PAINT.

Hammond's Cottage Colors,
 FOR ALL STRUCTURAL PURPOSES.

This Paint is absolutely pure. Its combination is Linseed Oil, Lead, Zinc, and Fine Pigments for colors, and is as durable as paint can be made, being entirely free from any impoverished material.

I WILL PAY \$100 FORFEIT FOR ANY ADULTERANT FOUND IN ITS COMPOSITION.
 August, 1894. BENJAMIN HAMMOND.

NET TRADE PRICES, Delivered at your R. R. Station in 5 gallon lots or over.

MR HAMMOND:
 Please give me price for the paint like the enclosed sample. I could get it here, but your paint wears so well that I prefer to get it from you. Very respectfully,
 March 19th, 1895. JOSEPH DUNBAR, Dobbs Ferry, N. Y.

 Mention American Florist.

Denver, Colo.

The store men report a good retail trade and quite a few mid-Lent decorations.

Mr. John Berry, Mr. A. M. Lewis and Mr. T. Loken have leased the Westminster greenhouses (formerly run by the Denver Florist Co.) for a term of years and will grow cut flowers and plants for the Denver market. They will occupy a store on 16th street soon.

Mr. A. E. Wiggam has retired from the Park Floral Co., his interest having been purchased by Mr. J. Valentine.

Mr. E. A. Wood has returned from Pittsburg, where he attended the S. A. F. Executive Committee meeting. He reports a pleasant trip—barring an unpleasant railroad accident near Terre Haute, Ind., on the return trip.

The advance schedule for the third annual chrysanthemum show of the Denver Florists' Society is out. An extra effort is made this season to secure exhibits of blooms—particularly seedlings—from eastern florists.

Mr. John Berry, president of our Florists' Society, who has lately returned from a trip through England and Ireland, entertained the boys at the last meeting by an interesting account of his observations and comparisons between commercial floriculture in Great Britain and the U. S.

Lilium Harrisii will be scarce in Denver this Easter, owing to the disease and other causes—mainly "other causes."

The Colfax Floral Co. have closed their store at 1128 16th street, still retaining their other store.

The Denver Florist Co. have closed their store in the Brown Palace Hotel, and have sold their store at 959 16th street to Smith & Co., Mr. S. Haycox remaining in charge.

A visit to the "Floral Department" (!) of the Daniels & Fisher Dry Goods Co. recently disclosed the fact that the stock of the department consisted of five roses, three carnations and one Von Sion. Why they stocked up so heavily on Von Sion could not be learned.

Mr. E. Glauber of Montclair has cancelled his contract with the Park Floral Co. and is once more in the field as a retailer.

The "Carnation Belt" had better look to its laurels. Colorado growers are waking up and Colorado is an ideal carnation country. G.

A Windmill

Is unreliable because it depends upon the element for its power; hydraulic rams also depend upon favorable conditions and waste as much water as they secure. Steam pumps require skill and hand pumps demand labor and time. The

DE LAMATER-RIDER OR DE LAMATER-ERICSSON Hot-Air Pumping Engines

are especially designed for pumping water, and from shallow streams or any kind of well. They are simple, safe and reliable, require no steam and have no valves. They require very little heat to operate them, and can be arranged for any kind of fuel.

Floating Straws.

"Going it one better" by cutting under your neighbors' prices is going it one worse for yourself every time.

"It will do tomorrow" is the sort of insanity that makes aphides laugh, rusts carnations, mildews roses, freezes houses and brings the sheriff right in across your threshold.

Better be on top of one tree than hugging the bottoms of many.

If you cannot grow the plant give it away or dump it.

Imagine your place a boarding house, where every plant must pay according to the room he takes and the attention he needs.

Never say you will pay in June when you know you can't do it till August.

Do your watering early if you are determined to breakfast late.

Patching an old house is like patching old pants; it pays for a little while only.

Ani M. Osity keeps store in most large towus. THE OLD CRANK.

A Serious Oversight.

There is an enterprising florist in a western town who is determined to "get there," although competition is very keen. Recently, when the chief of the fire department died, he loaded his wagon with assorted wire designs, and made a circuit of all the engine houses in the city, canvassing the firemen for an order. He finally obtained an order for the floricultural spasm known to the trade as the "Heavenly Portals," the casting vote being given in consideration of his offer to drive around to all the engine houses with the design, after it was completed, for the purpose of exhibiting it to the firemen on duty. This was done until the design began to exhibit symptoms of dissolution, when the enterprising florist had to cease his triumphal progress. It is the opinion of his florist brethren that the only thing lacking was a brass band playing solemn dirges as the procession moved majestically through the city.

HITCHINGS & CO.
 GREENHOUSE HEATING AND VENTILATING,
 HORTICULTURAL ARCHITECTURE AND BUILDING.
 ESTABLISHED 1844.

MUNCIE, IND.—Trade has been fairly good, but with four florists in a city of the size of Muncie prices have been brought down to a close margin. The Muncie Floral Co. will soon build another house, short-span-to-south. They have a branch at Hartford City, Ind., and are now starting a branch at Winchester, Ind. Mr. Carres found his boiler too small during the cold weather and will put in a new one this season. Geo. Miller has had a heavy run of funeral orders lately. George always gets his share of the trade. Geo. Kendall has a fine batch of well grown Harrisii.

Do YOU WANT a list of the cemeteries of the country that use trees, shrubs and plants largely in the ornamentation of their grounds and that are apt to be large buyers of these and other horticultural supplies? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

SUCCESS
 IN GREENHOUSE CULTURE
 depends more upon judicious heating and ventilation than upon anything else. You are displaying good judgment when you select your Hot Water or Steam Heater from our extensive assortment.

PEORIA, ILL.—Fire did slight damage to the boiler room at Kuhl's greenhouses March 30. No insurance, but loss small.

IN Mr. A. T. Hoyt's adv. on page 918 of our last issue the description of boiler should have read "from 24 inch shell, 6 feet long, up to 8 1/2 inch, eighteen feet long."

SOME BLOOMS of the Belle Siebrecht rose were sent to Berlin and were received in condition for exhibition. The rose was well received by the German society at whose exhibition it was displayed.

JOHNSTOWN, PA.—A. Akers & Co. is the name of a new firm here; they have something over 5000 feet of glass on Maple Lane, in the Eighth Ward, and will manage a general florist's business.

Roses for Bedding.

The rose garden at the World's Fair, and which remains now as a feature of Jackson Park, Chicago, promises to be a great attraction to lovers of the rose the coming season. All the plants came through the winter in excellent condition, and being now thoroughly established will make a grand showing.

From the time the garden was first prepared until the present time it has been under the care of Mr. Melchior Luetsch, a Swiss, an exceedingly painstaking and careful gardener, and he is justly proud of his success in a climate and soil notably unfavorable to the growth of roses out of doors.

In answer to questions Mr. Luetsch said: "While I know it was considered practically a hopeless task to create a really creditable rose garden here I am satisfied that if proper care is given we can easily overcome the unfavorable conditions, and can have rose gardens in America fully equal to the best to be seen abroad.

"The most unfavorable conditions that we have to meet here are the hot burning summer sun and wind and the great fluctuations in temperature both summer and winter. My experience in caring for the roses at the World's Fair showed me that what they needed was a cooler bottom than the soil there naturally afforded, the soil being of a very sandy nature. Of course we all know that the soil around Chicago is very unsuitable for roses. To correct the deficiencies in the soil and climate noted, I found that a suitable mulching was the remedy. The rose likes a warm top, which it has naturally here, and when the cool bottom is given the necessary conditions are supplied. I have found the best mulching for roses during the summer time to be the clippings from the lawn, laid on about three or four inches thick over the whole soil of the beds. This not only conserves the moisture in the soil, but prevents the heat penetrating and gives the requisite cool bottom. This mulch is allowed to stay on all summer.

"As to protection of the roses during the winter, I have found this method to be the best: About the latter part of October, depending upon the weather, I place over all the roses a layer of about a foot deep of dry leaves. The leaves must

be quite dry when applied, and the ground must also be dry when the leaves are laid on; this point is quite essential. Soon after that I lay over the leaves a layer of about four or five inches of cut grass from the lawn. In the case of beds this covering is built up toward the center so as to better shed the water. The great point in a winter covering of this sort is to keep the water from the soil, and to keep the whole plant dry as well as the soil. I find that this covering of short clippings from the lawn is almost impervious to water. In uncovering the rose beds this spring I find in many places that the grass had shed the water so well that the leaves beneath were still perfectly dry.

"Although the garden included a large variety of tea roses none of the shoots were bent down with the exception of Gloire de Dijon. With the exception of this rose the majority of the teas were frozen down near to the ground, but in no case were they frozen below the ground line, and all show signs of starting out in good shape from the bottom. In the case of Gloire de Dijon, which had very long branches, these were bent down and covered with the leaves and grass and they came through the winter without losing an inch of the tips. Considering the tenderness of this rose under ordinary circumstances, this will best illustrate the efficacy of the protection.

"In the case of the hybrids, each plant was bent over and secured to the ground with an iron wire hoop, and then covered with the leaves. Being short of lawn clippings after covering the tea roses, I did not have sufficient to treat the hybrids in the same way, so I simply placed over the leaves the cuttings from the beds of ornamental grasses, merely to keep the leaves in place and prevent their being blown away by the wind.

"In reference to planting roses, the ground should be very deeply and thoroughly worked. Then in setting the plant a hole of sufficient size to spread out the roots well and naturally must be made, then throw on the soil and make it firm, but do not tramp it too hard; remember that you are setting out a plant and not a post. In setting the roses, if the plants are grafted, the plant should be set so low that the graft will come at least four inches below the surface of the soil. This is done so that in case frost does penetrate down, it will not reach below the ground and thereby reach the graft.

"The Duchess of Albany carried through the winter even better than La France. In the whole collection of roses at the World's Fair I found Mrs. John Laing the best hardy rose. It grew well and had no disease, mildew or insect pest, and bloomed steadily from June until frost. This is surely the best hardy rose for the vicinity of Chicago. Margaret Dickson is a strong and healthy grower

and a good bloomer; the large white flower is very similar to Merveille de Lyon, but better. Alfred Colomb proved a good healthy grower and good bloomer, and Louis Van Houtte was extra good. Marshall P. Wilder was also extra fine. The only hybrid that did not pass the winter well was the American Beauty.

"I have had no trouble from rose bugs or other insects. I think the winds from the lake may have had something to do with this. The way the wind swept across the island at times was startling and proved conclusively to me that roses need no special protection from the wind if other conditions are favorable.

"With the summer mulching that I have recommended not much extra watering is necessary. I gave the plants no syringing, except what was given with the hose. I would deprecate going in among the plants when the foliage is wet. Damage seems always to result."

Among the roses in the World's Fair Garden that seemed to Mr. Luetschg specially desirable as bedders are the following:

Margaret Dickson.
Jeannie Dickson.
Mrs. John Laing.
Merveille de Lyon.
Marshall P. Wilder.
La France.
Earl of Dufferin.
Perfection des Blanches.
Jules Margottin.
Mme. Plantier.
John Hopper.
Paul Neyron.
Anna de Diesbach.
Louis Van Houtte.
Caroline d'Arden.
Duchesse de Caylus.
Mrs. Bosanquet.
Francois Levet.
Auguste Mie.
Pæonia.
Duchess of Albany.
Genl. Jacqueminot.
Mme. Georges Bruant.
Rosa rugosa.
Belle de Normandie.
La Reine.
Baroness Rothschild.
Anna Alexieff.
Magna Charta.
Gloire de Lyon.
Coupe d'Hebe.
C. M. Maurande.
Belle de Jardin.

But if he were to be limited to a dozen only he would select these as the ideal bedders:

Mrs. John Laing.
Marshall P. Wilder.
Margaret Dickson.
Baroness Rothschild.
Alfred Colomb.
Paul Neyron.
Anna de Diesbach.
Merveille de Lyon.
Jeannie Dickson (a very beautiful cherry red and a grand rose).
Earl of Dufferin.
Gen. Jacqueminot.
Magna Charta.

Arrangement of Flowers.

XX.

CROSSES OF GALAX LEAVES.

The two crosses we illustrate in this issue are frequently called for at Easter, when they are used for church decorations as memorial emblems, etc. It is not, however, for this purpose only that crosses, wreaths and other designs mainly composed of galax are in demand. For funeral purposes in general the galax leaves have come into use to a considerable extent, supplanting to a large degree the English ivy previously so extensively used for such occasions.

The galax leaves can be had in the markets of all large cities at any time during the winter, and are quite inexpensive. The leaves can be purchased in small quantities at 20 to 25 cents per 100, and in large lots for much less. The natural

color of these is a light green, but in fall after the first frosts have set in the foliage takes on an autumn tint, shading from a light to a deep brown, which renders them much more valuable for our purpose; still some of our flower buyers prefer the green, and when possible to obtain both it is best to carry a stock of each on hand. These leaves keep a long time and should be handled the same as the common wood ferns. If proper facilities are had a sufficient stock to last through the winter should be laid in in the fall when the leaves are gathered, and can be bought generally for much less than later on. The leaves come 25 in a bunch, and should be packed rather firmly in boxes, or else they will curl and shrivel up. Place a thin layer of dry sphagnum at the bottom, then a layer of leaves and sphagnum alternately until the box is full. Don't put too many in a box or else they will get heated and spoil; the air in the basement or cellar where they are kept should not be too damp, else the stock will get mouldy.

Our illustrations show a standing cross about 5 feet high. This style of cross is what is termed a block cross, all four sides being of the same width. The cross proper is made up of galax leaves set in rather carelessly. In this way it differs somewhat from the usual way of arranging the leaves, which generally consists of turning the leaves all in the same direction and overlapping them like scales. The loose and careless arrangement of the leaves gives a more natural appearance and is preferable in a design like this, especially in a large size. This is, however, largely a matter of taste, and some of our patrons that have been accustomed to the style more general in use may prefer it.

The modus operandi of putting up this design differs in no way from that described before for designs of a similar nature. In arranging the leaves it should be our aim to place them in a natural position as nearly as possible and at the same time preserve the outlines of the cross, which is an easy matter in a piece of this size.

Various combinations of flowers with the galax leaves can be made with good effect. A garland of white roses interspersed with valley starting at the base with one turn around the body of the cross, with the tip just reaching over the left arm, is shown in the first view of the cross, the base being arranged loosely with a clump of about a dozen *Harrisii* at the left hand side interspersed with *marguerites* and *Bride roses* in the front, with wood ferns and a few sprays of southern smilax for green. If the roses have sufficiently strong stems these can be pushed right into the moss. Weak-stemmed flowers, however, are best supported by a wire, as these are apt to droop too quickly otherwise. The *Harrisii* should by all means be firmly imbedded in the sphagnum; if these are placed where they but barely touch the moss they will flag in a very short time.

It is our object to show such an arrangement as the above in its simplest and least expensive form. The cost price, figuring average Easter prices, would be about \$15, as follows: 1000 galax of medium size, say \$2.50; 75 *Brides*, at 8, \$6; 12 *Harrisii*, at 15, \$1.80; 50 *marguerites*, at 1, 50 cents; 50 valley at 4, \$2; green, etc., 50 cents; frame, \$2.

The second illustration shows the same cross with a different arrangement of flowers, in which callas form the main part, between which are placed about a dozen purple Dutch hyacinths. In order

to keep the callas and hyacinths from flagging take a rather heavy wire, say No. 14 or 16, and push it up through the stem to the top of the flowers and then imbed them firmly in the moss. As to cost, a piece like this could be made up for \$9 to \$10. Cost of material: 1000 galax, \$2.50; 25 callas, at 12 cents, \$3; daisies, 50 cents; one dozen hyacinths, \$1.20; green, 50 cents; wire design, \$2.

Some Factors Influencing the Health of Plants Under Glass.

BY PROF. B. T. GALLOWAY.

[Delivered before the New York Florists' Club Monday evening, April 8.]

It needs little argument to prove that every plant in nature is constantly subject to change. There is no such thing as fixity, every living organism being in a measure a plastic object, subject to modification and eradication of its parts, or to total annihilation by the laws which govern the universe. If this is true of plants in nature it is even more true where they have been removed from this condition by the hand of man, and to serve his wants and needs have been made to develop not only out of season, but to produce one part at the expense of another. We see, therefore, that there must be a constant struggle for existence, and while in nature equilibrium is maintained by natural combinations of laws the gardener sets aside these combinations, for most of the plants he grows would soon cease to exist if his watchful care was removed even for the shortest time.

The gardener, however, is not satisfied with perpetuating the monstrosities which nature has placed within his hand, but acknowledging no limits to his power he causes these waifs of the plant world to grow, bloom and bear fruit or foliage at a time when the greatest forces of nature, viz., the sun's heat and light, are at their lowest ebb. The gardener, therefore, or to use the more specific and appropriate term for the present occasion, the florist, has a most difficult field of labor, for he must of necessity be the very closest observer of the workings of nature and nature's laws. His success depends upon this, for the more closely he observes and applies intelligently the knowledge thus gained the more likely he will be to keep his plants in full vigor and health.

This brings us now to a consideration of the question of health. What is health? Or, to put the matter in another way, what constitutes disease? Strictly speaking, an organism is diseased whenever any of its vital functions are deranged. If it can no longer propagate itself either by seeds or in other ways it is functionally wrong, therefore diseased. If we accept this definition it will be seen that a large majority of plants which the florist cultivates are in a state of ill health. It is hardly necessary to accept so broad a definition. For our purpose we may adopt a more restrictive one, by saying that a disease is any derangement of the functions of a plant which may result in death or injury as a whole, or death or injury of any of the parts designed by the grower for pleasure or profit, or for both. With these facts clearly before us we may now pass to a consideration of some of the factors influencing the health of plants when grown in greenhouses.

A plant may be likened to a complicated yet delicately adjusted steam engine. To obtain the desired amount of work from such a machine, fuel, water, oil, and other materials are necessary. If all of these materials are properly furnished and there is nothing wrong with the mechanism of the machine, all parts of the latter when

CROSS OF GALAX LEAVES. NO 1.
ARRANGEMENT OF FLOWERS.

started will work in harmony. If, however, fuel, water, or other materials are neglected, or if a nut, key, or valve has not been properly adjusted, the engine may be stopped entirely, or be so crippled that it can only partially perform its work. So it is with the plant, excepting we have here an infinitely more complicated mechanism, and an adjustment so delicate that the slightest change may affect it. In the plant, however, as with the engine, certain things are necessary to insure the proper amount of work. Food, light, heat, air and water must be furnished, and to do this in such a way as to insure the largest yields with the least expenditure constitutes, with the plants we have under discussion, the art of floriculture.

It follows from what has been said that the principal factors influencing the health of plants under glass are food, light, heat, air and water. The question of food is intimately associated with that of the soil, so that in reality the latter should be considered rather than the former. Improper conditions of soil, light and heat, and injudicious use of air and water, singly or combined, bring on changes which according to the definition already given may be characterized as disease. Then aside from these, yet intimately associated with them, we have the attacks of fungi and insects. Fungi and insects, however, considered independently, should in many cases be looked upon as secondary factors, and this is a point I think that should be kept in mind by

those who are studying them. It is too often the practice to lose sight of everything but the fungus or insect, forgetting that changes have also taken place in the plant attacked, changes which if studied and understood might have led to a much better understanding of the difficulty. In other words, there is in almost all cases of attacks by organisms such as we have under consideration an intimate relation between the plant attacked and the organism attacking it. To illustrate, lettuce when grown under glass is frequently attacked by a fungus, which starting on the edges of the central leaves soon extends to the center of the plant, causing a wet, slimy rot, very offensive and very destructive. Now, looking at the matter from the standpoint of the fungus alone, it might be concluded that it is the prime factor to consider, as it is always present and associated with the trouble. Its life history, without relation to anything else, would therefore be studied, and in view of the facts brought out possibly burning sulphur or dusting the plants with some fungicide might be recommended. When we come, however, to look beyond the fungus itself, in other words to the real condition of the host plant, we find the true explanation of the trouble. The lettuce plant or host, in brief, has had certain of its functions disturbed by peculiar conditions of the soil. The roots in certain soils are not able to act promptly at times when there is a pressing need that they should act, as for example, on a bright day following a spell of cloudy weather. The tissues of the leaves at such times are soft, and when the sun appears they lose large quantities of water. If the roots are not able to supply water rapidly enough the edges of the leaves first wilt and soon many of the cells may be killed, and others badly injured. These injuries may not be apparent except by very close observation. The fungus which is always present in a greenhouse finds here conditions just suited to its growth, consequently we soon find it luxuriantly growing on the parts that were injured. In a few days, especially if the weather conditions be favorable for its growth and unfavorable for the best development of the host, the fungus will gain sufficient strength to pass from the injured parts to actual healthy tissue. A few more days and we may have the whole center of the head a rotten mass, and millions of reproductive bodies being formed for further destructive work. The seat of the trouble, as will be seen from the foregoing, was in the soil, and if this had been understood the injurious effects might in all probability have been avoided. That the fungus alone, without consideration of other factors, could not cause the trouble, is shown by the fact that it can not be made to grow upon a perfectly healthy lettuce leaf. I have dwelt upon this matter at some length to emphasize the fact that no disease can be fully explained without considering numerous factors, their relations to the plant attacked, to the fungus or other organism, if such is involved, and finally to each other.

With these introductory remarks I will now pass to a somewhat more specific consideration of the subject, and with the aid of the stereopticon endeavor to make more clear some of the points already discussed.

From this point the speaker illustrated his remarks with the aid of the stereopticon and specially prepared slides. Attention was called first to soils in their relation to the growth of plants. The importance of a better understanding of this subject could hardly be overestimated. The soil in reality is the basis for all work the florist performs, and upon an intelligent understanding of its nature

depends more or less the elements of success or failure in growing crops. Every florist is aware that certain crops may be more successfully grown in one locality than in another. This is not because the general meteorological conditions are different in the respective localities, but because there are differences in the character of the soils. The actual food in the soil does not seem to play a very important part in the matter. Chemists could not by an analysis of the soil and plant throw any special light on the great differences shown by the growth of the same plant in soils containing to all intents and purposes the same amount of food. Those who work with soils are aware that the texture, or, in other words, the way a soil feels or behaves when turned up with the spade or plow, has a very important relation to its value for growing certain kinds of crops. Such questions bear upon the physical properties of soils, that is, their structure, capacity for air, heat, water, etc. There is an intimate relation between the growth of plants and the various properties mentioned, and a study of these relations throws much light on many practical questions.

With the aid of the lantern it was shown how the structure of a soil was determined. Soils as a rule consist of certain amounts of gravel, coarse and fine sand, silt, clay, etc., and these amounts could be determined by a mechanical analysis. In making such analyses the soil for convenience is separated into eight parts, each of which has received a certain conventional name. Thus there is fine gravel, coarse sand, medium sand, fine sand, very fine sand, silt, fine silt and clay. The separation into the parts named depends on the size of the grains of each. In fine gravel, for example, the grains are one to two millimeters in diameter, a millimeter being practically one twenty-fifth of an inch. Coarse sand is smaller, and so on with each part until clay is reached; this has the smallest grains of all, their size varying from .005 to .0001 of a millimeter in diameter. Now upon the amounts of these various materials will depend the texture of the soil, and the texture has a marked effect upon the capacity of the soil for air, water and heat. It follows, therefore, that there is an important relation between the texture or structure of a soil and the growth of the plant.

Mechanical analyses of several soils were then given and their capacity for moisture graphically illustrated. In one case where exactly the same amount of water was added to two plats of soil of different structure there was constantly at the disposal of the plant 15 per cent of water in one plat and 26 per cent in the other. From facts of this kind and others of a similar nature it was shown that by varying the structure of a soil many plants could be made to change their development materially. The color, size, and relative production of leaves, flowers, and fruit could be modified.

The relation of the physical properties of soils to diseases was then pointed out. It was shown how a soil of a certain structure would contain water, heat and air in a way that would bring about a growth of leaves or other parts peculiarly liable to the attacks of both insects and fungi. Of course the soil alone is not always the prime factor in troubles of this kind. Light and heat are also important matters. A consideration of light and heat involved the whole question of greenhouse construction, which in itself is a very exhaustive subject. It has come to be generally recognized that a certain style of house is best adapted to certain crops. There is still, however, a great deal to learn upon this subject. Florists, as a rule, had been somewhat backward about adopting new ideas in regard to greenhouse construction. Violet growers, for example, still cling to antiquated structures, wholly unsuited to the best development of the crop. Numerous houses were shown and the defects in their construction pointed out. The great improvement in the construction of houses for certain crops is largely due to the exchange of ideas brought about by co-operation and stimulation in society work. There is much yet to be accomplished, and the societies might do a great deal toward stimulating effort in improvement.

The speaker then entered upon a discussion of some of the diseases and insect pests affecting plants under glass. Diseases might primarily be due to the attacks of fungi or insects, or they might, as already pointed out, be largely brought about by improper conditions of soil, light, heat and other factors. The fact should always be borne in mind, however, that no disease can be intelligently explained by a consideration of one factor. The relation between the plant and the fungus attacking it was then fully explained. It was shown how by hygienic treatment many of the troublesome diseases of greenhouse plants might be largely prevented. In this connection a discussion of the diseases of the violet was entered upon in detail. For years Marie Louise had been grown and propagated with no other object in view than that of obtaining the greatest number of flowers at a time when they would bring the most money. Little or no attempt had been made to keep up the vigor of the stock. Weak plants, strong plants, free and shy bloomers, had all been propagated alike, and in consequence there had been a certain amount of deterioration. Add to this the methods that some growers follow and there is no wonder the plants go off with spot.

The speaker then proceeded to describe several diseases which cause more or less trouble to violet growers. The first, which is generally referred to as "the disease," might properly be designated as white spot. White spot is widespread and fre-

quently very destructive. It causes the greatest injury to plants a short time before they are ready to be moved into the house, viz., toward the latter part of August and early part of September. Hot, scorching days, followed by heavy dews at night, are almost certain to bring on the trouble, unless the plants are in the very best growing condition. White spot also attacks plants under glass, taking off the leaves about as fast as they push out. The disease is due to a fungus, possibly in some cases to two fungi working together. The fungus is exceedingly common. It will grow readily upon any decaying material, and its spores or reproductive bodies are found in great abundance in greenhouses, and in fact wherever the plants are growing. Certain conditions favor the growth of the fungus, and it was pointed out that these same conditions often work to the detriment of the host plant. Thus, during the latter part of August and early part of September, when the plants are making rapid growth, there comes one or two days of muggy weather; frequent light showers during the day, with possibly fog or heavy dew at night; the air at such times is practically saturated, the light is weak, and as a result certain functions of the plant are disturbed. In consequence the tissues become softened, the cells composing them being gorged with water and weakened by other materials which have been accumulated during the enforced inactivity. All this time the fungus has had just the conditions needed for its rapid development, plenty of moisture in the air and an abundance of small drops on the leaves. The growth of the fungus, therefore, is rapid and the leaves in consequence are infested at many points. Once within the tissues the fungus has to a certain extent the power of growing regardless of the condition to which the host is subjected. Its development, however, is comparatively slow, and it may be eight or ten days later, during another spell of damp weather, that the spots suddenly manifest themselves. In this way the plant is constantly being infested, and it will be seen that the more it is subjected to the conditions mentioned the fewer chances it has of evading the fungus.

These matters were all made clear with the lantern, the characteristic spotting, the fungus, and other points being illustrated. Other diseases of the violet were also discussed, the more important ones being a wet rot of the lower and inside leaves, which, owing to their position, are not reached by the sunlight; brown spot of the leaves, a fungous malady characterized by large brown irregular-shaped spots or blotches, which soon become soft in the presence of moisture; fading out and dying of the edges of the leaves due sometimes to the attacks of nematode worms at the roots, but more frequently to improper soil conditions; wart disease of the foliage, a trouble due wholly to improper conditions of soil, moisture, and light. The wart disease manifests itself by peculiar excrescences, which appear on the leaves and also on the leaf stalks and flower stalks. The speaker stated that he had produced the disease on nearly a thousand plants the past summer by mauling heavily with sphagnum and then shading with a closely made lath screen, which was raised about 4 feet above the bed. The plants made a fine growth under these conditions, but the light being feeble, the soil rich and full of moisture, the tissues or, to speak more properly, the living principle of the tissues, i. e., the protoplasm, probably developed an abnormal avidity for water, especially at certain points. The ultimate result of this was a rapid growth both in the number and size of the cells at the points mentioned. The trouble was not limited to any particular tissue, but was liable to start anywhere, even at the center of the leaf, and work outward. Cracking the leaf and even the punctures of aphids and red spider would start it.

The speaker exhibited magnified drawings of healthy and diseased leaves, explaining how the trouble started, how by the growth of the cells the pressure on the epidermis became so great that the latter was pushed up, then ruptured, the exposed cells dying and turning brown. The remedy is simple, namely, not to overfeed nor overwater, and so manage light and air as to keep the plants in healthy, but not excessive growth. It was pointed out that when plants take on a deep green color, when their leaves stand up stiff, and finally when you can hear the foliage crack when the hand is passed over it, the growth is too rapid and something should be done to check it. Water might be held off and possibly more light and air given.

Summing up the requisites for successful violet growing, the speaker said:

(1) Grow plants in solid beds where they are to stand.

(2) Build even span houses, three together, on the ridge and furrow plan, each house to be 12 feet wide inside, 7 feet to the ridge, and 18 inches at the side. Run houses north and south, and provide 18 inches of continuous ventilation on the west side of each house, ventilators to be hinged at the bottom. Provide also continuous ventilators on the two exposed sides so as to get a rapid and continuous circulation of air, ventilators in this case to be hinged at the top and to open outward. Make the roof permanent, using 1 1/2 x 2 1/2 inch sash bars with drip groove and no rafters whatever. Glass 12x12, second quality double thick; if less than 10,000 feet of glass use hot water for heating; if more, and in the latitude of New York and northward, use steam. In either case use only wrought iron pipe, running one supply under each ridge and a sufficient number of returns on each side to maintain a temperature of

40° inside with an outside temperature of zero.

(3) Keep the night temperature as near 40° as possible, and on bright days give plenty of air and keep the temperature down to 60 or 65.

(4) Never water unless it is certain that the leaves will dry before night.

(5) Never keep a plant more than one year.

(6) Propagate in spring, using runners rooted in sand whenever possible. Never under any circumstances propagate from a sick plant, nor one that has undesirable characteristics, as for example throwing "bull head" flowers, flowers with short stalks, or no flowers at all.

(7) Clean the plants often, never allowing yellow and spotted leaves to accumulate. Make it a cast-iron rule that every leaf and bud flower picked off is to be immediately burned. The man who allows the rubbish from the plants to be tramped into the mud in his walks and to accumulate behind every board is the first one to get the spot, and he ought to have it.

(8) Put on 4 or 5 inches of fresh soil every year, soil to consist of two-thirds good rotted soils and one-third rotten manure. Before putting on the new soil work over the beds thoroughly, turning to the bottom the soil on top. A change of soil gives a vigor to the plant that can be obtained in no other way, and is practically the only safeguard against root galls produced by nematode worms.

(9) For spider apply nothing but water, using it freely and forcibly. Get a nozzle throwing a thin, narrow, fan-shaped stream, and put on enough pressure with a force pump to lay the whole plant over. Eighty or one hundred pounds pressure would not injure the plants, but it would knock the spiders silly.

(10) For greenfly fumigate with tobacco, but do it cautiously. Never wait until the insects appear in numbers, as the smoke required to kill them will injure the plants and flowers.

The speaker said that it was not possible to go into details in regard to other diseases, and he wished therefore to close this phase of the subject by a brief reference to the *Harrisii* lily trouble. All present doubtless are only too familiar with the disease in question. As yet the investigations of the subject have hardly been commenced, therefore it was not possible to make any definite statements. It must be borne in mind that matters of this kind could not be settled in a day nor a week nor a month. It would be just as reasonable to expect a man to learn how to grow roses, carnations or violets successfully in a day, a month or a year. There are some troubles whose causes are so obvious that no particular effort is required to get rid of them; for example, caterpillars might attack pigonette, as they often do; they simply eat the plants, are in plain sight, and might be considered in the same light as a pig or a cow, or any other animal that is bent on satisfying its appetite at the expense of the grower. The remedy in both cases is obvious—get rid of the animal as soon as possible without injuring the plants any more than can be helped. For the caterpillar Paris green would doubtless be used, for the pig or cow a club. However, in many diseases matters were much more complicated. The plant was sick in the true sense of the word, and the only way to determine what ailed it was to look into all phases of its growth. This requires time, practical skill in growing plants, and the ability to apply scientific knowledge and reasoning to the facts developed. The summarized facts in regard to violet culture were given in five minutes, yet it had taken year's actual work in growing the plants to be able to make such statements.

The *Harrisii* lily disease seems to be one in which a number of factors are involved. The speaker was of the opinion that the trouble is primarily due partly to the way the bulbs are grown in Bermuda, and partly to the way they are treated after they reach here. For years the demand for early delivery has been stimulating the growers to harvest the bulbs before they are ripe. This practice must eventually tell on the vigor of the plant, for an unripe bulb is like an unripe shoot, unfit to stand the strain put upon it in performing even the normal processes of life. Add to this the practice many florists have of potting in heavy, poorly drained soil, crowding the pots together on a bench where the air can scarcely circulate and good drainage is out of the question, and it is no wonder that the net over-strong vigor of the plant gives way. All this, however, is offered merely as a suggestion, a working theory, which future investigation must prove or disprove. The conclusion the speaker called attention more specifically to some of the most troublesome insect-attacking plants under glass. Greenfly and red spider, the latter, not, strictly speaking, an insect, were the most serious pests to consider. Fortunately, however, simple and effective remedies were at hand. Tobacco for the fly and water for the spider. The speaker described a method of combatting spider on low-growing plants like violets. A good strong double-acting force pump was used. This was provided with about 50 feet of light extra strong discharge hose, about the size of the little finger. Hose of this kind could be pulled over the plants without injuring them and the water could be applied from all sides. The pump itself, which may be attached directly to the watering hose, was light and therefore could be moved readily. A nozzle with a lever, which could by moving change a solid stream to a fan-shaped powerful spray, was used. The spray could be thrown 15 feet and at that distance would turn the leaves over and wash their under sides thoroughly.

CROSS OF GALAX LEAVES. NO. 2.
ARRANGEMENT OF FLOWERS.

Winter Flowers.

My life experience in the garden has ever and always impressed me with the fact that a choice, select and varied collection of *flowering* plants is not only the most perpetually pleasing, but the only feature of even the most pretentious institutions which all classes of visitors enthusiastically enjoy. Those Kew men who have recently written in your journal will understand this when I remind them of the No. 4 conservatory. This is a show house, a greenhouse. It is not a very large one as houses go at Kew. It was my house 32 years ago, and I was never

quite so happy in my life, and never saw so many happy people in the same space of time. The palm house is more written about and figured about out here in America because it is big, but I can say, after the experience in both, that the show house made ten people beam with happiness where the palm house astonished one. It is flowers—a variety of them, and plenty of them, all the time, that people want, no matter what the fashion of the passing hour is or may be.

Perhaps it may be useful to state how this finest of show houses is maintained. There is nothing wonderful about it. It

is successful because the means are exactly adapted to the end. The central beds are filled with a miscellaneous collection of large plants, some of which remain in their positions all the year, and a portion go outside to make their growths. The benches are kept gay all the year through, but in England they are especially gay in spring. Every Saturday morning the plants which are past their best are set down and counted, the number given to the soft wood department, fresh plants brought in, and the exhausted ones taken away. After proper arrangement all is made spick and span for Sunday. So it goes year in and year out, and there are but few who visit the gardens knowing of that house but take it in. Thousands do so over and over and over again, and it is queer if they don't find plenty to pay them for their trouble.

It did not seem to me, however, that any premeditated effort was made to grow hard wood plants for furnishing purposes, but mainly the soft wood. It is a little easier there as well as here. But the variety of hard wood plants was very extensive, and there was a continual succession of them. The show stove was managed on somewhat similar lines, but it never seemed so popular. Now these things can be done with more facility here than in England, for our summer climate is quicker to develop growth. The mistake that seems to be made is trying to keep an immense barn of a horticultural building gay with an utterly inadequate set of growing houses to supply it. The passion for bigness in conservatories has mortified many a gardener, and forced him to run to greenery and despair. There are cases in the country where the houses are in capital proportion, and yet mediocre enough in results. I suppose they are run by politicians. Anyway, florists don't need to do as they do. Ever so small a house, a window even if you will (like Baldwin's of Philadelphia) you can keep attractive, and it is generally worth while for you if you live where many people travel.

The following lists were made up many years ago. I have never been able to get but a small percentage of them together here. I have seen but a few of them flower in the country, although I have sometimes seen the plants. In our climate it is possible that very many of the following plants would flower earlier than March, and very occasionally later.

A large number of Australian and Cape plants do extremely well planted out here, and the Botanical Gardens ought to be able to give definite information as to the behavior of the greater number of them. Some species are far from florists' flowers, but they are such as ought to be tried in the public conservatories, which are becoming more and more plentiful.

TROPICAL PLANTS.

Æchynanthus Paxtonii, *Æ. purpurascens*.

Æchmea species.

Alpinia Malaccensis, *A. nutans*.

Amomum dealbatum, *A. subulatum*, *A. sylvestre*.

Aristolochia species.

Asystasia bella.

Barbacenia gracilis, *B. squamata*.

Bauhinia species.

Beaumontia grandiflora.

Begonia longipes (syn. *Washingtoniana*) and many others.

Bignonia gracilis, *B. Telfairea*.

Bilbergia species.

Brillantasia owariensis.

Brucea ferruginea.

Brunfelsia angusta, *B. hydrangæ-*

formis, *B. latifolia*, *B. Lochartii*, *B. Pohl-iana*, *B. Hopeana*, etc.

Bougainvilleas.
Buddleia crispa, *B. braziliensis*, *B. salicifolia*.

Bunchosia glandulifera.
Casselia integrifolia.
Clerodendron glandulosum.

Combretum formosum, *C. paniculatum*, *C. purpureum*.

Cyclista albiflora.
Dicliptera resupinata.
Dombeya species.

Dracæna species.
Eranthemum montanum, *E. pulchellum*, *E. strictum*, etc.

Flacourtia sepiaria.
Feronia elephantum.
Galphimia glandulosa, *G. citriodora*.

Gilbertia palenata.
Gloxinia maculata.
Griffinia intermedia, *G. Blumenavia*, *G. ornata*.

Hedera digitata.
Heinsia jasminiflora.
Heeria roseum and *album*.

Hoya, several species.
Hymenocallis Knightii.

Impatiens Hookerii, *I. Hawkerii*, *I. Jerdonia*, etc.

Inga species.
Jacobinia speciosa.
Jacaranda mimosæfolia.

Mæsa nemoralis.
Manettia species.
Medinilla species.

MacPhersonia species.
Myginda latifolia.
Palicourea gardenioides.

Parkia uniglobosa.
Plumbago species.
Prepusa Hookeriana.

Randia Bowieana.
Rondeletia species.
Rudgea macrocephala.

Ruellia calvescens, *R. Purdeiana*, etc.
Rhynchospora Schwartziana.
Strelitzia species.

Strobilanthes sabinianus, *S. sessilis*, etc.

Tabernæmontana discolor.
Thunbergia erecta, *T. Vogeliana*, etc.

Talauma Candolleii.
Tetracera obovata.
Tetrazygia tetrandra.

Tibouchina macrantha.
Wrightia species.

GREENHOUSE PLANTS.

Acacia species.
Adenandra species.
Acocanthera spectabilis.

Agapanthus umbellatus vars.
Alophia cœrulea, *A. Drummondii*.
Aloe succotrina, etc.

Aotus lanigera.
Arbutus species.
Arum species.

Athrixia capensis.
Bahiana species and varieties.
Brachysema hybrida, *B. undulosum*, *B. villosum*.

Barosma crenulata.
Boronia species.
Callistemon species.

Campylanthus salsoides.
Calceolaria species and varieties.
Cantua pyrifolia.

Cestrum alaternoides, *C. corymbosus*, *C. evaneus*, *C. fasciculatus*.
Chorizema angustifolia, *C. Lowii*, *C. scandens*, etc.

Cineraria species and varieties.
Cluytia pubescens.
Cordyline species.

Coleonema tenuifolia.
Crassula coccinea, etc.
Conanthera bifolia.

Cuphea species.

Cyanella cœrulea, etc.
Cytisus species.
Daviesia angulata.

Daphne species.
Darwinia tulipifera.
Diosma species.

Diplolæna Dampierii.
Entelea pubescens.
Ericas, about 40 spring blooming species.

Epacris, about 20 spring bloomers.
Eriocephalus racemosus.
Eriostemon densifolia, *E. intermedia*.

Gastrolobium acutum.
Gladiolus species.
Gompholobium versicolor.

Grevillea acuminata.
Greyia Sutherlandii.
Hardenbergia monophylla.

Hæmanthus species.
Hemigenia purpurea.
Hermanuia species.

Hovea species.
Holbœlia latifolia.
Hymenocallis Skinnerii.

Iris species and varieties.
Ixia species and varieties.
Isopogon Baxtrii, *I. sphaerocephala*.

Jacksonia horrida.
Jasminum species.
Kennedyia species.

Labichæa bipunctata, *L. lanceolata*.
Lantana varieties.
Leucadendron species.

Libertia grandiflora.
Lilium species.
Liparia vestita.

Litsia apetalâ.
Lysinema pungens, *L. rubra*.
Malva amœna, *M. capensis*.

Macrostylis barbigerâ.
Magnolia fuscata, etc.
Marianthus cœruleus.

Mesembryanthemum species.
Mirbelia floribunda.
Myosotis species.

Onoseus montana.
Olearia oculata.
Ornithogalum species.

Ormosia inodora.
Othonna species.
Oxalis species.

Oxylobium species.
Pelargonium species and varieties.
Pittosporum, 6 species.

Polygala species.
Pomaderris lanigera, *P. viride-supra*, *P. Wendlandiana*.

Protea neriifolia, *P. acerosa*, *P. cordifolia*, *P. obtusa*, *P. longiflora*.
Pultœnia species.

Rhododendron species and varieties.
Ribes species.
Rochea falcata, *R. cymosa*, *R. jasminea*.

Scilla species.
Scottea angustifolia.
Semerandra grandiflora.

Siphocampylos bicolor.
Sparaxis bicolor, etc.
Spatalla pedunculata.

Stenomesson Hartweggii, *S. latifolia*, *S. coccinea*, etc.

Struthiola ovata.
Synnotia bicolor.
Tecoma meonanthera, etc.

Tecophilæa species.
Templetonia glauca.
Tetradlea ericoides, etc.

Tritonia crispa, etc.
Tropæolum species.
Turpinia arguta.

Veltheimia species.
Veronica species.
Urceolina Sulivantii.

It is doubtful if any month of the year can be so enjoyable in an American conservatory as March, for the large number of forced and other flowers ordinarily grown by florists are in perfection of del-

icacy and fragrance. Roses, hyacinths, lily of the valley, violets, narcissus, and a score more lend their delicious odors and herald the approaching spring.

Trenton, N. J. JAMES MACPHERSON.

In Flatbush.

There is one goat less in Flatbush. As everybody knows, the Flatbush florist is generous and companionable. More than that, he is long-suffering. The former virtue was born in him; the latter has been acquired; acquired through constant familiarity with the inroads of the bands of predatory goats, ducks and geese that patrol the town, and his only protest is an occasional stone or lump of coal shied with that unerring aim which comes through continual practice. But there is a limit to even Flatbush forbearance, and one day recently when Gus Bergmann saw one of the long bearded quadrupeds taking a leisurely walk along the ridge-pole of his lily house his patience gave out; he just reached for the shot gun and there was one goat less in Flatbush.

But Mr. Bergmann is not only a good marksman, he is also an intelligent and skillful grower. His cyclamens have long been famous, and his success with these and other flowering pot plants has prompted him to discontinue growing for the cut flower market and in the future devote the entire establishment to pot plants. The method of growing cyclamens in frames during summer he proposes to abandon as unsatisfactory, and will erect two new greenhouses especially for cyclamens, for which a sufficient number of sturdy little plants from last fall's sowing are now ready in 2½-inch pots. Another specialty with Mr. Bergmann is *Begonia Vernon*, which he pronounces the very best variety in cultivation for bedding and general purposes. Last summer this *Begonia* withstood the drouth when everything else was dried up. The best plants are raised from seed. The seed requires careful handling, as it is very fine and starts slowly. Mr. Bergmann's plan is to sow it on the surface of fine leaf mould and then cover with a sheet of glass. Plants from seed sown last December and January are now blooming in 5-inch pots, and will be just right for spring sales. If extra large plants are wanted for Easter the seed should be sown early in the fall.

Another plant which is raised here largely for spring trade is the yellow flowered shrubby *calceolaria* locally known as *Shower of Gold*, a variety of *Calceolaria rugosa*, which when well grown sells splendidly, and although not easy to grow pays better, Mr. Bergmann claims, than geraniums. Few growers care to give the time and attention required to raise *ardisias* from seed, for they germinate slowly, and their growth is small the first year. Plants one year from seed are now only in 2-inch pots, and although a few berries are borne on the two year plants yet it takes until the third year before they are nice salable plants well furnished with berries. Mr. Bergmann prefers, however, to raise his own *ardisias* rather than take the risk of importing plants already grown, which almost invariably sustain more or less damage in transportation. Pansies have done very poorly with most of the Flatbush growers this season and many have died out in the frames.

Mr. Gus Messeberg Sr. has been seriously ill for several weeks, and much anxiety is felt regarding the outcome of his sickness. Gus Jr. has the houses well in hand, however, and they look as good

CHRYSANTHEMUM FRED. WALZ.

as usual, which is saying considerable, for this place is well known as one of the neatest and best kept commercial plant establishments in the country. Geraniums and fancy pelargoniums are grown here to perfection, and the houses are already bright with bloom. The varieties of geraniums raised in quantity as the best for this market are La Favorite, Mrs. Wm. Pfitzer, Beaute de Poitevine, Bonnot, Double Gen. Grant, Summit of Perfection, Ruy Blas and Bishop Wood. The double pink ivy leaved Souv. de Chas. Turner is grown here in quantity. There is no danger of having too large a stock of this, the loveliest of all the ivy leaved section. Regarding azaleas, Mr. Messeberg notes that the demand for bright red colors exceeded the supply last year, but that after having provided against a repetition of this condition the present season he finds that the popular fancyleans strongly to pink. There is every prospect of a great run on azaleas, the small sizes particularly. Carnation Puritan is here, as in several other Flatbush establishments, in splendid bearing at present. If such a crop and such flowers could only be obtained in midwinter from this variety there would be little room for new white sorts. Mr. Messeberg still hangs on to the Bennett rose, of which he has a long bench in vigorous growth.

At Dail'edouze Bros.' the carnations are naturally the leading attraction. McGowan, Tidal Wave, Daybreak, Scott, Bouton d'Or and Emily Pierson are all in the most flourishing condition, and Lonsdale's pride, Helen Keller, is grand beyond description. Jacqueminot is tall and luxuriant, but the flowers are mere

pygmies; this is also true of Annie Pixley, which is good enough as to color and stem, but falls far short in the matter of size. Mr. Dailedouze regards Emily Pierson as the most valuable scarlet for late crop, and says that it brings double the price of Portia in the New York market at this season of the year. There are several seedlings under trial, all with phenomenal stem development. Molatsch's new salmon which Dailedouze Bros. exhibited at Boston, has been named Fred Weir, and plants are to be sent for trial in different sections of the country before placing it on the market. The famous Dailedouze mignonette begins to show the effect of warm weather. All through the houses are seen the towering spikes that have been selected to supply seed for next year. This stock was started eight years ago with one plant, and has been carefully worked up ever since, each year showing a slight gain. It entails much care and attention, as this variety will not fertilize itself. Sweet peas, although six feet high, are only beginning to bloom. Bermuda lilies with two and three stalks to the bulb, and in many cases thirty or more flowers to the bulb, are among the main attractions just now at this establishment.

At George Bennett's two plantings of sweet peas, one lot sowed in September and the other in November, are just beginning to show flower, and those last planted are fully as far advanced as the others. Daybreak, Puritan and Portia carnations are in the ascendancy here. Grace Wilder, which has long been a leader, is to be discarded after the present season.

Louis Schmutz is not in love with Easter trade. He likes steady trade best, and the twenty cemeteries within easy access are counted on to furnish him with all of the latter that he can take care of. To the same end he grows about everything that can be asked for; to use his own words he has "a regular botanic garden." The zoological department is represented by a pair of trick bantams that have the run of the houses and will come to him when called—if they feel like it. Marechal Niels and camellias are among the curiosities found here, and next comes Mr. Schmutz's cutting bench, which is nothing more nor less than the surface of the rose bed. The roses don't appear to mind it in the least, and Louis dilates upon its many advantages with emphatic gestures and unanswerable argument. Verbenas he raises entirely from seed. To the suggestion that seedlings do not bloom so early as cuttings he replies that all that is necessary to secure early blooming is to keep the plants dry. July is his favorite month for chrysanthemum cuttings. He does not fool with manure water, but just plants them in manure to start with and gets fat plants with foliage clear down to the pots. All in all Louis is a genius; he does things in his own way and "gets there all the same." Moreover he is one florist in a thousand, inasmuch as he does not propose to build any more houses.

Chrysanthemum Fred Walz.

This new pink chrysanthemum has met with considerable favor and was awarded a certificate of merit by the Chrysanthemum Society of America. We commend the originator, Mr. Theo. Bock of Hamilton, O., in sending a photograph of a plant rather than of a single bloom.

Aspidistra Lurida and Amomum.

If you have to furnish plants for decorations there is generally a lack of short bushy plants to cover or screen the front row of pots in a group. There is nothing better adopted for this purpose than a good lot of medium sized aspidistras, both green and the variegated. All sorts of plants we have tried, but most all were spoiled in a short time, while our aspidistras have lasted several years, and are to-day in as good condition as ever. We manage to destroy a good many palms and other decorative plants in the course of a winter by using them in decorations, but we never lost an aspidistra. If you have them once they will last a life time. Certainly it takes some years to get up a stock of them sufficiently strong and large enough to use, but they can be bought at about 50 cents to \$1 for just such plants as you want for such decorations, and they will be worth the same money after a winter's use. They will stand more abuse, as to handling and watering, than any other plant I know of, and a freezing will not hurt them in the least. In winter, when room on benches is too valuable, we set them under the benches, and there they remain until June 1, when they are looked over, repotted and divided a little, if too large, and then placed in a warm shaded house, such as you would use for growing palms, to get them to throw out new leaves. While in this house plenty of moisture overhead and at the roots is supplied at all times, so as to encourage the young leaves to come long and broad, in fact too much heat can not be given as long as the glass is well shaded to prevent scorching, and enough moisture in the air is kept up. Toward September they are gradually

hardened off, and then they are ready to go out and fill their places in decorations of large or small dimensions, and on their return are set under the bench again, or at times are stored away under the counters or in the cellar of our store in the city, and do not come home for months. We formerly kept the plants on benches all the year around, especially the younger plants, which we expected to grow on, but nothing was gained thereby, for we did not keep up heat enough in any of our houses to keep them in a growing condition, and we found out that the summer months, without any fire heat, was the cheapest and best time to grow them on, and a place under the bench, or in a frost proof pit or even cellar, or a shed will afford them ample protection. Plants in 5 and 6-inch pots are most convenient.

If smaller plants are required we found the dwarf *Amomum Cardamomum* to be a tough and hardy plant for the purpose, also to break the monotony in the group. This may be grown in much smaller pots, little tubers or offsets of them started in spring in small pots will fill a 4 or 5-inch pot densely by fall, and will usually last all winter in good condition. This plant rarely grows any higher than 12 to 15 inches, has highly scented leaves shaped like a miniature canna, and is very tough and hard. Unlike the cannas, the old stems and leaves will remain green and healthy for two or three years, and will produce new ones all the year around. Any ordinary greenhouse temperature will suit them, and a place under the shade of large palms, or between the pots of any other larger plants that require to be set apart, is good enough for their welfare. Both of the above plants are, with us, good plants to sell for house or parlor decoration, and it will not hurt them if placed in a room entirely away from the light, which treatment few things will submit to. J. B. KELLER.

Rochester, N. Y.

Smilax Once Again.

The following comes from a reader in Michigan: "Please give directions for cultivation of smilax. What is the cause of its turning white or blighting, and the remedy?" In 25 years' experience I have never seen it turn white "or blight." The only enemy I have ever seen it troubled with was red spider, and that is only caused by a wilful neglect of syringing. The story of how to grow profitable smilax has been told in your columns more than once. Strong young plants from 3-inch pots should be planted end of June or as early as possible in July. A rather heavy loam is much better than a sandy soil, and one-third of rotten cow manure will suit it well. It will make good strings on a bench in 5 or 6 inches of soil, but a solid bed of one foot of soil is much better. A light house is not essential, but a good warm temperature is; 60° to 65° at night is the least it should have if four crops are expected in the year, and that is what can be done readily if planted in time. Syringe frequently; when growing strongly give plenty of water. When the crop is cut water very sparingly until young growth starts. After the holiday crop is cut mulch the bed with one inch of manure and soil mixed half and half; that will feed the surface roots. That's all, with a sprinkling of common sense through it all.

W. SCOTT.

WHEN writing our advertisers please use one of your printed business letter heads or enclose your business card.

Carnation Notes.

Friend Dillon does not agree with me in defining the color of his *Crimson Sport*, simply because we do not use the same pair of eyes, then the editor comes along and says a color chart is to be arranged so that every grower can tell just what the color of his pet seedlings may be, or words to that effect. Now this sounds first rate, but what good will it be unless we all agree to stand by the chart, and then I am sure that some unruly fellow who has a mind of his own will take it into his head to see an entirely different combination of colors in his new carnation from what he could possibly get out of the chart. Florists are queer about just such little points; they will not do as they are told. What a lucky thing it is to know more than others; then we are unable to lay our failures to those who are always throwing in a little advice.

But about that color chart; I believe it would be a good thing. Of course the ink used on the charts would never fade, even if laid out in a hot greenhouse, but then if they did fade the projectors of the scheme would always have a large stock on hand to send out to their numerous friends and acquaintances just for the sake of having the charts adopted. Now, if this matter is carried through and the Chrysanthemum Society and the Rose Society, the Carnation Society and every other floricultural society will simply say that this chart *must* be used by committees judging of their respective classes, then the chart becomes absolutely necessary and will prove of permanent value. There is no better man than Mr. Mathews to get out the chart, but the fact that any one man does such a work, or that the FLORIST advises or intends publishing such a work will not alone make it what it should be; it must, and I believe, if properly arranged, would, be gladly accepted by not only the societies of this country, but by every grower who is in need of such a chart. It would be of very great use to me in every branch of my business, and then I would not be called down again by my friend Dillon, for as I stated previously we do not all use the same eyes, and what I would call a salmon others might call a yellow, and so on through all the long list of colors or shades of colors. Just the same give us a well arranged color chart and I for one will be very thankful.

If it could be so arranged that disseminators of new sorts could use this chart for finding the rust on their novelties, which never show it in the least until they arrive in the hands of purchasers, it would be good. Why would it not be well for Prof. Halsted to get up a small treatise on carnation diseases, in neat pamphlet form, illustrated so that we all could determine what ails our plants? The Professor did an excellent work at Boston, but the eyes of the average florist are not trained to hold and transfer to the brain the distinction between the different diseases by a single glance through a microscope, but if the disease was plainly shown on a card or plate so that the trouble could be easily diagnosed by us poor growers, I believe it would be of much benefit to us and well financially for the professor.

A Chicago grower sent me a few specimens of diseased leaves last week, I could easily tell what ailed some of the leaves but the balance had something I could not reach, but Prof. Halstead had no trouble in locating the trouble; to use his own words, "The carnation has bacteriosis badly, and I am sorry for the owner of such plants."

Now this is all very well; we find out what ails our plants, the next thing is the remedy. Why does not some genius go to work and probe these diseases to the bottom, find out remedies for each and every one and then set up his shingle, "Doctor of carnation diseases"? Small fortune for some one. He might apply to the S. A. F. for a certificate; there is no higher authority to grant the sheep skin that I know of. I hear that the S. A. F. would like to control all of the minor societies, Rose, "Mum" and Carnation, bring them all under her wing for protection. Likely chickens as they are, I think the mother hen should have done her own hatching. It is like using an incubator and when the chicks are out giving them to the hen to care for.

CHAS. H. ALLEN.

Carnation Nomenclature.

There have been several new carnations put on the market the past season and extensively advertised under the name of old varieties. This duplication of names is bound to cause confusion, and could be easily avoided if growers and introducers would kindly send all new names to Albert M. Herr, Lancaster, Pa., as soon as selected and have them registered.

As an assistant in the naming of new sorts the forthcoming report of the American Carnation Society will be invaluable, for it contains a list of all the varieties up to date as nearly accurate as it is possible to get it. This report can be secured by joining the society, and every one interested in carnations should join the society, for it is doing noble work for this flower and is worthy of your support.

A. M. H.

Carnation Alaska.

ED. AM. FLORIST:—Permit me to thank Mr. Chas. H. Allen for his complimentary remarks on my carnation Alaska, which appeared on page 878. The mention, however, that Alaska failed to get a certificate at Boston would seem to indicate that Mr. Allen has either forgotten or was unaware of the fact that my one hundred blooms of Alaska received the American Carnation Society's first prize over all other one hundred blooms of whites exhibited on that occasion, which, in view of the splendid whites there in competition, I regard as a most flattering testimonial to its value, and a certificate ample for all necessary purposes.

Paterson, N. J.

H. E. CHITTY.

Daybreak Carnations.

We have a bench of 400 Daybreak carnations which were planted the latter part of September and from which we have cut as follows: October, 848; November, 629; December, 622; January, 781; February, 1,079; March, 2,100, a total of 6,059, and an average of 1,000 per month.

E. D. ELLSWORTH,

St. Joseph, Mo.

with S. N. Kidd.

MRS. C. H. DUHME is a new pink carnation raised by F. Dorner & Son, La Fayette, Ind. It is something in the line of Scott in color, and seems a promising flower. A group of seedlings received

A HOUSE OF GLOXINIAS.

from the same grower showed some fine forms, one being a beautiful intense red, with several pinks showing extra size and vigor. Among them was a pink $3\frac{1}{2}$ inches across, so full petalled that it looked like a tightly quilled rosette.

Gloxinias.

As a showy summer-blooming plant, at a time when the show house is rather bare of flowers, the worth of the gloxinia has long been recognized, but a good many florists hardly realize its value in the retail trade. Showy, well-bloomed plants in 4 to 5-inch will be found excellent sellers during July and August, when there is a dearth of flowering plants suitable for the house. They do very well in a room, developing their flowers just as well as in the greenhouse. Their culture has often been treated at length in our columns, by Mr. Scott and others. They are raised from seed or leaf cuttings, but the average retailer will do better to buy one year old tubers, which should be kept dry in sand until the middle of February, which is time enough to start them to have them in flower by the end of June. Pot in 3 or 4 inch pots, the top of bulb even with the soil; if the soil is moist no watering is needed till the young leaves appear, after which they should have abundance of water. Start them in a temperature of 60° . Never let them suffer for water; if allowed to wilt when in bloom the flowers never recover. Never let water lie upon the foliage. The house of plants shown in our illustration gives a good idea of the beauty of the gloxinia in the mass.

A Podunk Parable.

Now it came to pass in those days that the sun waxed fierce and strong about Cle Veland, which lieth close upon Podunk, and divers strange things came to pass therein; for there rose up among those who buy and sell yet again, certain ones who dealt in all manner of things for which men's stomachs have an affinity, and these ones were in cahoots, which in that country is called partnership. And these same bought and sold many things, yea, hams and eggs, tea and coffee, soap, sugar, codfish of pleasant savor (being a special brand) and many other things. And those that traffic in these wares are called grocers.

And beho'd now, these men took council together saying, "Truly these that are called florists wax fat and take unto themselves real estate, yea, build many glass houses and prosper exceedingly. Shall we not go and do likewise? Also it will be great card." And they did it, selling unto the populace roses for a small sum, called in that country fifty cents, and the number that was sold for that sum was twelve, which are called a dozen. And of tulips sold they a dozen for fifty cents, and of daffodils the same, but carnations were exchanged for twenty cents current coin, and all other things after the like manner.

And the florists marvelled, saying little one to another, but ever kept they up a powerful thinking. And behold there rose one among them called Gah-zoor and smote his chest so that the sound thereof was as that of a drum full of wind. Then said he unto himself so soon

after the chest smiting as he could speak "Go to! Ain't I Gah-zoor, the holder o' medals? I will show them things unto the point of paralysis, yea, so that they stumble and fall."

And he called unto his servants, saying: "Take of the old flowers, yea all that are pickled, and dispose them in baskets. Get ye without my doors, even out upon the sidewalk, and unto whomsoever that passes, give ye a flower as it may hap, a rose, a lily, a pink, a daffodil or whatsoever ye have. Go! Gah-zoor hath spoken!" And even so was it done.

Then waxed yet another florist full of rage, so that the waxing of his rage stood out upon his mustachios, and he twirled the same for two days, saying naught. Then unsheathed he his mighty axe and went forth to battle, keeping step with himself, and conducting himself conformably with Upson and the rules of war, for he was learned in these things beyond common men, and right terrible to see. And he hung banners in the windows, and inscribed upon them divers strange legends, saying: "Good roses, 35 cents, carnations 15 cents," and many other wondrous things. Now yet again did the eyes of the other florists bulge out, but still said they nought, even as before.

Then came those that ran a department store, which is like unto the ark of Noah, containing all manner of strange things—animate as well as inanimate. And they departed, saying: "Come off! We are the people! Come unto us, all ye that labor, and together we will make these florists weary. Yea, we will teach you how to get something for almost noth-

ing, for in exchange for that something we desire but a pittance. Yea, and ye need funeral flowers, the same shall be provided for that tearful occasion, all gotten up artistically and the gain shall all be yours. Behold, we are true philanthropists."

And seeing all these things certain florists murmured, while others said, "Go to; these things can not last, and then we will give these Philistines the grand laugh, even the large ha! ha!"

But others yet again held with none of these, but said, "Go ye and pursue yourselves! These harm no one, but benefit all, in that they spread abroad the love and knowledge of flowers, so that they who buy of these men's goods, being not commonly buyers of flowers, shall some day be seized of a discontent with the quality of the Philistine's goods, and coming unto your places of sale shall buy good flowers for but few shekels more. Then shall they be content and you shall have a new customer."

But no man had certainty of these things, so still they walk in darkness. These things that be written, be true, so hallelu me Moses. Selah. A.

New York.

A condition of dissatisfaction, which from long continuance may be said to have become almost chronic, prevails in the cut flower trade. Retailers complain of the rigid economy practiced by their once free handed customers, and refuse to enthuse over the after-Easter prospects. Weddings there will be, lots of them, but the orders are all of them miserably small. Existing conditions could not be much worse for the wholesalers, who, between the exactions of their friends on both sides, find much difficulty in maintaining the proper balance between their commission and their expense account. Among the growers "that tired feeling" is most prevalent with the rose growers. The carnation men, or most of them, are well satisfied, and they ought to be. It is a peculiar fact that the rose growers' only protest is a verbal one. Their actions indicate anything but distrust of the future of their specialty, and they resolutely shut their ears to all suggestions that excessive over-production is what is ruining the rose growing industry; how otherwise can any one explain the contemplated increase in glass area for rose growing, which bids fair this season to equal, if not exceed, that of any recent year? In Madison and vicinity Lum, Noe, Hopping, Holmes, Hart, DeForrest, Busbin and others have already begun or are about to commence additions to their glass of from 4,000 to 12,000 feet each, and from other rose growing sections similar reports are heard. Odd, isn't it? Perhaps it isn't going to be much of a shower. It didn't take the bulb forcers long to come in out of the wet, and the quantity of this stock grown for the cut flower market has now been reduced down to actual demands, so that but little complaint in this line has been heard as compared with the last few seasons.

On the other hand the plant growers are supremely happy. What is not already disposed of will not long remain unsold, and to them the present and the future are full of sunshine. The inevitable result of this is seen in the stiffer prices and reduced size of azaleas, rhododendrons, palms and other desirable import stock. The growers of these specialties abroad will show good judgment if they

read and carefully reflect on the sad fate which befall their over-greedy brethren, the Dutch tulip growers. They can not hope to control the American trade always, but with sagacity they can retain their hold on it for some years to come.

Prof. B. T. Galloway of Washington was the lecturer at the April meeting of the Florists' Club. The weather was such that the audience was small, but those who braved the elements were amply repaid. The stereopticon views added much to the interest and instructiveness of the lecture. Altogether about sixty slides were exhibited; these included illustrations of the various questions discussed under soils, diseases, insects, etc., as well as numerous views of typical rose, violet, carnation and other houses. The professor explained his interest in the welfare of greenhouse plants and his fondness for florists' society by saying that he was once a florist himself. Answering a question after his lecture he recommended shavings as a good mulching for violet beds. The plants do not require water so often and the flowers are kept cleaner. In reply to a suggestion that the decaying shavings might favor fungous growth he said that this was not likely; sphagnum moss might be preferable, but the shavings were much less expensive.

President Allen spoke feelingly of the loss which the club had sustained in the death of their fellow member, Mr. Forsterman. He said that probably no man connected with the club was ever held in higher esteem than Mr. Forsterman. He was one whose nature unconsciously and without any self effort endeared him to all who came in contact with him; his genial, warm nature made him at once a friend of every one who met him. The secretary was instructed to extend the sympathy of the club to Mrs. Forsterman.

The past month has been a very busy one at Siebrecht & Wadley's New Rochelle greenhouses. Young stock of the new rose to the number of nearly 100,000 has been coming on splendidly, and is now ready to be sent out. The young plants are in excellent condition, well rooted and thrifty. The old plants are blooming freely and will yield a good cut for Easter. Mr. Siebrecht reports an unprecedented call for small and medium sized palms this season.

First of all in demand has been Cocos Weddeliana, the stock of which is nearly depleted, and next comes Kentia Belmoreana, which is about cleaned out, not only here but everywhere. Arecas in all sizes and latanias up to four feet are selling briskly. The call for bay trees for hotels, club houses and such places also show an increased demand. There will be enough kentias in due time for patient waiters; as an enormous quantity of seed is being planted this spring. The houses are well stocked with specimen palms in large sizes from Trinidad.

Orchids, which constitute a leading specialty here, are looking well, but the season of best bloom is over and the crop of flowers is at low ebb. Mr. Siebrecht's theory that *Odontoglossum crispum* requires more heat than is given it by many growers, and that a temperature of 60° to 65° best suits its needs, seems well justified by the appearance of the *odontoglossum* house, the contents of which are certainly in excellent health. *Cattleya Warnerii*, *speciosissima* and *Peruviana* are all grown in large quantities. *Epidendrum bicornutum* is recommended as an orchid worthy of general cultivation for commercial purposes; the flowers are pure white and exceedingly pretty.

Among the novelties is *Anthurium Siebrechtianum*, the marked distinction of which is its showy spike of deep red fruit, which remains a long time on the plant.

The half hundred men on the place have been kept hustling with Easter flowering plants, of which there was a large stock. Many hyacinths and tulips, imported as first-class stock, have developed flowers far from first-class, against which Mr. Siebrecht enters a vigorous protest. Another disappointment is experienced in a house of lily of the valley, the stock in which he says was thought as so-called "Russian" at an enhanced price, but which has yielded very ordinary results.

Ernst Asmus has gone off on a duck shooting expedition to South Jersey, and expects to bring back a few of those that escaped President Cleveland's gun.

Alfred Dimmock has arrived from England and will have a large sale of orchids from Sander at Rolker's auction rooms on April 18.

John Reid, a well known florist of Jersey City, died on Monday, April 8.

Chas. Pynaert of Ghent sailed for home on April 10 per steamer New York.

Dr. Emil Holub sailed on the 13th. He will lecture again in this country next winter.

Theo. Outerbridge of Bermuda is in town; also Burt Eddy of the U. S.

Chicago.

Every indication points to an active Easter trade. Stock promises to be fairly abundant, but there certainly will be none too much if orders keep on piling in as they have all the week up to the date of writing (Thursday). The demand from outside points was never heavier, and the shipping trade will probably heat all previous records. Local trade is also quite active since the latter part of last week. On Saturday and Sunday a number of funerals took place, which called for an enormous lot of stuff, which was followed by Monday with an unusually heavy demand, occasioned by the inauguration of the new Mayor and city council. The council chamber on Monday was a veritable flower show, and as far as variety of designs is concerned beat any previous record for a similar occasion. As to the artistic and appropriate we shall say but little; it is enough to say that some of the characteristic "designs" caused a good deal of merriment to the general public who were fortunate enough to view them; at the same time there were also many strikingly handsome pieces. At any rate the market was entirely cleaned up, and the week started in with a clean board. Naturally prices made a sharp advance over the week previous, which latter was one of the slowest of the season. To-day (Thursday) regular Easter rates take effect, quotations of which will be found under the regular heading.

The weather this week so far is such as to make the plantmen happy. Although the temperature is not quite as warm as might be desired, still the days are bright and pleasant, and the stuff can be handled in good shape. Up to the present the outlook for this line of trade is very bright, and if favorable weather conditions should continue during the critical time of the next few days the trade in plants will be much larger than in previous years. The stock of *Harrisii* in pots is very fine this year, and stock is moving out of the hands of wholesale dealers at a lively rate; in fact every variety of plant in bloom seems in good demand.

A car load of callas, yellow marguerites,

palm leaves, branches of the pepper tree, eucalyptus, etc., was received here Wednesday, the 10th. These were consigned to Kennicott Bros., of this city. This shipment was made from Los Angeles, Cal., by the Central Park Floral Company simply as an experiment. To judge, however, by the appearance of the stock on arrival, it will not prove much of a success in a financial way, fully two-thirds of the 17,000 callas being spoiled. The marguerites came through in fairly good shape, and so did the palm leaves, among which are some extra large phoenix 18 to 20 feet long.

The callas were stood upright in boxes, the stems in wet moss. The flowers not being secured at the top resulted in their being badly whipped about, and the bulk of the damage was from this cause. Those in the center were least injured, both from whipping and wilting. Probably these did not have so much opportunity to whip, and the moisture was better held in the center. Mr. Kennicott had a large force of men sorting out the salable blooms, and was trying to do the best he could with them. Buyers were given their own selection at \$10 per 100, but he fears that the results will not be satisfactory to the consignee, as the freight charges alone were \$400. It is probable that the palm leaves in this consignment would have gone very well had they been in time for Palm Sunday, but they are now too late.

Although there is no fear of shortage for Easter, flowers have not been overplentiful this week, the greatest shortage being noted in carnations, white ones being particularly scarce. A good many growers seem to be off crop in whites. Daybreak is the only fancy quoted, and is very good; the limited number of Buttercup to be had is bought at double the price of other fancies. Kirscht Bros. of Niles Center ship in a limited quantity of fine Helen Keller. Out of town orders for carnations are heavy, and a good many of them must perforce go unfilled. Roses are sufficient for demand, though it would not be surprising to find a shortage in light-colored ones toward the end of the week. Beauties are fine, and so are hybrids; Mermet is better in color, though it cannot compete with Brid-smaid.

Some very good bulb stuff is seen. Tulips are fine, some white La Reine particularly so, and there are excellent Dutch hyacinths at \$6 to \$8. A novelty is gladiolus from Bassett & Washburn, fine spikes of colored varieties, which are held at \$3 per dozen. The same firm is growing superior valley. Outdoor narcissus is increasing; both poeticus and single yellow comes from R. Kennicott at Carbondale. The poeticus, however, seems to go rather slow.

As to lilies, it is not likely there will be any shortage. They are now (Thursday) held firmly at 15, having begun the week at 12.50. The demand has been steady all the week. Some dealers think they may reach 18, but that is uncertain. Callas are 12.50 for high grade local stock, 10 for seconds, the Californian batch being counted as the latter. There is no doubt the trade may be congratulated on the conservative manner in which these latter are being sold; had they been left on South Water street to be thrown into the hands of the fakirs for what was offered, not only would the consignee's loss have been heavier, but the lily market as a whole might have been injured.

Lilium candidum is not offered in quantity, but some good flowers are seen; they stand at 8. A few very good white stocks were noted, but they sell very feebly.

The yellow marguerites from California seemed to take very well; this might be borne in mind by our growers.

T. J. Corbrey will remove about May 1 to larger and more commodious quarters on the second floor of No. 59 Wabash avenue, the room at present occupied by the Cut Flower Exchange. Geo. Piepgras will occupy a room on the same floor May 1. Wm. Lynch, successor to the Niles Centre Co., will also occupy a room on same floor at the same date.

Our friend Walter Kreitling is coming up in the world; he has emerged from his basement and has now opened up in very neat quarters on the ground floor of 227 Wabash avenue.

Chas. Fisk will leave his basement on State street about May 1, and open up a store at 167 Wabash avenue.

Mr. H. A. Bunyard is still at the Alexian Brothers' Hospital, but is doing nicely and will soon be convalescent. His room at the hospital is No. 57.

F. C. Mendonza has opened a floral store at 566 43d street.

Recent visitors: W. Bertermann, Indianapolis; Schmidt Bros., Grand Rapids, Mich.; Geo. M. Bradt of the *Southern Florist and Gardener*, Louisville, Ky.

Our old Wooded Island souvenir of the World's Fair, Mr. Melchior Luetsch, has, like Robinson Crusoe, at last abandoned his island, and has gone to Lake Geneva, Wis., as gardener to Mr. Frank L. Chandler. The island still remains as a beautiful remembrance of the Fair, but it will seem incomplete without Mr. Luetsch, who was almost a part of it. During the Fair he was the man that could always be found, and somewhere on the island was the place to look.

During a visit to the Fair Grounds last summer we could not avoid comparing the endurance of the works of nature and those of man. The buildings that were so beautiful the summer of '93, and which had escaped the fire, already began to show unpleasant signs of decay, but the beauty of the island had greatly enhanced. The island was a gem of natural beauty in the midst of desolation. It will prove the one enduring memorial of the great exposition.

Boston.

For some reason Boston appears to have escaped the period of dullness and panic prices which seems to have struck some sections of the country. Lent has passed without any very noticeable depression, and prices on most lines have been well maintained. The wholesalers have got out their Easter price list, but even at the present writing, one week ahead, the market figures on carnations are fully up to the Easter quotations. The large increase in space devoted to carnation growing this season seems to have made no impression on the market so far, for there have been but few occasions when the demand for good stock has not been up to or ahead of the supply. Referring to this, Mr. Denys Zirngiebel pertinently quotes the old farmer who said that "the more hens you have the less eggs you get." And this is about how it looks in this case.

Roses, while less satisfactory than carnations, have done fairly well, and the growers have but little complaint to make. On lilies there is every prospect for a full and possible over-full supply for Easter, although there is a disposition manifested among the growers and wholesale to hold well up to prices that have prevailed in past seasons. The plant trade will undoubtedly exceed all former years in volume.

Palm Sunday furnished the usual demand for flowers for the various churches, and all the city and suburban retailers report a satisfactory business.

Mr. Henry O'Meara of the Boston *Journal* will address the Gardeners' and Florists' Club on Tuesday evening, May 7th on "The Poetry of Flowers." Mr. O'Meara is himself a poet of no small ability, and the club is to be congratulated in having secured a lecturer who can handle this subject so well.

Philadelphia.

The Easter trade promises to be unusually good if the advance sales reported by the growers mean anything. In nearly every case they say business has been unprecedented. Robert Craig, who had a very large stock of lilies, and was a little doubtful as to the result, stated on Saturday night, April 6, that he had never experienced such a rush. It has been his custom to have his sheds full of fine plants, consisting of city orders selected ready to go away on Palm Sunday, but this season his large shipping orders kept all hands so busy there was no time for ornamentation, and visitors had to be satisfied with seeing the plants on the benches. He is already sold out of many kinds of plants, and his large stock of lilies is nearly all gone.

Mr. Harris's experience is much the same, all his choice stock was quickly picked up, and some staple lines sold out before anything was delivered. Lilies are selling well with all growers, and for once all appear to agree that 10 cents per flower and bud is the right price.

Spiraea compacta was sold out first, \$4 per dozen being the price, through some sold for \$3. Four dollars per dozen is said to be scarcely enough to leave the grower any profit, and a dozen well grown specimens certainly seems a lot for the money. Lilacs, *metrosideros*, rhododendrons, and such choice stock have sold well, and a few more should be grown. The large lilies, three bulbs in a pot, are in great demand, and it seems probable that the demand will not be supplied. Hydrangeas seem to be the most plentiful. Harris had some extra fine large plants that went to Washington; they were certainly fine.

The brothers Ball are not in it this year, and their famous longiflorums will be missed. Palms carry better than lilies, and can be sold most any time, at least such stock as they grow.

Retail stores are as busy as bees, getting ready at this writing. Some send out cards of invitation to their customers and others seem satisfied that their hold on their trade is strong enough. All decorate their stores more or less, and most of the displays are miniature horticultural exhibitions of themselves. A great many people have gone into the business selling plants, renting empty stores and stocking up, or getting favorable places on the pavements to spread out and catch the passers by. Around the City Hall is getting to be a popular place for these curb stone merchants, and it would not surprise us to see this develop into a retail market for the spring season.

Sunflower Brunners are now to be seen, and if the warm weather of the last day or two continues it will be hard on all kinds of cut flowers. The stock promises to be plentiful and is offered at about 33% above the prevailing prices, for Easter delivery, except for carnations, which it seems are to bring about 100% more. All the bulbous stock is offered at current figures, and cut longiflorums are quoted at \$10 per hundred.

Heron & Nisbet have failed; Messrs. Bearn, Anderson, Lonsdale and Burton entered up confessed judgment notes and took possession of the store, which is to be conducted for a time under the firm name of Anderson & Bearn, with the other two gentlemen as silent partners. They are facetiously called the big four, and the boys in town are given notice to look out for themselves and the double barrelled opposition. The indebtedness of the firm was about \$5,000, and the creditors outside of the above who are interested to over half the amount will lose all.

George Craig has added wagon No. 3 to his delivery service; it is a beauty and will make the next ambitious brother hustle to get out something better. K.

Washington.

Every one seems to have taken a new lease on life as Easter approaches. The florists' windows are being dressed in their sweetest and choicest blooms and plants, and even the florists themselves seem to have awakened from a deep sleep to begin life anew.

Flowers, especially roses, are very plentiful and in fine condition, La France, Jacks, Meteors and Brides being unusually fine. The markets are stocked with bloom of every kind. Harrisii lilies are being grown in quantity by most all the florists, and the indications are that the market will be flooded. As some of the market florists said last week, "There were flowers to burn." Harrisii were selling for 25 and 50 cents per stalk, having from 4 to 6 flowers on each.

Good La France are bringing \$2.50 per dozen in the market. Woottons are exceptionally fine and are being sold at \$1.50 per dozen. Beauties are bringing from \$1 to \$5 per dozen in the market, according to quality. Bridesmaids are good, and bringing \$1 and \$1.50 per dozen. Perles, which are in great profusion, are sold at the stands for \$1 per dozen. Brides bring from 75 cents to \$1.50 per dozen, according to quality. Dutch hyacinths are abundant and bring from 50 cents to \$1 per dozen. Pans of hyacinths containing 7 and 8 bulbs readily bring \$1. Narcissus are retailing at 25 to 35 cents per dozen, tulips 35, marguerites 25 cents per bunch. Callas \$1 per dozen. Asparagus from 50 to 75 cents per string. Astilbe japonica is plentiful and is selling at 25 to 75 cents per pot according to size and number of spikes. Cyclamen are still on the market and retailing for 50 cents per pot. A few plants of *Acacia paradoxa* in full flower are to be seen in the market and are bringing \$1.50 each in 6 and 7-inch pots. Marguerites in 12-inch pots are bringing \$2.50 each. Carnations are still plentiful and are being sold for 25 cents per dozen; fancy ones in the market are bringing 50 and 75. Azaleas in 6 and 7-inch pots sell for \$1 and \$2 each. Valley is being sold for 35 cents per dozen. Pansies in 4 inch pots bring only 10 cents.

The demand for decorative plants continues dull. I am told at the stands that the demand is steadily growing less each week. Violets are still plentiful and the demand unusually good for this season of the year; in the markets they are being sold from 50 to 75 cents per hundred. Sweet peas have made their appearance again and are in good demand, bringing 35 cents per dozen or \$3 per hundred.

Clark Bros.' La France roses will just about hit the Easter season with a fine crop. I have never seen them look finer. They expect the heaviest cut of the season

from this house. Their young Beauties are producing some fine bloom just now, they too will be at their best about Easter. I have never seen finer Woottons than they are cutting at present, or plants making such strong growth. They have a bed of *Asparagus plumosus* the strings of which are about 12 feet long in splendid condition, remarkably uniform in size and length. This is the second crop this season and will be just ready for Easter. They are going strong in chrysanthemums and already have hundreds of fine healthy plants in 3-inch pots.

I was particularly taken with a fine yellow marguerite which they have grown in considerable quantity. The plant is almost identically the same as the ordinary marguerite except in color of flower, which is canary yellow. Very free flowering and attractive. They expect to make a feature of it this season.

F. H. Kramer and Robert Lacey, doing business under the firm name of Kramer & Lacey, who purchased the old plant of Gude Bros. in Anacostia some 18 months ago, have by mutual consent dissolved partnership. Mr. F. H. Kramer assumes all the debts of the firm and will in future conduct the business himself. Besides their greenhouses they had a store at the corner of 13th and E streets N.W., which for more than a quarter of a century has been a flower store.

During Easter C. Strauss & Co. took a temporary store on F street, between 12th and 13th.

Mr. J. R. Freeman is again confined to the house with his old trouble. He has the sympathy of his many friends.

REYNOLDS.

Toronto.

Saturday last, although it was comparatively mild, was very wet, and the market men got another knockout. There is plenty of stuff, which, if the weather would only permit them to do so, the people want to buy. I am afraid the boys are not using sufficient sackcloth and ashes with their prayers this Lent. Harrisii lilies are going to be very scarce this Easter. Some are backward, owing to the recent dull cold weather, and some got a bad check during one night in March, when a cold wave unexpectedly swooped down. Other flowers will doubtless be in good supply unless the demand far exceeds present expectations, of which I am sorry to say there are no indications as yet. However, it is within the possibilities that a surprise party may come along and clean out everything. Times appear to be mending a little. There are lots of very fine azaleas to be seen in store windows now.

The Ontario government has not seen fit to accede to the reasonable request of the gardeners and florists of this and other cities that agricultural societies in cities be changed into horticultural societies. I think it quite probable that it will take a year or two before the anomaly of the thing penetrates the cranium of the members of the legislature, very few of whom take the slightest interest in horticulture. If there was anything in the request about prize bogs, or big turnips and mangel wurzel more attention would be paid to it.

It is reported that the Electoral District Society will not hold their usual summer flower show this year, but will devote their government grant to some other purpose. Why should not the Gardeners' and Florists' Association hold a show some time in May, just before the spring rush comes? Think over it, boys, there is time yet if taken in hand at once.

Mr. Wallace Wood, gardener to D. Walker, Esq., Victoria St., received a very sad affliction last Tuesday in the death of his wife. Mr. Wood has the sincere sympathy of all the fraternity. E.

Cincinnati.

Last week's business fell short of expectations. Starting in briskly Monday and giving promise of a profitable trade for the week, the demand fell off suddenly towards the middle of the week and was spasmodic to the end. Funeral work seems to have been abundant enough to have made a fair steady run on white flowers of all kinds. This, together with an unusual brisk transient trade for small amounts, seems to have kept the florists a little busy, so that they have scarcely noticed the fact that it was Lenten season. Parties of all kinds have been conspicuous by their absence of course, but taken altogether the dullness has not been as pronounced as was expected.

Stock has been quite plentiful in most lines, roses in particular. These threatened to become a glut, but a steady shipping demand served greatly to avoid a break in prices. Few changes in quotations are noted. Brides dropped from 5 to 6 to 4 to 5. The balance of the rose list remains the same as last week. Beauties are somewhat improving in general quality and the cut is increasing, but good stock is still insufficient for the demand. The same holds as regards hybrids. Jacqs are in supply about equal to demand and are of average good quality; some few lots indeed are extra good. La France and Bridesmaid are plenty.

In carnations there is still a scarcity in white. These command from 25 to 50 cents per 100 more than colored sorts. The latter are plentiful enough.

Very little bulbous stock is seen on the market. Many growers report being cut out entirely, still prices have not advanced any. Valley is in good demand. The supply is limited and sold out clean every day. Violets are getting very scarce, the supply being far short of the demand and quality very inferior.

The scarcity in hardy ferns still continues, and has its effect on smilax, which is in great demand. The price ranges from 25 to 35 cents a string, the latter being the highest price reached for a long time. Asparagus stays at 50.

A number of our large department stores are beginning to handle potted plants. The stuff they handle is of the poorest and cheapest quality, and the prices realized are probably all the plants are worth or more. A number of growers who supply these houses feel rather related over the fact that by these means they are enabled to unload all the worthless rubbish that would find no sale in the regular channels of trade, but we are afraid it may prove a boomerang. These plants can not possibly give satisfaction, and buyers of them will hesitate before investing their money again, even if offered a sound article by the regular dealers. P.

Spring Show of the Kentucky Society of Florists.

The first spring show of this society was held at Louisville April 6, and proved a success in every way. All the leading florists of the district were represented with well-arranged exhibits, and the public showed a gratifying appreciation of them. One of the largest displays was made by Nanz & Neuner. Their cut flowers comprised all the leading roses, while in their plant display was a carpet bed of

echeverias, etc., which was much admired. They also showed a quantity of bulbous and other spring flowering plants.

F. Walker & Co. made a striking exhibit of palms and other decorative plants, artistically arranged, and brightened by blooming plants. Wm. Mann, who makes a specialty of callas, had a large exhibit of these plants, and also showed the only swainsona on exhibition. His carnations were also good. Chas. Schleeter made a fine display of spring blooming plants in pots, including hyacinths, tulips, begonias, roses and genistas arranged with excellent effect. Jacob Schultz also made an exhibit of blooming and foliage plants, lilies, hyacinths, and tulips being particularly good, and his exhibit included some fine specimen araucarias. Geo. Thompson & Sons arranged their exhibits in pyramidal form, topped by a well bloomed plant of Bryophyllum calycinum. Cinerarias, double petunias, bulbous plants, etc., made up a very showy and attractive exhibit.

Chas. Reimers had a showy display, which immediately attracted the eye on entering the show. Azaleas, both tender and amœna, lily of the valley, and all sorts of spring stuff, were very tastefully arranged. His cut flowers were the object of special comment. Sweet peas of high excellence, roses, Beauties and Belles particularly, and other florists' flowers composed the exhibit. E. G. Reimers made a special display of Easter lilies of great excellence, and in addition to these were azaleas, begonias, tulips and other spring flowers. J. E. Marret's exhibit was described as the most tastefully arranged display in the hall. It was pyramidal in form, composed of flowering plants with a background of palms and other foliage. H. Kleinstariuk showed extra good hyacinths and tulips, genistas, cinerarias and rhododendrons.

In addition to the local exhibitors E. G. Hill & Co. of Richmond, Ind., sent cut blooms of their new carnations Jubilee, Armazinda and Triumph; Nathan Smith & Sons, Adrian, Mich., sent fine sweet peas. Geo. M. Bradt, publisher of the *Southern Florist and Gardener*, made a most interesting cactus display. At this show chrysanthemum plants were given to a number of school children, who will grow the plants on until next fall, when they will compete for prizes offered at the society's chrysanthemum show. The show was so successful that the florists will feel encouraged to hold another next year. No prizes were offered, but there is no doubt benefit from it will be felt by the trade in and around Louisville.

Worcester, Mass.

Cloudy weather and plenty of rain has been the rule the past week, and he who had his lilies well advanced was joyful, but the poor fellow whose buds were of a beautiful light green didn't like it at all. No change has been noticeable in the trade from last week; considerable funeral work has been coming in, and the regular trade is in first-rate condition. Harrisii are selling for \$3 per dozen; Brides, Mermets and Perles from \$1.50 to \$3; carnations 50 and 75 cents, tulips, hyacinths and narcissus at \$1, valley 50 and 75 cents, and violets at \$1 per hundred. Everything is in fair supply with the exception of smilax and ferns.

It is reported on the street that C. C. Kenyon, who bought out N. J. Herrick last January, has sold again to Herrick, but I have been unable to verify this.

Fred Madans has opened a temporary stand at 374 Main street.

John Speelman, representing C. J. Speelman & Sons, Sassenheim, Holland, was with us last week. A. H. L.

Do YOU WANT a complete alphabetical list of chrysanthemums in commerce in America, with class, and brief, accurate description of each? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

SITUATIONS, WANTS, FOR SALE.

For Sale or Rent.

My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 48 lots or 296 feet front on Belmont Ave. by 700 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 10 to 200 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the largest of the kind in Chicago. A good chance for some young man with some means, or for a corporation; and as I wish to retire from business, it can be had reasonable, and on easy terms. If rented, a long lease can be given.

AUGUST DRESEL, Belmont and Western Aves., Chicago.

Address THE AMERICAN FLORIST CO., Chicago.

ASA GRAY'S "Field, Garden and Forest Botany" is already a standard, and it would be superfluous to make comment on its recognized excellence. We have recently received a new and revised edition of this work, which, though intended primarily as a school book, is also a valuable reference work. The book has been revised and brought down to date by Prof. L. H. Bailey of Cornell University. (American Book Company, publishers, Chicago, Cincinnati and New York.)

SOME SWEET PEAS recently received from Nathan Smith & Son, Adrian, Mich., included four varieties, Indigo King, Blanche Ferry, Emily Henderson and Mrs. Sankey. Of the whites, Emily Henderson certainly seemed a decided improvement over Mrs. Sankey in size. Blanche Ferry still seems the standard pink, and Indigo King one of the best of its type. The flowers were large and lasting.

THE ADVANCE premium list of the Penna. Hort. Society just received, gives the schedule of their chrysanthemum show next fall, November 5-9. In addition to many special chrysanthemum prizes Mr. Craig offers a silver cup for the best carnation, not disseminated, one plant and 25 blooms.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

ITS MATCHLESS BEAUTY AND GRATEFUL FRAGRANCE makes friends everywhere for the

New Notes.

TAMA, IA.—O. M. Totten is starting in the florist business here.

SAN FRANCISCO.—This city is to have a water front boulevard lined with palms and elms.

DAVENPORT, IA.—Henry Pauli, formerly with Chas. Dannacher, has started in business for himself.

THE Wisconsin legislature has appropriated \$2,000 for the use of the State Horticultural Society.

GREENWICH, CONN.—Alexander Mead has just completed a new house 112x22 and reception room 28x12.

PORTSMOUTH, VA.—Mrs. O. D. Ball Jr. has built a greenhouse in Cottage Place and will be ready for business April 10.

OAKLAND, CAL.—Elaborate preparations are being made for the coming fest which will include a "battle of flowers."

MACON, GA.—The contract for decorating the exposition grounds has been awarded to Mr. P. J. Berckmans of Augusta, Ga.

MINNEAPOLIS, MINN.—The estimate of the park commissioners shows that the sum available for park maintenance this year is \$45,000. This is \$5,000 less than last year, and there is no prospect of any extension of the park system this year.

PANSIES.

Fine stocky plants, excellent strain, \$2.00 per hundred.

Vaughan's Seed Store, Box 688, Chicago.

Is it better to confine oneself to a few lines and devote special attention to them or to spread over a large field and cultivate the same roughly?
I believe in the former proposition—started in on that basis—and now commence my third year on same lines. My specialties are:
FLORISTS' FLOWER SEEDS. (The best strains obtainable.)
IMPORTED GRASS SEEDS. (At import prices.)
FLOWER ROOTS AND BULBS. (For Forcing and Retail.)
MUSHROOM SPAWN.
CLAY'S FERTILIZER.
I shall be pleased to figure on your wants in these lines. Write me for prices on anything you want. I stick to specialties and do them better than anyone else.
Note my New Address:

New Way to Hang Outside Doors to Greenhouses.

I have no doubt others have had the same experience I have, in finding the outside door or doors of the greenhouse frozen up solid on a winter's morning. I have found by experience in the last two winters that this trouble can be obviated by hanging the door in the right way. My way is to have the door say two inches larger than the opening at the sides, top and bottom. Have the hinges fastened to a strip planted on the door casing. This strip of course to be equally thick as the door. The fastening for the door lock should be a block screwed (not nailed) on the casing, so the same may be moved in case the door swells or shrinks. This makes a good tight job, and the drip can not get down under the door and freeze it fast. On the outside or weather side there must be of course a piece cut sloping upwards to the door so as to sheer off rain or melting snow on the door step, where it will be too far away to do any harm. My experience the last two winters convinces me I would have every outside door to a greenhouse hung in this way. It may be others know of it, but those who have not tried it will be pleased with it. CHAS. E. HAY. Springfield, Ill.

Primula Black Eyed Beauty.

A new variety of Primula chinensis filicifolia fimbriata is offered under the name of Black Eyed Beauty. It has a large, almost black, eye, the color being deep velvety crimson with a golden center. The plant is compact in growth, foliage dark green, of the fern leaved type, and with dark red stems. NORIS.

A New Fern.

One of the department stores recently offered a lot of measly looking plants of Adiantum cuneatum, over which was displayed a sign reading "Edadam, 25 cents each."

The Rose for the Million!!

BELLE SIEBRECHT.

This rose is the result of years of patient work by one of the best rosarians in the world. It is not sent out to be "tried." We have subjected it to the most severe tests, and are now fully satisfied that it is *the best Florists' Rose in existence*. It is not a mere sport, but is of a distinctly new strain, the result of a cross between La France and Lady Mary Fitzwilliam.

ALWAYS IN BLOOM. AN IRON CONSTITUTION. Requires no special houses, no nursing. Will make itself at home in any house where other roses are grown. Proved hardy out of doors in latitude of New York. *Color and keeping qualities unequalled.* The greatest introduction of the century.

We have received numerous testimonials from eminent rose growers who have inspected the rose and pronounced it to be everything we claim for it. It is having an enormous advance sale in every section of the country. The young stock from which we shall fill orders is in perfect condition. Delivery will begin April 15th, and orders will be filled strictly in rotation.

Strong Plants, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

HENRY A. DREER,
Philadelphia, Pa.

Mention American Florist.

Kansas City, Mo.

The plant trade has been very good, and the outlook for Easter is very promising. A run through the different establishments finds them all looking extra well, with all their hopes built on a big Easter trade; and judging from the quantity and quality of the stock, and with the weather propitious, we may confidently expect the best Easter trade ever seen in our city, which is rapidly improving every year. The fine weather has brought out the peddlers in great force, and our largest house in the city, which sells everything from a needle to a florist's trowel, is advertising choice seeds and dormant roses. It is reported that they contemplate handling cut flowers. It seems hard, but experience will teach them that the profits are not what many think they are. Also, that they are not like dry goods, which, when out of fashion may be sold at a sacrifice, but are perishable, and without experience and care are liable to see the rubbish barrel—no sacrifice sale, but dead loss sale.

The cut flower trade has been just fairly good; not at all what it ought to be, although slightly improving.

Arthur Newell is at Bean Lake, fishing. In town:—James Hayes, Topeka, Kan. S. M.

Bermuda Lily Flowers.

The Bermuda Easter lily bloom is doing its best in small towns this year.

Out of eight churches there are but two that have not ordered Bermuda grown blooms. Result: Bulbs wanted this year 100 in place of usual order of 500. W. Wellsboro, Pa.

A New Canna!

"THE PROFESSOR."

We take pleasure in offering this Canna to the Trade, and feel sure that it will please all who purchase it. It originated with me, has been tested on my grounds for the past three years, and has been very highly spoken of by all who have seen it.

The foliage is a very dark purple, nearly black, and colors up well in the full sun. The flowers are of fair size and substance, and of a deep crimson color; they are by far the best we have seen in the dark foliage section of this popular plant.

Its habit of growth is dwarf, and its average height is about 3½ to 4 feet.

We consider this Canna a valuable acquisition and hereby offer it for the first time.

Price for started plants from pots (ready after March 15, 1895), 75c. each; \$7.00 per doz.

N. B.—All orders will be filled strictly in rotation.

MONEY ORDER OFFICE,
STATION "H," Philadelphia.

EDWIN LONSDALE,

Wyndmoor, Chestnut Hill, PHILADELPHIA, PA.

It's Safer to buy Carnation stock from those growers who give their entire attention to its production. We grow nothing but Carnations, and ship only the best quality of rooted cuttings. There are no finer McGowans anywhere than ours, and they are cheap at \$2 per 100; \$15 per 1000, while our Scotts and Albertinis at \$3 and \$25, and Daybreaks at \$2.50 and \$20, are A1 in every respect. How many do you want?

ESTATE OF M. A. HUNT, Terre Haute, Ind.

Always mention the American Florist when writing to advertisers.

Poughkeepsie, N. Y.

The regular monthly meeting of the Dutchess County Hort. Society was held at Poughkeepsie April 3. There was only a small attendance of members, probably owing to pressure of spring work. Five new members were nominated and one elected. The exhibition committee submitted schedule of premiums to be offered at the exhibition to be held in Poughkeepsie, November 6, 7, and 8. It was decided however, on account of the small attendance, to defer passing the schedule until the next meeting, which will be held May 1.

An excellent paper on chrysanthemum culture, prepared by Mr. Thomas Harrison, gardener to Governor Morton, was in the unavoidable absence of Mr. Harrison, read by the secretary. Mr. Harrison confined his remarks principally to growing chrysanthemums in pots, both for specimen plants and specimen blooms. He considered January the best time to root cuttings for specimen plants, and from February 1 to March 1 for blooms. The plants for specimen blooms he recommends growing on without stopping. Only disbudbing to three shoots after the natural break, which usually under this method of culture occurs about the middle of June. They are plunged in ashes outdoors and tied to a trellis to prevent being blown over. Mr. Harrison considered from August 20 to September 20 the best time to take the buds.

W. G. GOMERSALL.

St. Paul, Minn.

The monthly meeting of the Society of Minnesota Florists was held in L. L. May & Co.'s offices at their greenhouses in this city on Friday evening, April 5. The paper of the evening was read by Mr. F. C. Bartels on violet culture, giving his experience the past season. The violets were planted in the benches in the houses in June, the sash removed and not replaced until fall. In October he commenced picking bloom, and had picked an average of 40 blooms from each plant, averaging the size of a half dollar. The chrysanthemum committee reported that the prospects for holding an exhibition this fall were so poor they had done nothing further in regard to the matter, and asked to be relieved from further duty. After adjournment of the business meeting the entertainment committee provided a musical and literary program, not forgetting the wants of the inner man in the meantime. FELIX.

ROSES Strong, healthy plants from 2, 2½ and 3-inch pots, \$3.00 to \$8.00 per 100. Am. Beauty, Bride, Mermet, Niphotos, Perle, Sunset, Wootton, Meteor, Albany, La France, Testout, Victoria, M. Niel, Bridesmaid, Watteville, The Queen, Mme. P. Guillot, S. d'uu Ami, &c.

VAUGHAN'S GANNAS. MEDAL WINNING VARIETIES,

Controlled by us and offered now for the first time. These novelties we consider of great value and permanent additions to the high class Cannas, they are the cream of twenty kinds chosen by M. Crozy from his entire stock of seedlings to represent his best achievements in Cannas up to 1893.

CHICAGO.—(Medal awarded). Positively the best vermillion scarlet to date; 4 feet, green foliage with leaves 9 to 10 inches wide, flower truss and stalk stands boldly erect. The large flowers open out nearly flat, petals $1\frac{1}{2}$ inches wide and five in number—in this respect the Chicago fairly out-classes all Cannas, the fifth leaf adding much to the blossom and flower spike. Its record at the World's Fair, on our grounds and in our greenhouses more than justifies all our claims for it. The record of our Canna Novelties of the past seasons entitles us to your confidence. The color, in the language of the judges, is a "dazzling vermillion scarlet," smooth and without markings except a purplish gloss. Price of this grand novelty only 75c. each.

MADAME ALPHONSE BOUVIER.—3½ feet, foliage medium green, flower large, well opened. The color is that of Madame Crozy, tinted with dark crimson spots like Crampbel. The yellow edge is irregularly wider with clear yellow spots on upper and lower edge of petals into the throat of the flower; a magnificent Canna, scarce. Each, \$1.25.

M. MESNIER.—(Medal awarded). 3½ feet, dark green foliage, sturdy growth, flowers large, petals wide, color salmon, slightly dotted and streaked with red, which is deepest in the center of the flower. Petals are bordered with a narrow rim of yellow which is irregularly wider on the ends, often $\frac{1}{4}$ to $\frac{1}{2}$ inch wide. Each, 75c.

MIDWAY.—(Medal awarded). 4½ feet, green foliage, strong grower, color rich vermillion slightly streaked with faint crimson; petals $1\frac{3}{4}$ inches wide, compact flower spike, a strong grower and free bloomer. The crimson streaks and splashing in the petals make a splendid effect on their background of scarlet. Each, 75c.

OCTAVE MIRABEAU.—(Medal awarded). 3½ feet, green foliage, flowers large, petals wide, color a deep vermillion, painted with finely pencilled lines of orange yellow and crimson. Very handsome. The back of petals the same. Price, 7c.

STANDARD CANNAS.

Splendid dormant roots wintered in soil and now starting.

NEW CHRYSANTHEMUM MRS. WM. H. RAND. (CERTIFICATE). A distinct variety of Japanese type, in color a remarkable rich color. Petals fine, long, twisted and irregularly reflexed, making it resemble a tangled mass of large gold thread. Highly commended by the judges at Chicago, and pronounced the most attractive and graceful flower at the show. .0c.

MARKEY BROS., Fort Wayne, Ind.

Rochester, N. Y.

Between spring openings, funeral work and now and then a little party, our florists are kept at work and all of them seem to have enough to do. The supply of flowers is still rather short, the latter part of the week carnations in particular were very scarce; good prices were obtained for all available stock. Supply of smilax very short, and no prospect of any relief in the near future. Kellers have one house of it ready to be cut, but are holding on to it for their own use until they can depend on some coming from out of town. The supply of carnations will fall short of the demand, so the commission man says, as he has now orders for very large quantities at advanced prices. We had such unpleasant cold and cloudy weather in this vicinity for the past few weeks that flowers of every description refused to open out in quantity, and this accounts for the scarcity.

A few of our Rochester florists accepted an invitation from Utica this week at bowling and had a good time there as usual; they were not victorious, however, but will be ready for them again whenever the call is returned by the Utica horticulturists. Messrs. Salter and Fry who were with the party and Mr. Mathews went on to New York the same night on a business trip and returned Friday. Today our commission man J. W. Keller and Mr. Fry started for Wilkesbarre on a similar errand and will return Monday morning, to be ready for a promising Easter week.

A new florist store has opened to-day, April 7, on State street, a good location, under the management of Mr. Fred Vetter. J. B. K.

An Inter-State Park.

Minnesota has taken another step to ward securing an inter-state park on the St. Croix. The bill appropriating \$6,000 to secure the 110 acres of ground necessary to begin the improvement and for other purposes connected with the inter-state park object was reported favorably from the senate committee yesterday, and placed on general orders. In order to entirely accomplish the object in view the co-operation of the State of Wisconsin is necessary, and, no doubt, can easily be secured. The bill provides for a joint commission of the two states, and as in all cases where two states are concerned and the consent of two legislative bodies is required, there will be much more delay than if the Minnesota legislature itself had full power over the subject. For that reason it is hoped that the senate will take up the bill and pass it soon, so that there may be no danger of its failing for the want of time at the present session, and so that the co-operation of Wisconsin may be had as soon as practicable. It ought not to require any argument to convince any public-spirited citizen of the eminent propriety of preserving this beautiful natural scenery and attraction, and in putting it beyond the reach of destruction preserving it for a place of recreation for the public for all time to come.—*St. Paul Dispatch, April 1.*

FOSTITE, A PERFECT REMEDY for Mildew on Roses and Carnation Rust. Joosten's Magazine Bellows, the best out Fostite, 25 lbs \$2.00. Bellows, \$3.50. Cash with order Sold by all dealers and by C. H. St. John, N. B.

Mr. Wm. H. Jones, who had attained the age of 67 years, died March 31 at his home, Torryburn. Mr. Jones was a native of Norfolk, England, and for upwards of 30 years has done business in this city. He was for a long time the proprietor of a merchant tailoring establishment until, in consequence of failing health, he began to engage in the business of a florist, which at that time was a comparatively new industry in this city, and in which he has been highly successful. For about 15 years Mr. Jones has conducted this business with excellent results, but he has been for many years a great sufferer from asthma to which he finally succumbed.

He started with one little greenhouse and kept increasing his plant until it is now the largest establishment in the maritime Provinces. He was a keen business man and was very popular.

Mrs. Jones will continue the business with Mr. Jas. J. Curran as manager as heretofore. C.

A Hint to Designers.

A Chicago milliner's window displays a life size picture of a little girl, frame and all, composed entirely of artificial flowers, with the exception of the face, which is the ordinary wax dummy. Just let that catch the eye of some one looking for a unique funeral design, and a long suffering florist will be asked to reproduce it in natural flowers, probably with the substitution of a photograph of the departed in the place of the wax.

Valuable Information.

A recent newspaper article, descriptive of Bermuda lilies, informed its readers that the most remarkable form of *Lilium candidum* was the *Victoria regina*, with leaves eighteen feet around and flowers a foot across, much larger than the ordinary *candidum*. Truly, the newspaper is the motive power of education.

Swansonas.

There are 25 or more species, some of which vary in color a good deal. I think the better ones have been selected and sold under namelong ago. Some of your correspondents have seen poor ones.

JAMES MACPHERSON.

Wanted Something Appropriate.

An order was recently given a Dowagiac, Mich., florist for a funeral wreath by a sympathetic neighbor of a young man drowned while skating. The S. N. said he'd like to have "Shall we gather at the river" worked on the face of the design in flowers. Knowing that he would not expect to pay more than a dollar, and that lettering would be out of the question, we inquired if "We gathered him from the river," wouldn't be more appropriate; or perhaps, as the design could not be large enough at that price, "He Fell In," simply. The dazed S. N. finally took 50 cents worth of carnations.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Foreign Notes.

The report on the French horticultural section of the Columbian Exhibition, prepared by M. Maurice L. de Vilmorin, has recently been published at the Imprimerie Nationale, Paris. In addition to matter concerning the exposition it contains a thoughtful report on horticulture in the United States.

Among new plants recently receiving certificates from the Royal Hort. Society we find *Arum Eggeri*, which is said to resemble *A. sanctum palæstinum*. The spathe is about nine inches in length, rich dark brown on the inner side, light green at the base and outside. The spadix is not quite so long as the spathe, and velvety black in color. The leaves are dark green, sagittate, and five to six inches long.

THE EASTER TRADE.

Reports From all Sections.

MEADVILLE, PA.—Easter trade was excellent, considerably larger than last year.

NASHUA, N. H.—One-third larger than last year. But sales of roses were light.

NEW ORLEANS, LA.—About the same as last year with retail prices 25% better. Supply short. Quality good. Sales of plants compared favorably with last year.

HAMILTON, ONT.—About the same as last year with retail prices a little lower. Supply equal to the demand. Quality somewhat better. Sales of plants hardly so good as last year.

READING, PA.—Increase of about 20%. Prices a little higher. Supply about equal to demand. Quality excellent. Lilies sold well, other plants rather slow. Very limited call for cytissus.

ELMIRA, N. Y.—An increase of about 30%; prices same as last year; supply equal to demand. Quality better. A large increase in the call for plants. Larger demand for lilies.

TOLEDO, O.—About the same as last year. No change in retail prices, except that lilies were five cents a flower less. Supply just about equal to demand; quality better. In plants more lilies were sold than last year.

LYNN, MASS.—An increase of from 20 to 30%. Retail prices a little better than last year. Supply was fair; quality better. Sales of plants increased 25%. A larger call for carnations and lilies. In general everything sold well.

TERRE HAUTE, IND.—Increase of about 10%. Plenty of flowers. Prices about same as last year. Quality of flowers better. Carnations and roses led. Two clothing stores gave away 12,000 plants and of course this hurt plant sales.

YOUNGSTOWN, O.—Increase of about 20%. Supply equal to demand. Retail prices same as last year. Quality good. Plant sales about one-third larger. Increased call for azaleas in plants and carnations and bulbous stock in flowers.

HARRISBURG, PA.—About same as last year both in volume of trade and prices realized. Supply short. No increase in plant sales, probably on account of the unfavorable weather. We had a deluge of rain nearly all the day sales should have been made.

WILMINGTON, DEL.—An increase of about 25%. Retail prices about the same as last year. Supply not equal to demand except daffodils. About the same amount of call for large plants and in-

creased demand for small ones; an increased demand for carnations.

ASHEVILLE, N. C.—Our Easter trade was fully 60% better than last year with prices just the same. Flowers of all kinds except violets were plentiful. There was an increased demand for blooming plants in pots, while there was a marked falling off in call for Bermuda lilies. Altogether it was a very satisfactory Easter.

PATERSON, N. J.—An increase of about 10%. Supply quite equal to the demand. Retail prices same as last year. Quality about the same as last year. In plants there was an increased demand for lilies and azaleas. Quite a falling off in the demand for tulips and most other bulb stock, especially tulips and narcissus.

SPRINGFIELD, MASS.—An increase of about 25%, with retail prices somewhat lower than last year. Supply equal to demand. Quality fully as good as last year. There was a larger sale of plants. Good demand for small plants such as hyacinths in single pots, but very few to fill the demand. Saturday and Sunday were rainy.

NEW LONDON, CONN.—An increase of about one-fifth. No change in retail prices; supply equal to demand. Carnations were better in quality. Lilies were good and had enough for the demand, but we lost some with the disease. Sales of plants about the same as last year. There was less demand for small cheap lots of flowers than last year.

CAMDEN, N. J.—Fully equal to and probably some better than last year. No change in retail prices. Could have sold more lilies had they been obtainable. Quality good. No change in call for plants. All general decorative plants sold well. More demand for fine carnations than roses. Principal call was for loose cut flowers and bouquets.

EVANSVILLE, IND.—An increase of about 25%. Retail prices same as last year. Supply equal to demand. Quality some better, especially in roses. An increase of about 10% in sale of plants. Roses were on top as usual in the demand. Our customers seemed to have a weakness for paying for the flowers when ordering, which was not disagreeable to us.

PORTLAND, ME.—A slight decrease from last year, owing to the bad weather. Retail prices held about the same as last year. The supply was this year 50% larger than the demand. Quality good. Plant sales were somewhat larger than last year. There was a marked increase in the call for roses and Harrisii lilies; the principal call was for cut flowers and baskets, no designs.

ALBANY, N. Y.—An increase of about 25%. Retail prices were about equal to last year on plants, but prices on flowers

were somewhat lower. Supply equal to demand. Roses and carnations were equal to last year in quality, but violets were poorer. Sales of plants were larger. A better call for azaleas and lilies; most of the people buying would rather purchase large showy plants than smaller and cheaper ones.

PEORIA, ILL.—An increase. Retail prices somewhat lower, thus increasing the total volume of sales. Supply was equal to demand with but very few exceptions. Quality better than last year. Sales of plants about as usual. Special demand for lilies and all cut flowers. Very little call for callas, daffodils or valley. Carnations of all colors were called for and sold at a good price.

UTICA, N. Y.—An increase of about one-third. Retail prices somewhat lower, especially on violets. Supply equal to demand. Quality about the same as last year. Increase in sale of plants. Better call for medium sized azaleas that could be sold at from \$1 to \$2. Lilies and azaleas were both in good demand. Roses and carnations of first quality sold well, while second quality flowers of all kinds were neglected. Supply of orchids not equal to demand.

DAVENPORT, IA.—Increase of 20%. Retail prices of roses and bulbous stuff was about as usual, but carnations brought double price. Sold out roses and carnations clean, but bulbous stuff was quite plentiful. Quality of roses and carnations was better than last year. Increase of about 25% in demand for plants and at much better prices. We did not raise prices at Easter above our usual rates. There was quite a call for wreaths for placing on graves.

SAVANNAH, GA.—Easter trade better than ever before. There were no outside flowers to be had this year and the florists sold out clean. Retail prices were our regular winter rate. There was a scarcity of lilies, all the outside lilies having been killed by the severe winter. Owing to the expected scarcity of outside flowers the florists had Easter orders a month ahead for all they could produce. But with the low prices that prevail here we could not buy from other cities and make a profit.

GRAND RAPIDS, MICH.—An increase of about 20% this year, also more competition; retail prices were about as follows: Roses \$1.50 per dozen, violets 20 cents, valley 50 to 75 cents, peas 25 cents, carnations 35 to 40 cents, tulips and narcissus 50 to 75 cents, Harrisii lilies \$1.50 to \$2.50. Supply was equal to demand. Quality improves here steadily. Not so good sales of plants. The principal call was for Harrisii lilies. There was a large supply of bulbous flowers, and a very large quantity was sold.

DENVER, COLO.—Slightly larger, probably owing to the bad weather of last Easter. Better price for Harrisii, about the same for roses and carnations, lower for bulbous stuff. Supply equal to demand; quality much better. Sales of plants were larger, owing to good weather. Beauties did not sell as well as expected. Violets went slow. Harrisii were scarce owing to not many being grown this year. Good roses and carnations brought good prices. Valley, Von Sion and tulips went fairly well.

BRIDGEPORT, CONN.—Not quite so large as last year. Retail prices the same as last year except for fine roses, which were 25% less. The supply exceeded the demand. Quality was equal to if not better

FLEISCHMAN'S WINDOW
EASTER SCENES IN NEW YORK

than last year. A marked increase in the sale of lilies in pots. In plants the principal call was for lilies, azaleas, marguerite daisy, hyacinths and tulips. There was a large sale of common plants such as geraniums, begonias, etc., in 4-inch pots, which were bought by the churches and distributed to the Sunday School children.

LOUISVILLE, KY.—A slight increase. Retail prices not quite so good as last year, but there was plenty of flowers and the volume of trade averaged up pretty well. There was a slight shortage in the supply of lilies, but there was plenty of other flowers. Sales of plants equal to last year with a slight increase for lilies. The churches were quite liberally decorated with plants and cut flowers, but no designs were used as formerly. The principal call was for boxes of cut flowers, and this seemed to come more largely than usual from what are termed the middle class people.

NEW BEDFORD, MASS.—About the same as last year; retail prices 15 to 25% lower. Supply was fully equal to demand, and an over-supply of most flowers. Quality was better than last year except violets, which were poor. A larger call for blooming plants. Sales would have been much better had it not been for the rain Saturday and Sunday. Harrisii sold on Saturday evening as low as 25 cents per plant with five to seven flowers. Trade was first-class until the rain came, and had the weather been favorable would have been double last year.

WILLIAMSPORT, PA.—Eveuden Bros. report Easter trade fully 25% better than last year, hydrangeas, cinerarias, genistas, hyacinths and lilies, of which they

had a large stock, selling well. Easter pans of tulips, hyacinths, lily of the valley and marguerite daisies sold quickly at good prices. There was quite a rush for cut flowers on Saturday, and an extra force of help were kept busy all day. Roses, violets and carnations were most in demand, and of the latter Daybreak and Tidal Wave were the most popular. The carnation is gaining in favor every year.

KANSAS CITY, MO.—Some report an increase of 30% and others an increase of 40%. Retail prices were the same except on Harrisii lilies, which were 10% less. Supply was about equal to the demand with the exception of roses. Quality as good as last year. Sales of plants were much better, with Liliun Harrisii in the lead as regards demand. In pot plants hydrangeas were slow, hyacinths and Harrisii in great demand. In cut flowers Beauties and roses of all kinds, valley, tulips and daffodils sold well, and at good prices. All the florists report an excellent trade.

DES MOINES, IA.—An increase of one-third; retail prices were about the same as last year, which were not high, and we think this induced a larger call. There was plenty of all flowers except violets. The quality was generally good except of course pickled carnations, of which we had a quantity. Had an excellent call for pot plants. There was an increased call for potted Harrisii and callas, and cut roses, carnations and candidum lilies. Cut Harrisii and callas were not much wanted. The people wanted the whole plant. Cut tulips, Romans and daffodils went slow, and there was little demand for violets. Valley sold well. Any showy pot plant in good flower sold quick.

HODGSON'S SHOW-ROOM.
EASTER SCENES IN NEW YORK.

Easter Scenes in New York.

The illustrations presented in this issue tell the story much better than we can relate it of the various phases of New York's Easter trade. In one view we see an express wagon load of cut flowers, which is only one of a score or two of such loads which found their way to the big commission dealers on Saturday morning. The crowd seen in one of these establishments, the heap of empty boxes in front of another, the load of flowers destined for one of the big Brooklyn establishments and the ever present Greeks are all characteristic scenes in the great wholesale quarters on West 28th street.

The views of the exterior and interior plant decorations in some of the prominent retail stores will give some idea of the extent of the Easter plant trade in these establishments, all of which had overflow displays in such vacant stores as they could secure in their vicinity.

New York.

As had been predicted, Easter, 1895, in New York was a "plant Easter." The plant trade has been unmistakably in the ascendant for a number of years, and this year more than ever the cut flower interests have had to give way before its encroachments. Some of the reasons for this we may consider later. Trade in general was slow to start, and until within forty-eight hours of the holiday the store clerks had little to do but to pick the pollen out of the lilies, answer

queries as to prices and exercise their ingenuity in crepe paper contrivances, but when buying did commence it came with a rush; benches and shelves were quickly stripped of their fragrant burden, whole gardens of gorgeous bloom melted away as if by magic, and by Saturday afternoon there were but few residences on the fashionable avenues that did not show a lily or azalea in the front window.

With better weather, the volume of business would doubtless have been much greater. All day Saturday a dispiriting east wind and rain prevailed and the detrimental effect must have been considerable, but the stock left on hand after it was all over was not large, and satisfaction with results was generally expressed.

The lateness of the season and consequent barrenness of the parks probably served as an incentive to plant buying, there being but little outside verdure to gratify spring yearnings. The green points of the tulips and hyacinths just pushing out of the ground were about the only intimations of coming beauty, and Citizen George Francis Train's striking button-hole combination of scarlet tulips and magenta azaleas had the field all to itself as this worthy strutted proudly up and down Madison Square.

Azaleas, lilies, hydrangeas and hyacinths constituted the main bulk of the stock. There was a fair sprinkling of hybrid roses, lily of the valley, heath, violets, daffodils, rhododendrons, metrosideros, kalmias, genistas, lilacs and astilbe, but with the exception of roses and rhododendrons they sold slowly. Genistas, once so popular, served chiefly to add brilliancy

to the store displays, and the public having found out that these showy plants as now grown are good for but a few hours or days at most, have become prejudiced against them, which is all the more deplorable because avoidable, as the genista is an admirable house plant when properly grown for that purpose.

Lilies varied greatly as to quality, and were slightly overstocked, but this was no special hardship to the retailer, who, finding the plants left on his hands, had only to cut them down and use up the stalks in his cut flower orders. Sashes and bows of pale blue ribbon were effectively used on the stems of the lilies, and the pots were fitted into white or light blue celluloid baskets, a great many of these being so disposed of. The sale of azaleas went away beyond that of any previous year. The pink varieties were the favorites; next in popularity came the bright red, and then the white. The azalea trade must have been extremely profitable to the retailers, judging from the prices obtained for nice specimens in the fashionable neighborhood, and it is not surprising that the florists had neither time nor inclination for cut flower work so long as the plant business prospered. Hydrangeas sold rather better than was the case last year; there was quite a fair demand also for hyacinths, lily of the valley and daffodils in pans and at astonishing prices, especially when fixed up with crepe tissue paper and a sash.

The use of these paper and ribbon decorations on flower pots was indulged in to a greater or less degree in most of the large stores. As is invariably the case with

such things, however, this craze is likely to soon overdo itself to death. In the hands of an artist with correct taste and dainty fingers, no fault can reasonably be found with a moderate use of such material, for a bare earthen flower pot is rather unsightly when associated with rich furniture, but by some florists it was employed to such an extent as to become positively hideous. A few such terrible examples as a pan of scarlet tulips swathed in a flaunting purple wrapper or a handsome white azalea almost smothered in tissue paper crinoline and still further degraded by the addition of a big bow of ribbon printed in calico patterns of red and blue roses, and we shall soon see the end of this fancy. In fact, if a plant is well grown and furnished with sufficient foliage, the less trimmings of any kind it has, the better, and it is safe to predict that the good old way of concealing the soil in the pot with a growth of green lycopodium will be followed long after the tissue paper craze has been forgotten.

Turning now to the cut flower trade, it is greatly to be regretted that the old story, told annually with the same moral, is still true, and that the baneful policy of holding back and storing cut flowers to be loaded on to the market all at one time was pursued on this occasion to an aggravated extent. What more can be added than has already been repeated over and over again as to the injurious results of this practice? There was the same old Friday demand which could not be satisfied because of insufficient supply of fresh and honest stock; the same old misrepresentation as to the quantity being cut, and the same old huge mountain of stock piled in on Saturday, much of it good, more of it bad; thousands upon thousands of half rotten violets whose rankness might be scented afar off; roses in advanced stages of decay, smelling of the vaults in which they had spent goodness knows how long a time; lilies worn transparent and flimsy with their long sojourn in dark cellars; crates of American Beauties, the fresh cut and the stale mingled together with crafty cunning, in the futile hope that in the rush they would all slip through undetected. How can any business prosper with such abuse? If the Easter cut flower trade is not what it should be this one detestable practice has done more than all other agencies together to bring it where it is. Combined with short sighted avariciousness as to prices it has well nigh annihilated the shipping business, and by throwing the entire production back upon the local market has demoralized the wholesale trade and practically put it into the power of a horde of street peddlers. Buyers and commission dealers have protested vainly against these reckless practices for years, and surely it is now time that intelligent growers who are obliged to hear their share of any loss which the trade suffers should for their own protection agitate this matter, and try to do something beyond merely asserting their own innocence.

The first trustworthy warning of the true state of affairs received by the wholesale dealers on Saturday morning was a telephone message announcing that a car load and a half of roses had started from Madison. Other sources of supply were soon heard from in like manner, and it was evident that there was to be another "pic-a-nic for da Greek." The receipts of roses, carnations, and violets throughout the day were enormous; there must have been stock enough for a whole week's supply left over in excess of all demands. Quite a lot of it could have been unloaded

on Friday if it had then been available, but after a busy hour or two on Saturday morning the limit was reached, and although the wholesalers all burned the midnight oil and offered goods at buyer's prices but little more was accomplished. The Greeks had it all their own way, for they pay cash, and the wholesalers realized that under prevailing conditions one dollar in the sale was better than two in the ice-box.

The Union Square plant market opened for the season at 4 a. m. on the day before Easter. There was a big turn-out of wagons and quite a brisk trade ensued. The buyers were mainly peddlers and representatives of the small stores. It was too disagreeable a morning for the public to venture out in any number.

A snatch thief robbed the money drawer of G. Villinni's flower stand on the corner of Sixth avenue and 59th street of about twenty dollars. The thief, J. W. Foster, was caught, but a confederate got away with the cash.

The fire at 663 Columbus avenue on April 12 did heavy damage to the stock of G. Polykranus, whose florist store was located in the building.

The sum of \$3,000,000 has been appropriated for the purpose of laying out two small parks in the overcrowded tenement district east of Broadway.

Boston.

The weather interfered sadly with the Easter trade, which Boston florists had looked forward to with so much expectancy. All indications pointed to a phenomenal sale of plants and flowers, and it was plain from the tremendous demand experienced on Friday, when the weather was good, that bright skies were the only missing element in the combination for Saturday. Wholesalers and retailers had all they could attend to on Thursday and Friday; in fact Friday was one of the best days the flower trade has seen in Boston for years. There were stupid growers, however, whom previous experience should have taught better, who carefully stored away a certain part of their stock throughout the week in anticipation of the great revival which was to occur on Saturday morning, just as they have done in years gone by, and with the same result, only "more so," for the stormy weather of Saturday and Sunday put a quietus on whatever energy there was left. So the immense boxes of carnations, roses, violets and lilies which their deluded owners regarded with so much confidence and hope remained unopened, their contents unsold, and not a little of their wasted product is still waiting for a buyer. Carnations were in great demand on Friday, and a much larger stock than was received could have been disposed of, that is, of marketable quality. Quite a considerable percentage from some growers was valueless, however, from long storing, and not only realized nothing, but brought trouble and embarrassment to all who had anything to do with it. Roses were in a similar plight. Then on Saturday they came in freely, but nobody wanted them. The lily trade was badly affected by the excessive prices asked in advance, which resulted in turning over the shipping trade to other and cheaper markets. When the price broke down finally it was too late to be of any use.

The plant trade was exceedingly good. In lilies, longiflorums alone were salable; Harrisii is of no value for this market at this season, and candidum has gone with the once popular calla into obscurity. The retail lily plant trade suffered consid-

erably from the competition of the department stores, which offered them at prices below possible competition. Azaleas were in greater demand than ever before; the sale confined principally to the small sizes, from \$3 to \$5 being about the outside prices customers were willing to pay. More good hybrid roses in bloom might have been sold, and there was a short supply of pæonies and rhododendrons. Bulbous stock was eagerly bought up, its cheapness being doubtless one great factor, for nice pans of four or five hyacinths could be bought for \$1.50. Anything larger than an 8-inch pan went very slowly, and a disposition to economize was very generally noted.

Chicago.

The Easter season was a record breaker at least in one respect, and that was in the volume of stock thrown on the market. An abundant stock was looked for by all well informed persons, but the most sanguine among them were surprised at the actual results. It upset many calculations, notably that as to Harrisii, the receipts of these being far larger than expected. Still on the whole the demand was nearly, if not quite, equal to supply in almost every line. In Harrisii there was not what might be called an overstock; at the same time lots were left unsold at the close of the market. The price on these, however, was well sustained. The largest bulk of good stock brought 13 to 15, and off grades 10 to 12. Tulips also, contrary to all expectations, were somewhat overstocked, the demand for these being rather light. Bulb stuff of all kinds was quite abundant, and sales rather slow, except Romans, which were none too plenty, with active demand.

The California shipment of callas had apparently no effect whatever on the market. This stock was held by Kennicott Bros. at a few points below local grown fresh stock, at which price it found few buyers. Fresh stock of the home grown article sold better than it has for several seasons past, and proves that the calla as an Easter flower is not entirely dead.

In roses the supply of Beauties was large and of excellent quality, in fact the best stock of this popular rose ever handled here at Easter. Bassett & Washburn and Reinberg Bros. handled the bulk of this stock, although there were many other fine lots. First quality extra long stemmed brought 3 to 4 per dozen, and medium grades 2 to 2.50. Hybrids were scarce; what little stock is grown for our market is nearly all cut out. F. Stielow sent in a few Baroness Rothschild and Merveille de Lyon of fine quality; these went at 25 to 30; Brunners 20 to 25.

The stock of teas was large, but on the whole not of a high grade. First-class stock, of which there was none too plenty, easily brought the top figures, 7 to 8. But by far the largest bulk was hardly up to grade, and this went at 5 to 6 and less for the poor stock. There was no particular shortage of any one variety, Bridesmaid, Meteor and Brides being heaviest in demand.

Carnations, heavy in demand and in good supply, ruled at top quotations from start to finish. In quality you had your choice; there was extra fine fancy at 4 (Hopp & Lemke's red seedling brought 6), fine extra commons at 3, and fairly good stock at 2. Very few of the poorest grades went as low as \$1.50. It was a great day for the carnation. Violets taken as a lot were of excellent qual-

HODGSON'S WINDOW.

A BIT OF WARENDORF'S COUNTER
EASTER SCENES IN NEW YORK.

ity, considering the season of the year, the best colored stock being those picked from frames. The demand was fully equal to abundant supply. The price for good quality was \$1 per 100. Mignonette was very slow, and marguerites also. Sweet peas, of which there were some fine Blanche Ferry, sold well at 1 to 2 per 100.

Smilax, which has been more than scarce since Christmas, turned up in surprisingly large quantities. The early part of last week the price was forced up to 35 cents per string, but as soon as a good supply came in dropped back to 20 and 25. Wood ferns are scarcer than ever; at present there are none at all in the market.

The wholesale dealers report an increased amount of business over last year. Shipping demand especially was heavy, and as usual proved an important factor in sustaining prices. Activity in this line commenced on Wednesday, Thursday and Friday being the heaviest days, the increase being variously estimated at from 20 to 30 per cent. Local demand, though fair and steady, was not much, if any, larger than last season. There was no such scramble for stock late on Saturday and on Easter morning as we were wont to see in former years. This was doubtless owing to the fact that all orders, having been placed in advance, could be filled in full, a thing that hasn't happened before in many a holiday season. The only shortage, and this not to a great extent, was in white carnations, more of which could have been disposed of. Numerous calls also for fresh violets on Sunday morning had to go unsatisfied.

The retail boys express themselves as satisfied with the trade in cut flowers, although few reports at hand give a marked increase of sales over last year. Harrisii and good quality Beauties took the lead. The former brought the usual price of 3.50 to 4 a dozen for the best stock. The best Beauties brought 6 to 8, with 3 to 5 for good medium long. Hybrids also sold well, but the limited stock of these cut very little figure. The larger teas, such as Bridesmaid, Meteor, Testout, Bride and Kaiserin brought 2 to 2.50 a dozen for selected; second quality of these and the smaller teas sold at 1 to 1.50 per dozen. The Klehm Nurseries sent in some extra fine Gontiers, which sold at wholesale at 8, and easily commanded 2 per dozen at retail.

Carnations sold well; fancy stock in Daybreak, Scott, Tidal, Helen Keller, etc., retailed at 1 per dozen, good common at 50 to 75 cents. Bulbous stock went slow and some stock was left unsold, notably in tulips, Dutch hyacinths and valley.

Memorial designs were conspicuous by their absence at all the principal churches. Loose cut flowers and plants in bloom have almost entirely taken their place. On the whole it seemed that most of the churches were not as lavishly decorated this year as formerly.

As to plants, all the dealers report a more than satisfactory business. The volume of trade in these shows a marked increase over last year. Some dealers report an increase of 20 to 25 per cent., while others almost doubled their sales. The stock in this line was plentiful, and of better quality than ever offered before. Harrisii headed the list as to largest demand in most places. These were sold according to the number of blooms and buds on the plants, and brought from 75 cents to 2 each, few plants being left unsold. Azaleas sold better than at any previous season. A. McAdams, E. Wienhoeber & Co., The Art Floral Co., E. Hobbs and others who had a large stock of fine plants sold out clean of every stock-

ble plant, realizing satisfactory prices. A. McAdams had a fine lot of genista, which sold readily. Cinerarias were in good demand, and Spiraea japonica, Dutch hyacinths, daffs, tulips and in fact everything in bloom went equally well.

As to the market this week trade is extremely slow, and unless a better demand springs up soon a glut, especially in roses, is inevitable. Prices are down in consequence.

Wietor Bros. will add about 30,000 square feet of glass to their establishment next summer.

Reinberg Bros. also contemplate building a large addition to their already mammoth range of houses.

At the meeting of the Florist Club next Thursday evening President Kidwell will read a paper upon the Easter trade in Chicago, and same will be discussed by Messrs. E. Wienhoeber, A. McAdams and others. There will also be a discussion upon the department store question. It promises to be the most interesting meeting of late years.

The department stores are being investigated by a special committee from the state senate pursuant to a series of resolutions, setting forth that department stores, or establishments in which all kinds of merchandise are sold under one roof, injure other merchants, tradesmen and property owners, and decrease the value of property. If the committee finds that this is the case, it is authorized to prepare a bill which will remedy the evils found to exist.

H. S. T. bbits has started as a florist at 915 Sawyer avenue.

Recent visitors: A. T. Boddington, representing Pitcher & Manda; P. Vos, of P. Vos & Co., Sassenheim, Holland; S. Skidelsky, representing M. Rice & Co., Philadelphia; John G. Heil, Terre Haute, Ind.

There is no question that the amount of stuff sold at Easter was immense, far larger than in previous years; the supply was very large, and though a good deal was in the hands of the wholesalers on Saturday, most of it went before Monday. There was a big supply of carnations, but the demand was even greater, and they all went. The increasing demand for carnations is a noticeable feature. While bulb stuff in pots sold well, the cut flowers did not; they had not moved at all the week preceding Easter, and the result was a decided glut.

But this week the market is utterly demoralized, and prices are nowhere. This stagnation is surprising, too, as the week after Easter is usually very gay socially, but there appears to be no decorating called for, and four days of bright sunlight has flooded the market with flowers. Roses are tremendously overstocked; while first grade Beauties stand at 25, they scale all the way down to 2 or 3. Ordinary roses run from 3 to 5, or they may be bought for 10 to 15 per 1000. A few fine Jacqs from Aug. Dressel bring 6 to 8. Hybrids are seen in good quality, but are selling rather slowly. Carnations do not suffer from such a glut as roses; whites are really scarce, and run from 1 to 1.50, with colors 75 cents to 1. Fancies are 1.50 to 2. Violets are growing very poor, but the best sell for 75 cents. A limited quantity of white violets come in, but do not sell. Outdoor lilac, very good, goes slowly at 25 cents a bunch, and is mostly sold on the street, in company with apple blossoms and narcissus from the south.

The display of flowers at the funeral of J. W. Scott of the *Times-Herald* was magnificent, and is said to be the largest and costliest ever seen in Chicago. While

there were some of the ugly and inartistic "symbolic" designs usually seen in such cases, the major part of the display was most artistic, the flowers being very choice.

Mr. H. A. Bunyard is still improving and will be able to sit up in a few days.

Buffalo.

The great flower festival of the year is past, and all the hopes and worries, the rattling good business and the usual reprimand, and the Easter of '95 is recorded in the humble history of the poor florist. No excuse needed for mentioning weather on this occasion. He that has 75 wagon loads, more or less, of flowering plants to deliver in two days must be excused if he gets a little anxious about the local forecast. Well, it was all right; if it was not ideal it was so much better than it might have been that we were all delighted, dull but not cold, and better than all not windy. Without any very accurate data to base my opinion on I would say that the bulk of the business exceeded that of last year by 20 per cent, and the increase was in plants. The expression was heard on all sides from customers on Saturday, "I never saw so many flowers in my life as there are in the city to-day." And the expression was an impression of the truth. A few of the leading Main street florists had wisely rented for the week large vacant stores, which enabled them to handle with much greater facility their large plant trade. Without their annex they could not possibly have taken care of their customers or disposed of their stock. We hear of a case here and there where parties loaded up too heavy with roses and had some left, and for the first time in our recollection there were lilies enough to go round and a few to spare, but on the whole it must be considered a most satisfactory Easter, and everybody did about all they had time to do. As our city adds about fifty thousand people to its population every year an increase in our business must be expected.

There is no doubt that the chief business was in plants. Longiflorum and Harrisii easily took the lead; all good buyers wanted a lily first, if they bought a dozen other plants afterwards; 25 cents per flower and bud was the ruling retail price. Next in value, if not in numbers, came the azaleas, from \$1.50 to \$8, and few of them were left. Well grown compact lilac sold well, and then it was go as you please, take your choice of hydrangeas, cinerarias, cytissus, Dutch hyacinths, pans of tulips, narcissus, lily of the valley, spiraea, and a few other minor articles, not forgetting a goodly number of medium palms, which sold well. The calla lily, once such a prominent plant at Easter, is scarcely heard of now, except as a cut flower. Liliun candidum seems to have passed out of existence; none were visible in this city. Hydrangeas want to be grown only in small quantities, and the public are getting tired of the bulky spiraea. Well grown pelargoniums sold well. There are thousands of people looking after a cheap plant, 25 cents is their limit, and a well grown hyacinth fills the bill like nothing else at the price.

Once again the carnation led in popular favor. There were plenty of good roses in opposition, still the carnation was easily the favorite, and for the first time Scott sold much better than Daybreak. In this locality it is those two first and the rest nowhere; 75 cents was the popular price for all varieties except Helen Keller, of which there was only a limited

SIEBRECHT & WADLEY'S DISPLAY

ALEX. McCONNELL'S DISPLAY.
EASTER SCENES IN NEW YORK.

quantity, and they brought \$1 per dozen. The supply of violets was abundant, and some of them very fine; \$2 per hundred was the price. Bulbous stuff went very slowly. When there are plenty of good roses and carnations at moderate prices tulips and daffodils have to wait. Our city is blessed with the absence of two elements which other cities complain of, no high class stores of any kind handle flowers or plants, and the street vender of flowers has not yet opened business in our breezy town.

The writer of these notes had to be content for the past ten days with a

report, a few times a day, of how business was going, having sprained his ankle on the 5th, and laid up in the house ever since. Pretty tough last week, yet in the darkest moments there is always the consolation that there is something to be thankful for. During the time he escaped an interview with at least 47 drummers, both foreign and domestic, mostly foreign. Buffalo has been over-run with them this week, as Egypt was with locusts. I could not begin to name them all; a few of their names I gleaned. There was Mr. Will Allen and Mr. Rolker of New York, Mr. Ingram of London, Messrs. Van Zan-

ten, Beerhorst, Blaauw, Goemans and Van Schee, from the land of black sand and ditches, and a variety of others. W. S.

St. Louis.

Easter trade was much better this year than last, but good stock was very hard to get. About a week before Easter flowers were very plentiful and very fine, but dark and rainy weather set in and made roses very small.

Harrisii plants were the best seen for many years and in great quantity; the plants retailed at from \$1.50 to \$3.50

each, ranging from 6 to 18 blooms on a plant; of course those with 18 blooms were not on single stems, they had three spikes to a pot. There was plenty of other plants, and of good quality.

Cut carnations were very scarce and brought \$2 to \$4 per 100. Bride, Bridesmaid and Meteor were \$6 to \$8, Perle and Wootton \$4 to \$5. There were a few tuberosa stalks in market and they brought 15 cents per stalk.

Miss Mary Ostertag has removed from her old stand on Olive street to her new store on Grand avenue; she has a very pretty place; it is a greenhouse with a round top covered with ground glass, divided in the center by a glass partition; the front is used for the decorative and small blooming plants and the back is used as the store.

One of the most graceful and pretty wedding decorations of the month was put up Monday at Mr. Hoffman's residence. The hall was very prettily draped with smilax and white lilac, on the newel post was a basket of Beauties and adiantum ferns; the screen for the musicians was of smilax and white lilac. In the west parlor of the house, in which the ceremony was performed, was a very large and delicately arranged canopy of smilax and Harrisii lilies. The background was draped with smilax and lily of the valley, and the mantel banked with adiantum, Beauties and lilac. The bride carried a large bunch of valley, and the bridesmaids' bouquets were of white lilac. The decoration was executed by Ayers Floral Co. and was admired by all.

R. F. T.

Philadelphia.

April 14 (and a more beautiful day would be hard to imagine) has come and gone and the worry and excitement of Easter is over. The weather of the week was fine, with the exception of Monday and Saturday, which latter was anything but a good day for shoppers, no doubt many a plant left standing on the tables would have been sold but for the rain. It rained all day, often pouring; toward evening it let up a little and business became more lively. From different reports it would seem as if the volume of business was about the same as last year, no great increase in demand being noticeable. It seemed at one time as if the supply of lilies would run short, but it turned out there were plenty and to spare. Nearly all the growers have cut lilies to sell, stock leftover and belated crops, of which however there are not many, will furnish a supply for a week or two to come. Hydrangeas seem to have lost their novelty, for while the plants offered were very fine they did not sell as well as formerly, and quite a number were left. Fine azaleas were also to be seen about the stores Easter Monday, but take it all in all there is not much to complain about.

In the cut flower line Brunners and Jacks sold very well. Anderson had the Brunner market to himself, there being no others of consequence. His stock too was very fine, and just on time. Other roses sold well, Brides leading. The prices were not raised to any great extent, except in a few instances, the growers for the most part being satisfied with the prevailing rates. Brunners brought \$5 per dozen, Beauties 2 to 4, the large teas 8 to 10 and the small stock 4 to 6, Jacks, mostly from Colflesh, 12.50 per hundred. Carnations were plentiful at prices ranging from 2.50 to 4 per hundred, the quality ran from medium to extra fine, Christy sending some excellent

stock. Bulbous flowers with the exception of valley went slow, outside single daffys were to be seen in large quantities at from 50 cents to 2 per hundred. Tulips brought 4 and poor sale at that. Cut Easter lilies were to be had in quantity, 10 per hundred being the price, the same as on the pots; there was no difference between Harrisii and longiflorum, both selling for the same figure. There were quite a number of violets about, but they were small. The Lady Campbell is showing up better now than Marie Louise, it being much larger and more fragrant. The small violets are nearly done. Arbutus is in and sells well.

Since Easter business has been very lively on account of the many weddings. Awnings are to be seen on the residence streets in all directions, and florists' wagons are kept going lively, loaded with decorative plants.

The April meeting of the Penna. Horticultural Society was held at the New Century Drawing-room Tuesday evening, and was fairly well attended. The forestry section had charge of the meeting, and papers on trees and their care, etc., were read and discussed as follows: "The orchard and its care," by Prof. E. B. Voorhees of Rutgers College, N. J. "The culture of nut bearing trees," by Mr. Franklin Bartram, Cornell University, N. Y. "Trees for a country place," by George F. Curwen, Villa Nova, Pa., read by John Curwen Jr., and "Trees for city streets," by Col. Burnett Landreth of Philadelphia. The different sections are providing very valuable papers, prepared and read by persons who are authorities on the subjects selected, but they are doing almost too much, as the meetings rarely now adjourn before 11 p. m., and the business of the society is transacted after the papers are read, and there is scarcely a quorum left, four papers in one night is about two too many.

The last game has been rolled on the alleys as they are at present; the old building is being demolished to make room for the new, and it will be a year at least before the new structure can be finished. In the meantime it is proposed to get a room in the neighborhood, and make a headquarters where the club can meet, and where the boys can get together for a good time once a week as of yore.

Paul Berkowitz of H. Bayersdorfer is drumming up trade in California, and has been very successful thus far. K.

Cincinnati.

After a Lenten period, which has not been nearly so dull as usual, a good Easter was naturally expected, and with few exceptions the Cincinnati men express themselves as greatly satisfied. Some of them report trade greatly increased over that of last year, and in no case was it less. A very large quantity of stuff was sent in, and a majority of the wholesalers found themselves pretty well sold out on Saturday night. One large wholesaler says his sales were fully 30% greater than last year, and as no one complained that his trade was less than previous Easters it is reasonable to infer that it would average an increase over former years. On the whole flowers were very fine, indeed every festival of this kind proves that the Cincinnati market emphatically demands good flowers and has no place for poor ones. The florists say that the call for any sort of designs is now very small. Formerly they made a good many memorial designs for Easter church work, but this year they were very few; a great

many plants were sold in their place, or else cut flowers.

Lilies were naturally the leading Easter flower, and the quantity sold in and about Cincinnati was certainly tremendous, much larger than last year. In addition to cut flowers they formed a favorite pot plant; few if any were left over, the supply was short by Saturday afternoon. The standard price for lilies was \$15 a 100; some few were sold higher in small lots, but that was the prevailing price. Earlier in the week some were sold for \$10 and \$12. Some of the growers had an idea that they might be overplentiful, but such was not the case, perhaps the market might not have taken any more, but all in were sold readily. The dealers were singularly unanimous in prices. The scale was about the same all over the city, so far as wholesale men were concerned. There was little difference from the prices of last year. Roses were very good, some few growers held back their stuff, rushing in nearly all the week's cutting on Friday and Saturday, to the detriment of quality and consequently of prices, but there was hardly so much of this as usual. There were some superb Jacqueminots and they sold well, as this rose always does when really good; they varied from \$10 to \$25 per 100. R. Murphy of Delhi, who has always enjoyed a reputation for this rose, sent in remarkably fine flowers. La France varied greatly in quality, and consequently in price, going all the way from \$6 to \$25 per 100. Perle \$6 to \$8, Bride, Bridesmaid and Mermet \$8, \$10 and \$12; some sold for more, but not many; Watteville the same; Bon Silene, Gontier \$6 to \$8. Hybrids averaged \$40 per 100; some few very fine ones brought more, but a good many brought less.

Carnations were not so plentiful as usual; they sold for \$3 to \$5 per 100. Tulips, which seemed almost a drug a week before Easter, were not overplentiful at that date; they brought \$3 to \$4 per 100; lily of the valley \$4. Violets were scarce, in fact there were very few to be seen. Beauties were fine; Corbett & Wilson disposed of 600 of the finest flowers of this variety seen in this market for many an Easter at \$4 to \$6 per doz.

Church decorations, while presenting no specially new features, were certainly more elaborate than in former years, and there was a largely increased use of flowers on the part of the churches which formerly made little display in this way. Similarly there was an increased trade from people who are not ordinarily flower buyers. The sale of flowering plants was very large, many of the churches buying the majority of those used in decorating, and distributing them to the hospitals afterwards. Lilies led among pot plants as well as cut flowers, next came azaleas, hydrangeas and pot roses. There is no doubt that the sale of plants, large though it was, would have been still larger if Friday had been fine, but it was blustery and threatened to rain; the florists could not make any display outside, and a good many buyers did not venture out. Saturday there were showers in the afternoon, but in spite of all these disadvantages trade was certainly excellent.

It will be noticed that no fancy prices were realized. Prices were really moderate, but as I heard a few of the dealers say, people are more ready to buy at Easter, because they can show something for their money. All the florists' stores were finely arranged, many of them making a regular exhibition. In fact all the large retailers made very fine displays.

P.

AMONG THE 28TH STREET WHOLESALERS.
EASTER SCENES IN NEW YORK.

Washington.

The weather bureau must have been at "outs" with the Washington florists, as the rain poured in torrents from early Saturday morning till past noon, which interlarded with Easter trade to a marked extent, but notwithstanding this Easter sales, on an average, will equal, if not surpass, those of last year. In both the stores and the markets was a profusion of all kinds of flowers. I doubt if any former Easter had a better show of bloom, and all were of excellent quality. The supply of flowers was far beyond the demand, except carnations. The

market was glutted with bloom, especially was this true of Harrisii lilies, and yet the prevailing price was \$2 per dozen. Thousands were sold at that price, while some were asking \$3, and disposed of their stock the entire day at that figure. There isn't a doubt but that if all had kept their prices up to \$3 there would have been just as many sold. In the matter of cut flowers I am told carnations took the lead, with violets as a second, and roses a good third. The quality of these was exceptionally good.

There was a good demand for blooming plants, *Lilium Harrisii* taking the lead. Hydrangeas were also in good demand,

bringing from \$2 to \$15 each. Good plants of genista were in fair demand, and selling from \$3 to \$10. Plants of lilac with from 4 to 6 spikes of flowers were quickly taken up at \$4 each. Brunner and Magna Charta with flowers in 6-inch pots were in good demand, bringing \$1.50. There was ready sale for valley in pans, having from 9 to 12 flowers, for 75 cents a pan. Large plants of marguerites sold well from \$1 to \$5, the prevailing price being from \$2 to \$4. Ferns (*adiantum*) in pans sold well, bringing from \$2 to \$5. There was practically no sale for *Astilbe japonica*, though there were quantities of it on the market.

Several of the florists put forth their best effort to make their store windows the center of attraction, while their stores were filled with foliage and blooming plants of all the varieties in demand. Small & Sons had a very attractive window representing a woodland scene. Branches of trees entwined with vines, from which hung orchids in bloom, served as a background, while the foreground represented a miniature garden, the groundwork of which was maidenhair fern, with beautifully made gravel walks, and a fountain for a center in full play.

Gude Bros. also had a very beautiful and attractive window, representing the advent of spring. Spring is represented by a maiden fair in a chariot of white with ribbons in her hands controlling a flight of doves. The remainder of the window was filled with lilies, bunches of white roses, white carnations and maidenhair ferns.

C. Strauss & Co. had a brilliant red window. The window was lined entirely with ruby red, with handsome cut glass vases filled with Emily Pierson carnations; and a central vase filled with magnificent Golden Gate roses. J. R. Freeman had a fine window display of flowering plants; magnificent specimens of white azaleas, white tulips, white hyacinths, Harrisii lilies and maidenhair ferns composed this most attractive display. C. F. Hale, J. L. Loose and N. Studer's windows were filled with blooming plants.

As to the volume of trade, some report an increase, others say it was about the same as last year. Prices showed a slight advance. Supply was up to demand in everything but carnations. Quality was better than last year. The sale of blooming plants was fully three times as large as last year. In cut flowers there was a decrease in the demand for roses, and a corresponding increase in the call for carnations. There was a marked falling off in the demand for bulbous stuff. Sweet peas were plentiful, and bringing 35 to 50 cents per dozen. Asparagus 75 cents to \$1 a string, very fine and demand good. The demand for smilax was unusually good, the supply was scant and the quality poor. There has been but little grown about Washington this season, which I think was a mistake on the part of the growers, for the demand has been good all season. In fact all first-class flowers, except tulips and jonquils, sold well. For color, white seemed to take the lead in all flowers.

REYNOLDS.

Worcester, Mass.

Plenty of wind and rain was what the weather clerk sent us for Easter Saturday, and he made about as wretched a day as possible; it is difficult enough to deliver lily plants in fine weather with plenty of time, and get them to their destination in good condition, but when the wind mistakes the blooms for weather vane, and you have to hustle over jolting pavements and ill-kept roads, it takes a bloom of remarkably stiff texture to stand it without looking like a bunch of wet rags when you get it there. Probably more stuff would have been sold had the day been more favorable, but as it was there was not much of a surplus, and the trade showed an increase of about 20% over last year.

The plant trade was very large, and quantities of bulbous stuff, spiræa, azaleas, lilacs, cinerarias, cyclamens, etc. were disposed of, and the bulk of the lilies sold were also in pots. Although the supply of flowers was greater than last

year it was very short in certain kinds, the demand for carnations, always large, was bigger than ever, violets were also in great demand, and the supply fell short early in the day. Jacks sold at sight, but other roses went rather slow, which was remarkable, as the demand was mostly for white or light colored flowers. Everybody grew more lilies last year, but we didn't have enough to go around. Harrisii and longiflorum retailed for \$3 per dozen, candidums \$1.50, Mermets, Brides and Perles \$1.50 to \$3, Jacks and Magnas \$3, carnations 60 cents to \$1, valley 50 cents to \$1, tulips, hyacinths and narcissus \$1.50, mignonette 50 cents to \$2, violets \$2 per 100, and other stuff at regular prices. The bulk of the lilies used were Harrisii, though longiflorums were used, where possible, for out of town shipments; no Bermuda grown blooms were seen by your correspondent.

The monthly exhibition of the Horticultural Society was held April 11, but owing to the nearness of Easter the display was not as elaborate as usual, although the exhibits that were shown were all excellent, with the exception of narcissus, which were very poor. Very good hyacinths and tulips were shown by Edward Hall and Mrs. H. M. Chase, splendid zonal geraniums by M. F. Briery and H. B. Watts, and F. A. Blake and Mrs. A. A. Hixon each displayed twenty vases of well grown cut flowers. The keenest competition was in the baskets of cut flowers, and resulted in F. A. Blake winning first, H. B. Watts second, Mrs. A. A. Hixon third, and Mrs. Thos. Ward fourth. The display of apples was especially fine.

A. H. L.

Brides Not Doing Well.

ED. AM. FLORIST: I mail you a sample of my Brides, which I have been having some trouble with. They are planted in a good heavy clay soil and in with the Bridesmaids. The latter have not been in the least affected and are in fine condition, and have been so all along. The Brides are only affected in spots, the rest, while not in as good shape as the Maids, are healthy and are coming into bloom all right. Have been careful with water and ventilation and have used liquid manure carefully. House light and clean. Have tried night temperature of 56° to 60° and am at a loss to know what to do.

F. D. R.

The sample plant of The Bride received from your correspondent F. D. R. is somewhat of a poser. The roots, as far as I could judge from the somewhat dried up condition it was received in, appeared quite healthy but the branches showed indications of disease. What is the direct cause is rather hard to determine from the description sent. It looks something like a case of consumption, or, to be more explicit, as if the plant during some stage of its existence had been subject to injudicious treatment. Such a condition as these plants appear to be in can be produced by subjecting the plants to too much heat, and over-watering, particu-

larly during the very early stages of the plant's life, and is often the result of such treatment in the propagating house. I do not wish to be understood that such is the fact in the present case, as it may arise from a totally different cause, but that such conditions are produced from the above causes is an acknowledged fact. The same conditions may also be produced by over-watering during cold, cloudy weather. In the present case it can hardly be that, as your correspondent says that other plants growing alongside and subjected to the same treatment are perfectly healthy, unless these certain plants affected may have been situated near a drip from the roof; such cases do sometimes occur without being noticed particularly and I would advise F. D. R. to watch carefully during the next heavy rain for drip.

There is just another chance which may be the cause, namely, these plants being perhaps the smaller, and consequently absorbing much less water, while the larger and stronger plants alongside may take what is given without injury while the weaker plants succumb from too liberal an amount of water. If this should happen to be the trouble in this case the remedy would be a little less water at the root, which means more care in watering so as to give the affected plants a chance to recover their health. JOHN N. MAY.

Roses to Grow With Carnations.

ED. AM. FLORIST:—Will you please give the names of four of the best varieties of roses to grow in a house with carnations. I would like to grow one variety each of red, white, yellow and pink. Will you also please state how old the plants should be and about how large?

Cresco, Ia.

W. B. PERRY.

Replying to your correspondent W. B. P., presuming that he intends to run his carnation house at about 50° at night, would suggest the following varieties of roses: For red, Souvenir de Wootton; for yellow, Perle des Jardins; for pink, if large buds are wanted, Bridesmaid, but if smaller buds are equally desirable but in much greater quantity, then take Madame Cusin; for white take Bride for large buds or Niphetos for smaller.

To grow these plants and get them to produce a fair proportion of flowers in such a temperature requires a treatment quite different from that usually followed in forcing roses. They should be planted not later than July 1, should be good commercial stock from not less than 3-inch pots. Grow them on liberally till about September 1, then gradually reduce the amount of water given at the roots, so as to get them accustomed to the temperature suitable for the carnations which are to occupy a part of the same house; presuming that it is intended to plant the carnations in the usual way, middle to end of September, by this time the roses should be somewhat checked in their growth, so that they will stand the treatment necessary for the carnations, which means more air and slightly less humidity in the house at any time than is usually given for roses. If the roses have been handled as above they will by the time the carnations are housed show a firm solid wood and be in good condition to stand the same treatment as the carnations, that is if the carnations are treated as they should be.

From this time on the roses will take considerably less water than formerly, in fact they must be held on the dry side all the time, letting the soil get quite solid

before giving water, and then only just enough to moisten the soil through. This also should always be given early in the day (and on bright days if possible) so as to get all surplus moisture dried up before night. Treated thus really fine roses can be cut all winter. Of course it is hardly consistent to expect as many as could be produced in a little higher temperature with more moisture, etc., but what is deficient in number will be made up in quality. Some care will be necessary in early fall to prevent mildew getting a start, but if they are treated as above and the wood is gotten into good firm condition before the cold weather comes on this can be avoided at all times as in their solid, firm condition they will stand an abundance of air with impunity, providing always that they are never over-watered.

One other thing I should add, the soil at the roots of the roses should be made as firm as possible soon after planting. This is very important when running roses on the cool side, as it helps to prevent an extra amount of moisture around the plant. The more solid the soil the quicker it will dry out. These should be grown on steadily under this treatment all winter, then toward spring, say end of February or early in March, give them a liberal mulching of manure, but continue the same treatment as before so far as water and air is concerned; by April of course they will take a much larger proportion of water, but care must be taken not to get the growth too soft at any time or the result will be virtually a failure.

JOHN N. MAY.

Carnation Notes.

Who ever dreamed that from the progressive city of Boston should come the remark, "would be better satisfied with carnations of moderate (mark well this word, moderate) size" even though the proviso follows, "with better keeping qualities," and this, too, from Long. Now Long, I never thought this of you, for if I am not mistaken you have always been in the lead; nothing in the shape of a flower could be made too large for you, nothing too fine. Don't let those intellectual Bostonians hear that you or any other florist of the Hub is willing to take a step backward in the march of improvement. It is only during the past few years that the carnation has received the attention which it deserves, the higher development of the flower has met with great obstacles similar to every industry in which greater or higher results are desired. If a young man applies his every energy in one direction, working with all his power to perfect himself in that one line, it must be at the expense of some other faculty, and his full development of mind and body is not complete until he is somewhat advanced in years. So with the higher development of the carnation; we have large flowers, long stems, but the keeping qualities are lacking with the product of many growers. This is only one of the obstacles which we have to meet in the improvement of any plant or flower we may be handling. This trouble can be and is overcome, for I know that some of the largest and finest flowers

going into the New York market are keeping much better than some of the poorer grown. Carnations, whether large or small, will not keep well if picked when the soil is dry and the plant is in a wilted condition; they will not keep well if picked after the sun has been on the plants on a warm bright day, for then in spite of all the water you can give them, the plants will be a trifle limp. This applies more especially to this time of the year. I have found that the keeping qualities are much improved by picking early in the day and before the sun is out very long. Some will say that where there are a great many flowers to be picked it can not be done in time, to this I will say get out a little earlier in the morning, or keep more help. If flowers are worth growing at all they are worth growing well. To produce large bloom demands a strong growth of the plant, and this strong growth will suffer more from a lack of water than weaker plants, for a check to the plant means a corresponding check to the bloom, and it is often during this check that poor-keeping flowers are picked; in other words if a flower is picked when the plant is suffering from thirst it suffers as to its keeping qualities. We are syringing our plants several times a day during bright weather. Why? Simply because the foliage demands it for the life of the plant. Is it not a fact that the plant received much of its nourishment through the foliage, and if the house and leaves are dry where is the nourishment to come from? Now I find that when the glass on the inside of the house is dry the plants need moisture in the shape of a fine spray. Whether my flowers suffer from this treatment I will leave others to judge.

Some of our Boston retailers say we are forcing too much, too high a temperature, etc. Now on a bright clear day at this season let the mercury register 80°; quite a drop to 50° at night. Try it. Your plants won't suffer, if (mind this little word, if) you have plenty of good fresh air and water, but look out for dark days, 60° is high enough. I am somewhat of the opinion that our friends Doyle, Long and Finlayson have just started this agitation on the non-keeping subject to set the growers to thinking, and not only thinking but working to produce better stock. How these three chappies would kick if the flowers came to them of moderate size. How they would cast contemptuous looks at the growers and tell them they were no good, better go to growing cabbage! How all, or most all, retailers kick when as the days grow brighter and the sun gets hotter the flowers begin to dwindle in size. Nevertheless I guess we can thank our Boston friends for telling us what we are not doing.

CHARLES H. ALLEN.

A CARNATION recently received from Mrs. I. E. Bailey, Swampscott, Mass., was certainly double enough for the most exacting. It was Mrs. Fisher and contained, in the center of the bloom, a second flower, perfect in every respect, even to the green calyx.

Novelties.

I have been instructed and much amused in my reading of the FLORIST for April 6. Instructed by the reports of essays, and much amused by the difference of opinion, given by two leading and well known gentlemen in the business.

In Mr. May's essay on page 902 regarding novelties he asks the Philadelphia people who would buy to-day the old fashioned roses, Bon Silene, Satrano,

Sprunt, etc., saying he thought one would get hardly enough for car fare back home if living not over twenty miles from the city; and the same evening before the Boston club Mr. Doyle expresses the opinion that the above mentioned roses could be sold on the Boston market with profit.

Now when the doctors disagree who is to save the child? The question is, can we who live further north live on less than our Philadelphia brethren (I think there is no doubt we have to), or is the Boston public more sentimental over the roses our fathers sent in their courting days?

As regards Mr. Doyle's position I hardly think the aforesaid roses can now be grown with profit for the Boston market. Twenty-five years ago when the Bon Silene, etc. were the roses, the profit then was in the spring months, March, April and May, as in the way the roses were then grown not an exceedingly heavy crop was cut earlier than March. Roses were then grown cool and with air. Now they are boiled out in a stove house temperature. They don't keep, and if one tried to put the same substance in the smaller sized roses, Mr. Doyle would quickly say, "No you don't, Jack, they won't go with us!" Roses are not very profitable in the spring months now, and the little ones would have to take a back seat I fear.

Now a word about carnations keeping. I go in town to Mr. Doyle's store, open my box of carnations, they are looked over. "I guess we don't want any to-day." "Why not?" "Well, we can buy larger ones of the same kind for the same money." I go out thinking—"Larger ones for the same money! Well, if the other fellow can grow larger ones I can." I bring in the larger ones, sell them, next morning hear the first morning's remark, "Don't want any." "Why not?" "Oh, they go to sleep." It seems to me the grower is between the "Devil and the deep, deep sea." If he grows them right they are not large enough, if he gets them large enough to suit the consumer they go to sleep.

As far as I can judge the public, the dear, dear public, want the large, larger, largest roses, carnations and cabbages, and we must continue to boil them out or bust.

One word about the "Leaks" by Mr. Mepsted, at the bottom of the second column, page 905, if I understand him, he condemns the man who makes up the eight dollar pillow with two dollars and fifty cents worth of flowers. Great Scott! I should judge him a floral artist of no mean merit. Why, there have been instances of pictures being sold for twenty thousand dollars, for which ten dollars would pay for the paint, but the balance was for talent. Give me the artist who can create from small things.

Dorchester, Mass. L. H. FOSTER.

Import Duties.

The Treasury Department has issued the following circular letter of instruction to collectors under the heading "Classification of so-called nursery stock, and of plants chiefly used for forcing under glass for cut flowers or decorative purposes, imported under the provisions of the act of August 28, 1894."

WASHINGTON, D. C., March 30, 1895.

To Collectors and Other Officers of the Customs:

For the purpose of securing uniformity at the various ports in the classification of imported nursery stock, and of plants

chiefly used for forcing under glass for cut flowers or decorative purposes, attention is invited to paragraphs 234½ and 587 of the Act of August 28, 1894, which provide as follows:

Paragraph 234½. Orchids, lily of the valley, azaleas, palms and other plants used for forcing under glass for cut flowers or decorative purposes, ten per centum ad valorem.

Paragraph 587. [Free list.] Plants, trees, shrubs and vines of all kinds commonly known as nursery stock, not specially provided for in this Act.

The following lists of plants, *Class A*, covering nursery stock entitled to free entry under paragraph 587, and *Class B*, covering plants, either specially provided for in paragraph 234½, or recognized by florists to be chiefly used for forcing under glass for cut flowers or decorative purposes, and dutiable at the rate of 10 per cent. ad valorem, are published for ready reference and for the guidance of Collectors in the classification of such importations.

The subjoined list is copied from a list which was submitted to the Board of General Appraisers and approved by them:

CLASS A.

The following plants, trees, shrubs and vines of all kinds are generally grown and used as nursery stock, principally for planting in the open ground, and are not chiefly "used for forcing under glass for cut flowers or decorative purposes." (Free of duty, paragraph 587.):

- | | |
|---------------------------|---------------------------|
| Aconitum autumnale. | ies Charles X, Marie |
| Althæa. | le Graye and Rubra de |
| Ampelopsis Veitchii. | Marly, <i>pot grown</i> . |
| Andromeda. | Lychnis. |
| Anemone fulgens. | Magnolia. |
| Anthericum liliastrum. | Mahonia. |
| Aristolochia. | Manetti stock. |
| Aucuba, green leaved | Multiflora rose stock. |
| kinds (other than ja- | Pæonia. |
| ponica). | Philadelphus (mock or- |
| Begonias, tuberous. | ange). |
| Black Hamburg Grape | Pinks, hardy. |
| Vines and other fruit- | Primula (except the spec- |
| ing vines and trees. | ies known as P. sinen- |
| Calycaanthus. | sis and P. ohconica). |
| Cannas. | Ptelea. |
| Clematis. | Pyrethrum. |
| Cornus mascula. | Rhododendron. |
| Crataegus. | Snowball (viburnum). |
| Cytisus or laburum. | Spiræas, except Astilbe |
| Daphne cneorum | japonica. |
| Delphinium (larkspur). | Staphylea colchica. |
| Deutzia. | Tarragon plant (Artem- |
| Dielytra spectabilis (Di- | isia dracunculus). |
| centra). | Weeping trees. |
| Doronicum. | Wiegela. |
| Forsythia. | Wistaria. |
| Gaillardia. | Yucca. |
| Hemerocallis. | All deciduous trees: Ma- |
| Helleborus niger (Christ- | ple (Acer), elm (U- |
| mas rose). | mus), linden (Tilia), |
| Hollyhock. | horse chestnut (Æscu- |
| Hdrangea. | lus), etc. |
| Iris (all species). | All evergreen trees: |
| Kalmia latifolia. | Spruce (Abies), arbor |
| Lilacs, except the varie- | vitæ (Thuya), etc. |

CLASS B.

The following "orchids, lily of the valley, azaleas, palms and other plants" are chiefly "used for forcing under glass for cut flowers or decorative purposes," and are not used to any appreciable extent as nursery stock for hardy outside planting. (Dutiable, 10 per cent. ad valorem, paragraph 234½.):

- | | |
|----------------------------|---------------------------|
| Araucaria excelsa. | Lælias, Odonogloss- |
| Aucuba japonica. | sums, Dendrobiums, |
| Azaleas. | Oncidiums, Phalenop- |
| Cactus. | s, Vandas, etc. |
| Camellia. | Palms, all, such as Ken- |
| Carnations, monthly (Di- | tias, Latanias, Seafor- |
| anthus caryophyllus). | thias, Arecas, Cocos, |
| Chrysanthemums. | Raphis, Chamærops, |
| Cycas. | Rapah, etc. |
| Dracena canes. | Primula sircensis and P. |
| Erica. | obconica. |
| Ferns. | Roses, all kinds. |
| Lapageria. | Vallota purpurea. |
| Laurus nobilis. | Lilacs, Charles X, Marie |
| Lily of the valley. | le Graye and Rubra de |
| Marguerite (Chrysanthem- | Marly, <i>pot grown</i> . |
| um frutescens). | Spiræa japonica (Astilbe |
| Orchids, all, such as Cyp- | Japonica). |
| ripediums, Cattleyas, | |

C. S. HAMLIN, Acting Secretary.

Springfield, Mass.

Quite a sensation was caused among local florists recently by the disclosure that Frederick S. Folwell, until recently head gardener for Anson Phelps Stokes, at the latter's place in Lenox, was a defaulter to the amount of \$7,000. His whereabouts at the present time are unknown.

The Holyoke Horticultural Society met April 5 and voted to hold its first show of the year about the middle of June. Roses will be the prevailing flower. E. H. Howland gave a short talk on "How to beautify our homes."

Fairfield will begin work shortly on a new house for carnations. The Wilkinsons are preparing to grow violets exclusively for the wholesale trade.

Mrs. W. H. Pinney gave an interesting talk on the insects destructive to plant life at the meeting of the Amateur Horticultural society April 5. F. W. J.

Greenhouse Building.

H. H. Cooke, Lenox, Mass., palm house and potting shed, each 70x30; rose house, plant house and grapery, each 100x20; violet house and propagating house, each 100x10; mushroom and cool house 100x30. All iron frame; Thos. W. Weathered's Sons builders. L. Strouse, Arlington, Md., plant house and rose house, each 50x20; potting shed 20x20. All iron frame; Thos. W. Weathered's Sons builders. L. G. Bloomingdale, 153 E. 59th street, New York, one greenhouse. H. H. Furness, Chester, Pa., one greenhouse. Alley & Filliettaz, Bar Harbor, Me., one greenhouse. Ames Bros., South Sudbury, Mass., three commercial houses. T. M. Mauk, Carlisle, Pa., one greenhouse.

Pittsburg.

Mr. A. W. Smith has taken the Sixth avenue store of Patterson Bros.

Mr. J. B. Murdoch was recently married to Miss Sadie Sneithen. Mr. Fred Burki and Miss Ida M. Voelp were also recently united in marriage. M.

W. B.—We think you need not fear any ill results to you from the circular sent us. The vulgarisms it contains cannot fail to repel people of refinement such as buy flowers, and it will surely do the party more harm than good.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—In a retail store by a young man of 20; best of references. Address NEW YORK, care American Florist.

FOR SALE OR LEASE. Three greenhouses with valuable grounds; the best place in this country for a man with some means. Address WM. SPRINCBORN, Dubuque, Ia.

Montreal.

The usual Lenten depression has been with us this year in a marked degree; with the exception of two or three storekeepers, all agree that it has been the dullest Lent experienced here for many years. One storekeeper told the writer that his receipts for one week averaged fifty cents a day. Carnations have been very scarce here all winter, a fact which suited the western growers nicely. Smilax has continued scarce ever since Christmas. Sweet peas are now seen in all the florists' windows, and are in brisk demand. Easter lilies seem to be rather scarce, and are likely to fall short of the demand. Hydrangeas are more plentiful this year than usual, but those in bloom found a ready sale for Easter. Azaleas are very scarce, but as usual here at Easter there was an abundant supply of spiræa; the variety compacta seems to be superseding the old japonica as a pot plant, but for cutting purposes the old variety is the best yet.

At the regular monthly meeting of the club there was a large attendance of members, brought together in a great measure by the announcement that the chrysanthemum show question was to be discussed. After a lengthy debate it was finally decided to hold the usual show next November, the dates are 12, 13, and 14.

A plant of *Heuchera sanguinea* in a 7-inch pot, with about a hundred spikes of bloom, which was brought in by Mr. George Robinson, attracted considerable attention. Mr. R. says he dug it up in October from the border, where it had been blooming all summer, and it commenced to bloom in January, and has been a mass of bloom ever since.

Walter Wilshire, the popular ex-president of the club, has been confined to his bed for nearly a month by an attack of heart failure.

The old greenhouse establishment on St. Denis street, known as the "Montreal Floral Nurseries," is advertised for sale, to make way for a new street; there are about 8 houses of about 1,200 feet of glass. The place has been run by Mr. Joseph Bennett for a number of years, who has built a new place at Lachine with all the latest modern improvements. BEAVER.

Baltimore.

Probably never in the history of the florist business in Baltimore, has there ever been a heavier stock of good flowers and plants for Easter, or as many left on hand after Easter was over. The Monday preceding Easter was very disagreeable, with continuous rain. The following four days, while not as perfect as might have been desired were still passable, and purchasers began to increase. Saturday, however, dawned with a gentle rain, which increased steadily to a downpour that continued through the whole day, with wind enough to make umbrellas nearly useless, and cold enough to make heavy clothing very necessary; so flower buyers were few. The stores were very handsomely decorated, so too were the stalls in the market, most of the florists making special displays.

As may be imagined, the weather demoralized the market to such an extent that prices were anything but uniform, the anxiety to make sales warring against the disposition to uphold prices, at least as far as the retail market men. At wholesale prices were a little more steadfast, valley 4, violets fifty cents per 100,

REMOVAL NOTICE.

Our large and constantly increasing business made it imperative to secure more spacious and commodious quarters. On and after May 1 we shall occupy the entire space on the floor of the present Cut Flower Exchange, No. 59 Wabash Avenue, second floor. We shall be better able than ever before to handle the large stocks of our numerous growers as well as give improved facilities to the buyer.

OBITUARY.

JAMES W. SCOTT.

The report of the death of Mr. James W. Scott, publisher of the Chicago *Times-Herald* and the Chicago *Evening Post*, which occurred in New York City April 14, was received with much regret by horticulturists of Chicago and vicinity. It is perhaps not generally known that Mr. James W. Scott was the son of D. Wilmot Scott, who was for so many years secretary of the American Association of Nurserymen, Florists and Seedsmen, now the American Association of Nurserymen. Mr. Scott Sr. was publisher of a newspaper as well as a nurseryman at Galena, Ill., and his son's first ambition was to be a scientific horticulturist. He went through an extensive course of study to this end, and although he subsequently tried what he termed "the other end of his father's business," he always retained a warm affection for his first love, horticulture.

In Chicago Mr. Scott was a tower of strength to horticulturists in combatting political influences in its park systems. On several occasions he has prevented injury to the parks from these influences by a simple word of warning to the effect that the threatened attempt would be combatted by the full strength of the two influential daily papers that he controlled. Mr. Scott was a very genial, approachable gentleman, and was always ready to lead any assistance in his power to advance the interests of horticulture in this city. Through his death horticulture in Chicago has lost an influential advocate and protector.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

CHARLES P. BRASLAN, who has been dangerously ill with pneumonia for the past three weeks is now out of danger, and from present outlook will be at his office within a week.

R. H. SHUMWAY advises the FLORIST that his mail trade this season has been the largest since he has been in business, the largest in number of orders as well as in total amount of money received.

THE MAIL TRADE holds out well and nearly all stocks are selling steadily. Potatoes are in strong demand at good prices. There is time yet to work off what seems like a possible oversupply of beans and sweet corn.

Waterloo's Garden Seed.

WATERLOO, NEB., April 7.—It has been raining here for the past thirty-six hours and the farmers are jubilant over the prospects for the coming season. Our seed merchants contracted for 2,000 acres of garden seed last year. This year they will put one quarter more. Garden seed average the farmer from \$35 to \$60 per acre, onion sets from \$100 to \$300 per acre, and during the seeding season, which begins the latter part of September and continues for three months, it gives employment to an army of men whose pay is from 75c to \$1.25 per day, according to experience. It is on account of this industry that the price of land in this vicinity has increased so rapidly, making it possible for a man to make a good living off of twenty acres of ground.—*Omaha Bee.*

International Horticultural Exhibition at Dresden.

An international horticultural exhibition will be held at Dresden, Saxony, May 2-12, 1896. This city is celebrated for the large number of florists and nurserymen in and around it, many of them making a specialty of roses, camellias, rhododendrons and other hard wooded plants. A large hall surrounded by a park containing many smaller buildings will contain the exhibition, which is under the patronage of the King of Saxony and the chief horticultural societies. Many valuable premiums and medals are offered in all classes, particularly for new and rare plants, rhododendrons, roses, palms, etc. As Dresden is a very popular city, always attracting many visitors, this exhibition is likely to be a great success. Premium lists and other information may be obtained from Mr. Laemmerkirt, Glacis Strasse, Dresden, Saxony.

Mention the American Florist when writing to advertisers on this page.

New Orleans, La.

The eighth annual show of the New Orleans Horticultural Association was held in Washington Artillery Hall April 4-6. The hall was handsomely decorated with bunting, and the fine groups of foliage plants added much to the effect. Dracænas, tree ferns, palms and fruiting philodendrons decorated the sides of the hall, and the orchid display was extra good. Beds of flowering plants and cut flowers filled the center of the hall, and some good floral designs were shown. Exhibits were also made by the children of the public schools. On the closing day Dr. W. L. Stevenson of Paris gave a lecture on the influence of electricity on plant life.

Among the exhibits Abele Bros. showed a fine specimen of Pteris tremula Smithiana, a showy collection of cannas in bloom, and also cut flowers. Chas. Eble showed fine baskets and designs, for which he received prizes. Chas. Panter received special prize for a choice collection of pansies, and D. Newsham special for a collection of cut flowers. Harry Papworth received special honors for a collection of cut roses. In the cut flower contest for private gardeners only D. Newsham received first; in the same class open to all Chas. Eble was at the head.

