IONOPSISIDIUM, *Reichenbach*. From *ionopsis*, violet-faced, and *eidos*, resemblance. *Linn.* 15, Or. 2, Nat. Or. *Brassicaceæ*. A hardy annual and beautiful little rock-plant for shady situations; its flowers are of a clear lilac, and the foliage of a delicate green. It is increased by seeds, which are produced freely, and also by runners, which root freely in the damp soil. *Synonyme*: 1, *Cochlearia acutis*, *C. pusilla*, *Lepidium violæflora*.

<i>acutis</i> 1 . . .	Lilac	7, H. A. 4	Lisbon	1845
-----------------------	-------	------------	--------	------

IONOPSIS, *Humboldt and Kunth*. Literally violet-faced; from *ion*, a violet, and *opsis*, look. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The plants of this genus are small, and difficult to preserve in our collections. We find that they grow best on wood, in the same manner as *Burlingtonia*. *Synonymes*: 1, *pallidiflora*; 2, *Jántha pallidiflora*.

ION THLÁSPI. See *Clypeola Ion Thlãspi*.

IPECAUÁNHA. See *Pombãlia Itãba, Asclepias asthmãtica*, and *Euphõria Ipecauãna*.

IPE TÁBACCO is a very hard Brazilian timber. See *Bignõnia*.

IPEUNA is the hardest wood in Brazil. See *Bignõnia*.

IPOMCEA, *Linn.* From *ips*, bindweed, and *homoios*, similar; alluding to the twining habit of the plants. *Linn.* 5, Or. 1, Nat. Or. *Convolvulacẽe*. A most beautiful genus of plants, well adapted for the rafters, columns, and pillars of the stove, also for trellis-work. *I. Horsfãllie* is excellently suited for training to a trellis, where its beautiful bright scarlet flowers make a lovely appearance. They thrive in loam and peat, mixed with a little dung; and the perennial kinds are multiplied from cuttings in sand without difficulty. The annual and biennial kinds should be raised on a hotbed in spring, and afterwards treated as other half hardy and tender annuals and biennials. The roots of *I. Quãmoclit* are sternutatory. *Synonymes*: 1, *I. salicifõlia*; 2, *I. palmãta*, *Convolvulus carircus*; 3, *I. tuberculãta*; 4, *C. fastigiãtus*; 5, *I. angustifõlia*, *I. denticulãta*; 6, *I. rubro-cõrõlea*; 7, *C. cõrõlea, *commutatã*, *heterophyllã*, *quinquẽlobã*, *stãns*, *strigõsa*, *vãria*.

IPOMÕPSIS, *Micheli*. From *ipo*, to strike forcibly, and *opsis*, sight; alluding to the dazzling colour of the flowers. *Linn.* 5, Or. 1, Nat. Or. *Polemoniãcẽe*. A very beautiful genus of plants, but rather difficult to cultivate. The following is our mode of treatment:—About the end of July the seed should be sown very thinly, in small pots, large sixties, well crocked, and filled with peat and loam, both

sandy, and in equal parts, and placed in a cold frame, where the seed will soon vegetate, during which time the least possible water is given. When the plants begin to show signs of leaves, they are thinned out to three or four in each pot; in about a week after this, they should be removed into a rather light and airy part of the greenhouse, where they remain all winter. During winter, over-watering, and drips from the roof of the house, must be carefully avoided. In spring, they are shifted into forty-eight-sized pots, well drained, and the same kind of soil as before; in doing this, great care must be taken not to injure the roots. In this sized pot they will generally be found to flower. Out of the four plants left after thinning, it is rare that more than two remain in each pot, one of which may be destroyed if the other appears healthy and well established; if not, let both remain. In the course of their growth, water cannot be too cautiously given, especially just before the plants break into flower. Thus nourished, in an airy situation near the glass, they flower splendidly in July and August, and continue beautiful for a long time. *Synonymes*: 1, *Gilia pulchella*; 2, *G. coronopifolia*. See *Gilia*.

speciosa . . . Yellow . 9, S. Epl. 2 Ceylon . . 1840

IRISINE, *Willdenow*. From *ciros*, wool; referring to the woolly appearance of the branches. *Linn.* 22, Or. 5, Nat. Or. *Amarantaceæ*. The plants of this genus are very pretty, and may be cultivated in sandy loam and peat, mixed with a little decayed dung. They increase from seeds by merely sowing them on a gentle hotbed.

IRIARTEA, *Ruiz and Pav.* Named after *Juan Iriarte*, a Spanish amateur botanist. *Linn.* 21, Or. 7, Nat. Or. *Palmaceæ*. A fine tall growing palm tree requiring the same treatment as other stove palms. *Synonyme*: 1, *Cerroylon andicola*.

andicola . . . Cream 5, S. Palm 60 Quindin . . 1840

IRIDACEÆ or **IRIDS**. An order of herbaceous plants of which the well-known *Iris* is the type. Many have very showy flowers, and the violet scented orris root is the produce of *Iris florentina*.

IRIO. See *Sisymbrium Irio*.

IRIS, *Linn.* From *iris*, the eye; alluding to the variety and beauty of the colours of the flower. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. The genus *Iris* has long been, as it still continues to be, a great favourite in the flower-garden. The sword-leaved sorts, as *I. germanica*, &c., do best in a light loam, and

increase freely by suckers from the roots, or by seeds. The tuberous-rooted ones are more difficult to cultivate, and thrive best in a mixture of loam, peat, and sand, as does also the tribe to which *I. persica* belongs, as *I. alata*, *caucásica*, *reticulata*, &c. The common bulbous species do well in common garden soil, the more sandy the better. *I. tuberosa* is purgative, and *I. versicolor* and *verna* are used in the United States as cathartics. *Synonymes*: 1, *I. grácilis*; 2, *Viussucúcia iridioides*; 3, *I. spatulata*; 4, *I. tripétala*; 5, *I. nepalensis*; 6, *I. paradóca*; 7, *I. stenógyna*; 8, *I. aphylla*; 9, *I. tripétala*; 10, *I. pumila*, *I. violácea*; 11, *I. missouriensis flore-pleno*; 12, *I. hæmatophylla*, *sibíríca sanguinea*. See *Diætes*, *Viussucúcia*, *Trimédia*.

IRON-WORT. See *Sideritis*.

IRPEX, *Fries*. From *irpex*, a rake or harrow; alluding to the hymenium, which somewhat resembles that instrument. *Linn.* 24, Or. 9, Nat. Or. *Agaricacœe*. These species are found on Pine and Beech wood.—*lacteus*, *pendulus*.

ISACHNE, *P. Browne*. From *isos*, equal, and *achne*, a glume. *Linn.* 3, Or. 2, Nat. Or. *Graminacœe*. A species of grass, of little interest, and common culture.—*australis*.

ISANTHUS, *Micheli*. From *isos*, equal, and *anthos*, a flower; in reference to the regularity of the corolla. *Linn.* 14, Or. 1, Nat. Or. *Lamiacœe*. A somewhat interesting annual, cultivated in sandy peat, and propagated from seeds. *Synonymy*: 1, *Trichostema brachiatum*. *cœruleus* . . . Blue . 7, H. A. 1 N. Amer. 1818

ISARIA, *Persoon*. From *isos*, equal; on account of the regularity of the filaments. *Linn.* 24, Or. 9, Nat. Or. *Botrytacœe*. A white species,

found during the spring months on some species of *Trichia*—*microscopica*.

ISARIS, *Caspar Bauhin*. From *isazo*, to make equal; the plant was believed, by its simple application, to destroy all roughness of the skin. *Linn.* 15, Nat. Or. *Brassicacœe*. The species of this genus have not much beauty, and cannot be recommended except for general collections. They thrive with the commonest management, and increase from seeds. *I. alpina* may be increased by dividing the roots.

Synonymes: 1, *I. megacarpa*; 2, *I. dasycarpa*.

ISOCHROMA, *Benth.* From *isos*, equal, and *chrome*, colour. All the species known have the same coloured flowers. *Linn.* 5, Or. 1, Nat. Or. *Solanæceæ*. The only species introduced is a handsome shrub, which grows freely out of doors in summer, but requires shelter in winter. Early in spring before the buds put out it should be pruned back freely, and it will then flower profusely. It readily strikes from cuttings planted in sandy soil under a glass. *Synonyme*: 1, *Habrothamnus cyanus*.

ITAKA WOOD. See *Machærium Schomburgkii*.

ITALIAN BEECH. See *Quercus Æsculus*.

ITALIAN OAK. See *Quercus Æsculus*.

ITEA, *Linn.* *Itea* is the Greek name of the willow, and applied to this genus on account of the quick growth of the species. *Linn.* 5, Or. 1, Nat. Or. *Escalloniaceæ*. An interesting North American shrub, cultivated in open fibrous sandy peat, and multiplied without great difficulty from layers.
virginica . . White 7, H. De. S. 6 N. Amer. . 1774

ITŪBA. See *Pombalia Ituba*.

IVA. Supposed to be from *Yua*, a name used by the older botanists; applied to this genus by Linnæus, because the smell of the plants resembles that of the ancient *Iva*. *Linn.* 19, Or. 5, Nat. Or. *Asteraceæ*. These species are not very interesting; they grow in any common soil, and increase from seeds. *I. frutescens* may also be increased by cuttings. See also *Ajuga Iva*.
frutescens . . White 8, H. Ev. S. 3 N. Amer. . 1711
annua, *axillaris*, *ciliata*, *wanthiifolia*.

IVRA. See *Sterculia Ivra*.

IVORY PALM. See *Phytelphas macrocarpa*.

IVY. See *Hedera*.

IVY GUM is obtained from the old stems of *Hedera Helix*.

IXERIS, *De Candolle*. Name not explained. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Obscure plants, of the easiest culture. *Synonymes*: 1, *Lagoseris versicolor*, *Barkhausia versicolor*—*versicolor* 1.

IXIA, *Linn.* *Ixia*, bird-lime; because of the viscid nature of some of the species. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. A genus of very handsome plants when in flower. We recommend them to be grown in a mixture of sandy loam and decayed leaves, or peat soil. When they have done flowering, they require no water till they begin to grow afresh. In October, they should be fresh potted, and set in a cool frame, as they only require to be protected from frost till their pots are well filled with roots; then they may be set on the shelves of the greenhouse, and watered regularly, and they will flower well. The species of this

genus, and some other bulbous-rooted genera, succeed best in a pit, covered with lights in very cold or wet weather. Most of the species will grow well in a south border, in the open air, planted from five to six inches deep, in a light sandy soil, near a wall, and to be covered with dry litter in severe weather; they will then flower much stronger than if grown in pots, and they may be increased by offsets from the bulbs, or by seeds. See *Babiāna*, *Hesperāntha*, *Sparāvis*, *Synnōbia*, and *Trichonēma*.

JABUTICABA. See *Eugenia caribiflora*.

JACARANDA, *Jussieu*. The name of *J. brasiliána* in Brazil. *Linn.* 14, Or. 2, Nat. Or. *Bignoniaceæ*. These are fine lofty trees, with the elegant habit of the fine-leaved *Acacias*. The soil best suited for them is loam, peat, and sand; and cuttings, with the leaves whole, of the half-ripened wood, will root in sand, under a glass. The best way to get them to flower, is to keep the plants dry in winter. *Synonymes*: 1, *Bignonia cærúlea*; 2, *B. procera*; 3, *J. rhombifolia*; 4, *J. ovalifolia*. See *Bignonia*.

JACQUÍNIA, *Linn.* In honour of the celebrated botanist, N. J. Von Jacquin, professor at Vienna. *Linn.* 5, Or. 1, Nat. Or. *Myrsinacææ*. A genus of very desirable plants, on account of the beauty of their flowers. They are of easy culture in a mixture of sand and peat. It is thought that watering these plants occasionally with salted water, has a tendency to make them grow and flower more freely. Cuttings will root in sand, under a glass, in heat; but they are by no means easy of propagation.

JASMINÁCÆ, or JASMIN-WORTS. These are general favourites on account of the delicious fragrance emitted by the flowers of several of the species, from which an essential oil is obtained. Most of the kinds are natives of the tropics.
JASMINE. See *Jasminum*.
JASMINUM. Linnaeus derives the name from *ia*, a violet, and *osme*, smell; some assert that it is from *ysmyn*, the Arabic name of the plant. *Linn.* 2, Or. 1, Nat. Or. *Jasmináceæ*. The species of this very elegant genus are familiar to every one. The stove and greenhouse kinds thrive well in a mixture of sand, loam, and peat; and cuttings of the ripened wood root freely in soil or sand, under a glass, in heat. The hardy kinds thrive well in any common soil, and are easily increased by cuttings planted under a glass. They are remarkably well adapted for training over an arbour, or against a wall, or trellis-work. The genuine oil of Jasmine of the shops is the produce of *J. grandiflorum* and *officinále*; but a similar perfume is obtained from *J. Sambac*. *Synonymes*: 1, *J. Wallichianum*; 2, *J. flexile*.

JÁTROPHA, *Linn.* From *iatros*, physician, and *trophe*, food; in allusion to the medicinal properties of the plants. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. The species of this genus are only valuable in a medicinal point of view. They thrive well in sandy loam and peat, in small pots, with little water. Most of the species ripen seed freely if care be taken to fertilise the stigmas with the pollen. Cuttings root very readily stuck in the tan, in a strong heat. The seeds of *J. Curcas* are purgative and emetic; an oil is obtained from them, which is a valuable external application in itch. See *Janipha* and *Siphonia*.

JOINTS, the places at which the pieces of the stem are articulated with each other.

JOLIFFIA. Named by Bojer, in compliment to his friend M. Jolliffe. *Linn.* 22, Or. 13, Nat. Or. *Cucurbitææ*. These are splendid plants, producing their curious and beautiful flowers in great profusion; but require a large space to grow in, and to be frequently pruned before flowering. They grow well in sandy loam and a little peat. It is much better to raise them from cuttings of the flowering shoots, as they will bloom much earlier; they will root without difficulty in soil or sand, under a glass, in heat. *Synonyme*: 1, *Telfairia pellata*, *Feuillea pellata*; 2, *Ampeliscyos scandens*, *Joliffia africana*.

JULY FLOWER. See *Prosopis juliflora*.

JUNCALES. See *Juncacæe*.

JUNCACÆE, or RUSHES. An order of well-

known herbaceous plants, found in damp places in all the cooler parts of the world. They are used for various domestic purposes.

JUNCAGINACÆE, or ARROW-GRASSES. Herbaceous marsh plants, in some cases aquatic. In this order is found the remarkable *Ouviranda fenestralis*, or net plant, the leaves of which are like open net-work, without any parenchyma.

JUNCAGO. See *Triglochin*.

JÛNCUS. Linnæus derived the name from *jungo*, to join; in allusion to the first ropes being made from rushes. *Linn.* 6, Or. 1, Nat. Or. *Juncacæe*. All the species of Rush do best cultivated in a moist situation, some of them entirely in water, and others in a peat soil; they may be increased by seeds, or dividing the roots. In Japan they cultivate *J. effusus* for making floor-mats. *Synonymes*: 1, *J. helòdes, arcticus*; 2, *J. compressus*; 3, *J. gracilis, tenuis*; 4, *J. biglumis*. See *Luzula*.

acutiflorus, arcticus, aristatus, balticus 1, biglumis, bôtnicus, bufonius, bulbosus 2, capitatus, castaneus, canescens, filiformis, Jacquini 4, lampocarpus, monanthos, obtusiflorus, pauciflorus, planifolius, pleberus, polycephalus, pygmaeus, squarrosus, subverticillatus, supinus, Tenagæia, tenuis, trifidus, triglumis, uliginosus, vaginatus, valvatus.

JUNGERMANNIA, *Nees*. In honour of the German botanist, Louis Jungermann, who died in 1853. *Linn.* 24, Or. 6, Nat. Or. *Jungermanniacæe*. This is a very extensive genus of obscure plants, found at all seasons of the year, and generally in little patches, formed by their creeping stems, upon trees, or rocks, or on the earth in damp places. *Synonymes*: 1, *Jungermannia epiphýlla furcigera*; 2, *J. endiviæfolia*; 3, *J. affinis*—albescens, albicans, anomala, asplenoides, barbata, barbata minor, bicuspidata, bidentata, Blásia, byssacæa, calycina 1, calyptriðia, capitata, ciliaris, cochleariformis, complanata, compressa, concinnata, connivens, cordifolia, crenulata, cuneifolia, curvifolia, decipiens, Dicksoni, dilatata, Doniana, emarginata, epiphýlla, epiphýlla longifolia 2, excisa, exsecta, Francisci, furcata, hamatifolia, hamatifolia echinata, hamatifolia exstipulata, heterophýlla, hibérnica, Hookeri, Hutchinsia, hyalina, incisa, inflata, inulacæa, juniperina, lævigata, lanceolata, laxifolia, Mackaii, microscopica, minuta, minutissima, multifida, nemorosa, obtusata, obtusifolia, orcadensis, pinguis, planifolia, platyphýlla, platyphýlla lugæa, platyphýlla major, polyanthos, pubescens, pumila, pusilla, Rálsii, réptans, réptans bipinnata, resupinatus, scalaris, serpyllifolia, setacæa, setiformis, setiformis Britanica, spherocarpa, Sphágni, spinulosa, stipulacæa, Tamarisci, Tamarisci apiculata, Tályori, tomentella, Trichomanis, trichophýlla, trilo-

bata, turbinata 3, Turneri, umbrösa, undulata, ventricösa, viticulösa, Woodsii.

JUNGERMANNIACEÆ, or SCALE-MOSSES. These consist of small moss-like plants, closely approaching Liver-worts (*Marchantiaceæ*), from which they have only been recently divided. They are found in damp shady places in all parts of the world.

JUNGIA, De Candolle. See *Dumerötia*.

JUNGLE BENDY. See *Tetrámeles*.

JUNIPER. See *Juniperus*.

JUNIPERUS, Linn. Derived from the Celtic, *juniperus*, rough or rude; in allusion to the stiff habit of the shrubs. *Linn.* 22, Or. 13, Nat. Or. *Pinaceæ*. This genus is too well known to need to be particularised here. All the species will grow in sandy loam, and some in any common garden soil, as *J. Sabina*. They are mostly raised from seeds, though cuttings will strike when planted in a sheltered situation, under a hand-glass. The stimulating and diuretic powers of the Savin (*J. Sabina*) are well known. The berries of *J. communis* are well known for the flavour they give to gin. *Synonymes*: 1, *J. canadensis*; 2, *J. nana*; 3, *J. sulcica*; 4, *J. alpina*; 5, *J. prostrata*; *J. repens*; 6, *J. tamariscifolia*; 7, *J. caroliniana*; *J. vulgaris fruticosa*, *J. communis erecta*; 9, *J. lusitanica*; 10, *Libocedrus tetragona*. See *Dacrydium, Frenela, Libocedrus, and Widdringtönia*.

JUSTICIA, Linn. In honour of J. Justice, an eminent Scotch horticulturist and botanist. *Linn.* 2, Or. 1, Nat. Or. *Acanthöceæ*. An extensive, highly interesting, and ornamental genus of plants, which mostly flower very freely. The stove and greenhouse shrubby and herbaceous kinds grow well in any light soil, or loam and peat mixed, and may be multiplied by cuttings in sand, under a glass, the stove kinds in heat. The seeds of the annual and biennial kinds must be raised in pots, in a hothouse, or hotbed frame, and when transplanted, treated as other tender annuals and biennials. The flowers, leaves, and roots of *J. Adhätoda* are said to possess antispasmodic qualities. *J. Ecdölium* is supposed to be diuretic. *J. paniculata* is the base of the French bitter tincture called *Droge Amère*, which is highly valued for its stomachic and tonic properties. *Synonymes*: 1, *J. quadranguläris*; 2, *J. flavicöna*; 3, *Eustachiana*; 4, *oblongata*; 5, *tinctöria*; 6, *Harrächia macrothyrus, Strobilörachis gläbra, S. prismatica*. See *Agalmöla, Apheländra, Asytasia, Barleria, Cyrtanthus, Elytraria, Eranthemum, Philogacanthus, and Strobilörachis*.

KALUMBO ROOT, or CALUMBA ROOT, is *Cócculus palmátus*.

KANGAROO APPLE. See *Solanum laciniátum*.

KANGAROO GRASS. See *Anthistria austrális*.

KANGURU VINE. See *Cissus antarctícus*.

KANTEN, or TSANTJAN (*Ficus castilaginosa*) is used in China as a substitute for eatable birds' nests.

KARA, or KARAT TREE. See *Erythrina abyssínica*.

KARÁTAS. See *Bromelia Karátas*.

KARÁTTO. See *Agave Karátto*.

KARÉLÍNIA, De Candolle. *Linn.* 19, Or. 2, Nat. Or. *Astóracææ*. A plant of the easiest culture in the open border.

caspia . . . Purple 8, H. Her. P. Caspia.

KAU APPLE. See *Diospýros Káki*.

KAUKI. See *Mimúsops Kauki*.

KAULFÚSSIA, Blume. In honour of Frederick Kaulfuss, M. D., professor of botany at Halle. *Linn.* 19, Or. 2, Nat. Or. *Astóracææ*. *K. amelíoides* is a pretty annual, with bright blue flowers, succeeding well in any light loamy soil. *amelíoides* . . . Blue . . . 7, H. A. 1 C. G. H. 1819
seculifolia . . . Brn. yel. 6, S. Her. P. 1½ I. of Leyte.

KAVA, a drink made from the roots of *Piper methústicum*.

KAWA. See *Libocédrus Doniána*.

KAYO UMUR PANJANG. See *Glaphýria nitida*.

KAWRY TREE OF NEW ZEALAND. See *Dámmara austrális*.

KECKSIES. A common name for the hollow stalks of umbelliferous plants.

KEEL. When the midrib of a leaf or petal is sharp, and elevated externally, it is called a keel.

KEFERSTEFNIA. See *Zygopétalum*.

KEG FIG OF JAPAN is the fruit of *Diospýros Káki*.

KELP, barilla, soda, potash, and Alicant soda, are all supplied by the various species of *Salsóla*.

KENNÉDYA, Ventenat. In honour of Mr. Kennedy, formerly of the firm of Lee and Kennedy, the once celebrated nurserymen of Hammer-smith. *Linn.* 17, Or. 4, Nat. Or. *Fabacææ*. A very beautiful genus of conservatory or greenhouse climbers, succeeding well in sandy loam and peat, and easily propagated from cuttings of the young wood in sand, in a little bottom heat, with a glass over them. *Synonymes*: 1, *K. dilatata*; 2, *latifolia*; 3, *eximia*; 4, *Campósèma rubicánda*. See *Campósèma*, *Hardenbergia*, *Phyalóbium*, and *Zichya*.

KERMES OAK. See *Quercus coccífera*.

KÉRNERA, Mea. J. S. Kerner, a German writer on Botany. *Linn.* 15, Nat. Or. *Brassicacææ*. See *Cochléaria*.

KÉRRIA, De Candolle. In honour of Mr. Kerr, some time superintendent of the botanic garden in Ceylon. *Linn.* 12, Or. 3, Nat. Or. *Rosacææ*. This truly beautiful plant is an old and well-known inhabitant of our gardens; it will grow in any common soil, and cuttings of the young wood taken off at a joint will root readily if planted under a hand-glass. *Synonymes*: 1, *Córchorus japonícus*; 2, *Córchorus japonícus flore pléno*.
japonica 1 . . . Yel. all H. De. S. 4 Japan . . . 1700
flore-pléno 2 . . . Yel. 6, H. Ev. S. 4 Japan . . . 1700

KETCHUP is made from the common mushroom, *Agaricus campestris*.

KHAIR TREE. See *Acacia Catechu*.

KHEU, or **VARNISH TREE OF MUNIPER,** is *Melanorrhœa usitata*.

KHUS. See *Anathærum muricatum*.

KIDBROOK ELM. See *Ulmus campestris virens*.

KIDNEY-BEAN. See *Phaseolus*.

KIDNEY-VETCH. See *Anthyllis*.

KIEMMEYERA, Martius. In honour of C. F. D. Kiemeyer, a great patron of botany. *Linn.* 13, Or. 1, Nat. Or. *Ternstroemiaceæ*. A beautiful plant, growing in a mixture of turfy loam and sand; and increased by ripened cuttings planted in sand, under a hand-glass in heat.

excelsa . . . White . 7, S. Ev. S. 3 Brazil . . . 1833

KIGGELARIA, Linn. In honour of Francis Kiggelaar, a Dutch botanical author. *Linn.* 22, Or. 9, Nat. Or. *Flacourtiaceæ*. Plants only worth cultivating in general collections; they are of common culture, and increase by cuttings.

africana . . . Wht. grn. 6, S. Ev. T. 10 C. G. H. 1688
integrifolia . . . Wht. grn. 6, S. Ev. T. 10 C. G. H. 1819

KILLINGA. See *Kyllinga*.

KINA-KINA, or **QUININE,** is the bark of several species of *Cinchona*.

KINGIA. After Capt. Philip King, a naval officer employed on the coast of New Holland. *Linn.* 6, Or. 1, Nat. Or. *Juncaceæ*. Pot in any light rich soil, and keep in an airy part of the greenhouse.

australis . . . Yel. . 4, G. Ev. S. 1½ Australia 1830

KING'S CUPS, or **BUTTERCUPS.** See *Ranunculus bulbosus* and *acris*.

KINO AFRICAN. See *Pterocarpus erinaceus*.

KINO EAST INDIAN. See *Pterocarpus marsipium*.

KIRGANELLA, Jussieu. From *Kirganeli*, the name of the plant in Malabar. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. This plant will grow well in a mixture of loam and peat; and ripened cuttings will root in sand, under a glass, in a moist bottom heat. *Synonymes*: 1, *Phyllanthus kirganellia*.

elegans . . . White . 7, S. Ev. S. 6 Maurit. . . 1820

KIRSCHENWASSER is prepared from the fruit of *Cerasus avium*.

KISSI. See *Camellia Kissi*.

KISSING COMETS OF FALSTAFF are the candied roots of *Eryngium maritimum*.

KITAIBELIA, Willdenow. In honour of Paul Kitaibel, M.D., professor of botany at Pesth, in Hungary. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. A tall, mallow-like, herbaceous plant, succeeding in any common soil, and easily increased by seeds, which it ripens in abundance.

vitifolia . . . White . 8, H. Her. P. 5 Hungary 1808

KIYAP OF CHINA is the *Soja hispida*.

KLEINHÖVIA, Linn. In honour of M. Kleinhoff, formerly director of the botanic garden in Java. *Linn.* 16, Or. 7, Nat. Or. *Eythneriaceæ*. A handsome species, flowering throughout the year, and seldom being without fruit, which is, however, of little value. It succeeds

well in peat and loam; and cuttings root in sand, under a glass, in heat.

hospita . . . Pink . all S. Ev. T. 20 Moluccas . 1800

KLEINIA. Named by Linnæus, in honour of James Henry Klein, a German botanist. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. The species of this genus are of very little interest, and of the simplest culture and propagation. See *Cacalia* and *Kuhnia*.

viridiflora . . . Green . 7, S. Ev. S. 4 Mexico . 1823
colorata, Porophyllum, ruderalis, suffruticosa, tagetoides.

KLÜGIA, Schlecht. In honour of Dr. William Klug, a lover of botany. *Linn.* 14, Or. 2, Nat. Or. *Gesneriaceæ*. A small genus divided from *Wulfenia*. The species thrive in a mixture of equal parts of sandy loam and peat, and require plenty of moisture when in a state of growth. Increase is by cuttings. *Synonymes*: 1, *Wulfenia Notoniâna, Glossanthus Notoniâna, G. malabarica*.
Notoniâna 1 . . . Blue . all S. Ev. P. 1. E. Ind. . 1848

KNÄPPIA, Smith. In compliment to Mr. M. Knapp, a writer on British grasses. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. This is one of the least of the British grasses, and merely requires sowing in any common soil.
agrostidea . . . Apstal 7, H. Grass. 4 Wales, sa. pl.

KNAPWEED. See *Centaurea scabida*.

KNAPWEED. See *Centaurea Jacea*.

KNAUTIA, Coulter. In honour of C. Knaut, a physician, and botanical author at Halle, in Saxony, who died in 1694. *Linn.* 4, Or. 1, Nat. Or. *Dipsacaceæ*. Plants of little beauty, growing in any soil or situation. *Synonymes*: 1, *Scabiosa arvensis*; 2, *S. collina*; 3, *S. ciliata*; 4, *S. diversifolia*; 5, *S. hybrida*; 6, *S. montana*; 7, *S. orientalis*; 8, *S. propontica*; 9, *S. sylvatica*; 10, *S. integrifolia*; 11, *S. longifolia*.

KNAWEL. See *Scleranthus*.

KNEED, or **KNEE-JOINTED,** bent like the knee-joint.

KNEE PINE. See *Pinus pumilio nana*.

KNIGHTIA, R. Brown. In honour of the late distinguished president of the Horticultural Society, Thomas Andrew Knight, Esq., F.R.S., &c., who died in 1838. *Linn.* 4, Or. 1, Nat. Or. *Proteaceæ*. This is described as a fine ornamental tree, requiring much the same treatment as *Hakea*, and some other New Holland genera.

excelsa . . . Fle. h . 6, G. Ev. T. 10 N. Zeal. . . 1824

KNIGHT'S STAR. See *Hippéastrum*.
KNIPHÓFIA, Mnch. See *Tritómu*.
KNOB TANG, or SEA-WHISTLE. See *Fucus nodosus*.
KNOT-GRASS. See *Ullébrum*.
KNOTTED MARJORUM. See *Origanum Majorana*.
KNOWLTONIA, Salisbury. After Thomas Knowlton, once curator of the botanic garden at Eltham. *Linn.* 13, Or. 6, Nat. Or. *Ranunculáceæ*. Curious species, but of no great beauty. They succeed well in loam and peat, and are increased by dividing the roots, or by seeds. *Synonymes*: 1, *Adónis hirsúta*; 2, *A. capénsis*.
daucifolia . . . Yel. grn. 4, G. Her. P. 1 C. G. H. 1822

scopária . . . Green 6, H. A. 3 Greece . 1629
sedioides . . . Green 5, H. A. 2 Crimea . 1821
trigyna . . . Green 6, H. A. 3 Spain . . . 1804

KELERIA, Link. Named in honour of M. Köhler, professor of natural history at Mayence. *Linn.* 3, Or. 2, Nat. Or. *Gramináceæ*. Mere weeds, of the commonest cultivation. *Synonymes*: 1, *Arra cristáta*.
glabra 1 . . . Apetal 7, H. Grass 1 Brit., pastures.
œgyptiaca, *brachystáchya*, *cristáta*, *glauca*, *grandiflora*, *hirsúta*, *hispida*, *lobata*, *macrantha*, *pennsylvánica*, *phleoides*, *pubescens*, *tuberosa*, *vallesiaca*, *villósa*.
KELPÍNIA. See *Lapsána*.
KENÍGIA. Linnæus named this genus after Samuel Kenig, a Swiss mathematician. *Linn.* 2, Or. 3, Nat. Or. *Polygonáceæ*. This is a

curious inconspicuous species, of greater rarity than beauty; it will grow sown in any common soil in the open border.
islandica . . . Apetal 4, H. A. ½ Iceland . 1773

KOHÁUTIA, De Candolle. In memory of Francis Kehaut, a botanical collector. *Linn.* 4, Or. 1, Nat. Or. *Cinchonáceæ*. Not worthy of cultivation. For culture, see *Oldenlándia*. *Synonyme*: 1, *Hedýotis gracilis*, *H. fásca*.
gracilis 1 . . . White . 6, S. A. 1 Nepaul . . 1823

KOHL RABI, or TURNIP-STEMMED CABBAGE. See *Brássica*.
KOLA NUTS. See *Sterculia acumináta* and *tomentósa*.
KÓLBEEA. See *Melánthium*.
KOLEHO FRUIT. See *Saurauja*.
KOLREUTERIA, Linn. In honour of the celebrated German botanist, J. G. Kolreuter. *Linn.* 8, Or. 1, Nat. Or. *Sapindáceæ*. This is a very handsome plant, growing well in any common soil; it should be planted in a sheltered situation, as it will not flower if too much exposed; it is readily increased by layers or cuttings of the roots.
paniculáta . . . Yel. 7, H. De. T. 10 China . . 1763

KO-NA, or AFRICAN ARROW POISON. See *Echites africana*
KÓNIGA, R. Brown. In honour of Charles König, F.R.S., L.S., superintendent of the natural history department in the British Museum. *Linn.* 15, Nat. Or. *Brassicáceæ*. *K. marítima* *variegata* is a pretty little under-shrub; it grows in any common soil, and may be increased by cuttings planted under a glass. *K. marítima* is increased from seed sown in the open border. *Synonymes*: 1, *Alfssum maritimum*, *Adysœum maritimum*, *Glyce marítima*.
marítima . . . White 7, H. A. ½ Eng., sea co.
variegata . . . White 7, G. Ev. S. ½ Gardens.

KOOCHLA, or POISON NUT. See *Strychnos Nax Vónica*.
KOPEH, or TARA ROOTS. See *Colocásia macrorrhiza*.
KÓPSIA, Blume. Named after Professor Kops, the author of a botanical dictionary of reputation. *Linn.* 5, Or. 1, Nat. Or. *Apocynáceæ*. A genus bearing flowers not unlike the stove species of *Vinca*; very ornamental, and produced several times in the year. It grows freely in a mixture of heath mould and light sandy soil, and is propagated by cuttings. *Synonyme*: 1, *Cérbera fruticósa*.
fruticósa . . . Red . 5, S. Ev. S. 4 Pegu . . 1818

KOSHEL, or GINGER-GRASS. See *Anathérium nárdus*.
KOUMÉ. See *Ampelocycos scândens*.
KOWAIN GUTUKAKA. See *Clánthus puniceus*.
KRAMERIA, Læsting. In honour of J. G. H. and W. H. Kramer, two German botanists. *Linn.* 14, Or. 2, Nat. Or. *Polygaláceæ*. This is an ornamental shrub, succeeding in sandy loam and peat; cuttings will root in sand, under a glass, in heat. The species is tonic, and excessively astringent.
pauciflora . . . White . 6, S. Ev. S. 4 Mexico . 1824

KREYSIGIA, *Reichenbach*. Named after F. L. Kreyzig, a German botanist, author of a treatise on the comparison of animal and vegetable life. *Linn.* 6, Or. 1, Nat. Or. *Melanthaceæ*. A pretty half-hardy herbaceous plant, bearing delicate rose-coloured flowers. It will grow in any light soil, and is increased by division. *multiflora*. Rose. 6, G. Her. P. N. S. W. 1823

KREIGIA, *Schreber*. In honour of Mr. David Kreig, a German botanist. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. *K. virginica* is rather a pretty little grassy-leaved annual; it, as well as *K. caroliniana*, has only to be sown in spring, in any open loamy soil. The other species will grow well in the same kind of soil, and may be increased by divisions. *Synonymes*: 1, *Tréaximum virginicum*; 2, *Hyöseris caroliniana*; 3, *Tréaximum Dandelion*; 4, *Hyöseris virginica*.
virginica 4. Yellow 6, H. A. $\frac{1}{2}$ N. Amer. 1811
amplexicaulis 1, *caroliniana* 2, *Dandelion* 3.

KRUBERA, *Hoffmann*. After John Julius Kruber, M.D., a promoter of botany. *Linn.* 5, Or. 1, Nat. Or. *Apiaceæ*. The seed of this species only requires sowing in a light soil in the open border, in spring. *Synonyme*: 1, *Ulosperrum dichotomum*.
leptophylla. White 6, H. A. S. Eur. 1596

KRUBUT. See *Rafflesia Arnöldt*.

KUCHGO, or **GAGLEE**. See *Arum maculatum*.

KÜHNIA, *Linn.* In honour of Adam Kuhn, of Pennsylvania, a pupil of Linnæus. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Ornamental little plants, succeeding well in a mixture of peat

and sandy loam, and increased by divisions. *Synonymes*: 1, *Critönia Kuhäta*; 2, *C. eupatorioides*; 3, *Klcinia linearifolia*, *Jaiümea linearis*.

Critönia 1. White 7, H. Her. P. $\frac{1}{2}$ N. Amer. 1816
eupatorioides 2. White 7, H. Her. P. $\frac{1}{2}$ N. Amer. 1812
linearifolia 3. White 7, G. Her. P. $\frac{1}{2}$ Brazil. 1829
rosmarinifolia. White 7, G. Her. P. $\frac{1}{2}$ Cuba. 1828

KULIT, or **CLOVE CINNAMON**. See *Cinnamö-munn Cülilöwan*.

KUM QUAT. See *Citrus japonica*.

KUNDA OIL TREE. See *Caräpa guineensis*.

KÜNTLIA. Humboldt named this genus in honour of his friend Charles Sigismund Kunth, a famous Prussian botanist. *Linn.* 21, Or. 6, Nat. Or. *Palmaceæ*. This is described as an ornamental palm, growing in any rich mould, and increased only by seeds.
montäna. Straw. 4, S. Palm. 10 N. Grenada. 1829

KUTULEGEE. See *Cedröla*.

KYDIA, *Roxburgh*. In honour of Colonel Robert Kyd, the first director of the Calcutta botanic garden. *Linn.* 16, Or. 7, Nat. Or. *Byttneriaceæ*. An ornamental genus, succeeding well in light turfy loam and peat, well mixed; and increased by cuttings, not too ripe, planted in sand, under a glass, on a bottom heat.
calycina. White 5, S. Ev. S. 25 E. Ind. 1818
fraternä. White 5, S. Ev. S. 20 E. Ind. 1823

KYLLINGIA, *Linn.* In honour of P. Kylling, a Danish botanist, who died in 1696. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceæ*. Mere weeds, of the simplest culture—*brevifolia*, *cruciformis*, *intermedia*, *monocéphala*, *odorata*, *polycéphala*, *triceps*, *uncinata*.

L.

LABARIA plant of Demarara. See *Dracontium polyphyllum*.

LABDANUM. See *Cistus Ladaniferus* and *orchidicus*.

LABELLUM, the front segment of an orchidaceous or other flower, the lower petal, the lip.

LABIATE, having a lip, or lips.

LABIATÆ. An extensive and very natural group of plants, so named by Jussieu and others from the ordinary form of the corollæ. See *Lamiaceæ*.

LABICHEA, *Guadichaud*. In memory of M. Labiche, an officer in the French ship Uranie, who accompanied Freycinet in his voyage round the world; he died on his passage to the Moluccas. *Linn.* 2, Or. 1, Nat. Or. *Fabaceæ*. These shrubs will thrive in a mixture of loam and peat, and cuttings will root if planted in a pot of sand, with a glass placed over them.

bipunctata. Yel. 4, G. Ev. S. 4 Swan R. 1843
diversifolia. Yel. 3, G. Ev. S. 3 Swan R. 1842
lanceolata. Yel. 4, G. Ev. S. 4 Swan R. 1837
punctata. Yel. 4, G. Ev. S. 4 Swan R. 1843

LABIÖSA, large, or broad-lipped.

LABISIA, *Lindley*. From *labis*, a spoon, in allusion to the divisions of the corolla resembling the bowl of a small spoon. *Linn.* 5, Or. 1,

Nat. Or. *Myrsinaceæ*. A stove shrub of little beauty, requiring to be grown in bottom heat, of very slow growth, and the roots must not be disturbed during their period of activity. In winter little water is required. It is increased by seeds.

pethaina. White. 6, S. Ev. S. 3 China. 1844

LABIUM, a lip.

LÄBLAB, *Adan.* See *Lablavia*.

LABLAVIA, *Adanson*. *Lablab* is the Arabic name of *Convolvulus*, with which this has no affinity except in the twining habit. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. The seeds of the annual kinds may be sown in pots, and kept in the hothouse until May, when, if the weather is fine, they may be planted in a sheltered situation in the open ground, and supported in the same way as scarlet-runners. The greenhouse species are readily increased by cuttings. *Synonymes*: 1, *Dölichos cultratus*; 2, *D. albus*; 3, *D. Bengalensis*, *Läblab bengalensis*; 4, *L. purpureus*, *D. purpureus*; 5, *D. Läblab*.

LABRADOR TEA. See *Ladum*.

LABRÚSCA. See *Vitis Labrúscá*.

LABÚRNUM. See *Cytisus Labáurnum*.

LAC, or EAST INDIAN KINO is procured from insects which abound on *Butea frondosa* and *supérba*.

LACÆNA, Lindley. This was one of the names of Helen, and may be applied to this plant on account of its beauty; but it may also be derived from *lakis*, a cleft, in allusion to the divisions of the lip. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæe*. A fine plant, bearing a strong likeness to the pendulous *Peristèrie*; it should receive similar treatment to *Stanhòpca*.

bicolor . . Grnsh. yel. 5, S. Epi. 1½ Guatemala 1843

LACATHÆA. See *Gordonia*.

LACE-BARK TREE. See *Lagëtta linteària*.

LACEPEDIA, H. B. and K. In honour of Count Lacedede, the distinguished naturalist. *Linn.* 5, Or. 1, Nat. Or. *Hippocrateacæe*. A handsome tree, with fragrant flowers, growing in any light soil, and easily increased by cuttings. *Synonymes*: 1, *Triceràtia tinifolia*, *Tricerós xalapensis*.

insignis . . White . 5, S. Ev. S. 20 Mexico . 1847

LACERATE, } torn, appearing torn.

LACERATED, }

LACERATELY-TOOTHED, toothed in a coarse irregular manner.

LACHENÀLIA, Jacquin. In honour of W. de la Chenal, a botanical author. *Linn.* 6, Or. 2, Nat. Or. *Liliacæe*. This is a genus of pretty, though rather diminutive plants, seldom attaining a foot in height. They bear forcing remarkably well, and may be made to flower at almost any season. The soil best adapted to the growth of these plants is a mixture of peat and sand. Care must be taken to give them little or no water when not in a growing state. They may be increased by offsets or by seeds. See *Drimia* and *Zuccàgria*.

LACHNANTHES, Ellis. From *lachne*, wool, and *anthos*, a flower; in allusion to the flowers, which are woolly. *Linn.* 3, Or. 1, Nat. Or. *Hemodoracæe*. A pretty plant; for culture and propagation, see *Dilatris*. *Synonyme*: 1, *Dilatris tinctoria*, *D. Heritièra*.

tinctoria 1 . . Pink 7, G. Her. P. 1½ N. Amer. 1812

LÁCHRYMA, weeping, drooping.

LACINIATE, jagged, cut.

LACISTEMACEÆ, or LACISTEMADS. A small order of dwarf trees and shrubs, natives of low damp places in the woods of tropical America.

LACISTEMA, Swartz. See *Nematospèrmon*.

LACTUCA, Linn. Derived from *lac*, milk; on account of the milky juice which exudes from the plants when broken. *Linn.* 19, Or. 1, Nat. Or. *Asteracæe*. Among others, this genus contains the well-known "Lettuce," with the culture of which every one is familiar. *L. viridis* yields an extract resembling opium in its qualities, but less likely to produce the consequences attending the use of that drug. *Synonyme*: 1, *sonchoides*.

LADIES' TRACES. See *Spiranthes*.

LADY FERN. See *Aspidium Thelypteris*.

LÆLIA. Named by Lindley, who does not give the derivation. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. These are splendid plants, approaching in beauty to some of the finer *Cattleyas*. The sepals and petals of *L. anceps*, and its variety, are pale lilac; the central lobe of the labellum is a beautiful deep purple, and the mouth of the tubular part yellow and white. *L. grandiflora* bears fine showy yellow flowers, but is found rather difficult to grow. All the other species are of easy cultivation, requiring precisely the same treatment as their rivals, the *Cattleyas*. *Synonymes*: 1, *L. caulescens*; 2, *Grahami*; 3, *Cattleya Perrinii*, *caulescens*.

LAGENOPHORA, *Endl.* From *lagenos*, a flask, and *phoros*, bearing. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*.

Forsteri . . . Yel. pur. 5, G. Her. P. 2 New Zea. 1837

LAGOESTRÆMIA, *Linn.* In honour of Magnus Lagerström, of Gottenburgh. *Linn.* 23, Or. 1, Nat. Or. *Lythraceæ*. A most splendid genus of plants, especially *L. reginae*, the flowers of which are produced in panicles; they are at first pale rose-coloured, and gradually deepen to a beautiful purple. The soil best adapted to these plants is a mixture of peat and loam. All the species, except *L. indica* and its variety, are rather difficult to cultivate; they require a strong heat, and very little water in winter. In summer, they grow freely, and require plenty of room to grow, with a good supply of water; cuttings root readily in sand, under a glass, in heat.

elegans	. . . Lilac	6, S. De. S.	10 E. Ind.	. . . 1841

LAGETTA, *Jussieu*. *Lagetto* is the name of the species in Jamaica. *Linn.* 8, Or. 1, Nat. Or. *Thymelacææ*. This species grows well in loam and peat; and cuttings of the ripened wood root readily in sand, under a glass, in heat.

Synonyme: 1, *Daphne Lagetta*.

linteria . . . White . 6, S. Ev. S. 6 Jamaica . . . 1793

LAGOËCIA, *Linn.* From *lagos*, a hare, and *oikos*, a house; the seeds enveloped in the hairy involucre have been compared to young leverets. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. The seeds of this plant should be sown soon after they are ripe, in autumn, because if deferred till spring, they commonly remain a year, and sometimes longer, before they grow.

cuminoides . Grn. wht. 6, H. A. 1 Levant 1640

LAGONYCHUM, *Bieberstein*. From *lagos*, a hare, and *onychion*, a little nail; in allusion to the spines on the plant. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. This plant will succeed in a warm situation in the open border, if protected by a mat in severe weather in winter. It may be increased either by seeds, layers, or cuttings, taken off at a joint when very young, and planted in sand, under a glass. *Synonymes*: 1, *Acacia Stephaniæna*, *Mimosa micrantha*.

Stephaniænum . Yel. . 7, F. De. S. 10 Persia . 1816

LAGOPUS. See *Ochröma Lagopus*.

LAGOPUS, resembling the foot of a hare.

LAGOSERIS, *Bieberstein*. From *lagos*, a hare, and *seris*, succory. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Obscure plants, of the simplest culture. *Synonyme*: 1, *Cræpis nemausensis*.

- See *Borkhausia* and *Crèpis*—*nemausensis* 1, *taùrica*.
- LAGUNÆA**, *Cavanilles*. In honour of Andreas Laguna, a Spanish physician and botanist of the sixteenth century. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. Annuals of no interest; they will grow in any light loamy soil. *Synonymes*: 1, *L. angulata*. See *Amiròta* and *Hibiscus*—*lobata*, *sinuata* 1.
- LAGUNÀRIA**, *Endl.* So called from the resemblance of this genus to *Lagunœa*. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. Handsome conservatory shrubs, growing in a mixture of sand and light loam, and increased by cuttings planted in pots of sand, and placed in heat, under a glass. *Synonymes*: 1, *Hibiscus lilacinus*; 2, *H. Patersonii*, *Fugòsia lilacinus*.

LANKESTERIA, *Lindley*. After Dr. Edwin Lankester, F.R.S., a distinguished botanist. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceae*. This genus is founded on a very interesting plant, which requires the same culture as *Ruellia* and *Eranthemum*. See *Eranthemum*.

longiflora . . . Yel. 4, S. Ev. S 1 Sierra Leone.
parviflora . . . Yel. 4, S. Ev. S 1 Africa . . . 1844

LANTANA. An ancient name of *Viburnum*, and applied to this genus by Linnaeus because of its affinity. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceae*. These plants are rapid growers, forming small bushy shrubs, and producing their pink, yellow, orange, or changeable-coloured heads of flowers in great abundance, which have a somewhat agreeable aromatic perfume. Any loamy soil suits them; and they are increased readily by cuttings in sand, in heat. *Synonymes*: 1, *parvifolia*.

LANUGINOSUS, woolly.

LAPAGERIA, *Ruiz* and *Pavon*. Named after Josephine Lapagerie, wife of Napoleon I. A most beautiful twining genus, bearing abundance of large rose-coloured flowers. *Linn.* 6, Or. 1, Nat. Or. *Philesiaceae*. It thrives in a light soil composed of leaf mould, peat, and sand, and is increased by division and cuttings.

rosea . . . Rose 5, G. Tw. P. 10 Chiloe . . 1847
albiflora . . . White 5, G. Tw. P. 10 Chiloe . . 1855

LAPEYROUSIA, *Ker*. Named in honour of La Peyrouse, the French navigator. See *Peyrouisia*.

LAPLACEA, *Humboldt*. In compliment to the

distinguished philosopher and mathematician Laplace. *Linn.* 13, Or. 1, Nat. Or. *Ternstroemiaceae*. A very pretty stove plant, which flowers freely in our stoves when of small size, although said to be a tree of 30 or 40 feet in Brazil. It thrives in a mixture of peat, loam, and sand, and is propagated by half-ripened cuttings planted under a hand-glass, in heat. *Synonymes*: 1, *Hæmôcharis semi-serrata*.

semiserrata . . . White 9, S. Ev. T. 35 Brazil . . 1842

LÁPPA, *Tournefort*. See *Arctium*.

LAPPAGO, *Schreber*. From *lappa*, burdock; because of its rough prickly flowers. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*. A plant of little beauty. The flowers are furnished with small prickles, similar to those of *Arctium Láppa*, or Burdock; whence the name. It will grow in any soil.

racemosa . . . Apetal 7, H. Grass. 1 S. Eur. . . 1771

LÁPPULA. See *Echinospérmum Láppula* and *Triumfetta Láppula*.

LAPSANA, *Linn*. From *lapazo*, to purge; in allusion to its once supposed medicinal virtues. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. Plants of little interest, and of the commonest culture. *Synonymes*: 1, *Hyôseris fétida*, *Arnoseris fétida*; 2, *H. minima*, *A. minima*. See *Rhagadiolus* and *Zacantha*.

grandiflora . . . Yel. 7, H. Her. P. 2 Caucasus . 1816
pubescens . . . Yel. 7, H. A. 2 Europe . . 1816
communis, crispa, fétida 1, intermedia, tyrata, pusilla 2.

LARBREA, *Hilaire*. Named after the Abbé Larbré, a botanical author. *Linn.* 10, Or. 3, Nat. Or. *Caryophyllaceae*. A small uninteresting weed, succeeding in any common wet soil. *Synonymes*: 1, *Stellaria aquatica, uliginosa* —aquatica 1.

LARCH. See *Lárix*.

LARDIZÁBALA, *Ruiz* and *Pavon*. In honour of Michael Lardizabala y Uribe. *Linn.* 22, Or. 13, Nat. Or. *Lardizabalaceae*. A hardy creeper, calculated to cover naked walls. It bears a very nice eatable fruit known in Chili and Peru by the names *Guilboqui*, *Aguilboqui*, and *Coguil-Vochi*. It grows readily in common garden soil, and is increased by cuttings.

bitemata . . . Dull purp. 5, H. Cl. S. 20 Chili . . 1849

LARDIZABALACEAE, or LARDIZABALADS, consists principally of twining shrubs, natives of the warmer parts of the world. They greatly resemble *Menispermum* in appearance.

LARÍCIS. See *Pinus Laricis*.

LÁRIX, *De Candolle*. From the Celtic, *lar*, fat; on account of the tree producing an abundance of resin. *Linn.* 21, Or. 10, Nat. Or. *Pinaceae*. All the species of this genus are highly ornamental, and some of them are extensively cultivated for their timber, which is adapted to a variety of useful purposes. The larch grows rapidly in almost any soil, and in any situation, yet its timber can only be brought to perfection when the trees are grown in a clear dry atmosphere, on a cold-bottomed soil, rather moist on the surface. Young plants are obtained from seed, which should

be sown in April, on finely-prepared soil. After the seeds are sown, a light roller should be drawn over the bed, to press the seeds firmly into the earth, and they should then have a thin covering of soil. The plants are generally allowed to remain two years in the seed-bed, and afterwards planted into nursery lines, or where they are finally to remain. As the Larch vegetates earlier than most other trees, and suffers more if removed after it has begun to grow, it ought to be transplanted in autumn, or early in spring. We have adopted the names of the species and varieties as given by Mr. Loudon in his very valuable work, the *Arboretum et Fruticetum Britannicum*. Synonymes: 1, *Pinus laricina*, *P. microcarpa*, *Abies microcarpa*; 2, *L. pëndula*, *Pinus pëndula*, *P. intermedia*, *Abies pëndula*; 3, *L. prolifera*; 4, *L. microcarpa*, *P. microcarpa*; 5, *L. dahurica*; 6, *L. intermedia*, *P. intermedia*; 7, *L. sibirica*, *L. rüssica*, *Pinus L. sibirica*. See *Pinus*.

LARKSPUR. See *Delphinium*.

LARMS DE SAPIN is the resinous sap which flows from the different species of *Picea*.

LÁRREA, *Cavanilles*. In honour of John Anthony de Larrea, a Spanish promoter of the sciences. *Linn.* 10, Or. 1, Nat. Or. *Zygophyllaceæ*. A mixture of loam, peat, and sand, is best adapted to the growth of these pretty shrubs; and young cuttings will root freely in sand, under a glass.

divaricata	. Yel. 7, G. Ev. S. 2 B. Ayres	. 1820
nitida	. Yel. 6, G. Ev. S. 2 S. Amer.	. 1823

LASERPÍTIUM, *Tournefort*. From *laser*, its gum, and *pit*, pitch; the name of the ancient Silphium. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Mere weeds, growing in any common soil. Synonymes: 1, *L. trilobum*, *Siler aquilegífolium*; 2, *L. Libanótis*; 3, *Cnidium caucásicum*; 4, *L. Halleri*; 5, *L. pilosum*; 6, *Cáchrys triquétrum*—*aquilegífolium* 1, *archangélicum*, *asperum* 2, *athamántæ*, *aureum*, *caucásicum* 3, *gállicum*, *G. angustifolium*, *hirsútum* 4, *hispidum* 5, *latifolium*, *marginátum*, *meoides*, *peucedanoides*, *pilosum*, *pruthénicum*, *scabrum*, *Siler*, *triquétrum* 6. See *Cáchrys*, *Gnídium*, *Ligústicum*, *Siler*, and *Thápsia*.

LASERWORT. See *Laserpitium*.

LASERWORT. See *Thapsia Laserpitii*.

LÁSLA. See *Póthos*.

LASIAGRÓSTIS, *Kunth*. From *lasios*, hairy, and *agrostis*, a kind of grass. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. Synonymes: 1, *Arándo spec-*

iosa, *A. calamagróstis*; 2, *Slipa splendens*—*calamagróstis* 1, *spléndens* 2.

LASIÁNDRA, *De Candolle*. From *lasios*, hairy, and *andros*, a male; alluding to the hairy stamens. *Linn.* 10, Or. 1, Nat. Or. *Melastomææ*. This elegant genus of shrubs well deserves a place in every stove; their large purple blossoms are rather freely produced in panicles. They require to be grown in a mixture of loam, peat, and sand; and cuttings of the young wood will root without difficulty, if planted in the same kind of soil, under a glass, in heat. Synonymes: 1, *Pleroma holosericea*, *Rhèxia holosericea*; 2, *Pleroma Fontanesii*, *Melastoma granulosa*; 3, *Pleroma petiolata*. See *Pleroma*.

argútea 1	. Purp. 7, S. Ev. S. 6 Rio Jan.	. 1816

LASIBOTRYS, *Kunze*. From *lasios*, woolly, and *botrys*, a bunch of grapes. *Linn.* 24, Or. 9, Nat. Or. *Helvellææ*. This species is found beneath the epidermis of honeysuckle leaves; when mature, it is of a black colour, and generally situated on a paler or colourless portion of the leaf—*Lonicææ*.

LASIOFÉTALUM, *Cassini*. From *lasios*, woolly, and *petalon*, a petal. *Linn.* 16, Or. 7, Nat. Or. *Sterculiææ*. These are small bushy shrubs, producing an agreeable contrast in the greenhouse by their ferruginous leaves and woolly-flowers. They grow in loam and peat, and are increased by ripened cuttings, under a glass.

ferrugineum	. White 6, G. Ev. S. 3 N. Hol.	. 1791
macrophyllum	. Pur. gr. 5, G. De. S. 3 N. S. W.	. 1835

LASIOFUS, *Cassini*. From *lasios*, hairy, and *pous*, a foot; alluding to the woolly footstalks of its heads of flowers. *Linn.* 19, Or. 2, Nat. Or. *Asterææ*. This plant has little beauty to recommend it; any common soil suits it, and it may be increased by divisions.

conchoides	. Yel. 8, H. Her. P. 3 Armenia	1834
------------	--------------------------------	------

LASIOSPÉRMUM, *Lagasca*. From *lasios*, woolly, and *sperma*, a seed; woolly texture of the seeds. *Linn.* 19, Or. 1, Nat. Or. *Asterææ*. Rather pretty plants, of the simplest culture and propagation. Synonymes: 1, *Santolina anthemoides*; 2, *erithimifolia*; 3, *eriosperma*; 4, *alpina erecta*; 5, *rigida*. See *Seringia* and *Thomasia*.

LATÁNTIA, *Commerson*. *Latanice* is the name of the plant in the Isle of Bourbon. *Linn.* 22, Or. 13, Nat. Or. *Palmáceæ*. A genus of fine middle-sized palms, with plaited fan-like fronds. They delight in a rich strong loam, with a tolerable supply of water. *Synonyme*: 1, *chinénsis*.

borbónica 1. Grn. wht. 5, S. Palm. 25 Bourbon 1816
glaucophýlla. Grn. wht. 5, S. Palm. 20 E. Ind. 1823
rúbra. Grn. wht. 6, S. Palm. 20 Maurit. 1788

LATERAL, on one side, or on the sides.

LATHRÆA, *Linn.* From *lathraios*, concealed; in allusion to the plant being found in concealed places. *Linn.* 14, Or. 2, Nat. Or. *Orobancháceæ*. A very curious little plant,

furnished with white fleshy scales in the place of leaves. It is very shy of cultivation; and may be increased by carefully dividing the roots.

Squamaria. Green 4, H. Parasite 1 Brit., dry woods.

LATHYRUS, *Linn.* From *la*, augmentative, and *thouros*, anything exciting; in allusion to the medicinal qualities of the seeds. *Linn.* 17, Or. 4, Nat. Or. *Fabáceæ*. This genus is formed for the most part of very handsome plants when in flower, the larger kinds being well adapted for arbours or shrubberies, where they must be supplied with branches to support them. Any common soil suits them; they are increased by seeds, and some of the perennial kinds by dividing the roots. The seeds of *L. Aphaca* produce intense headache if eaten in any quantity, while the roots of *L. tuberosus* are said to be wholesome food. *Synonymes*: 1, *Vicia bithýnica*; 2, *L. rotundifolius ellipticus*. See *Ervum* and *Orobus*.

LAURÆCÆ, or LAURELS. An order of noble trees and shrubs, inhabiting cool places in the tropics. All more or less contain an aromatic and fragrant principle; some bear excellent fruit, and others furnish very good timber.

LAUREL. See *Laurus*.

LAUREL CHERRY. See *Cerasus Laurocerasus*.

LAUREL WATER is obtained by distillation from laurel and peach leaves.

LAURINÆÆ. See *Lauracææ*.

LAUROCÉRASUS, or CHERRY LAUREL. See *Cerasus Laurocerasus*.

LAURELIA, Juss. See *Pavonia*.

LAURESTINE. See *Viburnum Tinus*.

LAUROPHÝLLUS, Thunberg. From *laurus*, a laurel, and *phylon*, a leaf; in allusion to the similarity of the foliage. *Linn.* 23, Or. 2, Nat. Or. *Urticacææ*. A shrub of no great beauty, from six to seven feet high, producing its minute green flowers in panicles; it thrives in loam and peat, and may be increased by layers.

- capénsis . Green . 6, G. Ev. S. 6 C. G. H. 1801

LAURUS, Pliny. From the Celtic word *blaur* (laur, the b is dropped), signifying green, in allusion to the foliage of the plants. *Linn.* 9, Or. 1, Nat. Or. *Lauracææ*. This is a very handsome and interesting genus of plants. The stove and greenhouse kinds do well in a mixture of sandy loam and peat, and ripened cuttings generally root freely in sand, under a glass; the stove species in a moist heat. Among the most interesting and valuable of the hardy kinds is *L. nobilis*, or bay-tree, which is injured by severe frost: it is, therefore, best to protect the plants with mats when young; they will grow freely in common garden soil, and in the warmer counties where the weather does not hurt them, they attain the size of trees. *L. Benzoin, L. Sassafras*, and several others, are deciduous, and in some situations attain a great size. They may be increased by layers, or cuttings of the roots. The bark of *L. Benzoin* is stimulant and tonic, and in North America it is used in intermittent fevers. In *L. fétens* an acrid red, or violet juice, is particularly abundant. All the species are more or less aromatic and stomachic. *Synonymes:* 1, *Evōsmus albidus*; 2, *Laurus Borbonia*; 3, *L. californica*. See *Cinnamōdum, Persca, Litscæa*, and *Oreodáphne*.

LAVĀNDULA, Linn. From *lavo*, to wash; in allusion to the use made of its distilled water. *Linn.* 14, Or. 1, Nat. Or. *Lamiacææ*. The hardy kinds are the only plants of this genus worth cultivating; they are much esteemed for the fragrance of their flowers, and are most valued when grown in a dry gravelly soil; they are freely increased by cuttings planted in a shady situation. The frame kinds do well in any light rich soil, and are readily increased from young cuttings in the same kind of soil. *Synonyme:* 1, *L. formōsa*. See *Anisochilus*.

LAVATĒRA, Tournefort. In honour of his friends, the two Lavaters, famous physicians and naturalists of Zurich. *Linn.* 16, Or. 8, Nat. Or. *Malvacææ*. The greenhouse and frame kinds grow well in any light soil, and are readily increased by cuttings of the ripened wood, planted in the same kind of soil, under a glass. The hardy herbaceous species grow freely in any common soil, and increase by divisions or seeds. The annuals and biennials need only be sown in the open border in spring. *Synonymes:* 1, *Emptedolcis*; 2, *undulata*.

LAVENDER. See *Lavandula*.

LAVENDER COTTON. See *Santolina*.

LAVENIA, *Swartz*. Supposed to be of Cingalese origin. *Linn.* 19, Or. 1, Nat. Or. *Asteráceæ*. Mere annual weeds, growing in any common soil—*decumbens, erecta*.

LAVERS (from *lavo*, to wash) are a group of seaweeds. See *Fucacææ*.

LAVRÁDIA, *Vellozo*. In honour of the Marquis of Lavradio, a distinguished patron of botany. *Linn.* 5, Or. 1, Nat. Or. *Violacææ*. This is a very elegant shrub, requiring a mixture of loam, peat, and sand; and cuttings root freely under a glass, in sand, in heat.

montana . Purple . 4, S. Ev. S. 1 Brazil . . . 1826

LAWSONIA, *Linn.* In honour of Isaac Lawson, M.D., author of a Voyage to Carolina. *Linn.* 8, Or. 1, Nat. Or. *Lythracææ*. Ornamental trees, producing their flowers in panicles or racemes; for culture and propagation, see *Lavrádia*. The Egyptian women obtain a paste from the powdered leaves, with which they stain their fingers and feet an orange colour; this they esteem an ornament. It will last for several weeks before there is occasion to renew it. *Synonyme*: 1, *L. inermis, L. spinosa*.

LAX, loose, supple.

LAXMÁNIA, *R. Brown*. In honour of E. Laxman, a Siberian traveller. *Linn.* 6, Or. 1, Nat. Or. *Liliacææ*. An interesting plant, growing freely in loam and peat, and readily increased by divisions.

gracilis . . . Pur. wt. 6, G. Her. P. 1/2 N. Hol. . . 1824

leadiflora . . Wt. brn. 6, G. Her. P. 1/2 Swan R. . .

LEADWORT. See *Plumbago*.

LEAFLETS, small parts of compound leaves.

LEAFY, covered with leaves, or of the consistence of a leaf.

LEANGIUM, *Link.* From *leios*, smooth, and *ageion*, a vessel; alluding to the peridium. *Linn.* 24, Or. 9, Nat. Or. *Mucoracææ*. A genus of minute wart-like *Fungi*, found upon the leaves of mosses and decaying trunks of trees—*floriforme, Trevelyanti*.

LEATHERWOOD. See *Dirca*.

LEATHERY, thick, of the consistence of leather.

LEBÉCKIA, *Thunberg*. After Lebeck, some unknown botanist. *Linn.* 16, Or. 6, Nat. Or. *Fabacææ*. Plants of some beauty, succeeding in sandy loam and peat, and multiplied by seeds, or cuttings in sand, under a glass. See *Indigofera*.

LEBRETONIA. See *Pavonia*.

LECANOCÁRPUS, *Nees*. From *lekane*, a basin, and *karpos*, fruit. See *Amaránthus cauliflorus*.

LECANÓPTERIS, *Blume*. From *lekane*, a basin, and *pteris*, a fern; in allusion to the form of the fronds. *Linn.* 24, Or. 1, Nat. Or. *Poly-podiacææ*. A pretty stove fern.

caribæa . . . Yellow 5, S. Her. P. Java . . .

LECANORA, *Acharius*. From *lekane*, a basin; alluding to the form of the shields. *Linn.* 24, Or. 8, Nat. Or. *Parmeliacææ*. This genus comprises some valuable plants. *L. atra, hæmatomma, parvella, and tartarea*, are used in dyeing, especially the latter, which is in much request for dyeing woollen yarn—*albella, apochryca, argopholis, atra, brænnea, candellæra, polycarpa, carneolitea, cerina, cervina, chloroleuca, circinata, coarctata, crassa, effusa, elegans, epigæa, erythrella, frustulosa, fulgens, galactina, gelida, glaucoma, hæmatomma, porphyria, Hagena, crenulata, Hookeri, hypnorum, lentigera, murorum, oculata, parvella, pericla, castiga, rubra, rubricosa, sativina, saxicola, sordides, Sdnei, subfæsa, tartarea-frigida, tuberculosa, Turneri, upaliensis, varia, ventosa, virrella, vitalina*.

LECHEA, *Linn.* After G. Leche, a Swedish botanist, who died in 1764. *Linn.* 3, Or. 3, Nat. Or. *Cistacææ*. Small plants, of no beauty, and the commonest culture. *Synonyme*: 1, *L. major*.

LECIDEA, *Acharius*. From *lekis*, a saucer, and *eidos*, like; in allusion to the saucer-like shields. *Linn.* 24, Or. 8, Nat. Or. *Parmeliacææ*. A very extensive genus of *Lichens*, found in almost every situation, and at all seasons of the year. *Synonymes*: 1, *Lichen escharoides*; 2, *Lichen atrocarpus*; 3, *Lichen câlvus*—*abiétina, alabastrina, alba, albo-cæruleus, a. turgida, anomala, anthracina, aromatica, atro-cinerea, atro-alba, atro-virens, geographica, atro-flava, atro-rufa, cæsio-rufa, candida, canescens, carneola, cinereo-fusca, citrinella, cõnfluens, conspurcata, coracina,*

corticola, dædæla, decipiens, decolorans, granulosa 1, dolosa, Ehrhartiana, epipolia, escharoides, fumosa 2, fusco-atra, fusco-lutea, ichmadophila, immersa, incana, lapidica, Light-footia, lucida, lurida, luteola, luteo-alba, marmorea, melizæa, microphylla, miscella, Cædri, orosthea, parasema, petrea, pholidota, polytropa, quérnea, rivulosa, rubiformis, rupèstris 3, sabuletorum, geochroa, sanguinaria, scabræsa, scallaris, silicea, speirea, sulphurea, uliginosa, verruculosa, vesicularis, viridescens.

LECÔNTEA, *De Candolle*. Named after John Leconte, F.L.S., of Savannah, in Georgia, a celebrated American botanist. *Linn.* 5, Or. 1, Nat. Or. *Cinchonæceæ*. For culture and propagation, refer to *Paedèria*.

Bojeriana . White . 8. Ev. Cl. 6 Madagascar 1823

LECÔNTIA, *Torr.* See *Peltandra*.

LECYTHIDÆE, or **LECTYTHS**, consist of large trees growing in the hottest parts of South America, especially in Guiana. The fruit of *Courouïta guianensis* is the cannon-ball tree; the Brazil nuts of our shops are the fruit of *Bertholletia excelsa*.

LECYTHIS, *Læfving*. From *lecythos*, an oil-jar; in allusion to the form of the seed-vessels. *Linn.* 13, Or. 1, Nat. Or. *Lecythidæceæ*. The soil best adapted to these plants is a mixture of loam and sand, and they require to be kept in a strong heat. Cuttings of the ripened wood will root in sand, under a glass, in heat. The fleshy seeds of *Lecythis* are eatable, but leave a bitter taste in the mouth.

LEDEBOÛRIA, *Roth*. After M. Ledebour, a botanical author. *Linn.* 6, Or. 1, Nat. Or. *Liliacæe*. *L. hyacinthina* is possessed of some beauty, and is of very simple cultivation.

hyacinthina . Grass. wht. 6, G. Bu. P. ½ E. Ind. 1832

LEDEBÛRIA, *Link*. Named as above. *Linn.* 5, Or. 1, Nat. Or. *Apiacæe*. A plant of no beauty, requiring the most simple culture. *Synonyme*: 1, *Trågium tauricum*—pimpinelloïdes 1.

LEDÔCÂRPUM. See *Balbisia*.

LEDÔCÂRPUM. See *Balbisia*.

LEDON GUM. See *Cistus Ledon*.

LEDUM, *Linn.* From *ledon*, the Greek name for a plant now known as the *Cistus Ledon*. In foliage the present genus agrees with the plant of the ancients. *Linn.* 10, Or. 1, Nat. Or. *Eriacæe*. This is an ornamental genus of plants, well suited for the shrubbery, where they form a fine contrast to *Rhododendrons*. They thrive best in bog earth, and young plants are obtained from layers, treated in the same way as the *Rhododendrons*. *Synonyme*: 1, *L. greenlandicum*. See *Ammgrsine*.

LEE CHEE. See *Euphòria Litchi*.

LEEK. See *Allium Pòrrum*.

LEERSIA, *Swartz*. After J. D. Leers, a German botanist. *Linn.* 3, Or. 2, Nat. Or. *Graminacæe*. These plants possess little to recommend them. They grow readily in any common soil, and are increased by seeds.

australis . Apetal . 7, H. Grass. 1½ N. Hel. . 1819
eryzoides . Apetal . 7, H. Grass. 2 Levant 1793
virginea . Apetal . 7, H. Grass. 1½ N. Amer. . 1770

LEGHORN STRAW is the straw of a bearded variety of wheat, resembling rye.

LEGUME, } a pod, the fruit of leguminous
LEGUMEN, } plants.

LEGUMINOSÆ. A large group of plants bearing legumes or pods. See *Fabacæe*.

LEGUMINOUS. Plants which bear legumes, or pods, such as the pea, the bean, &c.

LEIÂNTHUS, *Grisebuch*. From *leios*, smooth, plane, and *anthos*, a flower; on account of the even or regular corolla. *Linn.* 5, Or. 1, Nat. Or. *Gentianacæe*. A genus nearly allied to *Lisianthus*, to which refer for culture. *Synonymes*: 1, *Lisianthus longifolius*, *Táchia longifolia*; 2, *L. nigrescens*; 3, *L. umbellatus*.

longifolius 1 . Yellow . 8, S. Ev. S. 2 Jamaica. 1844
nigrescens 2 . Blackish 8, G. B. 1½ Guatml 1842
umbellatus 3 . Grn. yel. 5, S. Ev. S. 8 Jamaica. 1843

LEIGHIA, *De Candolle*. See *Helianthus*.

LEIMÂNTHIUM, *Michaux*. From *leimon*, a meadow, and *anthos*, a flower. *Linn.* 23, Or. 1, Nat. Or. *Melanthacæe*. These plants are worth cultivating. They thrive well in a peat soil, in a damp situation, and are increased by seeds. *Synonymes*: 1, *Melanthium hybridum*, *latifolium*, *racemosum*; 2, *monocum*, *polygamum*; 3, *virginicum*, *Helbnias virginica*, *Vetratrum virginicum*.

hybridum 1 . White 6, H. Her. P. 2 N. Amer. 1822
monocum 2 . Brwn. 6; H. Her. P. 2 N. Amer. 1817
virginicum 3 . Brwn. 6, H. Her. P. 2 N. Amer. 1768

LEIOCÂRPUS. See *Leocarpus*.

LEIOPHYLLUM, *Sprengr*. From *leios*, smooth, and *phyllon*, a leaf; the leaves are quite smooth. *Linn.* 10, Or. 1, Nat. Or. *Eriacæe*. For cultivation, &c., see *Ledum* and *Ammgrsine*.

Lyóni . . White . 4, H. Ev. S. 1 Carolina . 1812

LEMÂNËA, *Bory*. In honour of M. Leman, a French botanist. *Linn.* 24, Or. 7, Nat. Or. *Fucacæe*. This is rather a curious genus; the species are always found floating in fresh-water rivers—*fluviatilis*, *media*, *torulosa*.

LÉMNA, *Linn.* From *lepis*, a scale; in reference to the form of the plants. *Linn.* 21, Or. 1, Nat. Or. *Pistia*ceæ. Annual weeds, found floating in stagnant water, and known to most under the name of Duckweed—*gibba*, *minor*, *polyrhiza*, *trisulca*.

LEMNIAN EARTH is the dried and powdered pulp which invests the seed of the fruit of *Adansonia digitata*, usually known by the name of Baobab.

LEMON. See *Citrus medica*.

LEMON-GRASS. See *Cymbopogon Schænanthus*.

LEMÓNIA, *Lindl.* Named in honour of Sir Charles Lemon, Bart., M.P. *Linn.* 5, Or. 1, Nat. Or. *Rutia*ceæ. A beautiful stove shrub, bearing abundance of deep rose-coloured flowers. Cuttings of the half-ripened wood will root in sand, under a glass, in heat.

spectabilis . Deep rose . 9, S. Ev. S. 2 Cuba . 1839

LÉNNEA, *Klotzsch*. After M. Lenné, a distinguished landscape gardener. *Linn.* 17, Or. 5, Nat. Or. *Fabac*ææ. This plant has small pinnated leaves, and clusters of pretty drooping crimson flowers. It loses its leaves in winter, and grows very well in the open air during summer; but as it flowers in May, or even earlier, it can only be treated as a greenhouse plant.

robinoides . Crimson . 4, G. De. S. 6 Mexico. 1843

LENS. See *Ervm Lens*.

LENTAGO. See *Viburnum Lentago*.

LENTIBULARIACEÆ, or **BUTTERWORTS**, are a small group of dwarf herbaceous plants, living in water or boggy places, and some are very pretty when in flower.

LENTIBULARIÆ. A very interesting group of aquatic plants. See *Lentibulariaceæ*.

LENTICELLÆ. Rudimentary roots appearing on stems of plants.

LENTÍCULA. See *Ervm Lenticula*.

LENTICULAR, lens, or pea-shaped.

LENTIGINOSUS, freckled, pimpled.

LENTIL. See *Ervm Lens*.

LENTISCUS. See *Pistacia Lentiscus*.

LEOCÁRPU, *Link.* From *leios*, smooth, and *karpos*, a fruit; in allusion to the smooth peridium. *Linn.* 24, Or. 9, Nat. Or. *Lycop*eridææ. This is found in clusters on rotten wood, and has the appearance of being varnished with vermilion. *Synonyme*: 1, *Lycop*eridum fragile—vernicosus 1.

LEOCHILUS, *Lindley*. From *leios*, smooth, and *cheilos*, a lip, in allusion to the lip of the flower. *Linn.* 20, Or. 1, Nat. Or. *Orchid*idææ.

Stove Epiphytes, nearly allied to *Rodriguezia*, and requiring the same culture. *Synonymes*: 1, *Oncidium carinatus*; 2, *L. herb*acæus, *Oncidium micrantherum*, *Rodriguezia maculata*. See *Oncidium*.

carinatus 1 . Orange . 10, S. Epi. $\frac{1}{2}$ Halapa . 1842
cochlearis . Yellow . 8, S. Epi. $\frac{1}{2}$ Deminea . 1842
*herb*acæus . Grn. wht. 10, S. Epi. $\frac{1}{2}$ La Guay . 1843

sanguinolentus Crimson . 11, S. Epi. $\frac{1}{2}$ La Guay . 1842

LEONÓTIS, *Persoon*. From *leon*, a lion, and *ous*, an ear; in reference to the fancied resemblance in the corolla. *Linn.* 14, Or. 1, Nat. Or.

*Lami*acææ. Fine ornamental plants. They require to be grown in loam and peat, and should have plenty of air, to allow of their flowering in perfection. Cuttings root in sand, under a glass, in heat. *L. nepetifolia* requires the treatment commonly given to tender annuals. *Synonymes*: 1, *Phlomis Leonurus*; 2, *P. Leonitis*.

intermedia . Orange . 9, S. Ev. S. 3 C. G. H. 1822
Leonurus 1 . Scarlet . 11, G. Ev. S. 3 C. G. H. 1712
nepetifolia . Orange . 9, S. A. 3 E. Ind. . 1778
ovata 2 . Orange . 6, S. A. $\frac{1}{2}$ C. G. H. 1713

LEÓNTEA, *Linn.* Abridged from *Leontopetalon*, which is derived from *leon*, a lion, and *petalon*, a leaf; because of the resemblance of the leaf of *L. leontopetalon* to the impression of a lion's foot. *Linn.* 6, Or. 1, Nat. Or. *Berberid*acææ. Plants of little beauty, succeeding in any common soil, and increased by offsets, or seeds. See *Caulophyllum*.

altata Yel. . 4, F. Tu. P. $\frac{1}{2}$ Siberia . 1822
Chrysogonum . Yel. . 5, F. Tu. P. $\frac{1}{2}$ Levant . 1740
leontopetalon . Yel. . 4, F. Tu. P. $\frac{1}{2}$ Levant . 1597

vesicaria Yel. . 5, F. Tu. F. $\frac{1}{2}$ Siberia . 1821

LEÓNTODON, *Linn.* From *leon*, a lion, and *odon*, a tooth; in allusion to the tooth-like divisions of the leaves. *Linn.* 19, Or. 1, Nat. Or. *Aster*acææ. Herbaceous plants, of no value.

They grow in any common soil, and increase freely by seeds, or divisions of the roots. *Synonymes*: 1, *Prenanthes bulbosus*; 2, *Taraxacum ceratophorum*; 3, *T. glaucanthum*; 4, *T. bicolor*; 5, *Leontodon lividus*; 6, *L. alpinus*—*alpinus*, *bessarabicus*, *bulbosus* 1, *cichoracæus*, *ceratophorus* 2, *corniculatus*, *eripodus*, *erythrospermus*, *glaucanthos* 3, *glaucescens*, *lævigatus*, *leucanthos* 4, *nigricans*, *obovatus*, *palustris*, *serotinus*, *Stevonii*, *Taraxacum*. See *Callispa* and *Thrinca*.

LEONTOPÉTALON. See *Leontice leontopetalon*.

LEONTOPODIUM, *R. Brown*. From *leon*, a lion, and *pous*, a foot; the heads of the flowers have been fancifully likened to a lion's foot. *Linn.* 19, Or. 2, Nat. Or. *Aster*acææ. This plant does best cultivated in peat soil; it is well suited for ornamenting rock-work, and is increased by seeds, or divisions of the roots. *Synonymes*: 1, *vulgare*, *Gnaphalium Leontopodium*.

helveticum 1 . Yellow 6, H. Her. P. $\frac{1}{2}$ Austria . 1776

LEONÚRUS, *Linn.* From *leon*, a lion, and *oura*, a tail; in allusion to the appearance of the spike of flowers. *Linn.* 14, Or. 1, Nat. Or. *Lami*acææ. The herbaceous species grow freely in common garden soil, and increase readily by seeds. The other kinds require to be treated similar to other hardy and half-hardy annuals and biennials. *Synonymes*: 1, *L. crispus*; 2, *L. villosus*, *L. condensatus*; 3, *L. heterophyllum*; 4, *L. altarcus*, *L. multifidus*.

- LEPTOMÉRIA**, *R. Brown*. From *leptos*, slender, and *meros*, a part. *Linn.* 5, Or. 1, Nat. Or. *Santalaceae*. Ornamental plants, succeeding well in a soil composed of loam and peat in equal parts; and cuttings of the ripened wood will root readily in sand, under a glass. *Synonyme*: 1, *Thesium drupaceum*.
- ácida . . . White . 5 G. Ev. S. 1 N. Hol. . 1823
Billardièri 1 . White . 5 G. Ev. S. 1 N. Hol. . 1823
- LEPTÓMITUS**, *Agardh*. From *leptos*, slender, and *mitos*, a thread. *Linn.* 24, Or. 7, Nat. Or. *Confervaceae*. These plants are found floating in the water. They consist of very slender intertangled filaments, from the extreme fineness of which the generic name is contrived—*clavatus*, *lacteus*, *minutissimus*, *nanus*.
- LETOPHYLLUS**, slender-leaved.
- LEPTORHYNCHOS**, *De Candolle*. See *Chrysocoma*.
- LEPTOSIPHON**, *Bentham*. From *leptos*, slender, and *siphon*, a tube; in allusion to the slenderness of the tube of the corolla. *Linn.* 5, Or. 1, Nat. Or. *Polemoniaceae*. These are very elegant annuals, well worthy of a place in every flower-border. The seed should be sown in peat soil, and if this is done in autumn, the plants will flower in April and May, but if sown in spring they will produce flowers in autumn. See *Leptodactylon*.

- LEPTOSPÉRMUM**, *Forster*. From *leptos*, slender, and *sperma*, a seed; in allusion to the small narrow seeds. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceae*. All the plants of this genus are well worthy of extensive cultivation, as well for the neatness of their foliage as for the beauty of their blossoms. They thrive best in a mixture of loam, peat, and sand, and cuttings root in sand, under a glass; they may also be raised from seeds, but plants from cuttings are preferable, as they flower when young, and those raised from seeds do not flower till they become large. *Synonymes*: 1, *Billôdia flexuosa*; 2, *L. grandifolium*; 3,

B. marginata; 4, *Fabricia myrtifolia*; 5, *L. stellatum*. See *Billbta* and *Metrosideros*.

LEPTOSTELMA, *D. Don*. From *leptos*, slender, and *stelma*, a crown. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. This is a strong-growing plant, attaining the height of seven or eight feet; the flowers are produced in large panicles. It will grow well in a rich light soil, protected from severe frosts, and may be increased by seeds, or by separating the roots.

máximum . . . Wtsh. 9, F. Her. P. 6 Mexico . 1827

LEPTOSTROMA, *Fries*. From *leptos*, thin, and *stroma*, a layer; in allusion to the thin consistence of the species. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. These species are found on the stalks of ferns, and on the leaves of some plants—*caricinum*, *filicinum*, *scirpinum spiræa*.

LEPTOTES, *Lindley*. From *leptos*, slender; in allusion to the leaves. *Linn.* 20, Or. 1, Nat. Or. *Orehidaceæ*. These are pretty little species, growing rather freely among broken potsherds, decayed vegetable matter, and moss, and may be increased by divisions.

LEPTURIS. See *Lepturus*.

LEPTURUS. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Hard grasses. *Synonyme*: 1, *Rottbøllia incurvata*.—filiformis, incurvatus 1, subulatus. See *Ophiurus*.

LEPYRODIA, *R. Brown*. From *lepyrodes*, scaly; because the bractees are within the scales of the spike. *Linn.* 22, Or. 3, Nat. Or. *Restiaceæ*. This plant requires the protection of the greenhouse. A mixture of light sand, loam, and peat, in equal portions, suits it well, and it may be increased by dividing the roots.

gracilis . . . Apetal . 5, Grass. 2 N. Hol. . 1824

LERIA. Named by De Candolle, in compliment to his friend M. Leri. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Mere biennial weeds. They

are natives of the West Indies. *Synonyme*: 1, *Tussilago nutans*—albicans, nutans 1, pumilla.

LESCHENAULTIA. See *Lechenaulia*.

LESKEA, *Hedwig*. In honour of N. G. Leske, professor of natural history at Marburg. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. A genus of mosses, sometimes united to *Hypnum*, which the species very much resemble. They are found during spring and summer on the trunks of trees, &c. *Synonymes*: 1, *Hypnum atrovirens, attenuatum*; 2, *Pterogonium rotundifolium*; 3, *Hypnum medium, inundatum*—complanata, dendroides, incurvata 1, inulacea 2, polyantha, polycarpa 3, pulchella, rufescens, sericea, trichomanoides.

LESPEDEZA, *Michaux*. In honour of M. Lespedez, once governor of Florida, and a great patron of botany. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. Very showy plants when in flower. The herbaceous kinds grow well in peat borders, and are increased by dividing the roots in spring. The shrubby kinds must be grown in a mixture of sand and peat; and cuttings of the young wood root readily in sand, under a glass. The seeds of the annual kinds should be sown in a peat border, in a sheltered situation. *Synonymes*: 1, *Anthyllis cuneata*; 2, *Hedysarum janceum*; 3, *L. hirta*; 4, *L. divergens*; 5, *L. reticulata*; 6, *L. sessiliflora*.

LESSERTIA, *De Candolle*. In honour of the Baron Benjamin Delessert, of Paris, a most distinguished promoter of botany, and author of the *Icones*, published at Paris in 1823. *Linn.* 10, Or. 10, Nat. Or. *Fabaceæ*. The shrubby and herbaceous kinds are elegant little plants requiring the same treatment as *Suaresonia*. The annual species should be sown in pots early in spring, and placed in the greenhouse, and when about two inches high, to be planted singly into small pots, and shifted into larger ones as they grow.

LETTSOMIA, Ruiz and Pavon. In honour of J. C. Lettsom, M.D., F.R.S., a famous English naturalist, and author of a work on the Means of Preserving Objects of Natural History, published in 1772. *Linn.* 13, Or. 1, Nat. Or. *Ternstræmiaceæ*. A very beautiful shrub. It must be grown in the stove, in the same kind of soil as recommended for *Leptomèria*. See *Argyrea*.
 tomentosa . White . 5, S. Ev. S. 4 Peru . 1828

LETTUCE. See *Lactuca*.

LETTUCE LAVER. See *Ūva lactuca*.

LETTUCE OPIUM is obtained from *Lactuca sativa* and others.

LEUCADÉNDRON, *Linn.* From *leukos*, white, and *dendron*, a tree; in allusion to the white leaves. *Linn.* 14, Or. 2, Nat. Or. *Protocææ*. A genus of splendid evergreen shrubs, with handsome foliage, and heads of yellow flowers. *L. argenteum*, or the Silver-tree grows to the height of fifteen or twenty feet, with beautiful silky leaves; it is on that account admirably adapted for ornamenting conservatories. They grow best in loam and peat, with a small portion of sand, provided the pots are carefully drained, and not overwatered. Cuttings of the ripened wood will root readily planted in sand, under a glass. *Synonyme*: 1, *Protæa argentea*; 2, *P. stellaris*. See also *Melaleuca Leucadéndron*.

LEUCOPÓGON, *R. Brown*. From *leukos*, white, and *pogon*, a beard; because of the white hairs with which the limb of the corolla is bearded. *Linn.* 5, Or. 1, Nat. Or. *Epacridacææ*. These

plants are well worth a place in every greenhouse. They will grow well in an equal mixture of sandy loam and peat, with the pots well drained, and care must be taken never to overwater them. The tops of the very young shoots, taken off, and planted in sand, under a glass, will root freely. *Synonymes*: 1, *Styphelia obovata*; 2, *S. Richei*, *L. parviflorus*, *S. parviflora*.

LEYCESTERIA. Wallich named this genus in honour of his friend William Leycester, once chief judge at Bengal, a munificent and zealous patron of horticulture. *Linn.* 5, Or. 1, Nat. Or. *Caprifoliæceæ*. This is an elegant and most beautiful shrub when in flower, from the contrast of the deep green hue of its stem and leaves, with the purple colour of the large bractæes and the berries. A light soil suits it best, and it is readily increased by cuttings taken off in autumn or spring, or by seeds. It is well adapted to the front of shrubberies. It will require the protection of a mat in winter in all the northern counties.

formosa	. Wht. pur. 8, H. Ev. S.	3 Nepal	1824
---------	--------------------------	---------	------

LHÓTSKYA, Schauer. After Dr. John Lhotsky a German botanical collector. *Linn.* 12, Or.

- 1, Nat. Or. *Myrtaceæ*. For culture, &c., see *Mÿrtus*.
- acutifolia . Palo yel. 6, G. Ev. S. 1½ Swan R. . 1843
 violacea . Violet . 6, G. Ev. S. 1½ Swan R. . 1843
- LIABUM, De Candolle.** Meaning unknown. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A stove plant of easy culture, growing in a mixture of sandy loam and peat, and increased by division.
 Browni . Yellow 6, S. Her. P. 1½ Jamaica . 1768
- LIATRIS, Schreber.** The meaning of the name is not known. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. These are very charming little plants, with spikes of purple or pink flowers. It is best to take them out of the border in winter, and preserve in pots of sandy loam and peat, and in spring they may be planted out in the open border in the same kind of soil. Young plants are easily obtained by divisions.

- LIBANOTIS, Scopoli.** From *libanos*, incense. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. This genus is of easy culture, requiring a sandy or chalky soil, and it is readily increased by seeds. *Synonyme*: 1, *Ligusticum athamantoides*. See *Athamanta Libanotis*, *Laserpitium Libanotis*, and *Cáchrys Libanotis*.
 athamantoides 1 White 7, H. Her. P. 2 Pyrenees 1817
 graveolens . White 6, H. Her. P. 1 Altai . 1833
- LIBER, the inner bark.**
- LIBERTIA, Sprengel.** In compliment to Made-moiselle M. A. Libert de Malmédy, a Belgian lady, to whom the French Flora is indebted for a great number of new species. *Linn.* 16, Or. 1, Nat. Or. *Iridaceæ*. This ornamental genus thrives well in an equal mixture of loam and peat, and may be increased by dividing the roots. *Synonyme*: 1, *Sisyrinchium formosum*.
 formosa . White 5, F. Her. P. 1½ Chiloe . . 1831
 grandiflora . White 4, F. Her. P. 1½ N. Zeal. . 1822
 paniculata . White 4, F. Her. P. 1½ N. Hol. . 1823
 pulchella . White 4, F. Her. P. 1½ N. Hol. . 1823
- LIBOCEDRUS, Endl.** Name not explained. *Linn.* 21, Or. 8, Nat. Or. *Pinaceæ*. See *Thaja* for species.
- LICEA, Schrader.** The meaning is not explained. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. A species about the size of a pin's head, found chiefly on rotten wood—*fragiformis*.
- LICHENS or AERIAL FLAGS** are divided into three orders—1st, *Graphilolaceæ* or chink-writs; 2nd, *Collemaçæ* or collemaçs; and 3rd, *Parmeliaceæ* or shield-edges.
- LICHINA, Agardh.** Derived from *Lichen*; on account of the resemblance. *Linn.* 24, Or. 7, Nat. Or. *Collemaçæ*. By some botanists, this genus has been referred to the *Lichens*, and by others they are said to be *Algae* in one stage of their existence, and *Lichens* in another—*cônifinis, pygmaea*.
- LICHTENSTEINIA, Chamisso.** In honour of M. Von Lichtenstein, a celebrated German botanist, and professor of medicine at Berlin. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Pretty plants, with blue flowers. They grow well in sandy loam, and young plants are readily obtained from seeds. *Synonyme*: 1, *Cymation lævigatum*.
 lævigata 1 . Blue 7, G. Her. P. 1 C. G. H. . 1824
 undulata . Blue 7, G. Her. P. 1 C. G. H. . 1814
- LIGUALA, Rumphius.** The name of the species in the Macassar language. *Linn.* 6, Or. 1, Nat. Or. *Palmaceæ*. These are very beautiful palms, requiring a sandy loam and strong moist heat to grow in. In Macassar, they make tobacco pipes of the narrow leaves, while the middle broad one is used for wrapping up fruit, &c.
 peltata . Wht. yel. 6, S. Palm. 5 E. Ind. . . 1825
 pilosa . Wht. gn. 6, S. Palm. 5 E. Ind. . . 1802
- LID, the calyx which falls off from the flower in a single piece.**
- LIDBÉCKIA, Berger.** In honour of E. G. Lidbeck, an acute Swedish botanist. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Ornamental plants; for culture and propagation, see *Leyssera*. *Synonyme*: 1, *Cétula quinqueloba*. See *Cènia*.
 lobata 1 . Yellow . 5, G. Ev. S. 2 C. G. H. . 1800
 pectinata . Yellow . 5, G. Ev. S. 2 C. G. H. . 1744
- LIEBIGIA, Endl.** In compliment to the eminent chemist Liebig. *Linn.* 14, Or. 2, Nat. Or. *Gesneriaceæ*. An ornamental free-growing genus, cultivated in the same manner as *Ruellia*. *Synonyme*: *Tromsdriffia speciosa*.
 speciosa 1 . Wht. pur. 9, S. Ev. S. 1½ Java . . 1845
- LIGHTFOOTIA, L'Heritier.** In honour of the Rev. J. Lightfoot, author of the first Flora Scotica. *Linn.* 5, Or. 1, Nat. Or. *Campanulaceæ*. Ornamental under shrubs, growing freely in a mixture of loam and peat; and young cuttings root readily in the same kind of soil, under a glass. *Synonymes*: 1, *tenella*; 2, *Campanula fruticosa, interrupta*.
 Loddigesi 1 . Pa. blue . 7, G. Ev. S. ¾ C. G. H. 1822
 oxycoccoides . Blue . 7, G. Ev. S. ¾ C. G. H. 1787
 subulata 2 . Blue . . 8, G. Ev. S. ¼ C. G. H. 1787
- LIGN ALGES.** See *Aquilaria Agallidcha* and *Alobeylon Agallidchem*.
- LIGNEOUS.** Having the texture of wood.
- LIGNOSUS, woody.**
- LIGNUM RHODIUM.** See *Amyris balsamifera*, and *Convólulus floridus* and *scoparius*.
- LIGNUM VITÆ TREE.** See *Guaiacum*.
- LIGTU.** See *Alstromeria Ligtu*.
- LIGULA, the membrane at the top of the petiole of grasses.**

LIGULĀRIA, *De Candolle*. From *ligula*, a strap, in allusion to the florets of the ray. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. *Synonymes*: 1, *Senecio sibiricus*; 2, *Farfugium grande*, *F. Kämpferi maculata*, *Doronicum Tussilaginis*, *Senecio Kämpferi*, *Arnica tussilaginisifolia*. For culture, &c., see *Senecio*.

