BARRE, MASS.—A new hothouse 60x20 has been recently erected by Geo. R. Simonds.

CONNERSVILLE, IND.—C. A. Riegan has added two new houses 12x40 for pansies and violets.

GRAND RAPIDS, MICH.—Mr. C. Chadwick lost a house of fine carnations recently, from fire burning one end of the house, which was 20x150.

THE AMERICAN FLORIST (\$1.00) and *Gardening* (\$2.00) together to one address for one year for \$2.50. Send orders to American Florist Co.

DO YOU WANT a list of the leading park superintendents of America? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

Fungous Diseases of Ornamental Plants.

BY PROF. BYRON D. HALSTED.

[Read before the Massachusetts Horticultural Society January 26.]

One hundred and sixty-five kinds of fungus diseases of the rose are recorded in the books. The black spot (*Actinonema rosæ*, Fr.) is the most widespread of all. First described in 1826, it is common and familiar, soon develops dark circular spots on the leaves, or causes them to turn pale and fall to the ground. The result is fewer blooms and of inferior quality. After the spot has spread a little small specks are seen upon its surface. These are spore-bearing places from which multitudes of spores, or new germs, are produced; each of these spores, lodging upon a healthy leaf, can produce a new black spot. Glancing around in a rose house, we see foliage more or less covered with a powdery substance like dust from a flouring mill. These leaves are often misshaped. This powdery substance consists largely of spores of the rose powdery mildew (*Sphaerotheca pannosa*, Wallr.) It is a surface feeder, and spreads rapidly.

Perozonospora sparsa (Berk.) is another rose mildew, but of the downy mildew class. It penetrates and permeates the entire substance of the leaves, and afterwards throws up from the surface the downy growth. It is related to that of the grape, the onion, the greenhouse lettuce and several others. We observe a rose plant deloliated, and find its canes are covered with small pimples, each of which abounds in spores. These microscopic germs ooze from the pimples, germinate quickly and spread the disease. This is the rose anthracnose (*Glaeosporium rosæ*, Hals.), and is related to the bitter or ripe-rot in apples, grapes, etc. (*Glaeosporium fructigenum*, Berk.), and the raspberry anthracnose (*G. venetum* spag). The rose is most likely attacked by spores falling upon leaves or succulent canes, which, by girdling the latter, kill them. This is one of the most contagious fungus diseases of the rose.

Some rose-house plants have foliage badly marked with gray spots. It examined with a lens these spots are found to be dotted with minute black specks—the spore bearing organs of *Sphaerella rosigena* (Ell). The common name proposed for this fungus is rose leaf blight. The peculiar discoloration, called bronzing, of the leaves of La France rose plants is not of fungus origin, but is probably due to a structural weakness permitting the skin to become scalded by too great sun exposure.

Carnation rust (*Uromyces Caryophyllinus*, Schr.) is the leading fungous enemy of carnations to-day. It appears in plump gray blisters upon the leaves and stems, and after the epidermis is broken the rusty-brown spores escape in great numbers. It then appears much like rust of grains and

grasses. The carnation leaf spot (*Septoria Dianthi*, Desm.) appears in light brown sometimes reddish patches, chiefly between joints of the stem, but often on any other part of the plant. The spores—produced in minute black, flask-shaped bodies upon the brown patches—are long needle-shaped, and are immersed in a viscid substance which soon dries, and they float away upon the first light breeze, or a stream of water will carry them to new localities. Most rust spores can be scattered broad by syringing.

The carnation anthracnose consists of microscopic, sharp-pointed black hairs arranged in rosettes. The spores are borne on the tips of radiating threads intermingled with the hairs. This fungus likes moisture; is most often near the ground surface, destroying whole branches by affecting the lowest joints.

The leaf mould (*Helosporium Echinulatum*, Berk.) forms circular spots on leaves, ash color at first and covered with a dense mould. The spores appear upon the branches of this mould, and as they mature, the color changes to a dark brown. The last fungous disease of the carnation mentioned is of bacterial origin. The affected plant at first shows a lack of vigor, and failure in amount of bloom. This is occasioned by the swarming of these bacteria in all of the cells of the leaves, destroying the chlorophyll.

The violet leaf spot (*Cercospora Violæ* Sacc.) is distinguished from several other leaf spots by the dark center, due to the multitude of spore-bearing threads that are brown-colored. Another spotting of the violet leaves caused by *Phyllosticta Violæ* (Desm.) has no dark central area, but scattered over the whole brown spot are dark specks, in which spores are borne. Similar to these are other violet parasites, as *Marsonia Violæ* (Sacc.) Also fungi which cause blotching of the leaves; an anthracnose (*Glaeosporium*) and a bacterial enemy.

The fungus *Phyllosticta Maculicola* (Hals.) produces small, brown, angular spots in the leaves of Cordylone terminalis and they finally show spore bearing pimples, *Dracæna fragrans* is often disfigured by leaf tip blight. This may be due to the longer adherence of water to that part as, if any spores have fallen upon the leaf, some may be carried there during syringing, and remaining there, adhere and develop before another syringing carries them away.

The palm grower is far from exempt from troubles due to fungous growths. While the tip blight is not uncommon, it is not very unusual to find circular spots in the body of a leaf that are caused by the same associating fungus. This fungus is an anthracnose (*Colletotrichum Kentzæ*, Hals.), a deep-feeding parasite, which practically ruins the plant attacked.

Among orchids, the sobralias are killed outright by *Glaeosporium cinctum* (B. &

C) working in the foliage. The large, tender leaves of the bletias suffer from several blights, and the pseudo-bulbs often have large pits of decay due to one or more fungi. Occasionally the large and otherwise superb flowers of various orchids are spotted with brown, often the work of micro-organisms, of which the gray mould (*Botrytis vulgaris*) is the most common.

As a rule, plants variegated with white are more subject to fungous diseases than entire green-leaved plants of the same species, on account of the lack of chlorophyll. *Ficus elastica variegata*, *Funkia variegata*, *Aspidistra elatior variegata*, etc., are frequently much disfigured by fungous blights. Under the general term of "damping off" are included most of the failures of seedlings in their early stages of growth. This trouble arises chiefly from the microscopic fungi of the genus *Pythium* of which the *Pythium De Baryanum* (Hesse.) is the most common. In structure the *Pythiums* are similar to the deep-seated mildew, and nearly related to the *Phytophthora infestans* (De By.) which causes the potato rot. Seedlings are subject also to the whole list of parasitic enemies, which attack the host in its later life. Cuttings, like seedlings, are subject to the attacks of all fungi that affect established plants of the same varieties.

Concerning remedies, no one appreciates the lack of information on this subject more than he who wishes to instruct. The preventive means are, first, to start new plants from healthy stock, either from seeds, or from slips free from disease; secondly, to prevent the germs of decay from entering the healthy plants; and thirdly, if such are present to check their growth as much as possible. Germs of decay enter from the soil, the air, or both. Care must be exercised that the seed-bed and the cutting-bench be germ-free, and to this end all the woodwork of greenhouses should be cleaned and fumigated as frequently and thoroughly as possible. As the soil is a ready receptacle for spores, and soon gets charged with them, a frequent change of soil is important. But after these preventive measures have been carried out, it will be necessary to provide fungicides for occasional use in the greenhouse, as well as in the orchard and garden. Some germ destroyers, when properly used, have paid handsomely.

For roses, the mildew may be controlled by sulphur, either dusted upon the foliage or heated upon the greenhouse pipes. The black spot has been checked by Bordeaux mixture, and the ammoniacal solution of carbonate of copper. The formula for Bordeaux mixture is five pounds of lime and five pounds of sulphate of copper in fifty gallons of water; each may be prepared and kept in stock, to be mixed as needed for spraying. The formula for ammoniacal solution of the carbonate of copper is, five ounces of carbonate of copper dissolved in three quarts of strong (4F) ammonia, to be afterward added to fifty gallons of water. These two fungicides are the chief compounds that can be recommended for fungous diseases in the greenhouse. A solution of potassic sulphide ($\frac{1}{2}$ ounce of sulphide to one gallon of water) has proved a successful remedy in carnation diseases. Good results have followed the use of Bordeaux mixture for fungi on violets and many other plants would doubtless be benefited by its use.

The work against injurious fungi must be preventive instead of curative, and the old adage, "An ounce of prevention is worth a pound of cure," is nowhere more applicable. It is often true that the fungous

enemy gets so far along with its destructive work that it is the part of wisdom to destroy the plants instead of trying to save them; much less should one propagate from them. Fungicides are most useful at the time of attack by the fungi, and therefore often need to be used before the fatal parasites show themselves. It is most likely that greenhouse plants generally would profit by a spraying now and then, and a more general use of fungicides is to be looked for by growers of ornamental plants. The man who keeps his plants in the best way, observing the proper conditions of seed bed, soil, air, and food supply; the one who has all things neat and clean will also be the one who sprays. He will not delay until the plants are sick through and through, but will use the fungicide as a shield for plants still healthy. Such a one will have the greatest pleasure in his plants, and be most largely rewarded by them for his watchful care.

What is the right temperature for a propagating bed in which to strike rose cuttings?

What is the best soil for potting them, and how should it be mixed?

SUBSCRIBER.

I have rooted cuttings successfully in a temperature varying from 50° to 65° at night, but to obtain the best results a mean temperature between these two is certainly desirable. That which we have found for some years to give us the best results is between 55° and 58° at night, according to the outside influences; we very rarely even in the very coldest weather allow the general temperature of the propagating house to fall below 55° and try to prevent it ever going above 58° if possible. This with a slight rise of 5° or 6° during the day when cloudy, and if the sun is bright a rise of 10° to 15° in midwinter will not be detrimental. Formerly many growers thought additional bottom heat almost essential, but while it will admit of rooting the cuttings possibly three or four days quicker it will be at the expense of the strength and vitality of the future plant. A plant rooted in an even temperature as low as is consistent with keeping the same healthy and free from disease will have a much better constitution and give much better results. In such a temperature as described above the cuttings usually take from 30 to 36 days to root; some varieties root more quickly than others. Much of this of course depends upon the general conditions of treatment, and as I am often asked for details on this point I will give our method as practiced here. All our propagating houses are built on the north side of the larger houses and joined thereto about 6 feet 3 or 4 inches wide inside measure; in this we construct a bench about 4 feet wide and 4 inches deep, placing a 10-inch wide board on edge next to the north side. This projects 6 inches above the top of the sand, which prevents the heat rising at this point from striking direct on the cuttings.

At this place a space between the bench and the siding is left, 6 inches wide, to allow the free circulation of the heat from the pipes, which are placed under the bench. The sides next the walk are left open, that is to say the space all below the bottom of the bench is not confined in any way. In putting the boards for the bottom of the bench we use 6-inch boards placed at about half an inch apart, to allow ample drainage. These cracks are covered with a little moss or excelsior, just enough to prevent the crocking placed on it falling through. The coarser crocking is used on the bottom, with a coat of finer on top, making the whole about two inches thick. These should be levelled over evenly and beaten down firmly—if no crocking is available cinders can be used in the same way. After this is made level and firm select good coarse grit sand and fill the bench level full, heating it quite firm. Give the whole a good watering and it is ready for the cuttings. The mode of making these has been so often described that it's hardly necessary to describe it in detail here, but bear in mind that the better the wood made into cuttings so much better will the plants be. In putting the cuttings into the sand have a straight edged lath or piece of thin board planed smooth, about 2 $\frac{1}{2}$ inches wide, then with an old knife draw a line across the sand about 1 or 1 $\frac{1}{4}$ inches deep. In this place the cuttings, pressing them firmly down to the bottom of the cut. When the row is full press the sand firmly against them and with a fine rose watering pot give them a good watering; this will settle the sand level. Repeat this as fast as the cuttings are put in, and do not make too many at once, so that the cut at the base becomes dry before putting it in the sand, as much of the success depends on this. For after treatment should it be necessary to keep strong fire heat on the house to maintain the desired temperature the cuttings should be syringed overhead at least once each day, and if the sand shows the least indication of becoming dry give another good watering, but as these conditions vary so much it's very hard to give a correct method of treatment. A little careful watching combined with a liberal amount of common sense will soon tell the operator what is required. If reasonable care is bestowed upon them the easier rooting kinds such as Bride, etc., will have started out roots from $\frac{1}{2}$ to 1 inch long in about thirty-two or thirty-three days. As soon as they have done so they should be carefully lifted out of the sand and potted into 2-inch clean pots. Before starting to do this the soil should be brought into a warm shed or similar place to get as nearly as possible to the same temperature as the sand in which the cuttings have been growing.

The best soil to put young roses into is a fresh loam in which no plant of the same nature has been growing. For the first potting it should have but very little manure in it, and if of a heavy nature a liberal proportion of sand should be added, the whole turned over several times to thoroughly incorporate the whole (this is much better done in the fall before frost sets in). Screen it through a half-inch mesh screen or sieve and it is all ready for use. In potting the plants be very careful not to break the young tender roots. Fill the pots about level full of soil and press fairly firm with the thumbs. When potted place them on a bench with a few ashes or sand under them; water only lightly for a few days with a fine rose watering pot, but should the weather be warm and bright sun-

New Pedigree
Rose

D. S. Summarn

BELLE SIEBRECHT. (H. T.)
CROSS BETWEEN LA FRANCE AND LADY MARY FITZWILLIAM.

DECORATIONS FOR THE ANNUAL DINNER OF THE NEW YORK FLORISTS' CLUB.

shine with it give them a good syringing overhead at least twice each day and shade them from direct sunshine for a few hours during the middle of the day for about a week. After that they will stand all the light and air reasonable to give them. Such plants make good sturdy vigorous stock if kept growing steadily. They should not be allowed to become badly pot-bound at any time, but should be shifted on into larger pots as required. The soil for later potting may be a little richer than that for first potting. The young plants should be grown in a temperature as nearly as can be to that of the propagating house.

I forgot to mention that the floor of the propagating house should be kept moist all the time to produce a nice moist atmosphere in the house. As the cuttings have to depend upon the stored-up vitality in the leaves and wood for the first three weeks at least that they are in the sand a dry atmosphere will cause them to shrivel instead of making roots.

Summit, N. J. JOHN N. MAY.

Rose Belle Siebrecht.

With the present issue of the FLORIST we present a colored plate of this superb new rose. The picture shows its features of form and color truthfully, and therefore much better than we can describe it in words. The petals are of heavy texture, the flowers seem to be excellent keepers, the foliage is thick and leathery, and the plants appear singularly free from deformed or discolored blooms. As seen at the rose houses of its introducers,

Messrs. Siebrecht & Wadley, who have had it under cultivation for over two years, it gives evidence of being a strong grower and constant and abundant bloomer. Wherever it has been shown it has received high honors, including the gold medal of the National Rose Society of England.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

Several growers not many miles from here have deemed it advisable to caution me against following out the plan which I have advocated in this column concerning benching cuttings, as it is not the way they have always grown them, therefore it must be wrong. Now if this matter had only been mentioned by one man I would have thought nothing of it, but when five or six go for me I thought it advisable to prepare some kind of defense, so I went to see my friends with a few

questions in mind. They denounce the bench system simply because they have lost a great many nice young plants by damping off, and the grower who lost the most was a fair sample of all the others. Their great mistake was in using soil four and five inches deep, which had previously been used for several months with blooming plants, and rather than remove half of the soil, properly sitting and manuring the balance, they just smoothed off the surface and planted the young stock, expecting them to thrive; and so it goes; we are always in a hurry about this time of the year and the cuttings are thrown in any how, any way to get through with the work. Another grower used flats that had no holes in the bottom, and so he condemns flats and has gone back to pots as the only proper way to handle young stock. Pots are all right if you will repot as soon as needed, but there is the trouble; the plants are allowed to become pot-bound, then follows a check from which the plant seldom it ever recovers. I am obliged at times for want of proper bench room to use flats, and then we are very careful to see that they are not over two inches deep and the bottom full of holes, or made of slats two inches wide; this secures good drainage and the plants thrive.

My McGowan for next season's use are now benched and have started to make a strong growth. Is this the case with you who are growing this sort? If not you want to hustle and get them started. I received a communication to-day from a party who wishes plants that will bloom in April and May. Now, I have

just such stock, but the most of it has been blooming all winter in my houses, where they will continue to bloom until August, and although they do not bring very high prices it must be remembered that good carnations at that time are called for and every penny received during the summer months is so much gained. Never throw plants out of your benches so long as they are bringing a fair price, and I consider 50 cents per hundred during June and July as a fair price.

Last fall I saved all the small plants in the lot after filling my houses and planted them closely in a cold frame, where they are now in fine shape, and will do to plant out on the first of April, this of course in beds highly manured. This practice I have seen followed to the great advantage of the grower, for if properly treated and cared for the plants will produce a great quantity of hue flowers.

CHARLES H. ALLEN.

Long Island Carnation Growers.

The annual "rooted cutting" campaign of the carnation men is about to be inaugurated, and the Long Island growers are deeply in it. C. W. Ward has some 60,000 cuttings in the benches, of which a number are novelties now offered for the first time. Meteor as seen growing here is a grand addition to the crimson flowered section; it is of fine habit and the stems and flowers are all that could be desired. Bridesmaid also shows up well; the color is deeper than that of Wm. Scott, and the petals thicker and more waxy than in that favorite variety. Scott itself is superb and is loaded with bloom. Storm King is grand every way and bids fair to take a high place among the whites. Michigan, in some respects the loveliest of all white carnations, is of little value, apparently from lack of constitution. Uncle John is uncertain, and with such a variety as Storm King available, there is really not much room for it. Albertini is here, as everywhere, a noble grower, but irregular in color and coarse in texture. The Stuart is big and strong but the petals are badly discolored, and it is unquestionably doomed.

Chas. H. Allen is having lots of fun with Scott and McGowan. These are his two leaders and the dollars are sticking right out all over the benches. Here also the propagating house is paved with cuttings rooting and rooted. The greatest show perhaps in this vicinity is a house of Daybreaks at Wm. Bell's, in Bayside. It is doubtful if its equal has ever been seen, and it is well worth a long trip to see. Scott, McGowan and Daybreak are apparently the money makers par excellence up to date, for the New York market.

Dailledouze Bros. are "in it" up to the ears, and are ever ready to dilate upon the good or the bad characteristics displayed by the different varieties. They will inform the interested inquirer that they had that pretty Helen Keller will not stand abuse and that to be successful it must be taken in early, so as to make roots, hence is not desirable as a "second crop" carnation, i. e., to follow a crop of chrysanthemums; that Annie Pixley, although of a lovely color, is too small a flower for the present demands; that Emily Pierson is a favorite late crop variety with them; that Puritan is "no good," and Edna Craig has "gone all to pieces;" that Jacqueminot is altogether too slow to come on, and that Daybreak and Scott are great "trotters." They have adopted an improved form of Mr. Lonsdale's "unobtrusive and effective" device for supporting carnations and like

it exceedingly well. A house full of longiflorum lilies, Bermuda grown from Dutch stock, looks very promising and shows but little trace of the prevalent disease. Sweet peas fill another house, and are already showing bud. Emily Henderson, Butterfly, Queen of England and Blanche Ferry are the varieties grown.

Suydam & Co., the latest addition to the Flatbush carnation community are, as is frequently the case under similar circumstances, well in the lead, and if there is not good money in the way carnations are being done here, it would be useless to try further. Portia, Tidal Wave, Daybreak, McGowan, Scott and Mangold are all at their best; splendid plants, and a perfect forest of buds. Adelaide Kresken, which gave satisfactory results on first crop, is now on second crop all burst, and unfit to market.

Louis Dupuy, at Whitestone, is one of the most thrifty growers in this section, and a valuable lesson might be learned from him by some of our growers. Not a foot of idle space is to be found in his establishment from January to December. Houses now stocked with Hinze's White carnations will be cleared two weeks hence, and filled with potted plants for Easter sales, and the pots of sweet peas which will in turn occupy the vacant benches on the day after Easter Sunday, are already well under way. Ericas are looking finely, and a lot of *Acacia armata*, small plants imported last May, are now magnificent specimens; they are thickly set with buds, and good for \$3 plants at Easter. Mr. Dupuy has added a Hitchings iron frame house to his range, and judging from the general appearance of his place, he will be able to add a couple more the coming season, without depleting his bank account.

THE RETAIL TRADE.

Decorations at Washington.

The President and Mrs. Cleveland entertained the Diplomatic Corps January 24 at the largest dinner ever spread at the White House. To represent each embassy and legation required a spread of 66 covers, and as this was beyond the accommodations afforded by the state dining room the table was laid in the main corridor. The table was 60 feet long by 7 feet wide, there were 30 covers at each side and 3 at each end. In the center of the table was a low circular plat two and one-half feet in diameter of maidenhair fern thickly studded with scarlet carnations. Not far from this on either side was a gold vase filled with the same flower, further on was a square plat of maidenhair fern, having for a center a large specimen of variegated pine apple, surrounded by six smaller specimens of the same plant. Beyond this were two silver dishes filled with fruit; further on another circular plat of maidenhair and scarlet carnations, next to this was another gold vase of scarlet carnations and maidenhair; then came another square of maidenhair fern with a center of *Cyanophyllum magnificum*, surrounded by eight small plants of variegated pine apple, these squares were 5 feet long. Next to this was a silver dish filled with fruit, then another circular plat of scarlet carnations. At equal distances were placed silver candlesticks, each supporting five red tapers burning under red shades. Three thousand scarlet carnations were used on the table.

The chandeliers were draped with garlands of smilax studded with scarlet carnations. Garlands of the same were draped from the chandeliers to the wall. On one side of the room were fine specimen rubbers, while the niches on the other side were filled with palms, pandanus and ferns, with orange trees in fruit. The transom over the stained glass partition and the mirrors were draped with garlands of smilax. The East Room was decorated as usual. The large east window and the north and south windows were banked with foliage plants. Fine specimens of variegated althea were used in this decoration, probably the first time in this city. Mr. G. H. Brown is quite pleased with the fine effect of this plant, and considers it quite an addition to his list of decorative plants.

Mr. C. F. Hale had a very rich decoration last Saturday night at the Russian Legation, the occasion being a dinner given by the Russian minister; covers were laid for twenty-four. The centerpiece was a handsome imported cut glass oval two feet long, which sets in a solid silver tray handsomely carved. This was filled with long stemmed Beauties and Farlyense. On each of the four corners was a small oval of cut glass filled same as center. Fronds of Farlyense were strewn over the cloth. The mantel was banked with white azaleas in full flower, with a cut glass vase filled with Beauties for a center. The windows were banked with azaleas in flower. Valley was used in the finger bowls. The minister has selected American Beauties for all his decorations. He expects to give two dinners each week the remainder of the season.

REYNOLDS.

A Wedding Decoration.

At the chrysanthemum show held last fall by Aug. S. Swanson, St. Paul, Minn., several pretty decorations were shown, among them the wedding arrangement which forms the subject of our illustration. The picture does not quite cover the whole of it; on the left side, a little in the foreground, was a tall mirror trimmed with white chrysanthemums. On the right side, by the tall sealorthia, was a clump of Kioto chrysanthemums, grown as standards, with a vase of The Queen just in front of them. The canopy was wholly of asparagus supported by smilax. A wreath of white chrysanthemums four feet in diameter was suspended below the canopy, being tied to it with pink ribbons, which were carried to the cornice at the back, each end being fastened to a large bunch of pink chrysanthemums. To the left was a magnificent plant of *Areca lutescens* fully 15 feet high (the large palm at right was nearly 10 feet taller). The table bore a lamp with rose colored shade.

Noticing that we have been endeavoring to give prices of decorations as a guide to estimates, Mr. Swanson kindly gives approximate figures at which such a decoration could be produced at that time of year (November): Use of plants \$25, 20 strings asparagus \$10, three dozen specimen chrysanthemums \$9, four dozen smaller chrysanthemums \$8, 100 chrysanthemums in wreath \$6, ribbon \$3.50, hire of table, lamp and vases \$10. These latter were all very beautiful, the large vase on right being valued at \$100. This made a total of \$71.50, and Mr. Swanson observes that it certainly could not be arranged for less than \$100, while at the rate of profit usually allowed \$125 to \$140 would be considered a fair price considering the excellence of the material.

A WEDDING DECORATION.

Advertising for the Retailer.

Mr. J. C. Rennison, Sioux City, Ia., sends us samples of a blotter he is distributing among possible retail buyers in his city. It is very neatly printed in two colors and gives "special prices on cut flowers for February and March, 1895." As it may be of interest to retailers in other cities of similar size, we give the price-list herewith.

Roses, select, all colors, per dozen	\$1.50
Carnations, standard varieties, all colors per doz	.50
Carnations, fancy and new varieties, per doz	.75
Violets, double English, per bunch of 25	.50
Lily of the Valley, per doz	1.25
Roman Hyacinths, white, per doz	1.00
Daffodils, yellow, after Feb. 1, per doz	1.25
Freesia, very fragrant, per doz	1.00
Smilax, 25 cents per yard. Per string	.40
Ferns, Maidenhair or coarse ferus, per doz	.25

"Special attention to mail and telegraph orders" appears as a catch line in the upper left hand corner. Then follows a bold line: "Rennison's roses are celebrated for their size, perfume and lasting qualities." Another display line reads "Artistic floral emblems on short notice." In the lower right hand corner is an engraving of an attractive young lady with some roses in her hand and opposite is the following jingle:

ROSES.

For the lack of a thought
The Rose was not bought;
For the lack of a Rose
The maid was not caught;
But another young man
To Rennison's sent,
And ordered the Roses
That won her consent.

"Place a standing order for a \$1.00, \$2.00 or \$3.00 box of cut flowers, delivered once a week. Extra value given." This is a bold line across the bottom.

When to Sow Seeds.

A subscriber wants to know from a "brother florist" when several different kinds of seeds should be sown. Nearly all of these seeds have been mentioned and time of sowing given in your columns several times. Without copying his list I will give the time which in my

opinion is right for each kind, beginning at the first of the season.

Cyclamen persicum, from October to January.

Centaurea candidissima, October, not later.

Centaurea gymnocarpa, early in January.

Verbena, Pyrethrum aureum, lobelia, smilax, daisies, February 1.

Asters, from March 1 to end of April for succession.

Phlox and balsam, middle of March.

Primula and cineraria, early in May for winter flowering, early in September for spring blooming.

Pansies should be sown in August for selling in the spring, but can be sown in February and grown along in flats in the greenhouse, and although later and smaller plants than those wintered over will be quite satisfactory for planting out.

WM. SCOTT.

A Few Good Geraniums.

A subscriber from Junction City, Kas., wants the names of a dozen or fifteen good geraniums for the retail trade in a small town. The semi-double varieties are very much in favor now, and justly so. They are as free flowering, the flower lasts longer, and is not destroyed by a rain storm as much as the single ones. Some of the geraniums that make the most satisfactory flower beds are not the varieties that are best adapted for selling as pot plants in early spring. Here is a list of twelve that will give all the variety of color and have a good constitution, which is a great point in a bedding geraniums:

F. L. Raspail, semi-double bright scarlet, good for all purposes.

La Fortune, semi-double, pure white, a grand variety.

Emile de Girardin, semi-double, pink, an early and continuous bloomer.

Ernest Lauth, semi-double, crimson magenta, a great bedder.

Prokop Daubeck, semi-double, light scarlet, a robust grower and of the best for vases.

Wilhelm Plitzer, semi-double, light salmon, very fine.

Mrs. E. G. Hill, Bruant type, a magnificent salmon.

Comtess d'Arlincourt, semi-double, carmine rose.

W. P. Simmons, semi-double, dark red, orange shading, one of the most valuable of all.

Louis Pages, semi-double, orange scarlet.

Tour Eiffel, semi-double, bright scarlet. Athlete, single, immense trusses of large round flowers of a vivid scarlet.

There is one old scarlet geranium that must not be forgotten, viz., the single variety Genl. Grant. Although it has been propagated for 30 years it still holds its vigor, and for large beds or where masses of color are wanted it is still unsurpassed for effect. The color of the leaf is a pure green without any of those dark shades which nearly all the zonals have, and as scarlet is the complement of green, hence the brilliant effect of a bed of old Genl. Grant. For vases or for single plants it is not desirable. I cannot recommend any particular firm; get catalogues of those who make a specialty of that class of plants.

WM. SCOTT.

Correction.

In my miscellaneous seasonable hints of January 26 I am made to say that Vick's branching aster is several weeks "earlier" than Truffauts, etc. I meant to say later, which it is by several weeks.

WM. SCOTT.

Propagating Japan Snowball.

In propagating the Japan snowball is the old or new wood the best? We have poor success with it.

M.

Viburnum plicatum (Japan snowball) is not easily increased by hard wood cuttings, but is propagated without difficulty by cuttings of the young wood under glass in June from outdoor grown plants or during the winter from plants taken in and forced into growth. It is best to take the cuttings off before the wood becomes too hard. Late struck cuttings do not winter well unless kept at a temperature above freezing. Most nurserymen who have a fair stock plant out a row or two for stock plants and layer the branches. This gives good strong plants much sooner. If layered early in the spring they are well rooted by autumn. When possible it is best to leave them on the parent plants until spring, when they may be planted in the nursery rows in good soil and will make good salable plants the following year.

JACKSON DAWSON.

About the Kew Lectures.

Please allow another Kewite a word. How it may have been during Mr. MacPherson's time, more than thirty years ago, I cannot tell, but during mine ('76-'78), all the lectures, with no exceptions, were of a distinctly scientific character. Barring W. B. Hemsley, who lectured on geographical botany, none of the lecturers had ever practiced the art of gardening. The lectures during my time comprised the studies of botany divided into structural and morphological, economic, physiological, microscopic, cryptogamic and geographical. We had also, lectures on chemistry and acoustics—light and heat, as applied to horticulture, and meteorology. There were a few essays, read by the young men in the library on

practical subjects, which comprised all we had of that character. As stated, most of the young men were gardeners when they went there, and further, what attracted the majority was the lectures and opportunity for study of a scientific character.

T. D. HATFIELD.

Potting Palms.

As the days lengthen the various potting operations are brought to mind, and where decorative plants are made a feature the repotting of the palm stock is an item of some importance. Some species may be repotted at almost any period of the year, providing the plants are well rooted and healthy, but as a rule it is advisable to do little potting between November 1 and January 15, for during that time the root action of most palms is very slow, and with careless watering the soil is very likely to become sodden before the plants become established in it. The ordinary species of palms, such as are in general trade use, are not very fastidious in the matter of soil, though by this I do not wish to be understood that anything is good enough for the purpose, but rather that ordinarily good compost of such consistency as would be expected to grow good roses will answer for arecas, latanias, phoenix and rhapsis, but for kentias I prefer a somewhat lighter soil, and in order to grow on young stock rapidly the addition of from one-fourth to one-third in bulk of peat, and also a little sand will be found beneficial. Good drainage is needed in the pots, and in this particular it should be remembered that quantity is not the essential point, for one fragment of crock so placed that the drainage hole in the pot is kept clear is of more use than a handful that are jumbled in the pot in a promiscuous manner. The old drainage material at the base of the plant to be repotted should also be removed, at least as much as can be gotten out without breaking the roots, but when the plants in question are very much root-bound it is preferable to leave the old drainage in the ball rather than to spoil the best roots in the removal.

Do not give too large a shift at any time, for instance a plant in a 3-inch pot can go in a 4-inch, or from a 4 to a 6-inch, or 6 to an 8-inch pot. This practice is best for the plants, and will also avoid some of the difficulties that so often arise in fitting a certain plant into a certain jardiniere.

Palms in general should be potted firmly, and to accomplish this a potting stick or rammer is a portion of the necessary outfit for this operation when any larger sized pots than 4-inch are to be used, and it is also a good rule to follow that the base of the stem of the plant operated on, should be brought down to the surface of the soil, or just below, this being a good guide for the depth to which the plant should be potted.

Made-up plants of various species of palms have been more or less fashionable of late years, and at the spring potting period is a good time to arrange any such specimens as may be required. By this method very bushy plants are secured in a short time, and *Areca lutescens* in particular seems adapted to the plan, owing to its natural habit of branching from the base, and small plants of *Scaforthia elegans* and *Caryota urens* can also be made up satisfactorily, but *latanias* and *kentias* are not a striking success under such conditions.

A light shading is beneficial to the

palms at this season, and especially when repotted, the thin prepared muslin or tobacco cloth being an admirable material for the purpose, though not quite enough during the summer. *Kentias* especially are benefited by the shading at this early date, these being shade-loving plants, and will much sooner regain their color under such conditions. It is also advisable to keep the palm house a little closer after the plants are repotted, until they begin to root freely, and to syringe regularly and well. Any necessary sponging for the removal of insects had better be done before potting, as the plants are liable to become loosened in their pots by careless handling during the cleaning operation.

As to fertilizers in the soil for palms, it may be safest for one unfamiliar with the action of strong, concentrated manures to stick to the old material in the form of well rotted stable manure, this seldom doing any injury to these plants when used in reasonable quantity, the manure from a spent hotbed being generally in first rate condition for the purpose, while guano, soot, bone dust and various prepared fertilizers may all be used with proper care, and in rather small quantities.

W. H. TAPLIN.

New York.

The illustrations of the floral decorations at the annual dinner of the New York Florists' Club which we present in this issue, show in a striking manner the present tendencies in such work and also a good reason therefor. There were but two attempts at "made up work" on the whole table. On being asked the reason for this Mr. Warendorf replied: "Why, it would be a sin to cut up such flowers as those. We had to use them in vases just as they were. Those flowers were too good to put in baskets." There is no doubt that the improvement in quality of the roses and carnations grown for the florist trade and the attention given nowadays to producing finest stems and foliage as well as fine blossoms has had much to do with the disuse of baskets, bouquets, and other design work, which in former times furnished such a convenient means of using up inferior stock.

Mr. J. N. May's invitation to the New York Florist' Club to visit his place at Summit on Wednesday, January 30, met with an astonishing response, no less than ninety gentlemen participating. Special accommodations on train and conveyance from the station to the greenhouses had been generously provided and a nicely served luncheon put the visitors in the proper frame of mind for the full enjoyment and appreciation of the big floral treat which awaited them. Seldom has a new rose captured the growers so thoroughly and at once as this lucky Mrs. Pierpont Morgan appears to have done. That it has been found necessary to limit to two hundred and fifty the number of plants which will be sold to any one person is sufficient proof of this. After strolling through the well kept houses, which have never been in better condition than they are to-day, most of the visitors repaired to the bowling alley. The carnation enthusiasts finding it difficult to tear themselves away from the houses where Dean Hole, Mand Dean and several other beautiful novelties attested the high perfection which the divine flower has attained at Summit. Altogether it was not only a delightful but a profitable afternoon.

In a previous communication reference was made to Mr. Wm. Plumb as having

been in charge of the West View Floral Co. for the past two years. Mr. Plumb informs us that he severed his connection with that establishment last March, also that in expressing his preference for northern conditions and surroundings over those which he found in the south he did not mean to reflect on the warm hearted and kind friends whom he met down there and whom he will always hold in the highest esteem.

It is expected that the party from New York and Philadelphia going to the carnation convention at Boston will travel via the Fall River Line on boat leaving New York at 5 p. m. on Wednesday, February 20. All those desiring to accompany this party should so inform M. Eugene Dailedouze, Flatbush, who will see that good state room accommodations are provided for all who apply.

Boston.

While a fair amount of trade is going on and there is no great over supply of anything in the cut flower line coming in, yet it is unquestionably true that business is not what it should be if it is to compare favorably in the end with past seasons. The bustle and rush we have been accustomed to see in the large retail stores during January and February is not there, and the store people show it in their faces even if they do not always acknowledge it, while the growers are plainly disappointed at the absence of the old fashioned scramble for their goods which they have in the past depended upon to average up for the depressing times of the early fall. Any decided revival in trade would be quickly felt by the growers, as there is really but a limited supply of first-class stock coming in. Good roses and carnations of all colors are well cleaned up every day, but the call is not sufficient to tide the poor stock through with the good. Lily of the valley has been in rather short supply, but this may be attributed to the timidity of the growers rather than to any excessive demand. Tulips, if white, sell fairly well, but if red there is no show for them whatever. Violets are, if anything, too abundant and fancy prices are out of the question.

On Saturday, January 26, among the exhibits at Horticultural Hall was a noble specimen of *Angræcum sesquipedale* from the Harvard Botanic Garden, which was pronounced by experts to be the healthiest and best bloomed plant of this species they had ever seen. The lecture by Prof. Halsted on fungous diseases of ornamental plants which took place at the same time, and which we print in full in another column, will be found to contain a large amount of valuable information on this vital topic.

Warren Ewell is never so happy as when entertaining his friends. Warren's latching string was away out on the evening of January 24, and the cosy home in Dorchester resounded with merriment, laughter and song. A "tulip supper" he called it, and a large representation of the craft, with their ladies, were present and were entertained by Mr. and Mrs. Ewell with the most profuse hospitality. Mantels, mirrors and tables were resplendent with masses of brilliant tulips, freesias, narcissus and lily of the valley, and each guest was decorated with boutonniere or corsage bouquet of the same material. A rare good time it was and one long to be remembered.

It is announced that at the next meeting of the Gardeners' and Florists' Club, which will take place at Horticultural

MEMBERS OF THE NEW YORK FLORISTS' CLUB AT SIEBRECHT & WADLEY'S TO INSPECT THE NEW ROSE : BELLE SIEBRECHT.

Hall on Tuesday evening, February 5, Judge Hoitt will be the speaker. This is equivalent to saying that the meeting will be a large and enthusiastic one, for the Judge is popular and always entertaining, and is certain to have a good audience.

Philadelphia.

For the season of the year every one seems satisfied with the state of trade. All good stock moves lively at fair prices, while the extra choice is grabbed up quickly at the grower's price. All the large teas sell for \$8 to \$10, the extras bringing \$12 to \$15. Brunners and Laings sell for \$35 to \$50. The smaller varieties bring \$4 to \$5. Beauties and Belles command \$50 for the first choice, and from that down to \$1 per dozen, which is low. All the roses save Beauties can be bought much lower in quantity. Violets are plentiful such as they are, and sell for from 60 cents to \$1.50 per hundred. Carnations are about equal to the demand, and bring from \$1.50 to \$3, according to quality; \$4 is asked for a few extras. All kinds of bulbous stock is plentiful, hyacinths sell for \$1 to \$3, valley \$4, tulips \$4 to \$5. Freesia is in full supply.

The stores are beginning to brighten up considerably with plants in bloom, azaleas, Harrisii lilies, cyclamens and cinerarias and genistas. W. K. Harris has some fine azaleas and genistas. Mr. Harris makes a specialty of these two plants and always has a fine stock on hand. Jacob Becker also has a good stock of azaleas. Mr. Harris has a good stock of tulips, cut and in boxes; he plants them in flats, 50 bulbs of a kind to a flat. When in bud about ready to cut they are delivered and keep in this condition for quite a while, making a nice show. The new valley is now becoming quite plentiful but \$4 is still the price for good stock.

Trumpet major and double Von Sion are to be seen in small quantities and sell for \$6.

The orchids are creeping into popularity. Cattleyas are now kept in stock by all the prominent stores; there are not enough raised about here to supply the demand, notwithstanding that Messrs. Lonsdale, Burton and Evans grow quite a quantity of these aristocrats. The best cattleyas bring \$50, the common cypripediums sell for \$15, and Lawrenceanum \$25.

Mr. Lonsdale has a fine seedling carnation, a cross between Daybreak and Nancy Hanks; it is a very large flower on a strong stout stem and in color is deep pink. Myers & Santman have also a new pink like Della Fox, but a somewhat larger flower.

The shipping trade has been very good the past few days and S. S. Pennock says he has to buy largely to supply the demand. Z. De Forest Ely also reports an increased business out of town.

H. H. Bayersdorfer & Co. report a very good business for this season and have everybody hustling to get orders out on time.

Hot house tomatoes are becoming scarcer and good stock finds ready sale at 50 cents per pound. Mushrooms are more plentiful and bring from 40 to 50 cents per pound in regular channels. Some parties, however, having a few to sell take them around to hotels and restaurants and offer them for almost anything, as low as 25 cents per pound. Such business methods as these are demoralizing and very annoying to men who are trying to handle mushrooms with a little profit all around. If mushrooms will not net the grower at least 40 cents per pound then he had better try his hand at something else.

Real estate in the neighborhood of 50th and Market is now enjoying a boom. This part of the city has been dormant for a long time, but the

advent of the trolley cars has wrought a wonderful change and prices are climbing at a great rate. Jacob Becker of 52nd and Market, who some two years ago acquired title to some three acres of ground partly for investment and also to extend his place, has been offered \$20,000 for his bargain. Robert Craig of 49th and Market has been asked to put a price on his place, greenhouses and all, but is not likely to move his 35 houses for some time to come.

H. H. Battles' wagon loaded with plants was struck by a trolley car one day last week. There was not much damage done to wagon or driver, but there was a little boom in pots, in consequence as nearly all were broken.

Robert Craig has a very fine batch of cyclamen seedlings, some 10,000 of them, coming on; they are in fine healthy condition and he says will be in flower some three weeks earlier next season than he had them this. They are now growing in boxes containing about 100 plants each and most all of them have their second leaf. The seed was sown the early part of September.

John Walker, Mr. Craig's foreman, who has been ill for so long, is now on the mend and is able to attend to light duties about the place.

Jacob Eisele, foreman at H. A. Dreer's nursery, has been abroad the past month taking a rest; he is expected back about the middle of February. K.

Buffalo.

Since New Years the weather has been too severe for general business or for the production of flowers either. Fathoms of snow, blizzards at 60 miles an hour and zero temperature has been the bill of fare for many a day. The supply of flowers of all kinds has shortened up considerably under these conditions. Roses that are coming in are of fine quality, but they might be a little more plentiful

Carnations are not in over supply. Violets just about enough and none to spare, Daffodils and tulips are now offered in fine quality, but the demand is light for them as yet. Business must be called rather dull, except in spots. You see the notice of half a dozen weddings in one day where decorations were used, but the whole lot does not amount to one good old fashioned sort of three years ago. A very scarce article for some weeks past has been maidenhair fern. There seems a good opening for the growing of this universal favorite.

Mr. Harry Millatt, Mr. Grove P. Rawson's designer, favored us with a call this week.

Mr. David Scott of Fredonia, N. Y., has rented the establishment of Mr. Wolber of that village, a neat compact place of five good houses, and has called to his help his son A. J. Scott, who has been for the past 8 years with his uncle "W. S."

After the rush of the holidays was over we received a polite invitation to play the Rochester men a game of bowls, ten or twelve on a side, and we are to have the advantage of Peter Crowe and Wm. Mathews of Utica on our side. Mr. E. I. Mepsted has charge of organizing the team and all willing or anxious to go will please report to him at once. The young element is not so desirable for this sort of a trip as the "old uns." We want the stolid Palmer, graceful Cowell, methodical Long, "elegant" Christenson, sure shot Mepsted, sedate Keitch, neat-gaited Belsey, modest Milley and spare player Scott, and others of like ilk. These qualities add tone to a team even if they don't run up gigantic scores. W. S.

Chicago.

The continuously severe cold weather of the past week has not helped the supply of stock. The scarcity is unabated and promises fair to last until the weather moderates. Of course all the shortcomings of stock, quantity, quality, color and what not are attributed to the weather. Insufficient heating apparatus and injudicious saving on coal bills are generally not taken much into account. There is no doubt, however, that with the advent of warmer weather and bright skies the daily output will be doubled. Many of the rose houses are just coming into full crop and promise a heavy cut in the near future. At present, however, the supply of roses, more particular pink and white, is insufficient to meet the demand. The quality is nothing to boast of either. Beauties, take them as a lot, are poor. There are a few really good flowers that might be picked out of the great bulk of crippled stuff, but it is only a drop in the bucket. Bridesmaid is the only pink that averages good in quality. Poehlman Bros., Chas. Naslund, Chas. Hartwig and one or two others are cutting some fine stock of this variety. For every 100 roses, however, there are a dozen customers who stand ready to fight for them. The few Testouts that are sent in are also good, but the amount is so small that it cuts no figure. Mermets and La France are poor. Brides are of average fair quality; the demand for them is far in excess of supply and first quality has advanced to \$1. Perles are (as they have been pretty much all the season) mediocre. Meteor is less called for at present than the lighter shades and is about the only variety in sufficient supply.

Violets are fairly plenty. The demand is still fluctuating, and is generally the lightest in extreme cold weather. This is doubtless owing to the fact that on pleas-

ant days many bunches of these flowers are bought for street wear and the cold weather keeps the would-be buyer indoors.

Carnations are of good quality and the supply in most varieties is about equal to demand, first quality whites being the only brand that is short.

Bulbous stock is still short in supply. Really good valley, of which there is but little, brings 5 to 6, the best price for years at this date. Romans still hold at 3 to 4, and there are none too many. Daffs (Von Sion) are coming in more freely and sell quite readily at 5 to 6. Tulips have not improved much; a few La Reine and Yellow Prince are fair but most of them are too short stemmed. Dutch hyacinths have made their appearance but move slowly.

A few lots of fine lilac are coming in. It brings \$2 to \$3 a dozen.

The commission men are not resting on a bed of roses these days. Country dealers know the difference between a Bridesmaid and a Mermet just as well as their city brethren, and when these latter are substituted for the former there is a succession of kicks that makes the wholesale dealers weary. But as our friend Kennicott remarks, "There is nothing like being used to it. We have to suffer for the sins of omission and commission of others, and if the growers strike us on the right cheek we meekly turn the left to the dealer, at his pleasure." Still they prosper.

Worcester, Mass.

Although nothing of unusual interest has occurred the past week, trade has been brisk in all departments. There has been no glut of anything worthy of mention and no particular shortage; ideal conditions we like to see and fair prices.

Not much is heard from the department store that commenced selling cut flowers and plants about a month ago and created some excitement among the florists. We shall probably hear more when stuff is more plentiful and prices lower; as yet the trade has not been injured to any extent.

A few Scotts are brought in that are immense; if the stems were a little stronger they would be nearly perfect. They are grown on a shallow bench and were planted from 2-inch pots in the house about the middle of June and are now strong healthy plants, without a suspicion of rust or disease of any kind. This variety will undoubtedly supersede Grace Wilder, heretofore the best of its color in this vicinity, but which has proved very unsatisfactory this season.

A small bench of Albertini treated the same way has not given such good results, but have not had a fair trial, through what flowers do come are splendid.

Tulips and Dutch Romans are in. A. H. L.

Cincinnati.

The Florists' Society held their annual meeting January 26 with 26 members present. The board of directors elected for the ensuing year were John Fries, C. C. Murphy, R. Murphy, E. Gillett and B. George.

Tulips of very fine quality are plentiful in the florists' windows with only a limited demand for them. Carnations are in full supply and do not move very rapidly. They range from \$1 to \$1.50, with fancies such as Daybreak and Wm. Scott at \$2. Portia is the only scarlet seen in any quantity. Brides, Mermets, La

France and Bridesmaid sell at \$4 to \$5 per hundred, and there has been an increase in the demand for light colored roses recently, owing perhaps to extra funeral work. Meteors, however, still hold their own and sell at 7 to 10. Perles, Niphotos and other small roses sell at \$2 to \$3. Bulb stuff moves very slowly as a rule.

Violets hold their popularity and range from \$1 to \$2. Smilax seems to be going a little better than it did and is a little scarce. Complaints of dull business are general, both shipping and local trade suffering alike.

R. Witterstaetter showed some very fine seedling carnations at our last meeting. P.

New Notes.

NORTH ANDOVER, MASS.—Walter Angus has recently started into the florist business here.

KANSAS CITY, KAS.—Mrs. Charlotte D. Mann has sold her florist business here to Mrs. L. C. Dana.

NEW BEDFORD, MASS.—Robt. Taber, the treasurer of the Gardeners' and Florists' Club of New Bedford, died on Jan. 17, at the age of 64 years.

LOUISVILLE, KY.—The Hatcher Floral Co. succeeds A. Lauer at 1218 E. Broadway, where they will conduct a general florist and nursery business.

RUSH, N. Y.—Miss May Martin, who has been growing outdoor flowers for the Rochester market, has now built houses for raising carnations and smilax.

KINGSTON, R. I.—The main building of the R. I. Agricultural College which cost to build \$32,000 was destroyed by fire on the forenoon of January 27. There was no insurance.

NEW ORLEANS, LA.—The New Orleans Hort. Society will hold a spring show in April and a chrysanthemum show in November. The secretary of the society is Mr. Paul Abcle, Joseph and Laurel streets.

LENOX, MASS.—The first annual ball of the Lenox Horticultural Society took place at Sedgwick Hall on the evening of January 29. When the Lenox contingent undertakes anything it goes. This was superlatively true of the ball which was a pronounced success. There were quite a number of invited guests present.

THOMPSONVILLE, CONN.—The estate of the late Robt. McCrone has been settled, and will pay about 8 cents on the dollar to the creditors. At the time of the big blizzard a few years ago Mr. McCrone's greenhouses were practically ruined, and he was never able to recover from the financial strait in which he was thus placed.

SITUATIONS, WANTS, FOR SALE.

SITUATION WANTED—By a good gardener and florist; married; German; 15 years' experience. Best of references. K. D., care Am. Florist.

SITUATION WANTED—By florist, age 24; 8 years' experience in all branches. Eastern States preferred. Address PERLE, care American Florist.

SITUATION WANTED—By young man of some experience in greenhouses. Northwest preferred. References. NELS PETERSON, 100 1st Ave. S., Minneapolis, Minn.

SITUATION WANTED—By a young man, age 19, as assistant in commercial place; has had 5 years' experience. Can furnish best of references. Address JOHN CLARK, Cullu, O.

NEW ROSE MRS. PIERPONT MORGAN.

Special Notice.

On account of the unprecedented demand for this magnificent Rose I cannot accept any more orders for more than **TWO HUNDRED AND FIFTY (250)** plants from any one person.

THE PRICES ARE FOR	12 PLANTS.	50 PLANTS.	100 PLANTS.	250 PLANTS.
2-inch,	\$7.50	\$20.00	\$35.00	\$80.00
2½-inch,	8.25	22.50	40.00	92.00
3-inch,	9.00	25.00	45.00	105.00

These prices are net for cash only, and cancels all discounts whatever for any number. Orders will be filled strictly in rotation as long as the stock lasts. Speak at once if you want any, as this adv. will not appear again.

February 1, 1895.

JOHN N. MAY, Summit, New Jersey.

NEW YELLOW GARNATION

Dean Hole.

The most brilliant color of any in this class, and a fine bold flower, with fine stiff stem, a very strong, sturdy grower. Flowers of this variety have sold all through this season in New York at \$8.00 per 100.

Strong transplanted, well-rooted Cuttings, \$10.00 per 100; \$75.00 per 1000. Ready March 1st.

JOHN N. MAY.

NEW CHRYSANTHEMUMS FOR 1895.

DEAN HOLE—Very large incurved massive flower with broad petals of exquisite form; white with beautiful soft shade of pink on outer side, with extra good stem and foliage. Certificate American Chrysanthemum Society in Philadelphia.

NEMESIS—Very early, almost identical in color to Daybreak carnation and an ideal flower; dwarf, sturdy grower.

OLYMPUS—Very bold, round flower, 7½ inches through by 7 inches deep; white with clear pink on outside of petals.

SUNRISE—By far the best very early red; very fine color and form; average 7 to 8 inches through with fine stem and handsome foliage.

TRILBY—Very clear white and superior to Niveus in every way. Very late and a good keeper.

ZULINDA—Very late silvery pink, of fine build, with good stem and foliage.

SUNRISE, \$3 50 per dozen; \$25.00 per 100.

DEAN HOLE, NEMESIS, OLYMPUS, TRILBY, ZULINDA, \$6 00 per dozen; \$35.00 per 100.

JOHN N. MAY.

SITUATION WANTED—By experienced rose grower, foreman and reliable propagator, as foreman; competent to take full charge. East or South preferred; references. X Y Z, care Am. Florist.

SITUATION WANTED—By a single man, age 28, strictly sober, four years' experience growing roses, carnations, general bedding and vegetable plants, also design work, with some good florist; wages low. E. CLUM, Dover, N. J.

SITUATION WANTED—As foreman in commercial place; thoroughly understands the business in all its branches; roses, carnations and the forcing of all kinds of bulbs and plants. Address F. MCKENZIE, 53 Lenox St., Cleveland, O.

SITUATION WANTED—By practical gardener and florist; thoroughly understands the growing of flowers, fruit and vegetables under glass; single, excellent references; private place preferred. Address A. G., 359 Cumberland St., Brooklyn, N. Y.

SITUATION WANTED—By April 1st by a rose grower to take full charge of a medium sized plant where roses are made a specialty; understands his business, private or commercial. For full particulars address "WARNER," box 741, Nyack, N. Y.

SITUATION WANTED—By thoroughly experienced propagator and rose grower; thoroughly familiar growing all popular cut flowers and plants; references from leading rose growers; single, 28 years; open Feb. 15. Address GARDNER, Germantown, Pa.

SITUATION WANTED—By a first-class florist and landscape gardener, Swiss in a private place with greenhouse March first; 4 years' experience in Europe and 3 years in large private places in this country; best of references. Address F. BURKHART, 138 Noole Ave., Lake View, Chicago.

SITUATION WANTED—By orchid grower, commercial or private; 12 years' experience in several of the most important nurseries in Holland, France and Belgium; also very successful grower of other exotic plants; Dutch nationality. Address ROSLIN CONSERVATORIES, So Framingham, Mass.

SITUATION WANTED—German, 33 years old, married, who has been foreman in a large commercial place in this country for the last eight years, wants situation as such, after the 12th of February. Have had seven years' European and 12 years' American experience. CHAS. JOHNSON care Henry Plimmer, 804 Communipaw Ave., Jersey City, N. J.

SITUATION WANTED—By practical plantsman, fully posted on the general requisites of commercial places, including cut flowers, roses, carnations, etc.; general propagation, items of the nurseries, executive ability in the general management of inside, outside; best recommendations. For more particulars address PLANTSMAN, care American Florist.

WANTED—A young well recommended florist for retail store. H. F. HALLE, 548 W. Madison St., Chicago.

WANTED—To buy small florist business of about 5 to 6 thousand feet of glass. Address INDIANA, care American Florist.

WANTED—At once, catalogues and price lists of greenhouse material of all kinds THE THATCHER FLORAL CO., Louisville, Ky.

WANTED—A good man for palms, ferns and general greenhouse stock, single; must be well recommended. H. F. HALLE, 548 W. Madison St., Chicago.

WANTED—Good rose and cut flower grower, one who understands the business thoroughly; must be sober, energetic and reliable. CRAWB & HUNTER, Grand Rapids, Mich.

WANTED—A man competent to act as general foreman of a large ornamental nursery; must be well informed in all the details, especially regarding novelties, their propagation and growth. Correspondence requested. Address NURSERY, care American Florist.

FOR SALE CHEAP—Rooted coleus cuttings, 6 var. including Golden Bedder, by mail postpaid, 75c per 100; Alternantheras, 4 var., 60c per 100. Also 1 Furman No. 8 steam boiler cheap. Cash with order. GROEMANN BROS., Saginaw, E.S., Mich.

FOR SALE—Cottage house 7 rooms, with first-class repair, acre of prime land, center of lively town, 10,000 inhabitants, four railroads, 28 miles from Boston; first-class opening for a florist of moderate means, no competition. Address MICHAEL RYAN, 22 Boylston St., Brockton, Mass.

FOR SALE—Nursery 200-500 feet good land, 4 small greenhouses, also lathhouses, many thousands standard roses, leading varieties also tulips, horse and wagon; long lease; nursery near the cemetery; electric cars pass the place; will sell for \$500 cash. Address H. REISS, 257 12th St., Oakland, Cal.

FOR SALE CHEAP—Greenhouse, fifteen acres land, lease to run about three years (and can be renewed), a nice stock of berries of all kinds; greenhouse extra well stocked. Fifteen hundred feet hotbed sash and all necessary implements. Inquire J. D. LITTLE, Agent for Mrs. E. Wilson, Springfield, O.

FOR SALE CHEAP—I will sell my Maple Heights and Marion Greenhouses (or plant), consisting of 2,000 square feet of glass; heated with steam and natural gas, stocked with the leading varieties of roses, carnations, geraniums, palms, smilax etc., etc., with four acres of ground under cultivation; a cottage on the place and about forty fruit trees of the standard varieties of cherries, pears, plums, etc.; we are on three railroads with a direct line to the best flower markets in the west; only one competitor and a town of 20,000 inhabitants. Will health the cause of wanting to sell. A great bargain to the right one. Address MRS. GEO. R. FRAVELL, 322 Washington St., Marion, Ind.

FOR SALE—"Melrose Greenhouses," at Melrose a place of 8 acres, 28th and Berry Sts., Harrisburg, Pa. close to Paxtang Park, visited by thousands daily in summer by motor which passes the "Melrose" every 7 minutes. In summer. Plant consists of 7 medium sized greenhouses filled with choice plants in good condition, heated by "Perfect" hot water boiler new. Soil especially suited to violet and carnation culture; violets and Daybreak carnation have an exceptionally fine color; soil a rather heavy loam, retains the moisture. Field plants were not watered over during last summer, lifted in perfect condition. Store in city well stocked with all floral supplies. A good city and out of town trade established. Seed trade also started one year ago; could be made very profitable if pushed; seed only handled by grocers and druggists here. Senior partner's time all taken with a business of 20 years growth, and must have his capital for it. A. B. Machlin will sell either store or greenhouses, or both, or will take partner with \$3,000 to \$4,000. An AI florist on place can be retained if negotiations are made in time. Possession June 1st preferably, but can arrange at any time. THE MELROSE SEED & FLORAL CO., W. E. & A. B. Machlin Props., 24 S. 3d St., Harrisburg, Pa.

FOR SALE.

A CHANCE IN A LIFE TIME. The leading business of a city of 32,000 inhabitants, doing fine business established ten years, 4 new and modern greenhouses built last September, location in the heart of the city, salesroom in one of the most prominent localities, situated in the entrance of one of the most prominent Hotels salesrooms one-half block from greenhouses. Greenhouses stocked, complete new and modern system of heating, expense not considered when constructing greenhouses. Store handsomely fitted with modern coolers, cases and massive mirror. Greenhouse constructed on the eastern plan, large double strength glass. Anyone meaning business for further particulars address CHARLES M. TREANOR, South Bend, Ind.

For Sale or Rent.

My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 48 lots or 236 feet front on Belmont Ave. by 700 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 10 to 200 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand, is one of the far east of the kind in Chicago. A good chance for some young man with some means, or for a sportsman, and as I wish to retire from business, it can be had reasonable and on easy terms. If rented, a long lease can be given.

AUGUST DRESEL,
Belmont and Western Aves., Chicago.

WHEN writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

Denver.

Trade is rather quiet, but looking up.

Mr. Ernest Thornton has taken charge of the houses of the Denver Floral Co. at Westminster, succeeding Mr. Peter Hurdart, who has retired from the company.

A tour of the various establishments shows active preparation for the spring trade. More attention seems to be paid to quality than quantity this season, which seems to be a move in the right direction.

Mr. E. A. Beach, who has been in charge of Mrs. R. Mauff's Harman houses, has taken a like position with the Park Floral Co. Mr. Al. Mauff will manage the Harman houses this year.

The Denver Florists' Society held its second annual smoker January 19 at their rooms in the Electric Building. A very enjoyable time was had and a pleasant evening was spent in speaking, singing and fighting over again the battles of the past year. Over thirty members attended and the occasion only lacked the familiar features of our absent president to make the enjoyment perfect.

Very Rev. Dean Hole lectures in this city January 28 and 29; the florists of this city will tender him an informal supper.

The Park Floral Co. have completed two new houses, each 11x100.

Smith & Son closed their store in the Mack Block January 1.

Some of your correspondents who are interested in "single pipe" steam heating should visit this city and inspect the system of the Denver Steam Heating Co. This company furnish steam to heat many of our business blocks. Their plant where the heat is generated is a mile from the center of the city. The steam is generated by a large battery of boilers and flows through a 14-inch main to the farthest point of the system from the boilers, being led to side streets by smaller branch mains. In piping a building a single main is led into the building, raising continually from the main to the farthest point of the lead and all radiators are attached to this one lead. No return is provided for condensed steam; the usual air cocks are attached to the radiators; but the water must find its way back to the boilers by gravity. The system has been in operation for over ten years and apparently gives satisfaction, as over one hundred large buildings are heated by it. This is probably the largest application of the single pipe system in the United States. The steam pressure carried at the power station ranges from 15 to 40 pounds, according to weather.

Denver florists are groaning over the fact that the coal dealers have formed a trust and have raised the price of steam coal twenty five cents per ton. With expenses going up and prices going down the poor florist is having a hard time of it.

C. R. Gallup and Harrison H. Given report that spring plant and seed trade shows signs of beginning, a few straggling orders are coming in.

Mr. Chas. W. Johnson, who has been in charge of the Red Leaf Conservatories for the past season, leaves February 15 to accept a position in Chicago.

The decorations at the inaugural reception and ball at the Brown Palace Hotel and the Broadway Theater were very complete and were very much admired. Mrs. C. R. Gallup decorated the theater and the Park Floral Company the supper room of the hotel. NEVIC.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

ROSES. ROSES.

NEW BLOOD IN ROSES.

DISTINCT IN EVERY WAY. AN ENTIRELY NEW STRAIN.

The Greatest Rose of the 19th Century BELLE SIEBRECHT.

The Rose to Grow for Money.

**GREATEST BECAUSE EVERYBODY WANTS
ITS COLOR, SIZE, FRAGRANCE AND SHAPE.**

More brilliant, deep pink than any other Rose.

As large as the best American Beauty.

Fragrance like old La France (one of its parents).

Freedom of bloom like old Bon Silene—a single plant producing from 50 to 60 blooms during the season.

Strength, vigor and constitution of plants all that could *possibly be desired*.

Never Mildews.

Keeps Fresh from New York to Chicago and back again without falling.

Fades a beautiful light rose pink when old.

This Rose is not a mere sport, but is of a distinctly new strain, being a Seedling, the result of a cross between the grand old Rose La France and that strong and vigorous Rose Lady Mary Fitzwilliam.

Many of the leading Rose growers who have seen the Rose growing at our Nurseries have ordered from 500 to 2000 plants.

Orders booked now and will be filled in strict rotation.

STRONG PLANTS READY FOR DELIVERY APRIL 15th.

PRICE, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

The colored plate and what the Artists say about it:

It does not do full justice to the Rose in its magnificent intensity of peculiar deep pink, which is one of its striking characteristics, nature only can produce this, but we have approached as near to it as the limits of art will permit.

Breck & Sons, Boston, seeds and plants; Fred Dorner & Sons, Lafayette, Ind., trade list carnations and chrysanthemums; Huntington Seed Co., Indianapolis, Ind., seeds; W. W. Wilmore, Denver, Colo., dahlias.

OBITUARY.

WM. THOMSON, whose treatise on the vine is still one of the best of its kind, died at Clovenfords, near Galashiels, Scotland, January 12, in his 81st year. Mr. Thomson was born in Scotland in 1814 and was widely known as an expert gardener in all classes, but his specialty was the cultivation of hot house grapes. He was the originator of several fine varieties, the best known being Duke of Buccleuch and Duchess of Buccleuch. He was a notable figure in British horticulture and horticultural literature, and his death is deeply regretted.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

WHOLESALE PRICES of seeds are weak on nearly the wholeline; January business has been so light generally as to make the former discouraging outlook even more gloomy.

SANTA CLARA, CAL., January 26.—We are now enjoying a few days of sunshine after eight long weeks of continued wet weather which seriously interfered with all farm work. We do not know that any damage has resulted though some districts were flooded and everything too wet. It cannot be told until they begin to start if onions have been hurt. L.

To Continue Distribution of Seeds.

WASHINGTON, D. C., Jan. 25.—The bill making appropriations for the support of the Department of Agriculture for the fiscal year 1896, as completed by the House Agricultural committee, carries \$3,282,150, an increase of \$81,586 over the appropriation for the current year. Secretary Morton submitted no estimate for an appropriation to purchase seeds for distribution through Congressional agencies, which has been in vogue so many years, but instead asked for \$50,000 to publish and distribute farmers' bulletins of interest to that class of people. The committee, however, thought it desirable that the seed distribution should be continued and have provided an appropriation of \$180,000 for that purpose and reduced the estimate for farmers' bulletins to \$20,000.—Chicago Tribune.

Making a Good Impression.

Tom is so very punctilious, and in this case was especially anxious about producing a good impression. But the florist made the mistake of sending with the roses the card that bore the inscription: "Do the best you can for \$2."—Life.

After the Funeral.

She.—"Yes, I noticed the flowers; they were superb, but whatever induced you to send Jacquinet roses to a funeral?"
He.—"Why, didn't you notice that the design was a gridiron?"—Life.

COATESVILLE, PA.—A. N. Greenfield has sold his business to Phillips & Goodwin and has removed to Collingdale, Pa.

OTTUMWA, IA.—Thos. Kemp, formerly of the Kemble Floral Co., Oskaloosa, Ia., has entered into partnership with F. M. Teter of this city, and the business will be continued under the name Ottumwa Floral Co. The new company will build four houses 20x64 for roses. Trade is good.

WINONA, MINN.—W. E. Smith is preparing to erect a new house 25x150.

CHARLOTTE, MICH.—Mrs. Emma J. Church succeeds Mrs. E. T. Church.

NEW CHRYSANTHEMUMS.

Fewkes, Challenge, Dalledouze, Inter Ocean, Mrs. Hs. Mrs. Hill, Mrs. Lippicott, Benin, Mutual Friend, Bonnation, Yellow Queen, Davis, Pitcher & Munda, Gray, Beau Ideal, Bramhall, and others. Sold in sets of 12 plants each under the head of "Specialties" and "Novelties." Older varieties "Selects of 1893," 16 plants and the "Old Guard Set" of prize winners, 18 plants each. Price, \$1.00 for each set plants by mail, postage paid by me. Send for catalogue.

NEW CROP Flower Seeds
Just Received.
Now is the Time to Sow
MICHELL'S Special Strain
MAMMOTH VERBENA SEED.
This mixture can not be surpassed for immense size of flower and brilliancy of colors: It is made of 40 per cent scarlets, 30 per cent. plinks, 20 per cent. blue and purple, 10 per cent. striped. Each floret is larger than a silver quarter and has a large showy eye. We have secured the whole crop of a Verbena specialist. Per trade packet, containing 750 seeds, 50c.; per 1/4 oz. 80c.; per oz. \$1.00. Order at once as this stock is limited. Verbenas grown from seed are preferable to those grown from cuttings, as they are free from rust.
SMILAX SEED—New crop, 50c. per oz.; 4 oz. for \$1.50.
Send for our Wholesale List of Flower Seeds now ready
HENRY F. MICHELL, Seedsmen,

LAST YEAR A PROMINENT VIOLET GROWER OF PENNSYLVANIA RECEIVED privately 25 plants of **THE CALIFORNIA VIOLET**, and has thoroughly tested growing them for profit. His experience is they grow as healthy and strong in Pennsylvania as in California under exactly the same treatment as given to the Marie Louise, and he considers them by far the most profitable and satisfactory violet to grow. They have bloomed profusely with him since last September, with every prospect of continuing to bloom until late spring, as when recently seen his plants had an average of at least fifty buds and flowers on each. His plants have produced violets as large as grown in California, on upright, stiff stems, 10 to 12 inches long. He will plant them very largely the coming season.

We have advices from California that we are to receive the first eastern shipment made of the Violets, which will probably arrive during the next ten days, and we shall be pleased to receive orders for immediate or later shipment, as may be preferred.

In a nutshell it has been demonstrated that **THE CALIFORNIA VIOLET** grows equally well in the east as in California, and every claim made for it in California has been realized in Pennsylvania.

CULTURE: THE CALIFORNIA VIOLET is hardy, and should be grown exactly the same as Marie Louise or other Violets, either in cold frames or Violet houses; or if planted in the open ground will bloom in the early fall and spring.

DESCRIPTION.

Plant vigorous and absolutely free from disease; flowers single, immense in size, covering a silver dollar; color violet purple (does not fade); fragrance intense; flowers borne on strong stems 10 to 14 inches in length. Last season several hundred flowers were picked from a single plant. Delivery of plants will begin in March, 1895.

PRICE.

As the Eastern Agents for this **NEW VIOLET** we are enabled to offer the plants at the same price as charged by the introducer in California. We quote for quantities less than 100, **15 cts.** each; **\$10** per hundred; **\$70** per thousand; 500 at thousand rate. **Orders filled strictly in rotation.**

EXTRA CHOICE FLOWER SEEDS.

List free on application.
FRED. ROEMER, SEED GROWER,
QUEDLINBURG, GERMANY.

St. Louis.

The prevailing cold weather has shortened up the supply of stock of all kinds, and there has been no more received than was called for. Violets both home grown and southern have been very short, home grown owing to the inability to open frames and southern on account of the two late cold waves. Carnations are in fair supply but most growers are not cutting the maximum amount from their houses, owing to the smallness of the plants when benched in the fall, from lack of moisture during the summer. Bulbous flowers are nothing like as plentiful as in former seasons and those having them are making it profitable. From present indications, however, and from the way inquiries are being made, and orders placed, there will be the usual glut next season with the accompanying loss.

Mr. Herzog of Gratiot Station was called upon recently and his stock found in good shape. His principal and favorite plant is the carnation and his stock of them was fine. Among the whites Lizzie McGowan has proved to be the best, a trial having been given to most all the other varieties, and it will be grown almost exclusively next season for white. The old standby Portia holds its own with any of the reds. Those being cut now are as good in color and size as could be expected. Scott and Daybreak are the two best pinks and will supersede the rest. Some very fine flowers are being cut from old Pres. Garfield, the trouble with this variety being its late blooming habit. Mr. Herzog is experimenting with it however, and feels confident he can get it to commence blooming in the fall. If he can there is no red variety that will excel it.

A house of smilax is also grown, and is found to be profitable; there is a good demand in the St. Louis for smilax, a large portion of that used being shipped in from a distance. It appears to be somewhat neglected by the home growers.

At Lindenwood, the next station to Gratiot, Mr. Henry Aue has just finished a range of three short-span-to-the south houses, each 18x103. These are the first houses erected on this plan in this city and the outcome will be watched with interest. The heating will be by low pressure steam with the single pipe system.

ELLIS & POLLWORTH, MILWAUKEE, WIS.

The Bride of Erlescourt CARNATION.

SEEDLING 1890. PORTIA X SILVER SPRAY.

An extra large full flower, strong stem, good calyx, pearly white, delicately fringed, highly fragrant and an excellent shipper. Plant exceedingly healthy and grand grower; foliage stronger than Daybreak. Altogether the finest and most perfect White Carnation ever raised. This is our assertion, and we are borne out in it by hundreds of florists who have been to see it.

Scores of testimonials are reaching us from all over the Continent.

HERE ARE SOME TO-DAY:

MONTREAL, CAN., Jan. 21st, 1895, Dorchester St.

Gentlemen:—The Bride of Erlescourt is without exception the finest white Carnation I have ever seen, and have been handling cut flowers for over thirty years. Yours truly, J. S. MURRAY.

ALLIANCE, OHIO, Jan. 21st, 1895.

MILLER & SONS, Bracadale, Ont. Gentlemen:—I received your consignment of plants and flowers of Bride of Erlescourt in good order. Time forbids an analysis of this grand acquisition to the list of white carnations at this moment.

It suffices it to say it far exceeds my expectations; the character of the flower and the features of the plant place it beyond all question in the very front ranks of all existing whites.

Yours very truly, L. L. LAMBORN.

Price of Rooted Cuttings, delivery March 15, \$3 per doz.; \$12 per 100; \$90 per 1000.

Strong 2 1/2-inch pots, 50c. per dozen; \$3.00 per hundred.

NATHAN SMITH & SON, ADRIAN, MICH.

St. Paul, Minn.

The past week has witnessed a great scarcity of white flowers, roses and carnations especially. This can be attributed to cold, dark weather, off crop "season with the growers and a number of funerals of prominent people. Trade has shown quite a decided increase and both growers and store men rejoice alike.

We recently visited the Mendenhall greenhouses in Minneapolis and found much to please and edify. His range of houses, or series of ranges, is so extensive and his stock so large and varied, that one-half cannot be seen or described in an afternoon visit. Just at present his roses are nearly all "off crop" but the plants are looking well and promise good results for the future. His experiment with roses and violets in solid beds is proving highly satisfactory, the roses being superior, while the violets are decidedly better than those planted in benches.

In carnations he has a large number of varieties some of them looking well, while others are badly affected by rust, which is being fought quite successfully. We noted some very fine blooms of Uncle John, The Stuart, Bouton d'Or and other promising varieties. In ferns, palms, dracaenas, crotons, etc., he has several large houses. His stock of these plants is by far the largest and finest in the twin cities. His orchid house is a mass of bloom.

One of the latest firms in the business here is Hougren & Nelson, whose place was built in the summer of '93. Their houses, five in number, are built in a favored sunny location on the slope of a hillside facing the south. Their stock of cyclamen is one of the finest ever seen in the city, while their violets are hard to beat anywhere. A spring on the hillside furnishes them with an abundance of fresh water the year round. Their trade is principally wholesale. FELIX.

DON'T FORGET

That we are the headquarters for Coleus, and the originators of the Golden Queen Coleus, the only all round good yellow coleus.

WHEN writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

See what F. R. PIERSON has to say about our new Cannas.

"COLUMBIA is an entirely new type in every way, and one of the most distinct of any of the recent introductions. We are highly pleased with the flower, confirming our previous good opinion of it. It is certainly a very fine variety and if it is anything like as valuable outdoors as it seems to indicate from test under glass, we would consider it one of the very finest novelties that has been introduced in a long time. Unlike any other seedling it shows a new type of habit and character, and if it will stand the wind and rain as you have stated and as it would seem to indicate by the length of time flowers hold on under glass it certainly will prove a very desirable addition to our list of cannas." Price \$1.00 each.

"PRIMA is a good canna; it has more red on the flower than Eldorado but otherwise is, so far as a few plants would show, substantially the same. Has a good flower about intermediate between Eldorado and Florence Vaughan." Price 60c each, \$6 per doz. Orders booked for March 15th delivery.

Owing to limited stock of Columbia, we withdraw price by the dozen and offer only at \$1.00 each, net, regardless of quantity, on and after February 1st, 1895.

QUEEN CHARLOTTE

We think this the finest novelty in the way of a Carnia ever introduced. The center of the petal is of the "Alphonse Bouvier" type, beautiful blood red, and edge of petal to the depth of 1/2-inch, purest, brightest canary yellow. Dwarf variety, and as good a grower and bloomer as Madame Crozy, and much superior to that variety in color. 50c. each; \$5.00 per dozen; \$37.50 per 100. Plants ready March 1st. Order quick, while stock lasts.

Pittsburg.

The regular meeting of the club was held on Tuesday evening, January 22, the most important part being the election of officers for the ensuing year. Everything moved off nicely; and the following officers were elected: A. W. Bennett, president; Jno. Herron, vice president; Geo. Oesterle, secretary; A. F. Dalzell, assistant secretary; Jno. Baeder, treasurer; P. S. Randolph, Chas. Siebert and J. W. Gibbs, executive committee. The officers-elect were installed and each made a few remarks for the welfare of the club. Each pledged his support and assistance to make the club second to none in the country. The president appointed J. Ludwig, Wm. Love and A. Nelson a committee to form a bowling club, to secure alleys and report at the next regular meeting. As we have quite a number of 240 bowlers the Buffalo boys want to keep a moving or the smoky city will be after that cup, Great Scott beware! A number of the members, not the ones who made such "remarkable" scores at Atlantic City in the shooting contest, are practicing daily, in fact are blind to any other pleasures. The essays of the evening were on account of elections carried over until next meeting.

A suggestion was offered that a suitable prize be awarded at least once a month on a meeting night for best bunch of roses, carnations or some plants, such as the committee might state in advance, and at close of the meeting to be auctioned off, the proceeds to go to the club's treasury. This will be acted on next meeting.

The weather remains very cold, and a scarcity of good stock is noticed. Transient trade is very poor, the principal work being made up pieces, receptions, etc. All retailers say business is fair and seem satisfied. It is surprising to think that of all the first-class cut stock used in this city more than one-half of it is shipped in from the east.

P. S. Randolph is laid up with rheumatism and proposes a trip south for his health.

We are looking to the meeting of the S. A. F. executive committee in March with pleasure, and would be pleased to have as many visitors as possible drop in that time.

The cyclamens at Phipps Conservatory are in full bloom, the 1,500 plants with from 10 to 30 blooms each massed together make a fine sight.

We had a pleasant call recently from R. H. Warder, Superintendent of Cincinnati parks. BROWN.

New Catalogue (No. 4) containing over 1,000 Ornamental Cuts for Florist's use, such as envelopes, letter heads, bill-heads, cards, advs., floral designs, etc., at from 30c. and upwards. Price of Catalogue 25 cts. (deducted from \$1 order).

News Notes.

SOUTH FRAMINGHAM, MASS.—A. Herbert has opened a florist store at 13 Irving Square.

COLORADO SPRINGS, COLO.—Mr. William Clark is spending his winter vacation in California.

BARRE, VT.—Sanders & Sias have succeeded to the business formerly run by Wm. Clark.

PAWTUCKET, R. I.—Wm. Hoffman has opened a flower store on the corner of East avenue and Main street.

CAMBRIDGE, MASS.—The Shady Hill Nursery Co. is about to locate its central office at 102 State street, Boston.

NEWBERN, N. C.—The semi-annual meeting of the North Carolina Florists' Association will be held in this city February 20 to 24.

NASHUA, N. H.—The New Hampshire Horticultural Society has been incorporated. The incorporators are W. D. Baker of Rumney, G. A. Wason of New Boston, W. H. Stinson of Mont Vernon, Alonzo Towle of Freedom, and John W. Farr of Littleton.

BELVIDERE, ILL.—L. E. Coleman has opened a retail floral store at 420 South State street, where he will also carry a line of seeds. Stock in his greenhouses is looking well, a house of McGowan carnations being particularly good. C. H. Maynard, formerly with E. H. Hunt, Chicago, is in charge.

ASHEVILLE, N. C.—On Thursday, January 24, there was a large and enthusiastic gathering of four florists in this city who proceeded to form the Asheville Florists' and Gardeners' Club with the following officers: Robert Bottomly, president; R. G. Milford, vice-president; J. W. C. Deake, secretary; C. Zbinden, treasurer. We intend to have a chrysanthemum show here this year that will surprise the natives.

SEE HERE

Hardy Plants and Shrubs and Their Arrangement.

BY J. WILKINSON ELLIOTT.

[Read before the Mass. Horticultural Society February 2.]

The almost universal practice of using tender or half hardy bedding plants in ornamental gardening in preference to the hardy herbaceous plants and shrubs is open to criticism. Is it true that the people really prefer the short lived brilliancy of the tender sorts, followed by a long period of dreariness, to the ever-changing attractiveness of grounds judiciously planted with well selected flowering or otherwise ornamental hardy plants, which, even during the winter months, afford a pleasing variety to the garden view? It is my belief that people do not have a choice in this matter; they do not read gardening papers; and in the city parks and gardens, as a rule, they find the tender bedding plants are the chief reliance for the decoration of the grounds and therefore they buy what the local florist offers for their purpose. But these bedding plants are a yearly expense, while the hardy plants and shrubs, when once placed, are permanent, and furnish a fresh growth of beauty each succeeding year, with no further expense except for care and culture (which are always necessary for the tender plants in addition to annual purchase money). The tender plants endure but three or four months, but the well selected and properly planted hardy plant will open its display in early spring with snowdrops which are in bloom with the first pleasant days, even in March. They are quickly followed by scillas and crocus. Next come the tulips and narcissi, for a month; and before they are past the early flowering herbaceous plants are showing bloom, and the flowering shrubs have begun a display that will end only with the autumn. By May the creeping phlox, columbines, doronicums, Oriental poppies, German and Siberian irises; and of shrubs the lilacs, spiræas, Japan quince, magnolias, mollis and Ghent azaleas; of climbers the clematis, in its splendid varieties, open a season that will cover six months. June brings out rhododendrons, kalmias, roses, *Lilium candidum* and *L. elegans*. July ushers in Japanese irises and lilies in varieties that will show flowers until frost comes. During that period the tall phloxes, yuccas, rudbeckias, gaillardias, tiger lilies, hollyhocks, single and double, campanulas, rugose roses, day lilies, altheas, hydrangeas, tamarix, hardy sunflowers, and a host of other good things will also add their floral tribute.

When the autumn opens the Japanese anemones and the old fashioned and hardy chrysanthemums come on and will bloom through early frosts and even early snow storms.

But the skillful gardener will find a place for many tender plants, especially

for the gladioli, dahlia and tuberous begonias, which can be easily stored in the dwelling house over winter. A place can also be found for the large flowered cannas, not in isolated groups on the lawn, but in small groups in the margin of a shrubbery where their stiffness will be concealed, yet their fine colors will be useful. Phlox Drummondii, sweet peas, asters, calliopsis and tall nasturtiums can also be added. The most important thing we have to consider in gardening with hardy plants and shrubs is their arrangement. We must study to produce a pleasing effect at all seasons—to have a succession of bloom, that the garden shall never be dull or uninteresting.

As hardy plants are usually put in where they will remain for years it is well to make a liberal preparation of the soil before planting. I usually specify that the borders should have two feet of good, friable soil, mixed with one-fourth its bulk of rotted stable manure. Borders should be prepared in late summer or fall, and the planting be done in the following spring. Fall planting is recommended by some, but my experience is that many fall planted trees and shrubs are winter-killed that would have proved quite hardy if planted in the spring, so as to have the benefit of a growing season to establish themselves.

A border three feet wide in front of a house was planted with *Eulalia gracillima*, *erianthus*, *Funkia Sieboldiana* and *F. subcordata*; the last two in front of the first two. As these were selected for form and foliage they were effective throughout the season, and as a contrast a group of tuberous begonias was introduced, and these have to be planted every spring. The porch of this house was shaded by *Halliana* and golden honeysuckles, *Clematis Jackmanni*, *C. Henryi* and *C. paniculata*. A border at one side of the house was much shaded, and was planted with shade loving plants, such as native ferns, native cypripediums, trilliums, lily of the valley and tiarellas and a group of *Lilium lancifolium* at the point of most light. Another border, in front of a hedge of California privet, has first a line of hardy roses; among these gladioli are planted each season. In front of this line is one of narcissi, of sorts. The rest of the border is filled with hardy herbaceous plants, including columbines, Japanese anemones, iris and lilies, pæonies, German iris, *Helianthus laetiflorus*, *Coreosis lanceolata*, gaillardias, *Rudbeckia hirta*, hardy asters, campanulas, phloxes, delphiniums and *Heuchera sanguinea*. These are grouped in selections to secure a constant succession of bloom. In front of these is a line of tulips, narcissi, millas, etc., sweet peas, Phlox Drummondii and nasturtiums are added where space is found. The brick walls of the house are covered by *Ampelopsis Veitchii*. A single stem of Chinese wistaria is trained upon a wire to the

eaves of the house, along which it forms a fringe. Crocus, scillas and snowdrops are put into the earth all over the lawn, and their bloom is a highly prized feature of the estate.

Upon a lot two hundred feet deep by one hundred and fifty feet front, with an eastern exposure, the house should be placed nearly midway from front to rear of the lot, and only far enough from the northern boundary to permit a screen of planting to be made. The entire southern, western and a portion of the eastern boundary should be occupied by a border, varying in width from five or six feet to twenty, with a curved outline on the lawn. This should be planted principally with shrubs arranged in groups; but a few trees, such as birches, magnolias and Judas trees, and a few evergreens, such as retinosporas, should be used; also evergreen shrubs in quantity. Where a great variety of hardy plants is desired the entire margin might be filled with them, but a more effective arrangement is to plant them in bold groups, one variety in a group, and alternate them with groups of shrubs. Some of the stronger growing plants, such as the sunflowers, foxgloves and single hollyhocks, might be placed in the middle or back part of the border, and the Japanese *Lilium auratum*, *L. rubrum* and *L. album* and our American species *L. superbum* can always be planted with advantage in groups of rhododendrons and azaleas. After such a border is fully planted with trees, shrubs and hardy plants there will be many opportunities to introduce spring flowering bulbs—tulips, narcissi, etc. This border should be kept in cultivated condition, free from weeds or grass, and mulched with manure every year. The lawn should be kept quite free from trees, shrubs or flower beds, or, at most, have only a few choice specimens planted on it.

In larger places, where a vegetable garden is included, the latter should be concealed from the house by a large growing hedge, even including trees. These larger places permit the planting of hardy shrubs and plants in masses, as if they were growing wild. Naturalizing hardy material does not mean attempts to imitate thickets or woods on our lawns, but rather taking advantage of a brookside for iris, narcissi, hardy ferns, etc., that will thrive in such places; planting native rhododendrons, azaleas, kalmias by rough banks or ledges; the planting of climbing plants so as to hide uncouth or unsightly trees, or old shrubbery, transforms the spot into a thing of beauty. Climbing plants of the hardy class should be used much more freely and with great advantage. Do not try to train them in stiff, formal ways, they will always produce beautiful effects if allowed to grow naturally. There is nothing more charming in nature than the combination of shrub or tree with wild vines.

LIST OF PLANTS.

Hybrid perpetual roses, as Paul Neyron, Ulrich Brunner, Madame Gabriel Luizet, Gen. Jacqueminot, Anna de Diesbach, Magna Charta, Baroness Rothschild, Cant. Christy and Mabel Morrison.

Herbaceous plants—*Anemone japonica alba*, single hollyhocks, Japanese iris, *Lilium auratum*, *Rudbeckia hirta*, *aquilegia* in variety, *Yucca filamentosa*, herbaceous peonies, both single and double varieties, *Lilium speciosum*, *Helianthus lœtiflorus*, foxgloves, tall perennial phlox in variety, delphiniums in variety. *Aster nova-angliæ rubra*, the old fashioned hardy chrysanthemum, *Iberis sempervirens*, the lilies *superbum* and *Can-*

dense, *Phlox subulata* and *P. subulata alba*, *Pyrethrum uliginosum*, *Sedum spectabile*, *Doronicum plantagineum excelsum*, *gaillardia*, oriental poppies, *Eulalia gracillima*, *Funkia Sieboldiana* and *subcordata*, *Arundo donax*, *Hibiscus moscheutos*, *Heuchera sanguinea*, *Pyrethrum roseum*, single and double, *Spiræa palmata* and *filipendula*, *Tiarella cordifolia*, *Myosotis palustris semperflorens*, *Helianthus rigidum*, *Campanula turbinata*, and *Mariesii*, *Viola cornuta*, *Cypripedium spectabile* and native ferns in variety.

Spring flowering bulbs—*Narcissus bicolor Horsfeldii*, *N. poeticus*, *N. Emperor*, *N. Von Sion*, *N. alba pleno odorata*, *N. Golden Spur* and *N. Trumpet Major*; tulips, both early and late flowering, single, and *Gesneriana*; *Milla uniflora*, crocus in variety, *Scilla siberica*, single snowdrops.

Climbers—*Clematis paniculata*, *C. Henryi*, *C. Jackmanni*, *C. Virginiana* and *C. flammula*; *Ampelopsis Veitchii*, Chinese wistaria, purple, trumpet creeper, golden Japan honeysuckle and *Halliana* honeysuckle.

Shrubs—*Kalmia latifolia*, rhododendrons, *Catawbiense* hybrids, *Azalea calendulacea* and *arborescens*, *Ghent* and *mollis* azaleas, *Spiræa Van Houttei*, *Weigela candida*, *Magnolia stellata*; Japan maple—*sanguineum*, *aureum* and *atropurpureum dissectum*; tree peonies, *Hydrangea paniculata grandiflora*, Japan snowball, *Cornus Spathii*, and *C. elegantissima sanguinea*, lilacs in variety, *Tamarix tetrandra* and *chinense*, *Berberis Thunbergii*, *Forsythia suspensa*, *Exochorda grandiflora*, *Desmodium penduliflorum*, *Spiræa Lindleyana*, *S. Reevesiana* and *S. R. fl. nl.*, *S. Anthony Waterer*, *S. Bumalda*, *S. Thunbergii* and *S. prunifolia fl. pl.*; *Rosa rugosa*; althæas—dwarf single white, *Brist's* variegated and double varieties; Japan quince, *Deutzia crenata*, *fl. nl.*, *D. gracilis*, *Hydrangea paniculata*, *H. quercifolia*, *Philadelphus coronarius*, *Weigela rosea* and *W. rosea nana variegata*, *Forsythia Fortunei*, golden elder, *Rhododendron maximum*, *Andromeda japonica*, *A. floribunda*, *Elaeagnus longipes*; snowberries, both white and red, *Prunus Pissardi*, *Hypericum aureum*, *Ligustrum Iboti* and upright honeysuckles.

THE RETAIL TRADE.

The Arrangement of Flowers.

XVIII.

ORCHIDS.

The orchid is rapidly coming to the front as a commercial flower. In our large cities at least it is no longer a rarity to see orchid blooms displayed in our florists' windows, in fact the flower is now quite an important factor in high class decorations and arrangements of various descriptions. That this flower has plenty of admirers among all classes is plainly evidenced by the crowds that are attracted by a window display of these flowers. There is a fascination about the orchid to the passer-by that no other flower possesses.

Though still high in price, when we consider the length of time that these flowers last in good condition, they are not so very expensive in the end. Many flower buyers are beginning to find this out. We know of several instances this season where two receptions were given within three or four days at the same

house and one lot of orchids served a useful purpose for both occasions. After the first reception was over the flowers were taken down and cared for by the florist and then re-arranged again a few days later, the only additional expense being the extra labor and perhaps a few hundred fresh adiantum.

Of all flowers there is none that lends itself to better purpose in a decoration than the orchid. The arrangement is at once easy and difficult. Easy to him with natural taste and difficult to the mechanical worker. We have often spoken of the danger of overcrowding; no flower is more impatient of such treatment than the orchid; its value is lost when it loses its individuality by crowding. Then again we must understand somewhat the nature of the flower. Take for instance a mantel or mirror-decoration, we wouldn't take such terrestrial species as cypripediums and tie them up among the vines. We ought to know at least so much of their habit that the proper place for them is at the base. And the epiphytal sorts, which embrace the larger part of the orchid family, will only show their real beauty when placed in their natural position.

One of the most useful adjuncts in orchid decorations is corkbark. We prefer this to any other kind of bark for the reason that it is very light, and it is soft and spongy so that you can press a pin into it easily with your thumb. The bark can be had at the dealers in florists' supplies at a moderate cost. It comes in pieces 5 to 8 inches in width and 2 to 3 feet long and can be cut into any desirable shape.

Our first illustration shows an arrangement of 14 cattleya blooms on a piece of bark about 6x24 inches. For green we used a string of *Asparagus plumosus*, which was first draped around the bark, held into the desired position by running a small double pointed tack over the stem into the bark. In order to keep the flowers from wilting tie a little green moss (thoroughly soaked with water) around the stem and then arrange these on the bark by the same process as above stated. Such an arrangement will display the orchid flower to good advantage and suggests the idea of the flower growing in its natural element. There is only the foliage of the plant lacking; this, however, is difficult to obtain unless you are fortunate enough to have a suitable piece of the growing plant which might be fastened to the bark; still in a general way for a decorative purpose the asparagus will answer very well and is perhaps the best vine we can use, as it does not wilt in a warm room. The cost of such a piece would be about \$8, 14 cattleyas at 50 cents each, string asparagus 50 cents, and bark say 50 cents.

The second illustration is put up in a similar manner with the same number of cattleyas and the addition of a few sprays of *lælia* and *dendrobium*, which add to the cost; 4 sprays of *lælia*s (10 blooms) \$2.50, 3 sprays *dendrobium* at 75 cents \$2.25, total \$12.75. Such pieces are very useful in a first-class decoration and might be suspended in a group of plants or in any other suitable position with fine effect.

There are many other ways in which the bark might be employed to good advantage, as for instance in banking a mantel. Here we may use in addition to asparagus some growing ferns tipped out of their pots if necessary and placed between the pieces of bark in a growing position, then trail your vines over the pieces of bark in a rustic fashion and

ARRANGEMENT OF ORCHIDS ON CORK BARK NO. 1.

fasten the orchids on these. Cypripediums can be used to fine effect in a basket of this kind, arranged in groups in the crevices between the bark and ferns.

Orchids in baskets are also very effective but wherever possible the green (and there should be a good deal of it) should be suitable growing plants, as the cut fronds of ferns wilt too quickly. We prefer the airy fronds of *A. gracillimum* to any other, or if the basket is a large one *A. princeps* is also fine. If these are not to be had other species of a similar character will answer.

We present an illustration of a basket exhibited at the Chicago show where a plant of *A. gracillimum* is used. The plant is tipped out of an 8-inch pot and bedded in sphagnum moss with a layer of green sheet moss on top. Around and through the fronds are arranged 50 *Cypripedium Lawrenceanum*, with *A. Farleyense* around the edge, a spray of *Oncidium* being tied to the handle. The expense would be: 50 *Cypripediums* at 20 cents (you can often buy them for much less) \$10, 1 spray of *Oncidium* 75 cents, 1 fern \$1.50, basket and moss \$1.25, *Farleyense* fronds \$1.50, total \$15.

The last illustration is that of an oval handle basket of medium size, filled with orchids in variety. For green, which is liberally used, we have *A. Farleyense* and *A. princeps*. The handle is draped with *Asparagus plumosus*, into which are tied a couple of sprays of *Oncidium*. The cost would be about as follows: orchids of various sorts \$15, *Farleyense* \$2, *A. princeps* \$1, basket and moss \$1.50, 1 strip *asparagus* 50 cents, total \$20.

Floral Fashions in New York.

The custom of sending bouquets to debutantes at their "coming out" reception is more generally observed in New York the present season than ever before. These bouquets, which are round and of good size, are laid on a table along side the lady who is receiving her friends, and each bunch is in turn held in the hand for a short time, so that no slight or undue favor may appear to be shown to any giver. To wear corsage bunches or other floral adornment about the person which would harmonize with any and all of these gifts would be impossible, so none are ever used on the dress at these affairs.

Baskets of flowers are very seldom seen on such occasions, and promiscuously mixed bouquets never.

In making the fashionable bunch the combination is as a rule confined to one or two varieties of flowers loosely and gracefully arranged and tied with a broad satin ribbon, which is sometimes wound so as to cover the entire stems, but is oftener merely knotted once around the stems, these being exposed with their own foliage below the bow. Natural stems only are admissible and such things as tinfoil, wires or stuffing of any kind are never used under any circumstances. The flowers composing these bouquets are as various as the tastes of those who order them, or the fancy of the florist whose advice may be sought. A bunch made up of lilacs with one fine hybrid or American Beauty rose; or a single *Cattleya* bloom in one corner, and loops of narrow ribbon of color to match attached to the rose or orchid, is a favorite combination with one of the most fashionable florists. Care must be taken that the flowers used combine gracefully in form as well as in color. For instance, stiff *mignonette* with orchids set in between is an example of bad arrangement. This combination, which can never be made to look easy and graceful, may be made still worse by the use of dark green ribbon, which will add a gloomy appearance to it. The effect of ribbon should be, as a general rule, to lighten up the design and not to tone it down, hence it should, in most cases, correspond in tint with the brightest and most cheerful color used in the combination. The best florists never send a bouquet out now without ribbon, and the selection of the proper color for each order requires the exercise of much good judgment. The kind used is double faced satin, three to four inches wide. The ribbon bill is quite a formidable item in a florist's expense account. In the case of one New York establishment it amounted to fifteen hundred dollars for the one month of December last. This large demand has encouraged the production of new tints and shades, and the manufacturers are now prepared to furnish ribbon to order, to match any flower specified.

One of the latest and most novel creations for a debutante, which was made by Mr. Geo. Stump and was much admired, consisted of a garland of orchids to hang over the arm. The orchid blooms were fastened in among the foliage of *Asparagus plumosus*, little knots and strands of baby ribbon being daintily woven into it. This was made in response to a call for something novel. Herein is indicated the great secret of the success of some of the big New York florists. People in the best society are constantly demanding something new—copying they detest. And the florist who expects to cater to these people must be able to suggest new ideas and novel combinations. The first question asked by a lady about to give a dinner or reception, is "what have you that is new, something that nobody else has had?" If the reply is "nothing," the customer is disappointed and is convinced that the florist is behind the times. Even though his suggestion is not accepted, his ability to make it stamps him as a man of ideas, and he has gained a big point.

DO YOU WANT Mr. Scott's seasonable hints for the year in book form, so that you can refer readily to his suggestions for any week in the year? You will find them in this form in our trade directory and reference book for 1894. Price \$2.00.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

The statement has often been made in these columns and the idea has become thoroughly established in many sections that cuttings should be taken only from plants that have been grown solely for that purpose rather than for the very finest flowers. The bearing of A1 flowers seems in the minds of some to unfit the plant for propagation in that the cuttings are weakened, and that too much of the vitality necessary for producing a healthy plant for the following season has been impaired. From results obtained during the past I am justified in contradicting this fallacy, for such I believe it to be. Strong healthy parents, as a rule, in every form of life produce healthy, strong offspring. I believe the carnation is no exception to this rule. For any grower to state that a plant must be grown slowly or in an impoverished condition seems very strange to me. Now it must be admitted that to obtain a flower three inches in diameter requires a very robust stem, in fact the plant must be in a state of perfect health. Why then should not this plant be the very best for reproduction? Is not this the course adopted by every grower of any note in every other branch of our trade? I sometimes think that growers have been led to denounce the custom of using stock which has been grown for very fine flowers because flowers of A1 quality have not been produced in their houses. They often state that these large blooms are not good keepers; if this were the fact would the leading retailers of New York buy this stock as they do in preference to the smaller at any price? The very culture that is needed to produce a large flower makes it a good keeper, for if this were not the fact the flower would go to sleep or shrivel before opening. If the plant is forced with too much artificial heat the stems grow weak and slim and will not mature other than a weak flower. Lots of manure combined with judicious watering and ventilating are the requisites for the production of first-class bloom, and the plant which furnishes this will give the best cuttings.

If these advocates of growing for cuttings only would advise resting the plants during November and December in a cold frame and then bringing into the houses, starting the plants then into a strong growth for cuttings we might give them some attention, but as it stands to-day we can look upon their advice merely as a dodge to catch trade for their stock. A grower of some prominence who called upon me to-day stated that he had tried stock from one who claims to grow and furnish cuttings only from plants grown quite cool and for cuttings only and that the plants never did as well as those which he purchased from stock grown for all it was worth. This is only one case

of very many. I have investigated this matter quite thoroughly and feel justified in making these statements quite emphatic.

The New York Florists' Club was invited to Mr. John N. May's establishment last week to examine the new rose Mrs. J. Pierpont Morgan, and the visitors found that not only had Mr. May a treasure in his rose but that he also had several carnations that were simply grand. Dean Hole, a new yellow of the Buttercup type, is in fine condition at present. The foliage resembles Buttercup as does the flower, but the tendency which the latter has to die off in the bench is lacking and the plant in most soils makes fine root growth. The flower is very large and well formed. Maud Dean is one of the most beautiful flowers I have ever seen; it is perfection in form and the color white ground shading to the center with carmine, which gradually disappears as the flower develops. This shading may seem to some who have not seen the flower to be a detriment, but the retailers, a number of whom were with us, were delighted with this novelty and, oh! how they would all like to handle the entire crop. Probably the most striking carnation which Mr. May has at present is one which he calls Lily Dean; this is a variegated sort similar to Helen Keller, but the markings are not as dark. The petals are larger, with a smooth edge, and when fully developed the bloom is quite flat on the underside but well built up in the center. Mr. May has but a few plants of this variety and he is taking good care of it, from present appearances it will be a winner. Helen Keller is doing finely with Mr. May this year, although Helen has not done well in many places I am convinced that it is from a lack of knowledge as to the best way to handle it. I understand that a fine display will be made by Mr. May at the convention in Boston this month. **CHARLES H. ALLEN.**

The American Carnation Society.

The annual meeting of the American Carnation Society will be held in the halls of the Massachusetts Horticultural Society on Tremont street, Boston, Mass., February 21 and 22. The large upper hall will be devoted to the exhibition, to which all carnation growers are invited to contribute, and which will be undoubtedly the grandest display of the Divine Flower ever seen in America. Flowers and plants intended for the exhibition should be sent, carefully packed, prepaid, in care of Mr. A. H. Fewkes, Horticultural Hall, Boston, Mass.; they will be staged on the morning of Thursday, February 21.

An exhibition of the diseases of carnations with specimens will constitute an interesting feature, and diseased specimens are solicited. Prof. Byron D. Halsted of the New Jersey Experiment Station, New Brunswick, N. J., will be present and assist in this department.

Following is the schedule of premiums: Class A.—Vases containing 100 blooms each as follows:

White	1st.	2d.	3d.
Pink (light), not to be darker than Wm. Scott	\$10.00	\$7.00	\$5.00
Pink (dark), not to be lighter than Tidal Wave	"	"	"
Scarlet	"	"	"
Crimson	"	"	"
Yellow	"	"	"
Variegated	"	"	"

Class B.—Vases containing 50 blooms each as follows:

White	1st.	2d.	3d.
	\$5.00	\$4.00	\$3.00

Pink (light), not to be darker than Wm. Scott	"	"	"
Pink (dark), not to be lighter than Tidal Wave	"	"	"
Scarlet	"	"	"
Crimson	"	"	"
Yellow	"	"	"
Variegated	"	"	"

Class C.—Vases containing 12 blooms each as follows. First premium only, no second or third. \$2.00.

WHITE.	
Lizzie McGowan,	Silver Spray,
Mrs. Fisher,	Puritan,
Uncle John,	Any other white.
PINK (LIGHT).	
Grace Wilder,	Wm. Scott,
Diaz Albertini,	Edna Craig,
Daybreak,	Adelaide Kresken,
Sweetbrier,	Ada Byron,
Nicholson,	Annie Pixley,
Any other light pink.	
PINK (DARK).	
Tidal Wave,	Richmond,
Thomas Cartledge,	Mrs. Hitt,
Any other dark pink.	
SCARLET.	
Portia,	Stuart,
Hector,	E. G. Hill,
Fred Dorner,	Garfield,
Any other scarlet.	
CRIMSON.	
Jacqueminot,	Anna Webb,
Ferdinand Mangold,	Creole,
Wabash,	Crimson Coronet,
Pride of Kennett,	Any other crimson.
VARIEGATED.	
J. J. Harrison,	Helen Keller,
Chester Pride,	American Flag,
Nellie Lewis,	E. A. Wood,
Stanley,	Orange Blossom,
Western Pride,	Dr. Smart,
Any other variegated.	
YELLOW.	
Buttercup,	Bon-ton d'Or,
Goldfinch,	Golden Triumf,
Any other yellow.	

Class D.—Pot plants, the pots not to exceed seven inches in diameter and one plant in a pot. First \$5.00; 2d \$4.00.

White	Best six plants.
Pink (light)	"
Pink (dark)	"
Scarlet	"
Crimson	"
Variegated	"
Yellow	"

Twelve distinct varieties.—1st \$10, 2d \$8, 3d \$6. Twenty-five distinct varieties.—1st \$20, 2d \$15, 3d \$10.

Special premium offered by the Florists' Exchange for the vase of blooms showing best culture, \$25.

Certificates of merit will be awarded all new varieties of distinct merit.

The American Carnation Society will hold two sessions each day in lower Horticultural Hall, at which the following papers will be read and discussed: Carnation plants for winter blooming, J. L. Dillon, Bloomsburg, Pa.; Carnations from the cutting to the field, Wm. Swayne, Kennett Square, Pa.; Review of carnations the past decade, Edwin Lonsdale, Chestnut Hill, Pa.; The care of carnations during winter, W. B. Du Ric, Rahway, N. J.; What are the advantages of disbudding carnations? C. H. Allen, Floral Park, N. Y.; Why is the carnation a popular flower? E. G. Gillett, Cincinnati, O.; How to distinguish the diseases of carnations, Prof. Byron D. Halsted, New Brunswick, N. J.

The New York and Philadelphia delegations will leave New York by Fall River Line steamer at 5 p. m. Wednesday, Feb. 20. All those who can conveniently do so are invited to join this party, and Mr. Eugene Dailedouze will, upon request, be pleased to secure state-rooms and arrange otherwise for the comfort of those attending. For further information address Eugene Dailedouze, president, Flatbush, N. Y., or C. J. Pennock, secretary, Kennett Square, Pa.

Chester County Carnation Society.

The regular meeting of the society was held in Kennett Square, Pa., Saturday, February 2, and despite the stormy

ARRANGEMENT OF ORCHIDS ON CORK BARK NO. 2

weather there was an unusually large attendance. The subject discussed was the dying of leaves on some varieties after lifting. Wm. Swayne thought it due to dry weather followed by late growth in fall. C. J. Pennock gave a brief explanation of difference in appearance between simply a dying of leaves and the destruction of tissue from bacterial disease. E. Swayne thought it always advisable to clean off dead leaves to insure a quicker and healthier growth. Louis Eastburn found that in a lot of *Portia* plants where some were cleaned and others not the former gave better flowers throughout the season but he thought no more.

Joseph Renard had tried vaporizing

and use of tobacco dust to destroy aphids, but had found neither effective and returned to use of tobacco stems dampened and burned. Wm. Swayne said he began smoking to kill aphids at once after lifting plants in fall, making use of it twice a week lightly and found it entirely effective.

Pres. Ladley called attention to the coming meeting of the American Carnation Society, which was to be, he thought, the best meeting ever held under the auspices of the national society.

The particular feature of the meeting was the flower exhibition and the exhibition of diseases of the carnation under charge of Prof. Halsted of New Brunswick, N. J. Among the cut flowers shown

were seedlings from Hicks & Son, two fine pinks; Louis Eastburn showed good reds and C. P. Barnard some dark ones. A bunch of about 25 seedlings in great variety of color came by express from Hancock & Son, Grand Haven, Mich., as the meeting opened, and while showing the effects of travel, many of them were extremely promising. A bunch of Ruth (white shaded pink) from F. M. Pennock, Charleston, W. Va., came by way of a Phila. commission house, and considering the time en route, were very good, stems stiff, flowers fine form and quite fragrant.

Theo. Whitson had found some trouble with Daybreak not opening well and showing a stained appearance on buds as they were opening. Wm. Swayne thought the bottom of bench might be found dry. E. Swayne gave notice of his attempt to keep some flowers of his seedling Jack Frost for the Boston meeting; flowers are now out and will be held three weeks for the exhibition. C. J.

Miscellaneous Seasonable Hints.

Pelargoniums that you want in flower for Easter (the old cut down plants are most useful for this) should now receive their last shift and be given more heat than they have had since last November. Always give them a light house with plenty of air round them. Remember to pot firmly, using a good strong loam with a fourth or fifth of some well rotted manure. While you are at the old plants select some of the stronger of the young plants that are now in 3 or 4-inch pots, and shift into 5-inch, in which they will flower. You will then have a succession. I found last spring that these beautiful flowers paid to cut as well as they did to sell in pots. Two varieties especially suited for cutting are Mrs. R. Sandiford, a beautiful white, and Mme. Thibaut, a lovely soft pink. The greatest enemy to the show pelargoniums is aphids, which will work sad havoc with them if allowed to attack them. So a constant regular fumigating must be kept up.

The Easter batch of cinerarias should now be in their flowering pots. A 5 or 6-inch cineraria will take a very rich soil. They like rotten cow manure, but don't let the soil be sifted fine; it is better coarse. It drains better and the roots thrive in it better. Some good English gardener said the sieve was the curse of the potting bench, and in a large sense he was right. The cineraria is a cheap plant, but if well grown will sell well at Easter. It must have a low temperature, plenty of light and plenty of room. Spread tobacco stems among the pots, and renew them every three or four weeks; it will help much to keep down the troublesome greenfly. This plan is particularly good for calceolarias, for while sure to be troubled with fly they don't like strong tobacco smoke, and their broad thick hairy leaves secure a good shelter for the aphids.

If you cut your second crop of smilax at the holidays, which you should have done, and the young growth is up a foot or two, now is a good time to apply a top dressing to the bed, for most likely many roots are showing on the surface. Cow manure that is not too fresh mixed with an equal portion of loam will do well for the purpose. If that is not to be had any manure that is not too fresh will do. Any manure used as a mulch when too fresh is liable to do much harm. The ammonia arising from it on bright days when it is too cold to give air has many times been the cause of trouble.

You have not been giving chrysanthe

mums much thought of late possibly. The old plants have been or should have been in come light cool corner or in milder latitudes in a cold frame. Perhaps you have some cuttings potted off and growing. There is no better plan to increase your stock of any variety than the method recommended by Mr. Elmer D. Smith last year, viz., when the cuttings are well rooted plant them out a foot or 15 inches apart in 3 or 4 inches of good soil on a bench. You will get ten times more cuttings than if grown on in pots, with a fourth of the labor, and the cuttings will always be brittle, and in that state a chrysanthemum cutting must be if you expect a good plant. I believe such sorts as are liable to come blind, notably that still grand variety Mrs. Bullock, would if propagated this way be far less liable to come so often blind. From these young plants put now on the bench you can continue to take cuttings till June. Select only the most vigorous plants for the purpose. WM. SCOTT.

Fertilizers for Roses.

Many think that because the rose is a strong, vigorous growing plant it will take liberal and strong fertilizing. There is no greater mistake made than this, so far as greenhouse culture is concerned at least. A correspondent sent me a sample of the leaves from his plants after having watered them with a solution of nitrate of soda, one pound to 50 gallons of water, and the effect was certainly very apparent; the edges of the leaves looked as if they had been scorched with fire and he says many of the young shoots are shrivelling up and turning black at the points and I am not surprised that they do after his having used this powerful salt in such proportion. I have tried many experiments with nitrate of soda and with me it has never been safe to use over half a pound to 50 gallons of water and even then should not be repeated too often. We have found once in twenty-five days often enough. And while on this subject it might be well to mention that for ordinary purposes the same law applies to all liquid manures, except in quite old plants where they have been growing two or three years in the same soil and the whole is a mass of roots; in such cases they will take it a little oftener particularly as the days get longer and the sun brighter. More plants are destroyed by over-feeding than by any other cause. A much safer method to follow is to feed lightly, or, to be more exact, make the liquid 25 to 50% weaker than is usually considered the right proportion, then when the plants are in proper condition to apply it give them a good soaking; furthermore, any liquid manure should be clear enough to see through it. In this condition the roots can utilize it at once and the plants will feel the effect almost immediately. Many think if a little is good more is better, but the sad effect of this doctrine is brought very prominently before us in every day life. JOHN. N. MAX.

New York.

The fashionable mid-winter season is fairly on now. A brisk demand is experienced all along the line and it is felt especially in the choicer grades of roses and carnations, prices of which are maintained easily at figures which ought to be satisfactory to both buyers and growers. More than ever the good stock is on top; only after that has been cleaned up is there a living chance for the poorly grown or carelessly handled, and the prices of the latter bear no comparison to those received for the former. Next to roses violets and carnations, orchids seem to have the call, and since the wholesale market price of cattleyas fell to \$3 and \$4 per dozen the consumption of these splendid flowers has increased amazingly. Occasionally there is a sudden special call for something which ordinarily counts for but little in the flower market. Such was the case recently when the death of Miss Marguerite Shepard, youngest daughter of the late Col. Elliott F. Shepard caused a demand for marguerites to be used in funeral tributes, which was satisfied with great difficulty. Among the novelties which attract attention are Japan quince, crab apple and forsythia blooms and flowering plants of Azalea mollis and double flowered almond. Geo. Stump's window is filled with this class of stock and it is much admired. There are some very handsome ericas and azaleas coming in at present. Ribbons and crepe tissue paper are used to hide the flower pot or to add brilliancy to the plant, and in this form they have a large sale in the leading stores. The general sentiment which seems to prevail is that the flower business is in a prosperous a condition as usual at this season.

The echoes of the fake story about Mr. Astor's extravagant order for flowers to be placed on his wife's grave have not yet ceased. The country papers are still harping upon "perishable pomp," "scornful rebukes," "wasteful extravagance," and "melancholy satisfaction," and are working themselves into a perspiration, alternately discussing the more excellent uses to which the money might have been put and calling each other down for their censorious faultfinding, and the New York journals which first gave currency to the miserable yarn, have not yet been honorable enough to contradict it or to acknowledge that the tawdry looking contrivance which they pictorially represented under the name of a princely floral mantle, never had any existence outside the imagination of their inventive sketch artist, although abundant proof has been given them of the utter falsity of the whole matter from beginning to end. As near as can be estimated, all the flowers used at the funeral in question did not exceed \$200, and none have been placed on the grave since then, nor have any orders to that effect been given. The indignation among those having regard for the best interests of the florist trade has not subsided but rather increased as the fact gradually comes to light that the story had its source in the old combination of a conscienceless florist and a gullible reporter. It is hard to understand how any florist can be so blind to the injury such misrepresentations are bound to work upon the business in which he is engaged, or wherein it can afford him satisfaction or prospective personal advantage. The general condemnation which prevails in the present instance is a warning which should be heeded by those who are inclined to indulge in these tricks.

The funeral services over the remains of the late Ward McAllister took place at

Grace Church on February 4. There was a great profusion of floral offerings. It is said that the announcement by this gentleman that no lady would wear any flowers but violets to the horse show last fall was primarily the cause of the tremendous rush on violets, which took place in New York at that time and forced the prices up to such an unprecedented point. Be that as it may, it is still a fact that the noted society leader made no attempt to pose as a dictator as to floral fashions, and was never regarded as an especially eminent authority in such matters. On account of the intimate relations, however, which he enjoyed for some years with high society, his favor was at one time much sought after by florists who aspired to the patronage of this class of flower buyers, and in this direction he undoubtedly exercised a considerable influence. He was, naturally, well known to the leading florists, all of whom speak of him as a courteous gentleman, genial and unassuming in manner, in fact, anything but the dude which popular fancy has pictured him.

The New York Florists' Bowling Club met the Flatbush aggregation in a friendly game of bowling on the afternoon of Monday, February 4, and vanquished them by a score of 1232 to 979. There was quite a large number present, and everything went off pleasantly, all being in the best of spirits and bent upon having a good time. Arrangements are being made for a return match to be played in Flatbush in the near future. The following are the scores made at Monday's game:

NEW YORK.		FLATBUSH.	
Kepler,	223	Mellis,	147
Hafner,	127	Riely,	108
P. O'Mara,	145	P. Dailedouze,	158
Burns,	155	H. Dailedouze,	133
C. H. Allen,	142	Burnett,	102
J. Young,	125	Schmutz,	88
Horan,	159	Zeller,	120
Leuly,	156	Bergmann,	123

Total 1232 Total 979

The members of the North Hudson County Florists' Club had an elegant time at their dinner at West Hoboken, on the evening of January 23. The tables were beautifully decorated, and some fifty of the members and their friends attended. Mr. Chas. Dietz, the president of the club, presided and extended a hearty welcome to the guests, after which speeches were made by quite a number of those present, and music was rendered by some professional musicians, assisted by amateur talent. The meeting broke up at an early hour on the morning of January 24.

Julius Lang, who has been for a number of years with Theodore Roehrs, has taken the store recently vacated by Mr. John Young, at 53 West 30th street, thus adding one more to the list of wholesale commission florists in this city. Mr. Lang has made many friends in the trade, and will no doubt succeed in establishing a profitable business for himself.

Messrs. Siebrecht & Wadley have just completed a new iron rose house, 20x240, which is to be devoted at once to the young stock of the rose Belle Siebrecht. The house will accommodate 80,000 young plants.

Mr. A. F. Brabant, the dealer in florists' pins, has received an invoice of about 1,000,000 pins with heads of a new and very effective shade of violet.

D. H. Roberts has moved his glass establishment to 132 and 134 South 5th avenue, where he will have a much finer

FIRST PRIZE ORCHID BASKET AT LAST CHICAGO SHOW. ARRANGED BY P. J HAUSWIRTH.

location and largely increased floor space. Thos. W. Weathered's Sons have moved their office to 139, 141 and 143 Centre street.

The establishment of Isidore Kaufman, 984 9th avenue, was damaged by fire to the extent of \$1,000, on February 2.

Mrs. Spencer, Conway street, Brooklyn, has sold out to W. H. Hall.

The wife of J. M. Hodgson died of pneumonia on January 24.

Boston.

Thermometer below zero and wind blowing a hurricane are not the conditions most conducive to a large attendance at a florists' club meeting. It is therefore worthy of record that the session of the Gardeners' and Florists' Club on Tuesday, February 5, the coldest night of the season, was one of the best attended meetings for many months, and there is no question that those who were there felt well repaid. Judge Hoitt's masterly address was listened to with closest attention and the discussion which followed, Messrs. Foster, Crowley, Ewell and Finlayson participating, showed that the audience were in full accord with the sentiments expressed by the essayist. Much pleasure was also derived from the entertainment kindly furnished by Mr. Augustus Zirngiebel, who played some beautiful solos on the cornet and created

much enthusiasm by a novel musical performance upon a collection of ordinary flower pots.

On the table were exhibited blooms of the two new roses Belle Siebrecht and Mrs. Pierpont Morgan and carnation Dean Hole, which had been sent by Mr. John N. May and Messrs. Siebrecht & Wadley for the inspection of the members. It was announced that the banquet to be tendered by the club to the American Carnation Society would take place on the evening of February 21 at the Hotel Brunswick.

Galvin's greenhouses on Belmont street, Cambridge, were damaged by fire to the amount of \$500 on the night of February 5.

The exhibition at Horticultural Hall on Saturday, February 2, was surprisingly good, surpassing any before seen at this season of the year. It was prize day for orchids, violets, carnations and camellias. There was a beautiful display of orchids, plants and cut blooms by Mrs. F. L. Ames. Specially noticeable were two hybrid cypripediums, one named Mrs. F. L. Ames, a cross between C. Tonsum and Fairieanum, and another called C. Balantine, a cross between C. purpureum and Fairieanum. On violets the competition was brisk, and the prizes were awarded to W. N. Craig, N. T. Kidder and H. S. Rand, as first, second and third. Marie Louise, as shown by David Nevins,

was superb. Wm. Nicholson, W. N. Craig, Sewall Fisher and Fisher & Aird were represented by numerous fine carnations, among which were several seedlings of much promise. As usual, F. B. Hayes had it all his own way with camellias, of which he showed a large collection. There was a big audience present to hear Mr. J. W. Elliott's paper on hardy plants and shrubs.

The cut flower trade is going along at an easy jog, there being just about enough stock received to supply the steady demand, with no very great scarcity or overstock in any line. Colored carnations sell at outside prices as soon as received; white ones go more slowly. Roses, if extra good, bring as high as \$2 per dozen, but there are a good many roses sold for a very much lower figure. Of hybrids there are none coming in yet excepting Magna Charta, although later on there will be a supply of many of the best varieties from several large growers. Bulbous stock is in fair supply with light demand. Double daffodils, as usual, sell better than single unless the latter are extra large and fancy. In tulips the only sorts that sell well are the light pink tinted varieties. Harrisii lilies are shortening up in supply. The first receipts of longiflorums have appeared at Geo. A. Sutherland's and they bring on an average 25 per cent better prices than Harrisii. Smilax is decidedly scarce; this is an unusual occurrence so early in the season. Asparagus is also pretty well cut out and the prospects are that it will advance in price. Mignonette is very plenty and sells slowly.

Mrs. Louis Sander of Falmouth, Mass., who was lost in the Elbe disaster, was the sister-in-law of Mr. Chas. Sander, gardener to Prof. C. S. Sargent at Brookline.

Frank Becker has been seriously ill with bronchitis since January 1. James Comley is confined to his home suffering with the grip.

Chicago.

Market conditions remain about the same as last week. There is no let up in the weather, in fact the temperature dropped several degrees lower than had been recorded previously. It is no wonder therefore that the supply keeps at low ebb. Bulbous stock, which isn't so much subject to weather conditions, is offered somewhat more freely but is not by any means too plenty. Tulips are much improved. At Kennicott Bros. we note some very good Keiserkroon and Yellow Prince. The Klehm Nursery is sending in some of their famous La Reine grown as usual with a rich pink color. Von Sion are fairly plenty, but move rather slowly at 5. Valley is still very short in supply and there is no trouble in obtaining 5 for good stock. Dutch hyacinths are coming in of fairly good quality but there seems little call for them at present. Owing to the scarcity of white in every line Romans are in great demand.