For palm collections, first prize for florists went to J. H. Menard, for private gardeners, first to Harry Papworth. Mr. Menard also received first for collection of ferns, and for six distinct varieties, and special prize for a bed of coleus, and specimen phyllocerens. Chas. Eble took first for specimen tree fern, first for 12 dracænas, first for 25 pansies in 5 inch pots, for 20 pot roses, 12 pot roses, collection of bulbous plants, and violet "California." C. Panter received first for 12 Rex begonias, and 6 ferns (private gardeners' class). Abele Bros. received first for 12 flowering begonias, for collection of cannas, and special prize for asparagus. E. Valdejo was first for 20 geraniums, 12 cinerarias, bed of flowering plants, and special for bed of araucarias. H. Papworth received first for caladiums in two classes, for 12 crotons, for orchids in two classes, for hanging basket, for bed of foliage and flowering plants arranged for effect, and received special mention for the cultivation and arrangement of a bed of mixed plants. D. Newsham received first for specimen palm. In the exhibits of floral designs U. J. Virgin and Chas. Eble were the prize winners.

The show excelled any other previously held in New Orleans, and received high praise from the press and all who visited it, but it was very poorly attended, and is certainly discouraging to the energetic and public spirited florists who were so active in its arrangement.

On April 2 New Orleans was visited by a disastrous hail storm, which broke a quantity of glass, as well as seriously injuring outdoor plants. The principal sufferers were U. J. Virgin, E. Valdejo, M. Cook, R. E. Simons, J. H. Menard and Richard Orv.

Mr. H. Papworth sustained a severe loss lately in the death of his mother, and is the recipient of much sympathy from his many friends.

RAKESTRAW & PYLE,
 WILLOWDALE, CHESTER CO. PA.

CARNATIONS.

I OFFER TO THE WHOLESALE TRADE A SEEDLING WHITE The choice from over 400 varieties after three years' trial.

It is the best white I have ever grown. Plants robust, stems long, stiff and erect, flowers full, deeply fringed and extremely attractive, measuring 2 3/4 to 3 inches across without any forcing or disbudding. Comes quick y into BLOOM and CONTINUES PROLIFIC THROUGHOUT THE SEASON.

Flowers 2 3/4 to 3 inches across, on stiff erect stems 2 1/2 to 3 feet long. of the habit of McGowan but much more prolific; a striking and attractive shade of pure purple, a novelty in color, very taking, and entirely distinct from the purple maroons and so called purples. Price on the above varieties. \$12.00 per 100; \$100. per 1000.

My stock of Standard and New varieties has never been better than at present, and includes:

- | | | |

Toronto.

Business has been lively in this town the last few days, and as a whole will fully come up to the average. Some say they have done more than last year, others not quite so much, owing to the backwardness of Harrisii lilies. Nearly every one who grows these latter will get more or less left this year; of course there were some about, but many of these had more flowers on them unopened than opened. The roses and carnations in the store windows were very fine and tempting, and the demand was good. Smilax was scarce. Violets also became scarce towards evening. Large quantities of cheap bulbous stuff was cleared off in the morning on the market, but plants did not go off so well there as usual; buyers did not appear to be possessed of any bills of a big denomination. In the stores the plant trade was better; azaleas, which were very fine this year, and medium sized palms sold well. Genista also went off at a lively rate. The weather was dull, mild and still, an ideal day for delivering plants without packing or protecting. In a tramp round town on Saturday afternoon every one appeared to be well satisfied, and I heard no grumbling except with regard to lilies. In the evening florists' wagons were quite a feature on the streets, with their loads of goods "all a growin' and a blowin'." The little greenhouses on wheels were out in full force in the residential portions of the city and suburbs during the day, and did a thriving trade. Prices all round were about the same as last year. Roses may have been a little lower perhaps; there was a large supply. I was told by one florist that he could have sold lots of small plants at about 25 or 35 cents if he could have got them. Probably the only "interesting peculiarity" was some baskets of flowers with Easter eggs in them; the idea may be all right, but these baskets were not very tastefully arranged, and did not look "fetching."

Local retail seedsmen report a large increase in business this year so far, and they expect the improvement to continue. Outdoor gardening operations will probably be in full blast from this out. Spring is backward this year—a case of lingering too long in the lap of winter I am afraid—and it will be necessary to get a considerable "wobble on" in order to keep up with the weather, I expect, when it does come.

Two or three more florist stores have opened lately, but—well, I won't croak, some of them may be stayers. E.

The Refining Influence Again.

Saloon keeper—"No, I've got no money, and can't afford to buy flowers to welcome our alderman to his seat."

Ward healer—"Say, you'll contribute something to this voluntary token of esteem, or else the old man will have you pinched for keepin' open after twelve o'clock. See?"—Chicago Record.

VAUGHAN'S * CANNAS.

MEDAL WINNING VARIETIES, controlled by us and offered now for the first time.

These novelties we consider of great value and permanent additions to the high class Cannas, they are the cream of twenty kinds chosen by M. Crozy from his entire stock of seedlings to represent his best achievements in Cannas up to 1893.

CHICAGO.—(Medal awarded). Positively the best vermilion scarlet to date; 4 feet, green foliage with leaves 9 to 10 inches wide, flower truss and stalk stands boldly erect. The large flowers open out nearly flat, petals 1 1/2 inches wide and five in number—in this respect the **Chicago** fairly out-classes all Cannas, the fifth leaf adding much to the blossom and flower spike. Its record at the World's Fair, on our grounds and in our greenhouses more than justifies all our claims for it. The record of our Canna Novelties of the past seasons entitles us to your confidence. The color, in the language of the judges, is a "dazzling vermilion scarlet," smooth and without markings except a purplish gloss. Price of this grand novelty only 75c. each.

MADAME ALPHONSE BOUVIER.—3 1/2 feet, foliage medium green, flower large, well opened. The color is that of Madame Crozy, tinted with dark crimson spots like Crampel. The yellow edge is irregularly wider with clear yellow spots on upper and lower edge of petals into the throat of the flower; a magnificent Canna, scarce. Each, \$1.25.

M. MESNIER.—(Medal awarded). 3 1/2 feet, dark green foliage, sturdy growth, flowers large, petals wide, color salmon, slightly dotted and streaked with red, which is deepest in the center of the flower. Petals are bordered with a narrow rim of yellow which is irregularly wider on the ends, often 1/4 to 1/2 inch wide. Each, 75c.

MIDWAY.—(Medal awarded). 4 1/2 feet, green foliage, strong grower, color rich vermilion slightly streaked with faint crimson; petals 1 3/4 inches wide, compact flower spike, a strong grower and free bloomer. The crimson streaks and splushings in the petals make a splendid effect on their background of scarlet. Each, 75c.

OCTAVE MIRABEAU. (Medal awarded). 3 1/2 feet, green foliage, flowers large, petals wide, color a deep vermilion, painted with finely pencilled lines of orange yellow and crimson. Very handsome. The back of petals the same. Price, 75c.

STANDARD CANNAS.

Splendid dormant roots wintered in soil and now starting.

NEW CHRYSANTHEMUM MRS. WM. H. RAND. (CERTIFICATE). A distinct variety of Japanese type, in color a remarkable rich yellow. Petals fine, long, twisted and irregularly reflexed, making it resemble a tangled mass of large gold thread. Highly commended by the judges at Chicago, and pronounced the most attractive and graceful flower at the show. 50 cts.

The volume of business this year exceeded that of any previous Easter, and this report is general among all the live florists of the city. The market men were more than satisfied, and all day Saturday were kept busy waiting on customers who were attracted by some liberal advertising done by the Market House Co.

The week previous to Easter was cold and disagreeable, which shortened up stock and made flowers a trifle less in supply, but it anything better in quality. On Saturday the weather improved and as a consequence brought out the shoppers so that the store men were rushed all day and had more than they could attend to properly; many a box of flowers I hear did not have that "personal attention" that is so often promised. Yet with all the little mistakes made there is less complaint coming in this year than last; so perhaps we have forgotten the many blunders of last Easter. Sunday was cold and raw, so much so that business was not as good as expected, but as all the florists had large funeral orders there was no grumbling.

Prices realized this year were a shade lower, but this was more than offset by the quantity sold, as everything was cleaned out—even bulb stock that in former years was generally left over in goodly numbers. Violets were in better shape than for several seasons past, in fact were quite respectable for so late in the year. Thousands were sold at \$1.50 per hundred. Selected stock of all kinds was in greatest demand, good roses bringing \$2.50 per dozen, while average Beauties commanded \$5 and \$6 per dozen. Roses and violets took the lead in popular fancy, followed closely by the old reliable carnation.

The demand for plants was about the same as last year. Well grown azaleas sold best of all. Harrisii in pots sold freely, also Marguerites. Hydrangeas did not move so freely, nor did pans of bulb stock.

Ehrhardt, Wagner and Gasser had special window displays in keeping with the occasion. In fact all the merchants appeared to take more than the usual interest in their window displays, and the demand for plants from that source was heavy, all of which tended to stimulate trade. Gasser decorated the Grays' Armory for the charity ball on Easter Monday, and for the Chamber of Commerce banquet on the following day. The plant decorations were very elaborate, and for the latter occasion thousands of roses were used to adorn the tables.

What a difference, from a florist's standpoint, is the charity ball of to-day from a like affair some ten years ago! Then flowers were considered a necessary adjunct to one's toilet; now it is not considered quite the proper thing to load one's self down with a huge bouquet, and as a consequence the charity balls come and go with only a slight ripple on the financial surface of the florist's account book.

One of the neatest dinner decorations seen lately was one this week, where marguerites were used exclusively. There was a very large oval centerpiece, and then small crescents of the same flower were strewn carelessly over the cloth. This flower can only be used for immediate effect, as it will not stand any great length of time in a hot room without flagging.

We Commend to all Progressive Florists

the advantages and profits of growing Orchids for Cut Flowers. The demand has been greater than the supply during the past season, and has been continually increasing. The cut flowers have exceeded in value, in many instances, the prices asked for the plants. We offer one of the largest and choicest stocks of Orchids in commerce at prices much below the market, in order to make room for increasing growth of plants. Those contemplating the purchase of Orchids should not miss this opportunity.

TO TAKE PLACE OF WIND MILLS

HOT AIR PUMPING ENGINES

A Windmill

Is unreliable because it depends upon the elements for its power; hydraulic rams also depend upon favorable conditions and waste as much water as they secure. Steam pumps require skill and hand pumps demand labor and time. The

DE LAMATER-RIDER CR DE LAMATER-ERICSSON
Hot-Air

Pumping Engines

are especially designed for pumping water, and from shallow streams or any kind of well. They are simple, safe and reliable, require no steam and have no valves. They require very little heat to operate them, and can be arranged for any kind of fuel.

Send for illustrated catalogue to
THE DE LAMATER IRON WORKS,
87 South Fifth Av.,

NEW YORK, N. Y.

New Catalogue (No. 4) containing over 1000 Ornamental Cuts for Florists' use, such as envelopes, letter-heads, bill-heads, cards, advs., floral designs, etc., at from 30c. and upward. Price of Catalogue 25c. (deducted from \$1.00 order).

Rochester, N. Y.

Easter trade was good in general, everything being more plentiful than at first expected. Even smilax, a scarce article for some time past, was supplied in large quantities. Stuff evidently had been held back, and the consequences were that an overabundance of cut flowers was at hand, much more than could be disposed of. I have to apologize, right here, for last week's remark on friend Scott's report concerning the plentiful supply of carnations; he was right in saying that any quantity of them would be offered, but we here in Rochester had tried for the past week to get a supply and failed. All carnations were off crop, as the growers said, still by Friday evening, when out of town orders should have been filled, a large supply came in, but nearly all of it was salted stock, not fit to be sent to any customer. Is it a wonder then that retailers as well as commission men complain, and is it not natural that customers will be dissatisfied getting such goods?

The tendency of flower buyers at Christmas and Easter for some time past has worked toward flowering plants; people are afraid of purchasing cut flowers just for the above reason, and growers will, in a few years, find that the practice of keeping back stuff which is ready for shipment, just because there is a possibility of obtaining a higher price, will drive cut flowers entirely out of the market at these times, and customers will ask for plants exclusively, instead of buying a box of cut flowers. Every store in this place has had an over-supply of cut flowers, while good flowering plants were sold out pretty clean, and the only reason thereof is to be found in the salting of stuff and in the growers' expectations and demands for higher prices at these times.

Last Friday's incoming stuff was depended upon by the retailers for out of town orders, and being almost useless, some of them refused to take it and telegraphed to New York and other places, expecting to be better served there, but goods turned out the same way. The whole country seems to be in the salting business. Now would it not be far better for both grower and seller if flowers were shipped when ready and in a good, fresh condition? The grower would get a fair price, the retailer would be satisfied, and the public would not look suspiciously at the flowers, fearing their keeping qualities to be too doubtful to invest in them. The consequences of the whole transaction were, in this place at least, an over-supply of flowers, and this means a loss on all sides. The retailers, however, bought rather carefully and slowly, depending on a good stock of flowering plants of every description, and now have no reason to regret it. J. B. K.

CHEAPER THAN GLASS for cold frame sash is "FENESTER PAPER" comes in rolls of about 110 yards long, full 36 inches wide; will last for seasons when prepared as directed. The most useful article wherever shading is required. An original roll costs only \$10 cash. If you wish to see more of it before ordering, send one dollar for a trial roll of 8 yards to

Foreign Notes.

The double number of *Lindenia* for January and February is entirely devoted to the newer catasetums. Among them is an illustration of the superb *C. imperiale*.

Among the newer hybrid cyripediums are *C. Norma*, *C. nitens superbum*, *C. Mme. Jules Hye* and *C. Mme. Georges Truffaut*. Cyripedium hybrids appear to increase at a very rapid rate, and the custom of giving them personal names is rather confusing. We shall soon be calling them all florists' flowers.

Cymbidium eburneo-Lowianum superbum is a new and interesting hybrid between *C. eburneum* and *C. Lowianum*. The flowers are creamy white, the lip heavily marked velvety crimson. This plant recently received a certificate from the Royal Horticultural Society at London.

According to *L'Illustration Horticole* the plant exports from Ghent, Belgium, to the United States increase largely year by year. In 1885 the plants sent from that district to New York amounted to \$4,200; in 1895 it amounted to 495,000 francs, or nearly \$100,000. Azaleas formed a large part of this export, their value, during the year last named, amounting to \$40,000, palms \$25,000, araucarias \$13,000, and begonias \$7,000.

A "Floral Cow."

In a certain large city a local "statesman" who is familiarly known to his compatriots as "Buck" was recently re-elected to office, and to properly express their joy thereat the aforesaid compatriots ordered from a florist a floral representation of the noble animal from which the "statesman" received his nickname. This "work of art" was displayed on Buck's desk that it might be admired of all beholders, and the reporters for the daily papers were so much impressed by it that they gave lengthy descriptions of the "beautiful floral Cow" with which Buck had been presented.

April Orchids.

"The best bloom of orchids is over," such is the popular verdict. Like many another popular notion it is not necessarily true. It is possible to have your best bloom for any month that you choose to select your principal stock for. There are a few really good orchids which may be depended upon after you are out of Cattleya Trianae, which so far has determined the season of "best bloom." If a house were principally filled with the score or so of species named in this article, there would surely be plenty of April bloom in ordinary seasons and with ordinary treatment. All of the East Indian kinds are easy to propagate. More than half of the American ones, however, will need to be freshly imported from time to time if the best results are expected. There are specialists I know, who try to combat this notion, but confirmation may easily be had from any collection where buying has ceased for a few years. This test takes the conceit out of numbers of enthusiasts, and tires many an amateur.

This the florist may rely upon absolutely and completely, that he can never obtain "best bloom" from a hap-hazard miscellaneous collection. He must very carefully select his plants for the season during which he desires them, and give everything else the go-by. The man who will possess himself of 100 good fresh plants of each of the following, will after the first season be reasonably sure of a fine April display, with occasional blooms at other times from the cypripediums and from Cattleya Harrisonianum, Miltonia spectabilis, and Oncidium flexuosum. I repeat again that I have nothing to say about "pay." Florists who are in any way interested can judge their custom better than anybody else. Anything may pay if you can get a paying price for it. If you can get the price of imported stock plants of such an orchid as Arides Balandinianum for instance for your first cut of bloom, the following seasons may possibly pay you for your labor upon it. It cannot be increased to any great extent. The same is true of Arides Fieldingii, which is a superb flower for certain purposes, such as bending over a basket handle, or for a natural wreath for the hair. Unlike the first named, however, it is lacking in perfume.

There are several good dendrobiums which may be managed for April. D. densiflorum, D. Farmerii (golden) and D. suavissimum are among the best of the

yellow flowered ones. D. thysiflorum, of the same character, but white and yellow in coloring, and more uncertain as to season, is so well known that it scarcely needs mention. D. tortile for some reason is less commonly seen. In the best varieties it is a good and satisfactory orchid, rather slow to get into blooming condition from a division or a cutting, but when strong enough and well established, far too good to be lost sight of. D. Dalhousianum is a superb flower, one of the most striking in the whole genus in fact; some of the plants are ungainly and coarse, others again are dwarf and more compact. The flowers do not vary very greatly. Cymbidium eburneum, if wintered in an intermediate temperature, will usually flower during April. I mentioned it last month. Numbers of cypripediums may be selected, but C. Boxallii and C. Lawrenceianum will give two types which are perhaps as useful as any. These orchids, with the exception of the arides, may be increased by division to any reasonable extent.

Among cattleyas one of the most useful and certain for April is C. Harrisonianum. It is a small flower, slightly variable, easy to grow, and about the only one that you can be sure of getting along with indefinitely and in a reasonable time from small divisions. You can work up blooming leads in two years from a couple of sound bulbs, and this too after the stock has been under culture for half a life time. I do not know any other cattleya with a flower worth mentioning that I can say as much for. C. intermedia and its varieties, C. Mossiae in varieties, and C. Skinnerii, are all good orchids for this season if you provide yourself with fresh stock as often as the old stock peters out. Laelia purpurata is a grand good thing, and fairly durable under culture too. I know of a set of large plants which seem as good after ten years of culture which is by no means scientific, which flower as well now as ever they did. Some pains are taken to ripen the bulbs in autumn, otherwise they take what they can get. They occupy a good deal of space, however, and it is doubtful if they could sell for enough to pay their board bill.

Among oncidiums the little O. flexuosum is as likely to flower in April as any other season, in fact if you have a quantity of it you are pretty sure to have it. I have previously noted how easy it is to propagate. Oncidium ampliatum makes a splendid mass of bloom from freshly imported plants. It is by no means certain to ever repeat the process so well again however. If it could be bought as cheaply as tulips or hyacinths, it would be one of those things which a florist could often handle as an Easter flower. I fear the Indians in Spanish America are a pretty sleepy lot, or they would cut up a good many such things as this and staple them on to the trees to grow into blooming

THE pictures of Easter plant arrangements in this issue should prove a valuable suggestion to those who have not yet attempted anything in this line.

THE present backward spring does not afford much encouragement as to out of door flowers for Memorial day in the northern states, and preparations should be made accordingly. Better not throw out those carnations till you have cut a crop for this occasion.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

stock and accommodate people. There are a number of other orchids which bloom during April, *Miltonia spectabilis* and *Trichopilia tortilis* are two dull colored little things which are sure bloomers and easy to grow and propagate. *Vanda Denisoniana* again is pretty sure to bloom, but it is easy indeed for a florist to so load himself with orchids that he will neither see much bloom or in'crest in his investment. JAMES MACPHERSON, Trenton, N. J.

Orchids at W. S. Kimball's.

A visit to the establishment of the late W. S. Kimball is always interesting and instructive to any lover of flowers, and there is always something new and interesting to be seen there. Under the management of Mr. Geo. Savage the collection of orchids and stove plants has increased wonderfully, small insignificant bits of plants, bought only a few years ago, are now splendid large specimens. There was a large piece of *Dendrobium nobile nobilium* in a 7-inch pot, enveloped in a perfect mass of bloom, the brilliant shade and the size of individual flowers are something unusual, and it is worth while to travel for miles just to see this one plant. Mr. Sander of St. Albans, when in this country two years ago, pronounced it the best *D. n. nobilium* in existence. This specimen also was grown from a very small bit. The manager takes special pride in his well flowered dendrobies of every description, but says he does not take any particular care of them, they seem to grow anyway with him. The extreme counterpart of *D. n. nobilium* could be seen right along side of this, a pure white variety, *D. n. album*, broad waxy white sepals and petals and flowers of very large size. A number of *D. macrophyllum* in pans suspended from the roof were a great sight, the large flowers nearly fully expanded, on arching canes three to four feet long and flowered their full length; this is a very free grower here, and as it may be called nearly an evergreen variety it is supplied with abundance of water. Among them also is a pure white variety *D. m. Houttoni*, a very fine thing. A batch of *D. infundibulum Jamesianum*, with its extra large ivory white flowers and orange throat was at its best, and a finer lot may not be found. Canes are mostly all over two feet long and very stout and erect, flowering profusely like all the dendrobies on this place. A very desirable orchid, for it lasts over two months even in a warm house, and I have kept them myself in cooler quarters over three months in perfection. *D. Freemanii*, one of the lituiflorum section, is a perfect gem with its delicately colored flowers and made a good show. The *Wardianums* are very fine, some of the plants have extra large flowers and vary in color considerable, some being almost white.

In the cool house *odontoglossums* make a fine show still, and *coelogynes* are yet in fine shape, although many spikes have been cut. Fine large specimens of *C. cristata Lemoiniana* and also the pure white variety are covered with bloom yet. In a warmer house *cyripediums* are showing well, a lot of *C. hirsutissimum* in full bloom; this is a very desirable variety for commercial purposes, flowers very profusely. *C. Chamberlainianum* in quantity has been flowering for some time, and I do not know when they will stop blooming, as the many-flowered spikes show an everlasting amount of undeveloped buds, many variations are to be found in this lot. A bench of *C. Law-*

rencianum was only partly in bloom yet, many of them showing two flowers to the stem and the whole bench is bristling with buds; also a good variety for cutting. Among them is also the white form which originated here a few years ago. One of Pitcher & Manda's hybrids, *C. Josephianum*, with several flowers, is really a good thing. *C. Haynaldianum Kimballianum* is a very distinct bold flower, but the finest *cyripedium*, in my opinion, in bloom was *C. Rothschildianum*, with a splendid spike of four perfect flowers. The little plant is in remarkable vigorous health. This variety was exhibited some time ago in Boston with three flowers on the spike, but I never heard of a plant developing the fourth terminal bud.

It is a great gratification to the people of Rochester and perhaps for others too, that Mrs. Kimball has decided to keep this extensive collection of orchids intact and to keep up the whole establishment in the same style and manner as heretofore. The place is open to all visitors every day in the week excepting Sundays. Rochester, F. Y. J. B. KELLER.

Carnation Notes.

Shading is now in order, not much at first, just enough to keep off the intense heat of the sun. I believe the best material to use is naphtha and white lead; this is sometimes a little hard to remove in the tall, but usually the first hard frost does the business. Lime is very bad for paint and putty, but many of us leave shading until the last minute, and then we take the first article that comes handy, and as lime is more easily and cheaply procured than lead on it goes, and the result is we must do much more painting of the bars. Now which is the cheaper, figure a little for yourselves, and if you have any regard for your wallet I think you will not use lime.

Keep the houses moist; sprinkle the plants two or three times a day, it will not injure the flowers, at least it does not mine, and the sprinkler or fine sprayer is going much of the time. This of course only on fine days, but as the days grow warmer the plants will get the spray in cloudy weather.

There seems to have been an increased demand for carnations at Easter all around, and in many towns not enough to fill orders. Why? Simply that many growers throw out their carnations to make room for Easter plants, which they say pay better than carnations. This is possibly correct, especially when some very careful growers in this section are following this plan. There will scarcely be a full supply of carnations for Easter until growers make a specialty of them, growing them from the beginning until the end of the season, and as the demand for plants at Easter is increasing so rapidly and the crop from a house can be marketed in one week, the temptation is very great to throw out the stock for which you must be caring so much longer than Easter plants. It must be understood, however, that if you will retain the custom of a retailer your supply of any stock must be regular or a constant supply. There are varieties of carnations

that if grown properly and in sufficient quantities will produce a continuous supply. I have stated in previous articles how this can be accomplished. Albertini and Stuart have proven very unsatisfactory with the majority of growers, simply because of their tendency to come in crops. Some who have seen Storm King growing think it will be the same as the two mentioned, but as growing with me I believe it can be made to bear continuously as McGowan. Mapledale, a new pink sort to be sent out next year by Nathan Smith & Son, is in color identical with Daybreak, but the flower is larger, better shaped, and its keeping qualities can be judged when I state that it kept in fine condition for four days after arriving at my place from Michigan; the color remained distinct until the flower wilted.

CHAS. H. ALLEN.

Easter Plant Arrangements.

A basket of cut flowers loses its freshness in a few hours. Potted plants are somewhat clumsy gifts. Hence the demand for some form of floral Easter remembrance which will combine the delicate grace of a cut flower arrangement and the substantial qualities of a growing plant. Our illustrations show how this demand is met by some of New York's leading florists. The lily basket, the grouping of astilbe, roses and ericas, and the combination of hyacinths and adiantum are all good examples of Thorley's ingenuity. The basket of hydrangeas and lilies by Small is an effective and appropriate combination. Mr. Dards' azalea is a good example of the better class of the tissue paper dressing which has recently come into style.

New York Floral Fashions.

"Funeral work has been supporting the flower business," so remarked a prominent retail florist recently. He was commenting upon the economy practiced during the present season by the society people whose generous support is so necessary to the welfare of the florist trade. Wedding decorations this spring are mostly trifling affairs; for dinner parties and like occasions the quantity of flowers used has been small compared with other seasons; the former big trade in high priced roses for street wear has ceased altogether, and pretty dull times have been experienced. True enough, if it were not for funeral demands the flower business would make a poor showing under such circumstances.

Excepting among the cheapest class of buyers made-up designs of mixed flowers, pillows with inscriptions and so on are very seldom seen. Wreaths entire or crescent shaped, flat bunches of long stemmed flowers and occasionally a cross are the prevailing forms in which flowers are now arranged for funeral tributes. Baskets of flowers are sometimes sent, the flowers being carelessly laid in unmossed flat baskets. Boxes of loose flowers are seldom sent. The list of floral tributes at the funeral of the late Mrs. Paran Stevens will serve as an illustration. There were two wreaths of violets; two wreaths of violets and lily of the valley; three wreaths of white roses; wreath of white roses and violets; wreath of Bride and Baroness Rothschild roses; large wreath of lilies; wreath of pansies and lily of the valley; wreath of lily of the valley; wreath of galax leaves and violets; wreath of pansies; wreath of orchids; wreath of ivy leaves; large garland of bronze galax leaves, Augusta Victoria

BASKET OF LILIES BY THORLEY.
EASTER PLANT ARRANGEMENTS.

roses and *Adiantum Farleyense*; large cross of white roses, lily of the valley, white lilac and white orchids; large bunch of violets placed on the casket; bunch of mixed roses and lily of the valley; three bunches of longiflorum lilies; two bunches of American Beauties; bunch of yellow corn flowers and daffodils; bunch of white roses; bunch of lilies and red roses; bunch of white roses and lilacs; bunch of white orchids and gardenias; pair of palm leaves and lilac; pair of palm leaves and white lilies; pair of palm leaves with white roses and violets. This list gives a good idea of the custom now prevailing in fashionable society. Its characteristic feature is simplicity in design and composition; anything like ostentatious display is carefully avoided. It will be noticed that each piece is limited to not over two or three varieties, and these are never mixed together; solid colors are the rule, and mixtures are considered very bad taste, suggesting something like a clearing out of the odds and ends left in the ice chest. Galax leaves are extremely popular for funeral work. They come in such rich shades and harmonize so well in any combination that they have about driven the ivy leaf out of the market. Where expense is not considered casket covers of violets or of violets and lily of the valley are sometimes made. These arrangements are necessarily costly, and cannot be properly made under \$100 to \$200. Bunches of three or four dozen roses tied with white ribbon and fastened on the

side of the casket are very effective. Ribbon is regarded as necessary to give proper finish to a funeral piece, but it is used in moderation and made as unobtrusive as possible.

Where it can be afforded it is customary to decorate the house with palms. At the funeral above referred to a semi-circle of palms was arranged back of the casket in the room where the body lay in state. As soon as the casket had been removed from the house both plants and flowers were quickly transferred to the church, and rearranged in time for the services there. Instead of being sent to the cemetery the flowers were all divided among the various hospitals after the services, by request. A custom which has much to recommend it is that of preparing for the use of the family a complete list of the donors of the flowers. This is an embarrassing responsibility to assume, excepting where the florist has entire charge of the floral arrangements, in which case he can attend to this duty easily. The cards accompanying the pieces are also gathered together and bound with a strand of narrow black ribbon. The relatives are thus relieved of much anxiety and are enabled to fulfill their social obligations without the possibility of failure to acknowledge receipt of flowers from loss of cards or forgetfulness.

THE state legislature of Delaware will adopt a state flower, and it will probably be the peach blossom.

Reminders.

Now, after the Easter sales, our green-houses will not be so crowded, and we are enabled to give spring stock more room. In our own experience a gentle hotbed is a better place for many things than the benches in the houses; the moisture arising from the bed seems to suit the plants and promote growth. All soft stuff should do better in these frames if such structures are available, and therefore they may now have their final repotting, and as in most places the danger of very severe frosts is over, may go into the frames, which move will give us still more room to spread out all our plants that have been crowded into small space. We always wait until after Easter, before we repot our palms, dracænas, etc.; it is then plenty of time to get them in shape for next fall. Of course, in overhauling a lot of plants that probably have been used the past winter for decorating, a great number of them will be found damaged to such an extent that they are not worth keeping, but if a specimen palm has three or four good perfect leaves left, we usually grow it on, and by fall, after making this season's growth, they will be again in fairly good condition for renting out. If the younger leaves are in anyway imperfect or damaged, it is advisable to throw the plant out, for it would only be lost labor to try and grow them on, because several years' growth will not make a perfect specimen of such plants.

Large dracænas, which have lost their bottom leaves and look lanky, should be headed back at once, and the tops inserted in small bottles or tumblers, filled with water, to root. All dracæna tops will root surely there in short time, and make good plants. No bottom heat is required, only a shady place between palms or like plants. I wrote a little article on this latter mode of propagating dracænas a few years ago in these columns, but somehow I have never seen anybody put it in practice. Growers seem afraid to try it, and prefer the time consuming bark removing and mossing as being a surer way. If they would only try a few in water, soon they would discard the mossing, for it saves time, and there is no loss by decay or rot.

We also pick out our begonias now, which are intended for show or stock plants, and give them a very liberal repotting. The little things look for a while rather out of proportion for the size of pots we put them in, but we found that begonias will make a stronger growth under such treatment, breaking out in several places from dormant eyes and then, no customer when making a selection, will pick out these small plants in such large pots. In two months you will have nice specimen plants, and as by that time bedding stuff will all be disposed of, room in the houses will be available for a few specimen plants, especially if a show house is to be kept up all summer.

A few fancy caladiums, alocasias, marantas, dieffenbachias, etc., will, if started now, make fine specimens in a short time, the sooner you take them in hand now, the better. We do not take any care of such plants during the winter months, for there is no call for them then. We place them under the benches when winter begins, when we want the room for other things more valuable. All the above named plants will be great help to brighten up a show house in the summer months, and visitors will have something to look at when they come to your place. We also now take out from the corners and under the benches our aspidistras; there is now

plenty of room in the azalea house for them, also a number of old ferns, which were cut down within the last few months and have been set out of the way. A repotting and cleaning followed by a nice moist atmosphere will do wonders in a few weeks.

Everybody should grow one or two large plants of *Cissus discolor*. Plant two or three small plants in a larger pot close together, have plenty of drainage, and do not pot it in very heavy soil. Half of it should be old manure. When it begins to run and sent out its trailing shoots, some kind of a wire frame of any shape should be provided, and the new growth trained over this. A half shady position in a palm or fern house will be just what they want, and many a plant of this lovely climber will be sold when visitors go through your houses and have a chance to see a well kept specimen. In late fall or beginning of winter, if the room is wanted, the old plants may be set out of the way and kept almost dry until March, when the old wood may be cut up for cuttings, which root freely in any propagating bed with a little bottom heat. We prefer the old wood cuttings to the starting of the old plants into growth, for it saves labor and time.

In marantas there are a few varieties which will do in a dwelling house, such as *M. zebrina*, *M. pulchella*, *M. cuspidata*, *M. undulata*, *M. Massangeana*, etc., and we usually have a few of them on hand in the summer months, but in order to make people admire them a well grown specimen should be in view, either grown in a pan for the smaller leaved varieties, such as *cuspidata*, *undulata* and *Massangeana*, or in pots for the larger leaved ones. They grow luxuriantly in a warm shaded house in rather lumpy loose soil, and will take plenty of water while growing freely.

Fittonias in pans will be admired by everybody if well grown, and I would especially recommend *F. Piercei* or any red veined variety for the purpose, although the white veined *F. argyroneura* will do fairly well for a time after taken from the greenhouse. The red veined will bear the dry air in a dwelling without any injury; they are splendid things for fern-dishes all the year around, and may be grown entirely in the regular fern pans, which are specially manufactured to fit into the 8-inch jardinières. Fittonias root as freely as a *tradescantia*, and cuttings may be planted right into the pans. They grow freely all the year around, and a succession may be kept up without any trouble.

Dieffenbachia may be had in good shape inside of a month or six weeks if put in heat now. The pretty speckled leaves draw the attention of most everybody, if a well grown specimen is set in a place where its foliage as well as the full length of the stout stems down to the pot are in full view. This plant also propagates freely from the old stems cut up into single eyes and laid in moss mixed with sand where a slight bottom heat can be supplied. The young plants, after being potted, will do better if grown on in the same or a similar bed with bottom heat until well rooted through, when several of them may be planted close together into a pot and grown into specimens. The compost should be composed of rough material, and plenty of drainage is essential; lumps of old cow-dung, pieces of half decayed sod, a little peat and sand is a good mixture for all this class of plants. Shade, a close and moist atmosphere, is what they like, but plants intended for sale should have cooler quarters, for they would wilt if taken from the warmest house.

BASKET OF HYACINTHS AND ADIANTUM BY THORLEY
EASTER PLANT ARRANGEMENTS.

Young dracaenas of all varieties want attention now; give them a liberal repotting if the plants are in fair health; if not, then they had better be topped and inserted in water to make new young roots, because a stunted plant will never be a good specimen, and it is only time wasted to spend any labor on it. The stumps will answer for propagating purposes even if they are small. All the bright colored varieties will do well if plunged in the open ground after the middle of June, without any shade; the colors will come out more brilliant, and the foliage be harder and of more substance, not so easily damaged. In such a situation of course it would not do to take out very small stuff, but any good plant in a 4-inch pot or over will make a fine salable specimen before fall sets in, but don't neglect to water and to syringe them freely.

See that you have a plentiful stock of *Ficus elastica* for next fall. If you have not put in any cuttings yet or mossed the growths on old plants, there is no time to be lost now; do it at once, or you will only have small stuff next fall. Keep the young plants close and warm for a while after potting, and get a good start on them, then in June or July stake them securely and plunge outdoors in full sun. Keep liberally watered and syringed, and you will have fine perfect plants to sell, far better than stock grown under glass all the year around. A *ficus* grown in full sun outdoors is an entirely different plant from one grown under glass; the midribs of the leaves will be a dark red, also the protecting sheets over the top leaf, and such plants will find customers in any place.

J. B. KELLER.

Rochester, N. Y.

Chrysanthemum Uncle Sam.

ED. AM. FLORIST: In reference to the *chrysanthemum* Uncle Sam or James Comley we can set at rest any doubt as to their being one and the same. They certainly are. The variety was found by our Mr. Unger in a private garden in Tokio in the fall of 1891. We tested it and sold plants to an American firm the spring of 1892. In October of the same year Mr. James Comley visited Japan, saw plants of the variety in bloom and was so much taken with it that he purchased plants from us and others, though we informed him that we had already exported plants. We were much surprised to learn that the variety did not do well in America, for it certainly is a splendid thing as grown here. Grown under glass the flowers are of a much lighter shade than when grown in the open ground, and the latter are the finest blooms. With us it is one of the best late flowering varieties.

LOUIS BOEHMER & Co.
Yokohama, Japan.

Petræa Volubilis.

This is a beautiful greenhouse climber, belonging to the order Verbenaceæ. A genus comprising about a dozen species of beautiful, twining or arborescent stove shrubs, natives of tropical America. Flowers violet, purple or bluish. Nicholson says in his Dictionary of Gardening that the four species he describes, namely, *Petræa arborea*, *P. macrostachya*, *P. rugosa*, and *P. volubilis* are probably all that are in cultivation, and that they should be planted in good, rich mould. But I think he makes a mistake, when he says, "they should be kept in strong

BASKET OF SPIRÆA, ROSES AND HEATH BY THORLEY.
EASTER PLANT ARRANGEMENTS.

heat," as it is grown on the south side of the cool west house at the Botanic Garden, Washington, and that has just enough heat to keep out the frost in severe weather. Here it thrives admirably, and produces an abundance of beautiful flowers yearly, at this season, while when grown in heat it is infested with scale and mealy bug. This is another illustration that many plants are injured by being grown in too strong heat. It flowers in racemes about 10 inches long, and is readily propagated from cuttings in sand with strong bottom heat.

REYNOLDS.

Bougainvillea Glabra Sanderiana.

This new bougainvillea came to us last year from England, and we were rather doubtful about the claims coming with it, saying that it would bloom freely while young and small, for all bougainvillea we had hitherto grown, *B. glabra*, *B. speciosa* and *B. spectabilis*, are very shy bloomers until the plants have attained age and considerable size, and as to growing these varieties as pot plants and bloom them in pots, unless it was a 10 or 12-inch, we had utterly failed. Now we have been pleasantly surprised by a multitude of fine lilac-rosy bracts, with the tube of the

flowers proper, greenish outside expanding to a clear yellow on the inside. The flowers are rather larger and more prominent than in the old *glabra*, springing from the center part of the bracts. The panicles are produced everywhere, from breaks in the older stem as well as from the points of the growing branches. What the plant may do when planted out I do not know, but it has the appearance as if it would grow to be as large, in time, as the older varieties, for on several plants strong growths have started from near the base, which promise to make long running canes, but as yet I am not sure of it. Our plants are in 5-inch pots, are about 15 to 18 inches high, and 12 inches across. They were kept almost dormant, with just enough water to retain the foliage in winter, until the middle of February, when we placed them in a rose house to start and gave them a daily syringing and plenty of water at the roots. All have done finely, and would perhaps look better still if we had not removed a lot of cuttings from them, when new growth begun. Not expecting much bloom from the plants, and being desirous of getting up a little stock, we cut indiscriminately everything that would make a cutting, but when the second growth came on we found that

some of the little branches showed signs of bloom, and they were left alone. I have an idea that this bougainvillea will make a desirable Easter plant as a large specimen as well as in smaller sizes; it is so easily handled, and no trouble to have them at the right time. The habit is compact and bushy, so far as I can see in one year-old plants, and the treatment of them no more difficult than any ordinary hard-wooded plant. Probably the plants would have attained larger size, if we had grown them last summer under glass and pinched occasionally, but they were sunk in the ground among a lot of azaleas out doors and got no further care than watering and syringing, not even a repotting after July 1, and are to-day in the same pots. All the nourishment they received since was a dose of manure water once in a while after they were placed in the rose house in February.

The cuttings root nicely in sand in a much shorter period than the older varieties, and there will be no trouble about propagating them. All bougainvilleas will bloom more freely if the roots are somewhat confined, or if planted out until the surrounding ground is matted with their roots. They should have a well drained situation, too much moisture or very rich earth will cause too much rank growth and leaves. The flowers are produced very sparingly until the roots occupy the ground. From November to February they should be dried off, and then pruned into shape again before starting into growth. A very severe cutting in does not hurt them. These last notes have reference only to the well known old sorts, but I presume that Sander's variety will have the same constitution, and requires the same treatment. If bougainvilleas are planted in a moist place, where they have no chance of being dried off, the plant will produce a yellow, sickly foliage not at all pleasant to the eye in a well kept greenhouse.

J. B. KELLER.

Rochester, N. Y.

A Destructive Worm.

ED. AM. FLORIST: I send you specimens of worms which are very destructive here. They have been specially injurious to seedling plants, such as grevilleas, swainsonas, etc., eating the stem underneath the ground. Their presence was first made known by the plants tipping over as though they had damped off. On investigating we found that the plants had been severed from the roots just below the surface of the soil by this worm.

Libonia, Pa.

W. F. SCHMEISKE.

[We submitted the specimens of Prof. L. O. Howard, Government Entomologist, who writes as follows: "The creatures accompanying the enclosed letter from Mr. W. F. Schmeiske are Myriapods and not insects. The species is known scientifically as *Paradesmus dasy* Bollman and it has no common name. It belongs to the sub-class Chilopoda, including most of the so-called centipedes. These species are not especially destructive and I have only occasionally heard of such damage as that reported by Mr. Schmeiske. The only remedy which has been tried with any effect is that of trapping the creatures by slices of raw potato poisoned with Paris green."]

CHARLES W. SHERFREY of Nebraska City is the first member of the Florists' Hail Association to meet with loss this year. He carried a double insurance, which will be promptly paid.

JOHN G. ESLER, Sec'y.

New York.

Ever since Easter trade has been exasperatingly slow. This is the report made generally by the retail and the wholesale florists, and the appearance of their establishments confirms their statements, for flowers are much more abundant than customers are, and such sales as are made are small in amount. A full supply of all varieties is being received. Roses, while not as badly overstocked as on some previous occasions, are in excess of the demand. Among the prettiest things in this line are the moss roses, which two or three growers are cutting freely and of finest quality, but which do not meet with that appreciation which they are entitled to. Evidently the New York market has no disposition yet to return to the smaller varieties of roses, even though they be moss roses, and size will continue for some time to be a first consideration in determining a rose's popularity.

Carnations are inclined to be overplenty, especially in the scarlet sorts. Portia has to be sold at a low price to get rid of it, but from its abundance it is plain that it easily makes up in quantity what it lacks in the price list. Wm. Scott continues to head the list of market varieties in price and demand, always excepting, however, the peerless Helen Keller, which is easily the highest priced carnation on this market. But it has not yet had a test in large quantity. Lilies are extremely plentiful, and it is not possible to hold them to any regular figure. As one wholesaler puts it, "We are open to sell them if we only get an offer." Among the most annoying elements just now are the outdoor daffodils and tulips, which are being loaded on to the market from points further south. When this begins quotations on bulbous stock become impossible.

The plant peddlers' wagons, loaded with bright hued geraniums, are seen in large numbers in the residential districts, and are reminders that gardening time has come around again. Mr. Joosten, who is a large importer of roses, says that the number of rose bushes of all varieties handled by these peddlers is almost incredible. They are also quick, he says, to recognize varieties, and are experts as to quality. Roses also sell well at the auctions. Prices paid this season are higher than for some time past, and the demand seems unlimited.

The sad news comes from Flatbush that popular Gus Bergman is dangerously ill, with little hopes of his recovery. G. Messeberg also, who has been sick for several weeks, is reported to be much worse, and is not expected to live more than a few days.

H. A. Siebrecht delivered an instructive lecture on orchids before the Torrey Botanical Club at Columbia College on the evening of April 24.

Visitors in town: Edwin Lonsdale, H. H. Battles and John Burton, Philadelphia; Geo. A. Sutherland and Wm. Ingram, Boston.

Jacob G. Bebus, wholesale florist, has failed.

Boston.

The week following Easter has been a fairly busy one for everybody. Scores of impatient brides and grooms to whom it seemed as though Lent would never end have at last given the florists all they could attend to. So the retail florists are in the main happy and growers and wholesalers all come in for their proportionate share. The long delayed spring

DRESSED AZALEA PLANT BY DARDS.
EASTER PLANT ARRANGEMENTS.

weather has finally got here. Outdoor work is crowding hard on those whose business lies in this direction and bedding plant growers find plenty to keep them busy, too. The first auction sale of the season by N. F. McCarthy & Co. was in every way satisfactory. Prices equal to and often in excess of those quoted by foreign houses for goods delivered on the spot were realized for roses and other dormant hardy stock.

Cut flower receipts have been moderate in quantity and rather under the average as to quality. The market, which would otherwise have been good, was somewhat disturbed early in the week by the unsold stock left over from Easter, but altogether there has been a good demand at reasonable prices for all the really good flowers coming in. Carnations are a little reduced in size in consequence of the hot sun, but prices hold up remarkably well and fair stock goes at sight. In roses Brunner leads at present. Geo. Wilson is cutting heavily from this variety and the quality is fine.

April 19, Patriot's Day, being a holiday here was spent most delightfully by a dozen of the local fraternity as guests of Mr. Ed. Hatch at his seaside cottage "The Breakers." Mr. Hatch fairly outdid himself in hospitality and all past records at this famous shrine were eclipsed.

Visitors in town: Geo. C. Watson, Phila.; Winfried Rolker, C. H. Joosten, J. S. Taplin, New York; Jos. H. Veitch, London. Mr. Veitch, who is the head of the famous house that bears his name, is now making his initial visit to America.

Geo. A. Sutherland and Wm. Ingram have just returned from a three days visit to New York.

Prunus Davidiana is now in full bloom. This valuable novelty is the earliest in bloom of the hardy shrubs and trees, beating the forsythias by from one to three weeks.

Ed. Hatch will sell roses and imported stock in general for C. H. Joosten on Wednesday, May 1.

Bowditch & Co. have closed up.

Chicago.

Trade reports are not very encouraging this week; there is plenty of stock in the market, and very little sale for it—in fact the general verdict is that there is no business in town, and it is only the outside shipping trade that empties the dealer's icebox. Even the fakirs share the general depression, and complain that there is nothing doing. Four bright warm days have brought stock on in great quantities, and in very good quality. Roses are fine, but sell for very low prices. Select Beauties range from 16 to 25, and a good many are sold below these figures. Large teas range from 2 to 3 for good average, 4 to 5 for extra select. Mixed roses are quoted at 3, but on Thursday it was stated that 7.50 to 10 a 1000 would buy good average stock. Hybrids do not sell at all, in spite of the fact that they are very good. Some of the largest hybrid growers say they will grow none except Brunners another year.

Carnations are more plentiful than they were last week, there being rather a glut on reds, but whites are still scarce and in good demand, bringing the price of fancies. Portia is going slowly, as there is now an abundance of good Garfields. Reds are 75 cents to 1, white 1 to 1.50, fancies 1.50, excepting some extra stock

BASKET OF HYDRANGEAS AND LILIES BY SMALL
EASTER PLANT ARRANGEMENTS.

bringing 2. Violets are growing poorer and smaller; they stand at 75 cents. Bulb stock is very dead; there is very little sale for anything in this line except valley, which still brings 3.50 to 4.

The scarcity in greens still continues; there are no ferns in the market, though it is expected that in a day or two Tennessee ferns will be supplied. Smilax is still scarce at 15 to 20. The shortage in common greens has been very inconvenient, and it is said that in many cases the florists have had to fall back on rose leaves for backing.

Sweet peas still hold at 1, and are very good indeed; they are not yet very plentiful, but it is likely that two or three days will make a great difference in the supply, and the price will begin to take a downward turn. All classes of stock are excellent in quality this week; it is only buyers that are wanted.

Recent visitors: John Speelman, of C. J. Speelman & Sons, Sassenheim, Holland; Mr. Ingram, representing Hugh Low & Co., London, Eng.

Mr. H. A. Bunyard is still at the Alexian Brothers' Hospital, but is now able to sit up and will be about again in a week or ten days. Harry says: "If I had had my sketch book the first week of my fever I could have sent you some wonderful pictures of improved roses and carnations, and water melons that would have forever settled the colored race question. I could also have contributed largely to the "Zoo" at Lincoln Park,

and could have knocked some of those sea serpent yarns into a cocked hat. But now these have all been gathered in and I sleep in peace once more."

At the meeting of the Florist Club last Thursday evening President Kidwell was unable to be present and his essay was deferred till next meeting. The lease of the present meeting place having expired the trustees were instructed to take a new lease for another year, arranging for only one meeting a month (the fourth Thursday in the month). Mrs. E. T. Royle was elected an honorary member of the club. Mr. John J. Gormley was elected recording secretary for the remainder of the current term. A letter from the American Carnation Society asking the appointment of a committee to inspect and report upon seedling carnations originating in this section was favorably considered and the following committee appointed: Mrs. E. T. Royle, E. Buettner and Chas. Hartwig. Mr. E. Wienhoer displayed some samples from a lot of plants of the Belle Siebrecht rose just received from the introducers and made some very sarcastic comments on the quality of same. The samples shown were hardly more than rooted cuttings, and a very poor grade of cutting at that.

Rochester, N. Y.

The past week was not what we should call a very busy one, but flowers were plenty and sold well. Roses of all grades

are coming in, the best bring good prices, while inferior stock is rather low, joblots being sold at \$20 to \$30 per 1000. We had several weddings in this city, which called for elaborate decorations, and these used up a good portion of surplus Easter stock in blooming plants as well as large quantities of roses, carnations, and thousands of violets. Long-stemmed violets are scarce, those coming from frames are rather short, but the flowers are good size. Good valley is getting scarce also, but bulbous stuff of all description is abundantly supplied, and we may look for out-door grown hyacinths, daffodils and tulips next week. The steady warm spell we had since Easter brought out all such stock in a hurry and also roses, carnations, etc., under glass, so that an abundance of cut flowers may be looked for in this section from this time forward.

Spring work has commenced in earnest with the growers, every one of them is busy getting ground ready for planting out, and as we had such steady cold weather up to Easter everybody is behind with out-door work compared with other seasons.

All our retail men are satisfied with their Easter trade, and say they have done fully as well as other years, but they find that delivering blooming plants in such quantities is not such a very pleasant job at Easter. Inexperienced drivers handle these goods too roughly, and however carefully the plants may have been wrapped, tied, and packed in the wagons, by the time they get to the end of the route, some of the plants have suffered more or less and complaints will surely come in afterwards. With cut flowers packed in boxes this very seldom happens.

Our friend Chas. Swift of the Kimball greenhouses is recovering slowly but surely from his accident; he now is able to go about on crutches. His friends all hope to see him at his post again in the near future. J. B. K.

Pittsburg.

The last regular meeting of the Florists' Club was held in the superintendent's office, Phipps Conservatory, with a very good attendance. The members, after viewing the conservatories by electric light, were called to order by the president at 9 p. m. The special feature of the meeting was the appointment of the several committees to look after the interests of the coming convention. The president appointed the entertainment, reception, ladies, hotel, press and bowling committees. The local men are taking great interest in the convention, the business men are looking towards it, and everything points to the cordial welcome for which our city is noted to the members of the Society of American Florists. The Alvin Theatre, which has been selected for the convention, admits of having the trade exhibit and the convention under the one roof, with every possible convenience and comfort for the guests. It is centrally located and within easy reach of many good hotels.

The Easter trade of the florists in this city has never been equaled before; all the dealers claim it was the most satisfactory Easter trade they ever had. Many of the florists attribute the increase of the flower trade to the Phipps Conservatories, both in Allegheny and Pittsburg.

The conservatory in Schenley Park has attracted people by the tens of thousands. Easter Sunday 19,000 people passed through the doors, and during the Easter week work was partially suspended to allow visitors to enjoy the sights. The entire range of houses was lighted by

electric light and an orchestra played enchanting music each evening to large and appreciative crowds of visitors. With four large show houses of calceolarias, azaleas, lilies, hyacinths, tulips, cinerarias, spiræa, genistas, etc., all artistically arranged to make best effect possible, it was the show of the season.

Randolph & McClements have leased the Jao. R. & A. Murdoch greenhouses adjoining Schenley Park, to take possession June 15. They are also opening a new store on Penn avenue.

Patterson Bros. have sold their 6th avenue store to A. W. Smith of the South Side.

Some of the dealers are feeling a little hurt at the groceryman cutting prices, but still the regular florist people are doing a good comfortable business at fair prices. All the dealers in the city are busy, and the outlook is very bright for the best on record.

The city has passed the ordinance for the issue of \$1,750,000 in bonds for park improvements, and \$500,000 for new boulevards, which will place the parks in fine shape. BROWN.

Philadelphia.

Things have been quite lively the past week, the spring crop of weddings developed very well, and there are still quite a few to take place before the fateful first of May. Flowers of all kinds have been very plentiful, and the growers find it hard work to dispose of their increasing stock. The fakirs are now in their glory and the streets are lined with their boys, with baskets piled high with all kinds of choice stock. Short Beauties are their specialty; these are sold at from 3 to 6 for a quarter. The price of roses has taken a drop and \$6 is now high for best ordinary stock of the larger teas, a few extra selected bring \$2 more, and a great many fine buds are also sold for 4 and 5 per hundred. Smaller roses are 3 and 4 and sell slowly. Best Beauties sell for \$4 per dozen and from that down. Brunners the same, with the exception of Anderson's, which we believe bring \$5. Baroness and Laings go for 3 per dozen.

Carnations are beginning to feel the effects of the heat and are now 1.50 and 1 in quantity per hundred. Violets are poor and 50 cents per hundred is top figure. Longiflorums and Harrisii are a drug and are nominally quoted at 6; there must have been a good many that did not make Easter. Hydrangea heads are also to be bought by the basketful. To judge from what the growers say the bulb men are having a hard time taking orders; at almost all times the past season tulips were in over-supply, and yet there did not seem to be a great many about. The public is evidently tired of this flower.

The bedding plant men are now as busy as bees crowding every inch of space with spring stock. The warm sunny weather of the last few days has started the trees and many in sheltered places are coming into leaf, the early magnolias are in full flower, and in a few days more lilacs will be in. There seems to be no disposition among the growers to add any great quantity of glass; most men seem to have enough and appear more concerned as to what to grow and occupy the room they now have most profitably.

The Gun Club had a shoot last Tuesday; they seem to be getting ready in earnest for the contest of the coming convention, although the present shooting is more for pleasure than practice.

Robert Craig delivered an address be-

fore the Baltimore Florists' Club last Monday evening. He reported a rousing attendance and great interest in the proceedings. He came back with the feeling that the Baltimore brethren were very much alive, and that their Florists' Club was a great organization.

It is not yet determined just where the May meeting of the Philadelphia Florists' Club will be held, but notices will be sent out in a day or two. There will be quite a few new carnations on exhibition, and any one having anything new to bring before the trade would do well to send it to Robt. Kift, 1725 Chestnut street, chairman of exhibition committee, in time for meeting, first Tuesday in May.

The headquarters of Secretary Farson of the Horticultural Society is now 1414 South Penn Square, room 43. His office is not large, but he is just as glad to see his friends as of yore. K.

Baltimore.

The social meeting of the Florists' Club Monday night, April 22, was an unqualified success, and the members who conceived the idea are worthy of great praise for their work. The net results of a most enjoyable evening were a large increase in membership, including several of our most valuable workers in the past, who had drawn out, an invaluable improvement in the kindly feeling and good-fellowship of the club, and an uplifting of the courage and energy of all hands to a point that will insure a successful show. Mr. Robt. Craig of Philadelphia had been invited to speak to the club, and delivered an address that for practical and thorough ideas on matters connected with the trade would be hard to equal. He laid special stress on harmony as a prime essential to the successful development of the trade in any city, and his remarks were received with profound attention and frequent applause.

He was followed by Mr. Jas. Pentland, who after describing early days in Philadelphia, when the Pennsylvania Horticultural Society met in a cellar under the mayor's office, corner Fifth and Chestnut streets, and later on, the time when he was one of the four florists which the city of Baltimore could boast, finished by counseling better feelings among members of the trade, a high standard of quality for flowers and plants, and truthfulness. To illustrate the last he told a story which seemed to bear rather hard on the market men, and which was commented on good naturedly by Mr. Wm. Cristie later. Mr. E. A. Seidiwitz thought the club all right, but suffering from a kind of starvation intellectually, as the large audience to hear Mr. Craig testified. Mr. John Donn followed with a short address. He had been represented at every exhibition of the old Maryland Horticultural Society, and would rejoice to see the way clear and the spirit abroad that would bring him back to the club, so that we could all get along harmoniously together, and equal or exceed all past efforts.

Mr. W. A. Ekas being called on said he never made but one speech in his life, and that when he was ten years old. This speech he repeated, to the great delight of all present. Mr. Chas. Hamilton wanted all the old war horses back in their places. Mr. Brummel could not say much among growers, but was at home in questions of nomenclature, in proof of which he gave us an instance. Mr. Fred Burger felt diffidence among so many older members, but was glad to see so many out, and particularly struck with Mr. Craig's remarks against petty jeal-

ousy. Mr. Wm. Cristie said he was more than happy to be here, agreed with everything said except about market men, and told of an experience in market very nearly the opposite of Mr. Pentland's.

Mr. Wm. McRobertis thought the appearance of so many a hopeful sign for the club. Hoped they would all join and continue to come, when we would make them good members and they would help us to be a good club. Mr. N. F. Flitton hoped to see every private gardener in the county a member of the club. Mr. Henry Bauer would say to every word spoken to-night yea and amen. "Do what you have said and do what you have been advised to do, and I am with you."

Mr. Wm. B. Sands made one of his usual happy speeches, full of droll anecdote, and after the consequent laughter had somewhat subsided, a short recess was taken, during which the utmost good-fellowship prevailed. Don't suppose the committee in charge were idle during all the speechifying; waiter after waiter piled with good things was passed around, with cigars as a beginning, and again, after the appetites of all seemed satisfied, as an ending. After the recess Mr. Robt. Craig was unanimously elected an honorary member, and made a short speech, in which he said 'Gardening as a profession is the equal of any profession. It is a great art. It is coming up. It has a great future. The man who plants the landscape will receive as great honor as he who merely paints it on canvas.'

Mr. Jas. Pentland being proposed for re-admission to membership, on motion the rules were suspended and he was unanimously elected, all present joining in three rousing cheers for the Nestor of the trade in Baltimore. After receiving twenty-six proposals for membership and appointing a committee for them, all joined in singing "Auld Lang Syne," and slowly separated.

The beautiful clusters of swainsona on exhibition were from Mr. A. L. Black, and included with the well-known alba, a large and showy pink named S. rosea, also a smaller flowered purple labeled S. coronillaefolia, and another pink called S. Greyana. Mr. B. has imported a lot of swainsonas from their native habitat, and promises some more fine things among them, notably a yellow flowered one. The carnations shown, which were in several varieties, were certainly superb and came from Mr. Weber of Oakland, Maryland.

Not much change can be noticed in this cut flower market. Violets continue rather scarce at forty cents; carnations and roses, in fair supply at a shade lower rates than last week. MACK.

Buffalo.

Contrary to custom and what is expected the week following Easter was by no means a busy one, and we were all prepared to do a rushing business, as fine weather brought in any amount of flowers of all kinds. There must be a crop of weddings in the near future, perhaps they are postponed till more settled weather. It would be useless to quote any price on flowers now. Roses, carnations, violets, and all bulb stock are very plentiful, and with a light demand purchasers have it all their own way. Plant men are not worrying so much about that, as they are up to their necks preparing for spring trade. There is not likely to be any decrease in that branch of the business, as plants for the garden, flower beds, and verandas have become a necessity.

SIEBRECHT & WADLEY'S NEW ROSE HOUSE.

Our beautiful Forest Lawn Cemetery authorities have just let the contract for a fine conservatory to be connected with the chapel; it is to be as handsome and complete as money can make it. This is as it should be, for it will be greatly appreciated by thousands whose mournful duty calls them to this city of the dead.

There is another change at the fine private establishment of Mr. G. H. Lewis. Mr. Fitzgerald has left, and a gentleman from Philadelphia has taken his place. We wish him the best of success. This place is now complete enough to occupy the attention of a first-class man.

If not too late in the day some retrospective thoughts of Easter occur to me. I forgot in my last to mention church decorations. Ten years ago the great feature of the Easter trade was church decorations. Nowadays the latter has taken a back seat, if I may use such an expression, and why? Not because churches don't decorate, but because the general business has increased three fold. All the churches that ever decorated did so as usual, perhaps not as elaborately as in days of old, but all to some extent. Groups of lilies and a back ground of palms were the prevailing decorations. Where are the harps and lyres and wreaths and crosses gone that used to keep us up one continuous 48 hours without a wink of sleep, and where are the departed baskets of flowers that were

sent as Easter gifts to dear ones? They are gone, and it is safe to say they never will be missed. The departure of these fashions is merely the evolution of our business, and what live florist would like to deny that our business is subject to that inevitable process, and why regret it? The only thing to do is to adapt yourself to the change as quickly as possible. The amazing growth in the business in ten years, if of a changed nature, should satisfy all. There seems, in reading the reports carefully from all quarters, a remarkable fact brought out, almost all are unanimous that sales were quite equal to last year, and in many cases ahead of last year, but supply was amply enough for everybody, and in many cities there was a slight surplus. This fact should be pondered over and remembered for use another year. Locally we have several features in the Easter trade to be thankful for. I did not hear a word about salted stock. Our friends in Rochester grumble a good deal on that score, perhaps it's because they live so near the saline city of Syracuse. How strange that Buffalo with other northern and western cities, should have been blessed with fine weather while our eastern and southern brethren were handicapped by rain storms. If we had had such a Saturday as "Mack" of Baltimore describes I know of one man who by this time would be safely deposited in a refuge for the insane. W. S.

Siebrecht and Wadley's "Model" Rose House.

The rose house shown in the illustration was built to accommodate the young stock of the Belle Siebrecht rose. It is 20x240 feet and 14 feet in height. The special novelty in its construction is that its frame is entirely of 1¼-inch pipe. Mr. Siebrecht claims for this method it rusts less and gives less shade than the ordinary flat iron generally used, with the additional advantage that any man can put it together. It is heated by steam and the glass is 16x24 double thick second quality French.

Indianapolis.

The regular meeting of the Indianapolis Florists' Club was held at the club rooms April 3. The meeting was well attended and two excellent papers were read. One was entitled "Floriculture 20 years ago," by Robert McKeaud, touching many points of interest to the younger florists, the trials and tribulations of an old time florist, compared with the advantages now, show as great a difference as in the quality of the flowers grown. The writer has grown up with the business and several anecdotes happening during these old times kept the members smiling.

"The local park situation," the paper read by Mr. F. B. Alley, was of great interest to those present, showing what could be done by the new park commission created by the late legislature. It was decided to have refreshments and amusements at the monthly meeting in May. The premium committee of the state society for the chrysanthemum show gave notice that it would meet at Indianapolis some time in July to complete its list and make further arrangements.

Mr. G. E. Schwarz, formerly with Mr. Bettman at New Albany, has started in the general greenhouse business at Ellwood, Ind., the enterprising young manufacturing town in the gas belt. He has two houses 30x14 and 100x18, heated by steam.

Mr. Fred Heipl Jr. of Terre Haute, being in Indianapolis last week, reports his trade as excellent during Easter, much better than expected.

The local Easter trade was in some regards disappointing. There were plenty of flowers with some; those handling only a limited quantity of course sold out and report trade good, while those handling larger quantities did not dispose of their stocks altogether. The shipped stock was, as usual, in bad shape with few exceptions; it is plain that this stock is kept on hand several days and when exposed to the light collapses and is a total loss. It is much better not to have it at all; it is annoying waste of time, and if used at all a bad card for the retailer. In most cases a decrease of 25% is reported, but greater competition would about equalize it. The retail prices were 25% less on most flowers. With few exceptions there was an over-supply; the local stock was good, but shipped stock was pickled as usual. There was good demand for some lines of plants, especially good lilies and cinerarias. But a good many complain that altogether business was not quite up to expectations.

A large department house in this city is in a measure the cause of lowering prices of flowers, and also bringing the quality of flowers in disrepute, it is not legitimate business to advertise in great shape roses at 50 cents a dozen, Beauties 1.50 and 2, carnations at 19 cents a dozen, etc., when

in fact their stock is so limited as to be ridiculous.

The local market Tuesday, Thursday and Saturday is a flower show in itself now, and many people avail themselves of the opportunity of purchasing cut flowers at low prices, some very good flowers are sold there. Three years ago it was easy to count the regular market florists, but now it seems every market day brings a new one.

During a recent visit of the writer to Chicago he happened to see the California car load of flowers being transferred to a wholesale florist's place; the calla lilies were with few exceptions badly withered, dusty and spotted. As they are very likely raised outside the color is a dull cream, they have not the pure delicate white as when raised in the greenhouses. They were packed in glass boxes, stems bedded in moss. Some yellow marguerites came in fair condition. Eucalyptus, palm leaves and other green stuff did not last long after leaving the cold storage car. The experiment must have been a dead failure. W. B.

St. Paul, Minn.

So far this month the weather has been perfect. The spring has been the earliest known in years. Easter trade was good, probably better than ever before. Stock was abundant and good, buyers were plentiful, and while prices were somewhat lower than last year the aggregate of sales was much larger.

In the plant line lilies, roses and hydrangeas were the best sellers, with azaleas, spiræas and pelargoniums in only moderate demand. A year ago pelargoniums would sell at sight; this year there was but little sale for them. Spiræas, once the mainstay for church decoration, are used but little for that purpose now. The new varieties, compacta multiflora and astilboides floribunda have quite superseded the old japonica in this section.

In cut flowers nearly everything sold well. The supply was equal to the demand in everything but carnations. Prices ranged a trifle higher than during Lent, the best Brides, Testout and Bridesmaid selling at \$2 per dozen. Tulips, Von Sion, valley and Romans retailed at 75 cents per dozen. A few fine Beauties brought \$4 per dozen, while violets were eagerly sought after at 50 cents per bunch. The shipping trade was never better. But very few set pieces were made for the churches, and few baskets were sent as gifts. All this had a tendency to make the florists' work lighter. The weather being perfect for delivering plants the losses will amount to practically nothing. All the stores were well decked in holiday attire, the most notable displays being made by L. L. May & Co. and A. S. Swanson. At the former place a very artistically dressed window was the cynosure of all eyes. On the other side of the door a huge cross of Easter lilies ten feet in height received much favorable comment. Swanson had a special display in a store rented for the occasion. His stock consisted of lilies, azaleas, roses, spiræas, and some extra large specimen pelargoniums.

Sales since Easter have been good. Stock is abundant and roses especially of extra fine quality. Carnations are also in their prime. Bulbous stock moves slowly and will probably not be so largely planted another season.

Hougen & Nilssen are still cutting good violets. E. F. Lemke is the first to have sweet peas in the market. L. L. May &

Co. have a fine lot of *Gladiolus Colvillei* just coming into bloom. They are planting now two houses to roses for summer blooming, Meteor, Kaiserin and Albany.

We have had the commercial men with us during the week as follows: J. E. Killen of Philadelphia; A. T. Boddington of Short Hills; C. B. Whitnall of Milwaukee; K. J. Kuyk of Ghent, Belgium.

FELIX.

The business is I believe more demoralized in the Twin Cities than in any other city from which I have seen a report. This is due to the very sharp competition. Pot hyacinths have been extensively advertised in both St. Paul and Minneapolis all winter at 10 cents each, and as there was more than enough to meet the demand at Easter the price could not be placed higher even at this holiday.

Harrisii was also in a bad way. In St. Paul one of our leading clothing stores advertised 2000 plants for sale on Friday at 25 and 50 cents each, and they were good plants with from 5 to 8 buds. I can not understand how a retailer in the same city can see any advantage in disposing of a quantity of leading holiday stock to be sold at such a figure a day before Easter. I do not know what was paid for it, but presume it must have been about 15 cents a plant, at which price a retail florist in Minneapolis sold some hundreds of plants the week previous to a department store in the same city; these were also good plants with from 4 to 7 buds. These prices being advertised broadcast a few days before our harvest had a very depressing effect on the business. It makes us jealous to read the reports from cities like St. Louis and Cincinnati, cities so much to the south of us where they realize more at wholesale than we do here at retail.

There was a tremendous quantity of stock on the market this year. If we had had bad weather, I do not believe half could have been disposed of. As the weather was decidedly in our favor a great quantity went out from the stores before Sunday morning, still there was a good deal left on hand. One Minneapolis florist had some 1,500 plants in full bloom in the houses Monday after Easter. In St. Paul most of the lilies were disposed of at some price, but there were a great many hydrangeas, pelargoniums, and some azaleas, and bulbous stock without limit almost, left on hand.

Church decorations were this year simpler than ever; most of the churches depended entirely on private donations of plants for their decorations. There was plenty of cut flowers also, as one clothing house here gave away on Saturday afternoon some thousands of roses and daffodils to their visitors, a distribution I hardly believe they would have made had not the stock been bought very cheap.

AUG. S. SWANSON.

Toronto.

Business has kept up pretty well during this last week, the weather having been exceptionally fine and mild, the horse show, a fashionable event and a great success, brought many distinguished visitors into town and also contributed to keep the Easter bustle going. The market on Saturday was very lively too, and really begun to look like its proper self again.

I was glad to see in the last issue of the FLORIST your New York correspondent deprecates the abuse in the flippety floppety, snobby-nobby tissue paper and ribbon decorations on flower pots, said

to be fashionable just now. In moderation as a simple pot cover they are just enduring, but let us return to our lycopodium.

The last meeting of the Gardeners' and Florists' Association was very well attended. Seven new members were elected and five more nominated. The business was of an extremely lively nature, a great many fine constitutional points were brought up for the decision of the president, who used up a whole constitution book before the meeting was over, after which he declined to decide any more, and told the members that it might be advisable to get down to work. Several notices of motion to amend the constitution were given and some sections of the chrysanthemum show prize list, thought to have been settled at the meeting, were again maned over. Would it not be a good idea to have an essay and discussion sometimes, something a little instructive, and leave the constitution and the prize list, after it has once been adopted, alone? E.

The Greenhouse Orthezia.

Orthezia insignis Doug.

[From Bulletin No. 28 of the Mass. Agricultural College].

The despicable little insect figured on the accompanying plate is one of the newest pests in greenhouses. It is a tropical

THE GREENHOUSE ORTHEZIA.
Magnified 20 diameters.

insect somewhat closely allied to the common mealy bugs familiar to every florist. It was first brought to notice near New York City about five years ago and has now become very generally disseminated through the adjoining states. In Massachusetts it is most common about Boston.

The greenhouse orthezia has its mouth parts formed for piercing and sucking, and obtains its nourishment by imbibing the plant sap, like all other species of the family to which it belongs. The young are very small, and would hardly be discerned on a plant were it not for the presence of snow-white plates of waxy matter which occur on the back and sides, and which contrast strongly with the darker background of the body. The

NEW CHRYSANTHEMUMS SHOWN AT THE LAST PHILADELPHIA EXHIBITION.

adult females are about the size of the head of a pin and resemble the young in appearance, but bear in addition to the white plates on the back and sides a somewhat cylindrical sac of the same substance, which projects for some distance behind the insect and in which the eggs are carried. At the posterior end of this sac is an opening through which the young crawl soon after hatching from the egg. The young are then quite lively, and scatter well over the stem and underside of the leaves of the plant. As they grow older they become sluggish, but always retain their power of locomotion. The mature males have a single pair of wings, and being very minute and also rare, are seldom noticed. The engraving shows the female from above, magnified twenty diameters.

The greenhouse orthezia has not as wide a range of food plants as the mealy bug, but it attacks a greater variety of plants than most florists are aware of. It has been found on lantana, verbena, lemon verbena, coleus, salvia, libonia, peristrophe, ipomoea, ageratum, cineraria, eupatorium, stevia, chrysanthemum, pilea, cuphea, oxalis, pelargonium, abutilon, malvaviscus, fuchsia, heliotrope, periwinkle, potato, mint, white violet and forget-me-not. In tropical countries it is reported as infesting citrus plants. On all in the list as far as chrysanthemum, when allowed to increase without molestation in the insectary greenhouse, it became sufficiently injurious to cause the death of the plant.

Coleus appears to be the most favorable plant for its increase, and it is of its injuries to this plant, especially to the variety *Verschaffeltii*, that florists most frequently complain. During the winter it is very destructive to the coleus cuttings in the greenhouses, and if at all numerous on the young plants when they are set out in spring, it is almost sure to increase in a short time to such prodigious numbers that it kills or greatly weakens the plants before frost in the fall.

REMEDIES.

As the plants which this pest infests are mostly tender annuals, it is difficult to destroy the insects with insecticides without injuring the plants. This makes preventive measures of more importance to hold the insects in check than remedial ones. Most of the plants are used for bedding purposes, and as these are nearly all placed out of doors in the summer, not many insects would get into the houses to breed and cause trouble in the winter if the plants brought in from outside and the few which may have been kept in the houses during the summer were thoroughly cleaned in the fall. Cuttings for stock should only be made from uninfested plants, and cuttings or plants received from other dealers should be examined at once and rejected or at least thoroughly cleaned if found infested; this last point is an important one, as the insect has undoubtedly been introduced into new districts through the agency of auction houses, and has often become extremely abundant before being recognized as a new enemy.

These precautionary measures should be supplemented by frequent syringing with as severe a spray of water as the plants will stand if any insects make their appearance. Many plants like coleus, however, will not stand a syringing severe enough to wash off all the insects, and so resort to an insecticide is often found necessary.

Of the florists who use an insecticide against this insect, nearly all use fir-tree oil, and all who do speak very highly of its effectiveness. This substance has been tried at the insectary, and when used in the proportions recommended by its manufacturers for the mealy bug, it has been found to be very efficient in destroying the greenhouse orthezia. Its costliness is the greatest objection to its use.

Kerosene emulsion is another good insecticide, and one that is not as commonly used by florists as it deserves to be. Doubtless this is because it is a little

troublesome to prepare, but those who are willing to take this trouble are well repaid. The emulsion which was found to be the most efficient on the greenhouse orthezia in experiments conducted at the insectary was Cook's emulsion. This is made by adding one pint of kerosene to a boiling solution of one-quarter pound of hard soap in two quarts of water and churning the mixture thus formed until it is thoroughly emulsified, which takes about five minutes; for use, the emulsion is diluted with twice its bulk of water. It must not be expected that every insect will be destroyed by one application of either fir-tree oil or kerosene emulsion, and besides, the eggs in the ovi-sac are not always reached. Dipping the plants in the substance and holding them submerged for a few seconds appears to be a more successful method than spraying them.

The insects remaining on the plants left out of doors are killed by the first severe frost, so no danger need be apprehended from them.

Wages of Florists.

ED. AM. FLORIST: Can you find room in the FLORIST for a few remarks on this subject from an employee's standpoint?

The way things are going it will not pay a steady, thoughtful, hard working young man to devote his time and energies to the business. In many places the employee is expected to do the propagating, grow cut flowers, bedding plants, and possibly a stock of vegetable plants also, as well as giving a hand with design work, and tending the fires at night. To do all this well requires brains and study as well as muscle, but as compensation he usually receives about \$25 a month and board of very inferior character, with a cheerless kennel to sleep in, in a word about what is considered proper for a common laborer.

Can employers consistently demand skilled labor at the price paid for labor requiring no skill whatever? In any other

trade skill receives its proper reward, but it rarely does in ours. Laborers' wages are the rule with but few notable exceptions. Employers say first-class men are scarce, and that nearly all the applicants for a vacant position are poor sticks. What can they expect at the wages they offer? Any man possessing any real ability can nearly always get better pay in some other business, and while love of the profession holds a few the superior financial attractions of other trades continually draws the best young blood away from ours. Good men will always be scarce until merit is better appreciated by employers as a rule. It is true that some employers do make a proper distinction in favor of a well informed, painstaking man, but such are the exception, and not the rule. When such are the rule, instead of the exception, there will be a larger supply of better men, and not before.

NUNQUAM.

The Passing of Jaggs.

"Seen dot feller looking for vork today?" asked Otto from his accustomed corner. The three chums were not, however, enjoying repose this evening; some unfeeling citizen had departed this life in the midst of the busy planting season, and all hands were expected to help along the making up. Otto was chewing off stemming wire with a blunt rose shears, "His 'ighness" was attaching allyssum to toothpicks with an air of unusual dejection, and Davy was reflectively mossaing a huge "Gates Ajar." He looked up with some interest and said: "D'ye mean the mon speerin' for the master, ben the hoose? I'm thinkin' he might want a job, but he was no lookin' for wark."

"W'y, didn't you know 'im?" asked the Londoner, with a smile of pleased retrospect. "That was Jaggs—don't neither o' you know Jaggs? Where was you baptized? W'y Jaggs, 'e's wot you might call a botany prowler—'e aint 'appy and settled like if 'e aint traipsin' around the bloomin' country from Alfred to Omaha. You've 'eard, p'r'aps, of a 'Ebrew gent wot can't settle down long enough even to die—'e's been on the tramp about 2,000 years, they say, and blessed if I don't think Jaggs is some relation o' 'is. It's a matter o' twenty year since I fust sees Jaggs—I was a bit of a shaver, workin' down 'Ammersmith way, for six bob a week. Jaggs wasn't workin' there, but 'e'd drop in promiscuous like, just to pass the time o' day, and 'e seemed the pleasantest spoken chap I hever see. 'E'd drop in about dinner time, and horder a pot of 'arf-an'-'arf (w'ich 'e never pay for) and tell yarns about the time 'e was

foreman o' the dendrobes at Sander's ('e never was there) and then 'e'd borror a couple o' hob in a heasy casual way, before 'e went, so we'd feel 'e was givin' hus a reg'lar treat. It was Jagg's yarns wot fust started me across the water, instead o' stayin' to grow spring lettuce down by Deptford, along o' the 'alls o' my bancestors," and the speaker whistled a snatch of "The Old Kent Road," as if overcome by tender recollections.

"You Jaggs must be a lecin' chiel," observed the Scotchman, with some contempt.

"'E aint a George Washington," admitted the Londoner. "But you couldn't call 'is yarns lym'; 'e's a hartist, 'e is. Just you hask 'im if 'e know hanythink about 'Indostan—Lor', you should 'ear 'im tell about man heatin' tigers, cremated widders, nautch gals and helephants. You see, there was one o' they 'Indoo kings as 'ad a botanic garden, and 'e want a gardener as know horchids. Jaggs, 'e know horchids like they was 'is hown brothers and sisters, so some o' 'is friends 'elp 'im to get the job, thinkin', I suppose, if 'e once get to Hindia 'e'd stay there, becoss 'e'd never save money enough to get back. It was a good job, too; a good salary, and a bungalow to live in, with lots o' native servants and a 'ole Zoological Garden in 'is yard, helephants and camels, and what not. 'E was in luck. We never 'ear nothink of 'im for near two years, w'en one day me and the hother chaps was just eatin' a snack w'en in walks Jaggs, and 'e sez, as cool as if it was 'is reg'lar hour for droppin' in, 'You don't 'appen to 'ave a drop of 'arf-an'-'arf about,' 'e sez, 'sandwiches is dry eatin' alone,' he sez, 'elpin' 'isself to my last sandwich as if it belonged to 'im. Well, we was all knocked silly with the surprise, but by and by we hask 'im w'ere 'e come from, and 'e sez 'Hindia,' as cool as you please, and we hask 'im 'ow 'e got back, and 'e say 'walked, of course.' This was too much for one hargumentive little cove wot called hissself hagnostic, and didn't believe in nothink, and 'e sez 'e like to know 'ow hanyone could walk from Hindia. Jaggs 'e say in a fatherly way 'e halways like a young chap wot 'ad a thirst for hinformation, it was the right way to get hon in the world, and 'e begin to tell wot 'e see in Hindia, and 'ow 'e come to leave through 'is favorite helephant goin' hoff on a reg'lar drunk with 'im."

There was such an air of dissent visible at this statement that the narrator, rather huffed, continued:

"Well, that's wot 'e sez, and 'aven't you 'eard as helephants is just like humans, and 'as a weakness for drink too? Leastways that's wot Jaggs say; 'e sez 'e didn't 'ave no Christians to associate with, and they benighted Mo'amedans wouldn't so much as drink yer 'ealth in a bottle o' Bass, so w'en 'e find 'is helephant liked a sup once in a while 'e got a 'abit o' sittin' hout in the compound of a hevening, w'en 'e was takin' a little o' somethink to keep hoff cholery; the helephant would 'ave a drop, and 'e'd 'ave a drop, till they got reg'larly chummy. But it was that lowerin' 'isself to associate with dumb hanimals wot queered Jaggs, for one night 'im and the helephant was 'avin' a drop, and they must a 'ad too much, for Jaggs didn't know nothink till 'e find 'isself, and the helephant, and a lot o' natives, and a squad o' soldiers, hall mixed hup in the Rajah's flower beds. 'E didn't say much wot 'appened after that, but it seemed as if Hindia didn't suit 'im, and 'e said 'e wouldn't work there if they'd give 'im

the 'ole bloomin' country. Then 'e come to the States."

"Walked, I suppose," interpolated Davy. "I suppose 'is brother, which was a very respectable chap in the green grocery line, give 'im a steerageticket to get 'im away. Jaggs is a hartist, 'e is; 'e halways reckoned as 'is talents was throwed away around a greenhouse."

St. John, N. B.

Easter sales were the best for years; such is the unanimous verdict of the trade in this city. Easter trade is always good in this city, but this year the stock was larger than ever before, and the spring-like weather brought out the buyers to such purpose that by seven in the evening of Saturday there was no decent cut stock to be obtained. Plant sales were also extra good. A new feature was the opening of stores on King street by Goold, McIntosh and Cruikshank, who made beautiful displays. A surprise to many was the popularity of the carnation, the demand in many cases almost equalling that for roses. No doubt that "salted" stock in the rose line has something to do with this. Violets were scarce, and brought good prices. Bulb stock went slow, but it was all cleaned up at the last. Harrisiiis, heaths and azaleas were the leading plants, and hydrangeas sold well. Some fine specimen plants of Swainsona galegifolia alba shown by Goold sold well. Probably there will always be here a shortage of cut stuff at Easter as it certainly does not pay to run houses for that one day, and during the rest of the season the supply is fully equal to the demand.

There is some talk of a florists' association for New Brunswick; it is a good idea and should not be allowed to drop. It could be run in line with the Horticultural Association, and be of benefit to all concerned.

Superintendent Knott has made a model greenhouse at the park; it is a wonder of neatness, and the health of the stock shows his skillful care.

It was with great regret that the trade heard of the death of W. H. Jones, one of the oldest florists in the province, and one deservedly liked and respected by all who knew him. The business will be continued by Mrs. Jones, whose artistic wire work has made their business one of the foremost in Canada. S.

SITUATION WANTED—In a retail store by a young man of 20; best of references. Address
NEW YORK, care American Florist.

SITUATION WANTED—As all-around florist, growing roses, carnations, chrysanthemums and general greenhouse plants; also palms, ferns, orchids; single, 19 years' experience. A B, care Am. Florist.

SITUATION WANTED—By practical florist, German, married; experienced propagator and grower of roses, carnations, palms and general stock; good designer, best reference. Address
G. F., 316 Cambridge Ave., Toledo, Ohio.

SITUATION WANTED—By grower of cut flowers and plants, in good retail place, by single man, 14 years in the trade, 3 years in last place; best references; able to take charge; state glass and wages. Address
DANE, care Mr. Sharkey, Speedwell Place, Morristown, N. J.

WANTED—A quick, reliable young man for the mail plant business in the west.
R R, care American Florist.

WANTED—A few hundred dormant roots of Cann Star of '91. Address
WESTERN, care American Florist.

WANTED—A few dozen canna Queen Charlotte. Address, stating size and condition, with lowest price per 100.
R R, care American Florist.

WANTED—Thorough man as propagator; capable of taking charge; good on roses, "mums," first-class designer and decorator; salary moderate; good worker, reliable. EXPERIENCE, care Am. Florist.

WANTED—Assistant in greenhouse; must be sober and experienced in watering and potting young stock; state age, also what wages expected; references required. Address PRACTICAL, care Am. Florist.

WANTED—A German, single and good on designs and other floral work; only honest and sober worker wanted; wages \$25 to \$30, including lodging; give steady employment. Address
ALBERT SENFF, Menominee, Mich.

FOR SALE—One 10 and one 30 horse-power locomotive boilers in good condition, steam or hot water; prices on application.
M. R. SAUNDERS, Aurora, Ill.

FOR SALE OR RENT—Chicago greenhouses; \$3,000—\$1,000 cash, balance on time; 15,000 square feet glass, stocked with roses, carnations, etc. For particulars address A. T. JACKSON, Station X, Chicago.

FOR SALE—Two-story house with store and greenhouse at rear, 70 feet long by 20 wide, 426 61st St., good location; also store on Wentworth Ave., doing good business, with a reasonable rent. Address or inquire 6217 Wentworth Ave., Englewood, Chicago.

FOR RENT—My greenhouse plant of between 8000 and 9000 feet of glass, located on Pearl St., Cleveland, O., with a good established cut flower and potted plant trade; doing store and other cut flower plants for sale, and also all utensils necessary to carry on the business. Location second to none in Cleveland, adjoining one of the finest cemeteries in the city; electric cars passing every few minutes. Will be rented and stock sold on very reasonable terms. Possession given on June 1, 1895. Reasons for renting, not being a practical florist and engaged in other business. For a practical man with moderate means there is no better chance in the U. S. Address
J. D. SELZER, 1756 Pearl St., Cleveland, O.

FOR SALE OR LEASE.
Three greenhouses with valuable grounds; the best place in this country for a man with some means. Address
WM. SPRINCORN, Dubuque, Ia.

For Sale or Rent.

My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 43 lots or 290 feet front on Belmont Ave. by 700 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 100 to 200 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the largest of the kind to Chicago. A good chance for some young man with some means, or for a corporation; and as I wish to retire from business, it can be had reasonable, and on easy terms. If rented, a long lease can be given.

AUGUST DRESEL,

Belmont and Western Aves., Chicago.

Hybrid Perpetual Roses,

Worked low on the Munetti Stock, offer the best results to the florist, blooming freely and giving plenty of cuttings for propagating quickly. Fine plants for sale by the 100 or 1000, at low rates.

Price Lists to applicants. Address

Catalogues Received.

J. R. & A. Murdoch, Pittsburg, Pa., seeds and plants; Ellis & Pollworth, Milwaukee, Wis., florists' supplies and wire work; L. van Waveren & Co., Hillegom, Holland; Dutch bulbs; C. J. Speelman & Sons, Sassenheim, Holland, Dutch bulbs; E. H. Krelage & Son, Haarlem, Holland, bulbs and roots for spring planting.

A TASTEFUL retail catalogue is that of J. C. Rennison, Sioux City, Iowa. The cover is graceful in design, and the interior is well printed in a very harmonious tint. A catalogue of this class is sure to appeal to retail flower buyers. A list of plants in bloom, giving the seasons at which they are at their best, will prove a useful aid to purchasers.

MR. JOHN SPEELMAN of C. J. Speelman & Co., who has recently made a trip through the U. S., reports an excellent demand for hyacinths and expresses the belief that they will be scarce again next fall.

DO YOU WANT a list of firms in the trade that issue catalogues, with key showing proportion of space given each branch of the trade in same? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

DO YOU WANT a complete alphabetical list of carnations in commerce in America, with name of introducer, date of introduction and brief, accurate description of each? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

DO YOU WANT a list of trade organizations, both national and local, with names and addresses of principal officers, time and place of meetings and other information? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

DO YOU WANT a copy of the rulings of the express companies about rates on shipments of plants and nursery stock? You will find full information in our trade directory and reference book for 1894. Price \$2.00.

☉ The Seed Trade. ☉

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

MR. E. S. MILLER, with John Lewis Childs, of Floral Park, has been confined to his house for a week past with throat trouble.

THE long delayed retail seed trade in the eastern states has opened up at last and business is reported good from nearly all points.

AN unconfirmed rumor has been floating about in New York seed trade circles for the past two or three weeks that certain parties are contemplating the establishment of a new seed house in that city on a gigantic scale.

ENOS HARNDEN, seed buyer for the department of agriculture, will soon make a report regarding sales of seeds by members of Congress. It will involve well known men in a mess of petty crookedness. He has discovered that the seeds annually given members for free distribution among their constituents have been sold by many members. Harnden even bought some himself. For \$75 he bought of a member 14,950 packages of vegetable seeds, 1,365 packages of flower seeds and eighty-two packages of field seeds. These seeds actually cost the government \$228, so that the member displayed a remarkable ignorance of their value. Mr. Harnden, while he was in the detective business for the department, refused to buy more than 100,000 packages of seeds which had been paid for by the government and given to members free and were offered by them for sale. It is quite possible that when this report is presented it will put a stop to the free seed business altogether. The thing was started to enable farmers to secure new varieties of vegetables and grains, and thus enrich the agricultural products of the country. Last year \$160,000 was appropriated for the purchase of these seeds to be given to members of Congress in quotas of 15,000 packages each, and in turn to be distributed by them among their constituents. But the custom has been so abused that it will probably be stopped altogether. No good has ever come of it that anyone has seen.—*Chicago Times-Herald April 23.*

News Notes.

MORRISTOWN, N. J.—Thos. Mitchell, for 22 years engaged in the florist trade here, died on April 3.

COLUMBIA CITY, IND.—Mrs. S. A. Amerman has entered the business here, her establishment being devoted to a general retail trade.

FLATBUSH, N. Y.—G. Bergmann is very sick with diabetes and Bright's disease, and blood poisoning has set in. He is not expected to live.

MACOMB, ILL.—The firm of Danley Bros. has dissolved partnership, Mr. F. D. Danley retiring. The business will be continued, as heretofore, by Mr. S. T. Danley.

PORTLAND, ORE.—Easter trade showed an increase of about 30%, with retail prices fully equal to last year. Supply quite equal to demand; quality of stock was better than last year. Less call for plants.

RICHMOND, VA.—Easter trade was about one-third larger than last year, with the same retail prices ruling. Supply short; quality better. Larger sales of plants, with particularly strong demand for anything in color.

ELIZABETH, N. J.—Easter trade was about the same as last year and retail prices also ruled about the same. Supply equal to demand. Quality averaged up about as good as a year ago. A larger sale of plants.

BAR HARBOR, ME.—Alley & Fillettaz is the name of a new florist firm here; they have just opened for business corner Bridge and Cottage streets. Mr. Fillettaz was at one time foreman for Mr. Denys Ziragiebel of Needham, Mass.

PILOT POINT, TEXAS.—The Executive Committee of the Texas State Hort. Society met here recently and arranged the program and other details of the ninth annual meeting of the society, which will be held at Bowie July 31 and August 1 and 2 next.

NEWARK, N. J.—The Essex County Park Commissioners are vigorously agitating the park question, and the newspapers show much interest in the matter. The *New York World* recently published a portrait of Vice-President Fred W. Kelsey, who is a specially active member of the Park Commission.

NASHUA, N. H.—Easter trade was about 10% better than last year, with retail prices a little lower. Supply was equal to the demand, and the quality equally as good as last year. In plants more lilies were sold. The public in general seem to have caught on to the idea that Easter is not Easter without flowers.

MINNEAPOLIS, MINN.—Easter trade was about the same as last year, with prices about the same also, except on lilies, which were a little lower. Supply was equal to demand and quality as good as last year. There was no noticeable change in the demand for plants, except an increased call for lilies. Trade was satisfactory all around.

DETROIT, MICH.—D. C. Jones, a well-known florist of this city, died after a short illness April 13. The funeral, which took place on the 16th, was conducted by the Knight Templars; interment at Woodmere. Mr. Jones gave up his business some eighteen months ago, and has since been in the employ of the John Irvine Co. He leaves a widow and two children.

DETROIT, MICH.—Easter trade was about 25% larger than last year, with retail prices a notch higher for better quality. Supply was quite equal to the demand. An increase in the sales of plants, and also a marked increase in the call for azaleas and tulips in pans. J. Breitmeyer & Sons report that the fancy paper and ribbon trimming on plants was a profitable feature.

LOS ANGELES, CAL.—Easter trade was about 30% larger than last year. Retail prices of carnations were lower, but other flowers ruled about the same as last Easter. Supply was fully equal to demand. In quality everything was far better; carnations were in the lead. Easter coming so late this year gave us the best flowers of the year to work on. Flowers could be had by the tens of millions.

MILWAUKEE, WIS.—Easter trade was about 15% larger than last year, with retail prices about the same on cut flowers but lower on plants. Supply equal

to demand; quality better than last year. An increase of about 20% in the sales of plants. Spring flowers were more called for, and in plants smaller and cheaper ones were more in demand, with a special increase in the call for lilies and azaleas.

FORT WAYNE, IND.—Easter trade showed an increase of about 20% over last year with retail prices a little better in general, and the price on roses 20% higher. Supply was equal to demand with the exception of carnations, the supply of which was somewhat short. Quality better than last year. Sales of plants far ahead of last Easter. There was a marked increase in the call for lilies, and all blooming plants sold well.

LONDON, ONT.—Taking everything into consideration, Easter sales were about the same as last year, though the sales were made almost entirely on Saturday and Sunday; very few orders were placed ahead, and on Friday it looked as though there would be a decided decrease from last year, but at the last moment the buyers came out and sales averaged up about the same as a year ago. There was an increase of from 20 to 25% in the sales of plants. Supply was equal to demand.

COLUMBUS, O.—Easter trade was slightly better than last year, the prices being the same. The supply was equal to the demand except in carnations, and the quality was far better than last year. More plants were sold, and the demand is certainly increasing. Customers bought in small quantities, carnations were more popular than before. There was less demand than usual for lilies, and tulips and hyacinths were not as popular as they have been. Roses, carnations and violets were the favorites.

ROCHESTER, N. Y.—Silter Bros. report a decrease of 15% in the Easter trade, owing to high prices. In regard to supply they say, counting flowers bought outside, they were overstocked. They found plant sales much better than last year, with an increased call for lilies and azaleas. They find trade is running to plants, as the people here will not pay the high prices that have to be put on roses that are bought, particularly old roses. They say they shall run to plants next year more than ever and buy less flowers.

MONTREAL.—Easter trade was somewhat larger than last year. No change in retail prices. Supply of home grown flowers was short and a large quantity was imported. Home grown stock was superior in quality to that of last year, but a lot of the imported flowers were "salted." A slight increase in the sales of plants. In flowers roses and violets were more called for than carnations. Taken altogether Easter trade was generally satisfactory, both growers and retailers doing well. The only grumbling we have heard was by a couple of store keepers who received "salted" stock.

Red Tulip Buds.

Red tulip buds last night caressed
The sacred ivory of her breast.
She met me, eager to divine
What gold heart bud of hope was mine.
But, ah!—the tulip buds unwise,
Warmed with the sunshine of her eyes,
And by her soft breath glorified,
Went mad with love and opened wide,
She saw their hearts, all golden gay,
Laughed, frowned and flung the flowers away.
Poor flowers, in heaven as you were,
Why did you show your hearts to her?

F. R. PIERSON CO.,
TARRYTOWN-ON-HUDSON, NEW YORK.

Washington.

During the height of the season society has seldom had an opportunity to enjoy a more elegant reception (as far as gorgeous decorations were concerned) than the one given by Senator and Mrs. Gorman during Lent to meet the Gridiron Club. The house was most attractively decorated with a profusion of choice flowers. In the front drawing room the bay window was banked with palms and ferns, with here and there specimens of marguerites in full flower. The curtain cornices were banked with cuneatum, interspersed with small wellcolored Pandanus Veitchii. The large mirror facing the entrance to the drawing room was framed with asparagus and Florida moss, thickly studded with plants of Odontoglossum crispum, each having a large spike or two of this beautiful flower. The mantel was banked with Farleyense, having a large bunch of Iris Susiana springing up out of the right hand corner. In front of the mirror suspended by Dresden ribbons was a large basket of Adiantum Farleyense containing a dozen or more fine spikes of Odontoglossum crispum. In the fireplace was a fine plant of Adiantum cuneatum, which completely filled the entire opening. To the left of this was a vase filled with scarlet amaryllis. Immediately in front of the fireplace was a bed of violet plants in full flower that had been lifted from the frames and transplanted to form a hearth, the idea being to have the guests pick the violets from the growing plants. This hearth of violets was edged with the golden selaginella. The chandelier was festooned with asparagus with here and there a spike of Odontoglossum crispum.

Suspended over the doorway between the first and second drawing rooms, by an immense bow of black and white ribbon, was the club emblem, a gridiron, the frame and handle of which was composed of violets, and the bars of scarlet carnations. Upon the gridiron was displayed a fish, composed of the petals of white and pink tulips, which formed the scales. Vases of Brunner roses were placed in every nook and corner. The second drawing room was decorated similar to the first, except that the flowers used around the mirror were cattleyas instead of odontoglossums. In this room was a profusion of Magna Chartas. In the dining room the windows were banked with palms and ferns. The cabinet mantel was banked with Adiantum Farleyense and festooned with asparagus studded with spikes of Dendrobium nobile and cattleyas. In the center of the table was a large plat of Adiantum Farleyense studded with Dendrobium fimbriatum, with sprays of Odontoglossum crispum forming a border; the cloth was sprayed with Farleyense. This artistic decoration was executed by Mr. J. L. Loose.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

The "Podunk Parable."

ED. AM. FLORIST:—The Podunk Parable in a recent issue was quite apropos just at this time, I wish every florist in the land might read it. It is true that people flock to the bazaars influenced by advertisements with big headlines and deceived by the low prices quoted. Bargains in roses, bargains in carnations, etc., etc., as a rule old flowers and diseased plants, are found here, that if sought for at the florist's might undoubtedly be bought as cheap, or perhaps less. At first glance they appear cheap, and so they are—cheap in price and in quality, but really dear at any price. The lesson of the parable is a good one. Every flower given away to one not interested in flowers introduces a new customer to the florist. Especially is this true in our large cities. A neighbor of mine was walking with me a few days ago among my plants and I gave him a flower. He was not a lover of flowers, but he took the flower home and placed it in a glass of water; it talked to him for a number of days, and he came over to-day to look and talk of flowers; he is almost converted. Trust the flowers to perform their silent but effective office work, and the good work will move forward. The more flowers there are introduced into households where heretofore they have been looked upon with little or no interest the more converts you make. It was in this way that the great passion for flowers became so general, and it is still on the increase.

One word and I am done. Unite your forces; organize; believe in each other. If a brother violates a certain business rule or obligation go to him as a friend; labor with him as you would an erring son or brother. If he is persistent in evil doing then let all unite and swamp him, but above all things let charity prevail and be as one family if possible. The FLORIST contains much that is valuable and every florist (I do not care how small) needs the influence of so good a medium. I shall look for another chapter of the "Podunk Parable" from brother A. B.

Worcester, Mass.

Since Easter business has remained very steady, and we have nothing to complain of; prices have dropped back from the slight increase, and the flower supply has recovered from the exhausting demands. Everything is plentiful and good. Jacks are coming in with a rush, and other roses are cropping heavily. Russian violets are in the market in large quantities, and are discounting the double varieties. Lange is bringing in some extra fine Day-breaks and Scotts, and a few splendid Albertini. A recent amateur comic opera given by a popular militia company used up the surplus stock of roses last week and netted the florists a tidy little sum, and a few weddings, the advance guard of the June brigade, have arrived and received a warm welcome. A. H. L.

TRY DREER'S GARDEN SEEDS,

MISS P. A. BAKER, MEDIA, PA.

VAUGHAN'S * CANNAS.

MEDAL WINNING VARIETIES, controlled by us and offered now for the first time.

These novelties we consider of great value and permanent additions to the high class Cannas, they are the cream of twenty kinds chosen by M. Crozy from his entire stock of seedlings to represent his best achievements in Cannas up to 1893.

CHICAGO.—(Medal awarded). Positively the best vermillion scarlet to date; 4 feet, green foliage with leaves 9 to 10 inches wide, flower truss and stalk stands boldly erect. The large flowers open out nearly flat, petals 1½ inches wide and five in number—in this respect the **Chicago fairly out-classes all Cannas**, the fifth leaf adding much to the blossom and flower spike. Its record at the World's Fair, on our grounds and in our greenhouses more than justifies all our claims for it. The record of our Canna Novelties of the past seasons entitles us to your confidence. The color, in the language of the judges, is a "dazzling vermillion scarlet," smooth and without markings except a purplish gloss. Price of this grand novelty only 75c. each.

MADAME ALPHONSE BOUVIER.—3¼ feet, foliage medium green, flower large, well opened. The color is that of Madame Crozy, tinted with dark crimson spots like Crampel. The yellow edge is irregularly wider with clear yellow spots on upper and lower edge of petals into the throat of the flower; a magnificent Canna, scarce. Each, \$1.25.

M. MESNIER.—(Medal awarded). 3½ feet, dark green foliage, sturdy growth, flowers large, petals wide, color salmon, slightly dotted and streaked with red, which is deepest in the center of the flower. Petals are bordered with a narrow rim of yellow which is irregularly wider on the ends, often ¼ to ½ inch wide. Each, 75c.

MIDWAY.—(Medal awarded). 4½ feet, green foliage, strong grower, color rich vermillion slightly streaked with faint crimson; petals 1½ inches wide, compact flower spike, a strong grower and free bloomer. The crimson streaks and splashes in the petals make a splendid effect on their background of scarlet. Each, 75c.

OCTAVE MIRABEAU.—(Medal awarded). 3½ feet, green foliage, flowers large, petals wide, color a deep vermillion, palated with finely pencilled lines of orange yellow and crimson. Price, 75c.

THOS. A. McBETH, Springfield, O.

When writing to any of the advertisers on this page please mention the American Florist.

Cleveland, O.

Easter is over and the florist leans back to draw a long breath of relief and inspect the figures in his little bank book. On the whole I think that the majority finds it a not unpleasant duty this time, for most of them speak very well of the Easter of 1895. Some of their customers do not. One usually docile patron called up a florist some time in the late hours of Sunday afternoon, and after a little improvised song and war dance elaborately explained that it was not for Easter Sunday, '96, that he wanted his floral treasures, but "this year—1895—to-day!! D'y'e hear? To-day!!" This is probably not an isolated case, and very likely every florist could narrate a somewhat similar experience if he would. Take it all in all, however, I think the florists found few such thorns among their roses. Pretty much everything sold, and some things were in rather short supply; but this was counterbalanced by such quantity and variety in other lines that everybody could get something that was satisfactory. The weather, too, was all right—a trifle chilly perhaps, but clear and no wind to knock lilies and other easily marred flowers into discolored tatters and rags. "Heaven send us such another every year"—twice a year, if it be possible!

The philanthropists all died early Easter week—at least they disappeared or were metamorphosed into plain business men hustling for the agile and evasive dollar. In other words roses sell to-day at fifty cents a dozen and upward, according to the taste and fancy of the dealer. The gay groceryman and the festive department store still dally with the beautiful flowers, but with what financial result is not known. It was rumored that one firm would drop the flower department, though practical evidence to that effect is still lacking. In addition to these a large clothing house took a dip last week. The week previous they had advertised and sold two car loads of oranges. Easter week they had a circus "ad" in all the papers announcing a "palm and cactus sale"—two carloads of them. The goods were "personally selected" by one of the proprietors while traveling in California, planted in coffee cans, soap boxes, or whatever came handy, and sold at "one-third of florists' prices." Speaking of *Cycas revoluta*, one of the gifted salesmen informed an innocent looking party that "the florists sold the leaves of the identical palm for nine dollars a pair!" Why do so many florists look so innocent? These green looking floriculturists ought to be arrested for inciting others to crime. Probably that honest God-fearing seller of hand-me-downs would never have strayed into the paths of mendacity had that "flowerist" looked less innocent. In the meantime the astute buyer of those palms is probably wondering why the leaves of the same are turning a bright, beautiful yellow. If he looks at the place where the roots ought to be he will very likely know what is wrong. A.

ROSES Strong, healthy plants from 2 2/4 and 3 inch pots, \$3.00 to \$8.00 per 100. Am. Beauty, Bride, Mermel, Niphotos, Perle, Sunset, Wootton, Meteor, Albany, La France, Testout, Victoria, M. Niel, Bridesmaid, Watteville, The Queen, Mme. P. Guillot, S. d'Ami, &c.

MEREDITH B. LITTLE, GLENS FALLS, N. Y.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns.

Ottawa, Ont.

Easter is past and all are satisfied with the trade. In cut flowers there was an increase in sales of 25%. In plants a couple of the boys report a decrease, but as there is an extra store in town trade in that line can be classed the same as last year. Scrim had an extra store for plants only, and with a lot of rhododendrons, azaleas, etc., made an attractive exhibit; trade was very good in plants up to a dollar or so, but rhododendrons were too rich for the people of Ottawa. Lilies did not sell as well as usual. Our transfer company advertised the Bermuda cut stuff for a couple of weeks and I am informed they took orders for six boxes; they made enough to pay postage on their correspondence.

Parliament assembled on Thursday, but it will not help us much, as it will soon be too warm for festivities and good flowers will be scarce; however, small favors thankfully received. The drawing room on Saturday caused a stir. There was a fair amount of flowers sold to the better class of buyers, but the amount did not come up to last year, owing probably to members of the Bardwell Slate type leaving their wives at home to run the farm. I would like to see my old boss, W. J. Palmer of Buffalo, wait upon a few of this class of customers. There would be razors in the air. They take half an hour to select six carnations and often bring them back to change the color.

Snow has disappeared except in shady corners; we have got rid of our nine months winter and look forward to three months of cold weather. I think some Yank said that is the kind of a climate we have.

RED SPIDER CAN'T LIVE

Where this Nozzle is Used.

CHILD'S RAIN MAKER.

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a life time.

See what two well known florists who have tried it say about it:

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD,

Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.

Yours truly, E. G. HILL & CO.

PRICE \$1.00 Each, prepaid. Try one. You will find it the most useful and valuable appliance you have ever had.

P. M. CHILD & CO., 6122 Oglesby Ave., CHICAGO.

ELMIRA, N. Y., April 3, 1895.

P. M. CHILD, 6122 Oglesby Ave., Chicago.

Dear Sir:—Child's "Rain-Maker" nozzle is the most efficient sprinkler I have ever seen put on the end of a hose. It is eminently practical and does the business.

For greenhouse watering, it is a very neat device, and especially adapted to palm and rose culture, for spraying, etc. Properly used it would give that insect pest "red spider" no show at all to work mischief, either inside or for outdoor use.

The nozzle can be used at any angle, and every particle of foliage is thereby get-at-able.

I heartily commend it, and predict a great sale.

GROVE P. RAWSON.

The Boy's Story.

No, he's not in; and say, you fellers better keep out of here to-day, this ain't no continuous performance house. You can't do no business here before next week, 'n' you can't collect no bills. I'm givin' it to yer straight; he's uglier 'n sin; been 'n orful row here an' he'll have 'nother pain if he finds any of you fellers hangin' 'round 'n' then mebbe I'll lose my job same's Joe did. Yes, Joe's gone; y'ought ter been here, Hully gee, what a racket! You see it was this way. You know big Jim that brings the callas; well you know all the fellers plays tricks on him an' he don't like it for a cent an' he gets mad sometimes 'n' he tries to get even with them, so one day he brings a loaded cigar an' gives it to Joe cos Joe he druv some big nails in the bottom of Jim's box when Jim wasn't lookin' and when he tried to lift the box he thought there was somethin' heavy in it 'n' he pulled hard 'n' it come all to pieces an' left the bottom all nailed to the floor an' so he thought he'd pay Joe up an' so the cigar went off an' burnt all round one side of his mouth so's he couldn't whistle nor nothin' an' so he was layin' for Jim, so's to get square, and he histed a tin pan full of water up over the cellar stairs an' a string so's he could pull it when Jim was goin' down cellar to-day so's to soak him an' he wouldn't know who did it, but he didn't see him when he went down 'n' so he didn't do it an' when the boss come in, you know that big cove that gets the violets to wear every morning, the feller that his head goes bobbin' all the time when he walks, just like one of them cats what they sell at Christmas with the loose heads, 'n' well, that feller he came in to see about a big decoration, like's not he's goin' to get married 'n' the boss took him down stairs to let him look at them big wire things to put flowers in on the wall an' it was kinder dark 'n' I guess the man couldn't see or somethin' so he puts his hand out an' gets hold of Joe's string someway an' pulls the pan down 'n' the boss gets it right in the neck an' we fellers knowed what it was; gee, wasn't he snortin'; I guess he'd liked to lick the man only he was a customer an' he couldn't 'n' he bounced Joe right a way 'n' then he went out to buy a dry collar—look out! here he comes; bet yer life he'll knock the stuffin' out'er me if he gets on to me tellin you 'bout it; skip!

WE HAVE received from Secretary Albert M. Herr, Lancaster, Pa., a copy of the proceedings of the fourth annual meeting of the American Carnation Society, held at Boston in February last. It contains the essays read at the meeting, together with discussions upon same and record of the routine business. A very important part is the report of the nomenclature committee, in which is given an alphabetically arranged list of varieties with descriptions, the latest novelties being indicated by an asterisk. It is well printed on good paper and is a very creditable little volume of great value for reference.

Carnation Notes.

Several of the new sorts have reached us in diseased condition. Men lead us to understand that their whole establishment is free from rust, in fact they would guarantee their stock, and then when we open the box and examine the under side of the leaves we find rust, rust, enough of it to make us feel like throwing box and all in the fire, and the plants paid for at that. This is really too bad; we lose faith in each other. Better have said, "Yes, we have rust, but have taken every care to exterminate it, so if you buy you take the risk." To the one who does not have a cutting trade it is not of so much matter, but to him who does it simply means that he must isolate the new stock and watch very closely, and as many have only a limited space on which to plant this means to such a one the ruin commercially of his whole stock unless he takes heroic measures to keep the pest from spreading. The most successful way to rid your place of the rust is to watch your young plants; never plant a cutting that shows the slightest particle of disease, then possibly you will come out all right next season. I adopted this plan last spring and the results have been very satisfactory, as we have found but very few plants affected during the winter. I started last fall to spray with the different fungicide solutions, bought a new pump and sprayer for the purpose; now we use the pump for manure water and the sprayer is on the shelf. When, during December, the reports from a number came in that in spite of Bordeaux, carbonate of copper, copperdine and a host of other supposed remedies the rust continued, I, as I stated at the time, set the solutions one side and from that day to this (April 29) no new cases have developed, even around where the few plants that had the rust had been removed, and I have come to the conclusion that if the young plants which develop the rust are thrown out and the older plants kept in a strong healthy growth the rust will not increase to any great extent.

Carnations love a moist atmosphere, and therefore I keep the foliage moist at all times except in cold cloudy weather, and even then the leaves must not get dry, for then the little breathing pores are choked and the plant receives a check, injuring its health and making it more liable to disease. If you will examine the healthy leaves closely you will find what is termed a bloom on the surface of the

leaves; do you find this on sickly plants? The variety most subject to rust with me is Uncle John, and on the leaves of this sort you will see but little of that bloom. Science has told us how the disease gets into a plant, but so far I do not think it has given us a remedy, and not until a very much more thorough test or experiment is made in the propagation of the disease and the different conditions under which the disease thrives, as has been done with contagious diseases of the human body, will any practical results follow; so until this is brought about I shall follow the plan I followed last year, that is to throw out all young stock which is diseased.

Helen Keller came to me last spring with some rust on it, but after throwing out a number I got a clean lot, and I have not a particle on this variety now, nor has it shown at all during the winter. The same will follow with four of the new sorts of '95. It hardly comes within my province to name the new sorts affected with rust, but I must say that for the benefit of the trade at large and with no interest to harm the disseminators I think the names should be given, for to state that some are affected without stating which throws a cloud over all, and this I am loth to do, for we must have new varieties and we cannot afford to discontinue the trials, for then we would be back numbers. I would again advise a very close inspection of all young stock before planting out. This plan may save the destruction of many plants in the fall and the inoculation of your whole stock.

CHARLES H. ALLEN.

Notes on Novelties.

Anyone with a big lot of Crimson Rambler this season or next season is bound to make money on it. It has been well advertised and is sure to go, for it undoubtedly has merit. If in addition to its other good points it should also prove to be hardy then it is a treasure indeed. We have in Empress of China another good everblooming climbing rose. This is proved hardy and is altogether a desirable thing. Small plants of it were sold last season with restrictions forbidding its propagation for one year. Those who tried it were well impressed with it; it made a magnificent growth and flowered freely. Still another noteworthy new comer is Caroline Marniesse, a pure white dwarf growing hardy bedder which promises to become a companion for Clothilde Soupert, which is now established as the most useful rose in the hardy bedding class.

All have had an opportunity to form an estimate of the merits of Belle Siebrecht as a forcing rose, but in the opinion of Mr. Robert Craig, who is a good authority on such matters, this variety will prove to be a good bedder. It has lived outside through the past winter without

protection, and Mr. Craig intends to grow it in quantity for bedding purposes. Kaiserin Augusta Victoria did finely out of doors last summer. It makes a clean and vigorous growth, blooms freely and is worthy of a place beside Gontier as a fine bedding rose.

Acalypha Miltoniana is a new and most promising plant for subtropical work. The foliage is of a good dark green with a distinct edging of white. Triumphant is another new *acalypha* in the way of the well known *musaica*, but brighter colored.

After trying all the bedding geraniums new and old the gardeners around Philadelphia have settled on *La Pilot*, which Edwin Lonsdale introduced into that neighborhood twelve years ago as the best all around scarlet bedder. *Mme. Thibaut* remains unquestionably the best pink for this locality and *White Swan* leads in the whites.

In the set of new *coleus* sent out by Sander are found three very promising novelties, *Princess May*, *Mrs. Sander* and *Empress of India*, but their usefulness in outdoor bedding has not yet been tested.

Reminders.

As soon as azaleas are past blooming they should be pruned into shape, and all the long shoots shortened to a level with the main head of the crown. Azaleas start into growth usually while flowering, and therefore the operation should not be delayed too long if we expect them to bloom well the next season. Old, very large plants, if out of shape, will bear a severe pruning into the old wood, with the hedge shears if necessary, and will present a more compact and pleasing outline by another season, not occupying so much room as formerly, and producing the same amount of flowers.

Genistas or *cytisis* also should be pruned severely now, and if very compact plants are wanted with an even surface, pinching must not be neglected during all summer and fall up to October. However, for large plants I would advise only this severe spring pruning instead of constant pinching; the natural grown plants seem to have the preference in the eye of customers in this neighborhood at least. Don't mix any phosphate or bone with the soil for repotting these things; they will not do well with it. *Chorizemas*, which we found to take well as an Easter plant, should be treated the same way, but they require less pinching than *genistas* and want to be left alone after August 1. In the rush of the planting out season we are apt to neglect our indoor plants, thinking that later on will be time enough to attend to their wants, but even if we can't find time to repot them now the pruning at least should be attended to.

The little violets want to be planted out now, and I would like everybody to make a trial and pot up some of them into 3 or 3½-inch pots instead of planting out in the open ground. We have had them for the past two seasons, and consider it a great improvement over the old plan. They remain in the same pots until late fall, and do not occupy much space during summer when plunged in a bed or frame close together, where they can have a watering in dry weather. These potted plants will bloom right off when taken in and planted on benches, also do they keep on flowering much longer than field grown plants.

If not done already, sow some seed of *Grevillea robusta*, the silk oak; it takes them some time to germinate. They are

so very useful as small plants next fall and winter for center plants in fern dishes and jardinières, while a few large specimens will come very handy for decorations mixed in here and there among palms.

Rochester, N. Y. J. B. KELLER.

Hydrangea Otaksa.

The plant represented in our illustration is one of several noble specimens which every year adorn the grounds of Hon. J. S. Fay, at Woods Holl, Mass. When photographed it was fifteen feet in diameter and seven and one-half feet high and bore two hundred and twenty-six trusses of bloom. Mr. M. H. Walsh, the gardener, gives his method of culture as follows: "I let the plants remain outside until about December 15th. They are then pruned back, leaving about two buds above last year's growth, and placed in a cellar where they are kept until about May 1. Freezing in the early winter seems to ripen and harden the wood, and I find that they will stand 15° of frost without injury. They seem to grow best when fully exposed to the sun, the flowers being larger, the foliage brighter and the wood better matured than when grown in partial shade. A light soil composed of equal parts of loam, leaf mould and sand seems best suited to their requirements. To this is added ground bone and unleached wood ashes in the proportion of one quart of bone and three quarts of ashes to one wheelbarrow full of soil. *Hydrangeas* are gross feeders and require an abundance of water. When the flower buds appear liquid manure should be applied and repeated once a week, during the season."

Easter and the Grower.

Looking over the various Easter reports one would naturally conclude that the grower was a thick-headed sort of mortal, without any business knowledge whatever. This is hardly fair to the growers, many of whom are intelligent beings, as well as those who handle their products.

A good grower (and his number is increasing every year) will not even think of putting an inferior flower on the market, unless it is put there as second quality stock, and as for salting them down so that by Easter they are in the first or second stages of decay it is a form of suicide he does not care to follow. There are of course some who store up their stock as in days of yore, but their number is decreasing every year; there is little use for us growers to go to such a man and argue, but if the commission house would put all such stock aside until the first quality stock is disposed of, and then sell it at its actual worth, or return it marked unfit for use, and the retailer would refuse to touch it until nothing else was in the market, Mr. Grower would soon come to his senses.

The retailers are not altogether blameless for this state of affairs, for they sometimes use flowers that are decidedly the worse for age and wear, and use them at good stiff prices too. If a grower happens in about this time, he could scarcely help but think that it was not so absolutely necessary for a flower to be of first quality to bring a good price, and getting this impression he will salt down a lot of stuff for Easter, knowing that it will be as good as some he saw used. This is of course a wrong view to take. If the retailer has sinned it is no reason why the grower should sin also. The better

plan is for neither to sin, and put fresh flowers *only* on the market.

In sending a bunch or box of carnations to a lady, if I were to use some that had been cut a week or ten days it would seem to me like offering an insult to her good taste and judgment. This may be drawing the line a little too close, but if this principle were followed by the grower, the commission house and the retailer, the cut flower trade would certainly be benefited. We growers not being infallible there will always be some second and third quality stock to dispose of, but it should be sold for what it is, and at corresponding prices. The same thing should be done with flowers that have become shopworn in the stores; this would enable many persons of moderate means to gratify their love for flowers, and be a straight deal all around.

ALBERT M. HERR.

Hints for Decoration Day.

Decoration Day will soon be here and most retail florists, particularly in small towns, find it a remunerative season. It is time to begin calling attention to specialties for this date, and the standing advertisement in the local papers should have reference to it. In most places the demand for this date is essentially in the line of cheap materials, and fancy prices cannot be obtained. This demand should be catered to and preparations made accordingly.

Although there may be plenty of outdoor shrubs in bloom greenhouse flowers are rarely over-plentiful at this time. Carnations are dwindling away, even if they have not been torn out, and the same is true of roses, nor do the latter always give satisfaction. Though, fortunately for us, designs do not seem as much called for as formerly, something in this line will sell, and here galax leaves exactly meet the requirements. Wreaths and crosses of galax, either with or without draping of flowers, will surely sell, and their lasting character makes them specially valuable for cemetery use. They can be prepared beforehand, thus saving work during the rush. Let people see them; they look well in a show window and give an idea to would-be purchasers.

Like Easter, Decoration Day is largely a plant festival, and almost everything in the line of ordinary bedding plants will sell. The demand is largely for cheap flowering plants—geraniums, lobelias, *calceolarias*, etc., as many of the G. A. R. posts buy these in quantity, but many better plants go to private buyers. We have found *hydrangeas*, *Deutzia gracilis*, *Astilbe japonica* and *polyantha* or hybrid China roses in bloom to go very well. Another thing, which takes well in the retail trade, is a small splint basket (such as is used for packing fruit), containing six to a dozen assorted plants, the whole being sold for a fixed price. The plants are turned out of their pots and packed snugly into the basket; it makes a neat and convenient package, and often strikes the fancy of people who come with the intention of only buying a single plant. There should always be a vine or trailing plant in these baskets, *nierembergia*, *thunbergia*, *vinca*, *lophospermum* or *manettia*. These little baskets are so cheap and convenient that it is a wonder they are not more used by the retail florists.

PROVIDENCE, R. I.—The semi-centennial of the Rhode Island Horticultural Society will be celebrated on September 6, 1895, with an exhibition and banquet.

HYDRANGEA OTAKSA ON THE GROUNDS OF HON. J. S. FAY, WOODS HOLL, MASS.

Fern Notes.

The spring and early summer is quite a busy time to the fern grower, just as it is to his brother in the profession who confines his efforts to flowering plants and general spring stock. And although the various operations connected with the cultivation of ferns are all interesting, yet it may be said that there is a certain monotony and comparatively little excitement in such work as pricking out seedling ferns, a job that requires much patience and careful labor. But it pays to give the best attention possible to this work, from the fact that the seedlings are generally so much crowded in the seed pan that a large percentage of them would be choked out were it not for the method of pricking them out in small clusters into other pans as soon as they can be handled. If the spores have been sown in January, or before that time, the seedlings will now be in good condition for transplanting, the majority of species that are in general trade use being those that germinate quickly and grow rapidly. The pans or boxes to which the seedlings are to be transferred should have some coarse material placed in the bottom to assist the drainage, and should then be filled up with fine soil of rather light character, and pressed down quite firmly.

After transplanting the seedlings should be placed in a shaded house and thoroughly watered with a very fine rose, in order to settle the new soil, and it is also best to keep the house in which they are placed rather close for a few days until the seedlings have time to recover from the change. In a few weeks these seedlings will have made two or three tiny leaflets and also some roots, and will then

be ready for potting off, either singly or in clusters, according to the use to which they are to be put. If one has stock enough to permit such practice the plan of potting off the seedlings in clusters of four or five is a very satisfactory one, especially for home consumption, for these little bunches of small plants are admirably adapted for filling small ferneries and will become ready for use in much less time than single specimens.

The soil for potting the seedlings should be much the same as that used in the seed pans, and these tiny plants being quite easily injured by exposure it is unwise to have a large number of them divided up and spread out on the potting bench at one time, and it is also well to take the precaution of watering each load of the young plants as they are set away in the greenhouse. Shading is also needed for the young plants after potting, and of course proper precautions will be taken in respect to watering and ventilation, for a severe check at this stage of the proceedings will go a long way toward spoiling the crop. After the young plants are established in the pots much more air should be given, and if indoor space is limited they can then be moved out into cold frames, the sashes of the latter being shaded and raised up above the plants high enough to give a good circulation of air. The plants thus grown are stocky and sturdy if properly handled, but it must be remembered that they should be brought into safer quarters before the nights become too cold in the fall.

There seems to have been comparatively little change in the relative popularity of various species and varieties of ferns in the past few years, except that the demand is first for dwarf, compact growing

sorts, though they must also be graceful ones, for the majority of fern pans are required to be filled quite low as to stature, and it is even whispered by the retail men that the same condition applies to the price. But be this as it may, the demand is chiefly for such tried favorites as *Adiantum cuneatum*, *Davallia stricta*, *Pteris serrulata* in its numerous forms, *Pteris cretica* and its various progeny, among which *P. cretica albo-lineata* and *P. cretica magnifica* are two of the hardiest and most satisfactory. *Onychium japonicum* and some of the nephrodiiums are also prominent, among the latter *N. aristatum* var. and *N. Sieboldii* being notably good, while *Polystichum capense* and some of the nephrolepis are also included in the useful list.

Pteris Victoria is a very pretty fern, but unfortunately does not develop its full beauty until it produces fertile fronds, these having much brighter variegation than the sterile fronds, and by the time its best condition is reached the plant is too tall for a small fernery. *Pteris Smithiana* is a handsomely crested form of *P. tremula*, but in common with all of that type is rather brittle, and consequently has to be handled carefully. *Adiantum Farleyense* is becoming more appreciated as a florists' fern each year, and in most of our large cities a better market is found for this "queen of ferns" each year. From the multitude of *Adiantums* a few others may be selected where greater variety is demanded, among the best and most useful being *A. pubescens*, *A. gracillimum*, *A. auietense* and *A. tenerum* Ballii, the latter being a particularly good form of *A. tenerum*, not only admirable as a pot plant but also excellent for cutting.

W. H. TAPLIN.

Nephrolepis Davaloides Furcans.

This handsome robust growing fern should be grown more extensively by everybody as a decorative house plant. Not the way we so often see it in collections of ferns, where they are set close together and never get a chance to develop their long arching fronds, and are half starved in small pots, looking yellowish, the ends of the fronds dried off or imperfect, or the young growth in the center decaying before it had a chance to develop. When the plant has not had enough light and free circulation of air, or is stuck in between other plants where the moisture never gets a chance to dry off from one syringing to another such treatment causes the decay of the young leaves. It certainly will pay to allow these plants room, for you can demand a price for a well grown plant at least equal to the value of a palm three times its age. It is one of the few ferns that will endure the dry atmosphere in a dwelling without injury, if only enough water is supplied at the roots, and usually people will prefer the more graceful fern to a palm or a ficus if price should be about the same. It is a native of the Malay Islands, the fronds are two to three feet long, gracefully arching, the pinnae are about six inches long or over, slightly serrated at the edges and divided, crested or forked at the points. The color of the pinnae is a dark green, and has a peculiar lustre, not very often found in ferns.

While this fern may be grown, like the rest of the family, from spores, you will get stronger plants in a shorter space of time from the runners, which are produced by nearly all the nephrolepis from the crowns, or by the division of the old plants. If the stock plants are planted out in a warm corner of a fern or palm house, young plants will be produced freely. The old ones will spread rapidly and may be divided into small pieces and potted in suitable material. Perfect and plenty of drainage is essential, as they want a generous supply of water but do not like to have it stagnate about the roots. Like all ferns they should be shaded from the direct rays of the sun, and they grow better in a moist atmosphere, but should at the same time have a free circulation of air. When large enough to go into 5 or 6-inch pots, the plants must be allowed plenty of room, and this is done most economically by setting them up on the regular plant stands made of iron pipe and circular flanges and placed between other plants, so as to have the ferns entirely over and above the lower plants. In this way they occupy very little room and get the full benefit of light and air all around, interfering but very little with the plants beneath them. Here the ferns will spread out their graceful fronds, which may expand regularly all around and will produce a perfect symmetrical plant, which they could not possibly do if set on a bench unless a great deal of room was allowed.

As the plants grow on repottings should not be neglected until fall, when they will all be in 6, 7 or 8-inch pots, perfect specimens if they had the right care. It is true in this manner we cannot grow such plants by the thousand, but I should feel sorry if we could do that, for in a short time the market would be full of them, and prices would naturally drop down considerably. The way it is we are obliged to grow only in limited quantity, according to the room we have to spare for them, and the plant is not likely to ever become an every-day occurrence in the markets. *N. rufescens tripinnatifida*,

an allied species, with the pinnae cut up or divided into serrated segments again, which are elongated and closely overlap each other, is a newer form, and deserves a place alongside the above, requiring the same treatment. The growth and general appearance of this plant is rather more erect, but still the fronds are slightly curving, and when it becomes more known will surely become a favorite.

Rochester, N. Y.

J. B. KELLER.

Notes by the Way.

There are sights that are truly inspiring, and I know of no other source of inspiration, of no instance indeed, to compare with the sight of hundreds of little ones, marching in groups towards some public park or public square to participate in the ceremonies of planting a few trees on Arbor Day. I had the good fortune to behold such a sight in a thriving Illinois town, and the impression it has made upon me is not likely to be erased from my memory. It is certainly a beautiful custom, teaching as it does "Young America" the wholesome lesson of adding to nature's beauty and to nature's gifts. It is the knowledge of planting a tree rather than that of felling it, which, if implanted in the minds of our little ones, will insure the stability and the future welfare and strength of our country.

I look forward to the time, and such a time will surely come, when our public schools will designate to a certain day in the spring to be known as the "Flower festival," when our public parks, public squares and private yards will present their most pleasing aspect and fill the minds of the young with an appreciation of nature's charms.

I must refrain, however, from taking too bright a view of the present state of business. "Business is quiet" is the general reply to the question "how goes it?" Except now and then a funeral design, nothing of any consequence has transpired during the past week, in and of the towns I have traversed, to unload the surplus stock of flowers. Roses are plentiful at present and the quality is as good as might be expected. Mr. R. Sanders of Aurora, Ill., showed me, among other varieties, a crop of very fine Mermets, and Messrs. Brown & Canfield, of Springfield, take much pride in their American Beauties, which between their local trade and the St. Louis market, find quite a ready sale.

This temporary stagnation in the cut flower market does not seem, however, to discourage the florists. All look forward to a return of brighter days and it is the general opinion that the trade this spring will by far surpass that of a year ago. S.

New York.

The customary large decorations which are looked for in the period directly following Easter are missing this season and the effect is severely felt in all branches of the trade. Transactions are small, whether on Broadway or in the most plebeian quarters of the East Side, and it takes a good many of them to amount to anything. Under such conditions no customer is beneath notice, and a good opportunity is given to those who must sell flowers to live, to cultivate an amiable temper. The wholesalers are glad to sell to the dealers in half dozen lots, no one being too small to receive attention. When it comes to hundreds and thousands the Greeks have things all their own way, for "alas and alack" no one else has any outlet for such quantities.

Everything in the cut flower line is over-abundant, excepting possibly white lilac, which has been in special demand for several weddings, which as usual came altogether at the same date. Violets are as much out of date as a last year's chrysanthemum; they do not pay freight charges from greenhouse to market in most instances, all of which is a "very unfortunate state of affairs" as they say in Philadelphia.

The usual exodus of the fortunate ones to Europe has begun already, A. Hermann and family being the first to go. They left on the Normannia on April 25. It is about accepted that the backbone of the flower trade has been broken for the season, fully a month earlier than usual, and plans for the summer are being perfected. Charlie Carlin, Thorley's buyer, who hears everything and sees everything is thinking of writing a book of reminiscences.

Julius Roehrs had a wagon load of araucarias stolen from him on the night of April 24. Mr. Roehrs has been seriously ill, but is improving now and is believed to be out of danger.

The schedules of Jacob C. Bebus show liabilities of \$2,872, nominal assets of \$7,447 and actual assets less than \$600. The difference between nominal and actual assets is said to be due to uncollectable accounts amounting to \$6,768.

An order for 1,000 Belle Siebrechts to go to Hungary has just been filed by Siebrecht & Wadley.

Herman Rolker has moved his business to 484 2nd street, Brooklyn.

Chicago.

At the quarterly meeting of the Horticultural Society of Chicago held last Saturday afternoon a great deal of routine business was transacted. Further details in connection with the annual exhibition are now in the hands of the executive committee. Amendments to the constitution were proposed which provide for special meetings when deemed necessary by the president or any three members and for increasing the number of directors from seven to ten. These will be acted upon at the next meeting. Secretary Egan introduced the following resolution which was unanimously adopted:

WHEREAS, the Commissioners of the West Side Parks have established at Union Park a botanical garden of hardy herbaceous ornamental flowering plants, systematically arranged, combining in groups representative of the flora of the different countries of the world, and especially that of the United States, and have in contemplation the formation of an arboretum in one of the larger parks, in which will be placed specimen plants of each tree, shrub and vine that will prove hardy in and adapted to this climate, each plainly labeled with the scientific and common names, whereby those of our citizens interested in such matters or contemplating the improvement of their grounds, can observe the habit, form and other characteristics of the various plants that can be safely used in this section, and thus have a valuable guide to assist them in making their own selections. Therefore be it

Resolved that this Society greets with pleasure the spirit of advancement that has caused the formation of the Union Park collection, and hereby expresses itself as favorable to the scheme of the establishment of an arboretum, and promises hearty co-operation in this excellent plan for the diffusion of accurate horticultural knowledge among the people.

A committee was appointed to endeavor to secure a settlement of the medal question which has been hanging fire ever since the World's Fair Chrysanthemum Show, it being understood that the medals are at last being made by the Government authorities. Another committee was appointed to see that Chicago horticulturists were in future properly represented in the state board.

BASKET OF HYBRID ROSES BY SIEBRECHT & WADLEY.
EASTER PLANT ARRANGEMENTS

Of the flower trade this week, perhaps the less said the better—in fact it is a prevailing opinion that there isn't any. Continued warm weather has brought out flowers of all classes with tremendous rapidity, and there is a great increase in outdoor stuff. Retail trade has been dead ever since Easter, and the result is an enormous glut. It appears as if the same influences affect trade here as in the eastern cities; business is at an end very much earlier than formerly. Flowers are of good quality, very fine roses being seen. First quality Beauties go at \$1.50 to 2 per dozen, and poor grades do not go at all. American Belle is not seen in our market, and, contrary to Philadelphia experience, the few grown here did not sell. Reinburg Bros. tried it, but are now growing Beauty only. Bridesmaid and Testout are seen in good form and color. The average price quoted for the large teas is 3, but prices are greatly cut, and it is said that mixed roses could be bought for 5 per thousand, in large lots.

Red carnations are extremely plentiful and go very slowly; whites are scarcer, but the general glut depresses the price of these also. Sweet peas are more plentiful than last week, and generally excellent; John Turner of Morgan Park is sending in particularly fine long-stemmed stock. They are still quoted at 1. The market is absolutely snowed under with bulbstock; so much is coming in from outside. Narcissus of every garden variety comes in (and remains on the wholesaler's hands), and tulips, single and double, are in by thousands. Some parrot tulips from the M. A. Hunt estate were noted; they were beautiful in form and texture, and unique in coloring. As for lilac, which came in scattering lots last week, it is now here in a rush. One wholesaler received 1600 bunches one day lately; lilac and carnations are the main stock of the fakirs. But even the fakirs complain that business is poor.

Northern ferns are being received, and the famine in greens is now over.

T. J. Corbrey & Co. have moved into their new quarters at 59 Wabash, and will soon be settled after the usual discomforts of moving day.

Mr. and Mrs. O. P. Bassett are visiting Baden Springs, Ind., the trip being undertaken for the benefit of Mrs. Bassett's health.

Geo. W. Miller expects to take an eastern trip shortly, when he will visit some of the growers of forced fruit and vegetables. Mr. Miller has been growing forced cucumbers largely this year, and it is reported that he will turn his attention to choice forced vegetables in future, rather than flowers.

Mr. Harry A. Bunyard left the Alexian Brothers Hospital on Thursday, and hopes soon to be amongst his customers again. He wishes to express his thanks for the many kind letters of inquiry from his friends who saw an account of his illness in the *FLORIST*. From here he goes to Marquette, Mich., to recuperate from the after effects of typhoid, weakness, where he will visit awhile with an old schoolmate.

Mr. Van Waveren, of Hillegom, Holland, was in town this week.

Boston.

The period of overstock and light demand has struck Boston in earnest the past week. Norton had one big wedding order on April 30, but this only emphasizes by its loneliness the dearth of such affairs. The street boys are in clover, and line the sidewalks every evening with baskets and boxes of roses, violets, and carnations, all in various stages of collapse, and which can be bought for a song; carnations have had to come to it at last, but the carnation growers have no good reason to complain of their season's trade.

Boston is well supplied with visitors now. Last week's crop of industrious canvassers has given place to an equally numerous and equally plausible crowd. There are Harry Bayersdorfer of Philadelphia, who talks supplies without limit or reserve, Burt Eddy, who represents J. C. Vaughan, J. H. Troy, who represents United States Nurseries, and F. W. O. Schmitz, who represents himself, all ready to fill their books with Harrisilily orders or any other literature of a similar nature, and hoping to go home with "tidings of comfort and joy" for the house.

Trailing arbutus is just in its height and violets scarcely pay for the picking.

A big attendance is expected at the Florist Club meeting on May 7, to listen to Mr. O'Meara's lecture.

Easter Basket of Hybrid Roses.

The accompanying engraving belonged with those that appeared in last issue, but through an imperfection in the photo the cut was not ready in time. This is an Easter arrangement of hybrid rose plants in a basket, by Siebrecht & Wadley, New York, and shows how these somewhat difficult subjects may be so treated as to look in keeping with their surroundings when placed in the richest drawing room.

Philadelphia.

The weather the past week has been very disagreeable, and interfered to a considerable extent with the transient business. There seemed to be considerable to do however, between funerals and weddings. There are a great many flowers about, and in fairly good condition considering the weather; quite a little mildew is seen, caused no doubt by inattention to fires during the warm spell of last week. Prices of stock remain about the same, \$4 to \$6 for the large teas, 2 to 4 for the smaller buds, from 1.50 to 4 per dozen for Beauties, and from 3 to 4 for the hybrids for the same quantity. Carnations are down, 1 to 1.50 with 2 per hundred for the extras is now the price. Sweet peas are very plentiful and sell for from 50 to 1.50 per hundred. Bulbous stock from out of doors is to be had in quantity at all sorts of prices, from 2 per hundred down. All bunched flowers, such as alyssum, daisies and the like are sold by the lot. No reasonable offer on a job lot of most any kind of stock is refused. The only exception to the decline is smilax; this holds its head high, and it is a very small string that will not bring 25 cents.

One of the leading city undertakers opened a new branch establishment last week and invited the general public to see his funeral furnishings. The building was a ten room dwelling with office. In every room caskets were displayed, and the entire building was decorated most lavishly; everywhere that a plant could be placed or mantels banked it was done. The bannister was decorated with asparagus and flowers to third floor. Over all doorways and on blank spaces of wall asparagus and cut flowers were used. In two rooms the walls were draped with cheese cloth, being entirely covered, and dotted on this were pink roses, the ceilings were canopied with asparagus and roses. In these rooms were two wax figures laid out as for burial, one of a woman and another of a child. Mats of flowers were placed at the bottoms of the caskets on the floor and loose flowers and clusters used on the casket lids and on the bodies. About in the other rooms were floral designs. All the cut flowers used

were renewed and kept fresh each day; the opening lasted for four days. It was a very unique affair and attracted a great many visitors.

Bert Cokely & Co. dealers in florists' supplies, were sold out by sheriff on April 18. K.

A Peculiar Discoloration of Pæonia.

The leaves of certain pæonia plants grown in nursery rows by a florist have attracted attention by their peculiar discolorations. Some plants had all their foliage abnormal, while with others only here and there a leaf or portion of one

was affected. The accompanying engraving made from a sun-print of a portion of a leaf shows somewhat the nature of these blotches. The discoloration seems to start as a small speck, followed soon by a ring of yellow outside a circle of green, and inside of the latter is the light speck. Sometimes the concentric circles are interrupted by a vein or by the blending of two sets of rings.

As yet a microscopic examination of the injured parts does not reveal the presence of any fungus, and no insect has been found associated with the strange spotting of the pæonia leaves. The attention of florists is drawn to this with the hope that it may have been met with by others, and an explanation of the peculiar leaves is at hand. Attention of botanists was called to the case at the Brooklyn meeting in August last, but no light was thrown upon the subject. It will be interesting to watch the same plants this season to note if the trouble is perennial or passes away with the year.

BYRON D. HALSTED.

Rutgers College, New Brunswick, N. J.

Baltimore.

Saturday, Sunday, Monday and Tuesday one prolonged and incessant drizzle, without extenuating circumstances, as one might say. To be sure everything out of doors is growing that has the least bit of life in it, and the greenness of the foliage, and whiteness of the blossoms is unmarred by a speck of dust, for obvious reasons; but the weather is a great thing to kick about, and a safe thing as well, so let us grumble our fill about the rain. It isn't so safe to grumble about prices, for either the grower or the dealer is apt to be vexed whether prices are up or down.

A dealer said to the scribe the other day "Where did you get your Easter prices? I got splendid valley from Philadelphia for three cents." Whereat the writer gently replied that he had to make up an average as well as he could from many

reports, and had unfortunately missed the transaction referred to.

The next rebuke was from a grower, who remarked, "How is it Baltimore prices are so much lower than other cities as reported?" To whom a reply about on this wise was made. "Possibly because the standard of production is not high enough. When we produce as fine buds as other cities we will get as good prices for them. Even now the really first-class buds and carnations bring as much here as any where else in the country."

The public squares are gorgeous with Dutch bulb flowers. Here and there they seem to have suffered from the severe winter, but a walk down Eutaw Place showed that charming boulevard to be a succession of the most beautiful effects in tulips and hyacinths ever seen here. Whether the size and quality of flowers were considered or the taste and skill in arranging them in beds, the decision was first-class, and the superintendent, Mr. Leibert, deserves great praise for the result.

Cut flowers are in plentiful supply, though numerous weddings have helped the demand a little.

The demand for flowers at funerals seems to be on the increase rather than otherwise, though when one thinks of the grotesque things sent occasionally it is a wonder that "No flowers" is not seen more frequently. Speaking of grotesque things, a design at the funeral of the shop foreman of a large brass works here was an enormous steam whistle fully four feet high, made of flowers of many colors, and bearing about as much resemblance to the thing represented as the drawings of our childhood which were considerably labeled "A horse," "A man," etc.

Theodor Eckardt, individually, and trading as Theodor Eckart & Co., at Ruxton, has made a deed of trust for the benefit of creditors to William Penrose, who has given a bond of \$5,000. On a petition of the trustee by Z. Howard Isaac, attorney, the court has assumed jurisdiction of the trust.

J. H. Bokel has opened a flower store in the Equitable Building. MACK.

Cincinnati.

Pleasant, spring-like weather has come to us at last, and all outdoor vegetation is leaping forward with an apparent determination to make up for lost time. Hyacinths are blooming, and early tulips are beginning to show color. The outdoor work and the constant attention required by bedding plants in the houses now distract the growers' attention from their roses and carnations, and the result is apparent in the quality of some of the lots being sent in. There is any quantity of poor stuff about town, which gets, as a rule, into the hands of the street fakirs without much difficulty, and on the street corners it has to take its chances with its more seasonable competitor, the popular May flower, which catches most of the customers.

Complaint of poor business is universal. In retail circles nothing whatever seems to be doing. There is here and there a little funeral work, but nothing else of note. Transient trade is almost entirely monopolized by the street merchants, who fairly swarm the town.

The market is in a worse condition than ever. The extremely warm weather toward the end of last week rushed the crop forward at such a rapid gait that even with good business it would have

been difficult to dispose of it to advantage. There is no settled price for anything. Nominally roses are held at \$2 to \$3, but in reality the bulk of the stock is sold for much less. Bridesmaid, Meteor, Jack and Beauty are the only roses at all in demand, and some sort of a price is obtained for them. Good Beauties bring from \$12 to \$20, Jacq \$6 to \$8, Meteor and Bridesmaid \$3 to 4. Carnations have at last been carried down in the general slump, and the best stock is sold at \$1, the bulk going at from 50 to 75 cents, and in large lots at even less.

In bulbous stock valley has been scarce at \$3. Tulips, daffs and Dutch hyacinths are coming in freely from the open ground, but there is little demand for them. Tulips and daffs are quoted at \$1, Dutch hyacinths at \$2 and \$3. The few violets sent in are sold readily at 75 cents. Smilax is as usual at this season, a very scarce article, and good stock could be readily disposed of at three times the winter price. A great many of the florists are already complaining of the scarcity of water. P.

Zirngiebel's Coil Heater.

Mr. D. Zirngiebel of Needham, Mass., has for a number of years used a heater of his own construction, which he believes to be the cheapest and most economical method of heating. The device is not patented and Mr. Zirngiebel is perfectly willing for any one in the trade to make use of it. The accompanying cut shows the coil which constitutes the heater when set in brick work. Mr. Zirngiebel writes:

"Any florist can construct and set it, at a nominal cost, and with the best results, as a coil of that description about 2 feet square will easily heat a house 100x20 feet and consumes from 6 to 10 tons of coal, according to the temperature needed. They have, of course, to be used under pressure.

"They are set in brick work, using Hitchings' shaking grates, which are admirably

adapted for the purpose. In constructing the coil we leave an opening of 8 to 10 inches in the center, to feed from the top and act as a coal magazine, the boiler set one foot from the grate. They will hold coal enough to last from 12 to 18 hours, according to the weather, and an occasional shake of the grate is all the care required. The whole thing is simplicity itself.

"We lately completed a range of glass 300x30 feet, heated on the pressure system, with a coil 6 feet by 2½ feet, overhead flows and side returns, and from present indications we are safe to expect a saving of 40 per cent in coal, and better temperature than obtained before in using no pressure and 4-inch piping, the present arrangement being 2-inch pipes throughout.

"We have used a quantity of the elliptical

coils for dwelling house heating, using common radiators and coils of pipes in living rooms, one coil boiler heating 10 to 15 rooms very easily, with scarcely more coal consumption than is required in a kitchen range. The circular elliptic coil would produce the same results also, but are very expensive to make, one dollar a foot for inch pipe is the cost in Boston, and probably the cost of 1½-inch, which is the regulation size to secure good circulation, would not be far from double these rates, so at that price they are out of the question."

Buffalo.

Wonderfully fine warm and dry weather has helped to make a stir in the business generally. Plant men are now rushed with their work and some of them talk of having "bees" of an evening to catch up. These bees are all right if properly conducted, and help one wonderfully when you have a straightforward job. Two years ago I remember in this month that three men and a boy shifted 1,700 coleus from 3 to 4-inch pots in less than three hours. Of course the old man was there to throw in a word of encouragement and a joke. This lot never could be handled in the day time in those hours, because there would not be the same vim and snap about it.

Flowers of all kinds are in too great abundance to be healthy. I heard of a lot of flowers sold on Saturday last by our commission merchant to a market peddler that enabled the peddler to retail five roses at 25 per dozen and carnations at 10 cents ditto. It was a case of force, and such sacrifices are going on all over the country, but I pity the poor grower. To read the society columns of our daily papers one would think that half the people in town were getting married or remarried, but the effect on the florist trade is not greatly in evidence. All orders were very moderate in price. There was one wedding last week out of the usual dull order, and that was at the aristocratic Westminster Presbyterian Church of Delaware avenue. Hundreds of lilies, spiræas and azaleas were used and the effect they say was fine. The writer did the work, but he did not see it.

A few, a very few, short months intervene between now and Pittsburg. Our boys seem to take no heed that at Atlantic City we came out champions at bowling and second in shooting. Unless they get together and practice that beautiful banner and that solid Spaulding cup will go to the Quaker City or New York. Our team is sadly broken up. The veteran Mepsted has chronic poor man's gout, or some variety of that dread disorder. The doctor has told W. S. that he cannot think of playing in a year. One or two of the old team has left the city, so new blood will have to contend for the honors. There is plenty of good stuff here if they would only practice. There is the veteran Palmer, no better man ever rolled a ball, J. H. Rebstock, S. Anderson, W. A. Adams, W. Belsey, W. Milley and several others, all wonders at the game, but they are satisfied to sit round a table and tell you what they need to score. Well boys, if you don't wake up I can tell you we shan't be in it. As for shooting, which I trust is a future come to stay in our annual convention, the ability in that line is entirely confined to one family. At considerable trouble a few days ago we induced half a dozen of the craft to take a little practice at inanimate targets. We will never do it again. It was worse, far worse, than Mr. Pickwick's experience,

when seated in a wheelbarrow he viewed the marksmanship of his friend Mr. Winkle. Poor Winkle only got the gun tangled up in his legs. But our Mr. Long, after the shell failed to explode, looked down the barrel to see what was the matter. This so agonized W. S. that he hurled his left hand crutch at him, and the practice adjourned. Still, with all this, if you can send Dorrance to Europe and John Burton to Congress we will beat out our beloved friends. W. S.

THE LATE G. R. BERGMANN.

OBITUARY.

G. R. BERGMANN.

Mr. G. R. Bergmann died at his home in Flatbush on Sunday afternoon, April 28. Mr. Bergmann was 34 years old; born in Dresden, Germany, and came to this country eleven years ago as agent for F. Sander & Co., St. Albans, England, with whom he had been for several years. He afterwards bought the establishment of Julius Kretschmar in Flatbush, commencing business with a very small capital, but by close attention and industry made a success of it at once, and built up for himself a profitable business. He soon made a reputation as a skillful and intelligent grower; and has been particularly noted within the past few years for his success in cyclamen cultivation. His will provides that his estate shall be divided between his mother in Germany and his aunt, who has been his housekeeper in Flatbush. By his cheery disposition Gus Bergmann endeared himself to all with whom he came in contact. He was one of that coterie of rare good fellows to whose fraternal harmony among themselves and unselfish generosity to the stranger Flatbush owes its enviable reputation for kindly hospitality, and in his death Flatbush, the Society of American Florists, the New York Florists' Club and the fraternity generally are called upon to bear an irreparable loss.

SPRINGFIELD, MASS.—The Hampden County Horticultural Society will hold a grand exhibition of sweet peas about July 17th. The premiums amount to nearly one hundred dollars.

News Notes.

ELGIN, ILL.—Mr. Geo. Souster has been ill for several weeks with enlargement of the liver.

LAREDO, TEX.—Anna B. Nickels suffered a damage of \$1,000 to her stock of cacti from a blizzard in March.

TOPEKA, KAS.—E. M. Sheldon is about to embark in the florist business here, his establishment being at 1025 Taylor street.

QUINCY, ILL.—The city is arranging to purchase the Berrian tract of 52 acres, known as Watson Springs, and will turn it into a public park.

JACKSONVILLE, FLA.—The eighth annual meeting of the Florida State Horticultural Society will be held in this city May 7 to 10. A. H. Manville, of Glen St. Mary, is secretary.

DES MOINES, IA.—The park commissioners have a gang of men at work clearing Waveland Park of underbrush. The park will be fenced this year and probably a lake, covering five or six acres, will be built. The lake will be one of the finest artificial sheets of water in the state.

SANTA BARBARA, CAL.—The floral festival has proved a great success, the floral exhibition being a great advance over that of former years. In addition to a large exhibit of economic and ornamental tropical plants there was a fine show of roses and other flowers of the temperate zones.

ATLANTA, GA.—B. E. Fernow, Chief of the Forestry Division of the Department of Agriculture at Washington, is here arranging for a comprehensive exhibit at the Cotton States Exposition. Of the 12,000 square feet of space allotted to forestry the government exhibit will occupy nearly 4,000 square feet.

FRANKFORD, PHILA.—Fowler Bros. say that catalogues should no longer be addressed to them at their old location, 5031 to 5035 Charles street, but to their new address, Cherry and Dyre streets. There is no longer any greenhouse business at the old location, and the sending of wholesale catalogues there is doing them harm.

DIXON, ILL.—George M. Kendall of Leominster, Mass., an extensive grower of hothouse cucumbers, has been in our city for the past few days negotiating for the erection of a cucumber plant for W. F. Preston on South Peoria avenue. He will put up a twin plant for M. Preston one hundred feet long each, about the first of June.

TRENTON, N. J.—Hilborn reports Easter trade 50% greater in volume than last year; they were well cleaned out. Prices, however, were considerably lower. Competition is becoming very active at this point, and it looks as if many would have to hoe a hard road beside such safe and conservative people as Wainwright. Joseph Ribsam has left his father and set up for himself.

COLUMBIA CITY, IND.—Trade during the past winter has been good, everything selling well. Easter trade was far ahead of that of any previous year. Supply was much short of the demand. S. D. Amerman is growing some excellent roses and carnations. His Portias measure two inches across and have strong stems 22 inches in length. He feeds them liquid manure about once a week.

The "Up to Date" Florist.

"It is a source of infinite pleasure to contemplate the remarkable progress made within the last few years by the S. A. F.," remarked a "bulb man" to me the other day in the course of a pleasant chat, during which we compared notes, both of us having ample cause to be thankful for the return of the brighter days, which "had been so long a'comin'."

There is certainly much to be admired in the "go-aheadness" of the "upto date" florists (and they are in the majority), who, unlike their ultra-conservative predecessors of a generation or two ago, seem to realize the fact that success or failure do not depend so much upon the good or the hard times as upon the management or mismanagement of the florists themselves.

To illustrate my idea: A and B are two florists in a lively western town of, say 15,000. A is the possessor of four greenhouses, built in the most approved style and equipped with all the modern appliances. B has three tumbled down shanties of the antediluvian pattern, a veritable sore to the eye.

A grows fine roses, carnations, violets—just the stuff to catch one's eye and to inspire one's soul with a desire to invest in the luxury. B, on the other hand, grows everything in general, and nothing worth growing in particular.

One step further: A has a beautiful store on Main street, the best window in town and the finest ice-box in the state, and like many another successful merchant, he believes in stimulating trade by means of a neat little adv. in the local paper. B abhors the very idea of such innovations. "Why, to be sure," he says, "I cannot see how that fellow A manages to pay his store rent and all that."

The result is this: A does the business; he enjoys the best trade of the town; he is perfectly happy; he has always a kind, encouraging word for the "knight of the grip," and quite often a neat little order besides. He is a member of the S. A. F.; he attends the annual conventions, and is always ready and willing to learn "something new," and thus add to his own stock of knowledge and experience. B, poor fellow, I am sorry for him, is away behind the times. No wedding decorations, no funeral work, no business.

"To be sure," he philosophizes again in his own peculiar fashion, "times are not as good as they used to be. People haven't the money; that's why we don't do any business." And you might as well attempt to move a mountain as to convince B that the fault is not in the times or in the scarcity of money, but in himself; that a little push and enterprise on his own part might in the course of time bring him good returns. He cannot comprehend such things, no, not B. Fortunately for the craft, the Bs are in the minority, and before another decade shall have passed it is safe to assert, they will entirely disappear.

Herbert Spencer's assertion that the secret of the universe lies in persistence of energy is unquestionably applicable to the secret (if a secret it be) of individual success as well. It is the persistence and the energy which many of my friends in various parts of the country apply to the wheel of trade, rather than blind luck, accounts for their success. What is wanted nowadays is energy. Energy and push in all things, and above all in trade. The finer the stock, the more attractive the store or greenhouse, the surer are the chances of doing business and vice versa.

During my eight years experience on the road in my capacity as traveling sales-

man, I have had many favorable opportunities of studying the various phases of the flower business. What has always impressed me as ludicrous is the way some florists still cling to the ideas of the good old times, when the camellia, instead of the rose was all "the go," when folks were not a "bit" particular, not half so much as they are to-day. The dingy little shop with its heterogeneous stock scattered about promiscuously upon the table, benches and floor, were good enough in "them days." "Folks were plainer in their tastes and did not put on so much style either," said an old timer to me one day recently, "whereas nowadays nothing but the best will suit them."

And the wide-awake florist, be it said to his credit, fully realizes the fact "that nothing but the best will suit," hence continual improvements are the order of the day. Whether it be the plant or the cut flower, the bouquet or the design, the greenhouse or the store, a marked change for the better is noticeable everywhere and in everything. Mr. Smith fits up an elegant store of which he is justly proud, but lo and behold! Mr. Brown "goes him one better," and a new store, a more pretentious and attractive one than that of Mr. Smith appears in town.

If variety is the spice of life competition is certainly the backbone of business. The fact that the rising florists vie with each other in their efforts to attract the most custom tends only to enhance the chances of each, individually, and of all as a body, (providing, of course, no questionable means are employed). S.

IMPLS OF THE POTTING SHED

A Shattered Idol.

It was during the busy season, and the place was short-handed. The boss was rashly determined to hire the first wanderer who might come along, regardless of antecedents, to fill the place of one mild-mannered young man, who, having been entrusted with a pot of tar paint, and an order to use it on the potting shed gutters, had painted several lengths of pipe in one of the rose-houses before his nefarious work was discovered. It was just as the boss came to the conclusion that he ought to have hired a slim young man in a pink shirt who had been looking for a job the day before, and who, on being told what was expected of him, haughtily remarked that he was looking for a job, and not for slavery—it was just at this minute that the small imp who washed pots and got in everybody's way looked into the office and remarked that there was a chap outside wanting to see the boss. As the boss stepped into the potting shed he straightened up his collar

and wished he had put his coat on, the new comer looked so extremely respectable. He was a tall, slim elderly man, wearing a black frock-coat and a silk hat, apparently dating from the vintage of 1867. The hat was a little rusty at the edges, and the coat somewhat worn at the seams, but his stiff standing collar was dazzling in its purity, and his manner would have conferred dignity on a bishop. The boss was quite overcome when this vision of respectability stated that he was looking for work, and not above taking a journeyman's place. "As head of the propagating range at Slough, Mr. Cuttings—perhaps you've heard of Turner's at Slough—it's rather a fall to come down to journeymen's wages, sir, but times are hard, and I have met with reverses of late, and I'll take what you offer." So he was inducted into office immediately, and as Mr. Cuttings laid down to rest that night he had pleasant visions of being able to go the convention sure this year, with such a responsible man as Ironsmith to take charge in his absence.

The other men about the place took quite a fancy to Ironsmith, in spite of his respectability. He was very sociable, and told endless yarns about the days when he was an apprentice at a big nursery in the old country, earning six shillings a week. It was in the old days of high prices, and bread was a shilling a loaf. The men lived in a bothy, and boarded themselves, and Ironsmith was quite pathetic as he described the feelings of a hungry boy, who could have eaten his daily shilling in bread alone. It was there he learned several ingenious ways of snaring rabbits, which he explained to the profound admiration of the pot-washing urchin, and his description of the way they used to cook a tender young hare, dressed but not skinned, rolled up in wet clay and laid in the furnace, clay, skin and all being removed at once when it was cooked, made all think of trying that luxury with the next rabbit that fell into their clutches.

It is an unfortunate fact that the average small boy is totally devoid of reverence, and Billy the pot-washer did not seem to view Mr. Ironsmith with the esteem his respectability inspired in the others. The one drawback to Ironsmith's appearance was a distinct crimson flush at the end of his respectable nose, and although when dressed in his dignified black this was hardly noticed he certainly looked a different person in an earth-stained suit of brown overalls, with a canvas apron and a small cap on the back of his head. There was one occasion when Mr. Cuttings happened to catch sight of Ironsmith pursuing Billy the entire length of the propagating house, a brass syringe in his hand and an expression of extreme wrath on his face, and Billy was just around the corner as the syringe came crashing through the door, with a jar that shook every plant in the house. Mr. Cuttings tried to get some explanation of this scene, but Ironsmith only made some incoherent remark about his medicine, coupled with a threat that somebody would be the death of that boy, if he didn't take care, and Mr. Cuttings had to go away unsatisfied. There was something about Ironsmith's appearance, which, in a less respectable man, might have given rise to unpleasant suspicions, and even Mr. Cuttings felt a slight uneasiness when he caught sight of Ironsmith cutting the leaves off a *Lilium Harrisii* and sticking them into a propagating frame, following this extraordinary proceeding by mossaing the bare lily stalk and remarking confidently that he would

soon have a fine break from every joint. Suspicions gave rise to certainties a little later, when Irousmith, attired in his frock coat, silk hat, and other emblems of respectability, insisted on performing a Dahomey war dance among the flower pots, meanwhile singing, with a ferocious expression

"I am the cook and the captain bold
And the crew of the captain's gig—
The bo'swain tight, and the midshipmite,
And the crew of the Nancy brig."

We will draw a veil, as the novelists say, over subsequent proceedings. Mr. Cuttings' hopes of a trip to the convention, with an efficient substitute in his absence, were completely wrecked, and it is useless for any man addicted to wearing a silk hat and a clerical suit of black to apply for a vacant place on his establishment. There is such a thing, he thinks, as being too respectable, particularly when appearances are not borne out by subsequent conduct.

Pittsburg.

The B. A. Elliott Company went into the hands of a receiver April 27. The petition for the appointment was made by W. J. Elliott and J. C. Gooding. The debts of the concern are said to be about \$35,000, consisting mostly of promissory notes. The real estate is also said to be subject to several mortgages.

The petitioners are creditors of the company to the amount of \$2,448. A. C. Johnston was appointed receiver. He will be required to file a bond for \$10,000 before entering upon his duties.

Louisville, Ky.

Mr. Fred Haupt's new store was a genuine surprise to the writer, who recently had the pleasure of a visit to Louisville. It is on the principal business street and would do credit to New York or Chicago. Nothing essential to a really first-class store is lacking, not even the little nook containing desk for the use of patrons, where they find a full supply of blank cards, etc. for penning the "compliments" to be sent with flowers ordered. The large and handsome glass front ice box is fitted with electriclights inside and by pressing a button the interior is brilliantly illuminated, showing off the contents to excellent effect. In the rear is a fountain and basin surrounded by decorative plants. Mr. Haupt may well be proud of his store, and he seems to be doing an excellent business. S.

ACCORDING to the Springfield, Mass., *Homestead* "American Beauty rose has to be sprayed with some liquid to kill an insect fatal to the plant, so poisonous that it is taking one's life in his hands to bury your nose in the heart of the blossom." What next?

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—In a retail store by a young man of 20; best of references Address NEW YORK, care American Florist.

SITUATION WANTED—By a first-class man as foreman or second man in a large place where attention to business is appreciated. Address BUSINESS, care American Florist.

SITUATION WANTED—By a German young man; eight years' experience in growing roses, palms and general collection plants; references; state wages. Address C R, care American Florist.

SITUATION WANTED—By practical florist, German, married; experienced propagator and grower of roses, carnations, palms and general stock; good designer, best references. Address G. F. 315 Cambridge Ave., Toledo, Ohio.

SITUATION WANTED—By all-round florist, Scotch, married; 12 years growing cut flowers; 4 years with A. Giddings, Danville, Ill., as foreman; good funeral designer; reference. Address FLORIST, 5720 Garfield Ave., St. Louis, Mo.

SITUATION WANTED—By well experienced florist and gardener, competent in growing out flowers and forcing grapes; has charge of large private place, and is well recommended by present employer; nationality Swiss, age 23, married, no children. Address COMPETENT, care American Florist.

WANTED—A quick, reliable young man for the mail plant business in the west. R R, care American Florist.

WANTED—A few hundred dormant roots of *Canna Star of '91*. Address WESTERN, care American Florist.

WANTED—500 Bourbon roses in 3 or 4-inch pots; good stock. Address H. HAEFFNER, 10th & Heaton Sts., Hamilton, O.

WANTED—A few dozen *canna Queen Charlotte*. Address, stating size and condition, with lowest price per 100. R R, care American Florist.

WANTED—Florist, one that can grow roses, carnations, chrysanthemums and general stock of plants for retail flower store trade; a good steady honest man that is a good worker can find steady place at right pay; state wages wanted. FRED J. KING, 220 Madison St., Ottawa, Ill.

FOR SALE—No. 5 Furman Hot Water Boiler and 1,200 feet pipes, only 5 months used; a very rare chance. THE LACKNER, 157 Pomeroy St., Long Island City, N. Y.

FOR SALE OR RENT—Chicago greenhouses; \$3,000—\$1,000 cash, balance on time; 15,000 square feet glass, stocked with roses, carnations, etc. For particulars address A. T. JACKSON, Station X, Chicago.

FOR SALE—Two-story house with store and greenhouse at rear, 70 feet long by 20 wide, 426 1/2 St., good location; also store on Wentworth Ave., doing good business, with a reasonable rent. Address or inquire 627 Wentworth Ave., Englewood, Chicago.

FOR RENT—My greenhouse plant of between 8000 and 9000 feet of glass, located on Pearl St., Cleveland, O., with a good established cut flower and potted plant trade. Young rose and other cut flower plants for sale, and also all utensils necessary to carry on the business. Location second to none in Cleveland, adjoining one of the finest cemeteries in the city; electric cars passing every few minutes. Will be rented and stock sold on very reasonable terms. Possession taken June 1, 1895. Reasons for renting, not being a practical florist and engaged in other business. For a practical man, with moderate means there is no better chance in the U. S. Address J. D. SELZER, 1756 Pearl St., Cleveland, O.

FOR SALE OR LEASE. Three greenhouses with valuable grounds; the best place in this country for a man with some means. Address WM. SPRINCBORN, Dubuque, Ia.

ONE MAN

In every town or city can make money next winter growing

Antirrhinum Majus Alba.

And now is the time to get your plants. Well established plants, propagated from cuttings, at \$4.00 per 1000; \$6.00 per 100; \$1.00 per dozen. 250 or more thousand rate.

WILLIAM K. WOOD, West Newton, Mass.

The FLORIST of March 30th says of *Antirrhinum majus alba*. "This seems likely to be a very useful florist's flower, and no doubt will be as great a hit as *Swalsons*."

Gardiner's Celebrated English Mushroom Spawn. Fresh and Reliable. \$7 per 100 lbs. Special price on larger quantities. John Gardiner & Co., Philadelphia, Pa.

New Fuchsia LITTLE BEAUTY, 50,000. The best marketing variety ever introduced; comes into bloom early in March; no collection complete without it. Send for circular. Price, extra strong plants from 2-inch pots, \$1.50 per doz., \$8.50 per 100. BEGONIA Oliba, from 2 1/2-in. pots, \$9 per 100. GERANIUMS, Marshal McMahon, Happy Thought, Silver Cord, strong plants, from 2-in., \$1.25 per 100. Cash with order. Special price on large quantities. LINCOLN L. NEFF, Florist, 4010 Butler Street, Pittsburg, Pa.

CARD.

My new address is 43 North 10th Street. Please don't forget the number. I've been telling about the change these two months back; but I still find a few looking for me at the old stand. Give me a call. Glad to see you. Also give me a chance to figure on your wants if you can't call. Exceptional values in Bulbs and Flower Seeds for the Florist Trade, at all times.

G. C. WATSON.

BULBS.

Cheap to Clear.

I am now offering some fine lots of LILIU AURATUM, big sound bulbs; LILIU ROSEUM, LILIU RUBRUM, HYACINTHUS CANDICANS, DAHLIAS, DBL. NAMED, 25 vars; and other popular spring bulbs, at a great sacrifice to clear for the season. Let me hear from you at once if you want some Big Bargains.

SEASONABLE SEEDS.

PRIMULA SINENSIS FIMBRIATA, choicest mixed colors, from the best strain I know, and I've seen the most of them. Pkt. 50c.; 1000 seeds \$3.50.

CINERARIA, James & Wetherill's superb strain. Pkt. \$1.00.

FULL LINE of other varieties of Flower Seeds for Florists. Can fill your orders by mail on the shortest notice.

G. C. WATSON,

43 North 10th St., PHILADELPHIA.

CHRYSANTHEMUMS.

Fine assortment of all colors, prize winners of '94. Rooted cuttings, free by mail, \$1 per 100. Strong pot plants, by exp. \$2 per 100; \$18 per 1000. CARNATIONS—G. Wilder, rooted cuttings \$1 per 100 by mail; \$7 per 1000. Cash. E. FRYER, U. R. Ave., cor. 11th St., Brooklyn, N. Y.

Worcester, Mass.

Last week was the first really dull spell we have had this year, and though it is time to expect a let-up in business yet there are more or less kickers of course.

The pretty little May flower (*Epigaea repens*) is responsible for part of the trouble, as quantities are gathered and offered for sale on the streets.

Stock is piling up rapidly, roses especially so, and for once this season the store men have enough carnations; there being no funeral work has also tended to pile up the stuff and although prices have not lowered very much yet it is only a question of time before the bottom drops out. The weather is warm and hulbons stuff in the field is blooming.

The only important event of the week was the Keith-Knowlton wedding in West Upton, a small village 12 miles from here. It was the largest decoration put up in this vicinity for some time and used up lots of flowers. H. F. A. Lange had the contract. Four loads of large palms were used in the church and the arrangement though simple was very effective. Five hundred longiflorums were used and the walls were festooned with *Asparagus plumosus*. The house was lavishly decorated, the reception room being embellished with lilies, white lilac and specimen arecas; the drawing room with Jacqs and red tulips and the library with tulips and adiantum; lilies and Magna Charta roses were used in the dining room and the balance of the house in pink and white roses; banks of adiantum and palms were everywhere. The bridesmaids carried long bunches of candidum lilies.

A. H. L.

St. Louis.

Trade has been very good the last week, but flowers are a glut in the market. Roses are selling at whatever figure the florist wishes to pay. The fakirs are very numerous. There is one that has small cases at all the principal points in the city, and boys up and down Broadway, with trays of roses, selling them 2 for 5 cents, and others 3 for 5. If it was not for the fakirs I do not know what the wholesale men would do.

Mermets, Brides and Maids are selling for \$1.50 to \$4; Perles, Woottons and Meteors \$1.50 to \$3; long Beauties for \$5 and \$10 per 100. The only flower that is bringing any price is the sweet pea. These are sold at \$1 per 100, and there is always a ready sale for them.

A. Y. E.

CHRYSANTHEMUMS. Fine Rooted Cuttings.

The following surplus stock at 75 cents per 100: Sne T. Price, a good pink; Joe H. White, a fine white; Old Homestead, white with yellow center.

An Interstate Park.

Bills authorizing the establishment of
an interstate park at the falls of the St.
Croix have passed both the Minnesota
and Wisconsin legislatures. The people
of Taylor's Falls and St. Croix, the twin
villages on opposite sides of the water-fall
have held a meeting and resolved to do
something to supplement the aid extended
by the states. They will construct foot
bridges across the river, and bridges and
steps from crag to crag and cliff to cliff,
so that visitors may easily inspect and
enjoy all the beauties of the famous falls.
They will also improve the roads leading
to the park, thus furnishing a series of
charming drives.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. LON, 114 Chambers street, New York, secretary and treasurer.

CHICAGO.—Vaughan's Seed Store is rapidly getting in shape at the new double store at 84 and 86 Randolph street; a very central location. There is a frontage of 40 feet on Randolph street, with one large central window, which gives opportunity for a splendid window display. There are five floors including the basement, each 40x100 feet, which gives a total of 20,000 square feet of floor space, in addition to the sub-floor in the first story. The main floor is devoted to the retail trade and the sub-floor to the mail seed orders. The offices are on the second floor, and here and on the two floors above is the stock for the wholesale trade. The new west side store is at 206 and 208 West Randolph street, and has two floors and basement, containing 13,230 square feet of floor space. This store will cater to the west market trade and will also be used for storage purposes. With a total of 33,230 square feet of floor space in the two stores Mr. Vaughan ought to be able to handle the Chicago end of this large business to his entire satisfaction.

BIGGS, CAL.—A large ranchman near this place will this year grow 40 acres of Russian sunflowers for seed, from which is produced an oil but slightly inferior to olive oil. He expects to realize about 50 bushels of seed to the acre. It is said that a bushel of seed will produce a gallon of oil.

OUR trade directory and reference book for 1894 contains 270 pages of information of real practical value to every one in the trade. Price \$2.00.

VAUGHAN'S * CANNAS.

MEDAL WINNING VARIETIES, controlled by us and offered now for the first time.

These novelties we consider of great value and permanent additions to the high class Cannas, they are the cream of twenty kinds chosen by M. Crozy from his entire stock of seedlings to represent his best achievements in Cannas up to 1893.

CHICAGO.—(Medal awarded) Positively the best vermilion scarlet to date; 4 feet, green foliage with leaves 9 to 10 inches wide, flower truss and stalk stands boldly erect. The large flowers open out nearly flat, petals 1½ inches wide and five in number—in this respect the **Chicago** fairly out-classes all Cannas, the fifth leaf adding much to the blossom and flower spike. Its record at the World's Fair, on our grounds and in our greenhouses more than justifies all our claims for it. The record of our Canna Novelties of the past seasons entitles us to your confidence. The color, in the language of the judges, is a "dazzling vermilion scarlet," smooth and without markings except a purplish gloss. Price of this grand novelty only 75c. each.

MADAME ALPHONSE BOUVIER.—3¾ feet, foliage medium green, flower large, well opened. The color is that of Madame Crozy, tinted with dark crimson spots like Crampbell. The yellow edge is irregularly wider with clear yellow spots on upper and lower edge of petals into the throat of the flower; a magnificent Canna, scarce. Each, \$1.25.

M. MESNIER.—(Medal awarded). 3¾ feet, dark green foliage, sturdy growth, flowers large, petals wide, color salmon, slightly dotted and streaked with red, which is deepest in the center of the flower. Petals are bordered with a narrow rim of yellow which is irregularly wider on the ends, often ¼ to ½ inch wide. Each, 75c.

MIDWAY.—(Medal awarded). 4½ feet, green foliage, strong grower, color rich vermilion slightly streaked with faint crimson; petals 1¾ inches wide, compact flower spike, a strong grower and free bloomer. The crimson streaks and splashes in the petals make a splendid effect on their background of scarlet. Each, 75c.

OCTAVE MIRABEAU.—(Medal awarded). 3¾ feet, green foliage, flowers large, petals wide, color a deep vermilion, painted with finely pencilled lines of orange yellow and crimson. Price, 75c.

Mention the American Florist when writing to advertisers on this page.

Rochester, N. Y.

Small weddings have been the rule the past week and flowers are not in great demand; if it was not for a little funeral work retailers would not make expenses. A very dull week for the stores regarding cut flowers, but as most of them sell or take orders for all classes of early bedding plants, shrubbery, etc., they are doing fairly well after all. We usually had a goodly number of entertainments and fashionable weddings after Easter every year past, but this season the richer classes who use flowers extensively seem to prefer bachelorhood for a while longer. Buyers can make their own prices in job lots and when buying in quantity. Flowers of all description are plentiful and show the effect of warm weather. Roses are getting smaller, and carnations, if grown too warm, have not the lasting quality they had a few weeks ago. Violets are over-plenty.

The growers are busy planting out and potting, repotting and preparing for spring sales. The fine days we have had lately have enabled all to do considerable outdoor work and the backward spring is now almost forgotten. In several places carnations, etc. have been planted out, and all hardy stuff transplanted. Sweet peas are up here and there and second sowings are put in; if the fine weather continues for a week longer we will not feel the effects of the late spring, for with the extra help put on we are enabled to rush things through.

Our jolly Buffalo friend may consider himself very lucky in not having to combat with salted stock at Easter, and may not be far out of the way when he says that we are nearer to the salt producing districts than the windy city is, but I think it unfair on the part of those growers who use salt to send all their green stock to our brethren in the neighboring city and to let us have the pickled goods, and I would suggest to divide up in the future.

In last week's news I should have mentioned the assignment of White Bros. for the benefit of their creditors. The firm has been doing business here for the last 25 years and was generally believed to be financially sound.

ALWAYS mention THE AMERICAN FLORIST when writing to advertisers.

News Notes.

ROCHESTER, N. Y.—Chas. A. Green has enlarged his nursery near Clifton by the purchase of 69 acres of Edwin Emens for \$7,000.

MT. AIRY, PHILA.—An enterprising florist here has converted a discarded horse car into a store for the sale of plants and flowers.

ROCHESTER, N. Y.—John E. White (White Bros.) made an assignment on April 19, with liabilities between \$8,000 and \$10,000.

GENEVA, N. Y.—On the night of April 22, burglars gained entrance to Sears, Henry & Co's. nursery office but were frightened away by the night watchman.

NEWPORT, R. I.—Mr. J. R. Johnson, gardener at Mr. Ogden Golet's estate, will read a paper before the Newport Horticultural Society at the May meeting.

BRIDGEPORT, CONN.—Chas. Pfomm of 453 Barnum avenue, was very badly injured on April 14, by being struck by an electric car. It was a narrow escape from death.

PEORIA, ILL.—The Park Commissioners have adopted their election ordinance and arrangements. The election will be held on May 21. At the caucuses there will be 249 delegates chosen, and a citizens' convention will be held on the following evening.

ALLENTOWN, PA.—Geo. B. Shelly has bought a half interest in the business of H. E. Kratz & Co., and the business will be considerably extended. The greenhouses at Rittersville will continue in charge of B. P. Wynings, the present incumbent.

LENOX, MASS.—The Lenox Horticultural Society will hold its first rose exhibition on June 26 and 27, at Sedgwick Hall. H. P. Wookey, G. W. Ferguson and Thos. Dooley are the committee of arrangements. Mr. Jacob Manning of Reading, Mass., gave a talk before the society on "The fruits and flowers of California" on April 13. On April 27 Mr. Martin Finaghty read a paper on "Hardy herbaceous plants suitable for planting in Berkshire county."

SAN FRANCISCO—The Governor having failed to sign the bill appropriating funds for the maintenance of the State Board of Horticulture, the board finds itself in an embarrassing position. At a meeting held April 17 resolutions were adopted urging the Governor to take proper action. The election of officers resulted as follows: Ellwood Cooper, president; L. W. Buck, vice-president; J. L. Mosher, auditor; Fred C. Miles, treasurer; B. M. Lelong, secretary; A. Craw, quarantine officer.

THE GREAT INSECTICIDE! Highest Award at the Convention of American Florists, 1894.

Used and unannouncedly endorsed by the foremost growers and highest authorities on Floriculture in America, as the most effective and convenient insect exterminator known.