LIGULATE, strap-shaped.

LIGUSTICUM, *Koch*. So named because of some of the species growing in Liguria. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. Hardy herbaceous and biennial plants not worth cultivating. They will grow in any soil, and are increased by seeds. *Synonymes*: 1, *Sison peregrinum*; 2, *Cnidium pyrenaicum*; 3, *Selinum Seguièri* — alatum 1, balearicum, candicans, ferulaceum 2, obtusifolium, peregrinum, pyrenaicum, scoticum, Seguièri 3, Sprengèlii. See *Athamanta*, *Lascarpitium*, *Levisticum*, *Mèum*, *Molospèrum-mum*, *Petroselinum*, *Physospermum*, *Pleurospèrum*, *Trichosanthes*, and *Wallrothia*.

LIGUSTRUM, *Linn.* From *ligare*, to tie; in allusion to the very flexible branches. *Linn.* 2, Or. 1, Nat. Or. *Oleaceae*. These plants are well suited for making hedges, especially the evergreen varieties of *L. vulgare*. *L. lucidum*, and its variety, if grown in the open air, will require protection in winter; they are easily increased by cuttings. *Synonymes*: 1, *L. nepalense*. See *Chondrospermum*.

LILAC. See *Syringa*.

LILACINE, a peculiar property possessed by the lilac (*Syringa vulgaris*), and very useful in intermittent fevers.

LILIACEÆ or **LILY-WORTS**. A large order of very interesting plants, and many of them possessing great beauty.

LILLAGO. See *Phalangium Lillago*.

LILLĀSTER. See *Czackia Lillāstrum*.

LILIUM, *Tournefort*. Derived from the Celtic word *li*, signifying whiteness; on account of the beautiful white flowers of the original species. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. This is an ornamental and well-known genus; most of the species succeed in a rich light soil, but the American species should be grown in peat. All the kinds are readily increased by offsets from the bulbs. In Kamschatka, the root of *L. Pomponium* is cultivated the same as

the potato is in this country. *Synonymes*: 1, *L. fulgens*; 2, *peregrinum*, *byzantinum*; 3, *L. autumnale*; 4, *L. speciosissimum*; 5, *L. lancifolium*; 6, *L. lancifolium-roseum*; 7, *L. pennsylvanicum*; 8, *aurantiacum*, *bulbiferum*, *philadelphicum*; 9, *Fritillaria Thompsoniana*; 10, *longiflorum*; 11, *cordifolium*. See *Fritillaria*.

LILY. See *Lilium*.

LILY HYACINTH. See *Scilla Lilio-hyacinthus*.

LILY OF THE FIELD. See *Amaryllis*.

LILY-OF-THE-VALLEY. See *Convallaria*.

LILY PINK. See *Aphyllanthus*.

LILY THORN. See *Catesbea*.

LIMATODES, *Blume*. Name not explained by author. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. Beautiful plants with the habit of *Calanthe*, and requiring the same treatment. *Synonyme*: 1, *pauciflora*.

rösea 1. . . Rose . 12, S. Ter. 3 Martaban . 1850

LIMB, the border of a flower.

LIMBATE, having an expanded end; or being bordered by something.

LIME. See *Citrus Limonium*.

LIME-TREE. See *Tilia*.

LIMÉTTA. See *Citrus Limétta*.

LIMEUM, *Linn.* From *limos*, a pest; on account of the supposed poisonous qualities of the plant. *Linn.* 7, Or. 3, Nat. Or. *Illecebraceae*. A mixture of sandy loam and peat suits this species best; and cuttings root readily under a glass.

africanum . White . 6, G. Her. P. 4 C. G. H. . 1774

LIMNANTHES, *R. Brown*. From *limne*, a marsh, and *anthos*, a flower; in allusion to the habitat of the plant. *Linn.* 10, Or. 1, Nat. Or. *Tropaeolaceae*. *L. Douglasii* is well deserving of a place in every collection, on account of the elegance and beauty of its flowers, which are slightly fragrant. It requires to be grown in a moist and shady situation, and it is increased by seeds which ripen pretty freely.

LIMONIUM. See *Státice Limonium*, *Atalántia Limonium*, and *Citrus Limonium*.

LIMOSÉLLA, *Linn.* From *limus*, mud; in allusion to the habitation of the species; whence the English name Mudwort. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceae*. The seeds of this sub-aquatic should be sown near a pond or rivulet.

aquática . . . Flesh 8, H. Aq. A. 4 Brit. mud. pl.

LIMÓSUS, muddy, growing in mud.

LÍMPIDUS, clear, transparent.

LINÁCEÆ or FLAXWORTS. This order consists of but few genera, most of which are annuals or biennials, one or two species form small shrubs. The tenacity of their fibres and the mucilage and oil in their seeds, are their obvious characters, many of them also have beautiful flowers.

LINÁNTHUS, *Bentham*. Fram *linon*, flax, and *anthos*, a flower. *Linn.* 5, Or. 1, Nat. Or. *Polemoniaceae*. An ornamental annual, succeeding well when sown in the open border in spring.

dichotomus . Pink 6, H. . A. 1 California . 1833

LINÁRIA, *Tournefort*. From *linum*, flax; on account of the similarity of the leaves. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceae*. This genus for the most part consists of annuals, well adapted for ornamenting rock-work. *L. triornithophora* is remarkable for the form of its flowers, which bears some little resemblance to three little birds seated in the spur. They thrive best in a light sandy loam, and are readily multiplied by seeds. *Synonymes*: 1, *speciosa*; 2, *Antirrhinum lanigerum*; 3, *A. fruticosum*; 4, *A. linarioides*; 5, *spürum*; 6, *A. Linária*; 7, *A. odorum*; 8, *A. strictum*; 9, *L. striata*; 10, *A. lusitanicum*, *pedunculatum*.

LINGUIFORM, } tongue-shaped.
LINGULATE, }
LÍNGUN. See *Pædèria Língun*.
LÍNKIA. See *Rivularia*.
LINNÆA. Dr. J. F. Gronovius, with the concurrence of Linnæus, selected this little depressed, abject, early-flowering, long-overlooked northern plant, to transmit the illustrious name of Linnæus to posterity. *Linn.* 14, Or. 2, Nat. Or. *Caprifoliaceæ*. This elegant little plant is not only a native of the land which gave birth to Linnæus, but also of Lapland, Norway, Russia, Germany, Switzerland, Savoy, Siberia, &c. In Scotland, the plant was first found in an old fir-wood at Inglismaldie, on the borders of Mearns-shire, in 1795, and since then in several similar situations in the highlands of Scotland. In North America, it has been found in a number of districts, but most plentiful in Canada. It should be grown in a peat border, in a shady situation, where it will grow and flower freely. It will also grow luxuriantly in large pots, filled with peat earth; it is easily increased by separating the creeping stems when rooted. The American plants are commonly stronger than the European ones.

LINODORUM. See *Calopogon*, *Geodorum*, and *Blelia*.

LINOSYRIS, *De Candolle*. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. A hardy herbaceous plant, growing freely in common garden soil, and propagated by division.
divaricata . Yellow 7, H. Her. P. 2 Australia .

LINT and TOW are the fibres of *Linum usitatissimum* separated by dressing from the woody matter of the plant.

LINUM, *Linn.* From the Celtic word *lin*, a thread; whence the Greek, *linon*, and the Latin, *linum*. *Linn.* 5, Or. 5, Nat. Or. *Linaceae*. These plants are mostly ornamental, and well worth cultivating in every collection. The greenhouse and frame kinds grow best in a mixture of loam and peat, and cuttings root freely under a glass. The hardy shrubby kinds do well in any light soil, and are increased by cuttings under a glass. The hardy herbaceous species are well suited for ornamental flower-borders; but the dwarf kinds do best on rock-work, or even grown in pots, that they may be protected by a frame in frosty or very wet weather; they may be increased by divisions of the roots, by cuttings, or by seeds. The annual and biennial species should be sown in the open ground in April. The fibres of *L. usitatissimum* is the flax of commerce, from which linen cloth is made.

Synonymes: 1, *perenne*; 2, *tenuifolium*, *bicolor*; 3, *angustifolium*, *decumbens*; 4, *angustifolium*; 5, *austriacum*, *perenne*; 6, *austriacum*.

LIQUIDAMBERS. See *Altingiæcæ*.

LIQUID STORAX is yielded by *Dammara orientalis*.

LIQUIRITIA. See *Glycyrrhiza*.

LIQUORICE. See *Glycyrrhiza*.

LIRODÉNDRON, *Jussieu*. From *leirion*, a lily, and *dendron*, a tree; the flower produced by this tree bears some resemblance to a lily, but is more like a tulip. *Linn.* 13, Or. 6, Nat. Or. *Magnoliæcæ*. The Tulip-tree grows to a considerable height before it will produce its flowers, which are large. It is well suited for planting singly on lawns, or for forming avenues. It is generally increased from imported seeds, which should be sown in March, in a light rich soil, well exposed to the sun, and covering them about half an inch deep. They commonly remain two years in the ground before they come up. From the tonic quality of *L. tulipifera*, it has been said to be equal to Peruvian bark. The wood of this tree is smooth and fine-grained, very easily wrought, and not liable to split. It is used in carving and ornamental work, but is generally used in this country to make the panels of coach and chaise bodies.

tulipifera . Yel. red 6, H. De. T. 50 N. Amer. 1663
obtusifolia Yel. red 6, H. De. T. 50 Pensyl. 1663

LISIÁNTHUS, *Linn.* From *lysis*, dissolution, and *anthos*, a flower; in allusion to its being a powerful cathartic. *Linn.* 5, Or. 1, Nat. Or. *Gentianæcæ*. A mixture of loam, sand, and peat is the soil best suited for these ornamental plants. Cuttings of the shrubby and herbaceous kinds strike freely in sand, under a glass. *L. Russellianus* is the most splendid of the genus; it was discovered by the lamented Drummond in Texas, who described it as "not excelled in beauty by any plant."

The flower is large, handsome, borne in a terminal panicle; the corolla is as large as a tulip, of a fine rich purple, with a very deep eye in the centre. The flower continues perfect for two or three weeks. By forcing it early in the spring, and planting out in the open border, it will probably be found to flower as freely as *Phlox Drummondii*. It is figured as an annual, but is very likely to prove biennial. *Synonyms*: 1, *L. tetragonus*, *L. trifidus*; 2, *Eustoma silenifolia*; 3, *L. angustifolius*. See *Leianthus*.

LISTERA, *R. Brown*. In honour of Martin Lister, M.D., a famous English physician and naturalist. *Linn.* 20, Or. 1, Nat. Or. *Orchidæcæ*. Curious little plants, growing in peat and loam, and increased by divisions of the roots. *Synonyme*: 1, *Nebëtia ovata*.

cordata . Brown . 6, H. Ter. ½ Brit., mol. hea.
ovata 1 . Green . 5, H. Ter. 1 Brit., woods.

LITCHI. See *Euphëria Litchi*.

LITHONTRIPICT, having the power of breaking the stone.

LITHOSPÉRMUM, *Linn.* From *lithos*, a stone, and *sperma*, a seed; the little nuts or seeds are extremely hard, and have a surface as smooth as a polished pebble. *Linn.* 5, Or. 1, Nat. Or. *Boraginæcæ*. The species of this genus are all of the easiest culture. The shrubby kinds are well adapted for growing on rock-work, or on the top of walls, where they

will speedily establish themselves, if allowed to scatter their seeds; or they may be kept in pots among alpine plants, and increased by cuttings. *Synonymes*: 1, *L. latifolium*; 2, *Anchusa tinctoria*; 3, *Bátschia conspicua*, *L. conspiciuum*. See *Arnèbia*, *Bátschia*, and *Pulmonària*.

LITTRÆA, *Brignoli*. In honour of the Duke of Lytta, near Milan, a patron of botany. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. This is a handsome plant, and was long confounded with *Bonapartea jancea*, but is now found to be a totally different plant. It grows well in sandy loam, and is increased by suckers. *Synonyme*: 1, *Agave geminiflora*.

geminiflora 1. Green 7, G. Ev. P. 12 America . 1810

LITTORÆLLA, *Linn.* From *littus*, the shore; in allusion to its place of growth. *Linn.* 21, Or. 4, Nat. Or. *Plantaginaceæ*. A pretty little sub-aquatic, with neat white flowers, and long tremulous stamens; it is increased by seeds.

LLOYDIA, *Sal.* Named in honour of Mr. Lloyd,

an English botanist. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. *Synonyme*: *Ornithogalum striatum*. A hardy bulbous plant, merely requiring to be planted in a dry situation in the open borders, and treated like the hardy species of *Ornithogalum*.

striata . . . Wht. striped 5, H. B. P. Siberia . 1789

LOAF SUGAR is refined sugar as procured from the sugar-cane, beet-root, parsnip, maple, birch, grape, and many other plants, but the cane supplies the most and of a better quality than any of the other kinds.

LOASA, *Linn.* The meaning is unknown. *Linn.* 18, Or. 2, Nat. Or. *Loasaceæ*. This is a genus of plants highly interesting from the beauty of their curiously formed flowers. They would all be invaluable in collections were it not for the powerful stinging property of some of the species, as *L. Plæci*: on that account it is necessary to be very careful in touching them. Any common loamy soil suits them, and they are easily increased by seeds. *Synonymes*: 1, *ambrosiaefolia*; 2, *tricolor*; 3, *acanthifolia*. See *Blumenbáchia*, *Scyphanthus*, *Catophora*.

LOASACEÆ or **LOASADS**. An order of annual and herbaceous plants with climbing habits, and covered with pungent hairs which secrete an acrid juice which stings like a nettle. Some are very handsome climbers, and well deserve cultivating.

LOBADIUM, *Raf.* See *Rhás*.

LOBATE, lobed, divided into a number of segments.

LOBATELY-CRENATED, having deep crenatures, or indentations.

LOBE, a division.

LOBELIACEÆ or **LOBELIADS**. An extensive order containing plants of considerable beauty, but all more or less poisonous, nevertheless some of the species are used medicinally.

LOBELIA, *Linn.* In honour of Matthew Lobel, author of various botanical works; he was a native of Lille, became physician and botanist to James I., and died in London in 1616. *Linn.* 5, Or. 1, Nat. Or. *Lobeliaceæ*. This is an extremely interesting genus of plants, on account of the beauty of the blossoms. The greenhouse and stove shrubby and herbaceous kinds grow well in a mixture of peat and sand; the shrubby kinds are readily increased by cuttings in the same kind of soil, and the herbaceous species by dividing, and by seeds. The hardy herbaceous kinds do well in a light rich earth, or peat soil; but in winter most of

them require the protection of a frame. The greenhouse annuals and biennials must be sown in pots, and treated as other greenhouse annuals and biennials. The seeds of the hardy kinds have only to be sown in the open border. *L. longiflora* is one of the most venomous of plants. Barton says the Spanish Americans call it *Robenta Cavillos*, because it proves fatal to horses that eat it, swelling them until they burst. Taken internally, it acts as a violent cathartic, the effects of which no remedy can assuage, and which ends in death. *Synonyms*: 1, *L. erinoides*; 2, *L. goodenoides*, *L. spicata*; 3, *L. crista*; 4, *L. commutata*; 5, *L. maculata*; 6, *Isotoma axillaris*; 7, *L. pedunculata*; 8, *L. micrantha*; 9, *L. speciosa*, *Mülleri*; 10, *L. crista*; 11, *L. splendens ignea*, *Rapantium splendens*. See *Centropogon*, *Cyphia*, *Isotoma*, *Monopsis*, *Scovola*, and *Siphocampylus*.

LOGANIÀCÆ or **LOGANIADS** constitute a small order of shrubs, trees, and herbaceous plants, possessing intensely poisonous properties, of which *Strýchnos* may be taken as an example.

LOGANIA, R. Brown. In honour of J. Logan, a distinguished botanist. *Linn.* 5, Or. 1, Nat. Or. *Loganiàcæ*. Rather small but interesting shrubs, which produce their flowers in axillary or terminal bunches. They grow well in sandy loam and peat, and ripened cuttings root freely in sand, under a glass. *Synonymes*: 1, *Eucasma albiflora*; 2, *Exacum vaginale*. See *Geniostoma*.

LOMATOPHYLLUM, W. See *Phylloma*.

LOMENTUM. An indehiscent legume separating between each seed.

LONAS, Gærtner. The meaning unknown. *Linn.* 19, Or. 1, Nat. Or. *Asteràcæ*. The seed of

this plant has only to be sown in the open ground. *Synonymy*: 1, *Athanasia annua*.

inodora 1. Yellow. 7, H. A. 1 Barbary. 1686

LONCHITES, *Linn.* From *lonche*, a lance; in allusion to the form of the fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceae*. This genus consists of two very handsome ferns, which grow best in a mixture of loam and peat, and increase by divisions. *Synonymy*: 1, *Pteris podophylla*. See *Aspidium Lonchitis*.

LONDÉSIA, *Fischer*. *Linn.* 21, Or. 5, Nat. Or. *Chenopodiaceae*. A plant of no ornament, growing in any common soil—*eriantha*.

LONDON-PRIDE. See *Saxifraga umbrosa*.

LONDON-ROCKET. See *Sisymbrium Irii*.

LONGAN. See *Euphoria Longana*.

LONGCHAMPSIA, *Willdenow*. In honour of J. L. A. Loiseleur des Longchamps, M.D., a famous French botanist. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. The seed of this pretty little annual merely requires sowing in the open ground. *Synonymy*: 1, *Pectis discoides*, *Léyscia discoides*, *Gnaphalium leyseroïdes*.

capillifolia 1 . Yellow . 6, H. A. 3 Barbary. 1822

LONG-GLAND. See *Macradenia*.

LONGICORN, long-spurred.

LONGITUDO, in the direction of length.

LONICERA, *Linn.* Named after Adam Lonicer, a German botanist, who died in 1586. *Linn.* 5, Or. 1, Nat. Or. *Caprifoliaceae*. This is a genus of very ornamental shrubs, closely allied to the genus *Caprifolium*. The species grow in any common soil, and are readily increased by cuttings taken off in autumn, and planted in a sheltered situation. *Synonymy*: 1, *L. sibirica*; 2, *L. campaniflora*; 3, *Symphoricarpos puncticeus*, *Xylosticum campaniflorum*; 4, *Pallasii*. See *Caprifolium* and *Symphoria*.

LOOKING-GLASS PLANT. See *Heritiera*.

LOOSE-STRIPE. See *Lysimachia*.

LOPEZIA, *Cavanilles*. Named in honour of J.

Lopez, a Spanish botanist. *Linn.* 6, Or. 1, Nat. Or. *Onagraceae*. This is a genus of very elegant plants. The annual species should be raised on a gentle hotbed, and afterwards transplanted out into a warm border. The biennial kinds require to be kept in the greenhouse. *Synonymy*: 1, *L. grandiflora*, *Ichlia fuchsioïdes*.

LOPHIOLA, *Ker*. A diminutive of *lophia*, a crest; in reference to the crest of the sepals. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. This is a rare little herbaceous plant, growing in peat soil in a damp situation. It will also grow and flower well in pots placed in pans of water;

it is increased by dividing the roots. *Synonymy*: 1, *Conostylis americana*.

LOPHIRA, *Banks*. One of the sepals is extended out into a ligulate wing or crest; whence the name, from *lophos*, a crest. *Linn.* 12, Or. 1, Nat. Or. *Dipterææ*. This is a very fine low-growing tree. It has tap-roots, and therefore requires to be planted in a very deep pot, in order to allow the roots to descend. It should be grown in sandy loam and peat, and kept rather dry; cuttings of the ripened wood will root in sand, under a glass, in heat. In Sierra Leone, it is called *Scurby* or *Scrubby Oak*.
afriçana . White . 6, S. Ev. T. 10 S. Leone . 1822

LÖPHIUM, *Fries*. From *lophion*, a little hillock. *Linn.* 24, Or. 9, Nat. Or. *Helvellææ*. These extremely minute plants are very similar to the valves of a bivalved shell—*elatium*, *mytilinum*.

LOPHÓLEPIS, *J. Smith*. From *lophos*, a crest, and *lepis*, a scale, in allusion to the spore-cases. *Linn.* 24, Or. 1, Nat. Or. *Polypodiææ*. *Synonyme*: 1, *Goniophlebium tectum*.
ciliata . Yellow . 3, S. Her. P. 1 W. Ind .
tæta 1 . Yellow . 3, S. Her. P. 1 W. Ind .

LOPHOSCLÄDIUM, *De Candolle*. See *Ferula*.
LOPHOSPÉRMUM, *D. Don*. From *lophos*, a crest, and *sperma*, a seed; the seeds are furnished with a crest-like wing. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariææ*. This genus is composed of very elegant plants, with large purple, or rose-coloured flowers; for culture and propagation, see *Maurândya*. *Synonyme*: 1, *Rhodochiton volubile*, *L. Rhodochiton*.

LÖREUS, leathery.

LÖREYA, *De Candolle*. Dedicated to M. Lorey, author of a Flora of Burgundy. *Linn.* 10, Or. 1, Nat. Or. *Melastomææ*. For culture, &c., see *Melastoma*. *Synonyme*: 1, *Melastoma arboræscens*.
arboræscens White . 7, S. Ev. S. 4 Guiana . 1822

LOTE-TREE. See *Diospyrus Lötus*.

LOTE. See *Zizyphus Lötus*.

LÖTUS. From *lotus* of Theophrastus; the true *Lotus* is *Zizyphus Lötus*. *Linn.* 17, Or. 4, Nat. Or. *Fabææ*. An ornamental genus of plants. The greenhouse and frame species grow freely in any light soil, and are increased by cuttings of the young wood planted in sand, under a glass, or they may be increased by seeds. The hardy kinds are well suited for ornamenting rock-work, or dry banks. The seeds of the hardy annual species need only be sown in the open ground in spring. *L. corniculatus* and *L. major* are sometimes sown with white clover and cow-grass, in laying down permanent pastures. *Synonymes*: 1, *L. diffusus*; 2, *Cytisus argenteus*; 3, *L. decumbens*; 4, *Trigonella indica*. See *Carnichaëlia*, *Dorjengenium*, *Hosackia*, and *Tetragonolobus*.

- LUDŌLFIA.** See *Arundinaria*.
- LUDŌVIA.** See *Carludovica*.
- LUDWĪGIA, Linn.** In honour of Christian Gotlieb Ludwig, professor of medicine at Leipsic and botanical author, in 1737. *Linn.* 4, Or. 2, Nat. Or. *Onagræacæe*. Uninteresting plants, not worth cultivating except in general collections—*parviflora, prostrata*.
- LŪFFA, Cavanilles.** Derived from *louff*, the Arabic name of *L. ceyphiaca*. *Linn.* 21, Or. 5, Nat. Or. *Cucurbitacæe*. A remarkable kind of gourd, possessed of a very disagreeable odour; for culture and propagation, see *Cicumis*. *Synonymes*: 1, *Cicumis acutangulus*; 2, *Momordica luffa*.
 acutangula 1 . Purp. 7, F. Tr. A. 10 N. Amer. . 1692
 ceyphiaca 2 . Purp. 7, F. Tr. A. 10 E. Ind. . 1739
 fetida . . Purp. 7, H. Tr. A. 10 India . . 1812
- LUGDA, De Candolle.** See *Anthemis*.
- LŪHEA, Willdenow.** In honour of Charles Vander Luhe, a famous German botanist. *Linn.* 18, Or. 2, Nat. Or. *Tiliacæe*. This is a very pretty plant, which thrives well in a mixture of peat and loam; and cuttings of the nearly ripened wood root readily in sand, under a glass, in heat. In Brazil, they use the bark of *L. paniculata* for tanning leather.
 paniculata . . Rosy . 6, S. Ev. Cl. 6 Brazil . 1828
- LŪSIA, Gaudich.** The meaning of the name not explained. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæe*. This is a very pretty species, very scarce in collections. The sepals and petals are light green, and the labellum is

strongly streaked internally with deep purple. The leaves of the plant bear a strong resemblance to those of an *Aërides*, and the plant requires precisely the same treatment as that genus.

alpina . Grn. pur. 4, S. Epi. 3 Silhet . . 1837

LUKSHMEE FRUIT. See *Mangifera sylvatica*.

LUMNITZERA, Willdenow. In honour of Stephen Lumnitzer, a botanical author. *Linn.* 14, Or. 1, Nat. Or. *Combretaceæ*. A pretty little genus, of common culture. See *Acrocephalus* and *Mochlosma*.

tenuiflora . Pa. pur. 7, S. Her. P. 1 E. Ind. . 1703

LUNA. See *Narcissus Luna*.

LUNARIA, Linn. From *Luna*, the moon; in allusion to the appearance of the broad silvery silicles. *Linn.* 15, Nat. Or. *Brassicææ*. A genus of large, rather pretty plants, with cordate leaves, and purple or white flowers. Any common border soil suits them, and they are increased by seeds. *L. rediviva* may also be increased by dividing. *Synonyme*: 1, *annua*. See *Farsétia* and *Ritodia*.

Garden varieties.—These are now very numerous—their colours and names are given in the nurserymen's catalogues.

LÛPULUS. See *Humulus Lupulus*.

LURID, between a purple, yellow, and grey colour.

LUTEOLA. See *Réseda Lutéola*.

LUVINGA, Hamilton. From *Luvunga-luta*, its Sanserit name. *Linn.* 16, Or. 1, Nat. Or. *Aurantiacææ*. The species of this genus grow in any light rich soil, and are increased by cuttings planted either in sand or soil, under a glass. *Synonyme*: 1, *Limnisa scândens*.

scândens 1 . . White . 6, S. Cl. S. 10 Silhet . 1848

LUXEBÛRGIA, Hilaire. In honour of the Duke of Luxembourg, under whose patronage M. A. de St. Hilaire commenced his botanical researches in Brazil. *Linn.* 16, Or. 8, Nat. Or. *Sarvagésiæææ*. Beautiful shrubs, bearing racemes of bright yellow flowers; they require a moderate stove heat, and blossom during the summer months. They may be propagated by cuttings of the half-ripened wood in sand, under a hand-glass. *Synonyme*: 1, *Plectanthera cilidosa*.

cilidosa 1 . . Yel. . 6, S. Ev. S. 2 Brazil . . 1841

corymbosa . Yel. . 6, S. Ev. S. 4 Brazil . . 1840

LÛZULA, De Candolle. From the *Gramen Luzula* of Bauhin, the Glowworm-grass. *Linn.* 6, Or. 1, Nat. Or. *Juncæææ*. These plants are nearly related to *Juncus*, from which they are at once distinguished by their flat leaves. They possess but little beauty, and are of the easiest culture. *Synonymes*: 1, *Juncus arcuatus*; 2, *J. spadicæus*.

Berthelotii . Apetal 6, F. Grass. 1 Teneriffa . 1820

albida, *arcuata* 1, *campéstris*, *capénsis*, *congesta*, *flavescens*, *Fostèri*, *glabrata*, *lutea*, *máxima*, *multiflora*, *nivea*, *pediformis*, *pilosá*, *spadicea* 2, *spicata*, *sudética*, *vernális*.

LUZURIAGA. In honour of D. Ign. M. R. de Luzuriago, M.D., a Spanish botanist. *Linn.* 6, Or. 1, Nat. Or. *Smilacæe*. See *Gettonopësium*.

LYCÁSTE, *Lindl.* Lycaste was a beautiful woman of Sicily. *Linn.* 20, Or. 1, Nat. Or. *Orchidæe*. This very elegant genus has been separated from *Maxillaria*; they require similar treatment to *Stanhöpcas*. *Synonymes*: 1, *Maxillaria aromática*, *Cöläx aromáticus*; 2, *M. Barringtonie*; 3, *M. costata*; 4, *M. cruenta balsànica*; 5, *M. Déppeii*; 6, *M. macrophylla*; 7, *M. Skinneri*; 8, *M. tetragona*; 9, *M. macrobálba*.

LYCHNIDEA. See *Erinus Lychnidea* and *Phlox*.

LYCHNIS, *De Candolle*. From *lychnos*, a lamp; on account of the brilliancy of the flowers of most of the species. *Linn.* 10, Or. 5, Or. Nat. *Caryophyllæe*. An extremely beautiful genus of plants, well meriting extensive cultivation for the brilliancy of their flowers. Among the most showy and esteemed of the border flowers, is *L. Chalcedónica*, the double varieties of which require some care to prevent them from returning to a single state. *L. fátgens* and *grandiflora* are truly beautiful; the latter will grow and flower well if planted out in the open border in spring, but it must be taken up in autumn, or the frost will kill it. They all grow freely in light rich loamy soil; but they must be frequently divided, or they will dwindle away, and the best time to do this is early in spring. The seed of the annual species has only to be sown in the open border in spring. *L. Cali Rôsa* is very handsome. *Synonymes*: 1, *Viscária alpina*; 2, *L. brachypétala*; 3, *Agrostemma coronária*; 4, *A. còrsica*; 5, *A. sylvéstris*; 6, *A. Flòs-cuculi*; 7, *Githãgo ségetum*; 8, *Viscária helvética*; 9, *V. neglécta*; 10, *Githãgo nicænsis*; 11, *Agrostemma pyrenæica*; 12, *A. sibírica*; 13, *A. diòica*; 14, *Viscária vulgãris*. See *Viscária* and *Agrostemma*.

LYCHNITIS. See *Verbascum Lychnitis*, *Phlomis Lychnitis*, and *Amellus Lychnitis*.

LYCIOPLËSIUM, *Miers*. See *Lycium*.

LYCIOSÉRISSA, *Rœmer* and *Schultes*. From *lycium*, and *serissa*, serissa-like lycium. *Linn.* 5, Or. 1, Nat. Or. *Solanæe*. A Cape shrub, which grows in peat and loam, and is increased by cuttings—*capénsis*.

LYCION, *Linn.* From *lycion*, a name given by Dioscorides to a thorny shrub, and applied to this genus because of its containing some thorny shrubs. *Linn.* 5, Or. 1, Nat. Or. *Solanæe*. The stove and greenhouse kinds require the same treatment as other similar plants. *L. áfrum*, and some others of the Cape species, thrive and flower well against a south or west wall, and are very handsome when in flower. The hardy species are admirably suited for training against trellis-work, or walls, or for covering arbours. They are all readily increased by cuttings of the ripened wood planted in sand, under a glass. *Synonymes*: 1, *L. carnòsum*; 2, *Lycioplësium pubiflorum*, *Látra venenata*. See *Grabòwska*, *Bérberis*, and *Chenéstes*.

LYCÓGALA, Michaux. From *lykos*, a wolf, and *gala*, milk. *Linn.* 24, Or. 9, Nat. Or. *Lycopodaceae*. In the early stage of this plant's existence, it appears like a mass of thick cream. It is found upon rotten or decayed wood and leaves—*miniata*.

LYCOPÉRDON, Michaux. From *lykos*, a wolf, and *perdo*, to explode backwards. *Linn.* 24, Or. 9, Nat. Or. *Lycopodaceae*. This is a genus of roundish, tuber-like plants, which, when ripe, explode, and emit their sporules like smoke, and are known among country people by the name of Puff-balls. They grow in pastures on the stumps of trees—*Bovista*, *excipuli-forme*, *perlátum*, *pratense*, *pyriforme*. See *Geastrum*, *Institiale*, *Leocarpus*, and *Rhizopogon*.

LYCOPÉRSICON, Tournefort. From *lykos*, a wolf, and *persicon*, a peach; in allusion to its aphrodisiacal qualities. *Linn.* 5, Or. 1, Nat. Or. *Solanaceae*. The *Lycopérsicon*, or Lovc-apple, consists chiefly of annual plants, several of which are trained against walls for the sake of their fruit, which is used for soups. They are generally raised in frames, or in a stove, and when of sufficient size, they are transplanted into the open border. *Synonymes*: 1, *Solanum Pscúdo-Lycopérsicum*; 2, *S. Lycopérsicum*; 3, *S. pimpinellifolium*.

LYCOPÉRSICUM. See *Lycopérsicon*.

LYCOPODIACEÆ, or CLUB-MOSSES. A small order of moss-like, flowerless plants, chiefly with creeping stems.

LYCOPÓDIUM, *Linn.* From *lykos*, a wolf, and *pous*, a foot; because of the resemblance of the roots. *Linn.* 24, Or. 3, Nat. Or. *Lycopodiaceae*. The hardy species of Club-moss require to be cultivated in peat soil, in a moist situation; some of them succeed in pots of water. They are readily increased by suckers. *Synonymes*: 1, *L. apothécium*; 2, *Selaginella cordata*.

cuspidatum, *formosum*, *Galebtii*, *inequalifolium*, *Marténsi*, *sépcens*, *Schóttii*, *umbrosum*, *uncinatum*, *Willdenóvi*.

LYCÓPSIS, *Linn.* From *lykos*, a wolf, and *opsis*, the face; some resemblance in the flowers. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceae*. The seeds of these plants have only to be sown in the open ground in spring. *Synonymes*: 1, *Nónca arvensis*; 2, *Anchúsa echioides*, *N. echioides*, *Arnébia echioides*; 3, *N. obtusifolia*; 4, *Anchúsa ovata*; 5, *A. variegata*—*arvensis* 1, *calycina echioides* 2, *obtusifolia* 3, *orientalis* 4, *variegata* 5. See *Nónca* and *Arnébia*.

LYCÓPUS. From *lykos*, a wolf, and *pous*, a foot; in allusion to the resemblance of the leaves to the foot of that animal. *Linn.* 2, Or. 1, Nat. Or. *Lamiaceae*. They succeed in the open ground, in any light rich soil, preferring a moist situation, and are readily increased by seeds, or divisions of the roots. *Synonymes*: 1, *L. Virginicus quercifolius*.

straminea . . .	Yellow 8, H. Bl. P.	1 China . . .	1845

LYCÓRIS. See *Nerme*.

LYCÓSERIS, *De Candolle*. From *lykos*, a wolf, and *seris*, succory. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. Plants of no beauty, and of easy culture. *Synonymes*: 1, *Atractylis mexicana*—*mexicana* 1.

LYCOTROPAL. An orthotropal ovule curved like a horse-shoe.

LYGÉUM, *Linn.* From *lygeo*, to bend; on account of its flexibility. *Linn.* 3, Or. 1, Nat. Or. *Graminaceae*. A species of grass with rushy leaves. It is much used in Spain, Provence, &c., for making ropes, baskets, nets, for filling mattresses, &c. It grows in light loamy soil, and is increased by dividing the roots.

Spartum . . . Apetal . 5, H. Grass. 1 1/2 Spain . 1776

LYGODESMIA, *D. Don*. From *lygodes*, flexible, and *desme*, a bundle. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. *Synonymes*: 1, *Prendánthes punicea*—*punicea* 1.

LYGODIUM, Swartz. From *lygodes*, flexible; in allusion to the twining habit of the plants. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceae*. The Snake's-tongue is a climbing genus of ferns, which grows freely in a mixture of turfy loam and peat, and is readily increased by dividing the roots, or by seeds sown in the usual way. *Synonymes*: 1, *Lygodium dichotomum*; 2, *Hydroglössum hirsutum*; 3, *Osmunda scândens*.

LYGODYSODIA. See *Pedèria*.

LYME-GRASS. See *Élymus*.

LYMPHATIC, belonging to lymph or sap.

LYNGBYA, Agardh. In honour of the famous Danish botanist, H. C. Lyngbye. *Linn.* 24, Or. 7, Nat. Or. *Confervaceae*. Curious plants, resembling some species of the genus *Conferva*. They are found on damp earth at all seasons of the year—*Carmichaelis, crispata, ferruginæa, murialis, prolifera, speciosa*.

LYONIA, Nuttall. In memory of John Lyon, an American collector of plants, who fell a victim to a dangerous epidemic among those savage and romantic mountains which had so often been the theatre of his labours. *Linn.* 10, Or. 1, Nat. Or. *Ericaceae*. Very ornamental shrubs, well worth a place in every garden. They grow best when planted in a peat soil, and may be increased by layers, or seeds; if by seeds, they must be sown in pots filled with sandy peat soil, and covered slightly over. *Synonymes*: 1, *L. nitida, lucida, Andromeda coriacea*; 2, *Andromeda ferruginæa*; 3, *A. frondosa, A. paniculata*; 4, *A. mariana, A. racemosa paniculata*; 5, *A. ferruginæa*; 6, *A. jamaicensis*.

LYRATE, lyre-shaped.

LYSIMACHIA, Linn. From *lysis*, dissolution, and *mache*, stripe. *Linn.* 5, Or. 1, Nat. Or. *Primulaceae*. A very pretty genus of plants, with mostly yellow flowers. *L. Nummularia* is a handsome free-flowering plant, and from its trailing habit is well fitted for decorating rock-work. All the species are of the easiest culture, and may be propagated by divisions, except *L. dubia* and *L. Linum-stellatum*, which must be increased by seeds. *Synonymes*: 1, *atropurpurea*; 2, *Asterionon stellata*; 3, *quadrifolia*; 4, *Lubinia atropurpurea*.

LYSIONÔTUS. See *Achinènes*.

LYTHRÆÆ, or LOOSE-STRFES, constitute a considerable order of showy plants, principally herbs, but some grow to large-sized shrubs, and are very ornamental.

LYTHRUM, *Linn.* From *lythron*, black-blood; in allusion to the purple colour of most of the flowers. *Linn.* II, Or. I, Nat. Or. *Lythraceæ*. The hardy perennial species of this genus are

very handsome. They thrive in any common garden soil, and are readily increased by dividing the plants at the root. The seeds of the annual species should be sown in the open border in spring. *Synonymes* : 1, *L. Kennedyanum*; 2, *L. diffusum, virgatum*. See *Heimia*.

MACRÆA. See *Viviania*.

- MACRÁNTHUS**, *De Candolle*. From *makros*, long, and *anthos*, a flower; in allusion to the long flowers. *Linn.* 17, Or. 4, Nat. Or. *Fabæcæ*. This plant is a native of Cochinchina, where it is cultivated for table, the seeds being cooked like French beans. It grows in a mixture of loam and peat, and is increased by seeds, which should be sown in a hotbed.
cehinchinensis White 6, H. Cl. A. 4 Coch. China 1826
- MACROCHILUS**, *K. and W.* From *makros*, long, and *cheilos*, a lip; the lip of flower is long. *Linn.* 20, Or. 1, Nat. Or. *Orchidæcæ*. Nearly related to *Miltonia*, and requiring the same treatment. *Synonyme*: 1, *Miltonia spectabilis*. See *Miltonia*.
Fryanus 1 . Red green 9, S. Epi. 1 Brazil . 1835
- MACROCHLÁMYS**, *Ducaisne*. From *makros*, long, and *chlamys*, a covering. *Linn.* 14, Or. 2, Nat. Or. *Gesneræcæ*. For culture and propagation, see *Alloplectus*. *Synonyme*: 1, *Alloplectus Patrisii*.
Patrisii 1 . Scarlet 7, S. Cl. P. 2 St. Martha
- MACROCHLÒDA**, *Kunth*. From *makros*, long, and *chloa*, grass; length of herbage. *Linn.* 3, Or. 2, Nat. Or. *Graminæcæ*. *Synonyme*: 1, *Sclapa tenacissima*—*arenaria*, *tenacissima* 1.
- MACROCNEMUM**, *R. Brown*. From *makros*, long, and *cneme*, a leg; in allusion to the long flower-stalk. *Linn.* 5, Or. 1, Nat. Or. *Cinchonæcæ*. Ornamental plants, succeeding in loam and peat, and propagated by cuttings in sand, under a glass, in heat. See *Mussenda*.
jamaicensis . White . 8, S. Ev. T. 12 Jamaica . 1806
strictum . White . 8, S. Ev. S. 10 E. Ind. . 1804
trinitaria . Red . 9, S. Ev. T. 25 Trinidad . 1820
- MACROCYSTIS FYRIFERA** is a sea-weed growing to the enormous length of 1500 feet, found in the North seas, and occasionally washed upon our shores.
- MACRÓGYNE**, *L. and O.* See *Aspidistra*.
- MACROLÓBIUM**. See *Oûtea*.
- MACROMÈRIA**, *D. Don*. From *makros*, long, and *meris*, a part; in allusion to the stamens of this genus being larger than those of any other of the family. *Linn.* 5, Or. 1, Nat. Or. *Boraginæcæ*. *M. exserta*, the only species to our knowledge yet introduced, Dr. Lindley has recently described as a half-hardy perennial, growing from two to three feet high. It should be potted in a mixture of equal parts of sandy loam and fibrous peat, and is propagated by seeds and division.
exserta . Yellow 9, G. Ev. S. 3 Mexico . 1846
- MACROPODIUM**, *R. Brown*. From *makros*, long, and *pous*, a foot; in allusion to the shape of the seed-vessel. *Linn.* 15, Nat. Or. *Brassicæcæ*. A light rich soil suits these plants well, and cuttings of the herbaceous species root readily in sand. *M. laciniatum* is readily increased by seeds. *Synonyme*: 1, *Cardamine nivålia*.
laciniatum . White 7, H. . A. 1 N. Amer. . 1827
nivåle 1 . White 7, H. Her. P. 1 Siberia . 1796
- MACRORHIZA**, long, or large-rooted.
- MACRORHYNCHUS**, *De Candolle*. From *makros*, long, and *rhyngchos*, a snout. *Linn.* 19, Or.
- 1, Nat. Or. *Asteræcæ*. Annuals of easy culture in the open borders.
aurantiæcus . Orange . 6, H. . A. 1 Chili . 1838
levigatus . Yellow . 6, H. . A. 1 Chili . 1836
pteyærus . Yellow . 6, H. . A. 1 Chili . 1836
- MACROSPORIUM**, *Fries*. From *makros*, long, and *sporos*, a seed. *Linn.* 24, Or. 9, Nat. Or. *Botrytæcæ*. The first of the undermentioned is found on decaying leaves of cabbage, and the latter on those of *Cheiranthus*.—*Brassicæ*, *Cheiranthi*.
- MACRÓSTYLIS**, *Bartling*. From *makros*, long, and *stylis*, a style; referring to the length of the style. *Linn.* 5, Or. 1, Nat. Or. *Rutæcæ*. This is an interesting genus of plants; for culture and propagation, see *Diósma*. *Synonymes*: 1, *Agathósma barbata*; 2, *A. obtusa*, *Diósma ciliata*.

MAGIC-TREE. See *Cantua buxifolia*.

MAGNOLIA, Linn. After Pierre Magnol, professor of medicine at Montpellier, and author of several botanical works; he died in 1715. *Linn.* 13, Or. 6, Nat. Or. *Magnoliaceæ*. This is a genus of very elegant and showy plants when in flower, and all well worthy of extensive cultivation. The hardy kinds being remarkably handsome shrubs, should be planted in conspicuous situations, where they will flower profusely when they attain a good size. *M. glauca* and some others grow best in a peat soil in a moist situation. They are generally increased by layers put down in spring or autumn, or by seeds; when the layers are first taken off, they should be potted in a mixture of loam and peat, and placed in a close frame till they have taken fresh root. None of the leaves should be taken off or shortened, nor any shoots be cut off, or their tops shortened, as they will not succeed so well; for the more branches and leaves are on, the sooner they will strike fresh root. The Chinese kinds are often inarched or budded on *M. obovata*, and take readily. The greenhouse kinds thrive best in a mixture of peat and loam, and are also increased by inarching or budding on *M. obovata*, one of the readiest growing kinds. *M. fuscata*, and any of the weak-growing species, increase with facility from cuttings taken off as soon as ripe, and planted in a pot of sand, under a glass. The seeds of the North American species are received annually from that country. They should be sown as soon as possible after their arrival in pots of light rich earth, covering them half an inch deep: these may be placed either in a hotbed or a warm sheltered situation, or they may be sown in the open ground, and when the plants are of sufficient size, they should be planted out singly into pots, and sheltered till they have taken fresh root, and they should be protected from the frost by a frame for two or three successive winters, giving them the benefit of the open air in mild weather. *Synonymes*: 1, *M. gracilis*, *M. Yulan*; 2, *M. Soulangeana*; 3, *M. tomentosa*; 4, *M. umbellata*. See *Talauma*.

MALACH, an intoxicating liquor made from the hemp (*Cannabis sativa*).

MALACIADËNTIA, *Lindley*. *Linn.* 20, Or. 1, Nat. Or. *Orchidæceæ*. This very singular plant was given to Mr. Bateman by Mr. William Hooper of Lambeth, who received it from Rio in 1836. It is a remarkable genus, resembling *Megaclivium* in some respects, but belonging in reality to *Vandææ*, among which it is marked by the nearly total absence of the petals, the cirrhate column, and the soft fleshy cinnamon-coloured gland, to which a pair of reniform pollen masses are slightly attached. In this division of *Orchidæceæ*, it is uncertain where it must stand; probably other genera still undiscovered will connect it with the system better than can at present be done.

clavata . Grn. pur. . 4, S. Epi. 2 Rio Janeiro . 1836

MALACHODËNDRON, *Linn.* From *malachos*, soft, and *dendron*, a tree. *Linn.* 16, Or. 8, Nat. Or. *Ternstramiæceæ*. This fine ornamental plant is highly deserving a place in

every garden, on account of its large cream-coloured blossoms. The plant should be kept in the greenhouse, for though sufficiently hardy to stand our winters in the open air, the young shoots often get injured by frost, the summer not being long enough to ripen the wood, or even to flower it in perfection. The best soil for it is peat, mixed with a little loam; and it is readily increased by layers, or cuttings of the ripened wood, in sand, under a glass. See *Stuartaia*.

ovatum . . . White 7, H. De. T. 8 N. Amer. . 1785

MALACHRA, *Linn.* A name under which Pliny speaks of a Persian tree, which produces a gum. The name is preserved to designate plants analogous to *mallow*, from the similarity of the word *malachra* with that of *malache*, a mallow. *Linn.* 16, Or. 8, Nat. Or. *Malvæceæ*. Annuals of no interest; they require to be raised in a hothouse, and, when of sufficient size, to be planted singly into small pots, and placed among the stove plants. *Synonymes*: 1, *M. fasciata*—*alceæfolia*, bracteata, capitata, fasciata, heptaphylla 1, radiata, rotundifolia, triloba.

MALACOPHYLLUM. See *Cotyledon Malacophyllum*.

MALAXIS, *Swartz*. *Malaxis*, delicate; in allusion to the texture of the species. *Linn.* 20, Or. 1, Nat. Or. *Orchidæceæ*. A pretty little genus, growing freely in sandy peat. See *Liparis*, *Microstylis*, *Ochrônia*.

MALPÍGHIA, Linn. In honour of Marcello Malpighi, once professor of medicine at Pisa, and author of many valuable works on natural history. He died in 1694. *Linn.* 10, Or. 3, Nat. Or. *Malpighiaceæ*. A genus of interesting plants, some of which, as *M. aquifolia*, *coccifera*, and one or two others, are especially worth the cultivator's care. They thrive well in any light soil, and cuttings of the ripened wood root readily in sand, under a glass, in heat. *M. glabra* is known by the name of Barbadoes Cherry in the British West Indies. It is cultivated in all the West Indian Islands, and in many parts of South America, for its fruit, which is esteemed there, but is much inferior to our cherries. *Synonyme:* 1, *M. puniceifolia*. See *Bunchdسيا and Brysonima*.

MALPÍGHIAEÆ, or MALPÍGHIAIDS. Trees and shrubs, some having a climbing habit; many bear very pretty flowers and eatable fruit.

MALTESE MUSHROOM is the *Cynomorium coccineum*.

MÁLUM PÛNICUM is the *Punica Granatum*.

MÁLUS. See *Pyrus Málus*.

MÁLVA, Linn. Altered from the Greek, *malache*, soft, which comes from *malacho*, to soften; in allusion to the emollient qualities of the species. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. This is an extensive genus of plants. The stove and greenhouse kinds grow well in any rich soil, and are very ornamental, especially some of the greenhouse species; they are readily increased by cuttings planted in any light soil, under a glass. Among the most interesting of the hardy herbaceous

species, are *M. moschata*, *Munroana*, and *purpurata*. They should be planted in the flower-border, and increased by divisions of the roots, or by seeds. The annual species should be sown in the open ground, but few of them are worth cultivating. *Synonymes:* 1, *M. alceoides*; 2, *coromandeliana*; 3, *M. scoparia*; 4, *striata*; *M. reflexa*; 5, *Nuttalia malvaeflora*; 6, *M. glomerata*, *N. involucreta*. MALVACEÆ, or **MALLOW-WORTS**, constitute a large order of well-known plants. The uniform character of them is to abound in mucilage, on which account they are valuable for poultices and other medicinal and domestic uses.

MALVAVISCUS, *De Candolle*. From *malva*, a mallow, and *viscus*, glue. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. This is a genus of very desirable plants, on account of their rich scarlet flowers. The soil best adapted to them is a mixture of loam and peat, and cuttings root readily in sand, under a glass; these should be taken off as near the stem of the plant as possible, not being so apt to rot as when taken off by the middle of the shoot. None of the leaves should be taken off or shortened above the sand. *Synonymes*: 1, *Achânium Malvaviscus*; 2, *A. mollis*; 3, *A. pilosa*.

MAMMEFORM, nipple-formed.

MAMMÈA, *Linn.* *Mamcy* is the aboriginal name of the species. *Linn.* 13, Or. 1, Nat. Or. *Clusiaceæ*. *M. americana* is a tall tree with a thick, spreading, elegant head, somewhat resembling *Magnolia grandiflora*. In the West Indies it is cultivated for the sake of its fruit, which is much esteemed, and is eaten alone, or cut in slices with wine or sugar, or preserved in sugar. It grows freely in sandy loam, and cuttings of the ripened wood, with the leaves not shortened, will root in sand, under a glass, in a moist heat.

americana . White 7, S. Ev. T. 60 S. Amer. . 1730

MAMMEE-TREE. See *Mammèa*.

MAMMILLÀRIA, *Haworth*. From *mamma*, the nipple; in allusion to the small tubercles. *Linn.* 12, Or. 1, Nat. Or. *Cactaceæ*. This genus contains some very beautiful plants, and all highly-deserving of a place in every collection of plants, on account of their very curious and interesting habit. To grow them well, they require the following treatment:—About the middle of April they should be fresh potted in peat and a little sand mixed, and then plunged in heat, in a pit or frame, where the temperature must be kept from eighty-five to ninety-five degrees, not giving them much water until they have started afresh, and then may be added gentle waterings over head, occasionally in the afternoon; they should be closed early, and air given early in the mornings, and shade during sunshine; by treating them in this manner, they will make an amazing growth in the three following months, when they may be gradually hardened before removing them back to the succulent house; they are increased by offsets, and some of the kinds occasionally produce seeds if fertilised. *Synonymes*: 1, *Cactus ambigua*; 2, *M. densa*; 3, *caudata*; 4, *C. coccinea*; 5, *C. coronata*;

6, *C. depressa*; 7, *M. straminea*; 8, *C. glomerata*; 9, *C. mammillaris*; 10, *C. pusilla*; 11, *C. quadrata*; 12, *C. mammillaris*; 13, *C. solitaria*; 14, *C. spinosa*; 15, *C. stellata*.

MANDEVÍLLA, *Lindley*. Named after Henry John Mandeville, Esq., H. B. M. Minister at Buenos Ayres, to whom we are indebted for the introduction of this and many interesting plants. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceae*. This very fine climber is remarkable for its deliciously sweet and very beautiful snowy-white flowers. It also blooms most abundantly; but if raised from seeds, like all seedling shrubs, its first stage of growth is more productive of foliage than blossoms. In order to grow the plant to perfection it should be placed out in the border of the conservatory. If cultivated during summer in the open air, or in pots in the greenhouse, it grows freely, but does not flower. After the flowering season is over, the plants should be pruned similarly to vines or other plants which bear their flowers and fruit upon the wood of the same year. It may be propagated by cuttings or seeds, sown in a pit, with a little heat.

MANDRÁGORA, *Tournefort*. The English name mandrake is derived from *mandra*, an ox-stall, something relating to cattle, and *agaurus*, cruel; on account of its poisonous effects on cattle when accidentally gathered with their fodder in the countries where the plants abound. *Linn.* 5, Or. 1, Nat. Or. *Solanaceae*. These plants thrive well in a light soil, in a shaded situation. They can only be increased by seeds. The roots are very apt to rot during winter. *Synonymes*: 1, *Atropa Mandrágora*; 2, *M. officinális*; 3, 4, *Mandrágora*.

MANGÍFERA, *Linn.* Derived from *mango*, the name of the tree, and *fero*, to bear. *Linn.* 23, Or. 1, Nat. Or. *Anacardiaceae*. This is a genus of much esteemed tropical fruit trees, thriving well in sandy loam, or a mixture of loam and peat. The species are readily increased by cuttings of the ripened wood planted in sand, under a glass, in heat. Fresh seeds imported from the places of their natural growth, will vegetate freely. Within the tropics, they hardly eat any other fruit besides the Common Mango (*M. indica*) during the hot months; but if wine be not druck with it, the Mango is apt to throw out boils, which are, however, conducive to health. The fruit of the finest Mangos have a rich sweet-perfumed flavour, accompanied by a grateful acidity. The Mango tree has been cultivated successfully for some years in the garden of his grace the Duke of Devonshire, at Chatsworth, and by the direction of the late Sir Joseph Paxton, it was planted in a prepared border in the old aquatic house, where it grew vigorously, and annually produced fruit. It has now become fully established in this situation, and during the two last years, 1865 and 1866, under the careful management of his grace's gardener, Mr. Taplin, it has borne most abundant crops of well-formed and good-flavoured fruit. *Synonyme*: 1, *Manga domestica*. See *Buchananía*, *Eleo-dendron*, and *Spondias*.

MANGLESIA, *Endl.* In honour of Capt. James Mangles, R.N., and his brother, patrons of botany. *Linn.* 4, Or. 1, Nat. Or. *Proteaceae*. This genus of plants originally found its way into our gardens in 1839, the *M. glabrata* having been raised from Swan River seeds by Robert Mangles, Esq., of Sunning Hill. They are proteaceous plants, allied to *Grevillea*, with neat-toothed, long-stalked leaves, and very small flowers of no beauty. It is for their foliage alone that they will be cultivated.

ciuteafolia . Bn. yel. 8, S. Her. P. 2 Brazil . 1842

MARATTIACEÆ. See *Danaeaceæ*.

MARCESCENT, permanent; when withered not falling off.

MARCËTIA, De Candolle. Named after Dr. Marcet of Geneva, a chemist, who was the author of a curious paper concerning the effect of poisons on plants. *Linn.* 8, Or. 1, Nat. Or. *Melastomaceæ*. Curious little plants, requiring warm greenhouse treatment, and increased by cuttings. A soil composed of one half leaf-mould, one fourth peat, and one fourth sand, seems to suit them best, but they are considered difficult to manage. *Synonyme*: 1, *Rhexia decussata*.

MARCGRÁVIA, *Linn.* In honour of George Marcgrave, a German, who published a Natural History of Brazil in 1718. *Linn.* 3, Or. 1, Nat. Or. *Maregraviaceae*. This is a genus of curious shrubby, creeping plants; they are found adhering by their fibres to the trunks of trees, though they are not strictly parasitical. They are well suited for covering the walls or rafters of stoves. They grow in turfy loam and peat; and cuttings root in sand, under a glass, in heat.

coriácea . . . White 5, S. Ev. S. 20 Guiana . . . 1820
pecta . . . Green 6, S. Cr. S. 20 Guiana . . . 1827
umbellata . . . White 6, S. Ev. S. 20 W. Ind. . . 1792

MARCGRÁVIÆÆ, or **MARGRAVIADS**. These are all handsome and very curious shrubs and small trees; they bear curious little pitchers, the purpose of which is not understood.

MARCHÁNTIA, *Corda*. In honour of Nicholas Marchant, a French botanist. *Linn.* 24, Or. 6, Nat. Or. *Marchantiaceae*. Creeping plants, with green, cellular, fleshy fronds, spreading over the surface of the ground in moist places — *androgyna*, *cónica*, *hemisphærica*, *irrigua*, *polymorpha*.

MARCHANTIÆÆ, or **LIVER-WORTS**. These are plants of a leathery construction, growing on the ground or on trees in damp shady places in all climates.

MARE'S-TAIL. See *Hippuris*.

MARGARITACEOUS, pearl-bearing.

MARGIN, edge or border.

MARGINATED, having a border.

MARGOSA-TREE. See *Melia Azedarácta*.

MARGYRICARPUS, *Ruiz* and *Pavon*. From *margaron*, a pearl, and *karpos*, a fruit; resemblance of the fruit. *Linn.* 2, Or. 1, Nat. Or. *Sanguisorbaceae*. This is rather a pretty plant, growing well in sandy peat, and increased by cuttings in sand, under a glass, in heat.

setosus . . . Green . 6, S. Ev. S. 2 Peru . . . 1829

MARIALVA, *De Candolle*. Named after a Portuguese botanist. *Linn.* 13, Or. 5, Nat. Or. *Clusiaceae*. This fine tree thrives in a mixture of loam, peat, and sand, and ripened cuttings will grow in sand, under a glass, in heat. *Synonymy*: 1, *Toromita guianensis*.

guianensis 1 . . . Green . 6, S. Ev. S. 12 Guiana . 1827

MARIÁNTHUS, *Link*. Derivation of the word unknown, but Dr. Graham suggests that it may have been dedicated to the Virgin Mary, on account of the pure whiteness of the flowers of the first-discovered species. *Linn.* 5, Or. 1, Nat. Or. *Pittosporaceae*. Elegant little plants, with long slender branches, bearing a profusion of pleasing blue flowers in dense clusters. They should be trained to wire balloons, or circular-shaped trellis, in preference to rafters; they seem to thrive best in a mixture of loam, heath-mould, and sand, and cuttings of the young wood strike freely in sand. *Synonymy*: 1, *Campylanthëra elegans*.

MÁRICA, *Schröber*. From *maraino*, to become

flaccid; in allusion to the flowers. *Linn.* 3, Or. 1, Nat. Or. *Iridaceae*. Very beautiful and curious plants, delighting in a mixture of loam, peat, and sand, and increased by dividing the roots, or by seed, which ripens in abundance. *Synonymy*: 1, *Cipura Northiana cælestis*. See *Bobartia*, *Sisyrinchium*, and *Elcutherine*.

MATÉ. See *Ilex paraguayénsis*.

MAT-GRASS. See *Nardus*.

MAT-GRASS. See *Psamma*.

MATH, an old term for crop.

MATHIOLA, R. Brown. In honour of Peter Andrew Mathioli, a famous Italian physician, and author of a commentary on the works of Dioscorides; he died in 1757. *Linn.* 15, Nat. Or. *Brassicacée*. This is a genus of old and well-known inhabitants of the garden. In order to obtain good double *Stock-gilliflowers*, *Brompton* and *Queen-stocks*, choice should be made of such single-flowering plants as grow near many double ones. The seed should be sown in May, and after they have reached two or three inches high, they should be thinned at least nine inches asunder, and the plants taken out may be planted at about the same distance apart in the flower-border; if the following winter be severe, they must be protected by mats, and in the following May and June they will flower beautifully. Desirable double varieties may be propagated by cuttings, which root readily by being planted under a hand-glass, and shaded. To have a succession of the *Annual*, or *Ten-week-stock*, the seed should be sown in February, March, April, and May, and the plants from the May sowing will continue to flower till Christmas. In preserving plants of the *Stock-gilliflower*, and *Ten-week-stock*, for seed, select only such single-flowering plants as have fine-coloured flowers. The biennial and hardy shrubby kinds should be treated in the same manner as the *Stock-gilliflower*, and all the annual kinds in the same way as the *Ten-week-stock*. The greenhouse shrubby species grow best in a mixture of light soil and sand, and cuttings root readily under a glass. Fine double stocks may be planted in pots, and kept in a frame during winter. See *Gruettàrda*.

MAURÁNDYA, Jacquin. In honour of Dr. Maurandy, professor of botany at Carthage. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariacée*.

The species of this genus are very elegant, climbing, evergreen, or herbaceous plants, and are therefore well worthy of a place in every garden. During summer, they will grow and flower abundantly planted against a wall in the open air, or at the bottom of trellis-work; but they require the protection of a greenhouse in winter. A light rich soil suits them, and they are easily increased by young cuttings planted under a glass, or by seeds.

MAXILLARIA, Ruiz and Pavon. So named in consequence of the resemblance between the column and labellum and the jaws or maxillæ of some animal. *Linn.* 20, Or. 1, Nat. Or.

Orchidæcæ. This is an extensive and very elegant genus of plants, all of which are highly deserving of cultivation, either for the beauty or delicious fragrance of the flowers. *M. Steelii* is not only a very remarkable, but a very beautiful plant; the flowers are large, of a fine yellow colour, irregularly spotted with dark purple. This, and several other species, as *M. acicularis*, *imbricata*, *racemosa*, and *M. rufescens*, should be grown on wood, on which a little moss should be placed, then the roots of the plant put on that, with a sufficient quantity of moss, and the whole fastened to the wood with some metallic wire. For the culture of the other species, see *Stanhœpea*.

Synonymes: 1, *Maxillaria foveata*, *hyacinthina*, *latifolia*, *maculata*; 2, *M. revoluta*; 3, *M. fuscata*; 4, *M. fuscata*. See *Govènia*, *Bifrenaria*, *Cötax*, *Cymbidium*, *Houlletia*, *Lycaste*, *Paphania*, *Prominea*, *Scuticaria*, *Stanhœpea*, and *Warrca*.

MAXIMILIANA, Martius. In honour of Maximilian, Prince of Wied-Neuwied. *Linn.* 23, Or. 1, Nat. Or. *Palmæcæ*. This is a very beautiful plant, requiring the same treatment as the genus *Mauritia*.

- règia* . . . Straw . 6, S. Palm. 20 Brazil . 1825

MAYÆCÆ, or MAYACS. Moss-like plants, inhabiting the damp marshes of America, where they creep over the ground and produce their little simple flowers in abundance.

MAY-APPLE. See *Podophyllum peltatum* and *Passiflora incarnata*.

MAYS. See *Zea Mays*.

MAYTÈNUS, Feuille. *Maiten* is the Chilean name of one of the species. *Linn.* 23, Or. 2, Nat. Or. *Celastræcæ*. The species of this ornamental genus thrive well in a mixture of peat, loam, and sand; and cuttings of the ripened wood root readily in the same kind of soil, under a glass. *Synonymes*: 1, *Celastrus octagonus*; 2, *C. verticillatus*.

MAY-WEED. See *Anthemis Cöbula*.

- hoaria* . . . White . 6, F. Ev. T. 12 Chile 1822

MĀZUS, Loureiro. From *mazos*, a teat; in allusion to the mouth of the corolla being closed by tubercles. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. This is a genus of interesting annuals. They require to be raised on a gentle hotbed, and about the end of May to be planted out into a warm sheltered situation in the open ground. *Synonyme*: 1. *Lindernia japonica*.
 pumilio . . . Pa. pur. 6, H. A. $\frac{1}{2}$ V. D. L. 1823
 rugosa 1 . . . Yel. pur. 7, F. Tr. A. $\frac{1}{2}$ China . 1780

MEĀDIA. See *Dodecatheon Meadia*.

MEADOW-GRASS. See *Poa*.

MEADOW-RUE. See *Thalictrum*.

MEADOW-SAFFRON. See *Cibicium*.

MEADOW-SAXIFRAGE. See *Seseli*.

MEADOW-SWEET. See *Spiraea Ulmaria*.

MECONOPSIS, De Candolle. From *mekon*, a poppy, and *opsis*, resemblance; the appearance of the plants. *Linn.* 13, Or. 1, Nat. Or. *Papaveraceæ*. Ornamental plants, growing in any light rich soil, and increased by seed. *Synonyme*: 1, *Papaver cambrica*.

cambrica 1 . . . Yellow 6, H. Her. P. 1 Eng., rocks. 1833

heterophylla . . . Or. red 6, H. Her. P. 2 Calif. . 1833
Waltlichii . . . Blue . 6, F. Her. P. 3 Sik. Himal. 1852

MEDĒOLA, Linn. From *Medea*, the sorceress; supposed medicinal qualities. *Linn.* 6, Or. 3, Nat. Or. *Melanthaceæ*. This is a curious plant, succeeding well in light sandy soil, and increased by dividing the roots. *Synonyme*: 1, *Gyrtonia virginica*. See *Myrsiphyllum*.
virginica 1 . . . Yellow . 6, H. Her. P. $\frac{2}{3}$ Virginia 1759

MĒDICA. See *Citrus Medica*.

MĒDICĀGO, Linn. From *Medike*, a name given by Dioscorides to a Median grass. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. The perennial herbaceous species of this genus will grow in any common garden soil, and are increased by dividing the plants in spring at the roots. The shrubby kinds grow in the same kind of soil, and are readily increased by cuttings. The seeds of the annual species require to be sown in the open border in spring. *Synonymes*: 1, *Medicago littoralis*; 2, *Melilotus brachyloba*; 3, *Medicago pubescens*; 4, *M. Helica*; 5, *M. lupulina unguiculata*; 6, *M. elegans*; 7, *Melilotus sibirica*; 8, *Medicago triclycla*. See *Hyemenocarpus*.

MĒDIUM. See *Campanula Medium*.

MĒDLAR. See *Méspilus*.

MĒDLAR-WOOD. See *Mgrtus orbiculata*.

MĒDŪLLA, the pith of a plant.

MĒDUSA'S HEAD. See *Euphorbia Caput Medusæ* and *Cirrhopetalum Medusæ*.

MEGACARPÆA, De Candolle. From *megas*, great, and *karpos*, a fruit; in allusion to the large pods. *Linn.* 15, Nat. Or. *Brassicææ*. This plant grows best in light sandy soil, and may

- readily be increased by seeds. *Synonyme*: 1, *Biscutella megacarpa*, laciniata 1. Yel. 6, H. Her. P. 1 Siberia . 1818
- MEGACALFNIUM**, *Lindley*. From *me-gas*, large, and *klime*, a bed; in allusion to the broad, sword-shaped bed, or rachis of the flowers. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. This is a most singular genus of plants, the flowers being produced on a rachis, which is upwards of nine inches long. The lip of *M. falcatum* moves up and down with great rapidity, much in the same way as the head of the Chinese images of mandarins. For culture and propagation, see *Stanhöpa*.

- MELAGONIUM**. See *Conserva Mclagonium*.
- MELALEUCA**, *Linn.* From *melas*, black, and *leukos*, white; because the trunk is black and the branches white. *Linn.* 18, Or. 2, Nat. Or. *Myrtaceae*. This is a very desirable genus of greenhouse or conservatory plants, on account of the neatness of their foliage, and their splendid flowers. They thrive best in an equal mixture of loam, peat, and sand; and cuttings, if not too ripe, will root readily planted in sand, under a glass. *M. Leucadendron* and *Cajuputi* yield the volatile oil of Cajuputi, well known as a powerful sudorific, and a useful external application in chronic rheumatism. *Synonymes*: 1, *M. parviflora*; 2, *M. florida*; 3, *M. imbricata*; 4, *M. canescens*, *M. tomentosa*; 5, *piniperoides*; 6, *M. - MELAMPEDIUM**, *Linn.* From *melas*, black, and *pous*, a foot; in allusion to the seeds. *Linn.* 19, Or. 4, Nat. Or. *Asteraceae*. Uninteresting plants; they require to be sown and treated as other tender annuals. *Synonymes*: 1, *M. ovalifolium*, *Wedelia minor*, *Alcina ovalifolia*, *Dyssodium divaricatum*—americanum, hispidum, humile, longifolium, paludosum 1.
- MELAMPYRUM**, *Linn.* From *melas*, black, and *pyros*, wheat. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceae*. Annual weeds, which require to be sown in the open ground—*arvense*, *cristatum*, *memorosum*, *pratense*, *sybaticum*.
- MELANANTHERA**, *Richard*. From *melas*, black, and *anthera*, an anther; alluding to the colour of the anthers. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. Uninteresting plants, growing in any common soil, and increased by divisions and seeds. *Synonymes*: 1, *Calea aspera*; 2, *Bidens nivea*—deltoidea 1, hastata 2, h. pandurata.
- MELANANTHON**, dark-flowered.
- MELANCHOLY-THISTLE**. See *Cnicus helenioides*.
- MELANCONIUM**, *Link*. From *melas*, black, and

konis, dust; in allusion to the black dusty appearance of the species. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. These are very minute plants, found on dead branches of trees—*conglomeratum, ovatum*.

MELANOCAULON, black-stemmed.

MELANORPIDIUM, *Cels.* From *melanos*, black, and *psidium*, gnava. See *Thilcodia*.

MELANORRHÆA, *Wallich*. From *melas*, black, and *rheo*, to flow; when wounded it yields a black juice. *Linn.* 23, Or. 2, Nat. Or. *Anacardiaceæ*. This splendid tree attains the height of a hundred feet; it grows in peat and loam, and cuttings of the ripened wood root freely in sand, under a glass, in heat. The varnish of Martaban is obtained from this tree; it is known in that country by the name of *Theet-see*, or *Kheu*, and is extremely dangerous, as the skin, if rubbed with it, inflames, and becomes covered with pimples, which are difficult to heal.

usitatissima. Red. 6, S. Ev. T. 100 E. Ind. . 1829

MELANOSEL. See *Melanoselinum*.

MELANOSELINUM, *Hoffmansegg*. From *melas*, black, and *selinum*, parsley. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. This plant grows in any common soil, and is increased by divisions. *Synonyme*: 1, *Selinum decipiens*.

decipiens. White 6, H. Her. P. 2 Madeira . 1785

MELANOSTICTA, *De Candolle*. From *melas*, black, and *stictos*, marked; leaves and calyxes marked with black glands. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. A greenhouse shrub, growing about six feet high. A mixture of heath-mould and light loam is the best soil, and increase is effected by division at the roots.

Burchellii. Yellow 5, G. Ev. S. 6 C. G. H. . 1816

MELANOXYLON, black-wooded.

MELANTHACEÆ, or **MELANTHES**, are bulbous, tuberous, or fibrous-rooted plants, possessing considerable medicinal properties, and in some cases bearing pretty flowers.

MELANTHÆRA. See *Melananthæra*.

MELANTHIUM, *Linn.* From *melas*, black, and *anthos*, a flower; in allusion to the dusky colour of the flowers. *Linn.* 6, Or. 3, Nat. Or. *Melanthaceæ*. The plants of this genus deserve a place in every collection; for culture and propagation, see *Massonia*. *Synonyme*: *Tūlipa Breyniana*. See *Androcymbium*, *Chamelirium*, *Leimanthium*, *Ornithoglossum*, and *Wurmbea*.

MELASTOMA, *Burmamn*. From *melas*, black, and *stoma*, the mouth; the black berries of some of the species are commonly eaten by children, whose mouths they stain black. *Linn.* 10, Or. 1, Nat. Or. *Melastomaceæ*.

These plants are very showy when in flower, especially *M. elongata*; indeed, this plant can hardly be excelled for beauty; in its native habitat its flowers are large, and vary from blue to purple and white. Loam, peat, and sand, mixed, suit all the species best; and cuttings of the young wood root readily planted in pots filled with peat, and placed under a glass, in heat. *Synonymes*: 1, *Osbeckia grandiflora*; 2, *M. malabathrica*. See *Acidtis*, *Charianthus*, *Chironia*, *Clidemia*, *Medinilla*, *Miconia*, *Osbeckia*, *Oxygora*, *Pteroma*, *Tocoda*, and *Tetrazgia*.

MELASTOMA. See *Pteroma*.

MELASTOMACEÆ, or **MELASTOMADS**. An order of very beautiful shrubs, trees, or herbaceous plants; many bear sweet eatable berries; most of the species deserve cultivation.

MELEAGRIS, freckled, speckled.

MELHANIA, *Forskahl*. From Mount Melhan, in Arabia Felix, where the original species was first found. *Linn.* 16, Or. 2, Nat. Or. *Sterculiaceæ*. Ornamental trees, growing about twenty feet high. They thrive best in a mixture of sandy loam, and cuttings root readily in the same kind of soil, under a glass, in heat.

Erythroxylon White 7, S. Ev. T. 20 St. Helena. 1772
Melanoxylon White 7, S. Ev. T. 20 St. Helena. 1800

MELIA, *Linn.* The Greek name of the manna ash; resemblance in the leaves. *Linn.* 14, Or. 10, Nat. Or. *Meliaceæ*. Fine trees, thriving well in a mixture of loam, peat, and sand; and large cuttings of the ripened wood, with the leaves not shortened, will root in sand, under a glass; those of the stove species in heat. The root of *M. Azedarach* is bitter, and is used as an anthelmintic in North America. The fruit of *M. Azadirachta* is oily, acrid, and bitter, as is also the bark.

MELICOCÇA, Jussieu. From *mel*, honey, and *cocça*, a berry; the fruit is very sweet. *Linn.* 8, Or. 1, Nat. Or. *Sapindacææ*. These plants are cultivated to a great extent in the West Indies for their eatable fruits. They grow well in a light loamy soil; and cuttings of the ripened wood will root in sand, under a glass, in heat. *Synonyme: 1, Scytalia trijuga.*

bijuga . . . Yellow . 6, S. Ev. T. 12 Antilles . 1778

 trijuga 1 . Yellow . 6, S. Ev. T. 20 Ceylon . . 1820

MELICÔPE, Forster. From *mel*, honey, and *kope*, a division; in allusion to the honey glands at the base of the ovaries. *Linn.* 8, Or. 1, Nat. Or. *Rutacææ*. An ornamental shrub, growing freely, in loam and peat; and cuttings of the young wood root in sand, under a glass.

ternata . . . White . 6 G. Ev. S. 3 N. Zealand 1822

MELICYTUS, Forst. From *mel*, honey, and *cytos*, a cavity; filaments with a meliferous cavity. *Linn.* 22, Or. 6, Nat. Or. *Flacourtiacææ*. A greenhouse shrub, growing freely in a mixture of loam and heath-mould; and ripened cuttings planted in sand, under a glass, will strike root readily.

ramiflorus . . . Rose . 5, G. Ev. S. 3 N. Zealand. 1822

MELILOT. See *Melilotus*.

MELILOTUS, Tournefort. From *mel*, honey, and *lotus*; honey lotus. The plants are similar to the *Lotus*, and are the favourite haunts of bees. *Linn.* 14, Or. 10, Nat. Or. *Fabacææ*. Very few of these plants are worth cultivating except in general collections. *M. arborea* is

readily increased by cuttings. The seeds of the other kinds only require to be sown in the open border in spring. *Synonyms: 1, M. álba; 2, M. plicata; 3, Trifolium Kochianum; 4, M. vulgáris; 5, Trifolium Melilotus officinalis; 6, M. rugulosa; 7, M. mauritanica; 8, M. diffusa, officinalis, petitpierriana.* See *Medicago, Pócockia, and Trigonella*.

MÉLINIS. See *Tristégis*.

MELISSA, Bentham. From *melissa*, a bee; the bees obtain a great quantity of honey from the Balm. *Linn.* 14, Or. 1, Nat. Or. *Lamiacææ*. These plants will grow in common garden soil, and are readily increased by dividing the roots. *Synonyms: 1, Thymus còrsica, Acynus còrsica; 2, M. altíssima, M. cordifolia; 3, Hornnium pyrenaicum.* See *Calamántha and Népetá*.

MELISSOPHYLLUM. See *Melitta Melissophyllum*.

MELÍTTA, Linn. From *melitta*, a bee; a name synonymous with *Melissa*. *Linn.* 14, Or. 1, Nat. Or. *Lamiacææ*. These are showy plants when in flower, and are, on that account, well fitted for ornamenting flower-borders and shrubberies. They are increased by dividing the roots in spring or autumn. *Synonyme: 1, N. grandiflora.*

Melissophyllum Flesh 5, H. Her. P. 1 Eng., woods.
 alpina . . . Flesh 5, H. Her. P. 2 Switzerl.

MELÍTTIS. See *Melitta*.

MELLIFEROUS, honey-bearing.

MELLÔCA. See *Ullucus*.

MELLOCO. See *Ullucus*.

MÉLO. See *Cucumis Mélo*.

MELOCÁCCTUS, C. Bauhin. From *melos*, a melon, and *cactus*; in allusion to the appearance of the plants. *Linn.* 12, Or. 1, Nat. Or. *Cactacææ*. This is a genus of grotesque-looking plants. They are well worthy of a place in every collection of plants, and require precisely the same treatment as *Mammillaria*. *Synonyms: 1, Cactus Melocactus; 2, C. macracantha; 3, M. Bestéri; 4, Echinocactus polyantha; 5, E. Sellowii.*

MELON. See *Cucumis Melo*.

MELON-PUMPKIN. See *Cucurbita Melopepo*.

MELON-THISTLE. See *Melocactus*.

MELON-TURK'S-CAP. See *Melocactus comminis*.

MELÔSIRA, *Agardh*. From *melon*, a melon, and *sira*, a chain; shape of the filaments. *Linn.* 24, Or. 7, Nat. Or. *Diatomaceæ*. Very minute species, found in salt marshes, rivulets, &c.—*discigera*, *lineata*, *nummuloides*.

MELÔTHRIA, *Linn.* From *melothron*, of Theophrastus; supposed to be *Bryony*. *Linn.* 21, Or. 2, Nat. Or. *Cucurbitaceæ*. Mere weeds; growing in any rich soil, and increased by seeds. *Synonyme*: 1, *Trichosanthes foetidissima*—*fœtida* 1, *péndula*.

MELVILLA. See *Cuphea Melvilla*.

MEMBRANACEOUS, or **MEMBRANOUS**, having the texture of a membrane.

MEMECYLACEÆ. See *Melastomaceæ*.

MEMECYLON, *Linn.* From *memecylon* of Dioscorides; the Greek name of the fruit of the *Arbutus*. *Linn.* 8, Or. 1, Nat. Or. *Melastomaceæ*. The soil best adapted to the growth of these plants is a mixture of peat, loam, and sand; and cuttings of the young wood root freely in sand, under a glass, in heat.

MENIÏCUS, *Desfontaines*. From *mene*, the moon, and *okkos*, the eye; supposed to refer to the shape of the seeds. *Linn.* 15, Nat. Or. *Brassicaceæ*. A pretty little annual, well fitted for ornamenting rock-work. The seed may be sown where it is to remain. *Synonyme*: 1, *Alfssum linifolius*.

linifolius 1 . White 6, H. A. 3 Caucasus . . 1819

MENISCIUM, *Schreber*. From *meniskos*, a crescent; alluding to the shape of the fructification. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. This is a very elegant genus of ferns. They thrive well in loam and peat, and are increased by dividing the roots, or by seeds. *Synonymes*: 1, *Hemionitis prolifera*; 2, *Polypodium reticulatum*; 3, *Asplenium sorbifolium*.
cuspidatum . Brn.yel. 5, S. Her. P. 1 I. of Luzon.

triphylum . Brn.yel. 6, S. Her. P. 2 E. Ind. . 1828

MENISPERMUM, *Linn.* From *mene*, the moon, and *sperma*, a seed; the fruit is kidney or half-moon shaped; whence the English name, Moon-seed. *Linn.* 22, Or. 10, Nat. Or. *Menispermaceæ*. This genus is chiefly composed of hardy plants, well adapted for covering arbours or trellis-work. They grow in any common soil, and may be increased by dividing the roots, or by cuttings planted early in spring in a sheltered situation, or by seeds. *Synonymes*: 1, *M. virginicum*; 2, *Cissampelos smilacina*. See *Cocculus*, *Cosciniium*, and *Tiliacora*.

MENISPERMACEÆ, or **MENISPERMADS**. Principally shrubs that trail and straggle in their growth; the flowers are small and inconspicuous; in a selection where show is desired they are not worth growing. They possess strong narcotic properties, and are found useful in medicine.

MENONVILLEA, *De Candolle*. In honour of M. Thierry de Menonville, an enterprising French naturalist. *Linn.* 15, Nat. Or. *Brassicaceæ*. Rather pretty hardy plants, growing freely in light loamy soil, and increased by seeds.

filifolia		Grsh. wht.	8, H. A. 1	Chile	. 1836
linearis		White	8, H. A. 1	Chile	. 1836

MENSTRUUM, a liquor used as a dissolvent.

MËNTHA, *Linn.* The poets celebrate Minthe, a daughter of Coeytus, as being turned into mint by Proserpine in a fit of jealousy. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Mints form a well-known genus of useful herbs, with the culture and propagation of which every one is familiar. *Synonymes*: 1, *M. pyramidalis*; 2, *M. crispata*; 3, *M. hirsuta*, *M. nepetoides*; 4, *M. paludosa*, *M. palastris*; 5, *M. rivularis*; 6, *M. agræstis*; 7, *M. præcox*; 8, *M. gentilis*; 9, *M. MENZIESIA. See *Phyllodoce*.

MEOSCHIUM, *Linn.* 23, Or. 1, Nat. Or. *Gramineae*. A plant of no beauty.—*barbatum*.

MERCURIALIS, *Linn.* After Mercury, who is said to have first discovered the plant. *Linn.* 22, Or. 8, Nat. Or. *Euphorbiaceae*. Weeds of the simplest culture. The juice of *M. perennis* is emetic, while the seed is purgative, and highly dangerous—*ambigua*, *annua*, *elliptica*, *perennis*, *tomentosa*.

MERCURY. See *Mercurialis*.

MERENDERA, *Ranond.* A name given to *Cólchicum* by the Spaniards, and applied to this genus because of its affinity. *Linn.* 6, Or. 3, Nat. Or. *Melanthaceae*. This species thrives well in a light loamy soil, and is readily increased by seeds, or offsets from the bulbs. *Synonymes*: 1, *Bulbocodium trigynum*, *Cólchicum caucasicum*. See *Cólchicum*.

caucasica 1	Purple	8, H. Bl. P. ½	Caucasus	. 1828
-------------	--------	----------------	----------	--------

MERIANA. In honour of Maria Sybylla Merian, authoress of a work on insects. *Linn.* 10, Or. 1, Nat. Or. *Melastomaceae*. This is a genus of very beautiful stove plants, which grow freely in sandy peat mixed with a little loam; and cuttings of the half-ripened wood root freely in sand, under a glass, in heat. *Synonymes*: 1, *M. macrantha*, *Schrodannia superba*, *Chastanea longifolia*.

coccinea	Scarlet	. 6, S. Ev. S. 6	Jamaica	. 1818

MERIANA. See *Tocayena longiflora*.

MERIANDRA. See *Sávia*.

MERISMA, *Fries.* From *merismo*, a division; because of the branched habit. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceae*. These plants are found in woods and damp places—*cristata*, *felida*, *f. anthocéphala*, *tuberisa*.

MÉRLE. See *Merülus*.

MÉRSIA. See *Gillësia*.

MERTENSIA, *Roth.* In honour of F. C. Mertens, professor of medicine at Bremen. *Linn.* 23, Or. 1, Nat. Or. *Boraginaceae*. All the species of this genus are highly esteemed by the lovers of border plants for the brilliant colour of their blossoms. *M. maritima* and *parviflora* require

to be grown in pots, in very sandy peat. The other species will grow in common garden soil, though they succeed much better when kept in a peat border; increased by divisions. *Synonymes*: 1, *Pulmonaria dahurica*; 2, *P. denticulata*; 3, *P. lancolata*; 4, *P. maritima*; 5, *P. paniculata*; 6, *P. parviflora*; 7, *P. Virginica*; 8, *P. sibirica*.

MERTENSIA. See *Gleichenia flabellata*.

MERÜLUS, Haller. From *meta*, a pillar; because of the resemblance in the original fungus *metulius*. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceae*. This is one of the most important of parasitical fungi, being what is called the dry rot, so well known as the pest of wooden constructions—*aurantiacus*, *lachrymans*, *obliquus*, *tremellosus*. See *Agaricus*, and *Cantherellus*.

MESEMBRYACEÆ, or FICOIDS. *Mesembryanthemum*, or Fig-marigold, as it is commonly called, gives a fair example of this order; they chiefly grow in hot sandy plains in the countries they inhabit. All are more or less succulent.

MESEMBRYANTHEMUM, Linn. From *mesembria*, mid-day, and *anthemum*, a flower. *Linn.* 12, Or. 2, Nat. Or. *Mesembryaceae*. This beautiful and well-known genus of succulents is very easily cultivated. If they are intended to remain in pots, a light sandy loam will suit them best; but if they are planted out in a dry hot border, they will flower more profusely. Many of the kinds are very beautiful objects for the flower-garden; for this purpose, cuttings should be struck in the autumn, and allowed to remain in the store-pots all winter. A dry pit or frame, where frost is excluded, is sufficient for their protection in winter. Cuttings of the most succulent kinds should be allowed to dry a little after planting before water is given, after which they root readily. *M. cdute* is the Hottentot-fig, the leaves of which are eaten. *M. nodiflorum* is used in making Maroquin leather. *Synonymes*: 1, *M. stellatum*; 2, *M. Candollei*; 3, *M. purpureo-crœcum*; 4, *M. dividiatum*; 5, *M. parviflorum*; 6, *M. magnipunctatum*; 7, *M. micranthum*; 8, *M. canescens*; 9, *M. hirsutum*; 10, *M. hispidum*. See *Hymenogyne*.

MESHES, the openings in any tisse.

MESOCHLÆNA, *R. Brown*. From *mesos*, middle, and *chlaina*, a cloak. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove ferns.

asplenoides . . .	Yellow	.5, S. Her. P.	1 E. Ind.
javânica . . .	Yellow	.5, S. Her. P.	1 E. Ind.
molucaña . . .	Yellow	.6, S. Her. P.	1 Moluccas

MESOGLOIA. From *mesos*, middle, and *gloios*, viscid; the spines of the branches are in a solid mass. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. This genus is entirely composed of marine plants. *Synonymes*: 1, *Rivularia verticillata*; 2, *R. vermiculata*—capillaris, coccinea 1, Grifithsiána, Hudsoni, multifida, purpurea, vermicularis, v. coriacea 2, viréscens.

MÉSPILUS, *Linn.* From *mesos*, a half, and *pilos*, a bullet; in allusion to the resemblance the fruit bears to half a bullet. *Linn.* 12, Or. 2, Nat. Or. *Pomaceæ*. The *Mespilus*, or *Medlar*, is a genus of low-growing trees; they are very ornamental, and are therefore worth a place in every shrubbery. Any common soil snits them, and they are readily increased by budding or grafting on the common Hawthorn, or they may be increased by seeds, which do not vegetate till the second year after sowing. *Synonymes*: 1, *M. grandiflora*, *M. Smithii*. See *Amelanchier*, *Cotoneaster*, *Crataegus*, *Eriobóttria*, and *Photinia*.

MÉSUA, *Linn.* In honour of Mesue, the father and son, two celebrated Arabian physicians and botanists; they resided at Damascus, and flourished in the eighth and ninth centuries. The works of the son were published at Venice in 1581. *Linn.* 16, Or. 7, Nat. Or. *Clusiaceæ*. This tree is well deserving of cultivation on account of its beautiful orange and white sweet-scented flowers, which contrast finely with the dark-green foliage. It attains the

height of fifty feet, and grows best in a mixture of strong loam, peat, and sand. Young plants are commonly obtained from seeds; cuttings will root in sand, under a glass, but not freely. The wood is used for a variety of purposes in the East Indies, being considered harder and more durable than most other Oriental timber. The dried blossoms may be found under the name of *Nagkesur* in every bazaar in India; they are used in medicine, and universally esteemed for their fragrance.

METRODÓREA, *St. Hil.* Named after Metrodoro Sabino, a botanical artist. *Linn.* 5, Or. 1, Nat. Or. *Rutaceæ*. A pretty little shrub, requiring sandy loam and peat, and to be increased by cuttings planted in sand, under a glass, in heat.

nigra . . .	Purple	.4, S. Ev. S.	6 Brazil	1848
-------------	--------	---------------	----------	------

METROSÍDEROS, *Gaertner*. From *metra*, the heart of a tree, and *sideros*, iron; on account of the hardness of the wood and pith of the trees. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. These plants are well worth a place in every collection of greenhouse plants. They grow best in loam, peat, and sand, well incorporated, and young plants are readily obtained from cuttings of the young wood planted in sand, under a glass. *Synonymes*: 1, *Leptospermum ambiguum*; 2, *M. scândens*; 3, *L. scândens*. See *Acmena*, *Angóphora*, *Callistemon*, *Leptospermum*, *Billôtia*, *Eucalyptus*, and *Melalcuca*.

MICROSTÉPHIUM. See *Osteospermum*.

MICRÓSTYLIS, *Nuttall*. From *mikros*, small, and *stylos*, a column; in allusion to the very small column. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A genus of plants possessing little to recommend them. The Mexican species should be kept in the greenhouse, and grown in sandy peat; they come up in spring when they flower, after which, the leaves die down, and the plants remain dormant till the following season; they are increased by dividing the roots. *Synonyme*: 1, *Liparis pa-*

rockilus; 2, *Malaxis Porthoni*. See *Pul-tenceæ*.

MILLINGTONIA, Roxburgh. In honour of Sir T. Millington, professor of botany at Oxford. *Linn.* 14, Or. 2, Nat. Or. *Sapindaceæ*. An ornamental-growing tree. For culture and propagation, see *Jacaranda*.

simplicifolia . Yel. . 5, S. Ev. T. 20 E. Ind. . 1823

MILLINGTONIACEÆ. See *Sapindaceæ*.

MILTONIA, Lindley. Thus named in compliment to Earl Fitzwilliam, one of the oldest and steadiest friends of Natural Science in this country, and a great lover of *Orchidaceæ*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The flowers of these plants are strikingly handsome; the sepals and petals of *M. spectabilis* are delicate cream-colour, and the labellum, which is very large, is elegantly marked with various shades of purple, deepest towards the base. In *M. candida*, the sepals and petals are yellow-brown, and the labellum pure white, finely marked with pink. In potting these plants, the peat should be raised, for a well-grown, good-sized plant, two or three inches, in the same way as recommended for *Stanhopeas*; and the creeping stems, from which the pseudo-bulbs grow, ought to be entirely on the surface, and if necessary, they may be fastened to the peat with hooked pegs. The best way of propagating the species of this genus is, first, to cut the stem half through, which will cause young plants to be sent out; and, finally, to cut them through a month before dividing. They require a hot part of the house. *Synonymes*: 1, *Cyrtochilum flavescens*; 2, *Odontoglossum Clowesii*; 3, *Oncidium Russeltianum*; 4, *Cyrtochilum stellatum*; 5, *Macrochilus Fryanus*. See *Brassia*.

MIMOSA, Adanson. From *mimos*, a mimic; the leaves of many of the species mimic animal sensibility. *Linn.* 23, Or. 1, Nat. Or. *Fabaceæ*. The leaves of several of the species belonging to this genus are more or less sensitive to the touch, but none so much so as *M. pudica*; they are, on that account, well worth cultivating. They grow well in loam and peat, with a little sand; and cuttings of the young wood will root in sand, under a glass. They may also be increased by seeds. See *Acacia*, *Darlingtonia*, *Entada*, *Gagnebina*, *Inga*, *Lagonychium*, *Neptunia*, and *Prosopis*.

MIMULUS, Linn. From *mimo*, an ape or actor; so named because of the ringent corollas of the species. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. Most of these plants are showy, and worth cultivating, particularly the hardy herbaceous kinds, which are well suited for ornamenting flower-borders; they thrive in any common garden soil, and are readily increased by divisions of the roots, or by seeds. The greenhouse and frame species will grow well in light rich soil, and may be increased by cuttings in the same kind of soil, under a glass. The seeds of the annual kinds may be sown where the plants are intended to remain. The leaves of *M. guttatus* are eatable as salad. *Synonymes*: 1, *M. propinquus*; 2, *M. luteus*;

3, *M. Hodsni*. Sec *Leucocarpus* and *Diplacus*.

MINA, *Llave* and *Lexarza*. Named after Don Francisco Xavier Mina, a Mexican minister. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceæ*. A very curious and beautiful plant, used for decoration by the Mexicans. When not in flower it appears like an *Ipomœa* in foliage, and when in flower, if the leaves were removed, it loses all appearance of the order to which it belongs. Its flowers being racemose, and arranged similar to a Borage, the blossoms are at first rich crimson, changing as they open to orange and pale yellow. It requires the same treatment as *Ipomœa*.

MIOGA. See *Zingiber Mioga*.

MIRABILIS, *Linn.* From *mirabilis*, wonderful; alluding to the flowers. *Linn.* 5, Or. 1, Nat. Or. *Nyctaginaceæ*. Few plants make a more handsome appearance when in flower, either in the greenhouse or open border. They grow well in any light rich soil, and are increased by seeds. They may be planted out in the open border in spring, where they will do as well as in the greenhouse; at the approach of winter the roots must be taken up, and kept dry and free from frost.

MOHAUT. See *Hibiscus arboreus*.

MOHO-MOHO. See *Piper angustifolium*.

MOHOE. See *Hibiscus arboreus*.

MÓHRIA, *Swartz*. In honour of M. Mohr, an eminent botanical writer. *Linn.* 24, Or. 1, Nat. Or. *Polyodiaceæ*. Greenhouse fern.

thurifruga . . Brn. yel. 6, G. Her. P. 1 C. G. H. 1842

MOLDAVIAN BALM. See *Dracocéphalum moldavicum*.

MOLDENHAUËRA, *De Candolle*. In honour of John James Moldenhauer, a botanical author. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. For culture and propagation, see *Hardwickia*.

floribunda . Yellow . 5, S. Ev. S. 12 Brazil . . 1828

MOLINÆA. See *Cupania*.

MOLINA. See *Baccharis*.

MOLINÈRIA, *Calladon*. After Ignatio Molineria, director of the botanic garden at Turin. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. This little plant thrives well in peat and loam, and is increased by divisions.

plicata . . Scar. yel. 8, S. Her. P. 1 Java . . 1820

MOLÍNIA, *Mench*. In honour of J. Molina, a writer upon Chilean plants, in 1782. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Weeds not worth growing in any collection. *Synonyme*: 1, *Mélica cærulea*—*cærulea* 1, *depauperata*, *sylvatica*. See *Cupania*.

MOLLE, soft, pliable.

MOLLIA. See *Polycarpæa*.

MOLLÛG, *Linn.* A name applied by Pliny to a plant supposed to be the same as our *Galium Mollugo*; given to this genus because of the resemblance of the species. *Linn.* 3, Or. 3, Nat. Or. *Caryophyllaceæ*. Stove annuals of no beauty. *Synonymes*: 1, *M. dichotoma*; 2, *M. Linkii*—*hirta*, *oppositifolia*, *Schránkii* 1, *triphylla* 2, *verticillata*. See *Pharnaceum*.