There is no change in the price of roses. Good Bridesmaid, Meteor and Testont bring 8, Mermets, La France and Wootton 6 to 7, Perles and Gontiers 4 to 6. Jacqs have make their appearance. T. J. Corbrey is handling some very good blooms grown by F. Stielow. These sell at \$2 per dozen. The same grower has three houses of hybrids which will be in crop in a week or two. This stock promises very fine this year.

Poehlman Bros., of Morton Grove, had an accident to their heating apparatus which caused a serious loss. The place is heated by hot water with two of the

largest size tubular boilers. These boilers are of ample capacity to heat the extensive range of houses, but for some reason trouble was experienced in securing a proper circulation of water through the pipes, affecting a section of 9 houses. The trouble kept growing worse and couldn't be located until Sunday night, when Mr. Mailander of Niles Center who is quite an expert in heating apparatus, was called in. Then it was found that the flow pipe extending from the boiler for about 30 feet was clogged up with a deposit of lime and iron which had formed a thick coating inside the pipe, which left in some parts barely an inch in diameter for the water to pass through. To take down the pipe, clean it, and put back in position took only three hours, but as the water had to be turned off during that time and with a temperature outside of 15° below zero (Sunday, February 3) it was impossible to keep the frost out. All the oil stoves that could be obtained were placed near the pipes to keep the water from freezing. About 50 of these little heaters were placed in the 9 houses but in spite of them the temperature dropped to 20° to 24°, which of course ruined the contents of the houses. Four of these are in violets, which, having been covered with paper and matting, may recover somewhat by spring. Three houses of carnations are badly frozen. One smilax house had just been cut out and the loss on that is small. The last house was used for forcing bulbous stock. As this was all in portable shape, being grown in boxes, the stuff was quickly removed to safe quarters and was nearly all saved.

Speaking of this accident Mr. Mailander is of the opinion that the cause is in the system of piping and that it may occur again so long as only one feed pipe is attached to the boiler, especially if the water, as is the case here, is largely impregnated with iron and lime. The water while passing through this single pipe is of such a high temperature that it dissolves these small particles of iron, lime, etc., which form a coating inside the pipes. He thinks that if three feed pipes (for which the boiler is made) are used there will be no trouble. The unfortunate experience of the Messrs. Poehlman should be a warning to others who have similar conditions to deal with.

At a meeting of the executive committee of the Horticultural Society of Chicago held last Saturday a premium list for the chrysanthemum show of 1895 was adopted and ordered printed. The dates decided upon are November 5 to 9 inclusive, making a five-day show. Owing to the crowded condition of the hall at the last show it was decided to this year engage both the armories, connecting the two together, as has been done recently for other large exhibitions. This will surely give abundant room.

The organization of the Chicago Florists' Bowling Club has been perfected. The officers are as follows: J. S. Wilson, Pres.; Robert Schenk, Sec'y; Chas. Held, Treas. It is proposed to have practice games every other Thursday.

Montreal.

The Montreal Gardeners' and Florists' Club at their annual meeting January 28, elected the following officers for the year 1895: President, John Eddy, re-elected; first vice-president, John Walsh; second vice-president, George Robinson; treasurer, A. C. Wilshire; recording secretary, Fred Bennett, re-elected; assistant secretary, Frank Bennett; corresponding secretary, Jonathan Bland. Committee,

James McKenna, Joseph Bennett, Wm. Whiting, John Perrin, George Pasco, Walter Wilshire remaining in office as ex-president. The secretary's report for the year was very satisfactory. There were 77 paid-up members at the end of the year, an increase of about ten over 1893. The various social events of the year were very successful, viz., annual dinner, winter games, field sports, July picnic. The chrysanthemum show was far ahead of any previous year in point of excellence of exhibits and number of entries, the door receipts being in excess of any previous year, but not sufficient to pay the prizes in full, the absence of special subscriptions towards prize list last year contributing to the above result, but there is consolation in the fact that the flower show of which enough money was taken at the door to pay all expenses has not been held in Montreal yet. The annual dinner took place immediately after the election of officers, in the club room, the election having taken place in the library of the Institute. The decoration committee with the use of an abundance of evergreen wreathing and Chinese lanterns succeeded in giving the room a very rich appearance. The table was T shape, and was a mass of rich bloom. Down the center were numerous fine specimen azaleas, cyclamens, *Spiræa japonica* and pans of daffodils and tulips, also several thousand cut flowers, such as daffodils, tulips, freesia, carnations, Roman hyacinths and roses, in glass bowls and vases. Forty-eight members sat down. The bill of fare was everything that could be desired. After full justice was done to the good things provided the chairman called for order while he proposed the first toast "Our Queen," after which came a number of others intermixed with songs and recitations. Wm. Graham of the firm of Wm. Ewing & Co. responded eloquently for seedsmen, J. McKenna of P. McKenna & Sons and Walter Wilshire for the growers, Alfred Wilshire for the store keepers, Wm. Whiting for the private gardeners, George Trussell for the S. A. F., John Doyle for the Montreal Horticultural Society, Secretary Bennett for the ladies, while "The press" was responded to by representatives of the *Star* and *Witness*. At 2 a. m. Auld Lang Syne was sung and a very happy jolly party broke up.

Echoes—The singing of the "Dear little shamrock" by Graham was a graceful compliment to Charley McHugh's rendition of "Scotland yet." Our "weather prophet" says he will have a new song for the next annual dinner. The "Red white, and blue" takes better with the boys than "Cushing." Lot of better things have come over the water than "London's latest comic song." Bill Wilshire can always be depended on for something good whether it be an orchid at the show or a song at the dinner. Jonathan kicked against having a dinner and I believe he has occupied his leisure time since in kicking himself for having missed it. The boys never seem to tire of Tom McHugh's "Opening time."

A. Martin has opened a new store opposite his old stand on St. Catherine street, it will be run by his son.

It is reported that Girdwood intends to move on to St. Catherine street in the spring. There are nine florists on that street at present.

There has been a glut of Roman hyacinths all winter. Paper whites have been in better demand this winter than last. Daffodils are beginning to come in now in quantity with a good demand so far. Dutch hyacinths with from 3 to 6 bulbs

in shallow pots from 6 to 8 inches wide and 4 inches deep are all the rage here. Azaleas are nearly all grown in the shallow pots also this winter, they are better for table plants than in the old style pot.

Considerable complaints are heard about carnations this winter, the want of a good white is badly felt. Walter Wilshire is cutting some excellent roses just now, Walter made a good hit on azaleas for Christmas this winter. Mushrooms are a drug this winter, fifty cents a pound is the ruling price just now. P. McKenna & Son have a very pretty pink sport from President Cleveland bouvardia. BEAVER.

St. Louis.

Trade for the month of January has been very good, more especially for the latter half of it. The continued severe cold weather has kept stock rather short, while the numerous society events in progress have necessitated the placing of orders out of town for stock in several instances.

About the largest decoration of the season was recently arranged by the C. Young & Sons Co., the occasion being a ball given by Mr. Pierce. The entrance hall was decorated with Beauty roses, a large vase containing 36 being placed in the center of the apartment. The mantel was covered with valley, two vases of Beauties standing on the ends, the fireplace being filled and banked with plants. A specimen plant of cattleya covered with flowers was suspended from the ceiling, attracting the attention of all. The reception room was finished in orchids and valley, baskets filled with them being placed on mantel and tables. Vases filled with valley were scattered throughout the room. Numerous pieces of bark upon which orchids were worked were suspended against the walls, giving a novel effect. The parlors were in pink and white, *Mermet* roses and hyacinths being used. Baskets of silk matching the color of the walls were filled with *Mermet*s and hyacinths, trimmed with white ribbon and suspended against the walls from the side chandeliers. The mantel was also in *Mermet*s and hyacinths, the lower part being banked with plants. Vases of *Mermet*s were placed wherever opportunity presented, 500 roses being used in this room alone. The library was in yellow, *Perle* being the only flower used. Three large baskets were placed on mantel and table, while roses were in evidence everywhere. Several fine specimen plants of palms occupied pedestals, giving the room a very graceful appearance. Specimen plants were used in all the rooms where opportunity offered, and gave a graceful finished appearance to the whole. The central table in the dining room held a large vase of Beauties. The sideboard and tables held large bunches of *Meteor* roses. Plants were also used liberally. The ballroom was finished in cattleyas and *Mermet* roses. Hat baskets of *Mermet*s and cattleyas trimmed with white were suspended around the walls from the chandeliers. The central chandelier was covered with smilax, while a screen of the same material was drawn across one end of the hall concealing the musicians. Specimen plants were placed around the sides of the room. All the upper rooms were adorned with vases of roses, the ladies' room being in white, valley and Romans being principally used, several vases of *Cusins* being the only color allowed. The gentlemen's room was in red carnations. The decoration as a whole was most effective and well carried out. R. F. T.

SECOND PRIZE ORCHID BASKET AT LAST CHICAGO SHOW. ARRANGED BY W. J. SMYTH.

Society of Indiana Florists.

The annual meeting of this society was held in Indianapolis February 4. The cold snap probably prevented the attendance of some of the members; however, a goodly crowd was before President Coles when he opened the meeting at 3 p. m. The president pointed out the fact that notwithstanding the unfavorable weather during the exhibition last fall there was but a small deficit. He stated that the society was never in a more prosperous condition, and recommended that great care should be exercised in awarding premiums and certificates.

The minutes and secretary's report were read and approved. The treasurer's report showed a balance of \$217.68 in the treasury.

A committee was appointed to go over the excellent flowers brought for exhibition, being instructed to use discretion in awarding the society's certificate to new and rare flowers.

Mr. Dorner was called on to read a paper on florists' clubs and how to make them more successful, but excused himself by saying that after long study he could not suggest any more than had been already done by our society at least. We have given splendid exhibitions, held the members together by social entertainments, and invited the profession in gen-

eral to visit our state and our meetings. He thought that in many places florists did not appreciate the importance of clubs and societies. The discussion that followed was participated in by many of those present.

The paper read by Mr. E. G. Hill was a review of exhibitions that he visited last fall. He gave his experience, and also made note of the principal items of interest. He remarked that while many shows were not so successful as anticipated on account of miserable weather most of them would try again the coming season. The discussion on this paper brought up the question of saving in decoration and placing higher premiums, but this being matter for recommendation to the new exhibition committee the discussion was voted closed.

After the adjournment of the afternoon session an informal supper was served. Of course witty speeches were in order after the appetite was satisfied.

At the evening session the question of holding another show was brought up, and occasioned a lively discussion. We're some favored caution in going ahead this year the general sentiment was in favor of another show, and it was so decided. E. G. Hill, J. S. Stuart and F. Dorner were appointed as an exhibition committee.

The election of officers resulted as follows: President, W. W. Coles, Kokomo; vice-president, Henry Michel, Marion; secretary, Robt. McKeand, Indianapolis; assistant secretary, J. S. Stuart, Anderson; treasurer, J. T. Huntington, Indianapolis. Auditing committee: A. Wiegand, Henry Rieman, John Bertermann.

The committee on awards reported that the best pink carnation shown was Mr. Dorner's Bridesmaid. Having received a certificate last fall it was given special mention. The same exhibitor received honorable mention for Mrs. C. H. Dubme, Uncle John, Storm King and Meteor. In addition to these Mr. Dorner showed some fine Stuarts, a fancy variety which was an improvement on Helen Keller, and a fine feathery white of peculiar form. Hill & Co. received honorable mention for a pink seedling (an improved Wm. Scott) and for A. M. Herr, and a certificate for the best red, the variety being Jubilee. Henry Michel displayed some fine seedling carnations, among them a yellow, which received honorable mention, and two very good pinks. The M. A. Hunt Estate sent Peachbloom, a fine rose pink.

Whitney roses were shown by Hill & Co., Meteor, Bride, Bridesmaid and Niphetos by M. A. Hunt Estate, Bridesmaid, Testout, Kaiserin and Perles by J. S. Stuart. Bertermann Bros. showed some cinerarias that would be hard to beat, and a fine box of Russian lily of the valley. W. B.

Society of American Florists.

The annual session of the Executive Committee of the Society of American Florists will be held at Pittsburg, Pa., beginning on Tuesday, March 12, 1895. An important duty devolving upon these gentlemen at this time will be the selection of subjects to be treated on by essayists at the convention in August next. To do this to the general satisfaction of the members becomes each year a more difficult task.

Many of the members of the society no doubt have ideas as to subjects which could be with profit embodied in the program for next summer's convention or could suggest to the executive committee plans of improvement or advancement in the society's work. Now is the time to bring such matters to the attention of the executive committee that they may receive careful consideration. Criticising the committee's work afterwards is an easy matter. Much better, however, if the critics would assist the committee with suggestions beforehand. Pertinent suggestions from any member of the society are always gladly welcomed and will receive due and courteous consideration.

Communications should be addressed to the secretary, Wm. J. Stewart, 67 Bromfield street, Boston, not later than March 9.

S. A. F. Charter.

The committee having in charge the S. A. F. charter pending in Congress, Messrs. Smith and Durfee, made a bold strike last Tuesday to get the bill through the Senate. It having passed the House during the extra session last summer they thought they had but an easy thing to get it through the Senate and then it would only require the President's signature to become a law. But they ran against an unexpected snag when Senator Proctor asked unanimous consent for the present consideration of the bill known as H. R. 5740, to incorporate the Society

of American Florists, Mr. Gray of Delaware, asked the question if this intended corporation is to be a corporation in the District of Columbia or is it intended that it shall bloom in all the states of the union. This provoked a discussion which was entered into by Senators Proctor, Gray, Frye, Chandler, Hunter, Hill, Bates and Harrison on the constitutionality which was fully brought to a close by Senator Hunter offering an amendment striking out the words "And such other states as may be donated or bequeathed in any state or territory," which was agreed to. Senator Gray was anxious that the entire matter be referred to the Judiciary committee, but our friends were on the alert and the motion was lost. With this amendment the bill was read a third time and passed. The amendment as it now stands will prevent the society from owning real estate outside of the District of Columbia. Senator Proctor, who is a warm friend of the bill, asked that the Senate request a conference with the House of Representatives on the bill and amendment, which was agreed to, and Senators Ransom, Peffer and Proctor were appointed. The matter came up in the House last Friday, and Mr. Hatch, Chairman Committee on Agriculture, from which committee the bill was reported, moved a nonconurrence in the Senate amendment, and asked for a committee to confer with the Senate committee which was granted. Mr. Hatch, Mr. Forman and the other whose name I could not learn were appointed. The bill is now in conference with five out of the six members friendly to the bill. Both Mr. Smith and Mr. Durfee have no doubt that the bill will pass some day this week, and will be all signed and ready by the meeting of the Executive Committee of the S. A. F. at Pittsburg, when those interested will have an opportunity to discuss the matter. REYNOLDS.

Philadelphia.

The demand for flowers the past week has been good and stock of all kinds has been moving lively. Good hybrids have the call, Brunners particularly being in demand. All good flowers sell readily for 50, seconds, and there are very few that are not considered first-class, go for 30. Heacock, Burton, Anderson and Smith & Whiteley are the hybrid men. Laings are cut out just for the present. Beauties and Belles are also in demand, \$5 per dozen now being top price except for extra long ones. All the large teas are in good shape and range in price from \$6 to \$10, with a very few extras bringing \$12 to \$15. Smaller roses sell for \$4 to \$5. Carnations sell very well and the great majority of the stock seems pegged at \$2, extra choice bring \$2.50 to \$3. Valley is plentiful at \$4. Tulips bring \$4 to \$5. Double daffodils have taken a tumble and are now \$4. Double daffodils used to be a profitable crop according to one of the growers a few years ago, but of late there is little profit in them. It was a poor bulb that did not produce two flowers a few years ago and very often three and four were cut from one plant, but now 125 flowers from 100 bulbs is about what to expect. Double violets continue in fair demand and range in price from 75 cents to \$1.50 per hundred. Single are now sold at \$2 to \$3 per hundred bunches, 20 flowers to a bunch. There seems to be quite a good deal of interest taken in violets this year and it looks as if there would be a better supply of this flower in Philadelphia next season.

The meeting of the Florists' Club last Tuesday evening was well attended despite the weather, which was very cold. The members met in the club room, Horticultural Hall. Robert Craig made a report on the new clubroom, which promises to be a grand affair and all that the club could wish for.

A very interesting paper on "Double violets as a profitable crop," written by Wm. Swayne of Kennett Square, was read by Robert Craig. In the discussion which followed it was shown that the path of the violet grower was not a very flowery one and that he had much to contend with. Wm. Baker was asked to give the commission man's side of the question. He said that double violets were an excellent flower to handle when nobody else had them; then he could sell lots of them and get a good price. At this time he could sell white carnations better than violets, which sold very slow. He raised a great laugh by saying he had violets in his ice box for two weeks, which some thought might explain his inability to sell them. Mr. Craig spoke of violets that Mr. Harris had raised in solid beds in low houses years ago which were very fine, but at that time he could only get 50 cents per hundred for them even at Christmas, and as they did not pay at that he gave them up. He grew Marie Louise. This kind Mr. Craig said on account of the violet disease, had been very troublesome to grow. The variety Lady Campbell seemed to be entirely free of this trouble and was doing very well with most growers who were growing it.

Mr. Cartledge had been handling Mr. Swayne's violets, all Lady Campbell, this winter and said they were always very good and exceptionally sweet. He said it was hard to keep the fragrance about double violets any length of time. He had found the best place to keep them was in a protected box outside in the open air; here they would keep fresh and fragrant for several days. He had found the Campbell violet to sell better than the dark one the past season. Mention was made of the new violet from California. Mr. Eisenhart of Holmesburg was said to be growing it and some thought it was the old Wilson variety, as it resembled that variety very much. Some growers said that the flowers of plants that were affected with spot would smell of it and soon lose all fragrance. Mr. Westcott said that good violets could not be grown near a large city as they were sure to get diseased. K.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. I want ads not admitted under this head.

SITUATION WANTED—By first-class gardener and florist; one who understands about every cultivation. Address M. P., care American Florist.

SITUATION WANTED—By a young man, age 19, as assistant in commercial place; has had 5 years experience. Can furnish best of references. Address JOHN CLARK, Calia, O.

SITUATION WANTED—By young florist, German, as assistant in good private place; good references. Address POPE, Simpson Estate, Westchester Ave., N. Y. City.

SITUATION WANTED—By experienced rose grower, forceful and reliable propagator, as foreman; competent to take full charge; East or South preferred; references. X Y Z, care Am. Florist.

SITUATION WANTED—By a first-class gardener or florist, age 22; 8 years' experience, sober and reliable; best of references. Address GARDENER, 746 Central Ave., Dover, N. H.

SITUATION WANTED—By a single man, age 28, strictly sober, four years' experience growing roses, carnations, general bedding and table plants, also design work, with some good florist; wages low. E. C. F. M., Dover, N. J.

SITUATION WANTED—By a married man, German, 31 years' experience in growing roses and all kinds of cut flowers, competent to take charge of a private or commercial place. Address A B, care American Florist.

SITUATION WANTED—By practical gardener and florist; thoroughly understands the growing of flowers, fruit and vegetables under glass; single, excellent references; private place preferred. Address A G, 356 Cumberland St., Brooklyn, N. Y.

SITUATION WANTED—By April 1st by a rose grower to take full charge of a medium sized plant where roses are made a specialty; understands his business, private or commercial. For full particulars address "WARNER," box 741, Nyack, N. Y.

SITUATION WANTED—By March 1 or before as florist or gardener 20 years' American experience; practical, energetic, good propagator and designer, wants good pay, or work on percentage; German, single, middle age. Address A J, care Am Florist.

SITUATION WANTED—As second gardener or to take charge of private place, 11 years experience, strictly sober, willing to do anything wished; permanent place required; married, no children, English; best reference GARDENER, box 17, Kenosha, Wis.

SITUATION WANTED—Young man, 28, would like a position in retail place as general man for making up and outside decoration; no objection to extreme west; familiar with Boston and New York styles; American and single. Address DECORATOR, care American Florist.

SITUATION WANTED—By a first-class florist and landscape gardener, Swiss, in a private place with greenhouse, March first; 4 years' experience in Europe and 3 years in large private place in this country; best of references. Address F. BURKHART, 1438 Noole Ave., Lake View, Chicago.

SITUATION WANTED—German, 33 years old, married, who has been foreman in large commercial places in this country for the last eight years, wants position as such, after the 15th of February. Have had seven years' European and 12 years' American experience. CHAS. JOHNSON, care Henry Timmer, 804 Commercial Ave., Jersey City, N. J.

SITUATION WANTED—By practical plantsman, fully posted on the general requisites of commercial places, including cut flowers, roses, carnations, etc.; general propagation, items of the nurseries, executive ability in the general management of inside, outside; best recommendations. For more particulars address PLANTSMAN, care American Florist.

WANTED—Catalogues and price lists of greenhouse material of all kinds. F. MEISENBURG, St. Cloud, Minn.

WANTED—To buy small florist business of about 5 to 6 thousand feet of glass. Address INDIANA, care American Florist.

WANTED—A young well recommended florist for retail store. H. F. HALL, 548 W. Madison St., Chicago.

Ill health the cause of wanting to sell. A great bargain to the right one. Address MRS. GEO. R. FRAVELL, 322 Washington St., Marlon, Ind.

FOR SALE OR EXCHANGE,

Strong healthy blooming size surplus stock of Agapanthus Alba, Tritoma Nobile, finest double Dahlias, Amaryllis; offers at once.

H. E. GOLD,
Sussex, N. B., Canada.

The Rose for the Million!!

BELLE SIEBRECHT.

Always in bloom. An iron constitution. Requires no special houses, no nursing. Will make itself at home in any house where other roses are grown. Proved hardy in latitude of New York. Color and keeping qualities unequalled. The greatest introduction of the century.

What Mr. Montgomery of the Waban Rose Conservatories, at Natick, Mass., says:
OFFICE, BOSTON, MASS., Jan. 28.

MESSRS. SIEBRECHT & WADLEY:

Gentlemen.—After having grown 4 plants of your new Rose, Belle Siebrecht, for nearly a year I am decidedly very much pleased with it.

It has proved a strong, vigorous and healthy grower, and remarkably free flowering, while its very large flowers retain that beautiful clear deep pink color that is entirely its own, and the bud being so very long and pointed in shape there is no possibility of its bullheading or hooding over in dull weather, which is the case with so many other roses of this class.

On the whole we are so pleased with it that we intend to plant very largely of it for Boston market.
ALEX MONTGOMERY.

Another testimonial from a successful rose grower:

MESSRS. SIEBRECHT & WADLEY:

NEW ROCHELLE, N. Y.

It affords me much pleasure to express to you the very favorable opinion I have formed of your new Rose, after a careful examination of it at your place. It is certainly a beautiful rose, but what impressed me most was first its very fine texture and substance of the foliage, which I am sure is not excelled in this feature by that of any rose in the market, and, second, the very evident indications of the free blooming habit of the plants.

With these important characteristics I feel certain that the Belle Siebrecht will prove a valuable addition to our list of forcing roses.

With best wishes, I am

Yours truly,

S. C. NASH.

This Rose is not a mere SPORT, but is of a distinctly new strain, being a SEEDLING, the result of a cross between the grand old La France and that strong and vigorous Rose, Lady Mary Fitzwilliam. Many of the leading rose growers who have seen this Rose growing at our nurseries have ordered from 500 to 2000 Plants. Orders booked now and will be filled in strict rotation. Strong plants ready for delivery April 15th.

PRICE, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

SIEBRECHT & WADLEY,

New York Office, 409 FIFTH AVE.

NEW ROCHELLE, N. Y., U. S. A.

NEW CHRYSANTHEMUMS for 1895.

DEAN HOLE—Very large incurved massive flower with broad petals of exquisite form; white with beautiful soft shade of pink on outside, with extra good stem and foliage. Certificate American Chrysanthemum Society in Philadelphia.

NEMESIS—Very early, almost identical in color to Daybreak caration, and an ideal flower; dwarf, sturdy grower.

OLYMPUS—Very bold, round flower, 7½ inches through by 7 inches deep; white with clear pink on outside of petals.

SUNRISE—By far the best very early red; very fine color and form; average 7 to 8 inches through with fine stem and handsome foliage.

TRIBBY—Very clear white, and superior to Niveus in every way. Very late and a good keeper.

ZULINDA—Very late silvery pink, of fine build with good stem and foliage.

Sunrise, \$3.50 per dozen; \$25 per 100.
Dean Hole, Nemesis, Olympus, Tribby, Zulinda, \$6 per dozen; \$35 per 100.

FLOWERS FROM PEORIA. We recently received a box of cut flowers from Chas. Loveridge, manager for J. C. Murray of Peoria, which reflected great credit on the grower, and would stand comparison with the majority of stock now coming in. Carnations were represented by Day-break, Wilder, Silver Spray and Tidal Wave, all very good, though Mr. Loveridge says the small size of Wilder injures its sale; the color, however, was excellent. Some Wootton roses, cut from two-year old plants, were fine, and the same may be said of some valley, Romans, and violets. Mr. Murray's establishment is not that of a specialist, but is devoted to a miscellaneous retail business.

A NEW YELLOW CARNATION.—We have received from Mr. A. Duebendorfer, Manchester, Vt., blooms of a yellow seedling carnation originating with him, and of which he asks our opinion. We think, candidly, that it possesses uncommon merit. The color is clear sulphur yellow without the slightest stain of red. The flower is of good size, with strong and perfect calyx, and the length and firmness of the stems recalls Tidal Wave. As far as we could judge from these blooms it was the best pure yellow carnation to date, and we anticipate a prominent place for it.

VIOLETS FROM COLORADO.—We received a fine bunch of violets from H. F. Winter, Colorado Springs; the flowers were very large and well colored, with good stems. Mr. Winter grows them in a cold frame and has been picking ever since October 10 with good prospects for a continued crop.

THE ANNUAL REPORT of the American Carnation Society, recently received, contains a full report of the meeting at Indianapolis, with the essays, discussions, and miscellaneous business. It does not contain a list of carnations.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

BINGHAMTON, N. Y.—J. J. Bell, the seedsman of Flowers, N. Y., has moved his business to Ferry street in this town.

MEMPHIS, TENN., FEB. 5.—R. M. Craig & Co., dealers in seeds and agricultural implements, made a partial assignment to-day, naming L. McFarland as assignee. Their assets are estimated at \$100,000 and liabilities \$65,000, of which about \$14,000 is preferred. The creditors are, in the main, northern seed and agricultural implement houses. The firm has been in business thirty-five years. Bad collections are said to have been the cause of the assignment.

Catalogues Received.

Weeber & Don, New York, seeds, plants and bulbs; Johnson & Stokes, Philadelphia, seeds and plants; J. C. Vaughan, Chicago, seeds, plants and bulbs; Luther Burbank, Santa Rosa, Cal., fruit novelties; Vilmorin-Andrieux & Co., Paris, France, seeds, bulbs and plants; W. Hill & Co., Richmond, Ind., trade list plants.

MR. L. C. BOBBINK, of the Horticultural Company, of B. skoop, Holland, is in America stopping at the Meyers Hotel, Hoboken, N. J.

WE HAVE watched with interest the increasing use of the half tone engraving (such as used in the FLORIST) in illustrating catalogues. In many cases such engravings, owing generally to the necessity for cheap paper in catalogues, have not been very satisfactory though an occasional excellent one has shown the great value of the process. It requires a special combination of well etched plates, good paper, careful press-work and the right kind of ink to produce the right results. Messrs. Johnson & Stokes, Philadelphia, seem to have found the charmed combination and their 1895 catalogue attests the great value of such plates correctly used. It is a distinct advance in this line and we extend our congratulations.

NEW, RARE AND BEAUTIFUL PLANTS.

STROBILANTHES DYERIANUS This is the most valuable novelty which has been introduced for years. For bedding is superior to the finest colens. Withstands hot sun and dry weather better.

SPIREAE "Anthony Waterer" flowers rich crimson. Lord Penzance's New Hybrid Sweet Briar. **DELICARGOMMUS**—All the finest European novelties. **ORCHIDS**—A very extensive stock: East Indian, Mexican, Central and South American, etc.

JOSEPH HEINL, JACKSONVILLE, ILL.

The "Black Calla."

Can you tell me how to make the black calla bloom? I rest in summer and every winter it makes a good show and forms offsets but never blooms. J. F. H.

To get *Arum sanctum* to bloom it is necessary to secure good bulbs, which should be planted in a rich soil. As soon as they root through repot them into larger pots, just deep enough so that the top of the bulb is well covered with soil; keep them well watered, as this prevents off-roots. If a bulb has once given off-shoots it is of no use to trouble any more with the old bulb. Keep in a warm house, where there is plenty of light. Black callas treated in this way have always given me best results.

LUDWIG SCHILLER.

BUSINESS TROUBLES. The executors of the late E. E. Eggert of New Britain, Conn., are asking concessions from his creditors in settling up the estate. McClunie Bros. of Hartford, Conn., are asking their creditors to compromise on a basis of 25 cents. Geo. W. Marshall of Everett, Mass., is endeavoring to effect a similar settlement.

H. H. L.—New methods of propagation have been patented, and we see no reason why you should not be able to obtain a patent for yours if of a character that can be protected by patent. This could be determined only by making application for a patent and having the system passed upon by the official examiners.

As to Price.

"Though it is not the season
When in this rigorous climate,
The roses flourish just the same
They have a high old time."
—*Detroit Free Press.*
By the dozen?—*New York World.*

New Notes.

CUMBERLAND HILL, R. I.—Alonzo Vose has just completed a 100-foot greenhouse.

CHFFSTER, PA.—Shaw Bros. intend to add three new houses, one 18x50 and two 10x50 each.

TIDIOUTE, PA.—E. G. Shearman has built a greenhouse 14x60, and proposes to engage in the florist business here.

SPRINGFIELD, O.—It is rumored that a new florist concern will soon start here on a very large scale, with a capital of \$100,000.

ALBANY, N. Y.—The firm of Eyres & Goldring has been dissolved by mutual consent. Mr. H. G. Eyres will continue the business.

CRANSTON, R. I.—James A. Budlong, the pioneer market gardener on a large scale in New England, died January 26, aged 72 years.

WATERBURY, CONN.—A boiler in the greenhouse of W. J. Snow exploded on the night of February 3, causing a heavy loss, but fortunately injuring nobody.

GRAND RAPIDS, MICH.—F. M. Strong has sold his interest in the Grand Rapids Floral Co. to Hannah & Cunningham who will continue the business under the old title.

ELGIN, ILL.—The Elgin Nursery, Seed and Bulb Company has been incorporated. Capital \$10,000. Incorporators: David Hill, George Souster and Frank Harvey.

ERIE, PA.—The title of the Schluraff Floral and Seed Co. has been changed to Schluraff Floral Co., the seed department having been sold to Mr. E. Neuberger of this city.

ROCHESTER, N. Y.—Mr. Robt. C. Brown, of the firm of Brown Bros., nurserymen, was married on January 23 to Miss Helen Mae French. The bouquets were violets for the bride, and white and pink roses for the bridesmaids.

LENOX, MASS.—The members of the Lenox Horticultural Society feel very proud over the success and popularity of their first ball, and are unanimous that an annual ball will hereafter be a prominent feature with the society. This society was organized on January 29, 1894, by twelve gardeners, since which time it has grown to a membership of 90, with a very flourishing treasury.

CARNATIONS.

I OFFER TO THE WHOLESALE TRADE A SEEDLING WHITE The choice from over 400 varieties after three years' trial.

KOHINOOR (Mountain of Light)

It is the best white I have ever grown. Plants robust, stems long, stiff and erect, flowers full, deeply fringed and extremely attractive, measuring 2 3/4 to 3 inches across without any forcing or disbudding. Comes quickly into BLOOM and CONTINUES PROLIFIC THROUGHOUT THE SEASON.

Flowers 2 3/4 to 3 inches across, on stiff erect stems 2 1/2 to 3 feet long, of the habit of McGowan but much more prolific, a striking and attractive shade of pure purple, a novelty in color, very taking, and entirely distinct from the purple maroons and so called purples. Price on the above varieties, \$12.00 per 100; \$100. per 1000.

My stock of Standard and New varieties has never been better than at present, and includes: Sweetbrier, Thos. Cartledge, All at moderate prices, with regular discounts. Stuart, Caesar, I grow nothing but Carnations, and EXCLUSIVELY for Wm. Scott, Brutus, Cuttings and Plants. My stock is rooted cool and is Daybreak, Anna Webb, unusually healthy and vigorous. Buttercup, Ferd. Mangold, Inspection and correspondence solicited. Blizzard, Mrs. Fisher, Price List on application.

THE PINES.

C. J. PENNOCK, KENNETT SQUARE, PA. Chester Co.

TWO POINTS

FOR CARNATION BUYERS.

GET THE BEST.—Here's a quartette of money-makers: WM. SCOTT, finest pink of solid color, and most profitable; ALBERTINI, unapproachable in form, hue, size and texture; DAYBREAK, unrivalled in its delicate flesh tones; MCGOWAN, the white of whites, and the most productive.

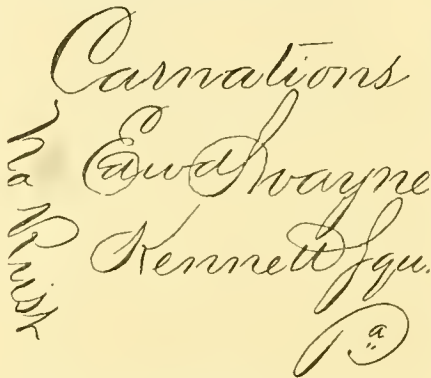

GET THEM GOOD.

We grow them cool, root them cool, and take our cuttings from blooming stems only, carefully selected, carefully rooted, and carefully packed for shipment. Our stock is in fine health and vigor.

Our prices are \$3.00 per 100 for Scott and Albertini; \$2.50 for Daybreak, and \$2.00 for McGowan. For quantities above 500, write us. Terms cash.

ALEX. McBRIDE,

ALPLAUS, N. Y.

NEW.

OPHELIA.—A fine large flower a little darker than Scott's Craig cup for best seedling of any color at Philadelphia. Flowers brought \$3.00 per hundred wholesale all last winter excepting at Christmas when they reached \$5.00. Rooted cuttings \$4.00 per 100; \$39.00 per 1000.

ELDORADO.—(Sheldahl). Introducer's description and stock. A yellow of free blooming habit and the other necessary qualities of a good carnation has long been a desideratum. In Eldorado we have a strong vigorous plant healthy foliage and finely formed flowers. The cuttings are easy to root and the plant is very prolific in both blooms and cuttings. Light yellow or, perhaps, nearer a buff, and free from all white markings. Petals edged with a narrow band of light pink, being almost a plectee in marking. The flowers look yellow by artificial light and not white, as many yellows do. \$2 per dozen; \$12 per 100; \$100 per 1000.

KOHINOOR.—(mountain of light)(Peacock). Introducer's description and stock. The choice of over 400 varieties after 3 years' trial. It is the best white I have ever grown. Plants robust, stems long, stiff and erect. Flowers full, deeply fringed, occasionally touched with pink blue, and extremely attractive, measuring 2 3/4 to 3 inches across without any forcing or disbudding. Comes quickly with bloom and continues prolific throughout the season.

STANDARD.

Table with 3 columns: Variety, 100, 1000. Includes Sweetbrier, Helen Keller, Uncle John, Stuart, Buttercup, Scott, Daybreak, Cartledge, Portia, McGowan, Fisher (from soil for Summer).

LADY CAMPBELL VIOLET, rooted runners, \$2.00 per 100; \$15.00 per 1000.

Walter R. Cliffe, of Germantown, Pa. has been the first in this locality to appreciate the virtues of Swainsona Gleditsia Aha. He has an entire house of it and the beautiful per like blossoms backed by its feathery plume to large, have, he claims, sold him better than anything else he has grown this winter. We are enabled to offer his stock at \$1.00 per 100; \$5.00 per 1000 for rooted cuttings; \$6.00 per 100 2 1/2 pots. Ready Feb. 15th.

PALMS ARE INCREASING IN FAVOR with the people but they need coaxing to buy. Our prices are so coaxing so yours can be. Send us \$3 for 1 1/2 & 4-in., or \$5 for 30 of assorted varieties such as Latania, Kentia, Elvagan, Exceles, etc. Shipped safely now. Catalogue free. WILLIAMS & SONS CO., Batavia, Ill.

NEW CARNATIONS.

BELL MILLER, Springfield, Ill.

Cincinnati.

Since last week we have been treated to a taste of genuine winter weather, the mercury reaching to 1 above zero. The effect of the cold wave is seen in the market, violets being unattainable, the growers being unable to get at their frames, and to make matters worse, there seems to be a run on violets. The cold weather has shortened up the supply of roses, which are already off crop and rather scarce, and has caused stock sent in to go with a celerity. Carnations are not plentiful; and are going well. Daybreak and Scott sell at \$2 and \$2.50, with some extra blooms at \$3. These two varieties are about the only fancies coming in. Scarlets are not plentiful, and what are sent in are of poor quality. In bulb stock Romans are as dull and plentiful as ever. Roses are scarce, particularly first-class grades.

Mr. T. Jackson has returned from New York after a stay of over a month. P.

Springfield, Mass.

An interesting meeting of the Amateur Horticultural Society was held February 1, when Dr. Swazey read a very practical paper on "Elms." D. A. White read a brief paper on roses, and closed his remarks with a general review of the work of the society during the past year and the outlook for 1895.

The Holyoke Horticultural Society held its annual meeting February 1, and elected the following officers: President, Rev. E. A. Reed; vice-president, Mrs. C. W. Ranlet; secretary, G. R. Hicks; treasurer, C. E. Mackintosh. The society has 335 members and a balance in the treasury of \$121. Three exhibitions have been held during the past year, all of which have been successful. F. W. J.

Louisville, Ky.

The Kentucky Society of Florists have determined to give a spring exhibition for two days in the first week of April, at which time the society will also give small chrysanthemum plants to children wishing to cultivate same for competition at our next chrysanthemum exhibition. By this means the society expects to make friends and associate members. N.

"WHIRLWIND."

The new hardy double white ANEMONE. Strong, field-grown roots, \$8.00 per 100.

CHRYSANTHEMUM

GEO. S. CONOVER, the best EARLY BLOOMING large yellow. Nothing like it on the market. Strong plants, \$6.00 per 100.

CARNATIONS.—Rooted Cuttings, \$10.00 to \$25.00 per 1000.

MARIE LOUISE VIOLETS.

Large cut blooms with long stems and nice foliage, bunched, \$1.00 per 100; \$8.00 per 1000. Cash with order.

ROBERT MANN, Lansing, Mich.

HOLMESBURG, PA., Feb. 2, 1895.
Messrs. PITCHER & MANDA, Short Hills, N. J.

Gentlemen:—Last year I came into possession of 25 plants of the California Violet and planted them for trial. I am pleased to say that they have been a great success with me. I have grown them exactly the same as Marie Louise and Russian, at a temperature of 35° to 40°, and have found them far more profitable. They began blooming in September and have bloomed profusely ever since, and the plants are now heavily set with flowers and buds, with every indication that the blooming will continue through the spring. They are strong, vigorous growers, making plants 10 or 12 inches in diameter and about the same in height, without any sign of disease. The flowers are large, often attaining the size of a silver dollar, borne on erect stems 10 inches and upwards long. The Violets have a delightful fragrance.

From my experience with this Violet I should say they grow equally as well here as they do in California, and are destined to be grown in immense quantities.

Very truly yours,
RODMAN M. EISENHART.

\$4.98

Sounds like a dry goods price, but it isn't. It is our Special "Cash-with-the-Order" price for 1,000 Envelopes and Letterheads (the extra two cents will buy the stamp), ruled or unruled (if you want the letterheads for typewriter use say so), of a grade good enough for anybody (better than most people use), printed in our peerless style, with a neat cut in addition to your card, if you want it. When stationery that is up to date can be had at such prices, there is absolutely no excuse for using anything that is of low quality or carelessly and poorly printed.

Send a check (money order will do), say what you want on the goods, and they will go forward to you promptly by freight, unless otherwise ordered.

If you want a Catalogue, Billheads, Red-leaf Labels, Culture Leaflets—anything that good printers can make—write us.

JOHN G. ESLER, Sec'y, F. H. A., Saddle River, N. J.

Toronto.

What is the matter with Toronto? Oh! she is all right. There has been no carnival here, only a little snow storm that appears to have buried your correspondent's memory, which was not dug out until too late to post his last week's notes. The church spires are still visible, but another storm or two like the last and we shall like Baron Munchausen be able to tie our horses up to the topmost ornaments. The weather too has been very cold and florists and gardeners have had an anxious time in endeavoring to keep the frost out of their greenhouses. I have only heard of one or two comparatively unimportant instances. The strong wind along with the cold was so trying.

I can not report that trade has been very flourishing this last two weeks, the wholesale men appear to be cutting their stock pretty close all the time, but most of it goes out of the city. At a ball the other night very few flowers were worn although all the elite were present. They do say that many people have given up buying flowers in order to be able to give more for charitable purposes. I noticed, however, in the reports of the ball next day that nobody appeared to have economized in the matter of dress. That is a horse of another color altogether. The weather does not suit the plant trade which is very quiet.

There are two fine examples of white Cattleya Trianae here, one at the Central Prison, which I saw to-day, and another at Reservoir Park, which I hope to see to-morrow. It is a lovely thing with large, substantial pure white petals, a slight tinge of yellow in the throat.

A petition is being circulated and I hear largely signed by the trade generally all over the province to change the Electoral District societies in cities and horticultural societies in towns and villages at present dependent on the Electoral District societies to horticultural societies pure and simple, and that they be given a grant as a right directly from the government and not through the favor of the Electoral District societies. Forms of petition have been sent to all the secretaries of all the country horticultural societies and to those interested in cities. It is hoped that every one in any way engaged in the industry will attach his autograph to this petition; the time is short as the legislature meets on the 21st inst., and the forms must be returned by the 14th, but the advantages to be secured are worthy of a grand hustle. E.

Tuberose Bulbs, Auratum and Speciosum Lilies.

OUR NEW PLANT TUB.

Price less than half of any other tub on the market. Florists having large plants should not be without it. Dealers issuing catalogues cannot afford to be without it. It supplies a long felt want for something neat, durable and cheap.

It has steel wire hoops (three times as strong as the flat iron hoop) with welded joints (not riveted as in common ware). These wire hoops are at intervals indented and pressed into the wood, these indentations in hoops, besides preventing them from falling under all circumstances, act also as a spring, expanding or contracting, always in accord with the condition of the wood in the tub, so that bursting is impossible.

We quote you following prices on "Our New Plant Tub" in four sizes, painted green. Net F. O. B. Milwaukee.

San Francisco.

The California State Floral Society will hold a rose show early in April.

The chrysanthemum business was very much injured the past season by Chinese and Italians who raised them by the acre and sold the flowers to retail dealers at from 2½ to 10 cents a dozen. During the months of October, November and early in December fairly good blooms of Lincoln and ordinary whites were sold on the streets by boys at 10 cents a dozen. As a result legitimate growers got but poor returns for their stock. Christmas and New Years was about the only time growers received anything worth mentioning for their flowers. Good flowers then brought \$2 to \$2.50 a dozen. But only those grown under glass brought good prices. Inferior flowers retailed at 75 cents to \$1 a dozen.

The weather during December was very hard on outdoor stock. It rained 20 days out of the month.

Yoshiike's new chrysanthemum Capt. J. C. Ainsworth promises to be a good thing. The drooping petals are sometimes 6 inches long and look like silken floss. The variety Mrs. J. Geo. Ills is too weak in the stem to be a good trade flower.

W. S. D.

THE PEOPLE of the state of Maine have recorded by a popular vote their choice of the pine cone and tassel as the state emblem. Maine Associations from California to Washington joined in the ballot. It is expected that the choice of the people will be ratified by the State Legislature.

FORTUNES IN FLOWERS was the title of an article recently published in the Chicago Record, in which women were told how easy it was to make barrels of money in the florist business. The picture of a lovely maiden in the get-up of a stage chambermaid, picking roses off potted standards with the aid of a triangular trowel, convinced the reader that there are many glittering possibilities still concealed in the flower trade.

What Growers Say!
A Different Letter Every Week

LEXINGTON, Ky., Nov. 8, 1894.
LOCKLAND LUMBER CO., Lockland, Ohio.
Gentlemen:—We have been much pleased with the Cypress greenhouse material purchased of you last September. The lumber is clear and you have filled our order so liberally that after finishing our house we have still a considerable amount of material left over. The carpenters who have done the work upon it report the lumber as being as fine stock as they ever saw. We shall take pleasure in recommending your firm to others needing greenhouse material.
Yours very truly,
C. W. MATHEWS.

STANDARD FLOWER POTS

Every user of Flower Pots should correspond with us before purchasing elsewhere. Our facilities are unequalled.

A. H. HEWS & CO., N. Cambridge, Mass.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipe Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

SYRACUSE POTTERY CO. OFFICE: 403 North Salina Street, SYRACUSE, N. Y.

STANDARD FLOWER POTS.

We will furnish you with prices on application, and will fill all orders promptly. Our Pots are excelled by none in the market.

The S. A. F. Charter.

The bill granting a national charter to the Society of American Florists has passed both houses of Congress and awaits merely the President's signature to become law. R.

IF YOU HAVE anything to sell to the trade you need an adv. in our special spring number to be issued March 16. No increase in rates.

NEW HAVEN, CONN.—S. H. Moore & Co. is the title of a new firm at 1054 Chapel street. Mr. Moore was formerly with G. A. Dickerman.

NEWBURG, N. Y.—John Peattie, a prominent florist, died on February 6, in his 56th year.

Glass Houses—Their Construction and Heating.

BY H. W. GIBBONS.

[Abstract of a paper read before the Mass. Horticultural Society February 9.]

Mr. Gibbons said that under this heading came not only structures used for raising plants or flowers for profit, but also greenhouses designed for both useful and decorative purposes on private estates; from the small greenhouse of the amateur florist to the imposing ranges of palm and other houses upon the estates of persons of wealth and refinement. He continued—

Commercial greenhouses being in use solely for profit, the proprietors desire to have their structures built to force their various crops of flowers or vegetables at as small cost as possible. Therefore the architect of such structures must design these houses of such shapes, dimensions, etc., as shall be adapted to special localities; that all available light, and also protection from strong winds or any other unfavorable influence shall be secured. With regard to the temporary or sash-bar construction, it may be described thus: Posts to support the building may be of locust, cedar, cypress or chestnut lumber; the first the most durable and expensive, the last the least in both respects. For temporary economy I would use cypress, being easily procured, at moderate cost, and of fairly enduring quality. This description applies well to red cypress; other varieties are not so desirable. But the red cypress must be air dried only; if kiln dried it absorbs so much moisture that it will warp in drying, and is, therefore, unfit for this purpose. Of air dried stock make posts for side supports of the greenhouse. If the structure is an even span of eighteen feet six inches, the posts should be of 2x5-inch joist, cut to set in the ground three feet and six to eight feet apart, with another of 2x2-inch alternating. If there is to be no glass in the walls four feet to the plate will be the right height for the side wall. If gutters are not used so much the better, as they promote decay of the wall, and should be avoided as far as possible. If they must be used they should be made from the solid stick, 4x6 (or seven) inch. The tops of the posts should be cut to the same pitch as the roof—about 32 degrees.

Next comes the siding. The inner siding should be of "bevelled ship," as it makes a tight joint. Nail it to the outside of the posts and take care not to allow any joints directly over another. This should be covered with rosin-sized building paper (weight one-half pound to a square foot) laid smoothly, and the outer siding at once nailed on, all the nailing to be done into the posts, all butted joints being made at those points, and no two successive ones at the same post. Novelty siding is preferable for the

outside. The upper edge of this siding rises to enter a groove that is ploughed in the lower side of the plate. The plate is made of 2x6 inch plank. Its under side has two ploughed grooves, the lower and larger one to receive the top edge of the outer siding, while the upper one (1/4 inch wide) serves to prevent the water of condensation from the roof from reaching the siding, by causing it to fall at that point. On the upper side the upper edge should be cut to a slight bevel to give a better bearing for the sash bar. Beveling the opposite edge of this upper surface would lessen the liability of ice to form there, to back up under the lowest lights of glass and cause breakage.

The sash bars are next in importance. Assuming that 16x24 glass will be used, sash bars with supports only five feet apart, 1 3/4 x 1 1/2 inch, are ample; but with supports eight feet apart 2 1/4 x 1 1/2 inches is necessary. The rabbets for the glass upon the upper edges should be V shaped at the bottom to retain the bedding putty. A groove is also needed on each side of the bar to carry off the water condensed from the moist air, which would otherwise fall upon the plants, causing injury. Be sure to cut away the lower side of these grooves before they reach the plate, that the water may fall upon the earth instead of the plate. Avoid mortising or other cavity making in any of the woodwork, where moisture can collect, which always hastens decay. Columns to support a purlin midway from ridge to eaves should be of iron pipe. For the southern slope of an 18 feet 6 inches wide 3/4 span, 1 1/4-inch gas pipe 8 feet apart will serve. For each slope of an even span house of the same width inch pipes at the same distance apart are right.

The ridge of houses such as these should be of perfectly air seasoned timber, sawed from a log that is perfectly sound, straight and true to the grain, free from heart or sap; otherwise yellow pine is preferable. It should be 2x6 inches and finished on either side, as necessary to receive sash bars, and glass or ventilators. A cap 3x1 1/2 inches, machine finished to shape, is securely fastened to the upper edge. When the sash bars are all secured in their places to both eaves plate and ridge the header, which connects the roof ventilating sash with the roof, is next fitted upon the sash bars. The ventilating sash is to be three feet deep, and continuous on either or both sides of the ridge to which they are now generally hinged. With this strain upon the ridge the latter needs as supports 1 1/2 or 2-inch gas pipe columns, or 3x3 wood posts, every eight or ten feet.

We next present what may be termed the permanent or true economy plan of construction of greenhouses, in which, so far as practicable, the material is iron. When the site is levelled and the floor line

fixed cast iron post bases $2\frac{1}{2}$ feet long are set their full length into the ground. To each of these a cast iron post is bolted. These posts are tied together by two lines of angle iron purlins; the lower is 18 inches above the ground, and is 3×2 inches by $\frac{3}{8}$ inch angle. Beside tying the posts together this purlin gives support to the $2\frac{1}{4} \times \frac{1}{4}$ inch eaves or gutter purlin and plate above by means of a light intermediate post which connects them together. They also support the header of the side ventilating sashes, the gutter and the roof up to the lower roof purlin. The lower purlin also serves as the back support for the side bench instead of using back legs. To connect the rafters $2 \times 1\frac{1}{4} \times \frac{1}{4}$ inch angle iron purlins are used, giving longitudinal stability to the roof and support to the sash bars. When a suitable bracket is used to unite rafter and post, and also the rafters together at the ridge, that, with rafters not over seven feet between supports, a section of flat iron $2 \times 1\frac{1}{2}$ inches is ample; and for lengths of seven to eleven feet $2 \times 1\frac{1}{2}$ inches will serve. The rafters are tied at their upper ends by iron brackets, which have also a socket to receive a wooden ridge, such as has been described. This ridge is far superior to any iron one that has yet been devised, as it meets all requirements the iron can, and many others beside. The upper brackets should have provision for carrying the shaft of the ventilating apparatus.

For connecting the rafters, giving stability to the roof, and supporting the sash bars, $2 \times 1\frac{1}{4}$ inch \times $\frac{1}{4}$ inch angle iron purlins are used. These purlins are spaced according to the length of the rafters and size of glazing bars; the upper one affords support for the upper ends of the glazing bars, of which a $\frac{1}{4}$ to $\frac{3}{8}$ inch rests upon the purlin and each is also toe-nailed to the under edge of the cypress header, which supports a ventilator above, and is firmly screwed to the purlin below it. The ends of the iron house are braced with one or more lines of purlins, as required by the size of the structure. Iron door posts are bolted to iron bases, as are the side posts, and reach up to the rafters. An iron door sill is also fixed in place. End purlins run from end post and rafters to the door posts; altogether making a well braced and stiff end, to which the necessary woodwork is readily attached.

The gutters are the last part of the iron frame. As they are of cast iron, and if water is frozen in such they are quickly ruined, provision is made for a portion of the heat from the interior of the house to be taken into the gutters, thus preventing the freezing of the water therein. It is a complete success. Now for the woodwork of this iron house: The sides are covered to the ventilators the same as the wooden house. The sill is connected the same, but as it serves as the sill of the side ventilators is finished above to meet that need. The ventilator, usually twenty inches deep, hangs from a rabbeted top rail, making a weather-tight joint; above this is a header, the under side being grooved to shed water. The eaves-strip is screwed to the upper purlin, and is fitted with a plough-groove upon the under side, near the outer edge, to receive the upper edge of the gutter. Its upper surface is bevelled, the outer side to the pitch of the roof, the inner to afford support for the foot of the sash bars.

An elaborate description was given of the construction of more costly glass structures for private estates, including those for different classes of plants. For

glazing for rose houses he recommended French or Belgian glass, the double thick grade, second quality, as allowing more ready passage of the pure light. For almost all other structures he believed American glass well suited, and thought that the time is coming when manufacturers here will produce as good glass as any imported. Possibly the only reason it is not now made is the present higher cost of labor, but improved methods of manufacture may overcome that difficulty.

As yet nothing better than light wooden bars with suitable putty has been found for satisfactory glazing purposes. The rabbeting should always be V-shaped, filled with putty, the glass placed and rubbed down firmly to the sharp edge of the rabbet and secured with strong zinc nails or other suitable points. Many other methods have been put forth, but in practice none of them has proved worthy of adoption.

Mr. Gibbons illustrated the various points touched upon in his remarks by use of diagrams and models, of which he had brought a most interesting and comprehensive exhibit.

Book Learning and Practical Experience: Their Comparative Value in a Florist's Education.

[Abstract of a paper read by Judge Hoitt before the Boston Florists' Club, February 5.]

The speaker opened with a tribute to the value of books as friends, counsellors and companions, citing many famous examples, and defining the difference between inherent ability and mere parrot learning. He reminded his hearers that the profitable use of books is to furnish materials on which the mind can act, and to facilitate their observations of nature. The education received at school and from books is primary and fundamental. Whatever we may there find or learn is simply for use and to be applied in the "practical experience" of our business or of our life. A good common school education is urged as furnishing us not only with the fundamental principles, but as leading to those sources of information from which we can at any and all times draw, and teaching us to see and understand what we have presented to our view; to deduce and to apply the lessons there offered or to appreciate the dangers and difficulties threatened. Such education teaches one to think, which to every one is of the highest importance.

By practical experience is intended personal experience, either by actual contact or direct observation. With a good book education as a foundation one is prepared to branch out, and build thereon, by his experience profiting by his successes and failures. A world full of books may tell you of the wonders of a certain shrub or the phenomena connected with the propagation or growth of certain plants but you can never understand them exactly but by the test of experience. Having first had it described to you step by step your mind is in a more receptive state for the successive stages. Practical sciences are not to be learned but in the way of action. It is experience that must give knowledge, and yet except one is observant, studious and has a retentive mind the experience is not always utilized. The speaker pointed out the duty of noting any unexpected development or novel feature; such experience should be preserved for the benefit of other workers.

Continuing, the speaker declared that practical experience was a most necessary adjunct to book knowledge; without it

the practical experience is not so fully appreciated, and the education is limited to the personal surroundings, and personal experiences; one is deprived of the many advantages arising from investigation, observation and experiment of others engaged in a similar line of business or duty. Without the practical experience, one is filled with mere theoretical knowledge. Again, he observed that the knowledge we gain from books is for the sake of application; to read and study the literature of plants, flowers, shrubs and trees is pleasing and instructive, but to the florists, its real intrinsic and profit producing feature is in the application of the teachings and suggestions set forth and made in such. When Prof. Watson a few months ago submitted a list of books of particular value to florists which was published by our two leading trade papers as being of great value to their patrons, he recommended such for the practical information conveyed therein, and having read such the readers should apply the principles found therein.

President Dean of the S. A. F., at Washington, called attention to "Two urgent needs of the craft: 1st, a college where scientific training can be had with business education; 2nd, an experimental station to which florists can refer vexed questions." He adds, "as a rule, we have grown solely on practice, with no knowledge of the scientific possibilities of plant culture. Ignorance of the correlative laws of plant demand, and soil supply, balk us at every step, and has retarded floriculture many years." An earlier president of the society approved this statement. Another authority, Mr. Peter Henderson, in his usual pithy and terse way said, "the underlying principles never change, though undoubtedly in the methods of making them available, we have made rapid strides in this country. In the early days of floriculture nearly all the men engaged in the business were old countrymen, often lacking in education. Now hundreds of young men with better education are training direct for the business."

It was the opinion of the speaker that the boy preparing for the florist's trade should first have a good business education, followed by study of horticultural literature. But the fact of education alone should not give anyone the idea that he was at once fit for a high position—he should work his way up, until his ability was proved. The need of technical schools was touched upon, it being Mr. Hoitt's opinion that there was as much need for these schools in the florist's craft as in other trades. He pointed out the ease with which we assimilate information when it is given us in the form of practical demonstration. For this reason he thought exhibitions of floral designs or decorations were of very great value, both for the education of the florist and for the purpose of calling out a demand for such work on the part of the public. He thought this was one form in which technical education would be of great value.

The Kew Lectures Again.

I am obliged to Mr. Hatfield; there is nothing like precision when we are about it. The truth is there are lectures and lectures at Kew. The institution is no hen coop. In my time even Professor Oliver distinctly tried to give all his lectures a practical flavor, and he was regarded as the botanical lecturer. The Hookers both lectured on anything but botany—in its strict sense. But I can

LUCULIA GRATISSIMA.

not do better than send you the courses of lectures as given a year or two ago.

"Four courses of lectures are given every year; 25 lectures on organography and systematic botany, 34 lectures on economic botany." These with the contents of the museums are the most useful of all. "10 lectures on geographical botany." A very useful series also. "35 lectures on elementary physics and chemistry," with plant illustrations of course.

Now for a year ago. The library lectures and papers which are distinct from the other courses, and from the work of the British botany class, were as follows: Sir Joseph Hooker offered a prize for the best paper on "A year in the garden." The cryptogamist, Mr. Masee, lectured on fungi harmful to vegetation. The papers read were on horticulture in the United States, hybridization, the flower garden, stove foliage plants, the potato, cryptogams, hardy bamboos, propagation, the uses and functions of leaves, soils, manures, notes on British plants, Cape heaths, irides, diseases of plants, fungi, gardening in Jamaica, the vine, the carnation, hardy spring flowering trees and shrubs, stove aquatics, filmy ferns.

Now if you will observe quite closely you will find that in all this list which I quote—even in the first series—botany figures as an *incidental*, not as a leading feature. Mind you, there is all the science the world can swallow, and vastly more than it can swallow, at the herbarium, but I am sure there is no attempt on the part of the garden lecturers now, or ever, to "favor botany."

Trenton, N. J. JAMES MACPHERSON.

Luculia Gratissima.

This is one of the most beautiful and useful plants we have for winter flowering. It comes into flower in December and its lovely pink color and delicious fragrance make it especially desirable for holiday sales.

It propagates easily from half ripened wood or wood from which flowers have been cut, it being only necessary to give

a gentle bottom heat and to keep the foliage free from red spider. Plants propagated in winter and grown in a cool greenhouse through the summer will make nice flowering plants in 3 inch or 4-inch pots by fall. When the flower buds are set keep the temperature at about 55° at night, for if kept too cool at this period the flower buds are liable to drop. Any light soil will do. When the pots are well filled with roots give liquid manure twice or three times a week.

GEO. MCWILLIAM.

Miscellaneous Seasonable Hints.

You may now be absorbed with more showy and important Easter crops, and forget that humble lot of plants which in May and June will enter largely into your trade for baskets, vases, and veranda boxes. Some of these are best grown from cuttings, and a few from seeds. Of those from cuttings you are supposed to have some stock of vinca; both the variegated and green are among the most useful plants for this purpose. If you lifted old plants from the field last October they can now be shaken out and divided and potted into 3 or 4-inch pots. If you propagated a lot in September from cuttings they will now be in 2-inch pots. You can get a cutting off each one. They root very easily and will come in very useful for late orders or baskets. The plant in 2-inch pots should get a shift into a 3-inch in good rich soil, and be placed along the edge of a carnation or rose bed. The so-called German ivy (*senecio*) you want in large quantities, for where not much exposed to wind it is just thing for a drooper for a veranda box. Get your few stock plants of these in such shape that you can have all the cuttings you want by the middle of March.

Abutilon vexillarium, with its pretty variegated foliage, is fine where it is not allowed to dry out. Perhaps you lifted some old plants of that; if so put in a batch of cuttings at once. Grown right

along they will make good 3-inch plants by the middle of May. I prefer to put in the cuttings in September, shift into a 3-inch very shortly, and they make fine plants with a comparatively small pot. *Lobelia* is best raised from cuttings and can be put in now or weeks later and make fine plants. When they have made any growth there is no place suits them so well as a hanging shelf on each side of of which they can hang over.

Lophospermum can be raised from seed; but cuttings will make much stronger plants. A few cuttings put in in September will now give you plenty of stock to propagate from. *Othonna crassifolia*, only useful for baskets, propagates most easily, but you want good sized plants, so get them started at once. You can raise the double sweet *alyssum* by cuttings, and it is one of the very few white flowering plants suitable for the purpose. Put in all you want of it now; in April it can be put into 3 inch pots and go into a mild hotbed.

The ivy geranium, of which there are now such grand varieties, is indispensable in veranda boxes. Those you struck in September should now be in 3-inch pots. It will improve them to take a cutting off each plant, which will make a good 3-inch pot plant by May. To grow fine plants the older ones should go into a 4-inch in early April. *Pilogyne suavis* is difficult to keep over winter, for it grows over everything if given root room, and the plants raised from cuttings look very small in the spring, but when once it starts to grow it makes a perfect curtain of its pretty green foliage and has an agreeable musk odor. Put in the cuttings at once. *Grammanthes gentianoides* is a perfect plant for a hanging basket; it grows freely and will be all right if propagated at once. The two weeds, money vine and variegated *glechoma*, should now be frozen up in a cold frame. Don't disturb them till March; then bring into the houses and they will be very useful.

Among those plants raised from seed for this purpose is *petunia*, which should already be sown. *Tropæolum* you should sow the middle of March. The dwarf varieties are no good for this purpose, sow the tall ones, and give them lots of light so they don't draw too much. They would grow to great height, but with their root room very limited they are quite satisfactory.

Linaria (the Kenilworth ivy) is only good for baskets, sow in March. *Maurandia* is rather slow to make a good useful size, sow first of March. *Thunbergia* is very pretty in a basket if you have nice thrifty plants, but it is one of the worst plants I know of for red spider, so guard against that. Sowe early in March. I may have forgotten some plants useful for the purpose, and perhaps in some localities there are other plants grown that I don't use, but the above are the plants we grow for "droopers," and if you have a good thrifty stock of them, and they must be of good size, you will be able to make a good job of a vase or veranda box or at least that part of it. As these plants are all droopers and cannot be grown on a bench as you would geraniums or coleus you must be prepared to have hanging shelves for them, or for the larger growing, such as *vinca* and German ivy, put them along in single file on the edge of rose and carnation benches. In March, April and May they will not do the slightest harm to the crops.

WM. SCOTT.

OUR special spring number will be issued March 16 and will be a beauty.

To PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

In a recent article on carnations around Chicago I notice that McGowan was said to be doing remarkably well, and in the opinion of the grower if this sort would do as well generally as with him no better white need be looked for. Now, if one man in the vicinity of Chicago can grow McGowan well it naturally follows that more can, for in the east it is the leading white, simply because it is now understood, and is proving the most remunerative of all the carnations. Many complain that it has a weak neck or weak stem; very true, and so will all others unless treated properly. Last year my McGowans were fine, having long stiff stems, but this year they are weak; why? simply because they are in too dark a house. September, October and a part of November were quite warm both day and night, and the stems ran up quickly, and when December came along with no bright days and cold at that perhaps we gave them not enough air, and when the sun did shine we were afraid to let the plants have the full benefit of it; both of these errors will produce weak stems. McGowan must have a good light house with the mercury never above 60° on a cloudy day, never below 50° at night and it will stand 75° to 80° when the sun shines, but never let the soil get dry under any circumstance, and be sure that the soil is wet clear through, for if it is wet on top and dry on the bottom you will see the plants begin to wither and shrivel until at last there is nothing. Many lay this damping off or withering to planting too deep; this will produce it, but not as often as the lack of thorough watering. Some will say that they have the same trouble in the field; so have I, but I notice that it follows a light rain after a severe drouth; the principle is the same. Make your benches as I have stated before so that you can pour on the water, and the surplus will go through the bottom.

One inquirer says his Scotts are coming weak stemmed. There is no excuse for this, and it is too bad for such a beauty in every way as Scott to be put on the market with a weak neck. A little more water, 50° at night, 55° days when no sun, and on bright days 75° to 80° with the ventilators open and the valves all shut if possible and I guess you will not be troubled with weak stems on Scott, but, I beg of you, don't use old rose soil again. The carnation is just as much entitled to the freshness and the fiber you find in newly decayed sod as the rose, and it requires it just as much. You would not think of using old carnation soil for roses, so don't use old soil at all.

The same inquirer wants to know if it is advisable to mix bone flour with the soil several months before using or when planting inside. I would not use it at all, you want ground bone and the best

you can get, I believe the imported is the best although it comes higher than domestic, and can be mixed with the soil the last time of turning. I believe that all varieties should be rooted as early as February 15 for main crop, excepting Daybreak, which will do one month later. It is true that very often cuttings rooted in April make fine large plants, but should a dry season prevail the plants are not apt to make a growth that will produce the best results. It is well, however, to put in several batches of cuttings even as late as April 1.

CHARLES H. ALLEN.

Bordeaux Mixture.

With reference to the use of Bordeaux mixture for preventing fungus growths on violets, would say it has not been a success with me. My plants are the Marie Louise variety and were moved to the benches about September 1. They were apparently strong and healthy. Almost from the first they were attacked by the "spot" in such severe form as to render it necessary to remove nearly all the leaves. This was repeated at frequent intervals until some plants succumbed and were thrown out and destroyed.

Realizing that something must be done if I would save my stock I obtained some Bordeaux mixture and sprayed a portion of one bed, containing 135 plants, which were as healthy as any in the house. This operation was repeated twice at intervals of about two weeks, at which time I stopped short for the simple reason that the unsprayed plants were outgrowing those upon which the fungicide was used in a large proportion. Since that time the sprayed plants have steadily deteriorated, until at the present writing (February 5) there are remaining out of 135 78, of which only 35 are throwing any sort of salable flower. Of the balance of my house, 480 plants, there are now living some 360, nearly, if not quite all, of which are blooming profusely, the flower being very large and deep in color, upon stems often 7 inches in length. I would like to state that since the advent of cold weather the "spot" form of fungus has not been very apparent, but the yellowing of the whole leaf, beginning at the margin, has been quite troublesome.

In the use of Bordeaux mixture for rust on carnations, my experience has been more gratifying. My bench of McGowans seemed particularly infested, some plants being completely covered with the blotches, but I am happy to state that after several applications of the mixture the trouble is abating and plants once covered with rust are sending out clean healthy shoots. Thus far I have not lost a plant. I shall however continue to spray at frequent intervals.

McGowans and Scotts are the money makers for me. Both varieties throw large full blooms and very long stems. Emily Pierson, Buttercup and Stuart are fine healthy plants, but give very sparingly of their flowers. Especially is this true of Stuart. The stems are immense, thick and coarse and standing erect at 30 inches. Many of these have been growing for weeks and yet they will not be satisfied and give us the desired flower.

Mattituck, N. Y. W. V. DURYEE.

CARNATION LIZZIE GILBERT.—Blooms of this new carnation were recently sent us by Ellis & Pollworth of Milwaukee, Wis. It is a large and shapely flower with excellent stems, of the general style of The Stuart, the color being clear and

bright. It seems to possess the qualities of a first class flower, and will doubtless be widely tried the coming season.

The Chrysanthemum Year Book.

The year book published by the National Chrysanthemum Society of England has recently come to us for review. It is a paper bound volume of 88 pages, exclusive of advertisements; the press-work is somewhat indifferent, and there are a few illustrations, which do not add materially to the value of the book.

A good deal of the book is naturally occupied with the affairs of the society publishing it, its shows, etc., but there are interesting papers on the chrysanthemum in different countries, notably that by Mr. Jas. H. Veitch on the flower in Japan, and experience in Australia by Mr. S. B. Levick. Regarding the cultural notes we can have nothing to say; our climate and methods are so entirely different from England that it would be manifestly absurd to criticize from an American standpoint. But the American chrysanthemum literature offered by this book is certainly open to criticism. We find a list of synonymous chrysanthemums in America by Mr. T. H. Spaulding (in which, by the way, the very familiar Wanemaker is mis-spelt) in which we find "Ostrich Plume" given as a synonym of Mrs. Alpheus Hardy. It should be borne in mind that although Mrs. Hardy was widely advertised as the "ostrich plume chrysanthemum" the title was never arrogated solely by that one variety—it was used as a descriptive term for all the hairy forms, and is still so used. For this reason we think it an error to give "Ostrich Plume" as a synonym when it is merely an adjective. Mr. Spaulding gives Robert Bottomley as the proper name, Lady Trevor Lawrence as the synonym, which should be reversed. In the case of President Spaulding, given as correct name, synonym Charles Sherman, it will be found that Charlie Sherman, President Spaulding and Gladiator are all synonyms of the variety W. M. Singerly. Mr. Spaulding gives Francis A. Spaulding as correct name, J. S. Dibbens and Mattie C. Stewart as synonyms but M. de Meulenaere entertains a contrary belief, as he gives Mattie C. Stewart and "Mrs. F. Spaulding" as synonyms of J. S. Dibbens. We do not find Francis A. Spaulding in any list of chrysanthemums to which we have access, there being but six or seven varieties bearing this family name in our authorities, so evidently Francis A. got away. It may also be stated that the variety in the list under review given as G. T. Moseman should be G. F. and M. E. Nicholls should be spelt with but one l.

Mr. Michael Barker of Cornell University gives some notes on American varieties and methods of culture, but few of our most striking novelties are mentioned.

An audit of the varieties exhibited at the National Chrysanthemum Society's show last November gives food for

ADVERTISING A CHRYSANTHEMUM SHOW.

thought. Here were 3,672 blooms, of which 1,993 were Japanese in 219 varieties, 787 incurred in 81 varieties, and 892 consisting of reflexed, pompons, anemones and singles. At the top of the list was *Avalanche*, which appeared 122 times. This was probably the yellow variety sent out by Owen in 1893, not the white *Avalanche* known in this country, which is now superseded. Second on the list was *Vivian-Morel*, exhibited 107 times; it will be remembered that this variety was the most popular pink at the American shows last year. Chas. Davis was third—this was much admired wherever shown here, but is not yet widely grown. Col. W. B. Smith was seventh, Wm. Tricker tenth, and W. H. Lincoln thirteenth. G. W. Childs and Niveus appeared 14 times, H. L. Sunderbruch appeared 3 times, W. G. Newitt twice, Mrs. E. D. Adams, President Smith and *The Queen* but once. Many of the varieties mentioned are not found at all at our shows; others, such as *J. Agate*, *Rose Wynne*, *Richard Dean* and *Mons. Panoucke*, have been seen and admired, but are scarcely grown in this country as yet.

A list of 25 chrysanthemum portraits, with the papers in which they appeared, is given; being restricted to this number of varieties it gives but a small impression of the many illustrated, particularly in America. It seems to us it would have been preferable to omit them altogether, rather than to have given such an imperfect list.

Advertising a Chrysanthemum Show.

The florists of Louisville, Ky., made a departure in advertising their last exhibition. This was a parade through the streets of the float of which an engraving is given herewith, headed by a troop of trumpeters. The results proved to be very satisfactory and it is believed that a large number of people were reached in this way that could not have been interested otherwise. The laurel trees at each corner of the float were covered with paper chrysanthemums.

Chrysanthemum James Comley.

In a recent issue of the *FLORIST* was an illustration of the chrysanthemum *James Comley* and a communication on the variety which states that it is valuable for exhibition purposes. If this variety is

identical with *Uncle Sam*, as is reported, I think that it will not be of much use for the purpose mentioned. *Uncle Sam* was exhibited at the Industrial Palace Exhibition of the New York Florist's Club in 1893 and it was noticed that it wilted in a very short time, so much so that it had to be removed. This variety was exhibited last fall at the show of the North Hudson Florists' club at Union Hill, and in a very short time after being staged it showed a very ragged appearance. Possibly the flowers referred to in your letter were grown better than those shown here in the east, but I am inclined to believe from an examination of the variety that it is not and cannot be a good exhibition sort.

CHARLES H. ALLEN.

In reference to the above Mr. E. G. Hill writes: "Yes, we think *Uncle Sam* and *James Comley* are the same, and we suppose the former name has precedence. As to the keeping qualities of the variety, we thought it excellent in this respect. Probably the blooms exhibited were cut from plants not thoroughly ripened, or very late struck. Ours were late both in maturing and blooming, too late for the shows. Of course the drooping form of the petals causes the bloom to look bad very quickly after it does begin to wilt."

Double Violets as a Profitable Crop.

BY WM. SWAYNE.

[Read before the Florists' Club of Philadelphia February 5.]

I was somewhat surprised to receive a request to write on this subject, one I know so little about. I have, however, been growing violets for several years with only fair success, and from former experience at least, they have been a very unprofitable investment. The fact that they have taken a second place with us, growing until room is needed for young carnation stock, is no reason why they cannot be grown successfully, and thus pay handsomely. First we tried *Marie Louise*; in the early part of the season the plants would look fine, but without apparent cause "spot" would come and the plants succumb to it. When one of the professors of the Department of Agriculture at Washington visited us he stated that one of their experts had been trying to solve the mystery of violet discases, and knew no more at the end of a year's work than he did when he started. We gave up

in despair of ever being successful with them.

At this point the new violet "*Lady Hume Campbell*" came into the market and was given a test, finally this season a trial. I say test, for a few plants were set among badly diseased *Marie Louise* and came through all right. Result is that we have grown this variety alone this season, making them a profitable crop.

There seems to be quite a variety of ways of growing, each one believing his own best. We have planted a frame or lean-to early in June with part of our plants, removing sash and growing as an outdoor crop, then putting sash on after a few hard frosts. These have done splendidly all season, and are full of buds at the present time. The balance were grown in the field, runners kept off, making much larger clumps, they were brought into the house October 1. This lot has produced nearly as many flowers but not so fine as those grown in frames, either in color or size of bloom. I think they should have been planted in houses at least two weeks sooner, as they start slow, so as to have plenty of time to get well established before the weather gets too cold. A temperature 40° night, 60° to 65° in the day, has given the best results. Good ventilation is needed, and keep the plants clean at all times; then with as little fire heat as possible, and plenty of water, a profitable crop will be the result.

Asparagus Plumosus.

We are told that *Asparagus plumosus nanus* is a dwarf grower, never climbing, and that the climbing asparagus is *A. plumosus comoriensis*. Is this correct.

N. P. C.

The true *nanus* does not climb and is distinct, especially in a young state, having a feathery appearance. *A. comoriensis* is also distinct from *A. plumosus*, with longer growth, larger fronds and not so closely set as with *A. plumosus*. The three are distinct from each other in general appearance but they are found under all sorts of names generally in the trade.

W. A. MANDA.

Acalypha.

Subscriber "K. B." asks "What is the proper treatment for and propagation of the *acalypha*?" This handsome ornamental plant, which is much used in sub-tropical beds, is perhaps not quite a hard wooded plant, but can be called a woody plant, and can not be increased as readily as a *coleus*. *Acalypha* should have at all times a high temperature, and will only exist (not grow) at anything less than 60°. You can take cuttings of the tender growth early in the fall, say beginning of September, and they will root all right, or you can lift the plants, cut back a little and pot, and from them get cuttings during the winter. Perhaps the surest way is the plan I followed last year, which was to carry over a few dozen plants in pots all summer plunged out of doors. Bring them inside in September, shorten back the leading shoots, and in a good heat they will make young growths which root very easily. A bright light warm temperature is the secret of growing *acalypha*.

W. SCOTT.

JOSEPH CARBONE, of San Francisco, desires us to correct the statement that he has gone into insolvency; he admits that Mr. Monte, his partner, has done so, but says that personally he is aiming to pay his own debts as fast as possible.

New York.

The promise made by President Allen on assuming his office that he would hereafter call meetings to order promptly at 7:30 p. m. was literally carried out at the February meeting of the New York Florists' Club. The late comers—and these were in the majority—came in with a look of puzzled surprise on their faces that was very amusing and looked at each other with a sort of "where are we at" expression as they slid into their seats. The special business of the evening, viz., the disease of the Bermuda lily bulbs, was soon under consideration, Mr. James Dean as a starter launching the following resolution:

WHEREAS, the lily bulbs imported from Bermuda to the United States known to the trade as *Lilium Harrisii* and *longiflorum* are infested with a disease or blight which is believed to be contagious to other plants, especially to the lily family,

Be it resolved, that a committee be appointed to consult and report back to this club at its next regular meeting the advisability of requesting Congress to pass a law forbidding the importation of lily bulbs from Bermuda until the disease or blight has been destroyed.

Mr. F. R. Pierson being called upon to open the discussion then addressed the meeting substantially as follows: "I think the question of disease in *Harrisii* is very much exaggerated. There has been more or less disease in Bermuda ever since lilies have been grown there commercially. I started the growth of *Lilium Harrisii* in Bermuda in a commercial way in the fall of 1881, thirteen years ago, and in the first years we suffered considerably from the effects of blight, which oftentimes wiped out whole fields in unfavorable seasons. It gave us very serious concern lest it should destroy the industry, but nothing was heard of its unfavorable effects on the bulbs that were shipped here at that time and we considered it more particularly from its effects on the profits of the crop there. There has been more or less disease ever since—the amount depending upon accidental climatic conditions—and it has not been confined to lilies, onions, potatoes and other crops suffering severely at times also. What the disease is I do not know. Some of the professors of Harvard College pronounced it a fungoid attack, but no remedy was found; we ascertained, however, that by thoroughly manuring the land and giving it the highest possible cultivation we practically prevented its ravages. The question has arisen as to whether frequent cropping of the same soil has not been the occasion of the trouble. I can not subscribe to this view. Of course land frequently cropped, if not properly manured, would produce weak growth and in seasons favorable to its spread the blight would take stronger hold where the plants are not strong and vigorous. The lily bulb occupies the land for nearly nine months of the year, and is a gross feeder, and what is taken from the land must be replaced in some way. This, I believe, is best accomplished by heavy manuring with natural, to the exclusion of artificial fertilizers. That lilies can not be grown on the same land consecutively with good results is a theory that I think has been exploded, provided a sufficient quantity of well rotted stable manure is used."

Mr. Pierson quoted from a recent editorial in the Bermuda *Colonist* in corroboration of his views and continued: "Any increase in diseased lilies this year was the result of unfavorable conditions existing in Bermuda last year between the time of flowering and the time of ripening, when the bulbs were making their final growth. During this period there was

an almost unbroken drouth, which affected crops unfavorably not only in Bermuda but almost everywhere, and under such unfavorable conditions disease would naturally secure a more than usual foothold and affect the bulb crop more than ordinarily."

Mr. Pierson then told how when the question of disease began to be agitated a short time ago he had written to a number of his customers to learn whether they had been troubled with it and to what extent, and produced the replies which he had received. Among these were letters from Alfred Hunt, Norwich, Conn., who said that out of one thousand bulbs probably seventy-five were no good, otherwise plants were all that could be desired; A. N. Pierson, Cromwell, Conn., who estimated that ten per cent of the 4-5 and four to five per cent of the 5-7 were of the "variegated early" kind (laughter); Fred Burki, Bellevue, Pa., who had some blight, about the same proportion as the last two years; H. F. A. Lange, Worcester, Mass., who claims to have no blight or disease; Hugh Graham, Phila., who has found only a very few with blight; John Bader, Allegheny, Pa., who found a certain proportion very weak and with yellow spots, but not in sufficient quantity to cause dissatisfaction; F. McCrae, Providence, R. I., who finds very few diseased and no cause for complaint; Alex Dallas, Waterbury, Conn., who has no disease to speak of, bulbs having come from three different parties, and John Spalding, New London, Conn., whose lilies, obtained from several dealers, are all in finest condition and health. "These statements," Mr. Pierson said, "lead me to believe there is nothing like as much disease here as one would infer from the criticisms that have been heard. There were undoubtedly some bulbs of a very inferior grade thrown on this market last season, bulbs that had been badly damaged by the drouth, which are at the bottom of most of the trouble, and which probably could not have been disposed of except for the scarcity that prevailed at the close of the season." Referring to the consolidation of bulb growers recently effected, Mr. Pierson said that this action was taken to secure living prices for the Bermuda growers and not to raise prices here; to regulate the quality of the bulbs shipped, making them of a uniform standard quality and to stop the shipment of cut flowers to this country, and that as the Bermuda Bulb Co. would handle the entire crop of three million bulbs the present year, with the exception of perhaps one hundred and fifty thousand, a careful selection and inspection of the bulbs would be inaugurated that would, he hoped, result in a better grade of bulbs being shipped than has been shipped for some years. He deprecated too early digging, a practice which was largely due to the anxiety of the trade here to secure early consignments. Another cause of bad results in culture he believed to be in improper treatment by growers here, damage to the root by excessive wet or heavy condensation on the foliage being often factors in the case, it being possible to injure the best bulbs by unskillful handling. He reiterated in conclusion his belief that the extent of the trouble at the present time is largely exaggerated, citing in proof of this position the fact that several of the largest dealers have requested that they be supplied this year from the stocks of the same growers from whom they obtained their bulbs last season, which it is to be presumed they would not do if there was

any serious cause for complaint in their last year's experience.

Mr. Dean said that he had grown *Harrisii* lilies for thirteen years and for the first five years had no trouble, no matter what the treatment was. Then gradually began the little brown tips on the leaves, which had increased from year to year until now out of twenty-five thousand lilies he has not one entirely free from disease. He would guarantee, he said, that throughout the country there would not be found one plant out of ten not affected. The bulbs, too, he said were subject to decay and were at the present time not more than half the size they were when planted. All this he attributed to the lax culture practiced in Bermuda. He condemned roundly the custom of growing bulbs in old ground and thought the best thing to be done was to put up the bars and let them keep their lilies till California and Florida can do something for us. He claimed that the gentlemen who had written Mr. Pierson all had the disease but didn't know it because they did not scrutinize closely enough, and instanced the diseased blooms sent here at Easter as evidence that the disease was in no manner owing to cultivation of the plants here in the greenhouses. He accused the Bermuda growers of gross carelessness in growing and selection, and asserted that stable yard manure was used only in homeopathic doses.

Mr. Pierson characterized the resolutions as a gross injustice to the Bermuda growers and not likely to do any good. He referred to the black spot trouble on American Beauty and the various troubles affecting peas, onion seed and Roman hyacinths, and pertinently enquired what good could be accomplished by prohibitive legislation regarding these things.

Several other growers then were called upon. Julius Roehrs said that he thought the brown spotting on the leaves was on the decrease. Eugene Dailedouze said his lilies were better this year than last. President Allen advised caution and questioned whether there was a man in the club competent to investigate fungous diseases intelligently. He deprecated the inauguration of any needless scare and called attention to the hasty and ill-advised action of carnation growers in destroying thousands of dollars worth of plants on account of the "rust" agitation. Alex Burns said that if lilies can be grown eight or ten years on the same ground they are the only horticultural crop that will stand it. Mr. Dean fired a parting shot by saying that he proposed to try to grow his own lily bulbs hereafter, and the matter was dismissed by the adoption of the resolution and the appointment of P. O'Mara and Wm. J. Stewart as the committee to report at the next meeting.

Other matters of interest at the meeting were an encouraging report by Mr. Kelsey for the committee appointed to confer with the board of general appraisers regarding the classification of nursery stock; a vote authorizing President Dailedouze of the American Carnation Society to invite that organization on behalf of the New York Florists' Club to hold their convention in 1896 in this city; a letter of thanks from Mr. Bayard Cutting accepting his election as an honorary member; a vote authorizing the secretary to print all essays read before the club in book form annually; the appointment of a house committee to arrange for a social entertainment and a committee to consider and report some plan of federation with the many lesser clubs in the vicinity

of New York; and a discussion on the best method of properly recognizing by certificate or otherwise such novelties as are exhibited at the meetings and may be found worthy. The "adjourned" meeting lasted nearly as long as the regular session and lively discussions extended to the car steps and the ferry gates, as usual.

Business is wretchedly dull. All last week during the prevalence of severe weather stock of all kinds accumulated in the hands of wholesalers and much of it was lost. Prices are badly demoralized but not nearly as badly as they will be as soon as balmy spring weather makes its appearance; then look out for squalls.

Alex Burns is cutting a lot of grand La France, unequalled in color and size. When La France "is good it is very good and when it is bad it is horrid."

Narcissus Stella and Campenelle are not worth forcing for this market; nobody wants them.

Philadelphia.

The past week has been unprecedentedly cold. In Philadelphia the thermometer seldom registers zero and very rarely two days consecutively, but last week it stood at zero or below at least four consecutive nights, and one day only rose to 6° above at noon. The lowest point reached was 14° below; it has now moderated considerably, and the public is able to see what the florists' windows contain, they having been coated with ice for over a week. Such weather was of course very severe on those who had any decorating to do, and in spite of ordinary precaution many palms were frozen. Boxes of cut flowers coming and going were in most cases more or less frozen, and in many instances the whole shipment proved a total loss, even when great care was taken in packing to avoid such results. Boxes with orchids and others with violets wrapped in twelve to fifteen newspapers of three to six or more pages each arrived frozen hard. Is there not a good field here for concerted action such as succeeded in getting a special rate from express companies for plants? There is certainly gross neglect on the part of the companies carrying cut flowers that are carefully packed, when they are delivered in a frozen condition. Their receiving offices are heated, and this is where boxes should remain until the cars, which are heated, are ready to receive them. After reaching their destination they should at once be placed in a warmed office, and from there delivered by special covered wagons protected also with blankets. All this would entail no extra expense to the carriers except possibly the final delivery. Perhaps it would be necessary to have a uniform manner of marking boxes such as tacking or pasting a band of red paper around it both ways or some other distinguishing mark, so that no matter which part of the box was exposed the nature of its contents would be known to the agent, and he would act accordingly. If this matter is brought to the attention of the express companies by a committee authorized to speak for the trade generally we feel sure that a system of quick delivery and protection against frost will be adopted that will reduce the losses to a minimum.

The snowstorm blocked the railroads even worse than the March blizzard some years ago. The Chester County boys were snowed under from the 7th until the 12th; it was impossible to get trains through for that time. It was the worst

blockade on record for this region. Quite a number of the trade had stock in their houses frozen, the worst case being with Chas. F. Evans of Rowlandville, who says he lost \$5,000 worth, having one large range of houses entirely frozen out. The damage was occasioned by the returns getting frozen when steam was down, and as it could not circulate everything soon froze up. In consequence of this accident Mr. Evans called his creditors together last Tuesday afternoon and a committee was appointed to investigate his loss and report at an adjourned meeting. There were numerous other small losses, but nothing very serious; large inroads were, however, made on the coal piles and a great deal of hustling to renew fuel stocks that were very low.

Speaking of fuel George Anderson says that he makes a 25-bushel load of coke breeze go as far as a ton of coal. This breeze costs 2 cents per bushel and the hauling, and is consequently much the cheapest form of fuel. Coke is used to start a fire and make a bed for the breeze, which might fall through the grate. It is a more troublesome fuel than coal to a green fireman, but is easily managed after a day or two's experience.

Business, considering the weather, has been fairly good. Transient business was light, as most folks don't go shopping in zero weather. There was not as much work for the second assembly ball as for the first, although it was in years gone by always much the best for the florist.

All kinds of stock is plentiful and good, although some kinds of roses begin to show an off crop appearance, but there is plenty of number one stock to be had without much hustling, and second class stock is offered away down. This applies particularly to roses; carnations seemed pegged at 2 for all fair stock, and extras bring 2.50 to 3. Brunner roses sell for 50, Beauties and Belles \$3 to \$5 per dozen, large teas 6 to 10, smaller sorts 3 to 5, violets 75 cents to \$1. Good smilax is scarce and commands 20 cents; adiantum sells very well at \$1 per hundred.

Mr. Lonsdale in speaking of rust recently stated that the variety Grace Battles, which had shown signs of rust last season, was entirely free from it this season. The plants affected last year were grown outside and when planted in the house the disease became noticeable. As the plants were quite a distance between the rows he planted after a time in this space small plants out of 3-inch pots that had been kept inside all summer, and these grew and did very well, never at any time showing signs of the disease.

Mr. Sapiot, a large violet grower of this city, who has recently returned from a visit to his native land, says that the large violet growers near the city of Toulouse, France, used to grow the Marie Louise exclusively, but now grow nothing but the variety known here as Lady Campbell, it is called the Toulouse violet there, and is grown entirely in cold frames and to great perfection, much better than he has seen it in this country. K.

Boston.

The first week of February must go on record as a disappointment in the amount of business transacted. It is entitled to the distinction, however, of furnishing the stormiest weather experienced for many years, weather presumably most unfavorable for the blooming of flowers, notwithstanding which there has been no indication of scarcity in any kind of stock, customers being the only commodity in short supply.

There is no change from conditions of a week ago which calls for special notice, except perhaps the increased quantity and excellence of the bulbous stock coming in, the leading varieties of tulips and narcissi being now offered in quality such as has been rarely seen so early in the season. There have been many instances of injury more or less severe to flowers by freezing. This has been the case especially with those received by express, and doubtless complaints are yet to be heard in regard to those shipped away from here. It takes a big box for a very few flowers in such weather and mere thickness of packing, in the absence of any means of heating, such as bottles of warm water, etc., seems no safe barrier against frost.

It has indeed been a hard week, hardest of all upon the market grower, who after a night of anxiety and fire watching must pack up his stock and, regardless of the storm, start for the city in the early morning, where with his pile of boxes he becomes a chosen target for the fierce winds, which buffet him and his unwieldy load at the bleak corners as he makes his way over the icy pavements from store to store, or to the market, where it takes several minutes of vigorous arm swinging before his numb fingers are equal to the task of unbuckling the straps; and then, worst of all, he is denied the compensating privilege once enjoyed of doubling up his price.

The man who starts from home before daylight to sell flowers in the Boston market in such weather as has been experienced recently well learns every cent he can realize on them. One's thoughts are apt to revert to the by-gone days, before shallow benches and houses "lighter than out doors" were dreamt of; the time when the advent of such weather brought dismay to the heart of the retailer and put fat on the grower's ribs. The old fashioned cool-grown Bon Silenes, Safranons and Sprunts with their feet in the deep cold beds would stand in the semi-darkness with their noses pointed upward at the snow laden sashes, "hard as bullets," and refuse to budge. Going to town to seek buyers was the last thing the grower thought of on such a morning. Full well he knew the buyer would come to him, so he cosied himself in the warmest corner and waited in patience, and the more the storm raged the surer he was of his victim, and for every six inches added to the snow drifts outside he mentally added another five dollar bill to the price at which he might be induced to part with the jar of "nubbins" that stood in the hottest spot over the boiler trying hard to swell.

All preparations are now completed for the approaching meeting of the American Carnation Society. Advices from points remote and near indicate that the exhibition will be a grand one and interesting as a display to the general public, as well as in a more scientific way to the fraternity. Much interest is felt locally in the event, and the banquet to be given to the visitors by the Gardeners' and Florists' Club on the evening of Thursday, the 21st, will bring together a large and representative gathering. An interesting feature will be Prof. Halsted's illustration of the diseases of the carnation, for which several high power microscopes have been procured. Don't miss it.

Francis Brown Hayes, son of the late Hon. F. B. Hayes and heir to the beautiful grounds at Lexington where the late Mrs. F. B. Hayes so lavishly entertained the Society of American Florists, died Dover, England, on Saturday, Febru

Chicago.

At last there is a welcome change in the weather. Already the stock in every line is beginning to feel the effects of a rise in temperature accompanied by sunny days. Fortunately the demand keeps fully apace with the increasing supply, and so far prices have not weakened to any extent, colored carnations of medium grades being the only line that is moving slowly, and quotations are somewhat lower.

There was an extra demand on the 14th, St. Valentine's day. Although this day has not been counted on heretofore as a factor in the flower market, still the custom of sending cut flowers in some shape or other as a valentine has been growing to a considerable extent of late years, and was most notable this year both in local demand as well as in the largely increased orders from the country. In fact the outgoing packages at the wholesale dealers on the 13th were nearly as numerous if not as expensive as at the holidays. Let us hope that this custom of using flowers on St. Valentine's day may keep on growing. The retail boys might aid the movement by keeping their patrons posted on prevailing "fashions."

Beauties continue in good demand, but A1 selected stock is not at all plentiful. Bassett & Washburn are cutting quite a large number with a fair proportion of medium to long stems. Reinberg Bros. are also coming in with new crop, and if the weather should continue fine there is a good prospect of ample supply and improving quality. Bridesmaid is in full crop with a number of growers and of average fine quality; still the demand continues far in excess of supply. Testout is extra fine and selling at top prices. Reinberg Bros., who grow this variety to quite an extent, report it very satisfactory in every way. Kaiserin, too, has behaved well all through the winter. Although the plants have not produced as many buds as Bride since December 1 the quality of bloom is very good. Mermet shows the effect of hard firing more than any other variety, the effect being a diminished size and pale color. Perles are improving in quality. Meteor continues of varying quality. Some growers are sending in blooms with extra long stems and fine bright color, while a number of others have it almost as black as the ace of spades. Brides are more plenty but meet with constant heavy demand; the quality is good.

Carnations are quite plenty but, keep moving at a lively rate. White is in extra demand, the supply of these running short most of the time. Tidal Wave of medium quality goes slow.

With the advent of warmer weather violets are brisk in demand; quality is fair and supply ample. Bulbous stock continues in fair demand. The supply is increasing rapidly, but so far there is apparently no overstock in any one line. In tulips we have now some pretty fair Keiserkroon, La Reine, Yellow Prince, Chrysolora, Cottage Maid, Crimson King and double Tournesol. In daffodils Von Sions are fine, and also Trumpet major, which have just made their appearance. Valley is decidedly more plentiful and has weakened a little in price, few of the best quality going above 4. Harrisii are rather slow.

To what an extent the common wood ferns are depended on by the retail florist was forcibly illustrated this week by the sudden cut off of the supply. For the last three or four days not a fern is to be had in our market. The cause must be looked

for in the abnormal weather conditions prevailing in that section of the country whence the supply is drawn at this season of the year. In fall and early winter the main supply comes from our northern states, the ferns being gathered and packed away for winter use before the snow begins to fly. Much of the stock, however, later on is shipped up from more southern states, where the weather is ordinarily such as to allow picking at any time during winter; but most of this section is now covered by snow, and where it is not the frost has turned the fronds brown and useless. As a result there has been a heavy increase in the call for smilax. The wholesale dealers find it difficult to fill orders and prices have taken a sharp advance, best quality selling at from \$2 to \$2.50 per dozen, and extra heavy at \$3.

T. J. Corbrey and family left for Los Angeles, Cal., last Tuesday, where they will remain for a month or two.

Harms & Lang, 113 State street, have dissolved partnership, Mr. Lang disposing of his interest to the senior member of the old firm, who will continue at the old stand.

Joe Craig has opened up again at 205 State street.

Mr. C. C. Pollworth of Milwaukee was a visitor during the week.

Buffalo.

This city has seen one of the most severe weeks in its history for blizzards and steady low temperature, but thank goodness, we are prepared for it, even if we don't expect it, and are fortunate indeed compared with the dwellers among the orange groves of Florida. We have been certainly no worse off than the rest of the country, although New York state has had its share; 13° below was the bottom notch recorded. These conditions could not help shortening up the supply of almost all kinds of flowers, roses, carnations and violets feeling it mostly. There was, however, no great scarcity, for nothing happened calling for any great amount of flowers, excepting a few funerals, which called for more than an ordinary lot of emblems, etc. Speaking of emblems a well known east side man died last week; he was a prominent bowler and member of one of the best clubs in the city. So his comrades ordered a diamond with regulation pins and a couple of halls. It was well carried out mechanically, but is this not going too far? It "strikes" me as out of place, and could be "spared" on such occasions.

There has been no chance to dispose of plants for two weeks past, store windows with an inch of ice on them, and weather too cold altogether to handle plants; when we are all thawed out, which I trust will be very soon, I have every confidence in a brisk demand for flowering plants; it always does come in February. We are ready for it. There is a fine lot of plants in the houses waiting to show themselves.

Visitors in town this week were Mr. Wise of East Aurora and Harry Bunyard of Short Hills; "Arry" is looking well. Mr. Wise grows the finest carnations sent into town, and his thoughtful philosophic talk on his favorites is always worth double the time it takes to listen. Mr. E. M. Wood of Natick and the Wahan Conservatories was in Buffalo on business, and we had him for an hour or two, much to our satisfaction. If we learned nothing more than to classify our roses correctly it satisfies us. We now know that our fairly good roses would

be in Boston classed as *second fourths*. As we don't ask wholesale as much as a fourth of what Mr. Wood gets for his best it's all right. We hope Mr. W. arrived home safely and enjoyed his brief visit as much as we did his company.

On Friday next a car load of nondescripts will journey to Rochester to take the scalp of the Genesee boys at nine pins.

J. H. Rebstock is sojourning in the more or less balmy south. W. S.

St. Louis.

The continuance of cold weather keeps stock scarce and has a marked effect on the market. First quality roses are especially in demand, much of the stock coming in being below the ordinary grade. Bulbous stock has been in somewhat short supply, and violets are few and far between.

The Jordan Floral Co. are cutting some fine Jacqueminot roses, and have been doing so since the first of February. Their method of growing is to plant in the field during the summer and in the fall to cut a trench each side of the rows and as soon as the soil is frozen to lift each plant with a ball of soil and plant in the benches. The houses used have held chrysanthemums during the summer and fall; and Jacks are worked in as a second crop; as soon as the Jacks are over the house is used for giving more room to Easter stock or for growing young stock. The old plants are thrown out, as much better satisfaction is attained when the stock forced is one year old.

One of the most graceful and pretty decorations of the season, and without expensive, was recently made at Mahlers Hall. The ball room was decorated principally with wild smilax. The front of the balcony which projects over the room on all sides was covered with wild smilax, while at close intervals baskets filled with blooming plants and flowers and trimmed with streamers of smilax were hung from the front of the balcony; at frequent intervals in the balcony groups of palms were placed, and inclined outward over the room, giving a most graceful appearance. The mirrors surrounding the ball room were trimmed with wild smilax, and in the four corners banks of foliage plants were placed; the chandeliers were covered with wild smilax. In the reception room specimen palms were used, and whatever allowed trimmed with wild smilax.

In the dining hall the chandeliers were draped with smilax, and each of the twelve tables had a centerpiece, either a palm or cyclamen plant, around which a bank of moss was laid, and into which ferns and cut flowers were arranged. As one entered the waving palms gave a most graceful air to the whole, and after all were seated they were high enough to be out of the way and did not obstruct the view. On each table, besides the centerpiece, fairy lamps with pink shades were placed and surrounded with garlands of smilax and pink roses. Smilax was used also around the walls. The decoration was executed by the C. Young & Sons Co. and was much admired.

Considerable amusement was occasioned at the windup of the last series of games of the bowling club. Some one was kind enough to provide a first and booby prize for the winners of the lucky and leather medal. The packages were received with much curiosity, which was dashed when on opening one was found to contain the figure of a hog, while the other held the image of a donkey.

R. F. T.

Cincinnati.

The weather for the past week has been a continuance of what has gone before, in fact no one can remember the time when we have had the continuous cloudy weather that has been prevalent this season. After promising a change the first part of the week we caught it in the shape of a blizzard with the thermometer at 15° below zero accompanied by snow.

The most noticeable thing during the week has been the scarcity of good roses, and in fact good flowers of any kind. Roses, however, seemed specially hard to get, and there was trouble for any unfortunate who got a large order without having in sight the wherewithal to fill it. Trade has not been very brisk either. Here and there we hear of a large order but as a whole business is very slow. Whether matters would be bettered much by a brisker demand unless the supply should increase at the same time, it may be doubted.

Carnations are running very small and inferior. Bulbous stock does not share in the revived demand, but is as dead as ever. Violets are a scarce article, as no one can get at their frames to pick them. Corbet & Wilson are cutting some of the finest that are brought in the market just now.

The regular monthly meeting of the Florists' Society was held last Saturday. The attendance was very small on account of the severe cold weather. P.

Kansas City, Mo.

The past two weeks have been very hard on greenhouse men. In fact, this has been the most severe winter so far in twenty years. All the boys report that coal bills for January are the largest on record. W. J. Barnes had to call to his aid all the gasoline stoves in the neighborhood and just barely managed to keep out frost. All the others just got through, many having two men up all night—and how the coal disappeared! Our friend Barnes has also had for some time to buy his water, getting it fully a mile from his greenhouses. Hard, especially so as there has been practically no business for the past two weeks, but of course lots of work; and at no time has the stock of all looked so well as at present. At Brown & Sons the stack of orders that stand waiting for the weather to moderate augurs well for us all later on. It will keep them hustling to get them on. Most of them go to the south, a great many to New Orleans. Their stock never was in such fine shape. Business with the store men has been very quiet; nothing but a small funeral piece occasionally, and those are scarce. It is in a sense a blessing, as stock is scarce, and there has been no demand. Probst Floral Company have daffs and valley in great quantity, but all they are making is a show in their spacious store. However, we learn that in the near future there is going to be some good decorating. Our club meets on the 14th, and there will be some good maiden essays, as we learn that a great many are anxious to read a paper; and may they come. S. M.

BATH, ME.—Mr. John H. Ramsay, superintendent of Oak Grove Cemetery, is preparing to embark in business as a commercial florist and is now building four houses, two of which are 14x50, one 16x50 and one 16x16. He will conduct the florist business as a private venture but will still retain his position as superintendent of the cemetery.

EAU CLAIRE, Wis.—Mrs. E. Wygant has bought out the business formerly conducted by H. Bluedorn, and will continue it at the same address, 941 Main street.

MT. PLEASANT, IOWA—H. Colclough has bought out the West End greenhouses formerly belonging to Mrs. J. P. Bean, and will hereafter conduct them, in addition to his former East End place.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each lateration. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—As foreman or charge of department; good grower of decorative stuff. Z. Y. S. X., care Am. Florist.

SITUATION WANTED—As foreman in first-class commercial place; good man in all branches, married; best references. E., care Am. Florist.

SITUATION WANTED—By first-class gardener to take charge of private place; 32 years old, married; best of references. 404, care American Florist.

SITUATION WANTED—By first-class gardener in private place; good grower, plants, cut flowers vegetables and mushrooms; age 25. ILEX, care American Florist.

SITUATION WANTED—By young florist, German, as assistant in good private place; good references. Address POPE, Simpson Estate, Westchester Ave., N. Y. City.

SITUATION WANTED—By a young man, German, of 6 years' experience in all branches, fast worker, good propagator; East preferred. Address M. K., care American Florist.

SITUATION WANTED—By first-class rose grower, 13 years' experience, seven years with present employer; 32 years' old, married. JOHN, care American Florist.

SITUATION WANTED—By a young, well educated man to learn the florist trade; please state terms. Address BREHM, care H. P. Smith, 102 W. 134th St., New York City.

SITUATION WANTED—By competent young man as mail and express packer or order clerk, 5 years' experience in large retail and wholesale place. C. W. 100, care American Florist.

SITUATION WANTED—By a practical gardener, 20 years' experience; age 40, single, sober and reliable; commercial or private. J. J., P. O. box 68, Biverdale, Ill.

SITUATION WANTED—March by young man as foreman or first assistant; well experienced in roses, carnations and mums; state terms. Address FLORIST P. O., care American Florist.

SITUATION WANTED—By a first class landscape gardener and florist, 18 years' experience, married, no family; references from first-class parks and florist. H., care American Florist.

SITUATION WANTED—By experienced grower, competent to take full charge; vicinity of Chicago preferred; good wages expected or some percentage. Address A. GROWER, care Am. Florist.

SITUATION WANTED—By a young man, age 21, as assistant in commercial place, to learn florist trade; willing worker; small pay. Good references. Address E. B. S., No. 634 Kinney Ave., Chicago.

SITUATION WANTED—By a married man, German, 15 years' experience in growing roses and all kinds of cut flowers, competent to take charge of a private or commercial place. Address A. B., care American Florist.

SITUATION WANTED—By a practical gardener and florist, 20 years' experience in all branches; strictly temperate married man; private place preferred; best of references. GARDENER, Batchelder Bros., 71 Lake Ave., Cleveland, Ohio.

SITUATION WANTED—As foreman, a practical grower of roses, carnations, violets, chrysanthemums, palms, ferns, also the forcing of bulbs over 20 years; single, good references. Address FLORIST, 23 E. 43d St., Chicago.

SITUATION WANTED—By April 1st by a rose grower to take full charge of a medium sized plant where roses are made a specialty; understands his business, private or commercial. For full particulars address "WARNER," box 74, Nyack, N. Y.

SITUATION WANTED—By a young Dane in a commercial place; is used to greenhouse work; speak fairly good English is sober and has good recommendation; western states preferred. Address S. BERTESON care Nissen 240 Division St., N. Y. City.

SITUATION WANTED—As florist or gardener in a commercial or first-class private place. Scotchman; 6 years American experience. First-class testimonials from former employers. Communication solicited. Address J. L. CAMERON, care Wm. Scott, Buffalo, N. Y.

SITUATION WANTED—By first-class florist; 12 years' American experience in commercial out flowers, palms, floral work, bedding plants, etc.; management of private or commercial establishment; English, age 31; total abstainer; best references. FLORIST, 72 Wilson St., Waterbury, Conn.

SITUATION WANTED—German, 33 years old, married, who has been foreman in large commercial places in this country for the last eight years, wants situation as such, after the 12th of February. Has had seven years' European and 12 years' American experience. CHAS. JOHNSON, care Henry Timmer, 804 Commercial Ave., Jersey City, N. J.

WANTED—Wholesale and retail catalogues of plants, seeds and novelties. Address B. F. VANDERVATE, Galea, Ill.

WANTED—Partner with \$500 in florist business in a good town in Kansas. Address H. W., care Vaughan's Seed Store, Chicago.

WANTED—Two first class experienced rose growers, single men. Address, with references and wages expected, BASSETT & WASHBURN, Hinsdale, Ill.

WANTED—A first-class rose grower, as working foreman on a commercial place; send reference from last place and wages expected. Address W. H. TRAENBLY, 271 Sixth Ave., New York.

FOR SALE CHEAP—Four greenhouses nearly new and dwelling, 4 lots 20x133, fine soil, within 100 miles from Chicago. For particulars write C. HOKANSON, Sibley, Ill.

FOR SALE OR RENT—In center of the city, 8.0 feet of glass with store, and first-class stock, cause, sickness. Address JOHN SCHNEIDER, 32 1/2 Walnut St., Kansas City, Mo.

FOR SALE CHEAP—I will sell my Maple Heights and Marlon Greenhouses (or plant), consisting of 25,000 square feet of glass; heated with steam and natural gas, stocked with the leading varieties of roses, carnations, geraniums, palms, siliacx, etc., etc., with four acres of ground, under cultivation; a cottage on the place and about forty fruit trees of the standard varieties of cherries, pears, plums, etc.; we are on three railroads with a direct line to the best flower markets in the west; only one competitor and a town of 20,000 inhabitants. Ill health the cause of wanting to sell. A great bargain to the right one. Address MRS. GEO. R. FAVELL, 322 Washington St., Marion, Ind.

FOR SALE OR EXCHANGE,

Strong healthy blooming size surplus stock of Agapanthus Alba, Tritoma Noble, finest double Dablias, Amaryllis; offers at once.

H. E. GOOLD,
Sussex, N. B., Canada.

FOR SALE.

On N. Western Ave., 2 blocks from Lincoln Ave. Electric Road, Chicago; 3 greenhouses 20x210, one 12x210, stocked with roses and carnations; lot 75x280. The ground on which the houses stand is valuable and will double in ten years. \$6,000 takes it—\$2,000 down, balance on ten (10) years' time.

A. T. JACKSON, Station X, Chicago.

For Sale or Rent.

My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 48 lots or 206 feet front on Belmont Ave. by 70 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 10 to 200 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the largest of the kind in Chicago. A good chance for some young man with some means, or for a corporation; and as I wish to retire from business, it can be had reasonable, and on easy terms. If rented, a long lease can be given.

AUGUST DRESEL,
Belmont and Western Aves., Chicago.

VERBENA SEED.

This improved strain of Mammoth Verbena gives perfect satisfaction to my many customers, and is justly claimed the finest in cultivation; flowers an inch in diameter, in extra large trusses, of finest color.

For trade pkg. 25c; 3 pkts. 60c; 6 pkts. \$1.00.
I will here thank my florist friends for the many letters of commendation received during the past year.
JOHN F. RUPP, Shiremanstown, Pa.

Worcester, Mass.

We have experienced the coldest weather of the season this last two weeks, the thermometer ranging from 2° to 12° below zero at night, and the way the coal pile grew beautifully less was a caution to those who think the florist business is all profit. I have heard of no one getting frozen up, but some tall firing was done to keep out Jack Frost. The dark days have not been conducive to bringing out flowers, consequently we were a little short on roses and carnations, but the supply is fully adequate now. Trade has been exceptionally good, in fact it is surprising to see how the trade holds good when all other kinds of business are complaining. The decoration business has fallen off considerably, but several fair jobs are looked for this month.

The Horticultural Society has held weekly meetings, which were open to the public, throughout the winter, but up to February 7 talks on pomology and travels have occupied the time. On February 7 the subject was floricultural talks, and it proved very interesting. O. B. Hadwen presided and F. A. Blake gave a little talk on fibrous and tuberous begonias. H. B. Watts told us all about gladioli and Willard F. Pond spoke on sweet peas and cannas, after which informal discussion was in order.

The Rose for the Million!!

BELLE SIEBRECHT.

Always in bloom. An iron constitution. Requires no special houses, no nursing. Will make itself at home in any house where other roses are grown. Proved hardy out of doors in latitude of New York. Color and keeping qualities unequalled. The greatest introduction of the century.

What good judges say:

It has proved a strong, vigorous and healthy grower, and remarkably free flowering, while its very large flowers retain that beautiful clear deep pink color that is entirely its own, and the bud being so very long and pointed in shape there is no possibility of its bullheading or hooding over in dull weather, which is the case with so many other roses of this class. On the whole we are so pleased with it that we intend to plant very largely of it for Boston market. ALEX MONTGOMERY, Natick, Mass.

It is certainly a beautiful rose, but what impressed me most was first its very fine texture and substance of the foliage, which I am sure is not excelled in this feature by that of any rose in the market, and, second, the very evident indications of the free blooming habit of the plants.

With these important characteristics I feel certain that the Belle Siebrecht will prove a valuable addition to our list of forcing roses.

S. C. NASH, Clifton, N. J.

The new rose, "Belle Siebrecht," I believe is the best rose of recent introduction. First, because of its fine color, which recommends it, there being no other rose of that brilliant shade. Second, its great keeping quality; after being cut three days its brilliant shade is just as pleasing as when first cut. Third, it seems to require less skill to grow it to perfection than any other rose I know of. I believe it is going to be the rose for the million.

ALEXANDER BURNS,

Of Burns & Raynor, Wholesale Florists, N. Y.

This Rose is not a mere SPORT, but is of a distinctly new strain, being a SEEDLING, the result of a cross between the grand old La France and that strong and vigorous Rose, Lady Mary Fitzwilliam. Many of the leading rose growers who have seen this Rose growing at our nurseries have ordered from 500 to 2000 Plants. Orders booked now and will be filled in strict rotation. Strong plants ready for delivery April 15th.

PRICE, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

SIEBRECHT & WADLEY,

New York Office, 409 FIFTH AVE.

NEW ROCHELLE, N. Y., U. S. A.

Our Annual Spring Number.

Our annual special spring number will be issued March 16. We have some splendid special features in preparation for this number and it will be a decided advance, both in value of matter and beauty of illustrations, on any of our previous special numbers. What more can be said?

A copy of this issue will reach every buying florist in the United States and Canada. There will be no increase in adv. rates for this special number, which will be big extra value to advertisers. Send advs. early so we may have time to give them the best possible display.

ELECTRO-HORTICULTURE is the title of Bulletin 37 of the West Virginia Agricultural Experiment Station. It describes in detail a series of experiments concerning the effect of electric light on growing plants. The effect of this light was tried on lettuce, endive, spinach, etc., and on some flowering plants. While it had a marked effect on many plants the summary of experiments does not appear to prove that the use of the light is of great practical value.

MESSRS. Ellwanger & Barry, Rochester, N. Y., have issued a supplementary catalogue for 1895 in which all the illustrations are half-tone engravings from photographs. The plates are excellent and exceedingly well printed on fine paper. Here we see the full value of such engravings for catalogue work. It is worthy of study by other makers of catalogues.

D. LANDRETH & SON, the Philadelphia seedsmen, have issued a very attractive album of views on their seed farms. The engravings are by the half-tone process from photographs and are well printed on good paper. The views acquire special interest from the fact that there are included many old buildings, some of them erected in the last century.

A California botanist is reported to have discovered a species of sequoia hitherto unknown to scientists. It is said to be closely allied to extinct species.

YOU CAN save money by printing your spring trade list in our columns.

BEAUTIFUL SOUTHERN GALAX LEAVESFor DECORATING and FLORISTS' USE.
BRILLIANT GREEN and BRONZE.
LARGE and SMALL SIZES.

A now heart shaped Evergreen leaf with long plant stems. Make up splendidly and sell well by the bunch at a large profit. Each size and color tied separately in bunches of 25 leaves. Will keep for months in cold storage or other cool places and are very popular wherever known. Write for price and sample by mail free to florists only.

A Testing Station Proposed.

THE AMERICAN FLORIST:—Would it not be a good all-round thing for the American Seed Trade Association to establish and maintain what might be called "A Testing Station" where an official test of seeds could be made, and a record of the same be kept to settle dispute as to their growing quality between buyer and seller. Everyone *thinks* they can test seeds, but *very few can properly*, and a great many of the methods now used for testing are, to say the least, very questionable, and the position the buyer frequently takes, if the same seeds can be bought for less money later in the season, is still more questionable. If the buyer does not want to keep the seeds, from any reason whatever, he will frequently return them on the pretext of poor vitality, sometimes after the season for selling them is over, or refuse to pay for them when the account is due. In all such cases it seems to me it would be good to have an official test, the result of which would be binding on both parties. Will give you a case of the kind to be prevented if possible: We sold some seeds last November that then tested 90 to 94%; have tested the seed since with about the same result. The seeds have depreciated on the market 15 to 20 per cent in value since the sale was made. The buyer writes on December 21 that the seeds grow only 40% and would not answer for his trade, *which is very critical* (?), etc., etc. He writes again January 26 that they grow only 50%; again writes February 1 that they grow only 60%. We wrote him that if he would keep on testing he would soon get 90%, all we claimed for the seed. But now the same seeds can be bought for less, and he is bound to return them. Now, if there was an official station where both the buyer and the seller could send a sample and have the seeds tested by a *disinterested* party, and his decision to be final and settle the matter, it would be well for the seed trade. Seeds returned to anyone under such circumstances are not worth the freight charges. No one wants seeds sent to them that have been returned by another party as of poor vitality. No one wants seeds returned to them that have been through the hands of any party who would take that course because it was (as he thought) his interest to do so. The buyer says he is right. We say he is wrong, but it cannot be settled; the seeds are returned and lost.

We had a few seeds that were not sold returned to us late in the season nearly a year ago because they did not grow satisfactorily. The amount was deducted from the bill and check sent reading "to balance account in full in to date" on the face of the check. When the seeds arrived we paid charges on them, tested them again and found them *all* of very strong growth; one lettuce showed 100%. But we had no appeal and destroyed the seeds as of no value coming from a man who would take that course. He might have returned the seeds he got of us and he might not; we gave him the benefit of the doubt.

Cannot there be some remedy suggested for this difficulty, which is on the increase we are sorry to say, and practiced by parties who would be considered above

such methods. After an official test if the seller if found to be at fault let the seeds be condemned and destroyed; if the buyer is at fault make him keep the seeds and pay for them like a man and a seedsman. Sufficient charge might be made for each sample submitted to the station for test to make the thing self supporting, and prevent any one party flooding the station with samples.

"I'll no say men are villains a';
The real, hardened wicked
Wha' hae nae check but human law
Are to a few restricted.
But, oh! mankind are unco' weak,
And little to be trusted.
If self the wavering balance shake
It's rarely right adjusted."

A MEMBER OF THE A. S. T. ASS'N.

American Seeds Abroad.

TO THE AMERICAN FLORIST; Referring to your article headed "American seeds Abroad" in your issue of January 19, you must remember that the notice published in our papers was based on the results of a very exhaustive investigation made by the *Ontario Agricultural Station* and in the United States. Assuming these reports to be true, it, it does show that there should be more care taken in the cleaning of American seed, and although Messrs. Dickinson & Co., of Chicago, are specially careful to send out seeds of A1 quality, it is quite necessary to warn our dealers that there are unscrupulous merchants in America, as well as in other countries.

Seed merchants of Great Britain do buy by sample, but the immense numbers of arbitration cases that take place in London, are sufficient to show that the deliveries are in many cases not equal to the sale sample.

If American seed is to take a prominent position in the trade of this country, your own Experiment Station must give us better results of their investigations.

LONDON.

THE COMMITTEE on agriculture have turned down the Secretary's recommendation with reference to discontinuing the distribution of seeds by Senators and Members of Congress by a vote of 12 to 2 and have reported the annual appropriation for the Agricultural Department without making any reference to the Secretary's recommendations, or changing it in any except in the amount of money to be appropriated. Mr. Latimer introduced a bill January 9 relating to the distribution of seeds, bulbs and so forth, by the Department of Agriculture, which has been referred to the Committee on Agriculture and I am informed by good authority that this bill will be reported to the House this week, with a recommendation that it be laid on the table. The following is Mr. Latimer's bill:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all seeds, trees, bulbs, shrubs, vines, cuttings, and plants purchased and propagated by the Secretary of Agriculture, as required by law, shall be distributed to the agricultural experiment stations and colleges in the several States and Territories, and all seeds, trees, bulbs, shrubs, vines, cuttings, and plants propagated by the agricultural stations and colleges in the several States and Territories of the United States shall be distributed to such persons as shall engage to make full test of the same under the direction of the stations, and furnish written reports of these tests on blanks to be provided by the Secretary of Agriculture, and the sum of five thousand dollars shall be allotted to each State and Territory, to be paid to the agricultural stations and colleges for the purpose of growing, and purchasing seeds, trees, bulbs, shrubs, vines, cuttings, and plants for distribution as aforesaid, and to pay the expenses of such distribution.

SEC. 2. That the seeds, trees, bulbs, shrubs, vines, cuttings, and plants distributed by the

Department of Agriculture and the agricultural stations and colleges under the provisions of this Act shall be transmitted in the mails of the United States free of charge for postage.

SEC. 3. That all Acts or parts of Acts inconsistent with this are hereby repealed.

REYNOLDS.

Notice of Dissolution

Notice is hereby given that the partnership composed of F. W. Ritter, Jr., and Lewis Harley, doing business in the city of Dayton, Ohio, under the firm name of F. W. Ritter & Co., has this day been dissolved by mutual consent. The said Lewis Harley retiring from said business. The said F. W. Ritter assumes and is to pay and satisfy all claims and debts of said firm, and he is authorized to collect and settle all claims and accounts in favor of said firm.

F. W. RITTER, JR.,
LEWIS HARLEY.

Dayton, O., Feb. 6, 1895.

MR. W. ATLEE BURPEE is in Florida.

VISITED CHICAGO: Frank T. Emerson, Henry A. Salzer, Geo. Salzer, E. M. Parmalee.

MAIL BUSINESS generally the second week in February is more encouraging, the trade prior to that time since January 1 having been disappointing.

MR. H. W. BUCKBEE, of Rockford, suggests that it would be a good plan to refer to the Department of Agriculture Nebraska applications for free seeds from persons who have never been customers of the firm they apply to; thinks the foreign seed contracts placed by the Department in France and England ought to supply them with a full hand.

