the bulk of the cut poinsettia is considered. Three-year-old plants were the ones which produced the most bloom and the largest flowers.

F. S. Sessions, a brother of Miss Sessions, has charge of the nursery, and in reply to an inquiry from me as to the handling of these blooms to insure their keeping he gave me a description of his method which proves satisfactory. As soon as cut the stems are put into boiling water for a quarter of an hour, which softens them to almost a mush. Then they are placed in cold water until ready for shipment, and there is no difficulty with them after this treatment.

To the botanist or the collector of rare palms there is one here of interest. This palm, I am informed, is grown by no one else in the United States, and is known only to a very few. It was discovered a few years ago in the deep, dark, canyons of the peninsula below California, in Mexico, and specimens are growing there which are eighty feet in height with a trunk not over eight inches in diameter. The palm was dis-

covered by Mr. T. S. Brandegee, a noted botanist of this State, and in company with the discoverer Miss Sessions visited this remote locality and secured about 2,000 seeds in 1903. The palm is named *Erythea Brandegeel*, and now that these seeds have germinated Miss Sessions has, so far as is known, all the stock of this palm that there is outside of its native locality. It is a palm of the fan-leaved type, and a very slow-growing plant.

Roses, best and largest collection grown under glass—Ferrari Brothers. Best and largest collection, field grown—Mr. Luderman (Pacific Coast Nursery). Twelve blooms in vase—Ferrari Brothers.

Carnations: Best and largest collection—John H. Stevers Co., first; Ferrari Brothers, second. Vase of 25 or more blooms—John H. Stevers Co.

Iris, best display—H. Platt. Clematis, best display—California Nursery, silver medal. Pansies, best and largest collection—Mr. Kettleman, gardener to George A. Pope. Lilacs, best display—P. C. Meyers. Shrubs in flower, best collection—W. H. Crocker. Plants, decorative, best collection, staged for effect—H. Platt. This prize was given by the Cox Seed Company. Best specimen—F. Glise. H. Platt was awarded \$10 for best and largest collection of ferns, \$5 for best fern specimen, and special prize for best hanging basket. Best collection flowering plants, not less than 25 plants in flower—H. Pfenniger. Azalea and rhododendrons—Ferrari Brothers.

ALVIN.

Flower Show in Kansas City.

A flower show will be held in Convention Hall, Kansas City, Mo., the week of November 13 next. While the plans are not fully outlined, they indicate that the show held this year will be the finest ever given in this city, as a number of new features will be introduced. George E. Kessler, of the park board, who is a member of the committee, and who has consented to assist the directors of the hall in preparing the show, will have charge of all the floral features, and Mr. Kessler is already preparing for an active campaign in this department. While the prize list has not been decided upon, the sums offered will be so generous as to attract exhibitors from all parts of the country.

Cyclamen Persicum at Boston Spring Show

Among the many good things seen at the recent exhibition of Spring flowers at Boston nothing caused so much comment and favorable discussion as the cyclamen exhibits. Everyone who saw them was much impressed, and the unanimous verdict was: "Such splendid specimens were never seen before anywhere." A few days later the writer called upon Jas. Stuart, gardener to Mrs. Fabyan, Brookline, Mass., who was an exhibitor. The plants looked little the worse of their exhibition experience. Mr. Stuart modestly alluded to his success and very willingly complied with a request to outline his cultural methods. The largest and best plants were three years old and it is Mr. Stuart's intention to grow them on still another year.

The seeds are sown in flats in the ordinary way about the month of August, and a good strain of seed is always secured; Mr. Stuart often saving his own seeds from his best flowers. He says: "The first mistake in cyclamen culture is usually committed in the early stages of their infancy. Too often they are potted when the second or third leaf appears, whereas if they are left in the flats until they are quite bushy, say, ready for a 3-inch pot; the growth is not only much more rapid, but the plants are always vigorous. Of course, they are not allowed to overcrowd one another, but are worked over and spaced just as soon as occasion demands. But great stress is laid upon this early treatment, as plants stunted in small pots rarely make good later."

The soil used is of a light nature, equal parts of loam, leaf-soil, and well rotted cow manure, and this compost is used throughout with a slight addition of some commercial fertilizer for the larger plants. In Mr. Stuart's case, the plants are grown in the greenhouse all Summer, on a north bench. They are not then so liable to be neglected as when put outdoors under sashes. They are carefully watered and syringed overhead several times a day during hot weather, and by the time they are a year old they are ready for a 6-inch pot in which size they are flowered the first year. A liberal amount of liquid fertilizer is given during the flowering season, but this can easily be overdone, and the plants seem to thrive and flower better when not pushed too hard. In the present case, the blooms are not used as cut flowers, but are allowed to remain on the plants for greenhouse decoration and they are a very pretty show most of the Winter months.

About the present time, when flowering naturally ceases, the leaves begin to ripen and decay, and every evidence of maturity is observed. The plants are again moved to the north bench to their summer quarters. But note here the change. (They are usually thrown under the bench and left to the ravages of red spider, wood lice and any other bug or crawling thing that may feel disposed to prey on them, and then about the month of July or August, after they have been thoroughly dried up and some one has time to look them over, they are unearthed; all the old soil shaken off; repotted and started away again feeling very much the result of their handicap.) They are never subjected to the drying off process. Liquid manure is withheld and watering is done more sparingly for a time. All flower stalks and leaves are picked off when they begin to wilt, otherwise if left to decay they will injure the bulbs. But the plants don't lose many of their leaves, and just as soon as the quiescent stage is over and growth again commences naturally, they are repotted. The old ball is never broken up; they are simply moved from a 6 to an 8-inch pot and so on; and this one shift is sufficient for the season. The same treatment as for younger stock is meted out, and thus they are kept going from year to year.

The largest plant seen at Boston was nearly 3 feet through, a mass of bloom and was admired by everyone. The flowers also were exceptionally large: Mr. Stuart said: "That plant had not been shifted for two years." It is his intention to give it a shift this year, and if it does as well as it has done it ought to be worthy of the society's silver medal the next time it makes its annual visit to the Massachusetts Horticultural hall.

Such plants may not be profitable from a commercial standpoint, but they are an inspiration to every true gardener, and the lesson they would meekly teach is: "Go thou and do likewise."

JAS. T. SCOTT.

TO CLEAN SMOKY GLASS.—The glass of our greenhouses is black, and it is only by repeated washings we keep it fairly clean. For this purpose we use a solution of hydrofluoric acid. First wet the glass, then with a wide soft brush wipe it over with the solution, and immediately wash it off with clean water. The acid cuts and unfastens the dirt on the glass. But all plants must be removed for the time being from under the glass, as every drip of the solution on the leaves means a spot. This saves an immense amount of rubbing. Don't be afraid of it; we have been using this for years. But don't use it too strong; dilute it with water. We have tried many other things—oxalic acid, murlatic acid, etc.—but found nothing as good as the hydrofluoric. The deposit of soot here is persistent; it is falling every day in the year; and this is why our commercial florists have been driven to the suburbs and outside towns.—W. Falconer, Pittsburg, Pa., in *The Garden*.

Easter Trade Reports for 1905

The reports which follow show that, in general, the Easter business of 1905 was fully up to the standard of its predecessors; in several cases being in advance of that of 1904. Notwithstanding the lateness of the season, with the possible exception of violets in some cities, there was a plentiful supply of cut flowers and plants. There was a good call for carnations and lilies. In New York City the cut flower trade was a disappointment. Stock for this market was plentiful beyond expectations, far in excess of the demand; consequently, large quantities were left unsold.

The late date helped the plant trade. The usual stock available at Easter, together with quantities of the general run of bedding plants, all found a ready sale. Genistas seem to be no longer favorite staples for this festival. The azalea continues first choice in many cities; hydrangeas and spiraeas were also good sellers; and lilies, of course, are still extensively called for. Heaths have been introduced into some of the Western markets with satisfactory results. Nothing of a particularly novel character in plants is reported. The Baby Rambler rose, wherever offered, found ready takers. Throughout the whole of the country it is observed that but few of the extra large plants are called for, these being mostly used by the store men themselves for display purposes. Easter, 1906, comes on April 15.

NEW YORK.—Plants of nearly all kinds sold well, but cut flowers were not in such good demand. Retailers are satisfied with the showing, but the wholesale market did not come up to expectations. Business fell away early on Saturday and did not pick up again, the consensus of opinion being that there is too much stock in cut flowers produced for this market.

We had beautiful weather for Easter—clear skies, no wind, moderately cool temperature, and everybody in good spirits anticipating a glorious harvest. It is all over now, and there have been many disappointments, which, however, are confined to the cut flower end of the business. Plantmen had a splendid run, and everything that was good and salable found a buyer. This result was not brought about by any deficiency in the quality of the flowers either. We never before saw better stock for Easter, and while there were isolated cases of flowers weary with age reaching the market, these were few and far between, and scarcely noticeable, there being such a plentiful supply of really superfine stock available.

What a pity it is that we have no Dickens in our midst to give to the world a history of our night market scenes. Our plant market over on the West Side would have been an ideal spot for him to wander about; the close bargainings and the coarse though good-humored repartee would have furnished that author many choice bits for his Key of the Street. It is here, on the West Side, in two spacious canvas tents, where the business of the day commences. The New York Market Florists' Association has not yet got that elegant store building for a market, the plans and drawings of which were made some years ago, but the city kindly allows them to use the ground space (for a heavy rental), and here, under the shelter of the tents, the beginning of the Easter trade is launched forth. It is scarcely past midnight when the growers begin pouring in from New Jersey and Long Island, and hardly have they got their array of plants arranged in their respective quarters before the army of plant peddlers begins to arrive. These itinerant plant sellers are weatherwise to an almost unlimited degree, and long before the first streaks of the dawning day they knew on Saturday that a fine clear day was assured. Besides being weather sharps they are shrewd to a marked extent. They are regarded in some circles as missionaries for the florist. Be that as it may, they know how to buy plants, and from 3 o'clock in the morning until the growers have disposed of their last plant it is one continual battle of wits between the latter and these traveling retailers. The plants offered for sale embraced everything in season almost, from the modest verbenas in 2 1/4-inch pots up to the massive rhododendron in a 14-inch tub. Lilies of every grade of quality were offered, and they fetched anywhere from \$2.50 to \$5 per dozen. Spiraeas brought from \$3 to \$5 per dozen; geraniums, \$1; heliotropes, 50c. and 90c.; h. p. roses, \$4 to \$5; Rambler roses, from 75c. each upward. Verbenas reached 35c. per dozen, Ivy geraniums 85c. per dozen, and hydrangeas from \$3 to \$6 per dozen. Not so many azaleas and lilacs were offered, these plants being considered rather too expensive for this market. Genistas, stocks and cinerarias, in small lots, were cleared out at fairly good figures, considering that they were mostly in small sizes. The best sellers in the market were undoubtedly Rambler roses and geraniums.

As the plant vendors are starting away with their loads of fragrant blossoms, another phase of the flower industry is commencing to bustle with activity in the Coogan Building, corner of 25th street and Sixth avenue. Promptly at 5 a. m. the manager's bell rings, and the Cut Flower Exchange is at once a Babel of sounds in many languages. There was an ample supply of flowers here, brought in by the growers themselves, each having his allotted portion of counter space, and the counters were piled high with such flowers as carnations, tulips, callas, lilies,

narcissus, double and single roses, sweet peas, stocks, ferns, lilac, etc. There was a lively scrimmage from the very start. Prices were held quite firm, but buyers were numerous; in fact, the floor was crowded almost to being impassable, everyone anxious to secure what he needed in the shortest possible time.

The Easter trade here was remarkably good, and prices more than satisfactory. Carnations realized from \$3 per 100 upward; lilies, \$3 and \$10 per 100; lilac, from 50c. to \$1.50 per bunch; General Jacqueminot and Ulrich Brunner roses, from 10c. up, according to grade; moss roses, \$1.25 per bunch; sweet peas, \$1.50 per dozen bunches; callas, \$1.25 and \$1.50 per dozen; tulips, \$2, \$3 and \$4 per 100; narcissus, \$2 and \$3 per 100; stocks, 35c. per bunch.

Just as the Cut Flower Exchange has completed its morning of activity, the wholesale commission district takes on a very animated aspect, and the more serious proceedings of the day's business begin to develop. Immense loads of flowers arrive by every express, and there is a general feeling of contentment and pleasure in anticipation of what promises to be a record-breaking Easter, in so far as good values and quick clearances go. Prices along all lines had been steadily advancing for several days. Most of the stock received was of prime quality; added to that there were rumors afloat that the supply of flowering plants had run short. Expectations were naturally high; the early morning flower market had pointed to lively dealings, and it was a foregone conclusion that everything would sell out slick and clean. But, alas, by 10 o'clock in the forenoon a profound dullness was felt in the whole district; it became evident that the cut flower market was over-supplied, and such a thing as firmness in values was out of the question. It had been confidently expected by some that American Beauty roses would touch the half-dollar mark, and that tea roses would climb to twenty cents; but such figures never materialized. Business continued draggy all through the day, and through the night, for the stores kept open right through waiting for the rush that never came. Lily of the valley and first-class violets did, however, find a good demand. It was surprising where all the violets came from, seeing that there had been such a scarcity in the early part of the week. Over 300 boxes came down the river in the afternoon, but many of them should have made the journey several days earlier, as they had become quite passe in the meantime, making but a poor impression when they arrived, and creating nothing but disappointment and disgust among those who had the misfortune to handle them. Held up roses are bad enough, but violets that have been kept back are a thousand times worse, and we wonder why such things happen. When Sunday morning arrived it was found that a vast amount of stock remained unsold. American Beauty and other roses, all of special grades, were on hand in almost unlimited numbers. There had never before been such a quantity of special grade stock available, and for that grade there had been no better call than is felt on an ordinary Saturday. It did not seem to be a question of price, either; there were no offers for the stock. The asking prices for Saturday had been 35c. and 40c. for American Beauty; 25c. for Liberty, 30c. and 40c. for the best Ulrich Brunner, and 15c., 12c., 8c., 6c. and 4c. for Bride and Bridesmaid; short grades went fairly well, but special and extra grades were not in demand.

In carnations, Prosperity was offered at 10c. and 8c.; Enchantress, 8c. and 6c.; Mrs. Thomas W. Lawson, 6c. down to 4c.; William Scott, Mrs. Frances Joost and that class, 3c. and 4c., with white varieties at 5c. and 6c. Prosperity and the white kinds were left over to some extent, but the others cleared out fairly well.

Violets were held firm at \$1 to \$1.50 until the evening shipments arrived; then when it was realized that so many were off grade, a general cutting took place,

and those only of standard merit went through at the prices mentioned. Cut lilies brought 8c. and 10c. and there were plenty to fill all requirements and some to spare. Lily of the valley went well until Sunday morning, but the shipments arriving at that time proved too late, as the demand was over.

When along in the afternoon of Sunday the wholesale houses were finally closed, they did so with large quantities of stock on hand; and it was generally conceded that the Easter trade had been a very disappointing one indeed. Stock had been plentiful beyond all calculations, and had exceeded the demand to such an extent that average prices would naturally fall away below what had been expected.

Among the retailers plants, as usual, played the most important part, and while here and there buying had been too heavy, with the result that there was a fair amount of stock left over, as a general thing the plant trade was good. Made-up hampers of small flowering plants went off very well; hydrangeas also were a good thing, as were potted lilies and violet plants. Rhododendrons were not so much in evidence as they have been in former years. Genistas were quite numerous and proved poor sellers at most stores. Azaleas, in bright colors, went well enough, but there was quite a lot of the white ones left over. Roses were in good demand and the supply was fairly well cleaned out all over. Very little ribbon was used compared with the former lavish displays. In cut flowers, the business went behind that of other years, and while no plunging had been attempted, most of the stores had quite a supply of flowers left on hand when the business of the day was over.

PHILADELPHIA.—Easter business has apparently been very satisfactory to growers, wholesalers and retailers. There was no surplus of either plants or flowers. A good many lilies were around this week, but as there were weddings every day, these flowers are being used up. The stock of plants offered was about the same as in the past few years. There were more blue hydrangeas seen here. The plants of Hydrangea Hortensia were more numerous and, in many cases, were grown small and found favor with buyers. As usual in this market, plants at from \$4 to \$10 at retail were the best sellers. Not so many very large plants were seen. Nearly every store had a few Bougainvillea Sanderiana in large sizes, but these were bought for show, and while some were sold, sales were not really expected. The same with azaleas; nearly every store disposed of a few of these at \$25 to \$35, but not many were around, probably three or four to a store. Made-up baskets of plants were not in as large quantities as in the past few years, and were not asked for by buyers. All plants were in very good condition; in fact, rather better than was looked for. The majority of the lilies were in good shape; although a few were seen with brown tips to the leaves.

The cut flower men appear to have done a very good business, and nearly all the wholesalers were able to fill their shipping orders except some varieties of carnations. The supply was such that prices were advanced, in some cases, 100 per cent.; and while this caused some to hesitate, yet the market was well cleaned up of all the Easter stock. Lilies went slowest; this was most notable in cut flowers. Several large orders, filled in past years, were not forthcoming this Easter, and several growers had stock left. There were probably more lilies around; and then, figuring probably on the advance on other flowers, some growers held out for 12c. per bloom, while buyers were able to get all they wanted at 10c.

All the retail store men appear to have cleaned up well; in fact, some of them had to replenish supplies on Monday. This week has been such a good one with wedding work that anything left was used to advantage.

Charles P. Poryczne had the misfortune to have his Chestnut street store burned out on Sunday morning at 2 o'clock. His loss in stock was considerable, as lots of orders for Sunday delivery were yet there. The worst loss was his order book, containing the Saturday and Sunday orders; the charged orders being all lost.

DAVID RUST.

BOSTON.—Easter trade in several cut flower lines was rather disappointing. It had been expected that everything would be sold out and that of some things, such as violets, there would be a scarcity. This was not the case, however, although all colored flowers were pretty well sold. White flowers of all kinds went slowly; especially white carnations, which hardly could be moved at any price. In roses, Liberty was a fine seller, some extra fine blooms bringing \$6 per dozen, although the general price was \$3 and \$4 per dozen. American Beauty, of course, held their own and proved one of the best sellers, but no material advance in prices was made, \$6 per dozen being the ruling quotation for best grades. There was a large demand for the shorter stemmed flowers.

All colored carnations sold well, Mrs. Thos. W. Lawson and Enchantress being the most popular varieties, selling at \$4 and \$5 per 100. White varieties, as before stated, went slowly, and as at Christmas time, were inclined to be a glut. Lilies were plentiful, and the quality was

good; they brought from \$8 to \$12. Violets, which were supposed to be scarce, were more plentiful than anticipated, selling at \$1 and \$1.25. Lily of the valley was plentiful; in fact, this was one of the flowers that went slowly, at \$1 to \$4. Tulips sold well, excepting white varieties, at \$2 and \$4. Daffodils went fairly well, with no advance on prices. J. W. D.

PITTSBURG.—Easter trade was good, but hardly any better than last year's with most of the dealers. The trouble is that more stock is put on the market every year than there is demand for. Competition was sharp. Some flowers were sold very cheap just to make them move. The weather was moderately fair on Saturday, after a raw cold spell the whole week, so that plants did not sell so well as was expected; but the supply of good plants was better than ever before, and prices realized were very good. Azaleas held out well for Easter and sold at usual prices from \$1.50 up. Hydrangeas were fine, with nice heads of bloom; they brought from \$2.50 up. Genistas don't sell so well as formerly, and quite a few were left on the dealers' hands. Fine Crimson Rambler roses, well in bloom, brought from \$3 up, and the supply was plentiful. Hyacinths, tulips and narcissus in pots sold at very reasonable prices. Lilies in pots went at about 25c. per bud.

In cut flowers, prices were reasonable and buyers were satisfied. Stock was good and abundant. Everything went well, excepting bulbous flowers, which were hard to sell, both at wholesale and retail. Lilies were in good supply at from \$12 to \$15, wholesale, and \$2 to \$3 per dozen, retail. The growers cleaned these out pretty well, but the retailers had some unsold. There was a light call for callas at 25c. Roses were of good quality; prices, at retail, ran from \$1.50 per dozen and better. Bride and Bridesmaid were principally handled. American Beauty went at from \$3 to about \$9 per dozen, wholesale, for the best. They were in good demand, and cleaned up fairly well.

Carnations were choice and fresh, and in good demand. Prices, at wholesale, were from \$4 to \$6 for average stock. Some of the fancy sorts brought better figures. At retail from \$1 per dozen up was about the price. Very few cheap ones were to be had, and the supply was cleaned up well. Violets were scarce; very little extra good stock was available. Prices were \$2 per bunch of 50 at retail; wholesalers got from \$1.50 to \$2 per 100. Daisies and marguerite went at 75c. per dozen; pansies, 15c. per bunch. A nice lot of antirrhinum brought \$1.50 per dozen spikes and was attractive. Bulbous stock was overdone, a lot of poor flowers was hard to sell at any price. Daffodils did not go so well as usual; from 50c. to 75c. per dozen was the price. Tulips, 75c. per dozen for single and \$1 for double was asked, but a good lot went at lower prices; some doubles as low as 50c. per dozen. Cut hyacinths were not much wanted. Lily of the valley went better at 75c. per dozen.

The stores made big window displays, and all available space inside was crowded with blooming plants and flowers.

The florists were all well prepared with extra help, and were kept on the move continually. The aisles of the market in Allegheny, near the florists' stands, were so jammed with people that it was impossible to get through.

John Bader, the largest plant grower in our vicinity, had a very busy week. His azaleas were in fine shape and sold well. Blind Bros. had a fine lot of plants of various kinds; and W. Lauch also had a fair lot of stock which he displayed and offered for sale in a store room on Diamond street, near his market stand.

The Easter floral displays in the Park conservatories were attended by a great throng of people. The day being nice, everybody was outdoors on Easter Sunday. More people went through the Phipps conservatories in the Pittsburg Park than ever before—about thirty to thirty-five thousand.

The next meeting of the Florists' Club occurs Tuesday, May 2, and will likely be well attended, the members having more time now. E. C. REINEMAN.

BUFFALO.—In extent of good business done the Easter season just past exceeds any past records for this locality. While some stocks naturally were wrongly timed and notably carnation blooms averaged low in quantity, a condition somewhat shared by violets, too—a generally large lot of both plants and blooms of good quality was available. Lilies, particularly in plants, perhaps showed the strongest popularity. The store florists sold these at 25c. per bloom, and all the stock to be had was disposed of. Azaleas went as well, with some white ones slow of demand. Forced bulbs were of excellent quality, a bit plentiful comparatively. Roses in plants, in Ramblers in moderate numbers, and forced hybrids filled all ordinary needs.

Retailers freely pre-empted available near-by vacant stores as annexes for extra supplies. The department stores were patrons of liberal quantities of lilies and also plants forced. One concern of this class opened a flower sale at low advertised prices, but the attempt showed a working management of weak character as regards competition to established conditions of business. VIDL

INDIANAPOLIS.—Every one is satisfied with the Easter trade. The volume of business done was not much, if any, greater than in 1904. The quality and quantity of stock for last week's business surprised every one. Rhododendrons, azaleas, hydrangeas, wistaria, lilacs, and lilies were in fine condition. Plants sold better than ever before. No trouble was experienced in disposing of high-priced specimen plants, such as hydrangeas or rhododendrons. Crimson Rambler roses sold exceptionally well at \$2.50 to \$5 each. Lilies were retailed everywhere at 25c. a flower or bud, and were entirely out of the market by Sunday morning. Pots containing from three to five lily plants, selling at \$3 to \$6, went unusually well. White enameled buckets of lilies, lilacs, azaleas, or Crimson Rambler, tied with a wide ribbon, brought from \$7.50 to \$15.00 each. These proved a popular novelty, as did small toy tubs filled with lily of the valley, forget-me-nots, hyacinths or tulips, which sold at \$1.50 to \$3 each. This white enameled ware is certainly more beautiful than a pot, handier than a pot cover, and much less expensive. Bulbous stock was more plentiful than anticipated. There were enough hyacinths, jonquils, and tulips to meet all requirements. Hampers and baskets, well arranged and tied with suitable ribbon, ranging in price from \$2.50 to \$20, were well cleaned up. Cheaper stock, such as a small azalea, a hyacinth, or a pan of pansies, or flat of tulips, arranged with crepe paper, mounted with a small chicken or duck, selling at 75c. to \$2, was disposed of in large quantities. Owing to the lateness of the season many customers tried to kill two birds with one stone, by buying plants

ST. LOUIS.—We here have nothing to complain of as to business during Easter; it was fully up to last year's trade, when the biggest Easter business was reported. Some of the up-town florists, who were loaded down with fine blooming plants, were somewhat worried early Saturday, but before night everything that was good had been sold. Most of the florists had to work late Saturday night filling cut flower orders for early Sunday delivery. Had the Sunday law placed a ban on the florists, most of us would have been in a bad fix; but, as it was, none of us was molested and the prospects are that we will not be.

In plants, azaleas, hydrangeas, and bulbous stock in pans had a big call; of course, Harrisii and longiflorum lilies were the choice of all buyers. An enormous lot was disposed of. In cut stock the retailers had their troubles, owing to the sudden advance in prices. Plenty of almost everything was to be had in large quantities, excepting long, fancy American Beauty roses. Cut lilies were more than ample for the demand, at \$12.50 to \$15 per 100. Callas were not so plentiful. Other bulbous stock was in plenty, at regular prices.

Carnations went up in price, \$4 and \$5 for fancies and \$3 for common, per 100. There were none too many for the big demand. Nothing less than 75c. per dozen could be bought at retail.

Bride and Bridesmaid roses were fine, the lowest price being 6c. Souvenir du President Carnot, from Bell Miller, Springfield, Ill., sold out clean, being of extra fine quality, bringing from \$6 to \$10 per 100. Meteor and Perles des Jardins were in limited supply. A great deal of

BALTIMORE.—Easter trade was very satisfactory, supply and demand both being good. More sweet peas, lily of the valley, and carnations could have been handled to advantage. Local violets were very scarce and practically no good; a few from the North were seen of good quality, and brought \$3 per 100, retail. Many thousands could have been sold if obtainable. Reports were that lilies would be very scarce. This proved to be an error, as there was a fine lot on hand. The only drawback was that longiflorum had rather short stem. Everything cleaned up at the Exchange except string asparagus, which came in a little too freely.

Only two retailers say they were not ahead of last year; with many this year's trade far exceeded any other Easter. Good cut flowers were in better demand than plants. The best evidence that all sold out is the fact that the Exchange cannot catch up on stock to fill all orders this week. The supply is pretty ample, with the demand a little better. Quite a number of weddings are taking place this week, which use up all good stock nearly as fast as it arrives. Prices have dropped back to where they were before Easter.

The Exchange is in reality a mutual concern between the local growers and dealers, each depending upon the other every day in the year; and for this

than was expected. Almost all kinds of stock cleaned up well, some kinds, especially carnations, being very short by Saturday evening. Prices were perhaps 10 to 15 per cent. lower than last year, but the unusually large volume of business done more than made up the difference. It was noticeable that there was a better supply of good stock in both plants and cut flowers. Carnations, as usual, were far in the lead in popularity, being quoted by some of the stores at 75c. to \$1, and by others at \$1 to \$1.50 per dozen. Roses were in good demand at \$1 to \$2 per dozen. American Beauty were cheaper than ever known here before, and brought \$2 to \$8 per dozen. Tulips went freely at 50c. to 75c., and hyacinths at \$1 to \$1.50 per dozen. Lily of the valley averaged about 75c. to \$1, and violets \$1.50 per 100, sales of the latter being unusually large.

Lilies brought \$2 to \$3 each, with very large and satisfactory sales.

There seemed to be an increased interest taken in plants. Sales of potted tulips and hyacinths were also surprisingly large. A new feature here was fancy baskets filled with cut flowers, assorted, which took well.

CLEVELAND, O.—The largest florists here are unanimous in declaring that the volume of Easter business far exceeded that of previous years. Prices were better and easier; but fewer cut flowers were sold than ever before, potted plants taking lead. Of the latter that sold best were lilies, azaleas, hydrangeas, Rambler roses, and hardy azaleas, a few genistas, spiraeas and the usual number of bulbous flowers in pots and pans.

Prices on cut flowers were: American

A CORNER IN GALVIN'S BACK BAY STORE

MACMULKIN'S WINDOW

EASTER DISPLAYS AT BOSTON, MASS.

which would ornament the home for a time, then be suitable as a shrub or bedding plant. Many bought geraniums or Crimson Rambler roses.

Cut flowers, especially roses, were in good condition, with little, if any, pickled stock in the market. The supply of carnations was short, but the immense amount of field-grown tulips and jonquils supplanted them to a large degree. Carnations retailed at 75c., \$1 and \$1.50 per dozen. Select La France, Souvenir du President Carnot, and Mme. Abel Chateaubriand roses retailed at \$3 to \$4 per dozen. The best Bridesmaid and Bride brought \$2 to \$3; seconds retailed as low as \$1 per dozen. Long-stemmed, select Liberty were in good demand, at \$5 to \$6 per dozen. American Beauty were reasonable in price, and sold well; select 36-inch wholesaled at \$4 to \$5 per dozen and retailed at \$9 per dozen; 24 to 30-inch stems wholesaled at \$2 to \$3, and retailed at \$4 to \$6 per dozen. Short American Beauty were plentiful at \$7.50 per 100.

Violets were a disappointment, as many orders were filled with small violets, which did not come up to the expectations of the customers who think only of Mid-winter quality. Sweet peas were in good demand, but the supply did not meet requirements; long-stemmed ones wholesaled at \$1 to \$1.25 per 100, retailing at 25c. per dozen. Growers who had quantities of field-grown tulips, narcissus and jonquils were lucky, as they sold well, and the profit in them was large at 60c. to 75c. per dozen.

Tomlinson Hall Market florists are well satisfied with Easter business. Until noon Saturday but little stock had been sold. The rush Saturday afternoon exceeded all expectations. I. B.

fine smilax was in the market, at 15c. per string. Other greens in all lines were in plenty, at usual prices.

ST. PATRICK.

CHICAGO.—Easter business, from the standpoint of the wholesaler, was all that was expected. There was a brisk shipping demand, nearly all week. During the fore part of the week some kinds of stock were very scarce; this was, no doubt, due to the fact that growers were holding back their flowers until the latter part of the week. This was a mistake, as Easter prices go into effect the Monday before, and shipping orders have to be filled early. Prices held up to the very last, and no doubt the volume of business done will compare favorably with that of former years.

More plants are being sold by the retailers each succeeding year; prices on these are advancing, and the quality of the stock grown is also improving.

Monday of this week's trade opened up rather slow; consignments were not very heavy; consequently, no great quantity of stock was left over at the end of the day's business. American Beauty are in ample supply at fairly good prices. Bride and Bridesmaid are yet plentiful, especially the poorer grades. The better sorts are now bringing from \$8 to \$10 per 100.

Carnations are in good demand, with a large supply available at 75c. to \$3, according to grade.

Some very good violets are yet seen, mostly all Eastern stock. Lilies are yet in goodly numbers, but there is not much demand at present; they sell at \$6 to \$10. Other bulbous stock is quite ample for the call. Smilax is becoming scarce and bringing higher prices. R. J.

reason enormous prices are not asked at any time because of any extra demand or short supply. It had been expected that there would be a shortage of bulbous stock for Easter; however, there was a fairly good supply, especially of tulips, which sold well; in fact, everything good went. Only a few plants were left over with some stores. Prices ran about the same as in previous years. At 11:30 Saturday night all the stock in Lexington market could have been bought for a \$10 bill, everything having moved so well. The hardest plant to move was white lilac. JOHN J. PERRY.

CINCINNATI.—Easter trade was all that could be wished for; everything sold. American Beauty roses and multiflorum lilies had the lead, but thousands of tulips, narcissi and Von Slon were also disposed of. Green goods went slowly. At the Jabez Elliott Flower Market the rush was so great that it was almost impossible to get into the building. Thousands of plants of all kinds were sold, hydrangeas and lilies taking the lead. Carnations and roses were not plentiful either in cut flowers or plants. To sum it all up, this Easter was equal to any other. Saturday was ideal; the sun shone all day and the temperature stood at 55 degrees.

George & Allan reaped a harvest in the bulb line; they commenced cutting early in the week, and at last accounts were still cutting. Their stock was much better than usual. E. G. G.

COLUMBUS, O.—Local florists entered upon Easter week with some misgivings, but the outcome proved more satisfactory

Beauty, wholesale, \$6 to \$10 per dozen; Bride, Bridesmaid, Meteor, Kaiserin Augusta Victoria, \$4 to \$12 per 100; carnations, \$6 to \$8. Violets were very scarce at \$3 to \$5 per 100.

Gassers' window display, conceived by Mr. Jones, was designed to represent a woodland scene, where the limbs of the trees and vines had intertwined and formed a nook, from which beautiful clusters of purple wistarias hung in rank profusion. Flowers peeped out from the crevices of the rockeries, rustic baskets were scattered here and there, with cage birds in full song, all adding realism to the picture.

The heaths on the market were controlled by Westman & Getz.

O. G.

MILWAUKEE.—Easter business was considerably ahead of that of last year, especially the demand for carnations. There was a good supply of lily plants, which sold well. There was quite a large number of short L. giganteum in the market, and these met with popular favor. Roses were plentiful and the supply was equal to the demand. Violets were almost out of the market, and the quality was inferior, owing to the lateness of the season. Most all of the florists report a satisfactory trade, and nearly everyone cleaned out of all lines of stock that was in good salable shape for Easter. The weather was very favorable for deliveries, and large displays were made outside by the various street men in the business. INCOG.

(Owing to pressure of late advertisements on our columns this week, quite a number of reports on the Easter trade are held over till next week.)

WARENDORFF, 122D ST. AND 7TH AVENUE

 ARCADE FLORIST, BROADWAY AND 65TH STREET ;
SOME EASTER DISPLAYS IN NEW YORK

MACDONALD, MADISON AVE. AND 68TH STREET

New York.

The Week's News.

There has been quite a number of weddings this week, and many of the retailers have been very busy in that line. The cut in the prices of flowers came in just at a time when they could be appreciated.

One of our daily papers, the New York Star, has been making an estimate of the number of flowers used for Easter, and gives out the following figures: Violets, 5,000,000; roses, 400,000; carnations, 1,100,000; lilies, 500,000. What an immense business we would have if those figures were only true. Evidently the reporter for the New York Star met with a veritable Baron Munchausen when he was interviewing the florist who gave him the facts and figures relating to the Easter business.

Bertha Cohn, formerly a florist at 17 East 59th street, has filed a petition in bankruptcy with liabilities of \$3,939 and assets of \$20 in debts due her.

The annual auction sale of orchids from Sander & Sons, St. Albans, England, took place in Cleary's Horticultural Hall, on Tuesday, April 25. There was a good attendance of buyers.

J. H. Small & Sons had one of the best Easter trades they ever experienced. They had one of the finest displays in the city, and their stock of plants was of enormous proportions and of superb quality, yet they had to call for extra supplies in some lines several times on Saturday.

Alex McConnell carried an immense supply of elegant flowering plants and sold out cleaner than ever before.

Wm. Elliott & Sons, seedsmen, Dey street, who contemplated moving into Fulton street on the first of May, have decided to postpone their moving into the new quarters until the first of July.

A. H. Allen, of this city, has gone to Berlin, N. Y., to take a position with Arthur Cowee, the gladiolus grower.

Henry Grebe, a prosperous florist residing at Jamaica, L. I., committed suicide by shooting himself with a revolver on April 21. Grebe was a very heavy smoker and was very nervous at times, but was of a genial disposition, and his friends, of whom he had many, were shocked to hear of his suicide. He had a bright future, as he had money, and his wife, who was a daughter of the late Henry Krick, of Brooklyn, recently received a legacy of \$30,000 as her share in her father's estate. He leaves a widow and two young children.

Clucas & Boddington Company, who for several years have been located at 812 Greenwich street, will move on May 1 to 131 West Twenty-third street, near Sixth avenue. This firm is doing a much larger retail business than heretofore, and the old location not being so well adapted for that class of trade, a move to the shopping district was necessary. A long lease has been secured at the new premises, and the firm is to be congratulated on its advance into the centre of the shopping district, where its transient trade is sure to be largely developed.

After Easter.

Business has gradually increased in volume as the week has advanced,

though, of course, prices are down to their usual Spring status. There was so much stock on hand Monday morning, and prices had weakened so materially through Saturday night and Sunday previous, that a general slaughter was inevitable, as the surplus had to be moved some way or other. American Beauty roses were the greatest sufferers, and many hundreds of special grades of this variety were cleared out at \$6 per 100. The top grades of tea roses were also offered at the same price, and it was considered a good sale whenever a few hundreds were moved at that figure.

When, after Easter was over, and we could get an approximate idea of the number of American Beauty that reached the city on Saturday, we were not at all surprised at the falling to pieces of the market. On a rough estimate there were at least four times more Beauty available this Easter than ever before, and the same remark applies to Bride and Bridesmaid. It would seem that, given a late Easter, an abundance of roses is sure to be on hand. Of this fact the most of the retailers were perfectly aware, and the high prices talked of a few days previous to Easter Saturday, made the retailers refrain from placing orders, they knowing that there would be plenty of stock on hand to supply all demands. In conversing with a prominent retailer this week he assured us that he would have been glad to have placed orders for American Beauty at 30c., and would have used a great many more than he did. The cut in price that came on Saturday night was too late to help the retailer, in a great measure, as he had been pushing plants for all they were worth on account of the roses being held at such a high figure.

As we said before, business increased in volume as the week progressed. The supply of stock seems to have kept up; there has been no shortage of anything but lily of the valley. This flower, on account of being so much in demand for bridal bouquets, has jumped to \$3 and \$4 per 100, with an occasional special lot at \$5.

The supply of violets has shortened

up greatly, and they were bringing, the latter part of the week, from 50c. to \$1 per 100, according to quality. And there does not seem to be enough to supply the demand.

Plenty of lilies are still reaching the city; the top price for these is \$6 per 100, poorer grades going as low as 4c. each.

Carnations are coming in quite plentifully, and, considering the time of the year, are averaging fairly well.

American Beauty roses, the latter part of the week, got to 20c. each, for specials, No. 1 going at about 8c. The supply still equals the demand, though we may expect at any time now a shortage in these roses. Liberty are quite difficult to dispose of, many of the best grades going at 10c. Bride and Bridesmaid have settled down at \$6 per 100 for the best, 2c. and 3c. each for No. 1, and 75c. to \$1 per 100 for No. 2 grade.

Tulips are very plentiful, and are bringing anywhere from 50c., for the single varieties, up to \$2 per 100 for the better grades. Single narcissus is also selling as low as 50c. per 100, and there is a big stock in the market. Sweet peas are going fairly well; white ones were in good demand one day and cleaned out entirely. The supply of orchids is increasing every day; the larger blooms of cattleyas are now in constant supply, and bring from 50c. to 75c. each.

Gardenias have sold better within the last few days than for some time, reaching as high as \$3 per dozen occasionally. Antirrhinum is a little in over-supply, but has been bringing 10c. and 12c. per spike. There is a steady supply of gladiolus, and some of the best has realized as high as \$2 per dozen. The price of smilax continues to hold up, as also does that of Asparagus plumosus in bunches.

WAYNESBORO, PA.—Henry Eichholz writes: Trade was fully 25 per cent. better than last Easter. The weather was ideal. Carnations were favorites in cut flowers; lilies, hyacinths, tulips, Rambler roses; in fact, everything that had a blossom sold.

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

LE MARS, IA.—L. R. Wasmer has opened a florists' store here.

CHILLICOTHE, O.—Walter Butler has opened a branch store on Paint street.

COLUMBUS, O.—Mrs. E. M. Krauss has removed from 183 to 209 South High street.

GIBSONBURG, O.—Joseph L. Wetzel & Son, of Fremont, O., have opened a branch store here.

HACKENSACK, N. J.—The New York Flower Store opened its new stand at 215 Main street on April 20.

SHEBOYGAN FALLS, WIS.—J. E. Mathewson will move his place of business to 625 North Eighth street.

CORTLAND, N. Y.—A. E. Ryan and Claude V. Hike have bought out the Hopkins greenhouses at Cortland.

FARGO, N. D.—The Pratt Greenhouse Company of Anoka, has opened a branch in this city, with Mrs. S. J. Hill in charge.

NORWALK, O.—C. E. Barton has leased store room at 12 Whittlesey avenue, where he will continue the flower business.

SALIDA, CAL.—J. H. Freeman, formerly of Howard, has purchased the Salida Greenhouses on E street, and will continue to operate them.

ALBION, N. Y.—The firm of Newman & Gatz, who built the new greenhouses on Brown street, has been dissolved. Mr. Newman retiring. Valentine Gatz is now the sole proprietor.

AITKIN, MINN.—A. Clarine has bought ground here on which he will erect greenhouses and engage in the florist business. The Clarine Brothers have extensive greenhouses at Faribault, where they are doing a satisfactory trade.

GRAND FORKS, N. D.—Andrew Peterson, who has had charge of the Grand Forks Nursery for several years, has leased land on the southeast corner of the Hunter farm, where he will conduct a nursery business.

SHELBYVILLE, IND.—Charles Warner, of Smithland, has purchased five greenhouses formerly owned by the Law Floral gardens of Shelbyville. Mr. Warner will move the houses to his place and use them for the purpose of raising lettuce.

We can't do much with a
"JUST WON'T" grower

who knows that all tobacco powder is the same cigar and tobacco store trash he gets at his cigar store or from his seedsmen and JUST WON'T ask for our booklet, that is full of the sayings of his fellows, that read:

The H. A. S. Co.—I consider the FUMIGATING KIND TOBACCO POWDER; perfection for what it is intended; my houses were badly infested and since the two fumigations, they are entirely clear.

J. W. SHEARER, Winchester, Ky.

He JUST WON'T believe that 95 per cent. of all the growers that send for our free five-pound trial sample bags of THE FUMIGATING KIND (for fumigating) and THE BLACK STUFF FINE (for sprinkling), have purchased not once, but again and again, after the trial. WHY BE A JUST WON'T when you can have these free five-pound trial sample bags; yes, two of them if one won't do. All we ask is for you to pay the express charge on them. Ask now. Don't be a "JUST WON'T."

THE H. A. STOOHOFF CO., Tobacco Powder Hobbyists, 116 WEST STREET, NEW YORK, N. Y.

The H. A. S. Co.—The BLACK STUFF FINE is used on m. place and I cheerfully state that it gives entire satisfaction without injuring the plants.

EMIL LEVLY, West Hoboken, N. J.

Dreer's Select List of HARDY PERENNIALS

We offer here only the most **Showy and Decorative Sorts**, including varieties suited for **CUT FLOWER** purposes. These varieties are marked with an asterisk (*).

For the most complete list of Hardy Perennials offered in America, see our current Wholesale List.

This important branch of our Plant Department has been completely reorganized during the past year, and we are now able better than ever before to supply almost any demands and to execute orders promptly.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns the first season. This, in most instances, is a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

AFTER EASTER BARGAINS

After Easter, all florists need to replenish their stock. We here offer some exceptionally fine bargains. If you cannot take care of your needs now, you had better place your order and have us hold same for you until you can use the plants. In this way you are sure of having your stock secured when you need it, and avoid the usual disappointment of "stock sold" when you order same.

	Size pots.	Per doz.	Per 100
Asparagus Plumosus Nanus, \$20.00 per 1000	2 in.	\$0 50	\$2 25

Plants in fine condition. JOHN BADER, Troy Hill, Allegheny City, Pa. Mention the Florists' Exchange when writing.

Forcing Hardy Shrubs.

Nearly all hardy flowering shrubs, especially the early flowering species, may be successfully forced under glass and made to bloom long before their usual time outdoors. Some varieties, if properly managed, will furnish a rare and highly prized article in the line of cut flowers for the early Winter months, while the greater number of them can be had in bloom at any time after New Year, and would prove especially valuable and most suitable for the Easter pot plant and flower trade. The mere process of forcing in itself is not difficult or of a complicated nature, and the resulting product, the cut blooms as well as the potted flowering plants are gladly welcomed and eagerly looked for by an appreciative public as something differing from the usual run of the florists' holiday supply. There is no doubt but what the forcing of the best known and easiest managed sorts in quantity, conducted in a rational and systematic manner, would considerably increase the profits of any plant-growing concern, where the necessary space and a house or two during the Winter could be spared and devoted to this feature of floricultural commerce. Many of the varieties which I have tried, some of them forcing remarkably easy, may be recommended to amateur and private gardener, but would, in my estimation, not be the things to include in a list of kinds promising profit to the commercial grower. The florist turning to this line of industry is not likely to make any great mistake, if he selects his material from the following: Double and single lilacs in variety, double and semi-double plums and cherries, double almond, Deutzia gracilis, spiraea, Paeonia Moutan in variety from the earliest flowering sorts, Hydrangea paniculata grandiflora and, of course, the hardy roses, remontants and hybrids. To this list, but requiring a different treatment, may be added: Ghent azaleas, rhododendrons, kalmias and ericas. There is, however, more profit in doing two or three varieties well and forcing them in masses, than to handle a great many kinds, each in limited number. Most all of these shrubs, if wanted for forcing, must go through a course of special culture in the open for a period of two or three years previous to being forced, so that short, well-formed and floriferous stock for the purpose may be obtained. Such plants, especially grown, we are receiving annually in October and November from abroad. My experience leads me to believe that at least the leading sorts, such as roses, syringas and prunus and probably deutzias and viburnum, could to better advantage be raised right here, where they are wanted. Half an acre or an acre of good land, given over to this culture, would, after a start has been made, annually provide all the suitable material needed on the place. Thus the plants would come cheaper, be less damaged by frequent handling, and a greater percentage of them could be worked up to

shapely plants, suitable for a first-class pot plant trade. I have done this on private estates and am convinced that it could be turned to good account commercially.

Preparatory Culture.

Some of the finer varieties of flowering shrubs are, by grafting, worked on to the common sorts, but all lilacs and prunus, including the best varieties, as also the two or three forms of Deutzia gracilis, grow willingly and rapidly from cuttings. They are best propagated from semi-ripened wood in early Fall, so that in the following Spring nice young plants are available for planting out in the field. Here they will rapidly grow into size, if properly attended to as regards pruning, hoeing, watering and sprinkling in hot, dry and windy weather. Pruning, however, is the most important part. The first and occasionally also the second year a judicious stopping, more or less severe, all according to variety, is necessary or shoots too forward and growth too rank. But at all times during the period of their nursery culture must weak, distorted or straggling growth and superfluous shoots be cut clean away or broken off smoothly. This latter, if wanted, may be used for propagating. To obtain a firm and small-sized ball of roots, desirable when potting up, root-pruning is resorted to. In early Fall a sharp spade is used to cut away the straggling roots all around the plants within reasonable distance from their base. This should be done every Fall, every succeeding year cutting a circle a trifle farther away from the stem than the preceding season, and in their last year it is done a few weeks before they are dug up. The majority of those plants, recommended as most tractable under this culture, will, if carefully attended to, at the end of the third and many at the second year, be nice, well-formed bushes from 1 1/2 to 3 feet high with from 12 to 20 strong shoots, profusely set with bloom buds. Only specimens of this description should be selected for forcing in pots. In October they are dug up, those of the desirable size and shape potted up at once, and all plunged in the frames ready for them. These frames must be so constructed that in times of heavy rains raised sashes will keep the plants dry. A moderately moist soil or other material, in which the plants are plunged, will afford sufficient protection against a thorough drying out of the roots, which should be avoided at a time when the wood is ripening. Thoroughly ripened wood assures success in forcing hardy shrubs. A few snappy frosts will help to ripen it, but when Winter sets in for good, the frames should be covered and protected against a solid freezing up, which would render the removing of the plants to the greenhouse later on inconvenient and difficult and would also cause a cracking and loss in pots. A better and more satisfactory pot plant is invariably obtained, if plants suitable for this purpose are potted either in the Fall or Spring previous to time of forcing. This gives them an entire season in the open to become thoroughly established in the pots. The adoption of this plan becomes an absolute necessity if the plants are wanted for extra early forcing. If they are induced by a short period of greenhouse culture in early Spring, to make and complete their season's growth long before those outdoors would, fine material is secured for very early forcing the coming Winter or Fall. The soil in the field should be good, well enriched and freely worked, while that for the benches and pots need not be of a kind especially prepared; a firm potting and planting is of greater importance.

Forcing.

When the plants are wanted for forcing, they are brought into a cool greenhouse from the outdoor frames. For a week or ten days a temperature of from 45 to 50 degrees is high enough. Gradually this is increased until 60 and 65 degrees is reached. They may, if occasion calls for it, even be subjected to a greater heat, but in such a case flowers will not always open evenly, or be of as fine a color, as if given more time to develop. A gentle course in forcing should be the rule, and 65 degrees should be set down as the maximum, while in a temperature much lower fine plants and flowers, as

FERNS, COCOS and KENTIAS

I make a specialty of Small Ferns for jardiniere, etc. A good variety of the right kinds, 2 1/2 in., \$3.00 per 100. Cocos and Kentias, fine for centers, 10c. ea.; \$0.00 per 100. Boston and Pteris Ferns, 2 1/2 in., \$4.00 per 100. Dracena Indivisa, 6 in., 25c. and 50c. ea.; 4 in., 10c. Geranium Mme. Sallerol, 2 1/2 in., \$2.00 per 100. H. WESTON, HEMPSTEAD, N. Y. Mention the Florists' Exchange when writing.

ARAUCARIA EXCELSA

From \$1.25 to \$2.00 each. Kentia Belmoreana, from 50c. to \$5.00 each. Rubber Plants, from \$6.00 per doz. up. Lilies, 12 1/2 cts. per bud or blossom. Azaleas, best varieties, in bud and bloom, from \$9.00 per doz. up. Spiraea, from \$4.00 per doz. up, fine plants.

WM. A. BOCK, No. Cambridge, Mass. Mention the Florists' Exchange when writing.

FERNS OUR SPECIALTY

Assorted Ferns for Jardiniere. We have a fine lot of these Ferns in all the best varieties ready for immediate use from 2 1/2 in. pots at \$3.00 per 100; \$25.00 per 1000; 500 at 1000 rate. FERN SEEDLINGS We are booking orders now for June delivery at \$1.00 per 100; \$5.00 per 1000. ANDERSON & CHRISTENSEN Telephone 14 F Short Hills, N. J. Mention the Florists' Exchange when writing.

Low rates by steamer to Eastern points

THE JESSAMINE GARDENS, Jessamine, Florida Mention the Florists' Exchange when writing.

also a healthy, fully developed foliage, may be had in March and April. At any rate, the plants should, to some extent, be hardened off just before being offered for sale, if the bloom is fully out. Reasonable ventilation on bright, warm days, the full, unobstructed light, a generous supply of water at the roots, frequent sprinkling and a somewhat moist atmosphere, are essentials while in process of forcing. To bring them into bloom very early will take from 5 to 7 weeks, according to species, while later on toward Spring 15 to 30 days will suffice.

Some of these shrubs, if gently forced, may successfully be used as willing and profitable subjects for years in succession, if sharply cut down, after the blooms are cut, and grown in the open during the Summer. But those having undergone a forcing under high pressure need a year or more in the open air nursery to recover lost strength. Rhododendrons may be had in bloom for Christmas. They and Azalea mollis should, after being forced, complete their growth under glass before being placed outdoors.

Etherization.

Dormant plants, otherwise fully prepared and ready to be forced into bloom, if subjected to the action of ether directly before being placed into the forcing house, will expand their flowers sooner and with greater certainty than plants of the same lot not so treated. This process, new and only sparingly tried by florists, promises to become a great help to those in search of methods that will hasten the production of flowers for the early Winter months, and, no doubt, would prove highly remunerative if properly turned to account.

Etherization does not, to any appreciable degree, affect such plants as roses, azaleas, rhododendrons, deutzia, spiraea, viburnum or peonies—not sufficiently to justify the use of ether in connection with their culture as a profitable measure. If, however, this seemingly drastic process is allowed to have fair and full play on lilacs, cydonias, plums and cherries, it will easily be recognized as a long step forward in floriculture. It will cause these plants to open their flowers in less than half the usual time required. The most responsive sort of the lilacs are Syringa Mme. Lemoine and S. Charles X. and of plums, Prunus nana and P. japonica.

It is absolutely necessary that plants set aside for etherization should be well established in their pots; and etherization does not in the least disqualify such plants for a similar course every year in succession. The process is simple and does not involve any great amount of labor, skill or expense, and any florist may test the merits of this promising new wrinkle for himself.

On a small scale, but giving fullest satisfaction, an experiment may be made in the following manner: The plants are set close together in an airtight ordinary wooden box, we will say, one 3 feet long, 2 feet wide and 4 feet high, or any tight box having a clear inside space of from 20 to 24 cubic feet. Between the pots and covering the same up to the base of the stems goes a layer of sand, which is to protect the roots from the gas. A small shelf or a stout wire-ring or bracket is fastened in the upper part of the box, as high up as possible. On this is placed the dish or open vessel containing the liquid ether. For a box of the given dimensions close to seven ounces of commercial ether are required. After the ether is securely placed on said shelf or wire support, the box is quickly closed and made tight. This operation should be undertaken in a greenhouse, or shed, with a temperature of at least 55 degrees. If much cooler, a greater dose of ether will have to be given. The box remains closed for from 40 to 45 hours. In opening it on the second day, it is safer to keep away lighted candle or lamp. The plants are now taken out, thoroughly sprinkled and at once subjected to forcing. Any delay would diminish the effects of the ether. Treatment from now on is the same as that accorded other plants in process of forcing. It is an interesting fact, worthy of note, that lilacs, which are hastened most by etherization, are also of all hardy shrubs those most easily retarded by cold-storage treatment.

FRED. W. TIMME.

Geraniums: R. C. of Nutt. Heteranthe, Poltevine, Hill and Gen. Grant, \$1.25 per 100; \$10.00 per 1000. Same from 2 1/2 in., \$2.00 per 100; \$18.00 per 1000. DAHLIA Kaiserin Augusta Victoria

THE BEST WHITE DAHLIA IN EXISTENCE.

My own importation. I control the entire stock of it. Flowers double, of the purest white, 4 to 5 in. in diameter; a wonderful bloomer, stems 12 to 18 in. long; plants 3 to 3 1/2 feet high.

A. L. MILLER, - Jamaica Avenue, Brooklyn, N. Y. Mention the Florists' Exchange when writing.

THE WEEK'S WORK.

Timme's Timely Teachings.

After Easter.

The Easter of 1905 has held what it promised and the sum total of business transacted by florists was fully up to expectations. In some respects it certainly was ahead of any Easter in previous years, while in others it fell markedly short.

Azaleas.

While many of the azaleas were in good trim for the Easter trade, quite a number of them were not. This was to be expected. Any of these valuable plants left over should not, however, be considered a total loss.

Lilies.

The pots containing the bulbs of longiflorum and Harrisii lilies, from which the flowering stalks have been cut, should be placed under a bench and there allowed to partially dry off.

and become fairly good bedding tulips. The bulbs of lilies, if they are to be saved, may be taken out of their pots later on, when the busiest Spring rush is over, and planted out in the open, about six or seven inches deep, in any good garden soil, roots and all.

Roses.

Any roses left over from the Easter sales and past their glory as flowering plants, are not, for that reason, to be considered unsalable stock.

Potted Roses for Next Season.

Now, before dismissing this subject, it seems a good time to remind the rose grower of limited experience that roses, as well as all other shrubby and hard-wooded plants, invariably give better satisfaction and finer results as subjects for Winter forcing if grown in pots.

When the plants are grown in pots all Summer, the roots are there and ready for business. To provide a rose stock in this manner for Winter forcing may entail a little more labor, though I don't see how, and probably a good deal more care and attention; but it pays, and is a gardener-like way to do the work, not being that of a truck farmer.

Now is the proper time to make a start with the best kind of two-year-old selected dormant stock. Prune close, and firmly plant into pots that will just hold the roots, using a heavy, well enriched soil.

As long as the plants are making their growth, they must not be held back by a lack of water, and a daily sprinkling in warm weather should not be omitted.

Young roses in three-inch pots of the right sorts are also good material to start with. These I prefer to grow on a sunny greenhouse bench, giving them a shift as often as needed, until they reach the six or seven-inch pot.

GERANIUMS

All rooted stock sold for this month with the exception of S. A. Nutt.

PETER BROWN, Lancaster, Pa. Mention the Florists' Exchange when writing.

SOMETHING NEW FOR DECORATING

NOW that the season for Wild Smilax is over and no more stock can be supplied, I wish to call your attention to the **Branches** of the **HUCKLEBERRY TREE** as a most elegant Decorative Green.

It is largely used by the Florists of the Pacific Coast, Washington and Oregon, in Decorations. The branches are **Flat**, very thickly furnished with exceedingly lustrous green leaves, and it seems to adapt itself to almost any position in decoration that the Wild Smilax can be used in.

As the introducer of Southern Wild Smilax, I think you can give me credit for knowing a good thing when I see it, and I am convinced that in **HUCKLEBERRY BRANCHES** you will have a very beautiful substitute for the Wild Smilax, of great value to you through the months of May and June.

I am anxious to get the verdict of the Floral Trade on this introduction and offer to send you a case on suspicion. Price **\$2.50 per case** if it suits you, nothing if it does not.

New Crop HARDY FERNS Now Ready
FANCIES, \$1.25 per 1000.
DAGGERS, \$1.00 per 1000.

WILL YOU TRY A CASE ON THESE TERMS?

Yours very truly,

CALDWELL THE WOODSMAN, The man who gave you the **WILD SMILAX,** **Evergreen, Ala.**

A Chicago Joke.
 Amateurs—What's the quickest and easiest way to make a hotbed?
 Oldtimer—Soak the mattress with kerosene and touch a match to it.—Chicago Evening Post.

Syracuse, N. Y.
News Jottings.
 L. E. Marquisee had the decorations for the Chamber of Commerce banquet. The color scheme was red and yellow, carnations and daffodils being used. Wheadon & Hencle have an elaborate decoration for the Oberdorfer-Thalheimer wedding. P. R. Quinlan & Co. opened a branch store for the accommodation of their patrons during the Easter season. Manager Robertson's window decorations are becoming a feature for the visitors and shoppers. His Easter window had its admiring crowds from early until late. A miniature lake bordered with lycopodium, with flowering plants overhanging in such a manner as to suggest a grotto, with a gondola manned by tiny ducklings holding streamers of tiny ribbons.
 Alfred Bellamy, of Oakwood Cemetery, reports a heavy sale of lilies.
J. B. B.

HACKENSACK, N. J.—The greenhouses of Kuhnert & Son were broken into on the morning of April 21 and plants and flowers stolen to the value of \$40.

BIG BUSINESS ASSISTANT

TO SAVE TIME, QUICKEN SALES, AND AID YOU PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions instead of having to continually resort to you for advice.

The following "Culturals" are now ready:

- | | | |
|--------------------------|-----------------------------------|--|
| AMARYLLIS (Hippeastrum) | FERNS | MUSHROOM CULTURE |
| ANNUALS FROM SEED | FREESIA | PALMS, House Culture of |
| ASPARAGUS | GERANIUM | PANSY |

Boston.
Easier Echoes.
 As anticipated, the plant trade in Boston was far better than the cut flower business. It is safe to say that the business done was not much in excess of last year's, for quite a lot of plants were left unsold. In some cases trade was much better than a year ago but on the whole the increase, if any, was slight. The cut flower business was not nearly up to expectations, and no particular flower seemed to find more favor than another. But, if anything, American Beauty and Liberty roses were the most popular. In plants there were few novelties; perhaps the best selling were lilies, of which there was an exceptionally fine stock this season. Azaleas were good sellers, and few were left over. Ericas were not seen in such quantities as a year ago, but they sold well. Hydrangeas were not very plentiful and were all sold out. Rambler roses did not sell so well as formerly, although any of the Baby Rambler that was on hand went well. Acacias, genistas and such plants sold fairly well, although there was not a great stock on hand. Prices compared favorably with those of former years.
News Jottings.
 The Waban Rose Conservatories did the largest Easter business in their history. This was not only owing to an exceptional fine stock of all kinds of roses, but to the good central location of their salesroom and improved facilities for shipping. Their Liberty roses were exceedingly fine; and their new rose Wellesley was one of their best sellers.
 James Rough, one of Boston's oldest established florists, is confined to his home with pneumonia.
 Macmulin had the decorations for the Bleakie-Stone wedding at the Tuilleries, and the Burlingame-Gannett wedding at Cambridge, both on Wednesday.
 Talby, of Wellesley, is bringing in some fine plants of the yellow calla, also lots of blooms of his new variety, Mrs. Theodore Roosevelt.
 James Farquhar returned from Porto Rico on Tuesday. He is favorably impressed with his experiments on the island in lily growing, and intends to return there again in a few weeks.
 Henry M. Robinson has started on a several weeks' business trip in various sections of the country.
 J. W. DUNCAN.

Worcester, Mass.
 Lord & Burnham Co. has a force of men at work erecting a double house (carnations and roses) for H. F. Littlefield size 125x62 feet.
 Orders for Memorial Day are being booked in goodly number.
 With the advent of warmer weather the seed trade is picking up.

Greenhouse Building.

(153) I am contemplating the erection of some greenhouses and would like to ask the following questions: Is there any advantage in building the houses all connected, as in the Dietsch plan, over the regular ¾ span, or even span houses for roses and carnations, and would the iron gutter be better than cypress? Can one grow as good stock in these houses? Would you run the houses east and west or north and south? K. G.

—The advantages claimed for the Dietsch system are chiefly economy in construction. Good stock is produced both in the Dietsch houses and in the regular ¾ and even span structures. Houses running east and west are always to be preferred. The iron gutter is an improvement over the wooden one, whether it be made of cypress or any other kind of lumber.

LA CROSSE, WIS.—John Thorpe is supervising the planning and construction of ten greenhouses for L. F. Easton, of this city.

WEST HARTFORD, CONN.—We regret to learn that A. Whiting, the veteran florist of this place, is seriously ill, and there is little hope of his recovery.

LOUISVILLE, KY.—The Kentucky Society of Florists will hold its May meeting on Tuesday evening, the 2d, at the office of Coenen & Bohman. The gathering will be in the nature of a farewell to Joseph Coenen, who leaves us the first of June to make a new home in the West. The officers of the society request a large attendance of the members. A. R. B.

CROWERS

YOU want to have the reputation for PERFECT BLOOMS. YOU want your
TRADE TO INCREASE and your REPUTATION to spread. You can
secure all this by using NICOTICIDE in your houses, either as a fumigant
or spray. It will clean out the pests, no doubt of that, and the experience
of users through many years shows it is SAFE. The cost per can is not so
low as some other preparations, but the WORK DONE is so great—THAT'S
THE POINT! Send along your address and we will see if we cannot make
you one of our customers.

The name of OUR preparation is NICOTICIDE.

Our Gallery of Fine Specimens

Copyrighted, 1905, by A. T. De La Mare, Ptg. & Pub. Co., Ltd., New York

ACER CAMPESTRE AUSTRIACA

The Austrian Maple, a form of the common field Maple of England, with much larger leaves than the type. The specimen illustrated is growing in the White Lot, not far from the President's Grounds, Washington, D. C. This Maple can be readily transplanted at the proper seasons—Spring or Autumn—and flourishes in any ordinary situation.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 18

NEW YORK, MAY 6, 1905

One Dollar Per Year

Hardy Field-Grown Roses

Extra Strong Two-year-old Plants in Splendid Condition

Strong plants, which if planted at once will bloom freely this summer. We offer a list of extra choice varieties at \$2.00 per dozen; \$12.00 per 100, as follows: Margaret Dickson, Baronesa de Rothschild, Ulrich Brunner, Magna Charta, Mrs. John Laing, Prince Camille de Rohan, Capt. Christy, Jules Margottin, Perles des Blanches, White Rose, Crested Mosa, Rugosa Alba, Rugosa Rubra, etc., etc. Also

FRAU KARL DRUSCHKI This is a queen among white roses, of the very largest size, pure snowy white, long pointed buds with shell-shaped petals, opening large and full. A continuous and free bloomer. The finest hardy white rose in cultivation. \$5.00 per dozen; \$30.00 per 100.

CAPT. HAYWARD Extra choice. Bright carmine-crimson. Very large. \$2.50 per dozen; \$16.00 per 100.

MRS. R. G. SHARMAN=CRAWFORD Deep rosy pink. \$2.50 per dozen

SOLEIL D'OR Golden orange-yellow. \$2.50 per dozen.

MONTHLY AND HYBRID TEA ROSES Strong field-grown plants. \$2.50 per dozen; \$16.00 per 100, as follows: La France, Gruss an Teplitz, Maman Cochet, Belle Siebrecht, Hermosa, Gloire de Dijon, American Beauty, Kaiserin Augusta Victoria, etc., etc.

New Dwarf Perpetual-flowering

CRIMSON, OR BABY RAMBLER (Mme. Norbert Levarasseur). Strong field-grown plants. \$6.00 per dozen.

STANDARD, OR TEA ROSES 12 best named sorts: fine collection. \$5.00 per dozen; \$35.00 per 100.

AMPELOPSIS VEITCHII. Extra strong field-grown plants. \$12.00 per 100.

ARISTOLOCHIA SIPHO (Dutchman's Pipe). Strong field-grown plants. \$3.50 per dozen. \$12.00 per 100.

HYDRANGEA PANICULATA GRANDIFLORA. Strong field-grown plants, \$12.00 per 100.

CLEMATIS Jackmanni, Henryi, Duke of Edinburgh, Hybrida Sieboldi, etc. Strong two-year-old field-grown plants. \$3.50 per dozen; \$25.00 per 100.

CLEMATIS Ville de Lyon. Few large red-flowered clematis. \$9.00 per dozen.

AZALEA MOLLIS. Fine bushy plants, well budded. \$4.50 per dozen; \$30.00 per 100. Also large stocks of **Colorado Blue Spruce, Retinosporas, Boxwood** in bush and Pyramidal form, **Hardy Phloxes**, etc., etc.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

HARDY VINES AND CLIMBERS

CLEMATIS INTEGRIFOLIA DURANDI

Iron Cross Clematis. The steel blue flowers grow in the form of the famous German Iron Cross, measuring 3 to 4 inches across in a dense form intermixed with the buds. A very robust and vigorous grower, although of semi-dwarf habit. Blooms from early summer until late fall. 4-in. pot plants, 5c. each; \$5.00 per doz.

CLEMATIS

JACKMANNI HYBRIDS

Duchess of Edinburgh. Double white.
Henryi. Large single white, very large flower.
Jackmanni. Dark, royal purple; most popular single variety.
Mme. Baron Vaillard. Light rose.
Sieboldia. Lavender.
The Gem. Deep lavender, blue, very fine.
Gipsy Queen. Fine dark single purple.
Imported three-year-old open-ground roots, 50c. each; \$1.00 per doz.; \$30.00 per 100.
Imported two-year-old pot-grown, 40c. each; \$3.00 per doz.; \$30.00 per 100.
American-grown one-year-old field roots, \$2.00 per doz.; \$15.00 per 100; \$125.00 per 1000.

OTHER CLEMATIS

Clematis paniculata. Strong four-year-old field-grown plants. 25c. each, \$2.00 per doz., \$15.00 per 100.
Strong three-year-old roots, 15c. each, \$1.50 per doz., \$10.00 per 100.
Strong one to two-year-old roots, 10c. each, \$1.00 a doz., \$7.50 per 100.
Clematis coccinea. A handsome variety, producing an abundance of large rosy-scarlet, bell-shaped flowers, which are exceedingly handsome and most useful for all sorts of decoration. Blooms from June until frost. Quite hardy. 10c. each, \$1.00 per doz., \$7.00 per 100.
Clematis crispa. Much like coccinea, but producing very fragrant lavender flowers, tipped white. 10c. each, \$1.00 per doz., \$7.00 per 100.