MOLLÛG. See *Galium Mollugo* and *Pharnaceum Mollugo*.

MOLOPOSPÉRMUM, *Koch*. From *molops*, a stripe, and *sperma*, a seed; the fruit has the appearance of being striped. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. This plant grows in any common

- soil, and is increased by dividing at the root, or by seeds. *Synonyme*: 1, *Ligusticum peloponesiacum*.
peloponesiacum Pa. yel. 6, Her. P. 4, Switzerl. 1598
- MÓLTKIA**, *Don*. In honour of Count Gadske Moltke, a Danish noble. *Linn.* 5, Or. 1, Nat. Or. *Boraginææ*. An elegant plant, well worthy of cultivation. See *Onösmä*.

MONNIÈRE, Aublet. In honour of William le Moonnier, once professor of botany in the Jardin du Roi, at Paris. *Linn.* 17, Or. 1, Nat. Or. *Rutaceae*. A stove annual, of no beauty—*trifolia*.

MONNINA, Ruiz and Pavon. In honour of Monnino, Count de Florida Blanca, a Spanish promoter of botany. *Linn.* 17, Or. 3, Nat. Or. *Polygalaceae*. An ornamental shrub, growing in peat and loam, and increased by cuttings or seed.

erotalarioides . Black . 8, G. Ev. Cl. 2, Peru . 1810
obtusifolia . Red . 6, G. Ev. S. 2, Peru . 1830

MONOCERA, Jack. See *Dicera*.

MONOCHÆTUM. See *Arthrostemma*.

MONOCHILUS, Fischer and Meyer. Derived from *monos*, one, and *cheilos*, a lip; alluding to the flower. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceae*. A pretty plant, growing in a mixture of light loam, peat, and sand, and thriving well if treated like other tuberous stove plants.

gloxiniifolius . . . S. Tu. P. . 1838

MONOCHLAMYDÆÆ. A large division in botany, consisting of plants that have only one envelope in the flower; from *monos*, one, and *chlamys*, a coat.

MONOCOTYLEDONOUS, having only one seed-leaf or cotyledon.

MONODORA, Dumont. From *monos*, one, and *dora*, a skin; in allusion to the fruit being one-celled. *Linn.* 13, Or. 6, Nat. Or. *Anonaceae*. This plant thrives in a light sandy loam; and ripened cuttings root in sand, under a glass, in a moist heat. *Synonyme*: 1, *Anona Myristica*.

Myristica 1 . Yel. red 5, S. Ev. S. 20 Jamaica . 1843

MONŒCIA. The twenty-first class of the Linnæan system of Botany.

MONŒCIOUS, having the one sex in one flower, and the other in another, on the same plant.

MONOGRAMMA, Sch. From *monos*, one, and *gramma*, a writing. *Linn.* 24, Or. 1, Nat. Or. *Polypodaceae*. *Synonymes*: 1, *Grámmis furcata*; 2, *G. trichoidea*.

furoata 1 . Brn. yel. 6, S. Her. P. 1 Trinidâd . 1825
graminea . Brn. yel. 6, S. Her. P. 1 W. Indies 1830

MONOÏNYA. Order one of the Linnæan system of botany.

MONOLŒPIA, De Candolle. From *monolopus*, a single covering; structure of involucre. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. A showy hardy annual, bearing bright yellow flowers. It continues to blossom during summer, and is increased by seeds. *Synonyme*: 1, *Helénium Douglâsii*.

mâjor 1 . Yellow . 7, H. A. 3 California . 1834

MONOMERIA, Linn. From *monos*, one, and *meris*, a part. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. For culture, see *Epidendrum*.

barbata . . . Spotted . 5, S. Epi. 1 India . 1841
nitida . . . Yel. pk. . 6, S. Epi. 1 Mexico . 1841

MONOPÉTALOUS, having only one petal.

MONŒPSIS, Salisbury. From *monos*, one, and *opsis*, a face; the flowers are regular, not bilabiate. *Linn.* 5, Or. 1, Nat. Or. *Lobeliaceae*.

M. conspicua deserves a place in every garden because of its neat, elegant, deep-blue flowers. The seeds should be raised on a hot-bed, and when the plants are about an inch high, planted singly into pots, in a mixture of peat and sand; or they may be planted out in a sheltered situation in the open border in May. *Synonyme*: 1, *Lobelia spëculum*.

conspicua 1 . Blue . 7, H. A. $\frac{1}{2}$ C. G. H. . 1812
inconspicua . purp. . 7, H. A. $\frac{1}{2}$ C. G. H. . 1812

MONOSEPALOUS, having only one sepal.

MONOSTACHYA, one-spiked.

MONOTÁXIS, Brongniart. From *monos*, one, and *taxis*, a series; in allusion to the male and female flowers. *Linn.* 21, Or. 2, Nat. Or. *Euphorbiaceae*.

simplex . . Green . 7, G. Ev. S. 3 N. Holl. . 1842

MONŒTOCA, R. Brown. From *monos*, one, and *tokos*, a birth; the fruit is one-seeded. *Linn.* 5, Or. 1, Nat. Or. *Eupuridaceae*. Very elegant plants; for culture and propagation, see *Leucopogon*. The pots must be well drained with potsherds. *Synonyme*: 1, *Styphëlia glauca*.

alba . . . White . 6, G. Ev. S. 6 N. S. W. . 1824
elliptica . . . White . 6, G. Ev. S. 6 N. S. W. . 1802

MONŒTROPÀ, Linn. From *monos*, one, and *tropes*, to turn; the flowers are turned one way. *Linn.* 10, Or. 1, Nat. Or. *Ericaceae*. Curious parasitical plants, growing on the roots of beech and pine trees in shady moist places.

Hypópitys . White 6, H. Her. P. $\frac{1}{2}$ Brit. woods .
uniflora . White 6, H. Her. P. $\frac{1}{2}$ N. Amer. . 1824

MONOTROPÆÆE, or FIR-RAPES. A small order of parasitic plants growing on the roots of fir trees. Several species are delightfully fragrant.

MONSŒNIA, Linn. In honour of Lady Ann Monson, the assistant of Lee in his Introduction to Botany. *Linn.* 16, Or. 7, Nat. Or. *Geraniaceae*. This is a genus of beautiful plants, delighting in a mixture of turfy loam and leaf-mould. *M. ovata* is increased by seed, and the others may be propagated by cuttings, or by dividing the roots. *Synonyme*: 1, *M. speciosa*. See *Sarcocaulon*.

lobata . . . Purple . 5, G. Her. P. 1 C. G. H. . 1774

- MORINGÆCÆ, or MORINGIADS.** These are a small group of very curious little trees, not unlike plants belonging to *Fabacæ*, but in some of their characters are very distinct.
- MORÍSIA, Cassini.** In honour of Professor Moris, who discovered the species. *Linn.* 15, Nat. Or. *Brassicæcæ*. This plant is well fitted for

MORCHEL. See *Morehella*.

MORCHÉLLA, Dillwyn. Derived from *morchel*, the German name of the plant. *Linn.* 24, Or.

- ornamenting rock-work, where its bright yellow flowers contrast well with its deep-green polished leaves; it is increased by seed sown as soon as ripe. See *Eruca*ria.
- hypogæa . Yellow . 6, H. Hor. P. † Sardinia . 1833
- MORISONIA**, *Plumier*. In honour of Robert Morison, a Scotclman, professor of botany at Oxford, who died in 1683. *Linn.* 16, Or. 8, Nat. Or. *Cappari*dæcæ. An ornamental plant, which grows well in a mixture of loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in a gentle heat. *Synonyme*: 1, *Capparis Morisoni*. americana 1 . White . S. Ev. T. 12 W. Indies . 1824
- MORISONDES**, *Lindley*. From *mors*, a frightful-looking object, a goblin; in allusion to the strange appearance of the flowers. *Linn.* 20, Or. 1, Nat. Or. *Orchid*idæcæ. These are very singular plants when in flower. For culture and propagation, see *Catas*tum. *Synonymes*: 1, *M. atropurpurea*; 2, *M. igneum*, *macranthum*; 3, *Cyclot*sia maculata, *Catas*tum citrinum; 4, *Catas*tum Russelliannum.

- MORNA**, *Lindley*. Morna, a heroine of Northern romances. *Linn.* 19, Or. 1, Nat. Or. *Aster*æcæ. This is a genus of very beautiful plants, well deserving of cultivation. They are half-hardy annuals, and may be had to flower in the greenhouse from May to the end of August, if sown at two different seasons. Plants intended to flower in May should be sown the preceding September, and plants for autumn flowering should be sown in February. The seeds should be sown in pots, in sandy peat and leaf-mould, and placed in the greenhouse; the young plants should be potted off when small into sixties, two plants in each pot close to the side, shifting them into larger ones as they require it, keeping them near the glass in a dry, airy part of the house. They must be very cautiously watered, as too much or too little will, in a few hours, destroy the healthiest plants; the pots should therefore be well drained, and the plants should not receive too great a shift at any time. If they are intended to flower in the open border, the plants must not be planted out before the end of May, as the least frost kills them.

- MORONOBIA**, *Aubl.* From *Moronobo*, the native name, *Linn.* 18, Or. 4, Nat. Or. *Clusi*æcæ. It is a beautiful tree, thriving in a mixture of sandy loam and peat. It is propagated by cuttings of the ripened wood, planted thinly in sand, under a glass, in heat. *Synonyme*: 1, *Symphonia globuliflora*. coccinea 1 Scarlet . 6, S. Ev. S. 20 Guiana . 1825
- MORPHIA**. A crystallised salt found in opium.
- MORPHIXIA**. See *Lia*.
- MORRENTIA**, *Lindley*. In honour of Professor Charles Morren, of Liège, one of the most distinguished botanists and vegetable anatomists of his day. *Linn.* 5, Or. 2, Nat. Or. *Asclepi*adæcæ. This is a very curious little plant, requiring the same treatment as the greenhouse species of *Cynanchum*. odorata . Green . 7, G. Tw. 3, B. Ayres . 1837
- MORUS**, *Linn.* From the Celtic word *mor*, signifying black; in allusion to the colour of the fruit. *Linn.* 21, Or. 4, Nat. Or. *Mor*æcæ. The species of Morus or Mulberry, grow from ten to thirty feet high. Moist situations and a loamy soil suit them best. *M. nigra* is in general cultivation for the sake of its fruit, which is well known. *M. alba* is extensively cultivated as food for silk-worms. *Synonymes*: 1, *M. sinensis*; 2, *M. pumila*, *M. nana*; 3, *M. alba ovalifolia*; 4, *M. sinensis*; 5, *M. pennsylvanica*. See *Broussonetia*, and *Maclura*.

MURUMÚRI. See *Astrocaryum Murumúri*.

MÚSA, *Linn.* Altered from the Egyptian Mauz, in honour of Antonius Musa. *Linn.* 5, Or. 1, Nat. Or. *Musaceæ*. To this genus belong those universally-esteemed fruits the *Banana* and *Plantain*, but from these plants growing to twenty-five or thirty feet high, they are rarely seen in perfection in this country on account of the quantity of room required; but the valuable species, *M. Cavendishii*, does not grow more than four or five feet high, so that any one possessing a moderate-sized house may, with a very little trouble, be rewarded by abundance of its excellent fruit. They all thrive best in a rich soil, requiring plenty of room and moisture; they are increased by suckers, which the old plants produce in abundance. It is considered that no known plant produces anything like the same quantity of nutriment from the same space of ground, as the *Banana*. It is indigenous to all the tropics, and amongst the numerous uses to which it is applied we may mention the following. The tops of the young plants are eaten as a delicate vegetable; the fermented juice of the trunks produces an agreeable wine. The fruit is served up both raw and stewed; slices fried are also considered a delicacy; and, finally, the leaves are used for thatching and basket-making. *Synonyme*: 1, *Ensele Ansétti*.

MYÆORUM, *Tournefort*. From *myia*, a fly, and *agra*, capture; an ancient plant was so named from its properties of catching flies. *Linn.* 15, Nat. Or. *Brossicacæe*. The seed of this pretty annual has only to be sown in the open ground. See *Calepina*, *Camclöna*, *Cochleäria*, *Didösmis*, *Nöslia*, and *Rapistrum*.

perfoliatum . Pa. yel. .6, H. A. $\frac{1}{2}$ France 1648

MYÆANTHUS, *Lindley*. From *myia*, a fly; when the flowers are dried they look very much like a fly pressed flat. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæe*. This is a very curious genus of plants, and, like other plants of a similar habit, they are easily cultivated, provided they are placed in a cool house and kept dry for some months, and afterwards vigorously forced in the same manner as the *Catasëtums*. *Synonyme*: 1, *Catasëtum trifidum*. See *Catasëtum fimbriatum*, *Lansbergii*, and several others.

MYLOCÆRYUM, *Willdenow*. From *myle*, mill, and *karyon*, a nut; the seeds have four wings. *Linn.* 10, Or. 1, Nat. Or. *Celastracæe*. An ornamental species, with the habit of *Andrömeda*; it may be successfully grown in loam and peat, and cuttings will root in sand, under a glass. *Synonyme*: 1, *Cliftönia ligustrina*.

ligustrinum 1 White .5, F. Ev. S. 6 Georgia .

MYOPORÆCÆE, or **MYOPORADS**, are little smooth shrubs, scarcely known in cultivation. The white mangrove (*Avicönnia*) belongs to this order.

MYOPÖRUM, *Banks*. From *myo*, to shut, and *poros*, a pore; in reference to the leaves. *Linn.* 14, Or. 2, Nat. Or. *Myoporacæe*. Pretty shrubs, delighting in a mixture of loam and peat; and

cuttings will root readily in sand, under a glass. *Synonymes*: 1, *Pogonia glabra*; 2, *P. tetrandra*.

MYOSERIS, *Link.* From *mys*, a mouse, and *seris*, succory. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. This species will grow in any common soil, and is increased by divisions. *Synonyme*: 1, *Borkausia purpurea*.

purpurea . Purpl. . 5, H. Her. P. 1½ Tauria . 1824

MYOSOTIS, *Linn.* From *mys*, *myos*, a mouse, and *otos*, an ear; fancied resemblance in the leaves. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceæ*. All the perennial species of this genus are very beautiful, especially *M. palustris*, the Forget-me-not. They grow best in moist places, or by the edges of ponds or ditches; they may also be grown in pots among alpine plants. The annual species like a dry sandy soil. Most of the perennial species may be increased by divisions of the roots, and all by seeds. *Synonymes*: 1, *M. lithospermifolia*, *M. rapicla*, *M. suarvölens*. See *Anchusa*, *Echinosperrnum*, and *Heliotropium*.

MYRIOCCOCUM, *Fries*. From *myrios*, a myriad, and *kokkos*, a berry. *Linn.* 24, Or. 9, Nat. Or. *Mucoracæ*. Found upon dead leaves in the spring—*præcocæ*.

MYRIONEMA, *Greville*. From *myrios*, a myriad, and *nema*, a filament. *Linn.* 24, Or. 7, Nat. Or. *Fucacæ*. This species is only to be met with in the sea—*straguláre*.

MYRIOGYNE, *De Candolle*. See *Grangea*.

MYRIOPHYLLUM, *Linn.* From *myrios*, a myriad, and *phyllon*, a leaf; division of the leaves. *Linn.* 21, Or. 9, Nat. Or. *Onagræaceæ*. Aquatics of some beauty, and common culture.

pectinatum . Rose . 7. H. Her. Aq. 1 Europe . 1828
spicatum . . Red . 7. H. Aq. P. 1 Brit., ditches.
verticillatum . Green . 7. H. Aq. P. 1 Eng., ditches.

MYRIOTRICHIA, *Harvey*. From *myrios*, myriad, and *thrix*, a hair; alluding to the filaments. *Linn.* 24, Or. 7, Nat. Or. *Fucæcæ*. A minute olive-coloured species, found growing on *Chorda lomentosa*—*claviformis*.

MYRISTICA, *Linn.* From *myristikos*, sweet-smelling; odour of the fruit. The well-known Nutmeg. *Linn.* 22, Or. 13, Nat. Or. *Myristicæcæ*. These very interesting plants are seldom to be met with in this country, and are considered difficult to cultivate. A sandy loam suits them best, and cuttings of the ripened wood planted in sand, and placed under a glass, in a moist bottom heat, root freely, and the plants thrive better than imported ones. *Synonymes*: 1, *M. officinalis, aromatica*; 2, *Virella sebifera*.

fátua . . . Gn. wht. 6. S. Ev. T. 25 Surinam . 1812
moschata 1 . Pa. yel. 6. S. Ev. T. 25 E. Ind. . 1795

MYRISTICÆCÆ, or NUTMEGS. Everyone is acquainted with the Nutmeg (*Myristica moschata*), and the mace, which is the envelope surrounding the nut. This tree may be considered a fair type of the order.

MYROBALAN PLUM. See *Prunus domestica myrobálama*.

MYROBALANUS. See *Spondias látca* and *Terminádia Patrea*.

MYRÖDIA, *Sweet*. From *myron*, fragrant balsam, and *osme*, a smell. *Linn.* 16, Or. 8, Nat. Or. *Sterculiæcæ*. This plant prefers a light rich soil; and cuttings will root in sand, under a glass.

turbinata . . White . 5. S. Ev. S. 6 W. Ind. . 1793

MYRÖSMA. See *Phgrrinium Myrösma*.

MYROSPERMUM, *Jacquin*. From *myron*, myrrh, and *sperma*, a seed; the seeds and cells yield a balsam, which has a strong smell. *Linn.* 10, Or. 1, Nat. Or. *Fabæcæ*. *M. toluiferum* is a lofty-growing tree, and both species thrive well in equal portions of loam and peat; and young cuttings will root in sand, under a glass, in heat. See *Myroxylon*.

toluiferum . . Rose 5, S. Ev. T. 40 S. Amer. .
frutescens . . Rose 5, S. Ev. S. 6 Caraccas . 1824

MYROTHÆCIUM, *Tode*. From *myro*, to distil, and *theca*, thecium. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdæcæ*. This plant is found on rotten bog matter—*Carmichælii*.

MYRÖXYLON, *Kunth*. From *myron*, myrrh, and *xylon*, wood; wood sweet-scented. *Linn.* 10, Or. 1, Nat. Or. *Fabæcæ*. This genus of fragrant wooded plants is highly deserving of a place in every stove. *M. perúiferum* is a beautiful tree, growing forty feet or more high, and produces the drug called Balsam of Peru, and *M. toluiferum* produces the Balsam of Tolu. They all grow freely in a mixture of peat and

loam, and cuttings of the young wood root in sand, under a glass, in heat. *Synonyme*: 1, *Myrospermum toluiferum*.

MYRSINITES. See *Euphorbia Myrsinites*.

MYRSIPHÝLLUM, *Willdenow*. From *myrsine*, a myrtle, and *phyllon*, a leaf; resemblance of the leaves. *Linn.* 6, Or. 3, Nat. Or. *Liliæcæ*. A genus of pretty twining plants, thriving well in sandy loam and peat, and readily multiplied by dividing at the root. *Synonyme*: 1, *Meddola asparagoides*.

angustifolium . . Gn. wt. 7. G. De. Tw. 6 C. G. H. 1752
asparagoides 1 . Gn. wt. 6. G. De. Tw. 6 C. G. H. 1702

MYRTÆCÆ or MYRTLE-BLOOMS. To this order belongs the myrtle (*Mýrtus*), the pomegranate (*Punica*), the rose-apple (*Jambôsa*), the guava (*Psidium*), the jamboselle (*Nelitris*), the clove (*Caryophyllus*), the clove-pepper (*Pimenta*), and many plants of the most beautiful character as regards flowers. All deserve cultivation.

MYRTALES are a large botanical division comprising ten orders of beautiful flowering and fruit-bearing plants.

MYRTILLA or MURTILLA. See *Eugenia Ugni*.

MYRTILLUS. See *Vaccinium Myrtillus*.

MYRTE. See *Mýrtus*.

MYRTE BILBERRY. See *Vaccinium Myrtillus*.

MYRTUS, *Linn.* From *myron*, perfume; *myrtos*

of the Greeks; and *myrtus* the Dutch, and of almost every other European language. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. The Myrtle is a favourite and well-known genus of plants, which grow well in sandy loam and peat; and cuttings, if not too ripe, will root freely either in sand or soil, under a glass. *Synonymes*: 1, *Jossinia orbiculata*, *Eugenia orbiculata*; 2, *Jossinia melastomoides*. See *Eugenia*, *Mýrcia*, *Olynthia*, and *Pimenta*.

NABK. See *Zizyphus Lotus*.

NAGÉLIA. See *Achimenes*.

NÉMÁSPORA, *Persoon*. From *nema*, a thread, and *spora*, a sporule. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Very minute plants, found on dead branches of Hornbeam, &c.—*carpini*, *cræca*, *filanensis*, *Röscæ*.

NEMATÉLIA, *Fries*. From *naima*, gelatine, and *ello*, to contain; in allusion to the nucleus in the receptacle. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. A curious flesh-coloured species, growing on partially decayed pine-wood—*en-céphala*.

NEMATOSTIGMA. See *Libertia*.

NAGÉIA, *Gærtner*. From *Nagi*, the Japanese name of the plant. *Linn.* 22, Or. 4, Nat. Or. *Myricaceæ*. Plants of no great beauty, growing best in a good rich loam; and cuttings of the ripened wood root in sand, under a glass, in a strong heat.

cuspidata	Apetal 3, F. Ev. S. 10	Japan	1812
japónica	Apetal 3, G. Ev. S. 6	Japan	1812
Putranjiva	Apetal 3, F. Ev. S. 10	E. Ind.	1822

NAGÉLIA, *Lindley*. After M. Nagéli, the fellow-worker of Schleiden in botanical investigation. *Linn.* 12, Or. 2, Nat. Or. *Pomaceæ*. A genus founded on a plant separated from *Cotonæster*. *Synonyme*: *Cotoncæster denticulata*.

denticulata 1	White 5, H. Ev. S. 4	Nepal?	
-------------------------	----------------------	------------------	--

NAGHEL. See *Caryophyllus aromaticus*.

NAGESUR. See *Mésua ferruca*.

NAGLA-RAGEE. See *Elcúsine coracána*.

NAGUR-MOCTHA. See *Cyperus portensis*.

NAIADACEÆ, or NAIADS, are small water-

plants inhabiting both the ocean and our brooks and rivers. They do not possess beauty, and are therefore scarcely worth cultivating.

NAIN FLAGOLEF. See *Phaseolus tumidus*.

NAJAS, *Linn.* From *naias*, a water-nymph; on account of the habitation of the plant. *Linn.* 21, Or. 5, Nat. Or. *Naiadaceæ*. A curious plant, of very simple culture. *Synonyme*: 1, *monosperma*.

major 1	Rose . 7, H. Aq. A. ½	Europe	1816
-------------------	-----------------------	------------------	------

NAKED, without hairs, leaves, or branches, &c.

NAKED-BARLEY. See *Hordeum calæste*.

NAKED-CAT. See *Avina nuda*.

NAKEDISH, nearly destitute of hairs, leaves, &c.

NAMA, *Don*. From *nama*, a stream of water; habitat of plants. *Linn.* 5, Or. 2, Nat. Or. *Hydroleaceæ*. Pretty plants, growing in a mixture of peat and sandy loam, and increased by seeds and division of the roots.

jamaïcensis	Wht. bl. 6, S.	A 1	Jamaica	1812
undulata	Violet . 6, G. Her. P. 1	Mexico	1826	

NANANTHÆA, *De Candolle*. See *Chrysanthemum*.

NANDINA, *Thunberg*. *Nandin*, or *Nand-scof*, is the name of the shrub in Japan. *Linn.* 6, Or. 2, Nat. Or. *Berberidaceæ*. This is a handsome plant, growing in a mixture of loam and peat; and ripened cuttings will root in sand, under a glass, provided the leaves are not shortened.

doméstica	Grn. brn. 7, G. Ev. S. 6	China	1804
---------------------	--------------------------	-----------------	------

NANODES, *Lindley*. From *nanodes*, pigmy; in allusion to the small size of both plant and flowers. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is among the most curious of orchidaceous plants; its flowers are completely embosomed by the leaves, and so similar in colour, that it would scarcely be observed to be in flower, even if every branch were blossoming. It is rather difficult to cultivate, but will be found to succeed best treated after the manner of *Burlingtonia*.

discolor	Purplsh. gn. 8, S. Epi. ½	Brazil	1827
--------------------	---------------------------	------------------	------

NAPÆA. See *Sida*.

NAPÉLLUS. See *Aconitum Napellus*.

NAPHA WATER is a perfume distilled from orange flowers.

NAPIFORM, formed like a turnip, tuberous.

NAPOLEON'S WEEPING WILLOW. See *Salix Napoleóna*.

NAPOLEONA, *Palis*. After the Emperor Napoleon. *Linn.* 13, Or. 1, Nat. Or. *Myrtaceæ*. Amongst the most remarkable plants that have hitherto been discovered ranks this rare species, of which living plants were brought in 1844 from Sierra Leone, by Mr. Whitfield. It forms a bush about as large as a *Camellia*; and some idea of the structure of its flowers may be formed, when we state that the species has been referred to the natural order *Passifloraceæ* by some botanists, and to *Cucurbitaceæ* by others. The propagation of this plant may be effected by cuttings, and in other respects its treatment should resemble that of *Gardénia*, and other first-class stove plants. *Syn.* 1, *Whitfieldii*.
imperialis 1 Ap. and crim. S. Ev. S. 4 S. Leone 1844

NÁPUS OF RAPE. See *Brássica Napus*.

NARAVELLA, *Decandolle*. From *Narawal*, its name in Ceylon. *Linn.* 13, Or. 6, Nat. Or. *Ranunculaceæ*. A mixture of sandy loam and peat suits this species, and cuttings of the young wood will root readily in sand, under a glass, in heat. *Synonyme*: 1, *Atrágene zeylánica*.

zeylánica . . . Yellow 5, S. Ev. Cl. 10 Ceylon . 1796

NARCISSALES, or NARCISSAL ALLIANCE, includes, as at present constituted, six orders, of which the Bromel-worts and Amaryllids may be taken as examples.

NARCISSUS, *Linn.* From *narke*, stupor; on account of the effects produced by the smell upon the nerves. *Linn.* 6, Or. 2, Nat. Or. *Amaryllidaceæ*. This is an old and very popular flower of great beauty, and some of the species are highly fragrant. They are all of very easy culture, growing well in any light sandy soil, or in glasses of water, and increased by offsets from the bulbs. *N. poeticus*, and one or two more, are well known to be emetic. *Synonymes*: 1, *radiiflorus*; 2, *tridéndrus*; 3, *orientalis*, var.; 4, *Corbulária conspicua*; 5, *Quétia cóncolor*; 6, *Narcissus præcox*; 7, *bicolor*; 8, *Ajax máximus*; 9, *Narcissus Tazetta*; 10, *tridórus*; 11, *calathinus*; 12, *unicolor*, *nóvius*; 13, *poeticus*, *majális*; 14, *moschatus*; 15, *festalis*; 16, *Phyllogyme minor*; 17, *calathinus*, *odórus*, *tripártitus*.

NARCOTIC, producing sleep or torpor.
NARDOSMIA, *De Candolle*. See *Trussilago*.

NARDOSTACHYS JATAMANSI is supposed to be the true spikenard of the ancients; it is probably not yet introduced into our collections, although seeds and specimens have been found in this country by several travellers.

NARDUS, *Linn.* From *nardos*, in Greek, and *nard*, in the Hebrew; having a peculiar smell. *Linn.* 3, Or. 1, Nat. Or. *Graminææ*. An insignificant species, growing on moist heaths in many parts of Britain.

stricta . . . Apetal. . 6, H. Grass $\frac{1}{2}$ Brit. heaths.

NARROWED, tapering.

NARTHÉCIUM, *Mohring*. From *narthex*, a red; referring to the stem. *Linn.* 6, Or. 1, Nat. Or. *Liliææ*. Iris-looking plants, which grow in turfy peat, and are multiplied by divisions.
americanum . Yel. 7, H. Her. P. $\frac{1}{4}$ N. Amer. . 1811
ossifragum . Yel. 7, H. Her. P. $\frac{1}{4}$ Brit. bogs.

NARTHÉX, the name of *Asafœtida* in Dioscorides. *Linn.* 5, Or. 2, Nat. Or. *Apiææ*. For culture, &c., see *Férula*. *Synonymes*: 1, *Férula asafœtida*, *Asafœtida disjunensis*.
asafœtida 1 . . Yel. 7, H. Her. P. 6 Persia . . 1835

NARUM. See *Udnâ Narum*.

NASEBERRY-TREE. See *Achras Zapotilla*.

NASÔNIA, *Lindley*. From *naso*, a nose, in allusion to the column. *Linn.* 20, Or. 1, Nat. Or. *Orchidææ*. A genus of Orchids, of which we possess little information.
sanguinea . Carmine . 2, S. Epi. $\frac{1}{4}$ Tolima . . 1843

NASTÛRTIUM, *R. Brown*. From *nasus*, the nose, and *tortus*, tormented; the acidity of *N. officinale* affects the muscles of the nose. *Linn.* 15, Nat. Or. *Brassicææ*. Few of these plants are worth cultivating; they are of the simplest culture. The seeds of the annual kinds have only to be sown in the open ground in spring. *Synonymes*: 1, *Sisymbrium nasturtium*; 2, *S. terrestre*; 3, *S. sylvestre*. See *Notôceras*.

erectum . . Yel. . 6, H. A. 2 Siberia . . 1837
nânsus . . . Yel. . 7, H. Aq. P. 8 Siberia . . 1827
officinale 1 . White . 6, H. Aq. P. 1 Brit. rivulets.
amphibium, *indicum*, *varifolium*, *bengalense*, *bursifolium*, *clandestinum*, *coronopifolium*, *indicum*, *lippisense*, *pabistre* 2, *pyrenæicum*, *sagittatum*, *sylvestre* 3.

NASTUS, *Jussieu*. *Nastos* is the Greek name for

a kind of reed. *Linn.* 6, Or. 1, Nat. Or. *Graminææ*. A curious species of grass, requiring the heat of the stove and a good sandy peat soil; it is increased by suckers. *Synonymy*: 1, *Bambusa latifolia*.

latifolia 1 . Green . 5, S. Grasa 20 Cumana . 1818

NASÛTUS, having a fancied resemblance to the nose.

NÂTANS, floating, swimming.

NATCHNEE. See *Eleusine coracana*.

NATIVE CARROT OF VAN DIEMEN'S LAND. See *Geranium parviflorum*.

NATIVE CURRANT OF TASMANIA. See *Leucopogon Richei*.

NATIVE GUM, or GUM GUALACUM. See *Gualacum officinale*.

NATIVE POTATO OF TASMANIA. See *Gastrodia Sesamoides*.

NÂTRIX. See *Ondnis Nâtrix*.

NATURAL MARMALADE. See *Achras mammæa*.

NAÛCLEA, *Linn.* From *nauis*, a ship, and *kleio*, to inclose; the half capsule is hull-shaped. *Linn.* 5, Or. 1, Nat. Or. *Cinchonææ*. A noble genus of plants, producing their flowers in large round heads. They grow well in a rich loamy soil, and young plants may be obtained from layers or cuttings. See *Adina* and *Uncaria*.

<i>Cadamba</i> . . .	Orange . 5	S. Ev. S. 20	E. Ind. . 1800

<i>squarrosa</i> 1 . . .	Blue . . 7,	H. An. 1	Vera Cruz . 1847

NAVELWORT. See *Cotyledon*.

NAVICULAR, boat-shaped.

NEAPOLITAN VIOLET. See *Viola odorata pallida-plena*.

NEBELLIA, *Necker*. Derivation unknown. *Linn.* 5, Or. 2, Nat. Or. *Bruniææ*. For culture, see *Brunia*.

<i>afinis</i> . . .	White 6,	G. Ev. S. 1 $\frac{1}{2}$	C. G. H. . 1816
<i>phylicoides</i> . . .	White 6,	G. Ev. S. 2	C. G. H. . 1823

NEB-NEB. See *Acacia nilotica*.

NEBULÔSUS, cloudy, dingy.

NECK; the upper tapering end in bulbs, or other plants, is called the neck.

NÉCKERA, *Hedwig*. In honour of N. J. Necker, a famous German botanist. *Linn.* 24, Or. 5, Nat. Or. *Bryacææ*. This is a beautiful genus of mosses; the plants are found in woods,

upon trees, and rocks—*crispa*, *pennata*, *pumila*.
See *Anémodon* and *Daltonia*.

NECKLACE-TREE. See *Ornòsia dasycarpa*.

NECTARIAL, of, or belonging to the nectary.

NECTARIFEROUS, bearing honey, or nectaries.

NECTARIFEROUS-TUBE in *Pelargonium* is the tube or swelled part at the top of the pedicel.

NECTARINA. See *Persica lævis*.

NECTARINE. See *Persica lævis*.

NECTARIUM, nectary, that part of a flower which produces honey.

NECTAROSOCORDUM, *Lindley*. From *nektar*, honey, and *skorodon*, garlic; in allusion to the honey-pores in its flowers, Honey-garlic. *Linn.* 6, Or. 1, Nat. Or. *Liliacæ*. This is an ornamental plant, succeeding well in any common soil, and increased by offsets. *Synonyme*: 1, *Allium siculum*.
sculum I . . . Pur. wht. 6, H. Bl. P. 3 Sicily . 1832

NÉCTRIS. See *Cabomba*.

NEEM-TREE. See *Melia Azadirachta*.

NEÉMDA. See *Buddleya Neémda*.

NEGRO GUINEA CORN. See *Sorghum vulgare*.

NEGRO'S-HEAD PALM. See *Phylélephas macrocarpa*.

NEGUNDIUM. See *Negundo*.

NEGUNDO, *Mæneh*. The meaning is unknown to us. *Linn.* 22, Or. 5, Nat. Or. *Aceracæ*. Fine ornamental trees, well suited for ornamenting the back of shrubberies. A light soil suits them best, and they are easily propagated by layers or seeds. *Synonyms*: 1, *Acer Negundo*, *Negundium americanum*.
fraxinifolium 1 Green . 4, H. De. T. 30 N. Amer. 1688
crispum . . . Green . 4, H. De. T. 30 N. Amer. 1688
violaceum . . . Green . 4, H. De. T. 30 N. Amer.

NEGUNDO. See *Vitex Negundo*.

NEHAL. See *Marattia alata*.

NEILLIA, *D. Don*. Named in honour of Patrick Neill, LL.D., secretary to the Caledonian Horticultural Society. *Linn.* 12, Or. 2, Nat. Or. *Homalinacæ*. Little shrubs of easy growth in common garden soil, and increased by cuttings of the young wood.
rubiflora . . . White . 7, H. De. S. 6 Nepal . 1850
thyriflora . . . White . 7, H. De. S. 6 Nepal . 1850

NEIPPÉRGIA. See *Acineta*.

NEJA, *Don*. Meaning unknown. *Linn.* 19, Or. 2, Nat. Or. *Asteracæ*. A worthless greenhouse herbaceous plant, growing in any common soil, and increased by seeds—*gracilis*.

NÉLITRIS, *Gærtner*. From *ne*, privative, and *elytron*, a seed-vessel; the berry is without any partitions. *Linn.* 12, Or. 1, Nat. Or. *Myrtacæ*. An ornamental genus; for culture and propagation, see *Psidium*. *Synonyme*: 1, *Psidium decaspernum*.

paniculata . White . 5, S. Ev. S. 10 Moluccas . 1820

NELSONIA, *R. Brown*. In honour of D. Nelson, the botanist who accompanied the circumnavigator Captain Cook. *Linn.* 2, Or. 1, Nat. Or. *Acanthacæ*. A stove herbaceous plant, not worth cultivating—*hirsuta*.

NELUMBIACÆE or WATER-BEANS. These are remarkable for the beauty of their flowers.

Nelumbium speciosum is supposed to be the ancient Egyptian *Lotus*, so popular in the history of that country. The nuts of all are eatable and wholesome.

NELUMBIUM, *Jussieu*. From *nelumbo*, the Cingalese name of *N. speciosum*. *Linn.* 13, Or. 6, Nat. Or. *Nelumbiacæ*. This is a genus of very interesting plants, which require to be grown in a rich loamy soil. The tank or tub in which the plants are grown should be kept full of water while the plants are growing, but may be allowed to get dry when the flowering season is over. They require to be grown in a strong heat, or they will not flower well; they may be increased by dividing the roots, but they are more readily increased by seeds. The fruit of *N. speciosum* is supposed to be the Egyptian bean of *Pythagoras*.

NEMACOMA. See *Ponera*.

NEMATANTHUS, *De Candolle*. From *nema*, a thread, and *anthos*, a flower, in allusion to the pendant thread-like peduncles on which the flowers are suspended. *Linn.* 14, Or. 2, Nat. Or. *Gesneracæ*. A genus of fine stove climbers, producing from the axils of the leaves large deep crimson blossoms, upon very long peduncles. It thrives in turfy heath-mould mixed with moss, and is increased with the greatest facility by cuttings, and probably by single leaves, as *Glozania*. *Synonyms*: 1, *Drymonia longipes*; 2, *N. corticola*, *Morelliana*; 3, *Columnea splendens*.

NEMOLÁPATHUM. See *Rimex Nemolápathum*.

NEMOPÁNTHEs, *Rafinesque*. From *nemos*, a grove, and *anthos*, a flower; habitat of the plant. *Linn.* 22, Or. 5, Nat. Or. *Aquifoliacæ*. This is an ornamental plant, thriving well in peat soil, and readily increased by layers or seeds. *Synonyms*: 1, *fascicularis*, *Nex canadensis*.
canadensis I . White . 5, H. De. S. 6 N. Amer. 1812

NEMÓPHILA, *Barton*. From *nemos*, a grove,

and *phileo*, to love; the plants delight in a shady situation. *Linn.* 5, Or. 1, Nat. Or. *Hydrophyllaceæ*. This is a genus of very pretty annuals, all of which are well worth cultivating; they grow and flower best in a moist shaded situation, and a peat or vegetable soil. If the plants are wanted to flower early, the seed should be sown on a hotbed, and afterwards transplanted; but if not wanted to flower before late in summer, they may be sown in the open border. *Synonymes*: 1, *Hydrophyllum appendiculatum*; 2, *Phacelia parviflora*, *Eritoca parviflora*.

NEPAL-BARLEY. See *Hordeum caeleste trifurcatum*.

NEPENTHACEÆ or **PITCHER-PLANTS**. These highly curious plants are all natives of swamps in tropical countries. The order at present contains but one genus.

NEPENTHES, *Linn.* This is a name under which Homer speaks of a substance, probably opium; but in what way it is applied to this plant we do not know. *Linn.* 22, Or. 13, Nat. Or.

Nepenthaceæ. The various species of *Nepenthes* are extraordinary and singular plants, well known under the name of Pitcher Plants; they deserve to be grown in every collection: some attain the height of twenty or even thirty feet, when their appearance is inconceivably singular from the fine large pitchers which hang gracefully from the points of the strongest leaves. Many have supposed them to be extremely difficult of cultivation, but we have not found the least difficulty in cultivating all the species; indeed, we question whether the plants at Chatsworth are not finer than plants growing in and enjoying all the advantages of their native soil. Experience has clearly taught us that heat at the roots is as necessary to the successful growth of these plants as a heated atmosphere is indispensable to their stems and leaves. The plants should be potted in a compost of a little coarse fibrous peat, mixed with a greater portion of Hypnum Moss, and the pots to be then immersed in moss, the heat of which should not be less than eighty degrees, while the heat of the house need not be, except in summer, more than seventy. The moss in which the plants are plunged should be kept rather wet, so that a constant but general humidity is given off, which rises among them, and thus strengthens, while it promotes their growth. Offsets are thrown out from the base of the stem of old plants, which, when a few inches long, or when each offset has made three or four leaves, are taken off, and potted singly into thirty-two-sized pots, using the same kind of compost, and plunging them in the moss, as before directed, and as the plants grow, and the rootlets in the pot become numerous, an additional sized pot should be given to each, using precisely the same materials as before, observing to secure a good open drainage at the bottom of each; young plants may also be obtained from seeds. *Synonymes*: 1, *Phyllamphora mirabilis*, *P. cantharifera*.

NERIUM, *Linn.* From *neros*, humid; alluding to the habit of the plants. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. This is a genus of noble evergreen shrubs, of easy culture, and flowering freely the greater part of the year. *N. oleander* and its varieties bear forcing remarkably well, and although treated as greenhouse plants, yet they will not flower well unless they are kept in the stove; they grow well in any rich light soil, and young cuttings root in any soil if kept moist. The leaves of

N. oleander contain gallic acid, and the leaves and bark of the root of *N. odorum* are applied externally as powerful repellents by Indian practitioners. See *Aistonia*, *Tabernaemontana*, and *Wrightia*.

NICOLSONIA, *De Candolle*. In honour of Mr. Nicolson, author of an "Essay upon the Nat. Hist. of St. Domingo." *Linn.* 17, Or. 4, Nat. Or. *Fabæææ*. For the culture and propagation of this plant, see *Uraria*. *Synonyme*: 1, *Hedysarum barbatum*.
 barbata 1 . Purple . 6, G. Ev. S. 1 Jamaica . 1818

NICOTIANA, *Linn.* In honour of John Nicot, of Nismes, ambassador from the King of France to Portugal, who procured the first seeds from a Dutchman, who had them from Florida. *Linn.* 5, Or. 1, Nat. Or. *Solanæææ*. The species of this genus generally grown as tobacco, are *N. Tabacum* and *N. macrophylla*. The popular narcotic which it furnishes is probably in more extensive use than any other, and its only rival is the betel of the East. The herb for smoking was brought to England from Tobago in the West Indies, or from Tobasco in Mexico (and whence the name), by Sir Ralph Lane, 1586. Seeds were shortly afterwards introduced from the same quarter. Sir Walter Raleigh first introduced smoking; in the house in which he lived at Islington were his arms on a shield, with a tobacco plant on the top. "Tobacco as used by man," says Du Tour, "gives pleasure to the savage and the philosopher, to the inhabitant of the burning desert and the frozen zone; in short, its use either in powder, to chew, or to smoke, is universal, and for no other reason than a sort of convulsive motion (sneezing) produced by the first, and a degree of intoxication by the two last modes of usage."—Many of the species are showy when in flower, and are well suited for decorating the flower-borders. The seeds require to be sown on a hotbed in spring, and when the plants have got two or three leaves, they should be planted into small pots, and placed in the frame, and planted out about the end of May, those for the open border in conspicuous situations, and those

intended for leaves in rows three feet apart. *Synonymes*: 1, *suavdolens*; 2, *angustifolia*; 3, *decurrens, pèrsica*. See *Petunia*.

NOTHOCHLÆNA, *R. Brown*. From *notos*, spurious, and *chlaina*, a cloak; the sori are frequently only covered over by the paleæ of the frond. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceae*. This is a genus of very handsome stove ferns. They grow well in a sandy peat soil, in a hot, humid atmosphere, and are increased by divisions, or by seeds, sown and treated in the usual manner. *Synonymes*: 1, *Acróstichum velleum*, *lanuginosum*; 2, *Cheilanthes lentigera*; 3, *A. Marantæ*; 4, *Pteris pilosellodes*; 5, *Pteris trichomanoides*; 6, *Cheilanthes vestita*; 7, *Acróstichum sinuatum*, *Gymnogramma sinuata*, *N. lævis*. See *Cheilanthes*.

NUT OF SINGARA. See *Trapa bispinosa*.

NUT, QUANDANG, is the fruit of *Fusanus acuminatus*.

NUT-GRASS. See *Cyperus Hydra*.

NUT-PINE. See *Pinus Frcmontiana*.

NUT-TREE. See *Corylus*.

NÜTANS, nodding, drooping.

NÜTMEG. See *Myristica*.

NÜTMEG. See *Monodora myristica*.

NÜTMEG OF BRAZIL. See *Cryptocarya moschata*.

NÜTMEG OF MADAGASCAR. See *Agathophyllum aromaticum*.

NÜTMEG OF SANTA FÉ. See *Myristica Otoba*.

NÜTS, seeds covered with hard shells.

NÜTS, BRAZIL, of commerce, are the fruit of *Bertholletia excelsa*.

NÜTTALLIA, *Dickson*. In honour of Thomas Nuttall, F.L.S., professor of mineralogy at New Cambridge, North America, an eminent botanist. *Linn.* 16, Or. 8, Nat. Or. *Malvaceae*. A genus of very elegant plants when in blossom, and, therefore, well worth cultivating. They grow in a sandy peat soil, and are increased by seeds, and sometimes by dividing at the roots. They require a slight protection in severe weather. See *Málva*.

NYCTAGINÆÆ, or NYCTAGOS. The Marvel of Peru is a well-known example of this little order. They mostly consist of annuals and perennials.

NYCTÁNTHEs, *Linn.* From *nyx*, *nuctos*, night, and *anthos*, a flower; the flowers expand at night, and fall off at the break of day; whence *arbor-tristis*, the name of the species. *Linn.* 22, Or. 1, Nat. Or. *Jasminaceae*. This tree is much valued on account of its very fragrant flowers, which are unfortunately seldom to be

seen in this country. It grows in loam and peat, and is increased by cuttings, not too ripe, planted in sand, under a glass, in heat. *Synonymes*: 1, *Scabritia scabra*, *Parilium arbor-tristis*, *Mánja pumerani*.
arbor-tristis 1 White . 4, S. Ev. S. 12 E. Ind. . 1781

NYCTELÆA. See *Ellisia Nyctelæa*.

NYCTERÍNIA, *D. Don*. See *Erinus Lychnidea*, *frágans*, and *tristis*.

NYCTERISÍTION, *Ruiz and Pavon*. From *nyct-eris*, a bat, and *sition*, food; bats feed on the flowers. *Linn.* 5, Or. 1, Nat. Or. *Sapotaceae*. This plant grows well in light turfy loam and peat well incorporated, and is increased by cuttings of the ripened wood planted in sand, under a glass, in heat. *Synonyme*: 1, *Chryso-phyllum splendens*.

ferrugineum 1 White . 5, S. Ev. T. 30 S. Amer. 1823

NYCTÉRIUM. See *Solanum*.

NYMPHÆA, *Linn.* From *nymphe*, a water-nymph; alluding to the habitation of the plants. *Linn.* 13, Or. 1, Nat. Or. *Nymphaeaceae*. These are beautiful plants, well worth cultivating in every collection. The stove species should be grown in tanks or tubs of water placed in a warm part of the house, with some rich loamy soil at the bottom. The hardy kinds may be grown in ponds, canals, &c. They are all increased either by seeds, dividing the roots, or separating the tubers. The stems of *N. álba* are superior to oak galls for dyeing grey. *Synonymes*: 1, *N. stellata*, var.; 2, *cahlára*; 3, *csculéna*, *Castalia edulis*; 4, *C. mystica*; 5, *N. odorata minor*; 6, *Castalia scutifolia*, *Lótus Lunan*, *coerulea*; 7, *Lótus*; 8, *Victoria Fitzroya*; 9, *Castalia ampala*, *N. Rudgeana*; 10, *N. blanda*, *Lótus*, *fietida*. See *Nuphar* and *Victoria*.

NYMPHÆÆÆ, or WATER-LILIES. These are all floating plants, with handsome flowers and large, mostly peltate, leaves. The common white water-lily (*N. álba*) and the yellow water-lily (*Nuphar lutea*) are well-known examples. The *Victoria régia* belongs also to this order.

NYMPHÆALES consist of three orders of water-

lilies, viz., *Nymphalæææ*, *Cabombæææ*, and *Nelumbiæææ*.
NYSSA, *Linn.* Supposed to be from the name of a water-nymph, on account of the habitat of the plants. *Linn.* 23, Or. 2, Nat. Or. *Alangiæææ*. These trees are well suited for large shrubberies; they grow in any common soil, but prefer a damp situation, growing best

when planted on an island in a pond or river; they may be propagated by layers or seeds. *Synonymes*: 1, *N. aquatica*; 2, *N. capitata*; 3, *N. denticulata, tomentosa*; 4, *N. sylvatica*.

NYSSÆÆÆ. See *Alangiæææ*.

O.

OAK. See *Quercus*.
OAK-CURRENTS, or SPANGLES, are formed on oak-leaves by the attacks of a small insect, called *Cynips quercus pedunculii*.

OAK-GALLS are formed by the punctures of small insects (*Cynips*).

OAT-GRASS. See *Avèna*.

OB is used in the composition of Latin technicals to indicate that the thing is inverted, as *obovate* is inversely *ovate*.

OBËATUS, bottle-shaped.

OBCONICAL, inversely conical.

OBCORDATELY TWO-LOBED, inversely-cordate, with the indentation very deep, so as to appear of two lobes.

OBELISCARIA, *Cass.* From *obeliskos*, obelisk, in allusion to the elevated disk of the flower. See *Rudbeckia Drummondii*.

OBËRONIA, *Lindley*. *Linn.* 20, Or. 1, Nat. Or. *Orchidæææ*. Two species of this remarkable genus have been figured in Lindley's splendid work, entitled—*Sertum Orchidæææum*, where he makes the following remarks:—"The genus *Obëronia* consists principally of small, fleshy-leaved epiphytes, inhabiting the branches of trees in the woods of India, and having the most tiny of flowers. Fourteen species have been described, only a part of which have been at present introduced to this country. The resemblance to insects and other animal forms, which have been perceived in the Orchidaceous plants of Europe, and which have given rise to such names as Fly Orchis, &c., may be traced so plainly in the genus *Obëronia*, in every species, that it alone would furnish a magazine of new ideas for the grotesque pencil of a German admirer of the wild and preternatural. If the Brahmins had been botanists, one might fancy they took their doctrine of metempsychosis from these productions. In the genera *Obëronia* and *Drymida*, Pythagoras would have found a living evidence of animals transmuted into plants." *Synonymes*: 1, *Cymbidium iridifolium, Malaxis ensiformis*.

OBËONE. See *Atriplex*.

OBELIQUELY-REPAND; a leaf having a margin undulated, and unequally and obliquely dilated, is said to be obliquely-repand.

OBELIQUELY-TRUNCATE, cut off in an oblique manner.

OBLONG, when joined by a hyphen to another word, signifies a form between the two words, as oblong-elliptical, oblong-linear, and so on.

OBLONG-TRIQUETROUS, oblong and three-sided.

OBOVATE, } inversely egg-shaped, with the broad-
OBOVOID, } est end uppermost.

OBOVATE, when joined by a hyphen to another word, signifies a shape between the two words, thus, obovate-spatulate, a shape between obovate and spatulate.

OBOVATE-CUNEATED, } between obovate and
OBOVATELY-WEDGE- } wedge-shaped, with the
SHAPEDED, } broadest end upper-
} most.

OBSELETE, hardly evident.

OBSELETELY-TOOTHED, scarcely toothed.

OBUSE-ANGLED, having blunt angles.

OBVOLUTE, having one part rolled on another.

ËCA-QUINA. See *Ullucus tuberosa*.

OCCIDENTAL, coming from the west.

ËCHNA, *Schreber*. From *ochne*, the Greek name of the wild pear-tree; there is some resemblance in the foliage. *Linn.* 13, Or. 1, Nat. Or. *Ochnæææ*. The species of this genus are very ornamental; they grow from six to eight, and *O. arborea* to twenty feet high. Sandy loam and peat mixed suits them, and cuttings root in sand, under a glass, in heat. *Synonymes*: 1, *O. serrulata, O. natalitia, O. Delagoensis, Arbor-africana, Diporidium atropurpureum, O. arborea*; 2, *O. squarrosa*. See *Gômphia*.

arborea . . . Yellow . 7, S. Ev. T. 20 C. G. H. 1832

OCHNACEÆ, or **OCHNADS**, are small trees or undershrubs, neat in their growth, but with no beauty as regards flowers; they are principally natives of warm climates.

OCHRADENUS, *De Candolle*. From *ochros*, yellow, and *aden*, a gland; disk of flower. *Linn.* 13, Or. 3, Nat. Or. *Resedacæ*. For the culture of this pretty little plant, see *Réseda*.

baccatus . Yellow . 5, F. Ev. S. 1 Egypt . 1837

OCHRANTHE, *Lindley*. From *ochros*, yellow, and *anthos*, a flower; colour of flowers. *Linn.* 5, Or. 3, Nat. Or. *Cunoniaceæ*. For culture and propagation, see *Hypéricum*.

arguta . . . Yellow . 8, G. Ev. S. 2 China . 1820

ÔCHRO. See *Hibiscus esculentus*.

OCHROLEUCOUS, pale yellow, ochre-coloured.

OCHRÔMA, *Swartz*. From *ochros*, pale; referring to the flowers, leaves, and wool of the seeds. *Linn.* 16, Or. 2, Nat. Or. *Sterculiaceæ*. Interesting plants, attaining from twelve to twenty feet high; they grow best in sandy loam, and young plants are raised from cuttings in sand, under a glass, in heat.

Lagopus . . . White . 5, S. Ev. T. 20 Jamaica . 1804

tomentosa . White . 5, S. Ev. T. 20 S. Amer. . 1816

OCHRÔPTERIS, *J. Smith*. From *ochros*, yellow, and *pteris*, a fern. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove ferns. *Synonyme*: 1, *Cheilanthes davallioides*.

pallens 1 . . Brn. yel. 5, S. Her. P. 1 W. Indies.

OCHRÔSIA, *Jussieu*. From *ochros*, pale; alluding to the wood. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. A rather pretty shrub; for culture and propagation, see *Cérbera*. *Synonyme*: 1, *Cérbera borbonica*.

borbonica 1 . Pa. yel. . 5, S. Ev. S. 10 Bourbon 1823

ÔCHRUS, *Persoon*. From *ochros*, yellow; on account of the colour of the flowers. *Linn.* 17, Or. 4, Nat. Or. *Fabacæ*. A pretty annual, of easy cultivation in any common garden soil. *Synonyme*: 1, *Pisum Ochrus*.

pallida 1 . Yellow . 7, H. Cl. A. 2 S. Eur.

OCHTHÏDIUM, *De Candolle*. From *ochthodes*, warted; alluding to the warted surface of the pods. *Linn.* 15, Nat. Or. *Brassicacæ*. A plant of little beauty and very simple culture. *Synonymes*: 1, *Bunias ægyptiaca*, *Rapistrum ægyptiacum*.

ægyptiacum 1 . Yellow . 8, H. A. 3 Egypt . 1787

OCOTEA, *Kunth*. Meaning unknown. *Linn.* 11, Or. 2, Nat. Or. *Lauracæ*. For culture, see *Laurus*.

psychotrioides . Green . 5, G. Ev. S. 10 Mexico 1828

OCÔTE PINE OF MEXICO. See *Pinus Ocôte*.

OCTÂNDRIA. The eighth class in the Linnæan system of botany, comprising plants with eight stamens.

OCTANDROUS, having eight stamens.

OCTOGYNOUS, having eight styles.

OCTOMËRIA, *R. Brown*. From *okto*, eight, and *meris*, a part; in allusion to the pollen-masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæ*. The species of this genus are not of a very interest-

ing character; for culture and propagation, see *Burlingtonia*. See *Èria*.

ODONTÏTES. See *Bupleurum Odontites*, *Bartsia Odontites*, and *Cenopteris Odontites*.

ODONTOGLOSSUM, *Humboldt* and *Kunth*. From *odous*, a tooth, and *glossa*, a tongue; alluding to the labellum. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæ*. These plants are now in most collections, and are very handsome; the sepals and petals are generally blotched with brown and purple. They succeed well with the treatment given to *Oncidium*s, and the like. *Synonymes*: 1, *Zygopetalum africanum*, *Cyrtocidium Bic-*

loniense; 2, *Oncidium hastatum*, *O. phyllochilum*; 3, *O. Ehrenbergii*, *O. acuminatum*. See *Brassia*, *Milöndia*, and *Oncidium*.

ODONTOLOMA, *J. Smith*. From *odous*, a tooth, and *loma*, an edge. *Linn.* 24, Or. 1, Nat. Or. *Polyodiaceæ*. Stove ferns. *Synonymes*: 1, *Davallia Boryana*; 2, *Lindsaea tenuifolia*.

Boryanum l. Br. yel. 5, S. Her. P. I. l. of Luzon
pulechellum Br. yel. 5, S. Her. P. 1/2 l. of Luzon
tenuifolium 2 Brown. 5, S. Her. P. 2/2 E. Indies .

OECEOCALADES, *Lindley*. From *oikeo*, to inhabit, and *klados*, a branch. *Linn.* 20, Or. 1, Nat. Or. *Orchidæacæ*. These are fine plants, well deserving a place in every collection; for culture and propagation, see *Vanda*. *Synonymes*: 1, *Angræcum falcatum*; 2, *A. maculatum*. See *Angræcum*.

falcata l. . . White . . . 4, S. Epi. 1/2 China . . . 1815
maculata 2 . . Ro. wht. 10, S. Epi. 1/2 Africa . . . 1819

ŒDERA, *Crantz*. In honour of George Œder, a Danish professor of botany at Copenhagen. *Linn.* 19, Or. 5, Nat. Or. *Asteræacæ*. A pretty genus, succeeding in sandy loam, mixed with a little peat, and propagated in sand, or sandy soil, under a glass.

aliëna . . . Yellow . . . 5, G. Ev. S. 2 C. G. H. . 1829
prolifera . . Yellow . . . 5, G. Ev. S. 2 C. G. H. . 1789

ŒDIPEDIUM. See *Gynnostomum Griffithsi-anum*.

ŒNANTHE, *Lamarck*. From *oinos*, wine, and *anthos*, a flower; odour. *Linn.* 5, Or. 2, Nat. Or. *Apiacææ*. These plants are mostly uninteresting, and of simple culture in any common soil. The juice of the leaves and stem of *Œ. crocata* is a violent poison for man and animals. *Synonymes*: 1, *Œ. gymnorrhiza*; 2, *Œ. approximata*; 3, *involutata*; 4, *Œ. australis*; 5, *Œ. virgata*; 6, *Œ. glauca*—*apiifolia*, *crocata*, *fastuosa*, *fluviatilis*, *globulosa*, *inëbrians*, *interrupta*, *Lachenalii* l., *L. approximata* 2, *L. involvèrata* 3, *nodiflora*, *peucedanifolia*, *phelandrium*, *pimpinelloides*, *p. chærophyllodes* 4, *p. pimpinellæfolia* 5, *prolifera*, *silafolia* 6, *tenuifolia*.

ŒNOCARPUS, *Martius*. From *oinos*, wine, and *karpos*, fruit; wine obtained from the fruit. *Linn.* 21, Or. 6, Nat. Or. *Palmaçææ*. A fine palm, attaining fifty feet in height, thriving in any rich mould in a strong humid heat, and increased from suckers.

Batada . . Pale yellow 5, S. Palm. 50 S. Amer. . 1820

ŒNÓPLIA. See *Berchemia* and *Zizyphus*.

ŒNOTHËRA, *Linn.* From *oinos*, wine, and *thera*, a catching; the roots of *Œ. biënnis* were formerly taken after meals as incentives to wine-drinking. *Linn.* 8, Or. 1, Nat. Or. *Onagracææ*. The Evening Primroses form a genus of truly beautiful plants, well suited for ornamenting flower-borders; they will grow in any common garden soil. The perennial species are increased by dividing the plants at the roots, by seeds, and by cuttings. The seeds of the annual and biennial kinds merely require to be sown in the open border. *Synonymes*: 1, *Œ. spectabilis*; 2, *Œ. ambigua*; 3, *Œ. suædolens*; 4, *Œ. concinna*; 5, *Œ. hirta*; 6, *Œ. alata*; 7, *Œ. striata*; 8, *Œ. undulata*; 9, *Œ. pinnatifida*; 10, *Œ. minima*; 11, *Œ. rhizocarpa*; 12, *Œ. distorta Veitchiana*, *Œ. heterophylla*, *Holostigma Böttæ Veitchii*. See *Godétia*.

OFFICIAL, anything sold in shops.

OGCHEE-LIME. See *Nyssa candicans*.

OGHIGE PLUM. See *Spondias*.

OIDIUM, *Link.* From *oon*, an egg, and *eidos*, resemblance. *Link.* 24, Or. 1, Nat. Or. *Botrylaceae*. The species of this genus grow on decayed wood, and the leaves of various plants

—*erysiphoides*, *fructigenum*, *fulvum*, *leucocodium*.

OFLEUS. See *Narcissus*.

OIL-NUT. See *Hamillonia*.

OIL OF BEN is procured from the seeds of *Moringa pterygosperma*.

OIL OF CAMPHOR is procured from the roots of various species of cinnamon.

OIL OF CLOVES is obtained from the leaves of various species of cinnamon.

OIL OF ROSES is obtained by the distillation of rose-buds and flowers.

OIL-SEED. See *Verbesina sativa*.

OILY GRAIN. See *Sesamum*.

OILY PALM. See *Elais*.

OLACACEÆ, or OLACADS. A small order consisting of shrubs, chiefly natives of the East Indies, New Holland, and Africa. The wood of *Heisteria coccinea* has been supposed to be the partridge-wood, but this appears to be incorrect.

OLAX. Named by Linnæus from *olax*, a furrow; but how applied to this genus we are not informed. *Link.* 3, Or. 1, Nat. Or. *Oleaceæ*. Ornamental climbers of simple culture in loam and peat; and young plants may be raised from cuttings in sand, under a glass, in heat.

OLD-MAN'S-BEARD. See *Geropogon*.

OLEA, *Link.* From *elaiæ*, olive. *Link.* 2, Or. 1, Nat. Or. *Oleaceæ*. The Olive is a very important genus of plants, on account of the oil, &c., which is obtained, chiefly from some of the varieties of *O. europæa*. They are also much admired for the fragrance of their flowers, which renders them worthy of a place in every collection. They grow well in loam and peat; ripened cuttings root readily in sand, under a glass. They may also be increased by grafting on the common privet. *Synonymes*: 1, *O. undulata*; 2, *Phillyria robusta*; 3, *O. europæa*.

ONAGRACEÆ, ONAGRADS, or EVENING PRIM-ROSES, are an assemblage of shrubs, herbaceous plants, and annuals, of which the well-known evening primrose (*Enothera*) and fuchsia are examples of their general character.

ONCIDIUM, Swartz. Derived from *ogkos*, a tumour; the plants belonging to this genus have warts, tumours, or other excrescences at the base of the labellum. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is an extensive and very handsome genus of plants, every one of which is highly deserving a place in every collection. *O. papilio* bears a striking resemblance to a butterfly on the wing. *O. altissimum* throws up from fifteen to twenty flower-spikes, producing as many as two thousand flowers, the colour of which is yellow; spotted with brown, and there is the splendid *O. lanceolatum*, one of the most prized in this valuable genus; but to particularise, where all are remarkable either for the beauty or the singularity of the flowers, would be invidious. The large-leaved kinds do best when grown in rustic baskets, which can readily be suspended from the rafters of the house; the basket should be made of small pieces of oak nailed together, or holes may be bored, and a piece of strong wire run through near the end of each, and fastened at the bottom. Some moss and rotten wood should be placed in the bottom previous to putting the plant in, in doing which, care must be taken not to insert the plant too deep. Moss and rotten wood must surround the roots of the plant, but should not on any account be raised higher than the roots of the leaves, or they will be liable to damp off. The small-growing kinds, as *O. iridifolium*, should be fastened on wood, and treated as the *Burlingdonias*. The other kinds, as *O. papilio* and *O. altissimum*, require to be potted similarly to the genus *Stanhopea*.
Synonymes: 1, *O. juncifolium*; 2, *Cyrtochilum volatile*; 3, *Leochilus sanguinolentus*; 4, *O. auratum*; 5, *C. flexuosum*; 6, *Odontoglossum phyllochilum*; 7, *O. roseum*, *Henchmannii*; 8, *Oncidium incitrum*; 9, *O. bicornatum*; 10, *O. gallopavinum*; 11, *Cyrtochilum undulatum*. See *Leochilus* and *Mitonia*.

ONCORHYNCHUS, *Fischer and Meyer*. Derived from *onkos*, tumour, and *rhynchus*, beak; alluding to the lip. *Nat. Or. Scrophulariaceæ*. The seed of this plant may be sown in any common garden soil.

tsnellus . H. B. . 1837

ONCOSPÉRMA, *Blume*. From *ogkos*, a hook, and *sperma*, a seed. The seeds are hooked. *Linn.* 21, Or. 6, *Nat. Or. Palmææ*. Only one species of this genus is yet introduced: it is an elegant plant, requiring to be grown in rich soil and a damp situation in the stove, and treated like other stove palms.

filamentosum . Straw . 5, S. Palm. 60 India . 1840

ONE-BERRY. See *Páris*.

ONION. See *Allium Cæpa*.

ONITES. See *Origanum Onites*.

ONOBROMA, *De Candolle*. From *onos*, an ass, and *broma*, food; favourite food of the ass. *Linn.* 19, Or. 1, *Nat. Or. Asterææ*. Ornamental plants, succeeding in any common soil, and increased by cuttings, divisione,

or seeds. *Synonyme*: 1, *Càrthamus arborëscens*; 2, *C. cœruleus*; 3, *C. cynaroides*; 4, *C. glaucus*; 5, *C. leucocaulis*. See *Brótera*, *Carlowizia*, and *Heracantha*.

ONOBRYCHIS, *Tournefort*. From *onos*, an ass, and *brycho*, to gnaw; plants grateful to the ass. *Linn.* 17, Or. 4, *Nat. Or. Fabææ*. All the species of Saintfoin are very showy, and well suited for ornamenting rock-work or flower-borders. The herbaceous kinds grow best in pots, in a mixture of chalk, sand, and loam; they succeed best when raised from seed, which should be sown where the plants are to remain. *Synonymes*: 1, *Hedysarum álbum*; 2, *H. caput-gállii*; 3, *O. orientális*; 4, *H. crista-gállii*; 5, *O. picta*; 6, *Hedysarum Onobrychis*; 7, *H. saxátile*; 8, *H. radiatum*, *H. OPHIOLINGULACEÆ, or ADDER'S-TONGUES. A small order of ferns, principally found in tropical countries, but a few are met with in temperate climates, of which the common moon-wort (*Botrychium Lunaria*) of our hilly pastures is an example.

OPHIOLISSUM. From *ophis*, a serpent, and *glossa*, a tongue; the resemblance of the leaves. *Linn.* 24, Or. 1, Nat. Or. *Ophioglossaceæ*. These ferns will grow well in a mixture of loam and peat, and may be increased by divisions of the roots, or seeds. The hardy kinds should be planted in a moist situation.

OPHIURUS, *Gærtner.* From *ophis*, a snake, and *oura*, a tail. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Curious annual grasses, growing in any common garden soil. *Synonymes*: 1, *Rottboellia filiformis*; 2, *R. incurvata*; 3, *R. cy-*

lindrica, *Monérma subulata*, *Lepturus cylindricus*. See *Pholiusrus*.

filiformis 1 . Apetal . 7, Grass } Portugal . 1800
 incurvatus 2 . Apetal . 7, Grass } Brit. sea shore.
 subulatus 3 . Apotal . 7, Grass } S. Eur. . 1806

OPHYRS, *Linn.* *Ophrys* is the Greek appellation for eyebrows, and is said to be applied to this genus because of the fringe of the inner sepals. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus are highly curious, and worth a place in every collection. They thrive best in a frame in a mixture of loam, peat, and chalk, broken small; the lights should be put on in very wet or frosty weather. It is advisable to have some turfy grass growing where they are planted, as they can only be increased from seeds, which are parasitic when young, and will lay hold of the grass when they first vegetate. They will ripen seed without difficulty if care be taken to rub the pollen on the stigma. The seeds should be sown as soon as ripe, and when come up sufficiently, to be transplanted to where they are to remain. *Synonymes*: 1, *O. bicornis*, *O. cestrifera*; 2, *O. arachnitis*, *exaltata*, *cestrifera*, *crabronifera*, *apiculata*; 3, *O. speculum*; 4, *O. bonbyliflora*, *O. distema*, *O. hiatica*, *O. picta*, *O. pallia*; 5, *O. lutea*. OPHATE, having the power of opium.

OPHIUM is the inspissated juice of the *Papaver somniferum*.

OPLISMENUS. See *Panicum*.

OPLOTHÈCA, *Nuttall.* From *oplon*, armour, and *theca*, a sheath; in allusion to the appearance of the capsules. *Linn.* 5, Or. 1, Nat. Or. *Amarantaceæ*. Ornamental plants, growing in loam and peat, and increased by cuttings. *O. floridana* is readily multiplied by divisions of the roots. *Synonyme*: 1, *Gomphrena inter-rupta*.

floridana . White . 9, H. Her. P. 3 N. Amer. . 1824
 interrupta 1 . Green . 7, S. B. 2 W. Ind. . 1733
 lactea . White . 7, S. Ev. S. 2 S. Amer. . 1818

OPÓPANAX, *Koch.* From *opos*, juice, *pan*, all, and *akos*, a remedy; the juice of the plant is

supposed to cure all diseases. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A plant of little beauty, and of easy cultivation; it is increased by seeds, or divisions at the roots. *Synonymes*: 1, *Pastinaca Opoponax*.
Chironium 1 . Yel. . 6, H. Her. P. 6 S. Eur. . 1640

OPORANTHEUS. See *Amaryllis*.
OPORINIA, Don. From *oporinos*, autumnal; alluding to the time of flowering. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Merely herbaceous weeds, growing in meadows, &c. *Synonymes*: 1, *Apargia autumnalis*; 2, *A. pratensis*—*autumnalis* 1, *pratensis* 2.

OPULUS. See *Viburnum Opulus*.

OPUNTIA, Tournefort. Some of the species are plentiful near Opus, a city of Locris. *Linn.* 12, Or. 1, Nat. Or. *Cactaceæ*. This is a very interesting genus of plants, well deserving of cultivation in every collection. They require to be treated like the *Mammillarias*; and young plants may be obtained by separating the branches at the joints, and allowing them to dry for a few days before sticking them in the soil, or they would soon rot. *O. cochiniifera* is valuable on account of its rearing the well-known *coccus cacti*, or cochineal insect. *Synonymes*: 1, *Cactus aurantiacus*; 2, *C. elatior*; 3, *O. humilis*; 4, *O. glomerata*; 5, *C. Opuntia*; 6, *C. elatior*; 7, *C. ferox*; 8, *C. sericea*; 9, *Cereus cylindricus*.

ORBICULATE, circular, or spherical.

ORBICULATELY-DEPRESSED, spherical, but depressed on the top.

ORCANETTE, or ALKANET, is *Anchusa tinctoria*.

ORCHALL. See *Rocella*.

ORCHIDACEÆ, or ORCHIDS. A most extensive order of very singular plants, found in all parts of the world except in the very coldest. The common Orchids of our meadows and woods are examples.

ORCHIDOCARPUM. See *Asimina*.

ORCHIS, *Linn.* *Orchis*, testis; frequent shape of the roots. *Linn.* 20, Or. I, Nat. Or. *Orchidaceæ*. Some of the species of this genus are well known, and require the same treatment as the genus *Ophrys*. *O. maculata*; and several others, grow best in peat soil. *Synonymes*: 1, *Orchis parviflora*; 2, *Satyrion hircanicum*; 3, *Gymnadenia angustifolia*; 4, *O. palustris*; 5, *O. Robertiana*; 6, *O. tephrosanthos*; 7, *O. Rivini*; 8, *O. sulphurea*; 9, *O. Cyrilli*; 10, *O. Schleicheri*; 11, *O. sambucina rubra*; 12, *O. militaris*; 13, *Habenaria spectabilis*; 14, *O. simia*; 15, *O. tephrosanthos*. See *Aceras*, *Anacamptis*, *Angræcum*, *Gymnadenia*, *Habenaria*, and *Platanthera*.

ORITHYIA. See *Ornithogalum*.

ORLAYA, *Hoffmann*. In honour of John Orlay, M. D., secretary to the Medico-Chirurgical Society of Moscow. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Worthless plants. The seed should be sown in the open ground in spring. *Synonymes*: 1, *Caucalis grandiflora*; 2, *C. maritima*; 3, *platycarpus*—*grandiflora* 1, *maritima* 2, *platycarpus* 3.

ORMOCARPUM, *P. Browne*. From *ormos*, a necklace, and *karpos*, a fruit; the pods are jointed, and appear like a necklace. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. For the culture and propagation of this plant, see *Pectitia*. *Synonyme*: 1, *Hedysarum sennoides*—*sennoides* 1.

ORMOSIA, *Jackson*. From *ormos*, a necklace; the seeds of *O. coccinea* are strung for necklaces; they are red, and have a black spot at one end. *Linn.* 10, Or. I, Nat. Or. *Fabaceae*. Ornamental trees, requiring to be treated the same as the stove species of *Edwardsia*. *Synonyme*: 1, *Robinia coccinea*.
coccinea l. . . Blue 7, S. Ev. T. 20 Guiana . . 1823
dasycarpa . . Blue 6, S. Ev. T. 20 W. Ind. . . 1793

ORNITHARIUM, *Lindl.* From *ornitharion*, a small bird; supposed resemblance in the flower. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. A small orchid, with curious flowers, requiring the same treatment as *Dendrobium*. *Synonyme*: 1, *Ornithochilus striatulus*.
striatulum l. . Yel. wht. . 6, S. Epi. 1 India . 1847

ORNITHIDIUM, *Salisbury*. From *ornis*, a bird, and *eidōs*, like; the upper lip of the stigma is beak-like. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. This is a genus of rather interesting plants; for culture and propagation, see *Burlingtonia*. See *Pholidota*.

OROBANCHÆÆ, or BROOM-RAPES. A small order of herbaceous leafless plants, growing parasitically upon the roots of other species, bearing flowers not unlike those of *Gesnèra*, and by no means devoid of beauty.

OROBANCHE, Linn. From *orobos*, vetch, and *ancho*, to strangle; supposed to kill the plants on which it grows. *Linn.* 14, Or. 2, Nat. Or. *Orobanchæææ*. The Broom-rapes are a genus of curious parasitical plants, none of which are properly cultivable. *O. major* is powerfully astringent.

OROBUS, Linn. From *oro*, to excite, and *bous*, an ox; the *Orobos* of Theophrastus was the name of a plant used for fattening oxen. *Linn.* 17, Or. 4, Nat. Or. *Fabâccææ*. The plants of this genus deserve to have a place in every flower-border, on account of their very elegant pea-blossoms. Any light soil suits them, and they are readily increased by dividing the plants at the roots in spring, or by seeds. *Synonymes*: 1, *O. atropurpureus*, *Orobèlla vicioides*; 2, *O. Gmelini*; 3, *Psoràlia longifolia*. See *Platystylis*.

OUIRÁNDRA, *Thouars.* *Linn.* 6, Or. 3, Nat. Or. *Juncaginæææ*. A most singular genus of aquatics. The leaves are without parenchyma, and consist of merely open network. They require a warm situation and shade; the water in which they are grown should never be allowed to become cold. *Synonyme*: 1, *Hydrogeton fenestrâle*.

Berneriána . . . Pink . . . 5, S. Aquat. 3 Madagascár 1857

fenestrâlis . . . Grn. yl. 5, S. Aquat. 3 Madagascár 1855

ÓVA, the eggs of anything.

OVAL, having the figure of an ellipse.

OVÁRIUM, or **OVARY,** the part of the flower in which the young seeds are contained.

OVATE, egg-shaped.

OVATE, when joined by a hyphen to another word, signifies a form between the two, as ovato-cordate, ovate, and heart-shaped.

OVERLAPPING; when the margin of one thing lies upon that of another, it is said to overlap.

OVÍDIA. See *Clerodendron*.

OVoid, egg-like.

OVULES, the young seeds of plants contained in the ovarium.

OXALIDÆÆÆ, OXALIDS, or **WOOD-SORRELS.** Herbaceous plants, undershrubs, and trees, containing a large quantity of acid. Some of the species of Oxalis have large tuberous roots, which are eatable like the potatoe; some of the shrubby kinds, as *Averrhoa Bilimbi*, and *Carambôla*, bear very grateful fruit, and are called in the East Indies Blimbing and Carambola. The leaves of some species are so sensitive that they are included amongst what are called sensitive plants.

ÓXALIS, *Linn.* From *oxys*, acid; the leaves have an acid taste. *Linn.* 10, Or. 4, Nat. Or. *Oxalidæææ*. Most of the plants of this genus deserve cultivating on account of their very pretty blossoms, which are produced in great abundance. The stove, greenhouse, and frame species, thrive well in a mixture of loam, peat, and sand; they should not be watered after they have done flowering until they begin to grow afresh. The shrubby kinds may be increased by cuttings or seeds; the herbaceous fibrous-rooted ones by dividing the plants at the roots, or by seeds; the bulbous-rooted species by offsets. Most of those marked greenhouse may be grown in a frame, only they must be protected from frost in

winter. The hardy species should be planted in a shady border, where they will grow and flower very freely. The seeds of the hardy annual species should be sown in the open border in spring. *O. Acetosella* contains pure oxalic acid, and several species are used in Brazil against malignant fevers. *Synonyms*: 1, *caprina*; 2, *arracacha*; 3, *rubens*; 4, *palustris*; 5, *floribunda*; 6, *Biophytum sensitivum*; 7, *Martiana*; 8, *rosea*.

OXYRÁMPHIS, Wallich. From *oxys*, sharp-pointed, and *rampfos*, a beak. *Linn.* 17, Or. 4, Nat. Or. *Fabáceæ*. A very pretty greenhouse plant, easily grown and propagated. *Synonyme*: 1, *Crotalaria macrostyla*.

macrostyla 1 Pur. crim. 10, G. Ev. S. 4 Saharanpr. 1887

OXYRIA, Hill. From *oxys*, acid. *Linn.* 6, Or. 2, Nat. Or. *Polygonáceæ*. The Mountain Sorrels grow well in common garden soil, and are increased by dividing at the roots, or by seeds. *Synonymes*: 1, *Rumex dignus*; 2, *O. reniformis*.

reniformis 1 . Green . 6, H. Her. P. 1 Brit., hills.
 americana 2 Green . 6, H. Her. P. 1 N. Amer.

OXYSPORA, De Candolle. From *oxys*, sharp, and *spora*, a seed; seeds awned at both ends. *Linn.* 8, Or. 1, Nat. Or. *Melastomáceæ*. Elegant shrubs, bearing panicles of red flowers. They grow best in a mixture of loam, peat, and sand; and young cuttings, planted in the same soil, root freely under a glass, in heat. *Synonymes*: 1, *Orthostemma paniculata*; 2, *Melastoma rugosa*.

paniculata 1 . Red . 6, S. Ev. S. 2 Nepal . . 1826
 vagans 2 . . Rose . 6, S. Ev. Cl. 5 E. Indies . 1849

OXYSTÉLMA, R. Brown. From *oxys*, sharp, and *stelma*, a crown; the foliola of the corona is acute. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadáceæ*. An ornamental plant; for culture and propagation, see *Oxyptalum*.

sculentum . Yellow 5, S. Ev. Tw. 4 E. Indies . 1816

OXYTROPIS, De Candolle. From *oxys*, sharp, and *tropis*, a keel; flowers ending in a nucrone at the apex of the keel. *Linn.* 17, Or. 4, Nat. Or. *Fabáceæ*. These plants are very handsome when in flower, and are well adapted for ornamenting rock-work, or the front of flower-borders. The seed should be sown where the plants are intended to grow, as they seldom thrive after transplanting. The rarer kinds may be grown in pots well drained, in a mixture of peat, sand, and a little loam, and

treated as other alpine plants. *Synonymes*: 1, *Astragalus campestris*; 2, *A. Hülleri*; 3, *O. Gmelini*; 4, *Astragalus montianus*; 5, *A. dahuricus*; 6, *O. sordida*; 7, *A. uralensis*; 8, *O. altaica*.

OXYURA, *De Candolle*. Supposed to be from *oxy*, sharp, and *oura*, a tail; but the application is not evident. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. An ornamental plant, having somewhat the appearance of *Chrysanthemum coronarium*. It grows in any common soil. *chrysanthemoides* Yellow 7, H. A. 1 1/2 Californ. 1834

OYSTER-GREEN is the *Uva lactuca*.

OYSTER-TREES. See *Rhizophora*.

OZONIUM, *Persoon*. From *ozos*, a branch; the filaments are branched. *Linn.* 24, Or. 9, Nat. Or. *Urodinaceæ*. This plant is found during autumn on decayed wood—*auricomum*.

OZOTAMNUS, *R. Brown*. From *ozos*, a branch, and *thamnos*, a shrub. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Ornamental plants, growing freely in an equal mixture of loam and peat; and cuttings of the young wood will root in a few days, planted in sand under a glass. *Synonymes*: 1, *Chrysocoma cinerea*; 2, *Eupatorium ferrugineum*; 3, *E. rosmarinifolium*.

P.

PACHANA. See *Cocculus cordifolius*.

PACHIDENDRON, *Willdenow*. From *pachys*, thick, and *dendron*, a tree. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. A genus of tree aloes, thriving in a mixture of sandy loam mixed with old lime and brick rubbish; the pots in which they are grown must be well drained, that the moisture may readily pass off. They require but little water in winter, and are increased from suckers, or young side shoots, when they are produced; leaves taken off close from the stem, and laid to dry for a few days, then planted in pots of dry soil, will throw out young plants at their base. *Synonymes*: 1, *Aloe africana*; 2, *A. angustifolia*; 3, *A. ferax*; 4, *A. principis*; 5, *A. pseudo-africana*, *africana angustior*; 6, *A. pseudo-ferax*, *subferax*; *A. supralævis*.

PACHIRA. See *Carolinæa*.

PACHNOCYBE, *Berkeley*. From *pachne*, hoar, frost, and *kybe*, a head. *Linn.* 24, Or. 9, Nat.

Or. *Mucoraceæ*. These substances are found on decaying plants of various sorts—*acutula*, *albida*, *ferruginea*, *grisea*, *subulata*.

PACHYLEPIS. See *Hieracium Kalmii*.

PACHYNEMA, *R. Brown*. From *pachys*, thick, and *nema*, a filament; filaments very thick. *Linn.* 10, Or. 3, Nat. Or. *Dilleniacæ*. This little leafless shrub thrives best in a mixture of loam and peat; and cuttings strike root freely in sand, under a glass.

complanatum . . .	White . . .	6, G. Ev. S. 1 1/2	N. Hol.	1825
-------------------	-------------	--------------------	---------	------

PACHYPHYLLUM, *Humboldt*. From *pachys*, thick, and *phyllon*, a leaf; leaves fleshy. *Linn.* 20, Or. 2, Nat. Or. *Orchidaceæ*. For culture, &c., see *Maxillaria*.

distichum . . .	Green . . .	5, S. Epi. 1	Mexico.	1836

PACHYPHYTON. See *Echeveria*.

PACHYPHYTUM, *Link* and *Otto*. From *pachys*, thick, and *phyton*, a plant; plants succulent. *Linn.* 5, Or. 1, Nat. Or. *Crassulacæ*. For culture, &c., see *Crassula*. *Synonymes*: 1, *Echeveria bracteosa*.

bracteosum 1 . . .	Crimson . . .	5, G. Ev. S. 1 1/2	Brazil.	1846
--------------------	---------------	--------------------	---------	------

PACHYPLEURUM, *Don*. From *pachys*, thick, and *pleuron*, a rib; ribs of fruit corky. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A plant of no

ornament, growing in any common soil, and increased by division and seeds.

alpinum . . . White . 5, H. Her. P. 1 Altai . 1837

PACHYPÓDIUM, *Lindley*. From *pachys*, thick, and *podion*, a peduncle; thick footstalks. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. This succulent and tuberous-rooted genus succeeds in an equal mixture of light turfy loam, peat, and sand; as the plants require scarcely any water in winter, the pots must be well drained, that the moisture may pass off readily; cuttings taken off, and laid to dry till the wound is dried up, then planted in a pot of dry soil in spring, will strike root, and produce tubers before winter. *Synonymes*: 1, *Echites succulenta*; 2, *E. tuberosa*.

auiculéntum 1 Wht. red . 5, G. De. S. 1 C. G. H. 1820
tuberósum 2 . Wht. red . 8, G. De. S. 1 C. G. H. 1813

PACHYRHIZUS, *Richard*. From *pachys*, thick, and *rhiza*, a root; alluding to the thick tuberous roots of the plants. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. The plants succeed well in a light rich soil; they may be increased from cuttings in sand, under a glass, by the tubers of the roots, or by seeds. *Synonyme*: 1, *Dolichos bulbosus*.

angulátua 1 . Purple . 7, S. Ev. Tw. 5 E. Ind. . 1781

PÁCHYSA. See *Erica*.

PACHYSÁNDRA, *Michaux*. From *pachys*, thick, and *aner*, a man; in allusion to the thickness of the stamens. *Linn.* 21, Or. 4, Nat. Or. *Euphorbiaceæ*. These are dwarf-growing plants thriving in any common soil, and may be planted near the front of flower-borders; they are increased freely by suckers from the roots.

coriáceá . . White . 6, S. Ev. S. 2 Nepal . . 1822
proéumbena White . 4, H. Her. P. 4 N. Amer. . 1800

PACHYSTÍGMA, *Hooker*. From *pachys*, thick, and *stigma*, a stigma. *Linn.* 13, Or. 1, Nat. Or. *Ruticææ*. A fragrant plant deserving cultivation, and requiring only the ordinary treatment of stove plants, ripened cuttings will root in the usual way.

pteleoidea White . 2, S. Ev. S. 10 Jamaica . 1844

PACOURY-UVA. See *Platonia insignis*.

PADINA, *Adanson*. Derivation doubtful. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. A small brownish-coloured species, found in the ocean—*deusta*.

PÁDUS. See *Cerasus Pádus*.

PÆDERIA, *Linn.* From *pæderos*, opal; in reference to the transparent berries. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. The species are remarkably free growers; any kind of light rich soil suits them, and cuttings root readily in the same kind of soil, under a glass. *Synonyme*: 1, *Lygodisódia Lingun*.

fétida . . . Purple . 5, G. Ev. S. 6 China . . 1806
Lingun . . . Red . . 5, S. Ev. S. 6 Mauritius . 1823

PÆDERÒTA, *Linn.* The ancients applied this name to a species of *Acánthus*. *Linn.* 2, Or. 1, Nat. Or. *Scrophulariaceæ*. These pretty dwarf alpine plants are well adapted for rock-work; light sandy soil, or an equal mixture of peat, loam, and sand will suit them very well if grown in the open border, the situ-

ation should be dry and airy; they are increased from seeds.

Agèria . . . Yellow . 5, H. A. 4 Italy . . 1824
Bonaròta . . . Blue . . 5, H. A. 4 Austria . 1818

PÆONIA, *Linn.* The physician Pæon was the first who used it in medicine. *Linn.* 13, Or. 2, Nat. Or. *Ranunculaceæ*. Beautiful flowering plants, mostly hardy enough to endure our winters. *P. Moután* and its varieties, though able to bear a moderate degree of frost, do not flower so well as when planted out in the border of the conservatory; they bear forcing well; a rich loamy soil suits them best. The shrubby kinds are increased from cuttings taken off in August and September, with part of the wood of the preceding year attached, and planted in a sheltered situation where they will root freely. The herbaceous species are increased by dividing the plants at the roots, taking care to leave a bud to each slip; the new varieties are obtained from seeds. *Synonymes*: 1, *P. Makóya*; 2, *P. laciniata*; 3, *P. tartárica*; 4, *P. dahúrica*; 5, *P. sessiliflora*.

PALATE, the mouth of a ringent flower.

PALÀVIA, Cavanilles. In honour of A. Palau y Verdera, once professor of botany at Madrid. *Linn.* 16, Or. 8, Nat. Or. *Malvæcæ*. Plants only worth cultivating in botanical collections. Seeds sown on a hotbed early in spring, and the plants transplanted into the open border in May, will produce their flowers and seeds in abundance. *Synonymes*: 1, *P. prostrata* —malvæfolia, moschata 1, rhombifolia.

PALEACEOUS, abounding with chaffy scales.

PALICOÛREA. Named by Aublet, who does not give the meaning of the word. *Linn.* 5, Or. 1, Nat. Or. *Cinchonæcæ*. A genus of pretty shrubs, from four to six feet high; for culture and propagation, they may be referred to *Psychotria*. *Synonymes*: 1, *Psychotria lineata*; 2, *P. crœcea*; 3, *P. rigida*.

PALÍURUS, Tournefort. The name of a town in Africa. *Linn.* 5, Or. 1, Nat. Or. *Rhamnæcæ*.

Very handsome plants, well fitted for shrubberies. The fruit of *P. aculeatus* is very singular, appearing something like a head with a broad-brimmed hat on. This is the shrub of which, it is by many persons supposed, the crown of thorns which was put on our Saviour's head was made; and this assertion is borne out by many travellers of credit, who say that it is one of the most common shrubs in the country of Judæa, and from the pliability of its branches, which may be brought into any figure, it may afford a probability. They will grow in any common soil, and may be increased by layers, cuttings of the roots, or seeds. *Synonymes*: 1, *P. australis*; 2, *Zizyphus incornvus*.

aculeatus 1 . Grn. yel. 7, H. De. S. 4 S. Eur. .	1596
virgatus 2 . . Grn. yel. 8, H. De. S. 6 Nepal .	1817

PALLÀSIA. See *Encodia*.

PALLÈNES. See *Buphthalmum*.

PALMÆCÆ, or PALM TREES. One of the most interesting orders in the vegetable kingdom. They are mostly natives of tropical countries, and their products are various and important.

PALMA-CHRISTI. See *Ricinus*.

PÁLMA-PINUS. See *Sâgus vinifera*.

PALMATE, or PALMATED, divided so as to resemble a hand spread open.

PALMATELY-PARTED, parted in a palmate manner.

PALMÉLLA, Lyngbye. From *palmas*, vibration; jelly-like nature of the species. *Linn.* 24, Or. 7, Nat. Or. *Conservacæcæ*. Minute species, found in marshy or inundated places; they consist of very small globules, supposed by some naturalists to be the ova of animalcules —*adnata, botryoides, cruenta, grumösa, hyalina, livida, montana, protuberans, rivularis, rosea*.

PALMÉTTO. See *Sabal Palmétto* and *Chamærops Palmétto*.

PALM-KALE or TREE-KALE. See *Brássica Ole-racea palmifolia*.

PALM-OIL is obtained principally from *Cocos aculeata*.

PALMS. See *Palmæcæ*.

PALM-WINE is made in large quantities from the sap of *Mauritica vinifera*.

PALMYRA-WOOD. See *Borassus flabelliformis*.

PALO DE VACA. See *Galactodendron utile*.

PAMPAS GRASS. See *Gymnëreum*.

PÁNACES. See *Heraclëum Pánaces*.

PANÆTIA, Lindley. Meaning not explained. *Linn.* 19, Or. 2, Nat. Or. *Asterácecæ*. This is a beautiful little annual of easy cultivation. The flower-heads are of the red-gold colour of *Elichrysum bracteatum*.

fúva . . Yellow . 5, G. . . A. 1 Swan R. .	1837
--	------

PANARY, used for making bread.

PÁNAX, Linn. From *pan*, all, and *akos*, a remedy; in allusion to the miraculous virtues ascribed to *P. quinquefolium*. *Linn.* 23, Or. 2, Nat. Or. *Araliacæcæ*. The species thrive well in a mixture of peat, loam, and sand, and cuttings root readily under a hand-glass. The root of *P. quinquefolium*, or *Ginseng* of the shops, is much esteemed by the Chinese for

its beneficial influence upon the nerves, and for other supposed virtues; but our physicians have not discovered any proofs of its efficacy in Europe. *Synonymes*: 1, *P. cochitiformis*; 2, *P. chrysophyllum*. See *Aràlia*.

PANCRATIUM, Herbert. From *pan*, all, and *kratys*, potent; supposed medicinal virtues.

Linn. 6, Or. 1, Nat. Or. *Amarylloidææ*.

These are handsome, well-known bulbous plants, requiring to be grown in a composition of three parts light sandy loam, and one part vegetable mould; they are increased by offsets from the roots, or by seeds, from which the new varieties are obtained. The bulbs of *P. maritimum* are emetic. *Synonymes*: 1, *P. mæzianum*, *Hemerocallis acutifolia*. See *Callithauma*, *Chlidanthus*, *Coburghia*, *Eurycles*, *Hymenocallis*, *Isæmie*, *Stenomæsson*.

PANDANACEÆ, or SCREW-PINES, are a group of plants nearly resembling palms. They very often send down aerial roots, which descend until they reach the ground. Some species bear eatable seeds, and others are useful in medicine.

PANDANUS, Linn. From *pandang*, a word in the Malay language, signifying conspicuous. *Linn.* 22, Or. 1, Nat. Or. *Pandanææ*. This stately, fine-looking genus has received the English name, Screw-pine, on account of the appearance of the plants; they thrive in a light loamy soil. Some of the species produce suckers, by which they may be increased.

PANDURATE, fiddle-shaped.

PANGIACÆ, or PANGIADS. An order of trees closely related to *Papayads*. They are all natives of the tropics.

PANICEOUS, eatable, good for bread.

PANIC-GRASS. See *Panicum*.

PANIC-GRASS. See *Ehrharta panicea*.

PANICLE, a loose disposition of inflorescence, as oats.

PANICLED, or PANICULATE, forming a panicle.

PANICULATELY-BRANCHED, loosely branched.

PANICULATELY-RACEMOSE, a panicle formed by numerous racemes.

PANICUM, Linn. From *panicula*, a panicle, or *panis*, bread. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. A useful genus of grasses. *P. miliaceum* is frequently sown for feeding poultry, and is sometimes used as a substitute for rice. *P. arborescens* is said by Linnæus to equal in height the loftiest trees in the East Indies, though the culm is little thicker than a goose's quill; it grows in the woods and jungles. In cultivation, the species grow in any common soil, and are increased by dividing the roots, or by seeds. See *Arundinaria*, *Cynodon*, *Echinochloa*, *Pennisetum*, *Tricholena*.

altissimum, anceps, arborescens, arundinæum, asperinum, attenuatum, bicolor, brevifolium, capillare, c. minor, carthaginense, clandestinum, coloratum, costatum, decumbens, dichotomum, diffusum, divaricatum, flavidum, fuscum, germanicum, gongyloides, hispidatum, indicum, interruptum, italicum, læve, latifolium, laxum, marginatum, maximum, militare, molle, nervosum, nitidum, numidianum, palmifolium, patens, plicatum, repens, tenellum, uliginosum, villosum, virgatum.

PANOCÛCA-BARK. See *Swartzia tomentosa*.

PANZERIA. See *Leonurus*.