No need of fumigation with Tobacco, making you sick with its stench, possible to use only indoors, and never to be depended upon.

No need of kerosene emulsions, tedious to prepare and useful in only a limited degree.

SULPHO-TOBACCO SOAP is a wholly simple to prepare and apply. Dissolve the soap in water and apply the solution as a spray or wash. Used the same way indoors and out. Absolutely positive, and wholly safe. Will not injure the tenderest plants.

Offered and exclusively recommended by leading members of the trade. A Can (enough for 3 gallons of the solution), postpaid, 30 cents; 4 Cans (enough for 12 gallons), \$1.10; 1 doz Cans (enough for 36 gallons), \$2.00 by express. Write for pamphlet

Near Long Island Ferry, **NEW YORK.**

Cleveland.

Harry S. Gordon, grandson of the late W. J. Gordon, who has been conducting greenhouses near Gordon Park, made an assignment on April 27 and turned over his business to M. W. Sanders, whose bond was fixed at \$4,000.

Outdoor flowers are becoming quite plentiful, with the early tulips, daffodils, hyacinths, magnolias, etc. in full flower, and valley and lilac in bud which will soon follow.

Cleveland is unfortunate in that it possesses several human buzzards who style themselves first-class florists. There have been several cases brought to the attention of the writer lately where a house of mourning has been entered by one of these unsavory birds following closely in the footsteps of death itself, in the hope that by "legitimate" soliciting(?) they might possibly get an order before it was placed elsewhere.

Is it any wonder that the "elevating" business—so called—gets into disrepute at times. We believe in getting all the business we can in a legitimate way, but we doubt if "crape chasing" comes under that head. L. F. D.

A Correction.

We are informed that the item alleging wrong doing on the part of Mr. F. S. Folwell of Lenox, Mass., which appeared in our Springfield notes, was based upon an unconfirmed rumor, and in the interests of justice would therefore ask our readers to give Mr. Folwell the benefit of the doubt, pending an investigation.

THE manufacturers have adopted a new scale of rates for glass, to take effect May 1, by which net prices on greenhouse glass will be advanced. It looks as if those intending to build this present season would do well to secure their glass at the earliest possible moment. A large dealer in greenhouse glass in commenting upon the almost universal demand for one size, 16x24, asserts that if every florist in the country is to insist on this size it will cost them from 50 cents to \$1 additional per box, as there are not factories enough in the country to supply such a demand.

Red Spider Can't Live
WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD,

Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.

Yours truly, E. G. HILL & CO.

Price \$1.00 each, prepaid. Try one. You will find it the most useful and valuable appliance you have ever had.

Kerosene as an Insecticide.

Prof. Howard Evarts Weed, of the Mississippi Agricultural Experiment Station, Agricultural College, Miss., has been experimenting with kerosene as an insecticide, and has devised an apparatus for diluting the kerosene at the time of spraying so that any strength may be used as desired. Prof. Weed finds that 1 part kerosene to 19 parts water is about the right proportion for use in the greenhouse, and advises that if a proportion stronger than 1 part kerosene to 15 of water be used, it be first tried on a few plants and result first noted before proceeding. Prof. Weed's experiments were mainly in exterminating aphides, but as every florist prevents the appearance of this insect in his greenhouses by regular fumigation he does not need kerosene as an exterminator. Still in dealing with other insect pests the kerosene may be made useful, especially in exterminating mealy bug, as it is undoubtedly the most effective of the insecticides which kill by external contact. The knapsack pump devised by Prof. Weed is however, not needed by the florist. The simple hose attachment manufactured by the Hose Connection Co., Kingston, R. I., would accomplish the same result with much less effort.

If any one has a lot of coleus infested with mealy bug we would suggest that he experiment with the kerosene in the proportion of 1 part to 19 parts of water and report results to us. In using even this solution we would advise that the spraying be moderate in amount each time, but repeated every other day until an effect is noted. If the first spraying results in injury to the foliage reduce the proportion of kerosene. An insecticide that will kill mealy bug without injuring such tender foliage as that of the coleus will be heartily welcomed.

THE NEW YORK State Legislature has appropriated \$16,000 to be expended for the promotion of horticulture, the treatment of plant diseases and destruction of insect pests in the fifth judicial department. This department includes the counties of Cayuga, Seneca, Wayne, Ontario, Yates, Steuben, Monroe, Livingston, Allegany, Orleans, Genesee, Wyoming, Cattaraugus, Niagara, Erie and Chautauqua. Communications should be addressed to Prof. L. H. Bailey, Cornell University, Ithaca, N. Y.

BLOOMS of the giant strain of verbenas were recently received from John F. Rupp, Shiremanstown, Pa. The trusses were large and compact, and must make a showy appearance in the bed.

Orchids for May.

A good many years ago growers were a good deal interested in the question of outdoor exposure for orchids. The late Isaac Buchanan, James Taplin and others did something in this way, in fact Mr. Buchanan turned out the greater number of his American kinds. I did a good deal myself in this line at one time, and kept systematic records for each species, which however, are scarcely worth going through for the florist. It will suffice to say that the most useful result of outdoor exposure is the ripening effect of the free air for such kinds as complete their growth early enough to benefit by it. This is particularly true in dry seasons and with East Indian kinds. Some very queer things happen, however, for instance *Arides crispum* grows in the full blaze of the sun when wild, but it will not stand our sun well at all. The same may be said of *Vanda cœrulea*, it gets considerable exposure on the older gordonia trees upon which it often grows, yet here it is quite sensitive to sun. Many of the dendrobes, all in fact that I have tried, are benefited by a dry month or six weeks in the sun outdoors, after their bulbs are built up. I have grown them outside with abundant water, from July onwards, but without any special advantage other than a saving of labor. Simple arrangements were made to accommodate them. So far as South American kinds are concerned, it does not seem to benefit them, except in the case of those kinds which are given to "rot" in humid and extreme weather.

Some odontoglossums and oncidiums are susceptible in this way, and the best and fattest bulbs are sure to be the ones affected. Such plants are almost absolutely safe beneath a tree; out of more than 150 species tried I never lost but one bulb, from a plant of *Oncidium sarcodes* which had been placed out but a day previously. Perhaps "bacteria" or something was on to it when it went out. What in the world causes the vile smell of those rotting bulbs, turnips are not a circumstance to them. Some of the experiment stations ought to nose the thing out. Of course it is common enough for decaying vegetables to smell, but this comes on so suddenly and emphatically, I'll bet there's a new "bacteria" at the bottom of it. But it is certain that the dryer outside air checks it, whatever it is.

I ought to add that the scientist who undertakes an investigation will need to be on the jump, for the whole in'ards of

the pseudo-bulbs melts away in just no time!

I placed the winter growing odontoglossums and some few other "cool" orchids outside one season as early as the 15th of May, but usually from the end of May onwards to August, and as growth nears completion, is the time to receive whatever benefit there may be in outside exposure. The root action is commonly checked, but several summer orchids will flower well outdoors.

The ærides in a good many varieties bloom during May. *Arides crispum* and its varieties are not very commonly seen; it is to my mind one of the most delightfully fragrant of all flowers. It grows naturally in moderately cool temperatures, say roughly from 60° to 70°, but it is always perched on the southern face of bare black rocks, which retain great heat, so that although there is frost all around at night during December to February yet the plants never suffer, but become so purpled in foliage and hard looking that they would drive a hothouse man crazy if they took on such ways with him. One of the fallacies in cultivating these plants is the idea that they must be kept moist always; the truth is there are but few orchids which will stand so much drying, providing they have plenty of roots, which go far towards acting as storage reservoirs. *A. odoratum* in several varieties will bloom during the month, and so also will those mentioned in April, further north.

The various types of *Cypripedium barbatum* are in full force now, and *C. hirsutissimum*, though less commonly grown, is one of the best and most striking among them. *Dendrobium Dearii* is a good white flower for May, not as large as *D. formosum*, but with other compensations. *D. transparens* and *D. moschatum* also flower, and help to make things interesting. *Saccolabium Blumei* in some varieties also flowers at this season.

Thunia alba is an orchid which is more neglected than it should be. I believe it would be as useful for a florist as any orchid other than *cypripedium* or *cattleya*, if properly attended to. It grows from March to September in moss, or moss and fibre, and should be kept quite dry during the winter season, it won't shrivel if the canes are strong. *Thunias* produce lots of young pseudo-bulbs from the tops of the old canes, in the way of some dendrobiums, and for cutting they are really good. They should be potted early in March, and then the young ones can be separated and cared for.

Nobody seems to grow brassias, but they are quite as good as many *cypripediums*, and the flowering is more abundant. *Cattleya Mendellii* and *C. Mossii* continue during May. *Odontoglossum citrosimum*, *O. pulchellum majus* and *O. Roezii alba* are three good white May

flowers. *Oncidium Lanceanum* also is usually at its best.

Trenton, N. J. JAMES MACPHERSON.

Orchids Now Blooming.

Maxillaria Sanderiana, a truly noble plant, is now in bloom with us, I believe for the first time in this section. It must be grown in a basket. I think, for the flower buds will push downward in the potting material and come out either on the side or bottom, like a *stanhoepa*. I mention this because all the plants I have seen in collections so far were grown in pots like other *maxillarias*, and my plant when received came also in a pot, but in hunting for a slug which had left its marks on the leaves I turned out the plant and found decayed matter, which looked very much like an old inflorescence, and therefore we substituted a basket for the pot, leaving the old potting material undisturbed. The complaint that *M. Sanderiana* is a shy bloomer does not hold good, for no flower spike can possibly force its way through a flower pot, and consequently will have to perish unseen. This *maxillaria* will flourish in the temperature of a *cattleya* house, and after completing its growth wants a decided rest in a cooler place. Even if the bulbs should shrivel a little bit, no watering hardly is necessary, only an occasional syringing until toward spring, when gradually more moisture should be administered to induce the plant to push, first the flower spikes and soon after the new growths for the following year's blooming. It is of very robust growth and habit, having long stiff evergreen leaves 8-10 inches long, produced singly on flat compressed pseudo-bulbs. The flowers are 8 inches across, of an ivory white, the base of the petals tinged and veined with a bright purplish crimson, as also is the reverse side of the petals, and the underside of the lip, the inside of the lip being pale yellow with a few crimson veins in the throat. In texture the whole flower is very firm and thick, almost may be called fleshy, and the lasting quality is unsurpassed by any other orchid.

Cœlogyne Massangeana we have also in flower again; it is a native of Assam, and one of the large, vigorous, evergreen species, requiring a good size basket or pan. The bulbs are pyriform and bear two plicate leaves 15 to 18 inches long, of a dark shiny green. The flower spikes spring from the base of the bulb and are long and drooping; as many as twenty or more blooms are loosely arranged along the flower stem, which is from 1½ to 2 feet long. The sepals and petals are of a very light ochre yellow, the lip is triparted, beautiful maroon brown with yellow veins, the middle lobe white at the edge with a brown disk. A very handsome species, and it does not require a very warm house, doing better in ordinary greenhouse temperature. When not in bloom we set the pans or pots on the benches where a more even moisture may be supplied, but as soon as flower scapes begin to show, which generally occurs twice a year, we hang them up again, to give the long drooping racemes a chance to develop.

Cœlogyne Dayana grandiflora is a very desirable and free blooming species, a native of Borneo. The long pointed pseudo-bulbs are 4 to 8 inches high in healthy specimens; the leaves long and narrow, erect, and spring from the top of the bulbs. The pendulous spikes will appear with the young growths in April or May. At Mr. Kimball's a large plant with 8 spikes, bearing from 18 to 30

flowers on each raceme, is in beautiful condition. The sepals and petals are of a pleasing light yellowish ochre with dark brown stripes on the lateral lobes of the lip. A very showy species, which lasts well. Pot or basket culture suits equally well, but if grown in pots should be hung up when growth begins until past flowering.

Cœlogyne ocellata maxima, from India, is another fine species; in bloom now at the same place. The bloom is also produced on long drooping racemes, the individual flowers are much larger than in the above mentioned species, but not so numerous on the spike. The color is pure white with a large yellow blotch on each lobe of the lip and a few purple stripes in the throat, very sweet scented and lasts in perfection for a long time. The bulbs are 2-3 inches high, and bear twin leaves, like the others. Basket culture with but little moss and fiber and abundance of drainage suits it best. All these orchids are very desirable for private collections and will also be found valuable in commercial places on account of their free blooming quality.

Rochester, N. Y. J. B. KELLER.

Lime Stone Soil for Roses.

Is limestone soil good for roses; it is of a clay nature. What kind of roses will do best in it, teas or hybrid teas? T. R.

Replying to T. R.: I have tried soil collected from a limestone strata and found roses do fairly well in the same, and if your correspondent's soil can be collected from the surface, say three or four inches deep only, I do not think he will find any difficulty in growing good roses in it. The best proof of the quality of the soil is to observe how grass or grain crops grow in it; if the above will grow well in the soil with a fairly liberal application of manure there is no doubt that roses will. I have never yet seen a soil that will grow good grass or grain that failed to grow roses when properly treated. The best manure for such soil, particularly if of a light nature, is cow manure, and if it can be procured from a stable where the cattle are grain-fed so much the better.

JOHN N. MAY.

Rose Leaves Turning Pale.

We have a house of Bride and Bridesmaid roses, planted last summer (in July), which grew very nicely until about the middle of January, when the leaves and new shoots began to assume a pinkish yellow, and to shrivel up and fall off. Have tried the usual way of reviving for over watering but have failed. Soil was fresh rotted sod and pure bone meal as fertilizer. Probably some of your readers can give us some advice. C. J. T.

Replying to your correspondent C. J. T., from the description given I should say that his roses are undoubtedly affected with club root. If he will dig up a diseased plant carefully and wash the dirt

clean off the roots I think he will find a lot of small lumps on the roots, many of them not larger than a pin's head. These if dissected and put under a magnifying power of 250 diameters will be found to contain lots of eel worms, such as have often been described in these columns. This pest is greatly on the increase in all sections of the country, and so far science has failed to give us any remedy even for prevention, much less a cure. The only remedy so far found is to steam the soil before using it, and this to be effectual must be heated to at least 235°, 245° is much safer. At this last figure every nematode in the soil, whether in egg or fully developed form, must die. It is a remarkable fact that the lower the order of animal life the more heat it takes to destroy it. In all our experiments here, covering several years, we have found that the common earth or argle worm dies as soon as the temperature of the soil reaches 150°; wire worms take 10° to 15° more, and many of the smaller insects take still a little more, while the eel worm which is one of the smallest and of the lowest order of animal life, takes over 230°. By this we can readily see the difficulty of exterminating this pest. We have consulted every known authority on this subject, and find they all agree with the above temperatures for killing them. Some years ago we erected a large apparatus to steam every particle of soil we use on the place for growing all kinds of stock in, and found after many trials what is stated above. I am fully aware how difficult this matter would be to very many of the craft, and the man who can invent the right kind of an apparatus for such a purpose, without making it too expensive, will find lots of customers in the near future, unless the present indications are very misleading.

JOHN N. MAY.

Cucumbers Under Glass.

The accompanying illustration shows one of Mr. Geo. Miller's cucumber houses at Hinsdale, Ill. The variety grown is Rollison's Telegraph. These cucumbers average 16 inches in length, though some are very much larger, and are produced in great profusion, as the picture shows. The cucumber seed is sown in small pots (2-inch) and from these planted into the bed. The plants are set 2 feet apart, the earliest house being planted about the first week in December, the last house a month later. The plants are in bearing 8 to 10 weeks after planting. The soil is a compost formed of one-half good clay loam and one-half cow manure. When the beds are filled the soil is drawn up into slightly raised hills two feet apart. But one plant is allowed to a hill, and as soon as it is about 18 inches long pinching is resorted to. Pinching must be regularly attended to, or there is too great a growth of vine. The variety grown sets fruit without fertilizing, but the flowers must be hand-fertilized if seed is wanted. Shading must be applied as early as February, or the vines will scorch. The temperature should never go below 65°, and should be kept as near 70° as possible. In spite of the rich soil the plants will need more food, and should have liquid manure in various forms at least twice a week.

Botanical Gardens.

It is one hundred and sixty-two years ago since General Oglethorpe landed at Savannah and built a town. It has been forgotten that he was the first on this continent to establish a botanical garden.

MR. MILLER'S HOUSE OF CUCUMBERS.

Among many other useful plants he introduced the tea plant. This is the primary conception of a botanical station entertained by our British cousins—usefulness.

However much Oglethorpe's garden may have done for the south, in the first years of its existence, the times became too troublous for its permanency; such gardens are emphatically works of peace.

A full century and a quarter passed before the faintest idea occurred to the people that anything had been lost, and it is doubtful even to-day if any sound comprehensive idea of the province and use of botanical stations obtains among Americans.

In their economic features, then, they are dedicated to the presentation of living object lessons in useful plants, and as nearly as may be of the climates they naturally inhabit.

It is quite conceivable that they are prime factors in the prevention of waste. That they point the way to the truth in the cultivation and climatology of such products as the cocoanut, pineapple, banana, sugar cane, orange and tea plant is evident.

There can be no doubt whatever but much loss might often be avoided if well ordered gardens, managed by gardeners conversant with botanical geography and climatology, were accessible to the people. The mere fact that the pineapple is grown in the tropical hothouse and the orange in a sub-tropical one, ought to

lead any one to avoid planting them where it severely freezes.

But these gardens, when complete, in their handy presentation of species, ought to be as useful for what they exclude as for what they grow. It is not, in my opinion, "scientific" to include species requiring temporary protection during winter, because such species do much to impress many with an untruth during the summer. Whatever protection is afforded should be manifest at all seasons. Even such plants as are removed from the hothouses should be distinguished by the color of their labels, and the geographical distribution should at all times be indicated.

In the vicinity of colleges and schools the systematic arrangements should be the most modern in sequence, simple in comprehensiveness, and beautiful in grouping.

The oil has never been very well fed to the lamps of botanical science. The demonstrations have been lit by wicks of paper, which have merely sputtered and gone out, leaving but little other than the dry ashes of a memory.

Ask those of your medical friends, who are supposed to know such things, to give you a description of the bases of many of their drugs; ask them even to give a synopsis of modern classification, and you will probably be surprised if not pained. I doubt if they were ever taught much classification, yet without it the human mind is utterly unable to grasp

such a science as botany, with many more than 100,000 species and innumerable varieties of flowering plants alone.

How important the object lessons of the botanical garden may be made, and how these objects and many others may be united into a beautiful and harmonious garden, at a cost which is surprisingly low, has probably never occurred to the people who control such matters. Parks, or parts of parks, may as well be wooded as arboreta as not, and nearly as cheaply. A specimen of each of the trees and shrubs hardy in the middle states may be had at retail rates for one thousand dollars, and the duplication of varieties may be carried to any extent, almost, at proportionate rates. Ground may be had at almost any desired price, according to locality.

Such gardens or arboreta should be uniform in their sequence all over the country. The *Genera Plantarum* of Bentham and Hooker is the recognized Bible of botany, and the professors who depart from its authority should be frowned down. They only make confusion worse confounded.

A landscape gardener who has a knowledge of classification is the proper person to arrange such gardens. It is a fallacy to suppose that architects, or professors of native herbaria, can have knowledge of park or garden grouping. It is a fact that all the professors of all the world have left very much indeed to be desired in the best and most popular of the bo-

tanical gardens. It is no unusual thing for a young gardener to impotently travel from one end of a large garden to the other to find a representation of a genus, order or class.

Trenton, N. J. JAMES MACPHERSON.

Flowering Shrubs at Washington.

Notwithstanding the very severe winter through which we have just passed the shrubbery in the parks has never been better supplied with bloom. *Magnolia Halleana* put forth an unusual amount of bloom, though a week or ten days earlier than usual. *Magnolia conspicua* had an abundance of flowers and was not caught by frost, which is a very unusual thing in this latitude; in fact all the early flowering magnolias met with no frost to mar their beauty. Forsythias were exceptionally fine this spring, and attracted the attention of the many visitors who come to Washington at this season; their abundance of bright yellow flowers could be seen for squares, there being no foliage to obstruct the view. *Spiraea Reevesi* and *S. prunifolia* fl. pl. were remarkably fine. *Jasminum nudiflorum* did not flower so freely this spring as usual, nor did any of the many plants of cydonias do justice to themselves. Both of the above named are the first things in the parks to show signs of approaching spring, but for some unknown cause both flowered very sparingly this season.

Cercis japonica deserves mention, for it has been very attractive among the shrubbery this season; quite a number of the plants about the parks were so thickly beset with flowers as to entirely hide the branches. It puts forth leaf after flowering and its foliage is attractive owing to its odd shape. Thrives well in any good soil.

Exochorda grandiflora is flowering unusually early; it is now in full bloom, while in former seasons we have had it to cut from Memorial Day. It is a very handsome hardy shrub, producing an abundance of white flowers. The structure of its fruit would attract the attention of a close observer of such things as being remarkable; it consists of five small compressed bony carpels adhering round a central axis in a star-like manner. Thrives in good loam and is propagated from seeds or layers. The plants about Washington do not seed freely.

Caragana grandiflora is a very ornamental hardy shrub, and is quite attractive just now, when its thin branches are a mass of yellow pea-shaped flowers, with just enough young foliage to add to its beauty. The flowers are much larger and more attractive than the other varieties, the center of the flowers being shaded into brown. It is well adapted to shrubberies, and is of easy culture in light sandy soil, and may be easily increased from cutting made from its roots, or by seed.

Syringa persica laciniata is one of the most attractive of all the shrubs now in flower in the parks; it is one mass of bloom and its finely cut leaves add much to its beauty, and even after its flower has gone the foliage would recommend it to one interested in plants. It is worthy of a place in every collection, no matter how small. It thrives in light rich soil and is easily propagated from cuttings made from ripe wood in the fall.

Staphylea Bumalda, while quite an old plant, being introduced in 1812, is nevertheless one of the best shrubs to be had for a large place, and to get the best effect should be planted by itself. At present it is one of the most striking shrubs in

flower. The plants about the parks are at present covered with bunches of white fragrant flowers. It attains a height of about 15 feet, thriving in ordinary soil. Propagation may be effected in autumn by cuttings of ripened wood. *Staphylea* is a small genus of about five species of hardy shrubs. Some of them are excellent for forcing when specially prepared for that purpose. *S. Bumalda* is a good one for forcing, but whether it would take is a question. It should be used more extensively in the decoration of our parks, and deserves a place in every collection.

Washington, May 7. REYNOLDS.

Aralia Chabrierii.

I want to call attention to this most graceful plant for decorative purposes; as a small specimen it may be used to advantage in table decorations, larger ones will be admired as specimens standing singly or in a group. As it is one of the newer varieties it has been too expensive to be used largely, but now European catalogues offer good plants at a very moderate figure, and we can therefore well afford to use them in decoration. This *Aralia* does not grow very rapidly, but retains its long linear leaves at the lower part of the plants in perfect health, and the old leaflets do not drop off until they are two or three years old. We have a few old plants on the place about five feet high or more, one of them being represented in center of the illustration, and although they are used every season twenty or thirty times for decorations, and have been so used for the last six or seven years, these plants are still in perfect shape, and without a blemish; I merely mention this to show that they are not like so many decorative plants, which at best you can only use for a season and then, being beyond recovery and worthless, must be thrown out. I consider *Aralia Chabrierii* to be superior to *A. gracillima*, which has the same general aspect, for unlike the latter variety it does not get bare at the bottom, because if the old leaflets drop, new ones are formed continuously to take their place, and the plant is always well furnished to the base. The leaves are of a deep shiny green, very narrow, about ten inches long with a dark crimson midrib. The growth is very symmetrically arranged all around the straight erect stem, and the whole habit is very graceful.

This species is usually classed with stove or hot house plants, but we found it to do better in ordinary greenhouse heat in winter and entirely out doors in summer; they grow more compact and sturdy and are not likely to draw as they may do in a warm house, especially if a little crowded. It is not a plant that requires any nursing at any time, the only thing it wants is plenty of water at all seasons. In this respect it is like all the aralias, they all require great quantities of water at the roots, and therefore in repotting the soil should be rammed in firmly about the roots; ordinary loam with one-third well rotted cow manure and a sprinkling of sand will do admirably for them. They do not require extra large pots, and this is an advantage in table, as well as in other decorations.

Propagation is best performed by cuttings in August of the half ripened wood; it has been said that only top cuttings from the central leader should be used, but we find that the side branches, even if cut in several lengths, will in a short time produce leaders, and we can not see any difference after the plants attain the height of ten or twelve inches. The side branch cuttings are just as perfect in

shape as the leader or top cuttings. We insert the cuttings in sand in a pot or pan, and place in a shaded frame without any bottom heat, and it takes them eight or ten weeks to root.

J. B. KELLER.

Rochester, N. Y.

The Variegated Cut Worm.

ED. AM. FLORIST:—I send you a worm that has caused sad havoc in my greenhouses. They hide in the soil in the daytime and come out at night. They eat almost everything, being particularly destructive to carnations, eating into the bud so that when it opens the petals fall. Can you tell me what it is and what remedy to apply? We have tried everything we know, but they thrive on all we have tried as yet. WALTER P. STOKES.

We referred the matter to Prof. L. O. Howard, Government Entomologist, who replies as follows:

"The insect is the variegated cut worm (*Agrotis saucia*) and the best remedy is to saturate the soil about the affected plants with kerosene emulsion diluted 15 times and washed down by subsequent waterings. All earth to be used in a greenhouse should be prepared before hand by allowing it to stand for a number of months without any vegetation growing upon it. If put in shortly after being dug it is liable to contain numbers of young cut worms."

Decoration for a Class Banquet.

ED. AM. FLORIST:—Will you give me a few suggestions regarding decorations for a high school banquet? Two tables will be used, covers being laid for 15 at each table. Class colors lavender and cream, and green and white. H. F. H.

Several things would suggest themselves to us as suitable and appropriate for such a decoration. In the first place there is the iris, which probably can be had at the date you mentioned (about June 1). Of these there is a pretty lavender variety that would match one class color nicely, and a light yellow or cream sort of this same species would probably answer for the other. The term "cream" color is, however, very vague. There are light and dark cream shades of various tints, and it is therefore difficult to say just what variety of flower would best match that shade of cream you have in mind. The same is true also as to lavender. Sweet peas of the variety known as Butterfly would be a good thing to use. A combination of these with, let us say *Mme. Hoste* or pale *Perle* roses would be good. It doesn't matter so much to have the flowers just the exact shade of the ribbon (we assume that you will use the class ribbons in connection with your decoration) but the two, ribbons and flowers must harmonize.

For the white and green table we would say that white roses either by themselves or in combination with white sweet peas would be good; for green we can use a variety of stuff, *adiantum* or ferns in variety, or even the common wood ferns will answer if the decoration is to be inexpensive. Of course we need not confine ourselves to the above mentioned variety; there are other white flowers quite suitable; we must be guided somewhat by what the market may afford at the time.

As to arrangement, this will somewhat depend on the shape of the table. We shall assume these to be oblong and square at the ends. This being a banquet we need not necessarily adhere to the rules laid down for dinner table decora-

ARALIA CHABRIERII.

tions, that is to keep the arrangement entirely either below or above the vision across the table. Flowers in vases of moderate height are not only admissible but desirable, especially if we use the iris, which shows up much better in a vase than in a low flat arrangement. Sweet peas on the other hand should be placed either in a low glass bowl or arranged in a suitable sized plateau. Roses arranged loosely, either in rose bowls or cut glass vases, will give better satisfaction than in any other way. The weather is likely to be warm and the flowers will last better.

For an oblong table to seat 15 or 16 persons the arrangement had best be made to consist of a small centerpiece and one at each end of the table. We might place a low arrangement in the center and the taller vases at each end, or vice versa; this is a matter of taste, only we should confine ourselves to one variety of flower for each. If favors are used these might be tied with the class ribbon. The flowers of these should be of the same varieties as those used in the other decorations. The cost of the material outside of the ribbons should be quite moderate at that season of the year, and could be furnished probably, if simple, for \$5 per table at a profit. Of course we must be guided as regards cost by the price we bargain for.

THE American Association of Nurserymen will hold its annual meeting at Indianapolis, Ind., June 12 and 13 next. A rate of a fare and a third for the round trip has been secured from the railroads. Full details may be had from the secretary, Mr. Geo. Seager, Rochester, N. Y.

Boston.

The Gardeners' and Florists' Club enjoyed a rare treat in the address of Mr. Henry O'Meara on the "Poetry of flowers" on the evening of May 7. Prefacing his remarks by the proposition that the consideration of flowers might be taken up under two general heads, those of utility and estheticism, the latter being on the plane of poetry and sentiment, he proceeded to tell of the inspiring effect of flowers in religious, political and domestic life, and likened the gardener and florist to a bridge which connects the realms of drudgery and prosy tilling of the soil with those of congenial fancy and aspiration. The practical grower, he said, is steadily reaching out from the useful to the esthetic application, and the poetical dreamer twining in to them the tributes of his fancy and sympathy. Flowers, he said, pay their tribute to every phase of human life, enlisting their beautiful ministrations of cheer, of solace and of sad memorial. The flowers have furnished the poets of all time with inspiration and beautiful smiles, and have been likened by them to the stars and the rainbow, and have spoken to them of the resurrection, and the poets in turn have done much responsively for the flowers, and unlike the botanist or the chemist, their mission has been to impart instead of to destroy life. The last rose of summer has with the vivifying fancy of the poet been made to live in memory and emotion more vitally than whole banks of gaudy bloom. Mr. O'Meara illustrated his points with quotations from Holmes, Horace Smith, Moore, Mary Howitt, Leigh Hunt, Robert Buchanan, Keats, Milton, Mrs. Her-

mans and Burns, the latter being beyond all the poets in his opinion in delicacy of feeling and the ability to weave flower thought into beautiful poetic expression. The symbolism of national flowers, the beauty of the wild flowers, the influence of the flowers of childhood and home, were all beautifully illustrated, and the speaker made a strong plea for simplicity in the naming of flowers, and denounced double naming, misrepresentation, the application of grotesque, unmeaning or conflicting names, and everything calculated to mislead flower buyers, a sentiment which was quickly applauded by the audience. The subject of special forms of verse as applicable to special flowers was treated in a novel and interesting manner, and the speaker illustrated his meaning by quotations from several of his own original compositions. A collection of dried flowers and leaves prepared half a century ago, mementoes of many mountains, lakes and castles, localities famous in poetry and history, was passed around and examined with great interest by the audience.

Jackson Dawson spoke of the sentiment attaching to the flowers associated with one's childhood, and told how in many cases old settlements may be identified and the origin of the settlers made known by the flowers found growing in such places. The national flower, he said, was not always necessarily the best loved, and he would like to see a Scotchman who did not love the heather better than the thistle.

Kenneth Finlayson applauded Mr. O'Meara's remarks regarding duplication and improper names, and was followed by M. H. Norton, who told how much the Society of American Florist had accomplished in this direction. Lawrence Cotter came next with apt quotations from Wordsworth and Goldsmith, but like the lecturer, gave the palm to Burns. An impromptu rhyme by Warren Ewell brought the discussion to a close, and a vote of thanks was extended to Mr. O'Meara, after which he was unanimously elected an honorary member of the club.

Mr. Chas. J. Dawson was elected secretary in place of Mr. Walsh who resigned from that position, and a vote was passed providing for a strawberry festival and concert to take place in June. A dish of superb pansies was contributed by Mr. M. H. Walsh of Woods Holl, and a vote of thanks was tendered him by the club.

The May exhibition of the Massachusetts Horticultural Society, which was held on Saturday, 4th inst., brought out a rich display of pelargoniums, Indian azaleas and calceolarias from Mr. N. T. Kidder, John L. Gardner, Dr. C. G. Weld and others. A fine collection of orchids and Cape plants was staged by John L. Gardner. J. S. Fay's pansies were pronounced the finest ever shown here. Gloxinias from E. S. Converse, narcissi from the Bussey Institute, and native plants and flowers from a number of contributors were also among the attractions.

Very extensive planting has been done at the Arnold Arboretum. Mr. Dawson estimates that he has planted nearly forty thousand shrubs this season already, and he is still at it. The work was seriously delayed by the late spring. Work on the new boulevard which is to connect the Arnold Arboretum with Franklin Park is to be pushed vigorously. Anthony McLaren of Forest Hills, whose greenhouse stands in the way of this improvement, has been notified to vacate at once. Mr. Dawson's son George Walter, who is in-

structor in architectural drawing at the University of Pennsylvania, will sail for Italy May 18, where he will spend several months in study.

Lawrence Cotter has made a rich strike in two houses of *Astilbe japonica*. The late season will make this a profitable flower to have for Decoration Day. The clumps were frozen solid until Easter, and planted in the bench in a frozen condition the moment the Easter lilies were finished. The growth which they commenced to make at once was something remarkable. Mr. Cotter's stock of young Brides and Bridesmaids for next season's planting is in splendid condition.

Mr. E. B. Clapp makes a specialty of pot geraniums for the auction trade every spring. Two new houses completed last season by Lord & Burnham are filled with a very handsome stock. Mr. Clapp grows but one single geranium, *Athlete*. He regards *La Favorite* as a better double white than *White Swan*, and first of all bright varieties he places *S. A. Nutt*.

Mr. John Walsh is about to retire from his position as superintendent of the Cut Flower Exchange.

Twombly has opened a branch store at Clark's Hotel.

Chicago.

It is an undeniable fact that the glut is with us; the wholesalers are buried beneath the accumulation of flowers, and they seem inclined to think that the waste-barrel is their best customer. Naturally the unusually warm weather, more like July than May, has brought out stuff very rapidly, and it is in many lines poorer in quality than last week. Roses are generally soft, and suffer in color too. Some of the finest Beauties still hold up to \$3 a dozen, but half that is the price for excellent stock—in fact 1.50 may be called the prevailing price for good stock, and from this it scales down to 1.50 a hundred. Other roses are quoted at 1.50 to 3 per 100 for selected stock, but they are bought in larger lots for 10 per 1000, first quality, and from that down to 6 per 1000.

Carnations share the general tumble, and are extremely plentiful, with few buyers. General stock is 50 cents per 100; selected fancies range from 1 to 1.50. Daybreak suffers from the heat, like all the rest, and many are rather bleached out. Violets are pretty well at an end, and the few coming in are very small and faded. Sweet peas have taken a drop; they are very plentiful, and bring 10 to 35 cents a 100. About the only thing which has not dropped in price is *Harrisii* lilies, which hold at 8, though, like everything else, they go very slowly.

As for outdoor stock, it is swamping the market. There is an ocean of lilac, overflowing every dealer's counters; it is down to 10 cents a bunch. Bulb stock is another drug; poet's narcissus is piled up everywhere; tulips are slackening a little. Very good outdoor valley is seen; it goes at 50 cents a hundred. Ferns are now plentiful; in fact there is no lack of anything except buyers.

Reinberg Bros. have enlarged their space to double its former size, and now have a very light and commodious place, with ample counter room.

Geo. Piegras has moved over to 59 Wabash, so we now have three wholesalers on the same floor. Geo. Klehm has space now in Kennicott Bros.; our wholesalers appear to be concentrating in one locality.

E. Wienhoeber & Co. arranged a very handsome buffet table decoration this week, the occasion being a ball given by

Miss Pullman at the family residence, Prairie avenue and 18th street. The arrangement was quite novel, and consisted of an elaborate centerpiece. The main feature was a large ball composed of Bridesmaid roses. The ball, about 30 inches in diameter, was raised some 8 inches from the level of the table, resting on a circular bed of *adiantum*. A fine specimen plant of *Areca lutescens* formed the apex of the design. The ball being open at the top the pot of the plant was placed inside it, giving the palm the appearance of growing in this ball of roses. Among the leaves of the palm tiny electric lights were placed, giving a beautiful effect. The table, a square one, had masses of Bridesmaid roses at each of the four corners, which drooped in graceful sprays to the floor. Ribbons to match the color of the roses were draped in loops and bows around the table with charming effect. About 1000 roses of the best quality to be obtained in our market were used in this decoration, which as a whole was one of the most elegant and tasteful ever seen here.

Mr. H. A. Bunyard is now staying a week with an old schoolmate in Marquette, Mich. From there he will go to Cleveland, O. He will take up his work again about June 1.

Philadelphia.

The weather has been quite warm the past week, and its effect on cut flowers, particularly on the large roses, is very noticeable. The hustlers have a hard time of it these days; it's no joke to lug eight and ten boxes filled with flowers and weighing anywhere from thirty to fifty pounds, up one street and down another. It's bad enough when the weather is cool, but now that the warm days have come and business is dull and "we don't want anything" is the greeting, the load seems to get heavier instead of lighter with every stop. However a few more weeks will settle the business, and then will come the long rest, at least the trudging days will be over except possibly to get that "little" bill.

Everything is plentiful and most of the stock is good; *La France* roses are now getting fine and this variety will soon be the leading pink. *Brunners* and *Laings* are almost done, the most of the stock offered being second crop. Carnations are to be had in any quantity, and the quality is still fair; 1.50 per hundred is now about the top figure, while 1 will buy very good flowers. Sweet peas are very plentiful, the price ranging from 50 cents to 1 per hundred. All the bulbous stock is done. Valley is equal to the demand at 3 per hundred; violets are done.

Some very good pæonies and snowball was received from Herbert Pennock of Gordonsville, North Carolina, and large quantities of southern lilac have been seen, some white from Mr. Cook of Baltimore being very fine. Lilac is in flower about here now and great quantities of it is to be seen on all the prominent streets; it is mostly handled by colored people who sell a good sized bunch for 5 cents. Prices of roses are for the larger teas 4 to 6, smaller kinds 2 to 3. Hybrids and Beauties 2 to 3 per dozen.

The Florists' Club meeting last Tuesday evening was held at Dumlér's, Broad and Locust, and was well attended. Mr. Westcott not having had time to prepare his paper on "the most profitable summer crop," it was postponed until the next meeting. Mr. Westcott has been very busy lately superintending the moving of the alleys and other club room furnishings; these are all now moved and stored at

his place, awaiting the building of the new hall. In lieu of Mr. Westcott's paper a general discussion about bedding plants took place. Mr. Huebner, who has charge of the bedding of the Philadelphia & Reading Railroad system, spoke of his system of planting, and said he found it a great benefit to mulch the beds after being planted and watered. He used short manure for this purpose. He especially recommended cannas, particularly the new varieties. Crotons he thought also made a good bed, as they required so little care and generally did well.

Mr. Taplin believed mulching to be a good thing where water was scarce, and thought grass clippings a good material. Roht. Craig thought that all beds should be as near level as possible, as when raised in the center they dried out so quickly; it was a good plan to raise the edges of the bed and sod them, and make the top of the bed level or depressed towards the center.

Mr. Harris spoke well of crotons, which he regarded as the coming bedding plant, and said that he had seen a very pretty bed made of ficus, with a border of *Pandanus Veitchii*. Mr. Westcott recommended *acalyphas*, *strobilanthes* and *Sanchezia nobilis* as among the best bedding plants that had not been mentioned by others; he also thought crotons to be among the leaders. Mr. Taplin spoke of the latitude where crotons would grow, saying that they did not do well as far south or west as St. Louis. Mr. Craig said that they did very well along the Hudson, and that a bed in the Exposition grounds at Chicago had been a great success; he thought they were a plant that would stand the full sun, but must not suffer for water. He said that some growers in Europe were giving their entire attention to the croton, raising new varieties and improving the stock all they could.

Mr. Mitchell spoke of *Oxalis tropæoloides* making a good border plant, but others objected to it on account of its free seeding qualities, it coming up year after year when it was not wanted. Mr. Smith recommended yuccas and aloes as making fine beds when planted together and edged with *echeverias*. Cactus was also recommended. Mr. Westcott made an appeal to his fellow members to turn in and help the Horticultural Society, as it needed all the help it could get, and he wanted everyone to do all they could the coming season to make the show a success.

Mr. Shelmire sent a bunch of his new carnation *Eldorado*; it is a fine flower, 3 inches and over in diameter, a little lighter in color than *Buttercup*, which it resembles. The room committee were directed to get a meeting room for the present use of the club.

Emma Chambers, a step-daughter of Robert Buist Sr., and known to many of the craft who graduated from his place, died last week, and was buried in Mount Peace cemetery. K.

Washington.

The past week has been one of incessant rain, which interfered considerably with the flower trade, and especially with bedding stuff, as quite a number of people had begun to fix up their gardens for the summer. Some of the stores, which had orders ahead, for weddings mostly, were fairly busy, but transient trade was dull. Weddings have been numerous in the past two weeks, and some of the decorations have been the richest of the season, many orchids, *bougainvillea* and the finest hybrid roses being used, notably at the

weddings of Miss Leiter and Miss Murphy, the daughter of Senator Murphy.

Flowers of all varieties are in great profusion. It is a little early to predict what the spring sale of plants will be, but most of the growers have a good supply of fine healthy stock, and are looking forward to a good trade, though they expect lower prices. REYNOLDS.

St. Paul, Minn.

From the conflicting Easter reports from this city the brethren in other parts of the country must think that trade here is badly demoralized and that ruinous competition has about forced the florists to the wall. I wish to correct any such impressions. St. Paul may not be as lively a florist center as Chicago, New York or Boston, and prices may not average as high the year round. Notwithstanding that, however, the yearly output is increasing, newer and better houses are constantly being erected, and the trade as a whole is prosperous.

Cut flowers are abundant and of good quality. The warm weather is beginning to have some effect on the Beauties, Brides and Testout, but the quality remains nearly up to the standard, while La France, Bridesmaid, Meteor, Albany and Kaiserin seem to revel in the bright sunshine. Carnations that have been cared for are producing magnificent blooms. L. L. May & Co., have a house of Daybreak that would be hard to beat, stems long and stiff and flowers of unusual size. The demand for cut flowers has been good. While no large orders have been noted the aggregate in sales has been quite as large as any week since Christmas—Easter of course excepted.

Retail prices have dropped to the following: Am. Beauty \$3 per dozen; Bride, Testout, Meteor, Bridesmaid, \$1.50; Perle, Niphotos, Hoste, Gontier, \$1 per dozen. Carnations, common, 25 to 35 cents per dozen; Daybreak, 50 cents; valley, daffodils, narcissus, gladiolus, 50 cents; sweet peas 25 to 35 cents; asparagus 30 cents per string.

In the plant line sales have not been as large as one would expect from the faultless weather which we are enjoying. At the city market a great many plants are being offered at very low prices. While this tends to hurt trade the quality of the plants offered oftentimes makes them dear at any price. But little bedding out or planting has been done yet. At Como Park planting is just beginning and the finest display yet seen is promised for the coming summer.

E. F. Lemke has already commenced building operations, intending to erect several fine houses this season. This is another evidence of a prosperous season and we are glad to note it.

Callers have been John Speelman, of Sassenheim; M. Keur, of Lisse; J. S. Van Waveren, of Hillegom; F. Berry of Stillwater; all report good sales. FELIX.

Rochester, N. Y.

Continued dry weather for weeks past has put a stop to planting out. Nurserymen as well as florists are waiting patiently for a good rain. We have not had any rain here worth mentioning since spring opened, and as the thermometer keeps away up in the eighties we cannot risk planting out anything. Tulips, hyacinths, daffodils and all early spring flowers are about past, even magnolias are burned and dried up, they only lasted a few days, and such cheap outdoor flowers as these will be rather scarce perhaps in

this neighborhood for the next few weeks. However, there is an abundance of good indoor stuff at rather low prices; roses and carnations in particular are in good supply.

The store business has improved some since last week, but is not up to the average of past seasons yet.

The Buffalonians have invited the Rochester florists to a friendly game of ten pins next week and a host of Rochester boys will accept the kindly worded invitation, expecting as usual a good old time in the windy city, even if they should get beaten by their friends. J. B. K.

THOMAS F. MARTIN

OBITUARY.

DIED, at Floral Park, Long Island, Sunday, May 5, Thomas F. Martin, in the 28th year of his age. A widow, Maggie Thorpe Martin (daughter of John Thorpe), and three bright little children survive him. A more conscientious, painstaking, faithful, competent, industrious and unassuming man I never knew, and I have known him from a child. If he had one fault, foible or weakness I can honestly say I never knew it. Knowing the full and far reaching meaning of these words I think all who ever knew him will bear me out in the assertion.

E. V. H.

Worcester, Mass.

Trade recovered unexpectedly last week, and was fairly brisk in both cut flowers and plants; a fair amount of funeral work helped greatly to keep things lively. The quantity of stuff coming in was augmented by the addition of field grown narcissus, tulips and hyacinths, and though more or less goes in the dump the surplus is not of an alarming nature. Carnations are still of good size and stiff stem, and of course they are blooming freely; prices are still 50 and 75 cents per dozen retail, though the department store is down to 23 cents. Roses are running a little undersized, and consequently prices have dropped slightly; the supply of violets and valley has had a temporary falling off, but things are pretty well evened up, as the demand has let up too. Lange has a splendid house of pink and white stock in bloom.

The marriage of Mr. C. W. Wenck (for many years in charge of the bulb department at H. F. A. Lange's plant) and Miss Margaret Braeme is announced to take place May 22.

Mr. Butterworth, with Power of South Framingham, and Harry Troy, representing Pitcher & Manda, were among last week's visitors.

The weather is very hot and we need rain very badly. A. H. L.

Baltimore.

Cut flowers are not at all scarce, and all inducements in low prices fail to make them scarcer. Very good buds are to be had at three cents, Perles, La France, Brides, etc. Choice ones are hard to get at any price, most being off in color, size and foliage, one or all. Outdoor valley is plentiful at 65 cents per hundred; lilac blooms five cents a bunch of eight to twelve clusters. Carnations one to two cents. Harrisii lilies three to five cents.

Plants are going somewhat better, coleus seeming rather scarcer than usual, and prices being about up to previous years for same quality of plants.

Mr. Charles Hamilton has sold his place at Waverly to Mr. G. V. Smith.

Mr. C. A. Sullivan has opened a very attractive retail store at 1405 North Charles street, called "The Bryn Mawr," probably after the young ladies' seminary of that name established by Miss Mary Garrett. MACK.

St. Louis.

The park commissioner has at last been appointed after a good hard fight. F. L. Ridgley is the successful man.

The Columbia Club was not very successful in trying to get up a handsome decoration in the way of a flower show. They offered only \$75 as premiums. If they had offered \$400 or \$500 they might have had a few entries. The club finally came to the conclusion that it would have to pay the florist for the decoration.

Mrs. Dangler will open a flower store May 15 at the southeast corner of Mississippi and Park avenue.

C. A. Kuehn is receiving a fine lot of gladiolus.

W. Ellison is receiving some very fine Beauties from R. F. Tesson.

The Florist Club has at last succeeded in getting a hall in which to hold night meetings instead of day. The first night meeting was held Tuesday, April 30, which was very well attended.

A. Y. E.

Decorations at Washington.

At the recent marriage of Miss Leiter the decorations were of very great beauty. The halls were decorated with great branches of apple and cherry blossoms, while small magnolia trees in bloom stood in the corners and niches. In the window ledges and along the marble railings were all sorts of spring bulbs, tulips, hyacinths, etc. In the Empire drawing room the onyx mantel was banked with maiden-hair fern and pink orchids. Beneath a life size portrait of the bride was a mound of forget-me-nots. In the dining room the walls were covered with bougainvillea, the table being decorated with pink orchids. The wedding cake was set in a wreath of lily of the valley, surrounded by a larger wreath of orchids.

Advertising for the Retailer.

My greenhouses presenting a very attractive appearance the week before Easter I had printed a neat invitation to call and view the "Easter Floral Exhibit" which was sent to my list of possible customers. It was a very successful adv.

Fredericton, N. B. A. M. SCHLEYER.

IDLIS OF THE POTTING SHED

Jaggs as a Benedict.

Work was over for the day and the men were seated back of the potting shed, enjoying well earned ease. Jaggs threw aside the paper he was reading, with an impatient exclamation, remarking "Here's another bloomin' guy writin' somethink he don't know. Talkin' about the gazelle-eyed houris of Persia—I s'pose he seen 'em on the Midway. I reckon I could tell him a thing or two, seeln' as I married one o' they houris when I was livin' in the Shah's palace at Teheran."

"I s'pose you was a welcome guest o' most o' the crowned 'eads of Europe and Hasia, Jaggs, old boy," remarked one of his audience with a grin.

"This is straight," asserted Jaggs. "They sent me out from Low's as head gardener to His Imperial Highness Nas'r-el-Deen, Shah of Persia, and I had rooms in the palace, and a precious scaly old barracks it was too. Nothink much to do, either, except to try and make the other chaps work, which they wouldn't, as a general thing. They'd sit around and tell lies, and smoke, and eat all sorts o' sweet stuff—sugar and tallow mostly—and drink pink lemonade; you couldn't get a drop of Bass nor nothink decent in the whole bloomin' town. I used to get precious lonesome of an evenin', after I'd got my own tea, and set out on a mouldy old balcony with nothink to do except smoke. There was an old rascal in a sheepskin jacket that was a sort of a boss o' the water carriers; he got a way o' sittin' with me of an evenin'. He'd sympathize with me and tell me I might be took sick and die, and how hard it was to be alone in a strange country, till he reg'lar broke me all up; then he ask me one night why I didn't get married. I tell him as I didn't know a lady that was willin', and he say he could arrange that, he knew a lovely creature, a Persian houri, that would just suit me. I asked if she could cook, and he say there wasn't nothink she couldn't do, and I'd never be lonely when she was around. Come to find out, the old rascal was talking about his own daughter, Faideh-ghul, and though he wasn't what you might call my ideal of a father-in-law I took a notion to marry the houri and settle down to domestic bliss. Courtin' in Persia aint what it is in this country; you don't get a word with the lady, and the old man makes all the arrangements, and he don't give the bride away, neither; you has to pay for her. Well, the old man he say she was such a pearl o' loveliness that all the wealth of Solomon wasn't equal to her value, but I finally beat down the old rascal to three pound ten, with a pair o'

Brummagem sleeve buttons thrown in. Well, we went before the cad and had the marriage all done up reg'lar, in the Persian style, and Mrs. Faideh-ghul Jaggs, she settles down in command. The old man was right—I never feel lonesome when *she* was around," and Jaggs sighed deeply.

"Well, what was the houri like?" inquired one of the audience.

"She was about 35 years old, which in Persia is old enough for a grandmother," said Jaggs with another sigh, "and as far as beauty goes she was uncommonly like one o' they sign-posts you see stuck up in an Indian village."

There was a general laugh at the description of the bride's attractions, and Jaggs continued, mournfully, "I didn't find no fault with that—I aint what you might call an Adonis myself—but it was the aggravatin'ness of her disposition that queered me. That woman could jaw at the top of her voice for two hours at a stretch without takin' breath, and as I couldn't understand half what she said and only knew that she was cussin' me and all my relations from generation to generation, it was enough to make Job turn rusty. I tries all sorts o' moral suasion, and then one night I throws a plate at her. She up with a pot o' hot coffee and throws it all over me, then she screams till a lot o' the servants come runnin' in, and she say I was murderin' her, so first thing I know I was bundled into jail. There I stay till the old man helps me out, and I pays him four pound seven and sixpence to get a divorce. I never see Faideh again, but I hear as she eloped with one o' the water carriers. I always had a grudge again that chap for stealin' my tootn brush, but I feel I was more than even with him when he eloped with my wife."

"What was the Persians like?" inquired one of the audience.

"Oh, they was mostly a lot o' lazy beggars that didn't never wash themselves and spends most o' their time under the mulberry trees watchin' the silk-worms and ticklin' of 'em to make 'em spin," said Jaggs. "The bloomin' Orient is all very well on the Midway, but blessed if I want to live there, not if they'd give me the whole bloomin' outfit."

The Flyin Dutchman.

This here flyin Dutchman aint that one what old man Wagner rote about. That feller wuz a saler, he wuz, and he wuz a tryin ter get round a caip but the wind wuz agin him an he got on his ere and swear he wuz agoin to dubble that caip or kno why and that's jist whair hee korked hisself. But theze here flyin dutchmen aint dubblin no caips; they jist want to dubble thair orders and paw sez that's why a florist getsit in the nek from them fellers. If ever you sea a feller comeround the greenhouses in the spring and that feller has kind of phunny cloes on and looks like a Methodist preacher with the stummy cake, you better skip lively wile yoo have a chanst, coz that feller is wun of them flyin dutchmen and he'll sel yoo a hull lot of stuph that you don't want, unless you dust out lively. That's what paw duz.

Them fellers is jist like Joon buggs. They have thare season jist like them buggs only the buggs has the worst of it coz they only last two or threa weeks but them uther fellers stais darn near threa months. Paw sez thair diffrnt becoz nobody knos where the buggs cum from or whare tha go to. Paw sez he's darn shoor of whair them flyin dutchmen will go to—sum day.

P. S. Paw don't say darn but that's the best I kin do hear.

Arsenic and parris grean and lundun perple and a hull lot uv things wil kil Joon buggs but I guess tha wont phaise flyin dutchmen. I never tride but I guess nit.

Them fellers alwuz has better bulbs than enny uther feller an' if yoo by sum bulbs from him he will prove it. All hee wantz is a triull order and yoo will be glad next yeer about it. Don't yoo give him nun, coz if yoo do next yeer he will cum round again wurs than ever and if you don't give him a order he will weap all over yoor plaise and muddy up the walks.

Paw sez he is goin' to trade the place off to them flyin dutchmen for a fue spring bulbs and when he gets the bulbs in the fall he is agoin to sell them rite awai and skip out for South Ameriky and raise cain on the Ammyzon. Golly!

N. B. The cain I meen is shugger cain.
A.

News Notes.

BRIDGEPORT, CONN.—Chas. W. Keith has been re-elected park superintendent by the park board.

HOUSTON, TEXAS.—W. W. Westgate succeeds the firm of Mrs. T. E. Westgate & Son, Mrs. Westgate retiring.

BLOOMINGTON, ILL.—Mr. J. H. Burnham has resigned as park commissioner and Mr. W. H. Patterson has been elected in his stead.

NAZARETH, PA.—Geiger & Leche entered into partnership here April 1, and will erect six new houses 150x18 this summer, principally for carnations.

OSWEGO, N. Y.—Mr. Walter Workman, our enterprising young florist, is very busy erecting a fine rose house 60x20 feet. His friends predict that in the near future his grounds will be covered with green-houses.

ROME, GA.—A local land company has offered to donate 60 acres of land to the city for a public park and citizens living in the vicinity of the proposed park have offered to contribute \$1,500 toward its development.

MADISON, Wis.—J. E. Williams is building a new rose house 20x60; another house for smilax, etc., 10x42, and a sales-room and palm house combined of an irregular shape 54 feet long; also an addition of 30 feet to his potting shed. This gives him altogether 6,000 feet of glass. The entire plant will be heated by steam.

PEORIA, ILL.—We have had a terrific hail storm that did serious damage to greenhouses and hot bed sash. On greenhouses glazed with single thick glass almost every light was broken; the hail stones were the largest ever seen here. Mrs. M. Cation's houses are almost a total wreck, also those of Mr. Shoaff. Cole Bros. and J. C. Murray suffered little or no loss, having double thick glass.

SYRACUSE, N. Y.—Mr. W. C. Hewson, for some years in charge of the late Mrs. Morgan's rare collection of orchids, and for the past four years head gardener to Mrs. P. A. Roche, has taken charge of the extensive greenhouses and grounds of G. H. Lewis, Esq., Buffalo. H. Youell, for some years secretary of the Central New York Horticultural Society, has rented the greenhouses of Mrs. Roche and will start in as a florist.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

JAPANESE LONGIFLORUMS

Why not try some of these instead of the Bermuda stock? Cheaper, and no Harrisii mix. I can deliver by Oct. 1st if I hear from you at once. Let me figure on your other wants in the bulb line.

G. C. WATSON, 43 North 10th Street, PHILADELPHIA, PA.

Mention American Florist.

GOING, GOING, GONE.

It is not surprising that sharp buyers are clearing out our surplus of Orchids at the prices they are going. An extra night force of packers are now employed to ship them. Already the great benches in the twenty Orchid houses begin to show wide spaces, so that we shall soon have plenty of room to grow on the balance, when we shall no longer need to continue the sacrifice. Orchids cannot be collected in the tropics at the prices we are selling, to say nothing of the expense of potting and establishing them to a point of perfection of vigor and bloom.

We have adopted the same course to reduce our stock of large Palms, Tree Ferns and Decorative plants. The plants are going fast. Be quick. Last call.

PITCHER & MANDA (Inc.) Short Hills, N. J.

FOR SALE OR LEASE.
Three greenhouses with valuable grounds; the best place in this country for a man with some means. Address WM. SPRINCBORN, Dubuque, Ia.

For Sale or Rent.
My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 48 lots or 2½ feet front on Belmont Ave. by 700 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 100 to 200 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the largest of the kind in Chicago. A good chance for some young man with some means, or for a corporation; and as I wish to retire from business, it can be had reasonable, and on easy terms. If rented, a long lease can be given.
AUGUST DRESEL,
Belmont and Western Aves., Chicago.

Established Flower Business FOR SALE AT A BARGAIN.

Two centrally located stores at Bar Harbor doing a lucrative summer business of \$4,000 to \$6,000 per season. THOS. A. McBETH, Springfield, O.	

Cincinnati.

The spring plant trade of the market florists has fairly begun, and the growers are more than pleased with the outlook for the season, though the past two weeks have been exceptionally hot, in fact we haven't experienced such warm weather in the early part of May since the spring of 1875. They have disposed of a good quantity of bedding plants each market day, and have booked a number of orders for later delivery. It is never safe to risk out tender plants in this section until after May 10, therefore the florist's busiest days do not begin until after that date. The plants offered for sale this spring are unusually fine, clean and healthy. Some fine specimens of decorative plants, such as palms, dracaenas, crotons, rubbers, pandanus and ferns can be seen on the stands of R. Schmidt, J. Schuman, Huntsman Floral Co., F. Walz, and Corbett & Wilson; the sale of such stock has been very satisfactory during the entire winter.

Cut flowers are a drug on the market at present, partly owing to the fact that the country people are bringing in many such flowers and are offering them at much reduced rates. Lilacs, spiræas, pæonias, flowering almonds, Chinese narcissus, tulips and loniceras, are brought in in quantities.

Next week will mark the beginning of the planting in the parks and reservations throughout the city. Hyacinths and tulips are at their best just now in the parks. The shrubbery throughout the parks begins to look as though spring has come, flowers can be seen in every direction.

Society is almost at a standstill, consequently the store florists have a breathing spell after a long and busy season. They are all unanimous in saying this has been their best season since they began business. The principal call just now is for weddings and funerals. The fakirs have had a busy week, giving a goodly portion of their stands and baskets to lilacs, which has been both plentiful and fine. Violets, both cultivated and native are done.

Gustave Adrian, of Clifton, is building a fine house for chrysanthemums, 60x20, with 20x24 glass, and it will be heated with hot water.

Mr. Louis Pfeiffer, of Louis Pfeiffer & Sons, has retired from business and turned everything over to his sons William and Louis.

The prospect for another free chrysanthemum show in the flower market this fall is very bright. P.

This flower looks attractive—multiply it by 1000 and you will have a good idea of a bush of

ANDORRA'S

LATEST INTRODUCTION

Hypericum Moseerianum (St. John's Wort.)

A beautiful, evergreen, trailing shrub, covered from June until late Fall with rich, golden flowers, resembling a single rose. With slight protection it has been found perfectly hardy in this country. **Fine, Strong Plants, \$7.50 per Hundred.**

Hardy Trees, Shrubs, Plants, Roses, and Fruit. (Rhododendrons a Specialty.)

Andorra Nurseries, Wm. Warner Harper, Mgr. Chestnut Hill, Philadelphia, Pa.

GIBSON'S PREMIUM SET OF PROGRESSIVE MAMMOTH VERBENAS.

Now ready at one day's notice.

Try this set, you'll not regret
When you see the beauties blooming,
And don't forget the best thing yet,
They'll set your business booming.

Stock all clean, healthy and thrifty, the best I have ever offered; the set of 15 kinds for 60 cents, from 2 1/2-in. pots and flats, \$2.50 per hundred, including the beautiful new white, White Plume, the magnificent new pink, Georganna, with the finest scarlets, purples, striped and intermediate shades. Double Petunias (Dreer's), 2 in., \$2.50; 3-in., \$1; 4-in., \$7 per hundred. All healthy and in fine shape; full of cuttings. The beautiful Snow Crest Daisy, all in bud and blooming, 50 cents per dozen; \$3.50 per hundred. New double pink daisy, Lady Johnson (scarlet), 5 for 50 cents. Variegated Vines (Perrywinkle) from flats, \$2; 2 1/2-in., \$3; 3-in., very fine, \$3 per hundred. Begonia Vernon, semperflorens, in three colors, the most satisfactory and profitable plant we ever handled, 2 1/2 in., \$2.50; 3-in., \$3.50 per hundred. New yellow daisy, Anthemis Tinctoria (single), 2 1/2-in., \$3 per hundred. Anthemis Coronata (Golden Margaret) the genuine dwarf large-flowered, double, from flats, \$2.50; 2 1/2-in., \$3.50 per hundred. Nasturtiums selected stock from cuttings, fine colors, \$2.50 per hundred. Heliotrope, finest mixed, including Welkin, the fine new white Jersey Queen, light purple Vert Valley, dark, 2 1/2-in., \$3 per hundred. Gem feverfew, flats, \$2 per hundred. New dwarf scarlet sage, Clara Bedman, 2 1/2-in., 60 cents per dozen. Coreopsis Lanceolata, strong roots, 60 cents per dozen. New hardy double white pink, Her Majesty, 2 1/2 and 3-in., \$4 per hundred. Calendula, P. of Orange, Scabiosa Snowball, sweet Alyssum, tall, double and dwarf single, Mignonette, Torenia fourneti, Tradescantia parlor Ivy, Lobelia trailing and dwarf. All nice young plants from flats, mostly seedlings, \$2 per hundred. Eulalia, two kinds, 4-in. size, \$3; 6-in., \$5 per hundred dormant roots; Eulalia plant sticks, the neatest and cheapest for all small plants, 1 to 2 feet \$2 per thousand, sample 100 post free for 35 cents. Mad. Crozy canna, dry roots, \$3 per hundred; selected Crozy seedlings, very fine, \$1 per hundred; selected dwarf French yellow bedding canna, \$2.50 per hundred. Many of the foregoing plants can be furnished rooted at from 60 cents to \$1.50 per hundred. For other novelties and specialties see novelty list, free to all. A dress cash with order please.

The Judge Says.

An agent authorized to act for a principal in a given negotiation cannot deal with himself.

An affidavit is simply a declaration on oath, in writing, sworn to by a party before some person who has authority under the law to administer oaths.

It is absolutely inconceivable that there can be actionable negligence where there is no duty, since negligence without breach of duty cannot possibly exist.

An invitation is inferred where there is a common interest or mutual advantage, while a license is inferred where the object is the mere pleasure or benefit of the person using it.

To make false representations legally available, they must not only have been believed, but they must have been acted upon, and formed, at least in part, the inducement for the action resulting in damage.

If a surety signs a note upon the condition that some one else is to sign, that condition being known to the payee, and assented to by him, the surety is not bound or liable on such note unless it be signed by the other party.

The grounds upon which infringements of trade marks are enjoyed are (1) injury to the public, by leading them to buy something that they did not intend to buy; and (2) injury to the owner of the trade mark, by diversion of his trade into other channels.

The law says that every one who breaks a contract shall pay for the natural consequences arising from the breach thereof, which must include gains prevented as well as losses sustained, provided they are reasonably certain, and such as might naturally be expected to follow the breach.

In order to justify setting aside a contract of an insane person, not under guardianship, on the ground of insanity, it must appear that the contract was made with the knowledge of such incapacity, or such information with respect thereto as would put a prudent person to the belief of the incapacity.

In the absence of both contract and statutes to the contrary, the liability of a railroad as a common carrier continues until notice to the consignee of the arrival of his goods, and a reasonable time, during business hours, after receipt of notice, to inspect and remove them, unless he is unknown, absent, or cannot be found, in which case the goods may be stored.

Seed Advertising.

AN INTERVIEW WITH W. ATLEE BURPEE.

"You ask me about seed advertising," said Mr. Burpee. "In the first place, I would say that a year ago, in the winter and spring of 1894, we purposely increased our advertising appropriation from the knowledge we had that other seedsmen, owing to the hard times, were curtailing their advertising expenditures. The amount spent in the winter and spring of 1894 by seedsmen generally was hardly more than two-thirds of the usual expenditure; whereas we increased our appropriation fully fifty per cent. over the advertising done by us in 1893. We did this thinking that with the general curtailment a fifty per cent. increase would have the same effect that doubling our advertising in an ordinary season. We took whole pages in forty-two leading weeklies and monthlies, including *Ladies' Home Journal*, *Household*, *Ladies' World*, *Lupton's Home Journal*, *Century*, *Scribner's*, *Harper's*, *Review of Reviews*, *Mayflower*, *Cosmopolitan*, *Chautauquan*, *Vick's Magazine*, *Success with Flowers*, *Farm Journal*, *Rural New Yorker*, *Gardening*, of Chicago, *American Gardening*, of New York, *Country Gentleman*, *Outlook*, *Congregationalist*, *Christian Herald*, *Golden Rule*, *Sunday School Times*, *Great Divide*, *Practical Farmer*, and large spaces in other leading publications, such as *Home and Farm*, *Farm and Home*, *Farm and Fireside*, *Ladies' Home Companion*, *Demorest's*, *Delineator*, *American Agriculturist*, etc.

POOR RESULTS LAST YEAR.

"Contrary to our expectations, never in the eighteen years in which we have been advertising, have we had less satisfactory returns. For some years past, previous to 1894, the average apparent cost of applicants from advertising has been sixty-six cents each; but as only one in three name the paper in which they have read the advertisement, this makes the actual cost of applicants twenty-two cents each. With the increased advertising in 1894 and the decreased competition, we naturally expected that the cost of applicants would not exceed the average cost of years previous.

"In this we were greatly disappointed. For instance, the *Century Magazine*, to name one of the best mediums, which in 1893 cost us apparently fifty-six cents per applicant (less than the average), cost us in 1894 more than \$2.50, apparently, per applicant. The *Ladies' Home Journal* which in 1893 cost us twenty-two cents, apparently cost in 1894, eighty-nine cents. The *Mayflower*, which in 1893 cost twenty-eight cents, apparently, in 1894 cost us \$1.28 cents for each applicant. I mention these three as three of the best advertising mediums we use, and would only say that with a few notable exceptions the general cost per applicant for inquiries for our seed catalogue for 1894 averaged about five times the usual cost of 1893 and of years immediately preceding.

"It was impossible to explain why inquiries should have been so much less in number from the increased expenditures in 1894, considering the fact that it costs comparatively nothing to write a postal card, and in response thereto the recipient would receive a handsomely illustrated

book of 174 pages with colored plates, giving information of value to every one who has a garden. Personally, I was almost inclined to the opinion that the public was disposed to resent our enlarged advertising in a season of such general business depression!"

GOOD RESULTS THIS YEAR.

"I am glad to say that this year the results from advertising are exceptionally satisfactory. Not for years, certainly not since 1888, have we had so many returns relatively for the cost as we are now receiving. We are spending this winter \$20,000 less than last year, and yet we are receiving fully fifty per cent more applications for catalogues than we did last year. This change may be due partly to the fact that spending a smaller sum of money, we are naturally confining our expenditures only to the mediums which last year's records show us were the most profitable. Again, instead of taking display advertising so generally as we did last season, we are, as a rule, confining our advertising to the plain announcement of our seed catalogue, using whole pages this year only in the *Century Magazine*, *Munsey's*, *Mayflower*, *Success with Flowers*, *Farm Journal*, *Christian Herald* and *Golden Rule*. In other leading publications, such as the *Ladies' Home Journal* and *Youth's Companion*, instead of whole pages, the largest advertisement we are using is about 110 lines, double column. I incline to the opinion that an advertisement the size of that just named is quite as effective as a whole page would be—we certainly are getting as many applications and selling as many cheap 25 cent collections of sweet peas from the smaller advertisement in the *Ladies' Home Journal* as we did last year for a whole page in the same month of February."

300 PER CENT INCREASE.

"Advertising men, such as Mr. Hazen, of the *Century*, and Mr. Thayer, of the *Ladies' Home Journal*, claim that the reason our advertising is paying us so well this year, is because we are getting the benefit of our extra expenditure last season. Personally I cannot agree in this opinion as, while the cumulative effect of advertising is certainly an important factor, it would not account for the much better returns this season than last, an increase, considering expenditure, of fully 300 per cent.

"Although at present our business is not quite equal in daily cash receipts through the mails to this time last year, yet the applications in answer to advertisements being so greatly increased, I believe that this season will be considerably more profitable than last. Last year was unprofitable in the seed trade generally, but notwithstanding that fact we had at this season two weeks of exceptionally good trade, owing to the exceptionally warm weather then existing. Owing to this exceptionally warm weather, the weeks corresponding to this week and last week last year were the two best weeks we ever had in the mail seed trade, notwithstanding the fact that for the year our business was considerably behind, poorer than it ever had been before in recent years."

COST OF APPLICANTS.

"The average actual cost of applicants, as already stated, for recent years, has been twenty-two cents; add to this the cost of our catalogue, which we send free to applicants, of twelve cents, and each applicant costs us thirty-four cents for the purpose of making acquaintance. With such cost it is our impression that the

direct results of magazine and periodical advertising about pay expenses, leaving any possible profit to future orders from the customers whose acquaintance we thus make.

"The excessive cost last year, as already mentioned, however, resulted in a positive loss, so that I can honestly say, had we not spent one dollar in periodical advertising, we would have been considerably better off at the end of our fiscal year. The other day, however, at luncheon with a fellow seedsman (my good friend William Henry Maule, of Philadelphia), I criticised severely the radical stand which he has taken in not spending one cent in cash advertising this season; and while admitting that he could look for no direct profit from newspaper advertising that could be traced, yet claimed that he was making a radical mistake in losing the moral influence that the regular appearance of his advertisements would have upon the readers of periodicals already on his mailing list as receiving his catalogues without advertising. In my mind the indirect influence of magazine and periodical advertising is the only really profitable result to be looked for."

A SIGNIFICANT STATEMENT.

"A few years ago a gentleman, who was the prime mover in establishing the consolidation into one trust of all the type foundries in the United States, approached me to buy out our seed business in connection with others and thus establish a huge seed trust. He wanted to buy the leading seed houses on the same basis on which he had bought the type foundries, fifteen per cent; that is, they would pay \$100 for every \$15 of profit that the business could show per annum for a series of three years preceding. I told him frankly that, while our business was not for sale, yet did we anticipate selling out to any trust, we would want at least three years' notice, since by curtailing our advertising expenditure we could get a much higher price for our business by showing a larger relative profit. To continue these profits, however, it would be necessary to spend even more money in advertising to bring the business back to its old basis after several years of starving it."

SOME MAGAZINES COMPARED.

"What magazines, Mr. Burpee, have paid you best in the past two years?"

"In 1893 the *Review of Reviews* stood at the head of the list, relative to the cost, and in 1894 all the magazines were very poor; but the *Century* and *Harper's* were the best, I think. The *Cosmopolitan*, ordinarily such a good medium, did not pan out in 1894, and the *Chautauquan* was very poor, although in previous years we have ranked it as a good medium.

"I was somewhat amused by the receipt of a letter from Mr. Arnold, the advertising manager of the *Chautauquan*, at the beginning of the season, assuring me that the readers of his magazine, although a highly intellectual class, had not yet reached that point of Twentieth Century advancement whereby they could produce their vegetable food by means of chemistry without the ancient method of growing from seeds. In reply I had to tell Mr. Arnold that had it not been for his assurance by letter, I would have supposed his readers already so advanced that they had learned to dispense with the sowing of seeds, judging from the records of those who applied for our catalogue last season, so few of whom mentioned the *Chautauquan* magazine!

"What publications have paid you best in the long run?"

"Well, I should say the *Ladies' Home Journal*, the *Farm Journal*, of Philadelphia, the *Christian Herald*, of New York, the *Golden Rule*, of Boston, *Century Magazine*, *Mayflower*, *Farm and Fireside*, *Home and Farm*, and the *Delineator*. Up to eight years ago the weekly editions of the great dailies, such as the *New York Sun*, the *Chicago Inter-Ocean*, the *Toledo Blade* and *Omaha Bee*, were among our most profitable mediums; but of recent years they have fallen off so that we now hardly consider them worth using at all. About the only secular weekly that is still profitable is the *Missouri Republican*, the weekly edition of the *St. Louis Republic*."

TRACING REPLIES.

"What proportion of your replies are traceable?"

"Fully one-third. We use this as a basis of estimating the proportion of our replies traceable to each publication."

"What valuation do you place upon an application?"

"It is worth just as much to us as an order enclosing twenty-five cents for one of our cheap collections. The average apparent cost of an application, counting a twenty-five-cent order for a cheap collection of flower seeds, the same as an application, is sixty-six cents in a normal season like 1893. But as only one-third mention any paper, the actual cost per applicant is only twenty-two cents."

"We were so astonished in the case of the *Mayflower*, one of our most profitable of all horticultural publications, that last spring we wrote to the advertising manager, Mr. J. J. DeLong, of New York, that from the fact that we were only getting from the same advertising one-fourth to one-fifth as many inquiries, we should not think that they were issuing as many copies as during 1893. From the fact that Mr. DeLong voluntarily reduced the rates for advertising this autumn, it will be seen that they admitted the falling off in circulation. We think this falling off in circulation was general with other publications, but few have been so honorable as the *Mayflower*, to voluntarily reduce their rates, notwithstanding they had large contracts, including our own, at higher rates."

ONLY TWO PROFITABLE RELIGIOUS PAPERS.

"The most profitable advertising medium we had in 1894 was undoubtedly the *Christian Herald*, which, from our returns, seems to have held its circulation better than any other publication. This and the *Golden Rule* are the only religious papers that are really paying us."

"In a normal season, such as 1893, when the average cost of our applicants is sixty-six cents, apparently, each of the applicants received from the leading religious papers will cost us all the way from \$1.50 to \$3 each."

"You haven't said how the *Youth's Companion* pays you, Mr. Burpee."

"My answer would be that I consider it a fairly good medium, but have not used it as freely as I might, for the reason that I have been fearful of getting too many applications from school children, who wrote simply because our catalogue was a handsome publication. In fact, in 1888 we had such an excess of applications for catalogues that in 1889 we tried the plan of charging ten cents, but soon dropped this as not feasible. Of late years, we generally put in each of our catalogue advertisements the statement, 'price ten cents (less than cost), or free to intending purchasers.' Placing it thus upon the honor of the applicant we find works very well, and we get many a letter enclosing ten cents, where the writer states

that he or she does not intend to purchase, as they have no garden this year, but are interested in reading about the progress of horticulture."

"Frequently we have received a postal card from a country postmaster warning us that by the same mail goes forward a number of postal cards applying for our catalogues, all from school children, who are not likely to be possible purchasers. Formerly this question of the distribution of catalogues worried us considerably, but now we consider youth as a disqualification that is soon overcome, and that nearly every child belongs to a family in which there are adults who may be interested in our catalogue. Therefore, we are now using the *Companion* proportionately with other papers, and can tell you next year as to the results."

"For years we have been urged to try the cheap Augusta, Maine, publications. This season we decided to test all of these by a one-inch single column advertisement offering 'A Bright Book About Seeds,' a special publication of this season which is not half so expensive as our regular catalogue. As we thought the readers of these papers were largely of a class that wanted something for nothing, we expected to get a number of applications, but have been surprised at the few received to date. This little advertisement appeared in the February number of *Lane's List*, and up to several days ago, when I looked at the returns, there were eighty-seven who named *Happy Hours*, twenty that named *Comfort*, *Good Stories*, eighteen, and *Lane's List*, twenty one."

USES NO DAILIES.

"You find the dailies are not good for mail business, then?"

"From what little experience we have had in daily newspapers, we do not consider them desirable for mail business."

"What class of people buy seeds most?"

"That is a very hard question to answer. Our best customers, that is, those who buy the largest bills, are market gardeners and florists—men who look to the profit from selling what they grow. Retail orders from this class will frequently reach from \$20 to \$100 each, sometimes more. The most of our customers, however, are farmers, who buy their vegetable seeds for their home gardens, and rural and suburban residents, who buy a few vegetable seeds for small kitchen gardens, and more flower seeds for the adornment of the garden and culture in pots or window boxes."

A FOURFOLD INCREASE.

"Has the general demand for seeds increased in a greater ratio than the increase of population?"

"Undoubtedly! In the eighteen years I have been in the seed business, I suppose the consumption of vegetable and flower seeds has increased fully fourfold, and I fully expect that the increase will keep on in the same ratio for the next twenty years. Travel anywhere throughout this country, and you will notice how many farmers, besides entirely neglecting the beautifying of their homes by the flower garden, grow in the field only the coarser vegetables, such as cabbage, potatoes, beets and onions. Seedsmen generally are mutually helping each other by educating our people to eat more vegetables and to grow more flowers. For instance, in 1876, when we first started business, our sales of sweet peas would not aggregate twenty-five pounds of seeds the season, while even the larger houses at that date would probably not sell over 200 pounds in a year. Now of sweet peas alone we require more than 20,000 pounds

annually, and there are one or two other houses who require quite as much."

ADVERTISING A POTENT FACTOR.

Has advertising been a potent factor in this increase?"

"Advertising has certainly been an important factor in this increase, but by advertising I would not mean merely periodical advertising, but the circulating of catalogues and horticultural literature as well."

"But which is primarily dependent, is it not, upon periodical advertising?"

"Largely, except that one customer who purchases seeds and grows a good garden naturally recommends us to his neighbor. It is very difficult to get information on these points, but probably we arrive as nearly at the facts as can be by an elaborate system of personal letters which we send out with our catalogues. In one of these letters we state to a certain class that 'We notice you did not purchase any seeds of us last year. Had you any cause for dissatisfaction?' etc. Answers to these letters often elicit the fact that some other member of the family sent the order the preceding year."

MAILING CATALOGUES.

"You ask me about circulation of catalogues. In reply would say that we never send a catalogue except to our regular mailing list of customers, and to the addresses of persons who apply direct to us from periodical advertising. For instance, the proprietor of a Boston seed house who had built up quite a nice little mail trade by advertising, approached us last autumn with a desire to sell out, and his chief asset named a list of a number of customers who were accustomed to buy from him by mail. He seemed greatly astounded when the writer stated to him that we were our active competitors to offer us their mailing list of customers, we would not send them unsolicited a copy of our manual. We have thoroughly tested this system of mailing catalogues to such buyers who have not applied direct to us in years past, and we have proved it to be comparatively valueless."

THE QUESTION OF POSITION.

"Do you regard position of much importance?"

"Yes, I do."

"You are willing to pay more for position space then?"

"Ordinarily we do not pay more for position space, as we are generally able on large space in the more important mediums to get position. For instance, this very week we have the first page of the *Christian Herald*, and the last outside cover page of the *Golden Rule*. However, you will also notice that we have the upper half of the last outside cover page of the *Century Magazine* for March. This, of course, costs heavily for the position, but from the returns already being received, it is worth several times the price of an inside page."

"I see that you use colored illustrations extensively in your 'annual.' Do you believe advertisements illustrated in colors in leading magazines, even if printed at an additional cost to you, would prove profitable advertising?"

COLOR WORK UNPROFITABLE.

"Decidedly no. While we always have a lithographed cover and several lithograph plates in our catalogues, it is a noteworthy fact that the novelties thus presented by such color work the first year of introduction do not sell as well as the next year, when the same varieties are catalogued with only a good wood cut engraving. We shall always, as we

have for years past, continue to use lithograph work, but the effect of the same we regard as principally profitable in that it makes the entire catalogue attractive."

"Have you any reason to offer for this?"

"Nothing further than that it is our custom in using color plates to give a description of the varieties upon the back of the plate, whereas the year following the same variety will be offered on a page with illustrations in connection with the matter."

MAGAZINES AND COLORED PAGES.

"Then if magazines were able to print illustrations in colors with the reading matter on the same page, this objection would be overcome?"

"Largely, I should think, but that would naturally be expensive, because in printing the same page you are paying for fourteen colors, or as many as you use, and a great deal of it would be descriptive matter which is not colored."

"What do you think of write-ups?"

"I don't think a write-up should ever be disguised. It should be a well-told story of the business, or of some interesting feature, and in the matter of seed-growing could be made both instructive and interesting without being in any way deceitful."

"It is fair to assume that you believe catch-phrases like 'Burpee's seeds grow' to be potential?"

A MISSTATEMENT CORRECTED.

"I do; and recently J. L. Stack & Co., in their bulletin, made the announcement that we had paid for the ownership of this phrase the sum of \$200. I immediately wrote to have this statement corrected, telling them that the phrase was first used in one of the advertisements competing for prizes we offered several years ago; that Mr. Wiley B. Jones, advertising manager of Wells, Richardson & Co., of Burlington, Vt., was awarded the second prize of \$25; but had I known how effective this phrase would prove, Mr. Jones would certainly have been awarded the first prize.

A COMMON ERROR.

"I think that other seedsmen, in common with ourselves, are all inclined to try to get too much into one advertisement; that our seed advertising generally has a very solid, heavy appearance, and from several interviews with experts, I know that it is generally condemned for this reason; but in defense of the general seed advertising would say that it is aimed directly at a class at the one season of the year when they are particularly interested in the subject matter of the advertisements, and consequently can allow of less display than general advertising that aims to catch the eye of the reading public not specially interested in the article advertised."—*Fame*.

REGARDING onion seed crops in California, Chas. W. Beebe, an experienced seedsman of San Francisco who has recently visited the growing district, reports the outlook favorable for a large yield; this notwithstanding recent statements to the contrary published in the *American Agriculturist*. We hope to give more definite details as to the outlook soon.

ST. PAUL, MINN.—L. L. May & Co. discharged 60 men last week. Griggs Bros. will increase their garden seed department. DeCon & Co. have removed to a better retail location with larger quarters at 62 East 7th street.

News Notes.

WILKSBARRE, PA.—I. G. Marvin is fitting up a magnificent florist's store on Franklin street.

SIoux CITY, IA.—Crop prospects in this section could not be better, and outlook for spring trade is excellent. J. C. Rensson is away on a business trip to Grinnell.

PEKIN, ILL.—Trade so far this season is much better than last year, and hope it will keep up. G. A. Kuhl is adding 6,000 square feet to his plant, giving him a total of 26,000 square feet.

HAMMOND, IND.—This city is to have a new park. The location being considered is within walking distance of the business center and comprises 20 acres of land admirably adapted to park purposes.

BRIDGEPORT, CONN.—It is now virtually settled that the beautiful tract of land situated on the east side of Clinton avenue, which has been leveled off and sown with grass seed, is to be made a public park.

PEORIA, ILL.—The mayor-elect was formerly chairman of the park board and as he is thoroughly in sympathy with the park movement it is believed he will use all the means in his power to carry on the park improvements successfully.

EAST BRIDGEWATER, MASS.—Thomas Hooper, for many years a leading florist of Bridgewater, died at the residence of his daughter May 1, at the age of 89 years. He has attended every meeting of the Plymouth County Agricultural Society during its seventy-five years of existence.

NEW ORLEANS.—The Lower City Park, which was a few years ago but a mere pasture for stray cattle, has been so improved as to be a credit to the city. The old marsh has been converted into a beautiful lake and the grounds beautified until now they are a popular resort of the people.

TAUNTON, MASS.—Easter trade and retail prices were about the same as last year. Supply was equal to demand and quality good. Sales of plants equalled those of last year. The leading demand was for lilies. It is rumored that Mrs. Lyman Briggs is selling out and will retire from the business.

COLUMBUS, O.—Gus Drobisch has had an excellent demand for Otaheite oranges, the call coming mainly from the south where the severe winter did such havoc among tender plants. The officers of the Franklin Park Floral Co. are Albert Knopf, president; John Siebert, vice-president; Capt. M. C. Lilly, secretary and treasurer; T. M. Lilly and Geo. Schmelz, directors. John Hellenthal has as clean a lot of plants in his new rose house as can be seen here.

OMAHA, NEB.—The last payment by the park commission on the purchase of Riverside Park not only exhausted the \$400,000 park bond fund voted three years ago, but left an unpaid balance of about \$12,000, for which the city council provided from another fund. No more bonds will be voted or issued for the purchase of parks this or next year; probably not for a number of years, but fortunately neither the development or even the extension of the Omaha park and boulevard system need be arrested on that account, as two public spirited citizens have made liberal offers of assistance.

DREER'S OFFER OF One Hundred Thousand Dwarf French Cannas.

We are now sending out a very fine lot of Cannas in strong, well-established plants in 3-inch pots.

REMEMBER these are not freshly divided plants out of moss or soil, but well established in 3-inch pots and will make a display at once.

Plants for Sale

in large and small lots, Cabbage, Tomato, Sweet Potato, Pepper and Egg Plants from now until the first of June.

HENRY HESS, Cockeysville, Balto. Co., Md.

MEDAL WINNING GANNAS, controlled by us and offered now for the first time.

CHICAGO.—(Medal awarded) Positively the best vermillion scarlet to date: 4 feet, green foliage with leaves 9 to 10 inches wide, flower truss and stalk stands boldly erect. The large flowers open out nearly flat, petals 1 1/2 inches wide and five in number. In this respect the Chicago fairly out-classes all Gannas, the fifth leaf adding much to the blossom and flower spike. Its record at the World's Fair, on our grounds and in our greenhouses more than justifies all our claims for it. The record of our Canna Novelties of the past seasons entitles us to your confidence. The color, in the language of the judges, is a "dazzling vermillion scarlet," smooth and without markings except a purplish gloss. Price of this grand novelty only 75c. each.

MADAME ALPHONSE BOUVIER.—3 1/2 feet, foliage medium green, flower large, well opened. The color is that of Madame Crozy, tinted with dark crimson spots like Crampbel. The yellow edge is irregularly wider with clear yellow spots in upper and lower edge of petals into the throat of the flower; a magnificent Canna, scarce. Each, \$1.25.

M. MESNIER.—(Medal awarded). 3 1/2 feet, dark green foliage, sturdy growth, flowers large, petals wide, color salmon, slightly dotted and streaked with red, which is deepest in the center of the flower. Petals are bordered with a narrow rim of yellow which is irregularly wider on the ends, often 3/4 to 1/2 inch wide. Each, 75c.

MIDWAY.—(Medal awarded). 4 1/2 feet, green foliage, strong grower, color rich vermillion slightly streaked with faint crimson; petals 1 1/2 inches wide, compact flower spike, a strong grower and free bloomer. The crimson streaks and splashes in the petals make a splendid effect on their background of scarlet. Each, 75c.

Toronto.

Times have been rushing lately with those in the trade who have anything to do outdoors; the weather has been exceptionally fine and dry for the last two weeks, and moderately warm, so fine that one was tempted to rather neglect greenhouse work in order to remain in the open air, which one enjoys all the more after having been shut up so much during the long winter. The retail trade has not been so lively since Easter week, though there has been nothing really to complain of; it might have been better of course, but the hard times are probably teaching us to be thankful for small mercies, and larger ones in proportion. Easter lilies have been plentiful since Easter, and those who have them to sell are thankful if they can sell them at all at any price. Some of them have actually sold at fair prices considering that they were after date. There are some magnificent roses coming in now, some Bridesmaids of Dale's seen at Tidy's the other day were simply exquisite. There are lots of very ordinary roses coming in too, which one sees exposed in the butchers' and grocers' stores at 5 cents each, 3 for 10. I don't think this kind of thing hurts the regular florist much; perhaps after all it may in the end increase the demand for good flowers. Trade at the market on Saturday was pretty good for flowering plants of all kinds in season; there was a fine show on most of the stalls, and those of the crowd passing by were hard up and hard hearted indeed who could resist the temptation of buying one or two for their house windows. I dare say that if the fine weather continues some will be even tempted to plant out soon, but the experienced ones will not plant out until after the 24th—the Queen's birthday—some even wait till the beginning of June.

Miss Cullen, until lately at Tidy's King street store, has left Toronto to start business in the ambitious city—Hamilton. Good luck go with her.

One sees very little of one's conferees at this busy season of the year, consequently there is a dearth of interesting local horticultural tid-bits, but I notice that the FLORIST manages to keep on issuing some extremely interesting numbers all the same.

An Arboreal Land Owner.

There is a tree at Athens, Ga., which is a property holder. In the early part of the century the land on which it stands was owned by Col. W. H. Jackson, who took delight in watching its growth. In his old age the tree had reached magnificent proportions, and the thought of its being destroyed was so repugnant that he recorded a deed conveying to it all the land within a radius of eighty feet of its base.—*Chicago Mail.*

Red Spider Can't Live
WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD.

Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.

Yours truly, E. G. HILL & CO.

Price \$1.00 each, prepaid. Try one. You will find it the most useful and valuable appliance you have ever had.

Cleveland.

The Gordon Park Greenhouses have assigned. They were the property of Mr. Harry Gordon, and were managed for him by Mr. John Miller. Mr. W. J. Gordon, the grandfather of the present proprietor, was a great enthusiast in all matters pertaining to floriculture. Many florists will remember the old belief that it was impossible to grow roses under glass in the region about Cleveland, and make a financial success of it. Mr. Gordon had no faith in that superstition, and backed his own opinion with good money. He put up the first houses of any size that were intended exclusively for the forcing of roses. They were two in number, and the financial success of the venture was so immediate and complete, that four or five more were added the following summer. For several years, while rose growing was in its infancy everything went well. Then came the time of close competition and low prices, with the consequent diminution of profits. Upon Mr. W. J. Gordon's death the houses fell into the hands of the present owner, and we have once more a demonstration of the correctness of the belief that under ordinary conditions, the greenhouse business is an excellent one for the inexperienced to let severely alone.

Mr. and Mrs. Wilson of the south side are happy in the possession of a little daughter.

As far as business is concerned, matters have settled down to the usual humdrum round. Some funeral work, an occasional wedding, a social function once in a while and the usual everyday flower buying, keep things moving. Those who grow bedding stock are hustling around getting their stuff into inviting shape for the party who wants "a few things to brighten up the yard." This individual is all right usually, when of the male persuasion, but when a formidable female, who knows a place where she can buy pansies for twenty cents a dozen, looms up before the florist's vision, there comes a sudden tendency toward fatigue on the part of the hapless flower man.

Prices on pretty much everything are pretty shaky just now, owing probably to the abnormally hot weather, which has brought every thing forward too fast, while the demand has been, excepting for two or three spurts, slightly below the ordinary. A.

IMPROVED GLAZING!

Gasser's Patent Zinc Joints make an air and water tight roof.

SAVES FUEL. SAVES GLASS.

No slipping or breaking of Glass from frost.

These "Joints" have been on the market for ten years, and are in use by some of the largest establishments in the country. When well put in they give entire satisfaction.

A Crawly Story.

The New Orleans Picayune is responsible for the following:

Among the strange stories told about the wonderful things to be found in Australia there is one of crawling leaves. English sailors first brought an account of this phenomenon. They were roaming along the coast when a sudden breeze shook down a number of leaves, which floated gently to the ground. The sailors were surprised at this shower because it was not the fall of the year, but midsummer, and the falling leaves looked fresh and green. But this was nothing to what followed. After a short rest these leaves began crawling along the ground toward the tree from which they came. The sailors were too much frightened to stop and investigate, and one of the men said, in relating the adventure, that he expected every minute to see the trees step out and dance a horn-pipe. Fortunately other travelers were not too much frightened to stop and examine the matter. It was discovered that these queer leaves are really insects which live upon the trees and are of the same color as the foliage. They have very thin, flat bodies, and wings shaped like large leaves. When disturbed by a breeze they fold their legs under their bodies, and then the leaf-like shape, with stem and all, is complete. Not only are they bright green in summer, like the foliage of the trees at that time, but they actually change like the leaves do to the dull brown produced by frost. Another peculiarity of these insects is that when shaken to the ground they seldom use their wings. After lying there for a few minutes, as though they were really leaves, they crawl to the tree and ascend the trunk without seeming to know that they have the power to get back to their quarters in a much easier and quicker way.

CHICAGO.—Mr. W. N. Rudd is very ill with peritonitis. His life was at one time despaired of but he is now improving though not yet out of danger. Mr. Dawes of Dawes & Whittaker, Rogers Park, was married in Brooklyn, N. Y., last Wednesday, his bride arriving from England on that day. The couple left for Chicago the same evening.

SIoux CITY, IA.—The Smiths Villa Greenhouse and Nursery Co. has been incorporated with capital stock of \$5,000. The incorporators are Wm. Smith, H. A. Smith and E. J. Stason.

DAVENPORT, IA.—The Tri-City Florists' Club has issued a premium list for its second annual chrysanthemum show to be held in this city November 12 to 15 next.

Pot Roses for Spring Trade.

I am often asked how these should be treated to get nice thrifty plants suitable for selling as pot plants in bloom for Easter and onward, and as this is the season when preparation must be made for next year I venture to give the mode of operation which I have followed for some years with success:

To get nice, saleable plants in bloom for Easter take good, clean, healthy plants now in not less than 3 inch pots; if to be had in 4-inch so much the better. Pot these up into a larger size, giving them a fairly liberal shift, if 3-inch put them into 4-inch, first putting a few pieces of broken potsherds in the bottom of the pot to insure ample drainage. The compost for potting should be a good friable loam with about one-sixth or one-seventh part of thoroughly decomposed manure; screen the whole through a 3/4-inch mesh screen, then pot the plants firmly. If the space between the ball of the plant and the pot is too narrow to allow the fingers to press the new soil firmly use a thin stick to ram it solid, being careful not to bruise the roots on the outside of the ball. When repotted place the same in an open airy part of the greenhouse, where they can be fully exposed to the sun. Do not water too heavily at the roots till the new roots begin to start well into the new soil, but syringe them freely overhead at least twice daily in bright weather. Under this treatment the roots will fill all the new soil in about four weeks, then they should be repotted into the pots they are to occupy for the balance of the year. The size of these must be regulated by the strength of the plant—usually 6 or 7-inch is amply large enough. When they get their final shift they should be kept in the greenhouse for three or four weeks longer, or till the roots have fairly well taken possession of the new soil. But before this final potting is done the pots must be well drained, and they must be very firmly potted this time. Treat them just the same as before. By July 1 they should have made good strong growths and be ready to place out of doors. Before doing this select a piece of ground convenient to water and where the sunshine will be unobstructed. Cover this with coal ashes to the depth of at least two inches to keep worms away. On this stand the plants, allowing sufficient room between them for free

circulation of air. Fill in the spaces between the pots with coal ashes, sand, or some similar material to within one inch of the tops of the pots. It is best to plunge them in beds of not over five rows in each bed, leaving a space of at least two feet between the beds for easy access to weed them, water, etc. For the first few days after they are placed in the open air if the sun is bright they will need syringing overhead three or four times a day to prevent flagging and burning of the foliage, but after three or four days in the open air they will stand all the sun and wind without damage, always providing they have sufficient water at the roots, and one good syringing overhead daily; in moist weather they will not need either. The plants can stand in this position till fall; then, should heavy rains occur it would be advisable to lift a few of the strongest and greenest looking plants out of the ashes. If the roots are pushing freely through the bottom holes they should all be lifted out of the ashes just enough to break off any roots that may have pushed through. This is to prevent their starting new growth on top, which must be avoided, the object being to let the plants thoroughly ripen the wood they have made during the summer. After the middle of September they should not be watered too liberally, as the cooler nights with generally heavy dews will give them considerable nourishment, particularly as they will not be making so much new growth at that season, and a gradual rest is very essential to them. As soon as the temperature falls below 26° or 27° they should be placed under cover—a cool, dry cellar or a cold greenhouse facing north is suitable for this purpose. If the cellar or shed or similar place is used for storing they should not be subject to cold, strong drafts, or the wood may suffer in consequence. The wood must be kept plump and solid during the winter and perfectly dormant.

The time of pruning them must be regulated somewhat by the conditions they are to be placed in the greenhouse. To obtain the best possible results, i. e., a nice bushy plant with good sized and well finished flowers, requires about twelve weeks from the time they are put into the greenhouse. The best temperature to start them in is 46° to 48° at night, with plenty of air during mild days, and when the sun is bright they should be syringed lightly, but enough to moisten all the wood at least twice daily. Continue this treatment with a gradual rise in the temperature of about two degrees every eight or ten days till the buds are set.

When they are first brought from the cold storage to the greenhouse the soil in the pots will undoubtedly be very dry, in that case a little of the old surface soil should be lightly scraped off with a blunt stick and a little fresh soil and manure—about half of each—mixed up and put on

the surface of the pots, and the whole should have a good soaking of water. Oftentimes it will take two or three good waterings to thoroughly moisten all the soil, after they should be watered only when required. When the buds are well formed a weak liquid manure can be applied once a week till they show color, after that only clean water should be given, and all overhead syringing must be discontinued, or the flowers will be spotted. Of course all greenfly, mildew, etc. must be kept in check. The plant when offered for sale must be a thing of beauty, and with a little care and a little common sense it is a very simple matter to have them so with the wide range of color at command.

The rose offers peculiar attractions for Easter and all other decorations. The following varieties are the easiest to manage and the most sure to give good results. After having tried these the list can be increased to almost any extent:

PINK—Anna de Diesbach, Baroness Rothschild, Magna Charta, Mrs. John Laing.

WHITE AND DELICATE SHADES—Mabel Morrison, Merveille de Lyon, Madame Plantier, Queen of Queens.

RED AND CRIMSON—General Jacqueminot, Paul Neyron, Ulrich Brunner, Susanna Rhodocanachi.

Clothilde Soupert, Souvenir de la Malmaison and La France are also well adapted for this purpose, and are really grand things. JOHN N. MAY.

Damaged Rose Cuttings.

ED. AM. FLORIST:—My rose cuttings, Perles and Brides, are not doing well, and I cannot understand it, the soil being what we always use. I used a layer of ashes and cinders in the bottom of the bench; do you think this is the cause of the trouble? J. M. Illinois.

I have carefully examined the sample of cuttings from your correspondent, J. M., under a strong magnifying power. Their roots have the appearance of having struck something which was not congenial to them in the propagating bench, as nearly all the roots were black or nearly so, and all the soft succulent matter which constitutes a vigorous healthy young root was to all appearance dried up, though the tops were still fresh and green when they arrived here. If your correspondent wishes to try them I would advise him to wash the roots off quite clean, pot in small sized pots, not over 2-inch, using clean fresh soil. If they start off freely they will soon make a new set of roots, and possibly may entirely outgrow their present diseased condition, though at this late season the chances are rather against their making the most desirable stock for planting. Your correspondent speaks of having used coal ashes to some extent; every once in a while somebody claims there is a benefit in using them. Personally I have never found it so; on the contrary coal ashes in any form near the roots of roses are positively injurious in my experience. Any one wishing to test this for his own satisfaction can easily do so by crocking a few pots with cinders that have not been washed and an equal number with clean broken potsherds. Pot vigorous plants of equal size into each, treat both alike, and in a short time the difference in the plants will tell the tale for itself. Three months after those in the cinder drained pots may do for the fire, at least that has been the experience of JOHN N. MAY.

Carnation Notes.

Mr. Crouch informs me that he has a wager pending with a neighbor to the effect that plants which he received are Grace Wilder; his neighbor says they are not, and as Mr. C. describes the flowers on his supposed Wilders as quite large, very late and habit of growth of the plant resembling Hinze's White, I guess he can settle the bet by putting his hand in his pocket and drawing therefrom the amount. Lucky is the man who did not sell Mr. Crouch the Wilders, but there are strange things happening in plant life, and things have transpired no less curious than that the plants received by Mr. C. were Wilders when they were propagated and that a change of soil and climate effected an entire change in their nature. When I look back upon the change of the old sort Peerless, which we received from a grower in New Jersey some twenty years ago, to an entirely distinct variety after one summer's growth no sporting freak seems impossible. Even the foliage was changed, and the flower, while still remaining variegated, was of an entirely different form and color. Therefore it is possible for the Wilders purchased by Mr. C. to have undergone a similar radical change. Wilder is an early, free and with many a continuous bloomer, whereas the plants as now growing with Mr. C. are described as just the opposite.

While we are on this subject of sporting I would suggest that it will be well for all of us who have purchased new sorts to make due allowances for any changes which novelties may make in their habits during the next year. A seedling which has shown remarkable qualities with Mr. A. may be valueless with Mr. B., and still the places of these two men are but few miles apart, and right here comes in the point advocated at Boston, that all novelties be sent to different localities for trial before dissemination, and I am pleased to note that several growers (myself among the number) that intend placing upon the market novelties next year have adopted this plan. This gives us a chance to decide to a certainty the quality of a novelty, and where this year we have bought in lots of fifty we can hereafter buy by the thousand.

Purchasers of new sorts should not condemn a disseminator hastily, for the reason that all seedlings of whatever class of plants are apt to vary to a considerable extent until their characters have through very careful selection become fixed. And it must also be noted that a disseminator will endeavor to grow his novelties so that the flowers, when placed upon the exhibition table, will attract as much attention as possible, and they might not prove as fine with every one; then again some of us may beat the originator; such things do happen.

New points in diseases are coming to us all the time. Now, I have always ascribed stem rot to lack of drainage or insufficient watering; be this the cause or no I advise every grower who has a case of this kind to throw out affected plants at once, for the disease will spread, not very rapidly at first but surely, and later on

quickly. I noticed a case of this kind in McGowan, and left the plant purposely to watch developments. Twenty plants in the vicinity of the one first affected have contracted this fungous disease, and it is now necessary to throw out over one hundred; rather an expensive test, but the value to me in the future will be great, for I now believe I understand the trouble, and that the only cure is not only to remove the first plant which shows the disease, but also a number of the adjoining plants and the soil as well. This disease I believe to be far more troublesome than rust. CHARLES H. ALLEN.

House of Daybreak Carnations.

The accompanying engraving is from a photograph of a house of Daybreak carnations sent us by Mr. L. E. Marquisee, of Syracuse, N. Y. Mr. Marquisee writes: "The side benches were planted about the middle of November from the field. The middle bench was planted the first week in December, the plants having been lifted from the field and potted previously. The plants were large and healthy. We did not keep any record of the number of flowers cut, but the number has been very large. Several traveling men who saw the house said it was the best they had seen in their travels."

Cannas.

BY J. IVEIRA DONLAN.

[From paper read before the New York Florists' Club May 13.]

It is not my purpose in this paper to dwell upon the early history of the canna, only to observe that the material for the production of what are known to us as French cannas were first brought from South America.

It is not the only instance where foreign appreciation and development of American flora has resulted in awakening us to some effort. It is gratifying to note, however, that in cannas, as well as in other flowers, we have succeeded in raising a higher standard of excellence by the recent introduction of American seedlings, which for beauty, size, and brilliancy greatly exceed those raised by any other country.

Notwithstanding the fact that we have been for years cultivating what are still first-class cannas, it is surprising to note what little is known about them, or to what small degree they are appreciated, not alone by the general public, but by the retail florist. It is strange, but nevertheless a fact, that not over 20 per cent of the retail florists of this great city know what a canna is like, and perhaps less than half that number would be able to name any particular one at sight. We must excuse the ignorance of the public where they are never enlightened, and the retail florist, as well as the grower, can never expect to be other than ignorant while he ignores the great progressive and educational factors—the florist clubs of the country.

We find the retail florists of the cities content to trudge to the market day after day, year after year, to purchase the same old 25 of a kind of roses, a few bunches of violets, bulb stock and greens. How few of them ever go out to the grower and investigate the possibilities of hybridization, or encourage the cultivation of meritorious novelties? Almost daily in every florist store the question is asked by some particular customer, What is the latest in flowers? What have you got that's new? How few are able to intelligently answer the question, or suggest a way out of the same old rut? These florists seldom read

HOUSE OF DAYBREAK CARNATIONS.

a trade paper, and never consider the florist club as a school where they could receive a much needed education.

The introduction and development of cannas when intelligently considered and reviewed will be found to mark one of the greatest and grandest achievements in modern floriculture! They have given to Flora her most brilliant gems—great dazzling beauties which produce such impossible effects wherever shown; they furnish the spectacular views in Nature's most beautiful scenes; by their innumerable shades of coloring they present an unequalled galaxy of splendors not even surpassed by the rainbow's tints. They give us colors not possessed by any other class of flowers. The autumnal setting sun rays may be seen in a mass of the different kinds; then again they appear like flocks of gorgeous butterflies fluttering in the summer breeze! Why should such flowers remain so long without recognition, or the proper application to what they are especially suitable for—the highest elements of decorative art, which is continually demanding newer materials. Every art has its distinct branches, and floricultural art, which is really the first and greatest incentive to every fine art, should be elevated wherever possible by the proper use of newer methods of application. In cannas we have all the colors necessary to produce the most daring and ingenious combinations.

It has always been surprising to me that they have not been more generally used for parlor and table adornment, as they make a magnificent table decoration when arranged in small bottles of water in a basket of adiantum or croton, or autumn foliage. Take a large vase, trim it in asparagus or autumn foliage, and fill it with a mass of any of the improved cannas, and it will dim the luster of any other

flower for room decoration. Every private gardener, whose duty it is to supply the table with effective cut flowers, should know the great value of good cannas. All during the hot summer they furnish him with abundance of blooms, grandly imposing in the garden, unsurpassed as a summer flower on the table! Many of the dwarf varieties, such as Crozy, Eldorado, Pierson, Columbia and Sunshine, are specially adapted for pot culture. They produce more flowers than any other similar sized plant, and are most effective for conservatory decorations. There is nothing to equal them for sub-tropical bedding. By supplying at once the foliage and flowers necessary to produce the best effects, they have driven into obscurity many other varieties of plants of lesser merit. They are easily cultivated, thus furnishing the cheapest material for garden decoration, for one canna is equal to six geraniums, or a dozen of numerous other kinds of bedding plants.

They are best started from single eyes in 3½ inch pots, from early in April till the middle of May. Early in June plant them in good rich soil, and give them plenty of water under the foliage, preferably after sundown. The canna is almost a semi-aquatic, and will grow in poor soil if given plenty of water, even better than in rich soil with less water. The height of most of them will depend much upon soil, treatment, etc.

When the plant commences to flower, a little care should be used in watering, as they are apt to go into too much growth, which will prevent them blooming until late in the season. I have found that an occasional light sprinkle on the flowers will add much to their substance and brilliancy, and it is often necessary to syringe the foliage in order to keep it clean. Under the most ordinary treatment they will

supply a great profusion of flowers from July till cut down by frost, when they should be taken up and placed on a cool surface under the greenhouse benches, or in a cellar where frost cannot reach them.

When bedding out, it is always best to group each color wherever possible, in separate beds; there is nothing so grand as circular groups of these gorgeously brilliant flowers, the scarlet, the intense crimson, the yellow, the orange, the apricot, the vermilion and the numerous mixed colors to be had.

The greatest care should be used in selecting standard varieties which possess great merit; don't depend entirely on catalogue pictures, for many inferior flowers are given the most elaborate descriptions. Our catalogue composers should be more honest in their descriptions; many frauds are committed by these false portrayals, that in any other business would be considered on a level with the green goods system of robbery. This dishonest practice could and should be made impossible by the formation of a committee of experts who should pass upon every flower before it is disseminated.

Another bad feature, and one that tends to retard the advancement of higher grades of flowers, is the habit of large growers and seedsmen in flooding the market with old and inferior varieties. It is as easy to grow a good canna as it is to grow a poor one. And why do our catalogues contain long list of varieties no longer equal to the popular standard? Let us be progressive, encourage greater advancement by discarding, wherever possible, the poorer kinds; by keeping on the market only the very choicest varieties we will add to their popularity and increase their demand.

Many of you remember the display of cannas made at the World's Fair, but

very few are acquainted with the enormous amount of fools' red tape connected with it. Flowers were forbidden to be grown on any section of the grounds but that of the isolated island. It could never be explained why; the only reason given was that the flowers might draw attention from the architectural features of the buildings. If this be the reason for the stupid, ignorant laws made on those grounds, it was in a way an acknowledgment of the great charm in, and the love of human nature for flowers. For it is certain that if floricultural art had been properly represented on those grounds many of the gaudy over-rated daubs would have gone unnoticed.

Great praise is due to the exertions of James Dean, Robert Craig, F. R. Pierson and John Thorpe, whose efforts resulted in obtaining the front of the Horticultural Hall for a display of cannas, which, although grown in dry, spongy soil, with many other disadvantages, still it may be assumed they created a lasting impression on the minds of many visitors from all parts of the world!

In my review of varieties it is impossible to reach many valuable new kinds. I can only give you my opinion of those I have known and studied; and whilst there are very many worthy old and new kinds, principally valuable for peculiarities in color, still there are but few, say 18 or 24, that reach a standard that justifies a general cultivation.

For the best dwarf cannas for general use, I would recommend yellow, Eldorado; crimson, Charles Henderson; glowing scarlet, F. R. Pierson; scarlet, Mme. Crozy; orange salmon, Sunshine; cardinal red, Columbia; gold laced scarlet, Queen Charlotte; spotted orange, Florence Vaughan; apricot, Francois Crozy.

For tall bedders: Crimson, Alphonse Bouvier; yellow, Capt. P. de Sazonni; orange apricot, Helen Gould.

Purple foliaged: Cherry red, Egandale; scarlet orange, J. C. Vaughan; orange scarlet, President Carnot; orange apricot, J. D. Cabos.

COLUMBIA.—This is a magnificent canna of this year's introduction; it is an entirely new, distinct type of canna, which creates a new ideal. It is an American seedling well worthy the grand name it bears, and possessing such great merit as to justify us all in being proud of it. I well remember its advent at the World's Fair; it came with five other seedlings at a time when everything was on the rush, consequently in a department where so many imposing and apparently important matters demanded attention, this seemingly insignificant exhibit of six wee, small seedling cannas was put at one side and forgotten until very late in the season.

An improvised bed was made in a very isolated position, and the six delicate looking seedling cannas were nursed to vigorous life by plenteous watering. The first flower it gave told us that a new queen of cannas had arrived. The circumstances connected with the introduction of this beautiful flower should be a lesson to all florists who are interested in the dissemination of new flowers. Your most delicate looking seedling may turn out to be your finest flower. I have heard many who saw it then at the Fair and know its merits now express regret for not buying the plant when first exhibited. Another lesson is here taught us, that there is money in early recognition of merit, and of the adoption of proper methods of introduction of worthy novelties.

Mr. Donlan then went on to describe

with more or less minuteness the characteristics, good points and otherwise of most of the prominent varieties of recent introduction, including many of American origin. He closed with a strong plea for the canna as a desirable flower for retail florists' requirements, giving colors and effects that can be obtained with no other flower in cultivation.

Bulbous Flowers.

Mr. W. H. Siebrecht of Astoria, N. Y., is the largest grower of Dutch bulbs for the New York market. He is one of the few growers who still have faith in tulip forcing. The heavy decline in prices of tulips, amounting to from 30 to 50 per cent. on some varieties within the past two years, will have the effect of causing the Dutch growers to drop many of the more ordinary varieties, and the general introduction of the finer sorts for forcing purposes will, he believes, bring about a reaction in favor of the tulip among flower buyers. For standard forcing varieties he grows mainly the following: La Reine (also known as Rosa Mundi and Miltiades), single white, Vermilion Brilliant, single red, Rose Grisdelin, single pink, Yellow Prince, single yellow, Couronne d'Or, double orange yellow, Murillo, double pink, Imperator Rubrum, double red, Tournesol, double red and yellow and Yellow Tournesol, double yellow. Too expensive for general commercial purposes, but superb for fancy work or private establishments are Rosa Luisant, pink and white, Salvator Rosa, cerise, Ophir d'Or, yellow, among the singles, and Blanche Hatve, double white. For outdoor planting he recommends Rosa Mundi Hykman, single pink and white, Golden Crown, single yellow, General Washington, single white, Coleur Cardinal, purple vermilion, Ida, single yellow, late, Gesneriana and all the Parrots. Yellow Rose is the only double he would recommend as useful for outdoor cutting. The doubles as a rule do not amount to much for this purpose.

The drop in prices of tulips has been offset by the advance in hyacinths, which are fully one-third higher than last year. Dutch growers claim that good stock is scarce on account of largely increased demands, but the more likely cause of the advance is that the bulbs were sold last year for a lower figure than the cost of production. Dutch hyacinths are practically valueless as cut flowers in this market, but the demand for them as plants in pots and pans, especially at Easter, is very heavy and constantly increasing. There is a need for a better grade of pans than the potteries have yet furnished. Something more artistic in design would find a ready sale, and the necessity of crepe paper to hide the receptacle would then not be felt so strongly. In forcing hyacinths it is well always to calculate upon a loss of ten to fifteen per cent. of the bulbs through failure to bloom. Another bad feature which has never been satisfactorily accounted for, is that in forcing some varieties will not come true. In some cases there will be as high as fifty per cent of imperfect spikes and blooms, the process of forcing appearing to have almost completely destroyed the identity of the variety.

Roman hyacinths about held their own last year, there being not so many forced as in the previous year, when an enormous surplus had been dumped on this market, and some lots had been bought as low as \$5 per thousand. It was represented by dealers that these changed conditions were the result of a shortage, but

this was not exactly true; the difference was simply that the surplus which had come here before went last year to England.

Four years ago the daffodil bulbs abroad got frozen, and the higher prices resulting from the scarcity thus caused induced many foreign growers to go into daffodils. The effect of this increased production began to be felt last year and prices went down so that everybody bought daffodils for forcing, thus there were entirely too many on the market, and many flowers were lost, while those that were disposed of brought lower prices than ever before. The fact is that the finer single blooming varieties are more appreciated by the better class of buyers than are the double, and with the reduced prices at which the improved varieties such as Golden Spur, Henry Irving, Maximus and Horsfieldii can now be bought, it is likely that this section will be more generally grown in future. Daffodils, from their susceptibility to injury from gas and drafts, do not give satisfaction when planted in pans for store purposes, as is the case with hyacinths; twenty-four hours in a store or dwelling is apt to ruin them completely.

The last of the forced lily of the valley is now coming in. This will be followed closely by the crop from outside, and after that the cold storage stock will come into requisition. No over-production of lily of the valley is likely for next year. The dry season in Germany two years ago destroyed fully one-third of the young stock at that time, and from this cause an advance of from \$1 to \$2 per thousand in the price of pips is in effect the present season. Mr. Siebrecht grows annually half a million lilies of the valley.

Starting Cycas Revoluta Stems.

Which is the best way to start Cycas revoluta from dry stems, covering the time from arrival until one year's growth is made? C. B.

Imported stems of Cycas revoluta are received in a dormant condition, the leaves and roots having both been cut off close to the stem prior to shipment, and the first consideration is to induce a new growth of roots in order to provide means of sustenance for the new crop of leaves that should soon follow.

In preparation for this the stems should be potted up at once, using as small pots as the size of stem will permit, for instance, a stem four inches in diameter may be put in a 6-inch pot; one six inches in diameter in an 8-inch pot, and larger sizes in proportion. Some drainage material should be used in the pots, for cycas will not flourish in sour soil, though enjoying abundant supplies of water when in active growth. A rather sandy loam enriched with about one-sixth of dry cow manure or a small quantity of bone dust forms a satisfactory compost, and the soil should be rammed firmly in the pots, the stem having been placed deep enough in the soil to avoid all danger of it becoming shaky. For example, a stem one foot long should be buried about half its length.

The newly potted stems should then be placed in a warm and shaded greenhouse and thoroughly watered, a night temperature of 70° to 75° being sufficient to start them into growth, providing a proper condition of moisture is maintained. During the growth of the young leaves it is essential that the plants should not suffer from lack of moisture, for in that case some of the fronds are likely to

ANTHURIUM ANDREANUM

become permanently crippled, but it is also safest not to syringe the foliage to any great extent until it is fully expanded, for where the pressure of water is heavy the tender leaves may be badly bruised. After the new growth is fully developed and has become firm to the touch the plants may be removed to a cooler and more airy house, and freely syringed, and from this time forth may receive practically the same treatment as the ordinary species of palms that are in general use for decorative purposes.

The time required to produce a new growth on the dormant stems of *Cycas revoluta* varies greatly with the condition of the stems and the treatment given them, in some instances the young fronds pushing up in two to four weeks, while others may take an equal number of months, and in some very obstinate cases the new leaves will not appear until the following spring, even though the root growth seems to be progressing satisfactorily.

W. H. TAPLIN.

Anthurium Andreanum.

This beautiful arad was at one time, not very long ago, a very rare one, but for the past few years good young plants in 3 and 4-inch pots can be bought at about \$50 per 100. Such plants would make capital little specimens in a few months, and it is time now to bring it to the front, not only as a flowering plant for the holidays, but also for the retail trade all the year around. It certainly stands the atmosphere in a dwelling better than many of our so-called best house plants, if it only get watered regularly, with a spouging of the leaves every now

and then. We have been selling some plants within the last three years to amateurs who had no greenhouse and we were rather surprised, noticing the fine growth and healthy appearance of the plants when some of them came back to be repotted. Since then we never hesitated to recommend them for that purpose, whenever fair sized and well established plants are available. This anthurium in our opinion, is sure to give good satisfaction, for even when out of bloom (which they seldom are), the fine foliage is very attractive and ornamental. The leaves are broad, cordate, but rather pointed, of a deep glossy green, hard and leathery, and are borne on long stiff stems. The inflorescence consists of bright orange red spathe over 6 inches long and 3 to 4 inches wide, with the surface irregularly corrugated, and the spadix yellow and white. The spathes will remain on the plants for many months in full beauty, and this is one reason for them to be nearly always in bloom, because new flowers are produced before the older ones are faded. The plant which is represented in the centre of the picture has never been entirely without flowers for the past four years, having a few of them on at all times, and at certain seasons a dozen or more. I see no reason why this should not make a good useful plant for the general trade at the holidays. It propagates readily and can be grown into salable size inside of ten to fifteen months.

The canes of old plants cut up and laid in a moss bed with bottom heat like *dracæna* canes, will produce young plants for a long time, while the old stumps will be sprouting up again, and if left to grow

undisturbed may be cut down a second time the following year. After the young sprouts in the moss bed attain a little strength and have made a few leaves, they should be removed, but not with a "heel," for that would seriously reduce the quantity of the second crop of cuttings which will come on after the first crop is removed. Nearly all of these cuttings will have made a few roots by the time they are of sufficient size to be separated from the canes, and may be potted directly in a suitable sized pot, using for compost about the same material generally used for orchids. Give liberal drainage and place the young plants in a close frame until well established; after that they will do in a shady warm house, where an abundance of moisture is kept up. Here they will make progress very fast, and soon will want to go into larger pots, and in repotting them now use the same material as recommended above, with the addition of a few pieces of sod, no further decayed than just dead. When the plants are large and strong enough to flower they should be placed in a somewhat cooler house, so as to harden them off, or else they would not endure the change of air, going into a store or in a dwelling house. We make it a rule not to send out a plant of this description unless it has been hardened off in a cooler and more airy house for some weeks previous, which may be one reason of their doing so well in stores or living rooms.

Rochester, N. Y.

J. B. KELLER.

Boston.

A week of the most remarkably hot weather ever experienced at this season of the year with the thermometer in the vicinity of 90° day after day, has played havoc with all horticultural operations, outdoor and indoor. A whole month of ordinary spring weather would scarcely make a greater transformation in the outdoor aspect. Trees and shrubs which were a few days ago leafless branches are loaded with foliage and blooms; forsythias and lilacs are in full flower both at the same time, a most unusual occurrence; pansies have dwindled down to midsummer size, and the question of flowers for Decoration Day use has now assumed an entirely different character, for this is no longer a "late spring," but a very early one.

The flower business has received a complete knock-out. Even carnations, which have been such "good property" in Boston at all times regardless of the condition of the market otherwise, have had to succumb with everything else, and the once proud carnationist marches about from store to store with heavy armloads of great whoppers with two-foot stems vainly offering three hundred for a dollar. The surprise is so sudden and unexpected for him that he cannot bring himself to fully realize it, but the rose growers and others have got well hardened down to such experiences, and they accept the situation more philosophically. Even Zirgiebel admits that it is "too hot to talk about heating."

The past winter has been very severe on evergreens. Many retinosporas and other conifers hitherto accepted as perfectly hardy and reliable are completely killed, and the map of many a rhododendron bed will have to be entirely reconstructed.

The daily newspapers have been agitating the project of transforming the Tremont street mall of the Common into a flower market, "like the one by the Madeleine in Paris." Some people are never satisfied unless they are copying something "abroad."

New York.

A very small audience was present to listen to Mr. J. I. Donlan's paper on carnas at the May meeting of the New York Florists' Club, but a large gathering is out of the question at this season of the year, especially where the membership is largely made up of greenhouse men. Mr. Doulan's paper was lengthy and comprehensive, and we regret that space will not permit us to give it in full. The major part appears on another page.

A splendid display of canna blooms including a number of promising seedlings was made by the F. R. Pierson Company and J. N. May, also a vase of carnation Della Fox from Philadelphia.

Mr. Donlan presented the club with a bound copy of the report of the New York state exhibition at the World's Fair, which was accepted with thanks. The secretary was authorized to send letters of condolence to the families of recently deceased members, including one in the German language to the mother of the late G. R. Bergmann. The attraction at the next meeting will be Mr. C. L. Allen, whose subject will be "The communion of sains."

Plant dealers generally report trade as extremely good. It is in fact the best season for many years and many things are practically sold out. This is true especially of hardy roses. Two reasons are advanced. One is that the extra demand results from the severe winter which has killed off much stock all over the country; another is that many of the former plant growers have gone into cut flower growing exclusively, thus leaving a better trade for those who continue the plant business. The auction sales enjoy their full share of the boom.

Cut flower trade is in a condition of summer stillness. Roses continue to come in abundantly but there is a big proportion of trash among them and many more than can be disposed of. Boxes from some of the poorer grade of growers are frequently cast aside without even opening, and the net proceeds from this class of stock amounts to practically nothing. All varieties of flowers show the effects of the extreme hot weather.

Mr. John Scallen met with a painful accident on May 7, having been thrown from his bicycle and fractured his leg.

Mr. Theo. Roehr's condition is not as favorable as was reported, but he has undergone successfully an operation and his prospects for recovery are good.

Thos. W. Weathered sailed for the old country on the City of Berlin on May 15. He will make a six months stay in England.

Charlie Snell, formerly with Burns & Raynor, was the recipient of a daughter on May 13.

The annual meeting of the Cut Flower Exchange was held on Saturday, May 4. Officers for the ensuing year were elected as follows: President, W. H. Siebrecht, Long Island City; vice-president, Louis Dupuy, Whitestone; 2nd vice-president, Gus Schrader, Newtown; secretary, John Donaldson, Newtown; treasurer, Geo. Mathews, Great Neck; directors, John Seifert, W. H. Siebrecht, Gus Schrader, Philip Miller and Marshall Clark. A special meeting of the stockholders will be held on the first Saturday in June for the consideration of unfinished business and to declare a dividend, which will probably amount to 10 per cent.

The United States Nurseries made a fine floral display in connection with the 2nd annual exhibition of the National Sculpture Society at the Fine Arts Building, West 57th street.

John Smith, a gardener, of 518 Boulevard, was held for trial in the Harkm police court, charged with stealing pansies from Riverside Drive.

Some of the wholesalers lose quite heavily by the B. A. Elliott Co. failure.

Jas. A. Hammond has given up his store on Fifth avenue.

Chicago.

The *Evening Post* of May 14 gave the "Crape chasers" an overhauling that will undoubtedly result in making their work much more difficult in the future. The *Post* gave in detail the various methods adopted by the ghouls to obtain orders and warned its readers against listening to their tales.

The glut prevailing last week is now past, and somewhat better conditions prevail. The quantity of stuff coming in is greatly lessened and is, for the most part, extremely poor in quality. The amount of really first-class stock is limited, and hardly sufficient to meet demands, consequently prices in all lines show an upward tendency. The intense heat of last week affected roses particularly, forcing out all the buds without the plants making any more growth, and it will be some little time before they recover. In addition to this many growers ceased firing and were then caught by the extraordinary fall in temperature; consequently the plants are now very badly mildewed. It is the general opinion that in this market at least roses will be scarce and dear at Decoration Day. Good Beauties are now \$2 to \$3 a dozen and in strong demand. First quality large teas are 4 per 100; small teas 1 to 2, with an upward tendency. They are no longer quoted in lots of 1000.

Carnations also share the raise in price. Small flowers in second quality, particularly red, still sell at 50 to 75 cents; first quality are 1, with 1.50 to 2 for fancies. Daybreak varies greatly in quality, but some of this variety still sell for 2, and Buttercups, limited in quantity, bring the same price.

Outdoor bulbs suffered severely from the sudden cold weather; in localities growing for this market they were entirely cut down by the frost, so tulips and poet's narcissus have about disappeared. Outdoor valley is over. Lilac is over too, and there is now literally nothing in this line to come in. One week has worked a revolution in the trade; last week every dealer was buried under the immense stock coming in; now their counters are bare. As some growers have begun throwing out and replanting, and many are off crop, prices are not likely to decline within the next week or so.

The fakir has been in his glory for the last two or three weeks. These gentry have multiplied to such an extent that every available nook and corner in the downtown district is taken possession of. Naturally the store men, particularly those whose places of business are located in close proximity to the haunts of the fakir, are not particularly pleased with this state of affairs, and a movement is now afoot to abolish or at least restrict the operations of these street vendors, if such a thing is possible. An organization of the retail florists is to be effected, for the purpose of forcing this question to the front. A meeting which was quite well attended was held at the Palmer House last Tuesday. At this meeting an organization was effected by the members present; this body will be known as the Society of Retail Florists, and as stated above, will wage war against the prac-

tice of vending flowers on our public streets in violation of our city ordinances, the position taken by the retail florists being to the effect that the occupation of the numerous stands in front of stores along the public streets is clearly against the law, and it is toward the enforcement of this existing ordinance, which should prohibit such practices, that the special effort of this society will be directed. Legal assistance, if necessary, will be secured, a fund for the purpose being now subscribed. A special meeting of the society will be held Friday, May 17, at which permanent officers will be elected.

Floral Carnival at Santa Barbara, Cal.

In California the annual "feasts of flowers" seem to be entered into with more spirit each year. They take the form of elaborate decorations of the houses and streets and parades of floral floats and decorated vehicles. There is much good natured rivalry in designing original decorations, and that some very striking things result may be seen by referring to our group of pictures, from photographs kindly sent us by Mr. Jos. Sexton.

While the carnival at Santa Barbara is one of the most important, similar "floral festivals" occur at about the same time (during the month of April) in a large number of other California cities.

Rochester, N. Y.

As to business done the past week in the line of cut flowers, etc., we cannot say that it was very brisk, although there is a steady demand, but with nothing extravagant going on the stores will generally call trade rather slack. The warm weather has brought out carnations and roses in plenty around here, also the dandelions in lawns. The superintendent in one of our large cemeteries noticing this gave orders to have the lawns cleared of the yellow pests. The foreman in turn told one of his men to begin with the job around the large fountain near the office building and left it to the workman's own judgment as to how to exterminate the weed in the quickest manner. The man concluded that a lawn mower would do the work in short order and went to work mowing down everything, including about 15,000 Parrot tulips, which had been planted in this part of the lawn last fall, and were just showing the yellow color of the dandelion. The labor of planting these bulbs in the sod had taken a man's time over a month, and the superintendent was delighted to see them coming on so well, promising to make a grand show for Decoration Day. After the man had cut down all in that part he thought of making a clean job of it, and therefor would have to go over a second time with the mower, but the tulip leaves and grass combined obstructed the machine, and in going for a rake to gather them into heaps he went to the office, where the superintendent found out what was going on, and naturally got mad, discharging the poor fellow right on the spot and telling him not to show his face again for seven years if he wanted to preserve his life. Now there are a great many journeymen gardeners out of employment who would never make such blundering mistakes; why don't cemetery superintendents employ better help at a very moderate advance in wages? it would surely save them such annoyance.

Still he has one consolation at least, and that is the Parrot tulips would have been spoiled anyway, for last Saturday we had such a fearful hail and wind storm

GLIMPSSES OF THE FLORAL CARNIVAL AT SANTA BARBARA, CAL.

that not a tulip would have been left undamaged. I stood by the window overlooking one range of greenhouses and saw small hailstones coming down; in a few seconds they increased in size and one light of glass after another was shattered, and a few minutes after we had witnessed the most destructive hail storm which has occurred in this section for 28 years; nearly all our greenhouse establishments have suffered severely, the south part of the city getting the worst of it, and the damage done cannot be estimated, for the glass and labor of putting it in is in reality only the smallest loss. The broken glass falling into large leaved palms, begonias and other foliage plants does the most damage. The hail stones chopped off the soft and brittle stems of *Lilium candidum* in the open ground, young carnations just planted out are cut clean to the ground, and many herbaceous plants in different collections are ruined, but we hope they will break out again. A large bed of Indian azaleas was badly damaged, branches being knocked clean off. Even under a shade house of lath hydrangeas in bud or bloom got enough of it to spoil their sale. Araucarias under the same structure had branches and leaders cut off, frames of verbenas and petunias are mown off; in fact the loss under glass is as heavy as outdoors. The weather has turned to almost freezing, and although fires are kept up there is so much ventilation on the houses caused by the

thousands of broken lights that fire heat will not do much good. In some places they began to glaze Sunday; others, among them ourselves, have covered the houses temporarily with oiled building paper, tacked on here and there with strips of wood and narrow boards to ward off the cold, but still coleus, heliotrope, begonias and other soft stuff could not stand it, and may be an entire loss. There is no use in going into particulars stating the losses of different firms; those in the north part of the city escaped comparatively easy, Vick & Hill's and Wilson's having no loss at all. Salter Bros.' loss is comparatively small, but in 1888, when the last hail storm visited us, their greenhouses suffered considerably more than any others, so it is only fair that they escaped lightly this time. The storm of last Saturday extended over a larger greenhouse territory, but the proverbial hen's eggs, duck and goose eggs were smaller in some sections. Ellwanger & Barry escaped lightly, while in the immediate vicinity Schlegel's, Keller's and Will King's were damaged more than any others, but then the houses at Ellwanger & Barry's are mostly old structures, well built of course, but some of them being glazed with 7x9 and even 6x8 glass supported by heavy bars and substantial woodwork, the hail stones would strike the bars oftener than the small glass, and this is the way I account for their escape. Builders should therefore consider this ad-

vantage of small sized glass (I think it is the only one there is) if they want to build safely against hail storms.

The glass broken at Ellwanger & Barry's is less than 2,000 lights, at Salter's 800, Crosman's 1,000, White Bros.' 2,500, Kruger's 1,200, DeFries lost one-half, while our Billy King lost nearly three-fourths of all his glass, and Schlegel's between 3,000 and 4,000 lights. One of their houses had all the glass knocked out on the west side and a good one-third on the east half. They had nearly all their hotbed sash stacked up and covered with shutters, or else their loss in glass would have been considerably more, while at Keller's the sash were on the frames, and there is more shattered glass to be found here than in any other place; it will probably figure up to 6,000 or 7,000 panes. One orchid house, a lean-to, facing west, has hardly a whole light to show. Today it has been raining and cold; re-glazing on the houses was abandoned, but they are all busy mending hotbed sash in the sheds. At Little's nurseries, a few miles outside the city limits, the new greenhouses are reported to be in a very bad state, perhaps as bad as at Keller's. Other places have suffered, but the amount of glass broken is smaller. J. B. K.

SPRINGFIELD, ILL.—The Senate bill appropriating \$4,000 to the State Hort. Society has been advanced to third reading.

Philadelphia.

The very warm weather for this time of year experienced last week, followed by the extreme cold of the early days of this, has been very hard on roses particularly, and all classes of flowers have suffered more or less. The thermometer registered 92° in the shade last Saturday, got down to 50° on Monday, and there was frost in low places on Tuesday night. This sudden change put a stop to planting, which was in full swing, and some lots of plants were sent back to the growers to wait for better weather. There is no fixed price for stock now, as the demand has fallen off so much. The growers do the best they can, no reasonable offer being refused; \$5 is the highest price for large teas, the majority being sold for 3 to 4. Smaller roses go for \$2. Beauties 2.50 per dozen down to 50 cents. Carnations 75 cents to 1.50 per hundred. There is still some very good stock around. Sweet peas go at any price up to 50 cents per hundred for the best. There are quite a few gladioli to be seen, but they don't seem to meet with ready sale even at 75 cents per dozen.

The big four have sold out their business to M. Heron, who will continue the same at the old stand. This combination must have been very successful if one is to judge from appearances. David Bear is now very particular about the crease in his trousers, John Burton is soon to be off on a fishing trip in the wilds of Maine, George Anderson has had his whiskers trimmed, and that smile of Mr. Lonsdale's seems to be a trifle more dignified. All this on account of their experience with a Chestnut street store; they all now present something of a retail appearance as it were.

W. K. Harris had a sale in New York last week of palms, rubbers, etc., all by himself, his usual Philadelphia associates staying at home. He expressed himself as very well satisfied with the result. He will accompany Mr. Burton on his trip to Maine.

Robert Craig has purchased the stock of Thomas Butler's new rose, the Climbing Wootton. This variety originated with Mr. Butler two years ago. It is a sport from the well known Wootton and a plant set out on a table in one of the houses threw shoots over twenty feet long. These bloomed continuously, producing flowers if anything larger than the old variety, with stems about 12 inches long. A few plants left outside for a test and unprotected have stood the winter perfectly. This variety should prove a valuable acquisition to the list of "ramblers," as it is a continuous bloomer, while many of the best of the old sorts only flower once.

James Verner of Lansdowne is sending in some fine teas; his Mermets are especially fine, considering the weather and season of the year.

Good strong plants of Ampelopsis Veitchii are scarce in this market; here is an opportunity for some one who wants a specialty. Large plants of this ampelopsis have been scarce for years, and the demand is not likely to fall off for a long time to come.

Jacob Becker has a fine stock of hybrid roses that have been wintered in frames outside; they are now without cover and present a beautiful appearance with their healthy foliage and lots of buds.

H. A. Dreer Co. have just received a very large importation of plants from Europe, all the stock is fine and seems to have carried well. They have perfected a system of packing which works to perfec-

tion, and only where their orders are not carried out is there any loss. Excelsior is used to tie about the balls of earth and is considered much better than sphagnum. Among the plants imported are a number of kentias grown three and four in a pot, which certainly ought to be salable plants, as they are very bushy and all the leaves are perfect. A lot of araucarias, the best they have ever imported, arrived recently and by fall should make fine specimens.

W. J. Baker, the Penn Square commissioner, is branching out; a new paper cutter adorns his counter. Wm. J. does nothing by halves and a new delivery wagon can now be looked for.

On a little trial shoot the other day John Burton broke 23 out of 25, and Mr. Harris surprised the boys with his skill in handling the gun, breaking eight before a miss.

John Shellem of 17th and Tasker has a 200-foot house of carnations of which he is proud; it is planted with Daybreak, Scott and McGowan, and while looking very well at present, has been doing splendidly all winter. He is very busy at present with bedding plant trade. He buys all he wants for this work, as he says he can buy better plants as cheap or cheaper than he can grow them. When one looks around it would seem as if it would be hard work for growers to make much off this class of stock at the present low prices, 4-inch geraniums as sold as low as \$6 and \$7 per hundred, and small stock of assorted plants at \$3. \$10 per hundred used to be considered bottom for 4-inch stock; now \$8 is high, and \$6 in many cases is not refused.

The many friends of Mr. John Westcott join in presenting their hearty congratulations on learning that he is a full fledged father-in-law, Will, the only son of the Westcott family, having taken unto himself a wife.

Mr. Harry Bayersdorfer starts on his annual trip to Europe in search of novelties in his particular line; he wants to be in the front ranks when the fall trade opens up. Having arranged for passage on the Augusta Victoria, he sails on the 16th. While Mr. B. is abroad he intends taking a trip through Norway and Sweden; this we understand is a recent addition to his regular program.

Mr. Joseph Meehan of Germantown leaves for old England on the 22d of the present month for a two months' stay among the scenes of his childhood.

In the will of Miss Marie Louise Baldwin, who died a few months ago, a kind remembrance is made to her head gardener, the venerable William Joyce, who entered the service of Miss Baldwin's family in the year 1857, and has remained continuously in the same position to the present time. Miss Baldwin bequeathes the sum of ten thousand dollars to Mr. Joyce without reserve, also one thousand dollars to Mr. Joyce's son John, who has worked with his father on this place ever since leaving school. Mr. Joyce has been a member and regular exhibitor in the Pennsylvania Horticultural Society for the past thirty-five years, and he shows with great pride a silver watch, a premium won at an exhibition of this society some twenty-five years ago. The Florists' Club of Philadelphia, appreciating Mr. Joyce as a gardener and able man, placed his name on the roll of honorary membership.

Mr. Chas. Zimmer has met with a great loss in the death of his wife, which occurred on the ninth instant. Mrs. Zimmer was a helpmeet in its truest sense, having the keenest interest in her husband's welfare. The interment took place on Sun-

day, the 12th, in Holly Cemetery, Camden, N. J.

Mr. H. H. Battles has a fondness for the country, as is evinced in his recent purchase of a twenty-five acre farm at Newtown Square, Delaware Co., Pa. It is Mr. B.'s intention to spend about eight months of each year at his country place, the remaining months in the city. He has selected a most charming spot to make a suburban home, and considered by those who are acquainted with the neighborhood to be the prettiest part of the County of Delaware.

The regular monthly meeting of the Pennsylvania Horticultural Society, which will be held in the New Century drawing room, on Tuesday evening, the 21st, should prove of interest and value to its members, as papers on the following subjects will be read and discussed: "Artificial manures, their sources, manufacture and application" by Dr. Bruno Terne; "When to use plant food and what kind to use," by Prof. E. B. Voorhees, of the New Jersey State Board of Agriculture; "The soil and fertilizer" by Prof. H. P. Armsby, of the Pennsylvania Agricultural Experimental Station; "The use of fertilizer on the truck and fruit farm," by Robert Simmers. From the above program it is evident that an interesting series of discourses will be had.

The old Horticultural Hall on Broad street is a thing of the past, the old building being entirely removed. There were many many happy moments passed within its walls, as the fraternity from all over the country can testify. "Alas, alack" those happy hours have gone, but will come again in new garb and new style, in our new hall. It is believed by experts that the new Horticultural Hall will surpass any structure of the kind in this country for the purposes for which it is intended. Thus the old society will break at the roots and thrive more luxuriantly than ever.

Pittsburg.

The sudden change in the weather the past week has made many of our local florists move around pretty lively. Monday morning's frost nipped everything in the plant line that was outside unprotected. The weather still remains very cold.

The regular meeting of the club was held last Tuesday night with a fair attendance. Interest of course centers on the coming convention. Committees are at work and considerable routine work has been done. Mr. E. C. Reineman (vice-president of the S. A. F.) returned home from his six months' tour feeling first-rate and ready to do his share for the convention.

All the store men say trade is very fair. Some are a little frightened at the appearance of the "fakir" on our principal street selling flowers below the store prices, but as yet the amount of trade done by these men need not cause any alarm.

The Bowling Club meetings are well attended and some of the scores are wonderful. At the last meeting, the 9th, Henry Scherer, highest, was 267, W. R. Watson 240, Jno. Murdoch 211, Frank Ehner 206, and a lot of members scored 175 and up. We don't want to frighten other teams, but if the members of the Pittsburg club continue their good work the prospects for the Spaulding cup stopping in Pittsburg are certainly very good. It gives me great pleasure to say the arrangements for the bowling contest will be exceptionally good. The owner of the present alley has removed and enlarged

his entire outfit, and when completed it will be without doubt one of the finest to be found anywhere.

Director Bigelow of the Department of Public Works on Saturday last opened the bids for the construction of a new range of propagating houses in addition to the Phipps Conservatory in Schenley Park. Thos. W. Weathered's Sons of New York being the lowest bidders (\$32,800) the contract will accordingly go to them. The range consists of two 28-foot and seven 18-foot houses, all 158½ feet long, a center house 118 by 25 which will be used as a combination potting house and store house for decorative plants, etc., used outside during the summer. The entire range will be heated with steam and will be of the latest construction. We expect the work will be commenced at once.

There has been a nursery started at Schenley Park, with Jas. George, late of B. A. Elliott Co., as foreman.

The visitors in town the past week were W. H. Mott of H. A. Dreer, Philadelphia; Chas. Kroder, with Siebrecht & Wadley; and Mr. Boddington of the U. S. Nurseries, Short Hills, N. J. BROWN.

St. Louis.

The dark, cold weather, more like December than May, has reduced the glut of flowers, but has made roses small and with mildewed foliage. Carnations are still a glut and sell at from 20 cents to 50 cents a 100. The fakirs have been selling them for 15 cents a bunch, 25 flowers in a bunch.

The arrangements regarding a meeting place for the Florists' Club proved unsatisfactory and a special meeting was held at Mr. C. A. Kuehn's store May 9 to take up this matter again and to consider the chrysanthemum show question. The proposition submitted by Mr. Ashworth for the giving of an exhibition was not acceptable and the club decided to handle the show on its own account, providing a suitable place can be secured. Mr. W. Edison offered the club his store as a meeting place free of rent and the matter was referred to the trustees for action.

There is quite a brisk competition for the position of park superintendent.

Mr. C. Sanders, of Sanders & Beneke, has purchased a tract of land on the Olive street road, which he will use for nursery stock. He has 8,000 young trees already planted.

Thos. Carrol has gone into the chicken business. He thinks it will pay better than carnation growing.

The Bowling Club will change its quarters, the alleys previously used having become unsatisfactory through failure of the proprietor to keep them in a cleanly condition.

Shippers of cut flowers should beware of a party in Waco, Texas, who orders flowers shipped C. O. D. and refuses to accept them when they arrive. He gets some one to buy them in for him from the Express Co. for the charges and is then able to sell them on the street at fakir prices. A. Y. E.

Toronto.

Owing to the weather having been so fine and warm lately the plant trade has been pretty lively and prices have been fairly good. Indications point to a considerable improvement in this line compared with last year.

As usual many people were again too previous in getting tender plants out doors. On Saturday evening the wind

changed to the north and on Sunday night there were from two to nine degrees of frost all over the province, doing lots of damage, though more especially to the fruit crops. In one of the evening papers I see it reported that Mr. J. H. Dunlop had planted out ten thousand carnations which were much damaged, but as yet I have been unable to verify the report.

The cut flower trade is growing smaller and beautifully less every week, though not by any means from a want of cut flowers. E.

Worcester, Mass.

The burning hot days of last week shortened the life of outdoor tulips, narcissus and hyacinths, but they were not mis-ed, as everything inside is blooming very freely.

Sunday we were treated to a very sudden change in the temperature accompanied by copious rains, which we needed very badly, and the weather has continued cold and cloudy up to this writing; the thermometer dropped to 28° Monday night and some soft stuff was badly nipped.

Cut flower trade has been only fair and on account of the quantity of good flowers coming in, prices have dropped another peg. The bedding business is reported to be rather light, though it is too early to say much of this branch of the trade.

The May exhibition of the Horticultural Society was held May 9, and some very good exhibits were staged. The display of pansies was large and very good; fine tulips and hyacinths were shown and the exhibits of cut flowers and baskets was well above the average. Several gratuities were awarded for meritorious exhibits. A. H. L.

St. John, N. B.

RETROSPECTIVE.

In the FLORIST of April 13, your correspondent C., in mentioning the death of the late W. H. Jones, makes the statement that at the time Mr. Jones started the florist business it was a comparatively new industry in St. John. Such was not the case, however, and the statement makes the old members engaged in the business look back on the days of yore, and recall to memory those who really were the pioneers in the business, and who have now gone over to join the great majority.

About the year 1840 the late Mr. Harris, father of Mr. Harris, the present gardener to Mr. Hunnewell, Wellesley, Mass., started a florist business on Chipman Hill. He had but one greenhouse and did a general business in plants and cut flowers. His grounds were very tastefully kept, and he was very successful for a number of years. Thinking he could better himself he removed to Halifax, Nova Scotia, where he continued the business until he died, and where his son Herbert carried it on until a few years ago.

It must have been about 1850 that the late Mr. J. McHenry started in the business. He put up quite an extensive place on what is now known as Burpee avenue and was at that time, and for some years, the leading man in the business. After conducting the business for some years he removed from St. John, and the greenhouses were cleared off to make room for improvements. Contemporary with McHenry was the late Harry Ward. He was gardener to the late Robt. Reid, Esq., Mount Pleasant, for a number of years, but thinking he saw an opening for another florist he secured a piece of

ground at the One Mile House on the Marsh road and put up a greenhouse there, where he did quite a large business in plants and cut flowers for a number of years, but old age came to the jovial Harry as it does to all who live long enough, and he found the work too much for him, so he sold his greenhouse and retired from the business.

In the year 1857 that old veteran in the florist business, Mr. Thos. Miller (who is still well and hearty at the age of 87), leased a piece of ground on Golding street and erected a greenhouse on it. After a year or two he added two more houses to his plant, and carried on the business most successfully until the year 1882, when he retired in favor of his son-in-law H. S. Cruikshank, who has succeeded so well that during the period from 1882 up to the present date he has rebuilt the old houses, and added others, until now there is some 7,000 feet of glass. He is now speaking of building a chrysanthemum house 100 by 20 feet, this season, and also has a retail store on Union street under the management of Mrs. Cruikshank, where a large business in cut flower work of all descriptions is done. I think it was in or about the year 1860 that the late John Fisher began business on Winter street, he had two houses, but, as his work was in a great part in taking care of gardens, planting, and attending them by the season, he never had any larger place. Some 10 years ago he became heir to property in England, sold out his houses, and removed there, where he died some years ago.

Next in order of time was the late John French, whose greenhouse was on Brussels street. John had only one house, but turned out plants that could compare in every way very favorably with any stock grower about St. John. He did business for some twenty years, dying a few years ago very suddenly. The business is now conducted by his sisters and a nephew.

Now comes the late Mr. W. H. Jones, whose death was announced in the FLORIST recently. He started the florist business in 1877 at Torryburn, and opened a store for the sale of his produce on Germain street near the corner of Princess street. The fire of June 20, 1877, that ever memorable day, when the city of St. John was almost swept off the face of the earth, also burned out his establishment but nothing daunted, he started again on Germain street near the corner of Union and has been in the same place ever since. To him is due the credit of being the first to start a store for the sales of cut flowers, and the business has certainly prospered under his management, until now there is something like 5,000 or 6,000 feet of glass at their establishment.

After Mr. Jones had been in business a few years, Donald McIntosh, then gardener to D. D. Robertson, Esq., of Rothsay bought a piece of land on the Marsh road, just beyond where the old Ward greenhouse stood, and built a greenhouse, a few years later adding another. He also started a retail store on Charlotte street, but for some reason it only existed for a short time, when he abandoned the enterprise.

Wm. McLean, still a little farther out on the same road, started shortly after Mr. McIntosh, and has now a very neat and tidy place of some 3000 feet of glass, doing quite a successful business in the plant line. Some twelve or fourteen years ago, Andrew J. Stephens went into the business in a small way, and is adding to the size of his place as his trade

requires. Then there are the Peddersen Bros., working up a trade in the plant line, they being followed by Shepherd, and several others, who have small houses and do a little in the business.

The latest to enter the lists is John Cruikshank, brother to H. S. Cruikshank who comes before the public this year for the first time as a florist, but who is well known to the people of St. John, having been gardener to the late E. D. Jewett, Esq., Lancaster Heights, and latterly superintendent of the Rural Cemetery here. He has bought a cottage and about an acre of land, has one house finished and two more 60 by 16 feet under way.

Such are the recollections of the past, and when we look back and see the changes that have come in the last fifty years, we wonder what will be the state of our business in fifty years more, but we hope and trust that in the future, as in the past there will still be room for us all. ST. JOHN.

SOUTH FRAMINGHAM, MASS.—Donald McRae bought out Wm. F. Gregory on May 1.

HENDERSON, KY.—Mrs. T. R. Bonenberger has recently started in business as a retail florist here.

BARRE, VT.—The firm of Sanders & Sias has dissolved. Mr. Sanders will continue the business.

LITTLE ROCK, ARK.—The fruit and flower show of the Horticultural Society is being held here this week.

SOUTH BEND, IND.—Paul Beyer has opened a new floral store at the corner of Washington and Michigan streets.

PAWTUCKET, R. I.—Strained relations exist in the firm of Harrison & Storer. Mr. Storer has petitioned the court for a partnership receiver.

DULUTH, MINN.—McComber's greenhouses on East Third street were damaged by fire on the morning of May 4. Loss on house and stock \$1,500.

MILWAUKEE, WIS.—H. W. Koerner has purchased land corner Ogden street and Kinnikinnic avenue, where he will erect three houses, each 20x155, to be devoted to a general retail trade.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—By a practical florist, experienced in growing cut flowers for city store. Address "GROWER," care American Florist.

SITUATION WANTED—As grower and florist in commercial place; 10 years' experience; unmarried. Good references. Address FLORIST, 56 Tyler St., Boston, Mass.

SITUATION WANTED—By a first-class rose grower, propagator and general plantsman, to take charge. First-class references. Address GROWER, 10 Sherman St., Chicago.

SITUATION WANTED—By well experienced florist and gardener, competent in growing cut flowers and forcing grapes; has charge of large private place, and is well recommended by present employer; nationality Swiss, age 29, married, no children. Address COMPETENT, care American Florist.

WANTED—1,000 or 2,000 plants of Perle Roses 2 or 2½-inch, strong. R R, care Am. Florist.

WANTED—A quick, reliable young man for the mail plant business in the west. R R, care American Florist.

WANTED—Pteris tremula and Pteris argyrea 2 and 3-inch pot plants. Address NANZ & NEUNER Louisville, Ky.

WANTED—A few hundred dormant roots of Canna Star of '91. Address WESTERN, care American Florist.

WANTED—A single man to grow plants and cut flowers, and arrange designs, etc. Address with reference J. W. DAYHOFF, Hagerstown, Md.

WANTED—A few dozen canna Queen Charlotte. Address, stating size and condition, with lowest price per 100. R R, care American Florist.

WANTED—Young, single man, as assistant in growing cut flowers and general greenhouse work. None but a sober, industrious man, and giving good references need apply. State wages wanted. LEWIS ULBRICH, Tiffin, Ohio.

WANTED—Rose grower, first-class man as working foreman, for commercial place. Permanent position and good wages to the right man. Permanent references. Married man preferred. Address P. CONNELLY, P. O. Box 230, Madison, N. J.

WANTED—Single man for store and conservatory; must be good bouquet maker; salesman with some experience of forcing bulbs and vases; if you are sober, honest and not afraid of work I have a steady place at \$3 a month, board and lodging to start with. SCHILLER, 839 Madison St., Chicago.

TO EXCHANGE—Pink and white hollyhocks for Mrs. Fisher carnation plants. Address GEO. SOUSTER, Elgin, Ill.

FOR SALE—130 sash, about 1500 feet glass 12 1/2 inch wide, 100 sash bars, 750 or 800 feet 4-inch pipe, and a few thousand pots of different sizes. C. T. BRIGGS, Avoca, Iowa.

FOR SALE—3 acres fine land, city limits, opposite largest cemetery, on street car line; fine location and opportunity for greenhouse. CHAS. LAMPARTER, 718 Columbia St., Elmira, N. Y.

FOR SALE—Good greenhouse and residence in a place with 4,000 inhabitants; good trade from adjoining towns; will be sold at a bargain; poor health reason for selling. For particulars address P. O. Box 1007, Plymouth, Ind.

FOR SALE—Large and complete greenhouses (with land) in Harrisburg, Pa. Within 10 minutes of heart of city; main line trolley cars pass the door every 15 minutes. Business wide and established for years—this has been held together since the owner's recent death. Everything in good shape. Property to be sold to settle estate. A first-class chance to competent man desiring to do large business. Address MARY A. MCCLINTOCK, Administratrix, W. F. DARBY, her Att'y, Harrisburg, Pa. Steelton, Pa.

TO LET.

Three greenhouses 17x100 each, one heated by hot water, and two by a steam boiler. Good chance to propagate; lots of land to do as one wishes. Stocked with Perles, Brides and Mermets. Three minutes' walk to the depot, f.c. fare to Boston. Good home trade. To responsible parties I will let it cheap. J. C. NEWTON, 7 E. Newton St., Malden, Mass.

FOR SALE OR LEASE.
Three greenhouses with valuable grounds; the best place in this country for a man with some means. Address WM. SPRINGBORN, Dubuque, Ia.

FOR SALE
At the lowest possible prices for cash, 15,000 Geraniums of the best bedding sorts, in 2½ and 4-inch pots; Alternantheras, Coleus and Rosea. Also some fine Daybreak Carnations which I would like to exchange for Portias. Address Mrs. Geo. R. Fravell, Marion & Maple Heights Greenhouses, Marion, Ind.

THE WOODBURY GREENHOUSES MUST BE SOLD OR LEASED.

To a good live business man it is an excellent opportunity. Anyone desiring to go into the florist business should have the advantage of this place. We will sell or lease the place very reasonable, on account of sickness and not able to run the business. Satisfactory terms can be made. Plenty of room and all the ground required for such a business. Situated opposite station, and the center of six railroads, and in the central part of a business city of 4000 inhabitants; 8 miles from Phila. 20 minutes ride by steam and trolley cars. For full particulars address J. H. LUPTON, WOODBURY, N. J.

COLEUS. COLEUS. COLEUS.

We take back sent for none, and claim to be the leaders in the Coleus trade, and the originators of the Golden Queen Coleus, the only good all around yellow Coleus grown. Over a hundred thousand now ready.
Per 100 Per 1000

Cheap ORCHIDS for Cut Flowers, \$50 PER HUNDRED.

FOR A FEW DAYS, or until sold, to make room, we offer nice collections of Cattleyas, Lælias, Cypripediums, Odontoglossums and other fine varieties, our selection; small, healthy plants that will grow, bloom and give satisfaction.

Old theories are exploded. The most successful growers treat them in a common sense, practical way, and grow them more like other plants and as successfully. As we are now offering Orchids at the price of ordinary plants, thousands who have never grown them should now take them up, and not miss this opportunity as it will not occur again. Order a collection of a dozen or a hundred at once, and if left to us you will be as well suited as though you were on the premises to select them yourself.

The American Chrysanthemum Annual.

This book, edited by Mr. Michael Barker of Cornell University, is the first attempt to give an American annual of the chrysanthemum, and it certainly has a place in our horticultural literature. The contents include a review of the past season in both England and America, the early American history of the flower, the work of the national societies of England and America, cultural notes from this country and others, talks about diseases and insect enemies, lists of the best varieties in different localities, and a list of the new American varieties of 1895. In the list of popular varieties (plants) we find Ivory and W. H. Lincoln at the head, each receiving 17 out of 23, while in the cut flower list Niveus is at the top with 18 votes, The Queen and Vivian-Morel second with 17. It is rather surprising to find Mrs. C. Lippincott with but 3 votes, Ermenilda 2 and Mrs. Potter Palmer but 1, in the list of cut flowers.

The book contains seven illustrations of new varieties, and nine portraits of prominent chrysanthemum growers. It is well printed, the only part of its make-up open to criticism being the size, 10x7½ inches, which is awkward for an ordinary bookshelf. (44 pages, price \$1, May-flower Pub. Co.)

IN PRINTING your premium lists for exhibitions be sure to include the full name and address of the secretary. A list containing a rule that entries must be made with the secretary and omitting the name and address of that officer is fatally defective.

A Blunder.

Actor Joseph Jefferson has just been elected an honorary member of the Massachusetts State Horticultural Society. This looks like a blunder; Beerbohm Tree probably was the fellow they were after.—*Chicago Dispatch.*

Selling Government Seeds.

[From special correspondence of the St. Louis Globe-Democrat, April 16.]

A sensation will be made by Secretary Morton's promised disclosures respecting the sale by Congressmen of seeds bought with public money and intended for free distribution among their constituents. It appears that this business has been conducted for an indefinite period on a scale so extensive that the wonder is why it should not have occasioned scandals before now. Many members of the House have made a regular practice year after year of disposing of their entire quotas for cash to brokers. A quota is 15,000 packages. One broker offered to Representative Hatch, of Missouri, whose district is agricultural, 60,000 packages in one batch, at \$2.50 per 1,000. This is about one-sixth of their actual cost to Uncle Sam. Seeds are commonly sold directly or indirectly by Congressmen from urban districts to others whose constituencies are rural.

The man who conducted the investigation of this matter at the instance of Secretary Morton was Enos S. Harnden, buyer of seeds for the Department of Agriculture. He caused it to be known that he was desirous of purchasing seeds on his own private account if he could get them cheap from Congressmen. One broker, whose confidence was gained, entertained an impression that Mr. Harnden wished to use the seeds for political purposes, with a view of securing an election to Congress for himself. The situation was certainly unique. The seeds which Mr. Harnden had purchased for the Government at market rates he subsequently bought again from members of the House at a small fraction of their actual cost. Notwithstanding the evident profit in this enterprise, he let pass offers aggregating 100,000 packages.

In truth, Government seeds were found to be a drug on the market. Brokers had whole cellars full of them stored away in stacks. One of them offered Mr. Harnden 30,000 packages of last year's seeds at an incredibly low figure, because they were somewhat damaged, mice having got into them. Another dealer was ready to sell three full quotas at \$150 per quota—i. e., at the rate of 1c a package. But the richest case was that of a Representative whose name is withheld for the present by Secretary Morton. It will be made public soon, together with the rest of the data. The story, as told by Mr. Harnden is as follows:

STORY OF THE SALES.

"I was called upon the telephone by an official of the House. He said that he had heard that I was purchasing seeds. Would I like to buy a quota? I replied: 'What is the price?' The answer was, \$75. I said that I would close the bargain, but must know the Congressman's name in order that I might make sure that the quota had not been drawn from the Department of Agriculture. The name being given, I sent over to the seed barn and found that the quota was there all right. Having ascertained this I called up the official over the telephone and told him I would take the seeds. I asked him to get the Congressman to make out an order transferring the quota direct to me. There was some demur at this, the

official suggesting that it would be just as well that the order should assign the seeds to himself, and he could indorse it for me. But I insisted that the deal must be strictly 'above ground and honorable,' and that the order should be straight. So he sent the order in the form I requested, which was what I required for evidence. I paid the \$75 with a check to the order of the Congressman, and I now have that check with his own indorsement in my possession. Thus the case is made complete.

"Whereas there was plenty of evidence in a general way of the prevalence of this abuse, we desired to make out in complete shape a typical case in which a Congressman sold for money the seeds which were received by him from the Government for free distribution. The law expressly provides that the seeds shall be distributed among the constituents of the respective Representatives. Thus the transfer of seeds by one member to another is wholly illegal. Yet we have record of more than 100 transfers of this kind. One member wrote to the department the other day inclosing a paper which assigned to him the quota of another member. We replied that the other member had no seeds to transfer, inasmuch as he had already drawn them all out. Whereupon the applicant rejoined that he must have the seeds, inasmuch as he had already paid the other member for them. Where such transfers between Congressmen are made, it is not uncommon for the agricultural member to give public documents in exchange for the seeds of the city member. Yet the law allots the seeds to the district and not to the men representing it. They belong to the people of the district, and are not the personal property of the Congressman.

EXTENT OF THE TRAFFIC.

"Here are figures that show that in 1894 9,555,000 packages of seeds were purchased and put up by Uncle Sam for distribution by members of the House, at a total expense of \$127,708. In view of the practice prevailing, it is no wonder that Government seeds are a drug in the market. I let pass offers that were made to me of 100,000 packages of this year's seeds, merely because the evidence relating to their sale by the Representative would not have been complete. These 100,000 packages were represented by Congressmen's orders held by brokers, who offered to assign them to me. One member actually came to me to buy seeds. He was from a rural district and had not enough to go round among his constituents. He had received offers of quotas at \$8 per 1,000, and desired to know if that was an excessive price.

"The quota which I purchased for \$75 was certainly a bargain. It consisted of 14,950 packages of vegetable seeds, 1,365 packages of flower seeds and eighty-two packages of field seeds—corn, grass and clover. The total was 16,397 packages, which cost the Government \$14 per 1,000. So you will see that Uncle Sam paid about \$228 for what I got from the Congressman for \$75.

"I have had queer experiences sometimes. Not long ago we decided to buy a lot of lentil seeds, in order that farmers in this country might make experiments in growing lentils, which are a profitable and useful crop in Europe. Incidentally, it was very desirable to know something about this vegetable, in order that we might give information as to the methods of cultivating it and ways of preparing it for the table. We had no knowledge on the subject, but I learned that a certain physician in charge of a sanitarium at

Battle Creek had grown lentils and knew all about them. So I wrote to him. His reply was delayed for some time, which was not surprising in view of what I subsequently learned. Evidently he did not possess the information, for he wrote to the *Scientific American* to get it. The *Scientific American* referred the matter to its Washington correspondent, suggesting that he go to the Department of Agriculture for advice.

"Meanwhile I had been looking up lentils on my own account. I got a lot of valuable data from Vilmorin, the eminent French seedsman. In short, I had the material all ready for the correspondent of the *Scientific American* when he called. He sent it to his paper, which forwarded it to the physician at Battle Creek, without telling him where it came from. The physician thereupon sent back to me my own answers to my own questions.

REASON FOR SEED DISTRIBUTION.

"The alleged reason for distributing seeds gratis among the farmers is that they may have an opportunity to obtain new and fresh varieties, tending to the improvement of agriculture. Of course, as a matter of fact, the whole business is for political purposes solely. Congressmen find it useful to throw sops in the shape of free seeds to their constituents. Hence the enormous annual appropriations for this purpose. The appropriation last year was \$160,000. The truth is that the farmers have opportunity to get the best seeds of all sorts in the open market. Such seeds may be purchased in the stores of every city, town and village throughout the country. In fully four-fifths of the towns of a population of more than 200 there are merchants who make a specialty of garden and field seeds in bulk or in packages. There are, moreover, 152 seedsmen in the country who issue catalogues that are mailed to farmers and gardeners in all the States.

"For a long time past the department has been used as a dumping ground for seedsmen who had stocks of seeds which they were afraid to send to market gardeners or other good customers. The practice of the department until recently has been to divide up the appropriation among the seedsmen, who charged pretty much what they chose. Under the present Administration this matter has been reformed, and we purchase our seeds from the lowest bidders, requiring that they shall come up to a certain standard and be free from seeds of weeds and the larvæ of injurious insects.

"It would be an extremely useful thing to the farmers if Congress would appropriate \$15,000 for the purpose of making tests of varieties of seeds and naming them, in order that the present confusion and multiplication of alleged varieties might be done away with. The results obtained could be published in a series of farmers' bulletins."

New York.

A review of the seed trade in the larger seed houses in this city indicates that while the trade was some two or three weeks late in starting owing to the backward season, yet the increased volume of business transacted since May 1, will go well towards making up for the deficiency earlier in the season. The best that is hoped by the most sanguine dealers, however, is that when the season is finally closed it may foot up equal to last year.

The falling off is generally attributed to the backward season rather than to dull times. The tendency to economize

which is seen in the reduced size of the average order is compensated for to some degree by the larger numbers of orders received. The disastrous freeze in the south was a big help to the vegetable seed department, as most of the early orders had to be duplicated. "It's an ill wind that blows nobody good."

The demand as experienced in both mail and counter trade has been mainly for staples. Novelties have not gone with their usual briskness; in fact there have been but few sterling novelties offered this season. Specialties have given general satisfaction to those who have pushed them. Sweet peas have done unexpectedly well. The falling off in mail trade has been felt much more severely by the large houses proportionately than by those who make no special effort in this line. All agree that there has been less night work in the busy season this spring than for many years past.

The wholesale trade has been fairly satisfactory to those who have pushed it, florist trade keeping well up to the average. It came on in good season and was well disposed of before the retail business got under way, but all are glad to accept wholesale trade even though it comes at the height of the retail busy season. Some dealers advocate strongly some more general understanding whereby prices may be advanced to a reasonable extent on stock which experiences a strong demand and runs short towards the end of the season.

The department store trade furnishes an outlet for some of the dealers for their cheaper grades and refuse stock. Its effect is felt on the other hand in the transient retail counter trade. Lawn grass seed feels the competition strongly.

Houses doing a plant business as well as seed trade note that while the seed trade has had to struggle to keep up to the mark, the plant trade has fairly boomed from the start and stock is being cleaned up with unprecedented briskness.

AUGUST RHOTERT, of New York, is making a business trip through the west.

CHICAGO.—Mr. Chas. P. Braslan left on the 12th for a three weeks trip to California.

THE Thirteenth Annual Meeting of the American Seed Trade Association will be held in The Russell House, Detroit, Mich., June 11 to 13, 1895. An interesting program has been prepared, and the central location would seem to promise well for a large attendance.

VISITED CHICAGO: L. J. Clark, Frank T. Emerson and Lester L. Morse, the latter on his way home from Europe; where he has spent six weeks in England, France and Italy. He verifies recent reports of damage done to root crop carrots, turnips, and also to cabbage.

Mr. Lem Bowen and family are in Paris, where he has taken a house for a year.

Mr. Charles Dickinson of Chicago is making a European trip and was in London the latter part of April.

Rev. W. T. Hutchins of sweet pea fame will visit Mr. Eckford in England during the flowering season there, with a view to secure all possible data for his new work on sweet peas.

A. L. BLACK, 415 E. Chase St., Baltimore, Md.

St. Paul, Minn.

The sudden and unexpected drop in temperature which came without warning found many people unprepared, and flowers and shrubbery have suffered considerable in consequence. The loss to the florists in this section will be not very much as but very little tender stock has been planted out. Lilacs, which were in full bloom, do not seem to have suffered damage, but snowball, which were just beginning to open up, are badly frozen and wilted.

Trade has been fairly active, cut flowers and plants both selling more readily than during the previous week. Roses are falling off in quality, also in quantity, and good stock is rather scarce at present. Carnations are quite abundant and of good quality. Sweet peas are more plentiful but are not in great demand. Already a dearth of flowers for Decoration Day is apparent and prices will undoubtedly be higher. There will be but very few if any outside flowers and as the demand will most likely be good, we anticipate a nice trade for the occasion.

While the demand for bedding and foliage plants is good, the large quantity of poor and inferior stock offered at the city market and by street fakirs tends to make prices low and sales uncertain. As the season opened early, however, and several weeks yet remain for the bedding season, there is no reason for our florists to despair.

Stock about town is looking good. Chris. Hansen has a fine lot of geraniums a lin full bloom. L. L. May & Co., have their usual complement of bedding roses, geraniums, marigolds, etc. They report a very fine shipping trade, much better than the previous years. Their catalogue mailing trade now drawing to a close for the season has been the most prosperous in their history.

The first consignment of Belle Siebrecht roses arrived a few days since and are in fine shape, quite a contrast to some of the roses received in days gone by.

The bulb men have all come and gone and peace and quiet reign once more. The amount of bulbous stock to be planted another year will be still smaller than this year. **FELIX.**

P. O. Drawer 164. **CHICAGO, ILL.**

Notes by the Way.

The Pittsburg boys are apparently making great preparations, being fully determined to entertain the members of the S. A. F. during the annual convention in August on a grand scale. The enthusiasm and the spirit of liberality which has always characterized the S. A. F. conventions in the past, I need hardly add, will not be found lacking in the "smoky" city as well. There is nothing slow about the Pittsburg boys to be sure, nor do they, as a rule, do things by halves.

That the convention will prove a "howling" success is a foregone conclusion with me. Let us hope that the attendance may be a large one. The attractions within and around the twin cities, or the "greater" Pittsburg, are many and varied—too numerous indeed to mention in my brief notes.

"One of the greatest evils confronting our trade and which ought to engage the attention of the S. A. F.," remarked a prominent florist of an eastern Pennsylvania town one day recently to me, "is that of 'crape pulling' practiced by some 'florists' (?) to the detriment of the legitimate and respectable trade. Not only do such practices tend to demoralize prices, but they degrade the business as well." The idea of a florist ringing the door bell of an afflicted house with a view of "striking", an order for a funeral design is simply abominable, and any man enterprising enough to attempt such a thing ought to be kicked down a flight of stairs. How to discourage such practices, how best to counteract their evil, and in some cases, contagious influences, is certainly worthy of some consideration.

All through the states of Connecticut, Rhode Island and Massachusetts (which I have recently traversed) I found the florists as busy as bees, beautifying lawns, cemeteries, yards, etc., and the planting season has hardly begun in these regions. The demand for bedding stock of the finer grades and varieties fully equals, if it does not exceed, the supply. It seems as if the public has at last realized the fact that the best is after all the cheapest in the end.

Mrs. Lyman Briggs of Taunton, Mass., who had achieved remarkable success during the comparatively short space of time she was in business, contemplates disposing of her greenhouses, stock, etc., a much needed rest from business cares being the chief reason given. S.

Strobilanthes Dyerianus. \$6.00 per 100.

STILL LOWER PRICES.

STROBILANTHES DYERIANUS. (1894).—The most beautifully colored foliage plant introduced for many years and sent out last season at \$2.00 per plant is now offered by us at \$6.00 per 100 or \$50.00 per 1000!! No other plant will do as well for bedding, etc.; nothing could be finer for table decoration, or as a window plant. The foliage is an iridescent metallic purple—shading to pink and green—is very persistent and stands rough usage. At our price, \$1.50 per dozen, a large profit should be made on them, as they readily sell at 50 cts. and \$1.00 each. A fine plant for Easter sales.

COLEUS MRS. SANDER. (1894).—Sent out last year at \$1.25 each, a big price for a Coleus, but it was well worth it, as no other Coleus can wink at it. It's worth that much to-day, but we've got too large a stock; it takes up room. \$5.00 per 100 will clear them out, however, and at \$1.00 per dozen they'd soon be "out of sight." Rooted Cuttings \$3.00 per 100, postpaid.

Red Spider Can't Live
WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD,

Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.
Yours truly, E. G. HILL & CO.

Price, \$1.00 each, prepaid. **TRY IT, AND RETURN IT** if not satisfactory, and your money will be sent back.

M. M. JONES, Gen'l Agent,
6122 Oglesby Ave., CHICAGO.

Mention the American Florist when writing to advertisers on this page.

North Easton, Mass.

Take a practical florist into the Ames orchid houses at North Easton just now, and his first exclamation, as his eye catches sight of *Miltonia vexillaria* Fairy Queen with its burden of fifty-two immense snow white flowers will most likely be "What a lovely bridal bouquet that would make," and Mr. Robinson would quickly retort, with his eyes if not in words, "Ah, my dear sir, you shall never see that day." But if the day ever should come when such peerless gems as *Miltonia vexillaria* Fairy Queen, *Cattleya Lowiana*, and *Cattleya Skinnerii* alba are at the disposal of the flower workers what a breaking up of old lines there will be; it is easy to imagine that the revolution in floral decorations would rival that which was effected when long stemmed flowers took the place of the old fashioned floral devices. Something like a feeling of regret is experienced when we reflect that their rarity places these beautiful creations, possibly forever, beyond the reach of the florist; their charm is irresistible, and on seeing them one can readily understand the fascination they have for those who once get interested in them, and whose means permit them to indulge in the cultivation or mere possession of these noblest of all plants.

Lælia and cypripeds are blooming in many rich and rare forms. *Lælia purpurata* *Blenheimensis* is a grand purple flower and *atroviolacea* is unrivaled with its broad sepals and petals and its intense purple lip. Another remarkable *lælia* is *L. latoni*, a hybrid showing a lovely blending of orange or purple color. In the *odontoglossum* house *miltonias*, *Pescatoreis* and *crispums* are flowering in profusion and here the visitor will linger long, for nowhere are *odontogloss* grown to such perfection as they are here. To note all the striking varieties now in bloom would fill a column, but one particularly cannot be passed by without special mention: *Miltonia vexillaria* Joseph Godseff, which is of such a marvelous purple, such substance and so immense in size that it is worth going many miles to see.

Do YOU WANT a complete alphabetical list of *chrysanthemums* in commerce in America, with class, and brief, accurate description of each? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

IMPROVED GLAZING!

Gasser's Patent Zinc Joints make an air and water tight roof.

ATLANTA, GA —The State Hort. Society has organized with Prof. J. S. Newman, president, and Dr. Samuel Haper, secretary.

CHATTANOOGA, TENN —The Chickamauga Park commission has completed the purchase of General Sherman's battle ground at the north end of Missionary Ridge, Chattanooga, and it now becomes a part of the National Military Park. The tract contains fifty acres, and embraces the ground of assault of the Army of the Tennessee and the positions about Tunnel Hill defended by General Bragg's army.

SPRINGFIELD, MASS.—In the annual sweet pea show which takes place here July 23 and 24 Mr. Hutchins will show seven of Eckford's new varieties which are: Blanche Burpee, the very latest improvement in white; Eliza Eckford, delicate rose striped and tinted; Duchess of York, white with pinkish purple stripes; Duke of York, bright rosy pink with primrose yellow wings; Meteor, a bright orange salmon variety and Novelty an orange rose. Mr. Hutchins has planted 100 varieties in his own garden which is one of the largest and best kept in the country. He will introduce on the market this year one new variety of his own, the Daybreak, a white blossom with a watered scarlet center,

Mr. Geo. Oesterle, 4200 Forbes street, Pittsburg, Pa., has been appointed superintendent of the trade exhibit at the coming convention and he is now entertaining applications for space. Blank applications and copies of the rules relating to the management of the exhibition may be had on application to him at the address given.

PEABODY, MASS.—Milburn P. Ward will continue the business of his father, the late J. M. Ward, under the firm name of John M. Ward & Co.

NORTH WALES, PA.—Franz Leverenz has purchased the greenhouses of J. K. Andre.

Carnation Notes.

Five hundred dollars reward to the man who will produce a carnation support satisfactory to all. Many of us thought we had in the system of Mr. Dorner the ideal plan for keeping the growth of the plants in such a shape that a free circulation of air around each plant was assured, so that every stem would grow just as wanted. I for one find I was mistaken and the result is a lot of wire netting for sale, but any man would be foolish to buy it for the purpose I have used it. I have been watching one system of supporting carnations during the past season which has proved very good, although this too has its drawbacks. It simply consists of No. 13 galvanized wire shaped by bending around the top of a 4-inch post having two nails opposite each other one-half inch from the top. This forms a loop and the ends of the wire are brought down the sides of the post, thus forming the support. The loop can be enlarged by stretching to the size which the plant requires. This support is superior to most of those of a similar nature in that it has two legs to stick in the soil, and where it has been in use all of the past season it has remained in its place firmly. As the plants grow in height towards February a second loop is placed over each plant. The only drawback to this system is that it is somewhat tedious picking the flowers where long stems are required, but as all supports have their defects we must overlook what few the Lonsdale (for he was the originator I believe) method has. I believe it would be a good idea for the different plant supports to be shown at Pittsburg this summer, thus giving those interested a chance to decide upon the merits of each. To be sure we can see all these by going to the different establishments, but some of us have not the time.

Nathan Smith & Son inform me that they are using but little stable manure in their houses now, depending to a great extent upon commercial, chemical or prepared fertilizers, and it is their opinion that in the future these will enter very largely into greenhouse work, and from what I have seen of the benefits of these manures I believe that by systematic trials a fertilizer of this character can be obtained that will obviate the necessity of using either cow or horse manure. We have tried a formula this season which has produced a fine growth, fully equal to the other manures, and the ease with

which commercial fertilizers are handled is much in their favor. This plan will necessitate procuring a fresh supply of good sod every year for our benches, and this I believe every good grower does, for the fiber in the decayed sod is what makes the soil porous; without this the soil becomes baked. It is a fact that we can obtain in chemicals, ground bone, nitrates, etc., all the essential elements necessary for manures; it lies with us to determine by trial the formula that our soil needs. There has been several thousand tons of commercial fertilizers used this spring by the farmers within a radius of three miles of my place, where formerly nothing but stable manure was used. Why can not the same be done in the greenhouse?

The rake is now an indispensable factor in the cultivation of our field of young plants. We planted in rows eighteen inches apart, and in beds one foot apart, also in rows three feet apart; the two former for the purpose of irrigating in case of a drouth. No more small plants for me if water will prevent it. But to return to the rake, this kills millions of young weeds, kills them before they get out of the ground. And then how nicely the rake pulverizes the surface of the soil, keeps in the moisture. Some say loosening the soil draws moisture from the air; be that as it may, it certainly produces better results than to leave the ground hard. Keep this tool going until the plants are too big to allow it, then cut off some of the teeth and go it again, in fact until the plants are housed.

Some growers are in the habit of piling the soil which they now begin to remove from their houses in a heap for future use. Don't do it, but spread it on the lot and sow Hungarian grass on it, then when the grass is in the proper condition plow it under and allow it to remain so over winter, then you will have soil that is worth using. CHARLES H. ALLEN.

The Carnation Rust in Europe.

Looking over some of the numbers of the *Revue Horticole* of Paris last winter, my attention was called to an article on carnations in the south part of France, drawing a lamentable picture of the state of affairs there. On the shores of the Mediterranean Sea and in a certain district called the Riviera carnations, violets and roses are planted by the acre to supply the northern markets of Europe with cut flowers during the winter months, being sent as far as Russia and Sweden. These plants, even in that mild climate, are sometimes subjected to a low and damp temperature in the months of January and December, and the past winter more so than usual, causing the rust and spot on carnations and violets to make its appearance, and destroying whole plantations, causing widespread distress among the

growers, who are depending on that line of produce for a living. The rust, or *Heterosporium echinulatum*, as they call it there, has also made its appearance in Switzerland and in the vicinity of Paris, and I was prompted to write to my esteemed friend and correspondent, Prof. Viviani Morel, the editor of *Lyon Horticole* and an authority on such matters, about it. As we all know, Lyon is the center of carnation growing in Europe, and where the monthly carnations originated, more being grown there than in all the rest of Europe together. In due time I received, through the columns of *Lyon Horticole*, a reply to my inquiries, stating that while the disease was well known there, still it had been kept in check by the growers using a solution of 4 pounds of sulphate of copper in one gallon of water in one part, and six pounds of carbonate of soda in six quarts of water, mixing both solutions in 30 gallons of water for immediate use, Mr. Viviani Morel remarking also philosophically, that it is a law of nature, that wherever there is accumulations of members either in mankind, animal or vegetable kingdom, growing together, to breed disease among them to keep off the surplus. On the whole here we may congratulate ourselves that we have controlled the disease somewhat, and that by the proper use of fungicides, and especially hygienic precautions as regards ventilation and regulating moisture when the temperature is low we have succeeded in some measure to ward off the disease. I do not see any reason to fear for the future of carnations.

In our new range of houses, having all the flows overhead and almost continuous ventilation on all sides, allowing a large circulation of air at all times, varieties that were under the ban as particularly predisposed to rust got over it very well, and are now very healthy, showing the necessity of a dryer atmosphere above. Still I cannot but dread the effect of a wet season on carnations planted out and dull weather after taking them in, as was the case in our section last winter, when the scarcity of flowers was almost without precedent, considering that fully one-third more plants were grown than ever before. Another advantage in using copper salts on carnations; it will completely free them of such insects as red spider and cut worms, as we found by experience.

DENYS ZIRNGEBEL.

A Useful Fern.

Scolopendrium vulgare and its varieties are only met with in very few places in the United States, and whoever was fortunate enough to have a stock of them on hand the past winter saw them go off rather faster than he cared for. They are wanted for small fern dishes while in a young state, and also as a fine low and very attractive ornamental plant for jardinières, when they have developed into specimens, and may be used on a table or small stand, or in fact for any purpose in room or window decoration. I often wondered why it was not classed with the very best and most useful ferns for fern dishes. There is no fern that has better lasting qualities than a scolopendrium, even the much esteemed *Cyrtium* (*Platylome*) *falcatum* cannot compare with them in that respect. We have grown it now for over twenty years in a few varieties, originally, besides *S. vulgare*. We had one under the name of *S. undulatum*, with longer and narrower foliage than the type, the edges of the fronds being regularly wavy and crimped; *S. cristatum*, a beautiful crested form with

the fronds many times divided at the apex, and of a more dwarfish habit, also another called *S. dentatum*, with finely cut and lacerated edges, but now they have sported or mixed up so badly that very few of the original types are to be found among them, being raised from spores year after year without taking any particular pains to keep the varieties separate, but all of them are good for our purpose. The spores and the names in the first place came from the late Dr. Regel, St. Petersburg, Russia, and I have no doubt that the names were correct at the time, but now I could not vouch for the true name of any variety and could not even pick out a true *S. vulgare* among a whole bunch.

They are a perfectly hardy evergreen fern and may be left unprotected outdoors all the year around if so desired, but for our purpose cool house treatment in winter and airy frames in summer gives best results. A close and moist atmosphere will cause the young fronds to damp off and disfigure the plant for present use, but soon will outgrow the defect if placed in a more airy position. Plants that are wanted for low fern dishes may be kept low and short in a 3-inch pot for a long time by merely keeping them moderately dry at the roots and allowing plenty of air. This treatment will not injure their healthy dark shiny fronds in the least, for they can live and flourish on a very small allowance of nourishment, but on the other hand they would also respond cheerfully to a more liberal treatment if larger specimens with longer fronds are wanted.

The spores of scolopendriums should be sown like other ferns, which operation has been described in these columns a number of times, but the seed pans or boxes must be placed in a somewhat cooler house, for in heat they will not come up so thickly, and are very apt to damp off soon after they germinate, and before they are large enough to handle, while in a cooler house and with free circulation of air this trouble is avoided. Therefore we found it better not to sow until May, or else in the autumn months, when plenty of air can be allowed while the young plants are yet too small to be pricked off. After the first transplanting from the seed pan very little difficulty will be experienced in the handling of this fern, for it grows freely after, but does not make a salable plant in as short a time as a pteris, onychium or the like, requiring to be left in the boxes a month or six weeks longer than our fast growing varieties. On the other hand they will never grow too tall or get lanky, even if set close together and crowded on a bench, always being compact and well furnished. Unlike other fern seeds the spores will retain their vitality for years. We have sown five year old spores and plants were produced just as thickly in the pans as from a new seed.

J. B. KELLER.

Rochester, N. Y.

The Arrangement of Flowers.

XXI.

During spring there are a number of hardy shrubs, the flowers of which might be used to good advantage in arrangements of various kinds. One of the best things in this line is *Spiræa prunifolia* (bridal wreath), which is strikingly beautiful when arranged properly in connection with other flowers. There is a natural grace to the pendent branches of this shrub that makes it adaptable to almost any kind of work. It is useful alike in funeral designs, basket work, and above all for the arrangement of vases and mantels.

In the accompanying illustrations No. 1 is a combination of the spiræa and La France roses, arranged in a square handled basket. The effect of this spiræa with pink roses is particularly pleasing. The branches of the shrub can be cut of sufficient length to embed in the moss and reach up to a desired height over the handle, and when placed in such position will last fully as long as the roses will. It is an inexpensive thing at this season of the year; a good generous bunch might be bought on the market for 25 cents; this and let us say five dozen roses at 3 cents will make a handsome basket. The entire cost of such a piece would figure up somewhat like this: Basket \$1, roses 1.80, spiræa 25 cents, adiantum 25 cents, ribbon 50 cents. Total 3.30 to 3.50.

The second picture shows an arrangement of *Harrisii* and spiræa in a tall slender glass vase. One dozen *Harrisii* and a bunch (25 cents) of spiræa, the total cost of which would not exceed 1.25, figuring the *Harrisii* at 8 cents each.

Reminders.

Callas may now be planted out in the ground for the summer, if this plan is satisfactory, but for the last ten years we have followed the way of drying them off in their pots, and found it advantageous as to labor saving and otherwise. The pots are merely laid on their sides and left alone until the middle of August or first of September, when they are taken in hand and about one half, the top, of the earth is removed and replaced by very rich soil, or even pure old manure. The plants are then placed close together and watered liberally every day for a few weeks, until the approaching cold weather demands their return to safe quarters. After thus top dressing and watering them they will grow very fast, and we usually have some of them in flower by the time they are housed, they only having made three leaves before the buds show themselves. The operation of planting out a lot of callas in spring alone consumes more time than the overhauling and topdressing of them at the end of the summer, not to speak of the potting, shading and syringing in the fall to keep newly potted water-loving plants from wilting.

All the planting out should be finished at once if possible, it saves lots of tedious watering under glass. Pick out your assortments of geraniums and other stock of bedding plants now, and plant enough of them to get a plentiful supply of cuttings in the fall, and you will not have to hunt all over for a supply when the time comes to put them in. Many odd plants may also be planted in the open ground instead of keeping them in pots over summer, and be greatly benefited thereby.

A lot of variegated euonymus, aucubas, *Yucca pendula*, large *Dracæna indivisa* and other evergreen plants which we use for decorating in the winter months, are regularly planted out in the open ground, where they need less care and will make a fine healthy growth without much help, and in fall, soon after potting, are ready again to take their places in whatever decorations we may want to use them. Of the smaller plants *ophipogon*, *farfugium*, *acorus*, trailing euonymus and a host of other things used for the same purpose may be treated in the same way, and come out the better for it.

If a few large hydrangeas are left over, or are done blooming, save them for planting out in some corner, and in late fall take the top cuttings, inserting them in boxes filled with sandy soil. Let them

ILLUSTRATION NO. 1
ARRANGEMENT OF FLOWERS

take their time in rooting without any heat in a cold frame, and by February pot them up. They will make those one flowered plants in 4 and 4½-inch pots, which are spoken of so often, and are in great demand during spring for various purposes, coming in very handy for veranda boxes, etc. These plants can be raised a great deal cheaper and require far less care than a geranium, and surely will fetch more than double the price of the latter; at least they do with us.

Lilacs, especially the white varieties, are growing in favor every spring more and more, and if room can be spared in the lot enough for your own supply should be planted. The common old variety takes too long before flowering, but Princess Alexandra sets buds and flowers profusely when very small; plants one and one-half to two feet high are covered with large panicles of pure white flowers, and it will pay any one to grow that variety, not only for outdoors but also for winter forcing.

J. B. KELLER.

Rochester, N. Y.

Foreign Notes.

Among recent introductions are some handsome solanums, which should be of value for the sub-tropical garden. *S. Sealorthianum* is a climber from the Antilles. It has pinnatifid leaves with nine to eleven leaflets, and the flowers are produced in pendent bunches suggestive of the wistaria. The flowers are lilac-blue, with golden anthers. This should be a good greenhouse climber. *S. Dammanianum* is a fine species for sub-tropical planting. This will grow in a single sa-

son, says the *London Garden*, to a height of 9 feet, forming a small pyramidal tree, with large serrated wooly leaves. In the autumn it bears, at the extremity of the branches, large bunches of deep blue flowers with golden anthers. *S. mors elephantum* is another species from Equatorial Africa. It grows about three feet in height, with violet stems and deep green foliage. The flowers are large and light blue, and are followed by large canary yellow fruit, borne in threes. *S. Dublosinatum* is a species recently introduced from Abyssinia, which has large blue flowers followed by white berries.

About Leaks.

I was very much interested in the spicy correspondence on this subject which appeared a few weeks since. As with every other question there are two sides to this and it looks quite differently from different standpoints, but no one will dispute the importance of the subject or question for a moment that watchfulness is most essential in these days of low prices and sharp competition if a business man expects to make both ends meet and have a little profit left besides.

An employer should, however, bear in mind that it is not necessary that in order to be careful and watchful to prevent wastefulness a man should be harsh and suspicious. There is such a thing as making men sly and deceitful by constant over-watching, nagging and general meanness. If there are leaks they should be located and promptly stopped. It will be found that such things are oftener the result of carelessness than of vicious in-

tent. The force of example goes a long way. If a man is careless himself he must not be surprised to find his employees copying after him. If he is so constituted that he will permit things to run to ruin right under his own eyes the responsibility for the loss rests mainly on his own shoulders.

On the other hand an employee should fully realize that a policy which is for the benefit of his employer's business and which helps to place that business on a reliable basis is decidedly to his own advantage as well, and will lend his hearty co-operation in any effort to curtail waste in the conduct of the business, not only as a matter of mere duty but for his own self interest also.

J.

The English Violet.

With the general adoption of the Marie Louise as a forcing violet the form of *Viola odorata* known as the English, Hardy or Tea violet has been almost forgotten. A high authority informs me that the variety differs widely under cultivation. My experience is limited to one strain, but as it seems to differ from such plants as I have seen elsewhere only in thirt I regard it as typical. I may also add that a dozen plants of a "Double Russian" violet, from one of our most reliable houses, have been two years in a bed of English violets, and I think no botanist could tell them apart. Is there a double Russian violet differing from the English?

The English violet is distinguished, in a general way, from varieties of the Marie Louise type by its darker green color and rounder leaf. The flowers are a deep violet color instead of pale blue; they are full double and deliciously fragrant, and of the same size as those of the Marie Louise when grown under the same conditions. It is an old fashioned plant, and may still be found in old gardens in the east, where it has held its own with the grass for years, proving its hardiness, vigor and freedom from "violet disease." My own stock was dug from an old sod in a neglected garden where it had shifted for itself for many years.

In the flower garden I have found it particularly useful as an edging for beds. It gives a mass of delicious bloom in the spring, and holds its clean, dark green foliage until covered with snow. If the beds are well enriched the violets in the border will throw a large proportion of fine flowers with long stems. Before me, as I write, is a violet border some forty yards in length, dividing a grass walk leading to the highway from the adjoining flower beds. It was planted in 1891 and is now 1½ to 2 feet in width. Perhaps twice during the season it is gone over to pull out stray weeds. In 1894 it furnished several thousand fine, salable blooms. This year, for the first time since I have been growing them, the excessive heat at the time the outdoor violets were coming on ruined them for florist's use.

For cold frames I have planted in good rich garden soil, rows 14 inches apart and plants 6 inches apart in the row. Young plants are used from a bed planted the previous year. The beds have had no shading nor watering, and have been allowed to set runners at will. By fall they make solid rows and nearly cover the ground between the rows. The marked coincidence in one frame, this season of small blooms and an unusual number of young plants has determined me to pinch off runners hereafter.

The only year for which I have a full account of both yield and prices is 1894.

The first frame to come on was 6x100 feet. The frame was put around this bed in the fall, and at the beginning of winter it was banked with manure and sash put on. Forty thousand violets were sold from this frame between March 24 and April 27. They netted \$278. Another frame 6x110 feet was put on, without banking in the spring, and hastened the blooming only a few days. This frame was not watched closely. The heaviest picking came on unexpectedly at the close of a week of hot weather and was a total loss. Twenty-one thousand violets were marketed from this frame between April 14 and May 2, netting \$86. From the open ground, mostly from the borders of flower beds, were gathered, April 24 to May 9, 25,000 salable blooms, which netted \$100. Of the total 86,000 about 35,000 were sold to local florists, and 51,000 sent to commission houses in other cities.

The English violet has a short season of bloom, which makes it undesirable for ordinary greenhouse culture. For a frame to come on at Easter I think it an advantage to be able to get one-half of the crop at a single picking. Of course the season can be considerably prolonged by shading, if that is desirable. I think it an advantage not to allow the soil in the frames to freeze deeply; but it is not necessary to freeze one's fingers putting on shutters every cold snap in winter, or to spend any time in summer spraying with Bordeaux mixture, or picking off diseased leaves. Good soil and a reasonable amount of hoeing and weeding is all that I have found necessary to insure a bountiful crop of blooms the following spring. Considering how cheaply and with what certainty these violets can be grown it would seem that a great many florists could advantageously grow a few each season.

The accompanying picture tells its own story except as to the color of the blooms. A bunch of Marie Louise in the same window looks faded.

Rochester, N. Y. GEO. ARNOLD, JR.

Herbaceous Plant Notes.

What a fine show *Alyssum saxatile compactum* is making now (May 21) in the herbaceous border and on our rockeries, with its bright golden yellow flowers profusely produced in close corymbose heads, so that the whole bush seems enveloped in a sheet of gold. It lasts a long time too, commencing with us the latter part of April and continuing into the end of June. One of our best herbaceous plants, and very hardy, the glaucous foliage is covered with a whitish down, and the plant is nearly an evergreen, does best in a dry and sunny position, where the plant, if not crowded by neighbors, will develop an even, rounded surface densely covered with large yellow flower heads.

The old *Iberis sempervirens*, known to everybody, blooms at the same time, and a good sized patch of it comes very handy for cutting; a little later on in June *I. coraeifolia* will give a succession of flowers; the corymbose flower heads of this variety are considerably larger than in the former, and are more compact and close, forming spikes 3 inches long. The leaves of this plant are broader and shorter than in the older variety, and the bush also more compact and close.

Centaurea montana, a large deep blue herbaceous cornflower, is beginning to bloom with these, and will continue for some time; the florets are deeply cut or fringed at the edges, and the plant is well worth a place on the border. It grows to

THE ENGLISH VIOLET

a height of 18 inches to 2 feet; there are also a rose colored variety *C. m. rosea*, and a white one, *C. m. alba*, both of which are equally desirable, and should be grown more.

Of irises the *pumila* section is now almost past its best, but the plants have made a fine show while in bloom, and are surely wanted in the border for an early spring ornament. The *germanica* section comprises a great number of very handsome varieties with large sweet scented flowers, and are among the easiest to cultivate; their rhizomes are formed on the surface of the ground, and are better not covered over with soil. They like plenty of sun and air, and once planted should not be disturbed and divided like other herbaceous plants, their flowering being much hindered by division or replanting. They vary a little in the time of blooming, and also in height of flower stem, but usually 2 to 2½ feet is as tall as they will grow. Some of the earlier varieties are in flower now, and there is every combination of white, yellow, blue and deep purple to be found in the flowers. A fine combination bed of iris may be created by planting *I. pumila*, *I. germanica* and the taller *I. laevigata* or *Japan iris* together; the flowering time will then extend from April to August, but they are also indispensable for the border or the rockery.

The moss pink, *Phlox subulata*, is in full bloom, and carpets the ground densely wherever planted, also the pretty *Phlox amœna* with its bright carmine pink flowers in compact corymbs, lasting well into June.

Hardy primroses are at their best, and there is such a variety of colors, a collection of them will please every visitor. They do well either on the border or the rockery, and will remain in health undisturbed for years, also will the much admired auriculas.

Polemonium coeruleum, the Greek valerian, has pretty soft blue flowers on corymbose erect stems from now to July, and is an elegant border plant, growing 1½ to 2 feet high. *Pulmonaria mollissima*, desirable for its early blooming, and *P. m. maculata*, the foliage of which is profusely dotted all over with large round silvery spots, are both good plants for edgings or for the border.

Arabis albidia may be used in the same

way, and is one of our first herbaceous plants to bloom; flowers are produced in great profusion and are exceedingly pretty. It does well in a dry place, but will flourish anywhere in the border. The variegated form of it is also a fine thing; both grow not higher than 6 to 10 inches.

Iceland poppies, *Papaver nudicaule*, are in great shape at present, and will continue so for two months yet; after that flowers will come more sparingly. White, yellow and vivid orange are the varieties seen, and they are a great help to brighten the border.

Anemone sylvestris is an early blooming large flowering variety, which we seldom find in collections, but as the flowers are so lasting and borne on good stout, long stems, we use them as cut flowers in the spring months. The flowers are almost as large as the fall flowering *A. japonica*, but of a very pure satiny white, and are fragrant. April and May is the time they bloom, and the height of their growth 18 inches. This is a very desirable border plant, and flowers freely in any soil or situation.

Daphne cneorum is not an herbaceous plant strictly, but is surely a most desirable one for planting in the border; flowers in terminal heads, very bright pink, is sweet scented and continues to bloom nearly all summer, but the main crops are produced in May and June, and again in late fall. The plant is shrubby and evergreen, as hardy as an oak tree, and once planted should not be disturbed. It grows 8 to 12 inches high, and is a grand plant, but rather rare.

Asperula odorata with its profusion of very fragrant snow white flowers is another good dwarf spring blooming plant for May and June. *Aquilegias* in the earlier varieties are coming out fast now. *A. alpina* has deep blue flowers 2 to 3 inches in diameter, and is one of the dwarf varieties of the genus, flowering from May to July. *A. coerulea* is dark blue with a white cup and large flower, blooms from April to July and is a most lovely species. *A. glandulosa*, bright light blue with a large pure white center and extra large sized flowers, blooms at the same time and is one of the best of all *aquilegias*. *A. olympica*, also one of the large flowering section, is delicate mauve blue, the inner petals or cup white,

ILLUSTRATION NO. 2
ARRANGEMENT OF FLOWERS

blooms in May and through June. *A. vulgaris* fl. pl., the common double columbine, is of various colors and will produce a good show when planted in large patches on the border, and continues to bloom until midsummer. The flowers of the latter variety are smaller than the others, but produced very freely. All of these early varieties grow from 1½ to 2 feet in height. *Doronicum caucasicum* is covered with a multitude of large bright yellow daisy-like flowers, and is useful also for cutting, height one foot. The pretty hepaticas or wood anemones, one of the very earliest dwarf spring flowers, blue or rose, are almost past; they like a half shady position and do well on the rockery or on the border. *Lychnis flos-cuculi* fl. pl., the old ragged robin, is now beginning to bloom, and will continue until August; flowers rosy red in loose panicles. It is a desirable border plant, 1 to 1½ feet high.

Pæonia tenuifolia and *P. tenuifolia* fl. pl. are both in good shape now; they are the earliest of all the pæonias, blooming in May and June. The color of the flowers is dark crimson, not so large, though more useful for cutting, than those of *P. officinalis*. The leaves are cut up into numerous linear segments, and the plant after blooming, is still an ornament in

the herbaceous border, height 12 to 18 inches. *Stellaria holostea* produces its pretty white flowers in great profusion from May to August, and forms a dense plant covering the ground, 12 to 15 inches high.

J. B. KELLER.

Rochester, N. Y.

New York.

Quite a number of the rose growers have already thrown out their old bushes and planted young stock, but not yet to an extent sufficient to reduce the receipt of flowers to where it will bear a proper relation to the consumption. During the greater part of the past month the cut of roses has been enormous, possibly the largest ever sent to this market in a corresponding period. They have been sold by the box, by the thousand or by guess work, with little regard for varieties, and no time wasted in counting them, and sometimes they have not been sold at all. Add the avalanche of outdoor daffodils and tulips and lilacs and the result has been a mass of stock which has brought into requisition every available packing box, kept the express men busy, and made the commission establishments almost impassable during the busy hours of the day. Where the stuff all goes to is a

mystery, but if there was only one-fourth as much of it the net proceeds would, in all probability, be just as much. *Harrisii* lilies continue to harass the wholesalers, and sweet peas are also entirely too abundant. It might relieve the stress somewhat if other varieties than *Blanche Ferry* were grown, but this would never do; every grower must do just as his neighbor does. Carnations have, as the saying goes, "gone all to pieces." About \$3 per thousand is the net result in the aggregate from the sale of all ordinary sorts. There is plenty of inferior stock that cannot be sold for anything. Notwithstanding this, it should be noted that two or three growers who have made for themselves a well deserved reputation as to the quality of their stock are getting as high as \$3 per hundred for their carnations, and even more than this for special fancy sorts, which goes to show that no matter how depressed the market may be the man with the best stock generally comes out all right.

The rapid progress of the season received a check by the sudden ending of the extremely hot weather. Ice was formed in some localities on two nights during the past week, and frosts were reported generally from the farming districts throughout the state. Apple and pear blossoms were badly blighted, Long Island growers lost hundreds of bushels of beans and other tender material and the too-hasty gardeners who confided their coleus to the early May weather will now have a chance to do it all over again, and the seedsmen and florists will benefit accordingly. One highly elated florist was overheard to say, "Coleus, I wish they would all be played out, I have got plenty to sell."

R. E. Loeben, formerly of Dobbs Ferry, has taken charge of the Nestledown Greenhouses at Hollis, Long Island. This establishment is being increased in extent by the addition of several houses, which are being erected by Thos. W. Weathered's Sons, and a retail store will probably be opened next fall on 236 street, near Fourth avenue, in New York City.

The second annual exhibition of wild flowers at the Normal College on Madison avenue came off on May 17. The daily newspapers, as usual, have got badly mixed up on the botanical names, and the New York *Herald* gravely informs us that *Viola pedata* is found only on Staten Island!

This is fairly outdone, however, by the *World* for May 12, which occupies a column of valuable space with an account of wonderful devil plants which kill everything animal and vegetable in their vicinity, but cannot be killed itself even by fire, and trees which feed on small birds and trees which have the power of coating themselves with copper, all of which they admit "must appear incredible to the unscientific."

R. K. Young has leased the greenhouses of W. H. Jacobson & Co. in Hackensack, N. J.

Henry Badger, a retired florist, died on May 19 at his home in Brooklyn, in his 80th year.

Mr. W. Rolker will sail for Europe about first of June.

In town: Theo. Outerbridge of Bermuda.

Boston.

The cold wave which has covered the entire country for a period of several days has not been so severe here as in other sections, judging from the reports of damaging frosts which are received from locali-

ties even much farther south, yet it has been sufficient to shorten up effectually the big surplus of flowers which were being piled on to the market, and the prices received for good marketable stock are generally satisfactory. The great interest now centers in the coming Memorial Day. From present appearances the season will be normal so far as the varieties of outdoor flowers obtainable is concerned. Of indoor flowers there will be probably no great excess over the demands of the market, and the usual figures quoted for this occasion may be expected to rule. As to plants, no one can complain, for prices have not been better nor sales brisker at the auctions at any corresponding time for several years.

The exhibition at Horticultural Hall on May 18 comprised some handsome seedling carnations from Fisher & Aird, a white seedling named Wellesley from J. Tailby & Sons, and the new English importation Uriah Pike, which was shown by Wm. Nicholson. Mr. Nicholson states that the flowers shown were the first cut from small 3-inch plants imported last September, which does not assure a promising future for this variety as a winter bloomer. In fragrance, form and stem it lacks nothing, but the color is rather dark for the prevailing taste in this country, and smooth edged carnation are not yet appreciated by the public here. Messrs. Fisher & Aird also showed a sport from Wm. Scott, in color and general appearance much resembling Thos. Cartledge. Wm. Thatcher, from the John L. Gardner Estate, exhibited an attractive group of orchids and other flowering greenhouse plants, also a well bloomed wistaria in tree form. Jas. Comley, from the Hayes Estate, staged a rich collection of promiscuous flowers, and the display of wild flowers from several exhibitors was unusually large and interesting.

Judging from a big importation of Japanese flower pots and stands just opened up by Jones, McDuffee & Stratton a large demand for the better class of these goods may be counted upon for the coming season. The designs and ornamentation are more artistic and beautiful than anything placed on the market in quantity hitherto, reminding one more of the show pieces in the art museums.

As the season advances the havoc wrought by the severe winter becomes more apparent among the shrubs and trees heretofore considered perfectly hardy. Even the tulips in the Public Garden have not the luxuriance and uniformity of former years. A singular feature is that some shrubs generally regarded as somewhat tender have come through better than usual.

J. W. Lovering, superintendent of Mount Auburn Cemetery for twenty years, died from lock-jaw on May 17, resulting from being thrown out of his carriage a few days previously.

Mrs. A. C. Bowditch died at her home in Somerville on May 19 after a painful illness of several years.

Buffalo.

Since I have penned any note to the FLORIST we have had a great variety of weather. The tropical spell broke up on the 11th, and the mercury fell in this city from 86° to 27° in 18 hours. I have not heard that it hurt any florist, for all had too much experience to believe that summer had come. Yet thousands of plants had been sold on the market, and have doubtless perished. Whether this is a gain to trade or otherwise I will leave to the thinker who thinks deeper than I can

think. Local readers know well how disastrous this was locally to fruit growers, but perhaps all do not realize the terrible visitation to the grape growing region on the south shore of Lake Erie. From Silver Creek, N. Y., to North East, Pa., and extending back from the shore from one to five miles is practically one vast vineyard. When I say that last year's crop was something like 9,000 carloads you can form an idea of its extent. It is a knock that many hard working men won't survive, but let us hope that it will in a measure turn out like the annual failure of the the Maryland peach crop, and if they get but a quarter of the usual yield the price will make up for the deficiency. Good clear weather with frosts at night is the rule up to date, so plant men are not yet rushed. During the hot spell roses and carnations became very plentiful, quite a surplus in fact. But since then flowers have been scarce enough.

A more than ordinary call for funeral flowers and a number of small weddings have kept the store men fairly busy. At present outlook it seems that all outside flowers will be very scarce for Decoration Day. The great bulk of flowers used on that date must be very inexpensive to suit the demand, and indoor stuff cuts but a small figure. The grave of a colonel may have a bunch of roses, but the resting place of a poor corporal or full private gets a 15-cent bunch of lilacs. Valley, lilac, parrot tulips and all the other flowers usually abundant at that time will be gone.

I understand some notes have been sent you of the recent visit of the Rochester bowling team. They were 13 strong, and a good deal of the young athletic element among them. They are a fine lot of boys (few gray hairs among them). What made the encounter more than ever enjoyable was the fact that we had as "rooters" for our side the elephantine form of Peter Crowe of Utica, the swan like graceful personality of George Fancourt of Wilkesbarre and the southern colonel, A. L. Vaughan of Chicago. The Rochester boys went home at midnight, we hope pleased with the afternoon's sport, but the "rooters" hung round another day or two. Crowe, not satisfied with two days of it, had to step into a new lot of alleys on Washington street the morning of his departure with a few companions as idle as himself, and here was the score: Crowe 219, Mepsted 189, W. A. Adams 102. We are glad to see the old man make such a brilliant score, but it has its drawbacks. However, everything passed off beautifully, and we are glad to see such good men honor our brethren with a visit, particularly when they don't have anything to sell or ax to grind.

W. Scott has sold his branch store on Elk street to Mrs. Buddenburg, his former lady manager; Mrs. B., being at home in the neighborhood and having all the attributes both physically and mentally to please a customer, is bound to succeed. W. S.

Buffalo is getting ready for Pittsburg. The bowling florists from the village of Rochester visited Buffalo on Tuesday last, the reason being that they wished to return a compliment that the Buffalo florists had paid them some weeks ago when they went to Rochester and allowed the home team to beat them.

They came, and a fine, muscular lot of fellows they were, 14 in all. At a glance an old bowler could see blood in their eye, but the public generally did not seem to tumble, for as they marched up Main

street in a body their faces and "manners" seemed to give the thing away; on the streets from passers-by you could hear the remark, "Florists' convention." Perhaps this was due to the presence of three faces besides the Rochesters. Peter Crowe of Utica—no comment needed; George Fancourt, the orator and rose grower from Wilkesbarre; and smooth, smiling A. L. Vaughan of Chicago, a great favorite of the ladies in Buffalo.

But let it all pass. We had a good time and the Buffalo florists as a body tried their best to pay back to Rochester a part of the bill they owed for the hospitable way in which they have been treated by their neighbors on more than one occasion. Judging by the faces of Vick, Salter, Savage, Frye, Keller, Graham and the rest, they succeeded in cutting down the balance some, i. e., at 1:30 a. m. on Wednesday.

Peter Crowe, when he had become acclimated on Thursday, made 219 in one game and departed happy. Fancourt seemed on Wednesday to think that all roses shipped into Buffalo had a tired look. Vaughan in his quiet way simply said "thank you, come and see me in Chicago. I have had a lovely time and shall never forget the ladies of Buffalo."

THE SCORE.

Buffalo	1st game	2d game	Total
E. I. Mepsted	135	172	307
Wm. Scott	151	152	303

Total majority for Buffalo 410 pias.

E.

Chicago.

Up to Thursday of this week the supply of stock coming into this market was quite short; though there was not a large demand it was sufficient to clean up the stock. On Thursday the weather turned very warm, so it is likely the stock would soon increase. Prices have held quite firm, roses being \$2 to 4 in most lines, choice Meteors and Testouts bringing 5. Beauties range from 8 to 25. Carnations were 1 to 1.50; fancies 2. Sweet peas are in short supply and not first-class; Harrisii is very scarce at 10, and will probably go up to 15 next week; valley is short, tulips, poeticus and violets done, and paeonies scarce at 75 cents a dozen.

As regards Decoration Day we get so many surprises in the way of weather that it is never safe to predict very much ahead, but present prospects point to a decided shortage in all lines, and a corresponding increase in price. The lack of outdoor stuff will be severely felt, and must have its effect on prices. We hear that there is likely to be some lilac from Northern Michigan, but there is none in this locality, and the same is true of most shrubs. Paeonies, usually so plentiful, have suffered severely from the killing frosts, and there is only about 25 per cent of the usual supply coming in; even where not absolutely cut by the frost

WREATH OF BAY LEAVES AND VIOLETS

the buds appear to be blasted. This time last year the local market was smothered by southern gardenias, which were dumped on South Water street by the truck load and sold for literally nothing. This year the killing frost in the southern states makes these flowers scarce; they are held at 1.50 and 2, and will doubtless go up to 3 next week. Very good ones are coming from Texas and Florida. Some good cornflowers bring 75 cents to 1 a dozen bunches; they sell well, but are not so plentiful as last year.

It is early to give advance Decoration Day prices, but at present it is said roses will be quoted at 5 to 8; carnations 1.50 to 3; *Harrisii* 15, and other stock in proportion. Most of the commission men are not disposed to make a very great increase, in spite of the scarcity of stock; this holiday is one when people demand cheap flowers particularly, but naturally there must be a decided increase over ordinary seasons.

Mr. W. N. Rudd is reported to be doing well though still confined to his bed. His physicians are now confident of his recovery.

The "Chicago Association of Retail Florists" has perfected its organization by the election of the following officers: President, John C. Schubert of the Gallagher Floral Company; vice-president, H. F. Halle; secretary, W. C. Cook; treasurer, A. McAdams; directors, Walter Kretling, Joseph Curran and Charles

Fisk. The stated object of the association is "mutual protection." The organization will inquire into the legal right of merchants to rent bits of the sidewalk, such as are used by the fakirs for stands, and endeavor to force the fakirs off the streets by any feasible expedient that may occur to its members.

Andrew Crawford has resigned as president of the Lincoln Park Board, but retains a position as a member of the Commission. He gives as a reason that when elected it was with the understanding that there should be rotation in the office. As he has served a year it is time for the office to "rotate."

Wreath of Sweet Bay and Violets.

So much ingenuity has been exercised in the designing of floral pieces that anything really new is rarely seen nowadays. The wreath of bay leaves and violets which we illustrate is not only new but is artistic and will, no doubt, prove useful to our readers as suggesting new ideas in funeral design work. It was made by Thorley of New York.

Greenhouse Building.

NORTH WALES, PA.—Dr. D. L. German, one greenhouse.

PITTSFIELD, MASS.—F. I. Drake, rose house 20x100.

BROCKTON, MASS.—H. H. Barrows, one commercial house.

Philadelphia.

Overcoats have been in demand the past week, the weather keeping very cool. All the roses coming in are in consequence close, Beauties particularly being so small as to be almost unsalable. Carnations and sweet peas seem to be improved by the cold spell. Prices remain about the same, Beauties \$3 per dozen for the best, with fairly good short stemmed stock at \$1.50; 4 to 5 per hundred is asked for the large teas and 2 to 3 for the smaller class. Carnations bring 1.50 for first choice, \$1.25 to 1 per hundred for good flowers and \$5 per thousand for large lots. The principal varieties offered are McGowan, Daybreak, Buttercup, Tidal Wave, Sweetbrier and Portia. All these kinds are to be planted in quantity about here for next season as well as small lots of the new ones for trial.

W. L. Edwards of Norwood is cutting some fine giant candytuft; there should be more of this variety grown.

The last of the outside valley is gone and cold storage stock is now on the market; \$3 per hundred is the price. Lilacs are done, but there is plenty of outside shrubbery, and pæonies are making their appearance.

Fairmount Park is now a charming spot, particularly in the neighborhood of Horticultural Hall. The irises have been blooming for some time, as have also the Ghent azaleas. The rhododendrons have commenced to open and in a few days will be seen in all their glory. Since the advent of the trolley nearly all street railways run special cars or will transfer passengers to the park for one fare. This will no doubt greatly increase the number of visitors the coming summer, and make this great pleasure ground more popular than ever.

Quite a number of the growers are getting their roses for summer cutting planted on the benches, Augusta Victoria being the favorite. Some will leave in their Brides and Mermets, while La France and Testout will also be planted by others. Altogether the prospect for good summer stock is very fair. Business is never very encouraging in July and August, but the dealer who doesn't carry a few nice roses in his stock and has only apologies to offer his customers is very apt to lose trade.

The gun club has completed the improvements to their grounds at Wissinoming, and this sport will now be less dangerous and more enjoyable. Before the season is over there will no doubt be some great records made.

When horticulturists meet in session and labor hard from 8 to 11:30 p. m. they must be terribly in earnest. This is the record made by the members at the meeting of the Pennsylvania Horticultural Society held last Tuesday evening at the Century Drawing Room, and the last to be held at this place. The attendance was not large, the night being a very disagreeable one. The four essayists were all present and their valuable papers, showing much thought and care in their preparation, were well received by those present. This meeting completes the work of the different sections and is the last meeting of the society to be held at this room. Resolutions looking to the discontinuance of the meetings during July and August were passed and it is likely that none will be held in these months.

"Manures, fertilizers and their application" was the subject under discussion, and the general tenor of the papers read was that much money was wasted in purchasing plant foods that were not applied intelligently. One-half the money

spent for fertilizers could be wisely used in finding out the kind needed and most suitable for the crops under cultivation, and also the proper time to apply it. The soil was described as a great store house of plant food, but much of it lay dormant and the artificial manures or fertilizers helped to bring this into action. The ingredients of these compounds were given: phosphoric acids, nitrogen and potash being the three principal substances. One speaker said that large companies were being formed to transform the garbage of all our large cities into fertilizers, which would be as valuable as any now on the market. Red clover was highly recommended by one speaker as one of the best of fertilizers, as when ploughed under it supplied the soil with that most useful stimulant, nitrogen.

Farm crops were mostly considered by the essayists, and the horticulturists present, or at least the greenhouse division, did not bear much that particularly interested them except in a general way. One speaker was asked if coal ashes acted in any way on the soil; he replied, none that he knew of, except to make it more porous; there was no chemical action whatever.

The next exhibition of the society, namely, the chrysanthemum show, will likely be held at the Academy of Fine Arts. It is a wonder this building was not thought of before, as it is in every way adapted for a flower show. At a meeting of the committee of arrangements David Rust was elected superintendent of exhibition. This was a good choice, and no doubt Mr. Rust will fill this position with credit to himself and to the society.

Mr. P. Welch of Boston has been recuperating in Atlantic City for the past week.

Mr. Hugh Dickson of Alex. Dickson & Sons, Newtownards, Ireland, arrived from Europe last Saturday, and is visiting Philadelphia and vicinity. K.

St. Louis.

A long continuous rain Tuesday and Wednesday ended a four weeks drouth that according to the Weather Bureau has not been equalled at this season of the year for twenty years. Spring opened exceptionally mild and all tender garden vegetables that were planted accordingly suffered considerably. Monday evening the thermometer dropped to 37°. In South St. Louis and through portions of the Illinois river bottoms grapes were nipped and are now turning black and falling. Many truck gardeners are replanting their potatoes, fearing to rely on the severely checked crop.

The succeeding four days of cool weather caused a decided decrease in the cut flower supply. The plant shipping trade has been slightly affected by it also.

The sixth annual "Flower Sermon" provided for by the will of the late Henry Shaw was delivered Sunday forenoon at Christ's Church Cathedral, by the Rt. Rev. William C. Doane, D. D., Bishop of Albany. Pulpit, chancel and altar were tastily decorated with smilax, roses and lilies. The text selected was Gen. III 8. "The voice of God walking in the garden in the cool of the day" and "the wisdom and goodness of God as shown in the growth of flowers, fruits and other products of the vegetable kingdom" was interpreted in a most eloquent, forcible and masterly manner. Numerous citations of the sentiment so profusely elucidated by poets of all ages; the sympathy and affection prompted by the beauty, glorioussness and radiancy of flowers, and their ennobling and inspiring influence,

were given in an impressive and pleasing style. A high tribute to the gardeners for their devotion and untiring watchfulness over the "beauties of nature" and their unceasing struggle in assisting her to reveal herself in her best garb, compliments in them "the best original bit of the Old Adam by far that survives to-day."

At a special meeting of the Florists' Club held the 16th, the advisability of holding a chrysanthemum show was discussed. In view of the fact that a discount was exacted on the premiums offered by the club last fall to balance the receipts it was intended to establish a \$625 guarantee fund, which in addition to the door receipts and the \$500 show premiums would cover the expenses of a first-class exhibition. A committee was appointed to ascertain whether twenty florists would vouch for \$25 each, to be paid either as personal contributions or in the shape of premiums offered by various business men. On their report it was found the necessary number could not be obtained (a lamentable fact indeed) and the club consequently decided if sufficient interest to successfully arrange for an exhibition was wanting, certainly the best material would not be supplied in the fall and to therefore dispense with it this year.

The sixth annual banquet to the Trustees of the Missouri Botanical Gardeners was given the 17th, at the Planter's Hotel. Among the distinguished visiting guests were Dr. Clarke Gopen, Supt. of Eastern Illinois Insane Asylum, Kankakee, Ill., Prof. Plumb, Director Indiana Agricultural Experiment Station; Dr. C. F. Millspaugh, Botanist of Field Columbian Museum of Chicago; Prof. W. O. Atwater, Middletown, Conn., formerly head of National Bureau of Experiment Stations at Washington; Pres. Henry Wade Rogers of Northwestern University, Evanston, Ill., Mr. J. S. Wright, Botanist of the drug house of Ely Lily of Indianapolis, Ind. E. M.

Rochester, N. Y.

The weather is extremely cold and raw, flowers have been short in supply for the past week; roses are getting smaller. The principal cause for the scarcity is laid to the abnormal and continued cold weather. Prices obtained are and have been a little higher here than in the larger cities, averaging on roses of all grades \$1 per 100 over quotations in principal cities and from 50 to 75 cents over carnation quotations. Rochester in the past had been considered by many growers as a poor market, but the principal shippers to this place now think otherwise. Smilax, which was so scarce for two months is coming in abundantly. The best carnations in market are homegrown, those from out of town are much smaller.

The growers here had to keep up fires in most of their houses, but to those who have suffered by the hailstorm, heating does not help much as long as repairing is not finished. In passing along the different greenhouses we notice that large sized glass suffered most damage. At every place they are busy repairing as fast as they can and the unfinished houses are still covered with building paper, shutters, propagating boxes, holly and bulb boxes, boards, canvas, blankets and Holland hulk bags tacked to the smaller breaks, and every other imaginable article available in a florist's place, the greenhouses presenting a queer sight to a stranger, but the work of repairing is pushed steadily along and in a short time

everything will look pleasant again as formerly.

The Buffalo bowling contest called out some 15 of the Rochester florists in spite of the pressing work caused by the broken glass at home, and they were entertained in a truly hospitable manner at the Tift House by the club, but at the game, as usual when playing on strange alleys, they were left behind, but surely had a good time with their Buffalo friends.

I am sorry to say that W. H. King has been confined to the house for the past week with illness; his friends are anxious to see him about again.

Bedding plants sell slowly yet on account of the cold season and prices are lower here, I think, than in any other locality, so that many leading local florists are speaking of giving up growing spring stock in quantity for the next few years, for it absolutely does not pay to raise it at such low prices. Why, the other day a lady came inquiring price of geraniums by the dozen, and was asked \$1 for plants in 4 inch pots, in bloom of course, but she was posted and promptly replied that they were sold at 60 cents per dozen in certain places. As we knew it to be true we blandly told her to buy there, but that we could not afford to sell at that figure. We have numerous small greenhouses in our vicinity, run by men who do not figure out the cost of raising their plants and who are anxious to dispose of their stock, knowing that there is an overabundance of it in market, but working ever so hard, they can barely make more than a very moderate living. If they sold half of their stock only at fair prices and threw out the other half it would pay them better, and they could live better too, or if they would turn their attention to growing violets, carnations or roses, their gains would at the end of a year amount to four times their present income. J. B. K.

St. Paul, Minn.

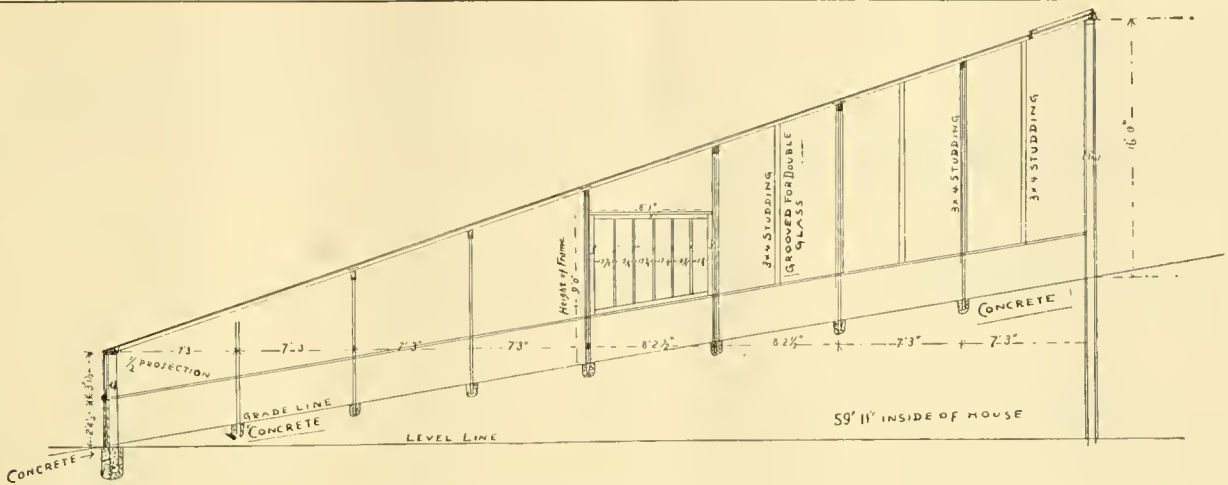

The prevailing low temperature of the past two weeks has called the boilers into use again, especially where cut flowers are grown. Planting out operations have been delayed, though they have now been resumed since the advent of warmer weather.

The cut flower trade has been fairly good. The cut is not large, while the demand has been good. White roses have been very scarce owing to a large amount of funeral work. Carnations are abundant and of good quality.

There will be but few if any outside flowers for Decoration Day and with only a medium size cut inside flowers are apt to be very scarce.

In the plant line sales have been quite slow. Carpet bedding seems to have been given up almost entirely in this section, and the bright hued beds of coleus, alternanthera and the like are replaced by roses, geraniums, cannas, etc.

The monthly meeting of the Florists' Society was held at West Hotel, Minneapolis, Friday evening, May 17. The attendance was very light and it was decided to hold no more meetings until fall. Mr. Joseph Taylor read a very interesting and instructive paper contrasting the trade in this country with that in Europe. New varieties for forcing were recommended by the speaker. The principal trade in Europe is in plants, while here it is in cut flowers. In Europe experienced growers are employed in the stores. In this country many store clerks are entirely ignorant as to the care and

A GREENHOUSE 60 X 300.

culture to be given a plant; the consequence is disappointed customers and poorer sales next time.

De Cou & Co., seedsmen, have removed their store to a more convenient location at 62 East 7th street.

L. L. May & Co. are to have a uniformed base ball team.

J. H. Roach, representing J. B. Rice & Co., was a caller during the week.

FELIX.

A Greenhouse 60x300.

The accompanying drawing shows the construction of a new house now being erected by the John C. Moninger Co. of Chicago for Mr. Fred Busch of Minneapolis, Minn., a large vegetable grower of that city. This house will be 60 feet wide and 300 feet long, the glass facing the south. The roof will be glazed with 16x20 glass and steam heat will be used. The steam pipes will hang close to the roof, just below the purlins and in this way it is believed that the laying of snow upon the roof will be avoided.

This building will be used for growing cucumbers and will contain no benches, the plants being treated much as in the open ground. The drawing shows the end section, and as will be seen there is a very large doorway in the center. This doorway is of such size that a team and large wagon can be driven right into the house. In reference to this style of building, Mr. Busch has had two houses of this style, each 35x150 feet, in actual use since 1892, and he has found them very satisfactory and economical.

In the house of which we give a section the ventilation will be at the apex of the roof and also at each side, but it would seem to us that hardly sufficient ventilation had been provided for such an immense expense of glass. The economy of such a construction over that usually employed is apparent at a glance, especially in the saving of walls, and it would seem that there is a gain in space, practically every square foot having full exposure to the sun. While we would not want to unqualifiedly recommend this style of construction, we would, in view of the satisfaction given to Mr. Busch by his houses built in 1892, consider the matter worthy of careful consideration by intending builders of commercial houses.

We published a short time since an engraving of a house of similar construction erected by Mr. C. S. Swayne of Kennett Square, Pa., who used it for carnations, and he seems to have had very gratifying results.

Cleveland.

In the matter of the Gordon assignment, mention of which was made in the last Cleveland notes, things seem to be moving. The place will be sold as an entirety on June 10 at sheriff's sale. The wording of the legal notice in the daily papers would lead one to suppose that the property, fixtures, stock, etc. were to be sold separately. Such is not the case. Everything is lumped and sold as a whole. Under these circumstances, with the present floricultural outlook, the bidding will hardly be very spirited, which is quite likely to be exactly what is wanted. The upshot of the whole matter might be that the property will come into the possession of the city, to be used for the propagating of stock for park purposes. This, however, is only at present a plausible surmise, founded upon such knowledge as comes into the possession of the outside world. Aside from all consideration of personal advantage to those directly concerned in such a deal, it might not be such a bad idea, provided that the city authorities are not too unmercifully "soaked." Providence, nevertheless, seems to have provided city governments expressly for "soaking" purposes and quite likely the usual municipal fate will overtake Cleveland in this matter.

Flowers at this time are extremely scarce, as was to be expected. Lilac and all other available early spring flowers are completely gone, rushed out of existence by the unseasonably hot weather of early May, while the present disagreeable, cold and generally miserable weather keeps all greenhouse stock at a standstill. In fact about all that can be had in quantity are roses, carnations and sweet peas. Of these latter James Eadie is handling some especially fine ones of his own growing. The same lengthy gentleman also has a new carnation, of which I shall have something to say in the future. It is A1 in every way. Wamelink Bros. are sending in excellent roses at present and they seem to go very well too.

Matters in the two larger markets where florists do business have been rather slow, which unpleasant condition arises largely from unseasonable and otherwise bad weather. Two frosts in a week with a fair prospect of more, are liable to make the prudent buyer of bedding stock thrust his lure down into the warmest corner of his pocket and sit himself down by his stove, rather than to get out and stick coleus and "sich" in the ground for old Jack Frost to nip. Meantime the market growers (and others) keep themselves

warm by cussing the weather and the business, or by rushing around to open ventilators at every blink of sunshine, only to do some more rushing five minutes later to jerk the air off again. Truly the florist's life is not in itself necessarily a happy one. A.

Hot Water Under Pressure.

The one requirement in a system of this kind is *absolutely tight joints*, and if this is secured there will be no fault to find. The system is supposed to be connected with the city water supply, but a tank set at the proper height will give an equal pressure and insure rapid circulation, which, together with high temperature, is the point gained by pressure. Under the open tank system it was almost impossible to get the temperature of the water leaving the boiler higher than 190° to 200°, which under pressure it is possible to raise it to 250° to 300°, consequently increasing the circulation many fold.

- A—Water supply.
- B—Air cushion.
- C—Air vent.
- D—Swinging check-valve with $\frac{1}{8}$ -inch hole drilled in disc.
- E—Gate valves.
- F—Emergency expansion tank.

By reference to the accompanying diagram it will be seen that directly over the boiler and connecting with it through a vertical pipe is placed an air cushion (B) which serves the double purpose of preventing the ebullition in the boiler from racking the pipes by sending its steam and air through them, and condenses the steam so formed. The air cushion should be quite large and should be tightly capped so that the air trap will prevent water from rising above the air vent (F C). The swinging check valve (D) should have a small hole, say $\frac{1}{8}$ inch in diameter drilled through the disc in order that the expansion may find its way into the water mains and prevent too great pressure from forming in the system. The gate valve (E) from emergency tank

(F) should be closed when pressure is on and of course the valve in supply should be open.

In case city pressure should be shut off the valve in supply should be shut off and that in tank opened. If radiating pipes have an inclination from boiler as shown by dotted lines in diagram, air cushions and vents should be placed as shown. Hot water may be drawn from a system of this kind with perfect safety, as the pressure is maintained by the check swinging open and filling as fast as it is drawn off.

GEO. LEMONT,

Chicago.

Chrysanthemums in May.

I was surprised to see fine chrysanthemum blooms of the Japanese variety Viviani-Morel while visiting the greenhouses of Mr. James Eadie, Cleveland, O.

The flowers were 5 to 7 inches across, and as this is the middle of May it may be considered somewhat remarkable and opening up great possibilities. It is the second year for the experiment and about 100 plants were grown this year.

They were top cuttings struck in the month of January and grown on into 4 inch pots. They attained a height of 2 and 2 1/2 feet.

During the recent cold snap they were somewhat appropriate, but for "mums" in May it were better they were mum! ugh!

B.

Dutchess County Horticultural Society.

At the last meeting of the Dutchess County Horticultural Society held May 8, the schedule of premiums to be offered for the chrysanthemum exhibition to be held at Poughkeepsie, November 6, 7 and 8, was adopted. Copies may be had by making application to the secretary, Wallace G. Gomersall, Fishkill-on-Hudson, N. Y.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By a practical florist, experienced in growing cut flowers for city store. Address "GROWER," care American Florist.

SITUATION WANTED—As manager small place, S experienced in all branches of work; can bring 50 finest chrysanthemums. Address CAPABLE, care American Florist.

SITUATION WANTED—As grower and florist in S commercial place; 10 years' experience; unmarried. Good references. Address FLOREST, 56 Tyler St., Boston, Mass.

"FAMILIAR FLOWERS OF FIELD AND GARDEN" by F. Schuyler Mathews differs from most books of its class in being almost entirely devoid of the poetry, symbolism and sentiment with which such works are usually overburdened. It is the simple story of an artist and color enthusiast who is bluntly practical, and warms up only when he touches upon some flower whose wide range of color gives him an opportunity to enthuse over tones, tints, shades and hues. In defining the colors of the wild flowers Mr. Mathews endeavors to be scientifically exact, often taking issue to the descriptions as given by Prof. Asa Gray, to whom he frequently refers as a partially color-blind botanist, but occasionally getting rather deep for the ordinary reader, as when he speaks of the color of the common milk weed as "pale lavender brown with a few touches of pale brown lavender." The flowers described are mainly those, both wild and cultivated, which have become familiar to the artist in his summer home in the New Hampshire mountains, and include annuals and perennials, deciduous, herbaceous and bulbous, indiscriminately, the only classification being as to their time of flowering. In commenting upon a work of this character one should not be too critical, but the omission of two such familiar favorites as the wild rose and clover blossom seems inexplicable. The volume is beautifully embellished with over two hundred accurate drawings by the author, and the appendix gives a valuable index to the names, colors and localities of some five hundred familiar flowers of the United States. Altogether it is a decidedly valuable addition to our floral literature. Published by D. Appleton & Co., New York.

GOOD PANSIES.—We recently received a box of pansies from I. E. Coburn, Everett, Mass. They represent a strain Mr. Coburn has been growing and selecting for about 20 years, finding them particularly valuable for market use. The flowers, of good size, were of exceptionally fine substance, lasting well, and the variety of coloring was remarkable. There were selfs of great brilliance and richness, and many unique margined and flaked forms. Some singular blues, maroons and chestnuts especially attracted us. We do not wonder that Mr. Coburn finds them valuable for market. He grows about 200,000, wintering most of them under a light covering of salt hay.

Philadelphia Seed Notes.

The rush of the season being now over the seedsmen here have time to breathe again and are willing to talk on the results.

At Wm. Henry Maule's Mr. Frank C. Bruton cheerfully gave a half hour to your scribe, and reported that the season generally had been much better than was anticipated. March was a bit slow but April more than made up for it.

Their best selling items this season were the Davis bean, the new Imperial tomato and the Grand Rapids musk melon. The Imperial originated in Vermont in a field of Dwarf Champion. It is extra early, large and very solid. The Notts Excelsior pea is another notable seller, being an improvement on American Wonder and much more profitable than that favorite sort. In potatoes the Freeman for early and Irish Daisy for late were the favorites this year, while the Lupton cabbage takes the lead in that vegetable. Mr. Maule still swears by the Mastodon corn, of which he now has a greatly improved type secured by careful selection for several seasons.

On being asked if the handsome pansy litho on front cover of their catalogue helped the sales of that item Mr. Bruton replied in the negative. He thought the sales ran about the same as usual. There was decided improvement in the popular demand for tuberoses, gladioli, cannas, lilies and other standard spring bulbs. Dahlias were especially good sellers. There seems to be somewhat of a revival in the taste for this good old flower and it seems safe for the catalogue men to give it more space next year. Sweet peas were again "all the go," demand being wonderfully good and stock well cleaned up notwithstanding liberal preparations. They are "down on" Albino tuberose here, as that item did not show up well in the trials last summer. Mr. Maule sends out over 500,000 catalogues (large and small) and has one of the best arranged and best equipped establishments in the country for conducting a mail trade. Like most seed stores they are bothered here with mice, which do considerable damage. Commenting on the absence of a tabby your scribe was told none were on the place, as the boys got 10 cents per mouse tail every Saturday night at the office. This fact may account for the absence of Mr. Maule from the advertising columns of the expensive periodicals this year, about which some of his contemporaries have had comments to make. Seriously, however, there seems more converts than ever this year to the theory that the day for making large display ads. in these high priced mediums has gone by, and it's very doubtful if they will ever return again.

Mr. Stokes (of Johnson & Stokes) is decidedly of this opinion. "Time was," he said, "when we could put a display ad. of corn in these mediums and make it pay handsomely, but you can't now for your life."

Mr. Stokes appeared well pleased with the season's business. Although March was disappointing February and April were very good, and there were fewer spurts than in '94, which enabled them to handle the business more easily. Onion seed went well with them notwith-

standing that they offered at stiff rates. Entirely cleaned out of yellows and had to go outside for more. This firm does a heavy trade with market gardeners; but their other lines are increasing. The sweet peas, for instance, a big increase in the business done was noted. The cow pea was another item that had a run. It is being more largely used north for soil-ing. This and crimson clover seems to be here to stay. Mr. Stokes is a strong believer in half tones from photos for illustrating their catalogues. He has a complete photographic outfit and gets lots of amusement out of this, which is quite a hobby with him. Some authorities claim that 5,000 or 10,000 impressions is all that can be run from a half-tone plate, but Mr. Stokes says that they can run 50,000 with a good printer.

H. G. Faust & Co. have also had a good season—much better than '94. They report a greatly increased demand for peas this year. This coincides with the experience of others and there is undoubtedly a better appreciation of this fine vegetable among all classes. Advancer is the favorite. Five years ago there was but little of it sold here, but it has forged to the front very rapidly and is now the leader. The demand for crimson clover during the spring has been larger than expected, the trade in this being as large as that of last summer, which would indicate a good demand for next July. Bulbs of all kinds were in good demand. Bush Limas, Country Gentleman sweet corn, Conn. Field pumpkin and peppers sold extra well, and flower seeds were never better. Altogether the business has been very satisfactory this year.

Henry F. Michell's is one of the busiest hives in the city at present, his trade being largely custom and counter business. Mr. Michell thinks his trade has increased fully 10% over '94. Novelties have sold better than usual. California Golden Bells has taken well. Crimson Rambler rose, strobilanthes and Bougainvillea Sanderiana also very good sellers. Mr. Michell has a sweet corn that he calls "Delicious" which has been very popular. It is a medium early, somewhat resembling Staffer's and is exceedingly sweet. Sweet peas are 25% ahead of last year. Esculent peas, very much increased demand. Spring bulbs very good, especially tuberoses, begonias, gladioli, dahlias and Japan lilies. There is still a good demand for cannas, the leaders being Florence Vaughan, Chas. Henderson, Madame Crozy and Alphonse Bouvier.

G. C. WATSON.

ONION BLIGHT is reported as active in some of the California fields.

BIRMINGHAM, ALA.—D. A. Helmich & Co., have assigned to L. G. Pettyjohn. The liabilities are about \$1,700. The company operate a seed store on Nineteenth street.

MR. J. C. VAUGHAN left last Saturday for the Pacific coast, where he will make a brief stay. Mr. C. Cropp, of the New York branch, is in charge at Chicago during his absence.

THE FIRM of Oscar H. Will of Bismarck, N. Dak., has changed to Oscar H. Will & Company, taking in John M. Johnson, who has been in the employ of Mr. Will for the past 12 years.

THE WAR DEPARTMENT at Washington is inviting proposals until May 28 for furnishing the bulbs required for the public grounds and the greenhouses of the Executive Mansion. Col. John M. Wilson,

office of Public Buildings and Grounds, is also inviting proposals until same date for florists' supplies needed by the Department for the ensuing year.

BULLETIN 90 of the Cornell University Agricultural Experiment Station is devoted to the China asters, with remarks upon flower beds. The latter subject is an interesting plea for the use of artistic borders, instead of meaningless beds cut out in the lawn. The main part of the bulletin, devoted to the asters, will be found to possess both interest and value to the trade. It treats of the history and development of this flower, and gives a concise description of all the good strains of the present day. We know of no other source whence one can obtain comparative descriptions, and this bulletin will possess a permanent value for florists and seedsmen.

Catalogues Received.

J. P. William & Bros., Heneratgoda, Ceylon, tropical seeds and plants; same, bulbs and tubers; D. Hay & Son, Montpelier Nursery, Auckland, New Zealand, trees, plants and bulbs; Nanz & Neuner, Louisville, Ky., retail list plants, seeds and bulbs; same, wholesale list; Wood Bros., Fishkill, N. Y., trade list plants; Waterbury Rubber Co., New York City, greenhouse hose; W. & J. Birkenhead, Sale, England, ferns and selaginellas.

Lancaster, Pa.

Landis & Co., who now have the old Rohrer place, is a firm of young men, but the place is kept well up to date.

H. D. Rohrer's fine new range of houses are well worth a visit. Carnations are the main crop, but as soon as the cut is unprofitable out they go and the space is used for lettuce or tomatoes. Mr. Albert M. Herr grew the following varieties of carnations the past season: Iago, Tidal Wave, Helen Keller, Sweet Brier, Wm. Scott, Albertini, The Stuart, Uncle John, Aurora, Daybreak and Lizzie McGowan. All were in solid beds. Uncle John has been perfectly satisfactory with him and will divide honors with McGowan next season. Helen Keller has also given good results and next season he will plant three houses with this variety instead of one as last year. The other varieties will all be grown in greater quantity the coming season.

Daniel K. Herr's place is devoted to seedlings, plants for the mail trade, and general bedding stock.

B. F. Barr, who has now the entire property formerly owned by Mr. Bitner, has in his combined plant a total of 75,000 feet of glass.

Frank Konr is enlarging his plant on a newly purchased farm. It is said that he grows the best Buttercup carnations in this section.

Elmer Weaver's place at Ronks Station, shows that he is an up to date florist and entitled to a place in Lancaster county.

Geo. B. Wilson, the present owner of "Wheatlands," grows a general stock for local trade. The excellent spring water on this place is phenomenal and a source of delight to one who has viewed pure Schuylkill when it is muddy.

Harry Schroyer was seen at his store. He and other Lancaster florists were enthusiastic about the coming convention and there will be a full delegation from this section at Pittsburg. F.

HENRY HESS, Cockeysville, Balto. Co., Md.

Grand Rapids, Mich.

A meeting of the Grand Rapids Florists' Club was held May 21 at the home of the treasurer, Mr. B. Stover, about twenty-five members being present. Mr. Geo. Crabb gave a short address on rose planting. He used during the past season only three inches of soil in his benches, which settled to two inches. American Beauties, Perles, Mermets, Bridesmaids and Meteors all flourished alike in this depth. He uses no rotten manure whatever, but prefers it fresh from the stable, both for mixing with the soil at time of planting and also for mulching. Where the steam pipes were placed on the inside of the outer legs of bench he had the best results. Where pipes were under the bench he found the most red spider; from a side bench of Perles 30x4 feet he cut six hundred roses (Perles) in one week.

The discussion brought out the fact that four inches was the universal depth of soil after settling, and most growers here uses rotten or partially rotten cow manure for all purposes. Fresh manure applied as a mulch is always accompanied by a multitude of small black spots covering the entire plant.

Owing to a seed firm offering pansies, the seed of which cost \$20 per ounce wholesale (?), for 15 cents per dozen at a special sale the club discussed the advisability of lowering the regular price, but it was decided a poor principle, as the price at the close of one season sets the price for the beginning of the next. The committee on chrysanthemum show is meeting with encouragement and everything points to success. J. A. CREELMAN.

Baltimore.

The continual rain is largely responsible for slow sales. No doubt we will have to do the business of a month during the next two weeks, as but very little planting out has been done yet.

Messrs. Madsen & Anderson are putting up two rose houses one hundred feet long.

Mr. Wm. J. Halliday has built a beautiful plant wagon of the largest size, with heating apparatus and glazed ventilators, making it a complete conservatory on wheels.

The display of plants at the markets was never finer, but complaints of slow business are numerous. MACK.

Pittsburg.

John R. & A. Murdoch are closing out their plant department and have leased their greenhouse property to the firm of Randolph & McClements. They will still remain in the cut flower and seed business at their old stand on Smithfield street.

GERMANTOWN, PA.—Walter R. Cliffe will decorate the Academy of Music, Phila., for the national convention of the Epworth League, to be held May 23 to 26. He also has the order for the table work for the receptions to be held two evenings, which will be quite elaborate. This is the first time a Germantown florist has been favored with this work.

JACKSONVILLE, FLA.—At the meeting of the Florida State Horticultural Society the opinion was general that in spite of the hard freeze not an orange tree in the state had been killed, and that even when the stock was seriously injured the tree would sprout from the roots. Many of the groves are reported in good condition, much better than was expected.

Make No Mistake! Get the Very Best CHRYSANTHEMUMS

for next Fall's shows, and for cut flowers, pot plants, etc. Here is a partial list. They are in prime condition for shipping.

Toronto.

The continued cool weather appears to have had the effect of brightening up the cut flower trade, which had during the hot weather shown signs of giving out for the season. For the same reason there is a corresponding depression in the plant trade, though there are any amount exposed at the stores and the market for sale. It is satisfactory to learn that the crops in the fruit districts are not quite so badly damaged as was at first reported. Grapes will not be a total failure.

Owing to there having been five Tuesdays in April it is five weeks since the last meeting of the Gardeners' and Florists' Association; doubtless there will be all the more to talk about at the meeting this week; it is to be hoped that there will be no explosion after having been bottled up so long. It is rumored that a prominent grower at present located in a town not a thousand miles west of Toronto will move bag and baggage to a more convenient situation in a northern suburb and will put up quite an extensive plant. E.

Lenox, Mass.

The Lenox Horticultural Society held its second semi-annual supper on the evening of May 18. About fifty members and their friends sat down to the tables, among those present from a distance being W. A. Manda of South Orange, N. J., and W. R. Phillips and Mr. Dugan, representing the firm of Thos. W. Weathered's Sons of New York. President Finaghty presided and J. F. Huss officiated very acceptably as toast-master. E. J. Norman responded for the Founders of the Society; Martiu Finaghty for the Trade; A. H. Wingett and Geo. Thompson for the Private Places; A. P. Meredith for the Kindred Societies, and W. A. Manda for Horticulture. Interesting addresses were also made by Messrs. W. R. Phillips, J. W. Cooney, H. P. Lucas and others, and Messrs. Dugan, Price and Jack entertained the company with songs, recitations and dancing.

MRS. O'HILLIGAN.—"Oi phwant some roses." The Florist.—"Madam, I would recommend chrysanthemums to you; they're all the rage now." Mrs. O'H.—"Shure, sor, that's phwal Oi phwanted, but Oi couldn't say it."—*Truth.*

Strobilanthes Dyerianus. \$6.00 per 100.

STILL LOWER PRICES.

STROBILANTHES DYERIANUS. (1894).—The most beautifully colored foliage plant introduced for many years and sent out last season at \$2.00 per plant is now offered by us at \$6.00 per 100 or \$50.00 per 1000!! No other plant will do as well for bedding, etc.; nothing could be finer for table decoration, or as a window plant. The foliage is an iridescent metallic purple—shading to pink and green—is very persistent and stands rough usage. At our price, \$1.50 per dozen, a large profit should be made on them, as they readily sell at 50 cts. and \$1 00 each. A fine plant for Easter sales.

COLEUS MRS. SANDER. (1894).—Sent out last year at \$1.25 each, a big price for a Coleus, but it was well worth it, as no other Coleus can wink at it. It's worth that much to-day, but we've got too large a stock; it takes up room. \$5.00 per 100 will clear them out, however, and at \$1.00 per dozen they'll soon be "out of sight." Rooted Cuttings \$3.00 per 100, postpaid.

A. BLANC & CO.,

CHEAP ORCHIDS

FOR

Cut Flowers

\$50 per 100.

FOR A FEW DAYS, or until sold, to make room, we offer nice collections of **Cattleyas, Lælias, Cypripediums, Odontoglossums,** and other fine varieties, our selection; small, healthy plants that will grow, bloom and give satisfaction.

Old theories are exploded. The most successful growers treat them in a common sense, practical way, and grow them more like other plants and as successfully. As we are now offering Orchids at the price of ordinary plants, thousands who have never grown them should now take them up, and not miss this opportunity as it will not occur again.

Order a collection of a dozen or a hundred at once, and if left to us you will be as well suited as though you were on the premises to select them yourself.

CELERY Plants, ready from now on.

PETER J. SHUUR, Kalamazoo, Mich.

Omaha, Neb.

The hail storm of May 6 was the worst ever experienced here. The track of the storm was about four miles wide, passing over the center of the city. The hail stones ranged from one to three inches in diameter and did a great deal of damage.

Among the florists the worst sufferer was E. C. Erfling, one of our oldest florists, who lost practically all his glass, about 7,000 feet, including a number of new houses recently put in first-class shape. Mr. and Mrs. Arnold had their 7,000 feet of glass also all broken. B. Hass lost all of his 6,000 feet. Peterson Bros. had about all their 8,000 feet destroyed. Ederer & Son lost about half of their glass. Donaghue and Hess & Swoboda suffered only slight damage. L. Henderson's place was the only one that entirely escaped.

The storm also did damage to the city greenhouses at Hanscom Park and to a number of private conservatories as well as many windows and skylights. The storm will not soon be forgotten here.

J. M. Jordan of St. Louis was in town last week.

Hess & Swoboda will build two fine new houses this summer. H.

Worcester, Mass.

Trade was rather brisk last week, owing to a number of large funerals, which came in quick succession, and the local supply of flowers was short in a few instances; the regular trade was fairly steady for this time of the year, and prices are satisfactory. Flowers will be very scarce for Memorial Day, as such outdoor stuff as syringa, valley, Narcissus poeti- eus, myosotis, deutzia and so forth that was not damaged by the late frosts is in full bloom now, and won't last till the 30th, and as the public wants a big show for their money on this day quantities of outdoor flowers are used; the supply of flowers available will probably not equal one-half the demand.

The department store is selling carnations for 10 cents per dozen, buying them of a vegetable grower.

Outside planting is progressing rapidly now; the ground is in splendid shape, and the weather cool and cloudy, ideal conditions that are not being overlooked.

Mr. Chas. Menck and Miss Margaret Braeme were united in marriage May 22. A. H. L.

FOSTITE, A PERFECT REMEDY or Mildew on Roses and Carnation Rust. Joosten's Magazine Bellows, the best out. Fostite, 25 lbs. \$2.00. Bellows, \$3.50. Cash with order. Sold by all dealers and by C. H. JOOSTEN, 36 Dey Street, New York.

DIANITE CHASES AWAY Mildew, Rust and similar fungoid growth. It is a finely powdered, non-poisonous, mineral substance. Rosegrowers use it. Apply with bellows on sunny mornings. Added to manure, improves and cleanses it. Original bags, about 112 lbs. sold for \$5 cash; 25 lbs \$1.50; 10 lbs. 75c. AUGUST RÖLKER & SONS, Seedsmen, New York, P. O. Station E.

TOBACCO DUST \$2.50 PER BARREL OF 195 POUNDS ON CARS OR BOAT NEW YORK. SAMPLES MAILED FREE. H.A. STOO THOFF. 331 MADISON AVE. N.Y.C.

Red Spider Can't Live

WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD. Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner. Yours truly, E. G. HILL & CO.

Price, \$1.00 each, prepaid. TRY IT, AND RETURN IT at once. If not satisfactory, and your money will be sent back.

M. M. JONES, Gen'l Agent, 6122 Oglesby Ave., CHICAGO.

THE KINNEY PUMP.

THE KINNEY PUMP.

Every florist, market gardener, owner of lawn, grass plot or flower-bed, in fact everyone who has a faucet and hose should have the Kinney Pump (patent applied for) for applying liquid manure, fungicides and insecticides to plants. Feed your plants, fertilize your lawns by using liquid manure. The cheapest, simplest and most scientific spraying pump in use. Sent prepaid for \$2.50—spraying valve attachment, 50c. Pump complete \$3.00. Send for circular. Address

News Notes.

READING, PA.—James Cartwright has opened a new florist's establishment at 438 Penn street.

BURLINGTON, IA.—A tract of 20 acres has been secured by the city, which will be turned into a public park.

ROCHESTER, N. H.—Tuttle & Folsom have dissolved partnership. The business will be continued by Mr. Tuttle.

QUINCY, ILL.—The park committee has recommended that O. C. Simonds of Chicago be employed as landscape architect at a cost not exceeding \$600.

LEAVENWORTH, KANS.—A local nursery firm has the contract for supplying the trees for an apple orchard of 1,000 acres in Dakota. There will be 30,000 Ben Davis and 40,000 Gano planted.

BRIDGEPORT, CONN.—Mr. John Reck, the florist, announces bargain sales of plants every Saturday and Monday during May and June. He proposes to beat the department stores by adopting their own methods.

PATERSON, N. J.—The finance committee of the park commission has decided to ask for \$6,000 in anticipation of the annual appropriation to begin work immediately and to expend \$12,000 in permanent improvements.

HEALDSBURG, CAL.—A feature of the flower festival will be a hundred little girls who will head the procession and scatter flowers along the line of march. Following will come the queen of the carnival in a handsomely decorated carriage.

GERMANTOWN, PA.—At the last meeting of the Germantown Hort. Society it was reported that \$400 had already been subscribed toward the fund for the next chrysanthemum show and that several hundred dollars additional had been promised.

NEWPORT, R. I.—The Newport Horticultural Society has distributed to the public school children under 15 years of age about five hundred young chrysanthemum plants to be grown by them and shown at the fall exhibition in competition for prizes.

NEW BEDFORD, MASS.—The Gardeners' and Florists' Club held their second annual dinner at Old Fellows Hall on the evening of May 13. John P. Rooney, gardener for Frederick Grinnell, read an interesting essay upon the "Culture of Chrysanthemums."

PORTLAND, ME.—The park commissioners hope as soon as the lease is obtained from the Grank Trunk to build the parapet at Fort Allen Park. They will also terrace the slope at the Grove street entrance to the Oaks and take in the vacant lot at that point.

SYRACUSE, N. Y.—The Council committee on parks will make an effort to induce the finance committee to appropriate \$20,000 for parks this year. The park fund is limited by charter to \$20,000. The appropriation granted last year was \$15,000. The committeemen and Superintendent Bishop think they will be justified in demanding an increase of \$5,000 this year. The extra money the committee has planned to expend for a greenhouse, a barn and a residence for the superintendent. The estimated cost of the greenhouse is \$1,000.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafterers, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all. Send for price list and samples and we know you will give us an order.

LOGANSPOBT, IND.—Mrs. O. G. McCormick is about to enter business here as a retail florist.

CINCINNATI, O.—Charles Schweizer is going to build three commercial houses, each 16x80, corner of Carthage Pike and Forrest ave.

FAIRHOPE, O.—G. W. Brown has gone into business here as retail florist. He has built and stocked one house 18x45, which will be increased when occasion requires.

TIFFIN, O.—Lewis Ulrich will soon add five more new greenhouses, of which one will be 50x100, and the others 18x45, 18x17, 18x100, 20x100. The 50x100 house will be of the same style as that built by Mr. C. S. Swayne of Kennett Square, Pa., and recently illustrated in the FLORIST.

MARQUETTE, MICH.—The Marquette Floral Co. will this summer erect a carnation house 20x70, glazing with double thick glass, butted. Mr. York, the able manager, reports trade for roses here on the increase, also a slight demand for palms. The spring trade, though somewhat delayed by the recent severe frosts, promises well. The temperature during the recent cold snap fell 50 degrees in twenty-four hours.

Hints About Art in Gardening.

BY F. SCHUYLER MATHEWS.

PART I.

I think a good definition of Art is,—A thing of beauty which Nature suggests and gives man the brain to accomplish! This is a very simple way of putting it, but at the same time it must not be forgotten that the word "suggests" covers a great deal of ground; in short it is apparent, if the saying is true, that anything which is *not* suggested by Nature is *not* Art. What beauty man creates without the direct aid of Nature is a work of

THE RIGHT WAY TO OBTAIN COLOR HARMONY. DELPHINIUM, HOLLYHOCK, CANDYTUFT AND MARIGOLD.

Art; so, in this respect a beautiful garden may be a work of Art, but a big chrysanthemum cannot be. You can create a garden, but not a chrysanthemum. Now, where does Art come into the garden? That is the question which I shall try very simply to answer; the gardener must be the artist, of course, but it is frequently the case that the florist as well as the gardener in some out of doors work is struggling after a realization of those things of beauty which Nature suggests, and he finds that the planting and digging of the garden is only the beginning of attempts in the direction of artistic effect.

There are little plots of ground before some of our city houses, and larger plots surrounding nearly all the suburban ones; there are many houses with extensive lawns in front; there are others with terraced or irregular grounds; and there are not a few, whose surroundings are so

wild and free from law and order that one is quite in a quandary about which way they should be treated; in all of these we aim for a final effect which will be beautiful; in each case the gardener has no simple task if he attempts to make "a place" artistic; there are so few methods in fashion nowadays regarding the arrangement of private grounds, that so far as appearance is concerned, a photograph of the Hon. Gardiner Eastman's place might easily be mistaken for that of Colonel West, who lives four hundred miles away in another state. This ought not to be; there is a lack of originality and independence among us Americans when it comes to art of a simple nature; we should cultivate the element of variety more.

I know the gardener will say as soon as I suggest the use of certain annuals and perennials of a transient nature "We must use plants which are adapted to secure permanent effects!" Very true, I must answer, but then you know perfectly well that you are limiting your art; and furthermore you may not know what an unnecessary restriction you are putting on your artistic opportunity! you cannot advance in your art without freedom and liberality; your customers may be contented with your conservative principles just now, but when the man turns up who puts picturesqueness and novelty in his work, they will flock under his banner as though he were a leader in a great reform, and you may, as the boys say, "get left!" The day of the pelargonium and coleus is on the wane, the dawn of a new day of sweet peas, hollyhocks, sunflowers, cannas, ricinus and petunias is already at hand.

Now, I wish to make clear a fact which is not recognized by many gardeners; it is this. The garden is much more a thing of the air than of the earth; it should be built on perpendicular lines as well as horizontal ones; the flower bed should be taken as a natural part of the earth within garden limits and not exalted to a position of eye-attracting importance. A colored pattern exactly laid out by the aid of centaurea, coleus, ageratum, and

THE WRONG WAY TO OBTAIN COLOR HARMONY. GERANIUM, COLEUS, CENTAUREA, ETC.

alyssum, descends to the level of a curiosity; there is no art in it because Nature never suggests anything of the kind; her color arrangements are absolutely free from geometrical principle; there are, in fact, so few conditions under which mathematical accuracy can be tolerated

ROCHESTER, N. Y.—Governor Morton has signed the bill allowing the common council to appropriate the sum of \$40,000 annually for the maintenance and improvement of the parks of the city, and also to care for the small parks and shade trees.

FOR SPACE at the S. A. F. trade exhibit at the next convention address Mr. Geo. Oesterle, 4200 Forbes street, Pittsburg, Pa., who is superintendent of the exhibition.

BALTIMORE.—Mr. Lemuel Feast, a former well known florist of West Baltimore, died May 24.

SANDUSKY, O.—R. Borchard, formerly with E. Hall & Son, of Clyde, O., intends to start in business here.

in the arrangement of flower colors, if we consider the matter from an artistic point of view, that it is scarcely worth while to mention them; perhaps the only excusable condition is that of architectural detail which extends from house to garden in the style of an Italian villa.

The successful harmony of certain flower colors which are vivid to the verge of actual crudity is pretty generally affected by *atmospheric freedom*. The same colors crowded together in a mathematical flower bed would fight like cats and dogs. Your tall plants which bear flowers of powerful color stand the best chance of harmonizing with the garden because they have plenty of atmosphere to float in. The tall mid-summer lilies, gladioli, hollyhocks, sunflowers, cannas, dahlias, Hyacinthus candicans, climbing roses, Nicotiana affinis, and climbing nasturtiums seldom if ever strike a discordant note with the rest of the colors in the garden; there is no need to ask why, because it is evident there is so much space and air about them that it would be difficult for one to select a point of view from which two conflicting colors would appear to be in close fighting company.

As regards the simple principle governing the harmony of colors, I can explain that best by the accompanying "wheel"

COLOR WHEEL

Opposite colors are harmonious. Three consecutive colors are harmonious. Colors at right angles are discordant.

which shows in *opposite* positions of the circle the colors which harmonize by contrast; those which harmonize by similarity lie *side by side* in threes—for safety, we will say not more than three. Thus blue and orange harmonize by contrast, and violet, purple and magenta by similarity. You will find also, that the colors which are discordant lie at right angles with each other, and also about 115° apart.

White is a color which harmonizes with everything; it will separate conflicting hues and connect tints which otherwise would lack a certain agreeable relationship. I am inclined to think that white pæonies, petunias, phloxes, poppies, geraniums, candytuft, stock, asters, and cosmos are the peacemakers of the garden; but better than by making one color fit another through peaceful influence we should learn the art of producing harmony by filling the garden with variety of form and character. For instance, double white ranunculus poppies, scarlet pæony-flowered poppies, dahlias white and pale yellow, new dark purple cockscomb, *Lilium rubrum* and *L. auratum*, *Coreopsis Drummondii*, sunflower (*argyrophyllus*), *Nasturtium Lobbianum*, gladioli, *Phlox Drummondii* alba and carnea, *Nicotiana affinis*, campanulas, larkspurs,

and asters—these are so completely contrastive in every possible way that the wonder is, why they are not used more by professional gardeners. The perennial phloxes are coming into fashion again; these are so varied in color that they offer great opportunities for certain quiet color harmonies; it is to be hoped that they will in some measure displace the dark coleus.

Those flowers which, according to the discords which the color wheel points out, are likely to create a disturbing influence in the garden if planted together, are deep red and magenta tulips (still worse, the orange and purple magenta ones), golden yellow marigolds and red geraniums, purple and violet delphiniums and orange calendulas, ultramarine-blue campanulas and scarlet nasturtiums, magenta and crimson petunias with anything whatsoever scarlet, orange, and golden yellow, forget-me-nots with heliotrope or anything of a magenta hue, and lantana with all phloxes except white ones.

It should be remembered that true green, which is not at all like any foliage green, is of an emerald hue and resembles the paint of that name; it is therefore out of our consideration so far as color harmony in the garden is concerned. It is also proper for me to say that powerful and vivid color, no matter if it is juxtaposed in accordance with the principle of the wheel, is apt to be aggressively in-harmonious; the method by which we may avoid such unpleasantly raw color effects I will explain later. With such plants and shrubs as deutzia, spiraea, pyrus and *Diervilla japonica*, ricinus, canna, dicentra, and andromeda we have little to fear in the way of discord; even the peony is so well guarded by its luxuriant dark foliage that it is seldom an undesirable neighbor for other than scarlet flowers. The great advantage in the garden of variety in form I will explain in another issue.

Carnation Notes.

Many stocks of carnations are ruined in the field at this time of the year by improper pinching back. I have lost many plants in the past by leaving this work to men who were not competent, and the lesson has been so expensive that in spite of the tact that I have been caused many a backache I have for the last few years made it a point to attend to the first pinching myself. It seems a very simple matter to go into a field with a pair of shears and clip off the tops, but to do the clipping properly requires patience and time. My present method is to wait until the young plant has started into good vigorous growth, and until the side shoots have started, then clip out the top without cutting any of the leaves which are to remain. A first-class pair of tailor's shears is the best tool for this purpose, for the sharp points go down between the leaves better than a knife, and then if the shears are quite long the bending of the back is not quite as great, hence a more comfortable feeling when the work is finished, and to a naturally tired man this is quite an item. Do not think that when you begin this work you must clip

every plant. It is better to go over the patch every day or two and treat each plant as it needs; keep the plants stocky by first pinching low, and allow at first only four side shoots to start; this is the only secret in securing stocky plants. Keep the cultivator, whether it be hoe, rake or horse cultivator, at work steadily at the present time and never allow the surface of the soil to become baked; this is one more of the secrets in successful carnation cultivation.

I find lots of little black fleas around now and they are playing havoc with outside foliage. To get rid of them use tobacco dust, which is a good fertilizer; apply this early in the morning after a heavy dew. If you do not have tobacco dust just get fine dust out of the road, or most any sort of dust will do; it serves as a pungent and chokes the little pests.

Many growers are now throwing out their old plants; they say the flowers don't bring anything during June, but I have found that for some years back they bring fair prices during July, and so I shall keep my stock in as fine a condition as possible until it is time to fill the houses again. To those who are throwing out plants I would advise a thorough house cleaning. Go back to the days of our forefathers, and find what they used when cleaning house (dwelling house). The walls were given a good thick coat of whitewash, and so do now with your benches; make the mixture good and strong, and do not be afraid of getting a little on the ground; soak the boards well in every corner. Your benches will last longer and your plants will certainly grow stronger. Some use crude petroleum; don't. I believe it is bad stuff for benches, air-slacked lime should be spread thickly under the benches and dusted in to every crevice in the sides of the house; bugs, snails and insects or worms of all sorts have a great dislike for lime.

A dealer in New York remarked to me last week that carnations are not keeping well now, I told him the plants required much water now, and as all florists were very busy with outside work at present the plants were often neglected. Well, he said, we could use more good flowers, but if the grower neglects watering he must expect to lose on the sale of his bloom. There are several ways for the grower to view this matter; I would advise a little more attention, hence a better sale of our stock, and if during the warm months we can furnish good keeping flowers it will make the public fonder of the carnation. You see roses will not keep long at this time of the year, and if the carnation through a little extra attention can be made to keep it will have a greater sale. CHARLES H. ALLEN.

European Carnation Rust in America.

A writer in the AMERICAN FLORIST for May 25 gives an account of the ravages of a carnation rust in southern France, referring to it under the name *Heterosporium echinulatum*, "as they call it there." One is left to infer that the French simply give another name to the rust that has recently been so troublesome in America. The fact is that the true carnation rust of our greenhouses was first discovered in central Europe, and is known to us primarily through the writings of German botanists. We know it by the name they gave it, *Uromyces caryophyllinus*.

The disease referred to in France was described by English botanists, and is known in American by the same name as in Europe, *Heterosporium echinulatum*. This latter is, however, not often recog-

ERICA BOTHWELLIANA

nized here, but was reported by Professor Atkinson in the AMERICAN FLORIST for February 23, 1893, where it is illustrated by several figures. It is altogether different from the usual carnation rust.

Cambridge, Mass. A. B. SEYMOUR.

Asparagus Decumbens.

This vine, although much older than either *A. plumosus* or *A. tenuissimus*, is an unknown plant to the majority of our florists, but in reality is a most useful addition to our greens for cutting up, as the branchlets are very freely produced, and if the long wavy sprays are set in a vase in combination with loose flowers of any description it will produce a lighter and more airy effect than either of the above mentioned varieties. The leaflets are longer, but not so closely set along the stem as in the others, but the stems are very slender, the weight of the tips bending the branchlets over in a very graceful arching manner, and the slightest current of air will keep the delicate sprays in constant motion. There is no thick woody or hard stem to them, and no hook thorns on old plants; every particle of a string can be used without any waste at all. Unlike all others it will make a thick undergrowth from the bottom up, and the base of the plant is never bare and devoid of foliage. The persistent lasting quality of all the asparagus is too well known, and

I only can say that this variety is not excelled by any other. Not being such a rampant, tall grower as either *A. plumosus* or *A. tenuissimus*, it may be grown in a lower house with less head room, but if planted out in a bed it requires to be planted even further apart than either of the others on account of its propensity to send up a multitude of useful sprays from the bottom. Strings, strictly speaking, are not produced, as it is not a climber proper, but will grow up to a height of 8 to 10 feet, perhaps more, under good treatment, and instead of using string for supports it is best to provide the plants with slender cane sticks or wire, the separate branches can easily be gotten apart when cutting, for they do not entwine or entangle into each other, even if very thickly grown together, but as the shoots elongate an occasional tying up will keep them in an upright position.

We have grown a few plants for some years, part of these in pots up to 10-inch, and pot culture seems to give just as good results as if planted out in bench or bed, only they require more attention in repotting, feeding and watering, for they are gross feeders and want plenty of nourishment. When plants are in 8 or 10-inch pots we do not usually repot after cutting down a crop, as we may do with smaller plants, but instead topdress heavily after the young growth has fairly

started again and attained a height of 8 or 10 inches. In well drained solid beds this species may remain undisturbed for many years, and give a good crop of green year after year, stirring up the soil occasionally and topdressing once or twice in a season is all we do to them. Our most fastidious customers always prefer this green to any other, but unfortunately our supply is but small, and when out we can not buy it anywhere. The plant produces seed but sparingly, and with us very few of the seeds sown have come up, although we have sowed every seed that ripened on our plants. Perhaps if we had left two or three strong plants alone and let them seed on the taller and more robust part of the plant the seeds would have more strength and vitality, but as it is, the stronger growth was hitherto invariably removed even before being really ripe and fully developed.

J. B. KELLER.

Rochester, N. Y.

Erica Bothwelliana.

In propagating ericas of the ventricose varieties we take the young growth about one inch in length, remove the lower leaves, and dibble the cuttings into a pot half filled with broken potsherds, over which a little sphagnum is placed for drainage, the pot being then filled with fine sharp sand. After a thorough watering the pots should then be placed in a close frame from which the cover can be easily removed to wipe off the damp from the glass, which, if allowed to remain would be fatal to the cuttings. A temperature of 60° is about right to root them in. When the cuttings are rooted, more air and light should be given. They then can be potted into small pots, using a compost of peat to which about one-third sharp sand has been added. Care must be taken that the plants are not allowed to become dry nor given too much water, neither should the young plants be allowed to become pot-bound. During summer they can be plunged out of doors in a shady place, or in a frame which is covered with slats, to break the force of the sun. During winter they can be kept in a temperature of from 40° to 45°, fire heat not being agreeable to them.

JAMES DEAN.

Herbaceous Plants Notes.

Thalictrum aquilegifolium is a desirable plant for the border, the feathery inflorescence of a delicate pale lavender color is very pleasing to the eye, and remaining in bloom from May to July. This plant is not often met with in desirable colors, usually dull purple prevailing, but in the above we have, in addition to the neat habit of the plant and the adiantum like foliage a beautiful color and freely produced flowers. It grows to a height of 1 to 2 feet and no collection should be without a few plants.

Saponaria ocymoides is now in full bloom, and I do not know anything in the line of a hardy trailer that covers the ground over so densely with green and is ornamented with pretty small flowers for such a length of time, lasting from May to September. It will do equally well on the rockery or the border, but should have the full benefit of the sun. The flowers are small bright pink, produced in short bundled panicles, closely covering the foliage, which is small and broadly lanceolate on trailing procumbent branches. Grows to a height of 6 to 8 inches.

Polemonium reptans is almost past now, but as it is one of our earlier border plants and very free flowering we should

not neglect it. The drooping flower heads are of a light blue, a shade lighter than in the taller *P. cœruleum*. Planting them in partial shade will extend the blooming time for 2 or even 3 weeks, so that we may enjoy it from April to the beginning of June. It rarely grows higher than 6 inches.

Lupinus polyphyllus in large clumps is a showy perennial and always admired; the flowers are produced on terminal erect racemes or spikes, which bear a great number of dark blue pea-shaped flowers, well worth a place in the border. Growing, when old and well established to a height of about 4 feet, it should be planted toward the back of the bed. *L. p. albus* is a pure white variety of it, and desirable in every respect. They bloom in spring and autumn.

Æthionema grandiflorum is a comparatively new plant of dwarf and a somewhat shrubby habit, forming a very compact neat little evergreen bush. Of all the *æthionemas* this is undoubtedly the best one, and is certain to become a general favorite when better known. The plants begin to bloom in May and will continue in flower all summer. The color is a warm shade of rose, and the racemes are crowded with flowers. It is extremely floriferous, and should be planted in an open situation, where it can enjoy the full benefit of the sun; it is also a good thing for the rockery or for a dry border. The leaves are broadly linear, an inch long, somewhat glaucous in color, and remain on in winter. Height about 1 foot and extremely hardy.

Lotus corniculatus, the birdsfoot trefoil, a very dwarf procumbent plant suitable for edging and for planting in crevices of the rockery, where it will creep and spread close over the stones, is beginning to seed up its long peduncles of bright yellow flowers, 5 to 10 on each peduncle; when tading the pea-shaped flowers will assume an orange color, and the effect of having varied colored blooms on the same plant is striking. The leaflets are small and of a bluish green. This is a very handsome dwarf perennial, blooming in summer and autumn.

Dictamnus fraxinella is now coming out with its long many-flowered terminal racemes, which will continue to bloom for six weeks, and are very useful as cut flowers, lasting well after being cut. The whole bush, stem and leaves emits a pleasing lemon odor, and has bold glossy pinnate foliage with 5 or 6 pairs of leaflets, hard and leathery in texture. An old favorite, flowers are either rosy or white according to variety. Both flowers and plant are bold and showy, and should be planted in a rather dry and sunny place, height 12 to 18 inches.

Viola cornuta is a little gem from now on until fall, both the white and the pale blue variety. The shape of the flowers is something between a violet and a pansy, considerably larger than the first and smaller than the last named; the foliage resembles the latter but is not so coarse. Unlike the pansies this plant will stand well in the midsummer sun, but in such an exposed position should have plenty of moisture applied to the roots. They need not be replanted every year, and will do 3 or 4 years without disturbing or dividing. It is very strange that these plants are not used more in this country for bedding out, in Europe they are used very extensively and with the best results. It is certain that many plants, which will give satisfaction bedded out in the mild and moist atmosphere of Europe, are of no use to our drying and hot surroundings, but this *viola* is an exception, and has

been tried for years. However in the very hottest weather they are benefited by being protected from the scorching sun at midday, and if such a place can be found on the east side of a building or hedge, the flowers will be of larger size and more perfect.

J. B. KELLER.
Rochester, N. Y.

OBITUARY.

GUS. MESSEBERG.

Once again the Flatbush florists have been called upon to pay their last tribute to the memories of a beloved brother and loyal friend. Gus. Messeberg was all that and more to those who were favored with his fellowship. As a plantsman he stood

THE LATE GUS MESSEBERG.

in the first rank, and a generous welcome always awaited any of the fraternity who crossed his threshold.

Mr. Messeberg came to this country from Magdeburg, Prussia, about forty-two years ago, already a trained plantsman, and after several years passed as a private gardener in Brooklyn went into business first on Myrtle avenue and afterwards at Flatbush, where he has been located some thirty years. The disease which caused his death has been of long duration and during the last months preceding his decease he has suffered intensely.

Mr. Messeberg, when gardener for Mr. Barnes, at Brooklyn, cultivated successfully the *Victoria regia* and is said to have been the first to bloom it in this country. The bronze and tricolor leaved geraniums owed much of their popularity at the time of their introduction to Mr. Messeberg's skillful culture. His age was 63 years, and he leaves a widow, one son and one daughter.

The funeral was attended by a very large number of the local craft and the floral designs were numerous and elaborate.

New York.

A large quantity of stock is coming in, but the quality is to a large extent inferior. The general demand was very light for Decoration Day, but little increase over an ordinary day. No special run

on anything, and no advance in prices. Steamer trade is light compared with previous seasons.

One of the handsomest funeral designs sent out recently was a Rock of Ages made at Geo. M. Stump's Fifth avenue store. The cross, which was nearly eight feet high, was composed of lily of the valley, white sweet peas and Bride roses, the base heavily fringed with maidenhair fern. Across the arm was thrown a heavy garland of *Cattleya Mossiæ* sprayed with Farleyense. This garland was fastened three-quarters of the length down on the cross, and long loops left hanging, which were caught up with broad mauve ribbon, and a narrower ribbon of same color looped in through the orchids. The design was the work of Mr. Owen McDonald, one of Mr. Stump's artists.

Another notable piece of work from this establishment was a table decoration at the Metropolitan Club. The table, which was forty-four feet long and fifteen feet wide, was arranged as a miniature reproduction of Central Park. Geraniums, lilacs and roses represented the trees, and among them wound gravel paths and roads; ravines, hillocks, rocks and lawns were represented in green and dotted with the regulation signs "keep off the grass," "to the menagerie, etc.," while a further appearance of life was added by little park policemen, carriages and horses, nursemaids and baby carriages, and tiny electric lights on miniature posts. Mr. Wm. Lee was the artist on this occasion.

Dan Creedon, who has been foreman for Alex Burns at his Woodside greenhouses, has bought a tract of land from Mr. Burns, and will erect thereon 300 to 400 running feet of greenhouses, and go into business.

Boston.

The superfluous stock of roses and carnations which so badly demoralized the market early in the month is no longer in evidence. Receipts and demand have been fairly well balanced, and stock of good quality has brought reasonable figures. The Memorial Day rush is now on, and prices for the moment are inflated as usual, but the supply of outdoor bloom is up to the average, and that is the main requirement for Memorial Day. There is quite a stock of *Harrisii* lilies and hydrangeas available, which work admirably. Outdoor lily of the valley will barely hold out, and lilacs are past their best.

At the weekly exhibition in Horticultural Hall on May 25 a new seedling canna named Florence E. Barker was shown for the first time by Thos. H. Westwood, and was awarded a first-class certificate of merit by the Mass. Horticultural Society. So far as can be judged by one pot grown plant, this canna is decidedly the best self yellow yet raised. The petals are broad and of great substance, color pure deep yellow with no perceptible trace of red marking. James Comley made his customary attractive display of showy bloom, and from John L. Gardner came an attractive group of *Cattleya Mossiæ* and *Lælia purpurata*, also cut blooms of *pæonies* and irises. E. Sheppard's *pelargoniums* were very fine. An extensive array of wild flowers, all named, was shown by several enthusiastic collectors.

A small delegation of the craft made a visit to the Arnold Arboretum to see the lilacs in bloom on invitation of Jackson Dawson. The display is a treat worth going a long distance to see. There are no less than one hundred and fifty species and garden varieties, single and double flowered, and under the magic influence of

BASKET OF ROSES AND CARNATIONS.

Mr. Dawson's entertaining discourse note books were soon in hand and every member of the party taking notes of the varieties most admired, and it is safe to say that on every list might be found Mme. Jules Finger, Pres. Massart, Mons. Alphonse Lavellee, Virginité, Ludwig Spæth, Tour d'Auvergne, Amethyst, Ranuncule, Rubra Trianoniana, Furst Lichtenstein, Marie Legraye and Emilie Liebig. The honeysuckles were found to be only second in interest and beauty to the lilacs. Mr. Dawson called attention to some thousands of young azaleas of the indica race raised from seed collected by Prof. Sargent in Japan, which had come through the winter in good condition without protection, while many of the reputed hardy rhododendrons in their neighborhood were badly injured. Although not regarded as proof conclusive, this circumstance gives good grounds for the hope that a type of hardy Azalea indica has at last been secured. Among other interesting things noted were some new maples from Japan which are being tested as to their hardiness. The late frosts have done considerable injury to magnolias and other susceptible shrubs in exposed places. A visit was also made to the conservatory of Prof. C. S. Sargent at Brookline, where one of the finest displays imaginable of Indian azaleas was inspected, and unstinted praise was given the grower, Mr. Chas. Sander, who had shown so much skill in training and taste in arranging this splendid collection.

The annual rhododendron show of the Mass. Horticultural Society will be held on Thursday and Friday, June 6 and 7, opening at noon on Thursday.

Mr. Wm. Dawkins, for twenty-one years foreman at the Arnold Arboretum under Mr. Dawson, has resigned his position, and will sail for England on June 20.

Basket of Roses and Carnations.

The accompanying engraving is from a photograph of an arrangement by Mr. Chas. J. Thiess, with the Park Floral Co., Denver, Col.

The flowers used were American Beauty and Perle roses and McGowan carnations, with ribbon to match the Beauties.

Chicago.

The firm of E. Wienhoeber & Co., consisting of E. Wienhoeber and E. Buettner, has been dissolved, to take effect June 1. Mr. Wienhoeber takes the Elm street place and Mr. Buettner the Park Ridge establishment. The connection between the two places will be much the same as before but under separate ownership and each establishment will be conducted as a separate business. Mr. Wienhoeber has lately renewed his lease of the Elm street property, the new lease to run 20 years, and will soon rebuild the entire establishment.

Officers of the South Park Board have been appointed for the ensuing year as follows: President, Joseph Donners-

berger; auditor, William Best; treasurer, John R. Walsh; secretary, E. G. Shumway. The \$80,000 due from wrecking companies for the world's fair buildings has been received, and it will be expended in park and boulevard improvements.

The site of the Art Institute on the Lake Front has been very materially improved by a broad expanse of lawn in front and extending some distance on each side. This is the building in which the World's Fair chrysanthemum show was held.

At the annual meeting of the Lincoln Park Board Andrew Crawford was re-elected president. The other officers elected are: Vice-President, John S. Cooper; Auditor, Bernard F. Weber; Treasurer, Robert M. Orr; Secretary, George W. Weber.

Notice has been issued by Assignee J. A. Merrifield that by virtue of an order of the County Court sealed bids will be received up to June 28 for the property and effects of J. T. Anthony. The property consists of "greenhouses, situated at 3425 Prairie avenue, Chicago, Ill., and the entire floral and horticultural stock herein contained, all tools and implements used in the business; including horses, wagons, etc."

Decoration Day left little to be desired, as far as shipping trade was concerned; it was really very good. Monday, Tuesday and Wednesday there was such a shortage of stock that most of the commission men had to refuse orders, or could only partly fill them. The scarcity was most marked in white flowers, white carnations being short everywhere. This helped the sale of gardenias—in fact in many cases orders for white carnations had to be filled with gardenias. Select carnations went up to \$3, and could not be supplied in sufficiency even at that figure. Thursday, when too late, more came in, but few whites even then. It is complained that as usual many growers held their stock back, which, at such a time was suicidal, for it was all needed for the shipping demand, and naturally did not keep well. Nor could it be sold on Thursday; the wholesalers declared that day was like a Sunday, and Friday was equally dull. For the holiday, good roses went up to 6; Friday the best were down to 4; Beauties, Decoration Day price 25, day after 12 to 15. Pæonies were not plentiful for the holiday; the first whites in quantity to be listed, came in the beginning of the week, and a lot of old red sold well, but they are scarce, like all outside stuff. Good lilac came in from Racine, but all shrubs were scarce.

Though all dealers report a great increase in shipping trade, we cannot from this argue any increase in general trade. The brisk outside demand was due to the fact that all sorts of outdoor stuff, usually depended on by out of town florists, was cut down by the recent frosts. In the city trade seems to have been slow, though there may be an increase in the plant business. Stock was generally of good condition. Sweet peas went up to 75 cents and \$1, and are still in good sale. But Friday the quantity of stock greatly increased, and the demand dropped off, with a corresponding drop in prices. Warm weather, with hot drying winds, will soon affect both quality and demand.

Mr. W. N. Rudd is very much improved and on last Thursday was able to pay a brief visit to his office.

It is reported that Alderman Madden's plan for the improvement of the lake front park will be put into execution, and that work will begin next week. Eighty-five acres of lake bottom are to be filled in,

giving to the park a total of 120 acres. The filling will cost nothing, as the contractors working on the drainage channel will be only too glad to dump at the place indicated the soil they are excavating, and which they are now obliged to dump far out in the lake. The Illinois Central tracks will be sunk 6 feet and will be crossed by bridges.

Philadelphia.

The bedding plant men have had a busy time of it the past week, although even at this date (29th) it is hardly considered safe to set out coleus, crotons and other tender plants. Messrs. Alburger and John Westcott & Bro., opposite South Laurel Hill Cemetery, have been very busy. Everybody expects their lots to be fixed up by Decoration Day, vases and hanging baskets placed weather or no weather. The recent cold spell kept this work back considerably, but a little hustling got everything through on time and the houses now present a forlorn appearance that is quite satisfactory.

The wire hanging basket seems to be a fixture in Phila. cemeteries, it has usually been suspended from a large iron hook. These rather unsightly supports have given way to a neat iron stand, into the top of which the basket is set. Mr. Westcott has invented a cheap form of this stand made as follows: Into a piece of $\frac{1}{2}$ to $\frac{3}{4}$ -inch gas pipe about 3 feet long an iron rod is placed about one foot longer than the pipe and large enough to fit snug. About an inch of the rod projects above the pipe and fitted across this at right angles are two pieces of iron $\frac{1}{8}$ -inch thick, $1\frac{1}{2}$ inches wide and about 18 inches long, the four ends of these are turned up to form the basket or holder. Exactly the same is attached to the lower end of the gas pipe and this with the iron rod, which is pointed and projects one foot below the bottom cross pieces, makes a very strong support, and when stuck into the ground is quite stationary. Mr. Westcott says they give great satisfaction, as after being galvanized they are as one piece and indestructible.

Decoration Day found all the boys busy; there was the usual amount of immortelle work for the Grand Army posts, the largest designs being placed in the store windows of the firms, giving them a day or two on exhibition. Some of them were really fine and reflect great credit on the designers. There was quite a demand for all kinds of flowers. Mr. Harris had a fine lot of red peonies, which went like hot cakes for \$1 per dozen. Charlie Meehan brought in wagon loads of snowball and other outside stock, crowding his nice new wagon as it had never been before. By the way, the hustler that can't sport at least one wagon won't be in it next fall. The route is lengthening each season, and the whole ground must be covered if one wants to sell out clean. This is the opinion of one who ought to know.

The quality of the roses offered has fallen considerably the past week; all the teas are more or less affected with mildew, and some, notably Brides and Mer-mets, show it very badly. Meteors and La France are now about the best and Kaiserin is beginning to be in demand. Good Beauties are scarce; the Belle stands the spring weather well and has a brighter and fresher appearance than the Beauty. The prices of roses are about the same as last week, although large lots are sold very low.

Carnations seem to sell fairly well at from 75 cents to 1.50. Sweet peas are

SOCIETY OF AMERICAN FLORISTS.

JOHN THORPE, *President*,
Queens, N. Y.

M. A. HUNT, *Treasurer*,
Wright's Grove, Chicago, Ill.

E. G. HILL, *Secretary*,
Richmond, Ind.

Dear _____

We beg to enclose you preliminary proceedings of our Society, feeling assured that the interest of the same will be encouraged by your countenance and assistance. A schedule with the objects of the Society tersely set forth is now in preparation. In the mean time we want you to interest yourself in the matter so far as to offer suggestions, canvass for members and agitate the matter among the trade in your immediate vicinity.

The Annual Fee is \$2.00, entitling members to all the privileges of the Society.

But at the meeting there was such an expression in favor of at once establishing a fund for the necessary incidental expenses attending a venture of such magnitude and importance, that every member present voluntarily handed over \$5.00 for such purpose, and if you are desirous of further helping the incidental fund, and will do so by remitting \$5.00 before the first of August we shall be pleased to insert your name in our prospectus which will appear on September 1st.

JOHN THORPE,
M. A. HUNT,
E. G. HILL.

All correspondence to be addressed to the Secretary, E. G. HILL, Richmond, Indiana.

Richmond, Ind., June 23, 1884.

also in demand, good stock readily bringing 50 cents per hundred. Cornflower is to be seen and sells for 1.50 per hundred.

The next meeting of the Florists' Club is to be held in Caledonian Hall, 13th and Spring Garden; this will suit all the Scotch members, and as they are hard to please anyhow all the other members will be on hand to join in their satisfaction and hear what Brother Westcott has to say about a profitable crop for summer. If there is any one thing more than another that most of the boys want to find out, it is how to make money in the summer time. K.

Early History of the S. A. F.

At the last convention of the Society of American Florists attention was called by Mr. Jordan to the lack of data regarding the preliminary work in organizing the society. We have undertaken to gather together the facts that they may be on record.

We find that the first steps taken were by Messrs. John Thorpe and E. G. Hill at the annual convention of the American

Association of Nurserymen, Florists and Seedsmen (now the American Association of Nurserymen), held in Cleveland, O., in June, 1883. They canvassed the matter quietly among the florists present, but the number was small and it was deemed unwise to push the project until the following year.

The next convention of the old association was held in Chicago in June, 1884, and the two gentlemen named went to that meeting for the purpose of making the initial move toward the formation of a separate organization to be composed entirely of florists and to devote its attention entirely to matters of interest to them. In the old society the nurserymen were in the majority and subjects of interest to the florists received but meagre time and attention. The matter was canvassed quietly for fear of opposition from some of the nurserymen, who had heard of the project and who feared that it would injure the old society.

At the close of one of the sessions word was quietly passed around for those interested to meet in one of the parlors of the Sherman House that evening. About

ICE BOX IN THE STORE OF MR. GEO. STUMPP, NEW YORK.

28 or 30 were present. We have been unable to secure a list of those present, but the number included Messrs. Thorpe and Hill and M. A. Hunt, J. M. Jordan, F. R. Pierson, J. D. Carmody, Robert George, Peter Henderson, W. G. Newitt, J. C. Vaughan.

Mr. Pierson suggested the name "Society of American Florists," which was adopted. Mr. Peter Henderson was first nominated for president, but declined to allow his name to be used, giving as the reason that he could not afford to have his name associated with an undertaking which he knew was bound to be a failure. He was willing, however, that his name be used as one of the promoters. John Thorpe was then elected president, E. G. Hill, secretary, and M. A. Hunt, treasurer, and an executive committee appointed to arrange for a regular convention at Cincinnati, in August, 1885. There was some little discussion of plans to provide insurance against loss by hail, and this was a strong plank in the platform of the young society.

A committee consisting of Messrs. Thorpe, Hill and Hunt was appointed to prepare an address to the florists of the country, inviting them to join the new society. We present herewith a photograph reproduction of this document. The annual fee was fixed at \$2.

Toronto.

Although the weather has been fine during this last week there has been a chill in the air, and the plant trade con-

tinues rather dull and has not yet recovered from the check it received from the recent severe frosts. There was a big display at the market on Saturday, but the demand was not very brisk.

As Lady Aberdeen will be in town this week presiding over the Women's National Convention, and various receptions and other functions will take place, there will probably be a little boom in the cut flower trade; which it is needless to say will be very acceptable at this time. Roses are very plentiful and very good just now, the best selling retail at from \$1.50 to \$2 per dozen.

The Gardeners' and Florists' Association meeting on Tuesday last was especially well attended considering the time of year. Four new members were elected. It seems, however, that several of the members are bound to create strife if it is possible to do so, and the latter part of the meeting was anything but harmonious. I am not going to air the Association's dirty linen before the readers of the *FLORIST* by giving full details and names, but I think that when members come down to the meetings loaded up to the muzzle and brimming over with strife and contentiousness for the only purpose of firing it off and making a point against some imagined opponent it is time for someone to speak out. No one would object to friendly criticism on horticultural matters or on the working of the Association, but it is the continual bringing of little petty personal matters (which in themselves don't amount to a row of pins) into the broad arena of horticult-

ural discussion which tends to keep up the ill feeling that it was one of the very objects in forming the Association to allay. We are none of us angels, and all have our little peculiarities (to call them by a mild name), but it is the duty of every member, and more especially of the officers, to try and reconcile these peculiarities, so that harmonious action may be the result. Sometimes no doubt it may be hard for the minority to be obliged to give in, but until some better way of carrying on business has been found I am afraid the majority will have to rule. It is possible that I am wronging these contentious ones, and that they may have some new and improved methods for the advancement of horticulture and the running of gardeners' and florists' clubs, if so I am sure the columns of the horticultural press will be open to them for the explanation of such worthy objects. An essay entitled "How to produce harmony and united action by promoting strife" would be in order. But to speak seriously—to those who have the interests of the Association and the profession generally at heart this strife-making appears to be simply deplorable. Isn't it possible for our profession to live in peace and harmony together? or if there must be strife why can't it be over something worth striving about? viz.: methods of propagation or cultivation, methods of destroying harmful insects or fungi, and a thousand other such subjects, the discussion of which would be to the advantage of not only ourselves but to the community at large.

A. H. EWING.

IDYLS OF THE POTTING SHED

An Error in Calculation.

Our friend Jaggs has viewed the world from more potting sheds than any other man in the trade, and what he doesn't know about running a place isn't worth knowing. So he says. But sometimes he makes an error, and this was the case when he undertook to oppose the sovereign will of Mrs. Grafts.

Jaggs has a habit of turning up when a place is short-handed; he knows his business, and by the time he has worked for about two days the boss begins to congratulate himself on his good fortune in getting such a valuable man, and by the end of the week nothing is too good for him. Then Jaggs gets an advance on his salary, and disappears. When he turns up again, extremely the worse for wear, he magnanimously offers to work out another advance, for the purpose of getting out of town. He has a very insinuating tongue, has Jaggs, and as a usual thing he gets the advance without much trouble, and joyously sallies forth to try fresh fields and pastures new. There was one place where Jaggs worked faithfully all winter, and although there were occasions when he gave evidence of having indulged in refreshments that Miss Willard could not conscientiously indorse, still his general conduct was exemplary, and his employer could hardly believe the evidence of his own senses when he found that Jaggs had suddenly departed without saying goodbye, having previously collected several small accounts, and taken the collections along as souvenirs. He was still more surprised the following spring, when Jaggs placidly loomed up and asked for a job again. This was too much even for a long suffering florist, and the ex-employer made remarks. Jaggs listened calmly, and then remarked, confidentially, "Well, if you won't give me a job, d'ye think you'd have the cheek to lend me half a dollar?" He got it, and continued the line of march.

Jaggs was not altogether exemplary while he worked for Mr. Grafts; he had several relapses, but the place was short handed, and he staid there in spite of moral slips. Mrs. Grafts didn't like him, and didn't want him around the place, but she was a very meek little woman, and her animosity didn't worry Jaggs a bit. One day, however, Jaggs returned in a very shaky condition; in fact, though it was his day on at the fires he wouldn't go down into the stoke-hole, on account of the extraordinary collection of zoological curiosities and art posters he saw in the coal bin. He recovered a little, after Dutch Otto had obligingly held him under the hydrant for a while, and immediately

hunted up Mr. Grafts, with the view of negotiating a loan. Mr. Grafts was about to put his hand in his pocket, when little Mrs. Grafts appeared. She had a very set expression, which Mr. Grafts appeared to recognize, for when she remarked, in a voice that lowered the temperature of the rose house at least nine degrees, "Mr. Grafts, there's a man in the office who wants to pay a bill," he started off without a word. Then Mrs. Grafts began to tell Jaggs a few home truths. He said afterwards: "It wouldn't ha' been so bad if she'd give me a chance to get in a word edgeways, but blessed if she didn't go on, without no commers, and as for a full stop she never come near one; she keep right on, never raisin' her voice nor nothink, and lookin' at me like she think sow-bugs and cut worms was aristocrats compared with me. She was that exasperatin' I don't know what I might ha' said, but just as she seem gettin' near the end she sort o' beckoned to someone behind me, and there was a bloomin' bobby, the police sergeant from across the street just come in for his button hole bokay, and she say, very dignified, 'Sergeant, oblige me by telling this man, mildly, but firmly, to leave at once,' and the bobby, he say, 'Yes ma'am. Be out o' this, ye thafe o' the worruld, or the head o' yez will be bruk.' So I has to go, and I don't expect to stop at Grafts's joint next time I go west. It shows there aint no dependin' on women; the missis there looked as mild as skim milk, and was so small she had to stand on a sheet o' paper to look over sixpence, and yet she reg'larly run me off the bloomin' place. Not that I'd ha' staid there any longer, not for a million a minute and toasted angels three meals a day," and Jaggs buried his indignant countenance behind a large tin can, while he silently absorbed its contents.

The Judge Says.

The unauthorized act of an agent, when ratified by his principal, is as binding as though the act had been within the scope of the agent's authority, and the principal, by accepting the benefits of an unauthorized act of his agent, may thereby ratify the act; but in order for the act of the principal, in accepting the fruits of a transaction conducted by his agent, to work a ratification of the agent's act, the principal must have accepted the avails of the transaction with knowledge of all the material facts.

How highway changes cannot be legally made.—Changes in highways cannot be legally made, the supreme court of Idaho holds (Gross v. McNutt, 38 Pac. Rep. 935) by merely changing lines of fence, though the new road may be shorter and better than the one fenced up, and especially is this true when the public or proper authorities do not consent to such change.

Liability for putting dangerous animals in public thoroughfares.—A person has no right to put a dangerous animal in a place that he knows the public are in the habit of traveling, as in a lane used by people as a thoroughfare, and if he does it, the supreme court of New York holds (Mahoney v. Dwyer, 32 N. Y. S. 346) he will be liable for any personal injuries which it inflicts.

Right of landowner to keep off surface water.—The general rule is, says the appellate court of Indiana (Lake E. & W. R. Co. v. Hilfiker, 40 N. E. Rep. 80) that upon the boundaries of his own land, not interfering with any natural or long-acquiesced-in water course, the owner

may erect such barriers as he may deem necessary to keep off surface water.

Building and loan association contract unconscionable.—An agreement whereby the stock of a borrowing member of a building and loan association, pledged as collateral security for his loan, is to be forfeited upon default of interest, without allowing credit on account of payments previously made on such stock, the supreme court of Nebraska holds (Randall v. National B. L. & P. Union, 62 N. W. Rep. 252) is unconscionable, and will not be enforced by the courts of that state, although recognized as valid in the association's own state.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—As grower or assistant: 19 years' experience; practical general man. References. Address 56 Tyler St., Boston, Mass.

SITUATION WANTED—As grower and florist in commercial place; 10 years' experience; unmarried. Good references. Address FLORIST, 56 Tyler St., Boston, Mass.

SITUATION WANTED—As manager small place. Experienced in all branches of work; can bring 50 finest chrysanthemums. Address CAPABLE, care American Florist.

SITUATION WANTED—By practical grower, commercial or private; 10 years' experience; general propagator; not afraid of work. Good references. PRIVATE, care American Florist.

SITUATION WANTED—By florist in commercial place; thoroughly understands the growing of roses, carnations, violets, and all kinds of florists' stock. Address MACK, care American Florist.

SITUATION WANTED—As foreman by a first-class rose and cut flower grower; good propagator and general plantsman; best of references; good wages expected. METEOR, care American Florist.

SITUATION WANTED—By florist and salesman in retail store, well experienced in all branches of trade; a total abstainer, good character; first-class references. SALESMAN, care American Florist.

SITUATION WANTED—By a florist with 10 years' experience in growing plants and cut flowers; 26 years old. First-class references. Address FLORIST, care O. A. Jerks, 6 N. Washington St., Rochester, N. Y.

SITUATION WANTED—Six years in one commercial greenhouse, and 3 years as foreman over garden, lawn and greenhouse in large reform school. Wife and one child. Address H. E., care American Florist, Chicago.

SITUATION WANTED—By a young man of good business ability as manager of a commercial place. Thoroughly competent in all branches. Can furnish the best of references from former employers. Address R. L. D., care American Florist.

WANTED—1,000 or 2,000 plants of Perle Roses 2 or 2½ inch, strong. R. R., care Am. Florist.

WANTED—A quick, reliable young man for the mail plant business in the west. R. R., care American Florist.

News Notes.

VICTORIA, MO.—F. L. Doubrava, formerly of Judsonia, Ark., has engaged in the nursery business here.

SAN FRANCISCO.—William F. Dreer and wife, who are making a two months' visit in Japan, are expected here June 1.

PEORIA, ILL.—The improvement of Glen Oak Park is being rapidly pushed forward by the authorities and with gratifying results.

BUZZARD'S BAY, MASS.—Joe Jefferson is having a lily pond 40 feet in diameter made in his lawn and will stock it with some 15 varieties.

PONTIAC, ILL.—W. J. Miller is preparing to build two more houses, to be devoted to carnations. The additions will be 18x37 and 14x60.

MADISON, WIS.—At the coming state fair \$60 in special prizes are offered in the horticultural department for first exhibits made by boys or girls.

KNOXVILLE, TENN.—An exhibition of strawberries was a feature of the recent farmers' convention in this city, and a very excellent display was made.

LAKE GENEVA, WIS.—The losses by the recent hailstorm were as follows: Hammersley 759 lights of glass, Geo. Trowbridge 156, Geo. Gill 140, Button Bros. 130. Some of the hail stones measured 6 inches in circumference.

AMESBURY, MASS.—J. Henry Hill, well known as a fruit and flower cultivator and a member of the State Board of Agriculture for six years, died on May 21.

OGDEN, UTAH.—The John Chipp's greenhouses have been transferred under a mortgage and the stock is being closed out at reduced rates. Mr. Chipp is said to have removed to Rock Springs, Wyo.

BATAVIA, ILL.—The Central railroad has decided to build greenhouses here from which plants will be furnished for decorating the grounds around the depots on the line of the road.

OMAHA, NEB.—The Park Board has elected officers for the ensuing year as follows: A. P. Tukey, Pres., Judge Lake, Vice-Pres.; F. B. Lowe, Sec'y.; W. R. Adams, superintendent. The superintendent's salary was fixed at \$150 a month.

JANESVILLE, WIS.—The Janesville Floral Co. succeed to the florist business of Walter Helms. The new firm is composed of George and Fred Rentschler, formerly of St. Louis. They are adding some new houses to the range of glass at 214 S. Main St. Mr. Helms will remain in the seed business.

CARTHAGE, MO.—L. E. Archias & Bro. have discontinued their branch at Fayetteville, Ark. concentrating all their business at this point. Mrs. E. R. Wheeler, Garrison avenue, has added a new steam heated greenhouse to her establishment. Crops here are in fine condition, though more rain is needed.

SAVANNAH, GA.—A car load of flowers and greenery was shipped from this city to Chicago May 23 to be used in that city on Decoration Day for the decoration of the monument to the Confederate dead. The car contained 24 palmetto trees, 100 young pine trees, 1000 laurel wreaths and a lot of moss and wild smilax. Later 1000 magnolia buds were sent by express.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

The Season in Boston.

The seed trade was fully three weeks late in starting this season, but when it did come it came altogether with a rush, and has now pretty well caught up with last year's average, and last year was a phenomenal year for the seedsmen, for with the exception of one week in the middle of April, when a heavy snow storm put a temporary end to seed buying, the weather could not have been better. The general report is that the month of May is going quite a little ahead of its record, especially in counter trade. There is less evidence of financial depression as compared with last season, and there are many indications of a better feeling among buyers. Customers are buying more liberally, and show less disposition to question prices. This is manifested most clearly in the trade which comes after May 10th, which is mainly the fancy flower seed trade.

Some dealers are showing a disposition to push the local mail trade. There is really no good reason why the Boston seed houses should not supply the bulk of the New England trade. It is useless for them to look outside of New England for business, for they cannot get it, but the New England trade they can have if they only go about it in an enterprising manner. Those pushing the florist trade also report it as quite satisfactory all around. This too, is limited mainly to New England territory. The only noticeable falling off in demand is in the case of Bermuda lily bulbs, which show quite a decrease from last year's sales. Quite a call has been noted for garden and farm seeds needed to replace those injured by the severe frosts in May, corn, beans, cucumbers, etc. having been cut completely down in many low lying sections.

There seems to be a marked improvement in taste among the common people, as shown in the increased demand for the better class of annuals. Sweet peas in all the improved varieties have had a tremendous run, and the same is true of nasturtiums. No two things have ever had the run that sweet peas and nasturtiums have had this year, and no two things are more generally satisfactory to amateurs. Larkspurs, cosmos, also white Victoria and Comet asters have sold unexpectedly well, and asters of all sorts are in short supply. As to novelties, either there are not so many available or the introducers are becoming more conservative. This is commendable, for undoubtedly a more cautious policy on the part of the catalogue people will greatly benefit the trade. There is no question that the wide spread prejudice against novelties is the legitimate result of unwise laudation of unworthy things. There is money in novelties of general merit, and a good thing put upon the market with truthful representation will soon sell itself. A big demand has been experienced in cannas, now that the fine varieties can be had at popular prices. Dahlias and tuberous begonias are also reported as selling unexpectedly well.

With those firms making a specialty of the tool and sundry trade business in this line has been very satisfactory. Evidence that money is circulated more freely is also seen in this department, as hammocks, garden hose and lawn mowers, tools which are to some extent luxuries

and which people can get along without when times are hard, have met with a brisk sale. Seedsmen with whom the tool business is a minor department assert that the competition of the country stores is becoming serious. In every country town of any pretensions now-a-days some one carries a good stock of agricultural implements, and retail buyers are no longer obliged to send to Boston for these goods.

Postal Rates on Seeds and Plants to Canada.

Replying to A. B., would say that the postage rate on plants and seeds to Canada is one cent per ounce. The special rule covering this matter is to be found upon page 960 of the Postal Guide for 1895, and reads:

"Note 2. Canada, articles of every kind or nature, which are admitted to the domestic mails of either country are admitted at the same postage rate and under the same conditions to the mails exchanged between the two countries; excepting that plants, seeds, etc., are subject to the postage rate of one cent an ounce."

S. Y. HAINES expects to make a trip to to Europe.

COLORADO and Dakota are now producing canary seed quite extensively.

MR. JOHN SPEELMAN, of C. J. Speelman & Co., sailed from New York on the Etruria for Holland May 25.

F. N. LANG, formerly in the seed business in Baraboo, Wis., is in Chicago on a visit from Washington. He contemplates attending the seedsmen's convention in Detroit.

JUDGE WILLIS and a jury are hearing the suit of Vilmorin, Andrieux & Co., a firm of seed dealers in Paris, France, against L. L. May & Co. The suit is for \$1,646, alleged to be due on account of goods sold. The defence is that the plaintiffs failed to carry out certain contracts with the defendants, and damaged them into the sum of \$5,000 thereby.—*St. Paul Globe*, May 25.

Worcester, Mass.

The weather continues fairly cool, and an occasional rain keeps the young stuff outside moving right along. Considerable planting has been accomplished at this date, the land getting into condition much earlier than last year. Florists handling bedding plants are hustling for all they are worth now, and in a good many cases are rather neglectful of the stock that will have to pay the bills next winter. Very fair trade is reported by the store men, and the scarcity of outdoor flowers keeps prices where they ought to be; flowers are not over-plentiful, as nearly every one is compelled to hold every bloom possible to fill orders. The scarcity of wedding decorations is phenomenal this spring; only a few small jobs this month and but few really good ones booked for June. A. H. L.

A Floral "Pick."

"A friend of mine," said a citizen, "asked me the other evening to go and call on some friends of his who had lost the head of the family the day previous. He had been an honest old Irishman, a laborer with the pick and shovel. While we were with the family an old man entered who had worked by his side for years. Expressing his sorrow at the loss of his friend and glancing about the room, he observed a large floral anchor. Scrutinizing it closely, he turned to the widow and in a low tone asked: 'Who sent the pick?'" —*Philadelphia Call*.

BIRMINGHAM, ALA.—E. R. Rockett, formerly of Vanderbilt, Ala., has moved to this place, and will this fall build three houses 12x100 feet.

BATAVIA, ILL.—Williams & Sons Co. will build two short-span-to-the-south rose houses 20x138 and one smilax house 20x104 feet.

PATERSON, N. J.—James M. Rea has leased Mrs. A. B. Murray's place and will continue the business under his own name.

HOUSTON, TEX.—On May 23 there was an elaborate floral parade here in honor of distinguished visitors.

 114 Chambers Street, NEW YORK.

Rochester, N. Y.

Supply of cut flowers is still below the average for this time of the year. Roses are of much better quality than they have been for weeks, and the demand for them is good; every one of the retailers is anxious to secure his share. There is also a scarcity of sweet peas, which had been plenty a short time ago. Cheap outdoor stuff, such as is in brisk demand for Decoration Day, is not to be had in quantity, and many a would-be buyer has to go without flowers, for the bulk of sales on this day runs to cheap flowers. Few can afford to buy roses or carnations to adorn the grave of a relative, but then bedding stuff is away down, so that instead of a bunch of cut flowers, one or two plants or a dozen of pansies are substituted. The latter retail at 25 cents per dozen, basket and all, surely a very low figure, and I don't see how anybody can make a profit at that price. The surrounding towns, which usually depend on Rochester for a supply of cut flowers on this day have to go without them this year. There is no extra demand for any bloom grown under glass; the sales in this line on Decoration Day are not larger than at ordinary times, but if cheap outdoor flowers are to be had and can be sold at low prices a great quantity would be disposed of.

As the weather is very unsettled yet, a number of growers keep up their fires still. We had several night frosts the past week, which condition delays all planting of soft plants, consequently even the spring trade in bedding plants is not as it should be, and nearly every grower of such is dissatisfied with the business. Today (May 28), the weather being a little milder, flower beds in the cemeteries are being filled at the risk of having to be replanted if another cold night should spoil them, but we all hope that the untimely frosts have left this section for good. Most of the cemetery work has to be finished before Decoration Day, and florists are seen swarming over every part of the grounds planting beds, adorning graves and filling vases, etc., anxious to get through their work at the right time.

Richard Salter of Salter Bros. contracted a very severe cold in the recent unpleasantly cold spell and narrowly escaped serious trouble, for it was generally believed that pneumonia had taken hold of him, but judicious care and persistent nursing avoided serious effects, and his many friends will be pleased to know that he will be able, we hope, to assume his post in the store again in a few days.

W. H. King, who has been reported on the sick list, is somewhat better, and is also expected to be in attendance again in the near future.

Just as I was closing my letter notice of the voluntary assignment of E. R. Fry, florist, for the benefit of his creditors, reaches us. It is too soon for particulars yet. Mr. Fry will undoubtedly resume business again in a short time.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

St. Louis.

During the past week business in the cut flower line was very brisk. The cold snap quickly ended the glut of flowers.

There will be no chrysanthemum show in this city this year. It was so decided by vote of the club at the last meeting.

Mr. Fred Ude is sending in some very fine Triumph carnations.

Mr. Martin Reukauf of H. Bayersdorfer & Co. was a recent visitor.

Tom Carroll reports that all the tomato plants were frozen during the recent cold.

Chas. Cannon is cutting a large lot of Harrisii's.

All the wholesale men report trade good. They sell out clean every day.

At its last meeting the Bowling Club voted to change alleys. Two teams tried the new alleys at Compton and Park avenues, and made good scores. Next Tuesday night they will roll at the new alleys just opened at the northeast corner of 18th and Park avenue, and will report at the next meeting. Carl Beyer won the "high" medal, John Young the "lucky" medal, and R. Frow the "unlucky" medal.

Mr. Brown's fear that the Pittsburg scores will frighten the other clubs is noted. Will the Pittsburg boys put up such good scores when the tournament takes place? Somehow it's always different when players are held to the rigid rules enforced on such occasions. St. Louis intends to make a strong pull for the cup this year.

The fakir is with us. They have their little stand on Broadway, and sell at one-half the prices asked by legitimate florists, and do much harm to the stores. The only way to get rid of them is for the wholesale men not to sell to them. What can the grower receive for his stock when the fakir sells a bunch of 25 carnations for 15 cents, or roses at 25 cents a dozen, and good stock at that. Would it not be wise for the grower to insist that his stock be sold only to legitimate florists? With the fakir off the street the florists would use more stock, and both the grower and the commission man would make more.

St. Paul.

This week shows no great change over last week's trade report, except an increased activity all along the line, occasioned by the warmer weather and the near approach of Memorial Day. While some of the craft are very busy others complain of poor trade. While prices on bedding plants are not quite as good as a year ago we think the aggregate in sales will be much larger. Vases, beds and window boxes are springing into existence quite rapidly, and they mean larger sales for the florists.

In cut flowers business is very active, and at the present writing (29th) white flowers are very scarce. Decoration Day trade is very good, both in plants and cut flowers. Prices range about as follows: Roses \$1 to \$1.50 per dozen; carnations 50 to 75 cents per dozen; sweet peas 25 cents per dozen. Carnations are very scarce, in fact impossible to secure in any quantity. Of outdoor stock there are a few snowballs left, but nothing else. Peonias are not in bloom and lilacs are all gone.

In the plant line, pansies are now retailing at 25 cents per dozen; geraniums \$1 to \$1.50 per dozen, no material change from last year's prices. I know there is stock being offered both in cut flowers and plants at lower prices, but the bulk of such stock is inferior and second-class.

It is reported that Chas. Bennett has disposed of his florist business to Mr. Peterson, formerly with C. D. Elfelt.

L. L. May & Co. report a very heavy shipping trade both in cut flowers and bedding plants. Their ball team, the "Purple Top Rutabagas," on Saturday last met and defeated a team of printers by the decisive score of 31 to 16.

Chas. Vogt of the city market has a new rig to facilitate his business.

August Rhotert of New York and S. Y. Hines of Minneapolis were callers during the week. FELIX.

A Pointer for the Bermudians.

Evidently our friends across the water have had to face problems not unlike our own Bermuda lily bloom controversy, for on the catalogues and circulars of a prominent Dutch bulb firm we find the following pertinent declaration:

1. That we do not send cut-blooms over.
2. That we do not sell or give away flowers.
3. That we do not send bulbs to be sold by auction.
4. That we do not supply other than wholesale people.
5. And that we do in no way, neither directly or indirectly, favor or assist the trade in flowers.

Paste that in your hats, Bermuda growers; you have got to come to it sooner or later.

New Catalogue (No. 4) containing over 1000 Ornamental Cuts for Florists' use, such as envelopes, letter-heads, bill-heads, cards, advs., floral designs, etc., at from 30c. and upward. Price of Catalogue 25c. (deducted from \$1.00 order).

Red Spider Can't Live

WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD,

Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.

Yours truly, E. G. HILL & CO.

Price, \$1.00 each, prepaid. TRY IT, AND RETURN IT at once. If not satisfactory, and your money will be sent back.

M. M. JONES, Gen'l Agent,
6122 Oglesby Ave., CHICAGO.

THE KINNEY PUMP.

THE KINNEY PUMP.

Every florist, market gardener, owner of lawn, grass plat or flower-bed, in fact everyone who has a faucet and hose should have the Kinney Pump (patent applied for) for applying liquid manure, fungicides and insecticides to plants. Feed your plants, fertilize your lawns by using liquid manure. The cheapest, simplest and most scientific spraying pump in use. Sent prepaid for \$2.50—spraying valve attachment 50c. Pump complete \$3.00. Send for circular. Address

How It is Done.

California is trying the experiment of shipping cut flowers to the east, and the railroads have cut transportation rates 40 per cent. to help the enterprise. A shipment last week contained thirty-five thousand calla lilies, English ivy and other varieties. If successful there will be big money in it.—*Beverly (Mass.) Times*

As soon as the burden has been borne of making a market by the florists, and there gets to be big money in it, then "Presto change," up goes the freights, and the railroads scoop the money and the florists take what they can get.

This old trick has been played so often that it is dangerous to an industry to build up on the seeming good will of a railroad.—*Malden (Mass.) Press.*

The sympathy of the *Malden Press* will be appreciated by the florists because so contrary to the usual sentiment expressed by the newspapers, and its opinion of railroads is undoubtedly well founded, but we venture to predict that there will be nothing in the above mentioned scheme for either the railroads or the florists to lose sleep over. Alas, the "big money" so glibly referred to by our worthy contemporaries is "only in your mind."

"The Flower of Death."

Under the above startling heading the *Philadelphia Times* prints the following tale:

In the mountains of Mexico, high up in the most inaccessible passes or buried within the deepest gorges, there grows a strange flower which the natives call "The Flower of Death." From their description of it, the plant must belong to the great cactus family, whose name is more than legion in that part of the world, yet it is, however, devoid of thorns, and the heavy succulent leaves exude a viscid fluid which will burn into solid rock like a strong acid. In shape the flower somewhat resembles two calla lilies placed face to face. Instead of the gracefully tapered point of the lily, however, the two petals of the flower of death are quite short and thick, presenting the awful appearance of parted livid lips, through which the red pistil protrudes like a horrid bleeding tongue.

It is said that this flower gives out an odor so penetrating and so intensely disagreeable that buzzards are frequently attracted by it, mistaking it for their rightful spoil. This of itself is horrible to contemplate, and yet the half has not been told, for so noxious is the poison of the flower that no man can smell it and live. In Mexico one hears stories of many an unwary traveler who has come to an untimely death by inhaling the poisonous breath of this curious flower, and the mountain bandits, no doubt, know very well how to have it held accountable for the death of many of their own victims.

What a terrible spree the writer of the story must have been on the day before.

Effective Liver Pills.

Her hubby was ill and she gave him regularly a liver pill from a box without a label but which seemed to be the required thing. He seemed to improve under this treatment until one day when he happened to turn the box over and discovered that there was a label on the bottom, which informed him that the supposed pills were "Crown Prince Morning Glory seeds." This unfortunate discovery completely neutralized all the benefit previously conferred by the "liver pills."—*Rochester Democrat.*

The Flowers Working Women Wear.

The sidewalk statistician of the *Chicago Mail* recently counted the women who passed the corner of Madison and La Salle streets between 7:45 and 8 a. m. and gives the following results:

Women wearing lilac blossoms	179
Women wearing roses	9
Women wearing dandelions	19
Women wearing pansies	6
Women wearing sweet peas	26
Women wearing or carrying other flowers	63
Women with no flowers	305
Total	607

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of greenhouses. Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Galt, Ont.

After a very dry spell, to-day (June 5) we have had three hours of nice rain, warm and moderate, just what was wanted. Plant trade brisk, cut flowers selling cheap; carnations 10 cents per dozen; roses—well, the following will tell: Three ladies enter greenhouse, "we want some cut flowers." Florist, all smiles (expecting a big order), "what kind, carnations?" "No, roses." "About how much?" "Well, about five cents."

The friends of J. W. Scott will regret to hear that he is still on the sick list.

MAC.

MECHANICSBURG, O.—S. L. Harper is starting in business here as retail florist, with one house 20x60, which will be enlarged as occasion requires.

Orchids for June.

Theories are the very last things to be indulged in about orchids or any other plants. There is only one way about them, and that is to learn every possible particular as to their natural environments, and artificially supply the requisites of heat and moisture and periodicity of rest and growth as closely as climate will permit. When all resources are exhausted you will still be far enough away from nature in many and vital essentials, not the least of which is the tropical sun itself. Most of the theorizing arises from the very paucity of our knowledge regarding the immense differences in tropical climates, not so much as regards the heat measures, for within certain limits these are fairly constant, but the vastly greater differences which occur in the supply and seasons of moisture. There are vast regions from which it is impossible to obtain any returns whatever, the observations have never been taken. Those gardeners, however, who have had experience in the cultivation of tropical fruits under glass can easily group orchids or other tropical plants in regard to heat as banana orchids and orange orchids—not "Florida oranges" mind, they get frozen!—and this is really about all that has been, or can be done. But this takes no account of insular climates and their periodicity in rainfall and depressions of temperature. These manifest themselves in very unexpected ways at times, and they are often reflected in the habits of the plants. For instance, in one of the climates where *Calanthe Masuca* is found in countless thousands the rains occur in the summer months of June, July and August. The plants complete their growth in the previous autumn, take a long rest and flower early in June, when the temperature falls 5° or 6° lower than for April and May, and within a few degrees of the temperature of the winter months. My impression is that the period of greatest root activity is during the warm months of April and May, so far as the old bulbs are concerned. But on the opposite side of the mountain range, where the plant is also found less plentifully, the climate is utterly different. June to October are much the warmest and also the driest months, November and April the periods of greatest rains. And so it varies in most tropical regions, and this will often account for the diverse behavior of plants received from Brazil or Venezuela, or Columbia, or where not, of whose climates we know

absolutely nothing. The same species in variety may inhabit totally different climates, and arrived here it may inhabit something entirely different from any of them. This gives rise to theories or guesses new and old, each one just about as valuable as the other so long as the truth is unknown as to each species and its geographical varieties. To gardeners and their experiments all or nearly all the credit is due for successful cultivation.

The orchids in the following list may be hung beneath such trees as the white pine or the ginkgo rather than those of very dense shade; except such pot orchids as some of the cypripediums, thunias, peristeria and *Anguloa Clowesii*—terrestrial, often thin leaved, sometimes woodland growths, whose foliage seems to easily suffer during dry winds. The others will not only do very well outside from New Jersey southwards, but all I mention will flower, and some few of them will grow. As a rule, however, growth requires more decided heat measures than our climate affords, but for such orchids as *Calanthe Masuca*, the reduction of temperature with enough moisture would be just the thing, provided of course you could be sure of your variety. *Calanthe Masuca* is not a very common orchid in cultivation.

Erides crassifolium is not very common either, but in color it is striking, and in fragrance and size of flower it is altogether a fine orchid, not for the florist, but the fancier. *Æ. expansum* vars., *falcatum*, *Larpenæ*, *Lobbii* and various varieties of *Æ. virens* flower well during June. For the best growth they require an abundance of water at this season, and it is because this cannot be supplied at a high enough temperature without great trouble, and also with risk of checks to the root action from cold spells, that the growth is best made inside. Most gardeners suffocate the root action of *erides*.

Cypripedium Stoneii in varieties, and most of the concolor, *niveum* and *Godefroyæ* varieties flower during June, together with an accumulating host of the *barbatum* and other types which now demand dictionaries all to themselves, and which are for faddists to collect and florists to select. *Dendrobium thrysi-florum*, *Dearii* and *calceolare* may usually be depended upon where there are enough plants. *Thunia Marshallii gigantea* is a good thing which flowers during June.

Vandas and *renantheras* are also often in force in private collections. *Renanthera coccinea* is not difficult in a warm house near the glass, and it is fine. It has naturalized at Rio Janeiro I understand, and can be had from there.

Cattleya Gaskelliana and *C. gigas* in varieties will flower capably outdoors, and as their growth is completed they will do as well as inside in all except rooting perhaps, and this proceeds none too

well inside after a few years. I remember one season years ago when there was a flood of rain in August that plants of *C. gigas* made more young roots outdoors in a week than they had made in the other 51 weeks of the year. These were old plants on blocks. If anybody can give the monthly climatology of this fine orchid with any completeness at all won't they please oblige the readers of the *FLORIST*? *Cattleya marginata*, *M. scia* and *Mendelii* often flower during June in some quantity, either from difference of variety, difference in time of importation, treatment and like causes. *Laelia elegans* is not only one of the best of South American orchids, but also one of the best to get along with. It can be cut up and leads grown from a bulb or two with as much facility as *Cattleya Harrisonii*, of which I have spoken before. Of course it requires attention, but no more, nor as much, as cyripedium seedlings.

Oncidium Lanceanum is equally facile, and it will not only flower but grow and root outside very well indeed. *Miltonia vexillaria* and *M. Roezlii*, especially in their white varieties, are fine orchids. They are neither quite safe in the house nor perfectly happy out of it. But both, especially *Roezlii*, can be increased. Fresh importations are best.

Peristeria elata, *Stanbopea grandiflora*, *Anguloa Clowesii* and brassias may be increased indefinitely, but *Epidendrum vitellinum* will bear freshly importing now and again. JAMES MACPHERSON.

Trenton, N. J.

Carnation Notes.

Very hot weather for carnations these last four days, ninety-eight in the shade outside. Keep the sprinkler going all the time; it will not spoil the flowers near as much as to omit the spraying, as the sun burns them worse when they are dry than when wet, and if there is not a great amount of moisture the red spider will get away with your stock. Pick the flowers early in the morning if you wish them to keep well. Give the plants a frequent dose of manure water, avoiding nitrate of soda at this season; cow manure is best at present; the sun will attend to the stimulating or quickening process.

Turn over the soil to be used next fall; do this often and well, and do not make the pile high or let it get too dry; if rain is lacking turn on the hose. If you have not mixed the manure with the soil do so now; use lots of it; any good, well rotted manure will do, but cow manure is best for light soils, not necessarily so for heavy loam. I would advise every grower to save a part of the new soil to test with chemical manures; do not mix stable manure with this. If we can find the proper formula of chemicals that will produce the same results as stable manures it will be a great saving. I shall give this matter a thorough test this coming season, and I advise every grower to do the same; it makes a little trouble, but will pay in the end.

CHARLES H. ALLEN.

YOU CAN never invest \$2 to better advantage than in a copy of our trade directory and reference book.

Coal Ashes and Roses.

On page 1062 of your issue of the *AMERICAN FLORIST* for May 18, Mr. John N. May, in answer to a correspondent, has this to say: "Your correspondent speaks of having used coal ashes to some extent; every once in a while somebody claims there is a benefit in using them. Personally I have never found it so; on the contrary coal ashes in any form near the roots of roses are positively injurious in my experience." This is the first time that I have ever heard that coal ashes were positively injurious to vegetation. If it is not asking too much I would like Mr. May to state for the benefit of the undersigned (and there is no doubt but that others connected with horticulture would also like to know positively), what there is in coal ashes to make them injurious to the roots of plants. Mr. May makes a good point certainly when he says: "Anyone wishing to test this to his own satisfaction can easily do so by crocking a few pots with cinders that have not been washed and an equal number with clean broken potsherds. Pot vigorous plants of equal size into each, treat both alike, and in a short time the difference in the plants will tell the tale for itself. Three months after those in the cinder drained pots may do for the fire," at least this has been the experience of Mr. May. I know of establishments that grow roses for cut flowers, and they have generally used coal ashes for drainage during the time they are growing in pots, not because they thought them better than potsherds, but because they were more convenient to use; and to my own certain knowledge, instead of the plants being fit for the rubbish pile or "the fire" as Mr. May puts it, they were planted in the regular way on tables and furnished very satisfactory results during the winter. Of course, they might not have satisfied Mr. May, who everyone will acknowledge is certainly an authority on the growing of roses. I know from my own personal knowledge that a house planted with American Beauty had been grown in their early stages in pots drained with coal ashes, and instead of the plants being ready for the rubbish heap, at the end of the three months they yielded at the rate of fourteen dollars per running foot, in a house over 100 feet long. That, of course, might not be considered a paying crop to those who grow for the New York market, but it is certainly considered a profitable crop to grow in this neighborhood; and I also know that there are quite a number of crops that do not have coal ashes used as drainage, or used in any way in connection with the soil in which the plants are grown, that do not produce that amount of money per running foot. I also know of some growers who have a clayey tenacious soil, where sand is at a very large premium, who think they have to use coal ashes in order to make the soil sufficiently porous for the roses to grow in, and they grow fairly good roses, too.

It may be that in a soil peculiar to the district where Mr. May is located some

chemical action takes place in his soil through the application of coal ashes, different from the effect upon some other soils.

According to an analysis I have read, "Coal ashes contains a trace of potash and some lime. They have no fertilizing action, but from their mechanical effect may be of slight service on stiff clay soils, on reclaimed bogs, or on soils rich in humus." But Mr. May's account of them as being absolutely an injury to plant life is the first time on record, I think, that has ever been made public; and I would like to have further information on this subject, for it is a very important one to me, having used coal ashes quite frequently for the last four or five years; and not noticing any deleterious effects it may be that I am not sufficiently versed in plant life to be able to determine whether a rose plant is fit for the fire or whether it can with safety be planted with the expectation of getting from it a crop of flowers.

My object in writing this is to get at the truth of the matter, and if some expert will please state the facts of the case as he knows them, in addition to what Mr. May will please tell us, all will be adding to the knowledge which we are all seeking for, that of being able to grow our plants *correctly*, and of course, to the highest state of perfection; and to get them to produce the largest amount possible from a given space. E. RAWLINGS.

Herbaceous Plant Notes.

Aquilegia chrysantha, the golden spurred columbine, is in bloom now. A large deep flower with very slender long spurs, it is truly one of the very best of the family, and no collection should be without it. The outer sepals are of a light primrose yellow in the true type, while the petals are deep canary yellow. The flower stems are profusely branched, more so than in any other variety that I know, and consequently flowers are produced more freely and for a longer period, lasting under favorable circumstances almost into the middle of September. It also grows higher, without being lanky, than most aquilegias, attaining a height of 3 to 4 feet.

Aquilegia olympica, a large spready flowering blue variety with a white center, is also blooming now and will last well into July; it grows only 1½ feet high and is a splendid variety.

Aquilegia canadensis, another slender long spurred variety, is yellow combined with bright red, and on account of the fine coloring and size of flowers should not be omitted from any collection, although we can find it in the woods growing wild in any part of the northern states. The flowers are very showy if planted either alone or mixed with others of the same family; it remains in perfection from May to July, and its season may be prolonged by planting in shady places. It is 1 to 2 feet high.

Heuchera sanguinea I should have mentioned in May, for it usually begins to bloom then, but this year, on account of the severe frosts in that month, the first flower spikes were frozen when almost ready to bloom, and in going over the herbaceous ground I failed to notice it until now, when another crop of flower spikes has made an appearance, and some of them are opening. It is a handsome and very hardy plant, with a neat compact habit, sending up its flower stems continuously until late in the fall. It is not an old plant, and therefor not generally known yet, but can be recommended

FLORAL ARRANGEMENT SENT TO THE FUNERAL OF THE LATE GUSTAV MESSEBERG
BY THE NEW YORK FLORIST'S CLUB.

to all. The flowers are deep blood red, somewhat funnel shaped, borne on long slender upright many-flowered panicles, and last well after being cut. The leaves are roundish cordate, slightly lobed at different places; height 10 to 18 inches. This plant will stand our hottest summer sun without injury, and also our coldest winters without protection of any sort.

Reseda glauca, a hardy herbaceous *reseda*, will be admired if planted in close patches. The flowers are of the same shape and color as in the well known *mignonette*, but smaller and perhaps a little more pure white in them; they are closely arranged on a very thin wiry stem, which continues to flower from the bottom to the tip as in all *resedas*, and blooms all summer; the foliage is narrow and fine, of a bluish green. Height 6 to 8 inches, likes the full sun at all times.

Armeria maritima, syn. *vulgaris*, the sea pink, in bloom now, will give general satisfaction as a border plant or when used for edging; the flowers are produced

continuously from now to September in round little heads, rosy pink in color, and although a very old fashioned plant it is very desirable; height from 6 to 9 inches.

Cytisus scoparius, the common broom, is not an herbaceous plant, but we have it in the border and like it there. The bright yellow flowers come solitary from the axils of the leaves on last year's growth, and a few specimens will make a grand show while the flowers last, which is from spring to July. In time it would form a bush of considerable size, but may be kept in bounds by pruning down after flowering each year.

Geranium pratense will bloom from now to September, and deserves a place in the collection; the flowers are large, almost blue in color, and the leaves are deeply serrated and parted into linear lobes; grows to a height of 2 feet.

Aster alpinus is flowering well, and is undoubtedly a most attractive species of low and compact growth, attaining a height of only 6 to 9 inches. We do not

see it very often in collections, but it surely deserves to be planted in quantity. The color of the flowers is of a pleasing light shade of purple, borne singly on erect stout stems, and the individual blooms measure from 1½ to 2 inches across. A useful plant for cutting, lasting until July or August.

Lychnis alpina, an alpine dwarf species, does best with us in a partially shaded place, otherwise our burning sun will scorch the flowers soon after coming out. The pretty little flowers are produced in close compact heads, and are of a light shade of rosy pink, very attractive and freely produced during spring and summer. The plant only grows to a height of 6 inches, and is rather rare in this country.

Lychnis alpestris is another alpine species with neat pure white star-like flowers, very freely produced on wiry branchy stems, and is undoubtedly very desirable in every respect. It grows 6 to 9 inches high and is a good thing for either the rockery or the border, but it also should be protected from the scorching mid-day's sun. Not a very common plant, although such a prolific bloomer should find place in every collection.

Hemerocallis flava is making a splendid show just now, and is the most useful of the tribe for cutting, the buds opening in succession after being cut and placed in water, where it may be kept fresh for over a week. The flowers are as large as those of *Lilium candidum*, only a trifle deeper and more funnel shaped; the color is a pale delicate lemon, very fragrant and pleasing. All *hemerocallis* require transplanting every 2 or 3 years in order to flower well; if left too long in one place they get too much crowded and the center of the plant will grow weaker, not deriving nourishment enough in this crowded state to produce flower stems. Blooms from latter part of May until July, attaining a height of 2 to 2½ feet.

Linaria dalmatica is a vigorous growing and very large flowering variety; the flowers are nearly as large as a snapdragon, of a fine yellow color. The spikes are long and branched, with the flowers distributed loosely along the stem, which is rather an advantage, the spaces being filled in with narrow lanceolate leaves of a glaucous hue. A very fine form, blooming all summer, height 2 or even 3 feet in some cases. It does well also in very dry situations, but without water the plant does not attain either the usual height or the size of the flowers. *Lychnis viscaria* fl. pl. shows its deep rosy flowers now; they are produced on erect many flowered panicles, and are extensively used for cutting, being a very prolific bloomer and lasting well after being cut. This old and reliable plant is worthy of cultivation in the border or for edging large beds, blooming until July; height 12 to 18 inches.

Helenium Hoopesii, an early flowering robust growing kind, with deep orange daisy-like flowers 2½ inches across grows 2 to 2½ feet high and is very floriferous, continuing to bloom during summer, a showy perennial and good for cutting.

Ononis rotundifolia is an unknown plant to the majority of florists, but nevertheless a very ornamental one; even when not in bloom it produces a striking effect, the foliage resembling a small roundish mahonia leaf, but not with the same lustre. From the axils of the rather glaucous leaves the pea shaped flowers are produced in threes for a long period in summer, and are of a very handsome bright rose color. The habit of the plant is somewhat shrubby, forming a small

roundish bush; it will stand our hardest winters without any protection, and should be planted in an open position, fully exposed to the sun, if compact specimens are wanted. Height one foot.

Anchusas are probably only wanted for the shrubberies or in a distant or back part of the border. The pretty forget-me-not-like flowers of such a lovely blue color are produced in such abundance, but the plant is a little coarse and tall, and as soon as the seeds are produced, although flowering goes on, it gets unsightly. When first coming in bloom it is very fine for a month or so and may be cut down after that. A clump or two should be in every collection. Height $2\frac{1}{2}$ to 3 feet.

Dianthus cæsius, the Cheddar pink, is now beginning to bloom, such a delicate pale rose color and very fragrant, of good size, the petals deeply fringed at the edges. It is good in any situation and will stand our severest hot summer weather. The leaves are small and fine, very glaucous, and the plant grows compact and close to the ground; height about 6 inches.

In writing down these notes I do not follow any alphabetical arrangement, merely endeavoring to give the correct time of flowering in the northern states and the height of growth, including the height of the flower stems, together with a short description. By going over the herbaceous ground and the borders I pick out the species at random as they come into flower, and make a note of the most desirable varieties. In different parts of the United States the flowering time of some kinds may differ a little, being a few days or even weeks earlier or later than with us, but this will only occur in few cases; the same holds good as to the length of flowering time.

Rochester, N. Y. J. B. KELLER.

German Iris.

Iris germanica in its countless varieties and the different combinations of shades and colors are at their best in the month of June, and a large patch of them planted together is a lovely sight; the coloring is of such a delicate nature in most instances that an artist is puzzled to reproduce the same tints and shades on canvas, and we are unable to give a correct description. They are the favorite flower with most all the fanciers of an herbaceous garden, and every section of the country has its own special varieties. I often wondered that such a diversity of colors should exist without the least effort at hybridization, for very few seedlings have been raised within the last fifty years, and after all we may find an entirely new shade, distinct from anything we ever saw before, planted in the rudely made flower garden surrounding an old fashioned farm house, where probably the great-grandmother of the present occupant planted it and where it has brought forth quantities of great spikes of flowers year after year. This is just what the German iris likes; the longer they are left undisturbed the better they will flower. Flower stems grow taller and stouter, and instead of producing 3 or 4 flowers on a stem when newly transplanted they will perfect a dozen or more of them on each spike on old well established clumps.

I have been asked for a description of colors and varieties, but must say that it would take up too much space should I undertake to enumerate one-fourth of the varieties known to the trade, so I will only mention a few distinct kinds.

Imogene Ware, white, faintly tinged lavender on the tips of the falls or outer petals. L'Avenir, a delicate shade of

lavender, the falls and the tips of a darker tint. Falcata, yellow, tinged and veined purple in the falls. Atropurpurea, probably the best dark variety in existence, deep velvety purple, a grand large flower. Celeste, delicate light lavender blue, extra. Jordain, deep purple shaded with rose. Pancrea, yellowish buff, reddish purple veined falls. Reticulata superba, center lavender, falls purple. Sampson, rich golden yellow, veined crimson maroon in the falls. Florentina, white ground, tinged blue and yellow. Arlequine Milanaise, white, blotched blue and rose. Deloismison, lavender and purple striped. Liabaud, yellow and maroon. Mme. Chereau, white, feathery edge of violet, with undulated falls. J. B. KELLER.

Rochester, N. Y.

The English Violet Again.

A writer in a recent issue of the *FLORIST* asks the question is there a double Russian violet differing from the old double English violet? I answer emphatically no, and regard the so-called Russian violet as another old plant introduced under a new name, defying any botanist or florist to tell one from the other when grown side by side.

I have been familiar with the English double violet for more than fifty years; have seen it growing where it may still be found, generally much neglected, in old gardens in the Atlantic States, and also around the old stations of the Hudson's Bay Company in the northwest, as well as in the gardens of Europe, and as it is a distinct variety of strong individuality I have no hesitation in saying in all those different climates and situations it is identical. Further, I obtained some plants of a so-called violet of new introduction heralded as the double Russian, but soon made up my mind that I had been sold again and at once recognized an old friend under a new name. I do not say this violet is not Russian as well; it is doubtless found all over Europe, wherever it originated, but more than likely the original stock came from England to America. Let us have this point settled; if the Russian is a new violet will some expert show us wherein it differs from the double English we have had in the country for more than fifty years?

AN OLD TIMER.

Washington, D. C.

The next few months the store florists expect but little trade, and that principally in the way of wedding decorations and funeral designs. On an average May was a fair month; many of the florists had sufficient work to keep them moderately busy. Orders for commencement decorations and flowers for the same were numerous, but most of them were as cheap as possible. Many are complaining of keen competition and the cut in rates.

Flowers of all kinds are in great quantity, and generally speaking, of very fair quality. Roses are plentiful, and are bringing from 50 cents to \$3 per dozen. There is a demand for good roses, and they readily bring \$3. Carnations are fairly good, and retail for 25 cents per dozen. Sweet peas are in abundance, but owing to the very hot weather of the past week they are deteriorating in quality, and in price as well. *Paonias* have been very good and in great quantity; demand fair, prevailing price \$1.50 per dozen. Irises have been unusually fine this spring, though somewhat late in coming in, owing to the cold, wet weather which prevailed the greater part of May. The demand for them was only fair. Owing to

their short life they are losing in popularity.

The funeral services of the late Secretary Gresham were held in the east room of the Executive Mansion Wednesday morning, 29th ult., at 10 o'clock. The room was most elaborately decorated for the solemn occasion. The national colors were conspicuous at all points. The windows were curtained with the stars and stripes, and the large mirrors and mantels were hidden by immense flags hanging from the ceiling to the floor. The entire south end of the room was a forest of palms and potted plants; around the sides were tall palms and foliage plants backed by the bright hues of the national flag. The floral offering of the President and Mrs. Cleveland was a large wreath of orchids, white roses, rhododendrons and maiden-hair ferns, tied with broad satin ribbon. The wreath sent by the diplomatic corps consisted of orchids, lilies of the valley, longiflorum, carnations and American Beauty roses, tied with wide white satin ribbon, on which was stamped in gold letters "From the Diplomatic Corps." Col. John M. and Mrs. Wilson sent a wreath of red roses. Chief Justice and Mrs. Fuller laid upon the bier two large sago palm leaves fastened with a bunch of violets and lily of the valley. From Gen'l Gresham's comrades of the Army of the Tennessee was received a large American flag, the emblem of the corps, constructed of immortelles. The Department of State sent a wreath of red and white roses, calla lilies and sago palm leaves, tied with purple satin ribbon. Secretary and Mrs. Carlisle sent a cluster of white roses and white lilies.

Decoration Day was commemorated by citizens and veterans, and by the patriotic women of Washington by affectionate and impressive services. The national cemeteries which belt the capitol, in which so many thousands of the Nation's dead are buried, were each visited by organizations of ladies, and also by friends to decorate the graves. The observances at Arlington were naturally the center of attraction, because of the thousands of soldiers whose last earthly homes are within this reservation. Wagon loads of flowers were carried from the different florists and from the government gardens. Not a single soldier's mound was left without a bunch of flowers and a small flag. The tomb of the unknown was beautifully draped with an American flag. On the front of the tomb was a magnificent wreath of roses sent by Mrs. Cleveland; each corner held another lovely wreath, and the upright canon supported additional ones. Around the mound in letters of flowers were the words "Our country's unknown dead."

The graves of the more illustrious soldiers, like Sheridan, Admiral Porter and others were honored with set pieces and military emblems. At Sheridan's monument were magnificent remembrances. Resting at the foot of the mound was an exquisite wreath of calla lilies and pink roses. To the left was a pillow of white roses and carnations with crossed swords and stars of purple immortelles, and the letters "Post 5, Chicago," in the same flowers. Near this was a magnificent floral G. A. R. badge from "Phil Sheridan Post No. 14." The eagle above and the stars below were of golden immortelles, the crossed canons of purple immortelles, while the flags were composed of red, white and blue immortelles. To the right of the mound was a guidon of red, white and blue immortelles. Back of this was the tribute from the Legion of Loyal Women, a saddle of red roses with stir-

FLOWERS AT THE GRAVE OF THE LATE GUSTAV MESSEBERG

rupes of gold immortelles; Gen. Rufus Ingalls' grave was remembered with a superb wreath of roses that covered the entire mound. Admiral Porter's grave bore a ship composed of cape flowers and immortelles, also an anchor of white roses and carnations. The tomb of Gen. John A. Logan in the Soldiers' Home Cemetery was elaborately decorated. The first and most conspicuous was a large American flag composed of immortelles, roses and carnations. The flag was raised on wires two feet high from a groundwork of flowers, containing an American shield in immortelles, beneath which was the motto in purple letters "Our Hero." The second was a large wreath of ivy leaves tied with violets and crossed palms; also two handsome baskets of roses and a wreath of immortelles embracing a star in the national colors. A circular piece in blue immortelles with the figures 103 in white and the inscription "Love and reverence of Logan, from 103." Logan Guard of Honor sent a scroll of white roses and immortelles five feet high. G. A. R. sent a wreath of roses and daisies. Logan Camp No. 2, S. of V., a Maltese cross of La France and Jack roses. Mrs. Logan's tribute consisted of a large wreath of purple immortelles, tied with broad purple ribbon and a bunch of thistle balls, another handsome wreath composed entirely of laurel leaves and flowers tied with a bunch of thistle balls rested near the tomb. A large handsome floral piece represented the badge of the Legion of Loyal Women in immortelles, with the letters L. L. W. across the crest, from the sides of which rose a large crescent shaped wreath in yellow immortelles. Another handsome wreath was composed of purple immortelles and beads of wheat. Bunches of roses and callas in vases completed the decorations.

REYNOLDS.

Flowers at the Funeral of G. Messeberg.

Our picture will convey some idea of the number and beauty of the floral designs sent to the funeral of the late Gustav Messeberg at Flatbush, N. Y. A few of the larger pieces such as the standing

anchor from the New York Florists' Club and Gates Ajar from the Flatbush Bowling Club were contributed by organizations with whom the deceased affiliated, but a very large number of the tributes came from his business associates and friends, who although the event occurred on the day before Decoration Day, a most inopportune time for them, thus gave fresh proof of that strong bond of fellowship and sympathy which exists to such an extent among the craft wherever found and which no business demands or cares of whatever nature can ever pervert or extinguish.

New York.

A number of the large growers of cut flowers in the neighborhood of New York are contemplating joining forces and selling their entire product through their own management. Their object as given out by them is "to make a more uniform price for their product, to protect the retail stores by selling to all buyers alike at one uniform price for the same quality of goods and to put an end to the competition between the commission men." Steps have been taken to incorporate the company, and the entire stock is said to have been already subscribed for. The scheme has been worked industriously by its promoters, but with such secrecy that it was not generally known until recently, and details are ascertained with difficulty, but the plans so far as outlined comprise the securing of a large store where the products of the stockholders and others who agree to consign to them will be disposed of at 10% commission. As a bond to hold the consignors from making any other disposition of their goods it is proposed that each be required to make a deposit at the rate of two cents per square foot of glass, the same to be forfeited to the company if the contract is broken within one year. Those who so prefer may pay this assessment in the form of 10% extra commission on their goods. It is the purpose to sell on a mutual basis. Goods are to be graded and those of even quality are to be sold

at uniform price, the results of sales in each class to be apportioned pro rata according to each grower's output, and the loss on goods left unsold to be divided in like manner.

This movement, engineered by the largest growers and contemplating, as it does, a revolution in the methods of marketing which have prevailed in this the greatest cut flower market in the country for nearly a quarter of a century, has occasioned much stir and comment, and is important enough to warrant a thoughtful consideration of the causes leading up to it and of its probable effect upon existing institutions should it go into operation. New York is the only city in the country which can boast any considerable number of flower growers who have amassed a fortune in their business; it is also well to remember that it is the only market in the country where the middlemen, whose overthrow is now sought, have controlled the great bulk of the output uninterruptedly. The complaint against the fierce competition between the commission dealers is well founded, and the demoralizing tendency of the conditions existing in recent years cannot be questioned. Still, looking the matter squarely in the face without prejudice, it is impossible to escape the conclusion that the large growers, with a few exceptions, are largely responsible for these conditions. With demands, threats and browbeating they have played the commission men against one another and haunted them until life became a burden. Attention has been called in these columns repeatedly to the injurious effects of this policy, for which the greediness of growers and the timidity of commission men are alike responsible, and that the tension would soon become unbearable and the bubble burst has been apparent to anyone who followed the drift. Now this big combine is under way, and included in its ranks are the very elements which have sown the seeds of mischief in the past. That they are now converted and will hereafter accept without contention the dictum of any individual or individuals as to the grade of their stock and what they shall receive for it, and bow meekly for the first time in their lives when their goods are reported unsold is a regeneration almost beyond belief, and if the new institution can conceive and carry out any plan whereby these elements can be bottled up effectually for a year they will confer an inestimable benefit on every branch of the business and be entitled to gratitude accordingly. It is safe to predict that they will encounter many a tough problem, but it is not our province to throw cold water upon any scheme which has for its avowed purpose the cure or abatement of acknowledged evils. As to the commission business, a temporary shaking up is the worst it need look for, and there is good reason to believe that the upheaval will result to the ultimate advantage of this department of the business. The proposed policy of the destruction of surplus stock and consequent annihilation of the curbstone Greek comes too late in the day to ever go, and cannot be taken seriously by any right minded person. If the surplus is to be destroyed the place to do it is at the greenhouses before it has impoverished the plants, and thus avoiding cost of handling and the injurious effect of its presence on the market, a course which has been practicable at any time, provided the growers saw fit to put it into execution.

The cut flower market is very flat at present. The extremely hot weather has

had a bad effect on the quality of the stock, which is also very abundant, and the retailers complain that the summer dullness seems to have set in already. For weddings, steamer departures and such occasions orders are unusually light. The big overstock moves with great difficulty. The Greeks even are not looking for anything and wait to be coaxed before exhibiting an interest. Sweet peas are among the most difficult stock to handle. The weather is very unfavorable for them, and they are in many cases worthless when received by the wholesalers. The failure of E. R. Fry caught some of the wholesalers for considerable amounts.

Colgate & Co. have had boxes of plants placed in over one hundred windows of their factory in Jersey City. Their avowed object is to cultivate a greater love for plants and to encourage their more general use about factories and public buildings, rightly believing that the moral effect of flowers upon the workmen is good. This is a most commendable action and is well worthy of universal imitation.

Mr. W. L. Swan at Oyster Bay reports a most successful spring plant trade, and stock of many kinds has been completely exhausted. He believes in beautifying the grounds around commercial greenhouses and is making elaborate plans to delight his customers with a grand display this season. Between his foreman, Mr. Jas. Clark, and himself the greatest of mutual admiration exists and they have agreed to stick together while they live, which ought to be long if good nature lengthens life.

The 34th street market association held a special meeting on June 1 at which 10% dividend was declared. It was voted to add to the by-laws a clause prohibiting anyone except a regular commission dealer from selling any stock except their own. Commission dealers are charged ten cents per foot extra rent and must take six or more feet of space.

On June 15 Mr. A. S. Burns will retire from the firm of Burns & Raynor and give his attention to his interests at Woodside. Mr. John Raynor will continue the business.

Boston.

Everybody is smiling and happy over the results of Memorial Day trade. Of the big holidays this is the one over which the least fuss is made, but it is more than likely that if the cut flower sales for this occasion could be computed and compared with Christmas and Easter it would be found that Memorial Day exceeds either of them in amount. Then the sort of flowers required is such as yields a good profit, makes a show quickly and requires no heavy outlay in advance. Those having longiflorum lilies and astilbe made a good hit this year, for lilies brought \$12 a hundred and astilbe \$2 to \$3, per ces which compare favorably with those at Easter, and very little coal consumed in the growing. The new dense flowering astilbe took the lead of the old fashioned variety and brought about one-third more. Carnations of the ordinary quality were in fair supply, the outside price being two cents, with the red varieties in largest demand. Extra fancy sorts sold from \$3 to \$5 per hundred in limited quantities. Roses were well cleaned up at satisfactory prices all round. Designs of dried and artificial flowers did not sell as well as heretofore, although some of the store men displayed much taste and ingenuity in the construction of these devices.

SPIRÆA ASTILBOIDES FLORIBUNDA.

Mr. Zirngibel has been experimenting with carnation blooms, with a view to preserving them as long as possible after cutting. He states that the addition of nitrate of soda to the water in the vases has a decidedly favorable effect, blooms after three days of this treatment having increased in size and brilliancy of color, and brought one dollar per hundred more than those not so treated.

T. C. Thurlow exhibited at Horticultural Hall on June 1 branches of a new and very beautiful decorative shrub, *Symplocos japonica*. The flowers are fine and of purest white, and would no doubt be found useful for florists' use.

N. F. McCarthy finds the auction business booming. Three sales a week, each lasting seven hours is the way it has been going. Ed. Hatch will sell for the balance of the season in the old Park House on Bosworth street.

Ludwig Schiller is in town in the interest of Chas. Schwake, making the acquaintance of the buyers, and laying a foundation for next season's campaign.

The stock in greenhouses of Anthony McLaren was sold at auction by Ed. Hatch on June 3 to make room for the new parkway.

Spiræa Astilhoides Floribunda.

A sport from the well known *astilboides* considerably larger and more floriferous than the type. The accompanying illustration is from a photograph taken in Holland last spring. It does not do justice to the variety, as the plant was not fully in flower when the photograph was taken. It is claimed that this new sport greatly surpasses as a pot plant the now very popular *Spiræa compacta multiflora* or Double *Spiræa* as it is vulgarly called,

and in the dearth of novelties of merit for the Easter trade which exists at present there ought to be a place for the new comer. W.

Chicago.

At a meeting held this week several aldermen and a number of prominent citizens discussed the Lake Front Park scheme. D. H. Burnham exhibited a plan, which was very well received. In the center of the made ground was to be erected an art building, to the south was laid out the site for the Crerar library or some similar building. North of the art building Mr. Burnham's plan contemplates the erection of a music hall. On farther to the north was a big campus for the use of the militia and the site of an immense armory, as proposed in the bill now pending before the legislature. The extreme southern part of the park was to be taken up with a small exposition building. All through the rest of the area were dotted flower beds, play-grounds for the children, drives and long avenues lined with shade trees. To the east of the park was to be erected a fountain, probably a bronze or marble reproduction of the famous MacMonnies fountain at the fair. The filling-in of the lake will make a park of about 200 acres. A citizen's committee, consisting of Lyman J. Gage, H. N. Higginbotham, A. H. Revell, F. W. Peck and W. J. Chalmers, is pledged to work in the matter, and there seems no reasonable doubt of the final success of the plan.

We have undergone another of the lightning changes for which Chicago weather is noted, and after broiling tropically for six days are now enjoying the temperature of October. Naturally flowers have suffered greatly. All through the hot days roses and carnations came

A BASKET OF FLOWERS

in by the bushel, and the quality deteriorated greatly. At the present time there are no good roses, only some are worse than others. They are small, off-colored and often mildewed. There is no great demand, but still it is hard to fill orders if flowers of good quality are wanted. Beauties are dull in color, Mermet washed out and Bridesmaids mildewed. Perhaps La France and Perles are about the best, and there will soon be a lot of these cut from young stock. Ordinary roses sell at 2 and 3 cents; Beauties 8 to 25 with few at the latter figure.

Carnations are a flood, and there is no sale for them. They are usually small, but some disbudded stock, fine for the season, is to be seen; 50 to 75 cents is the usual price, though some extra fancy flowers sell at \$1 and \$1.50, but the latter price is unusual. Lots of one thousand are sold for \$2 to \$4, and we did hear of some being sold at 75 cents a 1,000; probably a man who wanted ten thousand in a lot could get them at this figure.

In miscellaneous stock coreopsis is noted at 75 cents to \$1 per 100, and gladiolus at \$8. Sweet peas suffered severely from the heat, and many are rather short-stemmed; they are worth 35 cents. All greens are plentiful. Business is generally quiet; though most of the out-of-town shipping trade is for commencements there seems little doing in this line in Chicago.

The wife of John Turner of Morgan Park died suddenly the early part of the week.

T. J. Corbrey and family have returned

from California, where they have been making a prolonged stay.

At Niles Center Blameuser Bros. are rebuilding three houses 18x120 and are building a new propagating house 9x120. Adam Harrer is building two new houses 20x125.

At Morton Grove Poehlman Bros. are building a range of nine new houses each 20x140.

Recent visitors: P. J. A. Berckmans, Jr., Augusta, Ga.; A. Dimmock, representing F. Sander & Co., St. Albans, England.

A Basket of Flowers.

The chief value of our illustration lies in the fact in the basket represented use was made of a flower not new, but whose value in fresh cut condition is practically unknown to city florists. The little rhodanthe sold and used so extensively in dried flower work is exceedingly dainty when fresh cut and with its little gracefully drooping buds of white or pink and soft green foliage may be used without stint in connection with the choicest material. For funeral design work the white variety is especially useful. A corner in every florist's place should be devoted to this little gem. The basket was made by George Stumpp, New York.

LINCOLN, CAL.—Chas. M. Silva of the firm of C. M. Silva & Son died last winter, aged 71. The firm will be carried on under the same name by the surviving partner and the estate of C. M. Silva.

Buffalo,

Just as I am penning these words a gentle rain is falling, but not enough to make even a butterfly seek shelter. Since the snow gradually melted away there has been hardly one inch of rain on this arid plain. It is getting serious. Lake Erie is not likely to dry up for a few months, so the city florist is all right, but in surrounding villages where wells are the source of supply there is great trouble and expense to keep the plants alive. Between an abnormally high temperature and want of moisture we are not feeling as good tempered as is our wont. Flowers of all kinds have been rather plentiful for the past week, but not to any great excess.

Decoration Day was a great day. The demand for flowers exceeded all previous experience on that occasion; mostly a cheap article was wanted, but the aggregate of business was large. The plant men are now in the midst of their rush. Many years of experience has taught customers as well as growers that not till the first of June are tender plants safe, and then when it comes it comes with a bewildering rush. From the present outlook the plant trade will exceed all former records.

Our park commissioners asked for, and got with the greatest good will, an appropriation of \$10,000 to erect a few greenhouses for the purpose of raising plants to adorn the parks. This amount sounds very small for a city of our size, but more will no doubt follow. The pity is that our very worthy superintendent, Wm. McMillan, did not ask for this 15 years ago, for he could have had it and treble the amount.

Mr. Gabrielson, who has been in the employ of Joseph H. Rehstock for 6 or 7 years, lately as bookkeeper, disappeared about three weeks ago, leaving no word or trace of his intentions. Everything is all right, simply Mr. G. has vanished and not a soul here can say where he is. Mr. Rehstock will be relieved in mind, as we all will, should any reader of this have the good fortune to run across Mr. Gabrielson in the flesh and well. W. S.

Cincinnati.

The unusual hot and dry weather during the past week has interfered materially both with the sale of bedding plants and with the planting of beds throughout the city. Yet the market florists seem to be busy, and still they complain of the dullness of spring trade. As some of the men remarked, the people seem to have no money for flowers. Geraniums in 4-inch pots are selling for \$1 to \$1.50 per dozen; salvia and heliotrope in 3-inch pots 75 cents to \$1; Phlox Drummondii and verbenas in 2 and 3 inch pots 75 cents to \$1; petunias of good strains 75 cents to \$1; cannas in 4 inch pots 25 cents each; Crozy 35 to 50 according to size; roses from 25 to 75 cents each, according to variety, in pots from 3 to 5 inches.

The cut flower trade has been good during the past week. Flowers of all kinds are plentiful and the quality is good. Roses of all kinds are abundant. Very fine white pæonies are now in, they bring a better price than the red.

The wedding season is at its height. They commenced on the morning of June 1 and have kept up a steady stream ever since. Weddings without flowers would never do, hence the florists have about all they can attend to. There have been no notably large decorations and no occasions worthy of special description, but there has been a big consumption of flow-

THE SOCIETY

AMERICAN FLORISTS

—What we have long needed.—

THE Florists of the United States have for a long time felt the necessity of an organization, national in character, honest and progressive in purpose. Such an organization is now an accomplished fact.

Who are Interested?—The 15,000 people directly and indirectly engaged in the business, are certainly interested in a Society that will study and further their general good; the amateur, lady or gentleman; the lover of flowers in town or country; the gentleman's gardener, will all be interested in our Society, as the whole range of horticulture will be reviewed from year to year, and gardening in all its phases will be discussed in a manner that can not fail to profit all.

Who will be Benefited.—Alike, the Florist, with his acres of glass, and his humbler brother, with a few hundred feet; the decorative florist and dealer in flowers; the manufacturer and dealer in supplies of all sorts; the greenhouse builder and heating apparatus manufacturer, and all those interested in floriculture, whether for pleasure or profit.

The Aim of the Society.—Is to lift up and carry forward all that tends to advance the growth of such a delightful occupation, to collect and diffuse from the best sources information that shall be beneficial to all its members, to care for and instruct all in the best modes of carrying on a successful business, to help those overtaken by misfortune and form a brotherhood worthy of the goddess Flora.

The Plan of Action.—Is to have a yearly meeting at one of the larger cities; in connection with these there will be an exhibition—at such meetings the business of the Society will be conducted, the transactions of the year previous will be presented, and the programme for the ensuing year laid down. The exhibitions will be entirely novel, and of such interest as will be worthy of the Society of American Florists. The desirability of forming either a Hort Fund or a Hort Insurance Company is generally conceded, and it will receive careful thought and prompt action on the part of the Society at its first annual meeting in Cincinnati.

PAGE 1

THE PROSPECTUS OF THE SOCIETY OF AMERICAN FLORISTS.

Practical Papers, short, concise and full of instruction will be read at the meetings, and printed with the reports of the Society each year. No new plant or flower, no device or invention of merit will go unrewarded. Medals and certificates will be given for deserving exhibits. The Society will take especial care to have everything reported in the best manner. The Constitution and By-Laws are in preparation, and will be presented at our first general meeting.

Action Taken.—At a meeting of representatives from eight different States, held in Chicago on June 19th, 1884, this Society was organized by the election of the following

OFFICERS.

- | | |
|-------------------------------------|--------------------------|
| JOHN THORPE, President, | Queens, N. Y. |
| J. M. JORDAN, First Vice-President, | St. Louis, Mo. |
| M. A. HUNT, Treasurer, | Wright's Grove, Chicago. |
| E. G. HILL, Secretary, | Richmond, Ind. |

EXECUTIVE COMMITTEE.

- | | | | |
|--------------------|------------------|----------------|-------------------|
| ROBT. S. BROWN, | Kansas City, Mo. | ROBT. CRAIG, | Philadelphia, Pa. |
| J. C. VAUGHAN, | Chicago, Ill. | ALFRED NEUNER, | Louisville, Ky. |
| ROBT. J. HALLIDAY, | Baltimore, Md. | ROBT. GEORGE, | Painesville, O. |
| B. P. CRITCHELL, | Cincinnati, O. | W. G. NEWETT, | Chicago, Ill. |
| HARRY SUNDERERUCH, | | | |
| Cincinnati, O. | | | |

VICE-PRESIDENTS.

- | | | | |
|-------------------|----------------|-----------------|-----------------------|
| ROBT. H. HEATH, | Canada West. | EDWIN LONSDALE, | Pennsylvania. |
| C. E. ALLEN, | Vermont. | ALEX. MURDOCH, | Pennsylvania. |
| LUTHER ARMSTRONG, | Missouri. | F. R. PIERSON, | New York. |
| A. BRACKENRIDGE, | Maryland. | R. MAITRE, | Louisiana. |
| WALTER COLES, | Delaware. | A. H. BUNDE, | Minnesota. |
| J. D. CARMODY, | Indiana. | GEO. F. LAMB, | North Carolina. |
| A. GONAGHUE, | Nabrask. | CARL JURGENS, | Rhode Island. |
| PETER HENDERSON, | Now Jersey. | W. R. SMITH, | Dist. Columbia. |
| FRANCIS MORAT, | Kentucky. | C. B. WHITNALL, | Wisconsin. |
| C. A. REESER, | Ohio. | O. F. DUE, | Salt Lake City, Utah. |
| MARCUS ELLIS, | New Hampshire. | J. C. VAUGHAN, | Illinois. |

Our First Meeting.—The first meeting will be held at Cincinnati, O., between the 12th and 25th of August, 1885. We can promise even at this early date a more numerous attendance than has ever been accorded to any similar organization.

Our plans are maturing for an exhibition, noble in its conception and differing in character from any before attempted. The interest already manifested by many of the members warrants this positive statement. A schedule of premiums with rules and regulations and a complete list of members to date will be ready early in January.

PAGE 2

ers for the past week, and there is more ahead. All dealers report increased trade for Memorial Day, some of them claiming a very large advance over former occasions. The absence of outdoor flowers was severely felt. It did not make much impression on the rose market, but it sent carnations a-booming. Carnations of all kinds have been and still continue to be of extra fine quality. Quite a number of growers are planting houses of chrysanthemums for cutting next fall, and from the present outlook there will be no scarcity of this popular flower.

The florists will have their annual outing at Woodsdale Park July 25.

Mr. and Mrs. Peterson had an accident last week which might have proved fatal. They were driving along the road when the horse took fright and ran away, throwing the occupants out on a stone pile and bruising them considerable.

Mr. Tom Hardesty has moved his store to the southeast corner of 4th and Walnut streets.

Mr. Geo. Corbett of College Hill has been on the sick list this week.

Last Monday and Tuesday the thermometer stood 100 in the shade. P.

Early History of the S. A. F.

We are indebted to Mr. A. Whitcomb, Lawrence, Kans., for a copy of the prospectus of the Society of American Flor-

rists, issued in September 1884. We present a reduced reproduction of its four pages herewith.

Mr. Whitcomb gives the following as a complete list of those present at the meeting for organization, held at the Sherman House, Chicago, June, 1884:

- J. M. Jordan, St. Louis, Mo.
 - Peter Henderson, Jersey City, N. J.
 - M. A. Hunt, Chicago.
 - Alexander Murdoch, Pittsburg.
 - H. H. Ritter, Dayton, O.
 - F. R. Pierson, Tarrytown, N. Y.
 - Jos. Heim, Jacksonville, Ill.
 - W. G. Newitt, Chicago.
 - Wm. H. Boomkamp, New York.
 - Geo. R. Mumma, Dayton, O.
 - J. D. Carmody, Evansville, Ind.
 - John Thorpe, Queens, N. Y.
 - E. G. Hill, Richmond, Ind.
 - H. W. Buckbee, Rockford, Ill.
 - Luther Armstrong, St. Louis.
 - Chas. A. Reeser, Springfield, O.
 - A. Whitcomb, Lawrence, Kans.
 - Robert George, Painesville, O.
 - Frank Huston, Chicago.
 - R. W. Coglan, Niles Centre, Ill.
 - J. C. Vaughan, Chicago.
- A total of 21 names.

EDITOR AMERICAN FLORIST: In the last number of your paper you have an article in regard to the preliminary work of organizing the Society of American Florists.

It would seem that correct information could be procured on this subject, as nearly all of the parties who were the active workers in organizing the society are still living, and active members of the S. A. F.

A correct record of the facts in regard to the preliminary work of organizing the society would be valuable at this time, and still more valuable in future.

It seems to be generally admitted that Messrs. John Thorpe and E. G. Hill were the first to suggest the idea of organizing a florists' society. Where or when the first steps were taken to organize the society I have never had up to the present any correct information. It was not at the meeting of the American Association of Nurserymen, Florists and Seedsmen held at Cleveland, Ohio, in June, 1883, because there was no such meeting held at Cleveland that year. The meeting of the association in 1886 was held at St. Louis. Mr. Coleman of St. Louis was president of the association in 1883. Mr. M. A. Hunt was elected president of the association for 1884, and presided at the meeting held in Chicago.

At the St. Louis meeting there was much dissatisfaction among the florists at the treatment accorded them by the association, very little time being given to subjects that they were interested in. One afternoon at the St. Louis meeting the members of the association were

Losses by Hail.—One of the first intentions of the Society of American Florists is to provide in the best manner an insurance against loss of glass by hail. To advise the best plans for this insurance it will be necessary that all information regarding losses by hail during the years '82, '83 and '84 be furnished the Secretary as soon as possible. We wish to investigate this thoroughly and ask our friends to report any losses and to state the NAME of the sufferer, DATE of occurrence, quantity and PER CENT. of glass broken. This is a matter of vital importance to the Society and a compliance with the above is urgently requested that the Society may have facts and data as a basis for action.

Who are Eligible.—All Florists, Gardeners, Seedsmen, Nurserymen, Superintendents of Parks, Manufacturers of Heating Apparatus, Greenhouse Builders and dealers in Florists' Supplies in the United States and Canada shall be eligible to membership in this Society."

The fact that the large membership here given of representative men of the trade is voluntary and received almost without effort, proves that with the extended circulation kindly given our announcement through the various trade journals and catalogues we shall procure for our next membership list, the name of nearly every man connected with our business. Your name should be sent to the Secretary, or to the Vice-President of your State, or other officer of the Society and the regular numbered receipt of the Treasurer will be sent. **LET US HEAR FROM YOU.**

Annual Subscription.—The annual subscription is \$2.00, entitling members to all the privileges of the Society. Most of our members so far, wishing to give the Society a good impetus in the shape of an incidental fund, have paid \$3.00 extra, making a subscription of \$5.00. We shall be glad of many other \$5.00 subscribers.

For all particulars address:

E. G. HILL, Sec'y.
Richmond, Ind.

LIST OF MEMBERS SUBSCRIBING \$6.00.

taken in carriages to Snaw's Garden, where each member was requested to register his name and address. From this register the correct date of the event may be obtained. On the way back to the city we stopped at the fair grounds. At the Fair grounds in St. Louis, Mo., in June, 1883, a number of florists collected together, and the subject of organizing a society of florists was discussed. It was proposed by Mr. E. G. Hill that at the next meeting of the association to be held in Chicago the florists take steps to organize a society independent of nurserymen and seedsmen. I have reason to believe that this was the first definite proposition to organize the Society of American Florists.

The question whether the florists would sustain an independent society had been discussed previous to this time by various parties, but no definite action proposed.

I would be glad to hear from others on this subject, and to be corrected if I am in error. J. T. ANTHONY.

Chicago, June 4, 1895.

[Our statement that the first steps toward an organization were taken at Cleveland, O., in 1883 was from information supplied by Mr. E. G. Hill. It is evident that Mr. Hill meant to write St. Louis instead of Cleveland, as the record is plain that the meeting of the old associ-

ation was held in St. Louis in 1883. The meeting of 1882 was held in Rochester, N. Y., so it could not have been a confusion of dates.—Ed.]

St. Paul.

Decoration Day trade was all that could be desired. Shipping trade both in cut flowers and plants was especially heavy, while the city trade was as good or better than last year. Memorial Day was cloudy and wet, consequently sales were light, but for the three days immediately preceding sales were very good.

The supply of cut roses was good, and stock was of fine quality. Carnations were not plentiful, although of fair quality. Outside stock was very scarce, so that roses and carnations were the main dependence for the florist. Some gardenias came in in good shape and were in good demand. Retail prices were maintained at the figures in my last report. While trade was poor with some of the smaller stores, the majority were well satisfied.

Prices have now dropped to 75 cents to \$1.25 per dozen for roses, and 25 to 50 cents for carnations. The supply is abundant and the quality good. In the plant line sales are fairly good. The bedding out season is drawing to a close, and while prices in many instances have suffered severely the aggregate of sales will undoubtedly be larger than in former

years. One feature of the plant trade is very noticeable this year, and that is the readiness with which new things are bought. And in this fact lies the key to the future of the trade. Make your money on specialties, brother florist; have a hobby and ride it, and you can sell your goods irrespective of department stores and travelling fakes and fakirs.

The Parkside Nursery Co. have sent a carload of palms and other tropical plants here to be sold by a large department store at "half price" (?) figures, etc. While some of the palms, the phoenix especially, came through in good condition, many of them are dried up and worthless. The half prices (?) at \$4.89, \$5.48, are about the regular rates charged by the florist for good stock. We agree with the great showman that "people like to be humbugged."

The florist store conducted by C. I. Warren has been discontinued.

L. L. May leaves on the 8th inst. for an extended eastern trip, combining both business and pleasure.

The suit brought by Vilmorin, Andrieux & Co. of Paris against L. L. May & Co. of this city has been dismissed, an amicable settlement having been effected outside of the court.

We have had all kinds of weather lately, the mercury climbing giddy heights one day and plunging into unknown depths

the next. This has necessitated keeping up steam during the night the greater part of the time in cut flower houses.

FELIX.

Philadelphia.

June is here, the first month of summer, and if we are to have any warmer weather than that experienced the past few days the season will certainly be a hot one. For four days straight the thermometer registered over 95° in the shade. This phenomenal burst of heat so early in the season had a bad effect on florists and their flowers as well. In the stores an entire new stock had to be laid in each morning, as flowers would not keep over night and present a salable condition the next day. Beauties, Belles, Meteors, Kaiserins and La France are now the principal roses. Beauties and Belles sell for from \$10 to \$25 per hundred for the best stock. The teas range from 3 to 5, considering the roasting they have had the stock offered is quite good and salable. Carnations are in fair supply, and while rather pale in color, particularly Day-break, are in fair shape and seem to give satisfaction on account of their lasting qualities. There are a great many pæonies offered for sale at from 3 to 4 dollars per hundred; they seem finer this season than usual. Messrs. Lonsdale, Heacock, Miller and Craig have fine stocks. Sweet peas are feeling the heat and are coming in pale and shorter in the stem; valley is scarcer and \$4 is asked for the best.

The Gun Club had a shoot at their grounds May 29, which took the form of a match between two teams captained by W. K. Harris and George Anderson. The Andersons were victorious, and as a result enjoyed a planked shad dinner at the expense of the losing team. The following is the score:

The feature of the match in addition to Mr. Burton's excellent score was the rivalry between the two captains, William K. proved himself to be quite an expert while Anderson said he shot as he did to bring out his team. This was such an enjoyable occasion that it is likely the victors will soon be challenged to a return match and another seat by the loaded table of shad and other good things.

The June meeting of the Florists' Club at Caledonian Hall last Tuesday evening was rather slimly attended. The accommodations at this place are very good and it was voted to hold the meetings here until the completion of Horticultural Hall. The coming convention was discussed and committees were appointed on hotel accommodations, transportation and other matters pertaining to the convention. A committee was also appointed to confer with those having in charge the convention of press clubs of the U. S. and Canada to be held in this

city next week. The press has always treated the craft in such a liberal manner that the club felt it should take this opportunity and return in some way their many courtesies. It is proposed to furnish what flowers and floral decorations the committee can use to advantage.

Mr. Westcott's paper on the most profitable crop for summer, was short and to the point. He said there could not be any one crop much more profitable than another for any length of time, as every one soon got to find it out and then there was more raised than could be sold. He said that roses and carnations were in the main the most profitable crop for summer.

Mr. J. H. Troy of Pitcher & Manda was present and gave an interesting account of the new movement to control the handling of cut flowers in New York City. K.

Confessions of an Amateur.

MY EXPERIENCE IN ORCHIDS.

As an intelligent amateur, orchids have always possessed a powerful fascination for me, not only for their beauty, but also for their element of chance. They are a botanical lottery; one may buy a job lot of dry and withered plants at a merely nominal price, and then, when flowering time comes (if it ever does come, which according to my experience is a matter of doubt) one may find some unique gem among them, that will repay a year's outlay at one stroke. It was with this idea in view that I began to haunt the auction rooms. My friend Mr. Cuttings tried to persuade me to buy a batch of established plants first, telling me I should then know just what I had, but this was a point I specially wished to avoid; I wanted surprises, and I certainly got them. Nothing is more likely to surprise an amateur than the behavior of newly imported orchids, unless it is the behavior of the same plants when they are established.

The first auction I attended gave me several shocks. I didn't see any orchid plants; there were a few trays and cases of dingy-looking bulbs about, and some brilliant lithographs of orchid flowers. An especially brilliant picture was placed by the auctioneer, who gave it a name that sounded uncommonly like a disjointed college yell, and bidding commenced. Finally the lot was knocked down to me for \$17.50, and I found myself possessed of half a dozen clusters of dingy bulbs, looking more like petrified pickles dug out of an Egyptian pyramid than anything else I can think of. However, they were a great bargain, the auctioneer said; several of them were unnamed species, and that night I dreamed of making my fortune in orchids, having discovered in my lot a white cattleya with blooms the size of a theatre hat. I haven't discovered that cattleya yet, chiefly because most of the plants I picked out myself from a crate of unnamed species proved to be epidendrums, worth, so my foreman estimates, about 65 cents a bushel. And it is a singular fact that orchids worth 65 cents a bushel will thrive luxuriantly under circumstances that will prove instant death to orchids worth \$65 apiece.

That reminds me of one very unlortunate experience of mine. I attended an auction sale of rare hybrid orchids from Europe, which aroused a great deal of enthusiasm among amateurs. I was not very well acquainted with these plants myself, but when my friend Mr. Coupous, a very intelligent amateur, kept bidding

enthusiastically for a tiny specimen of the very rare Phalæo-Schomburgkilopsis Ghiesbregkiana I determined to possess that plant at all hazards. It was about the size of a Brussels sprout, but much dingier in complexion, and the professionals told me it would bloom in seven or eight years, if properly cared for. I was very much elated when it was finally knocked down to me for \$385, and wrapping it up carefully, I placed it in my overcoat pocket, preferring to carry it home myself, instead of trusting it to the care of an express company. As soon as I reached home I took out the precious plant, which had become unwrapped in transit, and, handing the cook a bag of globe artichokes I had brought for dinner I retired to the greenhouse, and, in the absence of the foreman, enjoyed the happiness of potting my precious acquisition. It was about an hour later, soon after we had sat down to dinner, that my foreman sent in to ask if he could see me at once. I called him in, and he appeared, in a state of great excitement, carrying the orchid basket containing my new hybrid. I asked him if anything was the matter, and he ejaculated "Matter? It's enough to make a chap feel upset to find a bloomin' old artichoke potted up in an orchid basket. What did you do with that new plant?" I looked at him in speechless horror, when he suddenly dropped the orchid basket, seized my fork, and speared viciously at the dish of artichokes, holding up, before my horrified gaze, my \$385 orchid, carefully boiled, and served with drawn butter. I will draw a veil, as the novelists say, over what followed. Mr. Coupous has several times wondered where I keep my Phalæo-Schomburgkilopsis, but I have never enlightened him, and my foreman always pots up any new plants, without a word of opposition on my part.

I must own that I find it hard to understand orchids from a purely professional standpoint. My friend Mr. Cuttings asked me to come and see a little thing he had in flower, of which he was very proud. I went over, and discovered a plant having the usual dried pickle appearance, bearing a spike of flowers, which, to my eye, looked like nothing so much as a cluster of agitated grasshoppers wearing Blackwell's Island suits of stripes. Several florist friends of Mr. Cuttings' were present, examining it critically. One remarked admiringly: "Just look at that marking." I remarked meekly that the marking was charming, if it wasn't for those dingy freckles on the lip. They all looked at me in a pitying way, and informed me that the markings I referred to as freckles were the distinguishing point, which rendered this particular plant unique compared with others of the same species. I then learned that an orchid which ordinarily has freckles is unique if it happens to omit them, and a fair-complexioned orchid is unique if it adds them to its make-up. Any personal eccentricity will add to its value, and if I can only discover a sage-green orchid that ought by rights to be pink, or something speckled like a turkey's egg which usually appears in bayadere stripes my fortune will be made, and the name of Sharps will go down to posterity hand in hand with that botanical gem.

I cannot truthfully say my experience with orchid flowers is very extensive yet. I had depended chiefly on some rare seedlings, which I purchased under the expectation of having a fine crop of bloom, but Mr. Cuttings told me cheerfully that I needn't expect any bloom from that batch for twelve or fourteen years. I did have

a few flowers on some established plants, but I found that to retain them I must stay up nearly all night picking snails, these creatures having a particular fondness for rare orchids, and I must say that the way in which they neglected a \$2 plant for the purpose of lurching on a \$50 specimen gives one the highest opinion of their intelligence. I mentioned this point to my foreman, but he said he didn't call it intelligence; it was pure cussedness.

From a sordid mercantile standpoint I cannot say orchid culture has been a success in my case. I begin to think that orchid collectors know a valuable thing when they see it, and that a casual amateur is not very likely to find rare specimens in a job lot of imported plants. But there is a good deal of pleasure in orchid fancying, and if only I live long enough to see some of my seedlings bloom and to secure a slackening in the snail crop I shall feel that my incursion into orchid culture has not been in vain.

J. ROBINSON SHARPS.

St. Louis.

At a recent fashionable wedding the decorations were entirely in green and white, the materials chosen being chiefly Bride roses, lily of the valley, sweet peas and smilax. The ceremony was performed under a chime of wedding bells, enclosed in an archway of smilax and roses, bordered with palms, and the reception rooms were very elaborately decorated. The arrangement was by the Jordan Floral Co.

The Judge Says.

Commission merchants cannot delegate authority.—Where a consignment is made to a commission merchant for sale without instruction, in the absence of an established usage to the contrary, of which the consignor has or must be presumed to have knowledge, the supreme court of Nebraska holds (*Burke v. Frye*, 62 N. W. Rep. 476) the consignee's authority to sell cannot be delegated, and its exercise is limited to the place to which the consignment was originally made.

Giving new note cuts off defense.—Where a debtor by promissory note and his creditor meet and have an accounting and settlement, and the debtor gives a new note for the balance due, in renewal of the old note, the supreme court of Georgia holds (*Turner v. Pearson*, 21 S. E. Rep. 104) that the debtor, when sued thereon, cannot, without alleging fraud or mistake, set up, in a plea of payment, alleged credits which ought to have been made upon the first note.

ROBERT T. DEAKIN & Co. have removed from Philadelphia to Ogontz, Montgomery County, Pa.

THE American Association of Nurserymen holds its annual meeting at Indianapolis next Wednesday and Thursday, June 12 and 13. Headquarters will be at the Denison Hotel.

THE HORTICULTURIST'S RULE-BOOK, by Prof. L. H. Bailey, comes to us in a new edition (the third) revised and extended. This work touches on so many subjects that it is impossible to enumerate them all, but it is safe to say that in no other volume can we find such a quantity of valuable information in such a handy form. Chapters on insecticides and fungicides, plant diseases, seed tables and planting tables, cements, glues, etc., plants for different purposes, postal rates, will all be found valuable to the trade, and the condensed form makes it essentially a handy volume. (Macmillan & Co., publishers, 66 Fifth avenue, New York. Price 75 cents).

Catalogues Received.

Peter van Velsen & Sons, Houtvaart, Overveen, Holland, Dutch bulbs; J. M. Thorburn & Co., New York, wholesale list vegetable seed; Dammann & Co., San Giovanni a Teduccio, Italy, bulbs, roots and orchids; S. A. Van Konijnenburg & Co., Noorwijk, Holland, Dutch bulbs and forcing plants; Sunset Seed & Plant Co., San Francisco, Cal., chrysanthemums; Mrs. T. B. Shepherd, Ventura, Cal., retail catalogue plants, seeds, bulbs, etc.; same, wholesale trade list; G. L. Taber, Glen St. Mary, Fla., fruit trees and ornamentals for the south; same, wholesale trade list.

News Notes.

BURLINGTON, IA.—M. H. Davis has opened a floral store here.

TIPTON, IND.—J. H. Weed is building six new houses, each 15x100.

SHELburne FALLS, MASS.—L. R. Fuller intends to soon add a new house 23x50.

SPRINGFIELD, ILL.—The House has passed the Senate bill appropriating \$4,000 to the State Hort. Society.

INDIAN SPRINGS, FLA.—R. W. Pierce, proprietor of Sunset Hill Nurseries, died recently and his business will be discontinued.

WILMINGTON, DEL.—De Voecht & de Wilde have changed their place of business, having bought out Charles Sparks, Garishca Lane.

SANTA ROSA, CAL.—H. Hurlbert, formerly in the nursery business here, is insolvent. His stock has been attached by Mr. Fitzgerald, who will sell out and wind up the business.

EUSTIS, FLA.—The double freeze of the past winter destroyed all budded citrus nursery stock here, and killed to the ground fully 90% of the orchard trees.

ELLIOTT'S ASPARAGUS PLUMOSUS NANUS.

The finest Decorative material grown. Graceful, durable and appropriate.

FOR JUNE WEDDINGS many thousands of yards will be used. This stock is grown to perfection in extensive houses specially constructed for this purpose, and can be shipped long distances without injury. PRICE PER STRINGS, 8 TO 10 FEET LONG, 50 CENTS.

WM. H. ELLIOTT, Brighton, Mass.**Hardy Cut Ferns,**

BOUQUET GREEN.

Laurel and Green Festooning, Wreaths, Etc.

SPHAGNUM MOSS IN ANY QUANTITY.

H. E. HARTFORD, 18 Chapman Place, BOSTON.

There will probably be considerable demand for replanting, and light supply.

TAUNTON, MASS.—Mrs. Lyman Briggs has disposed of the Walker greenhouses to Miss A. M. Porce, formerly in business in Boston, and E. F. Costeller, formerly of Boston, and recently Malden and Quincy, has been installed as manager.

LITTLE ROCK, ARK.—Our spring trade was perhaps 10% better than last year, but the long, cold winter made expenses more. Prices about the same as last year: 4-inch geraniums \$1.25 per dozen, pansies, coleus and verbenas 50 cents per dozen.

MOBILE, ALA.—G. Bitzer, formerly in the employ of Miss Maria Minge, has gone into business for himself on Marine street. The Bayside Nursery has erected 2 new greenhouses, and will put up three more. The same firm will open a retail store in the city.

KEUKA, FLA.—Mrs. Hollister started in the nursery business here recently, and for this season will grow citrus stock exclusively. John A. Germond will grow nothing in nursery stock except camphor trees for this season, but will keep up his nursery stock the same as heretofore. Trade dull here, money tight and scarce owing to freeze of last winter.

BRIDGEVILLE, DEL.—Myer & Son report: "The nursery trade this spring has been larger with us than usual and although the spring is cold and wet stock bids fair to make a fine growth by fall. We have a fine prospect for all kinds of fruit. The peach crop has been somewhat damaged by the rainy weather but yet have enough left to grow up fine and make a nice crop."

DENVER, COLO.—The Decoration Day trade opened up with quite a brisk demand for bedding plants, and it found the florist well prepared, and no doubt would have been a busy time with the boys had not the usual Decoration Day storm set in the day before. The retail stores also looked forward to a large sale of cut flowers, but they also were disappointed. The dealers in the mountain towns who look to Denver for their supply used up pretty well the surplus stock and the demand the next day soon revived the lost hopes. It seldom rains in Denver, but when it does it pours.

San Francisco.

Decoration Day brought an excellent trade in flowers, for though the prices were moderate, immense quantities were disposed of. The day is well kept and celebrated in the city and surrounding towns. M. Lynch of Menlo Park marketed 250,000 stems of sweet peas. Mr. Lynch is building two new rose houses each 20x100 feet.

The recent flower show was one of the best ever held in the history of the society.

☞ The Seed Trade. ☞

AM. SEED TRADE ASSOCIATION.

D. I. BURNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

S. Y. HAINES passed through Chicago on his way to Europe.

Miss C. H. LIPPINCOTT is away on a three months' trip to the Pacific coast.

MESSRS. Northrup and Goodwin are away on a trip to the Pacific coast.

MR. D. M. FERRY will give a dinner to the seedsmen at the Detroit convention.

MR. W. M. MARKURTH, of the Harnden Seed Co., Kansas City, was in Chicago this week.

MR. J. J. HARRISON of the Storrs & Harrison Co. has recently returned from a trip of several weeks on the Pacific coast.

MR. BROWN of the Brown Bag Filling Machine Co. will have one of their machines on exhibition at the Detroit convention.

THE assignee of Z. DeForest Ely & Co. has issued a statement to creditors in which the assets are appraised at \$38,553.28 and the liabilities estimated at \$81,638.32.

THE ONION and other seed crops are more widely distributed than usual in California, special conditions of soil, land values and other causes evidently supply reasons for the changes.

THE THIRTEENTH annual meeting of the American Seed Trade Association to be held at Detroit next Tuesday, Wednesday and Thursday (11th, 12th and 13th) promises to be an unusually interesting and valuable one, and the attendance will undoubtedly be large.

THE FOLLOWING gentlemen will go to the seedsmen's convention at Detroit via Chicago: Frank Emerson, J. O. Robinson, Col. King of Minneapolis, L. L. May of St. Paul, S. F. Leonard, John Clark (with Mr. Leonard), Mr. Minglestorf of Kansas, H. W. Buckhee.

CALIFORNIA seems second only to Jersey for mosquitoes; even a tough-skinned seedsmen could hardly be blamed for tiring occasionally when roguing a sportive variety like American Belle, if every time he plunged deep into a volunteer crop of it he came out black with skeeters, now could he?

BURPE'S new dwarf sweet pea Cupid, originated by C. C. Morse & Son, Santa Clara, Calif., who are growing the seed this season, is in fine condition on their grounds. The plants of this grand novelty in the rows of beds do not stand over 10 or 12 inches high, and present a mass of pure white bloom which at a short distance might easily be mistaken for beds of snow white pansies, such a mass they make. It is certainly a distinct break in sweet peas and sure to create a sensation horticulturally when introduced.

THE OUTLOOK for the onion seed crop in the Santa Clara valley has improved during the past twenty days. With clearer dry weather the blight or mildew which had quite seriously affected a few pieces has evidently been checked and all the onions even in the affected fields are now doing well where not actually destroyed by the blight. The second seed bearing stalks are in some fields coming stronger than the first, indicating

healthier conditions at present. Undoubtedly the early and long continued rains worked a damage of 10 per cent or so on the average. The onion acreage is believed to be large and although the crop has still five or six weeks to the safety line yet with fair growing conditions there should be cleaned up a sufficient supply for all in the trade, unless some of the ambitious brethren sit up o' nights to work it off.

DO YOU WANT a complete alphabetical list of carnations in commerce in America, with name of introducer, date of introduction and brief, accurate description of each? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

WANTED—Reliable, sober man; must be first-class and furnish good reference. Must understand rose, carnation and mum culture. Address H. P. SMITH, Piqua, O.

WANTED—A man that understands growing ferns, palms, carnations, violets and chrysanthemums. Must be well recommended. Address IRA G. MARVIN, Wilkes-Barre, Pa.

FOR SALE—Second-hand florist's refrigerator, used one year, in perfect condition, at reasonable rate. Address J. J. McMANNON, Lowell, Mass.

FOR SALE—One Allerton welded large fine boiler. One 16-section Golda boiler. One water back. Can be seen in running order. LEWIS TURNER, Kenosha, Wis.

FOR SALE—3000 feet Hitchings heavy 4-inch water pipe, with lot of valves, fittings, expansion tank, etc. Also one each Hitchings 16 and 17 boilers. THE FLORAL EXCHANGE, 614 Chestnut St., Phila.

FOR SALE—Our entire stock of Palms, Ferns and Decorative Plants; six 150-foot houses of the finest decorative stuff in Western Pennsylvania at your own price; it will pay to come and see it if you want good stuff cheap; must be sold before June 15th. JOHN R. & A. MURDOCH, 508 Smithfield St., Pittsburgh, Pa.

FOR SALE—Large and complete greenhouses (with land) in Harrisburg, Pa. Within 10 minutes of heart of city; main line trolley cars pass the door every 15 minutes. Business wide and established for years—this has been held together since the owner's recent death. Everything in good shape. Property to be sold to settle estate. A first-class chance to competent man desiring to do large business. Address W. A. McCLINTOCK, Administrator, Harrisburg, Pa.

W. F. DARBY, her Atty., Steelton, Pa.

FOR SALE OR RENT.

My greenhouses on North Western Ave., Chicago; 15,000 or 30,000 square feet of glass. Plenty of stock. For particulars address A. T. JACKSON, Station X, Chicago.

FOR SALE OR LEASE.

Three greenhouses with valuable grounds; the best place in this country for a man with some means. Address WM. SPRINCBORN, Dubuque, Ia.

FOR SALE OR LEASE.

Seven greenhouses heated by steam, new boiler, underneath and overhead pipes, houses located on the main street, street cars pass by the door from all parts of the city; will sell houses and give long lease on ground, or will sell both. Will sell stock. Reason for selling, other business. Anyone wanting to purchase a good paying business will find it to their interest to write T. E. KEITH & Co., 1700 Kansas Ave., Topeka, Kan.

For Sale or Rent.

My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 48 lots or 2 1/2 feet front on Belmont Ave. by 700 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 110 to 240 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the largest of the kind in Chicago. A good chance for some young man with some means, or for a corporation; and as I wish to retire from business, it can be had reasonable, and on easy terms. If rented, a long lease can be given.

AUGUST DRESEL,

Belmont and Western Aves., Chicago.

Assignee's Sale.

By virtue of a DECRETAL ORDER, made and entered of record in the County Court of Cook County, for the sale of the property and effects of the estate of Joseph T. Anthony an insolvent. Notice is hereby given that sealed bids or proposals for the purchase of all and singular the goods, fixtures and assets of said estate (exclusive of moneys, credits and outstanding accounts) and which consists of Greenhouses, situated at No. 3425 Prairie Avenue, Chicago, Ill., and the entire Floral and Horticultural Stock herein contained, all tools and implements used in the business including horses, wagons, etc., will be received by the undersigned at his office, No. 3425 Prairie Avenue or at the office of his attorney, George Sawin, Room 38, Howland Block, 134 Dearborn Street, Chicago, Ill.

An inventory of said property can be seen and full particulars given by calling upon either of the said persons. Bids to be inclosed in sealed envelopes, addressed to either said Assignee or said Attorney and such envelopes plainly marked "Bids for Stock." Bids can be received as late as 4 o'clock p. m. June 25th, 1895, and will be opened by said County Court, Saturday, June 29th, at 10 o'clock a. m., should said Court be in session. If said Court is not in session at the above named hour, said bids will be opened at the first session thereafter at the same hour, at which time said bids will be acted upon by said Court.

Inspection of said stock is invited.

JOSEPH A. MERRIFIELD,

Assignee of Estate Insolvent of Joseph T. Anthony.

GEORGE SAWIN, Attorney,

Room 38, Howland Block, 134 Dearborn St.

Cleveland.

A short time ago a certain prominent and popular business man of Cleveland died after a short illness. A day or two prior to his demise one of his business associates went into a florist's establishment and made some inquiries concerning funeral flowers, and finally placed an order that to his mind embodied all the desirable attributes of such a piece of work. It was to be emblematic of the business in which the deceased had been engaged, and it had occurred to the would-be purchaser that nothing could better represent that idea, than a floral horse's head! But being a far-seeing business man, accustomed to keeping his eagle eye on the dim and uncertain future, and knowing that such a novel and original design might present some difficulties to a florist when it came to working out the idea, he had thought it best to take time by the forelock and get things moving in good season! The unhappy florist dodged the issue as long as possible by suggesting that the man might get well, but without success. The business man knew what he wanted and pretty nearly when he wanted it and so the florist had to go ahead with the monstrosity. It seems to me that for downright grim, ghastly, provident, cold-blooded unsentimentality this party is entitled to the pie foundry. But about the time that a sufficient quantity of black cloth had been laid in, and while the florist was racking his brain to obtain a life-like wire frame and fiery and spirited glass eyes to go with the same, the order was changed for something not quite so startling. Possibly the man of unique ideas was sat upon by his colleagues.

More humorous but less ghastly was the conceit of a colored lady who wanted a wreath and insisted on having it lettered: "The gates of Jordan have now been lifted."

Planting out has been so long delayed that it is very doubtful if that branch of the business will develop any great activity this season. A few florists report business fair, others—and the majority—complain somewhat. Florists in the vicinity of the cemeteries were of course rather busy on Decoration Day, but this branch of the trade is decidedly not the most profitable. Average humanity with average wealth tends to spend money for its own gratification, or spends it when there is some hope of return in some form. And after the first outburst of grief is over and the late Mr. Smith has become a month, or six months, or a year late, then the sorrowstricken one begins to find that "flowers fade so soon," or "it's so far," or "so hot," or Heaven knows what, the upshot of the matter is the same, that in spending money for cemetery purposes people look for low-priced stock for planting out purposes, and among the buyers the personnel is continually changing; familiar faces drop out and new ones appear, often at very short intervals.

It is rumored that Robert Opitz, doing business under the title of "The Cleveland Floral Company," has sold out to a Mr. Schneider, a florist formerly of Ithaca, N. Y. Mr. Opitz was not a florist, but thought he would like to try anyhow.

rists' Society elected the following: A. M. Lewis, president; Mrs. R. Mauff, vice-president; E. Porter, treasurer; A. Kobankie, recording secretary; H. H. Given, corresponding secretary.

Lewis, Berry & Loken have leased the Westminster greenhouses for a term of years and have adopted "The Denver Florist Co." as a firm name. They have erected a neat conservatory in the rear of their store at 520 16th street and are doing a good business at their new stand.

G.

The Omnipresent Orchid—A Frenzy.

I've sung full many a simple flower, my lady's ear to please,
Of lilies, gillies, daffodils—machine-made rhymes, like these.
But now she wears odontoglots amid her rippling hair
And dendrobes deck her filmy gown—confusion take the pair;
For where's the poet who can rhyme a cypripedium?
Before such pagan polyglot the muse herself were dumb.

She talks of deudrochilums as the sweetest flower that blows,
And thinks a chysis fairer than the poet's red, red rose;
But who can rhyme cecolygne, or sing a tuneful strain
With phalenopsis for its theme, and vanda its refrain?
Or why should masdevallia with a sophronites lurk
Till a calopogon aids it to commit its deadly work?

Alack, those deadly, direful names are ringing in my brain—
The very thought of orchid brings a weariful refrain
Of cattleya and calanthe, with a catasetum proud
While schomburgkia's arms enfold me in an orchidaceous shroud;
They stalk like spectres round me, clad in names of ghastly sound,
Till the poet, raving madly, siuks a maniac on the ground.

—From the unwritten poems of a botanical bard.

St. Louis.

Decoration Day found the market with a good supply of flowers and good demand, every florist in town was busy. The only scarcity was in white carnations; the wholesaler could not fill all of his orders. A good supply of roses came in of all kinds; good stock brought 3 and 4 cents, Beauties 15 and 20; carnations 1 cent red or white. The florist used to look to June for a brisk demand for cut flower work, but that is a thing of the past, and June must be counted in with the dull summer months, as the flowers will not be permitted at the school commencements.

The petition barring all commission men from selling to the fakir has gone the rounds, and was signed by all the legitimate florists in St. Louis.

Now then, let the grower come to the rescue and refuse to consign to a wholesaler who sells to the fakir. When the wholesalers saw the petition they got white in the face and said they would sign it at once. But will they live up to it? They claim that they would be losing money by not selling their stock to the fakir. I say they would make more money by not selling to them. The whole thing came about in this way. About a week ago several florists who had sold out the stock bought in the morning, went back after more to the commission man; all sold out. The florist paid 3 and 4 cents for his stock—the fakir got the same stock for 1 cent. The florist was willing to pay 3 and 4 cents for more stock, but could not buy any, as it was all sold to the fakir. That's how the petition came about, and it was quickly signed by all the florists. One grower sent in his stock the other day marked "not to be sold to the fakir." Now brother grower, fall in line and do the same thing, and you will make money by it; try it, and see how it will work. The legitimate florist and the grower must be protected in some way, and that the only way out of it; the wholesaler has it all his own way. A meeting of all the florists who signed the petition was held June 4 at the office of the Chandler Floral Co.

The bowling club last Tuesday night rolled 3 games at the new alleys, corner 18th and Park. Two teams rolled, one was called the Japs and the other the Chinese. The Japs won. E. Schray of the Jap team made 247, the largest score made. Alex Waldbart had 6 straight strikes the last game, but fell down the last four frames, and his score was 218, the next best score. The club will bowl every Wednesday night at alley corner of Compton and Park avenues.

J. W. North was the busiest man in town Decoration Day; being a G. A. R. man he got all the work and lots of it.

Chandler Floral Co. are on the lookout for a new location; their present place is to be torn down next week. Should they be unable to find one they will close for the summer and open up in September downtown. J. J. B.

New Fuchsia LITTLE BEAUTY. 50,000 Ready. The best marketing variety ever introduced; comes into bloom early in March; no collection complete without it. Seed for circular. When writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

Worcester, Mass.

Memorial day trade was fully up to everyone's expectations and it took some tall hustling to get the orders filled on time; it is gradually increasing, and it won't be long before we will have to work two days and nights without a let-up. As it was, orders were refused all day Wednesday, partly on account of the uncertainty of the supply and partly for lack of time.

The increase over last year's trade in flowers is estimated at 20 to 25%, but the plant sales run lower than in 1894; of course the supply was short although more stuff came in than was expected; some of the farsighted growers built temporary frames over the deutzia and in this way brought it in about right and also saved it from Jack Frost.

Carnations came in in large quantities but not enough to go around, they brought 50 and 75 cents a dozen. Lange's house of pink and white stock was a great helper and sold for \$1.50 per dozen. The supply of roses was large and almost equal to the demand at \$1.50 to \$2.50 per dozen. Other stuff sold at slightly advanced prices. Longiflorums brought \$3.00.

There was a big increase in the call for bouquets and fully one-third of the supply was worked up in this way; next to bouquets the call was for loose flowers. Small plants went fairly well but anything large than a 6-inch pot sold slowly.

The soldiers' monument was decorated by the scholars of the two high schools and a very pleasing arrangement resulted; most of the stuff was contributed by the local florists. The weather was warm and clear.

Since the 30th trade has held up very well, considerable funeral work being turned out. We have had considerable rain and outside crops have been greatly benefited.

A. H. L.

Lenox, Mass.

The Lenox Horticultural Society will hold their first annual rose exhibition at the Assembly rooms, Lenox, on June 26 and 27. H. Wookey, G. Ferguson, and A. J. Loveless, form the committee of arrangements. The society has done much to educate the public taste in horticulture, and with this end in view they will endeavour to make this exhibition an interesting object lesson to all lovers of the queen of flowers. List of premiums can be obtained of A. H. Wingett, secretary.

Red Spider Can't Live

WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD,

Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.

Yours truly, E. G. HILL & CO.

Price, \$1.00 each, prepaid. TRY IT, AND RETURN IT at once. If not satisfactory, and your money will be sent back.

Vaughan's Seed Store, Box 688, Chicago.

Rochester, N. Y.

Decoration Day was a scorching hot day, but still large crowds of people rode to the cemeteries from early morning until night and many thousands of bedding plants were disposed of by the dealers. The sharp competition caused prices to drop below the paying point, and as a result, although as many or more plants were sold, the cash received for them does not compare favorably with other years. Cut flowers of all description were sold out clean and have been short in supply ever since, white carnations in particular are very scarce, also good roses; the effect of the extreme heat of the past week shows on them. Lily of the valley from outdoors is over and cold storage pips have to be relied on from now forward. Outdoor stuff is getting more plenty. Iris, pyrethrum, pinks, pæonias, spiræa, etc. are used in quantity. Outdoor roses of the H. P. class are seen here and there. Trade is taking a decided summerish aspect, with nothing going on but a few funeral designs now and then, and the storekeeper gets ready to take his summer vacation earlier in the season than usual, that is if he is lucky enough to have a bank account in his favor.

In the matter of assignment of Edw. R. Fry a schedule was filed in the county clerk's office June 3, showing debts and liabilities of \$11,281. The nominal assets are \$8,007.10, actual value \$5,397.12. The preferred creditors are Eliza Robinson \$265, David Todd \$400, and J. W. Keller \$1,000. All the daily papers had the latter name as J. B. K., which is entirely wrong; neither J. B. K. personally nor the firm of J. B. Keller Sons had any large dealings with Mr. Fry, only occasionally obliging each other in cases of emergencies with a small amount of flowers or plants. J. W. Keller is our local commission dealer and if he should have to lose even a part of the amount due his earnings since starting into business in December last will be materially reduced, but he takes it rather cheerfully, saying that it is his business to accommodate the grower and dealer both, in every possible way, but expressed the hope that no more will ask him for accommodation in this particular line, for a while at least.

On Monday last Mrs. E. R. Fry reopened the store again, having made satisfactory arrangements with the assignee, Mr. John R. Fanning, as to store rent and fixtures and she will continue the business at the old stand with Mr. Fry as general manager.

The entire stock in the greenhouses of White Bros. was sold at public auction on June 5 by the assignee. J. B. K.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

SYRACUSE POTTERY CO. OFFICE: 403 North Salina Street, SYRACUSE, N. Y.

WEST GROVE, PA.—Geo. M. Roney has just started in the florist business here.

NORWICH, CONN.—Geo. F. Brooks has started in business here with two houses, about 20x80.

KANSAS CITY, MO.—The park commissioners have decided to beautify the west bluff, overlooking the Union Station.

PINE BLUFF, ARK.—Mrs. C. A. Starr has started in business here as a retail florist; her location is near Bellwood Cemetery.

SALT LAKE CITY, UTAH.—Richard E. Evans is building two new houses 122½x20 for roses and carnations at his Poplar Grove establishment, which will make it the most extensive place in Utah. Mr. Evans reports business good and stock in fine order.

Orchid Culture and Hybridization.

BY ROBERT M. GREY.

[Read before the New York Florists' Club June 10.]

Very few works have been written on the culture of orchids in the United States, and those of foreign publication, while applicable to the country in which they were written, cannot be followed here without due allowance for difference in climate. The severity of our winter and extreme heat of our summer demands different treatment regarding watering, syringing and airing, and in many instances, different potting material as well.

It is only within the last few years that orchids have been cultivated extensively in commercial collections here, and until recently the uncertainty of obtaining them for orders at short notice has compelled the florist to discourage their sale more or less. Where they are properly handled, however, in decorative or design work they are always highly appreciated. * * *

Orchids may be separated into two classes: "Terrestrial," which includes all those found growing naturally on the ground, deriving their sustenance directly from it, and which are found distributed over both continents, in all but extremely cold or arid parts, and "Epiphytal," which are only found in moist, tropical countries, generally attached to rocks and trees for support, with very little compost to nourish them, as they derive their principal sustenance from the atmosphere in the form of carbonic acid, etc.

As a general potting compost for terrestrial orchids, such as *Cypripedium* insignis and allied forms, *Coelogynes*, *Calanthes*, *Cyrtopodiums*, *Bletias*, *Disas*, *Phajus*, *Orchis*, *Thunias*, *Lycastes* and plants of like description, I find chopped peat fiber, sod and sphagnum, equal parts, with a little sheep or well rotted cow manure added, makes suitable material. In potting one-third of the pot space should be devoted to drainage, covered by a layer of sphagnum to keep it clear. The roots must be carefully distributed and the soil worked in carefully and rather firmly about them, leaving the surface a little below the rim of the pot to allow room for water. The compost must be kept quite moist when the plants are growing, and not altogether dry when at rest, except in cases such as *Calanthe*, *Pleione* and *Thunia*, which are deciduous in root and foliage; for these water must be gradually increased and diminished as the plants start and cease action; when at rest they require no water.

These suggestions must be taken as general; many individual species require special treatment, that experience alone can teach us.

Epiphytal orchids, the most useful class to cultivate, require an open, porous compost, and at least one-half of the pot or basket space should be devoted to good clean drainage, consisting of potsherds or charcoal. A compost of one-half or two-thirds chopped live sphagnum—the coarse variety—and peat fiber well mixed together forms a good general mixture for most species.

The quantity of water necessary depends a great deal on the genus or species in question.

Cypripediums are always more or less in action and need water whenever the compost appears dry on the surface, at all seasons.

Cattleyas and *Lælia*, with many species of *epidendrum*, need plenty of water and syringing when growing. As the growths mature the compost should be let dry out often (except in the *C. intermedia* section, *L. elegans*, etc.), but syringing over the foliage will be necessary to keep the plants from shriveling. I grow my *cattleyas* and *lælias*, without exception, in cedar or cherry baskets, no pots being used, in compost consisting of fern rhizome and sphagnum, intersected with lumps of charcoal, and find they require less attention, do not suffer from over-watering, and ripen up better for flowering.

Dendrobiums enjoy copious syringing when growing, but not too much at the roots, and when at rest syringing alone is generally sufficient. They nearly all do well in pots or baskets; the pendulous sorts should always have the latter.

Odontoglossums, *masdevallias* and a few *oncidiums* require plenty of water at the roots at all times, in fact the compost should never be allowed to become dry, even when the plants are resting.

*Oncidium*s like a free, open compost; it may be kept open by inserting nodules of charcoal through it; the plants do best in baskets or the smaller growing kinds on blocks. As a rule they do not like too much water at the roots, but enjoy syringing overhead at all seasons.

Phalaenopsis, *vanda*, *ærides*, *anagræcums* and *saccolabiums* grow best in chopped sphagnum alone, and need an extra amount of drainage, with only enough compost to retain moisture. They should have plenty of water when growing, during summer, and should not be kept dry even when at rest. Syringing in bright weather is always beneficial. The small growing sorts do best suspended from the roof in baskets, the larger ones in cylinders or pots.

When we consider the vast territory over which orchids are distributed, the differences in temperature, amount of atmospheric moisture, altitudes and natural growing seasons, connected with the

exposed or sheltered position in which the individual plants are found growing, it is surprising to find what a large majority of them yield readily to the skill of the cultivator, and adapt themselves to the artificial conditions of our conservatories, often totally foreign to that of their native habitats. It will easily be seen that in order to make a success of orchid culture and grow the many different species to perfection, about four departments in which special treatment and temperature can be given, will be necessary.

The best houses in my estimation—except for odontoglossums, which I will mention later—are those with span roofs of eastern and western aspect. They get the early morning and late afternoon sun, while at mid-day when the temperature is naturally at its highest point, the sun strikes both sides at an oblique angle, thereby causing a very slight rise of temperature within, consequently requiring less ventilation in cold weather, and the moisture is easier retained.

The structures may be any length required. The best width is about 19 feet. This allows two side stages of three feet each and a center one of seven feet, with two paths of three feet each. A space of three inches must be given between the back of the side stage and the wall to let the heat pass freely up along the glass; the stage should be built double, one above the other, with an intervening space of six inches to prevent the direct heat from drying out the plants in winter. It enters out into the path where it becomes assimilated with the moisture of the house. The height of the house to the ridge should be ten feet, and to the eaves four feet. The ventilators should be the same as those used for other plants; side ventilation is useful in summer, but it is not absolutely necessary.

The temperatures and requirements of the several departments should be governed as follows:

The East Indian or warm house has a temperature in winter 60°-65° F. by night, 70°-75° by day, with a gradual rise to 75° night and 85° day, or even more with solar heat and ventilation during summer. A good quantity of moisture must be given and may be supplied by covering the benches with ashes, gravel or sand, and keeping them and the floors wet down with the hose several times during the day. A hygrometer, or moisture register, will give the quantity of moisture; in winter it should register 70° to 75°, or a little more just after damping, but should not remain long above 85° at any time or it will cause wet spot. In bad weather 70° is enough.

Ventilation is an important point to be considered in orchid growing, and should be given in greater or less quantity night and day to keep the atmosphere in action.

This department is for phalaenopsis, warm angræcum, vandas, dendrobiums such as *Dalibousianum*, *formosum* and *Phalaenopsis*; *Eulophiella Elizabethæ*, warm cypripediums and odds and ends requiring a great amount of heat. These plants require a light shading in winter to protect them from direct sun; a light coat of white paint or wash should be applied with a flat brush. In spring a heavier coat is necessary, and the latter part of April a rather heavy application will be found necessary.

The Brazilian or cattleya house does not need quite as much heat as the preceding, and during winter should range from 55°-60° by night and 60°-65° by day, with an increase in summer to 65° or 70° by night and 75° by day, or, with sun and air, 85°. The hygrometer should

register about 70° in winter, or a few points more after damping, allowing more or less air at all times, as weather permits. This department is used for cattleyas, *lælias*, cool vandas, a majority of the cypripedes, brassias, epidendrums, a few *cœlogynes*, *miltonias* of the *cuneata* and *spectabile* section, *M. vexillaria* during winter, and other plants of like nature. Most of the plants of this department may be grown equally well in the stove house, with palms, crotons and ferns and are greatly benefited by its natural moisture. The glass requires little or no shade during mid-winter; about the first of February a light coat of wash should be given to keep the leaves from scorching, and in April a heavier application will be found necessary to keep down the temperature. Close, stagnant atmosphere must be avoided, especially in wet weather, or the young growths are liable to damp off.

The oncidium or intermediate house requires a temperature about like the preceding, or a few degrees less. The plants need more solar light, less atmospheric moisture and more frequent syringing over the foliage to perfect their growth properly and insure sound tissue capable of giving good flowering results. This department is best adapted for dendrobiums that need a cool resting season, such as *D. aureum*, *crepidatum*, *Findleyanum*, *Farmerii*, *nobile* section, *infundibulum* and *Jamesianum* during winter, most of the oncidiums, *Vanda cœrulea*, *cymbidiums*, *Cœlogyne cristata* in winter, *Lælia majalis*, *sobralias* and current genera.

The odontoglossum, New Granadan or cool house, is one of the most important; it is used for plants from cool regions and high altitudes, such as *Ada aurantiaca*, *Epidendrum vittellinum*, *odontoglossums* of the *crispum*, *luteo-purpureum*, *Insleyi*, *Rossii* and *Harryanum* section, oncidiums of the *macranthum* section, *masdevallias* in general and during summer, *Dendrobium infundibulum* and *Jamesianum*, *Lælias harpophylla* and *monophylla*, *Miltonia Roezlii*, *phalaenopsis*, *vexillaria*, etc. In erecting a house for these plants a lean-to (or half-span) of northern aspect will be found best, and in order to protect it still further from direct sun (providing no natural sheltered position offers) a stone or brick wall, extending 8 to 10 feet above the apex of the roof, should be constructed, and will be found to assist greatly. The dimensions of the house should be 10 feet in width, 8 feet to ridge and 4 feet to the eaves. The stages 3½ feet each, and a 3-foot path. The shading should consist of strong canvas, attached to a roller at the bottom in such a manner that it can be raised or lowered at will, as the weather demands. The shade should be raised 15 to 18 inches above the glass, on a light framework, so as to admit cool air to pass between it and the glass. The temperature must be kept as low as possible in summer, and 50° to 55° by night and 60° to 65° by day in winter. A humid atmosphere must be retained by keeping the floors and benches wet. The hygrometer may range from 75°-85° in winter, using the lower figure for wet weather. Fresh air must be admitted at all times to promote atmospheric action, or the young growths will damp or become spotted. Houses constructed partly below ground are not to be encouraged; they collect stagnant air, which is unfavorable to plant growth.

In buying plants, care should be taken not to select those which are infested with scale or with poor eyes. I prefer newly imported plants in good condition to so-called "established plants," in which most

of the latent eyes are dead, or which are constitutionally exhausted, and take several years to resurrect and bring back into flowering condition. With newly imported plants the dormant eyes are generally in good condition and respond quickly on being brought into the warm, moist atmosphere of the greenhouse. On receiving newly imported plants they should have all the bruised and decayed parts removed; after carefully sponging them over they should be potted up and given similar treatment to their better established brethren, except that syringing should take the place of watering to some extent until they start action. Water should not be allowed to stand in the shoots of vandas, or plants of like nature, until they become semi-established; if in shriveled condition they absorb it and generally decay. Much more might be said on this inexhaustible subject would time permit, such as injurious insects, disease of tissue, the causes, etc.; before closing I would like to say a word on hybridizing without, however, going too deeply into their minute vegetative structure.

A cattleya capsule contains thousands upon thousands of minute seeds like dust. Should 10 per cent of the capsules ripen and the seeds germinate and grow the forests would be teeming with them and I fear very little else. This, however, is not the case, and of the very small percentage that does grow very many become the prey of natural insect enemies. The reproductive organs of orchids are so arranged that excepting the *catasatum* family, a few botanical species and inferior varieties of *Dendrobium Brymerianum*, *Lælia virens*, *Schomburgkia marginata* and *Cypripedium Schlimii*, very few are capable of self-fertilization. In their natural habitats the work is almost entirely carried on by insects of various orders. From my own observation in U. S. of Colombia I noticed a great deal of this work was done by various species of the bumble bee. In seeking the nectary the anther is removed and the pollinia adhering to the thorax is carried to and deposited on the stigma of the next flower visited and often on several others.

With all these natural agencies it is surprising how few pods are perfected, and how very rarely natural hybrids result from it. The principal work of hybridization in this high order of plants appears to have been left for the hand of man, for his benefit, pleasure and wisdom in selection.

Orchid hybridizing is as simple as that of any other order of plants. The pollinia is contained beneath the anther at the apex of the column; by inserting the sharp point of a lead pencil in below it and drawing it gently backward against the rostrum the anther will be removed, and the pollen will adhere to the pencil point; it is then only necessary to insert it on the stigma of the flower to be crossed or hybridized, and the work is completed. The stigma consists of a viscid, shallow cavity (except in cypripedes, where it is convex and smooth) located on the underside of the column, just below the anther.

In hybridizing, species should always be selected from the same genus, or one of like construction. For instance, a *masdevallia* should only be used on *masdevallias*, while cattleyas may be fertilized by *lælias*, *sophronitis*, or *epidendrums*, and vice versa, their general construction being alike. And in the genus *cypripedium* the same section should be used; otherwise they rarely give perfect results, often resulting in poor issue or crippled flowers. Judgment must be used and only

good flowers selected, and plants with vigorous constitutions chosen, which will be an improvement on those already in cultivation. The fertilized flower should have a label bearing the name of the parents, with the date, attached to the stem, so that a clear record up to the time of flowering may be afterwards carried out.

When the capsule or seed pod is ripe the seed should be carefully dusted on the surface of the plant belonging to the same genus as itself, so that it will receive proper treatment as regards water, temperature, etc. It takes the seed from 3-18 months to germinate; therefore a plant must be selected that will not require potting for some time and one on which the surface material is in good condition. Newly potted plants should not be used to sow seed on for two or three weeks after potting, as the surface on coming in contact with the moist heat of the house may be attacked with fungus, or through other reasons decay; in either case the seed would be lost.

Orchid raising from seed, when properly conducted, affords a great deal of pleasure, even though it does often take several years to obtain the result of one's labor. Some species mature sooner than others. From the same seed pod I have seen a difference of over a year in the germination of the seed. *Disa x Veitchii* is said to have flowered 21 months from sowing; cypripedes take from 21-30 or more months; cattleyas take from 4-5 years, or often longer, to reach the flowering stage. Dendrobies and phalænopsis require four or five years, masdevallias and odontoglossums about four, and phajus three to four years; all under good cultivation. To watch the tiny germinating plantlet as it passes through the different stages of babyhood, and so on to the expanding of its first flower, affords an unlimited amount of pleasure and, if care has attended the selection of good flowers for the work, also a just reward. The field open at present to the hybridizer is large. I trust many of you will take advantage of it before too late, and that the best results may attend you.

Hints About Art in Gardening.

PART II.

I have made bold to say in the previous paper that the colored pattern in a geometrical flower bed has nothing of art in

HIBISCUS AND PHLOX

it because such a thing was never suggested by nature. It is far from my purpose, however, to condemn this kind of

work in gardening; I am, on the contrary, quite sure that under certain circumstances it possesses some few merits, but I do not propose to say one word about that; in preference I would like to talk

ROCKERY IN IRREGULAR GROUND.

about something else which I am convinced is infinitely better; that is, the variety of form in the garden which is more or less an element of color harmony.

Suppose, then, to prove the truth of my statement, we turn our attention directly to the particular plants and shrubs which will offer the variety we think we need. The hibiscus, whose foliage and flower are quite as ornamental as those of the azalea, is a desirable plant for the garden although it is not hardy in the north; but

HYDRANGEA, GLADIOLI AND ASTERS.

that does not matter, for the garden needs certain plants in tubs or boxes for the sake of variety. It is uninteresting to see the flowers in the little front yard, or the garden all spread out on a dead level; the eye seeks diversity and change. If every garden was as flat as a billiard table, and every plant in it grew exactly eighteen inches high, we might suffer with some new malady superinduced by plant monotony! The spreading green lawn, however, with its close clipped velvety grass is not monotonous, it is a rest for the eye. It is a fundamental principle of art that somewhere in a design the eye should be given a resting space; so the lawn should not be spoiled by cutting a flower bed in the middle of it as this must result in disturbing the rest which the eye needs; but this restful effect should not extend itself into the flower beds, and it must not be supposed that if the garden is quite level it has reached a certain state of artistic perfection. If we cannot

lift plants up any other way, so there will be more than one plane to the garden, it will be best to have a few in tubs. Variety of form should extend itself to the very structure of the garden. The beauty of some flowers cannot be seen unless they are lifted to the level of one's eyes; perhaps a terrace may do this, or a group of rocks in some irregular bit of ground. Prettier than many of the formal grounds of the villas in Italy are the tiny terraced gardens at Amalfi which hang on the sides of the little hills sloping toward the blue Mediterranean; here the peasant has been compelled to scrape together his little patch of earth and wall it about so the rain cannot wash it into the sea! Our level gardens and level plants are not half so picturesque. The advantage of a rockery or a few plants in tubs I need not urge; the garden must lose something of variety without them.

But to return to those plants which also furnish the garden with variety; the

ASTERS IN RELIEF AGAINST EVERGREEN AND RICINUS.

helianthus is capable of giving us some stunning effects both in color and form, if we will only relieve our minds of the foolish notion that it is a homely country garden flower. I allude to the varieties argophyllus, cucumerifolius, globosus fistulosus and multiflorus. The old fashioned Rose of Sharon (tree hollyhock) is almost forgotten nowadays; this is another picturesque tall character which is in splendid harmony with the sunflower; but *Althæa* has been supplanted by the Hibiscus, which I think is a pity, because the former is quite hardy as well as beautiful. I would like to put in a plea for the single hollyhock; the double variety, although extremely beautiful, is not as hardy as one could wish. Again, from the artist's standpoint the single flower has undoubtedly the advantage of picturesqueness. Such plants could be placed in almost any position in the garden without striking a discordant note with their surroundings.

The oriental poppy, which is perennial and therefore suited to the permanent effects which we wish to produce, is grand in orange-red and salmon color. I am astonished that it is not in general cultivation; it harmonizes well with all white flowers, and in the company of *Deutzia gracilis* it is certainly very charming. Yet it is far from common, and many people I have met know nothing at all about it! The pæony sustains quite a complete color harmony of its own; its dark foliage is a fine setting for its pink, crimson, or

white flowers; I should not fear to place the plants near others with different colored flowers; but it would be wisest to separate them from anything yellow or orange if the latter colors are strong. The hydrangea is a bold flowering character whose strong mass of pale lilac or blue, or even pink color furnishes a splendid contrast with the tall spikes of the gladioli, no matter what their colors may be; and should the flowers of the hydrangea fail before the gladiolus in full bloom the contrast of foliage is still of great value to the garden.

Rosa rugosa is extremely valuable for its splendid foliage, and it will furnish a fine dark background for such an airy character as the whiteranunculus poppy, or the Comet aster. Asters are not common enough in our little gardens, and in the larger ones they are apt to be arranged in some formal manner; what I would suggest for the aster, particularly the light colored ones, is a deep shady background; there is always a chance, for instance, of a hazy dark green setting for white asters, if they are planted before some spreading evergreen tree, at a point where the eye is sure to get the two in range. We are apt to enter the garden through the gate (unless we have athletic designs on the fence), and this means that at least one point of view is firmly established; it is common for almost any garden to have a group of shrubbery, or an evergreen, about fifteen feet away, which will give us the background I have spoken of.

I have seen a brick wall well covered with *Ampelopsis Veitchii* which would give me exactly the background I wanted for *Helianthus argophyllus*; and the dark foliage of some pæonies past blooming time, which I have seen left alone by itself would be just what I wanted for a background to my airy bachelor's buttons.

The dwarf French marigold gives us another variety of form which is desirable for the garden. I find that the thrifty kinds, when they are given plenty of elbow-room, spread symmetrically into a dome-like figure about eighteen inches in diameter, and produce a profusion of golden yellow flowers which harmonize charmingly with the dark pinnate foliage; my advice, therefore, is to give this strain of the marigold a fair chance; it is superbly decorative, and outdoes the geranium in bloom; it is also a splendid neighbor for the blue delphinium. But speaking of blue delphiniums reminds me of one of the most beautiful effects of color and form which the garden is capable of producing; that is, a combination of delphinium with white lilies. I cannot think of anything more refined and lovely in color harmony. *L. caudatum*, *L. speciosum rubrum* and *roseum*, *L. auratum* and *L. longiflorum*, these are all charming neighbors for the tall blue delphiniums. One tires of scarlet geraniums and ornamental leaved plants; but who, on a warm day, is not refreshed by the sight of a graceful group of blue and white flowers? The fact is, we crave variety of color as well as form; and a few more blue campanulas and delphiniums; and just a few less scarlet geraniums would be quite an agreeable change! An old saying goes, "Variety is the spice of life". Very true; then let us grow this kind of spice in the garden! We like the coleus, but we would like to have a chance to see something else which might be just as pretty!

F. SCHUYLER MATHEWS.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Florists' Delivery Wagons.

A big transformation has taken place since the days of the dilapidated cart drawn by its equally dilapidated nag, which in the olden time sufficed for the florist's use. In the larger cities the ambitious florist has been obliged to keep pace with his neighbors in other lines of trade, and there is no question that he has kept right up in the front of the procession. Footman and livery have usurped the place once held by clay pipe and overalls, and the florist who has a horse without a pedigree in the fashionable quarters of the big centres of trade is decidedly behind the times.

The wagons which we illustrate give a good idea of the different styles in general use in New York city. The one bearing Mr. Stumpp's name, which by the way is only one of several in constant use by that establishment, is fitted up with beveled plate glass, with silver mountings and artistic coloring with a cluster of *Cattleya Trianae* painted in natural colors. The interior is arranged with convertible shelves which may be used for small packages and boxes without occupying any of the floor space, which can be utilized at the same time for large designs, baskets, etc., or if necessary the whole space is available for very large designs when the shelves, trays, etc. may be let down. The interior is lined throughout with hard wood finish. Mr. Hession's turnout is on a similar plan, but of lighter construction. Siebrecht & Wadley's van is a model contrivance for the transportation of large decorative plants. Its dimensions are sixteen feet long by eight feet wide and eight feet high. The interior is arranged so that in cold weather it may be heated. It is lined with hot water pipes and a small oil heater is used to set the water in circulation. The pipes are all protected by a covering of perforated wood. This van will carry enough plants to furnish quite a large decoration. Three horses are generally used to draw it, although but two are shown in our illustration.

A Few Plants Best Adapted for the Retail Florist.

BY J. S. WILSON.

[Read before the Chicago Florist Club June 10.]

Little Gem calla makes a good pot plant; and it is of very easy culture. Plants now in 2½-inch pots will make blooming plants this fall and winter. A great many florists complain they cannot make this calla bloom. I find there is no trouble in blooming it if kept in 3½ or 4-inch pots, in which they will get thoroughly root bound, and will then send out quite a number of flowers to each plant. Of course the flowers are much smaller than the Nana Gem or *æthiopia*. It is a very dwarf grower, rarely growing 18 inches high, and when in full bloom it makes the best calla for pot sale, and one sure to be asked for by your customers when better known. When through blooming knock them out of pots, shaking all soil from the roots, also removing all the small bulbs. Trim off a portion of the old roots and repot in the same size pot. A great mistake many florists make is giving this plant too much root room.

Swainsona alba is another (I think) grand pot plant when grown to bush form, say in 5 or 6-inch pot, as it is continually in bloom. Its pure white pea shaped flower makes it also indispensable for cut flowers. I would advise all growers who do a retail business to plant at least a portion of a bench in their carnation house, in which temperature it does well for cutting purposes.

You are all more or less familiar with the rose Clothilde Soupert, and there is no occasion for me to tell you that it is the best all-round rose grown. The color of this flower is a delicate flesh pink, turning to white. It is a continual bloomer, making a grand show when grown in 4 to 6-inch pots, and commands readysale. Another point in favor of this rose is that it makes a grand summer bedder, and has proved hardy in this locality during the severe weather of the last winter.

What is going to be a grand companion to the above rose will be found in the new rose Pink Soupert, to be introduced this coming season. This rose is not a sport, but a seedling, and is almost identical to the Clothilde Soupert except in color, which is a deep pink, I might say of the same shade as *Hermosa*, and it has undoubtedly a great future as a pot rose and summer bedder.

I will now mention the coming plant for all round general use, the canna. Although grown for a great many years I might say they are as yet in their infancy. They are now almost in the lead as a bedding plant, for which purpose they cannot be excelled. They also make a grand decorative plant when grown in a pot of sufficient size, say 6 to 8-inch, and can be had in bloom the year round with little care and attention. I am satisfied it will be but a few years until the canna is grown and planted largely for cut flowers. A florist informed me the other day that he made more money off a 20-foot bed of *Madame Crozy* last winter for cut flowers than he made from his bench of roses. And I have no doubt but what he did, for what will make more show than a bunch of bright cannas? You may say, why, they will not keep! I say they will keep for 12 hours or more in water, and that is as long as receptions, weddings, etc., are supposed to last. I admit they will not stand shipping, but these remarks are for the florist who does a home retail business. There are a great many cannas grown that have small flowers, late or shy bloomers, with a weak, spindly growth. Why grow such rubbish? I will give you a list of the very choicest varieties best adapted for the purposes just mentioned. First I will give you the bronze or purple leaf varieties, of which there are not over a half dozen worthy of growing.

First I would recommend J. C. Vaughan, height 4½ feet, strong grower, large flowers, color a deep vermilion orange. Foliage is a deep purplish bronze with less markings of green than any other so-called bronze canna. The flower stalks are numerous and stand up well above the foliage; as many as 4 and 5 flowering trusses appear on one stalk, which makes a very striking show combined with the rich, glossy, purplish foliage. It will bloom more, and stand the dry weather better than any other canna I know of.

Egandale, height about 4 feet. Purple foliage with green veins, strong compact flower spikes; color a currant red. The finest bedding canna of its color, because of this harmony of leaf and flowers, and because of its brilliancy it can be seen the farthest either in sunlight or at dusk. It was awarded a medal by the World's Fair canna experts. This is a variety you should grow for large show plants in pots on account of compactness and habit of retaining its flower longer than most other varieties.

Gen. Dodds is a novelty of this year, and of great promise. Height 4½ feet, a strong grower, foliage a deep purplish bronze; color of the flower a deep vermilion slightly dotted with crimson spots. Flowers are of a large size and beautifully

FLORISTS' DELIVERY WAGONS.

reflexed, so much so that they almost form a curl, which adds grace and beauty to its appearance.

J. D. Cabos is another medal winner. Height $4\frac{1}{2}$ feet, leaves a purplish green shading to a bronze. A very strong grower, sending up numerous flower stalks; flowers are large and round, color distinct apricot. Its novel color makes it one of the most attractive cannas. These four sorts I am compelled to say comprise the list of the best large flowering bronze cannas. The list is small, but as you have no doubt noticed almost all the new cannas now being introduced are of the green leaf order, of which there are quite a number of good varieties. I will not undertake to describe them all, but give a few of the very best.

I will head the list with the canna Chicago, which is one of M. Crozy's seedlings, sold by him to J. C. Vaughan as number 107. This was shown and awarded a medal at the World's Fair, and was subsequently named Chicago. This is one of the best cannas of recent introduction. I have watched it growing for two years among all the newly introduced cannas of any worth. Chicago has dark green musa-like foliage, with leaves 9 to 10 inches wide; height 4 feet. The flower trusses and stalks stand well above the foliage; the color is a deep vermilion scarlet, smooth and without markings. The large flowers open out nearly flat, with petals $1\frac{1}{2}$ inches wide; they are five in number, in this respect outclassing all other cannas. The fifth petal adds greatly to the beauty of the flower spike. I have counted seven flower spikes on a stalk.

A few other seedling of M. Crozy's that were awarded medals at the World's Fair are Octave Mirabeau, M. Mesnier, Midway and Madame Alphonse Bouvier. Octave Mirabeau is of dwarf habit, 3 feet

high, light green foliage, long, wide petals, with compact trusses. Color a deep vermilion, painted with finely penciled lines of orange yellow and crimson. A most prolific bloomer and very striking and handsome. I can recommend this to make a grand pot plant.

M. Mesnier is a very striking and handsome canna, with dark green foliage; height $3\frac{1}{2}$ feet, a strong and sturdy grower. Flower large, color light salmon, slightly dotted and streaked with red, which is the deepest in the center of the flower. Petals are bordered with a narrow rim of yellow, which is irregularly wide on the ends, often $\frac{1}{4}$ to $\frac{1}{2}$ of an inch in width.

Midway.—This is undoubtedly the largest flower in cultivation, its petals being $1\frac{3}{8}$ inches wide, $4\frac{1}{2}$ inches long. Color is of a rich vermilion, slightly streaked with faint crimson lines. Flower spikes are large and compact, a strong grower and free bloomer; height $4\frac{1}{2}$ feet. The crimson streaks and splashings in the petals make a splendid effect on the background of scarlet. A first-class canna in every respect.

Madame Alphonse Bouvier is the queen of the yellow bordered varieties, height $3\frac{1}{2}$ feet, foliage green, streaked with a lighter tint. Flowers a deep vermilion tinted with dark crimson spots, banded by a wider golden border. The petals are ruffled and curled at the edges, which adds to its effect and beauty. It is a grand summer canna, standing the dry weather better than any other of its class. The color does not fade, and it can be recognized from all other cannas at a great distance.

A few others of Crozy's introduction of 1893, and classed with the best varieties, are Mrs. J. M. Samuels, J. Wilkinson Elliott and P. J. Berckmans; for lack of time

I will only give a slight description of them. Mrs. J. M. Samuels, height 4 feet, foliage green with purplish stems, flowers large and of a deep salmon, heavily dotted with crimson spots. A strong grower and very distinct. J. Wilkinson Elliott, height $4\frac{1}{2}$ feet, large and open. Petals long and broad, color a light vermilion, covered lengthwise with fine distinct crimson veins, slightly edged with yellow; a very strong grower. P. J. Berckmans is what I might call an improved Ehemanni. Height 5 to 6 feet, long, narrow green leaves edged with bronze. Flower spikes are compact and stand well above the foliage; a free bloomer, and large flowers. The color is a bright cherry red; the petals reflex in a graceful form.

Queen Charlotte is a good canna; green foliage and dwarf habit. Color a distinct rich crimson scarlet with a large gold border; petals round and curving, making a handsome plant.

Florence Vaughan I consider the highest type of canna flower, the petals being remarkably wide and rounded on the ends, of great substance and large size. It is the nearest approach to a yellow of such size yet attained, and though thickly dotted with bright red its general effect in a group at a distance is a rich orange yellow. Leaves are large and broad, and of a dark green; height 5 feet.

G. W. Childs, height 3 feet; this cannot be excelled on account of its dwarfness and prolific blooming for outside row in planting a canna bed. The flowers are nearly like Madame Crozy, but with more yellow on the throat and at the back of the flower. About two-thirds the size of Madame Crozy. The spikes stand well above the foliage and have a gladiolus-like appearance.

Chas. Henderson, height 4 feet, green foliage, color deep rich crimson, of good

substance and large flowering stalks. A grand canna if not for its late flowering habit. There are a great many other good cannas worth growing, such as Madame Crozy, Paul Marquant, Sec'y Stewart, Sophie Buehner, Alphonse Bouvier, Explorateur Crampbel, Paul Bruant and Admiral Gervais, of which I need not give a description.

Carnation Notes.

Many complaints are coming in that McGowan and some other sorts are going off in the field from stem rot. One case in particular is very bad; only five hundred left out of five thousand. Many lay this trouble to cutting bench fungus, which shows itself most after the plants are set in the field. I believe this trouble originates before the cuttings are placed in the sand, for cuttings taken at the same time from other sorts are now growing finely in rows adjoining those where the McGowans have died. In my opinion the affected plants were taken from weakened stock or plants the cuttings from which were in the proper condition to take hold of the disease recognized as cutting bench fungus. The only remedy I know of for this disease is, first to keep your plants in a healthy condition before the cuttings are taken. When the disease appears, throw out the affected plants as once, as the trouble spreads, not very rapidly, but fast enough to ruin your whole stock. If this disease appears to any great extent in your field it will be very risky business to house any of the variety in which it is prevalent. I have known this disease for the past fifteen years on many places, and wherever affected sorts were housed a considerable loss was sure to follow. I was formerly of the opinion that stem rot or cutting bench fungus, for we are told by scientific investigators that they are one and the same, was confined to varieties of carnations that had been forced for a long time; now, however, I find that some of the late introductions are subject in a like manner. It is a fact that certain unfavorable conditions inside will produce stem rot, but these conditions are not present at this time in the field. Therefore it will be well for every grower to watch well his growing stock, to throw out every diseased plant, and to note carefully the nature of the progress of all diseases from this time on. Do not leave it to memory alone, but have a memorandum book in which all points of interest can be noted.

July will soon be here; if you wish flowers in August and September stop pinching back at this time from a portion of your plants. As soon as the buds begin to show place some excelsior packing between the plants, and this will insure you of good clean flowers unless your patch is near a dusty road, and this should not be.

CHARLES H. ALLEN.

HOLYOKE, MASS.—The Holyoke Horticultural Society offers a premium for the best collection of native wild flowers; time and place of exhibition to be decided later; the object being to encourage a closer study of our native flora.

Herbaceous Plant Notes.

Alyssum alpestre is a very dwarf neat little plant, only a few inches in height, growing very compact, and the flowers, which are golden yellow, cover the whole plant during the month of June. This little plant is well adapted for a rockery or the front of the border, but should have the benefit of the full sun at all times.

Centranthus ruber, the red valerian, a good old plant, is useful for cutting; the panicles are produced very freely and continue to bloom from June to September. There are different shades of light and dark red, and also a pure white variety. It grows to a height of about two feet.

Thermopsis fabacea and *T. montana* are identical as much as I can see; bloom during June and July and grow to a height of 18 inches. The flowers are a pure golden yellow, produced in terminal spikes much like a lupin, but the racemes are looser and shorter. This plant is rarely seen, although very ornamental and distinct. The leaves are oval, borne three together on long petioles. It is very hardy and does not require any covering in severest winter.

Gillinia trifoliata (known in some places as *Spiraea trifoliata*, the leaves having some resemblance to a spiraea, but the flowers are entirely different), has been in bloom since the beginning of the month and will last well into July. The flowers are produced from the axils of the leaves along the stem as well as terminal, thus forming a loose panicle of pale pink or bluish spready flowers 15 to 18 inches high. They do best in a partially shaded part of the border.

Spiraea filipendula plena is an elegant thing for cutting; the sprays are so graceful and the color is an ivory white. It blooms in June and July and the flower stems, branchy or divided toward the top, are about two feet high, bearing numerous little round double flowers in panicked cymes. The leaves are pinnate and deeply serrated, much resembling some fern leaves. A very useful and ornamental plant, well worth a place in every collection. There is also a single flowering form which is very desirable for all purposes; it has a pinkish tinge on the under side of the petals.

Sagina or *Spergula pilifera*, the pearl wort, in compact little low tufts, covered with miniature star or pearl-like flowers of a pure white, will hardly be noticed by anybody if planted among other herbaceous plants, but on a rockery or at the extreme front of the border all will admire this little gem. The leaves are very narrow, linear, rather stiff and remain green in winter. There is also a variety called *S. p. aurea*, with golden yellow foliage, very useful for bedding. It blooms from June until August and grows only two inches high.

Dianthus plumarius, the old fashioned feathered garden pinks, are full of useful flowers just now, and will be for a month to come. The old white fringed pink is such a profuse bloomer that although we have other varieties with larger pure white flowers it is still grown in quantity everywhere for cutting, but other varieties and colors are not to be neglected; all are very sweet scented. Snow or Mrs. Sinkins and Her Majesty are both good large flowering pure white varieties, the old Pheasant's eye is a profusely blooming pink with darker center, Earl of Carlisle, a very double white, Juliette, white, laced with crimson, Laura Wilmer, white with deep crimson maroon center, Stanislaus, lilac rose and crimson center, and Prince Arthur, blush with a crimson cen-

ter. There are many others which I could name, but the above constitute a good collection of colors.

Pyrethrum roseum in its many varieties are now at their best, and every florist should have a large patch of them planted in the garden, for they are indispensable at this time of the year for cutting. They have long stiff stems and last well in water after being cut. The flowers have the shape and size of the German asters and are borne singly on the stems, flowering from June 1 to the middle of July, and if the plants are cut down after flowering many of them will bring a second crop of flowers in the autumn again. They form a compact erect bush with finely divided foliage, and once planted will last for years without any trouble. For the last six or eight years these plants have been gaining constantly in favor and are used largely in gardens, besides being used extensively as cut flowers. Many varieties of all shades from pure white, blush and pink to a bright magenta have been raised, and new colors are coming out every year, but old or new all are beautiful.

Pæonias of the Chinese class are nearly out in full bloom, and it is surprising that so few florists grow them in quantity. The ground occupied by them could not be planted to a more remunerative crop, we can sell all the flowers and also dispose of a good number of plants every season, and good varieties will fetch fancy prices, both the flowers and the plants. There are so many distinct kinds of all colors, and I shall not undertake to mention any of them, for all are good, especially the newer additions of late years, in which we find form, size, color and fragrance combined. Some varieties are earlier, others later, so we can have bloom all through June and July by a judicious selection. Hardly another class of plants can rival the pæonia in brilliancy of color, perfection and freedom of bloom. The first and second year after planting we cannot expect quantity or full size of the flowers, and this may be one reason why florists hesitate to plant largely, but after the second year the individual flowers will be all perfect in form and size, and the plants should not be disturbed too often. It is a good plan to plant rather close at first, and after three years to take up every other bush, divide and replant again in another part what is not sold of these divided plants. When again they become crowded another thinning will perhaps be beneficial; but the older the stools and the longer they are left alone the more perfect flowers will be produced.

Valeriana officinalis, the old common valerian, is fine for cutting and blooms June and July. The erect flower stems will attain a height of 2 to 3 feet, forming a loose corymbose panicle bearing a multitude of rosy white flowers. It may be planted by itself in the border or at the edge of the shrubbery, and will take care of itself after once being planted.

Dianthus arenarius is a lovely species, the petals are so much and so deeply divided and lacerated, giving a fringed feathery appearance to the flower, which latter is white in color. Grows to a height of 8 or 10 inches and flowers abundantly in summer. This is a fit companion to the formerly described Cheddar pink; it is, however, rather rare in this country.

Dianthus alpinus is of a deep rose color with a crimson central spot, the flowers are very large, solitary, but freely produced on stiff stems. June and July is their flowering time, and on account of its pleasing color and dwarf habit this

FLORISTS' DELIVERY WAGONS.

species should be grown more extensively; height 4 to 6 inches.

Erigeron aurantiacus is an old thing, but the deep orange yellow flowers, which are 2 inches across, are very showy, and no herbaceous border should be without it. They, however, like a rather moist position and will not do so well in a dry situation; 10 to 12 inches is as high as they will grow and they bloom from the beginning of June to the end of July.

Papaver orientale, the well known oriental poppy, is now in its full glory. The deep scarlet large flowers are very freely produced when plants get once well established, and they should not be disturbed for years. The back part of the border or the edge of a shrubbery is the place for them, where large masses of them will make a grand show while in flower. Many new and named varieties have been introduced in late years, some have the dark purple spots at the base of the petals very large, extending half way up the flower, others have extra large flowers of a deeper or lighter shade, while some are dwarfer in habit, etc.; 2 to 3 feet is as high as they will grow.

Papaver involucreatum maximum, another hardy very large flowering single poppy not often seen in collections, is of a vivid orange color, with pale purple spot at the base of each petal. The foliage has a glaucous hue. Not so coarse looking a plant as *P. orientale*, and continuing in flower for a longer period than that variety. Height about 18 inches. One variety has the petals edged white and is very handsome.

Papaver pilosum, another good large flowering species with dazzling scarlet flowers, the base of the petals being white instead of purple as in the foregoing varieties. A stately plant if planted in large masses either at the back of a wide border or in the shrubbery. Should be grown in every collection and will continue to bloom until the end of July. Height 1½ feet.

Spiræa Humboldtii is a much dwarfer variety than the near related *S. Aruncus*. The flowers are of the same feathery shape but smaller and finer, creamy white in color, and they last well as a cut flower. The foliage also is smaller and finer, the

whole plant growing only about 20 inches high. It comes in bloom about a week or ten days after *S. Aruncus*, and lasts well for a month in good condition.

Gladiolus communis is in full bloom now and may be planted permanently in the herbaceous border, for it is as hardy a bulb as a tulip or a narcissus, and I often recommended them to the entire satisfaction of purchasers. They may be left permanently in the ground and will bloom year after year. Both the white and the rose colored or *G. c. rubra* are very much liked as cut flowers, the spikes being slender and flowers more loosely arranged along the stem than in the fall flowering *gladiolus*. The height is less than 2 feet. They last for a week or longer after being cut. Flowering time June and July.

Gem atrosanguineum is a most desirable hardy plant beginning to bring forth its double ranunculus-like flowers early in June, and continuing all summer. The color is a glowing crimson, and the flowers are produced in succession on stiff long branchy stems. A stately plant for the border or for large beds, and very useful for cutting. The flower stems, which are freely coming up, will grow to a height of 15 to 20 inches and the foliage is imperfectly pinnate, the upper or terminal leaflet being the largest and broadest, while the lower ones are small and imperfect. This plant will undoubtedly become a very popular one when better known.

J. B. KELLER.

Rochester, N. Y.

Violets in Pots.

H. J., Providence, R. I., wants to know about violets potted now into 4-inch pots instead of 3 or 3½ inch and plunged outdoors, as recommended in *AM. FLORIST* of May 4, instead of planting in benches in fall, keeping them in the 4-inch pots. He also asks, would violets do in a carnation house, and should they have more than 40° to 45° to do well. In answering above question I would say that violets invariably will give better results if planted in a bed or bench; we have grown them in pots years ago, but then the pots must be sunk in the ground

to the rim, and this operation is more of a job than the planting out. I cannot see any advantage in keeping the plants in the pots, although occasionally a few may be sold when well flowered, but we seldom can demand more than the price of the flowers actually opened out on the plant. If, for some purpose, the plants are wanted in pots I should suggest growing them over summer in 3 or 3½-inch pots, and repot in fall into 4 or 4½ inch, giving them good rich soil to grow in, rather than to plant and grow them in the larger pot all summer. Then plunge the pots in some material, a solid bed of soil is best in my opinion, so as to keep the roots as cool as possible, for the violet is a spring flower and outdoors will produce the best and most perfect blooms while the ground is cool. As soon as our sun gets strong enough to heat up the soil around them the flowers grow smaller, and we should imitate these conditions as near as possible. It is not too late to pot violets by July 1, provided the plants are in good condition and well rooted now, for we have to keep them watered, and if necessary can shade them during very hot spells, which we would not take the trouble nor time to do to any stock planted in the open ground.

Violets and carnations will not very well go together; one or the other will have to suffer. Carnations want a little more heat and a little less ventilation. The violets would bloom there all right, but flowers will be smaller and the crop would not last throughout the winter, they are also more apt to become diseased. I would rather partition off the cooler end of a carnation house and grow the violets in that part. It will not hurt the violets if the house goes down to 40° of a very cold night, but we endeavor to keep up a temperature of 45° at night and 50° to 55° in day time, but at all times give plenty of air. Even in zero weather we keep a crack of air on the houses for a few hours in the day. Violets will bloom in a temperature of 40° to 45°, provided they get sunlight enough, but I prefer the higher temperature. So much has been written by our best growers on the culture of violets that our

friend H. J. will be able to find all necessary information if he takes the trouble of looking up back numbers of the AMERICAN FLORIST. J. B. K.

Trees and Shrubs at Washington.

Among the several kinds of flowering trees in our parks, and especially in the park surrounding the Capitol, none of them were more admired than the *Laburnum vulgare* or golden chain, which were covered with long terminal racemes of bright golden colored flowers during the early part of May. This plant was formerly called *Cytisus Laburnum*. It attains a height of about 25 feet and of rather slender growth. Thrives in almost any soil or situation. *Laburnum* is the old Latin name used by Pliny belonging to the order Leguminosæ, a genus comprising only three species of hardy glabrous or puberulous trees or shrubs, natives of Europe and Asia Minor. The species are readily raised from seed, which should be sown as soon as ripe, when allowed to get dry and hard. They should be steeped in hot water for a few hours before sowing; this will hasten germination.

Cladrastis tinctoria or *Virgilia lutea* is another very ornamental and attractive tree now in bloom about the parks. Though a native of Kentucky and Tennessee is not often seen on our lawns. Just where this plant derives its name does not seem to be definitely known. There are but a couple of species described and they are both hardy deciduous trees. *Cladrastis tinctoria* is a large growing tree, flowers white, drooping from the ends of the branches in paniced racemes. This species is now in flower at the Botanic Garden and in a few of the parks. It succeeds in ordinary soil and in most any situation, and is easily propagated from seed, which should be sown as soon as ripe, or they may lay in the ground a year before germinating.

Paulownia imperialis is another very attractive tree now in flower in our parks, and should be more extensively cultivated. It is a good shade tree, native of Japan, named in compliment to Anna Paulowna, Princess of the Netherlands, daughter of Emperor Paul of Russia. Its quick growth, large foliage and beautiful, pale violet fragrant flowers make it a very valuable and desirable tree. In habit it resembles the catalpa. It does well in any good soil, propagated either by cuttings or seeds. Flowers showy, appearing before the foliage is developed. The young plants can be used with good effect for sub-tropical decorating. REYNOLDS.

Philadelphia.

Conventions and school commencements have enlivened things considerably the past week. The men that wear diamonds, the plumbers, the men and women who hatch such wonderful stories about florists, flowers, and fortunes that are made out of them, the newspaper reporters, and those whose business it is at times to guide our footsteps, the dancing masters, all held conventions here this week. As they were all entertained royally there was considerable work for the florist. Hugh Graham had most of the decorations for the newspaper men, while H. H. Battles attended to the plumbers, he having a large job at the Walnut street theatre, where the convention was held.

The Florists' Club decorated the house of the Pen and Pencil Club, the local organization of newspaper men. Palms were placed about the building on every floor, and vases of cut flowers adorned

mantels, tables and other places wherever they showed to advantage; smilax and asparagus was also used on chandeliers, bannister rails and over-doorways. In addition large bouquets were presented to all lady visitors, and there were bouquonniers for the men.

Business generally has fallen off a great deal, and a walk through the fashionable district shows the house fronts all boarded up, with a small card tacked on the board at the bell pull with the post-office address. It is about the time of year to expect the exodus, but every season folks seem to go out earlier and stay later. City life appears to be changing the past ten years; the suburbs are becoming more thickly populated with people who formerly only stayed there during the summer. Quite a number of the fashionable city churches have had to consolidate in order to get full sized congregations.

The stock of cut flowers is quite equal to the demand. Outside Jacqs have not done so well this season, owing to the hot weather, although J. Heacock had quite a lot of good ones; they brought \$3 and \$4 per hundred. E. Lonsdale had quite a lot of Brunners, these were much the best outside stock; being such a strong grower, we think they should be produced with longer stems; perhaps a different method of pruning would accomplish this end. \$4 per hundred was the price of the Brunners, and many more could have been sold. Carnations are feeling the effects of the heat, and fakirs have at times refused to take them at 25 cents per hundred in large lots. From 50 cents to \$1 per hundred is about the market price.

Sweet peas from inside are about done. R. Eisenhart of Holmesburg cut 5,000 sprays in two weeks from 250 plants. This lot succeeded violets, being planted out from 3-inch pots in April; the seed was sown about January 15. Mr. Eisenhart is adding 3,000 feet of glass to his equipment, and will heat same with hot water under pressure.

Cannas are coming down in price; some very nice stock from 3-inch pots, 6 and 8 to a basket, was to be seen last week offered at 25 cents a lot retail.

Harry Michell, the secretary of the Florists' Club, who last week stole away so quietly with his bride, is to hold a reception on the 24th of the present month at his future home on 34th street. Harry is deservedly popular with the trade, and his increasing business is but the natural result of his industry and untiring efforts to please. We wish him and his bride a long and happy life.

Myers & Samtman have about finished their Della Fox carnation house; it is 200x21, a rather large house for such a little lady, but as great things are predicted of her it was thought best to be prepared.

John Burton is replacing two locomotive with two return tubular boilers. A new windmill is also in place. Things ought to move lively on the hill next season.

In H. A. Dreer's window on a background formed of insect powder is made with different colored powders, an imitation of a potato bug; around this is traced the names of the different powders in the colors of each; it makes quite an attractive advertisement.

Mr. W. F. Dreer, who left San Francisco on a flying trip to Japan last April, is expected to return about July 10; his trip was for health and pleasure. He is accompanied by his wife.

Mr. Ziebel of H. A. Dreer Co. will visit Europe for a six weeks' trip, leaving about July 20.

A grower in speaking about greenhouse construction said that 16x24 seemed to be the most popular size of glass used; it was the largest size in the second bracket, and notwithstanding the rumor that glass was going up he had been assured by a prominent dealer that it could be furnished as low as it had ever been sold for.

The move of the New York florists looking to the establishing of a market is on the proposed Phila. plan; we use the word proposed, as a market has been proposed here a number of times, but never got any further. The scheme, however, is the same as Messrs. Watson and others tried to establish here last fall; if successful in New York probably it may be tried here. The Phila. grower takes no risks; he may lose from not trying, but he would rather sizzle in the pan than take any risks of falling in the fire in trying to get away. K.

New York.

There was only a small attendance at the meeting of the New York Florists' Club, held Monday evening, June 10.

The committee on awards rendered their report, giving the rules which were to govern the exhibits of novelties to be made at the club rooms.

Mr. Robt. M. Grey, of Orange, N. J., read a paper entitled "Orchids, their cultivation and hybridization." This paper proved to be so interesting that many members took the floor to thank Mr. Grey personally for the valuable information which he had given them. It was regretted by every one present that there was not a larger attendance, as it was one of the most interesting papers that has ever been read at any meeting of the club.

Mr. James J. Dunn, of Rahway, N. J., one of our members who had just returned home from a visit to Bermuda, where he has been for his health, gave a very interesting account of his experiences with the lily growers on that Island.

Chicago.

The rose garden at Jackson Park is now gorgeous with bloom, and is well worth a trip to see. Some illustrations and notes will appear next week.

The heavy rain of last Tuesday night was the salvation of the parks and gardens. All vegetation has now taken a new lease of life. The lawns in the parks had already turned quite yellow in places before the rain came.

At the meeting of the Florists' Club last Thursday evening the trustees were instructed to secure a new lease of the hall for another year on the same basis as before, and the action at a previous meeting reducing the meetings to only one a month was reconsidered except as to the months of July and August. Only one meeting will be held in each of these months, but for the remainder of the year there will be two meetings a month, as heretofore.

Mr. J. S. Wilson read a paper on novelties in pot plants for the retail trade, which appears elsewhere in this issue, and for which he received a vote of thanks from the club. In the discussion of the paper Mr. Stromback said he had found canna G. W. Childs excellent under glass, but of no value outside. Referring to Clothilde Soupert rose, he had found it a splendid bedder, and it had been hardy with him for three years.

At the adjourned session the highest score was 219.

During the past week the supply of fairly good roses has not been equal to the de-

FLORISTS' DELIVERY WAGONS.

mand. Most of the roses are very poor, and there is quite a shortage of them. Average teas go at 1.50 to 3, but selected Meteors and Testout sell for 4. These varieties are good, so too are La France and Perles, but Bride, Bridesmaid and Mermet are miserable in quality. Carnations are still very plentiful, but there is not such a pronounced glut as last week. Prices vary from 25 to 50 cents, select 75, and fancies 1 to 1.50. Some very fair double stock is seen, and carnations generally seem a little better than last week.

Sweet peas from inside are nearly over, and the outdoor crop is not in; they keep at 50 cents, though poor. Outdoor roses seem unusually poor this year; even Jacqs are flimsy and badly colored. They all seem to be suffering from the drouth. Quite a lot of the old Mme. Plantier are sent in, and they sell quite readily, though at low prices; they are put up in bunches, four bunches for a quarter. City trade has been quiet, but there is a good shipping demand.

Boston.

The annual rhododendron show of the Mass. Horticultural Society, which was held on June 6 and 7 at Horticultural Hall, was as usual a splendid exhibition and afforded much pleasure to the public, the attendance being large and the display of the gorgeous flower from which the exhibition takes its name fully as extensive as heretofore, although there was some fear that the injury wrought by the recent severe winter would have an unfavorable effect on the show. The largest displays were from the famed rhododendron collections on the H. H. Hunnewell and F. B. Hayes estates. There were also smaller exhibits from John L. Gardner, Mrs. B. P. Cheney, S. J. Trepass and others. The rhododendrons and azaleas occupied the entire floor space of the lower hall, with the exception of the wall tables, which presented a brilliant array of pelargoniums, German iris, aquilegias, pyrethrums, pæonias and gorgeous Oriental poppies, the upper hall being half filled with the overflow, which it was impossible to accommodate in the lower one.

The collections of native wild flowers from various enthusiasts were very complete and interesting, also the hardy herbaceous flowers from the Harvard Botanic Garden, J. W. Manning and N. T. Kidder.

To James Comley of the Haves estate was awarded first prize of the H. H. Hunnewell fund, for twelve, and to S. J. Trepass first for six varieties respectively, of unquestioned hardiness. The set of twelve shown in this class by Mr. Comley comprised the following: *Caractacus*, *Roseum grandiflorum*, *Album elegans*, *Oculatum nigrum*, *Everestianum*, *Roseum elegans*, *Album triumphans*, *Maculatum*, *Lady Armstrong*, *H. W. Sargent*, *Delicatissimum* and *Atrorubrum*. Another list worthy of preservation is that of twenty-five varieties, mostly new and untested, which were exhibited by Mr. Harris, gardener to H. H. Hunnewell, as having gone through the past winter safely without protection. This group includes *Kate Waterer*, *Minnie*, *Mrs. Shuttleworth*, *Countess of Normanton*, *Queen*, *Lady Clermont*, *Lord John Russell*, *H. H. Hunnewell*, *Lady Rolla*, *Rosabelle* (a gem), *Chas. Bagley*, *Lady Grey Egerton*, *Princess Mary of Cambridge*, *St. Simon*, *Isaac Davies*, *Mrs. A. Hunnewell*, *E. S. Rand*, *Mrs. Ingersoll*, *Mrs. T. Wain*, *F. D. Goodman*, *Sefton*, *Mrs. Chas. Thorold*, *R. S. Holford*, *John Waterer*, *Mrs. J. Clutton*, *Marshall Brooks* and *Lady Crossley*. To John L. Gardner was awarded second prize for twelve, and to Mrs. B. P. Cheney second for six as above. The Hunnewell exhibits were not entered for competition.

In hardy azaleas James Comley and T. C. Thurlow were the chief exhibitors. The latter showed a collection of seventy named varieties. The mollis section was conspicuous by its absence, the show being too late for these, but the Ghent azaleas were unprecedentedly good. Hardy flowering trees and shrubs were well represented in the collections shown by James Comley and Alice Grinnell. Rivaling the rhododendrons in the popular admiration were the two splendid tables of orchids in bloom from Mrs. F. L. Ames and John L. Gardner, well flowered *Cattleya Mossiae* and *miltonias* predominated in both collections. In the Ames collec-

tion was the lovely *Miltonia vexillaria* *Amesiana*, besides several other new and rare things. There was an interesting group of cut flowers from Mrs. Ames, among which were Java hybrid rhododendrons *Ophelia*, *Monarch* and *Scarlet Crown* and *Aristolochia gigas* *Sturtevantii*, the latter receiving a certificate of merit.

Trade in the florists' stores is reported as generally dull. Prices rule very low on all kinds of flowers, and the end of the season is plainly seen. The big public school graduation order is the only event of importance ahead and most of the prominent florists are figuring on getting a slice of it. Outdoor roses have not begun to come in yet, but a few warm days will bring them forward in quantity. Indoor roses average very inferior as to quality. Carnations are very good for the season, but in over-supply and prices almost unquotable, and the street urchins are having quite a picnic with them.

Plant dealers without exception report the best spring trade within their experience. On pansies this has been especially true. Mr. Zirngiebel, who leads in this specialty, states that he has had scarcely time to breathe since the season opened and that a huge pile of letters from correspondents brought out by the illustration of his heating apparatus in the *AMERICAN FLORIST* remain as yet unanswered for lack of time, but he expects to get them attended to long before there is any danger of freezing.

By the death of an uncle in England the Bindloss family come into possession of a fortune amounting to \$250,000. The heirs, eight in number, include J. Palmer Bindloss of New London, Conn., and Mr. and Mrs. W. H. Elliott of Brighton, Mass. Some people are born lucky and others achieve it. The latter is true of Mr. and Mrs. Elliott, who are cousins, and thus strike it double. Mr. Elliott and his boon companion N. F. McCarthy are talking of taking a trip to Europe this season.

The Gardeners' and Florists' Club will have a concert and strawberry festival in Horticultural Hall on the evening of June 24, in which the ladies and children will

Thos. Tasty reports business as very satisfactory.

Sloppy & Co. report "There's nothing in the business any more."

THE REASON WHY.

participate, and a very pleasant reunion is anticipated. The club has received an invitation from the New England Agricultural Society through Pres. Francis H. Appleton to take part in the annual fair of that society, which will be held at Portland, Me., on August 27-30.

On Monday, June 9, a number of the local fraternity spent a most enjoyable outing at Ed. Hatch's famous cottage "The Breakers," at Scituate. Mr. Hatch himself was the special guest on this occasion, other guests being Messrs. John Burton, W. K. Harris, John Westcott of Philadelphia, and W. F. Sheridan of New York, who arrived in town opportunely on their way to the Maine trout woods.

The recently published report of the Boston park commission shows that the expenditures for park construction since 1875 up to the present time have been \$6,824,498. For park land, construction and betterments there has been expended \$12,309,279. The completion of the Parkway now gives a continuous drive from the Public Garden to Franklin Park. Extensive improvements are in progress at the Marine Park, South Boston.

J. S. Powers, formerly employed in the florist business in Boston, has been arrested on the charge of passing a worthless check.

Buffalo.

With the exception of a few weddings the store trade is reported as generally dull. The extreme hot weather is sending in carnations in too large a quantity to be profitable, and we hear of ridiculous prices of the same on the markets, 30 for 15 cents, and a dozen thrown in if you are good looking. It is most likely their last dying effort, and we look for a very much decreased supply in a few weeks. Roses are suffering with the torrid climate, but there is a fair supply of better quality than usual at this time of year. Paeonies are with us with all their robustness, and sell well; anything for a change. All outside flowers are suffering with the unprecedented drouth. The oldest inhabitant (I interviewed her yesterday) declares that in recollection of 43 years she remembers nothing like this. Hay will be \$40 per ton and other food in proportion.

A very enjoyable and instructive meeting of the club was held on Tuesday last at the residence of W. J. Adams. After the

routine business and a discussion on the spring plant trade, Mr. Adams introduced a vocal quartette, whose melodies charmed the crowd, and made us forget for an hour at least that there were a dozen flower beds to be filled which had been promised a week ago.

There is going to be a lively fight over who shall represent Buffalo for the bowling prizes at Pittsburg. I trust they will settle it amicably and decide to let the best men bowl regardless of all else. The Spaulding cup is within a few feet of my elbow, while I write, and as I look round occasionally I can almost see it vanish into the hands of a Keppler, Grant or W. K. Harris.

Mr. W. Mott gave us his usual bi-monthly visit, and reports business on his trip as good; that is refreshing to hear. We were also very much pleased to see among us again Harry Bunyard. His severe and long illness seems to have left his vivacious spirits unimpaired. The only thing he seems to have lost is his hair, and that's unfortunate, for his close resemblance to a young pugilist who was lately warned to leave the town almost led to an embarrassing occurrence.

W. S.

Cincinnati.

There is little to be said of business of the past week. The market has been overstocked with cut flowers of all kinds, and no demand. There has been some work for weddings and school commencements, but the general trade has dropped down almost to a summer basis. With the exception of the mildew on the foliage the roses have been fairly presentable and not over-plentiful. Prices remain about the same as last week. Paeonies sold very well this season and are now about over. Valley is about gone. There is quite a demand for sweet peas, white going particularly well the past week.

In the plant line trade has been a little dull, but stocks are now low, the best having been sold. Some beds and vases are still being planted, but that class of work is practically ended, and florists are busy planting out their carnations, violets, etc., and getting their rose houses in shape for another season's business.

Have any of the florists noticed the tendency of the Daybreak to fade in hot weather? If cut and placed in water it

holds its color, but when fully expanded in the bright sunshine it fades. This shows that no flower is perfect at all times.

Wm. Hobbs died last week after an illness of a few days of neuralgia of the heart. Mr. Hobbs was 53 years old, and single; he was a good grower and well liked by all the florists who knew him.

Ernst Mauthy of St. Bernard is putting up 3 fine houses; he intends to grow mostly bedding plants.

P.

Watering Adiantums.

We would like to ask through the columns of the FLORIST if it is harmful to water the fronds of Adiantums Farleyense and cuneatum, or should each plant be watered with the watering pot, so as not to get any water on the foliage? T.

A little water on the foliage of these adiantums will do no harm in bright weather, providing the fronds dry off before night, and to ensure this condition it is preferable to water the adiantums in the morning, say from nine to ten o'clock. The watering pot provides the most satisfactory method of watering for these plants, though in the hands of a very careful man the work may be properly done with the hose, while careless watering of A. Farleyense will result in much injury.

W. H. TAPLIN.

Greenhouse Building.

BATAVIA, N. Y.—New York Central R. R., range of plant houses.

BELFAST, ME.—W. E. Hamilton, commercial house, 14x63.

HACKENSACK, N. J.—Red Towers Greenhouses, extensive additions.

UTICA, N. Y.—A. Whitten, six commercial houses, each 20x200.

MADISON, N. J.—H. McK. Twombly, grapery, vegetable and plant houses.

SARATOGA, N. Y.—The Thayer-Porter wedding, which took place here June 5, was quite a big affair. The bride's bouquet was made of white orchids and Adiantum Farleyense; those of the bridesmaids, eight in number, were composed of lily of the valley and tied with Nile green ribbon. The bouquets were made by Jas. Delay.

Indianapolis.

The regular meeting of the Indianapolis Florists' Club was short but interesting. Mr. Parker reported on the much agitated cemetery question that something of interest would turn up at the next meeting. He cautioned us to get as many names to the petitions as possible. The discussion brought out the fact that the prohibition of plants seemed to be in the interest of certain persons connected with the business of furnishing flowers to the cemetery. Mr. Walker made a humorous apology for the absence of so many professional florists at the meetings. The usual \$10 award was offered for the capture of flower and plant thieves; the new park commission also offers a reward for the same purpose.

Mr. Langstaff read a paper on "Soils for greenhouse purposes." It was instructive and created considerable discussion. After the short meeting refreshments were served, keeping the members together in social intercourse until late. The attendance was good.

The regular June meeting of the club was held Wednesday, June 5, at the club rooms, Pres. Hartje in the chair. One new member was taken up. The cemetery matter was again postponed on account of the committee not being present. The state meeting of the chrysanthemum show committee will probably be held July 3. The annual picnic came up for discussion; a committee of two was appointed to select place and time for holding same. A communication was received from the Noblesville, Ind., Floral Society, requesting some of the members' attendance at the annual floral parade and picnic. About 5 volunteered to go; the parade will occur June 11.

Mr. J. J. B. Hatfield read a paper on "Propagation, artificial and natural." Some interesting facts were stated by the gentleman; explanations from a scientific standpoint were very instructive, and showed that he had studied the subject thoroughly.

John Hartje is finishing one house 18x132 for roses.

Chas. Wheatcraft is building one house 18x80 for roses.

Mr. Edward Cornelli is making arrangements to move to the outskirts of the city, his lease being about run out. He has been in his present location about 15 years.

Decoration trade was reported fair, but on account of the extreme heat and drouth, flowers withered terribly. No such heat has ever been experienced in May before. Trade averaged cheap prices. Spring plant sales were satisfactory. The heat and dry weather continue, if no relief comes soon, everything in the fields will perish.

Young & Sonnenschmidt are adding 2 houses 20x100, short-span-to-the-south, for roses. W. B.

News Notes.

FARIBAULT, MINN.—Wm. Wachlin lost his only son, aged 26 years, last week.

LONDON, ONT.—McGill Bros., nurserymen, have made an assignment to Alfred Robinson.

DES MOINES, IA.—We had a glorious rain June 10, the best we have had in three years.

CANON CITY, COL.—Mrs. M. B. Wray is about to close up her business here and will retire from the trade.

CHICOPEE, MASS.—Dexter Snow, the well known horticulturist, died suddenly June 10 of heart disease, aged 71 years.

SPRINGFIELD, MASS.—The Amateur Horticultural Society will hold a rose show at Union Armory on June 18 and 19.

ARROYO GRANDE, CALIF.—J. S. Brooks suffered almost total loss of his entire place by fire last winter; very little insurance. He expects to start up again next fall.

NEW BEDFORD, MASS.—F. H. Pasell has three houses of carnations in magnificent condition just now. The varieties are Fisher, Daybreak, Tidal Wave, Mangold and Portia.

FARMINGTON, CONN.—Hugh Chesney has built two new houses of cypress, one 100x20 feet for carnations and one 100x10 for violets, heated by Scollay boiler, glass 16x24. Trade is good; prices same as last season.

LEBANON, PA.—D. Hammond Mish is building two $\frac{3}{4}$ span houses, 100x20, one for carnations, the other for roses. These houses are in South Lebanon, a short distance from the older houses, which will be used for palms and other plant stock.

MONTGOMERY, ALA.—W. B. Paterson (Rosmont Gardens) is doubling his glass, and will have 4 houses 20x100 heated with Scollay boilers. The houses will be used for general stuff, roses, carnations and "mums." Hugh M. Seals, formerly with Currey & Co. of Nashville, is manager.

PORTLAND, ME.—A wave of brotherly love struck Portland on Tuesday, 10th inst., in the shape of three Philadelphians, W. K. Harris, John Burton and John Westcott, who in company with W. F. Sheridan of New York and W. J. Stewart of Boston stopped here a few hours as guests of J. A. Dirwanger. The party were bound for Lake Kennebec, and were well provided with fishing tackle and bait of all kinds. Mr. Dirwanger accompanied them to the lakes.

THE ADDRESS of the DeLamater Iron Works of New York City will hereafter be 467 West Broadway instead of 87 South 5th avenue. The change of address is not due to removal but to a change in street arrangements by the city authorities.

DO YOU WANT a complete alphabetical list of chrysanthemums in commerce in America, with class, and brief, accurate description of each? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—By florist and gardener, all round man. References. C. C. care Am. Florist.

SITUATION WANTED—As assistant in greenhouse by young man; 15 years' experience. Address A. D. care American Florist, Chicago.

SITUATION WANTED—At once, by competent florist and gardener; good all round man; single; German; middle age. Address GARDNER, 473 N. Sixth St., Philadelphia, Pa.

SITUATION WANTED—By a young German gardener; 21 years old; 5 years experience in Europe. References from Royal Gardens, Vienna. Private place preferred. Address D. G. care Am. Florist.

SITUATION WANTED—By German florist, 20 years experience. Specialties cut flowers, Easter and show plants. Prefer first-class retail establishment. No family. Willing to take a place for a few months on trial. Address L. M. care W. Sabrnsky, Keaton, O.

SITUATION WANTED—By single Englishman; 25 years' experience with orchids, stove, greenhouse and flowering plants, in private and commercial places, landscape work and floral decorations, and capable of managing a first-class all round place; steady and sober. Address care Am. Florist office, 67 Broadfield St., Boston.

WANTED—2000 feet second-hand 1-inch steam pipe. PATRICK O'CONNOR, Box 433, Youngstown, O.

WANTED—Perlis tremula and Perlis argyrea 2 and 3-inch pot plants. Address N. A. & NEINER Louisville, Ky.

WANTED—Second-hand hot water boiler to heat 60 to 80 feet 4-inch pipe. Hitelbigs or Weathered preferred. R. C. FRANK, Beardstown, Ill.

WANTED—Reliable, sober man with good references, for growing roses, carnations, mums, and general stock. State wages wanted with board. DAVIS & BARRD, Dixco, Ill.

WANTED—A young man as helper among roses, carnations and greenhouse work. Must be good worker and reliable. State wages, etc., to Wm. KIRKHAM, Maywood, Ill.

WANTED—A number of large palms for decorative purposes. Must be healthy and in good shape. Address B. A. BUTLER, 525 Main St., Niagara Falls, N. Y.

WANTED—A man that understands growing ferns, plus carnations, violets and chrysanthemums. Must be well recommended. Address IRA G. MARVIN, Wilkes-Barre, Pa.

WANTED—A florist, one who understands all about general greenhouse culture and roses and carnations. For particulars address H. H. Box 872, St. Clair Co., Marlee City, Mich.

WANTED—At once, a first-class florist. Must be a good designer and decorator. One who can grow palms and a general lot of plants and cut flowers. German preferred; of good habits and appearance. Must be a hustler. Good wages to the right party. Address with reference S & B, care American Florist, Chicago.

FOR SALE—Second-hand florist's refrigerator, used one year, in perfect condition, at reasonable rate. Address J. J. McMANNON, Lowell, Mass.

FOR SALE—Three greenhouses: two 50x18, one 50x14, shed 15x50, built 2 years. Pots and bedding stock. Near four cemeteries; lot 300x150, on electric line. Reason for selling, had health. Address R. MITCHELL, 144 S. Meridian St., Indianapolis, Ind.

FOR SALE—Large and complete greenhouses (with land) in Harrisburg, Pa. Within 10 minutes of heart of city; main line trolley cars pass the door every 15 minutes. Business well established for years—this has been held together since the owner's recent death. Everything in good shape. Property to be sold to settle estate. A first-class chance to competent man desiring to do large business. Address MARY A. McCLINTOCK, Administratrix, W. F. DARBY, her attorney, Harrisburg, Pa. Steelton, Pa.

FOR SALE OR RENT.

My greenhouses on North Western Ave., Chicago; 15,000 or 30,000 square feet of glass. Plenty of stock. For particulars address A. T. JACKSON, Station X, Chicago.

FOR SALE OR LEASE. Three greenhouses with valuable grounds; the best place in this country for a man with some means. Address WM. SPRINCORN, Dubuque, Ia.

FOR SALE.

Six miles from Boston Flower Market. Four greenhouses, 3 years old, with 20,000 square feet of land; chance for three good house lots without touch of shading greenhouses; close to railroad depot; 25 trains daily each way. Two houses 12x75 one 3x30, other 12x40, connected by 4 1/2 ft. shed. Hot water heating. City water. Price \$12,000. Address

A. M. care American Florist, Boston Office.

Assignee's Sale.

By virtue of a DECREEAL ORDER, made and entered of record in the County Court of Cook County, for the sale of the property and effects of the estate of Joseph T. Anthony, an insolvent—NOTICE is hereby given, that sealed bids or proposals for the purchase of all and singular the goods, fixtures and assets of said estate (exclusive of moneys, credits and outstanding accounts) and which consists of Greenhouses, situated at No. 3425 Prairie Avenue, Chicago, Ill., and the entire Floral and Horticultural Stock therein contained, all tools and implements used in the business, including horses, wagons, etc., will be received by the undersigned at his office, No. 3425 Prairie Avenue or at the office of his attorney, George Sawin, Room 35, Howland Block, 154 Dearborn Street, Chicago, Ill.

An inventory of said property can be seen and full particulars given by calling upon either of the said persons.

Bids to be enclosed in sealed envelopes, addressed to either said Assignee or said Attorney and such envelopes plainly marked "Bids for Stock." Bids can be received as late as 4 o'clock p. m., June 28th, 1895, and will be opened by said County Court, Saturday, June 29th, at 10 o'clock a. m., should said Court be in session. If said Court is not in session at the above named hour, said bids will be opened at the first session thereafter at the same hour, at which time said bids will be acted upon by said Court.

Inspection of said stock is invited.

JOSEPH A. MERRIFIELD, Assignee of Estate Insolvent of Joseph T. Anthony. GEORGE SAWIN, Attorney, Room 35, Howland Block, 154 Dearborn St.,

Address THE AMERICAN FLORIST CO., Chicago.

The Society of American Florists.

Preparations for the eleventh annual convention of the Society of American Florists are progressing favorably, and the indications are that the meeting will be fully equal to any of its predecessors in interest and value. There are some new features which are relied upon to make it a most notable occasion. The attendance from the Middle and Central States should be very large, as the location is very central, and arrangements have now been made whereby special excursion rate of one and one-third fare for the round trip has been secured for all those attending the convention.

Members of the Society and those desirous of becoming members may remit the annual dues (\$3) to the secretary, Wm. J. Stewart, 67 Bromfield street, Boston, Mass., at any time prior to the meeting, thereby avoiding the inconvenience of paying during the confusion of the opening day. The badge for 1895 will be mailed to those who remit in advance of the meeting. Preliminary programs will be ready about July 1, and will be forwarded by mail to all members of the society and also to interested applicants.

Rochester, N. Y.

Trade has improved but little since last report, but retailers are kept moderately busy with funeral work and an occasional little wedding. Outdoor flowers are getting to be very plentiful, especially iris, paeonies and hardy roses; the latter are very fine, but if the dry hot weather should continue a few days longer we may expect a decline both in quality and quantity. Tea roses coming in are all small; there is no choice stock to be had, and carnations also show the effect of hot weather in size and color. For some days they have been a glut in the market. Sweet peas that have not had the benefit of a few hours' soaking in water before shipping do not arrive well, and growers should bear this in mind.

Bedding out is nearly all done, and the sales of such stuff from this time forward will not amount to much. Altogether spring sales of plants have only been satisfactory to a few of the growers, those who have been able to sell out clean; prices were so very low that large quantities had to be disposed of in order to show a profit worth mentioning. The wholesalers perhaps made the most out of it, the smaller concerns having the hardest time to make both ends meet. In conversation with one of our leading nurserymen, discussing the low prices, that gentleman claimed that prices of nursery stock at wholesale were comparatively much lower than those we obtained for bedding stuff, saying that there was an

ELLIOTT'S ASPARAGUS PLUMOSUS NANUS.

The finest Decorative material grown. Graceful, durable and appropriate.

FOR JUNE WEDDINGS many thousands of yards will be used. This stock is grown to perfection in extensive houses specially constructed for this purpose, and can be shipped long distances without injury. PRICE PER STRINGS, 8 TO 10 FEET LONG, 50 CENTS.

SPHAGNUM MOSS IN ANY QUANTITY.

H. E. HARTFORD, 18 Chapman Place, BOSTON

overstock of all the leading fruit and ornamental trees, as well as shrubs and roses, which could not be disposed of at any price, and that this spring thousands of dollars' worth of first-class stock had to be burned up. Two year old roses were sold at the low figure of \$2 per 100, pears and apples as low as 2 to 3 cents. At such prices it does not pay to dig them up, but the land has got to be cleared, and they rather take the small pay than to burn them up. The only way for these men would be, it seems to me, to do the same as the leading florists have done for years, grow specialties, and it may after all pay them to plant anew.

The assignee of E. R. Fry announces the sale of fixtures, stock, etc., to take place on Saturday, June 15, at 11 o'clock.

J. B. K.

St. Paul.

There is nothing new to report in the way of trade, as business is rapidly settling into the ordinary routine of summer work. Beds and vases are about all planted, and the bulk of the florists' stock disposed of. The cut flower trade remains good on account of commencements, weddings, etc. The market is not overstocked and the quality is still good. Outside roses have not made their appearance to any extent, though another week will bring them into full bloom. The past few days have been wet, and heavy showers have started the weeds to growing. The earth was so dry, however, that it could take up an unlimited amount of moisture, so there has been no damage done so far.

The greenhouses of Mr. Fred Busch in Minneapolis are now filled with cucumbers and tomatoes and are worth seeing. His large new house, a description of which was given in a recent number of the FLORIST, is well under way, and will be completed in about six weeks. Mr. Busch will plow the soil the same as for an outside crop, and as every inch of space will be utilized, the advantage of such a house will be apparent to all who read a description of it. As regards ventilation Mr. B. claims there will be more than enough. In his other houses constructed on the same plan he finds that a slight opening of the ventilators is all that is necessary. In fact great care in ventilation has to be exercised all of the time, or the vines will blight badly. When his new house is completed Mr. B. will have upwards of 75,000 square feet of glass, all devoted to the vegetable industry. That the business is a profitable one is evident on every hand. At the same time, constant care and watchfulness have to be exercised, and every detail has to be punctually attended to.

FELIX.

DARIEN, CONN.—Alexander Wuerz, who has just started as a grower for the New York market, is adding a new house 20x100, and a potting shed 12x20.

The Seed Trade.

American Seed Trade Association.

The thirteenth annual meeting of the American Seed Trade Association was held at the Russell House, Detroit, Mich., last Tuesday, Wednesday and Thursday. The following were present:

John H. Allan (Jno. H. Allan Seed Co.), Picton, Ont.; C. L. Allen, Floral Park, N. Y.; W. W. Barnard, Chicago; F. W. Barteldes, Lawrence, Kans.; C. S. Brent, Lexington, Ky.; Alfred J. Brown, Grand Rapids, Mich.; G. S. Brown, Grand Rapids, Mich.; G. H. T. Hopkins (Jno. H. Allan Seed Co.), Picton, Ont.; D. I. Bushnell, St. Louis; John T. Buckbee, Rockford, Ill.; Frank C. Bruce (John A. Bruce & Co.), Hamilton, Ont.; Howard M. Earl (W. Atlee Burpee & Co.), Philadelphia; A. N. Clark, Milford, Conn.; E. B. Clark, Milford, Conn.; Irwin B. Clark (O. W. Clark & Son), Buffalo; W. E. Cratz and Henry Cratz (Cratz Bros.), Toledo, O.; A. D. Heffron (A. Dickinson Co.), Chicago; W. Eber, Quincy, Ill.; Frank T. Emerson (Western Seed and Irrigation Co.), Waterloo, Neb.; C. S. Burge (S. W. Flower & Co.), Toledo, O.; Frank Ford, Ravenna, O.; W. H. Grennell, Pierpont Manor, N. Y.; John T. Huntington (Huntington Seed Co.), Indianapolis, Ind.; Alex Rogers (Illinois Seed Co.), Chicago; Chas. N. Page (Iowa Seed Co.); Des Moines, Ia.; O. E. Mueller (Kentucky Seed Warehouse), Lexington, Ky.; Col. W. S. King (Northrup Braslan, Goodwin Co.), Minneapolis; S. F. Leonard, Chicago; W. D. Livingston (A. W. Livingston's Sons), Columbus, O.; W. Brotherton (Brotherton, Breitmeyer & Co.), Detroit; Aug. Mangelsdorff, Atchison, Kans.; Harry McCullough, Cincinnati; J. Chas. McCullough, Cincinnati; Wm. Meggatt, Wethersfield, Conn.; M. H. Durvea (Henry Nungesser), New York; Edgar Stracosch (Northrup, Braslan, Goodwin Co.), Chicago; Sam'l. M. Pease (Cleveland Seed Co.), Cape Vincent, N. Y.; John S. Pearce, London, Ont.; Henry Philipps, Toledo, O.; F. R. Pierson, Tarrytown, N. Y.; Fred S. Plant (Plant Seed Co.), St. Louis; Robt. Rennie, Toronto, Ont.; J. C. Robinson, Waterloo, Neb.; Otto Schwill, Memphis, Tenn.; H. A. Johns (Sioux City Nursery & Seed Co.), Sioux City, Ia.; Herman Simmers, Toronto, Ont.; S. E. Briggs and J. W. Hogg (Steele, Briggs Seed Co.), Toronto, Ont.; Robert George (Storrs & Harrison Co.), Painesville, O.; James Kidd (Sunset Seed and Plant Co.), San Francisco; A. G. Trumbull (Trumbull Seed Co.), Kansas City, Mo.; A. L. Don (Weeber & Don), New York; T. W. Wood (T. W. Wood & Son), Richmond, Va.; W. S. Woodruff (S. D. Woodruff & Sons), Orange, Conn.; S. D. Crosby, New York; S. G. Courteen, Milwaukee, Wis.; R. L. Burge (Churchill & Co.), Toledo, O.; John B. Merrill (Merrill & Co.), Toledo, O.; Geo. W. Hill, Detroit; C. F. Lohrman (Lohrman Seed Co.), Detroit; L. L. May, St. Paul; Thos. Craig (Gillett & Hall), Detroit; F. T. Caughy, Detroit; H. P. Winter, Glenville, O.; Mr. Kendall, Cleveland, O.; Wm. Philipps (Henry Philipps Seed Co.), Toledo, O.; W. B. Hoyt (Cleveland Seed Co.), Cape Vincent, N. Y.; F. G. Johnson (A. W. Livingston's Sons), Columbus, O.

Officers elected for the ensuing year are S. E. Briggs, president; T. W. Wood, 1st vice president; Alex. Rogers, 2nd vice president; A. L. Don, secretary and treasurer; Executive Committee: D. I. Bushnell, W. P. Stokes, S. D. Crosby, Irwin B. Clarke, S. F. Leonard.

The following new members were elected: R. H. Shumway, Rockford, Ill.;

H. G. Courteen, Milwaukee; L. L. May, St. Paul; Cratz Bros., Toledo; Merrill & Co., Toledo; A. C. Kendel, Cleveland, O.; W. Hill, Detroit; F. T. Caughy & Co., Detroit; S. D. Crosby, New York.

The papers read at the sessions were specially practical and valuable and brought out a great deal of discussion. They included the following: "Experimental stations; their influence, relations and bearings on the seed trade," by John S. Pearce, London, Ont.; "Grasses, their use and suitability on different soils," by T. W. Wood, Richmond, Va.; "Rot in onion sets, how caused and how to be avoided," by O. E. Mueller, Louisville, Ky.; "System of keeping stock," by S. E. Briggs, Toronto, Ont.; "Why types run out," by C. L. Allen, Floral Park, N. Y.

Appropriate resolutions were adopted on the deaths of R. A. Robbins and R. Niles Rice.

On Wednesday afternoon and evening the members of the association and their friends were the guests of D. M. Ferry & Co. About 3 p. m. the party, numbering about 150, embarked on a steamer chartered for the occasion, and enjoyed a delightful trip up the Detroit River to the St. Clair flats. On the return an elegant collation was served on the boat. Mr. Ferry as host made a very lappy address of welcome, thanking the association for complimenting Detroit by holding their annual session there, and adding that the association could always depend upon the firm of D. M. Ferry & Co. to do their part in carrying forward its work when called upon. Col. W. S. King responded on behalf of the association, thanking Mr. Ferry for his open handed hospitality and the good will shown toward the organization. He was followed by Mr. T. W. Wood, Mr. Thos. Craig and others. The party returned to the city about 9 p. m. all having greatly enjoyed the day.

Philadelphia Notes.

Mr. and Mrs. Wm. Henry Maule sailed for Europe on the Teutonic. They intend to be gone two months, and will spend most of the time driving through England. William Henry takes things easy. Business has been very good indeed, and, thanks to his efficient assistants, he says he won't be bothered with letters from the office while he is abroad.

Mr. Burpee will probably sail for Europe on July 6 by steamer Columbia to take a long needed rest. Mr. B. is a hard worker, as all seedsmen know.

Some of the Philadelphia seedsmen have already decided on their 1896 catalogue covers, and are actually sending copy to the printers. Nothing like being out on time!

It is rumored that Robert Scott & Son will abandon their mail trade, their wholesale and cut flower department having proved more profitable.

Two or three fall catalogues will also be suppressed. It appears that this branch of the mail trade is only profitable in one or two quarters.

A. B.

MR. W. T. HUTCHINSSailed for England on the 12th inst. He expects to spend a good deal of time with Mr. Eckford and to call on others doing special work in sweet peas. He will also visit France and Germany.

R. NILES RICE, founder of the house of Jerome B. Rice & Co., Cambridge, N. Y., died June 10, age 81 years.

MARSHALL H. DURVEA, of Henry Nungesser & Co., is making a trip through the west.

Worcester, Mass.

This hot weather is gradually closing up the season, so far as the florist is concerned and the lucky ones who toil not are seeking sea or mountain to while away the tedious summer months. Business is dropping off rapidly, an occasional wedding and now and then a batch of funeral work is about all that keeps us moving. Flowers are very plentiful; outside hybrids, iris, candytuft, etc., helping to swell the daily supply; no material change in prices is noted.

The weekly shows of the Horticultural Society commenced Thursday, June 6, and will continue until October 24, the show last week was exceptionally good, and the competition was close in nearly all cases. There were some splendid displays of iris, azaleas, rhododendrons and cut flowers from bardy plants and shrubs, brilliant masses of color acting as a setting for the more modest hued pansy, begonia and cut flowers. The displays of native flowers were very fine and the competition so close as to make judging no easy task. Much interest is shown in wild flowers just now, nearly all the schools devote an hour or so each week to them, being supplied with fresh specimens by Arta Pierce.

A. H. L.

Dried Mushrooms.

There is a French story of some travelers in Africa who, while on an exploring expedition, ran out of supplies. By chance they came upon a native hut, but it was empty and the only visible edibles in it were several strings of mushrooms suspended from the rafters to dry. For lack of anything better or more substantial they stewed these and made a meal of them. After awhile the owner of the hut, who was a powerful native chief and warrior, returned from a hunting expedition and having greeted the explorers in a friendly manner set up a wild howl of despair.

"What is the matter?" asked the explorers.

"They are gone. My evil spirits have stolen them," wailed the chief.

"What are gone?"

"Those, those!" shrieked the chief, pointing to the cut cords on the rafters.

"Why, no evil spirits took them," said the explorers. "We ate them."

The chief seized his stomach in both hands and rattled the bones inside his skin. "Ate what?" he gasped.

"Those dried mushrooms."

"Oh! suffering Moses!" roared the warrior, or words to that effect, "why, you fools! you've eaten the ears of all the enemies I killed in battle."—*The Collector.*

St. Louis.

Trade in the cut flower line during the past week was very good. Roses are very poor and very few coming in, and the demand for them is good. Retailers come early in order to get first in line. Sweet peas are plentiful and in good demand.

In my last letter I stated that we would not have a flower show. But the florists got together and held a meeting at Kuehn's commission store, and voted to have a show next November in the name of the St. Louis florists; the Florist Club will have nothing to do with the show. The attendance at the meeting was very large, some thirty florists being present. A committee of 4 was appointed to make arrangements and report at the next meeting next week. The committee is as follows: E. H. Michel, chairman, F. C. Weber, R. F. Tesson and E. Schray.

The Retail Florists' Association of St. Louis met at the store of the Chandler Floral Co., and adopted resolutions. There was a large attendance present and great interest was shown by all florists. They will meet again next Tuesday.

Two of the fakirs have left us and we hope the rest will follow at once. We are making it too hot for them. The fakir says if they can't buy their flowers in St. Louis they will send to Chicago for their supply. Now if the Chicago wholesale florists will not sell to them they will help us out, and the retail florists of St. Louis will not forget them. We hope that all cities will take the same stand we have taken. The following florists have signed the resolution declaring they will not buy flowers from commission men or growers who sell supplies to the street fakirs: Chandler Floral Co., F. C. Weber, J. M. Hudson, Sanders & Beneke, North Floral Co., Cannon Floral Co., Riessen Floral Co., Ostertag Bros., Ayers Floral Co., Luther Armstrong, Lindell Flower Store, Wm. Oughton, T. Badaracco, Mrs. Rotter, F. W. Bruenig, Mary Ostertag, Mrs. M. L. Newman, C. E. McCormick, Thomas E. Carroll, Elleards, C. E. Schoenle, August Kunz, W. L. Hucke.

Chas. W. McKellar representing E. H. Hunt, Chicago, was a recent visitor, and reports trade good all along the line. Mr. Wm. Bouche made a very fine job of Terrace Park; some fine bedding and lettering can be seen all over the ground. Mr. Bouche is a candidate for superintendent of public parks.

Frank Fillmore (our Frank) has been very busy lately with funeral work, and reports trade good even if it is hot.

J. W. North made a large ship four feet long and five feet high, presented to a dry goods man leaving for Europe.

A grand bowling contest occurred June 13, between the "Japs" and "Chinese" teams. The winners will represent St. Louis in the bowling match at the convention, and as both teams want to go to Pittsburg excitement is intense.

J. J. B.

Toronto.

Bedding out has been progressing merrily this last week, the weather having been propitious. There is still much to do however, before the finishing touches are put on. The great bulk of the planting out has been done fully a week or ten days later than usual, owing to the extreme spells of hot and cold weather. The plant trade has been fairly good, with prices perhaps a trifle better than last year. I hear less talk about "cutting," which it is to be hoped is a sign of good times returning.

Mr. J. Simmons has moved from Carlton street to 426 Yonge street. Mr. Smithers and another whose name I forget will give up their stores on Yonge street. The Fleming estate (also on Yonge street) I have already reported as being about to give up business.

Mr. F. Schuyler Mathews' paper "Hints about art in gardening" is most timely and the best and clearest thing I have seen written on the subject, it should be read and thoroughly digested by every gardener, it is a pity that the bosses should not see it too. What is a poor gardener to do when the boss comes out to look round after the bedding is done, and standing before a handsome bed of musas, cannas, curculigos and such like says "Gardener, I think that is very ugly; couldn't you take those things up and plant coleus or geraniums?" This actually took place here in a seven acre square as flat as a pancake. Mr. Mathews' next paper will be eagerly looked for.

The Commissioner of Parks and Gardens of this city is just now in receipt of a good deal of spiteful criticism through the papers and otherwise from some members of the profession. I say "spiteful criticism" advisedly, because these would-be critics show it so plainly by their writings and sayings. The pettiness of the matters criticized is one clear proof that it is not the benefit of horticulture they are after but that it is the commissioner personally they wish to injure. It is often said that the commissioner seeks only his own glorification; this may or may not be, but at any rate he has made his position from that of a park foreman to what it is, and has through great difficulties (which any one who has had anything to do with city councils will understand) elevated most of the parks and gardens from mere deserts to real parks and gardens. One cannot gain glory without doing something to earn it, and we want men in our profession here who do something and "get there." Supposing that these critics gained their apparent object of getting the commissioner out of his position (of which I have no fear) what benefit to horticulture would they have accomplished? Most probably some political hack or ward politician would get the job regardless of efficiency.

A. H. EWING.

MOUNT DORA, FLA.—With frequent rains our spring weather has been unusually favorable for growth, and nursery stock of citrus trees and semi-tropical plants, which was frozen to the ground by the severe blizzards of the past winter, is coming out rapidly from the roots. Budded orange groves of all ages were generally killed below the bud, but in most cases are putting out new shoots from the old stem at or near the ground. Seedlings fared but little better; on these in a few cases some of the larger wood has been saved.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Red Spider Can't Live

WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD,
Dear Sir:—The nozzles to hand some time ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.
Yours truly,
E. G. HILL & CO.

Price, \$1.00 each, prepaid. **TRY IT, AND RETURN IT** at once, if not satisfactory, and your money will be sent back.

CHICAGO.

New Notes.

DEEP CREEK, VA.—Chas. H. Weiss has gone into business here, his establishment being styled Forest View Greenhouses.

MT. HEALTHY, O.—Robt. A. Van Horne is erecting commercial greenhouses here, with the intention of entering the business.

INTERLACHEN, FLA.—All are now busy engaged in cutting down frozen orange trees; some are budding in the roots, while others are waiting for the young sprouts to bud into. Roses are blooming freely.

COLUMBIA CITY, IND.—Wm. Kelsey of the Riverside Greenhouses has formed a partnership with Geo. E. Butchart, and the firm will be known now as Kelsey & Butchart. This firm is erecting another new house, 26x50.

ALHAMBRA, CAL.—Capt. Gray, proprietor of the Ingleside Nurseries, will erect new modern greenhouses during the summer to be devoted to ferns. He will probably use crude oil for fuel, it now being developed in large quantities in and around Los Angeles.

SAN LEANDRO, CAL.—J. W. Van Horn has given up the nursery section of his business and will devote his place entirely to raising flowers for the San Francisco market. He has two houses devoted to roses and carnations, and will add another rose house 18x60 this summer.

OVIEBO, FLA.—In this immediate vicinity the freezes of last winter put an end to both nursery stock and nursery trade. No new fruit orchards are being set out, and most of the young orange groves have been abandoned. Orange trees from ten to twenty years old will make a good recovery and ultimately be as good property as ever, but new groves will not be set out till the old ones have again paid dividends for a few years.

SAN DIEGO, CAL.—Mr. Robert H. Asher has started into growing bulbs and plants at La Mesa, near San Diego. He is the son of the oldest nurseryman in San Diego county and has had some experience as a collector. His sister at El Cajon valley is interested in the same business. Mr. Geo. F. Otto, formerly with Miss K. O. Sessions, has a well-kept place at National City and makes frequent trips to San Diego with loads of plants. He maintains his mail address at San Diego. A French gardener, recently from Chicago, is making plans to start in the plant business in San Diego.

PROTECTION FOR HOSE AT LAST.

For sale by all Seedsmen. No florist can do without it. Cheap, practicable and indestructible. 35 cts. each, or \$3.50 per dozen. MANUFACTURED BY CHAS. SCHUCK, 2457 North 8th St., PHILA., PA.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwertli. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order. SYRACUSE POTTERY CO. OFFICE: 403 North Salina Street, SYRACUSE, N. Y.

OUR NEW YORK and Boston news letters had not come to hand at time for going to press.

SPRINGFIELD, ILL.—Work has commenced at the fair grounds on the foundation for the dome of the World's Fair horticultural building. The contract price for the dome delivered and set up on the grounds here is \$68,000.

CHICAGO.—Mr. J. W. Hogg of Steele, Briggs & Co. of Toronto is in town. At the next meeting of the Florist Club a paper on "The florist of the future" will be read by Mrs. Emily T. Royle. The florists of the city should not fail to visit the rose garden at Jackson Park while at its best.

Herbaceous Plant Notes.

Campanula glomerata is opening its clustered heads of blue bell-shaped flowers on the main or middle stem now and will send out branches or new stems, which bloom in succession until September. It grows 12 to 15 inches high, and is well worth a place in the border. Campanula barbata is pale blue in color, the flowers are produced in loose panicles through June. It is 12 to 15 inches high and makes one of our best plants for the rockery or for planting on dry banks. Campanula carpathica, both the dark and the light blue and pure white varieties will bloom from June to August and are neat and compact in habit. The flowers are produced on slender wiry stems and stand upright, rather open bell-shaped, disposed on very loose panicles about 10 inches high. The plant is of dense, compact growth, very floriferous and covers the ground completely over. One of the most popular border plants we have. Campanula Medium, the true Canterbury bells, is opening its numerous flowers now all along the stems, and the racemes will be clothed with the purple, blue, white or pink bells until the end of July. Height about 12 to 18 inches. Not an herbaceous but a biennial variety, but surely a favorite border plant with all, especially the different shades of pink and rose. Campanula persicæfolia, the single and double white and blue, are all out and are very much liked as cut flowers. Good strong plants will after being well established send up straight stout panicles over 2 feet in height, clothed with the pretty little bells, which open in succession until the end of July. One of the finest border plants and useful as an ornament as well as for cutting.

Enothera glauca Frazerii is golden yellow and a most abundant bloomer. The flowers are large and come in clusters on the tips of the branches, buds forming as the branches elongate. A grand show plant for the border, blooming from June to October freely and attaining a height of about 12 to 15 inches.

Platycodon grandiflorum, the Chinese bellflower, is opening its large rather flat bells on the tips of the stems and branches now, and no collection should be without it. There are blue and white; both are excellent, and if planted in large masses rather close together they will produce a grand effect in July. Plants, however, should be old and well established to flower profusely and give best results, newly planted patches are rather weak the first and second year and do not hold up their flower stems erect. Height 18 to 24 inches. Platycodon g. Mariessii is a newer addition, and in every respect equal to the type, bearing flowers of a large size, a light blue in color.

Arenaria loricifolia is a small low alpine plant with numerous minute white flow-

ers, blooming in June, and will last 6 to 8 weeks. A good thing to plant among rocks; the leaves are narrow and thin and shaped almost like a larch leaf, and the plant only grows from 4 to 6 inches high.

Spiræa lobata or venusta is a tall growing beautiful species, old stools of which will grow to a height of 6 feet, but usually half that height only will be attained under ordinary circumstances. The flowers are very handsome, of a soft rosy pink with a peculiar salmon shade, and come in large flat terminal clusters borne on long stiff stems. This is very much admired as a cut flower, and deservedly so; they flower June and July. Spiræa astilboides and S. a. floribunda are both fine for cut flowers; of a creamy white, and the long graceful feathered panicles are very lasting when placed in water. The first named grows to a height of about 2 feet, while the latter has a more dwarf and compact habit. Both are capital plants for the mixed border, and last about 6 weeks in perfection. Spiræa palmata, of a dark brilliant pink in compact panicles, blooms from June to August, and is a most beautiful variety not very common in collections. The bright color, the freedom with which the flower stems are produced and the neat habit of the plant make it one of the most desirable of the tribe. Height 18 inches. Spiræa p. elegans is a newer variety of the above and bears white flowers with pink stamens; is a most elegant acquisition.

Achillea ptarmica fl. pl. and its sport, "The Pearl," is one of the best and most useful white flowering plants for the florist; the flower heads or corymbs are everlastingly coming along from June to late autumn, and large quantities of flowers may be gathered daily from a comparatively small patch. The small double flowers are set closely together on the terminal points of the stems and resemble a small flowering feverfew in shape, but are of a much purer white. They last a very long time in water and may be gathered with long stiff stems; in fact when cutting them they should be cut down rather low to induce the plant to throw up more flower stems from the root. This plant should be replanted and divided into small bits every two years, for it soon takes complete possession of the ground if left alone, and when too much crowded the flowers do not develop to perfection. Young plants will not begin to bloom quite as early in the season as the two year olds and two patches should always be on hand, one of last year's planting for early use and one of the present year's setting out, which will continue to bloom until very late in the fall. Grows to a height of 1½ to 2 feet.

Coreopsis lanceolata is well known to all florists, and the bright golden yellow flowers when under good cultivation and in rich soil will measure close to 3 inches

across. A very showy perennial and extremely useful for cutting; will grow 2 feet high generally and blooms nearly to the end of the summer.

Digitalis purpurea, the common fox-glove, blooms from June to the middle of July, and a patch in the border or a bed of it will make a grand display in early summer. There is a great variety of colors, ranging from purple, pink and rose to a creamy or a pure white. All have small purple dots in the throat, and the effect of the long narrow pyramidal flower stems, densely clothed with their drooping flowers, is equaled only by few other plants we may use in the border. Height 2 to 3 feet. This is not strictly a perennial, but if we divide plants after the second year's planting we can, simply by performing this operation, perpetuate any or all varieties we may desire, otherwise plants will usually die out after the second year. *Digitalis ambigua* or *grandiflora* as it is called by some, is a true perennial species with yellow flowers dotted with dark brown in the throat; will bloom until August and is very desirable, not only for its rare color, but also on account of its free flowering quality, and may be either planted by itself or mixed among *D. purpurea*. Grows to the same height as the above.

Lychnis chalcedonica is an old and well known border plant which deserves to be planted largely. The double varieties are as desirable as the single scarlet and white, both are good and bloom from now to August, attaining a height of 2½ to 3 feet.

Aconitums of the earlier varieties are beginning to send up their panicked flower stems and are making a fine show in the border. One of their good points is that we may plant them under the shade of trees and they will flower just as well as when planted in an open sunny border, but the roots should be undisturbed and remain in the same spot for years. Newly transplanted beds or patches will not produce those large pyramidal, many flowered panicles, which we admire so much on old plants or clumps. Blue or blue and white is the prevailing color of the early varieties, such as *ampliflorum*, *napellus*, *emineus*, *intermedium*, *gracile*, *angustifolium*, etc., and they grow from 2 to 4 feet high.

Clematis recta or *erecta* as some have it, is a white sweet scented, shrubby variety, blooms in dense compact corymbose clusters of large size from now until August. Old bushes will give hundreds of most ornamental long and stiff stemmed panicles of flowers, which can be used in various ways by the florist; it will form a beautiful bush with very dark green foliage, and should be planted extensively for cut flowers, as it has the best lasting qualities and has that sweet hawthorn fragrance, admired by so many. As a solitary plant in the lawn it forms a fine perfect round specimen 2 to 3 feet high. J. B. KELLER.

Rochester, N. Y.

Useful Plants.

SELAGINELLAS.

In the list of plants that will be found useful in a retail trade we may well include a few species of selaginellas, for though these plants will not endure long-continued exposure to a very dry atmosphere, yet a place may be found for a few of them. But it should be remembered that in order to produce satisfactory stock of this description it will be necessary to give them proper quarters and a little attention, for when selaginellas are

grown under a bench or crowded among other plants the growth will be so soft and sappy as to be quite useless.

The soil is not a very particular item in the successful culture of these plants, almost any light, sandy compost answering for the purpose, providing it drains readily and does not pack too firmly in the pots.

Cuttings of the strong growing sorts may be rooted at almost any time in wet sand, while those of tufted habit are generally increased by division and potted up into 2-inch or 3-inch pots, the latter being a convenient size for most purposes. Selaginellas require some shading at all times, but should also be vented freely in order to give substance to the growth.

Of the low growing species none are more useful than the well known *S. Kraussiana* and its variety *aurea*, these being rapid growers and very easy to increase, and may be handled nicely in a cold frame during the summer. Another good cool house species is *S. apus*, a native of the Eastern United States, and a very pretty one too, and of somewhat similar growth to the above is also *S. delicatissima*, another admirable sort, but not quite as hardy as *S. apus*.

S. serpens is another common species, very easy to grow and spreads almost like a weed, and having the peculiarity of changing its color during the day, being of bright green in the morning but apparently bleaching out to almost white in the afternoon, this change being of daily occurrence.

Among the species of fern-like habit, producing more or less upright fronds, and spreading by means of runners either on the surface or beneath the surface of the ground, few are more useful than *S. Braunii*, this species having finely divided, dark green fronds that are frequently one foot or more in length, and of sufficient substance to be quite enduring. A temperature of 55° at night is sufficient for this admirable plant, and spring is the best time to multiply it by division. It may also be worthy of note in this connection that *S. Braunii* is sometimes, though incorrectly, found under the name of *S. Wildenovii*, the true *S. Wildenovii* being an entirely distinct species.

S. Martensii and *S. Martensii variegata* should also be included in the useful list, both these being very easy to manage and soon becoming salable stock from cuttings taken off during the spring and summer. *S. filicina* is another handsome species, though possibly less hardy than the above, and bears a compact mass of feathery fronds that vary from six to fifteen inches in length, and of rather pale green color.

S. Vogelii is also a strong growing kind and makes a fine exhibition specimen, the fronds being nearly triangular in outline, finely cut and very dark green with sometimes a bluish or glaucous tint. *S. Emiliana* has found quite a place among the stock of many florists during the past few years, and is really a very pretty sort, of compact habit, rapid growth and very easily increased by cuttings. This species (or variety) may be worked into small fern dishes in company with the ferns with very good effect.

If one desires to have exhibition stock *S. grandis* and *S. atroviridis* should not be omitted, also *S. Wildenovii*, *S. Lyallii*, *S. viticulosa* and numerous other species could readily be enumerated for that particular purpose, but plants of that character are not always the most profitable, and therefore no special stress has been placed upon exhibition species in the present article. W. H. TAPLIN.

The World's Fair Rose Garden.

In this issue we present twelve views of the rose garden on the Wooded Island at Jackson Park, Chicago, from photographs taken last week.

At the time the photographs were taken the handsomest bed was undoubtedly that of Anne de Diesbach. Mrs. John Laing was also in good form and will of course remain in bloom long after Diesbach has passed its glory. Marshall P. Wilder was also a star of the first magnitude and Paul Neyron was in fine estate. Merveille de Lyon and Gloire de Lyon were in fine bloom and both were in better condition than Margaret Dickson, which was rather unexpected. Baroness Rothschild showed up rather better than anticipated, while Jeannie Dickson was rather a disappointment this year. Jacqueminot held the fort for brilliance of color, Mme. Georges Bruant was very satisfactory, and Alfred Colomb held a good position as a bedder.

In our issue of April 13 last we printed a description of the cultural methods employed in this rose garden, and our illustrations may be considered supplementary to that article.

Hæmanthus Kalbreyeri.

Among the newer and little known species of *Hæmanthus* *H. Kalbreyeri* is one of the most attractive. Several specimens of this plant are now in flower at the Botanic Gardens. The large brilliant orange-scarlet flower is very attractive. The flowers are curious, being closely gathered together in compact umbels. Propagation is effected by offsets, which are produced more or less profusely; they should be removed as soon as sufficiently rooted or large enough. The best season to do this is when the plant is in full free growth. It is important after flowering to have a period of growth, to be followed by one of rest. Pot in equal parts of peat and loam with a liberal addition of sand. The offsets should be kept in a close house until established. They should have the benefit of as much light as possible, and will reach flowering size sooner if kept in 55° or 60° and encouraged by an occasional stimulant in the form of manure water. Plants flower more freely when underpotted, for this reason it is not necessary to shift them every year. A native of Guinea, introduced in 1878.

REYNOLDS.

The Crape Myrtle.

Lagerstromia indica is a plant meriting a more wide-spread cultivation. In the north it would be a fitting companion in tubs or pots to the oleander, here, and south of here, it is one of the finest shrubs in cultivation. It is a native of China, attaining a height of from 6 to 10 feet, but by the use of the knife it can be kept at any height or shape desired. It was introduced in 1816, flowers abundantly, and seeds very freely. From seed it can be easily propagated, and cuttings from young side shoots grown inside are easily rooted. There are various shades of purple and pink. It varies greatly from seed, often producing as many as twelve to fifteen different shades from a small quantity of seed. When grown in tubs or pots they require but little or no attention during the winter months; just sufficient water should be given them to prevent the soil from getting dust dry. As the spring advances both the quantity of water and amount of heat should be increased. There is a pure white variety which is very handsome, but of course

VIEWS IN THE ROSE GARDEN AT JACKSON PARK, CHICAGO.

less hardy. In the matter of color only, does it differ from the type. REYNOLDS.

Orchids for July.

It is no whit easier to find a paying crop of orchids for July and August than it is to find any other paying crop for those months. I would rather undertake to give a system of kitchen garden crops, and would believe many a florist would be better and more surely served in handling them, the farmers to the contrary notwithstanding. There are a few first-class orchids for the month, but with a few exceptions they are such as need to be pretty constantly renewed by importation, and even then a paying crop and a paying demand are somewhat problematical.

The amateurish plan of our mutual friend "J. Robinson Sharps" will not do at all for the money maker. Such orchids as the white flowered hirsute dendrobes and the gorgeous cattleyas of the Dowiana and gigas breeds must be taken in hand at the source of supply in their native woods, and the fine varieties cut up and propagated there; moreover they must be transported as safely, surely, seasonably and cheaply as bananas before the florist can handle them with satisfaction. I am sure of that, and it is possible I may live to see the thing done systematically, just as I have seen moon-flowers and nelumbiums come into general cultivation.

July and August afford mean measures of heat as great as those of the tropics, and greater than those of the sub-tropics. The trouble is with us they are inconsistent, subject to severe depressions and are often too wet or too dry. The mean of our two warmest months is the constant temperature (approximately) of much of the orchid tropics up to an elevation of 5,000 feet.

I spoke of the facility with which *Oncidium Lanceanum* may be managed outdoors during these warm months in my last article. The explanation is probably simple. The plant has a wide range, wider than has been determined, but taking one of its warmest stations and comparing the mean temperatures of July and August with those of Philadelphia they are found to approximate closely, while the fluctuations of temperature, rainfall and humidity are not greater than the geographical range of the plant adapts it to withstand, or the cultivator can overcome. The following table is made up from government records and is still wretchedly incomplete as applied to the plant in question, but better than can be applied to most American orchids. The readings marked * are yearly averages, but the minimum is the temperature on the grass for July at St. Anne's Botanic Garden, Trinidad, fractions being dropped. At the same station the humidity ranges from 73° to 94° for the year.

July weather of Philadelphia, Pa., compared with stations of <i>Oncidium Lanceanum</i> .	Minimum		Max.		Mean	Mean	Humidity	Rain
	Fab.	Fab.	Fab.	Fab.	Mfn.	Max.		inches.
Philadelphia, Pa.	57°	97°	67°	87°	65°	2.39		
St. Anne's and Cedros, Trinidad.	71	88	69*	87*	78	2.00		

The heaviest rainfall at Cedros for the year examined was 10.61 inches in January, followed by 1.27 in February. Then followed from 2 to 4 inches per month up to August, when 6.92 inches fell, followed by another dry month with only .95 of rain. Then from 1½ to 5 inches in gradual increase to December. But in such climates as much rain again falls in other years. There are, however, two marked seasons of growth, and we can see why so many orchids try to grow in winter, and sometimes flower twice; besides our plants rarely seed, and gardeners know that many plants will flower oftener when seeding is by some means prevented. It is not impossible that some orchids flower twice annually, but I take it they are exceptions. But that two or more growths are made naturally is no doubt common enough—even with cattleyas—although some collectors who I warrant have never watched them in the woods say they only make one.

The florist who wishes to grow orchids may safely keep these things in view, and do anything in his power to promote orchid farming in orchid countries, and learn all possible of their climates. He will thus forward the day when he may as safely grow a crop of orchids as a crop of lilies. As matters are at present—dependent upon the selfish, short-sighted greed of the collectors, many fine things are in actual danger of extermination, or they are confined to the equally selfish possession of a very few, who do nothing rational either for their perpetuation or their dissemination. Do not for a moment fancy I am talking at random. I need only point to the success attained in vanilla culture to show you what may be done in the tropical culture of fine varieties of orchids. Although the vanilla orchid is chiefly Central American, although it has the advantage there of a fertilizing moth, and costs nothing much to cultivate, yet the pods are principally supplied to the world by the islands of Mauritius and Reunion, far away in the Indian Ocean, but with cheap and intelligent labor, with industry to cultivate, artificially fertilize and cure. It is only now and then that a partial failure of crop permits the Indians of Central America to make a living at collecting from the wild plants. Nevertheless they do keep the prices within certain limits, but isn't it strange to see that Central America does so little in the culture—with their material advantages of climate and insect fertilization? They simply haven't got the thing through their heads, or they are too sleepy—or both. Now suppose some one would do as much for *Cattleya Rex* as for the vanilla, and would deliver it in good order, in advance of the growing season, as the Dutchmen do hyacinths? Oh, no! I don't want to live in a Dowiana climate myself, but people do live there, and I fancy it would be easy for them to supply compact and useful plants which would supply the large cities with a crop of July flowers which are now almost unattainable. Some years ago a party at Long Branch bought a large lot of these cattleyas, and I made a visit to see them in flower(?) about five years later. There was neither a flower nor a gardener, and scarcely the ghost of a plant to be seen. Yet I believe some of the leading experts of the country had been employed upon them. Poor fellows, they couldn't maintain a sun energy of 150° during our winter, no matter how expert they were with crocks, and peat and fern fibre and sphagnum.

The surest and best of the eastern orchids for July are *Ærides quinquevul-*

nerum, *Æ. virens* Ellisii, *Saccolabium cœleste* and others of the Vandææ. It is doubtful if there is money even in the fragrant *ærides*. Some of the hirsute dendrobes may also be had in flower, and although often grown it would surprise me to hear anyone report a profit from them. *Dendrobium Dearii* although somewhat slow to establish will probably endure our climates better than most of the white flowered ones, and propagate better.

There are three types of *cattleya* often seen in flower during this month which, as flowers, are not surpassed in the genus. They are *C. Dowiana* and varieties, including *C. Rex*, *C. gigas* including *C. Imperialis*, etc., and the Rio Negro varieties of *Cattleya superba*. These latter are quite different in freedom of flowering from the Guianian plants—that is if the collector's accounts of their locality can be relied on; we are at their whim and mercy for what we know of localities, as well as for what we don't know. Anyway the Rio Negro climate and the "Rio Negro" plants are vastly different from the ordinary *Cattleya superba*.

Some of the older *miltonias* such as *Regnellii* and *spectabilis* are sure bloomers and easy to propagate and keep. *Mormodes luxatum eburneum* is seldom seen in flower. It is one of those orchids subject to the sudden rot I have spoken of before, and the finest young bulbs are bound to go in certain conditions of weather. The sooner you hang it beneath a tree after June 1 the more likely you will be to save the bulbs and see the raceme of ivory-like flowers. It commences growth in February or March and continues to September or October, rooting freely over nearly as long a period. It does both, and also flowers outside, maybe less succulently than under glass, but of what use is succulence if you lose the growth of a season in a day? This orchid no doubt needs more drizzle and humidity for growth than we can afford it at proper temperatures, but it is worth a little pains to see the raceme of a dozen to eighteen flowers. Every bulb will make a lead if separated.

Stanhopea eburnea is a fugaceous but good July orchid.

Trenton, N. J. JAMES MACPHERSON.

Orchids at Cincinnati.

The only collection of prominence in this city was formed several years ago by the late F. T. MacFadden, which he eventually converted into a commercial establishment and gained wide popularity as a cultivator of orchids, roses, cyclamens, carnations, etc. During a recent visit I found Mr. Harry Sunderbruch in charge, and he may be complimented on the appearance of the plants. The collection of cypripediums I found had been dispersed, with the exception of *Cypripedium insigne* which had been retained solely for cutting purposes, together with quantities of cattleyas, *lælias*, *vandas*, dendrobes, etc., occupying several houses, both stage and roof being crowded with them. The numerous growths now forming indicate a wealth of bloom during the coming season. *Cattleya labiata*, *C. Trianae*, *C. Mossiae*, *C. Percivaliana*, *C. Bowringiana* and *C. Mendelii* are the chief varieties cultivated. The season is now finishing with *C. Mossiae* and *C. Mendelii*, and a very pleasing group was in bloom, showing distinct and abundant variation, together with a fine lot of *Lælia purpurata* and *Dendrobium nobile*, a grand lot of the rare *Oncidium splendendum* was doing well, suspended from the roof, where they enjoy ample sunlight

VIEWS IN THE ROSE GARDEN AT JACKSON PARK, CHICAGO.

and not too much water at the root. A group of *Vanda coerulea* also was well grown, likewise a splendid lot of *Dendrobium Phalaenopsis Schroderianum* and *D. bigibbum*.
A. DIMMOCK.

Carnation Notes.

The cut worm has destroyed thousands of young carnation plants this spring, and the question arises, how can we rid our land of this pest? In conversation with Mr. Sirene of the N. Y. Experimental Station located at Jamaica, N. Y., I find that there are several species of this worm, and that the moths begin to deposit their eggs now and until fall, and that they always do so in sod ground or where there are many weeds. Moral, do not allow weeds to grow on any spot of your place, or if you intend to use ground that is now in sod for your planting next year plow it at once, then the moths will not deposit their eggs there. This may seem a matter of but little importance, but if, like a neighbor of mine, you should lose 5,000 or your whole stock of plants next season from cut worms don't say that I have not given you a pointer as to the remedy, for I know that in my vicinity there have been but few, if any, worms where the ground was kept clean last season, and where the weeds were allowed to grow cabbage, carnations and all soft wooded plants have suffered terribly. There is also another remedy, but it is expensive and requires considerable attention; it is to hang an oil torch over a large tub of water, the torch to be kept burning nights, the moth attracted by the light and coming in contact with it burns its wings, drops into the water and is drowned. This process must be continued for several months on account of the several species depositing their eggs at different times.

CHARLES H. ALLEN.

Analysis of Carnation Plants.

Perhaps the following analysis of carnation plants (including the whole stalk, leaves, flowers and roots) made for me at the Mass. State Agri. Exp. Station in 1891 may aid Mr. Allen in making a formula of chemicals spoken of in a recent issue of the FLORIST.

The plants were taken from the benches in September when the plants were thrown out. This whole matter of feeding plants in greenhouse culture is of the utmost importance. SEWALL FISHER.

How Many Men Does it Take?

A communication comes from Evansville, Ind., which is, to say the least, difficult to answer, and it would occupy several pages of your valuable space were it fully answered. Evidently the young man is in earnest, but whether he is the boss or an employee I have no means of knowing, and it matters little as far as my answer is concerned. Here are a few samples of the enquiries:

"How many men are needed for the best results on an establishments of 9 houses: 2 rose houses 100x20, 1 rose house 100x10, 1 carnation house 100x10, 1 smilax house 30x20, 4 houses for general use, each 80x10. (This as I figure it makes about 10,000 feet ground measure, of glass. W. S.) We grow about 6000 geraniums, about the same of roses, also have 400 feet of cold frames." Subscriber does not say whether this is square feet or lineal.

"Should one man water all and help lift sash off cold frames in winter? Should one man have full control of the watering of the rose and carnation houses, or should two or three do it and hold the one that does it most responsible? The number of men and what place, first, second, third, and so on, should occupy as to potting and tending cut flower houses."

I have given these quotations, verbatim, because your readers, if they trouble to read it, will realize what sort of stuff I have to grapple with. To be serious, it is quite difficult to say what amount of help would be necessary to run these houses, so much would depend on the style of business they did. If much decorative business was done in winter that would warrant more help than if there were none of that kind of business. Your correspondent says that the produce of the place is disposed of partly wholesale, partly retail. I would say it the very most was made of the glass that it should employ from July to March two good men, a boy and a laborer to do such work as firing and many other jobs which are always found round a greenhouse. From March 1 to perhaps July or later an extra hand will be wanted to handle the bedding stuff, deliver plants, etc.

In a place of this size one man should have full control of every operation. If the boss is not a stay-at-home man himself and does not superintend every operation he should have one man who should be foreman and responsible for everything. The foreman may not water the roses and carnations himself, but he should tell his subordinate when to do it. Mind, I say in a place of this size. About the relative positions of men in a place of this kind the foreman, if a man of any tact, will soon find out what the other employees are most capable of doing, and will set them to work where their ability will be most profitable. As to holding any workman responsible, the foreman only is responsible, because if a workman does not do his work right and intelligently, or is incapable of learning how to do it, he should be allowed the privilege of seeking some other occupation, where less brains and more brute strength is required.

The very curious question about lifting of sash in winter is really too ridiculous to answer seriously. In a greenhouse establishment no such rigid lines of duty can be laid down. All hands and the boss himself should get out in cases of emergency. If a man refused to lend a hand at any job when needed he should be given the grand bounce at once. There are some

amiable men with a slight soft streak in their composition who are often imposed upon by less worthy men, but that state of affairs usually finds its level. The worm will turn after a time, and the worthy man will float to the top, and in his upward course displace the arrogant selfish, domineering, bossy, showy, and brainless creatures.
WM. SCOTT.

Early History of the S. A. F.

ED. AM. FLORIST: The statement regarding the conference at Cleveland, O., between John Thorpe and the writer is correct in all particulars except the date. The nurserymen's meeting at Cleveland occurred in 1879 instead of 1883 as stated. The very first expression regarding the formation of the S. A. F. occurred in Cleveland in February of 1879 at the depot between Mr. Thorpe and myself, and when we parted at that time it was with the understanding that the matter should receive our best thought until June; when, if practicable, we would undertake to organize. So few florists were present at Cleveland in 1879, and those present were so fearful of failure, that the attempt was again postponed. The matter was canvassed at St. Louis and we all felt at that time that favorable action would soon crystalize, as it did the next year in Chicago.

The reprint in the FLORIST of our old prospectus brings forcibly and clearly to mind many of the thoughts and perplexities which obtained in the mind of the president and secretary at that time. Very few in the profession realize the great amount of work planned and executed previous to our first meeting at Cincinnati. All credit must be given to our beloved co-worker Myron A. Hunt; he spared neither time nor means in pushing to successful issue the several details given him to work out.

Whilst writing this, reminiscences of the past flit before my mind. I think of old-time friends, of the methods pursued by the profession in the days previous to our organization, of the anxious solicitude regarding the Cincinnati meeting. The great success of that meeting more than repaid for all the work and anxious thoughts expended in the effort to unify and ennoble our profession.

All acknowledge the wonderful work accomplished, but let us not glory in the past but looking to the future let us with firm tread and steady purpose endeavor to guide this national society so that it shall be even a greater factor in the future than it has been in the past in building up and conserving the varied interests connected with our calling. E. G. HILL.

Horticultural Exposition at Paris.

At the International Horticultural Exposition at Paris May 22 to 28 last, the exhibits were placed in enormous tents in a part of the Tuileries. The largest tent was 348 feet long, 87 feet wide and 36 to 45 feet high in the highest part. There were five smaller tents, all were made of a light material that admitted abundant light.

In the large tent were arranged six long beds, two on the sides and four in the center. These were filled with rhododendrons, Azalea pontica and hardy and tender perennials and annuals in mixed groups. On the inner beds were calceolarias, geraniums, sweet peas, etc.

Two of the smaller tents were filled with roses, and others with orchids and stove plants.

There were 400 exhibitors and the

PLANTING ON THE MARGIN OF THE WOODED ISLAND, JACKSON PARK, CHICAGO.

prizes amounted to 30,000 francs (\$6,000) in addition to numerous diplomas. Moser, of Versailles, received the "Prix d' honneur," of the President of the Republic for his rhododendrons, azaleas, clematis, kalmias, etc. The principal foreign exhibitors were two from England and two from Belgium.

Vilmorin-Andrieux & Cie were the recipients of many prizes for plants, both flowering and vegetable. They made a fine display of alpine plants. E. Forgeot & Cie made a specially fine show of plants for the kitchen garden, receiving a gold medal. Honore Defresne fils made a fine show of trees and shrubs, and M. Truffaut of greenhouse plants.

Among novelties were some exquisite bertolonias from M. Bleu, who has produced some of the most beautiful varieties in cultivation. Another novelty was a double rhododendron shown by M. Moser, which was as double as a zonal geranium.

The Wooded Island.

The accompanying engraving, from a photograph taken last week, gives a glimpse of the planting on the margin of the wooded island at Jackson Park, Chicago, as it now appears. A splendid growth has been made since the exposition closed and the beauty of the island has been greatly enhanced.

Of all the buildings at the fair the Japanese cottages at the northern end of the island and the art building are the only ones now standing, and surrounding the island is a scene of desolation. The wreckage is being slowly removed, but it will take several years to restore the park.

NEBRASKA has selected the golden rod as the state flower.

Philadelphia.

The June meeting of the Penna. Horticultural Society was held in the hall of the College of Physicians, 13th and Locust, a very good place by the way. The attendance was not large, and it was concluded to hold the meetings during July and August at the office of the secretary, 1414 So. Penn Square.

The American Dahlia Society asked permission to hold an exhibition of their favorite flower under the auspices of the Horticultural Society during the latter part of September, they guaranteeing to put the society to no expense on their account. They will issue their own premium list and have it sent out with the regular schedule of the society. It is also proposed to have a paper on the dahlia prepared and read at this meeting; this should prove a very interesting and instructive essay, as this flower has received very little notice from the horticultural press of late years. There are many new varieties coming out, which if properly brought to the notice of the public would make this flower much more popular than it is.

Mr. Heacock of the committee of arrangements reported having engaged the Academy of Fine Arts for the chrysanthemum show, which is to be held November 5 to 9 inclusive. David Rust has accepted the position of superintendent of exhibition; that he will fill the position to the satisfaction of the society goes without saying, especially as the working members have expressed their intention to give him all the assistance they can. There is everything in favor of a grand show next fall. The building committee reported the new hall as progressing in a satisfactory manner and unless some

serious delay not now anticipated occurred the chrysanthemum show of 1896 would open the new building.

Business is very quiet; the regular summer dullness appears to be setting in. The pond lily and the aster have arrived, and in a few days the hollyhock and the outside summer carnation may be expected. Beauties are very scarce and poor. La France, Kaiserin and Meteors are now the best roses; they sell for from 3 to 5 per hundred. Carnations are small, and bring from 50 cents to 1 per hundred. Iris is offered to take the place of pæonies, and sells for 50 cents per dozen. Lonsdale has some very pretty white varieties. He also is headquarters for orchids, and many a pretty box is topped off with a few of his favorite flowers.

Growers are very busy now getting their houses planted with roses for next season's crop. The Meteor seems to be a favorite, and nearly everybody is devoting a house to it. The new roses are being tried, and quite a number are planting Belle Siebrecht and Mrs. Morgan. More Beauties are also going in; at least half as many more will be grown about here the coming season. They are to take the place of the early hybrids, which have not of late years been a success. About the first of March a grower who had a whole house devoted to Beauties this season for the first time, and who has been very successful with Brides, Mermets and Bridesmaids, said "If I don't sell another Beauty from this time on, and still have good luck and success in selling my other roses until the season closes, I will not be able from any one house to catch up the receipts of my Beauty house. It is the most profitable rose I have ever handled since I have given it a house to itself."

The wandering fishermen from the wilds

of Maine have returned, and no doubt the air will be full of scaly stories for some time to come. K.

Chicago.

During the past week the market has fluctuated greatly. For several days sales were tolerably good, good roses going very well. Then there was a break, as an extra quantity of stock came in on Tuesday, and the demand was light. At the present time there is a decided glut in some lines, and trade is quiet, but the stock of really good roses is small, and they are all sold out every day, prices running from 2 to 3. A great many Meteors are in, bringing 2.50 to 3. Some extra stock in Testout and Kaiserin is held at 4. There is quite a shortage in Beauties, some large growers being off crop just now, and a large proportion of them have very short stems. Outdoor roses do not amount to much, and do not seem to influence the market in any way.

Carnations are very plentiful, and many are sold at 40 cents, though naturally more is paid for select stock. There is a lot of outdoor stuff in the market. The airy *Gypsophila paniculata*, which forms a dainty finish for basket work, sell for 25 cents a bunch. Canterbury bells go for 35 cents a bunch, and appear popular. *Candidum* and *longiflorum* lilies are seen, and auratum on inside; the latter sells rather slowly at 8. *Coreopsis* and cornflowers continue in quantity, and outdoor sweet peas, which have come in at the end of the indoor crop, sell for 40 cents. Candytuft, larkspur and other miscellaneous herbaceous stuff sell at no fixed figure, and usually goes in lots. Some of the yellow marguerites appeared popular for window decoration, though like the ordinary white one they would not bring a large figure.

A charming new centaurea, sent in by Mr. Swenson, is noticeable for its large size and feathery delicacy of form; at first sight it suggests one of the plumed pinks. The colors are white and mauve. A charming thing, and likely to be useful.

Pæonies are still to be seen; some noted this week had been placed in cold storage, simply laid down in the wrappings in which they were received, without putting in water; they are then placed in water when needed for sale. It was said that they lasted well in the cold storage for over two weeks.

Shipping trade still continues quite good, but the local demand is small.

Mr. Henry Kroder, representing Siebrecht & Wadley of New York, was a recent visitor.

At the last meeting of the Florist Club Mr. T. F. Keenan was elected secretary for the remainder of the current term.

The bill for the extension of Lincoln Park has passed and is now a law. This gives the commissioners power to acquire property along the lake to the north of the park providing the property owners of that section will vote for a tax sufficient to carry on the proposed improvements.

St. Louis.

Trade in the cut flower line was dull the past week, and flowers plentiful, the only scarcity being in white carnations. The roses that come in now are looking better, with good color; prices for good stock run from 2 to 4.

The florists interested in a show will meet again this week to hear the report of the committee; they say the show is a go and will be held at Urig's Cave next

November, and will be bigger and better than ever.

The fakir is about dead in St. Louis, but one of them got about 5,000 carnations in last week, kept out about 2,000 and sold the other 3,000 to two of our commission men, who resold them to the florists. The fakir's profit was 2,000 carnations; he then sold the carnations on the street for anything he could get. The two commission men who bought them will be reported at the next meeting.

The florists' picnic will be held some time in July; a meeting of the old committee of last year will be held this week to fix a date.

Mr. Brown of Brown & Canfield, Springfield, Ill., was in town last week. Mr. Koeppen of Koeppen & Staley of the same place was also a recent visitor.

The Riessen Floral Co. last week furnished one of the largest weddings of the season. The Chandler Floral Co. will soon move in their new location, 617 Olive street.

The Florists' Club has at last got new quarters, 919 Olive street, Empire Building, third floor, and will meet every second Thursday night.

D. I. Bushnell, the seedsman, has been out of town attending the American Seed Trade Association meeting held at Detroit, Mich.

J. M. Jordan will leave the latter part of the week to go east for the summer, and will not return until after the S. A. F. meeting.

At this writing a very heavy rain storm is raging, and will be welcomed by all florists and gardeners. This is the first rain we have had in five weeks.

A great crowd was present at the bowling match; the Japs won by a close score. Alex Waldbart is the happiest man in town; now he says he feels 10 years younger. Here are the scores:

JAPS.

The same teams bowl again next Wednesday night. J. J. B.

Denver, Colo.

The Park Floral Co. have broken ground for several large houses and intend making extensive improvements and additions to their present plant. They are building a handsome pressed brick office and salesroom, also two rose houses each 200x28 feet, one carnation house 100x50 feet, one smilax house 125x20 feet and a propagating house 80x15 feet. This amount of new glass will necessitate remodeling their heating apparatus, which they will do by putting in two 80 H. P. boilers which will be placed on the north side of the range of houses nearly on the ground level, a pump being used to return the condensed water to the boilers. The old boiler pit will be used as a bulb cellar and a new work shed built in another location.

Each day brings to light another victim. But no one lost anything, no one got caught, Oh no! "You see it was this way. He came into the store (or greenhouse) and said he had been sent to me by a friend and that he wanted me to do a

decoration—not more than fifty dollars—and would I please go down to his house and see what was needed. He offered to pay me twenty-five dollars to bind the bargain, but I told him that was all right, didn't want any money then, just as well to wait until the job was done. When I went to the address he gave me I only found a vacant lot, no house near. I tumbled right off then that I had been worked. Worked for what? Oh well, for the trouble of chasing around. Oh no, he didn't work me for anything else, I was on to him." That is the way the story goes and every greenhouse man and florist in town tells it exactly the same way without variation. The cause of all the trouble was the "smooth work" of a confidence man round Hugo Braun alias Gustave DeChannells alias a dozen other names, late of Philadelphia and Kansas City, who now sojourns in our city bastille in consequence of some of his work, and who seems to have had a particular penchant for florists, as he visited every establishment in town trying to work the bogus check game. He caught some one, as he was jailed for passing a bogus check on a restaurant man at whose place he wound up his career by giving a supper to a party of sixteen, and as the tables were elegantly decorated with flowers it is only fair to suppose that some florist got caught, but who it is no one knows and the modest victim keeps a discreet silence upon the subject.

Mr. C. F. Fawcett has taken the management of the Colfax Floral Co's. 16th street store.

Mr. John Hickey is now foreman at the Colfax Floral Co's. greenhouses.

Considerable bad feeling has been aroused by the practice of certain florists furnishing flowers to a certain department store in this city which are retailed at ridiculously low prices (orchid blooms \$1.50 per dozen, American Beauties \$1 per dozen, sweet peas 5 cents a bunch). While nothing definite has been done the matter may result in the formation of a trade society to try to regulate the wholesalers, who are so inconsiderate of the interests of the flower stores.

GIVEN.

St. Paul Minn.

Numerous commencements and weddings and the great steamship ball, the event of the season, were all factors in promoting a good trade for the week. While the cut was fairly large and of good quality, the demand was much larger and the shortage of white and red roses was very noticeable. The supply has now increased, while the demand has diminished, and flowers are once more abundant. Outside roses are now in bloom, but do not materially affect the sale of choice greenhouse stock. Plant sales are very slow, and as the good stock is all gone there is not much worth selling any way. Auratum lilies, now in full bloom come in very handily for the crop of June weddings. Sweet peas are in good demand. Some outside stock will be in bloom soon.

E. F. Lemke has torn down his last old house, replacing it with a new one of modern construction. He is also pushing work on his other new houses. When completed his range will be one of the largest and finest in the city.

L. L. May & Co. are remodeling the interior of their large house, building new benches in others and repairing in general. Their summer roses are just coming into bloom.

The very apt comparison of Mr. Tasty and Sloppy & Co's. business as illustrated

in the last FLORIST deserves more than passing notice, and is brim full of truth. How often we hear of dull times, poor trade, etc. from people whose houses disgrace the ground they occupy. There are so many examples in every city that any observer will have noticed it. Neatness is more economical than slovenliness.

The leaves of the box elder trees in this city are being destroyed by a worm that strips the branches bare.

Mr. F. C. Bartels, for the past year manager of the Mendenhall Greenhouses in Minneapolis has accepted a similar position in Cleveland. We shall miss his pleasant face and his practical suggestions at our monthly camp fires next winter.

FELIX.

OBITUARY.

Died, at West Medford, Mass., on the morning of Thursday, June 13, John Duane, aged 68 years. A widow, one son and a daughter survive. Born in Ireland, he came to America in 1853, and after trying in Dorchester and Milford settled in Medford, where he built up for himself a large and prosperous business in gardening; later deciding to be a florist he built the large greenhouses which he ran up to the time of his death. Mr. Duane was widely known, and his sterling integrity earned for him the friendship of all with whom he was connected in business.

N.

CONRAD KRANZ, the florist, of Muscatine, Iowa, died at Mercy Hospital, Davenport, Iowa, June 12. The cause of death was the removal of a tumor under his right arm, which had been giving him considerable trouble for several years, the operation resulting fatally. Mr. Kranz was very popular and his death is deeply regretted by many warm friends.

MIDDLETOWN, N. Y.—Herman Firnhaber, a prominent florist, died June 10, aged 52 years.

Floralville Sketches.

"Hello, Sandy, there's a crowd going up to Floralville to see Buddenbloom and a few of the other boys up there. They tell me Budd has a house of late hybrids worth looking at. Better come along."

Such an invitation was not to be refused, so I accepted as a matter of course, and that was how it occurred that I found myself early one bright spring morning along with a most agreeable party on the first train for Floralville.

Although the personnel of the company was entirely due to social affinities yet it happened that the various departments of the trade were well represented, for in the aggregation were a retail store man, a commission dealer, a rose grower, a hardy plant and tree enthusiast and an orchid crank, besides several other choice samples.

"What do you think I saw this morning?" asked the rounder, striking a match and applying it to his cigar.

"A little appetizer," suggested the funny man.

"What's that?" said the deaf man.

"I saw," continued the rounder, ignoring the interruption, "as handsome a lot of roses as I've seen this year, sold for a dollar and a half a hundred."

"You don't tell me! Well, well, what's the business coming to? There's got to be a change and that mighty quick," broke in the rose grower, at the same time casting a threatening look in the direction of the commission man.

"What do you expect. You fellows are always complaining," retorted that worthy. "You can't make me believe there isn't money in growing roses at a dollar and a half at this season. Look at the cut you have every morning. If it don't pay how is it you're putting up four more houses for roses?"

"We've got to do it in order to live. Every year it takes a bigger place to yield a grower a living."

"I notice I don't get any roses at a dollar and a half, all the same," said the store man. "I had to pay four cents this morning and the stuff was nothing to brag about at that."

"Yes, and tell us how many you bought," said the commission man.

"I can't see what that has to do with it."

"Oh, yes, it has a good deal to do with it. You buy twenty-five a day and want to pick over the whole stock."

"And then hold them at two dollars a dozen," added the grower. "Just look at that for profit. I'd like to see some plan got up so that our products will reach the public at popular prices. When the growers get a cent and a half and the buyer pays twelve or fifteen cents I say there's something wrong with the whole business. I say give the public the benefit of the low prices and we sha'n't hear so much talk about over-production. You store people have had the best of it for years and it's got so now the growers must do something for self preservation. We want the people to have cheap flowers."

"You were not so deeply interested in cheap flowers last winter when you demanded a dollar and a quarter for your Beauties," suggested the wholesaler.

"How about violets at three dollars a hundred?" chimed in the store man.

"I'd like to set you chaps to music," said the funny man.

"Yes, they require lots of water," said the deaf man.

"Well, gentlemen, what I think you should do," said the philosopher, who up to this time had kept quiet, "is to stop trying so hard for quantity and work more for quality. I notice that extra stock of any kind is seldom over-plenty and nearly always commands a good figure in the market, and the man who grows it doesn't have much cause to complain of poor returns. But a surplus at this season of the year is unavoidable and the question is what to do with it. For my part I believe it would be wiser and better for the business every way to keep the stuff out of the market entirely than to let it go to the fakirs and curb-stone peddlers. Talk as you please about giving the humbler classes an opportunity to get cheap flowers, I submit that when it is accomplished through these unsavory channels you lose more than you gain, for flowers will soon lose their charm for people of refined tastes if they are seen daily among filthy and repulsive surroundings, and then your flower business has sustained an irreparable injury. Flowers suggest delicacy and refinement, never coarseness or filth. No matter how common, a flower is a flower, but let it be fresh and dainty. A bunch of fresh arbutus, wild violets or buttercups offered for sale on the street by the child who gathered them appeals to you, but a handful of bedraggled, bruised and dirty Mermets in the paw of a foul mouthed street Arab is a very different thing, as I look at it."

"Tell us how you're going to work to keep the surplus stock out of the hands

of the street Arabs," demanded the rounder.

"Look out, old stockin'," broke in the funny man, "he wants to get you where he wouldn't understand what you'd be telling him and you wouldn't know what you'd be talking about."

"He can't do it unless we get more rain," said the deaf man.

Then the conductor came along for the tickets.

While the argument recorded in the previous chapter was progressing four of the party had slipped away quietly to a corner of the car by themselves and inaugurated a game of whist. Things did not run very smoothly, however. The tree man's mind was pre-occupied, his thoughts were more on the landscape than on the game. Finally, getting restive under the repeated chidings of his partner he threw down his cards and said, "Here, let some one else take my place and I'll quit. I'd rather look out of the window. We can play whist anytime but we can't always have this beautiful scenery to look at; it's a shame to miss it. Isn't that clump of birches handsome with the soft green foliage and the white branches shining through; and here, you florists who can't see anything outside of a rose or a pink, look at those wild apples, what could you get that would be finer for a big wedding decoration? Beats all your smilax with pinks wired on, and there is not a month from December till May when you might not have them."

"Yes," squeaked the funny man, "apple blossoms for a wedding; Eve tempting Adam, see?"

"Eh?" said the deaf man, his hand behind his ear.

"You florists are too narrow minded; there's a regular mint in these things if some one would just take hold of it in the proper way. And just look at those pin oaks," continued the tree man as the train slowed up at a little country station. "There's a tree that is not half appreciated. *Quercus palustris*, always symmetrical and beautiful whether the foliage is on it or not. It ought to be planted for ornamental purposes much more than it is."

"But where is the money for the florist in such things?" I enquired. "We are in the business for the money we can get out of it. You people are constantly harping on this sort of stuff and telling people that they must drop geraniums and coleus and so on. Why don't you let us alone? These are the things we have got to make our living on."

"My friend," said the tree man, "if you don't keep up with the times you have yourself to blame if you get left. You must recognize that the embellishment of gardens, home adornment, has made great advances in this country within a few years, notably in the use of fine shrubbery, especially the recent Japanese introductions, small evergreens, etc. Tree planting in town streets is another advancement. All these things are good indications of the growing fondness for home and attachment to locality which characterizes a peaceable and happy people. The fondness for plants and flowers of simple character is growing and the craze for freaks and oddities seems to have pretty nearly run out. If you are a watchful business man you will take note of these tendencies and adapt yourself to them. Something more than the old familiar wreaths, bouquets and crosses will constitute the stock in trade of the local florist and his claim upon his townspeople for their support. He will have a hand in making the surroundings of their

homes permanently beautiful and it is his own fault if he cannot make it as profitable as selling alternantheras, beefsteak plants and dusty millers. There is plenty of opportunity ahead for him if he wants to take hold, and if he doesn't somebody else will."

"I think the auction business has done as much harm as anything else to the plant business," I ventured to suggest. "I say we florists are fools to allow outsiders to come into our trade auctions. No other business would permit such a thing. Look at the brokers; can you or I go in and buy a share of any kind of stock? No, sir! But my customers go to the plant auctions and then come to me and tell me how much cheaper they can buy plants than I can furnish them. And we let this thing go on without any protest. I think we should stand together for the common good and make a vigorous effort to have these sales exclusive. If at the end of the season we want to unload stock, well and good, let it go, but early in the season we should protect ourselves and make the public pay fair living prices for their plants."

"It seems to me" said the philosopher, "that there are two sides to that question. Growers who send plants to these auction rooms tell me that they often get good retail prices. Then they clean everything right out all at once and their benches are ready for something else. When spring bedding stuff is ready to sell you want to get rid of it as quick as you can. It doesn't pay to hold them as a surplus till the end of the reason; watering them two or three times a day costs more than they are worth. And I tell you its pretty unprofitable work running all over a place to answer a thousand questions and make a sale of a couple of ten cent plants to a woman who has nothing else to do but take up your time."

"Here endeth the first lesson" exclaimed the funny man.

"Yes, I believe in painting every time your capital will allow," said the deaf man.

"Floralville," shouted the conductor.
SANDY.

LOGANSPORT, IND.—O. J. McCormick is building a greenhouse on Helm street.

PROPHETSTOWN, ILL.—W. W. Noyes intends to add a house 18x100 this summer.

PEORIA, ILL.—B. F. Cartwright has been re-elected secretary of the Park Board.

CYNTHIANA, KY.—Mrs. R. L. Grinnan has built a greenhouse 18x100, the first one built in this town.

BRISTOL, CONN.—Trade here has been good this spring. J. M. Peck lost 200 lights of glass by hail June 2; no insurance.

DANIELSONVILLE, CONN.—The John Mahrs place here has been leased by Wm. D. Logee. Business is reported as quiet.

PITTSBURG, PA.—At the recent funeral of the wife of ex-Mayor Wyman twelve handsome floral arrangements were supplied by E. C. Ludwig.

WATERBURY, CONN.—W. J. Snow failed in business this spring. His principal creditor, W. M. Cottell, will run the greenhouses, he having a mortgage on same. There has been no settlement of the insolvency so far.

ROME, GA.—Mrs. H. C. Norton will build two new houses this summer, and reports business as extremely good. Mrs. Norton is admirably situated in the matter of heating, the houses being joined to the electric power house and heated with exhaust steam.

Chemical Manures.

In feeding plants under glass the usual custom seems to be the use of the leachings of natural manure, or of a solution of nitrate of soda. The former does not fill all of the requirements. Nitrate of soda supplies but one element of plant growth, nitrogen, and while it is easily applied, being entirely soluble, it is a one-sided fertilizer. A mixture of nitrate of potash, phosphate of potash, and phosphate of ammonia, is probably the best combination yet devised. These ingredients should not be used separately, but mixed in proper proportion and mixed with the soil at the time of planting, and used in solution later. The artificial manure which is prepared from them is highly concentrated, and should be used sparingly until thorough knowledge of its action is gained, and it is preferable to buy the manure already prepared rather than buy the separate ingredients, and mix them. M.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—By competent man to grow roses and carnations. Single. Address J. J. care American Florist, Chicago.

SITUATION WANTED—By Scotch gardener; best of reference, married, seven years in this country. Address W. S. care American Florist.

SITUATION WANTED—By a first-class rose grower S and cut flowers of all kinds; 22 years' experience. Address ROSES, care American Florist.

SITUATION WANTED—By competent all-round florist, 16 years' experience in cut flowers, put plants, etc. M. N. care Am. Florist, Chicago.

SITUATION WANTED—By competent florist to grow roses, carnations, "mums" and general stock for retail; English, age 34, married, no family. Address J. T. TURNER, East Liverpool, Ohio.

SITUATION WANTED—As gardener in private place where good plants are grown; experienced. references. Address A. D. care Northrup's Greenhouses, La Grange, Ill.

SITUATION WANTED—By a German gardener, a rose grower, and first-class in general plant line. Fifteen years' experience in the country; foremanship preferred; references. Address E. W. care American Florist.

SITUATION WANTED—By a practical florist and gardener; commercial or good private place; A No. 1 rose grower; carnations, violets a specialty; good designer; age 35; references. G. W. 50 Laurel St., Lagonda Ave., Springfield, Ohio.

SITUATION WANTED—By a German, single, age 23; eight years' experience (in this country) in general greenhouse work, in both the mail and cut flower trade; best references. Address E. LAMPRECHT, Ashland, Ohio.

SITUATION WANTED—By a plant and cut flower grower; over 5 years in last place; 10 years in the country; will be free the 1st of July; good references, married. Address BRUNO BEHREND, Framingham, Mass.

SITUATION WANTED—By single Englishman; 25 years' experience with orchids, stove, greenhouse and flowering plants. In private and commercial places, landscape work and floral decorations, and capable of managing a first-class all round place; steady and sober. Address A. care Am. Florist office, 67 Bromfield St., Boston.

WANTED—Good rose grower; single man. Apply to REINHOLD BROS., 51 Wabash Ave., Chicago.

WANTED—2000 feet second-hand 1-inch steam pipe. PATRICK O'CONNOR, Box 433, Youngstown, O.

WANTED—Wholesale price lists. Address C. B. POTTER & Co., Shippensburg, Penna.

WANTED—Pteris tremula and Pteris argyrea 2 and 3-inch pot plants. Address N. N. care American Florist, Louisville, Ky.

WANTED—Stem Heater, capable of heating greenhouse 150x20 feet; new or second hand. Answer giving size and all particulars, with price. Address J. F. LUTHER, West Chester, N. Y.

WANTED—Two strong young men who are used to greenhouse work, cut flowers; \$16 per month board and lodging. Address POEHLMANN BROS., Morton Grove, Ill.

TO EXCHANGE—450 rooted chrysanthemums for 300 rooted Wm. Scott carnations. Address BENJ. J. PASSMORE, Swarthmore, Pa.

FOR SALE—The best floral establishment in Utah at a bargain. Address A. L. MURPHY, Salt Lake City, Utah.

FOR SALE—For demolition, three greenhouses, pipes and boiler at a bargain. Address MRS. NOLL, 132 Wilmot Ave., Chicago.

FOR SALE—No. 4 Hitchings conical boiler as good as new; will heat 500 feet 4-inch pipe; price \$50. f. o. b. cars in Dixon, Ill. Address B. F. PRATT.

FOR SALE—Second-hand florist's refrigerator, used one year, in perfect condition, at reasonable rate. Address J. J. MCMANNON, Lowell, Mass.

FOR SALE—Three greenhouses; two 50x18, one 50x14, shed 15x30, built 2 years. Pots and bedding stock. Near four cemeteries; lot 300x150, on electric line. Reason for selling, bad health. Address R. MITCHELL, 1043 S. Meridian St., Indianapolis, Ind.

FOR SALE CHEAP—Any below items separately or together: Two Hitchings hot water boilers, size 16; 4-inch pipe, 1,700 feet; two greenhouses, total 42x100 feet. Also Hitchings ventilators for 3 houses, being six lifting gears, etc. Address GEORGE V. ADELMAN, Assisnee, Franklin, Venango County, Penna.

FOR SALE—Large and complete greenhouses (with land) in Harrisburg, Pa. Within 10 minutes of heart of city; main line trolley cars pass the door every 15 minutes. Business wide and established for years—this has been held together since the owner's recent death. Everything in good shape. Property to be sold to settle estate. A first-class chance to competent man desiring to do large business. Address MARY A. MCCLINTOCK, Administratrix, Harrisburg, Pa. W. F. DARBY, her Atty., Steelton Pa.

FOR SALE OR RENT.

My greenhouses on North Western Ave., Chicago; 15,000 or 30,000 square feet of glass. Plenty of stock. For particulars address A. T. JACKSON, Station X, Chicago.

FOR SALE OR LEASE. Three greenhouses with valuable grounds; the best place in this country for a man with some means. Address WM. SPRINGBORN, Dubuque, Ia.

For Sale or Rent.

My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 48 lots or 286 feet front on Belmont Ave. by 700 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 10 to 200 feet in length and from 12 to 30 feet in width. The whole place can be bought or rented. Can also be divided; 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the largest of the kind in Chicago. A good chance for some young man with some means, or for a corporation; and as I wish to retire from business, it can be had reasonable, and on easy terms. If rented, a long lease can be given.

AUGUST DRESEL, Belmont and Western Aves., Chicago.

Assignee's Sale.

By virtue of a DECREEAL ORDER, made and entered of record in the County Court of Cook County, for the sale of the property and effects of the estate of Joseph T. Anthony, an Insolvent—NOTICE is hereby given, that sealed bids or proposals for the purchase of all and singular the goods, fixtures and assets of said estate (exclusive of moneys, credits and outstanding accounts) and which consists of greenhouses, situated at No. 3425 Prairie Avenue, Chicago, Ill., and the entire Floral and Horticultural Stock herein contained, all tools and implements used in the business, including horses, wagons, etc., will be received by the undersigned at his office, No. 3425 Prairie Avenue or at the office of his attorney, George Sawin, Room 38, Howland Block, 131 Dearborn Street, Chicago, Ill.

An inventory of said property can be seen and full particulars given by calling upon either of the said persons.

Bids to be enclosed in sealed envelopes, addressed to either said Assignee or said Attorney and such envelopes plainly marked "Bids for Stock." Bids can be received as late as 4 o'clock p. m. June 28th, 1895, and will be opened by said County Court, Saturday, June 29th, at 10 o'clock a. m., should said Court be in session. If said Court is not in session at the above named hour, said bids will be opened at the first session thereafter after at the same hour, at which time said bids will be acted upon by said Court.

Inspection of said stock is invited.

JOSEPH A. MERRIFIELD, Assignee of Estate Insolvent of Joseph T. Anthony.

GEORGE SAWIN, Attorney, Room 38, Howland Block, 131 Dearborn St.

PREPARE ADVS. NOW

FOR OUR

CONVENTION NUMBER.....

TO BE ISSUED

AUGUST 17.

VAUGHAN'S COLUMBIAN CINERARIAS.

PROBABLY there has never before been such a magnificent collection of Cinerarias shown as at the recent World's Fair, not only for beauty and brilliancy of colors, but for size and perfect form. The collection was of course the result of the gathering together of the finest strains from all the celebrated establishments of Europe. The success of our strain of International Pansies has led us to continue the same plan with Cinerarias, and we have secured seeds from the foremost seed growers of the world. Our Columbian Cinerarias equal those seen at the World's Fair.

COLUMBIAN CINERARIAS, mixed, per trade packet, about 1000 seeds, 50c.
CINERARIA HYBRIDA GRANDIFLORA, large flowering sorts, fine mixed, trade packet, 25c.

CALCEOLARIA HYBRIDA.

Calceolarias when in bloom at the World's Fair attracted much attention by the great size of the individual flowers and the richness of the colors and markings, many of these being new and distinct. It has been our good fortune to secure seeds of a most magnificent strain. Trade packet, 50c.

GLOXINIA HYBRIDA,

Pkt.
 Finest mixed, 50c.
 Defiance, new, flower large, bright scarlet, 35c.

26 Barclay St., **VAUGHAN'S SEED STORE,** Box 688,
NEW YORK. CHICAGO.

VERBENAS

The Color Question.

The AMERICAN FLORIST is now having carefully and accurately reproduced by lithography a chart of colors prepared for us by Mr. F. Schuyler Mathews and containing 30 of the most important shades. This chart may be depended upon as absolutely accurate and will undoubtedly be accepted as the standard in color description of flowers. We shall use this chart as a supplement to our convention number of 1895, to be issued August 17. Every subscriber at that time will receive a copy free with his paper. Extra copies of the chart will be supplied at 25 cents each.

The publication of this chart was a work of great expense but the urgent necessity for such a universal standard was such that we felt impelled to incur the expense and give the chart a wide circulation at once by making a present of a copy to each of our readers.

We have also in preparation several other attractive special features for our Convention Number.

NEW YORK AT THE COLUMBIAN EXPOSITION is a large volume of 647 pages, containing the report of the Board of General Managers for New York. From this we learn that in the Horticultural Building the state of New York occupied 20,000 square feet of space, and in addition to this 50,000 were taken up by the New York greenhouses, and 92,000 feet by lawns and gardens. This state easily led all competitors in this department, and great praise must be given to Mr. Dean and his assistant, Mr. Donlan, for their able work.

INSECTS AND INSECTICIDES, by Prof. C. M. Weed, is a practical manual of injurious insects attacking garden, farm or orchards, and the methods of combatting their ravages. The present issue is a second edition. The book is most thoroughly practical, describing all the important pests in detail and the preventives to be used against them. It will prove of sterling value to any gardener or florist. The book contains 336 pages, 176 engravings and 16 full page plates. (Orange Judd Co., New York. Price \$1.50).

A WHITE Marechal Niel rose is a novelty announced by a German rose grower.

Foreign Notes.

At a recent English orchid sale twelve plants of Cattleya Hardyana, including several varieties, were sold for £519 17 shillings (\$2,604), an average of \$217 each. This cattleya is regarded as a natural hybrid, the supposed parents being C. Dowiana aurea and C. gigas, and is of extraordinary beauty.

The boxes as they appear when set up for use.

We make them in a sufficient number of sizes, including for violets, to meet all necessary requirements.

We sometimes complain of the cumbersome names bestowed on chrysanthemums by our own growers, but here are some recent examples from French catalogues that dwarf our names to insignificance: Souvenir de Mile. Helene Amhanopulo, Lutilloux, Souvenir de sa Majeste le Tzar Alexandre III., S. M. I. la Tzarine Marie Feodorowna (two of the longest perhaps on record), and Souvenir de M. Auguste Nouin.

A novel horticultural exhibition is to be held at the Hague, Holland, July 8-16, being an international exposition of useful and medicinal plants. It is under the auspices of the Royal Society of Zoology and Botany. In addition to the plants themselves there will be exhibits of vegetable products and books and instruments for their study.

DO YOU WANT the census statistics regarding the florist, nursery and seed trades? You will find them in our trade directory and reference book for 1894. Price \$2.00.

"The National"

Folding Flower Boxes are the best and most convenient ever put upon the market. They are made from board, manufactured especially for these goods, and made so as to resist moisture, thereby keeping the flowers fresh, and the box holding its shape.

News Notes.

UTICA, N. Y.—On June 6 fire did damage to the greenhouses of Peter Crowe estimated at \$1,000.

JANESVILLE, WIS.—J. K. Downs has let the contract for a greenhouse at 252 Prospect avenue.

LXINGTON, KY.—The City Council has passed an ordinance providing for the establishment and maintenance of a public park.

LACROSSE, WIS.—The Board of Trade will memorialize the City Council to at once proceed to acquire land for a system of parks.

PALATKA, FLA.—E. A. Kuiskern lost heavily from the frost in January, and is closing out his place here. He will probably start anew in some other locality.

SALT LAKE CITY, UTAH.—The capital stock of the Utah Nursery Co. has been increased from \$50,000 to \$125,000. The place of business is removed from this city to Sugar House.

SAN ANTONIO, TEX.—The annual battle of flowers took place June 5. The affair is in commemoration of the battle of San Jacinto. The display attracted thousands of visitors to the city.

KANSAS CITY, MO.—The new board of park and boulevard commissioners has been appointed by Mayor Davis and will be composed of the following members: A. R. Meyer, president; Robert Gillham, S. B. Armour, A. Van Brunt and Charles Campbell.

POMONA, GA.—Philip Smith has retired from the nursery business here. The demand for nursery stock in all lines is better than it has been for some time. Fruit crops are very promising, Japan plum trees especially being very heavily loaded with fruit.

SAN FRANCISCO—The California State Floral Society gave its second annual exhibition of sweet peas June 14. There was a large display, including all the Eckford novelties. A paper on sweet peas sent by Rev. W. T. Hutchins was read to the society.

PORTLAND, OREGON.—The third annual rose show under the auspices of the floral section of the Oregon State Hort. Society was very successful. There were 41 exhibitors and some of the collections were remarkably varied and complete. The attendance of visitors was large.

GENEVA, ILL.—Mann's Island, located in Fox River, was dedicated June 12 with elaborate ceremonies as a park. The island is situated almost in the center of this city and is one of the most beautiful spots in Illinois. It is magnificently wooded and carpeted with a hue sward.

CHATTANOOGA, TENN.—It is reported that immediate steps will be taken by the United States government to acquire about one thousand acres of land adjoining the Chickamauga, Chattanooga, National Military Park and incorporate it with the park proper. Embraced in the coveted ground are the Cloud Springs property, where the old federal hospital stood, and the Dixon and Hardaway farms. Much of the ground saw hard fighting, and was not far removed from the main struggle for the right of way to Chattanooga. Condemnation proceedings will be at once begun, perhaps in the United States court at Atlanta, inasmuch as the property is in Georgia.

NOW READY.**Bermuda Grown Bulbs.****WHITE ROMAN HYACINTHS:**

If planted promptly can be forced for THANKSGIVING, or earlier if desired. 3 1-2 to 5 1-2 inches in circumference, 50c per dozen; \$3.00 per 100; \$25.00 per 1000.

WEEBER & DON,
Seed Merchants and Growers,
114 Chambers Street, NEW YORK.

American Association of Nurserymen.

At their Indianapolis convention the nurserymen elected officers for the ensuing year as follows: President, Silas Wilson, of Atlantic, Ia.; vice-president, Geo. A. Sweet, of Dansville, N. Y.; secretary, George D. Seager, of Rochester, N. Y.; treasurer, N. A. Whitney, of Franklin Grove, Ill.; executive committee, C. L. Watrous, Iowa; Irving Rouse, New York; and R. C. Berckmans, Georgia. Chicago was chosen as the next place of meeting. Treasurer Whitney reported a balance of \$1500 in the treasury.

On the opening day both Governor Mathews and Mayor Denny were out of the city but on the second day the Governor returned and gave the association a hearty welcome to the state.

The delegates paid a visit to ex-President Harrison and were very hospitably entertained at his home.

The essayists included Prof. F. M. Webster and Prof. L. H. Bailey.

Catalogues Received.

Brown Bag-Filling Machine Co., Fitchburg, Mass., bag filling machines for seedsmen; August Rolker & Sons, New York, insecticides; Davis Heater Co., Racine, Wis., heaters; H. H. Berger & Co., San Francisco, Cal., price list of bulbs, plants and seeds for summer delivery; W. W. Westgate, Houston, Texas, southern decorative material; Gurney Heater Mfg. Co., Boston, Mass., heating apparatus; American Boiler Co., Chicago, the new surface burning "Florida" heater; same, the "Perfect" heater; same, the "Soleil" heater; Victor Schmelz, Sylvan Lake, Fla., native plants, bulbs, etc.; H. Beaulieu, Woodhaven, N. Y., seeds and plants.

CHAMPAIGN FLORISTS; We have referred the matter to the firm mentioned. Please sign your names to future communications or we cannot pay attention. And it would seem no more than right for you to first warn the firm of its error, and name the parties objected to.

Rose Plants

FROM THE

.....THE ANNUAL
CONVENTION NUMBER

—OF—

The
American Florist
A
WEEKLY
JOURNAL FOR THE TRADE

Will be issued **AUGUST 17, 1895.**

In addition to other specially attractive features it will contain an accurate *CHART OF COLORS*, comprising 30 of the most important shades, prepared for the FLORIST by F. Schuyler Mathews. The color chart will be a permanent part of the paper as readers will be advised of the necessity of keeping it in the paper away from the light except when in use.

The expense of this chart has been very heavy, but it will lend to the issue, of which it will be a part, a very greatly increased value as an advertising medium, as it will be frequently referred to. Still there will be

NO INCREASE IN ADV. RATES,

which will be as heretofore :

FULL PAGE.....	\$42.00.
HALF PAGE.....	21.00.
QUARTER PAGE.....	10.50.
PER INCH.....	1.40.

Subject to time discount to those having term contracts with us.

Send ads. **early** so we may have abundant time to get them up in our best style.

The Convention Number will reach every Trade Buyer in the United States and Canada, and extra copies will be distributed at the Convention.

AMERICAN FLORIST COMPANY,

P. O. Drawer 164.

CHICAGO.

Toronto.

Both the cut flower and the plant trade will by the end of this week figuratively speaking, have gone to sleep for the summer season, and the retailers will be at liberty to take their annual trip to the sea side or to Europe. Growers and gardeners will have plenty to do till the fall to keep them at home, when the retailers will return and begin worrying for flowers again, and the gardeners to prepare for the the winter and next summer.

Rain is badly needed here now, none has fallen for nearly three weeks. Grass and bedding plants are suffering greatly except in small places where the hose can be kept going all time. Old probabilities promised us some showers, and there have been signs, but "signs without are signs of drouth." The thermometer though has behaved pretty well, and has not again reached the notch recorded in May. E.

Holyoke, Mass.

The fourth annual rose show of the Holyoke, Mass., Horticultural Society was held Thursday and Friday, June 13 and 14, and was the largest and most successful ever given by that society. The judge on the roses was W. C. Simons of Springfield, and he awarded C. W. Raulet the first prize for the best collection of 12 varieties of two blossoms in each vase. Rev. Dr. E. A. Reed received second prize and E. S. Waters third. Ex-Congressman William Whiting exhibited a number of beautiful roses. E. C. Taft's greenhouses and gardens were represented by a long table of potted plants and cut flowers, and E. H. Howland also filled a table with the products of his greenhouses. J.

Springfield, Mass.

The annual sweet pea show of the Hampden County Horticultural Society will be held at Springfield Tuesday and Wednesday, July 23 and 24. Prizes to the amount of \$100 will be offered.

The exhibition of garden flowers will be held Tuesday and Wednesday, September 24 and 25, and the closing show of the year, the chrysanthemum exhibition, will come November 12, 13 and 14. Prizes amounting to \$250 will be offered, besides a special International prize of \$50 for the best vase of 100 blooms without regard to the number of varieties. J.

Roemer's Superb Prize Pansies.
The finest strain of Pansies in the World.

SMILAX.
Nice thrifty stock, \$2.50 per hundred; \$20.00 per thousand.
F. A. BALLER, Bloomington, Ill.

Cleveland.

The Gordon assignment tangle seems to be straightening out in the manner indicated a couple of weeks ago. The sale was advertised in the ordinary legal manner to come off June 10, but instead of separating stock, buildings and real estate, thus making it easy for would-be purchasers to get what they wanted and to leave what was not needed by them, they were to be compelled to take everything or nothing. On the day of the sale nobody interested in the property was to be found on the place, and so far as can be discovered no sale was made or even attempted. The apparent indifference or disinclination to sell, taken in conjunction with the fact that one of the trustees of the Gordon estate is a member of the City Park Board, seems to point in the direction indicated in the letter mentioned above, that is, toward a sale to the city.

The lease of the Cleveland Floral Co. property to Mr. Schneider, formerly of Attica, N. Y., will probably be completed this week or early next week. The present understanding is that Mr. J. B. Keller will act for Mr. Schneider in appraising the stock. Mr. Opitz, who retires, has not yet selected his representative.

The fag end of the season is now with us. Greenhouses are disordered, stock looks hard, the weeds grow apace, though the rain cometh not. Schools and colleges are now having their annual little floral spasms; when these are over we can straighten out the stock, slaughter the weeds and settle down to the deadly dullness of summer.

Williams & Wilson are disposing of some of their well earned dollars in an attempt to fool the coal men. In other words they are boring for gas, which in this region is somewhat like investing in an extremely high priced lottery ticket. A.

THE color question will be settled in our Convention Number, to be issued August 17 next, by the publication of an accurate chart of 30 colors prepared for us by Mr. F. Schuyler Mathews.

Cedar Rapids, Ia.

I. N. Kramer & Son have been awarded damages of \$525 in their suit against a local plumbing firm.

This law suit grew out of the sale to plaintiffs by defendants in the fall of 1893, of a hot water heating apparatus, which was put in the greenhouse of plaintiffs under a guarantee to heat the building to a certain temperature in the coldest weather. After a two month trial of the apparatus complaints were made by the plaintiff that the apparatus was unsatisfactory and the defendant took the entire system out, leaving the greenhouse and office and store room of plaintiff without any heating facilities, in consequence of which the plants were frozen and greatly damaged.

The Kramers claimed that the apparatus was taken out under pretense of repairing it and fixing it so that it would give the required heat, whereas the Messners claimed that the heating apparatus was all right and that the fault was with the plaintiffs in the defective house and inattention to the boiler, and that the apparatus was taken out by them for the purpose of securing their pay for the apparatus, which had not been paid for.

The claim of plaintiff for damages footed up some \$1,500, which the defendants denied and in addition themselves made a claim for several hundred dollars damage which they asserted they had sustained by being compelled to put in the plant and then take it out.

The jury returned a verdict for the plaintiff as above stated.

Worcester, Mass.

No material change has been noticed in the trade since last report; a few graduation jobs and small weddings being the only things out of the ordinary run. Business has nearly got to its usual summer dullness, but the quality of the stuff brought in is better than ever before at this season. Carnations are very fair size considering the heat, and are a drug on the market. Hybrids are also very plentiful, and the demand light. Inside roses are coming rather small. Spanish iris are fine, but no demand to speak of.

The weekly horticultural show on June 13 was rather small, as but six numbers were scheduled. The exhibits of baskets was very fine, as was also the cut flower exhibit, the hydrangea display was rather weak.

The plant growers have about finished up their hedging and report a very fair trade at fairly remunerative prices.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafter, Sash Bars and everything else from the bottom of putters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to turnish plans when necessary.

LOCKLAND LUMBER CO. LOCKLAND, O.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipple Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

Red Spider Can't Live

WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but 'gets there' every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD,

Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.

Yours truly, E. G. HILL & CO.

Price, \$1.00 each, prepaid. TRY IT, AND RETURN IT at once, if not satisfactory, and your money will be sent back.

THEY LIKE THE "SPENCE."

Office of T. L. LOWDEN & SONS, FLORISTS AND MARKET GARDENERS, ETC., ETC.,
255 Pomeroy Avenue, Pittsfield, Mass., May 26, 1895.

"We are heating 7 houses—nearly 8 000 feet of glass—with just one 'Spence' hot water heater. In the very coldest weather last winter we would fire up at 9 in the evening, close pipe damper and leave only 1/4 draft damper open. It needed no more care till 10 a. m. next day, if cloudy; if sunny it was unnecessary to touch the fire till 3 p. m., and we never half worked the heater. I believe I can heat 8,000 more feet of glass with your heater, and not strain it. In one house I have 1 1/2-inch pipe, another 1 1/2 pipe, 2 houses, 2 inch pipe; one house, both 2 and 3 inch; still another, 4 and 3-inch cast pipe; and the last, 2 and 3-inch boiler tubing—all kinds and sizes, you see. When we first started the fire we had no repairs or alterations to make other than to tighten up loose joints. The heater has been running two seasons and is all right. We have another range of 8,000 feet glass which is heated by two steamers, and our experience is we can beat the steamers every time and in every way."

GLEN HEAD, N. Y.—Mr. P. H. Scudder has gone to the Adirondacks to look for trout and health for a couple of weeks.

RACINE, Wis.—George E. Ede, florist, has made an assignment to Roy H. Worthington for the benefit of his creditors. The assets are estimated at \$2,500, and the liabilities at \$3,000.

SPRINGFIELD, MASS.—The sixth annual rose show under the auspices of the Amateur Horticultural Society was held at Union Armory on June 18 and 19. The displays were attractive and the attendance exceeded all expectations.

NO. EASTON, MASS.—John McFarland, the Main street florist, while driving through Brockton on the afternoon of June 7 with a load of plants was kicked by his horse and sustained a bad fracture of the leg.

The Parks of Paris.

We are indebted to M. Charles Tavernier, Chief Engineer of the city of Paris, for the following interesting article upon the parks of the French capital, which was kindly translated for us by Mr. I. F. Dubius, an attache of Lincoln Park, Chicago.

The public parks or promenades of Paris may be separated into two sections, those within the city proper and those outside it. Those outside are the Bois de Boulogne and Bois de Vincennes, which although called Bois (forest) are really magnificent parks.

Inside the city are the parks Monceau, Buttes Chaumont, Montsouris, Trocadero and Champ de Mars; in addition to this there are forty-eight public squares and thirty-six other small places covered with vegetation and more or less laid out as parks or public gardens. Outside of these parks, squares and gardens of the city there are three large parks belonging to the government, the Tuileries, Luxembourg and Jardin des Plantes or botanical gardens.

BOIS DE BOULOGNE.

This park, though roughly treated during the siege of Paris, still remains one of the most beautiful in the world. Its transformation is highly creditable to the municipal administration, which spared no expense to accomplish this great work. Previous to its transformation the Bois de Boulogne was only a wood with a few straight drives, these bordered with trees trimmed into symmetry. The improvements started in 1853 and were completed in 1858. The difficulties to overcome were a level piece of ground, a very poor soil and a scarcity of good trees.

The ideas governing the design were: The locating of a lake at the base of the most prominent elevation of the ground, using the earth excavated from this lake to double the height of the elevation, this lake to empty into a larger one located in a low open valley, and whose terminus would be hid in the depths of the forest; from the summit of the elevation vistas were to open in five directions to picturesque points, like Fort Mont Valerien, Boulogne, St. Cloud, the Princes' Avenue and Autenil; a stream fed from the lake, following the contour of the low land in the forest, and forming a grand cascade above the plain of Longchamps, passing from there into the river Seine. A few of the best straight avenues were to be kept, the others to be masked by new plantations, while new and large promenades should encircle the park and connect all the inside drives. All the brush and cheap constructions dotting the plain of Longchamps were to be removed, transforming it into a vast hippodrome. These general ideas were carried out in all particulars.

This park is certainly the promenade of the fashionable people, and its appreciation by the public decided the municipal administration in furthering similar improvement in other localities. The plantations in the park have been done under the direction of a master hand, all trees and shrubs known to stand the climatic changes of the locality being used. Previous to the last war the park contained unique dendrological collections, but many single specimens have been irreparably destroyed.

The total length of drives and walks is 260 miles, the brooks 20 miles. The length of water pipe through the park is 185,962 lineal feet; the number of hose connections is 1800.

The soil being sandy requires a great deal of artificial watering. The quantity of water used daily in the summer time is 1,849,253 gallons, and for the feeding of lakes and cascade 2,313,432 gallons.

The cost of construction has been 16,206,252 francs. The area of the park is 2,095½ acres.

BOIS DE VINCENNES.

This park, situated at the other extreme of the city, is the peer of the Bois de Boulogne; if not from the class of its visitors it is so by the important improvements that have been made, such as superb lakes, running brooks, rushing in cascades across walks and through groves of trees. Large drives give easy access to all parts of the park, and some remarkable effects of thickets and clearings have been produced by the planting.

The total length of drives and walks is 65 miles. The length of water pipe is 181,692 lineal feet; length of water courses is 32,472 lineal feet, and the number of hose attachments is 1,121. The quantity of water pumped from the river Marne daily for sprinkling purposes in this park is 2,774,198 gallons. The construction expenses have been close to six million francs, and the work commenced in 1858 was completed in 1866. The area of the park is 2,358 acres.

PARC MONCEAU.

This, as it stands to-day, was built in 1861 by the city of Paris on part of the old domain of Monceau, dating back to the previous century. It is one of the most perfectly kept parks of the city; rare sub-tropical effects with newly acclimatized plants are tried here first, inculcating in the public mind a love for decorative grounds unknown before. The finest palms, ferns, cycads, etc. of Europe are here admired. All grand natural effects are here reproduced in a small compass, the majestic by single specimen trees, where the sun never pierces through their dense foliage; a water course, a lake, a rustic bridge, a rockery, a small cascade and beautiful openings change the landscape effects from the smiling to the pensive.

Two large drives cross the park from end to end as continuation of abutting boulevards; monumental iron gates decorate the entrances. The area of the park is 20 acres. From 80,000 to 90,000 plants are used during the summer, and 35,000 during the fall and spring. The park is lighted by electric light and kept open to the public until 2 o'clock a. m.

BUTTES CHAUMONT.

The Buttes Chaumont is a remarkable specimen of the landscape art, situated in the northeast of Paris, in a thickly populated district, and occupying ground formerly used as quarries of limestone and plaster. In that part nearest the city the walks follow the incline of the rock ledges, the lawn spaces being filled with humus.

The other part of the park, where the quarries were, is to-day the most picturesque section, but at the cost of an enormous amount of work. The front presented a vertical surface of rock 114 feet high, overlooking the old excavated low land. This was formed into a rocky island 164 feet above the level of the water surrounding it, and on its summit a copy of the Sibylline temple at Tivoli was erected.

The lake is fed by two streams flowing through the main valley, one emptying from a cascade 105 feet high. A suspension bridge 207 feet long shortens the way across the park. A number of driveways 23 feet wide cross the park in different directions, at a grade nowhere exceeding 6 in 100. Five bridges, some of masonry, some of iron and stone combined, and some all iron, cross roads or streams. Few visitors to the park realize the difficulties that had to be overcome to create such smiling effects of nature.

The improvements started in 1864 were completed in 1869 at a cost of 3,412,620 francs. The area of the park is 55 acres. The park is lighted with electric lights and is kept open until 1:30 a. m.

MONTSOURIS.

The park of Montsouris is situated at the southern extremity of the city and is the fourth in size, but its horticultural display is not up to the others. There are very fine views and a beautiful lake, the ground sloping gently to the river Bièvre. In it has been reconstructed the palace of the Bey of Tunis, which was so much admired at the universal exhibition of 1867. The surface of the park is 38 acres; the cost of the improvements have been 1,750,000 francs.

THE TROCADERO PARK.

This has been improved since the exposition of 1878. The central portion is laid out in the French and the outside in the natural style. There is some very fine scenery, specially a "Swiss valley," surrounded by rocks, and a hill planted exclusively with conifers. There is also an aquarium with beautiful grottoes, lined with stalactites. The park covers an area of 25 acres. The improvements completed in 1880 cost 660,978 francs.

CHAMP DE MARS.

Separated from the Trocadero by the river Seine, this has been subject to very many changes since 1889, and may be changed again if another exposition is to be held. Now it is cut up into small gardens, representing different styles, and play grounds, much used on holidays. The surface is 10 acres.

THE CHAMPS ELYSEE.

Cover 23 acres, situated in the most favored part of the city. There is a central avenue, running from the Place de la

Concorde to the Rond-point, a distance of 2,542 feet, 230 feet in width, planted with fine trees dividing the walks, and ornamented with fountains, pavilions, chalets, restaurants, etc. From these the city derives a revenue of 258,000 francs.

L'Avenue du Bois de Boulogne connects the center of the city with the Bois de Boulogne. Its length is 3,936 feet, and its width is 400 feet, divided into one central drive 52 feet wide, one equestrian and one foot walk each 40 feet wide, two grass plats, planted with trees and shrubs, and two roads 30 feet wide, including the sidewalk along the property line. There is also a building line of 33 feet established by the city on each side, and rules governing the fences.

The greenhouses of La Muette furnish all the plants used in the public parks, and also for decoration of the offices of the high functionaries of the state. Three million plants are used yearly for these different purposes. This establishment has a well merited reputation in the horticultural world, and students from all parts are admitted to its tuition. To it must be accredited the merit of having popularized the using of large foliage plants for outdoor decoration. The establishment covers a surface of six acres, almost all under glass, and an annex of eight acres for shrubbery, propagation, etc. It is probable that it will be moved to a larger tract of land better adapted to expansion than the present one. Two nurseries for the raising of the park and boulevard trees are also under its management.

THE TUILERIES GARDENS.

These are the oldest in the city, having been created by Catherine de Medeis, and extensively enlarged by Colbert. On its surface of 60 acres Le Notre carried out his beautiful plan, of which after two centuries the main line still exists.

On the north and south it is bordered by two lateral terraces; the south one is bordered with lindens, some elms, horse chestnut and sycamore, cut back to form curtains, from the front of which the promenade on the bank of the Seine can be viewed. The northern terrace, called Feuillant, in memory of a convent that occupied its site, is planted with lindens cut back on both lateral faces. From one end a beautiful view of the Place de la Concorde is seen, also the Champs Elysees.

One-third of its surface is covered by flower gardens of simple construction, also by the grand fountain and Casino. The other two-thirds is planted with horse chestnuts, and divided all through the center by a large avenue over half a mile long and 320 feet wide. Its terminus is a round place, the center of which is occupied by a basin, around which are four groups of statuary, representing the four seasons. Numerous vases, statues and other ornamental groups give a good idea of French sculptural art.

THE LUXEMBOURG GARDEN

Is principally known on account of its parterres of flowers, and the beauty of its shady spots. The original design from Jacques de Brosse, laid out in 1611, has not been materially changed; the same parterre planting of herbaceous plants with flowering shrubs in the center adorn the front of the palace. An addition of five acres from an old nursery has been made, on which a correctly designed natural park has been laid out. In one part of the park is situated the celebrated Medeis fountain. The area occupied is 62 acres.

JARDIN DES PLANTES.

This is more a scientific establishment than a pleasure ground, and has a world wide reputation as such. For the average population of Paris it is only a place to promenade which is filled with all sorts of plants and animals, but in the eyes of the scientist it is the most complete collection ever gathered by the investigating genius of a great people.

Its origin is ancient, and very modest. At first it was only a garden, where Guy de La Brosse, doctor to Louis XIII, used to cultivate medicinal plants. In 1650 it was first opened to the public. In 1740 it passed under the direction of Buffon, and was considerably enlarged. The animal department was opened in November, 1793. It covers an area of 74 acres. The surface of the ground is flat, in the center of which is a mound known as the Labyrinthe, where stands the cedar of Lebanon planted in 1735 by the celebrated botanist Bernard de Jussieu. On top of the Labyrinthe stands the Belvedere, from which an extensive view over the park is had.

The area of the pleasure grounds for the benefit of the Parisian populace is 49,765 acres, of which 47,813 acres are taken care of by the municipal administration, the remainder by the state.

The department of parks is administered as follows: One chief engineer, who has under his orders (1) an inspector of pleasure grounds, who has charge of new work, repairs of drives, sewers, water pipes, lighting, etc. This man employs 96 guards, divided into nine squads. These are recruited altogether from soldiers decorated with the military medal or the cross of the Legion of Honor. (2) One chief gardener, who has four helpers. (3) One keeper of the Bois de Boulogne, this man employing 43 of the above guards. (4) One keeper of the Bois de Vincennes, with 38 guards. (5) One architect, who has charge of all new and old structures.

The labor force is as follows:

Bois de Boulogne 140 laborers, 65 skilled workmen.

Bois de Vincennes 90 laborers, 40 skilled workmen.

All other pleasure grounds 30 laborers, 156 skilled workmen.

Greenhouses and nursery 82 skilled workmen.

Total number laborers 160.

Total number skilled workmen 343.

The Tuileries and Luxembourg gardens are state property, and are administered by the architect of each palace. Each has under his orders a chief gardener, with respectively 20 and 32 skilled workmen. The Jardin des Plantes is managed by the Minister of Education, who has one special professor, one chief botanist, one chief of culture, one chief of greenhouses, one chief of nursery, one chief of seed laboratory, and 45 skilled workmen.

All the parks are laid out chiefly in the natural style, with French adaptations. The trees and shrubs are disposed singly or in groups. The variety includes all those acclimatized in Paris. Evergreens do not do so well as deciduous trees, as is the case in all large cities, but a considerable variety is planted.

In 1852, under the impulse given by the administration in transforming the city, breathing places and pleasure grounds had to be provided; the Bois de Boulogne came first for improvement, then the main streets that were dark and crowded were straightened, enlarged, and planted with shade trees, as much for the pleasure they afforded as for a new and salubrious

CASCADE IN THE BOIS DE BOULOGNE
THE PARKS OF PARIS.

means of caring for the health of the enormous influx of transient population that flocked into the city. Thus avenues, where quantities of seats invite to rest, and where the traveler finds cool shade during the hot days, were opened first in the principal quarters. Formerly the boulevards were planted with a miscellaneous lot of starling trees, and taken care of by contractors, whose management left much to be desired. For that reason one of the first steps was the creation of a corps of competent gardeners who had at heart the success of the new plantations, which required such diversified study on account of the difficulties which a great city offers to the successful growth of vegetation. The city had to make considerable sacrifices in order to undergo such transformation, not only for imparting the elegance required by the capital, as also for the hygienic benefits to be sought for the welfare of all its inhabitants.

The trees planted were specimens selected for their quick growth, elegance of appearance, beautiful, shade-giving foliage, and freedom from insect pests. To-day all public thoroughfares over 85 feet in width are planted with two lines of trees, and those over 131 feet in width have a grass plat in the center with a line of trees, and also a line on each side of the sidewalk. The number of trees so far planted on the line of such streets is 87,879. The space between trees varies from 16½ feet to 26¼ feet. This depends on their attainable growth; in no case, however, are trees planted closer to buildings

than 16½ feet, and they are 5 feet from any curb or sidewalk. The principal conditions for the beautiful growth of street trees are their adaptability to the situation, the nature of the soil, and especially the sub soil.

Previous to 1812 the Bois de Boulogne was in the same state as all other woods in the suburbs of Paris; cut up with straight drives badly maintained it was not up to the needs of the great city. The first improvements were started in 1853, the lakes were excavated, the drives that were retained were replanted, new lawns were laid out, and choice trees were planted. Some large specimens were moved, with full ball of earth, on specially constructed trucks; then smaller kinds and more delicate species were grouped in protected places. The improvements were completed in 1858.

The Bois de Vincennes was ceded to the city of Paris by an act of the state July 24, 1860, and was similarly improved. The first work undertaken was the excavating of the lake Minimes in 1858. Later, in 1860, after the rapid progress attained on the Bois de Boulogne, the City of Paris obtained title to the plain of Charenton, which was added to the park, and improved as such. To day this beautiful forest, with its fine drives, meandering walks, its many water-courses and beautiful lake, the beautiful grouping of trees and shrubs, and long views over velvety lawns, is one of the finest parks of the city.

Independent of the boulevards and large parks, it was desired to dot the

interior of the city with smaller public gardens, where one could, within easy access, breathe the air purified by a luxuriant vegetation, and where the eyes could rest, and feast on the beauties of the vegetable kingdom, and so the improvements of the squares Tour St. Jacques, Marche des Innocents, des Art et Metiers, le Temple, Viatimille, St. Clothilde, Champs Elysees, Monceau, Buttes Chaumont, Montsouris and fifty others were decided upon, and shortly after completed.

The spirit of improvement was now in full sway, and some system had to be created, some rules adopted, the better to reach a uniform success in such diversified wants. The study of improvement of small breathing places in a great city is not subject to fancy only, but to several governing rules, such as the class of people, the site it occupies in the city, the number of people likely to congregate there, etc. All these points have to be considered in the sizes of lawns, walks, etc.; the design must not only be an artistic study, but must answer these different purposes in a modern way, and in due proportion to the size of the site. Overcrowding with details the point in view must especially be avoided. Some judicious picturesque effects must be introduced in all such compositions, with a well defined aim in view.

The plans must be very complete before work in commenced; it should be well drawn, dimensions carefully noted, and new profile carefully studied. The changes of contour on the surface are the first to

be considered, specially if the ground is bare; then the walks, open lawn, water features and floral display, and last the planting. These are the leading features that must be harmonized. Moving the ground to build an elevation has generally a deceptive and expensive result; what is wanted for a flat piece of ground is to give a natural and graceful rounding line to the walks. Ample provision should be made for sheltered seats overlooking interesting points.

After the ground line has been well determined, the planting should be considered, as it is the contrast of the different trees and shrubs that give color, shade and light in the green masses. For this reason the planting must necessarily be of various kinds, according to the height of the full-grown specimen, the soil they require, their best exposure, and whether grown for foliage, flowers, or fruit.

Our modern parks are also brilliant with their abundance of flowers and foliage plants during the summer months. They are planted in a raised bed bordering the lawn, and sometimes bordering the plantations. The immense amount of plants required yearly for the decoration of the several parks and boulevards rendered necessary the establishment of a vast system of greenhouses. The plant consists of 42 greenhouses and 2000 hotbed sashes. In addition to this there are three nurseries for the raising of large avenue trees, one for ornamental trees, and one for evergreens. About 50,000 specimens are removed every year.

LIST OF TREES AND SHRUBS USED IN THE PARKS AND GARDENS OF PARIS.

ORNAMENTAL TREES.	
FIRST HEIGHT.	HEIGHT IN FEET.
Acer pseudo-platanus and its varieties,	65 to 82
Ailantus glandulosus,	65 to 96
Alnus glutinosa,	50 to 82
Fagus sylvestris and its varieties,	82 to 98
Fraxinus excelsior,	50 to 82
Juglans regia and its varieties,	50 to 98
Liriodendron tulipiferum,	65 to 130
Platanus crenata,	50 to 65
Platanus orientalis,	50 to 82
Populus alba,	50 to 82
" angulata,	50 to 82
" canadensis,	50 to 65

Asparagus and Smilax.

A question is referred to me from Pontiac, Ill., asking whether "asparagus can be grown in the same house with smilax, and how far apart should smilax be planted." To the first query I would decidedly say yes. I have grown Asparagus plumosus, which I presume is the

species meant, in a limited quantity for several years. A rose house temperature will suit it well, or 50° night temperature will grow it profitably. We all know that smilax will do well at 50° for lowest temperature, but to be really profitable and produce four crops in the year it should have a warm house.

Two years ago I had a bed of asparagus 50x7 feet. It grew magnificently after planting, and up to November; after that the young growths assumed a sickly yellow green color, and for decorations it was worthless. In fact I called it a failure. Just about the time I was in my trouble Mr. W. H. Elliott of Brighton, Mass., gave us a call, and of course as he is certainly the best authority in the country on the subject, we soon talked asparagus. Mr. Elliott thought I might have over-watered it, but in that respect I was sure I had not erred. He then asked if there was a floor under it, or was it on the solid ground. The bed was on planks raised a few inches from the ground. Then Mr. Elliott made use of an expression which was exactly these words: "It hates to be divorced from Mother Earth." I would not say positively that asparagus cannot be grown on a bench, but my experience is that it is far safer to follow the advice of such a large grower and plant your bed on the solid ground. I did so the following year, and have had none of that sickly yellow color since I planted the same sized bed in a house where the night temperature ran in winter from 50° to 55° in 8 or 9 inches of good rich soil on a clay bottom, where the roots can go to our antipodes if the conditions are suitable.

The second question about smilax will depend somewhat on whether you plant annually or intend to let the bed remain for 2 or 3 years. I believe in annual planting, and a good distance between rows is 1 foot, and between plants 8 inches.

WM. SCOTT.

Carnation Notes.

Sometime ago I spoke of planting in beds outside, in view of irrigating should we have a drouth the same as last season. The drouth is here and carnations are beginning to show the effects of the heat and lack of rain. In view of needing to irrigate I concluded that 1 inch pipe with $\frac{1}{4}$ inch holes drilled on one side every 6 inches would be the most suitable for the purpose, and this morning I started to wet the ground with sixty feet of pipe. It may seem to many that this method is slow work, and if the water was pumped by hand it would be, but with only a pressure of 7 pounds I can thoroughly soak a space 18 inches wide in fifteen minutes, and where a heavy pressure of water can be had, as many of the florists have, of 50 to 60 or more pounds a much longer length of pipe can be used. The pipe is connected every 30 feet with brass unions, and this is easily disconnected when a great length is used, but two men can easily move 60 feet. I shall continue to irrigate as long as the drouth lasts. For the grower who has from five to ten thousand plants in beds this plan is very useful, as it will undoubtedly enlarge his plants.

I find several of the new sorts sent out this season are doomed, as the rust loves them too well, and so out they go. I understand that salt is being used in solution for spraying rust affected plants, and as a preventive, but when I ask the users if they are positive that it will surely eradicate the disease they can not answer positively in the affirmative.

Keep the rakes going, for I am positive that you will find them much more effective than the hoe or cultivator if used before the weeds show above ground. Keep the ground loose on top, and if there is any moisture around you will find it just where the plant needs it.

CHAS. H. ALLEN.

Propagating Carnations in Summer.

I have a batch of the new hardy carnations planted in the field. These plants were grown from the seed imported from France. I wish to propagate from the best plants during the summer. What is the most efficient way of doing this? Should I grow on the young plants produced by propagation in pots or transplant them also in the field, and at what stage of their existence should they be planted out?

F. L. BUTLER.

Danbury, Conn.

Take your cuttings in early September, break them off close to the main stem; do not pull them off nor trim them much. Place them in $\frac{1}{2}$ sand, $\frac{1}{4}$ peat and $\frac{1}{4}$ loam in a frame where they can be shaded and cool; when rooted transplant in a frame from which they can be planted outside in April. They will need protection during winter, as they are not as hardy as seed-

lings. Do not allow any seed to ripen on plants from which you expect to take cuttings, as the process of seeding devitalizes the plants.

CHAS. H. ALLEN.

The Florist of the Future.

BY EMILY TAPLIN ROYLE.

[Read before the Chicago Florist Club June 27.]

The florist of the present has seen so many remarkable changes in his business that he has no reason to doubt still greater changes for the future. Every branch of the trade has made wonderful progress within the last two decades; the still greater advance of the future depends upon the members of the trade themselves.

First of all, we want to advance our business in the eyes of the public. Very few people among the outsiders appreciate the trade at its full value. They look upon the grower as an agricultural person who grows roses instead of corn and potatoes, and accumulates vast wealth from his crops, and they regard the retailer as a persuasive individual who sticks 75 cents' worth of flowers into a wire frame and charges them \$7.50 for the finished result. They do not realize that the man who grows the flowers must be a scientist, and the man who arranges them an artist, and they both deserve the recognition and remuneration of their ability. The florist of the future will surely obtain this recognition, but we shall have to educate the public and ourselves.

To begin with the growers; I believe it would be hard to find any other trade in which manual labor forms an important part, whose members are so thoroughly interested in their work, and yet there is little inducement for an intelligent young man of fair education to enter a greenhouse establishment with the view of learning the business. We know that there is many a young man scraping along on a city clerkship, who would be far better off in So and So's greenhouses, but he has an idea that he would lose standing socially by doing such work, and that there is little chance for a successful future. We have got to get over that prejudice; the florist of the future must have well-appearing employees who bring brains into the greenhouse, and are not averse to using them, even if their employer does engage a foreman to do their thinking for them. The Jaggs type must go; they are out of place in a business suggestive of beauty and refinement; we are not likely to educate the public without doing a little in that line for ourselves first. Nor can we expect people to think of plants and flowers unless we bring such before them. Perhaps some of you noticed recent paragraphs in the trade papers regarding a manufacturing concern in an eastern city, whose managers recently placed one hundred window boxes in the windows of their factory. In some correspondence on the subject we were informed that a member of the firm, traveling in England, was impressed by the plants he saw in the windows of factories and private places there, so he decided, on his return, to make an attempt in the same line here. Doesn't it seem a pity that he had to go abroad to learn the value of plants and flowers? Our trade must indeed be derelict in duty, or we should teach people to use our stock without sending them abroad for lessons. It isn't altogether a matter of sentiment either—it is business—if people learn how to use plants abroad, they may learn to buy them there too.

Nor must we run in ruts. We have seen a good many new fashions within twenty

years; we have seen the development of aquatic gardening, the use of the gorgeous cannas and similar plants of effective growth, which are surely driving out the pie-crust system of bedding, just as long stemmed carnations and roses are driving out toothpicks, and we must not let the public in general go before us, we are to lead them. For this reason every wide-awake man in the trade, whether grower or retailer, must look out for novelties, or for little used plants of merit. After roses and carnations all winter people want a little change when spring comes; hence the fancy for wild flowers or herbaceous material. The last named class certainly gives us some valuable plants, both for garden effects and for cutting. Another old favorite, in which the public shows a reviving interest, is the dahlia; our friends in Philadelphia have a Dahlia Society, and intend to hold a dahlia show this autumn, which will do much to bring the flower into public notice. Naturally the value of the dahlia as a cut flower is rather restricted, but we must all recognize its value in garden decoration. Though personally my taste inclines to the single and cactus types, as being more artistic than the heavy formality of the large doubles, yet in these we get a richness of color unexcelled by any other flower, and there is in their massive regularity, an agreeable contrast with other garden flowers. We can hardly realize the progress made in dahlia culture abroad, where the many dahlia shows offer inducements for new varieties; the introduction of some of the new show and cactus types would effect a wonderful change in our opinion of these flowers.

Another style of gardening to be cultivated by the florist of the future is the hardy fernery. Years ago I recollect my old friend the late Mr. Roenbeck of Bayonne, N. J., then almost the only grower of ferns about New York, remarking that any one who tried to make a living from them would starve to death. This opinion certainly would not hold good at the present time; the continued and increasing use of fern dishes and fern decorations makes these plants of very great importance, but while we see such an increase in the use of tender ferns the hardy garden sorts are greatly neglected, in fact they are rarely to be obtained except from dealers in native plants. Yet, almost in every garden there is some spot better adapted for ferns than anything else, particularly in the city, and when appropriate soil is provided, there is no reason why they should not do well. If we ignore the claims of our native ferns, and take no steps to preserve them, it is quite likely that the florist of the future will have none to experiment upon, for some of the choicer varieties seem in danger of extermination, particularly the walking fern (*Camptosorus rhizophyllus*) the Hartford or climbing fern, and the bird's foot a liantum. The use of delicate ferns in Wardian cases or under a bell glass seems out of date now, doubtless because such appliances are not in harmony with modern ideas of decorative art, but a case of filmy ferns would always elicit more admiration than a group of any other varieties, and I believe amateurs took more interest in ferns, as a class, when these cases were in vogue. Perhaps we may see a revival of them.

And now for the claims of the retailer, the store florist. There is one trade tendency we have all noted of late years, and that is the increasing plant trade, which will gradually compel the store florist to give as much attention to plants as he does to cut flowers. Flower buyers of

THE PARKS OF PARIS.

wealth and culture are all for artistic simplicity—the same feeling that has driven out formal bedding, replacing it with the grace of natural planting, is rapidly driving out stiff set designs and formal bunches or baskets. Now, I must say with regret that I fear our trade is but little responsible for this vast improvement in public taste; it is almost entirely due to outside influences. Almost every town and village throughout the country now has its art class or art teacher. Women—our chief flower buyers—who, twenty years ago, spent their time in making green worsted lamp mats and head pin-cushions, or similar horrors, now learn to paint violets and dog roses on useless teapots, and however mediocre their work, the art training certainly improves their taste. They learn something of form and grouping, and a good deal about combination of color. Now, do you think it right for the florist to get his art instruction at second-hand? Ought he not to be instructor instead of instructed? I believe that the florist of the future will stand on the same plane as the man who paints pictures, but he will need the same primary cultivation; he must study grouping and the combination of colors with as much devotion as the artist who uses the brush. I hardly like to call him an artist, though he is one, for that word is sorely misused—every flower carpenter who builds floral bicycles and trolley-cars and tack hammers calls himself a floral artist.

Another thing—the laborer is worthy of his hire, and the man who brings native taste and artistic culture to his work should be paid in accordance with it.

The artist takes paint and canvas worth five dollars and produces a picture worth five hundred; like him the florist should be paid in accordance with the effect he produces, without reference to the value of the flowers used. People must learn to pay, not only for the material and the work, but also for the "know how."

The industrious wire worker may ask where he will be when all these things happen; apparently he will be very much out of it, unless he turns his attention to twentieth century hoop skirts, and there seems greater reason to doubt whether the new woman will have any use for these articles either. To tell the truth the wire worker, instead of leading, like the basket man, who studies public taste, and constantly produces new ideas, has simply tagged after the florist, and too often it has been a case of the blind leading the blind. Such simple forms as the wreath and the cross are likely to retain their hold, but the more elaborate emblems are surely going, and we may as well bid them farewell with a good grace. A few years ago no commencement was complete without a selection of horse shoes, lyres with immortelle strings, and similar emblems of regard. Who ever makes such things now? They are as dead as lace paper frills around a bouquet. The continued improvement in the quality of flowers makes it unnecessary to bunch them up into unnatural forms, and the florist of the future must therefore show his skill in harmonious grouping or arrangement, rather than in complicated making-up.

We hear a great deal now about Japanese art. Painters and sculptors study

it, recognizing the fact that however strange Japanese pictures and sculptures may seem in our eyes they are always governed by laws harmonizing with nature. Japanese gardening and floral arrangements are governed by similar laws; their florists do not work at hazard, but are expected to have an intelligent understanding of the reason for the effect they produce. With them "the art itself is nature." Our workers should be similarly instructed; apart from the gain in beauty there would be very much less uncertainty about it. A man who works at hazard is successful by chance; one who works in accordance with artistic rules will always succeed in his results.

To gain public recognition as masters of an artistic profession our florists must bring this matter out more fully at the flower shows, by gaining the co-operation and association of people identified with the fine arts. The recent exhibition of sculptures in New York, where an elaborate plant display was made in connection with the statuary, was a step in the right direction; we ought to seek a similar opportunity here. We also want to see an increase in the use around city residences and hotels not only of flowering plants in the summer, but also of hardy dwarf evergreens in tubs or vases during the winter. In this city, unfortunately, we have to contend with severe climatic difficulties, and to popularize gardening we have to make it reasonably easy and certain in its results. The present popularity of pansies and sweet peas shows what can be done by bringing things convincingly before the people. The little booklets, containing cultural directions,

sent out by various seedsmen, have done good missionary work, and have undoubtedly benefited the trade greatly in an indirect way. That one matter of cultural instruction is hardly considered sufficiently; the more we teach people about such matters the more likely they are to buy plants, and once acquired this taste never leaves its possessor. Flower lovers outside of the trade should be made to feel that florists are closely in touch with them and willing to aid them with their counsel.

Nor should we forget what we owe to the daily press. When we read some absurd "lake" story regarding our trade we forget that it is as hard for them to understand our trade as it would be for us to build a cylinder press off hand; in many cases they don't know where to get correct information, nor how to put it together when they do get it. We ought to lose no opportunity of giving them live, up-to-date information, devoid of exaggeration, whenever they require it—it is to our interest to do so—and the florists' club of the future should be prepared to do this. With all these possibilities before him—and they are certainties rather than possibilities—the florist of the future is rather to be envied, and the florist of the present too.

Rose and Strawberry Exhibition of the Massachusetts Horticultural Society.

The show of roses for 1895 was by no means equal to that of previous years. For this there were two reasons; one was unfavorable weather, another was the regulation adopted the present year, which provides that no duplicates shall be allowed when one person exhibits in different classes. With this restriction in force, the exhibitor competing in the three classes of twenty-four, eighteen and twelve blooms, for instance, is obliged to stage fifty-four varieties. The existence of such a rule is certainly prejudicial to the success of the exhibition, however valuable it may be to certain individual interests. That such a restriction could find its way into the prize schedule is only one more instance where the society's usefulness and reputation are impaired by petty expedients for the furtherance of selfish ends.

The pre-eminent adaptability of the shore district south of Cape Cod for outdoor rose cultivation was once more demonstrated. The exhibit of two thousand or more blooms made by M. H. Walsh, gardener to Hon. J. S. Fay, eclipsed everything else, and had it not been for the magnificent contribution from this prince of rose growers, the exhibition of the queen of flowers would have been a very meagre one. Other prominent rose exhibitors were John L. Gardner, J. Eaton Jr., Jas. Comley, Dr. C. G. Weld, John P. Spaulding, W. W. Astor, Sumner Coolidge, Mrs. E. M. Gill, Mrs. J. W. Clark, and P. Kane.

From the many varieties on exhibition one might select as the finest the following new and old sorts: Mlle. Susanna de Rodocanachi, Margaret Dickson, Mme. Delaville, Prosper Laugier, Earl of Dufferin, Spenser, Eclair, Louis Van Houtte, Mme. Gabriel Luizet, Marie Baumann, Ulrich Brunner, Prince Arthur, E. Y. Teas, Mlle. Marie Rady, Mme. Victor Verdier, Chas. Lefebvre, Etienne Levct, Gustave Piganeau, and M. P. Wilder. The merit of Earl of Dufferin in this section was somewhat in doubt last year, but in the present case it showed up grandly, and was credited by good judges with furnishing the best built blooms in the hall. Mr. Fay's prize collection of varieties intro-

duced since 1892, included Capt. Hayward, Mrs. Harkness, Paul's Early Blush, and Chas. Gater; of the four the latter is decidedly the best; Capt. Hayward has no chance here so long as Ulrich Brunner is in existence. Mr. Walsh's handsome seedling, M. H. Walsh, which received such high honors last year, fully maintained its position, and Mr. Walsh gave additional proof of his skill as a hybridizer in six new seedlings never before shown. One between Louis Van Houtte and M. H. Walsh, which has been named J. S. Fay, is a grandly formed flower of rich color. Another one from Jacqueminot and American Beauty, is of bright Margottin shade and unexcelled fragrance. A cream pink, a cross between Madame Hoste and Margaret Dickson, also promises well.

Mosses were but slimly represented, and in hybrid teas R. S. Fay was the only exhibitor. Duchess of Albany, La France, Pink Rover, Augustine Guinoiseau, Kaiserin Augusta Victoria and Madame Caroline Testout were the varieties shown. In the polyantha class there were no entries at all. The best single bloom of a variety introduced since 1892 was Marchioness of Londonderry, shown by J. Eaton, Jr. The premiums for general display, filling one hundred bottles, brought out nine entries. These were arranged in banks around the sides of the hall, and were very effective.

The miscellaneous exhibits were arranged in the lower hall. The prizes for flowering stove and greenhouse plants brought out some elegant specimens, including *Ericas* Cavendishii, globosa, ventricosa rosea, Bothwelliana and Bothwelliana alba, and *Aphelexis macrantha* purpurea from John L. Gardner; and *Hemerocallis macrostephana*, *Boronia elatior*, *Anthurium Scherzerianum* and *Rhynchospermum jasmuinoides* from Dr. C. G. Weld. The *rhynchospermums* were splendid plants trained into stately pyramids, but on the second day the flowers shed badly and formed a halo of white on the floor around the pot. A large group of orchids from John L. Gardner comprising *Cattleya Mossiae*, *miltonias*, *odontoglossums* and *dendrobiums* made a prominent feature at the head of the hall. Dr. Weld captured first prize for single specimen orchid with a plant of *C. Lawrenceanum*.

From the Harvard Botanic Garden and J. W. Manning came superb displays of hardy herbaceous flowers in large vases, extending the entire length of one side of the hall. This, with the comprehensive collections of native wild flowers of New England, contributed by Miss C. M. Endicott, Miss M. C. Hewett and Mrs. P. D. Richards, formed one of the most interesting and instructive departments of the show, and received its full share of attention from the visitors. Sweet williams, foxgloves, pæonias, gloxinias, petunias, poppies and Spanish iris were all shown in profusion. The sensation in the cut flower line was a maximum hybrid rhododendron shown by James Comley, and which received a well merited certificate of merit. The flowers are of good size, soft pink in color with a large blotch of deep golden yellow covering nearly the whole upper half of the corolla, a very distinct flower and well built truss.

The exhibition of strawberries was a disappointment as regards extent, variety and quality generally, the effect of the most unfavorable season experienced in many years. Here, as in the rose exhibit, Mr. Walsh came to the rescue, and his four quarts of Marshall was in all respects the best basket of berries ever shown in this hall.

New York.

Summer is here in earnest, and general business is duller than ever. Cut flower trade is very flat and there is much more stock coming in than is required; a few days more, however, will wind up a good share of the stuff coming in, as the growers are throwing out and re-planting. School work has proved to be but a small item this month, and everything has taken on an air of quiet which is not likely to be disturbed for some weeks.

Roses are fair in quality for the season. Long Beauties are about the only variety that have a call, but these are few and generally poor in quality. Small roses sell at \$2 to \$3 per hundred, and at \$5 to \$10 per thousand lots. Long Beauties bring \$8 to \$20, others \$1 to \$5. Carnations are going slower than ever, and best price obtainable for good stock is from 35 cents to \$1 per hundred, and ordinary quality sells at from \$1 to \$2.50 per thousand. Sweet peas are down to hard pan, and the prospect for summer peas is poor indeed.

No new developments are noted in regard to the proposed Cut Flower Co. It would seem that they have failed to interest the small men of Madison and vicinity who take exception to the manner in which arrangements were perfected, without first permitting them to share in the early work of organization.

The long-talked-of Botanic Garden appears to be now an assured success. The \$250,000 required by the act authorizing the establishment of the garden has been at last secured by subscription, and the \$500,000 appropriated by the City of New York now becomes available for the erection of the necessary buildings and the securing of the land needed. The Corporation of the Garden have selected 250 acres in Bronx Park, located on both sides of the Bronx river, a place of rare natural beauty and affording also unequalled facilities for the art of the landscape gardener. The \$250,000 raised by private subscription will be kept as an endowment fund, and the interest applied to the maintenance of the Garden.

Mr. Winfried Rolker sailed for Europe on the 18th inst, per steamer Lahn.

Geo. M. Stumpp sailed June 25 on the Spree and Thos. Young, Jr., June 27th on the Normannia.

W. H. Young has leased the Jacobson place and will devote it to American Beauties, 600 running feet of houses.

Philip Zeh, Fifth avenue corner 25 street Brooklyn, died at his home on June 20, aged sixty-seven years.

Boston.

The florists are all busy. Last week the colleges, this week the schools, make a demand for flowers which is larger and larger every year. The wholesalers, especially, are busy, for the demand extends to nearly every New England town. After the present week, however, there will be little to do for some time to come. All kinds of stock are cheap and abundant, carnations particularly so. They have never been so good or so plenty towards end of June as they are this year. Sweet peas are also seen everywhere in large quantities and if it were not for the street boys their lot would be a hard one.

The suit of W. W. Edgar against the Jos. Breck & Sons Corporation has been won by Mr. Edgar. This was a case where the defendant solicited orders for longiflorum lily bulbs from the plaintiff and guaranteed that the bulbs should be true to name. The lilies were grown for the Easter trade of 1894, but when they

came into bloom proved to be 75 per cent Harrisii. Mr. Edgar's customers refused to accept the flowers, and he therefore entered suit against Breck for the sum of \$900, which he claimed was the difference in market value between Harrisii flowers and longiflorum flowers at the time they bloomed. The defense entered a general denial, and also called attention to the clause at the head of their bills in which they disclaim all responsibility for results from seeds sold by them. It was decided, however, that this did not cover sales of bulbs, and the jury awarded the plaintiff the sum of \$532 for loss of crop.

On the evening of June 24 the Gardeners' and Florists' Club had a musicale and strawberry festival at Horticultural Hall, which was participated in by one hundred of the members and their ladies. It was one of the most thoroughly enjoyable occasions on record, and as an effort in a new direction was an unqualified success. The musical and dramatic entertainment was furnished by Miss Maud George, pianist, Misses Daisy and Lily Neil, two bright little daughters of Mr. Sam'l Neil, Mr. John C. Staab, violinist, Miss Anna M. Staab, soprano, Mr. Lawrence A. Turley, elocutionist, and Mr. Albert Russell accompanist. Mr. Staab's masterly playing fairly electrified the audience, and Mr. Turley kept them screaming with laughter. All the participants in the program, in fact, acquitted themselves nobly.

Ed. Hatch's cottage at Scituate was the scene of another very pleasant reunion last Friday, June 28, when a number of the craft partook of Mr. Hatch's hospitality at that famous retreat. Scituate is the home of clams and big appetites, and no one knows better than Mr. Ed. Hatch how to make the two work together. Whatever he does is done just a little better than anybody else does it.

With the present week begins the series of Saturday free exhibitions in Horticultural Hall, which will continue until August 24 inclusive.

Visitors in town: Martin Finaghty, Lenox, Mass.; A. T. Boddington, Short Hills, N. J., and J. A. Penman, New York. Mr. Penman has the Book of Choice Feins by Geo. Schneider, and Kerner's Natural History of Plants under his arm.

Mr. and Mrs. C. M. Atkinson have returned from their bridal trip to the south. Their friends were glad to welcome them back again, but sorry to note the evidences of severe sickness shown by Mr. Atkinson. All hope for his speedy restoration to health.

Philadelphia.

The lovers of flowers who usually obtain their supply from the various floralestablishments of this city are either satisfied for the season or are hunting for the beautiful in other fields, for business in the regular channels is scarcely moving at all. The street men, however, seem to be still in it; one of the stands sold 250 dozen roses at 10 cents per dozen, in addition to a large lot of water lilies, for a day's business recently. The gentlemen who favor the stores with the first choice of roses at \$3 to \$4 per hundred supply these gentry at about 50 cents for the same quality. This state of affairs is all right, however, as it shows the growers that people will buy flowers if they get them cheap enough. It is all wrong—this wail about the fakir that is going up all over the country; he is the best friend the grower has. He handles immense quantities of his flowers and pays cash for them. Of course he

knows his market and buys accordingly, and if the grower doesn't make money he mustn't blame the fakir. He is clearly a creature of the grower. With his additional houses and increased competition he produces more flowers than his regular trade will take, and just as soon as the surplus gets large enough a new fakir is born. It has been the case in New York, in Philadelphia, in Boston, and the same causes will bring about like results in all the large cities of this country. The fakir has come to stay, and no amount of legislating will keep him down. He handles the surplus stock, and as the surplus seems to be increasing every year, so also will his tribe increase.

Sweet peas are now in from outside, and sell well, bringing from 25 to 40 cents per hundred. Roses, especially La France, Meteor and Kaiserin, are fairly good, and sell for \$3 to \$4 per hundred. Beauties are very scarce and poor at 1.50 per dozen. Valley is plentiful at 3 and 4 per hundred. Carnations are small and poor, and bring from 25 cents to 1 per hundred.

Quite a lot of chrysanthemums are being planted, and the indications are that the supply of "mums" will about equal that of last season. Some are not putting in as many, while others who did well last year are increasing their stock. Philadelphia will be given a trial by most growers, and other new ones are being tried sparingly.

H. H. Battles has shaken off the dust of the city, and his farm near Newtown Square now occupies most of his time and attention. Farmer Battles they call him, and his opinion on the best breeds of horses, cows and chickens must by this time be very weighty.

The Gun Club had another shoot last Wednesday, and some very good scores were made. Anderson and Burton seem well nigh invincible, and a number of the others are showing the benefit of their practice. Shooting is good sport, and the grounds at Wissinoming are a delightful place to spend an afternoon.

S. S. Pennock has been in New England the past week, mostly at Newport and vicinity. Sam is quite an expert on tennis. Brother Lonsdale also wields the racket in good style. How about a match between Lansdowne and Chestnut Hill?

There is considerable talk about the convention, and there will probably be a good representation from this city. From former experiences the boys feel sure of a good time, and as the rate of fare will be below the delegation is sure to be a large one. K.

Pittsburg.

The regular meeting of the Florist Club was held at Magin's Hall with a very good attendance although the extreme warm weather, and was enjoyed. All the committees reported good progress and everybody seems to take a personal interest in the coming S. A. F. convention. There is one sure thing, that the florists of the county will receive a warm welcome coming to Pittsburg "if nothing else."

The bedding out in the two parks has been completed but the extreme weather has been against all outside planting, and we still need rain.

Great preparations are being made for the yearly outing of the citizens, July 4, at Schenley Park. This is the day of all for the parks. Director Bigelow has arranged for \$10,000 worth of sports, races, balloon ascensions, wire rope walking, fire-works, music, etc., all free and everybody welcome. The important feature will be the unveiling of the Bige-

low monument erected by public subscription to show the appreciation to the Father of Parks, as Mr. Bigelow is known. The unfinished state of the parks admits of these large demonstrations and gatherings, but as the work of finishing goes on it will be necessary to curtail these amusements, for the park on the morning of July 5 is a sight to behold. Supt. Bennett will be pleased to see all the florists that can possibly come this way that day and can guarantee them a big day's amusement.

P. S. Randolph has moved into the J. R. & A. Murdoch greenhouses on Forbes street.

Geo. Oesterle has engaged as foreman with Fred Burki at Bellevue.

John Bader of Troy Hill is building one new house. Fred Burki is building four new ones and Elliott & Ulam are building two new ones to meet increased demands of their trade.

The past week has been a very busy one for the florist, weddings, commencements, etc., making the demands exceptionally good. BROWN.

Cleveland.

At the funeral of one of the force connected with a prominent Cleveland paper a piece of work by Miss Eadie was very noticeable. It was a representation of the front page of the paper, and was exceedingly well worked out. Speaking of this design brings up a different and an exceedingly disagreeable subject—the crape puller—who on this occasion at least was badly left. One of the unsavory birds hustled to the newspaper office and pulled most mightily for this same order. He hadn't been sent for and most certainly was not wanted, although these facts did not affect his nerve at all. He got nothing but the cold shoulder in return for his pains, however. It seems to me that if some other portion of his anatomy had been well warmed it might possibly have brought about a much needed moral regeneration. I think all reputable florists would like these people to be born again—on some other planet.

The last word concerning outdoor planting seems to indicate that the season for those who cater to that trade has been fair. A good many were frightened by the slow sales and dubious outlook in May, but June has fairly compensated for May's shortcomings. The principal source of complaint seems to be the market, where considerable grumbling has been done. It is rather difficult to locate the real cause of the trouble there, but probably several conditions have tended to bring about so undesirable a state of affairs. For many years the Central Market was the florists' stamping ground, and thither everybody went for both plants and cut flowers. As the city grew florists' stores came and drew away the better class of cut flower trade. Further and faster growth and the removal of many residents to the suburbs have placed the obstacle of distance in the way of many former patrons. To steer baskets or boxes of plants—the most unwieldy, obstinate, breakable objects to transport that I know of—is no longer much relished by plant buyers. There has also been the newer market—a private corporation—that has entered the field as a rival of the older municipal affair. This new market has brought a host of new florists into existence, and the business that was formerly done under one general management is now divided between two.

The National League of Republican Clubs held its convention here last week.

The decorations by Gasser were very good as well as very extensive. They were somewhat conventional, but that's proper for a convention.

The long spell of dry weather has been broken by a magnificent rain—a slow, steady one, of which every drop soaked in and not one was wasted. We were certainly entitled to this blessing at least, for between May frosts and June drouths the florist has hardly had a festive time of it.

Mr. Schneider is now in full possession of the Cleveland Floral Co. establishment.

Mr. A. Graham, senior member of the firm of A. Graham & Son, met with an accident which has laid him up in bed for the past week—and he isn't through yet. Hereafter when he has occasion to perambulate on dry grass until his shoes acquire a glass-like polish he will probably drive a few twenty penny spikes through the soles of the same to enable him to descend from his chariot without getting under the feet of his fiery steed.

H. A. Bunyard, the genial, has severed his connection with Pitcher & Manda, and has retired from the road to lead a new and better life in Cleveland. He has made arrangements whereby he assumes control of the establishment heretofore operated by G. W. Heiser & Co. Here, 'neath lofty palms and verdant tree ferns he will hunt the fierce *Didymochloena* and wild *Nephrolepis* to their lairs. He will also dispense unto the retail florists of every race (except Greeks) and climate stock that shall excel that of other wholesalers, even as the splendor of the sun dims the milder radiance of the orb of night. A.

Chicago.

The country place of Mr. W. C. Egan, secretary of the Hort. Society of Chicago, at Highland Park, is now a beauty spot worth a long trip to see. Probably no other place in this country of equal size (5 to 6 acres) contains so many good things in the way of hardy plants. Practically the whole field of ornamental horticulture is here represented, and every specimen gives evidence of the most careful attention to its wants. During a recent visit we noted the following as being specially valuable to commercial growers: The orange yellow *Alstromeria aurantiaca*, which blooms all summer, and the flowers of which will last 10 days in a cut state; the double form of *Lychnis chalconica*, the flowers of brilliant color, and excellent keepers when cut; varieties of *Clematis integrifolia*, the graceful sprays of which would be exceedingly useful in arrangements, and give the touch of blue or purple so often desirable, and the flowers last well; delphiniums in splendid variety. Among plants specially brilliant or useful as bedders we noted *Gaillardia aristata Templeiana*, which is a dwarf grower, needing no staking, and the flowers of which are equal, if not superior, to the taller growing *grandiflora* type; *Coreopsis Drummondii*, a dwarf growing orange yellow with purple eye; a double rich crimson *dianthus* that came from the World's Fair exhibit, but the name of which Mr. Egan does not know. A bed of *Browallia elata* promised to be an attractive feature later. In a bed of cannas the new variety *Flamingo* showed a wonderfully brilliant color, the petals measuring 1½ inches across. Among flowering shrubs *Philadelphus Gordonianus* was the queen at the time. This variety is far superior to any other grown on the grounds. *Prunus Pissardii* does exceedingly well with Mr. Egan, and there are a half dozen or more excellent specimens. In white variegated trees his

best is *Fraxinus excelsior foliis argentea*. The variegation holds very uniform, and the growth is good. These are but a few of the thousands worthy of notice. To cover the whole collection would take several issues of the *FLORIST*.

The west side parks are to have a monopoly of set pieces in bedding this summer. Superintendent Kanst of the south parks will this year confine himself more to flowering plants, and there will be no such set pieces as the globe, sun dial, gates ajar, etc.

At the meeting of the Florist Club last Thursday evening the essay on "The florist of the future" by Mrs. Emily T. Royle was received with much commendation. The essay appears elsewhere in this issue. In the discussion that followed Mr. Neiglick said that while he had grown dahlias largely in Europe he had never met with any success here. Mr. Wilson found that they did well in a stiff clay soil during a wet season, but under ordinary circumstances frost had arrived by the time the plants had begun to bloom freely. All agreed with the essayist as to the necessity for a broader education of the florist. Mr. Schenck said that the retailers should be more careful to employ men who knew something about the plants and flowers they sold. Often the customer was better informed than the clerk and as a result the former felt contempt for the latter, which certainly did not tend to elevate the profession. In view of the remarkable advance during the last decade the predictions of the essayist seemed likely to be verified. But a few years ago a thousand long-stemmed carnations could not have been purchased at one time in this market. The majority of the growers persistently refused to grow long-stemmed blooms, holding that the retailer would not pay an adequate price for them. To-day the grower can sell really fine flowers at from \$2.50 to \$4 a hundred more readily than he can the old style stock at 50 cents a hundred. Even six or seven years ago the grower would have laughed had you predicted this, but the change has come just the same. How can we doubt that even greater advances will be made in the next decade?

President Kidwell was again absent and sent a note asking the club to relieve him from the office as matters had so shaped themselves that he could not give it the attention it merited. His request was complied with and Mr. G. L. Grant was elected for the remainder of the term.

During July and August there will be but one meeting a month, on the fourth Thursday of the month. After that the regular two meetings a month will be resumed.

At the bowling session the banner score was 195, made by J. S. Wilson, but Ed. Winterson still leads on average. Ed. will soon be wearing the club's medal. Next week the bowling meet will be on Wednesday evening, as Thursday falls on July 4.

Arrangements are being made for a special car from Chicago to the Pittsburg convention.

Mr. J. C. Vaughan is still in California. Mr. W. J. Smyth and wife will soon start on a trip to the Pacific Coast.

The Lake Front Park ordinance passed the city council last Thursday evening and work will now go ahead.

The flower market has taken a very sudden change. This week growers and dealers alike wear a satisfied smile, their only lament being that there isn't enough stuff to go around. While florists in less favored cities are going around with an air of summer gloom the Chicago wholesaler

turns would-be customers away half satisfied, and charges Easter prices for his stock. The present condition seems a surprise to all. It is generally conceded that commencement business is better than it ever was before, while the fluctuating weather has caused great shortage in stock. The extreme heat early in the season caused many to throw out their stuff extra early, both carnations and roses, and the subsequent cold spell checked a good deal of newly planted stock, as well as producing mildew on the old plants. The demand has been greatly increased by the custom, prevalent in all the schools, of adopting some class flower. A large number of classes throughout the city selected the Meteor rose—hence a most extraordinary demand for this flower. Prices ranged from \$4 to \$6, and even \$8, and there were not nearly enough to meet the demand. Other roses were 3 to 5. Beauties were extremely short in supply, Bassett & Washburn being practically the only firm supplying any quantity. The demand was good at \$25. Outdoor roses were not in the market; so few have been in this year that they do not count at all.

Nor were roses the only flower in demand. Carnations were sold at 1 to 2, the latter figure ruling on all good flowers, whites, Tidal Wave and Daybreak. On Friday morning all this stock was cleaned out before noon. This is a tremendous change from the carnation glut prevailing for the past two or three weeks, but much of the stock has been thrown out, and this, combined with the extra demand, has had its effect. The outdoor stuff goes, like everything else. Sweet peas, both indoor and out, are worth 25 to 50 cents, *coreopsis* 35, and ox-eye daisies 30 cents. *Spiræa* of various sorts sells for 25 cents a bunch.

Last week everyone was busy with the shipping trade for out of town commencements; city trade was dull. This was all over when the city rush commenced about Tuesday, but it is doubtful whether anyone anticipated quite such a demand. Wednesday and Thursday the commission men were rushing about among the growers, begging them to send in anything they could. As an example of the demand, we heard of a commission man who spied a lot of feverfew in full bloom, left over from the bedding season. He entreated the florist to cut this and send it in; the grower did this, with some misgivings, and realized more than he would have done from the plants. Of course this rush will be over by the end of the week, but it is good while it lasts, and it will be well to bear it in mind next year, and go slow on throwing out roses and carnations before the end of June.

Mr. John Thorpe goes to Pittsburg next week to give expert testimony in a case regarding damage done to trees by a factory. Miss Hattie Thorpe went to New York June 29 for a month's visit. Mrs. Thomas Martin (nee Miss Margaret Thorpe) with her three children is now visiting her parents in this city.

Cincinnati.

There is an enormous supply of indoor roses coming in, far greater than has been the case in previous years at this season. This may be caused by the growers holding their old plants in the benches till a later date than usual before throwing them out and replanting, but it is ascribed by some to the fact there is an increasing tendency to grow roses specially for summer trade. If the latter is the case it is not likely that anybody will realize much on summer roses this year. The demand

for such stock has undoubtedly increased greatly in recent years, and will probably increase still further, but still there is a limit to the possibilities of this summer trade, and if all go into it at once simply because they see their neighbors doing it there will be nothing in it for anybody.

The quality of stock averages very poor as a rule, and the prices realized are very low. Outdoor roses are a thing of the past, so they do not interfere in any way.

Among the retailers here there is but little complaining; with one voice they exclaim "No, we are not rushing; this is a slow time of the year anyhow, but with school graduates, a few receptions and an occasional wedding we keep things moving steadily, and are satisfied." There has been a few out of town weddings, and these have given the wholesalers a turn.

The weather for the last week has been uncomfortably warm, the thermometer registering over 90 degrees every day. We have had a good rain, and outdoor stuff is improving a little.

Hollyhocks are in the market, and are meeting with quite a sale, as they are very useful in filling up, and make a good background; the double white are the most in demand. Sweet peas are also in quantity, and seem to be the popular flower, judging by the number of these worn. Carnations are still very abundant, but of poor quality. P.

Worcester, Mass.

Quite an improvement was noticeable last week in the general trade, and though it made no impression on the raft of flowers at hand, it was a good week, and made a bright little oasis in this Sahara of dullness. Outside hybrids are still holding well, and the demand has slightly increased; inside roses are not very plentiful, and only fair in quality. Scott, Day-break, Buttercup, Cartledge and Silver Spray are the best carnations coming in, Scott being especially fine for this season. Some splendid candytuft is brought in, and is very desirable for funeral work. Field grown candidums and sweet peas are also in bloom.

H. F. A. Lange will experiment largely in growing carnations in the houses this summer, a few benches grown in this way last year having proved very successful. McGowan, Scott, Silver Spray, Stuart, Storm King, Uncle John, Meteor, Albertini and Bridesmaid are the varieties to be tried; Buttercup and Keller will also be grown in this way as usual.

Thursday, June 20, was the date of the annual rose and pæonia exhibition, and a very successful show resulted. The number of competitors was large, and the quality of the blooms shown very fair. Edward Hall, F. A. Blake, Mrs. F. H. Merrifield, D. E. Wilson, H. A. Jones and Mrs. Thomas Ward were the largest exhibitors, and secured the majority of the premiums; a few exhibitors were a little careless in naming the varieties. The baskets of roses were made up very tastily, and were quite a feature. It was just a little late for some varieties of pæonies, but enough were held to make a splendid exhibit. O. B. Hadwen had a fine lot, and took first premium, and the other prizes were awarded in the order named to A. A. Hixon, F. A. Blake and Mrs. Thomas Ward. Gratuities were awarded for native flowers, sweet peas and cut flowers. The attendance was large.

We are experiencing a prolonged drouth that is playing the very mischief with field grown stuff that cannot be watered, and though we have showers all around us, we don't get enough to lay the dust;

plants that were set out very early are all doing fairly well, but those of recent planting have not moved. A. H. L.

St. Louis.

The week past has been very dull in the cut flower line except in funeral work; that is the only thing that keeps the florist alive just now. The supply has been plentiful, lots of sweet peas and roses. Prices on roses run from 2 to 4, sweet peas 25 cents per 100, smilax scarce. Kuehn received some very fine smilax last week that brought as high as 25 cents per string. The strings were six feet long and the finest seen in the market for a long time.

Brown & Canfield are sending in some very fine Meteors, good color and fine foliage.

Tesson is sending in good Beauties for this time of the year. Beauties always were Bob's hobby. He has been sick for a week, but is up and around again.

The picnic committee met at Kuehn's Wednesday and set the date for the picnic at July 24. The committee will leave Monday on the 1:30 train to find a location. The subscription paper for our picnic fund went its rounds and we got \$100. In addition the Reissen Floral Co. donated a gold watch to the bowling club, to be given to the member making the highest average at the picnic.

The next meeting of the Florist Club will be held Thursday, July 11, 8 p. m., at Empire Building, third floor, 919 Olive street. The attendance at the last few meetings was very small, and President Waldbart hopes to see a large attendance at this meeting, as arrangements will be made to attend the S. A. F. convention at Pittsburg. Max Herzog of 7000 Scanlan avenue will become a member at this meeting. Mr. Herzog is building a short-span-to-south rose house 18½x104 and a propagating house 6½x60.

At the bowling club's roll last Wednesday night the Chinese won this time, but by only seven pins, the score being Chinese 2,387, Japs 2,380. The largest scores made were Harry Young 236 and Charlie Kuehn 214, in the same game, both belong to the Japs.

THE SCORE.

The same teams bowl again next Wednesday night, when the team will be made up for our picnic. All teams in the east want to keep their eyes on our Japs. J. J. B.

St. Paul.

Sales are fairly good despite the exodus to the lakes and the immense quantity of outdoor stock now in bloom. Flowers are plentiful but of fair quality only. Some very fine Beauties and Albanys are being cut by one of our growers, from young stock planted in May. Outside sweet peas are now in and meet with ready sale. Carnations are good despite the hot weather. L. L. May & Co. have

two houses which they have kept trimmed up and free from weeds, and from which they are now cutting as fine blooms as at any time during the season. This would indicate that carnations can be successfully grown under glass during the summer, and as they meet with a ready sale at 25 to 35 cents per dozen, they are profitable as a summer flower.

The best roses are retailing at \$1 per dozen while a good many second and third class blooms go at 50 and 75 cents. One of the stores displayed a sign on Saturday last offering roses at 25 cents per dozen. As they would have gone to the dump Monday morning, there was money in it for the seller.

Chris Hansen is erecting a new dwelling house and also making needed improvements to his greenhouses.

Callers during the week were J. Austin Shaw, of Brooklyn, A. J. Perkins, of Jackson & Perkins, Newark, N. Y.; Mr. Burt, of S. L. Allen & Co., Philadelphia; and Frank Berry of Stillwater. All report trade fairly active.

The many friends of J. C. Northrup, of Northrup, Braslan & Goodwin Co. will regret to learn of his serious illness at Kalispel, Montana. FELIX.

Rochester, N. Y.

Trade is just barely kept alive by a very moderate demand in funeral pieces and loose flower sales over the counter; the annual summer dullness has set in, and all may take a well earned rest, excepting the growers, who have to hustle all summer, not only in taking care of their outdoor stock, but their houses have to be put in order after the spring sales, and the replanting of roses in such hot weather under glass is not a very pleasant job. Many are beginning to plant chrysanthemums, and there is all probability that this popular flower will be very plentiful next fall.

Your correspondent has been away from home for over a week, taking a trip to Cleveland, and found trade in stores and the markets there rather brisk yet for the advanced season, much more so than with us. Everything planted out was suffering for want of rain, which came at last two days before we left that finicity. On going home we expected to find our own stock benefited by the same rains, but were rather disappointed on arrival to hear that very little rain had fallen here, so we are still looking forward for a change in the weather.

A certificate of the incorporation of the E. R. Fry Florist Company was filed at Albany yesterday (June 24). It has a capital of \$20,000, and the incorporators are Isabella B. Fry, Frederick Wells and Anna I. Rockfellow. It is surmised that the corporation is designed to carry on the florist business formerly conducted by Mr. E. R. Fry of this city, who failed recently. J. B. K.

Louisville, Ky.

The commencement season was a harvest for the florists; all did well. S. J. Thompson had for one commencement 27 designs, not one under five dollars. Plenty of flowers in market, but weddings and funerals are scarce. Store trade is generally dull, although we had a fairly good plant trade this season. Seeds sold well. The Hatcher Floral Company opened an auction room on Fourth avenue, and are doing an immense business. All outdoor plants are generally good on account of having good rains when they most need it. H. F. S.

THE DICTIONARY OF ORCHID HYBRIDS, by E. Bohnhof, recently received by us, is a very neat and wellbound volume of 138 pages, containing a list of all natural and artificial hybrids known up to January 1, 1895, with the name of their introducer and date of their appearance, also tables giving the seedlings obtained from each species, their synonyms, etc. The explanatory matter is given in three languages—French, English and German. This is the first volume of a work it is intended to continue in a new edition every two years. It possesses very great value for everyone interested in orchids. There is no other work, so far as we know, which gives the parentage of the numerous orchid hybrids, and the tables giving seedlings obtained from each species is most suggestive. It is to be hoped that the author will continue its publication, as intended (published by Octave Doin, 8 Place de l'Odeon, Paris, France; price, 4 francs).

THE American Association of Nurserymen, which meets in Chicago next year, has instructed the executive committee to arrange for a three days' trip on the lake, it being the intention to hold the regular sessions aboard the boat, making it serve as hotel and meeting hall as well as excursion boat. This was suggested by Mr. Z. K. Jewitt and met with the hearty approval of the members. The experiment will be of interest to other societies. Certainly the members will be able to keep cool. But if there should happen to be a "sea on" some of the delegates might be uncomfortable even though cool. However, the weather is generally favorable in June.

WE HAVE RECEIVED a report of the German exhibits in the horticultural department at the World's Fair, by Dr. L. Wittmack of *Gartenflora*. The report is illustrated with a number of half-tones, and contains 26 pages 12½x9 inches. Dr. Wittmack made a close study of the exposition while here.

General Notes.

At Floral Park things look bright and lovely. Some sixty men are still at work planting out bulbs, principally gladioli, for which the demand is greatly increasing.

A field of German irises in bloom is a great sight, worth going miles to see. Double pyrethrums also look grand.

Senator Childs has now returned from Albany, and on his return from a fishing excursion (like all great men) he will remain permanently at home for the summer. And where could a nicer place be found?

Does it pay to spend \$30,000 a year to get new customers? Why not hold on to the old ones in some way or other?

Wm. Henry contends that he does not have to advertise every year, that his customers stay with him, and get their neighbors to club with them. He has the proof of the pudding.

It costs 22 cents for bait to get a fish to nibble at a catalogue; and that does not mean a bite either—so says Mr. Burpee. Add the cost of the catalogues to that, and there is not much profit left on mail orders—so say others. Yet Mr. B. gets there just the same.

But it is keeping lots of other folks out of the mail trade, sure. Initiation fee comes high. They will make you ride the goat and cut you all to pieces should you think of joining the craft.

Mr. B. says he got as many returns this year from quarter page ads. as from full page ads. last year. Certainly he had a regular walk-over. Billy was not in the field with his posters. Why not get up an adv. that will be paid for itself, anyhow? It has been done, and is done in other lines.

"They didn't think I'd do it, but I did." That is the favorite song of a little seed-lady of Minneapolis. "Watch my smoke." That is Sammy Haines's.

Has anyone bloomed that green "mum" yet?

Some seedsmen have ascertained that only two orders will result from 100 postal card inquiries from a catalogue.

Some people think it is only necessary to get out a large edition of a nice catalogue, and the money will rush into their cash drawer. Don't you believe it. We know an edition of 300,000, finely gotten up, too, with handsome cover; it brought in just \$15,000 in orders. Almost unbelievable, true; but we take the loser's word for it. A. B.

PEA growers report pea crop short.

The sweet corn and vine seed growers report good prospects.

The drouth in Ohio has ruined many crops of onions. Onion sets are a thin stand on the ground.

IN CALIFORNIA crops are looking fairly well. The onions are now in full bloom and consequently just at their most critical period.

LOS ANGELES, CAL.—Jas. H. Denham has sold out to Geo. B. Watson, of San Diego, who will continue the business, at the same time retaining his business in San Diego.

AT THE Detroit convention the general feeling expressed was that trade was

good as to volume but that prices had not been as satisfactory as had been hoped early in the season.

MR. A. D. COWAN, a formerly well known seedsman at 114 Chambers street, New York, died on the evening of June 22. The funeral services were held at St. Luke's Hospital Chapel, on Monday, June 24.

OSCAR H. WILL & Co., seedsmen and nurserymen, of Bismarck, N. Dak., have established a branch house at Fayetteville, N. Y., where they have a large and convenient building formerly occupied by a glove manufacturing concern. Mr. John M. Johnson will remain in charge of the western house and Mr. Will have charge of the eastern branch and will also make contracts and do the buying for both houses.

The Color Question.

THE AMERICAN FLORIST is now having carefully and accurately reproduced by lithography a chart of colors prepared for us by Mr. F. Schuyler Mathews and containing 30 of the most important shades. This chart may be depended upon as absolutely accurate and will undoubtedly be accepted as the standard in color description of flowers. We shall use this chart as a supplement to our convention number of 1895, to be issued August 17. Every subscriber at that time will receive a copy free with his paper. Extra copies of the chart will be supplied at 25 cents each.

The publication of this chart was a work of great expense but the urgent necessity for such a universal standard was such that we felt impelled to incur the expense and give the chart a wide circulation at once by making a present of a copy to each of our readers.

We have also in preparation several other attractive special features for our Convention Number.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—By Scotch gardener; best of reference, married, seven years in this country. Address W S, care American Florist.

F. A. BALLER, Bloomington, Ill.

Denver, Colo.

Retail trade in and about Denver has been slow of late, yet the florists from the mountain towns are sending in good orders, thus keeping the shipping trade in good condition.

The season has been late this year and outdoor flowers have been scarce up to the present time. Growers are now busied with their planting and many rose and "mum" benches are well under way with a fine young stock of plants.

Denver's park commission have put in several thousand trees and shrubs this year and have obtained many fine effects.

The City Park is coming to the front at a rapid pace and in a few years we hope to see it ranked with some of the best parks of the country.

There need be no complaint coming from us this year for the lack of rain, for we indeed have had our share, and looking toward the west I can see that the mountains are capped with a white covering of snow which assures plenty of water for irrigating purposes for the next two months at any rate.

Florists are all looking forward to an increased trade in the fall, yet we all know that we must be content with little work until September. P. C. G.

Syracuse, N. Y.

All the florists are well pleased over their spring sales, which have been far in excess of previous years.

People here as elsewhere have delayed planting out and there are places yet to be furnished. The long continued drouth has told on field grown stuff, but with Friday's glorious rain it has made a great improvement in the plants.

There are rumors that some of the florists will build more greenhouses this summer and there are more new men to join the ranks. Y.

Newport, R. I.

The sixth annual exhibition of the Newport Horticultural Society will be held at Music Hall, Newport, R. I., on October 30, 31 and November 1. The schedule of premiums is now ready and may be had upon application to the chairman of the committee, Mr. Alexander MacLellan, Ruggles avenue.

Mr. A. S. Meikle has been elected financial secretary of the society in place of Mr. Chas. D. Stark, who has resigned.

CONVENTION NUMBER

— OF —

The
American
A
WEEKLY
JOURNAL
Florist
FOR THE TRADE

Will be issued **AUGUST 17, 1895.**

In addition to other specially attractive features it will contain an accurate *CHART OF COLORS*, comprising 30 of the most important shades, prepared for the FLORIST by F. Schuyler Mathews. The color chart will be a permanent part of the paper as readers will be advised of the necessity of keeping it in the paper away from the light except when in use.

The expense of this chart has been very heavy, but it will lend to the issue, of which it will be a part, a very greatly increased value as an advertising medium, as it will be frequently referred to. Still there will be

NO INCREASE IN ADV. RATES,

which will be as heretofore :

FULL PAGE.....	\$42.00.
HALF PAGE.....	21.00.
QUARTER PAGE.....	10.50.
PER INCH.....	1.40.

Subject to time discount to those having term contracts with us.

Send advs. **early** so we may have abundant time to get them up in our best style.

The Convention Number will reach every Trade Buyer in the United States and Canada, and extra copies will be distributed at the Convention.

P. O. Drawer 164.

 CHICAGO.

VAUGHAN'S COLUMBIAN CINERARIAS.

PROBABLY there has never before been such a magnificent collection of Cinerarias shown as at the recent World's Fair, not only for beauty and brilliancy of colors, but for size and perfect form. The collection was of course the result of the gathering together of the finest strains from all the celebrated establishments of Europe. The success of our strain of International Pansies has led us to continue the same plan with Cinerarias, and we have secured seeds from the foremost seed growers of the world. Our Columbian Cinerarias equal those seen at the World's Fair.

COLUMBIAN CINERARIAS, mixed, per trade packet, about 1000 seeds, 50c.
CINERARIA HYBRIDA GRANDIFLORA, large flowering sorts, fine mixed, trade packet, 25c.

CALCEOLARIA HYBRIDA.

Calceolarias when in bloom at the World's Fair attracted much attention by the great size of the individual flowers and the richness of the colors and markings, many of these being new and distinct. It has been our good fortune to secure seeds of a most magnificent strain. Trade packet, 50c.

GLOXINIA HYBRIDA.

Finest mixed, 50c.
Defiance, new, flower large, bright scarlet 35c.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Buffalo.

There has been according to the papers any amount of weddings this past two weeks, all doing a little good to the trade and well distributed, but with two or three exceptions, they have mostly been \$15 affairs as far as the florist was interested. Good roses are none too plentiful. The extreme dry weather has been very unfavorable to outside hybrids, and Beauties are still in good demand. Carnations are very plentiful and for the season of first-rate quality. On asking the veteran Palmer if he was picking many now he replied in his characteristic style, "Yes, a ton a day." It's a new way of measuring the divine flower, and I think a cord would be easier realized.

This week is a week of conventions and that always helps a good deal, in spite of the dominions who frowned severely a year or two ago on such a profusion of flowers at the exercises. The plant men are about through with their flower beds, veranda boxes and vases, and the bulk of the business must have been larger than last year. Good 4-inch geraniums ran out early in the month, and those who had a good supply left on the 10th of this month had it all to themselves.

Our D. B. Long has just returned from an extended tour among his shippers, and has come back full of shoot. We suspect he has been telling the folks he was a crack at it, and now wants to be as good as his word.

Last Friday this locality was blessed with a very heavy shower (nothing else) but for that many thanks. It was a blessing to the carnation growers in the surrounding towns.

Mr. James Kidd of the Pacific slope gave Buffalo a short visit last week, but unfortunately we failed to connect. W. S.

Feed your plants, fertilize your lawns by using liquid manure. The cheapest, simplest and most scientific spraying pump in use. Sent prepaid for \$2.50—spraying valve attachment 50c. Pump complete \$3.00. Send for circular. Address

HOSE CONNECTION CO., Kingston, Rhode Island. Only 29 Kingstone in the U.S. Get the state straight. "They are a good thing." "A very valuable labor saving device."—W. N. RUDD, Sec'y Mt. Greenwood Cemetery Asso., Ill. "The most valuable labor saving invention I ever used."—C. E. WELD, Roslindale, Mass. Mention American Florist.

A Windmill

Is unreliable because it depends upon the element for its power; hydraulic rams also depend upon favorable conditions and waste as much water as they secure. Steam pumps require skill and hand pumps demand labor and time. The

DE LAMATER-RIDER CR DE LAMATER-ERICSSON Hot-Air Pumping Engines

are especially designed for pumping water, and from shallow streams or any kind of well. They are simple, safe and reliable, require no steam and have no valves. They require very little heat to operate them, and can be arranged for any kind of fuel.

Send for illustrated catalogue to THE DE LAMATER IRON WORKS, 467 West Broadway, NEW YORK, N. Y.

News Notes.

MUSCATINE, IA.—The business of the late Conrad Kranz will be continued by his widow and sons.

JOLIET, ILL.—The Illinois State Penitentiary is getting material ready for the erection of three new greenhouses 20x60.

PEORIA, ILL.—The park bill has passed the legislature and the park commissioners can now proceed with the program for park improvement.

SAVANNAH, GA.—Geo. Wagner added a house 160x15 to his place last fall. A. C. Oelschig is building a rose house 100x35, to be heated with hot water.

TRENTON, N. J.—Geo. Wainwright Jr. of the well known florist firm of this city, had the misfortune to break his leg on the 17th, being thrown out by a runaway horse.

DALLAS, TEX.—The Texas Seed and Floral Co. has been incorporated with a capital stock of \$10 000. The incorporators are Seth Miller, R. Nicholson and David Hardie.

PAWTUCKET, R. I.—The fiftieth June exhibition of the Rhode Island Horticultural Society, consisting of strawberries, roses and other flowers, was held on Thursday, June 20.

OMAHA, NEB.—Trade has been very good this spring although prices on both plants and cut flowers were slashed. This was probably due as much to the hard times cry as anything. The florists are very active in replacing glass broken by hail and some of them are building new houses. Mr. S. Falconer is starting in business for himself. He has been with Mr. A. Donaghue for the past eight years. Mr. Ehrenfurt has taken his place again. He has rented it to others during the past five years.

SANTA CRUZ, CAL.—The floral carnival June 12 attracted crowds of visitors. The parade of floral floats and flower bedecked vehicles was very elaborate. After the procession entered the carnival arena the queen, with her maids of honor, descended from her float and reviewed the parade, which passed three times around the vast amphitheater. On the third time around the judges awarded the prizes. Then came the battle of flowers. It was a bloodless battle. Every spectator threw flowers and bouquets at those on the floats and in the carriages. The floral ammunition was abundant. The battle raged pleasantly until Queen Anita gave the order for it to cease.

PROTECTION FOR HOSE AT LAST.

For sale by all Seedsmen. No florist can do without it. Cheap, practicable and indestructible. 36 cts. each, or \$3.50 per dozen. MANUFACTURED BY CHAS. SCHUCK, 2457 North 8th St., PHILA., PA.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafter, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

THEY LIKE THE "SPENCE."

Office of T. L. LOWDEN & SONS, FLORISTS AND MARKET GARDENERS, ETC., ETC.,
255 Pomeroy Avenue, Pittsfield, Mass., May 26, 1895.

"We are heating 7 houses—nearly 8,000 feet of glass—with just one "Spence" hot water Heater. In the very coldest weather last winter we would fire up at 9 in the evening, close pipe damper and leave only 1/4 draft damper open. It needed no more care till 10 a. m. next day, if cloudy; if sunny it was unnecessary to touch the fire till 3 p. m., and we never half worked the heater. I believe I can heat 8,000 more feet of glass with your heater, and not strain it. In one house I have 1 1/2-inch pipe, another 1 1/2 pipe, 2 houses, 2 inch pipe; one house, both 2 and 3 inch; still another, 4 and 3-inch cast pipe; and the last, 2 and 3-inch boiler tubing—all kinds and sizes, you see. When we first started the fire we had no repairs or alterations to make other than to tighten up loose joints. The heater has been running two seasons and is all right. We have another range of 8,000 feet glass which is heated by two steamers, and our experience is we can beat the steamers every time and in every way."

Red Spider Can't Live

WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray of such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD,

Dear Sir:—The nozzles to hand sometime ago, we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.

Yours truly, E. G. HILL & CO.

Price, \$1.00 each, prepaid. TRY IT, AND RETURN IT at once, if not satisfactory, and your money will be sent back.

M. M. JONES, Gen'l Agent,
6122 Oglesby Ave., CHICAGO.

Society of American Florists.

President Lonsdale has appointed F. R. Pierson of Tarrytown, N. Y., to succeed I. Forsterman, deceased, and E. A. Wood, Denver, Colo., to succeed John N. May, resigned, on the Nomenclature Committee for 1895.

GERMANTOWN, PA.—Mr. David Cliffe sailed for England on the Aurania July 4.

UNIONTOWN, PA.—H. Hughes has sold his business here to W. R. McElroy, who will continue it on the same lines as heretofore.

TRINIDAD, COLO.—S. C. Thorp & Son are building one new house 75x20, to be heated with steam. They report trade as better than last year, with a growing demand for plants in holiday trade and call for a better class of bedding plants than formerly.

Herbaceous Plant Notes.

Lychnis flos-cuculi plenissima semperflorens is a very long name, but one of the greatest introductions of late years, and will undoubtedly become a very popular plant when better known. It beginning to bloom in June and continues until frost cuts it down, and by taking up the plants in the fall we may have them in flower through the whole winter in the greenhouse. The color is a beautiful soft rose-color, and the flowers are perfect in form and round, the ray florets very narrow, each separate flower showing distinctly to advantage; very floriferous when once established. The plant itself is low, but the numerous flower stems springing from every growth attain a height of 18 to 24 inches. Very desirable in every respect.

Senectis or *Erigeron speciosus* is covered now with a multitude of pretty aster-like flowers, light violet in color, on erect many flowered stems; a fine floriferous border plant, blooming in summer and autumn, and growing 1½ feet high.

Galega officinalis is a pretty old plant with pea-shaped flowers, densely set on rather long racemes, springing from the axils of the leaves, and freely produced. The color is a light blue or lavender shade, and the branches are useful for cutting. The leaves are pinnate and the leaflets broadly lanceolate, 6 to 8 paired. A good plant for the border, blooming throughout the earlier part of the summer, and growing 2½ feet high. *Galega officinalis alba* is a very desirable white form of the above, and identical in every respect, but of a more compact and shorter habit.

Yucca filamentosa on banks and the rockery is blooming freely on bold erect, many branched pyramidal flower stems, set with numerous large waxy-white drooping flowers. The panicles attain a height of 4 to 6 feet, and the plant itself with its stiff sharp-pointed leaves has a rustic stately appearance, well adapted for planting on banks or among rocks. Blooms in June and July.

Spiræa Ulmaria, the meadow sweet, is a much neglected but beautiful border plant, blooming in June and July in dense flat feathery cymes on stout many-branched erect stems. The fluffy surface of the white flower heads is much admired by everybody, and it is also a most desirable cut flower; height 2½ to 3 feet. *Spiræa Ulmaria* fl. pl., a very pretty double form of the above, is a little dwarfier in habit and the flower heads are also somewhat smaller in size, otherwise the plant resembles the foregoing.

Anthemis tinctoria is a most profitable plant for the florist during the entire summer and fall, but when neglected and the old flower heads are left on the plants to go to seed, bloom will not be produced any longer than September, yet by constantly cutting the older flowers every

day we manage to have it in full blaze from the middle of June to November. The daisy-like golden yellow flowers 2½ inches across, with deeper yellow disk, are large and handsome, perfect in shape, and will sell at anytime in a store. They last in good condition for days after cutting, and have long stout stems. The plant itself forms a spready but compact bush with twice pinnatifid leaves, which have a whitish down over the reverse side, and they are so very floriferous that a constant supply may be had of one or two dozen plants if they are well taken care of; eighteen inches in as high as they will grow and it is one of our finest perennials for the mixed border. *Anthemis tinctoria* Kelwayii, of newer introduction, resembles the above in every detail, and I can not see any difference between the two excepting perhaps that the flowers are of a deeper shade of yellow.

Leontopodium alpinum, the Edelweiss, is an alpine plant from the Swiss alps, largely gathered there by the peasants and offered for sale as souvenirs to travelers. The plant and inflorescence both are covered with a silvery white down, and the flower stems may be dried or pressed, and will keep the silvery color for years just like everlasting. This somewhat rare plant is much esteemed by travelers in Europe, and though not showy it is a pretty thing when in flower, the stems growing 6 to 8 inches high. The flowers proper are surrounded by bracts, standing out more or less regular in star shape, and this is what attracts attention to the plant. They remain in good shape for months on the plant.

Rudbeckia maxima is the largest of the rudbeckias and the solitary flower heads are produced freely on long stiff stems from now on to September. It is a handsome stately plant, but attains considerable height, 4 to 6 feet or more if planted in the shrubbery, but the large golden yellow ray-flowers produce a grand effect at the back of a wide border or in the shrubbery. The florets or rays around the elongated disk are drooping down a trifle, giving the disk a more columnar appearance than it really possesses.

Monarda didyma with its bright scarlet whorls of flowers, which are supported all around the head by pale green bracts, red at the base, will make a grand show from June to September if planted in a moist situation; in a very dry and sunny place the flowers do not last so long and growth is checked, so that by the middle of August no more flower stems will start from the roots. It is an excellent plant for low places or the shrubbery and water edges, where it will grow to a height of 2½ to 3 feet.

Agrostemma coronaria flowers from June to August profusely, forming an erect bush 1½ to 2 feet high with elongated broad leather-like foliage, covered with silvery woolly down. The flowers

are produced on one-flowered peduncles which spring from the main stem in succession; they are 5 petaled, an inch or more across, of different colors, the regular type being white with a large pale rose center, but there is a variety of colors from pale rose to a deep dark crimson. A most desirable plant for the mixed border or for moist places, where it grows luxuriantly.

Lychnis fulgens Sieboldi blooms from June to the end of summer, and is an exceedingly handsome border plant; the flowers are large, borne on a contracted cyme of a soft shade of salmon rose or pure white, and the plant does not grow higher than 1 foot. *Lychnis vespertina alba plena*, with large very double fragrant pure white flowers in very loose panicles, is a fine plant for the border, blooming all summer; the individual blossoms resemble a very double carnation, but can not be gathered with long stems, the weight of the flowers being too great for the weak stem below the calyx, but still I have seen these flowers stemmed and used by many in designs of all kinds, when carnations were scarce; height 2 to 2½ feet.

Coronilla varia blooms from June to November; the flowers are produced from the axils of the leaves in many-flowered umbels of a pale rosy lilac combined with white. The plant has a straggling or trailing habit, but nevertheless it is a good thing for the rockery or the border, the leaves are pinnate, having about a dozen oblong elliptic leaflets, height 12 inches.

Silene orientalis with dark pink or rose flowers in densely crowded corymbs on long branchy stems 1 to 1½ feet high, blooms in June and July, and may be used for bouquets. The leaves are oblong cordate, and have a glaucous surface. A good plant for the border and free blooming.

Scabiosa caucasica is a pale blue hardy species of the common *scabiosa*. The flower heads and also the habit of the whole plant is the same as in the latter. It blooms from June to September; 1½ feet is as high as it will grow, and it may be used for cutting. *Scabiosa ochroleuca* has the same habit, and is just as floriferous as the above, but has creamy white flower heads. Both are very pretty plants for the border.

Jasione perenne is an elegant very free-blooming species, forming an erect bushy plant 12 to 15 inches high, with oblong rather hairy leaves. It blooms from June to September, and ranks with our best perennials. The flower heads are large and deep. 2 inches or more across, of a pleasing shade of light lavender blue, and have the lasting quality after being cut. Sandy or light soil is best for them, and they grow and flower luxuriantly even in very dry weather.

Gaillardia aristata and *G. aristata grandiflora* bloom from now until very late in the autumn, bringing forth their large golden yellow flower heads in succession. The centre of the flower is flamed and washed with red more or less, some of them are nearly wholly red except a narrow edge on the fringed part of the petals, others have a clearly defined broad band of yellow extending to the middle of the petals. The type bears flowers 2 inches across, while the latter named is much larger in size. Both are very desirable border plants and extremely useful for cutting. Their gaily colored flower heads, the floriferous character of the plant and their adaptability to every soil and situation should earn them a place in every collection. It

makes no difference where they are planted, they always show off to advantage, height 1½ feet.

Lathyrus latifolius, our broad leaved everlasting pea, is now beginning to make a fine show along a wire fence. We grow the white variety principally, intermixed with a rose-colored one here and there. They are most desirable for covering trellises or wire fences, and being also much admired in a cut state the florist should have a good long row of them in the garden for this purpose, as they bloom freely from June to late fall and are not affected by the dry weather like the sweet peas. Also they will come up stronger every succeeding year, growing taller and thicker each season.

Iris anglica, the English iris, is flowering now and comes in very handy for cut flowers. A variety of colors and shades, mostly running in lilac, blue, purple, yellow and pure white are among them, and they are very fine flowers rivaling the large flowering orchids in delicacy of shades and combinations of colors. It is generally believed that they are not hardy as far north as this, but they are perfectly safe if planted in well drained land where no surface water will stand over the bulbs, especially in fall, winter and spring months; they do not want to be overmoist. The bulbs should be left in the ground all the year around and not be disturbed for years, as they will improve each year both in the size of flowers and size of clumps. Large masses of this beautiful iris in a border will make the grandest show in June and July, and it is strange that we never see them in this country. Height of flower stems 1 to 2 feet.

Lilium candidum, our common pure pearly white garden lily, should be grown in quantity by every florist, and also by everybody else. When a large mass of it is planted in a bed or border it produces a grand effect when in bloom in June and July. The strongest bulbs should be used, and large racemes with one to two dozen flowers will be produced, but care should be taken to plant always in well drained land, and if the soil is not shaded enough by the lower leaves of the lilies or by the surrounding plants, a mulching of clippings from the lawn will keep the soil cool. One of the principal reasons so many of us do not succeed in the outdoor culture of lilies is the failure to provide a cool soil for them, and also that we do not think of draining the land for them. The roots will start and take hold of the ground in early fall, and the cold water and over abundance of moisture in fall and winter will destroy these roots again, which should be preserved by all means if we want strong healthy flower stems. Height 3 to 4 feet. *Lilium excelsum* blooms from now to August, and is admirably adapted for the border, planting in clumps of a dozen or more. The color of the flower is a tawny yellow or buff tinged with light brown, of large size with reflexed petals. The stems are 4 to 5 feet high and many flowered. One of our very best lilies, but lately much neglected. *Lilium chalcedonicum* is the nearest approach to a scarlet we have in the lily family; the flowers are large and the petals reflexed so as to form almost a perfect ball. It is one of the easiest to grow in the border. The stems are many flowered, and grow to a height of 2½ to 3 feet. A splendid variety with an exceptionally dazzling, glowing color.

Delphinium hybridum is the most stately and ornamental of the whole list of delphiniums for either the border, the beds or the shrubbery. In color it ranges

from the deepest dark purple through all the various shades of blue to a pure white, and the spikes are of an enormous size under good cultivation and in rich deep soil. If planted either singly or in masses three feet apart each way, the long many parted pyramidal racemes will be all of 2 feet long, and can be cut with stems 4 to 5 feet long if desired. The plant when well established attains a height of 6 feet or over, but if planted on poorer ground and closer together 2 to 3 feet with correspondingly smaller spikes will be as tall as we can induce it to grow, therefore it pays to bestow special care and liberal treatment. Prepare the soil where they are to be planted in the best possible way, digging deep and adding the best of fertilizers, and every fall an additional heavy topdressing, which should be worked in with a fork the following spring. When they come to bloom the following June after such treatment we have no poor spikes to show. These spikes are very useful for cutting, especially those of the soft and light shades of blue, which look so beautiful in large vases either by candle light or in day time. The plants continue to bloom until August, young stock keeps on until September, but does not begin to flower so early in the season. There is no other perennial of such easy growth and stately habit for planting in large masses, which with a small outlay, would make so good a show in the garden, large or small.

Malva moschata alba, the musk scented mallow, is such a profuse bloomer during June, July and August that a few plants of it should be planted in every herbaceous border. The flowers are large, 2 inches or more across, of the purest satiny white, springing from the axils of the short jointed leafy stem as it elongates; the foliage is dark glossy green, the lower leaves kidney shaped, the upper ones deeply lacerated into segments. A fine perennial growing about 2 feet high.

Iris Kämpferi, the Japan iris, is beginning to bloom now, and the coloring in the flowers is truly grand. They range in all shades from pure white to a deep glossy purple; many of them are marbled and veined with darker or lighter blotches or veins, and all have a conspicuous golden yellow stain at the base of the petals, which are very broad and large as also are the flowers. They are most desirable for cutting, and last a long time in water. The leaves are narrow and long, of a pale green, height about 2 feet. Unlike the German iris this section does better when planted in a rather moist situation, where the flowers will be more perfect and of larger size and the plants increase and spread more rapidly. The latter part of June to August is their blooming time.

Althæa rosea, our hollyhocks, are of such endless variety in colors of all shades excepting blue; the plants when in bloom have such a stately appearance and make such a grand display in the shrubbery or at the back of a wide border, and everybody knows them to be so valuable in the garden that it seems hardly in place to mention them here, but as the flowers, especially those of the lighter and more delicate shades, are used extensively by many florists I could not omit this valuable decorative plant. Summer and autumn is their flowering time, old stools coming in earlier in the season than young or newly divided plants.

Adenophora liliiflora odorata is a gem of the first water, and an elegant herbaceous plant with loose pyramidal, branchy flower stems bearing numerous

THE PARKS OF PARIS.

campanula-like, pale soft blue bells, which are very sweet scented and of beautiful shape. If grown in quantity and planted rather thickly, they make a fine show in the border, and it is a pity that this plant is not met with more often, for it has all the qualities of a first-class perennial. It flowers June, July to August, and attains a height of about 18 inches. Requires sandy light soil and does best in full sun.

Dracocephalum Ruyschianum is a very pretty dwarf plant, bearing salvia-like very large deep blue flowers in whorls of 5 or 6 together on oblong spikes growing about 15 inches high, and blooming during June and July. *Dracocephalum grandiflorum* (*D. altaense*) is of still dwarfer habit and a very showy perennial; the flowers are lighter blue than the first mentioned and also borne in whorls on erect spikes. June and July is their flowering time, height 9 inches. A good thing, deserving a place in every collection.

Helianthemum mutabile, rock rose or sun rose, is a very pretty, desirable dwarf and free blooming hardy plant for the rockery or front part of the mixed border; has pale rose flowers, fading to white, resembling single roses in shape, blooms from June to September. A low many-branched procumbent plant with narrow pointed foliage and thin wiry branches; height 6 to 8 inches. We meet this pretty plant very seldom in the United States.

Agrimonia Eupatoria has long slender spikes of golden yellow flowers closely set along the erect straight flower stems, and will last from the end of June to August. The plant itself is low and bushy, and the

spikes grow well above the foliage to a height of 18 to 24 inches. A desirable plant of easy culture.

Erigeron aurantiacus is an excellent border plant with double bright orange colored flowers on a stout erect stem, blooming in June and July, and growing 12 inches high. This fine perennial should have a somewhat moist place to grow in, and if protected from the hottest mid-day sun so much the better. When no such place can be found for it mulching the ground will benefit the plant greatly.

Catananche cœrulea is an old favorite in the herbaceous garden, flowering from June until late in the autumn. The solitary flowerheads are produced very freely on long stems, and the plant is never out of flower in summer or autumn. The color is a soft shade of lavender blue, and the calyx has a shiny silvery appearance. It is also a good cut flower; height 2 feet. The variety *C. bicolor* has white flowers with a blue center, otherwise it resembles the type.

Hardy carnations have been much neglected in gardens for the last 25 years, but are likely to regain their former position in the near future. Old fashioned flowers of every description are the fashion now for planting out, and are gaining in popular favor every year, so the hardy carnations above all other old plants deserve to be brought to the front. There is a great variety of colors to be found in the carnation. Selfs or one colored, Bizarres with markings and stripes or bands of various colors, and Flakes, which are marked only with one

distinct color on a clear or light ground, also the Picotees, which are edged with a darker color on a white or light ground. Nearly all of them are highly scented, and many varieties are as large and well-formed as our best tree or everblooming carnations. As a rule all are hardy with us, and need no winter protection of any kind, except when newly planted late in the fall and if hard frost sets in early before the plants can take a firm hold in the ground. A few clumps here and there in the mixed border greatly assist in brightening up the otherwise soft or dull coloring of most of the hardy July flowers in the garden.

J. B. KELLER.

Rochester, N. Y.

Sprigs From the Spice Bush.

"VARIETY IS THE SPICE OF LIFE."

"Carnation Edna Craig," says Christian Eisele, "is one of the very best pollen varieties." He showed the writer a batch of a thousand seedlings, the product of a cross between that and *Pride of Peshurst*, from which he hopes to get some good ones, especially in the line of a good yellow. An interesting collection of hardy border carnations is also to be seen at Mr. Eisele's, and an effort will be made to popularize this class in the near future. Some interesting experiments are being made with the *Malmaison*, *Reynolds Hole* and other foreign sorts crossed with our winter blooming varieties. Carnation lovers can spend a very interesting hour with Mr. Eisele. His greenhouses are at 12th street and Germantown ave-

nue, Philadelphia. By the way, Mr. Eisele has a very good word to say for The Stuart carnation. He thinks growers have been unaccountably slow in taking hold of it, but predicts a great future for this sort. An interesting collection of herbaceous plants is also to be seen at this place, among those in flower at present were noted especially Iris Kämpferi in many different colors, double hollyhocks, a white variety of Silene armeria (a good thing for cutting), lychnis, double pink, white achillea, cannas, coreopsis, and a grand collection of sweet peas.

Mr. Isaac Kennedy (the right hand man to John Burton of Chestnut Hill) and your scribe paid a visit recently to the Penn Rock Nurseries, Wilmington, Del., a new establishment owned by Samuel N. Trump. The foreman here is Robert Lockerbie, a graduate of the Craig establishment in Phila. Roses and carnations are a chief feature here, although a general stock for bedding and cut flowers is also grown. The greenhouses are of considerable extent and are built in the latest style with all the modern improvements. An ideal packing shed is not the least of these same improvements. The building of two more large houses is contemplated this summer. Mr. Lockerbie had good success with mushrooms last winter and intends to grow more of them next season.

De Vochte & De Wilde are another new firm in Wilmington. They have the old Hannan place and are remodeling it thoroughly. Mr. De Wilde is well known around Philadelphia, having been engaged in the florist business in Chestnut Hill at one time.

A pointer which seems of value to florists came out in the course of casual conversation with Mr. Charles H. Allen of Long Island the other day in regard to growing longiflorums in frames during the winter so as to bring them in flower in July. Mr. Allen planted a lot in November (Japan bulbs) and when in flower they brought \$2 per dozen in the New York market. They flowered earlier than album præcox and formed a useful auxiliary to that fine variety. It would therefore seem a good idea to reserve part of the usual stock of this lily for frame culture.

Lilium Melpomene: What is the origin of this fine lily? I have always understood it was one of the late Mr. Hovey's seedlings; the transactions of the Mass. Hort. Society being my authority for this belief. The record states that Melpomene and another, the name of which I forget, were about the only really desirable acquisitions obtained by Mr. Hovey from a great many seedlings raised. But one of the largest importers of Japan lilies assured me the other day that Melpomene was a native of Japan. Mr. C. H. Allen, to whom I submitted the question, also maintained that this sort was a native of Japan. Can any one throw any light on the subject? G. C. WATSON.

Victoria Regia Rotting.

We have had a great deal of trouble with the recently matured leaves of our Victoria regia rotting all over the surface. They rot in the night time without any apparent cause. We are growing them under glass, leaving all the ventilation possible on them night and day, with water heated to a temperature of 85° to 90° running into the tank continually. If any one can explain the reason of the leaves going off in this manner will they please answer through the FLORIST.

GROWER.

Ventilation of Rose Houses.

A subscriber who signs himself "Temperature" asks the following: "We have a rose house 50x20, 3/4 span, 14x16 glass, ventilated top and bottom full length. But I find it rather difficult to keep the proper temperature even with partial shading. The house is planted annually with 6 or 8 varieties of the leading roses. Would you advise opening the bottom ventilator during the summer months? I find in bright days in winter the temperature will run up to 90° or more with all the heat shut off and outside temperature 15° or 20°."

There are so many large growers of roses in the country—I am only a pigmy among them—that the editor would have done well to refer this rather important question to a larger man. I have, however, studied the question of ventilation for a good many years, and here is what I know about it. A good winter rose house (the 3/4 span with the long span facing south), yet the ideal house with the large majority of growers, but not with all, is the least suited for the production of fine roses from May 1 to October 1. An equal span running north and south would be the best style of house to produce roses in the hot months of the summer. "Temperature" says he plants annually, so he can't be looking for rose buds from June until October, because he should be throwing out the old crop early in June, replenishing the soil and getting in his new crop, and unless the young plants grew phenomenally it would be at least the end of September or early in October before the young plants were allowed to develop their buds. To those who carry over houses for summer cutting ventilation is a more serious matter. I would say flatly there is no use in bottom—usually called side—ventilation. The only two months in the year it could be safely used would be July and August, when settled warm weather is here, and little fear of a draft. All rose growers know that in nine cases out of ten mildew is caused by a draft or a chill, and the very thing to produce it would be to open the side ventilators and at the ridge. It would be absolutely impracticable to do this and avoid mildew for nine or ten months in the year. There is nothing like plenty of ventilation; it need not be used carelessly, but have lots of it possible and let it be continuous along the ridge.

I can scarcely believe that on a bright day in winter, with the mercury outside at 15° and the heat shut off, a house would go up to 90°. If it went up to 80° why was there not a crack of air put on? One inch along the ridge would have kept the temperature down and certainly not chilled the roses. Experienced rose growers will I think agree with me that they are as often guided by their own sense of the temperature as they are by the thermometer. By that I mean if you walk into a rose house and you can feel a draft coming down on the plants you will close the ventilators, even if the thermometer is above the orthodox mark. Shading is seldom resorted to for roses at any time. Perhaps the first month after the young plants are on the bench a little shade is beneficial, but at no other time. I shall

always remember looking over a large establishment in Baltimore a few years ago. It was the month of March. There were seven or eight rose houses built on a steep side hill; the houses were all attached. The gutters were supported by posts, but no partition walls. When ventilation was put on the lowest house and the highest house or the one furthest up the hill there was naturally a strong draft running up through every house. The crop of mildew was something immense, and a clean bud or leaf could not be seen. I was asked the cause, and gave my opinion, but as it was ignored I became clam-like. All gardeners who have grown exotic grapes under glass know that mildew on the vines can be produced quickly by bottom ventilation.

WM. SCOTT.

Bedding Plants at Washington.

Col. John M. Wilson, Superintendent of public buildings and grounds, who has supervision of our parks and reservations is a lover of flowers, and takes great interest in beautifying and improving the public grounds about the city, though from a lack of funds at his disposal he is often hampered in his work, and frequently the grass is allowed to grow during the months of May and June until one would think that some of the parks were meadows. Congress in making the appropriation for the parks usually stipulates the amount to be expended on certain reservations, and at the same time stipulates the amount of improvements to be made and often reduces the estimate for said improvements from one-third to one-half. From this cause, something must go undone and it usually happens that the grass is allowed to go two or three months without cutting that the amount of money which would be required for that purpose may be used in planting the beds in these reservations. One can hardly estimate the amount of labor required to get up the plants and plant the many beds which go so far toward beautifying the public grounds in our city.

Mr. Geo. H. Brown, the able superintendent under Col. Wilson, is a very busy man from September until July. Very few people know anything of the magnitude of the establishment known as the "Propagating or Monument Gardens" under Mr. Brown's charge. There the plants and flowers are grown for decorating the large East Room of the Executive Mansion for all diplomatic and public receptions and entertainments during the social season.

At the close of the society season the establishment is immediately transformed into what might be termed a gigantic propagating establishment. All roses, carnations and other winter blooming plants are torn out to give place to soft wooded bedding plants. It is safe to say that there is no commercial establishment in the country where every inch of space is put to better use. Hanging shelves are erected, boxes of seed sown and placed on them in order to get them close to the glass, as soon as they are up they are potted into thumb pots and placed on the same shelves, while the benches are crowded with stronger growing plants such as geraniums, coleus, acalyphas, acyranthes, etc. I doubt if there is a florist with the same amount of glass who turns out as many plants in a season or could do so if he had the sale for them. One day last April I was over there with a visiting florist and he expressed himself as having no idea that the government had such an establishment.

THE PARKS OF PARIS.

He said that in all his travels, and he had traveled considerable, he had never seen such a sight, everything clean and healthy; and such thorough system.

To give an idea of what 'Uncle Sam' is doing in this line to beautify the Capitol city the following is a list of the plants grown and put out this spring:

Names.	No. of Var.	No. plants.
Alternantheras	4	70,648
Achyranthes	1	5,273
Abutilons	2	2,046
Amaranthus	1	3,000
Acalypha	2	5,450
Anthericum	1	1,558
Atriplex hortensis rubra (new)	1	172
Begonias	2	2,400
Cannas	20	1,281
Caladiums	16	887
Coleus	5	90,537
Chrysanthemums	65	12,000
Cupheas	1	2,254
Cerastium	1	312
Cannabis	1	420
Carduus	1	336
Euonymus radicans var.		24,000
Eranthemum	1	1,600
Eulalias	2	1,070
Erythrina	1	143
Fuchsias	11	580
Geraniums	7	26,251
Genista	1	600
Iberis	1	1,400
Magnolias	1	1,767
Nasturtiums	1	300
Poppy	2	620
Panyrus	1	1,000
Petunias	2	2,300
Phlox	1	1,764
Pandanus	1	250
Ricinus	1	300
Salvias	1	5,101
Stevia, variegated	1	2,525
Sunflowers	1	420
Solanum	2	618
Torenia	1	2,100
Vinca (annuals) rosea and alba		15,324
Verbenas	1	360
Wigandia	1	300
Yucca	1	4,300
Zinnias	2	750
Miscellaneous tropical and subtropical plants		1,500

Total number of plants put out 314,233

Mr. Brown started his force planting out geraniums May 4; they were 23 days in doing this planting, including replanting beds where plants were stolen (and this was no small item, for hundreds of plants were pulled out of the beds), also in replanting Golden Bedder coleus and vincas, that were killed by the cold weather in the second week of May.

It is Mr. Brown's intention to get out of the stereotyped form of bedding which has characterized the parks of our city for many years, in fact since the beginning of bedding in the public grounds, and instead of carpet bedding to go more into tropical and sub-tropical herbaceous and perennial plants. In former years they grew cetheverias by the thousands; this season they have planted none. It will require several years before Mr. Brown will be able to accomplish this idea, but he intends to make a good start this fall. They will purchase a number of New Holland and New Zealand plants, both herbaceous and perennial, and grow them in pits and frames which they propose erecting this season. In order to make this form of planting effective they will have to do away with the regular forms of beds now used, irregular forms, curved lines, etc. The plan is well mapped out, and if Mr. Brown is allowed to carry it into effect it will add much to the beauty of our parks. Next season they will only grow about half the quantity of soft bedding plants grown this year, and lessen the quantity each year until the new departure is complete; yet they do not intend to do away with all soft bedding plants, for in some places they will be compelled to decorate with them. They have a number of beds of fuchsias in shaded places in one or two of the parks which are looking remarka-

bly well and attracting the attention of the public. They also have some fine beds of tropical plants which are very attractive, noticeably among them the one in front of the north or main entrance to the National Museum; this is a large oval bed filled with palms, araucarias, dracænas, crotons, pandanus, etc., the plants being massed with a center about ten feet high, gradually sloping to the grass, edged with Strobilanthes Dyerianus. This is probably the most attractive bed in the public ground, having a very prominent position, the Museum forming a good background.

REYNOLDS.

Wages Again.

EDITOR AM. FLORIST:—With a great deal of interest I have read the articles in the FLORIST concerning work and wages. But there is one thing which I have not seen discussed fully up to this date, and that is the following: Suppose a man has 50,000 square feet of glass. He grows roses, carnations, chrysanthemums and a general line of miscellaneous plants. He has no regular foreman, but has men over the different departments, viz., roses, carnations and chrysanthemums; one of these men does all the propagating also. These men are responsible for everything that is done in their houses and are supposed to know their business, and grow cut flowers for exhibition and the general market with success. Now after having proved ability in that line, what in your judgment should such a man be worth? I know that wages differ a great deal in different localities, but I think that there ought to be a better understanding as to what a good man ought to be worth. I hope that some brother florist will give

us a little light on this subject, or at least open a little discussion so as to get the opinions of various ones of our learned men, and oblige.

SUBSCRIBER A.

Carnation Notes.

The Bulletin No. 94 sent out by Prof. Geo. Atkinson of Cornell University treats fully upon the matter of damping off of carnations and other cuttings in the sand. I notice that the remedies he suggests are such as have been suggested in this column during the past few years, but I should advise every reader of the FLORIST to secure a copy of this Bulletin; read it carefully and note the causes for one of the most troublesome points in carnation culture.

The point of decaying vegetable matter around the plants is well taken and it is to this point that I have endeavored to draw your attention when preparing your soil for future use, especially when stable manure is used. The manure should be well decomposed that no fermentation takes place after the plants are set in the fall and in preparation it is much better to have a thin layer often turned outside than by piling the soil several feet high. There is no better way to get air (a most potent and necessary factor in the decomposition of matter) into a body of soil than by the use of the plow; then again the plow will do the work of ten men, quite an object not to be lost sight of.

If you have sufficient room and you now have your soil in a high pile, level it off and work it from now until put in the house with the horse. Do this work if possible bi-weekly and see if the results do not warrant the work. If you intend using any commercial or chemical fertilizers or bone leave them out of the soil until the last turning. If wood ashes are used mix with soil now, using only the very best unleached. If night soil is used with the soil take it fresh from the vault and spread lightly on the soil and plow under.

Plenty of air slacked lime should now be scattered through the houses under the benches; worms and insects have a great dislike to lime. Before planting inside the bars, rafters and in fact every part of the house should be as scrupulously cleaned as your dwelling house; turn on the hose where you have a heavy pressure and use a force pump where the pressure is light and wash out every crevice and corner.

CHAS. H. ALLEN.

New York.

Business is as dead as it can be, but nobody looks for business the first week in July, and so the situation is accepted gracefully, even by the sweet pea growers, whose lot is so discouraging that no one could blame them were they to organize a lodge of sorrow. Sweet peas come in by the bushel and form little mountains of white and pink on the wholesalers' counters, and for the small sum of half a dollar one can buy a whole mountain. There are no buyers for anything, except a few Greeks. The great army of these gentry has faded away no one knows where to, and the few that remain par-

take of the general listlessness. Carnations are their great hold. They buy an armful for a dollar or two and then carry them away on their shoulders, a weary burden. In the new order of things in this now highly moral city even Sunday trade in carnations is fraught with uncertainty and risk, so the wholesalers find it useless to keep open on Sunday even if they dared, for there are no customers. Retailers and wholesalers both have reduced the help down to summer quota. Two of Hession's clerks, Frank Suplee and Jos. Featherstone, have taken a voluntary vacation for the summer and have opened stands at the Oriental and Manhattan Beach hotels, Coney Island, thus combining business and pleasure. At the same time some of the wholesalers' clerks are watching with anxious eye the progress being made by the new cut flower combination and speculating on its ultimate effect on their welfare, but generally arriving at the same conclusion, "Oh, there'll be plenty of stuff for everybody to sell." The new enterprise goes steadily on, meanwhile, in its preparations and its promoters expect to open for business somewhere by September 1 at the latest. A liberal charter has been secured from New York State and officers have been elected as follows: President, Ernst Asmus; vice-president, J. N. May, secretary and treasurer, Paul M. Pierson. A meeting of growers has been called for July 12, when the plans of the company will be publicly stated. The daily papers have had accounts more or less exaggerated of the new organization and the public have been treated to some wonderful chapters of the inside history of the flower trade. The *Press* on Sunday last stated that the "Harrisii lily was originated by Friend Harris, a Philadelphia Quaker." Another wholesaler, Michael A. Hart, has shown his indifference to the agitation by going away on a tour to Ireland. He may stop off at Europe on the way.

The improvement of the city horticulturally goes on. The park commissioners have selected a site for a palm garden in the northeast corner of Central Park. It will cover an area of 2,000 by 1,000 feet. The extension of the city limits has brought in what is the largest park in the state, Pelham Park, containing 1,750 acres and fronting on the waters of Long Island Sound. Brooklyn, too, is making progress and park improvements costing \$2,250,000 are contemplated.

The friends of Mr. E. Koffman, the Smilax King, will be sorry to hear of the death of his mother, which occurred last week. The father of Herman Dryer of Woodside died on June 28, aged 73 years.

W. L. Swan will sail for Europe on July 13.

Boston.

On Saturday, June 29, was initiated the series of regular weekly free exhibitions at Horticultural Hall. The hall was well filled with creditable displays of seasonal flowers and the usual large attendance was noted. Delphiniums were remarkably good. They were shown by J. S. Fay, E. Sheppard, N. T. Kidder, John L. Gardner and T. C. Thurlow. W. H. Cowing made a radiant display of Shirley poppies, sweet williams and English iris. English iris was also shown by Mrs. M. S. Walker and Japan iris by E. Sheppard, N. T. Kidder, John L. Gardner and T. C. Thurlow. An aftermath of roses came from J. S. Fay, Jas. Comley, Mrs. J. W. Clark and Hugh Williamson, gardener to W. W. Astor. J. W. Manning, Harvard Botanica

Garden and Shady Hill Nursery made their usual superb displays of hardy herbaceous flowers, all named, in large vases, and no department of the exhibition was more highly appreciated. The only orchid staged was a well flowered specimen of *Brassia verrucosa* from Jos. Tailly & Son.

Boston's great annual public school festival was observed on June 29, with appropriate exercises and the 2800 bouquets supplied by seven or eight of the city florists were distributed by the mayor to the happy graduates as they passed in procession across the stage at Mechanics' Hall. This occasion is accepted by the florists as the practically closing up of the season here, and by mutual agreement the doors of all the florist establishments in the city, wholesale and retail, will be closed daily, Saturday excepted, at 5 p. m. throughout July and August. In the meantime cash for current expenses will come out of the bank rather than over the counter. The most abundant flowers in market at present are candidum lilies from outdoors, carnations and sweet peas. The two latter are the main stock in trade of the street fakir just now.

Lawrence Cotter has completed the planting of 11,000 roses and 1,800 chrysanthemums and the campaign for the winter of 1895-96 may be said to have now fairly begun.

S. S. Pennock of Philadelphia gave us a hurried call one day last week.

Chicago.

The past week closed the cut flower season. Most all the dealers, both wholesale and retail, as well as the grower, are closing their books and striking a balance for the season's business just past.

Has the trade been satisfactory and does the balance show on the right side of the ledger? Take it from the grower's standpoint and there is little doubt that the past season has proved a satisfactory one, and a marked improvement on the preceding year. Prices have certainly ruled higher and with few exceptions were little subject to fluctuation. In this respect the season has been a remarkable one; we cannot recollect a season in late years where prices maintained a more even level than was the case this year between the Christmas holidays and Easter. In fact the market was remarkably steady commencing with the latter part of November, and, barring a break of a few weeks duration immediately after Easter, held steady until the closing days of June, which latter was marked by the greatest scarcity of stock and most phenomenal demand ever experienced at that season.

Prices of flowers of every kind taken collectively have been considerably higher than those of '93 and '94. The reason is not wholly an increased demand, however, but in a measure was due to a shortage of supply, notably at the mid-winter holidays and during January and February.

While a few of our principal rose growers report an increased cut from a given amount of glass, yet the majority are agreed that the gross amount of flowers produced was less than in other years. But the net results show that the fewer number of buds brought returns at more remunerative figures.

The local retail dealers on the other hand don't consider the past season as a specially profitable one. A few of them report an increased business, but by far the larger number had to be content to

THE PARKS OF PARIS.

be able to hold their own, while still others did a less amount of business than in former years.

The books of the wholesale men and commission dealers will probably show a slight increase in the aggregate amount of sales. All these men are pretty well agreed that the gross amount of stock handled of every description, considering the increased area of glass, was less than last year, the shortage being more noticeable in roses and bulbous stock than in other lines.

Making due allowance for a shortage in crop at times how do we account for the active demand and comparative high prices of stock when the leading retail men report a rather slow business? This we may trace to at least two different causes. One is owing to the fact that the trade in cut flowers is not nearly as much centralized as was the case formerly. The large downtown stores have in a majority of cases only been able to hold their own, some actually losing ground, owing to the fact that dozens of small dealers annually spring up in the residence portions of the city. These small places are not confined to the high class neighborhoods either; we find them everywhere, often doing a thriving business in localities where least expected. All these concerns, no matter how small, take their quota of stock. Then again there is the constantly increasing demand from out of town points, which is a considerable item in the grand total of yearly sales. In this respect our market is more favorably situated than any other on the continent, and the shipping trade instead of

decreasing, as has been the case in some of the principal eastern markets, has been steadily growing to such proportions that it has become quite a factor in maintaining prices at times when the market would inevitably have gone to pieces if depending on home consumption only. True, the aggregate amount of stock consumed at home is far larger than that shipped out, still this demand acts often as a safety valve, and must be regarded as a very important feature of the market.

How to cater to this part of the trade without injury to the home trade has been a problem which as yet has never been solved to the satisfaction of both parties at interest. The country dealer is generally of opinion that the best stock is picked up by the local men and that he has to be content with the leavings, for which he is taxed the highest market price. Our brothers at home, on the other hand, claim that the cream of the stock is reserved for shipping orders, and that the dealer outside of the city is the favored party in every respect. Be that as it may, the fact remains that as a great distributing center our market is fast assuming a commanding position.

In looking over the record of the past season it is a vital question for the grower what stock or variety has paid the best, and judging by past experience which will be the most profitable to grow?

Perhaps it matters little whether we give our attention to roses, carnations, violets or any other stock so long as it is grown well. The past season has illustrated more forcibly than any preceding one that high grade stock is in constantly

increasing demand and few dealers will handle any other if the former can be had. Of course in a season of scarcity everything goes, but let there be a slump and poor stock is simply nowhere.

Commencing with roses, which variety is in best demand? Unquestionably the Beauty stands at the head of the list. In our market at least it has not as yet been overdone, in fact with the exception of here and there for a week at a time the demand has been in excess of supply. This in spite of the fact that the output has been largely increased year by year. But is there any money in growing them? This is a question many a grower has asked himself, and which he generally answers in the negative. A few have made a decided success, the majority a failure, either total or partial. The consensus of opinion among our local growers seems to be that unless this rose is grown on a large scale there is little money in it. Hence the field in this direction has been largely in the hands of two or three men, and to judge by the present outlook will remain so for the coming season.

Among the smaller roses Meteor has occupied a prominent position and its popularity will doubtless continue. It certainly is the best all around red rose in the market to-day, and according to the statements of a number of growers has proved the very best paying variety. The past season's stock taken as a whole was greatly improved in quality, both size and color. The requirements of this rose are evidently much better understood by the grower of to-day than was the case

formerly; this is more particularly true as regards the producing of a good color in the dull days of winter. Next season will see this variety in larger quantity than ever. The Reinberg Bros. are growing it on a large scale, about 14 houses being planted.

Of the pink varieties Bridesmaid proved the most popular last winter, the demand always being far ahead of the supply. To judge by present conditions, however, the market will be amply supplied next season. Bridesmaid is being grown on a large or small scale by everybody in the business, and nine times out of ten has supplanted Mermet entirely. A few long-headed growers, though, have not discarded the latter entirely, of which we shall be thankful without doubt when the season opens. Mermet for a year or two may be somewhat neglected, but even at present when well grown is sought after by many flower buyers, and its comparative scarcity a year hence is apt to make it valuable.

La France, once so popular, is sadly neglected these days. The demand for an extra choice quality is almost nil. This is illustrated when the market is short. Maids are picked up first, Mermets next, and La France is generally accepted only if nothing else can be had in pink. The few growers who still grew it on a small scale last season will discard it entirely, at least as a winter rose. For summer flowering, however, La France is one of the best and should not be entirely neglected.

Cusin, which was seen in a few establishment last winter of mediocre quality, will be grown the coming season at but one place so far as can be learned now. This is at Stollery Bros. With them it proved quite satisfactory, but others who have tried to grow it for several seasons have given it up; not but what the rose is a good seller on the market, but our soil, or some other condition, don't seem to suit this rose, at least none have made a success of it to any marked degree.

Duchess of Albany has almost entirely disappeared, which nobody seems to regret.

Perle still holds her own and if well grown must still be regarded as a paying variety. There will always be a demand for a good yellow rose, and if the grower will give it as careful attention as he does other roses there is no doubt it will pay him.

In white Bride still stands peerless. Its general utility for all purposes makes it one of the most desirable varieties. The average quality of this rose the past season was quite satisfactory, but there is still room for improvement, and next year we hope to see the high grade quality in a large majority.

Of the newer varieties, those that have been tried on a small or larger scale last season, such as Kaiserin, Testout and Whitney, we shall speak later.

An interesting native plant now passing out of bloom in the hardy garden at Lincoln Park is *Cocopsis lanceolata angustifolia*. The flower is a trifle smaller than the type but very beautiful and is borne on a very long stem, the plant being quite dwarf in habit. The fact that it begins to bloom a full month earlier than *lanceolata* will make it of special value. The plants at Lincoln Park are from specimens found by Mr. Higgins near the lake shore some 20 miles north of the park, their number having been increased by division.

The first of a series of five games of baseball between clubs selected from the wholesalers and the retailers will be called

at 3 p. m. to-morrow (7th inst.) at Garfield Park race track in the center field. All florists and their ladies will be welcome. The membership of the teams is as follows:

WHOLESALE CLUB.

Naturally the market has changed since last week, as the commencements are now over, but a steady demand keeps up, and as the supply in roses and carnations is limited this stock sells out quite clean. Beauties are still scarce and in good demand; the best sell for \$2 a dozen. Other roses are 2 to 3 per hundred for good average stock, and 4 for fine Meteor and Kaiserin, some selected Brides also selling at the latter figure. The stock of good Testout is limited, but this rose is a great favorite. Carnations are decidedly scarce, and the best sell for 1 to 1.50, certainly a good figure for July. Medium grades brings 50 to 75 cents.

All sorts of outside garden flowers seem to sell well, though not at high prices. Some fine gaillardia sells briskly at 35 cents; coreopsis and ox-eye daisies are plentiful and good sellers at 25 to 30 cents. Sweet peas are suffering severely from drouth, and the stems are very short; they are worth 15 to 25 cents. The few dark varieties sent in sell but slowly; the demand continues only for white, pink, and pale purple or lavender. Fine auratum lilies are seen, but they go slowly for 8 per 100. Most florists in localities where there is no city water are suffering severely from drouth; stock in the fields is suffering greatly, and unless a good rain comes soon indoor plants will suffer too, as the water supply is giving out.

Recent visitors: Mr. J. G. Hancock of Hancock & Son, Grand Haven, Mich.; Geo. D. Taylor, Kalamazoo, Mich.

Philadelphia.

At the second annual school commencement at Wyndmoor Thursday last two of the neighboring florists' children were prominent as graduates, and also as taking part in the exercises, John Burton Jr. having in hand the "Class History" and Jennie Lee Lonsdale the "Valedictory." The school room was handsomely decorated, the stage being adorned with magnificent specimens of the arca and other palms, and every available space was occupied with the gorgeous Iris Kämpferi, making it altogether a memorable event both for parents and the children. Messrs. Burton and Lonsdale, both of whom are school directors, had charge of the decorations.

There was a good attendance at the July meeting of the Florists' Club held last Tuesday evening. Matters in connection with the convention was the chief topic, and all indications point to a good representation from this city. The various committees reported progress. The report of the transportation committee caused considerable discussion. An endeavor will be made to have the entire eastern delegation go by the same route. Mr. Westcott has this matter in charge for the Philadelphia club and promises that those in his charge shall be neither dry nor hungry while en route.

Mr. Lonsdale looked forward to the meeting with a great deal of pleasure,

and said he had no doubt that it would be one of the most interesting and instructive ever held by the society. He said that Mr. Hamilton Gibson's illustrated lecture on the insect fertilization of flowers would be worth a visit to Pittsburgh alone, not mentioning the many other interesting features. Mr. Craig said that aside from the convention there were very many places of interest to see, prominent among them being Mr. Bennett's department at Schenley Park, where the visitor would see probably the finest ranges of greenhouses in this country, if not in the world. Under Mr. Bennett's management this range of glass had already become famous; and at the time of the convention it would contain much to interest the practical florist.

There was considerable discussion on the report of the club room committee, and some doubt expressed as to the convenience of the club's quarters in the new hall. From an inspection of the plans and the building, which is now up to the level of the first floor, the portion set apart for the club is all that could be desired. The corner stone, by the way, is to be laid in a few days, and will contain among other things a lot of seeds; these will no doubt be tested by horticulturists some day in the distant future, and give them an idea of what their forefathers considered beautiful.

Mr. Keppler of the New York Club was present, and it might be well to say to the gentleman who keeps a certain object of interest by his elbow that if this said object settles finally in New York State it will cost a Buffalo man quite considerable for car fare every time he desires to admire its graceful form.

Albert Knapper, of Frankford, exhibited some clematis flowers of choice varieties. Mr. Knapper makes a specialty of this flower, and is very successful in increasing them from cuttings.

The American Dahlia Society met last week and partially arranged a schedule for their fall exhibition; their membership is increasing and considerable interest is being taken in their work by amateurs.

Business for the season is fair and some kinds of flowers, notably white roses, are scarce. The prices of roses range from \$1 to \$4 per hundred; carnations, 25 cents to \$1; sweet peas, 25 to 40 cents; valley, 3 to 4. K.

Buffalo.

The business has really got down to midsummer quietness. Mud turtles and water lilies are now an attraction in some of the florists' windows, and when you see mud turtles you can be sure that summer is here. A look in at D. B. Long's commission house a few days ago showed that there was yet no lack of first class carnations. Wise Bros., of East Aurora, take the cake for carnations, not only now but at any time. The usual fatigued look is on all the tea roses you see this time of year, although there is a better supply than usual. American Beauty is still the rose in greatest demand, and a very profitable price they bring. W. J. Palmer & Son have one large house planted in April just for summer cutting, and are delighted with the result. Your correspondent did that last year with great results, and found it paid four times as well as a house of mums. Liliun auratum, and the sweet scented album and rubrum are now in our store windows, and come in very useful.

J. H. Rebstock has had a fine show of gloxinias for several weeks past, and they have sold well. Mr. Stewart, whose store was on Main street in the Kremlin block,

has closed up. I have not heard there were any financial difficulties, merely retired from business. Mr. Wm. Beley was over to see us a few days ago, and says he never sold out so cleanly any year as he has the past season. When asked if he would add to his glass this year he said, 'No, I don't feel warranted in doing that, but I shall put a cellar under my residence this summer, which will save me a large ice bill, and that's improvement enough for one year.' Mr. C. F. Christensen, who does a large retail trade with our aristocratic Delaware avenue people, is also well pleased with his volume of trade. He made a specialty this year of 1,000 standard fuchsias, and exceedingly well grown they were, but they did not take quite as he expected. He thinks very properly that the country was hardly ready for them. In 10 or 20 years they will be appreciated.

Mr. Farnham, of Corfu, who grows carnations for the Buffalo market, as well as being a large farmer, lost by fire a barn, several tons of hay, a valuable team, a cow, implements, etc. Mr. F. told me he was not more than one-half insured.

The Florists' Gun Club team is beginning to practice and will have a shoot weekly until their departure for Pittsburg. Some of the bowlers of the club are turning out stars, and almost champions of this much bowled-up city, but the make-up of the team will be ragged and uncertain. W. S.

Montreal.

The annual exhibition of the Canadian Pansy Society took place June 29 on the grounds of Rockland House, the residence of Alfred Joyce, Esq., at Outremont. The society is to be congratulated upon the choice of site, as a more charming spot for a flower show could not easily be found; the grounds in themselves are worth half a day's journey to see, with its acres of beautiful lawn, scores of flower beds of every form of decorative plant in cultivation in this country, from the geometric carpet bed to the herbaceous border. A very large collection of herbaceous plants are seen here. We made particular note of the two beds of tuberous begonias, which were extra fine; a bed of dwarf heliotrope bordered with begonia Vernon attracted much attention, and a bed of Verbena venosa bordered with dwarf yellow coleus was very effective.

The tables for the exhibits were laid under the shade of some large maples which skirt the lawn in front of the house. The competition was not as keen as might be, but the society is yet only in its infancy, this being its second annual show. The two tables of hardy herbaceous flowers were very much admired. The list of prize winners is as follows:

Twelve pansies—selfs: 1st, W. O. Roy of Mount Royal Cemetery; 2nd, Frank Roy, superintendent M. R. Cemetery. Fancies—1st, Lachlan Gibb, Esq., city; 2nd, W. M. Ramsay, Esq., Outremont. Eighteen pansies—show and fancy: 1st, Geo. A. Robinson, gardener of Rockland House; 2nd, W. M. Ramsay. One bloom (pausa): 1st, W. O. Roy; 2nd, Frank Roy. Six yellow and six white ground: 1st, Frank Roy; 2nd, W. A. Roy.

Twelve outdoor 10ses: 1st, Rob't Reid; 2nd, G. A. Robinson.

Collection hardy herbaceous flowers: 1st, G. A. Robinson; 2nd, F. Roy.

A very pleasing event took place last Monday evening at the semi-monthly meeting of the club, when the members presented the secretary with a very handsome secretaire, it being the eve of his marriage.

The date for the annual picnic has been fixed for the 17th of July. It will be held at Isle Grosbois, a charming spot nine or ten miles down the river. The boat will

leave the Jacques Cartier wharf at 8 a. m. sharp. An extensive list of games has been gotten up, with valuable prizes attached.

One of our oldest and most respected members, Mr. John Doyle, has been visited by a sad affliction in the death of his oldest son, John, a promising young man of 23 years. Mr. Doyle and family have the sympathy of all who know him. BEAVER.

St. Louis.

Business the past week in the cut flower line improved just a little over last week, and flowers continue to be plentiful. Good roses are the only scarcity just now; prices are about the same as last week.

Park Commissioner Ridgely returned yesterday from the east, being absent about two weeks, and announced that he would appoint the new superintendent of public parks this week; the opinion of all the florists is that "Billy" Pape will be the man.

Thomas Summerville of Bunker Hill, Ill., was a recent visitor. Mr. Summerville is talking of locating in St. Louis and growing cut flowers for the market.

The second annual picnic of the St. Louis florists will be held at Meramec Highlands Wednesday, July 24. The committee consists of Alex. Waldbart, J. J. Beneke, C. A. Kuehn, J. W. Kunz, Chas. Young, Rob't Beyer and Dr. Helwig.

Park Commissioner Ridgely sent in his first batch of appointments to the mayor's office yesterday, and they were approved by the mayor; they were as follows: S. Plugger, O'Fallon Park; Chas. Tacker, Gravois Park; John Christ, Gamble Place; Peter Gundlach, Hyde Park; Jno. Jasper, Jackson Place; Theo. Hovelman, Laclède Park; Louis Siegmund, Lyon Park; Adam Kohl, St. Louis Place No. 1; August Mohlenbrock, St. Louis Place No. 2; Chas. Wiegand, St. Louis Places Nos. 3 and 4; and Herman Von Ahrens, Benton Park.

At the Bowling Club last Wednesday night the Japs took the Chinese into camp to the tune of 2379 to 2337 in three games. The captain of the Japs did not show up, but the Japs won just the same. Fred C. Weber of the Chinese team made the highest score, 230. The next highest was made by C. Beyer, he making 226, 213 and 201, his total for three games being 640. A. Beyer made 211, 192 and 209 in three games, his total being 612. That's what you call good bowling.

THE SCORE.

JAPS.				
Names.	1	2	3	Totals
J. J. Benecke	177	129	163	469
C. A. Kuehn	171	175	165	511

E. Schray	145	152	119	416
Totals	621	688	828	2337

The same teams roll Wednesday night again. J. J. B.

Toronto.

"Fair with showers in a few places" is the best old probz can dole out to us these days, and the situation remains practically unchanged. Some places round about us have had decent sized showers but "Toronto the good" only gets the tail ends, no doubt it is a case of "whom the Lord loveth be chasteneth." We should like about twelve hours steady rain though.

I enclose you herewith a florist's little account for flowers supplied at the funeral of the late premier of Canada. We don't like to see good men die but if a few more premiers were to be taken from us there might be a possibility of seeing a few of that *rara avis* the millionaire florist. Here is the little bill:

2,000 roses at 30c each	\$600 00
4,000 carnations at 10c each	400 00
3,000 ferns at 2½c each	75 00
500 Lily Harrisii at 37½c each	177 50
3,000 Roman hyacinths at 5c each	150 00
3,000 yards smilax at 25c	250 00
125 paper white narcissus	11 50
Wire designs	50 00
Boxes for designs	25 00
Beams for carrying designs	36 00
Time and expense	100 00
Expressage	50 00

This brings the total to \$1 925 00

Some of the florists report that there is still considerable business doing in cut flowers, though it is mostly in outdoor stuff and there is not much money in it. Still it keeps the pot boiling. The plant trade taken as a whole during the late defunct season was a decided improvement on the corresponding season of last year and very little stock was left over.

Already the question is being asked "Are you going to the S. A. F. convention this year?" The replies are as yet uncertain but I hope to see a goodly contingent from here this year. The expense has been the drawback of other years, but the distance to Pittsburg from Toronto is not great and twenty or twenty-five should be able to get a reduced rate. Why not join with Buffalo and charter a car from there? E.

Cincinnati.

Several good rains during the past week have broken the protracted drouth and as a result vegetation has put on a brighter appearance. Carnations have derived great advantage from it, as they were commencing to feel the effects of the lack of moisture. All plants intended for stock have improved likewise. It has within the last few years come to be recognized that it is unsafe to plant any stock out that is intended for future use, and trust to the rains to carry it through the season, so that the majority of the florists are prepared to water all stock planted out, and those that are not so fortunately fixed at present are making improvements in that line.

The quality of cut flowers coming to this market is now very poor. All kinds of roses are small and off color. Beauties are done. Kaiserin is the best white, being larger and better in color than Bride, which rose seems to burn very easily from the sun these hot days. La France has such a washed out, faded appearance that it is hardly salable.

Carnations hold out fairly well, pink and white being the principal colors. Sweet peas are in great abundance and better this season than ever. Every other grower has a lot of smilax he would like to cut out, and the price for any quantity is very low. Roses are selling at from \$2 to \$4, carnations 75 cents to \$1, sweet peas 40 to 50 cents, smilax 15, asparagus 50. Business is very light, what little there is being principally funerals and a few late weddings. The growers are still busy planting their houses; some have almost finished. Bridesmaid is being largely planted here in preference to Mermet.

The Florists' Club is getting ready for its second annual picnic, which will be held at Woodsdale Island the middle of July. The growers are already challenging the store men for a game of ball. We have some very good players on both

sides and expect to have a good game. We also extend an invitation to all brother florists to join us on this occasion, and will insure one and all a good time.

Osgar Ziegner is building five new houses on Colerain avenue. He will use three of them for cut flowers and the balance for pot plants, heating with hot water.

Frank Snider, now in the employ of Wm. Bolia, will also erect five houses 64x20 in the highlands back of Newport, to be heated with hot water. P.

Rochester, N. Y.

Flowers of all kinds are coming in very abundantly, and may be had at your own figures if bought in quantity. First class roses are very scarce, and would bring fancy prices if they could be had; they are getting smaller every week. Carnations are very plenty and sweet peas the same, and sell at any price, but still there is a moderate demand for most all sorts of flowers, and the store hands are kept fairly busy considering the advanced season. Lawn and dinner parties require some flowers, and although prices paid on such occasions in summer can not be compared with those of midwinter, something at least is made by the lucky party who gets those orders.

Plant trade is entirely out of the way now, and great quantities of bedding stuff has been disposed of, more than at any other season as long as I can remember, but as prices were way down the growers had to be satisfied with very small profits.

In last week's report it was stated that the E. R. Fry Florist Co. had been incorporated with a capital of \$20,000, but this is a mistake; the amount is \$2,000.

J. B. K.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Assignee's Sale.

By virtue of an order of the Court of Common Pleas of Venango county, Penna., C. P. P. D. No. 4, November term, 1893, the following effects assigned to me by James S. McGarry for the benefit of his creditors, to-wit: The lease of lot corner Liberty and Eighth Sts., two greenhouses, one house 18x30 ft., of 2 1/2 x 3 ft., two Hitchings boilers, size 16 corrugated fire-box, four Hitchings expansion tanks, six Hitchings ventilators with 48 arms, about 1,600 ft. 4-inch pipe. All plants, and accessories will be sold in bulk at public sale to the highest bidder. Sale will be on the premises, corner Liberty and Eighth streets, Franklin, Venango county, Penna., Friday, July 26, at 10 o'clock A. M. The above will be sold subject to the lease of the lot. Copies of said lease can be secured by a prospective bidder on application to the assignee. All bids sent by mail must be accompanied with good reference.

GEORGE V. ADELMAN, Assignee, 60 Thirteenth Street, Franklin, Pa.

FOR SALE.

1700 feet of 4 inch pipe, 8c. per foot, cash. One Foster boiler, 12 sections, will heat the above amount of pipe, cost \$260, will sell for \$100, cash.

36 Sash 4x8 feet, for a 75-foot house, house 15 feet wide including skylights; this lot \$50. All in fair condition.

WM. A. BOCK, North Cambridge, Mass.

For Sale or Rent.

My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 48 lots of 200 feet front on Belmont Ave. by 700 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 10 to 200 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the largest of the kind in Chicago. A good chance for some young man with some means, or for a co-partner; and as I wish to retire from business, it can be had reasonable, and on easy terms. If rented, a long lease can be given.

AUGUST DRESEL, Belmont and Western Aves., Chicago.

MR. BURFEE sailed on the Columbia on the 6th inst.

MR. CHAS. DINGEE of the Dingee, Conard Co. will sail for Europe on the 29th, with his family.

PROVIDENCE, R. I.—A recent visitor: J. B. Kidd of Sunset Seed and Plant Co., California.

M. HOUDREY of Houdrey fils & Maurice, St. Remy, France, is making a trip through the U. S.

MR. J. E. NORTHRUP has been seriously ill with appendicitis during his stay in Montana, but is improving and now out of danger.

THE infant daughter of J. C. Robinson of Waterloo, Neb., died June 13 at Granville, N. Y., where the family were visiting at the time.

ROBERT BUIST, seed grower of Philadelphia, has incorporated his business, and the style of the firm is now "Robert Buist Company." It is chartered with a capital of \$300,000, full paid.

NEW YORK.—Visitors in town: Chas. N. Page of Iowa Seed Co., Des Moines, Ia.; Jas. Clarke of Leonard & Co., Chicago. First shipment of orchard grass seed from Kentucky at Henry Nungesser & Co. T. W. Wood, Richmond, Va., sailed for Europe on Wednesday, July 3.

Alleged Persecution.

SAN FRANCISCO, June 20.—B. F. Wellington, a wholesale seedsman, says that he is being persecuted by the Southern Pacific Company because he refused to render a verdict in the cases against the strikers that was favorable to the railroad.

Wellington was one of the jurors who tried the strikers' cases, and the jury refused to convict the strikers of conspiracy against the government. Wellington says that the railroad company is now trying to injure his business. He says that one Sacramento firm, which had been his customer acknowledged to him that they had withdrawn their trade because of railroad influence.—*Los Angeles Times.*

Worcester, Mass.

Business has gone all to pieces and though there is plenty of good flowers available they all go in the dump with the rest of the rubbish.

We have just experienced a week of rainy weather that has been an immense benefit and has assured the field crops.

One of the best exhibitions of the season was held June 27 and never before were such splendid exhibits of Campanula Medium and Dianthus barbatus shown in Horticultural Hall. The display of H. P. roses and cut flowers was away above the average and the show of native flowers by Arta Pierce was the finest ever exhibited in this city. The number of competitors in all the classes was large and the competition very keen, resulting in a show that was very encouraging to those having the welfare of the society at heart.

Mignonette

. . . Seed.

Having a limited quantity this year to spare of

**GEO. E. BENNETT'S
IMPROVED ELOISE FRANCIS,**

I offer it to the trade at \$1.50 per hundred seeds, to be delivered on and after July 15th, 1895. All fresh and good seed. Cash with all orders. No agents. Address

GEORGE E. BENNETT,

382 Clarkson St., 29th Ward, BROOKLYN, N. Y.

Mr. George Bennett—

DEAR SIR:—It affords me great pleasure to endorse your Mignonette as the best I have seen; the pinch of seed given me last year surpassed any I have grown, and I say as a money maker it has no equal. Book my order for 12 packages. Yours truly,
ALEX. S. BURNS, Woodside, L. I.

Washington.

Next to New York Washington takes the lead in floral extravagance, and the decorations at the important fashionable affairs here are most elaborate. The display is generally inaugurated in November and December, when the debutantes are greeted by society goers.

The most extravagant lover of flowers that the Capitol has known for many years was the late Mrs. W. C. Whitney (whose husband was a member of President Cleveland's cabinet during his first term).

Mrs. Senator Brice and Mrs. Westinghouse are now among Washington's society entertainers who do not consider expense when ordering floral decorations for their many entertainments during the social season, they always have the finest and most expensive flowers in the market.

Mrs. Cleveland's great fondness for flowers is well known and she has an especial fancy for growing flowering plants, but is enthusiastic over all flowers from the most modest wild flower to the conservatory-grown roses and orchids. The President while not a connoisseur in such matters is very fond of flowers.

Mrs. Olney, the wife of the new Secretary of State, is partial to delicate pink roses, and at her entertainments her table is always extremely artistic, is ever filled with dazzling colored and fragrant flowers.

Mrs. Carlisle usually selects white or green and occasionally pink for the luncheons given to her youthful friends, and her tables are renowned for the taste displayed in floral decorations.

Mrs. Lamont is partial to the American Beauty rose, with smaller dainty flowers to contrast its rich coloring, and also is fond of a bright yellow.

Miss Herbert, daughter of the Secretary of the Navy, is original in her table decorations, which are always artistic and usually of some characteristic southern flower, often causing the florist having her order no end of trouble and anxiety to carry out her idea as to the flowers and their arrangements.

Mrs. Hoke Smith is perhaps the most lavish of all the cabinet ladies in floral effects and displays, and the cabinet dinner given at the home of the Secretary of the Interior a year ago was said to be one of the most beautiful ever spread in Washington. REYNOLDS.

VAUGHAN'S COLUMBIAN CINERARIAS.

PROBABLY there has never before been such a magnificent collection of Cinerarias shown as at the recent World's Fair, not only for beauty and brilliancy of colors, but for size and perfect form. The collection was of course the result of the gathering together of the finest strains from all the celebrated establishments of Europe. The success of our strain of International Pansies has led us to continue the same plan with Cinerarias, and we have secured seeds from the foremost seed growers of the world. Our 1 Columbian Cinerarias equal those seen at the World's Fair.

COLUMBIAN CINERARIAS, mixed, per trade packet, about 1000 seeds, 50c.
CINERARIA HYBRIDA GRANDIFLORA, large flowering sorts, fine mixed, trade packet, 25c.

CALCEOLARIA HYBRIDA.

Calceolarias when in bloom at the World's Fair attracted much attention by the great size of the individual flowers and the richness of the colors and markings, many of these being new and distinct. It has been our good fortune to secure seeds of a most magnificent strain. Trade packet, 50c.

GLOXINIA HYBRIDA,

Finest mixed Pkt. 50c.

CARNATIONS.

Plainfield, N. J.

This is a charming residence city, though there are but few large private places, one of them belonging to Mr. S. A. Ginna of New York, and managed by an English gardener, Mr. Geo. Jackson, with extreme neatness and finish.

Mr. Petersen is close to the station; he does a general business, and speaks fairly well of the spring trade. He has commenced repairs and rebuilding. He gives the following as his most useful carnations: Silver Spray, McGowan, Grace Wilder, Garfield and Helen Keller, the latter not extra with him, however.

COLEUS.

100 good 2-inch pot plants, in 20 varieties, if wanted, for only \$1.00.

California State Floral Society.

This society is doing good work on the Pacific Coast.

In February of this year a hyacinth exhibition was given; in March a fine display of named narcissi, hyacinths, tulips, etc., also wonderfully well grown violets, of every known variety, including the "California" and "Lady Hume Campbell." In April came the wild flowers and this display was large and well presented. In May, beside the rose show held at the Palace Hotel, at the monthly meeting three exhibits of 30 named varieties of carnations were shown, grown to perfection. Thirteen new California seedling pelargoniums were presented to have their merits passed upon by the society, while the collection of brodiaeas was the finest ever exhibited on the coast.

At the meeting held Friday, June 14th, at the rooms of the State Board of Horticulture, 220 Sutter street, the second annual exhibition of sweet peas took place. C. C. Morse of Santa Clara, and M. Lynch, of Menlo Park, each made a large display of the finest varieties, including all novelties of Mr. Eckford, even those of 1895. A paper sent by Rev. W. T. Hutchins, of Indian Orchard, Mass., the great specialist on sweet peas, was read at the meeting. Eighty-five varieties of sweet peas were displayed and the crowd was so great many had to stand throughout the meeting. W. H. S.

Steam Heating.

We would like to hear through the FLORIST the experience of those who are using the "uphill" system of steam heating without return. Also lowest percentage of grade at which it can be operated successfully. S. C. THORP & SON.

MRS. NAGGER.—Do you remember how, when we were first married, you used to call me your white lily? Mr. Nagger.—Yes, and if you insist on a floral nickname now I will call you my tiger lily.—*Truth.*

any other information you desire

Grand Rapids, Mich.

At the meeting of the Florist Club held July 2 the chrysanthemum show to be held in November was the principal topic. Several growers reported having considerable space in their houses set aside for the purpose of growing specimens. One grower expects his six dozen specimen plants to fill one of his houses by November. A special feature will be a spirited contest of amateurs in their class, the committee having decided to offer premiums in this class.

The club will hold its picnic August 6, and the ladies were requested to present samples of what their lunch baskets would contain at the next meeting of the club, which assures a full attendance.

Henry Lohr, who has been foreman for T. R. Renwick & Co. for the past fifteen years, leaves this week to take a similar position with Schmidt Bros. of the "Floral Park."

Miss Anna O'Neill, with Renwick & Co., leaves soon for a visit in New York.

The Grand Rapids Floral Co. are erecting a new rose house 150x20.

The Wealthy Avenue Floral Co. management has undergone a change, Louis Kunst and J. Ringold dropping out, leaving the original partners, Messrs. Freiling & Mendels. J. A. CREELMAN.

FOSTORIA, O.—The Fostoria Floral Co., composed of Emerson R. Sackett and F. W. North, has been dissolved. Mr. Sackett will continue the business under the name of The Fostoria Floral Co.

GREAT FALLS, MONT.—Frederick Edmonds and John Feiden are starting in business here under the firm name of Great Falls Floral Co. They expect to have 6,000 feet of glass up and in running order by next September.

BLOOMSBURG, PA.—Mr. J. L. Dillon, the well known florist, and Miss Louise G. Hutchinson of Kingston, Pa., were married June 26, at the home of the bride's parents. The floral decorations were very elaborate.

ATLANTA, GA.—All florists here are making great preparations for the exposition this fall. Trade now is confined almost entirely to funeral work, but that has been very good for the past two or three weeks. Good stock is scarce, as most everything has been thrown out, and there is very little outdoor stuff; competition is very great, but prices hold up fairly well. The West View Floral Co. are building new houses. The C. A. Dahl Co. are rebuilding house for "mums," and Geo. Hinman is making some extensive repairs and has built a new house for "mums."

PROTECTION FOR HOSE AT LAST.

For sale by all Seedsmen. No florist can do without it. Cheap, practicable and indestructible.

35 cts. each, or \$3.50 per dozen.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rattlers, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Red Spider Can't Live
WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILDS,

Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water. Sorry we did not have them sooner.

Yours truly, F. G. HILL & CO.

Price, \$1.00 each, prepaid. TRY IT, AND RETURN IT at once, if not satisfactory, and your money will be sent back.

255 Pomeroy Avenue, Pittsfield, Mass., May 26, 1895.

"We are heating 7 houses—nearly 8,000 feet of glass—with just one "Spence" hot water Heater. In the very coldest weather last winter we would fire up at 9 in the evening, close pipe damper and leave only 1/4 draft damper open. It needed no more care till 10 a. m. next day, if cloudy; if sunny it was unnecessary to touch the fire till 3 p. m., and we never half worked the heater. I believe I can heat 8,000 more feet of glass with your heater, and not strain it. In one house I have 1 1/2-inch pipe, another 1 1/2 pipe, 2 houses, 2-inch pipe; one house, both 2 and 3 inch; still another, 4 and 3-inch cast pipe; and the last, 2 and 3-inch boiler tubing—all kinds and sizes, you see. When we first started the fire we had no repairs or alterations to make other than to tighten up loose joints. The heater has been running two seasons and is all right. We have another range of 8,000 feet glass which is heated by two-steamers, and our experience is we can heat the steamers every time and in every way."

Society of American Florists.

PROGRAM PITTSBURG MEETING.

TUESDAY, AUGUST 20, 1895.

First Day, Opening Session, 10:30 A. M.

Address of welcome, Mayor B McKenna of Pittsburg, Mayor W. M. Kennedy of Allegheny, and others.

Response.

President Lonsdale's address.

Reports—Secretary, Treasurer, Standing Committees, Special Committees. Appointment of exhibition judges. Miscellaneous business.

PAYMENT OF DUES.

Members can pay their annual dues at the Convention Hall previous to the opening of the morning session, or at the close of that session, on the first day of the Convention.

Those who choose to do so, may remit the amount of their dues to the secretary at any time previous to the date of the Convention. The Society's badge and receipt will be sent in return.

N. B.—According to the by-laws and custom of the Society, any person becoming a member continues a member until he asks for a release, or is suspended for non-payment of dues. Members having once joined the Society are thus liable for successive annual dues unless they notify the Secretary of their desire to withdraw from membership. All arrearsages must be paid unless abatement is granted by vote of the Executive Committee.

On the afternoon of the first day the judges will examine and pass upon the trade exhibit.

First Day, Evening.

Tuesday evening will be devoted to the President's reception, thus giving the members an opportunity to get acquainted. This will probably take place in the Casino at Schenley Park, and under the auspices of the local club.

WEDNESDAY, AUGUST 21, 1895.

Second Day, Morning Session, 10 o'clock.

Selection of place of meeting for 1896.

Nomination of officers.

Report of judges on exhibits.

Discussion of the President's address.

A paper, subject: "Horticultural Education, Practical and Theoretical." Chas. J. Dawson, Jamaica Plain, Mass.

Discussion.

The Question Box.

Election of State Vice-Presidents by state delegations.

The Florists' Hail Association of America will meet on Wednesday afternoon. The Florists' Protective Association, The Telegraph Delivery Association, The American Rose Society and The Chrysanthemum Society of America will give notice of their time of meeting at a later date.

Second Day, Evening Session, 8 o'clock.

An illustrated lecture, subject: "The Mysteries of the Flowers." Wm. Hamilton Gibson, Washington, Conn.

This lecture will not be free to the public.

THURSDAY, AUGUST 22, 1895.

Third Day, Morning Session, 10 o'clock.

Election of officers.

Discussion, under the auspices of the Chrysanthemum Society of America. Subject: "Improved Chrysanthemums. Extant and Essential." Opened by E. G. Hill, Richmond, Ind.

Discussion, under the auspices of the American Carnation Society. Subject: "Latest Facts as to Carnations." Opened by Fred Dorner, Lafayette, Ind.

Discussion, under the auspices of the American Rose Society. Subject: "Latest Facts as to Roses."

The Question Box.

Third Day, Evening Session, 8 o'clock.

A paper on the Advancement of the Retail Flower Trade. (Author to be announced later).

Discussion.

A paper, subject: "The Society's Influence in Popular Horticultural Advancement." Prof. J. F. Cowell, Buffalo, N. Y.

Discussion.

The Question Box.

The following interrogatories have already been received, and will be assigned to competent gentlemen for replies during the course of the sessions:

1. Is it practicable for this Society to hold flower shows in some of the larger cities in the fall?
2. What is the best means for us as a Society to adopt to prevent unscrupulous dealers from misrepresenting their goods or our profession?
3. Should the Society take any action towards organizing a mutual benefit insurance within its own membership?
4. Would it benefit the Society to limit its membership to those actively engaged in commercial floriculture and allied trades?
5. How can the interests of any special class of plants be best advanced?
6. Is it advisable for greenhouse proprietors to accept plants for storage, and under what conditions?
7. What is the best method for forcing hardy roses?
8. What length of greenhouse would be most desirable to ventilate under one section, provided the whole length of sash could be raised without strain to the apparatus?
9. What amount of working capital would be deemed sufficient to start into the florist business in a city of five to ten thousand inhabitants?
10. What warranty against diseased Harrisii bulbs should be required by purchasers?
11. Is the mail trade in plants on the decline? and if so, why?

IMPORTANT BUSINESS.

In addition to the business outlined in this program many questions will come up for settlement which will have an important bearing on the Society's future, and will make the Pittsburg meeting one of the most important in the history of the Society. Among these are the reports of the special committee on the classification of risks and uniformity of rates of fire insurance for greenhouses; on the Society's policy with regard to members in arrearsages for annual dues; on closer relations between the Society of American Florists and the several auxiliary organizations which have been outgrowths of the parent Society; on standard list of decorative plants and on nomenclature.

THE TRADE EXHIBIT.

The Trade Exhibition will be as heretofore a prominent feature. Every branch

will be well represented. Those desiring space, and who have not already secured it, should apply immediately to the superintendent of the exhibition, who will supply all information relative to arrangements, premiums, etc.

MEALS.

The attention of growers is called to the Society's gold, silver and bronze medals which were offered last year for new and rare plants, and are open to competition again this year. For rules and conditions governing the awards apply to the secretary.

LOCAL HOSPITALITIES AND ENTERTAINMENTS.

On the fourth day (Friday, August 23,) the members of the Society will be the guests of the Pittsburg and Allegheny Gardeners' and Florists' Club. A steamboat excursion up the Monongahela river, and probably a visit to one of the large steel works at Homestead will be a feature of the day. Arrangements are being perfected for the grand bowling match and shooting tournament, and full particulars as to time and place of same will be given later. Special entertainments for the visiting ladies are also promised.

ARRANGEMENTS FOR TRANSPORTATION.

All the railroads represented in the Trunk Line Passenger Committee, Boston Passenger Committee, Southern States Passenger Association and Central Traffic Association have agreed upon a uniform excursion rate of one and one-third fare upon the "certificate plan," upon the following conditions:

1. Each person must purchase a first class ticket to place of meeting, for which regular fare must be paid, and upon request the Ticket Agent will issue a certificate certifying as to the form, number, route and destination of ticket purchased.

2. If through tickets cannot be procured at starting point passengers must purchase to most convenient point where such tickets can be procured, and repurchase through to destination, requesting certificate from Ticket Agent at the point at which such ticket is purchased.

3. Tickets for the return journey will be sold by Ticket Agents at place of meeting at one-third first-class limited fare, only to those holding certificates signed by the Ticket Agent at point from which ticket for going passage was sold; such certificate to be countersigned by the Secretary of the Association, and vised by the special agent of the railroad association.

4. Tickets for the return journey will be furnished only provided certificates have been procured not more than three (3) days before the meeting assemblies, and presented to Agent at return starting point within three (3) days after adjournment of the meeting Sundays not counted.

5. Certificates are non-transferable, and tickets issued on certificate for return journey will be limited by Agent for continuous trip, no stop-over privilege being allowed.

VERY IMPORTANT.—No refund of fare will be made on any account whatever because of failure to procure certificates before starting on the going journey.

You will observe from this rule that it is absolutely necessary for each passenger before starting to obtain a certificate of the Ticket Agent at the point at which the going ticket is purchased, otherwise said passenger will be unable to obtain the special rate for the return journey, and will be obliged to pay full tariff rates in both directions.

RECEPTION.

The chairmen of the various delegations en route to Pittsburg are requested to notify the Chairman of the Reception Committee of the time of arrival of their trains and members of that committee will be on hand to escort them to the hotels.

Sub Committees of the Pittsburg and Allegheny Florists' and Gardeners' Club in charge of Convention matters:

RECEPTION—A. W. Smith, Boggs avenue, Pittsburg; J. Semple, F. Burki, A. Nelson, J. Herron, J. Bader and R. Lundstrum.

ENTERTAINMENT—E. C. Reineman, 305 Lowry street, Allegheny; W. Watson, T. Ullman, A. F. Dalzell and W. Schemmatt Jr.

LADIES—G. W. Burke, Highland Park, Pittsburg; Ed. Howells, C. Cook, N. Patterson, W. J. Elliott, R. J. Murdoch, B. Froesch, T. Ulam and W. Breitenstine.

PRESS AND PRINTING—A. F. Dalzell, Sta-

tion D, Pittsburg; J. B. Murdoch and T. Ulam.

HOTEL—B. L. Elliott, 38 Fifth avenue, Pittsburg; P. S. Randolph and J. W. Ludwig.

BOWLING—H. Scherrar, 510 Smithfield street, Pittsburg; J. B. Murdoch and W. Watson.

Pittsburg and Allegheny Hotels.

Below are given the names and locations of the hotels at which rates have been secured by the local committee for convention week, rate per day, number each can accommodate, and whether American or European plan.

The Chairman of the Hotel Committee is Mr. B. L. Elliott, 38 Fifth avenue, Pittsburg.

PITTSBURG.

Central Hotel, Smithfield street, between Second and Third avenues. American plan. One person in a room, \$2.50; two in a room, \$2 each. Can accommodate 200.

St. Charles Hotel, corner Wood street and Third avenue. American. \$2. Can accommodate 100.

Hotel Willey, Sixth street near Penn. American. One person in a room, \$2; two in a room, \$1.75 each. Accommodate 100.

Newell's Hotel, Fifth avenue. European. \$1 to \$2.50. Accommodate 200.

American House, 1002 Liberty street. American. \$1.50. 75 rooms.

Hotel Schlosser, corner Sixth street and Penn avenue. American. \$3. Accommodate 150 to 200.

Hotel Anderson, Sixth street. American. \$3, \$3.50, \$4, \$4.50 and \$5. Accommodate 50 to 100.

Monongahela House, First avenue and Smithfield street. American. \$3 and upwards. Accommodate 60 to 75.

Hotel Durr, corner Fourth avenue and Market street. American. \$1.50 and \$2. Accommodate 25.

Hotel Duquesne, Smithfield street. European. \$1.50 to \$5. 90 rooms.

Home Hotel, Duquesne Way. American. \$1.50. Accommodate 75.

Seventh Avenue Hotel, Seventh avenue. American. \$2.50 and \$3. Accommodate 100.

Hotel Boyer, Seventh and Duquesne Way. American. \$2. Accommodate 100.

Eastern Exchange Hotel, Penn avenue, East End. American. \$1.75. Accommodate 50 to 100.

ALLEGHENY.

Gerst's Hotel, East Diamond street. 50 cents to \$1.25. Accommodate 25.

Hotel Schreiber, 35 S. Diamond street. \$1.50. Accommodate 50.

Hotel Randal, 49 S. Diamond street. \$1.50. Accommodate 25.

Hotel Girard, 20 Federal street. \$1.50. Accommodate 45.

Hotel Willard, 187 Federal street. \$1.00. Accommodate 75.

Hotel Mabald, Federal and Robinson streets. \$1.50. Accommodate 25.

Hotel Sauers, 84 Federal street. European. 50 cents, 75 cents and \$1. Accommodate 40.

Hotel Wetzler, 31 E. Diamond street. \$1.25. Accommodate 15.

Chas. Schutle, 162 Lacock street. \$2.00. Accommodate 25.

Hotel Carson, 168 Lacock street. \$1.

Hotel Burdett, 2 Federal street. \$2.

Carnation Notes.

The late rains have improved the condition of the carnations in this section wonderfully, and the question is now coming from some, will the plants be too large by September 1? In my opinion it is difficult to get too large a plant, although many differ from me on this point. I think all will admit that our main crop is needed most at Christmas. Will a small or even medium sized plant throw up as many flower stems at that time as a large one? I think not. I believe the cause of the preference for medium sized plants is that they transplant better than large stock especially when taken in in bud, but as I have stated

previously this is a bad practice. Now my advice to all is get your plants just as large as you can, for it is my experience that more large well developed bloom can be obtained from large plants.

Watch carefully at present the cutting back; see that no stem is allowed to mature a bud and do not pinch out a stem until the offshoots appear. By following this plan I find that the plant makes a stronger and a decidedly healthier growth. Thrips is now making its appearance; this pest injures the growth of the plant very materially and should receive prompt attention with tobacco dust blown over the plants when dry; this does not kill the mite but drives it away. The sort most affected with the mite here is Daybreak and many a large stock has been lost by neglect; I have also found that nipping out the affected stems will rid the plants of thrips.

If you wish early blooms stop pinching back now, thus allowing the plants to bloom. To obtain flowers during October and early November make some frames, double span, out of rough material if you choose, plant some desirable varieties in the frames August 20, utilizing any hotbed sash you may have. I would advise using early sorts for this purpose.

CHARLES H. ALLEN.

Hints About Art in Gardening.

PART III.

As the summer progresses and the earlier plants which we have arranged for special effect have either ceased blooming or have spent their strength completely we have to renovate waste spaces in the garden beds, and provide for those flowers which will bloom early in September.

September is the month when my own garden in northern New Hampshire is in its prime, and I have to provide now against all future possibilities of color discord and confusion of foliage masses. For instance, I am careful to transplant the newer roots of crimson sweet william,

SCARLET GLADIOLI AND WHITE ASTERS.

which has past its blooming period, to some part of the garden where next year crimson will not clash with orange, scarlet, and yellow. Against the possibility of a multitude of inharmonious hues among the annuals, I have also provided plenty of white.

We should have a good supply of the

white varieties of aster, scabiosa, poppy, dianthus, carnation, balsam, dahlia, zinnia, stock, Phlox Drummondii, petunia, tobacco and cosmos. With these it is an easy matter to bring the garden in September to a tolerable condition of color harmony. The white geranium *La Favorite* is also a very desirable flower to prevent the clashing of colors; it makes a

COMET ASTERS LIFTED ABOVE GARDEN LEVEL BY A TILED BOX.

beautiful combination with blue campanulas, and light colored gladioli.

One word now, about the aster, which is in its prime in September. I hope the advent of so large a number of beautiful new varieties will not occasion the neglect of the old standby *Victoria*. I depend on the white *Victoria* for producing some pretty effects either with cannas or with scarlet gladioli. I wish to draw particular attention to the fact that the white *Victoria* has more substance than the white *Comet*; the former is creamy and solid; the latter, translucent and alabasterlike. The beauty of the *Comet* is extraordinary; but at a distance this is not so apparent, and the solid white which characterizes the *Victoria* makes it more desirable for general effect. This must not be lost sight of in arranging asters in the garden beds; better place the *Victorias* in the distance and the *Comets* where they may be touched by the finger tips—in fact, we cannot place these dainty waxy white asters too near the eye.

I so often see a needless waste of energy in the arrangement of a garden—dainty things quite out of sight; larger and coarser ones obtruding themselves; detail lost, and masses of large foliaged plants eclipsing some few delicate specimens which ought to be directly under the eye—that I am constrained to wish for a little more far-sightedness among gardeners. The white tobacco may be planted quite near to the path, as well as in distance, and a few striking tall sunflowers may hold a position near a gateway; but all shrubby, eulalia and pampas grasses, dahlias, zea, ricinus, large poppies, tall zinnias and *El Dorado* marigolds, might be kept quite in the rear of many small things to the great increase of artistic effect; it is a mistake, however, to suppose that the exclusive grouping together of these larger characters is the correct way of treating them. The giants and dwarfs frequently appear in charming contrast together; I find no difficulty in growing my *mignonne* in solid clusters at the feet of my tall hollyhocks. So when the bed of asters is arranged, I do not see any reason why it should be solely occupied by asters. Gladioli, *Milla biflora*, *Bessera elegans*, *tigridias* and *Hyacinthus candidans*, as well as the flaming *tritoma*, are

all charming associates with white asters. In the grouping of colored asters, it is best to separate pink from red and crimson; blue-lilac from three foregoing, and purple from red, crimson, and all light colors. Violet, red-purple, and purple associate well so far as dark colors are concerned, and white with any color is perfectly harmonious. But the indiscriminate mixing of all colors in the aster family, although it may not bring about positive discords is apt to result in some unpleasant combinations. The *Triumph*, which is generally called scarlet (there is no scarlet aster), has a nearly pure red color which I find does not look well with the other crimson and purple tones of the aster family. The *Truffaut* asters are splendid in various hues and tints which all need the relief that a good dark background affords. As a rule it is best to plant the light colored flowers in distant positions, and the dark colored ones

A BORDER OF SCABIOSA AND CENTAUREA CANDIDISSIMA.

directly at one's feet, always placing white flowers in between those of deep and positive hue.

One of the prettiest bits of color contrast may be produced by planting together *King of the Blacks* and *Snowball* scabiosa. A group of these dainty plants on the border of a path, and close to one's feet is far more interesting than a bed of *coleus* and *dusty miller*; in fact the *dusty miller*, I find, makes an excellent environment for a good bed of scabiosa. Few people seem to be familiar with the splendid *black scabiosa*; its rich, velvety, dark claret color is unique, and it seems as though it deserved more attention from the florists. As a cut flower it has great powers of endurance, and in the garden grown with the white variety it is effective and even dainty. Such showy characters as scarlet *salvias* and geraniums are more or less common; the gay *caladium* and the brilliant *begonia* we find in almost any garden of moderate size; yet all these bright and curiously colored characters are difficult to bring into harmonious relationship; but the sober *black scabiosa* and the great white *somniferum* poppy are scarcely ever met with, although in the arrangement of a garden they easily adapt themselves to artistic conditions. Why is it we do not see them oftener?

The dwarf canna, rich in bronze green or light green foliage, with its bright scarlet, golden yellow, and spotted orange flowers, has always been judiciously used by gardeners except in one

respect; as a rule the plants are compactly grouped and so many are placed together that the individuality of each one is lost. If the canna was a shapeless plant there might be some excuse for such treatment; but on the contrary, its foliage is broad and effective and needs relief; particularly atmospheric relief. The better way of planting the canna is in a long row at the back of a winding bed of indefinite length; at its feet any compact dwarf plant looks appropriate, especially if the flowers are white. A few large white *Bride* poppies make excellent neighbors for the scarlet canna. I notice also, that in a certain garden the vicinity of a small bush of black alder (*Ilex verticillata*), with its brilliant scarlet berries, is no small advantage to the bronze green of a group of tall cannas.

The hardy chrysanthemum which lives in the garden the year around has its flowers offset by sufficient foliage to prevent any color discord; still it would be best to separate yellow from pink, and in setting out the plants I should alternate the colors with white; too much white in the garden is next to impossible.

Finally, I think it is wise for the florist and the gardener to bear in mind that the art of making a garden appear beautiful rests mostly with his ability to make an effective use of material at his disposal. One may have all of the best things in great plenty, and yet fail to place them together so they will not lose their true value. Sunflowers may be grown so their untidy feet shall be hidden by *nasturtium* and *alyssum*; blue delphiniums may be relieved by a bed of dwarf white phlox, and a dozen cannas can make an equal

AN EFFECT IN SCARLET AND WHITE: ALPHONSE BOUVIER CANNA AND BRIDE POPPY.

show with fifty if they are each one given a fair chance; but if sunflower, delphinium, and canna are crowded together without regard to color and form, if the ground beneath them is left bare and encircled by a prim ribbon border of dull and bright leaved *coleus* then one may bid farewell to artistic endeavor and cultivate the acquaintance of mechanical ingenuity. The true value of a thing it is the first duty of art to set forth; indeed, that is the *very calling* of art; but the mechanical effects so often mistaken for art which are presented to us in many of our American parks and gardens are devoid of any attempt to enhance the true value of a flower. If this is a fact, then some of our present methods of gardening are false to

truth and beauty. We need to reform such methods and return to simplicity and natural freedom. If I were to suggest what new method it would be best for a gardener to adopt, I should be inclined to say, make your flowers describe patterns against flowers up in the air, but never on the ground!

F. SCHUYLER MATHEWS.

Herbaceous Plant Notes.

Phlox suffruticosa is out in full bloom now; they are ahead of the *decussata* or *paniculata* section and in many respects are far more desirable than the latter. The elongated panicles are not so compact and stiff, and the individual florets do not crowd each other, altogether the plant and the racemes are more loose and graceful. The narrow sharp pointed leaves are of a dark glossy green and the flower stems thin and slender. Two crops of flowers may be had from them without any special trouble, and the late crop in September and October, when cut flowers are very scarce, comes in very handy for the florist. To make sure of a second crop all that is required is to cut down the flower stems after the first bloom is gone to within a few inches of the ground, and the plants will invariably make a second growth, which will flower in fall. I do not know why the *suffruticosa* section of *phloxes* should be neglected so, we find long lists of *P. decussata* in every catalogue, but not a single variety of *P. suffruticosa* is mentioned, and they are in danger of being lost entirely to the trade. The habit of the plant is very much dwarfer than the common *phlox*, 15 to 18 inches being their height.

Helianthus multiflorus fl. pl. is an old but also very useful plant for the florist; a great many of its flowers are sold over the counter every year from July to October. The color is a bright golden yellow and the shape is perfect, not too large under ordinary treatment unless planted in very rich soil. They attain a height of about 4 feet and should be planted at the back of the border or in the shrubbery. A desirable plant for all purposes.

Statice latifolia forms an evergreen, rosulate plant with broad oblong leaves of a rich dark green, very firm in texture; from the center or crown numerous thin but stiff flower stems will spring, which branch out and divide as they elongate until they form a dense head a foot above the foliage. Then the small blue flowers open out on the many spikelets and remain in perfection for months. These slender light and airy spikes may be dried in the shade and can be used with everlasting, retaining their color to perfection. A very useful plant flowering from July to September; 15 inches is as high as they will grow.

Bocconia cordata is a very handsome tall growing (5 to 7 feet) herbaceous plant with very ornamental, cordate roundish leaves, deeply cut into lobes; it flowers in large terminal loose panicles, bearing numerous elongated buff colored flowers. This is a fine plant for the center of a bed of cannas or mixed tropical plants and blooms in July and August.

Dracocephalum austriacum will bloom July and August freely in whorls of 8 to 10 flowers together on erect spikes 12 to 18 inches long; the color is a pure blue and the *salvia*-like flowers are nearly 2 inches long. A showy and free blooming species.

Linaria triornithophora is one of the best of the family, with reddish purple flowers and a bright yellow spot in the palate, it blooms on erect loose panicles,

the flowers coming out in whorls of 4 or 5, and it lasts in good condition from July to November, growing to a height of 12 to 18 inches. Should be planted in every collection, but like so many other pretty herbaceous plants we do not see it very often. We also have a rose colored variety with the same yellow markings in the palate, which is very handsome, and I have never seen it anywhere else; the flowers are produced with the same freedom and perseverance as in the parent plant. All *linarias* are very floriferous plants, doing well anywhere in the garden without any special care, and the large flowering kinds are extremely handsome. They succeed well on dry slopes or banks and in the rockery and will do the same in moist places or in the shade.

Saponaria officinalis is a mass of rosy white flowers from the latter part of June to September, and although a common everyday plant we always have a patch of it because it makes a fine show from a distance and remains in bloom so long; height 2 feet.

Hypericum Moserianum is a newer variety of the greatest merit for the border, not exactly herbaceous, but a low shrub of compact and clean growth. The five-petaled flowers are of a pure golden yellow, of very large size, 2 inches across, produced very freely on the tips of the young branches continuously from July to November. We were rather doubtful about its being hardy, but plants left out in the past severe winter without any protection are blooming now, although the tips of the branches were winter-killed and consequently had to be trimmed back, but I am confident now of it being perfectly safe to plant them out in any part of the country. The free growing habit of this variety and the large size of the regularly shaped flowers, together with its fine color, will undoubtedly cause this splendid border plant to be used largely as soon as it becomes known a little better. Height about 2 feet.

Heliopsis Pitcheniana is now beginning to open its handsome daisy-like flowers, about 3 inches across, deep yellow in color and a very profuse bloomer; valuable for cutting from July to September. A splendid perennial of easy management and free growth. Height 3 to 4 feet.

Eryngium coelestinum is a mass of bloom just now, and will last to the end of August in good shape. The oblong globose flower heads are of an amethyst shade, the upper part of the stems are also tinged a beautiful shade of blue. The plant is a very profuse bloomer and deserves a place in the mixed border or in the shrubbery, height 2 feet.

Lilium auratum planted last autumn are in fine condition now, spring planted bulbs will flower later. They should have a cool well drained bottom and partial shade; it is a good plan to plant the bed over with some densely growing low perennial like *Saponaria ocymoides*, *dracocephalum*, *Daphne Cneorum*, *Alyssum saxatile compactum* or the like so as to keep the ground shaded from the burning sun. The flowers will last longer and the flower stems grow much stronger if the ground is shaded. Where no such plants are available annuals may be used instead, or a good mulching will answer, but the latter is always more or less unsightly and therefore objectionable in a neatly kept place.

Rochester, N. Y.

Equalizing Temperature.

How can one equalize the temperature in two houses? Both are facing south; one 13 feet wide with 6 rows of pipes, the

other one 8 feet wide with 4 rows. The smaller house is built on to the larger and the wall left in. The smaller house is 6° lower than the larger one. By taking out the wall or partition between the two houses would the temperature be more equal?

C. F.

It would be much easier to answer these questions if "C. F." had stated a few more of the conditions, viz., what size of pipe, and if both houses were the same height. It isn't certain from his description whether the houses run parallel to each other and joined that way, or whether one is built on to the end of the other. I suspect the former is meant. I would say that if the houses are equally well built, if the pipes in the small house are just as hot as in the larger then the small house ought to be quite as warm as the larger, for there is as much heating surface in proportion to size in one as the other. Undoubtedly taking out the partition would help very much to equalize the temperature, and if you are not growing roses in either house it will do no harm to be out, but why trouble over it? a difference in temperature is often desired.

WM. SCOTT.

Lilium Speciosum Melpomene.

Your correspondent, Mr. G. C. Watson, on page 1232, July 6th issue of the *FLORIST*, asks what is the origin of this lily, stating that one of the largest importers of Japan lilies assured him that *Melpomene* was a native of Japan; and Mr. C. H. Allen also maintained that this sort was a native of Japan. The only light that the undersigned can throw on the subject is what Mr. C. L. Allen said a year or so ago to the effect that it was a seedling variety raised by the late C. M. Hovey of Boston, and further stated that it was somewhat darker than the true *rubrum*, but by no means an improvement on the type. He further went on to say that Mr. Hovey was quite successful in growing the *Lilium speciosum* from seed, and at one time had, of his own production, varieties named for each of the Muses; but with the exception of *Melpomene* none are in existence.

I am inclined to think that Mr. C. L. Allen and the records as taken from the transactions of the Mass. Hort. Society are correct.

E. RAWLINGS.

In reply to Mr. G. C. Watson's question in regard to the origin of *Lilium Melpomene* in last issue of the *FLORIST*, page 1232, would say that in an exhaustive list of lilies, their species and varieties, published in *The Garden* (England) February 21, 1885, is the following:

"*L. Melpomene* (Wall. Notes, pages 65 and 152). A hybrid from *L. auratum* and *L. speciosum*, and described by Dr. Wallace as being one of the finest varieties raised by Mr. Hovey, president of Massachusetts Horticultural Society."

ALEXANDER MACLELLAN.

Newport, R. I.

Cutting Back Chrysanthemums.

At what date should the last nipping back be given chrysanthemum bush plants in pots? Does it injure the plant to cut it back 6 to 8 inches?

SUBSCRIBER.

Chrysanthemum plants in pots may be nipped back until about the middle of August. In regard to cutting back six or eight inches I would say that it could be done early in the season, but it would be

VASE OF OUT-DOOR FLOWERS.

a very bad thing to do later on. It is better to simply nip out the tip ends of the branches before they get long enough to need to be cut back so far. A.

Vase of Outdoor Flowers.

We present in this issue an illustration of a vase filled with a variety of outdoor flowers, such as may be found in bloom at this season of the year, the flowers used being hollyhocks, *Spiraea sorbifolia*, white perennial phlox, achillea, a bunch of the common field daisies and gaillardia, with a few coarse ferns.

The arrangement is showy and inexpensive, and quite desirable in a room decoration. The cost price of this material would figure up about \$1 to \$1.25 at current prices.

Bone Meal.

Under the head of "Carnation Notes" in July 6 number of the *FLORIST* Mr. Chas. H. Allen in talking about preparing soil for carnations advises that the bone meal be left out of the compost until the *last turning*. Mr. Allen must have some good and sufficient reason for making such a statement or he would not have made it. I, for one, would like to

know what were his reasons for advocating such a course. One of the reasons why I ask this question is that it is generally understood by practical growers, and which I believe has been advanced by scientific men who make a study of these matters, that the bone is so slow in decomposing in the soil that it is claimed that much of the plant food known as phosphoric acid which the bone contains is not used to the best advantage in our operations with growing plants under glass for cut flowers, that is to say much of the material has not been made use of by the plants at the end of the first year. Now, it seems to me that the sooner the bone is put into the soil the better, as I have been lead to understand that the action of the soil upon the bone causes the phosphoric acid to become more available for plant food, being more in a decomposed state, and is less liable to leach away than is the potash in wood ashes, which Mr. Allen advocates being used at a much earlier stage in the preparation of the soil. Though, as I understand these different elements, neither potash or phosphoric acid are as volatile as is ammonia, or rather nitrogen.

Am very much interested in soils and plant foods in general, and am very anxious to learn all that I possibly can about

them. Mr. Allen will please excuse me on those grounds for asking the question.

E. RAWLINGS.

A Berkshire Industry.

In a veritable wilderness, 2,000 feet above the sea level, on the rugged slopes of the far-famed Berkshire Hills—here is the home of the "lace" fern and the "dagger" fern, which in latter years have become so indispensable for the florists' work, in the gathering of which hundreds of the thrifty country folk find remunerative employment. "Common" ferns we call them because, as with a good many other things that we lightly esteem, nature provides them lavishly without any assistance from us, but they are none the less beautiful on that account. Grown in the shade of rock maple, hemlock and balsam forests and moistened by the spray from splashing mountain steams, their texture is as delicate and their green as soft and rich as that of the most cherished pets of the conservatory.

It has only been within ten or twelve years that the use of these native ferns has become so general as to support a business devoted exclusively to the collection and shipping of these and other goods of a similar nature. Mr. L. B. Brague, who has done so much to build up and systematize this trade, stores no less than seven millions of ferns every fall for the winter demand. From October 10 to November 1 is the time when the collecting is done. Mr. Brague alone gives employment to from 60 to 200 people during this period. The pickers are paid so much per thousand, and make all the way from 1.50 to 3, or even 4 dollars per day, according to their proficiency. Care in handling is necessary to avoid breaking the tips of the fronds, which are tied, 25 in a bunch, and packed on the floors in large barns constructed for the purpose, in layers a foot deep, and well covered with damp sphagnum. One house is provided with double walls, and the space packed with snow to provide cold storage for a quantity sufficient to last from the opening of spring until the new crop is properly matured for use, which in this latitude is about June 10. From this time on through the summer picking is done in quantities sufficient only for the present demand as it comes in from day to day.

The ferns are found almost exclusively on the north exposures, and where the shade is not too dense. Fall picking, when the plants have matured their growth, does not appear to injure them, but where summer picking is done the plants run out rapidly. The spray fancy or lace fern, *Aspidium spinulosum*, is the one in largest demand. The call for the dagger or sword fern, *Polystichum acrostichoides*, is confined mainly to the eastern cities.

Another branch of this industry which has attained large proportions within a few years is the collecting of spruce boughs for lining graves and covering them in the winter. The branches are cut about three feet long and pressed in bales of 100 pounds weight. This trade is steady throughout the year, and Mr. Brague gathers about fifty tons for the winter demand. For Christmas trees spruce seems to be the favorite in the west, balsam in the New York market. There is no foundation for the prevalent notion that the cutting of these Christmas trees devastates the forests. Trees to be available for this trade must be full and symmetrical, and the proportion of such specimens in a spruce forest is very small.

Sphagnum moss is gathered all the year round. A peculiarly shaped forked hoe is

used in collecting it. A moss swamp will yield a crop once in two years. Live moss is necessary for orchid growers' use, but for florists' purposes the moss is dried and then sifted, the refuse dust being used as bedding for horses. Bouquet green, which once had a great sale among the florists, is now but little used. From October 1 it is gathered extensively, to be made up into wreathing for the holidays. Continued picking has impoverished it, however, in this section, and large quantities are shipped here from the west, where it is found in great abundance, but of coarser growth than in New England.

Sweet Peas for Cut Flowers.

Mr. M. Lynch, the well known sweet pea grower, who makes a specialty of these flowers in San Francisco in the wholesale trade there, finds the following varieties most in demand and undoubtedly the best of their respective colors in the solid colors in the order named: White, Emily Henderson; soft pink, Blushing Beauty; bright rose pink, Her Majesty; lavender, Countess of Radnor; scarlet, Firefly; nearest yellow, Mrs. Eckford. Other very desirable cut flower kinds, Lady Beaconfield, Venus and Lady Penzance.

The Marguerite Centaurea.

We present an illustration of this beautiful centaurea, which is of recent introduction from Italy, where it originated a few years ago, receiving a special award by the Horticultural Society of Florence in 1893. It is a sport from *C. odorata*. The flower is the size of a medium carnation, pure white and sweet scented, and its lasting quality after being cut is remarkable. Although a biennial it flowers the first year from seed.

Mr. Swenson of Elmhurst, Ill., so far as we know, is the only one in the vicinity of Chicago who has given it a trial. The blooms when sent to market created quite a sensation, everyone who has seen it pronouncing it one of the most valuable introductions of late years. It is a fine thing for cutting and sells on sight at good prices.

Mr. Swenson informs us that he sowed the seed in a hotbed in March, treating it the same as any annual. It commenced flowering the latter part of May and is still in full bloom at this date, July 10. For early flowering Mr. S., who makes the growing of outdoor flowers for market a specialty, thinks that fall sowing would give better results; at any rate he will give that plan a trial.

This variety generally comes true from seed, but occasionally a few sports are found of a carmine rose color with a white center. This shade also is very desirable in a cut flower and appears to sell equally well.

Pittsburg.

The regular meeting of the Florists' Club was held Tuesday evening, July 9, with Mr. E. C. Reineman in the chair. There was a good attendance and each of the committees report a flattering outlook for the coming convention; each and all are hard at work and there is no doubt of success.

The Fourth, well known as the day of days in Pittsburg passed off with a "hurrah" at Schenley Park; the day was a beauty, the crowds of visitors the largest ever know, good order and the greatest list of attractions ever offered. The leading ones the unveiling of the Bigelow

monument erected by public subscription, the second one erected in the U. S. to a living man, addresses by Gov. Hastings, Hon. Jon. Dalzell, Judge Magee, H. I. Gourley, Major Morland and others, then came the balloon ascension, wire rope walking, athletic sport, hurdle, chariot, pony, donkey, and running races, and the fire works to close the day were grand.

At the Phipps conservatories the glonxias are making a fineshow. Supt. Bennett is preparing for a grand chrysanthemum show this year. Everything about the conservatory is doing finely.

Reports of the trade are good; all seem to be doing well.

Superintendents Bennett and Burke started Monday night for a trip east to look at parks and park improvements; they will visit Buffalo, Rochester, Albany, New York, Brooklyn and Philadelphia.

BROWN.

St. Louis.

Trade is really good for this time of the year; the market is not overstocked and the quality is still good. The past few days we have had some heavy showers, starting outside stock to growing and looking better. Prices have dropped a little.

The committee on chrysanthemum show held a meeting at Fred Weber's store Friday night, July 5, all the members being present. Mr. E. H. Michel is manager of the show. Special prizes have been offered by the following well known firms: Michel Plant and Bulb Co., Wm. Schray, Fred C. Weber, F. J. Fillmore, E. H. Michel, C. A. Kuehn, Connor Floral Co., C. W. Wors, R. F. Tesson, St. Clair Floral Co., Ostertag Bros., James Gurney, Bucksahrt & Berning, George Waldbart and Wm. Pape. The show will be held in the Entertainment Hall, Exposition Building, November 6 to 10. Address all correspondence to Mr. E. H. Michel, manager, corner Magnolia and Tower Grove avenues.

The military encampment at the Fair Grounds had a tendency to work off some stock for the florists this week. C. Young & Sons sent out a large shield with crossed swords, standing about five feet high; it was admired by all who saw it. The Jordan Floral Co. also had a few designs and one very large bouquet of Beauties. Riessen Floral Co. have also been very busy for the encampment, in fact all the florists had some flowers to send out to the Fair Grounds this week.

John Stiedle is moving his greenhouses from his present location, 1900 Belt avenue, to out near Clayton; has purchased some five acres of ground there to grow for the trade. He will be good company for Tom Carroll, who is within a stone's throw of him.

The picnic committee met again last Wednesday and made out a list of prizes; our prizes this year will cost \$75, last year they cost \$58. The prizes are very handsome and useful both for the ladies and gentlemen. The Riessen Floral Co. has given an arm chair for a ladies' prize.

THE BOWLING CLUB.

Wednesday night, July 3, the Japs won again by a score of 2,854 to 2,823. E. Schray of the Chinese team made the banner score, 259. This was the last game of the summer series. Carl Beyer Sr. again wins the average medal, his average in 12 games being 180 7-12. Emil Schray wins the lucky medal for the highest single score, 259, and C. C. Sanders wins the unlucky medal. The Japs won the series, their score for 12 games 5 men to a team, being 9,445, average

per game 855 1-12. Here are the scores of last Wednesday night:

THE SCORE.

JAPS.				
Names.	1	2	3	Totals
Waldbart	135	148	169	452

J. J. B.

Boston.

The flower committee of the Massachusetts Horticultural Society went to Woods Holl on July 3 to see the new hybrid perpetual rose, M. H. Walsh, in its native home. What they found is expressed in the fact that they awarded to the originator, Mr. Walsh, the society's gold medal. Mr. Walsh entertained the visitors most hospitably, and they spent a most enjoyable afternoon inspecting the large number of promising seedlings. Among the most notable of those that have bloomed, is a cross between Merveille de Lyon and Dinsmore, which is a half red and half white. Another between Victor Hugo and Camille de Rohan is unexcelled in color, fragrance and foliage. Victor Hugo itself stands in the first rank. No other rose can equal its dazzling color. The cross between Her Majesty and Gloire de Dijon mentioned in these notes recently is coming into bloom again, a good point in its favor. That between Jacq. and American Beauty is also coming up for a second crop. These roses all stood the winter perfectly, and it has the distinction of having been the most trying winter for twenty years. Mr. Walsh is looking ahead to the winning of new laurels. His particular ambition now is to get a cross between Wm. Allen Richardson and Kaiserin.

The exhibition at Horticultural Hall on July 6 was of the usual excellence. Hollyhocks, Japan iris, roses and promiscuous herbaceous flowers were the main features. J. W. Manning showed flowers of the pretty little new climbing rose Empress of China for the first time.

Mrs. Wm. Doogue, wife of the superintendent of public grounds, died on Sunday, 7th inst., after a long and painful illness.

Visitors in town. Jas. B. Kidd, San Francisco, Cal.; D. B. Long, Buffalo, N. Y., and D. McRorie, South Orange, N. J.

Smith & Winchester, manufacturers of heating apparatus, have assigned.

New York.

Without exception this is the duller period on record in New York's floral annals. There are precious few flowers in the market, but this causes no complaining, for no one has any use for them. Testout, Kaiserin and Meteor are in fairly good quality; other roses about as poor as can be, American Beauty worst of all.

The Florists' Club met on the evening of July 8. Eight members braved the sultry weather. All they learned was that a round trip rate of \$14 to Pittsburg and return had been secured. The Board of Trustees will meet on Monday, July 15, to see what arrangements can be made for a small chrysanthemum show to be held next fall.

THE MARGUERITE CENTAUREA.

Buffalo.

No one expects to be very busy just now, and so nobody is much disappointed. There is the usual trade for this time of year, although it can be remarked truthfully that so far the season is healthy. We have not lost a premier, as they did in Canada; we have not lost even a ward politician that I am aware of, so business is slow.

I am awfully glad to tell you that there was a large and enthusiastic meeting of the florists' club on Tuesday evening last at the office of D. B. Long. The writer was unable to be present, but from authentic reports it was one of the old time gatherings. After the routine business had its attention the convention at Pittsburg was the all important topic. It behooves Buffalo to send a good crowd to that more than hospitable city, and they are bound to select some good howlers and shooters to represent our club in the contests. They decided to select a man to select a bowling team, and another to look after the shooters. Edward I. Mepsted is the bowling magnate, and Prof. J. F. Cowell the shootist. I don't think a better selection could possibly have been made. Although they are both growing old, they know the spirit and temper of the boys better than any two men you could spot in the club. Mr. Long was out of town, so the duties of host devolved on Mr. Wm. (better known as Billy) Kasting, who they say put up a much better display than his employer ever did.

I was glad to see by Mr. Ewing's notes in the FLORIST that there is likely to be a delegation of good size from Toronto.

Remember, Canucks, not a single individual was present at Atlantic City to represent your vast and roomy dominion. A committee on transportation was appointed at the meeting of the club, so if the secretary of the Toronto Club will communicate with our secretary, Mr. Wm. Legg, 889 West Delavan avenue, he will give you the whole particulars. The journey is short from here; you can leave at 10 p. m. and be in Pittsburg at 6 a. m., and have the choice of more than one route. Expense is not worth talking about on such a short journey, and we sincerely trust that a good many of the Canadians can join us.

Some illustrious visitors have been with us this week. Mr. Wm. T. Bell of Franklin, Pa., Mrs. Bell, three sons and daughter gave a short call on their annual summer outing, which is from their home to the St. Lawrence, down that majestic river to Montreal, then to the White Mountains of New Hampshire, next to the "Hub," from there to New York and up the Hudson by daylight to Troy, and then home. What a trip as an educator, but what is more worthy of note, how many florists take out their whole family in this way? Too many of us go away for a good time and leave the old woman at home. Mr. Bell is a model philosopher, and though not as well known to the horticultural world as many flippant writers and talkers, is one of our really great minds in the profession. Next to the liberty bell in Philadelphia he is the greatest Bell we know of.

Mr. Gus Bennett and Mr. George Burke of Pittsburg arrived in town yesterday.

You can imagine how pleased we were to see them. The writer did his best to show them all there is of this flat and well-paved city. He introduced them to our park superintendent, Wm. McMillan; Capt. James Braik, assistant superintendent; and to George Troup, the superintendent of our unequalled Forest Lawn. Everything was talked about from old Gen. Grant geranium up to Sambucus aurea. Bridges in Pittsburg to cost \$180,000 were mentioned, which made our own diffident Mac. fall off his wagon. But, as Mr. Bennett says, they are in the construction age, while we are near completion. By a strange combination of circumstances not at all intentional we passed a place where the sign read "Bowling." Much against my wish a halt took place, and I have only to say that if Messrs. Bennett and Burke are not good enough to be in the six in the tournament they must have a dandy crowd, and Keppler will have to look out. W. S.

Lenox, Mass.

The first rose show of the Lenox Horticultural Society was held in the Assembly rooms on June 26 and 27. The splendid private greenhouses and gardens of Berkshire county were drawn upon to an extent sufficient to fill the hall with a very pretty exhibition tastefully arranged, although it was a rose show more in name than in fact, for roses formed but a small part of the display. Groups of choice plants occupied the central floor space, and the cut roses, flowering shrubs and herbaceous flowers were arranged on tables around the sides. The white walls of the hall were artistically decorated with plaques of mountain laurel in bloom and hemlock boughs.

The principal rose exhibits came from G. H. Morgan, D. W. Bishop and M. K. Jesup. In Mr. Morgan's exhibit of cut flowers were fine collections of herbaceous and shrubby flowers. Promiscuous displays also came from W. G. Henry, Erskine Park and Wm. O'Brien, annuals from Chas. Lanier, superb sweet williams from M. K. Jesup and dahlias from Jas. Paul. Martin Finaghty represented the nursery trade with a comprehensive group of flowering shrubs.

The plant exhibits were very fine. Chas. Lanier (A. H. Wingett, gardener) showed a group of ferns, anthuriums in bloom and bright colored crotons, a specimen *Nephrolepis exaltata* with a spread of nearly ten feet, and a bed of pansies in pots that would be hard to beat. G. H. Morgan (J. F. Huss, gardener) showed a good lot of palms and stove plants and finished off the group most effectively with a border of begonia *Vernon* in pink and white varieties. A bench of tuberous begonias from the same exhibitor was also very fine. An elaborate mosaic bed of *alternantheras*, *echeverias*, etc. from W. G. Henry attracted much attention from visitors.

The trade was represented by handsome groups of new and rare plants from Pitcher & Manda, Short Hills, and W. A. Manda, South Orange. W. A. Manda's exhibit comprised orchids in bloom and stove plants, the central figure being a beautiful specimen of *Araucaria excelsa compacta*. Pitcher & Manda's group occupied a prominent position and included seventy-eight species, among the rarest of which were *Kentia Dumoiniana*, *Kentia Belmoreana variegata*, *Dieffenbachia Shuttleworthii* and *Araucaria glauca* Joseph Napoleon Baumann.

Certificates of merit were awarded to W. A. Manda and Pitcher & Manda for

their exhibits, to Pitcher & Manda for skill in culture of *Odontoglossum crispum*, to Chas. Lanier for Manda's set of new coleus and to Erskine Park (E. J. Norman, gardener) for *Coreopsis lanceolata* Harvest Moon.

A jolly party of eighteen gardeners with their ladies came over from Pittsfield in a tally-ho. Among them was A. P. Meredith, gardener to Col. Cutting, and much regret was expressed at the news that this well kept establishment was to be closed up. The boys all hope they will not lose Mr. Meredith from Berkshire county. Other visitors to the exhibition were W. A. Manda, C. B. Weathered, D. McRorie, J. H. Troy and W. J. Stewart, the latter acting as judge.

J. F. Huss entertained his friends with characteristic hospitality and escorted them about the beautiful estate of which he has charge. They were especially interested in the rose gardens, where the rare sight of high grafted standard roses in full health and bloom met them. Mr. Huss has had these plants two years in their present location. They are bent over and protected with a covering of soil and litter through the winter.

Philadelphia.

The weather has been quite cool for the last few days, the evenings being so that blankets are in demand, a state of affairs very unusual for this season of the year. There has been considerable wet weather of late and this has had a bad effect on the geranium beds in the parks and private grounds. All other bedding stock looks well, particularly beds of crotons. The new plant *strobilanthes* is coloring up well and is bound to be a fixture in future lists of decorative lawn plants.

Business in the stores is at a very low ebb, occasionally a funeral order brightens things up a bit, if we may be excused for using the simile, but beyond this nothing occurs worth recording, at least in the cash book, and this is the only record that counts. A few sleepy carnations are still to be seen, sweet peas are plentiful, and these with some fair roses about completes the assortment. Beauties are all cut out about here; no one seems to have a summer crop, or if there are any they are not on the street to be bid for.

The H. A. Dreer Co. are about making an addition to their plant that would make a good sized place of itself. It will cover an acre of ground. It is to be built adjoining the present houses on the east side; the houses will be one hundred and fifty feet long with no dividing walls, the gutters being supported on iron arches, walks will be laid out in this space, thus utilizing valuable room that is frequently wasted. The center and side beds or tables are to be of the same width, so that all the plants can be reached with the hose. They hope to have this addition in full running order before cold weather sets in. Their entire stock is in splendid condition and business is better than they have ever experienced at this season of the year. A chartered car load of choice palms and other like stock for Mr. C. B. Whitnall of Milwaukee was one of their orders of last week.

Whether George Anderson or Wm. K. Harris bears the palm as a wing shot is what is agitating these two gentlemen in particular, and a number of residents of this city who are unfortunate enough to reside in their neighborhood, the latter folk can't slumber in the morning, nor take a nap in the afternoon on account of the incessant noise first from one side and

then from the other. It is a small edition of the Fourth, going on all the time. Traps of the latest pattern are none too good, and blue rocks are brought by the barrel. Such is fame.

Wm. F. Dreer has arrived home from his long trip to Japan looking very well. He speaks very enthusiastically of his visit and of the Japanese and their love for flowers, which is unbounded.

Jacob Becker will shortly move into his new house at the corner of 49th and Chestnut. K.

Chicago.

Although the market is quiet as may be expected at midsummer, there is sufficient demand to consume all the good stock coming in. Roses are limited in quantity, all of the old plants now being thrown out, and they sell out clean daily. Beauties are very short in supply, and the demand good; first quality still stays at \$2 per dozen. Carnations are also in good demand, the best going at \$1.50 per 100, certainly an exceptional price for this time of year. Some fine Silver Spray, Tidal Wave and Daybreak are in.

Of the outdoor stuff sweet peas are rather better than they were, but it has to be very good stuff to bring 25 cents a hundred; most of it goes for 10 cents. Cornflowers are plentiful at 6 bunches for 25 cents; some very pretty pale pink shades are seen, but blue has the preference. *Iberis* in liberal bunches sells for the same price; it is much used for funeral work. Phlox, white and magenta, is plentiful, but not a very good seller; hollyhocks are abundant, and there is plenty of ox-eye daisies, *gaillardias* and *coreopsis*. The wholesale men and growers say generally that they have nothing to complain of this season.

Aug. Grossman has rented his establishment at Bowmanville to Weber Bros., who will continue to grow a general stock of cut flowers. Mr. Grossman for the present retires from active business.

Frank Calvert and wife of Lake Forest will leave for England in a day or two.

Mr. Julius Niesen, city buyer for E. Wienhoeber, is doing the east.

Mr. C. T. Neiglick, also with E. Wienhoeber, is making a tour of the lakes.

John Richter, formerly of Chicago, and now of Duluth, Minn., is in town this week.

Recent visitors: F. A. Baller, Bloomington, Ill.; J. Austin Shaw, representing Siebrecht & Wadley, New York.

BASE BALL NOTES.

The much talked-of first game of ball between the wholesale and retail men took place on Sunday, July 7, and was played in the paddock of the old Garfield Park race track. The teams lined up in following order:

RETAIL.	WHOLESALE.
P. J. Hauswirth, 2b.	G. W. Scott, c.
Ed. Conley, ss.	L. P. Kelley, lf.
—Kvle, lb.	Chas. Balluff, 2b.
Joe Curran, cf.	Ed. Winterson, p.
Gus Balluff, lf.	W. W. Randall, lb.
Jack Miller, 3b.	M. Cullum, rf.
W. Kreitling, p.	Chas. McKellar, cf.
Jimmy Curran, c.	Carl Thomas, ss.
W. E. Stevens, rf.	F. Strail, lf.
Al. Weber, umpire	F. F. Benthey, official scorer.

If the game was not played on scientific points throughout it proved one full of hilarious fun, and was hugely enjoyed by the members participating as well as the crowd of spectators. The game proceeded with that thorough good nature not often found on the ballground. The total absence of the usual wrangling over the decisions of the umpire was a notable and commendable feature of the game. This was doubtless owing to the

selection of the umpire himself. None of the fraternity—neither wholesale, retail nor grower—could be found rash enough to accept this responsible position unless a substantial iron cage be provided as a place of refuge in case of impending trouble. The situation was finally solved by selecting the burly form of Al. Weber, one of our city "coppers," well known to all the boys as a thoroughbred scrapper. This fact, as was stated above, was probably responsible for the good behavior of the boys.

Well, the game was red hot, and so was the weather. Old Sol kept beaming down on the boys with such a persistency that anything but a ball game would have been no temptation to face it. And then through some mistake the promised liquid refreshment didn't materialize and the crowd was a thirsty one indeed, until a wagon loaded with a barrel of lemonade hove in sight, which duly anchored alongside and dispensed a brand well known to all picnickers at 5 cents a throw. Now it is a strange fact that up to the time this delicious beverage arrived the retail boys were unable to solve the mysterious curves of Ed. Winterson, but after this new life was imparted into the team, which resulted in 5 runs in the third inning. The effect on the wholesale boys seemed to be just the opposite; they were evidently not used to this particular brand, and after making 10 in the first and 7 runs in the second dropped down to 1 in the third. It is the firm belief of the retail boys to-day that had the game been played to the last inning, providing the lemonade wagon had stopped with them, they would have won the game.

Ed. Winterson and Scotty were the battery the wholesale men presented, and W. Kreitling dished up the curves for the retail boys, with Jimmy Curran to hold them. Both pitchers also acted as captains for their respective teams. Both gentlemen are known for their vocal powers, which it is needless to say were freely used. But both did good work also in their positions, but friend Walter was no match to our redoubtable Ed, as the results showed. Both catchers played a fine game behind the bat. Scotty also distinguished himself by rapping out two home runs. Jack Miller for the retailers tried to play first base in the first inning. For some reason, however, Jack's fingers and the ball never could make connection, to the intense amusement of the spectators and the disgust of his captain. He was transferred to 3d base after that, in which position he kept dodging the balls in the most approved style. No game would be complete without Joe Curran; he played center field, and if Joe didn't always catch the ball that wasn't his fault. But his base running was a feature of the game. How Joe ever got on the bases is a mystery, for he doesn't lay any particular claim to be handy with the stick, but he got there just the same. To see Joe turn a couple of somersaults and then make a desperate slide for a base, covering himself with dust and glory, was a sight to behold. His trousers are ruined, but what of that? To speak of the achievement of all the boys would fill columns. All the boys played well, the number of runs made proves that. Here is the result for the seven innings played: Wholesale 30, retail 12.

But the fun didn't end by any means when the game was called at the beginning of the eighth inning. A thunder storm had been brewing for some time, but all were so intent on the game that its approach was unnoticed until a furious gust of wind sent the crowd scamper-

THE CHICAGO WHOLESALE AND RETAIL FLORISTS BALL TEAMS

ing for the nearest shelter three blocks away. Ed. Winterson stayed long enough to see his enemy, the lemonade wagon, turned bottom side up, scattering its contents to the four corners of the earth. The last that was seen of Ed. he and the owner of the aforesaid lemonade wagon were bravely trying to brace up the back stop, behind which they had sought shelter. The attempt, as proved afterwards, was futile. Whether the back stop had a grudge against Ed. or whether the gale was too much for it is a mooted question. But down the back stop went, burying our brave pitcher and his luckless companion beneath the debris. Besides a thorough ducking, however, our friend Ed. is all right again. Larry Kelley, Randall, Benthey and our valiant umpire and preserver of the peace brought up the rear of the crowd fleeing for shelter. This quartette was caught right in the midst of the tempest. There wasn't so much rain at first, but just enough to make a black and sticky paste of the clouds of dust, and it is safe to say that their most intimate friends wouldn't have known them when they arrived at the end of the race.

The next game of the series is scheduled for July 21, and will be played at Riverside. Court plaster, St. Jacob's Oil and horse liniment are now in active demand, and with its liberal application it is hoped the boys will be in good trim for the next game.

BOWLING.

At the practice games last Thursday night the scores were decidedly erratic. Here they are:

				Average
J. S. Wilson. . .	133	164	187	160
G. L. Grant. . .	195	160	156	195
E. Winterson. . .	207	154	172	183
Chas. Held. . .	193	185	195	191
A. McAdams. . .	175	124	141	147
F. Ohlund. . .	184	172		178

St. Paul.

Trade is quiet, though there has been an unusual amount of funeral work the past two weeks. Good greenhouse stock is not very plentiful, while white flowers are quite scarce. Sweet peas are inclined to be a drug, and sell but slowly. The season's trade is ended, and the growers are busy preparing for another year. Roses, as usual, will be the predominating flower. But very few Mermets are grown in this section; Cusin and Watteville are grown in limited quantities. Several of the growers are planting the Belle Siebrecht. For red Meteors and Wootton

are principally grown, though a few still hang on to Papa Gontier; if well grown, this variety is as good as any red rose yet introduced.

Frequent rains have kept outside stock looking fine, and carnations are away ahead of last year. Beds in the parks and lawns are likewise very beautiful, and give the city the appearance of one vast park. Where one flower was seen a dozen years ago, hundreds are seen to-day.

A review of the season's business finds most of the florists well pleased. In the line of cut flowers sales have shown a decided increase, while the quantity and quality were an improvement on previous years. In the plant line sales have been somewhat slower, and prices hardly as good as in previous years. One great detriment to the plant trade in this city is the large number of interior plants offered on the market. Good stock will command good prices, but oftentimes good stock at reasonable prices will not sell, when inferior stock will.

L. L. May has returned from an extended eastern trip.

Chris Hansen is just recovering from a severe bone felon, which leaves his finger stiff and disabled. FELIX.

Baltimore.

No one interested in horticultural matters can complain of the weather, for though excessively hot now and then there is always a rain followed by refreshing breezes, just before the heat becomes intolerable. All of which goes to show that the scribe's belief in "a sweet little cherub that sits up aloft" to look out for the florist man has some foundation; for in these hard times expensive sojournings by the sea or in the mountains are not for the majority. Speaking of hard times, a certain florist here was heard to remark the other day, "Business is about as good as it was in winter. We can't complain." This is the only report of its kind yet.

At the club meeting Monday night there was a good turnout of members, and wide awake at that, as the lively interest taken in debate proved. Possibly the most animated passage at arms was over the question of tubs or pots for the unlimited class of plants at the fall show. Mr. Jno. Donn argued at length for tubs, claiming that in no other way could the size be really unlimited, while others thought that as the schedule adopted said pots, pots it should be, whether unlimited or not. Mr. Christie did not want any Irish show in green tubs, a motion having

been made to have tubs allowed if painted green. The motion was finally carried. Two special premiums, from private parties, for the show were received with thanks, after which the question box being opened Mr. Jas. Pentland gave his method of growing poinsettias. After blooming lay them on their sides under the benches till June, then cut back to one eye of the new growth and plant outside in very rich friable soil. Give one pinching back and when potted up place in hottest part of house, keeping shaded and moist for awhile. If grown on richly bracts would be very large. Mr. Jno. Donn used much the same method, but grew in boxes, which when brought in and placed on benches had the sides removed, then by filling interstices with soil plants were secured without in the least disturbing the roots.

When asked at what season to sow cinerarias and primulas for Easter blooming Mr. Jas. Simpson said September; Mr. Chas. Hamilton mid-August. All the members present stood up when asked who were going to attend the excursion to Bay Ridge, so the success of the trip is assured. Mr. E. A. Seidwitz has invited all over to Annapolis to share his hospitality, and no doubt a large crowd will take the additional trip.

Madsen & Anderson are putting up two new rose houses 20x100 feet. Mr. G. V. Smith is putting up a lofty palm house on Mr. Chas. Hamilton's old place. MACK.

Washington.

Since the close of the public schools and all commencements are over, there is really nothing doing, excepting an occasional wedding decoration or a funeral order. At this season the society people are all out of town, either recuperating at the sea shore or mountain resorts.

Peas are scarce and of poor quality, owing to the continued damp weather. Dahlias and gladiolus have also been affected by the cool and moist weather.

Roses are not over-plentiful, but fully up to the demand. Kaiserin seems to be the rose for summer blooming, going far ahead of the Bride, and is growing in popularity every day. Maman Cochet makes a good pink for summer cutting, but I am told is not so good for winter forcing. Golden Gate is also growing in popularity and proving itself a valuable acquisition to our summer roses.

Lotus are coming in nicely, and while the demand for them is somewhat limited, they bring from \$2 to \$3 per dozen. Pond lilies have become so plentiful that the street fakirs are selling them at such ridiculously low prices that it does not pay the florists to handle them.

The Denver Wheel Club visited our city last week on their way to the great cycle meet at Asbury Park. The visitor spent Saturday in seeing the sights of the city, as the guests of the Georgetown Club. Mr. and Mrs. A. E. Mauff strayed from the club, and put in a few hours in the houses and grounds of the Botanic Garden. Mr. Mauff is in the florists' business in Denver, and was interested in everything, particularly the trees. He says the eastern florists are away behind the west in carnations.

J. L. Loose is busy erecting the first of a new range of houses at his place in Alexandria, Va. This one is 40x175, for roses. There will be a fine propagating house on the north side. He will change his heating system from steam to hot water. He finds that it pays to grow orchids for this market, and will increase the supply of these flowers. He has an immense stock

DELIVERY WAGON FOR LARGE PLANTS.

of adiantums, especially Farleyense and cuneatum. He has a thousand or more Farleyense in 5-inch pots, the finest I have ever seen, which he is at present shifting. The demand for ferns is increasing each year, more particularly for Farleyense, which with most florists is a hard fern to grow.
REYNOLDS.

OBITUARY.

Died in Atlanta, Ga., Sunday, June 30, after one week's illness, Thos. H. Brown, Vice-President of the Society of American Florists for Georgia, aged 25 years. Mr. Brown was manager of the greenhouse department of the Brookwood Floral Co. of Atlanta. He was formerly with the West View Floral Co., making a change a few months since. He was born in Belfast, Ireland, and has been in this country about five years, one-half of which time he has spent in Atlanta. It is with feelings of deepest sorrow that I record the death of this most excellent and promising young man. He was a man of sterling qualities, true hearted, full of enthusiasm and love for all that is beautiful in nature. He was much respected and loved by all who knew him, being a prince of good fellows, full of native wit and generous to a fault. His untimely death is a great blow to his many friends, especially to the writer of these few words, who had grown to love him very much and had experienced his kindness while passing through a very serious illness some months ago when living in Atlanta. He was a member of Georgia Lodge of F. and A. M., and was buried in their lot in Oakland Cemetery with Masonic honors on July 2. WILLIAM PLUMB.
Oyster Bay, N. Y.

WOODSIDE, N. Y.—V. S. Dorval is about to build one house 20x150 and another 12x100 for carnations.

Delivery Wagon for Large Plants.

The accompanying engraving is from a photograph of a delivery wagon recently built to order for Mr. Wm. J. Halliday, Baltimore, Md. It is 12 feet long, 5 feet wide and 8½ feet high, fitted with hot water heating apparatus for use in cold weather. The picture shows its several advantages quite plainly.

Exhibition Rules of the New York Florists' Club.

The following rules governing the exhibition of novelties which have been adopted by the N. Y. Florists' Club may be of value to other similar organizations having such exhibitions in prospect:

Rule 1.—For an exhibit of any new variety of florists' flowers or plants the committee would make it absolutely necessary that the initial exhibit of such flowers or plants be made at the regular meetings of this club, and the exhibitor of said novelty shall give at least ten days' notice in writing to the secretary before the meeting at which he proposes to exhibit.

Rule 2.—Anyone showing a novelty with the intention of obtaining the club's indorsement in any way the committee may recommend, either as a certificate of merit or a medal, or both, shall conform to the rules laid down by them for their guidance, as herein stated.

Rule 3.—Any exhibit of a novelty in the shape of cut flowers at the regular meetings, if considered of sufficient merit by the committee, they, or a portion of them, shall visit the place where it is growing, and if after careful examination of the same they deem it worthy of the club's indorsement, they shall award the same; but if in their judgment it appears advisable to defer the same till a second visit be made, they shall be at liberty to so decide.

Rule 4.—Points of importance that must be considered in judging novelties, 100 points as follows:

20 points for color.

15 " " form.

15 " " size.

15 " " stem.

15 " " distinctiveness.

10 " " foliage.

10 " " depth and substance.

In judging roses and carnations the committee shall at their opinion substitute 15 points for fragrance in place of the 15 for distinctiveness, as above.

Rule 5.—When a *new plant*, such as will be grown in pots generally, is brought to this club's meetings, if the committee is sufficiently satisfied as to its distinctive merits and other qualities without comparing with others of the same or nearly allied species, they shall be empowered to give whatever award of merit they may deem it worthy of without further examination. This rule to apply to *new plants* only.

Rule 6.—Cut flowers or plants may be exhibited from any section of the country, but the committee do not recommend that a general invitation be issued for the same to be sent from sections remote from this club's headquarters, as the necessary expense and time it would incur in traveling long distances to examine such things, as would be necessary so to do, would entail heavy loss on the committee; and, furthermore, it is the opinion of this committee that each florists' club should be applied to for examination of all such novelties in their own territory.

Rule 7.—In all cases where the committee be called upon to make any award or report, when there is a minority of the same, whether favorable or not to giving an award, the minority report, if presented with the majority report, shall be duly recorded in a regular book kept purposely for such reports, and at the same

time and manner that the majority report be entered, so that any or all the members of this club wishing to know the particulars of any special or particular report can examine the same at any of the club meetings.

The committee, after due consideration of all the points bearing upon the matter, are unanimously agreed that the expenses necessarily attending the traveling, etc., etc., to examine such things as may be considered of sufficient merit to warrant an investigation of the plants or flowers as growing in the greenhouse, shall be paid by the party requesting such, and we further recommend that if an initial exhibit be made in the club room, and the committee, after careful deliberation, consider its distinctive qualities sufficient to warrant further investigation, that the party exhibiting such novelty shall be notified that if he wishes the committee to go to the place for further examination he must forward the amount in cash to the secretary of this club necessary to cover mileage, etc., for at least three of the committee. The chairman of this committee shall first ascertain what such expenses would be, and advise the secretary of the amount, and in no case where the money is not sent in advance shall the committee be authorized to visit it.

In view of the heavy expense such journeys may entail upon this club, if said traveling expenses were paid by the club, we advise the above; but we do not advocate giving any notice of the time the committee will visit any place for completing their report.

Hymn to Jaggs.

Come all ye nations of the earth, when'er my muse it lags,
And swell the chorus; help me sing in praise of valiant Jaggs.
Sing out, sing loud, till all the echoes swim,
In laudatory music to the matchless worth of him.

Oh he knoweth every nation from Malay to Zuyder Zee,
And ne'er a tongue can fool him, e'en Chinese or Cherokee,
He speaks unhesitating, with unrivalled fluence,
And enjoys a conversation with a black Hindustanee.

Now when from England he departed and lit on Persia's strand,
He adopted all the customs and the costume of that land;
Took a little heathen wifie and of children raised a band,
And quickly did maneuver to get a harem on his hand.

Then unwitting like Micawher he fell prey to circumstances,
And lit out for other countries with a hole in his finances;
Yet he didn't even murmur or complain of fortune's whim,
For though he had deserved it yet there were no holes in him.

If on the seas, the stormy breeze raised waves like mountains high;
Though left alone, the only one, Jaggs still refused to die;
But swam unharmed through swirling waves' wild din—
The sharks refused to diue on him, he was too near akin.

And when he won unto the shore where dwells the Hottentot
Full many a lordly nigger King did think that fortune's lot
Had sent them Jaggs for stewing in their monster iron pot.

Oh Jaggs old boy, now hast thou need to do thy level best,
Or else full soon these niggers all, pot roast of thee will test—
Jaggs took a brace, screwed up his face, and thus the chief addressed:

"'Alloa! Ah there, me gay hold cove! 'Ow do ye think ye do?
It's bloomin' glad I ham indeed to clap my heyees on you!
I've roamed the 'ole world hover, till now I'm hout of cash—
I'll take your wad your darter too, she is me latest mash."

That nigger king turned deadly pale, he could not even speak,
At Jaggs' exhibition of his quality of cheek.
"Wot'nk! bijunks! We ne'er can eet a man so full of gall!
My wives and cash! Reveuge is mine—you've got to take 'em all!"

And having spoke, that colored bloke, turned up his manly toes,
While Jaggs, the king, wooed Mangi Jing, and soothed all her woes.

A year and day he held full sway, and then—must be confessed—
He lounged for more variety and so lit out due west.
Since then he's wandered many miles in every sort of clime,
And "done" full many a sucker usung of in his rhyme;
For Jaggs believed in Scripture—"up and doing" was his creed
Which he acted out right manful, in word and look and deed,
And if he tells some "stiff uns," that you can hardly credit,
Be careful and remember—'tis Jaggs himself has said it.

SO—

Come ye nations, sound the tum-tum, clang the loud whangdoodle and beat the sounding brass;
Proclaim it from the hilltops in the loudest kind of bass;
Clash it on the cymbals and on the big Kibosh,
Till the mountains swell the echoes, and the valleys too, by gosh;
While we sing in sounding chorus in accord with sweet hewgags,
The praises that are due unto the name of valiant Jaggs.

SAN FRANCISCO.—The receipts at the rose show were \$844.65 and disbursements \$642.74, leaving a balance of over \$200, the largest surplus the society has ever had after a rose show. The following system of judging has been adopted: Each member of the exhibition committee appoints a judge who goes around individually, examines the flowers and marks down their percentage of merit. One judge may not know any of the other judges until the percentages given by all of them are collected. No exhibitor or competitor is invited to act as a judge.

WINNIPEG, MANITOBA.—Braxton & Co. are succeeded by the Fort Rouge Greenhouse Co., F. Francis, manager. The Co. is remodelling the old houses and building three new ones, of which two are 10x100 and the other 19x100. The houses will have stone walls and butted glass 16x28. The additions will make the plant the largest in western Canada.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—As head gardener. Competent, and fully qualified. Age 30. Apply ISIDOR NAJEN, Pawling, N. Y.

SITUATION WANTED—By cut flower grower, propagator, nurseryman and general all round man; 10 years' experience in this country. Address JOSEPH FURMANSKI, 27 Emma St., Chicago.

SITUATION WANTED—As florist or propagator, in growing roses, carnations, chrysanthemums, general stock; also palms. Ferns; 20 years' experience; single Address M. care American Florist.

SITUATION WANTED—By German as head gardener or second man. Good designer and decorator. Wholesale or retail store. A florist all his life. References. Address K. care Am. Florist.

THE PRELIMINARY premium list of the St. Louis chrysanthemum show is out, and may be obtained from Mr. E. H. Michel, Magnolia and Tower Grove avenues, St. Louis. There is a number of special prizes, and a good show is looked for.

WE HAVE RECEIVED the premium list issued by the Oshkosh Florists' Club for their coming chrysanthemum show; it is very neat and attractive, but we note one serious omission—nothing whatever is said about the date of the show. The secretary of the club is Mrs. G. M. Steele, Oshkosh, Wis., from whom lists may be obtained.

An Inexpensive Decoration.

A good effect was recently worked out with inexpensive materials by Mr. Price and Miss Martin of East Rush, N. Y., in decorating a farm house on the occasion of a golden wedding. A large oval bank of native maidenhair fern, in the center of which was a mass of several hundred Coreopsis lanceolata was placed in the center of a table. The table was generously outlined with fronds of the same fern a short time before the guests arrived, and a few white roses and carnations were also used. The free use of the ferns subdued the vivid yellow of the coreopsis so that the general effect was rich without being startling.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.;
ALEX. ROGERS, 2nd Vice-Pres.; A. L. DON, 114 Cham-
bers St., New York, Sec'y and Treas.

Mr. J. C. VAUGHAN has returned from California.

Mr. CHAS. P. BRASLAN expects to sail for Europe August 3, per steamer Aurania.

MICHIGAN reports extra early peas 40 to 60% of a crop. Late peas in bad shape owing to the drouth.

Mr. BURT EDDY, representing Vaughan's seed store, sailed for the Bermuda Lily fields from New York on the 11th inst.

Mr. BURPEE's new dwarf sweet pea Cupid has received an award of merit from the Royal Horticultural Society of England.

Mr. E. SCHAEFFEL, representative for Vilmorin-Andrieux & Co. is expected in New York August 11 next on his annual autumn trip.

San Francisco Sweet Pea Exhibition.

At the exhibition of sweet peas by the California State Floral Society, June 14, an interesting feature was the able paper by Rev. W. T. Hutchins, Indian Orchard, Mass., the well-known specialist. The essayist asked members of the society not to rely on cheaply grown seed, as in such cases they would very likely receive an inferior article not up to the types of Mr. Eckford's selections. To produce well grown seed and maintain the standard, requires the services of high priced labor. He also gave descriptions of some of the newer varieties.

There were only two exhibitors at the exhibition, C. C. Morse & Co., and M. Lynch. The great attraction was Cupid, the dwarf sweet pea, which was exhibited in a pot. Next to this was M. Lynch's new white, The Bride, which was highly commended. Mr. Morse exhibited a new variety owned by Rev. Mr. Hutchins, which will be known as Daybreak, also Toreador, a very showy white with heavy crimson blotch and veinings, a sport originating with Morse & Co., and already sold to a prominent firm in the catalogue mail trade. Taken as a whole, it was the fullest sweet pea show ever held in California. The flowers were very nicely arranged, novelties of 1892 in one row, 1893 in another and so on. The society passed a vote of thanks to Rev. Mr. Hutchins for his valuable paper and to Messrs. C. C. Morse & Co., and M. Lynch for their displays. J.R.

Worcester, Mass.

Business is almost at a standstill, an occasional funeral being the only order of any consequence coming in, and of course a very little cut flower trade. Although nearly everyone is busy emptying their houses good flowers are still to be had in medium quantities. We have had nearly two weeks of almost continual rain, coming in intermittent showers, and giving the land time to soak it in; everything outside is thriving, and it would take a long and severe drouth to do much damage now.

No horticultural exhibition was called for last week, as Thursday, the regular show day, came on the glorious Fourth.

W. J. Herrick, who bought out C. C. Kenyon on the first of the year, has gone out of business. A. H. L.

My first consignment of the

W P.

MUSHROOM SPAWN

is due to arrive at the port of Phila. about the MIDDLE OF AUGUST. Most of the large growers have already engaged their early supply from this shipment, and those who have not already done so are advised to apply without delay, to prevent disappointment. The early crop has always brought best returns. Special prices on application.

PANSY SEED.

The Best is what everybody wants and will find in the **Diamond Strain**. Thousands of amateurs and florists whom I annually supply with this strain say it is the best. Its large and perfectly formed blooms with thick and velvety petals of an endless variety of rich and delicate colors and tints, many striped, mottled, blotched and variegated in every combination, distinguishes this strain above all others. The following is a sample of hundreds of reports I have received from florists who have used this strain:

"Allow me to congratulate you on your means of producing such elegant strains of Pansies. I buy seeds from all the Pansy Specialists but none of them come up to yours in size, substance and richness of coloring, showing that rich velvety appearance, which others fail to produce." **MERWIN ALLEN, Florist,** Northampton, Mass.

I have had an experience of 16 years in growing Pansy seed and know how to produce first-class seed. Price, over 50 distinct sorts and an endless variety, mixed, ¼ oz \$1.00; ¼ oz \$1.75; ½ oz \$3.25; 1 oz \$6.00. Cash with order. Money Order office, Amherst, Mass. Address **L. W. GOODELL, Pansy Park, Dwight, Mass.**

For Sale.

WHEN writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

News Notes.

BLOOMINGTON, ILL.—Mr. F. A. Baller is on a trip up the lakes to Marquette, where he will spend a week.

BIRMINGHAM, CONN.—This place is no longer a post office, correct address for the locality now being Derby, Conn.

ROCKVILLE, CONN.—Emil and Herman Schmeiske are building a rose-house 25 by 100. They report business as very satisfactory.

PHILADELPHIA.—J. S'hellem is building two new houses, one ¾ span 36x160 and one 20x100 for carnations and spring bedding plants.

MIDDLEFIELD, MASS.—E. H. Alderman, formerly of Shepard & Alderman, Oakdale, has started business here and will erect a carnation house 20x100.

ASHTABULA, O.—Wm. Bliss has withdrawn from the firm of C. H. Bliss & Son, and will settle in Florida, where he has purchased land in the Indian River district.

LA CROSSE, WIS.—The Salzer Seed Co. is going to make an addition to their mammoth seed house. It will be 40x80 feet, four stories high and covered with corrugated iron.

GALESBURG, ILL.—The greenhouse and cut flower business that has been conducted here under the name of Pillsbury & Gesler, will be continued by I. L. Pillsbury, Mr. Gesler retiring.

LINCOLN, NEB.—Mr. C. H. Frey is erecting two new houses, one 20x120 and the other 10x120. The first is for roses and the second for violets. This gives Mr. Frey a total of over 20,000 feet of glass.

GRAND RAPIDS, MICH.—The Wealthy Avenue Floral Co. have discontinued the partnership heretofore existing between Freyling & Mendels and Kunst & Ringold, the latter retiring and Freyling & Mendels continuing the business, probably under the same name.

LOUISVILLE, KY.—The first annual outing of the Kentucky Society of Florists takes place Thursday, July 18, at St. Matthews, Ky. Train will leave First street station at 9 a. m., returning at 6:32 p. m. The committee of arrangements includes E. G. Reimers, John Thompson and J. E. Marrett.

PANSIES. The Best from many growers, not the selection of one grower only.

INTERNATIONAL MIXTURE.

This mixture has been made up and sold by us for the past five years from the best strains known in Europe and America. We have in our files testimonials from leading florists in almost all the leading cities in the U. S. saying in effect "the best we ever had." Now if you would like to be convinced of this, drop us a line and we will send you the names of good men near you who will certify that VAUGHAN'S INTERNATIONAL MIXTURE has proven with them to be the best, most complete all round high class Pansy Mixture they have ever grown. Our four page price list of these and other seeds, mailed on request. The new crop seed is now arriving and can be sent at once, but after July 20th or August 1st our assortment of strictly NEW CROP SEED will be most complete. Trade pkt. 50c; 1/2 oz. \$1.50; oz. \$10.00.

CINERARIA. Columbian, mixed, pkt. 1000 seeds, 50c.

CYCLAMEN. Giant varieties, 60 seeds, 50c.

PRIMULA. Vaughan's International, per pkt. 250 seeds, 50c; 1000 seeds, \$1.25; 1-16 oz. \$2.00.

GIANT MIXTURE.

For those who desire the largest flowers only, and are willing to accept a somewhat less variety in the way of coloring, our GIANT MIXTURE has been especially put up. It contains only the largest flowers and during the last two years we have greatly increased the number of sorts. See list below. Price for Giant Pansy Mixture, trade pkt. 50c; 1/2 oz. \$1.50; 1 oz. \$5.00.

- Giant Trimardeau, white, large white with a violet center..... \$.25 \$ 5.00
- Giant Beauchamp..... .25 5.00
- Giant Trimardeau Improved, this strain contains all the new colors of Trimardeau..... .25 3.00
- Giant Cassier, a very choice variety of colors, each flower is marked with 3 or 5 blotches..... .25 5.00

Western Wholesale Nurserymen.

The semi-annual meeting of the Western Association of Wholesale Nurserymen was held in Kansas City June 25.

The meeting was presided over by President H. T. Kelsey, of St. Joseph, and the veteran secretary, U. B. Pearsall, of Fort Scott, was at his post. The individual reports showed that, taking the country over generally, there was a sufficient amount of stock on hand to meet the reasonable requirements of the trade for the coming year, and yet there was at no point a surplus. As was stated by one of the oldtimers, if there is a corn crop in the west they will have a market for every tree on hand or can get, but if there is a short crop or a scarcity, then there is certain to be some stock left over. Taking a reasonable and safe view, it was evident the stock on hand was as great as business prudence warranted. The outlook is good, but of course is based largely on the growing crops. There are strong indications that prices are to advance, certain they will in case there is a good crop and a strong demand for stock.

During the afternoon the secretary, U. B. Pearsall, of Fort Scott, presented his resignation, but the association promptly decided not to accept it. On the contrary, he was urged to remain where he was, and, as an evidence of the appreciation with which the association regarded his services, he was presented with a fine gold watch with an appropriate inscription. He has recently been appointed storekeeper in the state penitentiary at Lansing, and for that reason is going out of the active work of the nursery. He has held the office for four years and handled the business in such a manner that the members were not willing to dispense with his services.

Resolutions of sympathy for the family of the deceased member, Mr. John Mentch, of Winfield, Kas., were adopted. His is the only death in the association during the past year.

One feature of the business that has afforded no small amount of trade and satisfaction to the members of the association is the large number of commercial orchards that are being planted in different parts of the country. The eastern part of Nebraska is fortunate in getting a large number of them, and in various parts of the state of Kansas there are several of them planted some years since that are now getting in shape for producing great crops.

Kills Mildew and Fungus Growth. What does? **GRAPE DUST.** Sold by Seedsmen.

CONVENTION NUMBER

— OF —

The
American
A
WEEKLY
JOURNAL
Florist
FOR THE TRADE

Will be issued **AUGUST 17, 1895.**

In addition to other specially attractive features it will contain an accurate *CHART OF COLORS*, comprising 30 of the most important shades, prepared for the FLORIST by F. Schuyler Mathews. The color chart will be a permanent part of the paper as readers will be advised of the necessity of keeping it in the paper away from the light except when in use.

The expense of this chart has been very heavy, but it will lend to the issue, of which it will be a part, a very greatly increased value as an advertising medium, as it will be frequently referred to. Still there will be

NO INCREASE IN ADV. RATES,

which will be as heretofore :

FULL PAGE.....	\$42.00.
HALF PAGE.....	21.00.
QUARTER PAGE.....	10.50.
PER INCH.....	1.40.

Subject to time discount to those having term contracts with us.

Send ads. **early** so we may have abundant time to get them up in our best style.

The Convention Number will reach every Trade Buyer in the United States and Canada, and extra copies will be distributed at the Convention.

AMERICAN FLORIST COMPANY,

P. O. Drawer 164.

CHICAGO.

Rochester, N. Y.

All this summer extremely dry weather has prevailed here and in this vicinity, and all planted out stock suffered badly. Carnations, with the exception of a few robust growers, such as Daybreak, Scott, Portia, etc., make very little headway, and are in some cases not any larger now than they were when planted out. Asters and all annuals are small and stunted, and it is feared that the crop of such flowers will be very short. Nearly all the herbaceous stuff does not last in bloom as well as other years, and many choice things are fairly burned up owing to this extreme dry spell. However, last Monday we had a few hours of gentle rain, and it is hoped that all fall and winter stock at least will be greatly benefited thereby.

As to the flower business, there is no change since my last; everything goes very slow, and the demand is very light. Most of the upper or fashionable class of people are either gone or preparing to go out of town, and there will be at least two months' rest to the weary retailer, and also for the commission man. The growers, however, are always at work, and many have begun repairing and making additions or alterations.

Salter Bros. contemplate building several more houses at their place in Fairport. J. B. K.

News Notes.

MARQUETTE, MICH.—The Iron Cliffs Co. is preparing to build a greenhouse 22x100.

WEST GROVE, PA.—John McLimans has leased the Henry Jackson greenhouses for five years.

SCOTSDALE, PA.—John Nichols intends to add a new house 16x60 this summer. Trade has been very satisfactory here this spring.

SAN JOSE, CAL.—Preparations are already being made for a monster floral carnival next spring. It is proposed to expend \$50,000 on the affair.

TACOMA, WASH.—The rose show beginning June 15 was largely attended, and the display very full and complete. One exhibitor alone displayed 60 varieties of roses.

AMHERST, MASS.—Mr. Geo. E. Stone of Worcester has been given the professorship and supervision of the botanical work at the Mass. State Agricultural College.

WILMINGTON, DEL.—The Park Commissioners are arranging to borrow \$25,000, to be expended in improving the parks. A movement is on foot to have a floral exhibition this fall.

MANSFIELD, O.—The Berno Floral Co. is erecting two new houses for carnations and "mums." This firm makes a specialty of cut flower and decorative work. Trade has been very good.

KALAMAZOO, MICH.—Trade has been very satisfactory as a whole the past season. The principal increase in trade of late years has been in sales of cut flowers. The plant business does little more than hold its own.

PEORIA, ILL.—The park commissioners will issue bonds soon in the sum total of \$200,000. Of this sum \$140,000 will be used to pay for the parks already bought. The other \$60,000 will be expended in salaries and improvements at Glen Park. There will be \$5,000 spent at Bradley Park this year, but no other tract will be touched.

READING, PA.—A fine wedding decoration was recently arranged here by J. G. Brown. A handsome feature at the church was the use of five yuccas in bloom on either side of the chancel, sweet peas being freely used, in addition to palms and decorative plants. At the house a large wedding bell was suspended over the bride cake, and ivy was freely used in draping.

PROTECTION FOR HOSE AT LAST.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Red Spider Can't Live WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the under-side of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD,
Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.
Yours truly, E. G. HILL & CO.

Price, \$1.00 each, prepaid. TRY IT, AND RETURN IT at once, if not satisfactory, and your money will be sent back.

M. M. JONES, Gen'l Agent, 6122 Oglesby Ave., CHICAGO. Over 7000 in use July 4. Over 200 sent to readers of the FLORIST on approval, and none returned.

THEY LIKE THE "SPENGE."

Office of T. L. LOWDEN & SONS, FLORISTS AND MARKET GARDENERS, ETC., ETC., 255 Pomeroy Avenue, Pittsfield, Mass., May 26, 1895.

"We are heating 7 houses—nearly 8,000 feet of glass—with just one "Spence" hot water Heater. In the very coldest weather last winter we would fire up at 9 in the evening, close pipe damper and leave only 1/2 draft damper open. It needed no more care till 10 a. m. next day, if cloudy; if sunny it was unnecessary to touch the fire till 3 p. m., and we never half worked the heater. I believe I can heat 8,000 more feet of glass with your heater, and not strain it. In one house I have 1 1/2-inch pipe, another 1 1/2 pipe, 2 houses, 2 inch pipe; one house, both 2 and 3 inch; still another, 4 and 3-inch cast pipe; and the last, 2 and 3-inch boiler tubing—all kinds and sizes, you see. When we first started the fire we had no repairs or alterations to make other than to tighten up loose joints. The heater has been running two seasons and is all right. We have another range of 8,000 feet glass which is heated by two steamers, and our experience is we can beat the steamers every time and in every way."

Nomenclature.

The Nomenclature Committee of the Society of American Florists desires information as to any cases of misnaming or confusion of names in American decorative plants, as well as any other matters coming within the line of duty of the committee. Communications should be addressed to the chairman of the committee, Professor William Trelease, St. Louis, Mo., without delay.

Carnation Notes.

I am very glad Mr. Rawlings presented the case of bone meal as he did on page 1257. In the first place there is all the difference in the world in the bone which we purchase as to the time which is taken to decompose it or to get it into condition for the plant. I believe from my own experience and that of several experienced growers that the finer the bone is ground the quicker it will decompose. Bone as I understand it is used more as a staying manure than as a quickener, and for this reason I mix it with the soil on the last turning.

Now as to this leaching away of ashes and all other fertilizers. This idea I believe to be a fallacy so far as applies to outside work. Of course on a bench where there is only three or four inches of soil it is very apparent that a heavy watering will carry essential elements through the soil with it, as can be readily seen by watching the color of the water after it has passed through the bench, but when outside I have every practical reason to believe that the soil absorbs all that is in the manure and this too near the surface where the plant growth is sure to need it. To demonstrate this fact let Mr. Rawlings manure a piece of ground heavily in preparation for any crop, then after several heavy rains have fallen remove from a given space the soil to the depth of eight inches, remove then soil to the depth of four or five inches and have it analyzed by some expert and see if there is any fertilizing material in it.

There are many soils which need no bone. This can only be determined by testing a part of a bench without the use of bone. I have repeatedly advised the carnation growers to test this for himself not only with bone, but also with every other fertilizer. Again with the same grower different varieties of carnations require different manures. The Daille-douze Bros. tell me that bone is no good with them, also that they use horse manure, which on other soils would be ruinous. We can help the growth of plants by preparing the soil in such manner that the plants can take hold of the manures at once, by having them thoroughly decomposed, but I believe it is a practical fact that plants themselves help to decompose such matter as bone, and that by applying bone as I have stated the plant will take up as much of the elements in bone as they require and when they require it. And further-

more, if in certain soils plants do not require the bone and it is applied, the bone will be found after the plants have been removed. I do not pretend to be an expert in the analysis of manures but base my opinion simply upon practical experience on my own place and in observing results obtained by others.

CHAS. H. ALLEN.

Chicago Carnation Notes.

The outlook for good carnation plants for next season was rather dubious until the heavy rainfall of Sunday made a welcome change. Of course there is plenty of time yet for the plants to make a good growth, besides extra large plants are not always the most desirable. The record made by carnation growers in this vicinity the past season was in most cases a gratifying one, the general average of quality being far in advance of that of the few years preceding. The most satisfactory part of all was the fact that the stock sold readily at good prices. Few men in the business have probably had better returns on their investment than those who knew how to grow first-class carnations. There is little danger that this flower will be overdone for some time to come. During the best part of the past season really first-class flowers were below the demand, and this is likely to continue unless every one engaged in this particular line should produce a gilt-edge quality, which isn't likely. Although, as we have said, the general average of carnations has been greatly improved, yet a large quantity was also of a very poor grade, and would offer a still larger field for improvement.

As to variety, most of the older and tried sorts will constitute the bulk that is grown for next season. In whites Lizzie McGowan is largely planted. This variety in a general way proved satisfactory last year, although in some respects not the ideal white. Silver Spray, which threatened to be annihilated by the rust, is not a dead issue by any means. This variety has done much better in many places last year than for some years previous. Its old enemy, the rust, is being kept in check and when kept free from this trouble it is a white hard to beat. Henry Mundt has cut all winter, and is cutting now for that matter, as fine blooms of this variety as any one wishes to see. A number of other growers also had satisfactory results and will stick to it at least until a better one is found. Puritan was grown at a number of establishments, but with most was rather unsatisfactory.

Uncle John, as stated in our previous notes, was in most places destroyed by the rust. H. Mundt, who had it in fairly good condition in winter, reports that it gave out very early in the spring and hardly thinks it will be a paying variety for the market.

Alaska is being tried by a number of

growers. Mrs. Fisher is largely planted for summer flowering. It is probably the best sort for this purpose. In reds the past season was rather a failure. Garfield, except at one or two places, was poor and unsatisfactory. Portia did fairly well, and for want of a better variety of a proven quality will constitute the bulk of stock grown for next year. Lizzie Gilbert, which promises well, is planted in limited quantities at a number of places. Emily Pierson also is planted at a few establishments. Tidal Wave of course is a standard sort of sterling qualities. This variety was grown to perfection last year by a number of growers, and doubtless proved one of the best paying sorts. Although classed with the pinks it often fills the place of a red or a pink. This sort is being grown in large quantities this year.

Scott has superseded the old Grace Wilder, which latter is now a thing of the past. Scott, at least for this section, is the most desirable variety of the darker pinks. The stock is robust and free of disease. It is a good seller on the market, which is one of the main points in a flower. The coming season will see it in abundance to judge by the amount of stock planted. Daybreak hardly needs mention. It is such a thoroughly fine carnation, and its general behavior is so good, that no grower can afford to be without it. Enormous lots of this variety were grown for our market last year, but very seldom this sort had to wait for a buyer, even the poorer grades selling readily. Let us have more of them.

Helen Keller was fairly satisfactory, though some of the growers complain of the buds blighting more or less in mid-winter. It is doubtful if our market would absorb this variety in very large quantities, the demand for striped varieties being rather limited.

We are still looking for a good yellow, at least a yellow that our growers can manage to bloom in winter. Bouton d'Or behaved well with A. T. Jackson, who is growing it more largely this year. Several others are also giving it a trial. Fred Stielow is growing plants enough of Buttercup to fill a house, and we hope he may succeed and bloom them nicely. There is no better yellow we know of than Buttercup, if we could only grow it. Dean Hole, which is so highly spoken of, is on trial with John Ure and several others.

Kaiserling is to the front again as a good summer rose. Most of those who gave it a trial last year are in for it again, with an increased amount of space. Reinberg Bros., W. N. Rudd and Bassett & Washburn are among the growers who gave this rose a more or less extensive trial last year, which in most cases was quite satisfactory. While the rose in mid-winter was not up to the best standard as compared with the Bride, still the blooms were fairly good in quality and the cut better than expected. Its main value, however, as we said before, is its excellence for summer as soon as the hot weather sets in, when the Bride is forced

to the rear. The coming season will see this rose more generally grown. The Reinbergs have planted a half dozen houses, and are at present cutting some very fine blooms from them. Rudd, Bassett & Washburn and a number of other growers are sending in good blooms of this variety. Poehlmann Bros., of Morton Grove have two very fine looking benches of them.

Testout also proved very very satisfactory with most of those who gave it a trial last season. The three firms mentioned above and A. T. Jackson, of Bowmanville, furnished the bulk of the stock. The rose is certainly a first-class seller on the market, at least for home consumption; as a shipper, however, it is not always satisfactory, particularly in warm weather. The flower pops open very quickly and the petals drop too soon. Still on the whole the flower is satisfactory, and will doubtless have a good run next season. Reinberg has planted some seven or eight houses of it.

Mrs. Whitney was on trial at three or four places last winter. Kennedy, of Lake Forest, had a bench of several hundred plants, which did finely until mid-winter, when all the plants dropped their foliage, which, however, was owing to the damp atmosphere of the house, according to Mr. K., and not the fault of the rose. Stollery Bros., of Argyle Park, grew a small batch of about 100 plants, and as we saw it at their establishment it is certainly a grand rose. It is a vigorous grower and of free flowering habit, and worthy of more extensive growing. Mr. Bassett, on a recent visit to the East, was so much pleased by the appearance of this rose as seen growing there that he will devote several houses to them this year. Numerous other growers will also give it more or less of a trial.

The two new candidates for public favor, Mrs. Pierpont Morgan and Belle Siebrecht, will be on trial the coming season. The former, Pierpont Morgan, will be given an extensive trial by Bassett & Washburn, who have planted several thousand plants. A number of other growers have, however, only invested in small batches of 25 to 100 plants. Every grower who has seen a flower of this variety likes it, but most of them are rather cautious in giving it a trial on account of its parentage, the Cusin, which never would do anything out here.

Belle Siebrecht, however, will be right to the front. Hardly a grower of any prominence but has at least a hundred plants of it. We have seen this rose growing in at least a dozen places, and it looks vigorous and healthy everywhere notwithstanding the fact that the stock when received was extremely small and rather weak. The rose appears to take right hold of our soil, and judging by present appearances will prove satisfactory. There is one point, however, claimed for it that isn't borne out according to all the growers that expressed an opinion, and that is in regard to black spot. Whether the variety is subject to this disease or not we cannot say, but it certainly is not proof against it. The rose on the whole, however, is very satisfactory as far as its growth is concerned; of the blooms we shall judge later. Among those who are growing this rose in lots of 500 to several thousand are Reinberg Bros., Bassett & Washburn, Poehlmann Bros., F. Stielow and E. Buechner.

Bedding at Washington Park, Chicago.

The illustrations in this issue show a few of the beds on the slopes which were in previous years the scene of the very

elaborate carpet work. Naturally the photographs present the form without the charm of coloring. Most of the formal beds are composed of succulents, oxalis and alternanthera, but among other plants used begonia Vernon takes high rank. The begonia bed at the end of the slope is composed of this variety in three tints—pale flesh, pink and crimson. The darkest one has particularly richly colored foliage, and makes a grand showing in the mass, the colors being grouped separately. The coleus beds are also very showy. Among other plants doing especially well are the lobelias, which make solid garlands of blue, and the pansies, which keep in fine bloom, despite the dry hot weather. The cannas are planted along the top of the slope, and they promise a fine show later. The lily ponds are also doing well; among the plants at the edges the forget-me-nots make a sheet of blue. *Bocconia cordata* among the taller plants makes a fine show with its plume of creamy flowers.

Herbaceous Plant Notes.

Astragalus hypoglottis albus differs from the type, *A. hypoglottis*, only in the color, which is as the name indicates of a pure white, while the latter has white, blue and purple variegated flowers which are produced in a roundish head, springing from the axils of the leaves on stems standing out well above the foliage. The latter is pinnatifid and of a dark green color, while the stems are hairy and creeping or prostrate. It is a very ornamental plant for rock work or the edge of the border, growing only 3 to 4 inches high, and it delights in dry soil and a sunny situation, flowering freely from the latter part of June to the end of August. *Astragalus alopecuroides* blooms in compact oblong spikes on axillary peduncles, and is one of the best taller varieties of the species. The flowers are a light yellow, very pretty, and remain in perfection from the end of June to the latter part of August. The leaflets are covered with a whitish down, and the habit of the plant is erect, growing 2 to 3 feet high.

Veronica incana is a compact perennial variety with rather narrow and pointed white woolly foliage and fine blue elongated flower spikes, very freely produced from now until October. It is one of the very best of the genus, but rarely seen, and should not be omitted in any collection, for it blooms such a long time. Height 1½ to 2 feet. *Veronica longifolia subsessilis* (syn. *V. Hendersoni*) is a beauty with long cordate dark green leaves, erect stiff branchy spikes of very large deep blue flowers, remaining in bloom from July to October. Decidedly the most desirable and attractive veronica, but very rare; it attains a height of 2 feet and is of very easy culture.

Silene quadriauriculata is a little gem, very free flowering from July to September. It has very light pink flowers, sometimes white, of the same size and shape as *S. saxifraga* and is a fine thing for either the rockery, the front line of the border, or for edging. The plant only grows 6 inches high and is densely tufted.

Chrysostemma tripteris belongs to the coreopsis family and is now beginning to flower well, developing a great mass of rich golden yellow and brown star-shaped flowers, the disk of which will turn brown as it grows older. An exceedingly free blooming plant of tall and graceful growth with narrow lanceolate foliage and well adapted for the back of the border or the shrubbery. Five to six feet is

CARPET BEDDING IN WASHINGTON PARK, CHICAGO, THIS YEAR.

the height; will bloom from now until frost and is desirable as a cut flower. An odor of anise is emitted by the flowers when bruised.

Epilobium rosmarinifolium has numerous large pink or pale red flowers produced from the top of the branches in long spikes, which are very useful for cutting, as they last a long time in water. The stem is erect and stiff, branched from the middle up, about 2 feet high, and the leaves are small, narrow and lanceolate. This pretty plant will remain in bloom from July to September, and though not difficult to grow it is rather rare in this country.

Agrimonia odorata has flowers of a larger size than *A. Eupatoria* and also grows taller and stronger, but blooms later, beginning in July and lasting well through August; the long, slender erect spikes bear numerous golden yellow flowers, closely set along the stems. The leaves are pinnate and very sweet scented, of a dark green. The plant forms a compact bush and grows to a height of 2 to 2½ feet.

Chrysocoma Linosyris blooms profusely from July to September in dense terminal flower heads of a golden yellow color, and stands our dry summer admirably, forming a neat compact little bush with narrow fine lanceolate foliage, thickly set opposite or sometimes alternate along the branchy stems. Height 1½ feet, will do well in dry places, but does not exactly require such a situation.

Polygonum amplexicaule is a very fine ornamental plant with dark green

broadly cordate leaves and bright deep rose-colored flowers in elongated racemes 4 to 6 inches long, blooming from now until frost. It grows from 2 to 3 feet high and spreads considerable, therefore plenty of space should be allowed in planting. Abundance of water and rich deep soil will greatly assist in producing very fine specimen plants of this free flowering and very ornamental species, and a little extra care will repay the cultivator well by extra sized flowers and finer foliage, although under ordinary care in the border fair specimens can be grown. It often attains the full height of 3 to 4 feet.

Lythrum roseum superbum is a desirable and very hardy plant for the border or low shrubbery; the flower spikes are very freely produced during July and August. The florets come in whorls arranged around the erect stiff stems, are of a rosy color and make a fine show in the garden without any special care whatever, even in the dry summer months. The height is about 2 feet.

Chrysobactron Hookeri is a very rare plant, but a very handsome one, blooming freely and constantly during July and August. The flowers are of a very bright yellow and are produced in abundance on long stiff erect racemes. The leaves are from 9 to 12 inches long, broadly linear, grass-like, of a dark green when mature, but when first coming out in early spring the points of the young growth is of an intense orange scarlet color, and from a distance look like a mass of flowers, where they are planted thickly, and if the

plant had no flowers at all this spring ornament alone would make it most desirable, for in spring blooming plants we have none to give us this intense and dazzling color. It succeeds best in a moist situation and should have plenty of water if planted in the ordinary border; height 2 feet. This plant should be grown largely in all collections, but unfortunately stock is very limited and it takes time to raise enough from a few plants to make a show, although they divide easily and the smallest offset will make a good growth the first season. There are so many herbaceous plants of easy culture that have become very rare and almost extinct, but with the revival of interest in them as manifested in the last few years, I hope that most of the more desirable ones will be plentiful in the near future, and sold at popular prices. As it is now, high prices are the rule for rare things and people are indifferent as to buying them unless they actually see the plants and take a liking to them.

Rochester, N. Y. J. B. KELLAR.

Removing Whitewash From Glass.

A subscriber wants to know how to get two heavy coats of whitewash from his glass; he says it sticks worse than paint. As whitewash is usually put on the heavy rains wash it off, and early frosts in the fall, followed by rains, always bring it off. If it must be removed sooner, I know of only one way, and that is to use lye. A good way to apply it is to have a large sponge or bunch of cloth

on the end of a pole, keep the sponge saturated with lye, and rub over the glass, and let another man follow with a strong stream from the hose. If it is very tenacious you can syringe on the lye, follow with a stiff brush, and then the hose.
W. S.

A Violet House.

A subscriber who signs himself "A Florist" wants information on the above, how to build and how to ventilate a house best suited to grow violets through the winter. It was not necessary to say through the winter, as that is the time for violets. As I have had occasion to remark before in these columns, I have seen violets in almost all shapes and sizes of houses, and under very varied conditions, and I have seen houses built especially for them which were a total failure, but all that does not abolish the fact that there can be an ideal house for violets.

I trust my good friend Mr. Rawson will pardon me using his name, and also describing his style of violet houses, for he is about the most persistently successful of any one in my limited acquaintance. His houses are long and narrow (about 10 feet), solid benches. He plants his young plants in May or June and removes the sash. The violets are just the same as being out of doors only he has better control of them with hose. In September perhaps the sashes are put on. Everybody concedes that the solid bench is better than the shallow bench of 4 to 5 inches of soil, yet the finest violets that came to our market last winter were grown on the shallow bench. I think I know how to build the ideal violet house, and shall carry out the idea in the near future; here it is without reserve.

The house will be 11 feet wide, any length desired, running *north and south*; the side walls will be 3 feet 6 inches. The beds will be built on the ground with 1 foot of drainage and 1 foot of soil. The ventilation will be 2 feet deep from the ridge, continues the whole length of the house, and only on the east side, but if expense is no object you can put ventilators on both sides. Now here comes my wrinkle, if I won't be called egotistical: Instead of sash, which always make a dark house and are a nuisance generally. I shall *but* the glass, using the cap without putty. When time to remove the glass, say in May, the cap can be unscrewed and the glass removed and stored away till fall. If you think this is a good deal of a job I can safely assure you that one man and a boy will take out the glass of a house 100x11 easily in a day, and replace in 2 days. Remember there is no need of breaking a single light in the operation, and what a grand chance to give the hars a coat of paint when the glass is out. I may add that whether heated by steam or hot water I should run the pipes 1 foot above the plants on the side wall. In butted glass always use square; 12x12 or 14x14 would do finely for violets. The pitch of the roof may be 45° or a little less.
WM. SCOTT.

Through American Eyes.

The successful florist of to-day is always on the move; he is not satisfied to stand still and contemplate his work of the past. He may have done well, very well, with his specialty, but this result only nerves him on to do better. He is always on the lookout for improvements to his plant, stock, or his methods, and thousands of dollars are used intelligently

every year by this wide-awake class in carrying out their ideas. The success of the H. A. Dreer Co. is a good example of what can be done by bright progressive men. From a comparatively small plant they have in the last ten years added to their establishment until it is now the largest in this country, and plans are drawn and the plot laid out for an additional range of glass that will cover over one acre of ground.

In order to be up to date with the demands of the trade both in this country and Europe, Mr. J. D. Eisele, a member of the company, and one of the best palm specialists in the United States, spent some time recently visiting the palm-growing centers of Europe. Through the courtesy of an interview with Mr. Eisele, we are able to give to the readers of the FLORIST the following account of his trip and his impressions of the business as conducted on the other side.

One of the most extensive places in England, and probably in the world, is Thos. Rockford's, at Broxbourne, about sixteen miles out of London. They do not count the extent of their place by the thousand feet of glass, but by the number of acres of ground covered, which at the present time is eighteen, a new addition of two acres having just been completed. A force of carpenters and painters are kept constantly employed in erecting and looking after this immense range of glass. The houses are built mostly on level ground, and are of equal span, a number, four or more, being built together, the gutters resting on iron pipe supports, and sufficiently high to give headway, and so that an almost unobstructed view can be obtained over the whole range from any part of it. The tables are constructed of iron and laid with clay tiles, six by ten and half an inch thick. The heating is done with hot water, ordinary 4-inch pipes being used, connected with 6 inch mains on the returns. The boilers are in the greenhouses, but the stoke-holes are outside entirely without cover. This, together with the fact that the houses are not connected by sheds, causes general comment by American visitors. Ventilating is also done in a curious way by a lever at one end of a house, no special system being used. The largest house is one built for palms, and is three hundred feet long, fifty-two wide and twenty-eight feet high; this is filled with specimen *latanias* and *kentias*, and other large palms, among them being some *Cocos Weddeliana* ten feet high. They had no *arcas* in over 3-inch pots, in fact no specimen *arcas* were seen either in England or on the continent; they don't seem to do well, making a spindly growth, not bushing up as they do in this country. A few good sized ones had been imported, but they looked as if they wished they were back again. A great many *kentias* and *latanias*, as well as *aspidistras*, are grown here, mostly in 6 and 7-inch pots, and rather taller than we like them, the English dealers preferring a tall to a bushy specimen.

Dracenas amabilis, *regina*, *stricta*, *grandis*, *imperialis* and *terminalis* are grown in large quantities in 6 and 7-inch pots; they are mostly all sold in Covent Garden market, bringing from three to four shillings a plant. Ferns are grown largely in 3, 5 and 6-inch pots, a great many of the latter size being used as table plants. *Lomaria gibba* seems to be a great favorite, and three houses two hundred and twenty-five feet long were given to this variety alone. *Pteris cretica magnifica*, *P. Mayii* and *P. tremula*, *Polypodium aureum*, *Pteris argyrea* and

Nephrolepis exaltata were the other principal varieties. Quite a number of varieties are grown suspended from the rafters so as to make pretty individual plants; especially is *nephrolepis* in 5 and 6-inch pots grown in this way. The 3-inch pot ferns sold for £1 per hundred, and for the 6-inch the prevailing price was one shilling each (25 cents).

Many ranges of houses are given to forcing fruits and vegetables for the London market. Grapes, cucumbers and tomatoes are the principal products. Something over ninety tons of tomatoes were marketed in the winter and spring of '92. Each department is in charge of a foreman who makes a specialty of his particular branch; these foremen receive from thirty to thirty-five shillings per week.

One of the most interesting ranges on the place is that used for forcing lily of the valley, for which flower this establishment is particularly noted, the first choice being no doubt the finest produced anywhere. Six houses two hundred and fifty feet long by ten wide comprise the lily range, and between thirty and forty men and boys are employed in this branch during the forcing season. They have copied the cold storage system since its adoption in the United States, and orders are now filled the entire year. The work in the valley houses is done very systematically; planting, cutting, sorting and bunching is all done by piece work, and the several gangs of men and boys attain wonderful proficiency in their particular branches. After being cut the sprays are graded and bunched into firsts, seconds, thirds and culls, and packed in separate boxes ready for market. Very great care is exercised by the buyer as to the quality of the pips for forcing. Although bought by the million a higher price is paid than the very best pips are sold for in the smallest quantities in the United States. They are bought entirely by samples which are carefully preserved, and if in filling the order the quality does not come up to the standard the condemned lot is returned entire.

Chrysanthemums are largely grown, some forty thousand plants in 10-inch pots being sold last season. These are both cut and sold in pots, according to the demand. The crop of late varieties had just been cut out at this time (January 10). Great quantities of Easter lilies were seen coming on, all *Harrisii*.

Almost the entire product of this immense establishment is sent to the Covent Garden market, and no plant when once off the place is allowed to return. Nothing is imported or bought, everything being raised from seed. It was thought by this method that the plants would never become infected with insects, but they are there just the same, and what is your best remedy for scale is a question often put to the visitor. Nicotine and petroleum enters into all the insecticides offered in Great Britain; every grower seems to have a formula of his own, but none seem satisfied, and all are anxious for something better. The pots used are all hand made, and they did not present the neat and uniform appearance of our best machine make here, there being quite an irregularity noticed in those evidently made for the same size.

One very noticeable difference to methods employed in the United States was the watering; there was no hose to be seen anywhere. All this work was done by the watering pot with rain water obtained from cisterns underneath the benches. There is no windmill, or steam pumps, or connection with other service,

CARPET BEDDING IN WASHINGTON PARK, CHICAGO, THIS YEAR.

and this seems to be universal all through Great Britain and on the continent, in fact we did not see a hose from the time we left until we returned.

H. B. May is a large Covent Garden grower; his place is at Upper Edmonton, a few miles out. He grows large quantities of ferns in 5, 6 and 7-inch pots. His stock consists of *Polypodium aureum* by the houseful, *Selaginella Emilianoa*, a fine thing as he does it in 6-inch pots; and immense quantities of adiantums. A house was devoted to carnations, Malmaison type, in pots, quite a number of which were in flower, but all badly bursted, before being sent to market a small rubber band was slipped around each calyx. When cut the flowers were all pinched off short. One of the best was named Uriah Pike; it was a fine dark crimson. None of the American varieties are being tried. Among other plants grown in quantities here was *Aralia Sieboldii*; this was done well, and made a very salable plant. *Cyperus alternifolius* in 6-inch pots was also to be seen in quantity and in fine condition.

At Wm. Paul & Son's place was noticed two houses of pot roses, being tied out for exhibition purposes, much the same as chrysanthemums are staked here.

At Hugh Low & Co.'s we found a great quantity of New Holland plants being grown in the very best manner. Cyclamens were seen in 5-inch pots that were a revelation; they were perfect masses of bloom. They brought about 38 cents each in the market. Heaths were also done

very well, *Erica persoluta* and *Wilmoreana* being particularly fine. The collection of orchids here was large and in fine condition; they make a specialty of these aristocrats, and do them well. There were five houses full of genistas, and a great many double primulas were also grown to be sold in pots and for cut bloom.

Messrs. Veitch & Sons' place was a model retail establishment, everything being as clean as a new pin. This house has a large high-class trade, their specialty being new and rare plants.

Philip Ladd at Swanley Junction has an immense place; there are over one hundred houses, from two hundred feet long upwards, the largest being six hundred and eighty-six long by twenty-five wide. An eight hundred feet house had been tried, but had to be divided, as it was found very difficult to heat it evenly. Seven houses were filled with *Niphetos* grown in pots for cutting; the buds were all sold short with no stems of any consequence.

Wm. Whitely has a large place some twelve acres in extent, entirely surrounded by a wall seventeen feet in height. He grows plants and cut flowers, as well as hothouse fruit; these are disposed of in his large department store, on the plan of John Wanamaker at Philadelphia.

Greenhouse establishments in the immediate vicinity or suburbs of London have a great deal to contend with in the almost ever-present fog; it is oftentimes so thick that one cannot see the other side of the

street. This fog collects a dirty greasy substance and deposits it on the plants; it seems impossible to keep it out of the houses, and a force of men are continually cleaning and keeping the stock in presentable appearance; the syringe alone has no effect on this greasy dirt. This sediment seems to seriously interfere with orchid flowers, injuring the young buds.

With the exception of a few *Niphetos* and M. Niels, no roses are forced in England for cut flowers; this is owing to the lack of sunshine during the winter months. During our stay, a period of three weeks, there was but one clear day. Violets also are not forced, probably for the same cause. The grounds surrounding the private residences in the suburbs of London were very carefully kept, and contained many fine specimens of aucubas, Portugal laurels, English holly, *laurestinus* and great quantities of *rhododendrons*; all looked beautiful and green. The *laurestinus* were just coming into flower. A severe cold spell, unusually so for London, had just been experienced, but the shrubbery seemed to be all right; this was the 12th of January. Snowdrops were to be seen peeping through in sheltered places.

Covent Garden market is a place of great interest to the American florist. The quantities of plants and flowers disposed of here every day is enormous. The building has the appearance of a large market house, and stalls are rented by growers and dealers, who do business side by side. The flower building covers about

one acre of ground, and the fruit market alongside about the same. The market opens 4:30 a. m., and the business is all over in three hours. The assortment of cut flowers offered consisted of great quantities of bulbous stock, valley, hyacinths, tulips and narcissus; there were plenty of wall flowers, geranium flowers and ten weeks' stocks. These were all offered by the growers. The dealers handled great quantities of stock from the south of France. The old Safrano was their principal rose; it was put up in bundles of 12 flowers with fairly long stems. They came in hampers 8 dozen in each. They also handled considerable bulbous stock, which was sold very low. The London growers complain bitterly of this imported stock, for while theirs is better, this is good enough for the cheaper trade, and lowers their prices considerably. There were no longiflorum or Harrisii lilies, nor did we notice any callas.

Thousands of plants of all kinds are sold here every day. On entering the market about five o'clock it seemed as if it would be impossible to unload the stock in a single day, yet by half past seven it had almost entirely disappeared. A great many flowers and plants are sold by the street men, or fakirs as we call them, who load up push carts or hand barrows and peddle them along accustomed routes or sell them at street stands.

In Germany the principal flowers forced are lilacs, viburnum, valley and bulbous stock. Quantities of lilacs and viburnum or snowballs are grown and sold in pots. The snowball in the stores is decorated with crepe tissue, the stems of plants being so wrapped about as to expose nothing but the leaves and flowers. They call it the Guelder Rose. The varieties of lilac forced are Charles X, Mme. Lagrange, and Mme. Lemoine, new double white. Some good cyclamens are grown, but not in any quantity.

In Dresden all growers are specialists, principally in camellias and azaleas. J. T. Seidel has a very large establishment, which looks at a short distance like an extensive series of large frames. The entire place contains 225,000 square feet of glass and is all under ground to the eaves of the houses. The entrance opens into a tunnel arched with brick four hundred feet long, and opening off this on either side are houses two hundred feet long and fourteen feet wide; these are all double span iron frame and look as if they would stand a lifetime. The heating is done by low pressure steam, there are 6 inch mains running the entire length of the tunnel to supply the steam from two large boilers situated near the middle of the plant. Camellias, azaleas and rhododendrons form the bulk of the stock. Rhododendron Cunningham's White is used almost exclusively for stock for azaleas, and one hundred thousand cuttings of this variety were seen in the sand. Lady Hume Campbell is the stock used for camellias. Here, as throughout all Germany, azaleas are pot grown. Just the opposite is the Belgium method. Strong growing varieties of azaleas are there used for stocks, these are grown in pots and grafted before being planted out.

Albert Wagner's place at Leipsig was most substantial; the houses were constructed entirely of iron, not a stick of wood anywhere. They were one hundred feet long by twenty-five wide, and glazed double, two layers of glass being used. One range of nine houses was entirely filled with *Cycas revoluta* planted out and grown for fronds. They were heated with open tanks of water through

which steam pipes were run. The houses were very wet, and the plants were growing luxuriously, being entirely clear of scale and other insects. A great many of the leaves were sent to Russia and Austria. Rhaps and aspidistra were largely grown; they were planted out on tables, and allowed to grow until they become as one plant, when they were divided, the strong shoots potted and the weaker ones planted back, and the bed started again.

Nearly all through Germany the houses are covered with boards one foot wide and length of rafters; there was a frame work several inches above the glass to support them. Houses containing dormant or semi-dormant stock remained covered all day during severe weather. Placing and removing these boards must be a considerable item of expense to the German growers; it seemed to be about ten in the morning before they finished uncovering, and about four in the afternoon the replacing would commence and finish the day's work. In the absence of sheds to connect houses, bass mats were propped up against the ends, and it required at times a spade to pry the doors open after the mats were removed so the stock could be inspected.

Mr. Pfützer of Stuttgart had a model place, and handled quite a variety of plants. He has effected crosses between spring and fall flowering anemones by retarding the growth of the latter varieties and obtaining the early flowering stock from the south of France.

Leipsig men grow carnations planted on benches. Lizzie McGowan was being tried, but looked very homesick. They grow great quantities of carnations, propagating entirely by layers during summer; these are wintered in frames like pansies here, and planted out in the field and then lifted and sold as pot plants in the autumn. The varieties grown make admirable pot plants; all seem to have Malmaison blood in them. They seemed much surprised that carnations could be rooted so easily from cuttings in the United States.

Otto Thalacher grows many amaryllis, among them new varieties of the vittata type, the colors of which are wonderfully fine. Selaginella Emiliana is grown in large quantities in 5-inch pots; this plant is in great favor, and sells well. Clivia (*imantophyllum*) is also a very popular flower, and is sold extensively. Many different hybrid varieties of *C. miniatum* are to be seen here. New Holland plants are grown, health also being very well done. One entire house was given up to *Billbergia splendens*, and the grower said he could not get enough of it. Mme. Lemoine lilac is a good double white, and is regarded as a coming forcing flower, many growers speaking of it.

In Quedlinburg we saw one of the neatest and most interesting places. It is run by a stock company. They make a specialty of the growing of seedling plants for the trade. They had 300,000 cyclamen plants in flats, twice transplanted; these were in frames outside. Coming on were tuberous rooted begonias, gloxinias, primulas, cinerarias, *Dracæna indivisa* and large quantities of rooted cuttings of all bedding stock, such as coleus, of which they have four hundred varieties. *Achyranthes* and *alternanthera* are produced by the million. A table one hundred feet long by four wide was filled with 5 and 6-inch pots of begonia and gloxinia seedlings. All the seed sown is of strains of their own selection. There were seventy thousand primulas in four houses two hundred and twenty-five feet long coming into flower; they made a grand

showing. One house of Holborn blue was grand, and another of alba magnifica was very fine. The houses were of the lean-to pattern, with step stages. Immense quantities of plants are grown in frames, and it is a wonder how the frost is kept out, as there appears to be no artificial heat, although great care was taken in covering during extreme weather.

German growers as a rule do not raise their own seedlings, depending on specialists for their supply of young stock. There are quite a number of firms whose business is entirely that of growing young stock, both seedlings and cuttings, for the trade. Most of these houses are situated in Quedlinburg, which seems to be the center for this specialty. The work of transplanting the seedlings from the seed pans into boxes is mostly done by women and girls, who become very expert, and have a house to themselves for this branch alone.

In Erfurt great quantities of cyclamens and pansies are grown for the seed. Ernst Benary's large seed house is one of the most prominent, and is fitted with all modern appliances for the seed business.

Linden's establishment at Brussels is a fine place; his is a very select trade. Together with other fine plants he has a choice collection of orchids. Brussels is called small Paris; there are great number of fine cafes with music. The whole city seems to be given up to amusement at night. Here is where most of the metal flowers are made; large factories employing many hands are numerous, and stores which sell nothing but these goods are to be met with throughout Europe. A great many are handled by the retail cut flower stores, and in nearly all their windows the artificial and the natural are mixed promiscuously, as much prominence given to one as the other. There must be a great demand for this class of work, as it is manufactured extensively.

Great quantities of palms are grown in Ghent, there being over 250 establishments devoted to palm culture. Good plants here bring about the same as in the United States for equal quality. Young stock seems scarce, and growers are not anxious to sell small sizes. We have more young latanias on this place than are to be found in all Belgium and Germany put together. A great many araucarias are grown here, and from present appearances they will be quite plentiful in a year or two. One place had 25,000 cuttings coming on. Paris is their best market, and takes many thousands of these plants annually. In the demand for all classes of foliage plants Germany and England prefer tall specimens, while France and the United States like those of a more stocky, bushy growth. The methods of the Belgian growers seemed more modern than those of the Germans; they pursue much the same plan as is adopted in this country.

The more modern houses in Ghent are built in blocks together, with the walks under the gutters, which were supported on Tiron arches, thus economizing considerable valuable space. The winter had been unusually severe, the thermometer registering 13° to 15° below zero the latter part of January.

Vincke in Bruges had an immense place, his specialty being orchids, to which he had forty houses devoted entirely. Twenty-five of these were filled with *Odontoglossum crispum*. They were all in pots on step stages and side benches. His best market is the city of Paris. For last New Year's day his orders from one large dealer amounted to 25,000 francs (\$5,000); this was for *Odontoglossum*

CARPET BEDDING IN WASHINGTON PARK, CHICAGO, THIS YEAR.

crispum alone. He supplied nearly all the orchids for the funeral of President Carnot.

Among the plants grown largely in Europe that are not so much thought of here are *Aralia Sieboldi*, which is grown extensively and considered as good as a palm, and *Cyperus alternifolius*; this latter seems to have a large sale, and is certainly a very useful plant as they grow it. Very few dwarf oranges or ardisias were to be seen, no one making a specialty of them. *Farfugium* was another scarce plant. They seem to take things easier over there than we do. In Ghent men go to work 6:30 a. m. and quit at 7 p. m. They eat five meals a day—breakfast 7:30, lurch at 10, dinner at 12, lunch again at 4 and supper after 7. This is the invariable custom throughout Belgium. There are very few women employees in Belgium, but in Germany women are largely employed, and some were seen doing very menial work, such as putting coal into stoke holes and other like drudgery. All through Europe watering is done entirely from the can, a boy carrying from the cistern to the man employed. As in England, there were no windmills, elevated tanks or system of pipe connections anywhere to be seen. Handbarrows are used exclusively, wheelbarrows seeming to be unknown.

In Ghent plants are hauled about the streets to depots and other places of delivery by dogs hitched up to low wagons, and it is astonishing to see the loads they

pull at a full gallop. They are hitched up in single and double harness, and four in hand. A good dog is valued at one-fifth the price of a horse. Wages in Belgium compared to those paid in the United States seem very small; good journeymen receive 2 francs per day (40 cents); a few get 50 cents (2½ francs), but these are exceptionally good men.

Travel on the continent is somewhat different from what it is here; they have in Germany what they call corridor cars; these have a passage all along one side with doors into the apartments. The cars are heated by steam. You order your meals en route, from the conductor, who telegraphs ahead and in about an hour or at the next stopping place you get a basket containing dinner which you eat at your leisure; you can get a very good lunch for 38 cents. At the various stopping place boys run up and down in front of the cars with glasses of beer on trays, you buy what you want and drink as you please, leaving the glass in the car. At the hotels everybody must be tipped, from the head waiter down, this is quite an item of expense, as 4 to 5 people have to be seen at nearly every hotel.

In Brussels eclaireage was charged for, which meant light, this was in one instance used half an hour and cost 40 cents. To ask for water at table always caused a look of astonishment, as it is never served at meals and always put the waiters to considerable trouble. Cheap wines or beer are the universal beverages.

In Belgium there are a great many saloons, but we did not notice much if any drunkenness.

Throughout Europe all seemed much interested in the business in the United States, but found it hard to believe facts as to the quantities of certain varieties of plants that were grown and handled here easily, and of which they found it very hard to get any amount of stock. The statement that 1200 plants of *Doryopteris nobilis* had been raised from one batch of seed, or that a single firm had in one season handled thirty thousand *Davallia stricta* was too much for one large grower, and by his incredulous looks he seemed to think the American eagle was spreading his wings a little and allowing flight to his imagination. Taking it all in all the business seems to be managed here, fully as well if not more systematically than on the other side. As a rule they take things easier than we do. If they could see the hurry and bustle in one of our large places during the busy shipping season, it would be a revelation to most of them.

K.

Rochester, N. Y.

Still the weather is very dry; planted-out stock makes but little headway, and what little rainfall we had here was not enough to moisten the ground an inch deep. If we do not get a good long rain very soon, such stock as carnations, bouvardias, violets, etc. will be rather

small and weak by the time they ought to be housed.

Trade at this time of the year does not amount to much; sales are small and prices low. Sweet peas are of extra good quality in spite of the dry summer, but the cool weather we have had the past two months seems to suit their wants and they are in full vigor yet.

Building is going on at Keller Sons' place, a carnation house 110 feet long and a new propagating house 100 feet are going up, also rebuilding of potting sheds and enlarging of the palm house, besides repairing nearly all of the other houses is contemplated. J. M. Keller of that firm will take his vacation and visit Detroit and Lake Michigan on a fishing tour.

Visitors in town the past week were Mr. Gus. Bennett accompanied by Mr. Burke from Pittsburg; Mr. Ed. Burque of Mr. C. Dards, New York, is spending his annual vacation here in town, and is enthusiastic over the many attractions in and around this city. J. B. K.

St. Louis.

This week found the business very dull, nothing to speak of except occasionally a funeral design or a small summer wedding, but the market is not overstocked with roses, as nearly all the florists are planting with new plants, and from the looks of their houses everything is lovely for the fall trade.

Felter & Bruecker have built four new houses at the corner Lexington and Newstedt avenues, their new place. Two of the houses are 97 feet long by 18 wide both half span, and the other two are 97 by 11. They will grow for the trade. Mr. Felter has had charge of Mr. Klockenkamper's place while that gentleman was Supt. of Public Parks for four years, and as Mr. Klockenkamper is about to retire he will run his own place.

Connon Floral Co. have given up their branch store at Franklin and Grand avenues and will do all their business at one place.

Mr. and Mrs. H. W. Chandler, Jr., of the Chandler Floral Co. have left town, to be gone for the summer, they will visit all the principal cities in the east.

The regular meeting of the club was held Thursday night, July 11, and the attendance was good, the best for some time. The matter of meeting again in the afternoon was brought up and read for the first time. Everybody seems to favor afternoon meetings now, as the night meetings were a failure. This will be good news for our suburban members. A letter was read from the Carnation Society asking the appointment of a committee of two growers and one retailer to examine new carnations, the committee is as follows: Harry Young, F. J. Fillmore and J. J. Beneke. Mr. John W. Kunz was appointed a committee of one to look up rates for the S. A. F. meeting at Pittsburg, and to report at a special S. A. F. meeting to be held this month to ascertain who and how many are going.

Nomination of officers was next in order; for president F. C. Weber, Harry Young, F. J. Fillmore and J. W. Kunz were nominated. For vice-president C. A. Kuehn and J. J. Beneke. For secretary Emil Schray. For treasurer John Young. Trustees; A. Waldbart, H. Truesdell, H. Ostertag, R. F. Tesson, Wm. Ellison, and Tom Carroll. At the next meeting, August 8, the election will be held and the second reading of the motion to change the meetings back to afternoons. We hope that our suburban members will come in full force. The picnic committee

held another meeting July 9, and transacted all the business it had in short order. The programs have gone to press and will be out in a few days, and every florist in the city and vicinity will have one. The Florists' Gun Club will have a shoot at the picnic and the first prize will be a silver combination ink stand, and the second prize will be a silver flask; both prizes are given by one of our leading jewelry houses. A band of music has been engaged and dancing will be in order in the evening on Sunset Hill. The timetable of trains will be printed on the back of the program. All prizes are displayed in the window of the Jordan Floral Co.'s store.

The bowling July 10 was very interesting, and a large crowd was in attendance and saw the Japs go down before the Chinese to the tune of 2411 to 2348. Mr. C. A. Kuehn made the highest single score, 246, and J. J. Beneke rolled 605 in 3 games. All the boys are practicing hard for the picnic and all want to win the gold watch. The committee has bought a gold chain and charm to be given to the one making the highest single game. Here are the scores of Wednesday's roll:

THE SCORE.

J. J. B.

Philadelphia.

Hot weather is with us once again, the past few days being uncomfortably warm. All stock in the fields is coming on nicely, carnations are looking particularly well and roses are growing rapidly. Inside stock for summer cutting is now in good shape and some quite long stemmed roses of such kinds as Kaiserin and La France are to be seen in the growers' boxes; \$3 to 4 per hundred is the prevailing price. Meteor also looks well and is a good seller at the same figure. Sweet peas, achillea and carnations about complete the assortment.

Quite a number of the growers are planting *Adiantum cuneatum* for cutting, there will probably be fifty per cent. more of this about next winter than there was last. Farleyense will also be given more attention. The demand for smilax, except for decorations, has fallen off considerably the past year or two, and even in this field it has a strong rival in asparagus, while for bouquet and design work the finer and more graceful ferns have almost entirely superseded it.

Robert Crawford, Jr. of 11th and Locust, is overhauling things generally, his store is being torn up inside and is to be rearranged and finished up in first-class style. White and gold are to be the prevailing colors, and a large and handsome refrigerator with plate glass front doors will be the chief feature. Robert is a hustler and his rapidly increasing trade is the natural result of his untiring industry.

The Gun Club have accepted an invitation to visit the country seat of Mr. H. H. Battles at Newtown Square, about 14 miles out on Saturday, July 20. The members of the club have engaged a tally-ho

and will drive out. This will no doubt be a very merry occasion. Traps will be set up and the good natured rivalry so prevalent at occasions of this kind will bring out some good scores.

Messrs. John N. May of Summit, N. J., Joseph Kit of West Chester, Pa., Robert Craig and Robert Kift of Philadelphia, will leave for a six or seven weeks stay in Europe, by steamer Germanic from New York on July 31.

Messrs. G. C. Watson and J. M. Thoires, Camden's busy florist, have been spending a few days fishing at Anglesea, N. J., they report having had a good time and enjoyed themselves hugely.

Jacob Becker and family are bathing in the surf and inhaling the ozone at Atlantic City.

Samuel Y. Heebner has sold his entire interest in the La Roche & Stahl Co., Limited, and has no further connection with the firm.

Harry Bayersdorfer arrived home July 12 on the Normannia; he had a nice trip and brought lots of novelties. K.

Indianapolis.

The delegation of florists, as agreed, left June 11 for participation in the floral parade at Noblesville, Ind. From information received, it was an amateur performance all through, and on account of a scarcity of flowers very few carriages and wagons were decorated. The boys were, however, royally treated.

The regular monthly meeting of the Florist Club was held on July 3; after the regular business was disposed of the room was given up to the state society's committee on arrangements for the annual chrysanthemum show, the members having been already in session in the afternoon, but adjourned to await the arrival of several of their number who promised to come in the evening. E. G. Hill, J. S. Stuart and W. W. Coles were present from outside of Indianapolis. Many special premiums were received by the secretary, which were placed to the best advantage. A special feature will be the placing of four vases in the middle of the hall, each containing 100 specimen blooms of chrysanthemums in four colors, yellow, white, red and pink. Committees were appointed for the different departments, and other preliminary work completed. Tomlinson Hall will appear in a new coat of frescoing and painting, new lights, and other improvements, which will add materially to the appearance of the coming show. After many promises by different city boards of works the present board has finally come to the conclusion that something had to be done to bring the hall in better sanitary and more artistic condition. Refreshments were served by the local society, and entertaining speeches kept all concerned together until a late hour. The annual outing of our club occurred Tuesday, July 9, at the Bellevue Club House; about forty florists and amateurs participated. While bowling was the main feature, base ball came in for a good deal of attention; it was a great game, nothing like it was ever seen, such pitching, catching and field work was astonishing. Several balls and bats were used up during the game, no one, however, got hurt, but the next two days, stiff limbs and complaints of that tired feeling could be heard in many florists' places about the city. It was fun, glorious fun. The prizes in bowling were carried off by those who had not played for a long time, or never played, and those considered champions had to take a back seat. Boating was on the program; well,

several attempted it, but did not get very far from the canal; sticks, rocks, etc., flew in torrents around the boats from the bowlers, splashing water all over the poor pleasure seekers. It was nearly midnight when the last ones ran to catch the last car for home.

The talk is revived about issuing shares in sufficient amounts to build a bowling alley for the Florists' Club's use at one of the members' places. It will very likely be accomplished.

A visit to the Garfield Park recently found everything in as good shape as can be expected with the scarcity of water and the intense drouth; no good rain has fallen for a long time. Mr. McKead has supplied all the small parks with plants; with the new park commission now in office we can expect something better of the park system than formerly.

E. G. Hill, of Richmond, reports the wholesale business booming.

Geo. Fulle, of Fulle Bros., Richmond, was married at that place during the month of June.

Mrs. O. G. McCormick, Logansport, is starting in business with two greenhouses for general florists' trade at 700 Helen street.

Mr. Meyers, at Bluffton, is building a show house and storeroom.

Rushville, Ind., will now get a live florist, Geo. F. Moore is building a new place for a general florist's business.

C. A. Keman, Connersville, is remodeling and adding to his place, including a larger storeroom.

The summer dullness is starting in unusually dull; people are flocking away in all directions. W. Bertermann will start on his usual summer vacation to the Wisconsin lakes on July 20. About ten florists will take in the Pittsburg convention from this neighborhood.

July 15 a very slight hail storm occurred in the north part of the city, while heavy and rattling no damage was done to any glass. W. B.

Cincinnati.

Some rain has fallen during the last two weeks, but not enough, and we are again suffering from very warm, dry weather and kicking as hard as ever. What a lot of things we have to kick about this year. Flowers of all kinds are coming in very abundantly, and may be had at your own figures if bought in quantity. First-class roses are very scarce and would bring fancy prices if they could be furnished, but very few are to be had; they are getting smaller every week. Carnations are very plentiful, especially white, which is very good for this season. Sweet peas the same, and sell at any price, but still there is a moderate demand for most all sorts of flowers, and the store hands are kept fairly busy considering the advanced season. Lawn and dinner parties require some flowers, and although prices paid on such occasions in summer can not be compared with those of mid-winter, something at least is made by the lucky party who gets the orders.

Plant trade is entirely out of the way now, and great quantities of bedding stuff have been disposed of, more than at any other season as long as I can remember, but as prices were way down the growers had to be satisfied with small profits.

Our florists are having considerable trouble with asters, the plants look healthy, but there is a black bug eating them.

Our second annual picnic is progressing splendidly, and if we have a favorable

day we will have a much larger crowd than last year. July 25 is the date, at Wooddale Island. All our friends are invited.

EXERCISES AND PRIZES AS FOLLOWS:

Class 1. Bowling contest, team of six making largest score in three bowls. Cash prize \$6.

Class 2. Quoit pitching, team of four making largest score in one game. Prize, silver cup.

DINNER.

Class 3. Bicycle race, not less than three entries and two starters. Prize, pin charm.

Class 4. Donkey race, not less than five entries and three starters. Prize, budding knife.

Class 5. Boat race, handicap, not less than five entries and five starters over river course, up and back from given point not less than half mile. Prize, silver cup.

Class 6. Fat man's race, not less than fifty yard dash and back. Weight 175 pounds and over. Prize, elegant pipe.

Class 7. Lean man's race, not less than fifty yard dash and back. Weight 150 pounds or less. Prize, box (2) cigars.

Class 8. Boy's race, fifty yards and back, age 16 years and less. Prize, \$1.

Class 9. Young ladies' race, fifty yards one way. Prize, silver tea spoon.

Class 10. Girl's race, 15 years and under fifty yards one way. Prize, \$1.

Class 11. Sack race, open to all, fifty yards one way. Prize, \$2 to party stopping half way, getting sausage and finishing.

Class 12. Wheelbarrow race open to all, fifty yards and back. Prize, box (50) cigars.

Class 13. Boy's ball game; five inning game store boys vs. growers. Prize \$2.50.

Class 14. Ball game between storemen and growers, nine innings to game. Prize, \$10.

Phillip Popp has a fine lot of small primroses and says he will have finer plants this season than last; he certainly does grow the finest primroses around Cincinnati.

Fred Gear, an over-the-Rhine florist, is the happiest man in town; twin girls this time.

Wm. Bolia, who has been on the sick list for the past month, is slowly recovering. P.

Chicago.

Geo. Wittbold is building three new houses and rebuilding four of his old ones, also adding a new boiler house and potting shed. The addition and improvements will be devoted to palms and ferns, Mr. Wittbold's specialty.

Albert Fuchs has sold out his greenhouse establishment located on Evanston avenue, Lake View, to Louis Martini, who bought out and is now conducting the store on Division street formerly owned by A. Fuchs. Mr. Martini took possession July 14.

This week trade is extremely quiet, and Chicago may join the procession in proclaiming that the summer dullness is on. There seems to be no shipping trade, and local conditions are equally flat. The rose stock coming in is, as a rule, of very poor quality, flowers being both small and flimsy, and a good deal of it very short-stemmed. The average price is \$2, occasionally \$3 for extra select stock. Meteors are about the best sellers and the best in quality; Perles also sell quite well. While \$2 is quoted as the average price in large lots \$10 per 1000 is the outside price.

Carnations have dropped, none now going over \$1, which is best stock; 50 to 75 cents for medium grades. Sweet peas are down to 10 and 15 cents a hundred, so some of the growers have ceased cutting them. There is a great deal of outdoor stock of all classes, and while most of it is sold it goes at low prices. Smilax is very plentiful, and only brings 8 to 10 cents a string. There seems an oversupply of it all through the west.

While going home from her store at 3911 Cottage Grove avenue the evening of July 10, Mrs. Henry Hilmers was attacked by three footpads, two men and a woman. She held on to the satchel con-

taining her money and succeeded in getting away.

The firm of J. B. Deamud & Co. has been dissolved, Mr. Deamud retiring, and the business will be carried on in future by Messrs. Bassett & Washburn, under their firm name.

At the bowling practice games last Thursday evening the banner scores were 263 and 233, both made by J. S. Wilson.

New York.

Trade in flowers is at a standstill, but time does not drag, for the monotony of this dull season is relieved by the deep interest taken by everybody in all branches of the trade in the affairs and plans of the New York Cut Flower Company, which has furnished a fruitful theme for conversation and argument for the past month. The meeting of growers called by the company at the Grand Union Hotel on July 12 was a large one, there being about eighty gentlemen present, many of them small growers who are seldom seen in New York city. The president of the company, Mr. Ernst Asmus, presided, and remarks were made by Messrs. C. W. Ward, Paul M. Pierson, John H. Taylor and others setting forth the scheme which the company seeks to establish, and showing the benefits which they claimed would accrue to the small grower from a concentration of product. Many questions were asked as to the various details of the proposed plan of business and the discussion lasted for two hours, after which the growers present were invited to come forward and sign the agreement binding them to consign their goods to the company for the space of one year, and several responded. At last reports a satisfactory location or acceptable manager had not yet been found.

The planting at Glen Island is very fine this year, rivaling that in many of the parks, and will be a surprise to one who sees it for the first time. One of the handsomest features is an avenue bordered with masses of tall musas, pandanus, acacias, crotons, tree ferns and other tropical plants, orchids being suspended from the trees overhead. There are some fine examples of mosaic bedding, also groups of herbaceous plants, cacti, cannas, grasses and aquatics, and under the trees where the shade is too dense for grass English ivy makes a luxuriant carpet. Among the things worthy of note are several large plants of Erythrina crista-galli just coming into flower, and which to seem to be admirably fitted for summer decorative work. Mr. W. R. Smith, who recently accompanied a party to this attractive spot, characterized it as "a great object lesson for the people, bound to exert a powerful influence for horticulture. The people are being fed in spite of themselves."

The destructive cyclone which struck in this vicinity did considerable damage to greenhouses in its path. The hailstones, according to the local papers, were all the way from the size of a hickory nut to that of a base ball, and they made a clean job of it wherever they fell. Among the victims were Chas. Amman and Louis Kinkel, Harlem, and Geo. Welch, A. Ackerson, J. Acker and J. Patterson, of Ramsey. The extensive greenhouses of the late Hon. Wm. Walter Phelps at Teaneck were also badly damaged, and the entire roof of John Conrad's establishment at Fordham was carried away. Many fine trees were uprooted.

Mr. W. R. Smith, of Washington, has been spending a few days in New York, he having come here to meet some rela-

tives from Scotland who are visiting America for the first time. Other strangers in town the past week were Henry Kramer, Washington; Secretary D. D. L. Farson, Philadelphia; W. H. Elliott, Boston; A. W. Bennett and Geo. W. Burke, Pittsburg, Pa.

Alfred Dimmock sailed on July 13 for England. J. N. May and Robert Craig are scheduled to sail on July 27. P. Bruno Meissner has gone to Liberty for the summer and his Flatbush associates expect to see him come back fully restored to health.

Robert B. Young has recently returned from a trip through Canada and Northern New York. The look of happy resignation on his countenance has given rise to some suggestions the correctness of which Robert has not yet been induced to affirm or deny.

Chas. Schnell has given up his florist store at 814 Columbus avenue.

A decoration of orange flowers on Tierney's horse caused much hilarity in Twenty-eighth street and brought consternation to Tierney's heart on the morning of July 12.

"Compare slips."

Boston.

The only activity noticeable in the flower trade in any department is the demand for funeral flowers. This has been the case for the past week and white or light colored stock of good quality has found a fair market. Besides white carnations and roses there are now some good white asters coming in and achillea, gypsophila, white sweet peas, etc., are to be had in abundance. The usual summer demand from the sea side resorts has not been heard from yet, and shippers are anxiously waiting for the first call.

M. H. Walsh showed some fine hollyhock blooms at Horticultural Hall on July 13. The magnificent spikes of these showy flowers as shown in former years are missing at this year's shows. The detestable disease has made terrible havoc with the plants everywhere.

Two portly representatives of Boston floriculture made a trip to Old Orchard Beach, Me., a few days since. The races proved such a potent attraction that the time table was forgotten, the evening train for Boston missed and the much disgusted pair found themselves booked for a cheerless wait until 4 a. m., the next day and not even a — well, it was "down in Maine where they have to drink rain."

Visited Boston: P. O'Mara, Geo. Sykes representing Lord & Burnham Co., and C. W. Weathered, New York, Geo. E. Hunt, Terre Haute, Ind., and A. T. Bodding, Short Hills, N. J.

Saddle River, N. J.

A cyclone accompanied by a terrific hail storm swept over Bergen County, N. J. on the 13th inst. Among the greenhouses injured are those of Geo. Welch, 5,000 feet broken, Wm. Thurston, 2,500 feet broken; Jacob Peters on and Abram Acker, about 1,000 feet each, all of Ramseys, N. J., no insurance. J. G. & A. Esler, Saddle River, N. J., lost 1190 feet of double and 250 feet of single thick glass. A. C. Tice and James Bartow of Saddle River, both vegetable growers each had a small greenhouse wrecked. D. A. Hopkins, Park Ridge, N. J., 300 feet single thick. Herbert Forbes 800 feet and Henry Hales of Ridgewood lost a few lights. Forbes and the Eslers were the only ones insured. Trees were up-rooted, houses and barns blown down and the village of Cherry Hill, N. J. completely

wrecked. Many of the hailstones weighed a quarter of a pound each. J. G. E.

Pittsburg.

Mayors Kennedy and McKenna and City Comptroller Gourley will make short addresses on the first day of the convention, which will close with a reception at the Schenley Park Casino. On the second day the ladies will be given a carriage ride. The third day's diversion will be a bowling tournament. On the fourth day the steamer Dakota will take the visitors down the Ohio river to the dam, and thence up the Monongahela to Homestead, where Mr. Frick will conduct them through the mills.

TRENTON, N. J.—Mr. George Wainwright, Jr., never recovered from the shock of his broken limb, and died peacefully on the 10th inst. It seemed to his friends as though some injury must have occurred to the spine. He was an unusually large and heavy man, and the force with which he was thrown from his wagon in the runaway undoubtedly resulted in some shock to the nerve centers.

DAVENPORT, IOWA.—Henry Pauli, for the last eight years with C. Dannacher, has started in business for himself near Oakton Station, on the Chicago, Milwaukee & St. Paul R. R., and is building one house 18x100 for cut flowers, and one 8x100 for propagating, heated by steam. He has two acres of ground.

MUSCATINE, IOWA.—Mrs. Conrad Kranz, widow of Conrad Kranz, whose death was reported last month, died July 13 of a complication of kidney and liver trouble. The business will be carried on by the son, Emil C. Kranz.

ROCK ISLAND, ILL.—Henry Gaethje, whose houses were on leased land, has bought across the street, and has commenced to build two houses, the commencement of a range.

MOLINE, ILL.—Julius Stack is busy tearing down and rebuilding a range of eight greenhouses, most of them 18x100, for roses, smilax, palms and carnations.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—As head gardener. Competent, and fully qualified. Age 30. Apply ISIDOR NAJEN, Pawlog, N. Y.

SITUATION WANTED—By good all round florist; 6 years with one firm, 3 years as foreman; married. Address HENRY, care Am. Florist.

WANTED—By Aug. 1st man with some experience in greenhouse work, willing to do any kind of work in a large commercial place. Wages \$15.00 per month and board. Apply with references to THE LOVETT Co., Little Silver, N. J.

WANTED—Thoroughly first-class horticultural solicitor to solicit orders from amateurs. Liberal arrangements made with satisfactory man. Address, giving experience and references. J. WILKINSON ELLIOTT, Pittsburg, Pa.

FOR SALE—One hot water boiler and 700 feet 4-inch pipe. H. S. Roof, Westminster, Md.

FOR SALE—An 8 horse power steam boiler, used for hot water; in good condition. Price \$75.00. I. L. PILLSBURY, Galesburg, Ill.

FOR SALE—1200 feet 4-inch cast iron soil pipe, fittings, 3 valves, expansion tanks, for heating three houses. Must be sold at once. Pipe in good condition and most of it comparatively new. FRED J. KING, 20 Madison St., Ottawa, Ill.

POSITION WANTED.

Private or commercial. Thoroughly practical with orchids, stove and greenhouse plants, roses, carnations, violets, chrysanthemums, etc.; landscape work and floral decoration. Fully capable of managing all round place. 25 years' experience in private and commercial places. Single. English, steady and sober. A. care Am. Florist, 67 Bromfield St., Boston.

FOR SALE.

1700 feet of 4 inch pipe, 8c. per foot, cash. One Foster boiler, 12 sections, will heat the above amount of pipe, cost \$260, will sell for \$100, cash.

WM. A. BOCK, North Cambridge, Mass.

For Sale or Rent.

My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 48 lots or 2 1/2 feet front on Belmont Ave. by 700 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 10 to 200 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the largest of the kind in Chicago. A good chance for some young man with some means, or for a corporation; and as I wish to retire from business, it can be had reasonable, and on easy terms. If rented, a long lease can be given.

AUGUST DRESEL, Belmont and Western Aves., Chicago.

Assignee's Sale.

By virtue of an order of the Court of Common Pleas of Venango county, Penna., C. P. D. No. 4, November term, 1883, the following effects assigned to me by James S. McGarry for the benefit of his creditors, to-wit: The lease of lot corner Liberty and Eighth Sts., two greenhouses, one house 18x41 ft., one 2x10 ft., two Hitchings boilers, size 16, corrugated fire-box, four Hitchings expansion tanks, six Hitchings ventilators with 48 arms, about 1 1/2 ft. 4-inch pipe. All plants, and accessories will be sold in bulk at public sale to the highest bidder. Sale will be on the premises, corner Liberty and Eighth streets, Franklin Venango county, Penna., Friday, July 26, at 10 o'clock a. m. The above will be sold subject to the lease of the lot. Copies of said lease can be secured by a prospective bidder on application to the assignee. All bids sent by mail must be accompanied with good reference.

GEORGE V. ADELMAN, Assignee, 60 Thirteenth Street, Franklin, Pa.

VAUGHAN'S SEED STORE,

NEW YORK, CHICAGO, 26 Borelay St. 84 & 86 Randolph St.

Cleveland.

We want rain and we want it bad. The wind and rain storm in Chicago and the west, of which we have had newspaper reports, brought us nothing save a few miserable scattering drops that amounted to somewhat less than a decent fall of dew.

A visit to various greenhouse establishments discloses only the usual sweet, secluded calm that usually pervades such places during the mid-summer season. Some are planting chrysanthemums, some tearing out old benches and doing the patching that is always necessary at this season. One or two that had been figuring on additions to their glass have drawn in their horns, which would seem to be a wise conclusion with the past year as a criterion of future business. We hear an immense amount of talk at various times about "controlling the output" and "regulating prices"—both very good things no doubt—but it should be done at the right end; and that end, in handling perishable goods, is the producer's end. If growers would be careful not to build save when they saw a fairly good prospect of disposing of the product at a decent advance over cost, there would be less stock on the dump-heap and more money in everybody's pocket. Any attempt to persuade one to maintain a fixed price requires considerable confidence in the backbone and good faith of all the others—and they are neither angels nor fools—at least not all of them. It is well to make the last qualification in view of some of our performances at various times. Department stores, dry goods establishments and other institutions of that ilk occasionally advertise goods at less than cost, and some of the time they undoubtedly do so truthfully. Probably these "specials" do bring them other and profitable sales; but the spectacle of florists hustling about the country buying stock which is immediately sold at a price far below the cost is quite a different matter. We have had that type of establishment here. It would seem like carrying a love of euphemism too far to call that kind of business department store management. A much shorter, more profane and expressive phrase would fit better.

A visit to William Leitch's place the other day found every thing in good shape. A lot of asters planted in the houses were looking very fine and will undoubtedly furnish a lot of excellent flowers shortly. Early planted chrysanthemums were also coming along in great shape, and if not allowed to go hungry will be a source of pride to their genial owner.

At Fred Aul's place everything is hurrying. Fred has a lot to do and he is bound to get it done or know why. What with roses to plant, benches to repair, stock to keep in its usual good condition, it begins to appear doubtful about that new house 20x140. In the matter of building "langsam und deutlich" is not a bad plan in these times, and especially if one is up to the ears in urgent work. A.

DETROIT, MICH.—Thos. Gowanloch, in business here as a market gardener, is erecting several modern greenhouses at 1162 17th street, and will establish a retail florist trade.

CAIRO, ILL.—D. C. Linegar has discontinued business and the greenhouse has been torn down. A request is made that trade price lists be not sent to the old address as the parties now there are not in the trade.

The Only Best WHITE VARIEGATED ASPIDISTRA, 100 leaves for 30c; 500 for \$1.45; 1000 for \$2.80. Green ones, good leaves at 9c per 100; good stuff 85c per 1000. Orders for Aug., Sept., Oct. given now, will be most carefully attended to.

Cash or cheque will please accompany all orders.

Victory for the Creditors.

FARMERS WHO TRUSTED PHIL STIMMEL
MAY BE PAID IN FULL.

Several hundred Nebraska farmers are in a very joyful frame of mind to-day, or at least they will be as soon as they learn from their attorneys the latest turn that the law suits concerning the Phil Stimmel failure have taken. A decision handed down by Judge Duffie decided that Frank T. Emerson was a partner of Stimmel's in his seed business and in consequence he has ordered two of Stimmel's creditors to give an accounting of the firm's assets which they seized by virtue of an execution one year ago.

When the Omaha National bank and Montgomery Charlton & Hall, with claims of \$28,000 and \$6,000 respectively secured confessions of judgment from Phil Stimmel they proceeded to order executions and sell the Stimmel property. This apparently cut off the hopes of some 200 farmers of getting any money as a return for their labors.

During the summer of 1893 these men had been raising seed for Stimmel under contract. The affair ran along until January, 1894, when Stimmel failed. Attachments and law suits began to pile up, many small farmers in and about Waterloo, Valley, Richland and in Grant and Perkins counties suddenly realizing that their expectations were blasted. In a short time the court ordered the sheriff to proceed with the sale of the Stimmel seeds and implement stock to satisfy the bank and Montgomery, Charlton & Hall, an unsuccessful effort having been made by injunction on the part of Emerson to arrest the sale on the ground that Phil Stimmel and Frank T. Emerson were partners in the seed business and that therefore judgments against Stimmel himself could not be satisfied out of the partnership stock. The sale was held and the entire stock bought \$11,000. Since then the case has been waiting its turn on the docket, and when reached to-day Judge Duffie held that there were two kinds of business carried on, both under the name of Phil Stimmel. In one case in particular it was a trade name used by Stimmel and Emerson in the seed business, and in the other the name represented the implement business carried on by Stimmel exclusively. The court has ordered a reference to a commissioner to compel an accounting of the stock sold by the sheriff.

Already some fifty creditor have appeared, demanding in a motion they filed, that the two attaching creditors which realized on the sale be compelled to return not simply the \$11,000, but the actual value of the stuff sold, the claim being that the property was sold at a forced sale and should have brought at least \$50,000. J. W. West claims enough will be realized by this process to pay off the farmers.—*Omaha Bee, July 8, 1895.*

MR. LEM BOWEN returned home Sunday, July 14, from an extended foreign trip.

WET WEATHER just at the harvest has damaged the Connecticut turnip seed crop over fifty per cent.

THE BROWN BAG-FILLING MACHINE

Toronto.

Not until Friday last did a shower come to refresh the parched earth; it was not a very big one, but was most thankfully received all the same. Parks and gardens are consequently looking much brighter since, but it will take much more rain to get things into proper trim. Flower beds ought to be at their best at this time of year, but alas! they are far behind and the summer is half gone.

A visit to the Horticultural Gardens on Sunday found them looking as gay as could be expected. A large circular carpet bed about 50 feet in diameter is a great attraction; the design is very pretty and altogether is a fine bed, though I regret to say that when standing close to it the effect was somewhat marred by weeds, this is a bad example for Horticultural Gardens to set, but I hear it is undergoing repairs to-day.

Thanks, brother Scott, I will endeavor to instill into the minds of as many Canucks as possible the advisability, I might say necessity, of attending the Pittsburg convention.

Another little "summer shower" is falling as I write this. E.

Worcester, Mass.

A fine wedding decoration occasioned a slight ripple on the calm, unruffled placidity of the sea of trade last week, but outside of this everything was quiet and dullness reigns supreme.

We were visited by a very severe storm on the 13th accompanied by rain and hailstones as large as hazel nuts. Much damage was done to fruit, flowers and vegetation generally; soft foliage was torn and rent badly, having much the appearance of being riddled with buck-shot. The water lilies suffered severely, the flowers and foliage were torn all to pieces, and large fields of fodder were laid flat. Florists having single glass suffered more or less loss, but not a pane of double thick succumbed.

A very fine display was made at the horticultural exhibition July 11, including zonal geraniums, gloxinias, Iris Kämpferi, Lilium candidum and cut flowers.

Judging from present indications this summer will be as wet as last season was dry. A. H. L.

SALEM, OHIO.—F. C. Morlan, former of Madison, Ind., will succeed L. Faueett, the carnation grower at this place.

PANSIES. The Best from many growers, not the selection of one grower only.

INTERNATIONAL MIXTURE.

This mixture has been made up and sold by us for the past five years from the best strains known in Europe and America. We have in our files testimonials from leading florists in almost all the leading cities in the U. S. saying in effect "the best we ever had." Now if you would like to be convinced of this, drop us a line and we will send you the names of good men near you who will certify that VAUGHAN'S INTERNATIONAL MIXTURE has proven with them to be the best, most complete all round high class Pansy Mixture they have ever grown. Our four page price list of these and other seeds, mailed on request. The new crop seed is now arriving and can be sent at once, but after July 20th or August 1st our assortment of strictly NEW CROP SEED will be most complete. Trade pkt. 50c; 1/8 oz. \$1.50; 1 oz. \$10.00.

CINERARIA. Columbian, mixed, pkt. 1000 seeds, 50c.

CYCLAMEN. Giant varieties, 60 seeds, 50c.

PRIMULA. Vaughan's International, per pkt. 250 seeds, 50c; 1000 seeds, \$1.25; 1-16 oz. \$2.00.

GIANT MIXTURE.

For those who desire the largest flowers only, and are willing to accept a somewhat less variety in the way of coloring, our GIANT MIXTURE has been especially put up. It contains only the largest flowers and during the last two years we have greatly increased the number of sorts. See list below. Price for Giant Pansy Mixture, trade pkt. 50c; 1/8 oz. \$1.50; 1 oz. \$5.00.

	Trade pkt. Oz.
Giant Trimardeau, white, large white with a violet center.....	.25 \$5.00
Giant Beaconfield.....	.25 5.00
Giant Trimardeau Improved, this strain contains all the new colors of Trimardeau....	.25 3.00
Giant Cassier, a very choice variety of colors, each flower is marked with 3 or 5 blotches....	.25 5.00
Giant Bagnot, the flowers are of enormous size, perfectly round, of great substance and the most varied and attractive markings and colors. Our "Bagnot" contains shades of red, bronze and reddish brown that are not to be found in any other mixture.....	.25 6.00
Giant Auricula Colors, very beautiful shadings.....	.25 \$
Giant Violet Blue.....	.25
Giant Yellow, Fire Spotted, new.....	.25
Giant Hortensia Red, new, same shade as a Hydrangea.....	.50
Giant Emperor William.....	.25 5.00
Giant Trimardeau, mixed.....	.10 2.00
Giant Striped, flowers enormous size.....	.25
Giant Trimardeau, Yellow, very showy color, good seller.....	.25 5.00
Giant Trimardeau, Purple, flowers very large.....	.25 3.00
Giant Coal Black, of immense size.....	.25 4.50
Giant Copper-Color, a most distinct combination of rich metallic shades.....	.25

Giant Paris Pansy Mixture.

The flowers of this strain are as large as the Trimardeau and far superior in color and in substance of petals; having a stout and stiff flower stem, the flowers last longer and the plants are more compact. Oz. \$5.00; 1/8 oz. \$1.40; 1/4 oz. \$2.50; trade pkt. 25c.

PREMIUM PANSIES, Mixed. Pkt. 25c; 1/8 oz. \$1.00; 1/4 oz. \$5.25; oz. \$10.00.

Milwaukee, Wis.

Trade has taken a decided drop the past week, more noticeably so than in former years at this time, but stock still continues to come in abundantly and some of very fair quality. What demand there is chiefly for funeral purposes.

All growers in this vicinity report having had a good spring trade, hence there is considerable activity in building this summer. N. Zweifel is erecting a large new house for carnations, Geo. Volk is rebuilding his houses, making them more suitable for the growing of palms and decorative plants, H. Staeps of Elm Grove has added 3 more houses. Edlefsen & Scott have remodelled their store and will construct a show house in the rear for display of plants, etc., making it a model florist's establishment, and the finest in the city.

The Paris Floral Co. has changed hands, Allen & Holton having bought out F. Foster, who has leased the Armstrong Greenhouses and will now devote his time to the growing of plants, etc., for the retail trade.

Ben Gregory of this city and Wm. Gregory of Ludington, Mich., have left for England to visit their mother.

The preliminary premium list has been issued for the fifth annual chrysanthemum show, under the auspices of the Milwaukee Florist's Club, to be held in November next.

J. Austin Shaw of Brooklyn, N. Y., was a recent visitor.

Hathoro, Pa.

Harry M. Weiss has now got his new place at Hathoro, Pa., in running order. He has six houses each 10x175 and one 22x175, heated by steam and fitted with modern sash lifters, etc. Roses and carnations are the principal crops. The large house is already planted with Brides and Bridesmaids (equal parts of each) and two of the smaller houses one with Meteor and the other with Kaiserin. The other four houses will be devoted to carnations. Outside at present there is a fine show of double white petunias and a large collection of asters. The field carnations are looking strong and healthy and promise a fine lot of plants. Mr. Weiss is much better located now than formerly, and with better facilities in every way than at his old place in Germantown. He has in contemplation the building this summer of an additional range of glass which will be devoted mainly to be raising of violets.

G. C. W.

FAIRVILLE, PA.—Pennock Sharpless of West Chester is about to erect houses here for carnations and tomatoes.

CONVENTION NUMBER

— OF —

The
American
A
WEEKLY
JOURNAL
Florist
FOR THE TRADE

Will be issued **AUGUST 17, 1895.**

In addition to other specially attractive features it will contain an accurate *CHART OF COLORS*, comprising 30 of the most important shades, prepared for the FLORIST by F. Schuyler Mathews. The color chart will be a permanent part of the paper as readers will be advised of the necessity of keeping it in the paper away from the light except when in use.

The expense of this chart has been very heavy, but it will lend to the issue, of which it will be a part, a very greatly increased value as an advertising medium, as it will be frequently referred to. Still there will be

NO INCREASE IN ADV. RATES,

which will be as heretofore :

FULL PAGE.....	\$42.00.
HALF PAGE.....	21.00.
QUARTER PAGE.....	10.50.
PER INCH.....	1.40.

Subject to time discount to those having term contracts with us.

Send advs. **early** so we may have abundant time to get them up in our best style.

The Convention Number will reach every Trade Buyer in the United States and Canada, and extra copies will be distributed at the Convention.

AMERICAN FLORIST COMPANY,

P. O. Drawer 164.

 **CHICAGO.**

Denver, Colo.

The National Educational Association has been in session during the past week in our city. The town has been crowded with nearly fifteen thousand of these guests, ranking from the college president to the country school marm. Before these learned people we florists hang out our signs, make our windows attractive, and use every other means available to call their attention to the flower production of the Great American Desert, but our efforts seem to fail, and we are left to think that this company of people did not gather here to spend money. The townspeople have, however, made good efforts to entertain their guests, and the florists have received a number of decoration orders. The most attractive of these decorations was the one placed in the gentlemen's reception rooms of the Brown Palace Hotel, which were the headquarters of the reception committee. The decorations were in the hands of a N. E. A. committee, and efforts were made by them to use the Colorado wild flowers and foliage as much as possible. The Colorado blue spruce formed the background and hung in festooning around the sides and from the ceilings of the rooms. On the mantels and tables were placed graceful bunches of columbine (the state flower) and other flowers peculiar to our Rocky Mountains.

The weather has been cold and rainy all the past week, and I am afraid our visiting friends will not feel inclined to believe all that has been told them of the beautiful Italian climate of our state. Growers are nearly finished with their planting, and all efforts are being made to place a good stock of cut flowers on the market next fall and winter.

C. R. Gallup will soon begin work on two new houses with a store corner on Fifteenth street and Cleveland place.

Though the stock is now limited, the wholesale shipping trade still keeps up. Several of the boys are thinking seriously of making Pittsburg a visit in August. A number of our florists are in hopes that the society will decide to make our city a visit and hold the convention here, as we feel that it would benefit us and our trade greatly. Besides we are anxious to show the eastern florists what we have done in this city of the plains, and can give you an opportunity of spending a pleasant summer in some of the mountain resorts.

Having purchased large quantities of material, BEFORE THE ADVANCE we have decided to give our Patrons the benefit of such purchases, in the manner stated above,

SEND IN YOUR ORDERS AT ONCE, and secure the BEST GREEN HOUSE BOILER IN THE MARKET, at a LOW FIGURE.

KROESCHELL BROS. CO.

CHICAGO, ILL., March 12, 1891

KROESCHELL BROS. CO.

No. 41 to 55 E. Erie Street, City.

DEAR SIRS:—In regard to your Improved Green House Boiler I feel proud to state to you, or any person in our trade, the full particulars of same, for I have them in use over seven years and never had any trouble to heat up seven houses with 4,500 feet of 4 inch water pipe, also the new boiler I put in my new place last year gives best satisfaction, and I invite everybody interested in that line to call and investigate.

I heat my entire place—which is four houses, 28x125, one 10x25, three houses 16x100—with the new boiler except in severe cold weather we fire the old one to help along. I have now 8,000 feet of pipe to heat and will build two more houses to it this spring, which will be easily heated by the two boilers.

I also state that this is the eighth winter I am fitting the old boiler and never had any repairing done.

Consider Kroeschell Bros. Improved Green House Boiler as one of the best hot water heaters in existence.

Very truly yours,
ANTON THEN,
No. 839 LaFayette St., Chicago, Ill.

KROESCHELL BROS. CO.

DES PLAINES, ILL., March 23, 1891

DEAR SIRS:—In regard to your Improved Green House Boiler I desire to state that I prefer the Saddle Boiler (Kroeschell Bros. Boiler) if I wanted another boiler I would have no other. I think they are the best hot water boilers I have ever seen.

F. L. PRUSSE,
Des-Plaines, Ill.

Note—Since receipt of this letter we furnished Mr. Prusse with another of our Improved Green House Boilers, No. 12. Special.

This is one leaf out of our catalogue

News Notes.

BURRILLVILLE, R.I.—Reuben A. Buxton, a well known florist, died on June 22, aged 56.

OLD ORCHARD BEACH, ME.—Visitors from Boston, Thos. A. Cox and Jas. Rough, Jr.

PORTLAND, ME.—Recent visitors, Mr. and Mrs. M. H. Norton, Boston, D. B. Long, Buffalo.

RANDOLPH, MASS.—E. Arnold filed schedules in insolvency court on July 8. Liabilities over \$5,000.

SPRINGFIELD, MASS.—The sweet pea show, advertised for July 23, has been postponed one week, and will be held July 30.

NORTHAMPTON, MASS.—The greenhouses of Mr. Dietz, and of the late C. H. Brewster have been purchased by Alexander Parks.

PEABODY, MASS.—Peabody has appropriated \$10,000 for a public park at Franklin Hill, and has accepted the bequest of Miss Augusta Proctor for a similar amount.

MYSTIC, CONN.—Jas. W. Pollard, whose place was formerly at Old Mystic, is taking down his houses and moving them to this place, where he has bought 15 acres of ground. Mr. Pollard says his trade has increased so much during the past two years that increased facilities were necessary.

PITTSFIELD, MASS.—R. G. Hanford has sold his South street florist business to F. L. Olmsted & Son, the latter taking possession Wednesday. The business has been under the management of Vincent Olmsted since coming here and he will still be in control. The new firm is negotiating for the purchase or rental of the greenhouses of Mrs. Edward Learned.

SALINA, KANS.—This city has suffered severely from a terrible flood. The Smoky river which runs through the city rose so as to cover the entire east portion of the city and some 5,000 people are homeless. The waters are now subsiding. Florist John Buchi lost heavily. All his stock was ruined and his grounds are covered by three inches of slime. His loss is specially heavy as he had on the ground material for rebuilding and enlarging which is practically a total loss. This misfortune taken in connection with the dull trade the past year has made it pretty hard sledding.

PROTECTION FOR HOSE AT LAST.

For sale by all Seedsmen. No florist can do without it. Cheap, practicable and indestructible. 35 cts. each, or \$3.50 per dozen. MANUFACTURED BY CHAS. SCHUCK, 2457 North 8th St., PHILA., PA. Mention American Florist.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

LOCKLAND LUMBER CO. LOCKLAND, O.

THE ORIGINATORS OF THE STANDARD FLOWER POTS.

Our capacity now is 12,000,000

STANDARD FLOWER POTS PER YEAR.

A Full line of Bulb Pans.

STANDARD FLOWER POTS

Every user of Flower Pots should correspond with us before purchasing elsewhere. Our facilities are unequaled.

A. H. HEWS & CO., N. Cambridge, Mass.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all. Send for price list and samples and we know you will give us an order.

Red Spider Can't Live

WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the under-side of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILD,
Dear Sir:—The nozzles to hand sometime ago; we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.
Yours truly, E. G. HILL & CO.

Price, \$1.00 each, prepaid. TRY IT, AND RETURN IT at once. If not satisfactory, and your money will be sent back.

The Eleventh Annual Meeting

OF THE

Society of American Florists

WILL BE HELD AT

PITTSBURG, PA.,

AUGUST 20, 21, 22, & 23, 1895.

Members may remit the annual dues (\$3.00) to the secretary prior to the meeting, thus avoiding the crowd and relieving the officers on the opening day. Badges for 1895 will be sent by mail to those who remit in advance of the meeting.

Intending members can obtain any information wanted, by addressing the secretary.

OFFICERS:

EDWIN LONSDALE, Chestnut Hill, Philadelphia, president; E. C. REINEMAN, Allegheny City, Pa., vice-president; WM. J. STEWART, 67 Bromfield St., Boston, Mass., secretary; H. B. BEATTY, Oil City, Pa., treasurer.

Rose Notes.

Planting these, where it has to be done, should now be finished up as soon as possible; the main feature in preparing to do so is a good fresh loam with a fair proportion of manure according to the quality of the soil. If to be planted on benches be sure there is ample drainage provided. Before putting in the new soil, where the benches have been used before, they should be thoroughly cleaned out and the inside surface given a good coat of hot lime wash, or what is usually termed white-washed. This helps to destroy any insects in the cracks, etc. As soon as this is done cover the cracks with some light material, loose sod is the best; if that is not easily procured a very thin layer of excelsior, just enough to keep the soil from falling through, will answer the purpose very well; then fill the benches with the compost to whatever depth may be found most suitable. We never use more than four inches of soil, but others may prefer more; rake it level, then as soon as the house is filled it is ready for the plants. Having decided upon the varieties and the distance apart they are to be planted select the largest plants for the back rows. Turn them out of the pots; if they are at all pot-bound the roots at the bottom of the ball should be carefully loosened out before placing them in position. They should not be placed deeper in the soil than they had been in the pots. Press the soil very firmly around each plant and as soon as all are planted give the whole a good watering, so that the roots can feel the effects of it, and they will immediately begin making new feeding fibres.

The main thing to consider after this is done is judicious treatment. They should never be allowed to suffer for want of water, neither should they be saturated at any time. During very hot days they should be syringed overhead two or three times each day, and given all the air possible from top, sides, ends and every available place, leaving some on ridge ventilators all night. This treatment will produce close jointed solid wood and build up a strong constitution in the plant, which enables it to go through the winter's forcing campaign in better condition than a soft tender plant can possibly do. By this I mean a plant that is grown on by keeping it in a soft, weak condition without sufficient root action to maintain the same. This is caused by

a close atmosphere and injudicious watering. This subject—water—is, I am afraid, but little understood yet by many of us. There are so many conditions to consider in conjunction with proper time to water, how much to give, and the condition of the soil, that a few remarks may be admissible here:

There is a great difference of opinion on this very subject, hardly any two growers treat their plants alike, and the only way to find out what amount of water, when and how to apply it to best suit your own conditions of soil, etc., is to start a series of experiments. Take, for instance, a house of roses, or, better still, a few dozen in pots, if the latter pot them all into even-sized pots, giving them sufficient drainage and good fresh soil to grow in. Divide them up into say four lots, mark each lot. In one allow the soil to become quite dry before giving more water and then give sufficient to moisten the whole. For No. 2 allow the soil to get somewhat dry, but not to become hard as in No. 1, then give a light watering, such as many consider sufficient. In No. 3 allow the soil to get into the same condition as for No. 2, then give it a good watering, so that it runs out at the bottom of the pot. Allow No. 4 to become quite dry and solid before giving more water, then give a thorough soaking. Follow this treatment up steadily for at least three months with all, giving each batch the same treatment with regard to water all through, but in all other respects treat them all alike. At the end of that time you will be able to judge for yourself which mode of watering suits your conditions, etc., best, and, furthermore, you probably will be able to form a better idea of watering, how and when to give it to obtain the best practical results. But do not fall into the error of treating all plants alike—roses, carnations and chrysanthemums all require a different condition for watering, to say nothing about all the other classes of plants necessary for the general florist business. Actual experience and close observation are the best means of acquiring the information necessary to know when to water.

JOHN N. MAY.

Ventilating and Watering.

ED. AMERICAN FLORIST.—I am just starting in the rose business without having any previous experience. I have a house 60x20 feet, running east and west, with two doors in the east end, and one in the west. The house has a two-thirds slope to the south, with nine ventilating sash hinged to ridge, and three to ridge on the north side. We have very damp winds here, especially from the east and northeast which is very bad for mildewing plants. I have been for the past month in the habit of shutting all ventilators and east doors, only letting the

west door open at night. Now do you consider this right, and do you think north wind in daytime, on clear days, is injurious to roses, as they are young plants only starting in to make new wood?

How about watering also? Is it not better to leave plants rather dry than wet, and water in the morning after the sun is out bright, as this gives them a chance to dry off thoroughly before sundown? I noticed a few American Beauties looking badly and took one out to examine the roots, and found there were none left. I had thought, from the color of the leaves, that it was mildew, but think they are rotted off from being too wet after sundown, as I have been watering about 4 o'clock p. m. R. McL.

Replying to your correspondent R. McL., who wants to know how best to ventilate his rose house during warm weather, he should leave his ventilators on the south side of the ridge open proportionately to the condition of the atmosphere—in very warm weather leave them half open all night—but close all the doors tight. In moderate weather less air, and on very cool nights only about an inch on each sash. The best preventive of mildew during spring and summer is an abundance of air at all times, but it must be applied with judgment. As soon as the sun begins to affect the temperature in the greenhouse in the morning the air must be gradually increased, and as it continues to rise so must the amount of air increase, and the same rule applies the reverse way in reducing it in the afternoon. During very warm days it is really beneficial to open all the doors and other ventilators possible; this keeps the plants in a sturdy vigorous condition. Always do the principal watering in the morning, then, when extra hot, if some of the plants show indications of needing more water, say by 1 or 2 o'clock, give them a syringing overhead; this will all dry off in a short time and leave the house in a fairly dry, healthy condition for the night. If you want to produce mildew on a house of roses there is no better way than to keep a close atmosphere during the night and allow the temperature to rise ten or more degrees in the morning before putting on air, then put on a lot at once, and in a few days you can have the foliage white from end to end, for the simple reason that the growth is very soft when produced under such conditions. Hence, if we want to avoid it (and who does not?) we must treat our plants more consistently. In very hot weather plants, like ourselves, want plenty of drink, but in cloudy and cooler weather only a moderate amount is required, and the same law is applicable with some modifications the entire year. There is no set rule applicable to all cases for the general treatment, but the same principles are always essential to the best success in plant life.

When in active life they require sufficient moisture at the roots to maintain healthy active circulation between roots and leaves with plenty of air, and enough moisture about the foliage to keep them clean; there is then very little to fear from mildew or kindred diseases.

JOHN N. MAY.

Papa Gontier on Solid Beds Versus Benches.

Replying to your correspondent "H" he should plant this variety on a bench with about four inches of soil, giving plenty of room for drainage between the

slats. Press the soil good and firm, water liberally when the plants require it, and as soon as they get well established give them a thin mulching of old manure broken up very fine. Give all the air possible in favorable weather at this season of the year, day and night—then as soon as the weather gets cooler close at night and from that on through the season. Keep the night temperature at 53° or 54°, not over, with plenty of air on mild days; I think he will have no cause to complain of Papa Gontier not doing well on benches.

This method has been followed by most of the growers in this section of the country ever since its introduction, with much success, as those who saw the flowers can vouch for. That they can be grown on solid beds also I admit, and possibly a few extra fine buds can be gotten by this mode of culture, but not the quantity that can be cut from an equal space with bench culture. The quality of the flowers from bench culture will be fully equal to the others if the temperature is not run too high. In my experience all varieties having any Bourbon blood in their constitution will not stand a high temperature for continuous forcing, and, as a general rule, they will take more water than the Tea roses proper, though some discretion must be used in this, as this family are all inclined to drop their leaves after producing a heavy crop of flowers. At this stage they do not require quite so much water for a few days till new growth starts freely, then liberal treatment will be in order again.

JOHN N. MAY.

Carnation Notes.

Several have asked me lately how soon I will house my plants. If the weather continues as wet as we have had it for the past month, and that is very wet, I will not take the plants in until the 10th or 15th of September, the reason of this that I wish the cool nights of the latter part of August and September to harden the plants so that they will not suffer so much from the replanting. Should August be very dry then I will take my plants up about the 20th, for if a wet season follows a dry August the plants make a very quick soft growth, and I find the plants do not stand moving as well as if taken in as stated. I made this statement last year, and was criticised quite severely, but from every one who followed my example I have received word that they will hereafter do as I have done for several seasons.

I have seen growers planting when the soil on the benches was dry as powder, and others had thoroughly soaked the soil, both very bad, the dry soil is hard to wet through and the very wet bakes around the plants, and the roots can not break through. A happy medium is what you want. As fast as the plants are set water them so that every particle of soil is wet. I never take in any soil around the roots, but shake it off carefully, retaining as many of the roots as possible. This seems harsh treatment to some, but I have had results which justify me in continuing this practice.

CHARLES H. ALLEN.

Herbaceous Plant Notes.

Phlox decussata or *paniculata*:—To name a genus of herbaceous plants more elegant or possessed of so much excellence as is to be found in a collection of these phloxes, would perhaps be a rather difficult task. The improvements of late years, both in the size and form of the florets and in colors, have raised this popular class to a level with our most ornamental hardy plants, and the varieties are now so numerous that several acres could be planted with them if anyone should undertake to gather all the known named sorts. The *decussata* section of phloxes is called late flowering, and bears great, broad pyramidal panicles on stiff, almost woody stems. It flowers in July and August, but we may prolong their season by simply cutting down the plants to the ground in the latter part of May or beginning of June, when they will start up again a second time and bloom later than those which were left to grow undisturbed. To obtain the best results from a collection of phloxes we must divide and replant them every second or third year, for the old stools would develop so many eyes and send up such a mass of stems that none of them would be able to bring forth or develop a fair sized and perfect shaped panicle, the roots getting matted and completely exhausting the surrounding soil unless very frequent and liberal doses of liquid manure and heavy mulchings are administered. They are gross feeders and require a rich soil, but will amply repay the little extra care bestowed upon them by larger and perfectly shaped panicles of beautiful colored flowers at a time when many of the earlier flowering perennials are fading away or have ended their blooming season. The height of them differs considerable in the varieties; some only grow 18 inches high and others 3 feet. I may some time in the future give a list of the most desirable and distinctly colored named varieties with color description.

Helianthus rigidus begins to expand its handsome flower heads the latter part of July, and continues to bloom well into October. It is a single variety with a very small dark colored disk and broad ray florets of a shiny glistening deep yellow color, very useful for cutting and extremely free flowering. It succeeds well in any part of the shrubbery or in the back row of the herbaceous border. This is perhaps the most showy of all *helianthus*s, grows 3 feet high and the flowers are 3½ to 4 inches across. *Helianthus Buttaris* with numerous small sized dark yellow flowers, also very useful for cutting, blooms from latter part of July to October, is of stout erect habit with elongated sharp pointed leaves, grows about 4 feet high, and like all the family requires abundance of room in the border. *Helianthus latiflorus semiplenus* is a very broad leaved sort, and has rich deep golden yellow flowers of good size and excellent keeping qualities on the plant as well as after being cut, beginning to bloom end of July and lasting continuously well into October. A splendid variety for a late show, growing 6 to 7 feet high, and should be planted in every collection large or small. *Helianthus multiflorus Soleil d'Or*, a French introduction, raised from the type, is rather late in flowering this year, but generally blooms as soon as *H. multiflorus* and continues the same length of time. It is a decided improvement, the florets or rays are three times as broad as in the type, and the flowers resemble a well formed double yellow dahlia more than anything else.

ILLUSTRATION NO. 1.
WINDOW DECORATION

Aster Amellus Bessarabicus: No other aster is more desirable in my opinion, the flowers are produced in enormous quantities on stiff erect and branchy stems, and are larger than those of *A. Amellus*. They are of a deep violet purple and have an orange yellow disk or center, a very pleasing contrast. The plant also has narrower and finer oblong lanceolate foliage and grows taller than the type, 1½ to 2 feet being their extreme height. From the end of July to September the whole plant is covered densely with the large showy flowers, and surely deserves a prominent place in the herbaceous border, also an excellent thing for cutting purposes.

Chelone Lyoni has very showy rosy pink flowers slightly tinged with purple, in terminal, clustered elongated spikes, very floriferous and lasting from July to September. This plant, although a native of the southern states, is rarely seen here in collections. Having such a stately and floriferous character, extremely hardy, of a pleasing and rare tint in color, no other herbaceous plant resembling it even among the chelones, I cannot imagine why it should be neglected. It is by no means a new plant, although some catalogues have it classed among the new and rare things, for I knew and admired the flowers of this plant forty years ago, and then it was not considered a novelty. The pentstemon-like flowers with the tortoise head shaped upper part of the lip, together with the fine color, attracts the attention of everybody, and in addition thereto we can use it largely for cutting. No difficulty will be experienced in growing this handsome perennial; anybody can grow it in ordinary garden soil without special care whatever except keeping clean around them, and no winter protection is required. Strong roots after being well established will attain a height of 3 to 4 feet and almost as much in breadth, flowering freely year after year. A plant that can safely be recommended to every one and in every locality.

Saponaria caucasica fl. pl. has pink and rose colored double flowers in great profusion from July to September, blooming later than the other saponarias. A bushy compact habit, floriferousness and

desirable color constitute some of the good qualities of this most useful border plant; height 1½ to 2 feet.

Helenium autumnale is now beginning to open the first flowers, and will last well until the end of September, in some sections even later if the flower stems are not cut off. The color is a very pure yellow, and the ray florets are toothed or divided at the apex, four or five points to each, and the plant is very floriferous, blooming in loosely clustered heads. One of the finest herbaceous plants for all purposes; height 3 to 4 feet.

Rochester, N. Y. J. B. KELLER.

Window Decorations.

A neat and attractive window display should be the chief aim of a well-conducted floral establishment. It is justly considered the best paying advertisement; its results are far reaching and lasting. This is a fact well recognized by most men engaged in the retail business. We take it for granted that a fine display is most desirable, but the cost of making and maintaining such a display is an item very seriously to be considered, and it is in this respect that good judgement will have to be exercised. It doesn't follow that an attractively set-up show window is necessarily an expensive one. Simplicity combined with good taste often give the best results. We also very often have to take into consideration our location and surroundings.

If a florist occupies his premises by himself alone, he can regulate the temperature, in winter at least, to suit as nearly as possible the requirements of his stock. But as is often the case, when but part of the store is used by the florist, and the other half by parties in a different line of business, it will be found necessary to keep the place far warmer than is desirable for the keeping of perishable stock like cut flowers. In such a case many florists have resorted to the means of boxing in their windows with glass partitions. Although such a window is open to some objections, notably this, that the confined moisture condenses and settles on the glass, it is certainly of great advantage in keeping the stock in presentable shape much longer.

Our first illustration shows a window of this style, the display gives the arrangement of a general supply of seasonal stock. The vase in the center contains about 2 dozen long stemmed Beauties with a tall vase of gladiolus in light shades to the rear of the left with a vase of carnations and white lilac next, and a pot of adiantum and low basket of pink and white sweet peas at the base. In front of the Beauties stands a low arrangement of *Spiraea prunifolia*, flanked on the right by another vase of carnations (white), and a small basket filled with pink cornflowers. Such a display represents a cost of about \$15, and if all the stock were wasted, would of course be quite an expensive advertisement. But with proper care very little need be wasted.

The second window is of an entirely different type. In this display, decorative and other plants enter largely into the arrangement. The plants are arranged not so much for a massive foliage effect, but to display each specimen to best advantage. The pots are set in celluloid baskets, which latter, in the picture at least, appear with a little too much prominence, which however, is not objectionable for the purpose intended. While plants occupy the larger part of the windows, the left portion as shown in the illustration is partly devoted to a few well arranged vases of *Lilium auratum* and *L. roseum*, gladiolus, marguerites and a border of sweet peas. This is a typical summer window. In establishments where plants are handled such a display can be kept at a nominal cost, and recommends itself for effectiveness.

New Plants.

One of the finest novelties likely to come out next season is a perfect double large flowering pansy of the color of the well known Lord Beaconsfield. A double pansy itself is nothing new exactly, and years ago I have seen what was termed double flowers of that favorite spring bedding plant, but the one in question is entirely different, and far superior to anything of that kind in cultivation. The flowers are of perfect and very regular shape, imbricated and double to the heart, resembling a gigantic broad-petaled violet. In the spring and fall months, in cool weather, these flowers are of great size and substance, very freely produced, and last far longer than any of the single varieties, and when placed in water remain fresh for a long time, having no tendency to curl up the petals. I have now a bunch of them on the desk, which Mr. W. H. King, the originator, brought over to me a week ago, and the flowers look fresh and dainty enough yet to be sold in the store.

Three years ago, when the first plant of this novelty came in flower, I was permitted to have a look at it, and advised the propagation of it and trial another season. Robust growing plants will sometimes produce double or semi-double flowers early in the season, and afterward, when the hot weather sets in, nothing but everyday single flowers will come out from the same plant, but the hot or dry weather had no effect on the double flowers of this plant, and the numerous flowers are just as double now in the middle of an extraordinary dry summer as they were in early spring, only they are not of such a large size as they were then. It propagates very easy either by cuttings or by layers, and a large stock of it may be gotten up inside of five or six months from a few plants if well taken care of. The plant has a strong and

healthy constitution and can be flowered during winter in a violet or carnation house, and I do not hesitate to say that I am sure that the flowers will sell at fancy prices all the year around, even in the dull summer months the beautiful color and size will attract the attention of every flower buyer. Whoever grows violets should try and grow this pansy; there is no disease to battle with and the crop is everlasting.

Rochester, N. Y. J. B. KELLER.

[The flowers, judging from some specimens sent to this office, are strong and robust, and extremely double, making a compact blue-purple rosette. They are quite as double as our best double violet, and should prove very valuable to the flower trade.—Ed.]

Miscellaneous Seasonable Hints.

It's so long since I attempted to remind my brother florists of a few simple things to be thought of in their seas in that I can truly say "where was I at?" In this midsummer season there is work for the grower as well as at other seasons, if we are not quite so rushed. There is an inclination with many in the trade—and the writer may be among them—as soon as the big rush is over in June to rest on their oars and say "Now we can rest." I would remind those that now is the time to paint your houses. It is money well spent if done every year. Another most important item, in fact the very foundation of your success, is a good big compost heap. The great majority are niggardly in this great essential. It does not require skilled labor to pile up a big heap of sod with a fourth of cow manure amongst it, and don't think that you are paying too much if you are taxed a dollar a load for it. A florist in a large neighboring city told me a few years ago, that he paid \$5 per load for good "top earth." It seemed high, but no doubt it was cheap over some poor fibreless soil which is too often used.

Among the prospective crops we are thinking about just now are mignonette and pansies for winter blooming. To be large enough to cut in November mignonette should be sown at once. A solid bed is, I believe, better for it than a bench, but it can be well grown on a bench in 4 or 5 inches of soil. Don't get the mistaken idea that you can grow good mignonette without giving it lots of room; let the rows be 15 inches apart, and the plants 12 inches. The eastern growers who make a specialty of this crop give it more room than that, sow a few seeds at the distances I have mentioned, and when well up thin out to the two strongest, and when large enough to be out of the danger of our enemies the slugs, etc., leave only one plant.

Pansies for winter blooming should be sown at once. Sow in a flat and put into a cold frame, well shaded. In a month they will be ready to transplant on to the bench where they are to flower. If you grow the above crops in one house choose the warmer end for pansies. If too cool they will not flower.

If you rested your callas out of doors and dried them off as many do it is time early in August to start them going again. Shake off every particle of soil and pot in 5 or 6 inch pots, and plunge in a frame in the sun; before frost comes they will have made a fine sturdy growth and give you flowers in October and November, when they are often very desirable. When cleaning the calla bulbs you will find any number of small bulbs round the neck of the old root; you can increase your stock of callas by potting

these bulbets into 2 or 2½-inch pots and growing them on.

Those who have a call for ferneries in the winter—refilling is more of a business than selling new ones—should at this time look out for a good stock, for in midwinter and spring it has been almost impossible to get the right size of plant, the demand has been so enormous the past few years. Purchase by the thousand now in 2-inch pots. There are firms handling them by the hundred thousand. Shift when received into a pot a little bit larger, say a 2½-inch and grow on, and you will have the right size of plant. As the growers of these now grow only what is useful for the purpose you can largely leave the selection to them without proviso. You don't want the beautiful *Adiantum cucucatum* (maidenhair) in a fernery, much as you want it everywhere else, for it will not do in a living room, and the continual cry by Madam is "don't put any maidenhair in my fern case."

I am busy just now tying up chrysanthemums in the beds and benches, and trust I am not too late to tell some of my readers that there is only one way to tie them, or rather support them, and that is with strings. Stretch a wire commonly known as stove wire across the bench behind each row and a corresponding one near the roof and then run your strings from bottom to top; this is one-half the cost of stakes either wood or metal, can be tied up in much less time, and there is no toppling over, which there always is with stakes; on the side benches where the dwarf varieties are planted, such as Lincoln, Ivory, Etoile de Lyon, and others, short stakes will do. Another advantage with the strings—when the crop is ready to throw out a slash with a sickle top and bottom clean the whole thing out, string and all.

The Bermuda lilies have begun to arrive; don't let them lie round a dry shed, for it does them no good. Pot at once; a good light loam with a fourth of thoroughly rotted manure will suit them but nothing like fresh manure should be used. For a 5 to 7-inch bulb use a 5-inch pot, 7 to 9 a 6 inch, larger bulbs will require a 7 to 8-inch pot. When potted and well watered place out of doors and cover with a few inches of litter from the stable, that will prevent so much drying out and need of watering, and as they have no roots for a month the less watering they receive the better.

In the Buffalo notes of this issue is an account of the "chicken cure" for grasshoppers on carnations. If this plan had not been adopted there would have been a loss of several thousand dollars in the village of Corfu. I have within a few minutes inspected the area of carnations alluded to and will repeat here that it's a most unqualified success in every way, not to mention cheap chicken pie after the carnations are housed. WM. SCOTT.

The Plant Trade in Chicago.

The reports on the trade in bedding plants the past season are somewhat conflicting. Quite a number of growers and retail dealers seem to be well pleased with the amount of business done. While none of them may have sold out clean of everything, yet the stock was pretty well cleaned up. Others, again, complain of the trade as having been below normal demand. There is no doubt, as a visit to a number of establishments will prove, that considerable stock was left unsold. This is particularly true of certain lines of plants. In one place we noticed a large lot of *ageratum*, compact and well grown

stock in 3-inch pots. The variety is of dwarf habit, name unknown to grower. [Probably Cope's Pet.—Ed.] This particular *ageratum*, as reported, was in great demand for the spring of '93 and '94, and in anticipation of an increasing demand this year a larger stock was propagated, but the demand proved next to nothing. A majority of other growers also experienced a very slow demand for this stock.

Coleus, once so popular as a bedder, is in very limited demand now. Verbenas, also, at any rate greenhouse grown stock, has fallen off considerably in demand. Not that this plant seems to have grown unpopular, but the great majority is raised from seeds by the consumer himself. A bed of these plants will perpetuate itself for years by self-sowing, the seedling as a rule being more vigorous than stock propagated from cuttings, hence, probably, the great decline of demand for stock of this sort.

The geranium is one of the leading bedding plants still, particularly the bright scarlets. The sale of these appears to have been larger than ever, although the prices have dropped to a figure where but a small margin is left to the grower and dealer; \$1.80 is reported as the top price for the best stock in 5-inch pots, this generally includes the labor of planting and often the preparing of the beds. If these prices could have been uniformly maintained there would be little cause for complaint, but prices were cut by the majority of dealers to ridiculously low figures, much to the injury of the trade at large. The demand as stated above was largely for the red varieties, and these in solid colors of but one sort. Very little of this kind of stock is left over. Wherever we find a considerable number of geraniums left over they are generally of a mixed lot, where out of a hundred plants you couldn't pick a half dozen of one variety. Growers who still persist in growing their stock without reference to keeping the varieties separate, not speaking of their being true to name, would do well to give some attention to this in the future.

Pansies were sold in increasing quantities. In the first place the flower is a great favorite with the public on general principles, and furthermore it is about the only thing in the bedding line that can be risked for spring planting without injury in our changeable climate. It is, generally speaking, but short-lived, as with the advent of hot weather about the latter part of May or first of June it gives way to the more permanent things, such as geraniums, etc. But in spring the pansy rules supreme, and hardly a city lot, no matter how small, but boasts of bed or window-box of this flower. Prices ruled about the same as former seasons, varying as to season and quality from 25 to 50 cents per dozen at retail.

Cannas of the large flowering French type are in largely increased demand. These have superseded the old form, used for foliage effect, almost entirely. Madame Crozy is the leading sort in general commerce, but many other varieties of this type may be found adorning our city and rural homes with their gorgeous blossoms and rich foliage. Begonias, too, are seen more generally in summer bedding than formerly. The tuberous varieties appear to do quite well wherever tried, and the demand will doubtless increase largely the next season. But not alone these; a number of other flowering varieties of the begonia are well adapted for bedding and are destined to become quite a factor in the market for bedding purposes.

ILLUSTRATION NO. 2.
WINDOW DECORATION.

Herbaceous perennials, as well as biennials and annuals, are coming more and more to the front. This may account in a measure for the fact that so-called bedding plants proper have not met with a proportionately increasing demand. This class of flowering plants appeals more strongly to people of moderate means and those of an economic turn of mind. Take the herbaceous and perennial class. When once established and treated with half-way decent care they will give to their owners more real pleasure and prove far less expensive than any other form of plants. Our public parks, notably Lincoln and Washington parks, have done good missionary work in calling public attention and creating a love for a class of plants which had been unknown before to many, and neglected by others. At this season of the year we see many an otherwise unsightly backyard gay with the blossoms of bollyhocks, delphiniums, phlox, helianthus, lychnis and many other forms.

To cater to this increasing demand material suitable for the perennial border should be the aim of those of our growers engaged in furnishing stock for the adornment of our homes. The profits from sales of this class of plants should be at least equal to that derived from other lines. The numerous varieties of summer annuals are also in constantly increasing demand. Many lovers of this class of plants have neither the knowledge nor the patience to raise themselves from seeds, but prefer to buy the young seedling plants from the grower. In many cases no preparations are made for such demand. Those who give attention to this line have found it quite profitable.

The trade in pot plants is reported as very satisfactory, showing a decided increase over preceding years. In flowering plants for midwinter and early spring the cyclamen should receive more attention than it does at present. This

plant gives universally better satisfaction as a house plant than any other we know of. It sells readily at good prices, and yet but very few are grown, and these generally of a very mediocre quality. At the present date of writing (July 16) we see a small lot here and there, little wee plants in two-inch pots stuck in some out-of-the-way corner of a house, apparently, neglected entirely during the spring rush. But how can any grower expect satisfactory results from such stock? Really well-grown plants are rarely seen in our market and those we find are often shipped in from outside points. Some wide-awake grower, one located conveniently to the market, would do well to give the cyclamen more attention. There is little doubt it would pay him.

Primulas sold as well as ever, and in these a decided advance has been made. The plants as a rule were well grown, and those of the improved varieties. Cinerarias are popular with some classes of buyers, while others neglect it altogether; hence we find that some growers had a lot of stock left over, while others sold out clean at good prices. The stock of azaleas was more cleanly sold out this season than many preceding years. Comparatively few are found in summer quarters. Pelargoniums were in good demand, and the large stocks grown this year are disposed of in most cases. Fuchsias are not as popular now-a-days as was the case formerly, still there is considerable demand for them, and fuchsias are sold in midsummer when nothing else is in demand.

Palms are in largely increasing demand year by year. Kentia takes the lead, with latania and areca next. These three varieties constitute the bulk of the stock handled in this line. The sizes that sell best are plants in 5 and 6-inch pots that sell retail at \$3, \$4 and \$5 each. Most of these saleable sizes are either imported from Europe or come from eastern

markets. Our home grown supply is entirely inadequate to the demand, notwithstanding the fact that such firms as Geo. Wittbold and J. C. Vaughan grow thousands of these plants annually from seed. Although the above varieties are by far the best sellers, chamærops, corypha, livistona and rhapsis also find a good market.

Rubbers continue in good demand, the sale of these has been quite large at fair prices. Plants that retail at from \$1 to \$2 on the best commercial sizes. Pandanus ntilis, and more particularly P. Veitchii are good sellers, the demand for the latter is much the largest. These plants generally give good satisfaction.

A number of firms who handle such stock of plants as is used for general decorative purposes have found the past season an active one. Many houses, however, refuse to let out their plants for such occasions, as one season is apt to ruin the stock to such an extent as to render them useless for the market. It is needless to say that stock continually carted around, and exposed to all sorts of weather must suffer, and when such stock, as is too often the case, is sold in legitimate channels proves injurious to the trade, and should never be countenanced by any firm making pretensions to square dealings.

Transplanting Rhododendrons.

What is the best time to transplant rhododendrons? Are the Pacific coast plants good bloomers without being grafted? A READER OF THE FLORIST.

Rhododendrons may be transplanted successfully at almost any season of the year, even when in blossom. The best time, however, is in spring, before the buds start, or in August or September, after having completed their growth. As to the hardiness of the Pacific Coast

plants; it depends entirely upon the varieties. If California rhododendrons are meant their hardiness would be in doubt, as all the Himalayan rhododendrons are hardy in California, and while very fine they are not fit for the latitude of New York and Boston. They are grand bloomers without grafting.

JACKSON DAWSON.

S. A. F. Medals.

We would remind our readers who are interested in the production or introduction of new plants, of the valuable medals first offered by the Society of American Florists at the St. Louis Convention and which are open to competition at every annual meeting of the society. These medals, which are of gold, silver and bronze, are to be awarded to the originators of new hybrids, or varieties raised from seed, or the discovery and introduction of new species or varieties that are decided improvements over existing kinds. The awards to be made in accordance with the following rules:

"No award shall be made for any plant that has not been grown at least two years in this country, and exhibited at least twice before some regularly recognized horticultural society, where it shall have received a first class endorsement in writing by said society. Further, that it have the endorsement in writing of three members of the Executive Committee before it shall be considered by the full Executive Board, and then only shall such award be made by a two-thirds vote of the Committee. Such species or variety to be shown in plant form and cut state where practicable. Not more than one medal shall be awarded in each class, and not more than three in all in each year."

From the Far West to Pittsburg.

It is to be regretted that the railroad companies in the far West have not seen fit to grant to the florists in their territory equal facilities in the way of reduced fares to the Pittsburg meeting as have been conceded by all the lines east of the Mississippi River. The best that can be done under the circumstances by those attending from the excluded territory will be to purchase tickets only to Chicago, St. Louis, or other central points, and then repurchase from this point to Pittsburg, taking a certificate from the ticket agent, which will entitle them to the regular reduced rate of one-third full fare returning.

Chicago to Pittsburg.

The committee of the Chicago Florist Club has arranged with the Pennsylvania railroad for transportation to Pittsburg. The party will have special cars on train leaving Union Depot, Chicago, at 3 p. m. Monday, August 19, reaching Pittsburg at 6 a. m. eastern time (7 a. m. western time) on Tuesday, the opening day of the convention. Florists in the west and northwest are cordially invited to join the party. Berths may be reserved by addressing the chairman of the committee, Mr. G. L. Grant, 322 Dearborn street, Chicago.

S. A. F. Bowling Contest.

The committee on bowling request that all teams wishing to compete for the prize cup at the bowling tournament will send in their entries at an early date. Address all communications to H. Scherer, chairman, 510 Smithfield street, Pittsburg, Pa.

New York.

A few white roses and American Beauties seem to be about the only flowers required to satisfy the daily demand. Of other roses, Bridesmaid, Meteors, Test-outs and so on there is a large supply being sent in and they are disposed of in bulk to the street men or otherwise, but they could all be cut off from the market and still nobody would suffer. Of white roses, Kaiserin Augusta Victoria is decidedly the best at this season, and it is becoming very popular with the retail people, who appreciate its fine form and delicious perfume. Carnations are in much better form than ever before at this season of the year, and those growers who have been observant and ambitious have proved conclusively that it is possible to get superb carnation blooms in midsummer if you go at it properly. Sweet peas continue to encumber the market and do not pay for the picking. Gladiolus and auratum lilies are plentiful, the latter in splendid clusters of enormous blooms. They make a very effective display in a florist's window at a trifling cost.

It would seem as though everyone, wholesaler or retailer, had been, is now, or soon will be off on a vacation. Even Charlie Carlin, who is as indispensable to Thorley and to the 28th street fraternity as a rudder is to a ship has gone away for recuperation. The only evidences of activity are displayed by the gentlemen connected with the new flower company which, according to rumor, has secured ample premises for the transaction of its business on West 23d street between 6th and 7th avenues with Mr. Frank D. Hunter as manager, and expects to get under way by the first of September.

Boston.

Wholesalers and growers are now beginning to hear from the fashionable seaside resorts. The demand seems to follow in the same lines as in last winter's city trade, and American Beauty roses have the call, most decidedly. There was a time when the taste at these summer places ran to golden rod, ox-eye daisies, asters and gladiolus, and people seemed to want something identified with their rural surroundings on occasions when flowers were required, but things have changed now and the favorites of city life only are in demand. Local trade with the retail florists has picked up a little. The first half of July is the duldest time of the year, and after the 15th a slight improvement is always experienced. The gain is not enough, however, to keep anybody very busy, and all are taking such recreation as is available. On Monday, July 22, a party went on a fishing trip in the bay, taking dinner at Nahant. Various musical instruments were taken along by the experts, and every requisite for a good time was provided. P. Welch was general manager. Warren Ewell captured the prize for the first fish caught, a big cod; Warren is an expert.

At Horticultural Hall on Saturday, July 20, was the usual attractive exhibition of fruits and flowers. The entire center table was occupied by the exhibit of hollyhocks from J. S. Fay. There were hundreds of individual blooms arranged on dishes, and these were very good. The spikes showed that the destructive hollyhock fungus had reached Woods Holl. Whoever can discover a preventive for this miserable pest will confer an inestimable favor on the lovers of this grand garden flower. On the previous Saturday Wm. Robinson was awarded a silver

medal for a seedling *sobralia*, *S. Amesiae*, a cross between *S. Xantholeuca* and *S. Williamsii*. Mrs. F. L. Ames received a certificate of merit for Javan rhododendrons.

A communication signed "Clerk" has been received at this office. This cannot be published unless the writer's identity is first made known to us, but referring to the subject of the letter in a general way we would remind "Clerk" that the Gardeners' and Florists' Club of Boston was organized for the advancement of the best interests of all in the trade, clerks as well as proprietors, and no better means exists for correcting abuses and righting wrongs than to join and become active in the affairs of this organization.

Buffalo.

A serene and dry calm pervades the classic shores of Lake Erie, and so dry is the surface of the earth in these parts that the little toads and frogs have burrowed deep into the swamps in search of moisture, and we are deprived of their sweet calling song. Business is no worse than usual for this season, July and August in inland cities always are very dull. An occasional call for funeral flowers is just sufficient to keep the retail clerks from going to sleep or doing worse. Flowers of every commercial kind are in sufficient supply without any great surplus. Statistics show that the mortality percentage for the month of June was lower in Buffalo than in any city in the world of one hundred thousand and over, so pity the sorrows of the poor florist.

I am glad to tell your readers that the flower gardening in our public parks is not only much increased in quantity but greatly improved in quality, and all done under great disadvantage. When the new range now being built is completed I feel sure that the absence of high class flower gardening will be no longer a reproach to our beautiful parks. Under the personal supervision of Capt. James Braik, assistant superintendent, it will be in able hands. In front of Mr. Braik's house, corner Forest and Delaware avenue, are to be seen at this moment two long beds of tuberous rooted begonias. I have never seen anything like them, and visitors from out of town who travel the country over say the same. The plants were raised in hotbeds and never saw a greenhouse, and possibly all the better for it. They receive plenty of water, but carefully done, not dashed over their flowers and foliage as you would over a bed of cannas.

Grasshoppers made their appearance about three weeks ago in country districts, and would, if left alone, have wiped out several acres of carnations. The enemy had to be met seriously this year; one grower surrounded his whole batch of plants, about one acre, with chicken netting three feet high and then purchased 50 half grown chickens (breed not particular). To be brief it's a perfect success, and we are saved. Not a hopper dare poke his nose through the fence; if he does a young rooster is after him as eager as a New York politician after the spoils. Expense is nothing compared with results, and the way they hopped from burnt-up pastures to the succulent carnations threatened us ruin.

Last week we had a visit from several Toronto friends; the evergreen Geo. Vair, Mr. Reeves of Reservoir Park, Mr. Foster of Hamilton, and a gentleman from Toronto not in the profession, but who relieved us from all efforts at conversation, for he did it all. As it was of a very

VASE OF SUMMER FLOWERS.

amusing kind we were perfectly satisfied.

Mr. Anderson is round again recovered from his accident. The only building I hear of this year is by J. H. Rebstock, who intends to add two more houses to his Elmwood avenue place. He is also building a small office and salesroom at his Main and High street establishment. Our commission man, D. B. Long, has returned from his Boston trip; he says it was purely a pleasure trip.

Prof. J. F. Cowell of botanic fame has been spending a few days in Pittsburg and vicinity. He was investigating the chemical properties of the atmosphere in some of the valleys of the Appalachian Mountains. He says he found several good things besides atmosphere, not the least the cordial hospitality and company of Park Superintendent Gus Bennett. The professor has marshalled his clan of shooters and hereafter a few hours will be spent at Daws Park, Main street, every Thursday afternoon till convention week. The lowest score of the day will have to liquidate the cost of the trifling refreshments which will be used, and the next lowest will pay the car fare there and back. Long is booked for refreshments and Adams for car fare.

I received the remarkable news yesterday that your correspondent had become a grandpa, for the first time in his life, so hereafter expect nothing frivolous from either tongue or pen, for it might have been a boy, but it was a "new woman."

Mr. Mott of Riverside, N. J., called today looking fat, sleek and happy, and says business is good. W. S.

Baltimore.

The excursion to Bay Ridge turned out even more enjoyable than was anticipated, the weather being all the most exacting could have desired, and the enjoyment on the way and after arriving of the most unqualified character. Pretty much the whole membership of the club were in the jolly party that entered the special train at Bay Ridge, after a delightful trip down the Chesapeake, and were whirled over to Annapolis. Mr. Seidiwitz was waiting for them, and pioneered the whole crowd through one of the most interesting little cities on the continent. The State House, Governor's Mansion, Naval Academy and all other interesting and historical points were visited in turn, and then Mr. Seidiwitz's own place, where, after looking through greenhouses as clean and filled with as healthy plants as possible, all assembled around a table loaded with delicacies and proceeded to enjoy a feast such as only the dwellers along the shores of our noble bay need ever hope to equal. The table being set under the shade of large trees added to the charm, and from a platform near by a small minstrel troupe alternately tickled the fancy with quaint jokes or delighted the ear with well rendered music. The end-man, one Flabby Johnson, was a genius, and in narrating an imaginary trip to Baltimore and suburbs he managed to touch up a surprising number of the trade, not even omitting Bro. Christie's budded roses or Moss's water works.

While this was going on two belated members, W. B. Sands and Jas. Pentland,

arrived, having missed the boat and come down on the railroad direct from Baltimore. Then came the speeches, in which Messrs. Jno. Donn, B. Jones, W. Christie, Jas. Pentland, W. B. Sands and President Graham all had a turn, and though the general tenor of all was complimentary, not to say laudatory, of Annapolis hospitality and Mr. Seidiwitz as the dispenser thereof, yet opportunity was found for a lot of good advice, and forecasting the future at least as far as the next show. To say that every one present was surprised and delighted with the warmth and completeness of their reception would be no more than a bare statement of facts, and if a vote had been taken for the next president of the club on the way back to the cars there would have been but one nomination and a unanimous vote.

After the trip back to Bay Ridge the eighty members present at the banquet scattered among the thousands at that popular resort and for the most saw one another no more. Messrs. Sands, Pentland and the writer accompanied Mr. H. Brummel in a botanizing expedition around the Ridge, and enjoyed both the walk and Mr. B.'s remarks, for he is a most accomplished botanist, and whatever he says about plants is sure to be worth listening to. The trip up the bay at night concluded a day long to be remembered, and if the S. A. F. will only drop in at our town some year we will promise them just such another, or as near like it as possible.

Weather continues cool with occasional showers, but business does not seem to improve much in spite of the weather. Roses are small, off-color and short supply, except Perles, which seem fairly good for the season; three cents is about the price all around. Sweet peas and outdoor stuff generally is very plentiful, and twenty to twenty-five cents a hundred all that can be expected for it when it sells at all. MACK.

Vase of Summer Flowers.

The accompanying illustration shows an arrangement in a cut glass vase, composed of a dozen stems of *Lilium candidum* with an equal number of sprays of *Spiraea sorbifolia*, with edging of *Gypsophila paniculata*. The latter deserves to be more freely used in arrangements of this nature than seems the case nowadays. It is one of the most graceful little flowers, and for a loose effect has few equals. *S. sorbifolia* is also well adapted for such purposes. The probable cost of this arrangement would be 12 stems of *L. candidum*, 1.25, *spiraea* 25 cents, *gypsophilla* 25 cents. Total \$1.75.

Toronto.

The regular monthly meeting of the Gardeners' and Florists' Association last Tuesday was well attended in spite of the great heat. It was a lively and good humored gathering, and several interesting little discussions were had. It seemed to be the general opinion that Mr. Miller's new carnation "Bride of Earls court" was the most suitable general purpose white to grow in this section at any rate. Carnations were reported to be doing well for all the scorching they had been subjected to, and the late rains have put new life into them. Mr. Ewing asked who was going to Pittsburg but did not get very encouraging replies. It is very hard to get the boys to enthuse on this question.

The cricket match came off on Wednesday, but I regret to say that a previous

engagement prevented my attendance. I hear though that there was a good crowd present and lots of fun. The match was between east and west Toronto and I was told that one of Mr. Chambers' sons who played for the west made more runs than all the east put together. The east is of course burning for revenge, and another match will be arranged shortly.

There is no trade doing now. Ask a florist "how's business?" and he only looks at you with a mingled expression of pity, scorn and "come off."

The beds in the parks and gardens have made astonishing progress during this last week, in fact more than they had made before since being planted. The weather has been warm and moist, proper coleus weather one might call it. The grass too, which a week ago was brown, is nearly restored to its pristine color, and the sound of the mowing machine is again heard in the land this week. Everything grows. E.

Pittsburg.

The regular meeting of the club was held Tuesday evening, 23d inst., with a full and enthusiastic attendance. All the committees reported good progress and will have everything definitely arranged at next special meeting, July 30, at the Hotel Schlosser, where the proprietor has kindly given the use of a room for the meetings of the club.

Chairman Reineman of the entertainment committee reported having secured the option of the Casino in Schenley Park for the president's reception on the first evening of the convention; this is a new departure and I think a very desirable one, as it will bring the members of the society into closer social relations.

It is the desire of the club and the reception committee that all visiting clubs and parties coming to the convention will notify the chairman, A. W. Smith (Mt. Washington), or the secretary of the club of their time of arrival here, and by what route, so that the committee may meet them.

The bowling club committee has made all arrangements and will be pleased to have all entries made early as possible to Chairman Henry Scherer, 410 Smithfield street. Without a doubt the new alleys are the finest the society has ever had for a contest; there are six new regulation alleys, a nice reception room and sponge baths for the excited contestants, all lighted by electric system, and the whole place is modern and up-to-date. The committee has secured the alleys exclusively for the members of the society; they will be opened on Wednesday morning to any of the competing teams for practice. The hall is directly under the Grand Opera House, running through from 5th avenue to Diamond street, with the entrance on Diamond street. The individual prizes for the contest have not all been selected. The committee has decided to give outside of the individual prizes a silver badge to each member of the winning team and a gold badge for the highest individual score.

The shooting contest was taken up and voted down, the reasons being want of time and inability to get suitable grounds for the contest.

The boating trip up the Monongahela River to the great Homestead Steel Works will be a very pleasant outing. Preparations have been made to entertain the ladies with a drive through the principal parts of the city and the parks. The Alvin Theatre, where the convention is to be held, is a very fine building, admit-

ting the meetings and the trade exhibit in the one building. The large conservatory connected with the theatre and the foyers will give ample room for the trade exhibit. The permanent decorations in the building are good, a fine large stage, ladies' parlor, smoking room for the gentlemen, while the theatre office will be used for the secretary. I trust we will have a fine trade exhibit and would like to see more applications for space. Pittsburg is finely situated for the convention, being central, and can be reached from most of the cities in one night's travel. We expect to see the largest meeting with the finest trade exhibit that has ever been held, and trust that all who can possibly spare the time will come. BROWN.

Philadelphia.

Saturday last was a banner day in the history of the Florists' Gun Club of this city. In response to an invitation to visit Mr. H. H. Battles at his farm near Newtown Square, fifteen members turned out, armed with their best shooting irons, various grades of coal dust and other forms of ammunition. The ride of some 14 miles through a delightful country was taken on a tally-ho and a right merry time was enjoyed by everyone. Passing Robert Craig's a salute was given which brought everybody to the front and the party had to alight and partake of refreshments from the hands of Mrs. Craig and her hospitable family. Mr. Craig, who was to have been one of the party, was unavoidably out of town. Continuing the journey, the special feature of which, outside of the beautiful landscapes, the numerous toll gates and the dodging of low branches, was a terrible arraignment of the Scotch by Deacon Harris. Anderson, the principal defender of his countrymen, gave as good as he got, and it was a lucky thing for the deacon that Mr. W. R. Smith of Washington, who was to have been one of the party, was unfortunately not able to go on account of sickness of a relative. Mr. Smith is noted for his witty sallies, and when it comes to upholding the land of his nativity he is simply invincible. A hearty welcome was awaiting the visitors, and after a short inspection of the finest spring house in Delaware county and a glass of the finest milk and various other fine things not so generally found in spring houses, the party repaired to the mansion, where a bounteous spread was partaken of with a relish, the long ride having generated good appetites.

The shooting range was next visited and the sharp crack of the guns was kept up incessantly the balance of the afternoon. The little Scotchman demonstrated his ability to get away with his rival; he was in great form, as in fact were all the shooters, even the grand old Duke demonstrated that he was entitled to a place. After a short inspection of the commodious barn and some of the finest stock in Delaware county a lunch was served. Finally darkness setting in reluctant good byes were said to their host and his lovely wife, and three cheers were given with a will from the coach as the party started homeward. The occasion will long be remembered by the members of the club fortunate enough to be present.

There is little or no business in the stores, but it is as good as usual for the season of the year. Orchids seem to sell well, as they are as good now as in the winter, and while no great quantity are about enough are to be had for the demand. Very good valley is selling for \$3

per hundred, and it would seem as if it costs nothing to keep it in cold storage. Good short white carnations from outside bring 50 cents per hundred, while sweet peas are almost thrown at prospective buyers.

W. K. Harris is putting in ten new Chadbourne Automatic ventilators; he had a number on trial last season and says they did everything the makers claimed for them and more.

Convention matters are being talked about considerably and a good crowd from this city is sure to be present. The various social features, particularly the matches arranged for the bowlers and the shooters, come in for a large share of the discussion. The gun club's work is all that could be desired, but if the great number of 200 and over bowling scores that are being published in the letters from the various cities are any indication of what Philadelphia is to expect at Pittsburg we don't think any prizes will come our way this year.

Mr. P. O'Mara of New York and James B. Kidd of San Francisco were in town the past week.

Commodore J. Westcott, W. K. Harris and John Burton spent several days at the Waretown fishing grounds the past week with good success. K.

St. Louis.

Weather very hot; no business is what you hear from all the store men, even the occasional funeral design has been lost sight of this week, so the store men and the wholesalers have had an easy time of it. But the grower is not so fortunate; he has lots of work to do now; pulling out old stock and planting new. The summer cut of roses and carnations that comes in is fairly good; small roses are 2 cents and carnations 1 cent. Asters are coming in now, and will soon be plentiful at \$1 per 100. Double white petunias are grown by some of the florists in large quantities, to take the place of white balsams, and work up well in funeral designs. The balsams have dried up this summer from the heat.

Julius Koenig, Jr., has leased a new place in Baden near his father's, and is putting up two new houses 100x20; one will be planted in roses, the other in carnations.

John Young will leave on the morning of the 25th for Atlantic City to join his family. John could not miss the picnic you know.

Tom Carroll has some new seedling carnations; the committee on new seedling carnations will have to keep an eye on Tom.

Park-commissioner Ridgely has at last appointed his superintendent; "Billy" Pape got it and everybody congratulates the commissioner on his choice and in turn congratulate "Billy." He will give a good account of himself at the end of his term; he has 4 years to do it in.

The Jordan Floral Co. decorated for the banquet of the National Retail Jewelers' Association Thursday night at the Mercantile Club. The decorations was very tasteful and elaborately gotten up.

Chas. Roeper, foreman for C. C. Sanders, has returned from a visit to his old friend Tom Peterson at Moline, Ill., who is foreman for Mr. John Deere at that place.

Everybody is talking picnic now, and the committee is doing everything in their power to make it a day never to be forgotten by the florists and their friends. From the talk there will be a very large attendance, and the older florist will be heard from. In the 30 yards run for flo-

THE PHILADELPHIA FLORISTS' GUN CLUB AT MR BATTLES' COUNTRY PLACE LAST SATURDAY.

ists of 40 years old and over, the entries so far are Carew Sanders, Julius Koenig, Alex Waldbart, Chas. Jungel, Chas. Cannon, F. C. Weber, Wm. Schray, and Carl Beyer Sr.; the prize is a new hat.

Wednesday night, July 17, the Chinese had every thing their own way in the bowling. They won 3 games from the Japs; the total score was Chinese 2427, Japs 2212. C. Beyer made the largest single game, 229. Next Wednesday night, July 24, they roll at Meramec Highlands at the picnic. Everybody is looking for big games, as they all want to win the gold watch or the gold chain and charm.

THE SCORE.

JAPS.				
Names.	1	2	3	Totals P.

Totals	807	831	792	2427 3

The spring plant trade in St. Louis was about 20% greater than last year. I have consulted most of the leading plant growers here and find that the spring trade has been generally very satisfactory. There was an extra demand for beliotrope, Queen of the West geraniums, moon vines, large sized roses and especially French cannas, Mme. Crozy in the lead. The varieties that sold poorly are calendulus, coleus, alternantheras, and the class of plants used for carpet bedding. Shipping trade fell away a little, but the local trade made up the difference. The prices run about the same as last year. All the growers are feeling good and all are satisfied at the business they have done.

Cleveland.

There has been very little convention talk as yet in Cleveland. Some of us have so much work on hand that must be done before that time that it is not possible to give a positive answer either way as yet. A great many, who have not heretofore done their duty in this matter, should certainly make a great effort to get to so near by a place as Pittsburg. If these delinquents should become conscience stricken and go, their number, added to the old reliables who always attend, ought to make a delegation creditable to a city of close on four hundred thousand.

Things are very slow. There is nothing doing socially that means anything to us, and the prominent ward politicians obstinately maintain a state of malignant good health, so there is nothing but the every day run of funeral work to attend to. The dry weather has had a very injurious effect on all outdoor flowers, notably sweet peas, which with some florists are an absolute failure; with others they are only a partial crop. A very few report them up to the average year both in quantity and quality. Still the sources of supply are so varied, that of peas and all outdoor stock there are enough to go round. About the only ones who kick very hard are those who had to sow three or four times, got little or nothing for their pains, and now have to buy their stock.

A run through Glenville the other day disclosed the usual mid-summer condition of affairs, except in outdoor supplies. This is one of the regions most severely affected by dry weather, as the soil is almost universally very light and sandy. Carnations are very little larger than when first planted, but with the fine showers we have had since, they will doubtless begin to go ahead.

A visit to the establishment taken in charge by H. A. Bunyard found that young man up to his neck in work, with plenty more-a-coming. Some of the houses had already been replanted and others

were being rapidly gotten into shape for that operation. A considerable proportion of the glass is to be devoted to American Beauties, and a goodly share of La France have been put in. One large house of good height goes into Asparagus plumosus. Some of the smaller ones are to be devoted to violets and carnations, so that altogether Mr. Bunyard will hardly have much time to fall very deeply under the somnolent influences of Collamer, East Cleveland or Saint's Rest, as the burg is variously known locally. The official post office title, however, is East Cleveland, so that those having business to transact with Brother Bunyard may govern themselves accordingly.

A.

Worcester, Mass.

Good flowers are still to be had in medium quantities, but the sales are very light, even for this season, some funeral work being the only chance to work up the stock. Good Daybreak, Scott, Spray, Hill and Mangold carnations are brought in and sell as well as anything. Roses are small and short stemmed and not very numerous. Field grown stuff such as candytuft, achillea, sweet peas, hollyhocks, dianthus and helianthus, is in good supply and of very fair quality, the sweet peas being especially fine this summer. Carnations in the field are doing well and give every promise of being fine this winter. We have had lots of rain and now are having a spell of hot sultry weather that is trying to bipeds, but makes plants grow.

Most of the inside planting is done and repairing and getting the houses ready to receive their guests in the autumn is keeping most of us busy. H. F. A. Lange still keeps on building and will add three houses and if possible four to his plant, two for carnations, one for smilax and one for miscellaneous and bulbous stuff. Cypress plates, sash bars and purlins and 24x16 double thick glass, partly Belgian and partly American, will be used in the construction.

The horticultural exhibition on July 18 was fully up to the average and well attended; cut flowers, petunias, sweet peas and dahlias were all well done and shown to good advantage. A. H. L.

Chicago.

This week business is a trifle more active than last; there seems some revival of the shipping trade. While there is sufficient stock to meet demands there is really no surplus, and no flowers of salable quality go to waste. Roses improve a little; Testout, Kaiserin, Bridesmaid and Meteor are very fair, and average \$2; occasionally \$3 is asked for select stock. Beauties are 1.25 to 2 per dozen; short stemmed 3 to 6 per hundred. But there is no overstock of Beauties, and the demand keeps steady. Asters are in limited quantities; the white go readily at \$1 per hundred. Sweet peas are generally rather short stemmed, but Geo. Souster of Elgin is sending in very fine stock; extra good sells for 20 cents, but 10 cents is the usual figure. Carnations seem to be pretty good, and short outside stock does not appear in the market.

Kennicott Bros. Co. are making extensive alterations in their place, entirely rearranging counters, ice boxes and offices. The new arrangements will add very materially to the convenience of their establishment.

T. J. Corbrey is making alterations at his wholesale place, with a view to increasing his counter room.

W. W. Burdsall, Jr., the 11 year old son of W. W. Burdsall of 113 Dearborn avenue, was drowned while bathing in the Calumet River on Thursday last. He was accompanied by a younger boy when he got beyond his depth and it is supposed was attacked by cramp. The sad news was a terrible shock to Mr. and Mrs. Burdsall, who have suffered several previous bereavements. They have the deep sympathy of their many friends in the trade.

Vaughan's Seed Store are receiving first Harrisii bulbs of the season.

A. L. Vaughan has returned from a vacation trip to his home in Louisiana.

At the Florist Club meeting Thursday night the committee on transportation to Pittsburg reported that arrangements had been made with the Pennsylvania road. The party will travel on train leaving Union Depot at 3 p. m., Monday, August 19, reaching Pittsburg early the next morning, the opening day of the convention. Prospects are good for a full delegation from Chicago this year. Berths may be reserved in the special car now by addressing the chairman of the committee, Mr. G. L. Grant, 322 Dearborn street. In view of the fact that the next club meeting would come at a time when many will be at Pittsburg the secretary was instructed to call the next meeting for August 29, one week later than the regular time.

At the bowling meet there was time for only two games. The scores were as follows:

		Average
J. S. Wilson	182	183
G. L. Grant	185	195
Chas. Held	197	166
P. J. Hauswirth		177
A. McAdams	169	124
A. G. Prince	102	131
W. Palinsky	95	125

Visited Chicago: C. B. Whitnall and Supt. J. A. Pettigrew, Milwaukee, Wis.

BASE BALL.

The second game of the series of the Retail against the Wholesale Ball Club

was played on the 21st inst. at Riverside, and proved an interesting game as well as an enjoyable outing to members and their friends. Among the latter the ladies were largely in evidence. Their presence doubtless stimulated the boys to do their level best, and to their credit let it be said that they acquitted themselves nobly. It was by far the best game played, and the score running nearly even from start to finish kept interest up at the highest pitch. The retail boys particularly played in much improved style. With McGiven in the box they made things lively for the opposing side. Jimmy Curran behind the bat played his usual fine game, while Kyle at first, Hauswirth at second and Gus Balluff in the field did excellent work. The wholesale boys presented the same battery as in the first game, Winterson and Scott, the latter distinguishing himself by making the only home run hit of the game. Both teams batted well and the work of the infield of both nines was also very creditable. But the outfielding was rather ragged, and it is here that we find the weak spots that should if possible be strengthened in future contests. Of the numerous flies sent into the field but two were captured, one by John Zeck, the other by L. Coatsworth. The grounds were in most excellent shape. These are situated immediately in front of the residence of the late Mr. Chas. Reissig. The thanks of the clubs are due for the hospitable manner in which they and their lady friends were entertained by Mrs. Reissig, ably seconded by the Kyles, father and son (the latter are operating the greenhouse establishment of the late Mr. Reissig). Refreshments were served on the spacious lawns after the close of the game, the whole affair being thoroughly enjoyed by all present. Mrs. Reissig cordially extends an invitation to the boys for at least one more visit during the present season—and don't forget to bring the ladies.

Following is the make-up of the teams:

RETAIL.		WHOLESALE.
McGiven	P	E. Winterson
Jas. Curran	C	G. R. Scott
W. P. Kyle	1B	M. Cullen
P. J. Hauswirth	2B	C. Balluff
W. Kreitling	3B	L. Kelley
Stevens	SS	W. Lynch
G. Balluff	LF	John Zeck
A. Newett	CF	A. McKellar
Joe Curran	RF	L. Coatsworth
Umpires: Palmer, Weber.		
Score: Retail 16, Wholesale 17.		

San Francisco.

John H. Sievers is building a large chrysanthemum house at his big establishment on Chestnut street.

Henry Neuberger, the wholesale florist who has supplied the market with roses for many years, departed for his old home in Germany last week, accompanied by his wife. He has leased his establishment to Mr. Chippari, formerly of the firm of Podesta & Co., Sutter street.

The Sunset Seed and Plant Co. have added two new houses to their nursery at Menlo Park.

Business is rather dull now and the quality of stuff coming into the market is very poor. The florists, however, were very busy July 17 on account of the death of a prominent citizen. Sievers, Podesta and Pelicano had the bulk of the funeral work.

A. Hilbert has bought out Domenic & Co. of 307 Kearny street. He formerly owned a store on Geary street. Domenic & Co. will give their whole attention to their Sutter street store.

Mrs. C. Holbrow of 338 Post street has failed, making an assignment in favor of the Sunset Seed and Plant Co. The

largest creditors were that firm and M. Lynch. All the fixtures, etc. were sold at auction, but brought a nominal sum.

Frank Pelicano of 343 Kearny street and his party are on a camping excursion to Mt. Diablo, to be gone several weeks.

A camping party composed of Serveau Bros., M. Lynch and several others has gone to the Santa Cruz mountains for a short time.

Peter Connelly, late gardener to Edw. Barron at Mayfield, has opened up a retail store at 2190 Devisadero street. Mr. Connelly has had experience in that line before and we all wish him success.

Mr. Geo. S. Josselyn of Fredonia, N. Y., recently spent a few weeks in San Francisco.

Wm. F. Dreer passed through San Francisco on his way home from Japan.

Mr. August Kusche of Ross Valley, Cal., has been appointed inside foreman for M. Lynch at Menlo Park. Mr. Kusche is an experienced rose grower, having worked in many of the big rose growing establishments in the east. The first asters have made their appearance from this place and find a ready sale. Mr. Lynch is planting two new houses, lately erected, with Testout, Brides and Bridesmaid.

The first Harrisii have come to hand and already the growers are busily engaged potting, etc.

Mr. John H. Sievers read a very interesting paper on "Tuberous begonias" at the last meeting of the California State Floral Society. METEOR.

Pittsburg and Allegheny Hotels.

Below are given the names and locations of the hotels at which rates have been secured by the local committee for convention week, rate per day, number each can accommodate, and whether American or European plan.

The Chairman of the Hotel Committee is Mr. B. L. Elliott, 38 Fifth avenue, Pittsburg.

PITTSBURG.

Central Hotel, Smithfield street, between Second and Third avenues. American plan. One person in a room, \$2.50; two in a room, \$2 each. Can accommodate 200.

St. Charles Hotel, corner Wood street and Third avenue. American. \$2. Can accommodate 100. Hotel Willey, Sixth street near Penn. American. One person in a room, \$2; two in a room, \$1.75 each. Accommodate 100.

New Hotel, Fifth avenue. European. \$1 to \$2.50. Accommodate 20.

American House, 1002 Liberty street. American. \$1.50. 75 rooms.

Hotel Schlosser, corner Sixth street and Penn avenue. American. \$3. Accommodate 150 to 200.

Hotel Anderson, Sixth street. American. \$3, \$3.50, \$4, \$1.50 and \$5. Accommodate 50 to 100.

Monongahela House, First avenue and Smithfield street. American. \$3 and upwards. Accommodate 60 to 75.

Hotel Durr, corner Fourth avenue and Market street. American. \$1.50 and \$2. Accommodate 25.

Hotel Duquesne, Smithfield street. European. \$1.50 to \$5. 90 rooms.

Home Hotel, Duquesne Way. American. \$1.50. Accommodate 75.

Seventh Avenue Hotel, Seventh avenue. American. \$2.50 and \$3. Accommodate 100.

Hotel Boyer, Seventh and Duquesne Way. American. \$2. Accommodate 100.

Easteru Exchange Hotel, Penn avenue, East End. American. \$1.75. Accommodate 50 to 100.

ALLEGHENY.

Gerst's Hotel, East Diamond street. 50 cents to \$1.25. Accommodate 25.

Hotel Schreiber, 35 S. Diamond street. \$1.50. Accommodate 50.

Hotel Randall, 49 S. Diamond street. \$1.50. Accommodate 25.

Hotel Girard, 20 Federal street. \$1.50. Accommodate 45.

Hotel Willard, 187 Federal street. \$1.00. Accommodate 75.

Hotel Mahold, Federal and Robinson streets. \$1.50. Accommodate 25.

Hotel Sauers, 84 Federal street. European. 50 cents, 75 cents and \$1. Accommodate 40.

Hotel Wetzler, 31 E. Diamond street. \$1.25. Accommodate 15.

Chas. Schutte, 162 Lacock street. \$2.00. Accommodate 25.

Hotel Carson, 168 Lacock street. \$1.

Hotel Burdett, 2 Federal street. \$2.

Rochester, N. Y.

Demand for flowers in the past week was somewhat ahead of former weeks, but by no means could it be called brisk. Carnations are rather plentiful yet; those shipped from a distance are very tired and sleepy on arrival, but roses from Oil City, Pa., come in splendid shape and are the best in this market, those from other points being only of medium quality. There is an immense quantity of achillea The Pearl used here every day, it has to take the place of white carnations in funeral work, etc. The first asters made their appearance a few days ago and are very good, being the first or center bloom; how the lateral buds will come out remains to be seen, for we are still waiting for a good rain and everything is very dry, so that even our most troublesome summer weed, the portulacca, will not grow. The best sweet peas in town are homegrown, and outsiders do not compare favorably.

The sheriff levied upon the office furniture and books of A. D. Pratt, nurseryman, of Rochester upon a claim for \$18,586 in favor of Marion E. Stone.

Chas. Suhr is building a large rose house and J. Thomann a house for violets, besides doing other repairing and enlarging.

John Dobbertin, who conducts a small but paying florist business on St. Joseph street is building a fine residence on his grounds. J. B. K.

San Jose, Cal.

Chas. C. Mavlet has vacated his old store on North 1st street, and has moved to more commodious quarters across the street. He has a large store with four show windows each showing a separate department of his business, one is for cut flowers, another for seeds, another for birds, and one for bird cages, bird food, etc.

Miss M. B. Ridley has opened up a new retail store at 18 West San Fernando street, and seems to be doing very well.

Mr. G. A. Lehmann, who has been growing stuff for the San Jose market, recently erected two fine carnation houses. He intends planting Portia, Scott and McGowan. His ferns and other inside stuff is doing nicely. His place is at the corner of Stone avenue and Monterey Road, opposite Oak Hill Cemetery.

Mr. Edw. W. Parsons, late of Flushing, L. I., has been very sick lately but now is getting along nicely. He has a very fine range of glass on South 10th street where he grows roses, carnations, ferns, palms, etc. Wm. Nesbitt is in charge here. Lately they have been troubled greatly with the wire worm in their carnations.

At R. D. Fox's place carnations are the chief attraction. Mr. Frank Stark, who is in charge here, is a great admirer of Wm. Scott and is planting quite a lot of it.

Great preparations are being made here for the flower carnival to be held next spring. It is to be the grandest one ever held in California. METEOR.

Kentucky Society of Florists.

The first outing of the above society took place July 18, near St. Matthews, opposite Nanz & Neuner's establishment. A better place could not be wished for, and the weather was fine, though warm. Fully two hundred people were present. Football and base ball seemed to be the favorite games, and dancing was also indulged in. Messrs. Marrett and E. Reimers acted as stewards, and the refreshments furnished suited every taste.

The day passed off very happily, and everyone present enjoyed the feeling of friendly unity brought about by the formation of the society. It is likely that next year a larger and more elaborate excursion than the present one will be arranged.

Weather is fine here, only a little too much rain. Stock of all kinds is in fine condition; if trade had been a little better this year there would have been no complaints. H. N.

Newport, R. I.

The hardy yellow chrysanthemum Golden Fleece is just beginning to bloom in the garden borders and will be a sheet of bright yellow until October. This is one of the most satisfactory of garden plants and if it were more generally known would have an enormous sale. Mr. Johnston, formerly superintendent of parks at Paterson, N. J., is now in charge of Mr. Oden Golet's place. Among the things worth seeing here is a house of tuberous begonias, mostly seedlings. The hollyhock disease is beginning to make serious trouble in Newport.

The Reason Why.

Your sketch of the greenhouses of Messrs. Sloppy & Co. and Mr. Tasty brings to my mind a very old adage, that a thing worth doing is worth doing well or not at all. A short time since I visited just such a place as that of Messrs. Sloppy & Co., and was not surprised that business was not flourishing there. People will go to a neat, well kept place. Although it takes a little more time and attention it pays good interest. Coming back to the old adage, I would, with all due respect, impress it upon the minds of all who contemplate building new greenhouses that too often they are rushed together without much thought as to their lasting. I had a striking example of this not long ago; greenhouses that have not been built five years are plainly showing decay, with a tendency to fall down. That is Messrs. Sloppy's style of doing things.

My Mr. Tasty is a particular friend of mine in Oswego, Mr. Water Workman, the youngest florist there, who has just built himself a fine rose house 60x20, and his way of doing the work is well worth imitating. He made his plans early in the winter, had his lumber brought in, cut his wall plates and rafters, then gave all two coats of paint. His posts (cedar) were given a good coat of tar, and the butts dipped into the same; the siding on the inside was treated with a good coat of the black mixture, and I venture to say the house will be long lived. [Be cautious about using tar inside of the house.—Ed.] I had the pleasure of seeing it completed a week ago, and I must say that in my 35 years' experience I have never seen a better built house, and the glazing was perfection itself; one could not pass a visiting card through any of the laps. That my friend has well digested the old maxim must be evident. H. Y.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY. Please to remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

THE NORTH AMERICAN HORTICULTURIST is a new paper devoted to the fruit interests, and published at Monroe, Mich. It should find a good field in that fruit-growing region.

MUSHROOMS.—"Greenhorn" is advised that mushrooms will not be a successful crop if planted on a damp bottom. The time to plant spawn and how to cultivate it can be learned from the treatises advertised regularly in the FLORIST. See page 1290 of last issue.

THE DUTCHESS COUNTY Horticultural Society offers premiums amounting to over \$300 at their first annual chrysanthemum show to be held at Poughkeepsie, N. Y., November 6, 7, and 8. The schedule, recently issued, embraces roses, carnations, orchids, and other plants and flowers, in addition to chrysanthemums. W. G. Gomersall, secretary, Fishkill-on-Hudson, N. Y.

PEORIA, ILL.—The Park Board is considering plans for a conservatory to cost in the neighborhood of \$15,000.

PETERSBURG, COLO.—F. A. Haenselman has changed his location from South Denver to Petersburg.

KANSAS CITY, MO.—The park board has decided on three new parks, which will be paid for by special assessments covering a term of fifteen years.

NEW LONDON, CONN.—Trade is good; prices have reached the bottom in everything in the plant line. There is an unceasing demand for geraniums, especially pink shades, small palms, and boxes of plants for veranda or window decoration.

SPRINGFIELD, ILL.—The big dome from the horticultural building at the World's Fair, which was purchased by the Illinois State Board of Agriculture, arrived last Friday on two trains of 20 cars each. The dome will be used in the construction of the administration building on the new state fair grounds.

Rockville, Conn., E. & H. Schmeiske, 4,500 square feet of commercial houses.

Do You Know Him?

When summer brings his roses out,
And eke the prices down,
He sulphurs mildew with a scowl
And waters with a frown.
And when the winter price goes up
On roses and on coal,
You'd think that every bill he pays
Would cost his erring soul.

His thoughts on elevating trade
Are hardly more consoling;
He says with scorn the Pittsburg meet
Is only bosh and bowling.
If e'er he views in heavenly fields
Immortal asphodel
He'll only wonder why they grow
Such flowers, which wouldn't sell.
—From Echoes of the Potting Shed.

The Last Straw.

He made up floral bicycles
And harps with purple strings;
Big models of the Eiffel tower
And Saturn with his rings
But when one day a blooming maid
In flush of mournful pride
Came in and ordered a railroad collision, with
a model of the wreck in carnations, and an
ambulance in the distance
He

Laid
Him
Down
And died.

Wages Again.

In the FLORIST of July 6 a correspondent signing himself "Subscriber A" wants light on the subject of wages. What he evidently wants to know is what a good florist ought to be worth. There are two opinions on the subject, viz: The employer's and the employee's. The former generally thinks that about \$20 per month and board with permission to sleep in the potting shed so as to be handy if wanted during the night, is sufficient. The latter thinks that after he has spent five years and upwards in learning his business he ought to be worth as much as any other good tradesmen, but having no union or means of enforcing his demands he has to be satisfied with what he can get, which hardly ever will compare favorably with the common laborer of the district. It is a well known fact that while a good florist or gardener must have the knowledge of a B. A. he must not expect more wages than a hod carrier.
COLORADO SPRINGS.

"ARE you doing much gardening, Miss Struck-oye?" "No, not much. You see, I have not yet got the proper stockings for such work." "Got what?" "The proper stockings—the rubber garden hose I see advertised in the papers."—*Tammany Times.*

CONVENTION
NUMBER.....
TO BE ISSUED
AUGUST 17.

New Orleans.

The tenth anniversary of the New Orleans Horticultural Society was pleasantly celebrated July 18 after the following officers for the ensuing year were elected:

President, Edward Baker; vice-president, Louis Sieber; treasurer, John Eblen; secretary, Paul Abele.

The members repaired to the restaurant of Joseph De Simone, where a fine repast had been spread. The banquet room was beautifully decorated with flowers and ferns. A vote of thanks was extended Messrs. C. R. Panter, John Eblen and Louis Sieber, who had charge of the arrangements, and Messrs. H. Papworth, Daniel Newsham and C. R. Panter, who attended to the decorations.

Speeches were made by Messrs. Edward Baker, president of the society, Louis Sieber, vice-president; Senator Anthony Sambla, honorary president of the Gardeners' Protective Association; John Parr, financial secretary of the Gardeners' Association; Anthony Klees, grand marshal of the gardeners; Eugene Ratelle, honorary member of the Horticultural Society; Messrs. C. W. Eichling, Wm. Nelson, U. J. Virgin and others.

Portland, Me.

The botanists of Maine held an enthusiastic convention in this city July 12-13, and organized as a permanent association under the title of the Josselyn Botanical Society. A number of interesting papers were read and discussed and several exploring trips were made to points of interest in this vicinity. Officers were elected as follows: President, Prof. A. L. Lane, Waterville; vice-presidents, Prof. L. A. Lee, Brunswick, Mrs. H. C. Beedy, Farmington, Miss Mary A. Clark, Ellsworth, Mrs. E. L. Rand, Cambridge, Mass.; secretary, M. L. Fernald, Cambridge, Mass.; treasurer, Miss E. M. Cram, Portland.

Philadelphia Notes.

Dahlias are certainly coming forward. Some were in bloom on Decoration Day—pretty early. Nymphaea out on July 1, and it is a very good one, too. Within a few miles of Philadelphia may be seen a patch of six acres of dahlias; another one of four; another of three. We doubt whether they are grown so extensively anywhere else in the United States.

The white canna is here—true not so white as this paper, but very close to it. It was raised by Antoine Winzer, of West Grove, Pa. It will probably be shown at the convention if in bloom.

PANSIES. The Best from many growers, not the selection of one grower only.

INTERNATIONAL MIXTURE.

This mixture has been made up and sold by us for the past five years from the best strains known in Europe and America. We have in our files testimonials from leading florists in almost all the leading cities in the U. S. saying in effect "the best we ever had." Now if you would like to be convinced of this, drop us a line and we will send you the names of good men near you who will certify that VAUGHAN'S INTERNATIONAL MIXTURE has proven with them to be the best, most complete all round high class Pansy Mixture they have ever grown. Our four page price list of these and other seeds, mailed on request. The new crop seed is now arriving and can be sent at once, but after July 20th or August 1st our assortment of strictly NEW CROP SEED will be most complete. Trade pkt. 50c; 1/2 oz. \$1.50; oz. \$10.00.

- CINERARIA. Columbian, mixed, pkt. 1000 seeds, 50c.
- CYCLAMEN. Giant varieties, 60 seeds, 50c.
- PRIMULA. Vaughan's International, per pkt. 250 seeds, 50c; 1000 seeds, \$1.25; 1-16 oz. \$2.00.

GIANT MIXTURE.

For those who desire the largest flowers only, and are willing to accept a somewhat less variety in the way of coloring, our GIANT MIXTURE has been especially put up. It contains only the largest flowers and during the last two years we have greatly increased the number of sorts. See list below. Prices for Giant Pansy Mixture, trade pkt. 50c; 1/2 oz. \$1.50; 1 oz. \$5.00.

- | | | | |
|--|----------------|-------|--------|
| Giant Trimardeau, white, large white with a violet center..... | Trade pkt. 50c | \$ 25 | \$5.00 |
| Giant Beteon-feld..... | | 25 | 5.00 |
| Giant Trimardeau Improved. This strain contains all the new colors of Trimardeau.... | | 25 | 3.50 |
| Giant Cassier, a very choice variety of colors, each flower is marked with 3 or 5 blotches.... | | 25 | 5.10 |
| Giant Bignot, the flowers are of enormous size, perfectly round, of great substance and the most varied and attractive markings and colors. Our "Bignot" contains shades of red, bronze and reddish brown that are not to be found in any other mixture..... | | 25 | 6.00 |
| Giant Auricula Colors, very beautiful shades..... | | 25 | 5 |
| Giant Violet Blue..... | | 25 | 5 |
| Giant Yellow, Five Spotted, new..... | | 25 | |
| Giant Hortensia Red, new, same shade as a Hydrangea..... | | 50 | |
| Giant Emperor William..... | | 25 | 5.00 |
| Giant Trimardeau, mixed..... | | 10 | 2.00 |
| Giant Striped, flowers enormous size..... | | 25 | |
| Giant Trimardeau, Yellow, very showy color, good seller..... | | 25 | 5.10 |
| Giant Trimardeau, Purple, very large..... | | 25 | 3.00 |
| Giant Coal Black, of immense size..... | | 25 | 4.50 |
| Giant Copper-Color, a most distinct combination of rich metallic shades..... | | 25 | |

Giant Paris Pansy Mixture.

The flowers of this strain are as large as the Trimardeau and far superior in color and in substance of petals; having a stout and stiff flower stem, the flowers last longer and the plants are more compact. Oz. \$3.00; 1/2 oz. \$1.40; 1/4 oz. 75c; trade pkt. 25c.

- PREMIUM PANSIES, Mixed. Pkt. 25c; 1/2 oz. \$1.00; 1/4 oz. \$1.25; oz. \$6.00.
- CHICAGO PARKS. Oz. \$1.00; 1/2 oz. 50c; pkt. 10c. 4 oz. \$3.00.

A Wrinkle for Mushroom Growers.

The following extract from a letter just received from the largest mushroom grower in England will be of interest to those who intend to grow this crop the coming season:

"Advise growers to break the mushroom spawn into the size of pieces they intend to use and to put on the bed on the spot they intend for its final insertion two or three days before the bed is quite ready to spawn. This softens the spawn and it becomes accustomed to what it is going to live in.

"I would also recommend growers to get a few lengths of corrugated iron and lay on bearers about 4 to 6 inches clear of the bed. Try only a few lengths at first as an experiment, and if successful, as it is here in England, they will extend its use. This, of course, applies only to indoor culture."

In this connection it may not be out of place to remind growers that the early plantings have been the most profitable in the past. Most of the larger growers have their first beds ready for spawning by the first or second week in September.

G. C. W.

Mr. Isaac's Imported Cactus.

From the San Francisco Chronicle.

That ardent student of floriculture, Col. Alfred Isaacs, is not so passionately absorbed in the flora of foreign lands as he used to be. The poppy and the pallid pelargonium are good enough for him, he says. Mr. Isaacs is a government collector in the office at the foot of Main street. Along the top of his desk sits a row of alligator pears and some sweet potatoes booming in bottles of water. The other day this display was increased by the arrival of a queer looking plant in an earthen flower pot. A note attached to the plant described it as a Hawaiian cactus, and very rare.

"Those fellows at the Oceanic dock are getting good in their old age," remarked Mr. Isaacs as he poured a cup of water on the cactus and placed it in the warm sunlight.

In size and shape the Hawaiian cactus resembled a penholder covered with a thin grayish white foliage. The upper end of the plant was tied to a stick inserted in the soil of the pot. Taken as a whole the cactus was not a promising object, but Mr. Isaacs attended to it with loving care. Twice a day he watered it, according to instructions, yet the cactus did not appear to thrive.

"It must be the climate," said Mr. Isaacs. But the hot weather of the past two days aroused the latent energies of the Hawaiian specimen to a remarkable extent. It began to shed a fragrance round about that made Mr. Isaacs sick and drove sea captains out of the office. The aroma of that imported cactus was simply asphyxiating, so much so that the sagacious collector said:

"I am beginning to smell a rat."
Mr. Isaacs was right. He pulled the cactus up by the roots and exposed a rat, which should have been buried deeper or thrown overboard two weeks ago, and now Mr. Isaacs is trying to find out who palmed off a rat's tail as a Hawaiian cactus.

Plant Pots and Pedestals.

We invite the attention of intending buyers or those interested in seeing the newest productions of the potter's art, to our importations of English, French, German, Japanese and Chinese plant pots or jardinières, selected by our buyers at the places of production the present season.

They include all sizes and shapes up to the large and very large; from the lowest price up to \$150 each. Some very costly old blue Canton China.

Our stock of China and Glass occupies seven floors and more than 10,000 bins.

News Notes.

BOWIE, TEX.—The Texas State Horticultural Society meets here July 31.

WABASH, IND.—E. F. Overman is building quite an extensive addition to his greenhouse.

GERMANTOWN, PA.—Walter R. Cliffe, who has been seriously ill, is again able to attend to business.

STEVENSVILLE, MONT.—The State Horticultural Society will hold its annual meeting here September 19 and 20.

SALT LAKE CITY, UTAH.—Prof. C. F. Piau of the Kensington Greenhouses has recently finished a greenhouse 20x50 adjoining his residence. Evans is building two houses each 18x100. The LaFayette Floral establishment is for sale. Weather is usually cool, frost in some places on the 6th inst. Stuff outside is coming in slow. Business quiet.

PORTLAND, ORE.—The gate receipts at the recent rose show of the floral section of the Oregon State Horticultural Society were sufficient to cover all premiums and other expenses. This is the first exhibition of the sort that has paid expenses. The society feels greatly encouraged, and has commenced work on the arrangements for a chrysanthemum show the coming fall.

HOUSTON, TEXAS.—The ladies of the Faith Home are at work on arrangements for the annual chrysanthemum show this fall. It is intended to endeavor to secure exhibits from all over the State instead of from local growers only, and make the affair a state event. It is also expected that there will be exhibitors of cut flowers from distant states. The amounts for premiums will be considerably increased this year.

KANSAS CITY, MO.—A neighbor of florist John Schneider complained of the smoke from his chimneys and going into court obtained a temporary restraining order to shut off the smoke. The case was argued at length before Judge Dobson upon a motion to dissolve the injunction. The judge mopped his brow and cogitated. He was not able to come to a conclusion as to the merits of the case. He did come to the conclusion, however, that there was no great haste about the matter, as it does not take much steam to run a greenhouse just now, so he said he would appoint some experts to look into the matter, and render a decision next October.

New Catalogue (No. 4) containing over 1000 Ornamental Cuts for Florists' use, such as envelopes, letter-heads, bill-heads, cards, advs., floral designs, etc., at from 30c. and upward. Price of Catalogue 25c. (deducted from \$1.00 order).

A. BLANG, ENGRAVER for Florists, Philadelphia, Pa.

If you grow

Carnations, Chrysanthemums, Palms, Roses, Violets, or anything else worth growing, and are not feeding them with

Albert's Horticultural Manure,

you are missing a mighty good thing.

It can be used in solution, as a top-dressing, or mixed with the soil. Put up in 10, 25, 50 and 100 pound packages for florists' use, and in 1, 2 1/2, and 5 pound tins for retail purposes. Write for trade prices and pamphlet.

ROBT. L. MERWIN & CO., General agents, United States, 88 Wall St., New York.

Every florist, market gardener, owner of lawn, grass plat or flower-bed, in fact everyone who has a faucet and hose should have the Kinney Pump (patent applied for) for applying liquid manure, fungicides and insecticides to plants. Feed your plants, fertilize your lawns by using liquid manure. The cheapest, simplest and most scientific spraying pump in use. Sent prepaid for \$2.50—spraying valve attachment 50c. Pump complete \$3.00. Send for circular. Address HOSE CONNECTION CO., Kingston, Rhode Island. Only 29 Kingatons in the U. S. Get the state straight. "They are a good thing." "A very valuable labor saving device."—W. N. RUDD, Sec'y Mt. Greenwood Cemetery Assn., Ill. "The most valuable labor saving invention I ever used."—C. E. WELD, Roslindale, Mass.

IMPROVED GLAZING.

GASSER'S PATENT ZINC JOINTS for butting glass makes greenhouses air and water tight; also prevents sliding and breakage from frost. Does not cost as much to heat a house glazed with the joints, thereby saving enough in fuel to more than pay the additional cost of glazing. The leading florists of the country are using them. Write for circulars with full particulars and price list.

J. M. GASSER, FLORIST, Euclid Avenue, CLEVELAND, O.

.....THE ANNUAL
CONVENTION NUMBER

— OF —

The
American
A
WEEKLY
JOURNAL
Florist
FOR THE TRADE

Will be issued **AUGUST 17, 1895.**

In addition to other specially attractive features it will contain an accurate *CHART OF COLORS*, comprising 36 of the most important shades, prepared for the FLORIST by F. Schuyler Mathews. The color chart will be a permanent part of the paper as readers will be advised of the necessity of keeping it in the paper away from the light except when in use.

The expense of this chart has been very heavy, but it will lend to the issue, of which it will be a part, a very greatly increased value as an advertising medium, as it will be frequently referred to. Still there will be

NO INCREASE IN ADV. RATES,

which will be as heretofore:

FULL PAGE.....	\$42.00.
HALF PAGE.....	21.00.
QUARTER PAGE.....	10.50.
PER INCH.....	1.40.

Subject to time discount to those having term contracts with us.

Send advs. **early** so we may have abundant time to get them up in our best style.

The Convention Number will reach every Trade Buyer in the United States and Canada, and extra copies will be distributed at the Convention.

AMERICAN FLORIST COMPANY,

P. O. Drawer 164.

CHICAGO.

News Notes.

PROPHETSTOWN, ILL.—W. W. & C. W. Noyes are about to complete their greenhouse here.

WESTERLY, R. I.—S. J. Reuter is making extensive alterations and additions to his range of houses.

HOLMESBURG, PHILA., PA.—R. M. Eisenhart is about to build three new houses 40x100, on Bristol pike.

ROXBOROUGH, PA.—Wm. Christ has leased the greenhouses of P. D. Pfisterer and will make roses his specialty.

MARINETTE, WIS.—The city council has instructed the committee on public grounds to make quite a number of improvements in the city park.

UTICA, N. Y.—F. E. Shaw has purchased the greenhouses at 320-328 Sunset avenue belonging to the estate of the late Samuel Davies and will continue the general florist business there.

PEACE DALE, R. I.—W. M. Edwards, formerly secretary of the Berkshire County Gardeners' and Florists' Club, Mass., has taken charge of Oakwoods, Mr. Rowland Hazard's beautiful estate here.

LANCASTER, PA.—Spring business was very satisfactory here. Julius P. Siebold has added a new violet house 10x80. Peter Brown is adding two new houses. Stock of all kinds is reported in excellent condition.

JERSEY CITY, N. J.—The bonds for the Essex County park system, which will cost \$2,500,000, will be issued at 3.65 per cent. interest. It is thought the first issue of \$750,000 can be floated for par at that rate.

SPRINGFIELD, MASS.—The annual sweet pea exhibition of the Hampden County Horticultural Society has been postponed from July 23-24 to July 30-31. The change was necessitated by the recent heavy rains which damaged the flowers.

ATLANTA, GA.—There will be no department of horticulture at the Cotton States and International Exposition. The Forestry building will have a handsome exhibit of all things pertaining to forestry, but there will be no special exhibit of horticulture.

DANVERS, ILL.—L. Wellenreiter and H. C. Schweimann have formed a partnership here, under the firm name of Wellenreiter & Co. They are building one house 20x50, ¾ span, for roses, and another 8x50 for violets. Carnations look very well in this neighborhood.

NEW ROCHELLE, N. Y.—During the storm Saturday evening, July 13, the cupola tower of the large barn at Rose Hill Nurseries was struck by lightning, slightly damaging it. Mr. Siebrecht had a narrow escape, as he had just driven in when the crash came. The zinc capping on the corners over the slate seemed to act as non-conductors and carried the electric current off to a neighboring house, where it spent itself.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Red Spider Can't Live

WHERE THIS NOZZLE IS USED.

CHILD'S RAIN MAKER

Throws a powerful spray at such an angle that spraying the underside of the foliage is no effort at all. It is simplicity itself but "gets there" every time. It is well made of polished brass and will last a lifetime.

RICHMOND, IND., April 10, 1895.

MR. P. M. CHILLD,

Dear Sir:—The nozzles to hand sometime ago, we are so much pleased with the way they work that we are glad to write you saying that they are more than satisfactory. They are just what is wanted for greenhouse work, as they enable us to reach the underside of the foliage with perfect ease, and with the full force of the water.

Sorry we did not have them sooner.
Yours truly,
E. G. HILL & CO.

Price, \$1.00 each, prepaid. TRY IT, AND RETURN IT at once. If not satisfactory, and your money will be sent back.

M. M. JONES, Gen'l Agent,
6122 Oglesby Ave., CHICAGO.

AN ACCIDENT

To your heater may make it necessary to put out the fire until repairs have been made—and this may happen at a time when to be without heat in the greenhouse would mean

CERTAIN DEATH

to your plants. Should you be fortunate enough to possess a "SPENCE" HOT WATER HEATER, and should an accident occur to one of the sections of which the heater is built up, that section can be removed without stopping the action of the heater. This is a feature of incalculable value and one that is possessed only by the "SPENCE." New "Spence" booklet free.

Heating Questions.

[Replies by Samuel Burns, member of the American Society of Heating and Ventilating Engineers.]

How much below the heating pipes in the greenhouses should the water line of the boiler be so that the condense will return to the boiler, the pressure to be 30 to 40 pounds? A. W.

ANS.—The water line in boiler should be not less than 4 feet below the heating pipes in greenhouse. In large runs of pipes or above the boiler is situated some distance from its work. I should advise the depth of boiler increased as much as possible; a much better working job will be the result.

Is there any method by which a 25-horse power boiler that is used for running steam engine can be utilized in heating greenhouses through medium of hot water system, or if used on a steam heating system, can common 4 inch pipes be used? WILLIAMS & SONS CO.

ANS.—There is a method of utilizing steam for heating greenhouses by hot water, introduced some years ago by the Exeter Machine Co., Exeter, N. H. It was designed to help those who had 4-inch pipes in their greenhouses and wanted to heat by steam, but did not care to go to the expense of putting in new pipes. In this system a steam boiler was located at some central point, a generator filled with water being placed at the end of each greenhouse in the same manner that the ordinary hot water boiler is at the present time; the generator had flow and return connections which were attached to the 4-inch pipes in greenhouse. The steam was introduced to these generators and passed through a coil of pipes which warmed the water, causing it to circulate through the pipes in the greenhouses. If you decide to heat by steam put in small pipes; the 4-inch are too large, and cannot be recommended for that purpose.

I heat by steam, as is usual; the steam rises to the highest point directly over the boiler, and from that point it is a gradual drop all through the houses back to boiler. What I want to know is what changes, if any, would I have to make in order to heat by hot water in mild weather and by steam in severe weather? My houses are not piped heavy enough to run on hot water during severe weather, and further I do not want to change; but I would like, if possible, to use hot water during mild weather. I have thought that by putting in a small pipe at the top of "L" in flow pipe going up to a tank (open) that I could plug safety valve, shut off steam gauge, fill up boilers and pipes with water, and it would "go" right along. Am I right or wrong? W. J. B.

ANS.—There are several changes which should be made before he can successfully use his steam heating apparatus for hot water. The arrangement of pipes, i. e.,

rising at once from boiler to highest point and then dropping all the way back to the boiler is correct as far as it goes, but he does not give the sizes of mains, which is an important consideration in deciding questions of this kind. In hot water heating the main flow and return should be the same size to get the best results; assuming therefore that this condition regarding mains has been complied with I will suggest the necessary changes.

1st. Provide an expansion tank of sufficient size (about one-twentieth the water capacity of boiler and pipes will do); locate this tank at least 18 inches higher than the highest point on main flow pipe.

2nd. Take a one-inch pipe from highest point of flow pipe and connect this to expansion tank near the top, say within two or three inches; this will take the air out of the apparatus when filling with water, and will act as a relief pipe at all times.

3d. Take a one-inch pipe from bottom of tank and connect to the return pipe near the boiler; this will act as a feed and expansion pipe; direct feed can be connected at any point between valve and boiler.

4th. An ordinary galvanized iron boiler fitted with water gauge will answer well; if such is used, take a one-inch pipe from top for overflow. If more convenient a barrel or wooden tank will answer same purpose, the connections remaining as explained before.

5th. Put a "Y" branch on main return, on the greenhouse side of check valve and carry a pipe full size of return from this "Y" to boiler, thus making for a short distance an independent return. Each of the connections mentioned must be provided with a tight valve.

EXPLANATION. When using for steam the valves in pipe leading to upper part of expansion tank, in pipe leading from lower part of expansion and the short independent return from "Y," must be closed.

TO CHANGE TO WATER. Shut off steam gauge, weight or plug your safety valve, open valves leading from tank and on independent return pipe; fill pipes and boiler with water to proper level in tank, then start your fires, and if pipes are put in right you will have no trouble.

In answer to "Manager," would say: A greenhouse 100 feet long by 10 feet wide and 7 feet high at ridge, inside temperature 55° to 60°, outside temperature 30 below zero, would require 9 lines of 2½ inch inside diameter pipes. In house 19 feet wide by 100 feet long, ordinary construction, 70 degrees inside, 30 below outside, would require 16 lines of 2½ inch diameter pipe. These amounts would give perfect satisfaction, using hot water under gravity system; if under pressure less piping would do. Should advise you

to run one main flow, $2\frac{1}{2}$ inch, along ridge in small houses, but should advise 2 flows $2\frac{1}{2}$ inch, one on each side in the large house from these mains; drop down to pipes under benches, falling to boiler about 1 inch in every 10 feet if practicable. The most exhaustive work that I know of on the subject of hot water heating is one written by Charles Hood of London, England, but as this work is gotten up for English practice it might not answer so well. I should suggest as the most satisfactory book for American practice "Hot Water Heating for Buildings," by William J. Baldwin of New York.

In answer to Emil & Herman Schmeiske: In regard to heating greenhouse 50 feet by 16 feet by 9 feet high—we assume that this house is to be used for general plants and that you want a night temperature of 55° to 60° when temperature outside is at zero. If this is correct, one 2 inch main overhead and 6 lines of $1\frac{1}{2}$ inch pipes under benches will do the work provided you heat by hot water under pressure (10 pounds). If you wish to heat by hot water gravity system, then you must add 4 lines of $1\frac{1}{2}$ -inch pipes.

An up to Date Small Range of Glass.

A subscriber some weeks ago asked for some suggestions on building a place of about 5,000 square feet of glass. He said his place was getting valuable, so he had sold the land and purchased three acres farther from the city. He wished to avoid the expensive errors of the past and build the new place as near up-to-date as possible. The place is to be used for growing cut flowers and plants for the local trade in a small city of 15,000 people.

It would be easier to me to give my views on how to build a rose house or carnation house, for a plan of one would suffice for 40 houses. In this small establishment where such a variety is expected to be grown, there is much more likely to be a difference of opinion. The inclosed sketch covers 6,000 square feet of ground surface, and is what I would build were I limited to a place of that size and did a retail business. That amount of glass devoted to the production of one sort of flower, say carnations, would be entirely different were I to build it. The plan I trust will be easily understood, and here follow some points on construction which have to be explained.

I have placed the office near the street, which happens to be the east end of the lot, because I have found many customers, especially when in a hurry, want to get the salesman as quickly as possible, and don't care, especially in hot weather, to walk down the narrow pathway of the greenhouse. The office facing the street should have plate glass windows, and be completely and neatly fixed up. Beneath the office should be a cellar with a partition wall between it and the furnace cellar. This will always be cool and moist, and will keep flowers many months in the year much better than an ice box. The office or salesroom should be made and kept as near as possible the same as our retail flower stores in larger cities, and just let me add here, should never be a lounging place for friends. If any cigars are to be smoked, stories told or bowling arrangements made let them pass out to the potting shed. A close board partition should divide this workshop from the office. The walls of the cellar should be of 15-inch stone work, or if that is not convenient 8 inch brick work will do, and

the walls, particularly in that part used as the potting shed, should be brick or stone at least 4 feet above the ground. This is an important point, because you are storing soil in this shed and wooden walls will quickly rot out. I have used 2-inch plank for the walls of cellars, of course for cheapness, but in a very few years they rotted, letting the earth cave in and having at great trouble to be replaced by stone walls. If you have the sewerage go down deep with your cellar, 7 feet is not too much; never mind what some supposed authorities tell you about hot water circulation. The secret of a rapid circulation, which in other words means saving of fuel, is to have the heater well down below the pipes in the house, and if you use steam a good deep stoke hole is quite essential.

I have run the houses north and south. Fifteen years ago this would have appeared absurd, for in those days our glass was 8x10 and at intervals a heavy rafter 5 or 6 inches by 2 inches, nowadays we build so differently that I am convinced it makes little difference which way the houses run; light is what we are after and with glass 15 or 16 inches wide, no rafters, and only a small iron purlin you will get as much light one way as the other. Some will say "ah, but you don't get the direct ray of the sun." Query, whether that is any more essential than light all round. If you wish to save the water from the roofs let the houses tip slightly towards the shed. If you don't need the water then give the gutters a drop of 2 inches from the shed. Quite an important part of the structure is the gutter. A few years ago there was a great fuss made of the gutter, and it was made of tin, zinc or galvanized iron. They were all a failure, and a nuisance; keep them painted and patched as you would they would leak, and then between the metal and the wood the rotting took place. All you need for gutters is a 12x2-inch cypress plank, with pieces of the same material either bolted on side of gutter plate or nailed on top. Keep this gutter well painted with heavy coat of lead and it will last as long as the bars.

The roof should be supported by one inch wrought iron supports and the same for purlins; each bar is fastened to the pipe with a galvanized iron or tin clip. The two outside houses, Nos. 1 and 5, should have 3 runs of these iron supports, one under the ridge, which does the most good of all, and one on each side of ridge 4 or 5 feet down. In the houses Nos. 2, 3, and 4 a support under the ridge is not necessary. Some may say there is a good deal of iron post about these houses; remember they are only one inch (just as good for the purpose as 3-inch) and when kept painted are never noticed. There should be a door leading from shed into each house, and also a good width of door at the south end of each house. They will be used little or never during the winter months, but in summer time, when you want to renew the beds with fresh earth these are the doors which will be used. Make them wide enough to admit a wheelbarrow comfortably. The days of carrying in soil in a glass box should be over.

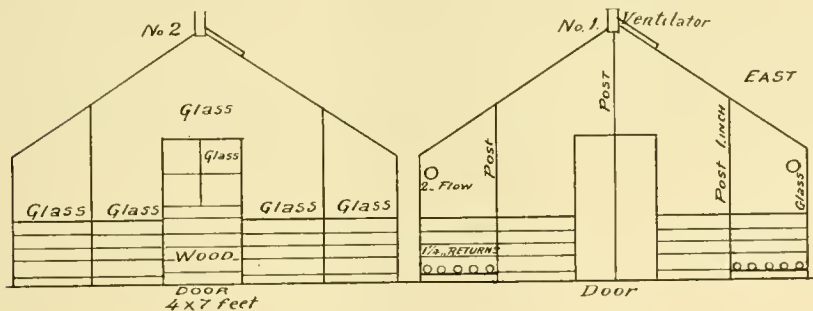

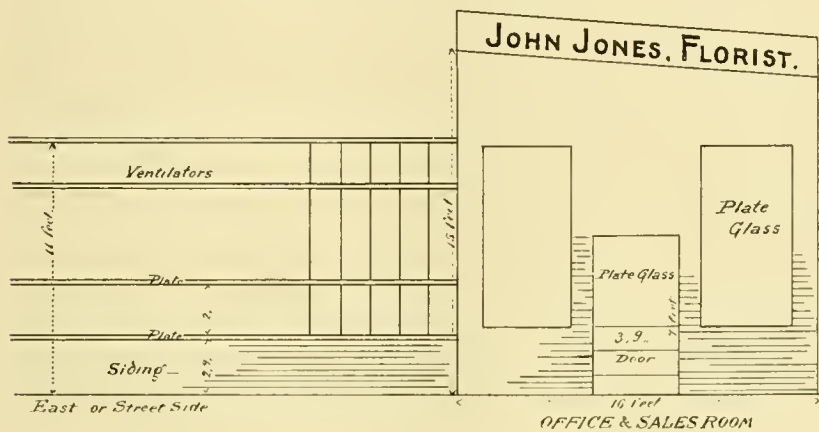

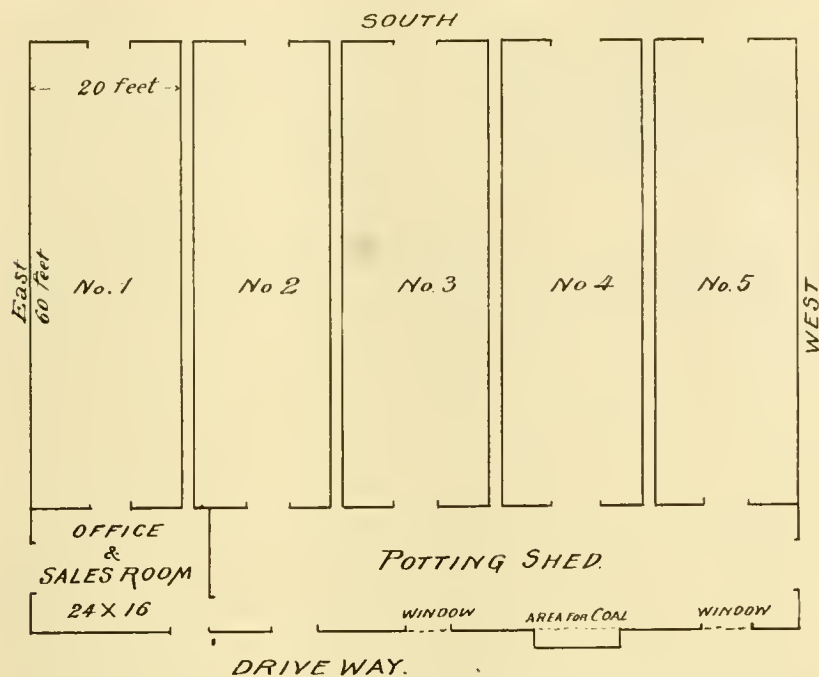

Ventilation should be continuous along the entire length of every house, and let it be large enough; on one side of the ridge is sufficient and the east side has many points in its favor. Don't think you can get along without one of the several lifting apparatus which are now in the market. You will save more than its cost in broken glass and time in one year over the ropes and sticks and rods of iron that

used to be considered all right. On the east or street side I have endeavored to show the side wall about 5 feet high, 2 feet 6 inches of wood work, 2 feet of glass and the rest is taken up with plate, etc. It is very desirable to have side light on this side, as it is not only beneficial to the plants but adds immensely to the appearance.

Use nothing but clear cypress lumber. It is now to be obtained in every locality but you can get it all cut ready to put up much better from the firms who make a specialty of getting out this stuff for greenhouses than you can from your local mill. Use for posts only red cedar so called here (*Juniperus virginica*) or locust. The cedar is to be preferred because it will last as long as you want a greenhouse, and is easy to handle and work. The partitions between houses should be one thickness of 1-inch pine or hemlock boards. Put the boards on whichever side suits you best. They should not nor need be matched stuff or nailed on too firmly, for it is a part that will rot sooner than any other part of the structure, and should be put on in such a way that they can be readily renewed when occasion requires.

About benches, it is hardly worth while to enter into that here, as they will or should be built to suit the crops, only remember it does not pay to use 1-inch boards. Use plank 2 inches thick and let the legs, *joists particularly*, and surface of plank receive a thorough coat of hydraulic cement. The cement will prolong the existence of the bench several years.

The heating is of first importance in every greenhouse establishment, and to give an outline even of the various systems would fill a small volume. There is nothing new in the principle of hot water circulating through pipes since the time the Romans used it to heat their baths, but there has been within a few years, a considerable improvement in its appreciation. I do not advocate steam for a place of this size where a different temperature may be desirable in each house, so I shall recommend hot water, and that under a system which I adopted two years ago, and was about the same time put into a new range in Orange, N. J., and illustrated in one of the horticultural journals. As stated before; get your boiler well down, run the flow or flows, 3-inch wrought iron in this case, up through the floor of the shed and 1 foot above the doorways leading into the houses; let that be the highest point in the whole system. By an elbow or T run the flow the length of the shed and tap the flow with a 2-inch at the side of each house; you can drop down to the height you want the flow either in the shed or inside the greenhouse. This 2-inch flow can be run along the post about 4 to 5 inches below gutter plate, giving it a drop of 1-inch to further end. Then drop down below bench into a manifold and return with $1\frac{1}{4}$ or $1\frac{1}{2}$ -inch pipes, giving them a drop back to the shed of one-inch. The returns will be under the floor of the shed, and then drop into the boiler. A tank or barrel of a good size should be elevated to the highest part of the shed and a one inch pipe lead from that to the return pipe just before it enters the boiler. The tank I have holds one hundred and fifty barrels and is used for watering the houses, but a tank of 30 gallons is just as good as long as you keep it full. From the highest point of the system a small pipe ($\frac{3}{4}$ -inch is large enough) should lead up to the top of the tank and discharge into it. If any steam should be made or air accumulate it will immediately find a vent there. I don't want to call this the

AN UP TO DATE SMALL RANGE OF GLASS.

down-hill system, for the circulation would be just as perfect if the pipes in the greenhouse ran perfectly level, but it is best to have a slight drop one way or the other, so that you can empty the pipes. If the pipes raised to the further end of the greenhouse you would be compelled to place a pet-cock on each run and they would require watching. Nor do I call it hot water under pressure, although in my case I have a few pounds of pressure because my tank is 25 feet above boiler. Still it is the open system. When your tank has water in it your whole apparatus is full. So grandly does this work and so economical is it that I can honestly say it is a great advance over the large pipes and old fashioned open

stand pipes. Don't forget to put a valve on the 2-inch flow as it enters each side of every house. Some good men will say "yes, but your small pipe cools awfully quick." To them I would say a good job too; in cooling they have given off their heat. You can make the pipes of this size with proper heater capacity much hotter than the 4-inch are usually heated, and all practical florists know the great advantage it is to have the pipes cool off quick on a bright day in March, when perhaps it has been a zero night followed by a bright sunny day. The 4-inch pipes, with the fire stopped dead, will keep up their heat on these occasions, while the small pipe will quickly cool. This is the great advantage of steam, quick to heat

and quick to cool, and the system I have tried to describe after 2 years' experience with 4 large carnation houses is to me as far ahead of the old fashioned 4-inch pipe with expansion tank filled by the hose, as the latter is of the old brick flues. As you pass through the office with your flow pipe over the doors to heat No. 1 you can take a one inch lead from it and heat a small radiator, which will be an ornament to the office and keep it comfortably warm in severe weather.

It is difficult for me to tell you which houses you should use for different purposes. The roses and carnations should undoubtedly have the lightest houses but they will all be about as light one as the other, excepting No. 1, which will get the advantage of the early morning sun, and would be best suited for roses. Yet this is the house leading from the office and nearest the street, and as a house of roses is by no means an attractive sight No. 1 should be the show house where the blooming plants should be always kept. No. 2 can be a rose house, No. 3 the warm house where palms, ferns, and plants requiring a high temperature can be wintered, No. 4 a general utility house, and No. 5 a carnation house. You will without a doubt as the city grows want to enlarge your glass area, and you can do that by simply extending your shed westward and run houses of any desired size from it.

In conclusion I would say: If you are not a practical man on building and have to trust to the local builders, it will pay you to give the contract to one of our horticultural builders; there are several in the country, good practical and responsible firms. The average builder knows about as much about building a modern up-to-date greenhouse as the village undertaker. If you undertake the building yourself and hire your men procure at once the late M. A. Hunt's little book on "How to grow cut flowers"; his chapter on building is excellent. If I am not too late with these suggestions for the enquirer I shall be glad to answer any questions he may ask of me privately, and to the expected critics I would say, remember I was confined to a range of houses, 5,000 feet to suit a small city. The list of hardy plants best suited for the summer cut flower trade and also the varieties of carnations, roses, etc., to stock with I must leave to a future number of your journal.

WM. SCOTT.

Herbaceous Plant Notes.

Clematis Davidiana has slender tubular shaped flowers resembling a very large common hyacinth, of a very firm texture and light blue in color; the flowers are produced in axillary clusters coming out in succession from the end of July to late autumn. The plant is of low and bushy growth with leafy stems two to three feet in height, and is a good hardy border plant of easy management, growing in most any part of the garden.

Globularia trichosantha is a pretty plant for the rockery or the front row of the border; has large light blue flower heads and blooms July and August. It is of dwarf growth, attaining a height of only 6 to 8 inches. The leaves are oblong, pointed, occasionally triparted and form rosettes close to the ground.

Antennaria margaritacea blooms from July to September in close clustered terminal flower heads white in color, it is one of the everlasting flowers and does well in dry sandy and light soil. The narrow lanceolate leaves are thickly covered with a silvery white down, very at-

tractive, and therefore the plant is sometimes used with the best effect in foliage beds; height 1 to 1½ feet.

Rudbeckia hirta with us comes in very much later than *R. maxima*, beginning to bloom the latter part of July and lasting well until fall. The flowers are borne on long erect, stiff stems, are bright golden yellow with a dark brown disk and are very much liked as cut flowers, keeping fresh for a long time after being cut. The plant is of a spready, branchy habit and makes a grand show when in flower in the border or among low shrubs, growing only 1½ to 2 feet high.

Boltonia asteroides is a very free flowering useful perennial, the aster-like flowers are disposed in large loose terminal panicles, pale flesh colored with a faint lilac tinge, and the plant is covered with bloom in August and September. For the back of the border or the shrubbery this is a most desirable plant for fall ornamentation; height 3 or 3½ feet. *Boltonias* will soon spread out, making numerous suckers, and would take entire possession of the ground if left alone, therefore dividing and replanting should be attended to every two or three years.

Silene Schafta is a beautiful dwarf free flowering perennial, beginning to bloom in the last week of July and lasting through August. Should be planted in a partially shaded position or else in rather moist places, otherwise our scorching sun will burn the foliage. The color is a pleasing shade of purplish rose and the long tubed flowers are freely produced along the half prostrate many branched stems in succession, until the whole plant is a mass of bloom; 6 inches is as high as it will grow.

Cassia marylandica deserves to be planted more frequently; we do not see it very often, although it is not at all difficult to grow. From the latter part of July to October the bright yellow many flowered crowded racemes will continuously spring from the axils of the leaves, and the plant also presents a very attractive appearance even in the earlier part of the season when not in flower. The leaves are pinnatifid, oblong, somewhat resembling a locust leaf in form, but producing only 7 or eight pairs of leaflets. The height of the plant when fully grown is from 2½ to 3 feet. Very effective where massed together in front of shrubs.

Lobelia syphilitica is an erect growing stout stemmed hardy variety with large light blue flowers disposed along an upright raceme, and grows to a height of 1 to 1½ feet. It flowers from now until late in the autumn, and is a desirable border plant of easy culture, but rarely seen in collections. The leaves are broadly oblong and pointed. It does best in a rather moist location, but also blooms tolerably well in a dry border.

Campanula pyramidalis, both the pure white and blue, should be planted more in gardens either in groups and masses or single specimens in the border. It forms a fine regular shaped plant, and during August and September it is a mass of bloom. A tall stately plant, the pyramidal flower stems reaching a height of 4 to 5 feet, covered from top to bottom with delicate bell shaped flowers. Not a perennial, but a biennial variety, not blooming the first year from seed. Annual sowings should be made of this grand campanula. J. B. KELLER.

Rochester, N. Y.

THE COLOR CHART to be issued with our convention number will contain 36 colors.

Now is the time to send advs. for the convention number.

Carnation Notes.

Mr. W. writes that he is ready to receive or compete for the reward offered in the FLORIST of May 25 for a carnation support that is satisfactory to all. He has it; no mistake this time. Well, this is just what a great many have thought before, and after thorough trials something has popped up that was better still, and then Mr. W. must prove that his support will fill the bill in every particular and satisfy every grower that his support is absolutely perfect. He will do well to have it on exhibition at Pittsburg and then again in New York next February at the meeting of the Carnation Society. This matter of supports is a great point in the successful growing of carnations. The general health and condition of the plant depends greatly upon the manner in which it is trained or propped. If a plant is allowed to sprawl all over the bench or is tied to a stake in a close bunch, or in any way in which it will hold dampness to excess disease is sure to follow. I have tried almost every sort of stake, wires and supports, and shall this year use what is now called the Excelsior which I have fully described before as "Lonsdale's," and which was used last season with great success by the Dailedouze Bros., but if Mr. W. has invented, as he claims, one that will place all others in the shade, why let's have it if it does not come high.

I am now, July 30, giving my carnations the last pinching back that they will receive, and this only to quick growing sorts. All late varieties such as Albertini, Hinze's White, etc., should not be cut back now, as they will need all they can get to bring them into bloom by Christmas. The general report from most sections is that carnation plants are in very much better condition than at this time last season, it will therefore be well to take extra care of the plants you house, as there is sure to be a very large supply of flowers next winter and only the best will bring the top price. Use plenty of good manure, watch your plants as closely as you do your 'mums or roses, and above all do not leave the care of your carnations entirely to green hands.

CHAS. H. ALLEN.

New Carnations.

Carnations have been registered as follows since my last report:

Mrs. Mailander—by Otto Mailander, Niles Center, Ill.

Annie H. Lonsdale—by Messrs. Myers & Samtman, Chestnut Hill, Philadelphia, Pa.

Evening Star and Guiding Star—by Messrs. W. P. Simmons & Co., Geneva, Ohio.

Fred Weir—by Henry A. Molatsch, Bay Ridge, N. Y.

Letty Coles, Triumph, Abraham Lincoln, Cleopatra, Emma M. Thompson, Emma Lowrey, Mrs. S. M. Inman, Mrs. McBurney and Azalea—by Messrs. E. G. Hill & Co., Richmond, Ind.

Mrs. Chas. H. Duhrme—by Fred Dorner & Son, Lafayette, Ind.

ALBERT M. HERR.

Committees on Carnation Novelties.

The following committees have been appointed by their respective clubs to examine and report upon carnation novelties that may come before them for inspection:

New York: Messrs. P. O'Mara, Ernst Asmus, J. N. May, Anderson, Weber, Paul Dailedouze and Julius Roehrs.

Philadelphia: Messrs. Thomas Cartledge, J. W. Colflesh and Robert Craig.

Chicago: Mrs. E. T. Royle, E. Buettner and Chas. Hartwig.

Baltimore: Messrs. Conrad Hess, F. Burger, Harry Fisher, W. Lehr and Edwin Seidwitz.

St. Louis: Messrs. Harry Young, F. J. Fillmore and J. J. Beneck.

ALBERT M. HERR.

Miscellaneous Seasonable Hints.

Those who are growing chrysanthemums for pot plants planted out on a bench in 5 or 6 inches of soil should keep a watchful eye on them, and pinch them discreetly. The first week in September is the time to lift them, and all stopping should be done by the middle of August. Anyone who has a demand for a well flowered compact healthy chrysanthemum in a 6 inch pot who does not grow them on this principle is 10 years behind the procession. It's a pity there are not more varieties that make good pot plants. With great labor and pains you can grow almost any variety into a specimen plant, but what the commercial florist wants is a variety that will naturally make a compact dwarf bushy plant and will keep its leaves green to the end. There are many chrysanthemums that I have not tried for this purpose, but of hundreds that I have given a trial to there is none equal to Ivory for a white, Lincoln for a yellow, Maud Dean for pink and Cullingfordii for red. Many others make acceptable plants, but nothing like the four varieties mentioned. These remarks are a little out of season, but perhaps will be remembered, and a good plan is to plant (as I do every season) two or three of every new variety, and test for yourself its adaptability for this purpose.

About the middle of August is the best time to cut down and propagate your show pelargoniums. In Europe all geraniums are called pelargoniums, which is perhaps correct, but here we are satisfied to call nearly all the members of this beautiful genus geraniums, except the species and their varied offspring the show pelargoniums, or *P. grandiflorum*. You will have noticed perhaps that when they went out of flower early in July they began to grow; from that young growth you can get your best plants. When cutting them down for propagating don't be afraid to cut down within a few inches of the pot. There is no safer way than putting the cuttings in the sand and keeping moderately moist; every cutting will "strike." Some growers to increase stock rapidly plant out their pelargoniums on a bench in spring. I have not tried this plan; no doubt you could get a larger plant, but I scarcely think the cutting would be in any such good shape to make root as those grown in pots. Have you ever noticed how indifferently the cuttings of the common rose geranium roots when taken from the strong succulent growth of the garden? But from pot plants it roots as easily as "Glechoma rotundifolia variegata." After the old plants are cut down almost to the pot keep them about dust dry; in two or three weeks they will

CLEMATIS JACKMANNI IN HUMBOLDT PARK, CHICAGO.

break out at every joint with a new growth. Then is the time to shake them out. Get rid of every bit of old soil, shorten back the long roots, and pot firmly into a size much smaller than they flowered in. Twenty years ago the pelargonium was a leading article in every greenhouse, but now it is too seldom seen. The varieties are so numerous it is dangerous to mention any, and I shall only refer to those which I know are healthy growers and free and favorite colors. Mrs. R. Sandiford, thought to be an improvement on Princess of Teck, a beautiful fringed and semi-double white. Madame Thibaut, identical in habit to the above but richly blotched and marbled with pink. Dr. Masters, dark maroon, a very rich looking flower. Then there is Capt. Raikes, Kingston Beauty, Maid of Kent, Mr. John Hayes, Venus de Milo, and dozens of others. If you don't want to go into a great variety the three varieties first mentioned will

fill the bill. To those who say there is no money in them allow me to say that an aristocratic customer of the writer's wanted a very handsome wreath made in June last, "something different you know," and I suggested the white pelargonium (Mrs. Robt. Sandiford). The man who made it, the lady who paid for it, and all who saw it say it was the handsomest wreath of the year.

Don't forget to propagate your alternanthera in early August. The coarse growing varieties can be increased by lifting up a few old plants before frost, but the best one of all, paronychoides major, is very difficult to winter unless you have a regular hot box. Prepare some flats, two inches deep, one inch of soil in the bottom and one inch of sand. Cuttings put in now will root like weeds, be strong young plants before cold weather comes, and the flats can be wintered on a shelf in the warmest house you have. This is the way to

keep this little scarlet gem over winter.

In this leisure time you should go over your palm and cycas stock and give them a washing. It pays to do it; a pail of water and a sponge with 4 or 5 ounces of kerosene emulsion (soap and coal oil) will rid them of their great enemies the scale and mealy bug, and leave the leaves looking bright and glossy. You may say that's quite a job, but think how little time it is on each plant. Supposing it took a lad at \$1 per day ten minutes to sponge a kentia worth three or four dollars. The operation has cost you less than 2 cents and you have added to the appearance of the plant (which in palms is value) more than 25 times the cost of labor.

I take the liberty to advise those who grow violets (not violet kings) to lift their plants if in the field early in August and plant them on the benches. The much talked of violet disease makes its appearance in September when the dews are heavy. Last year I noticed violets under many and varied conditions, and now were better than a small bench which had been kept in flats from the spring till the first week in August, then planted on a bench in 5 inches of soil. They flowered continuously for eight months.

WM. SCOTT.

Hardiness of Chrysocoma and Chrysobactron.

Do I understand Mr. Keller to say that any of the eight species of composite chrysocoma, which are South African, or any of the thirteen species of the Asphodeline bulbinella (Chrysobactron), of which perhaps *B. Rossii* is the finest, and which are all natives of South Africa, New Zealand, Campbell Island and Auckland Island, are hardy herbaceous plants at Rochester, N. Y.?

J. MCP.

In regard to the enclosed comment upon my notes on *Chrysocoma Linosyris* I can safely say that it is hardy here and should be so in all the northern states, for it stands the winter in Europe. I am not a botanist and cannot tell the native country of this particular variety, but believe it is to be found in northern latitudes. I remember having seen chrysocomas in Europe that were evergreen greenhouse plants, but the one in question is not an evergreen sort.

Chrysobactron Hookerii also is perfectly hardy here and has behaved nicely with us the past three winters. I was not acquainted with the plant until I saw it in Europe four years ago among other herbaceous plants, and determined then to try it here. I also wanted to buy *C. Rossii* at the time, but there were no plants for sale and I can't say anything about its hardiness. If there are any more varieties of chrysobactron that are likely to be hardy here I shall be glad to know where I can obtain any of them.

J. B. K.

[*Chrysocoma Linosyris* is a native of Northern Europe. *Chrysobactron Hookerii* (syn. *Anthericum Hookerii*) is a native of New Zealand, described as hardy by Nicholson.—Ed.]

Fancy Caladiums.

The fancy caladium does not get the attention it deserves. The bulbs are very easy kept through the winter; a well matured out of doors bulb will give from 25 to 50 young plants. They will make the best plant for house decoration and a fine bedding plant for high grade sub-

tropical bedding, say around croton and dracaenas. I plant all kinds out of doors except argyrites, which is too insignificant. If left out until October 15 or November 1 in this latitude the bulbs can be taken up and ripened in the greenhouse, say on a bench, and stored for the winter along hot water pipes. I have had as many as 500 in one bed of about 50 kinds. The effect was simply grand.

Anniston, Ala. F. J. ULBRICHT.

OBITUARY.

HENRY E. CHITTY.

Henry E. Chitty, widely known as the originator and introducer of a number of valuable carnations, died at his home in Paterson, N. J., July 24, after a short, but painful illness. Mr. Chitty had been suffering with a complication of diseases for some little time, which finally developed into acute peritonitis. He was about 66 years old, and leaves a widow, but no children.

Mr. Chitty was a native of England, where he learned his business, but came to this country when a very young man. He first settled at New London, Conn., where he worked at his profession until the war broke out, when he enlisted in the Tenth Connecticut volunteers. He served in many engagements, being severely wounded on one occasion, when the regimental colors were shot out of his hand. He left the army with a fine record, and has always been prominent in local G. A. R. circles, being past commander of Farragut Post, Paterson. After the war he went to the oil regions of Pennsylvania, which were then creating a great stir. From there he took charge of a greenhouse establishment in Philadelphia, but did not remain long in that city, returning to New London, where he married Miss Mercy Allen, who survives him. About twenty-one years ago he went to Paterson as foreman for the old Bellevue Nursery company, which position he held until he started in business for himself some fourteen years ago. About four years ago Mr. Chitty was elected an alderman, and has since been prominent as an exponent of good citizenship and progressive municipal government.

To the trade Mr. Chitty leaves a fine record as a carnation grower. He took a great interest in the testing of new varieties, and though he was hardly a carnation socialist, being engaged in a large retail business, he was much interested in this flower, and raised a good many seedlings, sending out a fine set this year. Personally he was a man of spotless integrity, and the object of universal respect in his community. We may all regret him, as a representative of whom the trade might well be proud.

ADVS. for the convention number must reach us by August 12 to be sure of insertion.

New York.

How to keep the store window attractive without much cost is a pertinent question with the florists in these mid-summer days, and as a rule they solve the problem very successfully. Here is where the indispensable and non-killable aspidistra comes in, and associated with ficuses and the tougher species of palms it is seen almost everywhere. Groups of these plants sloping from the tallest in the background down to the lowest in front and finished with a close margin of the low growing selaginellas make the ideal window display where expense for renewal would be avoided. Some add araucarias and pandanus to the collection, or vary the monotony of the dense mats of selaginella by a mixture of the more graceful growing Emilliana, and others more solicitous for effect than economy make maidenhair fern serve as a setting instead of the more durable selaginella. To such a background of green but little needs to be added to give color and life. A jar of auratum lilies or a couple of vases of showy gladiolus spikes fills the bill nicely. From the mixed up mass of many-hued garden flowers, immortelles and jimeracks of the Bowery florist to the stately bay tree and palm of his Fifth avenue brother is a long step, but doubtless each knows his trade and his environment, and worldly wisdom is shown in both cases. An unlooked-for artistic treat is sometimes seen, however, in the most unexpected place, as for instance in Third avenue where but a block away from "John the Florist's" distracting jumble of sweet peas, asters, alyssum and metal wreaths we stop to look into the cool green of adiantum and alsophila of Schilowsky's window, which if not so glorious to the Third avenue eye as its gaudy neighbor is nevertheless a valuable lesson in art where it is most needed.

Profound stillness prevails in Madison avenue. In Dards' window a pretty three-decked fountain plays and the water falls into a basin filled with water lilies and bordered with drooping foliaged plants. Within, a draping of mosquito netting covers everything and the occupants have nothing to do but ply the fan. Hauser, just above, is in the same box. He can tell you all about the gold reserve in the Bank of England, but when it comes to the cash balance which the flower trade on Madison avenue yields in July he can prove that it is not big enough to feed the canary which lives in the cage in the window and looks out at the passing bicycles. Besides a few palms and lycopodium the only window goods here are vases and baskets, which do not wither in twenty-four hours. From Stump's old stand the glory has departed temporarily and the curtains are down to stay so until fall, but on the opposite corner Niclis makes an attractive spot with a window full of plants.

Stump's new marble palace on Fifth avenue being right at the most fashionable entrance to Central Park has always a window display in keeping with the locality. A carpet of selaginella and creeping ficus makes a perfect setting for a group of rich colored caladiums, and massive palms and tree ferns form the background. Inside the big refrigerator is well stocked with American Beauties, Meteors, carnations and lily of the valley. At Burnham's, near by, the conservatory in the rear looks inviting, and the windows are decorated with palms, etc. in fancy pots. Further down Fifth avenue we come to Alex. McCoune's, where the monotony of green ferns and palms is

broken by the addition of some grandly colored dracaenas mounted on yellow pedestals and the court yard in front is shaded by a forest of tall arecas. One of Hodgson's windows is filled with a grove of araucarias and the other with a bank of Pandanus Veitchii, but the great man himself is away in Newport for the summer, where there are to be receptions and fetes galore. A stately row of handsome bay trees makes an imposing front for Siebrecht & Wadley's corner, and the windows are well hidden from sight. One of them, however, is fitted up as a refrigerator and here flowers of all seasonal varieties keep in vases until they are wanted.

Broadway shows but little more life, in a floral way, than the avenues. At Scallen's there is a window full of aspidistras but nary a flower. Thorley's large window is a forest of palms and in each of the smaller ones stands a rich bronze vase with a big cluster of auratum lilies or gladioli. Warendorf makes a promiscuous display of flowers, but always with much taste. Small's window is fitted up as a refrigerator, with double glass and ice overhead. Here a tasty arrangement of foliage plants interspersed with a few clusters of choice flowers is always seen. Hanft's front is a glory of gladioli and yellow urns with a background of ficus. Across the street is Bebus's new establishment in all the neatness of recent opening, and a few doors away is Miss Harris's little store, which needs no window adornment when its fair proprietor is in view.

A glance up and down Sixth avenue shows that here, too, summer quiet reigns. Chas. Doran varies the regular crop of selaginellas, aspidistras and palms with a big vase of cat-tails, and Herman Kuhn escorts his visitors upstairs to his useful little conservatory over the store and tells how valuable he found this adjunct to be and what he expects to accomplish with it next season. Bogart's store is in semi-darkness, typical of the dead calm pervading the flower business, but his window and that of his neighbor, Graulich, are neatly filled with plants. Alphonse gives a touch of French primness to his window display. With the aid of little geometrical shaped glass receptacles an attractive miniature parterre is constructed in which selaginellas of several species and ferns are the principal component.

The cut flower trade has never been at a lower ebb than at present. The wholesalers receive daily a load of consignments ranging in quality from grade one down to grade thirty-three, and in variety from American Beauties down to dahlias, but it is appreciated by the community and there is little to do except to speculate on the chances of success of the much discussed and much abused "combine." What would New York have done without this sensation this very listless season?

On Wednesday, July 31, a windfall dropped into the lap of Dards in the shape of a funeral order for the late Mrs. Hege-man, and Eddie Burke, who has just returned from a Wagner car trip over the New York Central R. R. was in his glory with wreaths, crosses, anchors, pillows and crossed palms.

Jacob G. Bebus has opened a retail flower store at 1142 Broadway.

Mrs. W. H. Young of Clifton, N. J., sailed for England on July 27.

J. N. May of Summit, N. J., Robert Craig and Robert Kift of Philadelphia, and Joseph Kift of West Chester, Pa., sailed for England on the steamer Ger-

BEDDING IN HUMBOLDT PARK, CHICAGO, THIS YEAR.

manic Wednesday last. There was a large and enthusiastic crowd of friends to see them off.

Boston.

Reports from the large growers and dealers in spring bedding plants for this market indicate that as compared with previous years the trade during the spring of 1895 was fully up to the average. The demand for foliage plants, so-called, such as coleus, alternanthera, etc., shows a decrease, but flowering plants in general have experienced a greater demand than ever before. This is especially true of the newer varieties of geraniums, French cannas, pansies, tuberous begonias, vincas, marigolds and plants for subtropical bedding, such as caladiums, ricinus, etc. The call for geraniums has been unprecedented, and pansies have also enjoyed a remarkable popularity, the latter suffering severely, however, from the very unfavorable season. Hydrangeas, fuchsias and verbenas seem to have fallen off in demand.

The trade and prices of plants at wholesale seem to have been particularly satisfactory to those who make a specialty of this business, with the exception of those growers who raise stock for the auction sales. These latter complain that auction returns have been too low for profit this season, and their protest is reinforced by the clamor of the retailers, who condemn roundly not only the auction sales of plants to amateurs, but also complain strongly about the competition of the department stores and the peddlers. It is the general opinion that the average quality of stock as now grown is far below what it should be, and that this is chargeable to the steady lowering of prices. That a policy of growing better plants and charging accordingly would win in the end seems to be generally conceded, but it is not believed that much relief will be experienced until the quantity is shortened up or a larger retail outlet is provided. Some growers favor a large central market where they can meet

the consumers directly without the intervention of the peddler or auctioneer, but there seems to be no prospect of an immediate fulfillment of their hopes.

The horticultural exhibition on July 27 was an unusually fine one. Sweet peas were the special attraction, and they were shown in excellent quality and endless variety by A. A. Hixon, F. A. Blake, John P. Spaulding, E. C. Lewis, J. S. Fay and Walter Russell. A most remarkable feature was the display of toadstools and mushrooms to which J. H. Woodford, Hollis Webster and Annie M. Livsey contributed. The collections were very comprehensive and the different species were carefully named and their poisonous or non-poisonous character carefully noted. Mrs. F. L. Ames staged twenty-eight varieties of cypripediums, the gem of the collection being the new Annie Measures, a hybrid between *Dayanum* and *bellatulum*. E. O. Orpet, gardener to Mr. E. V. R. Thayer, showed another novelty, six plants in bloom of *Saintpaulia ionantha*, for which a certificate of merit was awarded. N. T. Kidder and the Harvard Botanic Garden showed large collections of hardy perennials, and J. S. Fay, Oakes Ames, James Comley and others staged promiscuous lots of choice bloom.

Visitors in town: C. G. Knott, superintendent gardener of the Horticultural Association, St. John, N. B., and H. H. Battles, Philadelphia, Pa.

Philadelphia.

The friends of Robert Craig and Robert Kift gave them a farewell entertainment at Dooner's Hotel on Monday, July 29, previous to their departure for Europe on the steamer *Germanic* from New York. The affair was thoroughly enjoyable, as is usually the case when the Philadelphia florists meet. Mr. Edwin Lonsdale presided and made things lively. He says he would rather be president of the Society of American Florists than of the United States. Every one knows what a brilliant speechmaker Robert Craig is, and this time he outdid himself and was loudly

applauded; so was Robert Kift, who also made appropriate remarks. Deacon Harris related one of his many funny stories and recited some poetry suitable for the occasion, in which he gave the boys some good advice that they are sure to follow. Major Bonaffon, who spoke at length and to the purpose, presented Robert Craig, his bosom friend, with the small silk United States flag which encircled the clapper of the liberty bell while on its way back from the Columbian Exhibition, and hoped that it would prove an open sesame wherever they went. John Burton also made a good speech and George Watson wouldn't keep quiet. John Walker gave some capital songs and so did others. Robert Craig of course sang "Anne Laurie." A. Blanc read a number of letters and telegrams from those who were out of town or unable to be present, all wishing the travellers bon voyage. Among those present were also Messrs. Westcott, Cartledge, Colflesh, Heacock, Shellem, George Craig and Wm. P. Craig. The supper was very elaborate, but the boys kept good hours. As the State House clock struck twelve they all sang "Say au revoir but not good-bye," shook hands, and went straight home. The rooms were beautifully decorated by Geo. Craig. All regretted the inability of Mr. Joseph Kift senior to be present.

On Wednesday morning another delegation of Messrs. Craig's and Kift's friends met them at the Pennsylvania railroad depot previous to their departure for New York, accompanied by their respective families. A. BLANC.

Philadelphia Notes.

Looking in upon Mr. Mingeay at Fairmount Park recently, he was found as usual to be doing a very great deal of high-class bedding. He does not appear to indulge in clocks or sun dials or globes at all, but most of his beds are filled with plants presenting binary or ternary arrangements of color. As in some previous years by far the most beautiful beds are those near Horticultural Hall filled with

crotons, and others planted with an assortment of cereus and succulents. These are astonishingly rich and effective, too rich almost to be consonant with the somewhat mediocre shrubbery and herbaceous borders behind them. Such bedding harmonizes best with the very highest class of architecture or sculpture.

The sunken panel of bedding at one end of the conservatory looks very gay indeed with the usual line of bedding plants, *Iresine Lindenii*, *Stevia variegata*, *Coleus Verchaffeltii* and yellow coleus was a combination noted in one bed. Then a round bed of geraniums. Following was another long bed of variegated abutilon and acahypha. Then a round bed of pink geranium, and so on through the panel, with changes of plants and arrangement of color. Blue ageratum, white geraniums, pink flowered silver-leaved geraniums, and alternantheras of various sorts were in great abundance and all looking well. I understood from one of the gangs at work that no man among them other than the foreman had ever bedded a plant before this season. It must be exceedingly pleasant to be obliged to break in a fresh gang every year and how very accomplished they must become with such an experience. There is but little that they would not undertake after a training in one of these great parks.

Mr. Minge has moved his nelumbiums from the vicinity of the "Hall" to a pond further away, and they have been prompt to seize upon and appropriate the whole surface. He says he likes to transplant them as early in the spring as possible, taking care however, to plant tubers with well developed leads. It may not be quite understood that tubers destitute of eyes are like dahlia tubers so deficient, almost impossible to grow early in the season.

To one who had not seen the palms since they were planted in 1876, the growth was very marked indeed. The livistonas reach the lofty roof, and are I fancy the finest in the country. No tub specimens can at all compare with them. The same may be said of all the planted out collection; their rate of development has been but little behind that of plants in the tropics. I had not time to examine the arboretum as I was informed that it would be necessary to take in the whole park to gain any comprehensive idea of it. In the vicinity of the art building there is a collection of oaks, and another of conifers and so on, but none of them very comprehensive or instructive. I saw specimens about 20 feet high of *Pseudo-larix Kämpferii*, *Cedrus Libani*, and *C. Deodara*, the latter not particularly happy. Philadelphia lost a good opportunity, when she neglected to plant the exhibition site in an instructive manner.

Quite a great many herbaceous plants are grown in the shrubbery beds and borders, but in a heterogeneous way. Irises make a show as a genus, but there has been no attempt whatever to concentrate the possibilities lying within the compass of a single flowering month. It is almost as if someone arranging a show of chrysanthemums should arrange it principally with plants passed out of flower, with a few late ones coming into flower, and here and there a mid-season flower in full beauty. You can't get the best results from herbaceous stuff in any such way. The "old border" is as old as the Plymouth colony and older, but very few indeed have succeeded in rendering it a thing of beauty on the miscellaneous plan. As Mr. Kellar remarked in a late letter, the people need to see them grow-

ing and "flowering," not only as individuals, but with the effects they are certainly capable of.

At West Philadelphia I saw Mr. Anderson for a few minutes; he was earnestly contemplating a splendid breech-loader, and seemingly bothering but little about roses. His fine ranges of glass, however, betokened that he thinks a great deal, and not only thinks, but has his thoughts carried out. Immediately opposite is one of the grand old veterans of the trade—John Dick. There must be numbers of men all over the country who will be pleased to hear that he is still quite well although over 80 years of age. His greenhouses, so long a landmark at West Philadelphia, are now all cleared away. He made a suggestion far too sensible and practicable for politicians, and wished me to write it—to the effect that the city should remove all the bodies from the inter-urban cemeteries, to the upper end of Fairmount Park, thus acquiring ground of great use as pleasure ground, and occupying that which is inaccessible and of little use. There is no doubt I think but cities should acquire the old cemeteries and improve them, whether they make any removals or not. [This is being done in London, and agitated in New York.—Ed.]

Mr. Waterer was another gentleman whom I met. He tells me his father has a great many varieties of *Rhododendron maximum*, the late flowering species native to the hilly bluffs along the rivers from Georgia to Nova Scotia. They have not been much tried, or known in this country. He also spoke of the brittleness of the stocks of some species—maximum among the rest, rendering them unfit for working the hardy varieties upon. *Catawbiense* is just as brittle as any I think, but it ought to be possible to get a hardier stock than many of the hybrid seedlings.

JAS. MACPHERSON.

Buffalo.

At last rain has come, and if ever it seemed to fall from heaven upon the earth beneath it was last week. It ought to be ideal carnation weather now, for it is moist and cool. Can't say much about business. There is just about what is expected for this season. Some of the florists' windows are gay with lancifolium lilies and the gorgeous auratum. The home cut of Beauty is about sufficient for all demands. Carnations are coming in yet, good in quality but in much diminished quantities. A young man passing through here from Chicago said we kept a much better show in our store windows than they did in that big city. I have heard this remark before, and begin to believe it. I think it pays to make an attractive window every day in the year. It's ten times better than any newspaper "ad" for the retailer.

Thursday last was the first regular meeting of the shooting team which was to shoot at Pittsburg. We were hindered and nicely wet down by one of those welcome rains. Yet the practice was fair, each man shot at 75 Peoria blackbirds, eighteen yards rise, known angles, 12 gauge guns. Our conveyance was not on a tallyho like our lucky brethren of Philadelphia, so happily pictured in last week's issue; it was the plebeian trolley car. The score was as follows: Out of 75 birds H. Kreshover broke 73; G. McArthur, 71; Wm. Scott, 50; Philip Corkscrew Scott, 49; G. Troup, 48; C. Henson, 45; D. B. Long, 44; Prof. Cowell, 39. Mepsted, Adams, Belsey and Christenson each tried a shot, but as they

came near firing into the crowd the guns were taken away from them. and Christenson remarked, as he led Mepsted arm in arm to the tent, "My dear boy, we can bowl if we can't shoot," and bowl they did in a certain way. The excellent shooting of the two first mentioned can be accounted for by their living close to the grounds and having practiced many summer evenings. The score of D. B. Long was perhaps the most remarkable, as he had never shot at a flying target before, and missed his first 20 birds. All at once he seemed to tumble to the trick, and after that he fairly pulverized them.

On the 9th of August the florists are to have their annual picnic. It is to be down the river to the Bedell House, a select resort. The attendance of the ladies will be a special feature, and nothing will be left undone to make our better halves happy.

W. S.

Toronto.

Canada, until after the World's Fair, was supposed to be a country whose chief productions were bears, red Indians and icebergs. Among other things, however, at the Fair were exhibited a fine collection of specimen stove and greenhouse plants, some of them being unexcelled there. Now Mr. Houston, head gardener of the Central Prison here in Toronto, has proved that the Amazonian *Victoria regia* can be grown and flowered in the open air in Canada. The plant is not a miserable homesick looking thing either, but is healthy and well favored, having five or six leaves four, five and six feet in diameter and very large flowers. The seed was sown on the 18th of February, and the first flower opened during the third week in July. I think Canadians may be excused for tooting their horn a little over this occurrence. The other lilies (nymphæas) in the pond, which is a large circular one 60 feet across and built of stone, are also in very fine order too, and flowering profusely, there are ten or twelve varieties, the grand *Victoria* in the middle.

We had about six hours' steady rain the other day, which has greatly improved the appearance of everything.

At a meeting of the Horticultural Committee of the Industrial Exhibition, which opens here on the 2nd of September, the single judge system prevailed, and Mr. F. G. Foster, Hamilton, was chosen as judge of plants, and Mr. R. Flowerday of Detroit of cut flowers and designs. Alternatives were named, but it is much hoped that these two gentlemen will act in any way possible.

Cattleya Dowiana var. *chrysotoxa* is again flowering at the Normal school greenhouses. I think it is the most beautiful of all the cattleyas, pity it is such a shy bloomer; it wants a warm corner of the stove and should be well ripened off after the growths are fully made, even then it does not care to bloom every year, but when it does flower it is worth all the time and trouble.

Reservoir Park looked fresh and beautiful the other day, but still showed the effect of the long drouth in places. Mr. Reeves goes in specially for subtropical bedding and does it well. Some carpet bedding is also done, "Sol's clock" being very pretty and effective. The greenhouse plants were not looking quite so well as I have seen them other years, although there are some very fine specimens, especially the big cypas which was at the World's Fair; it has just thrown out about eighty leaves.

I hear that Mr. W. J. Laing has laid

GROUP AT THE RECENT PICNIC OF THE ST. LOUIS FLORISTS' CLUB.

formal charges against the Commissioner of Parks and Gardens with the committee of the city council, but the matter has not been brought up yet. If there is no more in the charges than I hear there is Mr. Laing will not make much out of them. One of them is that in 1887 the commissioner supplied the plants and planted a bed or two in the church yard of the church he attends, and the others are about on a par with this.

I hear that the full single fare from Toronto to Pittsburg is \$7.40, and the return fare will be a third of this on presentation of certificate at Pittsburg. Sleeping car \$2.50 from Buffalo. Surely Canada ought to be well represented at the convention this time. E.

St. Louis.

The business this week is on a standstill, nothing doing at all. The only thing one could hear the past week was the query "are you going to the picnic?" Some good roses are coming in now and bring 3 cents, carnations bring 1 cent, and outdoor stock can be bought at the buyer's price.

Wednesday, July 24, most of the florists closed up and with their families went to the picnic.

Reissen Floral Co. have a contract to furnish the Planters' Hotel with 75 bouquets every Sunday morning; this is a good summer job.

A heavy rain storm caused immense damage to trees and shrubberies in Forest and other parks. Trees were torn up by the roots and scattered across the drives, fences were blown down and flowers leveled to the ground.

THE PICNIC.

It was the biggest picnic held this season at the Highlands; two hundred florists, their families and friends attended and enjoyed themselves. Carl Beyer was the lucky man of the day, he won four prizes, and the next man was Chas. Young, who won two prizes. The bowling alleys were kept going all day long, and some good scores were made, but

when it came to rolling for the prize they were not in it. The committee deserves great credit for their efforts in making the picnic a grand success. No unpleasant incidents were reported. All the contests were watched with the closest attention by the big crowd. At 4:30 p. m. a photograph was taken. We then had supper, after which the bowling contest commenced. Owing to the large number of entries a rule was made the one not making 125 or over was to be ruled out of the next two games. Eleven men only rolled the games out of 26 entries. Here are the events and the lucky winners:

FROM 9 A. M. TO 12 M.

Three legged race, open to all, prize two pairs gloves. Won by Albert Brunner and Carl Beyer.

Fifty yard dash for boys 15 years and under, prize foot ball. Won by Harry Ellison.

Game of quoits, prize box of cigars. Won by Chas. Young.

Potato race for boys and girls 15 years and under, prize for boys league ball and bat, prize for girls silver belt buckle. Won by Frank Fillmore Jr. and Miss I. Jungel.

Thirty yards dash for men 40 years and over, prize hat. Won by Harry Young.

FROM 2 P. M. TO 4 P. M.

One hundred yards dash, open to all, prize silk umbrella. Won by Wm. Carney.

Egg and spoon race, ladies and girls, prize gold blouse buttons. Won by Miss Gertrude Brunner.

Running broad jump, open to all, prize gold link cuff buttons. Won by Carl Beyer Jr.

Tug of war, open to all, prize box of cigars. Won by Capt. Fred Weber's team.

Clay pigeon shoot, St. Louis Gun Club, 1st prize combination silver ink stand, 2nd prize silver flask. First prize won by Chas. Young, second prize won by E. W. Guy, Belleville, Ill.

FROM 5 TO 9 P. M.

Bowling contest, open to all, first prize for highest average gold watch, given by the Riessen Floral Co., second prize for highest single score gold watch chain and charm. First prize, highest average, won by C. Beyer; second prize, highest single score, C. Beyer.

BOWLING.

J. J. B.

Chicago.

The proposition to make Evanston a park district failed to receive a majority vote at the recent local election, and the matter will have to lay over till next year. It is said that many who voted against the proposition thought that too much taxing power would be given the commissioners. The proposition will probably be amended so as to meet this objection, and submitted again next year.

The several legal objections to the filling in of the lake front have now all been met, and work will begin. The Secretary of War has given formal consent covering all points named by the objectors to the work. The first step will be the building of a wall along the outer line of the proposed park. This will extend from Twelfth street to Randolph street, and will cost about \$60,000.

Mrs. M. Mailander, formerly with F. Kirchoff, has opened a floral store at 743 North Robey street.

N. G. Axtell is supplying the market with sweet peas of extra quality. Mr. Axtell does not confine himself to the familiar varieties usually sold, but grows and tests all the choicer sorts, having this year about forty kinds on his one-acre space. Among those in fine bloom at the present time are Mrs. Sankey, white, which, however, he thinks will be superseded by Emily Henderson; Mrs. Eckford, pale sulphur, which supersedes Primrose; Splendor, a most magnificent crimson, the wings tinged magenta; Countess of Radnor, light lilac, and Emily Eckford, magenta lilac standard, violet wings. We were especially impressed by Splendor; its brilliance should make it very valuable as a cut flower. All were finely grown. Mr. Axtell has been troubled of late by a species of rust attacking the flowers; we have not had any previous report of this trouble, and it will be a matter of interest to sweet pea growers.

Mr. James B. Kidd, of the Sunset Seed and Plant Company, left Chicago July 31 on his homeward trip via Denver.

J. B. Deamud is spending his vacation in Northern Michigan.

Visited Chicago: Edwin Pratt, Kansas City, Mo.; R. Roy Davis, Morrison, Ill.; Geo. Souster, Elgin, Ill.

The market remains unchanged, conditions being substantially the same as last week. Rose stock is a little improved in quality, but there is a good deal of mildew on some sorts. Two or three nights this week the weather has been quite cold enough for fires, hence the crumpled and discolored foliage. Prices are the same as last week. Of outdoor stuff there are some excellent gladiolus at 35 cents a dozen, hollyhocks are plentiful, and there is an increase in the supply of asters. The latter sell at 40 to 75 cents a hundred; they are not by any means over-supply as the black blister beetles have attacked them with more than usual voracity. Some growers report the loss of their entire crop from this cause. The only remedy is hand-picking into a vessel containing kerosene, and this is rather an expensive job, unless there is an ample crop of small boys in the neighborhood. Grasshoppers are also reported as causing serious damage to carnations and chrysanthemums, and one disconsolate grower reports that after devouring his stock of these two plants the hoppers then turned their attention to his smilax house and proceeded to demolish its contents. Mr. Scott's chicken cure seems to be needed in our neighborhood.

Only three members of the Bowling Club were present at the alleys last Thursday evening, but some excellent scores were made. The club's medal for highest average now goes to Mr. Grant. Following are the scores:

						Average
J. S. Wilson	175	201	210	193	131	182
Chas. Held	192	211	203	214	121	194
G. L. Grant	189	209	247	199	216	212

Shooting at Pittsburg.

We see by a short paragraph in the Pittsburg notes that the committee has decided to drop the shooting contest. It would be exceedingly bad taste for outsiders to dictate or even suggest to our most hospitable brothers in Pittsburg what they should do in the way of amusements, and as there are no challenge cups and banners to be fought for at shooting, as there are at bowls, the shooting can, at the discretion of the local club, be dropped. Furthermore, good reasons are given for letting the contest drop. Yet with all that it is a great disappointment to many. The writer knows a dozen men in this and other cities who have looked forward to the shooting with the keenest pleasure. They have bought guns, spent many hours in practice, and prided themselves that by the 23d of August they could not miss a bird. Now this news comes on them like a thunder clap, and their occupation's gone. As it was conducted on the pier at Atlantic City last year it was conceded by all to be a most pleasing part of the recreation side of our convention. For spectators it is far more attractive than bowling. Who does not enjoy seeing the crack shots, Dorrance and Burton, stand up with their eagle eyes and smash those inanimate targets? And the opposite is enjoyed when the hunter from the western prairies makes a clean score of 25 (missed). The shoot at Pittsburg was going to be an enthusiastic affair, and many a man went home from Atlantic City saying to himself "They won't laugh at me next year." As previously said we must bow to the discretion of our Pittsburg friends, but if there was such a thing as a com-

mittee reconsidering their action we almost pray that it may be the case in regard to shooting at Pittsburg.
Buffalo. CLAY PIGEON.

Judging Novelties.

ED. AM. FLORIST:—I have read with much interest and a good deal of surprise the rules as published in your paper laid down by the N. Y. Florists' Club governing the exhibition of novelties in plants and cut flowers before that society. This is acknowledged the strongest and most important club of its kind in the country, and if its object be to discourage and hinder the proper presentation of new plants and cut blooms before its members then these rules and regulations will certainly accomplish the end in view.

The first rule demands that the initial exhibit of a novelty must be made before this club; we would respectfully like to ask *why*? Why should the members of the N. Y. F. C. object to review, to condemn or to commend the action of some other body of florists who, perhaps, may have had the opportunity to pass judgment upon a novelty exhibit before it has been presented to the N. Y. F. C.

Rule 6 builds a Chinese wall around the growers or originators of novelties in the vicinity of New York; of course the outsiders may scale the wall if they have sufficient courage, but the rule seems to read come if you care to, but we would a good deal rather you staid outside—and this from the center of floriculture of the continent! On the other hand there are a number of members of this very club who could not be induced to purchase a novelty, either in large or small quantity, until they had seen the plant or the bloom in order to have substantiated the statement of the originator.

What particular good will come of a committee traveling over the country to examine the stock of a new plant? If a new hydrangea, pelargonium, palm or other novelty plant be presented what is to hinder judgment being passed upon it? Supposing it to be necessary to go about and examine roses and carnations as they are growing in the bench or the field; it would be needful that two or three trips should be made, for if the owner of the novelty were allowed to arrange for the visit he would certainly see that the committee should be shown his product when at its very best.

If a suggestion might be offered, why not insist upon a plant or a number of plants being put upon exhibition with the flowers? If the N. Y. F. C. are earnestly seeking to find out what is really worthy and meritorious in the way of new plants and cut flowers, it seems to the writer that they will certainly have to widen their gauge so as to include a trifle more territory than that immediately adjacent to New York City, even far away California having aspirations in the way of novelties occasionally. It would seem that no matter where a meritorious new rose, carnation or other plant were originated it should be one of the objects of a body like the N. Y. F. C. to ascertain the facts concerning it, give the originator the credit due him, and, as soon as possible, give full information to its own members in regard to it. It has been the formulated theory, oft proclaimed, that New York society and New York florists and cut flower men were the final arbiters of the destiny of a new plant or flower; we have been told again and again that if it "took" in New York it would "do;" if not its fate was sealed; well, how can

benighted outsiders know what will take in New York if their products are debarred entrance by such rules. Who likes to go supplicating a certificate with so doubtful a welcome awaiting one? X.

New California Pelargoniums.

A number of seedling pelargoniums were recently exhibited by J. H. Sievers before the California State Floral Society. In each case the seedlings were shown and judged by the side of blooms of the parent grown under similar conditions, an excellent idea in exhibiting seedlings. In each case improvements could be readily discerned, in size especially, in form and in number of petals. In Mrs. O. W. Childs, from Dorothy, the color is entirely new and very beautiful; Mr. Worthington also differs from the parent in color, which is new and distinct. In the white varieties a decided change is shown from cream to a pure dazzling white.

Mrs. O. W. Childs, a seedling from Dorothy, is an entirely new and distinct variety; it has handsome trusses of extra large fluted flowers of rose pink color, with scarcely any markings on petals. Mrs. J. Striening, from the fine old variety Mme. Vibert, is larger, of a different shade of red, and has a broader margin than the parent. Innocent and Purity are both seedlings from Volante Natioreale Album, each differing in degree of whiteness. Innocent has flowers of great size, an extra number of large petals beautifully fluted, the white of clearer tone than Volante. Purity is more like the parent in form, but a purer white. Anita, from Pilot, differs from it in color, being a rosy pink, upper petals blotched with velvety crimson shading outwards to rosy pink edges. It was the largest of all the specimen submitted. Katie IIs, a double pelargonium of good size, is a seedling from Empress Frederick. It has camellia-like double white flowers of good substance. Alexander Crow is a sport from Bush Hill Beauty, which is a seedling from Mme. Thibaut. It is considered superior to both in form and color, of the same type, only more double; edges more fluted, coloring more brilliant. J. H. Sievers is a seedling from the fine variety Empress of India, and from specimens submitted surpasses it in color, which is a brilliant salmon scarlet blotched with crimson in two upper petals. Mrs. S. P. Hart is a large white pelargonium with maroon feather in upper petals; seedling from Louise Arner, a California seedling, which it exceeds in size and brilliancy of color. Mr. Worthington is a seedling from Prince of Pelargoniums; it differs from it in every way, and is a distinct variety. F. S. Bush, raised from Milton, is distinct and of larger size, but not an improvement on the older variety in the opinion of the committee. La Belle: Origin unknown; could scarcely be judged from specimens obtainable so late in the season. Miss E. G. Britton, probably from Jubilee, differs from it, and is large flowered, with undulating petals, color delicate salmon pink; upper petals blotched carmine, lower ones slightly feathered; sometimes called the Butterfly.

This showy class of plants seems to be receiving more attention in California than in other parts of the United States. With the production of meritorious seedlings suited to our climate we may see a great increase in its popularity.

ROCHESTER, N. Y.—Attachments amounting to \$18,586 have been levied against A. D. Pratt, nurseryman, 112 Court street.

Worcester, Mass.

A slight improvement in trade is noticeable, but whether it is a sign of improvement or simply a little flurry is rather hard telling. Plenty of good flowers are coming in, among them some very fine asters. Good Brides, Mermets and Perles are getting more plentiful, and some good gladioli are in. We are getting plenty of rain and outdoor stuff is looking splendid, carnations are doing especially well.

Exceptionally fine sweet peas were shown at the horticultural exhibition July 25, and the best varieties to be obtained could be found in nearly every collection. The displays of A. A. Hixon, F. A. Blake and H. A. Jones were awarded first, second and third premiums in the order named. Some very fine Phlox Drummondii were also shown. The display of bollyhocks was rather poorer than usual on account of the prevalence of the disease in this vicinity. Cut flowers, verbenas, dahlias, etc., made up the balance of the show, which was above the average.

Stephen Salisbury will build an additional greenhouse 80x20 feet with an L 12x45 feet, the frame work will be of iron and the house will be 14½ feet in height; this is a private place.

C. A. Keyes will build a 16x23 feet addition to his greenhouses on Highland street. A. H. L.

PITTSBURG, PA.—The Patrick bank building, on Fifth avenue, has been sold by the sheriff. It was bought by A. M. Murdoch of the well known firm of A. M. & J. B. Murdoch. The building will be remodeled and fitted up in a style unapproached by any flower establishment in the country, and will be used for the sale of cut flowers exclusively. The old store on Smithfield street will be continued. It is expected that the new store will be opened in October.

SPRINGFIELD, MASS.—William Schlatter & Son is a new florist firm at Bay street and Oak Grove avenue, opposite to the principal entrance of Oak Grove Cemetery. They have in course of construction two greenhouses, one three-quarter span 20x75 and one lean-to propagating house 5x75, heated by hot water. The business will be a general one, principally in decorative and bedding plants.

ASPENWALL, PA.—Ernst J. F. Zieger is successor to Zieger Bros. H. B. Zieger, the retiring partner, has established a business under his own name and has built four houses, of which three are 20x100 each and one 10x100, all for growing cut flowers.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

S. E. BRIGGS, Pres.; T. W. WOOD, 1st Vice-Pres.; ALEX. ROGERS, 2nd Vice-Pres.; A. L. DON, 114 Chambers St., New York, Sec'y and Treas.

Closing of the Government Seed Shop.

The recent decision of Secretary Morton, which will practically shut up the seed distribution division of the Agricultural Department October 1st next, is one for which the Secretary deserves the highest praise from the seed trade of the country, as well as from all right thinking citizens. That such an inexcusable abuse perpetrated for so many years upon the long-suffering seedsmen is to be finally buried is a matter for congratulations and rejoicing. To Mr. Enos S. Harnden, the able purchasing agent of the department, is certainly to be extended no scant measure of thanks for assisting in a most unselfish and broad-minded way in bringing about the final collapse of this ancient and inexcusable abuse.

Opinion of the Attorney General under which the Secretary of Agriculture will discontinue the free distribution of seeds October 1 next.

DEPARTMENT OF JUSTICE.

WASHINGTON, D. C. April 20, 1895.

THE HONORABLE,

THE SECRETARY OF AGRICULTURE,

Sir:—I have the honor to acknowledge yours of the 18th instant, in which you call my attention to a portion of the act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1896, and approved March 2, 1895, and running as follows: "Division of Seeds—Purchase and Distribution of Valuable Seeds and for the Printing, Publication, and Distribution of Farmers' Bulletins: For the Purchase, Propagation and Distribution as required by law, of valuable seeds, bulbs, trees, shrubs, vines, cuttings, etc., one hundred and eighty thousand dollars."

You make two inquiries, as follows: "Can the Secretary of Agriculture legally purchase any other seeds than those described in Section 527 of the Revised Statutes, to-wit, 'seeds rare and uncommon to the country, or such as can be made more profitable by frequent change from one part of our own country to another,' under authority of the Act of March 2, 1895?"

"Would it be proper and lawful for the Secretary of Agriculture, in view of the verbiage of the Act of March 2, 1895, the wording of Section 527 of the Revised Statutes, to advertise for proposals to furnish the Department of Agriculture seeds, bulbs, trees, vines, cuttings, and plants 'rare and uncommon to the country, and for such as can be made more profitable by frequent changes from one part of our own country to another,' reserving the right to reject any and all bids?"

1. The seeds purchasable under the Act of March 2, 1895, are limited to those described in Section 527 of the Revised Statutes—there being no reasonable ground for claiming that the Act of March 2, 1895, operates, or was intended to operate as a repeal of the earlier statute.

2. It is not obligatory upon the Secretary of Agriculture to purchase seeds, trees, etc., conformably to Section 3709 of the Revised Statutes, it is certainly competent for him to make the purchases conformably to said statute, the right to reject any and all bids being reserved. But the term of the question is such that I think it proper to call attention to the fact that while seeds purchased must be such as are "rare and uncommon to the country or such as can be made more profitable by frequent changes from one part of our own country to another," the trees, plants, shrubs, vines, and cuttings to be purchased are such "as are adapted to general cultivation and to promote the general interests of horticulture and agriculture throughout the United States."

Respectfully yours,

RICHARD OLNEY, Attorney General.

Changes in the Seed Business.

Mr. Jerome B. Rice in a private letter mentions some of the remarkable changes which have taken place since the establishment of their business by R. Niles Rice in 1845, who at that time succeeded his cousin, Roswell Rice, whose business had been commenced in 1832.

Mr. Rice says: "In looking over some of my father's old books I found where he

THE BROWN BAG-FILLING MACHINE.

had an account with an eastern seedsmen, selling him Hubbard squash seed by the barrel at \$1 per pound, Long Green cucumber at 50 cents, Mountain Sweet water-melon at 60 cents, Blood Turnip beet 37½ cents, Extra Early peas \$6.50 per bushel." He says "we do not seem to be getting those prices these days. The prices on seeds in bulk are going into the ground as fast as they possibly can, and there is an inclination or disposition on the part of some of our seedsmen, seemingly, to sell goods, profit not being considered, and in many instances goods are offered and sold by some of our large wholesale houses at prices that barely cover cost. I regret that the seed trade is in such a position, and wonder how good business men can think of selling with a margin so small."

The Brown Bag-Filling Machine.

We present herewith a cut of the Brown Bag-Filling Machine, which is now coming into general use among seedsmen for putting up seed packets. It consists of a cylindrical elevating hopper which pours a quantity of seed upon a measure; the measure in discharging passes under the edge of a piece of soft rubber by which the surplus seed is brushed off, leaving a strict measure, which can be accurately gauged as fine as a grain or less. The empty bags are placed in the guide-box at the right to the number of three hundred or more. The gum is applied from a gum-pot that faces them on the left. A reciprocating arm, carrying a tunnel, opens each bag in turn and the seed is discharged at the same time through the tunnel into the bag. The bag is then seized squarely at the bottom by another arm which lowers it to the folding bed where the flap is turned and held under firm pressure until it sticks fast, the bag not being released till the fourth bag has been sealed. It then passes into the delivery chute dry and ready for packing.

By this means the bag is practically untouched and the paper is not wet with paste, soiled, bent or broken in any way till it is ready for the customer. With the help of the bag-making machines now in use the paper passes from the lithographer to the filled bag without handling, and in addition to its symmetrical appearance the bag is necessarily in better condition and longer lived than by the old process, which latter fact is already demonstrated. It is built by the Brown Bag-Filling Machine Company of Fitchburg, Mass.

Seed Crops.

Onion sets are reported a good crop in the vicinity of Philadelphia and a fair crop about Chicago. The Michigan bean crop has improved during the past ten days, with the present outlook for 75% of a crop, with favorable fall weather the entire crop should be satisfactory. Burpee's bush Lima bean is having a little boom. Onion according to some California growers will not yield as well as expected. Red Wethersfield is firm. Sweet corn and vine seeds promise well.

VISITED CHICAGO.—Henry A. Salzer, Col. W. S. King, H. A. Johns, Louis Gœpinger.

THERE IS A growing demand for Essex Rape as well as crimson clover.

COLLECTIONS FROM the smaller country dealers in seeds are reported slow.

MESSRS. JEROME B. RICE and A. H. Goodwin attended the recent Annual Convention of Bankers at Saratoga.

LAPEER, MICH.—W. H. Watson has built a new house 25x40, and is now putting in a 40 horse power boiler to work in connection with a 30 horse power boiler now in. He is also repairing three old houses and building one 24x125, one 25x50 and one 14x50, using buttled 16x24 glass with cap on bar.

“WHAT'S IT FOR?”

This question has been frequent the past few days around “WATSON'S CORNER,” at 43 North 10th St., Phila., the cause of the curiosity of the callers being a shipment of

Cocoa Nut Fibre

from Europe Many florists have yet to learn of the value of this material for lightening up the soil in composting, for starting Palm seeds, and for various other purposes. The palm growers around Phila. use it quite considerably. I have a few bags left unsold out of the above mentioned shipment and will sell low while stock lasts. It comes in 4 bushel bags, price \$1.50 each, or where a bale of 6 bags is taken \$1 25 per bag, f o. b. Phila. Mail orders promptly attended to,

F. R. PIERSON CO.,
TARRYTOWN-ON-HUDSON, NEW YORK.

Rochester, N. Y.

No change for the better has been experienced since last report; an occasional order for funeral work is about the only thing to break the monotony of the dullness in trade. Very few larger orders are coming in, and the store hands are helping out in the greenhouse work, where they are employed in various ways, for the grower can always find work for additional help at any time in the year. The long expected rain, followed by real cool weather, has visited us at last, and everything has freshened up. All field grown stuff was greatly benefited, and now things have a fair chance to grow along.

A visit to Vick & Hill's place at Barnard's Crossing was very interesting to us. They have wrought wonders there; only eighteen months ago their 12 acres of land was a complete wilderness of brush and weeds, and now every foot of it is planted, not a weed to be seen. All stock looks splendid, and is in a remarkably thriving condition. Bouvardia, carnations, etc., are very stocky. Their asters in various stages are far ahead of any others in this neighborhood. Hydrangea paniculata is ready to cut, and in fact there is not a single plant on the place which is not in a strong and healthy condition. Our genial friend Ed. Vick is ever ready to show visitors around, and to finish up will take them to a certain place where neither tables nor chairs are to be found, but where nevertheless the inner man is taken care of.

In regard to our city parks, large and small, no definite action of any consequence has been taken as yet. The park commissioners have not agreed as to the allotment of moneys for each of our three parks, but otherwise it must be said to the credit of our park superintendent Laney and also his principal assistant superintendent Dunbar that both of them have done remarkably well under the circumstances in developing and improving the different features in our parks in every possible way with a comparatively small allowance of funds. In time we undoubtedly shall have parks and parkways which will compare favorably with the finest of this or any other country, if the management continues under these same heads. J. B. K.

PANSIES. The Best from many growers, not the selection of one grower only.

INTERNATIONAL MIXTURE.

This mixture has been made up and sold by us for the past five years from the best strains known in Europe and America. We have in our files testimonials from leading florists in almost all the leading cities in the U. S. saying in effect "the best we ever had." Now if you would like to be convinced of this, drop us a line and we will send you the names of good men near you who will certify that VAUGHAN'S INTERNATIONAL MIXTURE has proven with them to be the best, most complete all round high class Pansy Mixture they have ever grown. Our four page price list of these and other seeds, mailed on request. The new crop seed is now arriving and can be sent at once, but after July 20th or August 1st our assortment of strictly NEW CROP SEED will be most complete. Trade pkt. 50c; 1/2 oz. \$1.50; oz. \$10.00.

GIANT MIXTURE.

For those who desire the largest flowers only, and are willing to accept a somewhat less variety in the way of coloring, our GIANT MIXTURE has been especially prepared. It contains only the largest flowers and during the last two years we have greatly increased the number of sorts. See list below. Price for Giant Pansy Mixture, trade pkt. 50c; 1/2 oz. \$1.50; 1 oz. \$5.00.

San Francisco.

The market at present is very dull. Everybody is out of town at the summer resorts, so that a great number of the florists are having an outing. Album and rubrum lilies are making their appearance and there is quite a demand for them. Very few roses are coming in, and those that are in are very poor. Carnations are very good and range from 75 cents to \$1 per 100 in price. Sweet peas are nearly done and everybody is glad. All the growers are busy replanting their houses for winter. The weather has been very cool and fine for growing, so the violets and chrysanthemums have all made a good growth and are looking well.

Podesta & Co. have removed from their old store to a more commodious place a few doors down. They have long needed the change, as they were cramped in their old quarters.

Down at Sherwood Hall all the replanting is done now. Several of the houses have been reglazed and the benches raised. Nearly all the roses are to be grown in raised benches here next season. The carnations are looking well. They have just replanted one house of Day-break. Their big stock of palms, ferns, etc. look well, also all the shrubbery, plants, etc. in the nursery have made a good growth, so that things look prosperous under the watchful eye of genial Sidney Clack.

M. Lynch and party have returned from their camping trip.

James Sproule has returned from a few weeks' trip to Southern California.

J. Sievers' erect flowering tuberous begonias are now looking fine. They have made great improvements in this popular plant, which they have been working on for several years. Carroll Kruger, who is in charge here, has a batch of 1,500 seedling carnations, all crosses of Portia and Germania, and of which he expects some fine results. In carnations, Portia and Edna Craig are favorites here. They are planting quite a number of Belle Siebrecht rose also, as Mr. Kruger thinks it is just what they need. METEOR.

Orange, N. J.

Around here violets look well and so far are free from disease. Carnations are only middling; they are affected with stem rot, a new disease, around here at least. This is our own experience also. Some of our carnations rotted away at the base in an unaccountable manner. They were chiefly the newer varieties like Uncle John, The Stuart and Alaska; none of our old varieties have been affected so far. The roses most generally grown around here this year are Bridesmaid and Bride, the former having driven out Catherine Mermet. The florists here have got discouraged growing American Beauty, and some have abandoned it altogether. Growers who will have good Beauties this coming season will probably get pretty good prices for them.

W. F.

FEW PTERIS TREMULA

from 2 1/4-inch pots, 10 to 12 inches high, ready to pot into 4s, \$3.50 per 100; \$30.00 per 1000.

GREENHOUSE BOILER

NILES CENTRE, COOK CO., ILL., March 30, 1894.
MESSRS. KROESCHELL BROS. CO.,
Chicago, Ill.

GENTS:—Those two boilers you made for me are the best I ever used. I have used more than twenty different kinds of boilers and never saved so much fuel as I did this winter with your boiler.

Truly yours,
F. STELOW, Florist,
Niles Centre, Cook Co., Ill.

RAVENSWOOD, ILL., March 24, 1894.
KROESCHELL BROS. CO.

DEAR SIR:—In reply to inquiries regarding your Improved Green House Boilers have the following to say:

Your boiler, I must say, is the best Green House Boiler in Chicago, or anywhere else. I have been using the largest size Kroeschell Green House Boiler ever since I am in the business. I have 14,000 feet of pipe attached to it. I had no trouble whatever in keeping the temperature of my houses at 60 degrees at 15 degrees below zero. I have used less coal than my neighbor, who has less glass; he uses the Devine Boiler.

I cannot say too much praise of your boiler.
Yours respectfully,
CHARLES E. NUSLAND,
Ravenswood, Ill.

CHICAGO, ILL., March 10, 1894.
MESSRS. KROESCHELL BROS. CO.,
No. 41 to 59 Erie Street, Chicago.

GENTLEMEN:—Last season we purchased three of your Improved Green House Boilers. They have done heroic service the past winter, eclipsing every claim you made. Since Feb. 23th one large boiler has been doing the work of two, heating six houses, 185 feet by 24 feet, with nine pipes (4 inches) each, or about 26,000 square feet of glass, the hot water being forced through nearly two miles of 4-inch pipes. While the weather has been mild we doubt if this showing can be excelled.

Needless to add your boilers please. Yours very truly,
Forest Flier, P. O. Box 58. BRANT & NOE.

AURORA, ILL., March 12, 1894.
KROESCHELL BROS. CO.,
No. 55 E. Erie Street, Chicago, Ill.

GENTS:—Permit me to say that your boiler is the most convenient I ever used, and I have tried a good many boilers. I am sure it will heat fully the amount of pipe you said it would.

Truly yours,
J. A. FREEMAN,
Aurora, Ill.
396 North Lake Street.

EVANSTON, ILLS., March 20, 1894.
MESSRS. KROESCHELL BROS. CO.,
Chicago, Ill.

GENTLEMEN:—Replying to your favor would state that I have in use three of your Improved Green House Boilers, which I had for five years. Before purchasing yours I had been using the Devine Boiler. I like your boiler better because it has water front and water back, which allows no heat to escape. The saving of your boiler in coal as compared with other boilers is about one-fourth. Your boiler is easier to run than other boilers.

Yours truly,
M. WEILAND,
Evanston, Ills.

CHICAGO, ILL., March 15, 1894
MESSRS. KROESCHELL BROS. CO.,
City.

GENTLEMEN:—We wish to state that of the many boilers we have had in use in our green houses we find your boilers give us the best satisfaction in heating. We have used less coal with better satisfaction than any other boiler; others who have put in your boiler through our recommendation have the same to say for it.

Yours respectfully,
51 Wabash Avenue. REINBERG BROS.

BLUE ISLAND, ILL., March 11, 1894.
KROESCHELL BROS. CO.,
Chicago, Ills.

GENTLEMEN:—Your favor of the 8th inst. asking me for an expression of my views as regards your heaters as compared to others we have tried is at hand.

Will say, in the fourteen years since we began, we have made three changes. We have about 29,000 feet of glass and heat it easily with the two heaters of your make.

After three years' use of one, and one year of the other one, I am free to say, I prefer it, all things considered, to any heater I know anything about.

With the hope that you may meet with the success you deserve, I am,
Yours truly,
CHAS. BREFOGLE,
Blue Island, Ill.

CHICAGO, ILL., March 16, 1894.
MESSRS. KROESCHELL BROS. CO.,
City.

GENTLEMEN:—In answer to your inquiries would state that I have two of your Improved Green House Boilers; one I have had in use two years and one four years.

I am well satisfied with both of your boilers, and have always recommended them. Very truly yours,
HENRY HILMERS,
Chicago, Ill.
No. 280 40th St.

Grand Rapids, Mich.

Trade is very light, nothing doing except funeral work, and that in very limited quantity. Locally grown roses are very good in quality for the season, and although very few are cutting any quantity still all have plenty to supply orders. Carnations are exceptionally good for this time of year and sell readily. Sweet peas are a drug, and can only be disposed of in work.

Crabb & Hunter are setting posts for one house 150x20 for roses and carnations.

The Grand Rapids Floral Co. are planting their new house 173x20 entirely to roses.

Henry Smith is rebuilding three houses and adding all the modern improvements. His is a most interesting place to visit just now; everything inside is looking fine and his outside stuff does not show signs of the drouth. Here can be seen the effects of thorough and constant cultivation during dry weather.

Schmidt Bros. are building two houses 100x20, one for roses and the other carnations.

The Central Floral Co. will build a house 75x20 and greatly enlarge their boiler room, making it possible to store a car load of coal at a time.

Miss Mamie Hartnett and Miss Anna O'Neill returned the first of the week and report fishing good around Niagara and Buffalo.

John Ring is again with us and intends remaining this time. He will look after Henry Smith's rose houses this winter.

Paul Goebel's new house and office add to the appearance of his place. He has added a telephone also.

Little was done at the last meeting of the Florists' Club other than to discuss the chrysanthemum show and the approaching picnic to be held at Reed's Lake August 6.

Mrs. Arnold has a new way of growing sweet peas, which is to plant the seed late, about May 15, not more than two inches deep, staking as soon as up and taking care of the first tendrils, watering freely. Her peas thus treated are the finest she has ever had, and far surpass those planted earlier and much deeper.

CANTON CHINA PLANT-POT.

CANTON CHINA HALL-SEAT OR PLANT-POT STAND

Plant Pots AND Pedestals.

We invite the attention of intending buyers or those interested in seeing the newest productions of the potter's art, to our importations of English, French, German, Japanese and Chinese plant pots or jardinières, selected by our buyers at the places of production the present season.

They include all sizes and shapes up to the large and very large; from the lowest price up to \$150 each.

Some very costly old blue Canton China.

Our stock of China and Glass occupies seven floors and more than 10,000 bins.

IMPROVED GLAZING.

GASSER'S PATENT ZINC JOINTS for butting glass makes greenhouses air and water tight; also prevents sliding and breakage from frost. Does not cost as much to heat a house glazed with the joints, thereby saving enough in fuel to more than pay the additional cost of glazing. The leading florists of the country are using them. Write for circulars with full particulars and price list.

J. M. GASSER, FLORIST, Euclid Avenue, CLEVELAND, O.

News Notes.

MONTROSE, COLO.—M. M. Mather is adding one new house 18x100 for roses and carnations.

FALL RIVER, MASS.—Woodcock & Lannigan, 58 New Boston Road, intend to build a large new greenhouse next year.

PATERSON, N. J.—Mr. Joseph Towell and daughter have sailed for England, where they will remain until September.

INDIANAPOLIS, IND.—Bids are asked by Architect L. H. Gibson up to August 6 on a greenhouse to be erected at the Institute of the Blind.

CLEVELAND, O.—Mr. and Mrs. J. M. Gasser, with their daughter and her husband, Mr. D. R. Knisely, sailed for Europe on the City of Paris July 31.

PEORIA, ILL.—At the last meeting of the Park Board an ordinance providing for the issue of \$200,000 of bonds was adopted. They are to run five, ten, fifteen and twenty years in sections of \$50,000 each, bearing 4 per cent interest, payable semi-annually. Plans for a conservatory at Glen Oak Park were approved.

NEGAUNEE, MICH.—The greenhouses of the Iron Cliff Co. are being erected here and not at Marquette as previously announced. These houses are being erected in connection with the land department of the company, who are extensive iron miners and furnace men, who have acquired about 100,000 acres in connection with their business. This has been cleared of timber for the production of charcoal, and they are now endeavoring to make the land valuable for horticultural purposes.

MINNEAPOLIS, MINN.—Jacob Hartman has petitioned the district court for a receiver for the florist firm of Hartman & Wessling and a dissolution of the partnership. He claims that he and Hattie C. Wessling contracted a partnership, in which he was to manage the business and she was to furnish a capable and competent florist to take care of the greenhouses. She employed her husband, and Hartman claims that the couple has threatened to ruin him and drive him out of the concern. He states that the firm's assets are worth \$8 000, and he wants the court to take charge of them until matters are adjusted.

Clear Cypress Greenhouse Material

We have had many years' experience in this line. We introduced Cypress for greenhouse construction. We have made many improvements in the construction of greenhouses. We carry in stock many different designs of Rafters, Sash Bars and everything else from the bottom of gutters up. Our facilities are large, and we are prepared to furnish on short notice material of our own designs or any special designs, and all of open-air-dried clear Cypress Lumber which we have bought for many years of one party because this particular growth of Cypress is as soft as White Pine, and has none of the knots, sap and other defects so common to White Pine. Every foot of our stock is guaranteed Spot Clear. Write for circulars and estimates. No trouble to furnish plans when necessary.

Announcement to Florists.
We desire to announce the dissolution of the firm of Sipfle Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.
Send for price list and samples and we know you will give us an order.

THE "SPENCE" HOT WATER HEATER

has many distinctive features, but there is none more valuable than that of the "WATER POST," which serves to connect the sections with the fire pot. This "post" makes each section independent of the others, so that, should it at any time be necessary—in case of accident—to repair any section, that section can be removed without necessitating the disturbance of the piping. This feature—a feature possessed by no other heater—is one of the utmost importance, as the injured section can be removed without putting out the fire, or in any way stopping the action of the heater.