Clematis Davidiana. Dwarf, herbaceous sort, growing about 2 to 3 feet high, covered with deep blue flowers in clustered heads, also singly in leaf axils. 1-year-old, 2 1/2 in. pots, 8c. each, 65c. per doz.; \$1.00 per 100, \$10.00 per 1000. Two-year-old, open-ground, 10c. each, 75c. per doz., \$5.50 per 100, \$50.00 per 1000.

BIGNONIA (Trumpet Creeper)

Grandiflora. Strong plants. 35c. each; \$3.50 per doz.

Rudicaos. Strong Plants. 20c. each, \$2.00 per doz.

WISTARIA SINENSIS

Blue. Open-grown; extra strong, 4 ft. plants, 40c. each, \$3.00 per doz., \$20.00 per 100.

White. Open-grown, extra strong, 4 ft. plants, 50c. each, \$3.50 per doz., \$25.00 per 100.

HONEYSUCKLES

Extra strong field-grown plants, 4 to 6 ft. vines in variety, 60c. each, \$4.00 per doz., \$30.00 per 100. Variegated: Halleans, yellow; Germanica, white; Germanica, red; Belgica, red; Scarlet Trumpet; Yellow Trumpet.

HARDY ENGLISH IVIES

Strong 4 in. pot-grown (cut back), \$1.00 per doz. \$7.00 per 100, \$65.00 per 1000.

Field-Grown. 2 ft. vines, strong plants, \$1.25 per doz., \$8.00 per 100, 2 1/2 in. pots, 30c. per doz., \$2.50 per 100, \$20.00 per 1000.

AMPELOPSIS VEITCHII

Sometimes called Boston Ivy and Japan Ivy 3 to 4 ft. high. Extra strong, imported roots, many vines. 20c. each, \$1.50 for 10, \$12.50 per 100, 2 to 3 ft. high, strong roots, \$1.25 for 10; \$10.00 per 100.

Well established 5 in. pot plants, 30c. each, \$3.00 per doz., \$22.50 per 100.

ARISTOLOCHIA SIPHO

(Dutchman's Pipe Vine)
We offer an extra fine stock of this most useful hardy climber in extra strong vines, 2 to 4 ft., 60c. each, \$5.00 per doz., \$40.00 per 100.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

ST. PAUL.—S. B. Beal, who has been associated with L. L. May & Co. 24 years, has started on his annual trip to Texas and the Southwest.

Catalogue trade has begun to drop off, but for the year will show a decided increase in volume over 1904.

So far there seems to be a good supply of field corn—enough to meet all demands. But the month of May may upset all calculations, as it so frequently does. VERITAS.

European Notes.

A typical Easter has fallen to our share this year—cold, dull and cheerless, and in every way prejudicial to trade. Our friends the florists are bound to feel it, for chilling winds with occasional snowstorms sandwiched between drive people to seek pleasure and comfort by their ain fireside. To the seedsman especially that part of him which looks after seed growing, the advent of the fly which clears off the young plants of brassicas before they are well out of the ground, is causing considerable anxiety. The warm spell reported last week also brought out an army of slugs and other vermin, and already second sowings of many of our broccolis, cabbages and cauliflowers have had to be made, which, considering the heavy cost of the stock seed, forms a serious item of expense.

So long as the northeaster continues we shall be subject to the ravages of this pest, and the extra trade done by second orders from market growers and others do not compensate for the losses we sustain.

As the business of Jacob Wrench & Son has not found a purchaser the voluntary winding up is to be continued under the control of the court. A trade committee of inspection has also been appointed. Creditors had better write off the amount of the claims. The Surrey Seed Company, Limited, of Redhill, England, is apparently in an even worse plight. A receiver has been appointed by the courts to guard the interests of the debenture holders, but the assets are not sufficient to warrant the appointment of a liquidator. Verb. Sap. Sat. Not very cheerful reading for Easter eve.

The other side of the picture is furnished by the genial secretary of the National Sweet Pea Society, who reports that he has already enrolled nearly a hundred more members than last year, and the season has hardly yet begun. EUROPEAN SEEDS.

P. S. The words "of mangel" were unfortunately omitted from the third paragraph in last week's notes.

FISCHER'S GRAND PURITY FREESIA

A magnificent, snowy, glistening white of very large size and great length and strength of stem. A dozen sprays make as fine a showing as a dozen white carnations and can be used wherever carnations are used for decorative purposes. A truss bearing from eight to eleven buds, of which six are frequently open at one time, make an immense flower. It is of great substance and bears shipping without bruising. Stems can be cut two feet long and are as rigid as sticks. It is very prolific in bloom, producing three to four rich shoots of eight buds each, besides the main flower. Bulbs no larger than dried wax beans of this grand Freesia make as large a flower as the large bulbs, only the stems are shorter. All growers should try some of this Queen of Freesia, for when "once grown always grown." Price for large bulbs, \$4.00 per 100; \$30.00 per 1000. 500 at 1000 rate. A discount on 5,000 and 10,000 lots.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Sager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

THE AMERICAN ASSOCIATION OF NURSERYMEN will hold its thirtieth annual convention at West Baden Springs Hotel, West Baden Springs, Ind., June 14 to 16, inclusive. The program appeared in last week's issue, page 576.

Foreign Grapes Outdoors, Evergreen Shrubs, Etc.

What Professor Massey says of the fruit of the foreign grape, when grown outdoors—that it is not of as good quality as when grown under glass—accords with my own experience and that of others in the North, and it would seem that further than as a curiosity it is not worth attempting.

Professor Massey also names several broad-leaved evergreens plentiful in the South which he thinks might prove hardy in the North. Of those he names, he following are hardy at Philadelphia: Osmanthus ilicifolius, Ligustrum japonicum, Lonicera fragrantissima, Ilex Cassine and Azalea indica alba. Magnolia grandiflora also gets through the Winters, but sometimes considerably injured; still there are trees of it which have stood out in open places for from 20 to 30 years. But it is not happy with us. Cerasus lauro-cerasus will not do, neither will the Cerasus caroliniana.

I have now in my garden a plant of the former which has struggled along for three years. It is still alive, but it gets smaller every year. For one or two Winters it got along nicely, but an extra severe one took it back to the ground. My opinion is that many of these evergreens would Winter better were we to cut off all their leaves when Winter approached, leaving but the wood to bear the cold.

As Professor Massey says, it is not altogether a

question of temperature. Humidity, shade in Winter, or proper ripening of the wood has much to do with it. This recalls to mind that a writer in an English horticultural paper recently spoke of buddleias not being hardy in that country. Two of them, curviflora and intermedia, are common hardy shrubs here; and there are many instances of trees and shrubs standing zero weather here that succumb to far less cold in England.

Evergreens and Shrubs in Pots.

Not only nurserymen, but florists as well, would find their sales materially increased were they to meet Summer trade by potting now an assortment of evergreens and shrubs. Besides the customers who are always too late for stock taken from the ground, there is an ever-increasing list of those who desire to plant in Summer. It is not from neglect that they were not ready earlier. Maybe alterations were under way, rendering earlier planting impossible. Let the reasons be what they may, it is a fact that Summer trade grows, and it will grow faster if those interested in selling prepare to push the business. A good assortment of evergreens, shrubs, vines, and even small trees, should be potted, and pains taken to let possible customers know that the stock is to be had. Circulars to old customers will bring trade, especially if there are a few nice items on it to which attention can be called.

In the Middle States, sales are getting over by the close of April, affording time to the nurserymen to get together and potted such articles as have been referred to. As a rule, the smaller growing evergreens are in more demand in Summer than the larger growers. Where the latter are required, those of large size are wanted, and a customer will prefer to wait until such can be taken from the open ground in Fall. The various retinisporas and the varieties of Arbor vitae, as well as yews and junipers, are the best-selling stock; and in the way of something nice, the Japanese umbrella pine, sciadopitys, is a good thing to have; so are the many forms of standard box.

In the line of shrubs, Japanese maples and magnolias always sell. When on lawns they make such a grand display in early Spring that those who see them, and have room for them, rush off to the nearest florist to try to purchase them. And as both break into growth early in the season, it is risky to dig them

FLOWERS OF CERCIS JAPONICA

Rosy Red—In Bloom May 20, 1904

Photo by J. F. Johnston

for transplanting, while, of course, the potted ones are good at any time for setting out. Shrubs and vines can be potted with reasonable safety even when out in leaf. It is worth the risk. A good pruning, shade and moisture for a few days, will bring them around in a short time. Some declare a preference for wooden boxes for all the kinds of potted stock mentioned. There is no need to turn the occupant out of the box, endangering the breaking apart of the ball of soil. When the hole is dug to receive the plant, the bottom of the box can be knocked away, or perhaps the box and all placed in the hole, and then the sides taken off, and the plant goes on growing without disturbance.

Plant Young Trees.

It cannot be urged too strongly on those about to set out fruit trees, to plant young ones instead of those of more age. The man who has only a small city garden, and who has room for but a few trees, is to be excused if he seeks trees of good size. Sometimes, with good care, a quite large tree thrives and bears quicker than a small one; but taking it all in all, the small tree does the better every time. Nurserymen find it to their own interest both to grow and sell small trees. There is less complaint from customers of loss of trees, and more profit comes from small trees than from large ones. Time was that when a nurseryman set out a block of trees he sold from it for several years until practically all the trees had disappeared. He does not do this now. If a block of apples, pears, peaches, and like fruits, are not disposed of in two or three years, the trees are rooted out—peaches after one year—and a new young crop started. This pays very much better than the old plan, and it is much to the customer's interest to have the young trees. In the case of peaches, good one-year plants are the best of all to set out. Pruned back to the main stem, when planted, they make better trees than under any other system.

With the apple, pear, cherry, plum, and similar fruits, a customer will do the best by getting two to three-year-old trees. A size of from five to seven feet high is generally satisfactory to a customer, and it is a safe planting size, and a good one for all who have to handle the tree.

These observations apply as well to all other trees, inasmuch as relates to a small size being more satisfactory to everyone than a large size. There has to be some good-sized transplanted trees of all kinds on hand to meet particular requirements, but it is the plantation of small-sized ones which will please the purchaser best in the end. The nurseryman who sacrifices the few old trees in a block that a setting of young trees may take their places, will be on the road to a greater profit.

JOSEPH MEEHAN.

PANSIES.—Gustav Pitzonka, of Bristol, Pa., favored this office with a box of nice pansies a few days ago. Mr. Pitzonka says he sells the most of his pansy plants through advertising in The Florists' Exchange.

CERCIS CHINENSIS SYN. C. JAPONICA

Photo by J. F. Johnston

Cercis Japonica (Japanese Judas Tree.)

This is the most beautiful of all the Judas trees. In cultivation it sometimes attains the height of from 10 to 12 feet, but, as a rule, it seldom exceeds 8 feet. Unlike Cercis canadensis, it is much hushier in appearance, and when in flower forms a pretty lawn specimen. It is a very free-flowering shrub, bearing numerous peashaped purplish-rose blossoms in clusters during the early days of May. The leaves are cordate. Its blossoms appear before the foliage, so that to appreciate to the full its beauty it should be placed in a situation where it can have some natural dark background.

JOHN F. JOHNSTON.

Heating.

(154) I have four rose houses, each 18 x 150 feet, that I am heating with steam from one boiler with 22 square feet of grate surface. These houses have glass on both sides and ends, and one-half pound pressure is ample to heat them.

—The boiler is forty horse-power and has a capacity of about four thousand feet of steam radiating surface. You do not state how much heating surface you have in the four present houses, but we assume it is about 2,700 square feet.

How many runs of two-inch pipe will I require to heat a house 68x20 feet, four-foot walls, no glass in either wall; glass in south end; height of roof in center, 11 feet from floor? Would want to heat the house to about 60 degrees.

—You will require for a house 68x20 feet, 19 lines of 2-inch pipe to maintain a night temperature of 60 degrees, if the temperature is 30 degrees below zero outside. These pipes could be distributed under the two outer benches, and the center bench as follows: Seven pipes under each outside bench, and five under center bench.

Plants for Beds and Borders. (155) What plants will make a nice floral display for a middle bed, eight feet in circumference; also, how far apart should they be planted? What hardy plants will make a nice display for side border, 40 feet long? W. L.

—Seeing that the center bed is so very small, a few scarlet geraniums or a few plants of salvia would be as attractive as anything. Plant 12 inches apart. For the hardy border plants,

achilleas, hollyhocks, phlox, anemones, aquilegias, veronicas, digitals, hell-anthus, gypsophila, dianthus, campanulas and rudbeckias are among the best. They should be planted from 18 to 24 inches apart.

Scale on Lemon Ponderosa.

(156) I send you two leaves of my Ponderosa lemon, attacked with a scale. Please give me name and remedy. I have kept it in check quite well by spraying with sulphur tobacco soap. Can you recommend anything better? D. H.

—The lemon leaves are badly affected with brown scale, which could easily have been killed and the plants kept clean if an occasional spraying had been done with one of the liquid tobacco insecticides.

Chicago.

News of the Week.

Business of all kinds is nearly paralyzed by one of the greatest teamsters' strikes that ever happened here. Express drivers are all out, and shippers of cut flowers are experiencing great difficulty in getting their consignments into Chicago.

A lady landscape gardener has been employed by the Illinois Central Railway Company to superintend the laying out of the station grounds along the company's 7,000 miles of road.

Assett & Washburn have been doing most of their shipping trade from the greenhouses at Hinsdale since the strike began.

ROBERT JOHNSTONE. Grand Rapids, Mich.

The funeral of Nick Freyding, of the Wealthy Avenue Floral Company, took place Tuesday of Easter week, and was attended by most of the florists here.

Elli Cross has a new 300-foot house 16 feet wide, recently finished. He has it planted to radishes and cucumbers.

Shaw, Maud Dean, President Smith, Helen Bloodgood, Glory of the Pacific, The Harriot, Intensity, Black Hawk. Transplanted cuttings from soil, \$2.00 per 100. Rooted cuttings from sand, \$1.50 per 100.

JAMES E. BEACH, 2019 Park Avenue, BRIDGEPORT, CONN. Mention the Florists' Exchange when writing.

The rose grower will now begin to think of the next season; and while there is not much to select from, a few plants of the newer varieties should be tried on all establishments. If all growers made a practice of trying, if only a dozen of the more promising sorts, it would at once stimulate an interest and a desire for something out of the ordinary.

On the large establishments, where flowers must be had the year round, the work of benching is already well under way, but for general purposes it is best to plant in June or July, as roses will sell better at this time of the year than they will in August and September. The plants should, therefore, receive all the care they require. At this time mildew is the worst enemy the rose-grower has to contend with. The changes in temperature are frequently very sudden, and the grower should always be on the alert, as a bad dose of mildew renders the stock almost valueless. Houses heated by steam can be easily kept clear of this pest by painting the pipes with sulphur; but where hot water is used for heating this would be useless, as the pipes cannot get hot enough for the sulphur to give off any fumes. In this latter case it is best to vaporize a small quantity of the sulphur by means of an oil stove. Great care must, however, be taken that the sulphur does not get afire, as burning sulphur fumes are death to all life, both plant and animal.

From now on watering is merely a matter of keeping the beds wet, which means a liberal use of the hose almost every day. But feeding is what the plants want, and liquid manure should be applied very liberally—at least twice a week.

Keep the plants disbudded and as cool as possible if you wish to retain the size of the buds. Weeds will start and grow very rapidly; these should be kept down, as they form a harbor for that tireless mite, red spider.

The young plants should now be in four-inch pots for June planting, and making a strong, healthy growth. Syringe them as often as possible, and remove the buds when of the size of a pea, cutting off at least one leaf with the bud. If the plants are very large, it would pay to reset them. Allow at least an inch space between the pots; this will permit of a freer circulation of air and the plants will not lose their lower leaves so readily. PENN.

BRIDE and BRIDESMAID FINE STOCK.

Propagated for grower's own use; Decided to carry over old stock. 2 1/2 in. pots, \$3.00 per 100.

This week's index will be found on page 607

News of the Week in Brief.

John Calder, florist, Kalamazoo, Mich., has disposed of his business.

Mr. Hoskins, of the firm of Hoskins & Giles, Reading, Pa., died on April 28.

A receiver has been appointed for the Surrey Seed Company, Limited, of Redhill, England.

The Prince of Naples rose, pink in color, is very successfully grown by a St. Paul florist.

The Department of Agriculture desires information on the results of experiments in bulb growing in the United States.

Spring bedding plants and some novelties will be shown at the meeting of the New York Florists' Club on Monday evening, May 8.

The Horticultural Building at the World's Fair grounds, St. Louis, was among the structures blown down during a recent wind storm there.

During the present strike of teamsters in Chicago several of the consignors of cut flowers to that city are now sending their stock to St. Louis.

Our obituary column this week contains notices of the deaths of Frank A. Pierson, Cromwell, Conn.; James Rough, Boston, Mass.; Henry Grebe, Jamaica, L. I., and others.

The Horticultural Society of New York will hold an exhibition in the Museum Building of the Bronx Park Botanical Garden Wednesday and Thursday, May 10 and 11. The usual \$50 prize for the "best horticultural novelty" is this year omitted from the schedule.

The teamsters' strike in Chicago is causing great inconvenience in the handling of flowers in that city. Only flowers for funerals are allowed to pass the "picket lines," and then on condition that the wagons are being driven by men who were union drivers. Much of the stock received has been handled at the depots and carried to the different wholesale stores.

The Boston Globe of Sunday, April 30, 1905, contains a portrait and "write-up" of William H. Elliott, Brighton, Mass. It is said Mr. Elliott introduced his great specialty, Asparagus plumosus, into the American market in 1884. His establishment at Brighton embraces some 20 houses, nine of which are devoted to this plant, the remainder mostly to roses. Then, in addition, Mr. Elliott recently purchased 200 acres of ground at Madbury, N. H., on which he has erected a rose house 812 feet in length. Twenty years ago Mr. Elliott did his own work with but little employed assistance; now he employs an average of 50 men throughout the year. He is one of the directors of the S. A. F. O. H., and is still "several years on the sunny side of the half century mark."

Frank A. Pierson.

Frank Allison Pierson died at his home in Cromwell, Conn., Saturday, April 29, aged 28 years, of cerebro-spinal meningitis, after an illness of only one week. He was the eldest son of A. N. Pierson, the well-known florist, and had been in business for himself for several years. He had already established a good reputation as one of the leading growers of bedding plants in the country. His business had grown so during the past year that he had arranged for doubling his plant this Summer, and much of the material for the new building was already on the ground.

Mr. Pierson was married, about three years ago, to Miss Ruth Coe, of the same town, who, with a young son, survives him. Last Fall Mr. Pierson was elected to the State Legislature, and had proved an active and useful member of that body. He was a thirty-second degree Mason, a member of Cyrene Commandery, K. T., of Middletown, Conn., and Sphinx Temple and Mystic Shrine, of Hartford.

The deceased was a lover of nature, and an enthusiastic sportsman, owning a camp in the Maine woods, where he spent much time every year. He was a

THE LATE FRANK A. PIERSON

practical electrician, and was noted in his section of the country as an amateur photographer, some of his work in this line being unusually good. Many of his pictures, taken on his father's plant, have appeared from time to time in The Florists' Exchange. The funeral, which was private, occurred at the house Tuesday afternoon, at two o'clock. The interment was in Miner Cemetery, Westfield, Conn. Here Cyrene Commandery took charge of the exercises, and the usual impressive Masonic service was conducted, before a large concourse of people.

James Rough.

James Rough, one of Boston's oldest established florists, died at his home in Roxbury, Mass., Tuesday night, May 2, of pneumonia. Mr. Rough was taken sick on the Saturday preceding Easter, during the busiest rush of the business, and had to be taken home during the early evening. The malady developed into pneumonia, and although he made a brave fight he succumbed to the disease. He was 58 years of age and was born in Stirling, Scotland. He came to America about thirty-four years ago, first finding employment on the estate of Mr. J. L. Gardner, Brookline. Subsequently he worked for Mr. Greenlaw, a well-known florist in those days. He started in business for himself about twenty-eight years ago and conducted the store at 1559 Washington street until about three years ago, when he removed to 248 Huntington avenue in the Back Bay district.

Mr. Rough had a large acquaintance in the trade, and was known as an honest, straightforward, though shrewd business man. He will be greatly missed among the flower lovers of Boston, for he had a flourishing establishment. He is survived by three grown children—James, Jr., who is a member of the firm, and Mary J. and Nellie S., who have had charge of their home since the death of their mother. The funeral was held Friday, May 5.

J. W. DUNCAN.

Henry Grebe.

Henry Grebe, of Jamaica, L. I., whose sad death was referred to in the New York letter in last week's issue, was born at Darmstadt, Germany, 53 years ago. He there learned the florist's business, and had a flourishing trade. About 20 years ago he came to this country, and followed his profession, although the ambition of his life had been machinery. His leisure time was spent in building engines, etc., of his own invention, for his son. He was of a very nervous disposition, and his health had been falling for a long time. Lately he was subject to fits of melancholy and took his life in a moment of mental depression, about midnight, April 20, for which act his physician says his nerves alone were responsible. He left a widow, who is a sister of W. C. Krick, of Brooklyn, N. Y., and two sons. He had a pleasant and happy home, and there was no reason for his act, as he was in good circumstances and was making extensive alterations at the time of his death.

Thomas Capers.

Thomas Capers, florist, Newburyport, Mass., died at the Anna Jaques Hospital April 29, aged about 67 years. He had been taken to that institution last week and operated on for the removal of gall stones.

Mr. Capers was a native of England and while a young man came to this country. He had lived in Newburyport about thirty years, and practically all of the time had been employed as gardener and florist for the Wheelwright family, afterward starting in business. Quiet, unobtrusive, yet steadfast, he performed to the best of his ability the duties which each day brought and has left a record above reproach.

He leaves a widow and one son, William Capers, of Malden.

Joseph Zimmerman.

Joseph Zimmerman, a florist, formerly of Pittsburg, Pa., was drowned last week at California Beach. Mr. Zimmerman worked for L. I. Neff for several years and then started in business for himself, continuing until a short time ago, when he went to California and worked for the Ocean Park Floral Company.

E. C. R.

Arthur E. Armstrong.

Arthur E. Armstrong, aged 91, died at his home in Milford, O., early Sunday morning, April 23. Ten years ago he was a well-known florist in Cincinnati, and was the oldest flower merchant in this vicinity. Mr. Armstrong, who was an honorary member of the board of directors of the Cincinnati Chamber of Commerce, is survived by three daughters.

Warren Fenno.

Warren Fenno, a prominent member of the Massachusetts Horticultural Society, and chairman of the fruit committee, died at his home at Revere, Mass., on April 27, from a complication of diseases.

J. W. D.

Henry Eckford Testimonial.

Editor Florists' Exchange:

It is a pleasure, indeed, to learn that you are actively co-operating in this laudable endeavor to do honor to a great man, and it emphasizes again that your nation is ever willing to do credit to one who is essentially deserving, no matter from what land he may come. Henry Eckford has done a grand life's work and it is the desire now that he should have some public recognition spread over the widest possible representation. I thank you for your practical assistance.

It is impossible for me to say definitely how long the fund will remain open, but it most certainly will not be closed until the end of August, and probably not until the middle of September, as I desire to take advantage of the great Scottish show in that month.

I assure you of my heartiest appreciation of your spontaneous kindness and hope that you will meet with a fine response.

HORACE J. WRIGHT, Secy.

National Sweet Pea Society, England.

[It may be opportune to repeat that the friends of Mr. Eckford in England have made this a one shilling (25c.) contribution, so that the response may be as general as possible. A similar amount contributed by all lovers and growers of the sweet pea in America would help swell the fund, and be as greatly appreciated as a larger sum. We hope to see the United States well represented in this laudable effort to honor a worthy gardener, who has done most efficient work in his different lines of endeavor.

All contributions will be duly acknowledged here, as received.—Ed.]

The Eckford Testimonial.

Subscriptions acknowledged.

Society of American Florists and Ornamental Horticulturists.

Growers of and dealers in American grown bulbs are notified that the usual accommodations will be extended to them free of charge for the display of American grown bulbs at the convention to be held in Washington, D. C., August 15-18, 1905. WM. J. STEWART, Secretary.

OUR READERS' VIEWS

Rosarians vs. Carnationists.

Editor Florists' Exchange:

Mr. C. W. Ward's rather severe criticism of the rose men would seem, on first thought, to be in a measure deserved, as they have not apparently rallied to the support of their special society as have the carnation men. It must not be inferred from this, however, that they are less progressive than are the others who have chosen a flower that responds readily to the efforts of hybridists. Had the carnationists to grow fifteen or twenty thousand seedlings for four or more years before being sure that they had anything that was an improvement over existing varieties, and without meanwhile realizing any income from them, I venture the assertion that they would not respond so readily to the call for exhibiting.

The raising of seedling roses is a very uncertain, as well as an expensive undertaking, and there are but few in the business that can afford to practice it; notwithstanding this, there is evidence that it is being carefully pursued. When the results justify their efforts, the rose men will be found shoulder to shoulder with the foremost of the carnation men—not with any special conceit, but with the quiet dignity of progressive rosarians. At the same time, they will give full credit to their brothers, the carnationists, for all they have done for their favorite flower.

ALEXANDER MONTGOMERY.

Editor Florists' Exchange:

As a rose grower and also a carnation grower, it seems to me that the assumption of the men who grow carnations alone is not well taken, for the reason that although they may seem to be more progressive, and to advertise themselves more than the rose men, they have to do so in order to make their business pay, as the cut bloom section of their business pays but poorly; and, in order to make their business pay, they must largely depend on marketing large numbers of cuttings, and also introduce yearly new varieties, which may or may not be worth anything. Most large rose establishments, who grow for cut flowers only, have all they can do without injuring their own stock to produce enough for their own needs. If I could, without bringing the names of rose firms into this article, I would name a number of the most progressive and largest who absolutely refuse to sell any rose stock whatsoever of the standard varieties. Of course, this does not apply to new introductions which they have been fortunate enough to produce themselves, or to buy so as to give them the control of the stock.

It is conceded, I believe, by all gardeners that the acme of gardening is to be able to grow roses to perfection. This, I think, is shown by the wages paid for such work, and also by the type of men who have been successful in growing roses, and who have made themselves known throughout the horticultural world. For instance, Alex. Montgomery, the present president of the American Rose Society; John N. May, L. M. Noe, the late John Henderson, Ernst Asmus, McMahon, of Seabright; Farenwald and Scott, of Pennsylvania, and hundreds of others whom I could mention, and who are as well known, and cannot be called unprogressive. Among others who have made a national reputation as producers of new varieties from seed, I will give just three names—Cook, of Baltimore; E. G. Hill, of Indiana, and Breitmeyer, of Detroit. There are others that I might name, but I only wish to give these as an instance of some of the men who are great rosarians.

Coming to another point, regarding the non-progressiveness of the rose growers, I would like to go back to ancient history relative to the shows held some years ago by the New York Florists' Club in the Madison Square Garden. These shows have never been surpassed in any way in the city of New York. The men who, at that time, lent their brains, money, influence, and time to those shows were mostly rosarians, and, at that time, they not only grew roses, but chrysanthemums and carnations. The rosarians were the first to see the possibilities of the chrysanthemum as a Fall flower, and the first to bring it to the notice of the public in a form and cultivation which had never before been seen in this country. At one show alone, there were taken out of the market flowers which, if they had been sold, would have netted at the very least ten thousand dollars. This is very conservative.

To conclude, I would say that the whole question seems to me one that is hardly to be discussed, because most of the progressive men in the business grow more than carnations and roses alone. In other words, those who are interested in horticulture are interested in it for two reasons—one because they love the beauty of nature, and the other is that they are pursuing it as a business proposition; and I think if the matter is looked at in a broad way, you will find that both the rose growers and the carnationists are looking after their own interests to their best ability.

I would say one word more, and that is: In these days of competition, all lines of horticulture are becoming more specialized, and I think a discussion of this kind, although bringing in matters of interest to all of us, should not take on anything which would create any ill-feeling between growers in different lines of cultivation.

JOHN H. TAYLOR.

Bayside, N. Y.

Information Wanted on American Bulb Growing.

Editor Florists' Exchange:

The Department of Agriculture is much interested in the study of American bulb growing, and desires to secure all possible information on the subject. We are already in touch with all the active bulb growers, but would be very thankful for any information that may be furnished us in regard to experiments on the growing of bulbs of any kind in America, whether such experiments have proven successful or not; and we should like to enter into correspondence with all persons who have conducted such experiments.

A. J. PIETERS,
Botanist in Charge.

Department of Agriculture, Washington.

Impressions of Canadian Horticulture.

Editor Florists' Exchange:

In your April 22 number there is an article on the above subject which I cannot allow to pass without answering. I am a great believer in allowing a man the fullest liberty of thought, but when thought is given expression to and sent out to the world, it then becomes public property, and its power for good or harm should be taken notice of. It is for this reason I wish to put right the wrong done to Canadian horticulture by the writer of the article in question.

In the first place, I consider him a very unfit person to make such statements. If we are to be judged, let it be by one capable of taking up the place of judge. By his own confession he is only four months in this country, and has seen only a very few places at that, to my certain knowledge. He would have done better had he waited and first ascertained that the conditions and requirements of Canada are very different from those of the old world; that the men in the profession in Canada are keeping up to all the demands of the country, and adopting all up-to-date methods, up-to-date structures, which are far ahead of anything in England, or Scotland, or France, that I have seen. Remember, I am not now talking about size. I am talking about up-to-date structures and methods, and I defy the newcomer to truthfully contradict this statement. Of course, there are plants we do not grow here that are grown by the thousands over on the other side. Why do we not grow them? Simply because we can buy them cheaper than we could grow them. This is pure business, and others are of no use in a business point of view. And when this young man knows a little more he will know that in Canada there are more than one establishment larger than any in the old world for growing the kind of flowers required by the country. Where in the old world can you meet with a place like the Dale Estate of Brampton, Ont., for the purpose of growing roses and carnations? Am I not safe in saying that no four places put together in England can be compared with it? And there are other establishments in Canada which this newcomer has never seen and knows nothing about. Truly his ignorance must be bliss.

But it is the old story of men coming from the old country. They come to teach men who were taught in the old country, and who since have learned new ideas in this new country which have been forced upon them by surrounding influence and necessities, compelling a forward movement from the hard beaten track of the narrow-minded, self-complacent old country way.

And, then, he tells about the "Canadian's capabilities." One would almost think that he was the only Englishman in Canada, and he only arrived a few days ago. We are too "impatient;" we want "hustlers," and he says that a hustler is a "bungler." Now such statements may come well from one who knows nothing of what he has undertaken to talk about. Is it not a fact that perfect knowledge of a thing enables one to perform that thing quickly. Is it not a fact that in all well conducted establishments other than ours, men are expected and compelled to produce a certain amount of work for a certain amount of pay? Half of the men who come out from the old world are not worth half the wages they receive for the first year, hence their dislike to the term, "hustler." It is not true that all hustlers are bunglers; but it is true that over one half of the slow ones are bunglers and humbugs.

Then as to this young man's "idealism." Grand! Every man should form high ideals and strive to attain them. But what about materialism, young man? A hundred cents on the dollar. This is an ideal every honest man should keep before him, both in work and pay. Men who build castles in the air and live in the atmosphere of fancy better come down to hard Mother Earth, and grasp the fact God has placed up against every life. "Whatsoever thy hand finds to do, do it with thy might."

We are also accused of following the United States rather than "Great Britain." Should not this be expected from men with their eyes open. We do not follow them because they are Americans, but because of their better and more improved methods in growing. This does not make us less British, but better Canadians, who are willing to cope with our sharp, intelligent neighbors, seeing what is an improvement and adopting the same to our own advantage. And I notice with pleasure that the man who has produced the highest priced carnations in Covent Garden Market, London, England, has adopted the so-called American way of growing them the past year.

"Comparisons are odious;" yes, very. Not only so,

but "a little knowledge is a very dangerous thing." And, I think, before anyone undertakes to give his opinions to the world, he should know the whole truth and nothing but the truth in regard to "Canadian Horticulture."

S. S. BAIN.

Montreal, Canada.

The Government and the Nursery Business.

Editor Florists' Exchange:

As a Long Island nurseryman, having all my possessions invested in a nursery and nursery stock, I have observed the entering wedge into an interference by the United States Government with the private nursery business, such as has been so long pursued by the Government with respect to the seedsmen's business. What I refer to is a statement in the last number of The Florists' Exchange that the Secretary of Agriculture was looking for a nurseryman, at a salary of \$1,200 a year. The question arises, what is this nurseryman to do? The Secretary of Agriculture, in his annual report of 1903, stated that the employees of the Department of Agriculture covered one hundred and thirty different occupations, and aggregated four thousand two hundred on the pay roll; and it is likely that, at the present day, the number may be considerably over five thousand.

But whatever it may be, the addition of one more man is immaterial, so far as the addition of one man goes, but will it stop there? This one now wanted is a head nurseryman, and, without doubt, a man worth \$1,200 can be had. Perhaps a man worth four times that much would earn his salary, but what will be his duties? What will be his charge? What the party is to do, I can only conjecture. Possibly to superintend the establishment of a Government nursery at Washington, where will be assembled nursery stock from all parts of the world, such as will stand the climate of the District; and this nursery might, in time, and probably will, be extended to be as big as any nursery in the country, and develop into a similar outrageous governmental competition with the nursery trade as there now exists with the seed trade.

[The item stated that the nurseryman was wanted for the Philippines.—Ed.]

The Department of Agriculture is attempting to do the whole thing, to cover the whole range of horticultural science. In confirmation of this, see the list of so-called "professors," as published in the department report: Pomologists, mycologists, brochemists, nutritionologists, medico-clematologists, physiographers, sylviculturists, riverologists, frank counters, agrostologists, pharmacologists, physiologists, zoologists, thermologists, meteorologists, biologists, stomatologists, seedologists, cerealists, dendro-chemists, pathologists, entomologists, fungicidists, bacterists, pasteurizists, beetologists, cottonologists.

This list would be laughable were it not such a serious matter, a list of ever-increasing officeholders under the civil service, a list never to be gotten rid of, for none of them die, and few resign.

NURSERYMAN.

"A CONSTANT READER" is respectfully reminded that The Florists' Exchange does not publish anonymous communications. If he will kindly furnish his name and address, also give the source of his information, his letter will receive attention.

Department of Agriculture Wants a Gardener.

The U. S. Civil Service Commission announces an examination on May 24, to secure eligibles from which to make certification to fill a vacancy in the position of gardener, experienced in growing plants under glass, at \$750 per annum, in the Bureau of Plant Industry, Department of Agriculture, and vacancies as they may occur in any branch of the service requiring similar qualifications. Only persons who are thoroughly experienced in handling plants under glass should apply for this examination. The examination will consist of the subjects mentioned below, weighted as indicated: Age, 20; physical condition, 20; experience, 60. Age limit, 20 years or over. This examination is open to all citizens of the United States who comply with the requirements. Applicants should at once apply to the United States Civil Service Commission, Washington, D. C., for application form 1093. No application will be accepted unless properly executed and filed, in complete form, with the commission at Washington prior to the hour of closing business on May 24, 1905. In applying for this examination the exact title should be used.

Joseph Jefferson and Gardening.

The deceased veteran actor was an enthusiastic lover of flowers. Not many months before his death, says a writer in the Outlook, he advised one of his friends, as soon as he passed seventy, to cultivate a garden. "The saddest thing in old age," he said, with a smile, as if nothing were wholly sad, "is the absence of expectation. You no longer look forward to things. Now, a garden," he added, with whimsical humor, "is all expectation; therefore, I have become a devoted gardener."

AMONG THE GROWERS.

Conard & Jones Company, West Grove, Pa.

This firm is, perhaps, not so well known in the trade, because its business is chiefly a mail one. But the concern is doing a grand work in trying out and introducing new things all the time, mostly in roses and cannas. How many florists are there who often ask where they could secure a few hundred plants of roses of such varieties as *Perle des Jardins*, *Bon Silene*, *Sunrise*, *Papa Gontier*, etc.? At this place these plants are always to be found; in fact, most of the old-timers are here, and in good, healthy, sturdy stock.

On reaching this establishment we enter a shed, 20x210 feet. There are 21 houses on the two sides of this shed. In the shed itself we see box-making going on; then the potting of young roses; and trimming and potting canna roots. The shed opens into the shipping department, to the right is the mailing department, to the left the express department. Long benches hold the orders as they are picked out, the whole department being arranged with excellent system, and all the work done with neatness and despatch.

Of the 21 houses three are 15x100 feet, others 18x100 feet. All those on the left of the shed as you enter are 18x120 feet, heated by steam, and filled to repletion with plants for shipping and mailing, and stock for planting out. No time is lost; for, as benches are emptied by the orders, cuttings from the propagating bench are potted up to grow on. Just now all available space is used for cannas.

At the beginning of the season there were 600,000 young roses in three-inch pots on this place, besides an enormous quantity of soft-wooded stock such as is used in the mail trade. In going around we saw every variety of rose, new and old. Of novelties there are the Philadelphia Rambler in all sizes, a great improvement over the Crimson Rambler; the new hybrid rugosas, Sir Thomas Lipton and New Century, both of great promise; a large stock of the new Baby Rambler rose in three-inch pots. Some 500 stock plants of this rose arrived early in January; now there are 20,000 plants on the place, besides 5,000 cuttings in the bench. One bench contains a new hardy perpetual blooming climber being developed for next season; another, 40,000 well-rooted cuttings of a novelty grape. A long bench contains started plants of novelty cannas, many of them of crosses never before attempted. In the next house we saw a fine stock of the new French rose, *Etoile de France*, in three-inch pots. This is considered a grand acquisition, and should be watched by cut flower men. Another novelty is a new striped *Reine Marie Henrietta*.

In cannas we saw a good stock of the firm's novelties, Louisiana and Wyoming, of the orchid-flowered type; also a fine lot of hybrid canna seedlings.

In another house are 200,000 rooted cuttings of hardy shrubs for planting out; 20,000 rooted cuttings of *Honeysuckle Heckrotti*, and 40,000 of *Berberis Thunbergii*. Out in the field were 50,000 *Crimson Rambler* roses of various ages, and 250,000 hardy shrubs in one, two and three-year-old plants. All this stock is in perfect condition, and reflects great credit on Antoine Wintzer, the manager of this department.

Half a mile nearer West Grove are the main offices of the firm. Here we met Alfred Conard, the venerable head of the concern, still ambitious and working at his desk; Morris Jones, the treasurer, and Mr. Pyle, the secretary, both busy with the enormous mail, and around them an army of clerks. The office is very systematically arranged with card systems, etc. In another part of this building is the flower seed and bulb department, the whole well arranged and everything up-to-date.

DAVID RUST.

Half-Hardy Climbers.

There is always room to be found among the hardy permanent wall plants for a few of the above class, and some of them are content with so comparatively little space as to cause no inconvenience whatever to them. In fact, a few of the slender annuals, as *Mina lobata* and *Mina coccinea*, would do planted at the foot of a Spring-flowering plant, such as *Cydonia japonica*, and allowed to ramble over it at will, thus forming an embellishment after its own blossoms have perished. *Mina coccinea* is of less rampant growth than *M. lobata*, and would suit the purpose admirably. True, its flowers are of short duration, but they succeed one another so quickly that there is always a fair sprinkling seen on the plant.

A plant of sterling worth for a trellis is *Manettia luteo-rubra* (bicolor). It hails from Brazil, and is often classed as a hothouse climber; but if cuttings are rooted in the Fall, and taken care of during Winter, then when all danger of frost is over are planted out, they will do better than when grown under glass where thrips and red spider attack it freely. The flowers, which are urn-shaped, are of a vivid scarlet and yellow, a very conspicuous combination of color. They are borne freely in the axils of the leaves.

Another Brazilian plant more often seen as a roof or pillar climber in a warm conservatory than in the open air as a Summer trellis plant, is *Stigmaphyllon ciliatum*. Its blossoms are borne in panicles of clear yellow flowers, slightly flimbriated; and so strongly does it bear resemblance to the flowers of *Oncidium varicosum* as to merit the name of "orchid vine." The writer, when visiting the nursery of Henry A. Dreer, Riverton, N. J., last Summer, was agreeably surprised to see this most interesting plant outside, and flowering nicely.

Two meritorious plants of Australian origin are *Sollya heterophylla* and *Hibbertia dentata*; the former often called the blue-bell creeper, on account of its drooping blue flowers. The latter has foliage of a deep bronze color, with large potentilla-like flowers of bright yellow. Both are evergreen, and well worthy of a trial. A little peat or leaf soil should be added to the soil when planting.

A slender but quick-growing trellis plant is *Rhodochiton volubile*, from Mexico. It bears very singular flowers in great numbers. The calyx is of a blood-red color, while the corolla is nearly black. This plant is easily raised from seed every year, and requires much the same treatment as its near relative, *Maurandya scandens*.

One cannot omit to mention two at least of the *Tropaeolums*, for who that has seen that lovely Chilean plant, *T. speciosum*, in bloom, will soon forget it? The brilliant scarlet flowers show up most effectively against its green foliage. It is not particular with regard to aspect, providing it is planted in a cool, moist soil. *Tropaeolum canariense* will prove itself a worthy companion for the last-named, with its many pretty little yellow flowers.

Perhaps it is needless to say that all the foregoing plants should be pot grown, so that they may receive no check when planted out at the earliest opportunity.

EDWIN MATTHEWS.

LILIUM CANDIDUM

Photo by John F. Johnston

How the Bermuda Lily was Introduced Here

The Philadelphia Record, in its issue of April 18, prints the latest story of how the Bermuda lily came to be introduced into America as an article of commerce. The truth of the statements is vouched for, so that the narrative may be taken as authentic:

"In the Summer of 1880 a young man from the Bermudas who was a traveling salesman for an iron firm (and who it seems had a soul above buttons and pig iron, for he loved flowers dearly) upon one of his frequent visits to Joseph Kift, of West Chester, Pa., chanced to see a *Lilium longiflorum* in bloom. He exclaimed with delight: "Oh, there is our lily!" mistaking it for the Bermuda lily, which it closely resembled. However, upon examining it, he discovered his mistake, for he found it was neither so fragrant, nor had it so many flowers as the lily which grew on his native island. Mr. Kift was interested at once, and told him if he knew of any lily which bore more flowers than the longiflorum he should like very much to have some. So the young man promised to send him some bulbs upon his return to Bermuda, which he did, and about Christmas time the bulbs arrived. They were planted, grew readily and bore profusely, much to Mr. Kift's delight. He exhibited the lilies in Philadelphia, where they at once attracted a great deal of attention.

"In June, 1881, Joseph Kift, Jr., went on a voyage of discovery to the Bermudas, to see for himself these wonderful lilies and to procure some of the bulbs. When he arrived at the little island he found the lilies growing in the people's yards and gardens, and in the cemeteries, but so far the bulbs had never been sold.

"During Mr. Kift's stay of six weeks in Bermuda he managed by buying, bartering and begging to gather eight barrels of bulbs, with which he started for home, bringing them as flower roots and thus escaping the custom house officers.

"At first they were called the *Lilium longiflorum floribunda*, but that name was too long, so they changed it to simply the Bermuda lily. When it was first introduced it naturally created a great stir, and florists, particularly

from New York, rushed to the Bermudas and rented land to start lily farming. Since that time the people of the island have taken up the culture of the lily and made it a commercial crop till it is now the chief industry of the island."

The Making of Flower Pots.

Few men who handle plants take into consideration the process gone through in the making of the flower pots ere they reach the potting bench. Pottery is one of the most ancient of arts, but it is only in comparatively recent years that the manufacture of flower pots has been carried on to any extent in this country at least. The firm of A. H. Hews & Co., at North Cambridge, Mass., is perhaps the oldest in this line of business in the country. It was established in the year 1775, although no record of the firm having made flower pots is found until many years after that date. It was not until about thirty years ago that flower pots began to be manufactured to any extent by this firm, and the business has increased so rapidly that the daily output is now 75,000 or about one-tenth of a whole year's work of thirty years ago.

The factory and storehouses at North Cambridge comprise several large buildings. On entering the factory the first place of interest is the basement, where are situated the large kilns, seven in number, each holding an average of 40,000 pots, and where may be seen the filling, firing and baking, cooling and emptying being carried on at the same time. A kiln filled with ware will require from twenty-four to thirty-six hours to burn, consuming in that time from three to four tons of coal. About the same length of time is required to "cool off" before the kiln is ready to empty. On this floor are situated also the boiler and engine which run all the machinery, also a pump which supplies the factory with water from an artesian well nearly 200 feet deep. And, by the way, some twenty-five tons of water are used daily in mixing and working the clay. The clay-mixing machinery and rollers are also on this floor. As the clay leaves the latter it is cut into suitable sizes for the various flower pots ere it is carried to the floors above. The clay bank and grinding mill are situated at some little distance from the factory.

On reaching the floor above one finds himself confronted with thousands of pots all in the process of drying. Here also are the pot-making machines, of which there are five in operation, each operator turning out 10,000 pots daily. Only the smaller sizes of flower pots are made on these machines; the sizes from 5-inch to 12-inch are all made in molds by this firm. A diligent workman will turn out of molds about 2,000 6 or 7-inch pots daily. The drying rooms occupy a large amount of space, as the flower pots, when formed, must receive a proper drying before being baked. The two upper floors of the building are devoted to the manufacture of garden and fancy vases, jardinières, cuspidors, etc., of which large quantities are made. The smallest piece of pottery made is the little square that holds the school paint, and the largest the handsome Italian garden vase, used now so much for bay trees and such plants.

This firm has about one hundred employees at its factory, and besides the North Cambridge establishment has a large distribution warehouse in Long Island City, N. Y. The main office is situated at the factory, and here may be found Mr. McKee and Mr. Pierce, president and vice-president of the corporation, who take great pride in showing the system which they have been the means of perfecting and successfully carrying on.

All shipments of goods are made from Boston, so that little delay occurs in transportation; and so perfectly arranged have been the shipping facilities that orders amounting to as many as 100,000 flower pots are shipped on the afternoon of the day on which the order is received.

The firm of A. H. Hews & Co. has always been known as makers of good flower pots; the clay here is peculiarly adapted to the purpose, and the continual improvement making in the machinery and working facilities enable the concern to produce an article of superior quality.

JOHN W. DUNCAN.

A Remedy for the Hollyhock Fungus.

This fungus (*Puccinia malveracea*) most generally affects the plants, destroying much of their foliage just when they are coming into flower. The following remedy has been used by Messrs. Webb & Brand, at their Saffron Walden Nurseries, with the best results: To one pound of tobacco powder is added a quarter of an ounce of finely powdered sulphate of copper, well mixed; this is dusted over any part of the plant affected with the fungus, foliage or stem, every two or three weeks during the growing season, a dull, still day being chosen for the operation.—Horticultural Advertiser, England.

Lilium Candidum.

Lilium candidum, the Madonna lily, sometimes called the Annunciation lily, is an old favorite in gardens. It is the well-known white lily, whose fragrant snowy blossoms, on long spikes, enliven and perfume the hardy borders and shrubberies during the warm months of June and July. The absence of the Madonna lily would cause a decided loss to any garden.

JOHN F. JOHNSTON.

Glen Cove, L. I.

CLUB AND SOCIETY DOINGS

PITTSBURG AND ALLEGHENY (PA.) FLORISTS' CLUB.—The May meeting of the club was fairly well attended considering the busy time of the year for the plantsmen. Quite a good exhibition of plants and cut blooms was on hand. "Bedding Plants and Pansies" was the topic for discussion. Ludvig Mosbaek, of Onarga, Ill., showed a fine lot of cut pansies. H. A. Dreer, of Philadelphia, exhibited two novelties—the double-flowered alyssum, A. saxatile flore-pleno and Euphorbia pilosa major. E. P. Hostetter, of Manheim, Pa., showed cut daisies and pansies, and A. Hostetter, of same place, had a nice lot of pansies. The Valley Greenhouse Company staged a collection of blooms of bedding plants. S. J. Wolfe, of Emsworth, showed pansies. Godwin & Son, of Bridgeville, had a collection of bedding plants. The Phipps Conservatories, as usual, made a fine display of plants, the calceolarias being particularly admired. Blind Bros. also had a good collection of bedding stock, and the Baby Rambler rose. E. C. REINEMAN.

BOSTON GARDENERS AND FLORISTS' CLUB.—About forty members attended the outing of the Gardeners' and Florists' Club on Saturday afternoon, April 29, on their visit to the flower pot factory of A. H. Hews & Co., at Cambridge, Mass. This was one of the most successful outings in the history of the club, for it led the members into seeing the manufacture of flower pots in the most up-to-date style—something which few of them ever saw before or had any idea that a flower pot went through so many different hands ere it reached the potting shed. The party was met by G. H. McKee, president, and E. L. Pierce, vice-president of the company, and L. L. Bryant and Thomas J. Benwell, salesmen. These gentlemen conducted the party all over the immense establishment, explaining as they went along the different operations in the manufacture of the various pottery ware made by the firm. Several hours were spent in the different parts of the factory, the offices being the last place visited; but it was here that the visitors were royally entertained to lunch and given souvenirs as a remembrance of their visit. J. W. DUNCAN.

MASSACHUSETTS HORTICULTURAL SOCIETY.—The April exhibition of the society, which was held at Horticultural Hall on Saturday, the 29th, was not large, but some very fine plants were shown. The calceolarias and pelargoniums from Mr. Geo. F. Fabyan (James Stuart, gardener) were very fine indeed; the plants of the latter being much superior to any seen in Boston in recent years. Mr. Fabyan was the only exhibitor in the classes for azaleas, calceolarias and pelargoniums. W. J. Clemson had a fine collection of tulips and narcissus. Mrs. J. E. Shurtleff, Jr., and Mrs. E. M. Gill showed collections of pansies. A noticeable feature of the show was several well-grown plants of *Amaryllis vittata* from E. W. Converse (Robert Marshall, gardener). One of these plants carried seventeen spikes of bloom, and Mr. Marshall was awarded a first-class certificate for their superior cultivation. Thos. J. Watt, gardener to Mrs. H. F. Durant, was awarded a first-class certificate for superior cultivation of *Saccolabium ampullaceum*; and Robert Cemeron received a like award for *Impatiens Holstii*.

The collections of native flowers are always interesting; the only exhibitors on Saturday were Mrs. Arthur Clark and Miss Isabella C. Shattuck. J. W. DUNCAN.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.—The regular monthly meeting of this society was held Tuesday evening, April 25. The prize this month was given for the best two plants of calceolarias. There was quite a keen contest, and after considerable deliberation the judges awarded the prize to Wm. Scott. Only a short business session was held, and the meeting adjourned to allow the members present to attend the lecture given by Professor George T. Powell in the lecture room of the high school. This lecture was given under the auspices of the society, and was open to the public. There was a good attendance. Professor Powell gave a very learned and instructive lecture, his subject being the "Propagation of Trees and the Culture of Roses." A number of excellent drawings were used for illustration on the subject of trees. He spoke chiefly of the fruiting kinds, and dwelt mainly on the careful selection of stock, illustrating very clearly the advantage of a healthy parentage by showing the free-growing and free-fruited qualities of plants taken from such in comparison with plants propagated from unhealthy trees, or trees of undesirable habit. In the part of his lecture devoted to roses, he gave a lengthy description of soils most suited to their development. Soil of heavy clay nature he considered the best. He advised against a very general mistake in the planting of roses—that of planting too shallow, considering it advisable to plant grafted roses so that the graft would be at least three inches below the surface of the soil. In conclusion he gave some advice regarding the destruction of the San Jose scale, and strongly advised concerted action in fighting it. WM. SCOTT.

PHILADELPHIA (PA.) FLORISTS' CLUB.—On Tuesday evening last we had a very interesting meeting. While the attendance was not large, those present took an active part in the proceedings. Edwin Lonsdale read a paper on some of Burbank's achievements. This paper was really a comment on some articles that have been appearing in the Century magazine. The essayist pointed out the work being done by Burbank, also very clearly portrayed the non-sensical part of the articles, showing that they were written by some one who did not have horticultural knowledge. For instance, in relation to Burbank discovering a verbena with fragrance, several members who had grown these plants 20 years ago remembered a white variety which was at that time very fragrant. Antoine Wintzer, of Conard & Jones Co., West Grove, Pa., who was present, was asked to say a few words on the newer roses. He began by taking exception to some articles recently published in the trade papers in reference to rose growers not being so progressive as carnation growers. He thought that just at present rose growers were very much alive, and never was there a time when so many promising novelties were in sight as at present. In roses for the amateur prospects were very good. As to the Baby Rambler rose not being a good grower, his experience was that it was an easy propagator and free grower; having polyantha blood in it he did not hesitate to use the knife freely. Of the first batch of cuttings, 97 per cent. rooted. In relation to the work of Burbank, the speaker thought other men were doing equally as good work. For instance, Dr. Van Fleet was doing very good work among roses. He has given us Sir

FRUIT UNDER GLASS.

The Early Grapery.

The crop should now be far enough advanced to give us an idea if it is coming up to expectations. The fruit man, or the majority of fruit men, in which I must include myself, delights in seeing large bunches, if properly finished. Take, for instance, the grape that is more generally grown than any other variety—Black Hamburg. This, when ripe, should be jet black in color. In this condition the grapes will be admired whether the weight of the bunch is two pounds or six. The main thing in getting color and finish to this fruit, in my estimation, is the airing. When the grapes commence to ripen, keep on all the air possible; that is to say, with a temperature of 75 to 80 degrees in the house; in fact, a crack of bottom air is a great help in this respect. The aim should be to keep up a healthy, bracing atmosphere. Whoever attempts to ripen up fruit in a close, humid atmosphere, I am afraid, will fail. Another thing that has to be considered is watering the border. It is poor policy to do this if it can be avoided while the fruit is coloring. Usually, if the vines receive a thorough soaking just as the fruits take on their second swelling, this should carry them over the coloring period. After that, if necessary, the border could have a light watering. I presume there are no two men who treat fruit just alike. However, we all aim for the best results possible. I don't believe in syringing the vines after the grapes are thinned. True, red spider is a great enemy to the foliage if it once gets a headway, but by being careful with the airing and providing a moist atmosphere while the

STAND OF E. C. LUDWIG, IN ALLEGHENY, PA., MARKET, EASTER, 1905

Thomas Lipton, which undoubtedly will prove the best in the rugosa line; and others are now being developed; one, an everblooming climber, looks very promising.

The principal thing, Mr. Wintzer thought, in roses was to avoid deterioration of stock. Just so long as a grower propagates and competes with his neighbor as to price, roses will be ruined by loss of vitality. No one can honestly grow young stock and sell at \$15 or even \$25. It is worth much more to produce good, honest stock that will retain vitality. Even roses that are run down can be reclaimed by careful propagation and good growing. In his opinion, the proper stock for propagation was outdoor grown. Treat the stock plants like hardy shrubs, and grow the young plants in three-inch pots.

Henry A. Dreer exhibited a vase of the new marguerite, Queen Alexandra. This is an anemone-flowered marguerite, pure white, and larger than the variety now grown. This new introduction was much admired, and a center of attraction. Even the single form is far superior to the general run of marguerites.

Conard & Jones Co. showed young plants in bloom of the Baby Rambler rose, all propagated since January 1. All were in flower and were thrifty plants.

Edwin Lonsdale exhibited a plant of an Australian star flower, one of the subjects that Burbank is now working on. DAVID RUST.

The dyed carnation has evidently received its death blow on the Pacific Coast. The San Francisco Call, of recent date, contains the following item: "Frank Shibeley, a florist, called the attention of the Board of Health to the green carnations sold by some florists, saying they are dangerous because they are dyed with rank poison, and if placed in the mouth of a child would cause serious sickness, or even death. The board ordered a warning to be given the public regarding coloring of carnations, and notices will also be sent to various dealers to cease using the alleged poisonous dye."

vines are growing, there is not much danger from this pest. On the other hand, let a house get a check through careless airing, or any other cause, and red spider will surely appear. A light dusting of sulphur on the foliage will check the progress of this pest.

Figs.

Figs are grown in different ways successfully—either in tubs or planted in a border trained to the back wall of a peach house. However, the best results are obtained by planting them in a house. Figs are not particular as to soil, but being rank growers, the roots should be confined to a limited space; otherwise, the trees will make a strong, vigorous growth at the expense of the fruit. Where the roots are allowed to run unchecked, it is surprising the distance they will spread. Of course, this depends somewhat on the size of the house and the headroom at command. A border six feet wide and three feet deep should be sufficient for a good-sized tree. As with all other fruits, good drainage for figs is essential. Anything stagnant is detrimental to the soft, fleshy roots of the fig. When growing, a moist atmosphere should be afforded, spraying the foliage twice a day. The fig house should be situated so that it will get the sun all day if possible. While the fruit is swelling a temperature of 80 degrees with sun heat should be maintained. As the fruits begin to ripen, a fairly dry atmosphere should be afforded. Figs, to be appreciated, should be allowed to get thoroughly ripe before gathering. Everyone who has grown this fruit knows the advantage of having the trees in a confined border. This gives us a chance to use manure water in developing a crop, with no danger of having a too rank growth. Pruning should also be avoided as much as possible. If the tendencies are to too much foliage, rather disbud some, as the trees start their new growth in Spring, than cut out much heavy wood. Severe pruning is apt to cause rank growth. There are quite a number of figs, but probably two of the best and most reliable for growing under glass are Brown Turkey and Negro Largo. WM. TURNER.

The Week's News.

The Cut Flower Exchange holds a stockholders' meeting to-day (Saturday) in the offices, corner of Twenty-sixth street and Sixth avenue, to elect a new president and four directors. The retiring president is William Amos, and the retiring directors are W. H. Siebrecht, George Golsner, J. A. Leach and Charles Beekman.

The Pennsylvania Railroad Company is acquiring much property in Woodside, L. I., for station purposes; among its latest purchases are the establishments of Victor Dorval and Charles Smith, both florists of that place.

A valuable mare belonging to S. C. Nash, Clifton, N. J., became frightened while hitched to a post near the greenhouses a few days ago, and broke loose. Starting to run, she overthrew the wagon, and, falling against some sash, received a deep cut in the shoulder. A veterinary was called and ten stitches were necessary to close up the wound.

The next meeting of the New York Florists' Club occurs on Monday evening, May 8, in the Grand Opera House building, corner of Twenty-third street and Eighth avenue. Alfred H. Langjahr will answer the question relating to the street merchant from the wholesaler's standpoint, and the other questions placed in the box at last meeting will receive due consideration at this time. Bedding plants will be on exhibition from many of the prominent growers, and F. Weinberg, of Woodside, L. I., will make a display of cactus and some of the newer forms of echeveria. The meeting will be called promptly at 7.30 p.m.; so let us all be present on time.

Jerome A. Suydam, Flatbush, N. Y., is offering his greenhouse plant for sale. The land is to be cut up for building lots, so the greenhouses, etc., must be moved from it.

At the dinner given to Dr. Osler, the of alleged chloroforming for old men fame, in the Waldorf-Astoria, on Tuesday night last, the decorations were entirely of flowering dogwood.

The Horticultural Society of New York will hold its fifth annual exhibition in the Museum building of the New York Botanical Garden, Bronx

Pansy Plants

Of my largest flowering mixture of Show Varieties, unsurpassed quality, fine strong plants, in coming in bud, at \$3.00 per 1000. Large plants, in bloom, \$1.00 per 100; \$3.00 per 1000. 500 at 1000 rate.

GUSTAV PITZONKA, Bristol, Pa.

Park, on Wednesday and Thursday, May 10 and 11. In addition to an attractive list of prizes for growers and amateurs, the council may award certificates to meritorious exhibits. George Skene will be in charge of the arrangements on the part of the New York Botanical Garden. It is observed that the \$50 prize for the "best horticultural novelty," etc., is omitted from this year's schedule. This is wise. Copies of the prize list can be obtained from Secretary Leonard Barron, 306 West 149th street, City.

A novel organization has been incorporated in New York under the name of the Agricultural Experts' Association. George T. Powell, Thomas Tryon, and Cyrus C. Miller are the incorporators. The association will cover a wide field. It purposes to give expert advice in all matters concerning land development in any direction. It will lay out an estate, a town or a group of farm buildings. It will examine soil and give advice as to the best methods of improving and cultivating it. Orchards, forestry, horticultural work and gardening and farming in all branches come within the scope of the association. Injurious insects and plant diseases will be treated by an expert who knows all about such things. George T. Powell is president of the association. The sanitary engineer is William Paul Gerard, the architect is Thomas Tryon and the consulting engineer is Collins P. Bliss. M. V. Slingerland is the entomologist and Frank S. Peer is associated with the new organization as live stock expert.

Apoplexy killed Emil Landraf, a gardener, while he was working in Greenwood Cemetery last week. Landraf was 60 years old, and lived at 288 First street. He was employed by James Weir, the florist, and was at work on a new grave when stricken. His body was taken to the Fifth avenue station house and then home.

Mrs. Bingham, of Ridgewood, N. J., intends to dispose of her greenhouse establishment, consisting of nine greenhouses, also a house and barn with six acres of land.

The Fleischman Floral Company has leased the building at the northwest corner of Forty-third street and Fifth avenue, and will occupy the premises as a flower store.

Maltus & Ware, who represent several Holland and Belgium growers in this country, have removed from 136 Water street to 14 Stone street.

E. G. Hill, of Richmond, Ind., sailed for Europe on Saturday, April 29.

FIRES.

COLUMBIA, PA.—On April 16, at the greenhouse establishment of William Aherne; damage, \$500. Supposed to have originated from a defective flue in the boiler house.

ROCHESTER, N. Y.—On April 17, a fire in the greenhouse plant of Alfred Dobbertin did damage to the extent of about \$600.

Review of the Market

Later Easter Trade Reports.

NEW YORK.—The weather turned quite warm in the middle of the week and seemed to check the business which, for several days, had been well up to the average for this time of the year. Violets are still coming in regularly, but as most of the retail stores are cutting them out, because they will not keep if the weather be at all warm, there is no means of selling them at any quotable prices. Occasionally, a few go at a normal figure, but the bulk are offered at from 50c. to \$1.25 a thousand, and they do not sell. Lily of the valley has become more plentiful, and now that the Spring weddings are over there is scarcely any demand for it. The better grades are being freely offered at \$1 per 100. Sweet peas also are becoming a good deal of a glut. Within the last few days there has been no perceptible call for these, and they are accumulating in the hands of the dealers. A steady supply of white single narcissus is coming from the South, and these, added to the home-grown crops of narcissi and tulips, make a very full market of this line of bulbous flowers. Prices are necessarily low. Lilies are quite plentiful, and while 6c. each is a ruling figure for the select grade, many good lilies are going at \$3 and \$4 per 100. Of callas, too, there seems to be a full crop just now, and prices for these do not vary much from those mentioned for lilies. Fancies are plentiful, but, thanks to their vivid coloring and their Spring-like freshness, they are clearing out quite well, the street men having taken them in hand in lieu of the violets.

Carnations are holding their own reasonably well; the crop continues fairly plentiful, and prices have taken no serious drop as yet. Bride and Bridesmaid roses are, in the main, of exceptionally fine quality; unfortunately, there is the best call for the shorter grades, and these are not the most abundant. Early in the week business for roses was decidedly better, and somewhat higher values were obtained. The supply of American Beauty is gradually shortening up, and there has been a marked falling off in quality. Liberty, General Jacqueminot and Ulrich Brunner are too plentiful for the demand, and a natural leaning toward lower values is the result. Gladioli are very plentiful, considering the time of the year, and a strong effort is made to maintain the price at \$1 per dozen.

BOSTON.—Slow sales are reported all along the line the past week. On Saturday all stock was fairly well cleaned up, but as this week advanced it became plentiful, with little or no demand. Roses are very abundant, the quality in most cases good. For the commoner kinds prices range from \$1 to \$6, while American Beauty fetch from \$1 for shorts up to \$20 for the long-stemmed flowers. Carnations, which have held up well in price all Winter, have now dropped, and very fine stock may be had for \$1 and \$1.50. Lily of the valley sells fairly well at \$2 and \$4. Lilies are hard to move at from \$4 to \$8. Violets are yet seen in fair quantities, at 50c. and 75c. Sweet peas are plentiful. Gladioli have made their appearance and sell at \$4 and \$6. Narcissus and daffodils are now in from out-of-doors.

INDIANAPOLIS.—An unusual quiet has prevailed since Easter. Few decorations are on hand and funeral work is not plentiful. Prices on all grades of stock are decreasing, but in spite of this lilies, roses and carnations are accumulating so rapidly that many go to waste. Select Bridesmaid, Bride and Golden Gate wholesale at \$5 to \$7 per 100; seconds bring \$3 to \$4. The best La France and Souvenir du President Carnot bring \$8 to \$9. Liberty, of excellent quality, are being received, going at \$7 to \$10 per 100. The demand for American Beauty roses is very light; select 36-inch-stem stock brings \$25 per 100; 24-inch to 30-inch, \$15 to \$20, and 12-inch to 15-inch, \$1 a dozen. Carnations, with the exception of good white, are disposed of with difficulty; \$2.50 to \$3 per 100 is obtained for fancy stock; 75c. a dozen is the customary retail price.

Any number of longiflorum lilies and callas may be had at \$10 per 100. Lily of the valley is out of the market; a few shipped are being received at \$4 per 100. Pink and white sweet peas of excellent quality, wholesale at 75c. per 100.

Bedding and bedding plants seem to be the all-absorbing topics of the growers at present. The number of bedding plants is larger than usual this year, but orders are coming in rapidly, so that with a little hustling no stock of this class should be left after Memorial Day. Prices are about the same as in former years: Four-inch geraniums bring \$1 to \$1.25; 5-inch, \$1.25 to \$1.50; 6-inch, \$1.75 to \$2, and 7-inch, \$2 to \$2.50 per dozen.

Tomlinson Hall Market business has been very quiet this week, as the cool weather has discouraged plant trade, and few cut flowers have been bought by the retailers.

CHICAGO.—Trade prospects the past week assumed a brighter aspect, and a good demand for stock of all kinds had a tendency to stiffen prices a bit. The strike prevailing here makes it extremely difficult for the wholesalers to get stock from the depots; in consequence, several of them have notified their growers at a distance from Chicago to endeavor to find another market for their produce temporarily. Others have been informed by the express companies that it would be all but impossible to deliver perishable goods on time, and, in some cases, the companies have refused to accept flowers for transport. The consequence has been that the supplies of stock in this market have been reduced, and there is a good demand both in local circles and from out-of-town. American Beauty are yet plentiful, except extra fancy grades, which bring \$4 to \$5 per dozen; medium and shorts, especially the latter, are in large quantities at \$4 to \$24 per 100. Bride and Bridesmaid are still abundant at \$2 to \$3 per 100 according to grade; Golden Gate brings the same price; Meteor and Perle des Jardins, \$2 to \$6. Mrs. Abel Chatenay is coming in very fine, selling at \$2 to \$3. Liberty is also in demand at \$15 per 100.

Carnations are in ample supply, the quality being unusually fine for so late in the season. Prices range from \$1 to \$4. Sweet peas are arriving in quantities, and are bringing 50c. to \$1.50. Lilies still come in quite freely, although they do not sell so well as before Easter; they bring from \$6 to \$12 per 100.

Bulbous stock can be said to be almost out of the market, with the exception of outside flowers, which do not move freely. Lily of the valley is selling at \$2 to \$4 per 100. Adiantum brings 50c. to \$1.50 per 100; smilax, \$2 to \$2.50 per dozen; asparagus, \$35 to \$50 per 100.

ST. LOUIS.—The week after Easter did not start as well as was expected; in some parts of the city dull trade was reported. A number of small weddings and funeral work constituted about all the business. The weather, too, was very bad, with wind, hail and too much rain. Cut stock was not over-plentiful. Prices remained almost as high as during Easter.