PAPÁVER, Linn. From *papa*, pap, or thick milk; the juice of the poppy was formerly used in children's food, to make them sleep.

Linn. 13, Or. 1, Nat. Or. *Papaverææ*. *P. somniferum* is cultivated in the vicinity of London; the capsules are sold to the druggists for the opium which is obtained from them. The plants succeed in a light rich soil. The perennial kinds are increased by dividing at the roots. All the species are narcotic. *Synonymes*: 1, *P. Bárscrt*; 2, *P. pulcherrimum*; 3, *P. aurantiacum*; 4, *P. alpinum*; 5, *P. olympicum*. See *Meconopsis*.

PAPAVERÆÆE, or POPPY-WORTS. A well-known order of herbaceous plants, small shrubs, and annuals, bearing showy but very fugitive flowers. All possess a peculiar narcotic property, which is extracted and used under the name of opium.

PAPAW-TREE. See *Cárica Papaya*.

PAPAYA. See *Cárica Papaya*.

PAPAYÆÆE, or PAPAW-TREES. A group of shrubs and trees sometimes yielding an acrid milky juice. The fruit of *Cárica Papaya* is eaten when cooked, and esteemed by some persons; but its chief value is, that it forms an excellent vermifuge; and other species are very useful in medicine.

PAPER-MULBERRY. See *Broussonètia papyrifera*.

PAPHNIA, Lindley. *Linn.* 20, Or. 1, Nat. Or. *Orchidæææ.* For culture, &c., see *Maxillaria*. *Synonymæ*: 1, *Maxillaria cristata*.

cristata 1 . Wht. pur. . 7, S. Epi. ¼ Trinidad . 1843

PAPILIONÆÆE. See *Fabæææ.*

PAPILIONACEOUS, butterfly-shaped flowers, as the common pea.

PAPÍLLÆ, small, soft excrecences.

PAPILLOSE, or PAPILLOUS, having small glandular excrecences, like pimples.

PAPPOPHORUM, Schreber. From *pappos*, down, and *phoreo*, to carry. *Linn.* 3, Or. 2, Nat. Or. *Graminæææ.* Grasses of no interest, increased by seeds—*alopocuroideum, laguroideum, nigricans, phœoides*.

PÁPPUS, crown of the fruit of *Compositæ,* and similar plants.

PÁPULÆ, round, soft, watery protuberances.

PÁPULOSE, covered with papulæ.

PAPYRÆÆE. See *Cyperæææ.*

PAPYRÆOUS, resembling paper.

PAPYRUS, Willdenow. From the Syrian, *baheber*; whence the Egyptian word *papyrus*, paper.

Linn. 3, Or. 1, Nat. Or. *Cyperæææ.* This is a splendid genus, requiring to be grown in a tub or large pot of water, with rich mud at the bottom; increased from divisions, or by seeds. The famed *Papyrus* of the Egyptians was obtained from our *Papyrus antiquorum*. *Synonymes*: 1, *Cyperus elegans*; 2, *C. odoratus*.

antiquorum	Apetal	.8, S. Aq. P.	12	Egypt	.1803
elegans 1	Apetal	.7, S. Aq. P.	6	W. Ind.	1820
laxiflorus	Apetal	.7, S. Aq. P.	6	Madagas.	1822
odoratus 2	Apetal	.7, S. Aq. P.	12	W. Ind.	1819

PARA-NUTS, or BRAZIL-NUTS, are the fruit of *Bertholdia excelsa*.

PARABOLICAL, form of a parabola, longer than broad, tapering gradually to both ends.

PARAGUAY TEA. See *Ilex paraguensis*.

PARALIAS. See *Euphorbia Paralias*.

PARASTRÁNTHUS, Don. From *parastrepho*, to invert, and *anthos*, a flower; the flowers are upside down compared with those of the other genera of the order. *Linn.* 5, Or. 1, Nat. Or. *Lobeliæææ.* These beautiful plants are easily cultivated in a mixture of loam, peat, and sand; and increased by dividing at the roots. *Synonymes*: 1, *Lobelia lutea*; 2, *L. unidentata*; 3, *L. variifolia*.

simplex 1	Yellow	.6, H. Her. P.	¼	C. G. H.	1774
unidentata 2	Blue	.7, H. Her. P.	¼	C. G. H.	1794
variifolia 3	Yellow	.6, H. Her. P.	1	C. G. H.	1812

PARDALIÁNCHES. See *Doronicum Pardaliánches*.

PARDÁNTHUS, Ker. From *pardos*, a leopard, and *anthos*, a flower; alluding to the spotted flowers. *Linn.* 3, Or. 1, Nat. Or. *Iridæææ.* A handsome genus, succeeding in light rich soil; when planted in the open border the plants require a little protection in severe weather. Increased by divisions, or by seeds.

chinensis	Orange	.6, H. Her. P.	2	China	.1759
nepalensis	Orange	.6, H. Her. P.	2	Nepal	.1823

PAREIRA BRAVA ROOT. See *Cissampelos*.

PARÉNCHYMA, parts of plants consisting of cellular tissue only.

PARIAH-ARRACK, is an intoxicating drink, made

- from the sap of the cocoa-nut palm (*Cocos nucifera*).
- PARIANA**, *Aublet*. Its name in Guiana. *Linn.* 21, Or. 9, Nat. Or. *Graminaceæ*. A curious under shrub, growing in any common soil, and increased by divisions.
- campéstris* . Apetal . 6, S. Ev. S. 2 Cayenne . 1803
- PARIETAL**, attached to the sides of the ovary.
- PARIETARIA**, *Linn.* From *paries*, a wall; they are commonly found on old walls. *Linn.* 23, Or. 1, Nat. Or. *Urticaceæ*. Mere weeds, found on old walls, stony ground, &c.; they have no beauty, and are of the easiest culture. *Synonymes*: 1, *Bohméria urticifolia* — crética, floridana, iudica, judaica, lusitánica, micrántha, officinális, penusylvánica, polygonoides, prostrata, urticifolia.
- PARIETES**, the sides of the ovary or capsule.
- PARINARIUM**, *Jussieu*. From *Parinari*, the Guiana name of one of the species. *Linn.* 7, Or. 1, Nat. Or. *Chrysobalanaceæ*. A noble genus of plants. *P. excelsum* is a fine tree, attaining the height of sixty feet, with long leaves and large terminal bunches of flowers, succeeded by a fruit of plumb-like appearance, which is eaten in Sierra Leone under the name of Rough Plumb. The plants grow freely in three parts sandy loam and one part peat; ripened cuttings in pots of sand, under a glass, in heat, root readily. *Synonyme*: 1, *Pterocarya campéstris*.
- campéstre* . 1 Yellow . 5, S. Ev. S. 6 Guiana . 1824
excelsum . . . White . 6, S. Ev. T. 60 S. Leone 1822
macrophyllum White . 5, S. Ev. S. 4 S. Leone 1822
- PÁRIS**, *Linn.* From *par*, equal; in allusion to the regularity of the parts. *Linn.* 8, Or. 4, Nat. Or. *Melanthaceæ*. The species of this genus thrive in light sandy loam, in a shady situation; increased from divisions, or by seeds. The juice of the berries of *P. quadrifolia* has been used in inflammation of the eyes.
- polyphýlla* . Green . 5, H. Her. P. $\frac{1}{2}$ Nepal . 1826
quadrifolia . Green . 5, H. Her. P. $\frac{1}{2}$ Brit., woods.
verticillata . Green . 4, H. Her. P. $\frac{1}{2}$ Caucasus 1825
- PARÍTIUM**. See *Hibiscus*.
- PARIVÒA**, *Aublet*. The Guiana name of the tree. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. A very handsome pinnate-leaved stove tree, delighting in rich loamy soil, and propagated from cuttings. *Synonyme*: 1, *Dimorpha grandiflora*.
- grandiflora* 1 . Purple . 5, S. Ev. T. 25 Guiana . 1821
- PARKERIA**, *Hooker*. In honour of C. S. Parker, who first found the plant in Essequibo. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. This genus of ferns grow best in turfy loam and peat mixed; they are increased by dividing the roots, or by seeds.
- Lockharti* . Brown . 5, S. Her. P. $\frac{1}{2}$ Trinidad . 1824
pteroides . Brown . 8, S. Aq. P. $\frac{1}{2}$ Essequibo . 1825
- PARKIA**. Named by Brown in memory of the celebrated African traveller Mungo Park. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. A beautiful genus of plants; for culture and propagation, see *Inga*. *Synonymes*: 1, *Inga biglobosa*, *P. biglobosa*.
- africana* 1 . Vermil. 3, S. Ev. T. 35 Africa . 1822
biglobosa . Vermil. 3, S. Ev. T. 30 Guinea . 1822
uniglobosa . Vermil. 3, S. Ev. T. 35 S. Leone . 1822
- PARKINSONIA**, *Linn.* In honour of Johu Parkinson, a London apothecary, and author of *Theatrum Botanicum*, &c. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. This is a very handsome species, but seldom suffered to grow large enough to flower; a mixture of peat and loam suits it, and cuttings root in sand, under a glass. The imported seeds of it also vegetate freely.
- aculeata* . Yellow . 6, S. Ev. S. 10 W. Ind. . 1739
- PARMELLA**, *Acharius*. From *parma*, a kind of small shield, and *heilo*, to inclose; the thallus. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. The species of this genus are found on rocks, trunks of trees, &c.; several of them are used in dyeing — *adglutinata*, *ambigua*, *aleurites*, *aquila*, *Borreri*, *cæsia*, *c. dæbia*, *caperata*, *Clementiana*, *columnaris*, *conspersa*, *corrugata*, *cyclobelis*, *diacapsis*, *diatripa*, *elæina*, *encæsta*, *fahlunensis*, *glomulifera*, *herbacea*, *horrensens*, *levigata*, *lanuginosa*, *olivacea*, *omphalodes*, *parietina*, *perforata*, *perlata*, *physodes*, *pitgreæ*, *plumbea*, *pulverulenta*, *rectarva*, *reticulata*, *rubiginosa*, *rugosa*, *saxatilis*, *scôrtea*, *sinuosa*, *speciosa*, *stellaris*, *stygia*, *sulcata*, *tiliacea*.
- PARMELIACEÆ**, or **PARMELIADS**. An extensive order of lichens, found in all damp and shady situations.
- PARNÁSSIA**, *Linn.* From Mount Parnassus, the abode of grace and beauty; these plants, on account of their elegance, are feigned to have first sprung up there. *Linn.* 5, Or. 3, Nat. Or. *Saxifragaceæ*. The plants do best in a moist peat soil and a shady situation. *P. palustris* is one of our most elegant marsh plants; increased by divisions, or by seeds, which ripen plentifully.
- asarifolia* . White . 7, H. Her. P. $\frac{1}{2}$ N. Amer. 1812
caroliniana . White . 6, H. Her. P. $\frac{1}{2}$ N. Amer. 1802
palustris . . . White . 7, H. Her. P. $\frac{1}{2}$ Brit., bogs.
parviflora . . . White . 6, H. Her. P. $\frac{1}{2}$ N. Amer. 1820
speciosa . . . Cream . 7, H. Her. P. $\frac{1}{2}$ N. Amer.
- PARÓCHETUS**, *Hamilton*. From *para*, nigh, and *ochetos*, a brook; in allusion to the habitation of the plants. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. A light rich soil will answer these pretty plants, which are readily increased by dividing.
- communis* . Purple . 7, F. Ev. Cr. 1 Nepal . 1820
majior . . . Lilac . 6, G. Her. P. 1 Nepal . 1827
- PARONÝCHIA**, *Tournefort*. From *para*, near, and *onyx*, a claw; supposed to cure a tumour which rises near the nail. *Linn.* 3, Or. 1, Nat. Or. *Illecebraceæ*. From the dwarf stature of the species, they are all well adapted for ornamenting rock-work; they, however, thrive best in pots, in a mixture of sand and loam, and are easily increased by dividing at the roots, or by cuttings under a glass, or by seeds. *Synonymes*: 1, *Illecebrum capitatum*; 2, *I. echinatum*; 3, *I. Paronýchia*. See *Illecebrum*.

PARTED, divided, but not to the base.

PARTHENIUM, Linn. From *parthenos*, a virgin; supposed medicinal qualities. *Linn.* 19, Or. 4, Nat. Or. *Asteraceae*. Plants of no beauty, growing in any common soil—*Hysterophorus inedana, integrifolia*.

PARTHENIUM. See *Pyræthrum Parthenium*.

PARTIDGE-WOOD, is the timber of *Heisteria coccinea*, and another species belonging to the same order.

PASCALIA, Ortega. In honour of Dedan Pascal, M.D., a professor at Parma. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. This species should be grown in pots, as it requires the protection of the frame in severe frosts; loam and peat suits it well, and cuttings planted under a glass soon root.

glauca . . . Yellow . . 7, H. Her. P. 2 Chile . 1799

PASPALUM, Flugge. From *paspalos*, one of the Greek names for millet. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*. Curious species of grass, without much beauty, and of easy culture. *Synonymes*: 1, *P. pubescens*; 2, *P. Swartziana*; 3, *P. littorale*; 4, *P. orbiculatum*; 5, *Digitaria pilosa*. See *Ceresia*.

PASQUE-FLOWER. See *Anemone pulsatilla*.

PASSERINA, Linn. From *passer*, a sparrow; in allusion to the beaked seeds. *Linn.* 8, Or. 1, Nat. Or. *Thymelæaceae*. The plants of this genus flourish well in a mixture of sandy peat and loam; and cuttings of the young wood root freely in sand, under a glass. The seeds of *P. annua* may be sown in spring in the open ground. *Synonyme*: 1, *Stellera Passerina*; 2, *Chamaejasme*. See *Daphne*, *Lachnea*, and *Stellera*.

PASSERINA. See *Erica Passerina*.

PASSIFLORA, Linn. From *passio*, passion, and *flos*, a flower; in allusion to the filamentous appendages or rays bearing a resemblance to the emblems of the passion of our Saviour. *Linn.* 16, Or. 2, Nat. Or. *Passifloraceae*. The species of this interesting and elegant genus are admirably adapted for stove and greenhouse climbers, being of easy culture, free growers, and if allowed plenty of room, producing abundance of beautiful flowers; many of the kinds produce fruit freely, from which, through impregnation, several fine hybrids have been raised. The fruits of some, as *P. edulis*, *laurifolia*, and *P. quadrangularis*, or *Granadilla*, are eaten; the succulent pulp which surrounds the seeds is found to be fragrant, cooling, and pleasant, agreeably acid, and admirably adapted for allaying thirst in hot climates. *P. edulis* and *P. laurifolia* will fruit freely in the plant stove. *P. quadrangularis* bears fruit resembling a large lime, and to cause it to produce them in abundance, should be treated as follows:—Plant it in a large box, or in a partitioned off corner of a stove, or tan-pit; if in the latter, holes may be bored in the sides to admit the egress of the roots into the tan. The shoots should be trained parallel to the glass, as vines, and treated similar to melons, that is, the most vigorous shoots removed, as they will be found not to bear so freely as those of a moderate growth; it will generally be found necessary to set the fruit by artificial impregnation, taking care to give the plant abundance of water. All the species will thrive well in a mixture of loam and peat, and are easily increased by cuttings planted in sand. The hardy kinds should be planted in

sheltered situations. *Synonymes*: 1, *P. heterophylla*; 2, *P. lunata*; 3, *P. lyræfolia*; 4, *P. palmata*; 5, *P. hircina*; 6, *P. hibiscifolia*; 7, *P. glabrata*; 8, *P. peltata*; 9, *P. discolor*; 10, *P. fragrans*; 11, *P. glauca*; 12, *P. punctata*; 13, *P. odora*. See *Disemma*, *Murucujá*, and *Tacsonia*.

Garden varieties. These are now become rather numerous, and some are very beautiful; for particulars respecting them refer to the nurserymen's catalogues.

PASSIFLORÆÆ, or PASSION-FLOWERS. A most interesting and well-known order of climbers bearing singular and beautiful flowers. They "are the pride of South America and the West Indies, where the woods are filled with their species, which climb about from tree to tree, bearing at one time flowers of the most striking beauty, and at other times fruit tempting to the eye, and refreshing to the palate."

PASSION-FLOWER. See *Passiflora*.

PASTECA. See *Cucumis Citrullus Pasteca*.

PASTINACA, Tournefort. From *pastinum*, a dibble; in allusion to the form of the root. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. *P. sativa*, or Parsnep, is a well known culinary root; the other species are unworthy of cultivation. They are only increased from seed, which should be sown in spring in the open ground. *Synonymes*: 1, *Ferula feniculacea*; 2, *Malabaria graveolens*; 3, *Smyrnum nudicaule*; 4, *Malabaria pimpinelloides*; 5, *P. opaca*, *P. sylvestris*; 6, *P. dissecta*—*P. feniculacea* 1, divaricata, graveolens, 2, latifolia, lucida, nudicaulis 3, panicifolia, pimpinellifolia 4, sativa 5, Sekakul 6, stenocarpa, taraxacifolia, umbrosa. See *Opópanax*.

PATAGONULA, Linn. From the name of its native country, Patagonia. *Linn.* 5, Or. 1, Nat. Or. *Boraginææ*. This is an ornamental tree, growing well in an equal mixture of loam and peat; cuttings planted in the same kind of soil, under a glass, root readily. *Synonymes*: 1, *Cordia Patagonula americana* 1. White . 7, S. Ev. T. 25 S. Amer. 1732

PATCHOULI, or **PUCHA PAT**, is a fragrant preparation from a species of *Plectranthus*, perhaps *P. graveolens*, but this is not certain.

PATELLARIA, *Fries*. Derived from *patella*, a saucer; form of the cup. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceae*. An extremely minute species, found on wood—*atrata*.

PATENT, spreading, diffuse.

PATERSONIA, *R. Brown*. In honour of Colonel William Paterson, an excellent botanist. *Linn.* 16, Or. 1, Nat. Or. *Iridaceae*. A handsome genus of plants, in habit and growth resembling the *Iris*; they succeed well in sandy peat, and may be increased by divisions, or seeds. *Synonyme*: 1, *P. glauca*.

<i>glabrata</i>	. . . Purple	. . . 6, G. Her. P.	1 1/2 N. S. W.	1814

PAULLÍNIA. See *Serjania*.

PAULÓWŃIA, *Sieb.* In honour of the Hereditary Princess of the Netherlands, who was daughter to the Emperor of Russia. *Linn.* 14, Or. 2,

Nat. Or. *Scrophulariaceae*. A very noble hardy tree, growing from thirty to forty feet high, bearing panicles of dark lilac flowers, similar in shape to those of *Catalpa Syringifolia*. It thrives in any good soil, and is readily increased by cuttings. *Synonyme*: 1, *Bignonia Houslonii*.

imperialis 1. Lilac . . . 6, H. De. T. 30 Japan . . . 1840

PAUPERÍŃIOUS, poor, having a starved appearance.

PAVÉŃTA, *Linn.* The name of one of the species in Malabar. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceae*. Handsome shrubs, growing best in an equal mixture of sandy loam and peat; increased from cuttings in sand, under a glass, in heat. *Synonymes*: 1, *P. indica*; 2, *P. alba*, *Icdera paniculata*. See *Icdera*.

PÁVIA, *Boerhaave*. In honour of Peter Paiv, a Dutch botanist, once professor at Leyden. *Linn.* 7, Or. 1, Nat. Or. *Sapindaceae*. Handsome flowering shrubs or trees; increased by layers, or by grafting on the common horse chestnut. When seeds can be obtained, they should be sown in March in common soil, about an inch deep. *Synonymes*: 1, *Aesculus discolor*, *Pavia hybrida*; 2, *A. flava*; 3, *Aesculus Pavia macrocarpa*; 4, *P. parviflora*, *A. macrostachya*; 5, *A. neglecta*; 6, *A. Pavia*; 7, *P. humilis*.

PEA. See *Pisum*.

PEACH. See *Amégdalus*.

PEACH OF SIERRA LEONE. See *Sarcocéphalus esculéntus*.

PEAR. See *Pýrus*.

PEARL BARLEY is barley divested of the husk, and then operated upon further so as to form the kernel into round grains.

PEARLWORT. See *Sagina*.

PÉCTEN, or VENUS'S COMB. See *Scándia Péctén*.

PECTIDIUM. See *Péctis*.

PECTINÁRIA, *Haworth*. Derived from *pecten*, a comb. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. This species requires the same treatment as the genus *Stapétia*. *Synonyme*: 1, *Stapétia articulata*.

articulata 1 . Purple . . . 7, S. Ev. S. $\frac{1}{2}$ G. G. H. 1800

PECTINATE, or PECTINATED, like the teeth of a comb or rake.

PÉCTIS, *Less*. From *pecten*, a comb; appearance of the teeth of the pappus. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Stove annuals, of neither interest nor beauty, and the simplest culture — *canéscens*, *ciliáris*, *humifúsa*, *linifolia*, *prostrata*. See *Longchampsia*.

PECTORAL, relating to the breast.

PEDALÁCÆ, or PEDALIADS, form a small group resembling Bignoniads. They occur in all parts of the tropics. Their products are useful both as food and medicine.

PEDÁLIUM, *Linn.* From *pedalion*, a rudder; in reference to the dilated angles of the fruit. *Linn.* 14, Or. 2, Nat. Or. *Pedaliaceæ*. A curious annual, remarkable for its hard, nut-like fruit, with sharp points or horns; it prefers a mixture of loam and peat.

mbrex . . . Wht. pur. . . 8, S. . . A. $\frac{1}{2}$ E. Indies 1778

PEDATE; when leaves are cut in divisions, and the outer divisions again lobed, they are pedate.

PEDATIFID, cut into lobes, the lateral ones not radiating from the petiole like the rest.

PEDICEL, commonly applied to the partial foot-stalks of flowers.

PEDICULÁRIS, *Linn.* From *pediculus*, a louse; supposed effect on sheep eating it. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. Beautiful little plants, with very regular, finely-cut leaves; they thrive best if planted in a mixture of peat soil, and kept moderately moist. The best way of obtaining an increase is by seeds. *Synonyme*: 1, *P. asplenifolia*.

PEKEA. See *Caryócar*.

PELARGÓNIUM, *L'Heritier*. From *pelargos*, a stork; the capsules may be fancied to resemble the head and beak of a stork. *Linn.* 16, Or. 4, Nat. Or. *Geraniaceæ*. The shrubby kinds of this favourite genus will thrive in any rich soil; loam and decayed leaves will be found a good compost for them. The pots should be well drained with potsherds, and the plants receive plenty of air and water whilst in a vigorous growing state; cuttings root freely in soil or sand, under a glass; some of the finer and hard-wooded kinds will be found easier to increase by cuttings from the roots. The tuberous-rooted kinds should be kept quite dry when not in a growing state, and may be increased by small offsets from the roots. No genus is more liable than this

to sport into hybrids by promiscuous impregnation. All the fine varieties which are found in gardens have been produced by artificial hybridisation, that is, by cutting out the anthers of the plant intended for the female parent before they burst, and impregnating the stigmas with the pollen of another. *Synonyms*: 1, *Geranium Grenvillea*; 2, *P. australe*; 3, *G. capitatum*; 4, *G. stenopetalum*; 5, *G. minutum, album*; 6, *Phymatanthus tricolor*.

GARDEN VARIETIES.—These are now numbered by hundreds, and for beauty they far surpass any of the species hitherto introduced; for their colours and merits, refer to the nurserymen's catalogues, which are published annually.

PELÉCINUS. See *Biserrula Pelécinus*.

PELEGRINA. See *Alströméria Pelegrina*.

PELÉXIA, Poiteau. From *pelax*, a helmet. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. An herbaceous plant of no great beauty, growing in a mixture of loam and peat, and increased slowly by division at the roots. *Synonyme:* 1, *Neottia admixta*.

spiranthoides 1 Grn. wht. S. Ter. $\frac{3}{4}$ St. Vincent. 1823

PELIOSÁNTHES, Andrews. From *pelios*, livid, and *anthos*, a flower. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. Curious plants, with ovate-lanceolate leaves, requiring a mixture of loam, peat, and sand; propagated freely from suckers.

bimilis . Green . . 5, S. Her. P. $\frac{3}{4}$ E. Indies 1809
Tota . . Brn. Grn. . 4, S. Her. P. $\frac{3}{4}$ E. Indies 1807

PELLICLE, a thin skin which envelopes certain seeds.

PELLITORY. See *Parietaria*.

PELLITORY. See *Pyrethrum Parthénium*.

PELLITORY OF SPAIN. See *Anthemis Pyrethrum*.

PELLITORY OF THE WALL. See *Parietaria officinalis*.

PELLUCID, bright, transparent.

PELTÁNDRA. See *Arum*.

PELÓRIA. See *Lénaria vulgaris Pelória*.

PELTÁRIA, Linn. From *pelte*, a small buckler; in allusion to the form of the silicle. *Linn.* 15, Nat. Or. *Brassicæ*. Pretty little plants, flourishing in any light soil; readily increased by dividing the roots, or by seed. See *Heliophila*.

alliacea . . White . 6, H. Her. P. 1 Austria . 1601
glatifolia . White . 6, H. A. 1 Syria . . 1823

PELTATE, a leaf is peltate when the petiole is fixed in the disk instead of the margin.

PELTATE-NERVED, used in reference to the nerves of a leaf radiating from the centre.

PELTÍDEA, Acharius. From *pelte*, a target, and *idos*, resemblance; form of the shields. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. The species of this genus grow on thatch, the bark of trees, among moss, &c. *P. aphthosa* is used, boiled in milk, by the peasants in Sweden, as a cure for the aptha, from which it takes its name—*aphthosa, canina, horizontalis, membranacea, polydactyla, rufescens, scutata, spuria, venosa*.

PENÆCÆE, or SARCOCOLLADS. These are all small evergreen shrubs, natives of South Africa. It is supposed that from some of the plants of this order the Hottentots obtain the gum-resin called *Sarcocol*, used by them in dressing wounds.

PENÆA, Linn. In honour of P. Pena, who, in conjunction with Lobel, published *Adversaria Botanica* in 1570. *Linn.* 4, Or. 1, Nat. Or. *Penæcæe*. Handsome shrubs, growing in sandy peat; and young plants may be obtained from ripened cuttings, in sand, under a glass.

fruticulosa . Red . . 6, G. Ev. S. 1 C. G. H. . 1822
umbriata . Pink . . 6, G. Ev. S. 1 $\frac{1}{2}$ C. G. H. . 1824
lateriflora . Red . . 6, G. Ev. S. 1 C. G. H. . 1825

marginata . Red . . 6, G. Ev. S. 1 C. G. H. . 1816
mureolata . Yellow . 6, G. Ev. S. 2 C. G. H. . 1787
myrtoides . Red . . 6, G. Ev. S. 2 C. G. H. . 1810
sarcocolla . Red . . 6, G. Ev. S. 1 C. G. H. . 1825
squambosa . Red . . 6, G. Ev. S. 1 C. G. H. . 1787

PENANG LAWYERS are walking-sticks made from the Calamus palm.

PENCILLED, marked in lines, as with a pencil, or having the appearance of hair pencil, as the stigmas of numerous species of Oxalis.

PENDULOUS, drooping, hanging down.

PENICILLÁRIA, Willdenow. From *penicillus*, a pencil; in allusion to the spikes. *Linn.* 3, Or. 2, Nat. Or. *Graminæcæ*. Mere weeds, thriving in any common soil, and increased by seeds—*ciliata, spicata*.

PENICÍLLIUM, Link. From *penicillum*, a painter's pencil; alluding to the form of the filaments. *Linn.* 24, Or. 9, Nat. Or. *Botrytæcæ*. The species are found on the decaying stems of herbaceous plants and other rotten substances—*candidum, glaucum, sparsum*.

PENNISÉTUM, Beauvois. From *penna*, a feather, and *seta*, a bristle. *Linn.* 3, Or. 1, Nat. Or. *Graminæcæ*. A genus of grasses, not worth cultivating except in botanical collections. The seed may be sown in the open border. *Synonyme:* 1, *Panicum holcoides*—barbatum, cenchroides, compressum, dichotomum, holcoides 1, nepalense, orientale, polystachyon, setosum, violaceum.

PENNATOUS, soft, downy, like a feather.

PENNY-CRESS. See *Thlaspi arvense*.

PENNYROYAL. See *Mentha Pulégium*.

PENNYROYAL TREE. See *Saturèja viminea*.

PENNYWORT. See *Hydrocotyle* and *Umbilicis*.

PENTACRÝPTA, Lehmann. From *pente*, five, and *krypte*, a vault. *Linn.* 23, Or. 1, Nat. Or. *Apiacæ*. A parsley-scented plant, requiring protection in winter; increased by seeds only—*atropurpurea*.

PENTADÉSMA, R. Brown. From *pente*, five, and *desma*, a bundle; the stamens are disposed in five bundles. *Linn.* 13, Or. 2, Nat. Or. *Clusiæcæ*. A handsome, lofty-growing tree, very difficult to transplant, on account of the long tap-root, which, if injured, will kill it; the tree produces its flowers when about twenty feet high. It requires a strong moist heat. A mixture of loam and peat suits it; and ripened cuttings, with their leaves not shortened, will root in sand, under a glass, in a moist heat.

butyræcea . White . 11, S. Ev. T. 30 S. Leone 1822

PENTÁGONIUM. See *Vincetoxicum*.

PENTÁNDRIA. The fifth class of the Linnæan system of botany.

PENTÁGONAL, having five angles.

PENTÁGYNOUS, having five styles.

PENTÁNDROUS, having five stamens.

PENTAPÉTALOUS, having five petals.

PENTÁPETES, Linn. One of the Greek names for Cinquefoil. From *pente*, five; alluding to the five-celled fruit. *Linn.* 16, Or. 7, Nat. Or. *Sterculiæcæ*. Beautiful flowering plants, growing in any light rich soil; cuttings soon

root in mould or sand, under a glass, in heat.
Synonyme: 1, *Brotëra ovata*.

ovata 1 . . . Scarlet . . . 7, S. B. 2 N. Spain . 1805
 phœnicea . . . Scarlet . . . 7, S. Her. P. 2 India . . 1690

PENTAPHYLLO. See *Lupinaster*.

PENTAPTERA, *Roeb.* From *pente*, five, and *pteron*, a wing; fruit with five wings. *Linn.* 23, Or. 1, Nat. Or. *Combretaceæ*. For culture, &c., see *Bucida*.

arguta . . . White . . . 5, S. Ev. S. 2 E. India .
 bialata . . . White . . . 6, S. Ev. S. 2 E. India . 1825
 paniculata . . . White . . . 5, S. Ev. S. 1½ E. India . 1826
 tomentosa . . . White . . . 5, S. Ev. S. 1½ E. India . 1824

PENTAPTERYGIUM. See *Thibardina*.

PENTARAPHIA, *Lindley*. From *pente*, five, and *raphis*, a spike. *Linn.* 14, Or. 2, Nat. Or. *Gesneriaceæ*. Handsome West Indian plants; for culture and propagation, refer to *Gesneria*.
Synonyme: 1, *Gesneria ventricosa*.

cubensis . . . Scarlet . . . 7, S. Ev. S. 1½ Cuba . 1848
 longiflora 1 . . Red . . . 7, S. Ev. S. 1½ Jamaica. 1823

PENTAS, *Bentham*. From *pente*, five; in allusion to the parts of the flowers being in fives instead of fours. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. Pretty soft-wooded shrubs, well worth cultivating for their numerous flesh-coloured flowers; they are easily cultivated, and require similar treatment to *Ruellia* or *Clerodendron*.

carnea . . . Pink . . . 4, S. Ev. S. 2 Africa . . 1844
 parviflora . . . Flamo . . . 4, S. Ev. S. 2 Africa . . 1846

PENTATAXIS, *D. Don*. From *pente*, five, and *taxis*, an arrangement. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. For culture, see *Helichrysum*.
Synonyme: 1, *Helichrysum Zeyheri*.

micrantha 1 . . White . . . 5, G. Ev. S. 1 C. G. H. . 1821

PENTHÖRUM, *Linn.* From *pente*, five, and *horos*, a boundary; and the capsule is terminated by five beaks. *Linn.* 10, Or. 5, Nat. Or. *Crassulaceæ*. A succulent plant of little beauty, growing in light sandy soil, and increased by division at the roots; cuttings also root freely under a glass.

sedoldea . . . Grn. yel. . . 7, H. Her. P. 1 Virginia 1768

PENTLANDIA, *Herbert*. In honour of J. B. Pentland, Esq., Consul-General in Peru. *Linn.* 5, Or. 1, Nat. Or. *Amaryllidaceæ*. There are two varieties of this species, differing very slightly from each other. The first was found in Cusco in Peru, and was sent to Spofforth under the name of the red Narcissus, by the gentleman in compliment to whom the genus is named: and the other was found by Commodore Sullivan, during his command on the west coast of S. America, in 1837. Both varieties flowered for the first time in England, in August, 1839.

miniata . . . Red . . . 9, F. Bl. P. 1½ Peru . . 1836
 lacunosa . . . Red . . . 9, F. Bl. P. 1½ Peru . . 1836
 Sulivânica . . . Orange . . . 8, F. Bl. P. 1½ Peru . . 1837

PENTSTEMON, *L'Heritier*. From *pente*, five, and *stemon*, a stamen; there are four perfect, and one imperfect. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. Charming herbaceous plants, worthy of a place in every collection; they all delight in a mixture of loam and peat, and are readily increased by divisions, or by seeds.

Synonymes: 1, *Chelone cœrulca*, *hirsuta*; 2, *C. atropurpurea*; 3, *C. cristata*; 4, *C. erianthera*; 5, *P. Bradburii*; 6, *C. angustifolia*; 7, *C. elegans*, *P. elegans*; 8, *C. rosea*, *angustifolia*; 9, *C. gentianoides*; 10, *P. gentianoides*.

PENTZIA. Named by Thuuberg, in honour of his pupil Charles John Pentz. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. A bushy, hoary-branched shrub, with corymbs of little yellow flowers; it grows in a mixture of loam and peat, and ripened cuttings root freely in sand, under a glass. *Synonyme*: 1, *P. crenata*, *Tanacetum flabelliforme*.

flabelliformis 1 Yellow . 6, G. Ev. S. 2½ C. G. H. 1774

PERPŒRIA, *Ruiz and Pavon*. Analogous to *Piper*. *Linn.* 2, Or. 3, Nat. Or. *Piperaceæ*.

This is the herbaceous tribe of Peppers. The species grow freely in an equal mixture of sandy loam and peat, and may be increased by cuttings, or divisions of the roots.

PEPPER, WHITE, is *Piper nigrum* with the black husks removed.

PEPPERWORT. See *Leptidium*.

PERÀDO. See *Ilex Peràdo*.

PERÁLTEA, *De Candolle*. In honour of Joseph Peralt, of New Spain, a botanist. *Linn.* 18, Or. 1, Nat. Or. *Fabaceae*. An elegant plant when in flower; it grows in loam, peat, and sand; and young cuttings root if planted in a pot of sand, with a glass over them in heat.

lupinoides. Purple . 9, F. Ev. S. 2 N. Spain . 1827

PERDÍCIUM, *Linn.* From *perdix*, a partridge; partridges were fond of the original plant. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. An uninteresting hardy herbaceous plant; succeeding in any common soil. *Synonyme*: 1, *Tussilago Anándria*—*Anándria* 1. See *Anándria*, *Chatanthèra*, *Chabrèa*, and *Tréxis*.

PEREGRINOUS, wandering, diffuse.

PERENNIAL, lasting many years without perishing.

PERÉSKIA, *Plumier*. Named in honour of Nicholas F. Píeresk, of Aix, in Provence, a lover of botany. *Linn.* 12, Or. 1, Nat. Or. *Cactaceae*. Grotesque and ornamental plants, very different from the rest of the genera in *Cactaceae*, from the branches being woody, as well as furnished with proper leaves. The species grow freely in any light soil; and cuttings root readily in mould, under a glass, in heat. *Synonymes*: 1, *Cactus Peréskia*; 2, *C. portulacæfolia*.

PERIÁNTH, or PERIÁNTHIUM, the envelope which surrounds the flower. This term is applied when the calyx cannot be distinguished from the corolla, as in *Lilium*, &c. &c.

PERIBÀLIA, *Trinius*. From *periballo*, to encompass. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*. A worthless species of grass, growing in any common soil, and increased by seeds. *Synonyme*: 1, *Aira involucreta*—hispanica 1.

PERICÁLLIS. See *Senecio*.

PERICÁLLIS, *D. Don*. From *perikalles*, very pretty; radial ligulae beautiful. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. A very desirable plant; increased by cuttings or seeds, and treated as the *Cinerària*. *Synonyme*: 1, *Cinerària tussiláginis*, *Senecio tussiláginis*.

tussiláginis 1 Purple . 4, G. Her. P. 1 Teneriffe 1829

PERICARP, the seed-vessel.

PERICLHENA, *Fries*. From *peri*, around, and *ischano*, to encompass. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. Very minute *Fungi*, found on the cones of *Pinus Abies*, and dead trunks of trees—*populina*, *strobilina*.

PERICLYMENUM. See *Caprifolium Periclymenum*.

PERIDIUM, the tunie which invests *fungi*.

PERICLHETIAL, leaves which in mosses surround the base of the stalk of the theca.

PÉRIGONE, the calyx and corolla.

PERIGYNOUS, inserted in the calyx, or in the disk which adheres to it.

PERILLA, *Linn.* The meaning not explained. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Plants of little merit, flourishing in any light loamy soil.

fruticosa . . . White . . . 7, G. Ev. S. 4 Nepal . 1823

PERIPTERA, *De Candolle*. From *periptera*, a shuttlecock; resemblance in the form of the flower. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*.

A pretty little shrub, growing about three feet high, in a mixture of loam and peat. The species ripens its seed freely, from which it may be increased, as also from cuttings in sand, under a glass. *Synonymes*: 1, *Sida Periptera*, *Andda punicea*.

punicea 1 . . Crimson . . 5, S. Ev. S. 3 N. Spain 1814

PERIPHERIC, circular, curved.

PERISTĒRIA, *Hooker*. From *peristera*, a dove; in allusion to the dove-like appearance of the column. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a genus of splendid plants, the most remarkable and interesting of which is the *P. elata*; it produces a long spike of yellowish-white waxy flowers, yielding a very peculiar fragrance. In the neighbourhood of Panama, it is known to the natives by the

appellation of "*el Spirito Santo*," and the reason for this name is quite obvious on looking at the flower; the centre of it exhibits a column which, with its summit and the projecting gland of the pollen-masses, together with the erect wings, bears a very striking resemblance to the figure of a Dove; whence the English name of the genus Dove-flower. The species should be grown in pots well drained, in a mixture of fibrous loam, leaf-mould, and sandy peat, and must not be overwatered at any season, more especially when torpid; they are increased by separating the pseudo-bulbs. See *Acineta*. *Synonymes*: 1, *Acineta Barkeri*; 2, *Angulda superba*, *Acineta Humboldtii*; 3, *P. maculata*; 4, *Angulda squallida*, *Lycobornium squallidum*.

PERPUSILLUS, very small.

PÉRSEA, *Geertner*. A name applied by Theophrastus to an Egyptian tree. *Linn.* 9, Or. 1, Nat. Or. *Lauraceæ*. This ornamental species succeeds well in a mixture of turfy loam and peat. The best way of propagating it is by layers, which root freely; ripened shoots taken off at a joint, and planted in sand, under a glass, in heat, will sometimes root. *Synonymy*: 1, *Laurus Pérsca*.

gratissima 1 . Grn. yel. 6, S. Ev. S. 50 W. Ind. . 1739

PERSIAN SUN'S-EYE. See *Tulipa Öcutis sblis*.

PÉRSICA, *Tournefort*. So named from the Peach-tree coming originally from Persia. *Linn.* 12, Or. 1, Nat. Or. *Drypaceæ*. To this genus belong the well-known and much-esteemed fruits the Peach and Nectarine. The different kinds are propagated by budding on Damask plum-stocks, and new varieties are raised from the stone, after a mixture of the sorts by impregnation. In this country, they are usually trained on south walls in the fan manner, which is allowed to be the most natural. The soil best suited for them is three-parts mellow-loam, enriched with one-part vegetable mould. *Synonyms*: 1, *Amgdalus Pérsica Nectarina*; 2, *A. Pérsica*.

PERTUSARIA, *Acharius*. Derived from *pertusus*, full of holes. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. A genus of cryptogamic plants, nearly allied to *Verrucaria*—*isidioides*.

PERUVIAN CINNAMON. See *Cinnamomum quitzos*.

PERULARIA. See *Orchis fuscescens*.

PERUVIAN-BARK. See *Cinchona Condamina, lancifolia* and *purpurea*.

PERVIOUS, having a passage through which anything can be transmitted.

PERYMENIUM, *De Candolle*. Meaning not explained. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Plants of the earliest culture.

Barclayanum Copper .7, G. Ev. S. 2 Mexico . 1830
discolor . . . White .9, G. Ev. S. 2 Mexico . 1880

PESOMERIA, *Thouars*. From *pipto, peso*, to fall, and *meros*, a part; the sepals are spontaneously thrown off from the flower shortly after they have expanded, just as leaves are thrown off the stems of many of these plants when they receive a sudden check, and then the petals and labellum only remain to constitute the flower. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The plant is nearly related to *Blétiæ* and *Phaius*, but will probably be found to grow best under the treatment given to *Burlingdonia*.

tetragona . Brown . 12, S. Epi. 2 Mauritius . 1837

PESTILENT-WORT. See *Tussilago Farsfara*.

PETALACTE, *De Candolle*. From *petalon*, a petal, and *acte*, a ray. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. For culture, see *Helichrysum*. *Synonymy*: 1, *Gnaphalium coronatum*.

bicolor . . . Pur. whit. .5, G. Ev. S. 1 C. G. H. 1816
coronata 1 . White .5, G. Ev. S. 1 C. G. H. 1816

PETALIDIUM, *Nees*. From *petalon*, a petal; probably in allusion to the very conspicuous corolla. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceæ*. A very showy stove plant, flowering freely during the summer months, requiring the same culture as *Ruellia*. *Synonyms*: 1, *Ruellia barlerioides*, *Ruellia bracteata*, *barlerioides* 1 . White .6, S. Ev. S. 3 India . 1840

PETALOMA, *Swartz*. See *Mouriria*.

PETAL-LIKE SCALES in *Aistnaceæ* and *Silenaceæ*, the scales which are fixed to the throat of the petals.

PETALÓSTEMUM, *Michaux*. From *petalon*, a petal, and *stemon*, a 'stamen; the stamens are joined to the petals at the base. *Linn.* 16, Or. 2, Nat. Or. *Fabaceæ*. Pretty herbaceous

plants, growing in any border soil; young plants are readily obtained by divisions. *Synonymy*: 1, *Dalea Kuhnistera*.

- candidum . . . White . . . 7, F. Her. P. 1 N. Ame. 1811

PETALS, divisions of a corolla.

PETÁMENES. See *Gladiolus*.

PETÁSITES. See *Tussilago*.

PETIT COCO. See *Theophrasta Jussieii*.

PETIOLATE, or **PETIOLED**, having footstalks.

PETIOLULATE, having little petioles.

PETIVERIA. Named by Linnæus in honour of J. Petiver, F.R.S., a London apothecary. *Linn.* 7, Or. 1, Nat. Or. *Petiveriæcæ*. Ornamental plants, growing in a mixture of loam and peat; they propagate readily by cuttings under a glass.

- alliacea . . . White . . . 6, S. Ev. S. 2 Jamaica . 1759
- octandra . . . White . . . 6, S. Ev. S. 2 W. Indies. 1737

PETIVERIÆCÆ, or **PETIVERIADS**. A small order of tropical undershrubs and herbaceous plants.

PETOUA. See *Apiaba Petouma*.

PETRÆA. Linnæus dedicated this genus to Robert James, Lord Petre, a famous patron of botany, who died in 1742. *Linn.* 14, Or. 2, Nat. Or. *Verbenæcæ*. Beautiful stove plants. *P. volubilis* is one of the most handsome stove twiners we possess. To grow them well, they must be planted in good rich mould, and kept in a strong heat. They may be propagated readily by cuttings under a glass.

PETROBŪM, *R. Brown*. From *petros*, a rock, and *bio*, to live; habitation of the species. *Linn.* 19, Or. 1, Nat. Or. *Asteræcæ*. An ornamental shrub, growing well in sandy loam; and cuttings root without difficulty in the same kind of soil. *Synonymes*: 1, *Bidens arborea*, *Spilanthes arborea*.

- arboresum 1 . . . Pa. yel. 6, S. Ev. S. 6 St. Helena 1816

PETROCÁLLIS, *R. Brown*. From *petros*, a rock, and *kalos*, beautiful; the plant adorns the rocks on which it grows. *Linn.* 15, Nat. Or. *Brassicæcæ*. This little plant is well fitted for ornamenting rock-work, or it may be grown in pots, in a mixture of sandy loam and peat, and is multiplied by seeds, or divisions at the root. *Synonymy*: 1, *Draba pyrenaica*.

- pyrenaica 1 . . . Pink . . . 5, G. Hor. P. 4 Pyrenees . 1759

PETROCÁRYA. See *Parinarium*.

PETROMÁRULA, *A. Decandolle*. From *petros*, a rock, and *maron*, a bitter herb. *Linn.* 5, Or. 1, Nat. Or. *Campanulæcæ*. This plant requires to be grown in a sheltered situation, and protected by a frame in winter; it may be increased by divisions. *Synonymy*: 1, *Phyteuma pinnata*.

- pinnata 1 . . . Pa. blue . . . 8, F. Her. P. 3 Candia . 1640

PETRÓPHILA, *R. Brown*. From *petros*, a stone, and *phileo*, to love; in allusion to the places

in which the plants are found. *Linn.* 4, Or. 1, Nat. Or. *Protæcæ*. A genus of ornamental shrubs, nearly related to *Protæa*, to which genus they may be referred for culture and propagation. *Synonymy*: 1, *Protæa fucifolia*.

PEZIZA, Dillwyn. Name derived from *Peziceæ*, a tribe of fungi in Pliny. *Linn.* 24, Or. 9, Nat. Or. *Helvellææ*. This is a very extensive genus, containing some of the most beautiful of our fungi, which appear in the end of autumn on decayed wood, or in places where trees have formerly stood; they are in the form of small undulated scarlet cups. *Synonymes*: 1, *P. eyathoides*; 2, *P. epidendra*; 3, *P. albella*—Abbotiana, acetabula, acicularis, ægriosa, agaricina, albo-spadicea, albo-violenscens, amorpha, anomala, arenosa, a. salicina, argillææ, Aspegrenii, atrata, atrorufa, atrovirens, aurantia, axillaris, badia, bicolor, bolaris, buccina, cœrulea, cœsia, calyculus, campanula, cerea, cerina, chrysocoma, cinerea, citrina 1, clandestina, claroflava, cochleata, coccinea 2, compressa, concinna, conigera, cribrosa, cupularis, domestica, epiphœria, erecta, erraticâ, erumpens, faginea, fascicularis, fibuliformis, firma, fissa, flexella, fructigera, furfurææ, fusca, fuscarioides, granulata, Gre-villii, hamisphœrica, herbarum, hirta, hispidula, humosa, hyalina, inflæa, leporina, leucoloma, leucostigma, macropus, Marchantie, mclaloma, melastoma, melaxantha, nidulus, ochrææ, onotica, pallenscens, papillaris, pedicellata, Persoonii, phascoides, pineti, plano-umbilicata, plúmbea, punctata, radiculata, Rá-pulum, repanda, reticulata, rhabarbarina, Rôse, rufo-olivææ, rutilans, saniosa, sclerotoides, scutellata, serotina, sterodæa, subtilis, sulphurea, tricolor, tuba, tuberosa, varicolor, vesiculosa, villosa, vinosa, virginea, vitellina, vulgaris 3, v. diaphana, Wauchii, xanthostigma.

PFÄFFIA, Martius. Name of a German gentleman. *Linn.* 5, Or. 1, Nat. Or. *Amaranticææ*. For culture, see *Celësia*. *Synonyme*: 1, *Celësia gnaphalodes*.

gnaphalodes 1 . White . 6, S. Ev. S. 1 Brazil . 1822

PHACA, Linn. From *phago*, to eat; a name adopted from Dioscorides. *Linn.* 17, Or. 4, Nat. Or. *Fabacææ*. Ornamental herbaceous plants, growing well in the open borders, in common garden soil; they are all increased by dividing the plants at the root, or by seeds, which is by far the best method of propagating them. *Synonymes*: 1, *P. membranææ*; 2, *Astragalus leontinus*, *oroboides*. See *Astragalus*, *Glottidium*, *Oxytropis*, and *Sphærosophysa*.

PHÆNOGÁMOUS, such plants as possess visible sexual organs.

PHÆNÓPSIS, *De Candolle*. From *phaino*, to be conspicuous, and *opsis*, the sight. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Of no interest to cultivators. *Synonyme*: 1, *Prenanthes viminea*.

viminea 1. Yellow . 7, H. B. 1½ Austria . 1789

PHÆOSTOMA. See *Clarkia*.

PHÁGNALON, *De Candolle*. See *Conyza*.

PHÁGUS. See *Quercus Æsculus*.

PHAIUS, *Loureiro*. From *phaios*, shining; in allusion to the beauty of the original species. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is an interesting and valuable genus of plants, especially *P. albus*, which ought to be in every collection of orchidaceous plants; the following is the best way of cultivating it:—When the plant becomes dormant, it should be placed in a cool house, the temperature of which, in winter, should not be more than 45 or 50 degrees. After reposing the proper time, it will begin to push from the base of the stems; and when the young shoots are about half an inch in length, the plants should be repotted into heath soil, well drained at the bottom, and mingled with an abundance of finely-broken potsherds, according to the usual method of cultivating orchidaceous plants. For a moderate-sized plant, the pot should be about six inches in diameter at the top, which will allow of its completing the annual growth without being again potted. It will bear a free supply of water when growing vigorously, and may then be syringed once or twice a day, till it shows signs of flowering, when the syringing must be discontinued. When it has ceased flowering, it should be kept in a cool house, and sparingly watered until the leaves begin to turn yellow, when it must be removed to its winter quarters, and kept dry, merely supplying as much water as will keep the plant alive, and taking care never to wet the stems. For the culture of the other species, see *Blétia*. *Synonymes*: 1, *Blétia Tankervilleæ*; 2, *B. Woodfordii*; 3, *P. grandifolius*.

PHALACRÆA. See *Ageratum latifolium*.

PHALACROLÔMA, *D. Don*. See *Erigeron carolinianum*.

PHALÉNOPSIS, *Blume*. From *phalaina*, a moth, and *opsis*, resemblance; in allusion to the appearance of the flowers, which bears a striking resemblance to that insect: whence the name Indian Butterfly-plant. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. *P. amabilis* is an extremely beautiful plant. The flowers are produced on a nearly erect spike, and are very elegant, on account of their large size and the brilliant whiteness of the broad leathery petals. Some of the other species are equally handsome. They all require a very hot, damp part of the house, and are otherwise treated as the genus

Vanda. Increase is from side shoots, which, however, do not throw out freely. *Synonymes*: 1, *P. equestris*, *Staurolóttis equestris*.

PHÁLARIS, *Linn.* From *phalaros*, brilliant; having shining seeds. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Mostly uninteresting species. *P. commutata* and *appendiculata* are rather pretty; *P. canariensis* is cultivated on account of its seeds (canary-seed), which are given to birds; they merely require to be sown in any common soil. See *Achnodóton*, *Atra*, *Chilobolus*, *Crypsis*, and *Dégraphis*.

appendiculata Apetal . 6, H. Grass 1 Egypt . 1820
canariensis . . . Apetal . 7, H. Grass 1½ Brit., wastes.
commutata . . . Apetal . 6, H. Grass 1 Italy . . 1823
aquática, bulbosa, cærulescens, capensis, microstachya, minor, nitida, nodosa, parviflora, quadrivalvis.

PHALEROCÁRPUS, *G. Don*. From *phaleros*, white, and *karpus*, fruit; because of the colour of the fruit. *Linn.* 8, Or. 1, Nat. Or. *Eriacææ*. This pretty little plant may be referred to *Oxycoceus* for culture and propagation. *Synonymes*: 1, *Gaultheria serpyllifolia*, *Oxycoceus hispidulus*, *Arbutus filiformis*, *Vaccinium hispidulum*.

serpyllifolia 1 White . 4, H. Ev. Cr. 4 N. Ame. 1815

PHÁLUS, *Michaux*. From *phallos*, signifying a wooden club. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. Fœtid-smelling fungi, found in woods and hedges, on hazel trunks, &c.—*caninus*, *fœtidus*, *ibsmos*.

PHALOCÁLLIS, *Herbert*. Not explained by its author. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. This remarkable plant produces a delicate and beautiful flower on a strong and tall stem. It will succeed pretty well under a warm south wall in the open ground; increase is by seeds. *Synonyme*: 1, *Capella plumbæa*.

plumbæa 1 . . . Lead col. . 7, F. Bl. P. 4 Mexico . 1837

PHANEROGAMOUS PLANTS are such as have conspicuous flowers.

PHANEROPHLËBIA, *Presl*. From *phaneros*, conspicuous, and *phleps*, a vein; veins conspicuous. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*.

Stove ferns. *Synonymes*: 1, *Polypodium juglandifolium*; 2, *Aspidium nobile*.
juglandifolia 1 Yellow . 6, S. Her. P. 1½ S. Ame. 1828
nobilis 2 . Yellow . 6, S. Her. P. 1½ S. Ame.

PHARBITIS, *Choisy*. Meaning not explained.
Linn. 5, Or. 1, Nat. Or. *Convolvulaceae*.
 This is a genus of very showy climbers, and tender annuals. The seeds of the latter should be sown on a hotbed, and when the plants are large enough, they should be planted into pots, in a mixture of sandy loam and decayed leaves; and afterwards treated as other tender annuals. *Synonymes*: 1, *Iponoea barbata*; 2, *I. barbiger*; 3, *I. cathartica*, *I. pudibunda*, *Convolvulus pudibundus*, *C. portoricensis*; 4, *I. cærulescens*; 5, *I. cuspidata*; 6, *I. Dilleni*; 7, *I. hederacea*; 8, *I. hispida*; 9, *I. Nil*, *I. cærulea*; 10, *I. punctata*; 11, *I. scabra*; 12, *I. varia*.

PHARUM. See *Béserra*.

PHARMACEUTICAL, relating to the art of pharmacy.

PHARNACEUM, *Linn.* Pharnaces, king of Pontus, is said to have first used it in medicine. *Linn.* 5, Or. 3, Nat. Or. *Illecebraceae*. Plants of little beauty, hardly worth cultivating except in botanical collections. The stove and greenhouse shrubby species thrive well in sandy loam and peat; and cuttings root readily, in the same kind of soil, if placed under a glass. The annual kinds should be sown in pots in the spring, and placed in a moderate hotbed, where they may remain till they are removed into the greenhouse in June. *Synonymes*: 1, *Mollugo bellidifolia*; 2, *M. spergula*.

PHAROS, *Linn.* From *pharos*, a covering; the long broad leaves are used as wrappers for various articles in Jamaica. *Linn.* 21, Or. 6, Nat. Or. *Graminaceae*. A fine stove species, succeeding in rich loamy soil; young plants may be obtained from seed.

- latifolius . . . Green . 7, S. Grass 6 Jamaica . 1793

PHASCUM, *Linn.* From *phaskon*, an ancient Greek name for a moss. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. Minute species of moss, often scarcely discernible to the naked eye, and varying much in appearance from each other; they grow on moist banks, in clay fields, &c. *Synonymes*: 1, *P. Schreberianum, curvisetum*; 2, *P. strictum*; 3, *P. multicapsulare*; 4, *P. stolontiferum*—alternifolium, apiculatum 1, axillare 2, bryoides, crassinervium, crispum 3, c. rostellatum, curvifolium, cuspidatum, muticum, m. majus, minus, patens, recurvifolium, piliferum, rectum, serratum 4, subulatum, triquetrum.

PHASEOLUS, *Linn.* From *phaselus*, a little boat; fancied resemblance in the pods. *Linn.* 17, Or. 4, Nat. Or. *Fabaceae*. The different varieties of kidney-bean belong to this genus; they all thrive in any rich light soil. The annual kinds are increased by seeds, and the perennials by seeds or cuttings. *Synonymes*: 1, *P. trilobus*; 2, *P. hirtus*; 3, *Dolichos poly-stachyos*. See *Dolichos*.

PHEGÓPTERIS. See *Polypodium Phegopteris*.

PHELLÁNDRIUM, Linn. From *phello*, to deceive, and *aner* a man. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A curious little plant, growing by the sides of rivers, in muddy ditches, or pools. Linnæus says it will render horses paralytic; this is caused by a coleopterous insect which breeds in the stalks. See *Mém. aquaticum*. White .6, H. A. 3 Brit., brooks.

PHÉLLOS. See *Quercus Phellos*.

PHÉLLOS, signifying a cork.

PHENAKOSPERMUM. From *Phenax*, a cheat, and *sperna*, a seed; the seeds differ from the order. See *Heliconia Bálbia* and *Uránia guianénsis*.

PHILADELPHACEÆ, or SYRINGAS, form a small group of deciduous shrubs, the common Syrioga or mock-orange (*Philadelphus coronarius*), is a familiar example.

PHILADÉLPHUS, Linn. The philadelphos of Aristotle is a tree now unknown. *Linn.* 12, Or. 1, Nat. Or. *Philadelphaceæ*. A very handsome and desirable genus of shrubs, producing their elegant blossoms in May and June; they have the appearance and smell of orange-flowers, only much more powerful. The plants succeed in any common soil, and are readily increased from layers or suckers. *Synonymes:* 1, *P. græcitis*; 2, *P. nepalensis*; 3, *P. grandiflorus*; 4, *P. humilis, pubescens*.

PHILÆIA, Comm. From *phileo*, to love; on account of the beauty of the flowers. *Linn.* 6, Or. 1, Nat. Or. *Smilacæ*. The only species yet introduced is *P. buxifolia*, and is amongst the handsomest of the antarctic American flora. It is of slow growth, and is suited for cool situations, not too windy, and grows in com-

mon light soil; it sends up suckers, by which it may be increased.

buxifolia . Red . . . 6, G. Ev. S. 4 Chile . . 1850

PHILESIACEÆ, or PHILESIADS, consists of a small group of very beautiful shrubs, bearing large showy flowers; *Lapagèria rosea* bears eatable berries, and the roots have the same properties as *Sarsaparilla*.

PHILIBERTIA, Kunth. In honour of J. C. Philibert, author of an Elementary Treatise on Botany. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. This interesting plant is admirably adapted for training up rafters, pillars, or trellis-work, in stoves or conservatories. A mixture of loam, peat, and sand, suits it; and cuttings root readily when planted in sand or soil, under a glass, in a little heat. *Synonymes:* 1, *P. græcitis*.

grandiflora 1 Yel. wht. 6, G. Ev. Tw. 6 B. Ayres. 1836

PHILLÁMPHORA. See *Nepenthes Phillámphora*.

PHYLLYREA, Linn. From *phyllon*, a leaf; leafy plants. *Linn.* 2, Or. 1, Nat. Or. *Oleaceæ*. Ornamental shrubs, more valuable on account of their deep green foliage than for any beauty in their flowers, which are small and insignificant; they grow in any common soil, and are multiplied with facility, either by cuttings or layers; which last, is the best way of obtaining young plants. *Synonymes:* 1, *P. virgata*; 2, *P. ilicifolia*.

PHLOX, Linn. From *phlox*, a flame; appearance of the flowers. *Linn.* 5, Or. 1, Nat. Or. *Polemoniaceae*. This is an elegant genus of plants. The species are all rendered more valuable from their lively red, purple, or white flowers, being produced at a season of the year when the majority of the plants that flower at the same period are syngenesious, and for the most part yellow; the trailing kinds are admirably adapted for growing on rock-work, or in small pots; they grow best in a rich loamy soil. All the species root freely by cuttings,

under glass, or by divisions. *Synonymes*: 1, *P. amœna*; 2, *P. stolonifera*; 3, *P. crassifolia*; 4, *P. scabra*; 5, *P. longiflora*; 6, *P. Nuttalliana*.

PHŒNIX, Linn. The Greek name of the Date. *Linn.* 22, Or. 3, Nat. Or. *Palmaceæ*. The Date of the ancients is included in this noble genus of palms. *P. dactylifera* is a fine lofty-growing tree, with a rugged trunk, and leaves from six to eight feet long. The inhabitants of Arabia, Upper Egypt, &c., chiefly live upon the fruit of it; the hard stones are even ground up as food for their camels, and of the leaves they make bags and baskets. In Barbary, the midribs are used as fences for their gardens,

and they sometimes make use of the trunks in small buildings. The threads of the integuments between the fronds are made into ropes, and the rigging of smaller vessels; a juice is sometimes extracted from the tree by incisions, or scooping holes at the top, which is afterwards made into an agreeable wine. *P. farinifera* contains a farinaceous substance in the heart of the stem, which is said to be as nutritive as sago. The species all delight in a strong rich soil, and the only way of obtaining young plants is by seeds. *Synonyme*: 1, *Élate sylvestris*.

PHŒNOCOMA, Don. From *phoinos*, bloody, and *kome*, hair; involucreum. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. An ornamental species, requiring the same treatment as *Elichrysium*. *Synonyme*: 1, *Elichrysium proliferum*.
prolifera 1 . Crimson . 9, S. Ev. S. 4 C. G. H. 1789

PHOLIDOTA, Lindley. From *pholis*, a scale, and *otos*, (otos,) an ear; in allusion to the scaly ear-like bractea of the spike. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. These are very pretty plants, and of easy cultivation; by keeping them constantly moist, they will grow well with the same treatment as *Burlingtonia*. *Synonyme*: 1, *P. imbricata*, *Ornithidium imbricatulum*, *Philocnema bracteolata*.

PHOLIURUS, Trinius. From *pholis*, a scale, and *oura*, a tail. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A curious species of grass, growing in any common soil, and increased by seeds, which only require sowing in the open ground. *Synonyme*: 1, *Ophiurus pannonicus*.
pannonicus 1 . Apetal. 7, H. Grass 1/2 Hungary 1804

PHOMA, Fries. From *phos*, a pustule; appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Minute and curious species of brown-coloured fungi, commonly found on dead willow and poplar leaves—*Dahlia*, *Hederæ*, *Pópuli*, *pástula*, *saligna*.

PHORMIUM, Thunberg. From *phormos*, a basket; use made of the plant in its native country. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. In its native country this is a very useful plant, serving the inhabitants of New Zealand, Norfolk Island, &c., with cordage, coarse thread and linen. Attempts have been made to grow it for manufacturing purposes in New Holland, but without success. It requires to

be grown in a rich strong loam, and is multiplied by divisions of the root.
tenax 1 . Grn. wht. 8, H. Her. P. 6 N. Zealand 1798

PHOTÍNIA, *Lindley*. From *photeinos*, shining; in reference to the leaves. *Linn.* 12, Or. 2, Nat. Or. *Pomácea*. A very handsome genus of trees, with fine, bright, glossy leaves, and corymbs of white flowers. The species require very little protection except in severe weather. They thrive best if planted in a mixture of loam and peat against a wall, in a warm situation; ripened cuttings put in sand, under a glass, will root readily; they may also be grafted or inarched on the different species of *Pyrus*, or *Méspilus*. In Nepal, they use the bark of *P. dubia* for dyeing scarlet. *Synonymes*: 1, *Méspilus bengalensis*; 2, *Cratægus glabra*.

PHOTINÓPTERIS, *J. Smith*. From *photeinos*, shining, and *ptéris*, a fern; fronds shining; *Linn.* 24, Or. 1, Nat. Or. *Polypodiácea*.
Horsfieldii . Brown . 3, S. Her. P. 1 Java . .
simplex . Brown . 3, S. Her. P. 1 E. Indies . .

PHRAGMÉDIUM, *Link.* From *phragma*, a division, and *eidos*, similar. *Linn.* 24, Or. 9, Nat. Or. *Uredinácea*. Extremely minute species of black fungi. *P. gracile* is found in autumn on raspberry leaves; the others on the leaves from which they have taken their names—*gracile*, *Potentilla*, *Rosæ*, *Rubi*.

PHRAGMÉTES, *Trinius*. From *phragmos*, a hedge; forming hedges. *Linn.* 3, Or. 2, Nat. Or. *Graminácea*. This plant is very common in ditches, and is readily increased by divisions. *Synonyme*: 1, *Arundo Phragmites*.
communis 1 . Apetal . 8, H. Aq. P. 6 Britain, ditches.

PHRYMA, *Linn.* Meaning unknown. *Linn.* 14, Or. 1, Nat. Or. *Lamiácea*. A dwarf-growing plant, of no great merit. It succeeds best in a mixture of peat and loam, and cuttings planted under a glass root readily.

leptostachys Wht. pur. 8, H. Her. P. 1½ N. Ame. 1802

PHRYNIUM, *Willdenow*. From *phrynos*, a frog; plants inhabiting marshes. *Linn.* 1, Or. 1, Nat. Or. *Marantácea*. Plants resembling *Calathea* in general appearance. "In China, they use the leaves for wrapping up cakes in the oven; they are infused before expansion in spirit of rice or sugar, with three times its quantity of water, to make vinegar." For culture and propagation, see *Canna*. *Synonymes*: 1, *Maránta Casupo*; 2, *M. comósa*; 3, *M. spicata*; 4, *Myrsóma cannaefolia*; 5, *Calathea villosa*; 6, *Maránta sanguinea*.

PHYLLARTHON, De Candolle. From *arthros*, a joint, and *phyllon*, a leaf; leaves supposed to be jointed, or leaflet articulated on leaf-stalk. *Linn.* 14, Or. 1, Nat. Or. *Bignoniaceæ*. For the culture of this handsome shrub, see *Bignonia*. *Synonymes: Arthrophýllum mada-gascariense, Bignonia articulata.*

Bojeriana . . . Rose . . . 7, S. Ev. S. 10 Mauritius . . . 1844

PHYLLIS, Linn. From *phyllon*, a leaf; its chief recommendation. *Linn.* 5, Or. 2, Nat. Or. *Cinchonacæ*. An ornamental shrub, growing from two to three feet high, and producing axillary corymbs of green flowers in abundance. It succeeds best in a rich strong mould, and cuttings root freely under a glass, in sand.

Nöbla . . . Green . . . 6, G. Ev. S. 3 Canaries . . . 1699
pauciflora . . . Green . . . 6, G. Ev. S. 3 Canaries . . . 1699

PHYLLITIS. See *Polypodium Phyllitidis*.

PHYLLITIS. See *Laminaria Phyllitis*.

PHYLLIACUS. See *Epiphýllum*.

PHYLLÓCLADUS, Richard. From *phyllon*, a leaf, and *klados*, a branch. *Linn.* 21, Or. 10, Nat. Or. *Taxacæ*. An ornamental tree; for cul-

ture and propagation, see *Podocarpus*. *Synonyme: 1, Podocarpus asplenifolius; 2, rhomboidalis.*

Cunninghami . . . Apetal 5, G. Ev. T. 30 V. D. L.

PHYLLÓGYNE. See *Narcissus*.

PHYMATÁNTHUS. See *Pelargonium*.

PHYSALIS, Linn. From *physa*, a bladder, alluding to the calyx. *Linn.* 5, Or. 1, Nat. Or. *Solanacæ*. A genus principally composed of weeds. The stove and greenhouse species will grow well in any rich light soil; young plants may be obtained from cuttings, which root readily under a glass. The hardy kinds thrive in common garden soil, and are increased from seeds. The annual species merely require sowing in the open ground. *Synonymes: 1, Atropa aristata; 2, P. tuberosa; 3, P. foetidissima, P. nodosa; 4, Atropa frutescens; 5, P. parvisiflora; 6, P. dubia; 7, P. Lagasca, P. Rothiana; 8, P. edulis; 9, P. atrivivifolia;*

10, *P. pruinosa*, *P. barbadensis*; 11, *P. flexuosa*; 12, *P. pennsylvanica*; 13, *P. Jacquinii*. See *Nicotiana*.

PHYSIC-NUT. See *Jatropha*.

PHYSINGA, *Lindley*. From *physos*, a bladder, from the inflated appearance of the labellum. *Linn.* 20, Or. 1, *Nat. Or. Orchidaceae*. This is a plant of little beauty, but very curious; it has the habit of an *Epidendrum*, and requires similar treatment to most other Mexican epiphytes.

prostrata . Purple . 9, S. Epi. 4 Demerara . . 1885

PHYSOCHLAINA, *Don*. Derived from *physa*, a bladder, and *chlaina*, an outer garment; alluding to the inflated calyx. *Linn.* 5, Or. 1, *Nat. Or. Solanaceae*. The species of this genus produce their very elegant flowers early in the season, and are therefore desirable plants. They grow well in any soil, and are easily increased by divisions of the root, or by seed. *Synonyme*: 1, *Hyoscyamus orientalis*; 2, *H. physaloides*.

PHYTEUMA. See *Cyphia Phyteuma*, and *Réseda Phyteuma*.

PHYTORENE, Wall. From *phyton*, a plant, and *krene*, a fountain. This plant is called the vegetable fountain on account of the quantity of sap which flows from it on being cut. It requires the same treatment as other stove climbers, and is readily propagated by cuttings.

gigantea . White . 5, S. Ev. Cl. 40 Martaban . 1830

PHYTOLACCA, Linn. From *phyton*, a plant, and *lacca*, lac, in allusion to the crimson colour of the fruit. *Linn.* 10, Or. 5, Nat. Or. *Phytolaccææ*. The stove species of this ornamental genus grow well in any rich light soil, and may be increased either from cuttings or seeds. *P. decandra* is a fine herbaceous plant, requiring a good deal of room, on account of its wide-spreading branches. Its greatest beauty is in the numerous bunches of black berries, which make a pretty appearance; it grows freely in rich soil, and is increased by seed, or cuttings under a glass. *Synonymes*: 1, *P. icodandra*; 2, *P. heptandra*; 3, *P. mexicana, Bogotensis*.

PICRIS, Linn. Derivation same as the genus *Picridium*. *Linn.* 19, Or. 1, Nat. Or. *Asterææ*. A genus nearly allied to, and requiring the same treatment as *Picridium*. *Synonyme*: 1, *Crèpis lappææ*—*altissima* 1, *asperrima*, *asplenoides*, *barbarorum*, *daburica*, *fragrans*, *hieracioides*, *hispidia*, *Kamtschatica*, *laxa*, *lyrata*, *nepalensis*, *ovalifolia*, *pauciflora*, *Pilumna*, *Rhagadiolus*, *rigida*, *Sprengeriana*, *strigosa*. See *Helminthia*.

PICRIS. See *Serratula Picris*.

PICTA, painted.

PICTERIA, Decandolle. In honour of A. Pictet, a celebrated physician. *Linn.* 17, Or. 4, Nat. Or. *Fabææ*. Ornamental plants, growing freely in a mixture of loam and peat; young cuttings will root readily in sand, under a glass, in heat. *Synonymes*: 1, *Eschynomene aristata*; 2, *Robinia squamata*.

aristata 1 . .	Yellow . 6, S. Ev. S. 3	St. Domin.	1816
squamata 2 . .	Yellow . 8, S. Ev. S. 3	W. Indee.	1824

PIERARDIA, Roxburgh. In honour of Mr. Pierard, of Kew. *Linn.* 8, Or. 1, Nat. Or. *Sapindææ*. An edible-fruited tree. It grows in a mixture of loam, peat, and sand, and ripened

cuttings root in sand, under a glass, in heat.
Synonyme: 1, *Pierardia sápidá*.
 dúlcis 1 . Yellow . 5, S. Ev. T. 20 Sumatra . 1820

PIERIS. See *Andrómeda*.
PIG-FACES, or CANAGONG. See *Mcsembryánthemum æquilaterale*.

PIG-NUT. See *Cárum bulbocástanum*.

PIGEON-PEA. See *Cajánnus*.

PILEA, Lindley. From *pileos*, a cap; one of the divisions of the perianth. *Linn.* 21, Or. 4, Nat. Or. *Urticácea*. A neat little creeper, making a good cover to hide the earth of large pots, &c.; it will grow in any common soil, and propagates freely from cuttings.
 muscosa . Green . 5, S. Ev. Tr. ½ W. Indies . 1793

PILEANTHUS, De Candolle. From *pileos*, a cap, and *anthos*, a flower; flower inclosed before expansion in an involucreum. *Linn.* 12, Or. 1, Nat. Or. *Myrtácea*. For culture, see *Cálythria*.
 Limácis . White . 4, G. Ev. S. 2 N. Holland . 1824

PILE-WORT. See *Ficária*.

PILEATE, having a cap or lid like the cap of a mushroom.

PILL, long stiffish hairs.

PILL-WORT. See *Pilulária*.

PILIFEROUS, bearing hairs.

PILÓBOLUS, Tode. Derived from *pileos*, a cap, and *boleo*, to eject. *Linn.* 24, Or. 9, Nat. Or. *Mucorácea*. A curious little species, of a very fugacious nature, found on dung during the summer and autumn months—*crystallinus, c. róridus*.

PILOSE, covered with long soft hairs.

PILOSELLA. See *Hierácium Pilosélla*.

PILULÁRIA, Linn. From *pilula*, a pill; shape of the heads containing the reproductive organs. *Linn.* 24, Or. 5, Nat. Or. *Marsileácea*. An obscure little plant, found in damp meadows among grass, especially where they have been overflowed with water during winter.
 globulifera . Brown . 7, H. Ev. Tr. ¼ Brit., moi. pl.

PILULÍFERA, producing little balls.

PILÚMNA, Lindley. From *pileos*, a cap. *Linn.* 20, Or. 1, Nat. Or. *Orchidácea*. *P. laxa* is a very interesting orchid, with pale-coloured flowers, which are borne on short racemes. The species require the same treatment as *Maxillária*. *Synonyme*: 1, *Trichopilia cándida*.
 frágnans 1 . White . . 7, S. Epi. ¼ Merida . 1856
 laxa . . . Pur. wt. gn. 9, S. Epi. ¼ Mexico . 1844

PIMELEA, Banks. From *pimele*, fat. *Linn.* 2, Or. 1, Nat. Or. *Thymelácea*. A genus of beautiful shrubs, growing three or four feet high, and producing numerous heads of flowers. To flourish well, they must be planted in a mixture of three parts sandy peat and one part loam, the pots being carefully drained; young cuttings will strike in sand, under a glass; they likewise produce seeds, by which they are readily increased.

PIMÉNTA, Lindley. *Pimento* is the Spanish name for Indian pepper. *Linn.* 12, Or. 1, Nat. Or. *Myrtácea*. This species forms in Jamaica a handsome tree, growing thirty feet high, and producing a fruit well known in this country under the name of Allspice. It delights in a strong loamy soil, and ripened cuttings will root in sand, under a glass, in heat. *Synonyme*: 1, *Mýrtus piménta*.
 vulgáris 1. . White . 6, S. Ev. T. 25 W. Indies 1723

PIMÉNTO. See *Piménta*.

PIMPERNEL. See *Anagállis*.

PIMPINÉLLA, Linn. Altered from *bipinnate*; referring to the leaves being twice pinnate. *Linn.* 5, Or. 2, Nat. Or. *Apiácea*. Worthless species, growing best in a dry sandy soil, and increased only by seed, which ripen in abundance. *Synonymes*: 1, *Trágium Anisum*; 2, *T. aromáticum*; 3, *T. Bróteri*; 4, *P. ténuis*; 5, *T. depressum*; 6, *P. dissécta*; 7, *P. média*; 8, *T. peregrinum*; 9, *P. nigra*; 10, *T. Colúmnæ*; 11, *T. villósum*—Anisa 1, aromática 2, áurea, bubonoides 3, crética 4, depressa 5, fláva, intermedia, lútea, magna, m. dissécta, 6, m. orientális 7, peregrina 8, rotundifolia, Saxifraga, S. nigra 9, Trágium 10, villósa 11. See *Sison, Trágium, and Trivia*.

PIMPLED, covered with minute pustules, resembling pimples.

PINÁSTER. See *Pinus Pináster*.

PINCKNEYA. Named by Michaux in honour of Mr. Pinckney, an American, now forgotten. *Linn.* 5, Or. 1, Nat. Or. *Cinchonácea*. *P. pubens* is a half-hardy tree, furnished with long downy leaves, and dividing but little into branches. It grows best planted against a south wall, with a little protection in severe weather; sand and peat is the best soil for it, and cuttings will root, if planted in sand, under a glass.

PINDROW. See *Picea Pindrow*.

PINEA. See *Pinus Pinea*.

PINE. See *Pinus*.

PINE-APPLE. See *Ananassa*.

PINÆCÆ, or CONIFERS. These are noble timber trees, natives of various parts of the world, but principally in the temperate and arctic regions. Their timber is known by the names of Deal, fir, pine, cedar, &c., and is highly esteemed.

PINGUICULA, *Linn.* From *pinguis*, fat; in allusion to the greasiness of the leaves. *Linn.* 2, Or. 1, Nat. Or. *Lentibulariæcæ*. Beautiful little plants, but difficult to keep artificially. *P. grandiflora* will succeed in common bog soil. The other species require a shaded moor to come to any perfection. *P. vulgaris* acts on cow's-milk the same as common rennet. In Sweden and Norway the milk of the Reindeer is poured on the leaves, and set aside for a day or so, when it acquires consistence and tenacity, and then neither the whey nor the cream will separate, forming a very grateful food.

PINGUIN. See *Bromelia Pinguin*.

PINGUIS, fat, greasy.

PINK. See *Dianthus*.

PINNÆ, the leaflets of a pinnate leaf.

PINNATE; when a leaf is divided into numerous small leaflets, as the leaves of the ash.

PINNATELY-PERNATE, having three leaflets disposed in a pinnate manner.

PINNATIFID, when a leaf is divided into lobes from the margin nearly to the mid-rib.

PINNATIFIDLY-SINUATED, scalloped in a pinnatifid manner.

PINOLIA. See *Erica*.

PIN-PILL. See *Opuntia curassavica*.

PINSÄPO. See *Picea Pinsäpo*.

PINUS, *Linn.* From *pinos*, a Greek word used by Theophrastus to designate a pine-tree; and some authors derive it from the Celtic *pin*, or *pyn*, a mountain or rock; alluding to the habitat of the tree. *Linn.* 21, Or. 10, Nat. Or. *Pinæcæ*. This much-esteemed and well-known genus contains some of the trees of most universal use in civilised society, and form a very important article of commerce both in Europe and America. Most, if not all, of the species are highly deserving of culture, being very ornamental and beautiful in every stage of their growth. They will succeed on almost any kind of soil, but to bring the timber to its greatest state of perfection, a somewhat loamy and a cool subsoil are requisite. Young plants may be obtained by a variety of methods. All the species may be propagated by layers, by inarching on nearly allied kinds, by herbaceous grafting; many may also be increased by cuttings; but the speediest way is by seed, and which process we shall briefly

notice. In some of the species the cones attain their full size the first year, but, in most, not till the end of the second autumn. The cones of *P. sylvestris* and the like, open of themselves shortly after being gathered from the tree, and spread out in the sun; but the cones of *P. Pinaster*, *P. Pineæ*, and similar kinds, do not, though treated in the same manner, open their scales for several months. The seed should be sown on finely-prepared rather sandy soil, in March or April. The seeds of the most common kinds are always sown on beds, and after being gently beaten down, are slightly covered with light soil. The seeds of the rare kinds are sown in pots filled with finely-prepared soil, and when up, treated like other hardy seedlings. For a great mass of other useful information relative to these fine trees, indeed, for every thing that it is necessary to know respecting them, we refer the reader to *Loudon's Arboretum et Fruticetum Britannicum*, a work which ought to be in the hands of every lover of hardy trees and shrubs.

Under *Pinus*, we have included the genera *Abies* and *Picea*, of Don and other authors, believing them to be so nearly akin as to render it unnecessary to keep them generically distinct. We have, however, in this genus departed a little from the original plan of the work, by dividing it into Sections, so that those who differ from us in opinion, will have no difficulty in recognising the species of *Abies* and *Picea* of authors, every species of those genera being retained alphabetically under the respective Sections.

SECT. I. PINUS, *Linn.* Derivation same as genus. *Synonymes*: 1, *P. palustris*; 2, *P. genevensis*; 3, *P. oocarpa*; 4, *P. Pinaster Ascarina*; 5, *P. Lemmoniana*; 6, *P. nuda-zelandica*; 7, *P. echinata*, *P. uncinata*; 8, *P. rubra*; 9, *P. Edgariana*; 10, *P. monophylla*, *Llaveana*; 11, *P. californica*. See *Abies, Cedrus, Cunninghamia, Dammara, and Læria*.

PIPER, *Linn.* From *pipul*, a Bengalese name, or *pepto*, to digest. *Linn.* 2, Or. 3, Nat. Or. *Piperacæa*. All the species of this interesting genus flourish in a mixture of loam and peat, requiring but little water; they are multiplied

with facility by cuttings and suckers. The well-known pepper of the shops is principally produced by *P. nigrum*. *P. Belle* furnishes the Betle-leaf of the Southern Asiatics, in which they inclose a few slices of the Areca-nut, and a little shell lime; this they chew to sweeten the breath, and to keep off the pangs of hunger, and such is the immense consumption of this luxury in the East, that it nearly forms as extensive an article of commerce as that of tobacco in the West. See *Peperomia*.

PIPERACEÆ, or PEPPER-WORTS, are shrubs and herbaceous plants of no beauty, but are interesting on account of furnishing the peppers of the shops and other products useful in medicine.

PIPERELLA. See *Thymus Piperella*.

PIPERITUS, hot, pungent.

PIPEWORT. See *Eriocaulon*.

PIPPUL. See *Piper*.

PIPTANTHUS, Sweet. From *pipto*, to fall, and *anthos*, a flower; the flowers are very fugacious. *Linn.* 10, Or. 1, Nat. Or. *Fabæcæ*. A very handsome and ornamental shrub when in flower, and sufficiently hardy to thrive in the open ground without any protection; it grows well in a rich loamy soil, and is increased by layers, or cuttings of the nearly ripened wood, planted in sand, under a glass. *Synonyme*: 1, *Anagyris indica*.

nepalensis 1 . Yellow . 5 H. De. S. 10 Nepal . 1821

PIPTATHERUM, Beauvois. From *pipto*, to fall, and *ather*, an awn. *Linn.* 3, Or. 2, Nat. Or. *Graminæcæ*. Curious species of grass, requiring the same treatment as *Milium*. *Synonymes*: 1, *Milium cærulescens*; 2, *M. multiflorum, arundinæcæ*; 3, *M. paradoxum, Arachne viræscens*; 4, *Eriô:hloa punctata*.

cærulescens 1 Apetal	6, H. Grass	2 Barbary	1819
multiflorum 2 Apetal	6, H. Grass	3 S. Eur.	1778
paradoxum 8 Apetal	6, H. Grass	3 France	1771
punctatum 4 Apetal	6, H. Grass	3 S. Eur.	

PIPTOLAÏNA, Don. From *pipto*, to fall, and *klaina*, a cloak; the calyx is deciduous. *Linn.* 5, Or. 1, Nat. Or. *Ehretiæcæ*. The seeds

of this annual should be sown on a hotbed, and in May or June the plants should be planted out in the open border. *Synonyme*: 1, *Heliotropium supinum*.

supina 1 Yel. wht. 6, H. A. ½ S. Eur. . 1640

PIQUERIA, Cavanilles. After Andreas Piqueria, a Spanish botanist. *Linn.* 19, Or. 1, Nat. Or. *Asteræcæ*. *P. trinervia* is a pretty herbaceous plant; all the species are of easy culture, and are multiplied by divisions.

trinervia White . 7, H. Her. P. 2 Mexico . 1798

artemisioides, ovata, pillosa.

PIRI-JIRI. See *Haloragis citriodora*.

PIRIQUETA, De Candolle. Meaning not explained by Aublet. *Linn.* 5, Or. 3, Nat. Or. *Turneriæcæ*. For culture, &c., see *Turnera*. *villosa* Yellow . 7, S. A. 2 Guiana . 1826

PISCIDIA, Linn. The leaves, bark, and twigs are used for the purpose of stupifying fish; whence the name from *piscis*, a fish, and *cædo*, to kill. *Linn.* 16, Or. 6, Nat. Or. *Fabæcæ*.

This genus, the Jamaica Dogwood, consists of two ornamental timber-trees, with spreading branches and pinnate leaves. Sandy loam suits them best, and cuttings may be rooted in sand, under a glass, in heat. *Synonyme*: 1, *Erythrina*. See *Darbenönia*.

carthaginensis 1 Dirty wt. S. Ev. T. 25 Carthage 1690

Erythrina Dirty wt. S. Ev. T. 25 W. Indies 1690

PISCIFOLIUM. See *Lepidium Piscidium*.

PISIFORME, formed like a pea.

PISÖNIA, Linn. In honour of M. Piso, an eminent physician of Amsterdam. *Linn.* 7, Or. 2, Nat. Or. *Nyctaginæcæ*. Stove shrubs, of not much merit. *P. aculeata* is remarkable for its spiny branches, and for its glutinous and burry seeds, which fasten to whatever touches them. A mixture of peat and loam suits them best, and they are easily propagated by cuttings in the same sort of soil.

PITA PLANT. See *Agave americana*.

PISTACHIA-TREE. See *Pistacia*.

PISTACIA, Linn. Altered from *Foustaq*, its Arabic name. *Linn.* 22, Or. 5, Nat. Or. *Tercbinthæcæ*. Ornamental plants. The greenhouse kinds thrive in loam and peat, and cuttings of the ripened wood root in sand, under a glass. The hardy species do best planted against a wall, as they are rather tender; common garden soil suits them, and they may be increased by layers, or cuttings in sandy soil under a glass. *Synonymes*: 1, *P. Lentiscus massiliensis*; 2, *P. officinarum*; 3, *P. reticulata*.

PISTIA. From *pistos*, aquatic. *Linn.* 13, Or. 6, Nat. Or. *Pistiaceæ*. These are singular plants, and only require to be thrown into the water in the stove, where they increase rapidly.

occidentalis Wht. grn. 6, S. Aq. 4 W. Indies . 1843
 stratiotes White 6, S. Aq. 4 Jamaica . 1843

PISTIACÆ, LEMNODS, or DUCK-WEEDS. These are all weeds, principally floating aquatics of no beauty, and scarcely worth cultivation.

PISTILLARIA, *Fries*. From *pestillum*, a pestle; and of the plants. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. The species constituting this genus are chiefly found on the decayed leaves of ferns—*micans*, *musciola*, *puberula*, *pusilla*, *quisquiliaris*.

PISTILLUM, or PISTIL, the columnar body in the centre of a flower, consisting commonly of three parts; viz., the ovary, style, and stigma.

PISTOLOCHIA. See *Aristolochia Pistolochia*.

PISTORINA, *De Candolle*. The meaning is unknown to us. *Linn.* 10, Or. 5, Nat. Or. *Crasulaceæ*. The seeds merely require sowing in light soil in any dry situation in the open border, or on rock-work, where it has a pretty appearance. *Synonyme*: 1, *Cotyledon hispánica*.

hispánica 1 . Red 6, H. B. 4 Spain . 1796

PISUM, *Linn.* From *pis*, the Celtic word for pea; whence the Latin *pisum*. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. This genus affords one of the most valuable and well-known legumes, the Pea; and like most cultivated vegetables, it has produced numerous improved varieties, growing from a foot to twelve feet high. They prefer a rich dry soil, in which they may be sown at any season, according to the time when they are wanted. See *Ochrus*.

PITCH is obtained from various species of *Pinus*.

PITCHER-LEAF. See *Nepenthes Phyllamphora*.

PITCHER-PLANT. See *Nepenthes*.

PITCHERS, hollow leaves having the appearance of pitchers.

PITH, medulla, occupying the centre of a stem or shoot.

PITOSPORACÆ, or PITOSPORAs. Chiefly New Holland trees and shrubs; some, as the *Billardiæra*, are climbers, and bear eatable fruit.

PITOSPORUM, *Banks*. From *pitte*, to pitch, and *sporos*, a seed; the seeds are covered with a resinous pulp. *Linn.* 5, Or. 1, Nat. Or. *Pitosporacæ*. All the species are very handsome shrubs, on account of their glossy foliage and pretty flowers, which render them well adapted for conservatories. *P. Tobira* will succeed against a south wall, with the protection of a mat in severe weather. All the species thrive well in a mixture of peat and loam, and ripened cuttings root in sand, under a glass. *Synonyme*: 1, *P. hirsutum*.

PLANTÁGO. See *Alisma Plantago*.

PLANTAIN. See *Alisma Plantago*.

PLANTAIN. See *Plantago*.

PLANTAIN-TREE. See *Musa*.

PLÁNTIA, *Herbert*. After Mr. Plaut, a zealous and industrious experimental cultivator and nurseryman at Cheadle, who has raised some curious hybrids amongst this race of plants. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. This pretty and florid little plant was first introduced into this country as a *Moræa*, by Synott, and has since been raised at Spofforth, from Cape seeds, under the name of *Sisyrrinchium*, to which genus refer for culture.

flava . . Yellow . 6, F. Bl. P. 1 C. G. H. 1842

PLANT OF GLUTTONY. See *Cornus subcica*.

PLATANACEÆ, or **PLANE-TREES**. A small order of deciduous trees and shrubs. They form beautiful objects as landscape trees, and their close-grained timber is highly esteemed for indoor and cabinet work.

PLATANTHERA, *Richard*. From *platys*, broad, and *anthera*, an anther. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Pretty plants. For culture and propagation, see *Orchis*. *Synonymes*: 1, *Orchis bifolia*; 2, *Habenaria ciliaris*; 3, *H. cristata*; 4, *H. dilatata*; 5, *H. fimbriata*; 6, *H. flava*; 7, *H. herbicola*; 8, *H. blaphariglottis*; 9, *H. orbiculata*; 10, *H. hyperborea*; 11, *H. incisa*; 12, *H. psychodes*, *H. PLATYCÁRPHA. See *Cynara glomerata*.

PLATYCÁRFUM, Humboldt. From *platys*, broad, and *karpos*, fruit; in reference to the compressed seed-pod. *Linn.* 5, Or. 1, Nat. Or. *Bignoniaceæ*. This tree thrives in peat and loam; and half-ripened cuttings planted in sand, and placed under a hand-glass, root readily. If the plants are kept rather dry in winter, it will tend to throw them into flower. orinocense . Pa. rose 5, S. Ev. T. 20 Orinoco . 1813

PLATYCÉRIUM, Desvauz. From *platys*, broad, and *keras*, a horn. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove ferns. *Synonymes*: 1, *Acróstichum alcidörne*; 2, *Polypodium grande*, *Acróstichum biförme*, *A. grande*, *A. fustiförme*; 3, *A. stemmária*.

alcidörne 1 . Brown . 8, G. Her. P. $\frac{3}{4}$ N. S. W. . 1308

PLATYCHILUM, Delarunay. From *platys*, broad, and *cheilos*, a lip; breadth of corolla. *Linn.* 16, Or. 6, Nat. Or. *Faböceæ*. A beautiful plant, requiring the same treatment as the *Hövesæ*. *Synonyme*: 1, *Gompholobium Celsianum*.

Celsianum 1 . Yellow . 6, G. Ev. S. 3 N. Hol. . 1820

PLATYCÖDON, De Candolle. From *platys*, broad, and *kodon*, a bell; the flowers are broad and bell-shaped. *Linn.* 5, Or. 1, Nat. Or. *Campánulaceæ*. A neat, elegant genus when in flower; it grows best in sandy loam, and may be increased by seeds or young cuttings. *Synonymes*: 1, *Campánula grandiflora*; 2, *P. homalanthum*.

PLATYLÖBIUM, Smith. From *platys*, broad, and *lobes*, a pod; in reference to the broad legumes. *Linn.* 16, Or. 6, Nat. Or. *Faböceæ*. Free-flowering shrubs, of rather difficult culture; they require a mixture of three-parts sandy peat and one part loam; the pots must be carefully drained, to allow the water to pass off freely, and care must be taken not to over-water them. They may be propagated by cuttings in sand, under a glass; or by seeds, which are sometimes produced in abundance.

PLATYLÖPHUS, D. Don. From *platys*, broad, and *lophos*, a crest; the capsule, from being much compressed at the apex, appears as if winged. *Linn.* 10, Or. 2, Nat. Or. *Cunoniaceæ*. The White Ash of the English colonists is an elegant tree. It succeeds well in a mixture of loam and peat; and cuttings of the ripened wood root freely in sand, under a glass. *Synonyme*: 1, *Weinmannia trifoliata*. trifoliatus 1 . White 5, G. Ev. T. 45 C. G. H. . 1820

PLATYPÉTALUM, Hooker. From *platys*, broad, and *petalum*, a petal. *Linn.* 15, Or. 2, Nat. Or. *Brassicaceæ*. An Alpine plant, requiring to be grown in a pot filled with a mixture of peat and sand, and treated like other plants of similar habits.

purpurascens Purple . 5, H. Her. P. $\frac{1}{4}$ Melville I. 1827

PLATYPTERIS, Humboldt and Bonpland. From *platys*, broad, and *pteron*, a wing; appendage to the seed. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. A small plant of little beauty, growing in any peaty soil, and increased by cuttings, in the same kind of soil, under a glass. *Synonyme*: 1, *Spilanthes crocatus*.

crocata 1 . Orange . 3, S. Her. P. 2 S. Amer. . 1812

PLATYSPÉRMUM, Hooker. From *platys*, broad, and *sperma*, a seed. *Linn.* 6, Or. 2, Nat. Or. *Brassicaceæ*. Mere annual weeds, growing in any garden soil. *Synonymes*: 1, *Caucalis littoralis*; 2, *C. orientalis*; 3, *Daucus muricatus*—littoralis 1, orientalis 2, o. pulcherrimum, muricatum 3.

PLATYSTÉMON, Benth. From *platys*, broad, and *stemon*, a stamen. *Linn.* 13, Or. 1, Nat. Or. *Ranunculaceæ*. A genus of rather pretty annuals, growing freely in sandy loam.

californicum . Yellow . 8, H. A. 1 California . 1833
 leiocarpus . . . Yellow . 7, H. A. 1 Siberia . 1837

PLATYSTIGMA, Benth. From *platys*, broad, and *stigma*; the stigma is ovate. *Linn.* 13, Or. 1, Nat. Or. *Ranunculaceæ*. This plant somewhat resembles *Platystemon californicum*, and requires the same treatment as that plant. lineare . Yellow . 5, F. Her. P. $\frac{1}{4}$ California . 1833

PLATYSTYLIS, Sweet. From *platys*, broad, and *stylos*, a style; in allusion to the dilated style. *Linn.* 17, Or. 4, Nat. Or. *Faböceæ*. A very handsome genus of flower-border plants. For culture and propagation, see *Orobus*. *Synonymes*: 1, *Orobus cyaneus*; 2, *O. sessilifolius*; 3, *O. stipulaceus*.