Baltimore.

The ground hog could not have seen his shadow on the second of February with the best pair of spectacles he could procure in the whole county, and popular opinion has it that as that knowing animal always comes out of his winter's hibernation on the second, he judges the weather by the amount of sunshine visible on emerging from his hole, and if there is enough to cast a shadow, prudently retires for another prolonged snooze. If any of the florist craft were inveigled by this belief into less watchfulness, they are regretting it now, for worse weather than followed has not been seen here in twenty-five years; and all that extreme frost, high wind and snow could do to break down the courage and test the skill of our flower growers seemed to be done in the ensuing seven days. For frost we had from four to nine degrees below zero, for snow we had gigantic drifts that blocked all the roads out of town so thoroughly that some of them are open not yet, and for wind we had howling gales that made it almost impossible to get about at all, and filled the air with snow dust that filtered through tiniest crevices, and as fast as a road or path was opened, filled it up again worse than before. For all this we have been pretty fortunate, as a class, and there seems to be no serious casualties to report. No doubt most if not all have had losses, but they have been the usual accidents that might occur during any winter.

The state of the retail trade can be imagined, during the continuance of such weather, among a people accustomed to mild winters, and in a state where frequently for several years no natural ice can be had for filling the ice houses. The retail trade simply ceased to exist, save in a spasmodic and very feeble way, and the grower had the satisfaction, at least, of knowing that, if his expenses were up, and his output down, he could still produce enough to supply the demand. Prices are much the same as before the storm, and both demand and supply are daily improving.

Two new firms are going into rose growing in the county, Messrs. Hogarth & Sons, who have leased the old Wiedey property from Brackenridge & Co., and Madsen & Anderson, who are located on Gittings avenue near Govanstown. Mr. Madsen has been in business here some time and Mr. Anders Anderson, who was for several years gardener to Mr. E. G. Miller and has extensive experience, joins him. The senior member of Hogarth & Sons, Mr. John Hogarth, after experience in commercial growing in England took a position with Miss Mary Garrett as head gardener, where he remained until the collection was given up and disposed of. His sons, who are associated with him are young men of experience and ability, and the prospect for them as well as for Madsen & Anderson is very bright indeed.

A stroll through Mr. Robert Garrett's conservatories showed a number of the seedling orchids, in which Mr. Hornick takes so much delight doing finely and several in bloom, of which more anon.

BELL MILLER, Springfield, Ill.

Orange, N. J.

The New Jersey Floricultural Society held its regular monthly meeting in Decker Hall on the evening of February 4, President Robt. M. Grey in the chair. After the routine business had been disposed of, the reading of an essay on the cultivation of carnations and the discussion that followed was the principal feature of the meeting. The paper was prepared and read by Mr. Geo. Van Qualin. He entered into all the little details from starting the cuttings up to carrying the plants through the winter. He advocated care in planting in spring not to plant too deep, giving attention during dry weather in summer to provide a liberal supply of water, specially in the case of such a variety as Lizzie McGowan. Preference was given to lifting plants in the fall with a little soil to the roots, care being advised in planting on benches that the plants should be set no deeper than they are grown out of doors, that the soil be pressed firmly about the roots, using soil the same as for roses, only chopped up a little finer, and avoiding the use of old rose soil or soil that has been used before. He advocated feeding at this time of the year with liquid manure or mulching with light manure, and giving plenty of air on every available opportunity. He regarded syringing in the short days of winter as a detriment rather than a benefit. The bunch of flowers which Mr. Van Qualin exhibited, as grown under his treatment, was evidence that he understood his subject, for the blooms were simply superb. An interesting discussion followed, participated in by many of the gentlemen present. Vice-President MacArthur exhibited a vase of fine specimen carnations in variety, and Mr. Taplin showed, on behalf of Siebrecht & Wadley, a bunch of the new rose Belle Siebrecht, which made a good impression and was favorably commented upon as a promising rose for either private or commercial use.

This society meets on the first Monday evening of each month. At the next meeting Mr. R. McInnis of Montclair, N. J., will read an essay on violets. It is possible that the club may give an exhibition next fall; this matter will also be discussed at the coming meeting. S.

PITCHER & MANDA (Inc.) Short Hills, N. J.

GANNAS.—VAUGHAN'S—GANNAS.

DO YOU OBSERVE

They still have 'a yellow canna better than Florence Vaughan'? Where did they come out last year on that claim? Did they make that statement purposely to deceive the public jury or not? We hope not. But to-day the question is, where will they come out this year on the same claim. Write for our Book for Florists, now ready, and we think you will find a list of cannas that did what we claimed for them **last year**, and a list of

NEW CANNAS which will do all we claim for them **this year.**

HENRY JOHANN, COLLINSVILLE, ILL.

Ottawa, Canada.

Our first winter carnival, which opened on the 21st of January, closed on the 26th, and as far as weather and amusement are concerned was certainly a success. Brilliant illuminations, tobogganing, skating and other northern sports made an impression on our visitors that Ottawa is not a bad place to spend a few days in. The Governor's opposition to holding it so soon after the death of Sir John Thompson, and the withdrawal of his patronage, did not seriously affect the success of the undertaking, as our people did not feel like dropping it after spending several thousand dollars, and keep up mourning all winter. If the Governor's absence did affect any part of it it was the ball, as the great three hundred were a trifle shy. But the presence of George Gould and party helped it out, as a good many seemed anxious to rub up against the American millionaire. There was not anything like the demand for flowers that we expected. Except on ball day there was nothing to speak of, and that did not amount to much. I know one florist paid out more than he took in. There was a lot of people but they were not flower buyers.

The next event that should have given us a lift was the Club "daunce" on February 1. Scrim had the decorating, but as the committee bought everything by the dozen the bill did not bankrupt the house. His Excellency and Lady Aberdeen were there, and all the upper crust, but we poor florists are not much richer except in book charges.

There is no prospect of Parliament meeting. Most of the ministers are out on the stump, and as thirty days is the usual notice given everything points to dissolution. When the house is in session in warm weather there is not much use for the florist.

The Montreal boys have had all the vice-Regal patronage this winter, and they need not be surprised to see some of us doing the fakir act on Beaver Hall Hill before spring. Altogether things look blue. During December and January in this latitude the cut is small and we have to buy, and often sell at a loss, and now when the sun has got above the pine trees and roses and bulb stock is coming in there is nothing thought of but politics. One thing I am sure of, we are getting too many flower stores for a city like Ottawa.

One of them is going to give it up in the spring and stick to growing, and one or two more could be spared without the risk of making the remainder millionaires.

ZERO.

"The most valuable labor saving invention I ever used."—C. E. WELD, Roslindale, Mass.

\$4.98

Sounds like a dry goods price, but it isn't. It is our Special "Cash-with-the-Order" price for 1,000 Envelopes and Letterheads (the extra two cents will buy the stamp), ruled or unruled (if you want the letterheads for typewriter use say so), of a grade good enough for anybody (better than most people use), printed in our peerless style, with a neat cut in addition to your card, if you want it. When stationery that is up to date can be had at such prices, there is absolutely no excuse for using anything that is of low quality or carelessly and poorly printed.

Send a check (money order will do), say what you want on the goods, and they will go forward to you promptly by freight, unless otherwise ordered.

If you want a Catalogue, Billheads, Red-leaf Labels, Culture Leaflets—anything that good printers can make—write us.

Toronto.

The bad weather is the sole topic of conversation these days, business is simply frozen up, the thermometer descended to 21° below zero on Tuesday and it could not get above zero until the Saturday after. On Friday it stood at 10° below with a howling wind blowing, this was a terrible day for florists and I can hardly see how some can have escaped being bitten, reports will come in this week no doubt. At this date (11th) the air feels comparatively balmy with 18 degrees of frost. It is perhaps a little consolation to know that we have not been served worse than our neighbors, in many instances not so badly. Luckily too there is a great deal of snow on the ground, which will prevent plants not quite hardy in this locality from being killed altogether. For a wonder the coal merchants did not put up prices this time, and we were able to warm our houses at a reasonable figure. But it did take a lot of coal! economy was not to be thought of. E.

American Pomological Society.

At the biennial meeting of the American Pomological Society held recently in Sacramento, Cal., officers for the ensuing term were elected as follows: P. J. Berckmans, Augusta, Ga., president; C. L. Watrous, Des Moines, Ia., first vice president; G. C. Brackett, Lawrence, Kans., secretary; Benj. G. Smith, Cambridge, Mass., treasurer. The society was very hospitably entertained by the citizens of Sacramento.

Neponset Flower Pots

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all. Send for price list and samples and we know you will give us an order.

SYRACUSE POTTERY CO. OFFICE: 403 North Salina Street, SYRACUSE, N. Y.

Exports and Imports.

Statistics recently issued by the Treasury Department at Washington show that during the last fiscal year the exports of plants and nursery stock were valued at \$140,415, and of cut flowers \$1,588, going principally to the Dominion of Canada.

The imports of plants and nursery stock were valued at \$124,143, principally from France, England, Holland and Canada.

WHENEVER you want anything pertaining to the trade, and do not find it offered in our advertising columns, write to us and we will take pleasure in assisting you to find what you want.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Meeting of the American Carnation Society at Boston.

Horticultural Hall was a busy spot very early on the morning of Thursday, the opening day of the Carnation Society's meeting. The visitors had arrived on time, and with boxes and crates had taken possession of the upper hall. It did not take long to realize from the quantity and quality of the flowers as they were unpacked that the display was going to be far in excess of what anyone had looked for and the first carnation exhibition in America worthy of the name was about to be inaugurated.

The opening session of the society took place at 11:30 a. m. when the audience, which nearly filled the lower hall, was called to order by President N. T. Kidder, of the Massachusetts Horticultural Society, who briefly extended to the American Carnation Society a cordial welcome to Boston and to the halls of the Massachusetts Society. He congratulated the young organization on its prosperity and secure establishment, and assured them that the old Massachusetts organization looks kindly upon the prosperity of these young offspring. Mr. C. W. Ward responded on behalf of the Carnation Society. He said it was indeed a pleasure to perform this duty, and that he knew of no city in the Union to which the Carnation Society would go with greater pleasure for an annual meeting than to Boston. He paid a pleasant tribute to Boston's world-wide reputation for hospitality, and asserted that the welcome extended to them and the preparations made for the society's reception here exceeded anything in their past experience.

Mr. A. M. Herr was elected secretary to succeed Mr. C. J. Pennock, who sent a letter declining to serve another year.

President Dailedouze then read his annual address as follow: "Ladies and gentlemen, and members of the American Carnation Society: Your president will only make a few brief remarks on carnations, which have suggested themselves after travelling through some parts of the carnation centers, and learning the feelings of our carnation growers, particularly as regards new varieties. We find to-day that we are face to face with the fourth annual meeting of the American Carnation Society, and I venture to predict that it will surpass all others in attendance, exhibits and last, but not least, in securing new members. That the

majority of our members are in search of new varieties there can be no doubt. We all want carnations superior to the kinds we are growing, and this fact has become the tie that binds our society together. How then are we to know the merits of these new varieties other than their exhibition values? I beg to submit a plan for your consideration, discussion, and I hope, action. In my opinion, we should follow the practice pursued by the American Chrysanthemum Society, in having judges in all the carnation centers; members who, without favor or prejudice will pass on the merits of new varieties as far as practicable. The plants should be seen growing not less than twice in the season, so that the judges may be able to report fully the particulars of each variety at our annual meetings. There are many fine kinds fit for exhibition purposes. One thing I would call attention to. I would ask the judges (if any are appointed) to be careful to give the weak points of all varieties, as well as the good ones. I do not believe any judge or judges can give a carnation its full merits on the exhibition table, except for exhibition purposes. I would also suggest that we offer gold and silver medals for new varieties. I do not think it matters whether the value of the medal be five dollars or one hundred dollars; its bestowal would simply show the inherent worth of the variety to which it was awarded in the judges estimation. In my opinion no variety of carnation should be awarded a medal until it had been tested in five or six distinct localities, and reported on at our annual meeting. This report would be all that was necessary to decide the medal problem. Those who do not care to have their varieties tested would require to be satisfied with certificates of merit. It would be well to have the florists testing new varieties to give descriptions of the houses the plants were grown in, composition of soil, and as near as possible, the kinds the newcomers resemble. It does not hold because a variety fails in one section of the country that it is altogether useless. We have many examples to-day that contradict that theory, such as Mrs. Fisher, Lizzie McGowan and Tidal Wave. I sincerely hope, gentlemen, you will take some action on these remarks. If the plan I have outlined be carried out successfully we would have for our meeting the most interesting paper our members ever listened to, besides, it would obviate the necessity of anyone writing a review of new carnations. I cannot say that I am in favor of showing only six blooms of a new variety in competition for prizes. We should have at least fifty blooms. One can sometimes show six and take the honors, whereas if the number called for was fifty, the result would be quite different. This point would create a vast difference on general effect, stem and calyx. None of us to-day would think of dissem-

inating a new variety without having a thousand plants of it, and if fifty blooms cannot be shown the variety would not be worthy of being put in commerce. I would also advocate the showing of a plant or two of new varieties. This would give us a chance to see their habit and character of growth. It has been advanced by some of our members that carnation growing for cutflowers and for cuttings should be two distinct things. I cannot agree with that statement. I claim you must have a carnation in the best possible condition to produce the best flowers; hence the cuttings taken from this stock should be the best we can secure. There is no science displayed in growing carnations for cuttings, but lots of it in producing the best flowers. This fact may be illustrated as follows: any grower desiring to change his stock of any variety would naturally first look at the quality of the blooms the stock was producing, before dispensing with it; there would be little satisfaction in securing stock that was not superior to that which he was growing. If you follow up a man's flowers you can readily conclude what his stock is like; no poor, half-grown plant ever grows first-class flowers. Before concluding I should like to ask our members to take some action on the exhibition of new varieties for honors that have been grown under glass all summer. This method changes the character of stems and flowers and a poor variety invariably produces good flowers. This is a misleading method as plants grown otherwise act in many cases quite differently."

After the reading of the secretary's and treasurer's reports a communication from the nomenclature committee was given. The following judges on the exhibition were appointed: On seedlings, Edwin Lonsdale, C. H. Allen and H. K. Southworth; on cut flowers, John D. Twombly, Robt. Craig and E. G. Gillette; on *Florist Exchange* special premium John D. Twombly, Robt. Craig and E. G. Hill. A proposition from the A. T. De La Mare Printing and Publishing Co. to publish for the use of the society a full report of its proceedings in return for the control of advertising privileges in same and other considerations, same to be complete by February 23, was accepted.

Mr. Wm. Swayne then read his paper upon "Carnations from the cutting to the field." Mr. Swayne in the course of his essay said that the most essential point for success with carnations was to begin with good healthy stock. In preparing the cutting bed the first thing to be done was to thoroughly clean and whitewash the boards. His practice then was to put an inch or two of soil in the bed over which an inch or more of sand was spread. He advocated the taking of cuttings during the early part of the day, when the plants are in their liveliest condition. A thorough watering as soon as placed in the cutting bed, shading for a week or ten days, and then exposure to the full sun. The plants he said would require no more water until they were ready to take out, and he would advise that spraying be not indulged in. With bottom heat the young plants would be ready within 30 days and without bottom heat it would take 45 days. Some varieties, such as Buttercup and Wilder, gave much better results with bottom heat than without. He urged necessity of taking at once out of the bench as soon as ready, and as a further guard against fungus he advised low temperature and plenty of fresh air. The future crop of flowers he maintained depended largely

on the care given the plants in their early stages.

The discussion that followed was quite animated, and was participated in by Messrs. Ward, Lombard and others. Mr. Ward did not believe in the plan of bedding soil under the sand on the cutting bench. He had tried it and got fungus as a result. He believed in shading the cuttings and syringing on every bright day, and thought that the same houses with the same light and temperature as given to the growing plants was best adapted for the rooting of cuttings. Mr. Lombard's experience was that a bottom temperature of 60° to 65° and top temperature of from 45° to 50° was about right. His propagating bench was on the north side, where the sun never reached, and he found that the cuttings required watering every other day. This he thought more in accordance with nature than putting in sunny houses and providing shading. Speaking of fungus in the cutting bench Mr. Dailedouze said that the best protective was to replace frequently with new boards. Mr. Lombard thought that the fungus was more apt to appear when the sand was too deep, and that two inches of sand was sufficient. Mr. Chitty's theory was that the use of sand a second time was a prolific cause of fungus, and advocated a new batch of sand for each lot of cuttings. Mr. Ward claimed that a thorough drenching with water in which a few drops of carbolic acid had been mixed, the sand being then allowed to dry out thoroughly, removed all liability to fungous contagion, and that under this method sand could be used several times with impunity. Mr. Chitty favored a temperature not exceeding 45° in the cutting bench at any time, as liable to make more sturdy plants. This was disputed by Mr. Hill, who thought such a temperature would result in a low state of vitality. His belief was that cuttings should be kept in a temperature corresponding with that in which the plants from which they were taken had been grown. He found no trouble in using sand a second time in the early part of the season, but from the present time on the liability to fungous growth was much greater.

It was then announced that the committees would defer action on the exhibits until 2 p. m. in order to give late arrivals an opportunity to stage their flowers. The meeting then adjourned to 2:30 p. m.

THURSDAY AFTERNOON.

The first business at the afternoon session was an essay by Mr. J. L. Dillon on carnation plants for winter blooming. Mr. Dillon emphasized the necessity of beginning with good stock, strong cuttings, no matter from what part of the plants they come, being the first consideration. His method is to dip cuttings in a solution of copperdine, or any of the other compounds of like nature, before inserting in the sand, syringing once a week with the same solution after rooting and throughout the season. He cautioned against setting plants in the field too deep and advised thorough cultivation between the rows. He advocated hard pinching to prevent blooming and strengthen the stock, a process required more by the early varieties than by the late bloomers. He had tried irrigation and saw little benefit to be derived from it, and much danger in a season inclined to be wet. He preferred planting in ridges in the field, plants six inches apart by three feet in the rows, thus leaving free passage for the cultivator and securing more fibrous roots.

Mr. W. B. DuRie then read an interesting paper on the care of carnations during the winter. He gave much practical advice from the beginning to the end of the process, laying special stress upon the value of starting right. Cultivation in the field, soil trenching, watering, transplanting, housing and all other processes were carefully gone over, he making the truthful assertion that it is necessary to have every link in the chain secure, as one mistake may mean success or failure. He favored the short-span-to-the-south system in building, advocating overhead heating and condemning bottom heating for both plants and cutting benches.

The report of the seedling committee was then read and certificates of merit were awarded as follows: To Maud Dean, Lena Saling and Dean Hole, exhibited by John N. May; Storm King and Meteor, by Cottage Gardens; Armazinda and Triumph, by E. G. Hill; and Della Fox, by Myers & Santman. The committee commended the action of Myers & Santman in having sent a plant of Della Fox for exhibition, which gives those who are interested an opportunity to judge of its manner of growth, flowering qualities, etc. It also recommended that the American Carnation Society insist upon at least one plant of all seedlings in competition for certificates of merit or medals, accompanying the flowers, and that not less than fifty flowers constitute an exhibit.

Mr. C. H. Allen gave a short talk on the advantages of disbudding, of which the following is an abstract: This question can be answered in one sentence. We get a better price for our carnations, it certainly makes a better flower, the same as a chrysanthemum and a rose when it is disbudded. I came to that conclusion some time ago although a great many say that it does not pay to disbud when there is call for the flowers for funeral work. If they could dispose of all their flowers in that way it would not pay to disbud. A part of the growers in the neighborhood of New York have said that it does not pay for them even in the New York market to disbud, you must educate your customers up to the better flowers, and even to paying a little more for their flowers for the sake of having the better ones. I notice that when the price goes down at all the poor ones are the very first to suffer. A reputation for fine stock brings you a better price right through the year.

THE BANQUET.

The banquet given by the Gardeners' and Florists' Club in honor of the American Carnation Society was the most brilliantly successful affair of the kind ever done in Boston. The grand banquet hall at the Brunswick was indescribably beautiful; the floral decorations contributed with profuse liberality from the many rich private collections and the leading commercial establishments of Boston and arranged under the skillful supervision of the industrious decoration committee were of a character rarely if ever equalled on any similar occasion. One hundred and twenty-five gentlemen participated, and the speaking, music and other features of the evening were fully worthy of the occasion. The last course having been disposed of President Stewart opened the after-dinner exercises by a few words of welcome. He said:

"I now become my pleasant duty to extend to you on behalf of the Gardeners' and Florists' Club of Boston a hearty welcome. The brave struggle for high position which the carnation has been

MR. C. S. SWAYNE'S 50-FOOT WIDE HOUSE. [SEE PAGE 704]

making in recent years we all recognize, and I think no one will question that the measure of success already achieved is largely due to this young society, the secret of whose vitality lies in the fact that her members are all enthusiasts and are in it not alone for the profit it yields but because they love the divine flower for its own sake. Among our guests here I see the faces of many gentlemen high in our profession; men whose names are linked with the grandest achievements in American horticulture, by whose presence here we do feel highly honored. Some of you have come a long distance; you have brought your choicest treasures, the products of your skill and devotion, and have spread before our eyes a marvelous feast. This meeting and this exhibition will, I believe, go down into horticultural history as marking the beginning of almost a new era in carnation culture, and in the distant future as they tell of these times and your accomplishments they may well say "There were giants in those days." But I will not detain you longer as I know you are all impatient to hear from the many eloquent speakers who will entertain us this evening. Our only regret is that you are obliged to meet at a season when we can not show you the parks and gardens, the lovely suburban environs which are the glory and the beauty of Boston. That you will make yourselves at home while here, that your stay may be one of uninterrupted enjoyment, that your proceedings may be productive of much good and that when you go away it may be with the feeling that you are glad you came and a resolve to come again, and often, is our heart-felt wish."

He then introduced as the toastmaster of the evening Mr. Lawrence Cotter, vice-

president of the club. Mr. Cotter received a grand ovation. His first call was upon President Dailledouze of the American Carnation Society, who responded for that society briefly, pleading inability to express the feelings which animated him and his gratitude at the reception accorded his society. A letter from President Kidder of the Mass. Horticultural Society was then read, after which Secretary Manning of that organization was called upon to respond. Mr. Manning told of the society's honorable record during the sixty-five years of its existence, and related how some sixty years ago one individual had exhibited in their hall thirty varieties of carnations. He spoke in complimentary terms of the American Carnation Society's great exhibition. The next toast was the Society of American Florists, President Lonsdale responding. He referred to the approaching meeting at Pittsburg, which he predicted would be an occasion of great enjoyment, and urged a full attendance. The decorations on the banquet tables and the whole entertainment now in progress he praised in the highest terms and claimed that had it not been for the Society of American Florists this occasion would not have taken place. President Chas. H. Allen of the New York Florists' Club was next called upon to respond for "Our Sister Clubs." He made a particularly bright, and at times, humorous speech, which gave much pleasure. He advised every florist not yet a member of a florist's club to get into one at once and let it be one as near like the Boston club as possible.

The Chrysanthemum Society of America came next, and Vice-president E. G. Hill responded in a grand speech. He applauded the general good fellowship ex-

hibited on this occasion, which he said gladdened his heart and filled his soul with joy. He told of the beneficent influence of the Chrysanthemum Society and the good effects of the popular exhibitions, and had a good word to say for all the horticultural interests. His address was replete with anecdotes told in his inimitable style.

The American Rose Society was represented by its president, Robert Craig. Mr. Craig's speech was one of his best efforts. He praised the supreme good fellowship of the gardeners of Boston and of America, declaring that never before in the world had such an exhibition been staged as they had seen in Horticultural Hall to-day, and nowhere outside of America was such a show possible. We do not claim enough for our profession, he said. It stands higher than high art, and the workers in the soil are gradually coming to be entitled more and more to honor and respect throughout the world. The time is fast coming when gardening will get its just due. The toast "Our rivals the rose growers" was assigned to Mr. J. N. May, who quoted from Dean Hole's eloquent introduction to his book on roses, and told of that renowned gentleman's tribute to American roses as he had seen them during his visit here, in which he said they were a revelation to him, and unmatched elsewhere in the world.

Prof. B. M. Watson was next called upon to speak on behalf of the horticultural schools. He characterized the speaking on this occasion, and the grand exhibition in Horticultural Hall as indicating the best kind of horticultural education. He said you cannot turn out a gardener in any school ever made. They can teach the A B C, but all the schools in Chris-

tendom could not make a show like this. What we know we learn from the past experience of gardeners. He described how the boys at the Bussey Institute are required to work, and claimed that all they could expect to do is to give the boys a good start in the right direction.

H. L. Sunderbruch, the Adonis of the society, was called upon to respond for the wholesale trade, but having left early his townsman E. G. Gillett spoke briefly in his stead. The wholesale men got full credit from Mr. Gillett for their usefulness. The seedling industry was responded to by Fred Dorner, the rooted cutting industry by A. M. Herr, and the carnation of the future by C. W. Ward, who made a facetious prediction as to the immense size and disproportionate price the carnation would soon reach at its present rate of progress, and predicted increasing popularity for this flower. Other toasts were the ladies, responded to by Major Bonafon, the carnation belt, by Wm. Swayne, and the horticultural press by D. B. Long. Mr. Long thought that the horticultural press was well able to take care of itself, and was last becoming a necessity to the trade. He did not forget to say a good word incidentally too, for Buffalo and her eloquent orator Great Scott. W. K. Harris was introduced as the successor of Tennyson, a great tragedian as well as poet, and gave a characteristic talk ending up with a witty rhyme. H. E. Chitty said that the Boston people had received the carnation society as though they were a delegation of angels from paradise, and that he would remember this experience as one of the pleasantest episodes of his life. Judge Hoitt carried the house with him as he paid his respects to the toastmaster, Major Bonnafon and others of his friends as he alone can do it. Speaking of the exhibition, which he characterized as the supreme effort of the Carnation Society, he said that nothing in the way of an example of skill in culture and art had ever been shown in Boston equal to this. A few more such experiences and he would get the fever on and go into the flower business again. J. H. Woodford, John Galvin, Ed. Hatch, P. Welch, Jackson Dawson, M. H. Norton, E. M. Wood and several others of the local fraternity made brief and entertaining addresses. Mr. Wood quoted Shakespeare, Burns and several other famous authorities with such readiness as to excite envy in several of the experts in this special line. An orchestra furnished fine music, and songs were rendered by Wm. Plumb, Alex. Wallace and Charles J. Dawson, the latter singing an original composition specially applied to this occasion. Lawrence Turley set the audience fairly wild by his dramatic recitations, but met a serious rival in Warren Ewell, who outdid himself in one of his grand specialties. The concluding speech was made by Charles Seeller, after which Annie Laurie was sung by Mr. Craig, and at one o'clock, on Washington's Birthday, the party reluctantly broke up after a rousing vote of thanks to the toastmaster of the evening, who had covered himself with glory by his witty and pertinent introductions.

Carnation Notes.

By the time these notes reach the readers of the FLORIST the American Carnation Society will have held its annual convention. What will be done? What gained? Will the grower who has put a new variety upon the market give to the trade all the faults as well as all the virtues of his novelty? Will the grower who has found a sure and reliable cure for rust,

bacteria, purple joint, give his remedy unreservedly to the public? Will he who knows positively from actual experience how to check the ravages of the red spider give to the sufferers from this pest his method of treatment? Will all those who have been troubled with any of the blights or other ailments to which the carnation is subject, send to the question box a little slip requesting information on the subject?

It is granted by all that the carnation society is composed of many of the best growers in the country and at no time could questions be answered better than during the convention. Many lose sight of this fact and regret when too late that they had not taken advantage of the chance or what is better still, attended the meetings and there and then conversed with those who have been troubled with the same failures. Some will say, "we could not spare the time," or it was too expensive, forgetting that they could have acquired information which might possibly save them far more than the cost of going to Boston.

I am well aware that the old idea of secrecy concerning many points in the cultivation of all classes of plants is still held by some of the best growers, for this point has come very forcibly to my attention lately. Fortunately this custom is gradually passing away, for it must be conceded that it is a very selfish motive that will allow a man to see his neighbor losing a large quantity of stock from any cause when he has a power to remedy the evil. This is one great object of the carnation society, to so instill into the minds of its members the fact that any information which will be of benefit to another should be freely given. A vast amount of good has been accomplished in this line and probably among no class of growers will be found the desire to impart knowledge concerning the plants he is handling more than among the growers of the carnation, and to this fact may be ascribed to a great extent the present standing of the society.

Many growers do not become members of the society nor lend their aid financially to the success of the same simply because they get a full report of the essays and proceedings in the trade papers. You may not this year, so it will pay you to send two dollars to the treasurer and thus get a full report of the convention in a form to which you can refer when and as you like. The florist as a rule is not aware that reports of such meetings are of great value in later years historically, for to them he can turn for points of information to be had from no other source.

CHARLES H. ALLEN.

Watering—Buds Blasting.

Is water from a cistern at 40° too cold to use on carnations? My carnations come to bud and then dry up. What is the trouble? A. H. W.

I do not believe in using water at 40°, for it is apt to produce a check upon the system of a plant the same as upon a man. Many experiments have been made on this point by some of our most practical growers, and I believe it is now considered unwise to use water at a lower temperature than 50°. I would not think of using water at 40° on carnations.

Without a fuller description of the trouble with the buds I can come to no definite conclusion, but this trouble often comes from lack of drainage.

CHARLES H. ALLEN.

A Greenhouse Fifty Feet Wide.

As I have received numerous letters of enquiry in regard to the plan of my new greenhouse, which is seemingly unique, and because it is my wish that the knowledge of what may be of value in its construction should be the property of the trade, I feel induced to submit to these columns a brief description. I may say at the outset, that the original conception is that of my brother Edward Swayne, but that he advised its application only to ground having a much greater slope to the south, say ten or fifteen feet in fifty. Last winter, having become convinced that the customary thirty-two feet of rafter and glass is more than is required to roof a twenty-five foot wide house, and also that gutters, especially of wood are an unnecessary abomination, I became captured by the plan.

After working up all the detail to my satisfaction I resolved to apply it to my only available piece of ground, which slopes but three feet in fifty, to the south. In the minds of those whom I consulted for suggestions and advice in the matter the plan found unanimous disapproval, but somehow that seemed only another incentive to vigorous effort to test, in substance, its practicality. With the help of the accompanying cut I can illustrate more clearly the salient points.

The ventilators, which are continuous, (100 feet) at lower and upper sides promise to be adequate. Method of heating, hot water under the pressure of the town stand pipe. Heating pipes (2,000 feet of 1¼ and 1½-inch) are all overhead, with present arrangement the house is about 15° cooler at lower, than at upper side. The boiler is homemade, 9 feet long, of 16 2½ inch pipes in two separate circulations. Grate surface 3 feet 10 inches by 4 feet. Will not exceed 16 tons (long) egg coal per year. Flue 140 feet long, rise of 15 feet, excellent draft. Snow slips off the roof with inside temperature of 50°. Sash bars cypress 2x3 inches, two feet apart. Supports of second hand 1-inch pipe (1¼ inches outside), perpendiculars, intervals of 10 feet in length of house 7 feet in length of rafter, capped by tees (T) into which the purlin of like material are screwed and run the length of the house.

The roof, which slopes 9½ feet in 51 foot bar, is light and durable. The paths are cement lined, 1 foot wide, 7 in number running the length of the house and 3 running across the house, one in the middle and one at each end. So we find 5100 square feet of roof covering 5000 square feet of ground, with 4050 feet of bed.

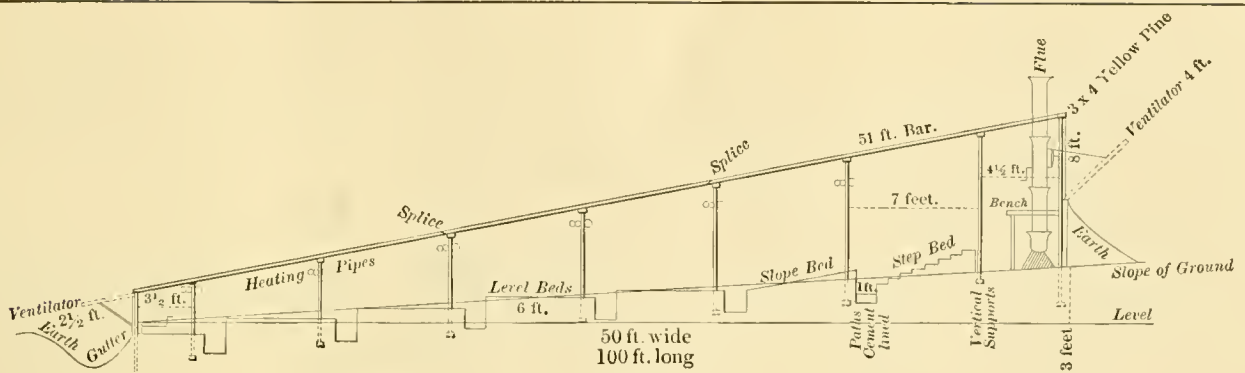

The carnations, which are the principal product, seem to be in their element, as do also the Lady Campbell violets on the lower two beds. I was especially anxious that the building might give the environments best suited to rooted stock, using for that end 16x24 glass, ample ventilation and ground beds.

The structure seems to impress all who have seen it, with the beauty of its simplicity, and no less for its proven intrinsic merits. Already, three houses of this plan are in prospect next spring, and a half dozen more men are considering it.

I append the cost in full and if I have forgotten anything or if anyone wishes more information in connection with the house I would be pleased to furnish it.

Material.....\$888.87
Hired labor..... 144.88

Total.....\$1,033.75
And this is not the minimum.
Kennett Square, Pa. C. S. SWAYNE.

SECTION OF MR. C. S. SWAYNE'S WIDE HOUSE.

Carnation Troubles.

I have a house (18x96) of carnations which have done finely until very recently. Now the Fisher are splitting the calyx badly and the stems are showing signs of decreasing in strength. Plants and flowers grow large and rapidly. Temperature in daytime 65° to 70°, at night about 50°. All well tied up. Houses sunny and clean. We ventilate on pleasant days, but whether enough or not am not sure. Can you suggest the cause of the trouble? W.

You probably keep your house too warm during cloudy days. Keep the temperature at 55° or 60°, never higher during dark weather, shut off all heat on bright days and let the temperature go to 70°, then ventilate but keep the thermometer above 70°, and it will do no harm if it goes to 75° or 80°. If you are not using manure water begin at once.

CHARLES H. ALLEN.

Pres. Garfield and Emily Pierson.

"F. B." finds the above carnations the same thing and thinks perhaps he did not get the latter true to name. They are not the same. Garfield is a sport of another scarlet and originated in Detroit about 1881 or 1882. Emily Pierson was raised by Mr. Pierson in 1893. It is different in habit from Garfield. Both varieties are about gone out of commerce.

WM. SCOTT.

TWO NEW CARNATIONS.—Two new carnations were recently received from the estate of M. A. Hunt, Terre Haute, Ind. One of them, Peachblow, a charming soft pink of the shade suggested by its name, seemed to us distinctly promising. It is a good-sized flower with long stem and good calyx, and the color seems both charming and distinct. The other, named M. A. Hunt, is white edged and flaked with carmine. Peachblow is to be sent out this year, the other not for a year to come.

Educational Factors in the Business.

BY S. D. DYSINGER.

[Abstract of a paper read before the Society of Minnesota Florists, St. Paul, February 8.]

The speaker remarked in opening, that this subject was one of vital importance to the craft: he described an educated man as one who had thoroughly mastered his business, knowing all its requirements. He continued:

There is no knowledge so beneficial as that gained by experience. And yet many a man passes through life, works at the florist business every day, draws his salary every Saturday night, if he is lucky enough to get it, and after years of what

should be rich experience, cannot satisfactorily grow a *coleus orgeranium*. And why is this? Because he lacks or fails to employ the power of observation, fails to concentrate his mind upon his work. When you do anything do it for a reason, or find out why if you have none. Use your brains with your hands, and your work will constantly grow lighter. If any knotty points come up which you are unable to solve, do not despair. Never give up. Be it blight or bug, disease or disaster, rust or ruin, earth or air, soil or water, light or heat, root or top, branch or cion, plant or cutting, bud or blossom, that is not as it should be, find out the remedy somehow or somewhere, or if you can't find one adopt one, and nine times out of ten you will win in the end and have had a rich experience beside. We should also acquire knowledge by reading. There are valuable books on floriculture, books recording the experience of other men who have traveled the same road and met with the same difficulties. They did not know all the business, neither can you expect to, but the experience of two men along the same line is better than that of one. If you do not possess a library of such books, start one at once; buy some good book, read it thoroughly, and when through, buy another and so on until you have a small library all your own.

Too much stress cannot be laid upon the value of the other branch of florist's literature; viz. the trade papers. I believe they are worth many times their cost to every man in the business. Instead of the life time experience of the one man, you get the daily and weekly experience of hundreds and thousands. You are kept in touch and sympathy with hundreds who are working, and experimenting, as you are, if you are anxious to succeed. By reading trade papers you are also keeping up with the times, and keeping yourself informed as to new varieties, new methods of culture and new ideas in general.

In the next place our knowledge is increased by florists' societies. These should be organized and supported wherever two or three florists are gathered together. Young and old, employer and employee, professional and amateur, in fact everyone who loves flowers, or grows them, should be included in the membership. Monthly or semi-monthly meetings should be held, practical subjects discussed, and every one come prepared to ask a question or give advice as the opportunity suggests. We can gain nothing by keeping our knowledge to ourselves; we may do a world of good by telling it to others. Let florists' societies be for growers of flowers, whether in the private dwelling house, the conservatory, or on

the lawn. Let the professional who grows plants by the million, the amateur who grows for pleasure, and the woman who gives the best window in the house to them, because she loves them, get together, confide their secrets and disappointments to each other and tell the world what they know about floriculture, and our trade will receive an impetus such as years of boom times would not produce. It would be the biggest kind of a boom in itself. In this connection would suggest frequent interchange of visits with other florists in your vicinity. You will nearly always see something from which a new idea is gained, besides promoting and cultivating a kindly feeling.

Mr. Dysinger urged those who possess some special knowledge to give their experience freely to others. He spoke of the readiness of the well-known leaders in the craft to impart their knowledge. He urged employers to give their experience freely to those under them, making them interested in their work. He considered the crying need of the trade to-day to be more intelligence and brain work, less ignorance and manual labor.

This brings us to the other side of the question; viz., the education of the people. While we may learn to grow stock to perfection, it will avail us nothing unless we have a market for it. For many years florists have only been supplying people with what they have wanted. The time has now come when florists must tell people what they want, and create a desire for their goods; in short must educate the masses to care for and be interested in their stock. Fifty years ago, people didn't buy flowers as they do to-day. They had not learned their value. To be sure, not many had the means to indulge in luxuries, and even those who had cared but little for flowers. Many persons of moderate means living in cities never had a plant or flower in their houses, from one year to another. Now, however, the poorest hut in the land is often graced by the loveliest of God's creations, flowers. What has produced this wonderful change? People have been educated to it, just as they have been educated so to speak to take a daily paper or ride in the street cars. They see the products of the florists' art continually, and seeing them continually become interested in them. It is the florist's province, nay, it is his duty to interest the people in his products. One of the factors in promoting this interest is the floricultural papers and the floriculture departments of family papers. They spread the knowledge far and wide, and sow the good seed that result in the florist's harvest. Their value will never be known. A third great educational factor is found in advertising. Keeping your goods constantly before the people

makes them buyers. A constant, persistent judicious use of printer's ink will bring customers some time.

In this connection let me say, that the annual flooding of the country with flashy, attractive catalogues is a great big advertisement of the best possible kind, not only to the ones who issue them, but to the trade in general. Another way of advertising is to make and keep your place of business attractive. If you have no store, keep your greenhouses neat and inviting. Have a small show room if possible, and keep everything in it arranged in a neat and attractive manner. You cannot expect to interest customers in your goods if you are not interested enough in them to keep them looking attractive. The secret of a successful salesman is in presenting his goods in an attractive manner. Many rare and beautiful plants are never sold because they are not shown to advantage. If you have a store, no matter how small, make the window attractive. Change it weekly or oftener. Make it suggestive as well as attractive, and you will instruct and please people and in the end capture them or their purse. Better have dirty floors, poor flowers, poor clerks and an uninviting interior than a poorly arranged and poorly kept window. Your show window is a standing advertisement of your business, and if attractive is a constant reminder that flowers are "A thing of beauty, and a joy forever."

The next but by no means the least important educator is the floral exhibition, chrysanthemum, rose and carnation shows. Their value is manifold, their influence far reaching. They attract the people and instruct them. The many varieties cause numberless questions to be asked and answered.

Lastly, we should all impart our knowledge of plants, flowers, etc., as freely as possible. The more knowledge given, the more interest will be manifested in what you have to sell. Once convince a woman that she can grow a flower and you have made a life time customer. If you can successfully grow a plant, tell how you did it as clearly and concisely as you can. Many a lady who loves plants would buy if she was sure of making them live. How often do we hear it "I would like this plant, but I don't know how to take care of it." If some plants will not do well outside of a conservatory, do not hesitate to tell your customers so. I know there are those who think that for every plant that dies for a customer another can be sold in its stead. While this is true in some instances, is it not equally true that for every plant that lives for a customer you can sell two? Do not hesitate to tell all you know about a plant or flower. The more the masses know about plants and flowers, the better customers they will become.

In conclusion the speaker said he considered the trade still in its infancy. Every year shows increased interest. He thought that we must encourage this increase by efforts to produce a higher grade of stock; every florist should strive to elevate his calling by his own individual efforts, and also to foster the taste for flowers and plants among the general public, with this point in view the future of the trade seemed secure.

SOME GOOD Marie Louise violets, grown by Mr. W. V. Duryee of Mattituck, N. Y., were recently received at this office. They were grown on benches in a carnation house, and certainly compared favorably with most of the stock grown.

New York.

The past week has been a most discouraging experience for growers and dealers. The cut flower market seems to have gone to pieces completely. Never before in the height of the season has the demoralization been so sudden and so complete. A breakdown of this character is always expected after Lent comes in, but with Lent two weeks off it is almost unaccountable. No doubt the heavy production of flowers aggravates the existing unfortunate conditions. Warm sunny weather has prevailed and the plants which had been standing still during the very severe snap which preceded the pleasant weather, have been in condition to produce almost a double crop. As to prices: It is almost impossible to quote figures that will convey any reliable information. As one wholesale dealer expresses it, the prices charged just now depend upon how much money the buyer is willing to pay. The main thing is to sell the goods at all. Many roses of fair average quality have been sold as low as \$4 to \$10 per thousand within the past two days, and carnations do not bring more than \$1 per hundred unless of extra quality or variety. Bulbous stock is badly in the dumps, and does not average more than \$1 and \$2 per hundred throughout the list. No finer tulips have ever been seen in this market than are now coming in from some growers, but it is out of the question to get more than \$2 per hundred for them, and even then they are seldom wanted. The retail dealers are at least fortunate in one respect, that they can get goods at their own price, especially those who have cash constantly at hand. The street men, however, are now out in full force, the weather being such as to permit them to expose their flowers on the streets, something they have not been able to do for many weeks, and no doubt a good large proportion of the stock being cut at present will necessarily find its outlet through these channels, as the retail stores are totally unable to handle it.

There are a few hybrid roses coming in, some of them being of excellent quality. Brunner is particularly good as to quality, but the prices obtained are not what they used to be. Hybrid roses as a winter crop pay only in connection with chrysanthemums; where a crop of chrysanthemums has been taken off a house, and hybrids are put in to follow them, a careful grower by a combination of the two specialties may manage to get a fair result, but there is no money in hybrids otherwise. The business has changed greatly in this respect within the past few years. American Beauties continue to come in in widely varying grades; the very best of them will bring not over \$50 per hundred. This price is as good, however, as was obtainable at this same time last year; very fancy figures on American Beauties are out of the question after hybrid roses begin to appear. From all appearances the principal work of the dealers will be for some time to come to get rid of the stock; that will be the first consideration, the price will be only a secondary matter.

Smilax and asparagus are both very scarce, and a grower who has a crop of either of these vines will have no trouble in finding a good market for it, and he can make his own price and get it too.

The New York Florists' Club will give their first "at home" on Monday evening, 25th, at 8 o'clock, and the committee, consisting of Messrs. Lawrence Hafner and John Young, will not leave a stone

untuned to make the evening a pleasant one.

One of the largest orders during the past week was one for the funeral of Mr. Polhemus, which was executed by Mr. Weir of Brooklyn, 21,000 violets being used to cover the coffin.

Chicago.

At the last meeting of the Florist Club there was an interesting discussion upon flowers not now grown in quantity but which would sell well if placed upon the market. Mr. E. Wienhoeber presented a brief paper on the subject in which he mentioned the finer varieties of single anemones, ixias, Primula officinalis, P. spectabilis, Coreopsis lanceolata, heaths, Browallia elata, and various sorts of yellow daisies. Other speakers mentioned the bouvardia and the cyclamen as desirable additions. There was quite a debate as to whether the cyclamen could be profitably grown for cut flowers. It was held that fine blooms of the improved giant strains would bring from \$2.50 to \$3 a 100 at wholesale and that they ought to pay at that rate, but some of the growers disagreed. It was noted that it would be useless to attempt to market short stemmed bouvardia, and that to secure a market for it the flowers should be cut with long stems, bunched, and each bunch wrapped carefully so that the flowers could be handled without injury.

After adjournment the members retired to an adjoining club room where an excellent lunch was waiting, and which was duly disposed of. The bowling alley next claimed attention and some truly wonderful and fearful scores were made.

The weather is all that could be desired and stock of all kinds is coming in with increasing quantity, nevertheless the supply is still short of demand. The season has so far been remarkable for the steadiness with which prices have been maintained all along the line. Although prices for good stock have not been extraordinarily high still the figures ought to be satisfactory to the grower. Not a really good flower of any description has been left unsold.

Quality is also improving. While many of the Beauties are rather short in the stem the blooms are very good, and often the blooms that lack in stem are better than those with longer stems. Hybrids are still hanging back, the few that are sent in are rather poor. Jacqs are coming in better, but the number is very limited and unless of good quality go rather slow at \$1.50 to \$2 a dozen. Maids, Brides, Testouts and a few Kaiserins are very good on the average, and Mermet with a few growers is showing up in color such as hasn't been seen before this winter and finds a ready market at only one point less than Bridesmaid, 7 being the top price at present. Perles continue coming in in increasing quantities of very good quality and hold their own at 4 to 5 for select. La France, which has kept a back seat so far, is also showing up much better. Though the demand is rather limited still it goes at fair prices if no other pink can be had.

Carnations are grand; no such average good stock was ever before seen in our market as that which is coming in now in large quantities. Daybreak leads with Tidal Wave a close second; both are exceptionally fine. Whites are extremely scarce; although a few lots are very good the bulk is only fair, there being actually no A1 stock. Red is rather weak also. One grower is sending in a few Emily

Pierson which are superb; if this variety can always be grown in fine shape it is all right. The few Scotts, Albertini and Helen Keller that are offered are extra good.

Violets are very plentiful and have weakened considerably, the best quality rarely goes above \$1. There is no change in bulbous stock, the market being still short in most lines, particularly Romans, which are very hard to obtain; prices remain stationary at top figures.

How to supply the demand for smilax has been a conundrum the commission men have tried in vain to solve. The scarcity is apparently not only local but extends all over the country. Adiantum is much the same and under pressure of demand much of the stuff sent in is altogether too soft.

Some very fine lilac is now coming in and brings \$1.50 to \$2 a dozen. Good quality mignonette is selling fairly well, but there is no demand for the small stuff.

Local trade is much improved and the shipping demand is heavy. The Mardi-Gras season is now on at New Orleans and the demand from that city is quite heavy, which calls for the best select stock.

Philadelphia.

Brunners are now plentiful; the best still sell for 50 cents, with all sorts of prices for seconds. There is a great difference in the quality of this rose, as the different growers' products are compared. Some get it with a long stem, plenty of foliage, but a rather small flower with not much substance, and generally poor color; others have it a medium to short length, but a good strong petalled flower, large and full, and a beautiful rich color. These latter keep much better than the others. Laings do not seem to be as good as formerly. Some three or four years ago John Burton sent in some grand Laings; they were magnificent in size and a perfect color. What's the matter in Chestnut Hill? Wake up, Isaac. All the best Laings will bring now is \$25 per hundred. Beauties and Belles are fairly good, but few can be called first-class; the best bring \$5 per dozen, and from that down to \$1.50. Mermets, Brides, Bridesmaids and others of this class sell for from \$6 to \$10, with a few extras from \$10 to \$15. Heacock has some extra fine Brides and Bridesmaids; Burton, Bridesmaids and Testouts, and Anderson good La France and Kaiserin. The smaller teas bring 4 to 6 and are in fairly good demand.

Some really fine carnations are now offered, the best varieties being Daybreak, Sweetbrier, Ophelia, Grace Battles, Grace Wilder and Scott in pink; McGowan, Fisher and Hinze's White in white; Portia in red. Some excellent flowers of Tidal Wave and Thos. Cartledge, and a monster pink of the Malmaison type measuring 5 inches across, together with a host of new varieties of more or less merit, make up the list. The best bring \$3, very good \$2.50, and the majority \$2 per hundred with \$1.50 in sight. Myers & Santman continue to bring out seedlings of merit; their latest trio is a deep pink, a fine white and a large mottled variety, white and pink like Dresden china. Mr. Santman says that the report that all his good ones came from one pod of seed is not true. Sleepy carnations have not made their appearance this season as yet. Smilax is scarce, that is, good smilax, and readily brings 20 cents. Bulbous stock is quite plentiful, especially valley and daffodils. Valley sells for \$3 and \$4, and

daffodils about the same. Tulips move slowly at \$4 to \$5. Violets are very plentiful and sell slowly at \$1 for the best.

The snow is piled high in the streets, but the fakir holds forth on the sidewalks, and very good stock of all kinds is offered at much less than wholesale prices; truly, the fakir has a pull.

The exhibition held in connection with the February meeting of the Horticultural Society was not large but very fine. The committee commended the exhibits of Messrs. Heacock and Anderson, and said that such fine roses had never been exhibited in this city before; they were certainly grand. The varieties were Brunner, Kaiserin, La France and Mermet by Anderson, and Brunner, Bride, Mermet and Wootton by Heacock. There was also a very choice exhibit of orchids in flower by E. Lonsdale, which attracted a great deal of attention, as these flowers always do. The paper read on "Something about vegetables" by Col. Barrett Landreth was the most carefully prepared essay of any ever offered before the society. The history of all the most popular and valued vegetables was traced from their discovery up to the present date. All branches of the business of vegetable growing were touched upon and the intricacies of the business pointed out and commented on. It was a paper of great historic value and exceedingly rich in information even to men who thought they were well up in the business. During the reading of the paper, which occupied two hours, the audience listened with the closest attention, showing their great interest in the subject. In answer to a question Mr. Landreth said that he thought the "Stone" was the best all round tomato. Mr. Morris said as late as 1862 the tomato was not eaten in Paris, being considered not fit for food.

K.

Buffalo.

Moderately cool weather with bright and cheerful sun has improved everybody's temper, and to some extent business. It has also increased the supply of flowers. Carnations are coming in in larger quantities, and so are roses. Bulbous stuff is now at its best, and the general opinion is that tulips and daffodils are selling quite as well and a little better than last year.

A fierce little fire on Monday, February 18, cleaned out the store of S. A. Anderson, our enterprising young florist at 302 Main street. Mr. Anderson occupied the north side of the store, while the south side was a fashionable candy store. The destruction was about complete. Mr. Anderson lost in furniture and stock about \$1,500, but fortunately was insured. Several of the craft offered him counter room until he could get located, so he will soon be on his feet again.

I regret very much to announce the serious sickness of Mr. W. J. Palmer Sr., inflammatory rheumatism is the trouble. At last accounts he was better, and we all wish him a speedy recovery. He is the patriarch of the trade here, and we all reverence him on that account.

From the serious to the frivolous is rather sudden, but I can't resist a few words about our visit to Rochester on Friday last, where a game of nine pins was the primary attraction. The Rochester boys were as usual more than great in their hospitality, and to detail all they did to make the visitors happy would take too much of your space. One of the features, and a very pleasant one, was a ride in a very spacious sleigh behind two

horses, each weighing a ton. The sleigh was large enough to take in the whole crowd, Peter Crowe and all. We drove through the beautiful residence part of Rochester, and made a halt at the green-houses of Salter Bros., where we found everything in first-class shape, roses in particular looking fine. Our driver was a humane and refined gentleman, and never forgot at proper opportunities to give his team a drink. You know that in keen frosty weather horses do get very thirsty. After the drive came an elaborate and much enjoyed banquet, and then came the game. They beat us, but they did not quite wipe the alleys with us, for it was 3 to 2 in favor of the home party, 12 men on each side. For those who are not acquainted with this ancient game of nine pins I can say that it is no more like ten pins than billiards. The alley is purposely rounding and as long as a rope walk. The balls are very small and so are the pins and wide apart. There is no denying that there is plenty of science in it, but hardly as cheerful a game as the one played annually by our national society. In conclusion, all those Buffalo men who stopped at home missed a great afternoon and evening, and we all say now as we did then, well done, Rochester.

W. S.

St. Louis.

The regular meeting of the Florists' Club was held on the 14th, with a fair attendance present. The principal interest centered in the appearance of the gentleman who is expected to manage the show. He appeared and gave a short talk in regard to the matter, but at this early day could state nothing positive; a committee of three was appointed to give him whatever assistance may be necessary in coming to an approximate estimate in regard to expenses, receipts, premiums to be offered, special prizes, and the like. Despite the unfavorable showing made last year the sentiment of individuals is strongly in favor of a show, and it will be strange if one is not given.

The committee having in charge the indorsement of a candidate for the office of Superintendent of Parks, did not report, owing to the chairman being away; it was continued and a communication from the present Superintendent of Parks, asking for an expression in regard to the manner in which he had filled his office, was also referred to it, with a request that they report at the next meeting.

The resolution changing the time of meeting from afternoon to evening was read a second time and laid over until next meeting, at which time it will be acted upon.

Quite a show was made at the meeting with carnations and roses brought by the members. Emil Schray showed fine Albertini, Daybreak, Buttercup and Sweetbrier. The old Garfield was in fine shape and was just as large and fine as any of the newer varieties. Tidal Wave also as shown was a surprise, they being fine. F. J. Fillmore also showed a vase with exceptionally fine Helen Keller and Uncle John; Daybreak and Albertini were also in his collection. A vase of roses containing the standard varieties, Bride, Bridesmaid and Mermet, with a few Kaiserin, was shown by R. F. Tesson and was much admired.

Cut flower trade has been on the jump lately, stock being scarcer than at almost any time during the season. Shipping orders have increased, and many go out only partially filled. The plant trade, which commences in January with ex-

treme southern points, has been snowed under, there being practically nothing doing in that line, although preparations are being made in expectation of a heavy demand as soon as it opens.

Mention has lately been made of the name of J. M. Jordan, ex-president of the S. A. F., for the office of park commissioner.

The Michel Plant and Bulb Co. has assumed control of the greenhouse plant formerly operated by A. Berdan at Old Orchard. R. F. T.

Washington.

The cold weather of the past two weeks has been unusually hard on greenhouse men, compelling them to lose a great deal of rest and burn an enormous quantity of coal to keep out the frost. All the florists have driven their boilers to their fullest capacity, but so far no mishaps have been reported. The cold weather, together with the snow, has kept home grown violets out of the market almost entirely, no one daring to uncover their frames. Transient trade fell off considerably during the cold snap.

Flowers are retailing as follows. Beauties \$3 to \$9 per dozen (Beauties as a rule are small and short stemmed), La France \$2 to \$3 (good ones are scarce; they seem to be off crop with the growers about Washington), Brides \$1.50 to \$2, Mermets \$2 to \$3, Wootton \$2, Gontiers 75 cents, Meteors \$1.50 and \$2, Perle \$1. Golden Gate with C. Strauss & Co. are simply perfect and they go fast at \$3. They are also cutting very fine Scott carnations. Bridesmaid bring \$3 and some excellent ones are on the market at present. The supply of roses has been a little more than the demand.

Tulips are plentiful and excellent, the Gude Bros. having an abundance of the finest I have ever seen. They are bringing from 50 to 75 cents per dozen. Dutch hyacinths do not seem to be as good as usual. There is a demand for 6 inch pans containing from 3 to 6 spikes, which retail for 50 cents and \$1. Valley is not over plentiful nor is it extra good, selling for 75 cents. Carnations continue plentiful (except the fancy varieties, which seem to be a scarce article about Washington) retailing from 50 to 75 cents per dozen.

There is still ready sale for azaleas in flower. Some are complaining of their coming blind this season. Jonquils have made their appearance and are very fine.

The Belle Siebrecht rose was introduced into society at the last state dinner of the season given last week by the President and Mrs. Cleveland to the judiciary. The table was spread in the state dining room, and was unusually attractive, it being decorated entirely with this new rose. The center was a large square of Adiantum studded with the Belle. On either side was a circular plat of ferns and roses. Between the circular pieces and the center urn handsome gold fruit baskets filled with fruit, then came a flat oval of the Belles. At equal distances were gold candelabra with pink tapers burning under pink shades. On each of the four corners of the tables (which was in the form of a Roman I) was a small oval basket of adiantum and the Belle. Corsage bouquets and boutonnières completed the brilliant floral effect. The new rose was generally admired. The east room was decorated as usual with plants and the chandeliers draped with smilax. The large mirror-rests were banked with carnations, roses, azaleas, Romans and tulips through which peeped small plants of the graceful Cocos Wed-

deliana. The blue, green and red rooms were bright with flowering and foliage plants.

The Cinerarias at the White House Conservatory are unusually fine this season. Although Mr. Pfister has always had a good strain of this very showy plant, and has always grown them well, this season he seems to have had a very superior strain not only in size but in color as well, some of the flowers measuring 3 inches and having a double row of petals. Mr. P. usually selects the best of these and puts them aside for seeding, while the others are used for decorating the main conservatory and the rooms in the mansion. Mr. P. says he gets the best results from seed two years old.

The zero weather of the past week made hard work, and lots of it for the florists, not only in keeping their houses above freezing, but it was only with the greatest care that flowers or plants could be delivered without being frozen. It has been many years since Washington was visited by such a severe spell of weather.

REYNOLDS.

Worcester, Mass.

We have had an unusual abundance of funeral work the past week, some of the designs being very large, using quantities of white stuff, the result being a temporary shortage of light flowers, which won't last long if old Sol is at all lenient. The regular trade still keeps up its satisfactory firmness, and prices are normal; bulbous stuff is selling very well, and very nice valley is brought in in fair quantities. The popular demand for carnations does not abate a particle, and the people are willing to pay good prices for good flowers, realizing that a dozen two and a half inch flowers that will keep four or five days are worth a dollar. A good scarlet is greatly in demand here, as E. G. Hill, which we used to swear by, seems to have run out. Hector is not entirely satisfactory. Portia is worthless, Emily Pierson has a poor color, and Florence has too weak a stem. It remains to be seen which of the new ones will prove the best. A better white could be used to good advantage also. Small azaleas are selling well; some of the most popular kinds are Deutsche Perle, Mme. Van der Cruyssen, Vervaneana and Oswald de Kerchove.

The fad of wearing artificial violets has struck the town, the millinery windows displaying them in quantities. The violet sales do not seem to be injured to any extent, however, as the natural product is good enough for the best people.

Lange has a nice little lot of white lilac in bloom. We are experiencing warmer weather and bright days. A. H. L.

Frozen Chrysanthemums.

"F. B." says his stock chrysanthemums "are frozen down to top of pot, and will they shoot out again so that good cuttings can be got from them?" It is quite possible if not frozen too badly at the roots that the plants may send up shoots that can be used for late propagation. They would, however, be late, and likely to be weak, and I would certainly advise "F. B." to buy some fresh stock. It is too late perhaps to buy stock plants, but there is any number of good firms both in the east and west where rooted cuttings can be bought at a very moderate charge and you can have your choice of all the standard varieties. WM. SCOTT.

News Notes.

COLUMBIA, PA.—Mr. Wm. Aherne suffered a loss of over \$500 by the freezing up of one of his greenhouses during the recent cold spell.

MARBLEHEAD, MASS.—Fire destroyed the greenhouse owned by Mrs. Grace Oliver on the morning of the 11th inst. Loss on plants about \$500.

NORWICH, CONN.—Gustave Geduldig, a well known florist, and a member of the S. A. F., committed suicide by taking poison the morning of February 20.

NEW ORLEANS, LA.—Bouquey & Collongues have dissolved partnership. Francois Collongues will continue business at corner of Valence and St. Patrick streets.

PITTSFIELD, MASS.—At the meeting of the Gardeners' and Florists' Club on the evening of the 14th inst. it was voted to hold another chrysanthemum show the coming autumn.

CIATHAM, N. J.—Mr. D. Falconer has embarked in the florist business here, having purchased the establishment of Mr. R. S. Perrin. The place consists of 2 acres of land and 425 running feet of greenhouses devoted to roses and mignonne.

NEEDHAM, MASS.—Mr. Jas. Smith, an old time gardener formerly in the employ of Mr. Skinner of Newton, and lately in charge of the estate of Gen. S. M. Weld, Dedham, died here on Sunday, February 17. He left considerable property, comprising mostly real estate in Newton.

ALBANY, N. Y.—Mr. Samuel Goldring, formerly of Eyres & Goldring, and his brother Mr. Frederick Goldring have formed a co-partnership under the firm name of Goldring Bros., and will open a fine store at No. 18 North Pearl street about the first of March, which will be run in connection with their greenhouses at Slingerlands.

WATERBURY, CONN.—The damage by fire to the greenhouses of W. J. Snow amounted to \$1,000, covered by insurance of \$5,000. But a result of the fire was a very serious damage to all his stock of plants by frost. He had no insurance upon the plants and the loss on these will reach \$15,000. The fire originated in the boiler room, but just how is not known.

HARTFORD, CONN.—The Hartford County Horticultural Society has elected Mr. Henry R. Hayden of East Hartford president in place of Mr. N. F. Peck, who was elected at the annual meeting, but declined to serve. The society has petitioned the General Assembly to change its title to the Connecticut Horticultural Society. A spring show to take place on April 10 is talked of.

PREPARE your advs. now for our special spring number to be issued March 16, and send in as early as possible.

DO YOU WANT a list of trade organizations, both national and local, with names and addresses of principal officers, time and place of meetings and other information? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

Kaiserin Turning Black.

In reply to your correspondent T. K., who complains that the buds of his Kaiserin Victoria roses are black on the inside I suspect from what I can infer from it that he has been fumigating the same. This will not only discolor white roses but colored roses also unless it is very carefully done. Except in very experienced hands it is dangerous business to attempt to fumigate with tobacco, at the present time. This is largely due to the adulteration of the tobacco in curing and has been growing steadily worse for the last twenty years in my experience. Previous to that time we could fumigate houses with roses in full bloom without doing much damage, but since that we have found it very risky business.

The more moisture there is in a house at the time of fumigating the more it affects the flowers. If your correspondent will trace back the operations of his house I think he will find that this is largely the trouble that he now complains of.

JOHN N. MAY.

Chrysanthemum Seed.

Replying to an inquiry by one of our readers a leading chrysanthemum grower says that generally speaking he would not care to sow seed purchased from others. But if obliged to purchase he would much prefer to buy American hand cross fertilized seed than any other. Seed procured by insect fertilization is hardly worth spending the time over; the single varieties are much more profuse with their pollen and consequently a very large percentage of seedlings will be single.

H. J. JONES' CHRYSANTHEMUM GUIDE is an excellent catalogue from the Rycroft Nursery, Lewisham, England. It is more than a mere catalogue, being a handy manual of chrysanthemum culture, giving instructions by various specialists on selection, cultivation and preparing for exhibition, in addition to a descriptive list of varieties, and contains a number of illustrations. The hints on "dressing" flowers for exhibition will be new to many American growers, our style of exhibiting being so different.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—As foreman or charge of department; good grower of decorative stuff. Z. Y. S. X., care Am. Florist.

SITUATION WANTED—As foreman in first class commercial place; good man in all branches, married; best references. E., care Am. Florist.

SITUATION WANTED—In good place as assistant; 8 years first-class experience, England and America. Good references. C. T., care Am. Florist.

SITUATION WANTED—By single man, 1 year's experience, wants place to advance. References exchanged. E. V. G., care Shilling Fy. Co., Columbus, O.

SITUATION WANTED—By a first class landscape gardener and florist, 18 years experience, married, no family; references from first-class parks and florist. H., care American Florist.

SITUATION WANTED—By first-class gardener in private place; good grower, plants, cut flowers, vegetables and mushrooms; age 28. ILEX, care American Florist.

SITUATION WANTED—By Swede to work in greenhouses or take charge of gentlemen's place; can speak and write English; good recommendation. Address A. C., 312 E. 34th St., N. Y. City.

SITUATION WANTED—By a German florist; 10 years' experience in Europe and in this country, to take charge of a small commercial place. Address H. T. 50, General Postoffice, Buffalo, N. Y.

SITUATION WANTED—By a practical gardener, Scotch, married, thoroughly understands his business, grapes, mushrooms, etc.; private place; Eastern states preferred; state wages. Address L. Box 78, Great Neck, L. I., N. Y.

SITUATION WANTED—By a practical gardener and florist, 20 years' experience in all branches; strictly temperate married man; private place preferred; best of references. GARDENER, Bateholder Bros., 71 Lake Ave., Cleveland, Ohio.

SITUATION WANTED—As foreman, a practical grower of roses, carnations, violets, chrysanthe-mums, palms, ferns, also the forcing of bulbs over 20 years; single, good references. Address FLORIST, 283 E. 43d St., Chicago.

SITUATION WANTED—Young man 28 would like position as manager of retail place or general man; good at making up or outside decorator; no objection to extreme west; familiar with Boston and New York styles; American and single. Address DECORATOR, care American Florist.

SITUATION WANTED—Permanent, by an honest and intelligent young man 4 years' experience in the retail trade, including forcing roses and carnations. Central or Southern States preferred. For further information address, stating particulars, GEORGE J. BALZISER, Princeton, Ky.

SITUATION WANTED—As headgardener, by first-class grower and propagator. A. In specialties and general horticulture; also nursery and landscape, 7 years' European, 8 years' American experience. German, married. State wages. FLORIST, care M. Knoll, 407 W. 39th St., New York City.

SITUATION WANTED—Gardener and florist wishes a situation, private or commercial; life experience in the growing of roses, carnations, violets, palms; first-class designer and decorator, laying out and general care of a gentleman's place, not afraid of work; excellent references, married, no children, age 38. Address with particulars GARDENER, 213 Derry St., Harrisburg, Pa.

SITUATION WANTED—By April 1st, by an energetic first-class nurseryman (32 years of age, unmarried), as general foreman of a large ornamental nursery. Possessing, as I do, over 16 years of practical experience with some of the leading firms of Germany, France, Holland and the United States, I have acquired thorough familiarity in all details of the nursery business. An expert in propagation, grafting by several improved methods, and the cultivation of the higher class of nursery stock and all novelties, accomplished by a system producing large quantities in the shortest time possible. Address PROPAGATOR, care American Florist.

WANTED—Partner with \$500 in florist business in a good town in Kansas. Address H. W., care Vaughan's Seed Store, Chicago.

WANTED—A good man for palms, ferns and general greenhouse stock, single; must be well recommended. H. F. HALLE, 548 W. Madison St., Chicago.

WANTED—At once, single florist, good propagator; year's experience with roses, carnations, "mum culture in the west; German preferred. Address G. FLEISCHER, Pueblo, Colo.

WANTED—Two of the best rose growers that we can obtain for the money. Single men preferred. Address with references and wages wanted. BASSETT & WASHBURN, Hinsdale, Ill.

WANTED—First-class rose and chrysanthemum grower to take charge of eleven houses near Chicago. Good pay to the right man. POEHLMANN BROS., Morton Grove, Cook Co., Ill.

WANTED—Good rose and cut flower grower, one who understands the business thoroughly; must be sober, energetic and reliable; about 20,000 feet of glass. Address with references and wages expected. CHRIST HANSEN, 804 Dale St., St. Paul, Minn.

WANTED—By a thorough, practical man, a position as headgardener on a gentleman's place, or manager of a large commercial plant. Thoroughly understands the growing of all plants for market or private use. Roses, violets, carnations and mums a specialty. Aged 40 years, married, two children grown, English; 18 years in present position; reason for leaving, death of employer. First-class references from England and this country. Open for engagement March 1st. Those not requiring the services of a first-class man need not apply. Address A. B., No. 3 Livery St., Waterbury, Conn.

FOR SALE, RENT OR SHARES—Greenhouse and celery garden, no competition; bargain. W. J. OLDS, Union City, Pa.

FOR RENT—A fine stand of steam heated greenhouses with an acre or more of land for a term of years. Apply to J. H. ALLEN, N. 59th St., Station X, Chicago.

FOR SALE OR RENT—In center of the city, 8.0 feet of glass with store, and first-class stock; cause, sickneea. Address JOHN SCHNEIDER, 92½ Walnut St., Kansas City, Mo.

FOR SALE CHEAP—I will sell my Maple Heights and Marlon Greenhouses (or plant), consisting of 25,000 square feet of glass; heated with steam and natural gas, stocked with the leading varieties of roses, carnations, geraniums, palms, smilax, etc., etc., with four acres of ground, under cultivation; a cottage on the place and about forty fruit trees of the standard varieties of cherries, pears, plums, etc.; we are on three railroad lines with a direct line to the best flower markets in the west; only one competitor and a town of 20,000 inhabitants. Ill health the cause of wanting to sell. A great bargain to the right one. Address MRS. GEO. R. FRAVELL, 322 Washington St., Marlon, Ind.

J. J. LAMPERT, N. King St., Xenia, O.

Baltimore.

As the cold decreases business seems to increase; slowly, to be sure, but none the less surely. The advent of grand opera and several funerals in high places have helped the demand for flowers, but the weather is the chief factor in the improvement after all, for it may be questioned whether even grand opera would draw people out in such weather as we had a week ago.

Carnations are coming in freely and of very good quality at two cents. There is also a good supply of fine Jack roses at ten cents. Smilax is not so plentiful, and there is nothing like an oversupply even in bulb flowers, but the market is easy; if anything roses are in rather short supply, almost everything else, including violets, being plentiful.

In speaking of Mr. Hornicke's seedling notice of another valuable novelty originated by him was omitted. It is a Sanseviera Zeylanica of the same habit as the type, but having leaves, or blades, of richer, darker green, beautifully lined and striped longitudinally with creamy white. The markings vary from hair lines to broad bands, almost taking up the whole blade, and where both sides of the leaf are marked the translucent effect when seen against the light is very striking. Some leaves show in addition markings of pale green across the green part of the leaf. The variegation is so free that the plant, which was in an 8-inch pot, and about four feet high, with twenty or thirty leaves, looked more yellow than green, and was really a beautiful and striking object.

Attendance at the club meetings seems to have fallen off somewhat of late. It would be a good thing if we had a small committee of prudent and sagacious members to act as an executive committee, with special charge of maintaining harmony among the members. We have already lost men that might have been held, and such a committee if carefully selected and upheld might save us from future losses, and even win back and hold past ones.

MACK.

NEW, RARE AND BEAUTIFUL PLANTS.

STROBILANTHES DYERIANUS. This is the most valuable novelty which has been introduced for years. For bedding is superior to the finest coleus. Withstands hot sun and dry weather better.

SPIREA "Anthony Waterer," flowers rich crimson. Lord Penzance's New Hybrid Sweet Briar. **RELIGIUMS**—All the finest European novelties. **ORCHIDS**—A very extensive stock; East Indian, Mexican, Central and South American, etc.

RARE AND BEAUTIFUL EVERGREENS, Ornamental Trees, Shrubs, etc. **PAONIES**—A large collection of the finest in cultivation. Hardy Perennials, Phloxes, Japanese Iris, Roses, Clematis, etc. New and Standard Fruits, etc. Catalogues on application.

The Rose for the Million!!

BELLE SIEBRECHT.

Always in bloom. An iron constitution. Requires no special houses, no nursing. Will make itself at home in any house where other roses are grown. Proved hardy out of doors in latitude of New York. Color and keeping qualities unequalled. The greatest introduction of the century.

What good judges say:

It has proved a strong, vigorous and healthy grower, and remarkably free flowering, while its very large flowers retain that beautiful clear deep pink color that is entirely its own, and the bud being so very long and pointed in shape there is no possibility of its bullheading or hooding over in dull weather, which is the case with so many other roses of this class.

On the whole we are so pleased with it that we intend to plant very largely of it for Boston market. ALEX MONTGOMERY, Natick, Mass.

It is certainly a beautiful rose, but what impressed me most was first its very fine texture and substance of the foliage, which I am sure is not excelled in this feature by that of any rose in the market, and, second, the very evident indications of the free blooming habit of the plants.

With these important characteristics I feel certain that the Belle Siebrecht will prove a valuable addition to our list of forcing roses.

S. C. NASH, Clifton, N. J.

The new rose, "Belle Siebrecht," I believe is the best rose of recent introduction. First, because of its fine color, which recommends it, there being no other rose of that brilliant shade. Second, its great keeping quality; after being cut three days its brilliant shade is just as pleasing as when first cut. Third, it seems to require less skill to grow it to perfection than any other rose I know of. I believe it is going to be the rose for the milliou.

ALEXANDER BURNS,

Of Burns & Raynor, Wholesale Florists, N. Y.

This Rose is not a mere SPORT, but is of a distinctly new strain, being a SEEDLING, the result of a cross between the grand old La France and that strong and vigorous Rose, Lady Mary Fitzwilliam. Many of the leading rose growers who have seen this Rose growing at our nurseries have ordered from 500 to 2000 Plants. Orders booked now and will be filled in strict rotation. Strong plants ready for delivery April 15th.

PRICE, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

Report of the Special Agent for the Purchase of Seeds.

SIR:—I have the honor to submit my report for the year ending June 30, 1894.

Respectfully,
ENOS S. HARNDEN,
Purchasing Agent.

HON. J. STERLING MORTON, Sec'y.

In connection with my report for the fiscal year ending June 30, 1894, and complying with your request for an estimate of the amount of appropriation required for the coming fiscal year for the purchase of seeds, I have to say that I can not conscientiously recommend an appropriation for a free distribution of seeds, either valuable and improved, rare and uncommon, or any other sort.

While serving in this department as special agent for the purchase of seeds I have tried to put the purchasing of seeds upon a purely business basis, considering only the best interest of the department. In the matter of the selection and purchase of seeds for the present fiscal year the law has been complied with and the results will be found, I am convinced, to be the most satisfactory attained by the department for many years.

In the light of my experience as a former seedsman, however, I consider the free distribution of seeds by this department as an infringement upon and interference with a legitimate business, and I believe it should be abolished.

The seed business, whether wholesale or retail, is to-day as much an established legitimate business as manufacturing or trading in any product or merchandise. I hold that this department has no moral right to interfere with this or any other legitimate business interest by a free political distribution of garden seeds, spades, shovels or plows, or of new styles of dress goods, or of any other commodity the subject of legitimate trade.

Many seed firms in the United States make a specialty of putting up seeds for sale in papers and packages, and these may be purchased in the stores of every city, town and village throughout the country. In fully four-fifths of the towns of a population of 200 and up there are merchants who make a specialty of garden and field seeds in bulk, where farmers and gardeners can obtain fresh seeds of all descriptions by the ounce or pound. Thus garden seeds are to be had by paying for them in every section of the United States.

There are, moreover, 152 seedsmen in the country who issue catalogues that are mailed to farmers and gardeners in all the States. Many of the picture catalogues are filled with extraordinary descriptions of vegetables and tell many Baron Munchausen stories, still they give the farmer and gardener an opportunity of ordering such seeds as they desire, and there is no reason why persons who wish to supply themselves with seeds for planting should fail to procure new or old varieties for want of an opportunity to obtain them in a legitimate way, by paying for them.

Garden seeds are as much a part of a groceryman's stock in trade (except in city stores which have no country trade) as starch or soap, and still this depart-

ment makes no distribution of the latter or of the thousand and one items handled by the tradesman.

I readily concede that years ago the seed division did much for the agricultural interests of the country in introducing new and improved cereals and other field seeds, but at the present time, as for years past, the people who receive our free garden seeds do not, as a rule, take any advantage of the opportunity given them of saving the seed crop for their own use the following year. On the contrary, as many of the reports made to the department on the results of planting the seeds sent simply state that "the seeds did well," "came up beautifully," "please send me some more," it is a fair inference that the recipients, as a rule, want to obtain good seeds for the least possible money.

As a matter of fact this department has for many years been behind the seedsmen in the introduction of new varieties, and for good reasons.

First, the seed division can not carry on the business like a private individual, but is hampered by the rules and red tape which govern all government undertakings. It is unable to make contracts in advance as seedsmen do. When a seedsman discovers a new and valuable improvement in a vegetable or plant he nurses the stock seed from year to year until he has a stock sufficient to enable him to place it upon the market and then, when he has introduced his improved variety, the department comes in and takes its chances on what no one else wants, after the growers and other customers have gotten their contracts made, perhaps a year or more ahead.

As there is no way of detecting if a shipment of seed be true to name without a practical test in a trial ground for that purpose, the Department of Agriculture has for years been considered the dumping ground of seedsmen, who had stocks of seed that they were afraid to send to market gardeners or other good customers. A trial ground is something that the department does not possess, and even if it did there is no advantage to be obtained from one from a distribution standpoint, as the seeds can not be experimented with until the year following the distribution. It is shown by the books that the department has year after year distributed the same old varieties under new names, doubtless supposing the same to be new to the country. In this the department, like hundreds of individuals, has been imposed upon, and will continue to be imposed upon to a greater or less extent while the distribution is continued until it takes up the subject systematically, and, by an experimental ground, settles the question of true varieties and synonyms.

To illustrate: In the 152 catalogues issued by the different seedsmen of this country for 1894 there were 222 varieties of cabbage listed, while actually there are not more than 30 distinct varieties in this country. The same state of affairs exists in all the families of vegetable and field seeds sold by seedsmen; we have, for instance, 235 names representing different varieties of lettuce, 228 of peas, etc., when in fact there is not over one-fourth that many actual varieties. The improvements in most cases are in the manner of putting up or in an improved way of weighing out the seed, and the prices asked for these are from 10 per cent to 50 per cent higher than those asked for the same thing under its proper name. I feel assured that the Department of Agricult-

ure can do the people, the gardeners and the farmers more actual good by making such tests of varieties and publishing the results of the same at an expenditure of \$15,000 than with ten times that amount for free seed distribution.

Moreover, the settling of this question will be of great benefit to honest and reliable seedsmen, and will, I believe, meet with the approval of every seedsman in the United States who is not a fakir.

In conclusion, therefore, I suggest that the purchase of seeds for free distribution by this department be discontinued, and I earnestly recommend that, in place thereof, \$15,000 be appropriated for the purpose of determining the distinct kinds and varieties of vegetable and field seeds and their synonyms, the result obtained from these experiments to be published in the series of farmer's bulletins of the department.

The Bermuda Bulb Combine.

There is good reason for fearing that one of the largest houses engaged in the bulb trade in the United States has undertaken to defeat the effort that is being made by the Bermuda Bulb Company to obtain an advance in the prices realized for bulbs last season; also that persons in Bermuda are co-operating with the house in question to bring about this result. It will be well, however, for the bulb-growers to consider just what the practical outcome will be if this scheme should succeed.

The aim of the Bermuda Bulb Company is to improve the prices which bulbs have been bringing hitherto. The only way in which this can be accomplished is by combined action on the part of the bulb-growers, and after a great deal of difficulty and labor the company has succeeded in formulating a scheme which has been accepted by a majority of the bulb growers of the colony, who have agreed to place their bulbs in the hands of the company. The gentlemen who compose the company do not pretend that they are acting the part of ideal philanthropists; on the contrary, they profess to hope to be able to make some money out of their venture; but they also profess to work their scheme on such lines that everybody concerned—producers and consumers, as well as themselves—shall make a good living profit out of the business. That their scheme, if carried out faithfully in all its details, will improve the financial condition of the bulb-growers is generally admitted by all concerned, and that it will be faithfully carried out the terms of the contract which has been entered into between the company and the bulb-growers leave little room to doubt. It seems strange, then, that anyone—be he bulb-grower or other—who has a direct interest in the prosperity of the colony would do anything to imperil the success of the enterprise.

It is well known that, for the past year or two, growers and shippers alike have been playing a losing game, simply for want of concerted action on their part, and now that such action has to a great extent been secured, it should be maintained as far as possible—not only because such action will benefit the growers and shippers here, but because it will also benefit their customers abroad. To insure this mutual benefit, The Bermuda Bulb Company has taken particular pains to protect bulb dealers in the United States and Europe; the company has bound itself not to sell in small lots to foreign dealers, so as to give the large dealers

abroad the opportunity to supply customers who desire to purchase quantities below a certain fixed limit. Neither will the company allow any of its bulbs to be sold at private auction in the London market—a practice which in the past has proved a most ruinous factor in the trade. The company will not allow flowers to be shipped and sold to compete with flowers sold by the purchasers of Bermuda bulbs, for this, as we have repeatedly pointed out is "burning the candle at both ends," apart from being an immoral practice. Furthermore, the prices fixed by the company are the same for all customers, and each individual member of the company is bound to sell to the company at the fixed scale of prices, just as growers who are not members of the company are bound to do. F. R. Pierson, the agent of the company in the United States, will not be able to buy his bulbs one cent cheaper than Peter Henderson. The terms of the agreement preclude anything of the kind; they prevent anything like a corner on bulbs by the company and an unreasonable advance in the prices.

Such being the case, it seems only too clear that it is to the interest of every bulb-grower to strengthen the hands of the company. The grower who fails to do this will surely regret it. The bulb-grower who places his bulbs in any hands outside of the company's will be giving a stick with which to break his own head, because he will simply be giving the company's opponents the wherewith to break the market price. What the growers, one and all, must bear in mind is that the existing arrangement has been entered into for the general good; it is a cooperative not a monopolizing arrangement, and while its success means the improvement of the present conditions and the future prospects of the bulb trade of the colony, its defeat means utter ruin, present and future, to that trade. If ever absolute united action were needed in this business, now is the time, and it would be a deplorable circumstance if those who for private and selfish reasons are hostile to the movement should succeed in defeating it.—Editorial in *Bermuda Colonist*, February 6, 1895.

WETHERSFIELD.—Deacon Robbins has been sick with the grip but is now improving.

VISITED NEW YORK: J. C. Robinson, Waterloo, Neb.; William Meggat; both report trade good.

W. KUNTZE of the firm J. C. Schmidt, Berlin, died January 28, aged 23 years.

A RECEIVER is reported to have been appointed for F. S. Posson & Son, incorporated, of Portland, Oregon.

The Water Garden.

Lovers of aquatic plants will find much to admire in a series of choice photographic views which Mr. S. C. Nash has had reproduced from photographs taken in his water garden at Clifton, N. J. Most florists have among their customers aquatic enthusiasts, and recognizing the helpfulness of these illustrations to such florists in their business, as suggesting ideas in aquatic gardening, especially in the very important matter of the treatment of the margins of ponds, Mr. Nash has had a few extra sets made which those who are interested may obtain from him at a nominal price. The views are from etched copper plates; no card or advertisement disfigures them, and each one of the eighteen which constitute the set is a gem in itself.

Cleveland.

Wamelin Bros. will close their city store the last of this month and retire from the retail business. They will wholesale cut flowers from their Woodland Hills greenhouses.

Mr. and Mrs. J. M. Gasser, and Mr. and Mrs. W. H. Beaumont left for New Orleans this week to be present at the Mardi-Gras. They will be gone several weeks, visiting in several southern cities.

All the down-town florists report trade as fair, with an occasional spurt. Brides and Bridesmaid are coming in exceptionally fine just now. Beauties have been off-crop ever since Christmas. Gasser will begin cutting his first hybrids and Brunners this week.

Charles Erhart is remodelling, painting and burnishing the inside of his store. He now has one of the neatest florist stores in the city. L. F. D.

Measuring Glass Surface.

Replying to I. G. S., "square feet of glass in a greenhouse" refers to the number of square feet of glass roof. In the case of your 11-foot house which has a 6-foot sash on each side the glass surface would be 12 feet in width on that house. No, the laps are not considered.

But as the measurement is intended to give an idea of the size of the house, and as roofs vary in pitch, it has always seemed to us that a better way is to give the square feet of ground surface covered by the house.

Our Annual Spring Number.

Our annual special spring number will be issued March 16. We have some splendid special features in preparation for this number and it will be a decided advance, both in value of matter and beauty of illustrations, on any of our previous special numbers. What more can be said?

CARNATIONS

READY NOW.

Rooted Cuttings.—20,000 Daybreak; 50,000 more March 1st. Other varieties in proportion—McGowan, Mrs. Fisher, Helen Keller, Sweetbrier, Stuart, Buttercup, Iago, Scott, Albertini, Cartledge, Aurora, Portia, Dorner and others.

Write for prices, stating how many you will want of each variety. The price will be reasonable and the stock warranted well rooted and healthy, with the privilege of not accepting it if found otherwise.

A few Lancaster Beauty Verbena ready at \$2.00 per 100. This is a real good thing and a money maker.

TWO POINTS

FOR CARNATION BUYERS.

GET THE BEST.

Here's a quartette of them: W.L. SCOTT, finest pink of solid color; ALBERTINI, peerless, in all qualities; DAY-BREAK, unrivalled in its delicate flesh tones; MCGOWAN, the white of whites.

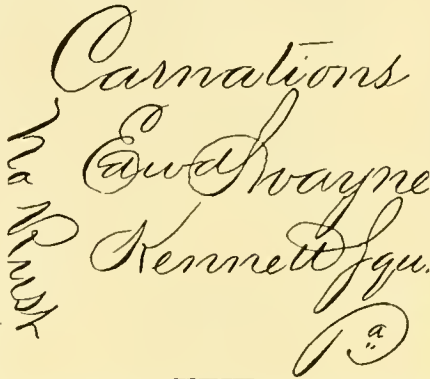

GET THEM GOOD.

We grow them cool, root them cool, and take our cuttings from blooming stems only, carefully selected, carefully rooted, and carefully packed for shipment. Our stock is in fine health and vigor.

Our prices are \$3.00 per 100 for Scott and Albertini; \$2.50 for Daybreak, and \$2.00 for McGowan. For quantities above 500, write us. Terms cash.

ALEX. MCBRIDE,

ALLAUS, N. Y.

NEW.

OPHELIA.—A fine large flower a little darker than Scott. Took Craig cup for best seedling of any color at Philadelphia. Flowers brought \$3.00 per hundred wholesale all last Winter excepting at Christmas, when they reached \$5.00. Rooted cuttings \$10.00 per 100; \$8.00 per 1000.

ELDORADO.—(Sheimire). Introducer's description in stock. A yellow of free bloom and habit and the other necessary qualities of a good carnation has long been a desideratum. In Eldorado we have a strong vigorous plant, healthy foliage and finely formed flowers. The cuttings are easy to root and the plant is very prolific in both blooms and cuttings. Light yellow, or, perhaps, nearer a buff, and free from all white markings. Petals edged with a narrow band of light pink, being almost a picotee in marking. The flowers look yellow by artificial light and not white, as many yellows do. \$2 per dozen; \$12 per 100; \$100 per 1000.

KOHINOOR.—(mountain of light) (Pennock). Introducer's description and stock. The choice of over 400 varieties after 3 years' trial. It is the best white I have ever grown. Plant robust, stem long, stiff and erect. Flowers full, deeply fringed, occasionally touched with pink blush, and extremely attractive, measuring 2 1/2 to 3 inches across without any forcing or dabbling. Comes quickly with bloom and continues prolific throughout the season.

LADY CAMPBELL VIOLET, rooted runners, \$2.00 per 100; \$15.00 per 1000.

Walter R. Cliffe, of Germantown, Pa., has been the first in this locality to appreciate the virtues of Swainsona Galegifolia Alba. He has an entire house of it, and the beautiful pea like blossoms backed by its feathery plumed foliage, have, he claims, paid him better than anything else he has grown this Winter. We are enabled to offer his stock at \$4.00 per 100; \$35.00 per 1000 for rooted cuttings; \$6.00 per 100 2 1/4 pots. Ready Feb. 15th.

CARNATIONS

SEEDLINGS FOR 1895.

KOHINOOR Large full white on strong erect stems. The best white I have ever grown.

FISHER & AIRD,
ELLIS, NORFOLK Co., MASS.

I DON'T THINK.

On this subject, it requires only an ordinary ganglion to disclose the fact that CARNATIONS make stronger, healthier stock when grown cool—on ground beds—and in a new house.

RUST has never visited us (barring Mr. David Rust of the "Exchange"), and clean, vigorous stock of the following list will be at your disposal on and after Feb. 1st, 1895.

Opheles, new, large, medium pink.....	\$10.00	\$80.00

Grown cool, and only healthy, selected stock taken

BELL MILLER, Springfield, Ill.

Cincinnati.

While a fair amount of trade is going on and there is no great oversupply of anything in the cut flower line coming in, yet it is unquestionably true that business is not what it should be if it is to compare favorably in the end with past seasons. The bustle and rush we have been accustomed to see in large retail stores during January and February is not the case, and the store people show it in their faces even if they do not always acknowledge it, while the growers are plainly disappointed at the absence of the old fashioned scramble for their goods which they have in the past depended upon to average up for the depressing times of the early fall. Any decided revival in the trade would be quickly felt by the growers, as there is really but a limited supply of first-class stuff coming in. Good roses and carnations of all colors are well cleaned up every day, but the call is not sufficient to tide the poor stock through with the good. Lily of the valley has been rather short supply, but this may be attributed to the timidity of the growers rather than to any excessive demand. Tulips, if white, sell fairly well, but if red there is no show for them whatever. Violets are scarce.

Prices are good here at present. Good Bridesmaids are bringing \$8, Perles \$4 to \$6, violets \$1 to \$1.50 a 100, callas \$1 a dozen, tulips \$3 to \$5, Roman hyacinths \$3 to \$4, carnations \$1 to \$1.50 for white and red \$2 to \$3 for Wm. Scott and Day-break. Harrisii lilies are scarce and bring \$15 per 100; other stock in proportion.

The greenhouses and place of the Huutsman Floral Co. will be sold at sheriff's sale February 20. The houses are almost new, and cost between \$8,000 and \$9,000 to build.

The greenhouses of Magric & George were partly destroyed by fire last week, damaging the stock to the amount of \$100. The houses were insured. Cause of fire unknown.

Mr. Tom Jackson of Covington is on the sick list.

Mr. Peterson of 4th street has a fine collection of azaleas in his show window.

Our special spring number will be issued March 16 and will be a beauty.

New Catalogue (No. 4) containing over 1000 Ornamental Cuts for Florists' use, such as envelopes, letter-heads, bill-heads, cards, advices, floral designs, etc., at from 30c. and upward. Price of Catalogue 25c. (deducted from \$1.00 order).

A. BLANG, ENGRAVER for Philadelphia, Pa. FLORISTS.

When writing mention the AMERICAN FLORIST.

VERBENAS, full of life and vigor, from robust seedlings of Mammoth grown, summer of '91. A selection of very best bright colors. Strong rooted cuttings, \$6.00 per 1000; 75 cts. per 100.

COLEUS, 24 distinct best bedders, plenty red and yellow, \$6.00 per 1000; 75 cts. per 100.

CANNA Mme. Crozy, dormant bulbs, 75c. per 12. ALBERT M. HERR, L. B. 496, LANCASTER, PA.

A New Canna!

"THE PROFESSOR."

We take pleasure in offering this Canna to the Trade, and feel sure that it will please all who purchase it. It originated with me, has been tested on my grounds for the past three years, and has been very highly spoken of by all who have seen it.

The foliage is a very dark purple, nearly black, and colors up well in the full sun. The flowers are of fair size and substance, and of a deep crimson color; they are by far the best we have seen in the dark foliage section of this popular plant.

Its habit of growth is dwarf, and its average height is about 3½ to 4 feet.

We consider this Canna a valuable acquisition and hereby offer it for the first time.

Price for started plants from pots (ready after March 15, 1895), 75c. each; \$7.00 per doz.

N. B.—All orders will be filled strictly in rotation.

LOGAN AVE. GREENHOUSES,
DANVILLE, ILL.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns.

\$4.98

Sounds like a dry goods price, but it isn't. It is our Special "Cash-with-the-Order" price for 1,000 Envelopes and Letterheads (the extra two cents will buy the stamp), ruled or unruled (if you want the letterheads for typewriter use say so), of a grade good enough for anybody (better than most people use), printed in our peerless style, with a neat cut in addition to your card, if you want it. When stationery that is up to date can be had at such prices, there is absolutely no excuse for using anything that is of low quality or carelessly and poorly printed.

Send a check (money order will do), say what you want on the goods, and they will go forward to you promptly by freight, unless otherwise ordered.

If you want a Catalogue, Billheads, Red-leaf Labels, Culture Leaflets—anything that good printers can make—write us.

GLEN ST. MARY NURSERIES,

G. L. TABER, GLEN ST. MARY, FLORIDA.

St. Paul, Minn.

In common with the rest of the country we experienced the cold wave. But unlike the rest of the country it was not accompanied by snow and blizzards. The ice formed so thick on most glass that it afforded a protection to the plants inside, by keeping the wind out. Bright warm weather now prevails and everything is looking better. On account of the weather the cut has not been up to the average, and for the same reason sales have been lighter. There has, however, been an unusual demand since New Years for funeral flowers, and as a consequence all white flowers, roses and carnations especially, have been very scarce. The sale of plants has been unusually quiet and scarcely any have been disposed of.

Bulbous flowers are plentiful but sales are light. L. L. May & Co. have an exceptionally fine lot of Dutch hyacinths, mostly Norma, which they are selling at 10 cents each or 3 for 25 cents. This is a pretty low figure but attracts people to the store and helps sales on other things as well. Besides, there is money in them even at that price.

The monthly meeting of the Florists' State Society was held the 8th inst. in L. L. May & Co.'s offices on Como avenue. There was a good attendance and an enjoyable meeting. Several members provided music and as the superintendent, Mr. Souden, had decorated the room with palms the meeting evoked a sociable feeling in all present.

The resignation of the secretary was tendered and accepted. Mr. Dysinger read a paper on Educational Factors in the Florist Business, which was warmly received and commended by all present. The speaker emphasized the importance of thinking as well as working, pointed out the several ways in which the business would be benefited by education, and paid a compliment to several of the prominent writers for the AMERICAN FLORIST who are doing good work in that line.

The Harrisii disease and its remedy were informally discussed, as also the wisdom of renting palms for decorative purposes at \$5 per dozen.

A rising vote of thanks was tendered the retiring secretary for his attention to business, also to Mr. L. L. May for the use of the room in which the meeting was held. A committee on entertainment was named for the next meeting to be held in Minneapolis.

Sample blooms of the new carnation Rose Queen were exhibited, inspected and criticised. The most favorable comments were made regarding its color, etc., though one of the prominent local growers predicted its early abandonment owing he said to its short calyx. Either it would burst badly or the bloom would be small.

Mr. Cary I. Warren, proprietor of Warrendale greenhouses, has just returned from a trip to Kentucky, where he has taken his family to reside permanently. He will, however, retain his business in this city.

Mr. Robert A. Currie, for the past three years superintendent of the Warrendale greenhouses, has accepted a similar position with the State Hospital at Columbus, Ohio, and has removed himself and family to that city. His many friends in this section regret his departure and wish him success in his new location. F.

When writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

TO TAKE PLACE OF WIND MILLS

HOT AIR PUMPING ENGINES

A Windmill

Is unreliable because it depends upon the elements for its power; hydraulic rains also depend upon favorable conditions and waste as much water as they secure. Steam pumps require skill and hand pumps demand labor and time. The

DE LAMATER-RIDER CR
 DE LAMATER-ERICSSON
 Hot-Air

Pumping Engines

are especially designed for pumping water, and from shallow streams or any kind of well. They are simple, safe and reliable, require no steam and have no valves. They require very little heat to operate them, and can be arranged for any kind of fuel.

Send for illustrated catalogue to

What Growers Say!

A Different Letter Every Week

DETROIT, MICH., Nov. 20, 1894.
 LOCKLAND LUMBER CO., Lockland, Ohio.
 Dear Sirs:—I have completed my third house of Cypress lumber and if I were building a hundred more would use nothing but Cypress material in their constructions, as it comes in the right lengths and is spot clear, straight and light; holds paint well and costs no more than the best White Pine, and will outlast Pine twice over I am told by an old Lumberman. I like the way you get it out and also your way of doing business.

Yours Respy., GEO. A. RACKHAM.

Toronto.

The weather during last week was a decided improvement on the previous one and the contents of florists' stores have again become visible through the front window. In spite of the abnormal dip of the thermometer no serious damage appears to have been done to florists' stock, the snow materially assisted in keeping out the cold, in fact in the greenhouses under my charge I had less trouble in keeping up the heat than at other times when the thermometer was not so low outside.

The sunshine of last week has made flowers considerably more plentiful, and there are some fine displays in the store windows; business, however, though better is not by any means rousing. Considerable design work is reported by some of the florists in the residence parts of the city.

A good deal of important business will come up at the regular meeting of the Gardeners' and Florists' Association this week, which promises to be an interesting one and largely attended. It is time to be getting the chrysanthemum show of 1895 under way now and the ways and means will have to be discussed and a committee struck. The "Horticultural Society committee" will report progress, and this report will also make food for lots of talk. The printed financial statements of the chrysanthemum show of 1894 and the general association will also be given out. E.

Poughkeepsie, N. Y.

The second meeting of the Dutchess County Horticultural Society was held here February 6, there being a very good attendance. The constitution and by-laws submitted by the committee appointed to draft and prepare them was approved and unanimously adopted.

Committees were appointed to arrange preliminaries for an autumn exhibition, to award certificates of merit to worthy exhibits at the regular monthly meetings, and one on essays and publication, same to have charge of the question box and entertainment.

Mr. P. O'Mara of New York was present and gave much acceptable assistance by his practical suggestions.

The next meeting will be held March 6 at 1:30 p. m. W. GOMERSALL.

RICHLAND CENTER, Wis.—S. I. Freeborn, the nurseryman, died February 5.

BERLIN, N. J.—The greenhouses of Joshua Barton were destroyed by fire February 18.

WORCESTER, MASS.—Wm. Cruickshanks, well known to the old gardeners and florists of Boston and vicinity, died February 18, aged 74 years.

PARIS, FRANCE.—Mr. Al. Pillaud, formerly owner of the Fafayette Floral Co., Salt Lake City, is now connected with the firm of J. Floucaud of this city.

The American Carnation Society.

The attendance at the sessions of the second day of the Boston convention was not quite as large as at those of the opening day. The first business in order was the reading of reports on awards. It was announced that the special premium of \$25.00 offered by the *Florists' Exchange* for the vase of flowers showing best culture had been awarded to Edwin Lonsdale for a vase of Helen Keller.

A communication was read inviting the society to visit the Ware collection of glass flowers at Harvard, after which the address of President Dailedouze delivered yesterday, was re-read, and its recommendation in regard to sectional committees to examine and report on new varieties of carnations was discussed at some length.

Mr. Chas. H. Allen stated that the New York Florists' Club had adopted a plan of having a permanent local committee on awards, and he favored the adoption of a similar plan by the various florists' clubs in the country for the special purpose of examining new varieties of carnations and awarding certificates where such are deserved and advised that the executive committee of the society request the different clubs to take action on this matter.

Mr. J. N. May said he thought the appointment of such committees would result in great benefit to the different sections, and that this work of the society ought to be something more than child's play. Exhibitions of new varieties brought 1500 miles from where they were grown were often in no condition to be judged. Committees nearby could decide much more intelligently on their merits. It was important, however, that proper men be selected for the committees, as it was too often the case that partiality had been shown on such occasions, and only men that could be relied on for fair judgment should be placed on the committee.

Mr. Lonsdale approved of the idea, but was of the opinion that it would require a great deal of thought to put it into successful operation and he believed it would be best to have it referred to a special committee or to the executive board. To examine varieties as they are growing would certainly be a great advantage and specially valuable as regards novelties. New varieties should be tested in the different parts of the country and these committees should examine them at

least twice a year. When this Carnation Society was formed that idea had been advanced at the opening meeting. All florists know that buying novelties is a lottery under the present methods. The matter was referred to the executive committee with power to act.

Mr. E. G. Gillett then read a short paper entitled "Why is the Carnation a Popular Flower." The following is an abstract:

Why is the young lady just blossoming into womanhood, who always has a smile and a kind word for everyone, whose disposition is faultless, why is she popular? For the same reasons the carnation is popular. As it is grown to-day it is a thing of beauty, its smile is lasting, it has all the good features of form, color and keeping qualities. It is used in all classes of society. It can be found in any circle from the lowest to the highest, and it matters not in what company it may be, it is always at home. It is reasonable in price and beautiful in appearance. It graces all social gatherings. It has reached such a degree of perfection that it takes a back seat for no other flower. This advancement has been made within the last few years; it has taken care, time and money to bring it about, and to day there is no other flower so universally popular as the carnation. It occupies a seat in the front row, and it holds a check for that seat. It is a money maker for the florist and it has come to stay. Allow me to congratulate the growers who have brought the divine flower so near perfection; I say so near perfection because there is no knowing what you will do in the future. You always have surprised us, and we are always ready to be surprised.

Mr. Edwin Lonsdale then read a paper on "Carnations that I have seen," which proved to be a most valuable historical and critical review. He gave a concise description of all the leading varieties, taking them alphabetically from Albertini to White Dove, and noting their origin, their weaknesses and their elements of strength. He referred to several which had remained in favor long enough to discredit the prevailing impression that the carnation is a short lived plant and must be constantly growing new varieties to take the place of those which die out. He spoke of his experience with varieties which did not succeed in his hands at first, but finally proved valuable, and to others which won in competitions, but soon sank into oblivion, and advised his hearers to be lenient in their judgment and to go slowly in condemning or strongly endorsing new sorts. We select the following from among the most interesting points noted in his essay.

President DeGraw and La Purite were my first acquaintances in carnations. I was surprised to find that La Purite was red, as I thought from its name that it

ought to be white, and the name DeGraw might as appropriately be applied to the red variety as the white. I am not quite sure that I didn't change the labels. I never felt quite satisfied that the names hadn't got mixed somehow.

Madame Diaz Albertini has great vigor and size of stem and flower, but the color is not so cheerful as it might be.

Andalusia was one of the parents of Cæsar. This led me to expect that Cæsar would be specially prolific in yellow progeny. In this I was disappointed.

La Belle was a novelty introduced in the seventies, and its virtues were loudly proclaimed. It was represented in the cuts as trained on a big balloon trellis, and the price was \$1 a plant.

The advance in quality and price and the popular appreciation of modern grown carnations have not made carnation growing any more profitable than under the old conditions. When from a table 6 feet by 80, fifty thousand short stemmed blooms could be cut in a year there was as much money in it as there is now.

I never had any success with Buttercup until I got stock from New York parties and kept it under glass all summer; then I got grand results. I believe that in future many of the choicest varieties will have to be grown under glass all summer.

I have often thought that a self colored yellow sport from Bouton d'Or would be a decided acquisition.

Daybreak is the best variety ever disseminated, taken all in all.

Under certain conditions any and all varieties will take rust.

For summer blooming Mrs. Fisher has no equal.

Maud Dean is vastly superior to Dawn, which it entirely supersedes.

Hector, from which great things were expected, proved a disappointment in many ways. Results with it vary greatly.

Helen Keller I hesitate to say much about. But it sold for more money in Philadelphia the past season than any variety that had ever been offered there. The notion that a carnation is no good unless of solid color is an old idea which is fast breaking down and giving way to more rational views.

I have seen old La Purite with one hundred and twenty to one hundred and fifty flowers and buds on a plant at one time. I question if any variety can beat that in these times of progressive horticulture.

The flower of the French variety Miss Moore is the most perfect in form of all carnations.

Spot has checked the career of more seedlings than any other cause.

Mrs. Carnegie was one of the parents of Helen Keller.

We are still looking for the scarlet carnation which has all the best characteristics of Portia but is twice as large.

If Mr. Dorner never did anything else but raise Wm. Scott he has done enough to win the gratitude of the trade all over the country.

The winners of trophies do not always in the long run prove to be the best varieties.

In the discussion that followed, Mr. Albert Herr gave his experience with The Stuart, which he succeeded well with by starting it early and growing it in solid beds with plenty of manure at a temperature of 60°. Mr. Dorner was also inclined to favor solid beds for this variety and Mr. Hill's opinion was that it required heat to bring out the bloom.

Mr. Eugene Dailedouze in reply to an inquiry as to how to propagate Bouton

d'Or successfully, advised early propagation. With late propagation not more than 30 or 40 per cent. of the cuttings will strike.

Mr. Dailedouze extended an invitation on behalf of the New York Florists' Club for the American Carnation Society to hold its next meeting at New York City, and the vote resulted in the unanimous selection of New York accordingly.

The nomination of officers being now in order, the following nominations were made: For president, Fred Dorner, Lafayette, Ind.; vice-president, J. N. May, Summit, N. J.; secretary, A. M. Herr, Lancaster, Pa.; treasurer, Chas. H. Allen, Floral Park, N. Y.

The afternoon session opened with the reading of a paper by Prof. Byron D. Halsted, of New Brunswick, N. J., telling how to distinguish the fungous diseases which attack carnations. He remarked that what he could say would be in substance a repetition of his paper read before the society two years ago. The main example to which he wished to call their attention was in the exhibition hall up stairs, where the five principal carnation pests might be seen under the microscope. He said that poor plants might be the result of unsuitable soil, or an uncongenial atmosphere or weak parentage. But outside of these causes, there were five principal sorts of fungoid growth which seriously affect them. These are carnation rust, leafspot, black speck, ring mould and bacteriosis. He had endeavored to hang their pictures in the rogues' gallery, so that they could easily be detected. Other diseases may sometimes attack carnations, but these five are the ones to be expected. He advised growers to have by them a good description of each, to examine the plants with the hand lens, and finally to add the compound microscope to their apparatus.

Replying to questions Prof. Halsted said that, when a plant gets thoroughly sick, it isn't of much account and had better be thrown away. That Bordeaux mixture stands at the head of all fungicides to-day and that sulphide of potassium is also of the greatest value. That fungous disease is not spontaneous; that neglect will not cause it, but will be one of the conditions favoring its spread. That he knows of no variety absolutely proof against rust. That bacteriosis may enter a plant through the pores of the leaf, and that as the texture of the epidermis may be different in various varieties it may be possible by microscopic examination to determine whether a specified variety is very susceptible or not.

Mr. E. G. Hill asserted that bacteriosis is to be dreaded fifty times more than the rust.

A hearty vote of thanks was then given Prof. Halsted for his paper and his kind services in providing the interesting and valuable microscopic exhibit.

The annual election was then held and resulted in the unanimous choice of all the gentlemen previously nominated. District vice-presidents were chosen as follows: New England states, William Nicholson; middle states, W. R. Shelmire; western states, Richard Witterstaetter; southern states, Benjamin Durfee; northwestern states, W. E. Kemble; Pacific states, F. Edward Gray; Canada, J. A. Miller.

A committee consisting of the secretary of the society and Messrs. Robert Craig and Edwin Lonsdale was appointed to revise the list of carnations, strike out the names of varieties no longer grown and prepare a new working list. The secretary was instructed to request the executive committee to devise a method for

securing promptly the names of new varieties.

After passing votes of thanks to the Massachusetts Horticultural Society for the use of its halls, to the Boston Gardeners' and Florists' Club for its hospitality, to the committee of arrangements and to the press, the society adjourned until next February.

Notes.

The most successful convention our society has ever held, is the verdict of all who went to Boston last week. Why? Simply that there were more growers in attendance who were thoroughly interested in the higher cultivation of the carnation and who wished to get every possible point that the essays and discussions brought out, also to see the new seedlings which are to be disseminated this or following years. The exhibition was far ahead of all previous shows in quantity and quality, both in new and old varieties. Probably the greatest interest was shown in the seedling class, comprising a majority of the novelties of this year.

E. G. Hill & Co. of Richmond, Ind., showed several very fine sorts, two of which, Armazinda and Triumph, received the society's certificate of merit. The former is a magnificent flower of very fine form, pure white ground delicately penciled with a deep crimson, but so faint are the markings that it could readily be used for any work where a white flower is needed, at the same time it is a distinct variegation. Triumph is a seedling from Wm. Scott, and in my opinion is an improvement over its parent; its form is bolder and stronger; the color is better than Scott, because it is a yellow pink, while the Scott is a purplish pink. This distinction is not generally understood, but if my readers will compare Scott and Albertini they will readily see why I make the distinction, and all growers of seedlings should watch this point very closely. Hill & Co. had several other seedlings of great merit; the committee did not deem them worthy of the society's certificate, however, as they were lacking in several points. Jubilee is a very finely formed scarlet that drew much attention owing to its stiff stem and good keeping qualities, but the color was a trifle dull, which would kill it in the New York market, but might not affect it in some other localities.

John N. May carried off three certificates for Maud Dean, Dean Hole and Lena Saling. The Maud Dean is a finely formed, good keeping creamy white tinged with crimson in the center upon first opening, but which gradually disappears as the flower matures. Dean Hole can scarcely be told from Buttercup, it has, however, a brighter appearance. Lena Saling is a dark pink resembling very much in color and form Mrs. Elizabeth Reynolds, introduced some time ago by Dorner; its color, however, is brighter and more pleasing.

The Cottage Gardens captured two certificates, one for Meteor, which is probably the finest maroon (some would say crimson) ever shown. Its form is perfect and the coloring is grand. Storm King, which was also certificated, was in the opinion of the committee the only white entitled to the honor of a special card. This variety is certainly a grand acquisition, being almost perfect in form, very large and a good keeper, and having a very good stem.

Della Fox, shown by Meyers & Santman of Chestnut Hill, Pa., is a very fine flower, similar to Daybreak in many respects, but is darker in color and is not so apt to fade as the older sort. I believe

PARTIAL VIEW OF THE TABLE OF SEEDLINGS AT THE BOSTON EXHIBITION OF THE AMERICAN CARNATION SOCIETY.

that Della will eventually supplant Daybreak, for the same reasons that the Bridesmaid rose has supplanted the Mermet.

The Bride of Erlescourt, a new variety from Canada, was shown in fine form and drew much praise from the members. It has good form and keeping qualities, and judging from the plant shown is prolific, but as the plant had been grown in a pot its qualities in this respect could not be seen as well as if a plant had been taken from the bench. The flowers when massed did not present as pure and clean white as is now required, especially when we compare it with Storm King.

Jos. Tailby & Son showed Ellen Shaefer, a white, in form and substance too much like Lamborn. Their new yellow is the best clear yellow (for it showed no markings whatever) I have ever seen, but it is too small and when compared with some of the Buttercups on exhibition was outclassed. Bettina, a seedling of '93 by Lothrop Wight, is a very fine maroon, as was also Crimson Sport shown by J. L. Dillon; but why does he call it crimson when it is a maroon? Custom, I suppose, but a poor custom.

Sewall Fisher also had a good maroon, its only fault being a weak stem; his seedling white No. 162 and Crystal were in poor form and had no show. H. E. Chitty's Alaska and Corsair were in good form. The former is undoubtedly a fine white, but as shown was not up to size; its form and substance of petals are all that could be desired, the stem is good. Corsair is a good shape, but its color is too much on the brick color; in this respect it can not compare with Portia.

W. R. Shelmire had some of his novelties in good shape, among them being Kitty Clover and Eldorado, both yellows of good form, but hardly large enough to compete with Buttercup, but they may make up in quantity what they lack in

size; we understand they are quite prolific. Eulalia, a variegated, is a yellow ground heavily marked, and so much so that it will hardly become popular. Peachblow from the M. A. Hunt estate did not arrive until Friday p. m. This is to be regretted, as it is a beauty. Its name describes it probably better than I can, however, it is a lively rich pink different from any other variety shown, and I believe is worthy of a certificate.

The exhibits in Class A, vases of 100 each, drew out quite a competition and some grand flowers were shown and received premiums as follows: Whites, first, H. E. Chitty, Alaska; second, Wm. Nicholson, a seedling; third, Dailedouze Bros., Lizzie McGowan. Pink (light), first, Dailedouze Bros., Wm. Scott; second, Fisher & Aird, Wm. Scott; third, R. Witterstaetter, Miss Emma Wocher, new. In this class Wm. Nicholson entered Daybreak and Nicholson, and L. H. Foster Daybreak, which were fine. Pink (dark), only one entry, Dailedouze Bros. with Tidal Wave, this was well grown. Crimson, Wm. Nicholson first with Ferdinand Mangold. Scarlet, first, E. G. Hill & Co., Jubilee; second, Wm. Nicholson, Hector. Yellow, first, H. K. Southworth, Buttercup; second, R. Witterstaetter, Buttercup; third, Dailedouze Bros., Bouton d'Or. Variegated, first, H. E. Chitty, Minnie Cook; second, Dailedouze Bros., Helen Keller.

Class B, 50 blooms. Whites: First, C. W. Ward, Storm King; second, Dailedouze Bros., Lizzie McGowan; third, Fisher & Aird, seedling. Pink: First, Dailedouze Bros.; second, Fisher & Aird; third, Wm. Nicholson. Wm. Scott was the winner of all three prizes. Pink (dark): Dailedouze Bros. were the only exhibitors in this class with a fine vase of Tidal Wave. Scarlet: First, E. G. Hill & Co., Jubilee; second, Fred Dorner, seedling; third, R. Witterstaetter, The Stuart.

Crimson: First, Fred Dorner, Meteor. Yellow: First, Dailedouze Bros., Bouton d'Or; second, J. L. Dillon, Buttercup. Variegated: First, Edwin Lonsdale, Helen Keller.

Class C, 12 blooms. White: Lizzie McGowan, Dailedouze Bros.; Silver Spray, Nathan D. Pierce; Mrs. Fisher, W. B. King; Uncle John, C. W. Ward. Pink, light: Grace Wilder, Geo. Smith; Albertini, Annie Pixley and Daybreak, Dailedouze Bros.; Sweetbrier, Fisher & Aird; Nicholson, G. N. Hyer. Pink, dark: Tidal Wave and Richmond, H. Weber. Scarlet: The Stuart and any other scarlet, Dailedouze Bros.; Hector, H. Weber; E. G. Hill, M. R. Cushing. Crimson: Jacqueminot, Dailedouze Bros. Variegated: J. J. Harrison and Chester Pride, H. Weber; Helen Keller, J. N. May. Yellow: Buttercup, Edwin Lonsdale; Bouton d'Or, Dailedouze Bros.; Goldfinch, Fisher & Aird; any other yellow, J. N. May.

As far as the prizes were concerned the greatest interest of the exhibitors was centered in the *Florists' Exchange* prize offered for the vase of bloom showing the highest culture, and a prouder man you never saw than the genial Lonsdale when he was made aware that his exhibit of Helen Keller was the winner, and no wonder, for they are grand, and go to prove that this variety can be grown in great shape notwithstanding the fact that many growers have failed with it. Moral, you should have gone to the convention and found out how to grow it.

Sunshine, a new yellow, was shown in Class A. This sort while of good form and fair size is too light in color. The Buttercups shown by H. K. Southworth were pronounced as fine as ever seen; they kept remarkably well. But how does Nicholson grow Hector to such perfection. If some of the growers around New York would duplicate Nicholson's work in this particular they would reap a rich

harvest. The Bride of Erlescourt found great favor in the eyes of many. Mr. Nicholson had a seedling white that for size and form of flower was immense, but the stem was a little weak, just the same it came in second in Class A.

One of the most interesting and instructive features of the convention was the exhibit by Prof. Halsted of fungus disease to which the carnation is subject. This in connection with the lecture of the professor during the last session drew a large attendance and was listened to with marked attention. Five different cases of diseased plants were carefully mounted on cards and also on glass, the latter being shown through the microscope. This is a feature that has never been undertaken at any time or place in connection with horticultural or floricultural work, and Prof. Halsted told me that thousands used the microscope and that a large proportion of his audience asked questions relative to the objects. The exhibit was made in this way to show all interested how to determine one disease from another, and the discussion following the professor's lecture brought out points that have previously been misunderstood.

The balls of the Mass. Horticultural Society were at the disposal of the Carnation Society, and the Gardeners' and Florists' Club of Boston did all in their power to make everything pleasant for the "carnation cranks," as some call them. How well we were treated can be imagined by all who have met those hospitable, generous and wholesouled florists of Boston.

CHARLES H. ALLEN.

"A Dodge to Catch Trade."

ED. AM. FLORIST:—Your correspondent, under "Carnation notes" in the issue of February 9, has made some startling and damaging charges against certain growers of carnation cuttings, that would seem to require a reply. The particular points at issue are:

(1). "The bearing of A1 flowers seems in the minds of some to unfit the plant for propagation, in that the cuttings are weakened, etc." (2). "For any grower to state that a plant must be grown slowly or in an impoverished condition seems very strange to me." (3). "They often state that these large blooms are not good keepers."

The readers of the AMERICAN FLORIST are concerned particularly with the manner of growing and propagating carnations by those from whom they are intending to purchase stock, and it is to this class of growers to whom your correspondent above quoted leads us to refer. I have before me the price lists of twenty of the leading carnation specialists of the United States and Canada, and have carefully examined the advertisements of a great many more; and in none of them is there anything that would lead me to infer any of the statements above quoted. Certainly points 1 and 3 are not in the most remote degree referred to. Point 2 might be evolved from one or more of these lists or advertisements, where the growers state their plants "have never been forced in culture," etc., a statement of very great importance to purchasers of young stock in the face of repeated complaints against seedlings sent out during the past few years that failed almost universally, and the general verdict was "overforcing of stock."

One grower, after giving the measurements of a flower states that it was made on plants grown "without special manuring." Certainly no writer of such a statement would expect his readers to infer

that the soil producing the plant and flowers referred to was "impoverished." The custom, sometimes practiced, of *intense* feeding of the plant, whereby extra large flowers are surely produced, other conditions being right, has undoubtedly been the source of bitter disappointment to purchasers of young seedling stock. When growers for the cut flower trade have realized, as your correspondent does, the increased results from increased enrichment of the soil it will be unnecessary for a grower to state that a 3-inch flower was produced "without special manuring." I have seen growing, within a month, several lots of a seedling disseminated last year, the flowers of which as shown at the Indianapolis meeting of the A. C. S., would lead me to expect remarkable results. As I saw them grown under the same conditions as the older varieties they were almost worthless. Is there not a reason then for calling attention to the fact that plants are not "forced in culture"?

Your correspondent further states that "If these advocates of growing for cuttings only would advise resting the plants during November and December in a cold frame, and then bringing into the houses, starting the plants then into a strong growth for cuttings, we might give them some attention." Will he kindly give us a reason for such a statement? Such plants would surely require decided forcing to bring in much profit. He further calls attention to the complaint of a grower who had bought stock from "one who claims to grow and furnish cuttings only from plants grown quite cool for cuttings only." Does the purchaser claim that he never had a failure from plants bought of growers who do not make such a claim, or is there *one* extensive grower who has not found complaint of at least *one* lot of cuttings sent out, despite the utmost care to have it right?

He further states that "lots of manure, combined with judicious watering are the requisites for the production of first-class blooms, and the plant which furnishes this will give the best cuttings." This is certainly the key note of successful culture, whether for flowers or cuttings. But the latter clause is, in the opinion of the writer, misleading. Will not a plant grown under favorable conditions of soil, water, and air, and topped back before blooms appear, make as good cuttings as if the flowers were marketed? More flower shoots are sent up and more cuttings are produced on the flower stems by such treatment than where flowers are marketed, and I believe every grower is agreed that cuttings from the flower stems are the most desirable.

After the quotation referred to about resting plants during November and December your correspondent goes on to say "but as it stands to-day we can look upon their advice merely as a dodge to catch trade for their stock." The inference is evident that he believes the class of growers to whom he refers are making false claims to deceive purchasers. As one of such growers I insist upon knowing through your columns wherein any such false claims are set up? That claims are made to "catch trade" is certain; why do we advertise? To catch trade, surely. Why does he, in the very issue of February 9, advertise cuttings from "specially selected stock," and advise his readers "Do not be misled by cheap offers," if it is not to "catch trade?" He says "Poor stock is dear at any price." Does he not hope to "catch trade" by such a statement?

In conclusion I also "feel justified in mak-

ing these statements quite emphatic." I do not court a newspaper controversy, but consider I have a just cause of complaint. Unfortunately your correspondent makes it seem expedient for the writer to withhold his name, or make himself liable to a charge of an attempt to "catch trade." To avoid the cloak of writing anonymously, however, I authorize the editor to furnish his correspondent with my name.

P.

"Stimulants."

BY CHAS. H. KEITSCH.

[Abstract of a paper read before the Buffalo Florists' Club February 12.]

The essayist opened his paper by remarking that the S. A. F. was one of the most powerful stimulating agents; it not only brought the trade together, increasing their appreciation of one another, but it also elevated them in the eyes of the public. Next in importance he placed the local florists' club. What the S. A. F. does in a general way the local organization does more accurately and carries out in detail, for here it is where a suggestion often leads to discussion and discussion to action. The closer communication between members of the profession creates a better feeling and often tends to make a better man of one, who, if he was left alone, would soon become boorish and ill-natured. The local club too can in many ways often accomplish what the larger organization, owing to its size, can not very well do in bringing to public notice features that are of incalculable value to the flower grower and seller. As for instance, flower shows. As the two aforesaid factors may be said to be the strongest stimulants in an indirect way, flower shows certainly are the best direct measure for enlarging the florist's pocketbook and enabling him to spread out his glass area. Here the public comes in direct contact with the florist and his charges, and he has the best chance to set his best foot forward; if he avails himself of the opportunity and conducts the show as it should be done he can accomplish the most salient and necessary object of his profession, and that is educate the people. For only through education can that love for nature's gems be brought out and increased, and certainly the more we have of this love the better for the florist.

Next to flower shows he thought the printing press can be called a stimulant of great force, for through no other medium can the public be so well reached as through our papers and periodicals. It is not only the horticultural journals, through which florists should communicate with the public, but also through the columns of the daily press should the influence of our calling be brought to bear on the public. A well worded advertisement in a leading daily will well repay itself, and a dollar spent in this way will soon return in company with many others. But not only the advertising columns should be taken advantage of, but also every part inside a paper's border should afford room for flower lore, which we know many members of the craft can prepare in palatable style.

The essayist next turned his attention to the florist's establishment. He advised that no matter whether the florist does business in a store or at a greenhouse he should see that his place is always kept faultlessly clean, neat and tidy, and have a place for everything and everything in its place. Even a rubbish heap can be made a thing of beauty if kept in proper shape in the right locality. If help is employed let it be the best of

VASES OF 100 BLOOMS EACH AT THE BOSTON EXHIBITION OF THE AMERICAN CARNATION SOCIETY.

their kind, and insist on their wearing clothes to suit their avocations. If clerks are kept by only good men, and men only. Women have nothing to do in greenhouse walks, and less behind a flower store counter; 99 out of every 100 female flower buyers (and it is the gentle sex who are our best and most frequent customers) would rather take curt and short answers from a man behind the counter than the most pensive reply from a woman, and such who only patronize a flower store to be waited on by a woman are not worth catering to. If a woman is needed in the store put her at the books in the office, for if a woman is wanted to exercise her gentle influence over the men in the establishment the office is the proper place for her. But be sure she is good looking and bright, for it also makes it much easier for gentlemen customers to pay a bill (such as \$2 per dozen for carnations) to a pretty girl behind the window than to the most suave and courteous man behind the counter. But keep women from behind the counter, they are out of place there. Flower girls are all right at carnivals, fancy dress balls, or even to garnish up a comic opera, but I do not think a woman of fair experience gives as much satisfaction as a clerk, than a man of similar experience does. Put men behind the counters who are well posted on everything pertaining to floriculture, but be scrupulous with them. See that they are always neat and clean about their person, have agreeable ways and good manners; let them eschew tobacco and avoid going out during business hours. Of course what applies to the employes applies to the employer also, only in a larger measure.

The writer next touched upon abuses in the trade. He said that of all practices which tend to injure the trade in flowers there's none so pernicious and despicable as the one which is carried on by the man who counts on the gullibility of the public and offers all sorts of "novelties" for sale, often of the most fantastic description and name. This individual generally chooses ladies' and family magazines for his stamping ground, and to judge from the amount of advertising he does, must

do a smashing business. But contemplate the resulting disappointments; how many fair dealing and honest florists have suffered in consequence is hard to tell. It seems that the S. A. F. should take up this matter and send a nomenclature committee after this kind of florist with power to land him where all such people are safe from doing harm.

There is another class of men, who although perfectly honest in their dealings generally, and with no evident dishonest purpose, should be protested against. And that is the dry goods man, the man who sells anything and everything, as long as he can put such figures as 59, 17, 98, etc., on his wares. These men generally buy florist's stuff the best way they can, in most cases of course from unreliable houses and persons; the stuff is then put on a "bargain counter." In nearly all cases a clerk who knows little or nothing of such things is ordered to sell them, and he sells them the best way he knows. What wonder if people who buy get fooled, and in their disgust quit buying flowers altogether?

The street fakir is a near relative to the above, but with a more elastic conscience. A sharp outlook should always be kept for him, for where he is not yet domesticated he is sure to bob up sooner or later; thanks to the vigilance of some of our members of the club he has been kept off our streets so long. Another one who does more harm than good is the fellow in the trade who undersells his neighbor merely to spite him. This one is pretty hard to deal with; he eventually gets to the end of his rope, but often gets the rope tangled up into better men's legs and trips them up also. If you are going to sell below the regular market value it is no more than just and fair to give the public at least some plausible reason for so doing; the proper informing of the public about the extreme fluctuations of prices of flowers should be more generally practiced, say for instance at holiday occasions. If this was done one would hear less complaint of outrageous overcharges.

Our special spring number will be issued March 16 and will be a beauty.

Winter Flowers.

February over all the northernmost parts of our country is one of the most treacherous months of the year. The Sun God is making slow but sure progress towards us, but the forces arrayed in his path are full of frigidity, and the blizzard, fiercest in its suddenness. Far away to the south, and under glass with us, nature is making progress, the buds swell, and clothe themselves with silver fur, but only a few of the ill advised foreigners venture to show their faces outdoors. *Jasminum nudiflorum*, and further south, Chinese magnolias and wistarias are more than likely to pay the penalty for being premature. And every florist can tell tales of the watchfulness the season entails upon him. But with a heating apparatus equal to the demands upon it, the very reserve of force makes progress in growth certain, and under glass spring is already here with a host of reminders.

Bulbous plants are now well to the front, and it is certainly a fact that very much more of novelty and beauty exists in this direction. *Ixias*, *sparaxis*, *tritonias*, *iris*, *moræa*, the South American species of *sisyrinchium*, *habiana*, the common jonquils, *hippeastrums*, *urceolina*, and many others are but seldom seen, nor does the florist seem to care for the superb *ranunculus*, although the chances are even that few things would surprise his customers more than they. A bed of them prepared in a chrysanthemum house ought to be worth trying by some one. They do not seem to me desirable as pot plants, but only for those who are on the look out for a show of a startling kind. There are very few things more gorgeous, and few less commonly seen in perfection.

I have previously spoken of the desirability of some kind of a show house for the city grower whose place can be reached by the people. To keep a large house of this kind furnished is out of the question for the majority, but everyone may have a place—it only a bay-window extension, into which the choicest of his products may be drafted for inspection—and he can hardly have a more effective

advertisement, whether constant or occasional. A comparatively dry, somewhat cooler and more shady treatment than the growing houses—whether stove or greenhouse—receive, is the thing to aim at for such a house, both for the plants' preservation and the comfort of visitors. Some special feature in rare plants may nearly always be compassed by the grower, for it is within the experience of every gardener that some plant or other will do better on his place than anywhere in his locality.

In the tropical house *Alpinia allugahs*; *Bilbergias clavata*, *pyramidalis*; *Brunfelsias*, *clerodendrons*, *Justicias calytricha*, *coccinea*, *secunda*, *speciosa*, *nodosa*, and *thrysiiflora*, *Musa coccinea*, *Phrynium sanguineum*, *scutellarias*, *Smearthmannia laevigata* and *pubescens*, *strelitzias*, *strophanthus* and many others offer a range of comparative novelty, and often require but a single plant to produce it.

The greenhouse plants and forced flowers are, however, still more abundant and useful to the florist, and a most astonishing number of them are rarely if ever seen to-day. So true is this that I almost hesitate to quote the month of blooming for some of them, for I have never seen them flower in America. Perhaps you may think I haven't looked for them, but I assure you I have, in very high sounding places. I will only mention a few of the genera which ought to flower at this season of the year, and I hope some of your correspondents will be able to tell you of their species flowering better and more frequently than I. *Banksias* are scarcely ever seen. *Burchellia capensis* rarely. *Epacris maxima*, *grandiflora*, *nivalis*, *purpurascens* and varieties are if ever seen. The same may be said of *hakeas*, and *hoveas*. *Jacobinia* as a genus includes *libonias*, *sericographis*, and *cyrtanthera*, these are fairly common; so also is *lopezia*. *Mesembryanthemums* however are known in but very few species, *Ornithogalums* and *oxalis* are familiar in two or three species only. *Primula denticulata* and its allies, dainty as they are, are but little seen. And so with a large number of Australian and cape plants; they have entirely disappeared, yet no one can pretend that good plants in flower would not pay a florist better as an advertisement than either a card or a circular.

There is no good reason why there should be any limit to the hits of the swainsona kind, and I have no doubt but the next century will see a number of them.

In window and basket gardening particularly there is a vast field of research open to the florist. I remember that years ago the *chielanthes* and *nothochloena* were deemed very miffy ferns by one of the most eminent fern growers then living, the late W. H. Gower. Yet it will surely be found that with ordinary care they in some of their species are among the very best of basket plants, for they naturally stand and receive more "drying off" than most ferns, and will surely reclathe themselves when they get a soaking. Just how much you can dry them, and at what temperature is the point to ascertain.

Trenton, N. J. JAMES MACPHERSON.

Dracæna Fragrans.

Dracæna fragrans is again in flower at the Botanic Garden at Washington. There are two large specimens, one measuring 15 feet 6 inches high, the other 14 feet 6 inches, with a base circumference of

14 inches each. They are planted out in the large conservatory. One has six spikes of flowers, the other five. These old plants flower every year at this season, and are admired by hundreds of visitors. Plants three feet high in pots are also flowering. Its varieties *D. Lindenii* and *Massangæana* flower at the same time. Native of Guinea and Sierra Leone.

Experiments are being tried at the Botanic Garden with *Dracæna Knerkiana* as to how it will stand cool treatment; hitherto it has been grown as a tropical house plant, its native country being unknown. It is planted out side by side with *D. fragrans* in the Australian end of the large conservatory, and up to date it is looking remarkably well. Its true name is *D. arborea*. *Dracæna Knerkiana* of C. Koch is called *D. Aletris arborea*, by Wildenow and is the *D. arborea* of Dr. Regel in his revision of the genus *Dracæna* as published in the *Garden* for May, 1872. REYNOLDS.

Adenocalymna Comosum.

The plant of *Adenocalymna comosum* received from Kew some years ago is flowering abundantly this season at the Botanic Garden. Mr. Nicholson, in his Dictionary of Gardening, mentions three varieties, *A. longeracemosum* and *A. nitidum*, and the above named. *Comosum* flowers with us in mid-winter, but instead of being 10 feet as Mr. Nicholson says the plant is at least 50 feet long. It is a free bloomer, flowers being of a lemon yellow. It is an excellent thing when it has plenty head room and I think would prove useful to florists doing a local business who have an opportunity to plant it out. Unfortunately it will not stand shipping. It is a strong grower and has flowered profusely in mid-winter with us for a number of years. This plant gets its name from *Aden*, a gland and *calymna*, a covering; referring to the conspicuous glands on the leaves and floral coverings. It belongs to the order *Bignoniaceæ*. Flowers trumpet shaped. It requires a hot moist temperature to grow it successfully and thrives best in good loam and peat. Cuttings root freely in sand with bottom heat from wood about half ripe. REYNOLDS.

Some Vegetables Products of Bermuda.

Preceding the earliest garden crops of our Florida, Georgia and Carolina truckers, and that by a maturity of six to twelve weeks in advance of these sections, the Bermuda commerce in earliest vegetable begins, and while it lasts constitutes an important traffic with the United States, Canada, and strange as it may seem, the West Indies.

As far as shipment to our states is concerned this continues until our southern section begins to supply the later demand from northern markets. As are the advantages in earliness and higher prices of our southern products over those of the northern market gardener, so are the crops of Bermuda more profitable than the shipments from the Gulf and Atlantic States of our country. The limited area available for production in Bermuda precludes excessive supply, and it seems that the lot of planters there is not so affected by the fluctuations of markets when fed by the rather extensive truck regions of the south. Bermuda onions are well known and the Islands shipped of these in the season of 1894 a total of 177,160 boxes of one bushel each at an average net price of \$1.50 per box, or a gross sum of \$265,749. This much exceeds the average value per bushel of the

crop raised in this country, but in Bermuda it is more expensively produced, the ground being mostly hand dug instead of plowed, and the seedling onions grown in beds are transplanted instead of the expeditious method of growing directly from the seed sown by the drill, and otherwise more cheaply raised in this country. The seed used on the Islands is grown in Teneriffe and our Connecticut and California seed is of no value for their planting. The crop is planted in December, begins to ripen in latter part of March through April and May for the successive plantings, and should all be harvested by the last of May.

Next in importance of the vegetable crops is the potato, the Triumph is the variety chiefly planted, and here again the expensive process of preparation of the ground by hand digging is largely practiced. But a few places are plowed, the small areas of the fields or rather plots, making horse labor less available accounts for this. A great deal of the planting is done by using a line and *dibbling* in the eyes, and in slowness of operation is almost ludicrous when compared with our more rapid planting by horse machines, indeed by our methods ten acres of this crop could be planted while the Bermudian could hardly do his one. The planting seasons are in October for earliest and up to January for latest. The earliest plantings are marketed a few in January and February with the bulk of the crop in March and April, and is wound up in May. The crop of 1894, according to list of shipments by the Quebec S. S. Co., was 20,110 barrels, which sold at an average price of \$4.50 or a total of \$90,495. The crop was about 5,000 barrels short of the usual output, owing to drouth and blight lessening the yield much below usual seasons.

Tomatoes and beets formed items of some considerable value in the year's shipments, egg plants, lettuce and cucumbers were among the minor exports, and with expert methods of using frames and irrigation there is a profitable field for growing this latter class of crops.

The soil of Bermuda is dry, and is almost instantly drained after rains by percolation through the porous coral rock underlying the thin soil. There are no good wells, the water supply is dependent upon rainfall collected by "water catches" on the hillsides and stored in cisterns, and irrigation is an important problem, which, however can be solved and no doubt Bermuda will be heard from more extensively in this line.

Its arrow root has a world-wide reputation, though in recent years the cheaper corn starch has largely superseded this preparation, and the industry has waned. This crop grows best in the deeper red soil. Portions of the rhizomes are planted in April, the white flowers appear in pairs about September, and the crop is ready in February. The tubers are washed, scraped and ground by a grating machine and the starch cleaned by repeated washing and decantation, the moisture pressed out and the snow white cake broken up and sundried. The appliances used are of a most primitive description, homemade in the strictest sense, but the product is excellent.

Cassava (*Jauipha Manihot*) the starch of which is tapioca, is prepared by washing and baking. The cassava is grown from slips planted in January, and take nearly the whole year to produce full-sized tubers. It is a smooth shrubby plant three to four feet high, the leaves being cut nearly to the base into five or

A USEFUL BEGONIA.

seven lanceolate acute entire segments, and a plantation of this is an interesting sight.

The total estimated value of the agricultural products such as above noted, and including the liliun bulbs mentioned in an earlier article amounts to about 115,000 pounds sterling or over one half million dollars of our money. At first glance an inconsiderable sum for a country's agricultural products, but when we reflect on the limited size of Bermuda with its population of only about 15,000 people this sum divided among the planting class allows them each a "pretty penny."

BURT ENNY.

A Useful Begonia.

The handsome pan of begonia shown in the accompanying engraving was grown by Mr. Joseph Bennett of Montreal, who gives these valuable hints about its culture: "We find it one of the most profitable plants we have. In order to keep the plants dwarf I find it necessary to root them as late as possible, about June, and keep them well pinched until end of September. The pan shown is 8 inches across, 4 inches deep, and contained 4 plants. When photographed it was 18 inches high and 27 inches across, and was sold for \$4. We find pans of 6, 7 or 8 inches in diameter suit the plant better than pots; we generally put 3 plants in a pan. Single plants we grow in 4½ and 5-inch low pots, and they sell at 50 cents to \$1 each."

The pan shown is certainly wellgrown, and at the price it sold for most profitable; even at half the price it would be fully as profitable as many crops we handle, for it has occupied much valuable space only during October, November and December. I have often had occasion to refer to this plant as a valuable acquisition to our winter blooming plants, particularly at the holidays, for, treat it as you will, it is bound to be at its best at that particular time. Mr. Bennett says he got it under the name of *carnea* or *incarnaata*. In this city we call it *incarnaata*.

nata grandiflora, but of the accuracy of this name I am not certain, for a sage of Franklin, Pa., who never asserts anything unless he is positive about it, has an entirely different name for it. Whatever its name may be, it is a very valuable plant, and indispensable both as a pot plant and for cutting at Christmas time.

There is no secret in its cultivation, but a few points must be observed. A moderately enriched loam will suit it best. I say moderately rich because if too rich the plants would be too rank and too rich for use. For large sized pot plants it should be rooted as early as March; for smaller plants it will root just as readily in May, June or July without any bottom heat. It *must not* have a heavy shade at any time; to keep it healthy during the summer it must have plenty of sunlight. I have seen many a batch ruined during the summer months with a rust, very similar to what attacks verbenas and heliotrope. In November and December, when they are covering themselves with buds and flowers, a night temperature of 55° is sufficient. A high temperature will make the flowers light in shade, while a low temperature produces flowers of good substance and a bright pink color about the shade, as Mr. Bennett says, of *Edna Craig* carnation. Keep a few old plants for stock, and don't shove them under the benches where they will make a soft limp growth, but give them a good light corner of your house. WM. SCOTT.

Orchids in January.

January ushers in very many of the finest of the florist's flowers, and they need no reminder of them. There are a few orchids, which those who like them and have time to attend to them may have in flower during the time the snow flies. One of the most remarkable of these and easily grown in a warm house, is *Angraecum sesquipedale*. It grows on from March to November, but the root action is almost nothing until June or July—ceasing in October. It is queer how

much more free this species is than *A. eburneum*, seeing that both are sometimes found upon the same tree in Madagascar, but this is only one of the many queer differences existing between a hot-house climate and a natural one. *Calanthes* still continue, especially *C. Regnierii* in several varieties; it is one of the best of growers, but scarcely a florists' flower, in comparison with *Veitchii*. Several *Cypripediums* and *Cymbidium* flower during January, and it is just possible that the yellowish green flowers of *Cymbidium Lowii* might pay for producing for some kinds of work. *Dendrobiums* begin to show up in force, such as *crassinode*, *aureum*, *Ainsworthii*, *fimbriatum oculatum*, *Findlayanum*, *Leechianum*, *luteolum*, *nobile* varieties, *primulinum*, and *Wardianum*. For the best results *Wardianum* and *crassinode* should be renewed from freshly imported stock now and again, but all the rest may be maintained in a satisfactory state of vigor by dividing and increasing them at home.

Phajus grandifolium and *Wallichianum* give an account of themselves about this time. The latter is slower to increase than the common one, but every detached bulb, or even the section of a bulb, will make a new lead, especially if given a brisk bottom heat. Some florists will hardly conceive the idea of bottom heat for an orchid perhaps, but many of the terrestrial ones root much more freely if they get it.

Cattleya Trianae is in full force during January. So are several sweet smelling epidendrams. *Laelia anceps* and *Lycaste Skinnerii* give good account of themselves.

Odontoglossum Harryanum blooms very well during this month. I should not like to call it a florist's orchid however. *Oncidium flexuosum* is one of the easiest orchids to propagate, every bulb will make a lead, and the leads will soon gain strength too, of course more rapidly and strongly with two bulbs behind them than one. It throws dainty sprays of little yellow flowers three or four times a year, if you have enough stock, and attend to it. Besides these are a number of orchids such as *burlingtonias*, *odontoglossums*, *oncidiums*, *sophronites*, *aranthus*, *phalaenopsis* and so on, which flower at this season, but which for various reasons it would scarcely be well for a florist to touch very heavily.

Trenton, N. J. JAMES MACPHERSON.

Tuberose.

What time should tuberose bulbs be potted and in what kind of soil? Which is the smallest size of pot in which they can be grown? E. M. H.

Twenty years ago every florist thought it absolutely necessary to have tuberose and lots of them, not only during summer and autumn, but if possible the entire year, and if you had double primroses, a few tuberose, and some rose geranium leaves for the edge, you had all the essentials for the making of a first-class funeral emblem. This may seem to those who were entirely ignorant of the business 20 years ago an absurdity, but to those who were in the business 25 years ago it will appear as the truth. Since then what a change! The tuberose has taken a gradual but terrible fall, and instead of being an essential in our business it is easily dispensable. There has been several reasons for these sweet gems going out of fashion, all of which are well known to your readers, and chief among them was

the fad "Please don't use any tuberoses, they make me think so much of a funeral."

The bulbs are generally received by the florist in February or March. For early crop put them in flats in 3 inches of sand; a box 2 feet long by 12 inches wide will hold about 40 bulbs. In 3 or 4 weeks they will be well rooted and can then be potted into 4 inch pots, in which they are sold in May and June for mixed borders, etc., or if not sold will flower very well in these pots. If very fine spikes are wanted and the bulbs were very fine give them a shift in May into a 5-inch. For a later crop store the bulbs in a warm shed, and start in May and June, as space on the benches is not so valuable in the latter months. You can start these in 3-inch pots and shift into 4 or 5-inch when well rooted. A light loam well enriched with rotten manure is the soil they need. The last potted will flower in September and October. When the early crop is put into boxes of sand place the boxes on the pipes; they will start at once, whereas potted and stood on the benches in the ordinary way they take a long time to start.

WM. SCOTT.

Orchid Center-piece for Buffet Table.

The arrangement of orchids shown in the accompanying illustration was the work of Joseph Curran, and was used as a center-piece for a buffet table at a recent Chicago reception at which orchids formed the principal parts of the decoration. The illustration doesn't do justice to this really fine piece of work, as the figured background of a flower design makes the arrangement appear indistinct, the photograph being taken at the residence, where proper facilities for obtaining good results were lacking. The salient features of the arrangement, however, are shown fairly plain. The design is an oblong plateau about three feet long, this being mossed up to a fair height. On the top of this were arranged in a rustic fashion pieces of cork bark, over which trailed vines of *Asparagus plumosus*. The orchids, of such varieties as *Cattleya*, *Laelia*, *Oncidium*, *Dendrobium*, etc., were fastened onto the bark in a natural position by means of double pointed tacks. The base was finished with a fringe of ferns with clumps of *Cypripedium* of various sorts peeping out between the crevices of the bark. The design stood about three feet in height, and made a very striking appearance.

Floral Fashions in New York.

The custom once so much in fashion of presenting hand bouquets to ladies to carry at dancing parties is no longer observed. The discomfort attending the carrying about, through an entire evening, of an awkward arm load of heavy bouquets, as well as the excess to which the fashion was carried, furnished a very good excuse for its abandonment. Hand bouquets are quite fashionable for theatre parties, however. The form which first came into general use last season, under the name of "shower bouquet" or "English spray bunch" is the most popular and is well adapted to its purpose, as the flowers are arranged to face all to one side, and the bunch may be laid down without injury to the flowers as would be the case with a round bouquet. The form is not unlike that of the old fashioned "flat bouquet" only the bunch is considerably longer and there is no "backing," "stuffing" or "wiring," the flowers being loosely arranged with their own foliage, with studied carelessness, as though just

gathered from the garden. Around the stems a ribbon from 8 to 10 inches wide, of a color which will blend with that predominating in the flowers used, is tied in the manner known as a French bow. Ribbon is indispensable, yet too much display of it is considered vulgar, so the ends are left only moderately long and are frequently partially hidden by sprays of lilac or lily of the valley pinned on to them.

Lilacs make up beautifully in these bunches, either by themselves or in association with a few roses. White roses and lily of the valley are a favorite combination. More novel and very rich in effect are *Acacia* and *Bridesmaid* roses. *Bridesmaid*, *Meteor* or *Testout* roses are used sometimes alone. In this case it takes about three dozen roses to make the bunch properly. When used with lilac or *Acacia* one dozen roses will be sufficient. *Bridesmaid* is the most popular rose in the market for such purposes the present season.

Wages of Florists.

The editor refers to me the following question "would you please inform me as to what wages a man should receive to take charge of a small greenhouse?" The question is so entirely out of the usual order of things that I would not dare to offer an opinion were it not that I believe some good may come from a discussion of the subject. The correspondent does not say whether this is a private or commercial place and only says "a small greenhouse." That is indefinite. Objects are large or small, long or short, hot or cold, good or bad, relatively only. The man who had 10,000 feet of glass 30 years ago had a large place; to-day with the same amount he has a very small place. Before attempting to give any figures there are many things to be considered. To attempt to review these would fill a small volume, and could be made mighty interesting reading for the thinking mind. I can only mention here briefly a few of the most important conditions that would help determine a florist's wages.

The man who is merely a worker in a florist establishment and has only to obey the orders of a boss without any responsibility even were he gifted with all the skill necessary to accomplish the many operations required of him is merely a mechanic. But can you call the man a mechanic only who has charge of a number of houses, or perhaps the whole place; who has on his shoulders the responsibility of everything going right and the crops being productive and profitable? If that man is a success a very small portion of his ability is mechanical. It is nearly all mental. I have often heard it argued many years ago whether gardening was a trade or profession. I should decidedly say it is much more of a profession than a trade. A bricklayer, tailor, type setter, barber or even bookkeeper is a true mechanic. As soon as the bookkeeper is found to be able to correspond cleverly and negotiate business for his employer he is in a different sphere, and is rewarded accordingly. Our business has been much elevated in many respects during the past 20 years, and to some extent the employer has mutually benefited by it, still I hear and know of large establishments where the employee is treated more like the field hands in the days of Uncle Tom than as an intelligent workman in a refined business. A large barn or outbuilding is their sleeping place, and a horn or bell calls them at sunrise to a coarse

meal in the boss's kitchen, and so it goes on from sunrise to sunset, and then you expect to turn out bright intelligent young men who will take an interest in the business and study horticultural literature in their *leisure* hours. The very wearing apparel of the help in some of the large establishments is a disgrace to the business. But I am not drawing a picture of the average place, I trust only the poorest from the workman's point of view. Now I must come to business and answer the question. If it's a greenhouse run for profit and the best results are wanted (which they always are, regardless of pay) and the greenhouse or houses is a really small affair, then I would say \$10 per week would be the proper wages to pay. I am not asked to answer further, but trust this may give rise to a discussion, when I shall be glad of the opportunity to add a little more on the subject, and I shall be on the side of the employee, for I see him in too many places treated as a piece of cheap machinery.

WM. SCOTT.

The S. A. F. Charter.

The president has vetoed the bill to incorporate the Society of American Florists. The veto message is as follows:

No sufficient reason is apparent for incorporation of this organization under Federal laws. There is not the least difficulty in the way of the accomplishment under State laws, by the incorporators named in the bill, of every purpose which can legitimately belong to their corporate existence. The creation of such a corporation by a special act of Congress establishes a vexatious and troublesome precedent. There appears to be no limit in the bill to the value of the real and personal property which the proposed corporation may hold. If acquired by donation or bequest. The limit of \$50,000 applies only to property acquired by purchase. A conclusive objection to the bill is found in the fact that it fails to carry out the purpose and objects of those interested in its passage. The promoters of the bill are florists, who undoubtedly seek to advance floriculture. The declared object of the proposed incorporation is, however, stated in the bill to be the elevation and advancement of horticulture in all its branches, to increase and diffuse the knowledge thereof, and for kindred purposes in the interest of horticulture.

It is entirely clear that the interests of florists would be badly served by a corporation confined to the furtherance of garden culture.

The message was read in the House of Representatives, and the matter was referred to the Committee on Agriculture, of which Mr. Hatch, a friend of the bill, is chairman. There will be a meeting of the committee soon to consider the advisability of attempting to pass the bill over the president's veto.

REYNOLDS.

New York.

The cut flower trade has, if anything, improved somewhat over last week. Any change was necessarily for the better, as it could hardly be worse than it was. Lent has arrived, however, and it is not probable that there will be any permanent improvement for some time. Washington's birthday was dull as possible; New York's patriotism does not find expression in this direction. Altogether the month of February has been quite a disappointment all round and the volume of business much less than might reasonably have been expected.

The decorations at Mrs. Dinsmore's hall at Sherry's on February 25 were remarkably fine. Her own private greenhouses contributed largely to the display, as well as the establishment of Siebrecht & Wadley, who had charge of the decorations. All the rooms and halls were heavily festooned with smilax, and large numbers of palms and bay trees were grouped in the corners and recesses. A fine effect was produced by the introduction of electric light among the foliage of

ORCHID CENTER PIECE FOR BUFFET TABLE.

the trees. The mantels were handsomely massed with orchids, one being composed entirely of *Dendrobium nobile*, another of *Cœlogyne cristata*, and the other of roses and orchids in variety. The nine tables in the dining hall were decorated each with a silver bowl about 15 inches in diameter, one filled with Wm. Scott carnations, one with phalænopsis and Farleyense, one with cattleyas, one with American Beauty, etc., and around each of these large bowls were set half a dozen smaller ones in which were placed flowers of corresponding variety, which were afterwards used as corsage flowers by the ladies.

The first "At Home" of the New York Florists' Club was a pronounced success. The crowd, while not as large as had been expected, evidently came with the intention of enjoying itself to the utmost, and long before the regular program was commenced the smoke was so thick that the ventilators made but little impression on it. The musical and dramatic portion of the entertainment was under the immediate direction of Mr. John M. Turner. The special attractions were Messrs. L. Fialkowski, who could imitate any kind of a noise from that of a young parrot up to that made by a display of fireworks, T. Ballantyne, ventriloquist and dialect artist, L. Katzenstein, pianist, and Victor Kuzdo, violinist, and last but not least Mr. Turner himself with his superb banjo playing. Mr. Turner had serious difficulty in pronouncing the names of the above aggregation, but once heard they needed no further introduction, for each was a king in his own speciality. Messrs. John Young, C. B. Weathered, W. A. Manda and John Raynor handled the trays like professionals, and no one had any opportunity to complain of either hunger or thirst. Messrs. Young and

Hafner proved themselves the right committee in the right place, and those foolish members of the club who failed to attend missed the greatest opportunity of their lives to enjoy themselves.

Thorley has been making elaborate alterations in his store. He has taken out the plant window and placed therein a beautiful marble top table which is to be used to show examples of fine dinner table decorations, etc. The idea is a good one and is sure to be copied. Mr. Thorley says that a party named Delmuth who is soliciting trade in Boston claiming to have been "for the past ten years designer for Thorley" is an imposter and that he knows of no such person.

Messrs. A. & F. Rolker have taken new quarters at 106 and 108 Liberty street, corner Church, where they will continue the plant auction business formerly conducted by A. Rolker & Sons.

Seward Baker has been appointed receiver in supplementary proceedings for George A. Schnauffer, florist on King's Bridge Road, near Kirkside avenue, Fordham, on the application of John H. Luther, a creditor. Mr. Schnauffer transferred the business, which he valued at \$2,000, to his wife in December last until he could get out of his difficulties.

Boston.

While advices from other markets indicate low prices and stagnation Boston florists are busy as bees and the growers are getting top prices for their products. Roses are holding up well and bring good returns, but it is the carnation men who have especial cause to smile. To what extent the carnation exhibition last week was responsible for the prices obtained no one can say, but it helped, beyond a doubt. The very poorest white carnations have

brought \$3 per hundred, while the colored varieties have sold quickly at prices ranging from \$4 to \$6, and even \$8 has been paid for exhibition blooms. If the carnation men can guarantee such results as this wherever they go it will not be long before their conventions will be in big demand.

Quite a few of the convention visitors remained over a day after the close of the meeting, the rose men making Waban Conservatories their Mecca, and the carnation enthusiasts favoring Mr. Nicholson with a visit. A few of the stragglers were captured by a delegation of the "old reliables," and a little good-bye symposium was the result.

The next meeting of the Gardeners' and Florists' Club will be a notable one from the fact that for the first time the ladies will be invited; also from the fact that Elmira's entertaining speaker will address the club, his subject being "The Ins and Outs of the Trade." Gifted members of the local fraternity will contribute vocal and instrumental music, and it is expected that the opportunity for pleasant social intercourse as well as the other attractions will draw an audience worthy of the occasion.

The appearance of the hall at the time of the carnation exhibition was very greatly improved by a splendid group of palms contributed by Mr. N. T. Kidder, which occupied the stage, a fine collection of orchids from Mr. John L. Gardner, and an exhibit of cyclamens grown by Geo. M. Anderson, the quality of which was a revelation to the visitors. J. N. May's new rose Mrs. Pierpont Morgan and Siebrecht & Wadley's Belle Siebrecht were also on exhibition, and Wm. Nicholson contributed a row of handsome cinerarias, which were displayed on the stage in the audience hall. Three vases of *Antirrhinum majus* from Mrs. A. D. Wood were much admired, as were also the mammoth mignonette from Dailedouze Bros. and W. W. Edgar.

Buffalo.

The closing of what should have been a gay season was not marked by special features. The Shrine ball which occurred last week in the Music Hall had some elaborate palm decorations which were well taken care of by W. A. Adams. A rather unusual demand for funeral flowers has used up closely everything suitable for that purpose. Violets are getting very plentiful and probably when Lent comes will be in over supply. All other flowers in about right quantity, except smilax, which is very scarce. It usually happens so about this time, and this is worth remembering.

Glad to report that W. J. Palmer Sr. is greatly recovered, and will soon be able to cut his Meteors himself. Mr. Anderson got over his scorch so quickly that in less than a week he was doing business again at the same old stand. Joseph H. Rebstock has returned from Florida, where he says he had a fine time. We don't doubt it, for he looks as clean cut and sparkling as a young curate. He has the usual fish story, something about a red snapper he caught in Lake Worth weighing 49 pounds. He promised to show me the photograph of the fish and him. You know photographers at such places keep specimens of all sizes to suit the size of the man and his conscience.

Mr. Miller and son of Toronto passed through on their way to the Hub to attend the carnation convention. I expect to hear good accounts of Mr. Miller's

fine white carnation, which he exhibited there.

The Dutchmen have begun to arrive; the first installment made his appearance last week. He was, however, a fine specimen. Time was when these gentlemen used to call on us about the middle of May, but each year they are advancing. I suppose they are all impressed with that old homely saying that the early bird gathers the worm. It looks to be now as if the worms would be all gathered in before our own poor robins get up from the south.

W. S.

Philadelphia.

The past week has been a brisk and busy one for the florists; there have been many entertainments and social gatherings at which flowers were special features, and all good stock was sold at fair prices, in fact some days it was difficult to get enough of some kinds to fill orders. Prices however did not advance, and remain the same as last week. Brunners sold well, they were to be had in quantity. Messrs. Heacock and Ely & Co., carried the bulk of the stock. The Brunner is an expensive rose and of course some are better than others; they are classed as firsts and seconds, but separated by a very flexible line. Turning a box upside down to get at the seconds (?) makes quite a difference in price sometimes without seeming to change the quality, that is if a man is not anxious to buy.

Carnations sell well, and although quantities of fine flowers are coming the price holds up very well, the prevailing price for good stock being \$2, with a few extra bringing \$2.50 and \$3. Isaac Passmore of Oxford is sending some very fine Tidal Wave to S. S. Pennock; it would almost seem to be another variety, it is so fine. There is a tidal wave of daffodils and they are to be had for almost any reasonable figure; quantities have changed hands at \$2 per hundred. The large single variety grown by Craig and Harris bring \$6. Tulips sell for \$4 to \$5; white hyacinths are scarcer and bring \$3 and \$4. Violets are very plentiful; good ones from cold frames, a little short in stem but fine flowers, sell for 50 to 75 cents per hundred.

Mr. Eisenhart of Holmesburg has sent his stock of the California violet to Pitcher & Manda. He speaks very highly of this variety and seems very well pleased with his experience with it this winter.

The Philadelphia contingent has returned from the Carnation Society meeting in Boston, and speaks very highly of the Boston boys and their hospitality. Mr. Craig said the decorations at the banquet were most elaborate and beautiful. The exhibition of carnations was very much finer than any previous ones, and showed great progress in the cultivation of this flower. Philadelphia received three premiums, two going to Mr. Lonsdale for vases of Helen Keller and Buttercup, and Messrs. Myers & Santman a certificate of merit for Della Fox, their new pink.

The growers are busy now preparing Easter stock. Lilies are looking well, and while some disease is to be seen it does not seem as bad as in former years, or at least no worse. J. Becker of 53d and Market has a fine lot of longiflorum; his other stock also looks very well. Otazaleas he has a fine lot; he says that azaleas kept over a year hold their flowers longer than freshly imported plants when in bloom. He finds it harder to winter the Jacqueminot than most of the hybrids; it is also a difficult rose to import, as it

often arrives with the wood dried and shrivelled.

Mr. Craig has also a large stock of lilies, and they are looking well, with not very much evidence of the disease; probably 10% would cover the infected plants, and many were only slightly affected. Mr. Craig is loud in his praises of lemon oil as an insecticide; he says it has cleaned a lot of coleus that were badly infected with mealy bug without injury to the plants, and thinks it will prove invaluable to the trade.

Mr. Z. De Forest Ely has decided to discontinue the wholesale cut flower department of his business. Mr. Reed, who has managed this department so successfully, will continue the business in his own name.

Messrs. Z. De Forest Ely & Co. made an assignment on February 26. Mr. Ely states that his embarrassment is only temporary, and that he hopes to resume payments in a short time. K.

Chicago.

The first two days of Lent have already given a different aspect to the business. There is no longer a continuous rush at the wholesale dealers. Local demand is very light and the shipping trade also has slackened considerably. Speaking about the shipping demand there has never been a busier season than the closing week before Lent. It was almost impossible to fill orders complete in spite of the fact that owing to extremely fine weather the cut was constantly increasing. On the other hand in local retail circles the closing days are reported as very quiet indeed. What the market is apt to be for the coming week is hard to say.

Prices of course are easier and if the present soft weather should continue there is likely to be a drop all along the line. Violets have already suffered severely, shipments are coming in by the tens of thousands, and with a drizzling rain with which Lent was ushered in, the demand is next to nothing. There is really no standard price to quote; a few extra fine still bring \$1, but the bulk goes at 50 to 75 cents and less. First quality Beauties are still held at 40 to 50, and as there are no hybrids as yet to compete with them there is no reason to anticipate much of a change for awhile. Bridesmaid and Testout are also held stiff at 7 to 8. Brides have dropped a point, the best selected being held at 7 and fair to medium at 5 to 6.

In carnations the medium grades now go at \$1.50, but the best whites still command \$2, and fancy are firm at \$2.50 to \$3 for the choicest. Bulbous stock is much more plentiful except Romans which are still rather scarce. Valley has to be superfine to fetch 4, the largest part going at 3. Tulips are coming in fine and so are Dutch hyacinths and Von Son. Trumpet Major goes very slow. Common wood ferns are still very scarce and have advanced to 35 cents per 100. Smilax holds stiff at 20, and extra heavy 25 to 30.

St. Louis.

Trade still continues to be excellent, while stock of most kinds is increasing in abundance the demand keeps fully up with it. Shipping orders call for the most of it and promise to continue for some time to come. Violets are a little more plentiful but still short. Shipping trade in plants has opened up at last, but not in any great quantity; it is expected that it will not be up to the average for some time.

Mr. J. W. Dunford is cutting some ex-

cellent stock from his rose house, the Brides, Bridesmaids and Mermetts being of fine shape and substance. Wootton also are doing extremely well, resembling Beauties more than anything else. The stock is a little short stemmed, but the flowers can hardly be surpassed.

Wm. Trillow, late foreman for R. F. Tesson, and formerly with John Taylor of Bayside, has purchased of the Michel Plant and Bulb Co. the plant recently assumed by them at Old Orchard, which was formerly operated by Mr. Berdan, and has embarked in business for himself. He expects to grow for the wholesale market, and his many friends wish him success in his undertaking.

The bowling club has passed a rule compelling all members to pay an assessment of fifty cents for every series of 12 games rolled, whether the member participates or not.

Mr. A. Y. Ellison is in the south, covering that territory with florists' supplies in the interest of Wm. Ellison of this city.

R. F. T.

Washington.

A novel table decoration executed by Small & Sons was at a dinner given by Attorney-General Olney to the President and Cabinet and justices of the Supreme Court. The center piece was a circular plat of Farleyense. A large silver pitcher formed the center, filled with a profusion of American Beauties. Around the ferns was a fringe of mignonette and down the table a spiral figure of this fragrant flower, beginning at the center, graduating in size to the end, formed an entirely new and striking effect of decoration.

At a recent dinner given by the Secretary of the Navy to the President and Mrs. Cleveland the table decorations were also of an artistic character. This decoration consisted of three stars, the center one the largest formed of white carnations, each point tipped with a smaller star in red and white. These stars were imbedded in red carnations fringed with maidenhair and tied with red, white and blue ribbons; at each end was a corresponding design, each surrounded with tri-colored ribbons. There were four large candelabra with red tapers burning beneath scarlet shades, and at each plate was placed a red taper in a silver candlestick. As the dinner began the gas was extinguished and the tapers lighted.

REYNOLDS.

OBITUARY.

ED. AM. FLORIST: Your issue of February 16 records the death of John Peattie at Newburg, February 6.

In the passing away of Mr. Peattie the gardening world has lost a man of exceptionally fine qualities as a landscape gardener, plantsman and fruit grower. He was a native of Scotland, came to this country when quite a young man. When in the employ of Judge Kent and later when he was head gardener to the late Mr. Kelly at Ellerslie (now owned by Gov. Morton) he brought fruit growing to great perfection. He was shrewd and far seeing, intensely practical in his methods, and occupying the position he did at Ellerslie he ranked amongst the foremost gardeners of his time. To the young men who served under him, of whom I was one, he was at once a help and source of inspiration, always pleased to explain and give of his experience. It was a pleasant task to serve under him. He leaves four boys and one daughter to mourn his loss.

J. B.

E. G. HILL & CO., Richmond, Indiana,

Offer to the trade the finest stocks of Chrysanthemums, both old and new, ever presented. Our plants have never had a touch of the dread disease which has worked such havoc in many places. We send out healthy stock, propagated from outdoor grown stools which will produce just such blooms as we exhibited last autumn.

EARLY FLOWERING SORTS.—Mme. Bergmann, Yellow Queen, Mrs. E. G. Hill, and Mrs. Whildin, all at \$4.00 per 100, or 500 for \$15.00.

COMMERCIAL CUT FLOWER VARIETIES. Per 100.—Dailledouze, \$4.00; Bonnafon, \$5.00; Judge Benedict, \$4.00; C. Chalfant, \$4.00; G. W. Childs, \$5.00; Inter Ocean, \$5.00; Ivory, \$4.00; Jessica, \$3.00; L'Enfant, \$4.00; Malmaison, \$6.00; Minerva, \$5.00; Mutual Friend, \$4.00; Nivens, \$4.00; Queen, \$3.00. An immense stock of the above. Varieties like Amour, Judge Benedict, Minerva, Charlotte, etc., are suited for single stem plants. We will be glad to make selections for this purpose at very lowest living rates. Will also gladly make selections for large pot specimens.

EXHIBITION BLOOMS.—Keep abreast of the times. You need the introductions of last year if you would have the best results. We can make you a splendid selection.

CALVAT'S celebrated Novelties have won first honors at all the English shows; we can send you his set of 33 varieties for \$7.00.

THE NEW ENGLISH SORTS of last year contain varieties of exceptional merit. If you want the finest Exhibition sorts you will have to include many of these; you can tell which from the descriptions. The full set of 37 sorts for \$5.00.

AMERICAN NOVELTIES OF 1895.—We would like to select and send you the best 12 for \$3.00, to include Philadelphia, and 11 others from our own, May's, Spaulding's, P. & M.'s, Smith's, Dorner's.

GENERAL ASSORTMENT
We will send 1000 choice Chrysanthemums, our selection, for \$25.00. This would include a complete outfit of varieties, suited for all purposes.

Send for our Trade List if you have not yet received it. We have a very fine line of Novelties all the way through. The new GERANIUMS are magnificent; Mme. J. Chretien, Deuil de Miribel, and Juliet will delight you. The new English and French are fine improvements—19 varieties for \$6.00, 12 of them fine double sorts. 12 grand new Ivy Geraniums for \$3.00.

Two fine new Acalyphas. Two grand Abutilons, S. de Bonne and Fleur de Neige. An elegant line of best Cannas. The new *Dracæna Sanderiana*, *Helianthus*, *Soleil d'Or*, *Hydrangea Otaksa* *Monstrosa*.

A very fine collection of strong sturdy growing Double Petunias, large, finely fringed, at \$3.50 per 100. We have a very large stock of them.

FORCING ROSES—Carefully grown—Perle, Sunset, Bride, Cusin, La France, Meteor, Wootton, Watteville, Albany, Gontier, at from \$3.00 to \$4.00 per 100, according to variety. An immense stock of clean, healthy American Beauty, ready now, at \$6.00 per 100.

We have made our prices to suit the times. Did you get our list? If not, we will be glad to send it.

E. G. HILL & CO., Richmond, Indiana.

A New Canna! "THE PROFESSOR."

We take pleasure in offering this Canna to the Trade, and feel sure that it will please all who purchase it. It originated with me, has been tested on my grounds for the past three years, and has been very highly spoken of by all who have seen it.

The foliage is a very dark purple, nearly black, and colors up well in the full sun. The flowers are of fair size and substance, and of a deep crimson color; they are by far the best we have seen in the dark foliage section of this popular plant.

Its habit of growth is dwarf, and its average height is about 3½ to 4 feet.

We consider this Canna a valuable acquisition and hereby offer it for the first time.

Price for started plants from pots (ready after March 15, 1895), 75c. each; \$7.00 per doz.

N. B.—All orders will be filled strictly in rotation.

St. Paul.

August S. Swanson's place at Merriam Park, this city, consists of a well built range of six houses containing 12,000 to 15,000 feet of glass and stocked with a general line of florists' plants. His store in the Endicott Arcade is one of the neatest and most attractive in the city while his trade is one of the best. Mrs. Swanson attends to the store while he personally looks after the greenhouses and to floral decorations, in which line he is one of the neatest and most artistic parties in the city.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

Half-tone Engravings.

AM. FLORIST:—Have just read your article referring to half-tone photo-engravings contained in your issue of February 9. I am very glad to see that you consider the subject worthy of special mention and that you so freely give honor where honor is due. I not only fully concur with you in all that you have published regarding the matter but will say further that in my humble opinion the time will soon arrive in the history of the seed trade when sensational and ridiculous over-drawn electrotypes and wood

years been one of the leading men in the seed trade.

At the first general gathering of American seedsmen held in New York City, June 12, 1883, some thirty-five leading firms being represented, Deacon Robbins was chosen as the first president of the American Seed Trade Association. He has since that time always been a leading spirit in the association, and his influence in the councils of that body at their annual conventions has ever been in the line of wise and safe counsel and had much to do with shaping the policy of the organization.

A friend in the trade who has known him for over twenty years says, he was most upright and honorable in every way. I never knew the Deacon to make a misstatement, his opinion on values and market conditions was generally based on intelligent shrewdness and the experience of many years and seldom wrong.

perous days, and for the last two years with W. Atlee Burpee & Co., has opened an office in the Betz Building, Philadelphia, as an agency for advertising and printing.

Some firms report the worst February in 15 years.

That cheap sacaline seed seems to have run out.

Italian onion seed is not quite as plentiful and good prices are spoken of.

We miss the full page ads. in the *Ladies' Home Journal* and other magazines. The days of two full pages in the *Century* with two square inches of adv. matter are gone. Strict economy seems to be the rule.

Mr. Charles Henderson passed through Philadelphia while on his way to New York from Florida.

Mr. Alfred Henderson is staying in Philadelphia under a celebrated doctor's care.

PUMPKINS GROWN AS A SEED CROP IN NEBRASKA.

cuts will become a feature of the forgotten past and half-tone engravings from *nature only* will be utilized in the constructions of our seed catalogues of the future.

Any school boy can throw adjectives together proclaiming every known and unknown possible and impossible meritorious quality in connection with vegetables, fruits, etc., to be imagined by the most fertile brain; but it must remain for the art of the half-tone engraving process to substantiate before the eyes of the seed buyer, at least in part, some of the strong claims contained in the seed catalogues of to-day, and which we have no reason to believe will be at all restricted in the catalogues of the years to come; in proof of which I herewith submit a photo of a field of King of the Mammoth pumpkins grown especially as a seed crop by the Western Seed and Irrigation Co., Waterloo, Neb., this past season of 1894.

FRANK T. EMERSON.

Obituary.

MR. R. A. ROBBINS, of the well known seed house of Johnson, Robbins & Co., Wethersfield, Conn., died at his home in that place on Tuesday, February 26, of pneumonia after an illness of only three days. Deacon Robbins, as he was familiarly known, has for more than thirty

The Deacon has for years made personally one or more annual trips through the country, this he did even the present season, coming as far west as Chicago in December last. He was a genial companion, one who made close confidential friends and who never violated such confidences. His death leaves a gap in the ranks of the old line wheel horses which cannot be filled.

Philadelphia Notes.

Z. De Forest Ely, trading as Z. De Forest Ely & Co., made an assignment for the benefit of creditors February 27 to Chas. W. Sparhawk. The immediate cause of the assignment is said to be the impossibility of making collections from southern customers with whom Mr. Ely dealt almost exclusively. Mr. Ely was greatly esteemed by the trade; his gentlemanly manners made him many friends who greatly sympathize with him in his troubles, which it is hoped are only temporary. Some claim that close sales, keen competition and excessively high store rent are responsible for the failure. The starting of a cut flower business was also considered an unwise move for the firm's location. The heaviest losers will be Dutch bulb growers.

Giles Leahy, who was with the Dingee & Conard Co. during their most pros-

perous days, and for the last two years with W. Atlee Burpee & Co., has opened an office in the Betz Building, Philadelphia, as an agency for advertising and printing.

REPORTS FROM France indicate that owing to the severe weather French bulb prices will be higher. An advance of 15 to 20 per cent. over 1893 and 1894 prices is intimated.

GEORGE TABER, of Cooper, Taber & Co., died recently aged 76 years. He was well known to many in the American seed trade. As the firm is a joint stock company it will in no way be affected by Mr. Taber's death.

REPORT from Erfurt, Germany, February 11, says, for eight days the thermometer registered as low as 22 to 25 degrees (centigrade), the hardest winter they have had there for many years. There is, however, a great deal of snow on the ground and that may save the pansies and other stock planted last fall.

THE MAIL TRADE is still unsatisfactory and is generally reported east and west as behind 1894 though most firms are still hopeful that with the coming of brighter spring weather business will come strong yet; the evident scarcity of money as indicated by the small early orders is however a factor not to be overlooked.

Cincinnati.

Trade this week has been fairly active. Although it may not be quite up to former years, still there is a more cheerful view taken by most of the dealers. Commission men report an increased shipping demand. Orders of this kind were usually heavy, and greatly helped to clear up the stock.

Roses in most all classes are plentiful and of improved quality; there is no apparent glut of any variety. In large roses there is still a decided shortage. Beauties are scarce, with brisk demand, and very few long stemmed flowers are seen. Good long stemmed stock sells readily at \$3 to \$4 a dozen, but the great bulk is short stuff, selling at from 50 cents to \$1. Hybrids are still scarce. A few good Brunners are seen, but are mostly shipped in from outside points. The flowers are not up to the standard in size, but are of good form and color, and with fine long stems. They bring from \$3 to \$4 a dozen for the best. Jacques are improving. Most of the flowers shipped in now are from plants grown in solid beds, and are much firmer and of better quality than those noted before. These bring \$1.50. Bridesmaid and Bride find a ready market at \$7 to \$8. Mermets are coming in very fine and of uniformly good color. La France is hardly up to the standard, though here and there a good lot may be seen; \$4 is the ruling price for good stock. Woottons, Perles, Gontiers and Niphetos go at \$3 to \$4. Meteor is of much better color, but rather small; good stock finds a ready sale at from \$5 to \$6.

Carnations are plenty and of fairly good quality. Very few of the common sorts go over \$1.50. In fancy Daybreak sells at \$2; a few extra good bring \$2.50, Scott about the same. Bulb stuff of almost every variety is very slow. Daffodils are a perfect drug on the market and can be hardly given away. In Dutch hyacinths only the light lavender shades are in fair demand. Valley can be bought of very good quality at \$1.50 to \$2. Romans are about the same. Tulips are very slow. Pink grown La Reine and Kaiser Kroon are the only two varieties called for. The former brings \$5, and the latter \$4. Most of the other sorts go at \$3 and less. Violets still hold their own, although the stock that is offered at present is not of very good color. The supply is about equal to the demand. Quotation on extra choice (very scarce) is \$1.50. The bulk of the stock is selling at \$1 to \$1.25. Harrisii are not quite as plentiful. Some extra good bring \$12, though most of the stock is disposed of at from \$6 to \$8. Callas are plenty and in fair demand. There is some very fine mignonette sent in now, mostly of giant varieties and Machet. Good spikes of these find ready sale at \$2.50. Smilax is extremely scarce and sells at \$15. Asparagus plumosus is in good demand. Adiantum is in fair demand at \$1.25 to \$1.50.

Mr. W. Murphy of Delhi lost one house and a lot of fine plants by fire this week. Mr. W. Weiland of Avondale also had a similar unfortunate experience. No insurance at either place.

Corbett & Wilson are bringing in some fine cyclamens in 6 inch pots with 30 to 40 blossoms on a plant. P.

Cheek.

Client—"That little house you sent me to see yesterday is in a scandalous condition. It is so damp that moss positively grows on the walls!"
Agent—"Well, isn't moss good enough for you? What do you expect at the rent—orchids?"

Lika Joko.

ROSES. ROSES.

In all the best standard varieties, suitable for forcing and bedding out, at prices to suit the times.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns.

The Rose for the Million!!

BELLE SIEBRECHT.

Always in bloom. An iron constitution. Requires no special houses, no nursing. Will make itself at home in any house where other roses are grown. Proved hardy out of doors in latitude of New York. Color and keeping qualities unequalled. The greatest introduction of the century.

MORE TESTIMONIALS FROM PROMINENT ROSE GROWERS:

DEAR SIR:—The new Rose, "Belle Siebrecht," is a very valuable rose for winter forcing. The form is exquisite, the foliage handsome, the color charming, rich, bright, and of an entirely distinct new shade; it is also very healthy in growth and a constant and very free bloomer. Please book my order for 1,000.

Yours truly,
ROBERT CRAIG, West Philadelphia, Pa.

It affords me much pleasure to express to you my thanks for the bunch of Belle Siebrecht roses you had the kindness to send to me. After having graced the tables of the N. Y. Florist Club annual dinner two days ago I find it to be a remarkable good keeper, having kept it for three days longer without its losing any of its brilliant color, and it appears as fresh now, after be-

ing out five days, as if just out. As seen growing at your place I shall pronounce it after a careful examination a remarkable free bloomer, healthy grower, and one that is not easily attacked by mildew, and a welcome addition to our list of forcing roses.

ERNST ASMUS, West Hoboken, N. J.

WASHINGTON, Dec. 5th, 1894.

MESSRS. SIEBRECHT & WADLEY, New Rochelle, N. Y.:
GENTLEMEN:—We have received your circular letter together with price list of your new Rose, Belle Siebrecht, which we inspected in your houses some time ago. Please book our order for 2,000 plants, to be delivered April 15th next.

Yours very truly,

STRAUSS & CO.

This rose is the result of years of patient work by one of the best rosarians in the world. It is not sent out to be "tried." We have subjected it to the most severe tests, and are now fully satisfied that it is the best florists' rose in existence. It is not a mere sport, but is of a distinctly new strain, the result of a cross between La France and Lady Mary Fitzwilliam. Its pedigree is all right. Orders booked now and will be filled in strict rotation. Strong plants ready for delivery April 15th.

PRICE, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

RIST when writing to advertisers.

Worcester, Mass.

One of the prettiest decorations of the season was arranged in Colonial Hall by Lange last week. Pink azaleas and white lilac were used extensively in the reception room, the dancing hall was decorated with asparagus and Trumpet major and the dining room decoration of Daybreak and Scott carnations was especially effective.

Nothing of unusual importance has occurred to change the direction of the trade winds, and they still continue to blow our way with a refreshing briskness that is very invigorating. We are having a good proportion of bright days that are opening good flowers in liberal quantities and of course this all helps to keep the balance on the right side of the ledger.

At the weekly meeting of the Horticultural Society, a very interesting paper on the wild flowers of Worcester county was read by Joseph H. Jackson, one of the best botanists in this vicinity.

The fruit growers of this state will hold a two days convention in this city March 20 and 21 for the consideration of the important questions of this industry, and also to consider the feasibility of forming a state fruit growers association.

A. H. L.

Our Annual Spring Number.

Our annual special spring number will be issued March 16. We have some splendid special features in preparation for this number and it will be a decided advance, both in value of matter and beauty of illustrations, on any of our previous special numbers. What more can be said?

RALEIGH, N. C.—We have had the coldest weather North Carolina has seen for many years. Temperature below zero and plenty of snow. On February 14 one of the greenhouses of Mr. H. Steinmetz was destroyed by fire. Loss about \$600, partly covered by insurance. The weather is now much warmer and as soon as frost gets out of the ground we shall be ready for out-door work.

WHENEVER you want anything pertaining to the trade, and do not find it offered in our advertising columns, write to us and we will take pleasure in assisting you to find what you want.

CARNATIONS

READY NOW.

Rooted Cuttings.—20,000 Daybreak; 50,000 more March 1st. Other varieties in proportion—McGowan, Mrs. Fisher, Helen Keller, Sweetbrier, Stuart, Buttercup, Iago, Scott, Albertini, Cartledge, Aurora, Portia, Dorner and others.

Write for prices, stating how many you will want of each variety. The price will be reasonable and the stock warranted well rooted and healthy, with the privilege of not accepting it if found otherwise.

A few Lancaster Beauty Verbena ready at \$2.00 per 100. This is a real good thing and a money maker.

TWO POINTS

FOR CARNATION BUYERS.

GET THE BEST.

—Here is a quartette of them: Wm. Scott, finest pink of solid color; ALBERTINI, peerless, in all qualities; DAY-BREAK, unrivalled in its delicate flesh tones; McGOWAN, the white of whites.

GET THEM GOOD.

—We grow them cool, root them cool, and take our cuttings from blooming stems only, carefully selected, carefully rooted, and carefully packed for shipment. Our stock is in fine health and vigor.

Our prices are \$3.00 per 100 for Scott and Albertini; \$2.50 for Daybreak, and \$2.00 for McGowan. For quantities above 500, write us. Terms cash.

ALEX. McBRIDE,

ALPLAUS, N. Y.

Carnations
Edward Wayne
Kennett Squ.

NEW.

OPHELIA.—A fine large flower a little darker than Scott. Took Craig clip for best seedling of any color at Philadelphia. Flowers brought \$3.00 per hundred wholesale all last Winter excepting at Christmas, when they reached \$5.00. Rooted cuttings \$10.00 per 100; \$9.00 per 1000.

ELDORADO.—(Shelbire). Introducer's description and stock. A yellow of free blooming habit and the other necessary qualities of a good carnation has long been a desideratum. In Eldorado we have a strong vigorous plant, healthy foliage and finely formed flowers. The cuttings are easy to root and the plant is very prolific both blooms and cuttings. Light yellow, or, perhaps, nearer a buff, and free from all white markings. Petals edged with a narrow band of light pink, being almost a piece in marking. The flowers look yellow by artificial light and not white, as many yellows do. \$2 per dozen; \$12 per 100; \$100 per 1000.

KOHINOOR.—(mountain of light) (Pennock). Introducer's description and stock. The choice of over 400 varieties after 3 years' trial. It is the best white I have ever grown. Plants robust, stems long, stiff and erect. Flowers full, deeply fringed, occasionally touched with pink bluish, and extremely attractive, meaninging 2 1/2 to 3 inches across without any forcing or disbudding. Comes quickly with bloom and continues prolific throughout the season.

STANDARD.

Table with 3 columns: Name, 100, 1000. Includes Sweetbrier, Helen Keller, Uncle John, Stuart, Buttercup, Scott, Daybreak, Cartledge, Portia, McGowan, Fisher (from soil for Summer).

LADY CAMPBELL VIOLET, rooted runners, \$2.00 per 100; \$15.00 per 1000.

Walter R. Cliffe, of Germantown, Pa., has been the first in this locality to appreciate the virtues of Swainsona Gallegifolia, Alba. He has an entire house of it, and the beautiful pea like blossoms backed by its feathery pinnate foliage, have, he claims, paid him better than anything else he has grown this Winter. We are enabled to offer his stock at \$4.00 per 100; \$35.00 per 1000 for rooted cuttings; \$6.00 per 100 2 1/2 pets. Ready Feb. 15th.

CARNATIONS

SEEDLINGS FOR 1895.

KOHINOOR Large full white on strong erect stems. The best white I have ever grown.

PURPLE KING Clear bright purple, productive and very showy.

My stock of standard and new varieties has never been better than at present. I grow nothing but Carnations and exclusively for cuttings and plants.

Inspection and correspondence solicited.

BELL MILLER, Springfield, Ill.

Toronto.

Enquiry amongst a few of the florists reveals the fact that trade has been pretty good this last week; one gentleman told me that he had really been very busy. A large quantity of bulbous stuff is coming in now, the price of which not being high it goes off quickly.

At the regular meeting of the Gardeners' and Florists' Association last Tuesday a good deal of business was done. The executive committee was instructed to go ahead with a chrysanthemum show prize list; three new members were elected and four proposed; an oyster supper was decided on at the Liederkranz Club rooms, the date to be fixed for the day when the delegates from the various cities and towns come to Toronto to interview the Provincial Government concerning the formation of horticultural societies; motions and amendments came thick and fast on other matters of minor importance, and though there was danger of the chairman's gavel getting red hot sometimes the chairman himself (Mr. W. Muston) kept a cool head and acquitted himself to the entire satisfaction of all present.

Mr. J. H. Dunlap brought down some fine specimens of various kinds of carnations, some of his own seedlings and some of the later introductions of other growers. The Stuart was in remarkably fine form. E.

Baltimore.

Trade seems picking up daily. No doubt Lent will make a difference as it usually does, but it can not make matters much worse than they have been up to the last week or two. The demand for carnations seems insatiable, all that come being snapped up at fair prices. Our neighboring village, Washington, has the advantage of us in this flower as a recent walk through C. Strauss & Co.'s hundred thousand Scotts and Fishers demonstrated, but we will get there yet, as far as producing is concerned. A notable thing in Washington is the way E. Pierson seemed to thrive, and the huge blooms it produced. There was an unnamed seedling there too that was while first class in every other respect in color the exact counterpart of the velvety richness of a Camille de Rohan rose.

Mrs. Davis, 801 Madison avenue, has quit and shut up her store.

Smilax seems rather scarce. Violets plentiful. Roses in fair supply. MACK.

Rooted Cuttings.

VERBENAS, finest bright colors, mammoth, vigorous, strong, \$6.00 per 1000.
 GERANIUMS, special best double and single; all labelled, \$12.00 per 1000.

GANNAS.—VAUGHAN'S—GANNAS.

DO YOU OBSERVE

They still have 'a yellow canna better than Florence Vaughan'? Where did they come out last year on that claim? Did they make that statement purposely to deceive the public jury or not? We hope not. But to-day the question is, where will they come out this year on the same claim. Write for our Book for Florists, now ready, and we think you will find a list of cannas that did what we claimed for them **last year**, and a list of

NEW CANNAS which will do all we claim for them **this year.**

THE CALIFORNIA VIOLET.

- "THE CALIFORNIA is the largest, most fragrant, and most beautifully colored of all the Violets."
- "THE CALIFORNIA VIOLET is a New Flower and the Fairest and Sweetest Blossom in the World."
- "THE CALIFORNIA VIOLET is the most prolific bloomer. Its flowering season lasts seven months. The average yield is about 350 flowers to a plant."
- "THE CALIFORNIA, the Queen of all the Violets."
- "The wonderful CALIFORNIA VIOLET has frequently twin flowers on a single stem."
- "The coming fashionable flower, THE CALIFORNIA VIOLET, will prove the most profitable to grow."
- "The sweetest flower that grows, THE CALIFORNIA VIOLET. Our patrons are continually increasing the size of their orders for them."
- "The greatest Floral Novelty of the century, THE CALIFORNIA VIOLET."
- "THE CALIFORNIA VIOLET, immeasurably superior in every respect to other varieties."
- "The exquisite CALIFORNIA VIOLET is the Floral Novelty of the United States. No other Violet is of such extraordinary size and beauty."
- "THE CALIFORNIA VIOLET, with its clearly outlined petals, is the embodiment of graceful beauty. A single plant will produce several hundred flowers of immense size and exquisite fragrance, on stems 10 to 14 inches long. The color is a clear violet-purple, and does not fade."
- "The beautiful CALIFORNIA VIOLET, excelling all in the richness and purity of its color, the fragrance of its perfume and the delicacy of its form."—THE EXAMINER, San Francisco, Jan. 30th, 1895.

We have 100,000 CALIFORNIA VIOLETS on the way, none too many for our orders.

The order for the insertion of the California advertisement of THE CALIFORNIA VIOLET in the Florist's Exchange, Novelty Edition, had been given before our appointment as Eastern Agents of THE CALIFORNIA VIOLET had been made.

All correspondence in reference to THE CALIFORNIA VIOLET east of the Rockies should be addressed to

Mention the American Florist when writing to advertisers on this page.

Kansas City, Mo.

Our club met again at R. S. Brown & Sons with quite a good attendance, and another brother joined our ranks. The essays were not forthcoming, but your correspondent firmly believes that most of them had them in their inside pocket: it was simply who should start first? However, we had a good warm discussion regarding the taking of dying palms back to keep and restore to health. This I believe to be one of the worst features in the business of the retail florist. The plant is invariably too far gone when brought to the florist to restore, and of course dies. Then he is told it was not possible for it to die so soon, and in some cases that he actually destroyed it in order to compel them to buy another, etc., or that he used it to decorate with. How many of us get paid the value of the room taken up by such rubbish, not figuring on the bad effect it has on our own stock?

Business has been extra good the past week, but stock—especially roses and violets—has been very scarce. There has been a splendid demand for hyacinths, cyclamens, begonias and cinerarias. In fact the demand for cinerarias has never been so good, and the plants are much superior to any seen here before. It demonstrates that good plants will always sell, and would be better for us all to grow less and have them good.

Arthur Newell, while out with his fast trotter, was caught in a storm, contracting a severe cold and has been confined to his bed for several days, but we learn that he is able to be out a little when the sun is out and warm, although he is by no means well yet. S. M.

Washington.

The florists of Washington as a rule are kept quite busy during the last week or two of the gay season, as there is generally a crowding of teas, luncheons, dinners and weddings into the last few days. For this reason several of them will be kept on the jump for the few remaining hours before Lent begins. Our florists have had no cause to complain of business the past week, as the weather has been all that could be desired and flowers of all kinds have been plentiful and up to the standard of quality. REYNOLDS.

"If it Could Only Bark."

"An' that's a cbrysanthemum," said Mr. Dolan, deeply interested. "It is," replied his wife, who had been indulging in some floral purchase. "Well, a wonderful flower it is; if the t'ing cu'd only bark, it'd be as foine a Skye terrier ez ye'd want to see!"

Frost on the Glass.

An Ohio florist had his violet house glazed with frosted glass to insure protection of the plants from the sun and to prevent sudden rises of temperature on sunny days. A new man was recently placed in charge of this house and the day following the proprietor was amazed to find the temperature up to 85°. When the new man was called to account he explained that he was trying to get up enough heat to get the frost off of the glass.

A Birthday Tribute.

After a floral tribute was ordered to be sent some time ago to the house of a bereaved friend the sender learned that the flowers had never been received. The florist was appealed to and he soon found that the package destined for a certain number on the west side of Fifth avenue had gone to the corresponding number on the east side. The house where the package was delivered was found in the care of an old Irish woman, the family being absent. To the inquiry as to whether she had responded with signs of satisfaction: "Deed did I, and I been wandering ever since who the kind lady was that remembered me birthday."—New York Sun.

LAFAYETTE, IND.—The mother of Mrs. F. Dorner Sr. died February 28, and the father of Mrs. F. E. Dorner Jr. February 27.

SEND ADS. NOW for our special spring number. It will be a beauty and will reach every buyer in the U. S. and Canada. No increase in adv. rates.

GRAND RAPIDS, MICH.—The Grand Rapids Florists' Club has been organized with an initial membership of seventeen and the following officers: Henry Smith, president; Wm. Cunningham, vice-president; L. N. Renwick, secretary; N. B. Stover, treasurer; J. A. Creelman, press reporter; Wm. Scott, custodian. Pink was adopted as the club color and the carnation as the emblem of the organization. Meetings will be held semi-monthly, the next one on March 19, at which a committee will submit a draft of constitution and by-laws for action.

Carnations That I Have Seen.

BY EDWIN LONSDALE.

[Read before the American Carnation Society at Boston, February 22.]

I prefer to give this paper that title rather than the one selected by the executive committee. It will answer the purpose for which it was intended, I think, and at the same time will give me a somewhat wider scope; yet not too wide, I trust, to test your patience. If I were to confine my remarks to carnations of the past decade I would of necessity have to omit some good varieties. For instance Buttercup. That variety has been in cultivation nearer two decades than one. It is pleasant to talk about the old varieties that stood by us twenty years ago. Though I do not intend to make this an elaborate paper, nothing like the gradual unfolding of the carnation, as one might expect that such a subject would suggest, but just to have a little chat about carnations that I have seen, and the impressions formed of them.

The first carnations that I became acquainted with were President Degraw and La Purite. Of each of these kinds I had a few cuttings given to me. It must have been about the year 1871. These cuttings rooted and in due time bloomed; but I was very much disappointed to find that La Purite had dark pink flowers, whereas the Degraws were white. I felt certain that either I or the person who gave me the cuttings had made a mistake, as I thought La Purite was so named because it bore pure white flowers. And the President Degraw—there was nothing descriptive in its name, and the dark pink flowers could easily have been named after that good patron of horticulture, who, if my memory serves me correctly, was at one time president of the Brooklyn, N. Y., Horticultural Society. I am not quite sure, but I am half inclined to think that when I found the colors of the flowers were as indicated, I changed the labels until I could find out positively whether a mistake had been made or not. In those days there were not so many carnation growers as there are now, and where carnations were grown was in establishments where a general florist's business consisted principally of growing bedding plants for spring sales. Strange as it may seem, when it was found that I was wrong in my suppositions I disliked very much to give up the idea that a mistake had not been made; and even to-day sometimes I feel that an error has

been made in the naming of the carnation La Purite.

It is not my intention to treat upon varieties in the order of the time of introduction, or as regards their merit, thinking perhaps it would be better if I dealt with them alphabetically, or nearly so; in that way new and old sorts will be mixed in about equal proportions. Mme. Diaz Albertini is one that is a favorite with quite a number of growers. Its large size and stout stems are its principal good points. Its color, though it might be classed with the Wilder pinks, is not as cheerful as it might be. It has more or less of a faded look, and under ordinary treatment it is rather a late bloomer. This, however, may to some extent perhaps be obviated by early propagating, and taking care not to pinch back too late in summer.

Alegatiere has had its day. It is grown in very limited quantities in these days, Portia having superseded it, on account of its being a brighter color and a freer bloomer.

The American Flag is a striped variety. This, as is generally known, is a sport from Portia. It never attained the popularity that was predicted for it. It is, however, very distinct, and where striped varieties are appreciated it is a good one to grow.

Andalusia is a French variety; this is very nearly out of date. It is a yellow, and is distinguished now, principally, as being one of the parents of Shelmire's Cæsar. On this account I expected great things from Cæsar as a producer of yellow seedlings, feeling that we had good reason to expect golden flowers through its pedigree; but I regret to say that my anticipations were not realized, as the coloring lacked life or brightness. Mr. Shelmire, I believe, has been more successful.

Chas. Sumner I remember fourteen or fifteen years ago. It was sent out as Bock's seedling, having been disseminated by Mr. Bock of Cambridge, Mass.; and after it had been out for a while it was given the name as indicated. This same variety was cultivated around Chicago as Anthony's Pink. I believe it was mixed among another kind, and those having it in their possession, not knowing the correct name, it was called Anthony's Pink, until its true name was made known. As I remember it, it produced pink flowers something after the color of Grace Wilder, or perhaps a trifle lighter in color. It was a dwarf sturdy grower, but for some reason or other with me it failed to come up to the standard of those days, not being a sufficiently free bloomer I believe was its principal fault.

Most everybody, I think, in those days either grew or tried to grow Astoria. It was a very beautiful variety, but was not sufficiently free blooming to warrant us in growing it in large quantities. This

also has the distinction of being one of the parents of a noted variety, namely, Buttercup, which is one of the popular varieties of to-day.

Aurora is a more recent introduction than any of those hitherto mentioned, excepting Albertini. Some growers speak very highly of Aurora and grow it in large quantities; but with me it did not prove successful, having a disposition to be affected with the disease known as "spot."

Beauty of Oxford is another one I tried to grow, but this also was affected with the same trouble, and never produced a flower with me that was salable.

Much was expected from the variety Ben Hur, but we rarely hear of it being mentioned in these days.

Blanche came out highly recommended, but it was troubled so much with bacteria that it always had a very limp, unhealthy look; and I question whether there is any of this variety grown at the present time, and it is not a very old variety either.

Blizzard is one of Mr. Starr's, I think, a more recent introduction than Buttercup. Buttercup, though, is much superior to this variety in color, that is to say, the yellow in Buttercup has more life in it than the yellow in the Blizzard. There is one claim for it, however, that it is more easily propagated than Buttercup.

La Belle brings up many memories. It was in the early seventies when there was so much furor both in England and in America about this variety. The illustrations that were used in those days were importations, and showed this variety to be trained on, apparently, a balloon trellis. It was described as being a tree carnation. Tree carnations, so called, were grown in England year after year, in fact, as long as they presented a respectable appearance and were what was considered profitable. The method of cultivation in England is entirely different from ours, that is to say, it was in the days when this variety was in the heyday of its youth. It was advertised very extensively, and if I remember rightly, plants of it were sold at one dollar each. The establishment on which I was engaged at that time secured one plant. Though it was tried in the same way as we grew carnations in those days and to-day, it was too tall a grower and flowered too sparsely to be of any value. The flower was of good form and size.

Boule de Neige—I do not know whether this variety was introduced from France or not, judging from its name one would think that it was an importation. However, be that as it may, the varieties known as Edwardsii, Peerless and Boule de Neige appeared to be so nearly alike that they have been pronounced identical. These were all popular in the seventies, and long since that time they have been cultivated under one name or the other; very excellent flowers we have cut from them, and they were very prolific. Very seldom indeed in those days were flowers cut with long stems. I am inclined to think that carnations paid just as well then as they do now, even at the higher prices they are now bringing. I cut 50,000 flowers from these sorts in one year, two-thirds were white and one-third were of the old La Purite, off a table six feet wide and eighty feet long; but we seldom cut a long stem to a carnation then, unless perchance there were no other buds to be seen.

Buttercup. I have an apology to make to this variety. I have abused it in season and out of season, more I think than all the rest of the carnations put together.

When it was first sent out by Mr. C. T. Starr I secured a few plants of it, but it proved a miserable failure. The plants took on the brown dead leaves that we dreaded in those days as much as we do now, and seemed really to have a hard struggle for existence. The plants were very little larger when they were taken up in the fall than they were when planted out in the spring. They rarely occupied the space in the greenhouses long after being lifted; space was too valuable for sickly Buttercups to occupy. Oat they would have to go, with a resolution never to try them again, until I would take a trip to Chester county and see them flourishing in all their golden glory. I remember with a great deal of pleasure on one occasion I happened to visit Kennett Square and Avondale, when all the carnation growers appeared to be holding their crops of Buttercup, which had been ordered for a Buffalo golden wedding. Those houses, many of them filled with Buttercup, presented a sight I shall never forget. I was so impressed with the variety that I had to try it again, with the same results as just recorded; and every time that I tried it it was always a failure until three years ago. About that time I had some orders that I could not fill for field grown plants of this variety, and not being able to get as many as I wanted from Pennsylvania I found it necessary to secure some from another state (New York) to complete the order. The plants were so superior from New York that I had hopes I could grow them as successfully as they were grown, as they looked much better than I had been able to grow them myself, or had seen them at any other place. I ordered a few more for the purpose of trying them alongside the ones that I had received from Pennsylvania, and although the result was not a great success it was sufficiently so to encourage me to persevere further in the experiment. During this time I had had some experience in combating the disease in carnations known as "rust," by growing them under glass all summer. I determined to secure young plants in the coming spring from New York state, where the better plants came from. They were grown under glass all summer, and were very much better than I had ever grown or seen them before. This year I grew them under the same conditions from cuttings taken from the plants which had been growing continuously or nearly so under glass, and to-day I defy any person to show a better lot of Buttercups than these are. They are large healthy plants, fine foliage, and with very few discolored leaves on them; full of buds, and the flowers are as good as many of the novelties that are being offered to-day. Mr. Wm. Swayne of Kennett Square called to see me a few days ago, and he pronounced them the finest that he had ever seen.

Now I wish to dwell a little on this point, because we are led to believe by some carnation growers that the carnation is naturally a short lived plant, that it only has a short time to live, and that it is absolutely necessary that we should be raising seedlings continuously for the purpose of taking the place of the varieties that must die out, after being in cultivation only a very few years. I think our friend Fred Dorner made that statement at the convention of the S. A. F. which was held at Toronto. Mr. W. R. Shelmire proved to the contrary of this in his able essay at Buffalo before the Carnation Society a few years ago. And another point: twenty years ago we were led to understand by some of the old mas-

ters in horticulture that it was absolutely necessary, in order to keep plants healthy, to put them out of doors in the summer; that it was more natural for them to be out of doors in the summer than it was for them to be under glass. Apparently this seems true, and in some cases it may be so, but not as regards carnations, we think. To make use of an expression made by a young enthusiast who saw the Buttercups in our greenhouses last week that, under our treatment, "they were rejuvenated."

Many of us are apt to jump to conclusions. It was by the merest accident that I undertook to grow carnations under glass all summer. As to how it was brought about: I at one time had a seedling which I purposed disseminating the following spring; and in order to get up as large a stock as possible I kept on rooting the cuttings until quite late in the spring or early summer. It was so late in fact, and the weather so dry, that those plants remained in thumb pots all summer. After the general collection of carnations had been lifted in the fall this particular seedling showed unmistakable evidences of being affected with the much dreaded rust. As soon as possible all the affected leaves were picked off and destroyed; but when the job was completed the plants appeared to be planted too far apart, and in order to fill up the spaces we made use of the small plants which were rooted late and had remained in thumb pots under glass all summer. They were planted between the rows or lines of the affected plants, and strange as it may appear, the unaffected little plants on each side of them were never affected by the rust during the whole season. At that time the rust had not created quite such a profound impression upon the growers as it did later. I introduced this point here in order to show how it came that I decided to try Buttercup under glass all summer. I reasoned in this way, that if one disease could be combated by this treatment, why could not other diseases be combated by the same treatment, and I am pleased to be able to say that the results have been eminently satisfactory. And to speak further, I believe that we will find that some of our choice varieties, if we wish to get the very best results from them, will have to be grown under glass all summer. Suppose a rose grower was to attempt to grow roses in the way that we have been growing carnations. Just fancy American Beauty being planted out all summer; what kind of a plant would we have to lift in the fall? It would be very little larger than when planted in the spring. Nearly every leaf would be affected by "black spot;" yet *Hermosa* and some other varieties of roses would flourish under that treatment and be happy. The same with chrysanthemums; if chrysanthemums were planted out of doors all summer and lifted in the fall we would not have the grand blooms we are now getting in November. Excuse this digression, but I wanted to impress these points upon my hearers, and to advise that all of us be quite lenient towards new varieties in carnations as well as other novelties; because it is possible that the treatment we have been giving the subject is not congenial; and if the variety is meritorious it is worthy of some intelligent experimenting before it is unceremoniously condemned.

To return to carnations that I have seen. *Brutus* is a red sport from *Cæsar*. In this connection I remember very well some years ago making an address on carnations before the Florists' Club of

COSTA RICA. TROPIC VEGETATION AND PLANTATION BUILDINGS.

Philadelphia. I had invited all those who had new or meritorious varieties of carnations from all over the country to forward them to me, so that I could use them to illustrate that address. I will remember how I held up *Cæsar* and pronounced it the best variety that was sent to me for that occasion, insomuch as it showed an advancement over all others in respect to the fine form of flower and a stout stem. It was the stout stem that took my fancy, and for that reason I pronounced it the best variety. *Cæsar* and *Brutus* are identical, I think, as regards growth, etc., excepting in the color of the flowers. *Cæsar* is a salmon color or very light red, striped with a darker shade; and *Brutus* is a self colored red. Unfortunately the coloring lacks brilliancy, being a very dull shade of red. This was a cross between the variety *Andalusia*, before referred to, and E. G. Hill, but which was the pollen parent or seed parent I really forget.

Bouton d'Or.—The nomenclature committee must please excuse me for referring to this variety as *Bouton d'Or*, if I recollect rightly, it should be *Baron Rothschild*. It is of French origin, and was first introduced to carnation growers in America by Mr. Denys Zirngiebel, Needham, Mass., who disseminated it only in very small quantities, and for some reason it did not flourish to any great extent, excepting in the hands of the *Daille-douze Brothers*, Flatbush, N. Y. To them belongs the credit of saving it to cultivation. It is a very distinct variety, very pretty in form, and faintly dashed with crimson. I have often thought that a

self colored sport from this variety would be a decided acquisition. The dark markings, small though they be, take a little life out of the coloring, according to my fancy; though it is a very good variety and it is spoken of very highly by people who are giving it a trial this winter for the first time.

Daybreak, which was sent out by *Simmons & Co.*, Geneva, Ohio, is, taking it altogether, I think, the best variety that was ever disseminated. It seems to do well generally, very seldom do we see it under any other conditions than that of giving entire satisfaction. It is true that *Miss Joliffe*, an old variety imported from Europe, is somewhat similar in color, but the flower is not nearly so well formed nor is the plant so strong a grower as *Daybreak*. Respecting rust proof varieties, with me, *Daybreak* has always been without rust, but I regret to have to say that I have grown several varieties which were not rust proof; and I also regret to have to say that I have seen rust on *Daybreak* on other places. And I am of the opinion that under certain conditions all and every carnation will take rust, no matter how carefully the breeder may lay his plans.

The variety *Fred Dorner* for a while promised well, on account of its large size and erect stem, but it is gradually going out of cultivation. It had a bad tendency to burst, and its coloring was not sufficiently brilliant to satisfy the flower buyers.

The variety *Wm. F. Dreer* is a very large flower, and, if I recollect right, is the result of a cross between *Century* and

Buttercup. This variety I have used in many of my operations in trying to produce a yellow flower, thinking that its pedigree might have an influence on the progeny; but I regret to have to say that there were no satisfactory results.

Edelweiss is a sport from *Chester Pride*, and like its parent was inclined to be a late bloomer. It never became very widely disseminated, as it is seldom or never seen in the advertised lists of carnations to-day. With me the flower came very much larger than its striped parent, but owing to its shy blooming character we had to discard it.

Grace Fardon for a while was quite popular, on account of its light pink colored flowers, but its diminutive size was its great drawback.

Mrs. Fisher was a sad failure for a long time about Philadelphia. It has never really got a strong foothold in the immediate vicinity of that city; but in some parts of Chester county it is largely used for summer blooming, and for that purpose it had no equal, so far as I know. But in and around Boston it is the most profitable white variety grown, I am told. It is also spoken of very highly in several other cities.

J. R. Freeman for a while promised well for a crimson, but its stem was so weak and it had such a tendency to the spot disease that nowadays it is seldom or never seen.

The variety *Dawn* was always very interesting to me on account of its unusually distinctive and very pretty shadings. It has been a fancy variety for a long time. It is now being superseded

by the Maud Dean; though similar in its colorings this is vastly superior to the old variety in every way possible.

Of the novelties sent out last year, Goldfinch has some good points. It has stout erect stems, and it is a free bloomer; but it has the fault of not being bright enough in color, according to the fancy of flower buyers.

The variety named Lois J. Haettel has made many friends on account of its free blooming qualities, its deeply fringed petals and exquisite fragrance. It, however, failed to grow freely for me, and I had to discard it.

The variety Nancy Hanks has some good points. It is similar to Edna Craig in some respects, and like that variety is not constant in its coloring. It lacks that delicate touch of color which is so essential in these light pink varieties.

The J. J. Harrison, on account of its delicate markings, has held its popularity for a long time. Its tendency to split its calyx is its one great fault, and has been the cause of fewer of that variety being grown the past year than formerly.

Great things were expected from Hector. We were told when it was first sent out that it was not only the best scarlet carnation, but was pronounced one of the very best carnations ever raised. We naturally expected great things from that variety. But alas! it had its faults. The flowers failed to open; it had a sleepy shriveled look, and the majority of the flowers were not salable, so that it had to go. But our good friend Elijah A. Wood prevailed on me to give it one more trial. I shook my head in doubt, but could not resist our friend's enthusiasm, and in due time a hundred very fine young plants of Hector were received. They were planted in due course, attended to as the rest of the carnations are in the field, and were lifted in the fall; and to-day they are as fine a looking lot of carnations as any person wishes to see. Now what is the cause of this difference? The flowers, for the most part, open well; it is of a good form, and has quite a long stem, and the plants are vigorous and thrifty growers. A very, very few of the flowers show the same tendency which they had the first and second year that I tried it.

Everybody who grew carnations twelve or fourteen years ago remembers the variety Peter Henderson, which was disseminated from Louisville, Ky. It was raised by a florist in Rochester, N. Y., who obtained the seed from Alegatiere, France.

Hinsdale is another old variety that most of us remember. If I am not mistaken it was said to have been a sport from Degraw. It had certainly the habits of Degraw in some degree; but the flower was faintly tinted; so also was Degraw at some seasons of the year. Hinsdale was a great favorite in New York for some years, but rarely seen in these days. [Mr. C. H. Allen, with whom Hinsdale originated, stated during the discussion which followed the reading of the paper that it was a sport from Peerless.]

Old Hinze's White is still grown to a limited extent, and it has been productive of quite a number of seedlings. It has as good a constitution as any variety that we have to-day. I have seen this variety rot off very badly, though, in the field in the summer; especially was this the case if the season happened to be damp and the situation low, and the soil of a stiff clayey nature. I have seen as good flowers cut from this variety as any variety that we now have, but it fails to flower early enough in the season, making it too late to be profitable.

Iago is a very pretty crimson flower, but am afraid it is rather undersized.

Jacqueminot was terribly affected with rust, and although it is a very pretty color and flowered freely enough in the early part of the season, it hardly flowers free enough under the treatment which I am giving it at present to be profitable. Will try it again next year under different treatment.

Helen Keller. I hesitate to say much about this novelty of last year. I can, however, say for it, that it has sold for more money, I think, for a variety that is in general cultivation, this past Christmas, than any other variety that has gone before. (This statement refers, of course, to Philadelphia). We ourselves sold six hundred of it at eight dollars per hundred. Some growers have difficulty with this, I hear. I have received some complaints, and I have also received many pronounced compliments regarding it. My plants look fairly well; but Mr. Totten of Saratoga Springs, N. Y., states that his plants are double the size of mine. I would certainly like to see them and learn the secret of his success. I do not hesitate to say that Helen Keller is the best formed flower of any that is in commerce, and it is also performing a mission. It is breaking down that old and prejudiced notion that a carnation to be popular must be a solid color. That notion originated when very few other kinds than white carnations were used, and then only in funeral work and made up floral pieces. Whoever objected to Buttercup because it had stripes in it? I never heard any objections; and the longer we grow carnations the more these old ideas will give place to more rational ones.

Adelaide Kresken promised very well. I have seen some magnificent flowers of this variety, and it certainly is worthy a trial.

The white variety Lizzie McGowan, I believe, is more largely grown than all the rest of the whites put together, though this variety fails to give entire satisfaction around Boston it is said, and so far as I could learn the Silver Spray is better appreciated in the west than is Lizzie McGowan. But the number that is grown about Philadelphia and New York certainly testifies to its value as one of the most profitable varieties that can be grown.

We have some of us had a great deal to say about Lady Emma, which was sent out a great many years ago by Mr. Chas. T. Starr. How that variety could have been mixed up with Portia I can not understand. No two varieties could be more distinct than were those two. I do not believe it is possible to find a true plant of Starr's Lady Emma in existence to-day. The foliage was more green than any other carnation that I remember, whereas Portia has a pronounced bluish cast. Lady Emma was more dwarf in its growth than Portia. The flower stems did not rise up from the plant in the same way as they do from Portia. It was short lived on account of its tendency to spot.

The white varieties L. L. Lamborn and Wm. Swaync have been favorites with both growers (especially the first named variety) and persons who bought flowers, for quite a while, but it is not every florist who can grow them successfully.

Old La Purite has gone, but its memory is still dear. I have counted on plants of that variety from one hundred and twenty to one hundred and fifty flowers and buds on it at one time; this was many years ago. I question whether any variety can

beat that in these times of progressive horticulture. There are a great many varieties now in cultivation that can not even approach that number.

Ferdinand Mangold for a long time has puzzled me. When I first saw that variety ten years ago—I suppose—it was a flower that appeared to be very full of petals, so much so that they generally burst the calyx. The next time I saw it, five or six years afterwards, I could hardly distinguish it from Anna Webb. I sometimes think that there has a mixture taken place here, and that Ferdinand Mangold is lost, and Anna Webb and Ferdinand Mangold as seen to-day are one and the same thing.

I do not hear any more of May Queen. It at one time was a great favorite in New York. Beautiful rose colored flowers, long stout stem, and a good shaped flower, choice blooms of which would sell very readily to-day. I see, however, that it is still being offered by some catalogue men under the name of Fred Johnson. This is unfortunate; Fred Johnson is a red variety. I question whether the true Fred Johnson can be found in cultivation to-day.

Strange as it may seem, three distinct varieties of carnations have been named Meteor. One is being disseminated the present season. The first Meteor that I recollect was in the early seventies. I am not quite sure who raised and disseminated it, but I am inclined to think that it was the old veteran Mr. Chas. Zeller. It was a good sized flower, though hardly pretty in color, as on close examination the flower appeared as though it was streaked with a pale shade of red, something similar to a more recent variety called Lulu. The next variety was a Philadelphia seedling, though it did not get very far under the name of Meteor, as it was discovered to be identical with one named Philadelphia. Philadelphia was allowed to take precedence; and the name of Meteor was dropped. The Meteor of to-day, of course, we can not say anything about, as it has not yet been disseminated. It appears to be a very promising crimson variety.

I forgot to say in passing that from the same seed pod from which Buttercup was raised one by the name of Venus and another by the name of Duke of Orange also came. Buttercup, however, is the better variety; the Duke of Orange was much smaller and not as good a yellow, and not as many petals in the flower, and the markings were more inclined to be crimson than scarlet, rendering it less bright and attractive. Why I wish to embrace Duke of Orange in this class is because when I grew it many years ago I never found any pollen in its flowers. I hunted for several hours one day over a bed of it without finding enough to use for pollinizing one flower.

This brings me to an improvement over the Duke of Orange, the Myrtle. The flowers are larger, there are more petals, and it is in every way of better form. I believe it was raised by Isaac Larkin of Chester county.

Nicholson, another of last year's novelties, promises to be a useful variety. It is a strong grower, and a large flower, and comes close to the useful pinks in color. The same may be said of Ada Byron, both of which are seedlings raised by Wm. Nicholson.

Some few years ago Mr. Zirngibel distributed a white French variety by the name of Miss Moore. It appears to me that the flower of Miss Moore is the most perfect in form of any variety that we

COSTA RICA. COFFEE TREE IN BLOOM.

now have, and it certainly would be an excellent one for seed saving purposes. It is so beautiful in form, which is one of the essentials that we are striving for in our better class of flowers, especially as we are endeavoring to raise carnations up to the very first class.

I incidentally mentioned Chester Pride, and I wish to add that I believe this variety has been in cultivation as long, if not longer, than any other variety now grown. It speaks well for its constitution, and for that reason it ought to make a good one for seed bearing or pollen producing purposes.

I referred above to Edna Craig. This variety certainly was disseminated under very auspicious circumstances. It was advertised thoroughly and well, and promised to be just the pink variety that we were all looking for; but it also took upon itself a disease which has not to my knowledge been identified. We do not know whether it was bacteria or spot; but whatever it may have been, it was a great misfortune, as it promised well. It is seldom seen now, though a day or two ago a grower informed me that it was doing better for him this year than it had ever done before.

Another delicate pink variety that promised well a year or two ago was

Fred Creighton. It was rather a tall grower, a fine flower, though it was rather late coming into bloom. The crops cut from it averaged fair, but it seems to have entirely dropped out of cultivation. It is very seldom offered for sale, to my knowledge, at the present time, excepting in California.

Crimson Coronet also promised well. It is a variety that could be planted close together, because it makes very little grass. The stems are stout and erect, but it has recently taken on a tendency to become streaked, which spoils all colored carnations. The flowers are not now of good color, and are altogether too small for present requirements.

In the efforts of the seedling raiser to bring out a variety to supersede Grace Wilder there has been more delicate pink varieties raised, I think, than all the rest of the colors put together.

This brings me to another Chester county seedling, by name Grace Darling. It certainly promised well, the flower was of a cheerful though delicate color. It was of good size and good form, but it became stricken with the spot, which I fear has checked the career of more promising seedling carnations than all the rest of the causes put together.

I certainly ought to have spoken of

Grace Wilder before Grace Darling because I am inclined to think that Grace Wilder has been more largely grown than any other variety that we have had. It is a color that is popular, and the variety has done fairly well, generally. Its flowers, of course, will come streaked; but I am afraid that we shall never be able to raise a pink or any other colored carnation that will not take on that streaky appearance, until we improve our methods of culture.

The variety Grace Battles was raised with the object in view of trying to supersede Grace Wilder. For a few years it produced flowers that were uniform in color, and I am free to say that it was the most beautiful color, at its best, of all pinks. It, also, produces some streaky flowers in these days. This is the variety before referred to that was afflicted so badly with rust, and it was this variety that taught me that it is necessary, if we wish to attain the best results with some sorts of carnations, that we must grow them under glass all summer; for this reason, if for no other, I shall always hold it in grateful remembrance. No carnation produces more flowers, I believe, from a given space than this variety does. Mr. John Burton has two houses almost entirely filled with it. They are just one mass of buds and bloom the whole winter season. They were grown under glass all summer.

A variety called Old Gold was sent out a few years ago, and I admired its color, because it was very much like that of the old Safrano and the Sunset roses. It, however, failed to flower sufficiently free, and it had to be discarded. I tried it for seed raising purposes, but did not get anything from it worth holding over for further trial even.

Orange Blossom is being grown a little more now than I think it was a few years ago. We are getting good reports from it from different parts of the country. It is white, shaded in the centre with salmon pink. It is distinct from either Maud Dean or Dawn, inasmuch as the petals are fringed, whereas, in the two varieties before named they are not.

Philadelphia I have already referred to. In habit of growth it is very similar to what we now have as Portia, but the flower was not nearly so bright a scarlet as Portia is to-day. It would appear almost that their origin was similar, as they had some points in common, habit of growth and so forth. There was also another Philadelphia. Mr. Starr had one which was variegated. It was dwarf in habit, and free blooming, but met with little sale, as its advent was in the seventies, when variegated flowers were not popular.

Mrs. Carnegie has a great tendency to burst its calyx. It is considered a good pot plant. By the way, Mrs. Carnegie was one of the parents of Helen Keller, and Peter Henderson or Hinze's White was the other, I forget which.

Emily Pierson is a valuable red variety where it succeeds, but it does not do universally well in all places. It has the appearance of being closely related to General Garfield.

Louise Porsch, yellow striped with red, came out about the same time as Lizzie McGowan, but owing to its tendency to one of the bacterial diseases, it never cut much of a figure in the cut flower world.

I have already referred to Portia incidentally on two or three occasions through these notes; and it is hardly worth while to mention it again, only to say that we are still looking for a scarlet carnation which has all the best charac-

teristics of the present Portia, with a flower twice or even four times as large. Puritan found favor with many growers for a while, but it is not as free a bloomer as Lizzie McGowan, being more inclined to be late. The origin of these two varieties is very similar; if I mistake not, they are both seedlings from Hinze's White, and according to the recorded pedigree of Alaska, these two are parents of that variety, which is to be sent out this year. Some raisers of seedlings would not use varieties so closely related as these two appear to be for seedling raising purposes.

One of the most popular varieties that we have is Wm. Scott. This is the one that all seedling raisers were looking for to supersede Grace Wilder. Under artificial light it is a beautiful variety. It is popular with the flower buyers and the retailers, and also with the growers. If Mr. Dorner had not done anything else except to raise Wm. Scott, he has earned the gratitude of every carnation grower in the country.

There may be some among you who have not heard of a variety by the name of Seagull. It was a novelty raised by Fred. Dorner and owned by E. G. Hill & Co. It was brought on to New York on one occasion to compete for a silver trophy, and it was awarded the prize, winning it after a very hard race over Lizzie McGowan. There were others competing, but Lizzie McGowan and Seagull were the last two in the home stretch, the others being distanced early; I forget now how many there were in competition, something like twenty-five or thirty varieties, I am sure. But Seagull has hardly been heard of since. If I mistake not, a catalogue man bought it as being suitable for his trade. It was decided that the variety was of no value to the grower of cut flowers; not being sufficiently free. This goes to prove that the winners of trophies are not always the best varieties; but Seagull at that exhibition was certainly the best flower of the whole lot. Lizzie McGowan had been groomed and trained in great shape for this race, paper collars were arranged about the blooms while growing, and the petals stood out straight. We do not see Lizzie McGowan in that form to-day, because nobody goes to the trouble to train her for exhibition purposes.

Mrs. Henry M. Stanley is a sport from Buttercup. It is very distinct from its parent. The coloring is more of a fawn and scarlet than is the old variety, and the flecks or markings are larger; and one very distinguishing characteristic is that the Mrs. Stanley is fragrant, whereas Buttercup is not.

It has always been a surprise to me that Starlight was never grown more plentifully than it is. It is a sport from Hinze's White. It is a delicate shade of yellow, and I have never yet seen any streaks of pink, which are so characteristic in the coloring of the parent variety. I am also inclined to think that Starlight is an earlier and a freer bloomer than Hinze's White; but perhaps the flowers of the former are scarcely as large as are those of the latter.

Everybody has heard of the winner of the Gold Medal at Indianapolis last year. The Stuart carried off that coveted prize. The flowers exhibited on that occasion were certainly fine. They were bright in color, of good size, and on stout and erect stems; but very few of us have been able to duplicate that vase as exhibited by the originator. I tried a few of this variety under glass all summer, and what few flowers I am cutting now are equally

as good as those which took the medal at Indianapolis last year; but it is scarcely a free enough bloomer to make it profitable the way I grow it. However, it will be given another trial.

Sweetbrier, a novelty of last year, has not given very general satisfaction. It, however, I think, will be given another trial by most carnation growers on account of its delicate coloring.

Tidal Wave was the successor to Century. It is similar in color to the old La Purite. It is a great favorite in the west.

I tried Uncle John under two methods of treatment, the one hatch have been thrown out long ago as worthless, being affected with bacteria so much that there was no profit in it, as the flowers were so poor. The batch that I planted under glass all summer have produced some excellent flowers, and I shall continue to grow it under that plan on a much larger scale next year.

White Dove is an improvement on old Degraw, and I find it very useful, as being a free bloomer, though the stems are not as stout as they ought to be. The flower is prettily fringed and very fine in form.

Thomas Cartledge in its line of color, one difficult to describe, but similar though darker than La Purite, I think, is one of the most free blooming in cultivation. It is one of Edward Swayne's productions in his early efforts at raising seedlings.

Annie Pixley is of beautiful form, and a very delicate pink in color, but it is hardly free enough in blooming, nor is it large enough in size.

Carnation Notes.

The address of President Dailedouze at the convention was full of excellent suggestions, which if adopted by carnation growers and disseminators would be greatly to the advantage of the trade in general. One feature that attracted my attention more than all the rest touched upon a phase of carnation culture wherein I had failed to obtain satisfactory results, that is the growing of the plants inside all summer. Mr. Dailedouze is of the opinion that inferior sorts, those unworthy of dissemination, even very poor varieties, can be made to produce very fine flowers if grown inside during the summer, and for that reason a distinction (as I understand it) should be made between those grown inside and those grown outside, unless the former should have been sent (as suggested at the meetings) to different sections of the country for trial before being placed upon the market. I agree with the president in so far as seedlings are concerned, for no seedling should receive a certificate that is not going to succeed in a majority of localities, and rules governing this point should certainly be adopted before the next convention. If the statement of Mr. Dailedouze is based on actual experience, and it has been proven that comparatively poor sorts will thrive and become remunerative when grown wholly under glass, then must we admit that a change in the culture of carnations is bound to come, and that as in the case of the rose and "mum" field culture is in the near future to be done away with. The Buttercups shown at Boston demonstrated fully the fact this sort is much better grown inside. There are a number of other sorts which make roots similar to Buttercup, and which receive so great a check when lifted from the field for planting inside, that many of the plants die, and the balance produce but poor results until late in the winter. Possibly this is the reason why Albertini and The Stuart have failed with most of us. Would it not be well to give

them a trial inside during the summer? I grew Albertini one season inside and failed, but that is no reason why others should also fail, and if this sort can be made to produce flowers early in the fall it would be a very profitable sort to grow. It seems to me that a test of this matter (inside culture) should be thoroughly made by every grower to fully bring out the facts. Mr. Lonsdale has proven that an old variety which many have discarded can be well grown in the manner stated. Many prominent growers have asserted that certain varieties have lost their vitality and are no longer fit to grow; possibly this is a mistake. If one old sort can be rejuvenated why not others.

I do not think that any discrimination should be made in awarding prizes to any class but seedlings, for the reason that if a grower is smart enough to take an old sort and by a higher cultivation produce flowers that will outshine new and supposed better sorts he should receive not only the prize offered, but he is also entitled to a special mention of what he has been capable of doing. Many a man has been obliged to give up growing carnations simply because he had no fields to grow his plants in; if he was aware of the success obtained by several growers during the past season with inside culture he would be able to go at it again. It is possible that the advantage of inside growing may be confined to such habits of growth as that of Buttercup; this point can only be demonstrated by a general test all over the country. The quicker growing sorts, such as Scott and Daybreak, may not thrive as well inside, but I will state here that I had a magnificent growth on Scott when I grew it inside; the only trouble was the blooms came late. Some claim that Daybreak will be troubled with red spider if grown inside; this is a mistake, for during the summer you can get all the moisture you want inside. Can you get the same results outside? I guess not. The greatest drawback to this new method is that good flowers bring fair prices until late in June, and to get the best results the benches should be replanted in early June. I have stated several times that I would not advise inside growing, and mainly for the drawback stated; if I have made a mistake I am more than willing to be corrected, and will be one of the first to adopt methods which others have proved or may prove better than mine.

CHARLES H. ALLEN.

Miscellaneous Seasonable Hints.

It is time now to start your big lot of cannas. You can cut the roots up into small pieces, being sure that you have one eye or lead to each piece. You need not pot them right off, but can put them in flats with 3 or 4 inches of soil, or on the bench in a few inches of soil. If in flats place the flats on the pipes where the heat is not too fierce; if on the benches pipes should be beneath it, and they will start much quicker. Sand is just as good and better than soil for starting them. By this means you save a great deal of room, which is now very valuable. When they have grown 5 or 6 inches and are well rooted they can be put into the pots in which they are sold, a 4 or 5-inch. Caladium esculentum does not want to be started yet; the end of the month will do for that, but the same treatment is the most economical way to start them. They will, if put into pots in soil and stood on an ordinary bench, remain sometimes for weeks without

COSTA RICA. CACTUS ON A ROOF.

starting, but in warm sand they jump at once.

You are sure to be very crowded now with Easter stuff, and will get very little relief before the 14th of April. Yet you must be propagating, and lose no chance to increase your stock of coleus, achyranthes, heliotrope, and many other bedding plants that will be wanted in May. About the middle of the month be prepared to sow asters, Phlox Drummondii, ten week stocks, and other annuals for summer flowering. You always want some *Cobaea scandens* for a cheap summer climber. Sow it within a week or two. You can raise *Ampelopsis Veitchii* quite as easily from seed as from cuttings. Seed sown now or even a month later will make the best of plants for planting next September. There will always be a demand for this beautiful hardy plant, for although almost overdone in some cities, notably Boston, in many smaller cities it is little known. Tree peddlers sell it to your customers for \$1 each. There is lots of money in it for the florist at one-third the price.

Mignonette should now be sown for spring sales; it is a difficult plant to transplant, and is best sown a few seeds in a 2-inch pot, and when up thin out to one, two, or three plants as you wish. In April they can be shifted into a 3 or 4-inch pot, and there is no place like a mild hotbed for growing them.

What is uppermost in the mind of most florists just at the present time is how to get his Easter crops in at the right time. Easter Sunday is the 14th of April, about three weeks later than last year. Many things have to be taken into consideration in timing your crops for this important occasion. The two weeks we will have in April this year will very probably be worth four weeks of March in bringing many things into flower. Particularly is this the case with bulbous stuff, which is an important item at Easter time. The winter has been very severe, freezing down through the ordinary covering of litter and soil with which the bulbs have been covered, and keeping them in a perfectly

dormant state. I remember well about 9 or 10 years ago that Easter came as late as the 24th of April. The tulips and other bulbs were almost ready to flower when taken from the beds about April 1, and I had great difficulty in keeping them back till they were wanted. The next year Easter was three weeks earlier, and only allowed about 16 days from outside to time of flowering; the consequence was I was about three days behind time. Since that I have learned to consider the season and reason accordingly. This year I would say allow from 21 to 24 days for the single tulips, a few days more for the early double tulips, and a few days less for daffodils. If you have them in the houses thawed out 21 days before Easter you will have them under control. It is not desirable to use much heat in forcing tulips, etc., at this date, and three weeks will bring them along very naturally in a night temperature of 55°. Dutch hyacinths, if they have been kept from growing by frost, will come along nicely in three weeks. If they have been kept from freezing they will have made progress towards flowering, and should only be brought into the greenhouse two weeks before Easter. Of late years the Dutch hyacinth has been an important plant at Easter, cheap but in great demand. You can use more than one device in forwarding or retarding your Easter crop of bulbs. Plenty of heat will quickly advance them if you are late, and if too early place the flats under the cooler benches. Direct sunlight adds quickly to their age. Don't get late with your Easter crop of valley; it will keep cut a week should you be a little early. Therefore allow four weeks from time you put it in the boxes. Hydrangeas always want pushing along for Easter. Never let them suffer from dryness, and a dose of liquid manure twice a week will greatly benefit them, for these pots are now one mass of roots. Spiræas should now be showing their flowers above their foliage, and will come along in plenty of time in a night temperature of 50°. Perhaps this is an unprofitable plant; it most assuredly

takes up a great lot of room, but the public like it, and after all it's soon grown and gone. You must give it room; copious watering, and no tobacco smoke is all that is needed.

I remarked once this winter that lilac took about six weeks to force; that was when I gave it a night temperature of 65°. Six weeks will do with a less heat, because we are approaching its natural time of flowering; alas, this beautiful shrub is not as fashionable as it once was, but good hushy plants covered with flowers must sell, and they can now be bought prepared for forcing, and will force as easy as a deutzia. I am a little late reminding you of this, but five weeks in a good rose house temperature will get them all right.

Cytisus is inclined to be a little early for Easter this year, and is showing its bright yellow flowers. It will stand anything but a freeze, so you can manage perhaps to keep it very cool to within two weeks of Easter. Of late years the azaleas have cut a big figure at Easter. An azalea that will sell for \$2 to-day will easily sell for \$3 on Easter week, and larger plants at the same ratio. Unless kept in a frame where heat can be turned on when actually necessary just to keep out the frost, it is hard work to keep some of the best varieties back for Easter. And nearly all varieties will want a very cool house. The queen of azaleas, Mme. Van der Cruyssen, all things considered, will be about right, while the beautiful variegated blush pink and white *Vervæneana* is too early. Never mind the variety; you can judge for yourself by the condition of the buds whether they will be too early or not. Remember the azalea will thrive at least for a time in a temperature just above the freezing point. You may have a cold frame sufficiently protected that no frost would enter; that would do, or you could do as I have done, put them under a cool light bench. It will make just sufficient difference to their time of flowering that you will get them in when everybody wants them. I have often before recommended this use of the space beneath the bench, and will say now that if the bench is not too low and a fair amount of light gets there an azalea will thrive as well there for a few weeks as it would on top of the bench, especially in a cool house. The azalea is a truly hard-wooded plant, and the above treatment will not hurt it in the least, while a soft wooded plant such as geranium, cineraria or primula would be simply ruined in a few days under such conditions.

And now we come to the most important plant of all the Easter trade, the *Lilium longiflorum* and *Harrisii*. Many are just in the quandary that the writer is and not sure about anything in particular. It very largely depends on the weather. I would like to see the buds (at the time you see these notes) showing themselves distinctly, and each bud about an inch long, or the largest of the group that size; then I would be sure that whatever weather came I would have them under control. If you want all your lilies to be in sight at Easter you can do it, providing you have houses of different degrees of heat, but it will be at the expense of lots of moving, and don't think that incessant moving is too much labor, for you will get twice the money for the plant at Easter that you will two days after.

WM. SCOTT.

Vegetation in Costa Rica.

We present in this issue a number of interesting views of plant life in Costa Rica from photographs kindly supplied us by

Mr. W. N. Rudd of Mt. Greenwood, Ill., who has a relative living in that Central American republic. The pictures tell their own story of vegetable life in that tropical region.

A Flatbush Incident.

"Are you going to Flatbush Thursday afternoon?"

"What's going on?"

"Bowling. New York and Flatbush. The Flatbush boys have invited us over to Bantle's alleys. You'd better come along; we'll have a good time."

"Guess I'll go with you." And they went and they did have a good time.

The New Yorkers got there first and indulged in a little practice game to get the "lay" of the alleys. There were Keppler, the great spare maker, Leuly, who always carries his own special ball with him, Burns, who can tell everybody else how to do it, Dihm, the human foghorn, Wullie Elliott who came "just to look on, you know," Happy Hafner and several others of equal renown. About five o'clock the Flatbush aggregation trooped in and after a few minutes of social intercourse the teams were chalked up and the pins began to fly. And when they had concluded, this was the score:

NEW YORK.	FLATBUSH.	
Keppler 181	Mellis 180	
Roehrs 155	Bennett 156	
Dihm 132	Dailedouze, P. 104	
Stewart 94	Riley 159	
Hafner 152	Dailedouze, H. 99	
Plumb 116	Shaw 121	
Storm 113	Zeller, A. 166	
Burns 145	Dailedouze, E. 134	
Leuly 133	Keller 100	
1221	1219	

The score was tied at the end of the eighth frame and from that time excitement ran high until it was finally announced that New York had won by two pins, whereupon Flatbush gave cheer upon cheer for the victors, who in turn responded with equal enthusiasm, and it was pronounced the hottest game on record.

Supper was the next thing in order and soon the company was seated at a well laden table, the New Yorkers on one side, their hosts on the other, and at the head, Flatbush's honored president Charles Zeller, who said "I am always glad when I see a long family before me, for I have always been used to it," and extended a kindly welcome to the visitors, complimenting the fraternal feeling which found expression in such gatherings, without which a man might as well be in the deserts of Africa. Alex Burns responded on behalf of the guests, paying a high compliment to the Flatbush florists, whom he had known for twenty-five years, and the longer he knew them the better he liked them. J. Austin Shaw being then called upon for his customary contribution proceeded to read the following original verses:

I dreamt a funny dream the other night;
'Twas Thursday night, when I came home from
bowling.
Perchance 'twas caused by merry balls a rolling,
Or possibly a gaunt and ghostly sprite,
Or goblin grim, that o'er my bedroom hovered;
Or was it the effect of banquet rich?
Of salad, ham, tongue, beer and milk, and "sich"
That all my senses 'thrilled, my eyelids covered?
I cannot tell; but this I know full well,
I slept and dreamed the live-long night away.
I really thought I'd left this earth to stay.
Transported was I sure, to Heaven or—well;
Which country 'twas I leave you to decide
After I've told you all my wondrous story,
And taken you with me for a pleasure ride
Adown the fragrant, verdant streets of glory.

It seemed, at least one hundred years from now:
When these tired bones of ours had turned to soil

We'd laid aside the shovel, hoe and plough,
And rested all, from every kind of toil.
No longer sat we up through dreary night
To feed the greedy furnaces with coal;
No hail, no cyclones did we have to fight,
No yearly reckonings found us, "in a hole."
I asked the man called Peter, at the gate!
When I arrived up yonder, somewhat late,
If he would kindly, quickly lead the way,
To where the Flatbush florist bowlers stay.
At once with plumed wings, and willing feet,
We ran and flew adown the golden street,
And in the suburbs, where the flowers bloom,
And where, he said, "there's always lots of room,"
There, in the very work they loved the best,
Up in the region of eternal rest,
I found them all, from Papa Zeller down,
Endeavoring, as on earth to "paint the town;"
By this of course, I mean to beautify
Their well won heritage up in the sky!

"Peter," said I, "whose lovely spot is this?
"What splendid trees, and vines, and pansies rare,
"And oranges for all, and some to spare;
"This family must be having lots of bliss!"
"Ah yes!" he said, "this is Pop Zeller's place;
"You'll know him by his gentle, patient face,
"And that that thin angel there's his good boy
"Alf."
"The fat one is Emile, too fat, by half.
"We're trying to melt him down, so he *can fly*.
"I fear we'll have to send him *down* to fry.
"What brilliant farm is this?" said I to Pete,
As we flew over miles and miles of bloom
All planted out by rule, so straight and neat,
"These fellows surely asked for lots of room!"
"Yes," Peter said, "those cusses *are* ambitious;
"They kicked because we couldn't give 'em *all*.
"I thought at first they acted rather vicious,
"But still, you see the plat they've got 's not
"small."
"And then they grow splendid looking 'mums,'
"Such lengthy mignonette, and heavenly Beauties,
"And when they are around, all business hums,
"And they attend so strictly to their duties,
"That we concluded at our last big fair,
"Alter a good deal of deliberation,
"For flowers tremendous—large, and rich, and rare,
"The finest in all our heavenly nation;
"To give them twenty prizes, more or less,
"And after this we'll *manage* them I guess."
"As to their names, why ask, and what's the use?
"All heaven knows the brothers Dailedouze!"

Still further flew we, till aroma sweet,
Caused us to settle down, and at our feet,
Full fifty thousand, thousand, thousand pinks,
And fields on fields of lovely maidenhair,
Enough to make a bachelor angel swear;
And cinerarias, rarest grown, methinks,
Unfolded to our interested eyes,
And filled me full of wonder and surprise.
I knew at once George Bennett had been lucky,
He always was so jolly and so plucky.
"Well George," says I, "so here you are again;
How goes it?" "O!" said he, "I can't complain,
"You see I've got new houses here, old soul,
"And it doesn't cost me anything for coal."

The next place where we lit just made me holler,
The violets! larger than our silver dollar!
And nothing else but violets, everywhere,
Enough to make an angel stop and stare!
"Holloa there, Uncle," Peter shouted loud,
"Raise up thy head and rest thee for awhile,"
But Julius answered with his gentle smile
"No Peter! two is company, three's a crowd."
"I'd rather work right on till time for dinner
"Unless that is a female angel, Peter,
"And if so, I'd leave heaven itself to greet her,
"Even if I had to suffer like a sinner."
"I always was on earth, so fond of ladies,
"I often wonder why I'm not in Hades;
"Where's Herman?" Said I to my ghostly guide
"O! he's gone to the city: 'on the sly."
"A million violets for some angel bride
"He must deliver to her! She is 'fly!"
"No telling when he will get back; that Herman,
"Especially, if that woman is a German."
"What do you folks, in heaven think," said I,
"Of these two daisies," Peter did reply:
"Well stranger," said he, "we hope they are all
right,
"And we know their violets are out of sight,"

"I see a Scotchman yonder, Peter dear,
"Who looks familiar, isn't that our Dave,
"Braw Davy Mellis? Lived he near a grave
"Yard, where ghosts oft times did appear?
"I knew him well! He grew such coleus rare,
"Excelled by none, and equalled but by few,
"Now that you have no grave yards anywhere
"What do you find for honest Dave to do?"
"Hey mon! hoo' are ye noo, and how d'ye feel?"
And Dave gave me the same old vigorous clasp
Of good right-hand, and said, "how can ye ask?"
And quick responded—"O! I'm vera weel!"
I found in talking over good old days,
That David's work was laying out the borders
Of all the streets up yonder; and it pays,
For he declares he's "over run with orders."

"Have you a lively handsome youngster handy?
"A lad called Keller, always drest so neat?"
Said Peter, "I should say so! He's a dandy,
"But he can never get enough to eat."
"There sits he neath that Aren Luise's;
"He and his father grew great palms down yonder,
"Their duty 'tis to give the angel's bossons,
"In cultivating palms. (We made no blunder)."

We flew for miles, and great was my surprise
And glorious was the scene for gods or men.
When suddenly, upon my ravished eyes
Burst oceans vast of mammoth cyclamen.
"Ho! Ho!" said I, "No no need for information,
"I know Gus Bergmann can't be far away
"This surely must be that old bachelor's station,
"And from the looks of things, he's here to stay."
No end could I perceive, no east nor west,
To Gussie's favorite flower on Mother Earth.
Of cyclamen he always grew the best,
He's got this job because of sterling worth.

A fitting end to my long voyage now,
Good Peter promised as we journeyed on,
I cannot tell you just exactly how
But almost while he spake there burst upon
My raptured visiou temples vast and grand,
"The finest," Peter said, "in all the land."
Filled to the doors with a bright angel crowd
And from their open portals, sweet and loud
There floated music such as mortal ear,
From noted songstresses will never hear,
"What think you is the tune the organist plays,
"None other than the dear old Marsaillaise;
"And who, the grand melodious solo sang?
"Twas brother Smutz! And how the rafters rang;
"Bon jour! Monsieur, Comment vous portez
vous?"

I flew around and whispered in his ear,
"Mon Dieu! ha! ha! tres bien! And is it you?
Let's go at once my boy and have swei beer."
"I've three old friends of yours down stairs,"
said he,
"They're practicing before they join their choir"
"And from the way they sing," he said with glee,
"I'll be some time before they go up higher."
No private grounds were good enough in heaven
For these experts; and they insist on singing,
And so the "Judge," Pete Hiltman and the tough
And brave Heit-Muller keep the arches ringing.
Just listen to the song these angels trill,
This lovely, heavenly trio, fat and wily;
Of it already you have had your fill,
That old familiar, "Hand it over to Riley."
"Oh! by the by!" said Louis, "won't you stay,
"We have a bowling contest here to-night
"You'll see the New York florist bowlers play,
"And we intend to beat them out of sight."

Just there, alas; and strange though it may seem
My vision ended, Lo! 'twas but a dream.

After the merriment over these verses
had subsided Mr. Plumb being called
upon sang the affecting story of the dis-
appearance of his grandmother's cat,
"the pride of the tiles," Mr. Stuart con-
tributed Annie Laurie, Louis Schmutz
regaled the company with a story, and
the climax was capped by the presenta-
tion to Messrs. Keppler and Mellis of two
enormous baked potatoes for having
made the highest scores, after which ad-
journment was made to the alleys once
more. The feature of the game that fol-
lowed was Mr. Leuly's successful strug-
gle to beat Mr. Keppler's record of 181 in
competition for the cigar holder which
Mr. Shaw had offered for the highest
score, and which Mr. Leuly won with a
score of 190. New York's lead in this
game was 173, but out of regard for the
feelings of the six gentlemen who failed to
reach the 100 mark the full record of
this game is consigned to oblivion. Come
again.

Boston.

The first ladies' night of the Gardeners'
and Florists' Club was a pronounced suc-
cess. The attendance was good and all
were delighted with the entertaining ad-
dress of Mr. Grove P. Rawson and the
musical program provided by Miss Min-
nie and Mr. Chas. J. Dawson.

Mr. Rawson's lecture was a witty and
at times mildly satirical review of his
experiences in the cut flower trade for the
past twenty years. His description of
the lady customer's tribulations with her
house plants, and the florist's tribu-
lations with the lady, was very funny and
undoubtedly true to life. He excited the
risibility of his audience when he asserted
that a florist who takes in such plants to
board and recuperate turns his place into
a sanitarium worse than any jag cure.
He "roasted" the department stores, the
crape pullers, the church fair and charity
festival fiends, the traveling nursery

agents and the commission men, offsetting the latter, however, with a compensating attack on the weaknesses of the retailer and grower from the commission man's point of view. The smell of the manure on violets, of tobacco on carnations and the live stock frequently sent in on the rose buds were enumerated among the many annoying things which the retailer has to contend with, and on the other hand the retailer's besetting sin was his indisposition to pay bills. The various phases of the business touched upon were well illustrated by witty anecdotes and dialect stories, and punctuated with short pithy maxims and precepts which indicated that the speaker had been keeping up quite a thinking during his twenty years of working. After the close of the lecture the musical entertainment was in order. Miss Dawson and Mr. Dawson were assisted by the Withington Bros. and Mr. Edwin Rich, who contributed vocal selections, and Mr. Dawson performed mandolin solos. Everything was good and encores were the rule. The ladies want to come again.

At the regular monthly meeting of the Massachusetts Horticultural Society held on Saturday, March 2, it was announced that a plan was on foot to have placed on the bank of Jamaica Pond, which is now a portion of the public parks, a memorial to the late Francis Parkman, the historian, a former president of the society. The lecture at this meeting was by David H. Coolidge, Jr., the subject being "A talk on gardens." He traced the development of landscape gardening from the time of the gardens of Babylon and of the Roman kings in the sixth century, B. C., and gave an interesting account of the beauties of ancient and modern, private and public parks in many lands. Concerning the desirability of paying more attention to the beautifying of home surroundings he spoke as follows:

"But parks are only a small part of our country, and their beauty alone can do little to make our great continent attractive or pleasant. The private homes, with large or small grounds, alone have the power to make our country beautiful as a whole; and it is to their owners that we must look for that development of taste which can produce general good effects. Nor is this an æsthetic question only. It is of great importance to the nation, for beauty and attractiveness in the home continually appeal to a man's better nature and keep him at home, where he finds the most genuine happiness. They sweeten his domestic life, they strengthen his character. I remember walking along a modest street in Liverpool, toward the close of a June day, when workmen were returning home from their daily toil. The street was lined with small houses, set back a little from the street, leaving a small area or garden in front. I was attracted to one for the reason that I could not look into it. An irregular screen of flowering shrubs grew just inside the fence and along the curved path so I could not see the house. My curiosity made me a trespasser. Within the garden I saw a perfect picture of happy domestic life, sustained on modest means. The house was placed on one side of the lot, thus leaving all available space possible for a lawn. A gracefully curving path led from the street to the front door, and between the path and boundary was a plantation of flowering shrubs; the rest of the ground was simply lawn, framed with masses of shrubs, having perennials blooming on the inner margin of the shrub beds. A few ornamental trees shaded the path and desirable parts of the lawn. The

house was of brick, the usual baldness being relieved by clinging vines. A tiny conservatory was upon the south side of the house, its open windows filled with flowers, among which the canary was singing. On the lawn a man, who had just left his lawn-mower, was sitting down to supper with his family. A feeling of contentment prevailed as pleasing to the mind as was the fragrant bloom to smell and sight.

"Large places are not liable to be neglected. What we need is to have the almost universal small places made useful and attractive by true art. No place with a few feet of ground is too small to be improved and made to exert a pleasure giving and refining influence. Too often we see a house in the center of a lot, with neither tree, shrub, vine nor other plant to indicate that the house and grounds do not belong to the highway. Good taste is not a difficult matter to acquire. Truth and simplicity are its foundation, but it does require a little common sense. Places are laid out with a view to their use and enjoyment."

Cut flower trade is fully up to the average for the first week in Lent. White flowers are in brisk demand, and at times there is a call for white carnations, which is filled with difficulty. Carnations continue to sell at good figures, nothing under \$2.50 and \$3 per hundred being obtainable. Good white roses bring all the way from \$8 to \$12 per hundred. Red roses feel the effect of the influx of a large quantity of Jacobs. These latter sell at \$6 to \$8, and many Brunners are disposed of at correspondingly low figures, although a certain proportion of extra specimens bring as high as \$25. Bulbous stock goes but poorly; daffodils, which have heretofore been good sellers, are hanging fire just as badly as the tulips this season, and the prices at which they are sold leave no margin for profit over the cost of the bulbs. The Dutchmen are here, however, in full force, and profess to have heard nothing drop as yet.

N. F. McCarthy & Co. have about completed the fitting up of their new establishment at 84 Hawley street, and are moving in this week. The facilities for conducting a large cut flower and supply trade in connection with the plant auction business are of the best. The main floor is 125x50, lighted with large windows on the front and the whole length of one side, and the basement is even larger, with well adapted vaults for the storage of cut flowers. Mr. McCarthy is to be congratulated on his energy and his good fortune in obtaining so fine a location.

Mr. John D. Twombly of Winchester has lost his son, a bright and popular young man of 18 years, who was taken away by pneumonia after a brief illness. Much sympathy is felt for Mr. Twombly by his associates in the trade.

Jackson Dawson reads a paper on grafting and budding before the Mass. Horticultural Society on Saturday, March 9.

Philadelphia.

Butler of Chestnut Hill astonished the boys with his fine Brunners the past week; they were quite up to date and a credit to the grower, the more so as it was his first attempt at growing hybrids. Since Lent set in business has been moving along quite lively; there seems to be demand for all good stock at fair prices. Good Brunners still bring \$6 per dozen, with the seconds a matter of a dollar or so below the asking price of \$3, according

to the skill of the buyer. All the large teas are selling for \$8 first choice, seconds \$4 to \$6; a few extras bring \$10 to \$12, but they have to be very fine. Beauties are not so good, and the best now bring \$5 per dozen; the majority, however, bring much less.

Bulbous stock is very plentiful. Valley is down; the best, and it is very good, brings but \$3. Harris, Craig and Penock of Lansdowne have fine stocks. Romans only are scarce, and good flowers would sell readily at \$4. Lukens of Burlington has very fine freesia, for which he gets \$3 per hundred. Carnations are plentiful, with signs of weakening. Good ordinary flowers, with few exceptions, have sold readily for \$2 since December 15, and extras \$2.50 to \$4, and it now looks as if \$1.50 for the \$2 kind would soon be the ruling price. Mignonne is quite plentiful at from \$1 to \$2. Violets are in full supply, too full in fact, and many are not sold; 50 cents to \$1, with a cut price by the thousand, is the figure. The last few days of warm or mild weather has begun to tell on the single varieties, and they won't last a great while longer.

The March meeting of the Florists' Club was held in the club room, the regular meeting room not being available. Pres. Lonsdale, who has frequently served as a judge at our exhibitions and elsewhere, is now doing duty as a jurymen. He was able to be present, however. There was a good attendance and much interest taken in the proceedings. Mr. J. N. May has kindly consented to prepare a paper to be read at the April meeting.

Aside from the able paper prepared and read by Mr. Michell on "Facts about florists' seeds" a resolution introduced to appoint a committee to receive and pass upon new, rare or interesting plants or flowers that might be sent to the meetings of the club caused the most discussion. It was mainly opposed by Mr. H. H. Battles, who thought the club would be liable to be used as an advertising medium, and that things might get the club's indorsement, which would eventually turn out to be worthless, and that the good name of the club would suffer thereby. Mr. Burton thought the club the proper place to have new things brought before the trade, and thought anything the club members would indorse would be worth growing; he would not be afraid of the judgment of the committee. The committee was finally appointed to take charge of and display anything that might be sent, but were not to pass judgment on the same. Anyone who has anything new or novel that they desire to bring before the florists of Philadelphia should send a small exhibit, express prepaid, to Robert Kift, 1725 Chestnut street, chairman of committee, and it will be acknowledged and placed before the meeting of the club. The meetings are held the first Tuesday evening of each month.

New York.

The Gould-Castellane wedding has been the leading event of the season, not only socially but from the extent and character of the floral decorations. One point worthy of note about the decorations as a whole was the almost entire absence of anything in the way of design work, graceful festooning and effective massing of flowers and foliage being depended upon almost exclusively. The top of the banisters of the staircase was covered with smilax so as to entirely obscure the woodwork, the sides were filled in with southern palm leaves dotted with Har-

risii lilies and Bridesmaid roses, with bow-knots of white ribbon appearing at intervals of four feet, the newel posts were banked with long needle pines filled in with roses and tied with white satin ribbon, and the red wall to the right of the railing was screened with wild smilax, which produced a beautiful effect. The entrance to the music room was through an archway covered with *Asparagus plumosus* and smilax filled in with callas, and the room itself was decorated and festooned with *Asparagus plumosus*, from which were suspended American Beauty roses finished with ribbons of corresponding color.

From the music room to the altar in the Moorish room where the marriage ceremony was performed ran an aisle formed of imitation rose trees about four feet high, at intervals of six feet, connected by loops of six-inch satin ribbon. These rose trees were made of Bride roses set in celluloid baskets. The fireplace in the Moorish room was banked with lily of the valley, cattleyas, *cœlogyne*, *phalænopsis*, *Odontoglossum crispum* and *Adiantum cuneatum*. The chandelier in the small alcove off this room was draped with valley and asparagus, and the room itself was festooned with asparagus and Bride roses. The archways leading from the Moorish room into the reception room at the left of the hall were draped with smilax and asparagus, dotted with Bridesmaid roses. The ceiling of the main hall for the entire length was screened with wild smilax and asparagus, from which depended Bride roses, and the walls were similarly draped with asparagus and Bermuda lilies. At the far end of the hall was a group interspersed with genistas, white azaleas and pink rhododendrons, forming a magnificent background. At the foot of the stairway the orchestra was screened from view by a group of large palms fringed with Bridesmaid roses. In the dome over the stairway hung a large chandelier from which depended garlands of asparagus dotted with Bride roses; these garlands were thirty feet long, and were carried from the dome right through, forming one continuous canopy from the library to the altar. The foregoing was the work of Alexander McConnell of 5th avenue. The decorations on the walls were all attached to wire frames filled with moss, thus giving full opportunity to work without the danger of injury to the walls themselves. It took a large force of assistants to accomplish the work, which was artistically executed throughout and superb in every way. From the Jay Gould greenhouses at Irvington, N. Y., the head gardener, F. Mangold, sent two flat baskets of mixed orchids and two of anthuriums and lily of the valley, the latter edged with Marie Louise violets.

R. L. Cottonet had the decoration of the dining room, which consisted of drapery of wild smilax thickly interspersed with Bridesmaid roses. The table decorations were executed by Siebrecht & Wadley. There were sixteen tables for the guests, each with a centerpiece of cattleyas and *Adiantum cuneatum*. The decoration of the bride's table was in the shape of the fleur de lis, outlined with *Adiantum Farleyense*, *Phalænopsis Schroderiana*, *Calanthe Turneri* and *Calanthe Regneri*. The top of the fleur de lis was composed of a groundwork of the new *Adiantum Capillus-Veneris imbricatum*, filled in with *Odontoglossum crispum* and *Cœlogyne cristata*, lighted up with miniature electric lights of two candle power. This was one of the most, if not the most elaborate table decoration

ever made in New York. The bride's bouquet, which was made by Mr. Cottonet, was composed of orange blossoms and lily of the valley; those for two of the bridesmaids were of lily of the valley and Testout roses, and two of lily of the valley and La France. The number of flowers used was in round numbers, 3,500 *Harrisii* lilies, 9,000 lily of the valley, 8,000 roses of different varieties, 200 callas, 1,200 yards of asparagus and smilax, besides wild smilax, palms, palm leaves and other decorative stock. The reporters for the daily newspapers were not satisfied, however, with this amount and took the customary liberties with the figures, it appearing from one brilliant account that the whole country from Boston on the east to Cleveland on the west had been drawn upon for every rose obtainable, and that even then the florist was in despair because he could not obtain all he needed.

W. H. Siebrecht estimates his loss from the effects of gas leaking into his greenhouses at over \$5,000. The loss does not stop with the Christmas crops of valley, etc., which were destroyed at the time the trouble first made its appearance, for although the leaky pipe from which the gas was found to come has been removed, he finds it still impossible to grow anything in the three affected houses, and has been obliged to abandon them for this season. The question of damages has not yet been adjusted with the gas company.

It is predicted by the supply men that the stock of Cape flowers will run short in this country the coming spring, owing to cautious buying on the part of American dealers.

Pitche & Manda have a new geranium, a sport from Madame Salleroi, which is a great improvement on that well known variety in habit and leaf. It has been named Jas. R. Pitche.

Palm growers about here report *Kentia Belmoreana* scarcer than for many years. The cut flower trade is in a state of partial collapse at present.

Mr. J. M. Keller of Bay Ridge has been confined to his room for a week with a sprained ankle.

Mr. A. V. Van Zanten, of Van Zanten & Co., Hillegom, Holland, arrived March 2, on a business trip through the U. S.

Montreal.

According to the usual custom here the owners of the principal conservatories in the city and environs invite the members of the Horticultural Society and their friends on certain days during the winter to visit their greenhouses. Your correspondent had the pleasure of visiting three places on February 23. The first was that of W. W. Ogilvie Esq., where Mr. John Walshe is gardener. A very good collection of plants is seen here, some fine specimens of palms and tree ferns, also some large pots of *Adiantum cuneatum*, *gracillimum* and others, a specimen of *Ficus variegata* eight and one-half feet high, a large *Medinilla magnifica* loaded with flowers, a great variety of anthuriums and various other choice species and varieties of foliage and blooming plants. There is also a nice collection of orchids, azaleas, camellias, deutzias, cannas, genistas, cinerarias, and a large quantity of bulbous stuff of very good quality; altogether the conservatory presented a very bright appearance, reflecting much credit on the gardener in charge. The conservatories of R. B. Angus, Esq., where Mr. Wm. Wilshire is gardener, was next visited. A very valuable collection of plants is seen here contained in two con-

servatories some 50 feet apart, and connected by an elaborate tiled subterranean passage. The collection of palms and ferns is truly grand. There are also a few good orchids; several anthuriums, some in bloom, some fine crotons and other rare foliage plants. We also noticed a large lot of hybrid *calceolarias* of very large size, which promise to make a fine show when in bloom. Andrew Allan's place, Jules Betrix, gardener, was next visited, but as it was getting late we could only spare time to pass through the immense string of conservatories and greenhouses to be found on this place. Everything looked fine in the conservatories; in the stove house some grand crotons were seen, also some of the best specimens of *Adiantum Farleyense* to be found in this city. In the greenhouse we noticed a fine bench of roses. Mushrooms are very successfully grown on this place.

A party of gardeners and florists to the number of thirty took a day's outing February 26. A sleigh holding the entire party, drawn by four horses started for Dorval at 10:30. The first halt was made at Colin Campbell's place near Lachine. Everything here looked fine, there are 13 or 14 houses filled with the various flowers and plants required for Mr. Campbell's store on Beaver Hall. Joseph Bennett's place at Lachine was next visited. There are two long houses of the healthiest and most prolific roses it has been our pleasure to see this winter, also a bench of perfectly healthy violets full of bloom. A large bench of sweet peas was also noticed. Several thousand young roses in the sand and potted off were in prime condition.

At Hanna's Hotel where lunch was waiting us an hour was spent, after which we headed for that gardener's Mecca, the greenhouses of the Forest and Stream Club, where our genial friend Tom McHugh rules supreme. As usual the conservatory was resplendent with bloom and such bloom! Almost everything that can be bloomed at this season is represented, and each plant a specimen of its kind, we will only make special mention of a plant of *Streptosolen Jamesonii* which is certainly the finest plant of the kind we have ever seen. The new seedling yellow canna grown by McKenna & Son is seen here to good advantage. Although Tom would have liked to keep the whole party all night we had to tear ourselves away after about an hour, turning again for the city. A short call was made on Charley Smith at Dawes' place at Lachine, where a magnificent display of good flowers is always to be seen. A start was at last made for home, the party arriving in the city at seven o'clock after a very pleasant day's outing. BEAVER.

FITCHBURG, MASS.—Mr. Geo. B. Andrews, a prominent fruit grower of this city, met with a shocking death March 5 in a saw mill by his coat catching the saw and instantly severing one arm and leg and cutting him in a terrible manner, causing instant death. He was a member of the Mass. Hort. Society and one of the most successful growers of grapes in the state, receiving many first prizes, and a special prize of \$45 for the successful cultivation of palms, and the same amount for Delaware grapes by the society at the fall exhibit. He was president of Worcester North Agricultural Society and a member of several orders, was 46 years of age and leaves a wife and two children, a son 21 and a daughter of 11 years.

S. WHITTON & SONS Wholesale Florists,

9-11 Roberts St. UTICA, N. Y.

Buffalo.

Nothing particularly new in town this week, not even in weather. The only variation in the latter is that two days in succession we have it 10 above zero and for a change the third day it is 2 below. Very like the Irishman's dinners, one day potatoes and salt and for change potatoes without salt. But "the sun is shining brightly, and somewhere children laugh and shout," and although it's not in Mudville we believe a good time is coming, and that very soon. Violets are now very plentiful and selling at truly popular prices. The terrible freeze prevented some of the growers from getting in their bulb stock for two weeks, and in at least one establishment there was a dearth. Carnations are now in good supply. W. J. Palmer is sending in some great Daybreak; this is yet the popular variety, and without doubt will be for some time to come. W. Scott is growing a small bench of Helen Keller at his houses at Corfu, and last week a view of them convinced him that this variety was and is all that is claimed for it. It is one of the largest if not the largest carnation in cultivation, a perfect flower, and has only to be offered to the public in good form to meet immediate sale. He says his plants, although received in the best of shape, and grown on had the misfortune to lay under an apple tree eighteen days of continuous rain, and then planted very late and followed by three months' drouth. He thinks with good fair treatment it is one at least of the four leading carnations of the day.

Mr. Simmons of Geneva, O., was in town introducing his new carnation Rose Queen. He does not show us any of the flowers, but as we know that Mr. Simmons raised Daybreak, Silver Spray, Portia, Harrison, Tidal Wave, and several others, we have only to bow and be polite and believe him when he says that Rose Queen beats them all.

President Adams has joined a West Side aristocratic bowling club, and was immediately made permanent captain of the same; his average for the first two weeks was 102 or 202, I forget which.

W. S.

Toronto.

Another snowstorm is now raging, with the thermometer in the vicinity of zero, obstructing the course of all trades more or less, but especially the florists' trade. What with storm and fire (three big fires within two months), this city is getting lots of excitement, but the price comes a little high. Lent is upon us again, but it does not appear to have so much effect upon the consumption of cut flowers as of yore; last week, although business was not exactly what one could call lively, it could scarcely be called dull either.

The new conservatories at the Horticultural containing the collection of plants presented to the city by Sir David Macpherson, were formally opened by Alderman Hallam, chairman of the Parks and Gardens Committee, on Tuesday evening last. A great crowd of people were present, who are reported to have enjoyed the evening immensely, but whether through a mistake or otherwise, very few of the gardeners or florists appear to have received invitations. The conservatory is a decided improvement on the old one, and in time as it gets filled up should be worth going into. Some more houses are wanted now to grow flowering plants to keep it gay and attractive, but Park Superintendent John Chambers finds it hard squeezing money

out of the city council for horticultural purposes, and I suppose we must be thankful for what we do get and wait patiently for more. E.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs not admitted under this head.

SITUATION WANTED—In a retail store by a young man of 26; best of references. Address

Address THE AMERICAN FLORIST CO., Chicago.

Our Special Spring Number.

We have decided to change the date of our special spring number from March 16 to March 23. This will be the most elaborate special number we have ever issued. If you have not already sent an adv. for it please send by early mail. No increase in adv. rates.

Your Spring Trade List.

Your spring trade list printed on a page of the special spring number of the AMERICAN FLORIST will go to every trade buyer in the United States and Canada (over 8,000) and will cost you only \$42. To mail a list of your own to the same number would cost you \$80 for postage alone, to say nothing of the printing, envelopes, addressing, etc. And the handsome special numbers of the AMERICAN FLORIST are always preserved, while your list (among the great mass of others with which the trade is deluged) might not be so lucky. We can save you money as well as giving you better service. Think it over—and give it a trial this year.

WE HAVE received a copy of the printed annual financial statement of the secretary and treasurer of the Gardeners' and Florists' Association of Toronto. It is a model, making everything connected with the finances of the organization perfectly clear. We commend the practice of preparing and printing such a statement, so that each member may have a copy to study at his leisure. We have no doubt that secretaries of other clubs may obtain a copy by addressing Mr. A. H. Ewing, Normal School Gardens, Toronto, Ont.

OBITUARY.

CAMILLE BERNARDIN, whose name is familiar to rose growers, died during the past winter at Brie-Comte-Robert, France, in his 64th year. M. Bernardin was one of the founders, and the first editor of the *Journal des Roses*, and contributed freely to the horticultural press. He was an ardent flower lover, doing much for the advancement of horticulture generally, and was a valued officer of numerous horticultural societies. M. Bernardin was a lawyer by profession, and prominent politically, being three times elected a member of the Conseil General of his district.

Bone Dust for Dahlias and Gladiolus.

"W." wants to know if "bone dust is good to apply as a fertilizer for dahlias, gladiolus and other flowering bulbs." The term "other flowering bulbs" is very indefinite, and let me remind "W." that a dahlia is by no means a flowering bulb, merely enlarged roots and a most gross feeder. I know of nothings scarcely that a farmer or a florist grows but what is greatly benefitted by bone dust as a fertilizer. Only last week I heard a gentleman (who certainly ought to know) say that bone dust was no good for carnations. Now contrary to his opinion I know many practical carnation growers who use bone dust liberally and grow fine flowers. The dahlia delights in plenty of animal manure, no plant more so, and the gladiolus also thrives best in a well manured piece of soil, but if you cannot get animal manure then don't be afraid to use bone dust. W. S.

Pink Swainsona.

I understand from old gardeners that there is a pink swainsona, which I believe would make a beautiful companion to the white, but I do not find it listed in any of the catalogues. Can someone tell me where it may be had? C. E. WELD.

N. DAMES,

OF THE FIRM

G. van der Horst & Co.,

BULB GROWERS,

Heemstede, - Holland,

Is on his round trip in America. Up to April 15th all letters and communications directed to G. van der Horst & Co., care of Knaut, Nachod & Kuhne, 13 South William Street, New York, will have prompt and careful attention. American Versus Foreign Glass.

I have read with interest the abstract of Mr. H. W. Gibbons' paper on the construction of glass houses which appeared in the AMERICAN FLORIST February 16. Evidently Mr. Gibbons understands his subject thoroughly, with one exception, which to my mind (perhaps a prejudiced one) is very important. He advocates the use of French or Belgian glass, double thick second quality, for the construction of rose houses, as allowing a more ready passage of the pure light, but for all other construction he believes American glass well suited.

If Mr. Gibbons had given the question of glass a trifle more attention I do not think he would have made this statement. If, as he states, American glass is well suited for ordinary greenhouses and conservatories I fail to see wherein it is not well suited for rose houses. I do not think that Mr. Gibbons intended to convey the idea that there were no good roses grown under American glass in this country, as I am sure he knows to the contrary. One has only to walk up Broadway on an afternoon to see the finest roses in the world, and it is a generally known fact that for the past eight years they have not been grown under French or Belgian glass, but under American glass.

I have been in the glass business for the past twenty-five years, sixteen of which were passed in the importing business handling French and Belgian glass, and the last nine years in the manufacture and sale of American glass. I have made greenhouse glass a study, and as a result of that study am now interested in the extensive works of the Chambers & McKee Glass Co. at Jeannette, Pa., where is produced the finest glass made either in this country or in Europe. The elegant conservatories in the Allegheny City Park which were given to the City of Allegheny by Mr. Phipps, and which were built by Thos. W. Weathered's Sons, were glazed with this glass. The conservatories at Schenley Park, Pittsburg, given to the City of Pittsburg by Mr. Phipps, and which were built by the Lord & Burnham Co., were also glazed with our American glass, and I could enumerate an extensive list of both public and private conservatories of which the same is true.

With all due respect to Mr. Gibbons I must take issue with him. There is no necessity for anybody going to Europe for glass, either for their conservatories, rose houses or commercial greenhouses. I claim that to-day we make in America the finest glass in the world, under which the finest flowers in the world are grown, with the aid of the bright sun of Heaven which shines on the finest country on earth.

D. H. ROBERTS.

IF YOU HAVE anything to sell to the trade you ought to have a strong adv. in our special spring number to be issued March 23.

Kieffer and Bartlett Pears (2 years). **Abundance and Burbank Plums.** **Japanese Persimmons** (1 and 2 years). **Scuppernon, Thomas and Flowers Grapes** (1 and 2 years).

Extra fine stock at greatly reduced prices.

GLEN ST. MARY NURSERIES,

G. L. TABER,

GLEN ST. MARY, FLORIDA.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns.

THE CALIFORNIA VIOLET.

We have received our first installment of **THE CALIFORNIA VIOLET** in splendid condition. The Violet is meeting with great favor from the principal growers throughout the country, and those who began ordering from 100 to 500 plants have raised their orders to 1000 and 5000 plants. This course we recommend to all growers, as those who make their plantings early will probably get from each plant an average of 300 to 400 flowers during the coming autumn and following winter. Considering the low price at which the plants are sold growers can make more money from the sale of cut flowers of **THE CALIFORNIA VIOLET** next season than from any other variety. Those who do not order in large quantities will find their mistake when too late. Orders booked now are for April delivery only, to be filled strictly in rotation.

PRICE, \$10.00 PER 100; \$70.00 PER 1000. 500 AT THOUSAND RATE.

PITCHER & MANDA, Inc., Short Hills, N. J.

GANNAS.—VAUGHAN'S—GANNAS.

DO
YOU
OBSERVE

They still have "a yellow canna better than Florence Vaughan"? Where did they come out last year on that claim? Did they make that statement purposely to deceive the public jury or not? We hope not. But to-day the question is, where will they come out this year on the same claim. Write for our Book for Florists, now ready, and we think you will find a list of cannas that did what we claimed for them **last year**, and a list of

NEW GANNAS which will do all we claim for them **this year.**

NEW YORK: **VAUGHAN'S SEED STORE**, 26 Barclay Street. CHICAGO: 146-148 W. Washington St.

The Rose for the Million!! **BELLE SIEBRECHT.**

Always in bloom. An iron constitution. Requires no special houses, no nursing. Will make itself at home in any house where other roses are grown. Proved hardy out of doors in latitude of New York. Color and keeping qualities unequalled. The greatest introduction of the century.

MORE TESTIMONIALS FROM PROMINENT ROSE GROWERS:

DEAR SIR:—The new Rose, "Belle Siebrecht," is a very valuable rose for winter forcing. The form is exquisite, the foliage handsome, the color charming, rich, bright, and of an entirely distinct new shade; it is also very healthy in growth and a constant and very free bloomer. Please book my order for 1,000.
Yours truly,
ROBERT CRAIG, West Philadelphia, Pa.

It affords me much pleasure to express to you my thanks for the bunch of Belle Siebrecht roses you had the kindness to send to me. After having graced the tables of the N. Y. Florist Club annual dinner two days ago I find it to be a remarkable good keeper, having kept it for three days longer without its losing any of its brilliant color, and it appears as fresh now, after be-

ing out five days, as if just cut. As seen growing at your place I shall pronounce it after a careful examination a remarkable free bloomer, healthy grower, and one that is not easily attacked by mildew, and a welcome addition to our list of forcing roses.

ERNST ANMUS, West Hoboken, N. J.,
WASHINGTON, Dec. 5th, 1894.

MESSRS. SIEBRECHT & WADLEY, New Rochelle, N. Y.
GENTLEMEN:—We have received your circular letter together with price list of your new Rose, Belle Siebrecht, which we inspected in your houses some time ago. Please book our order for 2,000 plants, to be delivered April 15th next.
Yours very truly,
STRAUSS & CO.

This rose is the result of years of patient work by one of the best rosarians in the world. It is not sent out to be "tried." We have subjected it to the most severe tests, and are now fully satisfied that it is the best florists' rose in existence. It is not a mere sport, but is of a distinctly new strain, the result of a cross between La France and Lady Mary Fitzwilliam. Its pedigree is all right. Orders booked now and will be filled in strict rotation. Strong plants ready for delivery April 15th.

PRICE, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

News Notes.

LOUISVILLE, KY.—The Florists' Society will give a spring exhibition April 5 and 6.

CARLISLE, PA.—Jesse Robbins has recently started in the florist business in this city, at 372 Lowther street.

MURPHYSBORO, ILL.—E. I. Bradley has purchased land here upon which he will erect two greenhouses this spring.

SALT LAKE CITY, UTAH.—The Utah Nursery Co. has adjusted the claims against it and will continue business.

QUEENS, N. Y.—Louis Loeben, who has taken charge of the Wheeler place, is about to erect two large greenhouses.

GARFIELD, N. J.—Fire recently caused serious damage to the greenhouse establishment of A. Van Leeuwen. No insurance.

AURORA, ILL.—Frank Haywood is building a greenhouse 16x60 and will start in the florist business at 206 Cedar street.

DEERING, ME.—Mr. W. Ballard has retired from the co-partnership hitherto existing under the firm name of Ramsey & Ballard and will remove to Bath.

MACOMB, ILL.—Mr. C. Leugenfelder, formerly with J. C. Vaughan, Chicago, has become a partner in the business of Mr. I. L. Pillsbury. The firm name will be Pillsbury & Leugenfelder.

MORGANTOWN, W. VA.—The State Horticultural Society met here February 20-22. The meetings were well attended and interesting. The president of the society is Mr. G. Adolph Hiehle of Parkersburg.

LANSING, MICH.—Fire destroyed the residence, office, and three out of the eight greenhouses belonging to Fitz Simmons & Conover (Riverside Greenhouses). Loss \$2,000, insurance \$1,500. They will rebuild at once.

PLEASANT HILL, Mo.—Mr. Alfred Broman, foreman of the Maplewood Greenhouses, met with a sad bereavement lately in the death of his only son, aged five months. He receives the warm sympathy of many friends.

PROVIDENCE, R. I.—Mr. Geo. Hunt, who was one of the original members of the Rhode Island Horticultural Society, died in this city February 21. Mr. Hunt was an enthusiastic amateur, doing good work for the society in several official positions. He was an authority on wild flowers, and also on entomology, writing some valuable papers on these and kindred subjects. He was universally esteemed and respected.

BELL MILLER, Springfield, Ill.

CARNATIONS.

I OFFER TO THE WHOLESALE TRADE A SEEDLING WHITE The choice from over 400 varieties after three years' trial.

KOHINOOR {Mountain of Light.}

It is the best white I have ever grown. Flowers robust, stems long, stiff and erect, flowers full, deeply fringed and extremely attractive, measuring 2 3/4 to 3 inches across without any forcing or disbudding. Comes quickly into BLOOM and CONTINUES PROLIFIC THROUGHOUT THE SEASON.

Flowers 2 3/4 to 3 inches across, on stiff erect stems 2 3/4 to 3 feet long. Of the habit of McGowan but much more prolific; a striking and attractive shade of pure purple, a novelty in color, very taking, and entirely distinct from the purple maroons and so called purples. Price on the above varieties, \$12.00 per 100; \$100. per 1000.

My stock of Standard and New varieties has never been better than at present, and includes:
Sweetbrier, Thos. Cartledge, All at moderate prices, with regular discounts.
Stuart, Caesar, I grow nothing but Carnations, and EXCLUSIVELY for
Wm. Scott, Brutus, Cuttings and Plants My stock is rooted cool and is
Daybreak, Anna Webb, unusually healthy and vigorous.
Buttercup, Ferd. Mangold, Inspection and correspondence solicited.
Blizzard, Mrs. Fisher. Price List on application.

JOSEPH RENARD, Unionville, Chester Co., Pa.

Cincinnati.

The past week has been a brisk and busy one for the florists. There have been many entertainments and social gatherings and lots of funeral work, and all good stock was sold at fair prices, in fact some days it was difficult to get enough of some kinds to fill orders. Prices, however, did not advance, and remain about the same as last week.

Carnations sell well, and although quantities of fine flowers are coming in the price holds up well, the prevailing price for good stock being \$2, with a few extra, such as Daybreak and Scott, being \$2.50 and \$3. Violets threaten to become a glut. This stock is very fine at present and the demand is still heavy, but the cut is so large that it is difficult to dispose of the whole. The finest stock can be bought for \$1 and very fine quality at from 50 to 75 cents. Callas are overstocked and are often sold at a sacrifice. HARRISII are holding their own this season; with a liberal cut every flower was marketed at a good price. Last year at this season you could hardly give them away. We hope to see no such glut again, but Easter is very late this year, and a number of batches which are intended for Easter trade will surely come in several weeks too soon.

Bulbous stock is much more plentiful, except Romans and valley, which are still rather scarce. Tulips are coming in fine and so are Dutch hyacinths and Von Sion; Trumpet Major goes very slow. Common wood ferns are still very scarce and sell at 25 cents per 100. Smilax holds stiff at 20, and extra heavy at 25.

In roses supply and demand are about equal. Perle, Bride, Bridesmaid and Mermet are about the most plentiful varieties and are generally good. Some fine Neyrons are in, and also Brunners. Good Jacqs are scarce. There is not a great supply of Beauties. The Hoffmeister Floral Co. are cutting about the best. It is not expected that there will be any scarcity of flowers at Easter. Although a good trade is anticipated it is likely that there will be plenty of flowers to fill all demands.

The sale of the property and green-houses of the Huntsman Floral Co. was postponed for three weeks. P.

AMERICAN FLORIST BOUND

in Half Leather. A valuable reference book of 1276 pages, bound in style uniform with preceding volumes.

PRICE \$3.50 by Express not prepaid.

AMERICAN FLORIST CO.,

P. O. DRAWER 164. CHICAGO.

E. G. HILL & CO., Richmond, Indiana,

Offer to the trade the finest stocks of Chrysanthemums, both old and new, ever presented. Our plants have never had a touch of the dread disease which has worked such havoc in many places. We send out healthy stock, propagated from outdoor grown stools which will produce just such blooms as we exhibited last autumn.

EARLY FLOWERING SORTS.—Mme. Bergmann, Yellow Queen, Mrs. E. G. Hill, and Mrs. Whilldin, all at \$4.00 per 100, or 600 for \$15.00.

COMMERCIAL CUT FLOWER VARIETIES. Per 100.—Dailledouze, \$4.00; Bannafon, \$5.00; Judge Benedict, \$4.00; C. Chalfant, \$4.00; G. W. Childs, \$5.00; Inter Ocean, \$5.00; Ivory, \$4.00; Jessica, \$3.00; L'Enfant, \$4.00; Malmaisou, \$6.00; Minerva, \$5.00; Mutual Friend, \$4.00; Niveus, \$4.00; Queen, \$3.00. An immense stock of the above. Varieties like *Amor*, *Judge Benedict*, *Minerva*, *Charlotte*, etc., are suited for single stem plants. We will be glad to make selections for this purpose at very lowest living rates. Will also gladly make selections for large pot specimens.

EXHIBITION BLOOMS.—Keep abreast of the times. You need the introductions of last year if you would have the best results. We can make you a splendid selection.

CALVAT'S celebrated Novelties have won first honors at all the English shows; we can send you his set of 33 varieties for \$7.00.

THE NEW ENGLISH SORTS of last year contain varieties of exceptional merit. If you want the finest Exhibition sorts you will have to include many of these; you can tell which from the descriptions. The full set of 37 sorts for \$5.00.

We have made our prices to suit the times. Did you get our list? If not, we will be glad to send it.

E. G. HILL & CO., Richmond, Indiana.

AMERICAN NOVELTIES OF 1895.—We would like to select and send you the best 12 for \$5.00, to include Philadelphia and 11 others from our own, May's, Spaulding's, P. & M.'s, Smith's, Dorner's.

GENERAL ASSORTMENT. We will send 1000 choice Chrysanthemums, our selection, for \$25.00. This would include a complete outfit of varieties, suited for all purposes.

Send for our Trade List if you have not yet received it. We have a very fine line of Novelties all the way through. The new **GERANIUMS** are magnificent; *Mme. J. Chretien*, *Deuil de Miribel*, and *Juliet* will delight you. The new English and French are fine improvements—19 varieties for \$6.00, 12 of them fine double sorts. 12 grand new Ivy Geraniums for \$3.00.

Two fine new Acalyphas. Two grand Abutilons, *S. de Bonne* and *Fleur de Neige*. An elegant line of best Cannas. The new *Dracæna Sanderiana*, *Helianthus*, *Soleil d'Or*, *Hydrangea Otaksa Monstrosa*.

A very fine collection of strong sturdy growing Double Petunias, large, finely fringed, at \$3.50 per 100. We have a very large stock of them.

FORCING ROSES—Carefully grown—*Perle*, *Sunset*, *Bride*, *Cusiu*, *La France*, *Meteur*, *Wootton*, *Watteville*, *Albany*, *Gontier*, at from \$3.00 to \$4.00 per 100, according to variety. An immense stock of clean, healthy American Beauty, ready now, at \$6.00 per 100.

A New Canna! "THE PROFESSOR."

We take pleasure in offering this Canna to the Trade, and feel sure that it will please all who purchase it. It originated with me, has been tested on my grounds for the past three years, and has been very highly spoken of by all who have seen it.

The foliage is a very dark purple, nearly black, and colors up well in the full sun. The flowers are of fair size and substance, and of a deep crimson color; they are by far the best we have seen in the dark foliage section of this popular plant.

Its habit of growth is dwarf, and its average height is about 3½ to 4 feet.

We consider this Canna a valuable acquisition and hereby offer it for the first time.

Price for started plants from pots (ready after March 15, 1895), 75c. each; \$7.00 per doz.

N. B.—All orders will be filled strictly in rotation.

HENRY JOHANN, COLLINSVILLE, ILL.

Baltimore.

We haven't had any Gould wedding nor any extra elaborate affairs floral of any other kind here, but still, somehow or other, the coal pile is replenished and other little incidentals provided for. There is not the slightest suspicion of a glut of any kind of flowers, unless, possibly, violets, which have a decidedly downward tendency in price and are becoming very, very plentiful. Fine ones can be had at 35 cents, and now and then a lot of very good ones at 25 cents a hundred. Whether we have the present trade or not we have great expectations; for, he it known to all men, we will have the greatest exposition of the century here in two short years. The site, one of the most beautiful and suitable of the many surrounding our city, has been selected, and in 1897 we will expect all our brother florists to come around and see what we can do in landscape and architectural effects.

Carnations are coming in freely, of very fair quality, for one cent, and fine for one and a half. Smilax is quite scarce. Roses are bringing good prices still, and are bought up as fast as offered. Romans and bulbous stuff generally shows a marked falling off in quantity from last year. Some very fine azaleas are shown in the windows of Charles street florists, notably Mrs. Thomas' and Feast's. The weather has been extraordinary; one day, the first of March, would have passed muster as a warm day in May, but by the fifth the mercury was again trying to get inside of itself, a trick it is getting a habit of this winter. MACK.

Worcester, Mass.

Thus far Lent has caused no noticeable decrease in demand, and prices remain regular, with but few fluctuations. Good bulbous stuff is plentiful, but the quantity of tulips coming in seems to diminish yearly. Good roses are in fair supply, and very fine carnations are cut in large quantities, with the exception of scarlet, and are bringing extra good prices. Violets are plentiful, wholesaling for 75 cents; smilax and asparagus rather short.

Burton W. Potter read an interesting paper on "The preservation of our florists." A. H. L.

What Growers Say!
A Different Letter Every Week

OVID, MICH., Nov. 3, 1891.
Gentlemen:—In answer to your inquiry in regard to your clear Cypress clipper sash bars, would say that I used them and other material from you on three houses, requiring 3,500 feet of glass to cover them; the whole bill was perfectly free from sap or knots. Have seen a great many varieties of sash bars, but have never seen anything that was equal to the Clipper. In using these of course Butted Glass is used—a great improvement over the old style of lapping. It is surprising how nicely the bars carry off the water. I would use no other; am well pleased with your dealing, and would be pleased to answer all inquiries from anyone.

HINSDALE, ILL.—Bassett & Washburn, three short-span-to-south 16x125.

Disappointed.

The American Carnation Society is a daisy, but how happens it, with all the interesting talk on the culture of that lovely flower, not a syllable was said about that Oscar Wilde 'fin de siecle' production, a "Green Carnation?" Every other carnation, with varied tintings and markings, was exhibited at this exhibition but the green, and thus one of the greatest opportunities of the society to achieve fame has been lost! What Boston wished to see was a really, truly green carnation, and it is disappointed, of course.—*Boston Herald.*

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfe Doppf & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppf and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all. Send for price list and samples and we know you will give us an order.

SYRACUSE POTTERY CO., 403 North Salina Street, SYRACUSE, N. Y.

STANDARD FLOWER POTS.

We will furnish you with prices on application, and will fill all orders promptly. Our Pots are excelled by none in the market.

THE PARMENTER MAN'FG CO., EAST BROOKFIELD, MASS.

A. A. GRIFFING IRON CO., 34 Dearborn St., Chicago, Ill.

MARCH 23 will be the date for our special spring number.

HOLLIS L. I., N. Y.—Richard Loebn is just starting in the business here, having built four three-quarter span houses, 18x100 for growing carnations and bulbs.

DIXON, ILL.—Davis & Baird are preparing to build next month three short-span-to-the-south houses, one 16x100, one 18x100 and one 20x100.

MISCHIEF IN TOBACCO STEMS.—There has been more or less complaint among growers the past season of injury resulting from the use of tobacco stems which had apparently been treated with chemicals. Doubtless many inexplicable crop failures might be traced to this cause, and a little watchful precaution on the part of those using tobacco stems about their greenhouses would be advisable.

Society of American Florists.

EXECUTIVE COMMITTEE MEETING AT PITTSBURG.

The usual session of the executive committee to formulate a program and take other preliminary steps in anticipation of the annual convention next August, which was held at Hotel Anderson, Pittsburg, on Tuesday and Wednesday, March 12 and 13, was made the occasion of a delightful entertainment in the form of a reception and banquet tendered by the Pittsburg and Allegheny Gardeners' and Florists' Club on Tuesday evening. The tables were profusely decorated with baskets of flowers contributed by the big-hearted members of the local fraternity, and the mantels banked with rich masses of cyclamens, cinerarias and other showy plants. There were about sixty participants, and the usual good feeling prevailed, the whole proceedings being replete with kindly greetings to the visitors, and promise of cordial co-operation in the plans for a grand reunion next August.

Mr. A. W. Bennett, president of the local organization, presided, and on his right and left were seated toastmaster A. C. Robertson, Mayor McKenna, of Pittsburg, Mayor Kennedy, of Allegheny, and several other high officials of the sister cities, alternated with the visiting guests. The toastmaster proved to be of the silver-tongued sort, a perfect ideal, quick, witty and happy. In his opening remarks he confessed that although a lawyer by profession he was a florist at heart. The florists, he said, are engaged in the propagation of species and specie, their interest in the former depending somewhat upon their success with the latter, but nevertheless they have done a great and noble work for the masses of humanity. He knew of nothing so humanizing as a bouquet of flowers, and bestowed high praise on floriculture as an occupation.

President Lonsdale responded for the Society of American Florists. He voiced in a feeling manner the appreciation and thanks of the visitors for the hospitality they were enjoying, and predicted a great success for the coming convention. Mayor Kennedy, of Allegheny, was the next speaker, and he spoke eloquently of the refining and elevating influence of flowers, and warmly seconded the words of welcome spoken by the chairman and toastmaster.

The auxiliary societies had a spokesman in Mr. Patrick O'Mara, of New York. He gave a brief account of the origin and growth of these organizations, and advocated a closer union between them and the parent society, as calculated to bring prestige to them and strength to the S. A. F. Mayor McKenna, of Pittsburg, was then introduced as the "star of the evening," an official who "had never yet put a veto on anything per-

taining to our interests." He promised to do all in his power to make the welcome to Pittsburg next August a notable one. He would extend the freedom of the city to the visitors, and assured them that no city in the Union is prouder to receive the florists of the United States than is Pittsburg.

"A delegate from the city where the winds do blow," was the introduction which brought Mr. W. N. Rudd, of Chicago, to his feet. Mr. Rudd said that he was afflicted with a grievance, and cut to the heart by a conversation he had overheard an hour or two previously in which the toastmaster had said: "I'll guarantee Rudd can't make a speech, so we can save time by calling on him," and amid much merriment he assured the toastmaster that he would fall in with his wishes and attempt no speech.

"The usefulness of florists' societies," was the subject assigned to Secretary Stewart, who made a characteristic response, and in closing said that had President Cleveland enjoyed a better knowledge of these organizations and their noble mission he would never have vetoed that florists' charter. Mr. Harry Ford, chairman of the Select Councils of Pittsburg, then spoke of the relations of municipal bodies to park improvements. He spoke in high praise of Mr. E. M. Bigelow, director of public works, who was unavoidably absent from this banquet, without whose untiring energy the park system of Pittsburg would never have existed. He also told of the noble gifts of Henry Phipps, and congratulated the city on having secured Mr. A. W. Bennett as the head of its park improvements, whose efforts and work were worthy of the highest praise. He also extended an invitation for the visitors to inspect the new Carnegie Library.

Mr. E. A. Wood then sang, "Jingle Bells" with characteristic spirit, and followed it up with a speech which was the shining event of the evening. His witty sallies at the good-natured toastmaster put the whole crowd in a condition bordering on hysterics. Speaking of the abuse of flowers, he asserted that the fashions in flowers to-day are set by the florists, and that if they are abused and good taste offended the florists are alone to blame. He was followed by Mr. W. C. Connelly, who represented the associated press, and promised that its full share would be done to make the August meeting a success.

The following resolution was then offered by Mr. Patrick O'Mara and unanimously adopted.

WHEREAS, The Executive Committee of the Society of American Florists and the Pittsburg and Allegheny Gardeners' and Florists' Club, in joint session, believe it is eminently meet that they should ve expression to their high appreciation

of the noble gifts of Mr. Henry Phipps to horticulture; therefore be it

Resolved, That we tender to him on our own behalf and on behalf of the Society of American Florists, their sincere thanks, and beg to assure him that they will use their best endeavors to second him in his noble efforts to advance and ennoble horticulture.

It was ordered that a copy of this resolution be properly engrossed and presented to Mr. Phipps. A vote of thanks to the jolly toastmaster and for the invitation to the Carnegie Library was then passed, and it now being past two o'clock a. m. adjournment was made to the tune of "Auld Lang Syne."

There were in attendance at the meeting the following gentlemen: President Edwin Lonsdale, Secretary W. J. Stewart, Treasurer H. B. Beatty and Messrs. Patrick O'Mara, W. N. Rudd, J. C. Rennison, Elijah A. Wood, Jackson Dawson, Grove P. Rawson, H. H. Battles, John Burton, E. G. Hill and Geo. C. Watson. Several lots of handsome flowers were sent in to adorn the committee room, among which were the rose Mrs. Pierpont Morgan and carnations Dean Hole and Maud Dean from J. N. May, rose Belle Siebrecht from Siebrecht & Wadley, carnation Jubilee from E. G. Hill & Co., *Antirrhinum majus album* from W. K. Wood, and carnations Uncle John and Daybreak from Chas. M. Fick. On Wednesday afternoon the visitors were escorted to Schenley Park, where they viewed with delight the splendid greenhouses and their contents, and also the almost completed building of the Carnegie Library.

Budding and Grafting.

BY JACKSON DAWSON.

[Abstract of a paper read before the Mass. Horticultural Society, March 9.]

The object of the grafting processes, Mr. Dawson said, is to perpetuate, and to multiply in the shortest time possible, choice fruit, ornamental or otherwise useful trees and shrubs, which do not reproduce themselves by seed, or only by very slow growth. By this art, old and worthless fruit trees can, in a very few years, be made to produce an abundance of superior fruit, and strong seedling stocks can be brought to fruitfulness in half the time that choice seedlings or rooted cuttings would require to reach the same result.

The art involves certain physiological principles which must be observed to secure success. There must exist an affinity between the stock and the scion, or there can be no perfect union. While the stock should be more vigorous than the scion, it should not only furnish sap that the scion leaves can successfully elaborate, but only to such amount as those leaves can properly convert into wood and fruit material; failure in either office will result in the death of the scion. This is why evergreens do not succeed on deciduous stocks, and vice versa. A stock suited to one temperature cannot sustain a scion adapted to either a higher or lower temperature. Again, where a stock and a scion naturally start into growth at different times of the year, they cannot thrive together. Thus, the law of affinity is absolute.

The best season for grafting out of doors is in the spring, when the sap is in motion—from March to June. Under glass the best time is from August to the end of September; the same time if half-ripened wood is used but with dormant wood from December to the end of March. Midsummer grafting is rarely successful.

In all grafting it is better to have the stock in a little more forward stage of growth than the scion. It is not safe to use scions that have started into growth, in outdoor grafting, unless each can be well shaded until union with the stock has been accomplished. The stone fruit trees should be grafted first in the spring; afterwards the pear and apple trees.

The tools are a saw, a pruning knife, a grafting iron or wedge; a budding knife, a pair of good pruning shears, a whetstone for the knives, a bunch of raffia, bast, or waxed cloth for tying scions in place after they are set; some kind of grafting wax, to cover wounds and protect them from drying, from water, or other injury. This wax may be composed of four parts common resin, two parts beeswax, and two parts mutton tallow, melted together. When cold it can be applied by hand, or if melted, laid on with a brush. The wax, melted, is also spread on cloth, which, when cold, is cut or torn into narrow strips and used to tie the small stocks after the scions are set. Prepared wax can be bought—Trowbridge's grafting wax is very good.

Scions from hardy trees should be cut while in a dormant state, from January to the middle of March. But those from slender-stemmed plants, whose wood is liable to injury by freezing, should be cut in early autumn, and heeled in, either in loam, sand or moss, in a moist pit or cellar, but the wood of such scions should be healthy, of medium or fine texture, and thoroughly ripe. Except in case of old and scarce or new and rare varieties, never use fruit buds for budding, as they produced relatively unsatisfactory shoots. On the other hand, stock trees should be carefully pruned in order to produce good scions, and also good wood in which to set the scions.

Budding consists in taking from one tree or plant a bud, with a portion of bark attached to it, and inserting it in some other part of the same tree or plant, or in some other one. The best buds to use are those near the middle of the shoot. These are neither too weak nor too gross. The blades of the leaves should be cut away at once. The operation includes making a longitudinal incision through the bark of the stock, and at the upper end of this incision a cross cut is made, thus: T. This is done when the sap is most active, and the corners of the cut bark can be readily separated from the wood, and raised far enough to allow the insertion of the bark attached to the prepared bud. The raffia, bast, or waxed cloth bandage is then wound upon the stock, both above and below the bud. The abundance of sap furnished by the stock, affords the nourishment the bud requires, and its growth is almost a certainty, unless the bud is allowed to become dried before being inserted. Shield budding differs from the above in making four cuts in the bark, above, below, and on either side of the bud. The bark is cut upon the stock in the same manner and size, and removed, then the bud is lifted from its bed, with the surrounding bark and quickly set upon the stock and bound there with bast or waxed cloth. These bindings on set buds should be examined within a few days to see that they are not strangling the stock.

Methods of grafting are numerous; each propagator has a favorite one, but skillful propagators use the best methods, which may be summed up as follows:

Inarching—grafting by approach—was originally a work of nature, copied and improved upon by man; and was a common practice in the first half of this

century, especially with azaleas and camellias. For out-door work the early growing season is the best; under glass all seasons serve. The method involves the removal of a strip of bark and cambium from both stock and scion, bringing the cut surfaces together, so as to fit exactly, and binding them firmly with bast. Cover the wounds with grafting wax. Sometimes only an incision is made in the two stems and the wounds brought together, bound and waxed. Sometimes the stock is cut off, a V cut out, and the scion plant stem fitted into it; thus are weeping plants inarched upon high standards.

Side grafting. In this process the scion is prepared with a long splice, cut smooth to the bark. From the stock a thin slice of bark and wood is taken, of the size to match the cut of the scion, which is then set in place and firmly bound there. Another case is where the scion is cut wedge-shaped on one side. The stock is cut into on one side to the cambium, and the scion is thrust into the incision so as to adjust the cambium of each to the other, then bound as in other cases. This can be done with either woody or herbaceous plants under glass.

Cleft grafting. This term is applied when a branch is sawed off, the stock made smooth with a knife and split a little way with a chisel, and the scions, after being cut wedge-shaped, inserted in the cleft, carefully adjusting the cambium of the scion to that of the stock. Generally a scion is set in both extremities of the cleft, and if the stock is rather large, two clefts are made and two scions set into each. If the pinch of the cleft is too strong for the scions a short wedge is inserted to correct that fault, then the wound is coated with the grafting wax.

Crown grafting. In this operation the stock is first headed down some weeks previous to grafting. When the work is to be done the scion is prepared by a flat sloping cut on one side. The stock is treated as in budding by a longitudinal cut through the bark, the latter raised on each side and the scion thrust down under the bark, then carefully tied. Another method is to cut half-through the scion, just below a bud, and remove the wood. From the stock remove a portion of the bark, adjust the scion upon the top of the stock, coat with wax, and bind with wax cloth.

Saddle grafting. The stock is cut on both sides into wedge shape, and the scion is cut as an inverted V. This requires skill and time, to secure proper adjustment of the parts; but it is used mostly in grafting rhododendrons, which make it worth while.

Tongue, or whipgrafting. In nurseries where stocks of seedlings one to three years old are used this method is most practised. The stock and scion are of nearly the same size; each is cut with a long, smooth slope, then a split is made in each about half-way on the cut; the tongue of each is thrust into the cleft of the other, forming a tongue, or splice-graft, which is bound in waxed cloth. The trees are then heeled in boxes, in sand or sifted loam, and stored in a moist cellar until spring. They are then brought into a warm place, and on showing signs of growth are planted in nursery-rows covering the graft to the first eye.

Root grafting. Plants that are difficult to grow from cuttings, can be successfully grafted upon pieces of their own roots or those of some other plants. Any of the above methods can be adopted in this work. In cutting the roots to be used, be careful to keep the neck-end (that nearest

BOX FOR FUMIGATING PLANTS WITH CARBON BISULPHID.

the root-crown) up for use. The pæony, bignonia, wistaria, rose, hydrangea, clematis, chestnut, plum, pear, apple, dahlia, magnolia, and others succeed well by this method. When a new plant is received, if it will not readily propagate in usual ways, try it on its own roots. "I have succeeded in this way," said Mr. Dawson, "after many failures by other methods."

Veneer grafting. This is one of the best means of propagating hard wooded plants under glass. It can be practiced from November to April, and from August to October. Plants should be established in pots. Seedling plants are best. They should be potted in early spring, plunged in frames, or a sheltered place, watering and pruning them until wanted for use. In grafting, select a smooth portion of the stem of the stock; with a sharp knife make a crosscut, downwards, cutting through the bark and slightly into the wood. From a point two inches above cut a thin slice of bark down to the crosscut. The scion is to be cut in the same way to the lower end; then fitted to the stock, having the two cambiums meet, and securely tied in its place. Put them in close frames in the greenhouse, sprinkle them overhead, when necessary, to keep a moist atmosphere. As soon as they begin to knit together, air can be given morning and evening; after a week or two more air can be kept on all day. The time to effect union varies much with the different kinds of plants. Two to four weeks after the scions have united, the plants can be taken out of frames, but remain in the greenhouse a month or more before planting out, or put into winter quarters. When sure the scions are set, transplant them from pots to

boxes, as closely as possible. When established, put them in a sheltered place outside to harden them off. When no double frames are at hand, the plants are placed in a bed of sphagnum moss three to four inches deep.

All coniferous plants are much more easily propagated by veneer grafting than by any other method. Their treatment after grafting is similar to that of other plants.

The Treatment of Greenhouse Plants With Bi-Sulphid of Carbon for the Destruction of Red Spider and Aphides.

From the fact that some field experiments with bi-sulphid of carbon, have yielded encouraging results in the treatment of Cucurbs for the destruction of aphides, it appeared not improbable that the same agent might be employed for a similar purpose in the greenhouse. Since the red spider, *Tetranychus telarius*, is perhaps, one of the most difficult to control, especially where sub-irrigation is practiced, and the drenching of the plants, heretofore the chief means of control, becomes impracticable, our first experiments were directed towards this pest. The infested plants were, in this case, greenhouse violets, but later on further experiments were made with lettuce and chrysanthemums infested with the aphides common to these plants.

The possible effect of carbon bi-sulphid upon the plants under treatment was an important consideration, as an excess of the insecticide might result in injuries equal to those caused by the insects. The physiological effects upon both plants and insects are dependent upon two

factors, viz., the density of the vapor and the length of time during which both are subjected to its influence. Hence, it is to be understood that the notes cover the results in respect to both plants and insects.

The apparatus was designed to be used to cover plants in benches or to enclose moderately large potted plants. It consisted of a box having an upper and lower part, as shown in the accompanying figure. Each section of this box had a cubic capacity of about 3 feet; the upper section was provided with two glass sides, the lower edges being grooved so as to admit a corresponding tongue on the upper edge of the lower section. The carbon was introduced through a stationary glass tube inserted in a hole in the top of the box, the lower end of this tube being provided with a sponge to retain the carbon while it was evaporating, the upper end being closed with a cork stopper in order to retain the fumes. In all of the foregoing experiments the upper portion was used exclusively in applying the insecticide, while the lower portion was employed in isolating without confining the plants after treatment. We began by applying one-half drachm, and removing the box at the end of two hours; spiders were at first stupefied, but no other effect was apparent, and extending the time to sixteen hours, the result did not differ from the first. One drachm was next tried for two hours without injury to the plants, and with favorable effects upon young spiders and such as were unprotected by the position of the lower leaves. The same amount for four hours left very few living spiders, even when examined several hours after the removal of the box, being chiefly on plants in close proximity to others untreated. The next trial was with one drachm, followed at the end of an hour by one-half drachm additional. Result after sixteen hours did not differ from that previously secured; but one of the plants thus treated was immediately covered for three hours longer with a bell glass, after which it showed injury to lower leaves. On the following day the injury to the leaves was still more apparent, while the number of living spiders present plainly indicated that the experiment had failed to destroy them. The amount was then increased to three drachms, applied in two equal parts at intervals of an hour, and the box allowed to remain over the plants nine and one-half hours. After twelve hours, during which the plants were left uncovered but enclosed by the open section, examination revealed no preceivable injury to plants and no living spider. Nine hours later a few of the leaves showed slight injury, but live spiders were still absent, which was true also forty hours later. A day later there were a few living spiders on the plants, which were apparently uninjured. These conditions after three days remained unchanged. Since the practical limits appeared to have been reached, it was not advisable to carry the experiments further, with the red spider. Lettuce plants growing in benches in greenhouse were similarly treated, and while the insects were readily killed, it was not found possible to do this without injury to the edges of the leaves, thereby rendering the plants unsalable.

With pelargoniums infested by aphides, one-half drachm carbon bi-sulphid, for three hours, was found to be thoroughly effective in destroying the insects without injury to the plants. Chrysanthemums infested with the ordinary brown aphid so common on these plants, were treated

with one drachm for two hours, this destroyed the insects without affecting the plants, which were in this case tender shoots brought directly from the cellar in which they were being wintered, and would therefor probably be more susceptible to injury. Cinerarias were treated in precisely the same manner, also for aphides, and with both these and the chrysanthemums, the experiment seemed an unqualified success.

The accompanying illustration shows the complete box as used to enclose large potted plants. It would seem that this method of treatment admits of application to a greater or less degree, according to circumstances. The results indicate very little danger to ordinary greenhouse plants from the use of the vapor of carbon bi-sulphid. We were assisted in these experiments by Mr. W. A. Porter, and the tests were made in the greenhouses of the Ohio Agricultural Experiment Station.

F. M. WEBSTER, Entomologist,
 Aug. D SELBY, Botanist.
 Wooster, Ohio, March 1, 1895.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

In reply to the criticism of Mr. P. in the issue of March 2 on my article of Feb. 9, I will state that he evidently imagines that I was criticising the advertisements appearing in the FLORIST. This is a mistake, for I do not consider it my place to question any advertisement which the publishers of this paper consider it advisable to print in their columns; in fact, I was not aware that Mr. P. had an advertisement in these columns, and that he was growing his plants for cuttings only. I do not consider that Mr. P. has any cause for an explanation from me at all, as I was not referring in any way to advertisers of cuttings from plants grown for cuttings only. If Mr. P. had been at the convention at Boston he would have heard something corroborative of my statements (which he questions so strongly) in the address of the president, who fully hears out every point in my article of Feb. 9. As President Dailedouze is considered by all in the vicinity of New York as one of the best authorities on, and one of the best growers of carnations in this country, I consider his corroboration of my opinions as fully covering the point at issue.

There may be some, like Mr. P., who do not understand my reference to keeping plants for stock in a cold frame during November and December. The reason of this is that the plants get a rest by this treatment, and I believe are much better for stock purposes. There are many advocates of this system to-day, not only for the carnation, but for the rose and "mum." The forcing or growing of any plant of the nature of the carnation to grow and bloom at all seasons of the year is, I believe, a mistake, and eventually results in destroying the vitality of any

stock. Resting a few stock plants in cold frames during the fall months will keep the carnation in much better health, and many less cases of failure will be found if this method is adopted. Mr. Fred Dorner has given this plan a thorough trial, and when at his place in February, '94, I saw plants which were yielding him the finest cuttings I ever saw. The plants had not gone to flower, if I remember right, but the new growths or terminals were used as cuttings. These plants, however, had been selected on account of their strength of growth and their disposition to throw a quantity of blooming stems. I trust no other advertiser in this paper has made the mistake of Mr. P. in thinking that I wish to cast any slur upon their advertisement, or in any way to take advantage in this column by drawing the attention of buyers from their goods.

To change the subject, I wish to call attention to one point brought out by Mr. Hill in the discussion on the essay of Prof. Halsted at the convention, that in the opinion of the professor the bacterial disease so common among carnations is liable to spread quite rapidly. This phase of the trouble I have watched with considerable interest during the time since the convention, and I have found that this disease is quite noticeable in different sections of the houses, and that it seems to spread just as the professor has stated, also that removing a plant as soon as it is found to be troubled with bacteria is the best way to rid the stock of the evil. It may be that the plant adjoining the affected plant will in time show the same trouble; this remains to be seen. Whenever this disease appears I at once apply my old remedy, a stimulant, using strong manure water with a little nitrate of soda, one half pint to fifty gallons manure water. I believe it is the general opinion that bacterial diseases are very apt to show themselves at this time of the year; this I believe is due to the exhaustion in the soil, and by using manure water more often at this season we can keep the plants in much better health. It will also be found that the carnation will now throw off much stronger stems than during the colder months, following out the natural course of all this class of plants and if large well-formed flowers are to be had they must receive additional nourishment.

CHARLES H. ALLEN.

Further Details About Mr. Swayne's Wide House.

ED. AM. FLORIST:—I find myself compelled to ask you to publish another description and diagram, this time of my boiler, in response to the numerous inquiries addressed to me since the publication of my former article.

The accompanying diagram will materially assist in making clear "how the boiler is put together and set up."

When I remove the iron front this is the appearance. First the foundation A. A. is built. Then the iron bands B. B. are placed; these are three in number, one at

each end and one just front of the bridge wall, and are of 3 by 7/8-inch iron. Place upon these the bands C. C., 3x1/2-inch stuff, and bolt each pair fast to a bolt built in the side walls, D. D. Then the boiler, which is of 2 1/2-inch pipe, may be slipped in and screwed together, one end of each pipe having a left hand thread screwed into corresponding return bends.

The lowest pipe of each side of boiler and also the two upper pipes are ten feet long in order to extend beyond the back wall. The rest are all nine feet with the exception of the four marked E., which extend only to the bridge wall four feet from the front. This wall (F) is 18 inches high above the grate, leaving a space of a foot between it and the arch, which is built of common brick, on a wooden frame of 1-inch stuff which burns out. Behind the bridge wall is a space 5 feet long extending below the grate line, for the combustion of gases, terminating in the flue at the top.

J. J. is a bolt through the arch at each band, perhaps unnecessary.

H. are the 1 1/2-inch returns.
 I. I. the 3/4-inch cold water connection from borough stand pipe, giving the pressure and allowing expansion and contraction, which is slight at most.

K. spigots for draining the circulations.

You see each side of boiler is a complete circulation, each separate from the other. The flows and returns each connect with the back of furnace. The return bends are made so that when touching one another the tubes are spread apart a trifle, allowing the water always to rise in the boiler, which is therefore built level.

I believe this boiler with its 15 1/3 square feet grate surface and 140 foot flue with a rise of about 18 feet will heat a house similar to mine, 50x100 with 1,600 feet of 1 1/2-inch pipe if placed properly. I hope this explanation is clear.

Second question: Do I advise this plan of constructing a house on level ground? By all means. In about this shape with heating pipe confined to lower half of house.

Theodore Whitson of Atglen, Pa., will follow this plan on level.

This (about 10 feet in 50) slope of rafter is undoubtedly sufficient to shed the elements. And if supported right will be substantial, and be a success, 50 feet or more wide, with indefinite width according to slope of ground.

Third: Cost of heating material and was it included in cost of house? Everything was included in cost of house except my labor, freight and tools.

Pipe, 2 1/2, 2, 1 1/2 and 1 1/4 inch	\$170
Brick	20
Iron	5
Flue (10-inch)	30
	<hr/>
	\$225

Fourth: Cost of iron pipe for construction, and lumber. Pipe \$49, cut and threaded to order from second-hand pipe, 3 cents per foot. Lumber—cypress, roof-drip bar 1 1/2 by 3 1/4, 2,400 feet lineal, end and ventilator bar 1 1/4x2 3/4 400 feet. Continuous ventilators, one 2 1/2 feet, the other 4 1/2 feet. \$1.28.

Fifth: "If you built again what changes would you make?" Very few. First, if I wanted the house to be the same temperature throughout I would put the boiler at the south side of house

COSTA RICA DWARF COFFEE IN BLOOM

either at one end or at middle, and all the pipes at the bottom, if the ground sloped considerably. Second, with 1 $\frac{1}{2}$ by 3 $\frac{1}{4}$ bar I would run the purlins 8 feet apart instead of 7, and make the posts 8 feet apart instead of 10, if 1-inch stuff is used, obviating a slight sag. I believe that is all.

Sixth: How is the glass put on? Did not bed it in putty, but applied liquid putty on top. Lapped slightly on roof and butted on sides, belly down.

Seventh: How do I prepare beds and what is soil? Carnations make better growth in a baking soil (somewhat clayey) but lift poorly. Ours is too much this way, therefore we endeavor to make it more loamy by cultivation, in order to lift successfully, whereas, in the house prefer it of heavier substance, and to that end I lean toward burying the fertilizer, principally manure, or top dressing instead of digging it in.

Eight: What is average cut from 1000 plants per week? My cut per week is nothing unusual, and about as follows:

No. of plants.	Variety.	Cut per week.
1,600	Sweetbrier,	800
800	Daybreak,	600
400	Thos. Cartledge,	300
400	Ophelia,	300
1,600	McGowan,	800
1 800	Lamborn,	800
1,600	Puritan,	200

Puritan will soon quadruple this. It is very prolific but late. Some other varieties I am using for stock alone. From 1,700 plants of Lady Campbell violets I cut 3,000 per week. Christmas week I cut 4,000 carnations and 3,000 violets from this house, bringing \$160.

I will be pleased to answer any further inquiries.

C. S. SWAYNE.

Kennett Square, Pa.

Three New Carnations.

We recently received from Fred Dorner & Son blooms of the new carnations Meteor, Storm King, and Bridesmaid. The first named has been described as a

maroon, but we regard it as a true crimson, touched with maroon shadows towards the edges of the petals. The color is very fiery towards the heart, exquisitely velvety on both the inside and outside of the petals, recalling the heart of a Marie Baumann rose. Bridesmaid is a warm peach blossom pink with a satiny lustre; Storm King dazzling white. All three are large, robust and well built, with splendid stems. As we see them we cannot wonder that in spite of the multiplicity of new carnations these varieties should excite such general admiration.

Raising Carnations from Seed.

BY C. W. WARD.

Read before the New York Florists' Club March 11.

In treating of the raising of carnations from seeds, I shall confine myself to the methods employed under glass, and in order that all may understand the subject will briefly describe the reproductive organs of a carnation flower.

We first have the ovule or embryo seed pod, from which extend the two pistils. This embryo seed pod is situated in the centre of the flower, and is surrounded by the petals, and protected by the calyx. Between the ovule and the petals are situated the stamens, each having upon its point the anther, containing the pollen. The method of fertilizing the flower is as follows: The pistil grows out of the calyx until it extends beyond the fold of the petals, and when ready for the reception of the pollen it becomes covered with a viscid, gummy substance. When the pollen is ripe, the anthers burst, and the pollen is scattered through the air in the form of a minute dry powder, and in this condition floats about and is caught by the gummy substance on the pistils, and the union of the pollen with the pistil completes the fertilization of the seed. It may be proper here to observe that generally the anthers of a flower burst before the pistils are ready for the reception of pollen in the same flower, and that this pollen floats away and fertilizes some

other flower, and thus nature favors a constant cross fertilization in raising plants from seed.

The method which we use in the greenhouse to seed plants, is to carefully prepare the flower from which we wish to raise seed by cutting away or pulling out a large proportion of the petals, which gives the pistil a better chance to grow out. It also throws the full strength of the flower into the pistil, and produces a better and stronger development of that organ. We also carefully remove all of the anthers before they have any chance to ripen and throw the pollen. This is done to guard against the chance of self-fertilization, as the best results are secured from a pure cross fertilization. As soon as the pistils are in proper condition to receive the pollen, we select a flower of the variety with which we desire to fertilize, in which the pollen has become ripened, and take this flower to the seedling plant, and there apply the pollen direct to the pistil, either by means of a camel's hair brush, or by carefully shaking the pollen out of the flower on to the pistil. This is done on a clear day (if it is slightly overcast the pollen takes better) as by experience we have found that the pistils are then in the most receptive condition, and that the pollen also is in the best condition for fertilization. It is essential to have the pollen perfectly dry, so that it will fly about like fine dust, and it is essential that the pistil be well covered with this gummy substance, as only when that occurs for the full length of the pistil do we get a perfect seed pod. If the pollen is applied to simply one portion of the pistil, or to only one pistil, we get an imperfect seed pod, that is, one not thoroughly filled with seed. In some cases there is but one pistil. Most generally there are two, often there are three and in two or three cases I have seen four, however, a flower with two well developed pistils is preferable, as from such flowers I have usually the best pods of seed.

Within 24 hours after the flower has been fertilized, if the process has been successful, the petals will close together and commence to wither away, and in the course of two or three days the pistils will commence to wither at the point and finally die out, and the ovule commence to swell. As soon as the ovule has increased two or three times its natural size, it will become necessary to split the calyx down and carry the split portions back so as to admit of the seed pods draining thoroughly, as it is often fatal to the successful growth of the pod, if water gathers in the calyx and stands around the base of the young pod. If the conditions are favorable, this seed pod will continue to grow until it has reached its full size, and it will then ripen. This takes from six to ten weeks during the winter time. When the seed pod has ripened, it will get dry and hard on the top and turn a light brown, and when it is thoroughly ripe it will begin to wither slightly. At this period the entire stem should be plucked and the seed pod, stem and all, laid in some sheltered place in the sun and allowed to dry. When dried the pod should be broken open, and the seeds carefully put away in an envelope, in a safe place, or immediately sown. The proper time to sow seeds is from the months of February to May. It is desirable to get the first flowers on the plant outdoors, and I prefer early sown seeds. By doing this you avoid bringing in a lot of single flowered plants; as when the singles bloom outdoors, they can be pulled up and destroyed.

We sow the seeds in clean 4-inch pots, using very light, friable soil, a mixture of leaf mold, loam, and very old, well rotted manure. The soil is made perfectly level, and the seeds are sprinkled on the surface and lightly covered with less than a quarter of an inch of soil. After the seeds are covered, the surface of the soil is very lightly pressed, and then it is given a syringing with luke-warm water, and the pots are set in a warm place where they get some benefit from the sun, and lightly shaded on very bright days; the night temperature being maintained at about 56° to 60°, and the day temperature 10° or 15° higher. The seeds generally germinate within 10 to 14 days from the time they are planted, and sometimes sooner. As soon as the seedlings have made the first leaves, they are pricked out into flats as below described, the plants being set 2 inches apart each way. These flats are made of coarse lumber, are 1 foot wide, 2 feet long, 2 inches deep, and made with slatted bottoms. Over the bottom a half inch of sphagnum moss is lightly packed, and upon this moss the soil is put.

In these flats they remain until they have made 5 or 6 additional leaves. They are then potted up into 1¾-inch pots, and allowed to grow on in the pots until they have made good balls of roots, and then the plants are turned out of these pots, and packed away in flats and set in a cold frame to harden, and from the end of April to the 20th of May these seedlings can be planted out in the open ground, where they are allowed to grow and flower.

The object of growing plants from seed is to get new varieties, and when these seedling plants flower in the fall each plant is carefully watched as it comes into bloom, and if it shows an undesirable color, or if it is a single flower, or if it bursts its calyx, or if its habit is such that we can foresee that it will be valueless for greenhouse use, the plant is immediately pulled out of the ground and destroyed. It usually happens that out of 1000 seedling plants so grown, we seldom take more than 75 to 100 into the greenhouses for test, after blooming outdoors, as in order to grow flowers for commercial purposes it is necessary always to select the best and most productive varieties, of such pleasing colors as will sell upon the markets, and it is a constant study and a struggle with originators of seedlings to produce something that is better than any of the existing sorts.

We have before us here to-night some samples of work that is being done in the line of raising seedling carnations. This vase contains Scott, Albertini, and Daybreak, three of the leading pink carnations which have an established place upon the market, and which are in demand for commercial purposes. In the second vase, we have a lot of seedlings that have been selected as being sufficiently promising either to introduce or to grow on a second or third year with a view of introduction, and we have in the third vase another lot of seedlings, which have been selected as worthy of a second year's trial.

Now the introducer of a new seedling must take into consideration that in bringing out a pink carnation he will have to compete with Scott and Albertini and Daybreak, as shown here to-night, for these are not specimen flowers, nor are they specially well grown, but they are the class of stock that a great many commercial florists are shipping on to the New York market to-day, and they are no better nor any worse than the average

selected stock that we ourselves ship upon the market. There are a number of things to be considered in the introduction of new seedlings. It not only must be distinct and sufficiently pleasing to sell, but it must have a great many excellent qualities. It must propagate easily, it must not be liable to take disease, it must be an early bloomer, and it must be prolific and a good keeper. The stem must be strong, the calyx must not unduly burst; it must be a large flower, and it certainly ought to be fragrant. Now if a great many in sizing up the merits of a seedling would get a good bunch of well grown flowers of the existing varieties of the same class and compare them it is possible that they would form a much better judgment of the merits of their new varieties. There are many splendid exhibition varieties that may not prove of very much value as commercial sorts, and some of the very best commercial sorts would play but a sorry figure on the exhibition table, when judged by a scale of points.

A BOX OF FLOWERS recently received from Nathan Smith & Son showed some extra well grown roses and carnations. Our old friend Buttercup showed up in a form not often seen in the west, and there was an unnamed seedling carnation, a soft yet clear salmon pink, that seems to offer unusual promise. The color is excellent, the flower large and very full. E. A. Wood was also among these flowers, and proved very attractive, as did some of the more familiar varieties.

ALASKA AND MINNIE COOK.—Blooms of these carnations were recently received at this office from Mr. H. E. Chitty, Paterson, N. J. They bore the long journey well, and are certainly very fine blooms. Alaska is very well shaped and so purely white that it makes a strong impression, and Minnie Cook is of fine size and attractive markings. The flowers gave evidence of excellent culture.

A SEEDLING CARNATION sent us by F. P. Dilger of Milwaukee, Wis., was a strong, stiff stemmed bloom, in color a deep carmine. It is large and double, suggesting Albertini in the form of its center petals, but the growth and shape of bud is like Daybreak. It seems worthy of further test.

Replying to your correspondent E. D. E. the sample of club root received show a very aggravated form of it. It is caused in the first place by an abrasion of the bark of the plant when being planted probably, or some time during the operation of handling it. This gives the eel worm an opportunity to get started, and once they get started in it they keep on growing and multiplying it.

For the benefit of your correspondent I would say that I took a piece of the club—so to term it—about the size of one-half a sweet pea seed, dissected it, and under the microscope I found from 25 to 35 live worms varying in size. I also found several clusters of eggs. In one piece I counted over 60 eggs, so that your corre-

spondent can see the number there would be in the entire piece if it were possible to get them all out alive. Many people doubt there being eel worms in the soil to affect the plants. Could they see what we investigate sometimes in this matter I think their doubts would be forever banished. These little animals are to a more or less extent present in almost all classes of soil. It is only by producing the conditions of growth necessary to keep them in check and enable the plants to grow away from them, that prevents their doing very much damage. In this particular case your correspondent says it has not apparently injured the plant, but while the plant, being a strong vigorous grower, may have kept ahead of it to some extent, still it will more or less impair the vitality of the plant or plants so affected. If your correspondent finds any more I should advise him to take them very carefully off with a knife as clean as he can and be sure to burn them all.

Scientists tell us that this little animal will live an almost indefinite time and in any climate—frost and snow has no apparent effect upon them, neither has dry weather. In all that I have been able to trace up regarding their habits, etc., such has been the general opinion of all the authorities that I have consulted, and there is no question about their being on the increase in almost every section of the country. Ten or twelve years ago it was a rare thing to hear any complaint about them in the north or northwestern section of the country; since that time, and particularly within the last four or five years, I have made it my business in every section I have been to search for it, and I am free to confess that I can hardly find a place in the country where they are not present in a greater or less degree. By carefully examining clover roots growing in the open fields in the summer these can often be found adhering to them in the shape of small nodules or lumps, and oftentimes not larger than a small pin's head. In each of these small nodules will be found numerous nematoids, which are only waiting to develop and effect other plants besides clover roots.

JOHN N. MAY.

Millipede Worms.

A correspondent writes me that his place is very much infested with a peculiar kind of worm (as he terms it), but it is not a worm at all; the samples received are of the ordinary millipede family; and while not particularly destructive to growing plants still they are not desirable, as when their food gets scarce they are very apt to attack the roots. The best way that I have found to eradicate these little animals is to take some kind of vegetable, such as carrot or apple, or any other sweet tasted vegetable—lettuce leaves will do if nothing better—but probably the best and simplest means is to take good-sized carrots, slice them up, and lay them over the bed in different positions. Go through these each morning carefully and lift them up, having a can of kerosene when you. Scrape each millipede off into the can and replace the carrots. By following this up carefully for eight or ten days I think they will be almost exterminated. Of course later batches developing may produce some more, but if they are found the same thing can be followed on till all are exterminated. Any good bright boy can do this if he is instructed how to do it, and set at it as soon as it begins to get daylight in the morning. JOHN N. MAY.

COSTA RICA. BREAD FRUIT TREE.

Shading.

This enquiry comes from a subscriber: "What is the best material to use for the above purpose?" I have had occasion before to recommend as the best cheap shading a mixture of white lead and naphtha. Use the ordinary white lead; as you buy it in kegs, there is a small quantity of oil left in the lead, but not enough to make the mixture too adhesive. Be sure and don't put linseed oil in the mixture, or you will have great difficulty in getting it off in the fall. You can make this mixture of lead and naphtha as thick or thin as you choose, to suit the degree of shade you desire. It looks cleaner and gives a better appearance altogether than whitewash made of common quicklime, although it is more expensive than the latter. If some shade is needed temporarily, say for a batch of azaleas or some such crop between now and Easter the quickest and least expensive plan is to syringe it on, which will answer very well, but when put on for the summer it is much better to apply it with a white-wash brush. It will cost more in labor to put it on with a brush, but you will save much in material. Another advantage of the brush is that in April say, a dense shade is not needed, but just subdued light and heat. Then you can shade every alternate run of lights, and leave the

others clear. That is sometimes all the shade that is required till the fierce rays of the sun pour down in May, or if the glass is broad a streak the width of the brush down the center of each light will be all you need in the early months.

W. SCOTT.

Aphorisms.

[Snatches from Mr. Grove F. Rawson's talk to the Gardeners' and Florists' Club of Boston March 5, 1895.]

The trouble with the flower business to-day is that there are too many pieces and not enough dozens.

We florists have pudding—plum pudding—at Christmas, and the rest of the year it is plain pie.

Look to superior management as an antidote for dull business.

Don't place too much dependence on market quotations; your bills will tell a different story.

The ladies know the difference between cut glass and the cheap imitation, but why in thunder do they wear artificial violets on the street?

Propos of church fairs and charity concerts; the dear ladies grumble at the high prices of flowers, but they never seem to realize that they cost the florist anything.

"We won't go home till morning" has

frozen many a house that might have gladdened the heart of a dealer.

Have a specialty if you choose, but don't be so stuck on your own specialty that you lose sight of what the market calls for; don't stick so tight to a hobby that you can't get off.

The plant business makes millionaires tired who start into it to double their money.

Because you send your son to a horticultural college it will not necessarily make him a howling success.

Your experience adapted to local conditions is what makes success.

It is a queer fact that you always expect cash from responsible parties, but Messrs. Brass & Cheek get all the credit they want on clear nerve.

What beats me is how all those eel worms get into the roses.

It is entirely unnecessary to be too much of a stickler for mere dignity.

If you want to keep on the right side of the world don't rub its fur the wrong way.

I shouldn't be surprised if the rose and carnation had a set-to yet for honors.

New York.

The regular monthly meeting of the New York Florists' Club was held Monday evening, March 11, President Allen in the chair. The increased interest in the meetings was shown by the large attendance. A committee of award was appointed consisting of Messrs. O'Mara, Ernst Asmus, May, Anderson, Weber, Paul Dailedouze and Julius Rochrs. These gentlemen are to meet and formulate rules governing all exhibits brought before the club at their regular meetings, and will also investigate any novelty which growers in the vicinity of New York may intend to place on the market. Action was taken by the club upon a reflection on one of its members which had appeared in a Bermuda paper concerning the views advanced by that member in regard to the disease in *Lilium Harrisii*.

Messrs. E. G. Hill & Co., of Richmond, Ind., exhibited a vase of their new carnation Jubilee; this variety was shown in Boston, but was off color on account of the long journey, and for this reason did not receive a certificate, but as seen here it is a very fine color and in every way worthy of a trial. It attracted much attention. Wm. K. Wood, of West Newton, Mass., sent on a few stems of *Antirrhinum majus album*, which were the source of great interest. Mr. Wood will not be the only grower of antirrhinums next season. The F. R. Pierson Company had a fine display of their new cannas Oriole, Sunshine, Eldorado and F. R. Pierson, all indicating great improvement on existing varieties; they also had bloom of *Koenigin Charlotte* and *Columbia*. These exhibitors received the hearty thanks of the club. Mr. F. C. Stewart, of the New York Experimental Station, gave a synopsis of the investigations he is now making upon the *Harrisii* disease, which was listened to with marked attention. Mr. Stewart advised the club to refer the matter of this disease to the government authorities at Washington. This would come under the care of Prof. Galloway, who, by the way, is to lecture before the club at its next regular meeting in April. Mr. C. W. Ward, of Queens, then gave an illustrated lecture on carnations which was highly interesting, and for which the club, through the president, tendered him a vote of thanks. Mr. Barron, of *American Gardening*, brought to the meeting a chart showing the com-

parative development of the carnation since 1597. This was quite a revelation to most of the members. Prominent visitors present were: Mr. J. F. Huss, of Lenox, and Messrs. Sirene and Stewart, of the Experimental Station annex at Jamaica, L. I. Four new members were elected. Some of the boys are of the opinion that if the attendance keeps on increasing as it has done for the past two meetings larger quarters will have to be procured.

A. & F. Rolker held their first auction sale at their new salesrooms, 106-108 Liberty street, on Tuesday, March 12. It consisted of dormant roses, hydrangeas, azaleas, lily bulbs and miscellaneous hardy shrubs and forcing stock; prices realized were satisfactory.

Half a dozen rose and carnation growers from Boston are going the rounds of the crack establishments in New Jersey and Long Island.

Visitors in town: A. Outram and A. Ingram, of London, England; Grove P. Rawson, of Elmira, and Jackson Dawson, Arnold Arboretum, Boston.

Boston.

The cut flower trade in Boston seems to feel the effects of Lent but little. In the retail stores there appears to be fully as much activity as before Lent came in, and at the wholesale establishments the stock does not accumulate, although the weather has been spring-like and the cut of flowers large in consequence. Prices in general are fully up to the mark of previous seasons. The presence of the opera has no doubt helped the trade here at this time, for the call has been quite large for flowers for this event. The market has never been better supplied as to quality and variety. Roses in all popular sorts are abundant, carnations have reached a perfection never before attained, bulbous stock is excellent, although in rather light demand, violets are better than at any previous time this season, and lilies are also unusually fine. The approach of spring is suggested by the quantities of yellow primroses, pansies, daisies and forget-me-nots with which the florists' windows are filled. Azalea plants of all the popular kinds are shown in great profusion, and they excel in quality any ever seen before in this market.

The showing of lilies for Easter at C. V. Whitten's is very promising, and Mr. Cotter pronounces the plants to be the best he has ever had. They are all longiflorums, and were purchased from several dealers. Those from one source showed thirty-three per cent badly diseased; in the lot from another party there is scarcely a trace of disease. Mr. Cotter's experience shows that the size or appearance of the bulbs makes no difference as to later results, for the best looking lot of bulbs received was the lot which proved to be worst affected with the disease. He thinks that carelessness and lack of judgment on the part of bulb growers in digging bulbs before they are properly ripened is partly responsible for the trouble. He has thrown away all those badly affected, and the loss sustained offsets all the profit which his houses might have yielded.

Wm. Edgar has about four thousand fine lilies, all longiflorums, of which he estimates that about five hundred were diseased. Those most seriously affected were dumped as soon as their condition was known. Mr. Edgar's mignonette is very handsome this season. He has one plant which will undoubtedly prove a valuable novelty. The receptacle in each

flower, commonly green, is much enlarged and bright orange in color, thus giving to the whole inflorescence a decided orange tint.

Jackson Dawson in his talk before the Mass. Horticultural Society on March 9 made use of a large number of instructive drawings, and was also provided with a promiscuous selection of young grafted shrubs in pots, to illustrate the different methods of grafting. After the lecture he was surrounded by a big crowd, who plied him with questions for half an hour or more. It proved to be one of the most entertaining and useful papers which the society has listened to for a long time.

At Horticultural Hall on March 9 James Comley showed a splendid collection of hybrid roses, azaleas and camellias. David Nevins had several vases of superb specimens of Magna Charta, Gabriel Luizet and Jacqueminot, and from the Bussey Institution came a collection of Roman anemones in pots, in a beautiful variety of colors. H. S. Rand showed seven varieties of violets, and C. W. Ward Storm King carnations. Crimson Rambler, the new climbing rose, was shown in bloom for the first time here by W. H. Spooner, and was awarded a first-class certificate of merit.

The flower committee of the Mass. Horticultural Society made a visit of inspection to the carnation houses of Wm. Nicholson at Framingham, on Monday.

Jackson Dawson and Wm. J. Stewart have gone to Pittsburg, Pa., to attend the meeting of the executive committee of the Society of American Florists.

Visiting Boston: P. Vos and L. C. Bobbink, Haarlem, Holland; W. Mott, Philadelphia; A. T. Boddington, Short Hills, N. J.

Thomas Motley, A. M., Instructor of Farming at the Bussey Institution and an eminent patron of horticulture, died at his home in Jamaica Plain on March 9, at the age of 83.

Philadelphia.

The violet market has busted, and prices are away down; 50 cents per hundred is now the figure for the best, and from that down to \$3 per thousand for job lots, and not particular about a handful of bunches over, is the condition of affairs for this favorite flower. Many lots sent in are hardly worth anything, and the grower of these should spend his time at something more useful than gathering and bunching such rubbish, as for instance reading a treatise on "How to grow violets."

Although business the past week has not been very brisk there has not been an over supply of stock, and flowers of all kinds, with the exceptions of carnations and hybrid roses have sold well at the same prices they have brought for the past few weeks. Carnations are down a little, but good common stock still brings \$1.50 and anything a little better \$2, with a few extras at \$3 and even \$4 is asked for some. The hybrids go slowly at \$5 to \$6 per dozen for the best, seconds bringing \$3 to \$4. Good Brides, Mermets, and Bridesmaids are scarce, as the crops all seem to be off; the best ordinary stock sells for \$8, smaller at \$6 and extra choice \$10 to 12.

Daffodils were very plentiful a week ago, but are now scarce and there is not much demand for what there are, the common bring \$3 and the large single, Golden Spur, sell for \$6 per hundred. There are a few tulips, \$4 to \$5 is the price. A grower thinks tulips will be

retailed in the stores next year at 50 cents per dozen instead of 75 and \$1 as now, for said he, "I am being offered some good bulbs for \$3 per thousand and can put them on the market next winter for \$20 to \$25 per thousand." Smilax is very scarce and 20 to 25 cents is the market price for it. Adiantum is also getting scarcer.

President Lonsdale is proud of his new carnation Helen Keller, having beaten everything it came in competition with and winning three prizes at the Boston show.

James Cole of 55th and Market, an Englishman by birth, came to this country some thirty-five years ago, but only took out papers and assumed citizenship a month ago. James and his sons are master hands in growing bedding stock and now that he intends to settle down and stay with us no doubt something wonderful may be looked for.

Mr. J. C. Eisele of H. A. Dreer's establishment at Riverton has returned from his European journey much improved in health. He reports having had a very pleasant trip; he found the stock of palms in many places very much reduced, and saw but few novelties of any merit.

W. K. Harris has been sending in a few very fine azaleas. With a little fine brass wire the outer branches of the ordinary close headed plants have been brought down almost to the pot, and the plants made to present a much prettier shape.

The Florists' Gun Club of Philadelphia was organized last week. John Burton was elected president and A. B. Cartledge secretary and treasurer. Grounds are to be selected, and as soon as the weather opens practice will commence. The initiation fee is to be five dollars and the annual dues three dollars a year. When one thinks of the prizes won without an organization, what will the result be when this shall get into working order?

George Anderson has been cutting some extra fine La France and Kaiserin the past winter. A look through his houses now shows plants to be in fine healthy condition but not over grown; in fact many do not seem to have foliage in proportion to the branches, and yet these plants send up very stout shoots from the bottom and strong wood that produce extra large flowers. He says that roses seem to stand any amount of pruning if they can be kept in a healthy, vigorous, growing condition, and by cutting them back well the thick brush does not get a chance to start, as the bottom eyes generally make strong growths.

Some of the Philadelphia palm growers are much exercised on the foreign palm question, and complain bitterly of this competition, which they say has had a great deal to do with cheapening palms the past few years. A tariff of 30 to 40 per cent would enable them to keep out the men who only pay their men 25 to 50 cents per day, and work them eleven hours at that. Perhaps there may be some truth in their complaint but how about *Areca lutescens*, which is most largely grown in this country and rarely imported; it seems to us that it never was as cheap as at present.

A meeting to perfect the organization and elect officers of the National Dahlia Society is called for March 20, at the Hotel Hanover, 12th and Arch at 8 p. m. Those who would like to join the society should send their names and addresses, together with \$3, the annual dues, to L. K. Peacock, Atco, New Jersey, the temporary secretary and treasurer.

President Lonsdale, and Secretary Stewart together with Messrs. Dawson and

Battles of the executive committee, and Messrs. Burton and Watson, members of the national society, left Philadelphia Monday evening to attend the executive committee meeting in Pittsburg.

D. D. L. Farson is about again after a two week's illness. K.

Chicago.

The opening of the grand opera season this week has helped to sustain the market, particularly as regards the better grades of stock. The increased demand in this line, however, was not as noticeable as was anticipated, and of course affects more largely only the dealers in the down town district and those located in the fashionable residence districts. The demand in this line is almost exclusively for the best grades of roses, violets, and perhaps orchids, which latter may be had in limited quantities. First-class Beauties have been in great demand, also hybrids, of which there are but very few. Jacqs, which have been rather slow up to the present time, are in quite lively demand. This rose nowadays seems to be appreciated only on account of its fragrance when used as a hand bunch. For purely decorative purposes Meteor has almost entirely usurped its place, and many flower buyers seem to prefer the latter to the former for its lasting qualities, even if both are offered at the same price. Bridesmaid, for the first time this season, is not of such average good quality as we have been accustomed to see; there are still some very fine flowers to be seen, but many of the blooms are of inferior size. The same might be said of Brides, which run very uneven. J. Meyer of Niles Center is, however, cutting at present some Brides and Mermets from 3 and 4 year old plants grown in solid beds that are hard to beat; these plants have not produced very many blooms this winter, but the quality has always been very fine. Testout runs uniformly good in quality, but as this rose is inclined to be what is termed a cropper the supply can not always be depended on when you want it. Kaiserin, fairly good all winter, is improving in quantity and quality, also Meteor, the color of which is much better on the average. Of Wootton we don't hear much nowadays, it having been discarded by many of the growers. Still when we see Wootton such as are grown at George Reinberg's place this winter one wishes there were more of them; for size and length of stem these are but little inferior to a fair sized Beauty, in color also nothing better could be desired. The Meteors also at this establishment have been exceedingly fine, and are a great credit to the grower, Mr. Otto Bentley, who is in charge of this section of houses.

Carnations are coming in better than ever; the fancies and all the better grades of the commons are finding a ready market, but the poorer grades are at times a little overstocked. Whites are decidedly more plenty, and prices on these have weakened. Hopp & Lemke, Paul P. O., Mich., are sending in to our market some splendid seedling carnation blooms, whether any of these have been named we are unable to say. There is one red variety that is simply magnificent. The color is probably as true a red as may be found in a carnation; you may call it a dark scarlet or a light crimson. The flower is nicely fringed and of enormous size, borne on long stout stems, which show a robust growth. A bunch of fifty, which was recently received by T. J. Corbrey, created quite a sensation among the growers and dealers who saw it, few of

the flowers measured less than 3 inches across, and several of them 3½ and 4 inches over the top. Now these flowers were not selected as a show bunch, the flowers having been sent in a consignment to be sold. Another seedling is a very fine pink of the style and color of Sweetbrier.

A. V. Jackson of Bowmanville has been sending in some very fine carnations; he grows Puritan for white, which with him has proved very satisfactory both in yield and quality of bloom. It is here we saw the yellow variety Bouton d'Or, which, if it may be judged by the small batch as grown here, is the very best yellow yet tried in this section. The plants are handicapped by occupying the poorest location on the benches, nevertheless these seem to thrive well, and have bloomed freely all winter. At present the plants are covered with buds and bloom of good quality, though not as bright and pleasing a color as Buttercup. As seen here this variety shows no tendency to burst the calyx, as a matter of fact we couldn't find a single flower affected that way.

Violets have shortened up again, and in consequence the market is somewhat firmer. Strange to say that even yet when we are nearing towards the middle of Lent bulbous stock of all kinds, with exception of perhaps valley, is not at all plentiful. Some growers seem to be inclined to think that the demand for this kind of stuff is again increasing, and talk of laying in a larger supply next season. All well and good, brethren, but don't overdo it. The present season has proved that a demand still exists for a reasonable amount of this stock, and prices certainly must have been satisfactory also, but a glut will in all probability bring back the same conditions existing for some years back.

H. Boettner, a retail florist doing business on North Clark street, has committed suicide by shooting himself.

Recent visitors: E. A. Wood, Denver; H. A. Bunyard, representing Pitcher & Manda; Daniel McRorie, representing W. A. Manda; Geo. Souster, Elgin, Ill.; W. J. Stewart, Boston; J. C. Rennison, Sioux City, Ia.

Buffalo.

The usual quietness which is supposed to prevail during Lent is not particularly noticeable just now, for there was nothing very gay before, but plants are selling fairly well, and flowers of best quality can be purchased at a very moderate price, which induces increased sales. Bright days and very cold nights still seem the order of the weather bureau. Some of the growers here are scheming to keep their crops for Easter. There will be more of that this year than any need to resort to much forcing.

The chief matter of interest to the great majority of our florists this week was the annual election and banquet, which took place at the Tift House on Wednesday. The following officers were elected: President, Charles H. Keitch; vice-president, Wm. B. Milley; recording secretary, Wm. Legg; financial secretary, W. F. Kasting; treasurer, Edw. I. Mepsted. Executive committee, J. F. Cowell, W. A. Adams, D. B. Long, S. A. Anderson, Wm. Scott. The report of the financial secretary and treasurer showed the club to be in a most sound financial condition. The committee on entertainment had done their duty grandly, and after the business meeting was over they conducted us to the private dining room of the Tift House, where a long table most lavishly decorated was spread for our admiration

and realization. Retiring President Adams presided, and with some pleasant introductory remark got most everybody on their feet in turn. D. B. Long gave us a long and interesting talk about "Our club." Mr. Keitch, in his usual dignified and classical style, responded for our officers. W. Scott made a rambling harange of some length about "specialties in the business" and finished up with eleven verses of original rhyme, but the rhyme had little reference to the toast, no more than it had to theosophy. Our professor, J. F. Cowell, gave a real sensible talk on "Our parks." "Relations of retailer and grower" was well handled by S. A. Anderson. "Gatherings and pastimes" was cleverly responded to by George Asmus, who did not forget the significant fact that it was at the pastimes of the club you always got the best attendance. Mr. Mansfield of Lockport responded to "old members." This did not infer that he was an old man, only that he had been long a member of the club. Mr. Wise of East Aurora very wittily replied to "Our visitors." "New members" was responded to by Louis H. Neubeck, who has lately wonderfully expanded in oratorical powers. "The trade in Buffalo" was handled by Mr. Wm. Legg, who gave an optimistic view of it, truly we trust. Mr. Keitch gracefully took care of the ladies. The retiring president, Mr. Adams, gave us a fatherly talk. Billy Kasting told of the pleasures of calling on the boys for their back dues, and old man Mepsted very fittingly wound up the formal proceedings with one of his sensible talks about nothing in particular and everything in general. A friend of the club, a Mr. Morse, added greatly to the pleasure of the evening with his sweet voice and tuneful banjo; besides Mr. M. our own Steve Rebstock sang two or three songs in most exquisite voice and taste. No fooling about this; his cultivated flexible six octave piping is a treat. Altogether it was a most enjoyable evening. The two or three bushels of flowers that had adorned the tables were ordered sent to the leading hospitals, and everybody went home happy. Visitors from out of town were Mr. F. B. Lewis and Thomas Mansfield of Lockport, Mr. Wise of E. Aurora and Wm. C. Stroh of Attica. The next meeting of the club will be at 21 Balcom street, the home of W. S.

Baltimore.

The event of the week in florist circles was the annual election of officers by the Gardeners' Club. Owing to a principle of rotation in office which prevails and an oppressing sense of their own unworthiness of the high honor on the part of the members the nomination was declined by the first four to whom it was offered. Mr. Wm. A. Ekas positively refused to consider it, although urged to do so by many of the members. Mr. Robt. L. Graham was equally positive he could not serve, then Mr. E. A. Seidiwitz was nominated, but would not run; Mr. N. F. Plittou was next, but declined on the ground of being on a private place, the office he thought ought to be filled by a commercial mau. The available presidential timber having thus unexpectedly come to an end the boys were nonplussed, and but for the prompt action of President Burger in giving them a five minutes' recess to do a little electioneering they might have staid there all night without making an election. There was some highly interesting wire pulling and fancy political work during the recess,

and when it was over Mr. Graham consented to withdraw his refusal and was unanimously elected. After this the rest of the officers were speedily elected as follows; Ed. Kress, vice-president; Wm. A. Ekas, financial secretary; Jas. G. Rodgers, recording secretary; Chas. M. Wagner, librarian; Wm. B. Sands, treasurer. After the election and auditing the books of the treasurer and financial secretary not much time was left, so consideration of a motion to hold an international horticultural show during the exposition of 1897 was deferred to next meeting, so was the further consideration of the chrysanthemum show program. The question box was opened and a number of questions discussed, among which were "Why do those who grow plants vote for such radical changes in the premium list?" Mr. Graham did not know, but wished some would make radical changes in growing.

"Will single eye American Beauty cuttings make as good plants as two or more eyes?" Mr. W. Ekas thought single eye cuttings of anything would make as good plants as longer ones, the only question was whether they would have vitality enough to make roots. "How much hard coal should be used to keep a house 50 by 12 feet to 55° at night? House isolated and heated with water." Mr. Ekas thought about nine tons, others could do it with as little as seven tons. "How often replant smilax?" Attention was called to a bed at S. Feast & Sons', which is said to have been planted twenty-five years. "Who were the members alluded to as having been lost, and what was the lack of harmony mentioned in a trade paper?" The correspondent replied to this referring the club to remarks made by nominees this evening for the one and to their own memories for the other.

Trade has been rather dull, still there seems to be sale for all material offered at fair prices. There has been but one event of any considerable magnitude demanding flowers, the funeral of a popular priest, but flowers are worn on the streets in profusion, violets particularly.

Mr. Wm. Fraser has been laid up with a severe attack of the grip. MACK.

NASHVILLE, TENN.—G. W. Currey & Co. made an assignment March 12.

MALTA, O.—Fire did about \$100 damage to the greenhouses of W. C. Scovill March 1.

DECORAH, IOWA.—W. T. Symonds lost two greenhouses and about \$800 worth of plants by fire March 6. He had \$500 insurance on the houses but none on plants.

NEWARK, N. J.—Chas. Voight suffered serious damage to his greenhouses and stock by the bursting of a water main in front of his place. The water undermined the walls of his greenhouses, put out his fires and many of his plants froze in consequence. He estimates his loss at \$5,000. He will attempt to recover damages from the city.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—By a first-class florist of all S branches, 16 years' experience single; good reference. K, care American Florist.

SITUATION WANTED—By practical gardener and florist, single, 20 years' experience. Address W. G., care American Florist.

SITUATION WANTED—By single man as florist and S gardener; life experience; private preferred. Address W. N., care American Florist.

SITUATION WANTED—By practical all-round florist and gardener on private or commercial place; age 25; references. Address J. S., care Am. Florist.

SITUATION WANTED—By florist, German, age 25, single, 11 years' experience in general greenhouse work; Chicago or vicinity preferred. C. N., 243 W. North Ave.

SITUATION WANTED—Head gardener's place by first-class grower; 15 years' experience, European and American; German, married. FLOREST, care M. Knoll, 407 W. 33th St., New York

SITUATION WANTED—By young man, age 28, single, as gardener in private place; 14 years' experience; good grower—flowers and vegetables. Good references. LOQUAT, care Am. Florist, Chicago.

SITUATION WANTED—By practical florist and gardener, single, age 35; able to manage greenhouses, either private or commercial; best reference; cut flowers specialty. F. O. 269 N. Ashland Ave., Chicago.

SITUATION WANTED—By experienced rose and S commercial plant and cut flower grower, single; 8 years' experience; references from leading rose growers; roses specialty. GARDENER, Gen. Del., Phila.

SITUATION WANTED—By young man 20 years of S age, who has 5 years' experience in the greenhouse and cut flower business; can do designing and decorating, also planting. Address P., care American Florist.

SITUATION WANTED—By competent man as foreman or assistant in a large place; about ten years' experience in roses, carnations, violets and "mums," and can give first-class reference. Address M., care American Florist.

SITUATION WANTED—As foreman; experienced S in all branches of propagation, roses, "mums," carnations a specialty; also fruit culture and general nursery work; state wages. Address A. B. C., care American Florist.

SITUATION WANTED—By a practical gardener, S Scotch, married; thoroughly understands his business; grapes, mushrooms, etc.; private place; Eastern states preferred; state wages. Address L. BOX 78, Great Neck, L. I., N. Y.

SITUATION WANTED—By a young man, German; S experience in growing roses, palms, ferns and mailing stock for 6 years; a place where he can learn some cut flower work and landscape gardening preferred; good references. A. C. LANPHECT, Ashland, Ohio.

SITUATION WANTED—Practical rose grower who S devoted all his lifetime especially in rose culture; capable to take entire charge of commercial place; good funeral designer; single, middle age, of good habits; satisfactory references. Address ROSE GROWER, 125 W. 6th St., Cincinnati, O.

SITUATION WANTED—By a thoroughly practical S gardener, either as foreman or gardener in general; good for palms, ferns; expert in roses, carnations, violets; competent at all departments in or outdoors; 30 years' at the commercial trade; single, steady, industrious, sober. Address P. O. BOX 21,332, Norfolk, Va.

SITUATION WANTED—By single Englishman; 24 S years' experience in private and commercial places; well up in orchids, stove, greenhouse and flowering plants, fruits and vegetables, laying out grounds, floral decorations, etc.; could take entire charge of all-round place; state wages. A., 67 Bromfield St., Boston, Mass.

SITUATION WANTED—Plantsman of practical S experience, posted on all requisites of commercial places, general propagation, cut flowers, roses, carnations, etc. Items of the nurseries, desirable specialty and novelty; executive ability in all branches inside, outside; best references. For particulars address PLANTSMAN, care American Florist.

SITUATION WANTED—As foreman in large commercial place to take full charge; 19 years' experience in growing roses, carnations, violets, chrysanthemums and the forcing of all kinds of bulbs and plants. Has been foreman the last 8 years; best of references; German, 35 years old, married. CHAS. JOHNSON, 40 Forest St., Jersey City, N. J.

SITUATION WANTED—By a capable, energetic S man as foreman; specialist in rose and cut flower growing; practically experienced in all leading branches of the business; German, single; open for engagement at any time desired; only first-class place wanted; best of references; when answering give particulars. Address M. S., care Am. Florist.

WANTED—Florists' wholesale catalogues. MRS. ANNA HEACOCK, Parsons, Kans.

WANTED—All greenhouse supply catalogues and price lists. DR. ALFRED E. BAKER, West Chester, Pa.

WANTED—Second-hand hot water heater for 9x50 house, 700 feet glass; give particulars. BOX 331, Bridgeport, Conn.

WANTED—A quick, reliable young man for the mail plant business in the west. R. R., care American Florist.

WANTED—All catalogues, nurserymen, florists, seedsmen. DR. ALFRED E. BAKER, West Chester, Pa.

WANTED—Partner with \$500 in florist business in a good town in Kansas. Address H. W., care Vaughan's Seed Store, Chicago.

WANTED—Single man for small place with 2 to 5 years' experience and good character; send reference. GEO. V. ADELMAN, Assignee, Franklin, Pa.

WANTED—Good assistant, well up in general greenhouse work, roses especially; German, reference; state wages expected, with board; good at floral work. BOX 824, Spencer, Mass.

FOR SALE OR RENT—Greenhouse, stocked, 2,000 square feet glass; a good chance for a practical florist. For particulars inquire of THEO. NOEHLE, Green Bay, Wis.

WANTED—By an eastern firm, an experienced assistant packer, experienced in filling mail orders. Address with references and wages desired. PACKER, care American Florist.

WANTED—Assistant, one who has had practice in cutting roses and has worked in rose houses; wages \$25 and board to right man. Address POEHLMANN BROS., Morton Grove, Ill.

WANTED AT ONCE—A good reliable young man (German preferred), not over 20 years. Apply, stating wages. GUS A. THIELE, Annapolis Junction, Md.

WANTED—Young man with some experience, as assistant in commercial greenhouses. With board. State wages. Address BRIGGS CONSERVATORIES, Taunton, Mass.

WANTED—Young assistant for private place, single, one who is not afraid to work; must speak English; state wages and reference. Address J. GUENTHER, care Dr. J. H. Vojte, Oconomowoc, Wis.

WANTED—A foreman for herbaceous department, who has a thorough knowledge of herbaceous plants and of their propagation, cultivation and packing for shipment; permanent place for the right party. Address SHADY HILL NURSERY Co., 102 State St., Boston.

WANTED—A man with means enough to build the rooms and me furnish the grounds and take 1/2 interest in greenhouse; no better location anywhere; none in twenty miles in any direction; a town of 2,000 inhabitants; there are several hundred dollars' worth shipped in every season. Address S. W. COX, Bement, Platt Co., Ill.

WANTED—On halves immediately, married man, with special practical knowledge of mushrooms, tomatoes, hot and cold grapes, forcing and propagating flowers, especially carnations, violets, bulbs, orchids; established six years, best trade, constantly increasing; ship direct from houses; telephone connection; plant handy, complete; fuel to door by rail. DR. ALFRED E. BAKER, West Chester, Pa.

FOR SALE—Greenhouses and nursery, living water; choice location and rare bargain. For full particulars address AGENT, P. O. box 53, Denver, Colo.

TO RENT—A well established florist business, twenty years standing, 1 1/2 acres of land with 2,000 feet under glass in 3 houses heated by hot water; heart of city, with 2 acres of land one mile distant; stock of carnations, roses, palms and hydrangeas; cheap. For particulars address MRS. SETH L. COLE, Gloucester, Mass.

FOR SALE OR LEASE.
Three greenhouses with valuable grounds; the best place in this country for a man with some means. Address WM. SPRINBORN, Dubuque, Ia.

\$3,500.

BARCAIN FLORIST STORE, fine location, Chicago, main business street, established 13 years; good paying business; owner going to Europe; stock consists of fixtures, seeds, artificial flowers and florist supplies, horses and wagons etc. Also to lease on long time, low rental, desirably located city lots on business street, for greenhouse purposes; excellent opening for retail plant business. Investigate before starting in business.

HORACE R. HUGHES, Room 4, 66 Wabash Ave.

For Sale or Rent.

My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 48 lots or 296 feet front on Belmont Ave. by 70 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 10 to 200 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the largest of the kind in Chicago. A good chance for some young man with some means, or for a corporation; and as I wish to retire from business, it can be had reasonable, and on easy terms. If rented, a long lease can be given.

AUGUST DRESEL,

Belmont and Western Aves., Chicago.

Hugo Lilienthal, 31 New Union St., Rochester, N. Y.

Antirrhinum Majus Alba.

SOMETHING NEW FOR FLORISTS' USE.

I offer to the trade well established plants, propagated from cuttings, of this beautiful acquisition to our florists' flowers, which should be in every commercial house, wholesale or retail.

It is of the easiest culture and produces an abundance of spikes three feet or more in length.

Everyone admires it. Wonderfully taking with the Retail Trade. It possesses marvellous keeping qualities.

Grown on benches, ten inches apart, in rich soil; in a cool house it is wonderfully productive and exceedingly profitable. I advise growing on benches, where it is to remain next winter, though it could be grown in the field or pots and run in the benches after the chrysanthemums come out with perhaps greater profit.

Our exhibit of Antirrhinum Majus was greatly admired by the experts at the Carnation Convention in Boston.

No Retail Florist can afford to be without it. I am booking orders for delivery this spring, April and May, at the following prices for well established plants.

Per Hundred..... \$6.00
Per Thousand..... \$40.00
2 0 or more at 1000 rate.

ANTON SCHULTHEIS, P. O. box 78, COLLEGE POINT, L. I., N. Y.

Toronto.

Those florists who attend the market have been anxiously waiting for a mild Saturday in order to unload some of their surplus stock of bulbous stuff, both potted and cut, but somehow although there have been many mild days lately they never happened to come on Saturday, which is very annoying, not to say trying to the temper, and I regret to report that I heard one of the said florists indulging in some exceedingly unparliamentary language on the subject. This was not wise, but the provocation being great I forgave him. So he said he would not do it any more unless it occurred again.

The executive committee of the Gardeners' and Florists' Association met in the Park Commissioner's office last Wednesday and arranged a prize list (without the prizes) for the next chrysanthemum show. Some few improvements were made and a few sections were added, but taken altogether there will not be much difference when compared with last year's list.

Violets are very plentiful now. Mr. A. Gilchrist says that Lady Campbell has done well with him this year, better than Marie Louise. Carnations are coming in from all quarters very fine, likewise roses. We could furnish the flowers for a Gould-Castellane wedding nicely just now.

The boys are anxiously waiting to hear the date of that oyster supper. E.

Kansas City, Mo.

The past week trade in cut flowers and decorations has been very quiet, and the mild weather has made stock somewhat more plentiful, especially violets, which are being brought in in quantity. Pot plants, especially cinerarias and hyacinths, sell very well. Greenhouse men are feeling very much better just now, as the mild weather is bringing them lots of visitors, and most of them invariably leave a few dimes, much to the delight of the needy florist who has been giving all he made to the coal man, and some to the water man. It is really distressing to see a man with 7,000 feet of glass having to buy water by the barrel. Those who do a shipping trade report business extra good.

The Probst Floral Company is growing a house of H. P.'s in pots and boxes which are looking fine. This is the first time Kansas City has had a house of these. It is an experiment and risky, but it is to be hoped they will sell well. They also show a house of L. Harrisii which will just make it for Easter, something over 2,000. Also 1,000 Hydrangea hortensis and 500 Thos. Hogg. Easter is the best time in all the year to sell cut flowers and plants in bloom. In fact, we all look forward to Easter as our harvest. It has steadily increased for the past five years, and the outlook this year is just as good, and we all hope a little better. S. MURRAY.

Address THE AMERICAN FLORIST CO., Chicago.

"A POPULAR TREATISE on the physiology of plants" is the title of a book by Dr. Paul Sorauer of Silesia, translated into English by F. E. Weiss. It is designed for the use of gardeners and horticultural students, and will be found very valuable to any one interested in structural botany. It is not merely a scientific treatise dealing with abstractions, but while describing organs and their uses it treats the matter horticulturally as well as botanically. The chapters on roots, their nutrition and treatment, the stem and its functions, the leaf, and the treatment of leaves, and the theory of watering, are most valuable, and will be appreciated by florists; it is rarely we find a book of this class which considers their point of view. The book is freely illustrated, well bound and well printed. (Longmans, Green & Co., New York, publishers.)

SOME FINE CINERARIA blooms were recently received from Mr. J. Smith, Cleveland, O. The blooms were very richly colored, and measured 3 1/4 to 4 inches across. Mr. Smith writes us that he has a batch of between seven and eight hundred plants in 5 inch pots, and it would be difficult to find any three alike in color.

This is the last call for advertisements in our special spring number to be issued next week. Advertisements must reach us by Wednesday morning, the 20th inst., at the latest.

SUBSCRIBER will find full answer to his inquiry about sow bugs on page 696 of our issue for March 10, 1892.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

ONION SEED is dull.

THE Johnson, Robbins Co. has been re-organized.

MR. W. ATLEE BURPEE has returned from Florida.

J. E. KILLEN is now with Wm. Hageman of Philadelphia.

VISITED CHICAGO: Joseph Rolker, John Barclay, J. C. Rennison.

MR. GREGORY, the seedsman, has offered through the *Christian Herald* to supply one thousand destitute families in the West with a free supply of garden seeds.

E. V. HALLOCK's contract with Messrs. Vilmorin, Andrieux & Co. having expired March 12 he no longer represents them. His plans for the future are not yet decided on.

CONTINUED cool weather or some better reason still holds the mail trade receipts below those of this season last year; there is still time for it to come stronger, but the season is already well advanced.

INCORPORATED: The Sibley Seed Company at Sibley, Ill.; capital stock \$15,000; to grow seeds; incorporators, J. H. Beagley, Thomas J. Ruff, Frank Skinner, George Stockdale, C. W. Cook and W. A. Ricket.

DOLTON, ILL.—L. Schroeder is now out of the business here, having leased his place to A. Tunsberg of Park Ridge. Mr. Tunsberg will continue his place at Park Ridge, which is devoted to bedding plants and vegetables, and will make carnations his specialty at Dolton.

EXTRA CHOICE FLOWER SEEDS.

List free on application.

FRED. ROEMER, SEED GROWER,
 QUEDLINBURG, GERMANY.

Worcester, Mass.

The first spring exhibition of the Horticultural Society was held on Thursday, March 7, and some very fine exhibits were staged. Mrs. H. M. Chase was awarded first in both hyacinth classes, and exhibited some splendid spikes; the cyclamens shown by A. A. Hixon, C. D. Thayer and F. A. Blake were also very fine. A nice display of primulas was made by F. A. Blake, A. A. Hixon and M. F. Brierly, and splendid carnations were brought in by H. F. A. Lange and F. A. Blake; a great improvement in the quality of the carnations, in comparison to those shown last year, was very apparent. Very fair azaleas, callas and cut flowers made up the balance of the show, which, as the first show of the year, was very creditable. While the judges were performing their duties in the hall, Dr. C. F. Hodge, of Clark University, gave a very entertaining talk in the library on "An ideal botanical garden," dwelling on the gardens at Antwerp, and relating some very pleasant reminiscences.

A great rush of funeral work has kept us very busy this last week, and has made white stuff rather short; the regular cut flower trade continues to hold good, with prices firm.

Mr. C. W. Ward, accompanied by H. F. Littlefield, paid us a flying visit on the twelfth.

Last week's FLORIST made me say that the subject of Burton W. Potter's talk before the Horticultural Society was the preservation of our florists; it should have been the preservation of our forests. A. H. L.

Washington.

All flowers are plentiful in the markets (except roses), and are of unusually good quality; prices low, yet they go slowly. Buyers seem scarce, this I presume is due to the quiet of the Lenten season. The market florists are complaining of the dullness of trade. The cut flower trade has been very good all the season up to the beginning of Lent, but the plant trade has been unusually poor all winter; particularly is this true of the decorative plants. The florists are all looking forward to a good season in spring bedding plants, for which all are making ample provision.

Mr. Wm. R. Smith has been confined to his room for the past week nursing a severe cold. It had been his intention to attend the meeting of the executive committee of the S. A. F. at Pittsburg this week, when he expected to tell the committee what has been done and what he expects to do during the next congress, with reference to the S. A. F. charter.

Taylor Ivy Geranium, \$2.00 per 100. These are all fine, large, well rooted, and will please. Cash with order. Add 10c per 100 by mail. J. J. LAMPERT, Xenia, O.

The Rose for the Million!!

BELLE SIEBRECHT.

Always in bloom. An iron constitution. Requires no special houses, no nursing. Will make itself at home in any house where other roses are grown. Proved hardy out of doors in latitude of New York. Color and keeping qualities unequalled. The greatest introduction of the century.

MORE TESTIMONIALS FROM PROMINENT ROSE GROWERS:

DEAR SIR:—The new Rose, "Belle Siebrecht," is a very valuable rose for winter forcing. The form is exquisite, the foliage handsome, the color charming, rich, bright, and of an entirely distinct new shade; it is also very healthy in growth and a constant and very free bloomer. Please book my order for 1,000.

Yours truly,
ROBERT CRAIG, West Philadelphia, Pa.

It affords me much pleasure to express to you my thanks for the bunch of Belle Siebrecht roses you had the kindness to send to me. After having graced the tables of the N. Y. Florist Club annual dinner two days ago I find it to be a remarkable good keeper, having kept it for three days longer without its losing any of its brilliant color, and it appears as fresh now, after be-

ing out five days, as if just cut. As seen growing at your place I shall pronounce it after a careful examination a remarkable free bloomer, healthy grower, and one that is not easily attacked by mildew, and a welcome addition to our list of forcing roses.

ERNST ASMUS, West Hoboken, N. J.
WASHINGTON, Dec. 5th, 1894.

MESSRS. SIEBRECHT & WADLEY, New Rochelle, N. Y.:
GENTLEMEN:—We have received your circular letter together with price list of your new Rose, Belle Siebrecht, which we inspected in your houses some time ago. Please book our order for 2,000 plants, to be delivered April 15th next.
Yours very truly,
STRAUSS & CO.

This rose is the result of years of patient work by one of the best rosarians in the world. It is not sent out to be "tried." We have subjected it to the most severe tests, and are now fully satisfied that it is the best florists' rose in existence. It is not a mere sport, but is of a distinctly new strain, the result of a cross between La France and Lady Mary Fitzwilliam. Its pedigree is all right. Orders booked now and will be filled in strict rotation. Strong plants ready for delivery April 15th.

PRICE, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

SIEBRECHT & WADLEY,

Cincinnati.

The March meeting of the Cincinnati Florists' Society was held at the society's rooms in the flower market, Saturday eve, March 9.

Business has been good during the past week and compares very favorably with that of other years at this same time. Larger orders have been conspicuous by their absence, for there were but few parties, receptions, etc., during the early part of Lent. Flowers of all kinds have been plenty among the retailers, but the wholesale men still cry for more and better roses. The same thing holds here as elsewhere, good stuff sells well and at good prices, but poor stuff is hard to dispose of at any price. The few days of sunny weather in the early part of the week brought out the roses some. Sunshine has been a scarce article with us for some time, and we were looking forward to a continuation of such profitable weather when the unlooked for windy and very severe cold snap came freezing up unprotected violets, and most of the Florists' Club members to their homes and furnaces on last Saturday eve, for they were not at the meeting.

Bulbous stuff is extremely plentiful, and much of it goes slowly, except freesia and valley. Harrisii and tulips are almost a glut. Violets are in fair demand, but there is a greater quantity coming in.

Among roses some good Brunners are now coming in from local growers, also Neurons and a very few Rothschilds. Roses generally sell very well.

There are some fine cinerarias in the market just now, Mr. Popp of Covington and Mr. Linfoot of College Hill have some prize winners. P.

NEXT WEEK you will receive our special spring number.

1.25 10.00

JOSEPH RENARD, Unionville, Chester Co., Pa.

Cleveland.

Considering the season business has been good since the beginning of Lent. Flowers are retailing as follows: Day-break, Scott and fancy carnations 50 cents per dozen, assorted colors 40 cents per dozen. Brides and Bridesmaids \$2, choice selected stock \$2.50 per dozen, Jacques \$2 and \$3, Brunners and Beauties \$4 and \$5 per dozen. There are some very fine cattleyas coming in now that being from \$6 to \$9 per dozen. Orchids are coming into more general use for funerals, and when well arranged with a few other choice flowers, say valley and mignonette, there is nothing more desirable. At a funeral recently where there was a lavish display of all the choicer kinds of flowers the handsomest piece there was a wreath of cattleyas, and the cost was very low considering the size of the piece, being only \$25.

C. M. Wagner, who has had charge of the Wamelink Bros. store ever since the above firm has been in business, has started in business for himself, and is cosily located on Erie street. On his opening day he was rushed with business, having several funeral orders and a decoration to attend to. There are now four florist's stores on Erie street practically next door to each other.

J. C. Gooding was in town recently buying up roses and carnations to help him out in a large order. He reports the outlook for trade good in Elyria and expects business to boom in the near future with the building up of Lorain, from which town they are but a few miles distant and connected by electric road.

Mr. and Mrs. A. Schmitt of Glenville celebrated the twenty-fifth anniversary of their wedding on March 1. A goodly number of friends called to pay their respects and a pleasant evening was spent.

ORCHIDS.

It is a significant fact that European firms are ordering large quantities of Orchids from us on account of the high quality of the stock which we furnish, and our prices the lowest known. While the stock lasts we shall be pleased to supply American customers at the same rates as we charge for export. At the prices offered these plants will double in value within a year. Many of our Orchids are of an exceptionally fine strain, and in the best possible condition. We offer, among others, several hundred varieties of rare hybrids.

It is a well-known fact that Orchids thrive the best in this country, and many of our plants are showing stronger growths than originally produced in their native habitat at the time we collected them. The stock we offer is one of the largest and most complete in commerce.

Please write us for offers.

Our 1895 Palm Collections are better than ever, and consist of 17 3 to 4 in. for \$3, or 31 for \$5; 10 4 and 5 inch Palms for \$3.50, or 20 for \$6; 6 6-in. Palms for \$1, all the best varieties.

Our Assorted Plant Collections for florists are selected from the best stock and are bargains. Send for 1895 Illustrated List showing quantities and prices.

WILLIAMS & SONS CO., Batavia, Ill.

E. G. HILL & CO., Richmond, Indiana,

Offer to the trade the finest stocks of Chrysanthemums, both old and new, ever presented. Our plants have never had a touch of the dread disease which has worked such havoc in many places. We send out healthy stock, propagated from outdoor grown stools which will produce just such blooms as we exhibited last autumn.

EARLY FLOWERING SORTS.—Mme. Bergmann, Yellow Queen, Mrs. E. G. Hill, and Mrs. Whildiu, all at \$4.00 per 100, or 500 for \$15.00.

COMMERCIAL CUT FLOWER VARIETIES. Per 100.—Dailedouze, \$4.00; Bonnaffon, \$5.00; Judge Benedict, \$4.00; C. Chalfant, \$4.00; G. W. Childs, \$5.00; Inter Ocean, \$5.00; Ivory, \$4.00; Jessica, \$3.00; L'Enfant, \$4.00; Malmaison, \$6.00; Minerva, \$5.00; Mutual Friend, \$4.00; Niveus, \$4.00; Queen, \$3.00. An immense stock of the above. Varieties like Amour, Judge Benedict, Minerva, Charlotte, etc., are suited for single stem plants. We will be glad to make selections for this purpose at very lowest living rates. Will also gladly make selections for large pot specimens.

EXHIBITION BLOOMS.—Keep abreast of the times. You need the introductions of last year if you would have the best results. We can make you a splendid selection.

CALVAT'S celebrated Novelties have won first honors at all the English shows; we can send you his set of 33 varieties for \$7.00.

THE NEW ENGLISH SORTS of last year contain varieties of exceptional merit. If you want the finest Exhibition sorts you will have to include many of these; you can tell which from the descriptions. The full set of 37 sorts for \$5.00.

AMERICAN NOVELTIES OF 1895.—We would like to select and send you the best 12 for \$5.00, to include Philadelphia and 11 others from our own, May's, Spaulding's, P. & M's, Smith's, Dorner's.

GENERAL ASSORTMENT. We will send 1000 choice Chrysanthemums, our selection, for \$25.00. This would include a complete outfit of varieties, suited for all purposes.

Send for our Trade List if you have not yet received it. We have a very fine line of Novelties all the way through. The new **GERANIUMS** are magnificent; Mme. J. Chretien, Deuil de Miribel, and Juliet will delight you. The new English and French are fine improvements—19 varieties for \$6.00, 12 of them fine double sorts. 12 grand new Ivy Geraniums for \$3.00.

Two fine new Acalyphas. Two grand Abutilons, S. de Bonne and Fleur de Neige. An elegant line of best Cannas. The new **Dracæna Sanderiana**, **Helianthus**, Soleil d'Or. **Hydrangea Otaksa Monstrosa**.

A very fine collection of strong sturdy growing Double Petunias, large, finely fringed, at \$3.50 per 100. We have a very large stock of them.

FORCING ROSES—Carefully grown—Perle, Sunset, Bride, Cusin, La France, Meteor, Wootton, Watteville, Albany, Gontier, at from \$3.00 to \$4.00 per 100, according to variety. An immense stock of clean, healthy American Beauty, ready now, at \$6.00 per 100.

We have made our prices to suit the times. Did you get our list? If not, we will be glad to send it.

E. G. HILL & CO., Richmond, Indiana.

A New Canna! "THE PROFESSOR."

We take pleasure in offering this Canna to the Trade, and feel sure that it will please all who purchase it. It originated with me, has been tested on my grounds for the past three years, and has been very highly spoken of by all who have seen it.

The foliage is a very dark purple, nearly black, and colors up well in the full sun. The flowers are of fair size and substance, and of a deep crimson color; they are by far the best we have seen in the dark foliage section of this popular plant.

Its habit of growth is dwarf, and its average height is about 3 1/2 to 4 feet.

We consider this Canna a valuable acquisition and hereby offer it for the first time.

Price for started plants from pots (ready after March 15, 1895), 75c. each; \$7.00 per doz.

N. B.—All orders will be filled strictly in rotation.

Last Call for advs. in our Special Spring Number to be issued next week. Advs. must be received by March 20 to be in time.

St. Paul, Minn.

Trade showed a marked improvement the last week preceding Lent. Since the beginning of the Lenten season it is more quiet, but is by no means discouraging. While there has been a decreased sale of cut flowers, plant sales have increased, owing to the milder weather. The outlook is very encouraging. Prices have weakened a little, though the best flowers are retailing at the old prices. Roses range in price from \$1 to \$1.50 per dozen; carnations from 40 to 75 cents, Romans, paper white, valley, daffodils and tulips 75 to \$1. Violets are retailing at 50 cents per bunch, and the demand for them is increasing daily. This seems strange when from all over the country the cry is raised that artificial violets are injuring the florist's business.

In potted plants, hyacinths and cinerarias are the best sellers. Azaleas by the way are not selling as well this year, owing no doubt to the many inferior plants being offered. Many will have to be carried over till another season, owing to the buds damping off and blasting.

The florist's club met March 6, at Washington Hall, Minneapolis. The attendance was the largest of the year. Mr. Gray of Minneapolis read a paper on Polygonum sachalinense, giving his experience with plants of the same. He exhibited two plants of the same showing entirely different form, habit of growth, etc., one of which he pronounced the common dock. Several present, however declared it to be a true polygonum. The chrysanthemum committee were instructed to prepare a premium list for the proposed exhibition, to be presented at the next meeting of the club. After adjournment the society was entertained by a musical program, followed by refreshments and dancing.

FELIX.

DR. EMIL HOLUB, of Vienna, the distinguished African explorer, has been lecturing in New York and expects to stay in America about three months longer, visiting a number of the larger cities. Dr. Holub is a most genial and companionable gentleman, and relates his strange experiences in a manner which fascinates and absorbs attention. He has made three exploring tours in southern Africa, on the last of which he was accompanied by his wife, and has collected much valuable information regarding the botany, mineralogy and natural history of that country. A considerable portion of the records of the last journey were unfortunately destroyed during a conflict with the natives. The large collection of specimens which he brought home from this trip number over 13,000, which took over four and one-half years to prepare and mount, and were valued at \$350,000. These he has distributed in part among the different European museums. The botanical collection includes seeds, bulbs, fruits, ferns, fungi, algæ and typical plants from the most important districts traversed.

NATURAL GAS MADE GLASS,
for Rose Houses, Conservatories, Etc., Etc.

St. Louis.

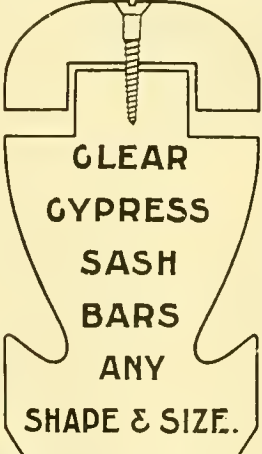

Trade has improved since the opening of Lent, the first week of which was rather slow; stock has been used up clean right along, there being very little waste. Just at present violets are suffering from the heavy southern shipments; they are as popular as ever, but too many are received for the market to carry. Jonquils have commenced to appear from the south, the single varieties, and will go well until, like violets, they are overdone. Home grown Harrisii are in plentiful supply, and move rather slow. All other stock is short, roses especially.

Four hundred cyclamen flowers were secured one day last week from California by a commission house; they arrived in good condition, considering the length of time they must have been on the road. Earlier in the season they would have sold well, but from now on, except probably at Easter, they would go rather slow, and the chances are the express charges would amount to more than they would sell for.

The spring plant trade has opened, several firms having taken possession of the usual stalls in Union Market, and show the general run of flowering plants. Trade with them has been somewhat slow, not coming up to expectations. Outside work is improving, considerable of it being done; it promises to be unusually active in the "West end," where considerable building has recently been completed. The tree agent is aware of the fact, and is abroad in the land. Several of them hailing from Rochester have been actively canvassing the best class of residence property, and selling the following roses, Empire State, Dolly Madison, Marmontel, LaFayette, New York Beauty and De Ferriol, at the wonderfully cheap price of \$10 per dozen. Unheard of trees and shrubs unknown to the trade are sold at corresponding prices. The circular used promises anything, simply plant the bushes and the roses will appear. A foot note informs readers that wherever the above roses have been exhibited they won the highest honors. Which can be literally true. R. F. T.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all. Send for price list and samples and we know you will give us an order.

No. 355

Our Title Page.

For the illustration on our title page we are indebted to the courtesy of Messrs. E. Wienhoeber & Co., who at our suggestion kindly furnished us with this superb arrangement of spring flowers, Mr. Gormley, chief decorator for this firm, being the artist.

A mirror about 3 feet wide by 5 feet high forms the background, in front of which stands a small counter 2x6. Over the edge of the counter droop ivy vines in pots; the ledge of the counter is arranged with small blooming plants such as primulas, cyclamens, cinerarias and hyacinths; these are interspersed with clumps of valley and violets in low dishes, a few small cocos and adiantums being added for green. On the left hand side rises a garland of *Harrisii* to the top of the mirror. The flowers are all placed in vases of various heights. At the base white and lavender hyacinths are interspersed with fine color effect. The opposite corner rises to a height half way up to the top of the mirror, with a plant of *nephrolepis* for the apex, back of which a vine of *Ficus repens* trails up to the top. This corner group is composed of a combination of such flowers as pink tulips, freesias, marguerites, daffodils, etc., set in vases, with the addition of a few blooming plants of Dutch hyacinths, cyclamens and cinerarias. The color effect of this arrangement as a whole was very fine. Unfortunately it is impossible to illustrate this. In order to get as perfect a picture of this arrangement as possible the surface of the mirror was soaped sufficiently to avoid the reflection in the glass. Of course the effect of the arrangement was far better with the glass clear.

Similar arrangements of flowers in season are always a feature at this establishment and prove a great attraction at all times to their patrons and would be well worthy of imitation by others in the trade. It is not necessary of course to make this decoration quite so elaborate, but it would at all times give new ideas and stimulate the taste of flower buyers, besides being a splendid advertisement, illustrating your ability as a decorator as well as showing off each individual flower or plant to the best advantage.

Arrangement of Flowers.

XIX

SPRING FLOWERS.

We present in this issue a number of illustrations showing the arrangement of various types of spring flowers of such varieties as may be found on the markets as this season of the year. When we use the term spring flowers of course we mean those varieties whose natural blooming season is in the spring, such as tulips, daffodils, valley, violets, lilac, etc., although any of these are of course to be

ILLUSTRATION NO 1
ARRANGEMENT OF FLOWERS.

had in bloom in midwinter, and some, like valley, every month of the year. Jacqueminot roses may not be properly termed a spring flower, still we are apt to associate them with such, as they generally make their appearance at this season and therefore enter to quite an extent into arrangements of such a nature. Although the Jacq. is not grown as extensively nowadays as was the case formerly it is still a prime favorite with many flower buyers, who value it for its delicious fragrance which is lacking in most of the other reds. Strange as it may seem the Jacq. is sought for in limited quantities only, when it appears in the market in midwinter. As spring advances the demand increases. Of course this may be accounted for by the high prices that are naturally current in midwinter which puts them beyond the reach of many. Still if offered at a moderate figure the sale is but slow.

Our first illustration shows a square high handle basket filled with a combination of Jacqs. and white lilac. The rich velvety crimson of the roses with the airy sprays of the white lilac form a lovely contrast. The roses, which form the main part of the basket, are of medium length of stem, say 9 to 10 inches. These are wired to match sticks in the usual way, and arranged loosely with their own foliage only, a little fern being used for edging. If expense is not to be considered A. Farleyense would be still better. The lilac is cut with long stems, and these being hard and firm are pushed right into the sphagnum, the longer sprays reaching up to the top of the handle and being fastened thereto by means of a cream white satin ribbon. Another very fine combination might be made of porcelain blue Dutch hyacinths and forced purple lilac, which latter, as we all know, when forced hard comes a

pale lilac shade. Arrange these in a similar style basket and tie with a ribbon to match and the effect is charming.

The cost of the first basket might be figured as follows, the price of course varying with the season: Say 75 Jacqs. at \$8, \$6; 2 bunches lilac, \$2; 1½ yards of ribbon, 50 cents; basket, \$1.50; total \$10. Using Farleyense fern for edging would add \$1 to \$2 more to the expense. The cost of the hyacinth arrangement would stand something like this: Four dozen Dutch hyacinths at \$1, \$4; lilac, \$2; ribbon, 50 cents; basket, \$1.50; green for edging, moss, etc., 50 cents; total \$6.50. In arranging this basket it must be borne in mind that the hyacinths must be cut with all their foliage surrounding the flower stem intact; as the flowers are heavy it is necessary to wire them firmly to stout match sticks, or what is better still, we can use skewers such as butchers use for roasts. These are made of hard wood and are not liable to break. The sphagnum should also be packed in quite hard so as to give a firm hold to the sticks, as the weight of the flower is otherwise liable to disarrange them. If additional green is used for the edging this should be of the coarser kinds of fern, as the finer forms of adiantum don't combine well with the Dutch hyacinths.

Illustration No. 2 is a typical arrangement of spring flowers. The style of the basket is similar to that of the former excepting the shape of the handle. This basket is filled with single daffodils (Trumpet Major) arranged with plenty of their own foliage, a spray of *Acacia pubescens* being tied to the handle with a satin ribbon of a shade to match the flowers. The acacia is one of the daintiest and prettiest little flowers that grows; its graceful drooping sprays are always welcome to the skillful decorator, who by its means, with a few finishing touches will add character to an arrangement. Unfortunately this flower is not grown to any extent except perhaps in the eastern flower centers. If the acacia can not be had *genista* might be used as a substitute although the latter is not nearly so effective.

A moderate estimate of cost would give us the following figures: 150 daffodils at 3, \$4.50; acacia, 75 cents; ribbon, 50 cents; basket, \$1.50; moss and wood fern to cover the same, 25 cents; total, \$7.00.

Our third illustration shows an arrangement of pansies in a metal basket (imitation silver) with rather a low handle. If the pansies are desired to show up well and to keep in an erect position it will be found necessary to wire at least part of the flowers, that is to say run a No. 34 or 36 wire carefully around the stem and then wire 3 or 4 blooms to the pick. At this season of the year when pansies are not as plenty as is the case later in the spring it is often impossible to obtain enough flowers of a certain color to form a combination by blending one shade into another commencing with pure white running through all the varied shades to the black. Such an arrangement is very effective but cannot be portrayed by means of a photograph. Pansies, however, show up very well when mixed indiscriminately as the various hues of the flowers blend naturally. The basket we illustrate is of the latter style, that is mixed shades except the spray on the handle, which runs from white at the top through the shades of yellow into the darker forms at the base. The flowers are draped over the rim of the basket quite low only on two sides of the basket, the back not being visible; it is slightly different from the front. It is

ILLUSTRATION NO. 2.
ARRANGEMENT OF FLOWERS.

desirable in a basket of this kind not to hide the shape by too heavy a fringe of green; a few fronds of adiantum set lightly around the edge are all right, although if the natural foliage can be obtained this is still more desirable.

The expense of this arrangement is very moderate as to cost of material; the expense will depend largely on the value of the basket, which in this case is more than the flowers. Cost of basket, \$3.50; 250 pansies, at \$1, \$2.50; adiantum and moss, 25 cents; total \$6.25.

Illustration No. 4 is a small round plateau suitable for a small luncheon or dinner table. During the Lenten season many of these little dinners, teas or luncheons are given where a simple and unostentatious table decoration is desired. This arrangement consists of 3 dozen valley, forming a band of irregular outline across the center, with clumps of violets set between *Adiantum cuneatum*, which also forms the edging. Such a little center piece is an inexpensive affair and would come within the reach of many: Say 3 dozen valley, \$1.50; 200 violets, \$2; 50 adiantum, 50 cents, form and moss, 50 cents, total, \$5.50.

No. 5 is a simple arrangement of yellow tulips also in a flat plateau and suitable for the same purpose as No. 4. It is of a still less expensive nature and can easily be duplicated at a cost of about \$3. Say 50 tulips at 4, \$2; plateau, moss and a few wood ferns, not to exceed \$1. Tulips are best wired to match sticks or skewers, as a pick is insufficient to hold them in position.

The True Color of a Flower.

The question of the true color of a flower, must be continuously in the mind of the florist; the multitudinous shades and tints of one color are, to say the least, distracting; and when so many hues with their near and distant relatives are constantly before us, we are not a little disturbed and unsettled in the effort to locate one of the simple primaries. "A clear idea at least of the primary hues is what we want." That is the desire of a great many florists, and I can answer the request with only a few members of Flora's large family. The trouble is, flowers do not often present pure unmixed color; but they *do* present mixed color in such a pure way, that no paints can imitate the purity! When I say pure unmixed color, it must be understood that I refer to the primaries, red, yellow, green and blue. The flowers which nearly approach these hues are, red carnations (the *Portia* will do, or any other variety like it but brighter), yellow evening primroses, or better, sweet sultans (*Centaurea moschata*, var. *suaveolens*), and blue gentians (*G. verna* and *G. alpina*, of the Alps and Pyrenees) and forget-me-nots, including the variety *Myosotis alpestris* of the Alps. There are excellent approaches to blue in our own gentians (*G. Andrewsii* and *G. crinita*), in the blue bachelor's buttons, and in chicory (*C. Itybus*); also, the beautiful *Delphinium peregrinum* of the Pyrenees approaches blue through violet. But these flowers are all violet-blue, and I am compelled to

ILLUSTRATION NO. 3.
ARRANGEMENT OF FLOWERS.

say that there is really no true blue flower. I must except the forget-me-not from any connection with violet, as that flower shows a fairly good blue (of a weak character) sometimes slightly tintured with green. But the color of the forget-me-not is entirely too pale to be called a true blue. There is an excellent pure red phlox (*Drummondii*) and balsam which seedsmen mistakenly call scarlet in their catalogues; but there is no scarlet blood in either family. Although the aster is supposed to present blue in various tones, as a matter of fact it does not approach the true color nearer than dilute violet. The so-called blue violet, but pale or medium (as the case may be) violet-color. If a specimen of the flower could be found which was true blue, it would create a sensation among the florists!

As true green is nearest like the paint called emerald-green, a metallic-looking color in common use by artists, it would be pretty hard work to match it in nature, at least in Flora's world. Neither leaves nor flowers ever present this color; it occurs in effects only, and thus in an impressionistic way.

The rose shows crimson, yellowish crimson-red, pale magenta-crimson, magenta-pink, and pure pink; it rarely shows a pure red, and never scarlet; there is no scarlet blood in this family. The canary-bird flower (*Tropaeolum peregrinum*) is a good yellow, but this color is not presented by any nasturtium; the latter flower is rich in golden yellows, and the Pearl shows an extreme reduction of the gold tone with white. Compare a bit of sulphur with the Pearl, and the sulphur will show how different the Pearl would be if the nasturtiums had pure yellow blood in their veins, i. e., a very whitish sulphur-color. The chrysanthemums do not show pure red, blue, purple, or violet. They do occasionally show a true yellow. Even the pure red flower is rather rare in polychromatic flower families, and the tulip, hyacinth, centaurea, aster, sweet

pea, larkspur and pansy never present a flower of the true red; but strange to say, excepting the tulip, these are all particularly strong in violet-purple. One of the most remarkable instances of the varied presentation of red, is the carnation family; here we have the color in its purest and most brilliant tones. But of carnations I will have something to say later.

F. SCHUYLER MATHEWS.

Plants in the Store Trade.

In discussing plants for the retail trade, that is more particularly the store trade, we have a subject that has come to be of great importance to the florist. No store is complete without a stock of plants; in many cities the sale of them is of as much importance as cut flowers. When renting a store one of the great considerations is, the convenience of handling the plant department, and we have now reached that stage that to be in the front ranks one has to look out for a store so located that a small conservatory or show house can be built at the rear end of it. This, when practicable, is of great value to the florist, as it enables him not only to show his plants to better advantage, but allows him to give much better care in the way of light, heat, and water, and to a certain extent does away with the great trouble that store men have to contend with in keeping plants in good health, for there are some plants that it has seemed to be impossible to keep in good shape under ordinary store treatment. The strides that this branch of the business has made in the last few years we hardly realize. So rapid has this increase been that at the present time growers make it one of their specialties to grow houses of the different varieties, not only for the holiday trade but for every day trade.

When a large trade is carried on in this business it necessitates in an establishment at least one clerk who is also a good plant man, as the losses from plants go-

ing wrong is in many cases due to the unskillful handling of them in the store, and as we all know many plants that we handle are not at all times good house plants. This means that the purchaser will return to the store to know what is the trouble with the plant that she bought, it has lost its leaves or they are turning yellow, etc. The clerk who has some knowledge of the business combined with good tact can usually satisfy such visitors.

Holiday times of course are the great days for plant sales, and one of the most noticeable demands on these occasions in the last two years has been for palms of all sizes. At Christmas and Easter it seems as if one can hardly get enough of the salable sizes. Good kentias, latanias, araucarias, and rubbers seem to be the favorites, and at the prices that they can be bought at the present time a very handsome profit is realized, often putting the profit on cut flowers in the shade. Palms are also getting to be used more generally at small affairs, I do not mean weddings, receptions, etc., but when from 2 to 12 are used, and also at business openings, where palms are now used generally. This is where the conservatory comes in so useful, for it not only helps to rent the palms, but is so handy to fill small decorations from without having to go to the greenhouses, which may be at some distance away. This renting out part of the business is not looked upon by all florists as the most profitable business, because what with imperfect packing in winter, careless watering at the houses where they may be sent, and effects of gas and heat on them we are apt to say when we find occasionally a plant comes back ruined, "There is no money in it." But do not believe yourself when you say it, for in my opinion with good care, skillful packing, and above all judicious selection of hardy varieties for the purpose, it is one of the best paying transactions. Of course one should always get a fairly good price, and especially for flowering plants, and they generally suffer the most.

With regard to the sale of plants I would say avoid one thing, and that is do not introduce to the public plants that you know are not going to be a success as house plants, at least not without stating the same, for people easily get disheartened and they fight shy of buying other plants. Of course we want novelties, but unless they are good we are better without them, and the pleasure that a salesman has in selling what he knows as a rule will turn out good compensates for the tired feeling he may have at not being able to offer his customers a novelty.

I will now give a list of what I grow and handle at my own store, beginning at Christmas, palms, dracenas, rubbers, ferns, and other foliage plants as above mentioned. The poinsettia, this I find the ideal Christmas plant when well grown and can be sold to a large extent. The only drawbacks to it are the trouble of delivering and the short time before the green leaves are gone, but all this the regular buyer of poinsettia understands. Begonias are one of the most salable, only do not keep them too long in the store, as the flowers soon drop. Lilies, callas and Bermuda, are always useful for filling in a gap. Then the early white azalea *Deutsche Perle*, which can now be easily forced for that date, is very salable and brings very profitable prices. Good primroses and cyclamens always give satisfaction, and I consider the cyclamen one of the very best house plants, and should be

much more largely grown than it is. Lilacs in limited quantities. *Linum trigynum*, a plant introduced in this locality this year, is very taking when covered with its yellow flowers.

There is one form of growing bulbs that I will introduce here, as at Christmas it first puts in an appearance; it is pan culture of bulbous plants, etc. The shallow pans 6, 8, or 10 inch in diameter, planted with lily of the valley, Roman hyacinths, tulips, etc., make one of the best selling articles that we handle, when covered with colored paper tastefully put on they are very attractive, and whether as a present for table decorations or in the place of cut flowers give general satisfaction, and at this time can be sold in large quantities, especially of valley and Roman hyacinths, it being rather early for good tulips. Having passed Christmas and New Year's the general trade in plants is brisk, as everyone begins to think that spring is coming, and long for a reminder in the way of a plant. For the next three months, that is until Easter, pans of every variety of bulbs are in season. Tulips in their many colors, valley and miniature hyacinths, the latter one of the best for selling. At this season we get two of our best all around winter plants, first the Dutch hyacinth, which is always popular and when good sells in larger quantities than any other pot plant. I would say here that I think many of us make a great mistake in buying a good part of our stock of a cheap grade; by paying 2 or 3 cents more we can certainly command more at retail. The cost of raising is the same and the credit given us for having fine flowers enough to add another five cents. Buy the best bulbs.

The other plant is the azalea, which I consider the best of all plants that we sell; its variety in color, pretty shape, lasting qualities, as a house plant, combined with the good legitimate profit one is able to make on it, give both seller and buyer satisfaction. Only be sure and tell your customers to give them lots of water when in flower.

Another favorite plant in most parts of the country is the cineraria, and when good seed is bought and plants are well grown, and the same is delivered without any greenfly on it is fairly satisfactory.

Lilacs and lilies should be grown in judicious quantities, as they are always salable. All through the winter months a few orchid plants can be sold at a good profit, one of the most satisfactory being cypripediums. As Easter and spring approaches so do flowering plants become more plentiful, and also the demand for them. Of all Easter plants the lily is the one. The increase in the sales of this plant is marvellous; every year you will hear the grower say he is overstocked, but when Easter morn comes what maneuvering there is to fill the last orders. It almost seems wrong to bring lilies in before this time, for they seem especially Easter flowers. When they are grown well they are very profitable, such a contrast to some of the cut flowers at this season. A very suitable form of lilies is 4 or 5 longiflorums in a large pot, they sell at once. I think that the sale of lilies at Easter will increase year by year.

A pretty Easter plant is the cythus, which is very attractive although it is a sketch of imagination to call it a good house plant, as the pretty little leaves will fall. Azaleas that have been kept back for this season are more than brilliant and therefore very salable. Now comes the grand old summer plant hydrangea, with its large heads of flowers that seem good enough to eat. They sell on sight. Pans

of bulbous stuff are at their best, the double ones being now an attractive feature of our plant display. I must not forget that useful plant, the spiræa, cheap and profitable, satisfactory, only give lots of water.

We have now also to keep up the supply with the demand to bring in good specimens of summer plants in the shape of geraniums in full flower, heliotrope, etc., but only for these few days, as this class of plants does not like the confinement of our stores. Leaving Easter behind, spring and early summer is with us, and we have some plants that are very salable as an everyday article of commerce. First I will mention *Lilium lancifolium album*, roseum, and rubrum, also the grand old *L. auratum*, which bring good prices. Hybrid roses are now most attractive, and tempt buyers as only a rose can. Gloxinias, one of the very best summer indoor plants, when well grown make our windows look very gay when we have no showy cut flowers to do so. Two or three years ago tuberous rooted begonias had a run, but as a house plant it was a failure. Besides those above mentioned we have few plants for sale; fortunately all have a show in their gardens at this season.

Fall comes and with it the most attractive, gaudy, coarse and yet fascinating of all, the chrysanthemum. This is truly a salable plant as outside plants are dead or so shabby that they make everybody feel the want of something brighter, and all they can get is the chrysanthemums, so they sell well for medium well grown plants and they pay.

Now although I have not mentioned nearly all the plants exhibited in our store windows yet I have given the most profitable and satisfactory, and will close my remarks by saying that one of the most useful and free selling forms in which plants are grown all the year round are the pretty plated jardinières filled with ferns, small palms, etc., and my advice to a retailer is that, however small your business is always make some provision to handle a few plants, as to say the least they help to keep your customers and on dull days of Lent and early summer help to swell up the amount in the cash register.

WM. SCOTT.

Flowering and Foliage Plants for House Decoration in Philadelphia.

Ten years ago the trade in this class of plants was very limited; the demand was light and so also was the supply. It is not very long since azaleas in flower were a novelty at Christmas. Now the dealer can get his orders filled without trouble. While some varieties of plants do not sell as well as formerly it is because they are superseded by others rather than on account of any falling off in the demand.

The sale of all kinds of plants for house decoration has grown wonderfully; particularly is this the case with palms and ornamental foliage plants. Whole establishments are now given up to this class, and still the supply is not ahead of the demand, although there are ten palms grown and sold now to one ten years ago. There are also many more ferns used, and the growing of these beautiful and useful plants will soon be in the hands of specialists. Other attractive plants that sold well in this market the past winter, particularly for the holiday trade, were solanums or Jerusalem cherries and ardisias. These latter will pay any grower who can place well berried plants on the market at a reasonable figure. The ardisia will command a really profit-

able price if well grown, as its bright red berries make it essentially a Christmas plant.

Says Wm. K. Harris: "The taste seems to be changing, and is now more for foliage than for blooming plants, and as we try to keep the public supplied with what they like our stock is now principally made up of this class, although of course we grow largely of chrysanthemums in the fall, genistas, azaleas and lilies in the winter, and these latter together with hydrangeas, deutzias and spiræa for Easter. Years ago we sold a great many carnations in pots, and begonias of various kinds were also good sellers. Libonias we grew largely for some years, having the bulk of the stock about the holidays, when it could be cut or sold in pots. Chinese primroses were also a staple plant with us. We still grow a few stevia to follow chrysanthemums. We have grown a few dwarf lilacs in pots the past season and find a demand for them. Hyacinths in pots and other bulbous stock have not sold as readily the past few years and the demand for all kinds except lily of the valley seems to be falling off. Plants grown in from 6 to 8-inch pots we find to make the most salable stock; there is a demand for extra sized plants, but it is very limited." Speaking of profits he said that the very low price a plant grown in a 6 inch pot should net the grower is \$3 per dozen. "If it belongs to that class that requires plenty of room and special treatment to flower nicely it should bring \$4. Such plants as cyclamen, if well grown in sixes, should bring \$6 to \$9 per dozen. There are many things to be considered in growing pot plants for profit; the grower should select such kinds as there is a good or reasonable demand for, grow them with the idea of quality rather than quantity, exercise care in staking and put them on the market in the best salable condition. Then above all things have them on time. If for the Christmas trade, they have at that time a special value and will not bring nearly as much if not ready until the week after. The same applies to Easter stock, lilies for instance, so much in demand the week before, being almost worthless the week after this festival. Some will say, 'everybody knows this,' and so they may, but the fact remains that belated crops are to be seen every year in too many places after these holiday events which might have been placed on the market and sold had a little more care and forethought been given them. A clean pot is another feature of the up-to-date market plant, and one that has come to stay."

J. W. Colflesh says in answer to the question, "Which are the most salable pot plants?": "That all depends on the quantities of this or that variety in the market. The demand for this class of plants is not so great as it ought to be, and the market is soon overstocked. Well grown begonias, carnations and bouvardias sell fairly well during the winter months, and later on heliotrope, mignonette, geraniums and fuchsias. Bulbous stock, such as daffodils and hyacinths, sell well in pots provided the market is not too full. Azaleas help to make up an assortment, and shapely plants of fine colors are good sellers."

Mr. W. W. Mecky is a large grower of plants for market. For the winter months he finds well-flowered marguerites, cinerarias, begonias and poinsettias to be his best stock. For the Easter trade he grows largely of hydrangeas, azaleas and pot roses. His stock of roses is probably the largest in this city; he having over

ILLUSTRATION NO 4

ILLUSTRATION NO 5.
ARRANGEMENT OF FLOWERS.

25,000 plants in from 5 to 8-inch pots. His varieties are *Hermosa*, *Brunner*, *Jacqueminot* and *Magna Charta*. These are potted during November from the open field, being plants entirely of his own raising and all on their own roots. They are pruned at the time of potting and the refuse wood made into cuttings for next year's stock. In potting, the soil, of a good sod compost, is very firmly pressed about the roots, and a water space of one and one-half inches from the top of the pot is left; this space seems more than is the practice with most growers, but is here considered necessary.

The roses are set close together on tables in very light houses, and are without heat of any kind the entire winter, those for Easter sales being removed to a higher temperature. The rose cuttings are put in boxes of micaceous sand rather than in a bed, so that they can be moved about if necessary. Mr. Mecky confines himself to the hardy class of roses as he finds that teas do not do well with the same treatment. In raising cuttings of bedding out stock, of which he handles principally *lantanas*, *coleus*, *tuchsias* and *geraniums*, he uses large pot saucers filled with micaceous sand; these saucers when

full of rooted cuttings can be moved into a cool house if not convenient to pot them off when rooted.

Robert Craig has been a large grower of pot plants for house decoration, and finds the taste changing from blooming plants to those with ornamental foliage. The demand for *araucarias*, *crotons*, *rubbers* and the various popular kinds of palms is increasing, but the public at the same time are becoming more critical, and will be satisfied with nothing short of a perfect plant. He makes a specialty of *evclamens*, and while he had them fine this season he expects to have something very choice for next year. He says: "Crotons make desirable house plants and they must also be acknowledged as one of the coming bedding plants; they are rapidly growing in favor. They can be propagated very rapidly by taking the top of a thrifty young plant and putting into a 3-inch pot with light sandy soil; in bottom heat they will be rooted in about two weeks, and then grow rapidly and soon assume the shape of a *Harris rubber*, with broad leaves from the pot up, while the plants from which the cuttings were taken develop into fine specimens. Crotons like plenty of heat and moisture; the walks and floor of the house being damped down every night. Lilies and azaleas will continue to be the popular Easter flowers." Mr. Craig's stock of lilies is immense; three large houses 150 feet long being filled with plants of all sizes, from pots containing one plant to those with five and six. Two-thirds of the lot are *longiflorum*. In order to keep them short considerable clay was introduced into the soil, and the effect is easily seen in the short stocky growth. Many 9-inch pots with 5 to 6 bulbs are expected to carry from 35 to 50 flowers.

A new *hydrangea* is on trial, *H. Otaksa monstrosum*, said to produce a flower two feet in diameter, similar to *Otaksa* but much larger. It is a European novelty. *Astilbe compacta* is being forced exclusively, being much better than the old variety. *Swainsona* Mr. Craig regards as a coming florists' cut flower; to obtain the best results after cutting it should be soaked a day and night in water before being offered for sale. After this treatment it lasts much longer. Bulbous stock for sale at Easter should be planted in pans, a quantity together; in this way they are very effective and salable.

Some of Mr. Saunders' new *coleus* are very fine, and quite different from our old varieties. *Empress of India* and *Princess May* are both striking novelties and will be sure to attract attention.

Roses, particularly hybrids in pots, make fine Easter plants. *Brunners* on their own roots are considered better than bedded stock. *Clothilde Soupert* is considered a much better rose for Easter than *Mme. Plantier*, as it holds its blossoms much longer. The *Crozy* type of *cannas* are destined to play a most important part in lawn decoration in the future. The list of good new varieties is growing rapidly. A partial list of the best comprises *Eldorado*, *Columbia*, *Florence Vaughan*, *J. D. Cabos*, *Charles Henderson*, *Sophia Buchner*, *Mme. Crozy*, *Egandale*, *Chicago*, *Queen Charlotte* and *Alphonse Bouvier*.

Sanchezia nobilis is a plant coming rapidly to the front as a fine bedding requisite; its broad green foliage with yellow stripes gives it a striking appearance. It is easily propagated.

K.

Made-Up Work.

"Give me some loose flowers, please, I do not want any 'set pieces,' they are so stiff and formal looking."

"Yes, but—my dear customer—that depends very much on how they are put together and for what purpose intended."

"O, I like naturalness and simplicity as always preferable to the florists' art."

"And I prefer to look at nature rather than her pictures; but all the same I do not decry artistic paintings—nor do you! What is the relation of masterpieces to mere daubs?"

Because many floral designs are excrescences it is proven that all of the florists' work belongs to the same category? I have heard ladies say "I simply can not endure 'set' pieces of flowers"—and I have noted that their own houses, supposedly criterions of good taste, contained artificial palms in jardinières and artificial roses on the buffet.

Deliver me from *all* this sort of thing, and artificial flowers of every description—whether wax, paper or cloth. Is this not the reason, I wonder, why man "kicks" so over millinery bills? I am glad I have no wife to "frozzle" her head with bits or huge bunches of parti-colored cloth flowers(?) and deem it a "love of a bonnet."

The vase or urn of cut flowers illustrated herewith is nothing at all remarkable or even original, and yet at the same time is particularly useful for certain occasions. Make the base itself of Beaconsfield pansies, one shade of carnations or the like, and the base of ivy leaves; while the bouquet part affords excellent opportunity for the display of good taste and can be made strikingly attractive.

A standard ship-shape anchor of English ivy with violet chains and a pendant loose wreath of roses is a beautiful piece of art when well done—still I wouldn't want it on a "dinner table" exactly—its proper place—is somewhere else.

Ivy is a superior groundwork and its leaves are susceptible of an effective polish by rubbing with a woolen cloth lightly saturated with olive oil. Bronze and green galax leaves possess a natural gloss and are more and more used by florists generally. I consider them a valuable addition to our stock in trade. Hardy wood ferns are also an interesting factor, especially so in design and basket work for covering moss and tin foil. Wire, match sticks or toothpicks should never be at all prominent, or the work of arrangement in evidence to the ordinary observer. To him it ought to have the natural effect of being almost thrown together.

Someone has said "It is needless to say there must be labor in any work of art, but the spectator must not see nor share in that labor; the effect upon him must be spontaneous."

I expect we will have more along this line in a paper or address before the coming meeting of the S. A. F. in August at Pittsburg.

GROVE P. RAWSON.

Decoration for a Small Banquet.

We present in this issue an illustration of the decorations at the recent annual banquet of the Chicago Trade Press Association.

The table was set in the shape of a T and covers laid for 35. Two small dining rooms being connected with wide sliding doors were used. The upper part of the T formed the head of the table, being set in one room, while the leg of the T ran through into the next room.

ARRANGEMENT BY MR. GROVE P. RAWSON.

Our illustration shows the upper part of the table, the group of decorative plants in the large window recess back of it, and part of the table extending into the second room, with a group of palms at either side at the foot.

The main part of this decoration was made of Jacqueminot roses and single yellow daffodils (Trumpet Major). Two round plateaus of Jacqs were placed one at the head and the other at the foot of the table, the one at the head being placed at the upper center of the T, flanked on either side by a cut glass vase filled with daffodils. Outside of these again stood two cut glass rose bowls which contained Jacqs. Down the leg of the T Jacqs in rose bowls and daffs in vases were placed alternately. A vase of superb carnations sent by Fred Dorner & Son of Lafayette, Ind., were quite a feature at the lower end of the table, although these had not been intended originally as part of the decoration. Wood ferns were laid on the cloth, dotted here and there with Jacqs and daffodils. The effect of this decoration was quite striking.

On the whole perhaps it is a little more elaborate and expensive than would be called for in the majority of cases for an occasion of the kind, as the estimated cost would be about \$1.00 per plate. Figuring the roses at the low price of 8, say 200, \$16; 150 daffodils at 3, \$4.50;

wood ferns \$1; adiantum \$1; add to this a load of decorative plants as adjuncts at a cost of \$10. Not figuring the vase of carnations, nor the frames of the plateaus, use of cut glass vases, etc., we have as first cost \$32.50, which would certainly warrant a retail price of \$60 to \$65.

Spring Plants in Boston.

In Boston the bedding plant trade has not increased to any extent for the past few years. This branch of the business has been steadily drifting into the hands of the smaller growers, those whose houses are not adapted for anything else, or who from their proximity to the cemeteries or for similar reasons find their best profit in bedding-plant growing. Competition in the cheap grades of goods produced by these establishments, and the resulting low prices, have injured the business for the large growers, who with the adoption of modern methods of utilizing space in greenhouses for roses, carnations, chrysanthemums and Easter specialties, either continuously or consecutively, find under prevailing conditions but little encouragement to bother with bedding plants.

That those who grow them do so at a general profit is evident, but it would be a difficult matter to arrive at any reliable figures as to what varieties yield a profit at present figures, or what varieties are

DECORATIONS FOR A SMALL BANQUET (35 COVERS).

grown at a loss. The general assortment of geraniums, petunias, verbenas, pansies, daisies, coleus, achyranthes, etc., are propagated and sold, year after year, by a class of growers to whom, in the great majority, business methods and careful management are unknown. There are a number of large growers also, who run their houses for bulbs in winter or otherwise arrange to have vacant space in spring time, which they devote to growing bedding plants in large quantities for the spring auction sales, but these growers take little account of the returns from one or another variety, as auction prices are erratic and unreliable, and their only interest is to assure themselves of a good net profit from the whole deal.

As to demand, flowering plants are far ahead of mere foliage plants. Coleus, alternanthera, achyranthes, centaurea, etc., have all seen their best days. Pansies are desirable at any and all times, and they know no fluctuations of popular fancy. Of the regular list of summer flowering bedding plants the double and semi-double geraniums stand at the head, and while the new sorts all sell well yet the old so-called double General Grant leads them all. Single geraniums are far behind the double in popularity. Of geraniums it is true as of all flowering plants that a plant with a bloom on it will sell for twice or three times as much as one without, although the latter may be the

better plant. Like the geraniums, petunias sell best in doubles, although the reason for this fancy is not so apparent, as a double petunia will stand bad weather no better and is not so brilliant or free flowering as its single fellow. Verbenas are not as much in demand as formerly. Salvias have a field to themselves, and are not likely to be superseded. A plant which deserves to be more generally grown and which is peerless as a continuous bloomer for baskets, lawn vases and gardens is *Gaura Lindheimeri*.

Subtropical bedding seems to be rapidly gaining a foothold. Grasses, musas, caladiums, ricinus, nicotiana and, most of all, the flowering cannas and tuberous begonias, are largely used for ornamental beds on lawns, where a few years ago geometrical designs in alternantheras, echeveras, golden feather, etc., had exclusive possession. In the cemeteries, which still furnish much of the demand for the general assortment of geraniums, heliotropes, lantanas, vincas, salvias, etc., the tendency to introduce subtropical effects by the use of large foliage plants is also on the increase. *Acalypha* is one of the most recent as well as most effective introductions in foliage plants, and much is expected from the latest novelty, *Strobilanthes Dyerianus*. Crotons do not succeed here as a rule. The night temperature is too cool for them.

The most prominent feature at present

in connection with the plant trade in this neighborhood is the strong indication of returning popularity in herbaceous perennial plants. This is coeval with a greatly increased demand for ornamental flowering shrubs and hardy low growing native and foreign evergreens, which are planted in beds or as single specimens. As the people advance in wealth, education and refinement, and own their own homes, the decoration of their grounds claims more and more of their attention, and the tendency to suburban life is a strong factor in this tendency. Dealers in hardy plants report a large increase in the demand for those varieties which are not weedy in habit and which afford a succession of bloom, most particularly for those plants which flower in spring and early summer and late fall, possibly because families are a way from home during the summer months and early fall. *Aquilegias*, poppies, irises, *pæonies*, *campanulas*, *doronicums*, *delphiniums*, *gaillardias*, *phloxes*, *lychnis*, *anemones*, *asters* and those grandest of all recent introductions, the hardy *pyrethrums*, all show a rapidly increasing demand. Lilies are eagerly sought for, but many fail with them on account of location or ignorance of their requirements. Hardy perennials would advance still more in favor if it were not that when grown their necessities are too often neglected; special locations and care and study of their habit

and wants will give surprising results, and it is only under such circumstances that their utility is fully demonstrated.

The prevalent custom with many plant growers of selling imported plants, such as palms and azaleas, without first getting them thoroughly established, should be vigorously condemned. Plants just shovelled into pots on the day they are received and then sold in a day or two to customers, or sent to the auction rooms, are sure to die, for it is impossible for them to live under such treatment. Such a practice works great injury to the trade and brings discredit on all connected with it.

Confessions of an Amateur.

I have often thought the florists' trade one really worthy the attention of a gentleman—there is something refining about it, to say nothing of the immense profits. I have thought, too, that a man of my calibre might elevate the business; I mentioned this to a rose grower of my acquaintance, but he seemed to think I was more likely to depress it—in fact he said something unpleasant about running it into the ground. Strange to observe the narrowness of some minds. I did not, however, make up my mind suddenly to embark in this business. My own interests (Sharps, Flattes & Co., real estate and loans,) were quite absorbing, but I spent my leisure in my garden, and gleaned much information from the horticultural departments of the daily papers. When I read of the lady who made \$17,000 from violets one winter (all grown in frames, which she attended to in her leisure moments) I was fired with emulation, and the description of the De Billion wedding, which called for 143,000 roses, 11,000 lilies and 44,000 yards of smilax, using the entire crop from Boston to Denver, made me feel that there was still room for a really conscientious grower. I began, about this time, to visit all the commercial growers I could, note-book in hand, and I must own they were very willing to impart information, only, unfortunately, they used such very singular language that I found great difficulty in understanding them. For example, I went into a carnation house one day, and noticing it was excessively hot I asked Mr. Cuttings, the proprietor, whether it was the usual temperature. He said: "Oh, no, it's just about time I put a crack of air on." I said: "Oa what?" and he answered, with some surprise, "Oa the house, of course." Well, I watched him, for what a crack of air was I couldn't imagine, it sounded like a nautical term, and I assure you, upon my word, he didn't do a thing except wind up a very stiff wheel at one end of the house!

I found the same difficulty in their plant descriptions. I am (or rather, I was) much interested in chrysanthemums, feeling sure they would be very remunerative, for all you have to do is to cut a plant up into slips, stick them into dirt and grow them on. The greatest trouble I had with them was to train them to one stalk, which Mr. Cuttings said was the way to produce the finest flowers. He told me to stop the huds, and as the only means of stopping them, so far as I knew, was to remove them entirely, I cut the tops off all my plants. One would think this was sufficient stop for any plant, but those miserable chrysanthemums, instead of restricting themselves to one big flower on top, immediately began to throw out weak little branches all down the stem, and before I realized what had happened my single stem plants were all hushes.

THE USUAL EXPERIENCE OF THE WEALTHY AMATEUR AS A COMMERCIAL FLORIST.

This was discouraging, so I gave up any idea of prize chrysanthemums that year, and determined to study them closely at the November shows. Mr. Cuttings and his friends were very kind here, but their manner of imparting information was very singular. I was making notes on an immense sandy boned blossom which had attracted my wife's attention, chiefly from its strong resemblance to Herr Ruffanthumpski, the distinguished pianist, when Mr. Cuttings remarked, abruptly, "Mrs. Lafayette Smithkins is too leggy for me, and weak in the neck, too." This seemed really insulting, particularly as Mrs. Smithkins is one of our society leaders, and I was simply amazed when Mr. Grafts, another florist, remarked contemptuously, "None of that Smithkins type has any constitution, and they're eat up with rust. When do you strike Smithkins?" I said indignantly, "Gentlemen, what would you strike Smithkins for?" and they answered in chorus "Why, for exhibition blooms only—no earthly use for anything else." It gradually dawned upon me that they were speaking of the flower, not the individual, but until I became familiar with plant names I had several similar shocks. What was I to think when Mr. Cuttings informed me that Miss Tompkins was a heavy feeder, that Mrs. Smith needed houe, that Colonel Jinks was liable to be crooked, and that Dr. Fourthly had a tendency to go blind? I can not help thinking this style of naming is overdone, though of course there are occasions where it seems advisable, as in the case of my new set, to be sent out next year (J. Robinson Sharps, Mrs. J. Robinson Sharps, Miss Ianthe Sharps and Master Beddgelert Sharps).

My studies among the trade resulted in the building of a block of modern houses, and the selection of a staff of employees. My greatest difficulty was in securing a

foreman—of course I intended to supervise the entire place myself, but still a working foreman seemed a necessity. The first man selected for the place only staid two days, owing to an unfortunate difficulty with Mrs. Robinson Sharps and the cook. It was the opinion of the latter that the foreman, not being expected to work as steadily as the other men, might very well attend to the vegetables and other errands for the house, and of course Mrs. Sharps coincided with the cook. The foreman, however, didn't; in fact he was really unpleasant, and asserting that he was no scullery maid, and wouldn't be bossed by petticoats anyway, he left on the very next train. It was annoying, for I was anxious to get my roses planted as soon as possible, as Mr. Cuttings had informed me that I was already late for such work, it being the end of October. However, by abundance of manure and plenty of heat I had no doubt of soon catching up. I had selected American Beauty as my chief crop, having noticed that they always command such a high price, and I calculated that even at the conservative estimate of one flower a day for each plant I should pay for my entire establishment that winter, and have enough left for a European trip besides. I must confess, however, that my hopes were not realized; every kind of bug and worm known to floriculture appeared to make itself at home in my houses, and by the time I had conquered the insect world there wasn't anything left of those unfortunate Beauties except bare sticks. However, they were not entirely valueless, as I planted the houses with English cucumbers, and trained the vines over the dead rose bushes; the effect was really unique, and I noticed that even Mr. Cuttings was evidently surprised when I took him in to look at them.

I had given some attention to the question of bulbs, as a very intelligent gentle-

A LOVELY GROTTTO. [SEE PAGE 820].

man from Holland had given me a lot of information on the subject, and the bulbs were so remarkably cheap that it was impossible to lose much by them, even if they didn't all bloom freely. My tulips were rather disappointing, however, as they failed to produce a succession of flowers; after cutting one crop all my efforts to start them blooming again were a failure, and I had the same trouble with hyacinths. I suppose they were not really strong bulbs. My Bermuda lilies didn't bloom at all. I had a difference of opinion concerning them with my second foreman. He was potting them in very rich earth, with an abundance of manure. I knew that couldn't be right, as I had seen lily of the valley forced in nothing but pure sand, and there seemed no reason why Bermuda lilies should be treated differently from any other lilies. My foreman objected strongly to this, he was opinionated, like most Scotchmen, and he simply pulled off his burlap apron, and remarking "Do as ye like, mon, but I'll no be a pairty to starving you puir bulbs," he left me. I thought McCulloch acted in a very hasty manner, but Mr. Cuttings has since informed me that none of the florists grow Bermuda lilies in pure sand.

I must own that I found a good deal of difficulty in securing adequate help that really met my views. As I had entered the business with the firm intention of

elevating it I did not desire the type of gardener I have so often seen about commercial establishments, who seem to have no idea of the refinement of their occupation. I tried to give my views to my third foreman, but though a most respectable young man and well recommended, he didn't seem to sympathize. He said, with unnecessary vigor, "Well, sir, if you want a lot of bloomin' livin' pictures around this place you can get 'em, but I'm looking for men that can work, and if my men are shy on culture you can bet they'll hustle when it comes down to work." His views, though crudely expressed, seemed to work admirably in actual practice, and I have always regretted that circumstances caused him to leave me.

My experience (I have certainly had experience) leads me to disagree with those who regard the carnation as a money-making flower. I decided to grow carnations quite heavily, as I noticed by the daily papers they brought from \$2 to \$4 a dozen, and didn't require any artificial heat except in very severe weather. I had some idea of growing them in frames, the same as violets, but my violet experience was so discouraging that I gave up the idea. Instead of growing my violets faded away like a vision; first they became afflicted with an eruptive skin disease uncommonly like vegetable measles, and then they absolutely melted. I have

heard of an ice plant, but I am quite sure the ice plant couldn't melt any faster than my violets did. When I named the matter to Mr. Cuttings he simply told me my violets had "the disease," and I had better burn whatever was left of them, and not replant till the next season. So my violet frames were empty and useless until my foreman planted them with spring onions, radishes, etc., which was well enough, only that my wife had christened our place "Violetsholme," and it was embarrassing to acknowledge that the violets were chiefly onions. But to return to the carnations. My foreman dissuaded me from growing them without any heat, and I was amazed to find that they needed as much attention as roses. However, I picked a few flowers in November, and sent my first consignment of 400 to Mr. Addem, the commission dealer, with a good deal of pride. I was rather shocked when my consignment slip came back, crediting me with 97 cents. I immediately went to interview Mr. Addem, and was very pleasantly received by that gentleman, but when I mentioned my carnations he told me in a genial manner that he didn't expect to sell them at all, only he had met with a man who didn't know carnations when he saw them. It appears, from what he told me, that commission men have a prejudice against consignments of long and short stemmed carnations of all colors, packed loosely

together in the box, and I found that it I expected to sell my flowers they must all have long stems, and be packed as tenderly as Sevres china. This must diminish the profits very seriously, although Mr. Addem tried to persuade me that there is more money in selling 100 flowers at \$2.50 than 300 at 50 cents. But I was not obliged to puzzle long over the question of selling flowers; as the politicians say, I was soon confronted by a condition, not a theory. If my violets appeared to suffer from measles, my carnations undoubtedly had small-pox; most objectionable pustules appeared all over the leaves, and gouty looking swellings at every joint. My foreman said they had "the disease," but this was so very indefinite that I consulted Mr. Cuttings. He pronounced it a combination of rust and purple joint. I asked him what to do, and he told me genially that I might use Bordeaux mixture for a time, if I wished—then I could throw the plants out and burn them, and be sure that the place was properly disinfected before I planted carnations there again. This mention of disinfecting gave me an idea of antiseptic treatment, so I painted all the steam pipes with tar and then burned pans of sulphur through the houses, but this utterly failed, and the plants never rallied. I have since learned that the sulphur treatment was unwise, and that nothing will ever grow in those houses so long as there is any tar left on the pipes. This is embarrassing; it seems that my only resource is to buy a lot of incubators and turn my carnation houses into a chicken run. I hope chickens don't mind coal tar. So my first season left my rose houses filled with cucumbers, carnation houses full of chicken coops, and violet frame full of onions—to say nothing of my experience. I think I shall try orchids next—it is absurd to think that an experienced man of business can not master the details of such a simple profession in time—that is, if his money holds out—although at times I doubt whether the profits are as great as the newspapers lead us to believe. I think I shall try raising new roses and chrysanthemums—the process is not difficult, and the remuneration very large; otherwise my outlay, so far, must be charged to profit and loss.

J. ROBINSON SHARPS.

The three chums sat in the potting shed enjoying the dignified ease that follows a good day's work. Davy Boyle leaned back on what was described as the lounge, an erection of delivery boxes artistically draped in burlap, his serious Scotch face bent on the piece of copper

wire with which he was giving additional backbone to the article mentioned by Uncle Josh Whitcomb as galluses. The little sharp faced Englishman, derisively styled "His 'Ighness'" around the place, chiefly because his misguided sponsors had burdened him with the name of Reginald, was fitting a new collar on a very solemn setter, varying the proceedings by shying an occasional lump of putty at Dutch Otto, who sat in silence on the top of the peat barrel, puffing vast clouds from a deep-bowled pipe.

"Ain't you afraid you'll break a blood vessel some night, Otto, with yer bloomin' lively ways?" inquired "His 'Ighness'" with deep sarcasm. "S'elp me if you've said a blessed word since you eat yer supper, and this bloomin' old Scotchman is so took up with mendin' 'is braces that 'e's about as cheerful as two Hegyptian sphynxes. It's 'ard on a bloke wot's formed for refined society, like me."

"We're no henderin' ye talkin', mon, if it's society you want," said Davy. "But after bendin' over the cuttin' bench all day I'm no in the humor for claverin'—it's a wonder my back's not fair broke the noo."

"Now don't you get talkin' about breakin' yer back over yer work," said the Englishman in a tone of disgust. "It puts me in mind of a Dutchman wot worked with me in Toledo—leastways 'e didn't work, for 'e was a lazy devil—not meanin' no offense to you, Otto, for I'd whop any bloomin' toff that said you was lazy. But this fellow Gus, 'e 'ad somethink the matter with 'is back, and it was a mysterious hailment too, halways ketchin' 'im w'en least expected. H'I've seen that bloke took sudden with 'is back w'en we was on the roof glazin' in July, and 'im 'elpless, and as limp as a little faded flower (which 'e didn't resemble, weighin' up'ards of twelve stone) and me and another chap 'ad to lift 'im down to the gutter, with 'is 'eels a-tappin' 'oles in the glass hevery move, and the hold man down below prunin' 'ybrids. W'ich you know prunin' two-year hold 'ybrids in July aint wot you might call a soothin' job, and the hold man 'ad quite a flow of language—Lor', 'ow 'e did cuss w'en 'e feel the glass go down 'is collar—it was enough to turn a self-respectin' laylock sky blue. An' w'en we gets Gus down on the gutter we 'as to slide a glazin' ladder hunder 'im, like 'e was a bloomin' corpse, w'ich I wish 'e was, and the hold man gettin' more hactionable in 'is language w'en 'e see the 'oles in the roof, and we 'as to slide 'im down on the floor in the pottin' shed, and stick a pillar of Cape flowers with "Rest" on it in purple immortelles hunder 'is 'ead, w'ich was the only time the bloomin' thing was hever a bit o' use, bein' mostly chucked up on a shelf, along of a lot o' scaly hold bouquet 'olders. There we 'as to rub 'is pore back, and give 'im a good stiff drink to bring 'im round, and 'e say 'e honly need a bit o' rest, and 'e lay down hon a 'eap o' moss hunder one o' the benches. I 'ope 'e rest a bit, honly some bloomin' hockerd cove as was 'elpin' carry a 'and-barrer o' wet soil through the 'ouse managed to trip just a passin' 'im, and the barrer and w'ot was hon it gets bloomin' well spilled hover pore Gus."

"Bet id vos you," remarked Otto with a chuckle.

"Well, it might be as I was took bad in my wrist and let the barrer slip just as we pass Gus. But then I seed 'im took bad with 'is back before. It was one day w'en we was doin' the hannual spring

cleanin' (w'ich came around about once in five years), and we was movin' a precious lot of bloomin' hold rubbitch w'ich the hold man 'ad stowed away, sayin' it would come in 'andy some day. There was hempty boxes, hold plant tubs, rotten moss, rusty wire, wire shapes wot 'ad got smashed flat, and assorted 'orticultural brickerbrack—we never knowed wot we'd strike next. Gus, 'e was workin' like a 'oss, makin' a bloomin' record for 'isself, w'en 'e ketches 'old of a barrel filled with wet moss and gives it a 'eft. 'E just gives one groan, and falls back like a bloomin' corpse. We see wot hailed 'im—the barrel wos too much for 'is stren'th, and 'e'd just about done for 'isself. We just laid 'im hout, and brought 'im round, and a precious lot o' rubbin' it took, and the hold man, 'e sez, 'Go 'ome and take a rest,' 'e sez, 'and 'ere's somethink to buy a plaster,' 'e sez, and gives 'im a couple o' dollars. 'E wasn't stingy, though 'e was such a bloomin' Tartar."

"D'ye ken what was in the barrel?" asked Davy.

"Well, me and another chap, after Gus went 'ome, we thinks we'd move that barrel, honly we didn't want to break hour backs too, so we went at 'im cautious like, just bracin' hourselves for the shock. We says 'one, two, three, and hup he goes.' It did hup, like a gas balloon, and me and the other chap sprawled on the floor with the shock. S'elp me gracious, if that bloomin' hold barrel wot 'ad broke Gus's back warn't filled with nothin' but paper, and a two-year hold could 'ave lifted it in one 'and!"

A Lovely Grotto.

Our illustration represents a corner in the beautiful grotto at the conservatories of Mrs. F. L. Ames, North Easton, Mass. It is especially valuable as a suggestion as to the possibilities of beautifying show houses. Its simplicity is one of its chief charms. There is no greenhouse so small or so limited in resource that some little exercise of artistic taste on the lines here indicated may not be indulged in, and depend upon it, your customers will appreciate it at its full value.

The Florist and the Press.

Just how far the florist is responsible for the many inaccurate statements concerning his business which one sees constantly in the daily press, is a matter very seldom considered. The fact that the papers publish such items shows that some interest is felt in the trade—and isn't it natural to imagine that they would prefer accuracy, if such were obtainable? But apparently it is not. A reporter, who knows as much about floriculture as he does about the cuneiform tablets of Ninevah, interviews some one in the trade. He may receive genuine information, which his own ignorance prevents him from applying, or he may meet with one who, unfortunately, thinks it legitimate to tell him most extravagant fiction, under the mistaken impression that he is advertising his business thereby. In either case the trades suffers, but especially from the exaggeration. It is our belief that the attempt to do away with funeral flowers is largely the result of newspaper exaggeration; people look upon them, not as an expression of the faith which robs death of its terrors, but as an evidence of extravagance and ostentation. We all remember a recent story of this kind; it was commented on from Maine to California, and the burden of the com-

VIEWS AT PITCHER & MANDA'S, SHORT HILLS, N. J.

ment was that florists minister only to the luxury of the rich, and that funeral flowers have become such an extravagance that right-minded people should set their faces rigidly against them. This was certainly advertising the trade, but in the wrong direction, for the florists received quite as much public reprobation as the unfortunate millionaire who didn't order the flowers. Of course the story was finally denied, but the refutation would never attain the publicity of the first story, which is probably still in circulation among the patent insiders.

How are we to improve matters in this line? To begin with, every man in the trade should feel it his duty to quietly correct a misstatement whenever he meets it; few of the big dailies will not find room for a short and impartial communication pointing out a glaring error. We had a little experience in this line lately, when one of the Chicago dailies published a very glowing article telling how any woman could easily find health, wealth and happiness in growing flowers for market, without the expenditure of much labor or capital. It told of a big demand and high prices, and was entirely silent as to the hard work, constant watchfulness and keen insight needed in the business. A communication written from the florists' standpoint was sent to the paper publishing the article mentioned above; following is an extract:

But, seriously, all this newspaper advice about making a fortune in the flower trade would be absurdly comic if it were not so often pathetic. A woman certainly can manage a florist's place. But even with brains and capital (and both are needed) it is absurd to talk as if any woman could do all the work of the greenhouse (except firing) and find health therein. Of course she can cut, bunch and pack flowers for market, disbud roses or carnations (your correspondent appears to confound disbudbing with removing shoots for cuttings); she may pot plants and thereby reduce her hands to the condition of deep-brown nutmeg graters, but she certainly cannot empty and fill benches, mix the compost or do the watering unless she combines muscular ability with bicycle-bloomers. There are women florists in the country—some very successful—but none of them imagines she can run a place without the aid of tyrant man, if only for his muscle, and a good many of them only succeed in making a bare living. Indeed, though I know many florists in comfortable circumstances, I can scarcely recall one who has made enough money from flowers alone to retire on a competency.

The information that roses, if well grown, are always salable at high prices will be received as a startling item by many a florist around Chicago. Just now all flowers are bringing a good price, because of the weather man's conspiracy against the growers, but as soon as the mercury begins to climb there will be a glut, and profits will be below zero. And the idea that there is no trouble in carnation growing will appeal with startling force to the men who have wrestled successfully with rust, botrytis, anthracnose, rosette, bacteria, and a few other aristocratic ailments with which the "divine flower" is afflicted. The value of the fumigating pot as a cure for rose bug will be viewed with doubt by those who have put their trust in hand-picking and baked soil, but evidently the writer alludes to green-fly (aphis), which doesn't like smoke. The real rose bug is a horrible little fiend, which grows fat on poison, and regards smoke with perfect indifference.

As regards the work of the decorative or store florist, I believe it an excellent field for women. Strangely enough there are comparatively few so engaged in this country, particularly in a prominent position. But, though I know there are women making a success of growing flowers, I must say, emphatically, that your correspondent gave a very misleading idea of the trade, and one likely to do harm. Competition in the business is already very keen, and, in the neighborhood of a great city particularly, the untrained beginner is likely to receive many a shock. Flowers are marketed quite as unsympathetically as cabbages and their sale through the wholesale trade fluctuates like that of any other perishable commodity.

This was promptly published, and without doubt did much to counteract the effect of the inaccurate screed first printed. Now, why not bear this in mind, and lend your aid, not only in correcting misstatements, but also in supplying reliable information. There is great need for this at all flower shows. At the Chicago shows a typewritten list

of the leading events and premiums awarded is prepared every day, and furnished to all the daily papers in the city, a convenience which is highly appreciated. This system should be carried out at all flower shows, and an efficient press committee should be on hand to see that the reporters notice the most remarkable features, and obtain reliable information thereon. If this duty was attended to properly we should not see so many absurdities in show reports. As to the value of these reports from an advertising standpoint there can be no doubt.

In the case of florists in small towns there is a much better chance to educate the public. Local papers are usually very ready to use local matter, and there is no reason why the farm and garden department, usually composed of more or less antique clippings, should not be revised and brought up to date by the florist. Of course he would not expect to be paid for it, but his name would appear there, and he would find it a great advantage to be looked upon as an authority in his craft. He will give people plenty of ideas—it is surprising how ignorant the average man or woman is concerning trade matters—and he will benefit the trade at large, as well as his own immediate section of it.

We certainly may thank the newspapers for much of the increase in decorating for weddings and receptions. If it was not for the publicity given to these entertainments people remote from the great centers would have very little idea of the display made; as it is, the simplest village function tries to make some show in this line. But, like funeral flowers, these decorations will suffer too from misstatements and exaggerations. Some of the old New Yorkers tell of a famous entertainment given during the latter days of Boss Tweed to a large company of the most disreputable notabilities of the city; the rooms were most lavishly decorated with camellias, and the newspaper reports, sarcastic and condemnatory, gave that waxen flower an ill-repute that seems to have killed it in the eyes of flower buyers forever.

Easter Plants at Chicago.

The demand for blooming plants at Easter time has been growing steadily for a number of years, until it has become a very important feature of the plant trade. It is a source of revenue to many growers, and if handled in an intelligent manner has proved quite profitable. There is a condition, however, upon which hinges to a large extent the success of the Easter plant trade, which is entirely beyond the control of the grower, and that is the condition of the weather just at the critical time of marketing the plants. This has been forcibly illustrated at various seasons, when owing to extremely unfavorable weather the demand for this class of plants was seriously reduced and much of the stock that could have been disposed of at good prices if the weather had been fine was left on the hands of either the dealer or grower. But such are not by any means a total loss to the grower, since the flowers of the majority are marketable as cut blooms, although if disposed of in this way the profit will be reduced to a considerable extent.

A visit to various establishments around the city shows that as Easter flowers *Harrisii* lilies easily lead the list. The great bulk of these however, are intended as cut blooms, but many thousand also find a ready market as pot plants, and are grown and treated for

this purpose. How to manage both of these plants so as to have them in bloom at just the proper time is an absorbing question and one that can not be easily answered. The date of Easter varies nearly 4 weeks, much depends on weather and then again the forcing quality of the bulb varies also. This present season the reports are nearly unanimous that the bulbs force quicker and more readily than last season. Easter coming at a late date this year the problem with many will be not how to bring them into bloom early enough but how to keep them back. Perhaps this is not a very difficult matter where proper house room and other facilities are had.

Mr. August Dressel, who grows several thousand of these for the wholesale plant trade says in regard to this question: "I do not care to be quoted as to laying down rules and regulations for treatment or the time of starting the bulbs into growth in order to obtain a desired result. Experience and a certain amount of sound 'horse sense' is the most necessary thing to success, providing of course that your stock of bulbs to start with is a sound one. Now right here I might say that much of the blame as regards diseased plants in *Harrisii* is laid to the so-called bulb disease. I do not mean to say that it does not exist, but in my opinion much of this crippled condition of portions of the stock is due to either neglect or mismanagement by the grower. Here is a house of lilies that show more or less of this blight, but I am inclined to think it is as much my own fault as that of the bulbs. It is my opinion that I kept them too dry in the fall after being potted up, and then again there is danger of over-watering before the plants have fairly started into growth, which in my opinion gives the same result. Here is another batch in another house which is entirely healthy. No, I don't think it is a great trick to bring the plants into bloom at a given time. I don't mean that this should apply to very early forcing as I never attempted that yet, but at Easter time. I prefer to give the plants intended for pot sales plenty of time to develop slowly as this make stronger and sturdier stock. It is not difficult to control the growth as this depends on the temperature of the house you grow them in. If I find the plants advance too rapidly I keep them colder, on the other hand if I find them moving too slow I provide more heat. I think it is preferable of course to have them in bloom just in time, as this avoids the extra handling of the plants which is necessary if the crop comes in a week or ten days early. In that case the plants should be removed to a cool shed with light but little sun, where the plants will keep in good condition for a sufficient length of time, in fact the plants are hardened in this way and are as a rule more satisfactory than those taken right out of the warm houses. It is at any rate better than to be obliged to put on extra heat in order to have them on time, and so on the whole I would rather have my stock too early by one week than too late. I generally grow 7 to 9 bulbs, mostly in 6-inch pots, which this year average probably 5 blooms to the bulb. The average wholesale price is \$5 per dozen; a few of the best bring \$6 and if extra good a little more, and those with but 2 or 3 flowers will bring \$4. While the profit to the grower is not large at these figures, it insures at the same time a reasonable profit.

"*Callas* are not much in demand for Easter, or for that matter at any other time, still I grow a bench of them every year. These of course give a good many

DISPLAY OF ORCHIDS IN THE CONSERVATORY OF MR. JOHN L. GARDNER, BROOKLINE, MASS.

flowers during the winter which are cut and marketed. I grow them in 6 inch pots and sell the plants at Easter for \$30 per 100.

"*Spiraea* or *Astilbe japonica* is in demand at Easter, but is grown by many as much for the cut flower trade as for the plant market. Plants in 6-inch pots bring \$4 per dozen, which is considered profitable by the grower."

Staphylea colchica, which impressed Mr. Dresel last season as a valuable thing for forcing, is grown here this year on a little larger scale. Here is the grower's opinion of it: "I find this shrub can be forced into bloom without much trouble and as soon as sufficiently known to the flower buyer will be sought by them. At present but few of the retail dealers and for that matter growers either are acquainted with it at all, but I find it sells well as a cut-bloom, for which purpose I have grown the larger portion of the 300 plants imported this season. As to the wholesale price of the blooms at this season of the year I should say that less than \$1 per dozen would not pay. A strong plant will give about one dozen heads of bloom. These plants cost me abroad 28 cents each; adding freight, which on account of the heavy balls of the roots is quite an item, the expense of handling and potting, the total cost of the plants will stand the grower about 50 cents. My experience in carrying over the one plant I had for trial last season has not been satisfactory. This plant made a good growth but has

matured but one single flower spike this year; but of course this experience with a single plant doesn't prove much. I am trying a couple of dozen plants this year to sell in pots at Easter, and think they ought to go well.

"Azaleas? Yes, I grow a good many of them and intend the great bulk for the Easter trade. I select no special varieties for this purpose and I really think it makes little difference. You can have *Madame Vander Cruyssen* one of the earliest if you desire, and you may have this same variety as late as any other; it depends altogether on your mode of growing them. If I desire a certain lot to come in bloom as nearly as may be possible at a given time, I keep a close watch on them, removing those that show an inclination to push ahead into cooler quarters and others that don't come fast enough to suit me are taken to a warmer house. A late Easter, desirable as a whole for the plant trade, is not just the thing for azaleas. After the 1st of April the azalea is very apt to do about what it pleases; you can hold it back just so long and no longer; it will come into bloom in spite of all your efforts to hold it back. I find that plants which can be sold at wholesale at from \$9 to \$18 per dozen go the best. There is little demand in my line of trade for more expensive stock.

"Here is a small batch of hydrangeas. I don't go heavy on them for Easter, as the demand with me at least is but small. Yes, I am in quite heavy again on pot

roses. The stock is of my own raising, as I import but little. Although I sell a good many of them at Easter still the bulk of the stock is not grown for this purpose. Here is a nice little batch of *Hermosa* which I expect to bring in at Easter. A plant in a 5-inch pot will bring \$20 per 100, and in 6-inch \$30. This lot of hybrids, which also includes some *American Beauties* and *La France*, are intended for Easter. These are grown in 6-inch pots and will average \$5 to \$6 per dozen; the price of course depends on the number of flowers and buds to the plant; some of the best will fetch 75 cents to \$1 each."

Mr. Samuel Pearce also grows considerable stuff for the wholesale market and has several houses of *Harrisii* intended for Easter. These are well grown plants in 5 and 6-inch pots; 5 to 7-inch bulbs in 5 inch pots, and 7 to 9-inch bulbs in 6-inch pots. Most of these are for the plant trade, but Mr. Pearce says all of the plants are not always fit to be sold in the pots. A plant in order to be suitable for this purpose must be well furnished with clean foliage from the pot up, and the plants that are lacking in this respect are useful only in supplying cut flowers.

Here we saw an exceptionally fine batch of Dutch hyacinths in full bloom. Speaking of these says Mr. Pearce: "Here you see in this lot an illustration of the extent the weather conditions operate in the sale of pot plants. These plants wouldn't be here if the weather was warmer and more pleasant. As it is the store men don't

care to handle them and I shall be obliged to cut the blooms of many, but the best price to be obtained for these is but 75 cents per dozen, while the plants in pots would bring \$1.50, which is the wholesale price of well grown and popular sorts, though a good many are sold at \$1.25. Yes, I grow several thousand of them for Easter and I find they go well."

It is here we saw a splendid batch of Beauties, which make an admirable pot plant. These are treated just like hybrids, having been kept dormant. Mr. P. expects to realize \$9 to \$12 per dozen for them, being grown in 6-inch pots and covered with buds. A fine lot of azaleas and spiraea is also grown for Easter.

Mr. Aug. Jurgens grows *Harrisi* lilies for the plant trade and has an admirable looking lot of plants. These are grown in 6-inch pots, some of the stock being 5 to 7 and the balance 7 to 9 bulbs. The latter will average 6 to 7 flowers and are expected to bring \$9 per dozen. Mr. Jurgens has discarded growing azaleas for the market, not finding it profitable, but is as usual quite heavy in bulbous stock. Dutch hyacinths, the stock of which is fine, will be grown in large quantities for Easter, and also tulips, daffodils, etc., in flats, being sold in this shape to the dealers.

E. Wienhoeber & Co. grow a large amount of Easter plants for their extensive retail business. Azaleas are handled in considerable numbers and are always in good demand for Easter. Here we find that a large number of the larger and more expensive plants are readily disposed of, plants that bring at retail \$5 to \$10 each, though by far the largest number are of a size that sell for \$2 to \$4 each. *Harrisi*s are sold in large numbers at retail prices ranging from 75 cents to \$2 each, according to the number of blooms to the plants. Dutch hyacinths sell well and bring 25 to 35 cents each. Chinese primroses sell well, most of these go at 25 cents, a few of the finest plants bringing a little higher figure.

Rhododendrons, here as elsewhere, are reported as going rather slow, and are not considered a profitable investment. *Cinerarias*, of which there is an excellent stock of finely flowered plants, are much in demand at Easter and are profitable stock to handle. The public seems to take to cyclamens more than ever, but as these commence flowering in midwinter most of them are already disposed of, hence a few only, and these not of the best, will be left by Easter. Here we saw narcissus of various kinds and Dutch hyacinths, 6 to 7 bulbs grown in pans. Mr. Gregson, the foreman of the plant department, reports an excellent demand for these; says he: "Last year was the first time we grew the bulbs for the plant trade in this way and the demand was such that this year, in anticipation of an increasing demand, we have planted a much larger number. We have an entire house filled with them which are intended for the Easter trade."

Mr. John Kidwell, on the south side, is an extensive grower of Easter stuff, which is largely disposed of at retail on the premises. Mr. Kidwell is always quite heavy on *Harrisi*; this year he is growing some 5,000 plants, about 1,000 of these being intended as pot plants for the Easter demand. Unfortunately Mr. Kidwell was not at home when we called for the purpose of gleanings some information as to how to do it. That he knew how to do it, and do it well too, there is no question; this is evidenced further by the fact that his absence is explained by the foreman, who informs us that John

has gone to Lafayette, Ind., to inspect the new farm recently purchased.

Well, the lilies are looking fine although a certain percentage is here, as elsewhere, affected by the blight. The foreman in charge is strongly of the opinion that the chief trouble is a diseased bulb and not the fault of the grower at all. It is his opinion further, which is shared by a dozen or more of other growers to which we spoke on the subject, that unless this disease can be checked there will be no profit left to the grower, some of whom report fully 25% of stock thus affected, which of course is quite a serious item.

Dutch hyacinths are grown in quite large quantities and so are *cinerarias*, *primulas*, *callas*, etc. In one of the houses we find a fine bunch of *Begonia* *Vernon* nicely in bloom. These are in mostly 5-inch pots and of these the foreman says: "We find this variety quite a profitable thing to handle. The plants are in bloom all the time and sell readily. Quite a quantity is disposed of at Easter, but we also find it quite satisfactory as a bedder. We select a few of the best plants from which to obtain the seed. This is sown about the 1st of January and by planting out time we have nice little plants in 3-inch pots."

"What about *genista*? You have a few plants, but have seen very few elsewhere?" "Genista is a beautiful thing and is greatly admired by many, but it gives no satisfaction to the buyer."

This seems to be the universal opinion of all the growers.

Mr. Hilmers, of the Art Floral Co., who had as fine a lot of these plants last season as probably were ever grown here found the demand for them not as good as was expected, and he says: "It is a thing that you cannot conscientiously recommend. The grower knows full well it is hardly lasts a day after being taken out of the greenhouse. It has caused more dissatisfaction to the buyer than any other plant I know of." It is for this reason that we see but few of these plants this season.

The above are but few of a large number of growers who handle or grow Easter plants. Most of these grow sufficient stock, mostly of varieties mentioned, for their own home demand, and all are agreed that the demand for this kind of stock is rapidly increasing, the percentage of increase in the Easter trade as a whole being far larger in plants than in cut flowers.

Japanese Flower Seller.

The perambulating florist in our illustration offers quite a contrast to our ideas, with his flowering branches standing in bamboo jars. The Japanese are great flower lovers, and the flower vender is a familiar sight in the streets of their cities. They are very fond of flowering shrubs, cut sprays being much used in decoration. But their ideas of floral arrangement are very different from ours, and our choicest decoration would be coarse and inartistic in their eyes. All their floral arrangements have an underlying symbolism which we find difficulty in comprehending, though we can recognize the main principle, that of fidelity to nature. A single branch of cherry blossoms, standing in a bamboo flower holder, will be the result of as much thought as we give to an elaborate arrangement, and a mixture of incongruous bloom is never seen, being absolutely repugnant to them. The idea that a single rose, thoughtfully placed so that stem and foliage, as well as bloom, show to advantage, is sufficient decoration for a table, an opinion

offered recently by a lady of much taste, is certainly a move toward the Japanese ideal.

Spring Plant Trade.

Many florists throughout the country are looking forward to their spring sales of plants and the filling of flower beds, vases, veranda boxes, etc., to lift them out of what has been a dull and hard winter. It is now late to begin to prepare for the spring trade, yet a few hints at this date may help some that are less experienced than the writer, if such there be. Easter will have disposed of great amounts of stock. At Easter will go the great bulk of lilies, azaleas, *cyttisus*, lilac, rhododendrons, spiraea and many other batches of stuff grown especially for that occasion. There are, however, a few of the above which it is by no means desirable that the whole stock be exhausted at Easter time. There is always a noticeable awakening of business after Easter and the forty days of fasting are past, and May and June are good florist months, exclusive of the usual outside plant business. You should have a few late azaleas coming on at intervals until the middle of May; they not only sell well, but are most useful for decorating at weddings, etc.

Lilium longiflorum, which can be had in succession till almost time for the outside crop, is indispensable. They are used now so largely for church decorations, and for several other occasions, as we all know. It is not necessary either to rush all your tulips and hyacinths in for Easter. The four or five weeks that intervene this year between the 14th of April and the first of the outside bulbous stuff is a lively time, and I have always found tulips, narcissus, etc. sell well then. The sun is strong then, and the frost and snow should be gone, and people wend their way to the cemeteries, and the call for flowers in the aggregate is fourfold what it is at this writing. Spiraea sell well at Easter, but they are an unprofitable plant, for they take up too much room if grown well. A batch of them should never be forgotten for Decoration Day. You will perhaps have noticed that about the end of May, instead of flowers being most plentiful, as is usually supposed by the public, there is a sad dearth. In this city immense quantities of cheap flowering plants are asked for on that occasion, and a bushy well flowered spiraea will fill the bill finely.

But all this is not to the text; spring plant trade is the theme. Before I enter on what is generally known as bedding plants something should be said about a large class of plants that enter largely into our sales, and yet are not bedding plants. These are moderate sized flowering plants of a familiar and very varied character, bought by people who would not dream of purchasing a plant from November to March. Spring has had its inspiring influence on these poor people; perhaps the sight of a familiar flower has awakened some long past recollections of their childhood's home in a far away land. Whatever the reason it's a common sight in our public markets during May and June to see poor women by the dozen struggling home under a load of the coarsest vegetables and most inferior meat, yet finding a place in their arms for a pelargonium, fuchsia or geranium. Chief among the plants that sell at sight is a rose, and yet how few are offered, at least that I have seen. This scarcity, almost absence, in some localities, of a nice rose in a pot in the month of May is mere carelessness on the florist's part. A

A JAPANESE FLOWER SELLER.

young and thrifty plant of an H. P. rose from a 2½ or 3-inch pot, planted out in May in a good fresh loam, stopped once to produce 3 or 4 shoots, lifted in November or late October, potted into 5 or 6-inch pots and then placed in a cold frame plunged in some suitable material, can rest there without any expense to you till March, when it must be brought into a cool house and gradually grown along. Don't bother with the imported long legged dried up stuff, but grow your own roses, and on their own roots. You can buy the young plants from many reputable firms in this country.

Hydrangeas sell well and at a good paying price. They occupy but a short time really valuable space. Struck in March or April, planted out end of May in rich soil, or what I prefer, a spare bench where the hose has control of them, lifted and potted in October, beneath the bench or even cold frame thoroughly protected is all they want till March comes. From that on a cool house, plenty of water, and plenty of room, and you have in May a plant worth \$2. Hydrangeas are used now largely as a veranda plant, stood in a fancy pot. The show pelargonium is a plant fast coming back to popular favor. Hints on their culture have often appeared in these columns. They can be had as an Easter plant easy enough, but there are other plants more in favor for that occasion, and the pelargonium is better not forced. In May

they sell and are a very satisfactory window plant. A limited quantity of the showy calceolarias should always be grown. There is always somebody fascinated with their gorgeous colors. They are easy to grow; seed sown in September will produce plants to flower in April and May. Cool temperature, no greenfly, and careful watering are the essentials to make a nice calceolaria.

Fuchsias are used but sparingly planted out, but vast quantities are sold singly on the markets. For a long time the fuchsia had a fictitious price. A fuchsia in a 4-inch pot should not be worth more than a geranium in the similar sized pots. In fact not as much, for they have occupied the benches for a much shorter time, yet they used to fetch double the price. They are so easily grown and now raised in such large quantities that they have found their level. A few old plants that have been rested in September will, if shortened back a little, and given a start in October, yield all the cuttings you want from November till February. The earlier struck ones can be flowered in 6-inch pots; more will sell in 5-inch, and the later struck ones in 4-inch. Years ago fuchsias were never pinched, but allowed to run straight up. Some varieties, such as old Elm City, made a beautiful plant grown this way, a perfect pyramid, but nowadays it's the fashion to pinch out the leading shoot when the plant is a few inches high, inducing a much bushier

plant, and for the varieties now grown this is much the best way. Fuchsias want the richest of soil. A few good varieties of fine habit are Avalanche, Black Prince (a perfect habit), Cervantes, Ernest Renan and M. Thibaut.

The common zonal geranium, besides being the universal favorite for a bedding plant, is sold by the thousand singly as a pot plant, particularly are they bought by people whose humble sphere and circumstances do not allow them to aspire to a flower garden, ever so small. The doubles sell much the best. Good 3-inch plants selected in early March and shifted into 4 or 4½-inch pots will in May be fine bushy little plants with two or three fine trusses of flowers; they sell readily at 20 cents each, and there is money at that. Some varieties that are best suited for this purpose are the well known scarlet F. S. Raspail, the reliable pink Emile de Girardin, Beaute Poitevine, Mrs. E. G. Hill, Tour Eiffel, W. P. Simmons, and for a white there is none better than La Favorite.

The beautiful gloxinias should not be forgotten. The bulbs are very cheap and can be started in March, and need not get their last shift, a 5 or 6-inch, till the rush of May is over and your bench room is much less valuable. Heliotrope, although essentially a bedding plant, is sold in large quantities in 4 inch pots in April and May. They can't be called a good house plant, yet who can resist

buying a fine plant for 20 or 25 cents? Every one knows its unrivalled odor, and buy it on that account. Another common plant, the petunia, sells well in spring. If raised from seed sown in February, in April the doubles can be selected by any practiced eye and potted up into 4-inch, the best strains of the doubles are very fine, and meet a ready sale. They deserve good treatment and a stick to support them, and will often bring 50% more than a geranium, and have occupied the bench one-third of the time. Well grown and well flowered plants of ivy geranium meet with a ready sale. Many of the later introduced varieties are almost as fine as the regal pelargoniums. They, however, have a fault; when planted out or put where the roots have lots of room they flower but sparingly after the big burst of bloom in May and June, and are generally more satisfactory when the roots are confined to 4 or 5-inch pots.

Although a midsummer and fall flower don't let us forget the beautiful Japan lilies, auratum, roseum and album. They would be sadly missed now in the midsummer. Of the latter 3 bulbs in a 7-inch pot sells well. Well-to-do people buy them for their verandas, and for your own use in July, August and September they are a necessity. They occupy little room before April. They are hurt by being ever out of the soil and should be potted when received in their flowering pots, but not watered. Stood under a bench in the coolest house they will make little growth before March and April, and will not till then want bench room. The price of these has much come down within a few years. Last but by no means least is the universal favorite, the carnation. Where do we now see a good lot of carnations in 5 or 6-inch pots in good thrifty condition? and in flower next to the rose nothing sells better. To lift plants from the bench in April and sell them is not fair, sort of a fraud for they will never be satisfactory. I only know one way, and that I have seen practiced very successfully many times. Lift good bushy medium-sized plants from the field in September. Any flower shoots or even long growths should be picked off. Pot them firmly and plunge in a deep cold frame. They will be well-rooted long before severe weather comes, and if the sides of the frame are protected and double sash used in the winter months they will come out in March or April as fresh and green as those you have on your benches. Brought into the houses by the middle of March, in two months they will be fine plants in full bloom, and every one of your customers will want one. I am afraid to recommend any varieties for this purpose. I know what used to do grandly under this treatment, but they are gone; that was old La Purite and President Degraw. Since their day I have grown Garfield in that style most satisfactorily. Judging from their habit I should not be afraid to recommend Portia, Silver Spray, T. Cartledge, Tidal Wave, and above all Scott, for this purpose.

And now for bedding plants proper, including those that are used in vases, veranda boxes, etc. It is very evident to me that a change has come over the public taste or fashion within a few years, Carpet bedding ten years ago was all the rage, although at that time it was decidedly on the wane in Europe, where it has had its day. The carpet beds were expensive, very expensive, if well carried out, and people are tired of their stiff

formality. A bed of scarlet geraniums with some suitable edging, or a bed of Coleus Verschaffeltii with an edging of Golden Bedder, or still better, a mass of pink Emile de Girardin geraniums with an edge of Mt. of Snow will satisfy most people. Of course these can't be repeated where there are a number of beds on one lawn, but there is plenty of varieties of this style. The sub-tropical bed has for years been in favor with many people, and for particular places, but since the introduction of the French cannas, now generally known as the Crozy type, there is more of it than ever. Whole beds of different varieties of the new cannas are seen on every hand, and few beds can be more effective. The variety in the heights of the plant, forms of the leaf and shades of the flower, a sight that eye never wearies to rest on during the whole summer. In many cities, notably our own, the summer gardening largely takes the shape of veranda boxes, some fine residences having as much as 100 lineal feet of this sort of decoration. This is not hiding their light under a bushel, for as the happy owners sit on their verandas they see but little of the beauty of these flowers themselves, but to the beauty of the street or avenue they are an adornment of the greatest value, and make for pedestrians, equestrians, or the lucky owners of a carriage, a most delightful ride or stroll through the residence streets.

It would be tedious and uncalled for were I to attempt to enumerate all the plants used in summer gardening. The great object of a florist should be to produce a plant as quickly as possible and as large a plant as possible in the smallest pot consistent with its well-being. The great bulk of our bedding and summer decorative plants should occupy but little room till Easter is over. Now let us look at the state of a greenhouse or houses, where the bulk of the space is occupied at the present moment with 500 spiræas, 2,000 Easter lilies, 300 or 400 azaleas, several hundred cistus, 100 lilac, 300 or 400 cinerarias, a large batch of roses in pots for Easter, 600 square feet of bench filled (or will be in two or three days) with flats and pans of tulips, narcissus and hyacinths, 200 pelargoniums for Easter. Now this actually exists in a greenhouse I am well acquainted with. In walking through the houses you don't notice much of the spring stuff, but of course it's there, and not under the benches either. It is simply kept in as economical space as possible. I notice 3,000 Crozy cannas a few inches high, all in flats, 60 in a flat 2x1 foot, in three inches of sand. They will have to stop there until after Easter. I notice 20,000 geraniums mostly in 3-inch pots, but standing very close together, kept cool and dry to prevent growth, for they can't get more room or bigger pots till Easter is gone. Flats of sand are filled with caladiums, and standing on some 4-inch pipes along the edge of the rose and carnation benches are abutilons, the trailing variegated species, with vincas and other drooping plants. A good-sized batch of coleus and achyrantlies in 3-inch pots are occupying considerable room, and that can't be helped. Flats of echeveria are on a shelf just as they were put there last October. Flats of alternanthera are also on a shelf just as they were put in the flats last August; in April they will be potted off and go into a hotbed, the only place to grow them in the spring. Now look at the propagating bed; it is full of a lot of cheap stuff that will come in very useful by and by.

Coleus, achyrantlies, senecio, lophospermum, lobelia, etc. I don't mean to say I have mentioned a title of the plants that we use, but I want to convey the idea that you must husband all the room you possibly can till Easter is over, then there comes a great change. Strive to raise a plant as quickly as you can and let it occupy your benches as short a time as possible. The late Mr. Peter Henderson told me that the most profitable plant he grew was Coleus Verschaffeltii, and no doubt he knew, for he was a keen observer. Of course that means that from the time the cutting was put in the sand till it was an established plant in a 2-inch pot fit to sell was shorter than with any other plant. Minor considerations were that it was easy to handle as a cutting, the easiest of all plants for a boy to pot, and easy to grow, but the chief cause of its profitableness was the rapidity with which crops could be turned out, and that should be what controls price in all our products unless it be with our new and scarce varieties and species.

There are several expedients which florists have to resort to when crowded; some of these will occur to you. I hate hanging shelves; they are an abomination, but till you have the relief of the hot beds they are very useful, and many plants do finely on them. The hot beds are a great relief to the congested greenhouse after the first of April, and should be largely used. Many plants, such as heliotrope, alternanthera, the variegated and bronze geraniums, sweet alyssum, lemon verbena, mignonette, and in fact almost all our bedding plants, do admirably in them, and make better plants than on a bench where the house is shaded, and perhaps no fire heat. Never let your bedding plants be in an exhausted condition when selling time comes, or poor results will follow and your customers will remember. A good customer who has faith in you will believe you when you tell him that a geranium, heliotrope, ageratum or a canna is better not to be in full bloom when planted. I thought of giving some figures about my estimate of the cost of raising many plants I have mentioned. I find that is about impossible, and perhaps of doubtful value. Adaptability of houses, ability at the business, price of wages and fuel in your location, would all bear on this and make great differences.

WM. SCOTT.

The Greeks.

"What would we do without the Greeks" inquired a New York wholesale dealer the other day. The weather was spring-like; a couple of sunny days had opened the roses and carnations by tens of thousands. The stock came into the wholesale marts by wagon loads. The retailers' demands would make little impression on the vast accumulation; it was out of the question to use up even one-tenth of it. But the Greeks were on hand, or rather under foot, wherever you went; they fairly swarmed at the Ferry Market and in the commission establishments where heavy invoices of roses are handled. They lounged about in groups gesticulating and chattering among themselves in their unintelligible lingo, they trotted up and down the store at the heels of the salesman, bargaining and protesting; they disdainfully handled and turned over the stock, called attention to its imperfections, and jingled their money in proof of their willingness to buy the alleged rubbish at a price. "And did they get it?" Well, yes.

GYMNOGRAMME SCHIZOPHYLLA GLORIOSA.

The Greeks are a New York institution. They tried Philadelphia, but it took too long to strike a bargain with a Philadelphian. They tried Boston, but that prime necessity of a Greek's career, a surplus, has no permanent existence there, and Boston would not do; so they all came back to New York, and here they thrive.

With the exception of a very few from Cephalonia, these Greeks are all peasants from the mountain districts of Sparta. Tired of their sheep herding they come here for an easy life. There are between six and seven hundred of them engaged in flower peddling, and these look down with disdain upon their fruit peddling countrymen, whom they consider their inferiors. It is less than ten years since their first onslaught on the cut flower industry. The first comers made lots of money, and it was not long before others found it out. By their frugal living they manage to make money where an American would starve. They mix with English speaking people very little, and seldom learn the English language, although quite a few of them are married to Irish and German wives, there being not over ten Greek women all told in New York. They are very ignorant, and few of them can write or even speak their own language correctly. After a stay here of a few years they manage to accumulate what in their home amounts to an independent fortune, and then back they go to enjoy it.

The greenhorns, on their first arrival, are taken in hand by the old settlers, who get their services in exchange for board and instruction in the art of selling. The dinner provided by these worthies for their apprentices consists of something like five pounds of the cheapest kind of meat boiled two or three hours and a pound of rice added; this with bread con-

stitutes the principal meal, and is expected to feed fifteen or twenty; if there be not enough for all somewhat is added. After an apprentice has learned how to sell he is then taken into "partnership."

Quite a number of the older and more ambitious ones have opened small stores in various sections of the city, and there are several that run quite pretentious establishments, where they pay good rents and claim to do better than on the street.

When the weather is too cold or market conditions are unfavorable to their vocation the street horde has a favorite loafing place in Roosevelt street, where they lounge about and take life easy. Notwithstanding their evident laziness, in trading these Greeks are extremely shrewd. Jews are nowhere alongside of them in driving a bargain. Their peculiar dialect is understood by no one but themselves, and unless one of their number can be induced to "squeal" they can go ahead right under the dealer's nose and plan tricks and combinations of which he is to be the victim. They do not want to bother with small lots. A sweeping purchase by one individual to be divided up among the crowd afterwards is their favorite method, and a slaughter competition among the commission men is what they are constantly longing for.

And Mr. Retail Dealer, what are you going to do about it? I can tell you what Mr. Grower is going to do about it: he will build some more houses, and then the supply will be larger and the Greeks can buy still cheaper. "What would we do without the Greeks?"

Gymnogramme Schizophylla gloriosa.

Gymnogramme schizophylla was introduced from the mountains of Jamaica in the year 1875, its habitat being some 5,000 feet above the level of the sea. It is one of the most graceful of the Polyodiaceæ family. The variety gloriosa, but recently introduced and still rare, is the most beautiful of all the existing forms. It is distinguished from the type by its longer, more arching and graceful fronds and its habit, which is throughout more vigorous, luxuriant and elegant. For a hanging basket, where the atmosphere is not too dry, it has few rivals. Our illustration is from a photograph of a plant grown by Mr. C. M. Atkinson, late gardener at Mr. J. L. Gardner's, Brookline, Mass.

Plant Trade in New York.

There has been a steady increase in the plant trade in New York every year, and more money is spent in this way at the present time than ever before. The character of the demand has changed greatly within a few years, the advance being very large in some lines, while in others there has been a decided falling off. In the use of decorative plants, vases, and baskets for the external adornment of hotels, club houses and prominent buildings generally, New York is far ahead of any other city in the country. Large vases of iron or cement are seen wherever there is a bit of open space in front of a building of sufficient size to hold them. These are filled in the earliest spring with pansies, daisies and hyacinths, and in summer with promiscuous plants, which are replaced in the fall with neat little retinosporas, arbor vite, etc., which keep green throughout the winter. There was a time when work of this class was a profitable item in the sum total of every florist's business, but of late years it has been left entirely to a few establishments that make a specialty of this class of work, and follow it up systematically in connection with sodding, vine pruning and general job gardening, and conducted in this way it is still a safe and remunerative business, but the majority of the floral establishments in the city proper have no facilities for such work and do not want it. Neither is the spring bedding plant trade any longer an item to the city florist. One reason for this is that it has moved away from his neighborhood. There is now no room for small yards and gardens within the limits of the closely built city, and such space is obtainable only in localities far removed from the business centers. In the suburban districts the spring trade in plants for gardens has increased enormously, but is supplied naturally by the florist whose location is contiguous, and he finds it profitable, as the bedding plants come in after Easter has cleaned out the houses, thus utilizing the vacant space. Geraniums well grown hold their own well and continue to lead in favor as bedding plants, the double General Grant holding first place. Double varieties sell much better than single, and the presence of a bunch of buds or flowers on the plant is necessary in order to command a fair price. The coleus seems to have gone out of fashion entirely. The sale of verbenas is small, compared with what it used to be, probably because they are diseased. Fuchsias have a tremendous sale; everybody wants them and they are inexpensive. As spring specialties, primroses are becoming very popular also, but the call for daisies does not seem to increase. For

general garden planting the flowering cannas now exceed in demand all other plants, and tuberous begonias have made a great advance also. The value of crotons for outdoor bedding is beginning to be recognized, and there is no doubt that these plants have a big future before them. Hardy roses and hardy herbaceous plants are appreciated more and more every year.

A factor which has had much to do with the city florist's loss of interest in the bedding plant trade is the peddler, who now monopolizes the cheaper lines of the plant business, and who by his methods and close competition has actually forced the regular stores out of it. From the point of view of the retail florist the policy of the growers in catering to the peddling trade and thus contributing to the slaughter in prices is regarded as fatal to the best interests of both retailer and grower. They submit that years ago when the grower found through the stores an outlet for all his goods, bedding plants included, prices were well maintained and there was profit for all, and encouragement to produce first-class stock, but now that the peddlers have been permitted to get control it has amounted to an almost complete overthrow of the once profitable traffic in bedding plants, for just as soon as the industry was ruined for the retailers its character quickly depreciated, and the grower has to suffer in company. In line with this argument the retailers point to the growing custom of plant selling by the dry goods stores, which they regard with great disfavor, and pronounce to be the beginning of a cheapening process that will soon work the same havoc with the fancy plant trade which the peddlers wrought in the bedding plant line. They urge that the growers of good plants of all classes for the New York trade have been doing well, and have no reason to find fault with the market which the retailers have provided for their goods in the past, and that the growers should, in justice to the retailers as well as for their own best interests, refuse in future to do any business with these department store people, who by selling plants at a few cents above cost make it impossible for the regular stores to handle the goods at a profit. They applaud the wise policy followed by the wholesale grocers and butchers in refusing to sell goods to the department stores, and predict that if some equivalent precaution is not adopted by plant growers the result will in the near future be similar to that which followed the advent of the peddler into the bedding plant trade.

Thoughtful dealers who keep a sharp lookout on the tendencies of the plant market are unanimous in the opinion that the sale of plants might be largely increased if those who prepare them for the market paid more attention to the matter of preparing them to withstand the peculiar atmospheric conditions and surroundings which they must encounter in the halls and sitting rooms of their ultimate owners. Plants must be thoroughly rooted and established in the pot before being sold, otherwise no success can be expected of them. They should be gradually hardened off, so that a change of atmosphere will have as little effect on them as possible. The less of the hot house combination of humidity and heat that enters into a plant's make up the more satisfactory it will prove as a house plant. If our plant growers would only bear this constantly in mind and act in accordance, and if only competent and truthful salesmen who could and would

give customers correct advice as to the treatment of their house plants, were employed, there is no question that the use of plants for home adornment would be increased enormously.

Carnation Notes.

Many inquiries are coming to me concerning manures for carnations, both for use now and outside during summer. This seems like going over the same ground that we have traveled many times during the past few months. Now it must be understood that I speak only from my own experience and what I have seen at other places. What serves best with me might not do well with others, and if any grower chooses to use such fertilizers as I do he must not lay the blame at my door in case his plants do not thrive. The most inquiries are concerning the best manure for manure water. I will merely state that for this purpose on all sorts of carnations I am using only night soil, which we take fresh from the vault, placing one-half peck in a bag, which is put in an oil barrel that is filled with water; this is allowed to stand until the bag with the manure rises to the surface of the water. We then apply the water to the benches, not wetting the foliage. We are not afraid of damaging the leaves, for in many instances this solution has and is bound to get on the plant, but in case any of the stems should be needed our customers might object to the odor, which will remain in a house fully thirty-six hours. I have heard many objections to the use of this manure, and the principal one is that it is too strong and will force the foliage at the expense of the flower. This may be true, but it generally follows that when plants are making an unusually strong growth we are apt to think it best to withhold the stimulant, and this is just where the trouble lies; if the application of the manure is not kept up the flowers suffer, for it takes as much or nearly as much to develop the flower as the stem. This applies more particularly to the use of liquid manures than to manure either incorporated in the soil or when used as a mulch, for when in a liquid form it is as a rule thoroughly dissolved, and the plant takes what it can as the liquid is applied, but when in the soil or in mulching the plant takes up manure as it wants it. Now I do not advise using night soil as a mulch, or to be mixed with soil that is to be used in a bench, unless it has been in a compost for several months, but for liquid manure I believe it has no equal. Several prominent growers visiting my houses lately could not understand how I got so strong a growth on Scott. This is very apparent when comparing the plants where I have used no night soil solution with those which have had it regularly since January 1st. I believe it adds greatly to the strength and color of the foliage.

Any decomposed manure can be used with safety as a mulch, and especially now, as the sun grows stronger. While the sun's rays, owing to the growth of the plant, do not strike the soil to any great extent yet the moisture is absorbed

from the soil in sustaining the plant, and all mulches tend to keep the soil in a moist condition. This is beneficial, not only in this respect but as a fertilizer; the roots from the plants will run to the surface and use the mulch as food, and where only three or four inches of soil are used it is absolutely necessary to give extra stimulant at this time. Many use sheep manure as a mulch, and with excellent results, but when compared with good cow or horse manure I do not think the extra cost makes it advisable to go very heavy into its use. I was somewhat surprised to see in a house of a prominent grower fresh stable manure being used quite heavily (one and one-half inches thick) as a mulch, but as results previously obtained had been satisfactory he felt safe in using it again. I am at present using a commercial fertilizer, the formula of which is my own, and it is certainly showing good results, as it has increased the growth of the plants and blooms very much.

Now, as to manure for outside, I prefer good well decayed manure from the stable, applied in the fall if possible, but if well decomposed it will do no harm in the spring. The more you use the better will be the results. If commercial fertilizers are used get the preparation that proves the most successful on property adjoining the land you use for your carnations and spread broadcast. After plowing harrow it in thoroughly, but never use it in the drill unless you mix it thoroughly.

CHARLES H. ALLEN.

Society of American Florists.

EXECUTIVE COMMITTEE MEETING AT PITTSBURG, PA.

The session of the executive committee of the Society of American Florists held at Pittsburg on March 12 and 13 was one of the best on record. The entire committee, with the exception of Messrs. Waldbart and Durfee, were present. A large number of suggestions were presented regarding the future policy of the society, and in the line of improving its work and extending its usefulness. Among the most important matters considered were: The policy of the society with regard to members who are in arrears as to annual dues; the obligations of the society to people in the trade whose interests may be affected by the public reports of the nomenclature committee, the matter of fire insurance for greenhouses, upon which Mr. Esler presented an interesting report, and proposed classification of risks; the advisability of withholding certain portions of the annual proceedings from general publication in the trade papers; the management of the trade exhibition, and the best methods to be adopted to secure at the sessions of the annual convention the attention and interest of the members.

Several theaters and halls were examined by the committee, and Alvin's Theater was finally selected as the best location for the convention next August. There will be room in the theater for the trade exhibition, as well as the sessions of the society. It is centrally situated, and altogether will prove an ideal location.

The program for the convention, as far as outlined, provides that the evening of the first day shall be devoted to a president's reception, and the evening of the second day to an illustrated lecture on cross fertilization of flowers by Wm. Hamilton Gibson. From a list of some twenty-five subjects which were presented to the committee for discussion, the fol-

lowing eight were selected: Latest facts as to roses; latest facts as to carnations; chrysanthemums up to date; auxiliary societies; horticultural education, practical and theoretical; how best to advance the retail flower trade; the future of orchids in the United States, and what action should the society take to broaden the floricultural spirit among the people. The first three subjects are referred to the Rose, Carnation and Chrysanthemum Societies respectively, who will be asked to appoint a representative to open discussion upon these subjects.

On recommendation of the Pittsburg and Allegheny Gardeners' and Florists' Club Mr. Geo. Oesterle was appointed superintendent of the trade exhibition, which will be conducted under the same rules and on the same general plan as at the recent conventions of the society.

It was voted, after considerable discussion, that the trade papers have full access to the proceedings, including such papers and discussions as they desire to publish.

The Western Pennsylvania Exposition Society having offered the free use of their exhibition building as headquarters for the society a vote of thanks was passed expressing the gratitude of the society for the kind compliment extended and explaining why same was not selected.

The following resolutions of thanks to the friends of the society who had lent their aid in the effort to secure a national charter were unanimously adopted:

WHEREAS, the bill granting a national charter to the Society of American Florists, after having been passed by the U. S. Senate and House of Representatives, failed to become a law because it did not receive the sanction of the President, therefore be it

Resolved, that we take this occasion to state emphatically our belief that the President's objections to the measure were not well founded. Our organization embraces within its membership men who are active workers in all branches of horticulture and its best interests could be, we strongly believe, safely left in their hands. We sincerely hope that the culmination of our hopes for a national charter is only postponed and that in the fullness of time a more auspicious turn of events will bring us what we ask and be it further

Resolved, that we tender our sincere thanks to the senators and representatives who supported the measure, more especially to those who at much personal inconvenience, but influenced by their sense of right, urged the measure on their colleagues; and we also beg leave to thank and gratefully acknowledge the invaluable services of Wm. R. Smith and other members of the S. A. F. in Washington in promoting the national charter, and be it also

Resolved, that a copy of these resolutions be sent to all our friends in Washington who assisted the passage of the measure.

The committee on final resolutions presented the following report, which was also unanimously adopted:

WHEREAS, the executive committee of the Society of American Florists in session at Pittsburg, March 12 and 13, has been most hospitably entertained by the Pittsburg and Allegheny Gardeners' and Florists' Club, making our stay one of continuous pleasure; and

WHEREAS, the city press has extended to us such courtesies as were in their power, and such treatment is most highly appreciated by the executive committee as evidence of kindly good will looking forward to the annual convention of the S. A. F. in August,

Be it Resolved, that we extend our hearty thanks to the Pittsburg and Allegheny Gardeners' and Florists' Club, individually and collectively, to Mr. A. W. Bennett, city officers and the press.

Chicago.

The market keeps at an even tenor. There is no overstock in any line, nor is there a great scarcity in any particular variety. The quality of roses as a whole is not as good as it was a few weeks ago. Here and there a little mildew has made its appearance, but is yet confined to but a small portion of the stock. The weather is certainly as fine as may be desired, the days are bright and sunny with cool and frosty nights, just the ideal conditions for producing both quantity and quality—yet the cut appears but light. At any rate the stock is pretty well cleared up every day, and for once the commission dealers find little use for their waste barrels in the middle of Lent.

Prices are easy in most lines. Gradually the figures for average quality of such varieties as Bridesmaid, Testout and Kaiserin has settled to 5 and 6, a few extra good lots up to 7. Mermets and La France, unless very fine, sell at 5. Perles 3 to 4, and Gontiers, of which few are grown, 2 to 4. Beauties are stationary, a select few still bring 40 to 50, but the medium grades go at 20 to 30. A few very fine hybrids, mostly Brunners and Gabriel Luizet, are now coming in and bring \$3 per dozen. Jacqs, in fair supply and moderate demand, bring 6 to 8. These are mostly cut from pot-grown plants.

Carnations are active as to quantity and quality; Daybreak and Tidal Wave lead the list, although of the latter there is also a large supply of poorly grown stock. The best of the fancy stock (this doesn't always mean fancy varieties) still brings \$3. Whites have settled back again to \$1.50 to \$2 for the best.

Speaking about the carnations Bouton d'Or and Puritan in last week's issue, we gave credit to A. V. Jackson, which should have been A. T. Jackson.

Violets also seem quite steady in demand, but prices have not recovered. The very best stock seldom goes above 75 cents per 100. Lady Campbell, of which variety small batches are grown at various establishments, is the best at present. Those we have seen growing are uniformly fine plants, and apparently free from disease. We see by some of the reports from Eastern cities that this variety takes well with the public. We cannot, however, say the same as regards our home demand, which certainly prefers the darker shade of Marie Louise.

Mr. Jos. Carbone, of California, is now in the city in the interest of his new violet, "California." His persuasive eloquence has evidently induced many of the local fraternity to invest a little of their surplus coin in an experiment to grow violets fourteen inches in length of stem and with flower as large as a silver dollar. Mr. Carbone is not an entire stranger to this city, having resided in its vicinity some years ago. He is certainly imbued with the true Chicago spirit which proverbially claims the earth. If this violet possess but half the virtues claimed for it it ought to create a sensation in the market next season. By the way, a bunch of about 100 of those flowers were brought to this city, which proved altogether the most expensive bunch of violets ever seen in this city, and for that matter, perhaps, anywhere else. This bunch of flowers was shipped here from California frozen in a block of trans-

parent ice and cost Mr. C. the neat little sum of very nearly \$40. So far as we could judge by these, the claim as to size of flowers and length of stem was fully substantiated.

Recent visitors: P. S. and H. S. Van Waveren, representing Segers Bros., Lisse, Holland; J. A. Evans, of Quaker City Machine Co., Richmond, Ind.

The Florists' Bowling Club has adopted a Constitution and by-laws. It provides for the organization of two or more teams to play in a tournament once a week (Thursday), a gold medal to be awarded to the team with the highest average in 20 consecutive meetings, the team earning the trophy three times becoming the sole owner thereof. The same is offered to the member making the best individual score. A leather medal, to be worn in a conspicuous position at each meeting of the club, will be awarded to the member having the lowest average. To judge by recent performance there will be quite a number of aspirants for this honor. An assessment of 5 cents for each poodle is also provided for the benefit of the club treasury. This is a wise regulation, as the experience of last meeting has proved beyond a doubt that more revenue will be provided by this means than that derived from the annual dues, which are \$2. The members who distinguished themselves in this direction shall be nameless for the time being.

The six members having the highest average in any of the teams in these tournaments shall represent the club at Pittsburg next August. Only members of the Chicago Florist Club are eligible as members in the Bowling Club.

Indianapolis.

The regular monthly meeting of the Indianapolis Florists' Club was held at the club rooms March 6. The attendance was good. Lunch and coffee was served. Members had been requested to bring some choice flowers and plants, but only a few responded.

Pres. Hartje opened the meeting with a few appropriate remarks. Henry Riemann read a very excellent paper on cyclamens, being a successful grower of them his views were listened to with interest. During the discussion Prof. Hatfield mentioned that the cyclamen was one of the few plants where the flower stem curls down and deposits the seed pods in the ground to protect them from birds and other injury. Following this a discussion was started on the effects of cold water on plants. Water at 44° would chill coleus and Impatiens Sultani. Water works water in this city was tested to be 35° during the coldest weather, while well water showed 52° temperature. A question was asked as to what effect has an unusual escape of steam on plants in a greenhouse. The answer was that no harm would follow if only for a short while; it would really be beneficial to kill red spider, etc. Some escape of steam during severe spells of hard firing would also be beneficial.

President Hartje was instructed to attend the state society's exhibition committee meeting, which was to be held at Anderson, Ind.; his expenses were ordered paid. Mr. Anthony Wiegand was indorsed as a suitable person to be appointed on the new park commission under a new law passed by the state legislature; \$25 was subscribed as a premium for the next chrysanthemum show. Mr. Robert McKeand was prevented from reading his paper on account of sickness.

The chrysanthemum show premium committee met at Anderson, Ind., March 9. E. G. Hill, J. S. Stuart, John Hartje and Robert McKeand were present. W. W. Coles and Fred Dorner telegraphed at the last moment that they could not attend. Over \$700 was again set apart for the regular premium list. No cash premiums are to be allowed for seedlings, only first-class certificates, and these only with extraordinary points of value over existing varieties. The list will be issued in a few days, and can be had from the secretary, Robert McKeand, Garfield Park, Indianapolis.

Business during February was in some respects better than ever before, receptions and funerals being plentiful. Since Lent commenced, however, things seem to have quieted down on both. Tulips and hyacinths are selling well, also daffodils, while carnations are having the biggest sale, they are in fine condition, no better flowers could be found throughout the land to compare with Daybreaks and Albertinis raised here. Hunt's "Peach-blow" fills the demand for a good rich pink.

We have been free in this city of the so-called "crape hunters," those fellows that attempt to call at houses where funerals occur and press their demands for orders. We have, however, now a firm that does this small business; it degrades our trade, when people appreciate flowers they will call soon enough.

Many bouquets were sent to the legislature on their closing day, March 11; they would also deserve a floral pillow inscribed "At Rest."

During the coldest spell of the season a lot of hardy roses sent by freight to a firm here by an Ohio house proved a total loss. With many years' experience it seems strange that such firms would ship without proper precaution or advising to have shipped by express, to avoid any possibility of loss.

Similarity in names of carnations and roses is unfortunate, but in telegrams no confusion could occur if roses are always considered to be on the list first. However, it would be best not to name both roses and carnations the same name.

The advance guard of bulb agents from Holland are appearing.

Smilax is a very scarce article at present, but experience has shown that later on it will again be plentiful and the market glutted.

Some beautiful flowers were seen at the funeral of Minister Gray; flowers sent from Mexico were all faded, nothing special was seen, except that many immortelles were used in constructing the designs, mixed with fresh flowers; the last being faded made them all look bad.

The Huntington Seed Co. report their trade opening up wonderfully, their mail as well as the wholesale trade.

At the recent great carnival great quantities of wild smilax, palm leaves and decorative plants were used; Tomlinson Hall never looked more beautiful, except of course during some of the shows.

W. B.

KEWANEE, ILL.—Wm. M. Parker succeeds T. Z. Magarrell (Illinois Floral Company) here. The place has about 5,000 feet of glass.

WINCHENDON, MASS.—James Sutherland Jr. has sold out his business to his son James B. Sutherland and H. P. Whittemore. The new firm will take possession April 1, under the title of Sutherland & Whittemore. Mr. James Sutherland Jr. contemplates erecting a range of greenhouses in Athol.

DO YOU WANT Mr. Scott's reasonable hints for the year in book form, so that you can refer readily to his suggestions for any week in the year? You will find them in this form in our trade directory and reference book for 1894. Price \$2.00.

IN THE LAND OF FLOWERS is the title of a little volume of Florida sketches by Mr. Walter N. Pike, published by Pike & Ellsworth, Jessamine, Fla. It gives a very attractive picture of southern life, and will be found specially interesting to those desirous of studying Florida vegetation.

THE ROSARIAN'S YEAR-BOOK for 1895, edited by Rev. H. H. D'Ombrain, secretary of the National Rose Society of England, is a very attractive little volume recently received by us. It is a very instructive little volume, containing a variety of rose lore from various pens, all very agreeably written. It is illustrated with a photograph of Mr. Edw. Mawley, who, with Mr. D'Ombrain, shares the honors of the secretaryship to the society of which Dean Hole is president.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

Kansas City, Mo.

Our club met on the 15th inst. at the greenhouses of the Heite Floral Company, 712 East 32nd street, and notwithstanding it was a very cold, bleak night there was a very good attendance, and much to the delight of all present, our most respected president was in the chair.

It is now a fact that the Kansas City Florist Club, although newly born and still a babe, will give next autumn a chrysanthemum show; and at our last meeting a schedule of prizes was adopted. All the boys are in great hopes that much good will result therefrom. It was really amusing to see a few of the boys going around Mr. Heite's with a lamp seeing how his stock of "mums" were looking, and what novelties he had been buying. May the good energy and ambition go on among us all and when the time arrives (which soon it will) may success crown our efforts.

After our meeting adjourned Mr. E. S. Heite informed us that the ladies desired to see us, and he leading the way we were ushered into his parlor, and after being introduced to his wife and charming daughters, were by them invited into the dining room, all of us sitting down to a table laden with fruits and flowers, and a splendid repast was enjoyed by all. In fact, our meeting on the 15th is one which will long be remembered by those who were so lucky as to be there.

Business in town has been very fair—quite a number of good funeral orders. With greenhouse men the past week has been a bad one, as the sun has not shown himself all week. As a consequence flowers are scarce, especially roses, and those that do come are not up to the mark.

In town the past week were J. H. Weeks of Liberty, Mo., and J. M. Gasser of Cleveland, O., who gave us a call on his way home from the south. S. M.

VILLA LORRAINE ROSERIES, T. W. STEMMLER, MADISON, N. J.

The Rose for the Million!!

BELLE SIEBRECHT.

Always in bloom. An iron constitution. Requires no special houses, no nursing. Will make itself at home in any house where other roses are grown. Proved hardy out of doors in latitude of New York. Color and keeping qualities unequalled. The greatest introduction of the century.

MORE TESTIMONIALS FROM PROMINENT ROSE GROWERS:

DEAR SIR:—The new Rose, "Belle Siebrecht," is a very valuable rose for winter forcing. The form is exquisite, the foliage handsome, the color charming, rich, bright, and of an entirely distinct new shade; it is also very healthy in growth and a constant and very free bloomer. Please book my order for 1,000.

Yours truly,
ROBERT CRAIG, West Philadelphia, Pa.

It affords me much pleasure to express to you my thanks for the bunch of Belle Siebrecht roses you had the kindness to send to me. After having graced the tables of the N. Y. Florist Club annual dinner two days ago I find it to be a remarkable good keeper, having kept it for three days longer without its losing any of its brilliant color, and it appears as fresh now, after be-

ing out five days, as if just cut. As seen growing at your place I shall pronounce it after a careful examination a remarkable free bloomer, healthy grower, and one that is not easily attacked by mildew, and a welcome addition to our list of forcing roses.

ERNST ASMUS, West Hoboken, N. J.

WASHINGTON, Dec. 5th, 1894.

MESSRS. SIEBRECHT & WADLEY, New Rochelle, N. Y.:
GENTLEMEN:—We have received your circular letter together with price list of your new Rose, Belle Siebrecht, which we inspected in your houses some time ago. Please book our order for 2,000 plants, to be delivered April 15th next.

Yours very truly,

STRAUSS & CO.

This rose is the result of years of patient work by one of the best rosarians in the world. It is not sent out to be "tried." We have subjected it to the most severe tests, and are now fully satisfied that it is the best florists' rose in existence. It is not a mere sport, but is of a distinctly new strain, the result of a cross between La France and Lady Mary Fitzwilliam. Its pedigree is all right. Orders booked now and will be filled in strict rotation. Strong plants ready for delivery April 15th.

PRICE, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

RICHMOND, INDIANA.

Philadelphia

The past week has been the quietest since the holidays, it seems as if the wretched weather experienced every day except Saturday was to blame for this, as Saturday found everybody busy and cleaned out of stock by night. Prices remain much the same, all good teas bring \$8 with a few extras at \$10 to \$12, smaller stock \$4 to \$5. Beauties \$3 to \$5 per dozen. Hybrids do not sell well, probably not more than half are sold; this is more true of Brunners than Laings and Baroness, the only other varieties in the market, for this aristocrat the growers all expect to get \$5 to \$6 per dozen or take it home. This policy may be all right, but it seems to us it would be better to lower the price a bit and give the retailer a chance; other roses have come down with the season and why not the Brunner? A house will turn out twice as many buds now as six weeks ago, and there are at least six times as many in the market, but the price asked is the same. Laings and Baroness bring \$3 to \$4 per dozen. Burton is sending in some fine specimens of these varieties. Carnations are still in good supply, but without the glut of last season at this time, \$1.50 to \$2 is the price for good stock, with \$2.50 to \$3 for selected. Double violets are plentiful but small, the best bring fifty cents. The Lady Campbell is not now as good a seller as the Marie Louise, the sun seeming to bleach the color out of it. Single violets are getting very small and will soon be done. Sweet peas are seen in limited quantities, some good, some poor, from \$1.50 to \$3 per hundred is the price.

Pennock Bros. had their window fixed up in fine style the past week. Vases of all the prominent varieties of roses with the names of each kind neatly printed and attached entirely filled the window. It was a horticultural exhibit on a small scale and attracted considerable attention.

The exhibition of cut flowers at the March meeting of the Horticultural Society was confined to carnations from Hugh Graham, who had some fine Keller, Stuart, Scott and Albertinis; some tulips from Robert Craig, and a few choice azal plants and a specimen genista from Mr. W. K. Harris. There was the best attendance since meetings have been held in the Drawing Room, and it would seem as if people cared more for milk, the subject of the evening, than for flowers. The topics for discussion are taking a wide range, and perhaps it is best, more people will be attracted to the meeting and the society will no doubt thus gain in membership. Purity of the milk supply, sources of milk, uses of milk and sterilization, were all treated by different speakers, who make these subjects their specialty. Their remarks were very much appreciated by the large audience present.

A paper on the life history of the early agricultural and horticultural societies of the world was read by the society's historian, Col. Burnet Landreth, showing the "Pala Society for the Promotion of Agriculture" organized in 1785, to have been the mother of this horticultural society organized under its auspices in 1828, and of every other agricultural and horticultural society on this continent.

The first certificate of merit issued for tomatoes was shown, and will be on exhibition for a week in H. A. Dreer's window. E. Lonsdale acted as secretary in the absence of Mr. Farson at the funeral of a relative. K.

Fancy Leaved Caladiums.—FOR THIS WEEK ONLY we offer a large assortment of varieties. Dormant bulbs, \$1.50 per dozen, \$12 per 100.

Tuberose, Excelsior Pearl.—Large second, all flowering bulbs, suitable for out-door planting. In barrels containing 1500, \$5 per barrel.

Lilium Auratum Bulbs.—7 to 9 inches in circumference; 150 in a box, \$5.50 per box. Two boxes for \$10.50

HARDY PERENNIALS.

We offer of this popular and desirable class of plants one of the largest and most complete stocks in commerce, and can supply small plants or large clumps in any quantity. Our stock includes all the best strains, and the newest as well as the oldest varieties of tried and sterling merit. Those especially requiring large quantities will find it advantageous to submit their lists to us for quotations.

ORCHIDS.

To make room for the increase of growth of our Orchids, we offer FOR THE NEXT THIRTY DAYS, or until the surplus is sold, all the leading varieties at export prices. Our stock, the quality of which is unequalled in vigor of growth and desirable varieties, is one of the largest in commerce, and prices below any other market.

Florists in the principal cities report the demand for cut Orchid flowers the largest they have ever known, it being probably 100 per cent increase over previous seasons. This has stimulated the growing of Orchids for commercial cut flower trade, and at the prices at which we offer Orchids to-day they are probably the most profitable flowering plants to be grown by progressive Florists.

An examination of our stock solicited. Quotations upon application.

Boston.

Trade in general at the wholesale and retail establishments maintains the degree of activity noted in last report; for the Lenten season it is surprisingly good, not spasmodically but steadily day after day. White carnations are decidedly scarce, and colored varieties none too plenty. All stock coming in, of whatever varieties, is worked off readily provided it is of acceptable quality, with the exception of lilies and callas, which show some indications of overloading. Asparagus, which was very scarce for a time, is now obtainable in splendid quality, and will probably have a larger sale for Easter decorations than ever before. Geo. Wilson has been making a record with his Brunners recently, and has an enormous crop in sight, which are of unexcelled quality. The troublesome maggot which ruined so many buds in these houses last year has not put in an appearance this season. Mr. Wilson believes that in starting the houses three weeks earlier he got ahead of the pests.

Messrs. Norton, Cotter, Edgar, Nicholson, Ewell and Fisher spent a few days in New York city and vicinity the past week, visiting a number of the most noted rose and carnation growing concerns. They never tire of telling of the princely reception and generous treatment they enjoyed at the hands of the New York brethren, and they all feel richly repaid for the time spent in inspecting those prosperous establishments.

Mr. Michael Welch, father of the Welch Bros., wholesale florists, died suddenly of heart failure at his home in Dorchester on March 17, aged 68. The funeral took place on Tuesday, 19th, and was attended by quite a number of gentlemen identified with the florist trade.

Visited Boston: Chas. Pynaert, Ghent, Belgium; W. Warnaar, representing Van Hiemstra & Co., Sassenheim, Holland, and H. J. Goemans, representing K. J. Kuyk, Hillegom, Holland.

Antirrhinum Majus Alba.

SOMETHING NEW FOR FLORISTS' USE.

I offer to the trade well established plants, propagated from cuttings, of this beautiful acquisition to our florists' flowers, which should be in every commercial house, wholesale or retail.

It is of the easiest culture and produces an abundance of spikes three feet or more in length.

Everyone admires it.

Wonderfully taking with the Retail Trade.

It possesses marvellous keeping qualities.

Grown on benches, ten inches apart, in rich soil; in a cool house it is wonderfully productive and exceedingly profitable. I advise growing on benches, where it is to remain next winter, though it could be grown in the field or pots and run in the benches after the chrysanthemums come out with perhaps greater profit.

Our exhibit of Antirrhinum Majus was greatly admired by the experts at the Carnation Convention in Boston.

No Retail Florist can afford to be without it.

I am booking orders for delivery this spring, April and May, at the following prices for well established plants.

Per Hundred..... \$6.00

Per Thousand..... \$40.00

2/3 or more at 1000 rate.

New York.

Trade in general is fearfully dull in New York. Occasionally there comes unexpectedly a day when business picks up suddenly, and hopes are raised only to be dashed to the ground again inside of twenty-four hours. The weather has been quite wintry for several days past, and this is apparently the only barrier that prevents a complete smash-up on prices. The quality of stock coming in averages poor and the prices obtained for the small proportion of selected blooms bear not the least relation to the net results for the entire receipts. Even the Greeks are exacting and hard to suit, and wherever they can get their hands into a box of roses they tumble and pay them over in a manner that makes the dealers sick at heart. This matter of picking over and rejecting stock that is not up to exact ideal in quality is not confined to any class of buyers; it is general, and is getting to be one of the hardest problems the dealers have to encounter. It may yet have to come to iron gratings with the stock on one side and the buyers on the other side of the barrier.

American Beauty is received in first class shape from but few of the growers at present. In most cases there is no trouble about the stems, there being more wood than flower. A bud scarcely larger than a Gontier with four or five feet of heavy stem attached to it is somewhat ill-balanced. The best Beauties, however, are no match for the shapely Brunners, which are now being received at their best, and while this lasts Beauty must take a rear seat.

Siebrecht & Wadley have just sent a new species of dendrobium to Kew for identification. It made its appearance in a recent importation from the East Indies.

Henry Butler and wife have gone to Florida for a short period of recreation.

Ed Jansen and wife are making a visit to Germany and France, and will not return for some weeks.

Visitors in New York: J. F. Huss and Geo. Thompson, of Lenox, Mass.

A New Canna! "THE PROFESSOR."

We take pleasure in offering this Canna to the Trade, and feel sure that it will please all who purchase it. It originated with me, has been tested on my grounds for the past three years, and has been very highly spoken of by all who have seen it

The foliage is a very dark purple, nearly black, and colors up well in the full sun. The flowers are of fair size and substance, and of a deep crimson color; they are by far the best we have seen in the dark foliage section of this popular plant.

Its habit of growth is dwarf and its average height is about 3½ to 4 feet.

We consider this Canna a valuable acquisition and hereby offer it for the first time.

Price for started plants from pots (ready after March 15, 1895), 75c. each; \$7.00 per doz.

N. B.—All orders will be filled strictly in rotation.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS, Portland, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

VISITING BOSTON.—Aug. Rhotert, New York, representing Vilmorin & Co.

F. HOWCROFT of London will sail for America April 10 on the Majestic, his health is much improved.

THE MAIL TRADE has been so poor this season that few even of the largest houses have succeeded in building up even a fairly respectable "Kick Department."

VISITING NEW YORK: E. B. Clark and A. N. Clark, Milford, Conn.; W. Langbridge, representing Jerome B. Rice & Co., Cambridge, N. Y.; and S. E. Woodruff, Orange, Conn.

Seed and Trade Notes.

The mail trade is booming now in Philadelphia. Mr. Burpee has returned from the south and everything is smiling. Don't ask us when or where he is going next, some seedsmen are like royalty—they like to travel incognito.

The Ditch have taken Philadelphia—five of them at a time.

Mr. Pynaert van Geert of Ghent, together with his able representative, August Rhotert, are calling on eastern florists.

Mr. W. F. Grissinger, representing the well known house of Louis Van Houtte of Ghent, also spent a week in Philadelphia.

E. V. Hallock, always genial but in a hurry, was heard talking in a Philadelphia office the other day until 2 a. m. He may turn up in Paris or Mexico next week for all we know—more about him when permitted.

"The boys" went to Pittsburg last week. While there they had a good time. Mr. W. J. Stewart of Boston stopped on his way. He is also one of the boys—tho' never full of spirits as "Nix" insinuates about the others; he leaves a trail of good hum or wherever he passes.

Vandegrift & Co. of New York are out again with offers of Easter lily blooms.

There is more demand for Lathyrus sylvesteris than was expected after Mr. B.'s criticism.

Another horticultural trade paper is spoken of. Aren't there enough of them already?

The Farm is the title of another farm and garden paper, to be issued from Williamsport, Pa.

There does not seem to be anything particularly striking in Mr. Crozy's new cannas for 1895 excepting the price of "Papi Canna"—\$4 per root—mais c'est comme ça Monsieur—fools and their money, etc.

How have the mighty fallen? Paul Sigrist last year sold at \$2.50—now \$6 per 100!

Canna Mme. Janni Sallier grows 12 feet high in one season and has fine blooms.

Now, really, which is the best yellow canna? As a red Flamingo is going to be heard from.

Isn't some one booming a new forage plant? Well, if big fish are biting at the bait why not let the small fry have a nibble without throwing stones at them. But then who would have thought there were so many big fish in that little pool.

A. B.

Worcester, Mass.

We are experiencing very good business in all branches of the trade; bulbous stuff, with the exception of Von Sions and Trumpet major, is going rather slowly, the demand for carnations is better than ever. Brides, Mermets and Perles are selling well at from \$1.50 to \$4 per dozen. Valley is in good demand, retailing at 75 cents to \$1 per dozen, and violets are popular at \$1 per hundred; other stuff is fairly plentiful and regular prices are the rule. Nice bright weather is helping us get our stuff in for Easter, and judging from the quantity of Harrisii that are being forced lilies won't be very short. The show windows are very bright just now with azaleas and pans of tulips, hvacinths and narcissus; nice little plants of azaleas readily bring \$2 and \$3, but bulbous stuff goes very much slower.

Mr. A. A. Hixon, librarian and treasurer of the Horticultural Society, was presented with a silver service on his 52d birthday by the Mignonette Club.

Prof. E. Harlow Russel of the State Normal School was the lecturer at the meeting of the Horticultural Society March 14. A. H. L.

EAU CLAIRE, Wis.—Mr. H. Bluedorn states that the report that he has sold his business is erroneous. He says he is at the old place and intends to stay.

SHARON, PA.—John Murchie has leased the greenhouses belonging to the Boyce estate where he has had charge for many years, and will engage in the florist business.

NYACK, N. Y.—W. R. Davison has secured a fine plot of ground to which he will remove and rebuild. He contemplates erecting five houses 11x135 to be devoted to violet growing exclusively.

WHENEVER you want anything pertaining to the trade, and do not find it offered in our advertising columns, write to us and we will take pleasure in assisting you to find what you want.

BULBS We expect by this week's steamer a large consignment of
BULBS Begonias, single, white, rose

Baltimore.

It is Lent to be sure, but the sackcloth and ashes of the penitential season are not as apparent as they might be. In fact, since the beginning of a season theoretically of fasting and prayer, the good people of the four hundred seem to have taken a fresh start and made up their minds to get what pleasure can be afforded by grand opera, lectures, concerts and theatricals of their own getting up. All of which makes work for the florist, and assists him to a little brightness, at a time when, whatever the condition of others, he is usually in anything but a light or frivolous state of mind. Flowers are selling very well for Lent, and probably about as well as they would were it only plain ordinary every day business.

Violets can be bought at from 25 to 40 cents per hundred for common to choice, but prices of other things hold their own. Jonquils seem to be about the only bulbous flower in any great quantity. Some very good Dutch hyacinths were on the stands at Lexington market last Saturday, retailing at twenty cents. The weather continues bad on the whole, though now and then a break of two or three fine days almost persuades one that winter is over. The succeeding ones are either hard freezing, or snow or sleet, and out-door work is consequently at a standstill. **MACK.**

BELLEVUE, O.—James Lunn, the florist, died March 8, of paralysis, aged 60 years. He was born in England, coming to this country in 1871. He first settled in Cleveland, O., removing to this place in 1887.

CHRYSANTHEMUMS.

Mrs. Potter Palmer.

"MRS POTTER PALMER" (seedling of Fred S. Walz, originator of "The Queen" and "H. L. Sunderbruch").—Winner of Columbian Medal, Chicago, 1893, for best pink seedling; Certificate at Indianapolis, 1894. I claim it to be the best pink, commercially, for cut flowers, and as valuable as "The Queen." Flowers large, full to the center, outer petals reflexed to stem with incurved tips, inner petals interlace and incurve to a fine globular form; color rosy pink, reverse silver, stem stiff, growth vigorous, unexcelled keeper.

PRICE: \$5.00 per dozen; 6 at dozen rate. \$30.00 per 100; 50 at 100 rate. Ready now. Orders filled strictly in rotation.

"FRED WALZ" (Seedling of Theo. Bock).—Winner of the National Certificate of Merit, 1894. Flower incurved full to the center, making a perfect ball, medium size, clear lilac pink, reverse silver, petals boat shaped. Plants short, better grower than "Ivory" for cutflowers, market or specimen. Stem stiff, foliage dark green, close up to flower.

Stock limited. Orders filled strictly in rotation, at \$20.00 per 100; 25 at 100 rate. \$3.00 per dozen; 6 at dozen rate.

Decorations at Washington.

The floral decoration at the Washington Assembly (which was the leading event of the season) was on a most magnificent scale. A new feature in this decoration was baskets of flowers suspended by broad ribbons the color of the leading flower. In two of the parlors were baskets filled with Beauty roses, tied with the same colored ribbons, and in the white parlor at the end of the suite, hanging before the mirror, was a basket of cattleyas, held by ribbon of the same color. In the large ball room the same idea was carried out; the background for the baskets which were filled with roses, lilacs, violets and jonquils were the mirrors, and their reflection formed a double picture. Forming a border around the lower edge of the mirrors were yellow tulips and jonquils. On the face of the gallery were three large laurel wreaths tied with bows and loops of American Beauty ribbon. Wild smilax and asparagus were used on the ceiling. The doorways were bowered with wild smilax, in which a number of electric lights glowed under varied colored globes. Supper was served on small tables, each of which had a small centerpiece. This decoration was by Small & Son.

At the last reception given by Mrs. Westinghouse the decorations were on the same lavish scale. In the drawing room Beauty roses were artistically arranged in huge bunches tied with ribbons (the same shade) to the woodwork. A solid screen of La France roses formed a background before which the hostess stood. In the tea room the table was a harmony in violets; the centerpiece was composed of valley and adiantum. The cloth was strewn with violets and valley, and the candelabras capped with violet shades.

The Gude Bros. had a large wedding decoration last Tuesday, in which several hundred white roses and almost as many cattleyas were used. The ceremony took place in a bower of palms and plants, from the center of which was suspended a bell of white carnations, roses and valley, with a clapper of violets.

GEO. A. KUHLE, Pekin, Ill.

Toronto.

In potting sheds, both private and commercial, signs of spring may now be seen. The signs outside don't amount to much yet, and it is necessary to exercise one's faith to a considerable extent to believe that in about a couple of months we shall be straddling and perspiring over flower beds or begging the retailer to take our roses at any price. The cut flower trade during last week has been spasmodic and generally dull; flowers are plentiful, but prices have not declined much. The plant trade is gradually improving, but the changeable weather keeps it back, Saturday being another cold day prevented anything being done on the market.

The trustees of the Fleming estate have decided to shut down their greenhouses and store on Yonge street about June next, or as soon as they can sell out the stock either by private sale or auction. The greenhouses themselves will either be sold or rented as they stand. This is the oldest establishment of the kind in Toronto, Mr. James Fleming having started it away back in the thirties, I believe, and he made lots of money out of it too, but since his death the place was rented for a year to a man who let the business down considerably, and lately it has been ably managed by Mr. J. Stevens, but as the present proprietor took very little interest in it he has been working at a disadvantage. There is a good stock of palms, ferns, orchids, bedding and miscellaneous plants.

Mr. J. HORACE McFARLAND has, without severing in any way his connection with the "Mount Pleasant Printery," at Harrisburg, Pa., become manager of the Colorotype Co., of New York, which is introducing a new process of color printing that will be specially adapted to the accurate reproduction in color of plants and flowers.

Lilies for Easter—Carnation Cuttings.

"F. M." wants to know how to force *Harrisii* lilies for Easter. F. M. says they have been in a temperature of 45° at night all winter and now they are in a night temperature of 70° at night and 90° in day time. On the 11th of this month they were not showing bud. They were kept too cool all winter. If they had been in a night temperature of 55° to 60° for the past two months they would have been in quite a different condition. If they were not showing buds at all on the 11th of this month it will be hard work to get them in flower for Easter. However, F. M. is doing all that can be done now; any higher temperature than 70° at night would be undesirable, as many of the small buds would be liable to shrivel up.

The same subscriber asks the question: "What is the best place to plant my carnation cuttings, light or heavy soil, and do they require to be placed where they will get the full benefit of the sun all day?" Light soil by all means for several reasons; chief is they lift in the fall without losing a fibre and without a lump of earth hanging to the roots. They should be entirely exposed to the full rays of the sun every hour in the day. W. S.

OTTO MAILANDER, Niles Center, Ill.

CARNATION MRS. FISHER, IMPROVED.

By a careful selection of propagating stock for over four years, I have succeeded in removing the objectionable points that are hovering over this grand Carnation. It is a vigorous grower, a profuse bloomer, bears large, pure white single flowers on long, stiff stems. Is an excellent summer bloomer, and with me has always been free from disease. Am growing it exclusively, with the exception of Grace Wilder.

Rooted Cuttings of Mrs. Fisher, \$2.00 per 100. Grace Wilder, 80c. per 100. Packages by Express sent prepaid to any part of the country.

NEW CARNATIONS.

NEW SEEDLING CARNATION STORM KING.

STORM KING

New Seedling.

AWARDED—American Carnation Society's Certificate of Merit at Boston; First Premium for best white at Boston; New York Florists' Club Certificate of Merit at Grand Central Palace Chrysanthemum Exhibition, November, 1893.

A grand white flower, magnificent in size, as white as the driven snow with no trace of coloring whatever. Very chaste and fragrant, and unequalled as a keeper. Brings the highest price of any white carnation in New York wholesale market. The best keeper we have ever grown.

Plant a moderate grower and good bloomer, and resembles Lizzie McGowan very much in constitution, having the same wry habit, but grows much taller and produces a longer and stronger stem; when well grown the flower attains magnificent proportions, ranging from $2\frac{3}{4}$ to $3\frac{1}{2}$ in., with stems from 16 to 20 in. long. Blooms are exceptionally fine in form and are all salable. The cuttings root as freely as Lizzie McGowan and are produced as abundantly as McGowan cuttings.

Price for Strong Selected Cuttings.
50 at \$5; 100 at \$10; 1000 at \$75.

Bridesmaid

New Pink Seedling.

A clear bright pink. The most pleasing shade yet shown. Fine, large well shaped flowers, ranging $2\frac{3}{4}$ to $3\frac{1}{2}$ inches and even more, on fine strong stems. Growth unusually healthy and strong. A moderately free bloomer. Flowers bring the highest prices on N. Y. Market. Pronounced by retail dealers the grandest pink carnation they have ever handled.

Comp. Notice by Massachusetts Horticultural Society.

Per 50 at \$5; 100 at \$10.00; 1000 at \$75.

In ordering Novelties don't forget that we have a grand stock of SCOTT, ALBERTINI, STUART, DAYBREAK, MCCOWAN, UNCLE JOHN and other standard sorts.

METEOR

New Crimson Seedling.

AWARDED—American Carnation Society's Certificate of Merit at Boston; First Premium for best Crimson at Boston; Massachusetts Horticultural Society, Comp. Notice.

A magnificent variety, of a rich brilliant crimson scarlet color, magnificent full blooms $2\frac{3}{4}$ to $3\frac{1}{2}$ in. with perfect calyces on 16 to 20 inch stems of unusual firmness and strength. The plant resembles Portia in vigor of growth and Wm. Scott in habit, but is a ranker grower than Scott. A very free bloomer. Stock is exceptionally healthy. Color holds well and is the best keeper of all the dark sorts. This is the only dark carnation that we have ever thought worth growing at the Cottage Gardens. Stock limited.

Per doz. \$2; per 50 at \$5; 100 at \$10.

We prepay all Express charges where cash is sent with order.

THE COTTAGE GARDENS, Queens, L. I., N. Y.

Pennisetum Longistylum.

This is the name of a very ornamental grass with narrow gracefully arching leaves, forming a compact densely furnished tuft 12 to 18 inches high and of the same width. The feathery inflorescence is four to six inches long, standing well above the foliage, and is exceedingly ornamental. The spikes are covered with a feathery down, purplish in color, and are produced continuously from spring until frost. They will last for months on the plants, and are also useful for drying to mix with gynecium, eulalia and other grasses for vases, etc. The plant is not hardy here in the north, but is surely one of the best to use as a border for large beds of cannas, caladiums, etc., or as a clump in the lawn. It is not a new plant for I have known it when a boy, but we seldom see it around nowadays, and like so many good old things it ought to come to the front. The clumps may be kept alive during winter either in a protected frame or in a cellar until spring, when they should be divided and started in pots or boxes so as to have them in leaf in time for planting out in the bed or border. It also may be used as a center plant for lawn vases and for verandah boxes. We have used it for that purpose for a number of years, and always with the best results, but these must be started into growth somewhat earlier in the greenhouse, so as to have shapely plants of some size with the feathery spikes showing by the end of May, the usual time for filling vases and boxes. You can start them in any corner of the greenhouse, or even along the walk, until the weather permits placing them in a prepared frame, where they will grow very fast into good sized plants.

Rochester, N. Y. J. B. KELLER.

A Slight Misconception.

"Dear Sir: Those '9-11' Harrisii bulbs weren't up to standard. Quite a number bore less than 9 flowers."

WHAT PAYS

These dull times?

Carefully select and plant only the best will pay

YOU

BEST

CHRYSANTHEMUMS can not be dispensed with; they are too popular. Only a few short months and your customers will be asking for them, so have plenty of the

Varieties at your disposal by planting time. There is no time equal to the present for PROFIT to the buyer, as a few strong plants benched NOW will afford ample stock.

Try Md. F. BERGMAN for early white and follow with IVORY, MAR E LOUISE, MUTUAL FRIEND, and THE QUEEN. For late NIVEUS, MRS. JEROME JONES, and MRS. J. GEO. ILS.

Try MARION HENDERSON, for early yellow and YELLOW QUEEN, GEO. S. CONOVER, CLINTON CHALFANT and MAI. BONNAFFON will follow. Then GOLDEN WEDDING, A. H. FEWKES and EUGENE DAILLEDOUZE with W. H. LINCOLN for late.

Try OCTOBER BEAUTY for early pink. It sells well Oct. 1st to 10th Follow with MRS. E. G. HILL, (crown bud for early) and plenty of LADY PLAYFAIR, nearly as early and better quality. Then comes HARRY BALSLEY, ERMINILDA and MAUD DEAN.

Again, if you want other colors for EXHIBITION or NOVELTIES of the present year, let us send you a list of the most desirable. It will cost you nothing and may be

PROFITABLE.

Five each of the foregoing varieties, 115 plants, \$5.00. As white is the most salable color, we will send seven plants of each of the whites and four each of the yellow and pink, 116 plants, for \$5.00, or twice this quantity for \$9.00. In connection with

CHRYSANTHEMUMS

We are offering the best of the NOVELTIES FOR '95,

AND

The LEADING STANDARD VARIETIES IN

CARNATIONS

At reasonable prices.

NATHAN SMITH & SON, Adrian, Mich.

It's Just as Easy

To grow choice Chrysanthemums as it is to grow poor ones if you START RIGHT.

By buying strong, healthy, well established stock. Avoid rooted cuttings—poor sickly things, hardly able to stand the journey from distributor to your place. Don't for an instant imagine it's economy to save 50c or \$1.00 per 100 at the start and lose at flowering time \$5.00. Buy now! Buy quick! while stock is strong and fresh, before others get ahead of you. What you want are varieties suitable for florist use—large, solid full and double flowers, guaranteed true to name and first class in every respect.

100 Plants, your selection, 20 kinds, five of each, \$3.50. If by mail, \$4.00.

VAUGHAN'S GANNAS

MEDAL WINNING

Varieties controlled by us and offered now for the first time.

These novelties we consider of great value and permanent additions to the high class Cannas, they are the cream of twenty kinds chosen by M. Crozy from his entire stock of seedlings to represent his best achievements in Cannas up to 1893.

CHICAGO.—(Medal awarded). Positively the best vermilion scarlet to date; 4 feet, green foliage with leaves 9 to 10 inches wide, flower truss and stalk stands boldly erect. The large flowers open out nearly flat, petals 1½ inches wide and five in number—in this respect the **Chicago** fairly out-classes all Cannas, the fifth leaf adding much to the blossom and the flower spike. Its record at the World's Fair, on our grounds and in our greenhouses more than justifies all our claims for it. The record of our Canna Novelties of the past seasons entitles us to your confidence. The color, in the language of the judges, is a "dazzling vermilion scarlet," smooth and without markings except a purplish gloss. Price of this grand novelty only 75c. each.

MR. F. KANST, of South Park, Chicago, judge of Cannas at the World's Fair, commends it very highly.
JOHN T. TEMPLE says: "Chicago this season is an early and constant bloomer, the best new Canna to date of its color."

MADAME ALPHONSE BOUVIER.—3¾ feet, foliage medium green, flower large, well opened. The color is that of Madame Crozy, tinted with dark crimson spots like Crampbel. The yellow edge is irregularly wider with clear yellow spots on upper and lower edge of petals into the throat of the flower; a magnificent Canna, scarce. Each, \$1.25.

M. MESNIER.—(Medal awarded). 3½ feet, dark green foliage, sturdy growth, flowers large, petals wide, color salmon, slightly dotted and streaked with red, which is deepest in the center of the flower. Petals are bordered with a narrow rim of yellow which is irregularly wider on the ends, often ¼ to ½ inch wide. Each, 75c.

MIDWAY.—(Medal awarded). 4½ feet, green foliage, strong grower, color rich vermilion slightly streaked with faint crimson; petals 1¾ inches wide, compact flower spike, a strong grower and free bloomer. The crimson streaks and splashes in the petals make a splendid effect on their background of scarlet. Each, 75c.

OCTAVE MIRABEAU.—(Medal awarded). 3½ feet, green foliage, flowers large, petals wide, color a deep vermilion, painted with finely penciled lines of orange yellow and crimson. Very handsome. The back of petals the same. Price, 75c.

QUEEN CHARLOTTE, The New German Canna—Strong plants started into growth. Each, 50c.; per dozen, \$4. 50.

CHRYSANTHEMUMS

OUR NOVELTIES FOR 1895.

MRS. WM. H. RAND.—(Certificate). A distinct variety of Japanese type, in color a remarkable rich yellow. Petals fine, long, twisted and irregularly reflexed, making it resemble a tangled mass of large gold thread. Highly commended by the judges at Chicago, and pronounced the most attractive and graceful flower at the show. 50c.

CRYSTALINA.—(Certificate). Snow white, medium sized flowers, snowball type, a grand keeper. Can be roughly handled and will not drop or bruise. Is quite distinct, good foliage and strong stem; early. 35c.

BURT EDDY.—(Special Mention). Very large pæony-shaped flowers, full and double, stem and foliage good. Color, silver rose shading to light magenta. A grand sort for exhibition and very early. 35c.

JAYNE.—(Special Mention). Dark shaded rose, high built, regularly formed incurved blooms. Very strong stem, first-class foliage, well up to flower. For exhibition and pot plants highly commended. 35c.

MRS. MOSES J. WENTWORTH.—(Special Mention). Chinese type, flowers large, full and deep, of a rich yellow color. A good keeper and shipper. Strong stem, with foliage up to flower; early. 35c.

SHAVINGS.—A curiosity. Flowers medium size and like a mass of curled mahogany shavings, dwarf and early. 25c.

VAUGHAN'S FLORIST SET OF 6 FOR \$2.00.

VAUGHAN'S SEED STORE,

CHICAGO:
P. O. Box 688.

A CHINA ASTOR.—Life.

Crawfish and Aquatics.

Are crawfish injurious to water lilies?
Chicago. J. J.

I have had very little experience with crawfish. We have them here in our ponds and have never noticed anything injured by them, but we have not had them in the Victoria pond. I have never had them in artificial ponds or tanks, but I believe they are discriminated by aquarium culturists. Wm. Tricker, Clifton, N. J.

From observations made some years ago, should say that this crustacean was not a vegetarian; and in the sections of the country where found aquatic plant life would be so vigorous that it would not injure it to any great extent. Malden, Mass. BENJ. GREY.

Plant Notes.

Novelties are scarce, even in Europe. In its issue of March 1 *L'Horticulture Belge* published a colored plate of *Manetia bicolor*, of which a plate was sent out from Ghent in 1846. *L'illustration Horticole* of February 28 illustrated *Methonica superba*, which has been figured in colors several times and many years ago.

A very good plate of *Saintpaulia ionantha* appears in *The Garden* (London), but is not the statement that the flowers of this beautiful little plant are 3 inches across a mistake? A. B.

"WHIRLWIND."

The new hardy double white ANEMONE. Strong, field-grown roots, \$8.00 per 100.

CHRYSANTHEMUM

GEO. S. CONOVER, the best EARLY BLOOMING, large yellow. Nothing like it on the market. Strong plants, \$6.00 per 100.

Specialties for Florists.

ROSES.

NEW ROSE, Mrs. J. Sherman Crawford.
This lovely new hybrid is one of the few large flowering Roses that bloom constantly and are perfectly hardy. It will be of exceptional value to Florists, because it will be a splendid forcing Rose for cut flowers, as well as for pot plants for spring sales. With us, it is much better than Mrs. John Laing, and from plants grown side by side the flowers were larger and finer. Color deep rosy-pink; the outer petals tinted with pale flesh. Plants from 3 inch pots \$4.00 per doz.; \$25.00 per 100. Plants from 2½ inch pots \$2.50 per doz.; \$15.00 per 100.

YOUNG HYBRID ROSES from hard wooded cuttings.
This stock planted out will give better results than soft wooded plants.

MARGARET DICKSON.
This magnificent new white hybrid perpetual Rose is unquestionably the greatest acquisition made in Roses for the past ten years. No other Rose has ever received so many certificates of merit in a single year. The color is white with pale flesh center, petals very large, shell shape, and of immense substance, \$1.00 per doz.; \$8.00 per 100.

RODOCANACHI.
A new hybrid of great promise. Color soft, transparent pink, shaded with carmine; immense flowers, very full. We believe this variety is the coming hybrid for florists. It sells better than Brunner, and is especially brilliant at night. We have the largest stock in this country, and offer it at \$7.00 per 100; \$60.00 per 1000.

MAGNA CHARTA.
A splendid Rose for Easter forcing; of fine form and sweet, color clear rosy-red, beautifully flushed with violet-crimson. \$5.00 per 100; \$40.00 per 1000. General list of hybrids \$5.00 and \$6.00 per 100 according to variety.

ULRICH BRUNNER.
A magnificent Rose; color rich glowing, crimson. \$5.00 per 100; \$40.00 per 1000.

ROSES FOR FORCING.
All the standard varieties in 2½ inch pots; prices on application. We have 20,000 young American Beauties that will be ready to ship the first week in April, from 2½ inch pots. Price \$6.00 per 100; price per 1000 on application.

STANDARD BEDDING ROSES.
50 cents per doz.; \$4.00 per 100.

CHRYSANTHEMUMS.

Four splendid varieties, 75 cents per doz.; \$6.00 per 100.

EUGENE DAILLEDOUZE. GOLDEN WEDDING.
MRS. E. G. HILL. GEO. W. CHILDS.
Standard Chrysanthemums, 40 cents per doz.; \$3.00 per 100.

TWO NEW AND RARE FUCHSIAS.

WASHINGTON.
Introduced by Lemoine, of France. It shows a rare new color among Fuchsias. Tube and sepals are soft, rich carmine, while the corolla is a true rose-mauve, an exquisite combination. \$1.00 per doz.; \$7.00 per 100.

FUCHSIA, TRI-COLOR.
An old variety, but good. The tube is deep coral-red, shading down to white-tipped sepals; the large single corolla is a delicate bluish-purple. \$1.00 per doz.; \$7.00 per 100.

BEGONIA ERFORDIA.
A sterling novelty for Florists. Begonia Erfordia has all the good qualities of the famous bedders, Vernon and Dewdrop, and is a novelty we can strongly recommend. It will stand the strong sun in summer and is one mass of bloom from June until frost. It is also a very showy pot plant for spring sales. Habit of growth strong and compact; color deep rosy-pink. We have a splendid stock and offer it at an exceptionally low price, 50 cents per doz.; \$4.00 per 100.

NEW BEGONIA, PERFECT BOUQUET.
A charming little plant, entirely novel, and unique and dainty in every way. The habit is neat, dwarf, compact and bushy—truly a perfect bouquet. In constitution and habit the plant is an improved Dewdrop, growing as well in any situation and thriving with as little care. 75 cents per doz.; \$6.00 per 100.

CARNATION, LIZZIE MCGOWAN.
Rooted Cuttings, \$8.00 per 1,000.

THE BEST CANNAS.

We do not offer a long list of Cannas, but our four varieties are the best standard sorts, and as we grow them in quantity we can sell at a low price. We have both dormant and started roots. Florists desiring the best stock to sell in five inch pots in April and May should purchase our started roots. They are now from six to ten inches high.

ALPHONSE BOUVIER. MADAME CROZY.
CHARLES HENDERSON. PAUL MARQUANT.
Prices, dormant roots, \$4.00 per 100; \$35.00 per 1,000
" started roots, \$6.00 per 100; \$50.00 per 1,000
Order early, as the above prices only last while our stock is unsold. Address,

Specialties for Florists at Reduced Prices.

New Rose Crimson Rambler.

The sensation of the century. Received gold medal at Antwerp Exhibition for the best new plant introduced in 1893. Gold medal from National Rose Society. Gold medal at Earls Court Exhibition, as well as numerous first-class certificates. This is **THE ROSE** for every Florist in America.

PLANTS ONE YEAR OLD WILL PRODUCE 300 BLOOMS ON ONE BRANCH.

Crimson Rambler is a vigorous grower, attaining a height of 12 feet in one season, producing enormous bunches of deep crimson flowers, remaining in perfection longer than any other Rose known. For full description and illustration see our Catalogue of Novelties.

Colored Plates, 10 cents. Price of Plants, 2½ inch pots, immediate delivery, \$2.50 per 12; \$12 per 100. From 4 inch pots, \$20 per 100.

New Chrysanthemum Philadelphia.

The greatest prize winner of all Chrysanthemums has been so fully described lately that every one must know all about it. \$3.50 per 12; \$25 per 100.

New Abutilon Souvenir de Bonn.

Elegant Maple like foliage, widely margined with white; large, golden yellow flowers, marbled with scarlet. \$1 per 12; \$6 per 100.

Allamanda Williamsii. Forms a compact bush with trusses of yellow flowers, 3 to 5 inches, deliciously scented and produced in greatest abundance. \$3 per 12; \$15 per 100.

New Bougainvillea Sanderiana.

The most useful and brilliant flowering plant known, of easiest culture, producing its magnificent rosy crimson bracts and yellow flowers, under all conditions in the greatest abundance and amazing profusion. (Sander & Co.) Still sold in England for \$25 \$3.50 per 12; \$20 per 100. Colored plate 10c.

New Garryopteris Mastacantha.

(Blue Spiraea), one of the very best novelties from China; blooms first year from seed or cuttings; grows 2 to 3 feet high; highly scented foliage; a mass of sky blue flowers until December; vigorous and hardy; excellent bee plant. \$1.50 per 12; \$8 per 100. Colored plate 10c.

New Clematis Mme. Edward Andre.

This is the new Crimson Clematis first exhibited at the World's Fair in French section. The flowers are very large, most vivid crimson in color; rapid grower, hardy and prolific bloomer. \$3.50 per 12; \$25 per 100.

New Pink Clematis. Mme. Baron Veillard, similar in every respect to Mme. Andre, but flowers a delicate pink, very distinct. \$2.50 per 12; \$15 per 100.

Garmine Fountain. (Thysacanthus.)

Drooping branches, 20 inches long, of deep carmine flowers. Nothing more beautiful. \$2 per 12; \$15 per 100. All plants 50 at 100 rates; 25 at dozen rates.

Mr. Grozy's Gannas of 1894. The complete set of 20 sorts. Price, 60c. each; set of 20 for \$10.

New Ganna Queen Charlotte. This is conceded to be the finest Canna to date, and will no doubt hold its place as such for a long time to come. Sent out last year at \$2.50 each, yet it found ready sale. Those who will grow it in quantity will reap the golden harvest. Fine plants that are ready to bloom at \$4 per 12; \$7 per 25; \$25 per 100. Order now.

All other Cannas such as EGANDALE, \$8 per 100; FLORENCE VAUGHAN, \$6 per 100; PAUL SIGRIST, \$10 per 100.

Bulbs.

Amaryllis Belladonna, \$5 per 100. A. Johnsoni, \$15 per 100. A. Formosissima, \$4 per 100. A. Vittata, \$8 per 100. A. Equestra, \$5 per 100. A. Hybrids, \$25 per 100. Tuberoses. Excelsior Dwarf Pearl, 4 x 6, \$6 per 100. Variegated leaved, \$6 per 1000.

SEND FOR WHOLESALE TRADE CATALOGUE OF BULBS AND NOVELTIES.

A. Blanc & Co.

314-316 North 11th Street.

Philadelphia.

Jardinieres and Flower Pots: Of these we have the largest assortment in the country and at lower prices than can be quoted elsewhere. Direct importation. Send for Catalogue.

Engravings and Electrotypes. Over 20,000 engravings in stock, of Plants, Flowers, Fruits, Trees, Vegetables, Ornaments for use in Florist or Seedsmen's printing. List of Extensive Catalogues mailed free.

Strobilanthes Dyerianus.

The most beautiful leaved bedding plant ever introduced. A brilliant metallic purple, shading into light rose. Stands the sun remarkably well—very useful and decorative plant, or for garnishing jardinières. Sold last year for \$2.

Price, 30 cents each. \$2.50 per 12; \$10 per 100.

New Spiraea Anthony Waterer.

Although only sent out by Mr. Anthony Waterer, in November, 1894, at \$2 each, we are already in the market with it at popular prices. Mr. Goldring of the Royal Kew Gardens speaks of it as follows: "It is one of those rare novelties that occur at rare intervals. It outshines all other Spiraeas in brilliancy of color (a bright crimson); it is also dwarfer and denser in growth, more profuse and more persistent in flower and is not out of bloom during summer and autumn—a rare gem—it will be extensively grown for market, as it is the IDEAL of a POT PLANT FOR FLORISTS. On September 1st I saw a large number in full bloom; some plants not more than 15 inches high had 20 flower clusters open at one time, and had been producing blooms in like manner since June! It has been awarded a first-class certificate last July."

Nice young plants \$5 per 12; \$8 per 25; \$50 per 100. Colored plate, 10c.

Royal Coleus. Mrs. Sanders. These, the finest of all Coleus ever introduced, are fully described in our Catalogue of Novelties, sent out last year at \$1.25.

Our price, \$1 per 12; \$7 per 100.

Solanum Wendlandi produces trusses of flowers a hundred in number, each flower measuring up to 2½ in. Color, mauve blue. A superb climber. \$4 per 12; \$30 per 100.

Solanum Rantonetti. A neat compact plant, 1 to 2 feet high; covered during summer and fall with deep blue flowers. \$2 per 12; \$12 per 100.

Peperomia Metallica. An introduction of the great establishment of Linden, Brussels. Leaves thick, waxy-like, appearing as if covered with bronze, red underneath. Price, \$2 per 12; \$10 per 100.

Kosteletzkia Virginica. (Pink Beauty.) First sent out by us—a fine, hardy, tuberous rooted plant, completely covered with large pink flowers. \$2 per 12; \$12 per 100.

Mr. Grozy's Gannas for 1895. By special arrangement we can deliver these in dry roots April 15th at \$2.50 each, or \$10 per set of 20. A single set could not be imported direct at this price.

New Ganna Golden Star. If this is not the purest yellow Canna in commerce to date we refund the price paid for it. The three upper petals which are beautifully fringed are absolutely pure yellow—the lower one is but slightly spotted red. \$4 per 12; \$7 per 25; \$25 per 100.

Shading.

Our friend Scott, in the last number of the FLORIST, recommends a mixture of white lead and naphtha for shading green-houses. I used this method for several years, until I found a cheaper and in every way better one. In using white lead I was never quite sure that I would not be compelled to use lye to remove it in the fall, which would be liable to take the paint off the rafters as well as the shading from the glass.

My method is to use common whiting. Mix it with boiled linseed oil if the shading is to stay on all summer; make the mixture so that it will run from the pot, or a little thinner than ordinary putty. For a shorter period use less oil. This mixture I use mixed with naphtha so that it can be put on with a syringe or a brush as recommended by Mr. Scott. I have never had any trouble with this shading, either to have it stay on as long as required or to remove it when I wished to do so. For show houses it is well to add a little cheap green to the whiting so as to make the shading a light apple green. This makes a very pleasing light in the house and shows plants and flowers to good effect.

J. T. ANTHONY.

Manure from Poultry Yard.

"A. W." inquires whether hen maure is used as a liquid manure, and if so what strength. The above is a very strong manure and must be used very carefully. It is often used with good results if not carelessly applied. One quart of the manure in thirty-two gallons of water is strong enough. If used other than in a liquid state still more care is necessary. I have seen two very dissimilar crops spoiled by it; one was a bed of seedling cabbage, the other was a bench of roses. If used in the ordinary way mixed with the soil it should be mixed with some dry soil first, being quite decomposed, and then run through a fine sieve. It must be used very sparingly.

COCKEYSVILLE, BALTIMORE CO. MD.

ROSES! ROSES!

In all the best standard varieties suitable for forcing and bedding out. My stock of these is now in fine condition, ready for immediate shipping, at prices to suit the times.

As my stock of **MRS. J. PIERPONT MORGAN** has sold in such an unprecedentedly quick time I regret that I can now only offer it in lots of 12 plants to give all who wish to try it an opportunity to do so. Those who want it should speak at once or it may be too late.

CARNATION DEAN HOLE.

NEW YELLOW, a great improvement on Buttercup. This variety won the first prize for best yellow, also a Certificate of merit at the Boston Carnation Show just past.

Extra fine stock now ready, \$10.00 per 100; \$75.00 per 1000.

Also I have now ready for delivery extra fine stock of

Bouton d'Or.....	\$8.00 per 100; \$70.00 per 1000
Helen Keller.....	5.00 " 40.00 "
Mme Albertini.....	3.00 " 25.00 "

Puritan.....	1.50 " 12.00 "
Tidal Wave.....	1.50 " 12.00 "

Transplanted stock from flats.

CHRYSANTHEMUMS.

The following set for this season are all of sterling merit:

DEAN HOLE—Very large, incurved, massive flower with broad petals of exquisite form; white, with beautiful soft shade of pink on outer side, with extra good stem and foliage. Certificate American Chrysanthemum Society in Philadelphia.

NEMESIS—Very early, almost identical in color to Daybreak carnation, and an ideal flower: dwarf, sturdy grower.

OLYMPUS—Very bold, round flower, 7½ inches through by 7 inches deep, white, with clear pink on outside of petals.

SUNRISE—By far the best very early red; very fine color and form, average 7 to 8 inches through, with fine stem and handsome foliage.

TRILBY—Very clear white, and superior to Niveus in every way. Very late and a good keeper.

ZULINDA—Very late, silvery pink of fine build, with good stem and foliage

SUNRISE, \$3.50 per dozen; \$35.00 per 100.
DEAN HOLE, NEMESIS, OLYMPUS, TRILBY, ZULINDA, \$6.00 per dozen; \$25.00 per 100.

CANNAS. CANNAS.

12 New Varieties for 1895. These have been selected from many thousands of choice seedlings and are very distinct from others, and all of sterling merit.

- AMERICAN FLAG**—Very much superior to Queen Charlotte.....Price, \$1.50 each; \$15.00 per dozen
- CRIMSON KING**—Intensely bright clear crimson without a trace of yellow in it, \$1.00 each, \$9.00 per doz., \$50 per 100
- DIRECTUM**—Soft orange scarlet with clear broad band of yellow, very dwarf.....\$1.00 each, \$9.00 per dozen
- GOLDEN QUEEN**—Very large, bold flower and spike; much superior to Florence Vaughan in every way, \$1.50 ea., \$15 doz.
- HENRY IRVING**—A very fine, bold flower, clear orange scarlet with bright orange border.....\$1.00 each, \$9.00 per dozen
- MRS. JAMES DEAN**—Bright clear scarlet with yellow throat.....\$1.00 each, \$9.00 per dozen
- ORIOLE**—Dwarf, clear yellow with only faint marking of red at base of upper petals, 60c. each, \$5 per doz., \$25 per 100
- PRINCESS BONNIE**—Vivid scarlet with broad band of gold, very distinct.....\$1.00 each, \$9.00 per dozen
- ROSALIND**—A decided shade of rose pink predominating all through the flower.....\$1.00 each, \$9.00 per dozen
- SALMON QUEEN**—Clear salmon, solid color; an exceedingly fine thing.....\$1.00 each, \$9.00 per dozen
- SCARLET GEM**—Intense bright cardinal red with narrow band of gold.....\$1.00 each, \$9.00 per dozen
- SUNSET GLOW**—Bright salmon with irregular band of pale yellow; quite distinct.....\$1.00 each, \$9.00 per dozen

One of each of the collection for \$8, or two of each for \$15. Good, strong plants from 4-inch pots.

ALSO A VERY FINE STOCK OF THE FOLLOWING DRY BULBS:

	Per doz.	Per 100	Per 1000		Per doz.	Per 100	Per 1000
Alphonse Bouvier.....	\$1.50	\$10.00	\$ 90.00	J D. Cabos.....	\$1.75	\$12.00	\$110.00
Doyen Jos Sisley.....	1.50	10.00	90.00	Miss S. Hill.....	1.25	7.50	60.00
Florence Vaughan.....	2.00	15.00	125.00	Mme. Crozy.....	1.00	6.00	50.00

Liberal discounts for large orders. Also all the other best varieties.

JOHN N. MAY, SUMMIT, N. J.

Chrysanthemum Troubles.

"Constant Reader" writes as follows: "Would like to know what is the best remedy for black fly on the 'mums,' as smoking does not seem to have much effect, and also the best remedy for mildew on them. What temperature is best for them at this time of year? And should chrysanthemums be syringed now?" Taking the questions as they are put, would say that fumigating with tobacco smoke will kill the black fly; if followed up three nights in succession it will most assuredly kill them. In the summer time, when you have to give lots of air, and more than likely there are several lights of glass out, tobacco water syringed on the plants will keep the fly down. Others depend on tobacco dust thrown over the plants every week, but neither of the two latter methods kills them so effectually as the smoke. Mildew is not often seen on the young plants at this time of year. In the fall, at flowering time, it frequently is, and mostly where the house is cold, damp and draughty. An increased temperature will start the plants growing, and you should not be troubled with mildew. A night temperature of 50° with a rise of 10° or 15° in daytime will keep them in a healthy growing state, at which they will grow fast enough to give you the means of increasing your stock. The usual waterings is moisture enough for the leaves. There is no occasion for syringing, but a dusting with the hose on bright days could do them no harm. The greatest trouble with chrysanthemums when struck early is that they must be kept shifted on, and not allowed to get starved in small pots; if they do they get drawn up, hard-wooded things, and are then only fit to take a cutting off the top and throw the plants away. W. S.

This wooden box nicely stained and varnished, 18x30x12 made in two sections, one for each size letter, given away with first order of 500 letters.

ECHEVERIA DESMETIANA,
 Finest silvery white, \$2.00, \$1.00 and \$5.00 per 100
M. WINDMILLER & SONS, MANKATO, MINN.

A rampant free-flowering vine, covering quickly, porch, wall or trellis. It has grown two inches in 24 hours, and when in bloom, bears 25 to 50 of the immense old shaped flowers, shown above at one time. These when open, measure 12 by 18 inches, not including the tail-like appendage 2 1-2 feet long. This remarkable plant attracted thousands of people at Washington Park last summer. Mr. F. Kaust, head gardener of that Park says: "It should grow out-doors as readily as a pumpkin. The only trouble would be that when it begins to bloom in a high wind the geese will begin to fly." Good Plants, each, 50c.

OUR SPECIAL BARGAINS for 25 cts.

- No. 1.- 5 Good Roses, 25c.
- No. 2.- 4 New Chrysanthemums, 25c.
- No. 3.- 15 pkts. Flower Seeds, assorted, 25c.
- No. 4.- 10 Spring Bulbs, all different, 25c.

Our Big BARGAIN CATALOGUE is just a little bit better than some others. WE SELL MOST KINDS OF SEEDS AT 3 CENTS PER PACKET, half price of others. Our Catalogue is expensive, but we mail it free with every order. Write to-day, east or west, prompt service from the two great centers. We surely save you money.

Mention the American Florist when writing to advertisers on this page.

We have had grown for us this past season a very choice lot of

Semple's Chrysanthemum-Flowered . . . Aster Seed.

We offer it in choice mixture made up as follows: 50 per cent white; 40 per cent, pink; and 10 per cent blue (which are the most desirable colors). This is without a doubt the MOST PROFITABLE ASTER for the Florist. The flowers are of immense size, perfectly double and can be cut with stems 12 to 20 inches long. The seed we offer will germinate 95 per cent. (as per several tests which we have made). ORDER AT ONCE, AS THIS STOCK IS LIMITED. Price: 40 cts. per Trade packet; 75 cts. per 1/4 oz.; \$2.50 per oz.

VICK'S WHITE BRANCHING ASTER.

TRUE STOCK, EXTRA QUALITY.

Price: Per Trade packet, 30 cts.; per 1/4 oz., \$1.00; per oz., \$3.50. We have also all other varieties of ASTER SEED as well as all other FLORISTS' SEEDS.

WRITE FOR WHOLESALE PRICE LIST.

SUCCESS!

AT LAST WE HAVE DISCOVERED a sure remedy for destroying Scale, Mealy Bug, Thrips, Red Spider, Black and Green Fly and Mildew.

LEMON OIL INSECTICIDE.

Soluble in Water. Directions for Use with Each Can.

This new Insecticide is a sweet-smelling, milk white soapy wash that can be trusted in the hands of the most careless operator, as they cannot get wrong, being perfectly safe and harmless to the tenderest foliage and roots. It effectually destroys mealy bug by syringing or dipping. It also destroys scale, thrips, red spider, black and green fly, caterpillar, American blight, mildew, &c. Acts as a fertilizer when not too strongly used.

"VICTORY!"

Read the following testimonials from well-known Growers who have tried and used this Lemon Oil:

49th AND MARKET STREETS, PHILADELPHIA, PA., Jan. 10th, 1895.

Mr. H. F. MICHELL:

Dear Sir:—The "Lemon Oil" Insecticide sent me for trial has proven very effectual in killing mealy bug, red spider and green fly; we diluted it according to directions and dipped the affected plants in the solution, it killed mealy bug on coleus without injury to the plants; it is also very useful for loosening the black scale on palms, so that they may easily be washed off with a sponge. For the latter purpose it is the best thing I have tried.

Yours truly,

ROBERT CRAIG.

GREENHOUSES, GOVANSTOWN, MD.

Dear Sir:—Having given Campbell's "Lemon Oil" Insecticide a thorough trial on mealy bug, scale, and red spider, we cheerfully pronounce it a very valuable insecticide, as it destroyed the insects without injuring the plants in the slightest, even when used on orchids with young roots and growths, also when used on coleus for mealy bug.

Yours truly,

BRACKENRIDGE & CO.

Note the low price at which this valuable Insecticide is sold: Pint, 40c.; Quart, 75c.; Half-Gallon, \$1.25; Gallon, \$2.00; 5 Gallon Kegs, \$9.00; 10 Gallon Kegs, \$17.50. For sale only by

HENRY F. MICHELL, HIGHEST QUALITY SEEDS and BULBS, 1018 Market St., Philadelphia, Pa.

LITTLE'S ANTIPEST.

Valuable Discovery of the 19th Century.

SILVER MEDAL AWARDED

CALIFORNIA STATE FAIR OF 1890.

This preparation is a sure destroyer of the **Scale, Woolly Aphis** and **Insect Pests** of any and all descriptions. It may be as freely used in the conservatory, garden and greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportion. It is **Safe, Sure** and **Cheap**. No fruit grower or florist should be without it.

Cycas Revoluta.

How old does the Cycas revoluta have to be to make fine specimen plants for decorating? Do they grow one set of leaves every year? What kind of soil suits them best and do they require strong sun light? M.

Cycas revoluta increases in size, but slowly, and many years' growth would be required to make plants of useful decorative sizes from small stems.

For those who have not proper facilities for starting dormant stems in good shape, it is the safest plan to procure established plants of about the size needed. Such plants will usually produce one growth or crown of leaves per year, but this rule is not without exceptions.

A light loam, moderately enriched with good stable manure or bone dust, is a satisfactory soil for cycas, and the finest leaves will be produced in a partly shaded greenhouse in which a temperature of 65° to 70° is maintained.

Especially during the period that young growth is being formed it is essential that these plants should not be allowed to become very dry, for under such conditions the new leaves are very likely to become crippled. W. H. TAPLIN.

Pink Swainsona.

The so-called "pink" variety is very disappointing all around. The growth is straggling with rather small flowers, and of a most muddy shade of magenta. The color is simply "horrid." A phlox and balsam does approach towards a scarlet, and there is a bluish shade even in a lavender aster, but a "pink" swainsona "isn't in it." G. P. R.

**What Growers Say!
A Different Letter Every Week**

KATONAH, N. Y., Jan. 18, '95.
LOCKLAND LUMBER CO., Lockland, Ohio.
Gentlemen:—The two new houses we built last year, in the construction of which we used your "Clipper bar" and Butted Glass suit us so well that we are now preparing plans for a rose house which we propose to build in the Spring, and will use your Cypress material and Clipper bar for Butted Glass.
We were very skeptical about using the Clipper and butting the glass when we made the venture last year, but now believe if the work be properly done it is far superior to the old method of bedding in putty and lapping the glass.

Yours very truly, DOYLE BROS.

Cincinnati.

Although business the past week has not been very brisk there has not been an over supply of stock, and flowers of all kinds, with the exception of carnations and hybrid roses, have sold well at the same prices they have brought for the past few weeks. Carnations are down a little, but good common stock still brings \$1.50 and anything a little better \$2, with a few extras at \$3, and even \$4 is asked for some. The hybrids go slowly at \$5 to \$6 per dozen for the best, seconds bringing \$3 and \$4. Good Brides, Mermets and Bridesmaids are scarce, as the crops all seem to be off, the best ordinary stock sells for \$8, smaller \$6 and extra choice \$10 to \$12.

Daffodils were very plentiful a week ago, but are now scarce and there is not much demand for what there are. The common brings \$3 and the large single Golden Spur \$5 per hundred. Tulips are getting more plentiful, \$3 to \$4 is the price. A grower thinks tulips will be retailed in the stores next year at 50 cents per dozen instead of 75 cents and \$1 as now. He said "I am being offered some good bulbs at \$3 per 1000 and can put them on the market next winter for \$20 to \$25 per 1000."

The violet market has broken and prices are down to 50 cents a 100 for the best, and from that down to \$3 per 1000 for the job lots.

HALIFAX, MASS.—W. E. Fullerton has purchased the Halifax Nurseries formerly run by the Old Colony R. R. It comprises twenty-two acres of ground on which are commodious greenhouses, about fifty thousand herbaceous plants and a large variety of nursery stock.

NEW ORLEANS.—Mr. Chas. Eble is asking extensions of one and two years from his creditors.

W. P. "SPECIAL" EVERGREEN
LAWN GRASS SEED.

This is the very finest mixture of Grass Seeds that can be made, and should always be used where a fine lawn is wanted. We have given much thought and made many experiments to determine the kinds of grasses most suitable to form a beautiful lawn in our climate. Our experience has taught us that Kentucky Blue Grass and Rhode Island Bent are the two kinds that ought to predominate in a lawn mixture. These, with the addition of Sweet Vernal, Fine-leaved and Hard Fescues, Crested Doxstall, English Ryegrass, and one or two others in smaller proportion, give in addition to a velvety Lawn in summer an early growth in spring and a late growth in fall, and also add a permanent character to the Lawn and a hardness to withstand walking over—as in Tennis or Croquet—not otherwise attainable. This "Special" mixture is prepared on these principles, and will give the best possible results.

DEALER'S PRICES 1895.—In bulk, per bush. (14 lbs.), \$1.40; retail, \$3.00. In quart packages, per 100, \$8.00; retail, 20 cents. In pint packages, per 100, \$5.00; retail, 10 cents.

CLAY'S LONDON FERTILIZER PLANT FOOD

A highly concentrated Plant Food, manufactured in England. It is entirely different from all chemical manures whatever, being composed of concentrated animal matter and expressly prepared to promote the growth and beauty of plants and containing all the necessary elements for their healthy and perfect development. It quickly changes the leaves to a dark green, develops and increases the size and number of the blossoms, and will, in a short time, change weak and stunted plants to thriving and vigorous ones. It is in powdered form, free from rank odor, and hence especially adapted for use on greenhouse plants as well as for all out-door and indoor crops, whether flower, fruit or vegetable. As a developer of large and fine blossoms this Fertilizer is famous the world over and is in constant use by amateur and professional gardeners everywhere. After one trial no one will be without it.

WHOLESALE RATES 1895.—In 112 lb. bags, \$6.00 per bag. In pound packages, (for retailing), \$10.00 per 100.

THE "TABASCO" WATER HEATER.
 ALL STEEL. SELF-FEEDER.
 FOR GREENHOUSES, CONSERVATORIES
 And all places requiring hot water for HEATING AND GENERAL USE.

KEWANEE BOILER COMPANY
 96 Lake Street, CHICAGO. KEWANEE, ILL.

Hoyt's System OF Hot Water Circulation,
 A NEW DEPARTURE.
 PATENT APPLIED FOR.

DISCOUNTS ALL KNOWN METHODS OF GREENHOUSE HEATING.

Gotten up by a florist, after years of experience, for the use of florists, and meets all the requirements as does no other method. No more to be compared with the gravity system, either open tank or pressure, than a street car is with an ox-team. Is far more rapid, hotter, cheaper in both the heater and piping; quicker in action, and more easily controlled than gravity, and no florist will ever want the slow, expensive and unsatisfactory gravity after seeing this new system.

Catalogue will be out soon. Send for one. (No stamp), and no cast-iron business; except "a heater" to sell.

A. T. HOYT, WARREN, OHIO.

Are You Thinking OF BUILDING MORE HOUSES THIS YEAR?

Gasser's Patent Zinc Joints are the best thing ever used in Greenhouse construction. Saves glass, saves breakage, saves fuel, makes a roof air and water tight.

NEW YORK. BROOKLYN, N. Y.

Soot.

A subscriber wants to know if soot "put into a barrel of water and used as a liquid is of any benefit to carnations or other blooming plants, and is it good for any kind of plants? How strong can it be used, and is there any danger in it?" The soot of soft (bituminous) coal contains considerable carbon and ammonia, and other properties, none of which are hurtful to plant life if not overdone. It is considered so valuable in Great Britain that a ton of it used to be worth \$20 to \$25. In agriculture it is used largely, not only as a fertilizer to cereal crops, but also as a destroyer or preventive of slugs and many other plant pests. The illustrious divine who has lately visited our shores, Canon Hole, says in one of his works on the rose that soot is better than sulphur for keeping down mildew on outside roses. The chief benefit it affords to our florists' flowers is that it increases the density of the chlorophyll, and hence intensifies the color of both the flower and foliage. In field crops it is of course used dry. In floriculture it is used as a liquid manure, and there are few plants we grow that will not be benefited by its use. The trouble is it is often difficult to procure. One gallon of the dry soot in 32 gallons of water is perfectly safe, and for carnations and chrysanthemums two gallons would do no harm. If you want to try it put the soot in a coarse bag and sink to the bottom of the barrel. If thrown in loosely it will remain on the surface and smudge up everything where used. The soot from our anthracite or hard coal would not only be useless, but very deleterious. Use only the soot of the soft or bituminous coal.

WM. SCOTT.

Incrustation of Boiler and Pipes.

Referring to the recent mishap to the heating apparatus of an Illinois florist due to incrustation of heating pipes, Mr. W. A. Harkett of Dubuque, Ia., writes that he also is obliged to use water impregnated with lime, etc., and had considerable trouble from scale until of late years, during which he has used Trisodium phosphate in the water to prevent the formation of scale and its dissolution when formed. He says this phosphate costs, in small lots, about 18 cents a pound. From 2 ounces to a pound to each 1,000 gallons of water is about right, depending upon the amount of scale already formed, and it lasts a long time in a hot water boiler as the waste is very little.

Neponset Paper Flower Pots

Manufactured Solely by F. W. BIRD & SON.

FROM THEIR CELEBRATED NEPONSET WATERPROOF FABRICS.

For shipping of plants in pots, with intact root balls, they have no equal. For a pot cover in decorations, they are unsurpassed in cheapness. Bulbs and all soft-wooded plants which do not shun water agree well with this pot.

Cabbage, Tomato and Strawberry plants have been grown with success in these pots. Paper pots retain the moisture in the soil longer than earthen pots.

We are agents for F. W. Bird & Son, and always carry a limited stock at our store. If pots are ordered to be shipped by freight, 50

cts. cartage must be added for each shipment. The Neponset Pots are manufactured of waterproof paper, are unbreakable, handsome, light, cheap and terra cotta color.

These pots come packed in light crates of always even contents as stated hereafter:

Prices are net spot cash, delivered at Factory, East Walpole, Mass., or from stock in New York (at our option). Less quantities than original crates are charged at 100 rates.

SPRING POETRY.

(The Poet Dropped Dead, Strangled by the Last Word.)

Spring, Spring, blustering spring,
 Baddest season of the year,
 Has come again, with wind and rain,
 And rivers of mud to smear
 The ladies' feet that trips the street
 In search of fashion's latest gear.

Frost and slush, shade and shine,
 Sudden changes ever near,
 Now sun, alas, shines through the glass,
 Fit to boil a keg of beer,
 With the "New Departure" you can stop the torture,
 And regulate the atmosphere.

Or this, as will best suit the occasion:

When plants you wish to propagate,
 You will need to ventilate,
 When the sun doth percolate,
 Through your glass too ardently.

The "New Departure" will regulate
 The temperature and cultivate
 A pleasant air to stimulate
 The growth of flowers so healthfully.

Iron and Slate.

The following question is referred to me from "E. H.": "Can roses and carnations be successfully raised in iron houses and iron benches with slate bottoms? The slate is one-half inch thick, and is very tight fitting, and seems to afford very little drainage." The fact of the houses being built of iron would have nothing to do with the success or failure of the crops. We would all have iron frame houses if we could afford it, and some of the most successful growers of roses in the country have iron frame houses. I have not yet seen a house in this country with iron bars, but in Europe the iron bar is largely used. The uprights and cross-pieces of the benches, if of iron, are all the better, and all who can afford it are using that material for the frame of the benches. Now comes the part that really affects the well-being of the plants. Slates for the bottom of the benches are only desirable when the plants are grown in pots. They have a neat, clean appearance, and for such plants as palms, ferns, orchids, and many other plants in pots, are just the thing. But where the plants are bedded in soil, as roses and carnations are invariably now, slate should never be used, particularly where the soil is shallow; better to have to renew the boards every year than to use slate. When the roots get down to the slates, which they will do in a few inches of soil, before they have been planted many months, there is nothing in the slate they like. They are repelled by it, whereas they will creep along a board and thrive. Again, "E. H." says, the slates are very tight-fitting; that makes it doubly bad. Even if the boards were closely fitting it would be uphill work to grow roses and carnations on such a bench. All growers now-a-days realize the great importance of having a space of at least three-quarters of an inch between the boards or planks, and these should not be more than six inches wide. Good drainage is half the battle with growing these flowers in the dark days of winter. I can assure "E. H." that under the conditions he has described he would be a wonder if he produced satisfactory crops of these two leading articles.

Hitchings & Co.

ESTABLISHED 50 YEARS.

HORTICULTURAL ARCHITECTS AND BUILDERS AND LARGEST MANUFACTURERS OF GREENHOUSE HEATING AND VENTILATING APPARATUS.

THE HIGHEST AWARDS RECEIVED AT THE WORLD'S FAIR FOR HORTICULTURAL ARCHITECTURE, GREENHOUSE CONSTRUCTION AND HEATING APPARATUS.

Conservatories, Greenhouses, Palm Houses, etc., erected complete, with our patent Iron Frame Construction. Send four cents postage for illustrated catalogues.

233 Mercer Street, NEW YORK.

LORD & BURNHAM CO., Horticultural Architects and Builders,

STEAM AND HOT WATER ENGINEERS.

Plans and estimates furnished on application.

Largest builders of Greenhouse Structures. Six highest Awards at World's Fair. SEND FOUR CENTS POSTAGE FOR ILLUSTRATED CATALOGUE.

LORD & BURNHAM CO., Architectural Office, 160 Fifth Ave., New York City.
COR. TWENTY-FIRST ST., FACTORY: IRVINGTON-ON-HUDSON, N. Y.

THE HEALTH OF YOUR PLANTS

is largely dependent upon the air they breathe. Our scientifically constructed Hot Water and Steam Heaters produce a heat which is conducive to the healthy growth of greenhouse vegetation.

PLAINVILLE, CONN.—The greenhouses of Mrs. W. Scott have been sold to Frederick Spencer.

MONTPELIER, VT.—The greenhouses of H. J. Curtis have been purchased by W. L. Draper of Berlin.

NEW BEDFORD, MASS.—Lord & Burnham have contracted to build a greenhouse for H. A. Holcomb 16x48.

NEWCASTLE, DEL.—The greenhouses of Samuel Landers were damaged by fire to the extent of \$1500 on March 21.

LOWELL, MASS.—John Chapman, recently with E. Sheppard & Son, will open a florist's store on Bridge street April 1.

BETHLEHEM, PA.—Two greenhouses on the truck farm of H. M. Riehl, with valuable contents, were destroyed by fire; no insurance.

Bedding and Pot Plants Around Chicago

Preparations are now actively in progress for the coming bedding season. Where a business of growing both plants and cut flowers is carried on, and there are many such, we find a bench of violets here and one of carnations or roses there that has already made room for geraniums and other pot plants. From now on until May and June every inch of room counts and will have to be made the most of, so part of the benches given to cut flowers of kinds that have either done their duty already or else won't pay for the room they occupy, are thrown out. Hotbeds are being prepared for bringing forward a variety of stuff now in the course of propagation. Some of these are ready to receive the pansies.

There is quite a difference of opinion among our local growers as the best way of growing pansies. Mr. Dresel advocates sowing the seed about January 1. As soon as the seedlings are large enough to handle these are pricked off into flats, and in spring, as soon as hotbeds can be safely managed, the young plants are set out in these and grown to marketable size. Mr. D. claims that plants grown in this way make finer and more shapely plants than those sown in August and wintered over in cold frames; the former giving much more satisfaction, flowering much longer and giving larger and better blooms than the latter, which are apt to draw up tall and lanky and produce much smaller flowers.

Mr. S. Pearce also grows his annual stock of many thousands under the same treatment with good results. On the other hand E. Wienhoeber & Co. prefer their plants grown in the fall, and Mr. Gregson, the foreman in the city department, who has charge of the planting out, is decidedly of opinion that the best results are obtained by this mode of culture.

J. F. Kidwell also grew his stock in this way last fall, but the foreman informs us that this season's result is not very satisfactory, as many of the plants when uncovered appear in bad shape, but he accounts for this in a measure by the fact that the plants were set in the cold frames too late and were overtaken by the early frosts before being thoroughly rooted in their winter quarters. "Next fall," the foreman tells us, "we shall grow them different; we shall sow the seed broadcast rather thickly in cold frames late in the season so as not to have them too large, and then winter them over in that shape, transplant into hotbeds in spring and grow them into marketable size."

Pansies are in good demand for early spring sales; enormous quantities are disposed of every season, but it is only for about two months (May and June) that these can be depended on to give good results. With the advent of July and hot

weather the flowers grew small and smaller and generally make way for something else.

What strain of pansies sells the best on the market is also a question on which there is a variety of opinion. This of course depends on the fancy of the buyer. Some of these prefer the strain of large flowered varieties such as the Giant Trimardeau, although we have not that variety of coloring in these as in some others. As a rule the buyer is better pleased with fancy colors than extreme large sized flowers; unfortunately the two do not always go together, but take a strain that will produce good medium sized flowers, where in a batch of 50 you will not find two exactly alike, these in the majority of cases will suit the buyer the best.

A. Dresel, C. Held, W. Palinsky, S. Pearce, and a number of others who grow them largely for the wholesale market, give \$2.50 per 100 as the price for good plants, although at times good stock is sold at \$2, and in large quantities at even less. These are sold at retail at from 50 to 60 cents per dozen.

The geranium easily leads the list of bedding plants, and these may be found at the present season in all stages of growth; thousands are still in the sand, while vast numbers are seen growing in 2, 3 and 4-inch pots. Those in 4-inch now will receive another shift into fives and a few into sixes, most of the tall growing varieties being intended for the filling of large vases and stands. The bulk of the stock is sold in 4-inch pots. Very few growers carry over any of their old stock plants, if at all it is more for the reason that a few come in handy where extra large plants are needed for vases, etc. The stock is of course propagated in fall and the young rooted cuttings are tucked away into the smallest possible shape until the proper time arrives for growing them into marketable sizes. How this is done in the very best manner we refer the reader to the author of "Seasonable hints" which regularly appear in this paper, in which he fully covers the ground. It is, however, painfully apparent that a number of our growers have not been as careful readers of these "hints" as they should be, or at least have given little heed to the subject matter as pertains to the growing of geraniums. "How not to do it" is illustrated far too frequently in the shape of drawn and lanky specimens, pot-bound and crowded together until the very life is choked out of them. This is some of the stuff that will make its appearance on the market in due season, destined to grace the bargain counter of some dealer and offered at perhaps 5 cents each, a plant a foot tall in a 3-inch pot. Such stuff does an infinite amount of harm to the trade, as it never can and never does give satisfaction.

As to varieties? Well, here we strike a snag. Some growers, mostly those who grow for the wholesale market, don't pretend to keep named sorts at all, not even trying to keep the colors separate. Mr. Dresel grows large quantities, almost entirely of the semi-double varieties, but without name. Says Mr. Dresel: "The largest share of my stock is grown for the store trade where the plants are retailed singly or in small lots to people who buy a half dozen plants and want as many varieties, and don't care for solid colors such as are desirable for massing for bedding purposes. I find that double or semi-double are the best for my purpose, as the flower will last longer than the single flowered varieties, and this is an important point where you cater to the store trade, as a plant for this purpose is valueless unless you can show it with good bloom." Most all of the other growers for the wholesale market report nearly the same. Although the grower may be able to point out certain varieties by name there is no effort made to grow the sorts separate. Plants in 4-inch pots are the standard size. The price of these averages about \$8 per 100; extra fine lots will bring \$9 to \$10, but the bulk is sold at the former figure, which is considered fairly profitable when the stock is grown in large quantities.

Those who grow more especially for the bedding trade have to be more careful as to varieties, since large numbers are required in given shades of color. Few of the newer varieties are found among commercial growers. Those that are obtained, often through the medium of the parks, where any number of cuttings might be had in the fall of the year for the mere trouble of going after them, are generally lost as regards name among the general collection.

At Kidwell's we find among others such sorts as Gen. Grant, Queen of the West, Souvenir de Maynard, Clifton, Ernest Lauth and Bishop Wood. The leading pink variety is old Master Christine, and for white, of which few are sold, La Favorite. A few of the fancy leaved varieties are grown, mostly as pot plants. Mme. Salleroi is in good demand for bordering.

August Jurgens, who grows for the wholesale market, gives us a few names such as S. A. Nutt, Leon Simon, Ernest Lauth and Mme. Messenier, which he grows largely. E. Wienhoeber & Co. grow but two varieties, Queen of the West and Atkinson, but most of the stock that is required for their extensive bedding trade is bought from wholesale growers, of such colors as the trade demands, the bright scarlets leading all others.

The retail price of geraniums in 4-inch pots is \$2 per dozen, at which figure the dealer is generally expected to set the plants in the beds or borders.

Heliotrope is not greatly in demand as a bedder, but is quite a favorite as a pot plant. When planted out it generally goes into the border where a variety of such other plants as pyrethrums, rose geraniums, lemon verbenas, ageratum, etc. are grown. This class of plants is offered to the trade at about the same price as geraniums, \$8 per 100, in 4-inch pots, and at retail will bring \$1.50 to \$2 per dozen.

Fuchsias are in demand only as pot plants, but as such are grown quite extensively. Both single and double sell equally well. The wholesale price of these also, which are generally grown in 4-inch, is from \$8 to \$10 per 100. But dealers who grow for their own retail trade find it profitable to grow a few into 5 and 6-

inch, which will sell at retail for from 25 to 50 cents each, extra well grown specimens of course bringing even better prices.

Coleus is grown simply as a bedder, there being little demand for it as a pot plant, as the mealy bug soon renders this plant unfit for an ornament in the house. Comparatively few plants are grown by the wholesale dealers, particularly those who cater to the store trade, as little demand exists for them in this line. On the other hand growers for the bedding market are working up quite a stock in anticipation of a good demand which has been increasing year by year.

Cannas of the fancy large flowered varieties are in constantly growing demand and a grower's list is not complete without them. These have almost entirely superseded the old varieties that were grown for the foliage; there is practically no demand at the present for the latter.

One would naturally think that the demand for plants suitable for carpet bedding would be stimulated by the fine displays made at our public parks. Such, however, does not seem to be the case. Most of the dealers, and those too who cater to the best trade, report the demand for such plants as alternantheras, echeverias, etc., as extremely light. This may in a measure be accounted for by the fact that the public at large may enjoy these displays at the parks without cost. On the other hand such plants that may be used for bordering a bed of geraniums and such like, as for instance golden pyrethrum, centanreas and Cineraria maritima are sold quite readily.

Verbenas and petunias are generally treated as annuals by most of the growers; that is the plants are grown from seed. The former is so much subject to rust if carried through the winter that few growers will bother with it, although the plants grown from cuttings will bloom earlier than seedlings. The demand for verbenas seems to have fallen off to some extent, which may in part be accounted for by the fact that a large number of former buyers raise their own stock from seed. Petunias are much the same. There is but a very limited demand for the double varieties, most of those sold being of the single flowered strains.

A few growers give some attention to growing such other seedling annuals as asters, ten week stocks, Centaurea cyanus, marigolds, cockscombs, Phlox Drummondii, etc., for which there is a growing demand.

Mr. Kidwell has grown for the last two seasons some very fine pot plants of calcicolaria. The first season these plants sold readily at good prices, but last year the stock went very slow. Of these Mr. K.'s foreman says: "The trouble with these plants appears to be that the buyer apparently gets little satisfaction with his purchase. In the first place a well grown plant is necessarily quite expensive, and soon after the plant is taken into the room it is infested with mealy bugs that soon destroy it. Therefore few people that buy it once will want it again.

At the present writing this house is starting up some gloxinia bulbs, for which there is a growing demand. We have found nobody in the commercial growing line who has experimented with tuberous rooted begonias, but several are going to give them a trial this season.

The pelargonium is coming right to the front as a pot plant and is grown more extensively every year. The plant always gives satisfaction to the buyer, and for that reason is getting more popular every

year. It is grown quite largely for the wholesale market. A. Jurgens has about 5,000 very fine plants, and other growers are into it quite heavily. At wholesale these plants bring from \$1.50 to \$2 per dozen in 4 inch, and \$2.50 to \$3 in 5-inch pots. These retail at 25 cents each and upward, a few extra well grown plants grown to larger size bringing 75 cents to \$1 each.

A large amount of stuff is used for window boxes, rustic stands and vases. In connection with the latter quite a number of palms, principally chamærops and coryphas, and *Dracæna indivisa* are used. It is for these also that vines and trailing plants are greatly in demand, such as vincas, both the common green and variegated, ivys, maurandias, lobelias, etc.

Packing Easter Plants.

Every plant grower has his own favorite method, simple or elaborate, for packing plants for shipment or delivery, which in his opinion is the best system in existence. At such a time as Easter, when an enormous amount of work must be crowded into a brief space of time, expedients simple and rapid, yet thorough and effective, become a first necessity.

The methods herewith illustrated are those in use at the establishment of Mr. James Dean, Bay Ridge, N. Y., who is

well known as one of the largest and most successful growers of flowering plants for Easter sales in this country. As will be seen the processes are extremely simple, and after a brief experience an employee of ordinary intelligence can put

through a large number of plants in an incredibly short space of time.

Figure A represents a *Harrisii* lily ready for packing, a stake being inserted in the pot and tied up close to the plant. The buds and flowers are first drawn up together and a piece of twisted tissue paper passed around them and knotted, as shown in figure B. Tissue paper is used here for tying in preference to string, which would be apt to cut the flowers. A sheet of tissue paper is then wrapped around the bunch of flowers as in figure C, tied at the base and either twisted or tied at the top, and the plant is ready for delivery in the city. For shipment to a distance a wrapping of heavier paper covering the whole plant as in figure D is added.

With azaleas, hydrangeas, etc., the process is similar. The azalea shown in figure E looks as it appears in figure F after being tied up close, and after papering as shown in figure G is complete. In figure H is seen a hydrangea also ready for shipment.

Araucarias are prepared as indicated in figure I, each tier of branches being tied up separately beginning at the topmost tier and completing the work as shown in figure J, after which a complete wrapping of paper is added as with the plants previously noted. It is necessary that the foliage and flowers should be dry before papering, and where a large number are to be packed paper of suitable sizes

and strings of necessary lengths should be ready cut. In packing plants for express shipment they should be set upright and a little hay, excelsior or other material stuffed around the sides, so as to draw the tops well together. In cold

weather a complete envelope of thick paper is provided, to which a covering of cheese cloth is sometimes added, as it is then less likely to be torn.

Some growers still adhere to the old method of wrapping each individual flower on a lily in cotton or paper separately. This Mr. Dean does not regard as necessary, the principal object in view

being merely to confine the flowers so as to prevent chafing. One advantage of his simpler method is that the dealers can unpack and expose the flowers with but a second's work, whereas under the old method it took considerable time to unpack and to dispose of the litter afterwards.

A precaution which should always be observed in preparing Easter plants, or in fact any plants, for the market is to properly harden them off. As soon as buds are ready to expand, which should be two or three weeks before Easter, the plants should be placed in a cool temperature and kept there until wanted. After going through this treatment they will stand better and give much greater satisfaction to customers than if taken direct from the forcing houses.

Easter Preparations.

The bustle of Easter preparation is now in the air. Wherever we go we are forcibly reminded of the fact. Call on a grower,

his first act will be to usher you into his lily house, where if he has the make up of a true gardener in him, the plants will be all carefully graded as to size, the tallest in the middle of the bed, the shortest on the margin, and then will come the inquiry "Do you think I can hold them back till Easter?" or "What do you think is the prospect for my getting them in for Easter?"

If the grower bought wisely last summer his lilies are mainly longiflorums this time, for when Easter is late, as it is this year, longiflorum is the lily par excellence. Then, too, it makes the neatest pot plant; and it is tough in texture and will stand much more knocking about without bruising than will the true *Harrisii*. This characteristic ability to bear rough handling is more of an item at such a time than would appear at first thought. The plant that will not stand shaking and jarring, that requires a tender touch and a hood of cotton, is lacking in the first requisites of an Easter plant, where time is money and every minute counts. The cost of packing and delivering of some plants amounts to almost as much as the cost of growing them.

This free delivery of goods becomes a serious burden upon a florist at such times. This thought calls to mind a big "department store" advertisement of a year ago, in which Easter lilies were offered at about fifty per cent. less than florists' prices. But there was a big nigger in the wood pile, for at the bottom of the advertisement appeared this warning, "Buyers must carry away their own purchases. We do not deliver plants." It is not difficult to imagine the appearance of those *Harrisii* blossoms on the morning following purchase. But there is a new crop of fools provided for every Easter.

Many florists are too careless about the appearance of the plants they send out. A florist who will deliver plants in unwashed and slimy pots forgets the cardinal principles of his business. Cleanliness, cleanliness, above all things should be the first consideration. Flowers and filth make a bad combination. If you want your customers to respect you and your business, if you want to hold their trade, aim high, observe neatness in every detail, and insist upon it in your employees.

And don't try to do too much. A florist who undertakes to do more than can be done well makes a grave mistake. Customers cannot and will not try to comprehend why their orders are not filled with the same care at Easter as at other times; no excuses will suffice if goods are not delivered on time; and no apologies will atone for misbehavior on the part of extra help hired just for the occasion. There is such a thing as having too much to do, and that means a loss every time. Better let "the other fellow" have the surplus.

Do not fail to fix up some hyacinths, tulips and daffodils in pans, six, eight or ten to the pan. They are easily handled, and best of all, they are sure to sell. Tie about the stems a piece of satin ribbon of a color corresponding with the flowers, and charge for it. If this does not tempt your customers, nothing will.

ANTIRRHINUM MAJUS ALBUM.—Spikes of this old but recently revived favorite were received from W. K. Wood, West Newton, Mass. It is certainly a very handsome thing; the bold spikes of white flowers, touched with yellow on the lip, form a fine contrast with the clear green stalk, and suggests itself as a fine thing to work into a white and gold table decoration.

This seems likely to be a very useful florists' flower, and no doubt will be as great a hit as the swainsona.

Cost of Maintaining a Small Place.

In the FLORIST of March 2, under the head of "wages for florists," among other good points I see the writer says that a man having 10,000 feet of glass 30 years ago had a large place, while to-day with the same amount of glass he has a very small place. The following is what I should like to know through the FLORIST: Can 2 men make their living from three houses each 18x80 feet, which would give about 3200 square feet of benches, one house to be all carnations, one for palms and other decorating plants, one for different plants, so as to have plants ready for the trade all the time? The roofs of these houses are about 10 feet high, which would give about 4,800 feet of glass. The expense connected with this small place seems to be almost too great, so it seems to me!

Expense per year would be as follows:	
Interest on capital and stock 6%	\$ 800
Wages of 2 men at \$10 a week	1,040
Fuel.....	90
Keeping of horse (shoeing and feeding).....	100
Taxes, city and county.....	105
Rent of stall on market.....	75
Help, tending above stall \$3 per week.....	156
Water.....	25
Bulbs, pots, seed, etc.....	250

\$2,641

On these premises, besides the 3 green-houses, are the living house, barn and a lot about 38x100 feet on which to grow all kinds of flowers during the summer. The above to be a retail business. If these houses could be arranged to more advantage would be pleased to have suggestions. At the above rate of expense it seems to me that it would be necessary to grow and sell about \$1 worth of plants to every square foot of bench in the house, is this possible? BUFFALO.

The above communication is from my own town, but I have no idea who the inquirer is. Some of the items seem to me quite fair and reasonable, among these, expenses of horse fuel, water, wages, bulbs, pots, seed, etc. Other items I don't agree with at all. These three small houses could certainly be well built complete in every respect for \$3,000. The interest on that amount would be at 6% \$180. That would leave in round figures \$600 for interest on the real estate investment, which would represent a lot worth \$10,000. Now everybody knows that that would be altogether too expensive a lot for such a small amount of glass and the small piece of land adjoining. I presume that the parties making this inquiry are the owners of the lot, and it must be in a good part of the city or it would not be so valuable. There are several florists here whose greenhouses are on very valuable property. They are paying some interest and heavy taxes, and large sums for local improvements, and if they were to charge to their expense account the amount of 6% on the value of their property the balance would be considerably on the wrong side. But they don't, they only charge on the expense side what the lot is worth for such a purpose. They know full well that every year their land is greatly increasing in value, and if they hold on another ten years they will get well paid for the loss of interest on the land invest-

ment. I believe more florists have become comfortably well off (few rich) by the rise in value of their property than by any profits on what they have grown. Every one knows that you can raise roses, carnations, palms and anything else as well (and even better) on land worth \$100 per acre as you can on that worth \$30,000 per acre. But if you want to dabble in a general business and deal directly with the public you must be where the public do congregate. If "Buffalo" owns a lot worth \$10,000 it must be in a good locality, and there is no need of that stall on the market. You surely can sell the produce of those houses without either store or stall.

About what amount of money can be raised on each square foot of bench surface will depend on what crops you grow, but in the end, when expenses are all figured out, you will find that the profits are about the same supposing the same amount of ability is at work. For instance, if a man had 6,000 feet of bench room on cheap land all devoted to carnations and he produced 50 cents per foot he would be doing fairly well, for one attentive man with a boy could run the whole business excepting a week or two in spring and fall, while the same amount of bench room devoted to a general business, such as "mums" in the fall, followed by lilies and then bedding plants of all kinds, besides all the flowering and decorative plants in season, would require 5 times as much labor and other expenses. Then \$1.50, or even more, per square foot would not be too much. To answer "Buffalo" squarely I would say, with the class of business they are doing and their supposed location they certainly ought to produce at least \$1 per square foot of bench.

WM. SCOTT.

Orchids for March.

March is deemed one of the most prolific flowering months of the year by many growers, and it is no doubt true that the increase of light and heat does stimulate and even concentrate the flowering of very many species during this time. Very many of the East Indian kinds, which would naturally flower somewhat earlier, have been retarded by more continuous low temperatures than their native ones. Others again are stimulated to flower by water, at a season earlier by a good deal than that of the rains. As a rule there must be no resting after the flowering of eastern orchids. The hot growing season advances in the east much as it does with us, but more constantly and surely. April and May are often the hottest months of the year, and also the period of gentle rains; it is not until nearly June that the deluge of the monsoon rains occur, and continue with an occasional break, for three or four months perhaps. This is the time for the roots of most of these plants to get in the work of absorption—to build for future development. This is a general statement of the case, for there are districts which are dry to a degree, when others are wet, yet, most of the Asiatic orchids follow the sun, and so I imagine do the American ones. But our climate and cultural conditions favor the Asiatics better than the South

Americans, and do less violence to their proclivities.

Erides Houlettianum begins to form its buds in the autumn, corresponding with the northeast monsoon. It does not flower with us until March, nor commence growth until May; then it keeps right on growing and rooting amazingly until its flower buds appear about November. It is rather dingy in color, but remarkably fragrant, and unique (so far as I know) in its mode of growth, which is horizontal, curving upwards at the ends a little like a sickle, under glass. *Angraecum citratum* and *A. Sanderianum* are two dainty orchids, flowering at this season, but of little use to the florist. *Cœlogyne cristata*, and the green-flowered *C. Parishii* give good returns in the way of flowers. *Cymbidium eburneum* also is a most useful orchid, with large fine white flowers, sometimes more or less spotted with color, fragrant, and enduring if care be taken to keep them dry and unbruised.

Cypripediums are in plenty, *C. Boxallii*, *chloroneurum*, *Lecanum* and the varieties of *villosum* are probably as useful to a florist, however, as many others which captivate certain buyers who dearly love to have the dollar sign associated with their name.

Dendrobiums are in great force, among the best are also *sanguineum*, *Brymerianum*, *chrysotoxum*, *Dalhouseanum*, *densiflorum*, *Devonianum*, *lituiflorum* and its remarkable varieties, *Freemanii*, *nobile* and *Pierardii*, both in many varieties, *superbum* in varieties, *tortile*, and *thryisiflorum*. The latter species, however, is quite variable in its period of bloom. Several *phalaenopsis* are in good flower at this season, but they are not florists' orchids. *Vandas* also such as the *Amesiana*, the remarkable *Cathcartii*, *suavis* and *tricolor* varieties will be in good flower for those who care to furnish them with room, fuel, and attention.

Among *cattleyas*, *Trianae* still holds the fort, for bigness, and the fair certainty of a paying crop of bloom from an importation. Some of the yellow throated varieties of *C. marginata* are dainty little things, which continue flowering from November until March. The finest varieties of these I have seen were sent to the country in a little haphazard parcel some years ago. *C. Schilleriana Regnellii* varieties are also superb if you can flower them. They prefer to grow during winter, but often make a spring growth also. The flowering growth is from November to March. The rooting quite irregular in some seasons, but fairly continuous from May to July in others. *Chrysis* and *epidendrums* of various kinds flower at this time. So also does *Laelia harpophylla*, and some others of less merit. *Lycaste Skinnerii* in a number of shades of color is an easily grown, easily propagated, useful and cheap orchid. Some of the *miltonias* are also good, such as *candida*, *spectabilis*, etc.

Odontoglossums are beautiful no doubt, but I would not sink a year's profits in them if I were you. Some varieties of *Pescatorei* said to be from Venezuelan territory were among the finest of the *crispum* breed I have ever seen, and they seemed hardier in constitution too than those from further south, but there, you can never find out anything really definite about those South American orchid stations. The governments don't keep "Farmer Dun's" in their back woods. *O. Roezlii alba* is a fine thing, and easy to keep in a warm house. Among *orcidiums* few can surpass *sarcodes*; it must be frequently imported, however, and you are

MR. W. R. DAVISON'S VIOLET HOUSE, NYACK, N. Y.

apt to get pubes in among it at that, if indeed the plants don't bear both species of flowers. How is that, my botanical friends? *Pilumna fragrans* is a good little orchid, and so is *Trichopilea suavis*.

Trenton, N. J. JAMES MACPHERSON.

Palm Notes.

The season of active growth for most plants of this very useful family has now begun, though the time for its beginning varies considerably with the different species, and also in accordance with the conditions under which the plants are grown. For while the usual list of trade palms do not require absolutely exact conditions of temperature, light, and moisture in order to obtain reasonably good results, yet it is quite evident that where a few dozens of assorted palms are grown in company with a general assortment of retail florists' stock, the conditions are not just as favorable for their best development as when an entire house can be devoted to this line. It will also be understood that when speaking of the lack of growth in palms during winter, it will only mean in a comparative sense, for most young palms can be induced to grow somewhat even in the dullest season, though the forcing of growth at that time cannot be highly commended. Young *latanias* are, however, somewhat obdurate in this respect, and when forced too much will become very spindly and weak, and later in the season will form

quite a contrast to those that have had a reasonable rest during the winter, and followed by proper encouragement to grow in the shape of a shift and liberal treatment during the summer. In fact in the experience of the writer, there seems to be little or nothing gained by potting *Latania borbonica* between November 1 and February 1, and quite a little risk to be taken in the possibility of overwatering and consequent souring of the soil.

The same rule applies to *Areca lutescens*, which is if anything more tender about the roots than the *latania*, but *kentias*, *Seafortbia elegans*, and *phoenix* of the stronger growing species, if much pot-bound, may be shifted during the winter to advantage, for either of these when allowed to get yellow from starvation takes a considerable time to recover its proper color. *Cocos Weddeliana* being a rather light rooting species does not need a large pot at anytime, but will preserve its deep color much better when given a light shading even in the winter, and also requires thorough syringing to prevent red spider from getting a foothold, for once established on a *cocos* this little pest is very hard to dislodge and will soon play havoc with the foliage. This species also does not enjoy repotting in the winter, its root action being rather slow at that period.

Rhapis flabelliformis and *R. humilis*, both of which are admirable house plants, the first named being almost as tough as an *aspidistra*, do not make much prog-

ress during the winter, and in fact are not rapid growers at any time, and in addition to this it is an unfortunate fact that we have to depend on division of the growths of these palms in order to increase the stock. This process being too slow for the average American florist almost the entire stock of *rhapis* are imported, and these various difficulties naturally tend to keep the price of good specimens rather above the popular level.

Kentia Canterburyana is among the handsomest and most serviceable of its genus when well-grown, but this also has the fault of extremely slow growth, and consequently is not likely to become a popular palm, for to be a paying plant to grow *K. Canterburyana* should bring treble the price of *K. Forsteriana*. *Kentia McArthurii* had a small boom a few years ago, but is seldom seen now, though a meritorious species, and of reasonably rapid growth. It is a pinnate leaved species, with gracefully arched leaves, the tips of which are rather blunt and toothed, bright green in color with the under side much lighter. Warm house treatment, such as would be suitable for *Areca lutescens*, is most satisfactory for *Kentia McArthurii*, and an abundance of water is one of the requisites to success in its culture.

The new crop of palm seeds will now begin to arrive, *Cocos Weddeliana* being among the first to appear, and it may be well to repeat the injunction that immediate sowing is the best method to adopt

for these seeds, and that it is always advisable to give them a little bottom heat to assist germination. For the benefit of beginners in this line of work it may also be remarked that a variation in the size of seeds of *Cocos Weddeliana* as received from the seedsman need not cause any alarm, for such a condition does not prove any foreign admixture among the seeds, the nuts of these *cocos* varying from the size of a pea up to three quarters of an inch in diameter. The period of germination also varies considerably with *cocos*, in some instances being only about a month, while in others it may occupy three or four times as long.

W. H. TAPLIN.

Carnation Notes.

I have received several inquiries from intending builders during the past week as to the best style of house for carnations. If I were to put up a new house it would be exactly like the last one built for the F. R. Pierson Co. at their Scarborough place. This in my opinion is an ideal rose house, which means that it is an ideal carnation house. But in making this statement I do not wish it to be understood that I condemn the short span to the south or the full span, or the house running north and south, or a house made of small light sash, for I am a firm believer in the old saying that "It lies more with the man than with the house." One grower asks me if it is advisable to connect three houses. To him I would say, no. I have had experience in this matter and I do not like it; better have ten feet between the houses, and twenty feet is better still. Pierson's latest house has no plate on the south side, nothing but a one inch angle iron, therefore the south bench is as good as any in the house. The glass on the roof runs over the edge, and glass on south side butts up under the roof glass, very simple. Paul Pierson had hard work to convince the builders that the required strength could be obtained in building on this line, but Paul was right, and he has the most complete and best arranged house for roses or carnations which I have ever seen. Of course this house is expensive, as it is what is termed an iron house. Now to any who intend building two or more houses I would simply say that the best way to get points on building is to go and see this house or one built on the same plan. As to heating, I am using steam, but this does not mean that it is the best; for a small place hot water is preferable, as it does not require the attention that steam does. If I should adopt hot water I would get a horizontal tubular steel boiler and use two-inch pipes—hot water under pressure.

Uncle John again to front! so many would say if they could walk into the house filled with this variety that I saw yesterday. It has rust on it, has had it all winter, quite bad too, but grand flowers are now being cut, and I find that quite a number of growers who threw out Uncle John in the late fall because of the rust, and who have seen other lots that have been bearing well all winter, are now kicking themselves for their mis-

take, I did it along with the rest, and what few plants were left don't show a particle of rust now and are doing well. Try it again.

Alaska did not get a certificate at Boston, but as I saw it at Chitty's the other day it was fine. Nicholson, Fisher and I thought enough of it to bring some cuttings away with us. Somehow it seems to make but a medium size plant, but we noticed that plants that would be called small had eleven to fifteen stems where flowers had been, and the foreman for Chitty did not dare tell us how many had been cut from the larger plants—said we would not believe him. I believe Alaska is all right.

There will be a host of new ones next year. Dailedouze Bros. have got one, another pink, light color, fine form and such a keeper! ten days in my office, then I threw it out because it wasn't mine. The shade of this pink is peculiar; when fresh it might be termed flesh color; it is different from any pink yet on the market, and will be given a good trial next winter and that will tell the story, for if it is a good bloomer and sells well it is all right, as the stem, form and make-up of the flower are all that could be asked.

One month more and we will begin planting outside; in beds for hand cultivation or in rows two to three feet apart and let a horse do most of the work? that is the question. I planted last year and have always planted in the latter way; this year I shall try both, so that if we have a dry season the windmill can be kept busy flooding the beds. The past two seasons have been very dry here, and the plants have suffered in consequence. I don't intend to have Mr. Drouth get hold of my stock again.

CHARLES H. ALLEN.

American Carnation Society.

The American Carnation Society has addressed the following letter to all the Florist Clubs whose addresses it could secure:

It was proposed at the last meeting of the American Carnation Society held at Boston, February 21 and 22, 1895, that the raisers of seedlings and disseminators of novelties, when they believe they have secured one or more varieties of merit and worthy of distribution, be requested to forward not less than twelve plants of each variety to some of the most expert and reliable growers in different parts of America, and that each Florist's or Gardeners' Club be invited to appoint a committee of three, to be composed of two growers and one retailer. These plants to be examined at intervals during the season, and said committee also be requested to inspect on invitation any new varieties originating and growing in the vicinity where a club is in operation.

This committee to make a full report concerning the soil, position and style of house in which they may be growing, night and day temperature, and in fact, all points of interest which are likely to be of benefit to the trade at large. Said report to be read at the next annual meeting of the American Carnation Society.

Any club who has not received one is requested to communicate with Mr. Albert M. Herr, secretary pro. tem., Lancaster, Pa.

Carnation Crimson Sport.

In a recent issue of the *FLORIST* Mr. Allen questions the propriety of calling "Crimson Sport" by that name, stating that it is a "maroon." It is often difficult to exactly determine the color of a flower unless it is compared by some standard. We have Brauuard & Armstrong's standard colors, and by this guide it certainly is not maroon, crimson being the nearest we can get to it. J. L. DILLON.

The AMERICAN FLORIST is planning to present to the trade as a supplement to

the paper a standard chart of colors, prepared expressly for florists' use by Mr. F. Schuyler Mathews. It hopes to have the matter ready for the convention number next August. We anticipate that this chart will do much to establish uniformity in color descriptions.

SEEDLING CARNATIONS seem plentiful, but improvements still continue. We recently received two new varieties from R. Witterstaetter, Sedamsville, O. One was a clear yellow, faintly marked with pale carmine at the edge. It was a large flower, coarsely fringed and extremely double, high built in the center. We were strongly impressed by this; it was distinct and promising. The other was flesh pink, delicate yet full of life, the flower smooth edged and even in shape. This was also very full and high built; both were robust in stem and growth. We believe neither are yet named.

SOME SEEDLING carnations recently received from Hopp & Lemke, East Grand Rapids, Mich., were remarkable both for size and beauty of color. Among them was the beautiful red recently mentioned in the Chicago market reports, which for size and brilliance excels any other now coming into our market. It is not a scarlet, but an intense red, and the eagerness with which it is purchased speaks well for its commercial value. We believe it is as yet unnamed.

Soot.

In the last issue of the *FLORIST* our friend Scott answers "Subscriber's" question as to whether soot used as a liquid is of any benefit to carnations or other blooming plants. I have had fifteen years' experience with soot as a fertilizer, and have used it in large quantities on a very large range of plants, both dissolved and in the dry state mixed with the soil. For most plants I prefer to have the soot mixed with the soil; as to how much would be beneficial to any plants would depend largely on the condition of your soil and the color of the flower of the plant to which you wish to apply it. A plant with a scarlet or white flower will absorb a large quantity, while some varieties of pink will stand but very little. Fourteen years ago I had two houses of carnations which I treated to a very liberal mixture of soot in the soil (about one-seventh part of soot). This does not include the large amount of soil taken up with the plants, which had large balls. Two such productive houses I have never seen before or since. I had at that time quite a large number of varieties in the two houses. All but two were greatly benefited by the soot treatment. The two exceptions were both pink; one of them Chas. Sumner, the other one that I grew for a dozen years or more, which was afterwards called Chas. Sumner by parties who never saw the two together. The growth that these plants made was phenomenal, and the color put on them by the soot wonderful. Chas. Sumner had the appearance of having been dipped in a solution of pulverized bricks; the color was changed from a very pleasing shade of pink to a mixture of light and brick red. The other pink variety was changed to a clear brick red. Neither one would sell. I tried the effect of soot on a lot of carnations last year. Daybreak is the only pink variety that was benefited by this treatment. No one would ever know the Wm. Scott carnation after being treated to a liberal dose of soot. I would advise every one intending to use soot on pink carna-

tions (except Daybreak) to go slow till you see what effect it produces on the color. I have tried the method of dissolving soot by putting it in a sack and putting the sack in a barrel of water; after letting stand a day or two I found the soot as dry as ever. My method is to take about two-thirds of a barrel of soot, then get a water pail full of fresh lime, put it in the bottom of the barrel, then pour in about ten gallons of hot water. This will about fill the barrel. Cover the top of the barrel with several thicknesses of old sacks, let it stand till cold, then fill the barrel with water. Use two pails of this mixture to a barrel of water.

J. T. ANTHONY.

Swainsonas.

Young plants of this now popular plant will give you more bloom if grown in medium sized pots; when planted out in a bench, especially if allowed a rather deep soil, they will at first grow too rank and produce their flowers very sparingly while in pots, with roots confined, they make harder wood and bloom more freely. After the first year's growth in pots the plants will be fit to be planted in benches or even in solid beds, where they can have plenty of head room, and will there produce flowers more abundantly than the first season. They may be left in the same beds for some years and will improve by age, all they require is an occasional top dressing when the soil is exhausted and a severe pruning once in a year. Before pruning be sure that the bed is dried off, and let the young growth be well started before giving any water. As growth gets stronger apply more moisture, and in six or eight weeks the first flowers will show up and continue to come for many months. Swainsonas require a very light position to do their best, and absolutely refuse to bloom in a darker corner. I have noticed a number of places lately where the owners have experimented on a small scale with them, planted on a side bench, which was rather shaded, and the result was disappointment; had they allowed them an end bench in a rose house with no obstruction of light the bed would have been a success.

While in Europe a few summers ago in one of the watering places I noticed a frame about 200 feet long, all planted with old stocks of white and rose colored swainsona that had evidently not been disturbed for some years, and on inquiry found that in late fall, after hard frost had cut down the plants some, the whole frame would be filled with dry leaves to the depth of 12 or 15 inches and then boards or shutters laid over the whole frame to keep snow and water out. In spring, after uncovering, the plants would be cut down to the ground and soon growth would begin. I think for many localities this plan would be successful in this country, and especially would it be desirable in establishments where quantities of such flowers are wanted during summer or fall months, for these plants do not stop blooming until severe frost. It was at that time I purchased plants of both the rose and the white variety, and have grown them ever since, but as we only have a local trade never grew them in quantity. The colored variety we found to be more free in producing its flowers, the plant being shorter jointed and more compact in growth. The individual flowers are a trifle smaller than the white, but desirable in every respect. We also found that cuttings of it will root more freely than the white.

Rochester, N. Y.

J. B. KELLER.

Spring Exhibition of the Mass. Horticultural Society.

The spring exhibition, which was held on March 25-28, was in some respects a notable one. The display of tulips and hyacinths at these spring shows has been decreasing in extent each year. Azaleas, a few years ago, formed a leading feature of the display, but these too have come to occupy a minor place. There was no vacant space, however, for the hall was well filled with displays more promiscuous in character and possibly more interesting to the average visitor.

Cut blooms of roses and carnations were on this occasion in larger quantity than for some time past, there were more contributors, and a distinct advance in quality was noted in carnations particularly. Cyclamens occupied a prominent place and cinerarias were uniformly excellent. The arrangement of the exhibits was exceedingly effective, the bold massing of dazzling colors making a picture brilliant in the extreme.

Well grown hyacinths and tulips of the leading varieties in pots and pans were shown by D. F. Roy, gardener to E. S. Converse, Kenneth Finlayson, gardener to Dr. C. G. Weld, and Chas. J. Dawson, gardener at the Bussey Institution. The leading feature, however, in the bulbous section was the collection of fancy narcissi in the general display of W. S. Ewell & Son. It is several years since a group of these so excellent has been seen here. Lily of the valley was also well shown by Thos. Butterworth, grower for C. J. Power.

The cyclamens made a sensation. They were shown by Geo. M. Anderson, Dr. C. G. Weld and John Barr, Mrs. B. P. Cheeney's gardener, and in the whole lot there was not one that might be called even an ordinary plant. Mrs. Cheeney's plants, of which there were about forty in 10 inch pots, were remarkably regular and showed a wide diversity in color. Mr. Anderson's, too, were large specimens more heavily bloomed than those from Mrs. Cheeney, but less uniform in size. Mr. Finlayson's were smaller plants but well nigh perfect in form and in abundance of bloom. Enormous cinerarias were also shown in brilliant array by these exhibitors and by John L. Gardner and James Garthley. Hardy primroses were shown by several parties, but with the exception of those from J. L. Gardner there were none that equalled former displays of these favorite plants. Dr. Weld's auriculas were of a quality not seen here since the palmy days when David Allan used to set the pace. Tritonias of unusual excellence were also in Dr. Weld's group.

One of the most comprehensive exhibits was that shown by the Bussey Institution. There were philadelphus, lilacs, rhododendrons, kalmias, spiraeas, forsythias, viburnums, Indian, mollis, and Ghent azaleas, ericas, ranunculuses, longiflorum lilies, polyanthus and bulbous stock in great profusion. Three plants of *Primula obconica* from David Nevins were pronounced the finest ever seen here.

There were two magnificent stands of orchids. One from Wm. Robinson, gardener to Mrs. F. L. Ames, was especially rich in *Odontoglossum crispum* in rarest forms, *masdevalleas*, *cattleyas* and *miltoniopsis* and could not be duplicated elsewhere in this country. One of the gems here was *Cypripedium Rothschildianum* bearing three spikes of three blooms each. The display from John L. Gardner's comprised a fine collection beautifully arranged, in which dendrobiums in variety and *cœlogynes* predominated.

Edward Butler again demonstrated his ability by staging a specimen *Dendrobium nobile* bearing over nine hundred expanded flowers. There were several other smaller groups, among which was a collection of rare dendrobiums from David Allan, Rollison's variety of *D. nobile nobilissimum* shining out resplendent. *Ouvirandra fenestralis* from E. S. Converse was domiciled in a tank at one end of the hall, but this once prime attraction has apparently lost its potency and received but little attention.

Arranged with great taste in the centre of the lower hall was a miniature forest of specimen acacias, genistas, chorozemas, boronias, eriostemons, diosmas and pyramidal azaleas, contributed by N. T. Kidder, J. L. Gardner, Dr. Weld and Edw. Butler, the central figure of which was a ten foot standard *Acacia pubescens* with a broad symmetrical head forming a perfect fountain of yellow bloom.

Taking a look at the cut flower department we find a big exhibit of superb hybrid perpetual roses from David Nevins; from James Comley an extensive collection of hybrid perpetual and a promiscuous lot of choice bloom, including a clematis from seed collected by him in Japan, a very rapid grower said to be hardy, and bearing a profusion of white flowers of medium size; from W. H. Elliott, C. V. Whitten, J. P. Spaulding, Thos. Meade and the F. R. Pierson Co., Bride, Mermet, Bridesmaid, Meteor and Kaiserin Augusta roses with stems both stout and long; from the F. R. Pierson Co., a group of cannas, including two handsome seedlings named F. R. Pierson and Sunshine; from H. S. Rand, D. Nevins, N. T. Kidder and others, violets of finest quality; from the Harvard Botanic Garden an interesting collection of *sarracenia* blooms; from R. S. Fay, fancy pansies of unsurpassed size, form and color, and from W. H. Elliott a graceful festooning of *Asparagus plumosus* over the stage.

The carnation men were out in force and made a most creditable showing of all the standard market varieties. The principal contributors were Wm. Nicholson, Jos. H. White, F. O. Blake, Mrs. E. M. Gill, Sewall Fisher, and A. H. Fewkes. The specialties were a lovely pink seedling from J. H. White, white seedling and enormous *Hectors* from Wm. Nicholson, and the new white *Crystal*, for which Sewall Fisher was awarded a certificate of merit. List of prizes awarded will appear in our next week's issue.

Prominent visitors to the exhibition were Louis Menand, Albany, J. S. Taplin, New York, J. F. Huss, Lenox, E. O. Orpet, Lancaster, and A. Ingram, London. Mr. F. L. Harris of Wellesley was greatly missed, he being confined to his home by an attack of grip.

Mr. Wm. E. Doyle will address the Gardeners' and Florists' Club at its next meeting, Tuesday evening, April 2.

Abutilon Souvenir de Bonn.

This is of German origin, and the proper name is *Andenken an Bonn*, but we have it here under the first mentioned name, and I suppose it will stick to it. We have grown it for three years now, and can recommend it in every respect. It is better as a pot plant than any other *abutilon*, growing more compact and bushy, and may be used as a foliage or a flowering plant. When planted out on the lawn it resembles a dwarf variegated maple, and produces a splendid effect when mixed in with subtropical plants, either in a border or in beds. The plant is good all around. As a decorative plant in pots

for fall and winter decoration, I think it will be used extensively, especially at Christmas and New Years. We can grow them to any required size in one season, merely by constant liberal repotting when required for the larger specimens, or by keeping them in smaller pots for the dwarfier plants. The habit of the plant naturally is very branchy, and by a little judicious pinching in summer we may have perfectly compact round plants, but if left alone and allowed plenty of room all around a perfect pyramid will surely be the result. Takes small plants anytime in June and July and plant at once into 6-inch pots, sinking the pots in the open ground to the rim, allowing plenty of space between each for the tops to develop, part of the plants may be pinched back if some short, compact plants are wanted. In a short time the pots will be filled with roots and an occasional dose of manure water will then be beneficial. About September 1, they may be potted into 7 or 8-inch pots, and placed in a cool airy house until they are sold.

About potting such small plants into 6-inch pots at once, I had a good many controversies with florists, who think it is against the rule. Certainly it would be against the rule if it was done in the houses in fall or winter, when room is scarce and when plants grow but slowly, but I consider it an advantage for outdoor culture, for so-called soft stuff in summer, when every part of a plant is in full action. If nothing else is gained we surely save the labor of several repottings and the replunging and handling over the pots a few more times, and I find that many soft plants will do better for us when treated in the beginning of summer to a liberal repotting than the same stock would do if only an ordinary shift, according to the so-called rules, was allowed them, even if repeated at exactly the right time, for the plant will be disturbed more or less at every repotting no matter how carefully the operation may be performed. This however is only a personal fancy, and it may be left to everybody as he thinks best; if you prefer to repot from size to size, well and good, but you will not in my opinion gain anything by it.

Rochester, N. Y.

J. B. KELLER.

New York.

There is at present an enormous oversupply of cut flowers in this market. This applies to roses especially, which are being heaped in by wagon loads from all the rose producing districts, and includes the high class American Beauties and hybrids, as well as those of more humble type. Some idea of the abundance of roses may be formed from the fact that from one town alone, Madison, N. J., there were shipped to New York wholesalers on Monday no less than 184 boxes of roses. The buyers, from the proudest store down to the humblest peddler, all seem to be actuated by one impulse just now, and that is to make life a burden to the wholesaler by hammering to pieces the prices which had already been hammered out of all reason. Between the tormenting by the growers in the fall and the buyers in the spring it is a wonder that the poor wholesaler has any life left in him.

Over at James Dean's the usual preparations are being made for a big Easter business. As compared with last year the most noticeable point is the small proportion of genistas being grown. Lilies have not proved as satisfactory for Mr. Dean as in former years, for he got more than his fair share of diseased stock. He estimates that he lost not far from 40

per cent. of his bulbs from this cause, and it is not surprising that he is outspoken in his wrath. Who wouldn't be, under the same circumstances? He will have some magnificent ericas and rhododendrons in for Easter, and among the novelties being grown for this market for the first time are a quantity of neat little plants of *Boronia heterophylla* covered with their pink blooms, also a nice lot of *Bougainvillea Sanderiana*. It is about settled that Mr. Dean will have to move this year, as the route of the new shore drive-way lies directly through his establishment.

A training school in practical horticulture for deaf mutes is to be established under the auspices of the New York institution for the Instruction of the Deaf and Dumb. It is said that a well equipped set of small greenhouses covering a space 60 by 142 is to be erected for this purpose by the Lord & Burnham Co. at 165th street and Fort Washington avenue.

George Stump's new retail store opposite the 5th avenue and 57th street entrance to Central Park is at last ready for occupancy, after many vexatious delays caused by strikes in the building trades. The store is a magnificent one, but as George has expressed his intention of having a grand opening within a few days a detailed account of the establishment is deferred until that time.

J. K. Allen, who has been in business on 24th street for a number of years, as a wholesale commission dealer, has joined the procession, and taken a commodious store at 57 West 28th street, where he will open business about April first. As we have remarked before, 28th street is "getting there" rapidly.

Buffalo.

A few beautiful spring days have made us all feel better, and like other hibernating animals the poor florist is feeling quite frisky when the thermometer goes up to 40° in the shade. How varied and perplexing are our individual interests, all in the same individual too. You walk into a house and look at a lot of azaleas almost in full bloom. Will they keep? Yes, if we have dull weather. Then you strut into a house filled with lilies. They look backward, hardly be in unless we get bright warm weather, and then you begin to think about the azaleas, and then it dawns on you that you don't know much, and that invariable tired feeling comes over the whole business. Such is the experience of many of us at the present time. I am going to have a look at the different establishments this week, and can then report how they look.

Flowers are quite plentiful now, yet not in any such quantity that many are going to waste. The bright days of late have helped roses greatly. Palmer & Son are cutting a heavy crop of short stemmed American Beauties just now and selling them at very popular prices. A walk through the model private establishment of Mr. G. H. Lewis, where Mr. Fitzgerald is gardener, revealed to us a well kept place, everything in order and thriving, and considering the time this fine range was completed (October last) remarkably well advanced. We hear that Mr. Lewis contemplates the erection of a grand conservatory very close to his residence. We trust it will materialize, for that is what is sadly lacking in our progressive city. The more thoroughly well kept private places there are the more will the love and education in flowers be spread among the community.

A sad incident of the week for some of

the frivolously inclined was the two days' visit of Peter Crowe of Utica. He seemed to have no particular business except to show some of the would-be bowlers how to bowl; 56 inches around the chest, No. 9 hat, No. 11 shoe, and tips the scales at 298 pounds. He is truly a wonderful man, but with all his marvellous physical advantages "poodles" are the result of his efforts on the alleys. We were busy moving lilies all the time he was here, but we could hear the noise of the roll-call here in July. We are willing to give him a few lessons on the curves. W. S.

Chicago.

Stock is decidedly more plenty, and although as yet no actual glut may be said to exist still the supply in some lines is more than can be disposed of in the regular channels of trade. As a consequence the fakir, as well as a number of department stores in this and other cities, are once more coming to the front. Some of these are quite heavy buyers and as a rule clean out a lot of stuff not otherwise salable. Of course under these conditions there is more or less cutting of prices, which latter have on the whole been better sustained than might be expected. The regular quotations on first-class stock of the larger teas is from 4 to 5, and of the smaller varieties 2 to 3. Job lots at thousand rate are going at times for much less.

Beauties have weakened considerable and have to be extra select to bring \$4 per dozen. Fine stock is offered at \$2 to \$3. Hybrids are in good supply and move fairly well; of these Brunners are in best demand. Luizet is very fine but doesn't take as well as Brunner. The best selected quality bring \$3 per dozen and good medium \$2 to \$2.50.

The supply of carnations is heavy. Fancy, unless extra fine, go at \$2, and good commons at \$1 to \$1.50. The demand for these is quite steady and although the cut at present is very heavy there is no great accumulation of surplus stock.

There is a good deal of speculation as to the Easter supply. Harris is of course one of the main features. Some well informed parties who claim to have canvassed this vicinity thoroughly estimate the output at about 50,000 for Easter week. If such is the case there should be plenty to supply all demands that might reasonably be expected. It is more than likely, however, that the cut will not be nearly as large. If we judge correctly much of the stock intended for the Easter trade will come in much too early, while on the other hand one large grower who usually supplies about 10,000 will be in too late with the bulk of his cut.

Bulbous stock is still scarce and what little is still left is evidently held back for Easter. But this stock is small at best and will not cut much figure on the market.

Mr. Joseph Curran will open up a neat little store at 157 Wabash avenue April 1. Mr. C. has the best wishes for success from his numerous friends and associates.

The preliminary premium list of the Horticultural Society of Chicago for the exhibition of 1895, November 5 to 9, has been issued. Anyone who has not received it may secure a copy by addressing Mr. W. N. Rudd, room 202, 185 Dearborn street.

Mr. H. A. Bunyard is at the Continental Hotel, confined to his room by illness.

The plans for beautifying Jackson Park, prepared by Mr. Olmsted, have been

accepted by the park commissioners. These plans include a system of lagoons extending the entire length of the park, 24 acres of tennis courts on the site of the Manufactures Building, and 60 acres for a ball field. The Wooded Island will be left as it was during the fair, and a number of small islands will be formed around it. The entire plan will be magnificent when fully carried out.

Recent visitors: A. V. Van Zanten, of Van Zanten & Co., Hillegom, Holland; J. Austin Shaw, representing Siebrecht & Wadley, New York.

Philadelphia.

Things are very quiet just at present, there seems to be more than enough flowers for the demand, and such fine stock it seems very hard to see it go to waste, after having passed the various ills and arrived at such perfection. We are inclined to believe that the fault for this state of affairs rests with the retailer; he should be able to handle larger quantities of flowers, as the price comes down, for flower lovers will buy flowers when they can get them cheap. A very large class scarcely ever indulge in them except at low prices, and others who are accustomed to purchase only the best at high prices are often induced by the reduction to buy when they have no particular use for them. Of course the grower should lend his assistance by making a uniform lower rate to everybody, according to the quantity taken, rather than getting all he can out of the regular channels and taking what is given him from the scavengers after his regular customers are supplied.

The mighty Brunner has taken a tumble and may now be had for \$4 per dozen for the first selection, the other grades bringing \$3 and \$2 for the same quantity. Butler of Chestnut Hill has for some time past been sending some very fine stock out from a low sash house, and several of the growers are wondering how much longer his house is going to last. Burton, Anderson, Heacock and Smith & Whitley are also cutting Brunners. Lonsdale has a few moss roses, which sell well. Baroness and Laing are also to be had in limited quantities at \$3 per dozen. All the large teas are selling for from \$5 to \$8 per hundred, with a few extras at \$10. The smaller stock go for \$3 to \$4. Carnations are getting plentiful but don't weaken much, selling for \$1.50 to \$2 for good flowers, while a few extra fine are quoted at \$3 to \$4. Sweet peas are still scarce at \$2 to \$3 per hundred. The best are very good. Valley, hyacinths, Romans and daffodils bring \$3, Harrisii lilies \$8 to \$10, callas \$8 to \$10, mignonne \$2 to \$3, smilax \$15 to \$20, asparagus \$35 to \$50.

The American Dahlia Society was organized Wednesday evening, March 20, at Hotel Hanover, this city. The following officers were elected to serve for the ensuing year: Robt. Kift, president, H. F. Michell, vice-president; L. K. Peacock, secretary; Frank C. Bruton, treasurer. An executive committee was also elected consisting of the following gentlemen: A. Blanc, chairman, Howard M. Earl, H. G. Faust, David Rust, C. H. Allen and Frank Bassett. The object of the society is to boom the dahlia. An endeavor will be made to induce horticultural societies to hold an exhibit of these flowers in September. There are many amateurs who grow largely and are much interested in this flower, and since the cactus type has been introduced there are many beautiful

varieties that are found exceedingly useful for cut flowers, and it is therefore believed by many that there is quite a future for this garden favorite.

The Florists' Gun Club is getting to work in earnest; guns are being purchased and nothing but the best seem good enough. A trial shoot on the grounds at Wissinoming was held last Wednesday afternoon, and some fair scores were made. It looks as if there is some good material in the club and a little practice will no doubt bring this out. It is President Burton's aim to make every member a credit to the club. K.

IDYLS OF THE POTTING SHED

"She."

It was a favorite loafing place for the boys, and they would rather spend their evenings there than go home. True, it was dusty and dingy; there were no rugs on the hard cement floor, no mirrors on the rough brick walls, no light except a couple of lanterns and the ruddy glow from the furnace doors, but nevertheless here was sociability such as no parlor could offer, an indescribable luxury in a seat on a glass box with an old coat for a cushion, and it was a sensation of cosy comfort on a winter's night to lean back against the warm brick sides of the big boiler and take a hand at forty-fives or indulge in animated discussion of the many questions on which no two gardeners can ever agree, and watch old Joe, the fireman, as he moved about in his methodical way, lighting his pipe only to let it go out again and burning matches with extravagant disregard of cost.

It was a rough night in January. The storm howling outside made the shelter of the old boiler house seem more delicious. The argument for the time being was about an innovation introduced at the Florists' Club, it having been proposed that the club members bring their wives with them to the next meeting. The discussion, interrupted only by the occasional shovelling of coal and banging of the furnace doors, waxed hotter and hotter. Long Tom was especially excited. The club was "no place for weemin'"; he'd just like to see his'n tagging after him; she wouldn't dare mention such a thing; he liked to see a man master in his own house. Rising to his full height he exclaimed "Why, she's been"—but Tom never finished the sentence, his yellow whiskers stopped wagging and his face was fixed in a frozen stare, for just at that moment the outer door opened with a jerk, and there stood a stout female figure with a very determined visage peering out from underneath

the big shawl which she held tightly clasped over her head. "Look a here you Tom, d'ye know what time it is? You git home!" Long Tom waited for no second invitation; he just turned up his coat collar and slouched out without a word, followed closely by his determined better half who threw back one taunting look of defiance at his late associates, as she slammed the door. Old Joe reached up into the corner for the dirty pack of cards, shuffled them over thoughtfully for a few moments, then slowly took his pipe from his mouth and murmured, "There do be different kinds av thim, an' some is wusser'n others."

Evolution Among Plants.

BY PROF. L. H. BAILEY.

[Abstract of a paper read before the Mass. Hort. Society, Boston, February 23.]

The speaker prefaced his remarks by saying that all thoughtful persons are now evolutionists, whether they know it or not. They believe in some kind of a transformation of species in the same way that they believe in the gradual unfolding and growth of human institutions. It is by no means essential to a belief in evolution that the person should hold to a single origin of all forms of life. The speaker then proceeded to consider the question, "Do new species originate now?"

De Varigny has written a most suggestive book upon experimental evolution, in which he contends for the establishment of an institution where experiments can be definitely undertaken for the purpose of transforming a species into a new species. "In experimental transformism," he writes, "lies the only test which we can apply to the evolutionary theory." This is a most commendable object, and I hope that the attempt will be made to create a new species before our very eyes. This is what most people demand as a proof of evolution, and they are sometimes impatient that it has not been done; and it would seem, upon the face of it, that nothing more could be desired. When I reflect, however, upon the fact that this very thing has occurred time and again with the horticulturist, and consider that botanists and philosophers persist in refusing to see it, I am constrained to offer some suggestions upon De Varigny's excellent ambition. If I show a botanist a horticultural type of recent or even contemporaneous origin which I consider to be specifically distinct from its ancestors, he at once exclaims that it is not a species, but a horticultural variety. If I ask him why, he replies, "Because it is an artificial production." If I show him that the type is just as distinct from the species from which it sprang as that species is from its related species, and that it reproduces its kind with just as much certainty, he still replies that, because it is a horticultural production, it can not be a species. In what, then, does an accidental horticultural origin differ from any other origin? Simply in the fact that one takes place under the eye of man and the other occurs somewhere else. It is impossible at the present day to make a definition of a species which shall exclude many horticultural types, unless an arbitrary exception is made of them. The old definitions assumed that species are special creative acts, and the method of origin is therefore stated or implied in all of them. The definition itself, therefore, was essentially a statement of the impossibility of evolution. We have now revised our definitions so as to exclude the matter of origin, and thereby to allow free course to

evolution studies; and yet here is a great class of natural objects which are practically eliminated from our consideration because, unhappily, we know whence they came! Or, to state the case differently, these types can not be accepted as proofs of the transformation of species because we know certainly that they are the result of transformation.

Now, just this state of things would be sure to occur if De Varigny were to transform one species into another. People would say that the new form is not really a species because it is the result of cultivation, domestication and definite breeding by man. He could never hope to secure more remarkable transformations than have occurred a thousand times in the garden; and his scheme—so far as it applies to plants—is essentially that followed by all good gardeners.

This notion that a species, to be a species, must have originated in nature's garden and not in man's, has been left over to us from the last generation—it is the inheritance of an acquired character. John Ray, towards the close of the seventeenth century, appears to have been the first to use the word species in its technical natural history sense, and the matter of origin was an important factor in his conception of what a species is. Linnæus' phrase is familiar, "We reckon as many species as there were forms created in the beginning." Darwin elaborated the new conception—that a species is simply a congregation of individuals which are more like each other than they are like any other congregation—and with a freedom from prejudice which is rarely attained even by his most devoted adherents, he declared that "one new variety raised by man will be a more important and interesting subject for study than one more species added to the infinitude of already recorded species." The old naturalists threw the origin of the species back beyond known causes; Darwin endeavored to discover the "Origin of Species," and it is significant that he set out without giving any definition of what a species is. I have said this much for the purpose of showing that it is important, when we demand that a new species be created as a proof of evolution, that we are ourselves open to conviction that the thing can be done.

The fact is that the practice of systematic or descriptive botany is at variance with the teachings of evolution. Every naturalist now knows that nature does not set out to make species. She makes a multitude of forms which we, merely for purposes of existing methods of botanical description and nomenclature, call species.

The speaker then proceeded to show that there has been as wide variation in very many garden plants as there is between accepted botanical species of the same genus.

Species-making forever enforces the idea of the distinctness and immutability of organic forms, but study of organisms themselves forever enforces an opposite conception. The intermediate and variable forms are perplexities to one who attempts to describe species as so many entities which have distinct and personal attributes. So the garden has always been the bugbear of the botanist. Even our lamented Asa Gray declared that the modern garden roses are "too much mixed by crossing and changed by variation to be subjects of botanical study." He meant to say that the roses are too much modified to allow of species-making. The despair of systematic botanists is the proof of evolution.

If species are not original entities in nature then it is useless to quarrel over the origination of them by experiment. All we want to know, as a proof of evolution, is whether plants and animals can become profoundly modified under different conditions, and if these modifications tend to persist. Every man before me knows, as a matter of common observation and practice, that this is true of plants. He knows that varieties with the most marked features are passing before him like a moving panorama. He knows that nearly every plant which has been long cultivated has become so profoundly and irrevocably modified that people are disputing as to what wild species it came from. Consider that we can not certainly identify the original species of the apple, peach, plum, cherry, orange, lemon, wine grape, sweet potato, Indian corn, melon, bean, pumpkin, wheat, chrysanthemum, and nearly or quite a hundred other common cultivated plants. It is immaterial whether they are called species or varieties. They are new forms. Here is the experiment to prove that evolution is true, worked out upon a scale and with a definiteness of detail which the boldest experimenter could not hope to attain, were he to live a thousand years. The horticulturist is the only man in the world whose distinct business and profession is evolution. He of all other men has the experimental proof that species come and go.

A Seedsman's Qualifications.

When Loudon left the remark on record "that the manipulation of seeds and their disposal was a most simple kind of work, and that the seed department was easily managed," he, worthy man, could have possessed but a very inadequate idea of the multiplicity and detail necessary for the thorough working of a large establishment as conducted at the present day, yet there still remains a glimmer of truth in his statement when it is applied to the small provincial seed distributor who adds the occupation to his other businesses at a certain season of the year only. This, however, is not the man with whom we are concerned, and whom one could expect to have a great deal of knowledge, so we pass him by, as he does not belong to our subject.

"What a delightful business yours must be!" is a common saying from outside sources, and there is no doubt the profession is looked upon by those who do not know a great deal about its inner workings, as an occupation in which the operator spends his whole existence among the daintiest of Nature's children. Granted that he enjoys many pleasures during the summer season, his labors, in sympathy with those affecting other trades, experience periods of doubts and difficulties, and his endeavors to battle against circumstances beyond control, hinder his mind from resting peacefully on the bed of roses some people imagine.

The capable seed merchant of to-day must be not only a man of sound practical experience, gained by life-long study, but a man of such technical qualifications and commercial grip as will enable him to pit his ability against the keen competition that surrounds him, and is becoming more apparent in every direction, and renders the carrying out of important transactions, upon ethical principles, a greater difficulty each season [!]. He must be both intelligent and observant, for he will often find after exercising the utmost precaution to provide against contingencies, that his efforts have proved

futile, through an unpropitious season that has ruined his crops, or a failure from some other cause. In a large establishment it is of the greatest moment for the leading man to be always on the spot, in order that his judgment may prevail in guiding important transactions to a safe end; in these days of rapid communication with all parts of the world business involving thousands of pounds often requires attention at a moment's notice, and the house that has a reputation to lose can not afford to throw these chances away for the want of enterprise and immediate action. He must be a man who looks ahead, that is to say, in 1894 he must have uppermost in his mind his requirements from the harvest of 1896. He must forecast the seasons, as it were, by making provisional contracts in advance, and to such an extent does this system prevail that we know of one firm that conducts operations on these lines to the extent of £100,000 annually. Then, again, he must be up to every movement in the market, for no other commodity fluctuates so much as some classes of seeds; take clover as an example, a seed that largely changes hands at all seasons on Mark Lane and other centers in Great Britain, Europe and America. With a keen eye he must be able to detect without much reflection the impurities existing in a sample when put before him on market, to know without hesitation that the clover contains dodder, the lucerne melilotus, or the meadow fescue, ryegrass. Smartness on these points is sufficient to stamp him an intelligent merchant in the opinion of all with whom he has dealings.

He must keep a watchful eye upon his trials for growth and purity of stock. Those crops which he places out with farmers must be sent into localities with a soil upon which they are likely to thrive, and on this account it becomes necessary for him to have some knowledge of vegetable physiology, and to be critically observant of causes and effects connected with the chemistry of plants. All novelties, both vegetable and floral, must be proved in actual comparison, trusting with little faith to the glowing and specious descriptions that herald many an old variety under a new name. All should be grown to maturity, and pronounced under actual observation, to be acquisitions before sanctioning their distribution to his customers. He must also have a methodical system of growing and selecting seeds, of roguing crops and the cultivation by the most perfect means likely to ensure a healthy development; he must be able to distinguish a swede from a turnip by its bulb or flower, one pea from another by its habits and appearance, or by its pod and seed; and one flower from another by its shape or color. He should be constantly conducting experiments in hybridizing and cross-breeding in the hope of being able to produce something that will on one or more points beat the best already grown, or that will startle his competitors, bring him into greater prominence, and cause him to take high rank in the most advanced class of experts. If he has a foreign connection—and what large house has not, he must be thoroughly acquainted with the climates and seasons affecting different parts of the world, to be in a position to advise customers seeking information what to grow and how to grow it. If the foundation of his establishment is built upon these principles an increased volume of business will ensue, for his customers will place every confidence in him, and he is bound to succeed.—*Seedsman in Gardeners' Chronicle.*

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads not admitted under this head.

SITUATION WANTED—By a good gardener, married; life experience; good references.
A B, care Am. Florist.

SITUATION WANTED—By decorator and salesman in leading retail store; best of references. Address
NEW YORK, care American Florist.

SITUATION WANTED—By a first-class florist of all branches, 16 years' experience, single; good reference.
K, care American Florist.

SITUATION WANTED—By assistant florist, experience in general greenhouse work; Chicago preferred.
H F, 150 Richmond St., Chicago.

SITUATION WANTED—By practical all-round florist and gardener; age 25, references.
JNO. SCHNELL, care Henry Vollmer, Bowmanville, Ill.

SITUATION WANTED—By a German thoroughly experienced in all the branches of gardening, also land, stock.
GEORGE HAUER, 522½ 21st St., Harrisburg, Pa.

SITUATION WANTED—By a thoroughly competent gardener and florist employed for the last 5 years in retail and commercial. Address
"X O," care American Florist.

SITUATION WANTED—By florist and gardener as assistant in private or commercial establishment; 8 years' experience, age 27, single.
F. HILL, West 11th St., Oswego, N. Y.

SITUATION WANTED—As foreman; thoroughly understands the growing of roses, carnations, violets and all kinds of florists' stock.
THOS. MCKENZIE, 53 Lindus St., Cleveland, Ohio.

SITUATION WANTED—By a young man, single, as assistant in commercial place; is capable of taking charge; Massachusetts preferred; best of reference.
Address
K, Box 681 Nyack, N. Y.

SITUATION WANTED—By young man as improver in large commercial establishment; roses and carnations principally; 4 years' experience; age 20; state wages.
IMPROVER, care American Florist.

SITUATION WANTED—As foreman; experienced in all branches of propagation; roses, "mums," carnations a specialty; also fruit culture and general nursery work; state wages. Address
A B C, care American Florist.

SITUATION WANTED—As foreman, a practical grower of roses, carnations, violets, chrysanthemums, palms, ferns, etc.; the forcing of bulbs, making up; single, 22 years' experience. Address
FLORIST, 283 E. 43d St., Chicago.

SITUATION WANTED—In a store as designer and decorator, by a German 23 years of age, 9 years' experience; first-class references; state particulars and wages. Address
J. J. HALLOWS, 666 N. Center St., Bloomington, Ill.

SITUATION WANTED—In commercial place; good in making up, decorating, etc.; age 28, American, single; now in business for myself; the west preferred; familiar with Boston styles. Address
DECORATOR, care American Florist.

SITUATION WANTED—As foreman; American, single, where rose growing is a specialty, and where only first quality roses are wanted; Pennsylvania or South preferred; struggling parties please not answer. Address
FOREMAN, care American Florist.

SITUATION WANTED—Any firm wishing to engage a first-class working foreman and manager will do well to correspond with me; 25 years' experience in catalogue, cut flower and plant trade; reference exchanged. Address
MANAGER, care 67 Bromfield St., Boston.

WANTED—Good greenhouse hand.
W. N. RUDD, Mt. Greenwood, Ill.

WANTED—Experienced German lady for florist store.
Q U, care American Florist.

WANTED—Second-hand hot water heater for 6x50 house, 700 feet glass; give particulars.
BOX 837, Bridgeport, Conn.

WANTED—A quick, reliable young man for the mail plant business in the west.
R R, care American Florist.

WANTED—A good window dormant roots of Cannas Star of '91. Address
WESTERN, care American Florist.

WANTED—Partner with \$500 in florist business in a good town in Kansas. Address
H W, care Vaughan's Seed Store, Chicago.

WANTED—(100) cuttings of Achyranthes of some dark variety; rooted cuttings preferred. Address
H. W. CLARK, West Manchester, Mass.

WANTED—A single man that has some experience in growing "mums"; state wages with board. Address
COLE BROS., Peoria, Ill.

WANTED—Young man who understands growing roses, carnations and "mums"; good wages for the right man. ALFRED PARUD, Indianapolis, Ind.

WANTED—Experienced foreman for growing cut flowers and plants; must be single, sober and steady.
GARFIELD PARK ROSE CO., 188 Madison St., Chicago.

WANTED—Young man 18 to 20 years of age, willing, ambitious and with plenty of aspiration for the trade.
PILLSBURY & LENGENFELDER, Macomb, Ill.

WANTED—A young man 16 to 18, as assistant in rose growing near New York; need not have experience if ambitious to learn; must be sober and industrious. Address
L, 28 W. 15th St., New York.

WANTED—To lease, in some good town or city, 2 or 3 greenhouses, with dwelling house on place, with option of buying; terms must be very reasonable. Address
REUTER, care American Florist.

WANTED—All florists who wish to place before the state of Kentucky any of their products at our spring exhibition April 5th and 6th, kindly inform
THE KENTUCKY SOCIETY OF FLORISTS, H. NANZ, Sec'y.

WANTED—A middle aged man, experienced and good on designs and other floral work; only honest and sober worker wanted; fair wages; must be competent to do planting of beds. Address
A. SENFF, Menominee, Mich.

WANTED—A first-class rose grower, reference required; a permanent place and good money to the man who knows his business; no other need answer. Address
Highland Park, Des Moines, Iowa.

WANTED—A man with means enough to build the rooms, and me furnish the grounds and take 1/3 interest in greenhouse; no better location anywhere; none in twenty miles in any direction; a town of 2,000 inhabitants; there are several hundred dollars' worth shipped in every season. Address
S. W. COX, Bement, Platt Co., Ill.

WANTED—On halves immediately, married man, with special practical knowledge of mushrooms, tomatoes, hot and cold grapes, forcing and propagating flowers, especially carnations, violets, balsam, adiantum; established six years, best trade, constantly increasing; ship direct from houses; telephone connection; plant handy, complete; fuel to door by rail.
DR. ALFRED E. BAKER, West Chester, Pa.

FOR SALE—Four greenhouses, six thousand feet glass, one block and six roomed cottage, well stocked in good lively town; will sell cheap on account of health.
J. J. SCHUMACER, Sioux Falls, So. Dak.

FOR SALE—On time or rent; 4 greenhouses, boiler, natural gas, large lot 12x15 1/2 feet; nice 5-room house almost in center of Indianapolis. A splendid chance for the right man. Address
JOSEPH BECKER, 401 North Delaware St., Indianapolis, Ind.

FOR SALE OR LEASE.
Three greenhouses with valuable grounds; the best place in this country for a man with some means. Address
E. W. BERTHOUD, WM. SPRINCORN, Dubuque, Ia.

FOR SALE.
P. Gornley offers his florist and nursery business for sale, or would let for a term, consisting of about 8,000 feet of glass and about 2 acres of land, 500 ft. front on street, electric cars pass every 15 minutes; a chance of a lifetime; established 25 years; all in thorough condition; there is a fortune in the place; good reasons for selling. Address
P. GORNLEY, 20 Main St., Worcester, Mass.

FOR RENT OR LEASE.
Nine greenhouses, 20,000 feet of glass, steam and hot water heat; large dwelling, good stable, 5 acres or more of land; full stock of young plants; good will of well established business; present owner leaves on account of ill health. The above located at Attica, Wyoming Co., New York. For further particulars address owner.
F. C. STEVENS, 1415 G St., Washington, D. C.

FOR SALE.
Four greenhouses 15x35, one propagating house 8x35, all heated by Hitchings, and filled with Roses, Carnations, Violets, etc.; a large supply of bedding and vegetable plants for spring trade; 16,000 rooted Carnations, roses, etc. One cold house 8x45, large Violet pit, over 100 sashes, several frames, pots, farm and garden tools, 2 fine horses, several wagons, 1 cow, large house, barn, sheds, chicken house, etc.; 15 acres good ground, well stocked with fruit; living stream supplies houses by means of hot air pump; 20 miles from New York and 5 minutes' walk from depot, school, churches, stores and postoffice. Greenhouses all new; cause of selling having another place. Address
J W, care Am. Florist.

For Sale or Rent.
My greenhouse establishment on Belmont Ave. near Western Ave. The place consists of 45 lots or 2 1/2 feet front on Belmont Ave. by 700 ft. deep, 3 cottages, two two-story frame houses, 22 greenhouses from 60 to 260 feet in length and from 12 to 20 feet in width. The whole place can be bought or rented. Can also be divided, 24 lots with the greenhouses on it, and 24 lots with the other improvements on it. The place is in good order, and a large stock is on hand; is one of the largest of the kind in Chicago. A good chance for some young man with some means, or for a corporation; and as I wish to retire from business, it can be had reasonable, and on easy terms. If rented, a long lease can be given.
AUGUST DRESEL, Belmont and Western Aves., Chicago.

WHEN writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

Stop the Leaks.

In the present condition of the florist trade, when from various causes net profits are cut down to a very small margin, a strict watch over the smallest details of business becomes a necessity. The free and easy methods which prevailed a few years ago, before customers learned to be critical and before over-production and sharp competition began to make themselves felt, are no longer safe. In the greenhouses every square foot of bench room must be kept constantly at work and made to yield its percentage of profit, and here the possible margin is so narrow that he who undertakes to run his business in a haphazard way without sharp scrutiny of every item of outlay, and close calculation of comparative results from different varieties under cultivation, will be apt to wake up some morning and find himself face to face with an insurmountable balance on the wrong side of his books.

This applies as well to the retailer who depends exclusively upon his store trade. Rent, help, lighting and the thousand and one smaller items which have always gone to make up the appalling total of store expenses are now increased by the many luxuriant accessories which modern methods impose, not to mention the mischief worked by the ubiquitous street peddler. It is all important then that every expense be closely guarded, and wasteful methods avoided.

In a business which deals in perishable commodities there is bound to be more or less unavoidable loss constantly going on. It is impossible for the producer or the dealer in such goods as these to so handle his stock that none goes to loss on his hands, but it is possible to reduce this drain very materially by close attention. It has been asserted that the loss from avoidable waste in some establishments amounts to nearly or quite as much as the rent, and there is little question of the correctness of this assumption. Empty room in the greenhouse or space that is unremunerative on account of the condition of the stock occupying it, but which comes in for its full share of the cost of heating, wasteful handling of coal, defective methods in the care of stock after it has been cut, these all make sad inroads on the surplus.

But how about the store? Here the carelessness or pure cussedness of employees is responsible for many a leak. Try the experiment of turning over the rubbish box some morning before it is carted away, and see what you will find. Whole handfuls of flowers thrown away to save the trouble of picking over, bunches of stemming wire which have been allowed to lie in the water and get rusty, tangles of snarled twine and enough good paper for a whole day's needs, wire designs that have been walked on, paper boxes that have been sat upon, broken vases and pots, and do not be surprised should you light upon that missing pair of shears or Scollay sprinkler.

Extravagance in making up designs is another big item in the profit and loss account. A large proportion of this work as executed by the average florist is over-crowded, and far more stock is used up than is necessary. There is no qualification more to be desired in design-making than the ability to produce the maximum effect from the minimum quantity of material, and where there is any large quantity of such work constantly going on an artistic workman can easily save the difference in salary over one that is incompetent and wasteful. There is such

a thing as having too much business. Orders for very large decorations are uncertain as to profit, the chances for waste in handling stock by inexperienced extra help added to the impossibility of giving personal attention to every detail make such jobs of doubtful advantage. It is safest to limit one's business to what can be done well and personally watched, and remember the old proverb that "A penny saved is a penny earned."

A New Canna!
"THE PROFESSOR."

We take pleasure in offering this Canna to the Trade, and feel sure that it will please all who purchase it. It originated with me, has been tested on my grounds for the past three years, and has been very highly spoken of by all who have seen it.

The foliage is a very dark purple, nearly black, and colors up well in the full sun. The flowers are of fair size and substance, and of a deep crimson color; they are by far the best we have seen in the dark foliage section of this popular plant.

Its habit of growth is dwarf, and its average height is about 3½ to 4 feet.

We consider this Canna a valuable acquisition and hereby offer it for the first time.

Price for started plants from pots (ready after March 15, 1895), 75c. each; \$7.00 per doz.

N. B.—All orders will be filled strictly in rotation.

ESSEX HEIGHTS FLORAL CO.,
..... BELLEVILLE, N. J.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns.

A rampant free-flowering vine, covering quickly, porch, wall or trellis. It has grown two inches in 24 hours, and when in bloom, bears 25 to 50 of the immense odd shaped flowers, shown above at one time. These when open, measure 12 by 18 inches, not including the tail-like appendage 2 1/2 feet long. This remarkable plant attracted thousands of people at Washington Park last summer. Mr. F. Kanst, head gardener of that Park says: "It should grow out-doors as readily as a pumpkin. The only trouble would be that when it begins to bloom in a high wind the geese will begin to fly." Good Plants, each, 50c.

OUR SPECIAL BARGAINS for 25 cts.

- No. 1.- 5 Good Roses, 25c.
- No. 2.- 4 New Chrysanthemums, 25c.

Providence, R. I.

The first carnation exhibition of the Rhode Island Horticultural Society was held on the afternoon and evening of March 20. There was a very fine display of blooms. N. D. Pierce Jr., John Macrea, W. B. Chappell and A. O. Miles were among the largest exhibitors. Nathan Smith & Son of Adrian, Mich., were represented by an interesting collection.

HARRISBURG, PA.—L. N. Stein, the florist, died February 24, after a week's illness.

APPLETON, Wis.—Two new greenhouses are soon to be built at Riverside cemetery. The new houses will be 20x108 each.

XENIA, O.—Jacob Lambert, the florist, and wife are rejoicing over the arrival of a boy. As they have five girls the boy is "a great acquisition."

FERTILITY, PA.—Mr. Martin H. Weaver is starting in business here and is building two houses 18x120 for carnations and one 18x64 for violets.

SALT LAKE CITY, UTAH.—Last January James Dwyer, the florist, had his leg broken one night by falling down an embankment through the street being left in an unsafe condition, and he has now sued the city for \$15,000 damages.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

SWEET PEAS are said to be selling in lots of 2,500 pounds.

VISITED NEW YORK: Wm. Meggatt, Wethersfield, Conn., Mr. Carson, representing H. A. Dreer, Philadelphia.

C. C. MORSE, of Santa Clara, Cal., sailed from New York for Europe on Saturday, March 23.

The Wernich Seed Company has been incorporated at Milwaukee with a capital stock of \$15,000 by W. Wernich, C. Waulfing and C. C. Mass, Jr.

THE SUPPLY of Red Wethersfield onion seed in the west is said to be quite limited and price has stiffened, but eastern dealers still seem inclined to cut the price wherever an opportunity is given.

A SANTA CLARA, CAL., paper is enthusiastic over "A dwarf sweet pea novelty named Cupid, growing in a 12-inch pot less than one foot high, and covered with perfect white blossoms of the usual size, with stems about the length of those of the pansy."

VAUGHAN'S SEED STORES at Chicago, both wholesale and retail, will after May 1 be located in the double stores 84 and 86 Randolph street. The building is being thoroughly overhauled and refitted with modern front and new elevator and other repairs especially adapted to the use of the firm.

Seed from Washington.

HURON, S. D., March 20.—Between 35,000 and 40,000 packages of garden seeds will soon be sent from the department of agriculture to the state agricultural college at Brookings, for free distribution to farmers and others in south Dakota desiring them.—*Minneapolis Journal*.

Relief Commission.

Every mail is bringing to the state relief commission requests for garden seeds. Yesterday a letter was received from Banner county, signed by the county commissioners and attested by the county clerk, stating that there are about 350 farmers in need of garden seed. This is the first demand that has been made by Banner county, and no provision has been made by the commission for that locality. The citizens recently held a mass meeting and adopted resolutions to the effect that as the farmers of Banner county are entirely without means to buy seed for planting the spring crop the county commissioners be requested to lay the matter before the state relief commission and petition for seed, grain and feed for horses. In compliance with the demand thus made upon them the county commissioners have made the appeal.

The state relief commission has set aside in the neighborhood of \$5,000 for garden seed, and the order for shipment of the same has been placed. This amount will come out of the state appropriation of \$50,000, and will thus cause a corresponding decrease in the food and coal supply furnished by the commission.

The congressmen of the country promised to send the state relief commission 930,000 packages of seed. Of that amount there have been received to date only about 9,000 packages. Some of the latter contain grass seed, which is of no practical value to the farmers of Nebraska.

Proposals and samples of seed grain are now being received by the commission, and when the bids are in it is expected that the commission will be in financial condition to let contracts for seed grain without loss of time.—*Lincoln (Neb.) Journal*.

To try to cover his misdeeds
The Congressman mails garden seeds.
—*Philadelphia Inquirer*.

Insuring Greenhouses.

It seems as if the insurance companies hesitate over taking greenhouse risks, at least down our way. Why we can't imagine, nor can the companies' agents give satisfactory reasons, only that the order comes from headquarters. Now this subject has been broached several times through your paper, and not having seen any comments of late on same, would like to know if any steps have been taken on this subject. The plan mentioned by your correspondent, I believe from the east, was to form a mutual insurance company like the hail association. I believe at no distant day greenhouse property, located outside of city limits at least will be barred altogether, and there is no question but what the florists will have to protect themselves in some manner against fire losses. Not having any figures to go by, but from what has been reported through the various journals and papers, the losses have been trifling compared with the amount of risks. From our own experience would say, we have paid thousands and thousands of dollars the past twenty years and have had only \$200 losses. We are located three miles from city. Now there are just hundreds of such cases, but still the insurance companies refuse the risks. Kindly mention these facts and see what our brother florists have to say on this subject. **NANZ & NEUNER.**
Louisville, Ky.

There is no doubt that our correspondent has good grounds for complaint. The experience above given is that of greenhouse owners all over the country, and the Society of American Florists should have the support and co-operation of every florist in its efforts to secure for greenhouses equitable insurance rates. We understand that the committee in charge of this matter has been active, and with the hearty support which we understand has been accorded them by the officers of the society there is every prospect that in a short time this difficult problem will have been solved and a classified rate acceptable to everybody finally secured.

IN THE page advertisement of Mr. J. N. May in our last issue the prices of his chrysanthemums were not correctly given. They should have been as follows: Sunrise \$3.50 per dozen, \$25 per 100; Dean Hole, Nemesis, Olympus, Trilby, Zulinda \$6 per dozen, \$35 per 100. The transposition of the rate per 100 was probably an error on the part of Mr. May's stenographer in preparing the copy for the adv.

Hybrid Perpetual Roses,

The Rose for the Million!!

BELLE SIEBRECHT.

Always in bloom. An iron constitution. Requires no special houses, no nursing. Will make itself at home in any house where other roses are grown. Proved hardy out of doors in latitude of New York. Color and keeping qualities unequalled. The greatest introduction of the century.

MORE TESTIMONIALS FROM PROMINENT ROSE GROWERS:

DEAR SIR:—The new Rose, "Belle Siebrecht," is a very valuable rose for winter forcing. The form is exquisite, the foliage handsome, the color charming, rich, bright, and of an entirely distinct new shade; it is also very healthy in growth and a constant and very free bloomer. Please book my order for 1,000.

Yours truly,
ROBERT CRAIG, West Philadelphia, Pa.

It affords me much pleasure to express to you my thanks for the bunch of Belle Siebrecht roses you had the kindness to send to me. After having graced the tables of the N. Y. Florist Club annual dinner two days ago I find it to be a remarkable good keeper, having kept it for three days longer without its losing any of its brilliant color, and it appears as fresh now, after be-

ing out five days, as if just cut. As seen growing at your place I shall pronounce it after a careful examination a remarkable free bloomer, healthy grower, and one that is not easily attacked by mildew, and a welcome addition to our list of forcing roses.

ERNST ASMUS, West Hoboken, N. J.

WASHINGTON, Dec. 5th, 1894.

MESSRS. SIEBRECHT & WADLEY, New Rochelle, N. Y.:

GENTLEMEN:—We have received your circular letter together with price list of your new Rose, Belle Siebrecht, which we inspected in your houses some time ago. Please book our order for 2,000 plants, to be delivered April 15th next.

Yours very truly,

STRAUSS & CO.

This rose is the result of years of patient work by one of the best rosarians in the world. It is not sent out to be "tried." We have subjected it to the most severe tests, and are now fully satisfied that it is the best florists' rose in existence. It is not a mere sport, but is of a distinctly new strain, the result of a cross between La France and Lady Mary Fitzwilliam. Its pedigree is all right. Orders booked now and will be filled in strict rotation. Strong plants ready for delivery April 15th.

PRICE, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

Wholesale Florists

RICHMOND, INDIANA.

Rochester, N. Y.

Our comparatively newly established wholesale commission house reports good sales at very fair prices all through Lent; first quality stuff sells at sight, the only overstock being poor violets, which are not wanted at any price just now, as we can get plenty large flowers of first quality. The retail men claim that in no former year have they paid such high prices for flowers of every description during Lent, but they are perfectly satisfied, having so far done a better business in the Lenten season than ever before. There are no large receptions or very elaborate decorations going on, but still there seems to be just enough weddings, dinners and little parties in our city to use up all the flowers available. All are looking forward to a good Easter trade.

Chas. Swift, of Mr. W. S. Kimball's greenhouses, who met with a painful accident some weeks ago, breaking his leg just above the ankle, is so far convalescent that he is allowed to be sitting up. We all wish him a speedy recovery, we can't spare him very well in our bowling team. K.

William S. Kimball, the well known orchid enthusiast of this city, died March 26. His collection of orchids, particularly cypripediums, was one of the largest in the country.

WASHINGTON, D. C.—Jos. R. Freeman is again at his place of business after a serious illness of two weeks. Joe looks trained down rather fine since his sickness but his genial smile beams as pleasantly as ever, when receiving the congratulations of his many friends.

WEST DEDHAM, MASS.—Miss E. M. Fisher intends to soon build a new house 12x100.

ROCHESTER, N. Y.—Mr. J. B. Keller is confined to the house with "La grippe."

Rooted Cuttings

VERBENAS, finest bright colors, mammoth, vigorous strong, 70c. per 100; 16.00 per 1000. GERANIUMS, special best double and single; assorted colors labelled, \$1.30 per 100, \$11.00 per 1000. I have a few thousand Rooted Cuttings of my namesake.

Strong and absolutely free of all disease

\$3.00 per Hundred; \$25.00 per Thousand.

Don't all speak at once.

WILLIAM SCOTT,

479 Main Street,

BUFFALO, N. Y.

It's Safer to buy Carnation stock from those growers who give their entire attention to its production. We grow nothing but Carnations, and ship only the best quality of rooted cuttings. There are no finer McGowans anywhere than ours, and they are cheap at \$2 per 100; \$15 per 1000, while our Scotts and Albertinis at \$3 and \$25, and Daybreaks at \$2.50 and \$20, are A1 in every respect. How many do you want?

ALEX. McBRIDE, ALPLAUS, N. Y.

ESTATE OF M. A. HUNT, Terre Haute, Ind.

Worcester, Mass.

March came in like the proverbial lamb and as yet has shown no symptoms of discarding its innocent gambols for the more disagreeable antics of the lion. Warm bright days, with an occasional light rain, have forced outside bulbous stuff through the covering of leaves, etc., and although the coal pile does not diminish quite as rapidly, if we should experience the hard frosts of last spring the price of the stuff ruined would discount the decrease in the coal bill. For several weeks there has been no perceptible change; trade remains steady and the supply very even, with an occasional shortage in some especial color.

The result of the two days convention of the state fruit growers was a permanent organization with the following officers: President, James Draper of Worcester; vice-president, Samuel Hartwell of Lincoln; secretary, Prof. S. T. Maynard of Amherst; treasurer, E. W. Wood of West Newton; auditor, Calvin L. Hartshorn of Worcester.

The annual reunion and banquet of the Horticultural Society was held March 21, and about four hundred people attended; President H. L. Parker was the toastmaster, and in his usual happy manner introduced the following speakers: Mayor Henry A. Marsh, Hon. Wm. R. Sessions, President French of the Bay State Society, C. F. Dodge, E. W. Wood, C. F. Carroll, Rev. F. F. Emerson and others. After the various toasts had been responded to the party adjourned to the lower hall, where dancing was in order. A. H. L.

In our last issue an unfortunate typographical error made the John Henderson Co. offer roses at \$4 per "1000" when it should have read 100. The adv. is correct in this issue.

NEW
CHRYSANTHEMUMS.

"MRS. POTTER PALMER" (seedling of Fred S. Walz, originator of "The Queen" and "H. L. Sunderbruch").—Winner of Columbian Medal, Chicago, 1893, for best pink seedling; Certificate at Indianapolis, 1894. I claim it to be the best pink, commercially, for cut flowers, and as valuable as "The Queen." Flowers large, full to the center, outer petals reflexed to stem with incurved tips, inner petals interlace and incurve to a fine globular form; color rosy pink, reverse silver, stem stiff, growth vigorous, unexcelled keeper.

PRICE: \$5.00 per dozen; 6 at dozen rate. \$30.00 per 100; 50 at 100 rate. Ready now. Orders filled strictly in rotation.

"FRED WALZ" (Seedling of Theo. Bock).—Winner of the National Certificate of Merit, 1894. Flower incurved full to the center, making a perfect ball, medium size, clear lilac pink, reverse silver, petals boat shaped. Plants short, better grower than "Ivory" for cutflowers, market or specimen. Stem stiff, foliage dark green, close up to flower.

Stock limited. Orders filled strictly in rotation, at \$20.00 per 100; 25 at 100 rate. \$3.00 per dozen; 6 at dozen rate.

Toronto.

There is little change to note in the state of trade since last week. The weather has been very bright and sunny, and roses are coming in in large quantities, but I don't hear that the scavengers are getting any of them yet. The snow has nearly all disappeared now, and the general public may soon be expected to show the first signs of interest in gardening matters. Times have been gradually getting better, and an improvement in the plant trade over last year may be expected.

A delegation of gardeners and florists from here and other cities and towns in Ontario will wait on the ministers of the Provincial Government on Wednesday (27th inst.) with reference to the formation and financial assistance to horticultural societies. At the present time the prospects for success are favorable, but like the S. A. F. charter, the project has a good deal to go through with before it finally becomes law. "There's many a slip, etc." The long talked-of annual jollification of the Gardeners' and Florists' Association will take place on the same evening in order that the country delegates may be duly entertained at the same time. The affair will be less formal than it has usually been.

The yellow calla has again been blooming at Reservoir Park, it is really a beautiful thing and apparently as free growing as the common white, the flowers are of a clear allamanda yellow, nothing dull about it.

Chester County Notes.

Prospects for building in "The Belt" are very promising. Wm. Swayne contemplates adding three houses 20x100 feet.

E. Swayne, on account of the sale of part of the ground on which his houses stand, will tear down one house and probably erect one or more new ones.

C. S. Swayne at "The Slope" will build a violet house 12x100 feet.

C. J. Pennock will build one house 20x100 feet, a cool house 12x100 feet, and put in new heating apparatus.

The Prospect Greenhouses will add at least one house 20x100 feet.

Jos. C. Chambers, formerly of Chambers Bros., Toughkenamon, has purchased a dwelling and lot in Kennett Square, adjoining Edward Swayne's establishment, and will build several greenhouses.

The following persons have decided or are contemplating the erection of houses for growing carnations, all in or near Kennett Square: J. M. Palmer, Wm. Taylor, John Balderston, M. Yeatman, and a son of the veteran grower I. Larkin.

W. B. DuRie of Rahway, N. J., and F. M. Pennock, Charlestown, W. Va., have recently visited Kennett Square and the growers of that vicinity.

P A I N T .

Hammond's Cottage Colors, FOR ALL STRUCTURAL PURPOSES.

This Paint is absolutely pure. Its combination is Linseed Oil, Lead, Zinc, and Fine Pigments for colors, and is as durable as paint can be made, being entirely free from any impoverished material.

I WILL PAY \$100 FORFEIT FOR ANY ADULTERANT FOUND IN ITS COMPOSITION.
BENJAMIN HAMMOND.

NET TRADE PRICES, Delivered at your R. R. Station in 5 gallon lots or over.

MR HAMMOND:

Please give me price for the paint like the enclosed sample. I could get it here, but your paint wears so well that I prefer to get it from you. *Very respectfully,*

R. W. CARMAN, General Agent,
291 AMITY STREET,
FLUSHING, Queens, Co., N. Y.

St. Louis.

Trade still continues good; the retailers say they have felt no diminution on account of Lent, with the exception of the first week, at which time there was a decided quietude. Stock lately has been somewhat below the usual standard, owing to several weeks extremely dull weather the first part of the month. Carnations have not suffered as much as roses, and are of a somewhat better quality. Shipping still continues active, and promises to be heavier than usual for Easter. Plant trade is steadily improving, but it could stand a considerable increase in volume without rushing things.

At the last club meeting the committee having in charge the chrysanthemum show reported and submitted a list of prizes which it recommended the club to offer, the principal innovations being the calling for vases of chrysanthemums and carnations under name. All the changes recommended were adopted, and the committee continued. A final vote was at last taken on the proposed amendment to the by-laws of the club, changing the time of meeting from afternoon to evening, and it was carried.

Mr. Arthur Ellison reports after returning from a southern trip that business has been and still is good in most all points visited, many curious experiences are reported by the southerners in the endeavor to keep things warm during the severe and protracted cold waves that visited that section with unusual persistency this winter. Several parties froze out entirely, while one place reports being froze out twice. Mr. Joe. Rolker was in town on his annual trip; also Mr. Wulze, introducing Belle Siebrecht. Miss Oster-tag is having a "greenhouse store," if such a term is proper, built on Grand avenue but two doors from Geo. Wald-bart's. Geo. Waldbart and Fred. C. Weber have been notified to close their places on Sunday, as a result of considerable agitation made lately by a Sunday closing society of some kind. It the command is to be enforced it will work considerable hardship, especially at Easter.

Rannell Bros., who were operating the place built by R. Hausperger & Sons, have dissolved partnership, the eldest continuing the business. R. F. T.

HYDE PARK, MASS.—Walter Butler of Readville has opened a flower store here at 3 Neponset Block.

SCHENECTADY, N. Y.—Mr. J. E. Felt-housen is attending to business again, after a nine weeks' illness with typhoid pneumonia.

PINK SWAINSONA.—Messrs. L. Templin & Sons, Calla, O., send us some sprays of the pink swainsona. It certainly is a very attractive thing as grown by them.

THE Society of Indiana Florists has issued the advance premium list for the ninth annual chrysanthemum show, to be held at Indianapolis, November 6 to 9 next. Copies may be had on application to the secretary, Mr. R. A. McKeand, Garfield Park, Indianapolis, Ind.

Novelties and Their Effect on Floriculture.

BY JOHN N. MAY.

[Read before the Florists' Club of Philadelphia, April 2.]

How very frequently we hear this remark made: "What is the use of buying novelties? It is only throwing good money away!" And invariably these remarks emanate from men who ought to know better, and I am often uncharitable enough to think that they do know better and only use above remark as a subterfuge. Possibly I misjudge them, if so I trust I may be able to show them in the remarks which follow that they are mistaken in the policy they follow—or profess to follow. No one, I think, will deny that the unfortunate introduction of inflated or very much overestimated novelties have a very detrimental effect on our business generally, and no one deplors that fact more than I do personally. Yet even this must be occasionally expected from the fact that from the multitude of annual introductions presented for our choice they will not all come up to the ideal standard of excellence with every one. The reasons for this are many and varied; treatment may be very different in one instance over another with disastrous results for the new candidate; dozens of other causes may and do occur. A new plant or flower may be a gem in its original home under the right treatment, but when it gets into other hands with indifferent treatment, soils, etc. may not be as good and at first cause some discredit to its introducer, but which, when better understood, may prove equally valuable in its new home. I am afraid many of us are inclined to condemn in such cases too hastily.

But, passing on to the influence of novelties in our business in the broad sense, it may be well for us to consider the same from various standpoints: first, then, what would our business be to-day if we had nothing better in carnations than the old President Degraw and its compeers of 25 years ago? or who is there among us bold enough to say that Lizzie McGowan was not fully worth all the price ever paid first as a novelty to the grower, the retailer and consumer alike? The same may be said of all the other good varieties introduced of late years. Could we ever have asked or obtained \$8 per-100 blooms for the old varieties? Would the flower-loving public at large ever have become enthusiastic over them? Would the widespread and greatly increasing interest in this lovely flower ever have been dreamt of without the startling advancement in the novelties which are being yearly placed upon the market? And if we had never bought any of the novelties what would our business of to-day be? *Simply retrograding!* Who can look at a fine bunch of Daybreak with its beautiful delicate tint of flesh pink and say it has not been worth its

weight in gold as an elevator and instructor for the advancement of floriculture? All other good carnations have their respective places in the drama; true, they cannot all be stars, but they play their parts well and we cannot overlook their merits, though some of them may have to be rejected after a trial, yet they all have some merits and help to increase the general interest in floriculture, thereby helping our business in a general way all along the line.

There is another factor to consider, and no one knows better than the retail florist how much the general public, or that portion of it at least who buy flowers, are influenced by new varieties. I am told by many who are in a position to study this point in various ways that many of the best flower buyers get tired of the same variety continually and often ask for something new. In all such cases when a new variety is presented to them with distinctive characteristics it is sure to find many admirers, and the very fact that "Mr. So and So has something new for sale" brings new inquiries for the same, which opens up new avenues for the ever increasing product of our green-houses.

Gentlemen, are these considerations worth anything to us in these days of sharp competition? If we are true to ourselves I think we must agree that it is a very material help, and this too, comes direct from the introduction of novelties. But you will think that I have said enough on the subject of the "Divine Flower." Please remember, though, that this flower is only a comparatively small portion of our wide range of business.

The chrysanthemum and its devotees cut a very small figure in our business fifteen years ago. Would it ever have attained the popularity of to-day if no novelties had ever been introduced? Would the hundreds, yes, thousands of work people it now gives considerable employment to have the same benefit from them as now? Would the magnificent shows dedicated to the "Queen of Autumn" as they now are, ever even have had an existence without the novelties continually being introduced to give renewed and increasing interest in the same?

I know there are many who do not like the chrysanthemum because it monopolizes the flower market generally for the short time it is in season, but, in spite of that it is a considerable factor in the floricultural world, and although it may not be as much sought after by some as it was a year or two ago yet they have undoubtedly come to stay and will find plenty of admirers, particularly as new forms, new colors and new types are introduced, and the quicker we realize this fact and apply ourselves to the same the better it will be for all concerned. In this family the introduction of novelties is of

the greatest importance, as many of the older forms, once the leading varieties, are continually deteriorating; this comes from the high pressure we run them at.

But there are plenty of other varieties of plants and flowers of equal or greater importance to our business in which the introduction of sterling novelties plays a very important part for the advancement of floriculture: How many among us to-day are there who would like to go back to the old varieties of roses of twenty years ago, and if he did where could he find a market for them? Such varieties as Safrano, Bon Silene, Isabella Sprunt and others of the same class. Just imagine, if you can, any grower bringing or sending such varieties and only such to any store in this city, and the result! well, I presume you will agree with me that he would not have to hire help to carry back the proceeds of his sales! Possibly he might sometimes realize enough to pay his railroad fare back home, that is if he did not live over twenty miles from Philadelphia. And yet, without the novelties in this family we should still have to grow such and in that case I would never have made money enough to pay my fare here, which undoubtedly would have been a good thing, as it would have saved you the trouble of listening to the disagreeable things I am saying to you now. But, as I am here, in spite of all objections, I cannot help saying that it is novelties and their influence on horticulture that has brought me here to-night, yes, and many times previously also. If we wish to keep abreast of the times (and who does not?) we must certainly encourage the introduction of all the sterling novelties. I do not wish to be understood by this that we are to try everything that is offered under the head of new things, as very many of them are no advancement over existing varieties, but, when a genuine novelty is offered it is to our benefit if we take advantage of it.

If you wish to find out the importance of new things go into the designing rooms of any of our large dry goods manufactories; there you will find many of the best designers in the country constantly employed getting up new and improved patterns which the market and the general public demand. Ask the dry goods merchant if he can sell the same patterns year after year and the answer will quickly come: "No; we must have new designs and that in large numbers every year." These are gotten up to meet the taste of exactly the same class of buyers that we in the florist business have to cater to, hence the reason for our constantly trying to get new and improved varieties. I am fully aware that many are deterred from buying new things because they find it very difficult to get at the facts regarding their merit; this I think we can largely overcome; if we can not go to the place where a certain novelty, for instance, a new rose, is growing preparatory to introducing it, we certainly can or ought to be able to obtain the desired information through our Florists' Club, and if the proposed plan of appointing a committee to examine and pass upon the merits of new plants and flowers that may be brought to their notice is put in operation I think we shall be making a strong point for every member of such clubs and also put a strong check upon anything which is not a decided improvement upon older varieties, as such a committee will have ample opportunities to examine anything within reasonable distance from their own club, not only as sample cut blooms or a speci-

men plant, but as it is growing, where its habit, free flowering qualities, etc., etc., can all be carefully noted; under such conditions the endorsement of a committee of practical and competent men should be sufficient guarantee for anyone, and if the plan is universally adopted by all the clubs in the country each club could be a bureau of information for its members. This is not applicable to foreign varieties, as climate and differences in treatment renders any opinion of a variety subject to many modifications coming from there; and while we have to thank the European rosarians for many sterling things in new roses yet the good ones are only a small, yes, very small percentage of those sent to us. Possibly in the near future we shall not need to send there for all the new and improved varieties suitable for our business, but this is digressing from the subject, which I hope you will excuse.

Many of us, from our constant and every day contact with them, regard flowers somewhat as the man does stones who is always engaged in crushing them to repair roads. With him it becomes natural to think that the only use for stones is to be broken up and walked upon, quite overlooking the fact that from the very same material many, very many, of the most beautiful temples, churches and all other classes of buildings are erected. The only difference is that greater skill is brought to bear upon the original material, and we see all around us what magnificent results are thereby produced. And we, with the most beautiful of all Nature's creations (flowers), are very apt to see only one feature connected with them, viz.: the money we can make out of them, overlooking the fact that they are destined for a higher and nobler end, namely to lift up and elevate mankind, and the more beautiful and attractive we can produce them the more will they appeal to all who behold them, hence all the greater reason for us to persevere in the production of improved varieties. Perfection in all points is not easily or often obtained, but when the clear yellow rose is produced which is a fit companion for that queen of all tea roses, Catherine Mermet and her daughters, then it will be a golden gem which we shall all prize, the alpha and omega of all our hopes and fears. All honor to the man who can produce it and may every success attend its footsteps. "Upward and Onward" is the motto we should all try to emulate, and we must do so if we wish to keep the vanguard.

The florists of the "City of Brotherly Love" have in the past always been in the front rank, long may they retain the honor they have won is the earnest wish of yours fraternally.

Carnation Notes.

An inquiry came to me during the past week as to when and how to plant young stock outside. While very willing to give my experience to my fellow tradesmen, yet I have not the time to answer the numerous questions that are sent me except it be through this column. Outside planting must be done thoroughly and well, and many failures have been made

through a lack of practical experience and the use of a little common sense. I have checked the growth of fine young stock by planting according to the usual custom, that is just after a heavy rain, when the ground is in a very wet condition. This I believe is wrong, because the soil which has been pressed around the young plant is very apt to become baked; this is especially so in a heavy soil, as the dropping and setting of the plants requires considerable walking between the rows (when not planted in narrow beds) the result of which is a packing of the soil which can not be remedied during the whole summer. I am therefore of the opinion that it is much better to wait until the surplus moisture in the soil has been allowed to drain off before the ground is even marked out. Some may say that if this plan is adopted and a drouth or even a short spell of very hot weather follows the planting, many plants will die, to this I would reply that the best success I have ever had in planting not only carnations, but even such tender plants as balsams, was when the ground was as dry as ever I have seen it. This was accomplished by simply "wetting" the plants in, a term applied to the process of pouring a little water into the hole in which the plant is set at once, and the roots covered as soon as possible, and the surface of the ground around the plant covered with dry soil.

But to go back to the starting point. I plow the ground, everything being favorable, May 1, harrow well, mark the ground with a Darnell marker, horse power, then if the ground is fairly moist the plants are taken from bench or flat as the case may be, the roots thoroughly wet and plants set eight to ten inches apart in the row. If the ground is quite dry we wet them in, and by wetting in we can plant at anytime, no matter how hot the weather may be. If any one is skeptical on this point, let him try it with a few plants. One great advantage in planting in beds is the fact that by using narrow beds no walking on the soil is necessary.

Carnations make most of their roots near the surface, and where horse cultivation is used the teeth of the cultivator are sure to disturb and cut off many young roots, thus checking the growth of the plants. It is absolutely necessary to keep the soil loose on the surface; this can easily be accomplished in beds by the use of a narrow iron rake, which by the way is a tool that is far more serviceable as a weed killer than a hoe if used in time, and the man who leaves weeds to be killed after they show above ground does not understand his work. Of course there are times when, if a man has a great amount of land to work, the weeds will be apt to get ahead a little, but the time to kill weed is before they are seen. I would not make this statement if I had not had a tough experience in earlier life by following out the old plan, waiting until the ground was green with weeds before hoeing.

Young stock that has been hardened off in a cold frame can be planted as early as April 15, but I would not advise putting out stock from the houses until after May 1.

CHAS. H. ALLEN.

Three New Carnations.

Mr. E. G. Hill of Richmond, Ind., recently brought specimen bunches of his new carnations, Triumph, Jubilee and Armazinda, to us for inspection. Triumph is a very fine pink in the way of Albertini, but possessing several advantages over

ORCHIDS AT RESERVOIR PARK, TORONTO, ONT.

that variety. Jubilee is an excellent very bright scarlet that will undoubtedly be heard from later. The color is very brilliant and attracts immediate attention. The stem is long and stout, and if the variety is as productive as seems likely, it will surely be an important trade sort. Armazinda is a white, very lightly striped with carmine; it is undoubtedly a very pretty flower and is borne on good stout stems. The three varieties attracted considerable attention while here, but nearly

all the growers who saw them seemed to think that Jubilee was the most valuable one of the three. Triumph was also very warmly commended.

Orchids at Toronto.

The accompanying engraving is from a photograph taken February 4 last in the conservatory at Reservoir Park, Toronto, Ont. At the upper center and in the upper right hand corner are specimens of

the white form of *Cattleya Trianae*, to the right of the center is *Phaius grandifolius*, while in the central lower part of the picture are *Cœlogyne flaccida*, *C. cristata*, *Calanthes Veitchii* and *vestita*, etc.

DO YOU WANT the census statistics regarding the florist, nursery and seed trades? You will find them in our trade directory and reference book for 1894. Price \$2.00.

Blind Wood on Tea Roses.

What causes our roses (Brides and Mermets) to run so much to blind wood, especially around the bottom of plant, and should that be cut away?

We find usually one or two good stout stems growing up and a lot of blind wood at base. If we cut away the latter all subsequent blooms must come from side shoots of former, and the question arises with us, does that give bearing wood enough to be profitable? KANSAS.

Many other correspondents complain that Mermets and Brides produce considerable blind wood this season; of my own personal observation I have not seen any with more blind growths than usual, as this family always produced considerable short-jointed, small shoots which are not strong enough to produce flowers. Some ask if it would not be better to cut this blind wood away. To all such I would say that the leaves are the lungs of all plants and the more healthy breathing surface you can keep on your plants the better they will grow and the finer the flowers they will produce. Just in the same relative proportion that healthy lungs are to the animal kingdom so are clean healthy leaves to plants; therefore, if we wish to keep the latter in the best possible health and productiveness we must keep all the clean, healthy foliage on them possible.

One reason why the plants of "Kansas" and others are not producing as many blooms as they might possibly is because they are not furnished with the proper amount of food necessary to produce strong shoots. If I have been rightly informed (as I understand it) the soil of Kansas, or that portion of it at least where the inquiry comes from, has a superabundance of alkaline matter in its composition. This in too large a proportion is not conducive to the highest development of rose plants. To counteract this there is nothing that I have ever found better than well decomposed cow manure, which in such soil can be used more liberally than is generally considered sufficient. Possibly at the present time, if "Kansas" has such at his command a mulching of the same, broken up fine and covering the whole surface with it from $\frac{3}{4}$ to 1 inch thick will materially help his plants to produce stronger wood, which means a much better crop of flowers. In all such soils any fertilizer made from bone in any form will hardly be desirable, as their nature is somewhat drying to the soils, while the natural soil requires something more in the form of a sedative. The same rule applies to very light sandy or gravelly soils in the main, though of course there are always exceptions, which can only be determined by the grower in actual trials and tests of materials most suitable for his particular soil. No rule can be laid down suitable for all alike. While the general principles should govern us in such matters the smaller details of treatment must be worked out by each to suit our own particular requirements, hence I can only

offer suggestions, not knowing what particular soils, their composition, etc., my correspondents have to deal with, but hope the above suggestion may be of some assistance to them and possibly to others.

JOHN N. MAY.

Summit, N. J.

Club Root.

In reading Mr. May's interesting article in the FLORIST of March 16 upon club root I find he speaks of examining clover roots and as having found upon them small nodules, containing numerous "nematoids." Has he not mistaken these nodules for the ordinary nitrifying tubercles which develop upon the roots of all species of the Leguminosæ, and are not only harmless, but absolutely necessary for the normal development of the plant, whether it be clover, pea, bean, vetch, etc. The presence of microbes in the soil occasions the formation of peculiar tuberosities or swellings on the roots of these plants, and these tuberosities, which are not formed in "sterile" soil, are found to be remarkably rich in nitrogen and swarming with bacteria. The benefit resulting from these micro-organisms in leguminous crops, by the enriching of soils in nitrogen, is now an established fact. However, I do not wish to question the fallibility of Mr. May's statements, unduly, but have not known eel worm (*Heterodera radicola*) to be in clover, although have always found the nitrifying tubercles and filled with vibrating bacteria.

Of course it is absolutely certain that eel worm is the cause of clubroot on roses, and these small galls appear at times very much like those on the clover.

It is surprising to find how the eel worm is gaining a foothold, but such seems to be the case. I find that in a number of establishments Mme. Cusin seems to be the variety most susceptible to its detrimental influence. Strange to state, I found recently, when throwing out some apparently strong and vigorous Bride bushes (4 to 6 feet high and some 7 feet) that the roots were infested with galls (eel worms). I can corroborate Mr. May's statement in regard to this little pest being in all soils, or so far as I have observed, especially so in manures.

In regard to "millipedes" I might state that tobacco stems, or any form of it (tobacco), spread over the benches will quickly kill these Myriopods, if they are the *Polydesmus*, as I suppose they are.

Lansdowne, Pa. A. J. PENNOCK.

Rose Leaves Becoming Sticky.

What is the matter with my roses? The leaves look healthy but they are sticky and look as though they had been oiled.

H. J. R.

Replying to your correspondent "H. J. R.," from the description given I think the sticky substance on the rose leaves comes from allowing the young shoots to get covered with aphid (greenfly); the sample leaf sent at any rate shows traces of it; where greenfly is allowed to become at all numerous the leaves will invariably become covered with a substance similar to that described. If I am right in guessing at this, the first thing to do is to get rid of the greenfly, and then two or three good syringings will clean the leaves off, leaving them bright and fresh; but the quality of the flowers certainly suffers from the effects, and the whole health and well-being of the plant is certainly injured by allowing these troublesome little insects to get established, and as they

multiply so very fast it takes only a few days after the first ones put in an appearance before the whole house will be well stocked. Far better adopt the rule of "Prevention better than cure" with them. If kept constantly checked they never give much trouble, but if they are allowed to become numerous then it takes considerable trouble to clear them out, besides doing much injury to the plants generally.

JOHN N. MAY.

Attention to Leaks.

In your issue of March 30 is an article without signature under the title "Stop the leaks." Whoever the writer was he knew the business most thoroughly, as well as possessing the facility of putting his experience into most concise language. It pleased me so much that I ordered a dozen extra copies to distribute among my friends in the trade, where I thought it would do the most good. It was written I should say, by an employer, and if the attention of an employee be drawn to this article with the remark "Read, mark, learn and inwardly digest" he (the employee) will most likely insinuate, politely of course, that the old man had better curtail some of his peculiarities. But really that is not to the point, because the old man must have had economical habits and thrift, or he never could have had employees to hand this most practical article to. To review the whole of the many good things would take up too much of your valuable space; from beginning to end it is good. Paragraph number four is particularly commended to second assistants. This is the ash barrel or rubbish box paragraph, and is a gem of purest ray serene. Of all five of these valuable lessons this one struck me most acutely, because I am a victim. To any one who runs a store and has to trust to the artistic (?) taste of his clerks the logic and truth of this paragraph must be most impressive. Now seriously, what has the art or rather method, of design making evolved or rather degenerated into? We are all too well aware that competition has by no means raised the price of ordinary designs; on the contrary, compared with the prices of 10 years ago, there is easily a drop of 30 per cent. or to be plain in size and price we now make as large a wreath or cross for three dollars as we did for five dollars 10 years ago. Admitting that a great improvement has taken place in all our designs, not only in funeral designs, but in baskets, bunches, and general decorations, how many are there at the business who show any really original taste? It is simply a game of follow the leader. We all remember the wreath or cross of 20 years ago, whose outline resembled Mary's little lamb, relieved only by a tuberose or Safrano bud here and there, just to show that the lamb had excrescences. A few bright lights in the business broke away from that, and by degrees (not all at once) we are where we are to-day, and where is that? It is where you can't make up designs and compete with your neighbors, pay fair prices for your flowers and pay expenses, and why is this? Simply because nine out of ten men and perhaps women who make up designs, exercise no taste, but make up for a lack of taste in an almost vulgar use of expensive flowers. If a customer orders a wreath, pillow, or any other design to be made of lily of the valley, there is usually a remunerative price charged for it, the same as a basket of Jacq roses, but those orders are the exception, and particularly in the funeral business the great majority of orders is

left to the taste of the florist. "It shall be perfectly satisfactory, ma'am." "I'll make it rich" etc., and rich it is, if a great amount of expensive flowers jammed in without a particle of taste can be called rich. How true those words from the article referred to: "There is no qualification more to be desired in design making than the ability to produce the maximum effect from the minimum quantity of material." Every clerk in a flower store that I have ever had the honor of meeting considered he was an adept, in fact an artist, in designing, while he could not handle a corn broom to sweep out a store expertly. Give him 20 carnations, 30 Bride roses, 27 Mermets and 33 lily of the valley with some smilax, and he will make you an "elegant" four dollar design. An absurd lavishness, almost vulgarity, has taken the place of any attempt of skill or taste, much less art. Real artists in our profession there are, and I hope many of them, but the great majority of our "makers-up" are no more artists than those men who follow the useful trade of "putting down" sauer kraut in the fall.

W. S.

About Those Leaks.

In your last issue I read with care and pleasure the article on stopping the leaks, and must say that it is good, as it opens up to liberal and unprejudiced thinking men the different channels in which profits melt away. At the same time I would like to comment on each clause, and object where my judgment says it ought to.

The opening remark is really a "chestnut," as any business man knows that looking after the small details is of most vital importance where profit is considered. Larger items, from their magnitude, must command thought, and as a rule, without criminal negligence, they will take care of themselves. In the free and easy methods of a few years ago small details were not of the same consequence as at present. Take one of them, like paper, then old newspapers at 25 cents a 100 filled the bill, and if not old second-hand grocery paper—anything was good enough for flowers. Shoe boxes were almost given away; at least the only pay demanded was a few plants for a wagon load of them. Nowadays we must keep up with the times; we older members must fall in with the fashion of the day or get left. Competition is sharper than ever. The florist of a few years back had no opposition as compared with to-day; he could deliver goods the next day if he chose, and wrap them in any kind of paper. Now close competition compels him to conform to fashion, and deliver by a messenger.

Now, with regard to greenhouses generally the first clause, as I call it, is especially to the point, for if the grower wants to make his business pay he must utilize every foot of space at his command, and also every minute of his employee's time. As we all know, the margin of profit is small, not only in the florists' business, but in all others. The man who wants to gather in the produce must be on hand both early and late to see it produced. Do not depend on others; don't, when disappointments come, blame some employee, but say "I am to blame for not attending to business," and if you do not attend to this early morning and late at night you must expect, at the end of the year, to find profits cut down. A man who employs 8 or 10 men can easily make a good living by attending to this part of his business, by seeing that his men are kept employed.

The same principle applies to the retail trade, for store clerks want supervision equally as much as greenhouse men. The necessity of light, paper, boxes, messengers and telephones is now recognized, and forms a part of the business. Yet if the "boss" is there it will make his clerks think twice before using too much paper, string, flowers or messenger service. Yet this supervision must not be carried too far; he must not imagine that he is living in the days of his grandfathers. Horse cars are out of date, and trolleys are in fashion. Customers, when they want flowers, will not wait the convenience of the seller, but wish them sent at once. Fashion and the general way of doing business now must be adhered to if one expects to reach "affluence."

Our goods are, we know, perishable, and there must necessarily be some loss, but that loss can be reduced to a minimum, and that depends wholly on the buyer, let him be proprietor or head clerk. Even if he ever overbuys himself, which all are capable of doing once in a while, still the principle holds good, for with ordinary skillful management he will in these isolated cases at least come out even. As for the suggestion that in some establishments loss amounts to the rent, it certainly can only be applied to a small town, where rents are low, or to a mismanaged institution. As to the matter of waste in greenhouses there is a deeper scope for thought. Space unprofitably used is a greater loss than unused space. In the first you have to pay labor, etc., in the latter simply rent or interest in value of space. Any grower who through mismanagement, lack of knowledge, etc., has space occupied with unprofitable goods, should throw stock away, as he is only losing more money every day. But the live man will acknowledge it, and go to work once more, putting in some other crop that will be profitable.

"How about the store?" This clause I must take exception to, not because I am a store man, but because of the expression "cussedness" of employees. According to this the writer must have had sad experience with a store, or never owned a range of glass. I think as a rule store clerks are as free from cussedness, and perhaps more so, than greenhouse hands. There certainly seems to me to be more chance to show "cussedness" in a greenhouse than in a store; the scope is so much wider.

As to the suggestion to look over the rubbish box before having it carted away, what a terrible experience the writer must have had. Think of flowers being thrown away by the hundred to avoid cutting the stems, to say nothing of rusted wire, tangled string and "down trodden" designs. What executive ability must have been shown in such an establishment by either proprietor or manager. It seems impossible for such negligence or criminal carelessness to prevail at the present day. But worse yet; Scollay's thrown out! I would like to work for the writer; what a snap!

In the last clause we come to a much more thoughtful matter. Any thinking and practical man, or any man not troubled with the idea that theoretical knowledge is supreme, knows that the profit and general artistic effect of made-up work is due to the least quantity of flowers that can be used to produce the same. In our business quality of workmanship, combined with quality of goods, will "get there." The man who undertakes to make up an \$8 pillow with flowers worth \$2.50 will finish by winning the booby prize.

One great mistake with employers generally is that when they are growers and retailers both if, through negligence or lack of knowledge, they fail to realize from a certain crop, they complain "the store doesn't pay."

A remark I take exception to is that a man may have too much business. The man who says that at the present time is lacking in knowledge of business or in executive ability, for with a good staff of employees one cannot have too much business nowadays. As to large orders being uncertain in profit I must consider them, as a rule, more profitable than smaller ones.

The closing remark in the article is a reflection on our nationality as Americans, which according to the latest rendering means push. The very idea of a man in this country not desiring to do more business than he can "personally" watch! Where would our mammoth enterprises of the present day be if we adopted that suggestion? Is it that florists' employees are less trustworthy than others, or are the employers in our business less liberal? Shame, gentlemen, don't forget that as a rule we were employees, and thought we were doing our very best for our employers; we should quickly resent any innuendoes suggesting that we were wasteful.

EDWARD I. MEPSTED.

Awards at the Spring Exhibition of the Massachusetts Horticultural Society.

Roses: 12 H. P., first David Nevins, second Jas. Comley; 6 H. P., Jas. Comley; 12 Brunner, David Nevins; 12 American Beauty, John P. Spalding; Catherine Mermet, T. H. Mead, Wm. H. Elliott; Meteor, C. V. Whitten; Gontier, Wm. H. Elliott; Bride, Wm. H. Elliott, C. V. Whitten; Bridesmaid, F. R. Pierson Co., J. P. Spalding.

Pansies: First, second and third, J. S. Fay. Violets, H. S. Rand, N. T. Kidder and David Nevins.

Carnations: General display, Wm. Nicholson, F. A. Blake; crimson, Wm. Nicholson, A. H. Fewkes; dark pink, Wm. Nicholson, F. A. Blake; light pink, J. H. White, Wm. Nicholson; scarlet; Wm. Nicholson, L. H. Foster; white, David Nevins, F. A. Blake.

Indian Azaleas: 6 large specimens, Dr. C. G. Weld, Jas. Comley; four in 10-inch, Bussey Institution; two in 10-inch pots, Edw. Butler, Dr. C. G. Weld; one specimen, Edw. Butler, Bussey Institution; one in 8-inch pot, E. S. Converse, Dr. C. G. Weld.

Orchids: General display, Mrs. F. L. Ames, John L. Gardner; three plants, Edw. Butler; single plant, Edw. Butler, N. T. Kidder.

Four hard-wooded greenhouse plants in bloom, first and second, Dr. C. G. Weld.

Four hardy flowering deciduous shrubs, first and second, Bussey Institution; and for six hardy azaleas and four hardy flowering evergreen shrubs.

Cyclamens: 10 large plants, Mrs. B. P. Cheney, Geo. M. Anderson; 10 in 7-inch pots, Dr. C. G. Weld, Mrs. B. P. Cheney; single plant, N. T. Kidder, Mrs. B. P. Cheney.

Hardy primroses: John L. Gardner. Polyanthuses: Bussey Institution. Auriculas, Dr. C. G. Weld.

Cinerarias: Six plants, Geo. M. Anderson, John L. Gardner; three plants, James Garthley, Geo. M. Anderson; single plant, James Garthley, John L. Gardner.

Hyacinths: Twelve pots, Dr. C. G. Weld, Bussey Institution; six pots, Dr. C. G. Weld, E. S. Converse; three pots, Dr. C. G. Weld, E. S. Converse; single pot, E. S. Converse, Dr. C. G. Weld; three pans of ten bulbs each, Bussey Institution, Dr. C. G. Weld; two pans, Dr. C. G. Weld, Bussey Institution; single pan, Dr. C. G. Weld, E. S. Converse.

Tulips: Six 8-inch pans, nine bulbs each, Dr. C. G. Weld, W. S. Ewell & Son; three 8-inch pans, E. S. Converse, W. S. Ewell & Son; three 10-inch pans, twelve bulbs each, Dr. C. G. Weld, Bussey Institution.

Polyanthus narcissus, four pots of 3 bulbs each, Dr. C. G. Weld, Bussey Institution. Jonquils, Bussey Institution, W. S. Ewell & Son.

Longiflorum and Harrisii lilies, Bussey Institution. Lily of the valley, Bussey Institution, W. S. Ewell & Son. Anemones, first and second Bussey Institution.

Freessias, Dr. C. G. Weld, John L. Gardner; ixias and tritonias, 6 pots of each, Dr. C. G. Weld; Roman hyacinths, six 8-inch pans, Dr. C. G. Weld, W. S. Ewell & Son.

General display of spring bulbs, W. S. Ewell & Son.

Easter Flowers at Chicago.

ED. AMERICAN FLORIST:—In your Chicago article in the last FLORIST you mention the fact that there is much speculation as to the supply of Harrisii for Easter. I believe that the anxiety among the retail trade is to find where they can get their orders filled with good stock. That there will be a scarcity of good Harrisii there is no doubt. I have given a good deal of attention, for some years past, to the supply of flowers for the holiday trade here, and especially to the Easter holidays, and have generally formed an accurate idea of the stock of lilies and other flowers likely to be on hand. You estimate an output of 50,000. I should infer that you meant 50,000 flowers. I should place the amount much higher; this would include the smaller places that grow plants and sell at retail. From my knowledge of the plant trade in Chicago I believe that from 8,000 to 12,000 pot lilies could be sold or used in decoration by the retail florists. This would be equivalent to about 50,000 flowers for pot plants alone. I do not mean to say that this amount of plants has ever been sold, or that so large an amount is likely to be sold in the near future, but that they could be sold if every retail florist would keep pot plants on hand, as well as cut flowers. Many of our largest retail florists do not pay any attention to the plant trade, on account of the difficulty in delivering them during the rush of other business. The florist who tries to sell his customers only what he has in stock is soon to be superseded by the one who furnishes what they want, and in the form desired.

J. T. ANTHONY.

Fire Insurance.

The S. A. F. committee on fire insurance are in receipt of the following communication from President E. A. Walton of the National Board of Fire Underwriters:

THE NATIONAL BOARD
OF
FIRE UNDERWRITERS.

NEW YORK, March 23, 1895.

Committee of the Society of American Florists.

Dear Sirs:—We acknowledge receipt from you of a proposed classification of Greenhouses adopted by the Society of American Florists, and note your suggestion that you believe its adoption would be of benefit to the owners of this class of property and also to companies insuring them.

While we are not prepared to express an opinion at this time as to the completeness of the schedule submitted, we are quite decided in the view that it is a move in the right direction. It seems proper to advise you, however, that this Board is not now a rate-making organization, having some years since devolved that work upon other associations throughout the country. We do all that we can to sustain the rates of such organizations when made, and are always gratified to take any action in our power which may be helpful to them.

We shall take pleasure in submitting the classification which you have transmitted to us to these associations for their consideration, and for your information, name the following to whom it has been sent:

C. M. Goddard, Secretary, New England Exchange, 55 Kilby street, Boston.
W. J. Frederick, Sec. Underwriters Ass'n of N. Y. State, Syracuse.
E. G. Snow Jr., Sec. and Treas. N. Y. Suburban Underwriters Ass'n, 44 Pine street, New York.
E. R. Clemence, Sec. Underwriters Ass'n of Middle Dept., 316 Walnut street, Philadelphia.
C. L. Whittemore, Sec. The Union, Chicago, Ill.
Chas. C. Fleming, Sec. Southeastern Tariff Ass'n, Atlanta, Ga.

Thanking you for your communication, we are,
Yours very truly,
(Signed) E. A. WALTON, Pres't.

This action of Mr. Walton places the classification of the national society directly in the hands of the rate-making powers of the country. The favorable comment of Mr. Walton will no doubt secure careful consideration for the greenhouse classification by the various boards

to whom it has been referred. We give the classification which so far has been successful in winning its way with the National Board of Underwriters.

To the National Board of Underwriters:

Gentlemen:—We herewith hand you a classification of greenhouses which has been adopted by the Society of American Florists, believing that its adoption would be of mutual benefit, both to the companies insuring and to those insured.

CLASSIFICATION.

First. Greenhouses in good condition heated by hot water or steam, or both, where boilers, flues and pipes are properly insulated, and having fireproof boiler pits. Each house being separate and detached, except for one connecting hall or shed to each one hundred feet in length of the house, with water under pressure on the premises, and being within reach of a fire department. A watchman on the premises at night, while firing is being done, one per cent for three years.

Second. Greenhouses heated partly by hot air flues and partly by hot water or steam, or both. All other conditions same as above. Two per cent for three years.

Third. Greenhouses heated by hot air flues in especially good condition. The other conditions the same as above, three per cent for three years.

Add for no watchman twenty-five per cent to rate of premium.

Add for no fire department twenty-five per cent to rate of premium.

Add for no water under pressure fifty per cent to rate of premium.

Old and dilapidated houses heated by flues to be excluded from insurance.

Kiudling wood in contact with flues, boilers or steam pipes, or iron flues in contact with wood-work of any description, to cancel obligation of company insuring in case of loss.

Where oil is used as fuel the risk is to be governed by the rules of insurance companies regarding its use.

We believe risks as above could be profitably taken at above rates.

E. H. MICHEL,
J. G. ESLER, Committee.
E. A. SEJDEWITZ,

Approved of and endorsed by the Society of American Florists.

(Signed) EDWIN LONSDALE, President.
WM. J. STEWART, Secretary.

Boston.

The announcement that Mr. W. E. Doyle would address the club on the tendencies of the retail cut flower trade brought together a good audience of representative men at the April meeting of the Gardeners' and Florists' Club. Mr. Doyle's presentation of the present condition and tendencies of the business as seen from the standpoint of a retail dealer was dispassionate and forcible, and his deductions were logical and convincing. The prevalent notion among the strictly retail people that the club has little value for them received a decided set back, and Mr. Doyle's remarks showed that the growers and wholesalers are not alone in their need for organization, but that there are many directions in which the retailers might by united action greatly benefit their own special department, and at the same time add their contribution to the common good.

After a brief reference to the condition of the business in Boston as it existed twenty-five years ago, the grand strides it had made, and its present proportions as compared with its unpretentious origin, the speaker touched upon the qualifications necessary for success in the business to-day. To be master of his business he said a man must enter into it heart and soul, love it and study out features to make it effective, and at the same time take the most money out of it. He condemned the practice sometimes indulged in of trying to work off on unsuspecting customers violets or other stock which were not fresh, and said he believed it to be practical economy in the long run to throw such goods into the dirt barrel. A good business reputation is made slowly and with difficulty, but is very easily lost, and customers, who often do not know themselves just what they want and depend upon the florists' judgement and

honesty should be conscientiously treated and no advantage taken of them. In this line the question of competent clerks and salesmen was considered by the speaker as a vital one. He regretted the lack of plant knowledge in the young men available as store clerks at the present time, and said that the old saying, "give him a knife and a ball of string and he is a florist" has no longer any meaning. Young men should try to equip themselves so as to be able to answer truthfully questions as to character and requirements of plants, and the older florists owe it as a duty to the coming generation to encourage them in it so that the advance in the business for the next twenty years may be as great as it has been in the past.

Mr. Doyle then referred to the trouble experienced with modern grown flowers, carnations especially, in regard to their keeping qualities. The complaint is getting so general that if prompt measures are not adopted to ascertain the cause and provide a remedy the best interests of growers and dealers are bound to suffer severely. He had tried every possible means in caring for the flowers after receiving them, but without success; carnations frequently lasted but a few hours, and he was convinced that the source of the trouble lay at the fountain head in the present methods of culture; excessive forcing in high temperature and the immoderate use of fertilizers were in his opinion the main cause. He spoke in strong condemnation of the use of "fairy flowers," and other dried material in funeral designs as a substitute for fresh flowers. He characterized this as an imposition upon buyers, who in their grief were willing to trust the florist to supply them with what they wanted and were paying for, and also a wrong to the growers, who were entitled to the loyal support of the dealers. The habit of sending men to places where grief was in the house to pull the bell and solicit business he condemned with vehemence; no man who is reputable in his business would be guilty of such a practice, which degrades and brings discredit upon our calling, and all these things are sure to react on anyone who indulges in such practices.

The relations between the grower and retailer were dwelt upon at length, and the desirability of mutual good understanding emphasized. Many of the old favorites among the flowers might, in the opinion of the speaker, still be grown and sold at a profit, and he instanced the Marechal Niel, Bon Silene and Safrano roses as illustrations. All these could still be sold profitably on the Boston market if of good quality; in our enthusiasm after new things these things had fallen into undeserved neglect. Concluding he referred hopefully to the prospects for business prosperity in the future, a great incentive being found in the fact that the flower trade, although a luxury, has not suffered as others have in the recent depression.

The speaker was frequently interrupted by tumultuous applause, and he evidently had his audience heartily in sympathy with him. A discussion followed. Mr. M. H. Norton agreed with Mr. Doyle as to the need for some of the old fashioned roses. He had grown two benches of Bon Silene the past season, and the buds were in many cases engaged several days ahead. He too had experienced great trouble with carnations, which frequently last but a few hours. He had found little difference as to the comparative keeping qualities of flowers that had or had not been disbudded. The stems he thought were unnecessarily long, twelve to fifteen

inches being sufficient for all requirements.

Mr. W. H. Long thought likewise. He believed there was too much effort being made for size, and the trouble with flowers now is that the head is larger than the legs will bear. Would be better satisfied with carnations of moderate size, but better keeping qualities. He mentioned that roses from which the thorns had been removed seemed to fade more quickly on that account. Mr. Thos. A. Cox here got in a word to the effect that the retailers were all to blame for the present conditions. They wouldn't be suited with a rose unless it was the size of a cabbage. "You can't persuade these people," he said; "they actually want heliotrope a yard long now and violets a foot long."

Kenneth Finlayson thought that over-culture had much to do with the wilting complained of. This was to be seen not alone in cut flowers, but in pot plants of all kinds which had been overfed and grown in too high a temperature, and thus become oversensitive to draughts, etc. Jackson Dawson advocated the preparation of cut flowers by placing them deep in water for some hours after cutting, before marketing them. Flowers were frequently allowed to become too fully expanded on the plants also; this was particularly true in the case of deutzias and other shrubby flowers. He applauded Mr. Doyle's sentiment in reference to the proper education of young men intending to become florists, and urged the necessity that clerks should be polite, obliging and intelligent, whose word could be relied upon if they are to be assured of success. He thought that the abandonment of the good old fashioned flowers was due fully as much to the florists as to the growers, and predicted that the demand for enormous sized flowers would soon show a reaction. This Mr. Norton took exceptions to, and laid the blame on the growers, who he said were trying to beat each other at growing the biggest blooms. He also deprecated the lack of knowledge among the clerks of the present day, but was interrupted by Mr. Cox, who wanted to know where the boys can be found nowadays who will be willing to work as boys used to work, and asserted that there were none such in his neighborhood, whereupon Mr. Warren Ewell pertinently inquired "Why don't you raise one?" and Mr. Cox subsided amid uproarious laughter. Mr. P. Welch was the last speaker. He agreed with all that had been said as to the demand for better keeping qualities in flowers produced for the market, and believed that any improvement in this regard would greatly benefit and strengthen the business.

A notable feature of the recent spring show was the very deep interest taken by visitors in general in the orchid display. These attracted more attention than any other department of the exhibition. For the initiated there was a special treat in the Ames collection of odontoglots, which included such gems as *O. crispum Wellesianum*, *O. crispum Vinckianum* and *O. eugenes*. *Cypripedium* Mrs. F. L. Ames, a hybrid between *tonsum* and *Fairieanum* raised by Mr. Robinson, was also in this display.

The competition in table designs came off on the fourth day of the exhibition. There were but two competitors, Mrs. E. M. Gill and Mrs. A. D. Wood. Mrs. Gill's arrangement, which took the first premium, was composed of orchids and white Himalayan rhododendrons. Mrs. Wood's piece was a very effective combination of daffodils, yellow antirrh-

nums, *Narcissus poeticus*, with *adiantum*s and yellow ribbon.

On the second day a fine collection of carnations was received from Mr. C. W. Ward of Queens, N. Y. It comprised Wm. Scott, Uncle John, The Stuart, Storm King, and a number of promising seedlings in various colors.

The closing lecture of the series at Horticultural Hall was given on March 30 by Prof. W. H. Jordan, director of the Maine State Agricultural College Experimental Station, his subject being "Commercial fertilizers as applied to horticulture."

Easter talk is now in the air, and advance price lists for cut flowers are out. They show a slight reduction in some lines from the prices of former years. A strong impression prevails that the plant trade will turn out to be more extensive than ever before, and the quantity of plants being prepared for this market is certainly larger than heretofore.

Lawrence Cotter has made a ten strike with his longiflorum lilies, which are unusually fine. This he has followed up with another ten strike by disposing of the entire crop as it stands to Welch Bros. He has also a lot of *Lilium tennifolium*, which are now to be tried on this market for the first time.

J. A. De Mar, Brighton Nurseries, has made an assignment.

Visitors in town: Frank Hamilton of Tarrytown, N. Y., and A. T. Boddington of Short Hills, N. J.

N. F. McCarthy and W. H. Elliott have gone south on a short vacation.

Wm. Edgar is preparing to build another house: 30x150.

IGNATIUS FORSTERMAN.

OBITUARY.

IGNATIUS FORSTERMAN.

On Friday evening, March 29, at his late residence in Newtown, N. Y., Mr. Ignatius Forsterman died suddenly of hemorrhage. He had not been very well for some months past. Last fall he went home to Germany for a change, which seemed to afford him great relief, but the past severe winter had been very trying, though his friends thought he was improving of late, and he certainly did look better and felt more hopeful of ultimate recovery as the weather improved. No man engaged in the florist business in the country was better known or more widely beloved by all with whom he had ever come in contact; generous to a fault, and the very soul of honor in all his dealings. As an orchidist in the strict sense of the word he was best known. The first three years he was in this country he was manager and representative of the firm of F. Sander & Co., St. Albans, England. Resigning that he started in business for himself at Newtown, L. I., New York,

where he has been growing a fine collection of market plants, but his love for orchids still clung to him, and he collected quite a large number of choice species, notably so in cattleyas and cypripediums. Of the latter he imported two years ago the coming summer a large lot from their native habitat, many of which are yet unbloomed.

Mr. Forsterman was a native of Coblenz on the Rhine, and in his early days, after a general course in some of the leading establishments of his own country, he obtained employment in France to gain further experience. From there he went to England, where he held several good positions. Finally Mr. Sander sent him to India collecting orchids. At this time *Cypripedium Spicerianum* was the rarest of all this great family; only one plant of it up to this time had ever been introduced. To our late friend was entrusted the task of finding this gem, and after surmounting almost impossible obstacles he found it; the result is well known to the orchid world. Many other choice though less known new things owe their introduction to him, notably *Pteris Victoriae*, but it was owing to his great enthusiasm, hunting for new gems of the floral world, and its consequent exposures in very trying climates, that he contracted the seeds of the disease which ultimately carried him off at the early age of 40 years. He leaves a wife to mourn his loss, and very many friends who will miss him and his magnetic nature.

The funeral services were performed in the Episcopal church, and were made more than usually interesting by the presence of a large delegation of the German singing society from Brooklyn, who gave some fine vocal music in German. To say that unusual respect was shown does not express it; the church, a good sized one, was filled full, and the floral decorations were most elaborate. Certainly, the arrangements were all of exceptionally high merit. They filled two large wagons.

For all the kindly sympathy and true friendship shown by so many during this sad period Mrs. Forsterman wishes me to express her thanks, through this medium.

JOHN N. MAY.

THOMAS BAINES, one of the best known gardeners in Great Britain, died at his home near London, March 2, aged 72 years. Mr. Baines was a prolific writer on horticultural subjects, a regular contributor to the leading English gardening papers, and author of a useful book on greenhouse and stove plants. It may be noted that Mr. Baines' father and grandfather before him served as gardeners on the estate where he learned his business, the Baines family having been employed on the same estate for some 400 years. Mr. Baines was a thorough gardener, possessing an inexhaustible fund of practical knowledge, and was greatly esteemed by all the craft in the United Kingdom.

CHARLES TRUFFAUT, the distinguished French horticulturist, died recently at Versailles, aged 72 years. M. Truffaut was especially known for his success in the culture of rhododendrons, amaryllis, China asters, azaleas and bromeliads. He was a cultivator of great ability, and was high in the councils of many horticultural societies. M. Truffaut had retired for several years from active part in the business he established at Versailles this being carried on by his son, M. A. Truffaut.

Chicago.

The residents of Evanston are arranging to convert a mile of their shore of the lake into a park. It will extend from Evanston to Highland Park.

The fernery at Lincoln Park, the framework of which was erected at the time the palm house was built, is now being glazed and will soon be ready for the plants designed for it. These will include the tree ferns secured from the World's Fair exhibit and which have been occupying cramped quarters in the palm house. Mr. J. A. Evans, maker of the Challenge ventilating apparatus, was a recent visitor and took away with him the order for the ventilating machinery for the fernery.

The wholesale market shows few changes over last week; prices have varied very little except that there is a slight downward tendency, and although stuff is not entirely cleaned out there is no real glut. Carnations do not come in quite so plentifully as last week, although there are enough for the present demand; it may be that some of the growers are holding them back. Roses are of good quality and keep at regular prices, except occasional thousand lots. Testout was seen in fine condition at Reinberg Bros.; this rose is such a success with them that it entirely supersedes La France and Albany, and the two last named will be grown for stock only, in limited quantities, next season. The weakness of the stem, which some growers complain of, does not appear with them. Similarly, Bridesmaid entirely supersedes Mermet, except where a pale rose is needed for funeral work. Meteors have been a little black lately, though there are plenty of good ones. This rose has cast Jacq entirely into the shade, and the latter has been little called for. The Beauty has exercised a similarly demoralizing effect on hybrids; some fine Neyrons were noted this week, but there was no sale for them, Beauty having the preference.

In carnations we see very good flowers; Daybreak leads among fancies, bringing \$1.50 to \$2, and there are a few Buttercups, which sell at the latter figure, but this variety is never plentiful in our market. Henry Mundt still sends in Tidal Waves of such high quality that they may justly be reckoned as fancies. Violets seem fixed at 75 cents, though some specially fine flowers from Klehm's Nurseries bring \$1. A good deal of the ordinary stock is rather small.

Bulb stuff is not overstocked. Dutch hyacinths are scarce, and have been all the season; it appears as if more are grown in pots this year, and no doubt they will be found among the Easter plants. Romans go well at \$3; ordinary valley at \$3, and extra stock at \$4. It is rather surprising to find valley from New Jersey in the Chicago market, but some very fine stock from Ernst Asmus of West Hoboken was noted at Kennicott's, which always realizes the top price. Daffodils are rather stagnant, and southern grown trumpet major of indifferent quality is a drug. Outdoor narcissus from southern Illinois is of better quality.

Callas do not appear to sell at all. Harrisii and longiflorum is steady, and it is the opinion of the wholesalers that while Easter sales will be large the prices will not be sensational. Mignonette is seen in fine quality from Day Bros. of Norwood.

The scarcity in hardy ferns still continues, and has its effect on smilax, which carce and in great demand; the price isanges from 20 to 35 cents a string, the

latter being the highest price reached for a long time. Asparagus stays at 50.

Reinberg Bros. will add considerably to their space on Wabash avenue May 1, business having far outgrown their present quarters. A. L. Randall & Co. also find it necessary to increase their room, and they will double their present premises.

Mr. Flint Kennicott has been confined to the house for several days by illness, but is now out again.

Henry Schroeder of Bowmanville died very suddenly of heart failure a few days ago. Mr. Schroeder handled stock on commission for a number of growers, selling it from the wagon. He was well known to the trade, and universally respected, being very popular personally. Mr. Schroeder was 36 years old, and leaves a widow.

Julius A. Schnapp will open a flower store April 6 at the corner of State street and Garfield Boulevard.

Bassett & Washburn are still cutting American Beauties with stems from three to four feet long. Last Monday they cut twenty-one dozen flowers of this description, all of which met with a ready sale. The extreme long stemmed Beauty is still in the swim.

Recent visitors: E. G. Hill, Richmond, Ind.; N. Dames of G. Van der Horst & Co., Heemstede, Holland; J. D. Carmody, Evansville, Ind.; Miss Taplin, Detroit, Mich.

The following despatch appeared in the Chicago dailies April 4:

LOS ANGELES, CAL., April 3.—The first carload of cut flowers ever shipped from California was sent to Chicago to-day. It is expected to reach Chicago for Easter Sunday. The car contained 35,000 calla lilies and a large number of marguerites, English ivy and many other varieties of flowers. It is regarded as a very important thing here, as the venture promises big returns.

Mr. H. A. Bunyard's illness has developed into typhoid fever and he has been removed to the Alexian Brothers Hospital, on the north side, that he might receive better care than it was possible to give him at his hotel. He is now where he will receive the best of care, and in view of his good constitution we may hope to see him convalescent in a few weeks. He greatly appreciates visits from friends and all who can do so should make it a point to look in on him occasionally and give him a cheering word. The doctors now all agree that typhoid fever is not a contagious disease, and no one need be deterred from visiting him through fear of contagion.

Philadelphia.

With the exception of one or two days the past week has been a very dull one. There has been far more flowers than there was any demand for, and a great many were wasted or sold at very low figures. In the main prices have not fallen, but job lots to fakirs have been offered at prices extremely satisfactory to them. Large teas are still \$6 to \$8, with selected stock \$10 to \$12. Smaller roses go for \$3 to \$5. Beauties, and they are in good shape just now, sell from \$4 per dozen down. Brunners \$4 per dozen for the best, and from that to \$15 per hundred. Baroness \$4 per dozen. Burton is sending in good ones. Heacock has some fine Laings, the best this season, \$3 per dozen is the price. Carnations are plentiful at from \$1.50 to \$2 per hundred, with a few extras bringing \$3 to \$4. Violets are getting quite small, and sell slowly at 50 cents per hundred. Some cold frame stock is of good size, but with short stems. Valley and Romans are in good supply at \$3 per hundred; tulips go

at \$4. Sweet peas are more in evidence, but the best still bring \$2.50 to \$3; they will not hold this price much longer, however, as a number of growers expect to commence cutting the coming week.

Lilium Harrisii and longiflorum sell for \$8 cut and \$10 on the plants. All the Easter stock of lilies about seems to be in good condition and most growers will have them in flower at about the right time. The majority of the plants seem a trifle shorter this year, and as yet the yellow tipped variety is not noticeable to any great extent. The growers expect to get \$10 per hundred flowers and buds for their Easter delivery of plants, while the retail price is expected to be 20 to 25 cents per flower and bud. A retailer was contrasting the present condition of the market with that of ten or twelve years ago, then 35 cents per flower and bud was eagerly paid wholesale, and what a time there used to be to get enough to fill orders. At one time a number of plants which had arrived in bud Easter Saturday were placed in saucers of water on a stove over night, and by morning had one flower each open, just enough to make them salable.

Gillyflowers, ten week stocks, have been quite a salable plant at Easter heretofore, but this season the market will be almost empty, as those who made a specialty of them formerly say they find them too difficult to grow of late, at least one half the crop damping off.

The dealers are all busy getting ready for the great rush, which they fully expect to come up to, if not surpass, that of last year. Convenient vacant stores are being hunted up, into which everything not needed at Easter is stored, so as to make all the room possible for plants. How best to manage the business at this time is a problem, some systems are no doubt better than others, but when the grand rush comes it seems as if the best of them get knocked out.

The John Wanamaker establishment has gone into the flower business again and has given this department a counter in the most prominent part of their store. A full line of cut flowers from the most expensive roses down is kept in stock, and sold loose, nothing being made up. In another department they have counters filled with imported roses, budded stock, which is sold at 15 cents each, \$1.25 per dozen. The low prices together with the size of the plant seem to take, and quite a good many are being sold.

Geo. C. Watson has moved his business from 1027 Arch to 47 North 10th street, where he has improved facilities for conducting his business.

A little fellow by the name of Eddy is going about among the fraternity in this city, and from the broad smile that illuminates his face he must be well received.

Chas. Fox has moved into his new store on Broad above Thompson; it is a perfect establishment in every respect, and Mr. Fox will no doubt increase his already large business.

The meeting of the Florists' Club last Tuesday evening was a very interesting event. On account of the death of Mr. Forsterman Mr. May was unable to be present and read his essay, which was read by Robert Craig. There was a large attendance although the evening was very disagreeable. There was quite an exhibition of carnations, and very fine stock it was. The Cottage Gardens sent a vase of 100 fine blooms of their new variety Storm King, and this was without doubt the finest hundred white carnations ever exhibited in this city. Messrs. Meyer & Samtman exhibited two

good whites under number, and another fine white, which looks very promising, and which has been named Annie Lonsdale. They also had a vase of Della Fox with stems 30 inches long and very straight and strong, it was much admired. Edwin Lonsdale showed some good Helen Keller, which did not suffer by comparison with anything else on the table, also a few seedlings that look promising. Mr. Chitty of Paterson, N. J., sent some fine blooms of Alaska and another variety which unfortunately did not arrive until the next morning, as also was the case with a box of the new rose Belle Siebrecht from Siebrecht & Wadley. The carnations were distributed among the members at the close of the meeting. Exhibitions of this kind, of novelties, before the florists' clubs of the country will certainly be a good thing for all the parties concerned, and nothing with merit will be overlooked. Seeing is believing, and a sight of something that a grower has in mind will no doubt many times clinch an order that otherwise might not be sent.

Messrs. R. Craig, Thos. Cartledge and J. W. Colfesh were appointed on the request of the Carnation Society as a committee to examine new varieties of carnations in this vicinity. There was some discussion as to how far this committee might go in approving or disapproving the new candidates for public favor, and John Westcott though they ought to give the devil his dues, and not be afraid to condemn if necessary. They were finally instructed to simply report things as they found them, and let the others do the rest.

"The best summer crop for forcing under glass" is to be the subject for the next meeting, John Westcott being the essayist.

Mr. May's paper on novelties and their effect on horticulture was very well received; it is a strong plea, supplemented by a good argument for novelties, and proved conclusively that without them our business would be a very narrow one. A vote of thanks was tendered to him, and the paper was given to the committee for publication.

The death of Mr. Ignatius Forsterman was feelingly referred to by Mr. Craig; he was very much thought of by all who knew him in this city, and his sudden death was a great shock to his many friends. The following resolutions offered by Mr. Craig were directed to be engrossed and sent to his family, and a copy to be published in the trade papers:

Resolved, That this club has learned with great sorrow of the sudden death of Ignatius Forsterman, who was so well known to many of its members and endeared to all by his many good qualities, by his kindness of heart, his enthusiasm in his business and his great knowledge of floriculture, which he was always so willing to impart to others. Floriculture has lost a great and good friend; one of nature's noblemen has departed. K.

New York.

The over-supply and low prices noted a week ago in the wholesale market here still exist, with no indication of relief. Most of the retailers have, reluctantly as usual, followed the wholesale rates down and by offering flowers to the public at prices reduced to a tempting figure, have managed to stir up some little activity in the transient trade. A large number of weddings are on the program to follow close after Easter, and so the prospects appear fairly bright for the retailers. The plant trade seems to be in an exceptionally healthy state, and plants monopolize

the greater part of the show windows. The dressing of the pots with variously tinted crepe tissue paper and ribbons is almost invariably indulged in, in some cases to an absurdly extravagant extent, but it appears to catch the popular fancy, and in some establishments occupies most of the time of at least one clerk.

The metropolitan dailies are giving more space to floral matters than ever. There has been a brisk rivalry between the various journals in the compiling of Easter notes, all the Sunday editions giving more or less space to this department, and it cannot fail to have a most stimulating effect on the Easter floral demand. The New York *Herald* for Sunday, March 31, was certainly a marvel in this line. It was a sixty-four page paper profusely illustrated throughout with Easter pictures in colors, among which lilies, primroses, begonias, azaleas, etc., were represented with wonderful truthfulness, and accompanied by descriptions of the popular varieties of the season, together with an extended, and in the main accurate, account of the methods of growing and distributing the enormous out-put of flowers and plants which find their market in New York City.

A formal opening of Geo. Stump's new store on 5th avenue took place April 1, 2, and 3, and the beautiful establishment was thronged with fashionable visitors who had been invited to inspect. Two large windows on the 57th street side are composed of a single plate of glass each, 17 feet long by 13 feet high, and the window fronting on 5th avenue is nearly as large. The display here was both artistic and gorgeous. The front window was filled with odontoglossums, anthuriums and Farleyense ferns variously arranged. The side windows were devoted to plants exclusively. In one of them big acacias and genistas were disposed in luxuriant masses, and the other was banked with a profusion of azaleas, rhododendrons, heaths, lilacs and violets, many of them in costly jars, and the pots all trimmed with tinted papers and ribbons. The interior of the store, which is 25x55 feet, is very richly furnished. The entire walls are in white tiles, the frieze of light greenish tint with groups of dancing Cupids. The large refrigerator is of tiles, white marble and mirrors, and ornamented with tinted vases and Cupids. Its ice capacity is about 40,000 pounds; its cost \$5,000. The floor is of wood and covered with rich rugs. The counters are marble, white with dark base, and there is a pretty office in the rear, of marble and brass work. The basement is 50x85, the portion under the side-walk being well lighted, and fitted up as a conservatory and show room for plants.

Ernst Asmus is sending in quantities of very fine lilac at present. All lilacs have sold very poorly this season, and the double even more so than the single, which is quite a disappointment, as the new sorts were imported at considerable expense, and Mr. Asmus expected that their novelty as well as their longer keeping qualities would insure for them a hearty reception. Mr. Asmus has had the best of success with his roses throughout the season, every variety under cultivation having produced well. Eel worm, which has proved such a pest in some other rose growing establishments, has troubled him but little, the only cases in evidence being an occasional plant in the center of the wider benches. The first noticeable effect of this pest is discoloration and wilted appearance of the edges of the leaves, showing that something is interfering with the nourishment of the plant.

By promptly removing and destroying the affected plants all danger of contagion to other plants is to be avoided. Mr. Asmus attributes the trouble wholly to over-watering, as in every case it has appeared in spots where the benches are densely shaded by the heavy growth, and where it is impossible for the soil to properly dry out, and to this theory Mr. Julius Roehrs also subscribes.

The display of Easter plants in Julius Roehrs's houses at Carlton Hill is a sight worth going many miles to see. There are some 20,000 lilies, all longiflorums with the exception of a few Harrisii which slipped through in unintentional mixture, house after house of azaleas, many of them of largest size, rhododendrons, hydrangeas, lilac, snowballs, tree pæonies, metrosideros and kalmias in greatest profusion. Among the varieties which may be classed as novelties are *Hydrangea macrophylla*, the purest white of all the hydrangeas; *Andromeda speciosa* and *japonica*, and the so-called three-leaved myrtle. This is the common myrtle in which the leaves grow ordinarily in pairs, but when old plants are cut back to the stumps a young growth is forced out in which the foliage is arranged in whorls of three, a form which Mr. Roehrs asserts is much in demand among the Jews in Europe, but which so far has failed of appreciation in this country.

Mr. Roehrs is one of the most successful growers of hybrid roses in pots. One secret of his success is that he does not believe in excessive forcing, the flowers being allowed to develop slowly, even if they do not get in on time for Easter. The principal varieties grown are *Magna Charter*, *Brunner* and *Baroness Rothschild*. Two plants are generally grown together in an 8-inch pot, producing a more symmetrical specimen than when one is grown singly. *Marchioness of Londonderry* has proved a disappointment as a pot plant, the color coming very dull, and *Capt. Hayward*, which is another recent introduction, is also decidedly no good for this purpose. As soon as the houses are emptied of their Easter stock, they are filled up with the young hybrid roses for next year's forcing. These stay under glass all summer until they have finished their growth and ripened their wood, after which they are stored in frames, and azaleas take their place in the houses. Mr. Roehrs has contracted with *Hitchings & Co.* to build another azalea house 50x167.

Mr. Wm. Plumb has taken charge of the new private establishment of Mr. C. Weidenfeld at Oyster Bay.

Mr. Gus Messeberg is seriously ill at his home in Flatbush.

Passed through New York on a visit to the Belle Siebrecht at New Rochelle—Mr. Benj. Durfee of Washington, D. C.

Buffalo.

My impression at this date is that plants of nearly all kinds will be rather backward. This must be accounted for by the exceptional winter. Last year Easter was 19 days earlier than this year and yet there seemed no trouble in getting in lilies, both *Harrisii* and *longiflorum*. The cold has been so steady and severe this past three months that it has deceived more than one grower in the forwardness of his crops. There will not be enough lilies to go round, but after Easter they will be very cheap. Azaleas are in about right, *spiraea* in most places will want to get a very lively gait on to show much white on Easter Sunday.

There are good batches of lilac, hydrangeas, cinerarias, hyacinths, and other flowering stuff scattered round, but I must believe none too plentiful. In cut stuff there is likely to be a large supply. I notice a good many houses of carnations, Daybreak and Scott particularly, that will be in great order by the desired time. The roses that are grown in the neighborhood are now of the finest quality. Smilax is as usual at this time very scarce. It is hardly such an essential as it was a few years ago for Easter business, yet used for so many purposes that its scarcity is felt by all of us.

A very hurried run through a few of my neighbors is where I gleaned the views about the condition of the Easter crops. Wm. Milley looks down from his altitude of 6 feet 5 inches and says "Those lilies will want all the sun they can get." Wm. Belsey looks up at his lilies and says "I have them all right for earliness, but what on earth make them grow so tall?" C. F. Christenson says "My dear boy, I do not care so much for Easter stuff, but come back here and look at two houses filled with violets and mignonette, and then we will look in the ice box." Christenson's place is looking fine all through, with a great promise of fine well grown spring stock. Mrs. D. Newland has a fine lot of lilies, spiraeas, cinerarias, and other Easter goods, and about right for time. W. Scott has a large assortment of Easter stuff, but the only thing he spoke of in any conceited way was a few potted American Beauty roses in 6 inch pots, bushy plants with 8 to 12 fine flowers and buds on each.

Mr. Wm. Legg is adding another small house to his establishment on Delevan avenue.

A new firm has started and is building on Bauck avenue. They have already one house complete, and four more are under way. The firm is Jansen & Poor.

Mr. George McClure, our popular landscape gardener, who is in great demand nowadays, is about to start a nursery on Bauck avenue, devoted to choice ornamental trees and shrubs and herbaceous stuff; lots of room for him in that line.

W. S.

Worcester, Mass.

The weather continues warm, and the question now is to hold stuff back for Easter, not much trouble to force stuff in this kind of weather, and many lots of lilies that were being pushed for all they were worth are now reposing quietly in the coolest house available. While trade remains as good as ever, and prices show no inclination of tumbling, stuff is a bit over plentiful, roses more so than other flowers, though carnations disappear as fast as they are brought in, that is a No. 1 bloom. The demand for Daybreak is far beyond the supply, and people are perfectly satisfied to pay 75 cents per dozen. Scott and Albertini have only been grown in small quantities this season, but the flowers have been retailed for \$1 a dozen.

Fred Madans has been forced out of his store, as the building is to be pulled down to make room for the new State Mutual Life Assurance building. As yet he has been unable to secure a suitable location, and will carry on his business at his greenhouses for the present.

The Market Gardeners' Association concluded their winter meetings with a banquet in Horticultural Hall, March 30.

WM. TRICKER & GO., Clifton, N. J.

A New Canna! "THE PROFESSOR."

We take pleasure in offering this Canna to the Trade, and feel sure that it will please all who purchase it. It originated with me, has been tested on my grounds for the past three years, and has been very highly spoken of by all who have seen it.

The foliage is a very dark purple, nearly black, and colors up well in the full sun. The flowers are of fair size and substance, and of a deep crimson color; they are by far the best we have seen in the dark foliage section of this popular plant.

Its habit of growth is dwarf, and its average height is about 3½ to 4 feet.

We consider this Canna a valuable acquisition and hereby offer it for the first time.

Price for started plants from pots (ready after March 15, 1895), 75c. each; \$7.00 per doz.

N. B.—All orders will be filled strictly in rotation.

Toronto.

The much talked of interview between the city and provincial gardeners and florists and the Toronto government took place on Wednesday last, but I am sorry to report that the Ontario men did not come away with the hope of receiving much benefit as a result, at least this year, although there is still just a chance that some "remedial legislation" may be given. The Toronto G. and F. Association will hold a special meeting on Monday to draw up a plan in writing of its proposed scheme with regard to horticultural societies in cities, the same to be presented to the government at the earliest moment possible. The provincial men, represented by Messrs. Burden and Trebilcock, president and secretary of the Bowmanville Horticultural Society, and Messrs. Wells, Lane and Colwell of the Galt Horticultural Society came away much better satisfied than their city brethren, having gained one of the chief points they were contending for, viz: receiving the grants allowed to horticultural societies direct from the government instead of through the agricultural societies. The increase of the grant asked for may come in time too if they are good boys, and send a government supporter to parliament every election.

On the evening of the same day took place the long looked for oyster supper, of which about forty members of the association and the provincial delegates afore-mentioned partook. After the supper came speeches interspersed with song, followed by a wonderful and entirely unexpected exhibition of mesmerism by Mr. Charles Arnold, the Queen street florist, which simply brought the house down. After this the party broke up into parties, some indulging in bowls, some in billiards, some in lager beer, and some going home. Your correspondent walked home after having spent a most enjoyable evening. The supper took place in the Liederkranz club building.

I should call the state of trade during the last week, moderately dull. The weather has not been so bad, but one can scarcely call it "joli printemps" yet. E.

ANCHORAGE ROSE CO.,

ANCHORAGE, KY.

The Rose for the Million!!

BELLE SIEBRECHT.

This rose is the result of years of patient work by one of the best rosarians in the world. It is not sent out to be "tried." We have subjected it to the most severe tests, and are now fully satisfied that it is *the best Florists' Rose in existence.* It is not a mere sport, but is of a distinctly new strain, the result of a cross between La France and Lady Mary Fitzwilliam.

ALWAYS IN BLOOM. AN IRON CONSTITUTION. Requires no special houses, no nursing. Will make itself at home in any house where other roses are grown. Proved hardy out of doors in latitude of New York. *Color and keeping qualities unequalled.* The greatest introduction of the century.

We have received numerous testimonials from eminent rose growers who have inspected the rose and pronounced it to be everything we claim for it. It is having an enormous advance sale in every section of the country. The young stock from which we shall fill orders is in perfect condition. Delivery will begin April 15th, and orders will be filled strictly in rotation,

Strong Plants, \$7.50 per dozen; \$35 per 100; \$250 per 1000.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

FRENCH HOUSES report some celeries and turnip damaged in winter storage, exceeding 50 per cent.

THE MAIL SEED TRADE has generally been excellent for the past 10 days, while occasional warm days of late has improved counter trade.

CHICAGO.—Mr. Chas. P. Braslan is confined to his home by a severe cold on his lungs, but is improving.

LYONS, N. Y.—Jas. P. Boyle has been appointed superintendent of the local cemetery.

MR. WM. WINCOTT, of Effingham Park, Babylon, L. I., sends us a box of blooms of M. Louise and Swanley white violets of excellent quality.

PORTLAND, MAINE.—Wm. E. Morton, the well known florist of Portland and Bar Harbor, died on Friday, March 29, after a lingering illness. Mr. Morton was a member of the Society of American Florists. The business will probably be continued by his wife.

TRENTON, N. J.—W. T. Hilbour has moved to his new stand in the extension of the Windsor Hotel on East State street. Mr. Wm. Moore is his presiding genius, and he has by all odds the finest window in the city. The glass is low down to the sidewalk and the entrance; the display is thus brought well under the eye.

Rochester, N. Y.

The announcement of the death of Mr. W. S. Kimball of this city, was a shock to all his friends and acquaintances. He was at Virginia Beach, Va., at the time of his death, and was in his 58th year.

Mr. Kimball was one of the best known residents of Rochester and one of our foremost public spirited men, and a prominent member of several organizations doing business here. His collection of orchids, especially his cypripediums, is one of the most extensive and costly ones in the United States, and his death will be lamented by all who knew him.

He leaves a wife and three children—two sons and a daughter.

Trade in general the same as reported last week. Prices keep up wonderfully. The demand was rather larger than the supply this week, especially so in carnations. A good supply of first-class Beauties has to be noted and several lots of splendid Whitneys made their appearance in the market. There was an immense lot of violets used at the funeral of Mr. Kimball. Perles are rather plentiful, smilax very scarce, asparagus is used instead. Violets will be in for Easter in very large quantities, the frames have begun to bloom and any quantity may be picked in this neighborhood. Also good long stemmed English double violets grown in frames are in market now.

The finest specimen of Dendrobium Wardianum I ever had occasion to see and worthy of special mention, was a plant in full bloom used in the church decoration on Friday last at the funeral services of the late Mr. W. S. Kimball. The plant had a spread of nearly four feet across without any tying apart or sticks of any kind. The stout canes were flowered to the very base of the pot which is an 8-inch. These canes all measured over three feet in length and were arching over in a natural graceful way; the effect was magnificent. The flowers on this splendid specimen are larger and broader than we usually see them, it being an extra good variety, probably the so-called giganteum. The plant belongs to Mr. Kimball's collection and Mr. George Savage certainly deserves high credit for "doing" them so finely. J. B. K.

HOYT'S SYSTEM OF HOT WATER CIRCULATION.

An open or pressure system (at will of operator) in which no stand-pipe or elevated tanks required. Uses in 100 ft houses or less one 1 1/2-in. pipe overhead or under-bench and four 1-inch pipes under benches (coming back), connecting at end into one pipe, 1 1/2-in. or 1-in. A globe valve on this pipe (return) controls this line from the full heat (100 per cent) to five per cent or closes it. Two similar lines are used in a 10 or 12-foot, four in a 20-ft. and 7 in a 30-ft. house. The reduction of heat in each or all lines can be done gradually as sun raises the house, and can be turned on gradually as sun leaves the house. Cost of piping, fittings, valves unions, etc., about \$45 per 1,000 square feet of glass. Cost of heater about \$100 up to 5,000 feet, and probably 10,000 feet of glass. Improved horizontal steel tubular boilers furnished from 21-in. shell, 6 feet long, up to 24-in., eighteen feet long. These are especially constructed for Hoyt's System, and will discount any heater either in price, power or economy in fuel. Hoyt's System is admirably adapted to residence or building heating on a large or small scale, and can be put in cheaper than steam. Catalogues out about April 15th. No patent on heater or tubular boilers, and no cast iron constructed heater.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Cincinnati.

The supply of stock for the first half of the week was very limited, but trade being quiet at the same time no great trouble was experienced in filling orders. Towards the end of the week business became more brisk. Saturday was one of the busiest days this season and everything was cleared up, although stock the latter part of the week was quite abundant. This week starts in with a heavy cut in roses. Crops are in at a number of large establishments, which threatens to cause a glut unless business keeps apace, but the prospect for a good Easter trade appears to be bright.

In social circles there is quite a stir and a number of prominent weddings and other social gatherings are announced for the next two or three weeks.

Prices remain the same as last week. Beauties come in more freely and are offered at 25 to 30 for selected stock; short stemmed go at 8 to 15. Hybrids are rather scarce yet, in fact there is less stock of this class of roses offered in our market this season than has been the case for a number of years. Nearly one-half of the present supply is shipped from outside points at that. The price rules firm at 25. Jacques are of good quality and fairly plentiful at 12 to 15. Of larger teas the supply is heavy and of a quality that averages better than has been noted for some years at this season. Brides, while quite plentiful, meet with brisk demand, the price being held stiff at 5 to 6. La France has improved wonderfully, and some extra fine stock is offered at 4 to 5; Mermets 3 to 4. Meteor is improving, though a large proportion is still of poor quality; the best selected bring 6 to 8; seconds go at 4 to 5. Bridesmaid is offered in limited quantities at 6 to 7.

Carnations are very abundant, particularly colored sorts. Common varieties in red and pink go at \$1 to \$1.50; white is held \$1.25 to \$1.50, fancy at \$2 to \$3.

Harrisii, up to the end of last week, have been very short, but are coming in quite freely again. They go at 6 to 8.

Bulbous stock is getting more plentiful, and the demand is quite brisk. Romans are noted in large quantities; first quality goes at 3. Valley is in fair demand; good stock is selling briskly at 2 to 3. Tulips are very slow at 2 to 3. Of Dutch hyacinths the supply is short; price 3 to 5. Daffs. are very slow at 3 to 4.

Violets are still plentiful, and the demand is quite brisk; stock of all grades is readily sold at 75 cents to \$1. Mignonette is very plenty and of good quality, 2 to 2.50. Smilax is very scarce, price 20 to 25.

The fakir is out again in full force and appears to do a thriving business. It is astonishing to note the amount of stock disposed of by them.

Louis Pfeiffer & Sons have opened up a neat little store on York street in Newport, Ky.

Corbett & Wilson of College Hill are cutting some fine Beauties.

W. A. MANDA, MERCHANT, GROWER, IMPORTER & EXPORTER OF FLORISTS' Plants, Seeds and Bulbs. NOVELTIES A SPECIALTY. The Universal Horticultural Establishment, SOUTH ORANGE, N. J.

Dark blush pink. Rooted Cuttings, \$8.00 per 100; \$65.00 per 1000. Good stock. Sample blooms sent free.

ESTATE OF M. A. HUNT, Terre Haute, Ind.

Always mention the American Florist when writing to advertisers.

St. Paul, Minn.

Trade has been fair notwithstanding the prevailing dullness in many lines of business during the Lenten season. White roses and carnations especially have been quite scarce, and Chicago has been called on several times during the past month for funeral flowers. Plants have sold very well and altogether there is a hopeful feeling abroad in the land.

The weather has now settled down to the warm and halmy state of spring and the quality and quantity of the cut is benefited thereby. Roses now being brought in are fine. Prices range about the same as at the beginning of Lent. The demand for Beauties has been poor, while the cut is the best of the season. We presume the demand will increase after Easter. Roman hyacinths, the mainstay for funeral work, are quite scarce, the demand early in the season having exhausted the supply.

In the plant line L. L. May & Co. have several large houses filled with Harrisii and longiflorum that are coming on in good shape for Easter, also a house of hybrid roses. Another house of hydrangeas with clusters of blooms a foot or more in diameter give promise of an excellent showing one week hence.

E. F. Lemke has a nice assortment of blooming plants, as has Swanson, Vogt, Venke and other of our storekeepers. With an abundance of good flowers and good weather for disposing of them Easter trade ought to be the largest in the history of this city.

L. G. Venke is moving his business to a more commodious store and a more central location. His store will be the sixth flower store within a radius of three blocks.

The warm weather has brought out the flower vendors at the city market, and two or three stands are in operation.

As we are writing this news comes to us of the death of Paul Kurucar, our well known wire worker. The boys will all miss the familiar face of "Paul," the name he generally was known by.

We hear of our former friend Louis Edlefson as doing a good business in Los Angeles, California, whither he migrated a year since.

The next meeting of the State Florists' Society will be held in this city on Friday evening next. Mr. Bartels is appointed the speaker of the evening. The question as to whether the twin cities shall have a chrysanthemum show another fall will be thoroughly discussed. It is to be hoped that this will be a "go" as the trade in these cities fully warrants a first-class show in each. FELIX.

ROOTED CUTTINGS CHRYSANTHEMUMS

All the best new market sorts, 60c per doz.; \$4 per 100. Best market sorts of previous years, 35c per doz.; \$2 per 100. Ready for delivery Feb. 1st. Also SMILAX, 2 1/2-inch pots, \$2.00 per 100; \$15.00 per 1000. Address J. G. BURROW, Fishkill, N. Y.