This week stock of all kinds is more plentiful. Most of the growers near Chicago are shipping flowers here; owing to the great teamster strike in that city, the express company cannot deliver the consignments. This, with the regular local consignments, has had a tendency to lower the price on all grades of roses and carnations. American Beauty roses, best grade, range from \$5 per dozen down to \$2; shorts go at \$5 per 100, with plenty of them. Bride, Liberty and Bridesmaid bring \$3 per 100 for fancy select stock; from that down to \$3 per 100.

Carnations, fancy, are still at \$4 and \$5 per 100; good first-class stock realizes \$2 to \$3, with common at \$1.50 per 100.

Sweet peas are becoming more plentiful each day; stock is very fine, at \$1 per 100 for fancy, long stemmed blooms; other stock 50c. There are still plenty of longiflorum lilies and callas to be had at \$8 and \$10 per 100. Tulips, lily of the valley and other bulbous stock rule at formerly quoted prices. Outdoor lily of the valley, iris, snowballs and others, are now coming in, but find little or no sale. All kinds of greens are plentiful.

CINCINNATI.—Easter business seems to have been good all over the country. The past week trade was also active. This week, however, business is simply lifeless, and much stock will be sold at low prices. American Beauty are fetching \$2.50 to \$3 per dozen for select. It is hardly worth while to name prices for other roses. The opening of a large retail furnishing store created some demand for made-up pieces. Julius Baer and Fred Gear got the greater part of the work. Peonies are now coming into the market. Carnations are still holding up nicely, good grades selling at 2c. to 3c. The poorer ones fetch \$1 to \$2.50.

C. A. Getz, the veteran florist of Cincinnati, now in the lumber business in Virginia, was in the city on the 26th ultimo, attending the wedding of his nephew.

PITTSBURG.—Last week's trade was very satisfactory and is continuing so. Prices of stock are holding up well. Carnations bring from 2½c. up, and roses from 4c. up. Lilies still realize 10c. and better, with a good supply. Bulbous stock is nearing its end. Good lily of the valley bring 2c. Brilliums and field violets, also lilies, sell well. Iris are in good demand. The good weather is helping plant trade; the markets are well supplied.

E. C. R.

Cannot Do Without It.

Herewith check for \$2 for two years' subscription. Of course I could not do without The Florists' Exchange.

Penna. JACOB FRIES.

HARTFORD, CONN.—Easter business this year exceeds all previous records. The sale of plants was far ahead of any previous year. All kinds of blooming plants sold well, but there was very little call for decorative stock. There was no noticeable increase in the demand for cut flowers over last year; plants seem to be taking the place of cut flowers more and more each year. Azaleas and lilies were most called for, and the supply was equal to the demand. Lilies sold from 1 to \$2 each. Some fine azalea plants were to be had; most of them were in just the right condition to be salable. They realized from \$1.50 to \$3 each. A few of the higher priced ones were disposed of, but the largest call was for the smaller ones. There were but few genistas sold; the demand for these plants seems to be getting less each year; \$1 and \$1.50 each was asked for them. Spiraea plants sold about as usual, at 50c., 75c. and \$1 each. Tulips, hyacinths and daffodils in pans went well at from 50c. to \$1.50 per pan. A few Crimson Rambler roses were in the market, and they sold readily at \$1.50 and \$2 each. Hydrangeas went well at from \$2 to \$3 each.

There was a good supply of all kinds of cut flowers, excepting carnations and violets, both of which were most called for. There was an abundance of roses of all kinds, and the quality was good. Bridesmaid were most largely called for, and brought \$1.50 a dozen, as did also Bride. American Beauty sold at from \$4 to \$8 a dozen, and Ulrich Brunner and Kaiserin Augusta Victoria \$2 a dozen. Carnations were very scarce, but those in the market were of good quality. The fancy varieties brought \$1 a dozen, and the common kinds 75c. Quantities of violets were sold, but before Saturday evening scarcely a violet could be had. Some were of good quality, and some exceedingly bad. They brought \$1 per hundred. There was a good demand for daffodils, tulips and mignonette, all of which brought 50c. per dozen.

A number of small blooming plants were used in the churches, and afterwards given to the children in the Sunday schools. All of the florists employed extra clerks and extra delivery teams.

J. F. COOMBS.

ST. PAUL, MINN.—Easter, 1905, will long be remembered as the nicest from the weather point of view, and the most profitable, and the volume of business the largest ever recorded. Stock was plentiful, the only noticeable shortage being in violets. Owing to the lateness of the season the output was necessarily curtailed, while the quality was poor. In blooming plants, lilies, as usual, took the lead. Azaleas were not quite as good sellers as in previous years, while hydrangeas and spiræas sold very poorly. The hydrangea, at its best, is not a popular Easter plant, and should be held for Memorial Day trade. Bulbous stock in pots and pans sold fairly well. Well-done Crimson Rambler and hybrid roses were in good demand, and sold readily. There was an abundance of all kinds of plants, and stocks were not all cleaned out. Some of the leading store windows are still gay with "left overs."

In cut flowers there was a good demand for everything, and plenty of stock to supply it, excepting violets. Prices were advanced but slightly over previous week's figures, and this, coupled with the fine weather, brought out the shoppers in large numbers.

On Saturday evening some of the stores indulged in cheap sales of lilies at 20c. and 25c. per plant, but this diversion did not affect trade in general.

Since Easter, trade has been good. May & Co., Holm & Olson, and E. F. Lemke have all had wedding and other decorations, calling for an abundance of stock, while funeral work and numerous balls have helped to keep down the surplus.

VERITAS.

PATERSON, N. J.—Easter business was very satisfactory. There was a short, sharp and decisive battle on lilies. A big department store here began to sell at 10c., a price which was met by Ed. Seery; then the store reduced the price to 9c., Seery going to 8c. A further reduction of 1c. was made by the store people, which Seery also met, when clerks from the store came around and bought all Seery's stock at 7c. After the supply otherwise had been exhausted, Robert Smith brought in two wagon loads of lilies, which he easily disposed of at 10c. Mr. Seery is to be congratulated on the steps he took to meet his extraneous competitors on their own ground.

SAN FRANCISCO.—In comparison with the excellent trade one year ago florists report this Easter business most excellent. The season's prices last year were advanced, but this year normal prices were maintained, and an excessive demand accommodated, the result being an average of 20 per cent. advance over the Easter business of 1904. Blooming plants again cut quite as good a figure as did cut flowers. The best selling stock, second of course to potted and cut lilies, were roses, orchids, carnations, tulips and sweet peas.

In his rounds among the stores the writer failed to find anything in the way of Easter novelties, excepting white and lavender paper bells and garlands, for which a good demand was reported, the three sizes in Easter bells selling at 50c., \$1 and \$1.50, respectively, the garland paper fetching a penny a foot. Florist Stapfenbeck had some dwarf lilac trees in bloom. This miniature tree is 20 inches in height, in a 9-inch pot, and sold on sight at \$10. There was enough stock of all kinds, and both grower and dealer cleared out nicely.

Retail prices for Harrisii and longiflorum lilies were \$2 to \$7.50 per dozen; callas, 25c.; American Beauty, \$1.50 to \$5 per dozen; Bride, Bridesmaid, Liberty, Kaiserin Augusta Victoria and General Jacqueminot, \$1 to \$2; carnations, 25c. to 75c. per dozen. Violets were not plentiful at 25c., one-half size bunch. Sweet peas were not equal to demand at 35c. per bunch. Tulips brought 75c. per dozen; pot hyacinths, \$1 to \$3; mignonette, 25c. per bunch; hydrangeas, \$2.50 to \$8 per dozen; special pick, \$2.50 each. Various quotations for azaleas, from 50c. to \$7.50; hyacinths and daffodils, 25c. and 35c. per bunch. Daisies were abundant at almost any price.

ALVIN.

GRAND RAPIDS.—We had a very hot spell of weather a few weeks previous to Easter which brought out such a heavy crop of roses and carnations as to congest the market. Shipping trade dropped off and stocks accumulated. Flowers sent to the commission houses brought very little, hardly enough to pay for the picking. It was a time when the buyer was very particular as to quality, and the best only was wanted. Such a condition previous to Easter has not occurred for a great many years; it resulted in a shortened carnation cut for Easter and good prices. Azaleas were pretty well flowered out, long before Easter. All flowering plants sold well.

Carnations were in large supply, but insufficient to meet the demands. Roses did not sell as well as in former years, and lots were left over.

In plants, the lily was leader, and although it was thought the supply was sufficient, by noon Saturday the stores were trying to buy lilies.

Crabb & Hunter had the largest crop of lilies in town, a large proportion of which were shipped as pot plants to Chicago and elsewhere. Cross had a fine stock of Rambler roses and hybrid perennials in full bloom, most of which were shipped. The stores had no special line, but a general assortment of plants. Prices were: Roses, \$1 to \$3 per dozen; American Beauty, from \$1.50 to \$6; carnations, 50c. to 75c.; lilies, \$2 to \$3 per dozen; lily of the valley and daffodils, 50c. to 75c.; tulips, 50c. to 60c.; violets, 15c. to 25c. per dozen.

COLORADO SPRINGS, COLO.—The florists in this city were probably as successful in holding stock back for Easter as any in the country, as the lilies, Dutch hyacinths, etc., were the finest grown in years. Everything sold well. The finest display ever shown here was at the Clark greenhouses, which were bought last December by J. B. Braidwood, son-in-law of Wm. Clark. The old palm house, used for years to accommodate palms, etc., for decorating, was cleaned out, the sash painted white, the glass tinted light green and the house arranged with odd-shaped benches. These were arranged, each bench being complete with some special plant grouped in such a way that each played its own part in the general decorative scheme. The place drew large crowds every day during Easter week.

A. C. Rott, who was in business for a number of years at Bloomington, Ind., is now in charge of the cut flower department of Mr. Braidwood.

LYNN, MASS.—Easter trade, on the whole, was satisfactory. The cut flower business was not quite so good as in other years. Plant sales were better than last year's. Lilies were very fine and sold clean. Azaleas also sold well. Genistas and Crimson Rambler roses were in good demand. Bulbous stock, with the exception of daffodils, did not move very fast. Church decorations were about the same as last year; nothing very elaborate was noticed. In cut flowers there was an abundance of all kinds. Colored stock sold well; white and light-colored flowers were sticky. Nothing new was noticed. Plant trade seems to be increasing every year. Most customers seeing Easter plants and flowers together and comparing the prices will almost invariably take plants. The total business done was about the same as in 1904.

J. L. M.

LATER EASTER REPORTS

(Continued)

NEWARK, N. J.—A. Begerow reports that the demand for plants at Easter was greater than ever before. Lilies were most in favor.

MONTROSE, PA.—W. W. Nash reports that he had the best Easter trade this year he ever experienced, and that the season just opening looks very promising.

MEADVILLE, PA.—G. W. Haas & Son write: Easter trade this year was very nearly one-half better than last year's. In cut flowers, carnations took the lead. L. Harrisii sold well. Roses were not so much in demand. In plants everything went.

ELMHURST, N. Y.—There was 10 per cent. increase in Easter trade over last year's. A shortage in cut flowers, except bulbous stock, was made up by the increased number of blooming plants. Prices were about the same as in previous years.—H. N. HOFFMAN.

MANCHESTER, VT.—George V. Smith says Saturday was a cold day, but the demand for flowers was larger than last year. Carnations took the lead, with not nearly enough to fill orders. Lilies were not first-class, but all cleared out. Prices were a little below last year's. Very little call for plants was experienced.

CANAL DOVER, O.—Easter trade made a clean sweep of everything; trade was far better than in any previous year, and more stock could have been sold. The trade in bulbs has been furious. Ferns are in very heavy demand for Fall. The supply of budding stock will be inadequate for the demand. Business in all lines is good. C. BETSCHER.

NEWPORT, R. I.—The volume of our Easter business was not quite up to the average of that for several years past. Prices, both on plants and cut flowers, were about the same as last year's. Lilies brought 25c. a bloom; bulbous flowers, 50c. per dozen; carnations, \$1 per dozen; roses, \$2; plants from 50c. to \$4 each. F. W.

CHAMBERSBURG, PA.—Byers Bros. report: Easter trade was something better than last year's. Roses headed the list, with carnations next. In plants, lilies sold best. Other bulbous stock went well. Flowering plants of all kinds were in demand. A large trade was done in pansies, which were very fine.

DAVENPORT, IA.—John T. Temple reports Easter trade very good, a slight increase over last year's. Owing to two new flower stores starting here since last Easter, some had a few lilies left. There was more call for blooming plants in pots than ever before. Smilax was very scarce, causing quite a run on Asparagus Sprengeri and plumosus.

BETHLEHEM, PA.—Jacob A. Fries reports a big Easter trade. The usual run of plants azaleas, rhododendrons, hyacinths, tulips, lily of the valley, daisies, astilbes, geranias; and, of course, lilies; all sold well. An unusual demand was experienced for 4-inch pot geraniums of any color. A few palms were sold; and large plants were loaned to the churches for decorative purposes.

WORCESTER, MASS.—Our florists are well satisfied with the Easter trade. Stock was plentiful, and prices a shade lower than last year's. Lilies were sold at 20c. per bud, a drop of five cents from last season's prices. All kinds of bulbous plants were in evidence, but these, with azaleas, held their prices up. Cut flowers were in abundance, with prices about as usual. There has been a good steady change since Easter. With weddings, funerals and decorations much left-over stock has been used up. C.

YOUNGSTOWN, O.—Walker & McLean say trade this Easter was about 15 per cent. better than last year's. We think it would have been still better had we been favored with good weather earlier in the week. The weather was miserable up till Saturday, which was very fine; and, therefore, we were compelled to crowd most of the week's work into one day. Plants that were most in demand were lilies, decidedly in advance; then spruce, azaleas, and geraniums and tulips. There was a decided falling off in the call for narcissus. In cut flowers, violets had the call, and good stock was not obtainable; then came carnations, roses and lilies. There appeared to be an ample stock of everything but violets. Prices generally were about the same as those of last season.

NEW BEDFORD, MASS.—Easter trade was 25 per cent. better than last year. Lilies sold well, with the supply very plentiful at 25c. a flower. Tulips, narcissus and other bulbous stock in pots were very good sellers. Roses and carnations were in fair demand, the former, for good stock, bringing \$2 per dozen, the latter 75c. and \$1 a dozen. But around this section there seems to be more demand for flowering plants at Easter time than for cut flowers. Violets sold well; there was a scarcity of these, \$2.00 per 100 was the price asked. Single violets are mostly grown for this market, they easily being the favorites. Princess of Wales is the variety chiefly grown.

ST. ALBANS, VT.—H. Bryant says: Good Friday morn looked gloomy with four inches of snow. Saturday was warmer, which gave us a chance to deliver our plants that we could not cover. Sunday was beautiful. Plants and cut flowers of all kinds sold out by 5 p. m. April 22. There were not enough lilies to go around. We had a great call for violets, but none were to be had in this section. Lilies sold at 15c. a flower or bud. A great call was experienced for carnations at 50c. and 60c. per dozen. The demand for roses was slow at 75c. to \$1 per doz. However, all sold out. Bulbous stock and spruce sold well. I believe business in general was a little better than last year's. Azaleas were not good on account of the lateness of Easter. Novelties were not much called for.

ROCHESTER, N. Y.—The Easter demand for flowers this year was the greatest ever known in Rochester and the supply was equal to it. While carnations and roses, as well as violets and lily of the valley were good sellers at about the same prices as last year, potted plants sold far in advance of any previous Easter. One dealer rented a large vacant store as an annex, and his two stores did double the amount of business over last year. The newest plant to meet with popular favor was the dwarf Crimson Rambler rose; almost every one of these in the market was sold at \$1 and upwards for each plant. Rhododendrons, azaleas, hydrangeas, spruce and acacias sold exceedingly well. Carnations brought from 75c. to \$1.50 a dozen, roses from \$1.50 to \$9, and violets, \$1 to \$1.50 a bunch, some large violets reaching \$2 per hundred. C. P. W.

LOUISVILLE, KY.—Every one here seems satisfied with the volume of Easter business transacted, also regarding the financial returns. All of the retailers whom I have spoken to report an increase over previous years, with prices as good as formerly. Owing to the very late date, bulbous stock was entirely gone, as was locally-grown violets. Plants had an increased sale and were supplied in all seasonable stock. Especially noticeable was the demand for some pans of ageratum. In cut flowers, the variety was not as great as in former years, as no bulbous stock was left in the local market. The lateness of Easter seemed to have somewhat lessened the demand for flowers for church decorations; there were so many of the Orient were employed with good effect. A. R. B.

SYRACUSE, N. Y.—Easter business came with a rush on Saturday after the wretched weather of the preceding days. All agree that the trade done was far in excess of that of other years. In pot plants, lilies led at 25c. per bud and bloom. Azaleas were next in popular demand, from \$1.50 to \$5 being the prices. Hybrid roses met with good sales at from \$1.50 to \$2. Crimson Rambler brought from \$3 to \$5. Tulips, hyacinths, daffodils, etc., proved popular with certain classes of buyers, and cleaned up well at 50c. to 75c. per pot or pan. Spruce sold readily at good prices.

In cut flowers carnations led in popularity, selling at from \$1 to \$2.50 per dozen. Roses realized \$2 to \$3; tulips, 75c. to \$1.25 per dozen; sweet peas, \$2 per 100; violets, \$2.50 to \$4 per 100. There was an unprecedented demand for violets, and the supply was much below the demand. Boston ferns sold well, and one firm handled large numbers of geraniums in bloom at 25c. each that cleaned up early. Many of the churches were elaborately decorated with lilies, palms, etc. J. B. B.

SPRINGFIELD, MASS.—Easter business was very satisfactory. In potted plants, lilies took the lead, there being a shortage of these. Azaleas were plentiful, well-grown plants selling from \$1 to \$2. Spruce, rhododendrons, Crimson Rambler and other potted roses found ready sale in limited numbers. Prices ranged about the same as last year's. The department stores offered potted plants, but the quality was far inferior to the stock offered by the florists, and at the prices charged

could not have created much, if any, competition. In cut flowers, roses were wonderfully abundant. One of the dry goods stores, it is said, sold ten thousand at 60c. a dozen. This price was met by some of the florists, but first-class stock was held at \$2 a dozen. Carnations were none too plentiful. Bulbous flowers, especially narcissus and tulips, were very abundant and prices low. Violets were in ample supply and sold well. Violets in pots went fairly well, although the supply was in excess of the demand. Bulbous stock in pots, pans and fancy holders sold well.

Palms, lilies and azaleas were used abundantly in churches. One florist had twelve churches to decorate. The increasing use of artificial lilies and other flowers for store window decorating is a sad sight to one who enjoys the true spirit of Easter. If Easter is observed at all, and windows are decorated because it is Easter, the natural flowers are none too good for the occasion. I had much rather see a store window without any attempt to recognize the season than to see anything used but Nature's choicest offerings. Any natural flower is suitable. G.

SPRINGFIELD, MASS.—A. L. Gilbert reports trade about as last year. Roses sold best at from 60c. to \$1.50 per dozen, and were in good supply. Carnations brought \$1 per dozen. There was a large supply of bulbous flowers. Lilies went at 15c. to churches and 20c. to retail buyers. No large Azalea indica were to be had. Azalea mollis and rhododendrons sold well. Geraniums realized 12c. and 15c. each. The supply of Crimson Rambler roses was not so large as last year. Most of the florists in this city sold out of cut blooms.

WASHINGTON, D. C.—Business during the early part of the week was only normal, but the last three days showed a marked improvement. American Beauty was in demand at from \$12 to \$15 per dozen. Liberty was also a favorite and brought from \$3 to \$5; Ivory, Golden Gate, Kaiserin Augusta Victoria, Souvenir du President Carnot, Bride, Bridesmaid and Mme. Abel Chatenay, \$2 to \$3 per dozen. There was a limited supply of the Cardinal and Enchanter roses, which brought from \$1.50 to \$3 per dozen. While there was an abundant supply of carnations, the prices were above the average—75c. to \$2 per dozen for the better varieties. There was a good demand for lily of the valley at \$1 to \$1.50 per dozen. Violets were very scarce; they brought \$1 per bunch; Sweet peas realized 50c. to \$1 per bunch; lilies, from \$2 to \$3 per dozen sprays; mignonette, from 50c. to 75c. per dozen; jonquils, tulips and Dutch hyacinths, 40c. to 75c. per dozen.

Potted plants of azaleas were much called for; pink and white seemed to be the favorite colors. Good plants brought from \$1.50 to \$4 each, the smaller sizes ranging from 75c. to \$1; Bougainvillea sold well at \$8 to \$15. Rambler roses brought from \$1.50 to \$3 each. Hydrangeas were in demand at \$2 to \$6. Lilies brought from \$3 to \$5 each. Harrisii and longiflorum lilies were the general favorites at 25c. per flower. Violets and pansies, in 6-inch pans, brought 75c. to \$1; tulips and hyacinths, in pans, \$1 to \$1.25 each.

The Easter trade showed a decided improvement over that of last year, notwithstanding that, owing to the lateness of the season, a great many people were out of town. The demand for plants varied considerably from that of last year, when combination baskets and boxes were in demand; this year they were not called for. Azaleas and lilies were most in demand. Such plants as Rambler roses, hydrangeas, bougainvilleas were secondary. The supply of both cut flowers and plants was equal to the demand. The florists here are a unit in declaring that this is one of the best Easters they have ever had. M. C.

PROVIDENCE, R. I.—We are fortunate in reporting a steady business, with good, salable prices, and a total volume of business well high reaching the high-water mark of last year. Carnations were never before so plentiful at a holiday time, and although the wholesale price was in excess of the market value, we feel sure this popular flower received a full portion of patronage at reasonable figures from the Easter buyer. These flowers managed to average 2c. to 3c., with some going as high as 4c., although the latter figure was too much, and it wasn't long before these values dropped to a more conservative figure. White carnations were in excess of the demand and on Saturday went as low as \$2 for handsome stock. Violets were scarce, probably not more than 8,000 to 10,000 entering this city. Prices averaged \$1 per hundred, and the quality was only passable. The scarcity of this flower may have been responsible for the falling off in receipts on the cut-flower end of the Easter business. Roses were steady at 4c. to 10c. with a full supply of good quality. Bulbous stock was plentiful at \$2 to \$3 per hundred, with a shortage of good daffodils.

The plant business stood something extra in volume, lilies in pots cleaning up in good style, at 8c. and 10c. per bloom,

wholesale. The low price was forced upon the growers by the department stores setting a very low retail value, and advertising same in the daily press, thus making the public look for bargains in plants. Azaleas were scarce in most places, but the demand was not great and quite a few still remain. There were no novelties. Small pans of tulips and daffodils at 50c. sold best.

N. D. Pierce furnished the market with nice hardy roses and Ramblers. R. I. Greenhouses stood sponsor for large numbers of hydrangeas. John Macrae was top-notch on big pan stock. A. A. Williams made a specialty of fine panes in pots. Howard Army delivered the finest pot spruce; Hoffman furnished most of the local grown lily of the valley; F. Macrae's Sons grew the best lilies, and King, of Attleboro, sent in the best selling pot tulips.

All the stores made nice displays, but nothing out of the ordinary. Keller & Co. cleaned up the best of any, and Macrae, as usual, watched his Easter profits diminish with a large display view on Easter Monday. O'Connor and George Kelley made unusually fine shows of potted stock and rejoiced in a good attendance. These two gentlemen, with the addition of T. J. Johnston, Johnston Bros., A. J. Davis and The Hogg Greenhouses, placed special advertisements in the press. C. S. MACNAB.

KALAMAZOO, MICH.—From all appearances Easter trade here will show a marked increase over last year's, and while at present it is too early to estimate the increase correctly, yet we are reasonably sure of considerable gains. Thus far we have been greatly assisted by beautiful weather, making the handling of plants very easy, and yet cool enough to develop the cut flowers to perfection. With the exception of carnations ample supplies of cut stock were on hand and sold readily at the following prices: American Beauty brought \$3 to \$5 per dozen; teas, \$1 to \$3 per dozen; carnations, 50c. to \$1 per dozen; violets, 25c. per bunch; hyacinths, tulips, daffodils, etc., 50c. and 75c. per dozen; lilies, 20c. each; callas, 15c. Greens at the usual prices. Novelties were not bothered with as the trade had all it could handle with the usual lines carried.

While mingling amid the throngs outside the florists' stores the past week, one could not help but notice the great advance made during the past few years both in the elaborate decorations displayed and the excellence of stock grown, rendering the ribbon a superfluity. Instead of a necessity to cover ill-grown plants, or dirty old pots. Now clean, well-grown and shapely plants in well washed or new pots is the rule, and the stores located well on the best business streets have advanced our business on a level with any. We are glad to note and report this progress in connection with the Easter displays, which certainly showed up finely this week, and, judging from the crowds inside the stores and the delivery wagons outside, they must have been profitable to the proprietors and a pleasure to the people.

Manager Smith, at the Central Nursery Company's, had their large store banked all round with a varied assortment of plants and besides making an effective showing inside and out, also had a string band Friday afternoon and evening to give further pleasure to their patrons, who returned the compliment in both word and deed.

G. Van Bochove & Brother also had their store filled to overflowing with the high-grade flowers and plants for which this firm is noted, and did an exceptionally good all round business. The Dunkley downtown display showed up very nicely, although the larger part of their business is done at the greenhouses, which are located well in the residence district. A grocery on Main street showed a collection from out of town which reminded one of conditions many years ago, and although some few vacant spaces showed a possible sale, yet the net result must have led to the better appreciation of the regular florist by the public at large.

The wholesale trade had good and fairly large stocks and are well pleased with business done. The local trade showed a large plant business increase, and vast quantities of lilies, azaleas, spruce, Rambler roses and all kinds of bulbs were disposed of at reasonable prices. The weather also assisted materially in making Easter of 1905 the best in the history of this city. S. B.

FREDERICTON, N. B.—Easter trade of 1905 was satisfactory. In cut flowers, lilies sold for 25c. per flower; callas, 15c.; roses, 25c. to 10c.; carnations, 75c. to \$1 per dozen; hyacinths, Dutch, 12c. each; tulips and snaydragons, 5c.; daffodils, 5c.; sweet peas, 10c. per dozen. In plants, azaleas brought \$1.50 to \$2; lilies, 25c. per flower; Paper White narcissus in pots, 25c. to 50c. each; daffodils in pots, also hyacinths. Morelle tulips, 25c. to 50c.; pelargoniums, 25c. to 60c.; cinerarias and Primula obconica grandiflora, 25c. to 50c. each; ericas, 3-inch, 25c. to 40c. each. We had a show, in both cut flowers and plants, worthy of a larger city. We shipped to all the provincial towns and had all we could do. The trade was slightly better than last year's, especially in cut flowers. J. BEBBINGTON & SON.

PANSIES Extra fine plants, twice transplanted, \$5.00 per 1000. Geraniums, leading varieties, bud and bloom, 4 in., \$3.00 per 100. Verbenas, Mammoth, bud and bloom, 2 1/2 in., \$1.50 per 100; \$12.00 per 1000. Colens, mixed, \$1.50 per 100. HILL TOP GREENHOUSES UTICA, N. Y. Mention the Florists' Exchange when writing.

CANADIAN NEWS

MONTREAL.—Easter business, on the whole, did not show any great increase over that of last year. Cut flowers, though, were in greater demand, and everything was sold excepting a few tulips and daffodils. American Beauty roses did not sell as readily as usual, but were cleaned up in most cases. Violets were sold out early. In plants Rambler roses and lilies were preferred; hydrangeas and spiraeas came next, with bulbous flowers selling very slowly. But few lilacs snowballs or rhododendrons were to be seen. In made-up baskets and boxes the low-priced ones sold out well, and the higher-priced pieces were left on our hands.

The florists have all been busy this week with weddings and funeral work.
W. C. H.

OTTAWA.—Easter week gave us a variety of weather—snow, frost, rain, and sunshine. Wednesday morning, the day for moving plants to the city, there was 6 degrees of frost, with snow and wind.

The demand for plants and flowers was ahead of that of other years, for cut flowers especially. Everything was cleaned out. The stock of plants in quantity and quality was ahead of other years, and everything in good condition sold, and at last many that were not good. Scrim had a plant annex, which was kept well filled from the greenhouse until Saturday noon, when there was no more to replenish with.

Graham Bros. had a grand lot of lilies, and a fine stock of everything which went. This firm was badly handicapped owing to J. Graham being sick in bed; he has been seriously sick for a week, but is slowly recovering; and, as we all know, he is a host in himself. W. Graham had our sympathy.

Good lilacs were soon out of business. There were not enough good colored azaleas. Lilies sold better than ever before. Rhododendrons fetched good prices. Spiraeas went better than formerly. Palms were nearly out of business. Pans, except of lily of the valley, were not caught at so lively as formerly; but all went. The churches used as many plants as formerly, and some were elaborately decorated. The buyers of small cheap plants were decidedly in the minority, and every year our customers seem to raise the price of their purchases. Lilies, as usual, were popular. The public does not tire of azaleas. Good lilacs were favorites. Pans of lily of the valley, when very good, go on sight. *Primula obconica* is not in it for Easter. But nothing goes with the public like a rose; any kind of plant will sell, but for an Easter plant American Beauty is ahead. All in Ottawa are satisfied with the results, and glad to get the space made vacant for Spring bedding plants.
E.

LONDON, ONT.—Easter trade was satisfactory. There was a decided advance in all lines, although much the greater increase was shown in the plant trade. In cut flowers, carnations were the popular favorites, followed by the standard varieties of roses. American Beauty were not

nearly as much in demand as is usual at this season. Violets, from some unexplained cause, do not seem to be a popular Easter flower here. In bulbous stock cut hyacinths of the miniature Dutch varieties led, followed by Von Sion daffodils. Lily of the valley was called for in moderate quantities only. Cut lilies were used in about the usual quantities for church decoration. In plants, lilies, as usual, were the leading favorites. The plants were much dwarfier than ordinary, and fears were entertained that this would have a deterrent effect on sales. It turned out, however, that but very few customers complained on this score. Azaleas were seen in quantity, and, the lateness of the season considered, they were in wonderfully good condition. Spiraea was very fine, and met with its usual popularity. Some good rhododendrons were seen, also large bottlebrush plants. There was no demand for this style of plant. Some splendid pelargoniums were shown; these enjoyed a fair degree of popularity. Bulbous stock was greatly in over-supply, and the demand, considering the quantities available, was very good.

Gammage & Sons had an extraordinary run on pelargoniums (wholesale), some buyers repeating their orders a couple of times. The plants were perfect, a fact which no doubt accounts for the demand. The wholesale lily trade was hardly up to that of former years. Cutting prices in Toronto was considered the cause of the trouble. This firm had an immense cut of carnations, but the supply was not nearly equal to the demand. Dicks had a splendid lot of azaleas. His carnation houses were in full crop, but the supply was entirely inadequate.
FRED BENNETT.

TORONTO.—Business Easter week was away ahead of that of former years; all through the week there was a steady demand both for plants and cut flowers, and the supply appeared to be unlimited. Lilies were very plentiful; the general quality of the blooms was not quite as good as usual. Nearly all the plants were short, the blooms rather small, but firm and good to handle; longiflorum were most in evidence. Azaleas were very good and rather over-plentiful; Mme. Van der Cruyssen, Niobe and Bernhard Andreas alba were the varieties mostly seen. Some fine lilac was offered, but our people do not fancy it much. Dunlop had some very pretty ericas, and although the prices asked were high, they suited the public's fancy. A few fine rhododendrons were seen; the light colors sold freest. Pot roses sold well. Nice palms and ferns, in 6 and 7-inch pots were rather scarce, and those available were soon picked up. A few good pans of hyacinths were offered, and again the light varieties quickly sold. In cut flowers the trade was exceptionally good. American Beauty roses were fine and fairly plentiful; they sold at from \$1 up to \$18 per dozen. Other roses were also both good and plentiful, and generally sold well, even the weak stuff being nearly all cleaned up. Violets were of poor quality, but went well. Carnations were very plentiful, the best brought good prices, but poor stock had to be sold cheaply. Morello tulips were abundant, but generally cleared out; the light colors sold well. Yellow narcissus was a little scarce, but white

were plentiful and nearly all sold. Lily of the valley was good and plentiful, bringing only medium prices. The large department stores used up immense quantities of stock in decorations, Eaton's big store taking 1,200 lily plants, besides other stock. All the principal stores had plants and flowers around, and on Saturday morning the quantities of cut stock in sight were enough to give a timid buyer cold feet. But at 9 o'clock but little was to be seen, and many were quite sold out. So far as I am able to judge, the business this year is quite 30 per cent. over last year's.
THOS. MANTON.

TORONTO.—Business since Easter has been very good. During the Canadian Horse Show held here last week society people used up large quantities of flowers and all our downtown florists were very busy. Wholesale prices were down, but retail prices for first-class flowers were kept right up. Our growers are sending in fine roses and carnations. Violets are nearly over for the season, excepting the few gathered from outside.

Arrangements for the chrysanthemum show here this Fall are nearly completed. The societies interested in the show of last year again united, with the addition of the Ontario Vegetable Growers' Association. The Ontario Government has made a grant of \$1,000 toward the fund, and a strong finance committee has been appointed to get subscriptions from prominent citizens to put the affair on a good financial basis. The officers appointed are: President, R. J. Scott, Toronto; vice-presidents, W. Bunting, St. Catharines, and John Chambers, Toronto; secretary, W. J. Cowan, Toronto; treasurer, J. H. Dunlop, Toronto. Several committees have been appointed, and there is no doubt the prize list will be printed in a very short time.
THOS. MANTON.

WINNIPEG, CAN.—A. H. Stopler has succeeded Richard Alston in the operation of the Royal Greenhouses here. Mr. Stopler is a German by birth, and has followed his profession in Germany, France, Belgium, Switzerland and England. He was for many years in the late Queen Victoria's conservatory at Buckingham Palace, London, and is the possessor of a royal certificate.

SAN FRANCISCO, CAL.—On the evening of April 24 Luther Burbank was given a reception by 300 high school lady teachers of the State who were in Santa Rosa attending their annual convention. The following day Mr. Burbank returned the courtesy by receiving these fair educators at his home and personally conducting them through his private experimental grounds and magnificent gardens on Santa Rosa avenue. The visitors inspected the fadeless flower, spineless cactus, Burbank rose, Shasta daisy, a myriad of lilies, the beds of poppies in which their modest host has wrought a change of color, the magnificent new amaryllis, and numerous other creations that bear the name of Burbank. The visitors voiced a resolution of thanks with a whereas that affirmed the visit to be one of the greatest educational treats the teachers of the State had ever enjoyed. On departing each one of the 300 teachers was presented with a handsome poppy bloom.
ALVIN.

St. Paul.

The Week's News.

Owing to the lateness of Easter and the unfavorable weather in April, Spring bedding stock is small and backward.

I visited A. S. Swanson's greenhouses a few weeks since and was greatly interested in the Prince of Naples rose which he has been successfully growing for several years. It evidently belongs to the hybrid perpetual class, although it shows some traces of tea blood. The flower is cup-shaped, a clear pink in color, of medium to large size, and is produced in the greatest profusion. The foliage is the finest ever seen on any rose. Planted in the benches two years ago, he will leave it there for several years longer. I have never before seen this variety mentioned by any in the trade, but the way it is grown here speaks volumes for it. Mr. Swanson was the first to grow Mme. Abel Chatenay in this section, and early discovered the great beauty and value of Dorothy Perkins for forcing purposes.

L. L. May & Co. are growing a bench of Mme. Abel Chatenay this year, but will plant several houses with this grand variety another year. It has done exceptionally well with them this year, producing continuously and bringing the highest market price at all times.

Holm & Olson are preparing to erect a new range of houses for growing carnations and roses.
VERITAS.

Cleveland.

News Items.

It is very encouraging to hear the numerous reports of good Easter trade from florists in all parts of the city.

There seems to have been plenty of stock of all descriptions, with the possible exception of violets. H. R. Carlton controlled all that were to be had around here; he sent in something like 50,000 in one week.

Speaking with Wm. Brinker the other day, about general matters of interest to the craft, the conversation turned on bulbs. Mr. Brinker says it is the consensus of opinion among florists that imported bulbs, such as hyacinths, tulips, daffodils, etc., are things of the past, viewed as a commercial product. The reasons for this condition, he says, are the high duty, the number of times the bulbs are handled, and the incidental delivery of some as flowering plants.

Chas. H. Wilson, 606 Jennings avenue, has purchased the fixtures of the Cleveland Floral Company, including a magnificent opal florists' box, which originally cost \$950.

Kirchners are preparing for a large cemetery trade this year; the outlook is very favorable.
O. G.

CLEVELAND, O.—The Commercial and Financial World of April 14 contains a write-up of the Gasser Company's flower store, paying particular attention to the new rose General MacArthur. Mr. Gasser is at present in California. The store is presided over by L. F. Darnell, whose original window displays always attract attention.

Indianapolis.

News Items.

The State Florists' Association of Indiana held its monthly meeting at the State House Horticultural Rooms Tuesday evening, May 2. No business of great importance was transacted.

The Indianapolis Plant & Flower Company is preparing for the sale of an immense quantity of peonies this year. All indications point to a large cut for Decoration Day, as the buds are now well under way and many should be in bloom by the 20th.

John Heidenreich, the popular south side florist, has announced himself as a candidate for the Council. All aware of his hustling abilities predict a victory.

F. A. Conway & Co. have opened a flower stand at the corner of Market and Delaware streets.

Fred Lemon, Richmond, was a recent visitor.
I. B.

We can't do much with a
"Just Wont" grower

who knows that all tobacco powder is the same cigar and tobacco store trash he gets at his cigar store or from his seedmen and JUST WONT ask for our booklet, that is full of the sayings of his fellows, that read:

The H. A. S. Co.—I have been using the BLACK STUFF FINE TOBACCO POWDER, on my violets, and it has given me great satisfaction.
FRED KIFFER, Northport, L. I.

The H. A. S. Co.—I have no Green Fly. THE FUMIGATING KIND TOBACCO POWDER is safe, clean and sure; a powerful fumigator.
CHAS. PETERSON, E. Liverpool, Ohio.

He JUST WONT believe that 95 per cent. of all the growers that send for our free five-pound trial sample bags of THE FUMIGATING KIND (for fumigating) and THE BLACK STUFF FINE (for sprinkling), have purchased not once, but again and again, after the trial. WHY BE A JUST WONT when you can have these free five-pound trial sample bags; yes, two of them if one won't do. All we ask is for you to pay the express charge on them. Ask now. Don't be a "JUST WONT."

announce the completion of arrangements whereby they will, beginning in January, 1906, disseminate jointly with

THE E. G. HILL CO.

THEIR TWO GRAND NEW CARNATIONS

MY MARYLAND AND JESSICA

MY MARYLAND is already well and favorably known, having been exhibited freely at the various flower shows and florist club meetings the past Fall and Winter, and in every case elicited the highest praise and most favorable comment. We pick this variety to quickly and easily displace all other whites for first honors, not alone in exhibition, but in commercial points as well. We claim for its robustness of constitution quite unequalled in any other variety and an ease of culture that will delight the heart of the grower. The great vigor of both parents (Norway x Lawson) seems united and improved upon in this variety.

"Disappointed"

Because your order for 2500 Fiancee was filled with only 500 late rooted cuttings?"

So were we, but we are not worrying about it.

"Why not?" Oh, you see we have RED SPORT and THAT never disappoints. We will plant 2000 more of it than we otherwise should, that's all.

We have sent out 125,000 RED SPORT since January 1, ON TIME, and if we have any customer who feels he has not received full value for his money he has failed to say so.

RED SPORT has filled all the requirements of a first-class "holly-berry" red carnation, early and continuous bloomer, giving its heaviest cuts around the Christmas holidays and during the winter months when red is in demand at paying prices; a fine flower that never splits, on a long wiry stem that well supports the bloom, a strong vigorous grower, an easy doer and an all-round money-maker. We are still cutting 3000 RED SPORT bloom a week that bring top prices.

We have 20,000 plants in 2 1/4 in. pots ready for planting in the field or on the bench inside, which if kept well stopped back until September 1, will give a heavy cut for Christmas, which we can supply for immediate delivery for \$6.00 per 100; \$50.00 per 1000.

GEORGE J. HUGHES, Berlin, N. Y.

The untamable blood and spirit of the old outdoor carnation in them. Under the best Winter culture they pine, languish and suffer, yielding to all sorts of inexplicable diseases, and as soon as everything gets green outdoors they prick up their ears, stretch their necks, throw off every trace of illness, and put forth all their remaining strength in a wonderful display of vigor, and a crop of flowers hard to match.

It is, in nearly every case, to be considered a gain to plant all the stock intended for the coming year early. It is not any too soon to get some of the benches in readiness now for chrysanthemums and roses.

Begonia Gloire de Lorraine.

Some of the old plants of the Gloire de Lorraine begonias, set aside on a light bench, and having had a partial rest in a comparatively cool temperature, are beginning to send up now any number of short and stout fresh shoots from their base.

Geraniums.

Millions of zonal geraniums, as usual, have been raised this year, and will likely all be sold before another six weeks have gone.

GERANIUMS

S. A. Nutt, 3 in., ready 6 to 8 days later part of May, \$4.00 per 100; \$35.00 per 1000. Rooted cuttings, \$10.00 per 1000. Ready for shipment.

COLEUS Rooted cuttings, Golden Bedder, Crimson Verschaffeltii, \$5.00 per 1000. Cash with order.

PETER BROWN, Lancaster, Pa.

CRASSULA HYBRIDA

Pink flowers, 2 in. pots, \$10.00 per 100.

CRASSULA COCCINEA

Scarlet flowers, 2 in. pots, \$15.00 per 100.

Both are novelties of exceptional merit in Easter flowering plants. The stock will make specimens for next season.

J. E. FELTHOUSEN, Schenectady, N. Y.

Mention the Florists' Exchange when writing.

plants are drawn and thin-bodied, one flower to a plant, and mostly one stem also to a 4-inch plant. The wholesale price for these is from \$8 to \$12 a hundred; from 20c. to 30c. a piece at retail. Now, what would a geranium bring of the kind we used to grow? A 4-inch plant, with four and five luxuriant stems, surmounted by trusses of buds or bloom, and studded at their base with numerous sturdy side shoots, was no rare sight on the place of a good grower, and should not be to-day. The culture of more plants than the greenhouses can accommodate, and the scarcity and high price of skilled labor nowadays, may be held responsible for the careless ways and slipshod methods in which plants of the common, but readily-selling kinds, are grown now.

Stock Plants.

The very best of the market, greenhouse and bedding plants, usually propagated from cuttings, are none too good for stock plants for an ensuing season. The grower who depends for his future supply on the stock of his own raising from well-tried good varieties, now offered for sale, should select the strongest, healthiest, most prolific plants from his general stock and set them aside for his own use in the time of propagation. It will not do to let them remain with the other plants of the same sort. They will be chosen first by the next retail buyer, and finally all the good plants will be gone and none left for stock but the very poorest, to propagate from. Growers who are satisfied with this kind of stock plants, selling as long as there is a salable plant on their place, need not wonder at the gradual but certain running out of their favorite money-earning stock. Always save the finest plants for stock. FRED W. TIMME.

St. Louis.

The Week's News.
Grim & Sorley have opened up in
the new Columbia store at Sixth and
Olive streets.

Fred Ammann is to be congratulated
on being elected for the second time
Alderman of Edwardsville, Ill. He
helped the trade greatly last week by
sending over a fine lot of both cut
flowers and plants of longiflorum lilies,
which were eagerly sought after.

C. W. Wors has opened a retail es-
tablishment at 2241 North Market
street. He had his troubles Sunday
selling stock on the downtown corners,
especially near Fred Foster's store.

C. Young & Sons, Miss Baddaracco
J. J. Beneke, St. Louis Palm Company,
Fred Foster and the Riessen Floral
Company all report a big Easter busi-
ness.

In the northern part of the city Max
Rotter, Adolph Brix, Slater & Co. and
the cemetery florists, Koenig Floral
Company and Fred Meinhardt, had a
fine trade in plants and cut flowers.

Leon Hunt celebrated his thirty-
third year as keeper of Lafayette Park
last week. This is one of the best kept
parks here, and is not controlled by the
city.

The bowling club on Monday night
rolled three games for Easter prizes.
There were eight in attendance. C. A.
Kuehn won first and Ed Gerlach second
prize. Next Monday night the regular
average bowling will commence for the
team to represent St. Louis at Wash-
ington in August.

Fred Augermuller, formerly with C.
A. Kuehn, is now with his brother,
George Augermuller, who recently em-
barked in the cut flower commisssion
business here.

Nick Himmer, of Merrimac High-
lands, reports that during the wind
and hail storm on Friday last, nearly
all the young buds in his peony field
were broken off, which will reduce the
number of blooms by several thousand
when cutting time comes the latter
part of this month. No greenhouse
glass was broken.

The Benthley-Coatsworth Co., Chi-
cago, is consigning to Frank Ellis this
week, and will do so until the strike in
Chicago is over.

Prof. H. C. Irish, F. A. Weber, and
William Scott Hancock have been ad-
ded to the committee of the Civic Im-
provement League on tree planting.

The wind storm of last week demol-
ished some of the buildings at the
World's Fair grounds; among them the
Horticultural Building.

The bowling club will visit De Soto,
Mo., some time next week to bowl a
match with a team of that place, of
which Florists Hippard and Frost are
members, they having sent the invita-
tion to the boys here.

The meeting of the Florists' Club will
be held Thursday afternoon at 2
o'clock. The May meeting is generally
not well attended by growers, who are
very busy at this time of the year, so
the president hopes that all the retail-
ers and wholesalers will come and
swell the attendance. The show com-
mittee say they will have the prelimi-
nary list ready for distribution. Three
new members will be elected according
to the new by-laws, and a good time in
general is expected.

A special bowling match was rolled
on Monday night between Theo. Miller
and C. Kuehn against F. H. Meinhardt
and J. J. Beneke. Six frames were
rolled. Miller and Kuehn won by two
pins. The scores were as follows:
Miller, 82; Kuehn, 1,050; total of 1,942.
Meinhardt, 960; Beneke, 980; total of
1,940.

Report of a Critical Test of Hammond's Slug Shot

for **POTATO BUGS,**
CURRENT and
CABBAGE WORMS,
Made in 1904

James Lawrence,
J. Reynard Lawrence.

Eden Trial Grounds
1896

Specialties:
SWEET PEAS and
POTATOES

Dear Sir:—Have been delayed in reporting on Goods you sent me for trial by severe illness. SLUG SHOT was as good, and did the work it was advertised to do as well and effectively as compounds and mixtures costing double and triple the price asked for it. For potatoes it proved especially efficient. Your BORDEAUX PULP is all right, dissolves readily and minutely so it does not clog nozzles of finest sprayers. Your AMMONIATED COPPER SOLUTION saved my melon vines (musk). It was not a case of preventing blight, but of checking it after it had developed and to quite an extent. I shall be glad to use and commend your goods another season.

Yours truly,
(Rev.) J. REYNARD LAWRENCE, North Middleboro, Mass.
Nov. 21, 1904.

Kalamazoo, Mich.

Death of Mrs. Dunkley.

The announcement of the death of Mrs. Dunkley on Wednesday last came as a surprise to all the trade. The deceased lady had been managing the Dunkley Floral Co. since the death of her husband, Joseph Dunkley, several years ago, and was well known and respected by the trade throughout Southwest Michigan. The concern is one of the oldest in the city, and enjoys the patronage of a number of leading residents. Mrs. Dunkley, who was 68 years of age, and a native of Grand Rapids, was a member of the S. A. F. O. H., and a frequent attendant at the conventions. The funeral on Saturday was largely attended. The business will probably be continued on behalf of the members of the family, although under what management has not yet transpired. Five children survive her.

News Notes.

John Calder has disposed of his business to Mr. Meyer, who takes possession on June 1. He will remove it to a location across the road from the cemeteries on Riverside, which he has just purchased, and where he is busily employed making ready for business. The gentleman is a newcomer to our city, but seems to be the right sort of a hustler, and we hope to be able to report a continuous success for him.

The death of Dr. Edwards, of the State Asylum for the Insane, caused a very large call for flowers of all kinds, and probably more money was spent than on any one funeral before.

Van Bochove & Bro. are progressing very fast on their new range, which will soon be ready to plant. The firm will also carry a line of high-grade nursery and ornamental stock; also herbaceous plants. S. B.

Philadelphia.

News Items.

Mr. Hoskins, of Hoskins & Giles, Reading, Pa., died on April 28 and was buried May 1. This firm has a store in Reading, with greenhouses just outside that city.

Frederic H. O'Neill, 56 North Seventh street, agent for Hitchings & Co., New York, has secured from McClintock & Weaver, contractors and builders, the contract for erecting and heating an iron frame greenhouse 52 feet long by 20 feet wide for Thomas J. Ryan, Esq., Elkins Park, Pa. DAVID RUST.

LYNCHBURG, VA.—A. Brosch, 1723 Monroe street, will sail about the middle of June on a four months' visit to his old home in Prague, Austria, after an absence of twenty-five years. He will be accompanied by his daughter, Theresa.

Pierson Boilers

For Steam and Water
are unsurpassed for efficiency
and economy

Meers, Righter & Barton, Madison, N. J., write: "August 5, 1904. The two
'Pierson' sectional hot water boilers installed for our new houses one year ago gave excep-
tional satisfaction during the past winter, the most severe for many years, easily fulfilling
what was expected of them, at the same time proving to be economical.
"We found them very easy to manage, that they responded promptly and heated the
water in short time, thus giving splendid control of temperature in houses when sudden
drop took place outside."

CONTENTS AND INDEX TO ADVERTISERS, PAGE 637

HARDY VINES AND CLIMBERS

CLEMATIS INTEGRIFOLIA DURUNDI

Iron Cross Clematis The steel blue flowers grow in the form of the famous German Iron Cross, measuring 3 to 4 inches across in a dense form intermixed with the buds. A very robust and vigorous grower, although of semi-dwarf habit. Blooms from early summer until late fall. 4-in. pot plants, 60c. each; \$5.00 per doz.

CLEMATIS

JACKMANNI HYBRIDS

Duchess of Edinburgh. Double white.
Henryi. Large single white, very large flower.
Jackmanni. Dark, royal purple; most popular single variety.
Mme. Baron Villard. Light rose.
Sieboldia. Lavender.
The Gem. Deep lavender, blue, very fine.
Olpy Queen. Fine dark single purple.
Imported three-year-old open-ground roots, 60c. each; \$1.00 per doz.; \$30.00 per 100.
Imported two-year-old pot-grown, 40c. each; \$3.00 per doz.; \$20.00 per 100.
American-grown one-year-old field roots, \$2.00 per doz.; \$15.00 per 100; \$125.00 per 1000.

OTHER CLEMATIS

Clematis paniculata. Strong four-year-old field-grown plants. 25c. each, \$2.00 per doz.; \$15.00 per 100.
Strong three-year-old roots, 15c. each, \$1.50 per doz., \$10.00 per 100.
Strong one- to two-year-old roots, 10c. each, \$1.00 a doz., \$7.50 per 100.
Clematis coccinea. A handsome variety, producing an abundance of large rosy-scarlet, bell-shaped flowers, which are exceedingly handsome and most useful for all sorts of decoration. Blooms from June until frost. Quite hardy. 10c. each, \$1.00 per doz., \$7.00 per 100.
Clematis crispa. Much like coccinea, but producing very fragrant lavender flowers, tipped white. 10c. each, \$1.00 per doz., \$7.00 per 100.

Clematis Davidiana. Dwarf, herbaceous sort, growing about 2 to 3 feet high covered with deep blue flowers in clustered heads, also singly in leaf axils. 1-year-old 2 1/2 in. pots, 8c. each, 65c. per doz., \$4.00 per 100; \$30.00 per 1000. Two-year-old, open-ground, 10c. each, 75c. per doz., \$5.50 per 100; \$50.00 per 1000.

BIGNONIA Trompet Creeper

Grandiflora. Strong plants, 35c. each; \$3.50 per doz.
Radiata. Strong plants, 20c. each, \$2.00 per doz.

WISTARIA SINENSIS

Blue. Open-grown; extra strong, 4 ft. plants, 40c. each, \$3.00 per doz., \$20.00 per 100.
White. Open-grown, extra strong, 4 ft. plants, 50c. each, \$3.50 per doz., \$25.00 per 100.

HONEYSUCKLES

Extra strong field-grown plants, 4 to 6 ft. vines in variety, 50c. each, \$4.00 per doz., \$30.00 per 1000. Variegated: **Halleana, yellow;** **Germanica, white;** **Germanica, red;** **Belgica, red;** **Scarlet Trumpet;** **Yellow Trumpet.**

HARDY ENGLISH IVIES

Strong 4 in. pot-grown (cut back), \$1.00 per doz., \$7.00 per 100, \$65.00 per 1000.
Field Grown, 2 ft. vines, strong plants, \$1.25 per doz., \$8.00 per 100. 2 1/2 in. pots, 30c. per doz., \$2.50 per 100; \$20.00 per 1000.

AMPELOPSIS VEITCHII

Sometimes called **Boston Ivy** and **Japan Ivy** 3 to 4 ft. high. Extra strong, imported roots, many vines. 20c. each, \$1.50 for 10; \$12.50 per 100. 2 to 3 ft. high, strong roots. \$1.25 for 10; \$10.00 per 100.
Well established 5 in. pot plants, 30c. each, \$3.00 per doz., \$22.50 per 100.

ARISTOLOCHIA SIPHO

(Dutchman's Pipe Vine)
We offer an extra fine stock of this most useful hardy climber in extra strong vines, 2 to 4 ft., 50c. each, \$5.00 per doz., \$40.00 per 100.

THE ELIZABETH NURSERY COMPANY, - Elizabeth, N. J.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierpont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

AMERICAN SEED TRADE ASSOCIATION.—The next annual convention will be held at Alexandria Bay (Thousand Islands), N. Y., June 20 to 22. The present outlook is that there will be a large attendance.

MINNEAPOLIS, MINN.—The Prior Seed Company is erecting a row of brick stores in this city.

ROCKFORD, ILL.—A local newspaper is responsible for the information that Hiram W. Buckbee, the well-known florist and seedsman, has decided to write a book on the raising and handling of seeds and the cultivation of flowers. He intends to start on the book in June.

PHILADELPHIA, PA.—W. Atlee Burpee and Howard M. Earl sail to-day, Saturday, May 13, by steamship Patricia for Hamburg. They will travel together in Denmark and, possibly, Sweden; then, separating, will visit different seed growers on the continent and in England.

SYRACUSE, N. Y.—The seed trade here does not fluctuate as in many places where "novelties" are the leading cards; but is a steady private and market gardeners' business, associated with which is that of every kind of farm and garden implements. F. H. Ebeling reports a very good trade.

ROSE HILL, N. Y.—The seed trade in this place has kept up better than those most interested anticipated. F. B. Mills, in common with most others doing a mail business, says it has not kept up with that of former years, but is very satisfactory, and is now on the increase. This is the home of the ginseng industry, which Mr. Mills says is a growing one, as it would seem after taking a hasty glance at the acres covered with lattice frames under which it is grown. It has generally been supposed that the demand for the dried roots was wholly a foreign one. This is a great mistake, as orders from our own country druggists are very considerable and on the increase.

COLDWATER, N. Y.—The Joseph Harris Company, upon the foundation the founder laid, has built up a profitable and increasing business. This company are not only dealers, but growers of very much of the stocks they sell, as well they may, for a more beautiful farming country, with a soil and situation admirably adapted to seed growing, cannot be found in this country, which is equivalent to saying it cannot be found anywhere. The soil is a deep and lively loam, thoroughly drained, in which plants of all kinds delight to grow. The firm's trade, which is largely with the truckers or market gardeners, is constantly increasing, and one those in the trade are eager to secure.

BEANS.—To know beans would be a fortune. During the early Winter the prices of some varieties, particularly Wardwell's kidney wax, were marvelously high. Now the query from all sides is "Do you not want a few bushels at reasonable rates?" At the same time the demand for the late Refugee is equally great, and the prices beyond the reach of the buyers.

FISCHER'S GRAND PURITY FREESIA

A magnificent, snowy, glistening white of very large size and great length and strength of stem. A dozen sprays make as fine a showing as a dozen white carnations and can be used wherever carnations are used for decorative purposes. A truss bearing from eight to eleven buds, of which six are frequently open at one time, make an immense flower. It is of great substance and bears shipping without bruising. Stems can be cut two feet long and are as rigid as sticks. It is very prolific in bloom, producing three to four rich shoots of eight buds each, besides the main flower. Bulbs no larger than dried wax beans of this grand Freesia make as large a flower as the large bulbs, only the stems are shorter. All growers should try some of this Queen of Freesia, for when "once grown always grown." Price for large bulbs, \$1.00 per 100; \$30.00 per 1000. 500 at 1000 rate. A discount on 5,000 and 10,000 lots.

NOTICE

To whom it may concern: RALPH M. WARD & CO., New York City, having purchased my crop of Bermuda Harrisii Bulbs for the season of 1905, have the sole right to sell them in the American and Canadian markets and to offer them as

PENISTON'S BERMUDA HARRISII

March 31, 1905.

CLARENCE PENISTON, Hamilton, Bermuda

RED CLOVER.—The Maine Agricultural Experiment Station and the Department of Agriculture have been making a study of red clover seed obtained from various sources to determine the best seed for general farm purposes. In most cases, the best results in the germination tests were obtained from seed grown in the higher regions of central Europe—though two lots of seed from Bohemia showed rather low vitality in the soil tests. The most vigorous seeds seemed to be those from Upper Austria, Styria, Hungarian Transylvania, and Russia; while one lot from England and that from Denmark were specially low in vitality. Seed from Brittany showed a high percentage of germination (sprouting) at Washington, but was rather low both in the blotting paper and in the soil tests at the station. Of the American seed tested, that from Ohio and Illinois was, in this trial, the strongest.

GROWING SWEET CORN SEED IN THE SOUTH.—Says Farmers' Bulletin 222, Experiment Station Work: "There is a popular belief that sweet-corn seed can not be grown year after year in the South without deterioration in quality. Some light has been thrown on this subject recently by the investigations of the Maryland station. That station has found that in a State as far south as Maryland at least as good or better sweet-corn seed can be and is grown for use within the State as can be grown in New England. The yield obtained in Maryland from Maryland-grown seed is considerably higher than the yield obtained when Connecticut seed is used. Not only is the yield higher, but repeated observation has shown that the quality of the crop was as good, if not better, and that the plants from home-grown seed stood the climatic changes much better than those from northern-grown seed."

European Notes.

The disagreeable conditions reported in last week's notes continued throughout the Easter holidays and made everybody feel very glum. As the fly still continues its ravages, the greater part of our time since work was resumed has been taken up with making fresh sowings for our 1906 crops; and,

WARD'S

as there are indications of a welcome change approaching, the waste of stock seed and the labor involved may be our only loss.

The destruction among our plants for 1905 crop of high class rutabagas has been great; how far this will affect prices next season cannot be determined until we know the full extent of the demand for present sowings. But the great advance in the price of sugar beet in France and Germany, and wheat in England, will add to the difficulties now experienced with the growers. It is admitted on all hands that prices are much too low, and that no one would suffer if they were once more placed on a remunerative basis all round.

A very determined effort is being made this season to increase the sale of the various forms of the star cinerarias, but the general verdict appears to be that they are too weedy in habit; and, owing to the lack of substance in the flowers, the colors are too dead for them to be of any service except as foils. The variously named cactus, Ixion, Stella strain, is practically condemned.

Our various exhibitions are abundantly supplied with new and, in many cases, beautiful forms of narcissi; but the prices demanded by the raisers do not admit of their being handled by seedsmen.

A grand novelty from Thibet was exhibited on April 25 at the Royal Horticultural Hall in London, in the form of a large pale yellow colored poppy, named *Meconopsis integrifolia*. As it is no doubt quite hardy it should find its way into the seedsmen's catalogues very quickly. Other interesting exhibits at the same meeting were: *Anemone fulgens bicolor*, a splashed and striped flower very similar in color to sweet pea America; *Anemone*

fulgens, The Queen, a pale rosy red; *Ranunculus asiaticus*, wild form from Palestine, identical in color with *Anemone fulgens*, but with shorter and broader petals, the individual flowers growing on stems about 15 inches long. All these will be available for the seedsman in due course. The last named is very effective and beautiful. The ranunculuses were grown from plants collected between Jerusalem and Bethlehem by Arthur W. Sutton, Reading.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

PAINESVILLE, O.—The Storrs & Harrison Company are doing the biggest business in the history of this long established concern, taxing the local capacity of the express company to the limit.

A FLOURISHING SOCIETY.—The annual membership roll of the Minnesota State Horticultural Society now contains 1688 members, and adding to these life members brings the total membership at this time up to 1832, which is 164 more than last year at this time.

GENEVA, N. Y.—Local nurserymen are having difficulty in obtaining help for the planting of stock this Spring. This scarcity of help applies more to boys than men. The nurserymen attribute the scarcity of boys this Spring to the more stringent compulsory educational laws.

J. H. Hale, the well-known nurseryman of Glastonbury, Conn., is being boomed by several agricultural periodicals as a likely successor to the late Senator Orville H. Platt. One paper states: "In 1891, wholly

Propagating Magnolias.

Sales of Spring stock are not nearly over yet, still it is in order to prepare for further propagation. In the line of magnolias there is no better way than layering. Budding, grafting and other methods are employed to some extent, but the old way of layering is the most solid of all. This is the time to cut back almost to the ground the stocks desired for layering purposes. Take some real heavy plants and cut them back to but a few eyes above the ground. This will cause the growth of strong, young shoots, which are just the sort needed for layering. The work should be done as soon as the shoots are of length enough to permit of it. If put down early, they will be nicely rooted by Fall, but should not be cut off from the parent plants before Spring. Old hands at propagating aver that but little is lost by allowing the layers to remain undisturbed for two years. In this way, too, the old plants are permitted to have a year's rest from layering, strengthening them, as the cutting down and layering the same plants year after year weakens them. This will lead propagators to have two sets of plants for layering, working one set one year, the other the next, which is much the better plan.

When propagating keep in mind the desirability of Magnolia Lenei. All the early flowering sorts, led by M. Soulangiana, are good sellers, but a more than good one is M. Lenei, and for these reasons: It is one which bears very large, cup-shaped, purplish-red

Figs In Gardens.

Were it remembered how easily figs may be grown in our gardens the bushes would be seen there much oftener than they are. There is no trouble at all in growing and fruiting them. It is true, they will not endure our Winters, but it is as easy to protect them when cold weather approaches as it is to protect rose bushes or decorative plants for lawns. All that is required is to throw the bushes over, to lie flat on the ground, and cover them with a few inches of soil. There is no need to dig them up entirely. Partly dug on one side, as if it was to be transplanted, permits of a bush being thrown over and covered. In my own case, I dig them out entirely, and take them to another part of the grounds to Winter them. A hole is dug as if for planting the roots. These do occupy the hole, but the plants are prostrate with the ground, and are so covered over with soil. The little figs which are just perceptible when buried are those which give the first crop. Two crops ripen here; the second one comes from the figs formed on the shoots first made. Our seasons are not long enough to permit of the ripening of a third crop. The figs form, but do not perfect themselves. If nurserymen would add figs to their lists of fruits and call the attention of customers to them, a good business could be done selling them.

Figs are easily raised from hard wood cuttings, set out in early Spring; and they are in fruiting condition in three or four years.

In England, figs are grown in tubs or pots. Not over much root room is given them, and growers find a little old mortar in the soil suited to the requirements of the plants.

Trumpet Vines as Shrubs.

As a vine the trumpet vine is well known, and when in the height of its flowering, in late Summer, a well-developed specimen of it is a glorious sight. For the covering of old trees, rough walls and like objects, it is most useful. For the walls of dwellings it is not so well fitted, being of a too sturdy nature to harmonize well with surroundings.

The use of this vine to form a shrub is not often made, at least not as often as it should be. When seen in such a shape it is interesting and beautiful. The large trumpet-shaped flowers are in display for many weeks. The flowers are in clusters, and one of a bunch succeeds another; and as every vigorous shoot will have a bunch of flowers at its end, the display is very fine.

The commonest trumpet vine is Bignonia radicans. This is our wild one, native of the Middle States, and the one usually seen in collections. But there are varieties of it, some with flowers darker red than the type; and, recently, an entirely different one—a yellow flowered variety—has appeared in cultivation.

One of the showiest of all these bignonias is the Chinese species, B. grandiflora. This has flowers more yellow than our native one, B. radicans; the flower tube is shorter, while the mouth of the flower expands more than the other. It seems to have found its way to Germantown very many years ago, judging by the very large vines of it to be seen here and there on walls.

The Southern one, B. capreolata, is of an evergreen character and does not bear close resemblance to the others. It is, in fact, classed separately by botanists. They make it a true bignonia; the others, our trumpet vines, are called tecoma. B. capreolata lives out in Germantown. Some years ago "Gardening" had an illustration of one in full flower, covering to the eaves the wall of a house there. The color of the flowers is a light orange.

The way to make shrubs of bignonias is to stake a vine, using a stout stake and seeing that it is maintained for some years, until the vine can support itself, when the "shrub" is formed.

Trumpet vines are increased from root cuttings and by grafting on pieces of root. Nurserymen do not like grafted plants for their own use, as it renders the mistake easy of propagating from roots which may not be those of the one it was thought to be. For setting out on private grounds it makes no difference.

JOSEPH MEEHAN.

To Grow Drug Plants and Herbs.

S. C. Hood, of the Bureau of Plant Industry, United States Department of Agriculture, Washington, D. C., a graduate of the University of Vermont in 1904, has returned to Burlington to take up the work in drug plants carried on by the experiment station in co-operation with the Department of Agriculture for the last two years. It is intended to grow, in part upon the new college property purchased from the Ainsworth estate and in part on other grounds many annual and perennial drug plants and garden herbs. The prominent feature of the work will be, as it has been for the past two years, the growth of the opium poppy with a view of determining the possibilities of the production of morphine in New England.

Pyrus Floribunda.

This flowering apple attains sometimes the dimensions of a small tree, and, as its specific name indicates, produces flowers in great abundance. The flowers are of a beautiful rosy-red color. The fruit is long-stalked, and in size resembles a pea. This is a very ornamental and showy species.

Glen Cove, L. I.

JOHN F. JOHNSTON.

PYRUS FLORIBUNDA, IN FLOWER MAY 16, 1904

Photo by J. F. Johnston

without his knowledge or consent, enough votes were pledged to Mr. Hale to elect him to the United States Senate in place of Mr. Platt, but Mr. Hale absolutely refused to consider the proposition and advised his friends to vote for Mr. Platt, which was done and O. H. Platt served in the National Senate up to the time of his death last week." Mr. Hale is as popular to-day as he was then.

Propagating Daphne Cneorum.

The hardness of the Daphne cneorum, together with its half-prostrate growth and lovely, sweet-scented, rose-colored flowers, or rose in the bud and pink when expanded, have made it a plant much used for the bordering of beds of larger growing shrubs, such as rhododendrons, azaleas and kalmias. The flowers come in early Spring, and for sweet odor can hardly be excelled. This daphne delights in a light, sandy soil. In fact, it may be all sand for planting in, if a good mulching of manure be placed over the face of the sand. In this sand the plants will root freely, and if they be set deep enough, roots will be made by the buried branches, and in this way propagation is easy. Another method of propagation is by grafting, using the D. mezereum as a stock. The plants unite well and D. cneorum grows well on it. The grafting is often done in Winter indoors, but may be done at other times, as convenient. Still another way is by cuttings, rooted in a greenhouse, using half-ripened wood for the purpose.

As a pot plant, kept in a cold frame all Winter and brought to heat early in Spring, they sell well, being desirable in so many ways.

flowers, differing from all others in the color and form of flower, when it flowers fully ten days later than the other early flowering ones, bringing up the end of the season, and always escaping the late frosts, which so often catch the very early sorts. I do not remember that M. Lenei was ever caught by frost, though the earlier ones often are.