PLEUROGRAMMA, *Presl*. From *pleura*, a side, and *gramma*, a writing. *Linn.* 24; Or. 1, Nat. Or. *Polypodiaceæ*. Stove fern. *Synonyme*: 1, *Grammitis linearis*.

linearis . Brn. yol. . 6, S. Her. P. 1 Jamaica . 1823

PLEUROGYNE, *Don*. From *pleura*, a side, and *gyne*, a female; stigmas joined to the sides of the ovary. *Linn.* 5, Or. 2, Nat. Or. *Gentianaceæ*. This plant is rather difficult to cultivate. The soil in which the seed is sown should have a large proportion of powdered chalk mixed with it. *Synonymes*: 1, *Gentiana rotata*, *Swertia rotata*.

rotata 1 . . Blue . 8, H. A. 3 Siberia . 1827

PLEUROSPERMUM, *Hoffmann*. From *pleuron*, a rib, and *sperma*, a seed; in allusion to the membranes of the pericarps both having ribs. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A genus of no interest, growing in any common soil, and readily increased by seeds. *Synonyme*: 1, *Ligusticum austriacum*—austriacum, uralense.

PLEUROTHALLIS, *R. Brown*. From *pleuron*, a side or rib, and *thallo*, to flower; in allusion to the one-sided disposition of the flowers of some of the species. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a genus of curious little plants, well fitted for cultivating on wood, in the same way as *Burlingtonia*. *Sy-*

nonymes: 1, *Duboisia Raymondi*, *D. palpitgera*. See *Bolbophyllum*, *Notflia*, *Physosiphon*, and *Rodriguezia*.

PLICATE, plaited; 3, 4, or 5, plicate, means 3, 4, or 5 plaited.

PLOCAMA, *Ailou*. From *plokamos*, bent hairs; alluding to the pendulous branches. *Linn.* 5, Or. 1, Nat. Or. *Cinchonacæ*. The plant grows best in a mixture of loam and peat; and it may be readily propagated by cuttings, in sand, under a glass.

pendula White . . . G. Ev. S. 2 Canaries . 1772

PLOUGHMAN'S SPIKENARD. See *Baccharis*.

PLUCHÆA, *De Candolle*. See *Conyza*.

PLUKENETIA. Named by Plumier in honour of Leonard Plukenet, an English botanist. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiacæ*. Uninteresting stove climbers, growing in a light loamy soil; increased by cuttings, under a glass, in sand—*verrucosa*, *volubilis*.

PLUM. See *Prunus*.

PLUMBAGINÆCÆ, or **LEAD-WORTS**. Are small under-shrubs or herbaceous plants, bearing, in many cases, showy flowers both for the greenhouse and open air. Several species are useful in medicine.

PLUMBAGINELLA, *Spach*. The diminutive of *Plumbago*. *Linn.* 5, Or. 1, Nat. Or. *Plumbaginacæ*. Of simple culture; the seeds only require to be sown in the open ground in a warm situation. *Synonymc*: 1, *Plumbago micrantha*.

micrantha 1 . White . 7, H. A. 2 Persia . 1829

PLUMBAGO, *Linn.* From *plumbum*, a disorder in the eyes, which some species were formerly said to cure. *Linn.* 5, Or. 1, Nat. Or. *Plumbaginacæ*. Pretty free flowering plants, growing in any common soil, and increased readily by cuttings. The root of *P. europœa*, it is said, when chewed, will cure the toothache. *Synonymes*: 1, *P. zeylanica*, *scandens*; 2, *Plumbagidium roseum*, *Thalia coccinea*; 3, *Valoradia plumbaginoides*. See *Valoradia* and *Plumbaginella*.

PLUMIERIA, *Linn.* In honour of C. Plumier, a celebrated French botanist. *Linn.* 5, Or. 1, Nat. Or. *Apocynacæ*. A genus of very fine flowering plants, growing best in a light loamy soil, or a mixture of peat and loam; large cuttings, with their leaves on, after being dried for a few days, will grow freely in pots of mould, without being watered. The plants, when in a dormant state, must be kept dry, otherwise they do not flower freely. *Synonymes*: 1, *P. tricolor*; 2, *P. Gouანი*.

PLUMOSE, resembling feathers.

PLUMOSUS, feathery, downy.

PLUMULE, the young leaf in the embryo.

PLURILOCULAR, having many cells.

PLUVIALIS, expanding in wet weather.

PNEUMONANTHE. See *Gentiana*.

POA, *Linn.* From *poa*, signifying grass or herb-
age. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*.
This genus contains some valuable hay and
pasture grasses, succeeding well in rich loamy
soil; some of the species are aquatic, growing
only in water or very moist situations; in-
creased by seeds, or divisions of the roots.

 plectranthoides 2 White . 7, S. Ev. S. 1 E. Ind.

PÓHLEA, *Hedis*. In honour of J. E. Pohl, a German botanist. See *Bryum*.

POHON-UPAS. See *Antiaris toxicaria*.

POINSETTIA, *Graham*. In honour of Mr. Poinsette, who discovered the plant in Mexico in 1828. *Linn.* 21, Or. 1, Nat. Or. *Euphorbiacæ*. This is a truly splendid and very desirable genus, growing well in good open, rather sandy loam, mixed with a little vegetable mould; and in order to keep the plants in a clean, free-growing state, they should have plenty of water at the roots, and be frequently syringed over the leaves and branches. In spring, before the plants are potted, or the buds begin to push, the branches of the previous year should be cut down to within three or four eyes of the old wood. These parts should be laid to dry for a few days, and then made into cuttings, and planted in sand, or sand and

loam mixed; if placed in a gentle bottom heat, with a glass over them, they will root very readily, but before the cuttings are planted in the soil, they should be dried for a day or two in an airy part of the house.

pulcherrima Brt. scar. . 3, S. Ev. S. 3 Mexico. 1834
albida . . White. . . 12, S. Ev. S. 3 Mexico. 1834

POINCIANA, De Candolle. In honour of M. de Poinci, once governor of the Antilles, and a patron of botany. *Linn.* 10, Or. 1, Nat. Or. *Fabacea*. This genus, the Barbadoes Flower-fence, is truly elegant and ornamental. *P. pulcherrima* is a spiny plant, growing about twelve feet high, the bruised leaves of which emit an odour resembling Savin. They require a good rich soil, and a strong heat to make them flower well in our stoves; cuttings will strike readily in sand. They sometimes produce seed, from which they may also be increased. See *Coultèria*.

POLIUM. See *Teucrium Polium*.

POLLEN, powder contained in the anthers, composed of globules, and containing the fecundating fluid; also the bloom of leaves.

POLLICHA, Linn. In honour of John Adam Pollich, M.D., author of a History of the Plants of the Palatinate of the Rhine. *Linn.* 1, Or. 1, Nat. Or. *Illecebracea*. An obscure plant, of the simplest culture.

campéstris . Apetal . 9, F. Her. P. 6 C. G. H. 1730

POLLINIA, Linn. After Cyrus Pollini, a professor of botany at Verona. *Linn.* 23, Or. 1,

Nat. Or. *Graminaceæ*. A genus of worthless grasses, growing in any common soil, and increased by dividing the root. *Synonymes*: 1, *Andropogon distachyos*; 2, *A. striatus*; 3, *A. undatus*—*distachya* 1, *striata* 2, *undata* 3. See *Chrysopogon*.

PÖLY. See *Teucrium Pölium*.

POLYACHYRUS, *De Candolle*. From *poly*, many, and *achuron*, chaff. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. For culture, see *Chrysanthemum auritus*. . Blue . . 6, F. Her. P. 1 $\frac{1}{2}$ Chili . 1830

POLYACTIDIUM. See *Erigeron delphinifolium*.

POLYANDROUS, having more than twenty stamens inserted in the receptacle.

POLYANGIUM, *Link.* From *poly*, many, and *angium*, a capsule; many peridiums. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. A species of *Fungus*, about the size of a grain of sand, found on damp trunks of trees—*vitellinum*.

POLYANTHUS. See *Primula vulgaris* and *elatior*; also *Narcissus tazetta*.

POLYBOTRYA, *Humboldt*. From *poly*, many, and *botrys*, a raceme; fertile division of frond. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Handsome species of Fern, delighting in a hot humid atmosphere, and turfy peat soil; increased by division at the roots, or by seeds.

acuminata . Brown . 6, S. Her. P. $\frac{2}{3}$ W. Indies 1831
cervina . Brown . 4, S. Her. P. $\frac{2}{3}$ Jamaica 1823
cylindrica . Brown . 5, S. Her. P. $\frac{2}{3}$ Jamaica 1843
vivipara . Brown . 6, S. Her. P. $\frac{2}{3}$ W. Indies 1823

POLYCARPÆA, *De Candolle*. From *poly*, many, and *karpos*, a fruit. *Linn.* 5, Or. 1, Nat. Or. *Illecebraceæ*. Sow the seeds of the annual species on a hotbed in spring. Both the shrubby and herbaceous kinds are of the easiest culture in a mixture of light sandy loam and peat. See *Polycarpon*.

brasilensis . White . 6, S. Her. P. 1 Brazil . 1837
carnea . White . 6, F. Ev. S. $\frac{1}{2}$ Caracass 1816
memphitica . White . 7, H. A. $\frac{1}{2}$ Egypt . 1828
Smithii . White . 6, F. Ev. S. $\frac{1}{2}$ Canaries 1816

POLYCARPON, *Loeffling*. From *poly*, many, and *karpos*, a fruit; numerous seeds. *Linn.* 3, Or. 3, Nat. Or. *Illecebraceæ*. Worthless annuals, merely requiring to be sown in the open border.

diphyllum . White . 6, H. A. $\frac{1}{2}$ Spain . 1821
tetraphyllum . White . 7, H. A. $\frac{1}{2}$ Eng. sands.

POLYCENIA, *Chois.* Meaning unknown. *Linn.* 14, Or. 2, Nat. Or. *Selaginaceæ*. A greenhouse annual of easy culture in light soil.

hebenstretoides . White . 8, G. A. 1 C. G. H. 1816

POLYCHILUS, *Blume*. From *poly*, many, and *cheilos*, a lip. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A curious orchid from Moulmein, requiring the ordinary treatment of tropical epiphytes.

œrnu-œrvi . Yel. red . 5, S. Epi. $\frac{1}{4}$ Moulmein

POLYCNEMUM, *Linn.* From *poly*, many, and *kneme*, a knee. *Linn.* 3, Or. 1, Nat. Or. *Chenopodiaceæ*. The seeds of the different species only require sowing in the open ground.

arvense . . . Apetal. 7, H. A. $\frac{1}{2}$ S. Eur. . 1640

POLYGALA, *Linn.* From *poly*, much, and *gala*, milk; reputed effects of the plant on cattle that feed upon it. *Linn.* 17, Or. 3, Nat. Or. *Polygalaceæ*. All the species of this genus are very showy. The greenhouse kinds thrive well in one part turfy loam, and three parts peat, with a quantity of sand mixed in it. To obtain cuttings fit for planting, the shoots should be topped, which will cause them to push out numerous young ones; these should be taken off close when in a growing state, about three inches long, planted in pots of sand under glass, and placed in the propagating house; the glasses must be occasionally taken off and wiped. The hardy perennial kinds thrive in a peat soil, and increase freely by seeds or divisions of the roots. The annual kinds require sowing in the open ground, preferring a peat soil. The root of *P. Séviga* is diuretic, expectorant, purgative, emetic, and sudorific; it has been used with success in croup, and as a cure against the bite of venomous reptiles. According to Barton, *P. sanguinea* possesses similar qualities. *Synonymes*: 1, *P. oppositifolia*; 2, *P. cordifolia*; 3, *P. grandiflora*; 4, *P. viridescens*; 5, *P. sanguinea*. See *Múndia* and *Murábia*.

POLYGALACÆE, or MILK-WORTS. Small shrubs and herbaceous plants; many very pretty, especially the greenhouse kinds. Some bear eatable fruit, as *Mándia spinosa*, others supply a red dye, as Rhatany-root (*Kramèria*), and others are useful in medicine.

POLYGAMOUS, when some flowers are male, some female, and others hermaphrodite, on the same plant.

POLYGONACÆE, or BUCKWHEATS. There are few parts of the world which do not acknowledge the presence of plants of this order. In Europe, Africa, North America, and Asia, they occupy ditches, hedges, and waste grounds, in the form of Docks and Persicarias; the fields, mountains, and heaths, as Sorrels, and trailing or twining Polygonums; in South America and the West Indies they take the form of Coccolobas, or Sea-side-grapes; in the Levant, of Rhubarbs; and even in the desolate regions of the North Pole they are found in the shape of *Oxyria*.—*Veg. Kingd.*

POLYGONATUM, Desfontaines. From *poly*, many, and *gonu*, a knee; referring to the numerous joints of the stem. *Linn.* 6, Or. 1, Nat. Or. *Liliacæe*. Pretty border plants, growing about two feet high in any rich soil, and readily increased by seed or divisions of the root. *Synonymes*: 1, *P. latifolium*; 2, *Convallaria verticillata*; 3, *C. Polygonatum*.

POLYGONUM, Linn. Derivation same as that of *Polygonatum*. *Linn.* 8, Or. 3, Nat. Or. *Polygonacæe*. The species of this genus grow freely in any light rich soil. The perennial kinds are readily increased from seeds, or by divisions of the root. The hardy annual species merely require sowing in the open ground. The tender kinds must be raised on a gentle hotbed, and transplanted into the flower-border. Some species, such as *P. Hydro Piper*, are extremely acrid, and said to blister the skin. The seeds of *P. Fagopyrum* and *tataricum* are used as food, and according to Humboldt, the leaves of *P. hispidum* are used in

South America as a substitute for tobacco. *Synonymes*: 1, *P. petiolatum*; 2, *P. elegans*; 3, *P. flagellare*; 4, *Anpeligonum chinensis*, *Polygonum brachiatum*. See *Tragopyrum*, *Fagopyrum*, and *Sarcogonum*.

POLYMORPHOUS, assuming various forms.

POLYOTUS. See *Asclēpias longifolia*.

POLYPÉTALOUS, having many petals.

POLYPHORE, an elongated receptacle, which bears many ovaries, but not the petals or stamens.

POLYPODIACEÆ, or **FERNS**. A very extensive order of flowerless plants—familiar to most persons. They all contain a thick astringent mucilage, useful in medicine, and several species supply in their rhizomes a large proportion of nutritive food.

POLYPODIUM, *Swartz*. From *poly*, many, and *podus*, a foot; numerous root-like feet. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. A genus of very ornamental ferns. The stove and greenhouse species require, to grow them well, a mixture of loam and peat. The hardy kinds are well adapted for ornamenting rock-work, or they may be grown in pots, in light loamy soil. All the species may be readily increased by dividing the roots, or by spores. *P. crassifolium* is said to be sudorific and anti-rheumatic. In the Sandwich Islands, they use the bruised fronds of *P. phymatodes* to perfume the cocoa-nut oil. *Synonymes*: 1, *P. scandens*; 2, *Davallia contigua*; 3, *P. multifidum*; 4, *P. latifolium*; 5, *Arthropteris filipes*. See *Allantodia*, *Aspidium*, *Asplenium*, *Cheilanthes*, *Gymnogramma*, *Mentiscium*, *Niphobolus*, and *Xiphopteris*.

POLYPODY. See *Polypodium*.

POLYPOGON, *Desfontaines*. From *poly*, many and *pogon*, a beard. *Linn.* 3, Or. 2, Nat. Or. *Graminæacæ*. Grasses, thriving in any common soil, and increased by seeds or divisions of the roots. *Synonymes*: 1, *Agrôstis setosa*; 2, *A. littoralis*.

littoralis 2 . Apotal . 7, H. Grass 1 Brit., sea shore.
monspeliensis Apetal . 7, H. Grass 1 Brit., way sides.

glomeratus 1, *maritimus*, *latræicus*.

POLYPORUS, *Michaux*. Derived from *poly*, many, and *poros*, a pore; the under surface is full of pores. *Linn.* 24, Or. 9, Nat. Or. *Agaricæacæ*.

These species of *Fungi* are found in pastures, trunks of trees, &c. *Synonyme*: 1, *Boletus velutinus* — abietinus, adustus, amorphus, armeniacus, betulinus, brumalis, cæsius, Carmichaelianus, castaneus, cinctus, cuticularis, ferruginosus, fomentarius, fraxineus, frondosus, giganteus, heteroclitus, hispidus 1, igniarius, incarnatus, lentus, leptocéphalus, lûcidus, medulla-panis, molluscus, nigricans, páchypus, p. olivaceus, pallescens, pellucidus, perennis, radiatus, reticulatus, Ribis, scoticus, spongiosus, spumans, squamosus, suaveolens, s. salicinus,

- sulphureus, strobiliformis, ulmarinus, undatus, varius, v. lateralis, v. nummularis, velutinus, versicolor, vulgaris.
- POLYPTERIS, Nuttall.** From *poly*, many, and *pteron*, a wing. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. A pretty little plant, requiring the same treatment as other rather tender annuals. *Synonyme*: 1, *Hymenopappus integrifolius*.
integrifolia 1 White . 7, H. A. 1 Georgia 1823
- POLYRHAZA**, having many roots.
- POLYSACCUM, Desfontaines.** From *poly*, many, and *sakkos*, a sack. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. Minute *Fungi*, found in damp places—*olivaceum*.
- POLYSIPHONIA, Gracille.** From *poly*, many, and *siphon*, a tube; in allusion to the numerous little canals by which the coloured matter is carried through the different parts of the plant. *Linn.* 24, Or. 7, Nat. Or. *Ceramidiæ*. Very singular plants, found in the ocean, on the seashore, rocks, &c.—*Ayardhiana*, *allochroa*, *atro-rubescens*, *badia*, *Brodiei*, *byssoides*, *coccinea*, *c. denudata*, *c. tenuior*, *cristata*, *divaricata*, *elongata*, *c. denudata*, *c. sanguinolenta*, *elongata*, *fastigiata*, *filamentosa*, *fruticulosa*, *furcellata*, *gracilis*, *macrocarpa*, *nigræscens*, *n. spinulata*, *parasitica*, *recurva*, *Richardsoni*, *spinulosa*, *thuyoides*, *vercolata*, *violacea*, *v. major*.
- POLYSPORA, Sweet.** From *poly*, many, and *spora*, a seed; many seeds in a capsule. *Linn.* 16, Or. 8, Nat. Or. *Ternstroemiaceæ*. This handsome shrub requires a mixture of loam and peat; and cuttings, when the wood is not too ripe, will root in sand, under a glass, in heat; it may likewise be increased by grafting on the single red *Camellia japonica*. *Synonymes*: 1, *Camellia axillaris*, *Gordonia anomala*.
axillaris 1 . White . 3, S. Ev. S. 8 E. Indies . 1818
- POLYSTACHYA, Hooker.** From *poly*, many, and *stachys*, a spike. *Linn.* 20, Or. 1, Nat. Or. *Orchidiaceæ*. Rather interesting plants; for culture and propagation, see *Burlingtonia*.

- POLYSTIGMA, Persoon.** From *poly*, many, and *stigma*, a mark. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceæ*. Very minute species of brown *Fungi*, found in autumn on live sloe and bird-cherry leaves—*falsum*, *rubrum*.
- POLYTÆNUM, Desv.** From *poly*, many, and *tænum*, a fillet; resemblance of fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove ferns. See *Vittaria*.
- POLYTRICHUM, Kunze.** From *poly*, many, and *trichos*, a little division. *Linn.* 24, Or. 9, Nat. Or. *Botrylaceæ*. A very small species, growing on clover-leaves, in the form of numerous black spots of unequal size—*Trifolii*.
- POLYTRICHUM, Linn.** From *poly*, many, and *trichia*, a hair; in allusion to the hairy calyptra. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. Very pretty species of moss, with rigid leaves, and the theca of a square form, mostly covered with a hairy calyptra; found on moist banks, among heath, &c. *Synonymes*: 1, *P. rubellum*; 2, *P. gracile*; 3, *P. strictum*; 4, *P. subrotundum*; 5, *P. seaxangulare*—*aloides*, a. Dicksoni, a. majus 1, alpinum, commune, c. attenuatum 2, c. yuccæfolium, hercynicum, juniperium, j. gracilius 3, nanum 4, piliferum, septentrionale 5, undulatum, urnigerum.
- POMACEÆ, or APPLE-WORTS.** Are well-known trees and shrubs, and the fruit they bear form an article of dessert, and others are used for culinary purposes.
- POMADERRIS, Labillardiere.** From *poma*, a lid, and *derris*, a skin; alluding to the membranous covering of the capsule. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. A beautiful early-flowering genus, very nearly akin to *Willdenowia*, which genus see for culture and propagation. *Synonymes*: 1, *Ceanothus capsularis*; 2, *C. globulosus*; 3, *C. spatulatus*; 4, *C. Wendlandianus*.

POMARIA, *De Candolle*. In honour of M. Pomar, physician to Philip III., of Spain. *Linn.* 10, Or. 1, Nat. Or. *Fabacæ*. It grows in a mixture of peat, loam, and leaf-mould, and is increased by cuttings and seeds.

glandulosa . Yellow . 5, G. Ev. S. 2 N. Spain . 1826

POMAX, *Solander*. From *poma*, an operculum; alluding to the operculum of the fruit. *Linn.* 4, Or. 1, Nat. Or. *Cinchonacæ*. For the culture and propagation of this species, see *Opercularia*. *Synonyme*: 1; *Opercularia umbellata*. *hirta* 1 . Wht. grn. . 7, G. Ev. S. 1 N. Holl. 1826

POMBALIA, *Vandellii*. In honour of S. J. de Carvalho, Marquis de Pombal, a famous Portuguese statesman. *Linn.* 5, Or. 1, Nat. Or. *Violacæ*. An interesting plant, growing best in an equal mixture of sandy loam and peat; it may be increased by young cuttings in the same kind of soil, under a glass, in heat, or by seeds. *Synonyme*: 1, *Ionidium Ippecacuanha*. *hirta* 1 . White . 7, S. Her. P. 1 Brazil . 1822

POMEGRANATE. See *Punica*.

POMIFEROUS, apple-bearing.

POMPEL-MOOSE. See *Citrus aurantium*.

POMPION. See *Cucurbita*.

POMPONIUM. See *Lilium Pomponium*.

PONCELËTIA, *R. Brown*. After Mr. Poncelet, author of a Treatise on Wheat. *Linn.* 5, Or. 1, Nat. Or. *Epacridacæ*. A very pretty plant; for culture and propagation, see *Epacris*. *sprengelioides* . Scarlet . 6, G. Ev. S. 1 N. S. W. 1826

PONCELËTIA. See *Asimina*.

POND-PINE. See *Pinus serotina*.

POND-WEED. See *Potamogeton*.

POND-WEED. See *Zannichellia*.

PONERA, *Lindley*. From *poneros*, miserable; alluding to the wretched appearance of the species. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæ*. This is a genus of no beauty, and will perhaps be found to succeed best when attached to a piece of wood, in the same manner as the species of *Pleurothallis*. *Synonyme*: 1, *Nemacônia graminifolia*, *P. junceifolia*.

graminifolia 1 Buff . 5, S. Epi. 2 Mexico . 1837

PONTERACÆE, or **PONTERADAS**. A small order of aquatic and marsh plants; all are worthy of cultivation.

PONTERERIA, *Linn.* In honour of Julius Ponteder, professor of botany at Padua. *Linn.* 6, Or. 1, Nat. Or. *Ponteracæe*. The species of this genus require to be grown in rich loamy

soil, in a tub or cistern of water; increased by division at the roots.

PONTHIËVA, *R. Brown*. Named in honour of M. de Ponthieu, a French West Indian merchant, who sent a number of plants to Sir Joseph Banks. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæe*. These curious plants grow well in a mixture of sandy loam and peat, with the pots well drained. They require to be kept dry when not in a growing state.

glandulosa . Green . 2, S. Ter. 1 W. Indies . 1800
petiolata . Brown . 8, S. Ter. 1 St. Vincent . 1822

POOR-MAN'S PEPPER. See *Lepidium latifolium*.
POOR ROBIN'S PLANTAIN. See *Hieracium vendsum*.

POPAYAN-TEA. See *Melastoma Theezans*.

POPLAR. See *Populus*.

POPPY. See *Papaver*.

POPULUS, *Tournefort*. Some derive the word *Populus* from *paipallo*, to vibrate or shake; others suppose it obtained its name from being used in ancient times to decorate the public places in Rome, where it was called *arbor populi*, or the tree of the people. *Linn.* 22, Or. 7, Nat. Or. *Salicacæe*. Most of the species of poplar are very ornamental, more especially in early spring, when the catkins of the males are produced. Their favourite place of growth is in moist soil near a running stream; but they do not thrive in very marshy situations.

All the species are readily increased by cuttings or layers, and some by suckers. *Synonymes*: 1, *P. nigra*; 2, *P. suaveolens*; 3, *P. viminalis*, *P. longifolia*; 4, *P. macrophylla*; 5, *P. acerifolia*; 6, *P. dilatata*; 7, *P. acaulesca*; 8, *P. levisgata*; 9, *P. supina*; 10, *P. canadensis*; 11, *P. balsamifera*; 12, *Tacamahaca*.

PORANTHERA, *Rudge*. From *poros*, a pore, and *anthera*, an anther. *Linn.* 5, Or. 3, Nat. Or. *Euphorbiaceae*. This ornamental species grows freely in a mixture of sandy loam and peat, and young cuttings will root readily if planted in sand, under a glass.

ericifolia . . .	White . . .	7, G. Ev. S. 1/2	N. Holl. . . 1824
------------------	-------------	------------------	-------------------

PORCUPINE. See *Chaetaria hystrix*.

PORCUPINE. See *Hordeum hystrix*.

PORES, apertures in the cuticle, through which transpiration takes place, or apertures in the anthers through which the pollen is ejected.

PORINA, *Acharius*. From *porinos*, anything that crumbles away. *Linn.* 24, Or. 9, Nat. Or. *Parmeliaceae*. A curious species, found on the bark of trees, &c.—*pertusa*.

PORLIERA, *Ruiz* and *Pavon*. In honour of Andrew de Porlier, a Spanish patron of botany. *Linn.* 8, Or. 1, Nat. Or. *Zygophyllaceae*. A curious and ornamental shrub, with leaves the linear leaflets of which remain open in serene weather, and contract before rain. It grows in a mixture of loam and peat, and ripened cuttings will root in sand, under a glass, in heat.

hygrometrica . . .	Grn. wbt. . .	4, S. Ev. S. 2	Peru 1820
--------------------	---------------	----------------	-----------

POROPHYLLUM, *De Candolle*. From *poros*, a pore, and *phyllon*, a leaf; porous leaves. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*.—*livifolium*.

POROPHYLLUS, having porous leaves.

PORPAX, *Lindley*. From *porpax*, a hutton; in allusion to its pseudo-bulbs. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. No genus of Orchids has yet been described, writes Dr. Lindley in the autumn of 1845, which will include this curious plant. It approaches nearest to the *Eria*, but it has the habit of *Trichas*, and the calyx of the *Masdevallia*.

reticulata . . .	Pur. red . . .	3, S. Epi. 1	E. Indies . . 1844
------------------	----------------	--------------	--------------------

PORPHYRA, *Agardh*. From *porphyra*, purple; the colour of the species. *Linn.* 24, Or. 7, Nat. Or. *Conferaceae*. Curious purple species, found during summer on the sea-shore. *P.*

laciniata is stewed, and considered a great luxury—*laciniata, purpurea*.

PORPHYROCÔME, *Hooker*. From *porphyra*, purple, and *koma*, head; in allusion to the purple heads of flowers. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceae*. A very beautiful flowering stove plant, easily increased by cuttings, and succeeding when treated like the species of *Ruellia*. lanceolata Violet 4, S. Ev. S. 1 S. America . 1845

PORRECTUS, stretched out, diffuse.

PORRUM. See *Allium Porrum*.

PORTENSCHLAGIA. See *Eleoedendron*.

PORTLANDIA, *P. Browne*. Named in honour of the Duchess of Portland, a great patroness of botany. *Linn.* 5, Or. 1, Nat. Or. *Rubiaceae*. Superb plants, worthy of a place in every collection, on account of their large showy flowers. They require a mixture of sandy loam and peat; and cuttings, with their leaves whole, will root in sand, under a glass, in heat. A strong heat is necessary for them; without that, they will never grow well. See *Coutarea*.
 coccinea . . . Scarlet . 6, S. Ev. S. 6 Jamaica . 1812
 grandiflora . . . White . 6, S. Ev. S. 10 Jamaica . 1775
 platantha . . . White . 6, S. Ev. S. 3 S. Amer. . 1848

PORTLAND SAGO is formed from the dried and powdered roots of the common Wake-robin (*Arum maculatum*) of our hedge banks.

PORTUGAL LAUREL. See *Cerasus lusitanicus*.

PORTULACA, *Linn.* From *porto*, to carry, and *lac*, milk; juicy nature of the plants. *Linn.* 11, Or. 1, Nat. Or. *Portulacaceae*. The seeds of the hardy annual species of this genus may be sown in a sheltered part of the flower-garden in spring. The stove and greenhouse kinds require the same treatment as other stove and greenhouse annuals. *Synonymes*: 1, *P. grandiflora rutile*. See *Talinum*.

PORTULACACEÆ, or **PURSLANES**. Succulent shrubs and herbs. Some are very pretty, and are ornaments to the flower-garden in summer.

PORTULACARIA, *Jacquin*. Altered from *Portulaca*, *Linn.* 5, Or. 1, Nat. Or. *Portulacaceae*. This plant, the African Purslane-tree, will grow well in any dry light soil; and young cuttings, taken off and dried for a few days, when potted, will root freely. The plant has never flowered in British gardens.

afra . . .	Purple . 4, G. Ev. S. 3	Africa . 1732

PORTULACASTRUM. See *Sesuvium*.

POSOQUERIA, *Aublét*. *Aymara* *posoqueri* is the name of *P. longiflora* among the natives of Guiana. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceae*. The species are remarkably pretty when in flower; for culture and propagation, see *Gardénia*. *Synonymes*: 1, *Stánnia formósa*; 2, *Solèna grácilis*; 3, *S. longiflora*; 4, *Oxyánthus versicolor*. See *Gardénia*.

POTAMOGETON, *Linn.* From *potamos*, a river, and *geiton*, near; growing in rivers and ponds. *Linn.* 4, Or. 3, Nat. Or. *Juncaginaceae*. The species of this genus mostly grow wholly immersed in water; they are increased by seeds, or by dividing the roots. The roots of *P. natans* are said to be eaten in Siberia.

POTAMOPHILA, *R. Brown*. From *potamos*, a river, and *phileo*, to love. *Linn.* 23, Or. 1, Nat. Or. *Gramineae*. A worthless species of grass, growing in any wet situation, and increased by divisions—*parviflora*.

POTASH is obtained in large quantities from the species of *Salsóla*.

POTATO. See *Solanum tuberosum*.

POTATO, SWEET. See *Batáta edulis*.

POTATO-BARLEY. See *Pearl barley* and *Scotch barley*.

POTATO-OAT. See *Avèna nuda*.

POTENTILLA, *Linn.* From *potens*, powerful; supposed medical qualities of some of the species. *Linn.* 12, Or. 3, Nat. Or. *Rosaceae*. Some of the species are very handsome when in flower. They grow in any common garden soil, and increase freely by dividing the roots, or by seeds. The shrubby kinds are well adapted for the front of shrubberies, and are propagated in autumn by cuttings planted in a sheltered situation. *Synonymes*: 1, *P. aurea*, *P. Halleri*, *P. satiburgensis*; 2, *P. leucophylla*; 3, *P. pámila*; 4, *P. thuringiaca*; 5, *P. sabarda*, *filiformis*; 6, *P. nepalensis*; 7, *P. fragariástrum*; 8, *P. dahúrica*; 9, *P. floribúnda*; 10, *P. Weinmanniána*; 11, *P. vinósa*; 12, *P. hispida*; 13, *P. spléndens*; 14, *P. cinérea*; 15, *P. arguta*. See *Omarun*.

POTERIUM, Linn. From *poterion*, a cup; *P. Sauguisôrba* is used in cooling drinks. *Linn.* 21, Or. 9, Nat. Or. *Rosâcea*. Plants of little beauty. The shrubby species grow well in any light rich soil; and young cuttings root readily under a glass. The herbaceous kinds grow in any common soil, and are increased by seeds. *Synonyme*: 1, *P. hybridum*.

POTIRA, or POTIRON. See *Cucurbita Potira*.

POT-MARIGOLD. See *Calendula officinalis*.

POUCH, a little sack or bag at the base of some petals and sepals.

POUNCE is the powdered gum resin procured from *Juniperus communis*.

POUPARTIA, Commerson. The tree is called Bois de Ponpart, in the Island of Bourbon. *Linn.* 10, Or. 4, Nat. Or. *Rhamnâcea*. An ornamental genus. For culture and propagation, see *Spondias*. *Synonymes*: 1, *Spondias dulcis*; 2, *S. mangifera*.

mangifera 2 .	White	. 6, S. Ev. T.	50	E. Indies	1820
horbônica . .	Purple	. 6, S. Ev. T.	40	Bourbon	1825
dulcis 1 . . .	White	. 6, S. Ev. T.	50	Java	1793

POURRËTIA, Ruiz and Pavon. In honour of Abbé Pourret, a French botanist and traveller in Spain. *Linn.* 6, Or. 1, Nat. Or. *Bromeliâcea*. An ornamental genus of plants, growing freely in a mixture of sandy loam and peat; they are increased by suckers, or by seeds. See *Billbergia* and *Puja*.

caerulea . . .	Blue	. 6, S. Her. P.	1	Chile	1827

POZOA, De Candolle. In honour of M. Pozo, a Spanish botanist. *Linn.* 5, Or. 2, Nat. Or. *Apiâcea*. For culture, &c., see *Fragosa*.

coriacea . . . White . 7, F. Her. P. 1 1/2 Chili . 1827

PRÆGNANS, swollen, protuberant.

PRÆMORSE, appearing as if bitten off.

PRÁNGOS, *De Candolle*. The native name of *P. pabularia*. *Linn.* 5, Or. 2, Nat. Or. *Apiáceæ*. All the species are easy of culture, but they thrive best on dry light land, on which the seeds should be sown in autumn.

foeniculácea. Yellow . 6, H. Her. P. 1½ Caucas. 1837
pabularia. Yellow . 6, H. Her. P. 1½ Thibet. 1839
ulóptera. Yellow . 6, H. Her. P. 1½ Persia. 1836

PRASINATE, of a green colour.

PRÁSIUM, *Linn.* The Greek name for Horehound. *Linn.* 14, Or. 1, Nat. Or. *Lamiáceæ*. Plants of little beauty, and of the simplest culture.

május. . . White . 7, F. Ev. S. 2 Spain . 1699
minus. . . White . 7, F. Ev. S. 1½ Sicily . 1751

PRASOPHYLLUM, *R. Brown*. From *prason*, a leek, and *phyllon*, a leaf; similarity in the leaves. *Linn.* 20, Or. 1, Nat. Or. *Orchidáceæ*. The species of this genus are not possessed of much beauty. A mixture of loam, peat, and sand, in equal quantities, suits them best; they are increased by divisions of the roots. They must be sparingly watered.

PRIMULACEÆ, or PRIMWORTS. A group of annual and perennial herbaceous plants, of which the primrose, cowslip, and *Lysimachia* may be taken as examples of the character of the order.

PRINCEPS, chief, principal.

PRINCES-FEATHER. See *Amaranthus hypochondriacus*.

PRINOS, Linn. *Prinos* is the Greek name of the Holly, which the present genus much resembles. *Linn.* 6, Or. 1, Nat. Or. *Aquifoliaceæ*. Ornamental plants. The stove species will grow in loam and peat; and ripened cuttings root in sand, under a glass, in heat. The hardy kinds are well adapted for shrubberies; they will grow in any soil, but thrive best in peat, and are easily increased by layers, or by seeds, which do not vegetate till the second year. *Synonymes*: 1, *Ilex prinoides*; 2, *I. canadensis*.

PRINTZIA, De Candolle. See *Lyssera polifolia*.

PRINUS. See *Quercus Prinus*.

PRIONITIS. See *Barbæria Prionitis*.

PRISMATIC, formed like a prism.

PRISMATOCÆRUS, L'Héritier. From *prisma*, a prism, and *karpos*, a fruit; long prismatic form of the fruit. *Linn.* 5, Or. 1, Nat. Or. *Campánulaceæ*. These plants grow well in sand, loam, and peat; and cuttings of the young wood, planted in the same kind of soil, under a glass, will root freely: they are also easily increased by seeds. The species are showy when in flower. *Synonymes*: 1, *Trachelium diffusum*; 2, *Campánula fruticosa*; 3, *C. interrãpta*; 4, *C. Prismatocærus*. See *Specularia*.

PRIVA, Adanson. Derivation unknown. *Linn.*

14, Or. 2, Nat. Or. *Verbenaceæ*. A genus composed of small verberna-looking plants, with insignificant flowers; loam and peat suits them well, and cuttings root readily under a glass. *Synonymes*: 1, *P. chinata*; 2, *P. hispidula*, *Verbena mexicana*. See *Streptium*.

lappulæca 1 . Blue . 7, S. Her. P. 1½ W. Ind. 1817
mexicana 2 . Violet . 8, S. Her. P. 1½ Mexico. 1726

PRIVET. See *Ligustrum*.

PROCESSES, protrusions either natural or monstrous.

PRÓCKIA, *Linn.* A name of unknown meaning. *Linn.* 13, Or. 1, Nat. Or. *Bixaceæ*. Ornamental shrubs, thriving in a mixture of loam, sand, and peat; cuttings root freely if planted in sand, under a glass, in heat. *Synonyme*: 1, *Ludia heterophylla*.

crucis . . Yellow . 7, S. Ev. S. 4 W. Indies . 1822
serrata . . Yellow . 7, S. Ev. S. 5 Montserrat. 1823
theseformis 1 Yellow . 7, S. Ev. S. 6 Bourbon . 1820

PRÓCRIS, *Commerson*. Procris was the wife of Cephalus. *Linn.* 21, Or. 4, Nat. Or. *Urticaceæ*. Herbaceous plants, of no interest, growing in any common soil, and increased by divisions—*integrifolia*, *punctata*.

PROPHYS. See *Eurycles*.

PROLIFEROUS, when a plant produces young plants about its root in abundance, or when the inflorescence bears shoots instead of flowers, contrary to the usual course of things.

PROMENÆA, *Lindley*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. For culture, see *Maxillaria*. *Synonymes*: 1, *Maxillaria citrina*; 2, *M. graminea*; 3, *M. lentiginosa*; 4, *M. Rollissonii*; 5, *M. stapelioides*; 6, *M. wanthina*.

PRONAYA, *Hugel*. In honour of M. Pronay, a French naturalist. *Linn.* 5, Or. 1, Nat. Or. *Pittosporaceæ*. This species will be found to succeed in a mixture of loam, peat, and sand. *Synonymes*: 1, *Spiranthera Frascri*, *Billardiera rosmarinifolia*.

elegans 1 . . bluc lil. 6, G. Ev. S. 3 Swan R. . 1837

PRONUS, having the face downwards.

PROPONENT, hanging forwards and downwards.

PROSELIA. See *Chaetanthera*.

PROSERPINACA, *Linn.* From *proserpo*, to creep; nature of the species. *Linn.* 3, Or. 3, Nat. Or. *Onagræacæ*. These plants should be grown in large pans of water, with a little mould for the roots to run in; or they may be grown in ponds. They require shelter in winter.

palustris . . White . 7, H. Aq. A. † Canada . 1818
pectinata . . White . 7, H. Aq. A. † N. Amer. 1821

PROSOPSIS, *Linn.* From *prosopsis*, a mask; but why applied is unknown. *Linn.* 10, Or. 1, Nat. Or. *Fabacæ*. Fine stove trees. For culture and propagation, see *Inga*. *Synonymes*: 1, *Acacia cumantensis*; 2, *A. edulis*;

3, *A. falcata*, *Mimosa piliflora*; 4, *Adenanthera aculeata*.

PROSTHEMIUM, *Kunze*. Derived from *prosthemum*, an addition. *Linn.* 24, Or. 9, Nat. Or. *Uredinacæ*. A very minute black fungus, found in autumn on the trunks of trees—*betulinum*.

PROTEA, *Linn.* From Proteus, a self-transforming sea-god; in allusion to the diversity of appearance of the species. *Linn.* 4, Or. 1, Nat. Or. *Protæacæ*. This is an extensive genus of magnificent evergreen shrubs, generally considered difficult of culture; but this supposed difficulty may be removed by attending strictly to the watering of the plants. The soil best suited for them is light turfy loam, mixed with about a third part fine sand; the pots must be well drained, and it is advisable to mix some small pieces of broken free-stone with the soil, in potting, to prevent them from retaining too much moisture; the roots are also fond of running among the free-stone or broken potherds. Care must also be taken not to let them droop for want of water, as the young roots are of a fleshy substance, and are as liable to suffer from too much drought as they are from too much water, whence the necessity of the waterings being regular and moderate. Ripened cuttings will root when taken off at a joint, planted thinly in sand, and placed under a glass, but not in heat; the glass should occasionally be removed to allow them to dry, as they are liable to damp off. Water them, but not over the leaves, whenever they want it, and let them get a little dry before the glass is placed over them again. *Synonymes*: 1, *P. longifolia*; 2, *P. speciosa*. See *Isopodgon*, *Leucadendron*, *Leucospermum*, *Mimætes*, *Nivènia*, *Petròphila*, and *Serraria*.

PROTEACEÆ, or PROTEADS. Handsome evergreen shrubs, deserving extensive cultivation. Some of the species of *Protea* and *Leucadendron* have their leaves clothed with a silky pubescence, which renders them particularly ornamental. They all require care in cultivation, or the fine foliage will perish.

PROTOCOCCUS, Agardh. From *protos*, first, and *kokkos*, a berry. *Linn.* 24, Or. 7, Nat. Or. *Confervaceæ*. This species is found on rocks during summer—*nivalis*.

PROTONEMA, Agardh. From *protos*, first, and *nema*, a filament; in allusion to the simplicity of structure. *Linn.* 24, Or. 7, Nat. Or. *Confervaceæ*. Singular species of *Algae*, found in caverns, on the earth, hotbeds, &c.—*cryptarum, fragrans, musicola, Orthotrichi, repens, umbratum, velutinum*.

PRUNOSE, covered with glittering particles, as if fine dew had been congealed upon it.

PRUNASTER. See *Evernia Prunastri*.

PRUNELLA, Linn. Altered from *Brunella*, derived from the German *die Braune*, a disorder in the jaws and throat, which this plant was supposed to cure. *Linn.* 14, Or. 1, Nat.

Or. *Lamidææ*. The species of this genus grow freely in a light rich soil, and are well adapted for ornamenting rock-work, or the front of flower-borders; they are readily increased by divisions. *Synonymes*: 1, *P. australis*; 2, *P. pennsylvanica*; 3, *P. hirta*; 4, *P. alba*, *P. laciniata*; 5, *P. incisa*; *P. longifolia*.

PRURIENT, causing an itching sensation.

PRUSSIC ACID is found in large quantities in the peach.

PSACALIUM, Cass. See *Cacalia Pellata*.

PSAMMA, Romer and Schultes. From *psamos*, sand; its place of growth. *Linn.* 3, Or. 2, Nat. Or. *Graminacææ*. A grass with a strong perennial creeping root; on some parts of the coast it is planted to keep the sand from being removed by the wind and tides; it is also used for mats and thatch. *Synonyme*: 1, *Arundo arenaria*.

arenaria 1. Apetal. . 6, H. Grass 2 Brit., sea coast.

PSIÁDIA, Jacquin. From *psias*, a dew-drop; in allusion to the glutinous exudation on the leaves. *Linn.* 19, Or. 5, Nat. Or. *Asteraceæ*. A species of little beauty, growing in any light rich soil; cuttings will root freely under a glass. *Synonyme*: 1, *Conjiza glutinosa*. glutinosa 1 . Yellow . 6, S. Ev. S. 2 Mauritius 1796
PSIDIUM, Linn. Derived from *psidion*, the Greek name of Pomegranate. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. The species of *Guava* grow well in a mixture of loam and peat, and cuttings will root in sand, under a glass; they will also root from layers. Some of the species fruit well in our stoves, but are not considered of much value. *P. Cattleyanum* has a fruit of a fine claret colour, and bears some resemblance in consistence and flavour to the strawberry. *Synonymes*: 1, *P. grandiflorum*; 2, *P. chinense*; 3, *P. guianense*; 4, *P. sapidissimum*. See *Nelitris*.

PSILONEMA, Meyer. From *psilos*, naked, and *nema*, a filament. *Linn.* 15, Nat. Or. *Brassi-*

cæce. For culture, &c., see *Algssum*. *Synonyme*: *Algssum dasycaerum*.
 dasycaerum . Yellow . 6, H. A. 1 Siberia . 1827
PSILÓNIA, Fries. From *psilos*, a spot. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. A reddish-coloured species, found in masses on the surface of felled oaks—*gilva*.
PSILÓTUM, Swartz. From *psilos*, naked; destitute of leaves. *Linn.* 24, Or. 3, Nat. Or. *Lycopodiaceæ*. A small bushy plant, of little beauty. It is of the simplest culture, but not worth growing except as an object of curiosity. *Synonyme*: 1, *Bernhardia dichotoma*. triquetrum 1 . Brown . 7, S. Her. P. 2 W. Ind. 1793
PSILÓRUS. See *Monerma*.
PSOPHOCÁRPUS, Necker. From *psophos*, a sound, and *karpos*, a fruit; the seeds, when ripe, make a rattling noise in the pods if shaken. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. In the Mauritius they use the seed of this plant in the same way as we do peas. For culture, &c., see *Lablavia*. *Synonyme*: 1, *Dolichos tetragonolobus*. tetragonolobus 1 Blue . 10, S. Tw. A. 4 Maurit. 1816
PSORALEA, Linn. From *psoraleos*, scurfy; in allusion to the appearance of the calyx, and most parts of the plants. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. All the species are rather handsome when in flower. The stove and greenhouse kinds are best cultivated in loam and peat, and cuttings root freely in sand, under a glass. The frame and hardy sorts do best in peat and sand, or any light sandy soil, and are increased by cuttings or seeds. The biennial species must be raised on a hotbed frame, and when potted off, kept with the greenhouse plants. The seeds of *P. corylifolia* are used by native doctors in India, and considered stomachic and deobstruent. *Synonymes*: 1, *P. linearis*; 2, *P. americana*; 3, *P. pedunculata*; 4, *P. intermedia*. See *Cyanopsis, Dalea and Orobus*.

PSYCHINE, *Desfontaines*. From *psyche*, a butterfly; the pods are furnished with wings like a butterfly. *Linn.* 15, *Nat. Or. Brassicaceae*. A worthless annual, merely requiring to be sown in the open ground. *Synonyme*: 1, *Thlaspi Psychine*—*stylosa* 1.

PSYCHOTRIA, *Linn.* Said to be from *psyche*, life; in allusion to the powerful medical qualities of some of the species. *Linn.* 5, *Or.* 1, *Nat. Or. Cinchonaceae*. Most of the species are handsome in foliage, but the flowers of all are rather insignificant. They are of the easiest cultivation, growing best in a mixture of loam, peat, and sand; and cuttings strike root readily in sand, under a glass. Several species are used as substitutes for *Ipecacuanha*. See *Geophila*, *Nonaldia*, and *Panicouria*.

PSYLLIUM. See *Plantago Psyllium*.

PTARMICA, *De Candolle*. See *Achillea Ptarmica*.

PTELEA, *Linn.* From *ptelea*, the Greek name of the elm, derived from *ptao*, to fly; alluding to the winged fruit. *Linn.* 4, *Or.* 1, *Nat. Or. Xanthoxylaceae*. A hardy North American plant, with labrum-like leaves; it will thrive in any common border soil, and increases readily by layers. See *Ptelidium*.

PTELIDIUM. So named by *Thouars*, from its similarity to *Ptelea*. *Linn.* 4, *Or.* 1, *Nat. Or. Celastraceae*. An ornamental shrub, growing best in a mixture of loam, peat, and sand; and cuttings of the ripened wood root readily in sand, under a glass, in heat. *Synonyme*: 1, *Ptelea ovata*, *Serjunga ovata*.

ovatum 1 . . . Green . . . 6, S. Ev. S. 3 Madagasc. 1818

PTERIS, *Linn.* From *pteryx*, a wing; in allusion to the appearance of the leaves. *Linn.* 24, *Or.* 1, *Nat. Or. Polypodiaceae*. An orna-

mental genus of *Ferns*. The stove and greenhouse kinds are best cultivated in a mixture of sandy loam and peat. The hardy kinds grow best among rock-work, or in a shady border; a light sandy soil suits them, and they are all readily increased by divisions, or seeds. *P. aquilina* is the well-known brako of this country, which has been sometimes used as an anthelmintic. *P. esculenta* is occasionally used as an article of food in different countries. *Synonymes*: 1, *P. semiserrata*, *serriaria*, *pentaphylla*, *heterophylla*, *nervosa*, *vitata*, *digitata*, *multiarvita*, *triphylla*, *stenophylla*, *albo-lineata*; 2, *P. elegans*; 3, *Adiantum hexagonum*, *Ruta-muraria major*; 4, *P. argyræa*, *tricolor*. See *Allosorus*, *Cheilanthes*, *Lonchites*, *Nothochlæna*, and *Tenitis*.

PTEROCARPUS, *Linn.* From *pteron*, a wing, and *karpous*, a fruit; the pods are girded with a broad wing. *Linn.* 16, *Or.* 7, *Nat. Or. Fabaceae*.

Mostly fine ornamental trees, attaining the height of from forty to sixty feet, and growing best in a loamy soil. Cuttings of the young wood not deprived of any of their leaves, will root in sand, under a glass, in heat. The wood of the tree is dark red with black veins, capable of a good polish, and so heavy as to sink in water. *P. santalinus* yields the official Red Sanders-wood. *Synonymes*: 1, *P. glabra*, *Brja Ebenus*.

PTEROCARYA, *Nutt.* See *Juglans pterocarya*, *Drepanocarpus*, *Ecstaphyllum*, and *Lonchocarpus*.

PTEROCALON, *De Candolle.* See *Conyza*.

PTEROCÉPHALUS, *Vaillant.* From *pteron*, a wing, and *cephale*, a head; in allusion to the receptacle of the flowers being villous. *Linn.* 4, Or. 1, Nat. Or. *Dipsacaceae*. *P. dumetorum* will grow well in sandy loam, and increase freely from cuttings, or seeds. The annual kinds merely require sowing in the open border where they are intended to flower. *Synonymes*: 1, *Scabiosa dumetorum*; 2, *P. brachiatia*; 3, *Cephalaria papposa*, *P. Vaillantii*; 4, *P. didandrus*; 5, *C. plumosa*. See *Cephalaria* and *Scabiosa*.

PTEROCALADUS. See *Baccharis*.

PTEROCALUS, *Hooker.* From *pteron*, a wing, and *discus*, a disk. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceae*. For cultivation, see *Calceolaria*.

speciosus	Lil. pur.	. 5, G. Her. P.	2 Africa	. 1844
-----------	-----------	-----------------	----------	--------

PTEROGONIUM, *Swarth.* From *pteron*, a wing, and *gonos*, a shoot; referring to the pinnated stems. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. These plants are found on trees and sub-alpine rocks. *Synonymie*: 1, *P. caespitosum*—filiforme 1, gracile, *Smithii*. See *Léskea*.

PTERONEURON, *De Candolle.* From *pteron*, a wing, and *neuron*, a nerve; because of the winged placenta. *Linn.* 15, Nat. Or. *Brassicaceae*. Rock plants, requiring a light soil, and increased by seeds, which may be sown where the plants are intended to remain. *Synonymes*: 1, *Cardamine carnosa*; 2, *C. græcum*.

carnosum 1	Pale	. 6, H. Her. P.	4 Hungary	. 1824
græcum 2	White	. 6, H. A. 4	S. Eur.	. 1710

PTERONIA, *Linn.* From *pteron*, a wing; the feathery scales of the receptacle. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. A genus of interesting plants, growing well in loam and peat,

and readily increased by cuttings. See *Stache-lina*.

PTEROTHECA, *De Candolle.* From *pteron*, a wing, and *theca*, a spore-case. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. Sow the seeds in any common garden soil.

nemausensis	Yellow	. 6, H. A. 1	S. Eur.	. 1794
-------------	--------	--------------	---------	--------

PTERYGODIUM, Swartz. The name is probably derived from *pterygodes*, wing-like; because of the appearance of the sepals. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A genus of tuberous-rooted plants, requiring the same treatment as *Corycium*.

alatum . . . Yellow . . . 7, G. Ter. 1 C. G. H. . 1821
volucere . . . Yellow . . . 7, G. Ter. 1 C. G. H. . 1797

PTILOCNEMA, D. Don. See *Pholidota*.

PTILOSTEPHIUM, Kunth. From *ptilon*, a feather, and *stephos*, a crown; from the feathery-like pappus. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. The seed of these plants should be sown on a gentle hotbed, and the young plants transplanted into the open border.

coronopifolium Yellow 6, H. A. 1 Mexico . 1823
trifidum . . . Yellow 6, H. A. 1 Mexico . 1823

PTILOTA, Agardh. From *ptilotos*, pinnated; the form of the frond. *Linn.* 24, Or. 7, Nat. Or. *Ceramiaceæ*. This species and its variety are found in the ocean—*plumosa*, *p. tenuis-sima*.

PTILOTRICHUM. *Synonymes*: 1, *Alfssum canescens*; 2, *A. elongatum*.

canescens 1 . . . White . . . 4, H. De. S. 3 Siberia . 1828
elongatum 2 . . . White . . . 4, H. De. S. 1 Altaia . 1836

PTYCHOTIS, Koch. From *ptyche*, a plait, and *ous*, an ear; the petals have a plait emitting a segment resembling a little ear. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Annuals not worth cultivating. *Synonymes*: 1, *Seseli ammoides*; 2, *Trachyspermum copticum*; 3, *S. corsicum*; 4, *S. saxifragum*, *Cicum Buntius*, *Micum heterophyllum*; 5, *S. verticillatum*, *pusillum*—*P. ammoides* 1, *optica* 2, *corsica* 3, *heterophylla* 4, *verticillata* 5.

PUBERULA, rather downy.

PUBESCENT, downy, hoary, covered with short soft hairs.

PUCCLINIA, Persoon. In honour of T. Puccinius, a professor of anatomy at Florence. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. The species of this genus have all the appearance of blackish or brown smut; and are found, as most of the specific names imply, upon the leaves of various plants—*Adoxæ*, *Agopodii*, *Anemones*, *Asparagi*, *Avicularia*, *Betonice*, *Baxi*, *Calthæ*, *Campânulæ*, *caricina*, *Centaureæ*, *Chrysosplenii*, *Circææ*, *clandestina*, *Epidobii*, *Galiûrum*, *Glechômatis*, *globosa*, *glomerata*, *Graminis*, *Hæradlei*, *Lychnidearum*, *Mêntheæ*, *Polygoni*, *Primulæ*, *Prunellæ*, *pulverulenta*, *Saniculæ*, *Scorodoniæ*, *Syngenesiarum*, *tumida*, *Ulmariæ*, *Umbelliferarum*, *Valantiæ*, *variabilis*, *Veronicarum*, *Vinææ*, *Violæ*.

PUCOON. See *Sanguinaria*.

PUCHA-PAT, or **PACHOULI**. See *Plectranthus*.

PUDICA, modest, humble.

PUERARIA, De Candolle. In honour of M. M. N. Puerari, a professor at Copenhagen. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. Ornamental plants. For culture and propagation, see *Clitèria*. *Synonyme*: 1, *Hedysarum tuberosum*.

PULVERULENT, powdery, downy.

PULVINATE, convex and flattened, cushion-shaped.

PŪMOS. See *Córypha Pūmos*.

PUMPKIN. See *Cucúrbita Pēpo*.

PUNCTARIA, *Greville*. From *punctum*, a dot; numerous dotted fructifications. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. These plants are generally found on marine rocks—*latifolia*, *plantaginea*, *tenuissima*.

PUNCTATE, dotted.

PUNGENT, pricking or stinging.

PŪNICA, *Linn.* From *punicus*, of "Carthage," near which city it is said to have been first found; or from *punicæ*, scarlet: alluding to the colour of the flowers. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. There is no tree more showy than the Pomegranate. *P. grandatum* and its varieties produce their splendid flowers and fruit very plentifully when planted against a south wall. They all grow well in a light rich loam, and strike root freely from cuttings or layers; the rarer varieties are sometimes increased by grafting on the common kinds. *Synonymes*: 1, *P. G. album*; 2, *P. G. plenum*.

PUNICEUS, red, or scarlet.

PUPALIA. See *Desmodicta*.

PURGING-NUTS. See *Jatropha purgans*.

PURGOSEA. See *Crassula*.

PURPLE OF AMORGUS is obtained from *Roccella tinctoria*.

PURPLE-HEART TREE. See *Copaifera pubiflora* and *bracteata*.

PURSATHA. See *Entada Pursathæ*.

PŪRSHIA, *De Candolle*. In honour of Frederick Pursh, author of "Flora America Septentrionalis," 1817. *Linn.* 12, Or. 1, Nat. Or. *Rosaceæ*. A dwarf shrub, requiring to be grown in a dry, light, sandy soil. It may be propagated by cuttings, but is easier increased by seeds. *Synonyme*: 1, *Tigarea tridentata*. See *Osmôndrium*.

tridentata 1 Yel. . . 6, H. Ev. S. 2 N. Amer. 1826

PURSLANE. See *Portulacæ*.

PURSLANE-TREE. See *Portulacaria*.

PUSCHKÍNIA, *Adams*. Named in honour of Count M. Pusckin, a Russian botanist. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. This plant requires to be cultivated in sandy loam, and is increased by offsets. *Synonyme*: 1, *Adamsia scilloides*.

scilloides 1 Pa. blue 5, F. Bl. P. ¼ Siberia . 1819

PUSFLOUS, weak, diminutive.

PŪSTULATE, covered with glandular excrescences.

PŪTORIA, *De Candolle*. See *Ernædea montana*.

PUTRANJIVA, *Wallich*. See *Nageia Putranjiva*.

PUTTY-ROOT. See *Aplæctrum hymæale*.

PŪYA, *Molina*. This name is substituted for the genus *Pourrétia*, as being the most ancient. *Puya cærulea* is identical with *Pourrétia cærulea*. *P. heterophylla* is a very pretty and curious plant, bearing two distinct kinds of leaves, one with tough, broad, horny petioles, which overlap each other, forming a kind of bulb, extended into narrow, serrated processes, about two inches long; the others which are last formed, are thin, bright green and lanceolate, more than eighteen inches long. For culture, &c., see *Tillandsia*. *Synonymes*: 1, *Pitcairnia undulatifolia*; 2, *Pourrétia cærulea*; 3, *Pourrétia lanuginosa*.

PŪCYNÁTHEMUM, *Michaux*. From *pyknos*, dense, and *anthemis*, a flower; the flowers are produced in dense whorls. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. White-flowering plants of little beauty, but fragrant in a high degree. A peat border suits them best, and they are readily increased by divisions. *Synonymes*: 1, *P. verticillatum*; 2, *Thymus virginicus*; 3, *Monardella caroliniana*.

PŪGMÆA, dwarf.

PŪN-BOOM. See *Pinus*.

PŪRACÁNTHA. See *Cratægus Pyracantha*.

PŪRAMIDAL, formed like a pyramid.

PŪRÁSTER. See *Pyrus communis Pyráster*.

PŪRÉNĪUM, *Fries*. From *pyren*, a kernel; appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. This species is found on dead wood—*lignatile*.

PŪRÉNŪLA, *Acharius*. From a diminutive of *pyren*, a kernel; the receptacle is enclosed in the thalamium as a kernel in its shell. *Linn.* 24, Or. 8, Nat. Or. *Graphidaceæ*. These plants

are to be met with on rocks, and the bark of beech-trees, at all seasons of the year—*nigræscens*, *nitida*, *tessellata*, *umbonata*.

PYRÆTHRUM, *Smith*. From *pyr*, fire; the roots are hot to the taste. *Linn.* 19, Or. 2, Nat. Or. *Asteræcæ*. A genus of very interesting plants. The greenhouse kinds grow in any rich light soil, and young cuttings root readily when planted under a glass. The hardy kinds are increased by divisions or seeds; any common soil suits them. *Synonymes*: 1, *Chrysanthemum coccineum*; 2, *P. grandiflorum*; 3, *P. grandiflorum*; 4, *Achillea sambucifolia*. See *Anthemis*.

PYROLÆCÆ, or **WINTERGREENS**, are a small group of herbaceous plants, possessing some beauty, and found in a wild state in woods in various parts of the world.

PYROLÆION, *Herbert*. Literally *Fireily*; from the colour of the flowers. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidææ*. Rather a pretty genus, growing in sandy loam, and increased by offsets. *Synonymes*: 1, *Amaryllis peruviana*. See *Chimaphila*.

alreum 1	Gold clrd.	5, G. Bl. P.	1	Peru	1833
flavum	Yellow	7, G. Bl. P.	1	Peru	1850

PYROLÆRIA, *Michaux*. The meaning is not known to us. *Linn.* 23, Or. 2, Nat. Or. *Santalææ*. An ornamental shrub, growing in sandy loam, and increased by cuttings. *Synonymes*: 1, *Hamiltônia oleifera*.

pubera	Grn. yel.	6, F. De. S.	6	N. Amer.	1800
--------	-----------	--------------	---	----------	------

PYRUS, *Linn.* From *peren*, the Celtic word for pear. *Linn.* 12, Or. 2, Nat. Or. *Pomæcæ*. To this genus belong the Pear and Apple, as well as the Service-tree, and many others, either prized for their fruit or their ornamental appearance. In our shrubberies, they grow in any common soil; but for the more highly cultivated ones a deep loam is necessary. They are increased by seeds, and the established kinds are multiplied by grafting the choicer on the common kinds. *Synonymes*: 1, *P. malus sylvestris*; 2, *P. salicifolia*; 3, *P. alpina*; 4, *P. sylvestris*; 5, *P. orientalis*; 6, *P. pabens*; 7, *P. edulis*; 8, *Sorbus latifolia*; 9, *Sorbus microcarpa*; 10, *S. hybrida*; 11, *P. Pollwyllyeriana*; 12, *Sorbus domestica*; 13, *P. hybrida*; *P. spuria sambucifolia*; 14, *Cratægus terminalis*; 15, *P. Pashia*; 16, *P. nepalensis*. See *Amelanchier*, *Cratægus*, and *Cydonia*.

PYTHAGOREAN BEAN. See *Nelambium speciosum*.

PYTHON, Mart. See *Arum campanulatum*.

PYTHONIUM, Schott. From *python*, a serpent, on account of the form of the spadix. *Linn.* 21, Or. 7, Nat. Or. *Aracæ*. A genus of plants closely allied to *Caladium*, and requiring the same treatment. *Synonymes*: 1, *Caladium petiolatum*; 2, *Thomsönia nepalensis*. See *Amorphophallus* and *Thomsönia*.

Hookeri 1 . . . Gn. pur. 6, S. Tu. P. 2 N Guinea 1840
Wallichianum 2 White . 6, S. Tu. P. 2 Nepal . 1816

PYXIDANTHERA, Michaux. From *pyxis*, a box, and *anthera*, an anther. *Linn.* 5, Or. 1, Nat. Or. *Diapensiaceæ*. This species thrives in peat soil, treated as other frame plants, and it may be increased by cuttings or divisions. *Synonyme*: 1, *Diapensia cuneifolia*.

barbulata 1 . White . 7, F. Ev. Tr. ½ Carolina 1806

PYXIDARIA. See *Lindernia Pyxidaria*.

PYXIDATA, box-shaped.

Q.

QUADRÁNGULAR, four-angled.

QUADRATE, square.

QUÁDRIA, Ruiz and Pavon. In honour of Antonio de la Quadra, a Spanish cultivator. *Linn.* 4, Or. 1, Nat. Or. *Proteaceæ*. This tree requires to be grown in peat and loam, and propagated by cuttings in sand, under a glass. *Synonyme*: 1, *Guevina Avellana*.

heterophýlla 1 Yel. grn. 6, G. Ev. T. 40 Chile . 1826

QUADRIFARIOS, arranged in four rows.

QUADRIFID, divided into four parts.

QUAHOUEH. See *Coffea arabica*.

QUAKING-GRASS. See *Braza*.

QUÁLEA, Aublet. The name of the tree among the Guianese Indians. *Linn.* 1, Or. 1, Nat. Or. *Vochysiaceæ*. This tree will grow best in peat and loam, and is readily increased by seeds.

violacea . . . Violet . S. Ev. T. 30 Brazil . 1824

QUAMASH. See *Scilla esculenta*.

QUAMÓCLIT, Tournesfort. From *kyamos*, a kidney-bean, and *kritos*, dwarf; the species of this genus resemble the kidney-bean in their climbing stems, but are less tall. *Linn.* 5, Or. 1, Nat. Or. *Convolvulææ*. This genus, for the most part, consists of very beautiful half-

hardy annuals. They require to be reared on a hotbed, and about the end of May they may be planted out in a warm sheltered situation in the open border; some of them may be kept in the greenhouse, where they will flower and ripen their seeds freely. The perennial kinds are well adapted for covering pillars in the stove or greenhouse. Any light rich soil suits them, and cuttings of the young wood root readily in sand, under a glass, in heat. *Synonymes*: 1, *Ipomœa coccinea*; 2, *I. digitata*; 3, *I. hastigera*; 4, *I. hederifolia*; 5, *I. longiflora*; 6, *I. luteola*; 7, *I. phœnicea*; 8, *I. sanguinea*; 9, *I. triloba*; 10, *I. Quamóclit*; 11, *Calboa globosa*.

QUARTZ, a kind of crystal-like stone.

QUASSIA, *Linn.* Quassi, the name of a negro slave, who first used the bark as a febrifuge. *Linn.* 10, Or. 1, Nat. Or. *Simarubaceae*. This valuable tree thrives in loam and peat; and cuttings of the ripened wood, with their leaves left whole, will root in sand, under a glass, in heat. The wood of this tree is well known as one of the most intense bitters, and is considered an effectual remedy in any disorder where pure bitters are required. See *Simaruba*.

amara . . . Red . . . 6, S. Ev. T. 20 Guiana . 1790

QUATERNARY, arranged in fours.

QUEKÉTIA, *Lindley*. Named after the late E. J. Quekett, F. L. S., an excellent botanical observer, and one of our best vegetable anatomists. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. Dr. Lindley says, "although this little plant is only a few inches high, and has no attractions for the vulgar eye, it is in some respects one of the most interesting I know, if examined microscopically." It will be found to succeed best on wood, treated precisely as the species of *Pleurothallis*.

microscópica Yellow . . . 4, S. Epi. † Brazil .

QUELTIA. See *Narcissus*.

QUERCITRON. See *Quercus tinctoria*.

QUERCUS, *Linn.* From the Celtic *quer*, fine, and *cuca*, a tree, fine tree; others derive it from the Greek word *χοιρος*, a pig; because those animals feed on the acorns. *Linn.* 21, Or. 9, Nat. Or. *Corylaceae*. All the species of this very important genus have a highly ornamental appearance, either on the lawn or in the forest; the wood is also much superior to that of any other tree, teak alone excepted, for the purpose of naval architecture; indeed, there is no purpose in the arts to which the wood of the oak is not applicable. *Q. Súber* is very valuable on account of its being the only tree which produces in any quantity that very important article, cork. The bark, leaves, and fruit, of all the species abound in astringent matter, and in tannin. The oak succeeds best in a deep loamy soil, and in a somewhat low situation. The species are generally increased from seed; and it is only when particular varieties are to be perpetuated, that grafting is resorted to. The seeds may either be sown when they drop from the tree, or they may be thoroughly dried, and preserved till the following March; previous to sowing, the soil should be well prepared, and after the drills are opened, or the earth drawn off the beds, the acorns may be scattered along the drills or over the beds, keeping them about two inches apart; before covering, the acorns must, if sown in beds, be patted down with the back of a spade, or the back of a wooden-headed rake if sown in drills. They should be covered from half an inch, to an inch and a half deep, according to the size of the acorn, with finely broken soil. The after culture of the oak does not require any notice here. *Synonyms*: 1, *Q. Phyllata*; 2, *Q. conglomerata*;

3, *Q. hemisphærica*; 4, *Q. nana*; 5, *Q. austraca*; 6, *Q. Lucombeana crispata*; 7, *Q. L. dentata*; 8, *Q. cérris dentata*; 9, *Q. L. heterophylla*; 10, *Q. QUERIA, *Loefling*. In honour of Don J. Query Martiuez, M.D., a professor of botany at Madrid. *Linn.* 3, Or. 3, Nat. Or. *Caryophyllaceae*. The seed of this plant only requires sowing in the open border. See *Angechia*.

hispanica . . Apetal . 6, H. A $\frac{1}{2}$ Spain . . 1810

QUERNALES. Plants that agree in certain general characters with the oak (*Quercus*).

QUICK-GRASS, or QUITCH. See *Triticum repens*.

QUICK-HEDGES are formed of young plants of Hawthorn (*Crataegus oxyacantha*).

QUICK-MOSSES, or QUIVER-WORTS. See *Confer-vaceae*.

QUILLATA, *Don*. *Quillai* or *Cullay* is the name of *Q. saponaria*. *Linn.* 10, Or. 4, Nat. Or. *Rosaceae*. For culture, see *Kagenbeckia*. Synonymes: 1, *Q. mollae*, *Smegmaria emarginata*.

saponaria 1 . White 4, H. Ev. S. 2 Chili . 1832

QUILLWORT. See *Isoetes*.

QUINCE. See *Cydonia*.

QUINDA. See *Chenopodium Quinda*.

QUINQUINA, or QUININE. An alkaloid obtained from several species of *Cinchona*.

QUISQUALIS, *Linn.* From *quis*, who, and *qualis*, what kind; when the genus was named, it was uncertain to what class or order it belonged. *Linn.* 10, Or. 1, Nat. Or. *Combretaceae*. The species of this genus are all very great favourites with cultivators, on account of the brilliancy of their flowers. For culture and propagation, see *Poirrea*. Synonyme: 1, *Q. sinensis*.

glabra	. Red . . 7, S. Ev. Cl.	20 Java . . 1815
indica 1	. Or. red . 6, S. Ev. Cl.	20 Java . . 1815

villosa	. Or. red . 7, S. Ev. Cl.	20 Pegu . . 1818

QUIVER-WORTS, or QUICK-MOSSES. See *Confer-vaceae*.

QUIVISIA, *Commerson*. From *Bois de quivi*, the name of one of the unintroduced species in the Isle of France. *Linn.* 10, Or. 1, Nat. Or. *Meliaceae*. This shrub succeeds well in a mixture of peat and loam; and ripened cuttings root freely in sand, under a glass, in heat.

heterophylla . White . 7, S. Ev. S. 12 I. France 1822

R.

RACEME, a term commonly applied to flowers, when they are arranged round a filiform simple axis, each particular flower being stalked.

RACEMOSE, flowering in racemes.

RACEMOSELY-CORYMBOSE, flowers disposed in a manner between a corymb and a raceme, or numerous racemes forming a corymb.

RACHIS, that part of a culm which runs up through the ear of corn, and consequently

that part which bears the flowers in other plants; also the common petiole of a pinnate leaf.

RACODIUM, *Link.* From *rakos*, a torn garment; in allusion to the appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. This species is found in undisturbed wine-cellars. *Synonyme*: 1, *Fibrillaria vinaria*—cellare 1.

RACODIUM. See *Sphæria Racodidium*.
 a flower is said to be so when, in a cluster or head of florets, those of the circumference or ray are long and spreading, and unlike those of the disk. A stigma is said to be rayed or radiant when its divisions resemble the rays of a star.

RADICAL, belonging to, or proceeding from, the root.

RADICANT, rooting, producing roots from the stem.

RADICLE, the root of an embryo.

RADIOLA, *Gmelin.* From *radius*, a little ray; in allusion to the capsule being rayed. *Linn.* 4, Or. 3, Nat. Or. *Lindacææ*. A little white-flowering, insignificant plant, found in sandy places.

millegrana. White . 7, H. A. $\frac{1}{10}$ Brit., sandy pl.

RADISH. See *Raphanus*.

RADIUS, the ray of a compound flower.

RAFFLESIA ARNÓLDI, called in Sumatra Ambun-Ambun, and Krúbít, is a parasitic flowering fungus, discovered by Sir Stamford Raffles in the interior of Sumatra, but is unknown in this country.

RAFFLESIACÆE, or **PATMA-WORTS**, consists of a few genera of singular flowering *fungi*, natives of the East Indies.

RÁFNIA, *Thunberg.* In honour of C. G. Rafn, of Copenhagen, a botanical author. *Linn.* 16, Or. 6, Nat. Or. *Fabacææ*. This is a genus of remarkably pretty plants; they succeed well in peat and loam, and young cuttings root without difficulty in sand, under a glass. *Synonymes*: 1, *Crotalaria oppósite*; 2, *Borbdonia cordata*. See *Vascda*.

RAGGED ROBIN. See *Lijchnis Floscuculi*.

RAG-MOSS-LEATHER. See *Racodium*.

RAGWORT. See *Othónna*.

RAGWORT. See *Senecio Jacobææ*.

RAISINS and **CURRENTS** of the shops are dried grapes.

RAJÁNIA, *Linn.* In honour of John Ray, an eminent English naturalist. *Linn.* 22, Or. 6, Nat. Or. *Dioscoridacææ*. Stove climbers, of no beauty, growing in peat and loam. They may be readily increased by division of the root—*cordata*, *hastata*, *quinquefolia*. See *Akèbia*.

RAMALINA, *Acharius.* From *ramale*, a withered branch; habitat of the plants. *Linn.* 24, Or.

8, Nat. Or. *Parmeliacææ*. Greyish-coloured *Lichens*, found on rocks and dead branches of trees—*farinacea*, *fastigiata*, *f. calicaris*, *fraxinea*, *pollinaria*, *polymorpha*, *scopulorum*.

RAMBUTAN, or **RAMBOOTAN**. See *Nephelium (Euphòria Nephelium) lappaceum*.

RAMÉNTA, little brown withered scales, with which the stems of some plants, especially ferns, are covered.

RAMIFICATIONS, subdivisions of roots or branches.

RAMÓNIA, *Richard.* In honour of M. L. Ramond, a French botanist and traveller. *Linn.* 5, Or. 1, Nat. Or. *Gesneracææ*. A genus consisting of one very pretty little alpine plant, well adapted for the front of flower-borders, or for growing in pots. Any light soil suits it, and it is readily increased by division of the root. *Synonymes*: 1, *Verbascum Mycedni*, *Charicia Mycedni*.

pyrenalca 1. Purple . 5, H. Her. P. $\frac{1}{2}$ Pyrenees 1781

RAMÓNTCHI. See *Flacocartia Ramóntchi*.

RAMOON-TREE. See *Tròphis*.

RAMOSE, branchy.

RAMPION. See *Phyteuma*.

RAMPION. See *Campánula Rapunculus*.

RAMPION. See *Cyphia Phyteuma*.

RAM'S-HEAD CHICK-PEA. See *Cicer arietinum*.

RAMSON. See *Allium ursinum*.

RANULI, twigs, or small branches.

RÁNDIA, *Houston.* In honour of J. Rand, a London botanist. *Linn.* 5, Or. 1, Nat. Or. *Cinchonacææ*. This genus is nearly allied to *Gardènia*, and requires precisely the same treatment. *Synonymes*: 1, *R. aculeata*, *obovata*, *Gardènia Rándia*; 2, *G. multiflora*; 3, *R. longiflora*; 4, *R. obovata*; 5, *Petúnga Kev-bárhái*, *Rothmánnia longiflora*.

RANUNCULACÆE, or **CROW-FOOTS**. A large group of plants, of which the common buttercup (*Ranunculus bulbosa*), the Anemone, and the Clematis may be cited as familiar examples. Acridity, causticity, and poison, are the characteristics of the order.

RANÚNCULUS, *Linn.* From *rana*, a frog; many of the species are found in moist places frequented by that reptile. *Linn.* 13, Or. 1, Nat. Or. *Ranunculacææ*. Many of the plants belonging to this extensive genus are well worth the cultivator's care, and they have long been favourites with the florist. The aquatic kinds require to be grown in water. The grunose-rooted species will thrive in any common soil, and in any situation; they are increased

by offsets from the roots, or by seeds. *R. asiaticus* and its varieties should be grown in good fresh loam and well-rotted cow-dung; the tubers should be planted in October or March; if in the former month, they will require to be slightly protected in had weather. Seeds selected from the best semi-double varieties, sown early in October, and kept growing during the winter, will flower the next season; these latter may also be increased by dividing the roots. These plants are mostly poisonous. *Synonymes*: 1, *R. polyanthemos*; 2, *aureus*, *villosus*; 3, *pyrenæus*; 4, *Thomasi*; 5, *serteacus*; 6, *apifolius*; 7, *monspeliacus*; 8, *polyanthemos*; 9, *aureus*, *villosus*; 10, *rigidus*, *circinatus*; 11, *peucedanifolius*; 12, *pyrenæus*, *plantagineus*; 13, *aconitifolius*; 14, *muricatus*, *brasiliæus*; 15, *Breyanius*; 16, *Teneriffæ*, *grandiflorus*; 17, *hederaceus grandiflorus*; 18, *divaricatus*; 19, *R. ollyssiponensis*. See *Ceratocéphalus* and *Ficaria*.

REEVĒSIA. Named by Lindley, in compliment to John Reeves, Esq., F. L. S., of Canton, from whom the botany of China has received material assistance, and to whom our gardens are indebted for many of their fairest ornaments. *Linn.* 16, Or. 8, Nat. Or. *Sterculiææ*. This very handsome shrub may be referred to the greenhouse species of *Sterculia*, for culture and propagation.
 thyrsoidea . . White . 1, G. Ev. S. 4 China . 1826

REFRIGERANT, producing coolness.

REHMĀNNIA, *Libosch*. Not explained. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariææ*. The flowers of this plant are large, but their colour so much destroys the effect of their magnitude, that the plant is, on that account, more curious than ornamental. Though hardy, it will succeed best in a cool greenhouse or frame, planted in any common soil, and is propagated by cuttings.

REMĒREA, *Aublet*. Its name in Guiana. *Linn.* 3, Or. 1, Nat. Or. *Cyperææ*. A plant of no value; it is increased by seeds or divisions—*maritima*.

REMUSĀTIA, *Schott*. In honour of Abel Remusat, a celebrated linguist. *Linn.* 21, Or. 7, Nat. Or. *Aræææ*. See *Caladium*.

RENANTHĒRA, *Loureiro*. From *ren*, a kidney,

and *anthera*, an anther; in allusion to the kidney or reniform shape of the anthers or pollen-masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidææ*. *R. coccinea* is a truly splendid plant. The flowers are produced on a lateral loose panicle; the sepals are of a pale scarlet, obscurely and irregularly blotched; the petals are marked with yellow bands on a beautiful scarlet ground; the labellum is yellow and scarlet. The plant will succeed in peat mixed with broken potsherds, carefully placed about the roots, so as to ensure a safe drainage; but the best way of growing it, is to plant it in *sphagnum* or *hypnum* moss, cut short and packed close about the roots, with a quantity of broken potsherds to act as a drainage. Any of the young branches taken off and potted in moss will soon make plants, which succeed well in any place where a strong heat and an abundance of moisture is kept up; when the plant has attained a good size, about the height of six feet, it should be placed in a house where the heat is from 65 to 70 degrees, and kept perfectly free from moisture, except what arises from watering and occasional syringing. The whole of the plant should be as near the glass and as much exposed to the sun as possible; and to prevent the leaves from shrivelling too much, it may be occasionally syringed in the afternoon. After being in this house two or three months, the flower-spikes will make their appearance; when the flowers are expanded, the plant should be removed to a cool house, and placed in a light situation: it will there continue in perfection for a great length of time. *Synonymes*: 1, *Aerides arachnites*; 2, *R. moluccana*, *A. matutinum*.

RENEĀLMIA, *R. Brown*. In honour of P. and M. L. Renealme, the first a famous French physician, and the other a botanist. *Linn.* 3, Or. 1, Nat. Or. *Iridæææ*. These plants may be referred to *Alpinia*. For culture and propagation, see *Libertia*.
 grandiflora . White . 4, G. Her. P. 1½ N. Zeal. . 1822
 paniculata . White . 6, G. Ev. S. 1½ N. Hol. . 1823
 pulchella . . White . 6, G. Ev. S. 1 N. Hol. . 1823

RENIFORM, kidney-shaped.

REPAHD; a leaf is said to be repand when its margin is undulated, and unequally dilated.

REPLICATE, folded back.

REPTANT, creeping and rooting.

REQUIĒNA, *De Candolle*. In honour of M. Requin, a botanist of Avignon. *Linn.* 16, Or. 6, Nat. Or. *Fabæææ*. This genus should be grown in a mixture of peat, loam, and sand; and young cuttings will strike if planted in sand, under a glass, in heat. The glass must be occasionally taken off and wiped, to prevent damp. *Synonyme*: 1, *Podalgria obcordata*.
 obcordata 1 . . Yel. . 7, S. Ev. S. 1 Senegal . 1825
 sphaerospërma . Yel. . 4, G. Ev. S. 1 C. G. H. . 1816

RESEDĀCÆE, or WELD-WORTS. These are nearly

all weeds, inhabiting various parts of Europe and Asia. The Mignonette (*Reseda odorata*) is a familiar example of their habits.

RESEDA, *Linn.* From *resedo*, to calm or appease; the Latins considered its application useful in external bruises. *Linn.* 11, Or. 3, Nat. Or. *Resedaceæ*. The Mignonette is an old and universal favourite, on account of the very pleasant odour emitted by the flowers. In summer it merely requires the treatment of other hardy annuals; but to obtain flowering plants through the winter and spring months, two other sowings must be made; to obtain flowering plants from December to March, the seeds should be sown about the middle of July upon a light, rich, open border, and the plants potted before the frost sets in, plunged in old tan or ashes, and covered by a frame, which should front the west. Those to flower from March to June, should be sown in pots not later than the third week in August, and treated in a manner similar to the November sowing. The third, or spring crop to succeed the last, may be sown about the middle of February; these should be placed in a frame in a gentle heat, and the plants thus obtained will be in perfection by the end of May. The suffruticose species may be increased by cuttings or seeds.

RETRACTED, bent backwards.

RETROGRADE, usually applied to hairs when they are bent back or down, instead of forward or up.

RETUSE, appearing as if bitten off at the end.

RÉTZIA, *Linn.* In honour of Anders Johan Retzius, professor of natural history in the University of Lund; author of "Observations on Botany." *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. This plant thrives in any light soil; and cuttings will root readily in sand, under a glass.

spicata . . .	Brown	5, G. Ev.	S. 4	C. G. H.

RHACOMA. See *Myginda Rhacoma*.

RHAGADIOLUS, *Tournefort*. From *rhagas*, a slit; in allusion to the divisions of the calyx. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Annuals of no interest; increased by seed in any common soil. *Synonymes*: 1, *R. lupsanoides*, *Lapsana Rhagadiolus*; 2, *Kelypina linearis*—*edulis* 1, *Kelcipina* 2, *stellatus*.

RHAGADIOLUS. See *Pteris Rhagadiolus*.

RHAGODIA, *R. Brown*. From *rhax*, a berry; its principal distinction. *Linn.* 23, Or. 1, Nat. Or. *Chenopodiaceæ*. Interesting plants, growing well in a mixture of loam and peat; and increasing readily by cuttings, placed under a glass.

RHAMNACEÆ, or RHAMNADS. These are trees and shrubs, often with spines. They are found in nearly all parts of the world; several species of *Zizyphus* bear edible fruit, known by the names of Lotus and Jujubes.

RHÁMNUS, *Linn.* From the Celtic *ram*, signifying a tuft of branches. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. The plants belonging to this genus are mostly valued on account of their foliage. The stove and greenhouse kinds are easily grown in any light soil; and increase readily by cuttings under a glass. The hardy kinds grow in any common soil, and are usually propagated by layers and seeds. The plants and berries possess very strong purgative qualities. The juice of the berries of *R. catharticus* is sold under the name of syrup of buckthorn; the French berries of the shops are the unripe fruit of the same species, and are used for dyeing Turkey or Morocco leather yellow. The wood of *R. dahuricus* is red, and is known to the Russians by the name of sandal-wood. *Synonymes*: 1, *R. Clusii*; 2, *R. Willdenovianus*; 3, *R. rupesstris*; 4, *R. pumilus*; 5, *R. pumilus*. See *Berchemia*, *Ceanothus*, and *Zizyphus*.

RHIZOBOLÁCEÆ, or **RHIZOBOLS**. Trees of a large size, supplying excellent ship timber. The famous Suwarrow nuts are the produce of *Caryocar butyrösium*, and belong to this order.

RHIZÓBOLUS. See *Caryocar*.

RHIZÓTONIA, *De Candolle*. From *rhiza*, a root, and *kteino*, to destroy; the name is applied in consequence of its destroying the roots upon which it grows. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. This species is found on *Céhicium* and the roots of the *Crocus—Crocürum*.

RHIZOGENS are a class of parasitical flowering Fungi. To this class belong *Rafflesia*, *Cynomorium*, and other similar productions.

RHIZÖMA, applied to root-like stems which spread under ground, similar to those of the Iris.

RHIZOMORPHA, *Roth*. From *rhiza*, a root, and *morphe*, form; the appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. The species of this genus are found beneath bark, and in cells—*divergens*, *medullaris*, *subcorticalis*, *subterranea*.

RHIZÓPIORA, *Linn.* From *rhiza*, a root, and *phoreo*, to bear; the branches of this tree throw out roots very freely, which descend into the mud; consequently, every branch being supported by its own roots, one tree may, in this manner, extend over a considerable space. *Linn.* 11, Or. 1, Nat. Or. *Rhizophoraceæ*. The Mangrove may be tried in loam and sand, well mixed, and kept moist by the frequent application of salted water. It is difficult, if not altogether impossible, to cultivate it in this country.

Mangle . Pa. yel. . 6, S. Ev. T. 10 E. Indies 1820

RHIZOPHORÁCEÆ, or **MANGROVES**. Trees and shrubs, natives of the sea-shores in the tropics, where they root in the mud, and form close thickets down to the verge of the ocean.

RHIZOPOGON, *Trinius*. From *rhiza*, a root, and *pogon*, a beard. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceæ*. This species is found by the waysides. *Synonyme*: 1, *Lycopodium gibbosum* —albus 1.

RHODANTHE, *Lindley*. From *rhodon*, a rose, and *anthos*, a flower; in allusion to the colour of the flower-heads. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. These are some of the most delightful annuals ever introduced to our collections. To obtain flowering plants in March, the seed should be sown in August, in a compost of decayed leaf-soil and light maiden earth, in equal parts, having the pots well drained. The seed-pots should not be placed in a lower temperature than 60, nor ever higher than 80 degrees. The earth should never be allowed to become too dry, taking care to apply water of a temperature nearly equal to that of the house. They will require several shifts previous to flowering; at the two last, viz., those in January and March, decayed manure should be substituted for leaf-mould, and a small portion of white sand added to the compost; a second sowing should be made in October and treated as the first, and they will flower beautifully the following May; and if a final sowing is effected in March, the plants will be ready to plant out in the flower-garden in May or June, where they will flower during the autumnal months. After the plants raised from any of the sowings have been potted, they should be removed to a much cooler house, and when properly established, placed on some elevated situation near the glass. Seed should be obtained from the plants grown in the greenhouse.

atrosanguinea Red . . . 6, G. A. 1½ Australia
maculata . . . Rose . . . 6, G. A. 1 Australia
Manglesi . . . Ro. yel. 6, G. A. 1½ S. River. 1832

RHODIOLA. See *Sidaum*.

RHODIUM LIGNUM. See *Centasia canariensis*, *Convolvulus floridus*, and *scoparia*, and *Physocalymma floribunda*.

RHODOCHITON, *Zucc.* See *Lophospermum*.

RHODODENDRON, *Linn.* From *rhodon*, a rose, and *dendron*, a tree; because of the appearance of the terminal bunches of flowers. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. The Rhododendron is decidedly one of the finest of all known genera, containing some of the most handsome, elegant, and showy shrubs; all of which are admirably adapted either for ornamenting the greenhouse or shrubbery, or for planting singly on lawns. Peat soil is most suitable to these plants, but they may also be grown in very sandy loam, or vegetable mould. Propagation may be effected by layers or seeds; if the latter mode be preferred, the seeds must be sown early in spring, in flat pans filled with peat soil, and the seed covered very slightly over; the pans should then be set in a close frame till the plants make their appearance, taking care to water very slightly when the soil appears dry. The seedlings having attained to a sufficient height, so as to admit of their being drawn without fear of injury,

should be removed into other pots or pans, using the same kind of mould. After this removal they should be kept in a close frame till fresh roots are produced, and they may then, by degrees, be hardened to the air. The small-wooded kinds may be also increased very freely by young cuttings, planted in sand under a glass. The tender kinds may be easily propagated by young cuttings torn off close to the stem, planted in sand, and plunged in heat under a glass. *Synonymes*: 1, *R. aromaticum*; 2, *R. cinnamomeum*; 3, *R. album*; 4, *R. Russeliænum*; 5, *R. Nobleænum*; 6, *R. officinale*; 7, *R. azaleoides*; 8, *R. myrtifolium*; 9, *R. obtusum*; 10, *R. indicum Smithii*, *Azalea indica Smithii*; 11, *R. Smithii*; 12, *Rhodora canadensis*; 13, *Vireya javanica*; 14, *R. formosum*; 15, *R. camtschaticum, lancifolium*; 16, *R. zeylanicum*; 17, *R. Griffithsii*; 18, *R. Roylei*; 19, *Vireya alba*; 20, *R. cleagnoides, obovatum, salignum*.

GARDEN VARIETIES.—These are very numerous, and some exceedingly beautiful. For their colours and characters, refer to the nurserymen's catalogues, published annually.

RHODOLEIA, Hooker. From *rhodon*, a rose; the flowers are red. *Linn.* 10, Or. 1, Nat. Or. *Hamamelidaceæ*. The only species of this genus yet introduced, bears a great resemblance both in habit and flowers to *Camellia*, to which genus refer for cultivation.

Championi . Rose . 5, G. Ev. S. 10 Hong Kong . 1849
RHODOMELA, Agardh. From *rhodon*, a rose, and *melos*, a limb; colour of the fronds. *Linn.* 24, Or. 8, Nat. Or. *Ceramiaceæ*. These plants are found in the ocean, on the seashore, &c.—*dentata*, *lycopodioides*, *pinastroides*, *scorpioides*, *subfusca*.

RHODOMENA, From rhodos, red, and hymen, a membrane. *Linn.* 24, Or. 8, Nat. Or. *Ceramiaceæ*. The species of this genus, like those of the one immediately preceding, are found in the ocean, &c. *Synonymes:* 1, *Sphaerococcus bifidus*; 2, *S. ciliatus*; 3, *S. c. angustus*; 4, *S. c. jubatus*; 5, *S. c. palmatus*; 6, *S. c. spinosus*; 7, *S. cristatus*; 8, *S. laciniatus*; 9, *S. Palmétta*; 10, *S. reniformis*—bifidus 1, ciliatus 2, c. angustus 3, c. jubatus 4, c. palmatus 5, c. spinosus 6, cristatus 7, laciniatus 8, Palmétta 9, polycarpa, reniformis 10, soboliferus.

RHODÖRA, See Rhododendron Rhodöra.

RHODORACEÆ, See Ericaceæ.

RHODORHIZA, Lindley. From *rhodon*, a rose, and *rhiza*, a root; fragrance of roots. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceæ*. Rose wood. See *Convolvulus*.

RHODÖSTOMA, Scheidw. From *rhodos*, red, and *stoma*, a mouth. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. The cultivation of this pretty plant is the same as *Gardénia*.

gardenioides . White . 6, S. Ev. S. 2 S. Amer. 1759

RHODOTHÄMNUS, Reich. From *rhodon*, a rose, and *thamos*, a shoot or branch. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. A genus separated from *Rhododendron*, and requiring precisely the same treatment. *Synonyme:* 1, *Rhododendron kamtschaticum*.

kamtschaticus . Purple . 5, H. Ev. S. 8 Siberia . 1840

RHCEAS, or COMMON POPPY. See *Papáver Rhceas*.

RHOMB, or RHOMBÖID, like a Rhömbus.

RHOMB-ÖVATE, } between rhomboid and egg-
RHOMBÖID-ÖVATE, } shaped.

RHÖPÄLA, See Röpäla.

RHUBARB, See Rhëum.

RHÜS, Linn. Derived from *rous*, in Greek, which is from *rhudd*, a Celtic word signifying red; alluding to the colour of the fruit and leaves of some species in autumn. *Linn.* 5, Or. 3, Nat. Or. *Anacardiaceæ*. The stove and greenhouse species will grow well in any common soil; and may be readily increased by ripened cuttings planted in sand, under a glass; the stove species must be placed in heat. The hardy kinds are rather ornamental, and well fitted for shrubberies; some are propagated by cuttings of the roots, and others by cuttings and layers. The juice of *R. radicans* and *Toxicodendron* is milky, stains black, and is extremely poisonous. *R. coriaria*

is powerfully astringent, and is used in tanning Turkey or Morocco leather. *Synonymes*: 1, *R. Bücku Amela*; 2, *R. lucida*; 3, *Lavrus canastica*; 4, *R. lucida*; 5, *spicata*; 6, *oxyacanthoides*; 7, *caroliniana*, *elegans*; 8, *elongata*; 9, *theezans*; 10, *venenata*; 11, *juglandifolia*. See *Omphalobium* and *Pterocarya*.