Huckleberry Branches.

One of your advertisers, I see, calls attention to a new decorative subject, which he terms "huckleberry branches" and which, he says, is largely used by the florists of the Pacific Coast as a most elegant decorative green. Is not this what is called the Oregon grape, Mahonia aquifolia, also called evergreen huckleberry? If it is—and the description of your advertiser fits it fairly well—it has been recommended several times by me. Should it not be the mahonia it still remains to be said that the mahonia is a very good thing for florists' use, where shining green, lasting leaves are required.

In our climate the foliage suffers in Winter, although the shrubs push out green and fresh-looking when Spring comes; but on the Pacific Coast the foliage holds good the season through.

It is not altogether unknown among our florists, small supplies being obtained from cultivated plants; but without a doubt it could be used in larger quantities were it obtainable at all seasons, as should be possible when secured from the Pacific States or from nearby agents who may keep it.

Dreer's Select List of HARDY PERENNIALS

We offer here only the most Showy and Decorative Sorts, including varieties suited for CUT FLOWER purposes. These varieties are marked with an asterisk (*).

For the most complete list of Hardy Perennials offered in America, see our current Wholesale List.

This important branch of our Plant Department has been completely reorganized during the past year, and we are now able better than ever before to supply almost any demands and to execute orders promptly.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns the first season. This, in most instances, is a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

Table listing various plants such as Achillea, Adonis, Agrostemma, Anemone, Arisaema, Asclepias, Aster, Campanula, Carduus, Ceanothus, Cerastium, Chelone, Clematis, Coreopsis, Dianthus, Digitalis, Echinops, Erigeron, Galium, Geranium, Gladiolus, Gypsophila, Helianthus, Hibiscus, Iris, Lysimachia, Lythrum, Monarda, Myosotis, Nicotiana, Nigella, Phlox, Ranunculus, Rosa, Rudbeckia, Salvia, Saxifraga, Sedum, Senecio, Sparganium, Statice, Stipa, Thalictrum, Trollius, Urtica, Veronica, Viola, Yucca, etc., with prices per dozen and per 100.

Indoor Culture.

There is a constantly growing tendency toward indoor culture, brought about by the demand for first-class, long-stemmed blooms early in the season. Instead of planting directly in the houses now, I prefer to have the young stock shifted to 3 1/2-inch pots, and put outside in frames for a month or so. Be sure to plunge the pots up to the rims to prevent excessive drying out, and give them a little space both ways. If you have not got the frames they can be built very cheaply. Take some 2x4-inch lumber, saw in pieces 18 inches long and sharpen one end; then stretch lines along where you wish to put the frames, and drive the 2x4s four feet apart, leaving six inches out of the ground. Take common fence boards for the sides and nail them to the 2x4 pieces. You will then have a good shallow frame any length desired. A shallow frame is preferred to a deep one for plunging carnations, as it admits more light and air and does not shade the first row of plants. After the carnations are in the frames continue to water carefully. Do not over-water. It is best to grow the young stock a little on the dry side, while in the frames. This induces a strong healthy growth, and keeps the roots in a healthy, vigorous condition.

The sun and wind will cause the soil to appear white and dry, but upon examination the soil at the bottom of the pot will be found wet enough. In that case, give them a heavy spraying; this will give the bottom a chance to dry out and at the same time keep the soil moist on top and prevent it cracking around the edge of the pots. When the plants are dried out evenly to the bottom of the pots, give them a good heavy watering and then let them alone for two or three days, except a spraying to keep the soil moist on top.

The soil for the houses should have been piled in ridges in the field last Fall or hauled and piled up at the end of the houses in which it is to be used. Add about one-quarter old manure to the soil pile, and then turn it over, chopping it up fine as you do so. This mixes it up thoroughly, and it is then ready for use when needed.

Black sod soil with some clay is ideal for most varieties of carnations. Cardinal and Prosperity do best in a heavy rose soil.

I prefer to wait until after June 1 to

plant inside, for two reasons, namely: Carnations are lovers of fresh air, and we cannot give as much air in the greenhouses as they get in the frame; and if the old plants are given good care and plenty of liquid manure, they will be yielding good returns even after June 1. But generally, after Decoration Day, both the demand and the price slacken up to some extent, and it is time enough then to throw out the old plants and get the young ones planted.

After the benches are empty, clean them and give them a coating of white-wash, which helps preserve the wood and keeps the benches nice and clean. Our benches are six inches deep, and we find that it pays to fill them full, firming the soil along the edges of the benches. Even then the soil will have settled about two inches by Spring. Plant the young stock firmly, 8 inches apart in the row and the rows 12 inches apart. This distance will be about right for most varieties. For nice, large plants, leave a depression around each one and water only at the plants for about two or three weeks after planting. This keeps the soil nice and sweet and encourages root action. Spray the plants early in the morning, and again in the afternoon to keep a nice moist air in the house. These sprays should be heavy enough to keep the soil moist on the top of the benches. Whenever weeds begin to appear go over the benches and loosen up the soil with the hand, thus keeping it fresh. A very light shading may be applied during the very warm weather; not that young plants really need the shade, but it helps keep down the temperature and prevents the benches drying out so often. Leave the ventilators wide open at night after the young stock is planted; even if the temperature does go down to 46 or 48 it will not hurt them. On some places the ventilators are closed down to about six or eight inches every night during the Summer for fear of wind and rain, thus shutting out an abundance of fresh air, when there are, perhaps, a half dozen or a dozen nights that the ventilators really need to be closed. If the place is small, appoint one of the men to attend to closing the ventilators in case of storms, and on a large place it will pay to have a night watchman for that purpose.

Now that the planting in the field is about finished it is time to get the hand cultivators started. Do not wait for the weeds to appear on the ground to get hard and crusty, but put a good, steady man in the field with a hand cultivator at once. As soon as he is finished cultivating them one way, let him cultivate them the other, or crossways. We endeavor to have our carnations in the field cultivated twice a week, or three times in two weeks at the very least, and find it a good investment. It not only kills the weeds, but holds the moisture and discourages the growth of surface roots, which are always the first to suffer during a drouth. Go over the plants every week or two and pinch and shoot that need it. Do not wait until the plants are in bloom and then make a clean sweep of it. Better go over them often. G. W. FRENCH.

Easter Decoration in Porto Rico

The accompanying illustration should prove of great interest to our readers as a sample of a church decoration in tropical Porto Rico.

A good suggestion to Northern decorators would be the use of these leaves; they are majestic, and make fine displays.

FLOWERING AND BEDDING PLANTS

News Items.

This week has been a quiet one; there is but little going on and the market is glutted with flowers.

Pennock Brothers have a very pretty window decoration. The bottom is filled with forget-me-nots; the upper part is a maze of streamers of light blue, narrow ribbon. It is very effective and attractive.

H. Bayersdorfer will sail for Europe on the 18th, on his annual trip.

Bowling matters are looming up strong at the Florists' Club, a tournament being now in full swing. There are six teams of five men, and three matches are being played each week.

As the teams are as evenly matched as possible, the tournament will be very interesting, and also be the means of showing up the best material for the convention team.

The bowling club, which was formed some years ago, with the object of encouraging bowling for the S. A. F. conventions, but which eventually resolved itself into a social affair and has practically been out of existence for the past two years, had about \$100 dollars in the treasury. It has now been decided to finally wind up the club, and on Tuesday next, all those who contributed to it will go down to Essington, on the Delaware River, where there will be a shooting contest and other games during the afternoon and a dinner at night. A royal good time is looked for.

In response to several inquiries, Easter in 1906 comes April 15.

News Jottings.

It is given out that Mr. J. J. Albright will directly erect several houses on his grounds in this city.

The city park interests received something of a set back for this year in the cutting down of appropriations deemed quite necessary for properly caring expenditures, so new improvements will be quite nominal of extent.

A trip in suburban directions, last week, showed a fine lot of geranium plants at C. B. Shisler's in Williams-ville, who inclines to further court the business of growing cuttings for the trade, and for which some further building is contemplated this year. At Eggertsville, R. Boettger shows geranium stocks of a sturdiness that will bring the buyers beyond any question. C. F. Christensen shows cut flower spaces before taken up by mignonette and carnations, now occupied by bedding stock in fine bloom.

Recent business visitors included Arnold Ringier, of Chicago, and Charles S. Ford, Philadelphia.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen
Seedsman and the Trade in general

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO. LTD.

2, 4, 6 and 8 Duane St., New York.

P. O. Box 1897.

Telephone, 3765 John

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

YEARLY SUBSCRIPTIONS.

United States, Canada and Mexico, \$1.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Express Money Order, draft on New York, Post Office Money Order or Registered Letter. The date on the address label indicates when subscription expires.

REGISTERED CABLE ADDRESS:
Florex, New York.

ADVERTISING RATES.

One-half inch, 75c.; ¾ inch, \$1.00; 1 inch, \$1.25. Special positions extra. Send for Rate Card, showing discount of 10c., 15c., 25c., or 35c. per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

Copy must reach this office THURSDAY MORNING to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

This week's index will be found on page 637.

News of the Week in Brief.

The June meeting of the New York Florists' Club will be a "Ladies' Night"; there will also be an exhibit of peonies.

The American Seed Trade Association will hold its next annual convention at Alexandria Bay (Thousand Islands), June 20-22.

Luther Burbank has planted some 10,000 seedling potatoes secured from various crosses, with a view to securing improved sorts.

The Washington brethren are making extensive preparations for the entertainment of visiting delegates to the S. A. F. O. H. convention in August next.

Our obituary column this week contains notices of the death of Alfred Whiting, West Hartford, Conn., and Benjamin Gingrich, president of the South Bend Floral Company, Indiana.

A severe hailstorm, which passed over Grand Rapids, Mich., last week, did much damage to greenhouse glass. Hail insurance is now being inquired into by several of the sufferers.

A suggestion is made this week by a correspondent that a fund be inaugurated by the American florists to honor, in some form, the memory of Paul Jones, who was the son of a Scotch gardener.

Some of the leading English growers are now naming new varieties of plants which are easily obtained from seed, such as anthuriums, gloxinias, clivias, etc., by colors, instead of giving them distinctive designations.

A new dracaena named Americana was shown at the Exhibition of the Horticultural Society of New York this week. It is a native of Honduras, and is said to be the only American representative of the genus. Its commercial value is promising.

The premium list of the American Peony Society, so far as it relates to commercial classes, appears in another column. The exhibition will be held in the Auditorium, Chicago, next month; J. B. Deamud, of that city, will be the manager.

PAMPHLETS RECEIVED.

WHITE HEATHER is the name given by Miss Ellen Velvin, 40 West Twentieth street, New York City, to a booklet designed for the use of florists and other merchants, to be sent to prospective brides and others. There is very little in the pamphlet about the white heather or any other plant, but the compiler has brought together quite a lot of interesting matter on things matrimonial, such as rings, bridal wreaths, significance of precious stones, wedding cake, wedding music, wedding anniversaries, etc.

The Eckford Testimonial.

Subscriptions acknowledged.

THIS WEEK'S SUPPLEMENT.

Quercus Conferta (Pannonica).

But few persons know the subject of our notes, the Hungarian oak, under the name of Quercus conferta. In all nursery catalogues it is listed as Q. Pannonica, but authorities give us conferta as its correct, specific name.

As it shows in the photograph, at first glance it reminds one of the white oak, and somewhat of the mossy cup oak; but it is very distinct from either when seen as it grows.

There are such a number and so many beautiful oaks in our own country that there seems no call for those of Europe, but the Hungarian is such a distinct and such a robust grower that there will be no regret when room is found for it. It comes to us from southeastern Europe, and unlike the Q. robur of England and the Q. cerris of southern Europe, it does not hold the green color of its foliage until the very last thing in Autumn—as it is well known the others do—but changes to a yellowish hue, as do our own species when the cool days of Autumn approach.

In the vicinity of Philadelphia the Hungarian oak grows splendidly; it is perfectly hardy, and the climate appears to be just to its liking. The appearance of the one illustrated is its natural one, attained without artificial aid of any sort, and it but characterizes all of the same kind that are growing in the neighborhood. There is a spreading, massive character of growth which is not common to all oaks, making it of broader outline than many of our own species are when of the height of the one pictured.

In former years it was even planted to a greater extent than it is to-day. This is not that it is less esteemed than it was, but because the public has been awakened to the fact that in our own large list of native sorts there are many oaks of great beauty, answering the same purpose almost that the Hungarian would. No one who sees our illustration will say but that the Hungarian oak should be in all collections.

So many planters fail to transplant oaks successfully that what has been said of doing the work properly heretofore will bear repeating. Oaks need careful digging, seeing that the roots are not exposed to dry air, the thorough settling of the soil about their roots and a very close pruning. When the trees are as large as the one illustrated, it will be wise not to attempt their transplantation. The risk of living would be very great. A young tree not over 6 to 8 feet in height would be far more satisfactory; but let the size be what it will, the one who prunes closely will be on the road to success.

JOSEPH MEEHAN.

Extraneous Competition.

At its meeting on Monday evening, May 9, the New York Florists' Club tackled the question of the operations of the plant and flower peddlers and other institutions as affecting the business of the wholesale commission dealer, the grower, and the retail store man. The latter, for some reason best known to himself, takes little or no interest in club affairs, so his side of the question has yet to be heard.

The "street man," as he is now called, the term "fakir" being in all but a few cases a misnomer when applied in this particular instance, was viewed as an indispensable factor, so far as the full disposal of plants and cut flowers is concerned. There was a charitable disposition shown toward him by each of the speakers; even the much abused department store being regarded as a not unmixed evil.

The statement was made, and it may surprise those who give such matters but little or no attention, that 95 per cent. of the plants sold during the market season in New York City are disposed of to the peddler; that each morning's sales in the market aggregate between \$7,000 and \$8,000. The remainder of the total output goes mostly to retail storemen during the month of May up to Memorial Day, and to cemetery florists short of supplies. The exigencies of the times demand that a cheaper grade of plants must be grown than formerly, and double the number raised, in order to make ends meet. The municipal order which forbids the placing of flower pots either on window sills or fire escapes, has curtailed, to a considerable extent, the demand for single pot plants, as such, although there is a greater call than ever before for subjects suitable for window boxes. The deduction is in view of the immense number sold, that greater attention is being given to flowering plants in the gardens and backyards in all parts of the city, and in the development of this commendable taste the street peddler, who penetrates into every nook and corner of the great metropolis, plays a most important part.

As was natural, especially in New York, the commission dealer looks upon the street merchant as a sine qua non. The essayist of the evening characterized him as "an advertising agent of the business" and "the Daniel Boone of the cut flower trade," terms not altogether inept in their application. Be that as it may, it would be impossible to move the immense quantities of cut-flower stock reaching this city without the aid of the street merchant. He provides an outlet for flowers that would not otherwise be available, and at the same time affords the agent an opportunity to make returns to his consignors that, with-

out the peddler, would not be forthcoming. And, notwithstanding his alleged harmful competition, the store man continues to flourish and get rich; while with his assistance the grower goes on adding to his range of glass. It is a noticeable fact, too, that those who once occupied street stands for the sale of flowers, or who plied their calling as itinerant vendors, as time goes on, become storekeepers themselves, thereby joining the ranks of the "legitimate."

It would, we presume, be difficult for the store florist generally to take the same charitable view of his extraneous competitor as do those from and through whom he obtains his supplies. High rentals, taxes, the maintenance of expensive equipages, liveried attendants, and other necessary and unnecessary appurtenances, are the portion of the store-men, from all of which the peddler is exempt beyond his license fee, and it would seem almost a straining of human nature for one so burdened to look with complacency on an imagined competitor relieved of these exactions. In these days, however, the hugaboo of the harmful influence of street competition looms up only before the narrow-minded members of the retail craft, and others imbued with their spirit. The broader-minded men—and these are in the majority, fortunately—see only in the department store, the auction room and the street merchant, helpful agencies along with themselves in the distribution of plants and flowers, all tending to develop, each in its own way, an interest in the craft and its products, and from which benefit to all engaged in the business is likely to proceed.

Benjamin Gingrich.

Benjamin Gingrich, of South Bend, Ind., died very suddenly Sunday evening, May 7, 1905, of dropsy, at the age of 62 years. His health had been failing for over three years, but his condition did not become acute until a week ago, since which time he has been in constant agony.

Mr. Gingrich was born April 2, 1843, near Hamburg, Ontario, and came to South Bend in October, 1865. In 1872 he embarked into the furniture business, which he conducted successfully until 1887, since which time he had been building contractor until December, 1901, when he organized the South Bend Floral Company and was its president at the time of his death.

He united with the German church of the Evangelical association shortly after his arrival in South Bend in 1865 and had been a devoted and constant member ever since. Besides his widow, he leaves two sons, Edward W. and Irving, also an adopted daughter, three brothers and two sisters.

Alfred Whiting.

Alfred Whiting, one of the best known florists in Connecticut, died Friday, May 5, at his home in West Hartford. The deceased was born in West Hartford in 1824, was educated and had lived there all his life. He started in the nursery trade in a small way over 50 years ago and gradually drifted into the florist business, and at the time of his death owned one of the largest establishments in Hartford County. Mr. Whiting was a member of the Hartford Florists' Club, having been elected an honorary member soon after the club was organized. He never took an active part, although he was much interested in the club's affairs. He was also a member of the Society of American Florists. On account of being troubled with rheumatism in late years he was unable to get around very much.

Mr. Whiting's wife died some years ago, and he is survived by one daughter. He had been sick about three months. Funeral services were held at his late home in West Hartford Sunday afternoon, being very largely attended. J. F. COOMBS.

How to Distinguish Steel from Iron Pipe.

The following bit of useful information is taken from the Valve World for April, the fourth issue of the new monthly publication of the Crane Company, Chicago, Ill.:

"Iron pipe is rough in appearance and the scale on it is heavy, whereas the scale on steel pipe is very light and has the appearance of small blisters or bubbles, underneath which the surface is smooth and somewhat white. Steel pipe seldom breaks when flattened, but if a fracture does occur it will be noticed that the grain is very fine. Iron pipe when subjected to this test breaks easily, and shows a coarse fracture, due to the long fiber of the material.

"The impression prevails with many that steel pipe is exceedingly hard, for which reason they imagine that it is threaded with difficulty and that the threads are easily broken off. This is erroneous, the truth being that steel pipe is soft and tough. The threads of this pipe do not break, but they tear off, to avoid which it is necessary that the cutting die shall be sharp so as to cut above the center. Dies suitable for steel pipe can also be used on iron pipe, but blunt dies that will work successfully on iron pipe will tear the threads on steel pipe, owing to the softness of the metal."

OUR READERS' VIEWS

A Paul Jones Fund Suggested.

Editor Florists' Exchange:

While the American florists seem to have quite a craze for subscribing toward testimonials for prominent members of the foreign trade, and as "charity begins at home," why not start a subscription for our great American patriot, Paul Jones, the funds to be applied toward the decoration of his grave, or tomb, as the case may be, in perpetuity? His body will soon be brought over from Paris, where he died on July 18, 1792; and thanks to our ambassador to France, it will soon find a resting place here. My reason for such a suggestion is that the records show that he was the son of a gardener, John Paul by name, born July 6, 1747, at Arbigland, Scotland. He spent most of his life in this country, and is better known as the "Father of the American Navy." All honor to his name, and to his father, who, while pursuing the peaceful pursuit of our noble craft, helped to bring into the world one of the most famous of men during the eighteenth century.

If this idea should ever take tangible form, I should be happy to contribute my mite, as the descendant of a line of gardeners and florists.

HARRY A. BUNYARD.

Impressions of Canadian Horticulture.

Editor Florists' Exchange:

I cannot help writing a few lines, in spite of the very busy season, to raise a protest against the most unfair, entirely unnecessary and uncalled for attack made by S. S. Bain, of Montreal, in your issue of last week, on the paper under the above heading (page 550), read by Edgar Elvin before the Montreal Gardeners and Florists' Club. I, in common with many others, put the paper down as very thoughtful interesting, and, well written; and for an Englishman four months out a very modest one—so very unlike the usual style of a Britisher "just out," who either blasts the blooming wooden country to infernal regions, or gets up on a pedestal and looks down with contempt on everything "colonial." I have no time to go into particulars, but would just say that there is a great deal in Mr. Elvin's paper that we might all take to heart and seriously think over, and I hope, Mr. Editor, that you will persuade him to give us some more of his ideas and impressions. We like "to see ourselves as others see us." Mr. Elvin has a great deal to learn about this country, and he appears to be quite conscious of his ignorance in this respect. We have a great deal to learn about our profession, and are glad to pick up any crumbs of knowledge from whatever source. I have not the pleasure of knowing Mr. Elvin—never heard of him before—but I hope he will be present at the C. H. A. convention in Montreal next August so that all the "boys" can make his acquaintances.

A. H. EWING.

Rosarians vs. Carnationists.

Editor Florists' Exchange:

Noticing the comments on the question, "Why are carnation growers more progressive than rose growers?" discussed at a meeting of the New York Florists' Club, the thought comes to me that in stating the matter as above, the question is begged. Now to start out by saying the carnationists are more progressive than the rose growers. I think judgment is already passed; so what is the use of argument? If because they make more fuss, it is true; then where the argument? As well say that progression is evidenced by noise and exhibitions. It is true that, years ago, "Uncle John" predicted the four-inch carnation; and as we sat in a tent on, I think, the corner of Fourteenth street and Broadway, trying to keep comfortable, with our feet on an oil stove, he failed to say that each Autumn a great big show of chrysanthemums would be held in almost every city of the country, thus showing that the chrysanthemum growers would be more progressive than the rose growers. The show we were then looking after did not create much furor, yet for the time it was a good one. I don't remember that there were any Russian sunflower-like blooms, gauged as to value by the size, but the whole, as a mass, was very attractive to the few who cared to pay the fifty cents to see it. Compared with the present Madison Square Garden shows, there is much progression. There, however, has been no improvement in the "smell." It required no very exhaustive effort to get an improvement in size and number of varieties.

Does not the same remark pertain to the carnation as to the chrysanthemum? It has become necessary to have committees from both societies to examine and pass upon the merits of the very numerous candidates for public favor. Of course, this only shows the progressiveness of the growers of each, and it also shows what infinite pains are required to produce these new candidates! The efforts are certainly commendable, but it seems to me the culturists are in a class by themselves—a class wherein no great care is required to produce a new and distinct flower—and between them the question of great progression can well come into play. But, as to rose growing, very different conditions arise. The hybridizer has, first, only a limited variety of color and class to work upon; no striped and speckled beauties are to be allowed. Self colors, or nearly so, must alone

be his aim. Variation in color must be confined within close lines, and, withal, a year to produce his seed, a year to germinate the same, three years to bloom and prove the value, to eliminate the poor, to improve the promising, and to throw away the majority; the care to keep the pedigree, to judge the effect of the cross before it is made; the trial in various soils, that one best adapted to the seedlings may be discovered. And after all this comes the submission to the judges. Where does the progressiveness come in? Can it be compared?

To deny or affirm is easy; but can you compare the grower of wheat, or corn, with the grower of orchids? To hustle and bustle to produce great numbers of tin cans may make more noise, but the result is what tells. The carnation of yesterday is lost to sight to-morrow.

Please, Mr. Carnationist, don't judge us by the number of our productions, but by the care, the work, and the beauty of our product. The rosarian works not alone for a bloom that can be produced under glass, but for a wider field, that his handiwork may charm not only the grower under glass, but the cultivator of a little garden, on the country side, the owner of a window ledge in the city.

Had the question been, Why is there more unanimity among carnation growers than among rose growers? I think it would have been more to the point; not that there is much jealousy or contention among rose growers, but more attention to the proper placing of their products before the public is needed. There certainly is far more push, more ambition, and less neglect on the part of carnationists, and more desire to do their business the highest amount of good than is shown by the rose men. If this be progression, then the former are more progressive.

Your comments, Mr. Editor, seem to me to be to the point, exactly.

BENJAMIN DORRANCE.

The Effects of Winter in North Carolina.

Editor Florists' Exchange:

As the sap is now in full swing we can see what damage has been done by the Winter. And, really, we have been surprised at the small amount. While every one seems to think that it was one of the coldest Winters ever known in the South, the damage to vegetation has been less than it is in some Winters normally mild. The difficulty in our ordinary Winters here is that we are apt at any time to have warm spells long enough to start the sap moving, and then a reverse to cold does damage. Last Winter was steadily cold, and plants kept dormant. Figs are less injured than I have ever known them, and now the young dormant figs are swelling off clear to the tips of the shoots. On one side of my house I have a little enclosure for shrubbery and flowers and to screen off the kitchen wing. This is surrounded with a wire netting fence, on which Clematis paniculata climbs. Inside, among other things, is one bush of Gardenia florida, one of Pittosporum tobium var., a clump of Hydrangea Hortensia and a lot of tea roses. This little enclosure is sheltered from the morning sun, being on the northwest corner. Now the singular thing about this plot is that the Clematis paniculata is nearly all dead to the ground, while the gardenia has not lost a leaf, and the pittosporum only shows a little singeing. The hydrangea is in full leaf now and not a bud was hurt. The tea roses lost their leaves from the cold, but that was an advantage. But that gardenia should escape unscathed when clematis is killed down is a little singular.

Most of the fruit trees have now passed blooming, and the peach trees are loaded with the young fruit. Plums likewise. I believe that the peach crop in this State will be a phenomenal one from present prospects. Now, April 5, the early tomato plants are going into the ground. Of course, there is still a little risk in this, but as we have plenty of reserve plants we always take the risk, for the earlier we can get tomato plants into the open ground and have them live, the earlier we get the ripe tomatoes. Then, as my work is largely experimental, it is always best to learn something even by a failure.

The canna beds had their Winter blanket of leaves removed last week, and now they are shooting up thickly. These beds were only planted last year, and we have not lifted them this Spring, since they are not yet too thick; but next Spring they will probably require lifting and dividing. We have lifted cannas here in the Fall, and then have lost a great many by drying during the Winter; now we never lift them till Spring, for they keep far better under a cover of leaves held down by the dead tops laid on them. The early start is an advantage. If we were planting dry roots now it would be May before they showed above ground; while the roots that have wintered outside have now, this early in April, made shoots six inches high. Erythrina Cristi-galli, twenty years old, passed the Winter safely as usual, with a mound of sawdust over the stump.

Since the above was written we have had a cold snap, and some frost, and the young figs were injured. Beans and Irish potato tops were singed, but the garden corn was not hurt. Fruit trees having their foliage largely developed were in good condition to escape injury, and I cannot find that any was done. At present writing, April 25, the roses are getting well into bloom. The Banksias are drooping in sprays of gold on many a porch. The tea roses are making their finest buds; and the vegetables seem to be recovering from the effects of the frost. The early planted gladioli are nearly a foot tall; and the cannas are likewise shooting up. The early figs were pretty well blasted by the cold snap, and we will have to depend

for fruit on the later ones, which are always smaller than the early ones. Just now the garden work is much impeded by the very dry weather, and we are hoping for rain. One of the prettiest things now is the blue phlox, of which there are numerous beds in the Raleigh lawns. This plant should be used more extensively than it is, for the mass of blue is very attractive at this season.

W. F. MASSEY.

Raleigh, N. C.

Reflections on Current Topics.

MR. EDITOR.—From your recent issue I gather that my personality is still an object of inquiry, and my poetry (?) a subject of criticism. Now, it seems strange to me that I, of all the scribes who hide their identity under initials, noms-de-plume, and other convenient forms of obscurity, should alone be singled out, and made the object of invidious inquisitiveness. For example, there is a paper, the conductor of which once raised a howl about "bemasked, skulking scribblers," that now delights in printing every week testimonials from parties who, my friend Birnie would say, are "afraid to sign their names;" and nobody evidently cares anything about their personality. That is only one example; I could cite others, but won't. Is it because the "writings" of the other offenders in this respect are unworthy of notice, and, per contra, my own effusions have so much of imagined value that I am thus honored? I have before quoted from experts on the value of noms-de-plume. Permit me to once more quote what Junius said, the most powerful "bemasked, skulking scribbler" of any age in the world's history: "A printed paper receives very little consideration from the most respectable signature." That's why the commission men ignore John Birnie's tirades on their defects. I suggest that there is no law that compels him to be "jarred" any longer than he himself is willing to stand the shock.

With the "poet laureate's" criticism it is different. His profane fault-finding with my best effort at rhyme but bears out the truth of Shenstone's remark: "Every good poet includes a critic; the reverse will not hold." And herein was I misguided. Truly we live and learn.

I observe from the outlined program of the S. A. F. O. H. convention, to be held in August next, that valuable time is again to be wasted on a "president's reception." Beyond the opportunity to display "six square feet of boiled shirt," and a claw-hammer coat, by those who possess such, I never saw any good or sufficient reason for this meaningless, useless function. Especially is it to be condemned, when there is so much to be done, and so little time in which to do it, that suggestions to refer part of the society's legitimate work to another tribunal—a national council of horticulture—have taken active shape. I am pleased, however, to notice that offer of Treasurer Beatty to give prizes for the best essays on the subject of "The Ideal Employer." But it is one thing to tell a fellow what he should be, and quite another thing for him to live up to what is expected of him by those who seem to know better than he himself just what he ought to be. It seems to me the discussion will be productive of as much good as if I were to point out the defects of John Birnie and other growers—after I had found out what these deficiencies were. They will still persist, no doubt. I hope Treasurer Beatty will not debar the regular scribblers, and poets, from the contemplated competition. I myself am just thirsting for a chance to hold up the mirror before the "ideal employer," and take my chances of getting a prize, and of the employer ever reflecting my ideal of himself.

Excluding the provision made for "the light-brained brigade," and the other matter mentioned, I am pleased with the program, and look forward to a grand gathering in August, no matter who is to be the next president.

On looking over the Special Spring Number of one of your contemporaries—the one that has as a frontispiece a picture that has been doing duty in several calendars this year, but is nevertheless charming, on account of the large display of unadorned nature presented—I notice that Scott has anticipated "The Ideal Employer" matter, to a great extent. I presume this was done as a sort of guide to those desiring to compete in the Beatty contest, though it may probably put the able author of it out of the running for the prize. One remark of Scott's strikes me as somewhat peculiar. He says: "With sincere joy and gratitude we can point to several young men now in business, or holding good positions, whom your humble servant first taught to set a plant level or handle the hoe." The inference is that the masterful initial instruction received by these young men was wholly, or partly, responsible for their after success—a case of "like master, like man." I believe that is mere egotism. The ability to succeed is within the individual, and is rarely, if ever, developed by external influences. The men who were similarly taught, but failed, of whom the gentleman says nothing, go to prove this. But we are all willing to assume association with the successful ones, taking credit, in a measure, for their successes; rarely, however, do we want to be identified with the failures. That a man, I mean the determined one, will develop his God-given talents, without extraneous assistance, is shown in Scott's own case. We have never read, or heard of any one but Scott himself being responsible for his becoming, as one correspondent recently remarked, a proficient toastmaster "in his own illimitable way," an author of repute, and an "endless chain" writer on miscellaneous and other kinds of hints. And there are others, including

JOB.

CHRYSANTHEMUMS

For Exhibition and Decoration.

(First prize essay, read by Wm. H. Griffiths before the Monmouth Co. Horticultural Society, Oceanic, N. J., May 5, 1905.)

There are a number of different types of this queen of Autumn flowers. They are as follows: Japanese, Japanese incurved, Japanese reflexed, incurved, hairy or plume, anemone, Japanese anemone, anemone pompon, pompon, and singles. For growing on the single stem for exhibition blooms, the first six types are exclusively used, although for bush plants and decorative purposes every gardener should grow a few plants of the smaller types.

Wintering the Stock.

One of the main points in chrysanthemum growing is good stock to propagate from. After the plants have bloomed, cut them down and place them in a cool, light house, where frost can be kept out. Keep them a little on the dry side, and also free from green fly. Varieties which are shy at making cuttings can be propagated in the Fall, growing them in a cool house through the Winter and then propagating the tops in the Spring. This also applies to any scarce varieties. By the middle of January shift any of the plants which are not making good cuttings into a house with a night temperature of 45 degrees. This will bring them along gently.

Propagation.

The time to propagate depends on the purpose for which the plants are needed—for specimen bush and trained plants, December and January; for exhibition blooms, February and early March; and for small bush and single stem plants in 6 and 7-inch pots, May and June (the latter can be propagated in a cold frame, in a shady corner).

The propagating bench should be in a house (north aspect preferred on account of less air being needed) where a night temperature of 50 degrees can be maintained, with a rise to 60 degrees with sun heat. Clean and whitewash the bench thoroughly and fill with fresh sand (not too gritty) to a depth of three inches. Give the sand a thorough watering the day before propagation commences; it will then be in good condition to firm.

Short-jointed, medium thick cuttings, about 2½ inches long, are best. Take those which are furthest away from the stem, as they will make cleaner growth. Make a clean cut below a joint, trim off the lower leaves, and cut the tips of the larger leaves. Dibble closely together in the sand, not too deep, firming each row with a brick. As each variety is put in, water gently to settle the sand around the cuttings. Dew the cuttings over twice a day till root action commences, never allowing them to flag, or be wet over night. A cutting once wilted gets hard, and takes longer to root. On the least sign of fungus, scrape it off, or it will quickly spread and destroy a large number of cuttings. In about two weeks' time most of the cuttings will be rooted.

First Shift.

When the roots are about half an inch long, lift carefully and place them in flats filled with light soil, about 2½ inches apart, firming moderately. Water just enough to settle the soil about the roots and place them in a cool house, with a night temperature of 50 degrees, rising to 60 degrees with sun heat.

Spray the plants over two or three times a day on bright days; shade when necessary, and give air whenever possible after two or three days. From my experience, this is a better method of starting the young plants than by potting into 2½-inch pots straight from the cutting bench. In the boxes the plants get a more even moisture and keep growing from the start. In small pots they need constant attention for water, and if not closely looked after they are liable to get a bad check. In about two weeks after boxing, the plants will be ready for a shift into 3-inch pots.

Soils.

This is a point that has to be closely looked after. Some soils, such as we have in this district, are very hungry, and need considerable manure; other soils do not need it so much. In my opinion it is best to give the plants sufficient food in the soil to insure a good, stocky growth right from the start.

The compost heap should be prepared in the Fall. A good, fibrous sod from an old pasture is best, cut about 3 inches thick. To every layer of sod add about one-quarter cow manure and a sprinkling of soot sufficient to blacken it over. Place in layers, bringing the stack to a point. This will keep the snow and rain from penetrating very much.

COMPOST FOR FIRST POTTING.—The soil for the first and second pottings should be screened. To every bushel of soil add a 5-inch potful each of Thompson's manure and bone meal, and a sprinkling of soot. Mix it thoroughly and let it stand for a few days until needed. This also will do for the 6-inch pots, providing the soil is coarser.

Compost for Final Potting or Boxing.

The soil for the final potting or boxing should be prepared a week before using. Chop the sod in pieces about the size of a baseball. When sufficient is chopped, level it a foot thick and three feet wide. To each nine feet of length add 20 pounds of Thompson's manure, 10 pounds of bone meal, and a good sprinkling of Scotch soot. For very heavy soils a barrow load of lime-rubble or coarse ashes could be added to keep the soil open. Mix thoroughly and place in a heap until wanted. The soil will then be thoroughly impregnated with the ammonia, etc., from the different ingredients. For weak-necked varieties, such as those of the Carnot family, add more bone meal and less of Thompson's manure.

Potting.

For growing exhibition blooms, pots are best for several reasons. Each plant has individual treatment, as regards watering and feeding, and is not so susceptible to damping as plants in boxes or benches. If growing too tall they can be easily moved, and can be kept back or brought forward at will when blooming. Eight-inch pots will do for the stronger growers, though some varieties do fine in 7-inch pots—Mrs. F. S. Vallis, Lord Salisbury, W. R. Church, H. J. Jones and Guy Hamilton, especially. From the time the cuttings are struck the plants must never be allowed to get root bound. As soon as the pots are well filled with roots repot from the flats into 3-inch, then into 4-inch, 5½-inch or 6, 7 and 8-inch pots in rotation. Never use dirty or wet pots. If you do, the roots will stick, and break when repotting.

The afternoon before potting commences, look over your plants and water any that are liable to get dry over night. They should then be in good condition for potting. For the 3-inch and 4-inch pots a label should be used to ram the soil, finishing with the thumbs. For the two later pottings, rammers must be employed. The degree of firm potting which a chrysanthemum needs depends on the soil. Light soils can be rammed firm; heavy clay soils will need but little. Bush plants should be potted medium firm, a quick growth being needed.

In the first place, see that the drainage is put in properly. Place one large crock over the hole, hollow side down (for the 3 and 4-inch pots this will

save a lot of watering. But as soon as this is done the ashes should be cleaned out and the plants stood in their proper places.

Set the varieties in blocks, grading from north to south, according to height. Always give plenty of room; and if the benches are wide, leave a walk down the center. It will save a lot of trouble if the plants are staked now. For the taller varieties four or five foot stakes are best, tied securely to two wires running lengthwise. With two wires the stakes can be raised to any height and the plants kept upright. If the house is long, run wires across for braces. If this is not done the plants will fall about when in bloom. For the dwarf varieties one wire will be sufficient.

WATERING AND SYRINGING.—To have well-ripened wood, without which first-class blooms cannot be had, watering must be done very carefully. Look over the plants three or four times a day, in preference to giving them all a drop whether they need it or not, affording sufficient to soak through. After potting, especially, is this true. If, overwatered at this stage, the foliage will turn yellow, the soil being rich and firm holding the water. For a guide tap the pot with the knuckles. If it sounds hollow it is safe to water. When the plants are in bloom, watering must be done carefully, and as early in the day as possible, so that the plants will have a chance to dry off before night. By doing this there is less evaporation through the night, and consequently less danger of the flowers damping. In the earlier stages the plants should be sprayed two or three times daily in bright weather. When in their permanent quarters, one good syringing daily on bright days will be sufficient to keep down red spider and the plants in good shape, having the foliage dry over night. Of course, there are exceptions to this. Take, for instance, a hot, windy day, after a spell of dull weather, the plants will flag badly. A light spray overhead will do them good. Don't be tempted to water in this case unless it is really needed. Stop syringing when the flowers show color.

(To be continued.)

Chrysanthemum Dorothy Faust.

The illustration herewith shows blooms of chrysanthemum Dorothy Faust, which originated with H. I. Faust, Merion, Pa. Several years ago he noticed a plant growing among a batch of Major Bonnaffon, planted on a bench, that was entirely distinct; he

kept this plant and found it to be a first-class white and a grand variety for late flowering. The past four years he has grown it extensively and has found it the best variety for cutting during the latter part of November and December.

Mr. Faust tried by various means to ascertain from well-known growers if this was a new or old variety; and if old, what it was. But no one knew it last season; it was sent to the various committees of the Chrysanthemum Society under the name of Dorothy Faust. It was examined and scored by several committees, but Eugene Dailedouze, of the New York Committee, stated it was Mrs. Robert McArthur. Since that time growers in Philadelphia, who years ago had Mrs. McArthur, claim that it was not as good as Dorothy Faust as a keeper or shipper. Fred Ehret, who handled almost all the flowers grown by H. I. Faust, is very enthusiastic about it, saying it gave excellent satisfaction to all customers to whom he shipped flowers, and retailers in this city stated that they had used the same flowers in several decorations, it being such a good keeper.

As Dorothy Faust proved such a good thing, Wm. P. Craig made arrangements with H. I. Faust to distribute the stock this Spring and is meeting with great success.

Henry Eichholz, of Waynesboro, Pa., has been interesting himself in the discussion, and has offered to supply plants of Mrs. Robert McArthur to be grown for comparison with those of Dorothy Faust. In a letter to Secretary Lonsdale of the Philadelphia Florists' Club, he says: "I have grown Mrs. McArthur for five years, and shipped the flowers to Pittsburgh markets in quantity each year, they having always realized the best prices. I never had a complaint of the variety not being a good shipper. Since the C. S. A. and Nathan Smith & Son are trying to straighten out the varieties, it seems too bad that Mr. Craig should create confusion.

"As far as re-introducing Mrs. Robert McArthur (Dorothy Faust) is concerned, I can only compliment Mr. Craig, as at the low price it is offered, it will always prove a better and safer investment than Wm. Duckham, or any other fancy transatlantic variety of recent date; in fact, I can hardly understand how a grower could be without it. But please do call a variety by its real name."

DAVID RUST.

In E. Y. Teas' gladiolus advertisement, page 604, of last week's issue, the word "Childsii" should not have appeared. See corrected advertisement in this issue.

CHRYSANTHEMUM DOROTHY FAUST

be enough). Over this place a few small crocks to a depth of from ¾ to 1¼ inches, according to size of pot. Put some of the rough sod and a little of the fine stuff over the crocks and ram firmly. Place the plant in the center of the pot, filling in and ramming gradually and firmly, holding the ball down with the left hand, being careful not to injure the roots. When firmed evenly all-around spread a little on top and finish off with the thick end of the rammer leaving enough room for watering and top dressing at the final potting.

General Information and Routine Work.

THE HOUSE.—For chrysanthemums a high span, running north and south, with plenty of head room at the sides, is best, fitted with top and bottom ventilators and sufficient piping to keep a good circulation in cold and damp weather.

If benches are in the house it is handier for working; but we have had as fine blooms with as little damping, in a house that has been used for pot fruit trees in the early Summer, standing the pots on boards.

ARRANGING AND STAKING.—Until the final potting, the plants should be stood on ashes; this will

CLUB AND SOCIETY DOINGS

NEW YORK FLORISTS' CLUB.—The meeting on Monday evening last, May 8, was devoted to an exhibition of Spring plants, such as are sold in the market at Canal and West streets; a discussion of the benefit, or otherwise, of the cut flower and plant peddlers; a talk on the most valuable plant introduced within the memory of any club member, and other interesting topics. John Birnie was in charge of the plant display and succeeded in bringing together a most excellent and comprehensive representation of market plants.

Over thirty members were in attendance, President Traendly occupying the chair. J. Austin Shaw reported for the outing committee that over \$100 had been subscribed as prizes for athletic events, and that a generous response as regards advertising in the program had been received. The affair promises to be a most successful one. Mr. Butterfield stated that he had been in communication with the park authorities of Brooklyn, relative to the order debaring children under 14 years of age from entering Prospect Park greenhouses, unless accompanied by parents or guardians. The attention of the Park Commissioner had been called to the injustice of this ruling, and that official's reply was now awaited. Girard Dreyer was elected to membership. The amendments to the by-laws, by which the secretary shall send out all due bills and collect money for same, subsequently transmitting the cash to the treasurer; also increasing the secretary's salary to \$250 per annum, were passed unanimously. A form of certificate to be awarded by the club for meritorious exhibits was ordered drawn up.

The following report of the committee of awards was then presented by the chairman, Patrick O'Mara, who gave an interesting reminiscent talk on the subject of growing and selling market plants in New York, a branch of the business, he said, the extent of which was not as fully known or appreciated by the trade as it should be.

H. Steinhoff, West Hoboken, N. J., H. P. roses, award of merit for culture. Chas. Hunt, Port Richmond, S. I., Pelargonium Victor, assorted geraniums, daisies, award of merit for culture. Herman Mende, Seacaus, N. J., Mme. Salleroi, geraniums, English ivy, ivy geraniums, geranium Beaute de Poitevine, award of merit for culture. E. C. Pesenecker, Jersey City, N. J., pansies, candytuft, variegated funkia, award of merit for culture. Smith & Lappe, Phlox subulata and candytuft, award of merit for culture. Peter Yost, West Hoboken, N. J., Sempervivum Lindenii variegata, award of merit for culture. Toni Cassia, Brooklyn, Armeria maritima, honorable mention. H. Bauman, West Hoboken, N. J., mignonette, mixed geraniums, award of merit for culture. Hentman & Wagenfahr, Winfield Junction, L. I., cinerarias, mixed polyanthus, award of merit for culture. John Reickert, Union Hill, N. J., Crimson Rambler roses, award of merit for culture. John Tschupp, West Hoboken, N. J., fuchsia Little Beauty, award of merit for culture. James H. Henderson, Jersey City, hydrangeas, award of merit for culture. S. C. Schroeter, Bayonne, N. J., coleus, ageratum, salvia Fire Ball, award of merit for culture. John Birnie, West Hoboken, N. J., geranium Mme. Landry, verbenas, one example box of pansies, award of merit for culture. George Fiest, West Hoboken, N. J., daisies, myosotis, honorable mention. Aug. Kresinger, Jersey City, nasturtium, honorable mention. Augustus Spies, New Springville, S. I., pansies, award of merit for culture. Chas. Heinz, West Hoboken, N. J., Myrtus communis, honorable mention. Wm. Stadtmiller, Jersey City, sempervivum, lantanas, musk, award of merit for culture. Fred Englen, West Hoboken, N. J., heliotrope, pelargonium Victor, award of merit for culture. George Darsley, Jersey City, geraniums, award of merit for culture. John Harrison, Jersey City, lemon verbenas, award of merit for culture. Leach Bros., Jersey City, double petunias, heliotrope, anthemis, award of merit for culture. F. Weinberg, Woodside, L. I., collection of sempervivums, sedums, celiverias, Carissa foetida, phyllocactus, award of merit for culture. Fred Dressel, Weehawken, N. J., young kentias. Guttman & Weber, New York, carnation Victory.

John Birnie had brought with him a box of pansies, which he designated a "horrible example" of the results obtained from poor quality seed sold by some advertisers in the trade papers, characterizing in no mistaken language the detriment to business arising from such practices. Mr. O'Mara believed such a result might come from the specialist having run out of his own strain, securing seed from other sources to fill orders. In this the specialist, he thought, made a mistake. No reputable seed house in the country would handle seed that would produce the miserable pansy plants shown by Mr. Birnie. A suggestion by the president that the result might be charged to the grower was resented by the complainant, who stated his 25 years' experience in successful pansy culture was sufficient guarantee that he was no novice in the art.

Mr. Weinberg gave an instructive talk on the plants shown by him, directing special attention to Carissa foetida for commercial purposes.

A recess was taken, during which the members enjoyed Chairman Nugent's hospitality. On reconvening the various questions propounded at the last meeting were discussed. Mr. O'Mara replied to the query, "What are the essential qualifications of a judge of cut flowers and plants?" He said, among other things, a judge must be thoroughly acquainted with the subjects shown, must know them at their best, and the characteristics of each. He must be able to discrimi-

nate, from actual knowledge, what constitutes the best. He must be a man of decision, able to make up his mind quickly, and when once his opinion was formed to stick to it. Above all, he should keep sober until after his work was finished. (Laughter.) The speaker condemned the practice common at some exhibitions of permitting late staging of displays, compelling the judges to work while surrounded by the visitors to the show, and often throwing upon the judges the onus of a committee of observation in locating the positions of the various classes and the plants included in these. Horticultural societies should bear in mind that the judges came to shows prepared to go to work and everything should be in readiness for them. Many a so-called error on the part of judges occurred, not because the men officiating had not the necessary knowledge or experience to decide fairly and properly, but simply because they are rushed to death and had to do their work under the most unfavorable conditions possible. An exchange of opinion on the part of judges was impossible when they were surrounded by individuals straining their ears to ascertain what was being said.

James Scott thought judges should not be too thick-skinned, so as to meet the complaints of the chronic kickers. Fleetness of foot, to take a judge away from an exhibition hall as quickly as possible after his work was done, was a very necessary qualification.

Alfred H. Langjahr replied, as a commission dealer, to the question, "Are Street Merchants and Peddlers Beneficial or Detrimental to the Florists' Business?"

sale man is glad to trade with him. He is the advertising agent of our business. You will find him on Broadway; he wends his way through the Fifth Avenue crowd, or among the slums, where a flower is a ray of sunshine to those who see nothing but fire-escapes and humanity; and when all the shops are closed on a Sunday or a holiday he is silently plodding along and disposing of his flowers. "I wish to emphasize that here in New York, where the grower is continually adding to his plant and new men are going into our business every season, what would we do without the vender? He is a hard-working, industrious person. If he would show the same ability employed as a salesman for John Wanamaker, he would be well paid. In closing I wish to say that he is the Daniel Boone of the cut flower business."

George Darsley, Jersey City, said, so far as the market plantsmen in New York were concerned, their business for a great many years had been, and is, entirely with the peddlers. Some forty years ago stands for the sale of plants were located on the sidewalks and in the city's different markets. Then good prices were obtained, because better stock was grown. Now small plants that will sell, retail, at 10c. must be supplied; and it is necessary to raise 50,000 instead of 25,000, as formerly, to make ends meet. Ninety-five per cent. of the plants grown for market here are disposed of to the peddler, and between \$7,000 and \$8,000 change hands every morning in the market. Without the outlet thus provided a great many growers could not exist.

John Donaldson, secretary of the Cut Flower Exchange, believed the street man was necessary also in the cut flower trade. He had observed that, during

A PORTO RICAN CHURCH DECORATION, EASTER, 1905

By Wm. C. Smith, San Juan.

He divided the street merchants into two classes—the "fakir," who employs unfair means in selling his flowers, and the "vender," who is beneficial to the business. He pointed out some of the fakir's methods, and their harmful influence both on the wholesale and retail trade. Continuing he said, in part:

"Another bad feature in our business is, if prices have been steady for some time, and the wholesaler cleans out to the vender a lot of special violets, Bridesmaid or American Beauty roses, and the latter is seen by the buyers hawking the flowers around, you may have to cut some slips the next day. I do honestly believe that flowers are cheapened when the same stocks are continually put out for sale on the street.

"In cities of the third class a 'vender' may do a great deal of harm; and if the store men will get together and use up all the spare flowers, to keep them off the street, I think it would pay them. Cities of the second class will have to submit to some street vending; and in cities like New York it will be impossible to do without the vender. In Boston a few years ago the wholesaler would not sell anything to the street man until 6 o'clock at night. In Philadelphia the street man is known as the 'fakir.' He is not allowed in the store proper until the dealer is ready to wait on him, and then is taken from a cage in the rear of the store, one at a time, to the ice-box to make his purchase and then retired. This prohibits him from interfering with the regular customers. In Chicago, where they have so much shipping trade, I do not think much stock should find its way out on the street.

"Here in New York we have practically no shipping trade and have to depend on our local people to buy everything that is shipped to us. We receive flowers from nearly every State in the Union and sometimes from Canada. What would we do without the street vender? He pays cash, buys in large quantities, and takes his flowers with him. He will purchase 50,000 violets or 5,000 carnations and all the red roses you are willing to sell him. Of course, there are other vendors that will only purchase 1,000 violets; and the flowers are on sale for him here from 6 a. m. until 7 at night. Every whole-

severe weather, when the peddler could not ply his calling, prices on cut flower stock generally went lower. W. E. Marshall did not think the peddler hurt the retail plantsman. He had experienced a very large call for plants for window boxes this season. The same view was held by Mr. Wheeler, also as regards the competition of the department stores, where, in some cases, stock was improperly handled, and therefore unsatisfactory, sending the purchaser to the regular florist for future supplies.

In the discussion on the "most valuable plant introduced within the memory of any member of the club," Mr. O'Mara championed Ampelopsis Veitchii. It had adapted itself to the American climate. The English ivy did not survive our Winters; the Boston ivy did. The latter colors up beautifully in the Fall. It is used extensively on churches and other buildings, to every curve of which it readily conforms, and brings into the city a touch of nature that nothing else does. It is easy of propagation either by seed or by cuttings, coming practically true by the former method, although a few variations from the type may occur, and its culture is of the easiest.

Mr. Darsley favored the double geranium, among the first introductions of which, and still among the best, was Gloire de Nancy. Charles Lenker espoused the cause of the Crimson Rambler rose; James T. Scott that of American Beauty, and Mr. O'Mara had a second choice in the Mme. Crozy canna.

The president appointed as a transportation committee in connection with the trip to the S. A. F. O. H. convention at Washington in August next, Messrs. Sheridan and Nugent. Secretary Young announced that the June meeting would be "Ladies' Night;" there will also be an exhibit of peonies then. The meeting adjourned at 10.30 p.m.

THE HORTICULTURAL SOCIETY OF NEW YORK held its annual meeting and exhibition at the Botanical Garden, Museum Building, Bronx Park, on Wednesday and Thursday, May 10 and 11. The old board of officers was returned. George C. Nash and C. Dieterich were elected members of the Council versus Peter Duff and P. J. Berckmans. The secretary's report showed a total membership of 189 and a balance of \$710.00 in the treasury. It was announced that the society would issue a bulletin at least eight times during the year, in which would be contained the proceedings of the society, the bulletin to be distributed to the members. Dr. N. L. Britton called the attention of those present to a new dracena named americana, with green foliage, a native of Honduras, Central America, said to be the only American representative of the genus. It is a rapid grower, and Dr. Britton thought it would find its way into commerce as an ornamental plant. The specimen exhibited had been grown from seed in the greenhouses of the garden. He also showed a Mexican opuntia, the flower of which had narrow petals. This plant had been collected on the battlefield of Buena Vista, Mexico. Blooms of the Australian fadeless flower, received from Luther Burbank, were also on exhibition. S. W. Fletcher, of Cornell University, delivered a lecture on "Summer in the Fruit Garden," illustrated with stereopticon views. Mr. Fletcher emphasized the necessity of tillage, spraying, etc.

The exhibits this year were not so numerous as in previous years; the larger part of the exhibition

American Peony Society.

The nomenclature committee of this society makes, April 1, the following report of progress. The committee was appointed by the society to investigate the nomenclature, botanical status and cultural requirements of varieties, particularly with respect to fertilizer experiments designed to influence the size and shipping qualities of the flowers.

Your committee is pleased to state that an excellent beginning in the important study outlined above has been made. Soon after the announcement was issued, a brisk correspondence sprang up with peony growers regarding the scope and purpose of this comprehensive study. This resulted in securing before cold weather arrived a fine collection of plants—probably one of the largest ever gotten together, as will be seen from the list below. The work has been materially aided by European peony growers, who have become interested in the enterprise mainly through the good offices of President C. W. Ward, who has labored both indefatigably and effectively in the cause.

SITE AND SOIL.—The field chosen is a short distance from the site of the new State College of Agriculture. It is about 500 feet above Lake Cayuga and slopes gently to the south, being protected by an elevated bluff and wooded land to the north. The soil is a light clay loam as nearly uniform as it was possible to secure.

PLANTING.—As each consignment arrived it was unpacked, the roots of the varieties described, classified

The premium list for the forthcoming show, to be held next month, is now in the printer's hands, and will be distributed shortly. Subjoined is a list of the commercial classes; there are also classes for amateurs and private growers. The exhibition will be held in the Auditorium Chicago, and J. B. Deamund, 51-53 Wabash avenue, will be the manager.

Herbaceous Peonies.

COMMERCIAL CLASSES.—DOUBLE.

Class 1.—Largest and best collection of varieties, one flower of each. First prize, \$15; second, \$10; third, \$5.

Class 2.—Collection of best twelve and most distinct varieties, six flowers each. First prize, \$10; second, \$5.

Class 3.—Best collection of varieties in various shades of rose pink, not less than three nor more than six flowers each. First prize, \$10; second, \$5.

Class 4.—Best collection of varieties salmon and flesh colored, not less than three nor more than six flowers each. First prize, \$10; second, \$5.

Class 5.—Best collection of white varieties, not less than three nor more than six flowers each. First prize, \$10; second, \$5.

Class 6.—Best collection of varieties, cream white and light yellow, not less than three nor more than six flowers each. First prize, \$10; second, \$5.

Class 7.—Best collection of crimson varieties, without stamens, not less than three nor more than six flowers each. First prize, \$10; second, \$5.

Class 8.—Best collection of crimson varieties with stamens, not less than three nor more than six flowers each. First prize, \$10; second, \$5.

Class 9.—Best collection of tricolor varieties, including flowers with guard petals, collarette and center petals of different colors, not less than three nor more than six flowers each. First prize, \$10; second, \$5.

Class 10.—Best twelve specimen varieties, twelve blooms of each variety. First prize, Doubleday silver cup; second, \$10.

Class 11.—Best 100 blooms Festiva Maxima. First prize, \$10; second, \$5.

Class 12.—Best 100 blooms pink, any shade. First prize, \$10; second, \$5.

Class 13.—Best 100 blooms crimson. First prize, \$10; second, \$5.

COMMERCIAL CLASSES.—SINGLE.

Class 14.—Best collection of Japanese varieties, including so-called Imperial varieties. First prize, \$10; second, \$5.

Class 15.—Best collection of single varieties. First prize, \$10; second, \$5.

AMONG THE GROWERS.

Mr. Heacock has just now a very choice lot of palms at his establishment. He is strong on kentias in all commercial sizes. K. Belmoreana is grown most extensively, and of these he has a grand lot; even in 3-inch pots they show good sturdy habit and healthy growth. The 4 and 5-inch plants are very fine and these sizes he has by thousands. When the 6-inch stage is reached, many of the plants are made up, four to a pot—a tall one in center with three around. These are to be seen in large numbers, in sizes of 7, 8, 9 and 10-inch pots. A fine lot of about 400 of the last named size has lately been potted up for the Summer sales. K. Forsteriana, when the plants reach the 6-inch size, is used entirely for made-up plants, as they are not demanded in quantity as large single plants. There is an exceedingly fine lot. One entire house of K. Belmoreana, single plants in 8 and 9-inch pots, are very good value, being hard and in grand condition. Another house contains a nice lot of plants, all made up in 10-inch pots and 12-inch tubs. The former are now fully established and will soon be moved into tubs as decorative plants. This entire house is worth going some distance to see, as the plants are all perfect and in good condition for immediate use.

Areca lutescens is represented by two benches of plants in 6 and 7-inch pots. These are not held to grow on, as the demand for extra large plants of this palm has fallen off. A few tatanias and phoenix are also grown; and one can always find a batch of cocos on this place. Intending buyers will do well to look this stock over. Wyncote is at Jenkintown station, on the Philadelphia and Reading Railroad, 10 miles out from Philadelphia, with splendid train service, the greenhouses being only five minutes' walk from the station.

PARTIAL VIEW OF EASTER SHOW HOUSE OF J. B. BRAIDWOOD, COLORADO SPRINGS, COL.

tables being taken up with collections of wild flowers and flowering shrubs. Those in the trade who exhibited were F. R. Pierson Co. Tarrytown, N. Y., who had a collection of crotons, dracenas, gardenias, and other decorative plants; also cut flowers from hardy shrubs, and a collection of bizarre and other tulips. Lager & Hurrell, Summit, N. J., showed a fine collection of orchids, both as cut specimens and flowering plants, as also did Julius Roehrs, of Rutherford, N. J. Collections of cacti and other succulent plants were staged by Frank Weinberg, Woodside, L. I., Gertrude Padrock and Mrs. Theresa Glibes, also of Woodside, L. I. The New York Botanical Garden exhibited some decorative plants; also a collection of flowering shrubs. Wild flowers and flowering shrubs were also shown by Julia J. Noll, of Plainfield, N. J., the Bedford Agassiz Association, of Bedford, N. Y., P. Nelson, of Bedford Park, N. Y., Mrs. Pauline Kaufmann, New York City, W. H. S. Wood, Greenwich, Conn. (gardener, F. M. Ryan), Louis Dupuy, Whitestone, N. Y., had four plants of *Crassula hybrida coccinea*. There was also a collection of wild violets from various amateurs throughout the county. Siebrecht & Son, New Rochelle, N. Y., also staged a collection of cut hardy flowers.

NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY.—This society held its regular monthly meeting on the evening of May 3, at the Glen Cove greenhouses. It having now been decided to meet in the evenings, the attendance was fairly large. A paper on hardy flowering shrubs and tree-like shrubs was read by John F. Johnston. Discussion followed.

J. F. J.

alphabetically, and planted as promptly as possible. The first alphabetical scheme was soon filled up, and another one started. Had it been possible to secure the plants all at one time, a well-systematized plan might have been carried out. However, the present arrangement will simply give the peony student a little more work. The plants were set, with crowns 2 inches below the surface, in rows 4 feet apart and 3 feet apart in the row.

LABELING AND MULCHING.—As the roots were set, a planting record was made and a temporary wooden label assigned to each plant. Before freezing, the rows were covered with a mulch of mucky soil or stable manure. When the supply of the latter gave out, the muck was used. So far as one can tell by early Spring examination, the roots have wintered well.

Intending contributors should forward consignments promptly so that the plants set this Spring may be placed on terms as even as possible with those set last Fall.

The committee is most grateful for the hearty co-operation of the friends of the peony both at home and abroad, and looks forward with the keenest interest to the flowering season of 1906, although a considerable amount of bloom will undoubtedly appear this Spring.

DONORS.—The following is a list of those who have contributed thus far:

EUROPEAN PEONIES RECEIVED IN 1904.

Review of the Market

NEW YORK.—Flowers are plentiful and business is dull. The month of May is never considered a particularly good one for the cut flower trade...

Lily of the valley has been both plentiful and cheap; fortunately, the supply diminished toward the latter part of the week...

CHICAGO.—Business during the past week has not been what could be termed brisk, owing, in great measure, to the strike which still continues...

American Beauty are not coming in so freely as at last report, nor do they sell as rapidly, few going at the top market prices...

Prices of carnations have fallen, and the stock is not moving as briskly as it did the week previous. Lilies have been a glut on the market...

BOSTON.—As is generally expected, there is not much doing at this season of the year in the cut flower line. The only parties who seem to be handling flowers are the street men...

ST. LOUIS.—The cut flower trade here is much demoralized owing to the great amount of outdoor stock in bloom. Some of the florists are doing work for weddings and funerals...

Carnations, too, are as abundant as roses; \$1 per 100 buys good carnations, \$2 for extra fancy; common stock goes at \$5 per 1,000...

Plantmen are very busy just now with all kinds of bedding plants. These are selling well at the stores and market stands.

INDIANAPOLIS.—The bedding season is at its height; an unusual number of window boxes, vases, and flower beds are being filled and made this season...

ican Beauty, of inferior quality, are being received; shorts bring \$5 per 100; 16 to 20-inch stems, \$15, and select 30 to 36-inch stems, \$25 per 100.

Fancy carnations are scarce at \$3 per 100, but medium grades, at \$2 to \$2.50, are plentiful. Field-grown lily of the valley is of unusual quality...

Southern peonies are beginning to arrive. Prices are about the same as in other years—\$4 to \$10 per 100, according to quality and condition.

All indications point to a heavy Decoration Day trade. The G. A. R. societies are urging the strict observance of that day and lay particular stress upon the liberal use of flowers.

BUFFALO, N. Y.—Cut flower trade in general is quite moderate at present, with an ample supply for all demands. Some good violets are still received.

PITTSBURG.—There has been an abundance of stock of cut flowers of all sorts the past week and prices were irregular. American Beauty went at from 2c. up; the street stands had their share of them, but they sold slowly.

E. C. Ludwig had several good decorations the past week—one for the Eagles, and the other for the banquet given to the visiting members of the Rivers and Harbors Committee of Congress.

The Pittsburg Florists' Exchange is still working at its new rooms; when complete, everything will be up-to-date.

The Botanical Society of Western Pennsylvania will hold its next meeting May 18. A talk on "The Tropics of Field Days" and an exhibit of wild flowers will be given.

E. C. REINEMAN.

WASHINGTON, D. C.—Business has improved considerably this week, yet the supply of certain lines of stock was very much in excess of the demand.

CINCINNATI, O.—It is impossible to name prices on cut flowers; the bottom has dropped clean out of the market, and the retail trade is buying only from hand to mouth.

There will be no meeting of the Florists' Society until June 10, when nomination of officers will be made.

E. G. GILLET.

NEWPORT, R. I.—Business in all lines continues very brisk, indeed; especially with the seedsmen, who have most certainly had a splendid trade this season.

SYRACUSE, N. Y.—Trade since Easter has been very good here, decorations, funeral work, etc., working up the surplus stock to advantage.

New York.

The Week's News.

The retail stores are bright and gay just now with the many Spring flowers available. Lilac particularly is being used most lavishly.

At the meeting of the stockholders of the Cut Flower Exchange, held last Saturday, Wm. Amos was re-elected president; the old board of directors was also returned with one exception.

At 457 Fifth avenue, Brooklyn, a new retail flower store has been opened by Hermens & Reger; the first mentioned member of the firm formerly conducted a store in Bridge street, Brooklyn.

Chas. H. Atkins has purchased five acres of land on Patterson avenue, East Rutherford, N. J.

Peter Bisset, secretary of the Washington (D. C.) Florists' Club, was a recent visitor. Mr. Bisset says that extensive preparations are making by the local club for the entertainment of the delegates to the S. A. E. O. H. convention in August next.

George Coleas, who has for some months operated a retail store on Flatbush avenue, near St. Mark's, Brooklyn, has gone out of business.

Harry van Koolbergen, representing Ottolander & Hoofman, Boskoop, Holland, sailed for home, May 10, per steamer Ryndam.

At the request of Park Commissioner Kennedy of Brooklyn, the city aldermen have appropriated \$7,750 to purchase for the city the collection of orchids, palms, ferns and geraniums, belonging to the late Wm. Brown, of Flatbush, N. Y.

Will cost no more with a JUST WONT ground

who knows that all tobacco powder is the same cigar and tobacco store trash he gets at his cigar store or from his seedsmen and JUST WONT ask for our booklet, that is full of the sayings of his fellows, that read: The H. A. S. Co.—I have used the BLACK STUFF FINE TOBACCO POWDER and also the FUMIGATING KIND, and they are all right; do not leave a bad odor; any bug that can stand a siege of the FUMIGATING KIND ought to be sent to O. D. MILLS, Stratford, Conn. He JUST WONT believe that 95 per cent. of all the growers that send for our free five-pound trial sample bags of THE FUMIGATING KIND (for fumigating) and THE BLACK STUFF FINE (for sprinkling), have purchased not once, but again and again, after the trial. WHY BE A JUST WONT when you can have these free five-pound trial sample bags; yes, two of them if one won't do. All we ask is for you to pay the express charge on them. Ask now. Don't be a "JUST WONT". THE H. A. STOOHOFF CO., Tobacco Powder Hobbyists, 116 WEST STREET, NEW YORK, N. Y.

The Retail Trade

An Effective Advertising Design.

The accompanying special Easter design shows how a progressive retail florist may attract attention to his goods at this or any other set day by having a heading made appropriate to the occasion. In this, the Easter bonnet and the lily blend in calling attention to the

anniversary. It is simple and forcible, and the name in block letters further impresses the reader as to who will supply the flowers. It was devised and used by Hales, of Orange, N. J., the past Easter for circulars and in newspaper advertising. But similar cuts may be prepared at small expense for other occasions as well; and any idea may be carried out under the pencil of a skillful designer. D.

Our London Letter.

BY A. HEMSLEY.

THE ROYAL HORTICULTURAL SOCIETY.—The fortnightly meetings continue to grow in importance. At the last one there was a larger crowd of visitors than I have ever previously seen; and they certainly had something to look at, for the hall was filled with interesting exhibits. Miniature rock gardens and alpine plants have been a feature for some time, but the exhibit made by Messrs. Cutbush & Sons at the last meeting certainly eclipsed any previous attempt. Some tons of tufa and spar were used to form a rock garden, which was arranged in an irregular mound, with a background of bamboos, clematis in flower on tall tree stems, Crimson Rambler roses twining up tall poles, with standard lilacs, crimson thorns, pyrus, etc., conifers, Azalea mollis, lilliums and peonies. The foreground was filled with the rarest al-pines. *Cypripedium spectabile* filled a large niche. Another corner was filled with *Primula rosea*, a large patch arranged together being more effective than when single plants are dotted about. Other subjects were treated in a similar manner, the whole forming one of the most unique exhibits we have seen. And the gold medal awarded was fully deserved. Of other interesting exhibits, A. F. Dutton's carnations are especially worthy of note. Cut with long stems, and well displayed in tall trumpet vases, they attracted all visitors. The varieties, chiefly of American origin, included Harlowarden, for which an award of merit was given; Enchantress, in superb condition; Flamingo, Lillian Pond, and others were equally good. Messrs. H. Low & Co. also showed carnations well, including some good things of their own raising.

In my last letter I referred to rose Warrior as coming from G. Paul & Sons; this was an error. This rose came from Wm. Paul & Son, of Waltham Cross, who again showed it in good form, with other good sorts. George Mount also put up roses in grand form, the Frau Karl Druschki being exceptionally fine. If the petals of this rose were of a little better substance it would beat all other white roses for market.

J. R. Box, one of our well-known begonia growers, put up a fine group of *Begonia Gloire de Sceaux*. This is undoubtedly worthy of attention. As shown, it is one of the best pot plants I have seen. In Messrs. J. Veitch & Son's exhibit the blue hydrangeas were a feature. I had previously seen these at their nursery, where, in a larger group, they were most effective. I may here mention that it is by artificial means that the deep blue color is obtained, and the variety most amenable to the treatment which produces the blue is *Hortensia rosea*, a variety more nearly resembling Thos. Hogg, the white one. It is the va-

riety which Messrs. Truffaut & Sons, of Versailles, flower so well for the Christmas and New Year's trade in France. The blue tint is produced chiefly by the use of ammoniated alum added to the water. The use of alum is an old idea, but I have not previously seen such good results as Messrs. Veitch & Sons obtained last year, and again this season.

ANTHURIUM SCHERZIANUM.—These are now a great feature in Messrs. Veitch & Sons' nursery. Many very fine seedling varieties are seen, and it is interesting to note that the firm is not giving them distinctive names, but simply labeling them according to shades of color, etc. They vary considerably, some having long, narrow spathes, while others are broad or nearly round. I measured one which was fully eight inches deep and four and one-half inches wide; others were broader, but not so deep. The colors also varied considerably, some being of a peculiarly vivid hue. *Clivias* are also well done, and there are some remarkably fine seedling varieties; but, like the anthuriums, they were not given distinctive names. In *gloxinias* and other things, which are so easily raised from seeds, distinctive names are now being dropped, and we might very well go further. It seems quite absurd to name tuberous begonias. There may be a few distinct types, yet seedlings are now so good, both in singles and doubles, that color distinctions are all that is necessary. Even in carnations, I think each raiser might keep to colors only, calling them Smith's white, Jones' scarlet, or Johnson's pink, etc. Even if improvements are made, they could be recorded from season to season, and it would save putting good names into oblivion; for it must be disappointing when a good thing has been named after some distinguished person, to find that, the next season, it has been superseded by a variety named after someone in humble circumstances.

THE DAFFODILS are now in full array. The finest things I have yet seen are King's Norton, an immense golden yellow trumpet variety, which was shown by Messrs. Pope & Sons, Birmingham, and gained an award of merit. King Alfred is a grand yellow, which will take a first place as a market variety. Duke of Bedford is a fine bicolor. We are getting many improvements in the Ajax type, also the Barrii type, those with the deep orange-red cups being the most remarkable. The whites, both in the deep trumpets and the short cup varieties, are much improved; but it will take some time to prove these before they can be recommended for market. There can be no doubt whatever about the first three I have named.

EASTER TRADE.—Sensational prices are things of the past. There is, however, a little advance on ordinary values, and a fairly brisk trade. Yet supplies are abundant, and even in lilliums and callas, which are wanted in such quantities, there is no great advance. I find buyers who ordered pot plants of *Lilium Harrisii* a week ago got them on good terms. Roses and carnations are well supplied, both in cut blooms and pot plants. Crimson Rambler are good this season, and as we have additional growers, they are lower in price. Dorothy Perkins is also good. *Alexandra* is grown, and flowers well, but there are none that sell better than the crimson. In zonal pelargoniums, Mrs. Lawrence, the new salmon variety, which was first seen last season, is already on the market, and very good it is. It will certainly become a favorite, being so remarkably free flowering, and of a nice shade of color.

In the best London floral establishments quite a feature is now made of baskets of various designs, some filled with cut blooms and some with pot plants. Others have plants and cut flowers combined, and most effective are some of the arrangements. In funeral and memorial designs, color is more used than ever before, especially mauve and purple.

Hail Storm at Grand Rapids, Mich.

On May 2 we were visited by one of the worst hail storms ever known here. A gale was blowing, and in eight minutes one inch of rain had fallen; the thermometer fell 13 degrees. The storm lasted about ten minutes and did thousands of dollars worth of damage to church windows, skylights and window-panes, even ruing gravel roofs in its track, and stripping trees and plants of their foliage. The wire glass on the roof of the Union Depot was badly broken. The hailstorm came down with such force as to perforate the tops of milk wagons and other covered vehicles. Greenhouses suffered the heaviest. At Greenville, the Greenville Floral Co. lost about \$150 worth of glass; L. C. Lincoln lost the same amount at Granville. N. B. Stover got off with 400 panes broken. Eli Cross bore the brunt of the storm, it striking his houses from the south. The hail smashed almost every pane on that side and some on the north; loss, \$5,000. Within a short time Mr. Cross had 25 men at work repairing the damage, and they are still at it. At St. Peter Kunst's, Crescent avenue and Union street, the hail demolished his plant most completely, breaking about 90 per cent. of all the glass. The damage to the crop was but slight. He says he won't rebuild yet the boys aver they will tear down the entire plant and rebuild along modern lines. John Ball Park sustained about \$50 worth of damage, and several lettuce houses on Leonard street and north of Cross's were damaged \$300 to \$400 each. Crabb & Hunter had a narrow escape; they were on the edge of the hail belt, but lost a few panes only. The hailstones ranged all the way from 1/2 inch to 2 1/2 inches in diameter, and from 2 to 8 inches in circumference. There is talk now of hail insurance being a good thing, and it is expected several will take out policies in the near future. G. F. C.

WINDOW GLASS.—The American Window Glass Company, which produces machine-made glass, announced last week a reduction in price to jobbers on the first three brackets of single strength to 90 and 40 per cent. discount from manufacturers' list. This is equivalent to a net price of \$1.14 per box for first bracket B, \$1.20 per box for second bracket and \$1.26 per box for third bracket. It is understood that at this discount it would be impossible for manufacturers of hand-made glass to sell their product except at a loss, under the present wage scale. It is reported that some manufacturers of hand-made glass are offering the first three brackets, single, at from 90 and 30 and 5 per cent. discount to 90 and 35 and 5 per cent. discount, and that for large sizes 90 and 20 per cent. discount is being made.—Metal Worker.

WASHINGTON (D. C.) FLORISTS' CLUB.—The meeting of the Florists' Club held last Tuesday night was well attended. Secretary Bisset, who at the last meeting announced his intention of resigning, consented, at the urgent request of the club, to continue his useful work as secretary. The business transacted was principally relative to convention matters. The chairmen of the different committees reported progress, and as every individual member seems to be lending a hand, the affair promises to be quite a success. At the next meeting it is expected to have everything (or nearly so) in definite shape for public announcement. M. C.

WINDOW DISPLAY BY JOHN COOMBS, HARTFORD, CONN., EASTER, 1905

Cleveland.

News Items.

While the weather so far this month has been reasonably good, we are now getting some very heavy rains and windstorms, and several green-houses in the east suburbs have suffered considerably from hailstorms. To what extent is the damage and whether covered by insurance has not yet been reported.

Great preparations for Decoration Day are going apace. There is a revival of the old discussion of setting a later date for Memorial Day on account of the late season making a scarcity of flowers.

Henry Merkel, under the firm name of Merkel's, will open a very pretty flower store at the corner of Euclid avenue and Olive street on May 15. The color scheme will be white and gold. H. Merkel was formerly with J. M. Gasser Co. and Smith & Fetters.

O. G.

Indianapolis.

News of the Week.

Wm. Dow has bought the establishment of Thomas Hepler, on Massachusetts avenue.

The Crown Hill Cemetery florists, A. Pahnud, E. A. Nelson, and Martin Braendlein, say the demand for the filling of vases, etc., is heavier than in former years and that a successful season in that line is almost assured.

John Bertermann, now at Weimar, Germany, was delegated as special representative of the Indianapolis German Societies to place a wreath upon the grave of Schiller in commemoration of his hundredth anniversary.

Superintendent of Parks C. J. Power has his large force of men engaged in planting out. The city is better prepared than usual for the work and few if any plants will be furnished from others than the city's green-houses at Garfield Park.

DOROTHY FAUST CHRYSANTHEMUM

This is Offered to the Trade as a Sure MONEY MAKER. How long have we waited for a Really First-Class Late Commercial White?

Mr. H. I. Faust has grown this variety in quantity, several houses each year, for several years, and has with difficulty been induced to part with it. The E. G. Hill Co. had this variety on trial last year, and the following description was written by a member of the firm who is considered by many to be one of the ablest Chrysanthemum experts in this country: "DOROTHY FAUST—Pure snow white, very large, incurved but not globular; petals broad and beautifully formed, somewhat loose in arrangement but of splendid texture; the stem and foliage are as fine as those of Eaton; an easy doer, can be planted very close; blooming at Thanksgiving and later make this a valuable and delightful variety, as it is one of the most beautiful in finish and effect."

Philadelphia, Pa., February 13, 1905.

Mr. W. P. CRAIG, 1305 Filbert St., Phila.

Dear Sir:—We are very glad to say that we think Dorothy Faust Chrysanthemum a very good variety indeed. We shipped it with elegant success, and the flowers arrived at destination in the best of shape. It is a good keeper; has good stiff stem, and good form, being pure white. We feel it is a very valuable addition to the Chrysanthemum market as a commercial variety.

Very truly yours, Samuel S. PENNOCK,

The above letter from "The Wholesale Florist of Philadelphia," who has handled this variety for several years, needs no further comment, nor do the following: Pittsburg, Pa., February 23, 1905.

Mr. W. P. CRAIG, 1305 Filbert St., Phila., Pa.

Dear Sir:—It is with pleasure that we state that

the Dorothy Faust Chrysanthemum, in our estimation, is one of the best commercial varieties and will no doubt prove a profitable one to the grower, coming at a season when it will command a good price.

Very truly yours, RANDOLPH & MCLEMENTS,

Philadelphia, Pa., February 16, 1905.

Mr. WILLIAM P. CRAIG, 1305 Filbert St.

Dear Sir:—We have handled considerable of the Dorothy Faust Chrysanthemum, and believe it to be the best late white. The color is so pure, and the straight tough pliable stem does not weaken, as is the case with so many late ones. We have kept flowers two weeks which still looked presentable. We are glad that Mr. Faust consented to send it out this season and believe it will become the standard late white.

Yours truly, JOS. KIET & SON.

Dorothy Faust is a Good Grower, Good Keeper and a Good Shipper

Every retail florist in Philadelphia will tell you it is the best late white. The price is so low for such a sterling novelty that all Chrysanthemum Growers can invest with profit. Special prices on large quantities. All orders will be filled in strict rotation.

Table with 2 columns: Sample dozen plants delivered free, 25 Plants, 50 Plants, 100 Plants. Prices: \$4.00, 6.00, 10.00, 15.00.

SITUATION WANTED—Single A1 grower of roses, carnations; competent worker; take charge 50,000 ft. glass. Florist, care Crane, 201 East 26th St., New York.

HELP WANTED

WANTED—Greenhouse man, steady position. Apply at once, Dimmett & Wagner, 137 Union Ave., Mount Vernon, N. Y.
WANTED—At once, good man to fill flower beds and vases. Call or write M. Wokral, 61 McConnell St., Newburg, Ohio.

HELP WANTED

WANTED—Working foreman, 15,000 feet glass, where cut flowers, bedding plants and general greenhouse stock is grown. S. S. Peckham, New Bedford, Mass.
WANTED—At once, young man for bedding out, tying vines, and general garden work; \$10 per week. Apply or write John Ralph, Saratoga Springs, N. Y.

WANTED—A first-class grower of Bride and Bridal roses. Must fully understand the business, to work under foreman; bring reference from last place; must be strictly sober and reliable; good wages and permanent place. Address or call on A. L. Thorne, Fishing, L. I., N. Y.

WANTED—Married man, good grower of roses and carnations, for commercial place, at once. \$40 per month, 3 rooms, coal and wood; no children; Protestant. Apply Onaway Greenhouses, Boonton, N. J.

WANTED—At once, an all-around florist to take complete charge of 8,000 feet of glass, cut flowers and bedding plants. Must be temperate and industrious; give references. H. B. Thompson, 10 Pike St., Canonsburg, Pa.

WANTED—A competent bookkeeper and office man familiar with the tree and plant business; good opportunity and permanent place for a man not afraid of work, and who wishes to advance. References required. Also a nurseryman of good habits; young, energetic man preferred. Fancher Creek Nurseries, Inc., Fresno, Cal.

WANTED

Two or three men for Nursery work, planting, etc.

CLUCAS & BODDINGTON CO., Palisade Nurseries, Sparkill, N. Y.

BUSINESS OPPORTUNITIES

FOR SALE—Fine plot for florist, 20 lots and house; exceptional opportunity. Address T. E., care Florists' Exchange.
TO RENT—In Greater New York, 25,000 feet of glass, 3 acres of ground, dwelling house and barn. Address P. M., care Florists' Exchange.
GREENHOUSES to let. Four beautiful Rochester greenhouses and land, only \$400 yearly. Business yielded \$1,800 annually. Cora M. Jones, 16 State St., Rochester, N. Y.

FOR SALE—Farm and greenhouses, fifty acres, five houses; 3 20x100; 2 10x100. Particulars given upon application to S. S. Penneck, 1612 Lindlow St., Philadelphia, Pa.

FOR SALE—A good bargain. Florist store and greenhouses in business center of the city; greenhouses rebuilt new last October; hot-water boiler, stable, wagon shed, bull house, three small greenhouses, all in first-class condition; splendid established retail trade in cut flowers, designs and plants. We do all the fine decorations in the Capitol City. \$1,500 cash is our price, including handsome glass refrigerator, show cases and store fixtures—not plants or supplies, which, if desired, will be sold cheaply. Any florist of ability and push can easily clear purchase money, besides living expenses, first year. Very severe lung trouble forces owner to sell. For further particulars write, or better, come and see. A. B. Machlin, 410 Market St., Harrisburg, Pa.

BUSINESS OPPORTUNITIES

FOR SALE OR TO LEASE—11,000 FT. OF GLASS; 8 ACRES OF LAND OR MORE, IF DESIRED; HOUSE AND BARN; 1 1/2 MILES FROM FINDERNE, ON THE CENTRAL R. R. OF NEW JERSEY, BETWEEN BOUND BROOK AND SOMERVILLE. ADDRESS K. H. CARE FLORISTS' EXCHANGE.
FOR SALE—The florist plant and business of the late Edward H. Howland, Holyoke, Mass. This plant consists of 31,800 square feet of land in the center of the city, with a complete and modern greenhouse equipment. The business is a wholesale and retail business, and is the leading establishment in a city of 50,000 people. For particulars apply to N. P. Avery, Administrator, No. 24 Dwight street, Holyoke, Mass.

MUST BE SOLD AT ONCE, to settle estate, nine greenhouses, each 100 feet, in fair condition; hot-water heating, with Hitchings boiler, comparatively new; six acres of cultivated ground; house of six rooms, and barn, in good condition; artesian well; steam pump. Situated 2 miles from Ridgewood, N. J., and same distance from Paterson, N. J. Present mortgage can stand. Immediate possession. Address Mrs. Bingham, Ridgewood, N. J.

FOR SALE—Our entire plant, 10 greenhouses, about 25,000 ft. glass, nearly all 16x24 ins. in size, and double thick. Iron and cedar posts, cypress bars; business established over 30 years, but entirely rebuilt in last 10 years; heating, hot water under pressure. A large percentage of income is from cut flowers and floral work; entire products sold retail. Receipts all right, books open. Terms easy. We are only 20 miles from Massachusetts State line, with some of N. H. fine summer resorts near us. Address Eliza Bros., Keene, N. H.

FOR SALE

A greenhouse establishment; about 20,000 feet of glass all double, consisting of 7 greenhouses. There are 375 running feet of Hitchings' iron frame, 3/4 span in 2 houses, 24-inch glass. There are 5 new boilers, two number 17, two number 16, and one number 54 sectional, all Hitchings, and all 4-inch pipe, Hitchings. The boilers are all new. Will be sold to be taken down, the land being cut up for building lots. Will sell whole, or any part. Must sell and vacate.

Apples from Seed Under Glass.

(157) Please let me know how long it takes apple seeds to come up under glass; also tell me the proper way to care for same.

J. F. M.

—I have never had any experience in raising apple seed in the greenhouse, although it could be done on a small scale. Seeds are sometimes selected of extra choice varieties and sown with the aim of raising new and improved fruits. However, the main object in sowing apple seeds is to raise stocks on which to graft the approved standard varieties. Still, as a matter of experiment, if you have a cool greenhouse at command with a solid bed (this is preferable to a raised bench, as the moisture would keep more even in the solid bed), sow in drills covering the seed with about one inch of soil, having the rows six or seven inches apart. The only advantage to be gained by this method is that at any time during the Winter months, if you had any seed you would like to plant, you could do so. This seed could be selected, dried, and sown, instead of waiting till Spring opens up. But certainly, after the seedlings were large enough, they should be planted outside. The usual method of raising the seed is: Thoroughly clean the seed, and keep it in a dry place. Apple seed should not be kept for any length of time, as it soon loses its germinating power. The soil should be well pulverized and enriched with fine well-decayed manure. Sow the seed in drills, one inch deep, and 12 inches apart. If the seedlings come up too thickly, thin them. This is best done when the soil is moist. When a year old they are transplanted into nursery rows, two feet apart and three or four feet between the rows. Apple seed may be sown in the Fall or early Spring. If sown in the Fall a mulch of half-rotten leaves would be found beneficial.

WM. TURNER.

Insects Attacking Asters in the Field.

(158) What kind of insect infests the roots of asters in the field, and is there any remedy? We have 4,000 asters planted in the field, and are told there is a bug that attacks the roots. Can you give us any light on this subject?

F. R.

—We know of no insect that is particularly dangerous to the roots of asters. Keep the soil well cultivated and spray the young plants occasionally with tobacco insecticide after they are put in the field, and they will do all right if the soil is in a fertile condition.

ORCHIDS

Arrived in superb condition, direct from the woods, the following Orchids: Cattleya labialis, Cattleya Dowiana, Cattleya Warnerii, Laelia flava, Miltonia Candida, Dendrobium Chrysoxanthum and Burlingtonia fragrans. Write for special list, also for Catalogue of established Orchids.

THE WEEK'S WORK.

Timme's Timely Teachings.

Hydrangeas.

Any hydrangeas that have bloomed and missed the Easter sales should be cut in so as to leave about half the length of the branches. Any pruning more severe than this will result in a sturdy and sometimes very dense break of new growth, which, however, coming from the lower part of the branches, will not produce flowers the next season, although such plants will be a mass of fine flower-trusses the year after next. Only with one-sided, shy or crippled plants this procedure may pay; but with the general run of market hydrangeas it is not the proper way of pruning the full-grown plants if an abundance of bloom next season is wanted. At this time of the year the matured shoots, especially those that terminated in a truss, are shortened in to half their length, and the later the season or the farther we get into Spring the shorter must be the top cut off in pruning. In June the last of this work is done and the tops then cut off are utilized for cuttings. But more of this at the proper time.

Hydrangeas are fine and fast-selling plants for the Memorial Day trade, small-sized plants at that time proving very profitable to handle. All the plants coming right for that important day must now have plenty of room and light, any amount of water and tobacco fumigation several times a week until the true rose color of the flowers shows.

Primulas.

The old plants of *Primula Forbesi* and *P. obconica* need not be thrown away after they have done flowering, as many of the florists do. They can be torn apart and the divisions planted into small pots and grown on. Good, bushy plants are thus obtained for next year's trade. The seeds of *Primula Forbesi* and *P. sinensis* must now be sown if flowering plants for the early Winter months are wanted. Later sowings, up until the end of June, may be made for a succession of plants in their prime and always just right for a continuous plant trade all through next Winter and Spring.

Points of importance in the culture of all primulas are a good drainage in seed pans and pots, an abundance of pure air and timely ventilation and the use of a sweet, sandy, very porous, non-baking soil. Good primulas cannot be grown in a loam that has a tendency to bake, to form a solid mass every time it becomes a little dry. A good sandy compost, partly decomposed sod and some gritty leaf mould in equal parts make a good mixture for primulas, nice for the seeds and fit for the plants in pots. The seeds should be covered but lightly, preferably with finely sifted moss. As soon as the plantlets can be handled, when two or three true leaves have been made, a transplanting into trays becomes necessary. In the case of young primulas, a potting up of the plants at this stage does not offer the advantages that a pricking off would. Even another transplanting after this, as soon as the plants appear crowded, into boxes, instead of pots, will render their treatment easier and will give greater assurance of entire success. Then when they have reached a size requiring a 3-inch pot, it is time enough to begin pot culture. In potting primulas, especially the Chinese, some extra care should be exercised to set the plants deep enough to keep them from listing to one side or falling over when sprinkled. The very flexible neck of the plant, unable to carry the heavy crown in an erect position, should be under ground, but only deep enough to secure firmness and not too deep, which would cause the crown to decay. During the Summer primulas fare best in a frame out of doors, where, in the matter of watering, shading and ventilation, they are least liable to suffer from extremes in these essentials. In the Fall they should be kept there and out of the greenhouse as long as ever the weather allows, a cold frame with close-fitting sashes being at that time a much better place for them than a steam-heated greenhouse.

Cinerarias.

The seeds of *Cineraria hybrida* as well as of *C. stellata* may now be sown. Of the former the last sowing for this season should be made in July, which will provide the flowering cinerarias for next Easter. As to the sowing of the seeds, the requirements of the young stock, the need of abundant ventilation and room for the growing plants and their treatment during our hot Summer months, the same advice as given for primulas above will, if followed, lead to success in the culture of cinerarias. A richer soil, however, may be employed here; and the shading on

NEPHROLEPIS BARROWSII

Of all the new forms of Nephrolepis this is the

HARDEST and BEST

Fronds more dense, more finely pinnate, of more massive and delicate effect.

Thrives in same temperature and under same conditions as the old Boston Fern. Having more fronds than any other form, well supported by stout midribs, it is of more shapely and bushy habit.

Very Dwarf and Compact

A decided improvement over other introductions and is admitted by the highest authority to be the

Charles Potter WEST BOYLSTON, MASS.

Mention the Florists' Exchange when writing.

very bright Summer days need not be so heavy as that used as a protection for primulas. And, unlike primulas, the cinerarias are greatly harassed by green fly, even outdoors at times, and the wise cultivator is not slow in taking precautionary measures in making free use of the various nicotine remedies and in replenishing his supply of tobacco stems.

Spiraeas.

Spiraeas or astilbes are good plants for Memorial Day. Of course, at this time of year no fire heat or special treatment is required to bring them out to perfection. A light bench, lots of air and a great deal of water at their roots is what they most need. Astilbes must not be flowered in a house that is stocked with other plants requiring fumigation, since tobacco smoke spoils the foliage of astilbe. This plant, to my knowledge, is never troubled by insect pests. Much better than the old Spiraea japonica are the newer forms of recent introduction. Washington and Superba are varieties showing a great improvement, but the finest of the newer sorts is probably the variety Gladstone, wherever it can be grown successfully.

Celestial Peppers.

It is not too late now to start seeds of celestial peppers, though they might not prove Christmas peppers, as they are more often called. These plants are now much in favor, and they fully deserve the careful treatment now granted them by all growers of holiday stock. The seeds are sown in shallow boxes, the single grains sufficiently far apart to insure an even stand and to avoid a crowding of the plantlets after they are above ground. Any kind of good, mellow soil may be used in this culture. When the seedlings are large enough they are planted into small pots and afterward repotted as they need it until by the middle of August they go into the selling-size pots—the 6-inch. These peppers very soon show the effects of neglect in the matter of a timely repotting when they are making their growth and striving for size. Any such plants that have at this period once been overlooked and slighted by the transplantor and have been allowed to become tightly and thoroughly pot bound before full bearing size has been attained, will never be first-class plants.

On some places these plants are grown in the open ground during the greatest part of the Summer, and then potted up and included to make good plants for the holiday trade. I prefer to grow them in pots altogether, and although the plants certainly make a thrifter, stockier growth in the open field, they lose much of what they have thus gained in the transfer from the field to the pot. All solanums lift badly, and quickly lose their lower foliage after being potted up. Those under continuous pot culture do fine in a cold-frame in the Summer, but must have lots of space between plants and a loose mulch between the pots to guard against a frequent and severe drying out and a burning of the roots on the inner side of the pot. A little shading is good for them at the hottest hours of the day, but too much of this is worse than none at all; and as regards this point in the Summer treatment of some of our most important market plants, inexperienced growers have yet much to learn. Too dense and an untimely shading and an unreasonable, ceaseless drenching with an overflowing stream out of an ever-ready hose have undone and made useless many a fine start in the raising of these plants.

Peppers started last month or earlier may not have had proper attention during the holiday rush. They should now be taken good care of. A fine lot of these so easily grown plants is ready money next Winter. Lots of time to put them outdoors. Frost, or even chilly weather, must not touch them.

Jerusalem Cherries.

Among decorative berried plants Solanum capsicastrum is still one of the best. It certainly is the one most easy to raise and to grow, and where special pains are taken to raise plants only a little better than the average batch of Jerusalem cherries seen at the plant shops, this extra care is sure to be rewarded by rapid sales of the product at prices astonishingly high when closely compared with those realized from the sales of other holiday stock. Most growers of market plants are very prone to fall into the error of regarding any plant, old and well known, with unusual staying qualities and easy of culture, as one of but little value and hardly worth while considering when laying the plans for a coming season's work. Because they are good sellers, even if ever so poorly grown, and the very fact that they are as easy to grow as few their less favored things, has established a standard of quality in these plants on our markets which is deplorably low as compared with that upheld by the growers of

similar stock in Europe. There probably was a time when it did not pay to lavish special attention and care on the growing of plants of this class, but we have passed this period of slovenly horticulture, and the plantsman will have to do a little of the real gardening as well as the mere hustling, which latter alone will not make him catch up with the growers of cut flowers, who, in this respect, are far ahead of him. Few growers of market plants have any idea what, by good culture, can be done with such plants as Jerusalem cherries, geraniums, mignonette, wallflower and many others of the same class, mostly grown as pot plants, and these growers may even deride the belief that there is money in good, thorough-going gardening. But enough of this at present and back to our subject.

The old plants of Solanum capsicastrum should now be sharply cut back to about 2 inches of last year's growth, and after this no other pruning or pinching should be practiced, but the cutting away of straggling and weak shoots, which may start later on. These old plants may be grown in the open field and again be reported in September or October. But if constant pot culture has to be resorted to, a repotting into new soil and pots of the same size, or even smaller, becomes necessary. This is done after the new growth has fairly started on the old wood. The old soil is then shaken from the roots and the plants given as small a pot as is consistent with good looks and the size and welfare of the specimen. The plant will set an abundance of fruit in an ordinary good soil, while in a very rich potting compost, the foliage will be luxuriant, but the berries few. A frame outdoors, where the pots can be sunk deep into some loose material, is a good place for potted solanums. They will, during the Summer, call for great quantities of water, and this necessitates ample drainage in the pots. An occasional feeding in liquid form at this time will be of good value.

Young plants are treated much in the same way. They have been started, either from seeds or from cuttings, early in the year, and should now be in 3-inch pots. Seedlings should be pinched back repeatedly or their growth is too straggling; while those raised from cuttings, unless one-sided or misshapen, should not be stopped if graceful, naturally built up plants are wanted.

Cosmos.

Now is the time to sow cosmos outdoors in the place where it is wanted to bloom. Sow three or four seeds in hills 2 feet apart, and when up thin out, leaving the strongest plant. If cosmos is grown extensively for the cut sprays in the Fall, the rows should be at least 4 feet apart. A good many growers of this profitable annual prefer to transplant early started seedlings from flats or pots into the field. By this method little or nothing is gained and much time and labor lost.

Tuberose.

Instead of planting the bulbs of tuberose out in the open or into frames outdoors, just as they are when received, they should first be started in a pretty warm house in 4-inch pots and planted out after some top growth has been made. The middle of June, or even later, is time enough for the planting out of tuberose. The undeveloped flower spike is most easily damaged by cold rains and inclement weather. Much better spikes of bloom are raised if the tuberose are grown right along in pots and flowered under glass than if cultivated in the field.

Hanging Baskets.

It pays to stock a number of hanging baskets in time and before they are ordered. Get them well started; use all kinds and sizes of baskets and strive to have a variety as to the plants used in filling them. Have them suspended from the rafters in conspicuous places, and never let them become thoroughly dry, which, with earthenware baskets, means a watering twice a day.

Report of a Critical Test of Hammond's Slug Shot

**for POTATO BUGS,
CURRANT and
CABBAGE WORMS,
Made in 1904**

James Lawrence.
J. Reynard Lawrence.

**Eden Trial Grounds
1896**

Specialties:
**SWEET PEAS and
POTATOES**

Dear Sir:—Have been delayed in reporting on Goods you sent me for trial by severe illness. SLUG SHOT was as good, and did the work it was advertised to do as well and effectively as compounds and mixtures costing double and triple the price asked for it. For potatoes it proved especially efficient. Your BORDEAUX PULP is all right, dissolves readily and minutely so it does not clog nozzles of finest sprayers. Your AMMONIATED COPPER SOLUTION saved my melon vines (musk). It was not a case of preventing blight, but of checking it after it had developed and to quite an extent. I shall be glad to use and commend your goods another season.

Yours truly,
(REV.) J. REYNARD LAWRENCE, North Middleboro, Mass.
Nov. 21, 1904.

Effects of Last Winter.
 The Winter effects on shrubs and all hardy plants have begun to show that damage to a much greater extent has been done than at first anticipated. Many trees that would seem to be in perfect health are entirely dead of such hardy species also as scarlet, red and willow oaks, hackberries, red buds, and others, which are plentiful in the native woodlands. It is hard to divine a reason, as the trees I have mostly noticed have been planted eight or ten years, and were well established. As before stated, all evergreens have suffered to a great extent. Among herbaceous plants there are many deaths, among such as delphiniums, aquilegias, etc. Some deciduous shrubs, which are now in full bloom, were perhaps never better than they are this year.

A year ago, the flower buds of the forsythias were destroyed, so that only an occasional yellow blossom was seen, but this year they are a glorious mass of bloom. The different prunuses, too, have been exceptionally fine this year, and the pyruses are just opening and will be fine in a few days. Lilacs have wintered in good shape, and will soon be a mass of bloom.

The number of blossoms on many of our native trees have been much more abundant than in recent years. This may be said of all the varieties of the maples; but then again, why should there be such a death rate among trees equally as hardy as the maple? Can it be that the seeds of those that have wintered badly came from a southern climate and have had the disease since first they started to grow?

News Gittings.
 D. S. Harrigan, for several years past in charge of MacMulkin's greenhouses, at Norfolk Downs, has left that position and will now carry on the business established by his father, the late Jeremiah Harrigan, at East Foxboro.

W. H. Elliott is thinking of locating his salesroom on Boylston street, and has almost decided on a suitable place.

James Rough, Jr., will continue the business established by his father, the late James Rough, as well as continuing manager of the Music Hall Flower Market. Mr. Rough expresses his thanks to his many friends in both flower markets and the trade generally for their many acts of kindness and sympathy shown during the recent illness and death of his father.

George Buckman, of Stoneham, is bringing in sweet peas of exceptional quality to the Music Hall market.

Henry M. Robinson & Co. are handling new crop southern ferns of fine quality, and have on hand a large stock for Decoration Day purposes.

On the moment of mailing, we hear that W. N. Craig was accidentally thrown from his carriage, on Wednesday, receiving injuries which will confine him to the house for several days. We hope nothing serious will result from this accident.

J. W. DUNCAN.

GRAND RAPIDS, MICH.—Carnation plants are all out in the field, and the weather is just right for them to take a hold.

Window boxes are 10c. per foot higher for filling than formerly. Small sizes of bedding plants in 3 and 2-inch pots are a little higher than in former years. It looks as if this might be a record-breaking season, and bedding stock become scarce, especially geraniums.

The weather continues threatening and unsettled. Business remains good.
 G. F. C.

DETROIT, MICH.—John Breitmeyer's Sons have donated to the park commission two large stone basins which formerly stood in front of their place of business. The urns will be placed on Belle Isle.

E. A. BEAVEN, Evergreen, Alabama

St. Louis.

News Notes. President Juengel of the Florists' Club reports that he has a very busy season before him in planting, but he will not miss the club meeting this week.

The committee on flower show met at Otto Koenig's store last week to talk over exhibition matters and put the preliminary list in the hands of the printer. No suitable hall has as yet been found in which the show can be held. The date was set for the week of November 7. Weekly meetings will be held from now on until the hall question is settled.

We had another bad wind, rain and hail storm here on Thursday last which did considerable damage to young trees throughout the city, especially in the parks. The hail was not large enough to do any great hurt to glass, only a few broken panes being reported.

The Board of Public Improvements met last week and appropriated \$126,397.20 for use of the park department. Of this amount, \$11,097.20 is used by one office, the balance, \$115,300, being distributed among the 18 parks over which the city has jurisdiction. This is a very small sum for the department to make much show.

The Growers' Club will hold its regular monthly meeting on next Wednesday afternoon in Louisiana Hall. President Halsted of Belleville expects a large attendance.

Carl Beyer had a tough job last week, sitting as a juror during a very busy time at home.

J. O'Neil, representing Vaughan's Seed Store, Chicago, is without this week. He says he was glad to get away from home on account of the strike. He tells us trade is suffering greatly, both retail and wholesale.

Phil Hauswirth of Chicago, spent a few hours with friends here last week.

C. C. Sanders will start building a new residence as soon as the busy planting season is over.

Bowling.

The nine members, who showed up at the alley on Monday night, had a big time. Five games were rolled. Robert Meinhardt was high with 777; Charles Kuehn, second, 741; and Theo. Miller, third, 735. Beyer, Beneke, Ellis, F. Meinhardt, Gerlach and Lohrenz, followed in the order named.

ST. PATRICK.

News Items.
 On May 1 a banquet was given in remembrance of the battle of Manila Bay, it being the seventh anniversary. J. H. Small & Sons made a superb decoration for the occasion. One of the principal features was an exact representation of Admiral Dewey's flagship, the Olympia, in immortelles, which was greatly admired.

The members of the steam railroad have an exhibition this week. This has brought considerable trade, as they have been lavish in entertaining.

The display of bulbs in the public parks, which is about over, has been unusually fine this year. The 30,000 pansies which were put out last October passed through the Winter in good shape, and are now quite a feature. George H. Brown, the landscape gardener, has commenced putting out the bedding stock, and intends making a very elaborate display not only of carpet bedding, but of flowering plants in honor of the visitors to the S. A. F. convention. M. C.

SOUTH BEND, IND.—Benjamin Gingrich, president of the South Bend Floral Company, is rapidly falling and death is expected at any moment. Mr. Gingrich has been ailing for the past three years with a complication of diseases arising from heart trouble.

SADDLE RIVER, N. J.—John G. Esler was re-elected president of the Orvil Building and Loan Association at a recent annual meeting; and his partner, Andrew Esler, was re-elected treasurer.

PIERSON Water Steam BOILERS

Will reduce your coal bill. They did it for others last winter.
 The Reason of this is found in the construction of the boilers. They have a larger amount of direct fire surface than other horticultural boilers. The flue areas are large and all parts are easily accessible for cleaning. They are adapted for the use of any kind of fuel.
 We Manufacture Every Type of Greenhouse and Everything for Heating.
 Estimates furnished for complete structures or for material ready to erect.

Plate 99

QUERCUS CONFERTA (PANNONICA)

The Hungarian Oak, generally listed in catalogues as *Quercus Pannonica*. In the vicinity of Philadelphia, Pa., this Oak grows splendidly; it is perfectly hardy, and the climate appears to be just to its liking. It has a spreading massive character of growth, which is not common to all Oaks, making it of broader outline than many of our own species when of the height of the one illustrated.

FISCHER'S GRAND PURITY

A magnificent, snowy, glistening white of very large size and great length and strength of stem. A dozen sprays make as fine a showing as a dozen white carnations and can be used wherever carnations are used for decorative purposes. A truss bearing from eight to eleven buds, of which six are frequently open at one time, make an immense flower. It is of great substance and bears shipping without bruising. Stems can be cut two feet long and are as rigid as sticks. It is very prolific in bloom, producing three to four rich shoots of eight buds each, besides the main flower. Bulbs no larger than dried wax beans of this grand Freesia make as large a flower as the large bulbs, only the stems are shorter. All growers should try some of this Queen of Freesia, for when "once grown always grown." Price for large bulbs, \$4.00 per 100; \$30.00 per 1000. 500 at 1000 rate. A discount on 5,000 and 10,000 lots.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierpont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

SHERMAN, TEX.—I. A. Heath is erecting a two-story building, 24x60 feet, to be used as a wholesale seed house. All classes of farm and garden seeds are to be handled.

COLUMBUS, O.—The Livingston Seed Company is and has been doing a fine retail trade in vegetable and flower seeds, plants and cut flowers. The elder Livingston was famous for his improved varieties of the tomato, a branch of business the house continues to follow, with marked success.

INDIANAPOLIS, IND.—J. A. Everitt, seedsman, reports a good trade along all lines, more particularly retail and truckers. Mr. Everitt is well known as the advocate of the "third power," which means bringing the farmers to the front, so far as controlling their business themselves, rather than for the speculator to control them, which is the proper thing to do. But will they do it?

BLOOMINGTON, ILL.—Nearly every city is noted for some speciality in the seed or plant trades. This city is no exception, and the speciality is corn for seed purposes. The Funk Brothers have made corn a hobby, and they ride it well, having 6,000 acres under cultivation exclusively with corn. This hobby consists in selection and for various purposes highly-bred chemical strains, for fattening and for growing live stock. Their chemical laboratory is on a scale that would seem fitted for the beet sugar industry. They report a large and constantly increasing business, which has been established for 81 years.

CHICAGO.—The strike has not struck the seed trade here, for all hands are wearing a most satisfied look, and are seemingly content. W. W. Barnard & Co. are still busy, and note an increasing business along all lines. No large stocks of any kind are held over.

The Goodwin & Harris Company, who do an exclusively jobbing trade, are carrying over but a limited quantity of any variety other than sweet corn; and the trade in general are not strangers to a surplus.

The Leonard Seed Company are more than pleased with their retail trade, but report less business along some wholesale lines.

Peter Hollenbach, who does an almost exclusively family trade in vegetable and flower seeds, plants and bulbs, reports a fast increasing business. This house is largely in the onion set trade, and is numbered with the few that has unloaded at a profit.

LA CROSSE, WIS.—John Thorpe, the veteran landscape gardener and plantsman, is doing some very elaborate work here on private grounds as well as laying out and planting a public park.

The John A. Salzer Seed Co., report a good trade, not as heavy a mail trade as in former years. To look at their shipments, particularly in seed corn and other grains, a stranger could not imagine so extensive a business, unless they were jobbers, which this firm lays no claim to, being simply retailers.

BELLINGHAM, WASH.—A correspondent of the Herald of this place, in a recent illustrated article describing the bulb farms of Whatcom County, makes the statement that bulbs grown in that locality are shipped to Holland, and from there sold as "Holland bulbs," adding, "perhaps many of them are re-imported to the United States, and end their days in the country where they had their birth." There are at present three bulb farms of importance in this county. These belong to Smith Bros., near Bellingham; George Gibbs, at Clearbrook, and Goode Bros., whose farm is near Ferndale. The area under cultivation is as yet limited, but the possibilities of the work are just beginning to be realized. The founder of the industry is George Gibbs. A resident of Orcas Island for many years, Mr. Gibbs finally moved to a place near Clearbrook, and saw the possibilities of cultivating Holland bulbs.

SAMPLES OF SEEDS FOR DEPARTMENT OF AGRICULTURE.

The following circular was issued by the Treasury Department, May 9, 1905, to officers of the customs: "At the instance of the Secretary of Agriculture, it is hereby directed that, commencing July 1, 1905, and continuing for one year, 2-ounce samples of all importations of 100 pounds or more of grass, clover, and forage-plant seeds be prepared at the earliest practicable date after entry, and forwarded to the Seed Laboratory, Department of Agriculture, Washington, D. C., labeled with names and addresses of consignors and consignees, name of seed given in the invoice, and quantity of the consignment."

CABBAGE TESTS IN NORTH CAROLINA.—H. Hume, State Horticulturist, has returned from New Bern, where he has a test farm, on which are 279 varieties of cabbages, says a local newspaper. He has discovered that several lots of seed that he used were extremely impure, showing a large mixture of varieties, and a great many were untrue to name. W. W. Tracy, of the United States Department of Agriculture, examined the plants with Mr. Hume, and he too said that certain seed growers, whose names were withheld but may be disclosed later, had disposed by sale of as many as 14 varieties of seed in one bag. Unless this practice of fraud is discontinued it will result in serious trouble for the guilty dealers and growers.

The results of the experiments on this farm have determined that for Eastern North Carolina the European and Puget Sound cabbage seeds are inferior to the Long Island grown seed, as they are more susceptible to injury from cold, resulting in either complete destruction of the plant or stunting of the growth so as to cause the cabbages to form seed stalks instead of heads. This one point, said Mr. Hume, will justify all the expense connected with the experiments. The Early Jersey and Charlestown Wakefield have given most satisfaction, although in some cases the seedsmen appear to have sold both varieties out of the same stock.

LONG ISLAND SEED CROPS.—The weather thus far has been most favorable for the seed crops, with the exception of spinach, which requires what we term "growing weather" early in the season, and this we did not have. The result will be plants too small when the hot weather comes on, which is now due. The plants will come into seed when not more than half grown, and give a small yield, and of inferior quality, as all stunted plants must do.

Cabbage started slowly because of the dry weather in April, but the present cool temperature, with plenty of moisture is forcing the plants along at a rapid rate, and a strong and healthy look—a surprise to every one. The Wakefield stocks are mostly fine, and many of the later sorts never looked better. The Volga, which is not a heavy seeder, gives a fair promise, and its quick growing habit is shown in the seed crop being first to come into flower.

Rutabagas are very fine, and a good yield is promised. Other sorts look equally well.

The Scotch kale is fairly good and gives promise of an average crop. However, this is a crop that pays no respect to promise, it being likely to disappoint at the last moment, and we

can never tell what to expect until after harvest. Siberian kale is a more sure seeder, and the outlook is all that could be desired.

Brussels sprouts will be decidedly short, and prices will be proportionate. The excessive cold Winter was more than the plants could endure.

European Notes.

The injury to growing crops of rutabagas, mentioned in last week's notes, has been increased during the present week to an extent that is quite alarming. This is partly due to the inclement weather which still prevails, but in a greater degree to a virulent outbreak of canker or stem rot.

To all outward appearances the plants are quite healthy, but heavy gales, such as have swept Northern Europe during the past week, snap them off close to the ground, and the disease is at once apparent. Nothing can be done to save them from destruction, and already the losses on such varieties as American Purple Top, Monarch or Elephant, and Universal are very great. The coarser varieties will doubtless be affected in their turn, but as there are some heavy stocks of these on hand, the consequences are not likely to be so serious. At the same time, the rapid rise in the prices of the first-named varieties, which has already taken place, is bound to affect the others later on.

Such cabbages as are left standing are making good progress; nearly every plant is running to seed, and the outlook to-day is very promising. The limited acreage will prevent a great surplus.

Mangel seed continues to be in great demand, and complete clearance of stocks will easily be effected. The plants for next harvest are backward at present, owing to the cold, but this does not cause us any great anxiety.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Vatrone, Des Moines, Ia., vice-president; George C. Easter, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

CHICAGO.—Peterson Nursery have removed their office to 1301 Stock Exchange Building.

The Kansas State Horticultural Society will hold its twenty-first semi-annual meeting and fruit display at Wichita June 7 to 9, 1905. An interesting and varied program has been prepared.

THE MISSOURI STATE HORTICULTURAL SOCIETY will hold its semi-annual meeting at Versailles June 13 to 15. J. C. Whitten, Columbia, is president, and L. A. Goodman, Kansas City, secretary.

H. J. CORFIELD, superintendent of Cranbrook Nurseries, Birmingham, Mich., is projecting plans for carrying out the landscape work on an estate 300 acres in extent near Detroit, which promises to be the most private estate in Michigan; 30,000 trees and shrubs and 3,000 evergreens have been planted this spring for present and future effect.

TRADE WITH NON-CONTIGUOUS POSSESSIONS

The statistician of the Bureau of Statistics, Division of Markets, Department of Agriculture, has prepared a bulletin showing the trade of the United States with non-contiguous possessions from 1901-1903. So far as concerns the nursery and seed interests the following information is given:

Total nursery stock exported to Alaska for the year ending 1903, \$270; clover and other seeds, \$1,430. To Hawaii—Nursery stock, \$1,693; seeds, \$4,922, against \$4,544 in 1900. To Porto Rico—Nursery stock, \$1,318, against \$3,677 in 1902 and \$5,246 in 1901; seeds, \$2,313, against \$653 in 1902. To the Philippine Islands, \$24, against \$147 in 1902; seeds, \$58, against \$725 in 1902 and \$372 in 1901. In 1903 \$9 worth of seeds were exported to Guam.

From Alaska were imported in 1903 seeds to the value of \$538. From Hawaii, seeds valued at \$74 and nursery stock at \$104. From Porto Rico no seeds were received in 1903, as against \$82 worth in 1902 and \$44 in 1901. From the Philippine Islands—Nursery stock plants, trees, shrubs, vines, etc., to the value of \$645 were received in 1903; none in 1902 and \$216 worth in 1901.

OBJECTS TO FREE TREES.—President J. C. Vaughan, of the S. A. F. O. H., who is sojourning in California, has written a strong protest to the Pasadena (Cal.) Star against the proposition of the civic committee to "raise trees at the expense of the city to be furnished to the people as their best interests may appear." Mr. Vaughan says, among other things:

"The inference is, that these are to be supplied free or at cost. While Park Commissioners may rightfully grow their own trees and plants for use on and in public grounds and parks, the paternal proposition to supply such to private individuals free or at cost is not only unfair to those taxpayers who are not land owners, but is also manifestly unjust to nurserymen, gardeners and florists in this community who not only have spent half their lives in acquiring a thorough knowledge of their business but have invested their capital in their special merchandise and in lands upon which to grow it. Doubtless their advice and aid for the last twenty-five years have done as much for beautifying Pasadena and making it what it is as have other professional or business men in their way. Why, then, single out this class of merchandise alone for free distribution? Why not appoint a public physician, lawyer, painter or a free water service for growing trees and plants. Because these horticulturists deal in merchandise which brings about beautiful results is no reason, in itself, why the city should enter into competition with them to the extent of giving away their wares."

TO GROW PEONIES.—The Baltimore Herald of May 9 contains an item to the effect that a group of promoters has purchased property on Gwynn's Falls for the purpose of raising peonies on a large scale for the supply of Eastern and Middle Western markets.

The company will be known as the Glyndon Gardens Company. It will issue \$20,000 of preferred stock. This stock will have a guaranteed interest of 8 per cent. for the first two years, 9 per cent. for the following two years and 10 per cent. after this. Theodore F. Wilcox will be president and general manager of the company. John J. Carey, secretary to the general manager of the Western Maryland Railroad, will be secretary-treasurer. In addition to the officers, the board of directors will be composed of Leonidas H. Nice, cashier of the United States Sub-Treasury; Harry M. Mason, cashier of the Commercial and Farmers' National Bank, and William Keyser, commission merchant. There are now about 6,000 roots in the ground, and some of the flowers are in bloom. About three hundred varieties are represented. The beds will be extended from year to year. The place is in charge of J. A. Eckman. The blooms, as well as the roots, will be put on the market.

The article continues:

"Experience has long dominated this industry, but experience has become a commodity which can be bought, and those who purchase it are relieved of the necessity of themselves acquiring it in practical ways. The importance of this venture lies, not so much in the attempt which it represents to bring to greater perfection and make popular the old-fashioned garden flower, but the

opening up of a novel avenue of investment. If capital can find satisfactory investment in the wholesale production of one floral specialty, there is no reason in the nature of the case why some other flower born to 'blush unseen' by the fashionable populace of great cities should not be brought out of obscurity and given a position among the floral favorites. The new enterprise possesses sufficient elements of interest to fix upon it the eyes of practical florists, as well as to attract the attention of persons alert for fresh forms of investment."

Pyrus Coronaria.

A much admired small tree, native of this country, is the sweet-scented crab, *Pyrus coronaria*. Because of the delightful fragrance of its flowers it is a small tree every one desires to have in their collections. The flowers appear at the same time as those of the common apple do, in May. Wherever it may be when in bloom, its presence is often detected before it is seen, so delightful is the perfume. We do not remember having seen it in the immediate vicinity of Philadelphia in its wild state, but it is native from the Middle to the Western States, and extends south along the mountains. In Yancey and Haywood counties, North Carolina, it was very abundant at one time, and may be still. In height, fifteen to twenty feet would be a fair average.

The blossoms of this crab are of a light pink, hardly rose-colored, as many dictionaries say they

This is a quite small growing tree, apparently, having shining green leaves and the fluffy, greenish white clusters of flowers that so embellish the ornus. All the plants of it observed so far are of small size. They have flowered some weeks in advance of the old kind, and this character seems natural to it.

Hardiness of *Skimmia Japonica*.

Skimmia japonica, which our florists have been importing of late as a plant for the Christmas time buyers, is entirely hardy in the vicinity of Philadelphia, if living through two or three hard Winters is a sufficient test. As it comes from Japan, no doubt it would succeed much further north of this city, as not a leaf has been hurt on the plants here. It is a slow-growing shrub, and at no time makes a large bush, so that its place will be among the dwarf collections of broad-leaved evergreens.

It is its clusters of beautiful red berries that make it such a desirable pot shrub for Christmas. The berries are lasting, too, for the plants used at Christmas will still be in fair condition at Easter when kept in a warm room through the Winter.

Planted near a dwelling, where its bright red berries can be often seen, it is an interesting shrub all Winter long. It propagates from layers, or from seeds. Those who have plants with berries on them should secure the berries as they commence to decay, and sow them early in Spring in a greenhouse. If in good condition they grow in a short time.

PYRUS CORONARIA

are. We have never seen them of a color deep enough to be termed rose-colored. Besides the agreeable perfume of the flowers already mentioned, this odor belongs to the fruit as well, to some extent. There is to the fruit a clammy feeling when ripe, much as is experienced when handling other apples which have "sweated." The fruit is hard, slightly yellow when quite ripe, and is valued for preserving.

There is a variety—by some considered a species—of this crab growing in the West, called *P. ioensis*, and this is the variety which, it is claimed, produced the Bechtel's double-flowered crab. The foliage is quite distinct from that of the common flowering crab, and the blossoms have a much deeper color.

These typical trees of our woods are in much demand the world over, wherever ornamental trees are valued. There is a corner in Fairmount Park, Philadelphia, containing a collection of *crataegus*, *pyrus*, and other bushes and trees of a rosaceous character, and it was there where our photograph of the sweet-scented crab was obtained. The tree was loaded with its flowers; and with the many hawthorns, which were blooming at the same time, made the locality a much-sought one.

This crab can be raised by grafting it on the common apple stock, in which way it succeeds very well, or from seeds, which grow readily cleared from the apples and preserved in slightly damp soil through the Winter, in a cool place.

Our photograph represents a specimen in shrub shape. It is optional whether to start a young tree in this form or as a small tree with a single stem.

A New Flowering Ash.

The flowering ash known to all of us—the *Fraxinus ornus*, also as *Ornus europæus*, is an esteemed flowering tree, the blossoms appearing in great clusters in the days of early June. What may be called a new flowering ash is the Chinese ash (*Fraxinus Bungei*).

Uses of the Tamarisk.

As a seashore shrub the tamarisk is well known. Its value lies not only in its ability to withstand salt air and spray, but in the readiness with which it undergoes a good pruning. Cut it as you will, it does not object, but sprouts afresh, and really seems to enjoy the pruning. This is why it is so often used as a boundary to grounds near the seashore, where, when pruned as it should be, it forms a pretty, graceful boundary line, which no other shrub could produce as well. Then, if one wants a small tree, and not a shrub, the tamarisk is accommodating. Cut it down, selecting a strong plant for the purpose. Several shoots will, perhaps, appear, which may be allowed to grow for a while, but should all be removed but the straightest and strongest. Remove the others gradually, not all at once. The straight, central one left will make a tree. Watch it, that it makes an ascending growth, and the tree shape will follow in time. Nice ones, ten to twenty feet high, are made in this way.

There are both Spring and Fall flowering varieties of tamarisk, all bearing light pink flowers.

Cork Fir (*Abies Arizona*).

A few years ago the Pinehurst Nurseries, North Carolina, introduced the silver cork fir (*Abies arizonae*), and to test its hardiness one was sent to me. The little specimen has now passed through its third Winter, and it is in no way injured by the Winter or any other source; nor has it been at any time. On account of its silvery, corky bark, and its pretty appearance generally, it is sure to be in demand, but where the supply will come from is a question to be answered.

The corky character of the bark is an exceedingly interesting feature. Just how soon it commences to form I do not know, but it is probable that it does not

show for a few years, as is the case with other corky trees. On a branch which was three inches in diameter, a section of which I have, there is a nice circle of silvery, corky bark. It is probable that in its native place it is a slow grower, as the branch spoken of has about twenty rings of growth, though, as stated, but three inches in diameter. In an ordinary place on our lawns, no doubt, its progress would be much faster than it was on the mountains of Arizona.

Sow Maple, Elm and Birch Seed.

There are two maples, the red and the silver, and two elms, the americana and fulva, as well as one birch, the rubra, which ripen their seeds in May, differing in this respect from other species of the same genus, which do not ripen until Fall. This seems curious behavior, and it is unusual, as usually the species of a certain kind of tree all ripen at one time. But what is interesting to the nurserymen is that if these seeds are sown in May, or very soon after gathering, they grow at once and make nice-sized seedlings by Autumn. Those who know this and obtain and sow the seeds as soon as they can be procured in Spring gain a year in their seedlings over those who do not know of this mode of sowing. In fact, unless kept very carefully, the seeds will not grow at all, if held until Fall before they are sown.

It is likely that other early ripening seeds, such as those of the *Rhus aromatica*, *Dirca palustris*, *Daphne mezereum*, *Sambucus pubens* and the mulberries, would do better sown as soon as ripe than when kept and sown in the Fall.

Pruning and Ramming Transplanted Stock.

When extensive plantings are undertaken, it is almost impossible to have every tree or shrub set out properly pruned and firmed, and it is well worth while to have a man detailed to go over a block of freshly planted stock to attend to these two things. The first thing should be the firming of the soil, and this is done with a rammer. The soil is pounded down around the specimen until it is firm, when it may be considered the soil is in contact with the roots. In light, sandy soil there is no difficulty in getting the soil compacted; in fact, many advocate the use of sand for filling in about the roots of trees, knowing that it almost ensures their well doing. The ramming of the soil should not be done in wet weather, but when the soil is dryish, for if rammed when wet the ground is apt to bake in hot weather.

To be pruned when transplanted is something almost every tree needs, and all can stand. Even those with good roots, which would grow without pruning, are none the worse for it, the strong growth pruning promotes well making up for what is lost by it. Therefore, a pretty close pruning should be given, keeping in view a good shape at the same time.

Evergreens need care in pruning, for the reason that they will not break satisfactorily from shoots from which all live foliage has been cut away. In the case of some pines and other evergreens, if every bit of foliage is cut away there will be fresh shoots from old wood, but when some branches are permitted to carry foliage and others are not, the latter ones will not break afresh, or but feebly.

Root Pruning Large Trees.

Now that sales are over and trees are in leaf, it is an excellent time to root prune trees that will be benefited by the process. There is no tree but that is made the better for transplanting purposes by being root pruned; but where they will grow very well when transplanted without the pruning, it can be omitted. When one sees the number of oaks, hickories and other trees of large size that die every year when transplanted, and which would not have died had they been well root pruned in advance, it is a strong point in favor of pruning. There is not a better time to root prune trees than early Spring—just after leaves have formed. The sap that was stored in the roots has been utilized in forming the leaves, and there is then no robbery of the foliage, as there would be were the roots cut before the clothing of the tree in leaves. After leaves are formed it is the other way about; the leaves are then perfecting sap and supplying some of it to the roots; therefore cut the roots then, in order that those remaining may reap the benefit of it. Root prune all trees of large size that your experience tells you may be difficult to get to live without it. Dig around them as you would to transplant them, perhaps a little nearer the body of the tree, and cut off all roots met with, making a clean cut. Fill in with the old soil, if good; with new if it will be of better quality. By the following Spring the trees may be removed with more safety than before, and for a year or two afterward they are much safer to transplant than they were.

The root pruning of large trees brings money to the nurseryman's pocket and peace of mind to the customer.

JOSEPH MEEHAN.

From the OPEN COURT PUBLISHING COMPANY, of Chicago, we have received an excellent portrait of Hugo de Vries, professor of botany in the University of Amsterdam, whose recently published work, "Species and Varieties; Their Origin by Mutation," has been so well received by scientists and others interested in the subject of evolution in plants.

FRUIT UNDER GLASS.

Peaches and Nectarines.

Peaches and nectarines that are coloring up in the early house should have a drier atmosphere. Give them all the air possible when the temperature goes above 75 degrees. Both top and bottom ventilation would be beneficial. Expose the fruit to the sun. The old method of training peaches up to the glass is more difficult to carry out than when they are planted crosswise of the house. The latter plan, in my opinion, is much to be preferred. The trees are easier handled, the fruit receiving the full benefit of the light on both sides; and it certainly gives the house a more attractive appearance. A great deal depends, as regards the flavor of our fruit, on the treatment the trees get, say, from the time the fruits start to color. Usually, if the tree receives a good watering just as the color shows, this should carry them till the fruit is ready to gather. Keep the water off the foliage, while the fruit is ripening.

What a grand sight a nectarine tree provides when the fruit is colored just ready for gathering! Take a tree of Early Rivers, for instance, with fruit as large as peaches, one of the grandest nectarines in existence. Fortunately, this tree is robust and vigorous. While both peaches and nectarines are interesting, grown under glass, with me the nectarine has the preference.

When the crop is gathered, it is well to cut out any useless wood; this allows more room for the young wood to develop. Give the house the same care, after the fruit is off, as regards watering, spraying, etc., except, of course, that no attention is needed as to airing. The ventilators, both top and bottom, should be kept open day and night. Trees that receive careful attention all through the season are in condition to carry a full crop of fruit every year. If the trees have made enough young growth by the time the fruit is gathered (which they should have done) any growth they make after that should be cut off, as it will be naturally soft. If the demand only calls for early fruit it is, comparatively easy to get that crop in and done with. On the other hand, where the demand is for fruit every day, say to the first of October, good judgment must be used. However, when one is acquainted with the different varieties, and space is at command, the early house can be planted so that no two trees will come in together.

The Second House.

As I have stated before, trees grown under glass require quite some feeding, especially when confined to an inside border. The fruit in this house should be now taking on the second swelling, and this is the time the trees will stand liberal feeding. A good soaking of cow manure water will be found beneficial. Never allow them to suffer for moisture at this stage. Moisture and feeding will help the size of the fruit considerably. Keep the young wood tied in. I am aware that often more young wood is tied in than is necessary for next season's crop. It is a great mistake to crowd; but the trouble is, in disbudding we are afraid we will not have enough, with the result oftentimes that we have too much. Whoever has peaches and nectarines under their charge, and find the wood too thickly crowded, will understand it pays to use the knife. One thing is certain, for the best results thoroughly ripened wood is one of the secrets of success.

San Jose Scale.

Quite a few articles have appeared on this pest at different times, and not without cause, I presume. Strange it is, how this scale gets spread around. Birds, or bees, or something of the sort, must carry it. Our peach trees were perfectly clean when we first started here; in fact, all the stock was imported. Still, the San Jose scale got here. But I am satisfied, if a tree is taken in hand as soon as the scale is first noticed, there is no difficulty in keeping the pest in check. On the other hand, if badly infested, better chop down the tree and start young ones. I noticed scale here on our trees two seasons ago. They were sprayed the following Winter with the lime, sulphur and salt formula. Last Summer I did not see a scale on the trees, and, of course, they were not sprayed the past Winter. This season I can just detect a few scales in the early house, which means spraying again the coming Winter. The bark of our trees has not been damaged at all; in fact, if I had not been well acquainted with the scale, I would not have known it was there, at least until too late to apply the remedy. The experimental stations are doing good work along the line of getting out different formulae to combat this fast-spreading pest. If a formula could be gotten up so that the trees could be sprayed during the Summer when the insects are in their active state, they then could be destroyed much easier than when in the dormant state; although, according to my experience, they can be kept in check with the lime, sulphur and salt, properly applied. I also believe in applying the material the same day it is made up.

WM. TURNER.

Mushroom Growing Under Glass.

The Department of Botany of the Agricultural Experiment Station of the College of Agriculture, Cornell University, Ithaca, N. Y., has issued an illustrated bulletin, prepared by Professor George F. Atkinson and Robert Shore, on the subject of Mushroom Growing, in which are given the results of experiments in growing mushrooms in a greenhouse, and of which the following is an outline:

"The mushrooms were grown under two different conditions: First, in boxes under benches in the greenhouse, the part of the greenhouse where the temperature during the Winter is about 55 degrees F. at night and from 60 to 65 degrees F. during the day except on bright, sunny days, when the temperature may go as high as 70 degrees; second, a space under a potting table in a small basement room was used for making up another bed.

"The space under the bench in the basement was made into a bed by placing a plank in front against the legs in order to support the material. The material then was packed directly on the basement floor and against the stone wall behind. Boxes were used under the benches in the greenhouse. These were most convenient to handle under the low bench of the greenhouse because the space was quite wide. These boxes were about 3x3½ feet wide and one foot deep. There were five of these. The space in these boxes together with that under the bench in the basement made a total of about 90 square feet. Up to the present time (March, 1905) 181 pounds of mushrooms have been picked from this area from one planting of spawn, practically two pounds per square foot.

"The manure was obtained and composted October 31. By November 9 it was cured and ready for putting in the beds. The temperature of the material in the beds was suitable for spawning on November 23 when the spawn was planted. The beds were cased in the basement on December 1, in the greenhouse December 2. The first mushroom was picked about January 1; that is, five weeks from spawning the beds. In six weeks we began picking regularly; at first a few, the number gradually increasing, and then diminishing again as the beds became exhausted. A space representing about 70 to 75 square feet ceased bearing about March 20; the remaining space was bearing its heaviest about April 1 to 10. For some reason the spawn in this part of the bed was very late in starting. It was fully two months after spawning before any evidence of mushroom growth appeared. The mushrooms usually were picked every other day, and when the crop was at its best bearing from 4 to 8 pounds were collected at each picking."

Advertising Truths.

Advertising helps the small business grow large and prevents the large business from getting small.—Advertisers' Review.

The man who is too busy to advertise generally has a good deal of business on hand that has nothing to do with his business.—Brains.

If your business is good, advertise to keep it so. It is always better to look ahead and prepare than to look back and regret.—Publicity.

"The law of supply and demand" governs trade all right, but the man who goes after trade with a good live advertisement is the fellow who gets the first slice when the "demand" watermelon is cut.—Agricultural Advertising.

The wise advertiser sells goods of merit and advertises them by calling attention to their meritorious points. The business that results from a careful use of judgment and honesty in buying and in advertising will make the success which is desired.—Smith's Partner.

Advertising is an insurance against future disaster. It creates persistent, ever-increasing demand. The advertising of to-day will not only bring present orders, but familiarize everybody with your trademark and the merits of your goods.—Circulation Manager.

Keep up some advertising even in Summer, and make that little effective. If well done, the cumulative effect in the Autumn is increased. Perseverance in a good cause seldom fails of its reward. Sticking to one thing tenaciously and persistently almost invariably brings success.—Agricultural Advertising.

Advertisers should always carefully examine the publications they think of using, before finally making up their lists. If a paper is edited in a careless and slovenly manner, cut it out. If an editor does not possess either the ability or gumption to do his work well, his paper does not deserve the business, and, indeed, careless editing minimizes the value of the advertising columns.—Agricultural Advertising.

Probably most often failure in advertising can be traced to lack of persistency. Too often the advertiser gets the idea that if the returns are not immediate the venture is a failure and quits. This is the very worst thing he could do. Advertising is cumulative in its character and the work done this month or year must form the foundation for later accretions, and he who goes in for a season and quits loses not only what he puts in, but all the possibilities which might be his.—Agricultural Advertising.

An employer should never write a "mean letter" to a salesman on the road; he may correct an error by writing, but should leave his grumbling and scolding until he gets the poor salesman at home, where, if necessary, he can soften the reproof. No man is so much alone as a traveling salesman. He needs encouragement all the time, and when he is reprimanded while in the field, it means loss to his employer, through the ill effect on the mind.—Agricultural Advertising.

SAN FRANCISCO.—Luther Burbank has again been heard from in connection with astonishing experiments he is making to produce new potatoes, tubers that may eclipse any other yet given to man. Chief among this experimental work is the crossing of the Solanum Commersoni, a wild species of the potato which grows on the Mercedes River, in South America, with the common potato. The South American tuber was discovered some ten years ago, and specimens were taken to Paris, and for almost a decade Dr. Heckel studied and tried to hybridize it. Finally he sent Luther Burbank a single eye, and twelve months after the distinguished California scientist commenced his experiments he had secured 120 hybrid seedlings from it. Also is Mr. Burbank experimenting with another new species of tuber, the Solanum Magli, which grows on the west coast of South America, in the high mountains. He also is using in his new tuber experimentation other varieties, including the hardy potatoes that grow in some parts of the mountains in Arizona, in Central America, and in the high mountainous country of old Mexico. The hardy qualities of these wild potatoes, so to speak, are being combined with the ordinary tuber, which has, to a certain extent, almost run its race of service. Regarding this new potato Mr. Burbank said: "It will be better in quality, better in flavor, more productive, and of more even size, so as to do away with small potatoes altogether," and then, reserving the best quality and most important, to the last, "it will be a potato that will resist the various diseases known to the tuber family. The resistant feature in this creative work is the most difficult." Mr. Burbank further explained that the common potato, the Solanum tuberosum, has practically lost the power to produce seed balls. Crossing the old varieties with the new ones will necessarily result in the introduction of new varieties that will have new qualities.

"About how many varieties of potatoes have you on hand now, Mr. Burbank, with which you are experiment-

ing to produce the new potatoes?" he was asked.

"Over 10,000," was the ready response. Most of the 10,000 varieties are hybrid seedlings of Mr. Burbank's own creation. These have been produced by crossing, followed by careful inspection, testing and selection. April 27 Mr. Burbank commenced the planting of the 10,000 varieties on his experimental grounds. The potatoes are of all kinds and shapes, some round, some square, some long, some short, of all colors of the rainbow. There are pure white tubers and black ones, pink, red, crimson, purple, yellow are among the colors of the potatoes that are being planted. When the harvest time comes in the Fall, possibly all but 100 varieties out of the 10,000 may be rejected, and the following year probably this number will be reduced two-thirds; and so on until perfection is attained. "It will take two or three years at least," Mr. Burbank said, "to produce the new potato, as all the varieties must be put through the testing process."

ALVIN.

PASADENA, CAL.—The practical gardeners of Pasadena have formed a permanent organization for mutual protection and advancement. The organization will be known as the Pasadena Practical Gardeners' Society and starts out with twenty-four members. The following officers were elected: President, T. Hanson; secretary, Ed Kirby; treasurer, Albert Zimmerman, superintendent of city parks. The next meeting will be held at the offices of the Park Nursery Company on May 18.