RHYNCHOGLÓSSUM, *De Candolle*. From *rhynchos*, a beak, and *glossa*, a tongue; the lower lip of the flower in the form of a tongue-like beak. *Linn.* 2, Or. 1, Nat. Or. *Gesneriaceae*. A pretty plant, native of Ceylon, and easily cultivated in the stove. *Synonymie*: 1, *Loxotis zeylanica*.

zeylanicum 1. Blue . 7, S. A. 1 Ceylon 1844

RHYNCHOSIA, *Loureiro*. From *rhynchos*, a beak; the keel of the flower is beaked. *Linn.* 17, Or. 4, Nat. Or. *Fabaceae*. These plants are not possessed of much beauty; any rich light soil suits them; and they are easily increased by cuttings or seeds. *Synonymes*: 1, *Glycine angustifolia*; 2, *Dolichos scarabaeoides*; 3, *Glycine caribaea*; 4, *G. tomentosa*, *volubilis*; 5, *G. erecta*; 6, *Dolichos minimum*; 7, *G. mollis*; 8, *G. phaseoloides*; 9, *G. precataria*; 10, *G. reniformis*; 11, *G. reticulata*; 12, *G. rhombifolia*; 13, *Dolichos scarabaeoides*; 14, *G. suaveolens*; 15, *G. picta*, *Cytisus violaceus*; 16, *G. viscosa*, *glutinosa*.

caribaea 3 . Yellow. 9, S. Ev. Tw. 3 W. Indies 1742
erecta 5 . Sulphur 7, S. Her. P. 3 N. Amer. 1820
reniformis 10 Yellow. 7, F. De. Tw. 2 Carolina. 1806
reticulata 11. White . 8, S. Ev. Tw. 6 Jamaica. 1779
suaveolens 14 Yel. red 8, S. Ev. S. 3 E. Indiae 1816

angustifolia 1, biflora 2, difformis 4, Fredericiana, minima 6, mollis 7, phaseoloides 8, precataria 9, rhombifolia 12, scarabaeoides 13, violacea 15, viscosa 16, volubilis.

RHYNCHOSPÉRMUM, *A. Dec.* From *rhynchos*, a snout, and *sperma*, a seed. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceae*. A pretty climber, not much unlike a *Jasmine*. It is of easy culture in light loam and peat, and is readily propagated by cuttings.

jasminoides . White . 7, G. Ev. Cl. 10 Shanghai 1846

RHYNCHOSPORA, *Vahl*. From *rhynchos*, a beak, and *spora*, a seed. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceae*. Worthless plants, growing in bogs, &c.—*alba*, *avurea*, *comata*, *distans*, *fusca*, *laxa*.

RHYTIPOHYLLUM, *Martius*. From *rhytis*, a wrinkle; and *phyllon*, a leaf. *Linn.* 14, Or. 2, Nat. Or. *Gesneriaceae*. For culture, see *Gesnera*.

auriculatum . Red yel. 8, S. Ev. S. 1 Brazil . 1834

RHYTISMA, *Fries*. From *rhytis*, a wrinkle; appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceae*. Found upon sycamore leaves and other live plants, as some of the specific appellations imply—*acervinum*, *Andromedae*, *corrugatum*, *punctatum*, *salicinum*, *Urticeae*.

RIB, the projecting vein of anything.

RIBESIACEÆ. See *Grossulariaceae*.

RIBES, *Linn.* From *Ribas*, the name of an acid plant mentioned by the Arabian physicians, which is known to be *Rheum Ribes*. *Linn.* 5, Or. 1, Nat. Or. *Grossulariæ*. This is a valuable genus, and contains the gooseberry and currant, the uses of which every cottager is familiar with; and in addition to these much-esteemed fruits, some of the species are well suited for ornamenting shrubberies. The most ornamental species are *R. atropurpureum*, *aureum*, *sanguineum*, and *speciosum*. All the species of *Ribes* will grow in any soil, and increase from cuttings, planted in autumn, or early in spring. *Synonymes*: 1, *R. aureum sanguineum*; 2, *R. hybridum*; 3, *R. reclatatum*; 4, *Uva crispata*; 5, *R. oxycanthoides*; 6, *R. glandulosum*; 7, *R. laxiflorum*; 8, *R. malvaceum*; 9, *R. stamineum*; 10, *R. missouriense*; 11, *R. stamineum*; 12, *R. ferocia*.

RIBESUM. See *Ribes*.

RIB-GRASS. See *Plantago lanceolata*.

RICCIA, *Linn.* In honour of P. Francisco Riccio, a Florentine botanist. *Linn.* 24, Or. 6, Nat. Or. *Ricciaceæ*. The species belonging to this genus are found floating in ditches, &c.—*fruticans*, *glauca*, *obtusata*, *natans*, *spuria*.

RICCIACEÆ, or **CRYSTAL-WORTS.** This is an order of plants of a diminutive size, chiefly inhabiting mud and water, sometimes swimming. They are mostly annual.

RICE. See *Oriza*.

RICE-PAPER OF CHINA. See *Aralia Japonica*.

RICHARDIA, *Kunth*. In honour of L. C. Richard, an eminent French botanist. *Linn.* 7, Or. 1, Nat. Or. *Aracææ*. *R. ethiopia* is a desirable plant, and thrives in any light rich soil, it is readily increased by offsets from the roots; while, on account of its frequent flowering, and large sweet-scented flowers, it is well worthy of a place in every collection. *Synonyme*: 1, *Calla ethiopia*. See *Richardsonia*.

ethiopia 1 . .	White	3, G. Her. P.	2	C. G. H.	1731
albe-maculata .	Grn. wt.	3, G. Her. P.	2	Africa	1858
hastata . . .	Grn. wt.	3, H. Her. P.	2	Natal	1858

RICHARDSONIA, *Kunth*. In memory of Richard Richardson, an English botanist. *Linn.* 6, Or. 1, Nat. Or. *Cinchonacææ*. This genus grows well in loam and peat; and cuttings root readily in the same kind of soil, under a glass, in a little heat. The white *Ipecacuanha* of the shops is the root of *R. scabra*. *Synonymes*: 1, *Richardia scabra*, *Richardsonia pilosa*.

scabra 1 . . .	White	9, S. Her. P.	2	Brazil	1814
stellaris . . .	White	7, H.	A.	Brazil	1836

RICHIA, *R. Brown*. In memory of Mr. Richie, an African traveller, who died in 1821, at Tripoli. *Linn.* 13, Or. 1, Nat. Or. *Cappari-dacææ*. *R. fragrans* is a stove climber: it grows best in a mixture of loam, peat, and sand; and cuttings root readily in sand, under a glass, in heat. *Synonymes*: 1, *Cratogeomys fragrans*, *C. capparioides*.

fragrans 1 . .	White	6, S. Ev. Cl.	6	S. Leone	1795
polypétala . .	Yel. grn.	6, S. Ev. S.	3	W. Africa	1859

RICINUS, *Linn.* From *ricinus*, a tick; resemblance in the seeds. *Linn.* 21, Or. 1, Nat. Or. *Euphorbiaceae*. The plants belonging to this genus will thrive in any rich soil, and are easily increased by seeds and cuttings. The well-known Castor oil is the produce of *R. communis*.

RICOTIA, *Linn.* Probably after some unknown botanist. *Linn.* 15, Nat. Or. *Brassicaceae*. A pretty little annual, well fitted for adorning rock-work, on which the seed may be sown. A light sandy soil suits it best. *Synonyme*: 1, *R. egyptiaca*.

Lunaria 1 . Li. pur. . 6, H. A. 3 Egypt . 1757

RIEDELIA, *Ventenat.* In honour of M. Riedley, a French naturalist, who accompanied Captain Baudin round the world. *Linn.* 16, Or. 2, Nat. Or. *Sterculiaceae*. The plants are not worth growing, except for the purpose of making up a collection. They are all of the easiest culture, and are readily increased by seeds. *Synonymes*: 1, *Melochia caracasana*; 2, *M. corchorifolia*; 3, *M. depressa*; 4, *M. supina*; 5, *M. truncata*.

caracasana 1 . White . 6, S. Ev. S. 2 Caraccas. 1817

 orthantha . Crimson . 6, S. Bl. P. 2 Mexico . 1846

RIMOSE, having a longitudinal fissure or fissures, chinky.

RINOERA, *Pallas.* In honour of Dr. Rinder, once dean of medicine in Moscow. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceae*. This plant is of the easiest culture, but of no beauty. *Synonymes*: 1, *R. laevigata*, *Cynoglossum Rindera*.

tetraspis 1 . Red . . 6, H. Her. P. I Siberia . 1818

RINGENT, gaping.

RINGING, removing a small strip of bark from around a branch, in the form of a ring.

RIPIDIUM, *Trinius.* From *rhipidion*, a little

fan; in allusion to the inflorescence. *Linn.* 23, Or. 1, Nat. Or. *Graminaceae*. Grasses, growing in any common soil, and increased by divisions. *Synonymes*: 1, *Andropogon Ravennae*, *Saccharum Ravennae*, *Erianthus Ravennae*; 2, *A. strictus*, *S. adpressum*.

Ravennae 1 . . . Apetal . 7, Grass 2 S. Europe . 1816
 strictum 2 . . . Apetal . 7, Grass 2 Hungary . 1802

RIPOGONUM, *Forster.* From *ripas*, a flexile twig, and *gonos*, a shoot. *Linn.* 6, Or. 1, Nat. Or. *Smilacaceae*. Ornamental climbers, thriving in loam and peat; and increasing by young cuttings, planted in sand, under a glass.

album . . . White . 6, G. Ev. Cl. 3 N. Hol. . 1820
 parviflorum . White . 6, G. Ev. Cl. 2 N. Hol. . 1820

RITRO. See *Echinops Ritro*.

RIVEA. Dedicated by Choisy, to Anguste de la Rive, a physiologist of Geneva. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceae*. For culture, &c., see *Ipomoea*. *Synonyme*: 1, *Ipomoea gangetica*.

tilinefolia 1 . White . 6, S. Ev. Tw. 4 E. Indies 1812
 ornata . . . Purple . 6, S. Ev. Tw. 4 E. Indies 1824

RIVINA, *Linn.* In honour of A. Q. Rivinus, a botanist of Saxony. *Linn.* 4, Or. 1, Nat. Or. *Phytolaccaceae*. These plants are mostly valued on account of their ornamental appearance when fruiting; they grow in any light soil, and are readily increased by seeds or cuttings.

RIVULARIA, *Roth.* From *rivulus*, a rivulet; place of growth. *Linn.* 24, Or. 7, Nat. Or. *Confervaceae*. These plants are found in lakes, ditches, &c. *Synonyme*: 1, *Linkia diva*—angulosa, appanata, atra, botryoides, calcarea 1, crustacea, nitida, plana, plicata. See *Corynephora* and *Mesoglydia*.

ROBERGIA, *Schreber.* In honour of Laurent Roberg, professor of medicine at Upsal. *Linn.* 10, Or. 4, Nat. Or. *Connaraceae*. An ornamental plant, growing in loam and peat; and increased by cuttings in sand, under a glass, in heat.

frutescens . White . 5, S. Ev. S. 6 Guiana . 1823

ROBERTIA, *De Candolle.* In honour of M. Robert, a Corsican botanist. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. Mere weeds, of the most common culture; seeds. *Synonyme*: 1, *Hypocheris pinnatifida*—pinnatifida 1, taraxacoides.

ROBERTSONIA. See *Saxifraga*.

ROBINIA, *De Candolle.* In honour of Jean Robin, a French botanist, once herbalist to Henry IV. of France. *Linn.* 17, Or. 4, Nat. Or. *Fabaceae*. The hardy kinds of *Robinia* are remarkably handsome when in flower, and well adapted for ornamenting the shrubbery. They will grow in any common soil; and are increased either by layers or by grafting the rare species upon the common kinds, chiefly

on *R. Pseud-acacia*. The stove and greenhouse species should be grown in a mixture of loam, sand, and peat; and young cuttings will root, if planted in sand, under a glass. *R. Pseud-acacia*, if properly seasoned, is equally as strong and as durable as oak. *Synonymes*: 1, *R. hybrida*, *ambigua*, *echinata*; 2, *R. grandiflora*, *macrophylla*; 3, *R. amorphæfolia*; 4, *R. monstrosa*; 5, *R. pëndula*; 6, *R. procëra*; 7, *R. sophoræfolia*; 8, *R. stricta*; 9, *R. inermis*. ROPE-GRASS. See *Résio*.

ROSA, Linn. From the Celtic *rhod*, red; in reference to the prevailing colour of the flowers. *Linn.* 12, Or. 3, Nat. Or. *Rosaceæ*. The name of this genus carries with it a charm as well for the beauty as the unrivalled fragrance of its flowers, and it has justly been the theme of writers, from the remotest antiquity, as a favourite and universal object of culture among all civilised nations. The plants vary in size, and the colours are red, white, purple, yellow, striped, or of almost numberless shades and mixtures, from single to semi-double and double. As it would be impossible to give a standard list of the most improved cultivated kinds, owing to the number of superior sorts raised annually from seed, and many of the varieties being annually lost, going out of repute, or entirely changing their appearance from time and local circumstances; we would on that account recommend those who wish to form a selection of these popular plants, to

resort to the latest and best catalogue of Roses now actually in cultivation; such as that of Messrs. Rivers and Son, of Sawbridgeworth, Hertfordshire, which is not only the best as a catalogue, but as containing other particulars worthy of the cultivator's consideration. The rose is propagated by every method capable of being applied to ligneous plants; by seeds for new varieties, for obtaining sweet-briar, and for stocks. The Indian, Chinese, and climbing kinds, by cuttings of the young wood placed in a gentle heat. The Moss, and Provence or Cabbage rose, by layers or suckers; also by cuttings of the large fleshy roots, which being planted, and covered with a little light rich earth, will each throw up one or more shoots. This will be found a good and an expeditious mode of obtaining young plants. Budding is chiefly used to produce standard roses, or to increase the number of kinds upon one plant; it is also resorted to to preserve some of the more tender kinds which languish upon their own roots. *Rosa canina*, or common dog-rose, is the best for budding upon; it is asserted by some cultivators, that all roses flower finer and last longer, by being budded on this stock. The Moss and Provence kinds are well adapted for forcing in winter and spring; the Chinese, and other tender kinds, for decorating the greenhouse nearly throughout the year. To keep a succession of flowers of the first-named kinds from Christmas, until their natural season of flowering, a quantity should be introduced into the forcing-house every month from the first of October to the first of March; the dung heat at first should not be more than 55 degrees, but it may be gradually raised to 65 or 70 degrees of Fahrenheit. The fruit of *R. canina* is astringent, and employed in medicine in cases of chronic diarrhoea and other maladies. The various preparations from the flowers are rose-water, vinegar of roses, attar, or essence of roses, &c. *Synonymes*: 1, *R. hybrida*; 2, *R. rubiginosa inodora*; 3, *R. canina cæsia*; 4, *R. leucantha*; 5, *R. canina dumetorum*; 6, *R. parvifolia*; 7, *R. Fraseriana*; 8, *R. odorata*; 9, *R. floribunda*; 10, *R. laxa*; 11, *R. eglantaria*; 12, *R. platyphylla*, *R. Roxburghii*; 13, *R. scabriscula*.

ROSÆÆ, or ROSEWORTS. A large group of plants, well known for their beauty, fragrance, and grateful products. Of the latter we may mention the Strawberry, Raspberry, and Blackberry.

ROSCOEÆ, Smith. In honour of William Roscoe, the famous historian of the Medici, and the founder of the Liverpool Botanic Garden. *Linn.* 1, Or. 1, Nat. Or. *Zingiberacææ.* A genus of pretty plants when in flower. A light turfy loam suits them best, and they are readily propagated by divisions.

ROSEWOOD. See *Génista canariensis, Convölvulus floridus* and *Scopäria, Physocalymma floribanda* and *Rhodorhiza*.

ROSLÍNIA, Don. Meaning unknown. *Linn.* 5, Or. 1, Nat. Or. *Gentianacææ.* See *Chirönia*.

ROSMARINUS, Linn. From *ros*, dew, *marinus*, of the sea; on account of its maritime habitat.

Linn. 2, Or. 1, Nat. Or. *Lamiacææ.* A genus of pretty shrubs, requiring to be grown in a rather sheltered, dry situation; and cuttings of the ripened wood root readily, if planted in spring. *R. officinalis* is the herb employed in the manufacture of Hungary water; tea made from it is also considered very beneficial to persons troubled with nervous headache, and it is one of the most powerful preparations for stimulating and strengthening the nervous system.

chilensis . . .	Purple . 7, H. Ev. S.	4	Chili . 1795
officinalis . . .	Purple . 2, H. Ev. S.	4	S. Eur. 1543

latifolius . . .	Purple . 2, H. Ev. S.	8	S. Eur. 1548

ROSMARINUS. See *Sphacèle*.

RÖSSOLI is a famous Italian liquor made from some species of Sun-dew (*Drösera*).

ROSTELLÄRIA, Nees. See *Justicia*.

ROSTRÄRIA, Trinius. From *rostrum*, a beak. *Linn.* 3, Or. 2, Nat. Or. *Graminacææ.* A grass of no interest. *Synonyme*: 1, *Brömus dactyloides*, or *Dactylis pängens*—pubescens 1.

ROTATE; when the limb of a monopetalous corolla is flat, and the tube very short, it is called rotate, or wheel-shaped.

RÖTHIA, Persoon. In honour of A. W. Roth, of Bremen, a German botanist. *Linn.* 16, Or. 6, Nat. Or. *Pobacææ.* The seeds of this curious little plant should be sown on a warm border, where the plants are intended to flower. *Synonymes*: 1, *Glycine humifusa*, *Cleöme prostrata*.

trifoliata I .	Sulphur . 7, H. Tr. A.	2	
----------------	------------------------	---	--

RÖTHIA, Lam. Named as above. *Linn.* 19, Or. 1, Nat. Or. *Asteracææ.* Mere weeds, not worth cultivation—*andryaloides*, *chieranthifolia*, *runcinata*. See *Hymenöppus*.

ROTHMÄNNIA. See *Randia*.

ROTTBÖLLIA, Linn. In honour of C. F. Rottboell, a Danish botanist. *Linn.* 3, Or. 2, Nat. Or. *Graminacææ.* Stove grasses, growing in any common soil, and increasing by seeds. See *Monërma* and *Ophüirus*.

exaltata . . .	Apetal . 6, S. Grass 6 E. Indies . 1906
perforata . . .	Apetal . 6, S. Grass 4 E. Indies . 1822

RÖTLERA, *Roxburgh*. In honour of Dr. Rottler, a Danish missionary. *Linn.* 22, Or. 11; *Nat. Or. Euphorbiaceæ*. Uninteresting stove plants, which grow freely in loam and peat; and may be increased by cuttings, under a glass. *Synonymy*: 1, *Crötön paniculata*—brasiliensis, paniculata 1, tinctoria.

ROUBIËVA. See *Chenopodium*.

ROUCON. See *Bixa Orellana*.

ROUGE PLANT. See *Rivina tinctoria*.

ROUGH CHERVIL. See *Anthriscus*.

ROUGH PLUM OF SIERRA LEONE. See *Parnarium excelsum*.

ROUNDISH DELTOID, between orbicular and deltoid.

ROUPALA. See *Ropala*.

ROUPËLLIA, *Wall.* Named in honour of Charles Roupel, of South Carolina. *Linn.* 5, Or. 1, *Nat. Or. Apocynaceæ*. This is the far-famed Cream-fruit tree, and forms a very handsome fragrant shrub. It is a nice plant to train to a trellis or a rafter, where its rose-coloured flowers are seen to perfection. Light loam and leaf-mould, in equal parts, suits it well, and it is easily propagated by cuttings.

grata . . . Wht. red . . . 6, S. Ev. S. 10 S. Leone . 1847

ROÛREA. See *Cinnarus*.

ROWAN-TREE, or **MOUNTAIN-ASH**. See *Pyrus aucuparia*.

ROXBURGHIA, *Dryander*. In honour of the late William Roxburgh, M.D., director of the botanic garden, Calcutta. *Linn.* 8, Or. 1, *Nat. Or. Roxburghiaceæ*. Interesting plants, thriving in light turfy loam, and readily increasing by suckers.

gloriosoides . . . Pk. yel. . . 7, S. Ev. Cl. 8 E. Ind. 1803
viridiflora . . . Green. . . 8, S. Ev. Cl. 6 E. Ind. 1836

ROXBURGHIAEÆ, or **ROXBURGH-WORTS**. A small group of twining shrubs, all natives of the hot parts of India.

ROYAL BAY. See *Laurus nobilis*.

ROYËNA, *Linn.* In honour of Adrian von Royen, professor of botany at Leyden. *Linn.* 10, Or. 2, *Nat. Or. Ebenaceæ*. These plants require to be grown in a mixture of loam, peat, and sand; and ripened cuttings strike freely in sand, under a glass. *Synonymy*: 1, *R. cuneata*.

villosa . . . White . . . 6, G. Ev. S. 3 C. G. H. . 1774

RÖYLEA, *Wallich*. In honour of John Forbes Royle, M.D., late superintendent of the botanic garden at Saharumpur; and Professor of Materia Medica in King's College, London. *Linn.* 14, Or. 1, *Nat. Or. Lamiaceæ*. An interesting little shrub, growing in any light rich soil. Cuttings root readily in the same kind of soil, with a glass over them. *Synonymy*: 1, *Ballota cinerea*.

elegans 1 . . . Purple . . . 7, G. Ev. S. 2 Nepal . 1824

RÖYOC. See *Morinda Röyoc*.

RUBEFACIENT, anything which reddens the skin, and raises slight cutaneous inflammation.

RUBËNTIA. See *Toddalia*.

RUBËNTIA. See *Elæodendron oliveria*.

RUBIA, *Tournefort*. From *rubra*, red; in allusion to the colour of the roots. *Linn.* 4, Or. 1, *Nat. Or. Galiaceæ*. Interesting plants. Any common garden soil suits them, and they are easily increased by seeds, or divisions of the roots. The root of *R. tinctorum* is one of the most valuable dyes with which we are acquainted; it is known under the name of *snadder*, and is a very important article of commerce. *Synonymy*: 1, *R. galioides*.

fruticosa, *f. galioides* 1, *lucida*, *peregrina*.

RUBIGO, *Link.* An ancient latin name for blight. *Linn.* 24, Or. 9, *Nat. Or. Uredinaceæ*. The plants of this genus are popularly called mildew, or blight. The species is found on decaying alders—*alnæa*.

RÛBUS, *Linn.* From the Celtic *rub*, signifying red; in reference to the colour of the fruit of some of the species. *Linn.* 12, Or. 3, *Nat. Or. Rosaceæ*. An extensive and interesting genus of plants. The shrubby kinds of *Bramble* grow best in a rich loam; and are readily increased by suckers from the root, or by cuttings. The herbaceous species thrive best in peat soil, and are likewise propagated by suckers. The well known and much-esteemed Raspberry is the fruit of *Rubus Idæus* and its garden varieties. The fruit of *R. Chamæmorus* is acid, and pleasant to the taste. It is known by the name of Cloudberry, from the plants being found in high situations. The Scottish Highlanders and Laplanders esteem it one of their most grateful and useful fruits, more especially on account of its long duration. *Synonymy*: 1, *R. pistillatus*; 2, *R. pedunculatus*; 3, *R. vulgaris*; 4, *R. flavus*; 5, *R. inermis*; 6, *R. discolor*, *abruptus*; 7, *R. f. plenus*; 8, *R. f. albus*; 9, *R. paniculatus*; 10, *R. pauciflorus*; 11, *R. echinatus*; 12, *R. villosus vulpinus*; 13, *R. ægopodioides*.

RUFFIA. See *Sâqus Ruffia*.

RUFESCENT, rather rusty.

RUFOS, reddish, orange-coloured, rusty.

RUGOSE, rough, coarsely wrinkled.

RUGOSITIES, protuberances.

RUGULOSE, finely wrinkled.

RUFIZIA, *Cavanilles*. In honour of Don Hippolito Ruiz, a traveller, and, in conjunction with Pavon, author of "Flora Peruviana et Chilensis." *Linn.* 16, Or. 8, Nat. Or. *Sterculiâceæ*. Desirable shrubs, growing in a mixture of loam, peat, and sand; and cuttings root freely if planted in the same kind of soil, under a glass, in heat. See *Boldoa*.

lobata . . .	White . . .	5, S. Ev.	S. 6	Bourbon	1816

RUST ON PLANTS. See *Uredinæceæ*.

RÛTA, Linn. From the Greek *rule*, from *ruo*, to flow; probably in reference to some reputed qualities of the plants; hence the English word *Rue*; *Linn.* 8, Or. 1, Nat. Or. *Ruticæceæ*. The species of *Rue* are all of the simplest culture. Any light rich soil suits them, and they are readily increased by cuttings placed under a hand-glass; or by seeds, which are produced in abundance by many of the species. *Synonymy*: 1, *R. chalepensis*. See *Aplophýllum*.

graveolens . Yel. grn. 8, H. Ev. S. 3 S. Europe 1562
albiflora . White . 7, F. Ev. S. 3 Nepal . . 1823
angustifolia 1, *bracteosa*, *corsica*, *divaricata*, *macrophylla*, *montana*, *pinnata*.

RUTÆCEÆ, or RUE-WORTS. Trees and shrubs, all characterised by their strong smell and bitterness. Some bear handsome flowers, and are esteemed by cultivators.

RÛTA-BÅGA. See *Brássica campestris Napobrassica*.

RÛTA-MURÀRIA. See *Asplénium Rûta-murària*.

RÛYSCHIA, Jacquin. In honour of Fred. Ruysch, M.D., who published the "Hortus Amstelodamensis," a posthumous work of John Commelin: he died in 1731. *Linn.* 5, Or. 1, Nat. Or. *Marcgraaviæceæ*. This very desirable

shrub will succeed well in a mixture of loam and vegetable mould; and ripened cuttings will root freely in sand, under a glass, in heat. In Guiana and the Caribbee islands, it is a parasitical under-shrub, rooting on trees in moist woods, similarly to the ivy with us.

clusiæfolia . Purple . 6, S. Ev. S. 4 W. Indies . 1823

RYÂNEA, De Candolle. In honour of John Ryan, M.D., F.R.S., a correspondent of Vahl. *Linn.* 13, Or. 1, Nat. Or. *Flacourtiæceæ*. This is a very beautiful stove plant, thriving in peat and loam; and propagated by ripened cuttings, planted in sand, under a glass, in heat.

speciosa . Cream . 8, S. Ev. S. 10 Trinidad . 1823

RYE. See *Secalæ*.

RYE GRASS. See *Lolium*.

RYTIDOPHYLLUM, Martius. From *rytis*, a wrinkle, and *phyllon*, a leaf; the surface of the upper side of the foliage is wrinkled. *Linn.* 14, Or. 2, Nat. Or. *Gesneriæceæ*. Ornamental under-shrubs, nearly related to *Gesnera*, which see for culture, &c. *Synonymy*: 1, *Gloxinia tigridia*. See *Gesnera*.

apétala, *cerastoides* 1, *erecta* 2, *maritima*, *procumbens*, *p. plena*, *subulata*.

SAGITTARIA, *Linn.* From *sagitta*, an arrow; because of the resemblance to the head of that weapon in the leaves of some species. *Linn.* 21, Or. 9, Nat. Or. *Alismaceæ*. Aquatics, requiring a loamy soil; and readily increasing by divisions. The stove and greenhouse kinds may be planted in a tub or large pot, with a little soil at the bottom, and filled up with water; a coating of pebbles may be laid on the soil to prevent the water from disturbing it,

and rendering it muddy. *Synonyme*: 1, *hasitata*.

SALACIA, *Linn.* From *Salacia*, in heathen mythology, the wife of Neptune. *Linn.* 3, Or. 1, Nat. Or. *Celastraceæ*. Plants of no great beauty; succeeding in loam and peat, and increasing by ripened cuttings planted in sand, under a glass. The fruit of *S. pyriformis* is eatable. It is about the size of a Bergamot

Pear, and of a sweet, rich flavour. *Synonymes*: 1, *Tonsella pyriformis*; 2, *T. scandens*. *pyriformis* 1 Green 8, S. Ev. Cl. 6 Guiana . . . 1825
scandens 2 Green 8, S. Ev. Cl. 6 Guiana . . . 1824

SALPE. See *Tacca pinnatifida*.

SALICACEÆ, or WILLOW-WORTS, are a group of well known trees and shrubs. The Willow, Sallow, and Poplar, are representatives of the order.

SALICARIA. See *Lýthrum salicaria*.

SALICORNIA, Linn. From *sal*, salt, and *cornu*, a horn. *Linn.* 1, Or. 1, Nat. Or. *Chenopodiaceæ*. These plants will grow in any common soil, and are readily increased by divisions. The plants being natives of the sea-shore, they will thrive better if a little salt be occasionally sprinkled on the surface of the soil. Soda is yielded in great quantities by the species of *Salicornia*.

SALISBURIA, Smith. In honour of Richard Anthony Salisbury, a distinguished English botanist. *Linn.* 21, Or. 9, Nat. Or. *Tuzaceæ*. The Maiden-hair Tree is well worth growing, if only on account of its singular foliage. The male and female flowers being produced on two different trees, the readiest way of obtaining fruit would be to graft or bud both sorts on the same tree, or by growing both trees near each other. Common garden soil suits it, and it is readily increased by layers. The fruit has never been perfected in this country, but in China the tree is extensively cultivated for the purpose of procuring it.

adiantifolia . . . Apetal 4, H. De. T. 25 Japan . . . 1754

SALISIA, Lindley. In honour of the Countess de Salis, a great lover of horticulture. *Linn.* 18, Or. 3, Nat. Or. *Myrtaceæ*. For the culture of this pretty plant, see *Melaleuca*.

pulehiella . . . Rosa. . . 5 G. Ev. S. 3 Swan R. . . 1837

SALIX, Linn. From *sal*, near, and *lis*, water, Celtic; in allusion to its place of growth; or from *salire*, to leap; because of the rapidity of its growth. *Linn.* 22, Or. 2, Nat. Or. *Salicaceæ*. An extensive genus of well-known, useful, and ornamental trees and shrubs. They all delight to grow in swampy places, and are increased by cuttings; though some of the more rare alpine kinds root with difficulty. Many of the species of willow are extensively grown for the manufacture of basket-rods. The best sorts for cultivating for hoops are *S. caprea* and *S. viminalis*. The branches of some of the species are used as stakes, poles, handles to rakes, hoes, and a great variety of economical purposes. In the north of Europe the bark of *S. alba* is used for tanning leather, and for dyeing yarn of a cinnamon colour, and the leaves and young shoots are given to cattle in a green state, or dried like the twigs of the

birch, and laid up for winter fodder. The leaves of *S. herbacea*, soaked in water, are employed in Iceland for tanning leather. *Synonymes*: 1, *S. violacea*; 2, *S. cœrulea*; 3, *S. uliginosa*; 4, *S. annularis*; 5, *S. napoleona*; 6, *S. præcox*; 7, *S. argentea*; 8, *S. ascendens*, *parvifolia*; 9, *S. incubæa*; 10, *S. prostrata*; 11, *S. repens*; 12, *S. malifolia*; 13, *S. serrulata*; 14, *S. riparia*; 15, *S. arbutifolia*; 16, *S. phylicifolia*; 17, *S. Fluggeana*; 18, *S. Hoppæana*.

SÁLMEA, De Candolle. In honour of Prince Charles, of Salm Dyck, in Holland, an enthusiastic cultivator of plants. *Linm.* 19, Or. I, Nat. Or. *Asteraceae*. A genus of pretty stove twiners, succeeding best in a light rich soil; and readily increasing by cuttings of the young wood planted in sand, under a glass, in heat. *Synonymes:* 1, *Bidens scândens*, *Hopkérkia scândens*. See *Carludóvica*.

SALOOB. See *Orchis*.

SALPIANTHUS. See *Boldoa*.

SALPICHLËNA, *J. Smith*. From *salpinx*, a tube, and *chlaina*, a cloak; fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove fern. *Synonymæ*: 1, *Bléchnum volubile*. volubilis 1. . . Yel. bra. 7, S. Her. P. 2 Brazil . 1842

SALPICHRÏDA, *Miers*. From *salpinx*, a tube, and *chroos*, ski; form and texture of flowers. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. A new shrubby plant, with small hairy leaves, between heart-shaped and ovate, on long petioles, and with a slender graceful habit of growth. It has bell-shaped flowers of a greenish-yellow colour, springing out singly, on lengthened footstalks, from the axils of the leaves, and taking a drooping direction. glandulosa . . . Yellow 7, S. Ev. S. 2 Chili . . 1844

SALPIGLOÛSSIS, *Ruiz and Pavon*. From *salpinx*, a tube, and *glossa*, a tongue; alluding to the tongue-like style in the mouth of the corolla. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. This genus of very showy plants should be in every ornamental collection. For culture, &c., see *Schizanthus*. *Synonymes*: 1, *S. atropurpurea*; 2, *S. Barclayana*; 3, *S. picta*; 4, *S. straminea*. See *Potinia*.

SALVADORACEÆ, or SALVADORADS. An order of small trees and shrubs, found in India, Syria, and North Africa. *Salvadora persica* bears a small succulent fruit which tastes like garden cress.

SALVIA, *Linn.* From *salvo*, to save; in allusion to the healing qualities of the sage. *Linn.* 2, Or. 1, Nat. Or. *Lamiaceæ*. This is a very extensive genus, consisting chiefly of extremely showy flowering plants, well worthy of cultivation. They are easily grown in a rich light soil. The shrubby kinds increase freely by cuttings of the young wood, under a glass; those of the stove species must be placed in heat; the herbaceous kinds must be multiplied by division of the roots. The seeds of the annual and biennial kinds simply require to be sown in the open ground where they are intended to bloom. The common sage, *Salvia officinalis*, is a well known culinary herb. *Synonymes*: 1, *S. patula, pyramidalis*; 2, *S. colorata*; 3, *S. polymorpha*; 4, *S. multifida, laciniata*; 5, *S. rosea*; 6, *S. prismatica*; 7, *S. SÂMOLUS, *Linn.* From *sam*, salutary, and *mos*, a pig; which, in Celtic, signifies pig's-food.

- Linn.* 5, Or. 1, Nat. Or. *Primulaceæ*. Pretty little plants, growing freely in common soil, planted in a rather moist situation, and increasing by divisions. *Synonyme*: 1, *Campanula perosa*.
- campanuloides 1 White 7, G. Her. P. $\frac{3}{4}$ C. G. H. . 1816
 littoralis . . . White 8, G. Her. P. $\frac{1}{4}$ N. S. W. 1806
 Valerandi . . . White 7, H. Her. P. $\frac{1}{2}$ Brit., marshes
- SAMPHIRE MARSH.** See *Salicornia*.
- SAMPHIRE ROCK.** See *Crithmum*.
- SÁMYDA**, *Linn.* The Greek name of the *Birch*; applied to this genus because of its resemblance. *Linn.* 10, Or. 1, Nat. Or. *Samydaceæ*. Ornamental plants, thriving well in a mixture of loam and peat; and cuttings root readily if planted in a pot of sand, under a glass, in a little heat. *Synonymes*: 1, *S. viridiflora*; 2, *S. pubescens*.

- SAMYDACEÆ**, or **SAMYDS**, are tropical trees and shrubs, with but little beauty. They are principally American, but a few belong to Asia and Africa.
- SAN.** See *Cryptomeria japonica*.
- SANDAL-TREE.** See *Sandoricum*.
- SANDAL-WOOD.** See *Santalum*.
- SANDBOX-TREE.** See *Hura*.
- SAND-CHERRY.** See *Ephedra distachya*.
- SANDERS-WOOD.** See *Pterocarpus Santalinus*.
- SAND-GRASSES** and **SEDGES.** See *Carex arenaria*.
- SANDORICUM**, *Cavanilles*. From *santoor*, the Malay name of the tree. *Linn.* 10, Or. 1, Nat. Or. *Meliaceæ*. This tree thrives well in a mixture of loam, peat, and sand; and ripened cuttings root in sand, under a glass, in heat.
- indicum . White . S. Ev. T. 50 E. Indies . 1820
- SANDRACH TREE.** See *Thijsa articulata*.
- SAND-WOOD.** See *Bremontiera Amboycylon*.
- SANDWORT.** See *Arenaria*.
- SANGUINARIA**, *Linn.* From *sanguis*, blood; all the parts of the plant yield a red juice when cut or broken. *Linn.* 13, Or. 1, Nat. Or. *Papaveraceæ*. Dwarf plants, serving well to ornament the front of the flower-border, in a light sandy loam or peat soil; and they are readily increased by dividing the roots, or by seeds.
- canadensis . White . 3, H. Tu. P. $\frac{1}{4}$ N. Amer. 1680
 grandiflora . White . 5, H. Tu. P. $\frac{1}{4}$ N. Amer.
- SANGUISORBA**, *Linn.* From *sanguis*, blood, and *sorbo*, to absorb; *S. officinalis* was formerly supposed to be a powerful vulnerary. *Linn.* 4, Or. 1, Nat. Or. *Sanguisorbaceæ*. All the species of *Burnet* are of the easiest culture in any common soil; and are readily increased by divisions of the roots, or by seeds. *Synonyme*: 1, *S. rubra*.

- SANGUISORBA.** See *Poterium Sanguisorba*.
- SANGUISORBACEÆ**, or **SANGUISORBES.** Herbaceous plants and small under-shrubs, natives of hedge-banks, heaths, and other exposed places, in various parts of the world; formerly they were united with *Rosaceæ*. The common *Burnet* (*Sanguisorba officinalis*) and the *Lady's Mantle* (*Alchemilla vulgaris*) are examples.
- SANICLE.** See *Sanicula*.
- SANÍCULA**, *Tournefort*. From *sano*, to heal; supposed healing effects of *Sanicula europæa*. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Mere weeds, multiplied by divisions of the roots—*canadensis*, *europæa*, *marilandica*.
- SANSEVIERA**, *Thunberg*. In honour of M. Sansevier, a Swedish botanist. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. Interesting plants, growing well in sandy loam; and increasing by suckers. The stove species should be very sparingly watered when dormant. *Synonyme*: 1, *S. sessiliflora*. See *Cordylina*.

- SANTALACEÆ**, or **SANDAL-WORTS.** A small order, consisting principally of shrubs and small trees. *Santalum album* produces sandal-wood, which, besides its variegated beauty, is esteemed for its perfume and medicinal properties.
- SANTALUM**, *Linn.* From its Persian name, *sandul*, signifying useful. *Linn.* 4, Or. 1, Nat. Or. *Santalaceæ*. A mixture of loam and peat suits these interesting plants; and cuttings will root in sand, under a glass, in heat. Saunders-wood is the produce of *S. album*, and in India it is considered sedative and cooling; it is also esteemed as a perfume.

SAOUARI, or SUWARROW, NUT. See *Caryocar*.

SAP-GREEN is obtained from the berries of *Rhamnus catharticus*.

SAPID, agreeable to the taste.

SAPINDACEÆ, or SOAP-WORTS. This order is composed of a great variety of species. One general character is that the embryo is either much curved or spirally twisted; this is particularly remarkable in the Snake-nut (*Ophiocaryon*). Several kinds bear eatable fruit, highly esteemed in the countries where they grow; of these may be mentioned the *Lee-choe*, *Longan*, *Rambootan*, *Honey-berries*, *Akee*, and many others quite as good as those named.

SAPINDUS, Linn. Altered from *Sapo-indicus*, Indian-soap; the aril which surrounds the seed of *S. saponaria* is used as soap in S. America. *Linn.* 8, Or. 3, Nat. Or. *Sapindaceæ*. These plants are hardly worth growing, except in general collections. They thrive in a mixture of loam, peat, and sand; and large cuttings will root in sand, under a glass, in heat. According to Browne, the seed-vessels are very acrid; they lather freely in water, and will cleanse more linen than thirty times their weight of soap, but in time they corrode or burn the linen. *Synonyme*: 1, *Moulinia rubiginosa*,

SAPJUM, Jacquin. From *sap*, Celtic, signifying fat; in allusion to the unctuous exudation from the wounded trunk. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. These trees thrive well in loam and peat; and cuttings will root in sand; under a glass, in heat. The juice of

S. aucuparium is said to be poisonous. *Synonyme*: 1, *Hippomane spinosa*.

SAPONACEOUS, soapy.

SAPONARIA, Linn. From *sapo*, soap; the bruised leaves are said to produce a lather, like soap, when agitated in the water. *Linn.* 10, Or. 2, Nat. Or. *Caryophyllaceæ*. This genus contains some truly beautiful plants, well deserving of a place in every garden. *S. ocymoides*, from its trailing habit, and handsome flowers, is well adapted for rock-work. A mixture of sandy loam and peat suits them best, and they are readily increased by division at the roots or by seed; young cuttings of the branching species will also root readily if planted under a glass. The leaves of *S. officinalis* form a lather, which much resembles that of soap, and is similarly efficacious in removing grease spots.

SAPOTA. See *Achras Sapota*.

SAPOTACEÆ, or SAPOTA PLUMS. A group of handsome trees and shrubs, some attaining a considerable height. Many bear excellent fruit, as the *Sapota-plum* and *Sappodilla*, which are species of *Achras*; the Star-apples (*Chryso-phylthum*), the Marmalade (*Achras mammosa*), and the Bully-tree (*Minusops*).

SAPPAN-WOOD. See *Cæsalpinia Sappan*.

SAPPODILLA. See *Achras Zapotilla*.

SARACA. See *Jonesia*.

SARACEN CORN. See *Polygonum Fagopyrum*.

SARACHA, Ruiz and Pavon. In honour of Isidore Saracha, a Benedictine monk, much attached to botany, and who enriched the royal gardens at Madrid with many rare plants. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. These plants will grow well in any common garden soil. *S. viscosa* is easily increased by cuttings. The seeds of the annual species should be sown in the open border in spring.

SARCOÁPŊNOS, *De Candolle*. From *sarx*, flesh, and *capnos*, the Greek name for fumitory; in allusion to the fleshy leaves. *Linn.* 17, Or. 2, Nat. Or. *Fumariacœe*. This plant thrives well in the open border or on rock-work, and is easily increased by seeds or cuttings. *Synonymy*: 1, *Fumaria cœneaphylla*.

œneaphylla 1 . Pa. yel. 6, H. Her. P. 1 Spain . 1714

SARCOCARP, the most fleshy part of fruit, under the pericarp.

SARCOCAULON, *De Candolle*. From *sarx*, flesh, and *caulus*, a stem; fleshy stems. *Linn.* 16, Or. 7, Nat. Or. *Geraniacœe*. Ornamental under-shrubs, growing best in a mixture of loam, peat, and leaf-mould or sand; they are readily increased by planting young cuttings in sand, under a glass, or by cuttings of the root. *Synonymes*: 1, *Geranium spinosum*; 2, *Monsônia spinosa*.

SARCOCÉPHALUS, *Afzelius*. From *sarx*, flesh, and *cephale*, a head; in allusion to the fruit being combined into a fleshy head. *Linn.* 5, Or. 1, Nat. Or. *Cinchonacœe*. This interesting plant is seldom seen in collections. It requires to be grown in a mixture of loam, peat, and sand, and kept in a hot part of the house. Cuttings will root in sand, under a glass, in heat. The heads of the fruit are eatable, and are much sought after by the negroes.

esculentus . .	Pink . . .	7, S. Ev. T. 20	S. Leone . 1822

SARRACENIACÆE, or **SARRACENIADS**. A small order, inhabiting the bogs of North America. The leaves of all the kinds are singularly enough formed into pitchers, which are lined inside with hairs, and which appear to be secreting organs, but what may be their real use is but imperfectly understood.

SARSAPARILLA. See *Smilax Sarsaparilla* and *Sarza*.

SAXÍFRAGA, Linn. From *sacum*, a stone, and *frango*, to break; its reputed medical qualities

in that disease. *Linn.* 10, Or. 2, Nat. Or. *Saxifragaceæ*. A very extensive genus of beautiful alpine plants, the greater part of which are particularly suitable for ornamenting rock-work, or for growing on the sides of naked banks. A light sandy soil is best for them; and they are all readily increased by seeds or divisions. Many of the more rare and tender kinds require the protection of a frame in winter, and should therefore be grown in pots. *Synonymes*: 1, *S. aquatica*; 2, *S. lævis*; 3, *S. grœnlandica*; 4, *S. palmata*; 5, *S. crenata*; 6, *S. dentata*; 7, *S. polita*; 8, *S. sphaeroidea*; 9, *S. recta*; 10, *Megasea ciliata*; 11, *S. muscoides*; 12, *S. moschata*; 13, *S. congesta*; 14, *S. moschata*; 15, *Leptarrhena pyrolefolia*; 16, *S. cuscutiformis*; 17, *S. dissimilis*; 18, *S. punctata*; 19, *S. serratifolia*, *S. cymosa*, *S. heterophylla*.

SAXIFRAGACEÆ, or SAXIFRAGES, are herbaceous plants, for the most part well known. They are all natives of mountains in Europe and the northern parts of the world, being found near the regions of perpetual snow. Some are found on old walls and rocks, and in shady groves; but none are met with in the tropics.

SAXIFRAGE. See *Saxifraga*.

SAXIFRAGE. See *Pimpinella Saxifraga*.

SCABIOSA, Remer. From *scabies*, the itch; the common kind is said to cure that disorder. *Linn.* 4, Or. 1, Nat. Or. *Dipsacaceæ*. Some of these plants are well adapted for ornamenting the flower-border. The herbaceous kinds are readily increased by division at the root,

or by seed. The seeds of the annual kinds merely require sowing in the open border. *Synonymes*: 1, *S. psëid-austrâlis*; 2, *S. nôrica*. See *Cephalària*, *Knautia*, and *Succisa*.

SCÆLEA. See *Podölepis*.

SCALE-FORMED, formed like scales.

SCALES, any small processes, resembling minute leaves.

SCALLION. See *Allium ascalonicum majus*.

SCAMMONY. See *Convolvulus Scammonia*.

SCANDENT, climbing.

SCÄNDIX, *Gærtner*. The Greek name of an eatable plant. *Linn.* 5, Or. 2, Nat. Or. *Apiöceæ*. Uninteresting plants; the seeds may be sown in the open border in spring. *Synonymes*: 1, *Wylia radicans*; 2, *W. grandiflora*; 3, *W. ibérica*; 4, *S. Pecten*—austrâlis, brachycarpa, falcata 1, grandiflora 2, ibérica 3, *Pecten Veneris* 4, pinnatifida. See *Anthriscus*, *Cherophyllum*, and *Törilis*.

SCAPE, a stem rising from the roots and bearing nothing but the flowers.

SCAPHYGLÖTTIS, *Poppig*. From *skapnos*, a boat, and *glotta*, a tongue; in allusion to the form of the labellum. *Linn.* 20, Or. 1, Nat. Or. *Orchidæceæ*. The species of this genus are altogether destitute of beauty. For culture and propagation, see *Burlingtonia*.

- SCHIZANDRA**, *Michaux*. From *schizo*, to cleave, and *aner*, a man; the stamens are split. *Linn.* 21, Or. 5, Nat. Or. *Schizandraceæ*. An ornamental plant, thriving in a mixture of sandy loam and peat; ripened cuttings root readily in sand, under a glass.
coccinea . . . Scarlet 6, G. Ev. Tr. 1 N. Amer. . 1806
- SCHIZANDRACEÆ**, or **KADSTRADS**. These are scrambling shrubs, not without beauty. They are natives of the hotter parts of the world, and their products are useful for domestic purposes.
- SCHIZANTHES**. See *Narcissus*.
SCHIZANTHEUS, *Ruiz and Pavon*. From *schizo*, to cut, and *anthos*, a flower; in allusion to the irregularly divided corolla. *Linn.* 2, Or. 1, Nat. Or. *Scrophulariaceæ*. This is a genus of extremely beautiful and showy annuals. A light fresh soil, not too rich, appears to suit these plants best. They succeed well if the seed be sown in an open border early in spring; they may also be reared on a hot-bed in spring, planting a portion in the open border, and growing the remainder in pots in the greenhouse, with a free admission of air and light. To procure flowering plants early in summer, the seed should be sown in pots during the autumn, and the plants kept in a frame or greenhouse throughout the winter.

SCHOMBÛRGKIA, Lindley. In honour of Sir Robert H. Schomburgk, a zealous naturalist, and a traveller in British Guiana on account of the Royal Geographical Society. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. *S. marginata*, and another species recently introduced, were originally discovered by the gentleman to whom the genus is dedicated. *S. marginata* is at present supposed to be rather difficult of culture. It will not grow so as to flower if kept in a pot, but thrives perfectly well when attached to a piece of wood, with a little moss on its roots. It must be kept in a hot, moist

part of the house. "In its native state, its flower-stalk is frequently four feet high, branching, and covered with flowers. During the dry season, it will bear intense heat without injury." *Synonyme*: 1, *Epidendrum tibicinis*.

SCIODAPHYLUM, *P. Browne*. From *scioides*, shady, and *phylon*, a leaf; the leaves are large, and consequently afford much shade. *Linn.* 5, Or. 5, Nat. Or. *Araliaceæ*. The foliage of this genus being very handsome, the species are, on that account, well worth cultivating. Loam, peat, and sand mixed, appears to suit them best; and cuttings root very freely in sand, under a glass, in heat. *Synonymes*: 1, *Carolinae insignis*; 2, *Aralia sciodaphyllum*; 3, *Actinophyllum conicum*; 4, *A. digitatum*.

SCION, a shoot intended for a graft.

SCIRPUS, *Beauvois*. From the Celtic *cirs*, rushes. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceæ*. Rushes, generally found in bogs. *Synonymes*: 1, *Schœnus compressus*; 2, *Schœnus rufus*—articulatus, atrovirens, cœspitosus, caricinus 1, caricinatus, elongatus, glaucus, lacustris, Luzulae, maritimus, mucronatus, pauciflorus, quinqueangularis, radicans, rufus 2, sylvaticus, triquetus. See *Eleocharis* and *Isoplepis*.

SCLAREA. See *Salvia Sclarea*.

SCLERANTHACEÆ, or SCLERANTHS, consist of small inconspicuous weeds, not worthy of cultivation.

SCLERANTHUS, *Linn.* From *scleros*, hard, and *anthos*, a flower; in allusion to the dry juiceless calyx. *Linn.* 10, Or. 2, Nat. Or. *Scleranthaceæ*. Mere weeds, not worth cultivating—*annuus*, *perennis*, *pungens*.

SCLERIA, *Willdenow*. Meaning unknown. *Linn.* 2, Or. 3, Nat. Or. *Cyperaceæ*. For culture, see *Cyperus*.

- SCLEROCARPUS, Jacquin.** From *scleros*, hard, and *karpos*, a fruit; in reference to the hard covering of the grains. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. A plant of very little beauty. It grows in any soil.
 africanus . Yellow 7, G. A. 2 Guinea . . 1812
- SCLERÓCHLOA, Beauvois.** From *scleros*, hard, and *chloa*, grass. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Worthless annuals. *Synonymes*: 1, *Triticum naritimum*, *Festuca maritima*; 2, *Poa procumbens*; 3, *P. rigida*, *Megastachya rigida*—articulata, dichotoma 1, divaricata, dhra, procumbens 2, rigida 3.
- SCLERODÉRMA, Persoon.** From *scleros*, hard, and *derma*, a skin; the hard coat. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdaceæ*. Found in plantations, about oak roots, &c. *Synonyme*: 1, *Tuber sólidum*—Cèpà 1, citrinum, spadicum, verrucosum.
- SCLERÓLEPIS, De Candolle.** See *Sparganophorus verticillatus*.
- SCLERÓON, Lindley.** From *scleros*, hard, and *oon*, an egg or seed. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceæ*. This is a little Mexican plant, bearing some resemblance to an olive, with the flowers of a Verbena and the name of Daphne. Mr. Hartweg found it in fruit only, and sent it to the Horticultural Society's garden, where it has flowered, and proved itself to be a new genus of *Verbenaceæ*. See *Daphne*, for culture and propagation.
 cletnum . Grn. wht. 5, G. Ev. S. 1 Mexico . . 1843
- SCLEROSCIADIUM, De Candolle.** From *scleros*, hard, and *sciadion*, an umbel. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. An annual of the easiest culture.
 humile . . White 6, H. A. 1½ Teneriffe . 1787
- SCLEROTHÁMNUS, R. Brown.** From *scleros*, hard, and *thamnus*, a shrub; rigid plants, with stiff leaves. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. A very ornamental shrub. For culture and propagation, see *Dillwynia*.
 microphyllus . Yellow 5, G. Ev. S. 2. N. Holl. 1803
- SCLERÓTIUM, Tode.** From *sclerotes*, hardness; in allusion to the texture of the plants. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdaceæ*. These species are found on various kinds of decayed leaves. *Synonyme*: 1, *S. quercinum*—bullatum, durum, fructum, fungorum, herbarnum, medullare, muscorum, neglectum, populinum, quercigenum 1, Rùbi, salcinum, scutellatum, semen, s. Brassicæ.
- SCLERÓXYLON.** See *Myrtsina*.
- SCOLLOPED,** having deep and wide indentations.
- SCOLOPÉNDRIUM, Smith.** From *scolopendra*, a centipede; in allusion to the appearance of the underside of the fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Interesting ferns, growing well on rock-work; they also succeed in shady situations, where hardly any other plants will live. They are readily increased by seeds or divisions of the roots. Important medical qualities are ascribed to several of the species. *Synonymes*: 1, *S. palmatum*, *Asplenium hemionitis*; 2, *A. scolopéndrium*; 3, *Onychium Krebsii*.

- SCOLOPÉNDRIUM.** See *Bossida Scolopéndrium*.
- SCÓLYMUS, Linn.** From *skolos*, a thorn; the plants are spiny. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. These plants succeed well in common garden soil; the perennial kinds are readily increased by divisions or seeds. The seeds of *S. maculatus* need only be sown in the open ground. The roots of *S. hispanicus* are equally as good as *Scorzonera*; the leaves and stalks are eaten as *Cardoons* by the people of Salamanca: the flowers are used for adulterating saffron.
 grandiflorus . Yellow 5, H. Her. P. 3 Barbary . 1828
 hispanicus . . Yellow 8, H. Her. P. 3 S. Eur. . 1653
 maculatus . . Yellow 7, H. A. 3 S. Eur. . 1630
- SCÓLYMUS.** See *Cynara Scólymus* and *Prætea Scólymus*.
- SCOPÁRIA, Linn.** From *scopa*, a broom; it may be used for similar purposes. *Linn.* 4, Or. 1, Nat. Or. *Scrophulariaceæ*. *S. dulcis* requires the same treatment as other stove annuals. According to Brown, it is an excellent vernalary.
 dulcis . . . White 7, S. A. 3 Jamaica . 1730

- SCOPÓLIA, Jacquin.** In honour of John Anthony Scopoli, a celebrated professor, and author of some botanical works. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. This is a very desirable plant, on account of its producing its pretty flowers early in spring. It thrives best in a light dry soil, and a shady situation. It may be increased by dividing the roots. *Synonymes*: 1, *S. atropoides*, *Hyoscyamus Scopólia*. See *Toddalia*.

SCORPIUS. See *Genista Scorpius*.

SCORZONERA, *Linn.* From *scurzon*, the Catalonian name of the viper; in Spain the plants are considered a certain remedy for the bite of the viper. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. These plants require the same treatment as carrots. *S. hispanica* is diuretic, stimulant, and sudorific. The root resembles a carrot, and is about the thickness of a man's finger; when the outer rind has been scraped off, it is steeped in water to extract part of its bitter flavour; then boiled or stewed the same as carrots or parsneps. The roots are fit for use from August till the following spring. *Synonymes*: 1, *S. graminifolia*; 2, *S. austriaca*; 3, *S. undulata*; 4, *S. subulata*; 5, *S. villosa*; 6, *S. scrullata*. See *Podospermum*.

SCROPHULARIACEÆ, or FIGWORTS. A large order containing many very beautiful and useful species. Amongst which may be mentioned as examples the Foxglove (*Digitalis*), the Snapdragon (*Antirrhinum*), and the Lady's Slipper (*Calceolaria*).

SCROTIFORM, shaped like a double bag.

SCRUBBY OAK. See *Lophira africana*.

SCRUB-PINE. See *Pinus Banksiana*.

SCUNKWEED. See *Symplocarpus fetidus*.

SCURFY, covered with scales, resembling scurf.

SCURVY GRASS. See *Cochlearia*.

SCUTATE, shaped like an ancient round buckler.

SCUTELLARIA, *Linn.* From *scutella*, a little saucer; alluding to the form of the calyx. *Linn.* 14, Or. 2, Nat. Or. *Lamiaceæ*. From the plants being for the most part very handsome when in flower, they are well suited for ornamenting the front of the flower-border. They grow in any common garden soil, and increase readily by seeds and divisions; the shrubby species may be readily multiplied by young cuttings. The greenhouse and frame species require protection only in winter. *Synonymes*: 1, *S. nigræscens, pallida*; 2, *S. altaica*; 3, *S. lupulina*; 4, *S. decumbens*; 5, *S. Caroliniana, hyssopifolia*; 6, *S. ambigua*; 7, *S. rubicunda*. See *Teucrium*.

syvestris.

SECAMONE, *R. Brown*. Altered from *Squamona*, the Arabic name of *S. ægyptiaca*. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. Ornamental plants. For culture and propagation, see *Pergularia*.

ægyptiaca . . .	White . . .	7, S. Ev. Tw.	6	Egypt	1752
elliptica . . .	White . . .	7, S. Ev. Tw.	6	N. Holl.	1824
emética . . .	White . . .	7, S. Ev. Tw.	6	India	1816

SÉCHUM, *Browne*. From *sekiso*, to fatten; the fruit serves to fatten hogs in the mountains and inland parts of Jamaica, where the plant is much cultivated. *Linn.* 21, Or. 10, Nat. Or. *Cucurbitaceæ*. This genus requires the

same treatment as the *Cucurbitæ*. *Synonyme* :
1, *Sicyos edulis*.

edible 1 . . Yellow . 6, F. . . A. 6 W. Ind. . 1816
palmatum . Yellow . 3, F. . . A. 6 Mexico . 1827

SECOND, arranged on one side only.

SECURIDACA, *Linn.* From *securis*, a hatchet ; in allusion to the form of the wing at the end of the pod. *Linn.* 17, Or. 3, Nat. Or. *Polygalacææ*. Pretty plants, growing well in loam, peat, and sand ; cuttings will root without difficulty in sand, under a glass, in heat. See *Securigera*.

erecta . . . Purple 7, S. Ev. Tw. 10 W. Indies. 1824
paniculata . Yellow 7, S. Ev. Tw. 10 Jamaica . 1820
virgata . . White 7, S. Ev. Tw. 10 Cayena . 1739
volubilis . . White 7, S. Ev. Tw. 10 W. Indies. 1789

SECURIGERA, *Decandolle*. From *securis*, a hatchet, and *gero*, to bear ; in reference to the shape of the pods. *Linn.* 17, Or. 4, Nat. Or. *Fabacææ*. The seeds have only to be sown in the open border in spring. *Synonymes* : 1, *Securidaca lutea*, *Coronilla securidaca*.
Coronilla 1 . Yellow . 7, H. . . A. 1 S. Eur. 1562

SECURINEGA, *Jussieu*. From *securis*, a hatchet, and *nego*, to refuse ; because of the extreme hardness of the wood. *Linn.* 21, Or. 5, Nat. Or. *Euphorbiacææ*. These plants succeed well in a mixture of peat and loam ; and cuttings of the half-ripened wood root readily in sand, under a glass, in heat.

Commerçonii White . 6, S. Ev. T. 35 . . . 1815
nitida . . . White . 6, S. Ev. T. 35 Mauritius 1793

SEDGE. See *Carex*.

SEDUM, *Linn.* From *sedere*, to sit ; the plants are found growing upon stones, rocks, walls, and roofs of houses. *Linn.* 10, Or. 4, Nat. Or. *Crassulacææ*. The hardy species of this interesting succulent genus are admirably suited for ornamenting rock-work. Some of the rarer kinds may be grown in small pots, in light sandy soil, or in loam mixed with brick rubbish. They are readily increased by divisions or cuttings. The greenhouse kinds require the same treatment as the *Globulacææ*. The annual kinds also succeed best on rock-work, where the seed has merely to be sown. *Synonymes* : 1, *Rhodiola sibirica* ; 2, *Sedum fruticosum*, *Jacquin*, *Sempervivum sediforme* ; 3, *Sedum glaucum* ; 4, *S. rupestre* ; 5, *S. maximum* ; 6, *S. album micranthum* ; 7, *S. hexapetalum*, *quinquefidum* ; 8, *S. collinum* ; 9, *S. recurvatum* ; 10, *S. SEED LAC is the produce of *Butea frondosa*.

SEED OF THE SUN. See *Armeniacæ*.

SEGETALIS. See *Alsine segetalis*.

SEGMENT, a part of anything.

SELAGINACEÆ, or **SELAGIDS**. A small group of

herbaceous plants, chiefly natives of Africa, and nearly related to Verbenas. Some are pretty, and well deserve cultivation.

SELAGINÉLLA. See *Lycopodium*.

SELAGO. *Linn.* From the Celtic, *sel*, sight, and *jach*, salutary; supposed medicinal qualities. *Linn.* 14, Or. 2, Nat. Or. *Selaginæceæ*. A genus of very pretty plants, of easy culture; a mixture of loam, peat, and sand suits them; and cuttings root freely in sand or soil, under a glass. *Synonymes*: 1, *S. lucida*; 2, *S. teretifolia*; 3, *falvo-maculata*; 4, *S. diffusa*.

SELLÖA. *Humboldt and Bonpland.* In honour of Mr. Sello, a German botanist. *Linn.* 19, Nat. Or. *Astericææ*. A worthless stove perennial; increased by cuttings—*glutinosa*. See *Gymnosperma*.

SEMECÁRPUS. *Linn.* From *semeion*, a mark, and *carpos*, a fruit; the black, acrid juice of the nut is used by the natives for marking cotton cloths. *Linn.* 23, Or. 2, Nat. Or. *Anacardiææ*. For the culture and propagation of this lofty-growing tree, see *Anacardium*. *Synonyme*: 1, *Anacardium longifolium*, *Cassuvium*.

Anacardium 1 Grn. yel. 5, S. Ev. T. 20 E. Indies 1824
cuneifolium Grn. yel. 5, S. Ev. T. 20 E. Indies 1820

SEMI. half.

SEMINAL. belonging to the seed.

SEMPERVIVUM. *Linn.* From *semper vivo*, to live for ever; the tenacity of life of the House-leek is well known. *Linn.* 11, Or. 7, Nat. Or. *Crassulææ*. These interesting plants are worthy of a place in every collection. The greenhouse species succeed best in a mixture of sandy loam and brick rubbish; and when not in flower, they must be very sparingly watered. Cuttings taken off, and laid to dry for two or three days, will root very freely. The readiest way of obtaining cuttings from *S. tabulariforme* and some others, is to cut the top out, when lateral shoots will be immediately produced. The hardy kinds succeed best on walls or rock-work, and are easily increased by offsets. The juice of the common house-leek, *S. tectorum*, applied either by itself or mixed with cream, gives immediate relief in burns, and other external inflammations. *Synonymes*: 1, *Sedum divaricatum*; 2, *Sempervivum calyciforme*; 3, *S. lineolare*; 4, *S. barbátum*, *ciliatum*; 5, *S. laxum*; 6, *S. grandiflorum*; 7, *S. soboliferum*; 8, *S. villosum*. See *Zonium*.

SENACIA, Commelin. In honour of John Senac, a distinguished French physician; he died in 1770. *Linn.* 5, Or. 1, Nat. Or. *Ptilosporaceae*. Interesting plants, thriving well in a mixture of loam and peat, or any rich light soil; cuttings of the ripened wood will root without difficulty in sand, under a glass, in heat. *Synonymes*: 1, *Celastrus verticillatus*. See *Eleoedendron*.

nepalensis 1. White 7, S. Ev. S. 12 Nepal . . . 1820
undulatus . . . White 7, S. Ev. S. 12 Bourbon . . . 1785

SENEBIERA, Poiret. In honour of John de Senebier, of Geneva, a vegetable physiologist. *Linn.* 15, Nat. Or. *Brassicaceae*. Plants of no beauty. The seeds have only to be sown in the open ground. *Synonymes*: 1, *Coronopus Ruellii*; 2, *Cochlearia nilotica*; 3, *Coronopus didymus*, *Lepidium didymum*—*coronopus* 1, *nilotica* 2, *pinnatifida* 3.

SENECILLIS, Gaertner. Probably a diminutive of *Senecio*. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. Interesting plants, thriving in any light rich soil, and increasing readily by divisions. *Synonymes*: 1, *Cineraria glauca*; 2, *C. purpurata*.

glauca 1 . . . Yellow 7, H. Her. P. 4 Siberia . . . 1790

SENECIO, Linn. From *senex*, an old man; the receptacle is naked, and resembles a bald head. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. An extensive genus of plants, many of the species of which are very ornamental. The shrubby kinds grow well in any light soil, and increase freely by cuttings. The hardy species will thrive in common garden soil, and may be increased by dividing the plants. The annuals and biennials are also of the easiest culture. *Synonymes*: 1, *Cineraria alpina*; 2, *S. cinerarioides*; 3, *Cacalia sarracénica*; 4, *S. incanum*; 5, *Cineraria cordifolia*; 6, *Cineraria cruenta*; 7, *S. aquaticum*; 8, *S. glutinosum*; 9, *S. incanum*; 10, *S. canescens*; 11, *Cineraria alpina*, var.; 12, *S. paradoxum*; 13, *S. lanceum*; 14, *Cacalia pinnata*; 15, *C. peucedanifolia*; 16, *S. Chrysanthemifolia*; 17, *S. graminifolia*; 18, *S. nemorosum*, *persicifolia*; 19, *S. leucanthemifolia*; 20, *Pericallis tussilaginis*, *Cineraria tussilaginis*; 21, *Cineraria præcox*. See *Cineraria*.

SENA OF COMMERCE. See *Cassia lanceolata*.

SENSITIVE FERN. See *Onoclea sensibilis*.

SENSITIVE PLANT. See *Mimosa pudica* and *scutivra*.

SEPAL, the divisions of the calyx.

SEPEDONIUM, *Link.* From *sepedon*, putrescence. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. These species are found in autumn growing on decayed substances—*mycophilum, ruscum*.

SÉPTA, the partitions which divide the interior parts of a fruit.

SEPTARIA, *Fries.* From *septum*, a division. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. These species appear as stains upon the leaves of the Elm, &c.—*Egopodium, Oxyacanthæ, Ulmi*.

SÉPTAS, *Linn.* From *septem*, seven; the number seven prevailing in the fructification. *Linn.* 7, Or. 4, Nat. Or. *Crassulaceæ*. Neat little plants, thriving well in a mixture of loam, peat, and sand; and readily increasing by division of the tubers. They must be very sparingly watered when in a state of dormancy. *Synonyme*: 1, *S. globiflora*.

capensis . . . White 8, G. Her. P. $\frac{1}{2}$ C. G. H. . . 1774

SERICEOUS, silky, downy.

SERICOCARPUS, *De Candolle*. See *Aster*.

SERICOGRAPHS, *Nees*. From *serikos*, silk, and *grapho*, to write. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceæ*. A handsome winter-flowering plant, requiring the same treatment as *Ruellia*. *Synonyme*: 1, *Aphelandra Ghiesbreghtiana*. *Ghiesbreghtiana* . . . Red 12 S. Ev. S. 2 . . . 1847

SERIES, a row, or layer.

SERINGIA, *Gay*. In honour of Nicholas Charles Seringe, a Swiss botanist. *Linn.* 5, Or. 1, Nat. Or. *Sterculiaceæ*. An interesting shrub, thriving in a mixture of sand, loam, and peat; young cuttings planted in the same kind of soil, under a glass, will root readily, or the species may be increased by seeds. *Synonyme*: 1, *Lasiopetalum arborescens*. See *Plectidium*.
platyphylla 1 White 6, G. Ev. S. 10 N. Holl. 1822

SERIOLA, *Linn.* From *seris*, succory; resemblance of the plants. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. These plants succeed in any common soil, and are readily increased by seeds. *Synonymes*: 1, *Rodigia alliata*; 2, *R. commutata*; 3, *R. levigata*. See *Rodigia*.

SEROTINUS, late, or evening-flowered.

SERPENT-WOOD. See *Ophiocarylon*.

SERPENTARIA. See *Aristolochia Serpentaria*.

SERPICULA, *Linn.* From *serpo*, to creep; in reference to the habit of the species. *Linn.* 21, Or. 5, Nat. Or. *Onagraceæ*. This plant grows in any common soil, and is readily multiplied by dividing the creeping shoots.

repens . . . White 7, G. Her. Cr. $\frac{1}{2}$ C. G. H. . . 1789

SERPÝLLUM. See *Thymus Serpyllum*.

SERRADILLA. See *Ornithopus sativus*.

SERRARIA. See *Plantago Serraria*.

SERRATE, cut like the teeth of a saw.

SERRÁTULA, *Linn.* From *serra*, a saw; the leaves are edged with cutting teeth. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. All the species of *Serrátula* succeed well in any common soil. The herbaceous kinds are increased by seeds or division of the roots; the annuals and biennials merely require sowing in the open ground. *Synonymes*: 1, *Centaurea Béhen*; 2, *S. alata*, *Càrdus cyanoides*; 3, *Cnicus centaurioides*; 4, *Càrdus nitidus*; 5, *S. linearifolia*; 6, *Centaurea nitens*; 7, *Càrdus cerinthoides, cerinthifolius, glaucus*; 8, *Càrdus pannonicus, serratuloides, Cnicus pannonicus*; 9, *S. ambigua, Càrdus polyclonus*; 10, *S. centaurioides*; 11, *S. simplex*; 12, *Càrdus leucanthus*. See *Cestrinus, Cirsium*, and *Saussurea*.

SERSALÍSIA, *R. Brown*. In memory of John Baptiste Sersalis, a Neapolitan ecclesiastic, much praised by Fabius Columna. *Linn.* 5, Or. 1, Nat. Or. *Sapotææ*. This shrub thrives best in a mixture of loam, peat, and sand; and cuttings root freely in sand, under a glass. *Synonyme*: 1, *Sideroxylon sericeum*.

sericea White 6, S. Ev. S. 6 N. Holland . 1772

SERVICE, See *Pyrus Sorbus*.

SÉSAMUM, *Linnæus*. From *semisen*, the Egyptian name of one of the species. *Linn.* 14, Or. 2, Nat. Or. *Pedaliææ*. Only worth growing as botanical curiosities. They require the same treatment as other tender annuals. The seeds contain an abundance of oil, which

might be substituted for olive oil; it is procured from them in Egypt in great quantities.

Indicum	Pa. pur. 7, S. A. 1½ E. Ind. 1731
luteum	Yellow 7, S. A. 1½ E. Ind. 1825
orientale	White 7, S. A. 1½ E. Ind. 1731

SÉSÂNIA, *Persoon*. From *Sesban*, the Arabic name of *S. ægyptiaca*. *Linn.* 17, Or. 4, Nat. Or. *Fabææ*. Interesting plants, requiring to be kept in a strong heat, or they will not thrive. A mixture of loam and peat suits them; and cuttings of the shrubby kinds will root in sand, under a glass, in heat. The annual species are increased by seeds, which they sometimes produce in this country. *Synonymes*: 1, *Æschynomene Séshan*; 2, *Æ. cannábina*. See *Agati* and *Glottidium*.

SÉSEL, *Linn.* The Greek name of an umbelliferous plant. *Linn.* 5, Or. 2, Nat. Or. *Apiææ*. The species of Meadow-saxifrage are of very little interest. A sandy or chalky soil suits them, and they are readily increased by seeds. *Synonymes*: 1, *Bábon siculum*; 2, *S. Athamánta*, *Bábon buchtornense*; 3, *S. Annuum*; 4, *B. dichotomum*; 5, *Athamánta Libanotis*; 6, *S. glaucum*; 7, *S. crassifolium*; 8, *S. proliferum*; 9, *B. rigidum*; 10, *S. tauricum*—Boccòni 1, buchtornense 2, campestre, cervariæfolium, charophylloides, coloratum 3, dichotomum 4, divaricatum, elatum, fragile, gracile, gummiferum, Hippomarathrum, leucospermum, Libanotis 5, Lobeliarum, montanum, m. glaucum 6, Pallásii 7, pencedanifolium 8, rigidum 9, striatum, strictum, tortuosum, triterinatum, varium 10. See *Bábon*, *Ptychotis*, and *Selinum*.

SESLERIA, *Arduini*. In honour of M. Sesler, a physician and botanist of the eighteenth century. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. Uninteresting grasses. *Synonyme*: 1, *Cynosurus cæruleus*—cærulea 1, cylindrica, disticha, elongata, nitida, tenella, tenuifolia, sphaerocéphala. See *Echinaria*.

SESSILE, without stalks.

SÉSÛVIUM, *Linn.* Not explained. *Linn.* 12, Or. 2, Nat. Or. *Tetragonitææ*. These succulent plants require to be grown in sandy loam and peat. They increase freely by cuttings, dried a little, and planted in the same kind of soil, under a glass. They must be sparingly watered. *Synonymes*: 1, *S. pedunculatum*; 2, *S. sessile*, *S. Portulacæstrum*.

revolutifolium	Rd. wt. 7, S. Her. P. 2 S. Amer.

SETACEOUS, shaped like a bristle.

SETÆ, bristles.

SETARIA, Beauvois. From *seta*, a bristle; the involucrem is bristly. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. These grasses are of no interest. They are nearly all annuals—*aspera*, *auricoma*, *cenchroides*, *compressa*, *cylindrica*, *erubescens*, *geniculata*, *germanica*, *glauca*, *helvola*, *intermedia*, *italica*, *macrochæta*, *maritima*, *mauricata*, *Pennisetum*, *polystachya*, *pumila*, *purpurascens*, *scandens*, *sericea*, *setosa*, *tenacissima*, *verticillata*, *viridis*, *Weinmanni*.

SETHIA, Kunth. In honour of S. Sethi, author of a work on culinary vegetables. *Linn.* 10, Or. 3, Nat. Or. *Malpighiaceæ*. This plant thrives well in turfy loam and peat, and cuttings will root in sand, under a glass, in a moist heat. *Synonyme*: 1, *Erythrocaylon monogynum*.

indica . . Yellow 6, S. Ev. T. 40 E. Indies . 1824

SETIFORM, formed like bristles.

SETIGEROUS, bearing bristles.

SETOSE, covered with bristles.

SEVERINIA, Tenore. Meaning unknown. *Linn.* 18, Or. 4, Nat. Or. *Aurantiaceæ*. For the culture of this desirable old greenhouse plant, see *Citrus*. *Synonyme*: 1, *Citrus buxifolia*. *buxifolia* 1 . . White 5, G. Ev. S. 3 China . .

SEVILLE ORANGE. See *Citrus vulgaris*.

SEYMERIA, Parsh. In honour of Henry Seymer, an English naturalist. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. The seeds should be sown in a bed of peat soil. The plants are very pretty when in blossom, but rather difficult to cultivate. *Synonymes*: 1, *Azëlia cascioides*, *Gerardia Azëlia*.

pectinata . . Yellow 7, H. A. 1 N. Amer. 1820
tenuifolia 1 . . Yellow 7, H. A. 1 N. Amer. 1780

SEYMOURIA, Sweet. See *Pelargonium*.

SHEEP'S BEARD. See *Arnopogon*.

SHEEP'S SCABIOUS. See *Jasione*.

SHEEP'S SORREL. See *Rumex acetosella*.

SHELL-BARK HICKORY. See *Juglans sulcata*.

SHEPHERDIA, Nuttall. In honour of the late Mr. John Shepherd, curator of the Botanic Garden of Liverpool. *Linn.* 22, Or. 4, Nat. Or. *Elæagnaceæ*. Ornamental trees. For culture, &c., see *Hippophae*. *Synonymes*: 1, *Hippophae argentea*; 2, *H. canadensis*.
argentea 1 . . Apetal 4, H. De. T. 8 Miscouri . 1820
canadensis 2 . . Apetal 4, H. De. T. 8 N. Amer. . 1759

SHEPHERD'S BEARD. See *Arnopogon*.

SHEPHERD'S CLUB. See *Verbascum Thapsus*.

SHEPHERD'S PURSE. See *Capsella*.

SHEPHERD'S PURSE. See *Thlaspi*.

SHERARDIA. Named by Dillenius in honour of his patron, William Sherard, LL.D., consul at Smyrna. *Linn.* 4, Or. 1, Nat. Or. *Galiaceæ*. Uninteresting plants. The seed has only to be sown in the open ground. *Synonyme*: 1, *Galium murale*—*arvensis*, *murale* 1.

SHERBOURNIA, G. Don. See *Gardenia Sherbourniana*.

SHERDS, fragments of pots, employed to drain the soil supplied to potted plants.

SHIELD, a broad table-like process in the flowers of *Stupelia*.

SHIELD FERN. See *Aspidium*.

SHINGLE-OAK. See *Quercus imbricata*.

SHOREWEED. See *Littorella*.

SHORTLY-ACUMINATED, having a short tapering point.

SHORTLY-BIFID, } slightly cleft at the apex
SHORTLY-TWO-CLEFT, } into two parts.

SHRUBBY TREFOIL. See *Ptelea*.

SHUTERIA, Choisy. Named in honour of Dr. Shuter, formerly a physician at Madras. This beautiful twiner may be raised from seeds on a hotbed in spring, and the young plants, when of a sufficient size, should be placed in separate pots, and trained to sticks. Unless a very warm sheltered situation can be found, they require to be placed in a stove or greenhouse to blossom and ripen their seeds. *Synonyme*: 1, *Ipomœa bicolor*.

bicolor 1 . . Yellow 8, S. Ev. Tw. 10 E. Ind. 1812

SHUTTLECOCK. See *Periptera punicea*.

SIBBÁLDIA, Linn. In honour of Robert Sibbald, professor of physic at Edinburgh. *Linn.* 5, Or. 5, Nat. Or. *Rosaceæ*. Small alpine plants, succeeding best when grown in pots in a mixture of loam, peat, and sand, and increased by dividing the roots. *Synonymes*: 1, *Chamaerhodos erecta*; 2, *Chamaerhodos polygyna*.

arctica 1 . . Pink . 7, H. Her. P. 3 Siberia . 1806

SIDA, *Linn.* Theophrastus gave this name to an aquatic plant, supposed to be identical with *Althæa*. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. Mostly free-flowering plants, of no beauty, thriving in any rich soil; and increased by seeds, which they produce in abundance. The shrubby kinds may be increased by cuttings, placed in sand, under a glass. They are for the most part stove plants. *S. cordifolia*, mixed with rice, is used to alleviate the bloody flux. The bark of several of the species is so tenacious as to be manufactured into cordage. *Synonymes*: 1, *Abutilon Avicennæ*; 2, *A. acerifolium*; 3, *A. albidum*; 4, *A. americanum*; 5, *A. arboreum*; 6, *A. asiaticum*; 7, *A. auritum*; 8, *A. crispum*; 9, *Napæa dioica*; 10, *A. ferrugineum*; 11, *S. viscosa*; 12, *A. giganteum*; 13, *A. glaucum*; 14, *A. globiflorum*; 15, *A. hermannioides*; 16, *S. pilosa*, *A. hirtum*; 17, *A. incanum*; 18, *A. indicum*; 19, *A. SILÄUS, *Besser*. A name given to an umbelliferous plant by Pliny. *Linn.* 5, Or. 3, Nat. Or. *Apiæceæ*. Hardy herbaceous plants, of no interest; increased by divisions or seeds. *Synonymes*: 1, *Stum pucedanoides*; 2, *Ligusticum longifolium*; 3, *Peucedanum Siläus*, *Cnidium Siläus*; 4, *Pastinaca rigida*, *Stum rigidum*; 5, *S. Mathrioli* — *carvifolius* 1, longifolius 2, pratensis, triflora 3, rigidus 4, tenuifolius 5. See *Cnidium*.

SILÈNE, *Linn.* From *sialon*, saliva; in allusion to the viscid moisture on the stalks of many of the species, by which the smaller kinds of flies are entrapped; hence, also, the English name of the genus, *Catchfly*. *Linn.* 10, Or. 3, Nat. Or. *Caryophyllacææ*. Elegant flowering plants, succeeding best in a light, rich soil. The shrubby kinds are readily increased by young cuttings, planted in sand or soil, under a glass. The hardy herbaceous kinds may be planted in the open border; the dwarfer species thrive well on rock-work, but duplicates should be kept in small pots, as alpinæ, that they may be sheltered by a frame in winter. The seeds of the hardy annual and biennial kinds only have to be sown, about the beginning of April, where they are intended to remain. They may all be easily multiplied by seeds, and some of the herbaceous sorts by dividing the plants at the root in spring. *Synonymes*: 1, *S. conoidea*; 2, *S. hirsuta*; 3, *Cucubalus chloræfolius*.

SILER, *Scopoli*. *Siler*, withy, from *salio*, to spring; alluding to the rapid growth of the plants. *Linn.* 5, Or. 1, Nat. Or. *Apiaceæ*. This species is quite worthless, and flourishes in the commonest soil. *Synonymes*: 1, *Laserpitium trilobum*, *Siler aquilegifolium*—*trilobum* l. See *Agasyllis*, *Ston*, and *Laserpitium*.

SILICEOUS, flinty.

SILICLE, the small short pod of *Cruciferae*.

SILIQUA, the long cylindrical pod of *Cruciferae*.

SILIQUÁSTRUM. See *Cercis Siliquastrum*.

SILK COTTON-TREE. See *Bombax*.

SILKEN PUBESCENCE, a very soft kind of pubescence.

SILK TREE. See *Acacia julibrissin*.

SÍLPHIUM, *Linn.* From *silphion*, the Greek name applied to an Asafetida plant. *Linn.* 19, Or. 4, Nat. Or. *Asteráceæ*. Tall-growing plants, of little beauty, and best adapted for the back of flower-borders. Any common soil suits them; and they may be increased freely by dividing the plants at the root. *Synonymes*: 1, *Coreópsis latifolia*; 2, *S. tomentósum*.

erythrocaulon Yellow . 8, H. Her. P. 4 N. Amer.

gladum 1 . Yellow . 8, H. Her. P. 4 N. Amer. 1786

pumilum 2 . Yellow . 8, H. Her. P. 2 N. Amer. 1786

asteriscus, atropurpureum, compositum, conjunctum, connatum, laciniatum, perfoliatum, terebinthaceum, ternatum, trifoliatum.

SILVER-TREE. See *Leucadendron argenteum*.

SILVER-WEED. See *Potentilla argentea* and *Argyrea cuneata*.

SILVER-WOOD. See *Mouriria Guiana*.

SÍLYBUM, *Vaillant*. A name applied by Greek writers to a plant now unknown. *Linn.* 19, Or. 1, Nat. Or. *Asteráceæ*. These plants succeed in any common soil, and are propagated by seeds. *Synonymes*: 1, *Cnicus cernuus*; 2, *Carduus marianus*.

cernuum 1 . Yellow . 6, H. Her. P. 4 Siberia . 1775

Marianum 2 Purple . 7, H. B. 4 Brit., banka.

SIMÁBA, *Aublet*. The native name of *S. guianensis*. *Linn.* 10, Or. 1, Nat. Or. *Simarubáceæ*. These shrubs should be grown in a mixture of turfy loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat.

guianensis . . . White 6, S. Ev. S. 10 Guiana . 1826

orinocensis . . . White 5, S. Ev. S. 10 Orinoco . 1816

SIMARÛBA, *Aublet*. *Simarouba* is the Caribbean name of *S. officinalis*. *Linn.* 10, Or. 1, Nat. Or. *Simarubáceæ*. Valuable plants, on account of their medical properties. For culture and propagation, see *Quassia*. The *Simaruba* in *Materia Medica*, is the bark of the root of *S. officinalis*; it is much used in curing obstinate dysenteries and diarrhoeas. Fluxes, induced by warm climates, are speedily cured by this bark. *Synonymes*: 1, *Quassia excelsa*; 2, *Quassia Simaruba*.

excelsa 1 . Yel. wht. 5, S. Ev. T. 35 Jamaica . 1818

glabra . . . White . . . 5, S. Ev. S. 10 Cuba . . 1824

officinalis 2 Yel. wht. 5, S. Ev. S. 10 W. India . 1789

SIMARUBÁCÆE, or **QUASSIADS**, are trees and shrubs, with intensely bitter wood: they are all natives of tropical climates, and are much used in medicine.

SIMËTHIS, *Kunth*. Name not explained. *Linn.* 6, Or. 1, Nat. Or. *Liliáceæ*. Heath-mould and sand suit this plant well; and increase is by division of the roots. *Synonyme*: 1, *Anthëricum planifolium*.

planifolium 1 Purple . 6, H. Her. P. 1 Brit., heatha.

SIMPLE, not divided.

SÍMSIA, *Pers.* In honour of J. Sims, M.D., editor of *Bot. Mag. Linn.* 19, Or. 3, Nat. Or. *Asteráceæ*. *Synonyme*: 1, *Coreópsis amplexicaulis*. See *Coreópsis* and *Ximenésia*.
anethifolia . Yellow . 6, G. Ev. S. 4 N. Holl. . 1825
amplexicaulis 1, *ficifolia*.

SINÁPIS, *Tournefort*. From the Celtic *nap*, a designation applied to all plants resembling the cabbage or turnip. *Linn.* 15, Nat. Or. *Brassicáceæ*. Principally annual plants; the seeds of which have only to be sown in the open ground in spring. Mustard (the use of which is familiar to every one) is the ground seed of *S. nigra*. *S. alba* is extensively cultivated as a small salad. The seeds are also swallowed whole, to the quantity of a table-spoonful, or more, to stimulate the stomach in some cases of dyspepsia, and to excite the peristaltic motion of the intestines, when they are torpid. See *Didésmis*, *Diploátaxis*, and *Eruçaria*.

Alliônti, *ápula*, *arvensis*, *auriculata*, *brassicata*, *cérnua*, *dissécta*, *foliôsa*, *geniculata*, *hastata*, *heterophylla*, *hispida*, *incana*, *integrifolia*, *jancea*, *Káber*, *lævigata*, *nigra*, *n. lævigata*, *n. torulôsa*, *n. túrgida*, *n. villôsa*, *nudicaulis*, *orientalis*, *pubescens*, *ramôsa*, *retro-hirsuta*, *subpinnatifida*, *laúrica*, *túrgida*.

SINGANA, *De Candolle*. *Singasinga* is the name of the tree in Guiana. *Linn.* 13, Or. 1, Nat. Or. *Clusiáceæ*. This pretty shrub grows well in a mixture of loam and peat; and ripened cuttings, planted in sand, and placed under a hand-glass in heat, will soon strike root. *Synonyme*: 1, *Stereóbeckia laterifolia*.
guianensis . White . 6, S. Ev. Cl. 3 Guiana . 1827

SINGHARA NUT. See *Trapa bispinosa*.

SINGLE-SEEDED CUCUMBER. See *Sicyas*.

SINNINGIA, *Nees*. In honour of William Sinning, gardener to the University of Bonn, on the Rhine. *Linn.* 24, Or. 2, Nat. Or. *Gesneriaceæ*. This genus of very pretty plants ought to be in every collection. Their culture and propagation is the same as that recommended for the genus *Gloxinia*. *Synonyme*: 1, *S. violacea*, *Gloxinia violacea*.

SIPHONANTHUS. See *Clerodendron*.

SIPHONIA, *Richard*. From *siphon*, a pipe; the use made of the exudation, which constitutes Indian rubber. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiáceæ*. This plant grows freely in sandy loam and peat; and cuttings of the half-ripened wood will root in sand, under a glass, in heat. The Caoutchouc of Para is obtained from this species. *Synonymes*: 1, *S. elastica*, *Jatropha elastica*, *Hevea guianensis*.
Cahûchu 1 . Grn. wht. . 5, S. Ev. S. 6 Guiana . 1823

SIRIBÒA. See *Piper Siribòa*.

SIR JOSEPH BANKS' PINE. See *Araucaria imbricata*.

SISARUM. See *Sium Sisarum*.

SISON, *Linn.* From the Celtic *sisum*, a running stream; some plants formerly in this genus were found in running streams. *Linn.* 5, Or. 2, Nat. Or. *Apiáceæ*. The seeds merely require sowing in common garden soil in spring. *Synonyme*: 1, *Sium verticillatum*—amomum, arvense, capillaceum, flexuosum, verticillatum 1. See *Càrum*, *Chærophylum*, *Helosciadium*, *Ligústicum*, *Petroselinum*, *Schultzia*, *Smgrnium*, and *Trágium*.

SISSOO. See *Dalbergia Sissoo*.

SISTOTREMA, *Fries*. From *sisto*, to place, and *trema*, orifice; alluding to the pores being in rows. *Linn.* 24, Or. 9, Nat. Or. *Agaricáceæ*. This species is found by the waysides—*confluens*.

SISYMBRIUM, *Allioni*. An old Greek name of unknown origin. *Linn.* 15, Nat. Or. *Brassicáceæ*. *S. Millefolium* is a pretty shrub, growing freely in any light soil; and readily increased by cuttings. The others are worthless annuals and biennials, flourishing in the open ground, in any soil. *Synonymes*: 1, *S. sinapioides*, *Sinâpis pyrenaica*; 2, *S. altissimum*; 3, *S. orientale*; 4, *S. Loesélii*; 5, *S. gallicum*; 6, *S. glâbrum*; 7, *Ergosimum officinale*; 8, *S. affine*; 9, *S. contortum*. See *Andréostkia*, *Barbarea*, *Brassica*, *Diploátaxis*, *Lepôtium*, *Lepocarpœa*, and *Nasturtium*.

Millefolium Yellow . 7, G. Ev. S. 1½ Canaries . 1779

SITUM, *Linn.* From the Celtic *siv*, water; the habitat of most of the species. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. These plants thrive best in a very moist soil; and are increased readily by dividing the roots, or by seeds. The succulent roots of *S. Sisarum* were formerly much esteemed in cookery under the name of *Skirret*. *Synonymes*: 1, *Bivium ferulaceum, ferulifolium*; 2, *B. peucedanoides*. See *Brignölia*,

Drepanophyllum, Heliosciadium, Pastinaca, and *Sison*.

SKIRRET. See *Situm Sisarum*.

SKULLCAP. See *Scutellaria*.

SLAVE-WOOD, or BITTER DAMSON TREE. See *Simarüba officinälis*.

SLIPPER-PLANT, or SLIPPER-SPURGE. See *Pedilanthus*.

SLIPPERWORT. See *Calceolaria*.

SLOANEA, *Linn.* In honour of Sir Hans Sloane, once President of the Royal Society, founder of the British Museum, and Chelsea Botanical Garden; died in 1753. *Linn.* 13, Or. 1, Nat. Or. *Tiliaceae*. A genus of fine lofty-growing trees, with large leaves. They succeed best in a mixture of loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat.

- dentata . . . White . . . 5, S. Ev. T. 35 S. Amer. . 1752
- sinemariensis White . . . 5, S. Ev. T. 20 Guiana . . 1823

SMEATHMÄNNIA, *De Candolle*. In honour of Smeathman, a naturalist, who travelled in Africa, and collected many botanical specimens. *Linn.* 13, Or. 6, Nat. Or. *Passifloraceae*. A very beautiful genus, which ought to be in every stove. A compost of loam, peat, and sand, suits it; and half-ripened cuttings root freely in sand, under a glass, in heat. *Synonyme*: 1, *Bulöwia insignis*.

- laevigata . . . White . . . 2, S. Ev. S. 6 S. Leone . 1823
- pubescens 1 . . . White . . . 2, S. Ev. S. 6 S. Leone . 1845

SMEGMÄRIA. See *Quillaja*.

SMILÄCÆE, or SARSAPARILLAS. These plants are not ornamental, they have a climbing habit, inconspicuous flowers, and are only worth cultivating in botanical collections.

SMILACINA, *Desfontaines*. From *smile*, a scraper;

alluding to the roughness of the stems. *Linn.* 6, Or. 1, Nat. Or. *Smilacææ*. Interesting plants, succeeding well in any light soil; and increased readily by divisions.

SMILAX, *Linn.* From *smile*, a scraper; and the stems are rough from prickles. *Linn.* 22, Or. 6, Nat. Or. *Smilacææ*. Climbers, of little beauty. They grow well in loam and peat; and increase readily by suckers. *S. Sarsaparilla* is well known as a restorative of health, after the use of mercury. *Synonymes*: 1, *S. mauritanica*; 2, *S. lanceolata*, *Watsoni*.

SÓJA, *Moench*. From *sooja*, the name given to a sauce prepared from the seeds in Japan. *Linn.* 17, Or. 4, Nat. Or. *Fabacææ*. The seeds of this plant may be sown in a warm sheltered situation in May, or raised with the tender annuals, and afterwards planted out. *Synonymes*: 1, *Dólíchos Sója*.

hispida 1 . Violet . 7, H. A. 3 E. Indies . 1790

SOLANACEÆ, or **NIGHTSHADES**. This forms a considerable group of plants of which the potato (*Solanum tuberosum*), tobacco (*Nicotiana*), henbane (*Hyoscyamus*), the winter cherry or Cape gooseberry (*Physalis*), the love-apple or tomato (*Lycopersicon*), and the deadly nightshade (*Atropa Belladonna*), may be taken as examples of the order.

SOLÁNDRA, *Linn.* In honour of Daniel Charles Solander, LL.D., F.R.S., a Swede, companion of Sir Joseph Banks in his voyage round the world, and collector of the botanical notes made during that expedition. They are preserved in the British Museum, and exhibit great learning and deep research. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. This is a splendid genus of plants; the foliage being very fine, and the flowers large, like those of the *Brugmansia*. The best way to induce them to flower is to grow them in two parts turfy loam and one of peat, liberally applying heat and water till they have perfected a good growth; then gradually withhold water until the leaves drop off from drought, and they will flower profusely. Cuttings, planted in mould or tan, will root without any difficulty. Those taken from the flowering shoots are more likely to produce flowers while small.

SOLANUM, *Linn.* The derivation of this word is quite uncertain; some derive it from *Sol*, the sun; others say it is *Solanum*, from *sus*, being serviceable in disorders of swine; and others assert that it is from *solor*, to comfort, referring to its soothing, narcotic effects. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. All the more showy species of this extensive genus thrive best in a light rich soil, and are readily increased by seeds, or by cuttings, in sand, under a glass. A great number of them are highly deserving of cultivation, on account of their ornamental appearance. The seeds of the tender annual species should be raised on a hotbed, and planted out in the open ground about the end of May in a sheltered, dry situation. *S. tuberosum* is that well-known and invaluable root, the potato, which, in a state of putrefaction, is said to give out a most vivid light, sufficient to read by. This was particularly remarked by an officer on guard at Strasburg, who thought the barracks were on fire, in consequence of the light thus emitted from a cellar full of potatoes. *S. nigrum* and some others are highly virulent poisons. *S. Dulcamara* is a very dangerous plant; when first bruised or chewed it is bitter, which quickly gives place to a considerable degree of sweetness, hence its name, *Dulcamara*, or *Bitter-sweet*. The berries may be readily taken for currants by children; they excite vomiting and catharsis. Floyer states that thirty of them killed a dog in less than three hours, remaining undigested in the stomach. *Synonyms*: 1, *Nyctærium amazonicum*; 2, *S. Quilense*; 3, *S. violaceum*; 4, *N. cornutum*; 5, *N. Fontanesianum*; 6, *N. lobatum*; 7, *N. heterodærum*; 8, *S. undatum*; 9, *S. minutum*; 10, *S. longifolium*; 11, *S. ovigerum*; 12, *S. insanum*; 13, *S. uniflorum*; 14, *S. melanocerasum*; 15, *S. Cervantèsii*; 16, *S. spinosissimum*; 17, *N. rostratum*; 18, *S.*

oleraceum; 19, *N. cordifolium*; 20, *S. dulcamaroides*. See *Lycopersicum* and *Nyctærium*.

pusilla	. Blue	. 4, F. Her. P.	1/2 Switzerl. 1820

SOLDEVILLA, *Laqasca* named this genus in honour of one of his friends. *Linn.* 19, Or. 1, Nat. Or. *Astraceae*. This plant is of common culture, and propagated by divisions or seeds. See *Hispidella*.

setosa . Yellow . 5, H. Her. P. 2 Spain . 1822

SOLDIER-WOOD. See *Inga purpurea*.

SOLEA, *Sprengel*. In honour of W. Sole, author of an essay on the genus *Mentha*. *Linn.* 5, Or. 1, Nat. Or. *Violaceae*. A curious little plant, requiring protection during severe frosts. A limestone soil seems to suit it best; and it is increased by divisions or seeds. *Synonymes*: 1, *Viola concolor*. See *Ionidium*.

concolor 1 . Green . 6, H. Her. P. 1 N. Amer. 1788

SOLENA. See *Posoqueria*.

SOLEANTHA, *Don*. See *Cryptandra spinescens*.

SOLEANTHUS, *Don*. From *solen*, a tube, and *anthos*, a flower. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceae*. For culture, see *Borago*.

circinatus . Purple . 6, H. Her. P. 2 Altai . 1837

SOLENA, *Hoffman*. From *solen*, a tube; on account of the tubular nature of the fronds. *Linn.* 24, Or. 7, Nat. Or. *Conferveae*. These plants are found in ditches and in the ocean—*clathrata*, *c. uncinata*, *compressa*, *c. crinita*, *intestinalis*, *i. maxima*, *Linza*, *L. lanceolata*.

SOLENDIUM, *Lindley*. From *solen*, a tube.

Linn. 20, Or. 1, Nat. Or. *Orchidaceæ*. This curious genus is nearly related to *Oncidium* and *Brassia*; from both of which it is distinguished by its narrow stalked wartless lip, three-lobed anther-lid, and very peculiar pollen masses which are bent down upon the caudicle, while in the anthers. For culture, &c., see *Oncidium*.

racemidum Yel. red . 11, S. Epi. $\frac{1}{2}$ Pamplona

SOLIDAGO, *Linn.* From *solidare*, to unite; on account of the vulnerary qualities of the plants. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. An extensive genus of coarse flowering plants, suitable for the back of flower-holders. Any common soil suits them; and they are readily increased by divisions of the root. *Synonymes*: 1, *S. montana*; 2, *S. argentea*; 3, *S. retrorsa*; 4, *Comiza rugosa*. See *Aster*, *Caleacte*, and *Euthamia*.

SOLITARIUS, alone, distinct.

SOLIVA, *Ruiz and Pavon*. In honour of Salvador Soliva, a Spanish physician and botanist. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*. Annuals of little beauty. *S. anthemifolia* requires the treatment common to half-hardy annuals. *Synonymes*: 1, *Gymnostyles anthemifolia*; 2, *G. stolonifera*.

<i>anthemifolia</i> 1	Apetal.	6, H.	A.	$\frac{1}{2}$	N. Holl.	1818
<i>etolonifera</i> 2	Apetal.	6, H.	A.	$\frac{1}{2}$	Portugal	1816

SOLLYA, *Lindley*. In honour of Richard Horsman Solly, a vegetable physiologist and anatomist. *Linn.* 5, Or. 1, Nat. Or. *Pitiosporaceæ*. Ornamental plants, succeeding in loam and peat; and increased by cuttings, planted in sand, under a glass. *Synonymes*: 1, *Billardiera fusiformis*; 2, *B. heterophylla*; 3, *B. heterophylla lindleyi*.

<i>angustifolia</i> 1	Blue	7, G. Ev. Tw.	6	V. D. L.	1823

SOLOMON'S SEAL. See *Convallaria*.

SOLORINA, *Acharius*. From *solos*, solid, and *rhinus*, skin; in allusion to the firm texture of the fronds. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. Leafy fronds, found on the soil upon the tops of mountains—*cracca*, *saccata*.

SOMNIFEROUS, causing sleep.

SONCHUS, *Linn.* From *somphos*, hollow; the stems are hollow. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Plants of easy culture, in any common soil. The shrubby kinds are increased by cuttings, placed in sand, under a glass; the herbaceous species by divisions. The seeds of the annual and biennial kinds only require to be sown in the open ground. *Synonymes*: 1, *S. Jacquinii*; 2, *Mulgedium multiflorum*. See *Agathysus*, *Picridium*, and *Mulgedium*.

SOPHORA, R. Brown. Altered from *sophora*, the Arabic name of a papilionaceous tree. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. *S. chinensis* and *S. japonica* are two of the most handsome species, and well adapted for growing singly on lawns. When young, they require a slight protection in winter. They are sometimes increased by layers, but generally by seeds. The stove and greenhouse kinds thrive well in a light loamy soil; and cuttings will root, if planted in sand, under a glass. The hardy herbaceous kinds are increased by dividing the roots in spring. *Synonyme*: 1, *Astragalus carndisus*. See *Ammodendron, Cydonia, Edwardsia, Thermopsis*, and *Virgilia*.

SOPHRONIS, Lindley. From *sophrona*, modest; in allusion to the pretty little flowers of the original species. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. *S. grandiflora* is a very lovely plant, the blossom being large, internally of a uniform red colour, approaching to orange, with darker red streaks; the other species are also well worthy of cultivation, for which see *Burlingtonia*. *Synonymes*: 1, *Sophronia cernua, sophronis, Hoffmanséggii, isopétala, nutans*; 2, *Cattleya coccinea, S. grandiflora*.

- SPÁRTÍUM,** *Linn.* From *sparton*, cordage; use made of the plant in early ages. *Linn.* 16, Or. 6, Nat. Or. *Fabacæ*. These plants, from being very ornamental when in flower, are well adapted for planting in shrubberies. They are usually increased by seeds, but cuttings of the young wood will root, if planted under a glass. See *Adenocarpus, Calycétome, Cytisus*, and *Génista*.

SPECULUM. See *Prismatocarpus Speculum*.

SPEEDWELL. See *Veronica*.

SEELT. See *Triticum seelta*.

SPÉNNERA, *De Candolle*. In honour of M. Spenner, a distinguished botanist. *Linn.* 8, Or. 1, Nat. Or. *Melastomaceæ*. Pretty plants, requiring to be grown in a mixture of peat and sand, and the pots to be placed in pans of water; they are propagated by seeds.

fragile . . White . 6, S. Ev. S. 2 Trinidad 1822 glandulosa . White . 3, S. Ev. S. 2 Guiana . 1824 paludosa . . Rose . 6, S. Her. P. 1 1/2 Brazil . 1825 pendulifolia . Rose . 3, S. Ev. S. 2 Guiana . 1826

SÉRGULA, *Linn.* From *spargo*, to scatter; because it expels its seeds. *Linn.* 10, Or. 4, Nat. Or. *Illecebraceæ*. None of these plants are worth cultivating, except in botanical gardens. They grow in any moist situation—*glabra*, *laricina*, *maxima*, *nodosa*, *pilifera*, *saginoides*, *subulata*. See *Arenaria*.

SÉRGULARIA, *Persoon*. Altered from *Spergula*, which see for explanation. *Linn.* 10, Or. 4, Nat. Or. *Caryophyllaceæ*. Worthless plants, undeserving of the culturist's care—*arvensis*, *pallida*, *pentandra*.

SÉRGULÁSTRUM, *Michaux*. From *spergula*, spurry, and *astrum*, an affixed term, signifying like. *Linn.* 10, Or. 3, Nat. Or. *Caryophyllaceæ*. This species is of no interest, except in botanical collections. Sandy peat suits it, and young plants may be obtained by dividing the roots or by seeds. *Synonyme*: 1, *Micropetalon lanuginosum*.

lanuginosum Wt. pur. 6, H. Her. P. 1/2 N. Amer. 1821

SFERMACŒE, *Dillenius*. From *sperma*, a seed, and *akoke*, a point; in allusion to the capsule being crowned by the calycine points. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. The species of *Spermacoce* are of the simplest culture. Any light soil suits them; and cuttings of the shrubby and perennial kinds root freely in the same kind of soil, in a little heat. The annual species require the treatment common to hardy and tender annuals. *Synonymes*: 1, *S. lævis*; 2, *S. strigosa*. See *Bigelovia*, *Hedyotis*, and *Knövia*.

glabra . . White . 7, H. A. 1 N. Amer. 1823 lanceolata . White . 7, H. A. 1 W. Ind. . 1813 Roxburghii 1 White . 7, S. B. 1 E. Ind. . 1818 rubra 2 . . Red . 10, S. A. 1 Mexico . 1797 tenulor . . Pink . 7, H. A. 2 W. Ind. . 1792

ascendens, áspera, cornifolia, diodina, Fischéri, hirta, hispida, lævis, latifolia, linifolia, mucronata, radicans, scabra, stylosa, suffruticosa, villosa.

SPERMADICTYON. See *Hamillönia*.

SPERMÁXYRUM, Labillardière. From *sperma*, a seed, and *axyra*, an anchor; the umbilical funicle is shaped like an anchor. *Linn.* 3, Or. 1, Nat. Or. *Olaedaceæ*. This species succeeds best in loam and peat; and cuttings will root in sand, under a glass.

strictum . . . White . . . G. Ev. S. 4 N. Hol. 1820

SPÉRMODERM, the outer covering of a seed.

SPERMÖDIA, Fries. From *sperma*, a seed, and *anoideo*, to swell; the diseased seeds. *Linn.* 24, Or. 9, Nat. Or. *Mucoræcæ*. This very minute species is found in autumn on the glumes of grasses—*clavus*.

SPEYSIDE PINE. See *Pinus sylvestris horizontalis*.

SPHÁCELATE, withered, or dead.

SPHACÈLE, Bentham. From *sphakos*, sage; similarity. *Linn.* 14, Or. 1, Nat. Or. *Lamiæcæ*. Free-flowering plants, of easy culture in any light rich soil. Cuttings root readily in earth, under a glass. *Synonyme:* 1, *Stachys Salvia*.

campanulata . . . Pa. blue 7, G. Ev. S. 2 Chile 1795
Lindleyi 1 . . . Violet . . . 7, G. Ev. S. 2 Chile . 1820

SPHACELLARIA, Lyngbye. From *sphakelos*, gangrene; appearance of the truncate extremities of the fronds. *Linn.* 24, Or. 7, Nat. Or. *Fucæcæ*. These species are found in the ocean, on the sea-shore, &c.—*cirrhösa*, *c. patentissima*, *disticha*, *Mertensii*, *plumösa*, *racemösa*, *radicans*, *scoparia*.

SPHERÁLCEA, St. Hilaire. From *sphaira*, a globe, and *alcea*, marsh-mallow. The carpels are disposed in a round head. *Linn.* 16, Or. 8, Nat. Or. *Malvæcæ*. Ornamental plants. For culture and propagation, see the greenhouse species of *Málva*. *Synonymes:* 1, *Málva abutiloides*; 2, *M. angustifolia*; 3, *M. caroliniana*, *Modiola caroliniana*; 4, *Málva decumbens*, *Modiola decumbens*; 5, *Málva elegans*; 6, *M. obtusiloba*; 7, *M. prostrata*, *Modiola prostrata*; 8, *Málva umbellata*.

SPHERÁNTHUS, Linn. From *sphaira*, a globe, and *anthos*, a flower; alluding to the globular heads of flowers. *Linn.* 19, Or. 1, Nat. Or. *Asteræcæ*. Stove plants, not worth growing—*africanus*, *cochinchenensis*, *hirtus*, *indicus*, *mollis*.

SPHÆRIA, Linn. From *sphaira*, a globe; their shape. *Linn.* 24, Or. 9, Nat. Or. *Helvellæcæ*. An extensive genus of very minute plants, found at all seasons on a variety of decayed substances, as on the leaves and trunks of trees, honeysuckle leaves, fir cones, &c.—*acervata*, *acuminata*, *acuta*, *Egopodii*, *affinis*, *alutacea*, *ambiens*, *Angelicæ*, *anserina*, *agutifolia*, *aquila*, *arbuticola*, *aridæca*, *arundinæca*,

áspera, *atropurpurea*, *atrovirens*, *Avellána*, *aurántia*, *aurea*, *Berberidis*, *biformis*, *bifrons*, *bombarda*, *botryösa*, *Brassicæ*, *brunnöla*, *bulbata*, *byssiseda*, *cálva*, *canescens*, *capitata*, *carpophila*, *ceratosperma*, *ceuthocarpa*, *ceuthosporoides*, *cinnabarina*, *cirrhösa*, *clitrina*, *clypeata*, *coccinea*, *coherens*, *comata*, *complanata*, *concentrica*, *convergens*, *cornicola*, *corniculata*, *coronata*, *Coryli*, *crinita*, *culmifraga*, *cupularis*, *curviröstra*, *Demätium*, *deusta*, *Dianthi*, *digitata*, *dioica*, *disciformis*, *discutiens*, *ditopa*, *dotolium*, *dothædea*, *duplez*, *elliptica*, *elongata*, *Empetri*, *enteroleuca*, *entipa*, *entomorrhiza*, *excupuliformis*, *favæca*, *ferruginea*, *fibrösa*, *filiöna*, *fimbriata*, *fimeti*, *flavovirens*, *fragiformis*, *frondicola*, *fuliginösa*, *furfuræca*, *füsca*, *gelatinösa*, *gndmon*, *gracilis*, *Graminis*, *gyrösa*, *Hedera*, *hedericola*, *herbærum*, *hirsuta*, *hispida*, *Hookeri*, *hypodermica*, *hypocylon*, *hystrix*, *Ilicis*, *immersa*, *inquans*, *inquinata*, *irregularis*, *juglandæ*, *Junci*, *Kerriæ*, *Laburni*, *lata*, *leiphemica*, *leucostoma*, *lignaria*, *livella*, *livida*, *longissima*, *Lonicera*, *maculæformis*, *maldrum*, *mammæformis*, *melogramma*, *microscópica*, *milliæris*, *nillepunctata*, *milliæria*, *moriformis*, *multiformis*, *myriocampa*, *nebulösa*, *nidula*, *nigrella*, *nivea*, *nucula*, *nummularia*, *obducens*, *obturata*, *ocellata*, *ochræca*, *ophioglossoides*, *ostriühii*, *ovina*, *pellita*, *petiolörum*, *Peziza*, *piliferi*, *pilosä*, *Pindæstri*, *Pisi*, *Platæca*, *polymorpha*, *pomiformis*, *populina*, *profusa*, *pruönda*, *Prunæstri*, *pulchella*, *pulveræca*, *pälvis*, *pyrñus*, *punctatus*, *punctiformis*, *quaternata*, *quercina*, *Racöidum*, *ramösa*, *recurvata*, *relicina*, *Ribis*, *rosella*, *rostellata*, *rubella*, *rubiginösa*, *rüdüs*, *rufa*, *salicella*, *salicina*, *sanguinea*, *scicatricum*, *scirpöcola*, *scrophularica*, *semiimmersa*, *sepinöla*, *sérpens*, *setæca*, *Solani*, *Sörbi*, *sordaria*, *spermoides*, *sphaerocephala*, *spinösa*, *stellöla*, *stilbötoma*, *striæformis*, *strigösa*, *ströbilöna*, *stygöna*, *succenturiata*, *Taiöbla*, *Tamariscinus*, *Táxi*, *Tilia*, *Trifölii*, *tristis*, *tubæformis*, *üca*, *umbrina*, *undulata*, *Vaccinii*, *velata*, *verrucæformis*, *verrucösa*, *vibratilis*, *Yucca*.

SPHÆRÖBOLUS, Tode. From *sphaira*, a globe, and *ballo*, to eject; the plant becomes elastic and emits a spherical sporangium. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdæcæ*. Found in autumn, on dead wood, shavings, sawdust, &c.—*stellatus*.

SPHÆROCÁRPUUS, Michaux. From *sphaira*, a globe, and *karpos*, a fruit; the seed-vessel is globular. *Linn.* 24, Or. 6, Nat. Or. *Ricciäcæ*. This species is found during winter, in damp places—*terrestrius*. See *Trichia*.

SPHÆROCÖCCUS, Agardh. From *sphaira*, a globe, and *kokkos*, fruit; the theca is round. *Linn.* 24, Or. 7, Nat. Or. *Ceramidæcæ*. The species of *Sphaerococcus* are found in the ocean, and on the sea-shore. *Synonyme:* 1, *Chöndria pusilla*—*acicularis*, *Brodiaei*, *cartilagineus*, *confervoides*, *c. albidus*, *c. geniculatus*, *c. procerrimus*, *c. cörneus*, *c. clavatus* 1, *c. clavifer*, *c. nereideus*, *c. pinnatus*, *c. pulchellus*, *coronopifolius*, *crispus*, *cristatus*, *c. linearis*, *gigartinus*, *Griffithsæ*, *lichenoides*, *mammillösus*, *membranifolius*,

- norvégicus, plicatus, purpurascens, rubens, Teedii.
- SPHEROLÖBIUM**, *Smith*. From *sphaira*, a sphere, and *lobos*, a pod; the pods are spherical. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. These plants succeed best in a mixture of loam and peat; and young cuttings root freely in sand, under a glass. *Synonyme*: 1, *S. minus*.
 acuminatum . Orange . 5, G. Ev. S. 2 Swan R. 1842
 medium . Red . 7, G. Ev. S. 2 N. Hel. 1803
 vimineum 1 . Yellow . 7, G. Ev. S. 2 N. Hel. 1802
- SPHEROMORPHÆA**, *De Candolle*. See *Grægea minima*.
- SPHERONEMA**, *Fries*. From *sphaira*, a sphere, and *naima*, gelatine; in allusion to the mucous receptacle in which the spores are inclosed. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Found on dead wood—*blepharistoma, subulatum*.
- SPHEROPHORON**, *Persoon*. From *sphaira*, a globe, and *phoreo*, to bear; form of fructification. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. A very elegant genus of *Lichens*, easily known by its branched, smooth habit. The species are found on rocks—*compressum, coraloides, fragile*.
- SPHEROPHYSA**, *De Candolle*. From *sphaira*, a sphere, and *physa*, a bladder; the pods are spherical and bladdery. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. This species succeeds in common garden soil; but is difficult to preserve on account of the want of that saline principle in which it grows in its native country; the plants should, therefore, be occasionally watered with salted water: they are increased by seeds, which are sometimes ripened in this country. *Synonymes*: 1, *Colutea caspica, Phaca salsula*.
 caspica 1 . Red . 7, H. Hor. P. 2 Siberia 1818
- SPHEROPTERIS**, *Wallich*. From *sphaira*, a globe, and *pteris*, a fern. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove fern. *Synonyme*: 1, *Perranema barbata*.
 barbata . Yellow . 6, S. Hor. P. 1 Nepal .
- SPHEROSTEMMA**, *Blume*. From *sphaira*, a globe, and *stemma*, a crown; the filaments of the stamens are coadunated into a fleshy solid mass, the anthers only being at liberty, and nestling in a number of little excavations of the mass. *Linn.* 22, Or. 12, Nat. Or. *Schizandraceæ*. These interesting plants succeed well in a mixture of sandy peat and loam; and cuttings root in sand, under a glass, in heat. *Synonyme*: 1, *Kadsura propinqua*.
 marmoratum Yellow . 7, S. Ev. Cl. 6 Borneo .
 propinquum 1 Yellow . 7, S. Ev. Cl. 6 Nepal . 1828
- SPHEROSTIGMA**, *Fischer and Meyer*. From *sphaira*, a globe, and *stigma*, a stigma. *Linn.* 8, Or. 1, Nat. Or. *Onagræceæ*. Same cultivation as for *Enothera*. *Synonyme*: 1, *Enothera spiralis*.

- SPHEROTELE**, *Presl*. From *sphaira*, a sphere; the stigma is round. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. For cultivation of this genus, see *Amaryllis*. *Synonyme*: 1, *Stenomesson coecineum* 1 . Scarlet . 5, G. Bu. P. 1 Peru . 1850
- SPHAGNUM**, *Linn.* A name used by Pliny for some kind of moss. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. The species belonging to this genus are found in bogs at all seasons. The leaves are nerveless, and of a singularly whitish colour. *Synonymes*: 1, *S. capillifolium*; 2, *S. latifolium*—*acutifolium* 1, *cuspidatum*, *obtusifolium*, *o. vulgare* 2, *o. fluitans*, *o. minus*, *squarrosum*.
- SPHENANDRA**. See *Buchnera*.
- SPHENODÉSME**, *Jack*. From *sphen*, a wedge, and *desme*, fascicle; in allusion to the fascicles of flowers. *Linn.* 5, Or. 1, Nat. Or. *Verbenaceæ*. This species succeeds in sandy loam; and is increased by cuttings, planted in sand, under a glass, in heat.
 pentandra . White . 6, S. Ev. Cl. 6 E. Ind. . 1823
- SPHENOGYNE**, *R. Brown*. From *sphen*, a wedge, and *gyne*, a female; in allusion to the wedge-shaped stigmas. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. This is a genus of very elegant under-shrubs, and half-hardy annuals. They succeed best in a mixture of loam and peat; and cuttings of the shrubby kinds root readily in sand, under a glass. *Synonymes*: 1, *Ursinia feniculaceæ*, *Arctotis feniculaceæ*; 2, *Arctotis leucanthemoides*.

- SPHENOTOMA**, *R. Brown*. From *sphenoo*, to cleave, and *tome*, a section; in allusion to the deeply-divided limb of the corolla. *Linn.* 5, Or. 1, Nat. Or. *Epacridaceæ*. Ornamental shrubs. For culture and propagation, see *Epacris*. *Synonymes*: 1, *Dracophyllum capitatum*; 2, *D. gracile*.
 capitatum 1 . White . 4, G. Ev. S. 1 N. Holl. 1890
 gracile 2 . White . 5, G. Ev. S. 2 N. Holl. 1822
- SPHERICAL**, round, like a sphere.
- SPHERULES**, minute spheres, or globules.
- SPICATE**, having a spike.
- SPICKNEL**. See *Athamanta*.
- SPIDER OPHRYS**. See *Ophrys aranifera*.
- SPIDERWORT**. See *Tradescantia*.
- SPIELMÄNNIA**, *Medicus*. In honour of R. S. Spielmann, professor of medicine and botany at Strasburg. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceæ*. This species will thrive in any light rich soil; and young plants are easily obtained from cuttings, planted in sand, under a glass.
 africana . White . 7, G. Ev. S. 3 C. G. H. 1710
- SPIGÆLIA**, *Linn.* In honour of Adrian Spigelius,

professor of anatomy and surgery at Padua, and a botanical author; died 1625. *Linn.* 5, Or. 1, Nat. Or. *Loganiaceæ*. These plants are showy when in blossom, and therefore worth growing; a compost of loam and peat suits them best, and cuttings of the herbaceous species root freely in the same kind of soil, under a glass. The roots of *S. marilandica* are used in North America as a vermifuge, and if administered in large doses, it acts as a powerful cathartic.

Anthelmia . Red . 7. S. A. 1½ S. Amer. 1759
marilandica . Scarlet . 7. H. Her. P. 1½ N. Amer. 1694
spléndens . Crimson 7. G. Hor. P. 1½ Mexico. 1860

SPIGNELL. See *Athamanta*.

SPIKE, a long rachis of sessile flowers.

SPIKELETS, in grasses, are collections of florets.

SPIKENARD. See *Nardobachys Jatamansi*.

SPIKE RUSH. See *Eleocharis*.

SPILANTHES, *Jacquin*. From *spilos*, a spot, and *anthos*, a flower; in allusion to the original species having yellow flowers and a brown disk. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Worthless plants, requiring the treatment commonly given to stove annuals. *Synonymæ*: 1, *Acmella lanceolata*—*Acmella*, *alba*, *brasilensis*, *débilis*, *exasperata*, *oleracea*, *Pseudoaemella* 1, *uliginosa*. See *Acmella*, *Petrobium*, and *Platysperis*.

SPILOCÆA, *Fries*. From *spilos*, a spot. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. This plant grows upon apples, whence its specific name—*pomi*.

SPILOMA, *Acharius*. *Spiloma*, a spot; appearance of the fructification. *Linn.* 24, Or. 8, Nat. Or. *Permetiaceæ*. The species of *Spiloma* are generally found on the bark of trees and decaying wood—*auratum*, *decolorans*, *dispersum*, *melanopum*, *microclivum*, *microscopicum*, *mirabile*, *punctatum*, *tuberculodum*, *tumidulum*, *t. concolor*, *t. detritum*, *t. dibium*, *t. marginatum*, *t. microstigma*, *t. rosaceum*, *variolosum*, *versicolor*.

SPINACH. See *Spinacia*.

SPINACIA, *Linn*. From *spina*, a prickle; in allusion to the prickly processes of the fruit. *Linn.* 22, Or. 5, Nat. Or. *Chenopodiaceæ*. Valuable herbs, of the commonest culture, and well known by the English name *Spinach*.

SPINA-CHRISTI. See *Zizyphus Spina-Christi*.

SPINDLE-MOULD. See *Fusarium*.

SPINDLE-TREE. See *Eucnymphus*.

SPINES, indurated and pointed branches or processes, which do not fall off from the part that bears them.

SPINOUS, furnished with spines.

SPIRÆA, *Linn*. From *spiræa*, to become spiral; in allusion to the flexile branches being suitable for twisting into garlands. *Linn.* 12, Or. 2, Nat. Or. *Rosaceæ*. An extensive genus of very handsome plants, when in flower. The shrubby kinds are well adapted for planting in ornamental shrubberies; and are increased by layers, or cuttings of the young wood. The

herbaceous species look well in the flower border; and are easily increased by dividing the plants at the roots. *Synonymes*: 1, *S. hypericifolia acuta*; 2, *S. média*; 3, *S. oblongifolia*; 4, *S. sororia*; 5, *S. Besseriána*; 6, *S. Ulmária denudata*; 7, *S. altaiensis*; 8, *S. hypericifolia crenata*; 9, *S. carpinifolia*; 10, *S. salicifolia alba*; 11, *S. hypericifolia savránica*; 12, *S. grandiflora*; 13, *S. triloba*; 14, *S. hypericifolia uralensis*, *S. crenata*; 15, *S. argénica*; 16, *S. canescens*; 17, *S. corymbosa*; 18, *Amelanchier racemosa*; 19, *S. flexuosa*, *S. decumbens*. See *Gillenia*, *Hotera*, and *Schizodon*.

SPIRANTHÈRA, *St. Hilaire*. From *speira*, a spire, and *anthera*, an anther; the anthers are spiral-shaped. *Linn.* 5, Or. 1, Nat. Or. *Ruticææ*. A very handsome flowering, sweet-scented shrub, thriving in a mixture of sandy loam and peat; and cuttings of the half-ripened wood will root in sand, under a glass; but they must be planted thinly, and the glass occasionally removed to allow them to dry, as they are very liable to damp. *Synonyme*: 1, *Terpidanthus jasminoides*.

odoratissima 1 Wh. red . 7, S. Ev. S. 6 Brazil . 1823

SPIRANTHES, *Richard*. From *speira*, a spiral, and *anthes*, a flower; in allusion to the spiral manner in which the flowers are arranged. *Linn.* 20, Or. 1, Nat. Or. *Orchidææ*. The species of *Spiranthes* (*Lady's Tresses*) require the same treatment as the *Neottia*. *Synonymes*: 1, *Ophrys cernua*, *Neottia cernua*, *N. gemmipara*, *S. gemmipara*. See *Neottia* and *Sarcoglottis*.

SPIRONEMA, *Lindley*. From *speira*, spiral, and *nema*, filament. *Linn.* 6, Or. 1, Nat. Or. *Commelynææ*. A Mexican herbaceous plant, introduced by Mr. Barker, with something of the appearance of a *Sanseviæta*; the flowers are very fragrant.

fragrans . . White . 5, S. Hor. P. 2 Mexico . 1839

SPLACHNUM, *Linn.* From *splachnum*, one of the Greek names for moss. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. These plants are chiefly found growing on mountains. *Synonymes*: 1, *S. Turnerianum*; 2, *S. fastigiatum*; 3, *S. ovatum*; 4, *Grimmia splachmoides* — ampullaceum 1, angustatum, mnioides, m. majus 2, m. minus, sphæricum 3, tenue 4, vasculosum, v. rugosum. See *Cyrtodon* and *Dissodon*.

SPLEENWORT. See *Asplenium*.

SPONDIAS, *Linn.* The Greek name for a kind of plum; the fruit resembles a plum. *Linn.* 10, Or. 4, Nat. Or. *Spondiææ*. The species of *Spondias* succeed best in a mixture of loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat. The fruit of some of the species is eatable. *Synonymes*: 1, *S. Myrobalanus*; 2, *Mangifera pinnata*; 3, *S. Mombin*. See *Buchanania*.

SPONGE-TREE. See *Acacia farnesiana*.

SPONIA, *Commerson*. *Linn.* 23, Or. 1, Nat. Or. *Ulmææ*. This plant will grow readily in any common soil, but requires to be planted in a sheltered place.

Willdenowiana. Green . 5, H. De. S. 4 China .

SPORENDONEMA, *Desmazières*. From *sporos*, a seed, *endon*, within, and *nema*, a thread. *Linn.* 24, Or. 9, Nat. Or. *Mucorææ*. Minute species; the first is found on cheese, the last on flies—*casei*, *nisææ*.

SPORIDERMUM, *Link.* From *sporos*, a sporule, and *derma*, a skin. *Linn.* 24, Or. 9, Nat. Or. *Uredinææ*. A minute plant, found on some species of *Thelëphora*—*âtrum*.

SPORBOLUS, *R. Brown*. From *sporos*, a seed, and *ballo*, to cast forth; its seeds are loose and easily scattered. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. Annual grasses, of simple culture in any common soil, and propagated by seeds. *Synonymes*: 1, *Agrôtis diandra*; 2, *A. purpurascens*.

diandrus 1	Apetal	8, Grass	1	E. Ind.	1820

micranthus	Apetal	8, H. A.	1	Monte Vid.	1825

SPOROCHNUS, *Agardh*. From *sporos*, seed, and *chnous*, wool; because of its reproductive organs being tufted with hair. *Linn.* 24, Or. 7, Nat. Or. *Fucææ*. Marine plants—*aculeatus*, *Cabrera*, *ligulatus*, *pedunculatus*, *rhodæus*, *r. major*, *villosus*, *viridis*.

SPOROBYBE, *Fries*. From *sporos*, a seed, and *kube*, a head. *Linn.* 24, Or. 9, Nat. Or. *Botrylææ*. Found on the decaying stems of plants—*byssoides*, *Calicioides*.

SPOROTRICHUM, *Link.* From *spora*, a sporule, and *trich*, a hair; alluding to the filamentous sporules. *Linn.* 24, Or. 9, Nat. Or. *Botrylææ*. Very minute species, found in various situations, chiefly on decaying substances—*aërium*, *badium*, *fenestrale*, *latebrarum*, *macrosporum*,

minutum, stercorarium, sulphureum, tenuissimum.

SPOULES, in cryptogamic plants, those parts which are analogous to the seeds of other plants.

SPREKELIA, *Herbert*. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceae*. For culture, &c., see *Amaryllis*.

SPRENGELIA, *Smith*. In honour of Christian Conrad Sprengel, of Brandenburg, who published, in 1793, an ingenious work on the manner in which insects promote the impregnation of plants. *Linn.* 5, Or. 1, Nat. Or. *Epaeridaceae*. This very elegant little shrub requires the same treatment as is recommended for *Epaeris*.

incarnata . . . Flesh . . . 5, G. Ev. S. 2 N. S. W. 1793

SPRING GRASS. See *Anthoxanthum*.

SPRING SALAD-ONION. See *Allium Cœpa*.

SPUMARIA, *Persoon*. From *spuma*, froth; appearance of the species. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdaceae*. This plant is found in autumn on grass, rotten wood, &c.—*mucilago*. See *Dichosporium*.

SPUMOSUS, frothy.

SPURS, long processes, like horns, produced by various parts of a flower.

SPURGE. See *Euphorbia*.

SPURGE LAUREL. See *Daphne Laurœola*.

SPURIOUS, counterfeit.

SPURLESS VIOLET. See *Erythron*.

SPURREY. See *Spergula*.

SQUALIDUS, mean, unseemly.

SQUAMARIA, scaly, covered with scales.

SQUAMARIA, *Hooker*. From *squama*, a scale; the thallus is scaly. *Linn.* 24, Or. 8, Nat. Or. *Parneliaceae*. These plants are found on rocks, stones, and trees—*candelaria*, *c. polycarpa*, *cœsia*, *c. dubia*, *circinata*, *Clementiana*, *crassa*, *elœna*, *elegans*, *epigœa*, *fulgens*, *gélida*, *Hookeri*, *hypnorum*, *lanuginosa*, *lentigera*, *minûta*, *murdrum*, *muscorum*, *rubiginosa*, *saxicola*, *tribacea*.

SQUAMIFORM, } formed like scales.

SQUAMOSE, }

SQUARE PARSLEY. See *Mentum Bâminus*.

SQUARE ROSE, spreading rigidly at right angles, or in a yet greater degree.

SQUASH. See *Cucurbita Mcloppœ*.

SQUILLA. See *Ornithogalum Squilla*.

SQUILL. See *Scilla*.

SQUINANCY, an inflammation in the throat.

STACHYLIDIUM, *Fries*. From *stachys*, a spike, and *eidos*, similar; in allusion to the manner in which the spores are fixed on the filaments. *Linn.* 24, Or. 9, Nat. Or. *Botrydaceae*. Found on dead wood—*bicolor*, *terrestre*.

STACHYS, *Linn.* From *stachys*, a spike; mode of flowering. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceae*. A genus of rather weedy-looking plants, hardly worth cultivating for ornament. They all succeed in common garden soil. The greenhouse species require to be treated as other greenhouse plants. The perennial kinds are easily increased by dividing the root in spring or autumn. The seeds of the annual kinds should be sown in spring, in the open border. *Synonymes*: 1, *S. crœtica*, *intermedia*, *orientalis*, *sibirica*; 2, *S. tenuifolia*; 3, *S. difflusa*, *Iberica*, *scordifolia*; 4, *S. arvensis*, *hispida*; 5, *S. latifolia*; 6, *Hyssopus anisatus*; 7, *S. biennis*, *lusitanica*, *polystachia*; 8, *S. phlomidoides*; 9, *Amblyda inflata*; 10, *S. salvicifolia*; 11, *Sideritis decumbens*; 12, *Sideritis calycantha*; 13, *Stachys ambigua*; 14, *S. Balbisii*; 15, *Sideritis linearifolia*. See *Sphœcele* and *Zietenia*.

STAFF-TREE. See *Celastrus*.

STAG'S-HORN. See *Cenomyce cervicornis*.

STALAGMITIS, *Murray*. From *stalagnos*, a running out; the trees exude a yellow resinous juice when cut. *Linn.* 18, Or. 2, Nat. Or. *Clusiaceæ*. A genus of very fine ornamental trees, thriving well in a mixture of turfy loam and peat, and requiring to be kept in a strong heat. Cuttings of the ripened wood will root in sand, under a glass, in a moist heat. The fruit of some of the species is eatable. The trees yield a yellow viscid juice, hardly distinguishable from gamboge, and used for the same purposes by painters. *Synonymy*: 1, *Xanthochymus edulis*; 2, *X. guineensis*; 3, *X. luteus*; 4, *X. macrophyllus*; 5, *X. ovalifolius*; 6, *X. purpureus*; 7, *X. tinctorius*.

STALAGMITIS. See *Garcinia*.

STALKS, the foot-stalks of leaves or flowers.

STAMEN, the male organ of a flower.

STANDARD, the upper petals in a pea-flower.

STANHOPEA, *Hooker*. In compliment to Earl Stanhope, president of the Medico-botanical Society. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of *Stanhopea* are splendid plants when in flower, particularly *S. Devonienensis* and *S. tigrina*, both of which are at present rare in collections. The flowers of all the species are more or less fragrant. The following is the method of cultivating these favourite plants at Chatsworth:—Over the drainage-hole of the pot to be used for large plants, is inverted one of a smaller size, generally covering about half the bottom of the pot; above and around this is carefully thrown a quantity of broken pots, sufficient to fill the remaining cavity to within one third of the top. A sufficient quantity of fibrous, moderately-sandy peat is next selected, and placed on the top of the drainage, being first broken into various forms and sizes, but none of them less than a walnut.

In placing these, care is taken to dispose of each, so as to leave a passage for the escape of water; this is more effectually secured by introducing, as the process of potting goes on, a few pieces of broken pots between every layer, more or less, according to the size of the plant; indeed, it is an excellent plan to continue a connexion of broken pots all the way up the centre, to the bottom of the pseudo-bulbs. After the peat becomes level with the summit of the pot, the successive external layers are made fast by means of small pegs, varying from four to six inches long: these pegs penetrate the layers of peat, and thus secure the whole firmly together. At eight inches above the edge of the pot the plant is placed on the top, the roots are carefully laid out, and covered up to the bulbs very carefully with smaller pieces of peat and potsherds, continuing to fasten the peat as before described, until the whole is finished; when it will be a foot or fifteen inches above the top of the pot;—small plants are not potted so high. When a single pseudo-bulb is first potted, it should be but very slightly raised above the level, and when a small plant of two or three bulbs is potted, it should not, at first, be raised more than two or three inches, but as it grows larger it is progressively elevated. In building up, as is here described, with peat, it does not terminate in the shape of a cone, but is carried up nearly square, being merely rounded a little at the top. Unless the plants are very healthy, water is given but sparingly at the roots, and in winter very little or none is supplied; the great desideratum in the cultivation of *Orchidaceæ* being to preserve the roots, which, by over-watering, especially in winter, are almost sure to be destroyed. The general temperature

of the house ranges from 60 to 85 degrees ; in the afternoon, during the growing season, it is shut up early, and the paths well watered, and once or twice a week a little water is sprinkled over the plants. They may also be grown well in open wire baskets filled with fresh moss and potsherds, the baskets being hung from the roof of the house, the flowers are seen to great advantage. Young plants are obtained by taking off one or more of the bulbs, potting them in proper sized pots, in the above soil, well drained, and placing them in a warm situation; being careful, in watering, not to allow the smallest quantity to rest upon the young buds. After they have formed roots, increase the size of the pots, and in other respects attend to them as before recommended.

STANNIA. Nuttall named this genus in compliment to Edward Stanley, Earl of Derby, F.R.S., V.P.L.S., President of the Zoological Society, and a munificent patron of the sciences, especially botany and ornithology. *Linn.* 15, Nat. Or. *Brassicaceæ*. A pretty little plant, succeeding well in the open border in vegetable mould; and increased by divisions of the root or by seeds. *Synonymy*: 1, *Cleome pinnata*. *pinnatifida* 1. Yellow . 6, H. Her. P. 1 Louisiana 1816

STANNIA. See *Posoquëria*.

STAPËLIA. Named by *Linnaeus* after Boderus Stapel, a physician of Amsterdam, and commentator on Theophrastus. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. An extensive genus of plants, well worth cultivating for their grotesque appearance, and their singularly beautiful starlike flowers, which have usually a very fetid smell. The soil best suited for them is sandy loam and old brick or lime rubbish. The pots should be well drained, and the plants at all times carefully watered, except in winter, when they must be kept in a perpetually dry state. They are readily increased by cuttings, which should, if possible, be only taken off in spring, when the plants are dormant. They should be allowed to dry for a few days after they are taken from the mother plant; after which they may be planted in separate pots, in the same compost as before recommended, when they will strike root in a very short time. *Synonymes*: 1, *S. deflexa*; 2, *S. grandiflora*. See *Caralluma*, *Carunculãria*, *Duvãllia*, *Dictyãnthus*, *Goniostemon*, *Huëria*, *Obesia*, *Orbea*, *Pectinãria*, *Piarãnthus*, *Podãthes*, *Tridentea*, and *Trombitruche*.

STAPHISÀGRIA. See *Delphinium Staphisàgria*.

STAPHYLËA. *Linn.* Abridged from *Staphylodendron*, its ancient name, from *staphyle*, a bnch, and *dendron*, a tree; the flowers and fruit are disposed in clusters. *Linn.* 5, Or. 3, Nat. Or. *Staphyleaceæ*. Shrubs of very little beauty. They succeed well in any common soil, and are readily increased by suckers from the roots, by layers, or by cuttings, planted in autumn. See *Bumalda*.

STAPHYLEACEÆ, or BLADDER-NUTS. These are ornamental trees, of small size, and shrubs common in our collections. Very little is known of their uses.

STAR APPLE. See *Chrysophyllum*.

STAR FISH. See *Stapelia Astérasis*.

STAR-HEAD. See *Asterocéphalus*.

STAR-FRUIT. See *Actinocarпус*.

STARKEA, Willdenow. In honour of the Rev. M. Starke, of Gros Tschirna, in Silesia, a cryptogamic botanist. *Linn.* 19, Or. 2, Nat. Or. *Asteræacæ*. A stove herbaceous perennial, growing in any light rich soil, and increased by divisions. *Synonyme*: 1, *Amellus umbellatus* —umbellata 1.

STAR OF BETHLEHEM. See *Ornithogalum*.

STAR OF THE EARTH. See *Plantago Coronopus*.

STARRY, in the manner of a star, radiating.

STAR THISTLE. See *Centaurea calcitrapa*.

STARWORT. See *Aster*.

STÁTICE, Linn. From *statizo*, to stop; in allusion to the powerful astringency of some of the species. *Linn.* 5, Or. 6, Nat. Or. *Plumbaginæacæ*. The species of *Státice*, or Sea Lavender, ought to be in every garden, on account of their lively little flowers. The greenhouse and frame kinds succeed best in sandy loam and peat, and may be increased by cuttings. The hardy herbaceous species are very suitable for ornamenting the front of flower-borders; they increase freely by division, or seeds, which latter some of them produce in abundance. The root of *S. caroliniana* is one of the most powerful astringents known. *Synonymes*: 1, *Taxánthema austrálsis*; 2, *Státice lyráta*; 3, *S. spatuláta*. See *Armeria* and *Acantholimon*.

STAUNTONIA, De Candolle. In honour of Sir George Staunton, Bart., who introduced numerous plants from China. *Linn.* 21, Or. 6, Nat. Or. *Lardizabalæacæ*. A species of easy growth, potted in a mixture of peat and loam, and requiring plenty of room for the roots to run. Cuttings strike freely in sand or soil, under a glass, in heat.

latifolia . Lil. gm. . 4, G. Ev. Cl. 10 China. 1846

STAUROCANTHUS, Link. From *stauros*, a cross, and *acantha*, a spine; the spines have each two smaller spines at the side; which give them the appearance of a cross. *Linn.* 16, Or. 5, Nat. Or. *Fabæacæ*. A very beautiful dwarf shrub, well suited for the front of shrubberies; it is easily increased by young cuttings, planted in sand, or by seeds. *Synonymc*: 1, *Ulex genistoides*.

aphyllus 1 . Yellow . 5, H. Ev. S. 2 Portugal. 1823

STAVESACRE. See *Delphinium Staphiságría*.

STEGANIA. See *Lomária*.

STEGANÓTROPIS, Lehm. From *steganos*, covered, and *tropis*, a keel; keel covered with the vexillum. *Linn.* 17, Or. 4, Nat. Or. *Fabæacæ*. A climbing plant, with but little beauty, requiring similar treatment to *Cliodia*.

conjugátus . Yellow . 6, S. Cl. A. 3 S. Amer. 1827

STELIS, Swartz. Not explained. *Linn.* 20, Or. 1, Nat. Or. *Orchidæacæ*. The species of *Stelis* are small, and rather interesting plants. For culture and propagation, see *Pleurothállis*. *Synonymc*: 1, *S. ciliáris*. See *Physostiphon*.

STEMARIA. See *Acrostichum Stemaria*.

STEM-CLASPING, when applied to a leaf, signifies that its base surrounds the stem.

STEMODIA, Linn. From *stemon*, a stamen, and *dis*, double; in allusion to each stamen bearing two anthers. Linn. 14, Or. 2, Nat. Or. *Serophulariacæ*. Plants of little beauty, growing well in any light rich soil, and increased by cuttings or seeds. The annual species are half-hardy. *Synonymes*: 1, *Capraria durantifolia*; 2, *Colámmca trifoliata*.

chilensis	Red .	9, F. De. Cr.	1½ Chile .	1829
suffruticosa 2 Blue		7, S. Ev. S.	1½ N. Grnad.	1820

durantifolia 1, *maritima*, *parviflora*, *verticillaris*, *viscosa*.

STEMONACANTHUS. From *stemon*, a stamen, and *acanthus*; stamens prominent. Linn. 14, Or. 2, Nat. Or. *Acanthacæ*. For culture and propagation, refer to *Ruellia*. *Synonymie*: 1, *Ruellia macrophylla*, macrophyllus 1 Scarlet . 6, S. Ev. S. 2 N. Gren. 1840

STEMONITIS, Gleditsch. From *stemon*, a stamen; the plant may be compared to the male organ of a flower. Linn. 24, Or. 9, Nat. Or. *Lycopodiacæ*. Found upon rotten wood. *Synonymie*: 1, *Trichia nuda*—fasciculata 1, obtusata, papillata.

STENACTIS, Nees. Probably from *stene*, narrow, and *aktin*, a sunbeam; from the narrow and sunlike rays of the expanded flower. Linn. 19, Or. 2, Nat. Or. *Asteracæ*. This is a very showy plant, well adapted for planting in beds; it grows in any common garden soil; and is readily increased by dividing the root, or by seeds, which it produces in great abundance. spociosa . . . Purple . 7, H. Her. P. 2 Californ. 1831

STENANTHERA, R. Brown. From *stenos*, narrow, and *anthera*, an anther; the filaments are broader than the anthers, which causes the latter to appear narrow. Linn. 5, Or. 1, Nat. Or. *Eupacridacæ*. This beautiful greenhouse genus requires a soil composed of one third sandy loam, and two thirds very sandy peat. The pot should be well drained, as the fine roots of the plants are easily injured by much wet; it should be kept in a shaded part of the house in summer. Cuttings taken from the young shoots, will strike with ease, if planted in sand, under a glass.

ciliata	Red .	4, G. Ev. S.	6 Swan R.	1836
pimifolia	Scarlet .	6, G. Ev. S.	6 N. S. W.	1811

STENANTHIUM, Kunth. From *stenos*, narrow, and *anthos*, a flower. Linn. 23, Or. 1, Nat. Or. *Melanthacæ*. This plant is said to be very poisonous, and to furnish a part of the sabadilla seeds of commerce, from which *Veratrum* is procured. The plant grows freely in sandy loam and peat, and is increased by dividing the roots. *Synonymie*: 1, *Veratrum frigidum*.

frigidum 1	Black .	6, G. Her. P.	1½ Angangulo	1848
----------------------	---------	---------------	--------------	------

STENIA, Lindley. From *stenos*, narrow; in allusion to the form of the pollen masses. Linn. 20, Or. 1, Nat. Or. *Orchidacæ*. This is rather a pretty genus, requiring to be treated the same as the species of *Maxillaria*.

Beaumontii	Yellow .	3, S. Epi.		
pallida	Yellow .	8, S. Epi.	½ Demerara .	1837

STENOCARPUS, R. Brown. From *stenos*, narrow, and *karpos*, fruit. Linn. 4, Or. 1, Nat. Or. *Proteacæ*. An equal mixture of sandy loam and peat suits this genus, and cuttings of the ripened wood will root in sand, under a glass. *Synonymes*: 1, *Agnostus sinuatus*; 2, *Embotrium umbellatum*.

aurita. Brn. yel. 7, S. Her. P. 1 Jamaica

STENOSÉRMUM, *Sweet*. See *Metrosideros*.

STENÓSTOMUM, *De Candolle*. From *stenos*, narrow, and *stoma*, a mouth; flowers. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. Pretty stove plants, requiring the same treatment as *Hamiltonia*. *Synonymes*: 1, *Guatteria lucida*, *Laugetia lucida*, *Starmia lucida*.

lucidum	1	. 5, S. Ev. S. 6	W. Ind.	. 1818
tomentosum		. 5, S. Ev. S. 6	Jamaica	. 1822

STENOTÁPHRUM, *Kunth*. Meaning unexplained. *Linn.* 23, Or. 1, Nat. Or. *Graminaceæ-americum, complanatum*.

STEPHANIA, *Willdenow*. In honour of S. Stephan, once a professor at Moscow, died 1817. *Linn.* 6, Or. 1, Nat. Or. *Capparidaceæ*. Well worth cultivating, on account of the beauty of the flowers. It thrives in loam, peat, and sand, and cuttings of the young wood will root in sand, under a glass, in heat. *Synonyme*: 1, *Cápparis paradóca*, *Steriphoma paradócarum*.

cleomoides	1 Yellow	. 6, S. Ev. S. 3	Caraccas	. 1823
------------	----------	------------------	----------	--------

STEPHANÓTUS, *Thouars*. From *stephanos*, a crown, and *otitis*, eared, from the auricles of the staminal crown. *Linn.* 5, Or. 1, Nat. Or. *Asclepiadaceæ*. A genus of charming twiners;

S. floribunda is a delightful plant; both species are well adapted for planting out in the stove, or for cultivating in pots; they should be favoured with a brisk heat in the growing season, both to their roots and tops, and be potted in a mixture of turfy loam and heath-mould, or leaf-mould. Increase is easily effected by cuttings in the usual way.

floribunda		. White	. 5, S. Ev. Tw. 10	Madagas. 1839
Thouarsii		. White	. 5, S. Ev. Tw. 10	E. Ind. . 1842

STERCULIA, *Linn.* From *Sterculius*, a God, derived from *stercus*; the flowers and leaves of some of the species are fetid. *Linn.* 21, Or. 10, Nat. Or. *Sterculiaceæ*. These plants succeed best in light turfy loam; or a mixture of loam and peat; and cuttings of the ripened wood, with the leaves left entire, will root freely in sand, under a glass, in heat. The seeds of *S. acuminata* afford the *Cola* or *Kola* of tropical Africa, so much spoken of by African travellers; and which, when chewed or sucked, enhances the flavour of anything that may be eaten afterwards; and is even said to render putrid water agreeable. The seeds are brown, and about the size of a pigeon's egg. *Synonymes*: 1, *Côla acuminata*; 2, *Courtenia Afzelii*; 3, *S. heterophylla*, *Brachyhiton diversifolia*; 4, *Helicteres apétala*; 5, *S. crinita*; 6, *S. Balanphas*, *Southwellia nobilis*; 7, *S. pubescens*.

STERCULIACEÆ, or **STERCULIADS**, are large trees or shrubs, natives of the warmer parts of the world. To this group belongs the Baobab tree (*Adansonia digitata*), the Silk-cotton tree (*Bombax Cœiba*), and the Durion tree (*Durio Zebethinus*), the fruit of which is highly esteemed. These may be named as examples of the character of the order.

STEREOCAULON, *Schreber*. From *stereos*, rigid, and *caulon*, a stem, firm branching fronds. *Linn.* 24, Or. 8, Nat. Or. *Parneliaceæ*. This is the first of its tribe found clothing the lava of volcanoes—*botrydium*, *Ceræolus*, *paschale*.

STEREOXYLON. See *Escallonia*.

STERIGMA, *De Candolle*. From *sterigma*, a fork; the larger stamens are joined at the base, and forked at the top. *Linn.* 15, Nat. Or. *Brassicaceæ*. The species of this genus are well adapted for ornamenting rock-work. They require to be treated as other alpine plants.

Synonymes: 1, *Cheiranthus tomentosus*; 2, *C. torulosus*.

acanthocarpum Yellow . . . 4, H.	B. 1 Iberia . . . 1837
tomentosum 1. Yellow . . . 6, H.	B. 1 Astracan . . . 1823

STERNUTATORY, possessing qualities which provoke sneezing.

STEVÈNIA, *Adanson*. In honour of Christian Stephen, Counsellor of the University of Moscow, and author of a paper on some new plants from Caucasus, published in the *Linnæan Transactions*. *Linn.* 15, Nat. Or. *Brassicaceæ*. The seeds of these plants should be sown on rock-work, but not sooner than the beginning of April—*alyssoides, cheiranthoides*.

STÈVIA, *Cavanilles*. In honour of Peter James Esteve, M.D., professor of botany at Valencia. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Pretty autumnal flowering plants, succeeding well in the flower border during summer; they require the protection of a frame in severe weather, and are increased by cuttings, divisions, or seeds. *Synonyme*: 1, *S. canescens*. See *Hymenopappus*, and *Palafoxia*.

STICTA, *Schreber*. From *stiktos*, dotted: in allusion to the little pits on the under surface of the fronds. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. A handsome genus of Lichens, found growing upon trees. *S. pulmonacea* possesses the same qualities as the Iceland moss of the shops—*aurata, ciliata, crocata, fuliginosa, limbata, macrophylla, pulmonacea, scrobiculata, sylvatica*.

STICTIS, *Persoon*. From *stiktos*, dotted; the dot-like appearance of many of the species. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. Very minute species, found on dead branches—*abietina, longa, pallida, radiata, scrobostoma, sphaeralis, versicolor*.

STIFFTIA, *Mikan*. Named after some unknown botanist. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A fine showy genus, requiring the same treatment as the shrubby species of *Baccharis*. *Synonymes*: 1, *Augusta grandiflora, Plazia brazilienstis*.

chrysantha 1 Yellow . . . 4, S. Ev. S. 10	Brazil . 1840
insignis . . . Red wht. 4, S. Ev. S. 10	Brazil . 1833

STIGMA, the female organ of a flower.

STIGMAPHYLLON, *Jussieu*. From *stigma*, a stigma, and *phyllon*, a leaf; stigma foliaceons. *Linn.* 10, Or. 3, Nat. Or. *Malpighiaceæ*. These handsome plants produce their fine yellow flowers, from three to five together, in an umbel. For culture and propagation, see *Banisteria*. *Synonyme*: 1, *Banisteria auriculata*; 2, *B. ciliata*.

STIGMATOSE, when the stigma is long, lateral, or on one side of the style.

STIGONEMA, *Agardh*. From *stigon*, dotted, and *nema*, a filament, alluding to the regular annular dots of the filaments. *Linn.* 24, Or. 7, Nat. Or. *Conferaceæ*. Small dark green tufts, found on rocks—*atrovirens, panniforme*.

STILAGO, *Linn.* From *stylos*, a style; probably alluding to its length. *Linn.* 22, Or. 3, Nat. Or. *Stilaginaceæ*. Ornamental trees, thriving in a mixture of sandy loam and peat; cuttings will root in sand, under a glass, in heat.

Binnus . . . Apetal . . . 8, S. Ev. T. 20	E. Ind. 1757
diandra . . . Apetal . . . 8, S. Ev. T. 20	E. Ind. 1800

STILBACEÆ, or STILBIDS, are Cape shrubs resembling the *Phyllica*, having a resinous secretion. Little is known of their uses.

STILBOSPORÆ, *Persoon*. From *stilbo*, to shine,

and spore, a sporule; the naked spornles are imbedded in a black substance, flowing from dead trunks and branches of trees. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*.—*betulina, biloculata, profusa*.

STILBUM, *Tode*. From *stilbos*, shining; the species are found upon old rotten wood, and are at first watery and gelatinous, but become opaque as they ripen. *Linn.* 24, Or. 9, Nat. Or., *Botrylaceæ*—*anomalum, bicolor, citrinum, erythrocephalum, nigrum, pellucidum, piliforme, tomentosum, vulgare*.

STILLINGIA, *Gardner*. In honour of Dr. Benjamin Stillingfleet, an eminent English botanist. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. The species of *Stillingia* should be grown in a mixture of sandy loam and peat; and cuttings will root in sand, under a glass, in heat. *S. sebifera* is the Tallow-tree of China; its kernel contains an oil, which, when expressed, consolidates through the cold to the consistence of tallow, and by boiling, it becomes as hard as bees-wax.

populnea . Yellow . 7, S. Ev. T. 15 Ceylon . 1823
sebifera . Yellow . 7, S. Ev. S. 12 China . 1703

ligustrina, sylvatica.

STILPNOPHYTUM, *De Candolle*. See *Tanacetum unifolium*.

STIMULATING, exciting.

STINK-HOUT. See *Oreodaphne*.

STINKING CEDAR. See *Torreya taxifolia*.

STINKING HOREHOUND. See *Ballota*.

STINKING VERVAIN. See *Petivèria alliacea*.

STINK WOOD. See *Oreodaphne*.

STIPA, *Linn.* From *stipe*, a silky or feathery substance. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A genus of beautiful grasses; they are increased by divisions. *S. pennata* is grown in the flower-garden for the sake of its beautifully feathered beards, which, Gerarde says, the ladies used to wear as feathers.

STÛÈCHAS. See *Elichrysium Stœchas*.

STÛÈKESIA, *L'Heritier*. In honour of Jonathan Stokes, M. D., the coadjutor of Withering, in his arrangement of British plants. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. A very handsome herbaceous plant, succeeding well in the open border during the summer months. It is increased by seeds or by division of the roots.

cyanea . Blue . S. G. Her. P. 2 Carolina . 1766

STOLONIFEROUS, bearing runners which root at the joints.

STOLONS, runners, which root at the joints.

STOMACHIC, agreeable to the stomach.

STOMATA, or **STOMATE**. An organic aperture in the skin of a plant by means of which respiration is maintained.

STONECROP. See *Sedum*.

STONE-PINE. See *Pinus Pinæa*.

STONE-WORTS. See *Chara* and *Nitella*.

STORAX. See *Styrax*.

STORK'S BILL. See *Pelargonium*.

STRAMONIUM. See *Datura Stramonium*.

STRANGURY, a disease produced on plants by tight ligatures.

STRANVÆSIA. Lindley named this genus in honour of the Honourable William Fox Strangways, F.R.S., a learned and indefatigable investigator of the Flora of Europe. *Linn.* 12, Or. 2, Nat. Or. *Ponaceæ*. This species is better known under the name of *Cratægus glauca*; it is ornamental, and succeeds best when planted against a south wall, with a slight protection in severe weather. It is readily increased by grafting or budding upon the common thorn. *Synonyme*: 1, *Cratægus glauca*.

glaucescens l White . 6, H. Ev. T. 20 Nepal . 1828

STRAPWORT. See *Corrigiola*.

STRATA, layers, beds.

STRATIÛTES, *Linn.* From *stratos*, an army; in allusion to its long sword-like leaves. *Linn.* 22, Or. 10, Nat. Or. *Hydrocharidaceæ*. An ornamental aquatic, increasing so fast in the ponds where it is planted as to become almost a troublesome weed.

altismoides . White . 7, S. Aq. P. 2 E. Ind. . 1806
aloides . White . 6, H. Aq. P. 2 Eng., ditches.

STRAVADIUM, *Jussieu*. From *Tsjeria Samstravadi*, the Malabar name of one of the species. *Linn.* 16, Or. 8, Nat. Or. *Myrtaceæ*. Fine ornamental trees. For culture and propagation, see *Barringtonia*. *Synonymes*: 1, *Bar-*

- STRËE,** small streaks.
- STRÍARIA, Greville.** From *stria*, a groove, the plant is marked with grooves. *Linn.* 24, Or. 7, Nat. Or. *Fucæcæ*. Found in the ocean—*attenuata*.
- STRÍATED,** having streaks.
- STRÍCT,** upright, straight.
- STRÍGÆ,** little upright unequal, stiff hairs, swelled at their bases.
- STRÍGOSE,** covered with strigæ.
- STROBILÁNTHES, Blume.** From *strobilos*, the cone of a pine, and *anthos*, a flower; the inflorescence in the bud state resembles the cone of a pine. *Linn.* 14, Or. 2, Nat. Or. *Acanthæcæ*. This beautiful stove genus is well deserving of a place in every collection, on account of its very showy purple flowers, and the deep purple colour of the under side of the leaves. For culture and propagation, see *Ruellia*. *Synonyme:* 1, *Ruellia Sabiniána*; 2, *Ruellia grandis*.

pennsylvanica . .	Brown 8, H. Her. P.	2	N. Amer.	1812

STRUTHIUM. See *Gypsophila Struthium*.

STRYCHNOS, Linn. The Greek name of the *Solanum*. *Linn.* 5, Or. 1, Nat. Or. *Apocynæacææ*. Valuable plants, on account of the medicinal properties ascribed to them. They all succeed well in a mixture of loam and sandy peat, and half-ripened cuttings will root in sand, under a glass, in heat. *S. colubrina* is given as an anthelmintic in intermitting fevers. The seeds of *S. Nax-vômica* are well known by the latter name, as possessing a dangerous narcotic property, which depends upon the presence of a peculiar principle called *Strychnia*. It has been administered in a great number of cases with different degrees of success: small quantities have been given for mania, gout, epilepsy, hysteria, and dysentery. It is a most violent poison, and its energy so great, that half a grain blown into the throat of a rabbit, occasions death in five minutes. Its operation is always accompanied with symptoms of locked jaw and other tetanic affections. The seeds of *S. potatorum* are sold in the Indian bazaars for the purpose of clearing muddy water; the vessels containing the water being rubbed for a minute or two round the inside with one of the seeds; after which, by allowing the water to settle for a short time, however impure and

muddy it may have been before, it becomes clear and wholesome.

STRYCHNINE is the product of different species of *Strychnos*.

STUARTIA, Cavanille. See *Stewartia*.

STÛPA, filamentose matter.

STYLÁNDRA, Nuttall. From *stylos*, a column, and *aner*, a male; the gynostegium is pedicellate. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadæacææ*. For culture and propagation, see *Asclæpias*. *Synonymes:* 1, *Podostigma pubescens*, *Asclæpias pedicellata*.

pumila 1 . . .	Grn. yel. . .	7, F. Her. P.	½	N. Amer.	1824
----------------	---------------	---------------	---	----------	------

STYLE, the stalk which bears the stigma, and intervenes between that and the ovary.

STYLIADÆÆ, or STYLEWORTS. A small order of herbaceous plants or undershrubs, chiefly found in the swamps of New Holland. They are curious plants and deserve cultivation.

STYLIDIUM, Swartz. From *stylos*, a column; the stamens and style are joined. *Linn.* 20, Or. 2, Nat. Or. *Stylidiæacææ*. Beautiful and rare little plants, succeeding best in sandy loam and peat. Cuttings of the shrubby kinds root very readily in sand, under a glass; a few of the herbaceous kinds are increased by divisions of the root, but chiefly by seeds. *Synonymes:* 1, *S. setigerum*; 2, *S. glandulosum*; 3, *S. mucronifolia*; 4, *Ventenatia minor*; 5, *S. longifolium*, *Dicksonii*; 6, *S. assinile*; 7, *S. loricifolium*.

STYPTIC, having the power to staunch blood.

STYRACÁCEÆ, or **STORAX-WORTS**. To this small order belongs the Gum-Storax tree (*Styrax officinále*), the Benzoin tree (*Styrax Benzoin*), and the Snow-drop tree (*Halésia tetráptera*), so common in our shrubberies.

STYRAX, *Linn.* A mere alteration of *Assthirak*, the Arabic name of *S. officinále*. *Linn.* 10, Or. 1, Nat. Or. *Styracécea*. The species of *Styrax* are very handsome when in flower, and are, therefore, well suited for ornamenting shrubberies. A light soil suits them best, and they are readily increased by layers, in spring or autumn. *S. officinále* is remarkable for producing the very powerful and fragrant balsam known by the name of storax: it is bitter and pungent to the taste, and possesses a strong, agreeable odour. *Synonyme*: 1, *S. glábrum*.

SUB, in composition, signifies somewhat; as *sub-umbellate*, somewhat umbellate, *sub-rotund*, somewhat round or roundish, &c.

SUBALATE, with a narrow wing, or margin.

SUBER. See *Quercus Suber*.

SUBEROSE, corky.

SUBULÁRIA, *Linn.* From *subula*, an awl; shape of the leaves. *Linn.* 15, Nat. Or. *Brassicácea*. This little annual is very remarkable from expanding its flowers two or three feet under water, and impregnation taking place in that element. It only requires planting in a pond or rivulet, with a gravelly bottom; or it may be grown in pots filled with sand, and plunged in water.

aquatíca . . . White . 7, H. Aq. A. ¼ Brit. ponds.

SUBULATE, awl-shaped, tapering to a point.

SUCCEDANEOUS, taking the place of another.

SUCCEISA, *Vaillant*. From *succisus*, lopped; appearance of the roots. *Linn.* 4, Or. 1, Nat. Or. *Dipsacácea*. Plants of no great beauty, and of very common culture. *Synonymes*: 1, *Cephalária albescens*; 2, *C. alpina*; 3, *C. attenuáta*; 4, *C. coriácea*, *Lepicéphalus leucántha*; 5, *C. corniculáta*; 6, *C. cretácea*; 7, *Scabídosa glabráta*; 8, *Scabídosa decúrrens*, *Cephalária graeca*; 9, *C. lævigáta*, *Succisa centaurioides*; 10, *C. leucántha*; 11, *C. leucánthema*, *Lepicéphalus leucántha*; 12, *Scabídosa succisa*; 13, *Cephalária rigida*; 14, *C. scábra*; 15, *C. syriáca*; 16, *C. tatárica*; 17, *C. transylvánica*; 18, *C. uralénsis*. SYMPIÉZA, *Lichtenstein*. From *sympiezo*, to press; in reference to the stamens, which adhere to the tube of the corolla. *Linn.* 4, Or. 1, Nat. Or. *Ericáceæ*. A pretty little plant, thriving in turfy peat and sand; and readily increased by young cuttings, placed in sand, under a glass. *Synonyme*: 1, *Blæria bracteata*.

capitellata 1 . Pink . 7, G. Ev. S. 1½ C. G. H. 1812

SYMPLOCÁRPUS, *Salisbury*. From *symplöke*, connection, and *karpos*, fruit. *Linn.* 4, Or. 1, Nat. Or. *Orontiáceæ*. This is a curious species, bearing large, handsome leaves. It succeeds in a marshy situation, in peat soil; and is increased by division. The roots and seeds are powerful antispasmodics; they are also expectorant, and useful in phthical coughs. *Synonymes*: 1, *Pöthos fétidus*, *Dracontium fétidum*.

fétidus 1 . Apetal . 5, H. Aq. P. 1 N. Amer. 173

SÝMLOCOS, *Linn.* From *Symplöke*, a connection; the stamens are united at the base. *Linn.* 18, Or. 2, Nat. Or. *Ebenáceæ*. These plants thrive well in a mixture of loam, peat, and sand; and cuttings root without difficulty in sand, under a glass; the stove species requiring heat. *Synonyme*: 1, *S. bicida*.

TACAMAHAÇA. See *Calophýllum Tacamaháca*, *Iceia Tacamaháca*, and *Pópulus balsamífera*.

TACCA, Forster. The Malay name of the species. *Linn.* 6, Or. 1, Nat. Or. *Taccácea*. Interesting plants, thriving well in a mixture of loam, peat, and sand; and readily increasing by division of the roots. They must be very sparingly watered whilst in a dormant state. The large fleshy roots, when scraped and frequently washed, yield a nutritive fecula resembling arrow-root. See *Arum*, and *Atáccia*.

áspera . . .	Brown 7, S. Bl. P. 2	E. Ind. .	1816

TACCÁCEÆ, or TACCADS, are large perennial herbs, with tuberous roots, which contain a large quantity of fecula, which is prepared and used as food after the manner of sago.

TACCADA. See *Scévola Taccada*.

TÁCHIA, Aublet. From *Tachi*, which, it is said, signifies an ant's nest; a name applied in its native country to *T. Guianénsis* on account of its trunk and branches being usually full of ants; this species, we believe, is not yet introduced to this country. *Linn.* 5, Or. 1, Nat. Or. *Gentianácea*. These plants will grow freely in a mixture of peat, sand, and loam; a small portion of the last will suffice; cuttings planted in sand, under a hand-glass, in heat, will strike root readily. The species are rather difficult to keep through the winter, in this country, on account of their being liable to damp off; and in order to prevent this, they should be very sparingly watered in damp weather. *Synonymes*: 1, *Lisianthus cordifolius*; 2, *L. longifolius*; 3, *L. exsertus*. See *Amorphophállus*.

cordifolia 1 . . .	Yellow 5, S. Ev. S. 2	Jamaica .	1816

TAGERA. See *Cassia Tagera*.

TÆGETES, Linn. From the beauty of its flowers, this genus is named after *Tages*, a Tuscan divinity. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A genus of elegant plants when in flower, and therefore, well deserving a place in every garden. The annual species should be raised on a hotbed in spring, and planted out about the end of May. *T. patula* is the French marigold, and *T. erecta* is the African marigold of our gardens. The herbaceous kinds thrive in any rich, light soil; and may be increased by cuttings or divisions.

TALIGÀLIA. See *Amasonia*.

TALINUM, Adanson. Supposed to be from *thalia*, a green branch; durable verdure. *Linn.* 11, Or. 1, Nat. Or. *Portulacaceæ*. Interesting succulent plants, growing best in a mixture of loam, peat, and sand; and readily increased by cuttings. The biennial species must be raised on a hotbed, and afterwards planted out in a warm sheltered part of the flower garden. *Synonymes*: 1, *T. patens* ; 2, *T. fruticosum* ; 3, *Portulaca racemosa*. See *Anacampseros*, and *Calandrinia*.

TALLOW-GOURD. See *Benincasa certifera*.

TALLOW-SHRUB. See *Mýrica certifera*.

TALLOW-TREE. See *Stillingia sebifera*.

TAMAQUARINA. See *Tabernaemontana*.

TÂMARA. See *Nelumbium Tâmara*.

TAMARICACEÆ, or TAMARISKS, are small shrubs and herbs. *Tamarix mannifera* is stated to produce a kind of manna in the neighbourhood of Mount Sinai. The species chiefly grow in moderate climates.

TAMARIND-TREE. See *Tamarindus*.

TAMARINDUS, Linn. *Tamar*, in Arabic, is the name of the date, and *Indus*, Indian; *Indian-date*. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. The species of *Tamarind* thrive in a mixture of sandy loam and peat; and are readily increased by seeds, which are annually imported from the East and West Indies; they should be sown on a hotbed, and planted singly into pots, when about three inches high. Cuttings root readily in sand, under a glass, in heat.

The preserved pulp of the tamarind is well known as a delicious confection. *Synonyme* : 1, *T. officinalis*.

TAMARISK. See *Tamarix*.

TAMARIX, *Linn.* So named on account of the plants growing on the banks of the Tamaris, now Tambro, on the borders of the Pyrenees. *Linn.* 5, Or. 3, Nat. Or. *Tamaricaceæ*. This is a genus of very elegant shrubs. The hardy species is well suited for ornamenting shrubberies; it grows well in any soil or situation; and increases freely by cuttings, planted in the open ground, in spring or autumn. *T. orientalis* succeeds well in a mixture of loam and peat; and cuttings root readily in sand, under a glass, in heat. The bark of all the species is slightly bitter, astringent, and probably tonic. The manna of Mount Sinai is produced by a variety of *T. gallica*: it consists wholly of pure mucilaginous sugar. *Synonymes* : 1, *Myricaria dahurica*; 2, *T. articulata*. See *Myricaria*.

TAMONIA. See *Chitonia Tamonia*.

TAMUS, *Linn.* A name applied by Columella to a plant resembling a vine. *Linn.* 22, Or. 6, Nat. Or. *Dioscoridacæ*. Hardy twining plants, of no interest, succeeding in common garden soil; division of the roots—*communis*, *crætica*. See *Testudinaria*.

TANACÆTUM, *Linn.* Said to be altered from *Athanasia*. *Linn.* 19, Or. 2, Nat. Or. *Asteracæ*. The species of *Tanacætum* or *Tansy* are not possessed of much beauty. The hardy kinds succeed in any common soil; and are readily increased by division. The greenhouse species should be grown in a light, rich soil. They increase freely by cuttings. Withering asserts, that if meat be rubbed with the leaves of *tansy*, the flesh-fly will not touch it. *Synonymes* : 1, *Achillea filipendula*; 2, *A. bipinnata*. See *Balsamita*, and *Penzia*.

TANGHINIA, *Du Petit Thouars*. From *Tanghin*, the Madagascar name of *T. veneniflua*, the seed of which is the ordeal nut of that island. *Linn.* 5, Or. 1, Nat. Or. *Apocynacæ*. These remarkable plants may be referred to *Tabernaemontana* for culture and propagation. *T. veneniflua* is the celebrated ordeal tree of Madagascar. The fruit is yellow; and incloses a fibrous stone or nut; the kernel inclosed in this stone, or nut, is said by some to be the part used for the ordeal, and to be infused in a liquid of which the accused person is made to drink; others say the infusion is made of the entire fruit. The custom of administering *Tanghin* as an ordeal, in Madagascar, has recently become far more universal than at any former period of the Huwa government. When her late Majesty, in the beginning of 1830, came to the resolution of cleansing her lands from sorcerers, an ordeal was commanded in every town and village; and in Tannanarivoo scarcely any class of the inhabitants escaped. On the 9th of May, 1830, in compliance with the sovereign's mandate, a notable administration of Tanghin took place. The accused persons amounted to about thirty, including some of the highest rank in the kingdom. All the nobility recovered, while the unknown plebeians, who, according to the common jugglery, had been compelled to drink with them, died. The former made the usual triumphant entry into the town, on the 17th, borne in open palanquins, amongst the shouting, dancing, and grimaces of the many thousands of people. In the following month, about an equal number of Malagassy ladies submitted to the same ordeal; but all survived, and, in due course, made a grand entry into the town. The Tanghin is administered in private, as well as in public. A subject so deeply rooted in the minds of all the Malagassy people, from the sovereign down to the slave, is the belief in witchcraft; and so blindly are they led on by this belief, that a whole nation may be considered as labouring under a spell, as powerful as the fascination which they attribute to the unfortunate sorcerers themselves. *Synonymes* : 1, *Cerbera dichotoma*; 2, *C. laurifolia*; 3, *C. lactaria*; 4, *C. Odollan*; 5, *C. Tanghin*.

TÉLLIMA, *R. Brown*. An anagram of *Mitella*; separated from it. *Linn.* 10, Or. 2, Nat. Or. *Saxifragaceæ*. A very handsome plant. For culture and propagation, see *Mitella*.

grandiflora . Pink . 4, H. Her. P. 1 N. Amer. 1826

TELÔPEA, *R. Brown*. From *Tolpas*, seen at a distance; alluding to the great distance from which its crimson-coloured blossoms are discernible in its native country. *Linn.* 4, Or. 1, Nat. Or. *Protaceæ*. This magnificent plant is considered to be rather difficult of culture. A light soil, composed of equal parts of sandy loam and heath mould, with a good proportion of sand and gritstone, well incorporated, appears to suit it best. The pot in which it is grown must be well drained; and in watering, care must be taken never to allow the plant to flag, nor yet to over-water it. Though it requires very little water in the winter season, it must have a good supply in the summer months, particularly while growing freely. It should always be kept in a light, airy part of the house. It may be propagated by cuttings, in sand, under a glass; but young plants may be obtained readier, and with greater certainty, by layers; as the plants naturally produce an abundance of suckers, which may be easily laid down into small pots, introduced round the one in which the plant is growing. In summer, the *Warratah* succeeds well in an airy part of the greenhouse, but in winter, it subsists better in a cool, airy part of the stove. *epiciosissima* . Scarlet 6, G. Ev. T. 12 N. S. W. 1789

TEMPLETONIA, *R. Brown*. In honour of Mr. John Templeton, of Orange Grove, near Belfast, an excellent botanist. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. Interesting plants, thriving well in a mixture of sandy loam and peat; and increased by young cuttings, in sand, under a glass.

TEREBÏNTHUS. See *Pistachia Terebinthus*.

TEREBINTHINATE, consisting of turpentine.

TERETE, round and long, like a taper.

TERGEMINATE, three-paired.

TERMINAL, ending, bounding.

TERMINÀLIA, Linn. The leaves are in bunches at the ends of the branches; hence the name, from *terminus*, end. *Linn.* 23, Or. 1, Nat. Or. *Combretacæ*. Interesting plants. For culture and propagation, see *Bucida*. The fruit and bark of several of the species are astringent and tonic. The fruit and galls of *T. Chébula* are highly valued by dyers, creating, when mixed with alum, a durable yellow. The bark and leaves of *T. Catappa* yield a black pigment, with which Indian ink is made. A milky juice is said to flow from *T. angustifolia*, which, when dried, is fragrant, and resembling Benzoin is used as a kind of incense in the churches in the Mauritius. *Synonymes*: 1, *T. Benzoin*; 2, *T. rotata*, *T. Myrobálana*; 3, *T. subcordata*; 4, *T. madagascariensis*, *Myrobálanus Patrèca*.

TERN, in threes, or three in a whorl.

TERNARY, consisting of threes.

TERNATE, applied to a leaf consisting of three leaflets.

TERNATEA. See *Clitoria Ternatea*.

TERNSTRÛMIA, Mutis. In honour of Ternström, a Swedish naturalist and traveller, who died at Palicandre, in 1745. *Linn.* 13, Or. 1, Nat. Or. *Ternströmiacæ*. Interesting plants, succeeding in loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat.

TERNSTRÛMIACÆ, or THEADS and CAMELLIAS.

For the beauty of many of the species of this order, the plants are highly esteemed. The tea-tree (*Thea*) and *Camellia* may be taken as examples.

TERPNÁNTHUS. See *Spiranthera*.

TERRA-JAPONICA. See *Ancari Gambier*.

TERRA-ORELLANA. See *Bica Orellana*.

TESSLATED, variegated by squares, chequered.

TESTA, the skin or integument of a seed.

TESTACEOUS, light brown.

TESTUDINÀRIA, Salisbury. From *testudo*, a tortoise; resemblance of the outside roots. *Linn.* 22, Or. 6, Nat. Or. *Dioscoridacæ*. Curious and interesting plants, succeeding well in turfy loam and peat. They should be kept dry when

not growing. Roots are frequently received from the Cape of Good Hope. The plants being diœcious, there is no chance of obtaining seeds in this country, unless specimens of both sexes should happen to flower at the same time. *Synonyme*: 1, *Tamus elephântipes*.

elephântipes 1 . Yel. 7, G. De. Cl. 10 C. G. H. 1774
mexicana . . . Yel. 7, G. De. Cl. 6 Mexico .
montana . . . Yel. 7, G. De. Cl. 10 C. G. H. 1816

TËTA. See *Peltosânthes Tëta*.

TETANUS, lockjaw.

TETRÁCERA, *Linn.* From *tetra*, four-fold, and *keras*, a horn; the four capsules are recurved like as many horns. *Linn.* 22, Or. 12, Nat. Or. *Dilleniaceæ*. These handsome climbers are well suited for covering rafters or pillars in stoves. They succeed well in turfy loam and peat; and cuttings of the ripened wood root freely in sand, under a glass, in heat. *Synonyme*: 1, *Dillenia scandens*. See *Delima*, and *Dolicoëarpus*.

TETRACHÔTOMOUS, a stem that ramifies in fours.

TETRADËNIA, *Nees*. From *tetra*, four, and *aden*, a gland. *Linn.* 22, Or. 8, Nat. Or. *Lauraceæ*. A neat growing plant, requiring in every respect the same treatment as *Cinnamômum*. *Synonyme*: 1, *Laurus involu-crata*.

involucrâta . Grn. yel. 1, S. Ev. S. 20 E. Ind. 1820

TETRADÏUM, *Lourcero*. From *tetradion*, quaternary; parts of flowers and fruit in fours. *Linn.* 22, Or. 4, Nat. Or. *Connaraceæ*. For culture and propagation, see *Brucea*. *Synonyme*: 1, *Brucea trichstoma*.

trichôtomum 1 White 6, S. Ev. T. 15 Chn. China 1820

TETRAONAL, having four angles.

TETRAONÏA, *Linn.* From *tetra*, four, and *gonia*, an angle; in allusion to the fruit being four angled. *Linn.* 12, Or. 2, Nat. Or. *Tetragoniaceæ*. Plants not worth cultivating, except in general collections. *T. expansa* has been used as a substitute for spinach—*cristallina*, *decumbens*, *echinata*, *expansa*, *fruticosa*, *herbacea*, *linearis*, *obovata*, *spicata*, *Tetrâpteris*.

TETRAONÏACEÆ, or **AIZOONS.** Are an order of succulent plants of no great beauty, and nearly related to *Mesembryaceæ*. *Tetragonia* is well known in our gardens under the name of New Zealand spinach.

TETRAONÔLOBUS, *Scopoli*. The legumes are furnished with four wings or angles; whence the name, from *tetra*, four, *gonia*, an angle, and *lobos*, a pod. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. Ornamental plants, succeeding in common garden soil; and increased by seeds. The perennial kinds are well adapted for ornamenting rock-work, and the annual kinds for flower borders. *Synonymes*: 1, *Lôtus conjugatus*, *biflorus*; 2, *L. conjugatus*; 3, *L.*

Tetragonlobus; 4, *L. Requièni*; 5, *L. siliquosus*.

biflorus 1 . Yellow 7, H. Tr. A. $\frac{1}{2}$ Barbary . 1818

TETRAONOTHËCA, *Dillwyn*. From *tetragonos*, quadrangular, and *theca*, case; the four-angled grains. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. An interesting plant, growing well in any rich light soil; and increased by divisions or seeds.

helianthoides Yellow 8, H. Her. P. 2 Virgin. . 1726

TETRAGYNOUS, having four styles.

TETRÀHÏT. See *Galeopsis Tetrâhit*.

TËTRALÏX. See *Erica Tëtraliæ*.

TETRAMËRIUM. See *Coffea*.

TETRAMËRIUM. See *Fardæa*.

TETRAMÏCRA, *Lindley*. See *Brassavola elegans*.

TETRANDROUS, having four stamens.

TETRANËMA, *Benham*. From *tetra*, four, and *nema*, filament; on account of there being but four filaments in this genus, whilst the neighbouring genus, *Penistemon*, has five. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. A very pretty dwarf greenhouse plant, producing a profusion of little corymbs of showy purple and white flowers, which rise up from among the leaves on long purple scapes. It requires a warm greenhouse in winter; and in spring it should be potted in leaf-mould and sandy loam, and placed in the greenhouse, where it will flower the greater part of the summer; it is readily propagated by seed or cuttings. *Synonyme*: 1, *Penistemon mexicanus*.

mexicana 1 . . Pur. wht. 6, G. Ev. S. $\frac{1}{2}$ Mexico 1843

TETRANTHËRA, *Jacquin*. From *tetra*, four, and *aner*, an anther. *Linn.* 9, Or. 1, Nat. Or. *Lauraceæ*. Ornamental plants, requiring to be grown in a mixture of turfy loam, peat, and sand, and ripened cuttings root readily in sand, under a glass, in heat. *Synonymes*: 1, *Litsea citrifolia*; 2, *L. Cervantesii*; 3, *L. glaucescens*; 4, *L. japonica*, *Tmax japonica*, *T. monopetala*; 5, *L. chinensis*; 6, *T. involu-crata*; 7, *zeylanica*.

apetala 1 . . Grn. yel. 4, G. Ev. S. 10 N. Hol. 1894
Cervantesii 2 . Grn. yel. 4, S. Ev. T. 20 Mexico . 1823

TETRÂNTHUS, *Swartz*. From *tetra*, four, and *anthos*, a flower. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A pretty plant, thriving in sandy loam; and readily increased by division.

littoralis . . White . 8, S. Ev. Cr. $\frac{1}{2}$ W. Ind. 1820

TETRAPËLTIS, *Wallich*. From *tetra*, four, and *pelte*, a buckler; or the pollen masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is an interesting and highly fragrant species. For culture and propagation, see *Cœlogyne*.

frâgrans . . White . 6, S. Epi. 1 E. Ind. . 1836

TETRAPÉTALOUS, having four petals.

TÉTAPHIS, *Hedwig*. From *tetra*, four, in allusion to the teeth of the peristome being in fours. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. Broad tufts, found on dry banks. *Synonymes*: 1, *T. ovata*, *Grimmia Browniana*—*Browniana* 1, *pellheida*.

TETRAPOGON, *Desfontaines*. From *tetra*, four, and *pogon*, a beard. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A curious hardy annual species, of common culture.

villosus . . . Apetal . 7, H. Grass 1 Barbary . 1818

TETRAPOMA, *Turcz*. From *tetra*, four, and *poma*, a cover; the capsule is four valved. *Linn.* 15, Or. 1, Nat. Or. *Brassicææ*.

barbarensifolia . . . Yel. 6, H. B. 3 Siberia . 1835

TETRÁPTERIS, *Cavanilles*. From *tetra*, four, and *pteron*, a wing; the carpels are each four winged. *Linn.* 10, Or. 3, Nat. Or. *Malpighiaceæ*. Interesting plants, seldom seen in blossom. For culture and propagation, see *Malpighia*. *Synonymes*: 1, *Tridopteris buxifolia*; 2, *T. citrifolia*.

acapulcensis . . . Yel. 5, S. Ev. Cl. 6 Mexico . 1824

acutifolia . . . Yel. 5, S. Ev. Cl. 6 Cayenne . 1826

citrifolia 2 . . . Yel. 5, S. Ev. Cl. 6 Cayenne . 1818

discolor . . . Yel. 5, S. Ev. Cl. 6 Guiana . 1827

TETRAQUÉTROUS, having four angles or sides.

TETRASÉPALOUS, having four sepals.

TETRATHÈCA, *Smith*. From *tetra*, four, and *thèca*, a cell; alluding to the anthers being four-celled. *Linn.* 8, Or. 1, Nat. Or. *Tremandraceæ*. A genus of very pretty undershrubs, rather difficult to cultivate. A mixture of loam, peat, and sand, in equal parts, seems to suit them best; and cuttings of the young wood root in sand, under a glass. See *Tremandra*. *Synonymes*: 1, *Tremandra Hügelii*, *T. nasuta*, *T. verticillata*.

ericefolia . . . Rose . 7, G. Ev. S. 1 N. Hol. 1820

TEUCRIUM, *Linn*. Named after Teucer, son of Scamander, and father-in-law of Dardanus, king of Troy. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Interesting plants, of very easy culture. The perennial herbaceous kinds succeed well in common garden soil; and are readily increased by division and by seeds.

Most of the shrubby kinds require the protection of a frame or greenhouse in winter; they are easily increased by young cuttings. The seeds of the annual species only require to be sown in the open border in spring. *Synonymes*: 1, *Scutellaria crtica*; 2, *T. orchideum*; 3, *T. latifolium*; 4, *T. saginum*; 5, *T. capitatum*, *flavum*; 6, *T. aureum*; 7, *T. pseudo-hys-sopus*; 8, *T. orchideum*. THALAMIA. See *Dacrÿdium*.

THALAMUS, that part of the flower which rises from below the ovary, and sometimes supports the outer envelopes as well as the stamens in all the *Thalamifloræ*.

THALIA, *Linn*. In honour of J. Thalius, a German physician, died in 1588. *Linn.* 1, Or. 1, Nat. Or. *Marantaceæ*. Interesting plants, thriving well in a rich, light soil; and increased by division. *T. dealbata* will withstand the severity of our winters, if planted

about two feet beneath the surface of the water.

dealbata . . Blue . 7, F. Ag. P. 4 S. Carolina 1791
 geniculata . Blue . 8, S. Her. P. 3 W. Ind. . 1823

THALICTRUM, *Linn.* From *thallo*, to grow green; in allusion to the bright colour of the young shoots. *Linn.* 13, Or. 6, Nat. Or. *Ranunculaceæ*. The greater part of the species are hardy herbaceous plants, adapted for the back of flower borders; any light soil suits them, and they are readily increased by division. *Synonymes*: 1, *Anemone thalictroides*; 2, *T. rugosum*; 3, *T. minus*; 4, *T. corynellum*; 5, *T. revolutum*; 6, *T. ambiguum*; 7, *T. vaginatum*; 8, *T. styloides*; 9, *T. speciosum*; 10, *T. diffusum*; 11, *T. acuminatum*; 12, *T. discolor*.

THALLUS. The cellular mass of which the lower cryptogamous plants are entirely composed.

THAMNEA, *Brongniart*. From *thamnos*, a shrub. *Linn.* 5, Or. 1, Nat. Or. *Bruniaceæ*. A pretty little green-house plant, thriving in a mixture of peat and sand, and propagated by cuttings of the young wood planted in sand under a glass.

undifera . . White . 4, G. Ev. S. 1 C. G. H. . 1810

THAMNIDIUM, *Link.* From *thamnos*, a twig; the appearance of the plant when under the microscope. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceæ*. A minute plant found on putrid substances—*Elegans*.

THAMNOCHORTUS, *Bergius*. From *thamnos*, a shrub, and *chortos*, grass; habit of the plant. *Linn.* 22, Or. 3, Nat. Or. *Restiaceæ*. This genus succeeds well in sandy peat; and is readily increased by division. *Synonyme*: 1, *Restio dichotomus*.

dichotomus 1 . . Apetal 6, G. Her. P. 2 C. G. H. 1817
 scariosus . . . Brown 6, G. Her. P. 2 C. G. H. 1821

THAPSIA, *Tournefort*. So named from the first species being discovered in the Isle of Thapsus. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. These plants will grow in any common soil. They can only be increased by seeds, which should be sown in autumn as soon as ripe. *Synonymes*: 1, *Laserpitium gummiiferum*; 2, *L. thapsoides*.

THAPSUS. See *Verbascum Thapsus*.

THEA, *Linn.* Derived from *Tcha*, the Chinese name for tea. *Linn.* 16, Or. 8, Nat. Or. *Ternstroemiaceæ*. For the culture and propagation of these valuable plants, see *Camellia*. They only require to be protected from severe frost.

“Mr. Fortune has proved that the Chinese manufacture black and green tea from the same plant; and it is now generally agreed that the

two supposed species, *T. Bohea* and *T. viridis*, are nothing more than varieties of one species, for which Linnæus' name *T. chinensis* is adopted, and of which the Assam tea plant, sometimes called *Thea assamica*, is merely a third variety, or perhaps, indeed, the wild type. The black and green teas are, however, mainly the growth of different districts of China, but the two kinds may be produced in either district, the difference being caused solely by the diverse methods of preparation."

Dr. Edward Smith, the most recent investigator of the action of tea, sums up its action thus:—"It increases the assimilation of food, both of the flesh and heat-forming kinds; and with abundance of food it must promote nutrition, whilst in the absence of sufficient food it increases the waste of the body."

Bohea 1 . . . White . 10, G. Ev. S. 4 China . 1788
latifolia . . . White . all G. Ev. S. 4 China . 1825
viridis 2 . . . White . 6, G. Ev. S. 4 China . 1768

THÈCE, the cases that contain the sporules of cryptogamic plants.

THÉCAPHORE, an elongated receptacle, which bears the ovary only, but not the petals nor stamens.

THEET-TSEI, or **ZIT-SI**. See *Melanorrhæa usitatissima*.

THEEZAN TEA. See *Rhámnus Theezans*.

THELÉBOLUS, *Tode*. From *thelè*, a nipple, and *boleo*, to eject. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdæcæ*. This species is found on cowdung, after rain, in June and July—*stercoreus*.

THELÉPHORA, *Ehrhart*. From *thelè*, a nipple, and *phoreo*, to bear; in allusion to the papillose surface of all the species. *Linn.* 24, Or. 9, Nat. Or. *Agaricæcæ*. The species of *Theléphora* are common upon old roots and branches of trees. *Synonymes*: 1, *Himântia candida*; 2, *Auriculària nicotidiana*—*acérina*, *Avellânæ*, biennis, byssoides, cálcea, carbonària, caryophyllæa, cinérea, cómedens, còrium, corylæa, doméstica, élégans, epidérmea, fraxinea, fúscæ, gigantæa, granulósa, hepática, hirsúta, incarnatâ, incrustans, intybæcæ, laciniatâ, lactæa 1, lactescens, Lauro-cérasi, lívida, miniatâ, nûda, ochràcæa, ochroleuca, Pâdi, pannôsâ, purpúrea, puteana, quercina, radiatâ, r. rimôsâ, rosæa, rubiginôsâ, Sambúci, sanguinolénta, sinnans, spadicea, tabacina 2, terrêstria, Thiliæ, viscôsâ.

THELOTREMA, *Acharius*. From *thelè*, a nipple, and *trema*, orifice; the protuberances of the thallus are perforated. *Linn.* 24, Or. 8, Nat. Or. *Graphidæcæ*. These plants are found on the bark of trees—*ecanthemáticum*, *Hutchinsie*, *hyménium*, *lepádinum*, *melaleucum*, *variolarioides*, v. *agelæum*.

THELYGONUM, from *thelys*, woman, and *gonu*, a knee; supposed resemblance in the joints. *Linn.* 21, Or. 9, Nat. Or. *Chenopodiæcæ*. Common garden soil suits this species; seeds—*cynocrámbe*.

THELYMITRA. Forster, who named the genus, is said to have derived it from *thelys*, woman, and *mitra*, a cap. *Linn.* 20, Or. 1, Nat. Or. *Orchidæcæ*. This is a tuberous-rooted

genus, requiring precisely the same treatment as *Disa*.

THELYPTERIS. See *Aspidium Thelypteris*.

THENÁRDIA. Kunth named this genus in honour of his friend, L. J. Thenard, a Frenchman, who has written on the chemical physiology of plants. *Linn.* 5, Or. 1, Nat. Or. *Apocynæcæ*. An interesting plant. For culture and propagation, see *Echites*.

floribunda . Blue . . 6, S. Ev. Tw. 10 Mexico 1823

THEOBROMA, *Linn.* From *theos*, god, and *broma*, food; celestial food. *Linn.* 18, Or. 1, Nat. Or. *Sterculiæcæ*. The species of *Theobroma*, or chocolate-nut, grow well in a mixture of loam and peat; and cuttings root readily in sand, under a glass, in heat. Seeds do not retain their vegetative power for a great length of time. The seeds of *T. Cacao* furnish the chocolate of the shops. The seeds are very nourishing and agreeable to most people, and are, therefore, kept in the majority of the houses in America as a necessary part of the provisions of the family. See *Guazúma*.

THEOPHRÁSTA, *Linn.* Named after *Theophrastus*, the father of natural history. *Linn.* 5, Or. 1, Nat. Or. *Myrsinæcæ*. A small, handsome tree, with a tuft of long, evergreen branches at the top of its simple stem, something like a palm-tree. It is well worth cultivating, on account of its long, holly-like leaves. A mixture of peat, loam, and sand, suits it best; and cuttings, with the leaves entire, root readily in sand, under a glass, in heat. Bread is said to be prepared from the pounded seeds of this tree in St. Domingo, where it is called *Le Petit Coco*. See *Caviya*.

Jussieui . White . 7, S. Ev. T. 3 St. Domingo 1813

THERÉSIA. *Koch*. Meaning not explained by author. *Linn.* 6, Or. 1, Nat. Or. *Liliæcæ*. For culture and increase of this species, refer to *Fritillaria*.

périsca . Pa. pink . 6, F. Bl. P. 2 Mt. Ararat . 1849

THERMÓPSIS, *R. Brown*. From *thermos*, a lupine, and *opsis*, resemblance; because of the resemblance of the species to lupines. *Linn.* 10, Or. 1, Nat. Or. *Fabæcæ*. The species of *Thermópsis* are very elegant, but rather difficult to preserve. They succeed best in a light, rich soil; and the safest way of increasing them is by seed; for when the plants are separated at the roots they are very liable to suffer.

Synonymes: 1, *Anagyris barbata*; 2, *Podalyria alpina*, *Sephora alpina*; 3, *S. fabacea*, *T. rhombifolia*; 4, *T. Lupinoides*, *P. lupinoides*. See *Anagyris*.

guineensis . Yel. brn. 3, S. Her. P. 1½ Guinea . 1824

THORA. See *Ranunculus Thora*.

THORN APPLE. See *Datura*.

THOROUGH WAX. See *Bupleurum rotundifolium*.

THOUFINA, *Poiteau*. In honour of André Thouin, a distinguished professor of Agriculture in the Jardin des Plantes of Paris; died in 1820. *Linn.* 8, Or. 1, Nat. Or. *Sapindaceæ*. This shrub grows well in a mixture of sandy loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat.
 pinata 2 . . White . 6, S. Ev. S. 6 N. Spain . 1823

THREADS, long hairs like threads.

THRIFT. See *Statice*.

THRINAX, *Linn.* From *thrinax*, a fan; form of the leaves. *Linn.* 6, Or. 1, Nat. Or. *Palmaceæ*. This species succeeds in turfy loam, and is increased by seeds.

parviflora Whit. grn. 5, S. Palm. 15 Jamaica . 1778

THRINCIA, *Roth*. From *thrigkos*, battlement; the seed crown of the marginal florets. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Uninteresting plants, succeeding in common garden soil; and increased by seeds. *Synonymes*: 1, *Hyoseris hispida*; 2, *Apargia tuberosa*, *Leontodon tuberosus*, *Thrinicia pruinosa*—*hirta*, *hispida*, *maroccana* 1, *tuberosa* 2.

THROAT, the orifice of a flower.

THROATWORT. See *Campánula Cervicaria*.

THROATWORT. See *Campánula Trachelium*.

THROATWORT. See *Trachelium*.

THRYALLIS, *Linn.* A name given by the Greeks to *Verbascum*, which is derived from *thrauo*, to break; however, the present plant has nothing to do with the plant of the Greeks, except in having yellow flowers. *Linn.* 10, Or. 3, Nat. Or. *Malpighiaceæ*. This plant succeeds in a mixture of loam and peat; and ripened cuttings root in sand, under a glass, in heat.

brachysetchys . Yel. . 8, S. Ev. Cl. 6 Rio Jan. 1823

THÚJA, *Linn.* From *thyon*, a sacrifice; the resin of the Eastern variety is used instead of incense at sacrifices. Why it is called *Arbor Vitæ* is not known, unless it be on account of the supposed medicinal qualities of its berries. In the East, the cypress is called the tree of life; and its berries are considered a cure for

all diseases. *Linn.* 21, Or. 10, Nat. Or. *Pinnaceæ*. In Britain the species of *Arbor Vitæ* can only be considered as ornamental, low shrubs or trees, well deserving of being cultivated, especially *T. pëndula*; which, on account of its very graceful, long, slender, pendulous shoots, ought to be in every collection. The American and European kinds succeed well in any soil or situation, but prefer low, sheltered, and swampy places. The more tender species, natives of China, require, when young, the protection of the greenhouse. They are all readily increased by seeds, either imported from the places of their natural growth, or gathered from the trees in this country; some of the rarer kinds, as *T. pëndula*, are propagated by cuttings. *Synonymes*: 1, *Libocèdrus chilënsis*; 2, *L. chilënsis*; 3, *T. pyramidalis*; 4, *T. tatarica*; 5, *L. tetragöna*; 6, *T. McNziësi*, *T. Craigiana*, *Libocèdrus decurrens*. See *Cupressus*, *Biota*, *Callitris*, *Pre-nëla*, *Libocèdrus*, and *Widdringtonia*.

THUNBERGIA, Linn. In honour of Charles P. Thunberg, F.R.S., a celebrated traveller and botanist. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceæ*. A genus of extremely pretty plants when in blossom. They succeed best in a mixture of sandy loam and leaf mould, and are readily increased by cuttings or seeds. *Synonymes*: 1, *Hexacëtris coccinea*, *T. pëndula*. See *Hexacëtris* and *Meyënia*.

THYMBA, Linn. *Thymbra* is the Greek name of a sweet-scented herb. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. This genus is well adapted for rock-work, or growing in pots among alpine plants. A gravelly soil suits it best, and it is readily increased by young cuttings or seeds. *Synonyme*: 1, *T. verticillata*.

ciliata . . .	Violet . 6, F. Ev. S. 1½	S. Eur. . .	1824
spicata 1 . . .	Pa. pur. 6, F. Ev. S. 1½	Levant . . .	1699

THYMBA. See *Satureja Thymbra*.

THYME. See *Thymus*.

THYMELEACEÆ, or DAPHNADS. The Mezereon (*Daphne Mezereum*) and Spurge laurel (*Daphne Laureola*) are two types of the habits of the order; the bark of all the species is so caustic, that, if chewed, it causes excessive pain. They all deserve cultivation.

THYMUS, Linn. From *thumos*, courage, strength, the smell of thyme being reviving; or from *thuo*, to perfume, being formerly used for incense in the temples. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Well-known under shrubs or herbs, preferring an exposed situation, and a dry, light, sandy soil. They are of very easy culture, and may be increased with facility either by divisions, slips, cuttings, or by seeds sown in March or April. Some of the rarer species may be grown in pots among alpine plants, and protected in winter. The different purposes to which Thyme is applied are so well known, as not to require any notice here. *Synonymes*: 1, *T. aciculäris*, *odoratissimus*, *Zygis*; 2, *T. crëticus*, *marinösci*, *Satureia capitata*; 3, *Thymbra ciliata*; 4, *Thymus Marschalkianus*; 5, *T. easërens*; 6, *T. citri-odörus*; 7, *T. lanuginösus*; 8, *T. montänus*, *nummularius*; 9, *T. collinus*. See *Acynus*, *Calamintha*, *Mënthä*, *Melissa*, *Micromeria*, *Nëpeta*, and *Pycnanthemum*.

TILE ROOT. See *Geissorhiza*.

TILIA, *Linn*. The etymology of this word is entirely unknown; in Dutch it is called *Linden*, in Anglo-Saxon *Lind*, and in English *Lime-tree*. *Linn* 13, Or. 1, Nat. Or. *Tiliaceae*. Ornamental, lofty-growing trees, well suited for avenues and parks. They thrive well in any soil, and are increased by layers or seeds; if by layers, the tree must be cut down close to the ground, and from its roots a great number of shoots are produced, in the following year; these will be strong enough to lay down the following autumn. Trees raised from seed are far preferable to those raised from layers. The Russian bass-mats are made from the inner bark of the lime-tree; while the wood, from its being light and white, is much used by the carver, and musical instrument-maker.

TOCOYENA, *Aublet*. *Tocoyena* is its name in Guiana. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceae*. This species succeeds well in sandy peat, mixed with a little loam; it is increased by cuttings of the young wood, in sand, under a glass, in heat. *Synonymy*: 1, *Meriania speciosa*.

longiflora 1 . . . Yel. . . 5, S. Ev. S.	6 Guiana . . 1826
--	-------------------

TODDÁLIA, *Jussieu*. From *Kaka-Toddali*, the name of *T. aculeata* in Malabar. *Linn.* 21, Or. 5, Nat. Or. *Xanthoxylaceae*. Interesting shrubs, succeeding best in a mixture of loam, peat, and sand; and cuttings planted in sand will root readily, if placed under a glass, in heat. The bark of the root of *T. aculeata* is said to be employed as a cure for the remittent fevers caught in the jungles of the Indian hills. *Synonymy*: 1, *Scopdolia aculeata*, *Paulownia asiatica*; 2, *Rubentia angustifolia*.

aculeata 1 . . . White . . . 5 S. Ev. S.	6 E. Ind. . . 1790

TOMATOES. See *Solanum Lycopersicum*.

TOMENLOSE, covered with dense white down.

TOMÉNTUM, dense, close, white hairs, or down.

TOMEX. See *Tetranthéra*.

TONCHÁT. See *Maránta Tonchát*.

TÓNGO, or TONQUIN BEAN. See *Dipterix*.

TONIC, bracing, corroborative.

TONQUIN BEAN. See *Dipterix odorata*.

TONSÉLLA. See *Salácia*.

TOONA. See *Cedrèla Toona*.

TOOTHACHE-TREE. See *Xanthoxylum*.

TOOTHED, divided, so as to resemble teeth.

TOOTHLETTERED, furnished with little teeth.

TOOTHWORT. See *Lathrœa*.

TOPICAL, local, confined to some particular place.

TORA. See *Cássia Tora*.

TORCH-THISTLE. See *Cactus*.

TORBYLIUM, Tournefort. An ancient Greek name, of unknown meaning. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. Uninteresting annuals. The seeds should be sown in the open border—*lusitanicum, maximum, peregrinum, sifolium, syriacum*. See *Condylocarpus*.

TORËNIA, Linn. In honour of Olof Toren, a Swedish clergyman, who discovered *T. asiatica*, and other plants in China. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceae*. For culture, &c., see *Herpestis*. *Synonymes*: 1, *T. vagans*; 2, *T. diffusa*, *Gratiola alata*.

TORËNIA. See *Vandèllia*.

TÓRILIS, Sprengel. Not explained. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. The seed of these plants may be sown in the open ground. *Synonymes*: 1, *Caucalis Anthriscus*; 2, *C. arvensis, helvetica*; 3, *Scandix trichosperma*—*anthriscus* 1, infesta 2, neglecta, nodosa, trichosperma 3, tuberculata.

TORMENTILLA, Linn. From *tormentum*, pain; alluding to its supposed efficacy in tooth-ache, as well as to its being supposed to cure diseases of the bowels. *Linn.* 12, Or. 3, Nat. Or. *Rosaceae*. British herbaceous plants, not worth growing, except in botanical gardens. The roots of *T. erecta* are so astringent as to be used in the western isles of Scotland for tanning leather; for which purpose they are superior to oak bark. The root is likewise one of the most efficacious of our indigenous aromatic astringents, and may be used with great effect in cases where medicines of this class are proper. It is usually given in decoo-

tion. *Synonymes*: 1, *T. officinalis*; 2, *Potentilla humifusa*—erecta 1, humifusa 2, reptans. **TOROSE,** uneven, alternately elevated and depressed.

TORRËYA, Arnott. In honour of Dr. John Torrey, author of "American Flora." *Linn.* 22, Or. 13, Nat. Or. *Taxaceae*. *T. taxifolia* is usually known as the Stinking Cedar, on account of its unpleasant smell when burnt. The treatment same as *Táucus*. *Synonyme*: 1, *Táucus montana*.

Humboldtii	Apetal 4, H. Ev. T.	80 Mexico	1848
myristica	Apetal 4, H. Ev. T.	30 Californ.	1851

TORFULA, Hedwig. From *torqueo*, to twist; in allusion to the singular manner in which the teeth of the peristome are twisted together. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. Small plants, generally found in thick tufts. They are common to nearly all situations. The character from which the genus has received its designation will always faithfully indicate the species. *Synonymes*: 1, *Zigotrichia cylindrica*; 2, *T. rigida*; 3, *T. imberbis, unguiculata*; 4, *T. nervosa*; 5, *T. apiculata, aristata, barbata, humilis, mucronulata*—brevirostris, convoluta, cuneifolia, cylindrica 1, enervis 2, fallax 3, f. brevicollis, linoides, gracilis, g. viridis, muralis, m. brevipila, revoluta 4, rigida, ruralis, r. lævipila, stellata, subulata, s. obtusa, tortuosa, unguiculata 5.

TÓRULA, Persoon. A diminutive of *torus*, a twisted cord; appearance of the filaments. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceae*. Found upon dead stems of plants—*cylindrica, Eriophori, herbærum, monilioides, ovalispóra*. See *Streptium*.

TORULOSE, slightly torose.

TORUS, the same as *Thálamus*.

TOUCH-ME-NOT. See *Impatiens*.

TOURNEFORTIA, Linn. In memory of Joseph Pitton de Tournefort, the distinguished author of an arrangement of plants under the title of "*Institutiones Rei Herbariæ*," and other botanical works, from 1694 to 1717; his first work "*Institutiones*," laid the foundation of the arrangement now followed, called the Jussieuan, or Natural System. *Linn.* 19, Or. 1, Nat. Or. *Ehretiaceae*. The species of *Tournefortia* are hardly worth cultivating for ornament. They are of the easiest management; and are readily increased by cuttings, in sand, those of the stove species in heat. *Synonymes*: 1, *Messerschmidia caracasana*; 2, *Heliotropium gnaphalodes*; 3, *Messerschmidia umbellata, M. velutina*; 4, *Argúzia montana, Messerschmidia Argúzia, T. Argúzia*. See *Heliotropium* and *Messerschmidia*.

TRACHYSPERMUM, *Link.* From *trachys*, rough, and *sperma*, a seed; in reference to the mucated fruit. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. An uninteresting plant, of very simple culture, and increased by seeds. *Synonymes*: 1, *Banimum rigens*, *Conium rigens*—*rigens* 1.

TRACHYSTEMON. See *Borago*.

TRACHYSTÉLLA, *De Candolle*. From *trachytes*, roughness; because the leaves, which have a very rough surface, are used for polishing wood, and also metal. *Linn.* 13, Or. 5, Nat. Or. *Dilleniaceae*. This species succeeds well in a mixture of peat and loam, and ripened cuttings root freely in sand, under a glass.

actaea . . . White . . 6, G. Ev. Cl. 5 China . 1823

TRADESCÁNTIA, *Linn.* In honour of John Tradescant, gardener to Charles I. *Linn.* 6, Or.

1, Nat. Or. *Commelynaceae*. Interesting plants, succeeding well in any rich, light soil; and readily increased by division. *Synonymes*: 1, *T. multiflora*; 2, *Cyanditis vittata*. See *Campanella* and *Cyanditis*.

TRAGORIGANUM. See *Thymus Tragoriganum*.
TRAGUS. See *Caléndula Tragus* and *Salsola Tragus*.

TRANSVERSELY-FLEXUOSE, waved in a cross direction.

TRAPA, *Linn.* Abridged from *calotrapa*, the Latin name of an instrument called *caltrops*, furnished with four spines, formerly used in war to impede the progress of cavalry; the fruit of some of the species is furnished with four spines. *Linn.* 4, Or. 1, Nat. Or. *Oenagrææ*. Aquatic plants, requiring a rich, loamy soil, and to be grown in a cistern, or large pot or tub of water; increased by seeds. The large seeds of *T. bispinosa* are sweet and eatable; they form an extensive article of cultivation. In Cashmere and other parts of the East, they are common food, and known under the name of Singhara nnts.

TRAPEZIFORM, shaped like a trapezium.

TRAVELLER'S JOY. See *Clematis Vitalba*.

TRAVELLER'S JOY. See *Clematis Viorna*.

TREACLE MUSTARD. See *Glycyphola*.

TREE BEARD. See *Unea*.

TREE CELANDINE. See *Bocconia frutescens*.

TREE KALE, or **CÆSAREAN COW-CABBAGE**. See *Brassica*.

TREE MALLOW. See *Lavatera arborea*.

TREE OF SADNESS. See *Nyctanthes arbor tristis*.

TREE ONION. See *Allium prolyferum*.

TREE SORREL. See *Rumex Lunaria*.

TREFOIL. See *Trifolium*.

TREISIA. See *Euphorbia*.

TREMÁNDRA. See *Tetrathæca*.

TREMADRÁCEÆ, or **PORE-WORTS**, are small slender shrubs, something like heaths. They are all natives of New Holland, and are worth a place in plant collections.

TREMBLING AMERICAN-TREE. See *Pópulus tremula*.

TREMÉLLA, *Dillenius*. From *tremo*, to tremble; in allusion to the gelatinous texture of the plants. *Linn.* 24, Or. 9, Nat. Or. *Aguricææ*. Found growing on fallen branches of trees—*albida, biparasitica, cerebrina, clavariæformis, clavata, fimbriata, foliæca, f. violæca, intumescens, mesenterica, sarcodes*.

TRENTÉPÓHLIA, *Agardh*. In honour of M. Trentepohl, an obscure German botanist. *Linn.* 24, Or. 7, Nat. Or. *Bryacææ*. Found on rocks, on the sea-coast—*aurea, a. ilicicola, pulchella, p. chalybæa, purpurea*.

TRÉSIA. See *Euphorbia*.

TREVIRÁNTIA, *Willdenow*. In honour of Lud. Christ. Treviranus, M.D., professor of botany in the university of Bonn. *Linn.* 14, Or. 2, Nat. Or. *Gesneriææ*. This species is extremely handsome when in flower. It requires to be grown in a light, rich soil, and when the blossoms have withered, the plants should not have any more water till the roots begin again to vegetate; when they must be taken out of the pots and divided. After they are potted, they require moisture and heat to make them grow and flower in perfection. *Synonymes*: 1, *Cyrilla pulchella, T. coccinea*. See *Achimenes pulchella* 1. . Scarlet 8, S. Her. P. 1½ Jamaica 1778

TREVDA, *Hooker*. *Trevo*, the name of a Spanish botanist. *Linn.* 5, Or. 1, Nat. Or. *Rhamnæcææ*. Interesting plants, thriving in sandy loam and peat; and increased by young cuttings, in sand, under a glass.
 quinquerria . White . 6, G. Ev. S. 4 Chile . 1827
 trinervis . . Grn. yel. 6, G. Ev. S. 3 Chile . 1828

TREWIA, *Linn.* In honour of C. J. Trew, of Nuremberg, a botanical author. *Linn.* 22, Or. 12, Nat., Or. *Euphorbiææ*. This species succeeds well in sandy loam and peat; and is readily increased by cuttings, in sand, under a glass, in heat. *Synonyme*: 1, *T. macrophylla nudiflora* 1. . Pink . 5, S. Ev. S. 5 E. Ind. 1796

TRIANDROUS, having three stamens.

TRIANTHEMA, *Linn.* From *treis*, three, and *anthos*, a flower; flowers usually disposed in threes. *Linn.* 10, Or. 2, Nat. Or. *Portulacæææ*. Plants of little interest. Any common garden soil suits them; increase is by seeds.

decandra . . Green . 7, S. A. 1½ E. Ind. 1824

TRICERÁTIA. See *Lucepédia*.

TRÍCEROS. See *Lucepédia*.

TRICHÆTA, *Link.* From *treis*, three, and *chaete*, a bristle. *Linn.* 3, Or. 2, Nat. Or. *Grami-*

- nàcæ*. A mere weed; increased by seeds. *Synonymes*: 1. *Bròmus ovàtus*, *Trisetum ovàtum*, *Avèna ovàta*—*ovàta* 1.
- TRICHIA**, *Hall*. From *thrix*, a hair; in allusion to the internal mass of elastic fibres gradually expanding after the head bursts. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdàcæ*. Small, pin-headed plants, found upon rotten wood. *Synonyme*: 1. *Sphærocàrpus fragilis*—*fàllax* 1, *nitens*, *ovàta*, *reticulàta*. See *Arçyria*, and *Stemonitis*.
- TRICHILIA**, *Linn.* From *tricha*, ternary; the stigma is three-lobed, and the capsule three-celled and three valved. *Linn.* 10, Or. 1, Nat. Or. *Meliàcæ*. These trees succeed in a mixture of loam and peat; and cuttings of the ripened wood, with the leavcs entire, will root in sand, under a glass, in heat. *Synonyme*: 1. *T. glàbra*.

- TRICHOCLADUS**, *Persoon*. From *thrix*, a hair, and *klados*, a branch; the branches are clothed with stellate hairs. *Linn.* 22, Or. 1, Nat. Or. *Hamamelidàcæ*. For culture and propagation, see *Trevða*.
- crinitus* . . . Green . 8, G. Ev. S. 2 C. G. H. 1823
- TRICHODERMA**, *Persoon*. From *thrix*, a hair, and *derma*, a skin; downy covering. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdàcæ*. Powdery masses, found upon dead branches—*viride*.
- TRICHODESMA**, *R. Brown*. From *thrix*, a hair, and *desmos*, a bond; the anthers are bound to each other by hairs. *Linn.* 5, Or. 1, Nat. Or. *Boraginàcæ*. Worthless half-hardy annuals, of the easiest culture. *Synonymes*: 1, *Borago zeylanica*, *T. kotschyànum*—*africanum*, *indicum*, *zeylanicum* 1.
- TRICHODIUM**, *Schrader*. From *thrix*, a hair, and *eidos*, like; hair-like appearance of inflorescence. *Linn.* 3, Or. 2, Nat. Or. *Graminàcæ*. Worthless plants, readily increased by seeds in common soil—*alpinum*, *caninum*, *decumbens*, *diffusum*, *elegans*, *flavescens*, *hybridum*, *laxiflorum*, *neglectum*, *rubrum*, *rupèstre*, *setaceum*.
- TRICHOGLÓTTIS**, *Lindl.* From *thrix*, hair, and *glotta*, a tongue. *Linn.* 20, Or. 1, Nat. Or. *Orchidàcæ*. A small epiphyte, not possessing much beauty, and requiring similar treatment to *Maxillaria*.
- pallens* . . . Yel. grn. 8, S. Epi. ½ Manilla . 1849
- TRICHOGYNE**, *De Candolle*. From *thrix*, hair, and *gyne*, a style; styles covered with hairs. *Linn.* 19, Or. 2, Nat. Or. *Asteracæ*. Sow the seeds in any common garden soil.
- cauliflora* . . . White . 6, H. A. 1½ Egypt
- TRICHOLENDA**, *Schrader*. From *thrix*, a hair, and *chlaina*, a cassock. *Linn.* 3, Or. 2, Nat. Or. *Graminàcæ*. A pretty grass, succeeding in loam and peat; and increased by seeds. *Synonymes*: 1, *Saccharum Teneriffæ*, *Panicum Teneriffæ*.
- micrantha* 1 . . . Apetal . 6, F. Grass 1 Teneriffe . 1825
- TRICHÓMANES**, *Linn.* From *thrix*, a hair, and *manos*, soft; the shining stems appear like fine hair. *Linn.* 24, Or. 1, Nat. Or. *Polypodidàcæ*. A genus of elegant ferns. A mixture of loam and peat suits them best; and they are increased by division or seeds. *Synonyme*: 1, *Hymenophyllum alatum*. See *Davallia*.

TRICHOPETALUM, Lindley. From *thrix*, a hair, and *petalon*, a petal; the inner series of the perianth is fringed. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. This curious genus succeeds best if planted out in a pit, or frame effectively drained, with a southern aspect, and from which the frost is entirely excluded; it will also succeed in pots, well drained, in a light, rich soil; increased by divisions. *Synonymes:* 1, *Anthericum plumosum*.

gracile	Grnsh.	7, F. Her. P. 2	Chils 1828
stellatum	White	4, F. Her. P. 1	Chilie 1829

TRICHOPHORUM, Richard. From *thrix*, a hair, and *phoreo*, to bear; the inflorescence resembles a bunch of hair. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceae*. The species are found in peat bogs. Their seeds are covered with a silky down, of which cloth, paper, and wicks of candles have been made; and with which pillows and cushions are sometimes stuffed. *Synonyme:* 1, *Eriophorum montevidense*.

alpinum	Apetal.	7, H. Graes $\frac{1}{2}$	Scotl., bogs.
cyperinum	Apetal.	7, H. Graes 2	N. Amer. 1802

Lockhartii, montevidense 1.

TRICHOPHYLLUM. See *Bahia* and *Eriophyllum*.
TRICHOPHYLLA, Lindley. From *thrix*, a hair, and *phyllon*, a cap; in allusion to the anther being concealed below a cap surmounted by three tufts of hair. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. This is a beautiful and very curious genus. It appears to succeed best when treated as the *Maxillariae*. *Synonyme:* 1, *T. marginata*.

cordata, cucumerina, lobata.
TRICHOSMA, Lindley. From *thrix*, hair, and *kosmos*, ornament. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. A very pretty epiphyte, which thrives if fixed upon a block of wood or fern roots. *Synonyme:* 1, *Caelogyne coronaria*.

suavis	Wht. yel. 6, S. Epi. 1 E.	Indies	1840
--------	---------------------------	--------	------

TRICHOSPERMUM. See *Aschynanthus*.

TRICHOSPORUM. See *Aschynanthus*.
TRICHOSPORA, Linn. From *thrix*, a hair, and *stema*, a stamen; in allusion to the slender, hair-like stamens. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceae*. The seeds of *Trichostema* should be sown in the open border. See *Isanthus*.

dichotomum	Blue 8, H. A. 1	N. Amer.	1759
lineare	Blue 7, H. A. 1	N. Amer.	1759

TRICHOSTOMUM, Hedwig. From *thrix*, a hair, and *stoma*, the mouth; the divisions of the mouth of the theca are very fine. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. Dark green tufts, found on mountains. *Synonymes:* 1, *Dicranum aciculare*; 2, *T. ericoides*; 3, *D. ellipticum*; 4, *D. patens, obtusum*; 5, *D. polyphyllum, cirrhatum*—*aciculare* 1, *canescens* 2, *ellipticum* 3, *fasciculare, heterostichum, lanuginosum, microcarpon, patens* 4, *polyphyllum* 5. See *Dicranum* and *Didymodon*.

TRICHOHECIUM, Link. From *thrix*, a hair, and *heke*, a seed-case; the thecae are intermixed with a mass of hair-like filaments. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceae*. Found upon decayed wood—*heterosporum, roseum*.

TRICHTOMOUS, divided into threes.

TRICOCCLUS, a fruit of three one-seeded cells, as that of *Euphorbia*.

TRICORYNE, *R. Brown*. From *treis*, three, and *koryne*, a club; in allusion to the form of the capsules. *Linn.* 6, Or. 1, Nat. Or. *Liliacæ*. The species of this genus thrive well in a light rich soil; and are readily increased by division; *T. simplex* is raised from seeds.

clätior . . . White 6, G. Her. P. 1 $\frac{1}{2}$ N. Holl. 1824

TRICRATUS. See *Abrönia*.

TRICUSPIDATE, having three points.

TRICÜSPIS, *Beauvois*. From *treis*, three, and *cuspidis*, a point; in allusion to the structure of the flowers. *Linn.* 3, Or. 2, Nat. Or. *Graminacæ*. According to Pursb, this is a very valuable grass for mountain meadows. In Pennsylvania it produces two excellent crops every year, and lasts many years without manure, even upon indifferent soils; increased by seeds. *Synonyme*: 1, *Poa cærulescens*.
quinquéfida 1. Apetal 6, H. Grass. 3 N. Amer. 1820

TRIDACTYLITES. See *Saxifraga*.

TRIDAX, *Linn.* From *tridaxnos*, thrice-bitten: the rays of the flower are divided into three. *Linn.* 19, Or. 2, Nat. Or. *Asteracæ*. A hardy annual, of no interest. *Synonyme*: 1, *Balbisia elongata*—procumbens 1.

TRIDENS, *Roemer*. From *tridens*, a trident. *Linn.* 3, Or. 2, Nat. Or. *Graminacæ*. *Synonymes*: *Triodia cuprea*, *Poa quinquefida*—quinquefida.

TRIDENTATE, having three teeth.

TRIDÉNTEA, *Haworth*. From *tridens*, a trident; the segments of the outer corona are tridentate. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadacæ*. Nearly allied to the genus *Stapelia*; which see, for culture and propagation. *Synonymes*: 1, *Stapelia gemmiflora*; 2, *S. hircäsa*; 3, *S. rugosa*; 4, *S. vctüla*.

TRIENTALIS, *Linn.* From *triens*, one-third; probably in allusion to the humble growth of the species. *Linn.* 7, Or. 1, Nat. Or. *Primulacæ*. Interesting little plants, thriving in a light rich soil; and readily increased by division or seeds.

americana . . . White 7, H. Her. P. $\frac{1}{2}$ N. Amer. 1816
europæa . . . White 5, H. Her. P. $\frac{1}{2}$ Brit., woods.

TRIFARIOS, arranged in three rows.

TRIFID, divided into three.

TRIFOLIOLATE, having three leaflets.

TRIFOLIUM, *Linn.* From *tres*, three, and *folium*, a leaf; all the species of the genus have trifoliate leaves. The French call it *triföle*, and the English *trefoil*, or clover. *Linn.* 17, Or. 4, Nat. Or. *Fabacæ*. The white, red, and yellow clover are among the most valuable herbage plants adopted in European agriculture. *Lucern* has been recommended as superior to clover, and *saintfoin* and various other

leguminous plants have been highly extolled; yet the red clover for mowing, and the white for pasturage, far excel all other plants in these respects. All the species thrive in common garden soil, and many of them, being very showy, are well suited for ornamenting the flower-borders. The perennial kinds are readily increased by dividing the plants at the root in spring, or by seeds. The seeds of the annual and biennial kinds only require sowing in the open border. Those species marked frame and greenhouse, require protection only in winter. *Synonymes*: 1, *T. Cupäni*; 2, *T. gracile*; 3, *T. hispidum*; 4, *T. pictum*; 5, *T. Molinærii*; 6, *T. cönicum*; 7, *T. cönicum*; 8, *T. obscurum*; 9, *T. aristatum*; 10, *Lupinaster pentaphyllum*; 11, *T. äbens*; 12, *T. irregulare*; 13, *Lupinaster macrocephalum*; 14, *T. strictum*; 15, *T. campêtre*; 16, *Lupinaster oblongifolium*; 17, *T. squarrosum*; 18, *T. pratense flavicans*; 19, *T. rectirvum*. See *Melilotus*, *Pocockia*, *Stylosanthes*, and *Trigonella*.

TRIGNAL, having three angles.

TRIGONÉLLA, *Linn.* From *treis*, three, and

gonu, an angle; the vexillum of the flower is flat, while the wings spread and give it a triangular appearance. *Linn.* 17, Or. 4, Nat. Or. *Fabaceae*. These plants are not very ornamental. They all succeed best in a light sandy soil; the perennial kinds are readily increased by dividing the plants at the root, or by seeds; while the annual kinds only require sowing in the open border in spring. The seeds of *T. Fienumgræcum* are used in fomentations, for softening, maturing, and dispersing tumours. *Synonymes*: 1, *Melilotus procumbens*; 2, *M. cæruleus*; 3, *Trigonella flexuosa*; 4, *Trifolium ornithopodioides*; 5, *Trigonella media*; 6, *M. hamosa, uncinata*. See *Lötus*.

TRIGONIDIUM, *Lindley*. From *trigona*, a triangle, and *eidos*, like; in allusion to the triangular form of several parts of the plant. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. This is rather an interesting genus of easily cultivated, though slow growing plants. They require to be grown in good fibrous peat, raised a little above the pot, which must be thoroughly drained.

TRIGUERA. Cavanilles named this genus after D. Trigueros, a Spanish botanist who first discovered the plant. *Linn.* 5, Or. 1, Nat. Or. *Malvaceae*. For culture and propagation, see *Verbascum*. *Synonyme*: 1, *Verbascum Osbeckia*.
ambrosiaca 1 . Pursh. vio. 7, H. A. 2 Spain 1762

TRIGYNOUS, having three styles.

TRÍLIUM, *Linn.* From *trilia*, triple; the calyx has three sepals, the corolla three petals, the pistil three styles, and the stem three leaves.

Linn. 6, Or. 3, Nat. Or. *Melanthaceæ*. Curious little tuberous-rooted plants, succeeding best in a bed of peat soil, and rather slowly increased by dividing the roots, or by seeds. The roots of all the species are violently emetic, and their mawkish, rather nauseous berries, are at least suspicious. *Synonymes*: 1, *T. rhomboideum*; 2, *T. pendulum*; 3, *T. pictum*; 4, *T. erythrocarpum*; 5, *T. erectum* var.; 6, *T. pusillum*.

TRILLIÆÆ, or PARIS. A small group nearly related to *Sarsaparillas*; they are all natives of temperate climates. The *Paris quadrifolia*, of our woods, gives their general character.

TRILOCULAR, having three cells.

TRIMEZIA, Hubert. Meaning unknown. *Linn.* 3, Or. 1, Nat. Or. *Iridæcæ*. For culture, &c., see *Iris*. *Synonyme*: 1, *Iris martinicensis*.

meridensis 1 . Yellow . 4, H. Bl. P. 1 Merida. 1848

TRÍNIA, Hoffmann. In honour of Dr. Trinius, a famous Russian botanist. *Linn.* 5, Or. 2, Nat. Or. *Apiacæ*. Worthless hardy biennials. *Synonymes*: 1, *Pimpinella dioica*; 2, *P. dichotoma, ramosissima, glauca*; 3, *T. Henningi*—Hoffmanni 1, Kitaibeli 2, vulgaris 3.

TRIÓDIA, R. Brown. From *treis*, three, and *odous*, teeth; the palea. *Linn.* 3, Or. 2, Nat. Or. *Graminæcæ*. A perennial hardy grass, increased by seeds. *Synonyme*: 1, *Poa decumbens*—decumbens 1.

TRIÓNUM. See *Hibiscus Tridnum*.

TRIOPTERIS, Linn. From *treis*, three, and *pteron*, a wing; the carpels are each furnished with three wings. *Linn.* 16, Or. 6, Nat. Or. *Malpighiæcæ*. A genus of very elegant twiners, extremely difficult to bring into flower in this country. They grow well in a mixture of loam and peat; and cuttings of the ripened wood will root in sand, under a glass, in heat. See *Tetrápteris*.

<i>jamaicensis</i> . . .	Yellow 5, S. Ev. Tw. 10	10	Jamaica . 1822
<i>sericea</i> . . .	Yellow 5, S. Ev. Tw. 8	8	Amer. . 1823
<i>lucida</i> . . .	Pink . 5, S. Ev. Tw. 8	8	Cuba . . 1822

TRIOSTEUM, Linn. From *treis*, three, and *osteon*, a bone, in allusion to the three hard seeds. *Linn.* 5, Or. 1, Nat. Or. *Caprifoliæcæ*. The species thrive well in a light rich soil; and are increased by cuttings, or by parting at the roots. *T. perfoliatum* is a mild cathartic.

Its dried and roasted berries have been used as coffee.

<i>angustifolium</i> . . .	Yellow 6, H. Her. P. 1	1	Virginia 1699
<i>perfoliatum</i> . . .	Dk. red 6, H. Her. P. 1	1	N. Amer. 1730

TRIBE ROCK. See *Gyróphora*.

TRIPETALOUS, having three petals.

TRIPHÁSIA, Loureiro. From *triphasios*, triple; the calyx is three-toothed, and there are three petals. *Linn.* 6, Or. 1, Nat. Or. *Aurantiacæ*. This plant succeeds well in turfy loam and peat; but it must be carefully watered during winter. Cuttings, ripened at the base, will root in sand, under a glass, in heat. *Synonymes*: 1, *T. aurantiola*; 2, *Limonia trifoliata*.

<i>trifoliata</i> 1 . . .	White 6, G. Ev. S. 2	2	China . . 1798
---------------------------	----------------------	---	----------------

TRIPHÓRA. See *Pogónia*.

TRIPHYSÁRIA, Fischer. From *tris*, three, and *physca*, a bladder; three segments of the lower lip of corolla saccate. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariæcæ*. A hardy annual, growing in any common light soil, and propagated by seeds.

<i>versicolor</i> . . .	Wht, red 6, H. A. 2	2	California 1837
-------------------------	---------------------	---	-----------------

TRIPINNÁRIA. See *Tandæium*.

TRIPINNATE, thrice pinnate.

TRIPLARIS, Linn. From *triplex*, triple; the parts of fructification are disposed in threes. *Linn.* 22, Or. 3, Nat. Or. *Polygonæcæ*. For culture and propagation, see *Tréwia*.

<i>americana</i> . . .	Pa. yel. 6, S. Ev. T. 50	50	S. Amer. . 1824
------------------------	--------------------------	----	-----------------

TRIPLE-NERVED, throwing out three side nerves a little above the base.

TRIPÓLIUM. See *Aster*.

TRÍPSACUM, Linn. From *tribo*, to thresh; in allusion to the purpose to which its grain may be applied. *Linn.* 21, Or. 3, Nat. Or. *Graminæcæ*. These plants grow in any rich mould, and are increased by division. They are forage grasses of the West Indies—*dactyloides, monostachyon*. See *Anthéphora*.

TRÍPTERIS. See *Caléndula*.

TRÍPTILION, Ruiz and Pavon. From *treis*, three, and *ptilon*, a feather; on account of the three divisions of the pappus. *Linn.* 19, Or. 1, Nat. Or. *Asteræcæ*. A genus of very pretty annuals. The seeds must be raised on a hot-bed in spring, and planted out in the open border about the end of May. *Synonyme*: 1, *Naussaviva spinosa*.

<i>cordifolium</i> . . .	White 7, H. A. 1	1	Chile . . 1824
<i>epinosum</i> 1 . . .	Blue . 7, H. A. 1	1	Chile . . 1827

TRÍQUETROUS, having three sides or angles.

TRISECTED, cut into three parts.

TRISÉTUM, Persoon. From *treis*, three, and *seta*, a bristle, on account of the three awns of the flower. *Linn.* 3, Or. 2, Nat. Or. *Graminæcæ*. According to the Woburn experiments, *T. pubescens* is well suited for a permanent pasture on light rich soils; it is hardy, early, and more productive than many other kinds in similar soils. *Synonymes*: 1, *Avena planiculmis, alpina*; 2, *A. flavescens*; 3, *A. pubescens*; 4, *A. striata*—*airoides, Alopecurus, alpestre, alpinum* 1, *argenteum, brevisfolium, carpaticum, condensatum, distichophyllum,*

- flavescens 2, Læfingianum, micranthum, neglectum, parviflorum, pennsylvanicum, pilosum, pubescens 3, rigidum, striatum 4, tenue. See *Trichæta*.
- TRISTANIA**, *R. Brown*. In honour of M. Tristan, a French botanist. *Linn.* 18, Or. 2, Nat. Or. *Myrtaceæ*. Very pretty shrubs, thriving well in loam, peat, and sand, and increased readily by half-ripened cuttings, planted in sand, under a glass. *Synonymæ*: 1, *T. albens*; 2, *T. laurina*.

- TRITURATED**, reduced to powder by pounding.
- TRIUMFETTA**, *Linn.* In honour of John Triumfetti, an Italian botanist and author. *Linn.* 11, Or. 1, Nat. Or. *Tiliaceæ*. Uninteresting plants, chiefly under-shrubs, growing in common garden soil; cuttings and seeds. *Synonymæ*: 1, *T. macrophylla*—althæoides 1, angulata, aërea, glandulosa, grandiflora, havanensis, heterophylla, Lappula, micropetala, oblongata, pilosa, rhombolœa, rotundifolia, semitriloba, suberhiculata, trichoclada, trilocularis.
- TRIURIDACEÆ**, or **TAILWORTS**. These are small perennial herbs, growing only a few inches high; they are found in the damp, shady woods of Brazil.
- TRIXAGO**. See *Bartsia*.
- TRIXIS**, *P. Browne*. From *trixos*, triple; on account of its triangular capsule, with three cells. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*. Interesting plants, of common culture. *Syno-*

- nymes*: 1, *Perdicium brasiliense*; 2, *Leuceria senecioides*.
 auriculata 1. White 8, S. Ev. S. 1½ Brazil . . 1827
 senecioides 2 White 8, H. A. 1½ Chile . . 1821
- TRIZEXIS**, *Lindley*. From *treis*, three, and *zeuxis*, a union; in allusion to the cohesion of the three sepals. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. A small plant, of no beauty. It succeeds best if fastened to a piece of wood.
 falcata . . Green . 3, S. Epi. ¼ W. Indies . 1820
- TROCHÆTIA**, *De Candolle*. In honour of M. Dutrochet, the celebrated French physiologist. *Linn.* 16, Or. 8, Nat. Or. *Byttneriaceae*. A most noble stove plant, producing snow-white blossoms, with a yellow blotch at the base of each petal. They are nearly three inches in diameter. Cuttings will root in sand under a hand-glass.
 grandiflora . Wht.yel. 12, S. Ev. S. 10 Mauritius 1842
- TROCHISCANTHES**, *Koch*. From *trochiskos*, a small wheel, and *karpós*, a flower. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. A hardy herbaceous plant, of no beauty. *Synonymes*: 1, *Ligusticum nodiflorum*—*nodiflora*.
- TROCHLEATE**, twisted like a pulley.
- TROCHOCARPA**, *R. Brown*. From *trochos*, a wheel, and *karpós*, fruit; and the cells of the fruit diverge from a common centre, like the spokes of a wheel. *Linn.* 5, Or. 1, Nat. Or. *Epacridaceae*. An extremely handsome tree. For culture and propagation, see *Epacris*. *Synonymes*: 1, *Styphelia cornifolia*.
 laurina 1 . . Yellow 6, G. Ev. T. 25 N. Holl. 1829
- TROLLIUS**, *Linn.* From *trol*, or *trolin*, an old German word, signifying something round; in allusion to the shape of the flower; whence, also, the English name Globe-flower. *Linn.* 13, Or. 6, Nat. Or. *Ranunculaceae*. Pretty border plants, thriving best in a light moist soil, and increasing by division or seeds. *Synonymes*: 1, *T. laxus*; 2, *T. ranunculinus*.

- TROMSDORFFIA**. See *Liebigia*.
- TRONGUM**. See *Solanum Tróngum*.
- TROPÆOLACEÆ**, INDIAN CRESSSES, or NASTURTIUMS. These are so well-known inhabitants of our gardens and greenhouses, that any description here would be unnecessary.
- TROPÆOLUM**, *Linn.* From *tropaion*, a trophy; the leaves resemble a buckler, and the flowers an empty helmet. *Linn.* 8, Or. 1, Nat. Or. *Tropæolaceae*. All the species are very showy when in flower, and are therefore desirable acquisitions to every collection. The greenhouse and frame species thrive in any light rich soil; and are readily increased by cuttings in the same kind of soil, under a glass. The annual species should be sown in the open ground in spring. The tuberous-rooted kinds succeed well in the open air, in a sheltered situation, during summer; in winter they may be taken up and kept in sand until spring, when they may be again planted out into the open ground. The seeds of *T. majus* are pickled, and used as capers, to which they are preferred by some. The roots of *T. tuberosum* are eaten in Peru. *Synonymes*: 1, *T. polyphyllum*; 2, *T. edile*; 3, *T. peregrinum*. See *Chymocarpus*.

TRUE DODDER. See *Cuscuta Epithymum*.

TRUE PARSLEY. See *Apium Petroselinum*.

TRUE SERVICE. See *Pyrus Sorbus*.

TRUFFLE. See *Tuber*.

TRUMPET-FLOWER. See *Bignonia*.

TRUMPET-WOOD. See *Cecropia*.

TRUNCATUS, blunt, as if cut off.

TRYMÆLIUM, Fenzl. Not explained. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. This species is well deserving a place in every collection of greenhouse plants, on account of its snow-white flowers; which, being produced in numerous loose, drooping panicles, render it a very beautiful object when in blossom; its flowers are also deliciously fragrant. The wood is said to be soft and pithy, and the plant apt to die off in winter, if overpotted, and not kept in a warm and light situation: in other respects, it may be treated as the greenhouse species of *Ceanothus*.

odoratissimum. White . 2, G. Ev. S. 4 N. Holl. 1837

TRYMÆNIUM. See *Odontoglossum*.

TUBE-FLOWER. See *Clerodendron Siphonanthus*.

TUBE OF CALYX, the tube formed by the cohesion of the sepals.

TUBE OF STAMENS, the tube formed by the cohesion of the filaments in *monadelphous* flowers.

TÛBER, Michaux. An ancient Roman name for a fungus. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. *T. cibarium* is the famous truffle, so celebrated in the annals of cookery. It grows under ground, and is found in light dry soils, in some of the southern counties; but it is much more common in Italy, Germany, and the south of France, whence immense quantities are imported. Dogs are taught to find this fungus by the smell, and to scratch it up out of the earth. An instance is recorded of a man having possessed this power. It is brought to the table boiled or stewed. It is reported to have a stimulating aphrodisiac quality, which perhaps renders it more popular than its flavour, which is trifling—*albidum, cibarium*. See *Scleroderma*.

TUBERCULÆRIA, Poda. From *tuberculum*, a pimple; warranted appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. Found upon dead branches. *Synonyme*: 1, *Clavaria cocinea*—*albida, confuens, discoidea, granulata, nigricans, vulgaris* l.

TUBERCULATUS, covered with knots or tubercles.

TUBEROSE. See *Polyánthes tuberosa*.

TUBEROUS, bearing fleshy, solid, roundish, or longish root-like underground stems, as the potato.

TULBAGHIA, Linn. In honour of Tulbagh, a Dutch governor at the Cape of Good Hope.

Linn. 6, Or. 1, Nat. Or. *Liliaceæ*. Interesting plants when in flower. They succeed well in sandy loam and peat, and are increased by offsets or seeds.

TULIP. See *Tulipa*.

TÛLIPA, Tournefort. Said to be from *Thoulyban*, its Persian name. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. A genus of very celebrated and much-prized florist's flowers. They succeed well in rich loam and sand, and are increased by offsets; new varieties are obtained from seed. The choicer kinds require to be taken up and dried after they have ceased flowering, and planted again in the autumn. They should be slightly protected in very rainy or frosty weather, or they are very liable to rot. *Synonyme*: 1, *T. acuminata*. See *Melanthium*.

Petasites, *P. hibrida*, *silvestris*.

TUSSOCK-GRASS. See *Dactylis cespitosa*.

TUTSAN. See *Androsæmum*.

TWAYBLADE. See *Listera*.

TWEDDIA, *Hooker*. In compliment to Mr. James Tweedie, an intelligent and indefatigable collector of plants in Buenos Ayres, Tucuman, S. Brazil, &c. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadacæ*. These very interesting plants succeed well in sandy loam, with a little peat mixed; and they may be readily increased by cuttings or seeds. They will prove to be nearly, if not quite hardy. See *Oxyptalum*.

caerulea . Blue 7, H. Da. Tw. 6 B. Ayres . 1836
 versicolor . Blue 7, H. Da. Tw. 6 Tucuman . 1836

TYDÆA. See *Gésnera*.

TYLÓPHORA, *R. Brown*. From *tylos*, a swelling, and *phoreo*, to bear; alluding to the ventricose pollen masses. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. Interesting plants. For culture and propagation, see *Höya*.

barbata . . . Purple . 7, S. Ev. Tw. 10 N. S. W. 1822
exilis . . . Pa. pur. . 7, S. Ev. Tw. 10 Sylhet. 1823

TYMPANÁNTHE. See *Dictyánthus*.

TYMPANIS, *Tude*. From *tympanum*, a drum; the resemblance of the young velum. *Linn.* 24, Or. 9, Nat. Or. *Helvcllæcæ*. Found upon dead alder branches—*álnea*, *conspersa*, *fraxini*.

TYNDARÍDEA, *Bory*. Meaning unknown. *Linn.* 24, Or. 1, Nat. Or. *Conservacæ*. An aquatic cryptogamic plant of botanical interest only—*anámalá*.

TYPHA, *Linn.* From *typhos*, a marsh; habitat of the species. *Linn.* 21, Or. 3, Nat. Or. *Typhacæ*. The pollen of *Typha* is inflammable like that of *Lycopodium*, and is used as a substitute for it.

ULLDA, *Persoon*. In honour of Antonio Ulloa, a Spanish naturalist. *Linn.* 5, Or. 1, Nat. Or. *Solanacæ*. This species succeeds well in decayed wood, or vegetable mould, and is increased by cuttings. *Synonyme*: 1, *Juanullda parasitica*.

parasitica 1 . Scar. or. . 6, Parasite 2 Peru . 1824

ULLUCO. See *Ullucus*.

ULLUCUS, *Lozano*. From *ulluco*, its Peruvian name. *Linn.* 5, Or. 1, Nat. Or. *Basellacæ*. The species is a native of Peru, and the roots, being tuberous, are eaten by the natives. When the potatoes in this country were attacked with disease in 1846, this plant was introduced to supply the place of the potato; but as it did not suit our palates, its culture for food was abandoned. Any common light soil will suit it, and increase is by tubers. *Synonymes*: 1, *Melloca tuberosa*, *M. peruviana*, *Basella tuberosa*.

tuberosa 1 . . Whitish . 6, F. Tu. P. 1 Peru . 1846

TYPHACÆ, or BULL-RUSHES, herbaceous plants growing in ponds and ditches. The order consists but of two genera; species of both are common in Britain, and in most of the cooler parts of the world.

TYPHALEA. See *Pavonia Typhalea*.

TYPHONIUM. See *Arum*.

TYPHULA, *Fries*. A diminutive of *Typha*, to which the heads bear a miniature resemblance. *Linn.* 24, Or. 1, Nat. Or. *Agaricacæ*. Found on rotten wood and dead leaves—*erythropus*, *filiformis*, *gracilis*, *Phacorchiza*, *tenuis*.

TYRÍMNUS. See *Càrduus*.

TYTÓNIA, *G. Don*. In honour of Arthur Tyton, F.L.S., by whom many of the oldest inhabitants of our gardens were preserved, but particularly those which were formerly cultivated by Miller, and which are now only to be found in his collection. *Linn.* 5, Or. 1, Nat. Or. *Balsaminacæ*. A beautiful aquatic plant, worthy of a place in every collection. It must be grown in large pots of water, in a rich loamy soil, and placed in a hot part of the stove. The seeds require to be sown in spring. *Synonyme*: 1, *Impatiens natans*.
natans 1 . Various . 8, S. Aq. A. 2 E. Indies . 1810

U.

ULMARIA. See *Spiræa Ulmaria*.

ULMUS, *Linn.* Supposed to be from the Saxon word *elm*, or *ulm*, a name which is applied, with very slight alterations, to the trees of this genus in all the dialects of the Celtic tongue. *Linn.* 5, Or. 2, Nat. Or. *Ulmacæ*. Fine forest trees, succeeding best when grown on strong lauds. They are increased by layers, from stools, or by grafting on the *U. montana*. *Synonymes*: 1, *U. chinénsis*; 2, *U. stricta*; 3, *U. humilis*, *microphylla*, *parvifolia*, *pumila*; 4, *U. planifolia*; 5, *U. sarniénsis*; 6, *U. viscosa*; 7, *U. ciliata*; 8, *U. pendula*; 9, *U. americana*, *montana vègeta*; 10, *U. scabra*; 11, *U. crispa*. See *Plánera*.

ULMACEÆ, or ELMWORTS, are well-known trees and shrubs, many form valuable timber. The common elm tree may be taken as an example of the order.

ULOSPÉRUM. See *Krùbera*.

ULVA, Linn. From the Celtic *ul*, water; place of growth. *Linn.* 24, Or. 4, Nat. Or. *Confer-vacææ*. Found in the ocean, on marine rocks, and in ditches. The green laver which, stewed with lemon-juice, is so much esteemed in England, is the *U. Lactuca*—bulbosa, crispa, furfuræca, Lactuca, latissima.

ULVACEÆ. See *Confervacææ*.

UMBEL, a particular arrangement of the flowers in certain plants, of which the carrot is a familiar example; the peduncles or pedicels spring from a common centre, and rise till they form a flat tuft. The difference between an *umbel* and a *corymb* is, that whilst in the latter the flowers form a flat head, they do not, as in the former, spring from a common centre.

UMBELLATE, having the flowers arranged in round flat heads, with the peduncles originating from a common centre.

UMBELLIFERÆ. See *Apiacææ*.

UMBELLULATE, disposed in small umbels.

UMBILICATE, hollowed like the navel.

UMBILICUS, the cord which attaches the seed to the placenta.

UMBILICUS, De Candolle. From *umbilicus*, the navel; the concave leaves of some species. *Linn.* 10, Or. 4, Nat. Or. *Crassulacææ*. Interesting plants, thriving well on rock-work

or on old walls; they also grow freely in pots, in a mixture of loam, peat, and sand, and are increased by offsets or seeds. *Synonymes*: 1, *Cotyledon lutea*; 2, *C. Lieveni*; 3, *C. Umbilicus*; 4, *C. serrata*; 5, *C. spinosa*, *Sedum spinosum*, *Sempervivum cuspidatum*.

erectus 1. . . Yellow 8, H. Her. P. ½ England, walls.

Lieveni 2 . . Red . 5, H. Her. P. ½ Caucasus 1836
pendulinus 3 Yellow 6, H. Her. P. ½ Britain, walls.
serratus . . Purple 6, H. Her. P. 1 Siberia . . 1732
spinosa 5 . . White . 6, F. Her. P. ½ Siberia . . 1790

UMBONATE, having a rounded protuberant centre, like an ancient shield.

UMBRELLA-TREE. See *Hibiscus guineënsis*.

UMBRELLA-WORT. See *Oxybaphus*.

UNARMED, destitute of prickles or spines.

UNCARIA, Schreber. From *uncus*, a hook; the old petioles are converted into hooked spines. *Linn.* 5, Or. 1, Nat. Or. *Cinchonacææ*. For culture and propagation, see *Nauclea*. *Synonymes*: 1, *Nauclea Gâmbir*.
Gâmbir 1 . Pa. red 5, S. Ev. Cl. 10 E. Indies 1825
sensilifrutosa Pa. red 5, S. Ev. Cl. 10 E. Indies 1829

UNCINATE, hooked.

UNCINA, Persoon. From *oginkos*, a hook; alluding to the awn. *Linn.* 21, Or. 3, Nat. Or. *Cyperacææ*. Plants resembling sedge; increased by division. *Synonyme*: 1, *Carex uncinata*—jamaicënsis 1, phleicides.

UNCTUOUS, fat, oily.

UNDER-ONAW. See *Hypôchnus*.

UNDER-GROUND NUT. See *Arachis hypogœa*.

UNDER-GROUND ONION. See *Allium Cœpa, terrestris*.

UNDULATED, waved, rising and falling.

UNDYING FLOWERS. See *Amaranthus* and *Celsoia*.

UNEDO. See *Arbutus Unedo*.

UNEQUAL, applied to petals and sepals, indicates that they or their sides are of unequal size and shape.

UNGUADIA, Endl. Named after David ab Ungnad, the Austrian minister in Turkey. *Linn.* 7, Or. 1, Nat. Or. *Hippocastanacææ*. The species is a fine hardy tree, nearly allied to *Æsculus*, and growing in any light soil. It may be increased by cuttings, and grafting on Horsechestnut stocks.

speciosa . . Rose 6, H. De. T. 25 Texas . . 1850

UNGUICULATE, furnished with an unguis, or claw.

UNGUIS, the taper base of anything.

UNILABATE, having only one lip.

UNILOCULAR, having one cell.

UNIOLA, Michaux. From *unus*, one alone; united glumes. *Linn.* 3, Or. 2, Nat. Or. *Graminacææ*. Hardy perennial species, succeeding in common soil; seeds. They are found chiefly upon the sea-coast; hence the name, *Seaside oat*—*distichophylla, latifolia, paniculata, spicata*.

UNISEXUAL, of one sex.

UNONA, Linn. From *uno*, to unite; stamens united with germen. *Linn.* 13, Or. 6, Nat. Or. *Anonacææ*. Interesting plants, succeeding in light turfy loam, and propagated by cut-

tings of the ripened wood, planted in sand, under a glass, in heat. The dry fruit of *U. aromática* is very pungent. From *U. Narum*, a sweet smelling, greenish oil is procured by distilling the roots, and is used medicinally as a stimulant. *Synonyme*: 1, *Uvária lácida*.

UPAS RADJA. See *Strichnos*.

UPAS TREE. See *Antaris*.

URANIA, *Schreber*. From *ouranos*, sublime; stateliness of the tree. *Linn.* 6, Or. 1, Nat. Or. *Musaceæ*. A splendid plant, well worthy of a place in every collection. It requires a mixture of turfy loam and a little peat, in a moist heat, and a good supply of water to make it grow luxuriantly. Newly imported seeds vegetate freely. *Synonyme*: 1, *Ravenata madagascariensis*. See *Phenakospermum. speciosa* 1. . Red . 5. S. Her. P. 20 Madagas.

URARIA, *Desvoux*. From *oura*, a tail; the bracts. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. These plants succeed well in a mixture of loam, peat, and sand, and are increased by young cuttings in sand, under a glass, in heat; but they are raised with more facility by seeds. *Synonymes*: 1, *Hedysarum alopecuroides*; 2, *H. crinitum*; 3, *H. lagocéphalum*; 4, *H. lagopodioides*; 5, *H. arboreum*; 6, *H. pictum*.

URCEOLAR, of, or belonging to, or having an *urceolus*.

URCEOLARIA, *Acharius*. From *urceolus*, a little pitcher; alluding to the form of the shields. *Linn.* 24, Or. 8, Nat. Or. *Graphidaceæ*. Found on stones and bricks. *U. cinerea* and *U. scruposa* are used in dyeing—*Acharii*, *A. erythraea*, *calcolarea*, *c. Hoffmanni*, *cinerea*, *Gaggi*, *globosa*, *rufescens*, *scruposa*.

URCEOLATE, pitcher-shaped.

URCEOLINA, *Reichenbach*. From *urceolus*, a small cup or pitcher; in allusion to the membranous cup. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. A curious little plant, said to thrive best in a strong rich loam, and may be increased by offsets. It must not be watered in winter.

péndula	. . Yel. grn.	. 6, G. Bl. P.	. 4 Peru
---------	---------------	----------------	----------

URCEOLUS, the filaments joined into a pitcher-shaped body constitute the urceolus of the stamens, or the name may be applied to any part of a similar form.

UREDO, *Person*. From *uro*, to scorch; applied to those plants called mildew or blight. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. The species of this obscure genus are found on the leaves of different plants. *Synonyme*: 1, *Acidium Cardui*—*acidiiformis*, *Alchemilla*, *anthyllidis*, *appendiculosa*, *Arméria*, *Bète*, *bifrons*, *Campánula*, *cándida*, *Caryophyllacearum*, *Cerastii*, *Cichoracearum*, *confluens*, *crustacea*, *effusa*, *Epilobii*, *Equiseti*, *Fabæ*, *farinosa*, *Ficariæ*, *Geranii*, *gyrosa*, *Helioscopiæ*, *Heraclei*, *Hypericorum*, *intrusa*, *Iridis*, *Labiatarum*, *linearis*, *Lini*, *oblongata*, *olivacea*, *ovata*, *parallèla*, *Petasites*, *Polygonorum*, *Populina*, *Potentillæ*, *Poterii*, *Prinulae*, *pustulata*, *Pyrrolæ*, *Quercus*, *Rhinanthearum*, *Rosæ*, *Ruborum*, *Rumicrum*, *Salicis*, *Saxifragarum*, *Scillarum*, *Senecionis*, *Sonchi*, *suaveolens* 1, *Tussilaginis*, *Umbellatarum*, *utriculosum*, *Vacciniorum*, *Vincæ*, *vitellinæ*.

URENA, *Linn.* From *uren*, its name in Malabar. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. Uninteresting stove under-shrubs and annuals, growing in peat and loam; cuttings and seeds. *Synonymes*: 1, *U. lobata*; 2, *U. americana*—*heterophylla*, *lobata*, *multifida*, *muricata*, *repanda*, *reticulata*, *scabriuscula* 1, *Sieberi*, *sinuata*, *speciosa*, *subtriloba*, *Swartzii* 2, *tricuspis*. See *Pavonia*.

URGINEA. See *Scilla*.

URINARIA. See *Phyllanthus Urinaria*.

UROPÉTALON, *Ker*. From *oura*, a tail, and *petalon*, a petal; the divisions of the flower are lengthened out. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. Interesting plants, succeeding best in a mixture of loam and leaf mould; they are increased by offsets or seeds. They should not be watered in winter. *Synonyme*: 1, *Scilla serbina*.

URSINA. See *Sphenogyne*.

URTICA, *Linn.* From *uro*, to burn; in reference to the stinging properties of most of the species. *Linn.* 21, Or. 4, Nat. Or. *Urticaceæ*. Plants of little beauty, and of the easiest culture. They all succeed in any common garden soil; and are increased by cuttings, divisions, and seeds. The effects of the venomous sting of the common Nettle are well known, but are, however, not to be compared with those of some of the Indian species, grown in the gardens of this country; yet all the known species are far surpassed for virulence by one, which in Timor is called *daum setan*, or devil's leaf, the effects of which are said by the natives in

many causes to cause death. See *Bæhmèria* and *Conocéphalus*.

æstuans, angustifolia, arboræscens, ærdens, bacifera, baleàrica, canadensis, capitellata, caracasana, caravellana, chamædryoides, ciliata, convèca, crassifolia, deprèssa, diffusa, dioica, diversifolia, Dodàrtii, elongata, gracilis, grandifolia, hòrrida, involucrata, macrostachya, membranæca, nivea, nudicaulis, nunmularifolia, Parietaria, pentandra, pilulifera, pulchella, pumila, reticulata, rufa, rugosa, scabrella, urens.

URTICACEÆ, or NETTLE-WORTS. An order of herbs, shrubs, and trees. Nettles are well known as possessing excessive causticity in their juice; the stinging species of this country are, however, not to be compared with some of the East Indian species, as *U. crenulata, stimularis, and urentissima* (or devil's-leaf, as it is called), when the pain occasioned is so acute and violent as to produce the most dangerous effects.

URUCURANA. See *Bixa Urucurana*.

URVILLEA, Kunth. In honour of Captain Dumont D'Urville, of the French navy, who was sent out to ascertain the fate of La Peyronse; an acute botanist. *Linn.* 8, Or. 1, Nat. Or. *Sapindaceæ*. Plants of little beauty. They may be grown in a mixture of loam and peat, and moderate-sized cuttings will root readily in sand, under a glass, in heat.

ferruginea . . .	White . . .	6, S. Ev. Cl. 20	Brazil 1823
ulmæca	White . . .	6, S. Ev. Cl. 20	S. Ame. 1824

USNEA, Dillenius. From *achneh*, a name applied to lichens in general by the Arabian physicians. *Linn.* 24, Or. 8, Nat. Or. *Par-*

melicææ. Found in winter, on old trees—*barbata, articulata, florida, plicata, hirta.*

USTILAGO, Link. From *ustus*, scorched; appearance. *Linn.* 24, Or. 9, Nat. Or. *Uredinacææ.* Found upon grasses, &c.—*antherarum, caries, flosculosa, segetum, Urceolarum.*

USTULATE, blackened.

ÛTAN. See *Corypha Ûtan*.

UTERUS, the womb.

UTRICLE, a little bladder.

UTRICULAR, composed of little bladders.

UTRICULARIA, Linn. From *utriculus*, a little bladder; applied to the small inflated appendages of the roots. *Linn.* 2, Or. 1, Nat. Or. *Lentibulariaceæ.* Elegant little plants, found in ponds and rivulets.

intermedia . . .	Yel. 5, H. Aq. P. 1/2	Brit., pools.
minor	Yel. 7, H. Aq. P. 1/2	Brit., pools.

V.

VACCÀRIA. See *Saponaria*.

VACCINIUM, Linn. An ancient Latin name, whether of a berry or a flower is not satisfactorily known. *Linn.* 8, Or. 1, Nat. Or. *Vacciniacææ.* All the species of this genus are well worth cultivating, some of them for the sake of their fruit, some for curiosity, and others for ornament. The different kinds of *Whortleberry* and *Bilberry* succeed best in peat soil, or very sandy loam. Some of them grow best in moist situations, and others in dry. Those requiring the heat of the stove must receive the same treatment as the generality of stove plants; and are readily increased by cuttings, planted in sand, under a glass, in heat; they may, also, like the hardy species, be raised from root-suckers, creeping roots, trailing root-

ing stems, or from seeds treated as follows:—In autumn, or as soon as the seeds are ripe, they should be sown in shallow pans, filled with very sandy peat soil, and covered slightly over; when about an inch high, they must be pricked out thinly into other pans, filled with the same kind of soil. After being well rooted in these pans, they must be planted out in spring in proper places, taking care to keep a ball of earth about the roots. If finally planted out in autumn, the worms are apt to throw them out of the ground during winter. *Synonyms:* 1, *V. myrtilloides*; 2, *V. diffusum*; 3, *V. brachycærum*; 4, *V. album, amœnum, disomorphum*; 5, *V. virgatum angustifolium*; 6, *V. fuscatum, formosum*; 7, *V. virgatum*; 8, *V. hirtellum, frondosum*; 9, *V. glaucum*; 10,

V. venustum; 11, *V. maderense*; 12, *V. tenellum*; 13, *V. parviflorum*; 14, *V. album*, *elevatum*; 15, *V. prunifolium*. See *Oxybeccus* and *Gaylussacia*.

VACCINIACEÆ, or CRANBERRIES. A small order of shrubs and trees; some producing very handsome flowers, and others bearing fruit. They are all deserving of cultivation.

VAILLANTIA, De Candolle. In honour of Sebastian Vaillant, an eminent French botanist and author in the early part of the last century. *Linn.* 23, Or. 1, Nat. Or. *Stellatæ*, or *Galiæcæ*. Plants of little interest, growing in common soil, on rock-work, old walls, or in any dry situation; division and seeds. *Synonymes:* 1, *Gàlium articulatum*; 2, *G. cruciatum*; 3, *G. Bauhinii*; 4, *G. pedunculatum*; 5, *V. glabra, Gàlium vèrnum*. See *Gàlium*.

VALERÁNDI. See *Sámolus Valerándi*.

VALERIAN GREEK. See *Polemónium*.

VALERIAN. See *Valeriana*.

VALERIANA, Necker. Said by some to be named after Valerius, who first used it in medicine; others assert that it is derived from *valere*, to be in health, on account of the medicinal qualities of *V. officinalis*. *Linn.* 3, Or. 1, Nat. Or. *Valerianæcæ*. Most of the species are very ornamental in flower-borders. The perfectly hardy kinds succeed well in common garden soil; those from warmer climates should be grown in pots in a mixture of loam, sand, and peat, and placed in a frame or greenhouse in winter. They are all readily increased by division at the root. The root of *V. officinalis* is eminently anti-spasmodic. It is very frequently prescribed with success in hysterical cases. In habitual costiveness it is an excellent medicine. The unpleasant flavour of *Valerian* is best counteracted by a small addition of mace. *Synonymes:* 1, *V. heterophylla*; 2, *V. Cardamines*. See *Patrinia*.

VALERIANÆCÆ, or VALERIAN-WORTS. These are annual or perennial herbs, principally natives of temperate climates. The roots of *Valerian* are well known in medicine, and the Spikenard of the ancients (*Nardostâchys Jatamânsi*) is much esteemed in India both for its fragrance and for its medical properties.

VALERIANÉLLA, Mœnch. From a diminutive of *Valeriana*, which see. *Linn.* 3, Or. 1, Nat. Or. *Valerianæcæ*. The species only require to be sown in early spring, in the open border. They answer well for a spring salad, and are generally known by the name of *Lamb's-lettuce*. *Synonymes:* 1, *V. dasycarpa, denticata*; 2, *V. tridentata*.

- VALORADIA**, *Hochst.* Origin of name unknown. *Linn.* 5, Or. 1, Nat. Or. *Plumbaginaceae*. The only species introduced is suitable for bedding out in the flower-garden in summer, requiring only the most common treatment, and easily increased by division of the roots. *Synonymes*: 1, *Plumbago Larpéntæ*, *Ceratostigma plumbaginoides*.
plumbaginoides 1. Blue 6, F. Her. P. ¼ China . 1845
- VALVÆFORM**, shaped as a valve.
- VALVATE**, opening like a valve.
- VALVES**, the divisions of the capsule.
- VALVULAR**, consisting of valves.
- VALVULAR-DISSEPIMENTS**, partitions in the centre of the valves.
- VÁNDA**, *R. Brown*. *Vanda* is the Sanscrit name of the original species of this genus. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. The species of this genus, as well as those elegant and interesting plants referred to it for culture, &c., are all well deserving of the cultivator's best care and attention. The beauty of their deliciously-fragrant flowers is quite sufficient to recommend them to all lovers of orchidaceous plants, besides their being in general such admirably free flowerers. Some of the species of *Saccolábium* and *Sarcánthus* produce from thirty to one hundred spikes of flowers each; indeed, we know from the best authority, that

there are single plants of *Saccolábium guttatum*, growing upon trees in the Botanic Garden, Calcutta, which produce every year from fifty to one hundred spikes of flowers. In their native districts, all, or the greater part of the plants referred to this genus, grow upon trees in dense forests, and consequently derive their chief support from the atmosphere; therefore their cultivation in this country is rendered very simple and easy, as the greater part of them require nothing more than a piece of wood to attach themselves to, or an ornamental wire basket filled with moss and broken pots, and suspended from the pillars or roof of the house. There are, however, exceptions to this rule; as, for instance, some of the stronger and more robust-growing kinds, such as *Vánda Roxbúrgíi* and *V. multiflora*, which should be grown in wide shallow pots, carefully filled with cut *sphagnum* moss, and potsherds broken small. We would recommend oak branches for those intended to be grown upon wood. They all require a good strong moist heat, and a plentiful supply of water during the growing season, which ought to commence about the beginning or middle of June, and continue to the end of September, from which time they should be kept cool and dry until the beginning of March, when they should be placed in a strong dry heat to induce them to flower. They will, if thus treated, flower most abundantly; whereas, if kept in a continued moist atmosphere, they will do nothing but grow from year to year, and of course never produce flowers, because they are not allowed a proper season to elaborate and perfect their flower-buds, neither have they a proper season for the development of those buds. Propagation is effected by carefully detaching the lateral shoots after they have grown to the length of about six inches, and fastening them to another block of wood in a similar manner to the old ones; but great caution is necessary to preserve them from excision by moisture till they have recovered from the effects of being severed from the parent plant, and commenced growing. *Synonymes*: 1, *V. lissochiloides*, *Fialdia lissochiloides*; 2, *V. Roxbúrgíi unicolor*, *Angræcum fávrum*, *Epidéndrum fávrum*, *Cymbidium fávrum*; 3, *Cymbidium tessellatum*; 4, *Trichozia teretifolia*; 5, *V. suaveolens*; 6, *Saccolábium giganteum*; 7, *Epidéndrum spatulatum*, *Limodórum spatulatum*, *Ærides maculatum*; 8, *Saccolábium papillosum*, *Thádia maranára*, *Cymbidium præmórsum*, *Ærides præmórsum*, *E. undulatum*. See *Sarcánthus* and *Ærides*.

VANÍLLA, Plumier. An alteration of *Vaynilla*, which is a diminutive of *Vatna*, a Spanish word signifying a sheath; in reference to the cylindrical pod being like the sheath of a knife. *Linn.* 20, Or. 1, Nat. Or. *Orchidácea*. These plants thrive best in a mixture of moss and turfy peat, in a moist warm atmosphere. They should have the rough bark of a piece of wood, or a wall for their long roots, which issue from every joint, to cling to; and they are readily increased by cuttings. The fruit is one of the most delightful aromatics known, and is extensively used in the manufacture of liquors, chocolate, and various articles of confectionary, and also for perfuming snuffs.

obovata 1 White 5, S. Ev. S. 4 Mauritius . 1824

VERATRA. See *Veratrum*.

VERATRUM, *Linn.* From *vere*, truly, and *ater*,

black; in allusion to the colour of the root.

Linn. 23, Or. 1, Nat. Or. *Melanthaceæ*. A

genus of elegant plants when in flower. They

thrive best in a rich soil, and are increased by

division or seeds. The dangerous medicinal

properties of the root of *Veratrum* are owing

to a peculiar alkaline principle, called *Ver-*

atrin, which acts with singular energy on the

membrane of the nose, exciting violent sneez-

ings, though taken in very minute quantity.

When taken internally in very small doses, it

produces excessive irritation of the mucous

coat of the stomach and intestines, and a few

grains are found fatal to the lower animals.

V. viride is an acrid, emetic, and powerful

stimulant, followed by sedative effects. See

Chamætrium, *Leimanthium*, and *Stenanthium*.

VERBASCUM, *Linn.* Said to be from *barbascum*,

bearded; in allusion to the bearded filaments.

Linn. 5, Or. 1, Nat. Or. *Scrophulariaceæ*.

The species of *Verbascum* are strong, robust

growing plants, producing an abundance of showy, yellow flowers, and on that account they are well adapted for planting at the back of flower borders, or in shrubberies. They grow freely in any soil, and are readily increased by seeds; some of the perennial kinds by divisions of the root. *Synonyme*: 1, *V. ferrugineum*. See *Ramondia*.

VERBENA, *Linn.* Said to be from its Celtic name, *Forfaen*. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceæ*. This is a genus of extremely beautiful and ornamental plants when in flower, either when grown in pots in the greenhouse, or when planted out in the flower-garden; and they will all succeed well in the open ground during the summer months. The flowers of *V. teucrioides* have a delightful jasmine-like odour. They all succeed well in a light loamy soil, with careful drainage when kept in pots. The herbaceous perennial kinds increase rapidly by cuttings, planted in sand, under a glass; the greenhouse kinds in a little heat. The annuals and biennials should be raised on a gentle hotbed. *Synonymes*: 1, *V. Melindres*; 2, *V. Drummondii*; 3, *V. erinoides*. See *Aloysia*, *Priva*, and *Zapana*.

VERÓNICA, *Linn.* The derivation of the word is not known. *Linn.* 2, Or. 1, Nat. Or. *Scrophulariaceæ*. The hardy herbaceous species of this extensive genus are admirably adapted for ornamenting the flower-borders, on account of their pleasing habit and beautiful flowers. They are all of the easiest culture, and are readily increased by division at the root. The greenhouse shrubby kinds are readily increased by cuttings. The annual species are hardly

worth cultivating, except in botanical collections; the seeds of them merely require to be sown in the open ground. *Synonymes*: 1, *V. polymorpha*; 2, *V. lamifolia*; 3, *V. palehra*; 4, *V. incarnata*; 5, *V. gentianoides*; 6, *V. agrestis, a. opaca, a. versicolor, arvensis, digitata, hederæfolia, persica, triphyllus, verna.

VÉRPA, Swartz. An old Roman name, synonymous with *Phallus*. *Linn.* 24, Or. 9, Nat. Or. *Helvellæceæ*. Found upon the ground—*cónica, digitatis.*

VERRUCÀRIA, Persoon. From *verruca*, a wart; on account of the verrucose nature of the shields. *Linn.* 24, Or. 8, Nat. Or. *Parmeliæceæ*. Found upon rocks, and the bark of trees—*análepta, alphânes, bifórmis, ceuthocarpa, circumscripta, concinna, conferta, dermatodes, Dufouirii, epidérmidis, epigæa, epipolæa, erysiboda, fissa, gemmata, gemmifera, Harrimânni, Hookeri, immersa, irrigua, levata, leucocéphala, l. amphibola, lithina, lucens, maïra, mollis, murâlis, niveo-âtra, olivacea, periphérica, plumbca, polysticia, punctiformis, rhyponia, rubiginosa, rûdis, Schraderi, stigmattella, striatula, s. acrotella, submersa, trachona, umbrôsa.*

VERSÀLIA. See *Abelia*.

VERSATILE, swinging lightly on a stalk, so as to be continually changing direction.

VERTEX, the uttermost point.

VERTICAL, perpendicular.

VERTICILLATE, disposed in a whorl.

VERTICORDIA, De Candolle. Meaning unknown. *Linn.* 10, Or. 1, Nat. Or. *Chamelauciæceæ*. Small heath-like shrubs, bearing corymbs of pink flowers. These belong to the curious race of fringe myrtles, and were first raised in the nursery of Messrs. Veitch, of Exeter. For cultivation, &c. refer to *Myrtus*. *Synonymes:* 1, *Chrysothecum Brôwnii*; 2, *C. plumosum*; 3, *Chrysothecum nitens*.

nitens, 3 . . . Yellow 4, G. Ev. S. 3 Australia 1860
pennifera . . . Lilac 4, G. Ev. S. 3 Swan R. 1841

VERTILINEAR, having straight lines.

VERVAIN. See *Verbena*.

VESICÀRIA, Lamarck. From *vesica*, a bladder, or blister; in allusion to the inflated pods. *Linn.* 15, Nat. Or. *Brassicæceæ*. These plants are well adapted for ornamenting rock-work. They are of the easiest culture and propagation. *Synonymes:* 1, *Alýssum arcticum*; 2, *A. créticum*; 3, *A. vesicària*; 4, *A. Utriculària*.

VESICLES, hollow excrescences, like bladders.

VÉSTIA, Willdenow. In honour of Dr. Vest, of Klagenfurth. *Linn.* 5, Or. 1, Nat. Or.

Solanæceæ. An interesting shrub. For culture and propagation, see *Cestrum*. *Synonyme:* 1, *Cantua ligustrifolia*.

lycioides, 1 . . . Yellow 6, G. De. S. 3 Chile . . 1815

VETCH. See *Vicia*.

VETCH. See *Astragalus Cicer*.

VETCHLING. See *Lathyrus Aphaca*.

VEXILLUM, standard, the upper petal of a pea flower.

VIBÛRGIA, Ortega. In honour of Eric Viborg, a Danish botanist. *Linn.* 16, Or. 6, Nat. Or. *Fabæceæ*. Pretty plants. For culture, &c., see *Loddigesia*. *Synonyme:* 1, *Crotalaria floribunda, obovata*.

obovata, 1 . . . Yellow 7, G. Ev. S. 3 C. G. H. . 1810
sericea . . . Yellow 7, G. Ev. S. 3 C. G. H. . 1810

VIBRISSEA, Fries. From *vibro*, to vibrate. *Linn.* 24, Or. 9, Nat. Or. *Helvellæceæ*. This species is found on the branches and trunks of trees lying in water—*truncorum*.

VIBÛRNUM, Linn. Said to be from *vieo*, to tie; because of the pliability of some of the branches. *Linn.* 5, Or. 3, Nat. Or. *Caprifoliæceæ*. The species of *Viburnum* are all very elegant, rather early-flowering shrubs. The hardy kinds are well fitted for planting in ornamental shrubberies. They are increased by layers, or by cuttings, planted under a glass, in a shady situation. The fruit becomes eatable after fermentation, and is made into a sort of cake by the North American Indians. *Synonymes:* 1, *V. squamatum*; 2, *V. Opulus roseum*; 3, *V. lacidum*; 4, *V. strictum virgatum*; 5, *V. strictum*.

VICIA, Tournefort. From *vincio*, to bind together; because the species have tendrils by which they bind other plants. *Linnaeus*, 17, Or. 4, Nat. Or. *Fabaceae*. Some of the species of this genus are well worth cultivating in the flower border for the beauty of their flowers. They are of the easiest culture in any common garden soil. The perennial kinds may be readily increased by dividing the root or by seeds. The seeds of the annual kinds only require to be sown in the open border in spring. *V. sativa* and its varieties are extensively cultivated, and well known by the common name of vetch, or tares; they are used as food for all kinds of cattle, and are allowed to be more nutritive and profitable than hay or any other herbage. *Synonymes*: 1, *V. laganensis*; 2, *V. sordida*; 3, *Lathyrus Bithynicus*; 4, *V. monantha*; 5, *V. Cracca*; 6, *V. parviflora*; 7, *Ervum soloniense*; 8, *V. alba*; 9, *V. atropurpurea*; 10, *V. tenuifolia*; 11, *V. laciniata*, *Ervum tenuissimum*. See *Ervum, Faba, and Lathyrus*.

VICIA. See *Francoeuria*.

VICTORIA, Lindley. Named in honour of her Majesty Queen Victoria. *Linnaeus*, 13, Or. 1, Nat. Or. *Nymphaeaceae*. *V. régia*, a magnificent stove aquatic, is now in several collections in this country; its large spreading leaves and immense flowers will cover a great surface; in other respects it may be treated exactly in the same manner as the stove species of *Nymphaea*. *Synonymes*: 1, *V. régia*, *V. cruziana*, *Nymphaea Victoria*, *Euryale amazonica*; 2, *N. gigantæa*. See *Nymphaea*.

- VILLARSIA, Ventenat.** Named in honour of D. Villars, a famous French botanist. *Linn.* 5, Or. 1, Nat. Or. *Gentianaceæ*. A genus of very elegant plants when in blossom. The stove and greenhouse aquatic species should be grown in tubs or cisterns of water. The hardy kinds succeed well in a pond. The marshy kinds, as *V. geminata*, require to be grown in pots, in a mixture of peat and sand, and the pots to be placed in water. They are all readily increased by divisions, or by seed. *Synonymes*: 1, *Menyanthes indica*: 2, *V. cordata*; 3, *M. nymphaeoides*.

VINE LEEK. See *Allium anapelloprasum*.
VIOLA, Linn. Latin name of the flowers. *Linn.* 5, Or. 1, Nat. Or. *Violaceæ*. All the species of this genus deserve to be cultivated, either for the beauty or the scent of their flowers. The hardy perennial kinds are well fitted for ornamenting the front of flower-borders or rock-work, but the smaller species succeed best when grown in pots, in a mixture of loam, peat, and sand. The species, natives of America, thrive best in vegetable mould or peat, and are readily increased by parting the roots, or by seeds. The greenhouse and stove species should be grown in a mixture of loam and peat; the herbaceous kinds of them are increased by seed, or dividing the roots, and the shrubby kinds by cuttings, which root readily when planted under a glass. The annual species may be sown in the open borders or on rock-work. The Neapolitan violet, *V. odorata pallido-plena*, may be made to flower throughout the winter and early spring, by placing it in a stove or warm pit. *V. carina* is said to be a famous agent in removing cutaneous diseases. *Synonymes*: 1, *V. sororia*; 2, *V. Pallásii*, *chrysántha*; 3, *V. Allioni*; 4, *V. lanceolata*; 5, *V. Patrínii nepalensis*, *primulefolia*; 6, *V. multifida*; 7, *V. dentata*; 8, *V. sibirica*; 9, *V. odorata*; 10, *V. stagnina*; 11, *V. Hornemanniana*; 12, *V. primulayolia*; 13, *V. prunellefolia*; 14, *V. digitata*; 15, *V. ramunculifolia*; 16, *V. ericetorum*; 17, *V. lancifolia*; 18, *V. littoralis*; 19, *V. Broussonetiana*; 20, *V. saxatilis*; 21, *V. arvensis*; 22, *V. Kitaibeliana*; 23, *V. calcarata*; 24, *V. maculata*, *pyrolefolia*.

VIOLACEÆ, or VIOLET-WORTS, are herbaceous plants and small shrubs; the common Violet gives the true character of the order.

VIOLACEOUS, violet-coloured.

VIOLET. See *Viola*.

VIOLET THLASPI. See *Clypeola Ion Thlaspi*.

VIORNA. See *Clematis Viorna*.

VIPER'S BUGLOSS. See *Echium*.

VIPER'S GRASS. See *Scorzonera*.

VIRENS, green, flourishing.

VIRESCENT, greenish.

VIREYA. See *Rhododendron*.

VIRGÁREA. See *Solidago Virgárea*.

VIRGÍLIA. Lamarck dedicated this genus to the poet Virgil, whose Georgics contain many things interesting to botanists. *Linn.* 10, Or. 1, Nat. Or. *Fabacea*. The greenhouse species are very elegant when in blossom; they succeed well in a mixture of loam, peat, and sand, and are increased by young cuttings in sand under a glass. *V. lítea* is an elegant hardy tree, well suited for shrubberies or pleasure grounds. It is commonly propagated by laying down the shoots in autumn or spring. *Synonymes*: 1, *Robinia capénsis*; 2, *Sophora sylvática*. See *Gáldaria*.

VISCOSUS, clammy, like birdlime.

VISCUM, *Tournefort*. From *viscus*, birdlime; on account of the sticky nature of the berries. *Linn.* 22, Or. 4, Nat. Or. *Loranthaceæ*. The Mistletoe is a well-known parasite, readily propagated by sticking the berries on thorn or apple-trees, after a little of the outer bark has been cut off, and tying a shade or mat over them, to protect them from the birds. Its branches are much sought after at Christmas to hang up in houses along with other evergreens.

album . . . Green 5, H. Parasite 2 England, treea.

VISMIA, *Vandelli*. In honour of M. de Visme, a Lisbon merchant. *Linn.* 18, Or. 4, Nat. Or. *Hypericaceæ*. These plants succeed well in a mixture of loam and peat, and are increased by young cuttings, planted in sand, under a glass, in heat. *Synonyme*: 1, *Hypericum guianense*.

VITICELLA. See *Clématitis Viticella*.

VITIS, *Linn.* From the Celtic *guid*, signifying the best of trees. Wine is derived from the Celtic word *gwin*. *Linn.* 5, Or. 1, Nat. Or. *Vitaceæ*. A very valuable genus of plants. *V. vinifera*, or common grape-vine, with its very numerous garden varieties, is in general cultivation for its much esteemed fruit. It must be grown in a strong, very rich soil, to have it in perfection. It is readily increased by cuttings or layers. None of the other species are worth cultivating for their fruit. The acid of grapes is chiefly tartaric; malic acid, however, exists in them. *Synonymes*: 1, *V. vulpina*; 2, *V. indica*; 3, *V. æstivælis sinuata*; 4, *V. laciniosa*.

WIDOW-WAIL. See *Cnedrum*.

WIGANDIA. Named by Kunth in honour of John Wigand, a bishop of Pomerania. *Linn.* 5, Or. 2, Nat. Or. *Hydrocæcæ*. If well grown, and formed into a bush, feathered to the surface of the ground, *W. caracasana* must have a very beautiful appearance with its large clusters of delicate lilac flowers, which continue to open in succession for a long time. But if formed into a sort of stake, with a few leaves and flowers at the top, as is too frequently the case with stove plants, it will be found to possess few claims to attractiveness. For culture and propagation, see *Hydræla*.

XANTHOXYLACEÆ or **XANTHOXYLS**. Trees and shrubs, principally found in tropical America; they are all pungent and aromatic, and are popularly called peppers in their native countries.

XANTHOXYLUM, *Linn.* From *xanthos*, yellow, and *xylon*, wood; the roots are yellow. *Linn.* 22, Or. 5, Nat. Or. *Xanthoxylaceæ*. Ornamental trees and shrubs. The hardy species, from their beauty, are well adapted for planting in shrubberies. They grow freely in any common garden soil, and are readily increased by cuttings of the ripened wood, planted under a glass. The stove and greenhouse kinds are of easy culture, and are increased by cuttings, in sand, under a glass. The bark and capsules

of *X. fraxineum* have a hot, acrid taste, and are used for easing the toothache; hence the name *Toothache tree*. *X. Avicennæ* and *Piperitum* are used in China and Japan as an antidote against all poisons, and in Japan the capsules of the latter species are used as a substitute for pepper. *Synonymes*: 1, *Fagara Budranga*; 2, *F. Piperita*; 3, *F. Pterota*; 4, *Sapindus spinosus*; 5, *Evodia triphylla*; 6, *F. tragodes*. See *Fagara*.

XIMENIA, *Linn.* In honour of Francis Ximenes, a Spanish monk, who wrote a work upon medicinal plants. *Linn.* 8, Or. 1, Nat. Or. *Olacæceæ*. A mixture of leam and peat suits these plants, and cuttings root readily in sand, under a glass, in heat. The drupes of *X. americana* have a sweet, aromatic taste, but are a little rough to the palate. They are eaten in Senegal; the flowers are very sweet. *Synonymes*: 1, *Gela lanceolata*, *Silas lanceolata*; 2, *Gela oblongifolia*.

XYLARIA, *Hill*. From *xylon*, wood, in allusion to the situations in which they grow. This genus was formerly included in *Sphæria*. *Linn.* 24, Or. 9, Nat. Or. *Helvellæceæ*—*alutacea*, *capitata*, *digitata*, *gracilis*, *hypocydon*, *compressiformis*, *polymorpha*, *punctata*.

XYLOBIUM. See *Macillaria*.

XYLÖMA, *Pers.* From *xylon*, wood, and *loma*, a fringe, or margin. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdæceæ*. Small fungi growing on living trees,—*acerninum*, *concordium*, *Geranii*, *fagineum*, *populinum*, *pezizoideum*, *salicinum*, *salignum*.

XYLOMBLUM, *Smith*. From *xylon*, wood, and

melon, an apple; appearance of the fruit of the plant. *Linn.* 4, Or 1, Nat. Or. *Protæceæ*. For culture and propagation, see *Hækea*. *Synonyme*: 1, *Hækea pyriformis*.

pyriforme 1 . White 5, G. Ev. T. 14 N. S. W. . 1789

XYLOPHÝLLA, *Linn.* From *xylon*, wood, and *phyllon*, a leaf; rigidity of the leaves. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiæceæ*. Ornamental shrubs, growing about three feet high. For culture and propagation, see *Phyllanthus*. *Synonymes*: 1, *Phyllanthus angustifolius*, *epiphyllanthus*; 2, *P. falcatus*; 3, *P. latifolius*; 4, *P. linearis*; 5, *P. ceramicus*; 6, *P. arbascula*.

XYLÖPIA, *Linn.* Abridged from *xylopiicon*, which is from *xylon*, wood, and *picros*, bitter; the wood of some of the species is extremely bitter. *Linn.* 13, Or. 6, Nat. Or. *Anonæceæ*. Ornamental plants; for culture and propagation, see *Phyllanthus*. The wood of *X. glabra* is so intensely bitter, that a quantity of sugar sent from Jamaica in hogsheads made from it, was so bitter that purchasers could not be found. A decoction of the wood is said to be of service in colic, and to be used for the purpose of creating an appetite.

ZIT-SI. See *Melanorrhœa usitatissima*.

ZIZANIA, *Linn.* The Greek name of *darnel*. The modern plants have no relation to the ancient, being natives of America. *Linn.* 21, Or. 6, Nat. Or. *Graminæceæ*. *Z. aquatica* was cultivated for a time in Middlesex and Ross-shire; it grows on the margin of ponds, and is exceedingly prolific of bland, farinaceous seeds, which afford a very good meal. It abounds in all the shallow streams of North-West America, where its seeds contribute essentially to the support of the wandering tribes of Indians, and feed immense flocks of wild swans, geese, and other water-fowl. Pinkerton says, this plant seems intended by nature to become the bread-corn of the north.

ZIZIPHORA, *Linn.* Said to be from *zizi* of the Indians, and *phoreo*, to bear. *Linn.* 2, Or. 1, Nat. Or. *Lamiaceæ*. The species of this genus are very pretty, and the perennial kinds well suited for growing on rock-work, or in pots well drained, in light sandy soil; they are increased by seeds and cuttings. The seeds of the annual species should be sown in the open border in April. *Synonymes*: 1, *Z. serpyllacea*, *Thymus lucidus*; 2, *Z. media*, *Z. serpyllacea*; 3, *Z. Pouschkini*.

ZIZYPHUS, *Tournefort.* *Zizouf*, in Arabic, is the name of the *Lotus*. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. The species of *Zizyphus* are all very pretty, and deserve to be grown in every collection of plants. The stove and greenhouse species thrive well in loam, peat, and sand, and ripened cuttings root readily in sand, under a glass. The hardy kinds are well fitted for shrubberies, and are easily increased by ripened cuttings, planted in soil, with a glass over them, or by slips of the roots. The fruit of *Z. Jujuba* and *Lotus* is very excellent, and is partaken of by all classes of people, in the countries to which these species are indigenous. It is sweet and mealy. *Synonymes*: 1, *Rhamnus Jujuba*; 2, *R. Lotus*; 3, *Z. bubaïna*; 4,

Z. sororia; 5, *Rhamnus Zizyphus*. See *Condalia*, and *Paliurus*.

ZYGOPHYLLACEÆ, or BEAN CAFERS. This order consists of trees, shrubs, and herbaceous plants. The ligneous species furnish exceedingly hard wood, and in the *Guaiacum* is both bitter and acrid.

ZYGOPHYLLUM, *Linn.* From *zygos*, a yoke, and *phyllon*, a leaf; the leaves are in pairs. *Linn.* 10, Or. 1, Nat. Or. *Zygophyllaceae*. The species of this genus are all very handsome when in flower. The stove and greenhouse species should be grown in a mixture of loam, peat, and sand, and are readily increased by cuttings, in sand, under a glass, or by seeds, when these can be obtained. *Z. Fabago* grows well in any light soil, in a dry situation; it can only be increased by seeds, which should be sown in a pot, and placed in a frame, and when the plants are large enough, they may be planted out in the open border, in a warm, dry, sheltered situation. See *Guaiacum* and *Fabago*.

ZYGOTRICHIA, *Brid.* From *zygos*, a pair, and *thrix*, hair. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. Mosses growing on wet sandy banks—*cylindrica*.

SUPPLEMENT.

The lapse of time consequent on the passage through the press of a work of this description and extent, has necessarily caused the omission of many plants that have been discovered or described since its commencement; these are now inserted in alphabetical order. The new Genera upon which no remarks are supplied have either not come under the Editor's observation, or are too little known for him to venture to speak of them with confidence.