SPRINGFIELD, MASS. — Edgar King, of New York, for 12 years assistant superintendent of Mount Auburn cemetery there, has been secured by the trustees of the Springfield Cemetery Association and will serve here in the same capacity. Nelson F. Higgins, who has had charge of the cemetery greenhouses for a number of years, has resigned and will go into the florist business. Superintendent Fred Emery and Mr. King will hereafter have charge of the greenhouses.

SURPLUS BULBS

FOR PRESENT PLANTING

GLADIOLUS—

- Angusta. The best florists' pure white variety in existence. Selected bulbs throw three flower stalks, each branching in candlebra form, with two and three heads of bloom.

HARDY VINES AND CLIMBERS

CLEMATIS INTEGRIFOLIA DURUNDI

Iron Cross Clematis. The steel blue flowers grow in the form of the famous German Iron Cross, measuring 3 to 4 inches across in a dense form intermixed with the buds. A very robust and vigorous grower, although of semi-dwarf habit. Blooms from early summer until late fall. 4-in. pot plants, 50c. each; \$5.00 per doz.

CLEMATIS

JACKMANNI HYBRIDS

Duchess of Edinburgh. Double white. Henry 1. Large single white, very large flower. Mme. Baron Villard. Light rose. Sieboldia. Lavender. The Gem. Deep lavender, blue, very fine. Gipsy Queen. Fine dark single purple. Imported three-year-old open-ground roots, 60c. each, \$1.00 per doz.; \$30.00 per 100. Imported two-year-old pot-grown, 40c. each; \$3.00 per doz.; \$20.00 per 100. American-grown one-year-old field roots, \$2.00 per doz.; \$15.00 per 100; \$125.00 per 1000.

OTHER CLEMATIS

Clematis paniculata. Strong three-year-old roots. 15c. each, \$1.50 per doz., \$10.00 per 100. Strong one to two-year-old roots. 10c. each, \$1.00 a doz., \$7.50 per 100. Clematis coccinea. A handsome variety, producing an abundance of large rosy-scarlet, bell-shaped flowers, which are exceedingly handsome and most useful for all sorts of decoration. Blooms from June until frost. Quite hardy. 10c. each, \$1.00 per doz., \$7.50 per 100. Clematis crispata. Much like coccinea, but producing very fragrant lavender flowers, tipped white. 10c. each, \$1.00 per doz., \$7.50 per 100.

Clematis Davidiana. Dwarf, herbaceous sort, growing about 2 to 3 feet high, covered with deep blue flowers in clustered heads; also singly in leaf axils. 1 year-old, 2 1/2 in. pots, 8c. each, 65c. per doz., \$4.00 per 100, \$30.00 per 1000. Two-year-old, open-ground, 10c. each, 75c. per doz., \$5.50 per 100, \$50.00 per 1000.

WISTARIA SINENSIS

Blue. Open-grown, extra strong, 4 ft. plants, 40c. each, \$3.00 per doz., \$20.00 per 100. White. Open-grown, extra strong, 4 ft. plants, 50c. each, \$3.50 per doz., \$25.00 per 100.

HONEYSUCKLES

Extra strong field-grown plants, 4 to 8 ft. vines in variety, 50c. each, \$4.00 per doz., \$30.00 per 100. Variegated: Balleana, yellow; Germanica, white; Germanica, red; Belgica, red; Scarlet Trumpet; Yellow Trumpet.

HARDY ENGLISH IVIES

Strong 4 in. pot-grown (cut back), \$1.00 per doz., \$7.00 per 100, \$65.00 per 1000. Field Grown. 2 ft. vines, strong plants, \$1.25 per doz., \$8.00 per 100. 2 1/2 in. pots, 30c. per doz., \$2.50 per 100, \$20.00 per 1000.

AMPELOPSIS VEITCHII

Cleveland, O.

Huckleberry Branches.
 To their complete satisfaction, since wild smilax is out of commission for the time being, Cleveland decorators have been using branches from the wild huckleberry bush introduced by the discoverer of the wild smilax, Mr. Darnell, of J. M. Gasser Co., speaking of it the other day, says it really is a boon to those who do lots of decorating through the Summer. While it doesn't give that graceful drooping effect so characteristic of wild smilax, it takes the place of it very nicely. This firm used some which was sent them recently in a decoration with complete satisfaction all round, and, by the way, it was this same decoration in which callas that were sent all the way from Los Angeles were used. Westman & Getz had the church decoration and banquet for the Cleveland Homeopathic College commencement, which occurred last week. O. G.

Syracuse, N. Y.

News Items.
 Owing to the frosty nights little is being done in the Spring bedding line. Prices on plants are: Geraniums, \$1 to \$2; verbenas, 60c.; stocks, \$1; pansies, 35c. and 50c. per dozen. P. R. Quinlan & Co. plan to put out their carnations in the field next week. L. E. Marquisee is now engaged in planting out. Henry Youell has returned to England, and is now in charge of an extensive plant in Lewes, Sussex, where roses are grown for the market. This season he will introduce carnation growing on the American plan, using the leading American varieties. P. R. Quinlan has returned to Cuba. J. B. B.

SALT LAKE CITY, UTAH.—A fortune is waiting for the man who will discover some conditions under which roses can be successfully raised in hot-houses in Salt Lake, says the Tribune. This has not been done so far, and florists of this city say that thousands of roses are imported from other States each Winter, and, consequently, thousands of dollars go out of this State for those roses. Since roses are the most popular flowers during the Winter among those who can afford them, it will be seen what the raising of roses in this city would mean to some man in a financial way.

CHILLICOTHE, MO.—A recent wind storm did serious damage at the nursery of R. C. Isherwood, entirely demolishing his greenhouse structure.

Time to Graft Orange Trees.

(168). N. F.—The best time to graft orange trees is just before they start to make a new growth. In the case of old plants that have been dormant, or nearly so, all Winter, now would be about the right time to graft them.

Moles on a Lawn.

(166) I am having quite serious trouble with moles on my lawn this season. They work not only in the grass, but in the beds where are bulbs and hardy plants. Kindly advise a way or ways to exterminate the pests. Is there anything with which they can be fed which will act as a poison?

News Notes.

Cold, rainy weather has retarded the bedding plant trade a little, but with the advent of a warmer spell it is now opening up nicely. This department is getting to be quite important now with the local growers, and a good many thousand plants are annually sold in the city at very fair prices. Hanging baskets and flower boxes, also, bring in a nice little grist. Good geraniums sell easily at \$1.50 and \$2 per dozen, are always in demand, and, with cannas and petunias, head the list in popularity.

Hardly had the carnations been planted before the rains came, which lasted several days, so the growers won't have to water them this year.

Herman Meyers, lately with Van Bochove & Bro., and more recently at Newcastle, Ind., has undertaken the management of The Dunkley Floral Co., and is now busily engaged in getting the plant into shape again.

Mr. Smith, of the Central Nursery Company, is tearing down the greenhouses on the north end of the city and will remove them to the nursery grounds, about three miles south of the city, at the same time adding several more houses and remodeling the whole plant on the best approved principles. The company found it inconvenient to have their places scattered, especially during shipping seasons, so decided to locate them all together at the most convenient point. S. B.

SCOTTII

The Most Graceful Nephrolepis Known.

Retailers who have handled this fern are unanimous in proclaiming it the best Fern ever introduced.

Consult any grower who has bought Scottii and he will tell you that it is as far ahead of the Boston as that variety is ahead of all other introductions.

See my ad. on page 471 of issue of April 8 for full particulars.

JOHN SCOTT,

Keap Street Greenhouses, BROOKLYN, N. Y.

Dreer's Select List of HARDY PERENNIALS

We offer here only the most **Showy and Decorative Sorts**, including varieties suited for **CUT FLOWER** purposes. These varieties are marked with an asterisk (*).

For the most complete list of Hardy Perennials offered in America, see our current Wholesale List.

This important branch of our Plant Department has been completely reorganized during the past year, and we are now able better than ever before to supply almost any demands and to execute orders promptly.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns the first season. This, in most instances, is a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

Mention the Florists' Exchange when writing.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen
Seedsmen and the Trade in general

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO. LTD.

'2, 4, 6 and 8 Duane St., New York.

P. O. Box 1697.

Telephone, 3765 John

ILLUSTRATIONS.

Electrotype of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

YEARLY SUBSCRIPTIONS.

United States, Canada and Mexico, \$1.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Express Money Order, draft on New York, Post Office Money Order or Registered Letter.

The date on the address label indicates when subscription expires.

REGISTERED CABLE ADDRESS:

Florex, New York.

ADVERTISING RATES.

One-half inch, 75c.; ¾ inch, \$1.00; 1 inch, \$1.25. Special positions extra. Send for Rate Card, showing discount of 10c., 15c., 25c., or 35c. per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

Copy must reach this office THURSDAY MORNING to secure insertion in issue of following Saturday. Orders from unknown parties must be accompanied with cash or satisfactory references.

This week's index will be found on page 669.

News of the Week in Brief.

A company has been organized near Baltimore to grow peonies on an extensive scale.

Nearly all the florists' clubs in the country are making arrangements for their annual outings.

The decoration of the canines with flowers was a recent feature of a San Francisco dog show.

Southern California is to have a laboratory and experiment station for the study of diseases of plants.

Fadeless flowers (Burbank's and others) are discussed on page 679.

President Vaughan of the S. A. F. O. H. has written a letter protesting against the proposed free distribution of trees by the Civil Committee of Pasadena, Cal.

There is yet time for all lovers of the sweet pea to send in their mites in aid of the Eckford Testimonial Fund.

Our London correspondent suggests that our American growers give more attention to the new and improved daffodils. There's money in them.

A subscription of \$5 has been received by this office to be applied toward the proposed "Paul Jones Memorial Fund." C. S. Macnair, of Providence, R. I., has set the ball a-rolling.

Dr. Robert T. Jackson, an authority on peonies, made a very interesting address on these popular plants before the Boston Gardeners and Florists' Club, part of which appears in another column.

The Department of Agriculture, Washington, D. C., has ordered that commencing July 1 next, two-ounce samples of all importations of 100 pounds, or more, of grass, clover, and forage plant seeds, be sent to its laboratory by customs officers.

Much concern is being felt by his relatives and many friends over the mysterious disappearance of Otto Kroeschell, of Kroeschell Bros., boiler manufacturers, Chicago. A reward of \$250 is offered for information that will lead to his whereabouts.

The smoking of dried chrysanthemum petals has been recommended by an English medical officer as a "pleasant substitute for tobacco." An epileptic patient is said to have been wonderfully benefited by this form of substitution for My Lady Nicotine.

The huckleberry branches are being highly spoken of by Cleveland (O.) decorators who have used them. Illal storms have been quite frequent throughout Iowa and other Western States the past week. Secretary John G. Esler says these are the best ads. the F. H. A. gets.

What do you think of the repeated suggestion that the S. A. F. give its medal to deserving workers who have enhanced horticulture by the production of new creations and other meritorious means? An S. A. F. Medalist in Horticulture would sound as well as a V. M. II.

Society of American Florists and Ornamental Horticulturists.

Railroad Rates to Washington Convention.

The Trunk Line Association has made the usual reduced rate to the Washington convention of one and one-third fare for the round trip. The Trunk Line Association territory includes the States of New York, Pennsylvania, New Jersey, Maryland, West Virginia, and a portion of Virginia. Following the granting of this concession by the Trunk Line Association, application has been made to the New England, Central, Southeastern, Southwestern and Western Passenger associations for a similar reduction. As soon as action has been taken by these associations, due announcement will be made accordingly.

WM. J. STEWART,
Secretary.

Heroes vs. Horticulturists.

"There has been a class of men whose patriotic affection or whose general benevolence have been usually defrauded of the gratitude their country owes them: these have been the introducers of new flowers, new plants and new roots. * * * Monuments are reared and medals struck to commemorate events and names which are less deserving our regard than those who have transplanted into the colder gardens of the North, the rich fruits, the beautiful flowers, and the succulent pulse and roots of more favored spots; and, carrying into their own country as it were another Nature they have, as old Gerarde well expresses it, 'labored with the soil to make it fit for the plants, and with the plants to make them delight in the soil.'"

So wrote the elder D'Israeli in his "Curiosities of Literature," many years ago. The same indifference, so far as Governmental recognition of the creators and introducers of new plants, etc., is concerned, exists to-day, although the horticulturist and the benefits he is bestowing upon mankind are now being "medalled," though not yet "monumented," by societies devoted to scientific pursuits and to the development of his own particular industry.

"Peace hath its victories, no less renowned than War," and among the many and varied institutions tending to promote peace and happiness none plays a more important part than the practice of the art and craft of horticulture. Why, then, should not Governments reward the labor of the deserving horticulturist with medals, and communities erect monuments to his memory, equally with those who have gained renown in other arts and professions? In the pursuit of his calling, there is probably no public benefactor who receives less pecuniary benefit from his achievements than he; and that is all the more reason why his country should show its gratitude for what he has done.

But the horticulturist has always been a modest man, proud and thankful of the least recognition. The same author cites as an example of that modesty the case of Peter Collinson, a botanist, "to whom the English gardens are indebted for many new and curious species which he secured by means of extensive correspondence in America," who was highly gratified when Linnæus baptized a plant with his name. Said Collinson: "Something, I think, was due to me for the great number of plants and seeds I have annually brought from abroad, and you have been so good as to pay it by giving me a species of eternity, botanically speaking, that is, a name as long as men and books endure." And, adds D'Israeli, "such is the true animating language of these patriotic enthusiasts."

Our object in calling attention to the foregoing is, more particularly, to recall the excellent suggestion made by ex-President John Burton in one of his addresses to the S. A. F. O. H., to the effect that that organization bestow its medal on the men who have, by their skill and perseverance, enhanced American horticulture with new creations and by other meritorious means. It seems to us that such recognition would have its value in more ways than one; and no more fitting time to begin the medal distribution could be selected than the year in which the S. A. F. shall have attained its majority—in 1906—in commemoration of which such an act would be well in keeping. The Royal Horticultural Society of England has adopted this method of rewarding work well done. Our own national organization would, we feel sure, make no mistake in emulating the example of its English prototype.

And we hope, too, the day is not far distant when monuments shall be erected, in fitting places, either by the nation or communities, to perpetuate the memory of men whose untiring and, in a great measure, unselfish work, has added so much to the pleasure, enjoyment and amelioration of the great mass of the people—among peaceful victories, the greatest.

Funny, Isn't It?

Our esteemed and beautifully pictorial contemporary, The Garden Magazine, in its June issue, has an article on "Unconventional Veranda and Window Boxes," accompanied with views of subjects which, it is said, provide "something better than the stereotyped lot of stuff most people buy from the local florist." In one instance, *Grevillea robusta* is recommended for its "flowers," as a window plant. "Ferns may be transferred from the woods," it is suggested, and "plants from the garden. Uncommon kinds can be ordered from the catalogues of large dealers in plants." But, it is stated, plants purchased from the local florists "cost ten cents each, and the dimes count up fast. This is why most of the window boxes that you see are conventional affairs, containing only a few plants that every one knows. Nearly all the accompanying pictures show originality and imagination. And by exercising a little ingenuity it is possible to reduce the expense to nothing."

Funny as it may seem, hardly a plant named by the writer of the article as suitable for the purpose in question, the effects from which show "originality and imagination," but what is used by florists in their conventional window box fillings. One wonders, too, why a "high class," gardening periodical, soliciting advertising from the florist trade, should seek to mould public predilection, horticulturally, to the extent of reducing the expense of plants for window boxes or any other form of home decoration, to "nothing."

The Yearbook of 1904.

The Yearbook of the Department of Agriculture will be ready for distribution during the latter half of June. A limited supply will probably be placed in the hands of Senators, Representatives and Delegates about June 1.

The book is made up of three parts: The report of the Secretary of Agriculture, 118 pages; special articles covering the chief lines of agricultural study during the year, 420 pages; and the appendix, made up of a directory of persons in charge of agricultural interests, of reviews of agricultural conditions, and of agricultural statistics, 204 pages. A full index of the three parts, in one alphabet, covers thirty-four pages more, bringing the total number of pages to 776. The volume is, as heretofore, well illustrated. It has seventy-five plates, of which sixteen are lithographs and fifty-nine half-tones, and there are sixty-four text figures. The special papers number thirty-three, and all but two were prepared by persons in the employ of the Department. Those of more or less interest to our readers are:

"The Relation of Plant Physiology to the Development of Agriculture," by Albert F. Woods; "Growing Crops Under Glass," by B. T. Galloway; "Fruit Growing," by M. B. Waite; "New Citrus Creations of the Department of Agriculture," by Herbert J. Webber and Walter T. Swingle; "The Relation of Birds to Fruit Growing in California," by F. E. L. Beal; "Sugar-Beet Seed Breeding," by J. E. W. Tracy; "Some Uses of the Grapevine and Its Fruit," by George C. Husmann; "Promising New Fruits," by William A. Taylor; "The Annual Loss Occasioned by Destructive Insects in the United States," by C. L. Marlatt.

Of the edition of 500,000 copies of the Yearbook provided for by law, 470,000 are subject to the orders of Senators, Representatives and Delegates in Congress, furnishing about 1,000 copies for each member. The Department of Agriculture receives only 30,000 copies, a supply not nearly sufficient for regular active correspondents and others directly in the Department service. For this reason many correspondents apply to Senators and Representatives, and meet a courteous and usually favorable response.

The Eckford Testimonial.

Editor Florists' Exchange:

Enclosed please find \$2, being my mite to swell the Eckford Testimonial Fund, and hoping to see it increase faster than in the past.

I feel much interested in this matter, as I served time with Mr. Eckford on the estate of Lord Radnor, at Colleshill in Berkshire, Eng., for three years; and many a time I have helped him prune and tie his seedling dahlias after work hours. Mr. Eckford was a thorough all-round gardener and plantsman.

GEO. H. ROWDEN.

Wallingford, Conn.

[We are much obliged to Mr. Rowden for his interesting letter. Subscriptions of 25c. and upwards to the fund will be gladly received and duly acknowledged. All growers and lovers of the sweet pea in America should be represented in the subscription list. Send in your subscriptions early, please.—Ed.]

Subscriptions acknowledged.

Obituary

A. T. Stearns.

Albert Thomas Stearns, president of the A. T. Stearns Lumber Company, of Boston, who died on April 9, 1905, at the age of nearly eighty-four years, was a conspicuous example of the business man of the old school. Born in Billerica, Mass., he learned the lumber business in his father's mill. As a boy he constructed a complete miniature sawmill, sawing his diminutive logs by means of the power developed by himself from a nearby brook, just as his father sawed his greater logs in the larger mill on the river bank.

After attaining a business age his first mill was built at Waltham, Mass. This he afterward sold, determined to locate within reach of a larger field for his enterprise. Attracted by the greater possibilities of a location on tidewater, and quick to perceive the future advantage of deep water in the handling of lumber which he then foresaw must come from ever increasing distances in vessels always growing larger and of greater draught, he acquired property at Neponset, near the mouth of the Neponset River. This is now a portion of the city of Boston, and here he established the present business in 1849, fifty-six years ago.

Mr. Stearns, writes Frederick C. Moseley, was ever a pioneer in his chosen line, the first to recognize a need and the first to supply it. He knew his business from the bottom to the top, and he also knew what his customers wanted. If a new wood, he found it for them; if improved manufacture, he would build the necessary machinery to supply the need. An inventor himself, he was also quick to secure the inventions of others whenever by so doing he could furnish his customers with material, either of better quality or at a reduced cost. He was the pioneer in the introduction of cypress as a general building wood in the North, and the mills of the Cypress Lumber Company, at Apalachicola, Fla., from which much of this wood has come, were established by him in 1883, and he was president of this company also until his death.

As a boy and man he was of tireless energy and scrupulous honesty. Always just, he expected and received justice from others. Despite his many years he had been the active and efficient head of the business which he founded until two months before his death, when he left home for his annual vacation in the South.

Mrs. Agnes Dunkley.

Mrs. Agnes Dunkley, whose death from heart failure was recently recorded in this column, was the widow of the late Joseph Dunkley, of Kalamazoo, Mich. She was born in Grand Rapids, Mich., July 4, 1847, and married in 1878. Seven children were born of the union, five of whom are living—Myra, Clara, Laura, Charles and Benjamin; also two stepsons, Robert Dunkley, Grand Rapids, and Samuel J., president of the Dunkley Celery Company, Kalamazoo. The funeral was held Saturday afternoon, April 26, at the house, the Rev. Gelston, pastor of the First Presbyterian Church, of which Mrs. Dunkley was a member, officiating. Burial was in the family lot at Riverside Cemetery. Several lots of flowers were sent by local and outside florists, by the Elks, and others. The business will be continued under the same name as at present—The Dunkley Floral Company.

Michael Curley.

Michael Curley, florist, Hyde Park, Mass., aged 61, died May 11, 1905, at the local emergency hospital as a result of a fall down stairs Wednesday morning at his home 27 Sunnyside street, whereby he sustained injuries to his skull. Mr. Curley was born in Ireland and had been a resident of Hyde Park for 25 years. He was a Civil war veteran and a member of Timothy Ingraham Post, No. 121, G. A. R., which he joined September 7, 1885. He enlisted October 28, 1861, at Staten Island, serving to the close of the war. He participated in the battles of Yorktown, Williamsburg, Fairfax, Malvern Hill, Seven days' battle, Chantilly, Second Bull Run, Fredericksburg, Chancellorsville, Gettysburg and Wapping Heights. His wife died a few months ago.

George N. Rider.

George N. Rider, a florist of Dunkirk, N. Y., died May 8, after a month's illness, at the age of 73 years. Besides a widow, he leaves four children.

OUR READERS' VIEWS

Paul Jones Memorial Fund.

Editor Florists' Exchange:

Herewith find check for \$5 as a nucleus of a "Paul Jones Memorial Fund," as per the letter in your issue of May 14. I trust the idea will rapidly take hold.

C. S. MACNAIR.

SUBSCRIPTIONS ACKNOWLEDGED:

Macnair, C. S. \$5.00

To the Lady Bowlers.

Editor Florists' Exchange:

The committee of the Ladies' Bowling Team would like to hear from all teams that will take part in the contest during the S. A. F. O. H. meeting in Washington, D. C., in August, as well as from individuals, so that the committee can make the necessary arrangements. The prizes will be numerous and the contest will be a record breaker. Two valuable prizes, so far, have been offered, one of \$50, another of \$40. Please communicate at once with,

F. H. KRAMER.

916 F St., N. W., Washington, D. C.

Among Cemetery Florists Near New York.

While visiting recently some of the florists whose chief business is to plant and care for lots in Greenwood Cemetery, Brooklyn, N. Y., several remarked that it was gradually becoming more difficult to do a profitable business in that line on account of the restrictions the cemetery authorities are placing upon the lot owners and the gardeners who do the planting. A recent order, which limits the raising of any mound more than three inches above the ordinary level of the plot, also prohibiting the use of any tall plants on the mounds, would seem at first glance a rather stringent rule, and anything but conducive to the welfare of the florists who cultivate plants for the cemetery. Believing that the subject was of interest to a large number of the craft, we called upon Eugene Cushman, the superintendent of Greenwood Cemetery, who freely explained the workings of the Cemetery Association in regard to the planting of graves, etc., and we came away convinced that the florist business around Greenwood will not be injured, or crippled, by any rulings that the cemetery authorities have put into force.

Those who manage such a property as Greenwood is, have a great many things to contend with and to provide for, that an outsider would never realize. It is with the idea of keeping the cemetery always beautiful, and according to each lot owner his just rights, that some restrictions have to be made as to what shall or shall not be planted on the cemetery lots.

Some people express a desire to plant a small pine tree in their lot; others will plead to place a maple or some other forest tree such as would soon overshadow and spoil the lots in their immediate neighborhood; and the cemetery as a whole would, before many years, be a kaleidoscope of mixed planting that would become an eyesore; and it is only by well directed restrictions that this "silent city" can retain its present beauty.

The association keeps a large force of help, and is continually doing a lot of permanent planting. The choicest of trees and shrubs are selected, and tended with the same care as is given those on any private estate. We may remark in passing that the pay-roll for 1904 amounted to something over \$135,000, from which one can easily see that if the cemetery authorities are willing to spend such a sum as that, they are more than willing that each lot owner will do his share toward the general scheme by placing suitable plants and shrubs whenever possible.

While it has been decreed that mounds may not be raised more than three inches above the common level, there has been no limit set as to the variety of soft-wooded bedding plants to be used, so there will be no diminution in the demands for such stock.

In the planting of trees and shrubbery, however, the authorities demand that permission be granted by the superintendent. Applicants must specify on blanks and diagrams furnished for that purpose by the association, just what is desired to be planted, and the exact position the shrubs or trees will occupy. Such trees as willows, allanthus, althaea, lilac and laburnum are prohibited; but permission is granted for the planting of spræas, syringas, azaleas, and rhododendrons.

James Weir, Jr., & Son, John Condon, John Wollmers and James Shanley, all have greenhouse establishments near the Twenty-fifth street entrance to Greenwood; and at the Seventh avenue entrance are the greenhouses of P. McGovern, Daly & Sons and a branch establishment of Charles Krombach, who also has a place at East Fourth street and Fort Hamilton avenue, besides several other establishments in close proximity to the cemetery, and a newly opened flower store at the Johnstown Flood attraction at Coney Island. Mr. Krombach is about as busy looking after his many places as it is possible for one man to be.

L. J. Krimmel has been located for four years near to Greenwood, and is building up a profitable business, confined entirely to cut flowers and bedding plants. F. Wegner & Sons is an old established firm here, which does considerable planting, outside of their large cemetery trade. This firm has full charge of the landscape and planting work at the Steeple-

chase Park, Coney Island—a park noted for its beautiful scenic effects and floral displays. Close by is the place of J. Kirschner, another old established florist, noted for his constant supply of all kinds of bedding and decorative plants. John Condon's Fort Hamilton avenue greenhouses are opposite the Greenwood entrance, and under the careful supervision of Fred Wiltshire are kept well filled with all classes of plants suitable for a first-class cut flower and bedding business. In close proximity is the mammoth establishment of James Weir, Jr., & Son. This is by far the largest growing establishment in the neighborhood, and everything is done on a large scale. Just now several houses are filled with dahlias and swainsonas, and a plentiful supply of flowers is in evidence for the near future.

In Holy Cross Cemetery, which is located in Flatbush, Brooklyn, N. Y., all kinds of soft-wooded bedding plants are used, but no one is allowed to plant trees or shrubs. The principal florists who supply this cemetery are: D. Y. Mellis, who in addition to his greenhouses, operates two stores; Braun & Friedman, and C. F. Wulff.

CLUB AND SOCIETY DOINGS

KENTUCKY SOCIETY OF FLORISTS.—The May meeting of this society was held at the office of Coenen & Bohman, Louisville, and as the meeting was in the nature of a farewell greeting to our popular and efficient financial secretary, Joseph Coenen, it was largely attended. Mr. Coenen is a charter member of the society, and for many years has held the office of financial secretary, but he has decided to take up his work in the West, and will leave us about the first of June. After the routine business, Mr. Coenen was presented with a cane as a token of the esteem and regard of the members. After adjournment a delightful "Dutch lunch" was served, and, with the cigars and small talk indulged in, certainly made the evening one long to be remembered. T. B. Rudy was elected to fill out the unexpired term of Mr. Coenen. A. R. B.

MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY.—At the last meeting of this society, held at Oceanic, Wm. Turner presented to Percy Hicks a beautiful silver cup, the first prize for an essay on "Fruit Culture Under Glass." H. Griffiths received the society's certificate as a second prize. The prize winners for an essay on "Chrysanthemum Culture" were announced, viz., Harry Griffiths first, and Joseph Kennedy second. So much time was taken up by the business matters of the society that it was decided to postpone the reading of the papers until the next meeting, at which time the prizes will be awarded to the winners.

The first annual rose show of this society will be held on June 16, in Red Men's Hall. B.

NEW JERSEY FLORICULTURAL SOCIETY.—Orchids are the prevailing flowers at the present time in the meetings of the New Jersey Floricultural Society. They were in force at the regular meeting held Friday, May 5, the exhibit of Julius Roehrs being in itself an object lesson. The most striking flower of the collection was *Lælia purpurata* var. William Barr, which was certificated. A *Cœlogyne pandurata*, exhibited by Mr. Henry Graves (grower, Edwin Thomas) received the society's first-class certificate. Mr. William Barr, among other orchids, had a *Catleya Mossia*, with forty-one blooms, which received 98 points. Other orchids were shown by Mr. William Runkle (grower President Kingsgrab), M. Hornacker, who displayed a new seedling carnation, Mrs. Lawson X pink seedling) which was certificated. The judges were: James Goodyear, Jos. A. Manda and A. Caparn. The topic for the evening was a talk on a Fall show which it was decided to have, if possible, in a large exhibition hall. Julius Roehrs, Jr., was placed in nomination for membership. J. B. D.

THE MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY held its regular meeting on the 10th inst. At the request of President Heeremans several members made exhibits in both plants and flowers. President Heeremans had a dozen magnificent specimen of *calceolaria*, grown in 6 and 8-inch pots. The committee on exhibits awarded a certificate of merit. By request of the members present, Mr. Heeremans promised to read a paper on the culture of these plants at our next meeting. A vase of carnations in variety from R. Vince was remarkably good for this time of year; it received cultural commendation. Well-done specimens of begonia and variegated hydrangea were shown by Mr. Edmichael, gardener to C. A. Work, Esq., receiving cultural commendation. A vase of mixed chrysanthemum blooms, something odd for this time of year, was put up by C. H. Totty. Baby Rambler roses in bloom from John Frazer, gardener to Gustav E. Kissell, Esq., were shown in fine form. The possibilities of this rose as a pot-plant were manifested by this fine display. Clucas & Boddington Co., Palisades, N. Y., sent by special messenger 16 varieties of hardy herbaceous perennials in bloom. They were interesting and instructive, just things that the florists on private estates need at this time of year. Robert M. Schultze and Andrew McKendry were elected members and Harry Green, David Pierson and William McCoy proposed for membership.

Our tenth annual flower show will be held in the assembly rooms, Madison, on October 26th and 27th next. Prospects for a grand exhibition look bright. The schedule is in press, and can be secured later on from E. Reagan, secretary, Morristown, N. J. E. R.

CHRYSANTHEMUMS

For Exhibition and Decoration.

(Concluded from page 642.)

VENTILATION.—A cool temperature is needed at all stages of growth; 45 degrees night temperature, with a rise of 10 to 15 degrees with sun heat, is sufficient. Keep the ventilators open night and day, at every opportunity, through the growing season. If very windy, it is better to close the windward side of the house, even if the temperature rises a little, for a heavy gust may strip off a good many leaves. After the blooms start to open, great care must be taken in ventilating, especially in damp localities like this. Ventilate always from the reverse side to the wind. Keep a crack of heat in the pipes, and the top ventilators open a little every night and damp day, keeping the side ventilators closed at night. This will prevent moisture from passing through the house and settling on the blooms midway.

After the final potting, constant attention must be paid to tying, fumigating, etc. Always try to keep this work ahead. Tie the plants often, and always tie loosely, never hitching the matting around the stake. Rub off all laterals before they get large, and keep the plants free from weeds and suckers. After the blooms start to open, the suckers can be left, as they carry off a good deal of surplus sap, cutting them off when drawn and spindly. Keep a sharp lookout for caterpillars, leaf worms and grasshoppers, especially when the buds are in the young state. If the house is inclined to be damp, spread lime about; this will dry up a good deal of moisture. Fumigate lightly and often with Aphs Punk or tobacco stems to keep down green fly and thrips. Syringe occasionally with tobacco water and soot water; and if mildew or rust appears, spray the plants with sulphide of potassium, 1 ounce to a gallon of water. For the spot or leaf disease spray with copper solution, or Bordeaux mixture, on bright days.

Feeding

By the beginning of July the pots should be getting full of roots, and light feeding must be afforded. Give the plants a light top dressing similar to the potting compost, using ichthemic guano or Clay's manure instead of Thompson's. When the roots have got hold of this, give a sprinkling of Clay's or ichthemic guano once a week and light waterings of clear liquid manure—cow, sheep, horse or soot water two or three times weekly, varying the feeding as much as possible. Never give manure to a dry plant; by doing so the plants are not benefited, and the roots will be burned. This will carry the plants all right till the buds begin to show, when feeding will have to be stopped for a little while. (Continued after taking the bud.)

Taking the Bud.

This part of the work is best done in the early morning, the growths then being easily rubbed out. Take off the laterals gradually, leaving one shoot to carry the surplus sap from the bud for a few days. It is wonderful what a difference this shoot makes to the bud, especially an early bud. In taking a number of early August buds of Nelle Pockett (about 40 in all) five buds were taken at one handling and marked. The remainder were taken as described. The five, without exception, were rough blooms; the others were as fine Nelle Pockett as anyone could wish to see. After the bud is taken keep tied straight.

Feeding (Continued).

As soon as the buds are of the size of a pea feeding must be continued, starting gently, and increasing in strength as the bud develops. Nitrate of soda is used by a good many growers as a stimulant at this time, but in a damp locality I prefer to do without it. Give Clay's manure and ichthemic guano, both dry and in water, and the farmyard manures as before. As the flowers show color, two or three applications of sulphate of ammonia, two ounces to three gallons of water, will give the flowers a brighter color and appearance. Feeding must be gradually stopped as the flowers develop, stopping entirely when the blooms are about one-quarter opened. Some varieties need less feeding than others. Experience and a knowledge of the different sorts is the only thing that will show a man the right amount of feeding to give.

Damping.

If the weather is warm and muggy when the flowers are opening put a light spray of whitening over the glass. This is cheap, easily applied, and if rainy weather sets in will wash off. Look over the blooms constantly and carefully, cutting out any damped or sealed petals, with a pair of light, clean scissors, being careful not to bruise the flowers in doing so. One bad petal, if left, will ruin the flower.

Cutting the Blooms.

The blooms should be cut in the early morning or evening. Strip off some of the lower foliage and split the stem 4 or 5 inches, to allow the water to run up freely. They should then be placed in large vases (as upright as possible) in a cool room for at least twelve hours before shipping.

Cutting the Blooms for Exhibition.

Blooms for exhibition should be cut 24 hours before packing. Tie a light stake to each stem before placing in the vases. This should be left on till staged, especially with weak-necked varieties. If any of the blooms for exhibition are early, cut them a couple of days before fully developed and place in tubs (half full of water) or vases, in a cool dry room or cellar. They will open up in about a week and keep in good shape for two weeks or more. The water in the tubs will not need changing very often if a few drops of ammonia or pieces of charcoal are put in. The stems should be cut occasionally, the floors damped on dry days and a crack of air kept on constantly. Be careful in handling the blooms (the least rub will bruise) and never crowd too many flowers in one vase.

Packing.

After all the work of growing fine blooms, it would be folly to rush the packing. Start early. Fasten a sheet of wax paper securely around the flower, and if traveling a distance fasten some damp moss to the bottom of the stem. Pack carefully in layers in

YUCCA TRECULEANA
Professor Massey Standing Near It

shallow boxes, using wads between each layer. The flowers can also be packed in boxes a little deeper than the required length of stem, tying securely to two sticks running crosswise.

Varieties and Buds.

Of the chrysanthemums grown in this country at the present day, the palm must be given to the Australian varieties. Most of the sorts sent out last year have come to stay, with probably the exception of Mrs. F. S. Vallis and Mary Inglis. These were not shown in good shape last year. Mildred Ware, too, may have to go on account of its weak neck. We growers in this locality did not have much chance of seeing this year's novelties, as very few were shown in New York and vicinity. As the seasons go by many of the old varieties are pushed out of place, though Golden Wedding, T. Carrington, H. J. Jones, Merza and Colonel D. Appleton still take a lot of beating in their respective classes.

The right bud is the foundation of a fine, well finished flower, and each variety has its peculiarity in this respect. Take Wm. Duckham, for instance; on the early August bud, the petals are narrow, of poor color and the flowers full of chickens. On the September bud it shows the eye; but get the bud from the 15th to the 20th, and it is grand. Nelle Pockett and C. J. Salter make grand, heavy blooms on the early August bud, but thin in petals on the later bud. As a class, however, the incurved are best on a late August or early September bud. Japanese, Japanese reflexed, reflexed and Japanese incurved from the middle to the 25th of August.

Most of the varieties take a round four weeks from the time the July break shows to the August bud. If they don't show signs of a break at the proper time, pinch out the tip of the shoot. By doing this you can generally get the bud at the right time. With the new varieties one must experiment a little to get the right bud.

Following is a list of the buds which have done best with us, and the time of July break:

Variety.	Bud taken.	July break about
Ben Wells	Aug. 25	Aug. 28
Brutus	Aug. 15	Mid July
Chelton	Aug. 5	Early July
Colonel Appleton	Aug. 20	Late July
C. J. Salter	Aug. 5	Early July
Dr. Enguehard	Sept. 1	Early Aug.
Donald McLeod	Aug. 15	Early July
Ethel Fitzroy	Aug. 18	Mid July
Frank Hannaford	Aug. 18	Mid July
F. A. Cobbold	Aug. 18	Mid July
F. S. Vallis	Aug. 15	Mid July
G. J. Warren	Aug. 18	Mid July
Godfrey's Pride	Aug. 18	Mid July
Golden Wedding	Aug. 20	Mid July
Goldmine	Aug. 28	Early Aug.
Guy Hamilton	Aug. 15	Mid July
Lella Filkins	Aug. 15	Mid July
Merza	Aug. 20	Mid July
Peter Kay	Aug. 18	Mid July
Maynell	Aug. 25	Late July
Mrs. T. W. Pockett	Aug. 15	Mid July
Madame Carnot	Aug. 18	Mid July
Mrs. E. Thirkell	Aug. 25	Late July
Mrs. G. Milleham	Aug. 15	Mid July
Mary Inglis	Aug. 15	Mid July
Mildred Ware	Aug. 15	Mid July
Nelle Pockett	Aug. 5	Early July
Timothy Eaton	Aug. 25	Late July
Mr. T. Carrington	Aug. 18	Mid July
Wm. Duckham	Aug. 18	3d week July
W. R. Church	Aug. 18	Mid July
Lady Hanham	Aug. 20	3d week July
Edith Pilkington	Aug. 18	Mid July
General Hulton	Aug. 18	Mid July
Henry Barnes	Aug. 25	Late July
Lord Salsbury	Aug. 20	Late July
H. L. Sunderbruch	Aug. 10	Early July

Specimen Bush and Trained Plants.

If large specimens are required, the cuttings must be struck very early; for standard, early November, and for the others, December and January. The plants must be repotted as required, some needing 12-inch pots. When growing freely, they should never be neglected for watering and feeding.

TRAINING.—When the plants are six inches high, pinch out the tip of the shoot, carrying three shoots up. When another six inches of growth has been made, pinch again and take up three shoots. When the shoots from this break can be handled, place a stake to each shoot, tying out widely and evenly. Keep on pinching the shoots in this manner till the beginning of July, keeping the plants staked out loosely. Pinching must be stopped now to allow the shoots to get strong. About the end of July or beginning of August, the plants will make a natural break, when three or four shoots should be left to each break. The plants will need to be trained, or staked, now in the shape required. Some growers stake them out evenly all around. They can also be tied to wire frames, fastened to the pots in cushion, pyramid or half pyramid shape. In the latter case, the shoots are tied to one face and are used for standing against walls. Tie the shoots so that the points are evenly distributed over the frame. The last tying should be done soon after the buds are secured, before the shoots get stiff. Standards should be grown on the single stem, to the required height, and then stopped. Three stakes should be placed at equal intervals around the pot and one in the center higher than the others. Secure a wire ring to the outside stakes and run wires from this to the center stake. As the breaks can be handled they should be tied down, pinching as for bush plants. For staking the flowers cut a large potato in two, scooping out the center to fit the stem, and tie securely. The stakes can be stuck in this. During the growing and flowering season the plants should be turned often to secure an even growth. Unless plenty of time can be spent on the plants, they are better left alone, as they are miserable looking objects if not grown and trained properly. The stronger growing Japanese and incurved which break freely, do fine as bush plants. Select those which do not have a tendency to show the eye. Pompons, also, do fine. Anemones and singles do well in small pots for edging groups, or as bush plants for decorative work, disbudding the anemones and leaving the singles and pompons in sprays. The varieties are numerous to select from. I have seen the following do well:

POMPONS.—Little Bob, Mlle. Marthe and its sports, Sœur de Melaine, Black Douglas, Eynsford Gem, Prince of Orange, Little Pet, and Primrose League.

SINGLES.—Earlwood Terra-cotta, Mary Anderson, Miss Rose, Admiral Sir T. Symonds, Eucharis, Kate Williams, and Daisy Brett.

ANEMONES.—Garza, Descartes, Juno, and Thorpe Jun.

JAPANESE ANEMONES.—Owen's Perfection, Sir Walter Raleigh, and W. W. Astor.

CHRYSANTHEMUM SMOKING.—The smoking of dried chrysanthemum petals was recommended some time ago by Gorton's medical officer as "a pleasant and harmless substitute" for tobacco. Now, according to a medical contemporary, chrysanthemum smoking has been responsible for a wonderful improvement in a victim of fifteen years' standing to frequent and violent epileptic fits, the result of chronic dyspepsia. Since his first smoke of chrysanthemum petals, in January last, the patient has exhibited remarkable signs of improvement. He not only walks now without the aid of a stick, but enjoys immeasurably better sleep, and, as the report states, "can even attend church." A run on chrysanthemum blooms for purposes of smoking may be anticipated.—The Gardening World.

Yucca Treculeana.

Our photograph of *Yucca Treculeana* comes to us from Professor Massey, of Raleigh, North Carolina, who says of it: "I send you herewith a photograph of *Yucca Treculeana*, which I planted on my lawn about fourteen years ago. It also includes my picture, and as I am 6 feet 1 inch tall, it will show the height of the clump very well. It is the only specimen in Raleigh. There are some fine specimens of *Y. recurva* and *Y. gloriosa* here; and a nice plant of *Yucca aloifolia variegata* at the college has stood out five Winters unburnt."

Yucca Treculeana is famed for its beauty and imposing appearance when in flower. It bears a dense panicle, differing in its comparative shortness very much from *gloriosa* and *recurva*. It is one of what are called tree yuccas, attaining a height of some twenty feet in time. Coming from Texas and North Mexico it is hardy at Raleigh, N. C., and all through the Southern States; and P. J. Berckmans, of Augusta, Ga., who has some very fine specimens of it, sent us a small plant for trial, believing it would prove quite hardy in Philadelphia. The smallness of the plant led to its being grown in a pot until a year ago, when it was planted out in Spring, and now, Summer of 1905, it proves alive and growing. But it must be said that it was under snow nearly all Winter. Still, as *gloriosa* and *recurva* are hardy here, there is hope that *Treculeana* will prove so as well.

The *Yucca filamentosa* is far too commonly seen alone in gardens. Counting the varieties of it, of *gloriosa*, *recurva*, *glauca* and others, there are as many as a dozen hardy yuccas one could grow in the Middle States. JOSEPH MEEHAN.

The Cultivation of Peonies.

(Robert Tracy Jackson, Cambridge, Mass., before the Boston Gardeners and Florists' Club.)

[This paper is an abstract, with some changes, of a fuller paper published in the Transactions of the Massachusetts Horticultural Society for 1904, Part I., p. 141-157.]

Herbaceous peonies are mostly of the easiest cultivation. Full sunshine, or at least a good exposure to the sun, is necessary, as they do not thrive in the shade, as under trees. The roots of trees or large shrubs are objectionable, especially elms, maples and lilacs, as absorbing the nourishment and water needed for the full development of the peonies. A location protected from the force of the wind is desirable where possible. Peonies will stand great variation as regards soil, but a heavy rather than a light sandy soil suits them best. Being strong feeders and vigorous growers, they should be given deep cultivation, eighteen inches to two feet; even more is recommended by some, but I have had good results with two feet. An abundance of barnyard manure should be worked well into the soil, especially before planting. If this manuring can be done some months previously, so much the better. Cow manure is best, when available. Peterson says that where propagation is the feature desired, peonies form more and better roots in light rather than heavy soil.

Where the soil is sandy, an addition of clay would doubtless be an advantage. In a heavy clay, which is the condition in my garden, a free use of sifted coal ashes and leaf mold, dug into the soil, works wonders in ameliorating and improving its tilth. Coal ashes contain little potash, and add practically nothing of chemical fertilizing ingredients to the soil, and nearly the same may be said of leaf mold, but both improve its mechanical condition, which is of the very first importance for successful plant growth. Sand and road scrapings, where available, are, of course, excellent for lightening heavy soil; stress is laid on coal ashes simply because their value is not usually appreciated, and in small gardens it is a convenient, available material, usually a waste product to be gotten rid of. My attention was called to the value of coal ashes by Dr. Henry P. Walcott, who has used it for many years in his garden. It is much used by English and Scotch gardeners for clay soil. In the Autumn cleaning of the streets in Cambridge the city carts collect great quantities of leaves, which they are very glad to dump on the grounds of willing citizens. These, in a single year, by turning once, make a fine, well decomposed leaf mold, ready to dig into the garden, and give room for a new lot of leaves.

Time to Plant.

It is emphatically best to plant peonies in the Fall. In the Spring they may be transplanted, if necessary; but it is undesirable to purchase stock at that time. Frequently plants purchased in Spring will not appear above ground the first year, as may happen with excellent stock coming from a distance; also in Spring there is more chance of the death of some plants than with Fall planting. If plants are received in Autumn too late for Fall planting, as is sometimes the case in importing, or if they are in questionable condition, if small enough, it is best to pot them and plunge the pots in a cold frame for the Winter. In Spring they can then be planted out without disturbing what roots they have made.

Peonies may be left in the ground without transplanting some eight or ten years, but longer is undesirable if best results are to be attained. It is sometimes stated that peonies may be left in the ground almost indefinitely, but this a mistake if good

LONICERA JAPONICA (JAPAN HONEYSUCKLE)

Photo by John F. Johnston

Japanese Honeysuckle (*Lonicera Japonica*).

This honeysuckle belongs to the climbing section of the family and is native of Japan and China. It is a vine which should be extensively employed, far more so than it already is, as few other subjects are better adapted for covering porches, arbors, or any kind of trellis work, also in forming a hedge or screen or where some kind of ground cover is required. Possessed of rapid growth it fills a niche where a quick-growing vine is required. The foliage might be termed half-evergreen, remaining fresh well into Winter. The white, and sometimes yellow, flowers are very fragrant and appear during the Summer months, also again in the Fall. The variety *L. aureo-reticulata* differs little from the species, only it possesses foliage which is most beautifully netted with yellow.

JOHN F. JOHNSTON,
Glen Cove, L. I.

results are expected. The finest flowers are to be had on moderate-sized, well-grown plants. If plants are left too long in the ground they sometimes die out in the center.

Propagation.

For purposes of propagation, plants may be advantageously taken up more frequently, every two or three years, divided with a large, sharp knife (a small carving knife is very good), so as to leave at least one bud with a portion of the root. Peony roots are stiff and unyielding, as well as brittle, so that they are very apt to be broken seriously in dividing. Harrison says: "Let them lie in the shade a few hours and wilt. This toughens them and does not hurt them a particle. You can immediately restore them to their plumpness by putting them in wet moss, or keeping in or planting in moist earth. This is very important." I have tried Harrison's method (last Autumn), only I left them out of ground for several days in cool weather. When the roots become somewhat flaccid and yielding, instead of rigid and brittle, they can then be easily divided without injury, even to solid old clumps. They will regain their original plumpness in a few hours' exposure in a damp medium.

The small plants, after division, may be set out in nursery rows, two feet apart, the plants being about ten to fifteen inches apart in the row, according to size. In cutting up, some roots will be broken off, and these may be planted with the rest, as more or less will grow from adventitious buds starting under these conditions. Actual observations of what proportion will grow from adventitious buds would be desirable, but do not exist, as far as I am aware. In propagating, if the plants are choice and are cut very fine, it is desirable to set a frame over them the first Winter. As Peterson says, herbaceous peonies of choice varieties may be propagated by grafting. This method is practiced to some extent; but I think is most undesirable for herbaceous plants. Grafting is not expected in such plants, and, if practiced, endless confusion in varieties may occur from the growth of adventitious buds from the stock. If this is done, they should be grafted on officinalis stock, or some other distinct species, so that shoots from the stock, which are likely to develop, will be strikingly distinct from those developed by the scion.

F. L. Temple in 1889 suggested the method of propagating herbaceous peonies by heaping up fine, rich soil over the crowns; under such conditions he found, by an accidental experiment, that roots and buds developed on the stems, which could then be cut off, leaving the crown intact. Timme, in a recent paper, recommends this method of deep burial as a means of propagation. According to him, the procedure is as follows: In Spring, before there is any growth above ground, a bottomless box or tub is placed over the plant and filled with nice porous soil to a depth of twelve or fifteen inches. The new growth will push through this layer of earth, developing its foliage and flowers above it. By keeping this soil enclosed in

the box fairly moist all Summer it will be filled with roots about October. The stalks are carefully cut away below the new stratum of soil, and cut into as many pieces as there are eyes provided with roots. These short lengths, planted to a depth of about two inches below the surface, will grow into fine stock in less time than will small root divisions. Timme says that this sort of layering succeeds well with nearly all herbaceous peonies.

Mallett, in England, also recommends this method of propagation, as he says " * * * cover the stools with eight inches of light soil made firm; growths will push through this in Spring readily enough, and will flower well, but in September the resting buds will be found on independent stems six inches long and with a mass of roots at their bases. These should be detached and planted forthwith, and the old soil cleared from the stools to admit warmth, when they will develop many buds hitherto latent, and which they always have in reserve. These will flower in the course of the season. * * * The flowering strength of the stools is but little impaired, but a vigorous thinning of several weakly growths may be necessary in the second season." "Strong double peonies will often form three or four resting buds on one rooting axis. These may be removed individually with a portion of the stem and its roots attached, potted, and grown on in a little warmth till planting time to encourage further root action." If this method proves as satisfactory as has been expressed, it may well be a most important means of propagating peonies. As Temple suggested it would probably be best to fill in the earth gradually rather than the whole depth at the start, but this is a matter for determination. Leaf mold being fine, light and retentive of moisture would, it seems, be good material for covering.

Starting New Beds and Transplanting.

In starting new beds or plantations it is important to plant peonies where they have not been grown for at least two or three years, as bits of roots are practically certain to have been overlooked in digging up the plants, and such growing make confusion with varieties. Of course, any given variety can be replanted in the same situation without risk of mixtures.

Peonies may be transplanted or dug up for division to best advantage late in August or in September, rather than in October or November, as the roots then have a chance to become established before cold weather. The crowns may be set about three inches below the surface; deeper planting is undesirable. For permanent planting peonies should be set three feet apart, or, if there is plenty of room, four feet is none too much. If set closer it will be difficult to get between the plants without injuring the blossoms. If plants are small when set out interspaces may be utilized for gladioli or any plants that will not cast appreciable shade or otherwise interfere with the peonies. Such plants had best be annuals, or of an annual char-

acter, as perennials would interfere with a free cultivation of the soil. In digging use a fork, not a spade, as less injurious to the roots of the peonies.

How to Plant.

For a limited number of peonies scattered planting is desirable, as allowing for the full development of each individual plant without loss of space. When grown close together the blossoms during a heavy rain or wind are apt to be beaten down and entangled with the flowers and foliage of adjacent plants. Where considerable quantities are grown beds are doubtless best, thus having all together, a convenience in watering and other cultural treatment; also the effect of mass in a bed is very fine.

Plants should be set three feet apart each way in a bed, or, better, four feet between rows if there is room to spare. Never having had this luxury of space I can affirm that three feet will do very well. Beds six or nine feet wide and of any convenient length cut in grass and carrying two or three rows of peonies respectively are very attractive and easily gotten at for handling or inspection. Such beds are good for roses, phloxes, irises or vegetables, which may be grown in rotation with peonies when they have to be taken up. Beds of this character are used extensively in the Botanic Garden of Harvard University, in Cambridge, and also in the large garden of a skillful lady horticulturist in Newport, where very best results and effects are attained. Large square beds with grass paths are used by Dr. Charles Sedgwick Minot, of Readville, Mass., in a large part of his extensive collection of some four hundred and fifty choice peonies, including two hundred and thirty-eight varieties. Such beds may be made of any convenient size, but beds for fifty or one hundred plants have certain advantages on account of the ease of keeping track of such numbers.

Disbudding—Manuring.

A peony well grown, or the same variety grown poorly or with average culture are very different. Unless really well grown one does not know what are the possibilities of this fine flower. Disbudding distinctly improves the quality of remaining flowers, especially on the larger varieties. In some varieties, however, where profusion of bloom is a feature, they may be left to advantage. The lateral buds should be removed as soon as they are large enough to handle, so as to throw all the strength into the leading bud. Proximity to a hose is an important feature when possible in planning the position of a peony bed, for the free use of water in the growing season is a great aid in producing fine flowers. Liquid cow manure, or other liquid manure used during the growing season, promotes a splendid vigorous growth and correspondingly superior flowers. Water from a cesspool is excellent. Sheep manure or other fine manure stirred into the soil about the peonies in Spring works well, being washed down to the roots by rain or watering. In the late Fall it is desirable to put four or five inches of barnyard manure above the crown of each plant. This may be done after the tops are cut off and the ground freezes hard; the manure being dug in in Spring.

Delicate colored peonies lose their color more or less in strong sunshine, so that for very best results they may be shaded to advantage. By shading I have retained delicate shaded pinks in flowers, which were entirely lost in flowers of the same variety grown a few feet away, but not shaded. Of course, opening flowers in the house has the same effect as shading, saving the delicate colors, and some of the finest blooms one sees are flowers thus opened off the plant.

Cutting the Blooms.

Peonies have a great mass of petals, at least the double ones, so that when picked there is a large surface for loss of water. Such being the fact, it is important that they be put into water as quickly as possible after cutting. The best method is to carry a pail or can of water into the garden and put the flowers instantly into water, not even waiting to cut a second bloom. Experiment has demonstrated that flowers thus instantly put into water will outlast flowers kept even a few minutes without water. This is especially important for flowers that are to be exhibited, or shipped to a distance. When a peony is on the plant there is a continuous flow of sap to the flower. On cutting, this flow being shut off, from the suction thereby inaugurated it is quite probable that air particles are sucked in. If this is true, such air particles would tend to obstruct the vessels, interfering with the succeeding flow of water. If cut peonies are to be shipped they had best be kept ten or twelve hours in water in a cool place, when they become surcharged with water and travel vastly better than fresh-cut blooms. The same principles as regards cutting doubtless would apply to most other flowers as well.

(To be continued.)

WINDOW GLASS.—The production of glass is being curtailed by the closing down of factories, and the end of the month will probably witness the going out of blast of most of the factories. This fact may prevent manufacturers making lower prices, though the low quotation of 90 and 40 per cent. discount by the American Manufacturing Company on the first three brackets has caused some low prices to be made by manufacturers of hand-made glass. Locally a slight improvement in demand is noticed. New York quotations are about as follows: First two brackets, single, 90 and 20 per cent. discount; all other sizes, single and double, 90 and 10 per cent. discount. Where jobbers are urgent to move stocks these quotations are sometimes shaded to a limited extent.—The Metal Worker.

CLUB AND SOCIETY DOINGS

(Continued.)

BOSTON GARDENERS AND FLORISTS' CLUB.

The regular monthly meeting of the club was held Tuesday evening, May 16, at Horticultural Hall, with an attendance of sixty, notwithstanding a rainy night. President Wheeler in opening the meeting announced, with regret, the inability of the secretary, W. N. Craig, to be present on account of the accident which happened him a few days ago, and called upon J. W. Duncan to officiate in that capacity pro tem.

On the exhibition tables were a very fine collection of troilius from Julius Heurlin, of the Blue Hill Nurseries. The varieties included *T. europæus*, *asiaticus*, *asiaticus orange globe*, and *asiaticus excelsior*. The latter variety is of Mr. Heurlin's own raising, and is a decided acquisition, being a medium-sized flower, of a distinct, bright orange color. Another rare plant exhibited by Mr. Heurlin was *Arnebia echioides*, the prophet flower, with its pretty yellow and spotted flowers. Wm. Sim, of Cliftondale, exhibited a vase of candytuft of excellent quality. Mr. Sim also announced that he would be pleased to have the club visit his place about the end of June to see the uses to which violet houses may be put in Midsummer.

tee of the American Rose Society would meet in Hartford, June 19, and accept the hospitality of our club.

A lively discussion took place on the subject of window flower boxes, and the president appointed a committee to devise ways and means of bringing this highly important matter strongly before the public. Hartford is admittedly a beautiful and prosperous city, and it was felt that the one thing necessary to make her the gem of Eastern cities was "the window box," skillfully planted and widely disseminated. It was the sense of the meeting that our commercial florists could easily do more to educate the public to the beauty and utility of window flower gardening. To show how universally flowers are used for this purpose in different parts of Europe, by rich and poor alike, one of the members gracefully emitted the following effusion which was received by the meeting with loud acclaim:

Ye bloom on the cottage, the cottager's pride,
The window looks cold with no flowers by its side;
Ye bloom on the palace, ye bloom on the hall,
Ye bloom on the top of the ruinous wall;
Ye bloom on the trellis, ye bloom on our bowers,
Ye carpet creation, ye beautiful flowers.

The following resolutions were passed on the death of Alfred Whiting, the veteran West Hartford florist, who passed away on May 5, at the ripe age of 81 years:

Resolved, That by the death of Mr. Alfred Whiting,

EFFECTS OF HAIL STORM, MAY 8, 1905, AT ESTABLISHMENT OF JOHN STAMM, HUTCHINSON, KAN.

Edward Macmulkin exhibited, for Louis Dupuy, Whitestone, L. I., two plants of *Crassula hybrida*, which were much admired. And, by the way, this is a plant that proved a great favorite last Easter. W. J. Downs showed a dish of strawberries of fine size and finish; and the H. A. Stevens Company a vase of carnations of the standard varieties.

Eight new members were elected, and with such encouraging meetings the club bids fair to have a membership of two hundred before the end of the year.

It is proposed to have a picnic, and suggestions were made for the committee to arrange for the same during July.

After the regular business the president, in a few well-chosen remarks, introduced the speaker of the evening, Dr. Robert T. Jackson, of Cambridge. Dr. Jackson's subject was the peony, and his paper, which was very entertaining and instructive to lovers of this flower, was listened to with the greatest attention. He strongly recommended early Fall planting as the best time to make a peony plantation, and said that the plant would do best if left in the same place for seven or eight years: He spoke of the different methods of propagation, labeling, etc., stating, that in cutting blooms it was very essential to the keeping qualities of the flowers to immediately put them in water. The quicker this was done the longer the flowers would keep. A lively discussion followed the lecture, participated in by Messrs. Rich, Cameron, Allen, Finlayson, Stevens, and others.

The president announced, that at the June meeting the club would be addressed by M. H. Walsh, of Woods Hole, on the rose. J. W. DUNCAN.

HARTFORD, (CONN.) FLORISTS' CLUB.—The regular meeting of this club was held Friday night, May 12. There was a large attendance. President Huss gave an interesting talk on Alpine auriculas and other perennials, of which he is a most successful grower. It was intimated that the executive commit-

tee of our Florists' Club, and a veteran horticulturist, we feel that the horticultural interests of Hartford have suffered a great loss. During Mr. Whiting's long, honorable and successful career he did much to advance the interests of horticulture in general, and as an estimable citizen and a man he held the respect and esteem of the entire community.

Resolved, That the sympathy of the Hartford Florists' Club be respectfully tendered Miss Helen Whiting in her bereavement, and the corresponding secretary is now instructed to forward to Miss Whiting a copy of these resolutions. A. C.

ST. LOUIS FLORISTS' CLUB.—The May meeting of the club was not well attended, the greenhouse men all being too busy. President Juengel occupied the chair, 13 members being present. Otto Koenig, manager of the chrysanthemum show this Fall, reported that the executive committee was meeting weekly and that the prospects of a successful exhibition were good; the preliminary list is ready for distribution. Mr. Koenig also made a plea for the subscribers to pay up, so that all the money could be in the hands of the treasurer by the first of June. F. C. Weber is treasurer of the committee. Two new applications for membership were presented—Edward Hicks and Henry Lorenz. The applications of F. W. Foreman, Henry Aul and George Augermueller were laid over until the next meeting. Messrs. Fillmore and Ammann will take the places of Messrs. Miller and Weber on the board of trustees until the latter two return from Europe. The club's picnic will be held in July, as usual, and the trustees were instructed to arrange for same and report their plans at the June meeting.

John Stiedel, Clayton, invited the club to hold its next regular meeting at his place, June 8. The invitation was accepted. The secretary will notify all the members when and where to meet to go in a body.

By the time the next meeting is held, the planting season will be over, and a large attendance is looked for. ST. PATRICK.

Review of the Market

NEW YORK.—The weather remains quite cool, and the flower business continues very dull. There is a large quantity of lilac in the city, and its unusual cheapness is the cause of its taking the place of a great many other flowers just now. Carnations are almost a glut, and while an occasional sale is made at decent prices, a great many flowers are cleared out at from 9c. to 50c. per 100. Roses are going lower than has been the case for a good many months. The quality in general is far superior to what is usually seen at this time of the year; mildew is conspicuous by its absence, yet there seems to be no outlet for the larger part of the stock excepting through the class of florists who cater to the sidewalk customers, and that means about 50c. per 100 for all grades, purchased in thousands lots. Outdoor lily of the valley is available at 25c. per 100; and the sale of the forced article is suffering to some extent thereby.

J. K. Allen is receiving the first peonies of the season, and they are coming in in good shape. Lilies continue plentiful; and the supply of gladiolus is on the increase.

Cattleyas have become so abundant that they are being used in quantity on window display in some of the Broadway retail stores. Canterbury bells, cornflowers, Spanish Iris and water-lilies are now included among the daily supplies, but the demand for these out of the ordinary subjects is only limited.

The supplies of smilax and asparagus are on the increase, and, as a consequence, prices are easier than they have been for some time.

BOSTON.—The market the past week has been very unsatisfactory; in fact, there has been so little demand for flowers that it might be said nearly everything is at a standstill. Stock is plentiful and piling up so that it has to be cleared out at unreasonable prices. Roses may be bought at from 1c. up, \$6 per 100 being considered a high figure. Carnations sell at from 50c. per 100, \$2 being top notch for most varieties. Lilies are a drug; they are hard to sell at any price. Lily of the valley continues unchanged, and sweet peas have dropped in value. Violets still may be seen, but only in limited quantities. J. W. D.

BALTIMORE.—The bottom has practically fallen out of business this week. Great quantities of stock are to be had almost at the purchaser's own price. Carnations have at times gone to 5c. per dozen, on the streets, and roses 5c. and 10c. per bunch; yet they move slowly. The only real demand is for peonies, which are selling at \$3 to \$5 per 100. The circus is in town, and will help to keep things quiet for a few days. The new city councilmen take their seats to-morrow (May 18). Orders seem scarce for this occasion even. The retailers are very blue; and when the growers get their returns, more of the same color will be in evidence.

CHICAGO.—Trade conditions the past week have been rather erratic, stock accumulating in the commission houses one day, with a dearth the next. The unprecedented wet weather was, no doubt, in a great measure, the cause of this. Local buyers were very light purchasers, on some days, finding but little call from their customers. The only stock that moved any way briskly was lilac, and other outdoor-grown flowers. Large quantities of these materials are now coming in, and the demand continues very good; the quality was never better, and consignors are realizing good profits.

The supply of American Beauty roses has diminished considerably; the demand for the better grades continues good, these now selling at from \$4 to \$5 per dozen. Other grades go at from \$4 to \$24 per 100. Bride and Bridesmaid are not arriving in such large quantities as heretofore, yet sufficient to meet all demands, with some to spare. Golden Gate of excellent quality and color is coming in, selling at from \$3 to \$8 per 100. Mme. Abel Chatenay never was better than at present, with the majority of growers, who realize good prices for this rose. Liberty, with several growers, is now in fine crop, and the quality is exceedingly good. Carnations are coming in freely, and while sales are not over brisk, in some cases good prices are realized. During Saturday and Sunday a scarcity seemed to exist, when extra good stock sold as high as \$3 per 100. At present writing very good carnations can be bought for \$2.

Sweet peas are seen in large numbers; in consequence, prices have taken a drop. Lilies are not now so abundant, but some very good ones are seen in some of the houses. Peonies have put in their appearance from several sources; the quality is very good, and a brisk demand seems to exist for them. Prices are from \$2 to \$8 per 100. Lilac is abundant. It is of excellent quality this year, selling very freely at from 15c. to 25c. per bunch, according to size.

R. J.

INDIANAPOLIS.—Growers and market florists are very busy planting, but are behind in filling orders on account of the continuous showers. Funeral work comes in spurts, but so far is not up to the standard of May. Quite a few decorations are booked for June. Stock is plentiful, but not satisfactory, as the major part of it is of second grade. The variety, too, is not large enough to meet the demands of customers who are continually requesting flowers impossible to obtain. A week or two more should give relief. Candytuft, feverfew, peonies, ten-week stocks and lilies will then be ready for the market in quantities.

Bridesmaid, Bride and Golden Gate roses are plainly showing the effects of warm weather. The best wholesale at \$6 to \$7 per 100; Mme. Abel Chatenay and Souvenir du President Carnot are in prime condition; select stock brings \$8 to \$10 per 100. Kaiserin Augusta Victoria are steadily improving in quality; the best wholesale at \$8 per 100. Good American Beauty are scarce, but poor, weak-stemmed ones are very plentiful. The best 36-inch American Beauty wholesale at \$3; 24-inch to 30-inch, \$5; 15 to 20-inch, \$1, and shorts, 50c. per dozen.

Fancy carnations are in demand at \$3 per 100; medium grades, at \$2 to \$2.50, are more than equal to the demand, and many go to waste on the growers' hands, as the commission houses can do but little with them.

Southern peonies are being received, selling at \$4 per 100. Cape Jessamine brings \$1 to \$1.25 per 100. Quantities of iris are in the market, but so far are of poor quality because of the rainy weather. I. B.

ST. LOUIS.—The wholesalers have experienced the worst glut in years this week. Everything is so plentiful and so cheap that it is a hard matter to quote prices. The retailers, at the same time, say they never saw trade so slow. They are buying stock of all grades almost at their own prices, and, of course, cheap figures prevail all over the city. Especially is this so with the downtown florists. Every one is trying to undersell the other, displaying signs in their windows, "Roses at 25c. and carnations at 10c. per dozen, or 15c. for the original bunches." The uptown florists are doing fairly good business with weddings, receptions and dinner decorations. Greenhouse men are, of course, busy at this time of the year with plants, as bedding is going on all over the city.

Some of the prices at the different wholesale houses are as follows: American Beauty, long, \$2 to \$3; next grade, \$1 to \$1.50; and shorts, 25c. to 50c. per dozen; Bride and Bridesmaid, fancy, 4c.; others from 1c. to 2c.; in 1,000 lots about \$5. Carnations, extra fancy, 1 1/2c. to 2c.; 50c. to \$1 for good blooms. Peonies are very plentiful at \$2 per 100. Callas and Harrisii lilies are down as low as \$5 per 100. Lily of the valley brings \$2 and \$3 per 100. A fine lot of sweet peas are coming into the market at 35c. and 50c. in 100 lots; \$3 per 1,000. Greens of all kinds are in plenty, at their usual price. ST. PATRICK.

WASHINGTON, D. C.—The cut flower business has decreased considerably this week; funeral work has been the principal standby. Roses of all sorts are becoming scarce. Carnations are showing the effects of the hot weather, and are much smaller and off color. Bedding plants are in demand and are realizing fairly good prices. American Beauty roses bring from \$3 to \$6 per dozen; the best stock of Kaiserin Augusta Victoria, Souvenir du President Carnot, Ivory, Golden Gate, Bride, Bridesmaid, Liberty and Meteor, \$1 to \$1.50; carnations, 25c. to 50c. per dozen; sweet peas are getting scarce; they sell at from 15c. to 25c. per bunch. Iris and peonies are coming in and are in demand. There is quite a call for pansy plants at 10c. to 20c. each. Such plants as geraniums, heliotrope, verbenas, petunias and coleus in variety bring from 75c. to \$1 per dozen. McC.

PROVIDENCE, R. I.—Along with other cities, we must add our word of prevailing quietness in the wholesale market, where prices have reached a minimum, such as 50c. to \$1 for common roses and 50c. for ordinary carnations. This cannot last much longer, for the crop is too abundant. In retail lines we cannot really complain, for the low market prices have enabled the trade to make a good margin from what was sold; even though the total business has been below a fair degree. Bedding plants have not yet received the full share of attention, and carnations are slowly coming forward in basket lots, but we expect a big demand to start in very soon. C. S. M.

CLEANED THEM OUT.—The one insertion of advertisement of Eastgold chrysanthemum sold all the stock available for April delivery. We are now ready for May delivery, and you may insert enclosed advertisement t. f. Mass. F. W. FLETCHER & CO.

Philadelphia.

News of the Week.

A meeting of the creditors of Robert Craig & Son was held Monday last. The only business transacted was the reading of the report of the assignee. The meeting adjourned to reconvene on June 15, this being the date when Robert Craig has promised to pay 50 per cent. to those creditors who have accepted that proposition. Mr. Craig stated to those present at the meeting that he had made such arrangements as he thought would enable him to make the promised settlement.

The old bowling club had its outing to Essington on Tuesday, when 20 of the members turned out and had a very enjoyable time. At this outing it was decided to organize a new bowling club for the encouragement of the game and the benefit of the Florists' Club, all the old officers being re-elected.

Hosea Waterer, seedsman of this city, with his family, sailed from New York on Tuesday on the Caronia for England, on a six weeks' trip.

D. T. Connor, agent for Lord & Burnham Company in this city, reports placing an order for an iron frame greenhouse, 20 x 60 feet, for H. O. Wilbur, Esq., Bryn Mawr, Pa.

H. Bayersdorfer & Co. are very busy now filling orders for Memorial Day goods. They have had an exceptionally heavy business in this line this year and orders are still coming in.

Pennsylvania Horticultural Society.

The meeting on Tuesday last was well attended. There was also a very good exhibition, in which were three large exhibits of hardy perennial flowers, all correctly labeled, which proved of interest to the members present. The new Nicotiana Sanderæ was shown by Mr. H. S. Hopper, John Dodds, gardener. This plant had many admirers. No doubt when planted out in a border, or massed, it will be very effective. The flowers are of a dull red color, but not fragrant, like the old white variety. The same exhibitor staged a collection of the Japanese peony (Ponia moutan). These were all good varieties and were much admired. The Conard & Jones Co., West Grove, Pa., made an exhibit of new roses, such as Baby Rambler, Etoile de France, a new red h. t., a new perpetual blooming climber not yet named, a good flower, pink in color, flowering in clusters; also several of the new rugosa hybrids, and a vase of the new canna Louisiana. Antoine Wintzer made an address at this meeting on new roses and the work being done by hybridizers. He spoke of the prominence being given to the work of Luther Burbank, and said that while he was doing some grand work, others were doing as good, but were not given such prominence. He mentioned the labors of Dr. Van Fleet, and spoke of some of his work on roses and cannas. The speaker then dwelt on the merits of some of Dr. Van Fleet's hybrids, and gave prominence to the production of the hybrid rugosa roses, such as New Century, Sir Thomas Lipton, and one yet under number, as all being great acquisitions. A special meeting for outdoor roses will be held on Thursday, June 8.

DAVID RUST.

St. Louis.

News Notes.

Recent visitors were: Mr. Hippard, of De Soto; J. M. Brunson, of Paducah, Ky.; F. J. Ries, Chicago, and Geo. M. Kellogg, Pleasant Hill, Mo. Arthur Ellison, in company with his father, have gone for a few weeks' trip through Southern Missouri. On their return Mrs. Ellison and daughter will leave to spend the Summer at the Northern lakes. J. F. Ammann, of Edwardsville, reports that during the recent big hailstorm he lost nearly 1,000 feet of glass, all single strength. The hail was not large enough to break the double glass. Mr. Ammann is fully insured. Fred C. Weber had a big decoration last week for the Knight funeral. The entire room had to be covered with smilax and asparagus.

The executive committee will meet again this week and try to settle the hall question. Any local or outside growers who have not yet received a copy of the preliminary list can have one by addressing Otto Koenig, 6471 Florissant avenue.

John Stiedel, who looked the picture of health at the club meeting, was reported very sick the last four days. At this writing he is somewhat better. His many friends in St. Louis will be glad to know that he is out of danger, and in a few days will be back to his regular work.

Bowling.

The members are not taking as much interest in bowling as at this time last year, and only seven were in attendance at the alleys last Monday night. They rolled five games. Kuchm was high man with 820; Beneke next, 819; Miller, 811, and Ellis, 802. R. Meinhardt, F. Meinhardt and Henry Lorenz came next, in the order named. ST. PATRICK.

Newport, R. I.

News Notes.

We are having a very backward season, and even now the trees have only just begun to break into leaf. Since my last writing we have had several days of rain which have done wonders to vegetation; it was drier than it has been any Spring for years, and these rains were indeed needed. Trade in all branches is very active; the seedsmen especially so.

F. L. Ziegler is having a special sale of crimson, white and pink Rambler roses at 50c. to \$1 each.

F. M. Smythe, of Wadley & Smythe, was over from New York last week. Very soon they will open their establishment in the Newport Casino for the Summer season.

S. W. Smith, of the T. W. Emerson Company, of Boston, Mass., was here for a few days last week. F. W.

Hail Storms.

MASON CITY, IA.—The Keith greenhouses were considerably damaged by a hail storm on May 7.

MUSCATINE, IA.—During a recent hail storm here the greenhouses of B. Kemper & Sons were damaged to the extent of \$300.

PERU, IND.—On May 10 a hail storm swept over this locality, doing great damage to fruit and breaking many greenhouse lights.

FORT MADISON, IA.—In a recent hailstorm Carl Boll had 58 lights broken in his greenhouse. J. M. Auge's loss was 48 panes. Both were insured.

KEWANEE, ILL.—Hamilton & Plummer lost 6,000 panes of glass in a hailstorm which occurred May 10. The loss is covered by insurance in the F. H. A. The storm was the most severe experienced in this locality.

CANADIAN NEWS

TORONTO.—Business has continued good, with most stock plentiful. Roses still keep up to a high standard, but prices at wholesale have fallen very low, except those for select stock. Dunlop is sending in some fine blooms of Mme. Abel Chatenay and American Beauty. All the retailers are showing nice Bride and Bridesmaid. Although carnations are not so abundant as they have been, those offered are generally of good quality.

Our public parks are now a blaze of color; many of the tulips are very fine, but a few of them are so poor that they look disgraceful.

All engaged in any way with nursery stock are very busy. The weather during the past week has been fine for planting, and thousands of shrubs and trees have been set out in our city. THOS. MANTON.

COMING EXHIBITIONS.

ST. LOUIS, MO.—The preliminary list of premiums, to be offered at the flower show to be held under the auspices of the St. Louis Florists' Club, November 7-10 next, has been issued. Otto G. Koenig, 6471 Florissant avenue, is manager, from whom copies of the schedule can be obtained.

ROSES

From 2 1/2 in. pots, grown cool and in best of condition, \$2.50 per 100; \$20.00 per 1000.

JOHN A. DOYLE, Rose Grower, Springfield, Ohio

ROSES

Bride, Bridesmaid and Golden Gate, extra strong stock, out of 3 in. pots, \$4.00 per 100;

JOHN C. HATCHER, Amsterdam, N. Y.

Grafted ROSE Plants

ON English stock, in 2 1/2 in. pots, Bride, Bridesmaid, Golden Gate, \$100.00 per 1000.

OWN ROOT STOCK

Bride, Bridesmaid, Golden Gate, in 3 in. pots, \$35.00 per 1000.

CHRYSANTHEMUMS

Dr. Enguehard, Mrs. T. W. Pickett, Cheltoni, Mrs. C. J. Salter.

Wm. Duckham, Alice Byron, Goldmine, Carlington, Yellow Jones, Yellow Easton, A. J. Balfour, Merry Christmas, W. Bonnaffon.

Transplanted cuttings from soil, \$4.00 per 100; Rooted cuttings from sand, 3.00 per 100.

The Retail Trade

SAN FRANCISCO, CAL.—At the recent dog show held here, some of the kennels and dogs were decorated with flowers. Mrs. Phil C. Meyer, wife of the well-known florist, who was an exhibitor, set the fashion, which became general, and is considered a "dog-goned" good idea. Each dog collar held a miniature bouquet, mostly of dog's-tail grass, clustered about either a Rosa canina, an Enchantress carnation, or a dog tooth violet.

The decorators, who in this connection displayed meritorious handiwork, were representatives, respectively, of the flower stores of Sievers & Boland, the Misses Worn, Julius Eppstein, Frank Pelicano Co., Alex Mann, Jr., Serveau Bros., Podesta & Baldocchi, Thos. H. Stevenson, Charles Stappenbeck, Frank & Parodi Co. and Wickstrom's Floral Depot.

ALVIN.

English Horticultural Notes.

AMERICANS AND DAFFODILS.—One seldom sees notes about daffodils in the American trade journals, and from that it is inferred that at least a keen interest in these lovely and delicate flowers is not widely extended in the United States. In England we have few daffodil exhibitions purely as such; still there are Truro, Cornwall; Plymouth, Devon; Croydon, Surrey; and the Midland Daffodil Society's show at Birmingham, besides the fortnightly exhibitions held in London by the Royal Horticultural Society. Numbers of private gentlemen's gardens are also so magnificent with thousands and thousands of different daffodils (narcissi) planted in the grass and in beds and borders, that they throw open their estates to allow the public to come and enjoy the sight. Occasionally a nominal charge is made, the money going to the funds of either the Gardeners' Royal Benevolent Institution or the Royal Gardeners' Orphan Fund.

There is money in daffodils. One clergyman (so many clergymen in this country make gardening a hobby—sometimes a paying one) has taken a leading part in the cross-breeding of varieties, and he makes possibly hundreds of pounds sterling per year by the sale of his choicest varieties to trade houses. On one occasion, however, he handed over the pick of his gems to a wealthy lady daffodil enthusiast for (it was related) the sum of £600. The said lady this year was able to stage the finest collection of varieties (mostly rare) that has ever been seen, and she secured the coveted and seldomly awarded gold medal of the R. H. S.

Our daily newspapers have also been informing their readers about the "50-guinea bulb." This is the variety Peter Barr, the largest and handsomest of ivory-white trumpet daffodils. Of course, when such a decided lead appears, as Peter Barr is, the owners put on what may be termed a prohibitive price, until such time as they have a sufficient stock. This may be in two years, or in three. In the case of Peter Barr I think it is three, but at their nurseries Messrs. Barr & Sons (of King street, Covent Garden) have now a dozen or two of bulbs. The price will very likely drop to £7 or £8 per bulb for the coming Autumn, perhaps less, and so the stock is dispersed into the hands of connoisseurs and breeders. There is the danger of holding stock just a year too long, for in these days when novelties follow so fast and show such marked distinctions and improvements, it seems unwise, unless you are thoroughly conversant with the stocks in Holland and in England, to lose £200 for a probable £500.

Messrs. de Graaff are the great raisers in Holland, and they dispose of their gems to our chief bulb dealers. In April, Messrs. Barr & Sons showed some white trumpet narcissi which seemed to me to be as different in the quality of whiteness, compared with those we already possess, as fresh milk is against driven snow. The flowers were under number, and they were all of medium size; but the form was excellent, the substance stout, and the color—well, spotless white.

At the Midland Daffodil Society's show, in mid April, an analysis was made, being secured in this excellent way: A ballot box was placed beside a collection of fifty varieties. Cards were given to visitors, who were requested to mark thereon what they considered the best twelve. Each bunch was under number only; 242 persons voted. The secretary sends me the result, which may also be of interest to readers of The Florists' Exchange.

1. Madame de Graaff.....157	26. Stella	38
2. Glory of Leiden.....100	27. Princess Mary	41
3. Whitewell (scedding) 24	28. Frank Miles	19
4. Incomp. Plenus 38	29. Campenelle Jonquils 40	
5. C. J. Backhouse.....122	30. Falstaff	52
6. Baroness Heath 9	31. Maurice Vilmorin..... 33	
7. Lulworth	32. Crown Prince	139
8. Duchess of Westminster	33. Cynosure	21
9. P. R. Barr..... 34	34. Duchess of Erabant. 27	
10. Princes	35. Princess Mary	18
11. Mary	36. Madame Plemp	79
12. J. B. M. Camm..... 38	37. Sensation	80
13. W. Goldring	38. Queen Bess	6
14. Horsfield	39. Golden Ball	43
15. Beauty	40. Fortia	48
16. Palmerston	41. Hogarth	9
17. M. J. Berkeley..... 42	42. Orange Phoenix	34
18. Barr Conspicuous.....198	43. Mrs. Langtry	72
19. Orpheus	44. Semi-partitus	29
20. Seedling (unknown). 23	45. Gloria Mundi	142
21. Katherine Spurrell. 121	46. M. M. de Graaff..... 23	
22. Titan	47. Emperor	108
23. Flora Wilson	48. Sir Watkin	90
24. Grand Duchess	49. Ornatu	100
25. Autocrat	50. Nelson Major	21

By this it will be seen that the twelve most popular are numbers 1, 45, 32, 47, 5, 21, 13, 2, and 49 (equal), 23, 36, and 37. Of course, like choosing roses from an exhibition board, all may not be good "doers" in the garden; but the best twelve are all robust enough.

Among golden trumpets none has impressed me more favorably this season than Lord Roberts and King's Norton, both being stately, smooth, rich, large and well balanced. Cassandra is the best of the poetic varieties without the shadow of a doubt. White Queen, Bridal Veil and White Lady, also Alice Knights, are gems among white Ledsiis, or silver chalice-cupped section. Mrs. Langtry is one of the best for market work in this section, though necessarily still scarce. For market also we use maximus, Henry Irving, stella superba, Barri conspicuus, Emperor, Empress and Sir Watkin. The red-cupped and the pale sorts are still novel to the general public, and I have repeatedly seen the keenest interest evinced by passengers in the trains and cars when I had a bunch of the less common kinds in my hand. A bookseller friend of mine also had some Barri and Mrs. Langtry on a table, which was in view from his shop. A lady saw them, and actually pleaded to be allowed to purchase a few; but as they were a present from a Manchester nurseryman friend, he did not deal. I mention these things, however, as suggesting possibilities to the alert man. Were some of the Exchange readers to make a specialty of narcissi (some may be doing so), and keep right abreast of the quickly-moving procession, I am sure good returns and fair fame would reward them.

J. HARRISON DICK.

GATES AJAR

Artist F. C. Read, Orange, N. J.

Fadeless Flowers.

The newspaper press has exploited the Burbank "fadeless flower" in a way to make one suppose his feat equal to making a fadeless rose or lily. Very little description was given, but from that little and its Australian origin I was sure it was an acroclinium or closely allied to it; and now Mr. Pierson's late article in this paper makes it still more certain. Indeed, the only botanical difference between acroclinium and cephalopterum so far developed is that the latter has a number of flowers on one stem, instead of one, and each flower has eleven petals (rays). I do not wish to belittle Mr. Burbank's work, but all will presently understand that his fadeless flower, like so many Australian flowers, was an everlasting, to begin with; he has merely improved its form, color, etc. Cephalopterum germinates strongly, says Mr. Pierson. Acroclinium will come up in three days. The foliage of both is light green; neither is afraid of drouth, and so on. I have grown acrocliniums for thirty years, and any one can have fadeless flowers for five cents from any seedsman. There is a light pink and a pure white variety to be had separate or mixed; also a "double" sort, more full than the others, but not really double; all having light yellow discs. Measuring an acroclinium flower, I find it 1-4 in. wide. It has ninety rays, and the double sort would have many more than this. There are many stems from one root, each bearing one flower, and, like cephalopterum, it has many flowers budding and blooming month after month if no seed is allowed to form. Pick some buds before fully grown—they will remain partly open flowers

after drying—and gather all before fairly open. Tie in small bunches, and hang head downward in the shade. Framed under glass, etc., and kept out of the sun all mentioned here will keep forever, so to say.

The rodanthe is another lovely Australian everlasting, with wider leaves and smaller and more delicate in all its parts than the acroclinium, but coming up as promptly. Its long, drooping buds are made up of pure white, transparent, overlapping scales, and nothing can be more delicately beautiful than the pink rays shining through this white envelope. There is a pure white sort—in fact, several species of rodanthe—but the R. manglesii is the only one I know. This, too, is a great producer. The buds should be picked soon enough to keep them as buds; the wide-open flower is less pleasing. It isn't likely that any Australian plant will worry much about hot weather, for they say a match dropped on Australian sand at noon is instantly lighted.

Then there is the Aelipterum sanfordii, a little, gray, dusty looking plant having cymes of small, light, golden yellow flowers. Other helipterums are said to be pink, white, crimson and purple. The Australian Ammobium alatum (winged ammobium) forms a thick bush two feet high, with an immense number of white flowers with brown discs. Pick so as to keep them in bud mostly. Now comes the helichrysum (sun gold), a tall, erect plant, three feet high, from South Africa and Australia—a great bloomer and drouth resister. Some are so red they are black; others are orange, pink, crimson and yellow, paling to almost white. Picked in bud they are double; left on the plant the disc enlarges until it is the main thing.

So here are all these fadeless flowers, which you can grow in any quantity with no more trouble than annuals in general. Acroclinium and rodanthe are very easily grown; helichrysum also. Helipterum and ammobium have fine seeds and require some care in sowing, but are not difficult. The xeranthemum, blue and purple, is easily grown, but the flowers are stiff and the colors dull. Waitzia, a golden yellow Australian, is said to be handsome, but I never saw it. "The Injun posy," or "moonshine" (Anaphalis margaritacea), and the mouse ear (Antennaria plantaginifolia), both common pasture weeds here in New York, are everlastings, having small white flowers in large heads; pale affairs beside the Australians, but good for variety. The "moonshine" is cultivated and now naturalized in England.—E. S. GILBERT, in Florida Agriculturist.

The Improvement of the Petunia.

Much needs to be done before the petunia will be brought back to the fine character, both striped and self colored, to the exquisite form which characterized the varieties named and distributed forty and fifty years ago. The petunia in both its single and double forms was a florist's flower; new varieties of high-class merit were propagated by means of cuttings, and distributed; fine specimens graced the exhibition table, and materially assisted to make the greenhouse and conservatory gay by reason of their natural floriferousness. We need, both for pot culture and decorative purposes, something much more refined than the large and coarse single and double German varieties. Cross fertilization may therefore be hopefully attempted, and the way to go about it, having selected a seed-bearing plant, to remove the pollen bearing organs prior to the impregnation of the flowers; of course, a suitable pollen bearing parent must be selected. The pollen of petunias under certain conditions is so energetic that even the faintest touch will occasion its distribution, and the particles disengaged by the eruptive force possessed by aggregations of pollen would minimize or most likely render futile the attempt to obtain crosses other than adventitious ones, which frequently fail to give satisfaction by their results. Those who have been engaged in this work have found that pollen is affected by atmospheric influences, when the impregnation of the flowers is particularly noticeable, the capsules developing as if by magic. The work of cross fertilization is full of interest, and when carefully performed the best results may be anticipated.—Argus in Horticultural Advertiser.

Southern California is to have a laboratory and experiment station for the study of diseases of plants. The financial support is to be furnished by the State that the work may be undertaken by the University of California as a part of the activities of its Department of Agriculture. The State Commission for the selection of a location for the pathological laboratory and experiment station, a board consisting of the Governor, President Benjamin Ide Wheeler, of the university, and Professor E. J. Wickson, of the chair of agricultural practice in the university, is ready to receive proposals in regard to a site. It is expressly set forth in the bill providing for this work that lands already belonging to the State at Whittier or at Patton may be used if the Commission so decides. Should other communities in Southern California, however, make offers particularly advantageous in character the Commission will be glad to entertain such proposals.

BENJAMIN HAMMOND, Fishkill-on-Hudson, N. Y., writes a strong letter to the local paper protesting against the rowdism of laboring men from the brick-yards in their effort to curb free labor, and calling on his fellow-citizens to aid in the maintenance of law and order.

THE WEEK'S WORK.

Timme's Timely Teachings.

Boston Ferns.

Whether or not the raising of Boston ferns is overdone, as some are trying to make us believe, I am not in a position to say. There certainly is no evidence of over-production in my immediate neighborhood. Indeed, it seems as if far more could have been sold this season had they been available, or had they been such as were wanted and in greatest demand by buyers of well-finished specimen plants.

That the fine qualities of the Boston fern have made this plant a universal favorite and have done much in lessening the sales of palms, rubber plants, dracenas and other decorative subjects, is true. If there is any over-production it must be looked for in that quarter. Certain sizes of all these plants are always in demand, and even scarce at times. A retail grower, observant and alert to business, will soon see the wisdom of providing the sizes and grades which best suit his particular trade and locality. Wholesale growers are never in doubt as to the sizes most called for, but very often are driven to extreme and novel measures, cultural and otherwise, in their efforts to supply them. A great part of the profits in the culture and in the handling of plants of this class is lost every season by missing it in this particular.

With me, Boston ferns in 5, and especially in 6-inch pots sell most readily; are a size most easy and most profitable to handle, and obtained by a single season's preparatory culture without the least difficulty. Smaller plants are useful, but three 4-inch pots contain more good material and bring less money than one 6-inch, and are not much called for. So, also, is the demand for very large specimens but a limited one. These bring an extra good price, but not enough money to fully pay for the extra time and care required to grow them into proper shape and finish. All this extra exertion is not necessary with 6-inch plants, they being in salable condition a few weeks after being made up from the bench-grown material.

Growers who intend to try their hand in the raising of Boston ferns, to work up a nice supply for next season's trade, should now begin to get a bench in readiness for this purpose. Select a well-drained side bench, not too near the glass; cover the cracks in the bottom with a layer of thinly cut sod, the grass side down, and put on this four inches of any good, fresh soil, mellow, porous and well enriched with nicely decomposed barnyard manure. If this latter is in an earth-like, powdery condition, not disagreeable to the touch—fully one-half of the entire mixture may be made up of it; and the other half, if not naturally sandy, should be made so by adding a goodly quantity of sharp, bright sand. Plants out of 2½ or 3-inch pots are the kind to start with. Any movable contrivance, giving the necessary light shading, is to be preferred to the permanent paint or lime coating on the glass roof, so often and so inappropriately employed by most growers. Thin muslin, nailed tightly on handy and well-made lath frames, costs much less than is generally supposed, is easily and quickly put up or taken down, and, by using it, the plants need not be deprived of the great benefit of the full light mornings and evenings, and on cloudy days. Ventilation, watering and sprinkling will have to be duly attended to in the same degree, as this part of the gardener's regular work is performed in the Summer culture of other stock under glass. Frequent syringing, resorted to in hot weather as a necessary measure, will also at times supply all the moisture needed at the pots. This should be borne in mind, and, although the ferns ought never to be let go until entirely dry at the roots, over-watering will produce weak and flabby fronds and should not occur.

In the latter part of September the plants must be lifted and be made up into good, finely balanced pot specimens. A couple of weeks later they can safely be placed on sale. The bench is cleared out entirely; all the smaller pieces, unsuitable for entering into the construction of finished plants, are potted up into small pots and grown on. Where only a limited number of Boston ferns is handled, the grower will have no difficulty in raising all he needs in this line in pots through the Summer, beginning now with 3-inch plants, and, by giving them two or three timely shifts into larger pots, working up to good-sized plants by next Fall. A good sandy loam, quite rich, is a suitable soil.

Maldenhair Ferns.

While speaking of ferns, it may be well to remind growers that this also is a good time to start a bench or part of a bench of *Adiantum cuneatum* for cutting purposes. This old standby is still largely depended upon for the finely feathered fronds so indispensable in all kinds of made-up floral work. It is, however, not any more reliable, or any easier to grow, and perhaps not as easy as the newer form of maldenhair fern, *Adiantum Croweanum*, which also

readily responds to mass culture in a bench. This, though the fronds are a trifle less finely and delicately serrated, is of a more vigorous constitution than the old and somewhat deteriorated *A. cuneatum*. Its fronds are longer stemmed, and are produced in regular succession. It does well under thinly shaded glass in the hottest Summer, and without any shading at all in Winter.

The greatest stumbling block in the road to entire success in this culture—especially where the old variety is grown in large numbers on benches, and the cause of much worry and a deal of extra labor—is the presence of a destructive fungus, a mold, which attacks the new unfolding fronds, and which must constantly be fought with sulphur and other remedies. If more light and a drier atmosphere than is usually maintained in our fern houses, minimize or do away entirely with this trouble, as is now claimed by some experts, then it is well worth while to test and put to proof this preventive measure by adopting a wholly modified course in fern culture, if only at first in a small way. That the densely painted glass so often seen, and the excessive degree of moisture maintained in most all the houses where this culture is carried on, are parts of a treatment employed in a measure far beyond the production of good, is not hard to believe.

In the bench culture of *Adiantum* I have found that a narrow bed, about two feet from the rafters, thoroughly drained, and a layer of four inches of porous, moderately enriched soil; half of it leaf mold, meet the requirements of the ferns in these essentials; and as to shading, watering and sprinkling, the practice of a little more moderation in the future would, no doubt lead to good results. *Adiantum grandiceps*, *A. caudatum*, *A. Farleyense*, *A. formosum*, and all these varieties, mostly grown as show specimens, and for the conservatory, will only succeed finely under constant pot culture, and are not adapted for massing in beds or benches. *A. Farleyense* thrives best and shows up best when placed singly on pedestals or inverted empty pots, far above the bench. The cut fronds of this variety are most valuable, and exceedingly useful to the decorator.

Gardenias.

The grower of cut flowers, not driven quite so hard just now as the all-around gardener and plantsman, should find the time to prepare a bench, or several, for gardenias. He should remember that the month of May, or the first week in June, is the very best, and, I may say, the only time in which young stock of the Cape Jessamine ought to be planted into the bench, if bench culture is the object. This work should not be delayed until June or July, when all his other stock is benched, if he hopes to cut gardenia blooms at a time when they are most valuable, longest lasting and highest priced.

Plants too far advanced—four or five-inch plants—will not do to plant into the bench. They would bloom too soon. So would the old plants coming out of a bench. The best thing to do with these now is to plant them into pots a size or two larger than they would seem to require. Provide good drainage and use a compost, made up of partly decomposed sod, leaf mold and well weathered old manure in equal parts, with a liberal admixture of gritty, coarse sand. Some of these old plants—most of them—come in good shape for Christmas, a time when the main crop of gardenia flowers is still in the bud form.

The proper stock for bench culture are the young plants, obtained by propagation in late Fall or early Winter from the ripened new wood of old plants. These should now be in 3-inch pots, well rooted, nice plants. Those with a deep green foliage should be chosen for the bench, and any showing a yellowish, sickly growth should be reserved for pot culture, where they will stand a better chance of regaining their vigor by proper treatment than in the bench.

In filling a bench for gardenia culture fully one-fourth of the contents should be some coarse material to go first in the bottom, guaranteeing perfect drainage. On this four inches of soil are placed of the same mixture as recommended for pot culture. However, should there be difficulty in obtaining a grade of sufficiently decayed manure, then much less should be taken in the preparation of the compost and a small quantity of crushed bone added. Instead, will not do to set the plants any deeper in the bench than they stood in the pots. No harm is done by planting a little higher, rather. Some growers plant on little hills, or ridges, and thus avoid a too deep stand of the plants after the soil has settled. While it is a common practice to give a newly stocked bench a heavy soaking just after cartons, chrysanthemums and such stock has been planted, it is not advisable to follow this course in the case of gardenias. The young plants should be well watered a few hours before they are taken out of their pots and planted, and the soil in the bench should be quite moist, admitting of good firming around the plants. Young gardenias, after being then planted and kept moist by frequent syringing will hardly ever need a real watering down until their roots have begun to send fibers into the new

soil. On unusual quantity of moisture is required in the culture of gardenias; not so much in the soil or at their roots, where a reasonable degree of moisture should only be in evidence at all times, but more especially in keeping the foliage moist and clean by frequent sprinklings applied several times daily. This tends to saturate the atmosphere of the house with moisture, a condition congenial to gardenias, and which ought to be kept up all through the Summer, as also in the Winter, when very hard firing becomes necessary. Forceful syringing and the presence of moisture on and about the plants will also help to keep them free of insects, of which the mealy bug is the most troublesome at times.

Antirrhinums.

February struck cuttings of snapdragons ought now to be finely rooted and sturdy plants in 3-inch pots. They are of the right size to be planted into the bench; and the time is also just right for a start to be made with a view of obtaining a beautiful crop of these gorgeous flowers for Christmas and the early part of Winter. A solid bed is a good place for snapdragons, but a bench with five or six feet of clear headroom will also do. They will thrive finely in any ordinary good soil, moderately enriched. Complete success in this culture need not be expected where the plants are grown in the open field and lifted in the Fall. Either pot culture all Summer or benching in May and June for the early crop will give good results, and will reward the grower, new and unaccustomed to the growing of these plants under glass for their flowers, with unlooked-for and often surprisingly high returns.

During the Summer the young plants will form bloom buds rapidly, and are always ready to flower. Keep the buds pinched out as fast as they appear, but let the green growth attain full height and size. Toward Autumn this first wood will cease to grow, and now is the time to look out for and take good care of the secondary growth—the stout, thick shoots, coming from under and over the ground, all around the base of the plants. These, under favorable conditions, will, at first slowly, later on rapidly, develop into those grand, strong stems, four and five feet long, crowned by flower spikes over a foot in length. This is the snapdragon of value, the only kind worth growing; and, when grown, worth a good deal. When rightly managed, the culture of antirrhinums always proves most profitable.

Campanula Media.

Another good bench crop, yielding satisfactory profits, is the Canterbury bell in all its colors and varieties. The plants needed for this culture are grown in the field all Summer, and are lifted and benched in late Fall, then being clumps of great size. Now is the right time to make sowings of the various kinds—meaning the kinds of *Campanula media* only, since none of the varieties of perennial campanulas are of any value for indoor culture. The true historical Canterbury bell comes fairly true from seed, and can be had in separate sorts and colors. Sow thinly and transplant to the open when large enough.

FRED W. TIMME.

CHANGES IN BUSINESS.

(Items for this column are respectfully solicited from readers.)

LANSDALE, PA.—John Savage succeeds Thomas Foulds in the greenhouse business, near Hoyt, and has moved his family from Germantown.

MADISON, N. J.—Charles H. Dodd, of Jersey City, has started in the greenhouse heating and repairing business here. He has had long experience in this class of work.

WATERLOO, IA.—H. D. Williams, senior member of the florist firm of Williams & Crittenden, has disposed of his interest in the business to Harry Daniels. The new firm will be known as Crittenden & Daniels. Mr. Williams, on account of failing health, and acting on the advice of his physician will make a trip to Montana, where he will remain for several months. In hope the climate will restore some of his former strength.

FIRMS WHO ARE BUILDING

ALLENTOWN, PA.—Andrew Yeager is building three new greenhouses.

SCARBORO, ME.—Gregory Blinson has added a small greenhouse to his plant; he hopes to make further increase this Fall.

BARABOO, WIS.—William Peck, who has just completed a new greenhouse, contemplates erecting another, 132 x 30 feet, to be devote to carnations. His business is growing very rapidly.

BOUND BROOK, N. J.—Ant. C. Zvolanek, of Grand View, N. J., has built a range of two houses, each 31x204 feet, to be devoted to sweet pea culture. He expects shortly to move to his new location, which is about 1½ miles northeast of Bound Brook depot.

CATALOGUES RECEIVED.

HENRY F. MICHELL COMPANY, Philadelphia.—List of Implements, Insecticides, Hose, Sprayers, and other necessities for the Garden and Lawn. Michell's Evergreen Lawn Grass Seed was awarded a silver medal at the St. Louis Exposition. The firm's sales of grass seed last year amounted to over 20,000 bushels.

PERRY'S HARDY PLANT FARMS, Winchmore Hill and Enfield, London, Eng.—Catalogue of Water Plants, including Aquatic and Bog Plants of all descriptions. Illustrated.

HENRY PHILIPPS SEED COMPANY, Toledo, O.—Wholesale Price List of Flower Seeds for Summer Sowing; Bulbs for Fall Planting, etc. Illustrated.

Indianapolis.

News Items.

A heavy wind and hailstorm visited this section Wednesday, May 10. Many trees were blown over in the parks bordering on the south part of the town. Hail as large as walnuts was reported in several places. The florists were unusually lucky this time in that but one of their number lost any amount of glass. Bertermann Bros. Co., at their East Washington street plant lost between 400 and 500 panes. At Smith & Young's place, about four blocks away, not a glass was broken.

The outlook for Decoration Day is very promising. Stock will, from all indications, be more plentiful than last year.

Visitors: W. H. Elverson, New Brighton, Pa.; Harry Balsley, Detroit, Mich. I. E.

Washington

Dr. B. T. Galloway, Chief of the United States Bureau of Plant Industry, is on his annual tour of inspection, and will visit the Plant Introduction Garden at Chico, Cal.

SCRANTON, PA.—Edward Jayne, florist, is quite ill at his home on Cedar avenue.

Does the Trick.

The Florists' Exchange certainly does the trick; and I shall patronize your paper exclusively another season.

New York. PETER OLSEN.

ROSE PLANTS.—Write for prices on hybrid perpetuals, hybrid teas, Climbers, Ramblers, etc. C. M. Niuffer, Springfield, Ohio.

SITUATIONS WANTED

SITUATION WANTED by a good rose grower, for a section. Address U. D., care Florists' Exchange.

SITUATION wanted as working foreman by competent married man; carnations a specialty; good references. Address U. H., care Florists' Exchange.

SITUATION wanted. Single. All grower of roses, carnations; competent worker; take charge 50,000 ft. glass. Address Florist, care Crane, 201 East 26th St., New York.

SITUATION wanted by florist, German, 31; eighteen years' experience; competent to take charge; honest. Industries; willing worker; steady position state wages. Florist, 158 Orange Road, Montclair, N. J.

GOOD GROWER, roses, carnations, chrysanthemums, violets, etc., wants position as work-plant, first-class references; long experience in charge. Commercial or private. Address U. F., care Florists' Exchange.

INTELLIGENT young man (30), 9 years' experience as grower of first-class carnations, orchids, and general stock, for New York market. A good grower, and well up in all mechanical work; desires position in the East. Not having been employed in florist trade for past few years would be willing to start low and prove ability. Address U. E., care Florists' Exchange.

HELP WANTED

WANTED—At once, a good man for pot plants; wanted to be a good potter. State wages. Herman Scholzel, New Durham, N. J.

WANTED—A salesman; must be good maker-up, and willing to work. Call T. J. Lang, 39th street & 6th avenue, New York.

AN EXPERIENCED section man wanted in rose house, at once. Apply to Edgar C. Hopling, Flotham Park, near Madison, N. J.

WANTED—Capable rose grower who understands his business; must state when he can come. R. T. McGorum, Natick, Mass.

WANTED—At my branch establishment, Fort Hamilton Ave., a married man as foreman; a good grower of roses, carnations and general stock; only a steady and experienced man need apply. Give references, and state wages expected. Address R. Sisson & Son, 341-9 Greene Ave., Brooklyn, N. Y.

HELP WANTED

WANTED—By June 1, a first-class grower of roses and carnations; must be sober, reliable, and able to grow all stock. Wages, \$85 per month. Place permanent. Address U. C., care Florists' Exchange.

WANTED—At once, good man to fill flower beds and vases. Call or write M. Wokral, 61 McConnell St., Newburg, Ohio.

WANTED—June 1, sober, married man, for general greenhouse work; steady position for a hustler. Joseph Wood, Spring Valley, N. Y.

WANTED—Catalogue man who is familiar with the "get up" of a seed, plant and bulb catalogue. Livingston Seed Co., Columbus, Ohio.

WANTED—Working foreman, 15,000 feet glass, where cut flowers, bedding plants and general greenhouse stock is grown. S. S. Peckham, New Bedford, Mass.

WANTED—Florist; one who can invest \$500 to \$1,000; take full charge of about 8,000 feet of glass; mainly carnations. Write Stafford Florist Co., Stafford Springs, Conn.

WANTED—A working foreman; roses, carnations and general stock. State wages expected, and give references. Also an assistant who worked successfully on roses. John Reck & Son, Bridgeport, Conn.

WANTED—At once, an all-around florist to take complete charge of 8,000 feet of glass, cut flowers and bedding plants. Must be temperate and industrious; give references. H. B. Thompson, 10 Pike St., Canonsburg, Pa.

WANTED—A competent bookkeeper and office man familiar with the tree and plant business; good opportunity and permanent place for a man not afraid of work, and who wishes to advance. References required. Also a nurseryman of good habits; young, energetic man preferred. Fancher Creek Nurseries, Inc., Fresno, Cal.

WANTED AT ONCE

A man to work as helper in rose houses. Address

U. G., care Florists' Exchange

WANTED

Gardens who is thoroughly familiar with the propagation and growing of Stove Plants in a commercial way. State experience, reference, salary expected. Address HENRY A. DREER, INC. Box 2, Riverton, N. J.

Mention the Florists' Exchange when writing.

BUSINESS OPPORTUNITIES

FOR RENT—SMALL PLACE, ABOUT 4,000 FT. OF GLASS. ADDRESS A. AKERS & CO., JOHNSTOWN, PA.

TO RENT—In Greater New York, 25,000 feet of glass, 3 acres of ground, dwelling house and barn. Address P. M., care Florists' Exchange.

GREENHOUSE, stocked with ferns, near New York, for sale to the right party; only people who mean business need apply. Address R. G., care Florists' Exchange.

FLORIST place in center of New York City; no store; a attached to another place with high-class trade, pays \$2,000 a year. For sale on account of other business. Address U. A., care Florists' Exchange.

Humphrey St., ENGLEWOOD, N. J.

Mention the Florists' Exchange when writing.

Use of Sulphur in Rose House. (170) In your issue of May 6 appears an article on roses by Penn, who, for the prevention of mildew at this season, says "it is best to vaporize a small quantity of sulphur by means of an oil stove." I would like to ask if it is necessary to heat the sulphur to the point of melting, or will it vaporize before that? R. H. C.

—The way to vaporize sulphur in a rose house, for preventing or checking the spread of mildew, is to place some flowers of sulphur in an iron pan over an oil stove. Allow the sulphur to melt. When in this state it should be kept stirred, and fanned with a piece of paper. The fanning seems to vaporize it more rapidly. The work should be done on a cloudy day or at night, when the ventilators can be kept closed for two or three hours. A can of water should be kept at hand, so that, should the sulphur ignite, it may be more easily extinguished, as when in a molten state sulphur is very inflammable and, if permitted to burn, is death to insect and plant life as well, and would do far more damage than mildew. PENN.

Heating.

(169) How many lines of 3 1/2-inch pipe will be required to heat a carnation house from 52 to 56 degrees in zero weather by hot water. Size of house: Length, 175 feet; width, 35 feet; ridge, 16 feet, even span; both sides glass, height of plates, 5 feet; both ends glass, size of glass used, 16x24 inches. The house sits on a grade of three feet, the highest end being the greater distance from the boiler. V.

—You mention both sides of house are glass. We assume from this you do not mean the five feet, but possibly two feet under the plate. The boiler in this case will be placed at the lower end of the grade, and your circulation will run from there to the highest point at the far end. The expansion tank can be located at the far end, if you so desire. The pipes can be run at the same grade as the house; that is, a rise of three feet in the total distance. If pipes are run at the same grade as the plate, all through the house, it will insure a proper grade, and all circulations will then be on the level. Fifteen runs of 3 1/2-inch boiler tubes will properly heat this house to from 52 to 56 degrees inside, with the temperature zero outside. Be sure and place, at the boiler end, mains of ample capacity to carry this amount of piping. These can consist of one large main; or you could run from the boiler separate mains of boiler tubes for each circulation. We would not advise, if you run 3 1/2-inch boiler tubes from the boiler, to take off from each connection more than 600 feet of boiler tubes, including both flow and return. U. G. SCOLLAY.

PUMPS Rider-Ericsson. Second-hand, from \$40.00 up; all repairs; other makes; new; cheap.

BOILERS New and second-hand. 2 second-hand steam; first-class condition; will heat 1000 sq. ft. glass, at \$35.00 each.

PIPE Good serviceable second-hand, with Threads: 2-in., 7 cts.; 1 1/2-in., 5 1/4 cts.; 1 1/4-in., 3 cts.; 3/4-in., 2 1/4 cts. New 2-in. Standard, full lengths, with couplings, 8 1/4 cts. ft. Old and new fittings and valves.

STOCKS and DIES New Economy, beat made. No. 1 Threads, 1/4-in., 1 1/2-in., 2-in. pipe, \$3.00. No. 2 Threads, 1 1/4-in., 1 1/2-in., 2-in. pipe, \$4.00.

PIPE CUTTERS New Saunders Pattern. No. 1 2 in. 1 1/2 in. - 2 in. pipe, \$1.00. No. 2 2 in. 1 in. - 2 in. pipe, \$1.30.

STILLSON WRENCHES New. 18-in., grips 1/4-in. - 2-in. pipe, \$1.65; 24-in., grips 1/4-in. - 2 1/2 in. pipe, \$2.40; 36-in., grips 1/2-in. - 3 1/2 in. pipe, \$4.75.

PIPE VISES New. No. 1 Hinged, grips 1/4-in. - 2 in. pipe, \$2.25.

GARDEN HOSE New. 1 1/2-in., guaranteed 100-lbs. pressure, 7 1/2 cts. per ft.; 1 1/4-in. not guaranteed, 4 1/2 cts. per ft.

HOT-BED SASH New. Cypress, 3-ft. x 8 ft., from 2 cts. up; glazed, complete, from \$1.80 up. Second-hand, as good as new, complete, at \$1.25 each.

GLASS

New American, 50 sq. ft. to the box. 10x12, B. Single, at \$1.40; 10x12-12x12, B. Double, at \$2.40; 12x14-12x16-12x20-14x18-14x20-16x16-16x18, B. Double, at \$2.50; 16x20-16x24, B. Double, at \$2.85.

For \$5.00 I will send you 100 assorted **CHRYSANTHEMUMS**

Newport, R. I.

News Notes.
M. B. Faxon, seedsman, has some splendid beds of his White House pansies in full bloom which have attracted a great deal of favorable attention.

The Rhode Island Nurseries report a much better business than in past years. Everybody wants large stock for immediate effect, and this class of goods is always limited.

Mr. and Mrs. Carl Jurgens have returned from a short vacation trip to New York.

William B. Scott & Company have been doing especially well with bedding plants, and report the market prices as follows: Geraniums, \$1.25; heliotropes, \$1.50; double petunias, \$2.50; marguerite carnations, 75c; salvia, 50c; forget-me-nots, 60c; and large vincas, \$3 a dozen.

The George A. Weaver Company have placed a great quantity of bean poles and brush for sweet peas, and garden peas, the past week. Mr. Summers of Sharon, Mass., has severed his connection as seedsman with this firm.

Asparagus is 20 cents per pound at retail, and rhubarb 3c for a like quantity. Asparagus is not bunched in this market, but sold loose as cut, by the pound. Last year the highest price obtained at retail was 35c a pound, and the lowest 12 1/2c.

A very large quantity of hardy rhododendrons are being received, and planted out at "Oakland Farms," the estate of Mr. Alfred G. Vanderbilt.

M. B. Faxon has been with his wife to Boston, Mass., attending the wedding of Mrs. Faxon's sister.

F. W.

SPRINGFIELD, MASS.—N. F. Higgins has purchased the store and show-rooms of C. F. Fairfield, on State street, and will take possession June 1. Mr. Higgins has been employed by the Springfield Cemetery Association, in charge of their greenhouses and garden work, for several years. He has tendered his resignation, that he may devote his entire time to the new enterprise. Mr. Fairfield has been connected with the local florist business for nearly twenty years, first as grower, and for the last ten years or so conducting a successful flower store, to which is attached a fine showroom. He expects to find a business opening in New York.

THE STANDARD TREATISE ON GARDENING.

THE GARDENERS' ASSISTANT

New Edition.

UNDER THE DIRECTION AND GENERAL EDITORSHIP OF

WILLIAM WATSON

Curator, Royal Gardens, Kew.

Thoroughly Up-to-Date; The Recognized Authority on Gardening; Most
Distinguished Contributors; Lavish in Illustration; Indispensable to
Practical Florists and Gardeners, to Country Gentlemen and
the Amateur. A Complete Encyclopedia of Gardening.
The Leader Among Gardening Books.

For the past half-century THE GARDENER'S ASSISTANT has main-
tained its unique position as the standard treatise on practical and
scientific horticulture.

The publishers in this new edition have given this monumenta
work such a complete remodeling, revision and extension as will en-
able it to hold in the twentieth century the place which it worthily
filled throughout the latter half of the nineteenth. It is so thoroughly
up-to-date, and is so comprehensive in scope, as to constitute a com-
plete encyclopedia of all that is known about the science and art of
gardening. No one who wishes to excel in gardening, either as a
business, or a hobby, can afford to be without it.

THE GARDENER'S ASSISTANT is a compendium of all operations of
the garden and arboretum; from the formation of the garden and
plant-houses to the cultivation of all kinds of plants, whether for use
or ornament: trees, shrubs, herbaceous and alpine plants, stove and
greenhouse plants, orchids, ferns, succulents; fruit, both under glass
and in the orchard or kitchen-garden, and vegetables of all kinds.

Everything has been done that could be done to elucidate the
text by the free use of illustrations. These represent recent gardening
appliances, houses, heating apparatus, flowers, trees, diagrams,
schemes for laying out the garden, methods of pruning, etc. In fact,
wherever a picture would be useful a picture is given. Moreover, in
addition to the black-and-white text illustrations, there are twenty-five
full-page black-and-white plates, and eighteen colored plates of flowers
and fruits, specially prepared for the work by eminent artists.

THE FIRST PORTION of the work deals with GENERAL PRIN-
CIPLES; THE SECOND PORTION is devoted to directions for the
CULTIVATION OF DECORATIVE PLANTS OF ALL KINDS—stove,
greenhouse and hardy trees, shrubs and herbaceous plants; THE
THIRD PORTION treats upon FRUIT CULTIVATION in all its
branches, both under glass and outside; and THE FOURTH PORTION
upon the GROWTH AND MANAGEMENT OF VEGETABLES
AND HERBS.

THE GARDENER'S ASSISTANT has been made the SOUNDEST
and MOST PRACTICAL, as it is unquestionably the NEWEST and
MOST UP-TO-DATE, Book on Horticulture.

SEND FOR PROSPECTUS.

We have obtained the exclusive right to the sale of this invaluable
work in the United States. It is elegantly printed, on thick, durable
paper, in two handsome imperial 8vo. volumes, substantially bound in
Roxburgh, half leather, cloth sides, marbled edges, about 1300 pages.

PRICE, delivered free, by express, to any part of the country, cash
with order, \$15.00. Money refunded if not satisfactory. Or, we will
send purchaser the two volumes on receipt of a first payment of \$4.00
and six monthly payments thereafter of \$2.00 each.

R. G. HANFORD, Norwalk, Conn. Mention the Florists' Exchange when writing.

A SUBSCRIBER.—We would recommend you to purchase a book giving the rudiments of gardening. If you will send your address, we shall be glad to furnish a catalogue of such books as would be most useful to you.

Funkia, or Day Lily.

(159) Kindly give me the botanical name of funkia or day lily. It has a striped leaf, green and yellow, and is used largely for bordering, growing not over 9 inches in height. Also can this plant be made to seed? H. L. P.

—Funkia is the botanical name of the plant referred to, but as there are several varieties of Funkia variegata, we would require to know the color of both flower and foliage to be able to distinguish the variety.

The quickest method of propagation is by division; though seed can no doubt be obtained.

Spitzenberg Apple.

(160) Kindly inform me what the Spitzenberg apples are. Any extra care needed in their cultivation? P. V.

—The Spitzenberg apple is a Winter variety, rich in flavor, round and slightly conical, color red, faintly striped; rather shy in fruiting in some sections.

Old Violet Soil for Carnations.

(161) Would you advise using one-quarter old violet soil to three-quarter fresh soil, thoroughly mixed, for carnations? Which do you think would be the better to use, to obtain the best results—the above compost, or a compost consisting of one-quarter good cow manure to three-quarters of sod stacked last fall? The violet soil has grown violets one year.

—We would not advise using any of the old violet soil in the compost for next season, either for carnations or any other crop that is planted out. The cow manure and sod stacked last Fall make an ideal soil and could be increased in bulk by adding another fourth of the sod, so as to make the proportions one to four of manure and soil, and still be a first-class soil for carnations.

Pansies and Fertilizers.

(162) Is it any good to grow pansies on the same ground after two years—regular Flatbush ground, a good virgin soil (sandy)? Is it a good idea to leave the ground with no crop till the time to plant in the pansies? Now I am digging up the beds, having before thrown over the beds the manure that was between them. I intend to dig in a good thickness of cow manure and horse manure later on. Would a little sprinkling of sulphate of ammonia added be of any benefit? Is there any kind of artificial fertilizer that will induce flowers instead of leaves? What would be the best kind of fertilizer to mix with the manure, to bring out the full benefit of it? E. R.

—Pansies can be grown on the same soil year after year with reasonable care in keeping the soil in good condition. If one can spare the ground between crops, it would, of course, be

W. J. & M. S. VESEY, Fort Wayne, Ind.
Mention the Florists' Exchange when writing.

hetter, as a rest is good for any soil, no matter how fertile it may be. At the same time, a Summer crop can be grown if necessary, and that may be followed with pansies quite satisfactorily. As the beds have already received a good dressing of manure, it is hardly possible that sulphate of ammonia would improve the soil for pansies, as that rather tends to an increase of roots and foliage and would promote a soft, heavy growth, not desirable in pansy culture.

How far apart should pansies be planted to keep them from mixing? Last Summer I saved seed from plants, planted about 15 feet apart, but the flowers from those seeds are all different from those on last year's plants. Why is it that most of the plants having the finest flowers give no seed? READER.

-In order to produce seed of the choicest strains of pansies, it is not so much the distance apart the plants are put, as it is the careful roguing that must be done that enters into the question. Where one intends saving his own seed, care must be taken that every undesirable variety be pulled out and thrown away as soon as the first flower is seen. By pursuing this method pansies can be kept up to their own standard of excellence and may be improved; but if ordinary and undesirable sorts are allowed to flower, then, of course, the pollen from them will get transmitted by insects to the choicer kinds and the strain will deteriorate.

Cosmos.
(163) Cosmos plants started in March are now in full bloom. Will they continue to grow after being set in the garden and make large Fall blooming plants? OHIO READER.

-By pinching out all the flowers and buds of the cosmos, and then planting them outdoors, they will make a good growth through the Summer, and should flower freely again in the Autumn.

Calceolarias.
(165) I have some fine, thrifty calceolarias in 3-inch pots. The center is throwing up a bud on many of them. I do not want these to come into bloom until Fall. Can I pinch them back and stop them, or had I better work them along and have them bloom out of doors? F. G. B.

-The calceolarias can be held to bloom later, by pinching out the buds and re-potting them into larger pots so as to keep them growing.

BIG BUSINESS ASSISTANT

TO SAVE TIME, QUICKEN SALES, AND AID YOU PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions instead of having to continually resort to you for advice.

The following "Culturals" are now ready:

AMARYLLIS (Hippeastrum)	FERNS	MUSHROOM CULTURE
ANNUALS FROM SEED	FREESIA	PALMS, House Culture of
ASPARAGUS	GERANIUM	PANSY
BEGONIA, TUBEROUS	GLADIOLUS	PERENNIALS, Hardy

News of the Week.
The long established florist busi-
ness of Ditzenberger Bros., at Seventy-
fifth street and Fifth avenue, Brook-
lyn, is about to be discontinued, and
the greenhouses done away with. On
Thursday, June 1, the houses, together
with all the stock contained therein,
will be sold at auction; John P. Cleary
will be the auctioneer.

On Tuesday evening last, a little
after 9 o'clock, fire broke out in the
dentist's parlors located over Weir's
flower store, corner Fulton street and
Elm place, Brooklyn. The fire did con-
siderable damage, but through the ef-
forts of the firemen Weir's store prac-
tically escaped injury, and business
continues as usual.

The plant auction rooms are in their
busiest season, and a vast number of
bedding and other plants are disposed
of at each of the twice-a-week sales.

The statue of George Washington, in
front of the Sub-Treasury Building in
Wall Street, was decorated with a
bunch of lilies one day this week. A
Columbus avenue florist's tag was at-
tached to the bouquet, and bore the in-
scription, "To G. Washington." The
name of the donor could not be learned.

Harry Hoffmeier, of Broadway and
Eighty-third street, was visiting his
former home at Easton, Pa., last week.
Those who handle the Queen of
Edgely rose say that the demand for
it is better than that for American
Beauty.

Clucas & Boddington, seed mer-
chants, 131 West 23d street, have just
received from Colombia a shipment of
Cattleya Trianae through their collect-
ing agent, A. Mertz.

We understand that some of the rose
growers in Madison, N. J., are selling
flowers direct to retailers in Jersey
towns at \$3 per thousand. What a
cinch those retailers must have!

The sympathy of the craft will go
out to Julius H. Zschorna, of 627 De
Kalb avenue, Brooklyn, whose daugh-
ter, Louise, aged 17 years, died of
pneumonia on Thursday, May 11th, af-
ter two days' illness. Miss Zschorna
had graduated recently from a busi-
ness college, and her death was a sad
blow to her parents and a wide circle
of friends. The interment took place
on Sunday, May 14th, in Mount Olivet
Cemetery, Maspeth, L. I.

At the Spring show held in the New
York Botanical Garden, Bronx Park,
May 10 and 11, F. R. Pierson Co., Tar-
rytown, N. Y., won first prize in each
of the following classes: Collection of
flowering shrubs, collection of tulips,
follage and flowering plants, ferns,
rhododendrons, cut roses, narcissi. Ju-
lius Roehrs, Rutherford, N. J., was first
for group of orchids and for cut flow-
ers. Lager & Hurrell, Summit, N. J.,
won second for orchid group, and first
for cut orchids. Frank Weinberg,
Woodside, L. I., took first for succu-
lents, and Louis Dupuy, Whitestone,
L. I., received a special prize for his
exhibit of *Crassula hybrida coccinea*.

Miss Gustaveson, who for several
years has conducted a retail flower
store in Fifth avenue, Brooklyn, near
Bergen street, has sold out to Mrs.
Wilson, who will continue the business.

William Jurgens, wholesale grower,
Newport, R. I., was in town Wednes-
day.

Cincinnati.

News Items.
There is no improvement in busi-
ness, and nothing in sight before Mem-
orial Day to clean up the vast quan-
tity of stock coming in. American
Beauty is selling better than anything
else.

We are still having heavy storms
nearly every day, but, fortunately, not
much hail. The Ohio River is now
higher than it has been any time dur-
ing the year.

I wish to correct an error made by
the Commercial Tribune and copied by
The Exchange. In your obituary, page
610, May 6 issue, you call attention to
the death of Arthur Armstrong, Mil-
ford, O. The man is dead all right; but
he was a "four" merchant—of a dif-
ferent character from ours.

Superintendent Critchell, of the
parks, reports thousands of dollars' worth
of damage to the roads from the
recent rains. E. G. GILLET.

1877

We Can Fill Orders for

1905

DECORATION DAY

—FROM—

WE can ship you better quality flowers for less money than you can obtain if you come to Boston to purchase them, besides saving you the time and expense.

We filled all orders sent us at Easter; can do so now.

Chicago.

The Week's News.

The strike situation remains unchanged with but small prospects of a near settlement, both sides being determined on a fight to a finish. This is causing hardship to all in the trade, retailers as well as commission houses. The express companies began making deliveries in a small way the first of the week, but at present are not trying to pick up packages from any commission houses. The deliveries up to date have been in general always more or less late.

A strike of the messenger boys of the Postal Telegraph Company hampered business in general on Tuesday, all messages being late in coming in and either being given over the 'phone or delivered by some man connected with the office force.

The relatives and friends of Otto Kroeschell are worrying over his mysterious disappearance one day last week. Up to the present writing he has not been found. A reward of \$250 has been offered by his family for any information as to his whereabouts. He is a member of the firm of Kroeschell Brothers, greenhouse boiler manufacturers.

The Benthley-Coatsworth Company have discarded American Beauty roses and hereafter will devote their whole range of glass at New Castle, Ind., to the growing of teas.

Theo. Meyer, Waukegan, was a sufferer to a considerable extent last week on account of the heavy rains; there were 18 inches of water in his greenhouses.

Vaughan's Seed Store presents a scene of unusual activity at this time. From appearances, this place has not lost trade on account of the strike.

The Fleishman Floral Company contemplates reopening Mosconosotes' store on the north side, remodeling and otherwise fitting it up. It will be in charge of Wm. Ghornerly, formerly with E. Wienhoeber.

Benthley-Coatsworth Company is again handling its own stock here, after transferring it to St. Louis for a few days at the commencement of the strike.

Building operations are well under way with the following firms: Bassett & Washburn and Peter Reinberg. The Jegen Sisters, formerly located on Washington street for many years, have removed to 96 State street, where they have a finer store.

William Graff has sold his store at 90 Washington street to Harry B. Tufts. It is under the management of Chas. Balluff.

Boston.

News Notes.
Andrew Christensen, of Stoneham, who is one of the best carnation growers in this locality, has bought six acres more land adjoining his present property, and will at once commence the erection of a modern greenhouse, 300x40 feet.

George Cartwright, of Dedham, well known as the treasurer of the Boston Co-operative Flower Growers' Association, will retire from the florist business in the near future. He has already sold most of his houses, Mrs. Fisher, of Montvale, having secured three of them, which she will remove to her own place.

R. H. Moltman, of Cambridge, who for several years past has conducted a florist store in that city, has bought several acres of land, and will erect three greenhouses thereon.

W. C. Stickel, of Lexington, who recently sold his North Cambridge establishment, is building another house, 200x30 feet.

Albert Scott, the Beacon street florist, will build another house at his West Roxbury place.

Justin Geist, of Melrose, is giving up his greenhouse business and will devote his entire time to his store.

A movement is on foot by members and salesmen of the two flower markets to hold an outing and picnic on Saturday, June 3. An interesting feature will be the ball game, which is scheduled to take place between picked teams from the two markets.

William Spillsbury, of Woburn, has commenced to harvest a fine crop of cucumbers from his new house, which was finished only about a month ago. Violets will be the crop grown next winter.

Visitors this week included: G. C. Watson and S. S. Skidelsky, Philadelphia. J. W. DUNCAN.

SEATTLE, WASH. — The Seattle Florists' Association has decided to give a chrysanthemum show in November. At the last meeting a paper on tomatoes under glass, read by Gust Bertman, was a feature.

OAKLAND, CAL. — A party of florists and growers in this city and San Francisco made a friendly visit to President J. C. Vaughan, of the S. A. F. O. H. at Pasadena, Cal., recently.

GROWERS

YOU want to have the reputation for PERFECT BLOOMS. YOU want your
TRADE TO INCREASE and your REPUTATION to spread. You can
secure all this by using NICOTICIDE in your houses, either as a fumigant
or spray. It will clean out the pests, no doubt of that, and the experience
of users through many years shows it is SAFE. The cost per can is not so
low as some other preparations, but the WORK DONE is so great—THAT'S
THE POINT! Send along your address and we will see if we cannot make
you one of our customers.

The name of OUR preparation is NICOTICIDE.

THE MAXWELL MFG. CO., Department F., LOUISVILLE, KY.

MEMORIAL DAY

Are you fully prepared to supply all demands for
**Metallic Wreaths, Ruscus Wreaths, Im-
mortelles, Magnolia Wreaths, in both
Green and Bronze, Moss Wreaths and
Cape Flowers?**

Send your orders early.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XIX. No. 21

NEW YORK, MAY 27, 1905

One Dollar Per Year

NEPHROLEPIS PIERSONI ELEGANTISSIMA (The Tarrytown Fern)

We have a grand lot of this in 6-inch and 8-inch pots—fine specimens, for which we have a splendid demand. Retail florists find this one of the best selling plants ever handled, even at the present novelty prices. We can supply 6-inch plants at \$2.00 each, and 8-inch at \$3.00 each.

Now is the time to obtain a supply of this in small plants and grow it on for retail trade. We have a splendid lot of very strong, heavy established plants in 2 1/2-inch pots, which, if shifted at once, will make grand stock for fall. Price, \$50.00 per 100. These are not light rooted runners from bench, but are strong established plants from 2 1/2-inch pots.

We also offer a lot of

PIERSON FERNS In large sizes for immediate sale for summer decoration. 6-inch at 50c. each; 8-inch at \$1.00 each; 10-inch at \$1.50 to \$2.00 each.

NEPHROLEPIS SCOTTII Fine plants, 6-inch pots. \$1.00 each; 8-inch, \$2.00 each.

ADIANTUM CROWEANUM Extra fine plants, 5-inch pots, extra fine for immediate use or for growing on, \$6.00 per dozen.

KENTIAS FOR DECORATING We have a nice stock of large plants which have been grown in a very low temperature all winter, and consequently are hardy and splendid for decorating, as they will stand a good deal of knocking around. Florists who need large stock for decorating or for hotels, piazzas, etc., in exposed places will find this stock unusually satisfactory. We offer various sizes from \$6.00 to \$15.00 each, according to size.

EXTRA LARGE FICUS FOR DECORATING We have some very large plants, grown in tubs, several plants in a tub, and in consequence are very well furnished, and very bushy, ranging in height from five to ten feet. Splendid for hotels, piazzas, etc., and useful for decorating. \$5.00 to \$10.00 each.

DRACAENA INDIVISA Fine stock in 6-inch pots, the most useful size for florists' use. 50c. each.

ENGLISH IVY Strong plants, 3 1/2-inch pots, \$12.00 per 100.

GERANIUMS Double General Grant, La Favorite, Duc de Montmart, Paunpeck, etc. strong plants, 8 1/2-inch pots, \$8.00 per 100.

CINCINNATI, O.—The wonders of the seed trade are but little known or appreciated, even by those most familiar with the details of production and distribution of such seeds as are found in the ordinary seed store, where vegetable and flower seeds go to make up the bulk of trade. To comprehend the magnitude and importance of the seed trade one must visit the establishments of those who collect and distribute field and grain seeds. Prominent among these are those of the two McCulloughs—J. M. & Sons and J. Charles McCullough. No one could imagine how much grass seed it requires to supply the retail trade until a visit is made to an establishment like these, and the details necessary to transform the crude product of the farm into a sample the seedsmen would class as "fancy." Here it is done to the greatest degree of perfection, as it is done in many other places, but nowhere else on a more gigantic scale.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Charles N. Page, Des Moines, Iowa, president; L. L. May, St. Paul, Minn., first vice-president; W. H. Grenell, Pierrepont Manor, N. Y., second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer.

CLEVELAND, O.—Charles Guelph, of Jerome B. Rice Seed Company, Cambridge, N. Y., was a caller last week.

PORTLAND, ORE.—The Portland Seed Company has built a large warehouse, and the construction of another one is in contemplation.

NEW YORK.—Louis Goepfinger, representative of Peignaux & H. Lorin, successors to Andre Leroy & Co., wholesale seed growers, Angers, France, arrived in the city on Saturday last on his annual trip to the United States. Mr. Goepfinger will, as usual, make his headquarters while in this country at Meyer's Hotel, Hoboken, N. J., where mail addressed to him will have immediate attention.

NOTES FROM THE SOUTH OF FRANCE.

The weather here has been most favorable for all classes of plants. The bulb prospects are very good; but freesia will be scarce.

Encouraged by the good prices of the past two years, the growers, although the crop will be abundant, do not seem to be satisfied with moderate figures. At a recent meeting of growers and exporters, with the view of arranging prices, these were fixed, based on last year's values. However, when harvesting time comes it is expected that the prices decided on at the meeting will be lower.

J. B., JR.

AMERICAN SEED TRADE ASSOCIATION.

The accompanying program, and the popular resort (Alexandria Bay, N. Y.) at which the twenty-third convention of the American Seed Trade Association is to be held, bespeak a large attendance. The Crossmon House has been secured for the exclusive use of the members, and no special engagement of rooms in advance will be necessary. Provision has been made this season for executive sessions, and the president hopes that members will take advantage of the question box and bring up knotty problems in the business world, the discussion of which might be of mutual benefit. Elaborate arrangements for entertainment have been made, so that all may have a good time. The convention will be held June 20-22 next.

NOTES FROM HOLLAND.—Whereas the month of April opened with delightful mild Spring weather, and had been preceded by unusually fine March weather, we were already anticipating a continuation of the blessings of nature until a sudden spell of cold and cutting east winds put a stop to all this. The month of April, all through, with the exception of one or two fine days, has proved a very sad disappointment to all concerned. Where we had hyacinths in full bloom on the first day of April, and had expected to find the bulk of bulb flowers to be over at the Easter holidays, the cold has retarded the flowering season to such an unusual extent that many hyacinths were still in bloom at Easter, and the tulips would have been at their best if the hailstorms had not completely ruined the flowers; and even those that are still in bud state already show the disastrous results of the continued rain and wet, and very likely even the late or May-flowering tulips will not come out to perfection. Many thousands of people from other parts of the country, that had anticipated a visit to the bulb fields when in bloom, were kept back by the inclement state of the weather, and, generally speaking, the whole of the flowering season has been a sad disappointment to us all. Spring shipments have now come to a close, and have been most satisfactory, as no surplus stock has been left on the hands of any of the growers.—Horticultural Trade Journal, England.

European Notes.

Beyond a continued aggravation of the troubles before referred to, we have every reason to be content with the present prospects both for 1905 and 1906 crops. Weather conditions are simply ideal, and with an average of twelve hours' bright sunshine every day, our fields of turnip are rapidly developing into seas of gold. The work of roguing is now in full swing, and it is satisfac-

whole, very pure. An exception must, however, be made in the case of that fickle brute, the American Amber Globe. No matter how carefully the stock seed may have been selected, there are from 25 to 40 per cent. rogues to be pulled out every year.

The writer is of the opinion that this most desirable variety (on the table) owes its existence to the genial and enterprising head of an old Philadelphia house; if so, the gallant captain has a lot to answer for; and if he were to "happen" near the fields where we are playing the part of botanical policemen with the offspring of his creation, we should endeavor to "pull his leg" for a drink of something stronger than the city water of Philadelphia.

Beet, mangel, parsnip and parsley are making good progress, conditions at present being all in their favor.

Trade continues very brisk, particularly for pole beans, cucumber and mangel. This is, in a great measure, the result of the success of these crops owing to the hot Summer last year. A few lucky holders of the above named have been simply coining money during the past few weeks. The revival in the cucumber-growing industry in England is rather remarkable, as the trade had been practically killed by the early arrivals of a cheap class of frame cucumbers from Holland. This caused the English growers to devote more of their land to the culture of vegetable marrow, with such satisfactory results that, at any rate, one grower has bought the freehold of his farm with the proceeds and has named his residence "Marrow House."

The high prices realized for onions during the past Winter have induced the authorities in Bermuda to ship a lot of their produce to Europe, but it is now too late, and the importers are only able to obtain about one-third of the price that would willingly have been paid in February. To make the Bermuda onion better known a supply of the bulbs (which have arrived in excellent condition) has been offered gratuitously to the hotel proprietors in London.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

E. W. Kirkpatrick, McKinney, Tex., president; C. L. Watrous, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Spraying for Scale.

This is the season when the young of the San Jose and other scale appear, and a spraying of trees suspected of containing these pests is in order. When the trees are bare the Winter washes of petroleum, lime, sulphur and salt, and others, are in order; but when the foliage is expanded recourse must be had to whale oil soap or some solution less strong than those of Winter. Whale oil soap is to be recommended at this season of the year. The young scales are killed more easily than when older, a pound of whale oil soap to a gallon of water making a mixture that will fix them.

Green Fly on Shrubs.

A source of great distress to many a nurseryman's customers is the numerous green fly pests which infest their shrubs and rose bushes, and many are the inquiries how to get rid of them. Tobacco in the way of smoke, and liquified by soaking, is death to these pests. An amateur having a greenhouse can be told of the smoke remedy, and, when it is outdoor bushes that have to be treated, of the liquid form. It is the outdoor bushes that usually trouble their owners. To make a solution for sprinkling the bushes, a pound of tobacco or double the weight of tobacco stems, from a cigar factory, soaked in three gallons of boiling water, makes a liquid which is death to all kinds of sucking insects. One, or, at the most, two sprayings with this water will destroy every green fly it touches.

There are, as well, the old-time remedies of soapsuds, or a solution of a pound of softsoap in five gallons of water, both efficacious, but tobacco is so easily obtained, and is such a sure thing that it is what is generally employed for the purpose.

The nurseryman's customer is made happy to find such an easy remedy before him. He frees his shrubs of the enemy, and is gratified to the one who thus enables him to still further enjoy his plants.

Rooted Evergreen Cuttings.

Evergreen cuttings rooted indoors through the Winter months need attention now, if they have not already received it. As a rule, they are rooted in shallow boxes, the intention being to allow them to remain in the boxes only until well rooted, which may be said to be in early Spring. These young plants are intended to be set out in nursery rows in time, but it is not well to do this the first year. They are but a few inches high and have but few roots, and when planted are but an inch or two underground. The droughts and heat of Summer will destroy such small plants, even though they be mulched; therefore it is far better to row them under cover in some way for a full season. This is done by potting them or by transplanting them into boxes containing a depth of soil sufficient to keep them growing well all the season. Planted in small pots, the pots plunged in sand, ashes or some other material which will prevent too rapid a drying is as good, or a better plan than any other. An open frame is a good place to plunge them. Kept growing through the summer, these will be fine, stocky plants by Fall, and, wintered in the frame, with some slight protection to keep the pots from freezing too hard, they will be in fine condition to plant out the Spring following. These are finer plants, and obtained with far less care under his plan than any other; much better than would result from a planting out as soon as rooted.

Many of these rooted plants make good stock to select from for the purpose of growing on of a few permanently in pots, for sales and for use as decorative plants. For the latter purpose florists as well as nurserymen have a constant call for such plants.

Soil for Rhododendrons.

A look at the rhododendrons as they grow in their native wilds affords an excellent opportunity of knowing what soil they thrive in there. It is really not oil as we know that substance here. Dead leaves and dead wood are what they grow in. Their own foliage, decaying year by year, rotten and rotting sticks, together with lots of moisture, appear to be their main support. As they are grown in cultivation the decaying vegetable matter would not do alone, or excepting in rare cases there would not be the steady supply of moisture the bushes get at the base of hills and mountains in their native haunts. In their wild state it is quite common to find them on the top of rocks which are barely out of running water, and wherever they are it is in nearly all cases where moisture is never lacking. Could we, in cultivating them, but insure moisture continually, far more success would attend our efforts than is now met with.

Rhododendrons are really not so particular as to special soil as many suppose. The foreign growers use peat largely, in which the plants thrive well. Then our own growers and their customers find light loam to suit them very well, and it really seems that

any light soil having an abundance of moisture, in a well-drained position, suits rhododendrons. There is one thing they dearly like, but rarely get, viz., partial shade. Were this secured to them, as well as the other requisites mentioned, their growth would be more satisfactory than it is, and when in flower the blossoms would last much longer than they do when in open situations.

CALLUNA VULGARIS IN POINT PLEASANT PARK, HALIFAX, N. S.

Courtesy of the publishers of "The Heather, in Lore, Lyric, and Lay."

Flowering Cherries.

Under the head of flowering cherries there are three well-known kinds in our gardens, the old Chinese double white, the Japanese double pink, and the weeping one, rosea pendula. The Chinese is known as sinensis; the Japanese is Sieboldi, and the weeper, as stated, is rosea pendula. To these is now to be added a new one, one of Veitch's introductions, and named after him, Cerasus japonica Veitchii.

C. rosea pendula stands without any competitors. It is a beautiful weeping tree, to say nothing of its charms as a flowering subject. It blooms early, the pink buds embellishing it the very first days of Spring, and when these buds are open the tree is like a cloud of snow. The appearance of the old double Chinese cherry is well known to all tree lovers. It is slightly pink before opening, and white afterward. The Japanese one, Sieboldi rubra plena, is well named. It is not only a fine red in the bud, but it maintains color all through until the flowers are about to fall, when they are almost white. Because of the color of its blossoms it is in great favor, and it certainly is very attractive when in bloom. The new one, Veitchii, which is now in cultivation here, appears to approach Sieboldi rubra plena a great deal, although this is the first season of its flowering. As in the other cherries, the flowers are borne in bunches of two to six or so, but the inflorescence appears more elongated. In addition to this, although it may be accidental, the flowers expand a week later than the others.

Excepting in the case of the weeping cherry mentioned, which is often grafted, budding is the method usually employed in propagating cherries. The common mazzard stock suits better than any other. Small seedlings set out in Spring become large enough to bud the same season. The weeping one needs tall stocks for working on. The one-sided growth which many grafted weepers make can be remedied to a great extent by watching the cion as soon as it commences to grow, directing the growth into a uniform shape by pruning or tying the growing shoots. Much of the discontent of customers over the one-sided growth of many weepers would not be formed were more attention given to the first growth of weeping, grafted trees. They are of but little use unless of well-rounded outline at the top.

JOSEPH MEEHAN.

When hot-water boilers are not in use, as during the Summer, it is considered advisable to draw off the water, clean the flues thoroughly, and pour a little machine oil between sections with the aid of a short length of pipe fitted with an elbow. This will prevent the accumulation of rust at these points of junction. Taking off the smoke pipe, shaking out the soot, and putting it away in a dry place, will prolong the life of this necessary appurtenance to the boiler.—Metal Worker.

WHITE HEATHER weddings are very common these days among the English nobility and gentry. At the marriage of a niece of Lady Aberdeen recently, this pretty emblem of good luck, with its "Bonny Gordons" associations, not only figured in the bride's bouquet and trimmings of her dress, but composed wreaths for the bridesmaids and the posies presented by two pretty girls to every one as he or she entered the church.

Hardy Heaths.

Perhaps one can only get a true conception of the beauty of the hardy heaths by viewing them in their native habitat, where they surface large tracts of hillside and moorland. The sight is one not easily forgotten, and even to those who are annually familiar with the sight it is a source of much pleasure.

Erica vagans, the Cornish heath, must be classed as one of the best of the dwarf-growing species, and a useful addition to our dwarf-flowering shrubs. Its value is heightened because of its flowering properties, beginning in July and lasting until October. Its flowers, which vary from quite a light pink to dark pink in color, are crowded in racemes four to six inches in length, while the dark-colored stamens protrude conspicuously from the corolla tube. This heath is a native of England, but is only found growing wild on a

small stretch of land overlooking the Atlantic Ocean in the southwest corner of England.

Erica vulgaris, or Calluna vulgaris, as it is now called, is the common heather of mountain, hill, and moor, and is very closely allied to the true heaths. It gives a display of pleasing pink flowers at the same time as E. vagans, and is the hardier of the two.

Another heath I would like to mention is Erica carnea, which is quite as hardy as the former two, and blooms at a time when there are but few things in flower, for from February to May this heath, under good conditions, is fairly smothered with bloom.

The uses of the heaths are many, but they should never be planted sparingly if striking effects are wanted. Heaths being social plants, they look more natural when planted in masses, choosing a sunny position, and where the soil is naturally of a moist character.

They may also be used with good effect as an approach, or belting, to higher growing shrubs, while they are of distinct value when used as a carpeting for the higher growing plants of the same natural order, such as half-standard rhododendrons.

The best and popular method of propagation is from cuttings, though they can be raised from seed. It is essential that the cuttings should have firm wood at the base, and to insure success, after inserting the cuttings into sand made very firm, air should be excluded from them as much as possible until they emit roots.

E. MATTHEWS.

Crimson Winter Rhubarb.

Mrs. Theodosia B. Shepherd, Ventura-by-the-Sea, Cal., has the following to say of the Crimson Winter Rhubarb in a recent issue of the Los Angeles Examiner:

"The Crimson Winter Rhubarb is literally eye-bearing. For raising this variety a well-drained, rich, sandy loam, or loamy soil, is best, and requires no fertilizer. The time of planting is from March to July, and the plants will begin bearing in December. This variety requires little water after it is once established. On March 10 I received a letter from one who is experimenting with this new vegetable. The writer said: 'I set out 1,200 young plants on the first of last July, and have been able to sell up to this time \$107 worth of cut rhubarb. As Mr. Burbank claims, this variety will produce marketable stalks abundantly six months earlier than any other kind.' The stalks are strong, of far more than average height, and thickly grown. The average is from 12 to 18 inches in length, and from 1 to 1 1/4 inches in diameter. The color is of a greenish crimson, which, when cooked, turns into a rich clear shade of crimson. As the Crimson Winter Rhubarb requires much less sugar and cooking than other varieties, I will give explicit directions how to cook it:

"To one quart of water add two cups of sugar, set on stove, and while boiling drop in 1 1/2 quarts of rhubarb, cut in cubes; move to back of stove allow to simmer for ten minutes, remove before the pulp is broken. I give these directions, as the cooking has much to do with the superior quality of the product. There are absolutely no strings to this variety, and no waste in using. This is the only vegetable grown that is so much like a fruit that it is practically a substitute.

"In my own experience I can report remarkable success. At present I have one acre of the bearing plants. This acre, since the middle of January to the first of March, has produced in actual weight three tons of marketable stems. The price has been from \$4.50 to \$5 per 100 pounds. If one could do his own work, the profits would be enormous on a few acres of rhubarb. 'The great question has been: 'Is this variety hard to grow?' My answer is, This product is the most easily produced of anything I have tried in my quarter of a century's experience with gardening."

PEONIES

Wholesale and retail catalogues ready for distribution. Sent free on application. All stock guaranteed true to name. Send your orders in early to be assured of a good collection for Fall planting.

LIKE THE BEE

A PROSPEROUS florist is never idle; do like this busy little insect—the bee—take advantage of the great work the nerve-resting florist, Godfrey Aschmann, and his people have done since Easter. 1,000 of them swarming and enjoying their lives in Aschmann's Greenhouses. "O! Aschmann's flowers taste so sweet," the bees say; "we cannot stop; we have a big field to work on; 100,000 of the choicest; every hole and corner full; let us harvest." Secure Bargains now, and for Decoration Day. Please note our lowest prices.

Plants out of 4 in. pots, at \$7.00 per 100 in the following varieties:

GERANIUMS, 15,000, S. A. Nutt, best double crimson; La Favorita, best double white; Mme. Thibaut, best double pink; La Plote, best double scarlet; Ageratum, dwarf blue; **Heliotrope**; **Scarlet Sage**, Clara Bedman (6 in., \$5.00); **Begonia Veron**, dark red or pink, (3 in., \$5.00); **Nasturtium**, all colors; **Fuchsias**, 15c., (6 in., \$1.50 per doz.); **Periwinkle** or **Vinca Variegata**, 10c., (2 1/2 in. to 3 in. 6c.); **Ivy Geraniums**, **Tuberous rooted Begonias**, (6 in., \$2.00 per doz.); **Dracena Indivisa**, broad leaved, imported, 30 in. high, 50c. each; home grown, 5 in., 25c. **Hydrangea Otaka**, 6 in. pots, some show buds, some not; for outdoor planting, 25c. to 35c. each. **Dusty Miller**, **Centurea Canariensis**, 3 in., \$5.00 per 100. **Double Petunias**, 6 in. pots, 20c.

The following is a list of small plants out of 2 1/2 in. pots at \$3.00 per 100: **Coleus**, **Verschaefeltii**, **Queen Victoria**, **Golden Queen** and **Fancy**; **Verbena**, have 10,000; **Petunias**, **Intimtable variegated California Giant**, (3 in. pots, 6c.); **Sweet Alyssum**, **Little Gem**; **Lobelia**, dwarf and trailing; **Cuphea**; **Tradescantia**, 3 varieties; **Phlox Drummondii**; **Parlor Ivy**; **Acorus Gramineus**, a beautiful variegated grass for vases, 10c. 25 sold at 100 rates.

I have a fine new variegated **Carnation** of my own, not named yet; the odor is like the real clove; admired by everyone who has seen it. 3 in. pots, 15c.; 2 1/2 in., 10c. Have only 500 of them.

DON'T FORGET THAT I AM THE MOON VINE CROWER OF THE LAND.

A. W. Smith's Hybrid Moon Vine, **Ipomoea Noctiflora**, is the one I grow exclusively. It is the only true Moon Vine in America. Mr. Smith has a world-wide reputation for growing the

SCOTTII

Makes three times as many fronds as any other Nephrolepis

THE only new NEPHROLEPIS that has really become popular as a commercial Fern, since the introduction of the Boston. Large and small growers everywhere are planting it in preference to any other Nephrolepis. A year's trial has demonstrated that it is the hardiest, most graceful and symmetrical Nephrolepis known. Unexcelled as a house plant; first choice of the retail florist and also of his customers. The New York and Philadelphia retail store men buy no other fern when Scottii is available. Has fully justified the high opinion formed of it by the judges who awarded it the following long list of prizes:

- Philadelphia, Pa.....SILVER MEDAL
- Newport, R. I.....SILVER MEDAL
- Boston.....SILVER MEDAL
- New York Florists' Club.....SILVER MEDAL
- S. A. F. St. Louis.....SILVER MEDAL
- American Institute, N. Y.....SILVER MEDAL
- New Orleans.....GOLD MEDAL
- St. Louis.....SHAW GOLD MEDAL
- World's Fair.....GOLD MEDAL

Highest Award at Chicago, Ottawa and Toronto
First Class Certificates and Testimonials from all over the country too numerous to mention

The Committee of Awards at the St. Louis World's Fair said of Nephrolepis Scottii: "A sturdy, Dwarf and compact form of Nephrolepis, very symmetrical and handsome, either in small plants or quite large ones. A great acquisition, with excellent qualities as a house plant. Worthy of Gold Medal."

Read Carefully the Best Report Ever Given by the New York Florists' Club for a New Plant:

The committee of award of the club visited the establishment of John Scott, of Flatbush, N. Y., on October 26, for the purpose of inspecting the stock of his new fern, NEPHROLEPIS SCOTTII. Seven members of the committee attended, also the president and vice-president of the club. The initial exhibit of this fern was made at the rooms of the club at the November meeting, 1903. The committee which examined it at that time was so favorably impressed by it that they unhesitatingly awarded it a certificate of merit, and did not ask to see it growing; a request to examine the stock was only recently sent to the club by the exhibitor. The committee made a thorough examination of the stock both in pots and on the bench, and character. It was growing in all sizes from plants in 4-inch pots up to specimen plants in tubs, and it was absolutely uniform, and were highly pleased at its condition form in all grades, the characteristics of the large specimen plants being evident in the smallest specimens on the place. The most careful scrutiny failed to discover any tendency whatsoever toward reversion, and it seems as if the character of the plant is absolutely and indelibly fixed. It is in essence a condensed form of the Boston fern, with valuable characteristics added, which are not evident in the parent. Your committee took an average plant in an 8-inch pot and found by actual count that there were 200 fronds in it, not counting the undeveloped and small ones which were in the center of the plant. The fronds of the plant in question averaged about 20 inches in length and three inches in width at the widest point; the pinnae are very closely set, so that they overlap, making a more finished frond than the parent. The plant in question had a spread of three feet. Plants in 4-inch pots showed a spread of 18 inches and a height of 10 to 12 inches. The committee was unanimously of the opinion that it is a most valuable introduction, and that it will become a plant for the florists to grow universally. It has a crispness and hardness about it which is superior to the parent, and which is one of its very valuable characteristics. It propagates very freely, and because of the fact that its character is established in the smallest size, it should find ready sale in all grades. After a thorough examination, your committee unanimously agreed that it was worthy of the highest award by the club and therefore voted that it be awarded the silver medal of the club, and herewith recommend same for your approval.

(Signed) PATRICK O'MARA, JOHN BIRNIE, ALFRED H. LANGJAHN, WM. H. SIEDRECHT, CHAS. LENKER, JOHN DOWSETT.

Scottii has received the highest awards whenever exhibited and for the past year has proven itself to be a **hardier house plant** than the Boston. **There is no comparison between this fern and any other variety for commercial use.**

Consult any grower, or retailer, who has bought Scottii, and they will tell you that it is as far ahead of the Boston as the Boston is ahead of all other introductions.

I sell plants, not apologies for plants. When you order of me, you can rest satisfied that **YOUR ORDER WILL BE FILLED.**

PRICES OF NEPHROLEPIS SCOTTII: 2 1/4 inch, \$2.00 per dozen; \$15.00 per 100; \$125.00 per 1000. 25 at 100 rate; 250 at 1000 rate.

This week's index will be found on page 699.

News of the Week in Brief.

The French bulb growers are basing this year's prices on those in operation last year.

Chicago is still in the throes of strikes, and business continues to be hampered in consequence.

Hall is still getting in its fine work in the West, and the F. H. A. secretary is being kept busy.

On May 19 and 20 frosts in the vicinity of Montreal killed many flowering and vegetable plants.

The Shaw medal and other prizes will be offered at the Fall show of the St. Louis Florists' Club.

Indianapolis and Milwaukee craftsmen are making great preparations for their respective Fall exhibitions.

E. Sutermeister, a florist of Hyde Park, N. Y., was thrown from his wagon one day last week, sustaining severe injury.

Reports come from various parts of the country that the prevalent cool weather is retarding the work of planting of bedding stock.

A recipient of Government flower bulbs, from a New York Congressman, is reported to have used them in his soup, with subsequent stomach derangement.

The program of the convention of the American Seed Trade Association is given on page 696. The meeting will be held at Alexandria Bay, N. Y., June 20-22.

John M. Keller, the well-known plant grower, of Bay Ridge, N. Y., will retire from business June 1. The greenhouse establishment will be operated by the J. M. Keller Company.

The Board of Health has forbidden the use of vases or other receptacles for holding water in Greenwood Cemetery, Brooklyn, N. Y., on the ground that they are breeding places for mosquitoes.

A florist in San Francisco, Cal., has sued an ice company there for \$4,966.61, the appraised value of 11ly of the valley pips, alleged to have been improperly handled while in cold storage.

The Horticultural Society of New York holds a Summer show in the Museum Building, Botanical Garden, Bronx Park, June 14 and 15. Copies of the schedule can be obtained from Leonard Barron, secretary.

The body of Otto Kroeschell, boiler manufacturer, Chicago, who disappeared from his home on May 8, was found last week in the Chicago River. Mr. Kroeschell, his friends think, had been suffering from mental derangement.

Society of American Florists and Ornamental Horticulturists.

Railroad Rates.

The New England Passenger Association has authorized a rate of one and one-third fare on certificate plan, in co-operation with rate announced by Trunk Line Association, for persons attending the S. A. F. Convention, at Washington, D. C., August 15-18, 1905. WM. J. STEWART, Secretary.

THIS WEEK'S SUPPLEMENT.

Abies (Picea) Nordmanniana.

One of the most deservedly popular evergreens in this country is the one pictured—Abies Nordmanniana, the well-known Nordmann fir. Nurserymen are never afraid of being overstocked with this tree, for it not only sells itself, because of its good looks, but it is also one that transplants well, with ordinary care. It is nothing against some of our own species of firs—notably the concolor—to say the Nordmann is so popular. Concolor is also sought for by all planters, but the two are quite unlike in appearance, while perhaps equally as desirable and called for.

No doubt the extreme hardness of the Nordmann fir has much to do with its popularity. A native of the Crimea, snows and frosts have no terrors for it; and no matter how cold our Winters are, never a one has any effect whatever in abating in the slightest degree the lustrous green of its foliage. It is of just as beautiful a green in late Winter as it is in Summer, in which respect, though not alone, there are not many others of which this can be said. This character it appears to maintain from north to south. In the colder parts of our country it thrives; and look at the illustration and note how the tree thrives at Mt. Vernon, on the Potomac, the home of the illustrious Washington! It stands inside the walled-in garden, at the far corner from the mansion, and, as will be acknowledged, it is a lovely specimen, representing its natural growth. The Nordmann fir cannot be too highly recommended to all planters. It is one of the most satisfactory of evergreens.

Many other evergreens thrive at Mt. Vernon. The grounds are elevated, and on two sides slope to the Potomac. In addition to the fir already named, there are some of the best Abies pinsapo, or Spanish fir, growing there that we ever saw in this country. Mt. Vernon seems to be nearly the limit of its well-doing approaching North, as this fir does not seem at home even about Philadelphia. Near the tomb of Washington there grows one of the finest specimens of the Cephalonian silver fir one could wish to see, and there are more pinsapo there and other choice evergreens, all thriving.

As stated, the illustration shows the Nordmann fir in the walled-in garden. This garden is famed for its box-bordered gravel paths, its crepe myrtles, roses and other old-time flowers. And close to the tree illustrated will be seen an inviting looking little building, bearing the name "schoolroom." On the right of the specimen are to be noticed the branches of a rare tree, Sterculia platanifolia, bearing flowers; but as this tree has been photographed separately we shall make no further reference to it now.

Mt. Vernon is quickly reached from Washington by electric cars, or boat, and the whole route is interesting in historical places and in a horticultural way.

JOSEPH MEEHAN.

"Lighter Vein" Horticultural Literature.

The literary style affected by our so-called "high class" periodicals, devoted wholly or in part to horticultural interests, which have recently sprung up in the midst of us, is meeting with a share of adverse criticism by the more staid and sober class journals, the conductors of which have no use for airy notions, or the purveyance of the horticultural "meat that satisfieth not." The National Nurseryman, in a recent editorial, while commending the abundance of illustration, the good letter press and artistic make-up, deprecates the over-enthusiastic, almost hysterical methods of the newer periodicals in describing the commonplace, everyday operations in the garden and orchard, and condemns the florid, glowing accounts of success chronicled relative to gardening matters, which would lead one to infer that only a modicum of ability and a small amount of perseverance were necessary to obtain the wished-for results. And, adds our esteemed contemporary:

"One is almost led to believe that horticultural magazines are following the lead of some other journals of yellow hue in their eager search for the sensational and striking. We must confess to a strong preference for the sane and conservative methods of the older journals of this country and England, and we believe that we should hold fast to the sound and conservative, though less catchy and attractive, for in the long run such a policy will redound with most benefit to our patrons. The conservative policy, the careful method are the ones which will live and endure."

Commenting on the same matter, the Rural New Yorker says: "Every imaginable subject of garden cultivation is treated by ready writers, more or less familiar with the topic, and exemplified with kindergarten half-tones showing all phases of the work." The Rural also has a good word for the attractiveness of the newcomers: "but," it adds, "it can scarcely be denied their tone is that of airy certainty in dealing with vexed cultural problems. . . . Much good will flow from this increase of ornate suburban literature, but it cannot yet be claimed to touch the real interests of actual tillers of the soil."

If we are to judge by the evident and reported success of the journals in question, they are, as one publisher remarked concerning his magazine, also under criticism, "marketing what the market wants." We are said to be living in an age of superficiality. To meet the desires of that age, horticultural and other writings must needs be superficial. And it must be admitted, we think, the major portion of them, in new journals, and some old ones, too, well merit the

characterization. For the good the periodicals criticized are doing, however, let us give them credit; the harm that will result from their teachings will have its after beneficial effects as well. One thing is certain, they seem to have a temporary success far and away beyond that of the journals, deceased and alive, that have endeavored and are endeavoring to purvey the "sincere milk" of the horticultural "word."

A similar tendency is observable in many of the new books dealing with horticultural subjects appearing in the United States. Material of "lighter vein" seems to satisfy in their case, too. In a recent criticism of a new volume, appearing in Country Life in America, it is said: "It is easy for a professional to criticize a book by an amateur, and the standard of complaint is that books by amateurs are scattering and incomplete. On the other hand, professional gardeners, as a class, though practical, are dull, and, like other experts, they forget what beginners want." There is a good deal of truth in this assertion, yet it is doubtful whether a plethora of the veriest rudimentary detail, largely rehash from cyclopedias and similar works, elaborated and augmented by immaterial and irrelevant verbiage, has the value of the instruction, though lacking in a few minor essentials that the professional practical gardener turns out. Horticultural books written for the purpose of instructing should instruct; to be entertaining rather than informative robs them of their raison d'être, and, consequently, their usefulness.

It is observable, too, that even our trade papers are tending to degeneration in the character of their literary material. We all are inclined to furnish too much "patier;" some more so than others. The majority, if not all, of this class of reading has, of course, no permanent value, and, we sometimes think, but little present worth. To be informed that John Brown is sending into market some good geraniums is of as much benefit to the trade at large as to tell them that John Brown's tomcat goes out o' nights. The only conclusion to be drawn from an item of this kind is, that both John and his Thomas are normal creations, each in his respective class, the former as a gardener, the latter as a feline. If the facts were otherwise, they might or might not be interesting, in a measure.

We question very much whether this sort of trade journalism is not being carried to excess, and, while confessing to being delinquent in a degree along the lines mentioned, we should like to have an expression of opinion on the subject from our readers. As regards the really solid, practical material provided by our trade papers, we believe it averages up well, if it does not excel, the literature of similar periodicals published in other countries. Of that we feel somewhat confident, so far as The Florists' Exchange is concerned, judging by the numerous extracts from our columns appearing in our esteemed foreign contemporaries, and from the opinions of our paper that are vouchsafed us by those who are in a position to know what real merit is.

We Are National.

There is an erroneous impression abroad, how generated we are at a loss to understand, that The Florists' Exchange is merely an Eastern publication, circulating most largely in the Eastern States. While it is true that we have an exceedingly large clientele in the East, it is equally true that our paper is very extensively circulated and read in every other part of the United States where attention is being given to commercial horticultural pursuits, comparing favorably in this respect with the journals whose publication offices are located in a Western city. In proof of this statement we would refer our readers to our Question Box column this week, which contains inquiries from readers in Arkansas, Texas, Dakota, New York State, Massachusetts and other points. This not only proves the comprehensiveness of our circulation, but it as well exemplifies the valuable character of the information supplied by The Florists' Exchange, when readers, doubtless in need of quick response to their questions, come right to us for replies, in preference to going to other trade journals, published nearer to their homes.

We would respectfully ask advertisers in the West to make a note of this. It is our firm belief that The Florists' Exchange will be found equally advantageous as an advertising medium for Western folks; in fact, for the trade located in every part of the United States. You can prove this averment by a trial, and to that end, and for the good it will do you, we respectfully solicit your business.

Obituary

Otto Kroeschell.

The body of Otto Kroeschell, the boiler manufacturer, who disappeared from his residence, 450 Dayton street, Chicago, May 8, was taken from the north branch of the Chicago River last week by a dredge at work widening the channel at Addison avenue. The condition of the body indicated that it had been in the water for nearly a week. No marks of violence were found other than those made by the scoop of the dredge, and it is supposed Mr. Kroeschell walked into the river while in a dazed condition due to mental derangement, which is ascribed by the family to the death of his brother, Albert Kroeschell, who succumbed to a stroke of apoplexy last Thanksgiving Day while bowling in the rooms of the Chicago Social Club.

Mr. Kroeschell was secretary and treasurer of the Kroeschell Bros. Company, manufacturers of boiler plate and steamfitting material, and treasurer of the Kroeschell Ice Machine Company, 29 to 55 Erie street, Chicago. He left his residence, apparently on his way to his place of business.

Aside from his business relations, Mr. Kroeschell had many acquaintances. He was a member of the Germania and Chicago Social clubs, and of the Royal Arcanum. He was born in Nashville, Tenn., in 1852. He was 10 years old when his parents moved to Chicago, and he attended the Franklin School. Mr. Kroeschell first engaged in business with his brother, Albert, in 1879. They started a steamfitting shop at 412 Michigan street. Five years later they were joined by the other two brothers, William and Charles, and the business has grown to large proportions.

Twenty years ago Mr. Kroeschell married Miss Theodora Sittig, of Chicago. Two children, Irma and Roy, are living.

BOOKS RECEIVED.

EXPERIMENTS WITH PLANTS. By W. J. V. Osterhout, Assistant Professor of Botany in the University of California. Publishers, the Macmillan Company, New York. Price, \$1.25.

This is an interesting volume, designed more particularly for the use of schools and colleges. It treats on such subjects as Seed Germination, the Work of Roots, of Leaves, of Stems, of Flowers, and of Fruits; tells how plants are influenced by their surroundings; and chapters are also devoted, respectively, to Fungus Plants and Plant Breeding. A number of inexpensive apparatuses for laboratory work are figured and described. There is much in the book that is of value to the practical horticulturist, especially the information given on how to make an analysis of soils. For its dominant purpose, however—a text book—the volume will be found invaluable. It is profusely illustrated.

HOW TO KNOW WILD FRUITS. By Maude Gridley Peterson. Publishers, the Macmillan Company, New York. Price, \$1.50.

The author, having observed the dearth of literature affording information that would enable one to readily identify many fruiting wild plants by their berries, etc., after the flowers had passed, has been prompted to publish this volume to meet in a measure this long-felt want. Approximately, 200 plants of the character mentioned, found in the northeastern section of the United States, are illustrated and described; these being classified according to their families and species, and treated on throughout the work under the headings of the color of the fruits. The whole furnishes a ready means of identification; information on the fruit, leaves, flowers, native habitat, etc., being provided. The illustrations are excellently executed; and a full glossary and indices add to the value of the volume.

INDEX FILICUM, by Carl Christensen. Publisher, H. Hagerups, Copenhagen, Denmark.—The first part of what promises to be a most useful work has been issued. The book, when completed, will be divided into three sections, one containing a systematic enumeration of the genera of ferns, based on the system of Engler and Prantl, "Die natürlichen Pflanzenfamilien;" section two, an alphabetical enumeration of the species and synonyms, which will embrace, as far as possible, all names and combinations of names published from 1753 till 1905, and will also comprise the names of garden ferns, especially of those appearing during the past thirty years. Section three will be devoted to an alphabetical catalogue of the literature on ferns—works and writings—wherein new genera and species are described or examined. Such a work, entailing, as it must, an immense amount of careful research, will be of incalculable value to all persons and institutions interested in the subject of pteridology.

FRAGRANT FLOWERS AND LEAVES. By Donald McDonald, A.R.H.S.

Frederick Warne & Co., New York, will publish immediately a book on this subject. It will contain notes on their history and utility, and interesting associations gathered from many sources, with an introduction by Wm. Robinson, author of "The English Flower Garden."

OUR READERS' VIEWS

Free Trees and College Competition.

Editor Florists' Exchange:

Surely every nurseryman will heartily agree with all Mr. Vaughan says regarding the free tree distribution, etc., by cities. But, it seems to me, if the shoe pinches me, that is another thing. Last year I complained in a Western trade paper about the Iowa State College at times selling cut flowers and plants ruinously cheap; but Professor Price, now in Ohio somewhere, said: "Better something than throw the stuff away." The present Professor Erwin follows the same plan. He defended his position by stating that the greenhouses of the State College are run on business principles. I asked him where the money came from? The first principle with a florist is to furnish his own money, and there is no State of Iowa to back him by buying coal, building houses, paying help, etc. He thought I was a "funny man." "What right," I said, "do you fellows have to ruin a citizen taxpayer with the aid of the taxes he pays?" No other florist in the broad land ever expressed himself on my remarks in the paper mentioned, probably because they all live at safe distances from the Ames State College. So the shoe does not pinch these gentlemen yet. There is another thing: Has the State College at Ames the right to supply the great Chicago & Northwestern Railroad system with bedding plants, etc.?

J. LOEHRER.

Boone, Iowa.

Training Peaches and Nectarines.

Editor Florists' Exchange:

In your issue of May 20 I was surprised to see Mr. Turner advocating that old, and what I presumed was dead and forgotten, system of training peach and nectarine trees, crosswise of the house in preference to what is known as the fan system. I am equally as much surprised when he says that they are easier to handle, and that they receive more benefit from the light than when grown under the usual system, which is certainly not my experience. Some years ago I had charge of a large fruit-growing establishment in the Channel Islands, where grapes were grown by the ton and peaches by the bushel. Something like two hundred and fifty peach and nectarine trees were grown under glass on the system Mr. Turner advocates, which proved to be so unsatisfactory that this style of training was done away with. I also had another experience with a house considerably over 200 feet long in England, with the same results; and have had others on a smaller scale. I would warn your readers against adopting this system without further investigation. I cannot for the life of me see how Mr. Turner is going to get as much light on the crosswise system as the other one, for if the fruits are properly thinned, all those underneath taken off, and only those on the upper side left, the leaves being carefully pulled underneath the fruit, as is done by most leading growers in England, I do not see how it is possible to give them more sun and light under any other system whatever. Neither can I agree with him that his system makes the house more attractive. When growers who have to make their living out of these fruits give up this system, men who have had years of experience and who have tried every possible system turn back to the old fan system or up to the glass, as Mr. Turner puts it, it is pretty good evidence as to which is the best.

Again, Mr. Turner says a great deal depends as regards the flavor of the fruit, on the treatment they receive from the time the fruit commences to color; but he fails to give this treatment. Perhaps he will oblige in your next issue. I will remember a good many years ago attending a fruit and flower show in England, where a well-known fruit grower was amongst the exhibitors. He was, as usual at this show, beaten by a man whom he considered greatly his inferior as a fruit grower. He made use of the remark: "We can always beat this man for size, color, and everything until it comes to flavor, and then we are simply not in it." There are but few who grow fruit under glass that understand the art of putting flavor into it, as this man did; and fruit without flavor is almost as good as a common turnip.

I have read, from time to time, with much interest, Mr. Turner's remarks on fruit culture under glass. Some time ago he referred to the bad setting properties of the Canon Hall Muscat grape. I would like to know his ideas in regard to overcoming this difficulty with this variety. I have had some little experience with it myself, having had a house 150 feet long devoted to its culture. I would also like to ask Mr. Turner if the bloom once taken off the berries can be replaced? If so, how? I heard an interesting discussion on this subject some time ago, and would like to have his opinion upon it.

H J CORFIELD.

Birmingham, Mich.

MORA, MINN.—A. W. Patten has decided to go into the nursery business here, and will devote his entire time to the growing and propagating of hardy fruit trees, small fruits and a general line of nursery stock.

Reflections on Current Topics.

MR. EDITOR:—In reference to that parroted proposition of yours, in issue of May 20, that the S. A. F. award its medals to men who have some noteworthy horticultural achievement to their credit, it seems to me you seek to impose upon the society a task more difficult of satisfactory consummation than the settlement of the "closer relations" wrangle. The cause of horticulture may be enhanced, or advanced, in so many ways. This may be done by the creation and introduction of novelties, as you suggest; then horticulture may be also advanced by scribbling, by talk, and such like means. I am led to make the latter remark because I once read that, at a banquet given to an honored horticulturist, one of the speakers said the guest of the evening "had done more for horticulture than any other one man;" yet, so far as I ever knew or heard, that same guest has not even a new carnation to his credit as a horticulturist. Then, at recent S. A. F. meetings, some of the essays were said to be the "best ever," doing more for the members, consequently for horticulture, than the big bunch of like literature that had gone before. I doubt not, too, but John Birnie believes he is an advancer, or enhancer, of horticulture, because he makes flippant remarks on how the New York wholesale cut flower business is conducted.

If the society should carry out the Burton proposition to its legitimate and logical conclusion, there should, I think, be medals of different and differing grades of merit, and as the list of recipients must necessarily be limited, I herewith append my selection of the dozen men whom I should like to see thus honored:

Wm. R. Smith, a gold medal and clasp, as the "Father of the S. A. F."

John Thorpe, a gold medal, simply for having once been the society's father.

Wm. J. Stewart, a gilt-edged silver medal, for long and meritorious society service, tenacity of purpose, etc.

Edwin Lonsdale, a silver medal, for exposing the Burbankian fallacies, and proving to his own satisfaction that the Wizard of California is not the only "bristle in the brush;" also for discovering that the American Beauty is a French rose, and that it has no "a" in its Gallic patronymic.

George C. Watson, a bronze medal, for perseverance in not proving that a committee is an association when peonies are concerned.

William Scott, a brass medal, for having more to say on the subject of horticulture than all other horticulturists, so-called, combined. He, with Paul Jones, deserves a monument, and, very likely—won't get it.

John G. Esler, a tin medal, for discovering that Rudd can be ranked in the same classification as Job, viz., in the mulish and asinine species. [P. S. Rudd has, in my opinion, done nothing for horticulture entitling him to a medal of any kind. J.]

John Birnie, a wooden medal, for introducing the bagpipes into horticulture. A suggestion is here made that this instrument be employed in the convention hall, when the various medals are pinned on the manly bosoms of the recipients, a procession formed, and these worthy men, in company with the "receivers" at the president's reception, marched round the hall for public approval and inspection.

The Poet Laureate, a leather medal, he being an example of the truth of the statement that the best horticultural poetry is made on an empty stomach; in other words, that viands in prospect inspire doggerel verses.

"Phil," a similar reward, as a generator of original ideas on horticultural advertising; also for egregious versifying on the style of his prototype, the laureate.

"The Traveler," a leather medal, for jarring the jelly jars, long-necked bottles and other misfit appendages at shows of "subsidized" horticultural societies; also as a peripatetic popularizer of the proverb, "Where ignorance is bliss, 'tis folly to be wise" on things horticultural.

W. N. Craig and J. W. Duncan, half of a leather medal each, for an excellent demonstration of the doggedness of horticultural controversialists.

On the waiting list I would place William Falconer, Patrick O'Mara, E. G. Hill, C. W. Ward, Fred. Dorner, Peter Fisher, all for gold medals; presidents of florists' clubs, secretaries of other societies, to be selected from afterward, for silver medals, and for a spare cowhide chest adornment, the champion bowler at the Washington convention, Carmody, Dr. Bunyon and

JOB.

NEWPORT, R. I.—The Rhode Island Nurseries report the season as being one of the very best; in fact, more orders than could be well taken care of some days. The demand for large stock increases every year, and it will take many years to catch up with the call for large specimens, as they take time to produce. At Wilson's nurseries the same story is told. In past years large specimen trees were hard to sell; now the question is to get some to sell at almost any reasonable price.

F. W.

The Cultivation of Peonies.

(Robert Tracy Jackson, Cambridge, Mass., before the Boston Gardeners and Florists' Club.)

(Concluded from page 676.)

Labeling.

Some method of keeping track of the names of peonies is a necessity to any careful gardener. When planted in rows or widely scattered, lists may suffice; but the best method is good labels, if supplemented by a list so much the better. Ordinary wooden labels six inches, or even a foot, long are practically worthless, being soon lost by decay or broken by garden operations. Heavy wooden labels, white pine, cypress or cedar, eighteen inches to two feet long, of seven-eighths inch stock, with the ends dipped in tar, or well soaked in linseed oil, then painted on both sides, reserving a space for writing, and the name painted or written on them, are excellent, but expensive and conspicuous.

A label that is cheaper, simpler to prepare and less conspicuous as far as that feature may be desired, is a zinc label attached to an iron rod. Such labels I have used for over twenty years with entire satisfaction.

Supports.

Unless supported in some way the larger, heavier peonies are apt to be beaten down when in bloom by wind and rain, and seriously injured. To obviate this difficulty some form of support is highly desirable. When planted in rows stakes may be driven into the

striking as garden flowers, and are of interest principally to the collector. They might, of course, be of value in hybridizing, to break the blood of cultivated forms.

The earliest peony to bloom is *Pæonia tenuifolia*, both the single and double forms, which appear in May. The flowers, though small, are of brilliant coloring, and well worth growing. Next in succession comes *Pæonia officinalis* var. *rubra*, the old-fashioned double red peony of our grandmother's garden. Its superb color, freedom of bloom and large size when well grown, render it one of the best of peonies, and indispensable in a garden. *Pæonia officinalis* var. *rosea*, a fine nearly cherry red variety of much merit, and var. *alba*, which is a delicate pink on opening, changing to white before fading, are important additions, both as being good peonies, and as coming early, and therefore extending the season of bloom. Other varieties of *officinalis* are listed in foreign catalogues, but I have not seen them.

Tree peonies, or *P. moutan* varieties, come with the *officinalis* and extend over to the season of the Chinese peonies. *Pæonia moutan*, according to authorities (Lynch), is not known in the wild state, being known only in cultivation, first in China and Japan, where it has been grown for a very long period of time. Professor Charles S. Sargent writes me that he does not know of it in the wild state, but believes that it will sooner or later turn up. It is a somewhat remarkable fact that a large growing shrubby species, and the only shrubby species of the genus, should be known only as a cultivated plant. Tree peonies are not as easy to grow as herbaceous peonies, are less hardy and more difficult to propagate; also it is not as easy to get really choice varieties. As far as known, all the tree peonies in the market are grafted on *moutan*,

best to bloom, but some double varieties are nearly as early. In the past two years the early Richardson seedling, George B. Sowerby, has been in full bloom on the fourth of June. The latest of the choice seedlings raised by Mr. John Richardson, named Milton Hill, this year had secondary blooms still left in July. We may therefore by selection, starting with *Pæonia tenuifolia*, get about six weeks or a little more of flowering season for peonies. It would be desirable for dealers in peonies in their catalogues to give more explicit statements of season of bloom, especially the earliest and latest varieties as an aid to purchasers.

The Qualities of a Peony.

In considering the qualities of a peony, color and form are of the first importance. Freedom of bloom is also an important feature, for some varieties while of good form and color are such shy bloomers that they are from this quality not desirable for the general cultivator with few varieties. Extra freedom of bloom, on the other hand, is a feature especially desirable. One other point of much importance is strength of stem. Many fine peonies have such weak stems that they flop over hopelessly from their own weight; others stand erect, thereby developing their flowers much better, and showing off to infinitely greater advantage in the garden. Lasting qualities, both on the plant and as cut blooms, are features of importance, especially to the dealer in cut blooms.

Flowering of Seedlings.

Seedlings of *Pæonia albiflora* varieties require four to six years to bloom. The seed should be planted as soon as ripe in rich, mellow soil; if protected by frames, so much the better. They are best left without disturbance until blooming, but if planted too thick, will have to be transplanted. Very double flowers rarely set seed, yet an occasional capsule will develop on an otherwise sterile plant. Harrison says that: "Seedlings will often bloom single for years and then turn double." I have never seen such a case. Doubtless seedlings may improve in size and quality with age, but as far as my experience has gone the first bloom, if strong, is a very close indication of what may be expected as the permanent character of a seedling.

It would be highly desirable for peony dealers to insert in their catalogues after the names of varieties the name of the originator. It is only fair credit, and adds much to the interest in these and other plants to know something of their history, who raised them and when. This is done somewhat, but rarely systematically, as it should be. Messrs. W. A. Peterson, of Chicago, and C. W. Ward, of the Cottage Gardens, Long Island, in their catalogues for 1904, note the originators of peonies very fully; also the Lemoines, of Nancy, France, do the same, though not as fully. On the other hand, the Kelways, of Langport, England, list their own seedlings, but ignore the names of other growers.

Work of American Peony Society.

The American Peony Society is studying the nomenclature and seeking to ascertain as far as possible when and by whom each variety was raised. The results of their inquiries are looked forward to with interest. Professor John Craig, of the Horticultural Department of Cornell University, at Ithaca, New York, in conjunction with the American Peony Society, is attempting to collect and grow all the known varieties of herbaceous peonies. By this means the synonymy can be straightened and the really best varieties ascertained. He has already gathered over six hundred varieties, which are to be grown in a fine piece of land well adapted for peony culture. Such experiments are of a high degree of value and interest, carried on by recognized experts, under auspices of an impersonal character, and where they can receive the benefit of a critical study best found in such a horticultural centre. Similar studies of other groups of cultivated plants, it is believed, would be productive of much good.

Another thing that might well be done by the American Peony Society, or by a horticultural society, or journal, is to prepare and publish a bibliography of the literature of the peony, including references to published figures of species and varieties. Such a bibliography could, to advantage, be annotated by the editor. Many short, but important, articles are apt to be overlooked, and a cultivator wishing to see a figure of a given variety, or species, may have a long search before finding it; or may take the trouble without reward, because no published figure may exist. Bibliographies of special topics are an important feature in scientific subjects, and it seems that no more important matter could be taken up for the advancement of horticulture than lists of published papers, or larger works, on our more important cultivated plants.

Carnation The Marquis at Easter.

The accompanying illustration shows a bench of The Marquis carnation at Easter, at the establishment of L. E. Marquisee, Syracuse, N. Y., demonstrating that with proper management it is still one of the "good things." J. B. B.

BENCH OF THE MARQUIS CARNATION, EASTER, 1905—GROWER L. E. MARQUISEE, SYRACUSE, N. Y.

ground at intervals, with a connecting wire run along the top; cross wires or light sticks secured to the connecting wires between plants are a material help. Another method, and one used by the late Mr. John Richardson, is to drive down two or three stakes around each plant, connecting them by a stiff wire stapled to the top of the stakes. Barrel hoops attached to stakes make very good supports, but are limited in size and are rather conspicuous. A most satisfactory support, the best I have seen, devised by W. C. Egan, with slight modifications of his description, is made as follows: Three iron rods, three feet long, are made of heavy wire one-quarter of an inch in diameter; an eyelet is bent in the top, and the rods are galvanized after they are cut and bent. A circular connecting wire of lighter weight, one-eighth of an inch in diameter and six feet six inches long, is passed through the eyelets and made secure by looping the free ends over the wire in such a manner that they will slip on the wire. Thus one can have the circular wire of full size or reduced to any smaller diameter desired, and held in the reduced size by tying one end. Such supports are very inconspicuous, being practically invisible in a well-grown plant, and have given satisfaction to several peony growers who have tried them. They are made by Morss & Whyte, a Boston wire-working firm, for three dollars a dozen. The supports as described by Mr. Egan are made of heavier wire, three-eighths inch in diameter, which seems unnecessarily heavy, and legs two and one-half feet long, which are too short for my peonies.

Number of Species.

According to Baker in his revision of the species, there are about two dozen species of peonies. He lists twenty-two species with their synonyms. Lynch lists and describes twenty-five species, and figures the foliage of many of the species. Excepting *P. tenuifolia* and perhaps *P. Wittmanniana* (which is somewhat difficult to grow), most of the species are said to be not

albiflora or *officinalis* stock. Auguste Dessert claims that they do best grown on *moutan* stock, although it is difficult to get roots of this stock large enough. He says that they use *sinensis* (a variety of *albiflora*) stock, and cut scions with two or more eyes and so disposed that at least one eye is beneath the surface of the ground. This eye greatly encourages the formation of roots in the graft. Kelway gives interesting notes on raising *moutan* seedlings, and in regard to grafting says: "First procure a sufficient quantity of tubers of *P. sinensis*; cut these into lengths of about six inches; then take grafts from the sorts you wish to increase and insert these into the upper end of the tuber in the ordinary way of side-grafting; tie securely and cover the junction with grafting wax so as to exclude the air. These should now be potted into five-inch pots, using a rich compost; the pots should be plunged into frames unheated; give a good watering, and cover the frames with a thin mat to partially exclude light. In the winter they should have an extra mat to protect them from severe frost. The best time to perform this operation is in the months of August and September." Tree peonies do well on *officinalis* stock as I know from experience. The Japanese, I believe, graft on *moutan* stock alone; but one difficulty with that is that shoots from the stock cannot be distinguished from shoots from the scion until blooming, whereas shoots from *albiflora* or *officinalis* stock are detected at once. Layering as suggested by some writers, though slow, would doubtless yield most satisfactory plants.

The Chinese peonies of the *Pæonia albiflora* stock come next in season of bloom. The varieties as known appear to be the results of variation of the stock, hybridization, or the crossing with other species, having entered in very little, if at all, as far as one can judge from the character of the foliage. They are in bloom about the first of June for the earlier varieties, and extend into July for the last blooms of the later varieties. The single varieties are usually amongst the ear-

Our London Letter.

BY A. HEMSLEY.

THE ROYAL HORTICULTURAL SOCIETY.—At the meeting held on April 26, though coming on Easter Tuesday, exhibitors turned out in goodly numbers, and during the afternoon the hall was thronged with visitors. Among the new plants, *Meconopsis integrifolia* was the centre of attraction. This hardy plant, which comes from Western China, grows about eighteen inches high, and produces several large, tulip-like flowers on a stout stem. They are of a soft, clear, pale yellow color, and droop over a little; the leaves are long, strap-shaped, and covered brown with hairs. It was shown by Messrs. Veitch & Sons (Ltd.), and was unanimously awarded a first-class certificate.

Another new scarlet carnation was shown named Elizabeth; a seedling raised from the variety America. The flowers, which are of a clear color, have a perfect calyx and large, broad petals, but hardly so full in the center as some varieties. An award of merit was given. It was shown by a private grower, but I understand it will be distributed by Messrs. George Paul & Son, Cheshunt. The above makes the fourth scarlet variety which has gained the distinction from the committee, the others being Adonis and Flamingo from America and General Kuroki from Messrs. Cutbush & Sons, Highgate. It would be interesting to see all these grown together and prove which is really the best. Harlowarden, the crimson from America, recently gained an award, and to me this seemed much like The President, which gained the same distinction some months ago. The best whites I have seen were The Belle and Lady Bountiful which Mr. Dutton had in the market recently. Of these the blooms were perfect.

Daffodils were again to the front and some new varieties were shown. Miss Willmott, V. M. H., was awarded a gold medal for a very choice collection, several of which were raised in Miss Willmott's own garden. Helen, Countess of Radnor, a grand variety of the Ajax type, received an award of merit. From Messrs. Bath (Ltd.), Wisbech, came two which secured the same distinction. They were Cornelia, a fine yellow, and Marie Hall, a fine bi-color. From a private source came Banzai, an improved Mme. De Graaff, and Countess Stamford, a pure white, which will prove a rival to Peter Barr. Messrs. Barr & Son had some fine seedlings of the same type, but these were unnamed.

Clematis in pots were well shown by Messrs. R. Smith & Co., Worcester, and William T. R. Russell, Richmond, also had a fine lot of well-flowered plants. These are now much appreciated for florists' work, but we do not often see them so well done as were those shown.

Sweet peas were splendidly shown by Mr. Engleman, Saffron Walden. They included all the best shades of color for market work. King Edward VII. was one of the best reds; Princess May, mauve, and Dorothy Eckford, the best white. Miss Willmott has no rival as a pink, and Hon. Mrs. Kenyon is the finest of the yellow shade. Mr. Engleman grows them in large, span-roofed houses, and has 4,000 feet of glass devoted to sweet peas. He has selected some which promise to give us a race of earlier flowering sorts.

Orchids continue to be prolific in new hybrid varieties. Several fine things gained first-class certificates. I think the certificated varieties are getting too numerous; every fortnightly meeting sees further additions made. Some years ago the run was on hardy ferns, and in the course of a few years about two hundred varieties of *Scolopendrium vulgare* were certificated, and about the same number of *Athyrium filix-femina*, and other hardy ferns received distinction; but it is now rarely that any of these are brought forward. Choice collections of exotic ferns are also out of fashion at present. It is only those likely to prove useful for market (or florists' work) that receive much attention. Even the market sorts do not seem to go quite so well as they did a few years ago.

Flowering plants are more in demand. Zonal pelargoniums are still much in favor, and have to a great extent taken the place of the show and regal sorts, but these are more to the front this season. Well flowered plants of the ivy-leaved sorts were not in quite so early, but they are now very good, and are likely to be much used for decorations, as well as for window box work. They work in well for making up the floral baskets which are now a great feature in most of the florists' windows.

ROSES.—These have never been so well supplied as we have had them this season, especially the large blooms on long stems. It would be a great surprise to some of the older growers to see what we now get in the market. Mme. Caroline Testout, La France, Mrs. Sharman-Crawford, Captain Hayward, Ulrich Brunner, Liberty, Kaiserin Augusta Victoria and Bridesmaid have been among the best. I must not omit Mme. Abel Chatenay; this has been exceptionally fine. I am afraid growers have been disappointed with the returns, for what with the extra large supplies and dull trade, if some have made good prices it has been impossible to clear at anything like remunerative figures.

THE SPENCER SEEDLESS APPLE.—Some time ago this was written up as a "great wonder," and fruits were sent from Colorado. These were offered at auction, and an enterprising firm of fruiterers and florists—Messrs. Shearn & Son—purchased them for the moderate sum of £3, and have since exhibited them. So

much having been written about them, great interest was created, and many have been anxious to secure trees of this phenomenon. However, the spell is now broken, for, in the presence of several representatives of the press, the apples were cut open May 2, and were found to have perfect seeds and a hard core, the core being more prominent than in other apples cut for comparison.

Ornamental Seeds.

At a recent meeting of the Barbados Natural History Society a paper was read by Mr. W. R. Buttenshaw, M. A., B. Sc., on "A West Indian Curiosity Shop, from a Botanical Point of View." Mr. Buttenshaw's account of ornamental seeds is reproduced here as it is likely to be of interest to our readers:

Among the wares of the West Indian curio shop a prominent place is always occupied by the rosaries, necklaces, bracelets and other ornaments made with seeds. There is in the West Indies a fairly large number of pretty and striking seeds suitable for this purpose. The following list includes, I think, most of the seeds employed in this way. From a botanical point of view, it is an interesting point to observe that the majority of the plants yielding seeds of this kind belong to the natural order Leguminosæ. We will deal with these first:

ABRUS PRECATORIUS.—The seeds known as "Crab's Eyes" are used for making necklaces, rosaries,

LEUCAENA GLAUCA.—The seeds of this tree, known as "wild tamarind," are used for fancy work in several of the islands, notably for baskets, work-hags, etc. In Barbados they are called "mlmosa seeds." In appearance they are flat and dark brown, with a shining surface.

ORMOSIA DASYCARPA.—This tree bears the true "jumbec" or "John Crow" beads. It is also known as the "West Indian bead tree" or "necklace tree." The seeds are somewhat varied in size, round and flattened, mostly scarlet with a black blotch at one end. The generic name is derived from the Greek word Ormos, a necklace. Not only are the seeds threaded into bracelets and necklaces, but are mounted in gold or silver for studs and buttons.

PITHECOLOBIUM UNGUIS-CATI (Bread and Cheese).—Black, shiny seeds, with rosy arillus, used for necklaces and bracelets.

Of non-leguminous seeds the following are used:

ANACARDIUM OCCIDENTALE (Cashew).—The kidney shaped nut is frequently mounted for pendants.

CANNA INDICA (Indian Shot).—I have not come across these seeds in any West Indian curio shop, but in India and East Africa they are used as beads and made into necklaces.

COIX LACHRYMA-JOBI (Job's Tears).—These are used for all sorts of ornamental purposes; not only for necklaces, bracelets, girdles, etc., but also for trimming ladies' dresses, etc. Mats are also frequently made of Job's tears.

Photo by John F. Johnston

ZINNIA ELEGANS

etc. In fact, the specific name "precatorius" shows at once the connection with "praying." In India they are used by goldsmiths as weights. These well-known scarlet seeds with their black eyes need no description.

ADENANTHERA PAVONIA (Circassian Seed Tree).—In Porto Rico it is known as "coral plant," since the seeds can be used in making scarfpins, etc., in the place of coral. It is also commonly used in making necklaces, etc. The seeds are of a uniformly bright, scarlet color, devoid of markings, somewhat lens-shaped, $\frac{1}{4}$ to $\frac{3}{4}$ inch in diameter; are particularly uniform in size and weight, and on account of this latter characteristic are, like "crab's eyes," used in India as weights.

ALBEZZIA LEBBEK.—The woman's tongue tree, or, as it is known here, Barbados ebony. These seeds are not in such common use as those already mentioned for ornamental work, although they are among those used in Barbados for necklaces, etc. They are of a pale brown color and are flat.

CAESALPINIA BONDUCELLA.—This is the horse nicker tree—bearing the gray nickers—common along our coasts, and therefore well known to you all. The seeds are used for making rosaries, necklaces, etc. These are rather large seeds—from $\frac{1}{2}$ to $\frac{3}{4}$ inch in diameter—and of a dull lead color.

CAESALPINIA BONDUC is the name of the tree that bears the yellow nicker seeds. The specific names of these two plants are derived from the Arabic, bondog, signifying a necklace.

CROTOLARIA RETRUSA (Rattle Bush, yellow).—Used for making necklaces, chains, etc.

ERYTHRINA CORALLODENDRON.—Various named the "red bean tree," "coral tree," "coral bear tree," "bead tree," etc. The last name in allusion to its seeds being strung as beads in chaplets. The seeds are scarlet with a little black spot.

SAPINDUS SAPONARIA (Soap Berry Plant).—These round black seeds were formerly exported to England for use as waistcoat buttons; they are now often strung as beads. The watery juice yielded by these seeds makes a lather with water, and therefore serves all the purposes of soap, but is liable to injure clothes. Used for rosaries in the West Indies.

THEVETIA NERIFOLIA.—This is an important plant from the curio dealer's point of view, as it yields the well-known "lucky seeds," or "lucky beans." In the Northern Islands it is known as "milk bush." This plant belongs to the Allamanda order (Apocynede), and has, indeed, a very similar yellow flower. The seeds are usually mounted as pendants.—Agricultural News, Barbados, W. I.

Zinnia Elegans.

This is the common species, from which most of the garden forms have originated. Zinnias, sometimes called "youth and old age," will always be great favorites with lovers of hardy flowers. They are hardy annuals and are among the most brilliant and showy of this class. Many distinct colors are to be found among zinnias, viz., white, yellow, orange, scarlet, crimson, lilac, magenta or purple. They are very floriferous plants, flowering continuously from early Summer till killed by hard frosts. When planted in large masses they prove very effective. The zinnia belongs to the composite family. For early flowering the seed can be sown in the greenhouse or hotbed, and the young seedlings afterward transplanted or sown later directly in the open ground.

Glen Cove, L. I.

JOHN F. JOHNSTON.

The corporation of Vienna, Austria, has decided to establish a phytopathological institute, or plant hospital, where the diseases of plants will be studied. Arrangements will be made whereby valuable sick plants may be sent to the institute for treatment.

CLUB AND SOCIETY DOINGS

LENOX (MASS.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held May 20. Committees were appointed for the Summer show, which is to be held June 22, 1905. C. O. D.

THE MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY.—A very well attended meeting of this society was held May 19, President Hale in the chair. The discussion of the evening was "Chrysanthemum Culture." President Hale presented the first prize winner for an essay on "Chrysanthemum Culture," H. A. Griffiths, with a beautiful silver cup. The second prize winner, Joseph Kennedy, received the society's certificate. Secretary Kettel announced the receipt of \$10 from Vaughan's Seed Store, as a premium for our Fall show. Wm. Turner exhibited a fine bunch of Black Hamburg grapes, beautifully colored, weighing 3½ pounds. It scored 93 points. B.

THE NEWPORT (R. I.) HORTICULTURAL SOCIETY on Wednesday last held its regular meeting. President Sullivan in the chair. The various committees in charge of the Rose and Strawberry Show next month are doing their very best to make this exhibition a grand success; many special prizes have already been offered by interested persons. A splendid massive solid silver cup has just been received from Miss Alice Keteltas, of New York, as her special prize at the show next month for the best gateway arrangement of plants. John K. M. L. Farquhar, chairman of the committee on prizes and exhibitions of the Massachusetts Horticultural Society at Boston, Mass., was a very welcome visitor; and while he was obliged early in the evening to leave us to catch the last Boston train, we did not let him go without his promise to come again soon and tell us about his recent trip to Europe. The next meeting occurs Wednesday evening, June 7. F. W.

DUTCH HORTICULTURAL AND BOTANICAL SOCIETY.—The floral committee of this society at its April meeting awarded first-class certificates to Odonoglossum Harryanum × crispum, from W. C. Baron von Boetschar at Maartensdyk; to Cypripedium × Felix Putheys, from H. C. Hacke, Baarn; to Lycaste Skinnerii Johanna Smit, from C. J. Kikhert, Haarlem; certificates of merit to Primula polyanthus Velvet Queen, as a new plant from A. M. C. von der Elst at Dedemsvaart; to Cypripedium Charles Canham aurea, from H. C. Hacke, Baarn; to Brassia Lælia Mrs. Gratrix, from H. C. Hacke, Baarn; to Pteris Wimsetti × tremula, as a new plant, from A. C. Dikker, De Steeg; to Ada aurantiaca Royal Prince, from F. G. von Tienhoven, Haarlem; to Primula acaulis Pompadour, from B. Ruys, Dedemsvaart. Honorable mention to Primula polyanthus Bruno, as a new plant, from A. M. C. von der Elst, Dedemsvaart; to Bellis perennis Alice, from B. Ruys, Dedemsvaart. A silver medal was awarded to a collection of 12 astilbes from G. F. Hemerik, Leyden, first prize, and a bronze medal to W. von Veen, Leyden, second prize.

New York Botanical Garden.

At a meeting of the Board of Managers of the New York Botanical Garden, held last week, it was voted to grant to the director-in-chief of the Garden, Dr. N. L. Britton, a leave of absence for six weeks, in order to attend the second international botanical congress, and to make a restudy of botanical gardens at Paris, Geneva, Vienna, Berlin, Kew and elsewhere in Europe. He will sail on May 27, and will go first to Paris.

The international congress will be held at Vienna from June 11 to June 13. The first congress of the kind was held at Paris at the time of the Exposition, in 1900, and was attended by about one hundred delegates from all parts of the world. This body will be composed of the Commission on Botanical Nomenclature, which was appointed by the first congress, and will make a report to this one; and of representatives of national governments, learned societies, academies and other institutions. Dr. Britton, who was a delegate to the first congress, is a member of the International Commission, and will not only be a delegate from the New York Garden and the Torrey Botanical Club, but has been designated by the State

Department to represent the United States Government. The only other delegate from this city is Prof. L. M. Underwood, of Columbia University, who will represent the New York Academy of Sciences. There will be about ten more American delegates, from various parts of the country.

In addition to the duties already mentioned, Dr. Britton, while abroad, will arrange for the purchase of books for the Garden's botanical library, in an effort to perfect it in the line of works by the older authors, which are constantly becoming more difficult to obtain, owing to the competition for rare works between libraries all over the world. This effort has been made possible partly by contributions from persons interested in the development of the Garden, and partly by an appropriation recently made for the purpose by the Board of Managers, from the regular income of the institution. It is hoped to expend not less than \$10,000 for this object within the next two or three years.

Another errand will be the purchase of certain rare and desirable living plants not to be procured in America, for which an appropriation has also been made. In connection with this, special attention will be given to perfecting the collection of living cacti, already very large, which it is designed to make the most complete in existence.

The publication, by the Garden, is announced of the first part of "North American Flora." This work, in its entirety, is designed to present descriptions of all plants growing wild in North America, using that term in its broadest sense; so as to include Greenland, on the north, and the republic of Panama and the West Indies, as far as Grenada, on the south. The work is to be completed in thirty volumes, and will engage the services of a large number of contributors, under the general charge of Dr. Britton and Prof. L. M. Underwood.

The managers voted that a part of the income of the Olivia E. and Caroline Phelps Stokes fund, for the preservation of native plants, be devoted this year to the payment of prizes for essays on the subject, with special reference to the local needs of New York City and its parks. These essays are to be submitted by November 1.

Much interest was expressed by the Board of Managers in the Garden's recent experiment of co-operation with the public schools of the Bronx in their nature-study work, and the continuance and expansion of this work were authorized, to such extent as may be practicable with available funds.

The Latest Scientific Process in Agriculture

BY BURNET LANDRETH.

(Extract from Landreth's New Book on Gardening.)

It was as far back as 1860, at the Polytechnic College of Philadelphia, when the students were instructed that some day electric currents would be profitably used in agricultural field operations, in stimulating plant growth; and six years later I looked over the field experiments of Alderman Mechl, on his farm, a few miles out of London, where he had installed apparatus for the purpose of forcing field crops of cabbage, turnips, mangolds and carrots, by the application to the soil of direct electric currents. His experiment, by reason of a then undeveloped knowledge of the subject, did not produce any practical results; consequently he did not pursue the experiments over two Summers, his relinquishment of the scheme, possibly, to a great extent being due to a very wide newspaper ridicule. But time has proved that he was more far-seeing than his critics, his efforts in their general scope being in a truly scientific direction, as has been lately demonstrated as practical by the marked success at several experimental stations in Germany, Sweden and England.

Every explorer in northern latitudes, especially in Polar regions, has been impressed with a vigor of growth of all the native plants, their extraordinary rapid budding, their productiveness, their brilliant coloring and high perfumes, all of which effects scientists now attribute to the influences of electric currents passing to or from the atmosphere and earth. In Northern Sweden, Finland and other extreme northern countries where agriculture is pursued the harvests are always best after seasons of many auras, electric currents proving a most important factor in stimulating and sustaining plant life. Artificially produced electric currents have been proved by numerous experiments made principally in Germany, Sweden and England to be decidedly advantageous where tracts of a size equal to ten acres have been treated with electric air currents, the results being an increase of from 20 to 80 per cent. in the productive capacity of crops of oats, beans, carrots, potatoes and strawberries.

In 1855 Professor S. Lemstrom, of Helsingfors, first made experiments in illustration of his idea that electric currents favorably influenced the growth of plants, and he has since continued to experiment, until now he has arrived at what may be considered a practical application of the system.

The influences of electric air currents in forcing vegetables, according to his theory, are the production of ozone and nitric compounds, and in influencing an increased rapidity of sap movement at those times when the current is ascending. In other words, the augmentation of energy of circulation, the results being an increase in grain seeds of digestible, nitrogenous matter; an increase of sugar in sugar beets; an increase of sweetness in berries, as well as their earlier ripening.

FLOWERING ALMOND DOUBLE WHITE

Photo by J. F. Johnston

The manner of making an application of these electric currents is by the installation of an electric machine, driven by a small hot air or gasolene motor. A wire is run from the negative pole to a zinc plate sunk in damp earth, and a second wire from the positive pole to a movable and well-insulated wire netting, supported, one foot high, by legs, the netting placed directly over the surface of the ground of the crop to be treated. This netting may be many feet in length and breadth, according to the power of the electric machine, the operation being to pass air currents to or from in either direction between the netting and the earth. The result is ineffectual on a wet or cloudy day, and during very dry periods it is positively harmful. Some vegetables, as peas, carrots and cabbage, will not endure the electric treatment unless the soil is in damp condition.

The expense of installation for a field of ten acres is estimated by Professor Lemstrom at \$500 for the electric machine and motor and \$150 per annum for labor.

It would seem this system of forcing plants by electric air currents is especially applicable to under-glass culture, where, certainly, many of the difficulties in the open field would not prevail; as, for example, too much moisture, or too much heat, or the greater difficulty in operations covering acres in extent.

What will be the next scientific process?

Weigela Rosea.

Weigelas are beautiful Spring flowering shrubs bearing numerous flowers, while occasional ones continue to expand through the Summer. W. rosea is probably the most cultivated species, the flowers being funnel-shaped, pink or rose-colored.

Flowering Almond

(Prunus Japonica or Amygdalus Nana).

Flowering almonds are very attractive during May, with their great profusion of dainty blossoms, which are double, and in colors usually rose, pink or white. These flowering shrubs prove useful subjects for enlivening shrubberies. The illustration represents a flowering branch of the white variety.

Glen Cove, L. I.

JOHN F. JOHNSTON.

SPRAY OF WEIGELA ROSEA

Photo by J. F. Johnston

A recent issue of the New York Press has a word about the wages of rose specialists. This is what is recorded:
