**Circulus** (*ir' klu-lus*) [*L.*]. A circle. **C. arteriosus**, the circle of Haller. The plexus of arteries that surrounds the outer border of the iris. **C. iridis minor**, an arterial circle near the pupillary border of the iris. **C. venosus mammæ** (or *Halleri*), a ring of anastomosing veins that surround the nipple. **Circum-** (*ir' kum*) [*L.*]. A prefix meaning *around, about*.

**Circumagentes** (*ir' kum aj en' tes*) [*L.*], "causing to revolve." 1. The oblique muscles of the eye. 2. The infrapinnatus and supraspinatus muscles that revolve the arm.

**Circumanal** (*ir' kum an' al*) [*circum*, around; *anus*, the fundament]. Perianal; surrounding the anus.

**Circumcision** (*ir' kum is' i-un*) [*circumcidere*, to cut around]. Excision of a circular piece of the prepuce.

**Circumclusion** (*ir' kum klud' kum*) [*circum*, around; *cludere*, to close]. A form of acupressure in which

the pin is passed beneath the vessel, a wire loop placed over its point, and its ends brought over the artery and made fast.

**Circumcorneal** (*sir-kum-kor' ne-al*) [*circum*, about; *corneus*, horny]. Around or about the cornea.

**Circumduction** (*sir-kum-duk' shun*) [*circumducere*, to lead around]. The movement of a limb in such a manner that its distal part describes a circle, the proximal end being fixed. See *Motion*.

**Circumference** (*sir-kum' fer-ens*) [*circumferere*, to carry around]. The distance around a part.

**Circumflex** (*sir' kum-fleks*) [*circumflectere*, to bend about]. Applied to a number of arteries, veins and nerves.

**Circumgyration** (*sir-kum-ji-ra' shun*) [*circum*, around; *gyrare*, to turn]. See *Vertigo*.

**Circuminsular** (*sir-kum-in' su-lar*) [*circum*, about; *insula*, island]. Surrounding the island of Reil.

**Circumlental** (*sir-kum-len' tal*) [*circum*, around; *lens*, a lentil; *lens*]. Surrounding the lens. **C. Space**. See *Space*.

**Circumnuclear** (*sir-kum-nu' kle-ar*) [*circum*, about; *nucleus*, kernel]. Surrounding the nucleus.

**Circumnutation** (*sir-kum-nu-ta' shun*) [*circum*, around; *nutare*, to nod]. In biology, a bowing successively toward all points of the compass. Applied to the movements of young and growing organs.

**Circumocular** (*sir-kum-ok' u-lar*) [*circum*, about; *oculus*, eye]. Surrounding the eye.

**Circumoral** (*sir-kum-o' ral*) [*circum*, about; *os*, mouth]. Surrounding the mouth.

**Circumpolarization** (*sir-kum-po-lar-iz-a' shun*) [*circum*, around; *polus*, pole.] The quantitative estimation of sugar in a suspected liquid by the degree of the rotation of polarized light, sugar rotating the ray to the right, albumin to the left.

**Circumrenal** (*sir-kum-re' nal*) [*circum*, about; *ren*, the kidney]. Around or about the kidneys.

**Circumscribed** (*sir' kum-skribd*) [*circumscribere*, to draw a line around]. Strictly limited or marked off; well defined; distinct from surrounding parts, as a circumscribed inflammation or tumor.

**Circumvallate** (*sir-kum-val' at*) [*circumvallare*, to surround with a wall]. Surrounded by a wall or prominence. **C. Papillæ**, certain papillæ at the base of the tongue.

**Cirrhoneus** (*sir-on' o-sus*) [*κίρρῶς*, yellow; *νόσος*, disease]. 1. A fetal disorder, marked by yellowness of the serous membranes. 2. Abnormal post-mortem yellowness of any surface or tissue.

**Cirrhone** (*sir-ös'*) [*cirrus*, a tendril]. In biology, provided with tendrils.

**Cirrrosis** (*sir-o' sis*) [*κίρρῶς*, reddish-yellow; from the color of the cirrhotic liver]. Increase and thickening of the connective tissue of an organ, especially of the liver. **C., Biliary**, a form due to chronic retention of bile in the liver from long-continued obstruction in the bile-ducts from any cause. **C., Fatty**, a rare form in which the hepatic cells become infiltrated with fat. The surface is smooth and the organ enlarged, but very tough, owing to increase in the interstitial connective tissue, which does not contract. This form is usually seen in the intemperate.

**Cirrhotic** (*sir-o' ik*) [*κίρρῶς*, yellow]. Affected with, or relating to, cirrhosis. **C. Kidney**. See *Bright's Disease*.

**Cirsocoele** (*sir' so-sel*) [*κίρσος*, a varix; *κήλη*, tumor]. A varicose tumor, especially of the spermatic cord.

**Cirsoid** (*sir' so'id*) [*κίρσος*, a varix; *εἶδος*, likeness]. Resembling a varix, or dilated vein.

**Cirsomphalos** (*sir-som' fal-os*) [*κίρσος*, varix; *ὀμφαλός*, navel]. A varicose condition of the navel.

- Cirsophthalmia** (*sir-soff-thal'-me-ah*) [κίρσος, varix; ὀφθαλμός, the eye]. 1. Ophthalmia, with an apparent varicose condition of the conjunctival vessels. 2. Corneal staphyloma, with an appearance of varicosity of the surface.
- Cirsotome** (*sir'-so-tom*) [κίρσος, a varix; τομή, a cutting]. A cutting instrument for the operation of cirsotomy.
- Cirsotomy** (*sir-sol'-o-me*) [κίρσος, varix; τέμνειν, to cut]. Excision of a varix.
- Cisma** (*sis'-mah*). Same as *Absus*.
- Cismatan** (*sis'-mat-an*). Same as *Absus*.
- Cissampelos** (*sis-am'-pel-os*) [κίσσω, ivy; ἄμπελος, a vine]. A genus of climbing menispermaceous plants. The root of *C. capensis*, of South America, is cathartic and emetic. *C. pareira*, of tropical America, false pareira brava (*g. v.*), is tonic and diuretic.
- Cistern** (*sis'-tern*) [*cisterna*, a vessel; receptacle]. 1. Any dilatation: reservoir. 2. Any dilatation of the space between the pia and arachnoid. The *cisterns* are true lymph-sacs. **C. of Pequet**. See *Receptaculum chyl.* **C. of the Cerebrum**. See *Cistern*, 2.
- Cisterna** (*sis-ter'-nah*) [L.]. Same as *Cistern*. **C. ambiens**, one of the pockets situated over the optic lobes. **C. magna**, a large cisterna where the arachnoid spreads across from the caudal border of the cerebellum to the oblongata. **C. perilymphatica**, in the ear, a large space adjacent to the foot-plate of the stapes.
- Cistus** (*sis'-tus*) [κίστος, the rock-rose]. A genus of plants of the order Cistaceæ, growing in the old world. **C. oreticus**, **C. cyprius**, **C. ladaniferus**, and **C. ledon** afford the drug ladanum, or ladanum.
- Citerior** (*si-te'-re-or*) [L., "hither"]. Brainward, centripetal, or afferent.
- Citrate** (*sit'-rät*) [*citrus*, citron-tree]. Any salt of citric acid.
- Citrene** (*sit'-rën*) [*citrus*, citron-tree],  $C_{10}H_{16}$ . Hesperidene; carvone. The oil of *Citrus aurantia*, and the chief ingredient of cedar oil, cumin oil, and dill oil. It occurs associated with pinene in lemon oil. It is an agreeable-smelling, colorless liquid, sp. gr. 0.846 at 20°, and boiling at 175–176°.
- Citric** (*sit'-rik*) [*citrus*, citron-tree]. Pertaining to or derived from lemons or citrons. **C. Acid**. See *Acid*.
- Citrine** (*sit'-rin*) [*citrus*, a lemon]. Yellow; of a lemon color. **C. Ointment**. See *Hydrargyrum*.
- Citronella** (*sit-ron-el'-ah*) [dim. of κίτρον, the citron-tree]. A fragrant grass. **C. Oil**, the essential oil of various grasses, mostly of the genus *Andropogon*; used chiefly as a perfume; antirheumatic. Unof.
- Citrus** (*sit'-rus*) [L.]. A genus of aurantiaceous trees. See *Aurantium*, *Bergamot*, *Lime*, *Limon*.
- Citrosis** (*sit-to'-sis*) [κίττα, κίσσα, pica]. Pica; a longing for strange or improper food.
- Civet** (*siv'-et*) [ME.]. A semi-liquid, unctuous secretion from the anal glands of *Livingia civetta*, *V. zibetha*, and *V. rasse*, carnivorous old-world animals, themselves called civets. It is now used as a perfume; formerly as an antispasmodic and stimulant, like musk. Unof.
- Civiale's Operations**. See *Operations*, Table of.
- Clacking Pivot**, or **Tenon** (*klak'-ing piv'-ot*). Clack pivot; a method of attaching an artificial crown to the root of a natural tooth; it was invented by Magiola.
- Cladocarpus** (*klad-o-kar'-pus*) [κλάδος, a branch; καρπός, fruit]. In biology, having the fruit borne at the end of short lateral branches.
- Cladoceros** (*klad-os'-er-us*) [κλάδος, a branch; κέρασ, horn]. In biology, with branched antennæ.
- Cladode** (*klad'-öd*) [κλάδος, a branch; εἶδος, form]. In biology, branch-like. See *Phyllocladum*.
- Cladodont** (*klad'-o-dont*) [κλάδος, a branch; ὄδους, tooth]. Same as *Hybodont*.
- Cladonea** (*klad'-o'-ne-ah*) [κλάδος, a branch]. A genus of lichens. **C. rangiferina**, the reindeer-moss; a lichen that grows extensively in Asia, Europe and N. America. It is used as a food in famine-seasons, and is locally distilled, affording an alcoholic spirit.
- Cladophyl** (*klad'-o-fil*) [κλάδος, a branch; φύλλον, a leaf]. In biology, a branch that in form mimics a leaf. Same as *Cladode*.
- Cladopsis** (*klad'-op-to'-sis*) [κλάδος, a branch; πίπτειν, to fall]. In biology, the annual falling of twigs bearing leaves instead of the leaves alone.
- Cladose** (*klad'-os*) [κλάδος, a branch]. In biology, ramose or branched.
- Cladothrix** (*klad'-o-thriks*) [κλάδος, branch; θρίξ, a hair]. A genus of bacteria, having long filaments, in pseudo-ramifications, with true spores. See *Bacteria*, *Synonymatic*, Table of.
- Clairaudience** (*klär-aw'-de-ens*) [Fr. *clair*, clear; *audience*, hearing]. The alleged telepathic hearing of sounds uttered at a great distance.
- Clairvoyance** (*klär-voi'-ans*) [Fr. *clair*, clear; *voir*, to see]. The alleged ability (in certain states), to see things not normally visible; the pretended ability to see the internal organs of a patient, and thus diagnose his ailments.
- Clamp** (*klamp*) [Ger. *Klampe*]. An instrument for compressing the parts in surgical operations, to fix them or to prevent hemorrhage, etc. **C., Gaskell's**, an instrument applied over the heart so that the pulsation of the auricles and ventricles may be separately registered; it is used in the study of cardiac pulsation.
- Clang** (*klang*) [κλάγγη, a clang]. A sharp metallic sound; a hoarse voice. **C.-deafness**, a defect of hearing in which sounds are heard, but their more delicate qualities are not perceived. **C.-tint**, the *timbre*, or delicate shading of a tone. See *Timbre*.
- Clap** (*klap*) [OF., *clapoir*, a venereal sore]. Gonorrhea. **C.-threads**, characteristic slimy threads in the urine of gonorrheal cystitis.
- Clapotage** (*klah-po-ta(h)zh'*) [Fr.]. The splashing sound of a liquid in succession.
- Clapping** (*klap'-ing*). See *Percussion* and *Tapotement*.
- Clapton's Lines**. See *Lines*, Table of.
- Claquement** (*klahk'-mon(g)*) [Fr., clapping, slapping]. 1. In massage, percussion with the flat of the hand. 2. The clack, or flapping sound caused by sudden closure of the heart-valves.
- Claret** (*klar'-et*) [*clarus*, clear]. A wine of a light-red color. **C.-red**. See *Pigments*, *Conspectus* of. **C. Stain**. Same as *Nævus maternus*.
- Clarificant** (*klar'-if-ik-ant*) [*clarus*, clear]. A substance used for the purpose of clearing solutions turbid from insoluble matter.
- Clarification** (*klar'-if-ik-a'-shun*) [*clarus*, clear; *facere*, to make]. The operation of removing the turbidity of a liquid or naturally transparent substance. It may be accomplished by allowing the suspended matter to subside, by the addition of a clarificant or substance that precipitates suspended matters, or by moderate heating. See *Fining*.
- Clarify** (*klar'-if-i*) [*clarus*, clear; *facere*, to make]. To free a liquid or solution from insoluble or heterogeneous substances. To make clear.
- Clarifying** (*klar'-if-i-ing*) [*clarus*, clear; *facere*, to make]. Clearing; purifying. **C. Reagent**, any preparation used for purifying microscopic and anatomic preparations that have been mounted in gummy media. Oil of cloves, turpentine, creasote, xylol, and oil of bergamot are the chief.

**Clarionet-player's Cramp.** See *Cramp*.

**Clark's Operation.** See *Operations, Table of*. **C.** (Alonzo), Sign. See *Signs and Symptoms, Table of*.

**Clarke's Corroding Ulcer.** An ulcer of the cervix uteri that shows a tendency to spread. **C. Inter-medio-lateral Tract.** See *Column of*. **C. Posterior Vesicular Column.** See *Column of*. **C. Process.** See *Water, Spawning of*. **C. Rule,** a rule for dosage. The dose is to be graded by the weight of the child. One hundred and fifty pounds is taken as the weight of an average human adult, and in order to obtain the fractional dose this number serves for the denominator of a fraction whose numerator corresponds to the weight of the child in avoirdupois pounds. Thus, the formula for a child of 50 pounds would be  $\frac{50}{150}$  or  $\frac{1}{3}$  of the dose for the adult.

**Clasmacytosis** (*klas-mah-si-to'-sis*). Same as *Clasmatocytosis*.

**Clasmatocyte** (*klas mat'-o-sit*) [*κλάσμα*, fragment; *κύτος*, cell]. A form of very large connective-tissue corpuscles that tend to break up into granules or pieces.

**Clasmatocytosis** (*klas-mat-o-si-to'-sis*) [*κλάσμα*, a fragment; *κύτος*, a cell]. The breaking up of clasmatocytes, and the formation of islands of granules from their debris.

**Clasp** (*klasp*) [ME., *claspēn*, to grasp firmly]. In mechanical dentistry, a hook fitted to a tooth and designed for the retention of a dental substitute or other apparatus to be worn in the mouth. In biology, an apparatus at the end of the male abdomen in certain insects, intended to grasp the female. **C.-knife** Rigidity, a reflex spasmodic action of the legs from increased myotatic irritability, as a result of which extension is, as it were, completed with a "spring," as in the knife.

**Classification** (*klas-if-ik-a'-shun*) [*classis*, a class; *facere*, to make]. An orderly arrangement of names, objects, diseases, etc., according to their properties and peculiarities.

**Clastothrix** (*klas'-to-thriks*). Synonym of *Trichorrhaxis nodosa*.

**Clathrate** (*klath'-rat*) [*κλῆθρα*, a lattice]. In biology, latticed; a name given by Mohl to cribriform cells; also written clathroid.

**Clathrocystis** (*klath-ro-sis'-tis*) [*κλῆθρα*, a trellis; *κύστις*, pouch]. A genus of microbes with round or oval cells, forming zoöglææ in the form of circular layers. See *Bacteria, Synonymatic Table of*.

**Clathrose** (*klath'-ros*) [*κλῆθρα*, a lattice]. In biology, having deep furrows crossing at right angles.

**Claudication, or Claudicatio** (*klaw-dik-a'-shun*, *kla-tik-a'-he-o*) [*claudicare*, to halt or limp]. The act of limping; lameness.

**Claudius, Doctrine of.** The doctrine that, in the production of fetal monstrosities, attributes the atrophic changes primarily to the reversal and impairment of the circulation, consequent upon the overpowering vigor of the stronger fetus. **C., Cells of,** the outer epithelial layer of the ducts of the cochlea.

**Claustrophobia** (*klaw-tro-fō-be-ah*) [*claustra*, a bolt; *φοβία*, fear]. Morbid distress at being in any room or confined space; clithrophobia.

**Claustum** (*klaw'-trum*) [*claudere*, to shut; *pl.*, *Claustri*]. A barrier; applied to several apertures that may be closed against entrance. Also, a layer of gray matter in the cerebrum near the lenticular nucleus.

**Clausura** (*klaw-u'-rik*) [L.]. Closure; atresia; as of a passage. **C. tubalis**, closure of a Fallopiian tube. **C. uteri**, an imperforate state of the uterine cervix.

**Clava, Clavola, or Clavolet** (*klav'-vuh*, *klav'-vo lah*, or *klav'-o-let*) [*clava*, a club]. 1. In biology, clubbed

at the end, as the antennæ of certain insects. 2. See *Funiculus gracilis*.

**Clavate** (*klav'-at*) [*clava*, a club]. In biology, club-shaped. Applied to a stigma, antenna, or other organ that is thick toward the apex and gradually narrowed toward the base.

**Clavation** (*klav-a'-shun*) [*clavatio*; *clavus*, a nail]. Same as *Gomphosis*.

**Clavelization** (*klav-el-iz-a'-shun*) [Fr., *clavelée*, sheep-pox]. Inoculation with sheep-pox virus; ovination.

**Claven, or Claviculen** (*klav'-ven*, *klav-ik'-u-len*) [*clavis*, a key]. Belonging to the clavicle in itself.

**Claviceps** (*klav'-is-eps*) [*clava*, club; *caput*, head]. A genus of fungi. **C. purpurea**, the fungus producing the ergot of rye.

**Clavicle** (*klav'-ik-l*) [*clavicula*; *clavus*, a key]. The collar-bone. See *Bones, Table of*.

**Clavicular** (*klav-ik'-u-lar*) [*clavus*, a key]. Relating to the clavicle.

**Clavilla marginales** (*klav-il'-ah mar-jin-a'-l-ēz*) [L.]. The "olfactory clubs" or marginal clubs in *Medusæ*; also called *Cordyli marginales*.

**Clavula** (*klav'-u-lah*) [*clava*, a club]. In biology, applied to various clubbed organs; as, a knobbed bristle in echinoderms, or the swollen receptacle of some fungi.

**Clavus** (*klav'-vus*) [*clavus*, a nail, a wart, a corn]. Corn; a hyperplasia of the horny layer of the epidermis, in which there is an ingrowth as well as an outgrowth of horny substance, forming circumscribed epidermal thickenings, chiefly about the toes. Corns may be *hard* or *soft*, the latter being situated between the toes, where they are softened by maceration. Both forms are due to pressure and friction. **C. hystericus**, a local neuralgic pain in hysteria, anemia, etc., in the head, as if a nail were being driven in.

**Claw** (*klaw*) [AS., *clawon*, a claw]. The stalk, or contracted base of a petal. In biology, the hooked limb or appendage of an animal. **C.-hand**, a condition of the hand characterized by over-extension of the first phalanges and extreme flexion of the others. The condition is a result of atrophy of the interosseous muscles, with contraction of the tendons of the common extensor and long flexor. (French, *main-en-griffe*.)

**Clayed Sugars** (*klād sug'-arz*). Sugars that have been freed from the dark molasses by covering them in moulds by moist clay, which allows of a gradual washing and displacement of the adhering syrup.

**Cleaning** (*klen'-ing*) [ME., *clensen*, to make clean]. Cleansing; removal of dirt; purifying. **C. Mixture for Glass**, 1. Potassium bichromate 2 parts, water to parts, sulphuric acid 10 parts; dissolve the potassium in the water with heat, pour into a warm bottle, add the sulphuric acid slowly and at intervals. 2. Nitric acid (conc.) 2 parts, sulphuric acid 3 parts.

**Cleansings** (*klen'-zingz*) [ME., *clensen*, to clean]. The lochia.

**Clearer** (*kler'-er*). See *Clearing Mixture*.

**Clearing** (*kler'-ing*) [ME., *cleren*, to make clear]. Clarification; making clear. See *Fining*. **C. Agent**, a substance used in microscopy to render tissues transparent and suitable for mounting. *To replace alcohol in a dehydrated section*, creasote, turpentine, xylol, and the oils of bergamot, cedar, cloves, and organum are used. *For celloidin sections*, Bergamot or cedar oil or creasote is preferable. *Before mounting vegetable sections*, glycerin, solution of carbolic acid, liquor potassæ, alcoholic solution of potash, liquor ammonie, solution of chloral hydrate, Javelle water, Labarraque's solution, are used. See *Stains, Table of*. **C. Mixture**, a fluid used in microscopy for rendering sections trans-

parent after dehydration. It must be miscible with the mounting medium. A very satisfactory and generally applicable mixture is the following: Carbolic acid crystals 4 parts, rectified oil of turpentine 6 parts.

**Cleavage** (*kle'-vaj*) [ME., *cleven*]. 1. The linear clefts in the skin indicating the general direction of the fibers. They govern to a certain extent the arrangement of the lesions in skin-diseases. The lines of cleavage run, for the most part, obliquely to the axis of the trunk, sloping from the spine downward and forward; in the limbs they are mostly transverse to their longitudinal axis. 2. A mode of cell-division.

**Cleavers** (*kle'-verz*). See *Galium aparine*.

**Cleft** (*kleft*) [ME., *clift*]. 1. A fissure; crevice. 2. The crotch, or point of junction of the legs. 3. In botany, divided half-way, as a leaf. **C. Face**. See *Schistoprosopia*. **C.**, **Ocular**, a fissure in the embryo, leading from the mouth to the eye. It is situated between the fronto-nasal process and the superior maxillary plate. **C.**, **Olfactory**. See *Olfactory*. **C. Palate**, a congenital malformation of the palate, usually occurring with hare-lip. **C. Sternum**, congenital fissure of the sternum. **C.**, **Visceral**, or *Branchial*. The four slit-like openings on each side in the cervical region in the fetus, sometimes called the *Branchial openings*. The slits close (in the human fetus), except the upper, from which are developed the auditory meatus, tympanic cavity and Eustachian tube. See *Branchial Clefts*.

**Cleidal** (*kli'-dal*) [*κλεις*, clavicle]. Relating to the clavicle; clavicular.

**Cleido-** (*kli'-do-*) [*κλεις* the clavicle]. A prefix, meaning a relation to the clavicle.

**Cleido-hyoid** (*kli'-do-hi'-oid*) [*κλεις*, clavicle; *ὑοειδής*, shaped like the letter upsilon]. Relating to the clavicle and the hyoid.

**Cleido-mastoid** (*kli'-do-mas'-toid*) [*κλεις*, the clavicle; *μαστός*, the breast; *ειδός*, like]. Pertaining to the clavicle and to the mastoid process.

**Cleistocarp** (*kli'-to-karp*) [*κλειστός*, that may be closed; *καρπός*, fruit]. In biology, an ascocarp in which the spores are completely enclosed and from which they escape by the rupturing of its walls.

**Cleistogamy** (*kli'-tog'-am-e*) [*κλειστός*, that may be closed; *γάμος*, marriage]. In biology, self-fertilization in closed flowers.

**Cleithrophobia** (*kli-thro-fó'-be-ah*) [*κλειθρον*, a bolt; *φόβος*, fear]. Same as *Claustrophobia*, but a better formed word.

**Clematin** (*klem'-at-in*) [*κληματισ*, clematis]. An alkaloid from *Clematis vitalba*.

**Clematis** (*klem'-at-is*) [*κληματισ*, clematis]. A genus of ranunculaceous plants of many species, most of which are acid or poisonous. **C. corymbosa** is powerfully irritant and resistant. **C. crispa** and **C. erecta** are diuretic and diaphoretic, and are said to be antisiphilitic. **C. viorna**, **C. virginica**, and **C. vitalba** are similar in properties to *C. erecta*.

**Clemens' Solution**. See *Arsenium*.

**Clemot's Operation**. See *Operations, Table of*.

**Cleptomania** (*klep-to-ma'-ne-ah*). See *Kleptomania*.

**Cleptophobia** (*klep-to-fó'-be-ah*). See *Kleptophobia*.

**Clergyman's Sore-Throat**. A chronic hypertrophic form of pharyngitis, with more or less enlargement of the tonsils and lymph-follicles of the posterior wall, due to excessive and improper use of the voice. Dysphonia clericorum. See also *Pharyngitis, Granular*.

**Clerk-Maxwell's Experiment**. See *Löwe's Ring*.

**Clethrophobia** (*kleth-ro-fó'-be-ah*) [*κλειθρον*, a bar, bolt; *φόβος*, fear]. Same as *Claustrophobia*.

**Cleaver's Fissure**. See *Fissures, Table of*.

**Clichy White**. Same as *White Lead*.

**Clicking Sounds** (*klik'-ing soundz*). Peculiar sharp sounds heard in auscultating the apex of a tuberculous lung. They indicate the commencement of softening in a tuberculous deposit. See *Râle*.

**Cliff-Rose** (*klif'-roz*). See *Alonsenel*.

**Climacteria** (*kli-mak-te'-re-ah*). Syn. of *Menopause*.

**Climacteric** (*kli-mak-ter'-ik*, or *kli-mak'-ter-ik*) [*κλιμακτήριον*, the round of a ladder]. A period of the lifetime at which the system was believed to undergo marked changes. These were at yearly periods divisible by seven. **C. Age**, puberty; also in women the time of cessation of the catamenia. **C.**, **Grand**, the 63d year, also the 81st year. **C. Dentition**. See *C. Teething*. **C. Insanity**. See *Insanity*. **C. Teething**, the development of teeth at a very late period of life, after the loss of those of the second dentition, and usually between the sixty-third and eighty-first year, the grand climacteric years of the Greek physiologists.

**Climate** (*kli'-mat*) [*κλίμα*, a region, or zone, of the earth]. The sum of those conditions in any region or country that relate to the air, the temperature, moisture, sunshine, winds etc., especially in so far as they concern the health or comfort of mankind. Climate is an essential factor in the production of or modification of certain diseased conditions. This influence depends upon the nearness of the country to large bodies of water, its altitude above the sea-level, the peculiarities of its atmosphere, the nature and composition of its soil and subsoil, and the character of its vegetation. The most equable climate is that of the ocean, and next from a therapeutic point of view stands the sea-coast. The climate of mountains is especially lauded for the treatment of pulmonary disease. Its value consists in the rarefaction of the atmosphere and the freedom from particles and germs. Climate also plays an important part in the management of hay-fever and other diseases.

**Climatic** (*kli-mat'-ik*) [*κλίμα*, a region or zone of the earth]. Pertaining to climate.

**Climatology** (*kli-mat-ol'-o-je*) [*κλίμα*, climate, a clime; *λόγος*, science]. The science of climate.

**Climatotherapy** (*kli-mat-o-ther'-a-pe*) [*κλίμα*, clime; *θεραπεία*, a waiting on]. The employment of climatic measures in the treatment of disease.

**Climbing Staff-tree**. False Bittersweet. The bark of the root of *Celastrus scandens*, alterative, diuretic and slightly narcotic. It has been advantageously employed in syphilitic and scrofulous affections. Dose of fld, ext. ʒj-ij. Unof. See *Celastrus*.

**Clinandrium** (*klin-an'-dre-un*) [*κλινη*, a bed; *άνθρωπος*, a man]. In biology, a cavity at the apex of the column in orchids in which the anthers rest. This is also called the *Androclinium*.

**Clinanthem** (*klin-an'-the-un*) [*κλίμη*, bed; *άνθος*, a flower]. In biology, the receptacle of a composite plant.

**Clinic** (*klin'-ik*) [*κλινικός*, pertaining to a bed]. 1. Medical instruction given at the bedside, or in the presence of the patient whose symptoms are studied and whose treatment is considered. 2. A gathering of instructors, students, and patients, for the study and treatment of disease.

**Clinical** (*klin'-ik-al*) [*κλινικός*, pertaining to a bed]. Relating to bedside treatment, or to a clinic.

**Clinician** (*klin-ish'-an*) [*κλινικός*, pertaining to a bed]. A physician whose opinions, teachings, and treatment are based upon experience at the bedside; a clinical instructor; one who practises medicine.

**Clinicist** (*klin'-is-ist*) [*κλινικός*, pertaining to a bed]. A clinician.

**Clinocephalia** (*kli-n' sej-af'-le-ah*) [*κλίση*, bed: *κρούνη*, head]. Abnormal flatness of the top of the head.

**Clinocephalous** (*kli-n' se-f'-a-l-us*) [*κλίση*, bed: *κρούνη*, head]. Having the top of the head abnormally flat.

**Clinodactylous** (*kli-n'-dak' (tl'-us)*) [*κλινόν*, to flex or lie; *δακτύλος*, finger]. Pertaining to an abnormal flexure, deviation or curvature of the fingers or toes.

**Clinoid** (*kli'-noy'd*) [*κλινός*, a bed; *εἶδος*, likeness]. Resembling a bed; applied to sundry bony structures of the body, as the clinoid processes, plate, walls, etc.

**Clinostat** (*kli' ne-stat's*) [*κλίνειν*, to incline; *στατός*, placed]. An apparatus for regulating the exposure of plants to the sunlight.

**Clip** (*kli-p*). See *Cinereus*.

**Clire, or Clyers** (*kli'-er, or kli'-ers*) [E. dial.]. Tuberculous disease of cattle. See *Kirriels*.

**Cliseometer** (*kli-se-om'-et-er*) [*κλίσις*, inclination; *μέτρον*, a measure]. An instrument for measuring the degree of inclination of the pelvic axis.

**Clistocarpous** (*kli-to-kar' p-us*) [*κλίστος*, that can be closed; *καρπός*, fruit]. In biology, having a closed capsule, as certain mosses.

**Clithrophobia** (*kli-th-ro-f'-le-ah*). Same as *Cleithrophobia*.

**Clitoralgia** (*kli-t'er-af'-je-ah*) [*κλиторίς*, the clitoris; *αλγία*, pain]. Pain referred to the clitoris.

**Clitoridectomy** (*kli-t'er-id-ek'-to-me*) [*κλиторίς*, clitoris; *ἐκτομή*, excision]. Excision of the clitoris.

**Clitoris** (*kli-t'er-is*) [*κλиторίς*, clitoris]. The homologue in the female of the penis, attached by two crura or branches to the ischio-pubic rami, which meet in front of the pubic joint to form the body, or *corpus*. The so-called "gland" is such only in appearance and name. **C. Crises**, paroxysms of sexual excitement in women suffering from tabes.

**Clitorism** (*kli-t'er-izm*) [*κλиторίς*, the clitoris]. 1. Enlargement or hypertrophy of the clitoris. 2. Tribadism.

**Clitoritis** (*kli-t'er-itis*) [*κλиторίς*, clitoris; *ιτις*, inflammation]. Inflammation of the clitoris.

**Clitorotomy** (*kli-t'er-ot'-o-me*). Incision of the clitoris.

**Clitorrhagia** (*kli-t'er-af'-je-ah*) [*κλиторίς*, clitoris; *ῥήγναι*, to burst]. Hemorrhage from the clitoris.

**Clivus** (*kli'-vus*) [L., a slope]. A slope. **C. Osis**, or **C. of Blumenbach**, the slanting surface of the body of the sphenoid between the dorsum sellae and the basi occipital.

**Cloaca** (*klo-a'-kah*) [*cloaca*, a sewer]. 1. In early fetal life, the common orifice of the intestine and the allantois. 2. In surgery, the long canal of escape of pus from a necrotic sequestrum. 3. In biology, the chamber into which open the large intestine and urogenital ducts of birds, amphibians and monotremata.

**Cloacal** (*klo-a'-kal*) [*cloaca*, a sewer]. Pertaining to or serving as a cloaca.

**Clonic** (*kli-n'-ik*) [*κλόνος*, commotion]. Applied to convulsive and spasmodic conditions of muscles in which alternate contractions and relaxations occur involuntarily.

**Clonici** (*kli-n'-is-i*) [L.]. Diseases marked by clonic spasm.

**Clonism, Clonismus** (*klo' nizm, klo-niz'-mus*) [*κλόνος*, commotion]. A clonic spasm; clonospasm.

**Clonospasm** (*kli-n'-o-spazm*) [*κλόνος*, commotion; *σπασμός*, a spasm]. A clonic spasm.

**Clonus** (*kli-nus*) [*κλόνος*, commotion]. Involuntary, reflex, irregular contractions of muscles when put suddenly upon the stretch. According to the part stimulated, the phenomenon is spoken of as *ankle, foot, rectal*, or *wrist C.*, etc. See *Reflexes*, Table of. It is a valuable diagnostic sign in certain lesions of the spinal cord. **Cathodal closure clonus**, and **Cath-**

**dal opening clonus**, etc. See *Contraction*. See *Ankle C.*, *Wrist C.*, etc.

**Clopemania** (*klo-pe-ma'-ne-ah*) [*κλοπή*, robbery; *μανία*, mania]. See *Kleptomania*.

**Cloquet, Angle of**. See *Angle C.*, *Canal of*. See *Canals*, and *Hyaloid Artery C.*, *Fascia of*, the septum crurale, *q. v.* **C., *Ganglion of*. See *Ganglia*, Table of. **C., *Hernia of*. See *Hernia*, and *Diseases*, Table of. **C., *Needle Test of*. See *Death*, *Signs of*. **C., *Operation of*. See *Operations*, Table of. **C., *Pseudoganglion of*. See *Pseudoganglion*.**********

**Closing Tetanus** (*klo'-zing tel'-an-us*). See *Gazzanotinus*.

**Clostridial** (*klos-trid'-e-al*) [*κλωστήρ*, a spindle]. Referring to spindle-shaped bacilli and especially to the agent of the butyric acid fermentation.

**Clostridium** (*klos-trid'-e-um*) [*κλωστήρ*, a spindle; *πλ.*, *Clostridia*]. A genus of bacteria, differing from bacilli in the fact that their spores are formed in characteristically enlarged rods. See *Bacillus butyricus*, under *Bacteria*.

**Closure** (*klo'-zür*) [*clausura*, a closing]. The act of completing or closing an electric circuit. According as a closure is anodal or cathodal, its effects may so differ as to give it a marked significance in diagnosis.

**Clot** (*klot*) [ME., *clot*, a round mass]. A coagulum, especially that of blood; a crassamentum. See *Thrombus*, *Embolism*. **White clots** are formed of the pure fibrin of white corpuscles and of blood-plaques. If the white clot has become slightly stained with red blood-cells, it becomes yellowish (*chicken-fat clot*); if it be red and soft, it is a *currant-jelly clot*. **Stratified clots** contain layers of more than one variety. **C. Distal**, a clot formed in a vessel beyond the seat of ligature. **C.-districts**, the small divisions into which a clot is broken by the dissemination through it of the fibroblastic plasma-corpuscles. **C.**, **Proximal**, the clot formed in a vessel above the seat of ligature.

**Clotbur** (*klot'- or klot'-bur*). The leaves of *Xanthium strumarium*, much used as a domestic remedy for bites of poisonous insects and venomous serpents. Also an active styptic. Dose of the fluid extract ʒj-ij. Unof. See also *Spiny Clotbur*.

**Clottage of the Ureters**. An operation proposed in case of hematuria from a kidney hopelessly crushed or with advanced carcinoma. The procedure consists in blocking or corking up the ureter with a clot.

**Cloudberry** (*klozd'-ber-e*). The leaves of *Rubus chamaemorus*, used in Russia as a diuretic. Dose ʒj to a cupful of boiling water. Unof.

**Cloudy Swelling**. Parenchymatous degeneration; a swelling up of the elements of a tissue by imbibition or accretion, a form of hypertrophy with a tendency to degeneration.

**Clove** (*klov*). See *Caryophyllus*. **C.-hitch Knot**, a form of double-knot in which two successive loops are made close to one another on the same piece of cord or bandage, a half-twist being given to the junction of each loop at the time of making it. See *Knot*.

**Clover's Gas and Ether Inhaler**. See *Anesthetic*.

**Clownism** (*klovn'-izm*) [ME., *clowne*]. Charcot's term for that stage of hystero-epilepsy in which there is an emotional display and a remarkable series of contortions or cataleptic poses.

**Club** (*klub*) [ME., *club*, a club]. In biology, a broad ending of an antenna. **C.-foot**. See *Tulipes*. **C.-hand**, a deformity of the hand similar to that of club-foot.

**Clubbed Fingers** (*klubd fing'-gers*). Knobbed deformity of the finger-ends, with curvature of the nails, seen in some cases of pulmonary and cardiac disease.

**Clyers** (*kli'-erz*). See *Clive* and *Kernels*.

**Clypeate** (*klipt'-e-at*) [*clypeus*, a shield]. In biology, shaped like a buckler.

**Clyster** (*kliis'-ter*) [*κλύσθηρ*, an injection]. An enema.

**Cnemis** (*ne'-mis*) [*κνυμῖς*, a legging]. The tibia or shin-bone.

**Cnemitis** (*ne-mi'-tis*) [*κνίμη*, shin; *τις*, inflammation]. Inflammation of the tibia.

**Cnicin** (*ni'-sin*) [*κνίκος*, a plant of the thistle kind],  $C_{12}H_{26}O_{15}$ . A crystalline bitter substance found in *Blessed Thistle*.

**Cnidoblast** (*ni'-do-blast*) [*κνίδη*, a nettle; *βλαστός*, a germ]. In biology, the budding thread-cell or urticating cell.

**Cnidocell** (*ni'-do-cell*) [*cnida*, a nettle; *cella*, a cell]. In biology, a lasso-cell, nematocyst, or urticating cell.

**Cnidocil** (*ni'-do-sil*) [*cnida*, a nettle; *cilium*, an eyelash]. In biology, the thread of a nematocyst.

**Cnidophorous** (*nid-off'-or-us*) [*κνίδη*, a nettle; *φέρειν*, to bear]. In biology, bearing lasso-cells or nematocysts.

**Cnidosis** (*ni-doi'-sis*) [*κνίδη*, nettle]. Urtication; nettle-rash.

**Coacervate** (*ko-as-er-vat*) [*coacervare*, to heap up]. In biology, clustered, bunched; said of grains or flowers.

**Coach** (*kōch*). See *Quizzer*.

**Coachmen's Cramp**. See *Cramp*.

**Coädnate** (*ko-ad'-nat*) [*con*, together; *adnatus*, bunched]. In biology, clustered.

**Coagulant** (*ko-ag'-u-lant*) [*coagulare*, to curdle]. 1. Causing the formation of a clot or coagulum. 2. A coagulating agent.

**Coagulated** (*ko-ag'-u-la-ted*) [*coagulare*, to curdle]. Clotted; curdled. **C. Proteids**, a class of proteids produced by heating solutions of egg-albumin or serum-albumin globulin suspended in water or dissolved in saline solutions, up to 100° C. At the body-temperature they are readily converted into peptones by the action of the gastric juice in an acid, or of pancreatic juice in an alkaline medium.

**Coagulation** (*ko-ag'-u-la'-shun*) [*coagulatio*, a clotting]. The formation of a coagulum or clot, as in blood or in milk.

**Coagulative** (*ko-ag'-u-la-tiv*) [*coagulare*, to curdle]. Causing or marked by coagulation. **C. Necrosis**. See *Necrosis*.

**Coagulum** (*ko-ag'-u-lum*) [*coagulare*, to curdle: *pl.*, *Coagula*]. Clot. The mass of fibrin, enclosing red and colorless corpuscles and serum, that forms from the plasma of the blood after the latter has been drawn from the body. Also, the curd of milk, and the insoluble form of albumin.

**Coal** (*kōl*) [ME., *cole*]. A solid and more or less distinctly stratified mineral, varying in color from dark-brown to black, brittle, combustible, and used as a fuel; not fusible without decomposition, and very insoluble. **C., Anthracite**, the hard variety of coal, used largely as a heating-agent. It contains but little hydrogen, and is mainly (over 90 per cent.) composed of pure carbon. **C., Bituminous**, is black or grayish-black in color, of a resinous luster, and somewhat friable, being easily broken into cubical fragments of more or less regularity; upon ignition it burns with a yellow flame. When heated to bright redness in retorts or ovens, free from the access of air, the volatile matter, composed of carbon compounds of hydrogen and oxygen with water, passes off. It is used in the manufacture of gas. **C., Cannel** is much more compact than gas or coking coals, duller in appearance, possessing a grayish-black to brown color, and burning with a clean candle-like flame. It does not soil the hands, and is not readily

fractured. **C., Brown**, or **Lignite**, appears to occupy an intermediate position between the bituminous coals and wood. It retains the ligneous structure of the material from which it is formed, hence the name *Lignite*. The vegetable remains are in a great many cases quite distinct. The color varies from yellowish-brown in the earthy, to black in the more compact, coal-like varieties. It does not yield coke. It is used as fuel in some localities. *Peat*, or *Turf*, occurring in large areas in Ireland and in some parts of Europe, consists of the decayed remains of certain forms of plants. It has been destructively distilled for tarry products, without profit, however. **C.-miner's Lung**. See *Miner's Lung*. **C.-tar**, a by-product in the manufacture of illuminating gas; it is a black, viscid fluid of a characteristic and disagreeable odor. The specific gravity ranges from 1.10 to 1.20. Its composition is extremely complex, and its principal constituents are separated, one from the other, by means of fractional distillation. **C.-tar Colors**. See *Pigments, Colors*, and *Dyestuffs*.

**Coalescence** (*ko-al-es'-ens*) [*coalescere*, to grow together]. The union of two or more parts or things.

**Coaptation** (*ko-ap-tu'-shun*) [*con*, together; *aptare*, to fit]. The proper union or adjustment of the ends of a fractured bone, the lips of a wound, etc.

**Coarctate** (*ko-ark'-tat*) [*coarctare*, to press together]. Crowded together.

**Coarctation** (*ko-ark-tu'-shun*) [*coarctare*, to put together]. A compression of the walls of a vessel or canal, thus narrowing or closing the lumen; reduction of the normal or previous volume, as of the pulse; shrivelling and consequent detachment, as of the retina. A stricture.

**Coarctotomy** (*ko-ark-tot'-o-me*) [*coarctatus*, constricted; *τεμνειν*, to cut]. The cutting of a stricture.

**Coarse** (*kōrs*) [ME., *cours*]. Not fine; gross. **C. Adjustment**. See *Adjustment*. **C. Features of Disease**, macroscopic organic lesions, such as tumor, hemorrhage, etc.

**Coarticulation** (*ko-ar-tik-u-la'-shun*) [*con*, together; *articulare*, to join, articulate]. A synarthrosis.

**Coat** (*kōt*) [*cottus*, a tunic]. A cover, or membrane covering a part or substance. **C., Buffy**, the upper fibrinous layer of the clot of coagulated blood, marked by its color, and absence of red-corpuscles.

**Coates's Operation**. See *Operations, Table of*.

**Coating** (*kōt'-ing*) [*cottus*, a tunic]. A covering, as of a wound, the tongue, etc. **C. of the Tongue**, a condition of the tongue indicative of abnormality of the digestive tract. **C. of Pills**, a covering of various substances to conceal the taste in swallowing.

**Cobalt** (*kōl'-barell*) [*Kobold*, a German mythologic goblin]. A tough, heavy metal having some of the general properties of iron. Its oxides have been employed in medicine, but are now very little used. See *Elements, Table of*. **C.-blue**. See *Pigments, Conspectus of*. **C.-green**. Same as *Rinmann's Green*. **C.-red**. See *Pigments, Conspectus of*. **C.-ultra-marine**. Same as *Cobalt-blue*. **C.-yellow**. See *Pigments, Conspectus of*.

**Cobweb** (*kōb'-web*) [ME., *cobweb*, a spider's web]. *Tela araneæ*, spider's web. The web of a common house spider, *Tegeneria domestica*. It is a styptic recommended for bleeding after tooth-extraction, and in pulmonary tuberculosis, in 30-grain doses. It forms a serviceable moxa, with the aid of the blowpipe.

**Coca** (*kō'-kah*). See *Erythroxylon*.

**Cocain** (*kōl'-kah-in*, or *kōl'-kān*) [S. A., *coca*],  $C_{17}H_{21}NO_4$ . The chief alkaloid extract of *Erythroxylon coca*. It is at first stimulant and afterward narcotic, and resembles *caffein* in its action on the nerve-centers, and

*atropin* in its effects on the respiratory and circulatory organs. Its long-continued use (*cocain-habit*) is followed by insomnia, decay of moral and intellectual power, emaciation, and death. Locally, it is a powerful anesthetic in a limited area of surface. It acts most rapidly on mucous tissues. Applied to the conjunctiva of the eye it causes also dilatation of the pupil and paralysis of the function of accommodation. Applied to the tongue it temporarily destroys the sense of taste. Dose gr. 1/8-1/2. See also *Anesthetic*. **C.-Bug**, an imaginary insect which cocaineomaniacs frequently think they are infested with; a belief that is probably due to some formicational sense-perversion. **C.**, **Ceratum**, 1 in 30, for burns, etc. **C. Citras**, used in dentistry to ease aching teeth. **C. Hydrochloras**, or chlorid of cocain,  $C_{17}H_{21}NO_4Cl$ , more properly cocain chlorid, most commonly used for local anesthesia in 2-8 per cent. solution. Dose, internally, gr. 1/16-1/8. **C. Hydrochlorat.**, **Liquor**. (B.P.). Dose 1/2-1. **Injectio C. Hydrochlorat.**, **Hypoderm.**; 1 grain in 20 minims. **C.**, **Lamellæ** (B.P.), each containing gr. 1/16 of cocain hydrochlorate. **C. Oleas**, a 10 per cent. solution in oleic acid, for external use. **C. Phenas** or **Carbolas**, a topical application in catarrhs and in rheumatism. Used as a five to ten per cent. alcoholic solution, also internally, gr. 1/12-1/6.

**Cocainism** (*ko-ka'-in-izm*) [S. Amer. *coca*]. The cocain-habit.

**Cocainization** (*ko-ka-in-iz-a'-shun*) [S. Amer., *coca*]. The bringing of the system or organ under the influence of cocain.

**Cocainomania** (*ko-ka-in-o-ma'-ne-ah*) [*cocain*; *μανία*, madness]. The habit of using cocain; properly, insanity due to the cocain-habit.

**Cocainomaniac** (*ko-ka-in-o-ma'-ne-ak*) [*cocain*; *μανία*, madness]. One who is insane from the effects of cocain.

**Cocamin** (*ko'-kam-in*) [S. Amer. *coca*; *amin*],  $C_{17}H_{23}NO_4$ , Truxillin, or Isotropyl-cocain; an alkaloid from *coca*. It has active properties, but its physiologic effects are little known.

**Coccaceæ** (*kok-kas'-e-e*) [Fr., *coccacées*; *κόκκος*, a kernel]. A group of schizomycetous fungi, or bacteria, including as genera the *Micrococcus*, *Sarcina*, *Asco-coccus*, and *Leuconostoc*. The elements are normally spherical, reproduction usually taking place by division. Some writers place the genus *Leuconostoc* alone in this group; others exclude it entirely.

**Coccidia** (*kok-sid'-e-ah*) [*κόκκος*, a berry]. The so-called *psorospermia*—minute oval structures about 0.035 mm. long, with a thick capsule and coarsely granular contents. They are frequently found in the liver of the rabbit, and have been found in the liver, in a pleuritic exudate, and in the kidney, ureter, and heart-muscle in man. The organism is more properly called *Coccidium oviforme*, while the spores that it forms are termed *psorospermia*.

**Coccidiosis** (*kok-sid-i'-o-sis*) [*κόκκος*, a berry; *νόσος*, disease]. The group of symptoms produced by the presence of coccidia in the body.

**Coccidium** (*kok-si'-e-um*) [*κόκκος*, a berry; *πλ.*, *Coccidia*]. 1. In biology, applied (a) to the spore-bearing conceptacle of certain algae, and (b) to egg-shaped psorosperms. 2. A genus of protozoans, by some referred to as the so-called psorosperms (see *Psorosperm*). See *Coccidia*. **C. oviforme** has been found in intestinal epithelium, and in the liver of man, and often in the liver of the rabbit. True coccidia are non-motile cell parasites. **C. sarkolytus**, the name given by Adamkiewicz to the parasite of carcinoma.

**Coccollana** (*kok-sil-a'-n-ah*) [S. Amer.]. The bark of *Guarea acuminata*, of the W. Indies, a tree of the fam-

ily *Meliaceæ*, an emetic and purgative; in over-doses it is poisonous as an irritant narcotic. It acts locally upon the mucous membrane when directly applied or when absorbed. It is commended for bronchial catarrh. Dose of fl. ext. 1/2-xxx. Unof.

**Coccinella** (*kok-sin-el'-ah*). See *Cochineal*.

**Coccinellin** (*kok-sin-el'-in*), or **Coccinellina** (*kok-sen-el'-ei-na*). See *Carmin*.

**Coccinin** (*kok'-sin-in*) [*coccinus*, scarlet],  $C_{14}H_{12}O_5$ . 1. A substance obtained by heating carmic acid with potassium hydrate. It crystallizes in yellowish leaflets from an alcoholic solution. 2. A coal-tar color belonging to the azo-group. Same as *Nero Coccin* and *Phenotol Red*.

**Coccobacteria** (*kok-o-bak-te'-re-ah*) [*κόκκος*, a kernel; *βακτηριον*, a little rod]. The rod-like or spheroidal bacteria found in putrefying liquids, and called *C. septica*. See *Bacteria*, *Synonymatic Table of*.

**Coccoloba** (*kok-ol'-o-bah*) [*cocolobis*, a kind of grape]. A genus of polygonaceous trees of tropical America. **C. uvifera**, the sea-side grape, has a hard and valuable wood, which, when boiled, yields what is called Jamaica kino.

**Coccomelasma** (*kok-o-mel-az'-mah*) [*κόκκος*, berry; *μέλασμα*, blackness]. A granular dermal melanosis.

**Cocculus** (*kok'-u-lus*) [dim. of *coccus*, a berry]. A genus of menispermaceous plants of the tropics. **C. indicus**, is the dried fruit of *Anamirta cocculus*. It is an active narcotic poison, and is employed as a destroyer of vermin; its preparations have proved serviceable for headaches, dysmenorrhea, etc. See *Picrotoxin*.

**Coccus** (*kok'-us*) [*κόκκος*, a berry]. 1. A cell or capsule. 2. In biology, (a) the separable carpels or mitlets of dry fruits; (b) a spherical bacterium, a micrococcus. **C. cacti**, the cochineal insect. See *Cochineal*.

**Coccyalgia** (*kok-se-al'-je-ah*) [*κόκκυς*, coccyx; *ἄλγος*, pain]. Coccygodynia.

**Coccydynia** (*kok-se-din'-e-ah*). See *Coccygodynia*.

**Coccygalgia** (*kok-sig-al'-je-ah*). See *Coccygodynia*.

**Coccygeal** (*kok-sij'-e-al*) [*κόκκυς*, coccyx]. Pertaining to the coccyx.

**Coccygectomy** (*kok-sig-ek'-to-me*) [*κόκκυς*, coccyx; *ἐκτομή*, excision]. Surgical excision of the coccyx.

**Coccygeus** (*kok-sij'-e-us*) [*κόκκυς*, coccyx]. One of the pelvic muscles. See *Muscles*, *Table of*.

**Coccygodynia** (*kok-sig-o-din'-e-ah*) [*κόκκυς*, coccyx; *ὀδύνη*, pain]. Pain referred to the region of the coccyx; confined almost exclusively to women who have given birth to children. The pain is due to a rupture or stretching of the ligaments surrounding the coccyx, or to fracture or dislocation of that bone.

**Coccygotomy** (*kok-sig-ot'-o-me*) [*κόκκυς*, coccyx; *τομή*, a cutting]. Cutting of the coccyx.

**Coccyx** (*kok'-siks*) [*κόκκυς*, the cuckoo (resembling the bill)]. The last bone of the spinal column, formed by the union of four rudimentary vertebrae. See *Bones*, *Table of*.

**Cochenille** [Fr.]. Same as *Cochineal*.

**Cochia** (*ko'-ke-ah*, or *ko'-che-ah*) [L.; of Gr. *κόκκινον*, a pill]. An old, but not obsolete, name for certain drastic and mainly aloetic pills (*pilula cochiae*). The name *cochia* is now adjectival.

**Cochin China** (*kok'-chin chi'-nah*) [native Asiatic]. A country of lower Asia. **C. Diarrhea**, a form of tropical diarrhea dependent upon the presence in the intestine of a thread-worm, *Anguillula intestinalis*, and its larval offspring. **C. Leg.** Synonym of *Elephantiasis arabum*. **C. Ulcer**, an affection of Cochin China characterized by deep ulceration of the extremities. It is supposed to be the same as *Furunculosis orientalis*.

**Cochineal** (*koch'-in-el*, or *koch-in-el'*) [ME., *cutchaneal*]. The dried insects of a species of plant lice, *Coccus cacti*, parasitic upon a cactus of Mexico and Central America. It contains a rich red coloring-matter, *carmin*, used mainly as a dyeing agent. See *Pigments*, *Conspectus of*. It is thought to be valuable in infantile whooping-cough. Dose gr.  $\frac{1}{3}$ .

**Cochlea** (*kok'-le-ah*) [*κόχλος*, a conch-shell]. A cavity of the internal ear resembling a snail-shell. It describes two and a half turns about a central pillar called the *modiolus* or *columnella*, forming the *spiral canal*, about  $1\frac{1}{2}$  inches in length. The latter is divided into three canals or scales,—the *scala tympani*, *vestibuli*, and *media*. See also, *Ear*. 2. In botany, a coiled legume, like that of *Medicago*.

COCHLEA.

1. Scala tympani. 2. Scala vestibuli. 3. Anterior or triangular canal. 4. Posterior or quadrilateral canal. 5. 5. Spiral ligament. 6. External spiral sulcus. 7. Membrana tectoria, or membrane of Corti. 8. Membrana basilaris. 9. Spiral vessel. 10. Limbus laminae spiralis. 11. Pillars of Organ of Corti. 12. Branch of cochlear nerve. 13. Ganglion spirale. 14. Branch of cochlear nerve between the lamellae of the lamina spiralis ossae. 15. One of the orifices by which this branch penetrates the canal of Corti. 16. Part of bony cochlea. 17. Lining periosteum. 18. Membrane of Reissner.

**Cochlear** (*kok'-le-ar*) [*κόχλος*, a conch-shell]. Pertaining or belonging to the cochlea. **C.** Nerve, the nerve supplying the cochlea. See *Nerves*, *Table of*.

**Cochlear**, or **Cochleare** (*kok'-le-ar*, or *kok-le-a'-re*) [L.: *pl.*, *Cochlearia*]. A spoon; a spoonful. **C.** magnum, a table-spoon; **C.** medium, a dessert-spoon; **C.** minimum, a teaspoon.

**Cochlearia** (*kok-le-ar'-e-ah*). See *Horseradish*.

**Cochleate** (*kok'-le-ät*) [*cochleatus*, spiral]. Spirally coiled, like a snail-shell.

**Cochlitis** (*kok-li'-tis*) [*κόχλος*, a conch-shell; *itis*, inflammation]. Inflammation of the cochlea.

**Cockroach** (*kok'-röck*). See *Blutta*.

**Coco** (*kö'-ko*). Synonym of *Yaws*. See *Frambæsia*.

**Coco**, or **Cocoa** (*kö' kö*) [Port., *cacao*]. See *Cacao* and *Theobroma*. **C.** nut, the nut of *Cocos nucifera*, a palm-tree of tropical coast-regions. The oil is used as a substitute for cod-liver oil, and in Germany it is employed in pharmacy in the place of lard. **C.** nut Fiber, coir. The coarse fibrous covering of the nut of the cocoa-palm is largely used in making brooms, brushes, matting, and coarse carpeting. The fiber is coarse, stiff, very elastic, round, and smooth like hair. It also has great tenacity, and is well adapted for cordage. **C.** nut Oil, *oleum cocois*, is obtained from the dried pulp of the cocoa-nut by expression. It is an oil of the consistency of butter, fusing at from  $73^{\circ}$  to  $80^{\circ}$  F. ( $22.7^{\circ}$  to  $26.6^{\circ}$  C.). When fresh, it is white in color and of sweet taste and agreeable odor, but it

easily becomes rancid. It is easily saponified, even in the cold. It is used in the manufacture of candles and soap.

**Cocomania** (*ko-ko-ma'-ne-ah*). See *Cocainomania*.

**Cocomaniac** (*ko-ko-ma'-ne-ak*). See *Cocainomaniac*.

**Cocoölein** (*ko-ko-o'-le-in*) [Port., *cacao*; *oleum*, oil]. A proprietary substitute for cod-liver oil, said to be derived from cocoa-nut oil.

**Cocotte** (*ko-kot'*) [Fr.]. Synonym of *Influenza*.

**Coction** (*kok'-shun*) [*coctio*; *coquere*, to cook]. 1. Digestion. 2. The preparatory alteration that morbid matter undergoes in preparation for its discharge.

**Cod** (*kod*) [ME., *cod*]. 1. The scrotum. 2. The belly. 3. In the plural, the testes. 4. The *Gadus morrhua*, a fish furnishing a valuable medicinal product. **C.** liver Oil, an oil derived from the liver of the *Gadus morrhua*, and ranging in color according to the method of its preparation from pale-straw to dark-brown; its specific gravity is .923 to .924 or even .930 at  $15^{\circ}$  C. The finer qualities are used for medicinal purposes, the darker by tanners and curriers. See *Morrhua*.

**Codamin** (*kod'-dam-in*) [*κώδεα*, the head; poppy-head; *amin*],  $C_{20}H_{25}NO_4$ . A crystalline alkaloid of opium, isomeric with laudanin. When ferric chlorid is added to it, it assumes a deep-green color.

**Codein** (*kod'-den*) [*κώδεα*, the poppy-head],  $C_{15}H_{21}NO_3 \cdot H_2O$ . A white, crystalline alkaloid of opium. It is mildly calmative and is serviceable in diabetes mellitus. It is also valuable in ovarian pain. Dose gr. ss-ij. **C.** Phosphate, soluble in water. Similar to morphin in action, but less toxic. Dose, hypodermically, gr. ss. **C.** Sulphas, dose gr.  $\frac{1}{6}$ – $\frac{1}{4}$ . **C.** Valerianate, an antispasmodic and sedative. Dose gr.  $\frac{1}{4}$ .

**Codex** (*kod'-deks*) [L.: *pl.*, *Codices*]. A pharmacopœia or book of formulæ; specifically, the French pharmacopœia.

**Codie Pine Resin**. See *Cæwdie-gum*.

**Codonostoma** (*ko-do-nos'-to-mah*) [*κώδων*, a bell; *στόμα*, a mouth]. In biology, applied to the oral or disc aperture of certain marine invertebrates, medusæ, etc.

**Cœlminth** (*se'-lel-minth*). See *Celminth*.

**Cœlia** (*se'-le-ah*). See *Celia*.

**Cœliac** (*se'-le-ak*). See *Celiac*.

**Cœliaca** (*se-li'-ak-ah*). See *Celiaca*.

**Cœliadelphus** (*se-le-ad-el'-fus*). See *Celiadelphus*.

**Cœliagra** (*se-le-a'-grah*). See *Celiagra*.

**Cœlialgia** (*se-le-al'-je-ah*). See *Celialgia*.

**Cœlian**, **Cœline** (*se'-le-an*, *se'-lin*). See *Celvan*, *Celine*.

**Cœliocyesis** (*se-le-o-si-e'-sis*). See *Celiocyesis*.

**Cœliolymph** (*se'-le-o-limf*). See *Celiolymph*.

**Cœliomyalgia** (*se-le-o-mi-al'-je-ah*). See *Celiomyalgia*.

**Cœlioncus** (*se-le-ong'-kus*). See *Celioncus*.

**Cœlioplegia** (*se-le-o-ple'-je-ah*) [*κοιλία*, the belly; *πληγή*, a stroke]. A synonym of Asiatic cholera.

**Cœliopyosis** (*se-le-o-pi-o'-sis*). See *Celiopyosis*.

**Cœliorrhœa** (*se-le-or-el'-ah*). See *Celiorrhœa*.

**Cœlioschisis** (*se-le-os'-kis-is*). See *Celioschisis*.

**Cœlioscope** (*se'-le-o-skop*). See *Celioscope*.

**Cœliotomy** (*se-le-ot'-o-me*). See *Celiotomy*.

**Cœlitis** (*se-li'-tis*). See *Celitis*.

**Cœlodont** (*se'-lo-dont*) [*κοίλος*, hollow; *ὀδούς*, tooth]. Hollow-toothed, as certain lizards—the opposite of *Pleodont*, or solid-toothed.

**Cœlom**, **Cœloma** (*se'-lom*, *se-lo'-mah*). See *Celom*.

**Cœlophlebitis** (*se-lo-ple-hi'-tis*). See *Celophlebitis*.

**Cœlophthalmia** (*se-loff-thal'-me-ah*). See *Celophthalmia*.

**Cœlosis** (*se-lo'-sis*). See *Celosis*.

**Cœlosoma** (*se-lo-so'-mah*). See *Celosoma*.

**CœlospERM** (*se-lo-sperm*) [*κοίλος*, hollow; *σπέρμα*, seed]. In biology, a seed so curved as to form a concavity on one of its surfaces.

**Cœlostomia** (se-lo-sto-mi-ah). See *Celostomia*.

**Cœlumbrella** (sæl-um-bre-l'ah) [*cœluros*, hollow; *umbrella*, the disc of *aealepis*]. In biology, the concave surface of the gelatinous umbrella of *Medusæ*.

**Cœnenchyma** (sæn-nen's kœ-nah) [*cœnos*, common; *enchyma*, to infuse]. In biology, the calcified tissue common to the several polyps of a compound *Actinomorpha*.

**Cœnesthesis** (sæn-nest'is). See *Cænesthesia*.

**Cœnobium** (sæn-nob'ium) [*cœnos*, common; *bios*, life]. In biology, a composite zoophyte or any colony of independent cells held together by a common investment.

**Cœnoblaster** (sæn-nob-l'as) [*cœnos*, common; *βλαστος*, a germ]. In biology, the primitive germinal layer, giving rise to the endoderm and mesoderm.

**Cœnecium** (sæn-n'ec-ium) [*cœnos*, common; *oikos*, a dwelling]. In biology, the common dermal system of a polyan colony. The polypidom of Johnson.

**Cœnosarc** (sæn-n'ark) [*cœnos*, common; *σαρξ*, flesh]. In biology, Allman's term for the "common living basis by which several polyps in a composite zoophyte are connected with one another."

**Cœnosteum** (sæn-nost'e-um) [*cœnos*, common; *ὀστεόν*, bone]. In biology, the calcareous ectoderm of hydrocorallines.

**Cœnotype** (sæn-not'ic) [*cœnos*, common; *τύπος*, type]. The fundamental type-form of a group.

**Cœnurus** (sæn-n'us) [*cœnos*, common; *οὐρά*, tail]. The larva of *Penna cœnurus*, Küchenmeister, producing the disease of sheep called staggers. See also *Attenation of Generation*. **C. cerebralis**, a many-headed hyalid found mainly in the brain and spinal canal of the ox and sheep (mostly in young animals). Occasionally it has been discovered in the muscles of man. It is now known to be the larva of the tapeworm, *Tænia cœnurus*. See *Parasites (Animal)*, *Table of*.

**Cœroulignone** (se-ru-lig'-non) [*cœruleus*, blue; *lignum*, wood],  $C_{18}H_{16}O_6$ . Cediret; a derivative of hexa-oxid phenyl. It separates as a violet powder when crude wood-spirit is purified on a large scale by means of potassium chromate. It is insoluble in the ordinary solvents, and is precipitated in fine, steel-blue needles, from its phenol solution, by alcohol or ether.

**Coffee** (kaf'ee). See *Caffea*. **C.-bean, Kentucky**, the popular name for *Gymnocladus canaensis*. **C.-ground Vomit**, the material ejected by emesis in carcinoma and ulceration of the stomach and other gastric conditions. It consists of blood and other contents of the stomach changed by the action of the gastric juice. **C.-tree, Kentucky**. See *Chicot*.

**Coffeinism** (kaf'ee-n'ism) [*caffea*, coffee]. Excessive habitual use of coffee, or the state of ill-health that results from it.

**Coffer Dam**, Barnum's. See *Rubber Dam*.

**Coffeurin** (kaf'ee-rin) [*caffea*, coffee; *οὐρον*, urine]. A principle said to sometimes be present in urine after the tri-c use of coffee as a beverage or medicine. The urine then has the odor of coffee, and its color is red, brownish, or deep-brown.

**Coffin** (kaf'in) [*κόβιν*, a basket]. 1. A case intended to hold the dead body. 2. In farriery, the hollow portion of a horse's hoof. **C.-birth**, post-mortem expulsion of the fetus. **C.-bone**, the last or distal phalanx of a horse's foot.

**Coffinism** (kaf'in-izm) [after Dr. Coffin, who advocated it]. A variety of quackery or professed system of medical practice. It resembles so-called Thomsonism.

**Cogged Breath-sound**, Cog wheel respiration or breathing. See *Cogwheel Sound*.

**Cogwheel Breathing or Respiration**. See *Cogwheel Sound* and *Breath-sounds*. **C. Sound**, a pathologic sound sometimes heard in auscultation of the lungs, due to interruptions in the accession of air to a part; this gives the sound an intermitting character. See *Breath-Sounds*.

**Cohabitation** (ko-hab-it-uh'-shun) [*con*, together; *habitare*, to dwell]. The living together of a man and woman, with or without legal marriage. Sexual connection.

**Cohen's Method**. A method of inducing premature labor. It consists in injecting fluid into the uterine cavity between the uterine wall and the ovum. See *Treatment, Methods of*.

**Cohesion** (ko-he'-zhun) [*coherere*, to stick together]. The force whereby molecules of matter adhere to each other. The "attraction of aggregation."

**Cohn's Fluid**. A fluid culture-medium. It is composed of potassium phosphate, 0.1 gm.; magnesium sulphate, 0.1 gm.; tricalcic phosphate, 0.01 gm.; distilled water, 20 gm.; ammonium tartrate, 0.2 gm.

**Cohnheim's Areas**. See *Area*. **C. Fields**. See *Cohnheim's Areas*. **C. Frog**. See *Salt-frog*. **C. Method**, a method of staining tissues. See *Stains, Table of*. **C. Theory**, a theory as to the origin of tumors; a satisfactory hypothesis, namely, to the effect that all true tumors are due to faulty embryonal development. The embryonal cells do not undergo the normal changes, are displaced, or are superfluous. When the favorable conditions are presented later in life they take on growth, with the formation of tumors of various kinds.

**Cohnstein's Operation**. See *Operations, Table of*.

**Cohobation** (ko-ho-bat'-shun) [*cohobare*, to redistill]. 1. Redistillation. 2. Recurrence of disease.

**Cohosh** (ko'-hosh) [Am. Ind.]. A name given to several medicinal plants. **C., Black**. See *Cimicifuga*. **C., Blue**. See *Caulophyllum*.

**Coil** (koi) [*colligere*, to gather together]. Rings formed by winding, as a wire. **C.-gland**. See *Sweat-gland*. **C., Induction**, rolls of wire in which an electric current is induced by the alternate opening and closing of a circuit. **C., Leiter's**. See *Lleiter's Tubes*. **C., Ruhmkorff**, an induction-coil, or spark-coil.

**Coiling** (koi'-ing) [*colligere*, to bind together]. Forming into spirals or rings. **C. of the Cord**. See *Cord*.

**Coincidence** (ko-in-de-ka'-shun) [*con*, with; *indicare*, to indicate]. A concurrent indication; a collateral and confirmatory indication. Cf. *Contraindication*.

**Coin-test** (koi-n'-test). See *Bacelli's Sign*, and *Bell-Sound*.

**Coir** (kiv) [Tamil, *kayaru*, a rope]. See *Cocanut-fiber*.

**Coiter's Corrugator**. The corrugator supercilii. See *Muscles, Table of*.

**Coition** (ko-ish'-un) [*coire*, to come together]. Same as *Coitus*.

**Coitus** (ko'-it-us) [*coire*, to come together]. The act of sexual connection. Copulation. **C. Disease**, the venereal disease of the horse. **C. reservatus**, congressus interruptus; incomplete copulation; the incomplete performance of the sexual act; onanism.

**Coix** (ko'-iks) [κόix, an Egyptian variety of palm]. A genus of coarse monocot grasses. **C. lacrima**, an old-world species of grass, having very large and hard seeds, called *Job's tears*, from which beads are made which are worn as amulets, and are thought to assist the process of dentition when bitten upon by young teething children. The seeds are used locally for lung troubles and for dropsy. Unof.

**Coke** (kok) [origin uncertain]. The solid product of the carbonization of coal.

**Coko Disease** (*ko'-ko dis-ez'*). A name applied in the Fiji Islands to a disease resembling Yaws.

**Cola** (*ko'-lah*). See *Kola-nut*.

**Colalgia** (*ko-lal'-je-ah*) [*kólōn*, the colon; *ἄλγος*, pain]. Pain in the great intestine.

**Colation** (*ko-lal'-shun*) [*colare*, to strain]. The operation of straining.

**Colatorium** (*kol-at-o'-re-um*) [L.]. A sieve, colander, or strainer; used in pharmacy.

**Colature** (*ko'-lat-yūr*) [*colatura*, straining]. In pharmacy, a liquid that has been subjected to colation.

**Colchicine** (*kol-chis-e'-in*) [*κολχικόν*, colchicum],  $C_{17}H_{21}NO_6 + 2H_2O$ . A crystalline decomposition-product of colchicin.

**Colchicin** (*kol'-chis-in*) [*κολχικόν*, colchicum],  $C_{17}H_{21}NO_6$ . An alkaloid of colchicum; it is a pale, brownish-yellow, exceedingly bitter powder, freely soluble in water. It is a very active poison. Its dose is gr.  $\frac{1}{10}$  or  $\frac{1}{2}$  milligram, hypodermically.

**Colchicum** (*kol'-chik-um*) [*κολχικόν*, colchicum: *gen.*, *Colchici*]. Meadow Saffron. The corm and seed of *C. autumnale*, with properties due to an alkaloid, *colchicin*. It is an emetic, diuretic, diaphoretic, and drastic cathartic. It is valuable in acute gout, and is used with good results in gonorrhea. Dose of the powdered root gr. ij-vij, of the powdered seeds gr. j-v. **C., Extract.** (B.P.). Dose gr. ss-ij. **C., Extract., Aceticum** (B.P.). Dose gr. ss-ij. **C. Rad., Ext.**, dilute acetic acid 35, powdered root 100 parts, water q. s. Dose gr.  $\frac{1}{2}$ -ij. **C. Rad., Ext., Fld.** Dose  $\frac{1}{2}$ ij-x. **C. Rad., Vinum**, 40 per cent. in strength. Dose  $\frac{1}{2}$ v-xv. **C. Sem., Ext., Fld.** Dose  $\frac{1}{2}$ j-v. **C. Sem., Vinum**, 15 per cent. in strength. Dose  $\frac{1}{2}$ x-xxx. **C., Tinct.**, prepared from the seed; strength 15 per cent. Dose  $\frac{1}{2}$ x-xxx. **C., Vinum** (B.P.). Dose  $\frac{1}{2}$ x-xxx.

**Colcothar** (*kol'-ko-thar*) [ML.]. A crude sesquioxide of iron; red oxide of iron; a tonic and hemostatic. Unof. See also *Pigments, Conspectus of*.

**Cold** (*kōld*) [AS., *ceald*]. 1. The comparative want of heat. 2. A term used popularly for coryza and catarrhal conditions of the respiratory tract. Cold is employed largely in various forms as a therapeutic agent, mainly for the purpose of lowering temperature and allaying irritation and inflammation. It may be used in the form of *affusion*, that is, the sudden application of a considerable volume of cold water to the body. This application of the cold douche is contraindicated in all cases of extreme weakness, with feeble pulse. Cold may be used as an anesthetic (see *Anesthetic*); in baths (see *Bath*); in the form of compresses applied over the affected part; in the form of irrigation, especially in the treatment of bruised and injured members; as a lotion, for the purpose of relieving local heat, pain, and swelling; as an injection, in the form of ice-water, into the vagina or rectum, for various conditions; and as the *cold pack*, which is a valuable means of reducing the body-temperature in cases of hyperpyrexia. The patient is wrapped in a sheet wrung out of cold water; as this becomes warm, it is replaced by a fresh cold one, or iced water may be poured upon it, or lumps of ice placed upon and around it. When the temperature is reduced the wet sheet should be removed and a light covering applied, but not a blanket. This is not as efficacious as the cold bath. Cold may be applied in the dry form by means of the *ice-cap* or *bladder*, an india-rubber bag filled with ice, snow, or a freezing mixture. **C. Abscess.** See *Abscess*. **C.-blooded.** See *Poikilothermic*. **C. on the Chest**, bronchial catarrh, *q. v.* **C. Coil.** See *Leiter's Coils*. **C. Cream.** See *Rosa*. **C. Freckles.** See *Lentigo*. **C. Pack.** See *Cold*. **C. Plague.** Synonym of

*Cerebro-spinal Meningitis*. **C. Sore**, same as *Fever-blister*. **C. Spots.** See *Temperature Suse*. **C. Stroke**, a condition, the analogue of heat-stroke, in which from excessive cold the patient is suddenly overcome and falls into a comatose state, shortly followed, as a rule, by death. **C. Test**, a test applied chiefly to lubricating oils to determine the point at which the oil begins to congeal, and ceases to flow.

**Colectomy** (*ko-lek'-to-me*) [*κόλον*, colon; *ἐκτομή*, cutting out]. Excision of a portion of the colon.

**Coleitis** (*col-e-i'-tis*) [*κολέως*, sheath; *ιτις*, inflammation]. Vaginitis.

**Coleocele** (*kol'-e-o-sel*) [*κολέως*, sheath; *κηλή*, tumor]. Vaginal tumor or hernia.

**Coleophyl** (*kol'-e-o-fil*) [*κολέως*, sheath; *φύλλον*, leaf]. In biology, the investing sheath of the monocotyledonous plumule.

**Coleoptosis** (*kol-e-op-to'-sis*) [*κολέως*, sheath; *πτώσεις*, a fall]. Prolapse of the vaginal wall.

**Coleorhiza** (*kol-e-o-r-i'-zah*) [*κολέως*, sheath; *ρίζα*, root]. In biology, a sheath that envelops the radicle in some embryos and through which roots penetrate when the seed germinates.

**Coleorrhesis** (*kol-e-or-eks'-is*) [*κολέως*, a sheath; *ρήξις*, a rupture]. Rupture of the vagina.

**Coleostegnosis** (*kol-e-o-steg-no'-sis*) [*κολέως*, a sheath; *στέγνωσις*, a constriction]. Contraction or atresia of the vagina.

**Colic** (*kol'-ik*) [*colicus*, *καλίκος*, pertaining to the colon].

1. Pertaining to the colon. 2. A severe gripping pain in the bowels or adjacent organs, as, *e. g.*, *hepatic*, *nephritic*, etc. In intestinal colic the pains radiate over the abdomen from the region of the umbilicus. The belly is usually distended (save in *Lead-colic*, *q. v.*), and pressure will usually relieve the pain. Colic may be due to irritation from the intestinal contents, a diseased condition of the bowel-wall, reflex irritation from other abdominal viscera, and general blood-poisoning. **C. of the Antilles**, an endemic form of colic somewhat resembling lead-colic. **C. Arteries.** See *Arteries, Table of*. **C., Biliary.** See *Gall-stones*. **C., Bilious.** See *C., Endemic*. **C., Copper**, a colic or pain in the intestinal canal seen in workers in copper, and differing from lead colic in being attended with extreme prostration and diarrhea. The duration is short and the prognosis favorable. **C., Cramp.** See *Cramp*. **C., Devonshire.** Synonym of *C., Lead*. **C., Dry.** See *C., Endemic*. Also a synonym of *C., Lead*. **C., Endemic**, a variety of colic occurring epidemically in some of the inter-tropical countries. Its symptoms resemble those of lead-colic. It is not accompanied by any constant lesion; it lasts from eight to fifteen days and may end in general paralysis and death, or it may become chronic. Relapses are frequent. **C., Hill.** See *Hill Diarrhea*. **C., Horn.** Synonym of *Priapism*. **C., Lead**, or **C., Saturnine**, or *Colica Pictorum*, *painter's colic*, is that due to lead-poisoning. It is common among those who use or work with lead. It is characterized by excruciating abdominal pain, a hard and retracted condition of the abdomen, slow pulse, and increased arterial tension. **C., Madrid.** Synonym of *C., Lead*. **C., Meconial**, the colic of the new-born. **C., Menstrual**, the pain of menstruation. **C., Mucous.** See *Enteritis, Pseudo-membranous*. **C., Nervous.** See *C., Endemic*. **C., Normandy.** Synonym of *C., Lead*. **C. of Poitou.** Synonym of *C., Lead*. **C. Root.** See *Aletis* and *Dioscorea*. **C., Sailors'**, a form of colic common among sailors. **C. of Surinam.** Synonym of *C., Lead*. **C., Uterine**, colic-like pains experienced at the menstrual epochs, often coming on in paroxysms.

- C., West Indian.** Synonym of *C. Lead*. **C., Zinc,** a form of colic due to chronic zinc poisoning.
- Colica** (*kŏl'-ik-ah*) [*L.*]. **Colic.** **C. pictonum** (literally, colic of the people of Pontou), lead colic. Painters' Colic. See *Colic, Lead*. **C. pituitosa.** Synonym of *Enteritis, Pseudomembranous*. **C. scortorum,** a pain in the pelvis of youthful prostitutes, symptomatic of the ovarian disease that results from their unnatural sexual relations. It is due probably to a pyosalpinx.
- Colicodinia** (*kŏl'-ik-sin'-ah*). Pain in the large intestine.
- Colicoplegia** (*kŏl'-ik-a-plŏ'-e-ah*) [*κωλικός*, pertaining to the colic; *-plegia*, a stroke]. Paralysis of the intestines. Also a synonym of *Lead-colic*.
- Colitis** (*kŏl'-it-iss*) [*κόλις*, the large intestine; *-itis*, inflammation]. Inflammation of the colon. See also *Enteritis*. **C., Mucous.** See *Enteritis, Pseudomembranous*. **C., Pellicular.** A synonym of *Membranous Enteritis*.
- Collagen** (*kŏl'-i-jen*) [*κόλλα*, glue; *γενναίνω*, to produce]. A substance existing in various tissues of the body, especially bone and cartilage; it is converted into gelatin by boiling.
- Collapse** (*kŏl'-aps*) [*collabere*, to fall together]. Extreme depression and prostration from failure of nervous force, as in cholera, shock, hemorrhage, etc. **C. of Lung,** return of a portion or the whole of a lung to its fetal or airless condition from some mechanical hindrance to the entrance of air. It is characterized by dyspnea, with more or less cyanosis, and is mainly encountered in broncho-pneumonia. **C., Parturient,** parturient apoplexy; vitular or vitulary fever; puerperal fever in cows.
- Collapsing** (*kŏl'-aps'-ing*) [*collabere*, to fall together]. Suddenly breaking down. **C. Pulse.** See *Corrigan's Pulse*.
- Collapsus** (*kŏl'-aps'-us*) [*L.*]. Collapse. **C. corneæ,** entire collapse of the cornea.
- Collar** (*kŏl'-ar*) [*ME., color*]. Something worn about the neck. **C., Adjusting,** in microscopes, a ring or collar acting on a screw to increase or decrease the distance between the systems of lenses of an objective. **C.-bone.** See *Cervicle*. **C.-cell,** in biology, a flagellate cell having the base of the flagellum surrounded by a collar-like extension of the cell-wall. **C.-crown,** in dentistry, an artificial crown, to be engrafted on a natural root, attached to which is a gold collar which encircles the exposed portion of the root, and is soldered to the lining or backing that holds the dowel in some cases, or to the dowel by means of a disk between the base of the artificial crown and the natural root.
- Collateral** (*kŏl'-at'-er-al*) [*con*, together; *lat valis*, of the side]. Accessory or secondary; not direct or immediate.
- Collecting Tubes of the Kidney.** A name given to the ducts discharging into the calices of the kidneys.
- Collector** (*kŏl'-ekt'-tor*) [*collectare*, to collect]. A device by which any number of cells may be taken from or added to an electric current.
- Collenchyma** (*kŏl-en'-kim-ah*) [*κόλλα*, glue; *εγχυμα*, an infusion]. In biology, applied to a modified plant-parenchyma in which the cells are thickened at the angles, and swell in water to a glue-like mass.
- Collenchyme** (*kŏl-en'-kim*) [*κόλλα*, glue; *εγχυμα*, an infusion]. In biology, a colorless gelatinous matrix in which are embedded the collenchymes of sponges.
- Collencyte** (*kŏl'-en-it*) [*κόλλα*, glue; *έν*, in; *κύτος*, cell]. In biology, the branched connective-tissue cells embedded in the collenchyme of sponges.
- Colla Fascia.** The deep layer of the perineal fascia. It is attached to the base of the triangular ligament, to the anterior lips of the rami of the pubes and ischia laterally, and anteriorly it is continuous with the fascia of the scrotum. **C. Fracture.** See *Fracture*, and *Diseases, Table of*. **C. Law.** See *Law*. **C. Ligament.** See *Ligament*. **C. Operation.** See *Operations, Table of*.
- Collet** (*kŏl'-et*) [*Fr.*; *collum*, the neck]. A neck or collar. A term applied by some writers on dental anatomy to the neck of a tooth.
- Colleterium** (*kŏl-et-el'-re-um*) [*κολλητός*, glued together]. In biology, a gland in certain insects that secretes a viscid substance for gluing the ova together.
- Colletic** (*kŏl-et'-ik*) [*κολλητικός*; *κόλλα*, glue]. Gluey; promoting surgical union in wounds.
- Colletocystophore** (*kŏl-et-o-sis'-to-for*) [*κολλητήρ*, one who glues; *κύστις*, bladder; *φέρειν*, to bear]. In biology, marginal bodies found in lucernarian hydrozoans.
- Colliculus** (*kŏl-ik'-u-lus*) [*dim. of collis*, hill; *pl., Colliculi*]. Any eminence of the cerebral parietes. The colliculi are the caudatum, hippocamp, calcar, collateral eminence, occipital eminence, and amygdaloid eminence.
- Collidin** (*kŏl'-id-in*) [*κόλλα*, glue],  $C_8H_{11}N$ . A name given to Nencki's ptomaine-base, isomeric but not identical with aldehyd-collidin. The ptomaine was obtained from pancreas and gelatin allowed to putrefy together in water. Its constitution is still unknown. The free base is oily, and possesses a peculiar, agreeable odor. Nencki believed it an aromatic base. Its physiologic action appears to be doubtful, but an isomer of it discovered in ox-blood fibrin and in putrefied jelly-fish has a poisonous effect resembling that of curara. Frogs poisoned by the isomer emit an orange-flower odor. Nencki's collidin is isomeric with collidin obtained from coal-tar.
- Collier's Lung.** Synonym of *Anthraxosis*.
- Collilongus** (*kŏl-e-long'-gus*) [*collum*, neck; *longus*, long]. The muscle called longus colli. See *Muscles*.
- Collimator** (*kŏl'-im-a-tor*) [*collimare*, to aim at]. The receiving telescope of a spectroscope.
- Collin's Black,**  $C_8H_5N$ . A name for Anilin Black, employed in staining microscopic sections.
- Collinsonia** (*kŏl-in-so'-ne-ah*) [after Peter Collinson, an English gentleman]. A genus of labiate herbs. **C. canadensis** (stone-root, heal-all), is a coarse plant with a disagreeable smell; it has useful tonic, diuretic, and diaphoretic properties. Dose gr. xv-lx in decoction; of the fluid extract  $\text{m}x-3j$ ; of the tincture (1 in 10)  $3ss-ij$ .
- Collinsonin** (*kŏl-in-so'-nin*) [*Collinsonia*]. A precipitate from the tincture of the root of *Collinsonia canadensis*. It is tonic, diaphoretic, resolvent, and diuretic. Dose 2 to 4 grains. Unof.
- Colliquation** (*kŏl-ik-wa'-shun*) [*con*, together; *liquare*, to melt]. The liquefaction or breaking down of a tissue or organ.
- Colliquative** (*kŏl-ik-wa-tiv*) [*con*, together; *liquare*, to melt]. Exhausting; enfeebling; copiously profuse or excessive; marked by excessive fluid discharge. **C. Diarrhea,** a profuse watery diarrhea. **C. Necrosis,** a high degree of inflammatory process in the tissues, with active movement of the leucocytes toward the central focus and rapid breaking down of the tissues, forming an abscess-cavity. **C. Sweat,** a profuse, clammy sweat.
- Collocystis** (*kŏl-o-sis'-tis*) [*κόλλα*, glue; *κύστις*, cysts]. A gelatin capsule to facilitate the swallowing of a drug.
- Collodion** (*kŏl-o'-de-on*) [*κολλώδης*, glue-like]. See *Pyroxylin*.

**Colloodium** (*kol-o'-de-un*). See *Pyroxylin*.

**Colloid** (*kol'-oid*) [*κόλζα*, glue]. 1. A non-crystallizable and generally soluble organic substance. See *Dialysis*. 2. A mobile pathologic material, jelly-like, firmer than mucus, and differing in its reactions from albumin and from lardacein. 3. Having the nature of glue. 4. In chemistry, amorphous and non-crystalline. **C. Cancer**. See *Cancer*. **C. Degeneration of the Skin**, a rare disease, occurring chiefly on the upper part of the face, in the form of small, glistening, translucent, flattish elevations, and yielding by pressure a small, jelly-like mass. **C. Milium**. See *Milium*.

**Colloma** (*kol-o'-mah*) [*κόλζα*, glue; *όμα*, a tumor: *pl.*, *Collomata*]. A cystic tumor containing a gelatiniform, amorphous, and non-vascular substance.

**Collonema** (*kol-o-ne'-mah*) [*κόλζα*, glue; *νῆμα*, tissue: *pl.*, *Collonemata*]. Myxoma, or myxosarcoma.

**Collum** (*kol'-um*) [*L.*]. The neck; especially the anterior part of the neck. **C. distortum**. Synonym of *Torticollis*.

**Collunarium** (*kol-un-a'-re-un*) [*L.*]. A nasal douche.

**Collyrium** (*kol-ir'-e-un*) [*κόλλυριον*, an eye-salve: *pl.*, *Collyria*]. An astringent, antiseptic, or medicinal lotion for the eyes. More rarely, a vaporous or gaseous medicament for application to the eyes, or even a powder, or solid, to be used in treating the eye topically, is called a collyrium. (Anciently, any suppository or medicated bougie was thus called.) **C. adstringens luteum**. See *Graefé's Collyrium* and *Horst's Eye-water*.

**Coloboma** (*kol-o-bo'-mah*) [*κόλοβόμα*, to mutilate: *pl.*, *Colobomata*]. A cleavage or fissure of parts of the eye, of congenital or traumatic origin. *Congenital C.* are due to imperfect closure of fissures during fetal development. **C., Bridge**, a variety in which the pupil is separated from the coloboma by a narrow thread of iris-tissue that stretches like a bridge from one pillar of the coloboma to the other.

**Colocentesis** (*kol-o-sen-te'-sis*) [*κόλζων*, colon; *κέντησις*, puncture]. Surgical puncture of the colon.

**Colocleisis** (*kol-o-klí'-sis*) [*κόλζων*, colon; *κλείσις*, closure]. Occlusion of the colon.

**Colocynth** (*kol'-o-sin-th*). See *Colocynthus*.

**Colocynthein** (*kol-o-sin'-the-in*) [*κόλοκυνθής*, colocynth],  $C_{44}H_{64}O_{13}$ . A resinous decomposition-product of colocynthin.

**Colocynthin** (*kol-o-sin'-thin*) [*κόλοκυνθής*, colocynth],  $C_{36}H_{84}O_{23}$ . The active principle of colocynth; an extract, or a yellow amorphous, neutral, exceedingly bitter powder, soluble in water and alcohol, but not in ether. It is an irritant hydragogue cathartic. Dose gr.  $1\frac{1}{4}$  to 1. Unof.

**Colocynthis** (*kol-o-sin'-this*) [*κόλοκυνθής*, colocynth]. Colocynth. The fruit of *C. citrullus*, from which the seeds and rind have been rejected. Its properties are due to a bitter glucosid, *colocynthin*,  $C_{36}H_{84}O_{23}$ , the dose of which is gr.  $\frac{1}{20}$  -  $\frac{1}{5}$ . It is a tonic and astringent purgative, and is used mainly as an ingredient of compound cathartic pills. It is somewhat useful in colic, sciatic rheumatism, and neuralgia. **C., Ext.**, alcoholic. Dose gr.  $\frac{1}{2}$ -ij. **C., Ext., Comp.**, contains colocynth extract 16, aloes 50, cardamom 6, resin of scammony 14, soap 14, alcohol 10. Dose gr. v-xx. **C., Pilula Comp.** (B. P.) contains colocynth, aloes, scammony, sulphate of potassium and oil of cloves. Dose gr. v-x. **Pilulæ Cathartic. Comp.**, compound cathartic pills; contain each, comp. ext. of colocynth gr. 1.3, abstract jalap gr. j, calomel gr. j, gamboge gr.  $\frac{1}{4}$ . Dose j-ij pills. **Pil. catharticæ vegetabiles**, contain colocynth, hyoscyamus, jalap, leptandra, resin of podophyllum, oil of peppermint. **Pil. colocynth et hyoscyam.**

Dose gr. v-x. **Laville's Anti-gout Remedy**, contains colocynth 2½, quinin, cinchonin aa 5, Spanish wine 800, alcohol 100, water 1000 parts.

**Colocynthiin** (*kol-o-sin'-thit-in*) [*κόλοκυνθής*, colocynth]. A crystalline, tasteless, inactive principle of colocynth.

**Colo-enteritis** (*kol-o-en-ter-i'-tis*) [*κόλζων*, colon; *έντερον*, an intestine; *ιτις*, inflammation]. Inflammation of the small and large intestine. See *Enterocolitis*.

**Cologne** (*kol-on'*). See *Spiritus odoratus*. **C. Spirit**, rectified commercial alcohol. **C. Glue**. See *Glue*. **C.-water**, aqua colognensis. See *Spiritus odoratus*. **C.-water Habit**, the use of cologne-water as a drink for the purpose of experiencing the effects of the alcohol which it contains.

**Colognese** (*kol-on-éz'*). Same as *Umber*.

**Colomba**, **Colombo** (*kol-on'-bah*, *kol-on'-bo*). See *Calumba*.

**Colomiatti**, **Bacillus of**. See *Bacteria*.

**Colon** (*kol'-lon*) [*κόλζων*, *κόλζων*, the colon]. The second and principal part of the large intestine. In the various parts of its course it is known as the *ascending C.*, the *transverse C.*, the *descending C.*, and the *sigmoid flexure*.

**Colonia** (*ko-lon-i'-ah*). Synonym of *Dysentery*.

**Colonic** (*kol-on'-ik*) [*κόλζων*, the colon]. Pertaining to the colon.

**Colonitis** (*ko-lon-i'-tis*). See *Colitis*.

**Colony** (*kol'-o-ne*) [*colonia*, a colony]. A collection or assemblage, as of microorganisms in a special culture.

**C. Treatment**, for the insane. See *Gheel System*.

**Colophony Resin** (*kol'-o-fō-ne*) [*κόλοφώνη*, a city of Ionia]. Rosin. The solid residue left on distilling off the volatile oil from crude turpentine. Rosin is a brittle, tasteless, very friable solid, of smooth, shining fracture, specific gravity about 1.08. It softens at 80° C. (176° F.), and fuses completely to a limpid, yellow liquid at 135° C. (275° F.). It is insoluble in water, with difficulty soluble in alcohol, freely soluble in ether, acetone, benzene, and fatty oils. See *Resin*.

**Coloproctia** (*kol-o-prok'-te-ah*) [*κόλζων*, colon; *πρωκτός*, anus]. The formation of an artificial colonic anus.

**Colopuncture** (*kol'-o-punk'-chur*) [*κόλζων*, colon; *πunctura*, puncture]. Same as *Colocentesis*.

**Coloquintida** (*kol-o-quin'-tid-ah*) [*ML.*]. An old name for colocynth.

**Color** (*kull'-er*) [*color*, color]. The differences in the appearance of a thing seen, other than those due to form and relief. The tint or hue of an object, dependent upon the number of vibrations of the ethereal stimulus. See *Pigment*. **C.-blindness**. See *Blindness*. **C., Complementary**, any color that added to another color, or to a mixture of colors, produces white. **C.-contrast**, any two colors that, when mixed, supplement the prevailing tone of the light. **C.-cure**, the supposed therapeutic effect of exposure to variously colored light. **C.-hearing**, the excitation of the visual center for color through the auditory nerve: the perception of sound photisms. See *Photism*. **C.-image**, an image of a highly-colored object lighted with so wide an aperture that the refraction-images are drowned in the light. **C.-sensation**, depends on the number of vibrations of the ether, the same as the pitch of a note depends on the number of vibrations of the sounding body. *Hering's Theory of C.-s* predicates dissimilation and assimilation (decomposition and restitution) of the visual substance in vision—white, red, and yellow representing the sensation of dissimilation, black, green, and blue that of restitution. The *Young-Helmholtz Theory* assumes three

kinds of nerve-elements corresponding to the three primary colors. Stimulation of the first develops red, of the second, green, of the third, violet. See *Photism*. **C.-sense**, the faculty by which the various colors are distinguished. **C.-top**, a top containing on the sectors of its disc a number of colors to be "mixed" by rapid whirling. **Colors, Mixed**, those produced when the retina is excited by two or more simple colors. **C., Saturated**, those containing little or no white. **C., Simple**, those of the spectrum.

**Colorectitis** (*kŏ-lŏ-rĕk-tĭ-tis*) [*kolŏn*, colon; *rektŭs*, straight; *itis*, inflammation]. Inflammation of the colon and rectum. Also, a synonym of *Dysentery*.

**Colorectostomy** (*kŏ-lŏ-rĕk-tĭs-to-mĕ*) [*kolŏn*, colon; *rektŭs*, straight; *stŏma*, a mouth]. The surgical establishment of a passage between the colon and the rectum.

**Colorimeter** (*kullŏ-rĭ-mĕ-tĕ-r*) [*color*, color; *mĕtrŏn*, measure]. An instrument for determining the quantity of coloring matter in a mixture, as in the blood. See *Hemachromometer*.

**Colorin** (*kullŏ-rĭ-n*) [*cler*, color]. An alcoholic extract of madder. See *Pigments, Conspectus of*.

**Coloring** (*kullŏ-rĭ-ng*) [*color*, color]. A tint or combination of colors. **C. Matters**. See *Pigments, Colors*, and *Dye-stuffs*.

**Colostomy** (*kŏ-lŏs-to-mĕ*) [*kolŏn*, colon; *stŏma*, opening]. 1. The formation of an artificial anus by an opening into the colon; coloproctia. 2. Any surgical operation upon the colon that makes a permanent opening into it, whether internal or external.

**Colostration** (*kŏ-lŏs-trĭ-shun*) [*colostrum*, the first milk after delivery]. A disease or illness of young infants ascribed to the effects of the colostrum.

**Colostrie** (*kŏ-lŏs-trĭk*) [*colostrum*, the first milk after delivery]. Relating to colostrum.

**Colostrous** (*kŏ-lŏs-tru*) [*colostrum*, the first milk after delivery]. Of the nature of or containing colostrum.

**Colostrum** (*kŏ-lŏs-trum*) [*L.*]. The first milk from the mother's breasts after the birth of the child. It is laxative, and assists in the expulsion of the meconium. **C. Corpuscles**, small microscopic bodies contained in the colostrum. They are the epithelial cells of the mammary glands, full of oil globules. After about the third day these cells burst and set free the fat globules before they leave the gland, and in this way the true milk is formed.

**Colotomy** (*kŏ-lŏtŏ-mĕ*) [*kŏlŏn*, colon; *tĕmneiv*, to cut]. Incision of the colon, either *abdominal*, *lateral*, *lumbar*, or *inguinal*, according to the region of entrance.

**Colotyphus** (*kŏ-lŏ-tĭ-fus*) [*kŏlŏn*, colon; *typhŏs*, smoke]. Enteric fever with involvement of the colon. Also a synonym of *Dysentery*.

**Colpalgia** (*kŏ-pŏl'ĭe-ah*) [*kŏlŏs*, vagina; *ŏlĝos*, pain]. Vaginal pain or neuralgia.

**Colpaporrhæxis** (*kŏ-pŏpŏr-rĕk'ŭ-i*) [*kŏlŏs*, vagina; *ŏpŏn*, from; *rhĕis*, a tearing, or breakage]. Severance of the cervix from the body of the uterus.

**Colpatresia** (*kŏ-pŏt-rĕ'ŭe-ah*) [*kŏlŏs*, vagina; *ŏtrĕsis*, not perforated]. Occlusion or atresia of the vagina.

**Colpectasia** (*kŏ-pĕk'tŏs'ŭe-ah*) [*kŏlŏs*, vagina; *ĕktŭsis*, a stretching out]. Vaginal dilatation.

**Colpedema** (*kŏ-pĕd'ĕ-mĕ*) [*kŏlŏs*, vagina; *ŏidĕma*, swelling]. Edema of the vagina.

**Colpemphraxis** (*kŏ-pĕm-frŏk'ŭs*) [*kŏlŏs*, vagina; *ĕmpeŕsis*, a stoppage]. Obstruction of the vagina.

**Colpeurynter** (*kŏ-pu-rĭn'tĕr*) [*kŏlŏs*, vagina; *ĕrĭpneiv*, to widen]. An inflatable bag or sac used for dilating the vagina.

**Colpeurytis** (*kŏ-pu-rĭ-tĭs*) [*kŏlŏs*, vagina; *ĕrĭpneiv*, to dilate]. Vaginal dilatation, especially that effected by the Colpeurynter.

**Colpitis** (*kŏl-pĭ'tis*) [*kŏlŏs*, vagina; *itis*, inflammation]. Inflammation of the vagina.

**Colpocèle** (*kŏl'ŏ-po-sĕl*, or *se'ŭe*) [*kŏlŏs*, vagina; *klĕĭĕ*, tumor]. Hernia or tumor in the vagina.

**Colpocleisis** (*kŏl-po-klĭ'sis*) [*kŏlŏs*, vagina; *klĕĭsis*, a closure]. The surgical closure of the vagina.

**Colpocystic** (*kŏl-po-sĭs'tĭk*) [*kŏlŏs*, vagina; *kĭstĭs*, bladder]. Relating to the vagina and the bladder; vesico-vaginal.

**Colpocystitis** (*kŏl-po-sĭs-tĭ'tis*) [*kŏlŏs*, vagina; *kĭstĭs*, bladder; *itis*, inflammation]. Inflammation of the vagina and the bladder.

**Colpocystocèle** (*kŏl-po-sĭs-to-sĕl*) [*kŏlŏs*, vagina; *kĭstĭs*, a bladder; *klĕĭĕ*, a tumor]. A hernia of the bladder into the vagina, with prolapse of the anterior vaginal wall.

**Colpocystosyrinx** (*kŏl-po-sĭs-to-sĭr'ĭngks*) [*kŏlŏs*, vagina; *kĭstĭs*, cyst; *ŏrĭngĭs*, pipe]. Vesico-vaginal fistula.

**Colpocystotomia** (*kŏl-po-sĭs-to-tŏ-me-ah*). See *Colpocystotomy*.

**Colpocystotomy** (*kŏl-po-sĭs-to-tŏ-me*) [*kŏlŏs*, vagina; *kĭstĭs*, bladder; *tomĕ*, a cut]. Surgical incision of the bladder through the vaginal wall.

**Colpohyperplasia** (*kŏl-po-hĭ-per-pla'ŭe-ah*) [*kŏlŏs*, vagina; *ĭpĕr*, over; *plŭŕŭssein*, to form]. Hyperplasia of the vagina.

**Colpo-hysterectomy** (*kŏl-po-hĭs-ter-ĕk'tŏ-me*) [*kŏlŏs*, vagina; *ĭstĕra*, womb; *ĕktŭmĕ*, excision]. Removal of the uterus through the vagina.

**Colpo-hysterotomy** (*kŏl-po-hĭs-ter-ŏtŏ-me*) [*kŏlŏs*, vagina; *ĭstĕra*, womb; *tomĕ*, section]. Surgical incision of the vagina and uterus.

**Colpoleukorrhœa** (*kŏl-po-lu-kŏr'ŭe-ah*) [*kŏlŏs*, vagina; *leukŏs*, white; *rhĕiv*, to flow]. Vaginal leucorrhœa.

**Colpo-myomotomy** (*kŏl-po-mĭ-o-mŏtŏ-me*) [*kŏlŏs*, vagina; *mŭs*, a muscle; *tĕmneiv*, to cut]. Vaginal myomotomy.

**Colpopathy** (*kŏl-pŏp'ŭ-the*) [*kŏlŏs*, vagina; *pŏthŏs*, illness]. Any disease of the vagina.

**Colpoperineoplasty** (*kŏl-po-per-ĭn'ŭe-plas-te*) [*kŏlŏs*, vagina; *perĭneiv*, the perineum; *plŭŕŭssein*, to form]. Plastic operation for abnormality of the vagina and perineum.

**Colpoplastic** (*kŏl-po-plas'tĭk*) [*kŏlŏs*, vagina; *plŭŕŭssein*, to form]. Relating to colpoplasty.

**Colpoplasty** (*kŏl'ŭ-plas-te*) [*kŏlŏs*, vagina; *plŭŕŭssein*, to form]. Plastic surgical operation upon the vagina.

**Colpoptosis** (*kŏl-pŏp'tŏ-sis*) [*kŏlŏs*, vagina; *pŏtŭsis*, a falling]. Prolapse of the vagina.

**Colporrhagia** (*kŏl-pŏr-ŭ'ĭe-ah*) [*kŏlŏs*, vagina; *rhĕgĕnnaiv*, to burst forth]. Vaginal hemorrhage.

**Colporrhaphy** (*kŏl-pŏr'ŭ-ŭe*) [*kŏlŏs*, vagina; *rhŏphĕ*, seam]. Suture of the vagina.

**Colporrhœa** (*kŏl-pŏr'ŭe-ah*) [*kŏlŏs*, vagina; *rhŏia*, a flow]. Vaginal leucorrhœa; a mucous discharge from the vagina.

**Colporrhæxis** (*kŏl-pŏr-ĕk'sis*) [*kŏlŏs*, vagina; *rhĕĭsis*, rupture]. Laceration or rupture of the vagina.

**Colpostegnosis** (*kŏl-po-stĕg-nŏ-sis*) [*kŏlŏs*, vagina; *stĕgĕnŭsis*, closure]. Same as *Colpostenosis*.

**Colpostenosis** (*kŏl-po-stĕ-nŏ-sis*) [*kŏlŏs*, vagina; *stĕnŭs*, narrow]. Stenosis or constriction of the vagina.

**Colpotomy** (*kŏl-pŏtŏ-me*) [*kŏlŏs*, vagina; *tomĕ*, a cutting]. Surgical or obstetric incision of the vagina.

**Colpoxerosis** (*kŏl-po-sĕ-rŏ-sis*) [*kŏlŏs*, vagina; *ĕxĕros*, dry]. Morbid dryness of the vagina.

**Colt-ill** (*koltŭ-il*). See *Strangles*.

**Coltsfoot** (*koltŭ-foot*). The leaves of *Tussilago farfura*, a demulcent and tonic, sometimes prescribed for chronic cough. Dose of decoction, ʒj to Oj, a tea-cupful; of fld. ext. ʒj-ij. Unof.

**Columbin** (*kol-um'-bin*). An active principle of *Calumba*. It is a colorless crystalline substance of excessively bitter taste and neutral reaction.

**Columbo** (*kol-um'-bo*). See *Columbo*.

**Columella** (*kol-u-mell'-ah*) [L., a little column]. 1. The column-like rod of birds and reptiles, a part of the organ of hearing, corresponding to the stapes of the higher animals. 2. The modiolus or central axis of the cochlea of the human ear. See *Cochlea* and *Modiolus*. **C. res dentes**; the cuspid teeth are so called from their shape.

**Column** (*kol'-um*) [*columna*, a column]. A pillar or column. Applied to sundry column-like organs of the body, and especially to certain parts of the spinal cord.

**C., Anterior**, the layer of white matter in either half

roots. It contains the lateral pyramidal tract, the direct cerebellar tract, and the greater part of the anterior ground-fibers and antero-lateral ascending tract. **C. of Morgagni**, vertical folds of the rectal mucous membrane seen at the point of union of the latter with the skin of the anus. They diminish, but are not entirely effaced, when the bowel is distended. Between their lower ends little arches are sometimes found stretching from one to the other, forming pockets of skin and mucous membrane. These are the *sinus* of *Morgagni*; they are more developed in old people. **C., Posterior**, a collection of white-matter situated in the spinal cord on either side between the posterior horns and posterior nerve-roots, and the posterior median fissure. It is divided into two parts by the

imperfect intermediate septum, a narrow "postero-median column," and a wide "postero-external column." **C., Postero-external**, the outer wider division of the posterior column of the cord; the column of *Burdach*. **C., Postero-median**, the median division of the posterior column of the cord; the column of *Goll*. **C. of Rolando**, an eminence on the lateral border of the medulla oblongata. **C. of Spitzka-Lissauer**, in the spinal cord a group of nerve-fibers lying just in front and just behind the posterior horns or cornua. **C., Posterior-vesicular**. See *Column* of *Clarke*. **C. of Türck**, the anterior or direct pyramidal tract. **Columns of the External Abdominal Ring**, the free borders of the aponeurosis of the external oblique muscle.

COLUMNS OF SPINAL CORD.

A.C. Anterior commissure. P.C. Posterior commissure. I.g.s. Intermediate gray substance. P. cor. Posterior cornu. c.c.p. Caput cornu posterioris. L.L. Lateral limiting layer. A.L.A.T. Antero-lateral ascending tract, which extends along the periphery of the cord. (*Gowers*.)

of the spinal cord included between the anterior horn and anterior nerve-roots, and the anterior median fissure. It contains the anterior or direct pyramidal tract, a portion of the antero-lateral ascending tract, and a portion of the anterior ground-fibers. **C., Antero-lateral Ascending**. See *C. of Gowers*. **C. of Burdach**, the postero-external column of the cord. **C. of Clarke**, a column of gray substance occupying the region to the outer and posterior part of the central canal of the spinal cord, at the inner part of the base of the posterior cornu. It is most marked in the dorsal region, and contains fusiform cells, some furnished with axis-cylinder processes. It is also called the posterior vesicular column of the cord. **C., Direct Cerebellar**, in the spinal cord, is situated outside of the lateral pyramidal tract, and ventrad of the *Spitzka-Lissauer* column. It is sensory or afferent. **C., Dorsomesal**, a name for the postero-median column of the spinal cord and medulla oblongata. **C. of Goll**, the postero-median column of the spinal cord. **C., Gowers'**, in the spinal cord, a bunch of fibers lying in front of the direct cerebellar tract and reaching around upon the periphery of the anterior pyramidal tract. It is probably a sensory column containing the nerves of pain and temperature. **C., Lateral**, the layer of white matter in either half of the spinal cord included between the posterior horn and posterior nerve-roots, and the anterior horn and anterior nerve-

roots. It contains the lateral pyramidal tract, the direct cerebellar tract, and the greater part of the anterior ground-fibers and antero-lateral ascending tract. **C. of Morgagni**, vertical folds of the rectal mucous membrane seen at the point of union of the latter with the skin of the anus. They diminish, but are not entirely effaced, when the bowel is distended. Between their lower ends little arches are sometimes found stretching from one to the other, forming pockets of skin and mucous membrane. These are the *sinus* of *Morgagni*; they are more developed in old people. **C., Posterior**, a collection of white-matter situated in the spinal cord on either side between the posterior horns and posterior nerve-roots, and the posterior median fissure. It is divided into two parts by the

imperfect intermediate septum, a narrow "postero-median column," and a wide "postero-external column." **C., Postero-external**, the outer wider division of the posterior column of the cord; the column of *Burdach*. **C., Postero-median**, the median division of the posterior column of the cord; the column of *Goll*. **C. of Rolando**, an eminence on the lateral border of the medulla oblongata. **C. of Spitzka-Lissauer**, in the spinal cord a group of nerve-fibers lying just in front and just behind the posterior horns or cornua. **C., Posterior-vesicular**. See *Column* of *Clarke*. **C. of Türck**, the anterior or direct pyramidal tract. **Columns of the External Abdominal Ring**, the free borders of the aponeurosis of the external oblique muscle.

**Columna** (*kol-um'-nah*) [L.]. A column or pillar. **C. bertini**, that part of the cortical structure of the kidneys that separates the sides of any two pyramids, and through which the arteries and nerves enter, and the veins and lymphatics emerge. **C. nasi**, the antero-posterior septum between the nostrils. **C. vertebralis**, the spinal column. **Columnæ carneæ**, muscular columns projecting from the inner surface of the cardiac ventricles.

**Colytic** (*ko-lit'-ik*) [*κολυτικός*, preventive]. Preventive; inhibitory; caused by an obstruction; antiseptic.

**Coma** (*ko'-mah*) [*κόμα*, the hair of the head]. In biology, any tuft, as the top of a pineapple, the hairs on the end of a seed, etc.

**Coma** (*ko'-mah*) [*κόμα*, deep sleep]. Abnormally deep and prolonged sleep, with the cerebral functions in abeyance; it is due to many conditions affecting the cerebrum directly or indirectly. The well-marked form is characterized by stertorous breathing, relaxation of the sphincters, lividity of the face, and loss of parallelism of the optic axes. **C., Alcohol**, that due to poisoning by alcohol. **C., Apoplectic**, that due to apoplexy. **C. diaceticum**, a form of coma occurring in carcinoma of the stomach and in diabetes. It is due to the presence of diacetic acid in the system. It is also called *Diabetic coma*. **C. Kussmaul's**. See *Kussmaul*. **C., Uremic**, that due to uremia. **C. Vigil**, a comatose

condition in which the patient lies with open eyes, but unconscious and delirious. This is occasionally met with in typhoid and typhus fevers, and in delirium tremens.

**Comanic Acid** (*kō-man'ik*). See *Acid*.

**Comatose** (*kō'mat'os*) [*κωμα*, a deep sleep]. In a condition of coma.

**Combination** (*kōm-bin-a'-shun*) [*combinare*, to combine]. The act of grouping or uniting; chemic union. **C.-back**, in the microscope, the lens-system of an objective farthest from the object, composed of a plano-concave of flint glass and a bi-concave of crown glass, or a bi-concave and two bi convex glasses. **C.-front**, in the microscope, the lens-system nearest the objective.

**Combustion** (*kōm-us'-shun*) [*combure*, to burn up]. The process of oxidation, attended with the liberation of heat and sometimes of light. It is loosely used as a synonym of inflammation. **C.**, **Spontaneous**, that due to heat from chemic changes, such as the spontaneous ignition of oiled waste or shoddy in woolen mills, factories, etc. **C.**, **Spontaneous Human**, the supposed burning of the body without the external application of heat.

**Comedo** (*kōm'e-dō*) [*comedo*, a glutton; *pl.*, *Comedones*]. Grubs; Grub-worms; Black-heads. A chronic disorder of the sebaceous glands characterized by yellowish or whitish pin-point and pin-head sized elevations, containing in their center exposed blackish points. They are found usually on the face, back of the neck, chest, and back, and are often associated with acne. They occur as a rule in the young. Occasionally a parasite, the *Demodex folliculorum*, a small mite, is found in each comedo.

**Comenic Acid** (*kō-men'ik*). See *Acid*.

**Comes** (*kō'mēs*) [*L.*; *pl.*, *Comites*]. A companion, as a vein or nerve to an artery.

**Comfrey** (*kūm'frē*) [*ME.*, *cumfrie*]. The root of *Symphytum officinale*, a demulcent, slightly astringent and tonic drug. It is a common ingredient of domestic cough-mixtures. Dose of the decoction indefinite; of the fld. ext. ʒj-ij. Unof.

**Comma-bacillus** (*kōm'-ah-bas-il'us*). See *Bacteria*, *Synonymatic Table of*.

**Commensal** (*kōm-en'-sal*) [*com*, together; *mensa*, table]. In biology, the harmonious living together of two animals or plants. One of two such organisms.

**Commī** (*kōm'e*) [*κώμα*, a gum]. Any gum; the purgative gum-resin of *Excaecaria cochinchinensis*, a tree of Indo-china.

**Comminution** (*kōm-in-u'-shun*) [*comminutio*; *comminere*, to break in pieces]. The process by which a solid body is reduced to pieces of varying sizes. It includes the various operations of cutting, rasping, grating, slicing, pulverizing, levigating, triturating, elutriating, granulating, etc. See, also, *Fracture*, *Comminut.*

**Commissure, Commissura** (*kōm'-is-ūr*, *kōm-is-u'-rah*) [*committere*, to unite]. A joining or uniting together. **C.**, **Anterior** (*of third ventricle*), a rounded cord of white fibers placed in front of the anterior crura of the fornix. It perforates the corpus striatum on either side, and spreads out into the substance of the hemispheres over the roof of the descending horns of the lateral ventricles. **C.**, **Anterior White** (*of spinal cord*), a layer of fibers separating the posterior gray commissure from the bottom of the anterior median fissure. **C.**, **Gray** (*of spinal cord*), the transverse band of gray matter connecting the crescentic masses of gray matter of each half of the spinal cord. **C. magna**, the corpus callosum. **C.**, **Middle**, a band of gray matter connecting the optic thalami, and

continuous with the gray matter lining the anterior part of the third ventricle. **C.**, **Optic**, the union and crossing of the two optic nerves in front of the tuber cinereum. **C.**, **Posterior** (*of third ventricle*), a flattened white band connecting the optic thalami posteriorly. **C.**, **Posterior White** (*of spinal cord*), a band of fibers separating the gray commissure from the bottom of the posterior median fissure. **Commissura brevis**, a portion of the inferior vermicorn process of the cerebellum, situated in the incisura posterior. **C. simplex**, a small lobe on the upper surface of the cerebellum near the incisura posterior.

**Common** (*kōm'-un*) [*communis*, common]. Belonging or pertaining to all. Prostitute. **C. Black**. See *Pigments*, *Conspectus of*.

**Commotio** (*kōm-o'-sho-o*) [*L.*]. A commotion or shock. **C. cerebri**. Synonym of *Shock*. **C. retinae**, the name given to those cases in which a depreciation, or perhaps an entire loss of vision, follows a blow on or near the eye. It can be explained as the result of insensibility due to the same changes in the retina as occur in the central organ of patients suffering from concussion of the brain.

**Communicans** (*kōm-u'-nik-ans*) [*L.*]. Communicating. **C. noni**. See *Nerves*, *Table of*.

**Communication** (*kōm-u-nik-a'-shun*) [*communicare*, to communicate]. 1. The transference of a contagium from one person to another. 2. The channel between two or more parts. **C.-plate**, in biology, a perforated diaphragm between the zooids of a composite actinozoön (the "Rosettenplatte" of Reichert, and the Communication-pore of Smith) by means of which communication is maintained between all the cells in a colony and between all the compartments of the stolon in Polyzoa. **C.-pore**. See *C.-plate*.

**Commutator** (*kōm'-u-ta-tor*) [*commutare*, to exchange]. An instrument for automatically interrupting or reversing the flow of an electric current, making and breaking it with desired frequency. See *Electric*.

**Comose** (*kō'-mōs*) [*coma*, hair]. Having much hair.

**Compass Plant** (*kūm'-pas plant*). See *Rosin Weed*.

**Compatibility** (*kōm-pat-ib-il'-it-e*) [*compati*, to suffer with]. The property of being compatible; susceptibility (as of different medicines) of being exhibited in the same solution with no loss of the desired effect, and without change in constitution.

**Compensating** (*kōm'-pēn-sa-ting*) [*compensare*, to compensate]. Making amends for. **C. Ocular**. See *Ocular*. **C. Operation**, in ophthalmology, tenotomy of the associated antagonist in cases of diplopia from paresis of one of the ocular muscles.

**Complaisance, Operations of** (*kōm-pla-zongs'*). See *Election*.

**Complanate** (*kōm'-plan-āt*) [*complanatus*, to make plane or level]. In biology, flattened.

**Complemental** (*kōm-ple-men'-tal*) [*complementum*, that which completes or fills up]. Supplying a deficiency. In biology, forming a complement to a female. **C. Air**. See *Air*. **C. Male**, one of such supernumerary males as those cirripedia (*Ibla*) that lie within the sac of the female.

**Complementary** (*kōm-ple-men'-ter-e*) [*complementare*, to fill up; to complete]. Complemental. **C. Colors**. See *Color* and *Pigment*.

**Completely Born** (*kōm-plet'-le born*). As employed in legal medicine, this expression implies that the child must be in the world in all its parts, *i. e.*, completely external to the mother. It does not imply that the placenta has been separated or the cord divided.

**Complexus** (*kōm-pleks'-us*) [*complexus*, complex]. The totality of symptoms, phenomena, or signs of a morbid condition. **C. Muscle**. See *Muscles*, *Table of*.

**Complication** (*kom-plik-a'-shun*) [*complicare*, to fold together]. A disease or a process secondary to and more or less dependent upon some primary disease.

**Compos Mentis** (*kom'-pos men'-tis*) [L.]. Of sound mind, memory, and understanding. See *Non Compos Mentis*.

**Composite** (*kom-poz'-it*) [*componere*, to put together]. 1. Composed of distinct portions. 2. In biology, belonging to the order Compositæ. **C. Monsters**; this is a term used to designate any form of monstrosity showing some degree of duplicity in the main regions of the body.

**Composition** (*kom-po-zish'-un*) [*compositio*, a putting together]. Compounding; applied to drugs. The constitution of a mixture. **C. Powder**, a popular name (originally Thomsonian) for the *pulvis myricæ compositis*, N. F. At present it is a mixture of finely powdered bayberry bark (*Myrica cerifera*), 12 parts; ginger, 6 parts; capsicum and cloves, each 1 part. It is useful for sore throat and severe coryza. Unof. **C. Tea**, a warm drink composed of different spices, and used as a stomachic and to abort an attack of coryza.

**Compound** (*kom'-pound*, or *kom-pound'*) [ME., *compounen*, to mix or compound]. 1. To mix, as drugs. 2. Composed of several parts; in chemistry, a compound body. **C. Cathartic Pills**. See *Colocynth*. **C. Cavities**, cavities in teeth that are produced by the coalescence of two cavities or by the extension of a single cavity in such a manner as to include two surfaces of a tooth. **C. Fracture**. See *Fracture*. **C. Granule-Cell**. See *Corpuscle*, *Gluge's*. **C. Oxygen**, a quick cure-all consisting of a strong solution of potassium nitrate or chlorate through which the air to be inhaled is passed.

**Compounding** (*kom-pound'-ing*) [ME., *compounen*, to mix]. The mixing, manipulation, and preparation of the drugs ordered in a prescription.

**Compress** (*kom'-pres*) [*compressus*, pressed together]. Folded cloths, wet or dry, applied firmly to the part for relief of inflammation, or to prevent hemorrhage. **C., Fenestrated**, with a hole for drainage or inspection. **C., Graduated**, the strip applied directly is small; the others, progressively larger, cover it.

**Compressed** (*kom-pres'd*) [*compressus*, pressed together]. Firmly pressed together. **C. Air**, air the density of which has been increased by forcible compression. **C. Air Bath**. See *Bath*.

**Compression** (*kom-presh'-un*) [*compressus*, pressed together]. The state of being compressed. **C.-atrophy**, atrophy of a part from constant compression. Instances are the Chinese foot, liver-atrophy of tight lacing, atrophy of tissues from pressure by an aneurysm. **C. of Brain**. See *Brain*. **C.-myelitis**, myelitis due to compression. See *Myelitis*.

**Compressor** (*kom-pres'-or*) [*comprimere*, to press together]. 1. An instrument for compressing an artery, vein, etc. 2. It is also applied to muscles having a compressing function, as the *C. naris*, *C. venæ dorsalis penis*, etc. See *Muscles*, *Table of*. 3. One of the light springs inserted on either side of the stage of a microscope for holding the slide in position; a clip. **C. sacculi laryngis**, the inferior aryteno-epiglottideus muscle. See *Muscles*, *Table of*. **C. urethræ**, constrictor urethre. See *Muscles*, *Table of*.

**Compressorium** (*kom-pres'-o' re-um*) [*compressor*, a compress]. An instrument devised for making pressure on the cover-glass of a microscope-slide in order to favor separation of the elements of the specimen to be examined.

**Comptonia** (*komp-to'-ne-ah*) [after Henry Compton,

Bishop of London, a botanist]. A genus of plants. **C. asplenifolia**. See *Liquidambar*.

**Conarial** (*ko-na'-re-al*) [κωνάριον, the pineal gland]. Relating to the conarium. **C. Vein**. See *Vein*.

**Conario-hypophyseal** (*ko-na-re-o-hi-po-fis'-e-al*) [κωνάριον, the pineal gland; ὑποφύσις, an undergrowth]. Relating to the conarium and to the hypophysis of the cerebrum; pineo-pituitary.

**Conarium** (*ko-na'-re-um*) [κωνάριον; dim. of κωνος, a cone]. See *Pineal Gland*.

**Conation** (*ko-na'-shun*) [*conari*, to endeavor]. The exertive power of the mind, including will and desire; a special act or exercise of the exertive power.

**Concassation** (*kon-kas-a'-shun*) [*concassatio*; *con*, together; *cassare* or *quassare*, to shake, to beat]. 1. The shaking of medicines, as in a bottle; the pulverizing of drugs by beating. 2. Mental distress or affliction.

**Concato's Disease**. See *Diseases*, *Table of*, and *Polyorrhymenitis*.

**Concaulescence** (*kon-kawl-es'-ens*) [*con*, together; *caulis*, a stalk]. In biology, the partial fusion of the pedicle of a flower with the stem from which it springs.

**Concavo-concave** (*kon-kah'-vo-kon'-kāv*). See *Lens*, *Biconcave*.

**Concavo-convex** (*kon-kah'-vo-kon'-veks*). See *Lens*, *Periscopic*.

**Conceive** (*kon-sēv'*) [*concipere*, to take in]. To become pregnant.

**Concentration** (*kon-sen-trat'-shun*) [*con*, together; *centrum*, the center]. Evaporation of part of the water of a mixture, thus rendering it relatively more dense.

**Concentric** (*kon-sen'-trik*) [*con*, together; *centrum*, the center]. Arranged in an equidistant manner about a center. **C. Hypertrophy of the Heart**, increase in the muscular texture of the heart, the capacity of the cavities remaining unchanged.

**Conception** (*kon-sep'-shun*) [*concipere*, to conceive]. 1. The fecundation of the ovum by the spermatozoid. See *Pregnancy*. 2. The abstract mental idea of anything; the power or act of mentally conceiving. **C., Imperative**, a false idea that an insane person dwells upon, and which he cannot expel from his mind, even when he knows it to be absurd, and which dominates his actions.

**Concha** (*konḡ'-kah*) [κόχχα, a shell]. A shell. Applied to organs having some resemblance to a shell, as the patella, vulva, etc., and especially to **C. auris**, or the hollow part of the external ear. **C. narium**, the turbinated bones. **C. santoriniana**, a name applied to a fourth turbinated bone sometimes found in the nose.

**Conchiolin** (*konḡ'-ki'-o-lin*) [κόχχα, a shell; ἰον, a violet],  $C_{20}H_{16}N_2O_{11}$ . The skeleton material that forms the organic bases of the shells of gastropods. **C. Osteomyelitis**. See *Osteomyelitis*.

**Conchitis** (*konḡ'-ki'-tis*) [κόχχα, a shell; ἰτις, inflammation]. Inflammation of the concha.

**Concho-anthelix** (*konḡ'-ko-an't'-he-lik's*) [κόχχα, a shell; ἀνθῆλις, the inner curvature of the ear]. The muscle called obliquus auriculæ. See *Muscles*, *Table of*.

**Concho-helix** (*konḡ'-ko-he'-lik's*) [κόχχα, a shell; ἑλῖς, a spiral]. The muscle called transversus auriculæ. See *Muscles*, *Table of*.

**Conchology** (*konḡ'-kal'-o-je*) [κόχχα, a shell; γέγεν, to speak]. That department of science that deals with the shells of molluscs.

**Conchometer** (*konḡ'-kom'-et-er*) [κόχχα, a shell; μέτρον, a measure]. An instrument for the measurement of the shells of molluscs.

**Conchoscope** (*konḡ'-ko-skōp*) [κόχχα, a shell; the naris; σκοπεῖν, to inspect]. A speculum and mirror for inspecting the nasal cavity.

**Concoctio** (*kon-kok'-she-e*) [L.]. Digestion. **C. tarda**.

Synonym of *Dyspepsia*.

**Concoction** (*kon-kok'-shun*) [*con-coq-ure*, to boil together]. The act of boiling two substances together.

**Concolor** (*kon-kol'-er*) [*con*, together; *color*, color]. In biology, having the same color on both sides or over the entire surface.

**Concomitant** (*kon-kom'-it-ant*) [*con-comitari*, to accompany]. Accompanying. **C. Strabismus**. See *Strabismus*.

**C. Symptoms**, symptoms that are not in themselves essential to the course of a disease, but that may occur in association with the essential symptoms.

**Concrement** (*kon-kre'-ment*) [*concre-scere*, to grow together]. A concretion.

**Concesce** (*kon'-kres*) [*con*, together; *cre-scere*, to grow]. In biology, to grow together.

**Concrescence** (*kon-kres'-s-ens*) [*con*, together; *cre-scere*, to grow]. In biology, the union of the germ-bands to form the primitive streak.

**Concrete** (*kon'-kret*, or *kon-kret'*) [*concre-scere*, to grow together]. Solidified or condensed. **Concrete Sugar**, the product of the Fryer concretor, or similar form of apparatus. It is a compact, boiled-down mass, containing both the crystallizable sugar and impurities that ordinarily go into the molasses. It shows little or no distinct grain.

**Concretion** (*kon-kre'-shun*) [*concretio*; *concre-scere*, to grow together]. The solidification or condensation of a fluid substance; a calculus; a union of parts normally separate, as the fingers. **C., Animal**, an earthy deposit found in any of the various organs or secretions of the body. These concretions have a fibrous base containing salts of calcium, phosphorus, or magnesium.

**Concubitus** (*kon-ku'-bit-us*) [*concumbere*, to lie together]. Copulation.

**Concursus** (*kon-ker'-sus*) [*concur-sere*, to run together]. A synonym of *Anastomosis*.

**Concussion** (*kon-kush'-un*) [*concussio*, a violent shock]. Shock; the state of being shaken; a severe or injurious shaking or jarring of a part; also, the morbid state resulting from such a jarring. **C. of Brain**. See *Brain*. **C. of Spinal Cord**. A condition caused by severe shock of the spinal column, with or without appreciable lesion of the myelon.

**Concussor** (*kon-kus'-or*) [*concutere*, to shake]. In massage, an apparatus for gently beating the part to be treated.

**Condaminea** (*kon-dam-in'-e-ah*) [after *Condamine*, the botanist]. A genus of *Cinchona*-yielding trees.

**Condensability** (*kon-dens-ab-il'-it-e*) [*condensare*, to condense]. Capacity for undergoing condensation.

**Condensation** (*kon-den-sa'-shun*) [*condensare*, to condense]. In chemistry, the union of two or more molecules by the linking of carbon-atoms and the formation of complicated carbon-chains. 2. The pathologic hardening, with or without contraction, of a soft organ or tissue.

**Condensed** (*kon-len-d'*) [*conden-are*, to make thick]. Much compact; reduced to a denser form. **C. Milk**, milk that has had most of its watery elements evaporated according to a known process. Condensed milk prepared with the addition of cane-sugar is a white or yellowish white product of about the consistency of honey and ringing in specific gravity from 1.25 to 1.41. It should be completely soluble in from four to five times its bulk of water, without separation of any flocculent residue, and then possess the taste of fresh, sweetened milk. Condensed milk prepared without the addition of cane-sugar is not boiled down to the same degree, and therefore remains liquid. Battershaw gives the following analysis of both classes:—

## CONDENSED MILK WITH ADDITION OF SUGAR.

| BRAND.                       | Water. | Fat.  | Cane-sugar and Milk-sugar. | Casein. | Salts. |
|------------------------------|--------|-------|----------------------------|---------|--------|
| Alderney, . . . . .          | 30.05  | 10.08 | 46.01                      | 12.04   | 1.82   |
| Anglo-Swiss (American), . .  | 29.46  | 8.11  | 50.41                      | 10.22   | 1.80   |
| Anglo-Swiss (English), . . . | 27.80  | 8.24  | 51.07                      | 10.80   | 2.09   |
| Anglo-Swiss (Swiss), . . . . | 25.51  | 8.51  | 53.27                      | 10.71   | 2.00   |
| Eagle, . . . . .             | 27.30  | 6.60  | 44.47                      | 10.77   | 1.85   |
| Crown, . . . . .             | 29.44  | 9.27  | 49.26                      | 10.11   | 1.92   |

## CONDENSED MILK WITHOUT CANE-SUGAR.

| BRAND.                     | Water. | Fat.  | Milk-sugar. | Casein. | Salts. |
|----------------------------|--------|-------|-------------|---------|--------|
| American, . . . . .        | 52.07  | 15.06 | 16.97       | 14.26   | 2.80   |
| New York, . . . . .        | 56.71  | 14.13 | 13.98       | 13.18   | 2.00   |
| Granulated Milk Company, . | 55.43  | 13.16 | 14.84       | 14.04   | 2.53   |
| Eagle, . . . . .           | 56.01  | 14.02 | 14.06       | 13.90   | 2.01   |

**Condenser** (*kon-den'-ser*) [*condensare*, to make dense]. A lens or combination of lenses used in microscopy for gathering and concentrating rays of light.

**Condiment** (*kon'-dim-ent*) [*condimentum*, spice]. Spice, sauce, or other appetizing ingredients used with food.

**Condom**, or **Cundum** (*kon'-dum*, or *kuon'-dum*) [corruption of *Conton*, the name of the inventor]. A sheath worn over the penis during copulation for the purpose of preventing conception.

**Conduction** (*kon-duk'-shun*) [*conductio*; *conducere*, to draw together]. The passage or transfer of force or material from one part to another. **C.-resistance**, the resistance encountered by an electric current in passing through a circuit.

**Conductor** (*kon-duk'-tor*) [*conducere*, to draw together]. 1. A body that transmits force-vibrations, such as those of heat or electricity. A term applied to the electrodes and cords by which they are joined to the battery. 2. An instrument serving as a guide for the surgeon's knife.

**Conduplicate** (*kon-du'-plik-at*) [*conduplicare*, to double together]. In biology, doubled or folded together, as leaves or wings.

**Condurango Bark** (*kon-du-rang'-go bark*) [native of S. Amer.]. Bark of *Gonolobus tetragonus*, or of *Conglobus condurango*; a remedy much used in S. America as an alternative in syphilis. It was introduced into the U. S. as a remedy for carcinoma of the

stomach, but yielded uncertain results. Dose of the fluid extract ʒss-j; of the tincture, ʒj-ij. Unof.

**Condy's Fluid.** One part of sodium or potassium permanganate dissolved in 500 parts of water; it is a useful disinfectant.

**Condylar** (*kon'-dil-ar*) [κόνδυλος, a knuckle]. Pertaining to the condyles.

**Condylarthrosis** (*kon-dil-ar-thro'-sis*) [κόνδυλος, a knuckle; ἄρθρον, a joint]. A form of diarthrosis, wherein a condyle is set in a shallow and elliptic cavity, and free and varied movement of the joint is possible; condylar articulation.

**Condyle** (*kon'-dil*) [κόνδυλος, a knuckle]. Any rounded eminence such as occurs in the joints of many of the bones, especially the *femur*, *humerus*, and *lower jaw*.

**Condylloid** (*kon'-dil-oid*) [κόνδυλος, a knuckle; εἶδος, likeness]. Resembling or pertaining to a condyle.

**Condyloma** (*kon-dil-o'-mah*) [κονδύλωμα, a swelling; *pl.*, *Condylomata*]. A wart-like growth or tumor about the anus or pudendum. The term is applied also to syphilitic patches and discolorations.

**Condylomatous** (*kon-dil-o'-mat-us*) [κονδύλωμα, a swelling]. Of the nature of a condyloma.

**Condylotomy** (*kon-dil-ot'-o-me*) [κόνδυλος, a knuckle; τέμνειν, to cut]. Extra-articular osteotomy; a division through the condyles of a bone.

**Cone, Conus** (*kōn, ko'-nus*) [κῶνος, a cone]. A solid body having a circle for its base, and terminating in a point. A patch of choroidal atrophy near the papilla of the eye, in myopia. **C.**, **Graduated**, a cone-shaped body used for measuring the size of orifices of vessels, etc., especially in post-mortem examinations. **C.** **Inhaler**. See *Anesthetic*. **C.** **of Light**, the triangular reflection from the normal membrana tympani. **C.**, **Retinal**, one of the rod-like bodies of elongated conical form, which, with the associated rods, form one of the outer layers of the retina, the so-called rod-and-cone layer. **C.**, **Spermatic**, one of the series of cones forming the head of the epididymis, and composed of the coiled efferent tubules.

**Conenchyma** (*kon-eng'-kim-ah*) [κῶνος, a cone; ἔγχυμα, an infusion]. In biology, a term applied to tissues formed of conical cells, as the velvety surface of some petals.

**Confectio** (*kon-fek'-she-o*) [L.: *gen.*, *Confectionis*]. Official name for any confection, *q. v.* **C.** **damocratis**. See *Mithriate*.

**Confection** (*kon-fek'-shun*) [*confectio*, a preparation]. In pharmacy, a mass of sugar and water, or of honey, used as an excipient with a prescribed medicinal substance. There are two official (U. S. P.) *confectiones*; in the B. P. there are eight.

**Confectioners' Disease** (*kon-fek'-shun-erz dis-ez'*). A disease frequently occurring in the workpeople manufacturing candied fruits, nuts, etc. It is confined to the nails of the fingers of the hands; the nail loses its polish, and becomes black, and the periungual portion becomes loosened and raised.

**Configuration** (*kon-fig-u-ra'-shun*) [*configurare*, to form after something]. In chemistry, a term now designating what was formerly called the "constitution" or "structure" of the molecules.

**Confinement** (*kon-fin'-ment*) [L.: *confiner*, to shut up]. The condition of women during childbirth.

**Confirmatory** (*kon-fir'-mat-or-e*) [*confirmare*, to confirm]. Confirming. **C.** **Incision**, an abdominal section, made to confirm a diagnosis, as in case of malignant disease of the ovary, uterus, peritoneum, etc.

**Confluent** (*kon'-flu-ent*) [*confluere*, to flow together]. In descriptive pathology, a term applied to eruptions that run together. The opposite of discrete. In

anatomy, coalesced or blended; applied to two or more bones originally separate, but subsequently formed into one.

**Conformator** (*kon'-for-ma-tor*) [Fr., *conformateur*]. A form of cephalograph used in determining the outlines of the skull in craniometry.

**Confrontation** (*kon-fran-ta'-shun*) [*confrontari*, to be contiguous to]. The bringing of one person into the presence of another from whom he or she has contracted a disease, as an aid in diagnosis.

**Confusion** (*kon-fu'-zhun*) [*confusio*, a confounding]. Mixing; confounding. Embarrassment. **C.** **Colors**, a set of colors so chosen with regard to their degree of brilliancy that they cannot be distinguished by one who is color-blind; a good test for color-blindness.

**Congelation** (*kon-jel-a'-shun*) [*congelatio*, a freezing]. 1. Freezing; frost-bite; intense cold or its effect on the animal economy, or, any organ or part. 2. The chilling or benumbing effect of any freezing-mixture or application; mainly employed for its local anesthetic effect. 3. Coagulation.

**Congener** (*kon'-jen-er*) [L., of the same race]. In biology, belonging to the same genus; closely allied.

**Congenital** (*kon-jen'-it-al*) [*con*, together; *genitus*, born]. Existing at birth.

**Congestion** (*kon-jes'-chun*) [*congerere*, to heap up]. An abnormal collection of blood in a part or organ. Congestion may be active or passive, atonic or inflammatory, functional or hypostatic. It is also named from the parts affected; the most important varieties of morbid congestion are the cerebral, spinal, pulmonary, hepatic, and renal.

**Congestive** (*kon-jes'-tiv*) [*congerere*, to heap up]. Marked by, due to, or of the nature of congestion.

**Congius** (*kon'-je-us*) [L.]. A Roman measure. A gallon.

**Conglobate** (*kon-glo'-bat*) [*con*, together; *globare*, to make into a globe]. Rounded. **C.** **Glands**, the absorbent or lymphatic glands. See *Gland*.

**Conglomerate** (*kon-glom'-er-at*) [*conglomerare*, to heap up]. 1. Massed together; aggregated. 2. A mass of units without order. **C.** **Glands**, acinous glands.

**Conglutin** (*kon-glu'-tin*) [*con*, together; *gluten*, glue]. One of the proteids found in peas, beans, and other kinds of pulse. Vines considers it an artificial product. It is more glutinous and more soluble in acetic acid, and richer in nitrogen, than ordinary legumin. See *Casein*.

**Conglutination** (*kon-glu-tin-a'-shun*) [*conglutinare*, to glue together]. The abnormal union of two contiguous surfaces or bodies, as of two fingers, or of the opposed surfaces of the pleural or pericardial sac.

**Congo** (*kon'-go*) [native African]. A country of western Africa. **C.** **Fever**. See *Fever*. **C.** **Paper**, a test-paper stained with Congo-red. **C.** **paper Test**. See *Tests*, *Table of*. **C.** **red**, a red coloring matter which becomes blue in the presence of free HCl. It is used in chemic investigation of the gastric juice. See *Pigments*, *Conspectus of*. **C.** **Solution**. See *Tests*, *Table of*.

**Congress** (*kong'-gres*) [*congressus*, a meeting together]. An assemblage for deliberative purpose. **C.**, **Sexual**, coition, or carnal intercourse.

**Congressus** (*kong-gres'-us*) [L.]. Congress, sexual intercourse. **C.** **interruptus**. See *Coitus reservatus*.

**Conhydrin** (*kon-hi'-drin*) [κόνειον, hemlock; ἵδωρ, water], C<sub>8</sub>H<sub>17</sub>NO. A solid alkaloid of conium, an oxyconin, occurring in pearly, iridescent, white, foliaceous crystals, with a faint, conin-like odor, and melting at 121° C. and distilling at 225°.

**Conical** (*kon'-ik-al*) [κωνικός, pertaining to a cone]. Cone-shaped. **C.** **Cornea**. See *Kerato-globus*.

**Conidiophore** (*kō-nid'ē-fēr*) [*κονίω*, dust; *οὐρεω*, to bear]. In biology, applied to the hypha that produces conidia.

**Conidium** (*kō-nid'ē-um*) [*κονίω*, dust; *ιδιον*, dim. suffix: *pl. Conidia*]. In biology, the deciduous asexual spores of certain fungi. Also called *Basidiospore* and *Acrospore*.

**Conioidosis** (*kō-nid'ē-ō-sis*). Synonym of *Urticaria*.

**Coniferin** (*kō-nif'ēr-in*) [*conifer*, cone-bearing],  $C_{16}H_{22}O_8 + 2H_2O$ . A crystalline glucosid found in the cambium of coniferous woods, and consisting of shining needles. It effloresces in the air and melts at  $185^\circ C$ . It is also called *Abietin*.

**Coniin** (*kō-ni'um*). See *Conium* and *Conin*.

**Conin** (*kō-nin*) [*κωνιν*, hemlock],  $C_8H_{13}N$ . A volatile alkaloid that occurs in hemlock (*Conium maculatum*), chiefly in the seeds, and is obtained by extraction with acetic acid or distillation with soda. It is a colorless, oily liquid, having the odor of hemlock and boiling at  $107-108^\circ$ ; its specific gravity is 0.886 at  $0^\circ$ .

**Conium** (*kō-ni'um*) [*κωνιν*, hemlock]. Hemlock. The green, full grown fruit of the spotted hemlock, *C. maculatum*. It contains three alkaloids and a volatile oil. Its properties are mainly due to the alkaloids *conin*,  $C_8H_{13}N$ , and *methylconiin*,  $C_9H_{14}NCH_3$ . It produces motor paralysis, without loss of sensation or of consciousness. Toxic doses cause death by paralysis of the organs of respiration. It is valuable in acute mania, delirium tremens, tetanus, blepharospasm, asthma, and whooping cough. **C., Abstract.**, made from conium 200, dilute hydrochloric acid 6, sugar of milk and alcohol q. s., to make 100 parts of abstract. **Unof.** Dose gr. ss-ijj. **C., cataplasma** (B. P.), made from the leaves. For external use. **C., Ext., Alcoholic.**, each grain representing one grain of the drug. Dose gr. ij-v-xl. **C., Fld. Ext.**, same strength as preceding. Dose mjj-v-xl. **C., pilula Comp.** (B. P.), contain extract of hemlock and ipecac. Dose gr. v-x. **C., succus** (B. P.), made from the leaves. Dose mxxx-3ij. **C., Tinct.**, 15 per cent. strength. Dose mxx-3j. **C. Vapor** (B. P.), for inhalations. **Coniin**, *unof.*, volatile alkaloid of conium. Dose gr.  $\frac{1}{10}$ - $\frac{1}{5}$ . **Coniin Hydrobrom.**,  $C_8H_{13}N(C_2H_5O)_2$ , *unof.*, recommended for spasmodic affections. Dose gr.  $\frac{1}{10}$ - $\frac{1}{5}$ . All preparations uncertain in strength. **Coniin Hydrobrom., Injectio Hypoderm.** Dose mjj-ijj.

**Conjugal** (*kōn'ju-gal*) [*conjugal*, a husband or wife]. Pertaining to marriage; connubial. **C. Diabetes**, diabetes affecting husband and wife together; this is said to be not infrequently observed.

**Conjugate** (*kōn'ju-gat*) [*con*, together; *jugare*, to yoke]. Yoked or coupled. **C. Deviation.** See *Deviation*. **C. Diagonal, Internal**, an internal measurement of the pelvis from the middle of the subpubic ligament to the sacro-vertebral angle. It is  $12\frac{1}{4}$  cm. **C. Diameter** (of the pelvis), the anteroposterior or sacro pubic. See *Diameter*. **C. Diameter of the pelvis, external.** See *Baudelocque, Diameter of*. **C. Focus.** See *Focus*. **C.-symphyseal Angle**, the angle that the conjugate diameter of the pelvis makes with the pubic bone at the symphysis. **C., True**, the minimum useful diameter of the pelvic inlet. See *Diameter*.

**Conjugation** (*kōn'ju-gat'chōn*) [*conjungatus*, joined together]. In biology, that form of sexual reproduction in which two cells, similar in size and appearance, unite to form a spore. The sexual character of conjugation was first pointed out by Vaucher, in 1803.

**Conjunctiva** (*kōn'junkt'iv-ah*) [*conjunctivus*, connecting]. The mucous membrane covering the anterior portion of the globe of the eye, reflected on and extending to the inner surfaces of the lids. Its parts are called *palpebral* and *bulbar*, or *bulbar*.

**Conjunctival** (*kōn'junkt'iv-al*, or *kōn'junkt'iv-al*) [*conjunctivus*, connecting]. Relating to the conjunctiva.

**Conjunctivitis** (*kōn'junkt'iv-itis*) [*conjunctivus*, connecting; *itis*, inflammation]. Inflammation of the conjunctiva. It may be catarrhal, croupous, diphtheric (or membranous), gonorrheal, phlyctenular, purulent, etc., in character or origin. **C., Atropin**, a peculiar idiosyncratic catarrh of the conjunctiva produced by prolonged use of atropin as a mydriatic, and characterized by the formation of numerous follicles. **C. crouposa**, a form associated with the formation of a whitish-gray membrane that is easily removed. **C. diphtheritica**, a specific purulent inflammation of the conjunctiva spreading by infection, yielding a contagious secretion, and leading to necrosis of the infiltrated tissue. **C. eczematosa.** See *C. lymphatica*. **C., Egyptian.** See *Trachoma*. **C. exanthematica.** See *C. lymphatica*. **C. follicularis**, a form characterized by the presence of follicles. **C., Granular.** See *Trachoma*. **C. lymphatica**, that occurring in scrofulous individuals. It is accompanied by the formation of ulcers. **C. membranacea.** See *C. crouposa* and *Ophthalmia*. **C. phlyctenulosa.** See *C. lymphatica*. **C. pustulosa.** See *C. lymphatica*. **C. scrofulosa.** See *C. lymphatica*.

**Connate** (*kōn'at*). See *Confluent* and *Congenital*.

**Connection** (*kōn'ek'l-shun*) [*connectere*, to connect]. Sexual intercourse.

**Connective** (*kōn'ek'l-tiv*) [*connectere*, to connect]. 1. Connecting; binding. 2. In botany, the portion of the filament that connects the two cells of an anther. **C. Tissue.** See *Animal Tissue*.

**Connivent** (*kōn'iv-vent*) [*connivere*, to wink at]. In botany converging toward each other; applied to stamens that converge above, as those of the violet.

**Conocephalic, or Conocephalous** (*kō-no-sef'al'ik*, *kō-no-sef'al-us*) [*κωνος*, cone; *κεφαλή*, head]. Having the skull somewhat conoidal.

**Conoid, or Conoidal** (*kō'no-id*, or *kō-noi'dal*) [*κωνος*, cone; *ειδός*, shape]. Of a conical or approximately conical shape. **C. Ligament**, the lower and inner part of the coraco-clavicular ligament. **C. Tubercle**, the eminence on the inferior surface of the clavicle to which the *C. ligament* is attached.

**Conquassant** (*kōn'kwass'ant*) [*conquassare*, to shake severely]. Very severe (applied chiefly to labor-pains at the acme of their intensity).

**Conquassation** (*kōn'kwass'at-shun*). See *Concassation*.

**Conquinamin** (*kōn'kwīn'am-in*). An alkaloid of Cuprea bark.

**Conrad's Water.** An eye-wash composed of three parts of mercuric chlorid, 100 of distilled water, and five to ten of tinctura opii crocata.

**Conroy's Test.** See *Tests, Table of*.

**Consanescent** (*kōn-san'es-ent*) [*consanescere*, to become sound]. Healing, becoming healed (applied mostly to wounds).

**Consanguine** (*kōn-san'gwin*) [*consanguineus*, of the same blood]. Allied by birth or descent; akin by blood-relationship.

**Consanguineous** (*kōn-san'gwin'e-us*) [*consanguineus*, of the same blood]. Related by a common parentage.

**Consanguinity** (*kōn-san'gwin'it-e*) [*con*, together; *sanguinis*, of blood]. The relationship arising from common parentage; blood-relationship.

**Consciousness** (*kōn'shus-nes*) [*conscious*, knowing]. The state of being aware of one's own existence, of one's own mental states, and of the impressions made upon one's senses; ability to take cognizance of sensations; applied to *ab extra* impressions. **C., Double**, that morbid condition in which there are two separate

and alternating states of mental consciousness, in either one of which the events that have occurred in the other state are not remembered by the patient.

**Consenescence** (*kon-sen-es'-ens*) [*consenescere*, to grow old]. The state or condition of growing old.

**Consensual** (*kon-sen'-su-al*) [*consensus*, agreement]. Reflex and involving sensation, but not volition; as a consensual act or movement.

**Consent** (*kon-sent'*) [*consentire*, to agree]. In forensic medicine, this term signifies willing participation in unnatural or illegal intercourse. In pathology, a sympathetic affection of a part distant from a diseased part.

**Consentience** (*kon-sen'-she-ens*) [*consentire*, to agree]. Undeveloped or unintellectual consciousness; the sum or result of the impressions made by sensations upon the psychic center of the organism.

**Conserve, or Conserve** (*kon-serv'-vah, or con-serv'*) [*conservare*, to keep]. A confection, *q. v.*

**Conservancy** (*kon-serv'-vun-se*) [*conservare*, to keep]. Public conservation of health or of things that make for health; the sum of hygienic or preservative legislation. **C. System.** See *Sewage, Disposal of*.

**Conservative** (*kon-serv'-vat-iv*) [*conservare*, to keep]. Aiming at the preservation and restoration of injured parts; as conservative surgery or dentistry.

**Conservator** (*kon'-ser-va-tor*) [*conservare*, to preserve]. A person appointed to look after the business interests and general welfare of an insane person or idiot.

**Consolidant, Consolidating** (*kon-soll'-id-ant, or kon-soll'-id-a-ting*) [*consolidare*, to make firm]. Tending to heal or promoting the healing of wounds or fractures; favoring cicatrization.

**Consolidation** (*kon-soll-id-a'-shun*) [*consolidare*, to make firm]. The process of becoming firm or solid, as a lung in pneumonia.

**Consonants** (*kon'-so-nants*) [*con*, together; *sonare*, to sound]. Non-vowel sounds in speaking produced at certain parts of the resonance-chamber. They are sounded only with a vowel. They consist of Explosives, Aspirates, Vibratives, and Resonants; they are also divided into four classes, according to the situation in which they are produced—the **Articulation Positions**,—the first being between the lips; the second between the tongue and hard palate; the third between the tongue and soft palate; the fourth between the vocal bands. **Labials**, made at the lips, may be explosive (*b, p*), aspirate (*f, v, w*), vibrative (the "burr"), and resonant (*m*). These form the consonants of the first articulation position. Those of the second position are the explosives *t* and *d*; the aspirates *s, z, sch, th*; the vibrative *r*; the resonant *n*. Those of the third position are the explosives *k* and *g*; the aspirates are the unvoiced consonants, unvoiced *ch* and *j*; the vibrative, palatal *r*; the resonant, palatal *n*. That of the fourth position is the aspirate, the glottis-formed *h*.

**Constant** (*kon'-stant*) [*constans*, steady]. Fixed; not changing. **C. Battery, Element, or Cell.** One yielding a constant current. A galvanic battery, of which the most common types are those of Bunsen, Callaud, Daniell, Grénét, Grove, Leclanché, and Smee.

**Consteratio** (*kon-ster-na'-she-o*) [*L.*]. See *Night-Terrors*.

**Constipation** (*kon-stip-a'-shun*) [*constipare*, to crush tightly together]. Costiveness; retention and hardness of the feces from functional inactivity of the intestinal canal, or from abnormalism of the biliary or other secretions. It may also be due to mechanical obstruction of the intestinal canal, paresis of the intestinal walls, the use of certain foods, and general depression of vital activity.

**Constituent** (*kon-stit'-u-ent*) [*constituere*, to establish]. A formative element or ingredient. The **Constituents of the Organism** are organic and inorganic. The **Inorganic C.** are Water, forming 58.5 per cent. of the body; Gases, such as oxygen, marsh gas, etc.; Salts, of which the chief are sodium chlorid, calcium phosphate (forming more than one-half of the bones), sodium phosphate, sodium carbonate, sodium and potassium sulphates, potassium chlorid, calcium fluorid and carbonate; Free Acids, as hydrochloric, sulphuric, etc.; Bases, such as silicon, manganese, iron. The **Organic C.** comprise the large classes of the proteids, albuminoids, fats, etc.

**Constitution** (*kon-stit-u'-shun*) [*constituere*, to dispose]. In chemistry, the atomic or molecular composition of a body. In pharmacy, the composition of a substance. In physiology, the general temperament and functional condition of the body.

**Constitutional** (*kon-stit-u'-shun-al*) [*constituere*, to dispose]. Pertaining to the state of the constitution. **C. Diseases**, in pathology, such diseases as are inherent, owing to an abnormal structure of the body. Also, inherited diseases. Also, a condition in which the disease pervades the whole system. General, in contradistinction to local.

**Constrictor** (*kon-strik'-tor*) [*constringere*, to bind together]. Any muscle that contracts or tightens any part of the body. See *Muscles, Table of*.

**Constringent** (*kon-strin'-junt*) [*constringere*, to constrict]. Same as *Astringent, q. v.*

**Consultation** (*kon-sul-ta'-shun*) [*consultare*, to take counsel]. A deliberation between two or more physicians concerning the diagnosis of the disease of a patient and the proper method of treatment.

**Consumption** (*kon-sump'-shun*) [*consumere*, to consume or wear away]. Wasting, denutrition, or atrophy, loosely used as a synonym of *Tuberculosis*, especially pulmonary tuberculosis, *Phthisis, q. v.* **C. of the Bowels.** See *Diarrhea, Chronic Inflammatory*.

**Consumptive** (*kon-sump'-tiv*) [*consumere*, to consume or wear away]. 1. Of the nature of tuberculosis. 2. One afflicted with pulmonary tuberculosis.

**Contact** (*kon'-takt*) [*contactus*, a touching]. A touching. **C. Lenses**, in optics, a glass shell the concavity of which is in contact with the globe of the eye, a layer of liquid being interposed between the lens and the cornea. **C. Series**, a series of metals arranged in such an order that each becomes positively electrified by contact with the one that follows it. The contact-values of some metals, according to Arvon and Perry, are as follows:—

DIFFERENCE OF POTENTIAL IN VOLTS.

|                      |      |                        |      |
|----------------------|------|------------------------|------|
| Zinc, Lead . . . . . | .210 | Iron, Copper . . . . . | .146 |
| Lead, Tin . . . . .  | .069 | Copper, Platinum . . . | .238 |
| Tin, Iron . . . . .  | 3.13 | Platinum, Carbon . .   | .113 |

**C. Test, Heller's test.** See *Tests, Table of*.

**Contactile, or Contactual** (*kon-tak'-til, or kon-tak'-tu-al*) [*contactus*, contact]. 1. Tactile. 2. Due to or spreading by actual contact.

**Contagion** (*kon-ta'-jun*) [*contagio*; *contingere*, to touch]. The process by which a specific disease is communicated between persons, either by direct contact or by means of an intermediate agent. (See, also, *Infection*.) Also the specific germ of virus from which a communicable disease develops. **C., Mental.** See *Imitation*.

**Contagionist** (*kon-ta'-jun-ist*) [*contagio*; *contingere*, to touch]. One who believes in the contagious origin or transmission of any given disease.

**Contagious** (*kon-ta'-jus*) [*contagium*, a touching]. Communicable or transmissible by contagion, or by a specific contagium. *Infection*—applied to a

disease engendered by a specific agency, which, once present, may multiply and renew itself indefinitely, and which always gives rise to the same disease. (a) *Miasmatic*—applied to an infectious disease of which the specific cause exists only in certain localities, *e.g.*, malaria, pneumonia, acute rheumatism. (b) *Contagious*—applied to a disease of which the cause is transmitted from person to person, through houses, villages, cities, and countries, *e.g.*, variola, morbilli, scarlatina, diphtheria, etc. (c) *Miasmatic-contagious*—applied to an infectious disease of which the specific cause is carried by persons, or their emanations, to a locality, and in the soil, water or houses of which it multiplies and thence generates the disease, *e.g.*, cholera, enteric fever, yellow fever. **C. Typhus.** Synonym of *Typhus Fever*, *q.v.*

**Contagium** (*kōn-tā'gi-um*) [L.]. Any virus or morbid matter by means of which a communicable disease is transmitted from the sick to the well. **C. animatum**, same as *C. vivum*. **C. vivum** ("living contagium"), any living vegetable or animal organism that causes the spread of an infectious disease.

**Contest** (*kōn'test*) [*contestari*, to call to witness]. To dispute; to strive for. **C. Theory**, the doctrine of chemotaxis.

**Contiguity** (*kōn-tig'u-ity*) [*contiguitas*, a touching]. Proximity. **C., Amputation in the**, is performed at a joint, without section of a bone.

**Continued** (*kōn-tin'ū-t*) [*continuuare*, to make continuous]. Persisted in. **C. Fever**, a fever that is neither intermittent nor typically remittent. See *Fever*.

**Continuity** (*kōn-tin'ū-ity*) [*continuitas*, uninterruptedness]. In anatomy, the portion lying between two ends, as the shaft of a bone. **C., Solution of.** See *Solution*. **C., Amputation in the**, amputation in which a bone is divided.

**Continuous** (*kōn-tin'ū-us*) [*continuuus*, joined; uninterrupted]. Unbroken. **C.-gum Work**, a method of constructing artificial dentures.

**Contortion** (*kōn-tōr'shun*) [*contorquere*, to twist]. A twisting or writhing, as of the body.

**Contour** (*kōn-toor'*) [Fr., *contour*, circuit]. 1. The line that bounds, defines, or terminates a figure. 2. In operative dentistry, to effect the restoration of lost parts of teeth by building them up with gold, etc. **C.-feather-hair**, one of those outer and longer hairs or feathers that go to determine the contour of a bird or mammal, as distinguished from a soft down-feather or a hair of the under-fur. **C.-fillings**, in dentistry fillings in which the material is so built out as to restore the lost portion of the crown of the tooth; distinguished from plane or flush-fillings.

**Contracted Heels.** See *Hoof-and*.

**Contractility** (*kōn-trak-til'ity*) [*contrahere*, to draw together]. That property of certain tissues, especially muscle, manifested by shortening upon the application of a stimulus.

**Contraction** (*kōn-trak'shun*) [*contrahere*, to draw together]. Approximation of the elements of a tissue or organ, thus diminishing its volume or contents. **C., Carpo-pedal**, a variety of tetany occurring in infants, and generally associated with dentition or seat-worms. There is a flexing of the fingers, toes, elbows, and knees, and a general tendency to convulsions. **C., Closing**, muscular contractions produced at the instant that the electric current is closed. **C., Front-tap**, Gowers' term for a phenomenon often observed in cases with exaggerated knee-jerk. It is a delicate test of neuromuscular irritability. The foot is placed at a right angle to the leg, and the muscles of the front of the leg are tapped, the result being extension of the foot from contraction of the gastrocnemius. See *Re-*

*flexes*, *Table of*. **C.-furrows**, a number of concentric curved lines near the ciliary margin of the iris. They are produced in the living iris by a folding of the iris upon itself during dilatation of the pupil. **C., Hour-Glass.** See *Uterus*. **C., Opening**, the muscular contraction produced by opening or breaking the circuit. **C., Paradoxical**, Westphal's term for a phenomenon that consists in the contraction of a muscle, caused by the passive approximation of its extremities. **C.-remainder**, the stage of elastic after-vibration or residual contraction persisting in a muscle after withdrawal of the stimulus. **C.-ring**, the boundary line between the upper and lower uterine segments, often marked by a perceptible ridge. That portion of the uterine canal that must be dilated to allow the escape of the fetus is called the *lower uterine segment*; that portion above the point at which the dilatation ceases, *i.e.*, the contracting portion of the muscle, is called the *upper uterine segment*.

**Contractions.** See *Contracture* and also *Abbreviations*, in *Introductory Tables*.

**Contracture** (*kōn-trak't-chur*) [*contractus*, a drawing together]. Contraction; permanent shortening, as of a muscle; distortion or deformity due to the shortening of a muscle or of various muscles. In electro-therapeutics, muscular spasms, clonic or tonic, the variety determined in regard to time, by the method of application of the current.

**Contra-extensio** (*kōn-trah-ek-sten't-se-o*) [L.]. Counter-extension.

**Contra-fissura** (*kōn'trah-fis-sul'-rah*) [*contra*, opposite to; *fissura*, a fissure]. Cranial fissure or fracture produced by a blow upon the skull at a point distant from or opposite to the seat of the fracture.

**Contra-indicant** (*kōn-trah-in't-dik-ant*) [*contra*, opposed to; *indicare*, to indicate]. 1. Having the effect of a contra indication. 2. A symptom, indication, or condition that forbids the use of a particular remedial measure or set of measures.

**Contra-indication** (*kōn-trah-in-dik-a'-shun*) [*contra*, against; *indicare*, to point out]. That pathologic or modifying condition in which a remedy or a method of treatment is forbidden that under ordinary cases might be proper.

**Contra-stimulant** (*kōn-trah-stim'-u-lant*) [*contra*, against; *stimulare*, to stimulate]. 1. Counteracting the effect of a stimulus; depressing; sedative. 2. A sedative remedy.

**Contra-stimulus** (*kōn-trah-stim'-u-lizm*) [*contra*, against; *stimulare*, to stimulate]. The doctrine of controstimulus; Rasionism.

**Contra-stimulus, or Contro-stimulus** (*kōn-trah-stim'-u-lus*, or *kōn-tro-stim'-u-lus*) [*contra*, against; *stimulus*, a stimulus]. An influence that is opposed, or acts in opposition, to a stimulus.

**Contrayerva** (*kōn-trah-yer'-vah*) [*contra*, against; *herba*, an herb]. The root of *Dorstenia contrayerva*, a stimulant, tonic, and diaphoretic. Its decoction is mucilaginous, and is serviceable in low fevers and malignant eruptive diseases. Dose ʒss. Unof.

**Contrecoup** (*kōn'tr-koo*) [Fr.]. Counter-stroke, a variety of injury by indirect violence, as by a blow on a remote part. See *Contra-fissura*.

**Contrectation** (*kōn-trek-ta'-shun*) [*contrectatio*; *contrectare*, to touch]. Digital examination; palpation; touch; manipulation, as in massage.

**Control** (*kōn-trōl'*) [*contra*, against; *rotula*, a roll]. An experiment performed to test the correctness of the results of another experiment; a standard by which to check observations and insure the validity of their results. Also, a synonym for *Control Animal*. **C. Animal.** See *C. Experiment*. **C. Experiment**, an

experiment carried out under normal or common circumstances or conditions, to serve as a standard whereby to test the variation or value of another experiment carried out under peculiar or abnormal circumstances. For instance, an animal is rendered immune by inoculation with some anti-specific agent. Such an animal is called the **Immune Animal**. Another animal, not having been previously rendered immune, is called the **Control Animal**. Both animals are then exposed to the action of, or are inoculated with, the specific virus in question, and the relative differences in the reaction of the two animals to the last inoculation or exposure constitute the conclusions of the experiment.

**Contusion** (*kon-tu'-zhun*) [*contusio*; *contundere*, to bruise]. A bruise or injury by a blunt weapon, or by collision, without breaking the skin or covering. **C.-pneumonia**, a form of pneumonia following traumatism. It is of frequent occurrence.

**Conus** (*ko'-nus*) [*κῶνος*, a cone; *pl.*, *Coni*]. A crescentic patch of atrophic choroid tissue near the optic papilla in myopia. **C. arteriosus**, the conoid eminence of the right ventricle of the heart, whence arises the pulmonary artery. **C. medullaris**, the cone-like termination of the spinal cord, continuous as the *filum terminale*. **Coni vasculosi**, a series of conical masses that together form the globus major of the epididymis.

**Convalescence** (*kon-val-es'-ens*) [*convalescere*, to become well]. A term applied to the restoration to health after the subsidence of a disease or ailment.

**Convalescent** (*kon-val-es'-ent*) [*convalescere*, to become well]. 1. One recovering from a sickness. 2. Recovering from sickness.

**Convallamarin** (*kon-val-am'-ar-in*) [*convallis*, a valley; *amarus*, bitter],  $C_{23}H_{44}O_{12}$ . A bitter, crystalline whitish powder; a glucosid derived from *Convallaria*. It is a rather active poison. See *Convallaria majalis*.

**Convallaria** (*kon-val-a'-re-ah*) [*convallis*, a valley]. A genus of liliaceous plants. **C. majalis**, Lily of the Valley. All parts of the plant are used in medicine. Its properties are due to *convallarin*,  $C_{34}H_{62}O_{11}$ , and *convallamarin*,  $C_{23}H_{44}O_{12}$ , glucosids. It is a prompt cathartic, diuretic, and cardiac stimulant, valuable as a heart-tonic. Unlike digitalis, it has no cumulative effect. **C., Ext.**, soluble in water. Dose gr. ij-x. **C., Ext.**, fld., alcoholic. Dose  $\frac{m}{ij}$ -xj. **C. infusum**, prepared with three times its weight of water. Dose  $\frac{ss}{ij}$ -ij. **Convallamarin**, or **Convallamarinum**, is soluble in water. Dose gr.  $\frac{1}{4}$ -ij. All unof.

**Convallarin** (*kon-val'-ar-in*) [*convallis*, a valley],  $C_{34}H_{62}O_{11}$ . A purging, crystalline glucosid derived from *Convallaria*.

**Convallarrhetin** (*kon-val-ar-e'-tin*) [*convallis*, a valley; *ρητιν*, resin].  $C_{28}H_{52}O_6$ . A poisonous resiniform substance obtainable from convallarin upon the separation of glucose from the latter.

**Convection** (*kon-vek'-shun*) [*convehere*, to carry together]. A transmission or carrying, as of heat or electricity. **C.-current**, a current of a liquid or gas heated to a temperature above that of the surrounding medium; it rises to the surface because of its lighter density, and thus the entire fluid or gas acquires the same temperature.

**Convergence** (*kon-ver'-jens*) [*convergere*, to tend to a center]. Inclination or a direction toward a common point, center, or focus, as, *e.g.*, of the axes of vision upon the near-point. **C.-theory**, a theory that accounts for the production of myopia by the pressure exerted by the external ocular muscles upon the eyeball in convergence, this pressure leading to distention of the eyeball.

**Convergent** (*kon-ver'-jent*) [*con*, together; *vergere*, to incline]. In biology, coming together. Tending to a common center. **C. Strabismus**. See *Strabismus*. **Convex** (*kon-veks'*) [*convexus*, vaulted]. Rounded, as a swelling of a round or spheric form on the external surface; gibbous; opposed to concave.

**Convexity** (*kon-veks'-it-e*) [*convexus*, convex]. A surface rounding outward; the quality of being convex.

**Convexo-concave** and **Convexo-convex** (*kon-veks'-o-kon-kav*, *kon-veks'-o-kon-veks*). See *Lens*.

**Convolute** (*kon'-vo-lut*) or **Convolutel** (*kon'-vo-lut-ed*) [*convolutus*, rolled together]. Rolled together. **C. Bones**. See *Turbinated Bones*.

**Convolution** (*kon-vo-lut'-shun*) [*convolvere*, to roll together]. A folding and turning upon itself of any organ, as the cerebrum and the small intestines; any gyrus of the brain. A *Table of the Convolution of the Cerebrum* is added. (See page 323.)

**Convolvulin** (*kon-vol'-vu-lin*) [*convolvere*, to roll together],  $C_{31}H_{50}O_{16}$ . A glucosid derived from the roots of Jalap (*Convolvulus purga*). It is a gummy mass, with active purgative properties.

**Convolvulus** (*kon-vol'-vu-lus*) [*convolvere*, to roll together]. A genus of plants. **C. panduratus**, wild potato. The tuber is a mild cathartic. Dose gr. xl. Unof. **C. purga**. See *Jalap*. **C. scammonia**. See *Scammony*.

**Convulsant** (*kon-vul'-sant*) [*convellere*, *convulsum*, to pull together]. A medicine that causes convulsions.

**Convulsion** (*kon-vul'-shun*) [*convellere*, to convulse]. A general paroxysm of involuntary muscular contraction, whether tonic or (more especially) clonic. Loss of consciousness and voluntary control of the muscles, with clonic, tonic, or mixed contraction, etc. It may be due to epilepsy, other functional or organic disease of the brain, circulation, etc.; or may be cataleptic, hysteric, choreic, etc. See, also, *Epilepsy*. **C., Infantile**, due to a number of causes, such as rickets, exhaustion, etc.; sometimes called "screaming fits." **C., Puerperal**. See *Eclampsia*. **C., Salaam**, *Eclampsia nutans*, *q.v.* **C., Uremic**, due to the altered state of the blood in disease of the kidney.

**Convulsionary** (*kon-vul'-shun-a-re*) [*convellere*, to convulse]. One who is subject to convulsions; especially one of a set of patients who are subject to epidemic or imitative convulsions.

**Convulsivant** (*kon-vul'-siv-ant*) [*convellere*, to convulse]. An agent that causes convulsions.

**Convulsive** (*kon-vul'-siv*) [*convellere*, to convulse]. Marked by convulsions or spasms. **C. Cerebral Typhus**. See *Dubini's Disease*. **C. Cough**. See *Cynobex hebetis*. **C. Tic**. See *Habit-Spasm*. **C. Tremor**. See *Paramyoclonus*.

**Conydrin** (*ko-ni'-drin*). See *Conhydriin*.

**Cook's (Alleyer) Hematoxylin Solution**. A solution for staining microscopic sections. Extract of logwood 6 gm., alum 6 gm., cupric sulphate 1 gm., and water, 40 c. c. are rubbed up into a paste in a mortar. This is allowed to stand for two days, and then filtered, and a crystal of thymol is added to the filtrate for preserving. See *Stains*, *Table of*.

**Cooper's (Sir Astley) Arsenious Ointment**. An ointment composed of arsenious acid and sulphur, each one part, spermaceti cerate, eight parts. It has been used as a local application in skin-affections. **C. Fascia**. See *Scarpa's Fascia*. **C. Hernia**. See *Hernia*, and *Diseases*, *Table of*. **C. Irritable Breast**. Synonym of *Mastodynia*. **C. Irritable Testicle**. Synonym of *Orchialgia*. **C. Ligaments**. See *Ligaments*. **C. Method**. See *Treatment, Methods of*. **C. Operations**.

CONVOLUTIONS OF THE SUPERIOR ASPECT OR CONVEXITY OF THE CEREBRUM.

- 1, 1. Fissure of Rolando. 2, 2. Ascending frontal convolution. 3, 3. Ascending and superior parietal convolutions. 4, 4. First frontal convolution. 5, 5. Second frontal. 6, 6. Third frontal. 7, 7. First occipital. 8, 8. Second occipital. 9, 9. Third occipital. 10. Anterior extremity of corpus callosum. 11, 11. Posterior extremity.

CONVOLUTIONS OF THE INFERIOR ASPECT OF THE CEREBRUM.

1. Anterior extremity of corpus callosum. 2. Optic chiasm. 3. Tubercles of the optic chiasm. 4. Corpora albicantia or mammillaria. 5. Pineal gland. 6. Third nerve. 7. Aqueduct of Sylvius. 8. Testes. 9. Inferior surface of frontal lobe. 10. Convolution of the fissure of

See *Operations*, Table of. **C. Ventilator.** See *Ventilation*.

**Coopers' Knee.** An enlarged bursa patellæ found in coopers, as the result of pressure exerted by the knee against the barrel.

**Coördination** (*ko-or-din-ah'-shun*) [*con*, together; *ordinare*, to regulate]. The harmonious activity and proper sequence of operation of the various organs of the body, especially of those parts that cooperate in the performance of any function.

**Copaiba** (*ko-pa'-e-bah*) [Sp.]. Balsam of Copaiba. The oleoresin of *Copaifera officinalis*, *C. coriacea*, *C. guianensis*, *C. multijuga*, *C. cordifolia*, *C. laxa*, *C. nitida*, *C. oblongifolia*, and *C. langsdorffii*; leguminous trees, native to South America. It is a stimulant, diuretic, diaphoretic, and an expectorant, and is much used in gonorrhea, although now considered of doubtful value. **C.**, Massa, copaiba 94, magnesia 6 parts.

Dose  $\text{m} \times - \text{ʒ} j$ . **C.**, **Mist. Comp.**, Lafayet-ette's mixture, unof., copaiba  $\text{ʒ} vij$ , oil cubebs  $\text{ʒ} j$ , glyceriti vitelli  $\text{ʒ} vij$ ; triturate and add syr. aq. menth. piperit.  $\text{ʒ} iiss$ ; then add, with constant stirring, liq. potass.  $\text{ʒ} ss$ , tinct. cardamon comp.  $\text{ʒ} ij$ , spt. ather. nitrosi,  $\text{ʒ} ss$ , aq. menth. piperit. q.s. to make  $\text{ʒ} viij$ . Dose  $\text{ʒ} j - \text{ʒ} ss$ . **C.**, **Ol.** Dose  $\text{m} \times - xv$ . **C.**, **Resina**, mainly copaibic acid. Dose gr. j-v.

**Copal** (*ko'-pal*) [Mex., *copalli*, resins]. Anime. These terms include a number of related resins that are of both fossil and recent origin. The copal resins, when of good quality, are too hard to be scratched by the nail, have a conchoid fracture, and a specific gravity ranging from 1.059 to 1.080. Unlike others, they are soluble with difficulty in alcohol and essential oils, and are, therefore, valuable for making varnishes. The softer kinds are called *anime*.

**Copalche** (*ko-pal'-che*) [Mex.]. The bark of *Croton niveus* and other trees of tropical America. The term is a vague one, and is little used in medical literature.

**Copalin, Copalm** (*ko'-pal-in*, *ko'-pal-m*) [Mex., *copalli*, resins]. The sweetgum tree, *Liquidambar styraciflua*; also the resin that in warm latitudes exudes from it, the so-called Highgate resin.

**Copeman's Method.** A method of overcoming the nausea and vomiting of pregnancy. It consists in digital dilatation of the cervix uteri to a slight degree, not sufficient to induce abortion.

**Copernicia cerifera** (*ko-per-nish'-e-ah ser-ih'-er-ah*). See *Carnauba*.

**Cophosis** (*ko-fō'-sis*) [*κωφός*, deaf]. Deafness or dulness of hearing.

**Copiopia** (*kop-i-oh'-pe-ah*) [*κόπιος*, a straining; *ωψ*, eye]. Eye-strain; weariness of the eyes.

**C. hysterica**, a term applied to those symptoms that indicate hyperesthesia of the fifth and optic nerves.

Sylvius. 12. Olfactory nerve. 13. Third convolution of inferior surface of frontal lobe. 14. Fourth convolution. 15. Third convolution of external surface of frontal lobe. 16. External border of posterior lobe. 17. Sphenoidal extremity. 18. Occipital extremity. 19. Hippocampal convolution. 20. External convolution of posterior lobe. 21. Middle convolution. 22. Internal convolution. 23. Gyrus fornicatus.

## TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.

| NAME.                   | LOCATION.   | BOUNDARIES.  |
|-------------------------|---|--|
| Abrupt.                 | Small convolutions at the extremity of the occipital lobe.  |  |
| Angular.                | Posterior portion of inferior parietal lobule.  | <i>Anteriorly</i> , continuous with the supra-marginal convolution <i>Inferiorly</i> , continuous with the middle temporo-sphenoidal convolution <i>Posteriorly</i> , connected with the occipital lobe by the annectant convolutions. |
| Annectant (4).          | Occipital lobe.   | Connect the occipital with the temporo-sphenoidal and parietal lobes.  |
| Annectant, external.    | See <i>Annectant, first</i>   |  |
| Annectant, first.       | Occipital lobe; a portion of the superior occipital convolution.  | Joins the superior occipital convolution with the superior parietal lobe.  |
| Annectant, second.      | Occipital lobe, posterior part.   | Connects the angular and middle convolutions.  |
| Annectant, superior.    | See <i>Paroccipital</i> .   |  |
| Antero-parietal.        | See <i>Frontal, ascending</i> .   |  |
| Antero-temporal.        | See <i>Temporal, first</i> .  |  |
| Antorbital.             | Frontal lobe (of orang-outang), orbital surface.  | <i>Internally</i> , olfactory lobe.  |
| Arcuate.                | See <i>Uncinate</i> .   |  |
| Of Arnold.              | See <i>Posterior, inferior</i> .  |  |
| Basilar, internal.      | Frontal lobe (orbital face); probably the rectus convolution, <i>q. v.</i>  |  |
| Basirrhinal.            | Temporal lobe, near tip.  | Hippocampal and amygdaline fissures.   |
| Breves.                 | The larger number of the insular convolutions, as distinguished from the long insular.                                  |  |
| Bridging.               | See <i>Annectant</i> .  |  |
| Broca's.                | The inferior or third frontal convolution, <i>q. v.</i>   |  |
| Callosal.               | See <i>Fornicate</i> .  |  |
| Calloso-marginal.       | See <i>Fornicate</i> .  |  |
| Central, anterior.      | See <i>Frontal, ascending</i> .   |  |
| Central, posterior.     | See <i>Parietal, ascending</i> .  |  |
| Choroid, anterior.      | In the embryo, the convexity of the parietes of the lateral recess of the fourth ventricle.                             |  |
| Choroid, inferior.      | See <i>Choroid, posterior</i> .   |  |
| Choroid, posterior.     | In the embryo, a convexity posterior to the anterior choroid convolution in the lateral recess of the fourth ventricle. |  |
| Choroid, superior.      | See <i>Choroid, anterior</i> .  |  |
| Of the corpus callosum. | See <i>Fornicate</i> .  |  |
| Cruciate.               | See <i>Orbital convolutions</i> .   |  |
| Cuneate.                | Occipital lobe, median aspect of cerebrum; wedge-shaped.  | <i>Above</i> , parieto-occipital fissure. <i>Below</i> , calcarine fissure   |
| Cuneiform.              | See <i>Abrupt</i> .   |  |
| Dentate.                | In the dentate fissure; rudimentary in man.   | <i>Above</i> , the tænia hippocampi; terminates in the notch of the uncinate gyrus   |
| Descending              | Occipital lobe.   | <i>Anteriorly</i> , post-calcarine fissure.  |
| Divisus                 | See <i>Frontal, ascending</i> .   |  |
| D'ourlet.               | See <i>Fornicate</i> .  |  |
| External (4).           | Convexity of each cerebral hemisphere (of dog).   |  |

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.—*Continued.*

| NAME.                            | LOCATION.  | BOUNDARIES.   |
|----------------------------------|--|---|
| Forriate                         | Median surface of cerebrum, immediately above the corpus callosum.   | <i>Above</i> , calloso-marginal fissure. <i>Internally</i> , great longitudinal fissure. <i>Below</i> , corpus callosum.  |
| Frontal.                         | See <i>Frontal, ascending</i> .  |   |
| Frontal, ascending.              | Frontal lobe.  | <i>Above and below</i> , generally continuous with the ascending parietal convolution. <i>Posteriorly</i> , fissure of Rolando. <i>Anteriorly</i> , precentral and supereentral fissures.                           |
| Frontal, first.                  | See <i>Frontal, superior</i> .   |   |
| Frontal, inferior                | Frontal lobe, lower and outer portion. U-shaped convolution; forms an essential part of Broca's speech-center.   | <i>Above</i> , subfrontal fissure. <i>Posteriorly</i> , the ascending frontal convolution. <i>Anteriorly</i> , becomes the posterior orbital convolution.   |
| Frontal, lower                   | See <i>Frontal, inferior</i> .   |   |
| Frontal, middle.                 | See <i>Frontal, second</i> .   |   |
| Frontal, second                  | Frontal lobe between the superior and inferior frontal convolutions.   | <i>Posteriorly</i> , continuous with the ascending frontal convolution. <i>Anteriorly</i> , continuous with the middle orbital convolution. <i>Above</i> , superfrontal fissure. <i>Below</i> , subfrontal fissure. |
| Frontal, straight.               | See <i>Rectus</i> .  |   |
| Frontal, superior                | Frontal lobe.  | <i>Posteriorly</i> , continuous with ascending frontal c. <i>Anteriorly</i> , continuous with the internal orbital. Its mesal surface is called the marginal c. <i>Below</i> , the superfrontal fissure.            |
| Frontal, third.                  | See <i>Frontal, inferior</i> .   |   |
| Frontal, transverse.             | See <i>Frontal, ascending</i> .  |   |
| Frontal, upper                   | See <i>Frontal, superior</i> .   |   |
| Fronto-marginal                  | Frontal lobe of cerebrum, median aspect.   | <i>Above</i> , fronto-marginal fissure. <i>Below</i> , supercallosal fissure.   |
| Fronto-parietal, middle.         | See <i>Frontal, superior</i> .   |   |
| Fusiform.                        | See <i>Subcollateral</i> .   |   |
| Genuate.                         | "Passes from the anterior extremity of the fornicate convolution over the upper surface of the callosum, becoming the medial and lateral strie Lancisi." |   |
| Gross form                       | See <i>Subcalcarine</i> .  |   |
| Hippocampal.                     | Extends from the splenium, dipping behind and below the callosum, and continuing forward to the uncinate convolution.                                    | The hippocampal and collateral fissures. <i>Anteriorly</i> , the uncinate convolution. <i>Posteriorly</i> , the splenium.   |
| Intra-frontal                    | See <i>Subfrontal</i> .  |   |
| Intracal                         | A V-shaped convolution about the inflected fissure.  |   |
| Intra-temporal                   | Temporo-sphenoidal lobe, the superior convolution.   | <i>Above</i> , the Sylvian fissure. <i>Below</i> , the super-temporal or parallel fissure.  |
| Insular                          | One of a group of small convolutions that form the island of Reil.   |   |
| Insular, long                    | A portion of the insula; recognized by its length and horizontal direction.  |   |
| Inter-furrow                     | The convolution between the two parallel central fissures, in the rare cases in which two co-exist.  | The parallel central fissures.  |
| Internal.                        | See <i>Fornicate</i> .   |   |
| Intra-occipital                  | See <i>Subcalcarine</i> .  |   |
| Longitudinal, superior internal. | See <i>Fornicate</i> .   |   |
| Marginal                         | Frontal lobe.  | <i>Internally</i> , longitudinal fissure. <i>Inferiorly</i> , the calloso-marginal fissure. <i>Posteriorly</i> , the calloso-marginal fissure and fissure of Rolando.   |

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.—*Continued.*

| NAME.   | LOCATION.   | BOUNDARIES.   |
|---|---|---|
| Marginal, external.                                 | See <i>Fornicate</i> .  |   |
| Marginal, inferior.                                 | See <i>Supertemporal</i> .  |   |
| Marginal, internal.                                 | The lamina of the septum lucidum and dentate convolution.   | <i>Above</i> and <i>externally</i> , by the fornicate convolution.  |
| Medifrontal.  | See <i>Frontal, second</i> .  |   |
| Medio-parietal, transverse.                         | See <i>Parietal, ascending</i> .  |   |
| Meditemporal.                                       | Middle of temporal lobe; a small horizontal convolution.  | <i>Above</i> , the supertemporal fissure. <i>Below</i> , mediotemporal fissure. <i>Posteriorly</i> , continuous with the angular convolution.   |
| Mendel's.   | See <i>Opercular</i> .  |   |
| Nuclear; also called <i>Rauber's</i> convolution.   | A fold of gray matter in the olivary body.  |   |
| Occipital, fifth.                                   | Occipital lobe (of gorilla). Corresponds to the lingual convolution of man.   |   |
| Occipital, first.                                   | See <i>Occipital, superior</i> .  |   |
| Occipital, fourth.                                  | Occipital lobe (of gorilla). Corresponds to the fusiform of man.  |   |
| Occipital, inferior.                                | Occipital lobe.   | <i>Above</i> , middle occipital fissure. <i>Below</i> , inferior occipital fissure. <i>Anteriorly</i> , continuous with middle temporo-sphenoidal convolution.  |
| Occipital, lower.                                   | See <i>Occipital, inferior</i> .  |   |
| Occipital, middle.                                  | Occipital lobe, between the first and third occipital convolutions.   | <i>Superiorly</i> , transverse occipital fissure. <i>Inferiorly</i> , inferior longitudinal and occipital fissures. <i>Internally</i> , the median longitudinal fissure. <i>Externally</i> or <i>anteriorly</i> , it runs into the angular gyrus. |
| Occipital, second.                                  | See <i>Occipital, middle</i> .  |   |
| Occipital, superior.                                | Occipital lobe, superior surface, upper convolution.  | Connected with the superior parietal by the annectant gyrus.  |
| Occipital, third.                                   | See <i>Occipital, inferior</i> .  |   |
| Occipital, upper.                                   | See <i>Occipital, superior</i> .  |   |
| Occipito-temporal.                                  | Lower surface of temporo-sphenoidal lobe.   |   |
| Occipito-temporal, inferior.                        | See <i>Subcollateral</i> .  |   |
| Occipito-temporal, lateral.                         | See <i>Subcollateral</i> .  |   |
| Occipito-temporal, middle.                          | See <i>Subcalcarine</i> .   |   |
| Occipito-temporal, superior.                        | See <i>Subcalcarine</i> .   |   |
| Olfactory.  | Arises in the anterior perforated space, passing forward in the olfactory sulcus, and ending in the olfactory bulb. |   |
| Olfactory, external.                                | The lateral root of the olfactory tract.  | <i>Internally</i> , the olfactory groove.   |
| Olfactory, internal.                                | Frontal lobe; the ridge along the inner side of the olfactory groove. The internal root of the olfactory tract.     |   |
| Opercular; also called <i>Mendel's</i> convolution. | Frontal lobe.   | Enters into the operculum.  |
| Of the operculum.                                   | See <i>Breves</i> .   |   |
| Orbital.  | Frontal lobe; small convolutions on the orbital surface.  |   |
| Orbital, anterior.                                  | Frontal lobe.   | Continuous with the middle frontal convolution. <i>Posteriorly</i> , orbital sulcus.  |
| Orbital, external.                                  | See <i>Frontal, inferior</i> .  |   |
| Orbital, internal.                                  | Frontal lobe  | <i>Internally</i> , the rectus convolution.   |

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.—*Continued.*

| NAME.                                   | LOCATION.   | BOUNDARIES.  |
|---|---|--|
| Orbital, lateral.                       | Frontal lobe.   | The ventral portion of the subfrontal convolution.   |
| Orbital, middle.                        | Frontal lobe.   | <i>Internally</i> , the internal orbital convolution.  |
| Orbital, posterior.                     | Frontal lobe, a small convolution.  | <i>Anteriorly</i> and <i>internally</i> , the orbital fissure. Continuous with the inferior frontal convolution.   |
| Orbital, transverse.                    | Frontal lobe, posterior portion of inferior surface.  |  |
| Paracentral                             | Parietal and post-frontal lobes, mesial aspect. It is the motor area for some part of the leg.  | <i>Below</i> , the paracentral fissure. <i>Dorsal</i> , the precuneus.   |
| Paracaudal.                             | See <i>Paracentral</i> .  |  |
| Parietal.                               | See <i>Superior</i> .   |  |
| Parietal, ascending                     | Parietal lobe.  | <i>Anteriorly</i> , fissure of Rolando. <i>Posteriorly</i> , intraparietal fissure. <i>Below</i> , fissure of Sylvius. <i>Above</i> and <i>below</i> , usually continuous with the ascending frontal, and also <i>above</i> with the superior parietal convolutions. |
| Parietal, first.                        | See <i>Parietal, superior</i> .   |  |
| Parietal, inferior.                     | See <i>Subparietal</i> .  |  |
| Parietal, middle.                       | See <i>Angular</i> .  |  |
| Parietal, posterior.                    | See <i>Parietal, ascending</i> .  |  |
| Parietal, second.                       | See <i>Angular</i> and <i>Subparietal</i> .   |  |
| Parietal, superior.                     | Parietal lobe.  | Continuous <i>anteriorly</i> with ascending frontal (generally). <i>Anteriorly</i> , upper part of fissure of Rolando. <i>Posteriorly</i> , the external parieto-occipital fissure. <i>Inferiorly</i> , the intraparietal fissure.                                   |
| Parietal, third.                        | See <i>Marginal</i> .   |  |
| Parietal, upper.                        | See <i>Parietal, superior</i> .   |  |
| Parieto-occipital, lateral.             | See <i>Occipital, middle</i> .  |  |
| Parieto-occipital, middle (of Schwann). | Occipital lobe; the dorsal surface of the superior occipital convolution.                       |  |
| Paroccipital.                           | Occipital and parietal lobes; U-shaped, curving around the dorsal end of the occipital fissure. | <i>Laterally</i> , the paroccipital fissure. <i>Mesially</i> , the margin of the cerebrum.   |
| Post-central                            | See <i>Parietal, ascending</i> .  |  |
| Post-cruciate                           | Posterior portion of the sigmoid convolution.   |  |
| Posterior, inferior (of Arnold)         | Occipito-temporal lobe, ventral aspect.   |  |
| Postero-parietal                        | See <i>Parietal, ascending</i> .  |  |
| Post-frontal                            | See <i>Post-cruciate</i> .  |  |
| Preopercularis                          | See <i>Parietal, ascending</i> .  |  |
| Precentral                              | See <i>Frontal, ascending</i> .   |  |
| Precruciate.                            | In the dog's brain, the convolution lying in front of the cruciate fissure.                     | <i>Posteriorly</i> , the cruciate fissure.   |
| Preopercular                            | See <i>Precruciate</i> .  |  |
| Preorbital                              | Prefrontal lobes at junction of frontal and orbital aspects of the cerebrum.                    | <i>Caudad</i> , preorbital (or orbito-frontal) fissure.  |
| Preorbital, dorsal.                     | See <i>Frontal, ascending</i> .   |  |
| Quadrato.                               | Parietal lobe of cerebrum, median surface.  | <i>Anteriorly</i> , calloso-marginal fissure. <i>Posteriorly</i> , the parieto-occipital fissure. <i>Below</i> , continuous with the fornicate convolution.  |
| Rathus.                                 | See <i>Nuclear</i> .  |  |
| Rostos.                                 | Frontal lobe, orbital aspect.   | Between the olfactory fissure and the mesial margin.   |

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.—*Continued.*

| NAME.                         | LOCATION.   | BOUNDARIES.  |
|-------------------------------|---|--|
| Retrocentral.                 | See <i>Parietal, ascending.</i>   |  |
| Rolandicus, anterior.         | See <i>Precentral.</i>  |  |
| Rolandicus, posterior.        | See <i>Post-central.</i>  |  |
| Sagittal.                     | In <i>Edentata</i> , the longitudinal convolution.  | Lies next to the longitudinal fissure.   |
| Of Schwalbe.                  | See <i>Parieto-occipital, middle</i>  |  |
| Sigmoid.                      | A U-shaped convolution, including important motor areas.                                  | Surrounding the cruciate fissure.  |
| Straight.                     | See <i>Rectus.</i>  |  |
| Subcalcarine.                 | Occipital and temporal lobes; a narrow convolution.                                       | <i>Above</i> , calcarine fissure. <i>Below</i> , collateral fissure. <i>Peripherad</i> , the cuneus.   |
| Subcallosal (of Zuckerkandl). | Mesial aspect of cerebrum.  | Reaches from the chiasm to the rostrum.  |
| Subcollateral.                | Temporal lobe; the fusiform lobules of the brain.   | Connects the occipital and temporal lobes. <i>Above</i> , collateral fissure. <i>Below</i> , subtemporal fissure.  |
| Subfrontal.                   | See <i>Frontal, inferior.</i>   |  |
| Subparietal.                  | Parietal lobe.  | <i>Above</i> , parietal fissure. <i>Anteriorly</i> , continuous with the marginal and angular convolutions. <i>Posteriorly</i> , the paroccipital fissure.                   |
| Subtemporal.                  | See <i>Temporal, inferior.</i>  |  |
| Superfrontal.                 | See <i>Frontal, superior.</i>   |  |
| Superior.                     | See <i>Temporo-sphenoidal, superior.</i>  |  |
| Supertemporal.                | See <i>Infra-marginal.</i>  |  |
| Supra-marginal.               | Inferior parietal lobe, anterior portion.   | <i>Anteriorly</i> , the inferior extremity of the intraparietal fissure. <i>Below</i> , continuous with the ascending parietal and superior temporo-sphenoidal convolutions. |
| Supra-orbital.                | See <i>Frontal, inferior.</i>   |  |
| Supra-sylvian.                | The third external convolution of the dog.  |  |
| Sylvian.                      | In <i>Marsupials</i> , the portion of the brain surrounding the fissure of Sylvius.       |  |
| Temporal, first.              | See <i>Infra-marginal.</i>  |  |
| Temporal, inferior.           | Temporo-sphenoidal lobe; the lowest of the three convolutions.                            | <i>Posteriorly</i> , connected with the third occipital convolution. <i>Above</i> , the meditemporal fissure. <i>Below</i> , the subtemporal fissure.                        |
| Temporal, inframarginal.      | See <i>Temporo-sphenoidal, superior.</i>  |  |
| Temporal, lateral inferior.   | See <i>Temporal, inferior.</i>  |  |
| Temporal, lower.              | See <i>Temporo-sphenoidal, inferior.</i>  |  |
| Temporal, middle.             | See <i>Meditemporal</i>   |  |
| Temporal, second.             | See <i>Meditemporal.</i>  |  |
| Temporal, superior.           | See <i>Infra-marginal.</i>  |  |
| Temporal, third.              | See <i>Subtemporal.</i>   |  |
| Temporal, transverse.         | Temporal lobe, ental surface: a number (2 to 4) of short convolutions near its extremity. |  |
| Temporal, upper.              | See <i>Infra-marginal.</i>  |  |
| Temporo-occipital.            | See <i>Occipital, inferior.</i>   |  |
| Temporo-occipital, internal.  | See <i>Fusiform.</i>  |  |
| Temporo-occipital, middle.    | See <i>Calcarine.</i>   |  |
| Temporo-sphenoidal, first.    | See <i>Temporo-sphenoidal, superior.</i>  |  |

TABLE OF CONVOLUTIONS OR GYRI OF THE CEREBRUM.—Continued.

| NAME.                         | LOCATION.                                 | BOUNDARIES.   |
|-------------------------------|---|---|
| Temporo-sphenoidal, inferior. | See <i>Temporal, inferior</i> .           |   |
| Temporo-sphenoidal, middle.   | See <i>Mediotemporal</i> .                |   |
| Temporo-sphenoidal, superior. | See <i>Intra-marginal</i> .               |   |
| Transeundulus.                | See <i>Transitional</i> .                 |   |
| Transitional.                 | A small convolution.                      | Anteriorly, the ascending branch of the fissure of Sylvius.   |
| Transverse.                   | See <i>Frontal, ascending</i> .           |   |
| Triangular.                   | Frontal lobe.                             | Posteriorly, the opercular convolution.   |
| Unciform.                     | See <i>Breves</i> .                       |   |
| Uncinate.                     | Temporo-sphenoidal lobe (median surface). | Above, the calcarine and dentate fissures. Below, the collateral fissure. Internally, the great longitudinal fissure. |
| Vaulted.                      | See <i>Fornicate</i> .                    |   |
| Of Zuckerkandl.               | See <i>Subcallosal</i> .                  |   |

**Copodyscinesia** (*kop-o dis-in-e'-se-ah*) [*κόπος*, toil, fatigue; *δύς*, hard; *κίνησις*, motion]. Difficult or faulty motion due to constant repetition of the same act. Lewis's term for the so-called Fatigue-diseases.

**Copopsia** (*kop-op'-se-ah*). See *Copiopia*.

**Copos** (*kop'-os* [*κοπος*, fatigue]). 1. Lassitude; exhaustion after illness. 2. Cramp in the calves of the legs.

**Copper** (*kop'-er*) [ME., *coper*, copper]. Cuprum. A reddish-brown metal not used in medicine in its metallic form, but represented by several salts. The latter are gastro-intestinal irritants, producing nausea and emesis. See *Element*, Table of. **C. acetate**, Cu ( $C_2H_3O_2$ )<sub>2</sub>, verdigris, used in pulmonary diseases, and as a lotion in skin diseases. Dose gr.  $\frac{1}{10}$ – $\frac{1}{2}$ . **C. aceto-arsenite**, Paris Green, used as a pigment and an insecticide.

**C. ammoniate**, unof., ammonium carbonate 3, copper sulphate 4 parts. Useful in chorea, hysteria, etc. Dose gr.  $\frac{1}{6}$ – $\frac{1}{2}$ . **C. arsenite**, a salt valuable in intestinal diseases. Dose gr.  $\frac{1}{10}$ – $\frac{1}{2}$ . **C. nitrate** (B. P.), Cu (NO<sub>3</sub>)<sub>2</sub>·3H<sub>2</sub>O, is used for the same purposes as the sulphate. **C. sulphate**, CuSO<sub>4</sub>·5H<sub>2</sub>O, soluble in water, valuable as an emetic. Dose, as an emetic, gr.  $\frac{1}{2}$ – $\frac{1}{4}$ , as a tonic, gr.  $\frac{1}{6}$ – $\frac{1}{2}$ . **C. Amalgam**, a metallic filling-material composed of chemically pure copper and redistilled mercury. **C.-colic**. See *Colic*.

**C.-glass**. Same as *Egyptian Blue*. **C.-green**. Same as *Mala inde-green*. **C. Indigo**. Same as *Oil Blue*. **C. Lazulite**. Same as *Azurite*. **C.-nose**. Synonym of *Line rosacea*. **C., Potassio-tartrate Sol.**, Hilking's solution, unof., copper sulphate gr. 70, distilled water ℥ 400; also dissolve Rochelle salt, gr. 488, in water ℥ 1000; when required, mix and add water to make ℥ 2720. Used as a test for glucose.

**Copperas** (*kop'-er-as*) [*rubri rose*, rose of copper (?)]. A common name for ferrous sulphate. See *Ferrum*. **C.-black**. See *Element*, *Compertus of*. **Coppice-bark** (*kop'-er-bark*). See *Oak-bark*. **Copra** (*kop'-ra*) [Hind.]. The dried and crushed kernel of the cocoa nut, from which cocoa oil is expressed.

**Copragogue** (*kop'-ra-gog*) [*κοπρά*, dung; *ἀγάζω*, leading]. A remedy to carry off feces; a purgative.

**Copremesis** (*kop'-re-mis*) [*κοπρέμ*, dung; *ἐκένσις*, vomiting]. The vomiting of fecal matter.

**Copremia** (*kop'-re-mi-a*) [*κοπρέμ*, dung; *αἷμα*, blood]. A form of grave blood poisoning arising from absorption of unduly retained feces. This condition is occasionally met with in chronic constipation. The symptoms are anemia, sallow complexion, anorexia, frontal headache, vertigo, nausea, flatulence, thirst, lithemia, fetid breath, lassitude, hypochondriasis, and irritability of temper.

**Copremic** (*kop'-rem'-ik*) [*κόπρος*, dung; *ἐκένσις*, vomiting]. Relating to or affected with copremia.

**Coproctic** (*kop'-rok'-tik*) [*κόπρος*, feces]. Relating to feces; fecal.

**Coproecholalia** (*kop-ro-ek-o-la'-le-ah*) [*κόπρος*, filth; *ἠχώ*, an echo; *λαλία*, a babbling]. The mechanical and purposeless utterance of obscene words by the insane.

**Coprolalia** (*kop-ro-la'-le-ah*) [*κόπρος*, filth; *λαλία*, speech]. The use of filthy and offensive language as a manifestation of disease. See *Libit-spasm*.

**Coprolith** (*kop'-ro-lith*) [*κόπρος*, dung; *λίθος*, stone]. A hard mass of fecal matter in the bowels.

**Coprophagous** (*kop-roff'-ag-us*) [*κόπρος*, dung; *φαγείν*, eat]. In biology, applied to dung-feeding beetles.

**Coprophagy** (*kop-roff'-a-jē*) [*κόπρος*, dung; *φαγείν*, to eat]. The eating of ordure; a symptom sometimes seen in insane and hysterical patients.

**Coprophilous** (*kop-roff'-il-us*) [*κόπρος*, dung; *φίλος*, loving]. In biology, fond of feeding or growing upon dung.

**Coprorrhea** (*kop-ror'-e'-ah*) [*κόπρος*, dung; *ῥέειν* to flow]. Synonym of *Diarrhea*.

**Coprostasia** (*kop-ro-sta'-se-ah*). See *Coprostasis*.

**Coprostasis** (*kop-rost'-tas-is*) [*κόπρος*, dung; *στάσις* a standing]. The accumulation of fecal matter; arrest of the onward movement of fecal matters.

**Coptin** (*kop'-tin*) [*κοπτειν*, to cut]. A colorless alkaloid of Goldthread. See *Coptis*.

**Coptis** (*kop'-tis*) [*κοπτειν*, to cut]. Goldthread. The root of *C. trifolia*, a simple bitter tonic resembling quassia. It contains *coptin*, an alkaloid closely allied to berberin. Dose gr. x–xxx.

**Copula** (*kop'-u-lah*) [L., "a band"]. 1. The *copula alba cerebri*, an anterior commissure of the cerebrum. 2. A thin lamina joining the rostrum with the terms.

**Copulation** (*kop-u-la'-shun*) [*copulare*, to couple]. The act of sexual intercourse.

**Copyopia** (*kop-e-o'-pe-ah*). See *Copiopia*.

**Coqueluche** (*kok-lush'*) [Fr., a hood or cow]. Synonym of *Influenza*; also of *Whooping-cough*.

**Coquet** or **Coquette** (*ko-ket'*) [Fr.]. Synonym of *Influenza*.

**Coquilles** (*ko-kell'*) [Fr.]. A variety of dark eyeglasses curved like shells.

**Cor** (*kor*) [L.; gen., *cordis*]. The heart. See *Heart*. In biology, according to Cæsalpino, the seat of the principle of life in plants. See *Root-neck*. **C. adiposum**, a heart with a simple excess of the normal sub-pericardial fat. **C. biloculare**, reptilian heart; a congenital condition in which there is absence or deficiency of the septa of both cardiac auricles and ventricles. **C. bovinum**. See *Bovine Heart*. **C. seminis**, the heart of the seed; the corcle or corcule. **C. villosum**, hairy heart; the peculiar shaggy appearance presented by the heart in acute plastic pericarditis, with the deposited fibrin existing in long shreds.

**Coraco-** (*kor'-ak-o-*) [*κόραξ*, a crow]. Pertaining to the coracoid process, as *C. brachialis*. See *Muscles, Table of*.

**Coracoid** (*kor'-ak-oid*) [*κόραξ*, a crow; *εἶδος*, likeness]. 1. Having the shape of a crow's beak. 2. The coracoid process. **C. Ligament**, a triangular ligament joining the coracoid process to the acromion. **C. Process**, a beak-shaped process of the scapula.

**Coracopectoralis** (*kor'-ak-o-pek-tor-al'-lis*) [*κόραξ*, a crow; *pectus*, the breast]. The pectoralis minor muscle. See *Muscles, Table of*.

**Coral** (*kor'-al*) [*κοράλλιον*, coral]. The hard substance secreted by marine polyps. **C. Calculus**, a peculiar dendritic form of calculus found in the pelvis of the kidney, and forming a complete mold of the infundibula and calices.

**Coral Root** (*kor'-al root*). Crawley. The root of *Corallorhiza odontorhiza*, a prompt and powerful diaphoretic that is used in fevers. Dose gr. xxx. **C., Fld., Ext.** Dose ℥xv-xxx. Unof.

**Coralliform** (*kor'-al'-if-orm*) [*corallum*, coral; *forma*, shape]. In biology, resembling coral.

**Corallin** (*kor'-al-in*) [*corallinus*, coral-red]. A coloring-matter derived from rosolic acid and alcoholic ammonia. It is used for dyeing red, and is noteworthy as being a cause of local and general poisoning, and it is liable to lead to cutaneous and constitutional affections in those who wear garments dyed with it. Some observers ascribe its ill-effects to an arsenical admixture. **C.-red**. See *Pigments, Conspectus of*. **C.-yellow**. See *Pigments, Conspectus of*.

**Corallite** (*kor'-al-it*) [*corallum*, coral]. In biology, the calcareous calyx or cup of a single coral polyp.

**Corbiculum** (*kor-bik'-u-lum*) [*corbis*, a basket]. In biology, applied to the pollen-basket or the inner side of the tarsus of a bee.

**Cord** [*chorda*, a string]. Used as a synonym for the *Umbilical Cord*, the vascular, cord-like structure connecting the placenta and fetus. **C., Coiling of**, loops about the fetus or its members. **C., Columns of**. See *Columns*. **C., False or Superior** (vocal), a fold of mucous membrane on either side of the middle line of the larynx, inclosing the superior thyro-arytenoid ligament. **C., Knots of**, real knots of the cord formed by the passage of the fetus through a loop. **False Knots**, accumulations of Wharton's jelly at particular points. **C., Presentation of**, descent of the cord, at the beginning of labor, between the presenting part and the membranes. **C., Prolapse of**, descent at the rupture of the bag of waters; *incomplete*, if remaining in the vagina, *complete*, if protruding therefrom. **C., Spinal**. See *Spinal Cord*. **C., Torsion of**, twisting upon its axis. The blood-vessels of the

cord make about 40 spiral turns. **C., Vocal**. See *Vocal Band*. **C. of Weitbrecht**, the orbicular ligament of the elbow. See also *Chorda*.

**Cordea** (*kor'-dah*). See *Chorda*. **C. valvuleux**, Du-four's term for the cecal pouches or pancreatic organs invariably and normally loaded with bacteria (*Micrococcus insectorum*, Burrill) in certain families of the higher Hemiptera (*Pentatomide*, *Scutelleride*, *Coremhenide*); invariably wanting in the lower Hemiptera.

**Cordial** (*kor'-jal*) [*cor*, the heart]. 1. Pertaining to the heart; exhilarant; stimulant. 2. An aromatic, spirituous stimulant.

**Cordiale** (*kor-de-al'-le*) [L.]. A cordial. **C. rubi fructus**. See *Blackberry Cordial*.

**Corditis** (*kor-di'-tis*). See *Chorditis*.

**Cordon** (*kor'-don*) [Fr., a cord or rope]. A chain of posts to enforce a quarantine against a place infected with an epidemic disease.

**Cordylus** (*kor'-dil-us*) [*κορδύλη*, a club]. In biology, one of the tentacular "auditory clubs" of *Hydromedusa*.

**Core** (*kor*) [ME., *core*, a core]. 1. The central slough of a boil or carbuncle. 2. The axial or central portion of the terminal corpuscle in a nerve. 3. A bundle of soft iron wires used as a magnet in the center of a coil.

**Coreclisis** (*kor-ek-li'-sis*). See *Corocclisis*.

**Corectasis** (*kor-ek'-tas-is*) [*κόρη*, pupil; *ἐκτασις*, a stretching out]. Dilatation of the pupil.

**Corectome** (*kor-ek'-tom*) [*κόρη*, the pupil; *ἐκτέμνειν*, to cut out]. An instrument used in iridectomy.

**Corectomy** (*kor-ek'-to-me*) [*κόρη*, pupil; *ἐκτέμνειν*, to cut out]. See *Iridectomy*, and *Pupil, Artificial*.

**Corectopia** (*kor-ek'-to'-pe-ah*) [*κόρη*, pupil; *ἐκτοπος*, misplaced]. An anomalous position of the pupil; displacement of the pupil.

**Coreclialysis** (*kor-e-di-al'-is-is*) [*κόρη*, pupil; *διαλύειν*, to liberate]. The production of an artificial pupil at the ciliary border of the iris.

**Coreclialstasis** (*kor-e-di-as'-tas-is*) [*κόρη*, pupil; *διάστασις*, dilatation]. Dilatation of the pupil.

**Corelysis** (*kor-el'-is-is*) [*κόρη*, pupil; *λύσις*, a loosening]. The detachment of iritic adhesions to the lens, or to the cornea.

**Coremorphosis** (*kor-e-mor'-fo-sis*) [*κόρη*, pupil; *μόρφωσις*, formation]. See *Pupil, Artificial*.

**Corenclisis** (*kor-en-kl'-sis*) [*κόρη*, pupil; *ἐνκλείσις*, inclusion]. The formation of a new pupil by displacement, the iris being drawn aside and in part excised.

**Coreometer** (*kor-e-om'-et-er*) [*κόρη*, pupil, *μετρον*, a measure]. An instrument for measuring the pupil of the eye.

**Corephthisis** (*kor-ef'-tis-is*) [*κόρη*, pupil; *φθισις*, a wasting]. See *Coreophthisis*.

**Coreplasty** (*kor'-e-plas-te*). See *Pupil, Artificial*.

**Coreses** (*kor'-es-ēs*) [*κόρις*, a bed-bug]. In botany, reddish discoid bodies found beneath the skin of grapes.

**Coretomy** (*kor-el'-o-me*) [*κόρη*, pupil; *τέμνειν* to cut]. Iridotomy or iridectomy; any surgical cutting operation on the iris.

**Coriaceous** (*kor-e-a'-she-us*) [*corium*, leather]. In biology, leathery.

**Coriamyrtin** (*ko-re-am-er'-tin*) [*corium*, a hide; *myrtus*, myrtle]. An exceedingly poisonous principle, a glucosid, obtained from the fruit of *Coriaria myrtifolia*.

**Coriander**, or **Coriandrum** (*ko-re-an'-d-r*, *ko-re-an'-drum*) [*κοριανδρον*, coriander]. Coriander. The fruit of *C. sativum*, an aromatic carminative and stimulant, used mainly to give flavor to other remedies and as a corrective to griping purgatives. Dose gr. x-xx. **C., Ol**, the volatile oil. Dose ℥ ij-v.

**Coriaria** (*ko-re-ah'-re-ah*) [L.]. A genus of poisonous shrubs of several species, having a wide geographic distribution. **C. myrtifolia**, used in dyeing and tanning, has poisonous berries and shoots. The seeds and shoots of **C. sarmentosa** of New Zealand afford what is called *test poison*. The memory is said to be impaired after recovery from poisoning by this plant. Unof.

**Corium** (*ko'-ri-um*) [L., leather]. The deep layer of the cutis.

**Cork** (*kork*) [*korke*, bark]. A substance obtained from the outer part of the sub-epidermic bark of certain oaks, as *Quercus robur* and *Q. occidentalis*, of the Mediterranean region; extensively used in pharmacy, and to some extent in surgery. **C.-oak**. See *Oak-bark*. **C.-black**. See *Pigments, Conspectus of*.

**Corm** (*korn*) [*koron*, the trunk of a tree]. The bulbous underground part of certain plants, as the crocus.

**Cormophyte** (*kor-mo-fite*) [*kopuoc*, the trunk of a tree; *phyte*, a plant]. In biology, a term formerly applied to vascular cryptogams and flowering plants—to all plants possessing roots, stems and leaves.

**Cornus** (*kor'-nus*) [*cornus*, a tree-trunk: *pl.*, *Corni*]. In biology, a colony of animals, associated "persons." See *Corn*.

**Corn** [*cornu*, horn]. A local induration and thickening of the skin from friction or pressure. See *Clavus*. **C.-flower**. See *Centaurea*. **C.-plaster**, a thick plaster worn over a corn, sometimes as a direct curative agent, and sometimes to prevent pressure and friction from the shoe. **C.-silk**, the long, thread-like styles of Indian corn, gathered while still green and succulent. It is used occasionally to relieve the pain and spasm of chronic and subacute cystitis, and is also recommended for gonorrhea, gravel, rheumatism, gout, etc. Dose of the tincture ʒss to j. See *Zea mays*. **C.-smut**. See *Ustilago*. **C.-starch**, the commercial name of a starch derived from maize, and extensively used as an article of food, especially for invalids.

**Cornalia's Corpuscles**. See *Bacteria, Synonymatic Table of*.

**Cornalian Corpuscles**. See *Bacteria, Synonymatic Table of*.

**Corne's Test**. See *Tests, Table of*.

**Cornea** (*kor'-ne-ah*) [*corneus*, horny]. The transparent anterior portion of the eyeball, its area occupying about one sixth the circumference of the globe. It is continuous with the sclerotic, and is nourished by lymph from the looped blood-vessels at its peripheral border. It is lined posteriorly by Descemet's membrane; the conjunctiva is firmly adherent to its substance in front. **C.**, **Conical**. See *Keratoglobus*. **C.**, **Leukoma of**. See *Leukoma*. **C.**, **Tattooing of**. See *Tattooing*. **C.**, **Transplantation of**, the operation of engrafting a section of transparent cornea from some animal into the place of an excised portion of leukomatous human cornea.

**Corneal** (*kor'-ne-al*) [*corneus*, horny]. Relating to the cornea. **C. Reflex**. See *Reflexes, Table of*.

**Cornein** (*kor'-n-in*) [*corneus*, horny],  $C_{30}H_{11}N_9O_{11}$ . The skeleton of gorgonia and certain corals.

**Cornetitis** (*kor-ni'-tis*). See *Keratitis*.

**Corneocalcareous** (*kor-ne-o-kal-ka'-re-us*) [*corneus*, horny; *calcareus*, pertaining to lime]. In biology, formed of a mixture of horny and calcareous substances.

**Corneosilicious** (*kor-ni'-sil-i-sh'-u*) [*corneus*, horny; *silicious*, pertaining to flint]. In biology, applied to sponges containing both horny and silicious substances.

**Corneous** (*kor'-n-u*) [*corneus*, horny]. Horny, or horn-like. **C. Tissue**, the substance of the nails.

**Cornet** (*kor-nit*) [*cornu*, a horn]. A small ear trum-

pet worn within the auricula, and sometimes concealed by the hair of the wearer.

**Cornic Acid** (*kor'-nik*). See *Cornin*.

**Cornicle** (*kor'-nik-l*) [*corniculum*, dim. of *cornu*, a horn]. In biology, one of the horn-like excretory ducts on the back of a plant-louse.

**Corniculum** (*kor-nik'-u-lum*) [*cornicula*, a little horn: *pl.*, *Cornicula*]. A small cornu or horn-like process. **C. laryngis**, a small, horn-shaped mass of cartilage on the arytenoid cartilages; called also the *Cartilages of Santorini*.

**Cornification** (*kor-nif-ik-a'-shun*) [*corneus*, horny; *facere*, to make]. The process of hardening or making horny.

**Corniform** (*kor'-nif-orm*) [*cornu*, a horn; *forma*, shape]. In biology, shaped like the horn of an ox.

**Cornin** (*kor'-nin*) [*corneus*, horny]. A precipitate from the tincture of the bark of Dogwood, *Cornus florida*; it occurs in white, silky, bitter crystals, and is a tonic, stimulant, and astringent. Dose two to four grains. Unof.

**Corning's Method**. See *Treatment, Methods of*.

**Cornu** (*kor'-nu*) [L.: *pl.*, *Cornua*]. A horn. A name applied to any excrescence resembling a horn. **C. ammonis**, the *hippocampus major* of the brain. **C. cervi**, hartshorn or ammonium hydrate. **C. cutaneum**, cornu humanum, a horn or excrescence arising from the skin, with a deeper portion imbedded within. These horns vary in shape and size, and may resemble the horns of lower animals. They are solid, dry, dense, smooth or corrugated, laminated or excavated on the surface, often elongated and conical at the extremity. In color they are white, gray, yellow, brown, or black. They may be single or multiple, and may involve any region of the body, though usually seen on the scalp and face. They are likely to recur on removal. **C. humanum**. See *C. cutaneum*. **C. sacri**, the prominence on each bone of the sacrum.

**Cornual** (*kor'-nu-al*) [*cornu*, a horn]. Relating to a cornu. **C. Myelitis**, myelitis affecting the anterior cornua of the spinal cord.

**Cornuan's Operation**. See *Operations, Table of*.

**Cornus** (*kor'-nus*) [L.]. Dogwood. The bark of the root of *C. florida*, with properties due to a crystalline principle, *cornin*. It is a simple stomachic, bitter and somewhat antiperiodic. **C.**, **Fld. Ext.** Dose ʒx-ʒj.

**Cornutin** (*kor-nu'-tin*). One of the poisonous basic principles or alkaloids of *Ergot*. Unof.

**Coroclis, or Corocleisis** (*ko-ro-klī'-sis*) [*κόρη*, pupil; *κλείσις*, a closure]. Pathologic closure or obliteration of the pupil.

**Corodialysis** (*kor-o-di-al'-is-is*) [*κόρη*, the pupil; *διάλυσις*, a loosening]. See *Iridodialysis*.

**Corodiastasis** (*kor-o-di-as'-las-is*) [*κόρη*, the pupil; *διάστασις*, separation]. Dilatation of the pupil.

**Corolla** (*ko-rol'-ah*) [*corolla*, dim. of *corona*, a crown]. In biology, the inner floral envelop.

**Corona** (*ko-ro'-nah*) [*corona*, a garland]. A crown. See, also, *Capsula*. **C. ciliaris**, the ciliary ligament. **C. dentis**, the crown of a tooth, *q. v.* **C. glandis**, the ridge of the *glans penis*. **C. ovariana**, the crescentic area of tympany above the area of dullness in cases of ovarian tumor. **C. radiata**, a radiating mass of white brain substance ascending from the internal capsule to the cortex cerebri. **C. veneris**, a circle of syphilitic blotches occurring on the forehead; sometimes dependent upon caries or inflammation of the frontal bone.

**Coronad** (*kor'-o-nad*) [*corona*, the crown; *ad*, to]. Toward the coronal aspect of the head.

**Coronal** (*kor'-o-nal*) [*corona*, the crown]. Pertaining to the crown of the head. **C. Intestine**. See

*Perogaster*. **C. Suture**, the suture joining the frontal with the two parietal bones.

**Coronamen** (*kor-o-na'-men*) [*L.*, a crowning; *pl.*, *Coronamina*]. Same as *Coronet*.

**Coronary** (*kor'-o-na-re*) [*corona*, a crown]. A term applied to vessels, nerves, or attachments that encircle a part or organ. **C. Bone**, the small pastern or median phalanx of a horse's foot.

**Coronate** (*kor'-o-nāt*) [*coronatus*, to crown]. In biology, provided with a crown.

**Coronen** (*ko-ro'-nen*) [*corona*, a crown]. Belonging to the corona in itself.

**Coroner** (*kor'-o-ner*) [*coronator*, a crown, an officer appointed by the Crown]. An officer who inquires by authority of the law into the causes of deaths of sudden or violent occurrence. **C.**, **Inquest**, the legal inquiry before a jury into the cause of a sudden or violent death.

**Coronet** (*kor'-o-net*) [*Fr.*, *coronette*, dim. of *corone*, a crown]. 1. In biology, a crowning circle of hairs. 2. In veterinary surgery, the lowest part of the pastern of the hoof, also called *coronamen*.

**Coronilla** (*kor'-o-nill'-ah*) [dim. of *corona*, a crown]. A genus of leguminous herbs. **C. emerus** is purgative. **C. scorpeoides**, abundant in southwestern Europe, has doubtful value in cardiac affections when increased amplitude of pulsation is required. **C. varia** is diuretic, purgative, and poisonous. Unof.

**Coronillin** (*kor'-o-nill'-in*) [dim. of *corona*, a crown]. A glucosid from *Coronilla scorpeoides*; it is said to be a diuretic cardiant.

**Corono-basilar** (*kor'-o-no-ba'-sil-ar*) [*corona*, a crown; *basis*, the base]. Extending from the coronal suture to the basilar aspect of the head.

**Coronofacial** (*kor'-o-no-fa'-shal*) [*corona*, crown; *facies*, face]. Relating to the crown of the head and to the face.

**Coronoid** (*kor'-o-noid*) [*corona*, crown; *ειδος*, likeness]. Crown-shaped; as the **C. process** of the ulna or of the jaw.

**Coronule** (*kor'-o-nūl*) [*coronula*, dim. of *corona*, a crown]. In biology, the tuft of down forming a crown to certain seeds.

**Corophthisis** (*ko-roff'-tis-is*) [*κόρη*, pupil; *θθίσις*, a wasting]. Habitual or permanent contraction of the pupil due to a wasting disease of the eye.

**Corpora** (*kor'-por-ah*) [*pl.* of *corpus*, a body]. A general term applied to certain parts of the body having a rounded or ovoid shape. **C. albicantia**. See *C. mammillaria*. **C. arantii**, the tubercles, one in the center of each segment of the semilunar valves. **C. cavernosa**, the cylindric bodies of erectile tissue forming the chief part of the penis. Also the two masses of erectile tissue composing the clitoris. See *Penis*. **C. geniculata**, two small eminences projecting from the optic thalami. **C. libera articularum**. *Mures Articularum*; joint-mice; loose bodies, either fibromatous, lipomatous, or chondromatous in nature, occurring occasionally in joints. They vary in size from that of a pea to that of a walnut, and are of all shapes. They are most frequent in the knee-joint. They are of traumatic origin. **C. mammillaria**, *Corpora albicantia*; the mammillary bodies of the brain. They are

CORPORA CAVERNOSA AND ADJACENT PARTS. (Potter.)  
1. Corpora cavernosa. 2. Corpus spongiosum. 3. Dorsal vein. 4. Arteries. 5. Nerves.

formed by the spreading out on the surface of Gudden's ganglion and an adjoining ganglion of the somewhat interwoven fibers of Gudden's and Vicq d'Azyr's bundles. They form the bulbs of the fornix. **C. olivaria**, the two oval masses behind the pyramids of the medulla oblongata. **C. oryzoidea**, the rice-like corpuscles or melon-seed bodies of hygromata. **C. pyramidalia**, the two bundles of white matter of the medulla oblongata, situated below the pons varolii. **C. quadrigemina**, the optic lobes of the brain, the four rounded eminences situated under the corpus callosum. The anterior pair are called the *nates*, and the posterior, the *testes*. **C. restiformia**, the large columns or cord-like bodies extending from the medulla to the cerebrum. **C. striata**, two organs, one in each lateral ventricle of the brain, composed of the caudate and lenticular nuclei. The first, or intraventricular portion, extends into the lateral ventricle. **C. wolffiana**, the "primordial kidney."

**Corporeal** (*kor'-por'-e-al*) [*corpus*, a body]. Pertaining to the body. **C. Endometritis**. See *Endometritis*.

**Corpse** (*korps*) [*ME.*, *corps*, a dead body]. See *Cadaver*. **C.-plant**, the *Monotropa uniflora*, a singular saprophytic plant of Asia and N. America; it is a popular remedy for epilepsy and for sore-eyes. Unof.

**Corpulency** (*kor'-pu-len-se*) [*corpulentus*, corpulent]. Obesity; fatness of the body.

**Corpulent** (*kor'-pu-lent*) [*corpulentus*, corpulent]. Excessively fat; obese.

**Corpus** (*kor'-pus*) [*corpus*, a body; *pl.*, *Corpora*]. A body; the human body. **C. of Arantius**. See *Corpora*. **C. callosum**. See *Commissure*. **C. cavernosum vaginae**, the spongy tissue of the vagina. **C. candicans**, corpus mamillare; a small white tubercle lying on the base of the brain, one on each side under the thalamus. The two form the boundary-point between the fore-brain and inter-brain; each is composed of three nuclei. **C. ciliare**, the ciliary body of the eye. **C. dentatum**. See *Olfactory Body*. Also a ganglion of the cerebellum, an open bag or capsule of gray matter, on section of a dentated outline, and open anteriorly. **C. highmorianum**, the mediastinum of the testis, a reflection inward of the tunica albuginea into the testicle at its posterior border. **C. fimbriatum**, the lateral thin edge of the tenia hippocampi. See also *Fimbria*. **C. luteum**, the yellow body. Hypertrophy of the *membrana propria*, or *reticulata* of the ovisac, after the escape of the ovule. **C. L., False**, that resulting when pregnancy does not occur, called also the **C. L. of Menstruation**. **C. L., True**, that resulting when pregnancy takes place, called also the **C. L. of Pregnancy**, and differing in several respects from the first. **C. mamillare**. See *Corpus candicans*. **C. pampiniforme**, the parovarium. **C. spongiosum**, the spongy body enclosing the urethra, etc. **C. striatum**. See *Corpora*. **C. trapezoides**, the arbor of the cerebellum. **C. trigonum**. See *Trigonum vesicae*. **C. uteri**. See *Uterus*. **C. vertebrae**. See *Centrum*. **C. Vitreum**. See *Vitreous Humor*.

**Corpuscle** (*kor'-pus-l*) [dim. of *corpus*]. A name loosely applied to almost any small, rounded, or oval body. **C.**, **Bizzozero's**. See *Blood-platelets*. **C. of Blood**, the minute, biconcave, flat discs, circular in man, elliptic in the camel, and oval in birds and reptiles. They are distinguished as red and white, or colorless. Red corpuscles have been divided, according to their size, into normoblasts (normal in size), megaloblasts or megalocytes (of excessive size), microblasts or microcytes (abnormally small), and poikiloblasts or poikilocytes (of irregular shape and size). The red corpuscles in the blood of man

are about  $\frac{1}{250}$  in. in diameter and  $\frac{1}{1250}$  in. thick. They consist of a colorless stroma (paraglobulin, cholesterol, lecithin, and neurin) infiltrated with coloring matter hemoglobin. The white or colorless corpuscles are flattened, binucleated or trinucleated cells, about  $\frac{1}{250}$  in. in diameter, and exist in the ratio of 1 : 400 compared with red corpuscles. They possess contractile power, alter their shape readily, and in general appearance closely resemble amebæ. They are most numerous in venous blood. The colorless corpuscles are variously designated as *eosinophile*, *basophile*, *neutrophile*, *mononuclear*, *polynuclear*, *lymphocytes*, *transitional*, *large*, *small*, etc. **C. of Donne.** See *Cystrum corpuscles*. **C., Eichborst's**, a special form of microcyte in the blood of those suffering from pernicious anemia. **C., Gluge's**, a variety of large cells containing fat-drops, myelin, or detritus. They are called also *Compound Granule-Cells* and *Inflamma-*

in the papille of the skin and enveloped by nerve-fibers. **C. of v. Tröltzsch**, a name formerly given to a series of lymph-channels between the two layers of the *lamina propria* of the ear. They are spindle-shaped on longitudinal section and stellate on transverse section, and are lined with endothelium. **C., Valentin's**, the small, roundish amyloid bodies found in nerve-substance. **C., Weber's**, the sinus pocularis.

**Corpuscula** (*kor-pus'-ku-lah*) [L.]. Plural of *Corpusculum*. **C. marginalia**, in biology, the marginal sense-organs of *Medusa*.

**Corpuscular** (*kor-pus'-ku-lar*) [*corpusculum*, a little body]. Relating to or of the nature of a corpuscle.

**Corpusculation** (*kor-pus-ku-lah'-shun*) [*corpusculum*, a corpuscle]. A condition in which the corpuscles of the blood have undergone hyperplasia, being larger and more numerous than normally.

**Corpusculous** (*kor-pus'-ku-lus*) [*corpusculum*, a corpuscle]. Corpuscular.

**Corpusculum** (*kor-pus'-ku-lum*) [L.]. **Corpuscle**.

**Correctant**, or **Corrective** (*kor-ek'-tant* or *kor-ek'-tiv*) [*corriger*, to correct]. 1. Having the power to correct or to modify favorably. 2. A substance used to modify or make more pleasant the action of a purgative or other remedy.

**Correction** (*kor-ek'-shun*) [*correctus*; *corriger*, to amend]. The rectification of any abnormality (as a refractive or muscular defect), or of any undesirable quality (as in a medicine).

**Correlated** (*kor'-el-a-ted*) [*correlatus*, related]. Interdependent; related. **C. Atrophy.** See *Atrophy*.

**Correlation** (*kor-el-a'-shun*) [*correlatus*, related]. Interdependence; relationship.

**Corrigan's Button.** A cautery-iron. It consists of a button of iron,  $\frac{1}{2}$  inch in diameter by  $\frac{1}{4}$  inch thick, fastened in a wooden handle by a rod 2 inches long.

**C. Cautery.** Same as *C. Button*. **C. Disease.** See *Diseases, Table of*. **C. Line.** See *Signs and Symptoms, Table of*, and *Line*. **C. Pulse**, water-hammer pulse. The jerking pulse of aortic regurgitation. The volume of the pulse is large, owing to the hypertrophy and dilatation of the left ventricle; hence there is a sudden expansion of the arteries. The regurgitation of the blood, however, as suddenly empties the artery, and the pulse-wave subsides rapidly. The peculiarities of the radial pulse may usually be intensified by raising the hand. It is also called the *collapsing*, *speaking*, *reading*, *locomotive*, *kicking*, and *shuttle* pulse. See *Pulse*, and *Signs and Symptoms, Table of*.

**Corrigent** (*kor'-ij-ent*). See *Corrective*.

**Corroborant** (*kor-ob'-o-rant*) [*corroborans*, strengthening]. 1. Tonic; strengthening. 2. A strengthening medicine.

**Corrosion** (*kor-o'-zhun*) [*corrodere*, to corrode]. The process of corroding, or the state of being corroded.

**C.-anatomy**, the preparation of any anatomic specimen by means of a corrosive process that eats away those parts which it is not desired to preserve. In some cases a resisting-substance is injected, so as to preserve the vessels and ducts from corrosion. **C.-preparation**, one in which the vessels, ducts, or cavities of organs are filled by a fluid that will harden and preserve the shape of the vessel or cavity after the organ itself is corroded or digested or otherwise de-

CORPUSCLE OF KRAUSE.

CORPUSCLE OF PACINI.

- 1, 1. Nerve-tubule. 2, 2. Its medullary substance. 3, 3, 3. Nuclei of the sheath of Schwann. 4. Granular substance occupying the center of the corpuscle and the contained nuclei.

1. Base, or proximal extremity. 2. Summit, or distal extremity. 3. Capsules displaying nuclei. 4, 4. Attachment of capsules to sheath of nerve-tubule. 5. Cavity of corpuscle. 6. Nerve-tubule. 7, 7. Nerve-tubule successively losing its medullary sheath and neurilemma. 8. Enlargement in which it terminates. 9. Granular matter continuous with the base of this enlargement.

**Corpuscles.** **C. of Krause**, the spherical or oval corpuscles occurring at the ends of the nerve-tubules that emerge from a nerve-plexus. They occur in the conjunctiva, the edges of the lips, and various mucous and glandular surfaces. **C., Malpighian**, a name applied to the splenic corpuscles, and to the Malpighian bodies. **C. of Neumann**, the nucleated cellular corpuscles of the blood seen after repeated hemolyzes. **C., Norris's Invisible**, colorless, transparent, biconcave discs of the same size as the red ones, invisible in the serum because their color and retractive power are the same as those of the liquor sanguinis; they are believed by Norris to exist normally in the blood. They are probably red corpuscles that have lost their hemoglobin. **C., Pacinian**, certain small corpuscles occurring in the subcutaneous cellular tissue of the fingers and toes. **C. of Purkinje**, a bone-cell. See *Purkinje*. **C., Shadow.** See *Shadow*. **C., Tactile**, of Wagner, the small, oval bodies found

TACTILE CORPUSCLE WITH TWO LOBES.

stroyed, the cast remaining. Three methods are used: 1. The injection is composed of rosin and white wax colored with paint, dissolved in balsam of copaiba; after the injection, the organ is destroyed by hydrochloric acid and water. 2. *Wood's Fusiform Metal*, consisting of 7 parts of bismuth, 4 parts lead, 2 parts tin, and 1 part cadmium. The tissues are destroyed by caustic potash. 3. Celloidin: The cold celloidin is slowly and forcibly injected by a syringe, and the soft parts eaten by an acid or a digesting fluid.

**Corrosive** (*kor-o'-siv*) [*cor*, intensive; *rodere*, to gnaw]. A substance that destroys organic tissue either by direct chemic means or by causing inflammation and suppuration. **C. Chlorid**, mercuric chlorid. **C. Sublimate**. See *Hydrargyrum*. **C.-sublimate Bath**. See *Bath*.

**Corroval** (*kor'-o-val*). A variety of curare, or arrow-poison; a cardiac and muscular paralyzant.

**Corrovalin** (*kor'-o'-val-in*). A poisonous alkaloid obtained from corroval. Unof.

**Corrugator** (*kor'-u-ga-tor*) [*corrugere*, to wrinkle]. That which wrinkles. See *Muscles*, *Table of*.

**Corset** (*kor'-set*) [F., dim. of *cors*, body]. In surgery, an investment for the abdomen or chest, or both; useful in some spinal disorders and deformities, and in fractures or injuries of the thoracic walls. **C.-liver**, a liver characterized by a furrow resulting from the pressure exerted by a corset and situated chiefly in the right lobe. It is due to habitual tight lacing, and hence is found in women and, rarely, among soldiers. If extreme, the furrow can be felt along the margin of the ribs if the abdominal walls are lax.

**Corsican Moss**. A mixture of fragments of various seaweeds, brought from Corsica, etc.; called, also, *helminthochorton*. It is said to be alterative, febrifuge, anthelmintic, and nutritious. Unof.

**Corson's Paint**. A substance used as a means of counter-irritation. It consists of croton oil 2 drams, ether 4 drams, compound tincture of iodine sufficient to make 2 ounces. Paint over the affected part with a camel's-hair pencil once daily.

**Cortex** (*kor'-teks*) [L., bark]. The bark of an exogenous plant. **C. aurantii**, orange-peel. **C. cerebri**, the external layer of gray matter of the brain. **C. renalis**, the cortical substance of the kidney.

**Corti** (*kor'-te*). A celebrated Italian anatomist, 1729-1813. **C., Arch of**. See *Arch*. **C., Canal of**. See *Canal*. **C., Cells of**, the external hair-cells of the organ of Corti. See *Cell*. **C., Fibers of**, the rods of Corti. **C., Ganglion of**. See *Ganglia*, *Table of*. **C., Membrane of**. See *Membrane*. **C., Organ of**, a series of some 3000 arches upon the floor of the basilar membrane within the *ductus cochlearis* of the internal ear. **C., Pillars of**, the rods of Corti. **C., Rods of**, the pillars of the arch of the organ of Corti. **C., Rolls of**, the fibers forming the inner limb of the arches of Corti. **C., Tunnel of**, a triangular canal between the layers of the rods of Corti.

**Cortical** (*kor'-tik-al*) [*cortex*, bark]. Pertaining to the cortex or bark, or to the cortex of the brain, or of the kidney. **C. Epilepsy**, C. Paralysis, such as is due to a lesion of the cortical substance of the brain.

**Corticiferous** (*kor-tis-iff'er-us*) [*cortex*, bark; *ferre*, to bear]. In biology, producing a bark.

**Corticin** (*kor'-tis-in*) [*cortex*, bark]. 1. An alkaloid from poplar-bark. 2. A form of tannin from certain wood-barks.

**Corticle** (*kor'-tik-ol*) [*cortex*, bark; *colere*, to inhabit]. In biology, growing on bark.

**Cortina** (*kor-ti'-nah*) [*cortina*, a curtain]. In biology, the marginal veil of certain fungi.

**Corviform** (*kor'-ve-form*) [*corvus*, a crow; *forma*, shape]. In biology, resembling a crow.

**Corvisart's Facies**. See *Signs and Symptoms*, *Table of*.

**Corybantism** (*kor-e-bant'-izm*) [*κορυβαντισμός*, corybantic frenzy]. Maniacal frenzy, with sleeplessness, choreic excitement and visual hallucinations.

**Corydalin** (*kor-id'-al-in*) [*κορυδαλίζης*, the crested lark],  $C_{11}H_{19}NO_4$ . A precipitate from the tincture of the root of *Corydalis formosa*; it is tonic, diuretic, anti-syphilitic, resolvent, etc. Dose 1 to 5 grains. Unof.

**Corydalis** (*kor-id'-al-is*) [*κορυδαλίζης*, the crested lark]. Turkey corn. The tuber of *C. formosa* (*Dicentra canadensis*), a tonic, diuretic, and alterative. Dose of fld. ext.  $\text{m}\times\text{-xl}$ . **Corydahn**, the alkaloid. Dose gr. j-v. Unof.

**Corymb** (*kor'-imb*) [*κόρυμβος*, a head or cluster of fruit or flowers]. In biology, a flower-cluster on the indeterminate plan, in which the axis is somewhat shortened and the pedicels of the lower flowers somewhat lengthened, so as to form a flat-topped cluster.

**Corymbos** (*kor-imb'-bos*) [*κόρυμβος*, a flower-cluster]. In biology, corymb-like, or arranged in corymbis. **C. Eruption**, a variety of the eruption of smallpox in which it shows itself in patches or clusters the size of the hand, as thickly set as possible, while the surrounding skin often remains entirely free. The grouping may be symmetrically distributed. This variety of small-pox is very dangerous.

**Coryphodont** (*kor-iff'-o-dont*) [*κορυφή*, summit; *ὀδόντις* (*odontis*), tooth]. In biology, having teeth with pointed cusps.

**Corystarium** (*kor-is-te'-re-um*) [*κορυστής*, one having a helmet]. In biology, an organ found in the abdomen of certain female insects, that secretes a jelly-like protective envelop for the eggs.

**Coryza** (*ko-ri'-zah*) [*κόρυς*, *κόρυζα*, the head]. Catarrh of the mucous membrane of the nasal passages and adjacent sinuses, popularly called a "cold in the head." See *Rhinitis*. **C. caseosa**, a term applied by Cozzolino to a disease in which the nostrils are filled with caseous masses. **C., Idiosyncratic**. See *Hay-fever*. **C. maligna**. Synonym of *Snuffles of the New-born*. **C., Periodic Vasomotor**. See *Hay-fever*. **C., Vasomotor**. Synonym of *Hay-fever*.

**Cosme's Paste**. See *Hebra's Arsenical Paste*.

**Cosmesis** (*koz-me'-sis*) [*κοσμεῖν*, to adorn]. The art of preserving or increasing beauty.

**Cosmetic** (*koz-met'-ik*) [*κοσμητικός*; *κοσμεῖν*, to adorn]. A remedy designed to improve or to hide defects of the skin or other external parts. It may be a white powder, such as starch, magnesian oxid, calcium carbonate (levigated), zinc oxid, mercurous chlorid, or bismuth subnitrate applied externally; it may be a white substance dissolved in dilute alcohol, which is left upon the face after the evaporation of the solvent; or it may be a stimulant to the skin used internally, such as arsenic. **C. Operation**, a surgical operation to give a natural appearance to a defective or unsightly part.

**Cosmetology** (*koz-met-ol'-o-je*) [*κόσμετος*, orderly; *λόγος*, science]. The science of the proper care of the body with respect to cleanliness, dress, etc.

**Cosmic Disease**. Syphilis of the heart-valves.

**Cosmolin** (*koz'-mo-lin*). See *Petrolatum*.

**Costa** (*kos'-tah*) [L.]. A rib. See *Rib*.

**Costal** (*kos'-tal*) [*costa*, a rib]. Pertaining to the ribs. **C. Arch**, the arch of the ribs. **C. Cartilages**, the 12 cartilaginous extensions of the ribs.

**Costalgia** (*kos-tal'-je-ah*) [*costa*, a rib; *ἄλγος*, pain]. Intercostal neuralgia; pain in the ribs.

**Costen** (*kos'-ten*) [*costa*, a rib]. Belonging to a rib in itself.

**Coster's Paste.** A remedy of some value in the treatment of *Tinea tonsurans*. It is made of iodine, 2 drams, in one ounce of oil of pitch. This is to be painted upon the patch and allowed to remain until the crust which is produced by the application falls off.

**Costicartilage** (*kōs-tē-k'ar-tū-ā*) [*costa*, a rib; *cartilage*, gristle]. A costal cartilage or unossified sternal rib.

**Costicervical** (*kōs-tē-r'v'k'āl*) [*costa*, a rib; *cervix*, a neck]. Relating to the neck and ribs.

**Costicervicalis** (*kōs-tē-r'v'k'āl-is*) [*costa*, a rib; *cervix*, the neck]. The cervicalis ascendens muscle. See *Mus. lxx, P. 100*.

**Costispinal** (*kōs-tē-p'v'nal*) [*costa*, a rib; *spina*, the spine]. Relating to the ribs and vertebral column. **C.** muscles, levatores costarum. See *Muscles, Table of*.

**Costive** (*kōs-t'v'ē*) [*constitui*, to be bound]. Constipated; affected with costiveness.

**Costiveness** (*kōs-t'v'ē-nēss*) [*constare*, to be bound]. An abnormality of digestion characterized by retention and hardness of the feces.

**Costo-** (*kōs't'v'ē*) [*costa*, a rib]. A prefix denoting connection with the ribs.

**Costotome** (*kōs-t'v'ē-tōm*) [*costa*, rib; *tomos*, cutting]. A strong knife for cutting the costal cartilages in dissection, etc.

**Costus Root** (*kōs't'v'ē root*). See *Putchuk*.

**Cotnar** (*kōt'nar*) [a Moldavian place-name]. A rich, strong, and highly esteemed wine from Roumania.

**Coto** (*kō't'v'ē*) [Sp., a cubit]. Coto Bark. The bark of a tree native to Bolivia. It contains a bitter principle,  $C_{22}H_{14}O_6$ , irritant to the skin and mucous membranes. Its therapeutic properties are not known. It is recommended for diarrhea and zymotic fevers and for the night-sweats of pulmonary tuberculosis. Dose of the powder, gr. j-xv; of the fluid extract gtt. v-xv; of the tincture (1 in 10), gtt. x-xxx; of cotoin, gr. ss-j. **Cotoin** (*kō't'v'ē-tōm*) [Sp., coto, a cubit],  $C_{22}H_{14}O_6$ . A crystalline substance found in Coto Bark. See *Coto*.

**Cottage-hospital** (*kōt'aj-hos'pit-al*). A small establishment for the purpose of providing for the sick in a small and isolated community.

**Cotting's Operation.** See *Operations, Table of*.

**Cotton** (*kōt'n*) [ME., *cotun*]. Gossypium, a white fibrous seed hair that envelops the seeds of the cotton-plant. The structure of the cotton fiber is very characteristic. It presents a flattened and collapsed tube, slightly twisted in a spiral form, with comparatively thick walls and a small central opening. Chemically, it contains about 91 per cent. of pure cellulose, 7 per cent. of moisture, and a small amount of fat, nitrogenous material and cuticular substance. **C.**, Absorbent, is the fiber prepared by removal of oily matters, for the surgeon's use. **C.-blue.** Same as *Soluble Blue*. **C.-holder**, a probe roughened near the end, upon which cotton may be twisted into a pledget. **C.-oil.** See *Cotton Oil*. **C.-root.** See *Gossypium*. **C.-phthisis**, a variety of pulmonary disease occurring among cotton operatives from inhalation of cotton-dust. **C.-seed Oil** or **C.-oil**, oleum gossypii seminis, an oil obtained by pressure from the hulled seeds of yellow seeds of *G. peruvianum*. The raw oil is brownish yellow in color, somewhat viscid, of a specific gravity of 0.922 to 0.924 at 15° C. The refined oil has a straw-colored color, is colorless, of a pleasant, nutty flavor, specific gravity 0.9204 at 15° C., boiling at about 600° F. It possesses excellent drying properties, and is saponifiable, but is chiefly used in adulterating olive, lard, sperm, and other oils.

**Cotton's Test.** See *Tests, Table of*.

**Cotunnus, Aqueduct of.** See *Aqueduct*. **C.**, Canal of. See *Canal*. **C.**, Liqueur, or Water of, the

perilymph. See *Aqua labyrinthi*. **C.**, Nerve of, the naso palatine. See *Nerves, Table of*.

**Cotyledon** (*kōt-il-el'don*) [*κοτυλιδών*, a socket]. A mass or tuft of villi on the fetal side of the placenta; not normally present upon the human placenta. The placenta of the ruminant mammals has many such masses, hence is *polycotyledonous*.

**Cotyloid** (*kōt'il-el'oid*) [*κοτύλη*, a cup; *ειδος*, form]. Cup-shape. **C. Fossa**, or **Cavity**, the acetabulum.

**C. Ligament**, surrounds the acetabulum. **C. Notch**, a notch in the anterior and lower border of the acetabulum.

**Couch-grass** (*kowch'gras*). See *Triticum*.

**Couching** (*kowch'ing*) [Fr., *coucher*, to depress]. The operation, now fallen into disuse, of depressing a cataractous lens into the vitreous chamber, where it was left to be absorbed.

**Couerbe's Test.** See *Tests, Table of*.

**Cough** (*kof*) [ME., *cough*, a cough]. A sudden violent expiratory explosion after deep inspiration and closure of the glottis. **C.-center.** See *Center*. **C.**, Trigeminal, a reflex paroxysmal cough, occurring in individuals whose respiratory organs are perfectly sound, and due to an irritation of the trigeminal fibers distributed to the nose, pharynx and external auditory meatus. **C., Winter**, a short troublesome cough of old people due to chronic bronchitis, and recurring every winter.

**Coulomb** (*koo-lom'*) [after *Con'omb*, a French physicist]. The unit of measurement of electric quantity; the quantity of electricity that passes during one second through a conductor having a resistance of one ohm, with one volt of electromotive force. The micro-coulomb is the millionth part of this amount.

**Coulomb's Law.** See *Law*.

**Coumalic Acid** (*koo-mal'ik*). See *Acid*.

**Coumaric Acid** (*koo-mar'ik*). See *Acid*.

**Coumarilic Acid** (*koo-mar-il'ik*). See *Acid*.

**Coumarin** (*koo-mar-in*),  $C_9H_6O_2$ . A vegetable proximate principle that occurs in *Asperula odorata*, in the Tonka bean, and in *Melilotus officinalis*. It is soluble in hot water, readily so in alcohol and ether; it crystallizes in shining prisms, possesses the odor of the *Asperula*, and melts at 67°, in the proportion of 2 grains to the dram. It covers the odor of iodoform. Unof.

**Coumarone** (*koo-mar-on*),  $C_8H_6O$ . A body, formed by distilling coumarilic acid with lime. It is present in coal-tar. It is an oil that sinks in water, and boils at 169° C.

**Counter-extension** (*kown'ter-eks-ten'shun*). See *Extension*.

**Counter-indication** (*kown'ter-in-dik-a'shun*). See *Contra-indication*.

**Counter-irritation** (*kown'ter-ir-it-a'shun*) [*contra*, against; *irritare*, to irritate]. Superficial and artificially-produced inflammation, in order to exercise a good effect upon some adjacent or deep-seated morbid process. This is generally accomplished by vesicants, rubefacients, etc.

**Counter-opening** (*kown'ter-op't-en-ing*) [*contra*, against; ME., *openyng*, an opening]. An incision made in an abscess or cavity, opposite to another, generally for purposes of drainage.

**Counter-poison** (*kown'ter-poi'zon*) [*contra*, against; ME., *poi.zon*, poison]. A poison given as an antidote to another poison.

**Counter-stroke** (*kown'ter-strok*). See *Contre-coup*.

**Country Fever.** See *Fever, Florida*. **C. F. of Constantinople.** Synonym of *Mediterranean Fever*.

**Coup de Soleil** (*koo duh so-lay'*) [Fr.]. Sunstroke. See *Heat-stroke*.

**Coup sur Coup** (*koo sur koo'*) [Fr.]. Blow upon blow; a designation for an obsolete method of applying venesection; the successive bleedings following each other rapidly.

**Couperose** (*kup'-rōz*) [Fr.]. Synonym of *Aene rosacea*.

**Coupier's Blue**. See *Pigments, Conspectus of*. **C.** Red. Same as *Rosanilin*.

**Courses** (*kors'-ez*). See *Menses*.

**Court Plaster** (*kort plas'-ter*). See *Ichthyocolla*.

**Courty's Method**. See *Treatment, Methods of*.

**Couvade** (*koo-vahd'*) [Fr., *couver*, to hatch]. Male child-bed. A custom of certain savage tribes in which, after child birth, the father goes to bed, etc., and the mother gets up, etc.

**Couveuse** (*koo-vuarz'*) [Fr.]. See *Incubator*.

TARNIER'S COUVEUSE.

(From Fullerton's "Obstetric Nursing.")

**Cover** (*kuv'-er*) [ME., *cūveren*, to cover]. 1. To protect. 2. To copulate with; said of male animals. **C.-correction**, an arrangement to so adjust the lenses of a microscope that the best definition may be obtained for varying thicknesses of cover-glasses. **C.-glass**, in microscopy, the thin lamina of glass covering the object mounted on the slide. It should not exceed  $\frac{3}{100}$  inch in thickness. On account of its effect on the transmission of light, the thickness of the cover-glass must be considered in correcting the objective. **C.-glass Preparation**, the fixing and staining of a fluid upon a cover-glass. **C.-slip**. Same as *C.-glass*.

**Cow** (*kow*) [AS., *cū*, cow]. The female of the genus *Bos*, and of other large animals. **C.-bane**, Water Hemlock. The leaves of *Cicuta virosa*, an acrid narcotic, highly poisonous to cattle, but not affecting sheep and goats. It causes intoxication and spasm. It is sometimes used externally as an anodyne in rheumatism. **C.-parsnip**. See *Masterwort*. **C.-pox**, **C.-pock**, a variety of pock seen in the cow, and thought to correspond with smallpox in man. **C.-tree**. See *Brosimum*.

**Cowage** (*kow'-āj*) [Hind., *kawānch*, cowhage]. The external hairs of the pod of *Mucuna pruriens*, used in medicine as a mechanical vermifuge.

**Cowan-plant** (*kow'-an-plant*). See *Alonsoa*.

**Cowdie-gum** (*kow'-de-gum*) [nat. N. Zeal.]. Codie pine resin. The resinous juice from the *Dammara australis*, a coniferous tree of New Zealand. It is one of the ingredients of copal varnishes. It is also one of the ingredients of the impression-material known as "Modeling Composition." It is one of the varieties of *Dammara*, *q. v.*, and is also called *Kauri-gum*.

**Cowell's Operation**. See *Operations, Table of*.

**Cowhage**, **Cowitch** (*kow'-āj*, *kow'-ich*). See *Mucuna* and *Cowage*.

**Cowl** (*kowl*) [AS., *cūle*, a hood]. A cover for a chim-

ney, that turns with the wind and assists in ventilation.

**Cowling's Rule**. A rule for dosage. In his formula the age of the child at the next birthday is the numerator and 24 the denominator. According to this, the dose of a child approaching four years of age would be  $\frac{4}{24} = \frac{1}{6}$  of the dose for an adult.

**Cowper's Glands**. See *Gland*.

**Cowperitis** (*kow-per-ī'-tis*) [*Cowper*, an English anatomist; *itis*, inflammation]. Inflammation of the glands of Cowper, usually gonorrheal in origin.

**Cowpoxing** (*kow-poks'-ing*). Synonym of *Vaccination*.

**Coxa** (*koks'-ah*) [*coxa*, hip]. The hip-joint or the hip. In biology, the basal joint of the leg of an arthropod, abbreviated from *coxognathite* and *coxopodite*, of Milne Edwards; also *Coxopodite*.

**Coxagra** (*koks-ā'-grah*) [*coxa*, the hip; *ἀγρα*, seizure]. Gout in the hip; sciatica.

**Coxal** (*koks'-al*) [*coxa*, the hip]. Relating to the coxa or hip.

**Coxalgia** (*koks-al'-jē-ah*) [*coxa*, a hip; *ἀλγος*, pain]. Pain in the hip-joint. See *Sciatica*, and *Hip-joint Disease*.

**Coxalgic** (*koks-al'-jik*) [*coxa*, the hip; *ἀλγος*, pain]. Relating to coxalgia.

**Coxarthrocace** (*koks-arth-rok'-ac-e*) [*coxa*, hip; *ἀρθρον*, joint; *κακός*, bad]. A fungoid inflammation of the hip-joint.

**Coxe's Hive-mixture**. See *Scilla* and *Antimonium*.

**Coxecphysis** (*koks-ek'-fis-is*) [*coxa*, hip; *ἐκφύω*, to blow out]. In biology, a branch springing from the coxa of an arthropod; synonymous with the *epignathite* and *epipodite* of Milne Edwards, and with the *podobranchia* of Huxley when it is connected with the branchial plumes, as in *Homarus*.

**Coxitis** (*koks-ī'-tis*) [*coxa*, the hip; *itis*, inflammation]. Inflammation of the hip-joint.

**Coxocerite** (*koks-ōs'-er-ī'*) [*coxa*, the hip; *κέρας*, horn]. In biology, the basal joint of the antenna of an arthropod.

**Coxodynia** (*koks-o-din'-ē-ah*) [*coxa*, hip; *ὀδυνή*, pain]. Same as *Coxalgia*.

**Coxo-femoral** (*koks-o-fem'-or-al*) [*coxa*, the hip; *femur*, the thigh bone]. Relating to the coxa and the femur.

**Coxopodite** (*koks-op'-o-dit*) [*coxa*, hip; *πους*, a foot]. See *Coxa*.

**Coxotuberculosis** (*koks-o-tu-ber-ku-lō'-sis*) [*coxa*, the hip; *tuberculum*, a tubercle]. Tuberculous disease of the hip-joint.

**Crab Louse** (*krab'-lous*). See *Pediculus*.

**Crab's-eyes** (*krabz'-ēz*). Flat, calcareous concretions (*Lapides cancerorum*) derived from the stomach of the crab, and used as a means of removing foreign bodies from the eye. Also a name for the seeds of *Abrus precatorius*.

**Crachotement** (*kra-shot-mon* (g')) [Fr.]. A peculiar reflex following operations upon the utero-ovarian organs, marked by a desire to spit, without the ability to do so. It is usually accompanied by a tendency to syncope.

**Cracked-metal Sound**. See *Cracked-pot Sound*.

**Cracked-pot Sound**. A peculiar sound elicited by percussion over a pulmonary cavity communicating with a bronchus.

**Crackling** (*krak'-ling*) [ME., *crakelen*, to crackle]. A sound compared to that produced when salt is thrown into the fire, heard over a lung in which softening of tuberculous deposits has begun to take place.

**Cradin** (*krad'-in*) [*κράδη*, fig-branch]. A principle obtainable from the leaves and twigs of the common fig. It is said to be a peptic ferment, in some respects

more effective than pepsin, and is believed to be identical with papain.

**Cradle** (*krad'el*) [AS., *cradla*, a cradle]. In surgery, the arcus, a wire or wooden frame so arranged as to keep the weight of the bed clothing from an injured part of the body. It is employed in the treatment of fractures, wounds, etc. **C-Cap.**, a cap given to the scull, composed of cart and skin, that form on the scalp of neglected infants and children.

CRADLE FOR SUPPORTING THE SCULL.  
(From Johnston's "Nursing in Medical Surgery.")

**C.**, **Ice-**, the suspension over a female patient, by means of iron frames, of a number of canvas bags, each half filled with ice, and inclosed in a cloth covering. **C.-pessary**, a cradle-shaped pessary for treating retroflections of the uterus.

**Cram** (*krám*) [ME., *cramen*, to cram]. To store the memory with information for the purpose merely of passing an examination. **C.-stunt**, arrest in mental development due to over study. **C.-stunted**, arrested in mental development by over study.

**Cramp** (*krám*) [Lat., *crampis*]. A spasmodic tonic contraction of the muscles, attended with sharp pain. It is commonly prior to attacks of the muscles of the calf. It occurs frequently in those of neurotic tendency, and is often the forerunner of epilepsy. **C.**, **Accommodation**, a spasm of the ciliary muscle of the eye. **C.**, **Auctioneers'**, one of the professional neuroses affecting mainly the left side of the orbicularis oris muscle. **C.-asphyxia**, spinal spasm. **C.**, **Ballet-dancers'**, a peculiar affection occurring in ballet dancers, especially during its dances, characterized by pain and paralytic symptoms, affecting the muscles of the calf. It is the result of local strain upon the parts. **C.-bone**, a name for the patella of a sheep. **C.**, **Blacksmiths'**. See *C. Hammermen's*. **C.**, **Car-drivers'**, a professional neurosis seen in car drivers, and perhaps also in London, characterized by spasm and weakness of the hand from the effort of tightening car-brakes. **C.**, **Chisel**, a professional neurosis occurring in smiths, affecting the left hand, and produced by the continuous holding of the chisel or similar instrument. **C.**, **Cigar-makers'**, one of the rare professional neuroses, consisting in a tonic contraction of the flexor muscles of the fingers and palm. The painful sensations also extend up the arm and shoulders. **C.**, **Cigaret-makers'**. See *C. Cigar-makers*. **C.**, **Clarinet-players'**, a cramp of the tongue and of the laryngeal muscles experienced occasionally by players on this instrument. **C. Colic**, a form of colic in the horse, produced by contraction of a portion of the small intestines from the retention of indigestible food. **C.**, **Coachmen's**, contraction of the palmar fascia, occasionally seen in coachmen. **C.**, **Cornet-players'**, a rare and peculiar muscular of the tongue in cornet-players, in which contractions cannot be avoided, from inability to relax the muscle for that purpose. **C.**, **Dancers'**. See *C. Elocutionists*. **C.**, **Elocutionists'**. See *C. Dancers*. **C.**, **Flute-players'**, slight increase of pain occurring occasionally in flute-players, from excessive use of the instrument. Also a cramp of the flexors and extensors of the hand, from excessive use of the instrument. **C.**, **Glass-blowers'**, a palsy, not divided and permanent between the fingers, the thumb excepted, due to the continuous pressure of the tools with which the glass is worked. **C.**, **Goldbeaters'**, a cramp of the muscles of the arm due to excessive use in beating gold leaf. **C.**, **Hammer**. See *C. Hammermen's*.

**C.**, **Hammermen's**, a spasmodic affection of the muscles of the arm and shoulder, at times unattended with pain, due to the repeated act of hammering. **C.**, **Knitters'**, a peculiar affection of the hands of those who knit, consisting in a contraction of the extensor muscles, with numbness of the ends of the fingers. **C.**, **Milkers'**, a spasmodic contraction of the extensors and flexors of the forearm in consequence of continuous exertion in milking. **C.**, **Milkmaids'**. See *C. Milkers*. **C.**, **Musicians'**, a general term including pianists' cramp, violinists' cramp, flutists' cramp, the cramp of clarinet-players, etc. **C.**, **Nailsmiths'**. See *C. Hammermen's*. **C.**, **Photographers'**, a rare professional neurosis. **C.**, **Pianists'**, a neurosis of the hands and fingers of piano-players, characterized by fatigue, pain, and weakness. The pain extends up the arm to between the shoulders. **C.**, **Piano-players'**. See *C. Pianists*. **C.**, **Saltatory**. See *Saltatory Spasm*. **C.**, **Sawyers'**, peculiar incoordinated movements of the saw-arm and corresponding side of the body, from excessive use. **C.**, **Scriveners'**. See *C. Writers*. **C.**, **Seamstresses'**, a professional neurosis consisting in a spastic condition of the flexors of the fingers from constantly plying the needle. **C.**, **Shoemakers'**. See *Shoemakers' Disease*. **C.**, **Smiths'**. See *C. Hammermen's*. **C.**, **Speakers'**. See *Dysphonia spastica*. **C.**, **Swimmers'**, a painful cramp of the muscles of the calf of the leg of swimmers, frequently causing death by drowning. **C.**, **Tailors'**, a spasmodic affection of the muscles of the thumb, forefinger, hands, and arms, sometimes occurring in tailors, from overwork. **C.**, **Telegraphers'**, a partial paralysis of the muscles of the hand and fingers with spasm, produced by fatigue from long-continued use of Morse's instrument. **C.**, **Treadlers'**, one of the professional neuroses; it is met with in treadlers, and consists in cramps of the leg-muscles from constant use of the machine. **C.**, **Violinists'**, a painful cramp most common in the left shoulder of violinists; it is due to the peculiar position assumed in holding the violin. **C.**, **Watchmakers'**, a cramp in which there is a flexion of the metacarpo-phalangeal joints, with extension of the other joints of the hand. Also, an inability to retain the glass in the eye-socket. **C.**, **Writers'**, Scriveners' palsy; a difficulty in writing, due to spasmodic action of the muscles of the hand and arm, to pain, to tremulousness of these muscles, or to fatigue and weakness of the extremity. These constitute the four forms, *spastic, neuralgic, tremulous, and paralytic*. **Crampton's Muscle**. See *Muscles, Table of*. **C. Operations**. See *Operations, Table of*. **Crampus** (*kram'pus*) [L.]. An old name for a cramp, or for any disease characterized by cramps. **Cranberry** (*kran'ber-e*) [ME., *craneberry*, a berry]. The acid fruit of *Vaccinium oxycoccus* and *V. macrocarpon*. It is a popular material for poultices, and is vaunted as a cure for carcinoma. Unof. **C.-tree**. See *Viburnum opulus*. **Crane-bark** (*kran'bark*). See *Viburnum opulus*. **Crane's-bill Root**. See *Geranium*. **Cranioacromial** (*kra-ne-ak-ro'ne-al*) [*κρανιον*, skull; *ακρωτια*, the point of the shoulder-blade]. Relating to the cranium and the acromion. **Cranial** (*kra'ne-al*) [*κρανιον*, the skull]. Relating to the cranium. **C. Bosses**, flat, bony elevations of the frontal and parietal bones sometimes seen at the angles of the anterior fontanel. They are said to be a proof of hereditary syphilis. **Craniectomy** (*kra-ne-ek'-to-me*) [*κρανιον*, skull; *εκτομη*, a cutting out]. The surgical removal of strips or pieces of the cranial bones. It is performed in cases of microcephaly.

**Craniocele** (*kra'-ne-o-sel*) [*κρανιον*, skull; *κηλη*, a tumor]. Encephalocoele, *q. v.*

**Cranioclasia** (*kra-ne-ok'-las-is*) [*κρανιον*, skull; *κλάσις*, a breaking]. See *Cranioclasia*.

**Cranioclast** (*kra'-ne-o-klast*) [*κρανιον*, skull; *κλάειν*, to break]. A heavy forceps for crushing the fetal head.

**Cranioclast** (*kra-ne-o-di'-ak-last*) [*κρανιον*, skull; *διακλάν*, to break into pieces]. An instrument for breaking the skull in craniotomy.

**Craniodidymus** (*kra-ne-o-did'-im-us*) [*κρανιον*, skull; *διδυμος*, double]. Same as *Cephalopagus*.

**Craniofacial** (*kra-ne-o-fa'-shal*) [*κρανιον*, skull; *facies*, face]. Relating to the cranium and the face; as the craniofacial axis, the craniofacial notch, etc.

**Craniograph** (*kra'-ne-o-graf*) [*κρανιον*, skull; *γράφειν*, to record]. An instrument for recording the outlines of the skull.

**Craniography** (*kra-ne-og'-ra-fe*) [*κρανιον*, the skull; *γραφειν*, to write]. That part of descriptive craniology the object of which is to describe the parts or regions of the skull or bones of the face.

**Cranio-hematococcus** (*kra'-ne-o-hem-at-ong'-kus*) [*κρανιον*, skull; *αίμα*, blood; *δγκος*, a tumor]. Synonym of *Cephalhematoma*.

**Craniology** (*kra-ne-ol'-o-je*) [*κρανιον*, cranium; *λόγος*, science]. A branch of anatomy based upon the comparative study of skulls.

**Cranio-malacia** (*kra-ne-o-mal-a'-se-ah*). See *Cranio-tabes*.

**Cranio-mandibular** (*kra-ne-o-man-dib'-u-lar*) [*κρανιον*, skull; *mandibula*, the mandible]. Relating to the skull and the lower jaw.

**Craniometer** (*kra-ne-om'-et-er*) [*κρανιον*, skull; *μέτρον*, a measure]. An instrument for gauging the dimensions of the skull.

**Craniometric, Craniometrical** (*kra-ne-o-met'-rik*, *kra-ne-o-met'-rik-al*) [*κρανιον*, skull; *μέτρον*, a measure]. Pertaining to craniometry. **C. Point**, any one of the points of measurement used in craniometry. A list of the craniometric points is given. **ACANTHION** [*ἀκάνθιον*, a little spine], a point in the median line of the skull at the base of the nasal spine. **ALVEOLAR POINT**, the point between the two middle incisors of the upper jaw. **ANTINION**, that point on the glabella, and in the median line, that is farthest from theinion. **ASTERION** [*ἀστέριον*, starry], the point behind the ear where the parietal, temporal and occipital bones meet. **AURICULAR POINT**, the center of the orifice of the external auditory meatus. **BASION** [*basis*, fundament], the middle point of the anterior margin of the foramen magnum. **BREGMA**, the point where the coronal and sagittal sutures meet. **DACRYON**, or **DAKRYON** [*δάκρυον*, a tear], the point beside the root of the nose where the frontal, lachrymal, and superior maxillary bones meet. **ENTOMION**, the point where the parietal notch of the temporal bone receives the anterior extension of the mastoid angle of the parietal. **GLABELLA**, or **GLABELLUM**, the point in the median line between the superciliary arches, marked by a swelling, sometimes by a depression. **GNATHION**, same as *Mental Point*. **GONTON**, the point at the angle of the lower jaw. **HORMION**, the anterior point of the basilar portion of the united speno-occipital bone, where it is crossed by the median line. **INION**, the external occipital protuberance. **JUGAL POINT**, the point situated at the angle that the posterior border of the frontal branch of the malar bone makes with the superior border of its zygomatic

branch. **KORONION**, the apex of the coronoid process of the inferior maxilla. **LAMBDA**, the point of meeting of the sagittal and the lambdoid sutures. **MALAR POINT**, a point situated on the tubercle on the external surface of the malar bone, or at the intersection of a line drawn from the external extremity of the fronto-malar suture to the tubercle at the inferior angle of the malar bone and a line drawn nearly horizontally from the inferior border of the orbit over the malar bone to the superior border of the zygomatic arch. **MAXIMUM OCCIPITAL POINT**, or **OCCIPITAL POINT**, the posterior extremity of the antero-posterior diameter of the skull, measured from the glabella in front to the most distant point behind. **MENTAL POINT**, the middle point of the anterior lip of the lower border of the lower jaw. **METOPION**, or **METOPIC POINT**, a point in the middle line between the two frontal eminences. **NASION**, or **NASAL POINT**, the middle of the frontal suture at the root of the nose. **OBELION**, the part of the sagittal suture between the two parietal foramina. **OCCIPITAL POINT**. See *Maximum Occipital Point*. **OPHRION**, the middle of the supraorbital line, which, drawn across the narrowest part of the forehead, separates the face from the cranium. **OPISTHION**, the middle point of the posterior border of the foramen magnum. **PROSTHION**, the *Alveolar point*. **PTERION**, the point where the frontal, parietal, temporal, and sphenoid bones come together. **RHINION**, the upper median point of the anterior nasal opening. **SPINAL POINT**. Same as *Subnasal Point*. **STEPHANION, INFERIOR**, the point where the ridge for the temporal muscle intersects the coronal suture. **STEPHANION, SUPERIOR**, the point where the coronal suture crosses the temporal ridge. **SUBNASAL POINT**, the middle of the inferior border of the anterior nares at the base of the nasal spine. **SUPRA-AURICULAR POINT**, the point vertically over the auricular point at the root of the zygomatic process. **SUPRANASAL POINT**. Same as *Ophryon*. **SUPRAORBITAL POINT**. Same as *Ophryon*. **SYMPHYSION**, the median point of the outer border of the alveolus of the lower jaw. **VERTEX**, the superior point of the skull. In obstetrics, that conical portion of the skull whose apex is at the posterior fontanel and whose base is formed by the biparietal and trachelo-bregmatic diameters.

**Craniometry** (*kra-ne-om'-et-re*) [*κρανιον*, skull; *μέτρον*, a measure]. The ascertainment of the proportions and measurements of skulls, together with the discussion of the ascertained facts, and the drawing of scientific inferences therefrom. See *Angle, Arc, Index, Plane, Point*.

**Craniopagus** (*kra-ne-op'-ag-us*). See *Cephalopagus*.

**Craniopharyngeal** (*kra-ne-o-far-in'-je-al*) [*κρανιον*, skull; *φάρυγξ*, the pharynx]. Relating to the cranium and the pharynx.

**Craniophore** (*kra'-ne-o-för*) [*κρανιον*, cranium; *φέρειν*, to bear]. A device for holding the skull during craniometric study.

**Cranioplasty** (*kra'-ne-o-plas-te*) [*κρανιον*, skull; *πλάσθς*, formed]. The surgical restoration or correction of cranial deficiencies.

**Craniosclerosis** (*kra-ne-o-skle-ro'-sis*) [*κρανιον*, skull; *σκληρός*, hard]. A condition the antithesis of that seen in craniotabes. A thickening of the cranial bones, usually due to rachitis.

**Cranioscopy** (*kran-e-os'-ko-pe*). See *Phrenology*.

**Cranio-stegnosis** (*kra-ne-o-steg-no'-sis*) [*κρανιον*, skull; *στέγνωσις*, contraction]. Contraction of the skull.

**Cranio-stosis** (*kra-ne-o-sis-tu'-sis*) [*κρανιον*, skull; *ὄσταν*, a bone]. Congenital ossification of the cranial sutures.

**Craniotabes** (*kra-ni-ta'be*) [*κρανίον*, skull; *ταβή*, to waste away]. An atrophy of the cranial bones occurring in infancy, with the formation of small, shallow, conical pits in the bone substance. These pits are granular within, and present a worm eaten appearance around the margin. They are most usually found in the posterior inferior region of the parietal bone, but may be seen in any of the other cranial bones. They form from within outward, so that in the early stage they cannot be found. Craniotabes is probably a result of rickets, syphilis, or marasmus. The craniotabetic pits are in some way associated with the rapid growth and development of the brain; they may be due to a premature formation of the markings of the convolutions on the skull. They are only encountered during the first months of life, that is, up to the sixteenth month. This disease is not a serious one as regards danger to life.

**Craniotabetic** (*kra-ni-ta'bi-et'ik*) [*κρανίον*, skull; *ταβή*, to waste away]. Pertaining or belonging to *Craniotabes*, *Craniotome*.

**Craniotome** (*kra-ni-to'tm*) [*κρανίον*, skull; *τέμνειν*, to cut]. An instrument used in craniotomy.

**Craniotomy** (*kra-ni-to'mi*) [*κρανίον*, skull; *τομή*, a cutting]. 1. The operation of reducing the size of the fetal head by cutting or breaking it up, when delivery is otherwise impossible. 2. Excision of a portion of the skull; performed by Prof. Lannelongue in cases of *menorrhoea* to relieve pressure upon the brain and to give the brain space. **C.**, **Linear**. See *Craniotomy*.

**Craniotractor** (*kra-ne-trak-tor*) [*κρανίον*, skull; *τρακτέρ*, a drawer]. A cranioclast designed to be used also, or mainly, as a tractor.

vessels. It consists of 22 bones, of which 14 belong to the face, and 8 to the cranium proper. See *Skull*.

**Crank** (*krank*) [*Ger.*, sick]. A popular term for an eccentric individual or a hobby-rider.

**Cranter** (*krant'er*) [*κραντήρ*, *κραντήρ*, to finish, render perfect; *πλ.*, *Cranteres*]. A wisdom-tooth. The dentes sapientie are sometimes so called because their presence is necessary to a perfect denture.

**Crapaudine** (*krap'au-din*) [*Fr.*, *crapaud*, a toad]. In veterinary surgery, an ulcer on the coronet of a horse's hoof.

**Crapulous** (*krap'-u-lus*) [*crapula*, drunkenness, surfeit]. Characterized by debauch or excess in drinking or in eating.

**Craquement** (*krahk'-mon(g)*) [*Fr.*]. Any crackling sound heard in auscultation.

**Crisis** (*kras'-is*) [*κρίσις*, mixture]. Temperament; constitution; predisposition. **C.**, **Vermineous**, an old term used to designate a peculiar dyscrasia of the system due to the presence of worms.

**Craspedotal** (*kras-fe-do'tal*) [*κρασπεδωτός*, bordered]. In biology, applied to those Medusæ that have velar otolith-like vesicles.

**Crassamentum** (*kras-am-en'tum*) [*L.*, thickness]. A clot, as of blood.

**Crateriform** (*kra-ter'-if-orm*) [*crater*, a crater; *forma*, shape]. Goblet-shaped or deep-saucer-shaped. Excavated like a crater.

**Cratomania** (*krat-o-ma'-ne-ah*) [*κράτος*, power; *μανία*, madness]. A delirium of exaltation in which the patient conceives himself to possess vast power.

**Cravat** (*kra-val'*) [*Fr.*, *cravate*, a Croat]. 1. A neck-cloth. 2. A bandage of triangular shape, used as a temporary dressing for a wound or fracture. The middle is applied to the injured part, and the ends are brought around and tied. See *Handkerchief Dressing*.

**Craw-Craw** (*kraw'-kraw*). See *Filaria sanguinis hominis*, and *Parasites (Animal)*, *Table of*.

**Crawley** (*kraw'-le*). See *Coral Root*.

**Craziness** (*kra'-ze-nes*) [*ME.*, *crasen*, to break]. Insanity.

**Crazy** (*kra'-ze*) [*crasen*, to break]. Insane; demented; deranged. **C.-bone**. See *Funny-bone*. **C.-weed**. See *Loco*.

**Cream** (*krēm*) [*cremor*, thick juice or broth]. The rich, fat part of milk. **C.**, **Cold**. See *Rosa*. **C.**, **Ripening of**. See *Ripening*. **C. of Tartar**. See *Potassium*.

**Creamometer** (*krēm-on'-et-er*) [*cremor*, cream; *μέτρον*, a measure]. An instrument for estimating the amount of cream in milk.

**Crease** (*krēs*) [*Celtic*]. A line made by folding. **C.**, **Gluteo-femoral**. See *C.*, *Ileo-femoral*. **C.**, **Ileo-femoral**, is the crease that bounds the buttock below, corresponding nearly to the lower edge of the gluteus maximus muscle. It is of supposed significance in the diagnosis of hip-disease.

**Creasol** (*kre'-as-ol*) [*κρέας*, flesh; *oleum*, oil],  $C_8H_{10}O_2$ . One of the principal phenols contained in creasote. It is formed from guaiacum-resin, and is found in beech-wood-tar. It is a colorless, oily liquid of an agreeable odor and a burning taste, boiling at 220° C. It is very similar to guaiacol.

**Creasote**, or **Creasotum** (*kre'-as-ol, -ol'-um*) [*κρας*, flesh; *σῴζειν*, to preserve]. The product of the distillation of wood-tar, consisting of a mixture of phenol-compounds. It is an inflammable oily liquid, differing in this respect from carbolic acid. It does not coagulate albumin or collodion. Most of the commercial creasote consists of carbolic acid or contains a large percentage of it. It is valuable for its antiseptic, astringent, styptic, anesthetic, and escharotic properties.

LATERAL ASPECT OF CRANIUM.

1. Frontal bone. 2. Parietal bone. 3. Occipital bone. 4. Temporal bone. 5. Greater wing of sphenoid bone. 6. Lambdoid suture. 7. Occipito-parietal suture. 8. Squamo-parietal suture. 9. Malar bone. 10. Spheno-parietal suture. 11. Spheno-temporal suture. 12. Spheno-frontal suture. 13. Temporal ridge. 14. Malar bone. 15. Fronto-malar suture. 16. Malar bone. 17. Malar bone. 18. Malar bone. 19. Malar bone. 20. Malar bone. 21. Malar bone. 22. Malar bone. 23. Malar bone. 24. Malar bone. 25. Malar bone. 26. Malar bone. 27. Malar bone. 28. Malar bone. 29. Malar bone. 30. **Cranium** (*kra-ni-um*) [*κρανίον*, the skull]. The skull. The cavity that contains the brain, its membranes and

Dose m̄j-ijj. **Beechwood Creasote**, from *Fagus sylvatica*, is best for internal use. Dose m̄j, every three hours. **C., Aqua**, a one per cent. solution. Dose ʒj-iv. **C.-bath**. See *Bath*. **C., Mistura** (B.P.). Dose ʒj-ij. **C.-oil**, Heavy Oil, the third main fraction in the coal-tar distillation-process. It is collected at temperatures of from 230° to 270° C., or until the anthracene commences to distil. The oil has a greenish-yellow color, and is very fluorescent, and becomes progressively more so upon exposure to light and air. The odor is unpleasant and extremely characteristic. The oil is heavier than water, and contains naphthalene, anthracene, phenanthrene, phenol, cresol, etc. It is used mainly in the creosoting or preservation of timber; it is also used as a fuel, and for the production of illuminating gas, as a lubricant, and for the production of lampblack. **C., Unguentum** (B.P.), for local application. **C., Vapor** (B.P.), for inhalation.

**Creatic** (*kre-at'-ik*) [*κρεας*, flesh]. Relating to flesh. See *Kreatinin*. **C. Nausea**, a loathing of flesh as food.

**Creatin** (*kre'-at-in*) [*κρεας*, flesh],  $C_4H_9N_3O_2$ . A neutral organic substance that occurs in the animal organism, especially in the juice of muscles. It crystallizes with one molecule of water in glistening prisms, which, heated to 100°, sustain a loss of water. It has a faintly bitter taste and dissolves rather readily in boiling water. It dissolves with difficulty in alcohol and yields crystalline salts with one equivalent of acid.

**Creatinin** (*kre-at'-in-in*) [*κρεας*, flesh],  $C_4H_7N_3O$ . An alkaline substance, a normal constituent of urine. It crystallizes in rhombic prisms, and is a strong base. It is much more soluble than creatin.

**Crebricostate** (*kreb-re-kos'-tat*) [*creber*, close; *costa*, rib]. In biology, characterized by closely-set ridges.

**Crebrisulcate** (*kreb-re-sul'-kat*) [*creber*, close; *sulcus*, a furrow]. In biology, marked by closely-set furrows.

**Crebruria** (*kreb-ru'-re-ah*) [*creber*, close together; *ουρον*, urine]. Frequent micturition.

**Creche** (*krāsh*) [Fr., a crib]. See *Infant Shelter*.

**Crédé's Method** (*kre-da'*). See *Treatment, Methods of*. **C. Operation**. See *Operations, Table of*.

**Crédivité** (*kra-div-it'-a'*) [Fr.]. See *Hypnotism*.

**Creeping Sickness** (*kreḗ'-ing sik'-nes*). The gangrenous form of ergotism.

**Cremaster** (*kre-mas'-ter*) [*κρεμαειν*, to support]. The muscle that draws up the testis. See *Muscles, Table of*.

**Cremasteric** (*kre-mas-ter'-ik*) [*κρεμαειν*, to support]. Pertaining to the cremaster muscle. **C. Reflex**. See *Reflexes, Table of*.

**Cremation** (*kre-ma'-shun*) [*cremare*, to burn]. The destruction of the body by burning, as distinguished from interment.

**Cremator** (*kre-ma'-tor*) [*cremare*, to burn]. A crematory, *q. v.* **C., Engle System**, a variety of cremator for the destruction of garbage, in which the smoke and gases generated by the destruction of the waste material are consumed by a second fire.

**Crematory** (*krem'-at-or-e*) [*cremare*, to burn]. An establishment for burning the bodies of the dead, or for consuming garbage and other refuse matter.

**Cremnitz White**. Same as *White Lead*.

**Cremocarp** (*krem'-o-karp*) [*κρεμαειν*, to hang; *καρπος*, fruit]. The peculiar capsular fruit of the natural order *Umbellifere*.

**Cremor** (*kre'-mor*) [*cremor*, broth]. Cream. Any thick substance formed on the surface of a liquid. **C. tartari**, cream of tartar.

**Crena** (*kre'-nah*) [L.]. A notch, especially such a notch as is seen on the sutural margins of the cranial bones.

**Crenate** (*kre'-nāt*), or **Crenated** (*kre'-na-ted*) [*crena*,

a notch]. Notched or scalloped. In botany, leaves that are serrated. See *Crenation*.

**Crenation** (*kre-na'-shun*) [*crena*, a notch]. A notched or mulberry appearance of the red corpuscles of the blood; it may be spontaneous or due to poisoning with Calabar bean, etc.

**Crenic Acid** (*kre'-nik*). See *Acid*.

**Crenothrix** (*kren-oth'-riks*) [*κρηνη*, a spring; *τριξ*, hair]. A genus of Schizomycetes the filaments of which are enveloped in a gelatinous sheath. **C. kühniana**, abundant in fresh waters; when putrefied it gives drinking-water a very bad taste, but the rôle attributed to it in the production of typhoid fever is unjustified.

**Crenulate** (*kren'-u-lāt*) [*crena*, a notch]. Finely crenate.

**Creolin** (*kre'-o-lin*) [*κρεας*, flesh; *oleum*, oil]. A coal-tar product deprived of carbolic acid. It is hemostatic and highly antiseptic, and is more active than carbolic acid in pure cultures of pathogenic microbes, but less efficacious in putrefying masses. It is an excellent non-poisonous deodorizer, used in a two per cent. solution or a five per cent. ointment with lanolin. It is used internally in typhoid fever and catarrh of the bladder in five-drop doses.

**Creosol** (*kre'-o-sol*). See *Creasol*.

**Creosote** (*kre'-o-sol*). See *Creasote*. **C.-bush**, *Larrea mexicana*, an odorous and resinous shrub of the Pacific States and Mexico. It is a local remedy for rheumatism and for wounds and sores. Unof.

**Crepitant** (*kreḗ'-it-ant*) [*crepitare*, to crackle]. Possessing the character of crepitus. **C. Râle**. See *Râle* and *Breath-sounds*.

**Crepitation** (*kreḗ'-it-a'-shun*), **Crepitus** (*kreḗ'-it-us*) [*crepitare*, to crackle]. The noise produced by escaping flatus. The grating of fractured bones. The crackling of the joints. The noise produced by pressure upon tissues containing an abnormal amount of air or gas, as in cellular emphysema. Also the peculiar murmur of respiration observed in pneumonia during inspiration. It closely resembles the sound produced by rubbing the hair between the fingers held close to the ear. **C., Redux**, a crepitant râle heard in pneumonia during the stage of resolution; usually the first manifestation of the recession of the disease.

**Cresalol** (*kres'-al-ol*) [*cresol*; *salol*],  $C_6H_4.OH.CO.O.C_6H_4.CH_3$ . Salicylate of cresol. It possesses antiseptic properties very similar to those of salol. Dose gr. iv in water from one to eight times daily. Unof.

**Crescent** (*kres'-ent*) [*creescere*, to grow]. Shaped like the moon in its first quarter. A name given to one form of the malarial hematozoön. **C. of Gianuzzi**. Groups of non-secreting cells in the acinus of a gland, pushed to one side by the secreting cells. **C., Myopic**. See *Myopia*. **C. Operation**. See *Operations, Table of*.

**Crescentia** (*kres-ent'-she-ah*) [*creescere*, to grow]. A genus of bignonaceous trees and shrubs. **C. alata**, of tropical Asia and America, affords leaves that are useful in hemoptysis, and the fruit is employed in pulmonary diseases. The pulp of the West Indian **C. cujete** is similarly used. Unof.

**Cresol** (*kre'-sol*) [*κρεας*, flesh; *oleum*, oil].  $C_7H_8O_2$ . Cresylic acid; a body obtained from the distillation of coal-tar. It is a colorless, caustic liquid, with properties similar to those of phenol, but is superior as an antiseptic. Unof.

**Cresolin** (*kres'-o-lin*) [*κρεας*, flesh; *oleum*, oil]. A proprietary preparation used as a disinfectant in diphtheria, etc.

**Cresosulphuric Acid** (*kres-o-sul-fu'-rik*). See *Acid*.

**Crest** (*krest*) [*crista*, a crest]. The surmounting part of any bone, organ, or process. **C., Frontal**, a ridge

along the middle line of the internal surface of the frontal bone. **C. of Ilium**, the thickened and expanded upper border of the ilium. **C., Lachrymal**, a vertical ridge dividing the external surface of the lachrymal bone into two parts. **C., Nasal**, a crest on the internal border of the nasal bone and forming part of the septum of the nose. **C., Neural**, a series of swellings along each side of the rudimentary spinal cord in the embryo from which the spinal nerves are developed. **C., Occipital**, a vertical ridge on the external surface of the occipital bone extending from the occipital protuberance to the foramen magnum. **C. of Pubes**, a crest extending from the spine to the inner extremity of the pubes. **C. of Tibia**, the prominent border or ridge on the front of the tibia; the shin. **C., Turbinate**, a prominent horizontal ridge on the internal surface of the palate bone. **C., Urethral**. See *Verumontanum*.

**Crest's Test**. See *Tests, Table of*.

**Cresylic Acid** (*kres'ill'ik*). See *Cresol*.

**Creta** (*kré'tá*) [L.]. Chalk. See *Calceum*.

**Cretaceous** (*kré'tá'sh-us*) [*reta*, chalk]. Chalky; abounding in calcium carbonate.

**Cretefaction** (*kré't-fak'shun*). See *Calcification*.

**Cretin** (*kré't-in*) [Fr., *crétin*, a simple minded person]. A person affected with cretinism.

**Cretinism** (*kré't-in-izm*) [Fr., *crétin*, a simple-minded person]. The condition of a cretin. Also an endemic disease, characterized by goiter and a condition of physical, physiologic, and mental degeneracy and non-development. The subjects of this disease seldom reach five feet in height. **C., Sporadic**, the congenital form of myxedema, characterized by absence of the thyroid gland, diminutiveness of size, thickness of neck, shortness of arms and legs, prominence of abdomen, large size of face, thickness of lips, large and protruding tongue, and imbecility or idiocy. It is popularly supposed that coitus during intoxication is a cause of this condition.

**Cretinoid** (*kré'tin-oid*) [*rétin*, a simple-minded person]. 1. Resembling a cretin; resembling cretinism. 2. A person who resembles a cretin.

**Creuse's Test**. See *Tests, Table of*.

**Crewels** (*kré'el*) [Fr., *écrouelles*, scrofula]. Synonym of *Scrofula*.

**Crib** (*krib*) [ME., *crib*, a manger]. A small frame with inclosed sides for a child's bed. 2. A stall for cattle. **C. Biting**. See *Cribbing* and *Wind-sucking*.

**Cribbing** (*krib'ing*) [ME., *crib*, a manger]. The peculiar wearing of a horses' teeth, due to a habit of biting his crib or manger, and at the same time sucking air into the stomach.

**Cribiform** (*krib'if-orm*) [*cribrum*, a sieve; *forma*, form]. Similar to a sieve in being perforated, as the *cribriform plate* of the ethmoid bone.

**Cribrose** (*krí'ró-s*) [*cribrum*, a sieve]. In biology, sieve like.

**Crick** (*krík*) [ME., *críke*, a twist in the neck]. Any painful spasmodic affection, as of the back or neck.

**Cricoid** (*krí'oid*) [*κρικος*, a ring]. A prefix denoting connection with the cricoid cartilage.

**Cricoid** (*krí'oid*) [*κρικος*, a ring]. Ring-shaped. **C. Cartilage**. See *Cartilages of the Larynx*.

**Cricothyroid** (*krik-thí'roid*) [*κρικος*, a ring; *thyroidea*, thyroid-shaped]. Pertaining to the cricoid and thyroid cartilages. **C. Artery**, a small branch of the superior thyroid, crossing the cricothyroid membrane. It is of much surgical importance. See *Artery, Thyroid*. **C. Membrane**, a ligamentous membrane that lies between the cricoid and thyroid cartilages. **C. Muscle**. See *Muscles, Table of*.

**Cricotomy** (*kri-kot'-o-me*) [*κρικος*, ring; *τέμνειν*, to cut]. Surgical laryngotomy by cutting through the cricoid cartilage.

**Criminal** (*krim'-in-al*) [*crimen*, a crime]. Of the nature of crime. **C. Abortion**. See *Abortion*. **C. Assault**. See *Assault*.

**Criminology** (*krim-in-ol'-o-je*). See *Criminology*.

**Criminology** (*krim-in-ol'-o-je*) [*crimen*, crime; *λόγος*, science]. The science of crime and of criminals; criminal anthropology; the study of crime as a branch of morbid psychology.

**Crino** (*kri'-no*) [*crinis*, hair; *pl.*, *Crinones*]. 1. A skin-affection of infants supposed to be due to the presence of a hair-worm. 2. Same as *Comedo*.

**Crinosin** (*krin'-o-sin*) [*crinis*, hair]. A nitrogenized fat from brain-substance, crystallizing in hair-like threads.

**Cripple** (*krip'-l*) [ME., *cripel*, a paralytic]. One who is unable to walk or to use his members normally.

**Cripps' Operations**. See *Operations, Table of*.

**Crisis** (*kris'-sis*) [*κρίσις*, a decisive point; *pl.*, *Crises*]. The turning-point in a disease, fever, time of life, etc., and in disease, marking a change either for the better or worse. **C. clitoridiennes**, periods of voluptuous excitement in women suffering with tabes dorsalis, accompanied by vaginal secretion, analogous to the violent erections and spermatorrhea found in men in the initial stages of tabes. **C. gastriques**, Charcot's term for certain gastric symptoms sometimes encountered in the course of progressive locomotor ataxia. The symptoms are shooting pains in the groin and abdomen, ending finally in gastralgia, pains in the shoulders and arms, a quick pulse, and often vertigo and vomiting. **C., Laryngeal**, paroxysmal spasm of the larynx sometimes observed in cases of posterior spinal sclerosis.

**Crispate** (*kris'-pát*) [*crispatus*, curl]. In biology, crisped on the margin.

**Crista** (*kris'-tah*) [L.]. Same as *Crest*. **C. acustica**, a yellow elevation projecting into the equator of the ampulla of the ear. **C. fornicis**, the crest of the fornix; a half-oval or semi-globular mass on the posterior surface of the fornix of the brain. **C. galli**, cock's crest, the superior triangular process of the ethmoid bone. **C. heliis**, spina heliis; a projection of the helix above the external auditory meatus. **C. spiralis**, a crest of the limbus of the ear overhanging the internal spiral sulcus of Waldeyer. **C. urethralis**. See *Verumontanum*.

**Critchett's Operations**. See *Operations, Table of*.

**Crith** (*krith*) [*κριθή*, barley-corn]. The assumed unit of mass and weight for hydrogen, and hence for gases generally. It is .0896 of a gram or 1.37 grains.

**Critical** (*krí't-ik-al*) [*κρίσις*, a decisive point]. 1. Pertaining to a crisis in disease, period of life, etc. 2. A qualification applied to temperature and to pressure in relation to gases.

**Crocein Scarlet** (*kró'-se-in skar'-let*). See *Pigments, Conspectus of*.

**Crochet** (*kro'-sha'*) [Fr., dim. of *croc*, a hook]. A hook. **C. of Uncinate Gyri**, the narrow portion of the uncinat gyrus at its anterior extremity which is reversed in the form of a hook.

**Crocin** (*kró'-sin*).  $C_{16}H_{11}O_6$ . Polychroit; the coloring-matter of *Saffron*. It is a deliquescent, orange-red, amorphous substance, odorless, with a sweetish taste, freely soluble in water and diluted alcohol.

**Crocitin** (*kró'-sit-in*). A coloring-substance of saffron; a red powder, easily soluble in alcohol, but not in water or ether.

**Crocker's Calamin Liniment**. A liniment used in the treatment of dermatitis. It consists of prepared

calamin powder, 2 scruples; powdered zinc oxid,  $\frac{1}{2}$  dram; olive oil and lime-water each one ounce. It is applied on soft rags.

**Croconic Acid** (*kro-kon'-ik*). See *Acid*.

**Crocus** (*kro'-kus*) [*κρόκος*, crocus, saffron]. Saffron. The stigmata of the flowers of *C. sativus*. (This should not be confounded with American Saffron, *Carthamus tinctorius*.) It is an aromatic stimulant and emmenagogue, commonly used as a cooling-agent. **C.**, **Tinct.**, 10 per cent. in strength. Dose  $\frac{5}{j}$ - $\frac{ij}{j}$ ; of the drug, gr. v-xx, in infusion.

**Crocodysmus** (*kro-sid-iz'-mus*) [*κροκώδεις*, to pick at]. Same as *Carphology*.

**Croft's Operations**. See *Operations, Table of*.

**Crook's Test**. See *Tests, Table of*.

**Crop** (*krop*) [*ME.*, *crop*, the craw of a bird]. The craw or pouch of the esophagus of a bird. **C.-bound**, a disease of poultry in which the fowls are unable to pass the food from the crop into the gizzard, and the former becomes filled with food, hanging like a bag in front of the bird.

**Crosby's Operation**. See *Operations, Table of*.

**Cross** (*kros*) [*crux*, a cross]. In biology, a cross-breed in plants, the result of cross-fertilization. **C.-birth**, shoulder-presentation, or other presentation requiring version. **C.-circulation**. See *Circulation*. **C.-eye**. See *Strabismus*. **C.-fertilization**, in biology, the fertilization of the ovules of one species by the seed-germs of another. **C.-knee**. See *Genu valgum*. **C.-leg**, a deformity that sometimes follows double hip-joint disease; the legs are crossed in walking. **C.-legged Progression**, a method of walking in which one foot gets over or in front of the other. It is a symptom of certain cord-lesions.

**Crossed** (*krosd*) [*crux*, a cross]. Having the shape of a cross. Applied to alternate sides of the body. **C.** **Anesthesia**. See *Anesthesia*. **C.** **Hemiplegia**. See *Stauroplegia*. **C.** **Paralysis**. See *Paralysis*. **C.** **Reflexes**, an exception to the usual law of reflex movements, in which, *e.g.*, excitation of one fore-limb induces movement in the opposite hind-limb. See *Reflexes, Table of*.

**Crotalin** (*kro'-tal-in*) [*κρόταλον*, a rattle]. An albuminous body contained in the poison of the cobra. It is not coagulable by heat at 212° C.

**Crotalus** (*kro'-tal-us*) [*κρόταλον*, a rattle]. A genus of serpents, including the typical rattlesnakes. **C.** **Poison**. The virus of the rattlesnake, used as a remedy by homeopaths.

**Crotchet** (*kroch'-et*) [*ME.*, *crochet*, a little hook]. A hook used in extracting the fetus after craniotomy.

**Croton** (*kro'-ton*) [*κρότων*, a tick]. A great genus of euphorbiaceous plants. **C.** **eleuteria**, yields cascarrilla. **C.** **tiglium**, croton oil; **C.** **niveus**, a part of the product called copalche bark. **C.** **Aldehyd**,  $C_6H_5O$ , a compound obtained by the condensation of acetaldehyd when heated with dilute HCl, with water and zinc chlorid; it is a liquid, soluble in water, possessing an irritating odor; it boils at from 104° to 105° and has a sp. gr. of 1.033 at 0°. In the air it oxidizes to crotonic acid. **C.** **Chloral**. See *Chloral butylicum*. **C.** **Oil**. See *Tiglii, Oleum*.

**Crotonol** (*kro'-ton-ol*) [*κρότων*, a tick],  $C_9H_7O_2$ . An acid, aromatic principle in croton oil, believed to be the vesicant constituent of the oil.

**Croup** (*kroop*) [*AS.*, *krōpan*, to cry aloud]. Membranous croup; pseudo-membranous croup; true croup; a disease of the larynx and trachea of children, prominent symptoms of which are a peculiar cough, and difficulty in breathing; it is often accompanied by the development of a membranous deposit or exudate upon the parts. There is doubt as to the real nature

of the disease, some contending that it is laryngeal diphtheria, while others believe it a special type of disease. See also *Roup*. **C.**, **Catarrhal**, an affection of childhood characterized by paroxysms of intense dyspnea and a peculiar, ringing, metallic cough. **C.**, **False**, catarrhal or spasmodic croup; catarrhal laryngitis. **C.**, **Spasmodic**. See *C.*, *Catarrhal*.

**Crown** (*krown*) [*ME.*, *crowne*, a crown]. See *Corona*.

**C. Glass**, a kind of glass used in optics. **C. Leather**. See *Leather*. **C.-setting**, the operation of uniting an artificial crown to the root of a natural tooth; the operation being commonly known by the misnomer "pivoting." **C.** of a **Tooth**, the exposed part of the tooth above the gums, covered with enamel. **C.-work**, the adaptation of an artificial crown of porcelain or gold on the cervical portion of the natural root of a tooth. **C.-yellow**. Same as (*chrome-yellow*).

**Crucial** (*kru'-shal'*) [*crux*, a cross]. Resembling or pertaining to a cross, as a *crucial incision*.

**Cruciate** (*kru'-she-at*) [*crux*, a cross]. In biology, shaped like a Greek cross.

**Crucible** (*kru'-sil-l*) [*crucibulum*, a melting pot]. A vessel of conical shape in which substances are exposed to the heat of a fire or furnace; it is formed of clay or earthenware, porcelain, iron, black lead or plumbago or graphite, silver, gold or platinum.

**Crucifixion Attitude** (*kru-se-fik'-shun*). See *Attitude*.

**Crucing** (*kru'-sing*). See *Block Teeth*.

**Cruels** (*kroo'-elz*). Synonym of *Scrofula*.

**Cruentin** (*kru-en'-tin*) [*cruentus*, bloody]. A precipitate obtained by boiling defibrinated blood with strong  $H_2SO_4$ , adding water, and filtering.

**Crull's Line**. See *Line*.

**Cruorin** (*kru'-or-in*) [*cruur*, blood]. Synonym of *Hemoglobin*.

**Crupper** (*kru'-er*) [*Fr.*, *croupe*, the rump]. The buttocks of a horse. **C.-bone**, the coccyx.

**Crura** (*kru'-rah*) [*Plural of crus*, a leg]. A name applied to certain parts of the body, from their resemblance to legs or roots. **C.** **cerebelli**, the peduncles of the cerebellum, superior, middle, and inferior. **C.** **cerebri**, the peduncles of the cerebrum. **C.** of **Diaphragm**, the muscular bundles arising from the vertebrae, etc., and inserted into the central tendon. **C.** of **Penis**, the corpora cavernosi.

**Crural** (*kru'-ral*) [*crus*, a leg]. Pertaining to the thigh. **C.** **Arch**. See *Ligament*. **C.** **Hernia**, femoral hernia. **C.** **Ring**, the femoral ring; the upper opening of the temporal canal, bounded in front by Poupert's ligament and the deep carpal arch, behind by the pubis, internally by Gimbernat's ligament, externally by a fibrous band separating it from the femoral ring.

**Crureus** (*kru'-re-us*) [*L.*]. One of the muscles of the thigh. See *Muscles, Table of*.

**Crus** (*kru*) [*L.*]. The leg; structures resembling a leg. See the plural, *Crura*.

**Cruso-creatinin** (*kru-so-kre-at'-in-in*),  $C_3H_5N_4O$ . A leucomaine, isolated from muscle-tissue. In this and other leucomaines of the Creatinin Group, as well as in those of the Uric Acid Group, hydrocyanic acid plays an important part in the molecular structure of the bases. Very little is yet known as to the function of this Cyanogen Group in relation to the vital activity of tissues, but recent investigations seem to show that the seat of the cyanogen-formation lies within the nucleated cell, and is intimately connected with the functions of the nuclein-molecule. A number of leucomaines of fresh muscle-tissue are credited with possessing an intensely poisonous action; and, if this be the case, any accumulation of such bases in the

- system, due to interference with elimination, may cause very serious disturbances.
- Crust** (*kruht*) [*crust*, a crust]. An irregular, dried mass of exudation, or other effete products of disease of the skin. It varies much in appearance, according to the condition that produces it. It may be adherent or loose, thin and flat, or thick and craggy, light yellow or blackish in color.
- Crusta** (*krus'-tuh*) [*crusta*, a crust]. The ectal portion of the crus cerebri. *C. lactea*. See *Lactea*. Also synonym for *Eczema*. *C. petrosa*, a thin layer of bone covering the tang of a tooth. *C. phlogistica*, the yellowish layer of the upper stratum of a blood-clot coagulating slowly.
- Crustaceorubrin** (*krus'-tuh-ru' brin*) [*crustata*, shellfish; *ruber*, red]. In biology a red coloring-matter of crustaceans.
- Crustaceous** (*krus'-tuh'sh-u*) [*crusta*, crust]. In biology, having a thin, hard, brittle, crust-like shell or coating.
- Crusted** (*krus'-tuhd*) [*crusta*, a crust]. Having crusts or scabs. *C. Ringworm*. Synonym of *Furcus*. *C. Scall*. Synonym of *Impetigo*.
- Crusting** (*krus'-ting*) [*crusta*, a crust]. The formation of crusts or scabs.
- Crutch** (*kruhch*) [ME., *crutche*, a crutch]. A staff reaching from the axilla to the ground, for the purpose of aiding the progression of lame or crippled persons. *C. Paralysis*, paralysis of an upper extremity due to the pressure of the crutch-head upon the nerves of the axilla.
- Cruveilhier's Atrophy**. See *Diseases, Table of*. *C. Disease*. See *Diseases, Table of*. *C. Fascia*, the superficial layer of the perineal fascia. *C. Plexus*. See *Phlexus*, *Table of*. *C. Paralysis*. Same as *C. Dejerine*.
- Cry** (*cri*) [ME., *crien*, to cry]. The utterance of an inarticulate vocal sound, or the sound so uttered; the sound of the voice in lamentation.
- Cryesthesia** (*kri-es-thuh'-ze-ah*) [*krýos*, cold; *αἰσθησις*, sensation]. Undue sensitiveness to cold.
- Crypt** (*kript*) [*κρυπτην*, concealed]. A small sac or follicle. **Crypts of Lieberkuhn**, minute tubular depressions of the mucous membrane of the small intestine.
- Crypta** (*krip'tah*) [*κρύπτειν*, concealed; *pl.*, *Cryptae*]. Same as *Crypt*.
- Cryptic** (*krip'tik*) [*κρυπτικός*, hidden]. In biology, a term used in the study of mimicry, for such colors as enable the animal to escape enemies, or to approach its prey; protective, *procryptic*; aggressive, *anticryptic*; resemblances. Similar effects may be produced by the use of foreign objects with which the animal covers itself to a greater or lesser extent, *allocryptic*. (Poulton.)
- Cryptidin** (*krip'tid'in*) [*κρυπτός*, hidden],  $C_{11}H_{11}N$ . A color obtained from the dry distillation of quinine.
- Cryptitis** (*krip'tit'is*) [*κρυπτην*, concealed; *τις*, inflammation]. Inflammation of a crypt, or of crypts. *C.*, Urethral, proctitis of the mucous follicles of the urethra.
- Cryptobranchiate** (*krip'tuh-brang'k'-e-at*) [*κρυπτός*, hidden; *βράγχια*, gills]. In biology, having concealed gills.
- Cryptocephalus** (*krip-toh'-eff'-al-us*) [*κρυπτός*, hidden; *κεφαλή*, head]. A monstrosity with an imperfectly formed and concealed head.
- Cryptodidymus** (*krip-toh'-id'im-us*) [*κρυπτός*, hidden; *διδυμος*, twin]. A tritatus in which one fetus is concealed within another.
- Cryptodorous** (*krip-toh'-doh-us*) [*κρυπτός*, hidden; *δουρή*, neck]. In biology, having a concealed neck.

- Cryptogam** (*krip'to-gam*) [*κρυπτός*, hidden; *γάμος*, marriage]. In biology, a general term applied to any plant below Phanerogamia; any flowerless plant is called a cryptogam.
- Cryptogamia** (*krip-to-ga'-me-ah*) [*κρυπτός*, hidden; *γάμος*, marriage]. A division of the vegetable kingdom comprising all plants with concealed sexual organs, without pistils or stamens.
- Cryptogamic** (*krip-to-gam'-ik*). See *Cryptogamous*.
- Cryptogamous** (*krip-to-gam'-us*) [*κρυπτός*, concealed; *γάμος*, marriage]. Belonging to the cryptogamia; having the processes of the reproductive function obscured or concealed.
- Cryptogenetic** (*krip-to-jen-et'-ik*) [*κρυπτός*, concealed; *γεννᾶναι*, to beget]. Same as *Cryptogamous*.
- Cryptolith** (*krip'to-lith*) [*κρυπτην*, crypt; *λίθος*, stone]. A concretion or calculus formed within a crypt.
- Cryptophanic, or Cryptophanic Acid** (*krip-to-fan'-ik*) [*κρυπτός*, concealed; *φαίνειν*, to bring to light].  $C_{10}H_{16}N_2O_{10}$ . An acid said to occur in a free state in urine, though regarded by Landwehr as an animal gum.
- Cryptophthalmia** (*krip-toff-thal'-me-ah*). Same as *Cryptophthalmos*.
- Cryptophthalmos** (*krip-toff-thal'-mos*) [*κρυπτός*, hidden; *ὀφθαλμός*, the eye]. 1. Congenital union of the eyelids, usually over imperfect eyes. 2. A person who has congenital union of the eyelids.
- Cryptopia** (*krip-to'-pe-ah*). Same as *Cryptoplin*.
- Cryptopin** (*krip'to-pin*) [*κρυπτός*, hidden; *ὄπιον*, opium],  $C_{21}H_{23}NO_5$ . One of the alkaloids of opium, colorless and odorless. It is said to be anodyne and hypnotic, but it is less safe than morphin. Dose,  $\frac{1}{8}$  gr. Unof.
- Cryptopyic** (*krip-to-pi'-ik*) [*κρυπτός*, hidden; *πύον*, pus]. Characterized by concealed suppuration.
- Cryptorchid, or Cryptorchis** (*krip-tor'-kid, -kis*) [*κρυπτός*, hidden; *ὄρχις*, testicle]. A person with retained testicles, i. e., not descended into the scrotum.
- Cryptorchidism** (*krip-tor'-kid-izm*) [*κρυπτός*, hidden; *ὄρχις*, testicle]. Retention of the testes in the abdominal cavity.
- Cryptorchism** (*krip-tor'-kizm*). See *Cryptorchidism*.
- Cryptozygosity** (*krip-to-zi-gos'-it-e*) [*κρυπτός*, hidden; *ζυγόν*, arch]. The quality of being cryptozygous.
- Cryptozygous** (*krip-toz'-ig-us*) [*κρυπτός*, hidden; *ζυγόν*, arch]. Having the dental arches or zygomata concealed from view when the skull is viewed from above.
- Crystal** (*kris'-tal*) [*κρίσταλλος*, clear ice]. In chemistry, a substance that assumes a definite geometric form. *C.*, Charcot-Leyden. See *Charcot-Leyden*. *C.*, Charcot's, minute colorless crystals found in the sputa of asthmatic and bronchitic patients and others. They are said to consist of tyrosin, or according to some, of mucin. *C.*, Violet. See *Pigments, Conspectus of*.
- Crystallin** (*kris-tal'-i*). Synonym of *Chicken-pox*.
- Crystallin** (*kris'-tal-in*) [*κρίσταλλος*, clear ice]. The globulin of the crystalline lens.
- Crystalline** (*kris'-tal-en or -in*) [*κρίσταλλος*, crystal]. Like a crystal. *C. Lens*. See *Lens*. *C. Swelling*. See *Swimming*.
- Crystallitis** (*kris-tal'-it-is*). See *Phakitis*.
- Crystallization** (*kris-tal-iz-a'-shun*) [*κρίσταλλος*, ice]. The process by which the molecules of a substance arrange themselves in geometric forms when passing from a gaseous or a liquid to a solid state. *C.*, Water of, the water of salts that cannot be extracted without destruction of their crystalline nature.
- Crystallized** (*kris'-tal-izd*) [*κρίσταλλος*, ice]. Formed into crystals. *C. Green*. Same as *Iodin Green*.

**Crystallography** (*kris-tal-og'-ra-fi*) [*κρυσταλλος*, crystal; *γράφειν*, to write]. The science of crystals, their formation, etc.

**Crystalloid** (*kris'-tal-oid*) [*κρυσταλλος*, crystal; *ειδος*, likeness]. Having a crystalline structure, as distinguished from colloid. In biology, one of the crystalline-like proteid bodies found in seeds, tubers, etc.

**Ctenes** (*ten'-es*) [*κτενεις*]. Incisor teeth.

**Ctenocyst** (*ten'-o-sist*) [*κτεις* (κτεν'), comb; *κύστις*, a bladder]. In biology, applied to the auditory vesicles of ctenophorans.

**Ctenoid** (*ten'-oid*) [*κτεις* (κτεν'), comb; *ειδος*, like]. In biology, pectinate or comb-like.

**Cubeb**, or **Cubeba** (*ku'-beb*, or *ku be'-bah*) [Pers., *ka-baba*, cubeb; *gen.*, *Cubebæ*]. The unripe fruit of *Piper Cubeba*, cultivated in Java. Its properties are due to a volatile oil,  $C_{13}H_{21}$ , and an organic acid. It is an aromatic stimulant, diuretic in small doses, and is useful in affections of the bladder and urethra. It is a good remedy (applied by insufflation or smoked in cigars) for diseases of the fauces, catarrh of the air-passages, etc. Dose gr. x– $\bar{z}$  ij. **C.**, **Fld. Ext.**, alcoholic. Dose  $\bar{m}$ v–xxx. **C.**, **Oleoresina**, ethereal. Dose  $\bar{m}$ v–xxx. **C.**, **Ol.**, the volatile oil. Dose  $\bar{m}$ v–xx. **C.**, **Tinct.**, 20 per cent. in strength. Dose  $\bar{m}$ x– $\bar{z}$  ij. **C.**, **Trochisci**, oleoresin gr.  $\frac{1}{2}$ , oil of sassafras gr.  $\frac{1}{10}$ , ext. of glycyrrhiza gr. iv, acacia gr. ij, syr. of tolu q.s., in each troche. Dose j–ij.

**Cubebene** (*ku'-beb-en*) [*cubeb*],  $C_{20}H_{16}$ . The light portion of the essential oil of cubeb.

**Cubebic Acid** (*ku-beb'-ik*) [*cubeb*],  $C_{13}H_{11}O_7$ . A resinous acid body from cubeb; actively diuretic and cathartic. Unof.

**Cubebin** (*ku-beb'-in*) [*cubeb*],  $C_{10}H_{10}O_3$ . An odorless crystalline substance obtained from cubeb.

**Cubic** (*ku'-bik*) [*κύβος*, a cube]. Pertaining to a cube. **C. Space** (of air), the amount of space required by persons in health and in disease. In hospitals about 1000 cubic feet to each patient is necessary for proper ventilation.

**Cubital** (*ku'-bit-al*) [*κύβος*, a cube]. Relating to the forearm, to the elbow, or to the ulna.

**Cubitocarpal** (*ku'-bit-o-kar'-pal*) [*κύβος*, a cube; *καρπός*, the wrist]. Relating to the forearm and to the carpus.

**Cubitoradial** (*ku'-bit-o-ra'-de-al*) [*κύβος*, a cube; *radius*, a staff]. Relating to both the ulna and the radius.

**Cubitus** (*ku'-bit-us*) [*cubitus*, the elbow]. The forearm.

**Cubitus** (*ku'-bit-us*) [*cubare*, to lie down]. A bed; a couch.

**Cuboid** (*ku'-boid*) [*κύβος*, cube; *ειδος*, resemblance]. Resembling a cube. **C. Bone**, a bone of the foot situated at the outer anterior part of the tarsus.

**Cuca** (*koo'-kah*). See *Erythroxylon*.

**Cucullate** (*ku-kul'-ät*) [*cucullus*, a cap, hood]. In biology, hooded.

**Cucullus** (*ku-kul'-us*) [L., a hood]. 1. In biology, a hood-shaped formation of the head. 2. Synonym of *Whooping-cough*.

**Cucumber**, **Squirting**. See *Elaterium*.

**Cucumis** (*ku'-ku-mis*) [L., a cucumber]. A genus of plants. **C. colocynthis**. See *Colocynthis*.

**Cucurbit** (*ku-ker'-bit*) [*cucurbita*, a gourd]. 1. A cupping-glass. [Old.] 2. The body of an alembic.

**Cucurbitation** (*ku-ker-bit-al'-shun*) [*cucurbitatio*, a cupping]. The operation of cupping.

**Cud** (*kud*) [AS., *cudde*]. The regurgitated food of ruminants. **C.-weed** (*kud-wed*). See *Life Everlasting*.

**Cudbear** (*kuul'-bär*) [After Dr. Cuthbert Gordon]. A

purplish-red powder, nearly identical with *Orchil*, *q.v.* From it the *Tinctura persionis*, and *Tinctura persionis composita*, N. F., are prepared. Both are used mainly in coloring various pharmaceutical preparations. See *Pigments*, *Conspectus of*.

**Cuichunchulli** [Peruvian]. The root of *Ionidium parviflorum*: said to be diaphoretic, diuretic, sialogogue, emetic, and cathartic; it is useful in elephantiasis. Unof.

**Cuirass** (*kwe-ras'*) [Fr.]. A close-fitting or immovable bandage for the front of the chest. **C. Cancer**, a large, flat cancerous growth upon the front of the chest.

**Cul-de-sac** (*kul'-de-sak'*) [Fr. *cul*, the bottom; *de*, of; *sac*, bag]. A cavity of the body closed at one end.

**Douglas's C.**, a pouch between the anterior wall of the rectum and the posterior wall of the uterus, formed by the reflection of the peritoneum. It is called, also, the *recto-uterine* or *retro-uterine cul-de-sac*.

**Culex** (*ku'-leks*) [L., a gnat]. A mosquito. A well-known insect that punctures the skin to obtain its food, the blood. See *Parasites (Animal)*, *Table of*.

**Culicifuge** (*ku-lis'-if-ij*) [*culex*, a gnat; *fugare*, to drive away]. An agent that prevents the biting of mosquitoes; as oil of pennyroyal.

**Cullen's Theory**. A theory as to the origin of gout, which he claims to be primarily an affection of the nervous system.

**Culm** (*kulm*) [*culmus*, a stalk]. In biology, a hollow-jointed stem.

**Culmen** (*kul'-men*) [L., the summit]. The cacumen; a portion of the cerebellum situated to the cephalic side of the vermis. In biology, the highest middle lengthwise line of the bill of a bird.

**Cultrate** (*kul'-trat*) [*culter*, a knife]. Sharp-edged; also cultriform.

**Cultriform** (*kul'-trif-orm*) [*culter*, a knife; *forma*, shape]. See *Cultrate*.

**Culture** (*ku'-chür*) [*colo*, *cultum*, to till, cultivate]. A name loosely and indiscriminately applied to the act, the liquid or solid medium used, and the product of the process, in culture-experiments upon microorganisms. The **culture-media** are of various kinds; mineral liquids (see *Raulin's Liquid*, *Cohn's Liquid*, etc.), bouillons of various kinds, gelatinous fluids, gelose, potato, serum, etc. These media are first sterilized, usually by heat (see *Oven*, *Sterilization*), but possibly also by chemicals, by filtration, by cold, by steam, etc. The infectious matter is then taken upon a sterilized platinum needle-point, pipet, or other instrument, and transferred to the culture-medium. When the latter is of semi-solid consistency, as gelatin, the inoculation by the needle is called *Stab-culture*, *Stichkultur* (Ger.), or *par piqûre* (Fr.), the needle being thrust into the substance. When smeared over the surface, it is called *smear-culture*, *Strichkultur* (Ger.), or *en stries* (Fr.). The macroscopic features of the subsequent development give important means of differentiation. For example, when the inoculated matter forms a mass in the medium, pointed below and rising like a nail-head above, it is called *en clou*, nail-shaped. Then the medium may be liquefied or not, variously colored, peculiarly changed, sediment deposited or not, etc. Subsequent microscopic examination of the culture-product, inoculation-experiments upon animals, etc., complete the study. *Culture-bulbs*, *culture-cells*, *culture-fluids*, *culture-media*, *culture-ovens*, *culture-tubes*, etc., are among the equipments of the bacteriologist. **C.-oven**. See *Oven*.

**Culver's Physic**, or **Root** (*kuul'-verz fiz'-ik* or *root*) See *Leftandra*.

**Cumberland Disease**. An Australian term for *Anthrax*, *q. v.*

- Cumene** (*ku'-mèn*) [*uminum*, *cumin*],  $C_9H_{12}$ . Isopropyl benzene; a compound made by distilling cumic acid with lime. It boils at  $153^\circ C.$ , and its specific gravity at  $0^\circ C.$  is 0.870.
- Cumic** (*ku'-mik*) [*uminum*, *cumin*]. Derived from or pertaining to *cumin*. **C. Acid**. See *Acid*. **C. Aldehyd**. See *Cuminol*.
- Cumidin** (*ku'-mīd-in*) [*uminum*, *cumin*],  $C_9H_{13}N$ . A methylated homologue of anilin. It melts at  $63^\circ C.$ , boils at  $235^\circ C.$  **C.-red**. See *Pigments, Conspectus of*.
- Cumin** (*ku'-min*) [*uminum*, *cumin*]. A fennel-like, cultivated, umbelliferous plant, *Cuminum cyminum*, found native in Egypt and Syria. The fruit is agreeably aromatic and possesses well-marked stimulating and carminative properties. Its active principle is an oil.
- Cuminol** (*ku'-mīn ol*) [*cuminum*, *cumin*; *oleum*, *oil*],  $C_{10}H_{16}O$ . Cumic aldehyd, occurs in Roman caraway oil, and in oil of *Cladonia viridis*, or water hemlock, etc. It possesses an aromatic odor and a burning taste, has a specific gravity of 0.973 at  $13^\circ C.$ , and boils at  $235^\circ C.$  ( $430^\circ F.$ ).
- Cumulative** (*ku'-mu-lā-tiv*) [*cumulare*, to heap up]. Increasing; adding to. **C. Action**, or **Effect**, the production of a noteworthy and sudden result, after the administration of a considerable number of comparatively ineffective doses. The possible cumulative effect of certain drugs is one of the sources of danger that attend their administration.
- Cumulus** (*ku'-mu-lus*) [*L.*, a heap]. A heap or mound. **C. ovigerus**. See *Ovule*.
- Cundurango** (*ku'-du-ran'-go*). See *Condurango*.
- Cuneate** (*ku'-nē-āt*) [*cuneus*, a wedge]. Wedge-shaped.
- Cuneiform** (*ku'-nē-if-orm*) [*cuneus*, a wedge; *forma*, shape]. Wedge shaped, cuneate. **C. Bones**, three wedge-shaped bones at the anterior part of the tarsus. **C. Columns**. See *Columns of Burdach*.
- Cuneihysterectomy** (*ku'-nē-i-his-ter-ek'-to-mē*) [*cuneus*, wedge; *ἵστίον*, the womb; *ἐκτομή*, a cutting out]. The excision of a wedge-shaped piece of uterine tissue, a procedure that has been advocated in the treatment of antelexion of the uterus.
- Cuneus** (*ku'-nē-us*) [*L.*, a wedge]. A wedge-shaped convolution on the internal aspect of the cortex of the occipital lobe.
- Cunicular** (*ku'-nik'-u-lar*) [*κοινικτός*, a subterranean passage]. Furrowed.
- Cuniculate** (*ku'-nik'-u-lat*). Same as *Cunicular*.
- Cuniculus** (*ku'-nik'-u-lus*) [*L.*]. The burrow of the itch-insect.
- Cunila** (*ku'-ni-lah*) [*L.*, a plant]. A genus of labiate plants of the U. S. **C. mariana**, dittany; a labiate plant of N. America. It is aromatic, carminative, and gently stimulant. Unof.
- Cunisset's Test**. See *Test, Table of*.
- Cunilinguist** (*ku'-ni-lin'-gwaist*) [*cunius*, the vulva; *lingua*, to lick]. One who practices licking the vulva. See *Phroditism*.
- Cunus** (*ku'-u*) [*L.*; *gen.*, *Cunni*]. The vulva.
- Cup** (*ku'-p*) [*AS.*, *cuppe*, a cup]. 1. To bleed. 2. A cupping glass. **C.**, **Dry**, a cup for drawing the blood to the surface merely. **C.**, **Favus**, a depression in a face, with surrounding hair. **C.**, **Physiologic**. See *Face, of the ear*. **C.**, **Wet**, a cup for abstraction of blood through incision in the skin.
- Cuphosis** (*ku'-fō-sis*). See *Kyphosis*.
- Cupola** (*ku'-pō-lā*) [*cupula*, a dome]. The dome-shaped extremity at the canal of the cochlea. Also, the summit of a solitary gland of the small intestines.
- Cupped** (*ku'-p*) [*AS.*, *cup*, a cup]. Having the upper surface depressed; applied to the coagulum of blood after phlebotomy. **C. Disc**, excavation of the fundus oculi, normally present in slight degree, but pathologic if excessive.
- Cupping** (*ku'-p-ing*) [*AS.*, *cuppe*, a cup]. A method of blood-derivation by means of the application of cupping glasses to the surface of the body. **C.**, **Dry**, without the abstraction of blood—a form of counter-irritation. This is used mainly in inflammatory affections of the lung. **C.-glass**, a small bell-shaped glass capable of holding three to four ounces, in which the air is rarefied either by heat or exhaustion, and the glass applied to the skin, either with or without scarification of the latter. **C.**, **Wet**, with the abstraction of blood after scarification.
- Cuprea Bark** (*ku'-pre-ah*) [*cupreus*, coppery; *ME.*, *barke*, bark]. The bark of certain species of *Remijia*, *q. v.*; it affords quinin and the associated alkaloids.
- Cuprum** (*ku'-prum*) [*L.*; *gen.*, *Cupri*]. See *Copper*.
- Cupule** (*ku'-pul*) [*cupula*, a little cup]. In biology, a cup-shaped organ, as an acorn-cup, or the sucking apparatus of an insect's foot.
- Curaçao** (*ku'-ra-so'*) [Island of *Curaçao*, north of Venezuela]. A cordial or elixir prepared from brandy, and variously flavored, principally with orange-peel. It is sometimes used as a vehicle for certain medicines.
- Curaçoa** (*ku'-ras-ol'-ah*). See *Curaçao*.
- Curage** (*ku'-rah-zh'*) [*Fr.*]. Curettage; cleansing of the eye, or of an ulcerated or carious surface.
- Curara** (*koo'-rah'-rah*), **Curare** (*koo'-rah-re*), **Curari** (*koo'-rah'-re*) [*S. Am.*]. Woarara. A vegetable extract obtained from *Paullinia curare* and certain members of the *Strychnos* family. It is a powerful paralyzant of the motor nerves and of the voluntary muscles. Its active principle is *Curarin*,  $C_{30}H_{15}N$  (*Preyer*), dose gr.  $\frac{20}{100}$ — $\frac{1}{100}$ , hypodermatically. It is used in S. America and elsewhere as an arrow-poison. Toxic doses cause death by paralysis of the organs of respiration. It has been reported effectual in two cases of hydrophobia, and has been successful in the treatment of tetanus. Dose by hypodermatic injection gr.  $\frac{1}{20}$ — $\frac{1}{10}$ . **Injectio Curare Hypodermatica**, 5 grains in 60 minims. Dose m.j.-vj.
- Curarin** (*koo'-rah'-rin*). See *Curara*.
- Curarism**, **Curarization** (*koo'-rah'-rizm*, *koo'-rah-riz-ol'-shun*) [*S. A.*, *curare*]. The state of one subjected to the full influence of curare by hypodermatic injection. The voice and power of motion are generally abolished, but not the sensibility to pain.
- Curatio** (*ku'-rat'-she-o*) [*cura*, care]. The treatment and nursing of a patient.
- Curative** (*ku'-rat-iv*) [*cura*, care]. Having a healing tendency.
- Curb** (*kerb*) [*ME.*, *courben*, to bend]. A hard and callous swelling on various parts of a horse's leg, as the hinder part of the hock, the inside of the hoof, etc.
- Curcas** (*ker'-kas*). See *Barbadoes Nut*.
- Curcuma** (*ker'-ku-mah*) [*L.*]. Turmeric. The rhizome of *Curcuma longa* of India. Its action is similar to that of ginger. It is employed as a yellow dye; in chemistry, as a test for alkalis; and in pharmacy, occasionally, to color ointments and other preparations.
- Curcumin** (*ker'-ku-min*) [*curcuma*, saffron],  $C_{21}H_{21}O_6$ . The coloring matter of turmeric; it crystallizes in orange-yellow prisms, and melts at  $177^\circ C.$  It dissolves in the alkalis to brownish-red salts. See *Pigments, Conspectus of*.
- Curd** (*kerd*) [*ME.*, *curd*, curds]. The coagulum of milk that separates on the addition of rennet or an acid.

**Curdling Ferment, Test for.** See *Tests, Table of*.

**Cure** (*kur*) [*cura*, care]. The successful treatment of a disease; also, a system of treatment. See *Faith-cure*, *Mind-cure*, *Grape-cure*, *Water-cure* (see *Hydro-pathy*), *Hunger-cure*, *Rest-cure*, etc. **C.-all**, a *Panacea*, *q. v.* **C., Herb-juice**, a method of treating certain intestinal and gastric troubles. It consists in drinking daily the fresh juice of various herbs and wild plants. **C., Potato**, Cameron's method of treating foreign bodies in the alimentary tract by the ingestion of mashed potatoes. The body becomes imbedded in the potato-mass that is formed. **C., Shaking-**. See *Shaking-cure*.

**Curet** (*ku-rel'*) [*fr.*]. An instrument shaped like a spoon or scoop, for detaching substances from one another, as the placenta from the uterine wall, etc.

**Curettage** (*ku-rel'-aj*). See *Cureage*.

**Curling's Operation.** See *Operations, Table of*. **C. Ulcer.** See *Ulcer and Diseases, Table of*.

**Current** (*ker'-ant*) [*ME.*]. 1. *Uva passa minor*; the small, dried, seedless grapes of Greece; formerly used in pharmacy. 2. The fruit of various species of *Ribes*, as *R. nigrum*, the black currant, preparations of which have long been employed in the home-treatment of sore-throats. Unof. **C.-jelly** **Clot**, a soft variety of clot seen in thrombi, the fibrin being stained by the presence of red cells.

**Current** (*ker'-ent*) [*currere*, to run]. In electricity, a term applied to the transference of electric force, which is arbitrarily likened to the flow of a liquid in a confined passage. **C., Action**, the physiologic current obtained during the activity of a muscle or nerve. **C., After**, a current produced in nervous or muscular tissue when a constant current which has been flowing through the same has been stopped. **C., Alternating**, a term applied to a current which, by means of an interrupter, is alternately direct and reverse. This current is employed (in New York) for the execution of capital sentences. **C., Ascending**, the current formed by placing the positive electrode upon the periphery of a nerve and the negative upon the surface over the nerve-center in the spinal cord. **C., Axial**, a current passing through a nerve in the direction opposite to that taken by the normal impulse. **C., Battery**, a galvanic current. **C., Blood**, the stream of blood as it flows from and back to the heart. **C., Centrifugal**, a descending current. **C., Centripetal**, an ascending current. **C., Constant**. See *C., Continuous*. **C., Continuous**, a constant, uninterrupted current in one direction. **C., Critical**, the current at which a certain result is reached. **C., Demarcation**, the muscle-current of Du Bois Reymond; the current obtained from an injured muscle. **C., Derived**, a current drawn off by a derivation-wire from the main current. **C., Descending**, one passing through a nerve centrifugally, the anode being placed proximally, the cathode distally. **C., Diffusion of**, the power of a galvanic current to extend its influence in all directions, the same power never being limited to the two electrodes. **C., Direct**, a current constant in direction, in contradistinction to an alternating current. **C., Electrotonic**, in electro-therapeutics, a current due to internal polarization in the nerve-fiber between the conducting core of the nerve and the enclosing sheath. **C., Faradic**, the current produced by an induction-coil, or by a magneto-electric machine. **C., Franklinic**, a term sometimes used in electro-therapeutics for a current produced by the action of a frictional electric machine. **C., Galvanic**, a current generated by the decomposition of acidulated water by means of metallic plates. **C., Induced**. See *C., Secondary*. **C., Interrupted**, a current that is alter-

nately opened and closed. **C., Inverse**, an ascending or centripetal current. **C., Labile**, moving one or both electrodes over the surface treated. **C., Muscular or Nerve, Alteration Theory of**, a theory proposed by L. Hermann, in which the currents of nerve or muscular fibers are regarded as a result of their alteration from any original condition; **Molecular Theory of**, a theory proposed by Du Bois Reymond, according to which every nerve or muscular fiber is regarded as composed of a series of electro-motive molecules arranged in series and surrounded by a neutral conducting fluid. **C., Reversed**, that produced by changing the poles. **C., Secondary**, a momentary current produced when a coil of insulated wire is introduced within the field of another coil, through which a continuous current is passing. When the coil is removed from the field there is a momentary current in the opposite direction. **C., Secretion**, a current following stimulation of the secretory nerves. **C.-selector**, a device for altering the strength of a current. **C., Stable**, a current applied with both electrodes in a fixed position. **C., Swelling**, one that begins weak and is gradually made stronger, and again gradually diminished. **C., To and Fro**, a Faradic current. **C., Voltaic**, the continuous current.

**Curry** (*ker'-e*) [*Canarese, kari*]. A sauce, originally Anglo-Indian, containing turmeric, coriander, capsicum, garlic, ginger, etc.; it is much employed as a relish or appetizer, especially in warm countries; also, a dish seasoned with the foregoing.

**Curschmann's Spirals.** Corkscrew-like threads of mucin contained in the small, thick pellets that are expectorated during or at the close of an asthmatic paroxysm. They are supposed to be casts of the bronchioles, and have also been seen in simple bronchitis and in pneumonia. **C. Theory.** See *Bronchiolitis exudativa*.

**Curtate** (*ker'-tat*) [*curtatus*, shortened]. See *Expectation of Life*. **C. Expectation.** See *Expectation of Life*.

**Curtman's Test.** See *Tests, Table of*.

**Curvature** (*ker'-vat-ur*) [*curvare*, to curve]. A bending or curving. **C., Angular.** See *Spondylitis*. **C., Potts'**, angular curvature of the spine, with a posterior projection. **C. of Spine.** See *Caries, Kyphosis, Scoliosis*.

**Curve** (*keru*) [*curvus*, bent]. A bending or flexure. **C. of Carus**, in obstetrics, a portion of the arc of a circle the circumference of which lies in the median line of the pelvis, the center being at the symphysis pubis; the curve is that part of the arc that lies between the planes of the inlet and the outlet.

**Curvicaudate** (*ker-ve-kaw'-dat*) [*curvus*, curved; *cauda*, a tail]. In biology, having a curved tail.

**Curvidentate** (*ker-ve-ent'-tat*) [*curvus*, curved; *dens*, tooth]. In biology, having curved teeth.

**Curvifoliate** (*ker-ve-fo'-le-at*) [*curvus*, curved; *folium*, leaf]. In biology, having curved leaves.

**Curvinervate** (*ker-ve-ner'-vat*) [*curvus*, curved; *nervus*, nerve]. In biology, applied to leaves the veins of which are curved and nearly parallel in their course.

**Curvirostral** (*ker-ve-ros'-tral*) [*curvus*, curved; *rostrum*, beak]. In biology, having a crooked bill or beak.

**Curvoisier and Von Hacker's Method.** See *Operations, Table of*.

**Cusack's Operation.** See *Operations, Table of*.

**Cuscamin** (*kus-kam'-id-in*) [*cusco*; *amid*]. A substance found in *Cinchonas*.

**Cuscamin** (*kus'-kam-in*) [*cusco*; *amin*]. A crystalline substance found in *Cinchonas*.

**Cusco Bark** (*ku'-ko bark*). A kind of cinchona; the bark of a variety of *Cinchona pubescens*.

**Cusconidin** (*ku'-kon'-id-in*) [*cusca*]. An alkaloid found in *Cinchona*.

**Cusconin** (*ku'-kō-nin*) [*cusca*],  $C_{15}H_{15}N_2O_4$ . A crystalline alkaloid found in *Cinchona* bark.

**Cushing's Operation.** See *Operations, Table of*.

**Cushion** (*ku'-shun*) [ML., *macula*, a cushion]. A soft body used as a pillow, for the purpose of reclining or sitting.

**Cusp** (*ku'*) [*cuspis*, a point]. The crown or projecting part of a tooth.

**Cusparia Bark** (*ku'-par'-ia bark*). See *Angustura*.

**Cuspid Teeth** (*ku'-pid-tee*). The four teeth that have conical crowns. They are situated, one on each side, in each jaw, between the lateral incisor and first bicuspid.

**Cuspidate** (*ku'-pid-at*) [*cuspis*, a point]. In biology, tipped with a sharp, rigid point.

**Cuspidatus** (*ku'-pī-tū-tus*) [*cuspis*, a point: *pl.*, *Cuspidati*]. A cuspid tooth.

**Cuspidor** (*ku'-pid-ōr*) [*pl.*, *cuspidor*, a spittoon]. A spittoon; a vessel for receiving the ejecta from the mouth. **C.**, Sanitary, a small pasteboard or wooden cup with a cover supported in a rim of metal. These cuspidors should contain some water or disinfecting solution, and at the end of the day should be thrown into the fire. They are used to prevent the dissemination of the germs of tuberculosis.

**Cusso** (*ku'-soo*). See *Brayera* and *Kosso*.

**Cut** (*ku't*) [ML., *cutto*, to cut]. To incise, as with a knife. To castrate. An incision. In biology, a cleft. **C.-velvet.** See *Velvet*.

**Cutaneous** (*ku't-ē-ne-us*) [*cutis*, the skin]. Pertaining to the skin. **C.** Calculus. See *Althum*. **C.** Emphysema. See *Emphysema*. **C.** Horns. See *Cornu unicornum*. **C.** Respiration, the transpiration of gases through the skin.

**Cutch** (*ku'h*) [Anglo-Ind.]. 1. A name given to *Catechu*, the dried extract from *Acacia catechu*, cultivated in India and Burmah, and containing 45 to 55 per cent of a special variety of tannic acid (catechutannic or mimotannic). It is used in leather-manufactures. 2. The tool, or book of parchment leaves, between which gold is beaten into foil.

**Cuticle** (*ku't-ik-l*) [dim. of *cutis*, the skin]. The epidermis or scarf-skin. See *Skin*.

**Cuticula** (*ku't-ik-u-lah*) [dim. of *cutis*, a skin]. The outer, finely lamellated layer of the wall of hydatid cysts. **C.** dentis, the cuticle of a tooth; Nasmuth's membrane; the delicate horny envelop that covers the enamel of young and unworn teeth.

**Cuticular** (*ku't-ik-u-lar*) [*cuticula*, dim. of *cutis*, the skin]. Belonging or pertaining to the skin.

**Cuticularization** (*ku't-ik-u-lar-i-zā'-shun*) [*cuticula*, dim. of *cutis*, the skin]. The formation of a cuticula.

**Cutin** (*ku't-in*) [*cutis*, skin]. In biology, cork-substance; a modification of cellulose (Frémy), also called *cutanin*.

**Cutipunctor** (*ku't-punk'-tor*) [*cutis*, skin; *punctor*, puncturer]. An instrument for puncturing the skin.

**Cutis** (*ku'-tis*) [L.]. The derma, or true skin. **C.** anserina. See *Goose Skin*. **C.** pendula. Synonym of *Dermatophaga*. **C.** testacea, a variety of seborrhea in which the trunk and extensor surfaces of the extremities are covered with large, thick plates of greasy, unpeeled scales, usually greenish or blackish, from accumulation of dirt upon them. There is no inflammation of the subjacent skin. **C.** unctuosus. Synonym of *Acromedusa*.

**Cutisation** (*ku't-i-zā'-shun*) [*cutis*, skin]. The acquirement of the character of true skin by exposed mucous membrane.

**Cutisector** (*ku't-ik-tor*) [*cutis*, skin; *sector*, a cutter].

An instrument for taking small sections of skin from the living subject for microscopic study.

**Cut-off Muscle.** A popular designation for the compressor urethre muscle. See *Muscles, Table of*.

**Cutose** (*ku'-tos*) [*cutis*, skin]. In biology, the substance forming the thin outer covering of the aerial organs of plants (Frémy).

**Cuttle, Cuttlebone** (*ku't-l, ku't-l-bon*). See *Sepia*.

**Cuvier, Angle of.** See *Angle*. **C.**, Canals of. See *Canal*. **C.**, Ducts of. See *Duct*.

**Cyanalcohol** (*si-an-al'-ko-hol*) [*kyanoc*, dark-blue; *alcohol*]. Cyanhydrin; a substance obtained by the union of an aldehyd with hydrocyanic acid.

**Cyanaldehyd** (*si-an-al'-de-hid*) [*kyanoc*, dark-blue; *aldehyd*]. A substitution-compound of acetic aldehyd.

**Cyanalkin** (*si-an-al'-kin*) [*kyanoc*, blue; *alkali*]. One of the products of the action of sodium upon the pure nitrites. The cyanalkins are crystalline and strongly alkaline bases, and form salts with one equivalent of the acids.

**Cyanamid** (*si-an-am-id*) [*kyanoc*, blue; *amid*],  $CN-NH_2$ . A white, crystalline body prepared by the action of ammonia on cyanogen chlorid.

**Cyananilid** (*si-an-an-il-id*) [*kyanoc*, blue; *anilin*].  $C_6H_5N$ . Phenylcyanamid, a body formed on conducting  $CNCl$  into a cooled ethereal solution of anilin. It is readily soluble in alcohol and ether, but dissolves with difficulty in water.

**Cyanbenzene** (*si-an-ben'-zen*). See *Benzonitrile*.

**Cyanein** (*si-an-e'-in*) [*kyanoc*, dark-blue]. In biology, the blue pigment found by Krukenberg in *Rhizostoma*, *Vellula*, *Aurelia*, and *Cyanea*. It is soluble in water, insoluble in benzene, carbon disulphid, and chloroform.

**Cyanephrosis** (*si-an-ef-id-ro'-sis*) [*kyanoc*, blue; *εἰδρωσις*, sweat]. Blue sweat.

**Cyanetholin** (*si-an-eth'-o-lin*) [*kyanoc*, blue; *ethyl*]. A liquid of ethereal odor, insoluble in water, and decomposing when distilled. The cyanetholins are the esters of the cyanic acids.

**Cyanhematin** (*si-an-hem'-at-in*) [*kyanoc*, blue; *αἷμα*, blood]. A substance produced by adding a solution of cyanid of potassium to a solution of blood, and heating gently for some time.

**Cyanhydrin** (*si-an-hi'-drin*). See *Cyanalcohol*.

**Cyanhydrosis** (*si-an-hid-ro'-sis*). See *Cyanephrosis*.

**Cyanic** (*si-an'-ik*) [*kyanoc*, blue]. Blue or bluish. **C.** Acid. See *Acid*, *Cyanic*.

**Cyanid** (*si'-an-id*) [*kyanoc*, blue]. Any compound of cyanogen with a metal or a radical. Most of the cyanids are actively poisonous.

**Cyanidrosis** (*si-an-id-ro'-sis*). Same as *Cyanephrosis*.

**Cyanin** (*si'-an-in*) [*kyanoc*, dark-blue]. 1. In biology, the blue pigment of certain flowers, as the cornflower, violet, iris, etc. 2.  $C_{25}H_{15}N_2I$ . A blue dye formerly prepared by heating quinolin amyl iodid with potassium hydroxid. Same as *Quinolin-blue*. See *Pigments, Conspectus of*. **C.-blue.** See *Pigments, Conspectus of*.

**Cyanochroia** (*si-an-o-kroi'-ah*) [*kyanoc*, blue; *χρoιά*, color]. Cyanosis.

**Cyanoderma** (*si-an-o-der'-mah*) [*kyanoc*, blue; *δέρμα*, skin]. Cyanosis.

**Cyanodermia** (*si-an-o-der'-me-ah*). See *Cyanoderma*.

**Cyanogen** (*si-an-o'-jen*) [*kyanoc*, blue; *γενναι*, to produce]. A radical molecule having the structure  $CN$ , an acid compound of carbon and nitrogen, existing as a colorless, combustible gas, exceedingly poisonous. With hydrogen it forms hydrocyanic or prussic acid; with metals, the cyanids; with oxygen,

the compound known as fulminic acid. Cyanogen and hydrocyanic acid are usually distinguished by the odor of bitter almonds.

**Cyanohemoglobin** (*si-an'-o-hem-o-glo'-bin*) [κίανος, blue; γένναι, to produce; αἷμα, blood; globus, a ball]. A peculiar compound of hydrocyanic acid and hemoglobin, made by the addition of hydrocyanic acid to warm blood outside of the body. This substance is entirely wanting in the ozonizing power of normal oxyhemoglobin.

**Cyanomycosis** (*si-an'-o-mi-ko'-sis*) [κίανος, blue; μύκης, fungus]. The production of blue pus, or of pus charged with *Micrococcus pyocyaneus*. See *Bacteria*.

**Cyanopathy** (*si-an-op'-a-the*). See *Cyanosis*.

**Cyanophilous** (*si-an-off'-il-us*) [κίανος, blue; φιλῶν, to love]. Stainable with blue coloring-matter.

**Cyanophyl** (*si-an'-o-fil*) [κίανος, dark-blue; φύλλον, leaf]. Frémy's name for a supposed blue constituent of chlorophyll.

**Cyanopia** (*si-an-op'-pe-ah*) [κίανος, blue; ὤψ, eye]. A perverted state of the visual powers, during which all objects appear blue.

**Cyanosin** (*si-an'-o-sin*) [κίανος, blue]. One of the Fluorescein colors. See *Pigments, Conspectus of*.

**Cyanosis** (*si-an-o'-sis*) [κίανος, blue]. A bluish discoloration of the skin from non-oxidation of the blood, caused by local or general circulatory diseases. It may be due to the admixture of arterial and venous blood, as when there is a deficiency of the septum between the auricles and ventricles. It is seen in various diseases of the heart and lungs. **C., Congenital.** See *Blue Disease*.

**Cyanospermia** (*si-an'-o-sper'-me-ah*) [κίανος, blue; σπέρμα, sperm]. A condition wherein the semen has a bluish tint.

**Cyanotic** (*si-an-ot'-ik*) [κίανος, blue]. Relating to or affected with cyanosis.

**Cyanuric Acid** (*si-an-u'-rik*). See *Acid, Tricyanic*.

**Cyanurin** (*si-an-u'-rin*) [κίανος, blue; οὖρον, urine]. Uroglaucon or urine-indigo; indigo found in the urine in cystitis and in chronic kidney-diseases; it is also occasionally found in apparent health.

**Cyar** (*si'-ar*) [κύαρ, the eye of a needle]. The internal auditory meatus.

**Cyasma** (*si-as'-mah*) [κύνειν, to be pregnant; pl., *Cysmata*]. The peculiar freckle sometimes seen upon pregnant women.

**Cyathiform** (*si'-ath-if-orm*) [cyathus, a cup; forma, shape]. In biology, cup-shaped.

**Cyclarthrosis** (*sik-lar-thro'-sis*) [κύκλος, circle; ἄρθρωσις, a joint]. A pivot-joint; lateral ginglymus, or rotary diarthrosis; an articulation that admits of decided rotation in one of its elements.

**Cyclic** (*si'-kliik*) [κυκλικός, circular]. Having cycles or periods of exacerbation or change, as *cyclic insanity*. In biology, applied to flowers whose organs are arranged in whorls. **C. Albuminuria.** See *Albuminuria*. **C. Insanity.** See *Insanity*.

**Cyclicotomy** (*si-kliik-ot'-o-me*) [κυκλικός, circular; τέμνειν, to cut]. Surgical incision or division of the ciliary body.

**Cyclitic Shell** (*si-kliit'-ik*) [κυκλικός, circular]. A coherent, solid, fibrous mass of exudate, completely enveloping the crystalline lens.

**Cyclitis** (*sik-li'-tis*) [κύκλος, a circle; ιτις, inflammation]. Inflammation of the ciliary body, characterized by a zone of congestion in the sclerotic coat surrounding the cornea. It is a serious condition, often implicating adjacent structures. It may be serous, plastic, or suppurative. **Irido-cyclitis**, the involvement of both iris and ciliary body in the inflammatory process.

**Cyclocephalus** (*si-klo-sef'-al-us*) [κύκλος, a circle;

κεφαλή, head]. 1. A species of single autostic monsters characterized by a more or less complete absence of the olfactory organs, together with an intimate union of imperfectly developed or rudimentary visual organs, situated in the median line. 2. A variety of this species in which there is a fusion of the orbital cavities and of the eyes, without a vestige of a nose or of a proboscis.

**Cycloid** (*si'-kloid*) [κύκλος, a circle; εἶδος, form]. In biology, having a circular form.

**Cyclophoria** (*sik-lo-fó'-re-ah*) [κύκλος, a circle; φέρειν, to bear]. 1. A term applied to the circulation of the fluids of the body. 2. An insufficiency of the oblique muscles of the eye, giving the eyes a tendency to roll outward or inward, so that the naturally vertical meridians would diverge either at the upper or lower extremities.

**Cyclopia** (*si-klo'-pe-ah*). See *Synophthalmia*.

**Cycloplegia** (*si-klo-ple'-j-ah*) [κύκλος, circle; πλῆγῃ, a stroke]. Paralysis of the ciliary muscle of the eye.

**Cyclops** (*si'-klops*) [κύκλος, circle; ὤψ, eye]. A congenital malformation consisting in a fusion of the two eyes into one. See *Rhinocephalus*.

**Cyclosis** (*si-klo'-sis*) [κύκλος, a circle]. In biology, circulation, as of the protoplasm within a cell.

**Cyclotymia** (*si-klo-thim'-e-ah*) [κύκλος, circle; θυμός, mind]. Cyclic insanity. See *Insanity*.

**Cyclotome** (*sik'-lo-tom*) [κύκλος, circle; τομός, cutting]. A kind of knife for performing cyclotomy.

**Cyclotomy** (*sik-lo'-o-me*) [κύκλος, round; τομή, section]. An operation proposed for the relief of glaucoma, consisting of an incision through the ciliary body.

**Cydonium** (*si-do'-ne-um*) [κυδώνιον, a quince]. Quince-seed. The seeds of *C. vulgaris*, employed mainly for the mucilage contained in the epithelial covering, which consists of a compound of gum and glucose. **C. mucilago**, quince-seeds 2, macerated in water 100 parts, is a bland demulcent, known as *Bandolin*, and used as a hair-dressing.

**Cyematocardia** (*si-em-at-o-kar'-de-ah*) [κύημα, a fetus; καρδιά, a heart]. Fetal rhythm of the heart-sounds.

**Cyesignosis** (*si-e-se-og-no'-sis*) [κύησις, pregnancy; γνώσις, knowledge]. The diagnosis of pregnancy.

**Cyesiology** (*si-e-se-ol'-o-je*) [κύησις, pregnancy; λόγος, treatise]. The science of gestation in its medical aspects.

**Cyesis** (*si-e'-sis*) [κύησις, pregnancy]. Pregnancy.

**Cyetic** (*si-el'-ik*) [κυητικός, pregnant]. Relating to pregnancy.

**Cylicotomy** (*sil-ik-ot'-o-me*) [κύλιξ, cup; τέμνειν, to cut]. Surgical incision of the ciliary muscle.

**Cylinder** (*sil'-in-der*) [κύλινδρος, a cylinder]. A long, circular body. See, also, *Lenses*. **C.-cone of Kuhn**, one of the conical sections marked off by the "incisures" and going to build up the annular segments of a medullated nerve-fiber. **C.-filling**, a filling, the material of which is composed of gold-foil or tin-foil cylinders, sometimes called block-filling. **C. of Gold-foil**, a form of gold-foil for filling teeth, made by rolling a tape of non-cohesive gold upon a fine broach, commencing at one end of the tape and continuing the movement until the desired size of the cylinder is reached.

**Cylindrenchyma** (*sil-in-drench'-kim-ah*) [κύλινδρος, a cylinder; ἔγχυμα, an infusion]. In biology, tissue composed of cylindric cells.

**Cylindric** (*sil-in'-drik*), or **Cylindrical** (*sil-in'-drik-al*) [κύλινδρος, a cylinder]. Pertaining to or like a cylinder. **C. Lenses.** See *Lenses*.

**Cylindrocephalic** (*sil-in'-dro-sef'-al'-ik*) [κύλινδρος, cylinder; κεφαλή, head]. Affected with cylindrocephaly.

**Cylindrocephaly** (sil-in'-dre-sel'-a-le [κίλινδρος, cylinder; κεφαλή, head]) A cylindric formation of the skull.

**Cylindroid** (sil-in'-droid [κίλινδροειδής, cylinder; είδος, likeness]). A name given to a mucous cast frequently found in the urine in scarlet fever, and other diseases. It closely resembles a hyaline tube cast. Cylindroids are ribbonlike forms, usually of great length, and of about the same diameter as renal casts. They may assume various shapes, due to bends and twists, giving them a cork-screw appearance. The extremities are narrow and elongated and often bifurcated.

CYLINDROIDS.

a and b. Cast-like forms  
c. Filamentous forms.

**Cylindroma** (sil-in'-dromah [κίλινδρομα, a cylinder; πλάτη, Cylindromata]).

A tumor peculiar to the orbit of the eye, to the face, and to the stomach, composed of cylindric or club-like hyaline processes. It is a variety of myxo-sarcoma.

**Cylindrosis** (sil-in'-dros-is) [κίλινδροσίν, to roll]. A variety of bony articulation, the bone being rolled upon itself to form a canal and then a suture, as in the cranium.

**Cyllosis** (sil'-o'-sis) [κίλλωσις, crippled]. Club-foot; lameness from deformity.

**Cyllosoma** (sil-o-s'-mah) [κίλλος, lame; σῶμα, a body; πλάτη, Cyllosomata]. A variety of single autositic monsters of the species celosoma, in which there is a lateral eventration occupying principally the lower portion of the abdomen, with absence or imperfect development of the lower extremity on that side occupied by the eventration.

**Cyllum** (sil'-um) [κίλλος, crooked]. Knock-knee.

**Cymba** (sim'-bah) [κίμνη, a boat]. In biology, a boat-shaped sponge-spicule.

**Cymbiform** (sim'-bif-orm) [cymba, boat; forma, shape]. In biology, boat-shaped. **C. Bone**, the scaphoid bone.

**Cymbocephalia** (sim-bo-sef'-a-le-ah). See *Cymbocephalus*.

**Cymbocephalic**, or **Cymbocephalous** (sim-bo-sef'-al-le, or sim-bo-sef'-al-us) [κίμνη, boat; κεφαλή, head]. Exhibiting cymbocephaly.

**Cymbocephaly** (sim-bo-sef'-a-le) [κίμνη, boat; κεφαλή, head] The condition of having a boat-shaped head.

**Cyme** (im [yme, a young sprout]). In biology, a loose flower cluster on the determinate or centrifugal stem.

**Cymene** (im'-en) [cymum, cumin].  $C_{10}H_{14}$ . A hydrocarbon that occurs, together with cumic aldehyde, in Roman paraffin oil from *Cuminum cuminum*, and in other essential oils. It is prepared by treating the paraffin with oil of vitriol. It is a pleasantly smelling liquid, that boils at  $175^{\circ}$ – $176^{\circ}$  C.; its specific gravity is 0.872.

**Cymozelle** (im'-zel) [Cymum, cumin; γίνω, produce]. A liquid obtained from petroleum, gaseous at ordinary temperature, but liquefiable by cold or pressure; boiling at  $12.5^{\circ}$ – $13^{\circ}$  F.; specific gravity 1.00 B. It is used in the manufacture of artificial ice, and is serviceable in the production of great cold for local or minor surgical purposes.

**Cymose** (si'-mos) [κίμνα, a young sprout]. In biology, pertaining to a cyme; bearing cymes.

**Cynanche** (sin-ang'-ke) [κύν, a dog; ἄγγειν, to strangle]. An old name for any acute affection of the throat, as diphtheria, croup, tonsillitis, etc., in which the patient struggles for breath (as a panting dog). See also *Angina*. **C. maligna**, a fatal form of sore-throat. **C. suffocativa**. Synonym of *Croup*. **C. tonsillaris**. See *Quinsy*.

**Cynanthropia** (sin-an-thro'-pe-ah) [κύν, dog; ἄνθρωπος, a man]. A mania in which the patient believes himself a dog, and imitates the actions of one.

**Cyniatria** (si-ne-a-tri'-ah) [κύν, dog; ἰατρεία, medication]. The science or treatise of the diseases of the dog and their treatment.

**Cynic** (sin'-ik) [κυνικός, dog-like]. Pertaining to a dog. **C. Spasm**, a contraction of the facial muscles upon one side, so as to expose the teeth in the manner of an angry dog.

**Cynobex hebetica** (si'-no-beks he-bet'-ik-ah) [κύν, dog; βήξ, cough; ἡγήτικός, youthful]. The convulsive cough of puberty; a loud, dry, barking cough that often attacks boys and girls at puberty. General hygienic treatment is usually curative.

**Cynocephalous** (sin-o-sef'-al-us) [κύν, dog; κεφαλή, the head]. With the head dog-shaped.

**Cynodontes** (si-no-don'-tez) [κύν, dog; ὀδοίς, ὀδόντος, tooth]. The canine teeth, so called from their resemblance to the teeth of a dog. See *Cuspid Teeth*.

**Cynoglossum** (si-no-glos'-um). See *Hound's Tongue*.

**Cynolyssa** (si-no-lis'-ah) [κύν, dog; λύσσα, rabies]. Hydrophobia; rabies.

**Cynophobia** (si-no-fol'-be-ah) [κύν, a dog; φόβος, fear]. 1. Morbid fear of dogs. 2. Imaginary hydrophobia.

**Cynorexia** (si-no-reks'-e-ah) [κύν, dog; ὄρεξις, appetite]. Canine voracity; bulimia.

**Cynospasmus** (si-no-spas'-mus) [κύν, dog; σπασμός, spasm]. Same as *Cynic Spasm*.

**Cynurenic Acid** (sin-u-ren'-ik) [κύν, a dog; οὔρον, urine].  $C_{20}H_{11}N_2O_6 + 2H_2O$ . A crystalline acid found in dog's urine. It is a decomposition-product of proteids. On heating it cynurin is evolved.

**Cynurin** (sin'-u-rin) [κύν, a dog; οὔρον, urine].  $C_{18}H_{14}N_2O_6$ . A base obtained by heating cynurenic acid to  $250^{\circ}$ .

**Cyophoria** (si-o-fol'-re-ah) [κίος, fetus; φέρειν, to carry]. Pregnancy; gestation.

**Cyopin** (si'-o-pin) [κύανος, blue; πύον, pus]. The coloring-matter found in blue pus.

**Cyphosis** (si-fol'-si). See *Kyphosis*.

**Cypripedin** (sip-rip'-e-din) [κύπρις, Venus; πόδιον, a slipper]. A precipitate from the tincture of *Cypripedium pubescens*; antispasmodic, nervine, narcotic. Dose  $\frac{1}{2}$  to 3 grains. Unof.

**Cypripedium** (sip-rip'-e-de-um) [κύπρις, Venus; πόδιον, a slipper]. Lady's Slipper. The roots of *C. pubescens* and *C. parviflorum*, American valerian, with properties due to a volatile oil and acid. It is an antispasmodic and stimulant tonic, used instead of valerian, which it resembles. **C., Fld. Ext.** Dose  $\frac{1}{2}$ –xxx.

**Cypriphobia** (sip-rif'-e-be-ah) [κύπρις, Venus; φόβος, fear]. Fear of sexual intercourse.

**Cyprus Vitriol** (si'-prus vit'-re-al). Same as *Blue Vitriol*. **C. Fever**. Same as *Malta Fever*.

**Cypsela** (sip-sel'-ah) [κυψέλα, a hollow, cup-like structure]. In biology, a term sometimes applied to an achenium which is invested with an adnate calyx such as that of the Composite.

**Cyron** (si'-on). See *Chyron*.

**Cyrtocephalus** (si'-to-sef'-al-us) [κυρτός, convex; κεφαλή, head]. Having a short head.

**Cyrtocoryphus** (*sir-to-kor'-if-us*) [κυρτός, convex; κορυφή, the crown of the head]. Lissauer's term for a skull with a parietal angle between 122° and 132°.

**Cyrtograph** (*sir'-to-graf*) [κυρτός, curved; γράφειν, to record]. A recording cyrtometer.

**Cyrtoma** (*sir-to'-mah*) [κύρτωμα, a curving; *pl.*, *Cyrtomata*]. A convexity, especially one that is abnormal.

**Cyrtometer** (*sir-tom'-et-er*) [κυρτός, curved; μέτρον, a measure]. An instrument adapted for measuring curves, and especially those of the chest.

**Cyrtometopos** (*sir-to-met-op'-us*) [κυρτός, convex; μέτωπον, the forehead]. Lissauer's term for a skull in which the angle formed by lines connecting the nasion with the bregma and the metopion is between 120° and 130.5°.

**Cyrtonosus** (*sir-ton'-o-sus*) [κυρτός, curved; νόσος, a disease]. Synonym for *Rhachitis*.

**Cyrtopisthocranium** (*sir-to-pis-tho-kra'-ne-us*) [κυρτός, curved; ὀπισθοκράνιον, the occiput]. Lissauer's term for a skull in which the angle of the summit of the occiput is between 117° and 140°.

**Cyrtosis** (*sir-to'-sis*) [κύρτωσις, curvature; *pl.*, *Cyrtoses*]. Any deformity, especially one that affects the bones.

**Cyrturanus** (*sir-tur-al'-nus*) [κυρτός, curved; ὀρανός, the roof of the mouth]. Lissauer's term for a skull in which the angle at the roof of the mouth is between 132° and 147.5°.

**Cyst** (*sist*) [κύστις, a pouch]. A cavity containing fluid and surrounded by a capsule. **C.**, **Blood**. See *Hematoma*. **C.**, **Cutaneous**. See *C.*, *Dermoid*. **C.**, **Dentigerous**, one containing teeth; one form is found in the ovaries. **C.**, **Dermoid**, a congenital cyst containing bone, hair, teeth, etc.; the cyst-wall is like the skin. **C.**, **Echinococcus**, a cyst formed in various tissues and organs of man by the larva of the *Tenia echinococcus* of the dog, taken into the stomach. **C.**, **Exudation**, one resulting from increase of exudation, or from exudation into a closed cavity. **C.**, **Hydatid**. See *C.*, *Echinococcus*. **C.**, **Meibomian**. See *Chalazion*. **C.**, **Mucous**, a retention cyst containing mucus. **C.**, **Multilocular**, one composed of many separate compartments. **C.**, **Müllerian**, a cyst containing mucus, blood, or pus, developed in the remnants or rudiments of the inferior or vaginal portion of the duct of Müller. **C.**, **Piliferous**, a hair-containing or dermoid cyst. **C.**, **Primary**, one newly formed, not from distention. **C.**, **Retention**, one that is due to the non-expulsion from its duct of the secretion of a gland, in consequence of closure of the duct, as in *mucous* or *sebaceous* cysts. **C.**, **Sebaceous**, one containing fatty material. **C.**, **Secondary**, a cyst within a cyst. **C.**, **Sublingual**. See *Ranula*. **C.**, **Synovial**, one resulting from the distention of bursæ or synovial sheaths. **C.**, **Tarsal**. See *Chalazion*. **C.**, **Unilocular**, one having but a single cavity. **C.**, **Wolffian**, a cyst developed in the inferior vestiges of the canal of Wolff. It is situated in the anterior or antero-lateral vaginal wall, and is frequently prolonged toward the cervix or even into the base of the broad ligament.

**Cystadenoma** (*sist-ad-en-o'-mah*) [κύστις, cyst; ἄδην, gland; ὄμα, a tumor; *pl.*, *Cystadenomata*]. An adenoma containing cysts.

**Cystalgia** (*sist-all'-je-ah*) [κύστις, bladder; ἄλγος, pain]. Pain in the bladder.

**Cystatrophia** (*sist-at-ro'-fe-ah*) [κύστις, bladder; ἀτροφία, want of nourishment]. Atrophy of the urinary bladder.

**Cystachenitis** (*sist-aw-ken-i'-tis*) [κύστις, bladder; αἰχμήν, neck; ιτις, inflammation]. Inflammation of the neck of the bladder; trachelocystitis.

**Cystauxe** (*sist-awks'-e*) [κύστις, bladder; αἰξίη, increase]. Thickening of the bladder.

**Cystectasia** (*sist-ek-ta'-ze-ah*), or **Cystectasy** (*sist-ek'-taz-e*) [κύστις, bladder; ἐκτασις, a stretching out]. Surgical dilatation of the urethra or of its prostatic portion in certain operations for stone.

**Cystein** (*sist'-e-in*) [κύστις, bladder],  $C_3H_7NO_2S$ . A compound obtained by reducing cystin; it is a crystalline powder, soluble in water, yielding an indigo-blue color with ferric chlorid; in the air it rapidly oxidizes to cystin.

**Cystelcosis** (*sist-el-ko'-sis*) [κύστις, bladder; ἐλκωσις, ulceration]. Ulceration of the bladder.

**Cystencephalus** (*sist-en-sef'-al-us*) [κύστις, a bladder; ἐγκεφαλός, the brain]. A form of monstrosity in which the brain is replaced by a cyst-like structure.

**Cystenchyma** (*sist-eng'-kim-ah*) [κύστις, a bladder; ἐγχυμα, an infusion]. In biology, a connective tissue of large, oval, thin-walled cells, as seen in certain sponges.

**Cystitis** (*sist-thi'-tis*) [κύστις, bladder; ιτις, inflammation]. Inflammation of the vulva.

**Cystic** (*sist'-ik*) [κύστις, bladder]. Pertaining to or resembling a cyst; pertaining to the urinary bladder or the gall-bladder. **C.** **Angioma**. Synonym of *Lymphangioma circumscriptum*.

**Cysticercus** (*sist-te-ser'-kus*) [κύστις, a bladder; κέρκος, a tail]. The scolex of the tape-worm. An hydatid. **C. bovis**, a form of hydatid existing in the muscles of the ox (mostly in the calf). Its progenitor is the *Tenia mediocanellata* of man. It produces the disease called *Beef Measles*. **C. cellulosa**, the hydatid found inhabiting the intermuscular connective tissue of the pig, producing the condition known as "measles." Its progenitor is the *Tenia solium* of man. See *Alternation of Generation*. **C. cellulosa cutis**. An hydatid, or immature form of *Tenia solium*, which is sometimes parasitic upon the subcutaneous tissues of the skin. **C. ovis**, an hydatid of uncertain origin found in sheep in the condition called *Mutton Measles*. **C. pisiformis**, an hydatid found mainly in the abdominal cavity of the rabbit and of the hare, and, in its immature state, in the liver of these animals. Its progenitor is the *Tenia serrata* of the dog. **C. tenuicollis**, a slender or long-necked hydatid found in the abdominal and pelvic cavity of the sheep, the pig, the ox, and the fowl. Its progenitor is the *Tenia marginata* of the dog. See *Parasites (Animal)*, *Table of*.

**Cystid** (*sist'-id*) [κύστις, a bladder]. In biology, the saccular, ciliated, planula-like embryo of a polyzoan; also the cell in which the body of an adult polyzoan is contained.

**Cystidomyeloma** (*sist-id-o-mi-el-o'-mah*) [κύστις, bladder; μυελός, marrow]. A medullary carcinoma of the bladder.

**Cystifellotomy** (*sist-if-el-o'-o-me*) [κύστις, cyst; fell, bile; τομή, a cutting]. See *Cholecystotomy*.

**Cystiform** (*sist'-if-orm*) [cystis, a bladder; forma, shape]. Encysted, cystomorphous.

**Cystin** (*sist'-in*) [κύστις, bladder],  $C_3H_7NSO_2$ . A substance found in the urine in small amount. It occurs in regular, colorless, six-sided tables of very characteristic appearance. It is insoluble in water, alcohol, and ether, but readily soluble in ammonia. Test: boil with a solution of lead oxid in sodium hydrate. If cystin is present, black lead sulphid is precipitated.

**Cystinuria** (*sist-in-u'-re-ah*) [κύστις, bladder; οὖρον, urine]. The presence of cystin in the urine. The cystin may be present in the form of calculi or as a deposit. The urine has a yellowish-green color and a peculiar smell, like that of fresh sweet-briar, but rapidly acquires a putrescent odor on standing, whilst an oily film forms on the surface.

**Cystipathy** (*sist-ip'-a-the*) [*κυστις*, bladder; *πάθος*, disease]. Any disease of the bladder.

**Cystirrhœa** (*sist-ir'-e-ah*) [*κυστις*, bladder; *ῥοία*, a flow]. Vesical catarrh.

**Cystitis** (*sist'-is*). See *Cyst*.

**Cystitic** (*sist-it'-ik*) [*κυστις*, a bladder]. Relating to cystitis.

**Cystitis** (*sist-it'-is*) [*κυστις*, bladder; *τις*, inflammation]. Inflammation of the bladder. **C.**, Exfoliative, that form of cystitis in which the inflammatory process has produced a sloughing of the mucous membrane, or a separation of the whole or a portion of the membrane, which lies loose in the bladder.

**Cystitome** (*sist-it'-i-m*). See *Cystotome*.

**Cystoblast** (*sist'-o-blast*). See *Cytoblast*.

**Cystobubonocœle** (*sist-o-bu-bon'-o-sel*) [*κυστις*, bladder; *βοιόων*, groin; *κήλη*, hernia]. Hernia of the bladder through the inguinal ring.

**Cystocarcinoma** (*sist-o-kar-sin-o'-mah*) [*κυστις*, bladder; *καρκίνος*, a cancer]. Carcinoma with cystic degeneration.

**Cystocarp** (*sist'-o-karp*) [*κυστις*, a bladder; *καρπός*, fruit]. In biology, a name sometimes applied to the sporocarp of certain algæ.

**Cystocœle** (*sist'-o-sel*) [*κυστις*, pouch; *κήλη*, a tumor]. A hernia of the bladder into the vagina, pushing the vaginal wall through the vulvar orifice. In the great majority of cases it is a sequela of childbirth, following laceration of the pelvic floor. It may, however, result from heavy lifting, etc. There is a feeling of weight, with frequent and difficult micturition, and a protrusion between the labia. It is generally associated with a rectocœle, and if left uncorrected favors the descent of the uterus.

**Cystochondroma** (*sist-o-kon-dro'-mah*) [*κυστις*, bladder; *χόνδρος*, cartilage; *όμα*, a tumor; *pl.*, *Cystochondromata*]. A neoplasm presenting the characters of both chondroma and cystoma.

**Cystocolpitis** (*sist-o-kol-pi'-tis*) [*κυστις*, bladder; *κόλη*, vagina]. Inflammation of both bladder and vagina.

**Cystoscope** (*sist'-o-kop*) [*κυστις*, bladder; *κόπος*, a blow]. A urethral sound, having at the proximal extremity a plate to amplify the sound produced by striking against a vesical calculus.

**Cystocyte** (*sist'-o-sit*) [*κυστις*, a bladder; *κύτος*, a cell]. In biology, one of the bladder-like cells of the cystenyma, as in sponges.

**Cystodynia** (*sist-o-din'-e-ah*) [*κυστις*, bladder; *δύσιν*, pain]. Same as *Cystalgia*.

**Cystofibroma** (*sist-o-fi-bro'-mah*) [*κυστις*, a bladder; *fibra*, a fiber; *όμα*, a tumor; *pl.*, *Cystofibromata*]. A neoplasm presenting the character of both a fibroma and a cystoma.

**Cystohemorrhagia** (*sist-o-h'-m-or-a'-je-ah*) [*κυστις*, the bladder; *αἷμα*, blood; *ρήγνιναι*, to burst]. Vesical hemorrhage.

**Cystolith** (*sist'-o-lith*) [*κυστις*, bladder; *λίθος*, a stone]. Vesical calculus. In biology, a stalked body mainly composed of calcium carbonate, found in the cells of certain leaves, as in those of the nettle.

**Cystolithiasis** (*sist-o-lith-i'-as-is*) [*κυστις*, a bladder; *λίθος*, a stone]. Stone in the bladder; also that condition of the system that is associated with the presence of vesical calculus.

**Cystolithic** (*sist-o-lith'-ik*) [*κυστις*, bladder; *λίθος*, a stone]. Pertaining to a vesical calculus.

**Cystolutein** (*sist-o-lut'-in*) [*κυστις*, a cyst; *luteus*, yellow]. A yellow coloring-matter found in cysts.

**Cystoma** (*sist'-o-mah*) [*κυστις*, a cyst; *όμα*, a tumor; *pl.*, *Cystomata*]. A neoplasm, especially an ovarian tumor, containing or made up of cysts.

**Cystomerocele** (*sist-o-mer'-o-sel*) [*κυστις*, bladder; *μηρός*, thigh; *κήλη*, hernia]. A hernia of the bladder through the femoral ring.

**Cystomorphous** (*sist-o-mor'-fus*) [*κυστις*, cyst; *μορφή*, form]. Having the form of a cyst.

**Cystomyxoma** (*sist-o-miks-o'-mah*) [*κυστις*, a cyst; *μύξα*, mucus; *όμα*, a tumor; *pl.*, *Cystomyxomata*]. A neoplasm presenting the characters of both myxoma and cystoma.

**Cystoncus** (*sist-on'-us*) [*κυστις*, bladder; *δγκος*, a swelling]. Any swelling of the bladder.

**Cystonephrosis** (*sist-o-ne-fro'-sis*) [*κυστις*, sac; *νεφρός*, kidney]. A cystic or cystomorphous dilatation of the kidney.

**Cystoparalysis** (*sist-o-par-al'-is-is*) [*κυστις*, bladder; *παράλυσις*, palsy]. Paralysis of the bladder.

**Cystopexy** (*sist'-o-peks-e*) [*κυστις*, bladder; *πήξις*, fixation]. Fixation of the bladder. An operation for the cure of cystocœle, based upon the principle of the Alexander-Adams operation.

**Cystophotography** (*sist-o-fotog'-ra-fe*) [*κυστις*, the bladder; *φως*, light; *γράφειν*, to write]. Photographing the interior of the bladder for diagnostic purposes.

**Cystoplastic** (*sist-o-plas'-tik*) [*κυστις*, the bladder; *πλάσσειν*, to form]. Relating to cystoplasty.

**Cystoplasty** (*sist'-o-plas-te*) [*κυστις*, bladder; *πλάσσειν*, to form]. Plastic operation upon the bladder, especially for vesico-vaginal fistula.

**Cystoplegia** (*sist-o-pl'-je-ah*) [*κυστις*, bladder; *πληγή*, a blow]. Paralysis of the bladder.

**Cystoptosis** (*sist-op-to'-sis*) [*κυστις*, bladder; *πτῶσις*, a fall]. The projection of some portion of the bladder into the urethra.

**Cystopylometer** (*sist-o-pi-lom'-et-er*) [*κυστις*, bladder; *πύλη*, gate; *μέτρον*, measure]. An instrument for measuring any obstruction (as an enlarged prostate) at the entrance to the bladder; it is called also *pylometer*.

**Cystorrhagia** (*sist-or-a'-je-ah*). See *Cystohemorrhagia*.

**Cystorrhœa** (*sist-or-e'-ah*). Same as *Cystirrhœa*.

**Cystorrhæxis** (*sist-or-eks'-is*) [*κυστις*, bladder; *ρήξις*, rupture]. Rupture of the bladder.

**Cystoscope** (*sist'-o-skop*) [*κυστις*, bladder; *σκοπεῖν*, to examine]. An instrument for examining the interior of the bladder.

**Cystoscopy** (*sist-os'-ko-pe*) [*κυστις*, bladder; *σκοπεῖν*, to examine]. Examination of the interior of the bladder by means of the cystoscope.

**Cystospasmus** (*sist-o-spas'-mus*) [*κυστις*, bladder; *σπασμός*, spasm]. Spasm of the bladder.

**Cystospastic** (*sist-o-spas'-tik*) [*κυστις*, bladder; *σπαστικός*, pulling]. Relating to spasm of the bladder.

**Cystostomy** (*sist-os'-to-me*) [*κυστις*, bladder; *στόμα*, a mouth or opening]. The formation of a fistulous opening in the bladder-wall.

**Cystotome** (*sist'-o-tom*) [*κυστις*, bladder; *τέμνειν*, to cut]. A knife used in cystotomy; also a knife used in rupturing the capsule of the lens in cataract-operations.

**Cystotomia** (*sist-o-to'-me-ah*) [*l.*]. Same as *Cystotomy*.

**C. hypogastrica**. Suprapubic cystotomy.

**Cystotomy** (*sist-ot'-o-me*) [*κυστις*, bladder; *τομή*, a cutting]. Incision of the bladder.

**Cyte** (*sit*) [*κύτος*, a hollow]. Any cell; especially a nuclear cell (used mostly in composition).

**Cythemolysis** (*si-them-ol'-is-is*) [*κύτος*, cell; *αἷμα*, blood; *λύσις*, dissolution]. Dissolution of the corpuscles of the blood.

**Cytin** (*sit'-tin*) [*κύτος*, a cell]. An insoluble cellular substance that remains in various residues of animal tissue from which cytoglobin has been removed. By decomposition it is changed into an albuminoid.

**Cytisin** (*si't'-is-in*) [κύτισος, a kind of clover],  $C_{20}H_{27}N_3O$ . A poisonous alkaloid obtained from *Cytisus laburnum* and other species. It occurs in yellowish-white, deliquescent crystals. It is chiefly used in the form of the *nitrate*, a beautiful crystalline salt, pale-yellow in color and acid in reaction. It is used subcutaneously in paralytic migraine, and as a diuretic in dropsy and cardiac disease. Dose, grain  $\frac{1}{20}$  to  $\frac{1}{12}$ , hypodermatically.

**Cytoblast** (*si'-to-blast*) [κύτος, a cell; βλάστος, a germ]. In biology, applied to the nucleus of a cell; also one of the ameboid cytodes going to make up the cytoblastema of sponges.

**Cytoblastema** (*si-to-blas-te'-mah*) [κύτος, a cell; βλάστημα, a sprout]. In biology, applied to formative material or protoplasm, as giving rise to cells or cytodes; also to the matrix in which the individuals of a protozoan colony are imbedded; the gelatinous matrix of a sponge.

**Cytochylema** (*si-to-ki-le'-mah*) [κύτος, a cell; χυμός, juice]. Strasburger's term for the inter-reticular portion of protoplasm; cell-juice.

**Cytochyma**, or **Cytochyme** (*si-to-kim'-ah*, or *si'-to-kim*) [κύτος, a cell; χυμός, juice]. The water-sap in the vacuoles of the cytochylema of protoplasm.

**Cytococcus** (*si-to-kok'-us*) [κύτος, cell; κόκκος, kernel: *pl.*, *Cytococci*]. The nucleus of a cytula.

**Cytode** (*si'-tod*) [κύτος, a cell; είδος, form]. In biology, a term applied by Haeckel to a non-nucleated cell. The simplest, most primitive form of cell, without nucleus or nucleolus; Haeckel therefore calls the *Monera* cytodes.

**Cytoderm** (*si'-to-derm*) [κύτος, a cell; δέρμα, skin]. In biology, a cell-wall.

**Cytodieresis** (*si-to-di-er'-es-is*) [κύτος, cell; διαίρεσις, division]. The process of cell-division.

**Cytogenesis** (*si-to-jen'-es-is*) [κύτος, a cell; γένεσις, production]. The formation or genesis of the cell, or of cells.

**Cytogenetic** (*si-to-jen-et'-ik*) [κύτος, a cell; γένεσις, production]. Relating to cell-formation.

**Cytogenic** (*si-to-jen'-ik*). See *Cytogenous*.

**Cytogenous** (*si-toj'-en-us*) [κύτος, a cell; γέννης, producing]. In biology, producing cells.

**Cytogeny** (*si-toj'-en-e*). See *Cytogenesis*.

**Cytoglobin** (*si-to-glo'-bin*) [κύτος, a cell; globus, a ball]. An albuminoid, obtainable in the form of a white, soluble powder. It forms three per cent. of the pulp of the lymphatic glands. It is partially convertible into preglobin.

**Cytography** (*si-to-g'-ra-fe*) [κύτος, a cell; γράφειν, to write]. A description of cells.

**Cytohyaloplasm** (*si-to-hi'-al-o-plazm*) [κύτος, a cell; υάλος, transparent; πλάσμα, formed matter]. Strasburger's name for the reticulum of protoplasm.

**Cytoid** (*si'-toid*) [κύτος, cell; είδος, likeness]. Resembling a cell.

**Cytokinetic** (*si-to-ki-net'-ik*) [κύτος, a cell; κινεῖν, to move]. In biology, applied to the phenomena of motion of plasma or cells; the opposite of *Cytostatic* (Ryder).

**Cytolergy** (*si-to'-er-je*) [κύτος, a cell; ἔργον, work]. Cell-activity.

**Cytologist** (*si-tol'-o-jist*) [κύτος, a cell; λόγος, science]. One who is versed in cytology.

**Cytology** (*si-tol'-o-je*) [κύτος, a cell; λόγος, science]. The science of cell-formation and cell-life.

**Cytolysis** (*si-tol'-is-is*) [κύτις, cell; λυσις, loosening; solution]. Cell-catabolism; cell-destruction.

**Cytometer** (*si-tom'-et-er*) [κύτις, cell; μέτρον, a measure]. A device for measuring cells.

**Cyto-mitoma** (*si'-to-mi-to'-mah*) [κύτος, cell; μίτος, a fiber]. The fibrillar part of a cell-body. See *Mitoma*.

**Cytonergy** (*si-ton'-er-je*). Same as *Cytolergy*.

**Cytopathy** (*si-top'-ath-e*) [κύτος, a cell; πάθος, disease]. Disease of the living cell.

**Cytophagous** (*si-toff'-ag-us*) [κύτος, a cell; φάγειν, to devour]. Phagocytic; of the nature of a phagocyte; cell-devouring.

**Cytophosphatid** (*si-to-fos-fat'-id*) [κύτος, cell; φωσφόρος, Lucifer]. A form of nuclein, containing sulphur and phosphorus and said to be obtainable from brain-tissue; gangliocytin.

**Cytoplasm**, or **Cytoplasma** (*si'-to-plazm*, or *si-to-plaz'-mah*) [κύτος, cell; πλάσμα, anything formed]. In biology, Dujardin's name for *protoplasm*, *q. v.*

**Cytoproct** (*si'-to-prokt*) [κύτος, a cell; πρωκτός, the anus]. In biology, an orifice with anal functions in the Infusoria. Cf. *Cytopyge*.

**Cytopyge** (*si-to-pi'-je*) [κύτος, a cell; πύγη, the rump]. In biology, the anal aperture of a unicellular animal. Cf. *Cytoproct*.

**Cytostasis** (*si-tos'-tas-is*) [κύτος, cell; στάσις, stasis]. Stoppage or plugging of the capillaries by the blood-cells.

**Cytostatic** (*si-to-stat'-ik*) [κύτος, a cell; στατός, fixed]. In biology, applied to the static or resting conditions of plasma or cells; the opposite of *Cytokinetic* (Ryder).

**Cytostome** (*si'-to-stōm*) [κύτος, a cell; στόμα, mouth]. In biology, the oral aperture of a unicellular organism.

**Cytotaxis** (*si-to-taks'-is*) [κύτος, a cell; τάξις, order]. The selective, ordering, and arranging function of a living cell.

**Cytotrophy** (*si-tot'-ro-fe*) [κύτος, cell; τρέφω, nourishment]. The growth of the cell and sustentation of cell-life.

**Cytozoön** (*si-to-zo'-on*) [κύτος, cell; ζῶον, animal]. A protoplasmic cell-mass, probably parasitic in nature, with independent movement; found by Gaule in defibrinated blood and other structures.

**Cytarrhagia** (*si-ar-a'-je-ah*) [κύτταρος, cell; ῥηγνίναι, to burst forth]. Hemorrhage from the socket of a tooth.

**Cytula** (*si'-u-lah*) [κύτος, a cell]. In biology, an impregnated ovum.

**Cytuloplasm** (*si'-u-lo-plazm*) [κύτος, a cell; πλάσσειν, to form, mold]. In biology, the mingled *cytoplasm* and *spermoplasm* in a cytula.

**Czermak's Spaces**. Certain interglobular spaces in the body.

**Czerny's Operations**. See *Operations, Table of*.

**Czerny-Lembert Suture**. See *Suture*.

**Czerny-Schræder Operation**. See *Operations, Table of*.

**Czoker's Alum Cochineal**. A solution for staining microscopic sections. Boil 7 grams of pulverized cochineal and 7 grams of alum in 700 c.c. of distilled water, until the quantity of fluid is reduced to 400 c.c.; cool, add a few drops of carbolic acid, and filter. After standing for a few days filter again, after which the fluid will be ready for use. See *Stains, Table of*.

**Czumpelitz's Test**. See *Tests, Table of*.

## D

**D.** (Dosis). A dose. In Electrotherapeutics an abbreviation of *Duration* and of *Density*. In ophthalmology the letter is used as an abbreviation of *Detur* and *Diplopia*. It is also used for *detur*, let it be given.

**Da Costa's Disease.** See *Dyspnea*, Table of.

**Dacryadenalgia** (*dak-re-ut-in-al'-je-ah*) [*dakrion*, tear; *algos*, gland; *algos*, pain]. Pain in a lachrymal gland.

**Dacryadenitis** (*dak-re-ad-en-i'-tis*). See *Dacryadenitis*.

**Dacryagogue** (*dak'-re-og-og*) [*dakrion*, tear; *agogos*, emollient]. 1. Inducing a flow of tears. 2. An agent that induces a flow of tears.

**Dacrycystalgia** (*dak-re-sis-tal'-je-ah*). See *Dacrycystitis*.

**Dacryelcosis** (*dak-re-el-ek'-sis*) [*dakrion*, tear; *elkosis*, ulceration]. Ulceration of the lachrymal apparatus.

**Dacrygelosis** (*dak-re-jel-ol'-sis*) [*dakrion*, tear; *gelos*, laughter]. Alternate weeping and laughter.

**Dacryhemorrhysis** (*dak-reh-em-or'-is-is*) [*dakrion*, tear; *haima*, blood; *rhesis*, a flow]. The weeping of bloody tears; a flow of blood from a lachrymal duct.

**Dacryin** (*dak'-re-in*) [*dakrion*, a tear]. A peculiar substance contained in tears.

**Dacryma** (*dak'-re-mah*) [*dakrion*, a tear; *pl.*, *Dacrymata*]. A tear; the lachrymal secretion.

**Dacryoadenitis** (*dak-re-o-ad-en-i'-tis*) [*dakrion*, a tear; *aden*, a gland]. Inflammation of a lachrymal gland.

**Dacryoblenorrhoea** (*dak-re-o-blen-or'-el-ah*) [*dakrion*, a tear; *blennos*, mucus; *rhoia*, a flow]. Chronic inflammation and discharge of mucus from the lachrymal sac.

**Dacryoceale** (*dak'-re-o-sel*, or *-se'-le*) [*dakrion*, tear; *kylia*, hernia]. See *Dacryocystoceale*.

**Dacryocyst** (*dak'-re-o-sist*) [*dakrion*, tear; *kystis*, cyst]. The lachrymal cyst.

**Dacrycystalgia** (*dak-re-o-sis-tal'-je-ah*) [*dakrion*, tear; *algos*, cyst; *algos*, pain]. Pain in a lachrymal sac.

**Dacrycystitis** (*dak-re-o-sis-ti'-tis*) [*dakrion*, tear; *kystis*, a sac]. Inflammation of a lachrymal sac.

**Dacryocystoceale** (*dak-re-o-sis-tal'-o-sel*) [*dakrion*, a tear; *kystis*, a sac; *kylia*, hernia]. Hernia of a lachrymal sac.

**Dacryocystoptosis** (*dak-re-o-sis-top-to'-sis*) [*dakrion*, a tear; *kystis*, a cyst; *ptosis*, a fall]. Prolapse or downward displacement of a lachrymal sac.

**Dacryohemorrhoea** (*dak-re-o-hem-or'-el-ah*). See *Dacryhemorrhysis*.

**Dacryoid** (*dak'-re-oid*) [*dakrion*, tear; *eidos*, form]. Resembling a tear.

**Dacryolite** (*dak'-re-o-lit*). See *Dacryolith*.

**Dacryolith** (*dak'-re-o-lith*) [*dakrion*, tear; *lithos*, stone]. A lachrymal calculus; a calcareous concretion in a lachrymal passage or in the palpebral conjunctiva.

**Dacryolithiasis** (*dak-re-o-lith-i'-as-is*) [*dakrion*, a tear; *lithos*, a stone]. The morbid condition that is attended by the formation of dacryoliths; also, the presence of dacryoliths.

**Dacryoma** (*dak-re-o'-mah*) [*dakrion*, to weep]. 1. A lachrymal tumor. 2. The closure or obstruction of the *fonticulus lachrymalis*, causing epiphora.

**Dacryon** (*dak'-re-on*) [*dakrion*, a tear]. 1. A tear. 2. See *Chonchium Punctum*.

**Dacryops** (*dak'-re-ops*) [*dakrion*, tear; *ops*, eye]. 1. A watery eye. 2. (eye) of the duct of a lachrymal gland.

**Dacryoptosis** (*dak-re-op'-to-sis*) [*dakrion*, tear; *ptosis*,

a fall]. 1. The falling or shedding of tears. 2. Dacryocystoptosis.

**Dacryopyorrhoea** (*dak-re-o-pi-or'-el-ah*) [*dakrion*, a tear; *pyon*, pus; *rhoia*, a flow]. A discharge of pus from the lachrymal apparatus.

**Dacryopyosis** (*dak-re-o-pi-ol'-sis*) [*dakrion*, tear; *pyon*, pus]. Suppuration in the lachrymal apparatus.

**Dacryorrhoea** (*dak-re-or'-el-ah*) [*dakrion*, tear; *rhoia*, a flow]. Excessive discharge of tears.

**Dacryosolen** (*dak-re-o-sol'-len*) [*dakrion*, tear; *solon*, pipe]. A lachrymal duct or canal.

**Dacryosolenitis** (*dak-re-o-sol-len-i'-tis*) [*dakrion*, a tear; *solon*, a pipe; *itis*, inflammation]. Inflammation of a lachrymal duct.

**Dacryostenosis** (*dak-re-o-ste-no'-sis*) [*dakrion*, tear; *stenos*, narrow]. Stenosis or stricture of a lachrymal duct.

**Dacryosyrinx** (*dak-re-o-sir'-inks*) [*dakrion*, tear; *syrinx*, pipe]. 1. A lachrymal fistula. 2. A syringe for use in the lachrymal ducts.

**Dactyl** (*dak'-til*) [*daktylos*, a finger]. A finger or toe; a digit.

**Dactylagra** (*dak-til-a'-grah*) [*daktylos*, a digit; *agros*, seizure]. An attack of gout or rheumatism in the fingers.

**Dactylate** (*dak'-til-at*) [*daktylos*, a finger]. Resembling a finger. Possessing five rays or appendages.

**Dactylion** (*dak-til'-e-on*). See *Syndactylism*.

**Dactylitis** (*dak-til-i'-tis*) [*daktylos*, a finger; *itis*, inflammation]. Inflammation of a finger or toe.

**Dactylognathite** (*dak-til-og-nath'-it*) [*daktylos*, a finger; *gnathos*, jaw]. In biology, Milne Edwards' term for the terminal (distal) joint of one of the foot-jaws of a crustacean. See *Dactylos*.

**Dactylogryposis** (*dak-til-o-grip-ol'-sis*) [*daktylos*, finger; *grypos*, curved]. Abnormal curvature of the fingers or toes.

**Dactylloid** (*dak'-til-oid*) [*daktylos*, finger; *eidos*, form]. In biology, resembling a finger.

**Dactylogy** (*dak-til-ol'-o-je*) [*daktylos*, finger; *logos*, speech]. Conversation or talking by the fingers.

**Dactylolysis** (*dak-til-ol'-is-is*) [*daktylos*, digit; *lysis*, loosening]. The falling off of a finger or toe. **D. spontanea**. See *Ainhum*.

**Dactylopatagium** (*dak-til-o-pat-ag'-e-um*) [*daktylos*, finger; *patageion*, a border to a woman's gown]. In biology, that part of the patagium of a bat which is connected with the digits. Cf. *Ectopatagium*.

**Dactylopodite** (*dak-til-op'-o-dit*) [*daktylos*, a finger; *podis*, a foot]. See *Dactylos*.

**Dactylopore** (*dak-til'-o-por*) [*daktylos*, finger; *poros*, pore]. In biology, applied to the opening of the finger-like, or tentacular dactylozoid of certain hydrozoans.

**Dactylopterus** (*dak-til-op'-ter-us*) [*daktylos*, finger; *pteron*, wing]. In biology, applied to fishes in which certain of the pectoral fin-rays are separate and finger-like.

**Dactylorhiza** (*dak-til-or-i'-zah*) [*daktylos*, finger; *rhiza*, root]. A disease of the roots of certain vegetables, as turnips.

**Dactylos** (*dak'-til-os*) [*daktylos*, a finger]. In biology, the seventh joint of any crustacean appendage, as the *dactylognathite* and *dactylopodite* of Milne Edwards.

**Dactylospasmus** (*dak-til-o-spaz'-mus*) [*daktylos*, a digit; *spasmos*, a spasm]. Spasm of a digit.

**Dactylosymphysis** (*dak-til-o-sim'-fis-is*) [*daktylos*, finger; *syn*, together; *physis*, to grow]. Syndactylism.

**Dadi Gogo** (*da'-de-go'-go*) [African]. See *Gogo*.

**Dæmonomania** (*de-mo-no-ma'-ne-ah*). See *Demonomania*.

**Daffy's Elixir**. A compound aromatic tincture of senna. Unof.

**Dahlia** (*dahl'-yah*). See *Pigments, Conspectus of*.

**Dajaksch** (*di'-aksh*) [Java]. The arrow-poison used in Borneo. It is believed to be distinct from the Java arrow-poison.

**Dakryon** (*dak'-re-on*). See *Cranimetric Points*.

**Dakryops** (*dak'-re-ops*). Same as *Dacryops*.

**Dalby's Carminative**. An old empiric carminative and mildly opiate mixture, answering nearly to the *mistura carminativa* of the National Formulary. It contains about two and a half minims of tincture of opium to the fluidounce.

**Dalgarno Alphabet**. Glove-alphabet; a method of manual communication among deaf-mutes, in which the letters are indicated by touching various parts of the hand.

**Dallas's Operation**. See *Operations, Table of*.

**Dalmatian Insect Powder**. See *Buhach*.

**Dalton's Theory**. The atomic theory of compounds.

**Dalton-Henry Law**. See *Law*.

**Daltonism** (*dall'-ton-izm*) [Dalton, a physician]. Color-blindness. See *Blindness*.

**Dam**. See *Rubber Dam* and *Coffer Dam*.

**Damalic Acid** (*dam-all'-ik*). See *Acid*.

**Damaluric Acid** (*dam-a-l'-ur-ik*). See *Acid*.

**Damiana** (*dam-e-an'-ah*). The leaves of *Turnera aphrodisiaca*, found in Mexico and Lower California; a stimulant tonic and said to be a powerful aphrodisiac. It is the basis of a great number of quack remedies. **D.**, **Ext.** Dose gr. ij-x. **D.**, **Fld. Ext.** Dose  $\text{m}\bar{x}$ - $\text{ʒj}$ . Dose of the leaves  $\text{ʒj}$  daily. All unof.

**Dammar** (*dam'-ar*) [Hind., *dāmar*, resin]. A gum or resin resembling copal, produced by various species of *Dammara* and by various other trees. **D.**, **True**, is obtained from the *Dammara orientalis*, a coniferous tree, indigenous in the East Indies, and also from *Dammara australis*, in New Zealand. The latter variety is also known as *Kauri*, or *covodie resin*. The former is the variety commonly called dammar in commerce. It occurs in masses, coated on the exterior with white powder from mutual attrition, while the interior is pale-amber colored and transparent. It is harder than rosin, and splits and cracks at the temperature of the hand. It is used in the manufacture of varnishes. See *Covodie Gum*.

**Damp**. See *Choke-damp*; *Black-damp*; *Fire-damp*.

**Damping Apparatus**. The union of the tympanic membrane of the ear with the auditory ossicles acting as a damper to prevent excessive sympathetic vibration for its own fundamental note.

**Dance** (*dans*) [Fr., *danser*, to dance]. Any measured tread or system of steps accompanied by music. Also, any motion of the body caused by an abnormal nervous stimulus. **D.**, **St. Vitus's**. See *Chorea*. **D. Plague**. Synonym of *Chorea*.

**Dancel's Method**. See *Treatment, Methods of*.

**Dancer's Cramp**. See *Cramp*. **D. Palsy**. See *Palsy*.

**Dancing Mania**. See *Choreomania*.

**Dandelion** (*dant'-de-li-on*). See *Turaxacum*.

**Dandruff** (*dant'-druf*). See *Seborrhea*, *Pityriasis*, and *Alopecia furfuracea*.

**Dandy** (*dant'-de*) [Hind., *dāndi*, a boatman]. 1. In India, a kind of stretcher or hammock of canvas with a bamboo frame. It is serviceable in the transportation of the sick and wounded. 2. See *Celic*, *Endemic*. **D. Fever**. See *Dengue*.

**Danforth's Oil**. See *Naphtha*.

**Daniell** (*dant'-yel*) [*Daniell*, an electrician]. A unit of electric measurements equal to 1.124 volts. **D. Cell**. See *Cell*.

**Daniella** (*dant-e-el'-ah*) [Dr. *Daniell*, a traveler]. A genus of leguminous trees of W. Africa. **D. thurifera**, the only species of this genus affording olibanum, or true frankincense.

**Dantec, Bacillus of**. See *Bacteria, Table of*.

**Danube Fever** (*dant'-ub fe'-ver*). A febrile affection of remittent or relapsing type observed in sailors and others that have sailed on and have drunk the water of the Danube River, characterized by symptoms of gastro-intestinal derangement, albuminuria, hematuria, edema, uremic symptoms, profuse perspiration, enlarged spleen, and nervous symptoms. Its precise nature is unknown; possibly it is the same as *Malta fever*, *Rock fever*, *Cretan fever*, *Mediterranean fever*.

**Daphne** (*daf'-ne*) [*δάφνη*, the laurel]. A genus of thymelaceous shrubs, mostly poisonous or acrid. See *Mezerion*.

**Daphnetin** (*daf'-net-in*) [*δάφνη*, the laurel],  $\text{C}_9\text{H}_6\text{O}_4 + \text{H}_2\text{O}$ . A substance obtained by the decomposition of the glucosid *daphnin*. It crystallizes in yellow needles or prisms, melting at  $255^\circ\text{C}$ .

**Daphnin** (*daf'-nin*) [*δάφνη*, the laurel],  $\text{C}_{13}\text{H}_{16}\text{O}_9 + 2\text{H}_2\text{O}$ . 1. A glucosid isomeric with esculin; it is obtained from the bark of *Daphne alpina*, and forms prismatic transparent crystals having a bitter taste and melting at  $200^\circ\text{C}$ . 2. See also *Pigments, Conspectus of*.

**Darier's Disease**. *Psorosporose folliculaire végétante*; *Keratosis follicularis*; *Ichthyosis sebacea cornea*; a disease of the skin commencing on the face or trunk, but ultimately spreading to other parts of the body, and characterized by the development of papules of small size and dirty-red color, with firmly-adherent grayish-brown, black, or gray horny crusts. These crusts can be squeezed out of the papules by the thumb-nails. In some places the lesions may become confluent. The disease progresses slowly, and the papules may assume considerable size. Ulceration of their surfaces may occur, or the tumors may suppurate *en masse*. The disease occurs usually in males. Its etiology is obscure. See *Diseases, Table of*.

**Darnel** (*dar'-nel*). See *Lolium*.

**D'Arsonval's Oven**. See *Oven*.

**Dartois**, or **Dartoid** (*dar-to'-ik*, or *dar'-toid*) [*δάρτης*, flayed]. Pertaining to or resembling the dartos. **D. Myoma**. See *Myoma*.

**Darton's Test**. See *Tests, Table of*.

**Dartos** (*dar'-tos*) [*δάρτης*, flayed]. The contractile fibrous layer beneath the skin of the scrotum.

**Dartre** (*dar'-tr*) [Fr.]. Any herpetic or other chronic skin-disease; a term vaguely used in French and the older English medical literature.

**Dartrous** (*dar'-trus*) [Fr., *dartre*]. Of the nature of tetter or herpes; herpetic.

**Dartsac** (*dart'-sak*). A muscular sac containing a calcareous or chitinous dart or rod, opening into the cloaca of certain gasteropods. (*Helix*.)

**Darwin's Ducts**. See *Ducts*. **D. Ear**. See *Ear, Deformities of*, *Darwinian Tubercle*, and *Diseases, Table of*. **D. Theory of Heredity**. See *Heredity*.

**Darwinian Tubercle**. A nodule or eminence sometimes seen on the edge of the helix of the ear; it is believed to be a relic corresponding to the point of an ape's ear.

**Darwinism** (*dar'-win-izm*). [Named after Charles *Darwin*, a celebrated naturalist]. The theory of descent by evolution, as modified by the doctrine of the survival of the fittest. See *Neo-Darwinism* and *Evolution*.

**Dastre-Morat's Method.** See *Anesthesia*.

**Dasyma** (*das'-im-ah*). Same as *Hirudines*.

**Date-disease.** See *Alpea Bail*. **D.-fever.** Synonym of *Dengue*.

**Datisca** (*da-tis'-kah*) [L.]. A genus of herbs, somewhat allied to the cacti. **D. cannabina**, of Asia and the Levant, is antiperiodic and antiscrofulous. **D. glomerata** is a Californian species.

**Datiscin** (*da-tis'-in*) [*Datisca*],  $C_{21}H_{22}O_{12}$ . A starch-like glucoside from *Datisca cannabina*; it is a good yellow dye.

**Datura** (*da-tu'-rah*) [Hind., *dhatūra*, a certain plant]. A genus of Solanaceæ, or night-shade family. **D. stramonium.** See *Stramonium*. **D. tatula**, a plant belonging to the night-shade family, closely resembling stramonium in its therapeutic and physiologic properties. It has been smoked with advantage in asthma. Unof.

**Daturin** (*da tu'-rin*) [Hind., *dhatūra*, a certain plant]. A poisonous alkaloid from the thorn apple. See *Atropin*.

**Daturism** (*da-tu'-rizm*) [Hind., *dhatūra*, a certain plant]. A morbid condition of mind and body induced by excessive dosing with stramonium (*Datura*); stramonium-poisoning. It is nearly or quite identical with atropism.

**Daubenton's Angle.** See *Angle*. **D. Line.** See *Line*. **D. Plane.** See *Plane*.

**Daughter** (*da-ter*) [AS., *dohtor*, daughter]. A female child or descendant. **D.-cell.** See *Cell*. **D.-cyst**, a cyst formed within a cyst. **D.-nuclei.** See *Karyokinesis*. **D.-star**, an amphiaster. See *Karyokinesis*.

**Dauvergne's Apparatus.** An apparatus used for treating old dislocations of the shoulder.

**Davat's Operation.** See *Operations, Table of*.

**Davidsohn, Pupillary Reflex of.** The light reflected through the pupil in reflexion, when the electric light is held in the mouth.

**Davies's Operation.** See *Operations, Table of*.

**Davier** (*dah'-ve-á*) [Fr.]. A tooth-forceps; a lion-forceps.

**Davies and Dale's Carmin Mass.** A warm-flowing mass for injecting tissues. Digest in a flask for thirty-six hours, at the ordinary temperature, 11.6 grams of carmin in a mixture of 15 c.c. of ammonia (0.92 strength) and 118 c.c. of water. Filter, and dilute with water to 472 c.c. Dissolve 38.88 grams of potassium alum in 295 c.c. of water, and add, with constant boiling, a solution of sodium carbonate until a slight precipitate is produced. Boil and add to the carmin fluid, shaking vigorously. A drop of the fluid, when placed on a white filter paper, should show no color-ring. Allow it to cool and settle for a day or two, and draw off the supernatant fluid with a siphon. Wash, by decantation, until the wash-water ceases to give a precipitate with barium chlorid. So much water must be kept with the color that it shall measure 1180 c.c. For use soak 100 grams of gelatin in 750 c.c. of this fluid and melt over a water-bath.

**Davies-Colley Operations.** See *Operations, Table of*.

**Davis's (Leon) Sign.** See *Death*.

**Davy's Method.** See *Treatment, Methods of*. **D. Operation.** See *Operation, Table of*. **D. Tests.** See *Tests, Table of*.

**Day's Test.** See *Tests, Table of*.

**Day-Blindness.** See *Nictalopia*; also *Hemeralopia*.

**Daymare** (*de'-mar*). A state of temporary distress and terror, resembling nightmare, but coming on when the patient is awake. It is thought to be due to a diseased state of the blood-vessels of the brain.

**Dead** (*ded*) [AS., *dead*, dead]. Without life; desti-

tute of life. **D.-born.** Still-born. **D. Finger.** See *Sphaceloderma* and *Night-palsy*. **D.-house**, a morgue; an apartment in a public institution for keeping dead bodies. **D. Nettle.** See *Lamium*. **D. Voice**, a voice without nasal resonance. The so-called nasal voice.

**Deadly** (*ded'-le*) [AS., *dead*, dead]. Capable of causing death; fatal; mortal. **D. Nightshade.** See *Atropa* and *Belladonna*.

**Deaf** (*def*, or *def*) [AS., *deaf*, deaf]. Without the sense of hearing. A condition of impaired hearing. **D.-dumbness.** See *Deaf-mutism*. **D.-fields**, two small triangular planes, converging toward the external auditory meatus, and in which the vibrating tuning-fork is not heard. **D.-mute**, one who suffers from deaf-mutism. **D.-mutism**, a condition of deafness or impaired hearing, accompanied by imperfect development (congenital), or loss of speech. **D.-points**, some points near the ear in which a vibrating tuning-fork cannot be heard.

**Deafness** (*def'-nes*) [AS., *deaf*, deaf]. The condition of being deaf; surdity. **D., Boilermakers'**, chronic labyrinthine deafness resulting from constant exposure to loud sounds. Bone-conduction is impaired, and there are destructive and atrophic changes throughout the cochlea, most marked at the base. **D., Mind.** See *D., Psychic*. **D., Music**, a variety of psychic deafness in which, although musical sounds are heard, they are not recognized as such. **D., Paradoxical**, called also *Paracousia Willisii*, deafness for speech in silence, but with ability, *e. g.*, to hear the same voice in a noisy car or street. This is said to be caused by compression of the labyrinth. It is a form of otopisias. **D., Psychic**, the deafness from destruction of the auditory center (Munk). Sounds are heard, but not recognized or understood. **D., Word**, a variety of psychic deafness in which, although words be heard, they are not comprehended.

**Death** (*deth*) [AS., *death*, death]. The cessation of life. **D., Apparent**, a term applied to a cataleptic state in which respiration and circulation are so feeble as to be inappreciable. **D., Black**, an exceedingly fatal epidemic called the "Plague," which occurred in Europe during the 14th century, during which it is estimated 20,000,000 people died. **D. Camass.** See *Camass*. **D., Localized.** See *D., Somatic*. **D., Molecular**, caries; ulceration. **D.-rate**, a term arbitrarily expressing the mortality of a place, based upon the number of deaths for each 1000 of population during a period of one year. **D.-rattle**, the peculiar sound produced by the passage of air through mucus in the throat of a dying person. **D., Signs of**, certain indications of death, such as cessation of the heart's action, and respiration, vigor of the body, healthiness of the tissues, etc. See *D., Tests of*. **D., Somatic**, death of the organism as a whole, in distinction from localized **D.**, or necrosis, and gangrene. **D., Tests of:** Dr. Richardson summarizes the more important as: 1. Absence of the pulsation of the heart. 2. Absence of the respiratory murmur. 3. Pressure on veins (*Fillet test*). 4. Electric test for muscular irritability. 5. The ammonia hypodermatic test (*Mont-verde's sign*). 6. Coagulation of the blood in the veins. 7. Rigor mortis. 8. Decomposition. **Baifour's Test**, a test for the action of the heart in apparent death. He proposed sticking into the skin over the heart needles having little paper flags fixed in their blunt ends. Should there be contraction of the heart-muscle, such movement would be communicated to the paper flags. **Cloquet's Needle Test**, a bright needle plunged into the body of the biceps muscle and left there for a time; then ex-

amined for signs of oxidation. If found, life is present. *Davis's (Leon) Sign*, after death the arteries are pale or yellowish, and empty of blood, whilst during life the vessels pulsate, and have the color of the surrounding tissues. *Diaphanous Test*, the scarlet-red color of the finger-edges when held toward the light, due, if life exists, to the blood circulating through the tissues. The scarlet tint does not appear if life is extinct. The test is not to be relied on in all cases, as in syncope the red coloration may be absent. *Fillet Test*; *Richardson's Test*, a fillet applied to the veins of the arm will not cause filling of the veins on the distal side of the fillet if death be present. *Foubert's Test* consists in cutting through one of the intercostal spaces and feeling the heart with the point of the finger. *Laborde's Sign*. Same as *Cloquet's Needle Test*. *Larcher's Sign*, soon after death the conjunctivæ exhibit externally gray, cloudy discolorations, that rapidly become black. They are due either to the formation of films of mucus, or to cadaveric imbibition dependent on putrefactive changes. *Levasseur's Sign*, the application of a scarificator and cupping-glass will fail to draw blood if life has been extinct for some hours. *Magnus's Sign*, if a finger be tightly bound round with a ligature, the part beyond the constriction will, if the person be living, become bright red, the tint increasing in depth until it finally assumes a uniformly bluish-red color. At the spot, however, where the ligature is applied, a narrow white ring becomes visible. No change results from the application of the ligature if life be extinct. *Monteverde's Sign*, the injection subcutaneously during life of a little ammonia solution will be followed by a port-wine congestion in surrounding parts, which does not take place in case of death. *Ripault's Sign*, during life the circular shape of the pupil is influenced by external pressure only during its actual application. After life, however, external pressure is capable of permanently affecting the normal roundness of the pupillary aperture. **D. Trance**, trance that closely resembles death.

**Debilitant** (*de-bil'-it-ant*) [*debilitare*, to weaken]. 1. Weakening. 2. A medicine that weakens.

**Debility** (*de-bil'-it-e*). See *Asthenia*.

**Débove's Membrane**. See *Membrane*. **D. Method**. See *Treatment, Methods of*.

**Debridement** (*da-bréd'-mon(g)*) [*Fr.*, *débridement*]. The enlarging of a gunshot wound or a hernia with the knife; the slitting of any constricting tissue or band.

**Debrunner's Tests**. See *Tests, Table of*.

**Decaceros** (*de-kas'-er-us*) [*deka*, ten; *képas*, horn]. In biology, having ten horn-like processes, tentacles or arms.

**Decagram** (*dek'-a-gram*) [*deka*, ten; *γράμμα*, a certain weight]. Ten grams or 154.32349 grains, or 353 ounce avoirdupois, or 0.3215 ounce troy. See *Metric System*.

**Decagynous** (*dek-aj'-in-us*) [*deka*, ten; *γυνή*, female]. In biology, with ten pistils.

**Decalcification** (*de-kal-sif-ik-a'-shun*) [*de* priv.; *calx*, lime; *facere*, to make]. The loss of the lime-constituent of bone in some cases of osteitis.

**Decalcified Bone-Drain**. A drainage-tube made of a decalcified chicken-bone.

**Decalcify** (*de-kal'-sif-i*) [*de* priv.; *calx*, lime; *facere*, to make]. To remove lime-salts from tissues previously to section-cutting for histologic examination. An acid is usually combined with a hardening agent to prevent swelling of the tissues. The best decalcifying fluids are Arsenious Acid, Chromic Acid, Hydrochloric Acid, Exner's Solution, Hydrochloric Acid and Glycerin, Nitric Acid, Nitric Acid and Chromic Acid, Picric Acid. See *Reagents and Stains, Table of*.

**Decalcifying Fluid** (*de-kal'-sif-i-ing flu'-id*). A solution used for the purpose of depriving tissue of its calcium salts. Chronic acid 1 gram, water 200 c.c., then add 2 c.c. nitric acid,—is commended.

**Decaliter, Decalitre** (*dek'-a-le-ter*) [*deka*, ten; *λίτρον*, a pound]. Ten liters, or 2½ imperial gallons, or 2.64 U. S. gallons. See *Metric System*.

**Decalvant** (*de-kal'-vant*) [*decalvare*, depilatory]. Removing hair; depilatory; causing baldness.

**Decamorous** (*dek-an'-er-us*) [*deka*, ten; *μέρος*, a part]. In biology, ten-parted, as a flower.

**Decameter, Decametre** (*dek'-a-me-ter*) [*deka*, ten; *μέτρον*, a measure]. Ten meters or 393.7 English inches, or 32.8 feet. See *Metric System*.

**De Candolle, Canal of**. See *Canal*.

**Decandrous** (*dek-an'-drus*) [*deka*, ten; *ἀνδρ*, male]. In biology, having ten stamens.

**Decane** (*dek'-an*) [*deka*, ten], C<sub>10</sub>H<sub>22</sub>. A hydrocarbon of the paraffin series.

**Decantation** (*de-kan-ta'-shun*) [*de*, down; *cantare*, a side]. The operation of removing the supernatant fluid from a sediment. It may be poured off by means of a guiding-rod, or drawn off by means of a siphon.

**Decapetalous** (*dek-ap-el'-al-us*) [*deka*, ten; *πέταλον*, a leaf]. In biology, having ten petals.

**Decaphyllous** (*dek-af'-il-us*) [*deka*, ten; *φύλλον*, a leaf]. In biology, ten-leaved.

**Decapitation** (*de-kap-it-a'-shun*) [*de*, from; *caput*, head]. Division of the neck of the child in labor, when delivery and version are both impossible. This is sometimes called *decollation*.

**Decapitator** (*de-kap'-it-a-tor*) [*de*, from; *caput*, head]. An instrument used in performing decapitation.

**Decapod** (*dek'-a-pod*) [*deka*, ten; *ποῦς* (πῶδ-), foot]. In biology, having ten feet, rays, or arms.

**De Cassis' Operation**. See *Operations, Table of*.

**Decay** (*de-ka'*) [*de*, down; *cadere*, to fall]. 1. Putrefactive change. 2. The ultimate catabolic state; decline of life, of health, or of any one or more functions.

**Dece's Operations**. See *Operations, Table of*.

**Decentered Lens** (*de-sen'-terd lenz*). 1. A lens thicker at one side than at the other. 2. A lens so mounted that the visual line does not pass through its center.

**Decentration** (*de-sen-tra'-shun*) [*de*, from; *centrum*, a center]. Removal from a center.

**Decephalization** (*de-sef-al-iz-a'-shun*) [*de*, away from; *κεφαλή*, head]. In biology, applied to retrograde changes or simplification in the head parts.

**Decerebrated** (*de-ser'-e-bra-ted*) [*de*, from; *cerebrum*, the brain]. Deprived of the cerebrum; said of birds and other animals that have been thus vivisected for observational study.

**De Chaumont's Formula**. A formula for determining the volume of pure air necessary to maintain a certain standard of purity in the atmosphere. It is as follows:

$$d = \frac{\epsilon}{p}; d = \text{the volume of air to be delivered per hour in cubic feet; } \epsilon = \text{the quantity of CO}_2 \text{ that each person is assumed to evolve per hour; } p = \text{the amount of impurity in a cubic foot of air.}$$

**Decidua** (*de-sid'-u-ah*) [*deciduus*, a falling off]. The membranous envelop of the ovum derived from the mother and cast off at birth with the placenta, etc. **D., Ovular**. See *D. reflexa*. **D., Placental**. See *D. serotina*. **D. reflexa**, that part of the decidua growing about the ovum and enclosing it as a sac. **D. serotina**, that part of the decidua vera upon which the ovum lies, and from which the placenta is subsequently formed. **D., Uterine**. See *D. vera*. **D. vera**, the thickened, vascular, spongy mucous membrane of the gravid uterus.

**Decidual** (*de-sid' u-ul*) [*de-cidua*, a falling off]. Belonging to the decidua. **D. Cells**, a proliferation of young connective-tissue cells above the uterine glands, taking place after the ovum is impregnated, and producing an hypertrophy of the mucous membrane of the uterus. **D. Endometritis**. See *Endometritis*.

**Deciduoma** (*de-sid' u-um*) [*de-cidua*, a falling off; *ōma*, a tumor; cf. *Decidua molar*]. An intra uterine neoplasm, containing decidual tissue, and believed to arise from some hyperplasia of a retained portion of the decidua.

**Deciduous** (*de-sid' u-us*) [*de*, away, from; *cadere*, to fall]. In botany, falling off. Applied to leaves that fall in autumn, and to the calyx and corolla when they fall off before the fruit develops. In dental anatomy, applied to the first teeth or temporary teeth. **D. Skin**. See *Decidua cutis*. **D. Teeth**, the temporary teeth or milk teeth are so called because, after subserving the purposes of early childhood, they are removed by an operation of the economy, to give place to others of a larger size and of a more solid texture. See *Teeth*, *Temporary*.

**Decigram** (*de-si-gram*) [*de-cimus*, tenth; *gramma*, gram]. One-tenth of a gram or 1.54 grains troy. See *Metric System*.

**Deciliter** (*de-si-liter*) [*de-cimus*, tenth; *litra*, liter]. One-tenth of a liter, or 3.52 English fluidounces or 3.38 U. S. fluidounces. See *Metric System*.

**Decimeter** (*de-si-m' ter*) [*de-cimus*, tenth; *metron*, a measure]. One-tenth of a meter, or 3.937 inches. See *Metric System*.

**Decinormal** (*de-si-nor-mal*) [*de-cimus*, tenth; *norma*, normal]. Having one-tenth the strength of the normal, is a solution.

**Deck Plug** (*dek' pl' us*). A short wooden cylinder that may be of various sizes, used by ship-builders, and employed in pathologic laboratories for making paper boxes in which the specimens may be embedded. A strip of thin paper is wound around the plug and held in place by a rubber band, sufficient paper protruding above to form a cylindric box with a wooden bottom.

**Declinate** (*dek' lin-āt*) [*de*, down; *clinare*, to bend]. In biology, bent downward.

**Declination** (*dek' lin-ā'-shun*) [*declinare*, to decline]. The dip of the magnetic needle.

**Declinator** (*dek' lin-ā-tor*) [*declinare*, to decline]. An instrument for keeping the dura out of harm's way during the act of trephining.

**Decline** (*dek' lin'*) [*declinare*, to bend]. A marked deterioration; weakness of the body; an enfeebling chronic state of disease: the decreasing stage, as of a fever. Also a popular term for *Pulmonary tuberculosis*.

**Declivis cerebelli** (*dek' kliv' is ser' e-bell' i*) [L.]. The sloping posterior aspect of the monticulus of the cerebellum.

**Decoction** (*dek' ksh' shun*) [*de-coquere*, to boil down]. A decoction, or "tea." In pharmacy, a liquid preparation obtained by boiling vegetable substances in water. There are two official *decocta*, besides one in the national formulary, and twelve in the British pharmacopoeia.

**Decoctum** (*dek' ksh' tum*) [L.; cf. *Decoct*]. A decoction.

**Decolated** (*dek' o-lā-ted*) [*de*, away, from; *callum*, scab]. In biology, applied to univalve shells the apices of which have been lost; beheaded.

**Decollation** (*dek' o-lā'-shun*). See *Decolatio*.

**Decollator** (*dek' o-lā-tor*) [*decollare*, to behead]. An instrument used in midwifery for decapitating the fetus.

**Decoloration** (*dek' o-lor-ā'-shun*) [*de*, away, from; *colorare*, to deprive

of color]. The operation of discharging the color of an organic substance, usually by bleaching or by filtration through animal charcoal.

**Decolorize** (*dek' o-lor-īz*) [*decolorare*, to deprive of color]. To remove the excess of coloring-matter from stained histologic preparations, for purposes of differentiation.

**Decomposition** (*de-kom-po-zish' un*) [*decomponere*, to decompose]. The separation of the component principles of a body, either by chemic analysis or by putrefactive fermentation.

**Decomound** (*de-kom' -pound*) [*de*, away, from; *compositus*, compound]. In biology, many times compound, as certain leaves.

**Decongestive** (*de-kon-jest' tiv*) [*de*, from; *congerere*, to bring together]. Relieving congestion.

**Decortication** (*de-kor-tik-ā'-shun*) [*de*, from; *cortex*, the bark]. 1. The operation of removing or stripping the bark or husk of a plant. 2. The stripping off of portions of the cortical substance of the brain from the summits of the gyri. This lesion is often witnessed in post-mortem examinations of the brain after death from parietic dementia, and is partly due to the abnormal adhesion of the gray matter to the meninges.

**Decrepit** (*de-krep' it*) [*decrepitus*, old]. Broken down with age.

**Decrepitation** (*de-krep-it-ā'-shun*) [*decrepitare*, to crackle]. The crackling noise made by certain crystalline bodies when their water of crystallization is driven off by heat. It is caused by the conversion of the imprisoned water into steam.

**Decrepitude** (*de-krep' it-ūd*) [*decrepitus*, decrepit]. The state of being decrepit; senility; the feebleness of old age.

**Decrescent** (*de-kres' ent*) [*decrescere*, to decrease]. In biology, gradually tapering or diminishing from below upward.

**Decubitus** (*de-ku' bit-us*) [*decumbere*, to lie down]. A term denoting a recumbent or horizontal position. Also, the position of a sick person while in bed. **D.**, **Acute**, a form of bed-sore, sometimes seen in connection with cerebral lesions.

**Decumbent** (*de-kum' bent*) [*de*, down; *cumbere*, to lie]. In biology, bent to one side; reclining.

**Decurrent** (*de-ku' r' ent*) [*de*, down; *currere*, to run]. In biology, applied to leaves that are prolonged down the side of the stem below the point of their insertion.

**Decussate** (*de-kus' at*) [*decussatus*, cross]. In biology, arranged in pairs that successively cross each other. To intersect. A term applied to nerve-fibers and to muscle fibers that interlace.

**Decussatio** (*de-kus-ā'-she-o*) [L.]. A crossing. **D. pontinalis**, in the pons, a decussation of tegmental fibers from the thalamus.

**Decussation** (*de-kus-ā'-shun*) [*decussatio*, a crossing]. A chiasma or X-shaped crossing, especially of nerves, or of nerve-filaments. The principal decussations are that of the *optic nerve*, and that of the *pyramids*; i. e., of the anterior pyramids of the oblongata.

**Decussorium** (*de-ku-ō'-re-um*) [L.]. An instrument for depressing the dura after the operation of trephining, so as to facilitate the removal of pus, blood, or abnormal effusions.

**Dedentition** (*de-den-tish' un*) [*de*, down; *dens*, a tooth]. The shedding of the teeth, especially the milk-teeth.

**Dedolation** (*ded-o-lā'-shun*) [*dedolatio*, a hewing off]. The removal of a slice by cutting; a wound by which a part is cut off.

**Deduplication** (*de-du-plik-ā'-shun*) [*deduplicare*, to divide in two]. In biology, the same as *Chorisis*, q. v.

**Deelinæ Oleum**. A highly refined petroleum oil manu-

- factured on the Dee River. It is said to be valuable as a local application in eczema, etc. Unof.
- Deemetinize** (*de-em-et'-in-iz*). To deprive ipecacuanha of its emetic principle, emetin.
- Deep** (*dep'* [M.E., *depe'*). Not superficial; not situated near the surface. See *Profundus*. **D. Reflexes**. See *Reflexes, Table of*. **D. Water**, water obtained from a porous substance beneath the first impervious stratum.
- Deer-berry** (*der'-ber-e*). A popular name for *Gaultheria procumbens*.
- Defatigatio** (*de-fat-ig-a'-she-o*) [1.]. Over-fatigue; overstrain, as of the heart-muscle. **D. mentis**, brain-fag.
- Defecation** (*de-fek-a'-shun*) [*defēcāre*, to separate from the dregs]. The evacuation of the bowels, or discharge of feces.
- Defect** (*de-fekt'*) [*defectus*, a failure]. A lack or failure; absence of any part or organ; absence or failure of a normal function.
- Defemination** (*de-fem-in-a'-shun*). See *Evisceration*.
- Defensive Proteids**. Hankin's name for those substances formed in the bodies of animals that render them immune to certain diseases. See also *Sozin*, *Phylaxin*, *Mycosozin*, *Toxosozin*, *Mycophylaxin*, *Toxophylaxin*, *Alexin*.
- Deferent** (*def'-er-ent*) [*deferens*, carrying away]. Carrying away or down; efferent. See *1 as*.
- Deferentitis** (*de-fer-en-ti'-tis*) [*deferens*, carrying away; *itis*, inflammation]. Inflammation of a vas deferens.
- Defervescence** (*de-fer-ves'-ens*) [*defervescere*, to cease boiling]. A term applied to periods during the course of fevers in which the temperature falls.
- Defibrillation** (*de-fi-bril-a'-shun*) [*de*, from; *fibrilla*, a small fiber]. The tearing of the brain-substance in the direction of the least resistance, in order to make cleavage-preparations.
- Defibrination** (*de-fi-brin-a'-shun*) [*de*, from; *fibra*, a fiber]. The removal of fibrin from blood or lymph.
- Definition** (*def-in-ish'-un*) [*definitio*, to bound by limits]. In optics, the power of an object-glass to show clear outlines of area or structure, free from aberration or distortion.
- Defixus** (*de-fiks'-us*) [*defigere*, to fasten]. Impotent; sexually powerless; an old term based upon the idea of a spell wrought by an enemy being the cause of the condition indicated.
- Deflagration** (*def-lag-ra'-shun*) [*deflagrare*, to be consumed]. A sudden, violent combustion, such as accompanies the oxidation of certain inorganic substances by mixing with an easily decomposing salt, such as the alkaline chlorates and nitrates.
- Deflex** (*de-fleks'-us*) [*deflexas*, to turn aside]. In biology, to bend down.
- Deflorate** (*d'-flo'-rāl*) [*defloratus*, to deprive of flowers]. In biology, said of a plant or anther that has lost its pollen or flowers, or is past the flowering state.
- Defloration** (*def-lo-ra'-shun*) [*de*, from; *flora*, a flower]. On the part of the female the first sexual connection effected by consent, not by rape. The loss of those marks or features that indicate virginity, as rupture of the hymen.
- Defluvium capillorum** (*de-flu'-v'e-um kap-il-or'-um*). Synonym of *Atopelia simplex*.
- Defluxion** (*de-fluk'-shun*) [*defluxio*; *de*, down; *fluere*, to flow]. 1. A catarrh; a descent of the humors or secretions. 2. A rapid falling, as of the hair or eyebrows.
- Defœdatio unguium** (*de-fe-da'-she-o un'-gwe-um*) [1., "Fouling of the nails"]. Excessive thickness, with foul appearance of the nails, which often become partly detached from the matrix.
- Defoliate** (*de-fol'-le-at*) [*de* priv.; *folium*, a leaf]. To destroy the leaves of a plant, or to cause them to drop off.
- Deforestation** (*de-for-es-ta'-shun*) [*de*, down; *forestā*, a forest]. The stripping of a country or district of its forests, a process that has a direct influence upon the public health for good or for evil.
- Deformation** (*de-for-ma'-shun*) [*deformare*, to disfigure or distort]. A process by which the body or any of its parts acquires an abnormal shape.
- Deformity** (*de-form'-it-e*) [*deformitas*, a deformity]. Abnormal shape or structure of a body or any part. **D., Anterior**. See *Lordosis*.
- Dfunctionalization** (*de-funk-shun-al-iz-a'-shun*). Failure or deprival of a function.
- Degasify** (*de-gaz'-if-i*) [*de* priv.; *gas*]. To expel from wood, coal-tar or other substance all moisture and gaseous material, by means of the application of heat.
- Degener's Test**. See *Tests, Table of*.
- Degeneration** (*de-jen-er-a'-shun*) [*degenerare*, to differ from ancestors]. Deterioration, degradation, or retrogression of the molecular or cellular structure of a tissue, organ, or cell, so that it can no longer maintain its function; passage from an anastate to a catastate, or from one catastate to a lower one. **Atrophy** is a form of degeneration. **D., Amyloid** or **D., Albuminoid**, now regarded as an infiltration from without, and not as a degeneration of the proper cells and fibers. See *Albuminoid Disease*. **D., Ascending**, that which takes place in centripetal fibers after a destructive lesion of the spinal cord. **D., Atheromatous**. See *Endarteritis, Chronic*. **D., Black**. Synonym of *Melanosis* and of *Anthraxis*. **D., Calcareous**, the deposition of insoluble compounds of calcium and magnesium within the tissues. **Caseation**. See *Caseation*. **Cloudy Swelling**. See *Cloudy Swelling*. **D., Colloid**, akin to mucoid, the disorganized material becoming of a structureless, semi-solid, jelly-like consistency. **D., Descending**, that which takes place in the centrifugal fibers of the cord after a destructive lesion between the central cortex and the anterior nerve-roots. **D., Fatty**, the conversion of the proteids of a cell or fiber into oil. **D., Fibroid**, the substitution of fibrous for a higher grade of tissue. **D., Glassy**, the halo-granular change of the heart-muscle seen in fevers. **D., Gray**, in nervous tissue a degeneration due to chronic inflammation, and characterized by the production of a gray color. **D., Hyaline**, the disorganized tissue becomes shining and translucent. **D., Hydropic**, a form of degeneration in which the degenerating cells imbibe large quantities of water. **D., Lardaceous**. See *Albuminoid Disease*. **D., Mucoid**, hyper-secretion followed by disorganization of the mucus-cells. **D., Reaction of**. See *Reaction of Degeneration*. **D., Senile**, the widely disseminated degenerative changes, largely fibroid in character, that mark old age. **D., System**, degeneration of a system of fibers, in contradistinction to insular or scattered degeneration. **D., Waxy**. See *Albuminoid Disease*. **D., Zenker's**. Same as *D., Glassy*.
- Deglutable** (*deg-hul'-a-bl*) [*deglutitio*, a swallowing; M.E., *able*, capable]. Capable of swallowing, or of being swallowed.
- Deglutitio impedita** (*de-glu-tish'-e-o im-pe-di'-tah*). Synonym of *Dysphagia*.
- Deglutition** (*deg-lu-tish'-un*) [*deglutitio*, a swallowing]. The act of swallowing.
- Degmus** (*deg'-mus*) [*δργμός*, a sting; pain]. A gnawing pain in the stomach.
- Degradation** (*deg-rad-a'-shun*) [*degradatio*, a descent by steps]. Gradual physiologic and histologic change for the worse; degeneration; retrograde metamorphosis.

**Degras** (*de-gras*). See *Leather*.

**Degrease** (*de-gré'*) [*Fr., dégrasser*]. To remove fat, as from bones in the preparation of skeletons.

**Degreasing** (*de-gré'-ing*) [*Fr., dégrasage*]. Removing the fat, as from bones.

**Degree** (*de-gré'*) [*L., from; gradus, a step*]. Position in a graded series; quality. The units or intervals of thermometric scales. Also, a charter or testimonial of qualification granted by a medical or other college. In trigonometry the 1/360 part of the arc of a circle.

**Degut** (*de-gut'*) [*Russ.*]. Birch oil or tar. See *Birch*.

**Dehio's Method**. A method of outlining the stomach. About a quart of water is introduced in separate quantities of a half pint each, and after the ingestion of each portion, the lower crescentic limit of flatness against the tympanic transverse colon is outlined. The normal stomach with this additional weight will not quite reach the level of the umbilicus, while in case of dilatation its descent will be rapid and considerable.

**Dehisce** (*de-his'*) [*L., off; hincere, to gape*]. In biology, to split open. Applied to the splitting open of anthers to shed their pollen, of antheridia to set free their antherozoids, of sporangia to shed their spores, of certain fruits to shed their seeds, etc.

**Dehiscence** (*de-his'-ens*) [*L., off; hincere, to gape or yawn*]. In biology, the act of dehiscing or splitting open.

**Dehorn** (*de, away from; ML., horn*). To deprive cattle of their horns.

**Dehumanization** (*de-hu-man-i-zé-shun*) [*de, from; humanus, human*]. 1. The loss of the proper characteristics of humanity, either by insane persons, or by debased criminals. 2. The supposed loss of some quality pertaining to the human species; as in the alleged dehumanization of vaccine virus.

**Dehydration** (*de-hi-dré'-shun*) [*L., away from; idōō (idōō), water*]. The necessary removal of water from microscopic preparations previously to clearing and mounting in balsam. Absolute alcohol is generally best; anilin is used in special cases in which alcohol is inadmissible. 90 per cent. alcohol will answer if xylol or cedar oil be used as the clearing-agent, and should always be used with celloidin sections. It is also called *Anhydration*.

**Deiters' Cells**. Certain cellular structures between the outer hair cells of the organ of Corti. Also certain non-striated cells at the intersection of the fibers of the white substance of nerves. Deiters' Cells (spider-cells) are also found in the neuroglia, especially in that of dorsal brain-tissue. **D. Nucleus**, a nucleus lying in the direct sensory cerebellar tract of the medulla oblongata. Its function is unknown. See *Nucleus medullaris*. **D. Process**, the process of a nerve-fiber, that goes to form an axis cylinder.

**Dejection** (*de-jeék'-shun*) [*Latini; de, down; jacere, to throw*]. The discharge of fecal or other excrementitious matter; the matter so discharged. Also, a state of despondency.

**Dejections nigre** (*de-ék-hé-á-nez ní' gre*) [*L.*]. Synonym of *Melan*.

**Dekagram** (*de-ká-gram*). See *Decagram*.

**Dekaliter** (*de-ká-lí-ter*). See *Decliter*.

**Dekameter** (*de-ká-mé-ter*). See *Dynameter*.

**Del Toro's Operation**. See *Operation*, Table of.

**Delafield's Hematoxylin**. See *Hematoxylin and Stains*.

**Delagarde's Operation**. See *Operations*, Table of.

**Delamination** (*de-lá-mín-á'-shun*) [*L., away; lamina, a thin metal plate*]. In biology, applied to the splitting of the blastoderm into two layers.

**De la Rue's Method**. A method of preparing carminic acid. Exhaust cochineal in boiling water. Precipitate the extract with plumbic acetate slightly acidulated

with acetic acid, care being taken not to add an excess of the lead. Wash the precipitate with distilled water until the wash-water ceases to give a precipitate with mercuric chlorid; then decompose it with hydrogen sulphid; filter, evaporate the filtrate to a syrupy consistence on a water bath, and dry; extract the dark-purple product with alcohol, which dissolves out the carminic acid. See *Stains*, Table of.

**Delayed Symptoms**. A term used as a synonym of *Shock*, *Deferred*, q. v.

**Deleterious** (*del-et-é'-re-us*) [*δηλητήριος, hurtful*]. Hurtful, injurious.

**Delifs' Tests**. See *Tests*, Table of.

**Delhi Boil** (*del'-he boil*). See *Furunculus orientalis*.

**Delicate** (*del'-ik-at*) [*delicatus, delicate*]. Of a refined constitution. Feeble. In a condition of poor health.

**Deligation** (*del-ig-a'-shun*) [*deligatio, a binding*]. Ligation, as of an artery; bandaging, as of a wound.

**De Lignerolle's Operation**. See *Operations*, Table of.

**Deliquescence** (*del-ik-wes'-ens*) [*deliquesce, to melt away*]. The breaking down as a result of the absorption of water from the atmosphere, characteristic of certain substances. Such substances are said to be *hygroscopic*.

**Deliquescent** (*del-ik-wes'-ent*) [*deliquesce, to melt away*]. In biology, dissolving; applied to a stem that divides into branches.

**Deliquium** (*del-ik'-wé-um*) [*L.*]. An absence. **D. animi**. 1. Failure of the mind; mental decay; melancholy; lowness of the spirits. 2. Syncope or fainting.

**Delirament** (*de-lir'-am-ent*) [*deliramentum, delirium*]. Delirium.

**Deliration** (*de-lir-a'-shun*) [*Deliratio, delirium*]. Delirium.

**Deliriant** (*de-lir'-e-ant*) [*de, out of; lira, the furrow*]. An agent that acts on the brain, so as to disorder the mental faculties and produce confusion of will-power.

**Delirifacient** (*de-lir'-e-fa'-she-ent*) [*delirium, delirium; facere, to make*]. Producing delirium.

**Delirious** (*de-lir'-e-us*) [*delirus, mad, raving*]. Affected with delirium; wandering in mind.

**Delirium** (*de-lir'-e-um*) [*delirium, madness*]. A disturbance of the cerebral functions manifested by impaired action of the nerve-centers, characterized by hallucinations, an incoherence of speech, a staggering gait, etc. **D., Alcoholic**. See *D. tremens*. **D. ambitiosum**, a condition of boastfulness that is sometimes manifest in the course of parietic dementia. **D. cordis**, a peculiar condition of the myocardium resulting when chloroform vapor is administered above a certain point of concentration. The myocardium fails to contract and rapidly becomes insensitive to stimulation, being thrown only into fibrillary contraction. A heart once so dilated beyond the point of its ability to re-contrast never recovers, and death results.

**D. ebrositatis**. See *D. tremens*. **D., Febrile**, the delirium of fever. **D. furibundum**, acute mania. **D. of Grandeur**, delirium ambitiosum. **D. muscitant**, low, muttering delirium. **D. nervosum**, the delirium following severe surgical operations, or injuries. **D. palinosticum**, that in which the patient asserts that he has been before in a place to which he has come for the first time. **D. persecutionis**, that in which the patient imagines himself the object of persecution. **D. potatorum**, synonym of *D. tremens*. **D., Senile**, the delirium of old age; dotage. **D., Toxic**, the delirium caused by poisons. **D. tremens**, the delirium arising from alcoholic poisoning, and usually following some acute sickness, overwork, or the shock consequent upon an injury or surgical operation. It is characterized by constant

tremor, great exhaustion, distressing illusions and hallucinations. **D. vigilans.** See *D. tremens*.

**Delitescence** (*del-it-es'-ens*) [*delitescere*, to lie hid]. The sudden disappearance of inflammation by resolution. Also, the period of incubation of the virus of contagious diseases, such as smallpox, etc.

**Delivery** (*del-iv'-er-e*) [*l'r., délivrer; deliberare*, to set free]. Parturition, childbirth. **D., Post-mortem**, the birth of a fetus after the death of the mother, from an accumulation of gases in the uterine cavity.

**Delomorphous** (*del-o-mor'-fus*) [*δηλος*, conspicuous; *μορφή*, form]. With open or conspicuous form. **D. Cells of Rollet**, collections of large, oval, or angular, well-defined, granular, reticulated, nucleated cells, between the membrana propria and the adelomorphous cells of the fundus glands of the gastric mucous membrane. They are called, also, **Parietal Cells of Heidenhain**, or **Oxyntic Cells of Langley**. The secretory part of the tubes is lined by cells called **Adelomorphous, Central, or Principal Cells**.

**Delore's Operation.** See *Operations, Table of*.

**Delpech's Operations.** See *Operations, Table of*.

**Delphin** (*del'-fin*). Same as *Delphinin*.

**Delphini Oleum** (*del-fi'-ni ol'-le-um*) [*L.*]. The oil of the common porpoise, *Phocaena communis*. It is said to have all the medicinal virtues of cod-liver oil, without the disagreeable qualities of the latter.

**Delphinin** (*del'-fin-in*) [*δελφίνιον*, larkspur],  $C_{21}H_{35}NO_2$ . A poisonous alkaloid from *Staphisagria*. See *Staphisagria*.

**Delphinium** (*del-fin'-e-um*). See *Staphisagria*.

**Delphinoidin** (*del-fin-oid'-in*) [*δελφίνιον*, larkspur; *είδος*, like]. An amorphous alkaloid derived from *Stavesacre*.

**Delphisin** (*del'-fis-in*) [*δελφίνιον*, larkspur],  $C_{31}H_{46}N_2O_8$ . An alkaloid of *Stavesacre* occurring in crystalline tufts.

**Delta** (*del'-tah*) [*δέλτα*, the fourth letter of the Greek alphabet]. The vulva, from its triangular shape. **D. mesoscapulæ**, the triangular area at the root of the spine of the scapula.

**Deltidium** (*del-tid'-e-um*) [the Greek letter Δ, *δέλτα*]. In biology, applied to the triangular space on a brachiopod shell, between the beak and the hinge.

**Deltoid** (*del'-toid*) [*delta*, the Greek letter Δ; *είδος*, likeness]. Having the shape of a delta, or a triangular form, as the **D. Muscle**. See *Muscles, Table of*.

**Delusion** (*de-lu'-shun*) [*de*, from; *lusus*, play]. A false judgment of objective things, as distinguished from illusion and hallucination. It is the result of an abnormal condition of the brain. A delusion may be systematized or unsystematized, the former being the more serious and met with in the chronically insane.

**Delusional** (*de-lu'-shun-al*) [*deludere*, to delude]. Of the nature of a delusion; characterized by delusions. **D. Stupor.** See *Insanity, Confusional*.

**Demarcation** (*de-mark-a'-shun*) [*demarcare*, to set the bounds of]. A line of separation, as between gangrenous and healthy tissue.

**Demarquay's Operation.** See *Operations, Table of*.

**Demembration** (*de-mem-brā'-shun*) [*demembrare*, to deprive of a limb or limbs]. The cutting off of a member; amputation; castration.

**Dement** (*de'-ment*) [*demens*, insane]. An insane person; one who is demented.

**Dementia** (*de-men'-she-ah*) [*de*, out of; *mens*, the mind]. A mild form of insanity marked by imperfect conception, illogical sequence of expression, loss of reflection, and impaired perception. There is partial loss of self-control and self-respect. Dementia is often a final stage of other forms of insanity. It is described under the various forms of *secondary, senile, organic, and alcoholic*. There is a general

atrophy of the brain-substance, with a compensatory thickening of the brain-membranes, and an increase of the fluid of the brain and of the neuroglia.

**Demersal, or Demersed** (*de-mer'-sal, or de-merst'*) [*demersus*, plunge into]. In biology, growing beneath the surface of water, as the eggs of the catfish.

**Demi-** (*dem'-e-*). A Latin prefix denoting one-half.

**Demilune Cells** (*de-mi'-e-lun selz*) [*demilius*, half; *luna*, moon]. See *Cell*. **D. C. of Adamkiewicz.** A peculiar form of nerve-corpuscle lying below the neurilemma of medullated nerve-fibers; it is stained yellow by safranin. **D. C. of Heidenhain**, half-moon shaped bodies lying between the cells and the membrana propria of the alveolus in the salivary glands.

**Demimonstrosity** (*dem-i-mon-stros'-it-e*) [*demi*, half; *monstruosus*, monstrous]. A variety of congenital deformity that does not give rise to appreciable disorder of function.

**Demme, Bacillus and Micrococcus of.** See *Bacteria, Synonymatic Table of*.

**Demnia** (*dem'-ne-ah*) [*δένυον*, a bed]. In biology, the subgenital cavities found in the *Discomydus*; they are also called respiratory cavities, genital cavities, umbrella-cavities of the reproductive organs; *infundibula subgenitalia*.

**Demodex** (*dem'-o-deks*) [*δημός*, fat; *δήξ*, an insect]. A genus of parasitic insects. **D. folliculorum**, a minute parasite found in the sebaceous follicles, particularly of the face. It probably does not produce any symptoms, though in large numbers it may produce acne. See *Comedo*, also *Parasites (Animal), Table of*.

**Demography** (*de-mog'-ra-fe*) [*δηγος*, the people; *γράφειν*, to write]. The science of peoples collectively considered; social science, including that of vital statistics and the consideration of various questions of state medicine.

**De Moivre's Hypothesis.** An hypothesis that the decrements of population are in arithmetic proportion, and that of every 86 persons born, one dies uniformly every year until all are extinct.

**Demonolatry** (*de-mon-ol'-at-re*) [*δαίμων*, a demon; *λατρεία*, worship]. Insane or delusional worship of devils; the morbid assumption of the character of a witch.

**Demonomania** (*de-mo-no-ma'-ne-ah*) [*δαίμων*, a devil; *μανία*, madness]. A form of madness in which a person imagines himself possessed of a devil.

**Demonomaniac** (*de-mo-no-ma'-ne-ak*) [*δαίμων*, a devil; *μανία*, madness]. One who suffers with demonomania.

**Demonopathy** (*de-mon-op'-a-the*) [*δαίμων*, a demon; *πάθος*, disease]. Same as *Demonomania*.

**Demonstrator** (*dem'-on-strā-tor*) [*demonstrare*, to show]. One who instructs in the practical application of the arts and sciences.

**De Morgan's Operation.** See *Operations, Table of*.

**Demours, Membrane of.** See *Descemet's Membrane*.

**Demulcent** (*de-mul'-sent*) [*demulcere*, to smooth]. 1. Soothing; locally softening and lenitive. 2. Any substance that protects the mucous membranes. It is generally of a mucilaginous nature.

**Demutization** (*de-mu-tiz-a'-shun*) [*de*, not; *mutus*, dumb]. The education of deaf-mutes to speak and to understand spoken language by the movement of the lips, signs, etc.

**Denan's Operation.** See *Operations, Table of*.

**Denarcotized** (*de-nar'-ko-tizd*) [*de*, priv.; *ναρκωτικός*, narcotic]. Having the narcotin removed, as opium.

**Dendritic, or Dendroid** (*den-drit'-ik, or dent'-droid*) [*δενδροειτής; δένδρονειδής; δένδρον*, a tree]. Tree-like or arborescent. The arrangement of the structures that make up the *arbor vitae* of the cerebellum, or that of the uterus, is dendritic.

**Dendrocelus** (*den-dro-sel' lus*) [*δένδρον*, a tree; *κοιλία*, belly]. In biology, having a branched intestine.

**Dendrodentine** (*den-dro-den'tin*) [*δένδρον*, a tree; *dentine*, tooth-tissue]. In biology, a tooth tissue formed by the blending of the dentine, enamel, and cement of many teeth.

**Dendrostyle** (*den'-dro-stil*) [*δένδρον*, tree; *στήλη*, pillar]. In biology, Huxley's term for the stalk of the hydroid stage of certain hydrozoans.

**Denecke, Spirillum of.** See *Bacteria*.

**Dengue** (*den'-gē*) [West Ind.]. A zymotic disease somewhat resembling remittent fever, but much more severe. It is characterized by racking pain in the head and eyeballs, pain in the back and knees, arthralgia, catarrhal inflammation of those mucous surfaces that are exposed to the air, swollen salivary glands and measles eruptions. Cf. *Bacteria, Synonymic Table of*.

**Denidation** (*den-ī-ti'-shun*) [*de priv.*; *nidus*, a nest]. During involution after pregnancy, the process of disintegration and casting off of the superficial portion of the uterine mucosa.

**Denis's Plasmin.** A precipitate of uncoagulated blood with sodic sulphate, and treated with sodic chlorid.

**Denneth's System.** See *Treatment, Methods of*.

**Dennis's Operation.** See *Operations, Table of*.

**Denonvillier's Operation.** See *Operations, Table of*.

**De novo** (*de no'-vō*) [L.]. Anew.

**Dens** (*dens*) [L.: *pl.*, *Dentes*]. A tooth. See *Teeth*.

**Density** (*den'-sitē*) [*densitas*, thickness]. Closeness; compactness. In electro-therapeutics, the amount of electricity accumulated on a unit of surface.

**Dent** (*den't*) [Fr.]. A tooth.

**Dentagra** (*den-tal'-grah*) [*dens*, a tooth; *ἄγρα*, a seizure]. 1. The *Denticaps*, an instrument for extracting teeth; a tooth-forceps. 2. The term is also applied to tooth-ache.

**Dental** (*den'-tal*) [*dens*, a tooth; *gen.*, *Dentis*]. Pertaining to the teeth. **D. Apparatus**, the teeth, together with the alveoli in which they are implanted, and the jaws; also a set of artificial teeth. The instruments and appliances employed in dental operations are likewise so termed. **D. Arches**, arcades dentaires. The arches formed by the teeth when arranged in their sockets in the alveolar borders, or the arch formed by the alveolar process of each jaw. **D. Arteries**, the arteries supplying the teeth. See *Arteries, Table of*. **D. Atrophy**, atrophiea dentalis. See *Atrophy of the Teeth*. **D. Bone**, dentine. The osseous part of a tooth. **D. Canals**, the canals that perforate the alveoli, and give passage to the blood vessels and nerves that enter the teeth at the extremities of their roots. See *Canal*. **D. Caries**, caries of the teeth. **D. Cavity**, cavitas pulpe; cavum dentis; antrum dentale. The pulp-cavity. The cavity occupied by the dental pulp in the interior of a tooth. Its shape resembles that of the tooth; it is larger in young persons than in old, and when the teeth suffer great loss of substance, either from mechanical or spontaneous abrasion, it sometimes becomes completely obliterated. See *Abraction of the Teeth*. **D. Engine**, a machine first introduced in 1870, but since greatly improved, and which has almost wholly superseded the use of hand bars and drills. It is operated like a dental file, and possesses a flexible cable, or an adjustable arm and hand piece, which afford great facility of movement and adaptation. By means of attachments to the hand piece, and the cable, can be operated at a right angle with the shaft, at an acute angle, or with a backward inclination of nearly forty five degrees. Burrs, burs, discs, etc., are also adapted to these dental engines. **D. Excavator**, an instrument employed for the removal of the decayed part of a tooth, preparatory to the operation of filling. **D. Exostosis**. See

*Exostosis of the Teeth*. **D. File**, a file manufactured for operations on the teeth. See *File, Dental*. **D. Forceps**. See *Forceps for Extracting Teeth*. **D. Glands**. See *Gland*. **D. Groove**, a furrow on the lower border of the upper jaw early in fetal life, in which the teeth are developed. **D. Laboratory**, a room or place where the operations connected with mechanical dentistry are performed. **D. Necrosis**, odontonecrosis. See *Necrosis of the Teeth*. **D. Neuralgia**, a form of neuralgia the immediate exciting cause of which is owing to some disease of the dental pulp. See *Odontalgia*. **D. Organism**, the organism of the teeth; the organic structure of these organs; the vital forces that govern them. **D. Orthopedia**, the art of correcting deformity occasioned by irregularity of the teeth, or other causes. See *Irregularity of the Teeth*. **D. Pathology**, considers the causes and different forms of the various diseases to which the teeth are liable. **D. Periostitis**, periostitis dentium. Inflammation of the dental periosteum or periodontal membrane. See *Odontalgia*, and *Periodontitis*. **D. Pulp**, a soft, vascular, and highly sensitive substance, of a reddish-gray color, occupying the cavity of a living tooth. It also constitutes the rudiment of a tooth. The dental pulp is the principal blood-supply and nerve-supply of the dentine. **D. Pulp, Destruction of**; there are two methods of destroying the pulp; one by an operation, such as the use of a barbed brooch; the other by the application of some devitalizing agent, as arsenious acid. **D. Ridges**, the projecting borders of the primitive dental groove. **D. Sac**, the sac that encloses the developing tooth in the embryo. **D. Surgeon** (chirurgical dentiste), surgeon-dentist, one who devotes himself to the study and treatment of the diseases of the teeth, and their connections, and the adoption of substitutes for them when, by age, accident or disease, they are lost. **D. Therapeutics**, considers the methods and medicaments used in the treatment of diseases of the teeth. **D. tubuli**, the tubes occurring in the structure of the dentine.

**Dentalgia** (*den-tal'-je-ah*) [*dens*, tooth; *ἄλγος*, pain]. Tooth-ache.

**Dentalis lapis** (*den-tal'-tis la'-pis*) [L.]. Salivary calculus; tartar of the teeth.

**Dentaphone** (*den'-taf-on*) [*dens*, tooth; *φωνή*, sound]. A modification of the audiphone, *q. v.*, by means of which the sound waves are transmitted through the bones of the head to the auditory apparatus.

**Dentarpaga** (*den-tar'-pa-gah*) [*dens*, tooth; *ἀρπάγη*, hook]. An instrument for the extraction of teeth.

**Dentate** (*den'-tat*) [*dens*, a tooth]. In biology, applied to leaves, wings, or other flattened organs that have their margins provided with acute teeth that point directly outward from the margin.

**Dentatum** (*den-tal'-tum*) [L.]. The dentate nucleus of the cerebellum. **D. olivæ**. See *Dentoliva*.

**Dentes** (*den'-tez*) [L., the plural of *dens*]. Teeth. See *Teeth*. **D. acuti**, the incisor teeth. **D. adulti**, the teeth of second dentition. **D. adversi**, the incisor teeth. **D. angulares**, the canine or cuspid teeth, so called, probably, because they are situated at the angles of the alveolar arch, at the corners of the mouth, or from the angular shape of their crowns. **D. bicuspidati**, bicuspid teeth. **D. canini**, the cuspid or canine teeth; so called from their resemblance to the teeth of a dog. **D. cariosi**, carious teeth. **D. columellares**, the molar teeth. **D. cuspidati**, cuspid teeth. **D. exserti** [*exsertere*, to thrust out], teeth that project or are in front of the dental arch, but applied more particularly to the cuspidati. **D. incisores**, incisor teeth. **D. lactei**, the milk, temporary, or deciduous teeth. See *Deciduous Teeth*. **D. molares**,

molar teeth. **D. primores**, the incisor teeth; so called because they occupy the front or anterior part of the dental arch. **D. sapientia**, the wisdom-teeth. A name given to the third molar tooth of each half of the jaws. **D. tomici** [*tomicus*, cutting], the incisor teeth.

**Denticulate** (*den-tik'-u-lat*) [*denticulus*, a small tooth]. In biology, having minute dentations. Furnished with small teeth.

**Denticulus** (*den-tik'-u-lus*) [L.]. A little tooth.

**Dentier** (*don(g)-te-a'*) [Fr.]. A French word signifying a base of metal, ivory or any other substance, employed as a support or attachment for artificial teeth. The term is also sometimes applied to a set of artificial teeth.

**Dentification** (*den-tif-ik-a'-shun*) [*dens*, a tooth; *facere*, to make]. The formation of teeth.

THE TEMPORARY TEETH.

The top section of illustration is the upper set, and the bottom section is the lower set.

**Dentiform** (*den'-tif-orm*) [*dens*, a tooth; *forma*, shape]. In biology, tooth-like.

**Dentifrice** (*den'-tif-ris*) [*dens*, tooth; *fricere*, to rub]. A substance used for cleansing the teeth.

**Dentigerous** (*den-tij'-er-us*) [*dens*, a tooth; *gerere*, to carry]. In biology, bearing teeth.

**Dentinal** (*den'-tin-al*) [*dens*, a tooth]. Pertaining to or composed of dentine.

**Dentinalgia** (*den-tin-al'-je-ah*) [*dens*, a tooth; *ἀλγος*, pain]. Pain in dentine.

**Dentine** (*den'-tin*) [*dens*, a tooth]. The bony structure of the tooth, lying under the enamel of the crown and the pericementum of the root. **D.**, **Sensitive-ness of**, a hypersensitive condition of the dentine of a tooth, occasioned by distal irritation of the dentinal fibrils. See *Sensitive Dentine*.

**Dentinitis** (*den tin-i'-tis*) [*dens*, a tooth; *τις*, inflammation]. Inflammation of the dentinal fibrils.

**Dentiphone** (*den'-tif-on*) [*dens*, a tooth; *φωνή*, a voice]. A form of audiphone in which the vibrating disc is attached to the teeth.

**Dentist** (*den'-tist*) [*dens*, a tooth]. Dentista; odontia-ter; a dental surgeon. See *Dental Surgeon*.

THE TEETH OF AN ADULT.

The top section of illustration is the upper set, and the bottom is the lower set.

**Dentistry** (*den'-tis-tre*) [*dens*, a tooth]. Odontotechny; odontiatra; odontotherapia; dental surgery, embracing everything pertaining to the treatment and replacement of the loss of the natural teeth.

**Dentitio** (*den-tish'-e-o*) [L.]. Dentition.

**Dentition** (*den-tish'-un*) [*dens*, a tooth]. The cutting or first appearance of the teeth in infancy. Also, the arrangement and evolution of the teeth. Dentition is *primary*, that is, the cutting of the temporary or milk teeth, and *secondary*, or that of the permanent teeth. There are always some vague symptoms associated with the process, such as fretfulness, restlessness, convulsions, diarrhea, painful and swollen gum, which may be relieved by lancing over the protruding tooth.

**Dentium** (*den'-she-un*) [L.: *gen. of Dentii*]. Of the teeth. **D. cavernæ**, the sockets of the teeth. **D. cortex**, the enamel of the teeth. **D. dolor**, pain in the teeth; tooth-ache. **D. nitor**, enamel of the teeth. **D. sculptura**, lancing of the gums. **D. vacillantia**, looseness of the teeth.

**Dentography** (*den-tog'-ra-fe*) [*dens*, a tooth; *γραφω*, a description]. A description of teeth.

**Dentoliva** (*den-tol'-iv-ah*) [*dens*, a tooth; *oliva*, an olive]. Dentatum olivæ; olivary nucleus; a capsule of cinerea within the olivæ of the brain.

**Dentology** (*den-tol'-o-je*) [*dens*, a tooth; *λόγος*, science]. A treatise on the teeth.

**Dentonomy** (*den-ton'-o-me*) [*dens*, a tooth; *νομος*, a law]. The arrangement of the teeth into classes.

**Dentos** (*den'-tos*) [*dens*, tooth; *ος*, bone]. Tooth-bone; tooth-substance.

**Dentrification** (*den-trif-ik-a'-shun*) [*dens*, a tooth; *facere*, to make]. The deposition of lime-salts on the enamel and dentine of the teeth.

**Dents** (*dahnt*) [Fr.]. Teeth. **D. bicuspidées**, the bicuspid teeth. **D. coldes**, neck of the teeth. **D. canides**, the canine teeth. **D. de lait**, the milk or temporary teeth. **D. machelures**, the molar teeth. **D. molares**, the molar teeth. **D. multicuspidées**, the large molar teeth. **D. œilleries**, canine teeth.

**Denture** (*den'-chūr*) [*dens*, a tooth]. A complete set of teeth; the whole assemblage of teeth in both jaws.

**Denudate** (*den'-u-dāt*) [*denudare*, to strip]. In biology, lacking covering, as scales, hair, foliage.

**Denuding** (*den-ut'-ding*) [*denudare*, to denude]. A stripping or making bare. **D. of the Teeth**, an affection that consists in the gradual destruction of the enamel of the anterior or labial surfaces of the incisors, cuspidati, and sometimes of the bicuspidi; the molars are rarely affected by it.

**Denutrition** (*de-nu-trish'-un*) [*de*, from; *nutriare*, to nourish]. The breaking down or atrophy of tissue arising from lack of nutrition. The opposite of nutrition.

**Deobstruent** (*de-ob'-stru-ent*) [*de*, from; *obstruere*, to obstruct]. A medicine that removes functional obstructions of the body. An aperient.

**Deodand** (*de'-od-and*) [*deus*, God; *dare*, to give]. A fine formerly imposed on an inanimate thing or animal that had caused the injury or violent death of a person.

**Deodorant** (*de-od'-or-ant*) [*de*, priv.; *odorare*, to smell]. A substance that removes or corrects offensive odors.

**Deodorizer** (*de-od'-er-izer*) [*de*, priv.; *odorare*, to smell]. A deodorizing agent; a substance that destroys offensive odors.

**Deontology** (*de-on-tol'-o-je*) [*δέον*, right, binding; *λόγος*, science]. The science of duty. **D.**, Medical, medical ethics.

**Deopillant**, or **Deoppilative** (*de-ep'-il-ant*, or *de-op-pil'-at-iv*) [*de*, from; *opillare*, to stop]. 1. Deobstruent; aperient. 2. An aperient medicine.

**Deorsum** (*de-or'-um*) [L.]. Downward. **D. vergens**. See *Vergens*.

**Deossification** (*de-oss-ifi-ik-a'-shun*) [*de*, away; *os*, bone; *ficere*, to do]. The absorption of bony material; the deprivation of any part of its bony character.

**Deoxidation** (*de-oks-id-a'-shun*) [*de*, from; *oxidatus*, having oxygen]. In chemistry, the separation of an element or compound from the oxygen held in combination. Reduction.

**Deozonize** (*de-o'-zon-iz*) [*de*, from; *ὄζων*, to smell]. To deprive of ozone.

**Depauperate** (*de-pau'-per-āt*) [*de*, intensive; *pauper*, poor]. 1. To render poor; to pauperize; to impoverish. 2. Impoverished; ill-nourished; underfed, and under-grown.

**Depilation** (*dep-il-a'-shun*) [*depilatio*, removal of hair]. The removal of hairs.

**Depilator** (*de-pil'-a-tor*) [*depilare*, to remove the hair]. An instrument for pulling out the hair.

**Depilatory** (*de-pil'-at-or-e*) [*de*, from; *pilus*, the hair]. 1. Having the power to remove the hair. 2. A substance used to destroy the hair, usually a caustic alkali.

**Deplethoric** (*de-pleth'-or-ik*) [*de*, priv.; *πληθώρα*, plethora]. Marked by absence of plethora.

**Depletion** (*de-ple'-shun*) [*deplere*, to empty]. The process of diminishing the quantity of any tissue or fluid of the body, especially the blood. It may be general or local, the former by venesection and purging, and the latter by leeching, cupping, or scarification.

**Depletive**, **Depletory** (*de-ple'-tiv*, *de-ple'-tor-e*) [*deplere*, to empty]. 1. Causing or tending toward depletion. 2. A medicine that depletes.

**Deplumation** (*de-plu-ma'-shun*) [*de*, down, off; *pluma*, feather]. The loss of the eyelashes.

**Depolarization** (*de-po-lar-iz-a'-shun*). Destruction of polarity. The neutralization of the opposite poles of a magnet. The neutralization or recombination of electric waves that have been separated by means of a Nicol prism.

**Deposit** (*de-poz'-it*) [*de*, from; *ponere*, to place]. A gathering of particles that have been held in suspension. A gathering of nodular or normal matter in any part of the body. See *Primary Deposit*.

**Deposition** (*de-po-zish'-un*). See *Couching*.

**Depositive** (*de-poz'-it-iv*) [*deponere*, to lay aside]. Tending to or characterized by a morbid deposit; exudative.

**Depravation** (*dep-rav-a'-shun*) [*depravare*, to vitiate]. A deterioration or morbid change in the secretions, tissues, or functions of the body.

**Depressant** (*de-pres'-ant*) [*deprimere*, to press down]. A medicine that retards or depresses the physiologic action of an organ. A sedative. **D.**, **Cardiac**, one that lowers the action of the heart. **D.**, **Cerebral**, one that arrests the functions of the cerebrum. **D.**, **Motor**, one that lowers the activity of the spinal cord and motor apparatus.

**Depressio** (*de-pres'-e-o*) [L.]. A depressing. **D. cataractæ**. Synonym of *Couching*.

**Depression** (*de-pres'h'-un*) [*depressio*; *deprimere*, to depress]. In anatomy, a hollow, or fossa. In surgery, displacement inward of the skull, often giving rise to pressure on the brain. **D. and Elevation**, one of the Swedish movements, either excentric or concentric, in which, while the part is being raised or depressed, resistance is made by the patient or operator. **Depressions**, **Pacchionian**. The depressions on the internal surface of the parietal bone that lodge the Pacchionian bodies.

**Depressor** (*de-pres'-or*) [*deprimere*, to depress]. A name given to a muscle or an instrument that depresses. See *Muscles*, *Table of*. **D. Fibers**. See *Pressor*. **D. of Sims**, an instrument for holding back the vaginal wall during exploration with the speculum. **D.**, **Tongue**, an instrument for depressing the tongue in order to examine the throat.

**Deprimens** (*dep'-rim-enz*) [L.]. 1. Depressing; pressing down. 2. A depressing muscle. **D. auriculæ**, the retrahens auris muscle. **D. oculi**, the rectus inferior of the eye. See *Muscles*, *Table of*.

**Deprived Classes**. Those persons collectively who have lost or are without their reason or any one of the special senses.

**Depurant** (*dep'-u-rant*) [*depurare*, to purify]. 1. Purifying; cleansing. 2. A medicine that purifies the animal economy.

**Depurative** (*dep'-u-ra-tiv*), or **Depuratory** (*dep'-u-rator-e*) [*depurare*, to purify]. Purifying or cleansing. **D. Liver**, same as *Anyloid Liver*.

**Depurator** (*dep'-u-ra-tor*) [*depurare*, to purify]. A medicine or a device for promoting a depuratory process.

**DeR**. A contraction and symbol of the term *Reaction of Degeneration*, *q. v.*

**Deradelphus** (*der-ad-el'-fus*) [*δέλη*, neck; *ἀδελφός*, brother]. A monocephalic dual monstrosity, with fusion of the bodies above the umbilicus, and with four lower extremities, and three or four upper.

**Deradenitis** (*der-ad-en-ī'-tis*) [*δέλη*, neck; *αδήν*, a gland; *ιτις*, inflammation]. Inflammation of the glands of the neck.

**Deradenoncus** (*der-ad-en-onc'-us*) [*δέλη*, neck; *αδήν*, gland; *ὄγκος*, mass]. A swelling of a gland of the neck; a swollen gland of the neck.

**Deranencephalia** (*der-an-en-sef-a'-le-ah*) [*δέλη*, neck; *ἀν*, priv.; *ἐγκέφαλος*, brain]. Teratism marked by absence of the head and brain, the neck being present.

**Derangement** (*de-ranj'-ment*). See *Insanity*.

**Derbyshire Neck** (*der'-bi-shēr nek*). See *Goiter*.

**Derencephalia** (*der-en-sef-a'-le-ah*) [*δέλη*, neck; *ἐγκέφαλος*, brain]. The condition of being derencephalous; teratic absence of cranium, the vestiges of the brain being enclosed in the cervical vertebrae.

**Derencephalocle** (*der-en-sef'-al-o-sel*) [*δέλη*, neck; *ἐγκέφαλος*, brain; *κῆλη*, tumor]. A protrusion of the

- brain through a split in one or more of the cervical vertebrae.
- Derencephalous** (*der-en-sef'-al-us*) [*δέρη*, neck; *ἐγκέφαλος*, brain]. Affected with derencephalia; of the nature of derencephalus.
- Derencephalus** (*der-en-sef'-al-us*) [*δέρη*, neck; *ἐγκέφαλος*, brain]. A variety of single autistic monsters of the species anencephalus, in which the bones of the cranial vault are rudimentary, the posterior portion of the occiput absent, and the upper cervical vertebrae bifid, the brain resting in them.
- DeRhein's Plaster.** A celebrated plaster for chilblains, made as follows: Capsicum pods  $\frac{3}{4}$  j, strong alcohol,  $\frac{3}{4}$  ij; macerate several days, then add mucilage of acacia  $\frac{3}{4}$  ij. Stir well and brush over sheets of silk or tissue paper, and apply like court-plaster to the unbroken chilblain.
- Derivant** (*der'-iv-ant*) [*derivare*, to derive]. 1. Derivative; revulsive. 2. A derivative medicine or application.
- Derivate** (*der'-iv-at*) [*derivare*, to derive]. In chemistry, a substance that is derived from another.
- Derivation** (*der-iv-a'-shun*) [*derivare*, to derive]. 1. Derivative action; the drawing away of a morbid process from one part to another; revulsive treatment. 2. The supposed suctional power of the heart, or the effect of that power upon the circulation. **D. Wire**, in an electric battery a wire connecting two points in a closed circuit.
- Derivative** (*de-ri-v'-at-iv*) [*derivare*, to turn aside a stream]. Diverting or drawing a morbid process from its seat; revulsive.
- Derm.** See *Derma*.
- Derma** (*der'-mah*) [*δέρμα*, the skin]. The skin. The true skin. See *Cutis*.
- Dermal** (*der'-mad*) [*δέρμα*, the skin; *ad*, to]. Externally; toward the skin; ectad.
- Dermagra** (*der-mat'-grah*). See *Dermatagra*.
- Dermal** (*der'-mat*) [*δέρμα*, the skin]. Pertaining to the skin.
- Dermalaxia** (*der-mal-aks'-e-ah*) [*δέρμα*, skin; *μαλαξία*, softness]. Morbid softening of the skin.
- Dermalgia** (*der-mal'-je-ah*). See *Dermatalgia*.
- Dermanoplasty** (*der-man'-o-plas-te*) [*δέρμα*, skin; *ἀνατίθασιν*, to form anew]. Skin-transplantation; skin-grafting; a method of plastic surgery, in which a piece of the whole thickness of the skin is entirely removed from one part and transferred to another distant part to fill up a gap.
- Dermanyssus** (*der-man-iss'-us*) [*δέρμα*, skin; *νύσσειν*, to prick]. A genus of itch-mites. **D. avium** is a species found on birds and sometimes on the human subject.
- Dermatopostasis** (*der-mat-opst'-tas-is*) [*δέρμα*, skin; *ἀπόστασις*, a falling away]. Any skin-disease dependent upon some constitutional disorder, and marked by metastatic dermal deposits.
- Dermatagra** (*der-mat-a'-grah*) [*δέρμα*, skin; *ἀγρα*, seizure]. See *Pellagra*.
- Dermatalgia** (*der-mat-al'-je-ah*) [*δέρμα*, skin; *ἄλγος*, pain]. Neuralgia of the skin. Rheumatism of the skin. Pain in the skin not due to any structural change in it.
- Dermatauxe** (*der-mat-avks'-e*) [*δέρμα*, skin; *αὔξειν*, augmentation]. Thickening or hypertrophy of the skin.
- Dermatic** (*der-mat'-ik*) [*δερματικός*, pertaining to the skin]. 1. Relating to the skin. 2. A remedy for diseases of the skin.
- Dermatitis** (*der-mat-i'-tis*) [*δέρμα*, skin; *τις*, inflammation]. A generic term used to designate an ill-defined and extensive group of symptomatic inflamma-

tions of the skin, characterized clinically by redness, heat, swelling, and pain, and terminating in resolution, suppuration, gangrene, or chronic dermatitis. **D. ambustionis**, the form due to burns and scalds. **D. bullosa**. See *Epidermolysis*. **D. calorica**. Synonym of *Chilblain*. **D. congelationis**. Same as *Frostbite*. **D. contusiformis**. See *Erythema nodosum*. **D. exfoliativa**, an acute or chronic, general or partial, inflammation of the skin, in which the epidermis is shed more or less freely in large or small scales. See *Pityriasis rubra*. **D. exfoliativa infantum vel neonatorum**, *Kittler's Disease*; a severe form of exfoliative inflammation of the skin, usually unattended by fever, which begins between the second and fifth weeks of life. About 50 per cent. of those attacked succumb to marasmus. **D. gangrænosa**; *Sphaculoderma*; gangrenous inflammation of the skin. It has been observed in cases of cerebral and spinal disorders, diabetes, etc. It may also be primary in those whose constitutions are depraved. The lesions are at first reddish or purplish erythematous spots, usually on the trunk and extremities; these vesicate, rapidly become gangrenous, and slough; they are attended by fever and constitutional disturbance. Spontaneous recovery generally ensues with scar-formation. **D. gangrænosa infantum**; *Varicella gangrænosa*, *pemphigus gangrænosus*; *rupia escharotica*; a gangrenous eruption following varicella and other pustular eruptions of children. It is a rare condition. If it occur while the varicellar lesions are still present, it begins on the head or upper part of the body, and, instead of the scab being thrown off, ulceration occurs beneath it, and often a pustular border with a red areola is formed, the whole resembling a vaccination-pustule. On separating, a sharp-edged, roundish or oval, conical ulcer remains, deep or shallow. Death may result if the lesions are numerous, and constitutional disturbance is always great. **D. herpetiformis**, an inflammatory skin-disease of an herpetic character, the various lesions showing a tendency to group. It is a protean disease, appearing as erythema, vesicles, blebs, and pustules. Itching and burning are the most marked symptoms. See *Hydroa herpetiforme*. **D., Malignant**, Papillary dermatitis, Paget's disease of the nipple. Carcinoma of the nipple. **D. medicamentosa**, *Drug-eruptions*; inflammatory eruptions upon the skin due to the action of certain drugs taken internally. The most prominent are the following: *Antifebrin* produces a kind of cyanosis; *antipyrin*, an erythema that may be general or partial, but symmetric, affecting the extensor aspects in preference to the flexor, and the limbs more than the trunk; papules, vesicles, and bullæ have been noted; *arsenic* produces an urticarial, erysipelatoïd dermatitis of the face and eyelids, a papular rash on the face, neck, and hands, herpes zoster, and in large doses pustular, ulcerative, or gangrenous eruptions; *belladonna*, a diffuse erythematous blush and a scarlatiniform eruption; *boric acid*, an erythema; *borax*, psoriasis, eczema, and erythema; *bromin* and *bromids*, pustular, erythematous, urticarial, bullous, and squamous eruptions; *annabis indica*, a vesicular eruption; *chlorate of potash*, a fiery, erythematous and papular eruption, and cyanosis; *chloroform*, purpuric spots; *chloral hydrate*, erythema, scarlatiniform, bullous, erysipelatoïd eruptions; *chloralamid*, scarlatiniform; *chrysarobin*, erythema, vesicles; *cod liver-oil*, vesicular eruption, acne; *copaiba*, erythematous, urticarial, papular eruption; *cubebæ*, papular erythema; *digitalis*, scarlatiniform, papular erythema; *iodin* and *iodids*, pustular, vesicular or bullous, purpuric, erythematous, urticarial; *iodoform*, punctiform, papular and erythematous; *mercury*, erythematous, exfoliative

- dermatitis; *morphin*, erythematous; *psaphoric acid*, bullous, purpura; *quinin*, eczema, erythematous, urticaria, purpuric, vesicular, bullous; *resin*, urticaria; *rhubarb*, hemorrhagic and pustular bulle; *sulicylic acid*, erythema, urticaria, bulle, petechie, vesicles, pustules; *antimon*, urticaria; *trimonium*, erythema; *strychnin*, scarlatiniform, pruritus, miliaria; *sulphonal*, erythema, purpura; *tinonin*, urticaria; *tar*, erythema, vesicles and bulle, acne; *tributyl*, papular erythema; *turpentin*, scarlatiniform; *turpentin*, erythema, papules, vesicles. **D. papillaris capillitii**. Same as *D. papillomatosa capillitii*. **D. papillomatosa capillitii**. *Ane keloid*; *Synas fram asiformis*; a rare form of chronic skin-disease affecting the nape of the neck and adjacent portion of the skin. The lesions consist of minute red papules, which occasionally suppurate, and are usually traversed by a hair. Ultimately these unite to form extensive, irregular, hard, white, or reddish keloid looking growths from which a few brush-like bundles of atrophied, firmly adherent hairs protrude. It occurs usually in males of middle age. **D. repens**, a spreading dermatitis, usually following injuries, and probably neuritic, commencing almost exclusively in the upper extremities. **D., Seborrheic**; *Seborrheic eczema*; a form of inflammation of the skin associated with seborrhea of the scalp, due to the direct transference of the same pathogenic organism from the head to the region affected. **D. traumatica**, those inflammatory changes in the skin resulting from traumatism. **D. venenata**, a term embracing all forms of inflammation of the skin produced by external irritating agencies, whether from the animal, vegetable, or mineral kingdom. This includes the dermatitis produced by rhus-poisoning.
- Dermatobia** (*der-mat-oh'-be-ah*) [δέρμα, skin; βίων, to live]. A bot-fly of Central America, the eggs of which are not infrequently deposited in the skin and produce a swelling very like an ordinary boil. See *Macaco Worm* and *Parasites (Animal)*, *Table of*.
- Dermatogen** (*der-mat'-o-jen*) [δέρμα, skin; γέννς, producing]. In biology, the layer of cells, in a young or growing part, that is destined to become epidermis.
- Dermatography** (*der-mat-og'-ra-fe*) [δέρμα, skin; γραφω, to write]. A description of the skin.
- Dermatoid** (*der'-mat-oid*) [δέρμα, skin; εἶδος, resemblance]. Like or resembling skin.
- Dermatokeras** (*der-mat-o-ker'-as*) [δέρμα, skin; κέρας, a horn]. See *Cornu cutaneum*.
- Dermatol** (*der'-mat-al*) [δέρμα, skin; C<sub>6</sub>H<sub>2</sub>(OH)<sub>4</sub>.CO<sub>2</sub>Bi(OH)<sub>2</sub>]. The subgallate of bismuth, which appears to be a valuable antiseptic agent. It is especially of service in cutaneous affections or lesions associated with copious secretion. Dose internally in affections of the stomach and intestines, two drams daily. It is valuable as a drying antiseptic for dusting wounds.
- Dermatologist** (*der-mat-ol'-o-jist*) [δέρμα, skin; λόγος, science]. One who is an adept in the treatment of skin diseases.
- Dermatology** (*der-mat-ol'-o-jy*) [δέρμα, skin; λόγος, science]. The science of the skin, its nature, structure, functions, disease, and treatment.
- Dermatolysis** (*der-mat-ol'-o-jis*) [δέρμα, skin; λύσις, a loosing]. An exaggerated form of *Molluscum fibrosum*, marked by large foci or fields of hypertrophied skin, the most common site being the neck, face, buttocks, and chest. The skinflaps are often deeply pigmented, thickened, indurated, and warty. Hypertrophy of the bones or other subcutaneous tissues may also be present.
- Dermatoma** (*der-mat'-o-mah*) [δέρμα, skin; ὄμα, a tumor; *pl.*, *Dermatomata*]. Any tumor of the skin, or one made up of dermal elements.
- Dermatomalacia** (*der-mat-o-mal'-at-se-ah*) [δέρμα, skin; μαλακία, softness]. Morbid softening of the skin.
- Dermatomelasma** (*der-mat-o-mel'-az'-mah*) [δέρμα, skin; μέλασμα, a black color]. Addison's disease.
- Dermatomycosis** (*der-mat-o-mi'-ko'-sis*) [δέρμα, skin; μύκης, fungus]. Any skin-disease caused by a parasitic plant-growth.
- Dermatomyoma** (*der-mat-o-mi'-o'-mah*) [δέρμα, skin; μύς, muscle; ὄμα, a tumor; *pl.*, *Dermatomyomata*]. Myoma seated upon or involving the skin.
- Dermatoneurosis** (*der-mat-o-nu-ro'-sis*) [δέρμα, skin; νῆρον, a nerve]. Any neurosis of the skin.
- Dermatonosus** (*der-mat-on'-o-sus*) [δέρμα, skin; νόσος, disease]. Any skin-disease.
- Dermato-pathology** (*der-mat-o-path-ol'-o-je*) [δέρμα, skin; πάθος, disease; λόγος, science]. The pathology of the skin.
- Dermatopathy** (*der-mat-op'-ath-e*) [δέρμα, skin; πάθος, disease]. Any skin-disease.
- Dermatophony** (*der-mat-off'-o-ne*) [δέρμα, skin; φωνή, sound]. The auscultation of the skin; a process by which, it is alleged, the sound made by the blood in the vessels of the skin can be heard.
- Dermatophyte** (*der'-mat-o-fit*) [δέρμα, skin; φυτόν, a plant]. Any species of fungous vegetation that grows upon the skin.
- Dermatoplasty** (*der'-mat-o-plas-te*) [δέρμα, skin; πλάσσειν, to form]. Plastic surgery of the skin.
- Dermatorrhea** (*der-mat-or'-e'-ah*) [δέρμα, skin; ῥοία, a flowing]. An increased secretion from the skin.
- Dermatosclerosis** (*der-mat-o-skle-ro'-sis*). See *Scleroderma*.
- Dermatosis** (*der-mat-o'-sis*) [δέρμα, skin; νόσος, disease; *pl.* *Dermatoses*]. Any disorder or disease of the skin. **D. Kaposi**. Synonym of *Xeroderma pigmentosum*.
- Dermatosome** (*der'-mat-o-sōm*) [δέρμα, skin; σῶμα, body]. A thickening or knot in the equatorial region of each spindle fiber in the process of cell-division.
- Dermatospasmus** (*der-mat-o-spaz'-mus*) [δέρμα, skin; σπασμός, spasm]. Cutis anserina, or goose-skin.
- Dermatosyphilis** (*der-mat-o-sif'-il-is*) [δέρμα, skin; Syphilis, a Latin proper name]. The cutaneous manifestations of syphilis. See *Syphiloderma*.
- Dermatotomy** (*der-mat-ol'-o-me*) [δέρμα, skin; τέμνειν, to cut]. The anatomy or dissection of the skin.
- Dermatozoön** (*der-mat-o-zo'-on*) [δέρμα, skin; ζῷον, an animal; *pl.* *Dermatozoa*]. Any animal parasitic upon the skin.
- Dermen** (*der'-men*) [δέρμα, the skin]. Belonging to the derma itself.
- Dermenchysis** (*der-men'-kis-is*) [δέρμα, skin; ἔγχυσσις, a pouring in]. Hypodermatic injection.
- Dermepenthes** (*der-mep-en'-thes-is*) [δέρμα, skin; ἐπένθεσις, insertion]. Synonym of skin-grafting.
- Dermexanthesis** (*der-meks-an-the'-sis*) [δέρμα, skin; ἐξάνθησις, eruption; *pl.* *Dermexantheses*]. Any skin-disease marked by a rash-like eruption.
- Dermic** (*der'-mik*) [δέρμα, the skin]. Relating to the skin.
- Dermocyma** (*der-mo-si'-mah*) [δέρμα, skin; κύμα, the fetus]. A form of double monstrosity in which the parasite is contained within the skin of the host.
- Dermogastric** (*der-mo-gas'-trik*) [δέρμα, skin; γαστήρ, stomach]. In biology, applied to structures having a connection with the skin and the stomach, as dermo-gastric pores.
- Dermographia** (*der-mo-graf'-e-ah*) [δέρμα, skin; γραφω, to write]. The condition observed in the so-

- called autographic skin; autographism. See *Urticaria factitia*.
- Dermographic** (*der-mo-graf'-ik*) [*δέρμα*, skin; *γράφειν*, to write]. Affected with dermatographia. **D. pseudo-urticaria**. Same as *Dermatographia*.
- Dermographism** (*der-mo-graf'-izm*) [*δέρμα*, skin; *γράφειν*, to write]. Autographism. See *Autographic Skin* and *Urticaria factitia*.
- Dermography** (*der-mo-gra'-fe*) [*δέρμα*, skin; *γράφειν*, to write]. Dermatographia; dermal autographism.
- Dermohemal** (*der-mo-he'-mal*) [*δέρμα*, skin; *αἷμα*, blood]. In biology, applied to parts of the ventral or hemal fins of certain fishes.
- Dermoid** (*der'-moid*). See *Dermatoid*. **D. Cyst**, a teratoma.
- Dermology** (*der-mol'-o-je*). See *Dermatology*.
- Dermoneural** (*der-mo-nul'-ral*) [*δέρμα*, skin; *νεῦρον*, nerve]. In biology, applied to parts of the dorsal or neural fins of certain fishes.
- Dermoneurosis** (*der-mo-nu-ro'-sis*). See *Dermatoneurosis*.
- Dermoplasty** (*der'-mo-plas-te*) [*δέρμα*, skin; *πλάσσειν*, to form]. Restoration of skin; skin-grafting.
- Dermorhynchous** (*der-mo-ring'-kus*) [*δέρμα*, skin; *ρύγχος*, snout]. In biology, having a bill or beak covered with skin, as the duck.
- Dermorrhagia** (*der-mor-a'-je-ah*) [*δέρμα*, skin; *ρηνύναι*, to break forth]. Hemorrhage from the skin; bloody sweat; hematirosis.
- Dermosclerite** (*der-mo-skle'-rit*) [*δέρμα*, skin; *σκληρός*, hard]. In biology, one of the spicular masses found in certain actinozoans.
- Dermoskeleton** (*der-mo-skell'-et-un*) [*δέρμα*, skin; *σκελετόν*, a skeleton]. The exoskeleton of invertebrates; the skin and its appendages.
- Dermo-syphilopathy** (*der-mo-sif-il-op'-a-the*) [*δέρμα*, skin; *syphilis*; *πάθος*, affection]. A syphilitic skin-disease.
- Dermotomy** (*der-mot'-o-me*). See *Dermatotomy*.
- Derodidymus** (*der-o-did'-im-us*) [*δέρη*, neck; *διδυμος*, double]. A sycimic monstrosity with a single body, two necks and heads, two upper and lower extremities, with other rudimentary limbs occasionally present.
- Derospasmus** (*der-o-spaz'-mus*) [*δέρη*, neck; *σπασμός*, spasm]. Spasm or cramp in the neck.
- Dertrotheca** (*der-tro-thel'-kah*) [*δέτρον*, a vulture's beak; *θήκη*, a sheath]. In biology, the skin of the *dertum* or tip of the upper mandible in certain birds.
- Dertum** (*der'-trum*) [*δέτρον*, a beak]. See *Dertrotheca*.
- De Salle, Line of**. See *Lines, Table of*.
- Desanimania** (*des-an-im-a'-ne-ah*) [*d's* (*dis*) priv.; *animus*, mind; *μανία*, mania]. Mindless insanity; amentia.
- Desault's Apparatus or Bandage**. See *Bandage, D. Operations*. See *Operations, Table of*.
- Desbassins' Test**. Same as *Richmont's Test*. See *Tests, Table of*. **D. Splint**. See *Splint*.
- Descemet's Membrane**. The internal or posterior lining membrane of the cornea. Also called the *Membrane of Demours*.
- Descemetitis** (*des-em-et-it'-tis*) [*Descemet*; *ιτις*, inflammation]. Inflammation of Descemet's membrane.
- Descemetocoele** (*des-em-et'-o-sel*) [*Descemet*; *κίηη*, hernia]. Hernia of Descemet's membrane.
- Descendens** (*de-sen'-dens*) [*descendere*, to go down]. Downward. **D. noni**, a branch of the hypoglossal nerve. See *Nerves, Table of*.
- Descent** (*de-sen't*) [*descensus*, a going down]. The act of going down; downward motion. **D. Stage of Labor**, one of the stages in labor, consisting in the entrance of the fetal head into the pelvis. **D. of**
- Testicle**. See *Testicle*. **D. of Womb**. See *Pro-lapsus*.
- Deschamps' Angle**. See *Angle*.
- Deshler's Salve**. The compound resin cerate of the pharmacopeia.
- Desiccant** (*de-s'-ik-ant*) [*desiccare*, to dry up]. 1. Causing desiccation; drying. 2. A drying medicine or application.
- Desiccation** (*des-ik-a'-shun*) [*desiccare*, to dry up]. The process of removing moisture from solids and organic tissues.
- Desiccative** (*des'-ik-a-tiv*) [*desiccare*, to dry up]. 1. Drying; desiccant. 2. A medicine or application having the property of drying moist tissues, ulcers and running sores.
- Desma** (*dez'-mah*) [*δέσμα*, a band]. In biology, a term applied to irregular sponge-spicules.
- Desmachyme** (*des'-mah-kim*) (*δέσμα*, a band; *χυμός*, juice). In biology, the connective tissue of sponge.
- Desmacyte** (*des'-mah-sit*) [*δέσμα*, a band; *κύτος*, a cell]. In biology, one of the connective-tissue cells of a sponge.
- Desmarres' Operations**. See *Operations, Table of*.
- Desmitis** (*des-mit'-tis*) [*δεσμός*, ligament]. Inflammation of a ligament.
- Desmobacterium** (*des-mo-bak-te'-re-um*) [*δεσμός*, band; *βακτήριον*, a small staff; *pl. Desmobacteria*]. A group of microbes, so-called by Cohn, corresponding to the genus *Bacillus* of Klein.
- Desmodactylous** (*des-mo-dak'-til-us*) [*δεσμός*, a band; *δάκτυλος*, a finger or toe]. In biology, having the flexor tendons of the toes united.
- Desmodynia** (*des-mo-din'-e-ah*) [*δεσμός*, a band; *ὀδὶνῃ*, pain]. Pain in a ligament.
- Desmognathism** (*des-mog'-na-thizm*) [*δεσμός*, a band; *γνάθος*, jaw]. Union of the maxillo-palatine bones across the middle line; normal in certain birds, as hawks, ducks, etc.
- Desmognathous** (*des-mog'-na-thus*) [*δεσμός*, a band; *γνάθος*, a jaw]. In biology, applied to birds of the "bound palate" type, in which the vomer is small or absent, the maxillo-palatines united, and the palatines and pterygoids articulate directly with the sphenoid.
- Desmography** (*des-mog'-ra-fe*) [*δεσμός*, a ligament; *γράφειν*, to write]. The description of the ligaments.
- Desmoid** (*des'-moid*) [*δέσμη*, a bundle; *εἶδος*, likeness]. Like a small bundle. **D. Carcinoma**. Synonym of *Hodgkin's Disease*.
- Desmoma** (*des-mo'-mah*) [*δεσμός*, a band; *pl., Desmomata*]. A connective-tissue tumor.
- Desmoneoplasma** (*des-mo-ne-o-plaz'-mah*) [*δεσμός*, band; *νέος*, new; *πλάσμα*, plasma; *pl., Desmoneoplas-mata*]. Any neoplasm made up of connective tissue.
- Desmopathy** (*des-mop'-a-the*) [*δεσμός*, a band; *πάθος*, disease]. Any disease of a ligament.
- Desmopelous** (*des-mo-pel'-mus*) [*δέσμα*, a band; *πέλας*, the sole of the foot]. In biology applied to such birds as have the plantar tendons bound together.
- Desmosis** (*des-mo'-sis*) [*δεσμός*, a band; *pl., Desmoses*]. Any disease of connective tissue, especially of the connective tissue of the skin.
- Desmotomy** (*des-mot'-o-me*) [*δεσμός*, band; *τομή*, section]. The dissection and anatomy of the ligaments; surgical cutting of a ligament.
- Desmotrophy** (*des-mot'-ro-fe*) [*δεσμός*, a band; *τροφή*, to turn]. Tautomerism.
- Desoxalic Acid** (*des-oks-al'-ik*). See *Acid*.
- Desprez' Operation**. See *Operations, Table of*.
- Despumation** (*des-pu-ma'-shun*) [*despumare*, to skim froth]. The purification of a liquid by removal of the scum or froth; also the formation of froth; purification; clarification in general.

**Desquamation** (*de-skwa-ma'-shun*) [*desquamare*, to scale off]. The exfoliation or falling off of the cuticle in scales. It is bran like after measles; in layers after scarlet fever.

**Desquamative** (*de-skwa-ma'-at-iv*) [*desquamare*, to scale off]. Characterized by desquamation.

**Destructive** (*de-struk'-tiv*) [*destructivus*, destroying]. Hurtful; tending to destroy. **D.** Distillation. See *Distillation*.

**Desudation** (*de-su-da'-shan*) [*desuare*, to sweat away; *sudare*, to sweat]. 1. Excessive or morbidly profuse sweating. 2. Salinina.

**Desudatory** (*de-su-da'-tor-ē*) [*desudatio*, a sweating]. A sweating-bath.

**Detergent** (*de-ter'-jent*) [*detergere*, to cleanse]. 1. Purifying; cleansing; abluent. 2. A drug, compound, or solution used for cleansing wounds, ulcers, etc.

**Determinant or Determining Part** (*de-ter'-min-ant*) [*determinare*, to limit]. Weismann's name for one of the particles of germ plasma corresponding to a group of *characters*: a primary constituent of a cell or group of cells.

**Determinate** (*de-ter'-min-at*) [*determinare*, to limit]. 1. Applied in botany to an inflorescence in which the blossoming takes place centrifugally, the blossoms being from terminal and not from axillary buds. 2. Weismann's name for one of the cells or groups of cells that are independently variable from the germ onward. They are also called *hereditary parts*.

**Determination** (*de-ter-min-a'-shun*) [*determinatio*, a directing]. The direction or tendency to or toward a part or an organ, as of blood to the head.

**Determinism** (*de-ter'-min-izm*) [*determinare*, to limit, prescribe]. In biology, a term introduced by Claude Bernard to indicate the fatality of the reproduction of phenomena under similar conditions, as seen in Experimental Science.

**Detercion** (*de-ter'-shun*) [*detergere*, to cleanse]. The action of a detergent; a cleansing.

**Detersive** (*de-ter'-siv*). Same as *Detergent*.

**Detmold's Method**. See *Treatment, Methods of*.

**Detrition** (*de-trish'-un*) [*deterere*, to wear off]. The act of wearing or wasting of an organ or part, especially the teeth.

**Detritus** (*de-trit'-us*) [*deterere*, to wear off]. The waste matter resulting from any wearing away, or from a destructive process.

**Detumescence** (*de-tu-mes'-ens*) [*detumescentia*, a subsidence of a tumor]. The subsidence of any swelling.

**Deutencephalon** (*deut-en-sef'-al-on*). See *Diencephalon*.

**Deuteria** (*du-te'-re-ah*) [*δευτέρια*]. The secundines.

**Deutero-albumose** (*du-ter-o-al'-bu-mos*). See *Albumose*.

**Deutero-elastose** (*du-ter-o-e-las'-tōs*) [*δευτερος*, second; *ελαστικός*, elastic]. Elastin peptone; one of the products of the digestion of elastin. It is not precipitable by saturation with sodium chlorid.

**Deuteropathy** (*du-ter-op'-a-the*) [*δευτερος*, second; *πάθος*, a disease]. A disease that is secondary to another.

**Deuteropin** (*du-ter-op'-in*) [*δευτερος*, second; *ὀπιον*, opium].  $C_{20}H_{27}NO$ . An alkaloid of opium.

**Deuteroplasm, or Deutoplasm** (*du-ter-al'-pla-zm*, or *deu'-to-pla-zm*) [*δευτερος*, second; *πλάσμα*, formed, plural]. The food yolk of an egg; a mass of protoplasm of proteid and fatty matter occurring in the ovum.

**Deuterostopy** (*du-ter-al'-bo-si*) [*δευτερος*, second; *σκόπος*, to view]. Synonym of *Chlorostopyance*.

**Deuterostoma** (*du-ter-al'-de-mah*) [*δευτερος*, second; *στόμα*, mouth]. In biology, a secondary blastopore.

**Deuterozoöid** (*du-ter-o-zo'-oid*) [*δευτερος*, second; *ζῷον*, an animal; *εἶδος*, likeness]. In biology, a secondary zoöid, developed by budding.

**Deuthyalosome** (*du-thi-al'-o-som*) [*δευτερος*, second; *υἶος*, glass, crystal; *σῶμα*, body]. The remains of the germinal vesicle after the polar bodies have been extruded, formed by the union of portions of the chromatic stars or discs with portions of the prothyalosome.

**Deutoleucite** (*du-to-lu'-sit*) [*δευτερος*, second; *λίθος*, the yolk of an egg]. In biology, a term applied by Salensky to the nutritive vitellus of the eggs of sturgeons; it is homologous to the secondary vitellus (Nebendotter) of osseous fishes. Cf. *Protolucyte*.

**Deutomala** (*du-to-ma'-lah*) [*δευτερος*, second; *μάλα*, jaw]. In biology, a term applied by A. S. Packard, Jr., to the second pair of mouth-appendages of the Myriopoda, formerly called *labium*, but really homologous with the first maxillæ of insects.

**Deutomerite** (*du-ton'-er-it*) [*δευτερος*, second; *μέρος*, a part]. In biology, the posterior segment of a two-celled organism, as a gregarine, the anterior cell being called the *protomerite*, *q. v.*

**Deutoscolex** (*du-to-sko'-leks*) [*δευτερος*, second; *σκόληξ*, worm]. In biology, applied to secondary or daughter-cysts or bladder-worms that are derived from a scolex or primary bladder-worm.

**Deutospermoblast** (*du-to-sper'-mo-blast*) [*δευτερος*, second; *σπέρμα*, sperm; *βλάστης*, germ]. Any one of the cells produced by the division of a protospermoblast.

**Deutoxid** (*du-toks'-id*) [*δευτερος*, second; *ὄξιν*, sharp]. See *Dioxid*.

**Devalgate** (*de-val'-gāt*) [*de*, intensive; *valgus*, bowleg]. Bowlegged or bandylegged.

**Development** (*de-vel'-op-ment*) [*Fr., developper*, to unfold]. The sequence of organic changes, by which the vitalized ovum becomes the mature animal or plant.

**Deventer's Diameter**. The oblique diameter of the pelvis. **D.'s Method**. See *Treatment, Methods of*.

**Devergie's Disease**. See *Diseases, Table of*.

**Deviation** (*de-ve-a'-shun*) [*deviare*, to deviate]. Turning from a regular course, standard, or position. **D.**, Conjugate, the forced and persistent turning of eyes and head toward one side, observed with some lesions of the cerebrum. **D.**, Primary, the deviation of the weaker eye from that position that would make its visual line pass through the object-point of the healthy eye. **D.**, Secondary, the deviation of the healthy eye from that position that would make its visual line pass through the object-point of the weaker eye. **D. of Teeth**, a faulty direction or position of one or more teeth.

**Devitalization** (*de-vi-tal-iz-a'-shun*) [*de* priv.; *vita*, life]. Depriving of life or vitality. **D. of Dental Pulp**. See *Dental Pulp, Devitalization of*.

**Devitalize** (*de-vi'-tal-iz*) [*de*, from; *vita*, life]. To destroy vitality, as that of living tissue.

**Devonshire Colic** (*dev'-on-shēr kol'-ik*). See *Lead-Colic*.

**De Vries' Theory of "Intracellular Pangenesis."** See *Heredity*.

**Dewys' Operation**. See *Operations, Table of*.

**Dew's Method**. See *Artificial Respiration*.

**Dew** (*du*) [*AS., deaw*, dew]. The water deposited during the night from the atmosphere by the process of condensation. **D.-claw**, the aborted hallux of a domestic dog, or the false hoof of an ungulate. **D.-point**, the point at which the air cannot take up more vapor at the existing temperature, or loses a portion of its vapor by condensation if the temperature be but slightly reduced.

**DeWecker's Operations.** See *Operations, Table of*.  
**Dewees' Carminative.** See *Asafetida*.

**Dewlap** (*du'-lap*) [ME., *devolappe*, a loose, hanging piece]. The pendulous longitudinal fold of skin seen under the throat of most bovine animals and of some dogs; the wattle of a turkey; colloquially, the similar fold seen occasionally under the chin of old persons.

**Dexicardia** (*deks-e-kar'-de-ah*). See *Dextiocardia* and *Dextrocardia*.

**Dexticardia** (*deks-e-o-kar'-de-ah*) [δεξιός, on the right; καρδία, the heart]. Transposition of the heart to the right side of the thorax.

**Dexter** (*deks'-ter*) [L.]. Right; upon the right side.

**Dextrad** (*deks'-trad*) [*dexter*, right; *ad*, to]. Toward the right side. See *Position and Direction, Table of*.

**Dextral** (*deks'-tral*) [*dexter*, right]. Pertaining to the right side; right-handed. See *Position and Direction, Table of*.

**Dextran** (*deks'-tran*) [*dexter*, right],  $C_6H_{10}O_5$ . A stringy, gummy substance formed in milk by the action of cocci, and occurring in unripe beet-root.

**Dextren** (*deks'-tren*) [*dexter*, right]. Belonging to the dextral side in itself.

**Dextrin** (*deks'-trin*) [*dexter*, right],  $C_6H_{10}O_5$ . The soluble or gummy matter into which starch is converted by diastase or by certain acids. It is white, insipid, odorless, and is remarkable for the extent to which it turns the plane of polarization to the right hand, whence its name. See *Carbohydrates, Table of*.

**Dextrins** (*deks'-trinz*) [*dexter*, right]. Gummy amorphous masses, readily soluble in water and precipitated by alcohol. Their aqueous solutions are dextro-rotatory, hence their name. They do not reduce Fehling's solution, even on boiling, and are incapable of direct fermentation; in the presence of diastase, however, they can be fermented by yeast.

**Dextrocardia** (*deks-tro-kar'-de-ah*) [*dexter*, right; καρδία, heart]. A congenital condition in which the heart is situated on the right side of the thorax; either alone or as a part of a general transposition of the viscera. See *Dextiocardia*.

**Dextro-compound** (*deks-tro-com'-pound*) [*dexter*, right; *componere*, to set together]. In chemistry, a compound body that causes a ray of polarized light to rotate to the right. Dextrin, malic acid, and cinchonin are dextro-compounds.

**Dextrogyrate** (*deks-tro-jí'-rát*). Same as *Dextro-rotatory*.

**Dextrolichenin** (*deks-tro-tí'-ken-in*) [*dexter*, right; λειχήν, a lichen]. A form of lichenin readily distinguished from normal lichenin in being colored blue by iodine, while lichenin is not.

**Dextro-rotatory** (*deks-tro-ro'-tut-or-e*) [*dexter*, right; *rotare*, to whirl]. Causing to turn toward the right hand, as a dextro-rotatory crystal.

**Dextrose** (*deks'-trós*) [*dexter*, right],  $C_6H_{12}O_6$ . Grape-sugar. A sugar belonging to the glucose-group, that crystallizes from aqueous solution with  $11H_2O$  in nodular masses of six-sided scales. It is readily soluble in water and alcohol, has a taste less sweet than ordinary cane-sugar, and directly reduces an alkaline copper-solution. It is dextro-rotatory to polarized light. It is found in most sweet fruits, and in large amount in diabetic urine. See *Sugar and Glucose*.

**Dextro-sinistral** (*deks-tro-sin-is'-tral*) [*dexter*, right; *sinister*, left]. Extending from right to left.

**Dextroversion** (*deks-tro-ver'-zhun*) [*dexter*, right; *vertere*, to turn]. Version to the right side, as when the fundus of the uterus is tilted dextrally; dextral latero-version.

**Dezeanneau's Operation.** See *Operations, Table of*.

**Dhobie's Itch.** An Indian name for Kingworm of the body.

**Diabetes** (*di-ab-e'-lez*) [διαβήτης; διά, through; βαίνειν, to go]. The habitual excessive discharge of urine; used alone the term often designates *D. mellitus*. **D., Artificial**, that form produced in the physiologic laboratory by puncturing the floor of the fourth ventricle of the brain. **D., Cerebral**, diabetes in which *cerebrose* appears in the urine in place of the ordinary form of glucose or liver-sugar. It indicates a cerebral lesion. **D., English**. Synonym of *D. mellitus*. **D., Fat**, a variety in which there is a tendency to obesity. **D. insipidus**, *polyuria*, a disease characterized by the excessive secretion of a urine of low specific gravity, associated with a marked degree of thirst, but without the presence of glycosuria. The urine is pale, almost colorless, and with a specific gravity but slightly above that of water, and may be voided in considerable quantities, even as much as fifty pints in a day. Many of the cases progressively emaciate and finally die of exhaustion. There is frequently found some lesion of the central nervous system, as a cerebral tumor; or the disease may be due to some lesion of the vaso-motor system of nerves. It is most frequent in males, and usually occurs between the ages of five and thirty years. **D., Lean**, a variety in which emaciation is marked. **D. mellitus**, *glycosuria*, a disease of the metabolic functions of the system, without gross or clearly defined anatomic lesions, manifesting itself by glycosuria, polyuria, thirst, and progressive loss of flesh and strength, with a tendency to a fatal termination. The onset is generally insidious. The urine is not so excessive as in simple polyuria, but may be as much as thirty pints in twenty-four hours. It contains glucose or grape-sugar, varying in quantity from two to five per cent., but occasionally reaching as high as ten or twelve per cent. The specific gravity is increased to between 1040 and 1060 though it may be as low as 1010; the quantity of urea is increased; in some cases there is an excess of the phosphates of the urine, and these cases have been termed "*phosphatic diabetes*." The reaction of the urine is slightly acid; the smell sweetish. The emaciation is very marked and rapid, and persists notwithstanding the fact that the appetite is ravenous and the patient consumes an enormous quantity of food. Toward the end of the disease there is a failure of the mental faculties. Among the complications of diabetes may be mentioned a tuberculous variety of pneumonia, eczema and pruritus of the skin, gangrene of the toes, albuminuria, opacity of the crystalline lens, coma, and cardiac failure. *Coma* occurs most frequently in the young, and is characterized by an extreme degree of dyspnea both of inspiration and of expiration; it has been called "*air hunger*" by Kussnaul. No appreciable cause for the dyspnea can be found. As regards the morbid anatomy of diabetes no lesion has as yet been found. The disease occurs most commonly in young males, and in those of the gouty and neurotic diatheses. Exposure to cold, mental strain, injuries of the cerebrum, and the excessive use of starchy and saccharine foods, are given as exciting causes. **D., Mosler's**, polyuria due to the presence of too much inosit in the blood. **D., Non-saccharine**. Synonym of *D. insipidus*. **D., Pan-creatic**, a variety of glycosuria associated with and probably dependent upon disease of the pancreas. **D., Phloretin**, that form produced in animals by the administration of phloretin. **D., Phloridzin**, that following the administration of phloridzin. **D., Phos-**

phatic. See *D. mellitus*. **D.**, **Saccharine**. See *D. mellitus*. **D.**, **True**. Synonym of *D. mellitus*.

**Diabetic** (*di-ak'-et-ik*) [*diá*, through; *baivw*, to go].

1. Pertaining or belonging to diabetes.
2. A person suffering from diabetes.

**D. Cataract**, an opacity of the crystalline lens sometimes found in association with and thought to be a complication of diabetes.

**D. Coma**. See *Diabetic mellitus*.

**D. Gangrene**. See *Sphacelation*.

**D. Sugar**,  $C_6H_{12}O_6$ , a form of glucose, present in the urine of diabetes mellitus. It is identical with grape sugar.

**D. Tabes**, a peripheral neuritis occurring in diabetic patients, characterized by lightning pains in the legs, loss of knee-jerk, and a loss of power in the extensors of the feet. The gut is the characteristic *steppage*.

**Diabetin** (*di-ak'-et-in*) [*diá*, through; *baivw*, to go]. The trademarked name for levulose, which is recommended as an innocuous and palatable sugar, and nourishing substance for diabetics. It is a white granular mass, soluble in water, and has a pure sweet taste.

**Diabetometer** (*di-ak'-et-met'-er*) [*diá* *hugēs*, diabetes; *μτρον*, a measure]. A polariscope for ascertaining the proportion of sugar in diabetic urine.

**Diaboleptic** (*ti-ab-o-lep'-tik*) [*diáboles*, devil; *λαμβάνω*, to seize]. An insane or deluded person who professes to have supernatural communications.

**Diabrotic** (*di-ab-rot'-ik*) [*diabρωτικός*; *diá*, through; *δύρωσκα*, to eat].

1. Corrosive.
2. A corrosive substance.

**Diacatholicon** (*di-ak-ath-ol'-ik-on*) [*diá*, through; *καθολικός*, universal]. Formerly, a purgative compound.

**Diacoustic** (*di-ik-aw'-stik*) [*diá*, through; *καυστικός*, caustic]. A double convex cauterizing lens.

**Diacele**, **Diacœle** (*di'-as-el*) [*diá*, between; *κοίλη*, a hollow]. A term for the third ventricle or cavity of the diencephalon or interbrain. Its walls are the thalami; its floor the tuber and diaterma.

**Diacetic Acid** (*di-as-el'-tik*). See *Acid*.

**Diacetin** (*di-ak'-et-in*) [*di*, two; *acidum*, acid],  $C_3H_5(OH)(C_2H_3O_2)_2$ . A liquid derivative of glycerin, with a bitter taste. It is also called *aceticin*.

**Diacteturia** (*di-ak'-et-u'-re-ah*) [*di*, two; *acidum*, acid; *ουρον*, urine]. The presence of diacetic acid in the urine; it is a precursor of diabetic coma.

**Diachorema** (*di-ak-o-re'-mah*) [*διαχώρημα*, excrement]. Fecal matter; excrement.

**Diachoresis** (*di-ak-o-re'-sis*) [*διαχώρησις*, a passing through]. Excretion or passage of feces.

**Diachoretic** (*di-ak-o-rel'-ik*) [*διαχωρητικός*; *διαχωρέω*, to go through]. Laxative; aperient.

**Diachylon** (*di-ak'-il-on*) [*diá*, through; *χρῶς*, juice]. Formerly any emollient plaster composed of the juices of herbs. **D.** **Plaster** or **Ointment**. See *Plumbum*.

**Diacid** (*di-ak'-id*) [*di*, two; *acidum*, acid]. In chemistry, having an acidity of two; said of an acid or salt.

**Diaclassis** (*di-ak'-h'-is*) [*διάκλασις*, a breaking in two]. R. *Classis*. A breaking.

**Diaclast** (*di-ak'-et*) [*διακλάνω*, to break apart]. An instrument for penetrating and breaking up the fetal head by craniotomy.

**Diaclastic** (*di-ak'-et-ik*) [*διακλάνω*, to break apart]. Pertaining to diastasis. **D.** **Amputation**. See *Marfan's*.

**Diacodion** (*di-ak'-o-d'-ion*), or **Diacodium** (*di-ak-o-d'-i-um*), *diacodium*, *diacodium*, of poppy-heads. Syrup of poppy-heads.

**Diacœle** (*di-ak'-el*), or **Diacœlia** (*di-ak'-el'-ah*). See *Diacœle*.

**Diacope** (*di-ak'-op*) [*diá*, through; *κοπή*, a cut]. A deep, narrow wound, especially of the head or skull; a fracture of the line or cut, as of a bone.

**Diacrisis** (*di-ak'-ris-is*) [*diá*, a part; *σπίνω*, to separate or secrete; *pl.*, *Diacrises*].

1. A critical discharge.
2. A change or disorder in a secretion.
3. Any disease marked by altered secretions.

**Diacritic**, or **Diacritical** (*di-ak-rít'-ik*, *di-ak-rít'-ik-al*) [*διακρίσις*, a separating]. Diagnostic.

**Diactine** (*di-ak'-tin*) [*diá*, two; *ακτίς*, a ray]. In biology, having two rays.

**Diad** (*di'-ad*). See *Quantivalence*.

**Diadelphous** (*di-ad-el'-fus*) [*diá*, two; *ἀδελφός*, brother]. In botany, applied to stamens that are arranged in two sets or brotherhoods.

**Diaderm** (*di'-a-derm*) [*diá*, two; *δέρμα*, skin]. In biology, a general term proposed by Minot for that essential differentiation of the segmenting ovum, characterized by the formation of two plates of cells, differing in character, joined at their edges and surrounding a segmentation-cavity; the two plates or lamina are the two primitive germ-layers, the ectoderm and entoderm.

**Diadermatic**, **Diadermic** (*di-ad-er-mat'-ik*, *di-ad-er'-mik*) [*diá*, through; *δέρμα*, skin]. Administered through the skin. Cf. *Hypodermatic*.

**Diadexis** (*di-ad-ek'-sis*) [*διάδεξις*, metastasis]. Metastasis of a disease, with a change of its character; change in the seat and nature of a disease.

**Diæresis** (*di-er'-es-is*). See *Dieresis*.

**Diageotropic** (*di-aj-e-o-trop'-ik*) [*diá*, through; *γῆ*, the earth; *τρέπω*, to turn]. In biology, growing at right angles to the direction of gravitation.

**Diagnose** (*di-ag-nōs'*). See *Diagnosticate*.

**Diagnosis** (*di-ag-nō'-sis*) [*diá*, a part; *γνώσις*, knowledge]. The distinguishing, fixation, or interpretation of a disease from its symptoms. **D.**, **Differential**, the qualitative distinguishing between two diseases of similar character, by comparative symptoms. **D.**, **Direct**, the recognition of a disease from the existence of one or more signs, or symptoms, independently of or in relation with other symptoms, or with age, sex, physical and mental characteristics, residence or occupation, or with the family history. **D. by Exclusion**, the recognition of a disease by excluding all other known conditions. **D.**, **Physical**, the application of physical methods to the study of disease.

**Diagnostic** (*di-ag-nōs'-tik*) [*diá*, apart; *γνώσις*, knowledge]. Determining or confirming a diagnosis; serving as sufficient evidence in a diagnosis. **D.** **Incision**, an incision (as through the abdominal wall) made for diagnostic purposes.

**Diagnosticate** (*di-ag-nōs'-tik-at*) [*diá*, apart; *γνώσις*, knowledge]. To make a diagnosis.

**Diagnostician** (*di-ag-nōs-tish'-an*) [*diá*, through; *γνώσις*, knowledge]. One skilled in making diagnoses.

**Diagometer** (*di-ag-om'-et-er*) [*διαγωγή*, transmission; *μέτρον*, a measure]. An instrument for measuring the electric conductivity of bodies.

**Diagraph** (*di'-ag-raf*) [*diá*, thoroughly; *γράφειν*, to record]. An apparatus for recording the outlines of crania.

**Diapheliotropic** (*di-a-he-le-o-trop'-ik*) [*diá*, through; *ἥλιος*, the sun; *τροπή*, a turning]. In biology, having a tendency to grow at right angles to the direction of the light.

**Dialdan** (*di-al'-dan*) [*di*, two; *aldehyd*],  $C_6H_{14}O_3$ . A chemic compound prepared by allowing the mixture of aldehyd and HCl used for the preparation of aldol to stand for some time; it melts at 135° C.

**Dialysate** (*di-al'-ic-at*) [*diá*, through; *λύειν*, to loose]. A substance that has been acted upon by dialysis.

**Dialysis** (*di-al'-is-i*) [*diá*, through; *λύειν*, to loose]. The operation of separating crystalline from colloid

substances by means of a porous diaphragm, the former passing through the diaphragm into the pure water upon which the dialyzer rests.

**Dialyzed** (*di'-al-iz-ed*) [*diá*, through; *livein*, to loose]. Prepared, acted upon, or separated, by dialysis.

**Dialyzer** (*di'-al-iz-er*) [*diá*, through; *livein*, to loose]. An apparatus for effecting dialysis; also the septum, or diaphragm of such an apparatus.

**Diamagnetic Bodies** (*di-a-mag-net'-ik bod'-ez*). Bodies not susceptible of being magnetized.

**Diamagnetism** (*di-a-mag'-net-izm*) [*diá*, across; *mag-nēs*, magnet]. The east-and-west orientation of certain substances, notably antimony, copper, and gold, when placed in the magnetic field.

**Diamesogamous** (*di-a-me-sog'-am-us*) [*diá*, through; *μέσος*, middle; *γάμος*, marriage]. In biology, applied to such flowers as are fertilized by means of the wind, water, insects, or other external agency.

**Diameter** (*di-am'-et-er*) [*diá*, through; *μέτρον*, a measure]. A straight line passing through the center of a body or figure. **D.**, Baudelocque's. See *Baudelocque*. **D.**, Bisacromial, that between the acromial processes. **D.**, Bisiliac, that between the iliac bones.

**D. Bistrochanteric**, that between the two trochanters. **D.**, Craniometric, one of several lines connecting points on opposite surfaces of the cranium. The most important craniometric diameters are the following:

*Auricular* or *Biauricular*, connecting the centers of the two external auditory meatuses; *Basilo-bregmatic*, that joining the basion and the bregma; *Biclenoid*, that joining the central points of the two glenoid cavities; *Bigeniatic*, that joining the two gonions; *Bijugal*, that joining the two malar points; *Bijugular*, that joining the two jugular points; *Bimalar*, that joining the two malar points; *Bimastoid*, that joining the apices of the mastoid bones; *Biparietal*, that joining the parietal eminences; *Bistephanic*, see *Maximum Frontal*; *Bitemporal*, that joining the extremities of the coronal suture; *Bizygomatic*, that joining the most prominent points of the zygomata; *Cervico-bregmatic*, that joining the center of the anterior fontanel and the junction of the neck and floor of the mouth; *Fronto-mental*, that joining the top of the forehead and the point of the chin; *Fronto-occipital*, see *Occipito-frontal*; *Inial*, that joining the most prominent points of the inion and glabella; *Maximum Antero-posterior*, the distance from the glabella to the furthest point of the occipital bone; *Maximum Frontal*, that joining the stephanions; *Maximum Occipital*, that joining the two astersions; *Maximum Transverse*, the greatest transverse diameter of the cranium, wherever found; *Mento-bregmatic*, that joining the chin and the middle of the anterior fontanel; *Mento-frontal*, see *Fronto-mental*; *Minimum Frontal*, the supra-orbital line; *Occipito-frontal*, that joining the root of the nose and the most prominent point of the occiput; *Occipito-mental*, that joining the external occipital protuberance and the chin; *Sagittal*, see *Basilo-bregmatic*; *Stephanic*, see *Maximum Frontal*; *Sub-temporal*, that joining the spheno-temporal sutures on either side of the head; *Trachelo-bregmatic*, see *Cervico-bregmatic*; *Vertical Diameter*, ordinarily the distance from the basion to the bregma, or what is nearly equivalent, the distance from the basion to the point where the line through the basion at right angles to the alveolo-condylean plane intersects the cranial vault; but sometimes the line is drawn at right angles to the foramen magnum. **D.**, Deventer's. See *Deventer*. **D.**, Pelvic, any one of the diameters of the pelvis. The most important are the following: *Antero-posterior* (of pelvic inlet), that which joins the sacro-vertebral angle and the pubic symphysis; *Antero-posterior* (of

pelvic outlet), see *Coccygubic*; *Coccygubic*, that which joins the tip of the coccyx with the subpubic ligament; the antero-posterior diameter of the pelvic outlet; *Conjugate*, the antero-posterior diameter of the pelvic inlet; *Conjugate, diagonal*, that connecting the sacro-vertebral angle and subpubic ligament; *Conjugate, external*, that connecting the spine of the first sacral vertebra and the middle of the upper border of the symphysis pubis; *Conjugate, true*, that connecting the sacro-vertebral angle and the most prominent portion of the posterior aspect of the symphysis pubis; *Oblique* (of pelvic inlet), left and right, that connecting one sacro-iliac symphysis with the opposite ilio-pectineal eminence; see also *Deventer*; *Oblique* (of pelvic outlet), that extending from the middle of the under surface of the sciatic ligament upon one side to the junction of the ischio-pubic rami on the opposite side; *Sacro-pubic*, see *Antero-posterior*; *Sacro-subpubic*, see *Conjugate, diagonal*; *Sacro-suprapubic*, that connecting the sacro-vertebral angle and the upper portion of the symphysis pubis; *Transverse* (of pelvic inlet), that connecting the two most widely separated points of the pelvic inlet; *Transverse* (of pelvic outlet), that connecting the ischial tuberosities.

**Diametroscopy** (*di-am-et-ros'-ko-pe*) [*διάμετρος*, diameter; *σκοπεῖν*, to inspect]. Observation or measurement of diameters (as of the retinal vessels).

**Diamid** (*di'-am-id*). See *Hydrazin*.

**Diamin** (*di'-am-in*). See *Amin*.

**Diamotosis** (*di-am-o-to'-sis*) [*διά*, through; *μωτός*, lint]. The packing of a wound or sore with lint.

**Diandrous** (*di-an'-drus*) [*δύς*, two; *άνήρ*, a man]. In biology; having two stamens.

**Dianoux's Operation**. See *Operations, Table of*.

**Diapason** (*di-ap-as'-on*) [*διαπάσων*, concord]. A tuning fork.

**Diapedesis** (*di-ap-ed-e'-sis*) [*διαπήδησις*, a jumping through]. The escape of the elements of the blood, especially the white corpuscles, through the vessel-wall. Also a synonym of *Hematidrosis*.

**Diapedetic** (*di-ap-ed-e'-tik*) [*διαπήδησις*, a jumping through]. Relating to diapedesis.

**Diaper** (*di'-ap-er*) [*ME., dyaper*, diaper; ornamented cloth]. A napkin used as a T-bandage for infants and menstruating women.

**Diaphanometer** (*di-af-an-om'-et-er*). See *Lactoscope*.

**Diaphanoscope** (*di-af-an'-o-skóp*) [*διαφανής*, translucent; *σκοπεῖν*, to inspect]. A form of endoscope in which the walls of the inspected cavity are rendered diaphanous by means of an intense light.

**Diaphanoscopy** (*di-af-an-os'-ko-pe*) [*διαφανής*, translucent; *σκοπεῖν*, to see]. The examination of cavities of the body by means of an introduced incandescent electric light.

**Diaphanous** (*di-af'-an-us*) [*διά*, through; *φαίνειν*, to shine]. Transmitting light; translucent. **D. Test**. See *Death*.

**Diaphemetric** (*di-af-em-et'-rik*) [*διά*, through; *ἥσῃ*, touch; *μέτρον*, measure]. Pertaining to measurements of tactile sensibility.

**Diaphoresis** (*di-af-o-re'-sis*) [*διά*, a part; *φορέειν*, to carry]. Perspiration, especially perceptible perspiration, or that induced by medical treatment.

**Diaphoretic** (*di-af-or-et'-ik*) [*διά*, a part; *φορέειν*, to carry]. 1. Causing an increase of perspiration; sudorific. 2. A medicine that induces diaphoresis.

**Diaphragm** (*di'-af-ram*) [*διά*, across; *ράγμα*, wall]. 1. The wall, muscular at the circumference and tendinous at the center, that separates the thorax and abdomen. The chief muscle of respiration and expulsion. 2. A thin septum, such as is used in

dialysis. 3 In microscopy, an apparatus placed between the mirror and object to regulate the amount of light that is to pass through the object. **D., Central Stop**, in microscopy, a diaphragm having a circular slit

DIAPHRAGM, INFERIOR ASPECT.

1. Anterior and middle leaflet of central tendon. 2. Right leaflet. 3. Left leaflet. 4. Right crus. 5. Left crus. 6, 6. Intervals for phrenic nerves. 7. Muscular fibers, from which the ligamenta arcuata originate. 8. Muscular fibers that arise from the inner surface of the six lower ribs. 9. Fibers that arise from ensiform cartilage. 10. Opening for inferior vena cava. 11. Opening for esophagus. 12. Aortic opening. 13, 13. Upper portion of transversalis abdominis, turned upward and outward. 14. Anterior leaflet of transversalis aponeurosis. 15, 15. Quadratus lumborum. 16, 16. Psoas magnus. 17. Third lumbar vertebra.

THE DIAPHRAGM IN ITS RELATIONS TO THE HEART AND LUNGS.

1. Left ventricle. 2. Right ventricle. 3. Anterior coronary artery. 4. Left coronary artery. 5. Right coronary artery. 6. Superior vena cava. 7. Inferior vena cava. 8. Origin of aorta. 9. Arch of aorta. 10. Innominate artery. 11. Right carotid. 12, 12. Subclavian artery. 13. Superior vena cava. 14. First rib. 15. Lung. 16. Lung. 17. Pleurogastria. 18, 18. Pleura. 19. Ribs. 20. Left lung. 21, 21. Diaphragm. 22, 22. Sixth part of ribs.

just within its margin, the center remaining opaque. **D. Iris**, a device for changing or regulating the amount of light directed upon an object under the microscope. **D. Opening**. The opening in the disc or apparatus of a microscope through which the rays of light pass. It should be of about the same size as that of the front lens of the objective.

**Diaphragmalgia** (*di-af-rag-mal'-je-ah*). See *Diaphragmatalgia*.

**Diaphragmatalgia** (*di-af-rag-mat-al'-je-ah*) [*διά*, across; *φράγμα*, a wall; *ἄλγος*, pain]. Pain in or neuralgia of the diaphragm.

**Diaphragmatic** (*di-af-rag-mat'-ik*) [*διά*, across; *φράγμα*, a wall. Relating to the diaphragm.

**D. Hernia**. See *Hernia*. **D. Pleurisy**. See *Pleurisy*.

**Diaphragmatitis** (*di-af-rag-mat-i'-tis*) [*διά*, across; *φράγμα*, a wall; *ιτις*, inflammation]. Inflammation of the diaphragm.

**Diaphragmatocele** (*di-af-rag-mat'-o-sel*) [*διά*, through; *φράγμα*, diaphragm; *κύλη*, hernia]. Hernia through the diaphragm.

**Diaphragmitis** (*di-af-rag-mi'-tis*). See *Diaphragmatitis*.

**Diaphragmodynia** (*di-af-rag-mo-din'-e-ah*) [*διά*, through; *φράγμα*, diaphragm; *δύνη*, pain]. Pain in the diaphragm.

**Diaphtherin** (*di-af'-ther-in*) [*διαθέρειν*, to destroy]. Oxychinaseptol; a coal-tar derivative composed of two molecules of oxychinolin and one of aseptol. It is a yellow powder, with a phenol-like odor. It is used as an antiseptic and bactericide in solutions varying in strength from 1 to 50 per cent. Its chief drawback is that it attacks silver plated or nickel-plated instruments, turning them black. Unof.

**Diaphylactic** (*di-af-il-ak'-tik*) [*διαφυλάκτικός*, preserving]. Same as *Prophylactic*.

**Diaphyseitis** (*di-af-iz-e-i'-tis*) [*διάφρυσις*, a diaphysis; *ιτις*, inflammation]. Inflammation of a diaphysis.

**Diaphysis** (*di-af'-is-is*) [*διά*, between; *φύειν*, to grow]. The middle part or shaft of any long, cylindric bone, as considered apart from the apophyses and epiphyses. In biology, applied to an unusually elongated axis, as that of a flower or flower-cluster.

**Diaplex, or Diaplexus** (*di'-ap-leks, di-ap-leks'-us*) [*διά*, between; *plexus*, a network]. The cho-roid plexus of the third ventricle or diacele.

**Diapophysial** (*di-ap-off-iz'-e-al*) [*διά*, apart; *ἄποφυσις*, an outgrowth]. Relating to a diapophysis.

**Diapophysis** (*di-ap-off'-is-is*) [*διά*, apart; *ἄποφυσις*, an outgrowth]. The superior or articular part of a transverse apophysis, or its homologue.

**Diapyema** (*di-ap-i-e'-mah*) [*διαπίημα*; *διά*, through; *πύρ*, pus; *πλ.*, *Diapymata*]. An abscess.

**Diapyesis** (*di-ap-i-e'-sis*) [*διαπίεσις*; *διά*, through; *πίεσις*, supuration]. Suppuration.

**Diapyetic** (*di-ap-i-e'-ik*) [*διαπυητικός*, suppurating]. Promoting diapyesis or suppuration.

**Diarch** (*di'-ark*) [*δίς*, two; *ἄρχοι*, rulers]. In biology, a term descriptive of radial fibro-vascular bundles having two rays.

**Diarrhea** (*di-ar-e'-ah*) [*διά*, through; *ῥέειν*, to flow]. An abnormal frequency of evacuation of the feces, which are watery, and sometimes acrid. **D., Acute**, that due to cold, or to the ingestion of improper food or chemic poisons. In severe forms it is associated with collapse, and may in rare cases be followed by death.

**D., Acute Inflammatory**, a term including the severer forms of the catarrhal and summer diarrheas of children. It is characterized by griping, vomiting, and the passage of offensive, watery, brown or greenish stools. The child in the latter stage of this disease presents the same appearance as that seen in advanced tuberculous meningitis—pinched features, drowsiness, sunken and half-closed eyes, and rapid irregular pulse—and to this condition the term "*spurious hydrocephalus*" has been applied. Death frequently results from this form of diarrhea. **D., Acute Summer**, a term given to sudden attacks of profuse watery diarrhea occurring in children and weak adults during the prevalence of hot weather. (See *Cholera infantum*). **D. alba**. See *Celiac Affection*. **D., Cachectic**, that depending on some diathetic disease, as syphilis, scurvy, malaria, tuberculosis, and carcinoma, or else on chronic intestinal catarrh. **D., Choleraic**, severe, acute diarrhea of any form not readily traceable to any recognized cause. **D., Choleric form**. Synonym of *Cholera infantum*. **D., Chronic Inflammatory**, a diarrhea of children either following an acute attack, or developing insidiously. The stools are of a dark-brown color, thin and foul, and may occasionally contain a spinach-like material. There is great emaciation and anemia, and the term "*consumption of the bowels*," has been given to this condition. The prognosis must be guarded. **D., Chronic Tropical, Hill-diarrhea**, "*white flux*," of India, a severe form of chronic intestinal catarrh, and essentially a tropical disease. In India it develops often in those who, after dwelling in the heat of the plains, pass to the changeable temperature of the hilly country, hence the name "*Hill-diarrhea*." The stools are copious, light, and frothy; there is progressive failure of strength; the temperature becomes subnormal; albuminuria and edema develop, and death results in many cases from exhaustion. **D. chylosa**. See *Celiac Affection*. **D., Compensatory**. See *D., Vicarious*. **D., Dissecting-room**, a severe form of diarrhea resulting from exposure to the animal effluvia of the dissecting-room. The discharges are very fetid and may be accompanied by colicky pains, nausea and vomiting, and headache. **D., Dysenteric**, a form of diarrhea frequently encountered in children in temperate climates. There are tenesmus and colic, the passage of mucous and fecal stools, prolapse of the rectum, and great exhaustion. Death may result. **D., Fatty**, a rare form, the result of the imperfect performance of the pancreatic or hepatic function. **D. febrilis**. Synonym of *Enteritis, Pseudo-membranous*. **D., Fibrinous**. Synonym of *Enteritis, Pseudo-membranous*. **D., Gelatinous**. See *Enteritis, Membranous*. **D., Heat**. See *D., Summer*. **D., Hill**. See *D., Chronic Tropical*. **D., Infantile**, a term including various forms of diarrhea occurring in infants and young children. **D., Irritative**, that due to direct irritation of the intestines by improper food and drink, purgative medicines, poisons, intestinal worms, etc. **D., Lienteric**, a form of diarrhea common in children over two years of age, and characterized by the passage of fluid stools containing scraps of undigested food, and associated with griping pains. **D., Matinal**. See *D., Chronic Tropical*. **D., Mechanical**, that due to mechanical obstruction to the portal circulation, with consequent gastro-intestinal hyperemia and catarrh. It is seen in cases of mitral lesion. **D., Mucous**. See *Enteritis, Membranous*. **D., Nervous**. See *D., Lienteric*. **D. pituitosa**. Synonym of *Enteritis, Pseudo-membranous*. **D., Secondary**, symptomatic diarrhea: that secondary to some ulcerative condition of the intes-

tines, as in typhoid fever, tuberculosis, pyemia, etc. **D., Serous**, a variety in which the stools are very watery. **D., Simple Catarrhal**, a common variety of diarrhea occurring in infants. It is marked by watery evacuations containing feculent matter and undigested curds. It is due to errors in diet or exposure to cold. **D., Summer**, an acute form due to the intense heat of summer. A synonym of the *Summer Complaint* of infants. **D., Symptomatic**. See *D., Secondary*. **D., Tuberculous**, that form dependent upon tuberculous disease of the bowels. **D. tubularis**. Synonym of *Enteritis, Pseudo-membranous*. **D., Ulcerative**, a grave form due to intestinal ulceration. **D., Vicarious**, that due to suppression or arrest of the functions of the skin, kidneys, or lungs, so that the bowels do the extra or vicarious work. It is also called *Compensatory diarrhea*. It is rather salutary than otherwise.

**Diarrheal** (*di-ar-e'-al*) [*δύα*, through; *ῥέειν*, to flow]. Relating to, or of the nature of diarrhea.

**Diarthrodial** (*di-ar-thro'-de-al*) [*διά*, throughout; *ἄρθρωσις*, articulation]. Relating to or of the nature of a diarthrosis.

**Diarthrosis** (*di-ar-thro'-sis*) [*διά*, throughout; *ἄρθρωσις*, articulation]. A form of articulation characterized by mobility. The various forms are: *Arthrodia*, in which the bones glide upon plane surfaces; *Enarthrosis*, best known as ball-and-socket joint, with motion in all directions; *Ginglymus*, or hinge-joint, with backward and forward motion; and *D. rotatoria*, with pivotal movement.

**Diary Fever** (*di'-ar-e*). See *Fever*.

**Diastaltic** (*di-as-tal'-tik*) [*δύα*, apart; *στέλλειν*, to send]. Reflex; performed (as are many reflex actions) through the medium of the spinal cord.

**Diastase** (*di'-as-tās*) [*διάστασις*, separation]. A nitrogenous vegetable ferment that is either contained or developed in the fermentation of grain, which acts on the molecules of starch, converting this into grape-sugar or glucose.

**Diastasemia** (*di-as-tas-e'-me-ah*) [*διά*, apart; *στάσις*, settling; *αἷμα*, blood]. Acute anasarca.

**Diastasic**, or **Diastatic** (*di-as-tas'-ik*, or *di-as-tat'-ik*) [*διάστασις*, separation]. Relating to a diastasis. **D. Ferments**. See *Ferments*.

**Diastasis** (*di-as'-tas-is*) [*διάστασις*, separation]. 1. Luxation or dislocation. 2. The separation of an epiphysis from the body of a bone without true fracture.

**Diastema** (*di-as-te'-mah*) [*διάστημα*, a distance; *πλ.*, *Diastemata*]. A space or cleft. In biology, applied to the space between any two consecutive teeth.

**Diastemelytria** (*di-as-tem-at-el-it'-re-ah*) [*διάστημα*, fissure; *ἔλκτρον*, vagina]. Longitudinal and congenital fissure of the vagina.

**Diastematochilia** (*di-as-tem-at-o-ki'l'-e-ah*) [*διάστημα*, fissure; *χείλος*, lip]. Congenital longitudinal fissure of the lip; hare-lip.

**Diastematocystia** (*di-as-tem-at-o-sis'-te-ah*) [*διάστημα*, fissure; *κύστις*, bladder]. Congenital longitudinal fissure of the bladder.

**Diastematognathia** (*di-as-tem-at-og-na'-the-ah*) [*διάστημα*, fissure; *γνάθος*, jaw]. Congenital longitudinal fissure of the jaw.

**Diastematometria** (*di-as-tem-at-o-me'-tre-ah*) [*διάστημα*, fissure; *μήτρα*, womb]. Congenital longitudinal median fissure of the uterus.

**Diastematosternia** (*di-as-tem-at-o-ster'-ne-ah*) [*διάστημα*, fissure; *στέρνον*, sternum]. Median congenital fissure of the sternum.

**Diaster** (*di'-as-ter*). See *Dyaster* and *Karyokinesis*.

**Diastole** (*di-as'-to-le*) [*διαστέλλειν*, a drawing apart]. The period of expansion or dilatation of the heart during

its rhythmic cycle or beat. It is applied also to the dilatation of the arteries by the heart's contraction.

**Diastolic** (*di-as-toe'ik*) [*διαστολή*, a drawing apart]. Pertaining to diastole. **D. Impulse**, the back-stroke. **D. Murmur**. See *Murmur*. **D. Thrill**, the vibration felt in the region of the heart during the diastole of the ventricles.

**Diastrephia** (*di-as-tre'f-ah*) [*δια*, apart; *σπείρειν*, to turn]. Insanity marked by acts of cruelty and by gross perversion of the moral sense.

**Diatactic** (*di-at-ak'tik*) [*διατασσειν*, to make ready]. Preparatory. **D. Action**, the supposed molecular establishment of unions between different brain-cells and nerve centers preparatory to coördinated motor activity.

**Diatela** (*di-at-el'ah*) [*δια*, between]. The velum interpositum of the brain.

**Diatema** (*di-at'er-mah*) [*δια*, between; *τέμα*, end]. A portion of the floor of the diacele. It has a nearly dorsal-ventral direction.

**Diathermal or Diathermanous** (*di-ath'er-mal, di-ath'er-man-u*) [*δια*, through; *θερμν*, heat]. Transparent or diaphanous to the waves of radiant heat.

**Diathermancy** (*di-ath'er-man-se*) [*δια*, through; *θερμν*, heat]. Permeability to rays of heat.

**Diathesis** (*di-ath'es-iss*) [*δια*, through; *τιθέναι*, to arrange]. A state or condition of the body whereby it is especially liable to certain diseases, such as gout, calculus, diabetes, etc. It may be acquired or hereditary. **D. Hemorrhagic**. See *Hemophilia*.

**Diathetic** (*di-at'te't-ik*) [*δια*, through; *τιθέναι*, to arrange]. Relating to a diathesis.

**Diatom** (*di-at'om*). One of the *Diatomacea*, a group of microscopic *Alae*.

**Diatomic** (*di-at'om'ik*) [*δῖς*, two; *ἄτομος*, atom]. In chemistry, consisting of two atoms; specifically applied to hydrates that have two hydrogen atoms united to the nucleus radical by oxygen.

**Diatomin** (*di-at'-min*) [*διά*, through; *τέμνειν*, to cut]. The yellowish-brown coloring-matter of diatoms. It is also called *Phycocanthin*.

**Diaxon** (*di-aks'en*) [*δῖς*, two; *ἄξων*, axis]. In biology, having two axes.

**Diazo-** (*di-a'-zo*) [*δῖς*, two; *azotum*, nitrogen]. In chemistry, a prefix signifying that a compound contains phenyl,  $C_6H_5$ , united with a radical consisting of two nitrogen atoms. **D.-acid**, one of certain volatile liquids of yellow color and peculiar odor, which distil undecomposed with steam or under reduced pressure. They are slightly soluble in water, but mix readily with alcohol and with ether. **D.-compound**, in chemistry a compound containing a group consisting of phenyl ( $C_6H_5$ ) united with a radical consisting of two nitrogen-atoms (whence the name). **D.-reaction or test**, a urinary test, originally thought to be especially valuable in the diagnosis of enteric fever. It is not found in the urine of healthy persons. The test is made by mixing 200 parts of sulphanilic acid solution (saturated solution in water) with 10 parts of pure ferric chloride sol., and 6 parts of nitrite of sodium solution (1:200). To this mixture add an equal volume of water with sufficient ammonia to render the water alkaline. A bright or carmin red denotes the reaction. See *Test*, *Urinary*.

**Diazobenzene** (*di-a-zo-ben'een*) [*Δ*, two; *azotum*, nitrogen; *benzen*]. The nitrogenous body called *Tyrosin*.

**Dib** [*i*, dial]. The knee-pan or ankle-bone of a sheep's leg.

**Dibasic** (*di-bas'ik*) [*δι*, twice; *βάσις*, base]. Having two bases. **D. Acid**. See *Acid*.

**Dibenzyl** (*di-ben'zil*) [*δῖς*, twice; *benzoin*],  $C_{14}H_{14}$ . A compound prepared by the action of sodium upon benzyl chlorid. It crystallizes in large prisms, melting at 52° C. and boiling at 284° C.

**Diblastic** (*di-blas'tik*) [*δῖς*, double; *βλαστός*, germ]. Referring to any theory of disease that ascribes it to a double agency.

**Dibothrium** (*di-both're-um*) [*L.*]. A genus of cestode worms. **D. latum**. See *Bothriocephalus latus*.

**Dibromindone** (*di-bro-min'don*) [*δῖς*, double; *βρώσος*, a stench],  $C_9H_5Br_2O$ . A compound derived from dibromocinnamic acid. It consists of orange-yellow needles, with an odor resembling that of quinone. It melts at 123°.

**Dicephalism** (*di-sef'al-izm*) [*δῖς*, two; *κεφαλή*, head]. The condition of having two heads.

**Dicephalous** (*di-sef'al-us*) [*δῖς*, two; *κεφαλή*, head]. Two-headed.

**Dicephalus** (*di-sef'al-us*) [*δῖς*, two; *κεφαλή*, a head]. A monster having two heads.

**Dicerous** (*dis'er-us*) [*δῖς*, two; *κέρας*, a horn]. In biology, having two antennæ.

**Dichasium** (*di-ka'se-um*) [*δίχασις*, division]. In biology, applied to a cyme having two axes.

**Dichastasis** (*di-ka's-tas-iss*) [*δίχασις*, division]. In biology, spontaneous fission.

**Dichasteres** (*di-kas'te'rez*) [*διχάζειν*, to divide]. An old name for the incisor teeth.

**Dichlamydeous** (*di-klam-id'e-us*) [*δῖς*, two; *χλαμύς*, a mantle]. In biology, applied to flowers having both floral envelopes.

**Dichogamy** (*di-kog'a-me*) [*δίχα*, in two; *γάμος*, marriage]. In biology, a provision for cross-fertilization of flowers by the maturation of the reproductive elements of the same flower at different times.

**Dichotomous** (*di-kot'o-mus*) [*δίχα*, in two; *τέμνειν*, to cut]. In biology, divided, forked or having a dual arrangement.

**Dichroism** (*di'-kro-izm*) [*δῖς*, double; *χρῶμα*, color]. The phenomenon of difference of color in bodies when viewed by reflected or by transmitted light.

**Dichromatism** (*di-kro'at-izm*). Same as *Color-blindness*.

**Dicinchonin** (*di-sin'-kon-in*) [*δῖς*, double; *cinchona*],  $C_{26}H_{14}N_2O_8$ . An alkaloid of Cinchona bark, an amorphous solid, melting at 40° C., readily soluble in alcohol and ether.

**Diclesium** (*di-kle'te-um*) [*δῖς*, two; *κλείειν*, close]. In biology, an achenium having a persistent calyx or perianth.

**Diclinous** (*di-kli'n-us*) [*δῖς*, two; *κλίνη*, a bed]. In biology, having the stamens and pistils in separate flowers.

**Dicochirurgea** (*di-ko-ki-er'e-ah*) [*δίκη*, justice; *χειρουργία*, surgery]. Forensic surgery.

**Dicotoin** (*di-ko'to-in*) [*δῖς*, double; *Coto*]. A derivative of cotoin present in coto bark.

**Dicotyledon** (*di-kot-il'e-don*) [*δῖς*, two; *κοτυλήδων*, a cavity]. In biology, a term introduced by J. Ray in 1682, for a plant whose embryo has two seed-leaves or cotyledons.

**Dicranous** (*di kra'n-us*) [*δίκρανος*, two-headed]. Dicephalous.

**Dicranus** (*di-kra'n-us*) [*δῖς*, double; *κράνον*, head]. A dicephalous monster.

**Dicrotic** (*di-krot'ik*) [*δικοτος*, double beating]. Having a double beat. **D. Pulse**, a term applied to a pulse that imparts the sensation of a double beat at each pulsation. **D. Wave**, the wave of recoil, or the second smaller ascending wave of the sphygmographic tracing. It is generated by closure of the aortic valves.

**Dicrotism** (*di'-kro-tizm*) [*δίκροτος*, a double-beat]. The quality of being dicrotic. A condition of the pulse in which with every wave there is given to the finger of the examiner the sensation of two beats. It is present when the arterial tension is low. The second shock is due to the recoil of the arterial walls when the aortic valves are closed.

**Dictyitis** (*dik-te-i'-tis*) [*δίκτυον*, net, retina]. Retinitis.

**Dictyopsia** (*dik-te-op'-se-ah*) [*δίκτυον*, net; *ὄψις*, view]. The sensation as if a net were stretched before the eyes.

**Dicyanogen** (*di-si-an'-o-je-n*) [*δύς*, double; *cyanogen*], NC.CN. Free cyanogen; a colorless, poisonous gas of peculiar odor, and specific gravity 26 (H=1). It may be condensed to a mobile liquid by cold of  $-25^{\circ}$  C., or by a pressure of four atmospheres at ordinary temperatures. In this condition it has a specific gravity of .566, solidifies at  $-34^{\circ}$  C. to a crystalline mass and boils at  $-21^{\circ}$  C. It burns with a bluish-purple mantled flame.

**Didactic** (*di-dak'-tik*) [*διδασκτικός*, apt at teaching]. Teaching by description, rules, or principles; opposed to clinical.

**Didactylism** (*di-dak'-til-izm*) [*δύς*, double; *δάκτυλος*, a finger]. The condition of having congenitally but two digits on a hand or foot.

**Diday's Operation.** See *Operations, Table of*.

**Didot's Operation.** See *Operations, Table of*.

**Diduction** (*di-duk'-shun*) [*diducere*, to draw apart].

Abduction of two parts; the withdrawal of a part.

**Didymalgia** (*did-e-mal'-je-ah*) [*διδυμος*, testicle; *ἄλγος*, pain]. Pain in a testicle.

**Didymitis** (*did-e-mi'-tis*) [*διδυμος*, a testicle; *ιτις*, inflammation]. Orchitis affecting mainly the body of the testicle.

**Didymium** (*di-dim'-e-um*) [*διδυμος*, twin]. A rare metal of grayish or yellow color. See *Elements, Table of*.

**Didymous** (*did'-im-us*) [*διδυμος*, twin]. Arranged in a pair, or in pairs.

**Didymus** (*did'-im-us*) [*διδυμος*, twin]. A twin; a twin-monstrosity; a testis.

**Didynamous** (*di-din'-am-us*) [*δύς*, two; *δύναμις*, power]. In biology, having the stamens in two pairs, one longer than the other.

**Die** (*di*) [ME., *diēn*]. To cease to live; to become dead.

**Diecious** (*di-e'-shus*) [*δύς*, two; *οἶκος*, house]. In biology, having the two sexes in different individuals, or in two households, as staminate and pistillate flowers separate and on separate plants.

**Dieffenbach's Operation.** See *Operations, Table of*.

**Dielectric** (*di-e-lek'-trik*) [*διά*, through; *ἤλεκτρον*, amber]. A non-conducting substance that transmits electricity by induction.

**Dielectrics** (*di-e-lek'-triks*) [*διά*, through; *ἤλεκτρον*, amber]. The property of certain substances to permit an inductive electric influence to act through or across them.

**Dielecrolisis** (*di-e-lek-trol'-is-is*) [*διά*, through; *ἤλεκτρον*, electricity; *λύνειν*, to dissolve]. Galvanic electrolysis of a compound, the current passing at the same time through a diseased portion of the body and carrying one of the elements of the compound with it.

**Dien** (*di'-en*) [*διά*, through; *ἐγκέφαλος*, brain]. An abbreviation of diencephalon. The name given to the line of junction of the thalamus with the caudatum.

**Diencephal** (*di-en-sef'-al*). Same as *Diencephalon*.

**Diencephalon** (*di-en-sef'-al-on*) [*διά*, between; *ἐγκέφαλος*, brain]. That part of the brain between the prosencephalon and the mesencephalon. It includes the optic thalami and the third ventricle.

**Dieresis** (*di-er'-es-is*) [*διαίρεσις*, a division]. A solu-

tion of continuity, as a wound, ulceration, etc. In biology, the division of the outer branch of the posterior or caudal pleopod of a crustacean. (Bate).

**Dieretic** (*di-er-et'-ik*) [*διαίρειν*, to divide]. Destructive; escharotic; corrosive.

**Dies and Counter-dies.** Metallic casts obtained by molding in sand or dipping in molten zinc and lead, or other alloys, such as Babbitt metal, and which are used for stamping up dental plates; they are generally described as male and female castings, between which the plate is swaged.

**Diesel's Test.** See *Tests, Table of*.

**Diet** (*di'-et*) [*διαίτα*, a system or mode of living]. 1. An arranged selection of food necessary to meet the needs of the body. 2. To regulate the amount and character of the food ingested. **D.-drink**, a medicated drink, or beverage. **D., Lisbon**, a draught much resembling the compound tincture of sarsaparilla. **D., Milk**, one consisting mainly of milk. **D., Tuff-nell's**, a highly nutritious diet including but a small amount of liquids, employed in the treatment of internal aneurysms.

**Dietarian** (*di-et'-re-an*) [*διαίτα*, a system or mode of living]. A physician who pays special attention to matters of diet.

**Dietary** (*di'-et-a-re*) [*διαίτα*, a system or mode of living]. A system of food-regulation intended to meet the requirements of the animal economy.

**Dietetic** (*di-et-et'-ik*) [*διαίτα*, a system or mode of living]. Pertaining to diet.

**Dietetics** (*di-et-et'-iks*) [*διαίτα*, a system or mode of living]. The science of the systematic regulation of the diet for hygienic or therapeutic purposes.

**Dietetist** (*di-et-et'-ist*) [*διαίτα*, a system or mode of living]. One who is expert in questions of diet; a dietarian.

**Diethylamin** (*di-eth-il'-am-in*) [*δύς*, double; *ethyl, amin*], NC<sub>2</sub>H<sub>5</sub>. A ptomaine, obtained from the pike-fish when allowed to putrefy for six days in summer. It is an inflammable liquid of strong basic properties, soluble in water, and boiling at  $57.5^{\circ}$  C. It is non-poisonous.

**Dietic** (*di-et'-ik*) [*διαίτα*, a system or mode of living]. Same as *Dietetic*. **D. Diseases**, those caused by errors of diet.

**Difference-Theory** (*dif'-er-ens*). A theory in explanation of the galvanic phenomena of living tissues. The theory is an expression of these facts: Protoplasm when injured or excited in its continuity becomes negative to the uninjured part; when heated it becomes positive; and the surface-polarization diminishes with excitement and in the process of dying. It is also called *Alteration-theory* (Hermann).

**Differential** (*dif'-er-en'-shal*) [*differentia*, difference]. Pertaining to or creating a difference. **D. Diagnosis.** See *Diagnosis*. **D. Rheotome.** See *Rheotome*. **D. Tone**, a tone produced by two primary tones when sounding simultaneously; the number of the vibrations corresponds to the difference between the two primary tones. **D. Staining**, a method of staining tubercle-bacilli, syphilis-bacilli, etc., founded upon the fact that if deeply-colored, and especially with a mordant, they retain the color in the presence of certain reagents that decolorize the surrounding tissues. Koch, Ehrlich and Weigert, Ziehl and Neelsen, Fütterer, Gibbes, etc., have devised various methods of differential staining.

**Differentiation** (*dif'-er-en-she-a'-shun*) [*differentia*, difference]. Specialization of tissues, organs, or functions. The gradual change of homogeneous material into special tissues or organs.

**Difficultas intestinorum** (*dif-ik-ul'-tas in-tes-tin-or'-um*) [L.]. Synonym of *Dysentery*.

**Diffraction** (*dif'rah'-shun*) [*dis*, apart; *fractus*, broken]. The deflection suffered by a ray of light when it passes through a narrow slit or aperture. **D. Grating**, a strip of glass closely ruled with fine lines; it is often used in the spectroscope in the place of the battery of prisms.

**Diffuse** (*diff'us*) [*dis*, apart; *fundere*, to pour over]. Scattered or spread about. In medicine, applied to diseases that involve a large part of the body. **D. Aneurysm**, one caused by a rupture of the walls of a blood-vessel. **D. Cerebral Sclerosis**. See *Sclerosis*. **D. Inflammation**. See *Inflammation*.

**Diffusible** (*diff'us-ib'l*) [*dis*, away; *fundere*, to pour]. Susceptible of being rapidly diffused throughout the system; applied to certain quickly acting stimulants, usually of transient effect.

**Diffusion** (*diff'yu-zhun*) [*diffundere*, to spread]. A spreading or dissemination. **D., Anodal**, same as *anodal*. **D.-circle**, the imperfect image formed by incomplete focalization, the position of the true focus not having been reached or else having been passed.

**Digastic** (*dij'as-tik*) [*dis*, double; *γαστήρ*, belly]. Having two bellies. **D. Muscle**. See *Muscles*, *Table of*. **D. Triangle**. See *Triangles*, *Table of*.

**Digenesis** (*dij'en-esis*) [*dis*, two; *γενεσις*, generation]. In biology, the alternation of sexual and asexual generation.

**Digenous** (*dij'en-us*) [*dis*, two; *γενος*, sex]. In biology, pertaining to both sexes, or originating from opposite sexes.

**Digerent** (*dij'er-ent*) [*digerere*, to digest]. A digestant; also a medicine that excites the secretion of pus in wounds.

**Digestant** (*dij'es-tant*) [*digerere*, to digest]. 1. A body or substance that effects solution of the food in the mouth, stomach, and intestines. 2. A remedy for indigestion.

**Digestibility** (*dij'es-ti-bil'i-ty*) [*digestibilis*, that can be digested]. Susceptibility of being digested.

**Digestible** (*dij'es-ti-b'l*) [*digestibilis*, that can be digested]. Capable of being digested.

**Digestio Difficilis** (*dij'et-she-o dif'ik'il-is*) [L.]. Synonym of *Dyspepsia*.

**Digestion** (*dij'es-tshun*) [*digerere*, to digest]. In biology, that process whereby the food taken into an organism is made fit to become part thereof. **D., Artificial**, the production of peptones outside of the body. **D., Primary**, gastro-intestinal digestion. **D., Secondary**, the assimilation by the body-cells of their appropriate pabulum.

**Digestive** (*dij'es-tiv*) [*digerere*, to digest]. 1. Relating to or favoring digestion. 2. An agent that promotes digestion. 3. Pertaining to the process of digestion. **D. Apparatus**, the organs of digestion considered collectively. **D. Tract**, the whole alimentary canal from the mouth to the anus. See *Illustration*.

**Digit** (*dij'it*) [*digitus*, a finger]. A finger or toe.

**Digital** (*dij'it-al*) [*digitus*, a finger]. Pertaining to the fingers or toes. **D. Arteries**, the arteries of the hands and feet supplying the digits. See *Arteries*, *Table of*. **D. Compression**, the stoppage of a flow of blood by pressure on the finger. **D. Dilatation**, the enlargement of a part or mass of the finger. **D. Examination**, examination or comparison with the finger. **D. Nerves**, the nerves of the hands and feet. **D. Phalanges**, the bones of the finger or of the toes.

**Digitalein** (*dij'es-tal-een*) [*digitale*, pertaining to the finger]. One of the constituents of digitalis.

**Digitalin** (*dij'it-al-in*) [*digitale*], pertaining to the fingers. 1. *Digitalinum* (C. S. P.);  $C_{41}H_{66}O_{12}$  [2], the

active principle of *Digitalis purpurea*, q. v. Dose gr.  $\frac{1}{10}$ – $\frac{1}{30}$ . 2. A precipitate from a tincture of *Digitalis purpurea*. Unof. Besides the foregoing there are various commercial preparations known by this name.

**Digitalis** (*dij-it-a'-lis*) [*digitalis*, pertaining to the fingers]. Foxglove. The leaves of *D. purpurea*. It contains an amorphous complex substance, *digitalin*, that does not, however, represent the full properties of the leaves. It is a cardiac stimulant and excitomotor, and in large doses causes severe gastric disturbance. It is employed mainly in affections of the heart when the latter is rapid and feeble. Dose of the leaves gr. ss–ij. **D. abstractum**, strength twice that of digitalis itself. Unof. Dose gr.  $\frac{1}{4}$ –ij. **D., Ext.**, leaves yield 25 per cent. of extract. Dose gr.  $\frac{1}{6}$ – $\frac{1}{2}$ . **D., Ext., Fld.**, strength 100 per cent. Dose m–ij. **D. infusum**, 1½ per cent. in strength. Dose  $\frac{3}{4}$  ss–j. **D., Tinct.**, 15 per cent. Dose m–v–3j. See *Digitalin*.

**Digitalose** (*dij-it-al-oz')* [*digitalis*, pertaining to the fingers]. A white crystalline constituent of digitalis.

GENERAL SCHEME OF THE DIGESTIVE TRACT, WITH THE CHIEF GLANDS OPENING INTO IT; TOGETHER WITH THE LACTEALS ARISING FROM THE INTESTINE AND JOINING THE THORACIC DUCT. (Landois.)

**Digitate** (*dij'it-at*) [*digitus*, finger]. In biology, having finger-like divisions, as when the leaflets of a compound leaf are all borne on the apex of the petiole.

**Digitation** (*dij-it-a'-shun*) [*digitatus*, having digits]. A serration; a finger-like process, or a succession of such processes.

**Digiten** (*dij'it-en*) [*digitus*, a finger]. Belonging to a digit in itself.

**Digiti mortui** (*dij'it-i mor'-tu-i*) [L.]. Dead-fingers; a cold and white state of the fingers, seen in

- some hysterical women, and in certain types of insanity. It is a manifestation of some vaso-motor disorder.
- Digitigrade** (*dij'-it-ig-rad*) [*digitus*, finger; *gradi*, to walk]. In biology, walking on the toes.
- Digitonin** (*dij-it-o-nin'*) [*digitalis*, pertaining to the fingers],  $C_{31}H_{52}O_{17}$ . A white, amorphous mass obtained from *digitalis*. It is easily soluble in water, slightly so in alcohol; insoluble in ether and chloroform.
- Digitoxin** (*dij-it-oks'-in*) [*digitalis*, pertaining to the fingers; *toxicum*, poison],  $C_{21}H_{32}O_{11}$ , or  $C_{12}H_{22}O_{34}$ . A highly poisonous alkaloid from *Digitalis purpurea*. Its effects are little understood. Its action is cumulative. Unof.
- Digitule** (*dig'-it-ul*) [*digitulus*, a little digit]. A little finger, toe, or claw; a small organ or prominence resembling a digit.
- Digitus** (*dij'-it-us*) [L.]. A finger or toe.
- Diglossia** (*di-glos'-e-ah*) [*δῖς*, double; *γλῶσσα*, tongue]. The condition of having a double tongue.
- Digoneutic** (*di-go-nut'-tik*) [*δῖς*, two; *γόνος*, offspring]. In biology, producing two broods a year.
- Digonoporous** (*di-go-nop'-or-us*) [*δῖς*, two; *γόνος*, offspring; *πόρος*, pore]. In biology, having the genital pores separate.
- Digyn** (*dī'-jin*) [*δῖς*, two; *γυνή*, woman]. In biology, having two pistils.
- Dihydrolutidin** (*di-hi-dro-lut'-tid-in*) [*δῖς*, double; *ιδωρ*, water],  $C_8H_{11}N$ . One of the alkaloids of cod-liver oil. See *Morrhualins*.
- Dihysteria** (*di-his-te'-re-ah*) [*δῖς*, double; *ἰστέρα*, the womb]. The presence of a double womb.
- Dilaceratio cataractæ** (*di-las-er-a'-she-o kat-ar-ak'-te*) [L.]. See *Dilaceration*.
- Dilaceration** (*di-las-er-a'-shun*) [*dilaceratio*, a tearing apart]. A tearing apart; division of a membranous cataract by a tearing operation.
- Dilatatio cordis** (*di-lat-a'-she-o kor'-dis*) [L.]. Dilatation of the heart.
- Dilatation** (*di-lat-a'-shun*) [*dilatare*, to spread out]. 1. An increase in the size of a cavity or of the lumen of a vessel; expansion of an organ without hypertrophy. 2. Surgical stretching out of the walls of a hollow organ. **D. of Blood-vessel.** See *Telangiectasis*. **D. of Heart**, an increase in the size of one or more of the cavities of the heart, arising from a relaxation or weakening of the heart-muscle. It is associated with evidences of failure of circulation, resulting in congestion of the lungs and other viscera and tissues.
- Dilatator** (*di-lat-a'-tor*). See *Dilator*.
- Dilator** (*di-la'-tor*) [*dilatare*, to spread out]. An instrument for stretching or enlarging a cavity or opening; also, a dilating muscle. See *Muscles*, Table of. **D., Barnes'**, an instrument for dilatation of the os and cervix uteri, consisting of a rubber bag, which, when inserted, is distended with water. **D., Intra-uterine**, for dilating the uterine cavity by means of air or water. **D., Laryngeal**, an instrument with two or three blades that may be separated, for freeing or dilating the larynx.
- Dilemma** (*di-lem'-ah*) [*δίλημμα*; *δῖς*, double; *λήμμα*, proposition]. In experiments to determine the reaction-time of psychic processes, if the person is told which side is to be stimulated, or what colored disc is to be presented, etc., the time is shorter. Lack of such foreknowledge is called the dilemma.
- Dill** (*dil*). See *Anethum*.
- Dilmaisch Disease.** See *Disease*.
- Diluent** (*dil'-u-ent*) [*diluere*, to wash away]. An agent that dilutes the secretions of an organ, or that increases the fluidity of secretions.
- Dilution** (*di-lu'-shun*) [*diluere*, to wash away]. 1. The process of mixing with a neutral fluid or substance, in order to attenuate. 2. A diluted substance; the result of a diluting process.
- Dilutionist** (*di-lu'-shun-ist*) [*diluere*, to wash away]. One who advocates the dilution of medicines. **D., High**, a homeopathist who advocates the extreme attenuation of medicines.
- Dimerosomatous** (*dim-er-o-som'-at-us*) [*δῖς*, two; *μέρος*, a part; *σῶμα*, body]. In biology, applied to animals, as spiders, that have the body divided into two regions, cephalo-thorax and abdomen.
- Dimerous** (*dim'-er-us*) [*δῖς*, two; *μέρος*, a part]. In biology, bipartite.
- Dimethyl Ketone.** See *Acetone*.
- Dimethylamin** (*di-meth-il'-am-in*) [*δῖς*, two; *methyl*, *amin*],  $NC_2H_7$ . A non-toxic ptomaine found in putrefying gelatin, old decomposing yeast, certain varieties of fish-decomposition, etc.
- Dimethylarsin** (*di-meth-il-ar'-sin*). See *Cacodyl*.
- Dimethylphenylene-green.** See *Pigments*, *Conspectus of*.
- Dimetria** (*di-me'-tre-ah*) [*δῖς*, double; *μήτρα*, the womb]. The condition of having a double womb.
- Dimidiate** (*di-mid'-e-at*) [*di*, apart; *medius*, middle]. In biology, divided into halves, or represented by one half only; one-sided. Applied to an anther whose lobes are widely separated by a broad connective, or to animals that are male on one side and female on the other.
- Diminished Breathing.** See *Breath-sounds*.
- Dimorphism** (*di-morf'-izm*) [*δῖς*, double; *μορφή*, form]. The property of assuming or of existing under two distinct forms.
- Dimorphous** (*di-morf'-us*) [*δῖς*, double; *μορφή*, form]. In chemistry, having the quality of two forms of crystallization. In biology, existing in two forms, as individuals of the same species that differ in form, structure, size, or color.
- Dimple** (*dim'-pl*) [AS., *dynt*]. A slight depression.
- Dingee** (*din'-ge*). Synonym of *Dengue*.
- Dingler's Green.** See *Pigments*, *Conspectus of*.
- Dinic, Dinical** (*din'-ik*, or *din'-ik-al*) [*δῖνος*, whirl]. Pertaining to or useful in the relief of vertigo.
- Dinitrobenzene** (*di-ni-tro-ben'-zēn*) [*di*, two; *nitrum*, niter; *benzene*],  $C_6H_4(NO_2)_2$ . One of the ingredients of *Roburite*, *q.v.*
- Dinner Pills.** A name applied to various mild cathartic pills taken after meals. See *Lady Webster Pill*.
- Dinomania** (*din-o-ma'-ne-ah*) [*δῖνος*, a whirling dance; *μανία*, mania]. Dancing-mania. Choromania, *q.v.*
- Dinus** (*dī'-nus*) [*δῖνος*, whirl]. Vertigo or dizziness.
- Diæcious** (*di-e'-shus*). See *Diecious*.
- Diogenes' Cup.** See *Poculum diogenis*.
- Diognus** (*di-og'-nus*) [*διαγνῶς*, a chase]. Palpitation of the heart.
- Dionæa** (*di-o-ne'-ah*) [*Διώνη*, Dione]. A genus of plants. **D. muscipula**, a plant of the Sundew family, growing in the Carolinas; Venus's fly-trap. It captures and feeds upon various insects, and is said to contain droserin and azerin, the same digestive ferments that occur in *Drosera*, *q.v.* Unof.
- Dionym** (*dī'-o-nim*) [*δῖς*, two; *ὄνυμα*, name]. A name consisting of two words, as *madulla oblongata*; *corpus callosum*.
- Diophthalmus** (*di-off-thal'-mu*). See *Diprosopus*.
- Diopsimeter** (*di-op-sim'-et-er*) [*διοψις*, clear vision; *μέτρον*, a measure]. An instrument for exploration of the visual field.
- Diopter** (*di-op'-ter*). See *Dioptry*.
- Dioptrimeter** (*di-op-tom'-et-er*). Same as *Optometer*.
- Dioptry** (*di-op-tom'-et-er*) [*διοπτρίη*, a watchman; *μέτρον*, a measure]. The measurement of the accommodative and refractive states of the eye.

**Dioptral** (*di-op'tral*) [*διωπτήρ*, a watchman] Pertaining to a dioptry; expressed in dioptries.

**Dioptre** (*di-op'ter*). See *Dioptry*.

**Dioptric** (*di-op'trik*) [*δία*, through; *ὀφθαλμ*, to see]. 1. Pertaining to transmitted and refracted light. 2. A dioptry.

**Dioptries** (*di-op'triks*) [*δία*, through; *ὀφθαλμ*, to see]. A branch of optics treating of the refraction of light by transparent media, especially by the media of the eye.

**Dioptry** (*di-op'try*) [*δία*, through; *ὀφθαλμ*, to see]. The most commonly accepted unit of measurement for optic lenses. A positive (or *plus*) spherical (bi-convex) lens of one dioptry has a focal distance of one meter; one of two dioptries, a focal distance of one-half a meter, etc. See *Lenses*, and *Spectacle-lenses*.

**Diorthosis** (*di-orth-osis*) [*δία*, throughout; *ὀρθοειν*, to straighten]. The surgical correction of a deformity, or repair of an injury done to a limb.

**Diorthotic** (*di-orth-otik*) [*δία*, throughout; *ὀρθοειν*, to straighten]. Relating to or effecting a diorthosis.

**Dioscorea** (*di-os-ko'-re-ah*) [*Dioscorides*, a famous Greek physician and botanist]. Wild Yam, Colic Root. The rhizome of *D. villosa*, a creeping-plant, indigenous to the eastern U. S. It is claimed to be expectorant, diaphoretic, and stimulant to the intestinal canal, in large doses causing neuralgic pains and erotic excitement. It is used successfully for bilious colic. **D.**, **Fld. Ext.**, of standard strength, dose  $\text{m}\bar{\text{x}}$ -xxx. Unof.

**Dioscorein** (*di-os-ko'-re-in*) [*Dioscorides*, a Greek botanist]. A precipitate from a tincture of the root of *Dioscorea villosa*. It is antispasmodic, expectorant, and diaphoretic. Dose  $\frac{1}{2}$  to 4 grains. Unof.

**Diosma** (*di-os'-mah*) [*διος*, divine; *ὄσμη*, odor]. Buchu. See *Baccharis*.

**Diosmin** (*di-os'-min*) [*διος*, divine; *ὄσμη*, odor]. An active principle obtained from various species of Buchu. It is an amorphous, bitter substance. Unof.

**Diosmosis** (*di-os-mo'-sis*). Same as *Osmosis*.

**Diotic** (*di-ot'-ik*) [*δεις*, two; *ὠτις*, ὠτις, ear]. Binaural; pertaining to both ears.

**Dioxid** (*di-ok'-id*) [*δεις*, two; *ὀξυς*, sharp]. An oxid containing two atoms of oxygen and one of a metal.

**Dipentene** (*di-pen'-ten*),  $\text{C}_{10}\text{H}_{16}$ . Cinene; a compound produced by heating pinene, camphor, and limonene to 250-300° C. It is present in the Russian and Swedish turpentine oil. It is a liquid with an agreeable lemon-like odor; sp. gr. 0.853; boils at 175-176° C.

**Dipetalous** (*di-pet'-al-u*) [*δεις*, two; *πέταλον*, a leaf]. In botany, two petaled.

**Diphenyl** (*di-fen'-al*) [*δεις*, two; *φαινελ*, purple-red],  $\text{C}_{12}\text{H}_{10}$ . A hydrocarbon resulting from the action of sodium upon the solution of brom benzene in ether or benzene. It is also present in coal tar. It crystallizes from alcohol and ether in large colorless leaflets, melting at 71° C., and boiling at 254° C. **D.-methane**,  $\text{C}_{12}\text{H}_{12}$ . Benzyl benzene; a hydrocarbon obtained from benzyl chloride and benzene. It is easily soluble in alcohol and ether, possesses the odor of oranges, crystallizes in needles, melts at 26.5° C., and boils at 262° C.

**Diphenylamin** (*di-fen'-a-min*) [*diphenyl*; *amin*],  $\text{C}_{12}\text{H}_{11}\text{N}$ . A compound produced in the dry distillation of triphenyl ammonium Rosin blue; it is also prepared by heating ammon hydrochlorid and anilin to 240°. It is a pleasant smelling, crystalline compound, melting at 54° and boiling at 310°. It is almost insoluble in water, but readily soluble in alcohol and ether. It serves in the preparation of various dyes. **D. Orange**. See *Di-phenyl*, *Constitution of*.

**Diphenylol** (*di-fen'-al*),  $\text{C}_{12}\text{H}_{10}\text{O}$ . Oxydiphenyl;

obtained by diazotizing amido diphenyl sulphate. It sublimes in shining leaflets, melting at 165° C., and boiling at 305.8° C.

**Diphosphatid** (*di-fos'-fat-id*) [*δεις*, twice; *phosphorus*]. Any phosphatid containing the phosphorized radical twice (such as assurin). Diphosphatids exist in the brain-substance and in other animal tissues.

**Diphtheria** (*dif-*, or *dip-thet'-re-ah*) [*διφθερα*, a skin or membrane]. An acute, epidemic, infectious disease, generally regarded as of specific contagious origin, attacking especially the mucous membrane of the air-passages, and producing profound depression of the vital forces. It is characterized specifically by the formation of layers of whitish or yellowish membrane upon the mucous membrane of the pharynx, nose, and larynx, and upon any existing cutaneous abrasion. The duration of the disease is from one to two weeks, death, when it follows, occurring usually within a week. There are certain grave sequelae that must be noted; chief among these are various forms of paralysis, especially of the palate. The prognosis is always grave. To stain the microorganisms of diphtheria see *Löffler's Method*, *Gram's Method*,—a fragment of false membrane being spread on a cover-glass, dried, and otherwise treated as a cover-glass preparation. **D.**, **Antitoxin Treatment of**, the treatment of diphtheria with subcutaneous injections of the blood-serum of animals, and more especially the horse, rendered immune to diphtheria by previous and repeated inoculation with progressively increasing doses of the toxic products of the bacillus diphtherie. **D. circumscripta**, a peculiar form of diphtheria described by Barrett, in which a distinct circumscribed slough appears on one tonsil, and death often results. **D.**, **Cutaneous**, a form involving abrasions of the skin. **D.**, **Gangrenous**, a gangrene of the skin and mucous membrane sometimes accompanying diphtheria. **D.**, **Laryngeal**, a form involving the larynx, threatening death by suffocation. **D.**, **Malignant**, a very fatal form, beginning with rigor, vomiting, and attended with typhoid symptoms. **D.**, **Nasal**, a form in which the diphtheritic membrane spreads to the nasal passages, and is accompanied by a fetid, brown discharge. **D.**, **Secondary**, a term designating the occurrence of the disease in association with other acute affections, such as typhoid fever, scarlatina, etc. **D.**, **Paraffin Treatment of**, the membrane is scraped or peeled off, and paraffin is applied to the raw surface every hour by means of a large camel's-hair brush.

**Diphtheric** (*dif-ther'-ik*) [*διφθερα*, a skin or membrane]. Pertaining to diphtheria. **D. Conjunctivitis**, a form of conjunctivitis attended with an infiltration of coagulable matter or inflammatory products. **D. Membrane**, the pellicle forming on the parts involved in the diphtheric process. **D. Paralysis**, a paralysis frequently affecting the muscles of the soft palate and larynx, after the healing of the lesions of these parts.

**Diphtheritic** (*dif-ther-it'-ik*) [*διφθερα*, a skin or membrane]. Same as *Diphtheric*, *q.v.*

**Diphtheritis** (*dif-ther-it'-tis*). See *Diphtheria*.

**Diphtheroid** (*dif'-ther-oid*) [*διφθερα*, a skin or membrane]. Resembling diphtheria. **D. Throat**. Synonym of *Herpetic Tonsillitis*.

**Diphthongia** (*dif-thon'-je-ah*) [*δεις*, double; *φθόγγος*, a voice]. The production of a double tone of the voice by the incomplete unilateral paralysis of the recurrent nerve, or by some lesion of the vocal bands that causes each portion of the glottis to produce its own sound.

**Diphycercal** (*dif-i-ser'-kal*) [*διφύς*, double; *κήρκος*, tail]. In biology, applied to fishes that have the

caudal fin-rays arranged equally above and below the extremity of the spinal column.

**Diphygenic** (*dif-i-gen'-ik*) [*διφυγής*, of a two-fold nature or form; *γεννᾶν*, to produce]. In biology, producing successively two sorts of embryos.

**Diphyllous** (*di-fil'-us*) [*δύς*, two; *φύλλον*, leaf]. In biology, composed of two leaves or sepals.

**Diphyodont** (*dif'-e-o-dont*) [*διφυής*, twofold; *ὀδούς*, tooth]. In biology, having two sets of teeth, as the milk-teeth and the permanent teeth.

**Diplacusis** (*dip-lak-u'-sis*) [*διπλῶος*, double; *ἀκουσις*, hearing]. 1. The hearing of a tone as higher by one ear than by the other; called *D. binauralis*. 2. The hearing of two tones by one ear, when only one tone is produced; called *D. uniauralis*, or *D. monauricularis*.

**Diplanetic** (*di-plan-et'-ik*) [*δύς*, twice; *πλανητός*, wandering]. In biology, applied to organisms that are twice active with an intervening period of quiescence.

**Diplastic** (*dip-las'-tik*) [*δύς*, two; *πλάσσειν*, to form]. A term applied to cells having two substances in their constitution.

**Diplegia** (*di-ple'-je-ah*) [*δύς*, double; *πληγή*, stroke]. Coincident paralysis of two corresponding parts, as of the two arms. Double or bilateral hemiplegia.

**Diplegic** (*di-ple'-jik*) [*δύς*, double; *πληγή*, stroke]. Relating to or of the nature of diplegia.

**Dipleuric** (*di-plu'-rik*) [*δύς*, two; *πλευρά*, side]. In biology, bilaterally symmetric.

**Diplococcus** (*dip-lo-kok'-us*) [*διπλῶος*, double; *κόκκος*, kernel]. A micrococcus whose spherules are joined two and two. See *Micrococcus* and *Bacteria*.

**Diplocoria** (*dip-lo-ko'-re-ah*) [*διπλῶος*, double; *κόρη*, pupil]. That state in which the pupil is double.

**Diploë** (*dip'-lo-e*) [*διπλοή*, a fold]. The cellular osseous tissue between the tables of the skull.

**Diploëtic** (*dip-lo-et'-ik*) [*διπλοή*, a fold]. Relating to the diploë; diploic.

**Diplogenesis** (*dip-lo-jen'-es-is*) [*διπλῶος*, double; *γένεσις*, production]. The development of a double or twin monstrosity.

**Diploic** (*dip-lo'-ik*) [*διπλοή*, a fold]. Pertaining to the diploë.

**Diploma** (*dip-lo'-mah*) [*δίπλωμα*, a diploma]. A document granted by an authorized body of men, showing that the recipient has performed certain work under the prescribed conditions, and is entitled to a definite professional rank and title.

**Diplomyelia** (*dip-lo-mi'-e-le-ah*) [*διπλῶος*, double; *μυελός*, marrow]. An apparent doubleness of the spinal cord, produced by a longitudinal fissure.

**Diphophony** (*dip-loff'-o-ne*) [*διπλῶος*, double; *φωνή*, voice]. Same as *Diphthongia*.

**Diphophonia** (*dip-lo-fō'-ne-ah*) [*διπλῶος*, double; *φωνή*, voice]. A rare symptom of laryngeal disease in which a double note is produced in the larynx. It is stated by Gottstein to occur in some cases of paralysis, or when a small tumor is situated so that on phonation it lies between the vocal bands. Cf. *Diphthongia*.

**Diplopia** (*dip-lo'-pe-ah*) [*διπλῶος*, double; *ὄψις*, sight]. Double vision, one object being seen by the eye or eyes as two. **D.**, **Binocular**, the most frequent, is due to a derangement of the muscular balance, the images of the object being thereby thrown upon non-identical points of the retinae. **D.**, **Crossed**, or **D.**, **Heteronymous**, the result of divergent strabismus, the image of the right eye appearing upon the left side, and that of the left eye upon the right side. **D.**, **Direct**, or **D.**, **Homonymous**, the reverse of Crossed **D.**, due either to paralysis of the external rectus or

over-action of the internal rectus. **D.**, **Physiologic**, that produced when an imperfect image is seen beyond or within the distance of the object accommodated for and transfixed by the visual axes. **D.**, **Monocular**, or **D.**, **Unicocular**, diplopia with a single eye, usually due to polycoria or other imperfections of the media. **Diplopic** (*dip-lo'-pik*) [*διπλῶος*, double; *ὄψις*, sight]. Relating to or affected with diplopia.

**Diplopiometer** (*dip-lo-pe-om'-et-er*) [*διπλῶος*, double; *ὄψις*, sight; *μέτρον*, measure]. An instrument for measuring the degree of double vision.

**Diploplacula** (*dip-lo-plak'-u-lah*) [*διπλῶος*, double; *πλάξ*, a tablet or plate]. In biology, a placula or discoid embryo composed of two layers of cells.

**Diplostemonous** (*dip-lo-stem'-o-nus*) [*διπλῶος*, double; *σῆμα*, a thread]. In biology, applied to a flower in which the stamens are double the number of sepals and petals.

**Diploteratography** (*dip-lo-ter-at-og'-ra-fē*) [*διπλῶος*, double; *τέρας*, a monster; *γράφειν*, to write]. A term used by Fisher to denote the description and diagnosis of special forms of double monsters.

**Diploteratology** (*dip-lo-ter-at-ol'-o-jē*) [*διπλῶος*, double; *τέρας*, a monster; *λόγος*, science]. The science of twin monstrosities.

**Dippel's Animal Oil**. Oleum cornu cervi; a pyroligneous oil, containing ammonium carbonate, amines, and aromatic compounds. It is obtained in distilling bone and deer's horn. It is antispasmodic and stimulant. Unof.

**Dipropargyl** (*di-pro-par'-jil*),  $C_6H_6$ . One of the hydrocarbons; a mobile liquid, of penetrating odor, isomeric with benzene; it boils at  $85^\circ C$ ; its specific gravity at  $18^\circ C$ . equals 0.81. If allowed to stand or if heat be applied to it, dipropargyl polymerizes and becomes thick and resinous.

**Diprosopia** (*di-pro-so'-pe-ah*) [*δύς*, double; *πρόσωπον*, face]. In teratology, the duplication of the face.

**Diprosopus** (*di-pros'-o-pus*) [*δύς*, double; *πρόσωπον*, face]. A monster characterized by a duplicity of the face and head, frequently associated with hydrocephalus, acrania, defective development of the brain, and spina bifida. The diprosopi have been classified as follows: 1. *Diprosopus diophthalmus*. 2. *D. distortus*. "Fisher has described the first case of diprosopus diophthalmus, or distortus, reported in English." There was anencephalus, a broad duplex nose, two mouths, one oral cavity, two tongues. 3. *D. triophthalmus*. In this variety there are three eyes, often with other deformities of the face and head, such as acrania, hare-lip, and cleft-palate. 4. *D. tetrophthalmus*. In this variety the differentiation of the two faces is further advanced, but there are still but two ears. There are present four eyes. 5. *D. triotus*. In this variety there are usually four eyes and always three ears. 6. *D. tetrotus*. In this variety, the intermediate stage between diprosopus and dicephalus, there are four eyes and four ears, with considerable duplicity in the cervical region. This is an extremely rare condition in the human race.

**Dipsesis** (*dip-se'-sis*) [*δίψησις*, thirst]. Extreme thirst. **Dipsetic** (*dip-se'-ik*) [*δίψητικός*, causing thirst]. Causing or attended with thirst.

**Dipsomania** (*dip-so-ma'-ne-ah*) [*δίψα*, thirst; *μανία*, madness]. The uncontrollable desire for spirituous liquors. This is generally considered as a disease.

**Dipsomaniac** (*dip-so-ma'-ne-ak*) [*δίψα*, thirst; *μανία*, madness]. A person affected with dipsomania.

**Dipsopathy** (*dip-sop'-a-the*) [*δίψα*, thirst; *πάθος*, affection]. Any disease depending upon or related to alcoholic excess.

**Dipsosis** (*dip-so'-sis*). See *Dipsesis*.

- Dipterocarpus** (*dip-ter-o-kar'-pus*) [*διπτερον*, two-winged; *καρπος*, fruit]. A genus of trees, mostly S. Asiatic. *D. alatus*, *D. catus*, *D. hippidus*, *D. laevis*, and *D. zeylanicus* afford wood oil or gurjun balsam.
- Dipterous** (*dip'-ter-us*) [*δις*, two; *τερον*, wing]. In biology, two-winged, as a fly or a seed.
- Dipteryx** (*dip'-ter-i-ks*) [*δις*, two; *πτερις*, a wing]. A genus of leguminous trees. *D. odorata*, the tree that produces the Tonka Bean, *γύμνη*.
- Dipygus** (*dip'-ig-us*) [*δις*, double; *πτερυς*, buttocks]. A monstrosity with more or less duplication of the pelvis and lower parts of the back.
- Dirca** (*dir'-ka*) [*διρκα*, a fountain near Thebes]. A genus of apetalous shrubs. *D. palustris*, wicopy, leatherwood, or moosewood; a N. American thymelaceous shrub, with the properties of mezereum. It is sparingly used in domestic practice for dyspepsia and hemicrania. *Λύμφ*.
- Direct** (*dir'-ekt*) [*directus*, straight]. In a right or straight line. **D. Current.** See *Current*. **D., Image.** See *Image*. **D. Ophthalmoscopy.** See *Ophthalmoscopy*. **D. Vision,** the perception of an object the image of which falls upon the macula.
- Direction** (*di-rek'-shun*) [*dirigere*, to direct]. Relative position considered without regard to linear distance. **D.-spindle,** a fusiform body of the ovula, stretching from the germinal vesicle toward the surface.
- Director** (*di-rek'-tor*) [*dirigere*, to guide]. Anything that guides or directs. **D., Grooved,** an instrument grooved to guide the knife in surgical operations.
- Dirigomotor** (*dir-ig-o-mot'-tor*) [*dirigere*, to direct; *motor*, a mover]. Causing or involving motion and at the same time directing that motion to an end.
- Dirt** (*der't*) [ME., *drut*]. Excrement; feces. **D.-eating.** See *Chthonophagia* and *Geophagism*.
- Dis** [*δς*, twice]. A prefix used to denote *two* or *double*. Also, a prefix to denote *apart* from.
- Disaccharids** (*di-sak'-ar-ids*) See *Carbohydrates*.
- Disarthral** (*dis-ar'-thral*) [*δις*, twice; *arthron*, a joint]. Relating to muscles that pass over two joints, e.g., the triceps.
- Disarticulation** (*dis-ar-tik-u-la'-shun*) [*dis*, apart; *articulum*, a joint]. Amputation in the contiguity of a part or at a joint.
- Disassimilation** (*dis-as-sim-il-a'-shun*) [*disassimilatio*]. In ophthalmology, the decomposition of visual substances in the retina.
- Disassociation** (*dis-as-o-se-a'-shun*) [*dis*, apart; *associare*, to unite with]. In chemistry, the decomposition of a compound by heat, the molecules reuniting on the removal of the heat.
- Disc** (*dis*) [*discus*, *δίσκος*, a quoit or round plate]. A circular, plate-like organ or body, especially the papilla of the eye, the entrance of the optic nerve into the eyeball. Its area corresponds with that of the *blind spot*. In dentistry, an instrument in the form of a disc, made of emery, cuttle fish, bone, or sand paper, for finishing fillings on surfaces between teeth. **D., Blood.** See *Blood*. **D.-carrier,** an instrument applied to the dental engine for the better application of corundum discs to the teeth. **D., Choked.** See *Perforator*. **D., Corundum.** A device used in dentistry for separating teeth, by cutting away a portion; it is used with the dental engine, and applied by means of carriers, that admit of ready adjustment and change of the disc to any desired angle with the shaft containing it. **D., Cupping of.** See *Excavation of the Optic Nerve*. **D., Germinal,** the small disc of the blastodermic membrane, in which the first traces of the embryo are seen. **D., Hypermetropic,** hazy; simulating optic neuritis, observed in hypermetropia. **D., Proliferous.** See *Discus proliferus*.
- Discharge** (*dis-charj'*) [ME., *dischargen*, to unload]. Any evacuation; that which is evacuated. See also *Excretions*, *Colors* and *Dyestuffs*.
- Discharger** (*dis-charj'-jer*). See *Electric*.
- Discharging** (*dis-charj'-ing*) [ME., *dischargen*, to unload]. Unloading, flowing out, as pus, etc. **D. Centers,** nerve-centers whence emanate influences which, according to the structures at the other ends of the nerves connected with them, may cause movements (muscles), secretion (glands), or contraction of vessels. **D. Lesion,** a brain-lesion that causes sudden discharges of nervous motor influence.
- Disciferous** (*dis-iz'-er-us*) [*discus*, a disc; *ferre*, to bear]. In biology, disc-bearing.
- Discifloral** (*dis'-if-lo-ral*) [*discus*, a disc; *flos* (*flor*), a flower]. In biology, applied to such flowers as have the receptacle expanded into a conspicuous disc.
- Discissio cataractæ.** See *Discission*.
- Discission** (*dis-izh'-un*) [*discissio*; *discindere*, to tear or cut apart]. 1. Bilateral incision, as of the cervix uteri. 2. An operation for cataract. See *Cataract*.
- Discoblastula** (*dis-ko-blas'-tu-lah*) [*δίσκος*, a disc; *βλαστος*, a germ]. In embryology, the blastula resulting from the development of a discomorula.
- Discocarp** (*dis'-ko-karp*) [*δίσκος*, a disc; *καρπος*, a fruit]. In biology, applied to those fruits in which the expanded receptacle encloses the seeds or achenia; also the same as *Apothecium*.
- Discocyula** (*dis-ko-sil'-u-lah*) [*δίσκος*, a disc; *κύτος*, a cell]. In embryology, the cyula resulting from the reformation of a nucleus in a discomonerula.
- Discodactyl** (*dis-ko-dak'-til*) [*δίσκος*, a disc; *δάκτυλος*, a finger]. In biology, applied to those animals (e.g., toads and frogs) the ends of whose toes are provided with disc-like dilatations.
- Discogastrula** (*dis-ko-gas'-tru-lah*) [*δίσκος*, a disc; *γαστήρ*, belly; *gastrula*, a two-layered germ-cup]. The gastrula resulting from discoid egg-cleavage or discoid segmentation of the yolk.
- Discoid or Discoidal** (*dis'-koid*, *dis-koil'-dal*) [*δίσκος*, a disc]. Somewhat disc-shaped.
- Discomonerula** (*dis-ko-mo-ner'-u-lah*) [*δίσκος*, disc; *μονήρης*, solitary]. In embryology, a disc-like monerula of a meroblastic ovum.
- Discomorula** (*dis-ko-mor'-u-lah*) [*δίσκος*, a disc; *morula*, dim. of *morum*, a mulberry]. In embryology, a disc-like morula of a meroblastic ovum.
- Discrete** (*dis-kret'*) [*discretus*, separated]. A term applied to exanthematous eruptions in which the pustules or papules remain distinct. The opposite of confluent.
- Discus** (*dis'-kus*) [*δίσκος*, a disc]. A disc. **D. proligerus,** the elevated cells of the *membrana granulosa* of the ovum, whereby the ovum is attached.
- Discussion** (*dis-kush'-un*) [*discussio*]. The scattering or driving away of a swelling, effusion, or tumor.
- Discutient** (*dis-ku'-shent*) [*discutere*, to shake apart]. 1. Capable of effecting resolution or discussion. 2. A medicine supposed to have the power of scattering or discussing a swelling.
- Disdiacast** (*dis-di'-ak-last*) [*δις*, double; *διά*, through; *κλίσσω*, to break down]. Any one of the (supposed) small doubly-refractive elements in the contractile discs changing its position during muscular contraction and relaxation.
- Disease** (*dis-ez'*) [*dis* negative; *ease*, a state of rest]. A condition of the body marked by inharmonious action of one or more of the various organs, owing to abnormal condition or structural change. A *Table of Diseases* named after men who have described or have especially studied them is appended. **D., Acute,** a disease marked by rapid onset and course. **D., Bad,**

a synonym of syphilis. **D., Bleeders'**, synonym of *Hemophilia*. **D., Chronic**, one that is slow in its course. **D., Constitutional**, one in which a system of organs or the whole body is involved. **D., Coarse**, the macroscopic organic lesions in a disease. **D., Cretinoid**. See *Myxedema*. **D. of Ditmarsch**, a form of endemic syphilis that was seen in Ditmarsch from 1762-1842. **D., Fatigue**. See *Fatigue*. **D., Feigned**, the wilful simulation of disease or injury, through malice or for the purpose of attaining a desired end. **D., Focal**, a centrally localized disease of the nervous system as distinguished from peripherally localized affections. **D., Functional**, abnormality of function without discoverable organic lesion. **D., Grouse**. See *Grouse Disease*. **D., Idiopathic**, one that exists by itself without any connection with another disorder; one of which the cause is unknown. **D., Intercurrent**, a disease occurring during the progress of another of which it is independent. **D., Knife-grinder's**, chronic catarrhal bronchitis met with in knife-grinders. **D., Pearl-worker's**, a recurrent bone-inflammation, with enormous hypertrophy of the bone, seen in workers in pearl-dust. **D., Saint Gothard**, a synonym of *Anchylostomiasis* or *Dochmiasis*, *q. v.* **D., Septic**, one arising from the putrefactive fermentation of some foreign substance within the body. **D. of Siam**. Synonym of *Yellow Fever*. **D., Specific**, one caused by the introduction of a specific virus or poison within the body; also a synonym of *Syphilis*. **D., Subacute**, one more protracted and less active than an acute disease. **D., Subchronic**, one less protracted than a chronic disease, but more protracted than an acute disease. **D., Symptomatic**, a disease caused by or connected with another ailment of the body. The opposite of idiopathic disease. **D., Zymotic**, a term used to include the whole class of germ-diseases, or those arising from the introduction and multiplication of some living germ within the body.

**Disengagement** (*dis-en-gaj'-ment*) [Fr., *desengager*, to disengage]. Emergence from a confined state; especially the escape of the fetus from the vaginal canal.

**Disfigurement** (*dis-fig'-tur-ment*) [*dis*, priv.; *figurare*, to fashion]. Blemish; deformity.

**Disinfectant** (*dis-in-fek'-tant*) [*dis*, neg.; *infcere*, to corrupt]. An agent that destroys disease-germs and noxious properties of fermentation and putrefaction.

**Disinfection** (*dis-in-fek'-shun*) [*dis*, neg.; *infcere*, to corrupt]. The destroying of disease-germs by means of heat, chemic substances, fumigation, or by fresh air. **D., Ransom's Apparatus for**, a method of disinfection by means of dry heat. **Washington Lyon's Apparatus**, a method in which steam is employed as the active agent.

**Disinfectol** (*dis-in-fek'-tol*) [*dis*, neg.; *infcere*, to corrupt]. An antiseptic substance analogous to creolin and lysol. It is used in the form of a two to five per cent. emulsion.

**Disinfect** (*dis-in-fek'-tor*) [*dis*, neg.; *infcere*, to corrupt]. An apparatus for the purpose of disinfection.

**Disintegrate** (*dis-in'-te-grat*) [*dis*, apart; *integer*, the whole]. To break up or decompose.

**Disinvagination** (*dis-in-vaj-in-a'-shun*) [*dis*, neg.; *in*, in; *vagina*, a sheath]. The reduction or relief of an invagination.

**Disjoint** (*dis-joint'*) [*disjoindre*, to disjoin]. To disarticulate; to separate, as bones, from their natural relations.

**Disk**. See *Disc*.

**Disklet** (*disk'-let*) [*δίσκος*, a disc]. A little disc.

**Dislocation** (*dis-lo-ka'-shun*) [*dis*, apart; *locare*, to place]. The luxation or abnormal displacement of one or more bones of a joint, or of any organ from its

natural position. **D., Complete**, the bones entirely separated. **D., Compound**, the coverings of the joint ruptured. **D., Consecutive**, the displaced bone is not in the same position as when originally misplaced. **D. of Eyeball**, displacement of the eyeball outside of the lids. **D. of Lens**, the crystalline lens thrown out of its capsule, or misplaced so that it does not occupy its proper position behind the pupil. **D., Old**, inflammatory changes having ensued. **D., Partial, or Incomplete**, the articulating surfaces remaining in partial contact; called, also, *Subluxation*. **D., Primitive**, the bones remaining as originally displaced. **D., Recent**, no inflammatory changes having ensued. **D., Simple**, without laceration of the surrounding parts. **Diastasis**, dislocation of an amphiarthrotic joint; also a separation, as of the parts of a muscle, or of the epiphysis of a bone from the diaphysis.

**Disorder** (*dis-or'-der*). See *Disease*.

**Disorganization** (*dis-or-gan-iz-a'-shun*) [*dis*, priv.; *organizare*, to organize]. Destruction or loss of organic structure; complete pathologic or traumatic change in the minute structure of any tissue.

**Disparate** (*dis'-par-at*) [*dispar*, unequal]. Not alike; unequal or unmet. **D. Points**, non-identical points of the two retinae. Diplopia is produced when the images of a single object fall upon such points.

**Dispareunia** (*dis-par-oo'-ne-ah*). See *Dyspareunia*.

**Dispensary** (*dis-pens'-ar-e*) [*dispensare*, to distribute]. A charitable institution where medical treatment is given the poor and medicines are dispensed on prescription.

**Dispensatory** (*dis-pens'-at-or-e*) [*dispensatorium*, an apothecary's diary]. A treatise on the materia medica, and the composition, effects, and preparation of medicines.

**Dispensing** (*dis-pens'-ing*) [*dispensare*, to weigh out]. The measuring, weighing, and issuing of the drugs ordered in a prescription.

**Dispersion** (*dis-per'-shun*) [*dispersio*; *dispersus*, scattered]. The resolution, discussion, or scattering of an inflammation or other morbid condition. In physics, the separation of a ray of white light into colored rays; also, any scattering of light, as that which has passed through ground glass.

**Dispirem** (*di-spi'-rem*) [*dis*, two; *spira*, a spiral]. In embryology, the two skeins of a dividing nucleus formed from the nuclear loops and giving rise to the daughter nuclei. It is the seventh stage of *Karyokinesis*, *q. v.*

**Displacement** (*dis-plas'-ment*) [Fr., *desplacer*, to displace]. A putting out of place; applied to various organs, as the uterus, heart, etc. **D. of Mortality**. See *Carroll's Doctrine*.

**Dispora caucasica** (*dis'-por-ah kaw-kas'-ik-ah*). See *Bacillus caucasicus*, under *Bacteria*, *Synonymatic Table of*.

**Disposition** (*dis-po-sish'-un*) [*dispositio*, an arranging]. Tendency, either physical or mental, to certain diseases.

**Dissection** (*dis-ek'-shun*) [*dissectio*, *dissecare*, to cut up]. The disassociation and exposition by means of incisions, cutting apart, etc., of the organs of the body, for purposes of scientific study. **Dissecting Aneurysm**. See *Aneurysm*. **Dissecting Wound**, injury during dissection, with consequent introduction of septic material. It may become constitutional and result in septicemia, or it may take the form of warts, *Ferruca necrogenica*. The sore resulting directly from the prick or abrasion is called *Post-mortem pustule*.

**Disseminated** (*dis-em'-in-a-ted*) [*disseminare*, to scatter seed]. Scattered; spread over a large area. **D. Sclerosis**. See *Insular Sclerosis*.

# TABLE OF EPONYMIC DISEASES.

| NAME  | PART AFFECTED  | SYMPTOMS.  | PATHOLOGY   | ETIOLOGY                                     | SYNONYMS.  |
|---|--|--|---|--|--|
| Albright's disease.<br>Fibrous dysplasia.       | Scapular, mandible, and most glomerular synostosis; nervous system atrophic. | Brown pigmentation of the skin, progressive anemia, asthenia, death from exhaustion.   | Tuberculous infiltration and fibrous degeneration of the capsules.  | Tubercle bacilli.                            | Melanin suppurative, dermatomelanin suppurative, cutis area bronzed skin disease, copper-skin. |
| Albright's disease.<br>Acromioclavicular joint. | Shoulder joint.  | Contractions of the skin and fascia; scar-like growths, of rounded, ovoid, or irregular shape; pale-yellowish or brownish in color; fixation of joints from skin-infiltration. | Formation of scar-tissue.   | Traumatism.                                  | Morphea; circumscripted scleroderma; scleroderma localis.                                      |
| Albright's disease.<br>Acromioclavicular joint. | Skin of sternum, shoulders and neck.   | Fibrous outgrowth of the skin.   | Formation of connective tissue.   | Obscure, traumatism.                         | Cheled; keloid; fungoid mycosis; true keloid.  |
| Arnold-Biheim's disease.                        | Spinal cord.   | Progressive muscular atrophy, spastic condition, tremors.  | Degeneration of the motor nuclei in the pyramidal tracts of the cord and medulla; fatty and sclerotic changes in the muscles. | Unknown.                                     | Cruveilhier's palsy; progressive muscular atrophy; Cruveilhier's atrophy; Duchenne's disease.  |
| Balser's fatty necrosis                         | Pancreas, omentum, mesentery.  | Indefinite; those of acute pancreatitis.   | Areas of opaque, white, fatty, and calcareous degeneration in the organs affected.  | Obscure.                                     |  |
| Barton's fracture                               | Radius (lower extremity).  | Silver-fork deformity.   | A chipping off of the articular surface.  | Traumatism.                                  |  |
| Bazellow's disease.                             | See <i>Graves' disease</i> .   |  |   |  |  |
| Bazin's disease.                                | Mucous membrane of cheek.  | Psoriatic eruption on the buccal mucous membrane.  | That of psoriasis.  | Obscure.                                     | Buccal psoriasis.  |
| Beclard's hernia                                | Intestine.   | Those of hernia.   | Femoral hernia, through the saphenous opening.  | Strain; traumatism.                          |  |
| Bednar's aphthæ.                                | Mucous membrane of hard palate of the new-born.                              | Progressive marasmus and death.  | Specific ulcerative stomatitis of the hard palate.  | Microbic.                                    | Ulcerative stomatitis of the new-born; plaques ptyerigiales; aphthæ of the palate; athrepsia.  |
| Begbie's disease.                               | See <i>Graves' disease</i> and <i>Bergeron's disease</i> .                   |  |   |  |  |
| Beigel's disease.                               | Brain.   | Acute delirium, wild hallucinations, insomnia, slight fever, dry tongue, rapid running pulse.  | No lesions found.   | Obscure.                                     | Acute delirium; acute periencephalitis.  |
| Bell's disease or mania.                        | Facial nerve.  | Immobility of the affected side of the face; impairment of hearing; herpes; occasional neuralgia.  | Lesion of the facial nerve; a neuritis.   | Tumors; abscess; chronic inflammation; cold. | Facial paralysis.  |
| Bell's palsy or paralysis.                      | Artery.  | Those of aneurysm.   | That of aneurysm.   | Traumatism; strain; atheroma.                |  |
| Bérard's aneurysm.<br>See <i>Aneurysm</i> .     | Any group of muscles, as of abdomen, head, etc.                              | Localized rhythmic movements.  | None.   | Hysteria.                                    | Localized rhythmic chorea; hysterical chorea; Begbie's disease.                                |
| Bergeron's disease.                             | Ear.   | Asymmetry of the ears.   | Deformity of the ears.  | Congenital.                                  |  |
| Blainville's ear.                               |  |  |   |  |  |
| Bostock's catarrh.                              |  |  |   |  |  |

|   |  |  |  |   |
|---|--|--|--|---|
| Bonilland's disease.                              | A synonym of <i>Endocarditis</i> , <i>q. v.</i>                                    |  |  |   |
| Boyer's cyst.                                     | Subhyoid bursa.  | Painless and gradual enlargement of the bursa.   |  | Irritation.   |
| Bright's disease. See <i>Bright's Disease</i> .   | Kidney.  | Edema, anemia, albuminuria, tubercasts.  | Inflammation of the renal tissues.   | Cold; specific poisons; lead-poisoning; repeated congestion.  |
| Briquet's ataxia.                                 | Nervous system.  | Ataxia; local anesthesia; hysterical manifestations.   | None.  | Hysteria.   |
| Broca's aphasia.                                  | Brain.   | Loss of speech from incoordination of the muscles; agaphia; right-sided hemiplegia.  | Lesion of third left frontal convolution of the brain.   | Various diseased conditions of the brain.   |
| Brodie's abscess.                                 | Head of the tibia.   | Those of bone-abscess.   | Ulceration of bone-tissue.   | Tubercle-bacillus; traumatism.  |
| Brodie's disease or knee.                         | Knee and other joints.   | Those of synovitis.  | Pulpy degeneration of the synovial membrane of a joint, especially of the knee.                        |   |
| Brown-Séquard's disease.                          | Spinal cord.   | Paralysis of a limb or side of the body, corresponding to the lesion in the cord; anesthesia on the opposite side; increased reflexes on side of lesion. |  | Tumors or traumatism of one side of the cord at some level.   |
| Budd's jaundice.                                  | A synonym of <i>Acute Yellow</i>   | <i>low Atrophy of the liver</i> . See <i>Icterus</i>   | <i>gravis</i> .  | Brown-Séquard's paralysis.  |
| Buhl's disease.                                   | All the organs of the newborn.   | Icterus, cyanosis, diarrhea, vomiting.   | Acute fatty degeneration of all the organs.  | Icterus typhoides (of Lebert).  |
| Carswell's grapes.                                | Lungs.   | Those of pulmonary tuberculosis.   | Racemose distribution of tuberculous infiltration about the smaller bronchial tubes.                   | Icterus of the new-born.  |
| Cazenave's lupus.                                 | Skin of face and head, usually; occasionally that of extremities, rarely on trunk. | Characteristic eruption on skin. See <i>Lupus</i> .  | Inflammation of corium with cell-infiltration.   | Unknown; preëxisting congestion of skin.  |
| Chabert's disease.                                | A synonym of <i>Syphilitic</i>   | <i>Anthrax or Black-leg</i> , <i>q. v.</i>   | Areas of grayish-red degeneration in the white matter of the cord and brain; excess of fibrous tissue. | Lupus erythematoses; lupus erythematosus.   |
| Charcot's disease ( <i>scélrose en plaques</i> ). | Brain and spinal cord.   | Spastic paraplegia with great increase in the reflexes; voluntary tremor; scanning speech; nystagmus; mental debility; vertigo; attacks of coma.         | Atrophy of the anterior horns and sclerosis of the antero-lateral columns.                             | Disseminated sclerosis; cerebro-spinal sclerosis; insular sclerosis; multilocular sclerosis; multiple sclerosis.  |
| Charcot's disease.                                | Pyramidal tracts of medulla and spinal cord.                                       | Progressive emaciation, and wasting of the muscles; spastic condition of the muscles; increased reflexes; tremor; failure of memory; dementia.           | Chronic inflammation of the synovial membrane, later involving the bony substance.                     | Anytrophic lateral sclerosis; primary lateral sclerosis; primary spastic paraplegia; lateral sclerosis; chronic anterior poliomyelitis; progressive muscular atrophy. |
| Charcot's joint.                                  | Any joint.   | Swelling; but slight local heat and pain; soreness on motion.  |  | Spinal arthropathy.   |

TABLE OF EPONYMIC DISEASES.—Continued

| NAME                            | PART AFFECTED   | SYMPTOMS   | PATHOLOGY   | ETIOLOGY  | SYNONYMS   |
|---------------------------------|---|--|---|---|--|
| Cloquet's hernia                | Intestines  | Those of hernia.   | Femoral hernia resting on the pectineus muscle, the tumor turned within and behind the femoral vessels. | Strain; traumatism.   | Pectineal crural hernia.   |
| Cloquet's fracture              | Radius (lower third).   | Silver-fork deformity  | A splitting from $\frac{1}{4}$ -inch to $\frac{1}{2}$ -inches above the articulation.                   | Traumatism.   |  |
| Croquet's disease               | Serous membranes, especially the pleura   | Vary with the membranes involved.  | Progressive and malignant inflammation of various serous membranes.                                     | Obscure   | Polyrhythmenitis, polyorihomenitis   |
| Croquet's (Alek) hernia         | Intestines  | Those of hernia.   | Congestion; strangulation of the bowel.   | Lodgment of the small intestine in the duodeno-jejunal fossa. | Mesenteric hernia; retroperitoneal hernia  |
| Croquet's irritable testicle.   | Synonym of <i>Mastodynia</i> , <i>q. v.</i>   |  |   |   |  |
| Croquet's irritable testicle.   | Synonym of <i>Ochialgia</i> , <i>q. v.</i>  |  |   |   |  |
| Croquet's disease.              | A synonym of <i>Aortic Insufficiency</i> , <i>q. v.</i>   |  |   |   |  |
| Cruveilhier's atrophy of pulse. | See <i>Aran-Duchenne's Disease</i> .  |  |   |   |  |
| Cruveilhier's disease.          | Stomach.  | Pain; hæmatemesis; vomiting; emaciation; peritonitis (occasionally).                         | Ulceration of the gastric wall.   | Improper diet and hygiene.                                    | Simple ulcer of the stomach.   |
| Curling's ulcer.                | Duodenum.   | Vary with the part affected, and are preceded by a rapid disappearance of the local signs.   | Ulceration of the bowel-wall.   | Burns of the surface.   | Duodenal ulcer.  |
| Da Costa's disease.             | Gastro-intestinal tract; heart, brain.  | Characteristic lesions of the skin. See <i>Darier</i> .                                      | Vary with the localization of the disease.  | Gouty diathesis.  | Suppressed gout; retrocedent gout; lithemia  |
| Darier's disease.               | Skin of body.   | Absence of the upper part of the helix, and formation of cartilaginous nodules in the helix. | Inflammation of the skin-layers, with cell-infiltration.  | Obscure.  | Psorospermose folliculaire végétante; keratosis follicularis; ichthyosis sebacea cornea.           |
| Darwin's ear.                   | Ear.  | Those of glaucoma.   | Malformation.   | Congenital.   |  |
| Devergie's disease.             | See <i>Gibert's pityriasis</i>  |  |   |   |  |
| Donders' glaucoma.              | Eye.  | Recurring periodic attacks of hæmaturia.   | Atrophy of the optic papilla and hardening of the eyeball.  | Obscure.  | Simple atrophic glaucoma.  |
| Dressler's disease.             | Blood.  | Progressive palsy and wasting, with sudden, shock-like movements.                            | Presence of coloring-matter of the blood in the urine.  | Malarial.   | Paroxysmal hæmoglobinuria; intermittent hæmoglobinuria; periodic hæmoglobinuria; Harley's disease. |
| Dubini's disease.               | Nervous system.   | Obscure.   | Obscure.  | Obscure.  | Electric chorea.   |
| Duchenne's disease.             | See <i>Aran-Duchenne's Disease</i> .  |  |   |   |  |
| Duchenne's disease.             | A synonym of <i>Dubur Paralysis</i> , <i>q. v.</i> , and of <i>Progressive Locomotor ataxia</i> . |  |   |   |  |

|                                     |  |   |  |  |  |
|-------------------------------------|--|---|--|--|--|
| Duchenne's paralysis.               | A synonym of <i>Pseudo-hydrocephalic paralysis</i> . |   |  |  |  |
| Dühring's disease, or impetigo.     | Skin.  | Protean eruption; itching and burning; exhaustion.  | Undetermined.  | Obscure.   | Dermatitis herpetiformis; pemphigus pruriginosus; hydroa herpetiforme; herpes gestationis; herpes circinnatus; bullous; pemphigus circinnatus; pemphigus malignus; pemphigus hystericus. |
| Dupuytren's contraction.            | Palmar fascia and contiguous structures.             | Contraction of one or more fingers.   | Cicatricial contraction.                                     | Burns and injuries.  |  |
| Dupuytren's hydrocele.              | Tunica vaginalis testis.                             | Those of hydrocele.   | Same as hydrocele.   | Same as hydrocele.   | Bilocular hydrocele.   |
| Eichhorst's neuritis.               | Nerves.  | Those of neuritis.  | Obscure.   | Obscure.   | Neuritis fasciatis.  |
| Eichstedt's disease.                | Skin.  | Characteristic lesion. See <i>Tinea versicolor</i> . Slight or no subjective symptoms.  | Infiltration of cuticle with the parasite and its spores.    | A vegetable parasite; microsporion furfur.                         | Pityriasis versicolor; chromophytosis; tinea versicolor.   |
| Erb's disease.                      | Spinal cord.   | Progressive wasting of various groups of muscles in upper arm and shoulder, and gluteal and thigh muscles; later, hypertrophy.  | Fatty and sclerotic degeneration of motor nuclei in cord.    | Largely hereditary; disease of puberty.                            | Juvenile muscular atrophy; primary muscular dystrophy; idiopathic muscular atrophy.  |
| Erb's palsy.                        | Pyramidal tracts of cord.                            | Loss of power; spasm of muscles of lower extremities; spastic gait; crossed-leg progression; increased reflexes.  | Obscure; degeneration of pyramidal tracts.                   | Syphilis, frequently   | Spastic paraplegia; spasmodic tabes dorsalis; lateral sclerosis.   |
| Erl's-Charcot's disease             |  |   |  |  |  |
| Erichsen's disease.                 | Cerebro-spinal axis.                                 | Those of neurasthenia and hysteria.   |  | Concussion of central nervous system from railroad shock.          | Spasmodic locomotor ataxia.  |
| Fauchard's disease.                 | Dental alveoli.                                      | Pain; supuration; swelling.   | Slow and progressive destruction of alveoli; death of teeth. | Decayed teeth, etc.  | Railway spine, <i>q. v.</i> ; railway brain; traumatic hysteria.   |
| Fajani's disease.                   | Synonym of <i>Exophthalmic goitre</i> .              |   | Obscure.   |  | Alveolo-dental peristitis; pyorrhœa alveolaris; alveolar abscess; Riggs' disease.  |
| Fothergill's disease, or facicache. | Facial nerve.  | Severe pain in face; tender points of Valleix; salivation; herpes; lachrymation.  |  |  | Facial neuralgia; tic douloureux; trifacial neuralgia; prosopalgia; trigeminal neuralgia.  |
| Fothergill's sore-throat.           | Throat.  | Pain; swelling; associated symptoms of scarlet fever.   | Intense inflammation; membranous exudate.                    | Specific virus of scarlatina.                                      | Scarlatina anginosa; anginoid scarlet fever.   |
| Friedreich's ataxia or disease.     | Spinal cord.   | Peculiar swaying, irregular gait; also similar movements of head and arms; reflexes frequently lost; nystagmus; talipes equinus; lateral curvature of spine; scanning speech. | Sclerosis of posterior and lateral columns of cord.          | Hereditary.  | Hereditary ataxia; family ataxia; postero-lateral sclerosis; hereditary ataxic paraplegia.   |
| Friedreich's disease.               | Synonym of <i>Paramyoclonus</i> .                    |   |  |  |  |
| Gerlier's disease.                  | Nervous system.                                      | Sudden paroxysms of ptosis; rotary vertigo; muscular paresis; cervico-occipital pain.   | Obscure.   | Obscure.   | Paralyzing vertigo.  |
| Gibbon's hydrocele.                 | Scrotum and bowel.                                   | Those of hydrocele and hernia.  | Hydrocele with hernia.                                       |  |  |
| Gilbert's pityriasis.               | Skin.  | Characteristic eruption; face discolored; chronic course; itching; progressive emaciation; exhaustion; death.   | A dermatitis.  | Those of hernia; irritation of tunica vaginalis testis. Uncertain. | Pityriasis ruber; dermatitis exfoliativa; pityriasis ruber aen; Devergie's disease; Hebra's pityriasis   |

TABLE OF EPONYMIC DISEASES *Continued*

| NAME  | PART AFFECTED                                    | SYMPTOMS   | PATHOLOGY  | ETIOLOGY  | SYNONYMS   |
|---|--|--|--|---|--|
| Caplain's disease                             | Abdominal viscera.                               | Those of gastro-intestinal disturbance with necroticæmia; prolapse of abdominal organs; looseness of mesenteric and peritoneal attachments.                | Occurs in pendulous abdomen, etc.  | Relaxation and necroticæmia.  | Enteroptosis, splanchnotosis.  |
| Cheese-cake cirrhosis.                        | Liver.   | Those of cirrhosis.  | Liver much reduced in size, covered by a firm, grayish membrane; chylotic changes in parenchyma. | Alcoholism, cyanotic induration.  | Perihepatitis.   |
| Chomard or Govard's disease                   | The bowel.                                       | Those of hernia.   | That of hernia.  | Usual causes of hernia.   | Inguinal intestinal hernia.  |
| Graves' disease. See <i>Graves' Disease</i> . | Thyroid gland, eyes, heart.                      | Cardiac palpitation; goiter; exophthalmos; Græfe's lid-sign; Stellwag's sign.  | Unknown.   | Obscure, but most frequent in neurotic persons.                               | Exophthalmic goiter; Basedow's disease; Parry's disease; Begbie's disease; March's disease; Parson's disease; Stokes' disease. |
| Gabler's tumor.                               | Wrist.   | Prominence on back of wrist in wrist-drop.   |  | Lead-poisoning.   |  |
| Hall's (Marshall) disease.                    | Brain.   | Occasional convulsions; semi-comatose condition; irregular pulse; contracted pupils; flaccid, depressed fontanel; retracted head; Cheyne-Stokes breathing. |  | Early age; prolonged illness; premature weaning.                              | Hydrocephaloid disease; spurious hydrocephalus; hydrocephaloid disease.  |
| Halstern's disease.                           | Entire body.                                     | Those of syphilis.   | That of syphilis.  | Syphilitic virus.   | Endemic syphilis.  |
| Hammond's disease.                            | Brain and cord.                                  | Constant rhythmic movements of fingers and toes.   | Obscure.   | Lesion of the brain and cord.   | Althetosis; post-hemiplegic chorea.  |
| Hanot's disease.                              | Liver.   | Chronic jaundice; absence of ascites; enlargement of spleen.   | Increase of intralobular and interlobular connective tissue; liver large, smooth, firm.          | That of cirrhosis.  | Hypertrophic cirrhosis of liver;iliary cirrhosis.  |
| Harley's disease.                             | See <i>Dressler's Disease</i> .                  |  |  |   |  |
| Heberden's asthma.                            | Synonym of <i>Angina pectoris</i> , <i>q. v.</i> | Those of chronic rheumatism, with formation of nodosities.   | Destruction of the cartilages; roughening of articular surfaces; thickening of the ligaments.    | That of rheumatism.   | Osteo-arthritis; rheumatic arthritis; digitorum nodi.  |
| Heberden's disease or rheumatism              | Smaller articulations, as those of the fingers.  |  |  |   |  |
| Hebra's erythema.                             | Skin.  | Characteristic eruption; slight constitutional manifestations.   | Inflammatory effusion of serum and leukocytes.   | Early adult age; spring and autumn; irritating ingesta; specific bacilli (?). | Polymorphous erythema; erythema multiforme.  |
| Hebra's pityriasis.                           | See <i>Gibber's pityriasis</i> .                 |  |  |   |  |
| Hebra's prurigo.                              | Skin.  | Characteristic eruption; limbs feel like coarse brown paper; incurable; persists through life.   | Unknown—probably a neurosis.   | Poor food; poor hygiene; early age.   | Prurigo ferox; congenital prurigo.   |
| Henoch's purpura.                             | Skin.  | Purpuric eruption, associated with peculiar intestinal symptoms.   |  | Obscure.  |  |

|   |                                       |  |   |  |
|---|---------------------------------------|--|---|--|
| Hesselbach's hernia.                              | Intestines.                           | Those of hernia. The hernia presents a lobulated appearance.   | There is a diverticulum of the hernia through the cruriform fascia.   | That of hernia generally.  |
| Heubner's disease.                                | Cerebral arteries.                    | Pain in the head; giddiness; drowsiness; numbness and weakness of one side of body; glycosuria; albuminuria; later, hemiplegia; aphasia; coma, or delirium; death.                             | Grayish or whitish thickenings of the coats of the vessels; complete or incomplete occlusion of the lumen; growth of fibrous tissue; infiltration of round cells. | Syphilis.  |
| Hodgkin's disease. See <i>Hodgkin's Disease</i> . | Lymph-glands; blood.                  | Enlargement of the lymphatic glands; marked and progressive anemia; edema of the face; pressure-symptoms; hemorrhages; purpura; dyspnea; hemic murmurs; palpitation; fever; exhaustion; death. | Hyperplasia of lymphoid structures of the body; enlargement of spleen.  | Unknown.   |
| Hodgson's aneurysm, or disease.                   | Aorta, first part.                    | Those of aneurysm, frequently with hypertrophy and dilatation of the heart.  | Inflammatory and sub-inflammatory changes with extreme degeneration.  | Old age.   |
| Hugnier's disease.                                | Uterus.                               | Those of fibroid tumor of the uterus; growth; pressure-symptoms; hemorrhage, etc.  | Development of fibrous tissue.  | Fibro-myoma of the uterus.   |
| Huntingdon's chorea.                              | Brain.                                | Irregular movements; disturbance of speech; gradual dementia.  | No characteristic lesions; atrophy of the convolutions; chronic meningoenephallitis.  | Advanced age; heredity; psychical troubles.  |
| Inman's myalgia.                                  | Muscular system.                      | Muscular pain of any origin.   | None.   | Muscular rheumatism.   |
| Jacksonian epilepsy.                              | Brain-cortex.                         | Spasm of a single group of muscles in the face, arm, or leg, or other region; no loss of consciousness; usually there are sensory phenomena.   | Lesion of the motor area of the brain.  | Cortical epilepsy; symptomatic epilepsy; focal epilepsy; partial epilepsy; epileptiform seizures.  |
| Jacob's ulcer.                                    | Eyelid.                               | Slow ulceration at inner end of lower lid.   | Epithelial cancer-formation; edges indurated and elevated; no lymphatic involvement.  | Rodent ulcer of the eyelid; lupus of the eyelid; carcinoma of the eyelid.  |
| v. Jaksch's disease.                              | A synonym of <i>Pseudo-leukemia</i> . | <i>koxythemia occurring in infants</i> . See   | <i>Hodgkin's Disease</i> .  | Infantile pseudo-leukemic anemia; anaplasia pseudo-leukemica infantilis.   |
| Kaposi's disease.                                 | Skin.                                 | Characteristic eruption, followed by atrophy of the skin and formation of epithelial carcinoma; emaciation; exhaustion; death.   | Atrophic degeneration of the skin.  | Xeroderma pigmentosum; parchment skin; atrophoderma pigmentosum; angione pigmentosum atrophicum; dermatosis kaposi; leiodermia essentialis cum melanosist et telangiectasia; melanosis leucotelaris progressiva. |
| Kopp's asthma.                                    | See <i>Millar's Asthma</i> .          |  |   |  |
| Krühner's disease.                                | Nervous system.                       | Hyperesthesia; illusions of sense; vertigo; tachycardia.   | Neurosis.   | Cerebro-cardiac neuropathy.  |
| Krönlein's hernia.                                | Intestines.                           | Those of hernia.   | A variety of inguinal hernia.   | Inguino-peritoneal hernia.   |
| Kussmaul's coma.                                  | A synonym of <i>Diabetic</i>          | <i>Coma</i> . See <i>Diabetes and Coma</i> .   |   |  |

TABLE OF EPONYMIC DISEASES. *Continued.*

| NAME  | PART AFFECTED.                | SYMPTOMS.  | PATHOLOGY   | ETIOLOGY.  | SYNONYMS.  |
|---|-------------------------------|--|---|--|--|
| Kussmaul's disease.                         | Spinal cord.                  | Sudden onset; rapid muscular wasting; reaction of degeneration; fever.   | Acute hemorrhagic myelitis of the anterior horns, with degeneration and destruction of the large ganglion-cells.  | Unknown.   | Acute atrophic spinal paralysis; polio-myelitis anterior.  |
| Laennec's atrophic cirrhosis                | Liver.                        | Digestive derangement; diminution in size of liver, tendency to hemorrhage; ascites; jaundice.   | Great reduction in the size and weight of the liver, with deformity; surface granular; substance composed of greenish-yellow islands surrounded by grayish-white connective tissue. | Alcoholism; lead-poisoning; malaria, gout.       | Chronic interstitial hepatitis; atrophic cirrhosis, portal cirrhosis.  |
| Landouzy-Déjérine type of muscular atrophy. | Spinal cord.                  | Wasting of muscles of face and those of the scapulo-humeral groups.  | Degeneration of the muscles involved, which undergo a fatty and sclerotic change; degeneration of motor nuclei in spinal cord.  | Heredity; age twenty to thirty years.            | Facio-scapulo-humeral type of idiopathic muscular atrophy.   |
| Landry's paralysis.                         | Spinal cord.                  | Loss of motor power in the lower extremities gradually extending upward; exhaustion; loss of reflexes; sensation usually intact; death usually.  | Degenerative changes in the anterior roots of the spinal nerves.  | Unknown; most common in males between 20 and 30. | Landry's disease; acute ascending paralysis.   |
| Laugier's hernia.                           | Intestines.                   | Those of hernia.   | A femoral hernia perforating Gimbernat's ligament.  | That of hernia.                                  |  |
| Leber's disease.                            | Eye.                          | Those of optic neuritis.   | Malformation of optic nerve with atrophy, and inflammatory changes.   | Heredity—affects the males of a family.          | Hereditary optic atrophy.  |
| Legal's disease.                            | Meningo-tympanic region.      | Headache.  | Inflammatory changes.   | Obscure.   |  |
| Leyden's neuritis.                          | Nerves.                       | Those of neuritis.   | Destruction of the nerve-fibers; formation of fibrous connective tissue, with deposit of fat.   | That of neuritis.                                | Lipomatous neuritis.   |
| Leyden's type of muscular atrophy.          | Spinal cord.                  | Wasting of muscles of lower extremities and back; hypertrophy of the calves.   | Fatty and sclerotic degeneration of the affected muscles; degeneration of the motor nuclei of the spinal cord.  | Heredity.  | Hereditary muscular atrophy.   |
| Little's disease.                           | Brain and cord.               | Stiffness of the legs; talipes equinus with characteristic attitude; crossed-leg progression; lead-pipe contraction; increased reflexes; sensation normal; symptoms of cerebral defects—idiocy, imbecility, nystagmus. | Lesion of brain-cortex; meningeal hemorrhage; arrest of development of pyramidal tracts.  | Difficult labor or premature delivery.           | Congenital muscular rigidity; spasmodic tabes of children; spastic paraplegia of infants; paraplegia cerebrales spasica. |
| Littre's hernia.                            | Intestines.                   | Those of hernia.   | Hernia of an intestinal diverticulum.   | That of hernia.                                  |  |
| Littre's hernia.                            | Synonym of <i>Richter's</i> . | <i>Hernia.</i>   |   | Unknown.   | Retropertitoneal sarcoma.  |
| Lobstein's cancer.                          | Abdomen.                      | Large abdominal tumor, centrally situated; immovable.  | Sarcomatous tissue.   |  |  |
| Louis' angina.                              | Synonym of <i>Ludwig's</i> .  | <i>Angina.</i>   |   |  |  |
| Loy's disease.                              | Entire body of horse.         | Characteristic pustular eruption.  |   | Specific virus.                                  | Horse-pox; variola equina.   |

|  |  |   |   |   |  |
|--|--|---|---|---|--|
| Ludwig's angina.                         | Neck.  | Swelling, especially in the submaxillary region; intense pain.  | Cellulitis of neck.   | Usually follows specific fevers, especially diphtheria and scarlet fever; may be idiopathic, or result from trauma. | Louis' angina; cellulitis of the neck.   |
| Malassez' disease.                       | Testicle.                                    | Tumor of the gland.   | Cyst-formation.   | Cyst of the testicle.   |  |
| March's disease.                         | See <i>Graves' Disease</i> .                 |   |   |   |  |
| Marie's disease. See <i>Acromegaly</i> . | Bones of face and extremities.               | Gradual hypertrophy of the hands, feet, and face; changes in the size of the thyroid gland; headache.   | Hypertrophy of the bones; enormous enlargement of the pituitary body.                                   | Unknown; heredity probably.   | Acromegaly; acromegalia; akromegaly.   |
| Marjolin's warty ulcer.                  | Skin.  | Wart-like parallel growths; progress slow; glandular enlargement.   | Malignant degeneration of a cicatrix or old ulcer.  | Old age; heredity.  |  |
| McLeod's capsular rheumatism.            | Joints.                                      | Those of rheumatism.  | Effusion into the synovial capsules and into the synovial sheaths and bursae around the affected joints | That of rheumatism.   |  |
| Ménière's disease.                       | Semicircular canals.                         | Vertigo; nausea; vomiting; deafness; rotatory movements; sudden and temporary apoplectic symptoms; tinnitus aurium; ocular symptoms—nyctagnus, diplopia.                  | Inflammatory processes in the canals.   | Uncertain.  | Aural vertigo; auditory vertigo; labyrinthine vertigo.   |
| Millar's asthma.                         | Nervous system; reflexly the larynx.         | Sudden paroxysms of suffocation, with short, sonorous respiration; high mortality.  | Neurosis.   | Rachitis; early age.  | Thymic asthma; spasm of the glottis; laryngismus stridulus; laryngospasm; laryngeal suffocation; spasmodic croup; internal convulsions; spasmodic laryngitis; <b>Passionitis</b> ; <b>child-crowing</b> ; <b>Kopp's asthma</b> . |
| Morand's disease.                        | Extremities.                                 | Paresis of the extremities.   | Disease of the nervous system.  | Obscure.  |  |
| Morand's foot.                           | Foot.  | The presence of eight toes on the foot.   | Deformity of foot.  | Congenital.   | Flat ear.  |
| Morel's ear.                             | Ear.   | Flattening of the folds of the ear; thinness of the rim; increase in the size of the ear.   | Abnormality of the helix, anti-helix, scaphoid fossa, and crura furcata.                                | Congenital.   |  |
| Morton's foot or Morton's toe.           | Metatarsophalangeal joint of the fourth toe. | Pain in the foot.   | Local neuritis.   | Bruising of one or more branches of the external plantar nerve.   | Morton's affection; Morton's toe; metatarsalgia.   |
| Morvan's disease.                        | A limb.                                      | Loss of sensibility on one side; neuralgic pain and paresthesia of the affected limb; vaso-motor and trophic disturbances, as shown by painless and destructive whitlows. | Disease of the posterior roots of the nerves of the affected limb.                                      | Rheumatic elements(?); hysteria.  | Monoplegia anesthetica.  |
| Naegele's pelvis.                        | Pelvis.                                      | Deformity of pelvis.  | Lack of development of one lateral mass of the sacrum.  | Congenital.   | Obliquely-contracted pelvis.   |
| Paget's disease.                         | Bone.  | Hypertrophy of the bone-tissue, with deformity.   | Inflammatory changes.   |   | Hypertrophic deforming osteitis ossificans.  |
| Paget's disease.                         | Nipple and areola.                           | Eczema-like eruption; intensely red; clear, yellowish, viscid exudation; frequently terminates in carcinoma.  | Inflammatory changes; cell-infiltration.  | Presence of psoriasis (Darier, Macculum, Osler).  | Paget's nipple.  |

|   |  |   |  |  |   |
|---|--|---|--|--|---|
| Quincke's disease.                                | Skin, usually of loins and thigh.              | Immense and sudden circumscribed swelling of the skin; a sense of tension.  | That of urticaria.   | That of urticaria.                                 | Urticaria oedematosa; giant urticaria; acute circumscribed edema; urticaria subcutanea.       |
| Quinquaud's disease.                              | Scalp and hairy parts.                         | Formation of smooth, irregular patches of alopecia, dotted with red points.   | Perifollicular inflammation.   | Probably mycotic.                                  | Folliculitis decalvans; acne decalvans.   |
| Ray's mania.                                      | Brain.   | A form of general moral insanity.   | Changes in the cerebral cortex.  | Obscure.   |   |
| Raynaud's disease. See <i>Raynaud's Disease</i> . | The extremities.                               | Local syncope; local asphyxia; local gangrene; chill; hemoglobinuria; cerebral symptoms; mental torpor.                                     | Obscure.   | Vaso-motor changes.                                | Local gangrene; symmetric gangrene; sphacelodema; gangrene of the skin; dermatitis gangrenosa |
| Raynaud's disease.                                | Throat-muscles.                                | Paralysis of affected muscles.  |  | Secondary to parotiditis.                          |   |
| Reclus' disease.                                  | Mammary gland.                                 | Slight enlargement of both breasts; fluctuation; no pain.   | Disseminated cystic dilatations of the ducts and acini.  |  | Cystic disease of the breast.   |
| Richter's hernia.                                 | Intestines.                                    | Those of strangulated hernia.   | Strangulated enterocoele in which only a part of the circumference of the gut is constricted.                            | That of hernia.                                    | Parietal enterocoele; partial enterocoele; Littre's hernia.                                   |
| Riga's disease.                                   | Mouth.   | Aplithous eruption beneath the tongue; painless; grave constitutional symptoms; emaciation; exhaustion; earthy pigmentation of skin; death. | Ulcer, gray in color, with irregular and poorly defined borders; enlargement and fatty degeneration of liver and spleen. | Hereditary; characteristic bacilli.                | Cachectic aphthae.  |
| Riggs' disease. See <i>Finchard's disease</i> .   |  |   |  |  |   |
| Ritter's disease.                                 | Skin.  | Characteristic eruption on skin; exhaustion.  | Inflammation, with exfoliation.  |  | Dermatitis exfoliativa in infantum; dermatitis exfoliativa neonatorum.                        |
| Rivolta's disease.                                | Synonym of <i>Actinomycosis</i> , <i>q. v.</i> |   |  |  |   |
| Robert's pelvis.                                  | Pelvis.  | Deformity of pelvis.  | Lack of development of both lateral masses of the sacrum.  | Congenital.  | Transversely-contracted pelvis; doubly symstotic pelvis.                                      |
| Rodrigues' aneurysm. See <i>Aneurysm</i>          | Arteries and veins.                            | Those of varicose aneurysm.   | A varicose aneurysm with the sac immediately contiguous to the artery.   | Trauma.  |   |
| Rokitansky's disease.                             |  | See <i>Atrophy of the Liver</i> .   | <i>gravis</i> .  |  | Hyperchlorhydria; gastrostaxis; gastrostaxis; hyperacid vomiting of Rosenthal.                |
| Rossbach's disease.                               | Stomach.                                       | Cephalalgia; gastralgia; very acid vomiting; in paroxysms.  | Neurosis.  | Exaggerated secretion of HCl in the gastric juice. |   |
| Sacensisch's ulcer.                               | Cornea.  | Those of purulent keratitis.  | An acute, serpiginous or creeping ulceration; sharp margins; arc of propagation; gray floor; sloughing of cornea.        | Local infection.                                   | Infectious ulcer of the cornea  |
| Saint Agatha's disease.                           | Synonym of <i>Mammillitis</i> , <i>q. v.</i>   |   |  |  |   |
| Saint Aignan's disease                            | Synonym of <i>Tinea faciei</i> .               |   |  |  |   |
| Saint Anthony's dance                             | Synonym of <i>Chorea</i> , <i>q. v.</i>        |   |  |  |   |
| Saint Anthony's fire.                             | Synonym of <i>Pyriphalangia</i> , <i>q. v.</i> |   |  |  |   |
| Saint Anthony's fire.                             | Skin.  | Gangrene of the affected parts; pain.   | Intense inflammation, with destruction of the affected parts.  | Chronic ergotism.                                  | Epidemic gangrene.  |

TABLE OF TYPHYMIC DISEASES—Continued.

| NAME                       | PATHOGENIC   | SYMPTOMS                       | PATHOLOGY | ETIOLOGY    | SYMPTOMS   |
|----------------------------|--|--------------------------------|-----------|-------------|------------|
| Saint Aphrodite's disease. | Tooth and jaw.   | Loethache and pain in the jaw. | Neurosis. | Carie, etc. | Toothache. |
| Saint Avicenna's disease.  | Synonym of <i>Lipulphus</i> , <i>q. v.</i>   |                                |           |             |            |
| Saint Avicenna's disease.  | Synonym of <i>Diogenes</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint Blaise's disease.    | Same as Saint Blasius' disease.  |                                |           |             |            |
| Saint Blaise's disease.    | Synonym of <i>Quar</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint Clair's disease.     | Synonym of <i>Ophthalmia</i> , or <i>Sore Eyes</i> , <i>q. v.</i>                    |                                |           |             |            |
| Saint Dymphna's disease.   | Synonym of <i>Insanity</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint Erasmus' disease.    | Synonym of <i>Culu</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint Fiacre's disease.    | Synonym of <i>Hemorrhoids</i> , or of <i>Condylomata</i> , <i>q. v.</i>              |                                |           |             |            |
| Saint Francis' fire.       | Synonym of <i>Erysipelas</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint Gervasiu's disease.  | Synonym of <i>Rheumatism</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint Gilles' disease.     | Synonym of <i>Carcinoma</i> , or <i>Leprosy</i> , <i>q. v.</i>                       |                                |           |             |            |
| Saint Guy's disease.       | Synonym of <i>Chorea</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint Hubert's disease.    | Synonym of <i>Hydrophobia</i> , <i>q. v.</i>   |                                |           |             |            |
| Saint Job's disease.       | Synonym of <i>Syphilis</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint John's disease.      | Synonym of <i>Chorea</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint John's evil.         | Synonym of <i>Epilepsy</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint Lazarus' disease.    | Synonym of <i>Leprosy</i> , or <i>Measles of the Hog</i> , <i>q. v.</i>              |                                |           |             |            |
| Saint Main's disease.      | Synonym of <i>Scabies</i> , <i>q. v.</i>   |                                |           |             |            |
| Saint Martin's evil.       | Synonym of <i>Drunkenness</i> , <i>q. v.</i>   |                                |           |             |            |
| Saint Mathurin's disease.  | Synonym of <i>Insanity</i> , or <i>Idiocy</i> , or of <i>Epilepsy</i> , <i>q. v.</i> |                                |           |             |            |
| Saint Modestus' disease.   | Synonym of <i>Chorea</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint Roch's disease.      | Synonym of the <i>Rubonic Plague</i> , <i>q. v.</i>                                  |                                |           |             |            |
| Saint Sement's disease.    | Synonym of <i>Syphilis</i> , <i>q. v.</i>  |                                |           |             |            |
| Saint Valentine's disease. | Synonym of <i>Epilepsy</i> , <i>q. v.</i>  |                                |           |             |            |

|                                    |   |   |  |  |   |  |
|------------------------------------|---|---|--|--|---|--|
| Saint Vitus' dance.                | Synonym of <i>Chorea</i> , <i>q. v.</i>   |   |  |  |   |  |
| Saint With's dance.                | Synonym of <i>Chorea</i> , <i>q. v.</i>   |   |  |  |   |  |
| Saint Zachary's disease.           | Synonym of <i>Dumbness</i> , <i>q. v.</i> |   |  |  |   |  |
| Schönlein's peliosis.              | Joints and skin.                          | Multiple arthritis; purpuric eruption, with urticaria and erythema; sore throat; fever; articular pains; edema; scanty and albuminous urine; relapses.                    | Vaso-motor neurosis (?).   | Males; age 20 to 30; rheumatic origin. | Schönlein's disease; peliosis rheumatica; purpura rheumatica. |  |
| Stahl's ear.                       | Ear.                                      | Helix flat and folded over, forming one mass with the anti-helix at its bifurcation.  | Deformity of ear.  | Congenital.                            |   |  |
| Stokes' disease.                   | See <i>Graves' disease</i> .              |   |  |  |   |  |
| Störck's blennorrhœa.              | Respiratory tract.                        | Chronic mucous discharge.   |  |  | Laryngitis sicca.   |  |
| Strümpell's disease.               | Brain and spinal cord.                    | Those of inflammation of the cord and brain; ophthalmoplegia; progressive muscular atrophy.   | Engorgement of the mucous membrane.  | That of laryngitis.                    |   |  |
| Sydenham's chorea.                 | Synonym of <i>Chorea</i> , <i>q. v.</i>   |   |  |  | Polio-encephalitis; polio-encephalomyelitis.                  |  |
| Tay's choroiditis.                 | Eye.                                      | Those of central choroiditis; chronic course; symmetric; numerous white, glistening dots on retina; contraction of the field of vision; scotoma.                          | Changes resembling those in albuminuric retinitis; colloid degeneration, and calcareous formations in choroid. | Old age.                               | Senile guttate choroiditis.                                   |  |
| Thomson's disease.                 | Muscles of arms and legs.                 | Tonic spasm or rigidity of the muscles; myotonic reaction; reflexes normal.   | Hypertrophy of the muscles; increase in the number of the nuclei.  | Congenital; hereditary.                | Myotonia congenita  |  |
| See <i>Thomsen's Disease</i> .     |   |   |  |  |   |  |
| Thornwaldt's disease.              | Pharynx, Luschka's gland.                 | Hypersecretion of mucus; hawking; catarrh.  | Naso-laryngeal stenosis; formation of a cyst-like cavity in the gland, containing pus or mucus.                | Cold.                                  | Thornwaldt's bursitis; Thornwaldt-itis.                       |  |
| Tourette's (Gilles de la) disease. | Nervous system.                           | Motor incoördination; echolalia; coprolalia; involuntary muscular movements; explosive utterances; echokinesis; fixed mental ideas.                                       | Psychosis.   | Early age; neurotic tendency.          | Tic convulsif.  |  |
| Velpeau's hernia.                  | Intestines.                               | Those of femoral hernia.  | Femoral hernia in front of the vessels.  | That of hernia.                        |   |  |
| Volkmann's deformity.              | Foot.                                     | Deformity.  | Tibio-tarsal luxation.   | Congenital.                            |   |  |
| Voltolini's disease.               | Middle ear.                               | Acute inflammation; cerebral symptoms; permanent deafness.  | Inflammation of the labyrinth.   | Childhood.                             | Purulent labyrinthitis otitis.                                |  |
| Wardrop's disease.                 | Matrix of nails.                          | Pain; swelling; redness; tenderness; exudation of a fetid, serous fluid; falling off of the affected nails; involvement of the bone.                                      | Intense inflammation.  | Childhood; traumatism.                 | Malignant onychitis; onychia maligna; onychitis.              |  |
| Well's disease.                    | General disease.                          | Remitting fever; chill; muscular pains; jaundice; headache; course, 8-14 days; clay-colored stools; urine albuminous; occasionally hematuria; cerebral symptoms and coma. | Swelling of liver and spleen; frequently nephritis.  | Specific virus; males; age 25 to 40.   | Acute infectious jaundice; acute febrile icterus.             |  |

TABLE OF EPONYMIC DISEASES—Continued.

| NAME                  | PART AFFECTED                               | SYMPTOMS   | PATHOLOGY   | ETIOLOGY  | SYNONYMS  |
|-----------------------|---|--|---|---|---|
| Werthoff's disease    | Skin  | Headache; great irritability; purpuric eruption; hemorrhages from mucous surfaces; epistaxis; hematuria; hemoptysis; anemia; slight fever; frequently death. | Obscure.  | Youth; debile constitution.                         | Purpura hemorrhagica; morbus maculosus Werthoffii; Land-scurvy. |
| Willdron's disease    | Liver                                       | Prominence of the anti-hepatic.  | Deformity.  | Congenital.   |   |
| Wilks's disease       | The large white kidney of                   | <i>Chronic Parenchymatous Nephritis</i> , <i>q. v.</i>   | A name formerly given to lupus of tuberculous, as opposed to that of non tuberculous, origin. | Tubercle-lacullus.                                  |   |
| Wiland's lupus        | Skin.                                       | Those of lupus.  |   |   |   |
| Will's disease        | A synonym of <i>Diabetes</i> , <i>q. v.</i> | Those of <i>Pityriasis rubra</i> , <i>q. v.</i>  | That of <i>Pityriasis rubra</i> , <i>q. v.</i>  | That of <i>Pityriasis rubra</i> , <i>q. v.</i>      | Universal exfoliative dermatitis.                               |
| Wilson's (E.) disease | Skin.                                       | Acute hemoglobinuria; jaundice; cyanosis.  | Fatty degeneration of the organs; infarcts of the kidney.                                     | Microörganism, entering through the umbilical cord. |   |
| Winkell's disease     | All the organs of the newborn infant.       | Those of acute pulmonary congestion.   | Congestion of the lung-tissue.  |   |   |
| Williez's disease     | Lungs.                                      |  |   |   |   |

- Dissemination** (*dis-em-in-a'-shun*) [*dis*, apart; *seminare*, to sow]. The scattering or dispersion of disease or disease germs.
- Dissepiment** (*dis-ep'-e-ment*) [*dis*, apart; *sæpire*, to hedge in]. A partition, septum, or diaphragm.
- Dissipation** (*dis-ip-a'-shun*) [*dissipare*, to scatter]. A dispersion of matter or of the morbid conditions that cause disease.
- Dissociation** (*dis-so-se-a'-shun*) [*dis*, apart; *sociare*, to associate]. In physiology, the separation of the component elements of a compound. In chemistry, the decomposition of a compound by means of high temperature. **D. Symptom**, anesthesia to pain and to heat and cold, with preservation of tactile sensibility and of the muscular sense; it is observed in syringomyelia.
- Dissolution** (*dis-o-lu'-shun*) [*dissolutio*; *dissolvere*, to set free]. A solution of the continuity of a part. Decomposition arising from the death of the body or its parts; death.
- Dissolvent** (*dis-olv'-vent*) [*dissolvere*, to loosen, dissolve]. A solvent.
- Dissonance** (*dis'-o-nans*) [*dissonare*, to disagree in sound]. The combination of such tones as are so different from each other as to produce beats.
- Distad** (*dis'-tad*) [*distare*, to be at a distance; *ad*, to]. In the direction of the free extremity of an appendage or part. See *Position and Direction*, *Table of*.
- Distal** (*dis'-tal*) [*distare*, to be at a distance]. At the greatest distance from the trunk, heart, or mesial line. See *Position and Direction*, *Table of*. **D. Clot**. See *Clot*.
- Distally** (*dis'-tal-e*) [*distare*, to be at a distance]. Distad.
- Distance** (*dis'-tans*) [*distantia*, distance]. The measure of space between two objects. **D., Working**, in the microscope, the distance from the front lens of an objective to the object, when the objective is correctly focused.
- Distemper** (*dis-tem'-per*) [*distemperare*, to dissolve]. 1. Disease; malady; indisposition; most commonly applied to the diseases of animals. 2. A disease of young dogs, commonly considered as a catarrhal disorder. **D. Colors**. See *Pigments, Colors, and Dye-stuffs*.
- Disten** (*dis'-ten*) [*distare*, to be at a distance]. Belonging to the distal aspect in itself.
- Distention** (*dis-ten'-shun*) [*distendere*, to stretch]. The state of being dilated.
- Distichiasis** (*dis-tik-i'-as-is*) [*δίς*, double; *στίχος*, a row]. The condition of a double row of eyelashes, the inner rubbing against the globe.
- Distichous** (*dis'-tik-us*) [*διστίχος*, having two rows]. In biology, in two perpendicular rows; applied to the arrangement of leaves or other organs.
- Distillation** (*dis-til-a'-shun*) [*distillare*, to drop little by little]. The double process of vaporization and condensation of the vapor. This is used mainly in purifying liquids by separating them from non-volatile substances. **D., Destructive**, the decomposition of a substance in a close vessel in such a manner as to obtain liquid products. The substances that are submitted to destructive distillation are in the main solids, as wood, coal, shales, bones, and animal refuse. **D., Fractional**, a process of decomposition of complex liquid bodies depending upon the fact that, if a mixture of liquids, each having a different boiling-point, be heated, the one having the lowest boiling-point will pass over first, and if the temperature is not increased beyond that point at which the distillation of this fraction takes place, no other constituent will come over; if the temperature be gradually increased the

- others will follow in the order of their boiling-points. In cases in which the boiling-points are close, the action of one substance upon another often prevents exact separations.
- Disticia** (*dis-to'-se-ah*) [*δῖς*, double; *τόκος*, birth]. Delivery or birth of twins.
- Distoma** (*dis-to'-mah*), or **Distomum** (*dis-to'-mum*) [*δῖς*, double; *στόμα*, a mouth]. A genus of trematode worms. See *Parasites (Animal)*, Table of.
- Distomiasis** (*dis-to-mi'-as-is*) [*δῖς*, double; *στόμα*, mouth]. The symptoms produced by the presence of certain trematodes or flukes in the human system.
- Distomum** (*dis-to'-mum*) [*δῖς*, double; *στόμα*, mouth]. Same as *Distoma*. See *Parasites (Animal)*, Table of.
- Distomus** (*dis-to'-mus*). See *Diprosopus*.
- Distortion** (*dis-tor'-shun*) [*distorquere*, to distort]. 1. A twisted or bent shape; deformity or malformation, acquired or congenital. 2. A writhing or twisting motion, as of the face; a grimace.
- Distortor oris** (*dis-tor'-ter o'-ris*) [L., "the distortor of the mouth"]. The zygomaticus minor muscle. See *Muscles*, Table of.
- Distribution** (*dis-trib-u'-shun*) [*distribuere*, to distribute]. The branching of a nerve or artery, and the arrangement of its branches within those parts that it supplies.
- Distrix** (*dis'-triks*) [*δῖς*, two; *θρίξ*, hair]. The splitting of the distal ends of the hair.
- Disulphate** (*di-sul'-fat*) [*dis*, two; *sulphur*]. In chemistry, an acid sulphate.
- Disulphone** (*di-sul'-fon*) [*dis*, double; *sulphur*]. One of the solid, crystalline, very stable compounds, produced on oxidizing the di-thio-ethers or thio-acetals with a permanganate solution. The disulphones are not attacked by acids or alkalis.
- Disuse-amblyopia**. See *Argamblyopia*.
- Disvulnerability** (*dis-vul-ner-ab-il'-it-e*) [*dis*, neg.; *vulnerare*, to wound]. The power of abnormally rapid recovery from wounds, said to be a peculiarity of many criminals.
- Dita Bark** (*di'-tah*) [L.]. The bark of *Alstonia scholaris*, native to the Philippine Islands. It is employed as a tonic and antiperiodic in intermittent fever. Dose of the tincture, ʒ j-ij; of the fluid extract, gr. ij-v; of the powder, gr. v. Unof.
- Ditain** (*dit'-a-in*) [*Dita*],  $C_4H_{30}N_2O$ . An alkaloid of *Dita*, occurring as a yellow amorphous substance.
- Ditamin** (*dit'-am-in*). Same as *Ditain*.
- Ditana digitifolia** (*dit-a'-nah dij-it-if-o'-le-ah*) [L.]. A Mexican plant said to possess galactagogue properties. The existence of such a plant has been questioned.
- Dithecal** (*di-the'-kal*) [*δῖς*, two; *θήκη*, a case]. In biology, having two thecae or anther-cells.
- Ditokus** (*dit'-o-kus*) [*δῖς*, two; *τέκω*, to bring forth]. In biology, giving birth to twins, or laying two eggs.
- Ditrichotomous** (*di-tri'-ch-ot'-o-mus*) [*δῖς*, two; *τρίχης*, threefold; *τέμνω*, to cut]. In biology, divided into twos and threes.
- Dittany** (*dit'-an-e*) [American]. See *Cunila mariana*.
- Dittel's Operation**. See *Operations*, Table of.
- Dittopsia** (*dit-top'-se-ah*). Synonym of *Diplopia*.
- Ditrich's Plugs**. Masses of granular matter, degenerated epithelium, and crystals of the fatty acids (chiefly butyric acid) plugging up the ends of the bronchial tubes in cases of gangrene of the lung. They are yellowish-brown in color, of very fetid odor, and vary in size from a millet-seed to a bean.
- Diuresis** (*di-u-re'-sis*) [*δαῖ*, through; *οἰπέειν*, to make water]. Abnormal increase in the secretion of urine.
- Diuretic** (*di-u-rell'-ik*) [*δαῖ*, through; *οἰπέειν*, to make water]. 1. Increasing the flow of urine. 2. A medicine that increases the secretion and flow of urine.
- Diuretin** (*di-u-re'-tin*) [*δαῖ*, through; *οἰπέειν*, to make water],  $C_7H_7NaN_3O_2 \cdot C_6H_5O_11COONa$ . Theobromin sodio-salicylate, containing 50 per cent. of theobromin salicylate. It has been found useful as a diuretic in pleuritic effusion and cardiac dropsy. Dose 90 grains daily, in 15-grain doses.
- Diurnule** (*di-urn'-ul*) [Fr.]. A form of medicinal tablet that contains the maximum quantity of a toxic drug that may be administered to an adult in 24 hours.
- Divagation** (*di-vag-a'-shun*) [*divagatio*, a wandering]. Incoherence of speech or thought.
- Divalent** (*di'-val-ent*) [*δῖς*, twice; *valens*, having power]. Having power to combine with two monovalent atoms, as a chemic compound. Thus, the oxygen atom and the radical  $Cl_2$  are divalent.
- Divaricatio palpebrarum** (*di-var-ik-a'-she-o pal-pe-bra'-rum*). Synonym of *Ectropion*.
- Divergent** (*di-ver'-jent*) [*divergere*, to diverge]. Moving in different directions from a common point. **D. Strabismus**. See *Strabismus*.
- Divers' Disease**. An affection similar to *Caisson-disease*, q. v., common in deep-water divers. **D. Paralysis**. See *Caisson-disease*.
- Diverticulum** (*di-ver-tik'-u-lum*) [*divertere*, to turn; *pl.*, *Diverticula*]. 1. A small cul-de-sac or pouch; an offshoot from a main structure; an organ supposed to be a place of lodgment for superfluous blood. 2. Variation from a normal structure; malformation. **D., Meckel's**, a sacculcation of the ileum, owing to the non-obliteration of the vitelline duct.
- Divi-divi** (*di'-e-di'-e*) [S. Amer.]. The seed-pods of *Cesalpinia coriaria*, a small tree found in South America. The pods are about three inches long, brownish in color, and generally bent, by drying, into the shape of the letter S. They contain 30 to 50 per cent. of a peculiar tannin somewhat similar to that of valonia, but liable to fermentation. They are used in leather-manufactures.
- Division** (*div-izh'-un*) [*divisio*, a dividing]. Surgical section into two or more parts; separation into two or more parts, such as occurs in certain cell-nuclei.
- Divulsion** (*di-vul'-shun*) [*divulsio*, a tearing apart]. The surgical or traumatic division of any part by tearing it asunder.
- Divulsor** (*di-vul'-sor*) [L.]. An instrument for effecting surgical divulsion, especially of a urethral stricture.
- Dizziness** (*dis'-e-nes*). See *Vertigo*.
- Dobell's Spray, or Solution**. Liqueur sodii boratis compositus (N. F.); a solution of borax, sodium bicarbonate, and carbolic acid in glycerin and water; it is valued as a spray for nasal and throat troubles.
- Dobie's Line, or Stripe**. See *Lines*, Table of.
- Dochmiasis** (*dok-mi'-as-is*) [*δόχμιος*, crumpled]. The diseased condition caused by the presence in the body of parasites belonging to the genus *Dochmius*. Cf. *Ankylostomiasis*.
- Dochmius** (*dok'-me-us*) [*δόχμιος*, crumpled]. In biology, a genus of thread-worms of the family Strongylidae. See *Parasites (Animal)*, Table of.
- Docimasia** (*dos-im-a'-se-ah*) [*δοκιμασία*; *δοκιμάζειν*, to examine]. 1. Examination, especially a post mortem examination. 2. A test, especially a chemic test, of poisons. 3. In pharmacy, the testing or assaying of medicines. **D. pulmonum**, a mode of determining whether a child has or has not been born alive, by examination of the lungs.
- Docimastic** (*dos-im-as'-tik*) [*δοκιμασία*; *δοκιμάζειν*, to examine]. Making use of tests; testing; proving.
- Docimasy** (*dos'-im-as-e*). See *Dosimasia*.

Dock (*dok*). See *Rumex*.

**Dockmackamus, or Dockmackie** (*dok mak'-am-us*, or *dok' mak'-e*) [aboriginal]. The shrub *Viturnum acerifolium*, of N. America; used in domestic practice in poulticing tumors, and as an alternative. Unof.

**Doctor** (*dok'-tor*) [*dok'-tor*, a teacher]. A teacher. A title conferred by a university or college. A physician licensed to practice medicine. **D. Gum**, the resin of *Rhus metelorum*, a poisonous sumach of tropical America; it is said to be purgative and alterative. The name is given in the W. Indies to various other soft resins.

**Dodecadactylitis** (*do-dak'-a-dak'-til-i'-tis*) [*δωδεκα*, twelve; *dak'-tilos*, a finger; *itis*, inflammation]. Inflammation of the duodenum.

**Dodecadactylon, or Dodecadactylus** (*do-dak'-a-dak'-til-en*, or *-us*) [*δωδεκα*, twelve; *daktilon*, finger]. The duodenum.

**Dodecagynous** (*do-dak'-a-in-us*) [*δωδεκα*, twelve; *gynē*, a female]. In biology, having twelve pistils.

**Dodecamerous** (*do-dak'-am'-er-us*) [*δωδεκα*, twelve; *meros*, part]. In biology, having the floral organs in twelves.

**Dodecandrous** (*do-dak'-an'-dru-*) [*δωδεκα*, twelve; *andros* (*an'-dros*), a male]. In biology, having twelve stamens.

**Dodecapetalous** (*do-dak'-a-pet'-al-us*) [*δωδεκα*, twelve; *petalon*, a leaf]. In biology, having a corolla consisting of twelve petals.

**Döderlein, Bacillus of.** See *Bacteria, Synonymatic Table of*.

**Dodging Time.** The popular term among women for the period of irregular menstruation of varying duration preceding the full establishment of the menopause.

**Dog-button.** See *Nuxvomica*.

**Dogma** (*dok'-mah*) [*dogma*, opinion; *dokein*, to think]. A tenet or principle taught by authority. A statement of medical science.

**Dog-rose** (*dok'-ros*). See *Rosa canina*.

**Dogwood** (*dok'-wood*). See *Cornus*.

**Dohrn's Method.** A method of dressing the umbilical cord. The stump is covered with cotton-wool fixed with stumps of adhesive plaster. This dressing is to be followed by umbilical ulceration.

**Dolabra** (*do-lab'-rah*) [L.]. A name applied to various banages. **D. currens.** See *Ascia*. **D. repens.** See *Ascia*.

**Dolabriform** (*do-lab'-ri-form*) [*dolabra*, a kind of hatchet; *forma*, shape]. In biology, shaped like an axe.

**Dolbeau's Operation.** See *Operations, Table of*.

**Dohariin** (*do-lah'-ri-in*) [*dolium*, a cask]. A vegetable poison, like papain and cradin, obtained from *Ficus dolabra*, a wild fig tree of Brazil. It is vermifuge, purgative, and digestive. Unof.

**Doli capax** (*do-li-kap'-ak*) [L.; *pl.*, *Dolicapaces*]. In legal medicine, one capable of guilt; one able or old enough to distinguish right and wrong; one morally or legally responsible. **D. incapax**, one incapable, or not old enough to distinguish wrong from right, or to be legally responsible for wrongdoing.

**Dolichocephalia** (*do-lik'-sef'-a'-le-ah*) [*δολιχός*, long; *kephale*, head]. The condition of being dolichocephalic.

**Dolichocephalic, or Dolichocephalous** (*do-lik'-o-sef'-a'-le*, or *-sef'-al-us*) [*δολιχός*, long; *kephale*, head]. Having a relatively long antero-posterior cephalic diameter applied to skulls or to persons or races. See *Index*.

**Dolichohieric** (*do-lik'-hi-er-ik*) [*δολιχός*, long; *hieros*, sumum]. Having a relatively slender sacrum. See *Index*.

**Dolichopellic** (*do-lik'-sef'-ik*) [*δολιχός*, long; *pellos*, a bowl]. Having a relatively long or narrow pelvis. See *Index*.

**Dolor** (*do'-lor*) [*dolere*, to feel pain]. Bodily or mental pain or suffering. **D. colicus.** Synonym of *Enteralgia*. **D. dentium**, pain in the teeth. See *Odontalgia*. **Dolores præsagientes**, precursory pains felt by women in advance of labor.

**Domatophobia** (*do-mat'-o-fob'-be-ah*) [*δόμα*, house; *phobos*, fear]. Insane dread of being in a house; a variety of claustrophobia.

**Donath's Tests.** See *Tests, Table of*. **D. and Mayrhofer's Test.** See *Tests, Table of*.

**Donda Ndugu** [African]. Brother Ulcer; a disease common on the east coast of Africa, due to some minute organism that infests stagnant water and enters an abraded joint of the lower extremities, especially of the lower third of the leg. The part becomes swollen, and a deep-seated slough occurs that burrows beneath the healthy tissues. Death may follow from exhaustion or hemorrhage. Those who recover are generally permanently lamed.

**Donders' Glaucoma.** See *Diseases, Table of*. **D. Law.** See *Law*. **D. Schematic Eye**, in optics, a device for calculating the path of the rays from one refracting surface to the other. **D. Theory**, a theory of the formation of glaucoma, in which the disease is supposed to originate in an irritation of the choroid nerves.

**Donegana's Operation.** See *Operations, Table of*.

**Donne's Corpuscles, or Globules.** See *Globule and Colostrum Corpuscles*. **D. Test.** See *Tests, Table of*.

**Donovan's Solution.** See *Arsenic*.

**Doornick's Horizontal Line.** See *Line*.

**Dorcadizant** (*dor-kad'-iz-ant*) [*δορκάδιζεν*, to leap like a gazelle; *δορκάς*, gazelle]. Leaping; characterized by leaps; applied to certain forms of insanity.

**Doremus's Method.** A method of estimating the amount of urea in the urine. It is done by allowing the urine to pass through a solution of sodium hypobromite and measuring the gas that is evolved.

**Dorsad** (*dor'-sad*) [*dorsum*, the back]. Toward the dorsal aspect; dorsally. See *Position and Direction, Table of*.

**Dorsal** (*dor'-sal*) [*dorsum*, the back]. Pertaining to the back, or to the posterior part of an organ. The term *Neural* is sometimes used in place of dorsal. See *Position and Direction, Table of*. **D. Artery.** See *Artery*. **D. Decubitus**, recumbency in the supine position. **D.-elevated Position.** See *Postures, Table of*. **D. Nerves.** See *Nerves, Table of*. **D.-recumbent Position.** See *Postures, Table of*. **D. Reflex.** See *Reflexes, Table of*. **D. semi-recumbent Posture.** See *Postures, Table of*.

**Dorsalis pedis** (*dor-sal'-lis pe'-dis*). See *Arteries, Table of*.

**Dorsen** (*dor'-sen*) [*dorsum*, the back]. Belonging to the dorsum in itself.

**Dorsicollar** (*dor-se-kol'-ar*) [*dorsum*, the back; *collum*, the neck]. In biology, having to do with the back and neck.

**Dorsicumbent** (*dor-se-kum'-bent*) [*dorsum*, the back; *cubare*, to lie down]. In biology, supine; or lying upon the back.

**Dorsigerous** (*dor-sij'-er-us*) [*dorsum*, the back; *gerere*, to carry]. In biology, bearing the young upon the back.

**Dorsigrade** (*dor'-sig-rad*) [*dorsum*, the back; *gradus*, to walk]. In biology, applied to animals that walk upon the back of the toes, as the armadillo.

**Dorsi-lumbar** (*dor-si-lum'-bar*). See *Dorso-lumbar*.

**Dorsimesad** (*dor-si-me'-sad*) [*dorsum*, back; *mesos*, the middle]. Toward the dorsimeson. See *Position and Direction, Table of*.

**Dorsimesal** (*dor-si-me'-sal*) [*dorsum*, back; *mesos*, the

- middle]. Pertaining to the dorsimeson. See *Position and Direction, Table of*.
- Dorsi-meson** (*dor-si-me'-son*) [*dorsum*, the back; *μέσος*, the middle]. The dorsal edge of the meson or median plane of the body. The dorsal, mesal, or median line. Cf. *Ventrimeson*; also *Position and Direction, Table of*.
- Dorsiparous** (*dor-sif'-ar-us*) [*dorsum*, the back; *παρέω*, to produce]. Applied to plants that bear fruit on the back of the leaves (ferns), or animals hatching young upon the back (toads).
- Dorsi-scapular** (*dor-si-skap'-u-lar*) [*dorsum*, back; *scapula*, the shoulder]. Relating to the dorsum of the scapula.
- Dorso-** (*dor'-so-*) [*dorsum*, back]. A prefix used in connection with the names of such organs as have their attachment to or about the back.
- Dorsocephalad** (*dor-so-sef'-al-ad*) [*dorsum*, back; *κεφαλή*, head]. Toward the dorsal aspect of the head.
- Dorsodynia** (*dor-ste'-di-ni-e-ah*) [*dorsum*, back; *δύνις*, pain]. Omodynia; scapulodynia; pain in the dorsal region; rheumatism of the muscles of the shoulders and upper back.
- Dorso-lumbar** (*dor-so-lum'-bar*) [*dorsum*, back; *lumbus*, loin]. Relating to the back and the loins.
- Dorso-sacral Position**. See *Postures, Table of*.
- Dorso-thoracic** (*dor-so-tho-ra'-sik*) [*dorsum*, back; *θώραξ*, thorax]. Relating to the back and the thorax.
- Dorstenia** (*dor-ste'-ne-ah*). See *Contrayerza*.
- Dorsulum** (*dor'-su-lum*) [dim. of *dorsum*, the back]. The second dorsal sclerite of the thorax in certain insects.
- Dorsum** (*dor'-sum*) [L.]. 1. The back. The rounded part of the back. 2. Any part corresponding to the back; as the *dorsum* of the foot, hand, tongue, scapula, or penis; in many cases, the upper surface is thus designated.
- Dorsumbonal** (*dor-sum'-bo-nal*) [*dorsum*, the back; *umbo*, a boss]. In biology, pertaining to both the dorsal and umbonal regions in a bivalve mollusc.
- Dosage** (*do'-saj*) [δόσις, a portion given]. A system or method of dosing. See *Posology*.
- Dose** (*dōs*) [δόσις, a portion]. The measured portion of medicine to be taken at one time. **D.**, **Divided**, a mode of administration in which a drug is to be taken in fractional portions at short intervals. **D.**, **Maximum**, the largest portion of medicine ordered to produce a given result, or the largest dose consistent with safety. In this work both minimum and maximum dosage is given under each medicine or preparation. **D.**, **Minimum**, the smallest quantity of a medicine that will produce physiologic effects.

## GAUBIUS' TABLE

Of Proportion of Dose According to Age.

|  |                |   |               |   |      |
|--|----------------|---|---------------|---|------|
| For an adult, suppose the dose to be . . . 1, or 60 grains |                |   |               |   |      |
| An individual under 1 year will require                    | $\frac{1}{12}$ | " | $\frac{1}{8}$ | " | 5 "  |
| " " " 2 years " " "  | $\frac{1}{6}$  | " | $\frac{1}{4}$ | " | 8 "  |
| " " " 3 " " " "  | $\frac{1}{4}$  | " | $\frac{1}{3}$ | " | 10 " |
| " " " 4 " " " "  | $\frac{1}{3}$  | " | $\frac{1}{2}$ | " | 15 " |
| " " " 7 " " " "  | $\frac{1}{2}$  | " | $\frac{2}{3}$ | " | 20 " |
| " " " 14 " " " "   | $\frac{2}{3}$  | " | $\frac{3}{4}$ | " | 30 " |
| " " " 20 " " " "   | $\frac{3}{4}$  | " | $\frac{4}{5}$ | " | 40 " |
| For one of 21 to 60, the full dose, or . . . 1, or 60 "    |                |   |               |   |      |

Above this age, an inverse gradation must be observed.

- Dosimeter** (*do-sim'-et-er*) [δόσις, a dose; μέτρον, a measure]. A drop-meter; an instrument for measuring minute quantities of a liquid.
- Dosimetric** (*do-sim-el'-rik*) [δόσις, a dose; μέτρον, a measure]. Relating to or characterized by dosimetry.
- Dosimetry** (*do-sim'-et-re*) [δόσις, dose; μέτρον, a measure]. The accurate and systematic measurement of a dose or prescribed portion; the use of drugs in exact and definite doses.
- Dosiology, or Dosology** (*do-se-ol'-o-je*, or *do-sol'-o-je*) [δόσις, dose; λόγος, science]. Posology; the science of doses.
- Dosis** (*do'-sis*). See *Dose*.
- Dossil** (*dos'-il*) [ME., *dosil*, a spigot]. A pledget or tuft, as of lint.
- Dotage** (*dōt'aj*) [ME., *dotren*]. Feebleness of mind; senility.
- Dothienenteritis, or Dothinenteritis** (*doth-e-en-en-ter-i'-tis*, or *doth-in-en-ter-i'-ti*.) [δοθίη, a boil; έντερον, bowel; ιτις, inflammation]. Enteric fever, or the enteritis that accompanies it.
- Double** (*dub'-l*) [ME., *doublen*, to double]. Two-fold. In pairs. **D. Athetosis**, a manifestation of infantile spastic paraplegia. **D. Chin**. See *Buccula*. **D. Consciousness**, periodic amnesia; a periodic failure of memory involving all the intellectual functions and the character of the individual; that condition in which a patient seems to have two distinct but alternating lives; it is seen mostly in somnambulists and hypnotics. **D. Flap Amputation**. See *Amputation*. **D. Hearing**. See *Diplotacusis*. **D. Monsters**. Same as *Composite Monsters, q. v.* **D. Personality**, an abnormal condition in which the subject feels as if he were two distinct personalities, the one alternating continually with the other. It is a symptom of insanity and of poisoning by certain drugs. **D. Staining**, in microscopy, the impregnation of a structure with two colors in order to show its details. Bacteriologically the application of such staining-reagents as will stain the spores one color and the rods another. **D. Touch**, the exploration of the vaginal and rectal walls by inserting the thumb into the one cavity, and the index finger into the other, so that, *e. g.*, the presence of any abnormal growth may be ascertained. **D. Vinegar**. See *Vinegar*. **D. Vision**. See *Diplotopia*. **D. Vitriol**, a mixture of copper and iron sulphates crystallized together. **D. Voice**. See *Diphthongia*. **D. Wedge**, an instrument used in dentistry for removing an artificial crown from the root of a tooth upon which it has been set.
- Doubler** (*dub'-ler*). See *Doubling*.
- Doublet** (*dub'-let*) [ME., *doublet*]. In optics, a system consisting of two lenses.
- Doubling** (*dub'-ling*) [ME., *doublen*, to double]. A term given to that duplication of dispensary statistics that results from patients coming twice or oftener with different troubles in the course of a year. Such patients are termed "doubblers."
- Doubly** (*dub'-le*) [ME., *doublen*, to double]. In a two-fold manner. **D. Contoured**, in microscopy, an object is doubly contoured when it is bounded by two, usually parallel, dark lines with a lighter band between them.
- Doubt** (*dōwt*) [ME., *doute*, fear]. Uncertainty; fear. **D.**, **Insanity of**, mental disorder in which the patient is affected by morbid doubts and fears, and subjects himself to introspective questionings.
- Doubling** (*dōwt'-ing*) [ME., *doute*, fear]. Fearing. **D. Mania**, a form of volitional disorder in which the reflexive mechanism of the will is over-irritable and reacts to slight stimuli, producing a constant succession of contradictory, absurd, or useless acts.
- Douche** (*dōosh*) [Fr.]. A stream of water directed against a part, or one used to flush a cavity of the body.
- Douglas's Cul-de-sac or Pouch**. See *Pouch*. **D. Line**. See *Lines, Table of*. **D. Semilunar Fold**, a thin curved margin that forms the lower part of the posterior wall of the sheath of the abdominal rectus muscle.
- Dourine** (*doo'-rin*) [Fr.]. Syphilis in the horse.

**D'Outrepont's Version.** In obstetrics, indirect version, the head being seized from without by the hand corresponding to its position, while the other hand, well oiled and folded together like a cone, is introduced into the uterine cavity, grasps the presenting shoulder and pushes it toward the side on which the breech is situated.

**Dover's Powder.** Pulvis ipecacuanhee compositus. See *Oreum*.

**Dowel** (*draut'*) [*Fr., dowel*, a socket]. In dentistry, the piece of wood or metal uniting any artificial crown to the root of a natural tooth.

**Dowell's Operation.** See *Operation*, Table of.

**Doyère, Eminence, Hillock, Papilla, or Tuft of.** See *Syngrapha*.

**Dracæna** (*dra-kæ-nah*) [*Græka, dragon*]. A genus of liliaceous plants, often tree-like. **D. cinnabari** and **D. schizantha** (both E. Africa) and **D. draco** (mainly W. African) afford a part of the so-called dragon's blood of commerce. See *Dragon's Blood*.

**Dracol** (*dra-kol*). Same as *Anacol*.

**Dracontiasis** (*dra-kon-ti-as-is*) [*Grækon, dragon*]. Guinea-worm Disease; a skin-disease due to the presence of the fully developed nematode worm, *dracunculus medinensis*, and characterized by the development of deep vesicles or abscesses. The disease is endemic in India and various parts of Africa and other tropical regions. The female worm is cylindrical,  $\frac{1}{8}$  inch in diameter and about 30 inches long, or even much longer. It may be felt like a cord of soft string under the skin. When about to make its escape it produces itching and discomfort, followed by an abscess. The embryo of the worm gains entrance into the human body and there develops with the named results. See *Parasites (Animal)*, Table of.

**Dracunculus** (*dra-un'-ku-lus*) [dim. of *draco*, a dragon, serpent]. A genus of thread worms, belonging to the family *Triclinidae*. See *Parasites (Animal)*, Table of. **D. medinensis**. See *Dracontiasis*.

**Draft, Draught** (*draut'*) [*AS., dragon, to draw*]. 1. A quantity of liquid, especially a medicine drunk at one gulp. 2. A mild blister; a poultice. **D., Black**, compound infusion of senna. **D., Chopart's**, a mixture containing balsam of copaiba, alcohol, peppermint water, vinegar balsam of tolu, and sweet spirit of niter. **D., Effervescent**, one containing sodium or potassium bicarbonate and a vegetable acid.

**Dragée** (*dra-jé*) [*Fr.*]. A sugar-coated pill, bolus, or tablet; a sugar-coated confection.

**Dragendorff's Tests.** See *Test*, Table of.

**Dragendorff and Kossow's Test.** See *Tests*, Table of.

**Dragon Root** (*dra-gon root*). Indian Turnip. The root of *Fam. trichotomum*, acrid, expectorant, and diaphoretic. Dose of the dried ext.  $\text{℥j}$ . Unof.

**Dragon's Blood** (*dra-gon blood*). 1. The astringent resin of *Ca. dracæna* and *C. draco*, E. Indian ratia palm. 2. The resin of various species of *Dracæna*, etc. 3. The resin of *Pterodroma draco*, a W. Indian tree. The various kinds of dragon's blood are astringent, but are not used mainly in the arts and in making tannin pigments. See *Plants*, *Composite* of.

**Drain** [*ME., drænan, to drain*]. A channel that receives the drainage or waste water of one building or set of premises. In surgery, a material that affords a channel of exit for the discharge from a wound or abscess. **D.-throat**, a sore throat produced by the poison of scarlet fever, and other poisons introduced into the system by breathing the air from defective drains.

**Drainage** (*dra-naj*) [*ME., drænan, to drain*]. 1. The process, by means of tubes or strands of fibers, of a channel of exit for the drainage from a wound or

cavity. 2. See *Sewage*. **D. Anchor**, a rubber filament inserted in an abscess or cavity. **D.-tube**, a rubber tube with perforations for draining wounds or cavities. **D.-tube, Decalcified**, a decalcified bone (e. g., of a chicken, etc.) used as a drainage-tube.

**Dram, or Drachm** (*dram*) [*Grækxui*, a Greek weight]. The eighth part of the apothecaries' ounce, equal to 60 grains or 3.8 grams. Also the one-sixteenth part of the avoirdupois ounce, equal to 27.34 grains. **D., Fluid**, the eighth part of a fluidounce, equal to 60 minims.

**Dramatism** (*dram'-at-izm*) [*Græpanu*, a drama]. Insanely stilted and lofty speech or behavior.

**Draper's Test.** See *Tests*, Table of.

**Drastic** (*dras'-tik*) [*Græpæiv*, to draw]. 1. A powerful and irritating purgative, such as scammony or gamboge. 2. Severe, harsh, powerful.

**Draught** (*draft*). See *Draft*.

**Draw** [*ME., dræwen, to draw*]. To digest and cause to discharge; said of a poultice. In dentistry, to remove a tooth from its socket. In andrology, to remove the urine from the bladder by means of a catheter. **D.-bench**, a bench for drawing wire, so constructed as to confine a wire-plate at one end, with a roller and windlass at the other end for drawing the wire through the plate.

**Drawer, Gold.** An apparatus for use in the dental laboratory to collect gold scraps and filings.

**Drayman's Bottom.** An enlargement of the bursa situated over the tuberosity of the ischium.

**Dream** (*drēm*) [*ME., dremen, to dream*]. 1. An involuntary series of images, emotions, and thoughts presented to the mind during sleep. 2. To be conscious of such manifestations. **D., Waking**, an illusion or hallucination. **D., Wet**, a term given to the emission of semen during sleep.

**Dreamy** (*dre'-mē*) [*ME., dremen, to dream*]. Full of dreams. **D. State**, a common psychic aura of epilepsy in which the patient experiences a sensation of strangeness or sometimes of terror. It may be associated with flashes of light or auditory aures.

**Drechsel's Test.** See *Tests*, Table of.

**Drechsler's Test.** See *Tests*, Table of.

**Drench** [*ME., drenchen, to drench, drown*]. In veterinary practice, a draught of medicine.

**Drepanidium** (*dre-pan-id'-e-um*) [*Græpân, a sickle*]. The sickle-shaped young of certain protozoans. **D. ranarum**, a (probably) parasitic cytozoön of frogs' blood.

**Dressed Mouth** (*drest mouth*). That condition produced by the fraudulent practice of filing the teeth, used to make an old horse appear young.

**Dresser** (*dres'-er*) [*ME., dresen, to make straight*]. An attendant (in English hospitals, usually a student) whose special duty it is to dress and bandage wounds, and attend to other ward work.

**Dressing** (*dres'-ing*) [*ME., dresen, to make straight*]. 1. The application of a bandage, lint, or other substance to a wound or ulcer. 2. The material so applied. 3. In metallurgy, the mechanical treatment that an ore receives after being brought to the surface; concentration.

**Dressler's Disease.** See *Diseases*, Table of.

**Drewsen's Test.** See *Tests*, Table of.

**Drill** (*dril*) [*AS., thyrelian, to pierce*]. A surgical instrument used in perforating bones, calculi, or teeth. **D.-bone**, a flat osteoma. **D.-bow**, a bow and string for rotating a drill-stock, effected by passing the string around it, and moving it backward and forward.

**D.-stock**, an instrument for holding and turning a drill, either by the thumb and finger or by a handle.

**D.-stock, Flagg's**, an instrument for drilling into the

- pulp-cavity of a tooth for the purpose of giving egress to matter formed there in the process of suppuration of the pulp.
- Drimys** (*dri'-mis*) [δρῦμις, piercing]. A genus of magnoliaceous trees, largely S. American. **D. granatensis**, **D. mexicana**, and **D. winteri** afford *Winter's Bark*, an aromatic and stimulant tonic, formerly in repute as an alterative. Unof.
- Drink** [ME., *drinken*, to drink]. To swallow a liquid. The liquid that is swallowed. A draught.
- Dripping Sheet** (*drip'-ing shet*). A means of reducing temperature in fever, entirely distinct from the wet pack. The patient is placed erect in a tub containing twelve inches of water at 100°. A linen sheet (the coarser the better) is dipped in water at 70°, which is reduced daily two degrees until 48° is reached. This sheet is thrown over the patient from behind, covering the head and body, so that it clings to the person. The attendant now makes rapid passes with both hands, beginning anteriorly and posteriorly, so as to produce friction and afflux of blood to the surface. Occasionally cold water at from 40° to 70° is thrown on from a cup and friction renewed. The procedure is also said to be useful in anemia.
- Drivelling** (*dri'-el-ing*) [ME., *drinelen*]. 1. An involuntary flow of the saliva, as in old age, infancy, idiocy, and mental stupor. 2. Senile weakness of mind.
- Drivers' Spasm** (*dri'-vers spazm*). See *Spasm*.
- Dromograph** (*drom'-o-graf*) [δρόμος, a course; γράφειν, to write]. An instrument for registering the velocity of the blood-current.
- Drop**. See *Gutta* and *Minim*. 1. To let fall in globules or drops, as a liquid. 2. To let fall from the womb. 3. A spheric mass of fluid-material. **D.-culture**, in bacteriology, a culture prepared by placing a drop of the infected material in a culture-medium. **D.-meter**. See *Dosimeter*. **D.-serene**. See *Gutta serena*. **D.-shoulder**, the condition in which one shoulder is on a much lower level than the other; not uncommonly met with in hysterical girls.
- Dropped Hand, or Wrist** (*dropt hand or rist*). A form of paralysis from lead-poisoning, consisting in the inability to contract the extensors of the forearm.
- D. Foot**, a deformity, especially observed in alcoholic peripheral neuritis, and dependent upon weakness of the flexors of the foot.
- Dropper** (*dropt'-er*) [ME., *droppen*, to drop]. A bottle, tube, or pipet, fitted for the emission of a fluid drop by drop. See *Misph-dropper*, and *Stopper-dropper*.
- Dropsical** (*dropt'-sik-al*) [δρῶψ, dropsy]. Affected with or pertaining to dropsy.
- Dropsy** (*dropt'-se*) [δρῶψ, dropsy]. See *Hydrops*. **D. of Belly**. See *Ascites*. **D. of Brain**. See *Hydrocephalus*. **D., Cardiac**, that due to failure of compensation in cardiac disease. **D., False**, an accumulation of liquid in a cavity of an organ from obstruction of the outlet; a retention-cyst. **D. of Chest**. See *Hydrothorax*. **D. of Peritoneum**, ascites, hydroperitoneum. **D. of Pericardium**, hydropericardium. **D. of Spine**. See *Spina bifida* and *Hydrorrhachis*. **D. of Testicle**. See *Hydrocele*. **D. of Uterus**. See *Hydrometra*.
- Drosera** (*dros'-er-ah*) [δρῶσερός, dewy]. Sundew; the *D. rotundifolia*, native of U. S. and Europe. An antispasmodic, useful in whooping-cough and other spasmodic coughs. Dose of the fluid extract  $\mathfrak{m}\mathfrak{v}$ -xx; of the tincture (I in 10)  $\mathfrak{m}\mathfrak{v}$ -xv. Unof.
- Droserin** (*dros'-er-in*) [δρῶσερός, dewy]. A ferment resembling pepsin and found in the digestive secretions of most of the insectivorous plants.
- Drown** [ME., *drovenen*, to drown]. To deprive of life by immersion in a fluid.
- Drowning** (*drown'-ing*) [ME., *drovenen*, to drown]. Depriving of life by immersion in a fluid. **D., Intra-uterine**. See *Intra-uterine*. **D., Treatment of**. See *Artificial Respiration*.
- Drowsy** (*drow'-ze*) [AS., *drusan*, to sink]. Inclined to sleep; sleepy.
- Drug** [ME., *drugges*]. A substance, simple or compound, natural or prepared, single or mixed with other substances used as a medicine. **D., Antagonistic**, one that neutralizes the action of another by a process other than chemie. **D.-eruptions**. See *Dermatitis medicamentosa*. **D.-habit**, the acquiring of a tolerance for a drug after long administration, by which its physiologic action in normal dose is abolished. This may be avoided by intermitting the remedy from time to time.
- Druggist** (*drug'-ist*) [ME., *drugges*]. One who deals in drugs.
- Drum** [ME., *drumme*]. The tympanum. The labyrinth of a bird. **D.-belly**. See *Tympanites*. **D. of Ear**. See *Tympanum*. **D.-head**. See *Membrana tympani*.
- Drumlin** (*drum'-in*) [Drummond, a botanist]. A name given to the alkaloid extractive of *Euphorbia drummondii*, an Australian plant. It is said to be a local anesthetic, and is claimed, also, to be an impure calcium oxalate. Unof. See *Anesthetic*.
- Drummers' Palsy** (*drum'-ers palsy'-ze*). A form of occupation-neurosis, dependent upon the constrained attitude of the hand in beating a drum.
- Drummond's Whiff**. See *Signs and Symptoms, Table of*.
- Drumstick - bacillus**. See *Bacteria, Synonymatic Table of*.
- Drunkard** (*drunk'-ard*). One given to excessive indulgence in spirituous drinks. **D.'s Liver**, a cirrhotic liver. **D.'s Pneumonia**, a grave form of pneumonia occurring in drunkards; it is usually fatal.
- Drunkenness** (*drunk'-en-nes*) [AS., *drun-en*, drunken]. Acute or habitual alcoholic intoxication. See *Alcoholism*, *Dipsomania*, *Inebriety*.
- Drupe** (*drup*) [δρῦππα, an over-ripe olive]. In biology, a stone-fruit, as the cherry, peach, and plum.
- Drupelet** (*drup'-let*) [δρῦππα, an over-ripe olive]. A little drupe.
- Drupetum** (*dru'-fel-tum*) [*drupa*, a drupe]. In biology, an aggregation of drupes, as in a blackberry.
- Druse** (*dris*) [Ger.]. A wound that does not communicate with any surface; a rupture of the tissues with no superficial lesion.
- Dry** (*dri*) [ME., *drye*]. 1. Without moisture. 2. Barren. 3. To evaporate. **D.-ash System**. See *Dry-earth System*. **D. Belly-ache**. See *Girdle-pain*. **D. Caries**. See *Onychomycosis*. **D. Cupping**. See *Cupping*. **D.-earth System, Dry-ash System**; a method of disposing of feces by mingling with them dry earth or ashes in sufficient quantity to absorb all moisture from them, so as to render them inodorous and to prevent decomposition. **D. Gangrene**. See *Gangrene*. **D. Itch**. Synonym of *Lichen*. **D. Labor**, one in which there is but a slight discharge of liquor amnii. **D. Mouth**. See *Xerostomia*. **D.-nurse**, a nurse who attends and feeds a child, but does not suckle it. **D. Pile**, a hemorrhoid that does not bleed. **D. Pleurisy**, pleurisy without effusion. **D.-scall**, a synonym of psoriasis. **D.-swimming**, swimming exercise in the air, a useful gymnastic measure. **D. Tetters**. See *Psoriasis*. **D. Wine**, a wine containing little or no sugar. See *Wines*.
- Dryer's Test**. See *Tests, Table of*.
- Drying Oils**. See *Oils and Fats*.

**Drysdale's Cells or Corpuscles.** Certain microscopic cells in ovarian fluid, generally round, sometimes oval in form, transparent, containing fine granules, but no nucleus. They have been described as pathognomonic of ovarian cysts, but this is disputed.

**Dualin** (*du'-al-in*) [*dual*, of two]. An explosive composed of a mixture of nitro-glycerin 50 parts and nitrated sawdust 50 parts. *Giant powder* and *rend-rock* are similar mixtures.

**Dualism** (*du'-al-izm*) [*two*, two]. A system by which natural phenomena are explained upon two principles. **D., Chancrous**, the theory of the existence of two forms of chancre—the non infecting, or soft chancre, and the infecting, or true (hard) chancre.

**Dualistic** (*du'-al-ist-ik*) [*dual*, of two]. Characterized by duality. **D. Theory of the Composition of Carbon-compounds**; every chemic compound is composed of two groups, electrically different, and these are further made up of two different groups or elements. The *Elektro-chemi*, *dualistic theory of Berzelius* was prevalent in Germany until about 1860. **Duality** (*du'-al-ty*) [*dualitas*, dual]. Dualism; the supposed distinction, and potentially independent action, of each of the cerebral hemispheres.

**Dubini's Disease.** "Electric chorea;" myelitis convulsiva; a malady met with in Italy, differing from chorea in the character of the movements, which are sudden and shock-like; in the course of the disease, which is progressive and often fatal; and in the addition of muscular palsy and wasting. Its etiology and pathology are obscure. See *Diseases*, *Table of*.

**Dublin Method.** See *Treatment*, *Methods of*.

**Dubois' Caustic.** See *Caustic*.

**Duboisia** (*du'-bis'-e-ah*) [after *Dubois*, a French botanist]. The leaves of *D. myoporoides*, an Australian tree. It resembles belladonna in physiologic and therapeutic effects. **D., Ext.** Dose gr.  $\frac{1}{6}$ – $\frac{1}{4}$ . **D., Ext. Fld.** Dose  $\mathfrak{m}$  v–x. **D., Tinct.** Dose  $\mathfrak{m}$  v–xx. **Duboisin** (*du'-bis'-in*) [after *Dubois*, a French botanist],  $C_{20}H_{28}N_6O$ . An alkaloid from *Duboisia myoporoides*, identical with hyoscyamin.

**Dubruel's Operation.** See *Operations*, *Table of*.

**Duchenne's Disease.** See *Diseases*, *Table of*. **D. Paralysis.** See *Diseases*, *Table of*. **D.-Aran Type of Muscular Atrophy.** See *Diseases*, *Table of*.

**Duck-bill Forceps.** See *Forceps*. **D. Speculum.** See *Speculum*.

**Duckett's Closet.** See *Sewage*, *Disposal of*.

**Duck-foot** (*duk'-foot*). Synonym of *Flat-foot*.

**Duck-legged** (*duk'-leg'-ed*). Having very short legs.

**Duck-weed Disease** (*duk'-weed dis-ez*). A German name for tuberculosis in cattle.

**Duckworth's Theory.** The *neuro-humoral theory* of the origin of gout. It is that there is a basic, arthritic stock, a pathetic habit, of which gout and rheumatism are two distinct branches. The gouty diathesis is expressed in (a) an abnormality of the nerve-centers, which may be inherited or acquired; and (b) a peculiar incapacity for normal elaboration within the whole body, whereby uric acid is formed at times in excess or is incapable of being duly transformed into more soluble and less noxious products.

**Duct, or Ductus** (*duk'-tus*, to lead). A tube for the conveyance of the fluids of the body. **D., Aberrant**, a small, blind, coiled tube, 2 to 14 inches in length, running from the lower portion of the canal of the epididymis. **D., Aberrant Bile**, one of a number of biliary ducts, occasionally found in the left lateral ligament of the liver. They are not surrounded by lobules and are the remains of hepatic substance, present at an early stage of development. **D., Acoustic**, the external auditory duct. **D., Adipose**, one of

the sacs in cellular tissue containing the fat. **D., Air**, in biology, one of the intercellular spaces in aquatic plants, containing air. **D., Alimentary.** See *D., Thoracic*. **D., Alveolar**, one of the infundibula of the bronchioles. **D., Annular**, in biology, one of the ring-shaped thickenings of the cells of vascular tissue. **D. of Arantius.** See *D. venosus*. **D., Archinephric.** See *D., Mesonephric*. **D., Arterial.** See *D. arteriosus*. **D. arteriosus**, a short vessel in the fetus between the main pulmonary artery and the aorta. It becomes obliterated at birth. **D., Auditory**, the space between the membrana tectoria and the membrana basilaris of the cochlea. **D. of Bartholin**, the larger and longer of the sublingual ducts, opening into the mouth near to, or in common with, Wharton's duct. **D. of Bellini**, one of the excretory tubes of the kidneys. **D., Biliary.** See *D., Common Bile*. **D. of Botal.** See *D. arteriosus*. **D., Branchial**, in *Myxozoa*, a short tube between the branchial pouch and the intestinal cavity. **D., Canalicular**, one of the smaller galactophorous ducts of the mammae. **D., Cement**, in *Cirripedia*, one of a number of tubes that pass through the antennae from the cement-glands. **D. choledochus.** See *D., Common Bile*. **D., Cochlear.** See *Canal, Cochlear*. **D., Common Bile**, a duct about three inches long formed by the union of the cystic and hepatic ducts, and conveying the bile to the duodenum. **D. of Cuvier**, in the fetus, one of two short transverse venous trunks, on either side, opening into the auricle of the heart, each being formed by the union of a superior vein, the primitive jugular, and an inferior vein. The right one becomes the superior vena cava; the left one disappears. **D., Cysthepatic.** See *Hepato-cystic*. **D., Cystic**, the excretory duct of the gall-bladder; it is about  $1\frac{1}{2}$  inches long, runs backward, downward, and to the left and unites with the hepatic duct to form the common bile-duct. **D. of Darwin.** See *D., Cement*. **D., Definitive**, one of the straight milk-ducts in the nipple. **D., Efferent.** Same as *Canal, Efferent*. **D., Egestive.** See *D., Excretory*. **D., Ejaculatory**, a duct about an inch long, on either side of the body, formed by the union of the vas deferens and the seminal vesicle. The semen passes through it into the urethra. **D., Endolymphatic**, a tubular process of the membranous labyrinth of the ear, passing through the aqueduct of the vestibule into the cranial cavity, where it terminates below the dura mater in a blind enlargement, the sacculus endolymphaticus. **D., Esophagocutaneous**, in biology, a duct joining the esophagus with the branchial pore, and thus with the exterior. **D., Excretory**, the tube through which the secretion of a gland is discharged. **D., Galactophorous**, one of the 15 or 20 milk-ducts of the lobes of the mammary glands. They converge toward the areola, and terminate upon the surface of the nipple in small depressions. **D., Gall.** See *D., Bile*, *D., Hepatic*, and *D., Cystic*. **D. of Gärtner**, the canal of Gärtner. See *Canal*. **D., Genital**, the genital canal. See *Canal*. **D., Guttural**, the Eustachian tube. **D., Hepatic**, a duct,  $1\frac{1}{2}$  inches long, formed at the margin of the transverse fissure of the liver by the right and left hepatic ducts. It unites with the cystic duct to form the common bile-duct. **D., Hepatic, Left**, a duct arising from the left lobe of the liver, and joining the right hepatic duct to form the common hepatic duct. **D., Hepatic, Middle**, an occasional branch of the hepatic duct, conveying the bile from the quadrate lobe of the liver. **D., Hepatic, Right**, a duct arising from the right lobe of the liver, and joining the left hepatic duct, to form the common hepatic duct. **D., Hepato-cystic**, one of the biliary ducts emptying

directly into the gall-bladder. **D., Hepato-pancreatic**, a duct conveying the secretions of the liver and pancreas into the intestinal canal; the common bile-duct. **D., Hermaphrodite**, a duct that in hermaphroditic animals receives the male and female elements. **D., Hemithoracic**, an ascending branch of the thoracic duct, given off high in the thorax, and opening either into the right lymphatic duct or close to the angle of union of the right subclavian and right internal jugular veins. **D. inferens**, in certain *Edentata*, one of the ducts leading from the submaxillary glands to a common receptacle for the secretion of the gland. **D., Inter-cellular**, the intercellular canal. See *Canal*. **D., Interlobular, Bile**, one of the ducts situated between the lobules of the liver. They are of two varieties, small and large. **D., Intralobular, Bile**, one of the intralobular canals. See *Canal*. **D., Lachrymal**. See *D., Nasal*. **D., Lactiferous**. See *D., Galactophorous*. **D., Leydig's**. See *D., Mesonephric* and *D., Urogenital*. **D., Lymph**. See *D., Thoracic*. **D., Lymphatic**. See *D., Thoracic*. **D., Lymphatic, Left**. See *D., Thoracic*. **D., Lymphatic, Right**, the vessel that receives the lymph from the absorbent vessels of the right arm, the right side of the head and neck, the chest, lung and right side of the heart, and also from the upper surface of the liver. It terminates at the junction of the right subclavian and internal jugular veins. **D., Mammary**. See *D., Galactophorous*. **D., Mesonephric**, an embryonic duct belonging to the mesonephron, and formed by the longitudinal fission of a portion of the segmental duct. In the male, it becomes the vas deferens, while in the female it almost entirely disappears. **D., Metanephric**, the *Urter*, *q. v.* **D., Milk**. See *D., Galactophorous*. **D., Mucous**. See *Canal, mucous*. **D., Mucous**. See *Canal, mucous*. **D. of Müller**, a tube (on either side of the body) formed by the undivided portion of the segmental duct, and of the longitudinal tubes into which it divides. From them in the female are developed the oviducts, uterus and vagina, while in the male they atrophy and disappear. **D., Nasal**, the duct,  $\frac{1}{2}$  an inch long, that conveys the tears from the lachrymal sac into the inferior meatus of the nose. **D., Naso-lachrymal**. See *D., Nasal*. **D., Nuckian**, one of the excretory ducts of the orbital gland of the dog. **D., Omphalic**. See *D., Vitelline*. **D., Omphalo-mesenteric**. See *D., Vitelline*. **D., Pancreatic**, a duct that extends from the pancreas to the duodenum at the point where the common bile-duct enters the bowel. **D., Pancreatic, Accessory**, the excretory duct of the lesser pancreas, opening into the pancreatic duct or into the duodenum, close to the orifice of the common bile-duct. **D., Pancreatic, Supplementary**. See *D., Pancreatic, Accessory*. **D., Parotid**. See *D. of Stensen*. **D. of Pecquet**, the thoracic duct. **D., Pneumatic**, in fishes, the tube that connects the swimming-bladder with the esophagus. **D., Pronephric**. See *D., Segmental*. **D., Prostatic**, one of the ducts conveying the secretion of the prostate into the urethra. **D., Reticulate**, in biology, an aggregation of parenchymatous tissue-cells, in which the thickenings assume the form of a network. **D. reuniens**, a small duct leading from the sacculle to the membranous labyrinth of the cochlea. **D. of Rivini**, one of the ducts of the sublingual gland. **D., Roriferous**. See *D., Thoracic*. **D., Sacculo-utricular**, a small canal connecting the sacculle of the internal ear with the utricle. **D. of Santorini**. Same as *D., Pancreatic, Accessory*. **D., Scalariform**, in biology, one of numerous parallel narrow and elongated bordered pits in plant-cells set close together like the rounds of a ladder. **D., Secretory**, one of the smaller ducts of a gland,

tributaries of the excretory duct. **D., Segmental**, in embryology, a tube, on either side of the body, situated between the visceral and parietal layers of the mesoblast, opening anteriorly into the body-cavity, and posteriorly into the cloaca. **D., Seminal**. See *D., Ejaculatory*. **D., Spermathecal**, in certain *Mollusca*, the duct that connects the spermatheca with the hermaphrodite duct. **D., Spermatic**, the *Vas deferens*; *q. v.* **D., Spiral**, in biology, the prosenchymatous cell-tissue, the walls of which are marked by spiral thickenings. **D. of Steno**. See *D. of Stensen*. **D., Stenon's**. See *D. of Stensen*. **D., Stenonine**. See *D. of Stensen*. **D. of Stensen**, 1. a duct about  $2\frac{1}{2}$  inches long, conveying the secretion of the parotid gland into the mouth, opening on the inner side of the cheek, about opposite to the second upper molar tooth. 2. See *Canal, Incisive*. **D., Sublingual**. See *D. of Rivini* and *D. of Bartholin*. **D., Tear**, the nasal duct. **D., Testicular**, the vas deferens, *q. v.* **D., Thoracic**, a duct 18 to 20 inches long, extending from the receptaculum chyli, in front of the vertebrae as far as the seventh cervical vertebra, where it curves down over the subclavian artery and empties into the left subclavian vein at its junction with the left internal jugular vein. It receives the lymph and chyle not received by the right lymphatic duct. **D., Thyroglossus**, in the embryo, a duct that terminates upon the tongue as the foramen cecum, and leads to the rudiments of the thyroid body. **D., Trabecular**, in biology, prosenchymatous tissue cells, in which thickenings cross the lumen of the cell. **D., Urogenital**, in biology, a duct that receives the urine and the genital products. **D., Uropygial**, in birds, a duct leading from the uropygial gland. **D., Uroseminal**. See *D., Urogenital*. **D. venosus**, the smaller, shorter, and more posterior of the two branches into which the umbilical vein divides after entering the abdomen. It empties directly into the ascending vena cava. After the birth of the fetus it becomes obliterated. **D., Vitellarian**, the canal in which an ovum receives its investment of albuminoid substance. **D., Vitelline**, a temporary channel of communication between the alimentary canal of the embryo and the umbilical vesicle. **D., Vitello-intestinal**. See *D., Vitelline*. **D. of Wharton**, the duct, about two inches long, of the sublingual gland, opening in the mouth at the side of the frenum linguae. **D. of Wirsung**, the pancreatic duct. **D., Wolffian**, the mesonephric duct. **D., Yellow**. See *Canal, Eschricht's*.  
**Ductule** (*duk'-chül*) [*ductulus*, a small duct]. A small duct, as the straight seminal ducts.  
**Dudgeon's Recipe**. A formula for varnish to preserve sphygmographic and cardiographic tracings. It consists of one ounce of gum dammar dissolved in six ounces of rectified benzolin.  
**Dudley's Operation**. See *Operations, Table of*. **D. Tests**. See *Tests, Table of*.  
**Duflos' Tests**. See *Tests, Table of*.  
**Dugas' Test**. A method of diagnosis in dislocation of the shoulder. If the hand of the affected side is made to clasp the opposite shoulder, the elbow cannot be made to touch the front of the chest.  
**Dugong Oil** (*du'-gong*). The fixed oil afforded by the dugong, *Halicore australis*, a marine sirenian mammal. It is regarded as a good substitute for cod-liver oil.  
**Duhring's Disease**, or *Impetigo*. See *Impetigo, Dermatitis herpetiformis*, and *Diseases, Table of*.  
**Dulcamara** (*dul'-kam-a'-ra*) [*dulcamara*, bitter-sweet]. Bittersweet. The young branches of *D. solanum*, containing several glucosids and an alkaloid. Its properties are not well understood. It causes nausea

emesis and convulsive muscular movements, and in toxic doses is a narcotic poison. It is now employed in psoriasis and similar skin-diseases. **D., Fld. Ext.** Dose  $\frac{3}{4}$ . **D., Decocum**, unof., 15 per cent. strength. Dose  $\frac{3}{4}$ -1.

**Dulcamarin** (*duk'-am-a'-rin*) [*du'-ka-ma-a*, bitter-sweet]  $C_{12}H_{14}O_{10}$ . An alkaloid of *Bittersweet*. It is a yellow, amorphous powder, with a sweetish-bitter taste, sparingly soluble in water, freely so in alcohol and acetic acid, insoluble in ether and chloroform.

**Dulcin** (*du'-sin*). See *Dulcitol*.

**Dulcite** (*du'-sit*). See *Dulcitol*.

**Dulcitol** (*du'-sit-ol*) [*tu'-sit*, sweet]  $C_6H_{14}O_6$ . Dulcin, dulcite; an hexahydric alcohol occurring in various plants, and obtained from dulcitol manna (originating from Madagascar manna). It is made artificially by the action of sodium amalgam upon milk-sugar and galactose. It crystallizes in large monoclinic prisms, having a sweet taste. It is sparingly soluble in water, and melts at  $188^\circ C$ . It is said to be two hundred times as sweet as sugar.

**Dull** (*du'*) [ME., *du'*, stupid]. 1. Slow of perception. 2. Not resonant on percussion. 3. Not bright in appearance. 4. Not sharp; blunt.

**Dullness** (*du'-ness*) [ME., *du'*, stupid]. The quality of being dull, in any sense; lack of resonance on percussion.

**Dulong and Petit's Law**. See *Law*.

**Dulse** (*du'*) [Gael., *duileasg*, dulse]. A popular name for various edible sea-weeds, such as *Rhodymenia palmata*. These are popularly esteemed as pectoral remedies. Unof.

**Dumas, Method of**. A method for the determination of nitrogen. In a glass tube (from 70 to 80 cm. long) sealed at one end, place a layer (about 1 cm.) of dry, primary sodium carbonate or magnesite, then pure cupric oxide (5 cm.), afterwards a mixture of the substance with the cupric oxide; then again pure granular cupric oxide (from 20 to 30 cm.), and finally fill the tube with pure copper turnings (about 20 cm.). In the open extremity of the tube is placed a rubber cork, bearing a gas delivery tube, which extends into a mercury bath. The back part of the combustion-tube, containing the carbonate, is heated first, to expel the air from all parts of the apparatus. A graduated cylinder, filled with mercury, is placed over the extremity of the exit tube; into the tube containing mercury several cubic centimeters of concentrated potassium hydroxide are introduced by means of a pipet. The metallic copper and the layer of cupric oxide in the anterior portion of the tube are first heated and then gradually the mixture. When the combustion is complete, heat is applied to another part of the sodium carbonate layer. The graduated vessel, containing pure nitrogen, is placed in a large cylinder of water, allowed to stand a short time until the temperature is equalized, when the volume of gas is read and the temperature of the surrounding air and the barometer-height are noted.

$$G = \frac{V}{w} \left( \frac{h-w}{760} \right) \times 0.0012562$$

$G$  = the weight of the nitrogen volume in grams.  $V$  = the absolute volume in cubic centimeters.  $h$  = the barometric pressure.  $w$  = the tension of aqueous vapor at the temperature  $t^\circ C$ .  $0.0012562$  = the weight, in grams, of 1 c.c. of nitrogen at  $0^\circ C$ , and 760 mm. pressure.

**Dumb** (*du'*) [ME., *dumb*, mute]. Unable to utter articulate speech. **D. Ague**, a popular expression for ague or malarial sickness marked by obscure symptoms. **D.-bell**, a weight consisting of two iron balls connected by a shaft, used in exercise for health and

development. **D.-bell Crystals**, crystals of calcium oxalate, sometimes seen in the urine. **D.-cane**, the *Caladium seguinum*, or *Dieffenbachia seguinum*, a W. Indian plant; when bitten it causes the lips and mouth to swell, and thus may produce temporary inability to speak. The plant is used in preparing an ointment, and is said to be useful in dropsies.

**Dumbness** (*dum'-nes*) [ME., *dumb*, mute]. Inability to utter articulate speech.

**Dumetose** (*du'-met-os*) [*dumus*, a bramble]. In biology, belonging to a thicket; bush-like.

**Dumont's Blue**. Same as *Smalts*.

**Dumose** (*du'-mös*) [*dumus*, a thorn-bush]. In biology, bushy, or pertaining to a bush.

**Dumoutier's Horizontal Plane**. See *Plane*.

**Duncan's Operation**. See *Operations*, *Table of*.

**Dung** [ME., *dung*, dung]. Excrement; feces; ordure.

**D.-bath**. See *Pigments*, *Colors*, and *Dye-stuffs*.

**D.-hill**, a heap of dung.

**Dunga** (*du'-gah*). Synonym of *Dengue*.

**Dunging** (*dung'-ing*). See *Pigments*, *Colors*, and *Dye-stuffs*.

**Dunham's Solution**. A culture-medium composed of sodium chlorid, 5 parts; dried peptone, 1 part; distilled water, 100 parts.

**Duodenal** (*du-o-de'-nal*, or *du-ad'-en-al*) [*duodeni*, twelve each]. Relating to the duodenum. **D. Ulcer**, ulceration of the duodenum. It may be *acute*, as after severe burns or scalds, or after exposure to extreme cold; or (more commonly) it may be *chronic*, occurring usually in old alcoholic males. Its most frequent seat is in the first part of the duodenum, either on the anterior or posterior wall. It is probably due to the action of the gastric juice upon the intestinal wall which has been devitalized as the result of some form of malnutrition. Perforation and fatal peritonitis may ensue if the ulcer be situated on the anterior wall.

**Duodenitis** (*du-o-den-i'-tis*) [*duodeni*, twelve each; *itis*, inflammation]. Inflammation of the duodenum.

**Duodeno-cholecystotomy** (*du-o-de'-no-ko-le-sis-tol'-o-me*) [*duodeni*, twelve each; *χολή*, bile; *κυστις*, bladder; *στόμα*, mouth]. An operation for establishing an artificial communication between the gall-bladder and duodenum.

**Duodeno-enterostomy** (*du-o-de'-no-en-ter-os'-to-me*) [*duodeni*, twelve each; *έντερον*, bowel; *στόμα*, mouth]. The establishment of an artificial communication between the duodenum and some portion of the small intestine.

**Duodeno-jejunal** (*du-o-de'-no-jej-u'-nal*) [*duodeni*, twelve each; *jejunus*, dry]. Pertaining to the duodenum and the jejunum.

**Duodeno-renal** (*du-o-de'-no-re'-nal*) [*duodeni*, twelve each; *ren*, the kidney]. Relating to the duodenum and to the kidney.

**Duodenostomy** (*du-o-de-nos'-to-me*) [*duodenum*; *στόμα*, a mouth]. The operation of opening the duodenum, and the attachment of the lips of the intestinal slit to the walls of the abdomen, in order to form an artificial mouth for the introduction of nutriment.

**Duodenotomy** (*du-o-den-ol'-o-me*) [*duodenum*; *τομή*, to cut]. Surgical incision of the duodenum.

**Duodenum** (*du-o-de'-num*, or *du-ad'-en-um*) [*duodeni*, twelve each; so called because it is about twelve finger-breadths long]. The first part of the small intestine beginning at the pylorus. The inner surface is covered with folds of mucous membrane called *valvulae conniventes*, or *valves of Kerkring*.

**Dupasquier's Test**. See *Tests*, *Table of*.

**Duplay's Operation**. See *Operations*, *Table of*.

**Duplicana** (*du-plik-a'-nah*) [*duplicare*, to double]. A double tertian ague.

**Duplication** (*du-plik-a'-shun*). Same as *Reduplication*, *q. v.*

**Duplicature** (*du'-plik-a-chur*) [*duplicare*, to double]. The reflection, or folding of a membrane upon itself.

**Duplicity** (*du-plis'-it-e*) [*duplicitas*, doubleness]. The condition of being duplex or double.

**Dupuytren's Contraction.** See *Diseases, Table of*.  
**D. Hydrocele.** See *Diseases, Table of*. **D. Ointment,** an ointment used to correct baldness. It contains ox-marrow 250, lead acetate 4, balsam of Peru 8, diluted alcohol 30, tinct. of camphor,  $R_{12}$ , tinct. of cloves and tinct. of cinnamon, each 1. **D. Operation.** See *Operations, Table of*. **D. Splint,** a splint used in the treatment of Pott's fracture of the leg. **D. Suture.** See *Suture*.

**Dura** (*du'-rah*) [*durus*, hard]. The *Dura mater*, *q. v.* **D. mater,** the outer membrane of the brain and spinal cord. It is divided into the *cerebral* and *spinal* or *rhachidian* dura, and its cerebral portion is in part identical with the endocranium. **D. m. testis,** the tunica albuginea of the testis.

**Duræmatoma** (*dur-em-at-o'-mah*). See *Durematoma*.

**Dural** (*du'-ral*) [*durus*, hard]. Pertaining to the dura.

**Duramen** (*dur'-am-en*) [*durare*, to harden]. In biology, heart-wood.

**Durande's Solvent.** A solvent for biliary calculi; it consists of three parts of ether and two of turpentine, administered in capsules immediately before meals. **D. Treatment.** See *Treatment, Methods of*.

**Duration** (*du-ra'-shun*) [*durare*, to last]. Continuance in time. **D. of Life,** several methods of ascertaining the duration of life are employed: 1. The Mean Age at Death; 2. The Probable Duration of Life; 3. the Mean Duration of Life; 4. the Expectation of Life, or mean after-lifetime; and 5. the number living out of which one dies annually. According to the English Life-table No. 3, the mean age at death is 40.9 years, but this test is, for several reasons, fallacious, though it is of exceptional interest when the deaths from various diseases are considered. See *Probable D. of L., Expectation of Life, and Life-table*.

**Durematoma** (*dur-em-at-o'-mah*) [*dura*, hard; *âma*, blood; *ûma*, tumor: *pl., Durematomata*]. Hematoma of the dura; an accumulation of blood between the dura and arachnoid.

**Durene** (*du'-rèn*) [*durus*, hard]  $C_{10}H_{14}$ . A hydrocarbon, present in coal-tar. It is a crystalline substance that possesses a camphor-like odor; it melts at  $79-80^{\circ}C$ , and boils at  $190^{\circ}C$ .

**Dürer, Angle of.** See *Angle. D., Plane of*. See *Plane*.

**Durham's Tube.** The lobster-tail tube largely used in tracheotomy.

**Durilic Acid** (*du-ril'-ik*). See *Acid, Durilic*.

**Duro-arachnitis** (*du'-ro-ar-ak-ni'-tis*) [*durus*, hard; *ἀράχνη*, a spider; *itis*, inflammation]. Inflammation of the dura and arachnoid membrane.

**Duroziez' Murmur.** See *Signs and Symptoms, Table of*.

**Dusart-Blondlot's Test.** See *Tests, Table of*.

**Dust-occupations.** Those that from the nature of the particles of the dust produced may give rise to pneumoconiosis, tuberculosis, or bronchitis.

**Dutch** (*duch*) [ME., *Dutche*]. Pertaining to Holland. **D. Bitters.** See *Latifia*. **D. Gold,** an alloy of copper and zinc. **D. Liquid.** See *Ethene Chlorid*. **D. Mineral,** copper beaten out into very thin leaves. **D. White.** Same as *Hamburg White*.

**Duval's Operation.** See *Operations, Table of*.

**Du Verger, Suture of.** See *Suture. D. Method.* See *Operations, Table of*.

**Duverney, Foramen of.** See *Foramina, Table of. D. Glands.* See *Gland*.

**Dware's Test.** See *Tests, Table of*.

**Dwarf** (*dworf*) [ME., *dwarf*]. A being characterized by completed physical development, but having the various parts of unnaturally small dimensions, owing to insufficient growth. This condition is frequently associated with sterility and impotence. See *Nanism, Nanus*. **D. Elder,** the *Aralia hispida*. Its root is a valuable diuretic. Dose of fld. ext. ʒj-ij. Unof. **D. Tape-worm.** See *Tenia nana*.

**Dyad** (*di'-ad*). See *Quantivalence*.

**Dyaster** (*di-as'-ter*) [*δῆς*, two; *ἀστήρ*, star]. In biology, the karyokinetic figure assumed by the aster of a dividing nucleus before the formation of the stars at the ends of the nuclear spindle. It is the sixth stage of *Karyokinesis*.

**Dye** (*di*) [ME., *dyen*, to dye]. To color a substance by immersing it in some coloring-matter. The material used as a coloring-substance. **D.-stuffs.** See *Pigments, Colors, and Dye-stuffs*.

**Dyer's Broom.** See *Pigments, Conspectus of*.

**Dyerism** (*di'-er-izm*) [*Dyer*, the physician who proposed it]. A simple means of giving exercise to all the ocular muscles at once. It consists merely in reading a certain definite small amount daily, and increasing that amount systematically as the strength of the eyes increases.

**Dyerizing** (*di'-er-iz-ing*). See *Dyerism*.

**Dynam** (*di'-nam*). See *Dyne*.

**Dynamia** (*di-nam'-e-ah*) [*δύναμις*, power]. 1. Ability to resist diseases, or to withstand the effects of any strain, physical or mental. 2. The sthenic character of any attack of disease.

**Dynamic** (*di-nam'-ik*) [*δύναμις*, energy]. Pertaining to energy. In medicine, a synonym of *Sthenic, q. v.* **D. Squint.** See *Insufficiency*.

**Dynamics** (*di-nam'-iks*). See *Mechanics*.

**Dynamite** (*di'-nam-it*) [*δύναμις*, power]. An explosive consisting of nitro-glycerin incorporated with infusorial earth, to give it consistency. It is eight times as powerful as gunpowder.

**Dynamization** (*di-nam-iz-a'-shun*) [*δύναμις*, power]. The so-called potentizing of medicines by comminution and agitation.

**Dynamo** (*di'-nam-o*) [*δύναμις*, power]. A dynamo-electric machine; a machine that generates dynamic, or current electricity, instead of static electricity; one in which the current is generated by revolving coils of insulated wire through the field of a magnet intensified by the same current.

**Dynamogeny** (*di-nam-oj'-en-e*) [*δύναμις*, energy; *γεννᾶν*, to beget]. The production of energy; the physiologic generation of force.

**Dynamograph** (*di-nam'-o-graf*) [*δύναμις*, power; *γραφειν*, to write]. An instrument designed to measure and graphically record muscular strength.

**Dynamometer** (*di-nam-om'-et-er*) [*δύναμις*, power; *μέτρον*, a measure]. An instrument designed to

DYNAMOMETER OF MATHIEU. (Landois.)

measure force, or one for the measurement of muscular strength, particularly of the hand.

**Dyne** (*din*) [*δύναμις*, power]. A force sufficient to

- impart a velocity of one centimeter per second to a mass of one gram. See *Electric Units*.
- Dys-** [dŭs-,] a prefix implying difficulty, illness, badness; it may be represented by *bad, hard, difficult, painful*.
- Dysacusma** (dis-ak-ŭs'-mah) [dŭs-, painful; ἀκούσια, hearing]. A sensation of pain or discomfort caused by loud or even moderate noises.
- Dysacusia, or Dysacusis** (dis-ak-ŭs'-ze-ah or -sis) [dŭs-, hard; ἀκούσια, hearing]. Hardness or difficulty of hearing.
- Dysæsthesia** (dis-es-the'-ze-ah). See *Dysæsthesia*.
- Dysalbumose** (dis-al'-bu-mŏs'). See *Albumose*.
- Dysagnosia, or Dysagnosis** (dis-an-ŭs'-nŏs-ah) [dŭs-, hard; ἀγνῶσις, recognition, reading]. Word blindness; dyslexia.
- Dysæpe** (dis-ŭs'-tŭs') [dŭs-, painful; ἀσπῆ, touch]. Morbid state of the sense of touch.
- Dysapocatastasis** (dis-ap-ŏ-kat-as'-tas-is) [dŭs-, hard; ἀποκατάστασις, re-establishment]. Morbid restlessness and dissatisfaction.
- Dysapnotocy** (dis-ap-ŏ-not'-ŏ-se) [dŭs-, difficult; ἀπνοα, painless; τοκος, birth]. Painless, but difficult, labor.
- Dysarthria** (dis-ar'-thre-ah) [dŭs-, difficult; ἀρθρῶν, articulation]. Impairment of the power of speech-articulation, from disease of the medulla and pons. **D. literalis**. Synonym of *Stammering*.
- Dysarthrosis** (dis-ar'-throt'-sis) [dŭs-, bad; ἀρθρῶν, a joint]. 1. A deformed joint. 2. A false-joint. 3. A dislocation of a joint.
- Dysbasia** (dis-ba'-ze-ah) [dŭs-, difficult; βάσις, a step]. Difficulty of walking. (Proposed instead of abasia, as in the affection there is rarely absolute inability to walk.)
- Dysbulia** (dis-bu'-le-ah) [dŭs-, difficult; βούλεσθαι, to will]. Impairment of will power.
- Dyscataposis** (dis-kat-ap'-ŏ-sis). Synonym of *Hydrophobia*.
- Dyschroa, or Dyschrœa** (dis'-kro-ah or -kre'-ah) [dŭs-, bad; χρῶμα, color]. Discoloration, especially of the skin.
- Dyschromatopsia** (dis-kro-mat-ŏp'-se-ah) [dŭs-, ill; χρῶμα, color; ὥψις, vision]. Difficulty in distinguishing colors.
- Dyschromia** (dis-kro'-ma-ah) [dŭs-, ill; χρῶμα, color]. Discoloration, especially of the skin.
- Dyschylia** (dis-ki'-le-ah) [dŭs-, ill; χυλός, chyle]. Disorder of the chyle.
- Dyscinesia** (dis-in'-e-ze-ah) [dŭs-, ill; κίνησις, motion]. Difficult or painful motion.
- Dyscoria** (dis-kŏ'-re-ah) [dŭs-, bad; κόρυς, pupil]. Abnormality of the form of the pupil.
- Dyscraia, or Dyscraia** (dis'-kra-ŭs'-ze-ah) [dŭs-, bad; κράσις, combination]. A depraved or abnormal state; an abnormal or impure condition of the blood, due to general disease.
- Dyscrasic, Dyscratic** (dis-kra-ŭs'-ik, dis-kraŭs'-ik) [dŭs-, bad; κράσις, combination]. Of the nature of, or affected with a dyscrasia.
- Dyseœa, or Dyseœia** (dis-ŭs'-ŭs'-ze-ah, or dis-ek-ŏi'-ah) [δυσᾶσσια, deafness]. Hardness of hearing.
- Dysentery** (dis-en-ter'-ŭs'). See *Dysentery*.
- Dysenteric** (dis-en-ter'-ik) [dŭs-, bad; ἐντερῶν, the bowels]. Of the nature of, or affected with dysentery.
- Dysentery** (dis-en-ter'-ŭs') [dŭs-, bad; ἐντερῶν, the bowels]. An acute specific disease marked by inflammation of the solitary glands and follicles of the large intestine, with tormina and tenesmus, and the frequent passage of scanty and bloody stools. Death may result from asthenia, or peritonitis from perforation.
- Toward the close of grave cases of the disease the stools may become watery, black (the so-called '*meat-washings*'), and of an offensive gangrenous odor. Dysentery is prevalent in all malarious regions, and is also likely to occur among troops when the food is poor and irritating, and the drinking-water impure. **D., Algid**, that form characterized by great feebleness or absence of the pulse-beat, cyanosis, aphonia, suppression of urine, cold surface, and an early fatal issue. **D., Amebic**, that in which the *Amœba coli* is found in the stools. **D., Hemorrhagic**, a grave bowel-disease in India, marked by profuse hemorrhages from the bowels, with collapse. **D., Sporadic**, a mild type occurring in temperate climates. **D., White**, an epidemic variety, with muco-purulent stools.
- Dyseptic** (dis-ep-ŭ-toŭl'-ik) [dŭs-, bad; ἐπιπλωτικός, healing]. Cicatrizing slowly and imperfectly.
- Dysæsthesia** (dis-es-the'-ze-ah) [dŭs-, difficult; αἰσθησις, sensation]. Dullness of any sensation, especially that of touch. 2. Painfulness of any sensation not normally painful. **D. interna**, amnesia. **D. receptiva**, pain or distress felt in the vertex or occiput, often with a feeling "as if the head were being opened and shut."
- Dysgenesis** (dis-jen'-es-is) [dŭs-, hard; γένεσις, generation]. In biology, the second of Broca's four degrees of fecundity—in the union of two species. Cf. *Aggenesis*, *Paragenesis*, *Eugensis*.
- Dysgeusia** (dis-jŭ'-se-ah) [dŭs-, ill; γεῦσις, taste]. Morbidity or perversion of the sense of taste.
- Dysgrammatism** (dis-gram'-at-izm) [dŭs-, difficult; γραμμα, a letter]. Inability to make the proper use of words. It is a symptom of certain cerebral diseases.
- Dysgraphia** (dis-graf'-e-ah) [dŭs-, difficult; γράφειν, to write]. 1. Inability to write, as a result of a brain-lesion. 2. Imperfect configuration of an organ.
- Dyshidrosis** (dis-hid-roŭs'-sis). See *Dysidrosis*.
- Dysidrosis** (dis-id-roŭs'-sis) [dŭs-, bad; ιδρώσις, sweating]. Excessive activity of the sweat-glands, in association with a retention of their secretion, probably due to some neurotic disorder. See *Chiro-pompholyx*, *Pompholyx*.
- Dyskinesia** (dis-kin'-e-ze-ah) [dŭs-, difficult; κίνησις, movement]. Impairment of the power of voluntary motion. See *Discinesia*.
- Dyslalia** (dis-laŭ'-le-ah) [dŭs-, difficult; λαλεῖν, to talk]. Impairment or difficulty of speaking, due to some non-central lesion (such as a defect of the vocal bands or of the palate).
- Dyslexia** (dis-leks'-e-ah) [dŭs-, difficult; λέξις, reading]. Morbid or aphasic difficulty or fatigue in reading.
- Dyslochia** (dis-loŭ'-ke-ah) [dŭs-, bad; λόχια, the lochia]. An abnormal condition of the lochial discharge.
- Dyslogia** (dis-loŭ'-je-ah) [dŭs-, difficult; λόγος, speech]. Difficulty in speech, not so much with individual words as with the expression of ideas; it is due to some central lesion. See also *Alogia*.
- Dyslysin** (dis-tis-in) [dŭs-, difficult; λύνειν, to dissolve],  $C_{21}H_{36}O_2$ . A resinous anhydrid of cholalic acid. It is insoluble in water, alcohol, and alkalies. It is a non-crystalline substance soluble in an excess of ether.
- Dysmenorrhea** (dis-men-or'-e-ah) [dŭs-, difficult; μήν, month; ῥέειν, to flow]. Obstructed or difficult menstruation. **D., Congestive**, a form of painful menstruation in which often no lesion can be found, the pain being due to an intense congestion of the pelvic viscera. In other cases there exists some morbid condition that is aggravated by the menstrual congestion. **D., Intermediate**, pain occurring regularly each month, but not at the menstrual period. **D., Mechanical**. See *D., Obstructive*. **D., Membranous**,

painful discharge of the menstrual decidua in one or more large pieces, instead of after undergoing disintegration. **D. Mixture.** See *Guaiaec Mixture*, *Fenner's D.*, **Neuralgic.** See *D.*, **Spasmodic.** Also, a term applied to *Neurotic dysmenorrhea*, *q. v.* **D.**, **Neurotic**, a peculiar form of dysmenorrhea occurring in women of neurotic temperament and marked by neuralgic pains, not confined to the pelvis, but distributed over the body. **D.**, **Obstructive**, that due to mechanical obstruction to the free escape of the menstrual fluid. It is usually due to contraction of the cervical canal, associated with anteflexion of the uterus. **D.**, **Ovarian**, that form in which the pain is apparently entirely in the ovaries. It is aching or burning in character and referred to the *ovarian center*, a spot at the level of and about two inches internal to the anterior superior iliac spine. **D.**, **Spasmodic**, that form of dysmenorrhea due to spasmodic uterine contraction. It is often associated with deficient uterine development.

**Dysmerogenesis** (*dis-mer-o-jen'-es-is*) [*δυσ-*, bad; *μέρος*, a part; *γεννᾶν*, to beget]. In biology, a variety of budding in which the various buds are very dissimilar.

**Dysmimia** (*dis-min'i-e-ah*) [*δυσ-*, difficult; *μιμῆσθαι*, to mimic]. Aphasic difficulty in using signs or symbols in lieu of words.

**Dysmnnesia** (*dis-mne'-ze-ah*) [*δυσ-*, difficult; *μνήσις*, memory]. Impairment or defect of the memory.

**Dysmorphia** (*dis-mor'-fe-ah*) [*δυσ-*, ill; *μορφή*, form]. Deformity.

**Dysmyotonia** (*dis-mi-o-to'-ne-ah*) [*δυσ*, bad; *μῖς*, a muscle; *τόνος*, tone]. 1. Atony of the muscles. 2. Excessive tonicity in muscles; myotonia.

**Dysneuria** (*dis-nu'-re-ah*) [*δυσ-*, bad; *νεῖρον*, nerve]. Nervous disorder or distress; sense-impairment.

**Dysnusia** (*dis-nu'-ze-ah*) [*δυσ-*, bad; *νοῖς*, mind]. Weakness or impairment of the mind.

**Dysodia** (*dis-o'-de-ah*) [*δυσωδία*; *δυσ-*, ill; *ὀσμεν*, to smell]. Fetor; stench; ill smell. Also a synonym of *Rhinitis atrophica*, *q. v.*

**Dysodontiasis** (*dis-o-don-ti'-as-is*) [*δυσ-*, bad; *ὀδοντίασις*, dentition]. Difficult dentition.

**Dysodynia** (*dis-o-din'-e-ah*) [*δυσ-*, ill; *ὀδύνη*, pain]. Ineffective labor-pains.

**Dysopia** (*dis-o'-pe-ah*) [*δυσωπία*; *δυσ-*, bad; *ὤψ*, eye]. Defective or painful vision. **D. tenebrarum.** Synonym of *Hemeralopia*.

**Dysorexia** (*dis-or-eks'-e-ah*) [*δυσ-*, ill; *ὄρεξις*, appetite]. A deprived or unnatural appetite.

**Dysosmia** (*dis-oz'-me-ah*) [*δυσ-*, ill; *ὀσμή*, odor]. 1. An unpleasant or fetid odor. 2. Loss or impairment of the sense of smell.

**Dysosphresia** (*dis-os-fre'-ze-ah*) [*δυσ-*, ill; *ὀσφρησις*, smell]. Impairment of the sense of smell.

**Dysostosis** (*dis-os-to'-sis*) [*δυσ-*, ill; *ὀστέον*, bone]. Defective formation of bone.

**Dyspareunia** (*dis-par-oo'-ne-ah*) [*δυσπάρευνος*, ill-mated]. Painful or difficult performance of copulation from physical incompatibility.

**Dyspepsia** (*dis-pep'-se-ah*) [*δυσ-*, difficult; *πέπειν*, to digest]. Impaired or imperfect digestion. It may be *acute*, from some error in diet, or *chronic*, due to catarrh of the mucous coat of the stomach, the presence of abnormal ferments, or to other slowly-acting pathologic conditions of the viscus. **D.**, **Atonic**, a derangement of the stomach, with disorder of its functions, due to insufficient quantity or impaired quality of the gastric juice, or to deficient action of the gastric muscles. **D.**, **Colonic.** See *Enteritis*, *Membranous*. **D.**, **Duodenal.** See *Enteritis*, *Membranous*. **D.**, **Follicular.** Synonym of *Enteritis*, *Membranous*. **D.**, **Intestinal**,

due to defects in the pancreatic, biliary, or intestinal secretions, or to deficient peristalsis. It is marked by borborygmi, flatulence, etc. **D.**, **Irritative**, the catarrhal form of imperfect gastric digestion. **D.**, **Nervous**, that form characterized by sensations of distress and uneasiness during digestion, although the act is accomplished within the physiologic time-limit. It occurs most frequently in those of the neurotic constitution. **D.**, **Smokers'.** See *D.*, *Tobacco*. **D.**, **Tobacco**, that due to excessive use of tobacco.

**Dyspepsodynia** (*dis-pep-so-din'-e-ah*). Synonym of *Gastralgia*.

**Dyspepsy** (*dis-pep'-se*). See *Dyspepsia*.

**Dyspeptic** (*dis-pep'-tik*) [*δυσ-*, difficult; *πέπειν*, to digest]. 1. Relating to or affected with dyspepsia. 2. One who has dyspepsia.

**Dyspeptone** (*dis-pep'-ton*) [*δυσ-*, difficult; *πέπειν*, to digest]. An insoluble and unassimilable product of the gastric digestion of proteids. See *Metapeptone* and *Hemiprotein*.

**Dysperistalsis** (*dis-per-is-tal'-sis*) [*δυσ-*, painful; *περί*, around; *στάσις*, compression]. Violent peristaltic action of the intestine.

**Dyspermatism** (*dis-per'-mat-izm*) [*δυσ-*, difficult; *σπέρμα*, seed]. Difficulty of depositing the sperm within the vagina.

**Dyspermia** (*dis-perm'-e-ah*). See *Dyspermia*.

**Dysphagia** (*dis-fa'-je-ah*) [*δυσ-*, ill; *φαγεῖν*, to eat]. Difficulty in swallowing, or inability to swallow. **D.**, **Convulsive.** Synonym of *Esophagismus*. **D. globosa**, *globus hystericus*. **D. hystericus.** Synonym of *Globus hystericus*. **D. spastica**, dysphagia due to hysteric spasm of the esophagus or pharynx.

**Dysphasia** (*dis-fa'-ze-ah*) [*δυσ-*, ill; *ὥσις*, speech]. Imperfect or disconnected speech, arising from loss of or faulty arrangement of words, and dependent upon a central lesion.

**Dysphonia** (*dis-fō'-ne-ah*) [*δυσ-*, difficult; *φωνή*, voice]. A condition of defective voice; hoarseness. It is due to some acute or chronic inflammatory condition, new-growths, paralysis, or ulcerations of the vocal bands. **D. clericorum**, chronic glandular laryngitis; clergyman's sore-throat, *q. v.* **D. spastica**, speakers' cramp; stammering of the vocal bands.

**Dysphoria** (*dis-fō'-re-ah*) [*δυσ-*, difficult; *φέρειν*, to bear]. Impatience and restlessness; mental anxiety; fidgets.

**Dysphrasia** (*dis-fra'-zhe-ah*) [*δυσ-*, ill; *ὁράσις*, speech]. Imperfect speech, due to impairment of the mental powers. Kussmaul's term for a mental condition in which the emotion is opposed to the words designed to express it.

**Dysphrenia** (*dis-fre'-ne-ah*) [*δυσ-*, bad; *φρήν*, mind]. Any mental disorder.

**Dyspnea** (*disp-ne'-ah*) [*δυσ-*, difficult; *πνέειν*, to breathe]. Difficult or labored breathing, arising from various causes, as laryngeal or tracheal obstruction, heart-disease, kidney-disease, lung-disease, or anemia. It may be either *inspiratory* or *expiratory*, according as it is mainly dependent upon the muscles of inspiration or expiration; or it may be *general*, that is, both inspiratory and expiratory. **D.**, **Asthmatic**, that due to asthma. **D.**, **Cardiac**, that due to heart-disease. **D.**, **Postural.** See *Orthopnea*. **D.**, **Renal**, that due to renal disease. **D.**, **Uremic**, that due to uremia. **D.**, **Rhythmic.** See *Cheyne-Stokes Respiration*.

**Dyspneic** (*disp-ne'-ik*) [*δυσ-*, difficult; *πνέειν*, to breathe]. Affected with or caused by dyspnea. **D. Coma.** See *Coma diaceticum*.

**Dyspermia** (*dis-sper'-me-ah*) [*δυσ-*, ill; *σπέρμα*, seed]. An imperfect or abnormal condition of the semen.

**Dysstasia**, or **Dystasia** (*dis-ta'-ze-ah*) [*δυσ-*, ill; *στάσις*, standing]. Difficulty in standing. A term

proposed for astasia, as in this affection there is rarely absolute inability to stand. **D. Dysbasia.** See *Ataxia ambula*.

**Dystaxia** (*dis-tak'-ah*) [*δυσ*, bad; *-axis*, regulation, order] Ataxia, or partial ataxia.

**Dysteleologic** (*dis-tel'-e-logic*) [*δυσ*, ill; *-telos*, perfect; *-logos*, science] Pertaining to *Dysteleology*.

**Dysteleology** (*dis-tel'-e-logy*) [*δυσ*, ill; *-telos*, perfect; *-logos*, science] The study of rudimentary and useless organs, such as the vermiform appendix.

**Dyathanasia** (*dis-than'-a-sia*) [*δυσ*, painful; *thanatos*, death] A slow and painful death.

**Dysthelasia** (*dis-thel'-a-sia*) [*δυσ*, ill; *θηλάειν*, to suck] Difficulty in sucking or in giving suck.

**Dythesia** (*dis-thel'-a-sia*) [*δυσ*, to do, or feel ill] 1. Ill condition, especially ill health due to a non-fatal disorder of the blood vessels. 2. Impatience; irritableness; ill temper in the sick.

**Dysthetic** (*dis-thel'-ic*) [*δυσ*, to do, or feel ill]. Of the nature of a dythesia; eachetic.

**Dysthymia** (*dis-thim'-ia*) [*δυσ*, bad; *θυμος*, mind]. Melancholy or mental perversion. **D. algetica**, mental perversion due to peripheral nerve-irritation. **D. neuralgica**, mental perversion due to facial or other neuralgias.

**Dystithia** (*dis-tith'-e-ah*) [*δυσ*, difficult; *τιθήναι*, a nipple] Difficulty of nursing or inability to nurse at the breast.

**Dystocia** (*dis-to'-c-ia*) [*δυσ*, difficult; *τοκος*, birth]. Difficult labor. **D.**, Fetal, difficult labor due to such

fetal irregularities as displacement of the arm, excessive size, plural pregnancy, monsters, etc. **D.**, Maternal, due to some defect on the side of the mother, as pelvic deformity or disease.

**Dystonia** (*dis-to'-ne-ah*) [*δυσ*, ill; *τόνος*, tone]. Disorder or lack of tonicity.

**Dystopia** (*dis-to'-pe-ah*) [*δυσ*, ill; *τόπος*, place]. Displacement of any organ.

**Dystrophia** (*dis-trof'-fe-ah*). See *Distrophy*.

**Dystrophic** (*dis-trof'-fik*) [*δυσ*, bad; *τροφή*, nourishment]. Poorly nourished.

**Dystrophoneurosis** (*dis-trof'-o-nu-ro'-sis*) [*δυσ*, bad; *τροφή*, nourishment; *νεῖρον*, a nerve; *νόσος*, disease]. A disturbance of nutrition caused by abolition or perversion of nervous influence; or a nervous disease caused by ill-nutrition.

**Dystrophy** (*dis'-tro-fe*) [*δυσ*, bad; *τροφή*, nourishment]. Imperfect or faulty nourishment. **D.**, Primary Muscular. See *Atrophy*, *Idiopathic Muscular*.

**Dystropextrin** (*dis-tro-po-deks'-trin*) [*δυσ*, bad; *τρέπειν*, to turn; *dexter*, right]. A starchy material existing in normal blood, and but slightly soluble.

**Dysulotous** (*dis-u'-lo-tus*) [*δυσ*, bad; *ὤλη*, scar]. Healing with difficulty.

**Dysuria** (*dis-u'-re-ah*) [*δυσ*, ill; *οὔρον*, urine]. Difficult or painful urination; it may be due to calculi, cystitis, spasm, stricture.

**Dysuric** (*dis-u'-rik*) [*δυσ*, ill; *οὔρον*, urine]. Affected with or relating to dysuria.

**Dysury** (*dis'-u-re*). Same as *Dysuria*.

## E

**E.** Abbreviation of *Eye* and *Emmetropia*.

**E. M. F.** Abbreviation of *Electromotive Force*.

**Ext.** Abbreviation of *Extraction*.

**Eagle-wood** (*ag'-la-wood*). See *Allochum*.

**Ear** (*er*) [*ME.*, *ere*, ear]. The organ of hearing. It consists of the outer or external ear, the middle ear or tympanum, and the internal ear or labyrinth. Illustrated details are shown in the annexed cuts. **E.-ache.** See *Otalgia*. **E.-bone**, an auditory ossicle. **E.**, Cat's, a deformity of the ear, causing it to resemble the ear of a cat. **E.-cough**, reflex cough from irritation or disease of the ear. **E.-crystal**, an otolith. **E.-deformities**. That insane, imbecile, and idiotic persons often have deformities of the external ear is a fact well established. Among the named deformities are the following. *Barnwell's ear* designates asymmetry of the two ears. *Caged ear* is an ear with no cover at all; but it is asserted that this is a peculiarity of the Lapins, and not of the Cagots. *Dugan's ear* is the upper part of the helix, and the remainder of the helix contains nodules of cartilage. *Hutchinson's ear* is large, flattened down, as if pressed, with a narrow and depressed helix. In *Stahl's ear* the helix is flattened and covered with the antihelix, and the two nodules, nor the form graphoidea being visible. In *Willebrand's ear* the antihelix is mildly prominent. See also *Horn-tower ear*, and *Loup's ear*. **E.**, Drum of. See *Tympanum*. **E.-dust.** See *Otodebris*. **E.**, **E.-finger**, the little finger. **E.**, Flap, a deformity of the ear in which

it is pendulous, as in certain animals. **E.-giddiness**, a synonym of *Mènière's Disease*.

**E.-hole**, the external auditory meatus. **E.**, Inflammation of. See *Otitis*.

**E.**, Internal, the *Labyrinth*, *q. v.* **E.-lobe**, the lobe of the ear.

**E.**, Middle. See *Tympanum*.

**E.-sneezing**, sneezing produced by inflammation of the ear.

**E.-spoon**, a curet used in removing cerumen.

**E.-stone.** See *Otolith*.

**E.-trumpet**, an instrument for gathering a larger number of waves of sound to a focus, and thus improving the hearing of those partially deaf.

**E.-tumor**, *Hematoma auris*, *q. v.* **E.-vertigo**, a synonym of *Mènière's Disease*.

**E.-vomiting**, reflex vomiting from auditory disease.

**E.-wax.** See *Cerumen*.

**E.-wig**, an insect (*Forficula auricularia*) erroneously supposed to have a fondness for secreting itself in the external auditory meatus.

**Earth** (*erth*) [*ME.*, *erthe*, earth]. In chemistry, a name given to various metallic oxides or silicates, not soluble in water and not affected by great heat. **E.**, Alkaline, the oxides and hydrates of calcium, magnesium, strontium, barium, and other metals of the same group. **E.-bath**, a sand bath. See *Bath*. **E.**, Cimolian. See *Cimolian*. **E.-closet**, a privy in which the dejecta are disposed of by the *Dry-earth System*, *q. v.* **E.-cure**, the therapeutic use of earth, soil, mud, or sand. **E.-dressing**, a dressing of earth for wounds, bruises, etc. It has marked deodorizing powers. **E.**, Fuller's, a clay used as an absorbent dressing for sores. See also *Ammonotheapy*, *Bole*.

**E.-worm**, a common soil-inhabiting worm, *Lumbricus terrestris*. An oily liniment prepared from earth-worms is vulgarly held in high esteem as a relaxant for contracted tendons. In Russia a preparation of earth-worms is highly valued as a diuretic.

THE EAR.

1. Pinna, or auricle. 2. Concha. 3. External auditory canal. 4. Membrana tympani. 5. Lucus. 6. Malleus. 7. Manubrium mallei. 8. Tensor tympani. 9. Tympanic cavity. 10. Eustachian tube. 11. Superior semicircular canal. 12. Posterior semicircular canal. 13. External semicircular canal. 14. Cochlea. 15. Internal auditory canal. 16. Facial nerve. 17. Large petrosal nerve. 18. Vestibular branch of auditory nerve. 19. Cochlear branch.

#### AUDITORY OSSICLES.

1. Head of Malleus. 2. Processus brevis. 3. Processus gracilis. 4. Manubrium. 5. Long process of incus. 6. Articulation between incus and stapes. 7. Stapes.

COCHLEA (LAMINA SPIRALIS OSSEA).

1. 1. Surrounding bony structure. 2. Semi-infundibuliform lamella. 3. Its concave surface. 4. Concave border in which it terminates. 5. Anterior extremity of this border. 6. Cupola, superior two-thirds removed. 7. Inferior portion of base of semi-infundibuliform lamella. 8. Lamina spiralis ossea. 9. Its origin. 10. Its beak or terminal portion. 11. Scala tympani. 12. Scala vestibuli. 13. Internal auditory canal. 14. Fossa at the base of the modiolus.

#### OSSEOUS LABYRINTH OF THE EAR (LAMINA SPIRALIS OSSEA).

- 1, 2, 3. Semicircular canals. 4. Vestibule. 5. Ampulla. 6. Fovea semi-elliptica. 7. Fovea hemispherica. 8. Cochlea. 9. Origin of lamina spiralis ossea. 10. Foramen rotundum.

#### OSSEOUS AND MEMBRANOUS LABYRINTH OF THE EAR.

1. Vestibular branch of auditory nerve. 2. Branch for sacculus. 3. Branch for utricle. 4. Branch for ampulla of membranous posterior semicircular canal. 5. Branch for ampulla of external canal. 6. Branch for ampulla of superior canal. 7. Cochlear branch of auditory nerve. 8. Cochlea.

#### MEMBRANOUS LABYRINTH OF THE EAR.

Distribution of the vestibular branch of the auditory nerve to the membranous labyrinth; membranous vestibule and semicircular canals.  $\times 3$ .

1. Vestibular branch. 2. Sacculus branch. 3. Utriculus branch. 4. Branch to ampulla of external membranous semicircular canal. 5. Branch to ampulla of superior membranous semicircular canal.

COCHLEA.

1. Scala tympani. 2. Scala vestibuli. 3. Anterior or triangular canal. 4. Posterior or quadrilateral canal. 5. 5. Spiral ligament. 6. External spiral sulcus. 7. Membrana tectoria, or membrane of Corti. 8. Membrana basilaris. 9. Spiral vessel. 10. Limbus laminae spiralis. 11. Pillars of organ of Corti. 12. Branch of cochlear nerve. 13. Ganglion spirale. 14. Branch of cochlear nerve between the lamellae of the lamina spiralis ossea. 15. One of the orifices by which this branch penetrates the canal of Corti. 16. Part of bony cochlea. 17. Lining periosteum. 18. Membrane of Reissner.

Easton's Syrup. See *Ferrum*.

Eat (*et*) [*AS*, *etan*, to eat]. To masticate and swallow food.

Eau (*ay*) [*Fr.*]. Water. E. de Cologne, cologne water. E. de Vie, brandy; alcoholic spirit.

Eberth's Bacillus. See *Bacteria*, *Synonymic Table of B.* E's. Lines. See *Lines*, *Table of*.

Ebner's Glands. See *Gland*, *Table of*.

Eboli's Test. See *Test*, *Table of*.

Ebonite (*eb'-n-ut*) [*ebon*, ebony]. Black hard rubber. See *Table of*.

Ebracteate (*eb'-rak'-te-at*) [*e*, priv.; *bractea*, a thin plate]. In biology, destitute of bracts.

Ebrietas (*eb'-ri-et-as*) [*l.*]. Synonym of *Alcoholism*.

Ebriety, Ebriosity (*eb'-ri-et-ty*, *eb'-r-as'-et-ty*). Synonym of *Alcoholism*.

Ebstein's Theory. A theory as to the origin of gout. He claims that a nutritive tissue-disturbance is the primary change, leading to necrosis, and in the necrotic areas the urates are deposited. E's Treatment. See *Treatment*, *Methods of*.

Ebullition (*eb'-ul-tsh'-un*). See *Boiling*.

Ebur (*eb'-ur*) [*l.*]. Ivory. E. dentis, dentine, *q.v.*

Eburnation (*eb'-ur-na'-shun*) [*ebur*, ivory]. 1. Increase of the earthy constituents of bone causing greater size and density of the same. 2. Ossification of a cartilage; calcareous infiltration of a tumor.

Eburneous (*eb'-ur-ne-us*) [*ebur*, ivory]. In biology, ivory white.

Ecalcarate (*ek'-kal'-kar-at*) [*e*, priv.; *calcar*, a spur]. In biology, destitute of a spur or spur-like process.

Ecarinate (*ek'-kar'-in-at*) [*e*, priv.; *carina*, keel]. In biology, destitute of a carina or keel-like structure.

Ecaudate (*ek'-aw'-dat*) [*e*, priv.; *cauda*, a tail]. In biology, tailless; without a tail-like appendage. See *Table of*.

Ecballium (*ek'-bal'-i-um*). See *Elaterium*.

Echlepharos (*ek'-hl'-f'-ar-os*) [*ek*, out; *βλέφαρον*, eyelid]. An ancient form of artificial eye.

Echloima (*ek'-hl'-mah*) [*ek*, out; *βάλλω*, to cast]. An abortion; an aborted fetus.

Echolic (*ek'-hl'-ik*) [*ek* *βολή*, a throwing out]. 1. Abortifacient. 2. A substance used to produce abortion, or to facilitate parturition; an abortifacient.

Ecbolin (*ek'-hl'-in*) [*ek*, out; *βολή*, a throw]. An alkaloid said to be one of the active principles of ergot. Little is known about it.

Ecbolium (*ek'-hl'-le-um*) [*ek* *βολών*; *ek*, out; *βάλλω*, to throw; *pl.*, *Ecbolia*]. Any abortifacient drug.

Eccentric (*ek'-en'-trik*) [*ek*, out; *κέντρον*, center]. 1. See *Excentric*. 2. Odd or peculiar in behavior, but free from insanity. E. Amputation. See *Amputation*.

E. Convulsion, one due to peripheral irritation.

Eccentricity (*ek'-en'-trik'-it-ty*) [*ek*, out; *κέντρον*, center]. 1. Oddness or peculiarity of behavior without true insanity. 2. A peculiarity.

Echondroma (*ek'-ken'-tro'-mah*) [*ek*, out; *χόνδρος*, cartilage; *pl.*, *Echondromata*]. A cartilaginous tumor; a chondroma.

Echondrosis (*ek'-k-en'-dro'-is*) [*ek*, out; *χόνδρος*, cartilage; *pl.*, *Echondroses*]. A cartilaginous outgrowth.

Echondrotome (*ek'-k-en'-dro-tom*) [*ek*, out; *χόνδρος*, cartilage; *τομή*, cutting]. An instrument for the surgical removal of cartilaginous growths.

Ecchymoma (*ek'-k-um'-mah*) [*ek* *χυμα*, an ecchymosis; *pl.*, *Ecchymomata*]. A tumor made up of extravasated blood.

Ecchymosis (*ek'-um'-sis*) [*ek* *χυμάσθαι*, to extravasate blood]. An effusion of blood into the subcutaneous tissues. It is marked by a purple coloration of the skin, the color gradually changing to brown, green,

and yellow. It is often the result of traumatism. See, also, *Purpura*.

Ecchymotic (*ek'-e-um'-tik*) [*ek* *χυμάσθαι*, to extravasate blood]. Relating to or looking like ecchymosis.

Ecchysis (*ek'-kis-is*) [*ek* *χύσις*, a pouring out]. Any skin-disease characterized by effusion into the dermal tissue.

Eccoprosis (*ek'-o-pro'-sis*) [*ek*, out; *κόπρος*, feces]. Gentle purgation; defecation.

Eccoprotic (*ek'-o-prot'-ik*) [*ek*, out; *κόπρος*, feces]. 1. Gently aperient. 2. Any aperient remedy; a purgative.

Eccrinology (*ek'-rin-ol'-o-je*) [*εκρίνειν*, to excrete; *λόγος*, science]. The science of excretion, including its physics, physiology, and pathology.

Eccyesis (*ek'-si-et'-sis*) [*ek*, out; *κύνσις*, pregnancy]. Extra-uterine gestation.

Eccyliosis (*ek'-se-le-et'-sis*) [*ek*, out; *κύλιειν*, to roll]. Any disorder of development.

Ecdemic (*ek'-dem'-ik*) [*εκδημος*, away from home]. Applied to diseases originating in a distant locality; not endemic.

Ecdemiomania (*ek'-de-me-o-ma'-ne-ah*), or Ecdemomania (*ek'-de-mo-ma'-ne-ah*) [*εκδημος*, away from home; *μανία*, madness]. Insanity marked by a desire for wandering.

Ecdemionosus (*ek'-de-me-on'-o-sus*) [*εκδημέειν*, to wander; *νόσος*, disease]. Ecdemionomania.

Ecderon (*ek'-der-on*) [*ek*, out; *δέρμα*, skin]. 1. That layer of skin or mucous membrane that lies outside of the enderon. 2. The outermost or epithelial layer of skin or mucous membrane.

Ecdersonic (*ek'-der-on'-ik*) [*ek*, out; *δέρμα*, skin]. Belonging to or of the nature of the ecderon.

Ecdysis (*ek'-dis-is*) [*εκδύνειν*, to cast off]. In biology, the sloughing or casting off of the skin.

Ecgonin (*ek'-go-nin*),  $C_8H_{15}NO_3 + 11_2O$ . An alkaloid produced in the decomposition of cocaine by  $HCl$ . It is very soluble in water, more sparingly in alcohol, and consists of prismatic crystals that melt at  $205^{\circ} C$ .

Echidnin (*ek'-id'-nin*) [*ἐχίδια*, viper]. 1. Serpent-poison; the poison or venom of the viper and other similar serpents. 2. A nitrogenous and venomous principle found in the poison-secretion of various serpents.

Echinacea (*ek'-in-a'-se-ah*) [*ἐκίνος*, a hedgehog]. A genus of coarse composite plants of N. America. E. angustifolia. Black Sampson. The root of a perennial herb growing in the U. S. It is claimed that it possesses marked alterative value in strumous and syphilitic conditions. Dose of the fluid extract  $\mathfrak{M}\mathfrak{XV}-\mathfrak{XXX}$ . Unof.

Echinate (*ek'-in-at*) [*echinatus*, prickly, from *echinus*, a hedgehog]. Beset with prickles.

Echinochrome (*ek'-ki'-no-krom*) [*ἐχίνος*, a sea-urchin; *χρῶμα*, color]. In biology, a brown pigment of respiratory function found by MacMunn in the perivisceral fluid of *Echinus*.

Echinochromogen (*ek'-ki'-no-kro'-mo-jeu*) [*ἐχίνος*, a sea-urchin; *χρῶμα*, color; *γένεσις*, producing]. In biology, the chromogen causing the deepening of color in echinochrome on exposure to air.

Ecchinococcus (*ek'-ki'-no-kok'-us*) [*ἐχίνος*, a hedgehog; *κόκκος*, a berry]. In biology, the same as E. veterinorum, the hydatid of the *Tienia echinococcus* of the dog, the most universally distributed of all the hydatids. It is found mainly in the liver and in the lungs of cattle. See *Parasites (Animal)*, *Table of*.

Echinopodium (*ek'-ki'-no-pe'-de-um*) [*ἐχίνος*, a sea-urchin; *-παιδιον*, dim. of *παῖς* (*παῖδ-*), a child]. In biology, Huxley's term for the bilaterally symmetric larva of an echinoderm just as it leaves the egg. It in many ways resembles a worm-larva. Cf. *Pluteus*.

**Echinoplacid** (*e-ki-no-plis'-id*) [*ἑχίνορ, a sea-urchin; πλάς, a plate*]. In biology, applied to echinoderms having spines on the madreporic plate.

**Echinorhynchus** (*e-ki-no-rin'-kus*) [*ἑχίνορ, hedgehog; ῥύγχος, beak*]. A worm parasitic within certain animals and occasionally found in man. **E. gigas** is the best-known species. **E. hominis** is smaller, and is perhaps an immature form of the other. See *Parasites (Animal)*, *Table of*.

**Echinulate** (*e-kin'-u-lāt*) [*echinulus*, dim. of *echinus*, a hedgehog]. In biology, beset with prickles of small size.

**Echitamin** (*e-kit'-am-in*),  $C_{22}H_{28}N_2O_4$ . An amorphous alkaloid of *Dita*, with a paralyzing power comparable to that of curare. It is also called *Ditain*.

**Echitenin** (*e-kit'-en-in*),  $C_{20}H_{27}NO_4$ . An amorphous, brown alkaloid of *Dita*, soluble in alcohol and water.

**Echlorophyllose** (*e-klo-ro-fil'-os*) [*ε, priv.; χλωρός, yellowish-green; φύλλον, a leaf*]. In biology, destitute of chlorophyl.

**Echma** (*ek'-mah*) [*ἔχμα, a stoppage: pl., Echmata*]. A stoppage or obstruction.

**Echmasis** (*ek'-mas-is*) [*ἔχμάζειν, to hinder: pl., Echmases*]. An obstruction or an obstructive disease.

**Echmatic** (*ek-mat'-ik*) [*ἔχμάζειν, to hinder*]. Due to or marked by an echmasis or an echma.

**Echo** (*ek'-o*) [*ἠχώ, a sound*]. A reverberated sound. **E.-sign**, a symptom of epilepsy and other brain-conditions in which there is a repetition of the closing word or words of a sentence. It is regarded as the result of perverted will, or impaired or defective inhibition. **E.-speech**, a peculiar method of utterance in one type of hypnotism.

**Echokinesia, Echokinesis** (*ek-o-kin'-e-se-ah, or -e'-sis*) [*ἠχώ, echo; κίνησις, motion*]. Imitative unwilling action, like that observed in palms or latah. See *Pal-mus* and *Habit-spasm*.

**Echolia** (*ek-o-lā'-le-ah*) [*ἠχώ, echo; λαλέω, talk*]. An aphasic symptom consisting in a repetition of words spoken to the patient by others.

**Echometer** (*ek-om'-et-er*) [*ἠχώ, sound; μέτρον, a measure*]. A stethoscope.

**Echopathy** (*ek-op'-ath-e*) [*ἠχώ, echo; πάθος, disease*]. Any automatic and purposeless repetition of a word or sound heard or of an act seen.

**Echophotony** (*ek-o-fot'-o-ne*) [*ἠχώ, echo; φῶς, light; τῶνος, tone*]. The production of the sensation of color by the stimulus of aerial waves, or sound. See *Phen-ism, Photism*.

**Echophrasia** (*ek-o-fra'-se-ah*) [*ἠχώ, echo; φράσις, speech*]. Same as *Echolia*.

**Echos** (*e'-kos*) [*ἦχος, sound*]. Any subjective sensation, as of a sound that has no objective cause.

**Echoscope** (*ek'-o-skōp*) [*ἠχώ, sound; σκοπεῖν, to examine*]. A stethoscope.

**Echujia** (*ek'-u-jah*). An apocynaceous plant, *Adenium bahmianum*, of Africa. It is extremely poisonous.

**Echujin, Echugin** (*ek'-u-jin*). A poisonous glucosid from the plant called *Echujia*; it has much the same effects as strophanthin.

**Eciomania** (*ek-e-o-ma'-ne-ah*). See *Oikomania*.

**Ecker's Angle**. See *Angle*. **E. Fissure**. See *Fis-sure*.

**Eclampsia** (*ek-lamp'-se-ah*) [*ἐκλάμπτειν, to shine or burst forth; from the suddenness of the attack*]. 1. A sensation as of a light flashing before the eyes. [Obsolete]. 2. Any epileptiform seizure, especially one in which consciousness is not lost. 3. Puerperal convulsion. A convulsive or epileptiform seizure suddenly coming on in a woman prior to or during labor, or in the puerperal state. The convulsions are first tonic and then clonic, and finally affect

the involuntary muscles as well as the voluntary; consciousness is lost, and the attack is followed by coma or sleep. The etiology is obscure, the attack generally repeated, the prognosis grave. The term eclampsia is also used as a general designation for convulsions, and besides the puerperal form described there are the infantile and uremic types. See *Con-vulsions*. **E. nutans**, the nodding *spasm* or *salaam convulsion* of young children. In this affection the head and upper part of the body are bowed forward several times in succession. The attacks tend to occur in paroxysms, during which the child suffers temporarily from disordered consciousness.

**Eclampsic** (*ek-lamp'-sik*). See *Eclamptic*.

**Eclamptic** (*ek-lamp'-tik*) [*ἐκλάμπτειν, to shine or burst forth*]. Relating to, affected with, or of the nature of, eclampsia.

**Eclectic** (*ek-lek'-tik*) [*ἐκλεκτικός, selection*]. Pertaining to a choosing or selection. Applied by a certain school of physicians to themselves, to denote their principle or plan of selecting or choosing that which is good from all other schools.

**Eclecticism** (*ek-lek'-tis-izm*) [*ἐκλεκτικός, selection*]. The doctrine and practice of the *Eclectics*.

**Eclegm** (*ek'-lem*) [*ἐκλεγμα, an electuary*]. An electuary.

**Eclegma, or Ecleigma** (*ek-leg'-mah, ek-lig'-mah*) [*ἐκ, out; λείπειν, to lick: pl., Eclegmata*]. An electuary.

**Eclimia** (*ek-lim'-e-ah*) [*ἐκλίμια*]. Same as *Bulimia*.

**Eclipsis** (*ek-lip'-sis*) [*ἐκλείπειν, a dying out*]. A sudden failure; trance; catalepsy; a sudden and transient loss or impairment of consciousness.

**Eclysis** (*ek'-tis-is*) [*ἐκλύσις, a release, a loosening*]. Any loosening, as of the bowels. Also a slight amount of, or merely a tendency to, syncope. It is present in anemia of the brain.

**Ecmnesia** (*ek-mne'-se-ah*) [*ἐκ, out; μνήσις, memory*]. The dropping out of the memory of the events of a certain portion of time.

**Ecnea** (*ek-ne'-ah*) [*ἐκ, out; νοῖς, mind*]. Insanity.

**Ecoid** (*e'-koid*) [*οἶκος, house*]. A blood-shadow; the colorless stroma or framework of red corpuscles of the blood that have been deprived of their hemoglobin; a shadow-corpuscle.

**Economy** (*e-kon'-o-me*) [*οἶκος, house; νόμος, a law*]. A general name for the human being considered as a whole.

**Ecorticate** (*e-kor'-tik-at*) [*ε, priv.; cortex, bark*]. In biology, destitute of a cortical layer.

**Ecouvillon** (*a-koo-ve'-yon-g*) [Fr.]. See *Ecouvillonnage*.

**Ecouvillonnage** (*a-koo-ve-yon-ahzh'*) [Fr.]. The operation of cleansing, and carrying medicinal agents to, the inside of the uterus by means of a brush.

**Ecphlysis** (*ek'-fllis-is*) [*ἐκφύλλειν, burst out: pl., Ecphlyses*]. Any vesicular eruption.

**Ecphractic** (*ek-frak'-tik*) [*ἐκφρακτικός, clearing obstruction*]. 1. Removing obstructions. 2. An ecphractic medicine.

**Ecphronia** (*ek-fro'-ne-ah*) [*ἐκ, out of; φρήν, mind*]. Insanity.

**Ecphyadectomy** (*ek-fi-ad-ek'-to-me*) [*ἐκφύας, appendage; ἐκτομή, excision*]. Excision of the vermiform appendix.

**Ecphyaditis** (*ek-fi-ad-i'-tis*) [*ἐκφύας, appendage; ιτις, inflammation*]. Inflammation of the vermiform appendix; appendicitis. This term has also been used to include typhilitis, perityphilitis, etc.

**Ecphyas** (*ek'-fi-as*) [*ἐκφύας, an offshoot*]. The vermiform appendix.

**Ecphyma** (*ek-fi'-mah*) [*ἐκ, out; οἰσθαί, to grow: pl., Ecphymata*]. An excrescence on the skin.

**Ecphyesis** (*ek-fī-sē'sis*) [*ek*, out; *ophein*, to blow]. Rapid breathing.

**Ecphysis** (*ek'fī-sis*) [*ek*, out; *meōe*, growth]. In biology, applied by Bate to the branch of any particular crustacean limb; as *antecphysis*, a branch springing from the coxa; *metecphysis*, a branch springing from the base.

**Ectoma** (*ek'tō-mā*) [*ek*, out; *temnō*, to fall: *pt.*, *Ectomata*]. Any falling of a part or organ.

**Ecpyesis** (*ek'pī-sis*) [*ek*, out; *peōō*, to suppurate: *pt.*, *Ecpyesē*]. 1. Any suppuration or abscess. 2. Any pustular skin disease.

**Ecpyetic** (*ek'pī-ē'tik*) [*ek*, out; *peōō*, to suppurate]. Promoting suppuration.

**Écrasement** (*ek-rā-sē'mānt*) [*fr.*]. Surgical removal of a part or growth by means of the ecraseur.

**Écraseur** (*ek-rā-sē'r*) [*fr.*]. An instrument used in the amputation of parts, and consisting of a chain or wire loop, tightened by a screw, whereby the tissue is slowly crushed apart rather than cut, thus rendering the operation easier and bloodless.

**Ecroductily** (*ek-rō-dik'til'ō-ah*) [*ékroos*, escape; *dik'tōō*, digit]. Same as *linham*.

**Ecstaltic** (*ek-stā'tik*) [*ek*, out; *stēllō*, to send]. Sent out from a nerve-center; applied specially to nerve impulses originating from the spinal cord.

**Ecstasy** (*ek'stā-si*) [*ékstasis*, a trance]. A derangement of the nervous system characterized by an exalted visionary state, absence of volition, insensibility to surroundings, a radiant expression, and immobility in statuesque positions. It is also called *Carus-ecstasy* and *Cathēpsia curia*.

**Ecstrophy** (*ek'strō-fī*) [*ek*, out; *strophēō*, to turn]. Eversion; the turning inside-out of a part.

**Ectad** (*ek'tād*) [*ékōs*, external; *ad*, to]. On or toward the ectal part.

**Ectal** (*ek'tāl*) [*ékōs*, external]. At some surface or aspect farther from a supposed center than that with which a given object is compared. External, superficial. See *Position and Direction*, Table of.

**Ectasia** (*ek'tā-si-ah*). See *Ectasis*.

**Ectasis** (*ek'tā-sis*) [*ékstasis*, extension]. Abnormal distention or dilatation of a part.

**Ectatic** (*ek'tā-tik*) [*ekstasis*, extension]. Characterized by ectasis.

**Ectental** (*ek'tē'tāl*) [*ékōs*, outward; *éntōs*, inward]. Pertaining to the line of union between the ectoderm and the entoderm. **E. Line.** See *Lines*, Table of.

**Ecethmoid** (*ek'thē'mōid*) [*ékōs*, out from; *ēthmoēdōs*, sieve-like]. Either one of the lateral cellular masses of the ethmoid bone.

**Ecthyma** (*ek'thē-mā*) [*ekthēma*, a pustule]. An inflammatory skin-disease attended with an eruption of large, flat pustules, which are usually flaccid and of a yellowish or brownish red color. They vary in size from a tiny point to a silver quarter dollar, and are surrounded by a distinct inflammatory areola. Brownish crusts are formed, which on removal leave a slightly excavated surface. The eruption appears as a rash on the legs and thighs where the hairs are thick; it occurs in crops, and may persist for an indefinite period. It is probably due to inoculation with microorganisms, and is prone to occur after local irritation.

**Ecthyminiform** (*ek'thē-mīn-ērm*) [*ekthēma*, a pustule; *pt.*, *form*]. Resembling ecthymin.

**Ectillicio** (*ek'til'ē-siō*) [*ek*, out; *teōō*, to pluck]. Depilatory; causing the hair to fall; removing corns from the feet.

**Ectiris** (*ek'tī-ris*) [*ékōs*, outward; *hōō*, the rainbow]. That part of the cornea, iris, and pupil that lies in front of the iris.

**Ecto-** (*ek'tō-*) [*ékōs*, without]. A prefix signifying without, upon the outer side.

**Ectobatic** (*ek-to-bat'ik*) [*ékōs*, out; *baīnen*, to go]. Effluent; centriugal; moving ectad or distad.

**Ectoblast** (*ek'tō-blast*) [*ékōs*, outside; *blastōs*, a bud]. In biology, a simple, sensitive, covering, and protecting cell-layer; the ectoderm.

**Ectobliquus** (*ek-to-blī'kwus*) [*ékōs*, outward; *obliquus*, slanting]. The external oblique muscle of the abdomen. See *Muscles*, Table of.

**Ectocardia** (*ek-to-kar'de-ah*) [*ékōs*, out; *karōdia*, the heart]. Abnormality of position of the heart.

**Ectocarotid** (*ek-to-kar-ōt'id*) [*ékōs*, out; *kāros*, stupor]. The external carotid artery. See *Arteries*, Table of.

**Ectocarpous** (*ek-to-kar'pus*) [*ékōs*, outside; *karpos*, fruit]. In biology, applied to such animals as have the reproductive organs located in the ectoderm.

**Ectoceliac, or Ectocelian** (*ek-to-sē'le-ak*, *ek-to-sē'le-an*) [*ékōs*, out; *koīlia*, the belly]. Occurring or situated outside a ventricle of the brain.

**Ectocelic** (*ek-to-sē'lik*) [*ékōs*, outside; *koīlia*, a hollow]. In biology, applied to structures placed outside the body-cavity in a celenterate.

**Ectochoroidea, or Ectochorioidea** (*ek-to-ko-roī'de-ah*, or *ek-to-ko-re-ōt'de-ah*) [*ékōs*, out; *choroēdōs*, like a membrane]. The outer layer of the choroid, composed mainly of fibro-connective tissue.

**Ectocinerea** (*ek-to-sin-e're-ah*) [*ékōs*, out; *cinereus*, ashy]. The gray substance of the cortex of the brain. Cf. *Entocinerea*.

**Ectocondyle** (*ek-to-kon'dil*) [*ékōs*, out; *kōndylos*, condyle]. An external condyle.

**Ectocornea** (*ek-to-kor'ne-ah*) [*ékōs*, out; *corneus*, horny]. The corneal conjunctiva.

**Ectocyst** (*ek'tō-sist*) [*ékōs*, out; *kīstis*, a cyst]. The thick, laminated, translucent, and highly elastic membrane of an hydatid cyst. It is lined by a thin cellular membrane called the *endocyst*. The outer layer of the cecæum (or common dermal system) of a colony of Polyzoa.

**Ectoderm** (*ek'tō-derm*) [*ékōs*, outside; *dēma*, skin]. In biology, the primitive outer wall of the body; the animal germinal layer; the term was first applied to the outer of the two membranes of a hydroid zoöphyte. See *Blastoderm*.

**Ectoentad** (*ek-to-ent'ad*) [*ékōs*, without; *éntōs*, within; *ad*, to]. From without inward.

**Ectogastrocnemius** (*ek-to-gas-trok-ne'-me-us*) [*ékōs*, without; *gastrocnēmia*, the calf of the leg]. The gastrocnemius externus muscle. See *Muscles*, Table of.

**Ectogenous** (*ek-toj'en-us*) [*ékōs*, out; *gennāō*, to produce]. Developed outside the body (said of certain pathogenic bacteria and of enthetic poisons).

**Ectogluteus** (*ek-to-glu-tē-us*) [*ékōs*, without; *gloutōs*, the rump]. The external gluteus muscle. See *Muscles*, Table of.

**Ectolecithal** (*ek-to-lēs'ith-al*) [*ékōs*, outside; *lēkithos*, yolk]. In embryology, applied to such eggs as have the formation-yolk enclosed in a superficial layer of food-yolk.

**Ectomere** (*ek'tō-mērē*) [*ékōs*, out; *mēros*, a share]. Any one of the cells of the ovum that are destined to take part in forming the ectoderm.

**Ectopagia** (*ek-to-pā'je-ah*) [*ékōs*, out; *pāgos*, a fixture]. The condition of being ectopagous; an ectopagous monstrosity.

**Ectopagous** (*ek-to-pā'g-us*) [*ékōs*, out; *pāgos*, a fixture]. Of the nature of or pertaining to an ectopagus.

**Ectopagus** (*ek-to-pā'g-us*) [*ékōs*, out; *pāgos*, a fixture]. A monomphalic twin monstrosity united laterally the full extent of the thorax.

**Ectoparasite** (*ek-to-par'-as-it*) [*ἐκτός*, outside; *παράσιτος*, a parasite]. In biology, a parasite that lives on the exterior of its host.

**Ectoparasitic** (*ek-to-par-as-it'-ik*) [*ἐκτός*, out; *παράσιτος*, a parasite]. Of the nature of or pertaining to an ectoparasite.

**Ectopatagium** (*ek-to-pat-aj'-e-um*) [*ἐκτός*, outside; *παταγεῖον*, the border of a garment]. In biology, that part of the wing membrane or patagium of a bat which is limited to the manus; it is also called *dactylopatagium*.

**Ectophyte** (*ek'-to-fyt*) [*ἐκτός*, out; *φυτόν*, a plant]. An external parasitic plant-growth.

**Ectophytic** (*ek'-to-fyt'-ik*) [*ἐκτός*, out; *φυτόν*, a plant]. Of the nature of or pertaining to an ectophyte.

**Ectopia** (*ek-to'-pe-ah*) [*ἐκτοπῶς*, displaced]. An abnormality of position. **E. cordis**. See *Ectocardia*. **E. lentis**, dislocation or congenital malposition of the crystalline lens. **E. oculi**, abnormal position of the eyeball in the orbit. **E. testis**, abnormal position of the testicle. **E. vesicæ**, protrusion of the bladder through the wall of the abdomen.

**Ectopic** (*ek-top'-ik*) [*ἐκτοπῶς*, displaced]. Pertaining to ectopia; displaced. See also *Teratism*. **E. Gestation**. See *Gestation*.

**Ectoplasm** (*ek'-to-plazm*) [*ἐκτός*, without; *πλάσσειν*, to form]. In biology, the outer, hyaline, more compact layer of protoplasm in a cell or unicellular organism; as distinguished from the granular endoplasm.

**Ectopy** (*ek'-to-pé*). Same as *Ectopia*.

**Ectoretina** (*ek-to-ret'-in-ah*) [*ἐκτός*, out; *retina*, retina]. The external and pigmentary layer of the retina.

**Ectosarc** (*ek'-to-sark*) [*ἐκτός*, outside; *σάρξ*, flesh]. In biology, same as *Ectoplasm*, *q. v.*

**Ectoskeleton** (*ek-to-skel'-et-un*). Same as *Exoskeleton*.

**Ectosome** (*ek'-to-sôm*) [*ἐκτός*, outside; *σῶμα*, body]. In biology, applied to the outer region of a sponge, which forms the covering of the choanosome, or middle region, with its flagellated chambers.

**Ectosporous** (*ek-to-spo'-rus*) [*ἐκτός*, outside; *σπόρος*, seed]. See *Exosporous*.

**Ectosteal** (*ek-to'-ste-al*) [*ἐκτός*, out; *ὀστέον*, a bone]. Relating to, situated or occurring outside of, a bone.

**Ectostosis** (*ek-tos-to'-sis*) [*ἐκτός*, out; *ὀστέον*, a bone]. The growth of bone from without; ossification that begins at the perichondrium, or future periosteum.

**Ectotheca** (*ek-toth'-ek-ah*) [*ἐκτός*, outside; *θήκη*, case]. In biology, applied to the capsule of such compound gonophores as those of *Laomedea*; also to such thecae or asci as are exposed, *e. g.* those of discomycetous fungi and gymnocarpous lichens.

**Ectoxemia** (*ek-toks-e'-me-ah*) [*ἐκ*, out; *τοξικόν*, poison; *αἷμα*, blood]. Toxemia not originating within the organism; blood-poisoning from some cause not existing within the organism.

**Ecto-zoön** (*ek-to-zo'-on*) [*ἐκτός*, out; *ζῷον*, an animal; *pl.*, *Ectozaa*]. An external animal parasite; an ectoparasite.

**Ectrodactylia**, **Ectrodactylism** (*ek-tro-dak-til'-e-ah*, *ek-tro-dak'-til-izm*) [*ἐκτροπῶς*, abortion; *δάκτυλος*, finger]. Congenital absence of any of the fingers or toes.

**Ectrogenic** (*ek-tro-jen'-ik*) [*ἐκτροπῶς*, abortion; *γενῆναι*, to produce]. Due to some loss of tissue, as from traumatism or surgical operation. See also *Teratism*.

**Ectrogeny** (*ek-troj'-en-e*) [*ἐκτροπῶς*, abortion; *γενῆναι*, to produce]. Loss or absence of any part or organ.

**Ectroma** (*ek-tro'-mah*) [*ἐκτροπῶς*, abortion; *pl.*, *Ectromata*]. An aborted ovum or fetus.

**Ectromelus** (*ek-trom'-el-us*) [*ἐκτροπῶς*, abortion; *μέλος*, limb]. A single autotistic monster characterized by the presence of aborted or imperfectly-formed limbs.

Examples of this anomaly show every degree of arrested development, from entire absence of the limb to simple shortening.

**Ectropion** (*ek-tro'-pe-on*) [*ἐκ*, out; *τρέπειν*, to turn].

An everted eyelid; abnormal eversion of an eyelid; also, an everted state of the cervical portion of the endometrium. **E.**, **Cicatricial**, due to destruction of part of the skin of the lid, with cicatricial contraction. **E.**

ECTROPION.

**luxurians**, an old name for ectropion, with a proud-flesh appearance of the conjunctiva. **E.**, **Paralytic**, that due to paralysis of the orbicularis palpebrarum. **E.**, **Sarcomatous**. See *E. luxurians*. **E.**, **Senile**, found only in the lower lid, due to relaxation of the orbicularis palpebrarum muscle. **E.**, **Spastic**, due to spastic contraction of the fibers of the orbicular muscle lying near the margin of the orbit.

**Ectropium** (*ek-tro'-pe-um*). Same as *Ectropion*.

**Ectrosis** (*ek-tro'-sis*) [*ἐκτροσις*, abortion]. An abortion, or the production of an abortion.

**Ectrotic** (*ek-tro'-ik*) [*ἐκ*, out; *τιτρώσκειν*, to wound]. Tending to cut short; abortive; abortifacient.

**Ectyotic** (*ek-til-ot'-ik*) [*ἐκ*, away; *τέλος*, callus]. Tending to remove warts or indurations.

**Eczema** (*ek'-ze-mah*) [*ἐκζεῖν*, to boil over]. Tetter; Moist Tetter; an acute or chronic, non-contagious, catarrhal inflammatory disease of the skin, characterized by multififormity of lesion, and the presence, in varying degrees, of itching, infiltration, and discharge. The skin is reddened, the redness shading off insensibly into the surrounding unaffected skin. When well-marked, the skin is fissured, with crusting, leathery infiltration, and scaling. Eczema occurs in skins that are particularly susceptible to the action of external irritants. **E. ani**—of the anus—a troublesome variety common in children; it may simulate condylomata. **E. articolorum**, eczema of the flexor surfaces of the joints. **E. aurium**, a common, troublesome, pustular form affecting the ears. **E. barbae**, a form resembling sycosis, but more superficial. It attacks the bearded portion of the face, but may spread. **E. capitis**, a variety confined to the head. It is usually seen in children; is diffuse, pustular, impetiginous, not itchy, and may be associated with pediculi and seborrhea. **E. circumscriptum parasiticum**, a name given by Crocker to a form of eruption that looks like a dry eczema, but has a border more sharply defined than is usual in *E. squamesum*. It occurs chiefly on the legs below the knee, and is constituted of minute papules aggregated into a uniform moderately red, scaly patch, with sharply defined borders. It is a chronic disease, and is probably parasitic in origin. **E. crurum**, a form occurring in old people as a result of varicosity of the veins of the leg, and not associated with eczema elsewhere. The skin is much infiltrated, red, scaly, with indolent ulcers. **E. crustosum**, eczema with the formation of thin and pale-yellowish crusts. If these crusts are thick and dark in color from capillary bleeding the condition is termed *E. impetiginosum*. This latter form occurs frequently on the scalp and face of strumous children.

**E.**, Diabetic, from the irritation of diabetic urine. **E.**, Epidemic. See *Dermatitis, Epidemic, Exanthematic*. **E.**, epizootica, a disease of domesticated animals due to a microorganism, attended with a characteristic eczematous lesion of the skin and a catarrhal condition of the respiratory tract. It is also called *Fetani-Muth Disease*. See *Streptococcus of Schottelius* under *Bacteria, Synonymy, Table of*. **E.**, erythematousum, the mildest form of eczema, in which the skin is reddened, slightly swollen, infiltrated, and tense, from active congestion; the color of the patches is more vivid, and their edges are less well defined, than in true erythema. It is seen in its most typical form on the face. **E.**, faciei, an acute or chronic form affecting the face; it resembles erysipelas, but is attended with no rise of temperature. **E.**, fissum, *E. rimosum*; a form affecting the hands and skin over the articulations, and characterized by the formation of deep, painful cracks or fissures. **E.**, folliculare, a form confined largely to the neighborhood of the hair-follicles, where irritable, acuminated papules may persist for prolonged periods. **E.**, genitalium, an acute form common in men; it is attended with great swelling and edema, with excoriation. **E.**, hypertrophicum, *E. verrucosum*; a form characterized by permanent hypertrophy of the papillae of the skin, giving rise to general or limited warty outgrowths. This variety results from a tendency to passive congestion. See *Granuloma fungoides*. **E.**, impetiginodes. See *E. pustulosum*. **E.**, impetiginosum. See *E. crustaceum*. **E.**, Infantile, a form commencing usually within six months of birth, and making its appearance first upon the head or face. **E.**, intertrigo, a form of *E. erythematousum* occurring in the groins, on the inner surfaces of the nates, below the mammae, etc. It is due to uncleanness. See *Erythema intertrigo*. **E.**, labiorum, a very obstinate variety affecting the lips, and associated with painful fissures. **E.**, madidans, *E. rubrum*; weeping eczema; large, raw, weeping surfaces studded with red points. It follows *E. vesiculosum*. **E.**, mammae, a variety common in nursing primipare; it is at first vesicular, then squamous, with painful fissures and much crusting. It is very obstinate. **E.**, manuum, a common form implicating the whole of both hands. The acute variety is most marked along the edges of the fingers, where deep-seated vesicles abound; the chronic form chiefly involves the palms and knuckles. **E.**, marginatum, Hebra's term for the most severe form of ringworm of the body. Its seats are the groins, axillae, fork, and occasionally the peritæal spaces. Its lesion is marked by a well-defined, festooned, raised margin. **E.**, meatus, eczema of the external auditory passage. **E.**, mercuriale, that form due to the irritation produced by mercury. **E.**, narium, a form affecting the nostrils. **E.**, palmare, or *E. palmarum*, confined to the palm of the hand. It is also called *Psoriasis palmis*. **E.**, palpebrarum, *Tinea tarsi*; an obstinate form affecting the eyebrows; it is common in scurfy children. **E.**, papillomatousum. Same as *E. verrucosum*. **E.**, papulosum, *Lichen simplex*; a form associated with the formation of minute intensely-itching papules of a deep-red color and firm consistency, arranged in irregularly-shaped groups. They are about the size of a pin's head, acuminate, of a bright red color. Vesicles may form on their summits (*L. tenax*). When they are grouped in oval or rounded patches, a form not uncommon on the external aspect of the forearm and hands, and on the sides, it is *Lichen circumscriptus*. **E.**, pedum, eczema of the feet. **E.**, plantarum, con-

fined to the sole of the foot. **E.**, pustulosum, *E. impetiginodes*; the stage of eczema in which the vesicles develop into pustules that are usually of larger size than the preceding vesicles. This is most common in strumous children. **E.**, rimosum. See *E. fissum*. **E.**, rubrum. See *E. madidans*. **E.**, sclerosum, a chronic form of eczema in which there is induration and thickening of the tissues. **E.**, Seborrhoeic. See *Dermatitis, Seborrhoeic*. **E.**, seborrhoeicum. Synonym of *Seborrhoea*. **E.**, solare, that form due to irritation from the rays of the sun. **E.**, spargosiforme, a variety of *E. sclerosum* in which the thickening is so very great that a condition indistinguishable from *Elephantiasis arabum* is produced. **E.**, squamosum, a form in which the surfaces of ill-defined irregular patches are covered with more or less adherent scales of shed epithelium. This is often seen on the neck and limbs. **E.**, sulphure, that form due to the irritation produced by sulphur. **E.**, tarsi, a form affecting the edges of the eyelids. **E.**, tuberosum. Synonym of *Granuloma fungoides*. **E.**, umbilici, a tractable form resembling syphilitic disease of the same part. **E.**, unguium, involvement of the nails in chronic *E. manuum*. The nails are rough, dull, brittle, and punctate. **E.**, unisquamosum, a rare form having its seat at the root of the nose between the eyebrows. The secretion takes the form of a single epidermic lamella that covers the whole of the affected surface. **E.**, verrucosum. See *E. hypertrophicum*. **E.**, vesiculosum, a stage of vesicular formation in the course of eczema. It is the most common form of the disease. It is best seen on the flexor aspect of the limbs, between the fingers, back of the ears, etc. The vesicles, minute at first and closely aggregated, coalesce and rupture, exuding a clear plastic fluid that stains and stiffens linen. The burning and itching are worse at night, and the excoriated surfaces continue to weep for a few days, when they gradually heal by crusting. **E.**, Weeping. See *E. madidans*.

**Eczematoid** (*ek-zem'-at-oid*) [*ékzétw*, to boil over]. Resembling an eczema.

**Eczematosis** (*ek-zem-at-oid'-sis*) [*ékzétw*, to boil over; *pl.*, *Eczematoses*]. Any eczematous skin-disease.

**Eczematous** (*ek-zem'-at-us*) [*ékzétw*, to boil over]. Of the nature of or affected with eczema.

**Eczemogenous** (*ek-zem-oi'-en-us*) [*ékzétw*, to boil over; *gennáw*, to produce]. Giving rise to eczema.

**Edeagra** (*e-de-at'-grah*) [*aíðia*, the genitals; *ágra*, a seizure]. Pain or gout in the genitalia.

**Edeatrophia** (*e-de-at-ro'-fe-ah*) [*aíðia*, genitals; *átrōphía*, a wasting]. Atrophy or wasting of the genital organs.

**Edeauxe** (*e-de-awks'-e*) [*aíðia*, genitals; *αἰξέω*, increase]. Swelling or hypertrophy of the genitals.

**Edebohl's Position or Posture**. See *Postures, Table of*.

**Edeitis** (*e-de-it'-tis*) [*aíðia*, genitals; *ίτις*, inflammation]. Inflammation of the genital organs.

**Edema** (*e-de'-mah*) [*oídēma*; *oíðēw*, to swell]. Swelling, especially such as is due to the effusion of serous fluid into areolar tissues. See *Anasarca*. **E.**, Acute Circumscribed. See *E.*, *Angio-neurotic* and *Urticaria edematosa*. **E.**, Acute Idiopathic. See *E.*, *Angio-neurotic*. **E.**, Acute Non-inflammatory. See *E.*, *Angio-neurotic*. **E.**, Angio-neurotic, Giant urticaria; a vaso-motor disorder, characterized by the abrupt occurrence of edematous swelling of variable extent, sometimes accompanied by gastro-intestinal crises. There may be a marked hereditary feature in the disease. Death may result from edema of the larynx. **E.**, Brown, the brownish fluid that flows from the cut surface of a lung in the state of brown induration. **E.**, Filtration, a peculiar sort of edema

of the conjunctiva observed after operations or injuries that have produced a perforation in the most anterior sections of the sclera. It is due to the oozing of the aqueous humor between the lips of the wound and under the conjunctiva. **E., Intermittent.** See *E., Angio-neurotic*. **E., Malarial.** See *E., Angio-neurotic*. **E., Malignant,** the term applied by Koch to a parasitic form of gangrenous inflammation that occurs at times after serious bone-injuries, etc. It is characterized by the rapid spread, the septic character of the inflammatory product, and the speedy destruction of the tissue involved, with the formation of gas. It is also called *Gangrenous emphysema*. **E., Menstrual.** See *E., Angio-neurotic*. **E. neonatorum,** a disease resembling somewhat sclerema neonatorum, the skin, however, being less generally involved and less edematous, filled with a serous fluid, and assuming a livid or purplish, rather than a whitish tint, as in sclerema. The disease begins before the third day of life, with drowsiness, and then the edema appears in the extremities, especially the legs, gradually spreading upward. **E., Solid,** a form of edema in which puncture gives exit not to serum, but to a sanious, stringy, lymphoid material.

**Edematous** (*e-dem'-at-us*) [*oîdhma*, edema]. Marked by edema; swollen; puffy.

**Edentate** (*e-den'-tāt*) [*e*, priv.; *dens*, a tooth]. In biology, toothless, as an entire leaf, or a member of the *Edentata* among mammals.

**Edentation** (*e-den-tā'-shun*) [*e*, without; *dens*, a tooth]. A deprivation of teeth.

**Edentulous** (*e-den'-tu-lus*) [*e*, without; *dens*, a tooth]. Without teeth (applied to one who has lost his teeth). See *Caries of the Teeth*.

**Edecephalus** (*e-de-o-sef'-al-us*) [*aîdoia*, genitals; from the resemblance of the proboscis to a penis; *κεφαλή*, head]. A variety of single autostitic monsters of the species otocephalus, in which there is synopsis, absence of the mouth, very rudimentary jaws, and the presence of a proboscis.

**Edeodinia** (*e-de-o-din'-e-ah*) [*aîdoia*, genitalia; *ὀδὴν*, pain]. Any pain in the reproductive organs.

**Edeogargalismus** (*e-de-o-gar-gal-iz'-mus*) [*aîdoia*, genitals; *γαργαλισμός*, a tickling]. Masturbation.

**Edography** (*e-de-og'-ra-fe*) [*aîdoia*, the genitals; *γράφειν*, to write]. A description of the genitalia.

**Edeology** (*e-de-ol'-o-je*) [*aîdoia*, genitals; *λόγος*, science]. A treatise or monograph on the organs of generation.

**Edeomania** (*e-de-o-ma'-ne-ah*) [*aîdoia*, genitals; *μανία*, madness]. Nymphomania; satyriasis.

**Edeomycodermatitis** (*e-de-o-mi-ko-der-mil'-tis*) [*aîdoia*, genitals; *μύκος*, mucus; *δέρμα*, skin; *ιτις*, inflammation]. Inflammation of the mucous membrane of any of the genital organs.

**Edeopsophy** (*e-de-op'-so-fe*) [*aîdoia*, genitals; *ψοφείν*, to utter a noise]. The emission of sounds from the genital organs (as from the bladder or vagina).

**Edeopsy** (*e'-de-op-se*). Same as *Edeoscopy*.

**Edeoptosis** (*e-de-op-to'-sis*) [*aîdoia*, genitals; *πτῶσις*, a fall]. Prolapse of some portion of the genital apparatus.

**Edeoscopy** (*e-de-os'-ko-pe*) [*aîdoia*, the genitals; *σκοπεῖν*, to inspect]. An inspection or professional examination of the genital organs.

**Edeotomy** (*e-de-ol'-o-me*) [*aîdoia*, genitals; *τομή*, a cutting]. The anatomy or dissection of the genital organs.

**Edgeweed** (*ej'-wēd*). A composite-flowered plant, *Sericocarpus tortifolius*, of the Southern U. S. It is used as a remedy for colic in horses. Unof.

**Edible** (*ed'-ib-l*) [*edibilis*, eatable]. A qualification

applied to food, the condition of which is good and wholesome.

**Edison-Lalande Cell.** See *Cell*.

**Edriophthalmous** (*ed-re-off-thal'-mus*) [*ἔδριον*, dim. of *ἔδρα*, a seat; *ὀφθαλμός*, eye]. In biology, having fixed, sessile eyes, not borne on a movable stalk.

**Educt** (*e'-dukt*) [*e*, out; *ducere*, to draw]. A compound that exists in any substance and is extracted from it by a chemic or pharmaceutical process; opposed to *product*, which designates a body that is produced by a process similar to that used in its extraction.

**Edulcorant** (*e-dul'-kor-ant*) [*e*, out; *dulcorare*, to sweeten]. Sweetening; corrective of acidity or of acrimony.

**Edulcoration** (*e-dul-kor-a'-shun*) [*edulcare*, to sweeten]. In chemistry, the act or process of sweetening; the removal of soluble or saline matters by washing.

**Effeminacy** (*ef-em'-in-as-e*). See *Feminism*.

**Effemination** (*ef-em-in-a'-shun*) [*effeminare*, to make womanish]. The state of being effeminate.

**Effera** (*ef'-er-ah*) [*efferus*, fierce, wild]. Sauvage's name for a certain genus of exanthematous diseases.

**Efferent** (*ef'-er-ent*) [*efferens*, carrying from]. Of *nerves*, conveying impulses from the central nervous system to some tissue; motor; secretory. Of *blood-vessels*, conveying blood from the tissues toward the heart, veins, or from the gills. Of *lymphatics*, the vessels leaving or conveying lymph from the lymphatic glands. Compare *Afferent*.

**Effervescent** (*ef-er-ves'-ent*) [*effervesce*, to boil up]. Susceptible of being made to effervesce, or to dissolve with foaming and with the escape of a gas, such as carbon dioxide.

**Effervescing** (*ef-er-ves'-ing*) [*effervesce*, to boil up]. Boiling up; foaming. **E. Powders.** See *Seidlitz Powders*.

**Effleurage** (*ef-flur-ash'*) [Fr.]. In massage, centripetal strokings, *i. e.*, toward the body or heart. These may be made with the palm of one hand, the palms of both hands, the thumb, or the tips of the fingers. Effleurage increases the circulation in the venous blood-vessels and the lymphatics, thereby causing absorption.

**Efflorescence** (*ef-lor-es'-enz*) [*efflorescere*, to bloom]. 1. The flowering of plants. 2. The formation of minute crystals on the surface of certain crystalline bodies, due to the loss of a part or the whole of their water of crystallization. 3. The breaking-out or characteristic eruption of an exanthematous disease.

**Effluent** (*ef-lu'-ent*) [*effluere*, to flow out]. An outflow. The fluid discharged from works for the treatment of sewage.

**Effluvia** (*ef-lu'-ve-ah*) [L.]. Plural of *Effluvium*, *q. v.* **E., Telluric**, emanations arising from the earth.

**Effluvium** (*ef-lu'-ve-um*) [*effluere*, to flow out; *pl.*, *Effluvia*]. Any subtle emanation from a substance or person, especially one that is offensively odiferous.

**Efflux** (*ef'-fluks*), or **Effluxion** (*ef-fluk'-shun*) [*effluxio*; *effluxus*, an outflow]. 1. An outflow; that which flows out. 2. Abortion, or the escape of the embryo from the womb during a very early stage of pregnancy.

**Effracture** (*ef-frak'-chūr*) [*ex*, out; *fractura*, a fracture]. Fracture of the cranium, with depression of one or more fragments.

**Effusion** (*ef-u'-shun*) [*effundere*, to pour out]. A pouring-out. The abnormal secretion or transfer of a liquid from its natural organ or place; effused material.

**Effusive** (*ef-u'-siv*) [*effundere*, to pour out]. Attended with or of the nature of an effusion.

**Egertic** (*e-jer'-tik*) [*ἐγερτικός*, wakening]. Causing wakefulness.

**Egest** (*e-jest'*) [*egere*, to discharge]. To void, as excrement; to defecate.

**Egesta** (*e-jest'-ta*) [*pl.* of *egestum*, fecal matter]. The discharges of the bowels or other emunctory organs.

**Egestion** (*e-jest'-shun*) [*egere*, that which is voided]. Defecation; the expulsion of excrements or excretion.

**Egg** (*eg*) [*ME.*, *egg*, an egg]. See *Ovum*. **E.-albumin**, a native albumin, or proteid constituent of the human body, of which the unboiled white of egg is the type. It is distinguished from serum-albumin by its precipitation when shaken with ether, and by its appearance unchanged in the urine when injected under the skin or into the intestine. **E.-apparatus**; in biology, the ovosphere and the two companion-cells (called the synergidae) in the upper end of the embryo-sac, around the egg apparatus. **E.-cells**, *primordial cells*, large, spheroidal, granular cells embedded at intervals in the layer of the germ-epithelium of the ovary. They eventually become the ova of the Graafian follicle. **E.-cords**, dippings inward into the ovarian substance of the specialized columnar epithelium covering the ovary; these prolongations carry highly specialized cells, each of which develops into an immature Graafian follicle containing an immature ovum. **E.-nog**, a nutritious preparation made by adding the beaten yolk of egg and a little spirit to a tumblerful of milk, stirring well, adding sugar and the white of the egg separately beaten. **E.-shell** **Crackling**, a peculiar crackling produced by pressure upon a soft tumor springing from the medulla or cancellated tissue of a long bone, and surrounded by a thin bony capsule. **E.-tube**. See *Oviduct*. **E.-water**, a nutritious food for infants having summer diarrhea. It consists of the white of a fresh egg, a pint of cold water (previously boiled), a teaspoonful of brandy, and a small pinch of salt.

**Egilops** (*eg-i-lops*) [*aiē*, a goat; *ōp*, eye]. Abscess, with perforation, at the inner canthus of the eye, supposed to be a result of lachrymal fistula. See *Anchilops*.

**Eglandular** (*eg-lan'-du-lar*) [*e*, priv.; *glandula*, a gland]. In biology, destitute of glands.

**Eglandulose** (*eg-lan'-du-lōs*) [*e*, priv.; *glandula*, a gland]. Same as *Eglandular*.

**Egobronchophony** (*eg-brong-koff'-o-ne*) [*aiē*, a goat; *σπυρ*, a bronchus; *φωνη*, a voice]. A combination of egophony and bronchophony.

**Egophony** (*eg-off'-o-ne*) [*aiē*, a wild goat; *φωνη*, the voice]. In auscultation, a term meaning a modification of bronchophony, in which the voice has a breathing character like that of a kid. It is heard in pleurisy with slight effusion, usually near the inferior angle of the scapula.

**Egregorsis** (*eg-reg'-o-ris*) [*εγρηγορειν*; *εγχειρειν*, to wake]. Morbid wakefulness; insomnia.

**Egyptian** (*eg-ipt'-hun*) [*αγπτιος*, Egyptian]. Pertaining to Egypt. **E. Blue**. See *Pigments*, *Conspicuous*. **E. Chlorosis**. See *Anchyletomiasis*. **E. Ophthalmia**. See *Ophthalmia*, *Purulent*. **E. Ulcers**. See *E. venter Utera*.

**Ehrenritter's Ganglion**. See *Ganglia*, *Table of*.

**Ehrlich's Anilin-water Solution**. See *Stains*, *Table of*. **E. Method**, the use of a saturated solution of aniline in water as a mordant for better fixing the aniline dyes on staining bacteria. **E. Test**. See *Tests*, *Table of*. **E.-Biondi's Fluid**. See *Biondi's Fluid*.

**Eichhorst's Corpuscles**. See *Corpuscles*.

**Eichstedt's Disease**. Synonym of *Linea verticolar*, *q. v.*; see also *Dermis*, *Table of*.

**Eidam Cheese** (*id'-am*). See *Cheese*.

**Eidoptometry** (*id-opt'-me-tre*) [*ιδος*, appearance;

*δπιος*, seen; *μετρον*, measure]. The estimation of the acuity of vision.

**Eilema** (*i-le'-mah*) [*ειλημα*; *ειδεν*, to twist; *πλ.*, *Eilemata*]. A pain or colic of the bowels; volvulus; tormina.

**Eiloid** (*i'-loid*) [*ειδεν*, to coil; *ειδος*, form]. Having a coiled texture resembling the coils of an intestine; applied to certain skin-tumors.

**Einbrodt's Test**. See *Tests*, *Table of*.

**Einhorn's Method**. 1. A method of ascertaining the condition of the gastric secretion. An apparatus termed a *stomach-bucket*, consisting of a small oval silver vessel, 1½ cm. long and ¾ cm. wide, is attached to a silk thread, in which at a distance of 40 cm. from the bucket a knot is made. The patient swallows the bucket, and when the knot enters the mouth the operator knows that the bucket is in the stomach. It is withdrawn after remaining there five minutes, and its contents are tested. Resistance to its removal may be overcome by having the patient expire deeply or swallow once. 2. See *Gastrodiaphany*.

**Eisanthema** (*is-an-the'-mah*) [*εις*, into; *ανθημα*, inflorescence; *πλ.*, *Eisanthemata*]. Same as *Enanthema*.

**Eisel** (*i'-sel*) [*ME.*]. An old name for vinegar.

**Eisodic** (*is-od'-ik*). Same as *Esodic*.

**Eisophobia** (*i-so-fo'-be-ah*). Synonym of *Agoraphobia*.

**Eisophoria** (*i-so-fo'-re-ah*). Same as *Esophoria*.

**Eispnea** (*is-pne'-ah*) [*εισπνοη*, a breathing into]. Inspiration; the inhaling of the breath.

**Ejaculation** (*ej-ak-u-la'-shun*) [*ejaculatio*, a throwing out]. The ejection of the semen. **E.-center**. See *Center*.

**Ejaculator** (*ej-ak'-u-la-tor*) [*ejaculare*, to throw out]. The accelerator urinæ. See *Muscles*, *Table of*.

**Ejaculatorium** (*ej-ak-u-la-to'-re-um*) [*L.*]. A syringe.

**Ejaculatory** (*ej-ak'-u-la-tor-eh*) [*ejaculatio*, a throwing out]. Throwing. **E. Duct**. See *Ductus ejaculatorius*.

**Ejecta**, or **Ejectamenta** (*ej-jek'-tah*, *ej-jek-tam-en'-tah*) [*L.*, *pl.*]. Things or materials cast out; excretions or excrementitious matters.

**Ejection** (*ej-jek'-shun*) [*ejectio*, a casting out]. The casting out of excretions or of excrementitious matters; that which is cast out.

**Elaboration** (*e-lab-or-a'-shun*) [*elaborare*, to take pains with]. Careful and exact working. In physiology, any anabolic process, such as that of making crude food into higher tissue-products.

**Elaidic Acid** (*e-la-id'-ik*). See *Acid*.

**Elaidin** (*e-la'-id-in*) [*ελαις*, the olive-tree,  $C_{37}H_{74}O_6$ ]. A white, crystalline, fatty substance, isomeric with olein, produced by the action of  $HNO_3$  upon certain oils, especially castor-oil.

**Elain** (*e-la'-in*). See *Eleoptene*.

**Elaphrium** (*e-la'-fre-um*) [*ελαφρος*, light]. A genus of burseraceous trees. **E. copalliferum** produces a variety of copal. **E. elemiferum** is one of the sources of Mexican elemi. **E. excelsum** and **E. tomentosum**, of South America, afford tacamahac.

**Elastic** (*e-las'-tik*) [*ελαστικη*, to urge forward]. Returning to the original form after change of form by external traction or force. **E. Bandage**, an India-rubber bandage exerting continuous compression of a part. **E. Stocking**, an India-rubber stocking exerting continuous pressure. **E. Tissue**, a variety of connective tissue having elastic properties, and of which some ligaments are composed.

**Elastin** (*e-las'-tin*) [*ελαστικη*, to urge forward]. An albuminoid substance, the fundamental element of elastic tissue. It yields 36 to 45 per cent. of leucin and ½ per cent. of tyrosin. **E.-peptone**. See *Deutero-elastose*.

**Elastose** (*e-las'-tos*) [*ελαστικη*, to urge forward]. One

of the forms of peptone resulting from the gastric digestion of elastin.

**Elater** (*el'-at-er*) [*ἐλάτηρ*, a driver, hurler]. In biology, (a) one of the thread like, usually spirally-coiled, bodies found in the sporangia of mosses, liverworts, and equisetum. They serve for the dispersion of spores. (b) One of the free filaments of the capillitium of the slime-moulds. (c) One of the elastic anal bristles of the insect called spring-tail.

**Elaterin**, or **Elaterium** (*el-at'-er-in*, *el-at-er-i'-um*) [*ἐλάτηριος*, driving away],  $C_{20}H_{28}O_5$ . A neutral principle obtained from *Elaterium ecballium*, or squirting cucumber. It occurs in colorless, hexagonal prisms, that are odorless and have a bitter taste. It is a powerful hydragogue cathartic. In toxic doses, it causes emesis, spasmodic respiration, and death. Dose gr.  $\frac{1}{8}$ – $\frac{1}{2}$ . **E.**, **Pulv.**, **Comp.** (B. P.), contains elaterin 1, sugar of milk 39. Dose gr. j–v. **E.**, **Trituratio**, elaterin 10, sugar of milk 90 parts, thoroughly mixed. Dose gr. ss–j.

**Elaterium** (*el-at-el'-re-um*) [*ἐλάτηριος*, driving away]. A powerful hydragogue cathartic, being the dried sediment from the juice of the squirting cucumber, *Ecballium elaterium* of Europe. Dose  $\frac{1}{8}$  gr. every two hours; of the tincture, gtt. x–xxx.

**Elbow** (*el'-bo*) [*ME.*, *elbowe*]. The elbow-joint; the articulation of the arm and forearm. That part of the forearm and arm adjacent to the elbow-joint. **E.**-jerk, one of the reflexes. See *Reflexes*, *Table of*.

**Elcoplasty** (*el'-ko-plas-te*). See *Helcoplasty*.

**Elcosis** (*el'-ko'-sis*). See *Helcosis*.

**Elder** (*el'-der*). See *Sambucus*. **E.**, **Dwarf**. See *Dwarf Elder*.

**Elecampane** (*el-e-kam'-pān*). See *Inula*.

**Election** (*e-lek'-shun*) [*electio*, a choosing]. Selection or choice, as of points (*points of election*) to be operated upon; consideration of circumstances, such as age, condition in life, occupation, sex, etc., in determining whether to proceed with a proposed surgical operation or not. Such operations are called *Operations of Election* or of *Complaisance*. **E.**, **Triangle of**, the Superior Carotid Triangle. See *Triangles*, *Table of*.

**Electrepeter** (*e-lek-trep'-et-er*) [*ἤλεκτρον*, amber; *τρέπειν*, to turn]. An obsolete term for "commutator," *q. v.*

**Electric**, or **Electrical** (*e-lek'-trik*, or *e-lek'-trik-al*) [*ἤλεκτρον*, amber]. Having the nature of or produced by electricity. **E.** **Aura**, a current of electrified air. **E.** **Brush**, a wire brush used as an electrode. **E.** **Commutator**, an instrument for automatically interrupting or reversing the flow of an electric current, making and breaking the same with desired frequency. **E.** **Chorea**. See *Dubini's Disease*. **E.** **Depilation**, the permanent removal of hair from any part of the body by the electrolytic destruction of the hair-follicles. **E.** **Discharger**, the instrument that directs the charge from a condenser through an object. **E.** **Endosmosis**, cataphoresis. **E.** **Fustigation**, application of electricity through a metallic brush. **E.** **Head-bath**, application of electricity by means of an umbrella-shaped electrode surrounding the head, but separated from it by a distance of from one-half to one inch. **E.** **Inertia**, a term sometimes employed instead of electro-magnetic inertia. **E.** **Insulation**. See *E. Sunstroke*. **E.** **Insulation**, the placing of non-conducting material with respect to a conductor so as to prevent the loss of a charge or the leakage of a current. **E.** **Irritability**, irritability of nervous or muscular tissue to an electric discharge. **E.** **Megaloscope**, an apparatus for the medical exploration of the cavities of the body. **E.** **Moxa**, a burn made on the skin by electricity. **E.** **Probe**, a metallic conductor inserted into the track of a

wound in order to ascertain the exact position of a bullet, or other foreign metallic substance. **E.** **Prostration**. See *E. Sunstroke*. **E.** **Reactions**, the response of muscles and nerves to electric stimulation. **E.** **Shock**, the physiologic shock produced in an animal by an electric discharge. **E.** **Shower-bath**, a device for general electrization; one of the poles is immersed in a tub containing an alkaline solution. The patient stands beneath this reservoir on a metallic stool connected with the other pole. The falling water completes the circuit, dispersing the current over the whole body. **E.** **Sphygmograph**, an instrument for electrically recording the characters of the pulse. **E.** **Sterilization**, sterilizing a solution by depriving it of whatever germs it may contain by means of electric currents. **E.** **Sunstroke**, the physiologic effects, similar to those produced by exposure to the sun, experienced by those exposed for a long while to the intense light and heat of the voltaic arc. **E.** **Test**, the application of electricity to ascertain the existence or non-existence of central lesions after railway injuries. It must be borne in mind that cutaneous insensibility or absence of response in the muscles is not positive proof of organic lesion; hence the so-called electric test is not so absolutely relied upon as formerly.

**Electric Units**. The lowest integral electric values. They are as follows:—**Ampère**, the unit of measurement of an electric current. It is the electro-motive force of one volt produced in a circuit having one ohm of resistance, equal to  $\frac{1}{10}$  C. G. S. electro-magnetic unit. It is sufficient to deposit .3 grain of copper per minute on the plate of a copper voltameter, or to decompose sufficient acidulated water to generate 10.32 c. c. of mixed hydrogen and oxygen per minute. For convenience the  $\frac{1}{1000}$  part is used in medicine, namely, the *milliampère*. This equals 1 volt divided by 1000. **Ampère-hour**, a unit of electric quantity equal to one ampère flowing for one hour; it is the equivalent of 3600 coulombs. **C. G. S. System**, Centimeter-gram-second Units,—the system of fundamental units in which a centimeter is adopted as the unit of length, a gram as the unit of mass, and a second as the unit of time. **Coulomb**, the unit of measurement of electric quantity; the quantity of electricity that passes during one second through a conductor having a resistance of one ohm, with one volt of electromotive force. The *micro-coulomb* is the millionth part of this amount. **Unit of Current**, a conductor one cm. long which, if bent into an arc of one cm. radius, will act with the force of one degree on a unit magnet pole at the center. **Dyne**, the unit of force; *i. e.*, the force which if it acted for one second on a mass of one gram would, if the mass was previously at rest, give it a velocity of one centimeter per second; or if it was previously in motion in the direction of the force, would in that time alter its velocity by that amount. **Erg**. See *Unit of Work*. **Ergten**, 10,000,000,000 ergs. **Farad**, the unit of electric capacity. Practically, a capacity sufficient to hold one coulomb of current having a potential of one volt. The *micro-farad*,  $\frac{1}{1000000}$  part of the theoretic farad, is commonly used. A practical form of condenser of one farad capacity consists of 300 leaves of tinfoil, each 16 centimeters in diameter, separated by leaves of mica. The entire surface has an area of about 1.1 sq. meters. **Joule**, the unit of electric energy or work. The volt coulomb. It equals 10,000,000 ergs. **Unit Magnet Pole**, a magnet having a strength of pole sufficient to repel a similar pole at a distance with a force of one degree. **Megalerg**, 1,000,000 ergs. **Megavolt**, 1,000,000 volts. **Micro-coulomb**.

See *Coulomb*. **Microfarad**. See *Farad*. **Micro volt**, one millionth part of a volt. **Milliampere**. See *Ampere*. **Ohm**, the unit of resistance. Practically, it is the resistance of a pure silver wire one meter in length and one millimeter in diameter. The theoretic or absolute unit is  $\frac{1}{1000000000}$  part of the unit practically used. **Volt**, the unit of electromotive force, or the force sufficient to cause a current of one ampere to flow against a resistance of one ohm. The following is the voltage of several popular cells: Smee, 0.65; Bunsen, 1.00; Daniell, 1.05; Callaud, 0.60; Leclanche, 1.50. **Volt-ampere**, the unit of electric work. It is the amount of pressure developed by a current of one ampere having an electromotive force of one volt. Its mechanical equivalent is about 44.2 foot-pounds per minute. It is sometimes called a *Watt*. **Volt-coulomb**, the unit of electric work. **Watt**. See *1 ampere*. **Weber**, an ampere. **Unit of Work**, the erg; it is equal to the work required to move a body through one centimeter against a force of one dyne. The reciprocal relations of these electric units may be expressed thus:—

|   |   |           |
|---|---|-----------|
| 1 volt $\times$ 1 coulomb                                 | = | 1 joule   |
| 1 volt $\times$ 1 ampere                                  | = | 1 watt    |
| 1 volt $\times$ 1 ohm                                     | = | 1 ampere  |
| 1 ampere $\times$ 1 ohm                                   | = | 1 volt    |
| 1 volt $\times$ 1 ampere $\times$ 1 ohm                   | = | 1 watt    |
| 1 volt $\times$ 1 ampere $\times$ 1 ohm $\times$ 1 second | = | 1 joule   |
| 1 ampere $\times$ 1 second                                | = | 1 coulomb |

**Electricity** (*e-lek'tris'-it-e*) [*ήλεκτρον*, amber]. One of the forces of nature developed or generated by chemism, magnetism, or friction, and probably a mode of ethereal vibration, closely analogous to and convertible into heat and light. It has been largely employed in its various forms for therapeutic purposes. Most animal and vegetable fibers (living) contract when an electric current is passed through them, and, in fact, no substance is known that does not offer some resistance to the passage of an electric current. By the *conducting Power* of a substance is meant the ability of a given length and area of a cross-section of that substance to conduct electricity, as compared with an equal length and area of a cross-section of some other substance, such as pure silver or copper. This power may, in various substances, be pronounced, partial, or absent. *Good* conductors are silver, copper, other metals, charcoal; *partial* conductors are water, the human body, cotton, wood, marble, paper; *non-conductors*, oils, porcelain, dry wood, silk, resins, dry air, shalal, gutta serena, ebonite, paraffin, glass. **E.**, Animal, tree electricity in the body. **E.**, **Chemic**. See *E.*, *Galvanic*. **E.**, **Faradic**, that produced by induction. **E.**, **Franklinic**, frictional or static electricity. **E.**, **Frictional**, that produced by friction. **E.**, **Galvanic**, that which is generated by chemic action in a galvanic cell. **E.**, **Inductive**, that produced in a body by proximity to an electrified body without contact. **E.**, **Magnetic**, that developed by bringing a conductor near the poles of a magnet. See *Current*. **E.**, **Medical**, that used for therapeutic purposes. **E.**, **Static**, frictional electricity. **E.**, **Voltaic**, same as galvanic or chemic electricity.

**Electrization** (*el-ek'tri-zā-shun*) [*ήλεκτρον*, amber]. The application of electricity to the body. **E.**, **General**, the therapeutic application of electricity to all parts of the surface of the body.

**Electrize** (*el-ek'tri-zye*) [*ήλεκτρον*, amber]. To treat by means of electricity.

**Electrizer** (*el-ek'tri-zyer*) [*ήλεκτρον*, amber]. A metal disc of copper and zinc, or silver and zinc, applied to the surface of the body, and connected with copper wire, extending through the perspiration, a feeble galvanic current.

**Electro-** (*e-lek'tro-*) [*ήλεκτρον*, amber]. A Greek word used as a prefix to denote connection with or relation to electricity. **E.-anesthesia**, inability to perceive the sensation made by electricity upon the skin. **E.-biology**, the science of the electric relations and laws of organic beings. **E.-bioscopy**. See *Bioscopy*. **E.-centesis**, the use of electrolysis to cause absorption of effusions, as in pleurisy. **E.-chemistry**, the science of the inter-relations and laws of electricity and chemistry. **E.-cystoscopy**, examination of the bladder by means of electric illumination. **E.-diagnosis**, diagnosis by means of the exaggeration or diminution of the reaction of the excitable tissues of the body when subjected to the varying influences of electric currents. **E.-esthesia**, ability to perceive the sensation made by the reception of an electric discharge; it may co-exist with local anesthesia, or with loss of the power to perceive other sensations. **E.-magnet**, a mass of soft iron surrounded by a coil of wire. **E.-magnetic Inertia**, a term sometimes employed instead of inductance or the self-induction of a current. **E.-magnetism**, magnetism induced within iron, steel, or nickel, by introducing it within a coil through which a current is passing. **E.-massage**, the transmission of a current of electricity through a kneading instrument; the use of labile currents applied by means of a rolling or wheel electrode, or by a sponge or brush. **E.-motive**, pertaining to the mechanic or motor effects of electricity. **E.-motor Force**, that which sets electricity in motion; the difference of potential between two points. It is estimated in volts. **E.-muscular**, pertaining to the action of electricity upon muscles. **E.-muscular Contractility**, the contractile response of a muscle to an electric current. **E.-muscular Sensibility**, the impression upon a sensory nerve by electric irritation. **E.-otiatry**, electricity applied to the treatment of diseases of the ear. **E.-pathology**, the study of morbid conditions by the aid of electric irritation. **E.-physiology**, the study of electric reactions, properties, and relations of organs and organic tissues. **E.-puncturation**, or **E.-puncture**, the use of needles as electrodes, which are thrust into an organ, or tumor, *e. g.*, into the cavity of an aneurysm, with the object of coagulating the contained blood. **E.-sensitivity**, an effect produced on a sensory nerve by its electrization. **E.-statics**, the science of static electricity, or that developed by friction and induction. **E.-thanasis**, a word proposed for death by electricity. **E.-therapeutic Bath**. See *Bath*. **E.-therapeutics**, the science and art of the application of electricity for therapeutic purposes. **E.-therapy**. See *E.-therapeutics*. **E.-thermometry**, the determination of the radiation of body-heat by means of an electric thermometer. **E.-vital**, pertaining both to electricity and to the phenomena of life. **E.-vitalism**, the theoretic identification of the vital forces with electricity.

**Electrode** (*e-lek'trod*) [*ήλεκτρον*, amber; *ὅδος*, a way]. The instruments, fastened to the conducting cords of a battery, that are used in the application of electricity to the body. The standard sizes of electrodes generally adopted in therapy are, according to Erb, as follows:—

|                   |       |                            |
|-------------------|-------|----------------------------|
| 1. Fine electrode | ..... | $\frac{1}{2}$ cm diameter. |
| 2. Small "        | ..... | 2 " "                      |
| 3. Medium "       | ..... | 7.5 " "                    |
| 4. Large "        | ..... | $6 \times 2$ " "           |
| 5. Very large "   | ..... | $8 \times 16$ " "          |

**E.**, **Brush**, one end fitted with a camel's-hair pencil. **E.**, **Clay**, a therapeutic electrode of clay shaped to fit the part of the body to be treated. **E.**, **Electro-therapeutic**, the therapeutic electrode is generally

placed nearer the organ or part to be treated than the indifferent electrode. **E., Indifferent**, the electrode that is employed merely to complete the circuit; not directly concerned in the treatment or diagnosis. **E., Non-polarizable**, zinc wires treated and so arranged as to prevent electrolysis. See *Anode* and *Cathode*.

**Electrogenesis** (*e-lek-tro-jen'-es-is*) [*ἤλεκτρον*, amber; *γένεσις*, production]. Results following the application of electricity to the spinal cord or nerve after the withdrawal of the electrodes.

**Electrolysis** (*e-lek-trol'-is-is*) [*ἤλεκτρον*, amber; *λύσις*, solution]. The dissolution of a chemic compound by an electric current; the discussion of any morbid growth by means of an electro-chemic current. It is used in the treatment of hydrocele and some other surgical affections.

**Electrolytic** (*e-lek-tro-lit'-ik*) [*ἤλεκτρον*, amber; *λύσις*, solution]. Relating to electrolysis.

**Electrometer** (*e-lek-trom'-et-er*) [*ἤλεκτρον*, electricity; *μέτρον*, a measure]. An instrument for the measurement of differences of electric potential.

**Electrophonize** (*e-lek-trof'-on-iz*) [*ἤλεκτρον*, amber; *φόνος*, a killing]. To inflict capital punishment by means of electricity.

**Electrophony** (*e-lek-trof'-o-ne*) [*ἤλεκτρον*, amber; *φόνος*, a killing]. Capital punishment by means of electricity.

**Electrophorus** (*e-lek-trof'-or-us*) [*ἤλεκτρον*, amber; *φέρειν*, to carry]. An instrument used to generate small quantities of static electricity.

**Electropoion Fluid** (*e-lek-tro-poi'-on*) [*ἤλεκτρον*, amber; *ποιεῖν*, to make]. A battery fluid made by dissolving 1 lb. of potassium bichromate in a mixture of water 10 lbs. to sulphuric acid (commercial) 2½ lbs.

**Electroscope** (*e-lek'-tro-skop*) [*ἤλεκτρον*, amber; *σκοπεῖν*, to view]. An instrument for detecting the presence of static electricity and determining whether it is positive or negative.

**Electrostixis** (*e-lek-tro-stiks'-is*) [*ἤλεκτρον*, amber; *στιγίς*, puncture]. Electro-puncture, *q. v.*

**Electrothanasize** (*e-lek-tro-than'-as-iz*) [*ἤλεκτρον*, amber; *θανάττειν*, to kill]. To produce death by electricity, but not as capital punishment.

**Electrothanatose** (*e-lek-tro-than'-at-ös*) [*ἤλεκτρον*, amber; *θάνατος*, death]. Same as *Electrothanasize*.

**Electrothanatosis** (*e-lek-tro-than-at-ö'-sis*) [*ἤλεκτρον*, amber; *θανάτωσις*, a putting to death]. Death by electricity.

**Electrotisis** (*e-lek-trot'-is-is*) [*ἤλεκτρον*, amber; *τίσις*, penalt.]. Capital punishment by electricity.

**Electrotistic** (*e-lek-tro-tis'-tik*) [*ἤλεκτρον*, amber; *τίσις*, penalty]. Pertaining to capital punishment by means of electricity.

**Electrotistis** (*e-lek-tro-tis'-tis*). An incorrect form of *Electrotisis*, *q. v.*

**Electrotome** (*e-lek'-tro-töm*) [*ἤλεκτρον*, amber; *τέμνειν*, to cut]. The circuit-breaker of an electric battery; especially one that acts automatically.

**Electrotonic** (*e-lek-tro-ton'-ik*) [*ἤλεκτρον*, amber; *τόνος*, tension]. Relating to or of the nature of electrotonus. **E. Effect**, an altered condition of excitability of a nerve produced when in the electrotonic state.

**Electrotonus** (*e-lek-trot'-o-nus*) [*ἤλεκτρον*, amber; *τόνος*, tension]. The change of condition in a nerve during the application of a current of electricity. A decrease in the electro-motive force of a nerve, effected by sending a current through the nerve in the opposite direction to the nerve-current, is termed the *negative phase* of electrotonus, while an increase in the electro-motive force of a nerve, effected by sending a current through a nerve in the same direction as the nerve-current, is termed the *positive phase* of electrotonus.

See *Anelectrotonus*, *Catelectrotonus*, and *Electrogenesis*. **E., Law of**. See *Lavo*.

**Electrovection** (*e-lek-tro-vek'-shun*) [*ἤλεκτρον*, amber; *vehere*, to carry]. Electric endosmosis; the introduction of medicaments into the system by means of the electric current; cataphoresis.

**Electrozemia** (*e-lek-tro-ze'-me-ah*) [*ἤλεκτρον*, amber; *ζήμια*, penalty]. A word proposed for capital punishment by electricity; electro-tisis.

**Electuary** (*e-lek'-chu-a-re*) [*electuarium*, an electuary]. A soft or pasty confection. See *Confectio*.

**Eleidin** (*el-e'-id-in*) [*ἔλαια*, olive-oil]. A material that forms the elliptic granules of the superficial cells of the stratum granulosum of the epidermis. It is called also keratohyalin.

**Element** (*el'-em-ent*) [*elementum*, a first principle]. In chemistry, a body that cannot be decomposed into simpler substances. The recognized elements now number about 73. See *Table of Elements*, on p. 416. The term is applied in biology to the ultimate microscopic structures of a tissue. In electricity, one of the generating plates in a galvanic cell. **E., Mendelejeff's Classification of**, the classification of elements according to their atomic weights. See *Elements*, *Table of*, *Note*.

**Elementary** (*el-e-men'-ta-re*) [*elementum*, a first principle]. Pertaining to an element. **E. Cell**, an embryonic corpuscle. Also, a synonym of *Leukocyte*, *q. v.*

**Elemi** (*el'-em-i*) [Arab]. A concrete resinous exudation probably derived from the *Canarium commune*, although its botanic source is still undetermined. It contains a crystalline resin, *Elemi* or *Amyrin*. Its action is similar to those of the turpentine generally.

**E., Unguent**. (*B. P.*), elemi and simple ointment; it is used as an application to indolent sores and boils. Many other resins are known to commerce as *elemi*. In general, the *elemis* are softer than the *copals*; and they may be classed together as a group of somewhat hard oleo-resins. See *Resins*.

**Eleocharis** (*e-le-ök'-ar-is*) [*ἔλος*, marsh; *χαίρειν*, to rejoice]. A genus of sedges or cyperaceous plants; the spike-rushes. **E. palustris**, a plant very common in Europe, Asia, and N. America, is a popular astringent remedy, useful for diarrhea and for hemorrhages. The root, tops, and seeds are used. Unof.

**Eleoptene** (*el-e-öp'-ten*) [*ἔλαιον*, oil; *πτηνός*, volatile]. The permanent liquid principle of volatile oils. See *Stearoptene*.

**Eleosaccharum** (*e-le-o-sak'-ar-um*) [*L.: pl., Eleosacchara*]. Same as *Oleosaccharum*.

**Elephant Leg**. See *Elephantiasis arabum*.

**Elephant's Foot** (*el'-e-fants foot*). Any plant of the genus *Elephantopus*, order Compositæ. The U. S. has several species. *Elephantopus tomentosus* is diuretic, expectorant, and emetic. Dose of the fld. ext. ℥v-xxx. Unof. *E. carolinianus* is tonic and febrifuge, and so are various tropical species.

**Elephantiasis** (*el-e-fan-ti'-as-is*) [*ἑλεφας*, an elephant]. *Elephantiasis arabum*; *Barbadoes leg*; *Tropical big leg*; *spargosis*; *elephant leg*; *morbus elphas*; *burnemia tropica*; *pachydermia*; a chronic affection of the cutaneous and subcutaneous tissues, often occurring as an endemic or sporadic disease, due to obliteration of lymph-vessels, resulting in febrile and other systemic symptoms, redness, tumefaction, and infiltration of the affected part, and the eventual production of a well-marked hypertrophy that may become gigantic. It is most common in the leg and genitals. **E. græcorum**. See *Leprosy*. **E. indica**. Synonym of *E. arabum*. **E. telangiectodes**, a rare vascular form of elephantiasis arabum of congenital origin but of later development.

# TABLE OF CHEMIC ELEMENTS.

As arranged alphabetically from data of atomic weights of Funk and Wagnall's Standard Dictionary copyrighted. (Published by permission.)

| NAME.                     | SYMBOL. | ATOMIC WEIGHT. | SPECIFIC GRAVITY.* | FUSING-POINT OR MELTING-POINT. Deg. C. and F. | VALENCE.   | DISCOVERED. | BY WHOM.           | WHERE AND HOW FOUND.                              |
|---------------------------|---------|----------------|--------------------|---|------------|-------------|--------------------|---|
| 1 Argon (rare gas).       | Ar      | 39.9           | 1.38               | -189.2° C.; -320.6° F.                        | 0          | 1868        | Wöhler.            | In many rocks. (The most abundant inert gas.)     |
| 2 Arsenic (rare metal).   | As      | 75.0           | 5.71               | 432° C.; 808° F.                              | V          | 1450        | Valentine.         | Chiefly as sulphid, and in various metallic ores. |
| 3 Barium.                 | Ba      | 137.0          | 3.75               | Above redness.                                | II         | 1691        | Schroeder.         | Native, as sulphid, and in various metallic ores. |
| 4 Bismuth.                | Bi      | 208.9          | 9.80               | 268° C.; 517° F.                              | V          | 1858        | Davy.              | In barite and witherite.                          |
| 5 Boron.                  | B       | 11.0           | 2.6                | Very high.                                    | III        | 1808        | Valentine.         | Native, as sulphid, and in rare minerals.         |
| 6 Bromine.                | Br      | 79.95          | 3.19               | -7.3° C.; -20° F.                             | I or VII   | 1826        | Rapier.            | In borax and various minerals.                    |
| 7 Cadmium.                | Cd      | 112.4          | 8.65               | 320° C.; 600° F.                              | II         | 1817        | Stronnyer.         | Mainly in sea-water and other natural brines.     |
| 8 Calcium.                | Ca      | 40.0           | 1.610              | Bright redness.                               | II         | 1808        | Davy.              | In small amount in zinc ores.                     |
| 9 Carbon.                 | C       | 12.0           | 3.52               | Infusible.                                    | IV         | 1803        | Perehistic.        | In limestone, and abundantly in other rocks.      |
| 10 Cerium.                | Ce      | 140.2          | 6.78               | Beltsilver.                                   | III or IV  | 1803        | Perehistic.        | In cerite and other rare minerals.                |
| 11 Chlorine.              | Cl      | 35.45          | 3.33               | -34.6° C.; -30° F.                            | I          | 1806        | Rapier.            | In lepidolite, pollucite, and mineral springs.    |
| 12 Chromium.              | Cr      | 52.1           | 7.33               | Above platinum.                               | I or VI    | 1797        | Scheele.           | In common salt (NaCl), and other chlorides.       |
| 13 Cobalt.                | Co      | 58.9           | 8.96               | 1500° C.; 2732° F.                            | II or VIII | 1733        | Brandt.            | Mainly in chromite ore.                           |

| 67 | Tungsten (wol-<br>framium). | Swed., heavy stone.  | W     | 184.0     | 19.26                   | 1781 d'Elhujar.                   | Widely diffused in rocks and clays, in small<br>amounts.                                  |
| 68 | Uranium.                    | Planet <i>Uranus</i> .   | U     | 239.6     | 18.69                   | 1781 d'Elhujar.                   | Mainly in wolframite (MnFeWO <sub>4</sub> ).  |
| 69 | Vanadium.                   | Goddess <i>Vanadis</i> (Freya).  | V     | 51.4      | 5.87                    | 1781 Klaproth.                    | In pitch-blende and other rare minerals.  |
| 70 | Ytterbium.                  | See <i>Tungsten</i> .  | Yb    | 173.0     | ...                     | 1830 Selstrom.                    | In vanadinite and other rare minerals.  |
| 71 | Yttrium.                    | Gr. <i>Ytterby</i> , a town in Sweden.   | Yt    | 89.1      | ...                     | 1878 Marignac.                    | In rare minerals, as gadolinite, etc.   |
| 72 | Zinc (zincum).              | Gr. <i>zink</i> .  | Zn    | 65.3      | 7.12                    | 1828 Wohler.                      | In gadolinite and other rare minerals.  |
| 73 | Zirconium.                  | Gr. <i>zirkon</i> , gold-colored.  | Zr    | 90.06     | 4.15                    | 1824 Berzelius.                   | In ores, as oxid, silicate, sulphid, and carbonate.<br>In zircon and other rare minerals. |

In the foregoing table the alphabetic, instead of the Mendeleeff classification, has been followed. Formerly elements were grouped according to their resemblance to some member, as the Potassium group, Li, Na, K, Rb, and Cs; the Calcium group, Ca, Sr, and Ba; the Magnesium group, Gl, Mg, Zn, and Cd; the Aluminum group, Al, Yt, Ga, Zr, Er, In, La, Pr, Nd, and Th; the Iron group, Fe, Co, Ni, U, Ce; the Manganese group, Va, Cr, Mn, and Mo; the Antimony group, Sb and Bi; the Tin group, Ti, Pb, Sn, Ta, and W; the Silver group, Cu, Ag, Hg, Pt, and Pb; and the Platinum group, Rh, Ru, Pd, Au, Pt, Ir, and Os. Since the acceptance of the periodic law, elements have been arranged in the order of their atomic weights, and each group shows indications of an arithmetic progression. In the Mendeleeff classification, the following are the groupings: Group I, with Valence 1, H, Li, Na, K, Rb, Cs. Group II, with Valences 2, Gl, Mg, Ca, Zn, Sr, Cd, Ba, Hg. Group III, with Valences 3, B, Al, Sc, Ga, Yt, In, La, Nd, Pr, Sm, Gd, Th, Er, Tu, Yb, Tl. Group IV, with Valences 4, C, Si, Ti, Ge, Sn, Ce, Pb, Th. Group V, with Valences 5, N, P, V, As, Sb, Ta, Bi. Group VI, with Valences 6, Cr, Mo, Te, W, U. Group VII, with Valences 7, F, Cl, Br, I, Os. Group VIII, with various Valences, Fe, Ni, Co, Cu, Rh, Pd, Ag, Ir, Pt, Au.

\* The factors in the columns of specific gravities and melting-points naturally vary with the form which the element takes (e.g., in carbon the specific gravity varies as diamond, charcoal, or lampblack is taken), but as far as possible the factor of the most typical form is given.

† Of the liquid element.

‡ Of the liquid at -180° C.

Elephantoid Fever (*el'-fan'-toid'*). See *Fever*.

Elephas (*el'-e-fas*) [L.]. Synonym of *Elephantiasis arabum*.

Eleuthera Bark (*el'-u-th'er-a'*). See *Cascarilla*.

Eleutheropetalous (*el'-u-th'er-o-pet'-al-us*) [*ἐλευθερος*, free; *πέταλον*, a leaf, a petal]. Polypetalous. The same as choripetalous.

Eleutherophyllous (*el'-u-th'er-o-phil'-u*) [*ἐλευθερος*, free; *φύλλον*, a leaf]. In biology, made up of distinct leaves; polypetalous or polyspalous.

Elevator (*el'-e-vay-tor*) [*εἰς ἄνω*, to lift]. 1. The same as *Lavater*. See *Muscle*, Table of. 2. An instrument used in surgery and dentistry. E. Disease, one of the professional neuroses, due to constant traveling in an elevator.

Elimination (*el'-im-in-a'-shun*) [*e*, out; *limen*, thresh-old]. Excretion; the process of putting forth or out.

Eliquation (*el'-ik-wet'-shun*) [*liqueure*, to melt out]. The separation of one substance from another by fusion or melting.

Elixir (*el'-iks-er*) [Arab., *el iksir*, the philosopher's stone]. A sweetened, aromatic, spirituous preparation, which is practically a flavored syrup designed as an excipient for extracts and tinctures. There are many *elixirs*, only two of which are official in the U. S. P.; in the N. F. more than seventy are described. E. aromaticum, aromatic elixir, comp. spirit of orange 12 c.c., syrup 375 c.c., precipitated calcium phosphate 15 gm., deodorized alcohol and distilled water, q. s.

Elixiviation (*el'-iks-iv-e-a'-shun*). See *Lixiviation*.

Elkodermatosis (*el'-ko-der-mat-o'-sis*) [*ἔλκος*, an ulcer; *δέρμα*, skin; *νόσος*, disease]. An ulcerative skin-affection.

Ellagic Acid (*el'-aj'-ik*). See *Acid*.

Elliot's Bassorin Paste. A paste used in the treatment of eczema. It consists of bassorin, 10 drams; dextrin, 6 drams; glycerin, 2 drams; water, sufficient to make 25½ drams. It should be prepared cold.

Elliptic, Elliptical (*el'-ipt'-tik, -al*) [*ἐλλειψις*, ellipse]. Having the form of an ellipse. E. Amputation. See *Amputation*.

Ellis's Curved Line. See *Line*. E., Ligament of. See *Ligament*.

Ellison's Ventilating Bricks. See *Ventilation*.

Elm. See *Ulmus* and *Fremontia*.

Elocution (*el'-ok'-u'-shun*) [*e*, out of; *loqui*, to speak]. The choice, arrangement, and delivery of words and language, including the use of the voice, the action of the lungs, diaphragm, gesture, etc.

Elocutionist (*el'-ok'-u'-shun-ist*) [*e*, out of; *loqui*, to speak]. One who is skilled in the art of elocution. E.'s Cramp. See *Cramp*.

Elodea (*el'-o-de-a*) [*ἑλὼδης*, marshy]. The marsh St. John's Wort; a genus of hypericaceous plants. E. virginica, common in the U. S. and Canada, is a popular stomachic. Unof.

Eloles (*el'-o-les*) [*ἑλώδες*, swampy; *ἔλος*, a swamp]. Malarial or paludal fever; malarial fever.

Elsberg, Plastidules of. See *Heredity*.

Elutriation (*el'-u-tri-a'-shun*) [*elutriare*, to wash out]. A water-sifting process whereby the coarser particles of an insoluble substance are separated from the finer. Ely's Operation. See *Operations*, Table of. E.'s Table. See *Pneumony*.

Elythrits (*el'-ith-rit'-is*). See *Vaginitis*.

Elytratesia (*el'-it-ri-at-es-ah*) [*ἑλντρον*, sheath; *ἀπὸ τοῦ*, imperforate]. Atresia of the vagina; colp-atresia.

Elytreurynter (*el'-it-ru-ri-nt'-er*) [*ἑλντρον*, sheath; *εὐρύς*, to make broad]. Same as *Colporeurynter*.

Elytritis (*el'-it-rit'-is*) [*ἑλντρον*, the vagina; *εἴς*, inflammation]. Inflammation of the vagina.

Elytrocele (*el'-it-ro-sel*) [*ἑλντρον*, sheath; *κῆλη*, hernia]. Colpocele; vaginal hernia.

Elytroclasia (*el'-it-ro-klat'-se-ah*) [*ἑλντρον*, sheath; *κλάειν*, to break]. Rupture of the vagina.

Elytroncus (*el'-it-rong'-kus*). Same as *Elytrophyma*.

Elytrophyma (*el'-it-ro-ji'-mah*) [*ἑλντρον*, sheath; *φύμα*, a tumor]. Swelling or tumor of the vagina.

Elytropicalistic (*el'-it-ro-plas'-tik*) [*ἑλντρον*, sheath; *πλάσσειν*, to form]. Relating to elytroplasty.

Elytropolasty (*el'-it-ro-plas-te*) [*ἑλντρον*, sheath; *πλάσσειν*, to form]. Plastic operation upon the vagina, especially for vesico-vaginal fistula.

Elytropolypus (*el'-it-ro-pol'-ip-us*) [*ἑλντρον*, sheath; *πολύπους*, polypus]. Vaginal polypus.

Elytrosis (*el'-it-ro-plat'-sis*) [*ἑλντρον*, sheath; *πτῶσις*, a falling]. Prolapse of the vagina.

Elytrorrhagia (*el'-it-ror-a'-je-ah*) [*ἑλντρον*, sheath; *ῥήγναι*, to burst forth]. Hemorrhage from the vagina.

Elytrorrhaphy (*el'-it-ror-a'-a-fe*) [*ἑλντρον*, sheath; *ῥαφή*, a seam]. Suture of the vaginal wall. An operation to close the opening of the vagina in procidentia uteri.

Elytrorrhea (*el'-it-ror-e'-ah*) [*ἑλντρον*, sheath; *ῥοα*, a flow]. A vaginal leukorrhea.

Elytostenosis (*el'-it-ro-ste-no'-sis*) [*ἑλντρον*, sheath; *στένωσις*, a contraction]. Colpostenosis; vaginal stricture.

Elytrotome (*el'-it-ro-tóm*) [*ἑλντρον*, sheath; *τομή*, a cutting]. An instrument for performing elytotomy.

Elytrotomy (*el'-it-ro-t-o-mé*) [*ἑλντρον*, sheath; *τομή*, a cutting]. Surgical incision of the vaginal wall.

Elytrum, Elytron (*el'-it-rum, -tron*) [*ἑλντρον*, a cover, case; *πλ.*, *Elytra*]. In biology, one of the wing-covers, wing-sheaths, or modified fore-wings of beetles; also one of the scales on the back of certain worms.

Emaciation (*e-ma-se-a'-shun*) [*emaciare*, to make lean]. Loss of the fat and fulness of the flesh of the body. Leanness.

Emaculation (*e-mak-u-la'-shun*) [*emaculare*, to remove spots]. The removal of freckles or other spots from the face.

Emanation (*em-an-a'-shun*) [*emanare*, to issue]. 1. Emission; radiation. 2. That which flows or issues from a substance; effluvium.

Emandibulate (*e-man-dib'-u-lat*) [*ε*, priv.; *mandibula*, mandible]. In biology, without mandibles, or at least with soft and minute mandibles.

Emansio (*e-man'-se-o*) [L.]. A falling. E. mensium, delayed menstruation; amenorrhea.

Emarginate (*e-mar'-jin-át*) [*emarginatus*, to deprive of the edge]. In biology, applied to a leaf or feather the margin of which is broken, notched, nicked, or otherwise modified.

Emasculation (*e-mas-ku-la'-shun*) [*emasculare*, to make impotent]. Removal of the testicles; impotence. See, also, *Eviseration*.

Embalming (*em-bahm'-ing*) [Fr., *en*, in; *baume*, balsam]. The treatment of a cadaver with antiseptic and preservative substances to keep it from putrefying.

Embedding (*em-bed'-ing*). The fixation, in order to preserve it intact, of a tissue-specimen in a firmer medium before freezing or otherwise hardening and section.

Embelia (*em-be'-le-ah*) [*Embel*, a German traveler]. A genus of shrubs. E. ribes, a myrtaceous shrub that grows in Asia; it is reputed to have antelmintic properties. Dose of the powdered fruit, ʒj-iv; of the fluid extract, ʒj-iv. Unof.

Emblica (*em'-blik-ah*) [L.]. A genus of euphorbiaceous trees. E. officinalis, a tree of India; its fruit, the *Emblica myrobalan* (see *Myrobalan*), is astringent and vermifuge, the seed is febrifuge, and the bark is also medicinal. Unof.

**Emboitement** (*on(g)-bwat'-mon(g)*) [OF., *emboister*, to inclose, as in a box]. In biology, Bonnet's doctrine that each germ includes the germs of all generations that shall succeed it.

**Embolemia** (*em-bol-el-me-ah*) [*ἐμβολῆς*, thrown in; *αἷμα*, blood]. A state of the blood in which it is said that emboli are readily formed.

**Embolic** (*em-bol'-ik*) [*ἐμβολῆς*, thrown in]. Relating to, associated with, or caused by an embolus.

**Embolicform** (*em-bol'-if-orm*) [*ἐμβολῆς*, an embolus; *forma*, form]. Resembling an embolus.

**Embolism** (*em'-bo-lizm*) [*ἐμβολῆς*, an embolus]. The obstruction of an artery or capillary, usually by a blood-clot or embolus, brought from another point by the blood-current. These emboli may be fragments of vegetation from the valves of the heart, clots from a thrombosis or aneurysm, or fragments of atheromatous tissue. Around the seat of an embolus thrombosis occurs with the production of an infarct, *q. v.* **E., Air**, by a bubble of air. **E., Capillary**, obstruction of capillaries by micrococci. This occurs in pyemia. **E., Fat**, the entrance into the circulation of fluid fat after extensive injuries. Death often follows. The symptoms are restlessness, anxiety, slight dyspnea, accelerated breathing, quickening of the pulse; cyanosis, delirium, and insomnia, followed by coma, are graver symptoms. The temperature may remain subnormal or it may rise. **E., Infective**, the emboli are metastatic. This occurs in pyemia and ulcerative endocarditis. **E., Multiple**, numerous small emboli. **E., Paradoxical**, embolism of an artery by a venous thrombus, as may occur in a patulous foramen ovale. **E., Pyemic**. See *E., Infective*. **E., Retinal**, occurring in the arteria centralis retinae, followed by sudden loss of vision. **E., Venous**, occurring in veins, especially of the lungs and liver.

**Emboloid** (*em'-bo-loid*) [*ἐμβολῆς*, an embolus; *εἶδος*, likeness]. Resembling an embolus.

**Embololalia** (*em-bo-lo-la'-le-ah*) [*ἐμβολῆς*, a thing thrown in; *λαλία*, talk]. The morbid intercalation of words, often meaningless, into the speech.

**Embolophrasia** (*em-bo-lo-fra'-ze-ah*) [*ἐμβολῆς*, insertion; *ῥάσις*, speech]. Embololalia.

**Embolus** (*em'-bo-lus*) [*ἐμβολῆς*; *ἐν*, in; *βάλλειν*, to throw]. 1. A clot of blood, or plug of other material, brought by the blood-current from a distant artery, and forming an obstruction at its place of lodgment. 2. Wilder's term for the *nucleus emboliformis*.

**Emboly** (*em'-bo-le*) [*ἐμβολή*, insertion]. In embryology, the process of invagination that gives rise to a gastrula from a blastosphere or vesicular morula.

**Embrocation** (*em-bio-ka'-shun*) [*ἐμβρέχειν*, to soak in]. A fluid external application for some injured or diseased part.

**Embryectomy** (*em-bre-ek'-to-me*) [*ἐμβρυον*, embryo; *ἐκτομή*, a cutting out]. The surgical removal of the embryo in extra-uterine pregnancy.

**Embryo** (*em'-bre-o*) [*ἐμβρυον*]. The ovum and the product of conception up to the fourth month of pregnancy; the fertilized germ of an animal. Applied in botany to the rudimentary plant within the seed. **E.-sac**. In biology, (a) the cell in the nucleus of the ovule of flowering-plants, that contains the germinal vesicles and finally the embryo; (b) the protoconch or primitive shell of certain cephalopods.

SCHEME OF A LONGITUDINAL SECTION OF AN EARLY EMBRYO.

E. Epiblast. m. Mesoblast. e. Hypoblast.

SCHEME OF THE FORMATION OF THE HEAD- AND TAIL-FOLDS. r. Head-fold. D. Anterior extremity of the future intestinal tract. S. Tail-fold, first rudiment of the cavity of the rectum.

SCHEME OF A LONGITUDINAL SECTION THROUGH AN EMBRYO AFTER THE FORMATION OF THE HEAD- AND TAIL-FOLDS. Ao. Omphalo-mesenteric arteries. Vo. Omphalo-mesenteric veins. a. Position of the allantois. A. Amniotic fold.

SCHEME OF A LONGITUDINAL SECTION THROUGH A HUMAN OVUM.

Z. Zona pellucida. S. Serous cavity. r. Union of the amniotic folds. A. Cavity of the amnion. a. Allantois. N. Umbilical vesicle. m. Mesoblast. h. Heart. U. Primitive intestine.

SCHEME OF HUMAN EMBRYO, WITH THE VISCERAL ARCHES STILL PERSISTENT.

A. Amnion. V. Fore-brain. M. Mid-brain. H. Hind-brain. N. After-brain. U. Primitive vertebrae. a. Eye. p. Nasal pit. S. Frontal process. n. External nasal process. r. Superior maxillary process of the first visceral arch. 1, 2, 3, and 4. The four visceral arches, with the visceral clefts between them. o. Auditory vesicle. h. Heart, with e, primitive aorta, which divides into the five aortic arches. f. Descending aorta. om. Omphalic-mesenteric artery. L. Liver with venae adheventes and reventes. D. Intestine. T. Inferior cava. all. Allantois, with z, one umbilical artery; and x, an umbilical vein.

**Embryocardia** (*em-br-yo-kar'd-ah*) [*ἐμβρυοκαρδία*, the heart]. An affection of the heart, characterized by a heart beat like that of a fetus. It is usually associated with tachycardia, and a condition of collapse and cyanosis. See *Cyematocardia*.

**Embryocotony** (*em-br-yo-kot'-ny*) [*ἐμβρυοκοτομή*, to kill]. The destruction of the living fetus; the procurement of abortion.

**Embryogenesis** (*em-br-yo-n'-e-sis*). **Embryogeny** (*em-br-yo-n'-e*) [*ἐμβρυογένεσις*, producing]. That department of biology which deals with the development of the fecundated germ.

**Embryograph** (*em'-bre-o-graf*) [*ἐμβρυογράφος*, to write]. A form of microscope and camera lucida for use in drawing outlines and figures in embryologic study.

**Embryography** (*em-br-yo-gra-fy*) [*ἐμβρυογραφία*, to write]. A description of embryos.

**Embryologic** (*em-br-yo-loj'-ik*), **Embryological** (*em-br-yo-loj'-i-kal*) [*ἐμβρυολογία*, embryo; *λόγος*, science]. Relating to embryology.

**Embryologist** (*em-br-e-ol'-jist*) [*ἐμβρυολόγος*, embryo; *λόγος*, science]. A specialist or expert in the science of embryology.

**Embryology** (*em-br-ol'-o-jy*) [*ἐμβρυολογία*, embryo; *λόγος*, science]. The science of the evolution of the embryo, or the study of fetal development.

**Embryon** (*em'-bre-on*). Same as *Embryo*.

**Embryonal** (*em-br-e-ol'-nal*). Same as *Embryonic*.

**Embryonic** (*em-br-e-on'-ik*) [*ἐμβρυονικός*, embryo]. Pertaining to the embryo. **E. Area**, in embryology, an opaque circular spot that forms on the blastoderm. **E. Connective Tissue**, the primitive condition of connective tissue when first formed, consisting of small, round cells. **E. Spot**. See *E. Area*.

**Embryotega** (*em-br-e-ol'-e-gah*) [*ἐμβρυοτέγα*, an embryo; *τέγα*, a roof]. In biology, a small lid or cap covering the micropyle in certain seeds.

**Embryotome** (*em-br-e-ol'-o-tom*) [*ἐμβρυοτομή*, section]. An instrument used in embryotomy.

**Embryotomy** (*em-br-e-ol'-o-me*) [*ἐμβρυοτομία*, embryo; *τομή*, section]. An operation for reduction of the size of the fetus to render possible its transmission through the birth-canal. See *Cephalotripsy*, *Cranioclasm*, *Bubotrie*, *Brilyst*, *Decapitation*, *Exenteration*, *Evisceration*, *Lamination*, *Perforation*, *Spondylotomy*, *Transforation*.

**Embryotoxon** (*em-br-e-ol'-o-tok'-on*) [*ἐμβρυοτοξον*, embryo; *τοξον*, a bow]. A condition resembling *arcus senilis*, sometimes seen at birth.

**Embryotrophe** (*em'-bre-o-trof*) [*ἐμβρυοτροφία*, the embryo; *τροφή*, nourishment]. In biology, the food-yolk.

**Embryotrophy** (*em-br-e-ol'-ro-fy*) [*ἐμβρυοτροφία*, embryo; *τροφή*, nourishment]. The nutrition of the fetus.

**Embryulcia** (*em-br-e-ol'-e-ah*) [*ἐμβρυουλκία*, embryo; *ἐλκεῖν*, to draw]. 1. Forcible extraction of the fetus. 2. The operation of embryotomy.

**Embryulcus** (*em-br-e-ol'-e-kus*) [*ἐμβρυουλόκος*]. A blunt hook, or obstetric forceps.

**Emerald-green**. See *Chrysomela*, *Mittler's Green*, *Schmiedeknecht's Green*, *Brilliant Green*.

**Emergence** (*em-r'-en-ss*) [*εἰσέρχεται*, to merge; to rise out]. In biology, one of those structures occurring in higher plants, analogous to hairs, but differing from true hairs in not originating from single epidermal cells; they constitute a transition between trichomes in the stricter sense of the term, and leaves or secondary axes.

**Emergency** (*em-er'-jen-ss*) [*εἰσέρχεται*, to rise up]. A sudden, pressing, and unforeseen occasion for action; an accident or condition unlooked for, and calling for prompt decision.

**Emergent** (*em-er'-jent*) [*εἰσέρχεται*, to rise up]. Sudden, unforeseen, and urgent; calling for prompt decision and action; as an *emergent* case.

**Emerod** (*em'-er-od*). See *Hemorrhoid*.

**Emery Strips**. Strips made of fine emery cloth and employed by dentists for cutting down to the correct shape the excess of gold on proximate fillings.

**Emesis** (*em'-es-is*) [*ἐμέσις*; *ἐμεῖν*, to vomit]. Vomiting.

**Emetatrophia** (*em-met-at-ro'-fe-ah*) [*ἐμετατροφία*, wasting]. Atrophy or wasting, due to persistent vomiting.

**Emetic** (*em'-et-ik*) [*ἐμετικός*, causing vomiting]. 1. Having the power to induce vomiting. 2. An agent causing emesis, or a dose of such an agent. **E., Direct**, one acting directly on the nerves of the stomach. **E., Indirect**, or **E., Systemic**, one acting through the blood upon the vomiting-center, or by reflex action from other peripheral sources.

**Emetology** (*em-met-ik-ol'-o-jy*) [*ἐμετικός*, emetic; *λόγος*, treatise]. Same as *Emetology*.

**Emetin** (*em'-et-in*). See *Ipecacuanha*.

**Emeto-catharsis** (*em'-et-o-kath-ar'-sis*) [*ἐμεσις*, vomiting; *καθάρσειν*, to purge]. Vomiting and purgation at the same time, or produced by a common agent.

**Emeto-cathartic** (*em'-et-o-kath-ar'-tik*) [*ἐμεσις*, vomiting; *καθάρσειν*, to purge]. Having power to induce emeto-catharsis.

**Emetology** (*em-et-ol'-o-jy*) [*ἐμετος*, vomiting; *λόγος*, science]. The study or science of the physiology, pathology, and therapeutics of vomiting, and of the nature of emetics.

**Emetomania** (*em-et-o-ma'-ne-ah*) [*ἐμετος*, vomiting; *μανία*, madness]. Insane desire for frequent emetics.

**Emetomorphin** (*em-et-o-mor'-fin*) [*ἐμετος*, vomiting; *Morpheus*, the god of sleep]. Apomorphia.

**Emetophobia** (*em-et-o-fo'-be-ah*) [*ἐμετος*, vomiting; *φόβος*, fear]. Morbid dread or fear of vomiting.

**Emiction** (*e-mik'-shun*) [*εἰς*, out; *μιγγερε*, to void urine]. Urination.

**Emictory** (*e-mik'-tor-e*) [*εἰς*, out; *μιγγερε*, to void urine]. 1. Promoting the secretion of urine. 2. A diuretic medicine.

**Emigration** (*em-ig-ra'-shun*) [*εἰς*, out; *μιγγερε*, to wander]. The outward passage of a wandering-cell or leukocyte through the wall of a blood-vessel; diaporesis.

**Eminence** (*em'-in-ens*) [*eminentia*, an eminence]. A rounded or protuberant part of an organ, especially of a bone. **E., Canine**. See *Canine*. **E., Collateral**, a projection of the lateral ventricle of the brain between the hippocampi. **E. of Doyère**. See *Doyère* and *Sarcoglia*. **E. facialis**, an eminence in the angle formed by the striæ and sulcus ventriculi. **E., Frontal**, the two eminences of the frontal bone above the superciliary ridges. **E., Ilio-pectineal**, a ridge on the upper surface of the pubic bone. **E., Nasal**, the prominence above the root of the nose between the superciliary ridges. **E., Parietal**, the eminence of the parietal bone.

**Eminential** (*em-in-ent'-shal*) [*eminentia*, an eminence]. Relating to an eminence.

**Emissarium** (*em-is-a'-re-um*) [*εἰς*]. A term for any canal or channel conveying a fluid outward. It is applied especially to the veins of the skull.

**Emissary Veins**. See *Emissarium* and *Vein*.

**Emission** (*e-mish'-un*) [*εἰσέρχεται*, to send forth]. An ejaculation, or sending forth.

**Emmena** (*em'-e-nah*) [*ἐμμηνα*, menses]. Menses, *q.v.*

**Emmenagogue** (*em-en'-ag-og*) [*ἐμμηνα*, the menses; *ἀγωγέ*, leading]. A medicine that stimulates the menstrual flow. **E., Direct**, one acting directly on the generative organs. **E., Indirect**, one acting only through other functions and indirectly.

**Emmenia** (*em-e'-ne-ah*) [L.]. The menses.

**Emmeniopathy** (*em-en-e-op'-a-the*) [ἐμμηνα, menses; πάθος, illness]. Any disorder of menstruation.

**Emmenology** (*em-en-ol'-o-je*) [ἐμμηνα, menses; λόγος, science]. That branch of science that treats of menstruation.

**Emmenorrhea** (*em-en-or-e'-ah*) [ἐμμηνα, menses; ροία, a flowing]. The menses.

**Emmerich, Bacillus of**. See *Bacteria, Table of*.

**Emmert's Suture**. See *Suture*.

**Emmet's Method**. See *Treatment, Methods of*.

**E. Operation**. See *Trachelorrhaphy, and Operations, Table of*.

**Emmetrope** (*em'-et-rôp*) [ἐν, in; μέτρον, measure; ὤψ, eye]. A person whose eyes are emmetropic.

**Emmetropia** (*em-et-ro'-pe-ah*) [ἐν, in; μέτρον, measure; ὤψ, the eye]. Normal or perfect vision. The condition of an eye whose shape and refractive media are such that, with suspended accommodation, parallel rays of light are brought to a focus upon the retina. For practical tests, rays of light from a point 20 feet away are considered as parallel.

**Emmetropic** (*em-et-ro-p'-ik*) [ἐν, in; μέτρον, measure; ὤψ, eye]. Characterized by emmetropia.

**Emodin** (*em'-o-din*) [Hind., emodi, rhubarb],  $C_{15}H_{10}O_5$ . A glucosid that occurs with chrysophanic acid in the bark of wild cherry, in cascara sagrada, and in the root of rhubarb. It consists of orange-red crystals, melting at  $245-250^{\circ}C$ .

**Emollient** (*e-mol'-yent*) [*emollire*, to soften]. 1. Softening; relaxing and soothing. 2. A substance used by external application to soften the skin; or, internally, to soothe an irritated or inflamed surface. **E. Cataplasm**. Same as *Species emollientis*.

**Empoioë** (*em-op'-to-e*). See *Hemioptysis*.

**Emotion** (*e-mo'-shun*) [*emotio*, agitation]. Mental feeling, or sentiment, with the associated agitation, and often with more or less bodily commotion. With the emotions, desire, impulse, and will are intimately associated.

**Emotional** (*e-mo'-shun-al*) [*emovere*, to move out]. Pertaining to the mental condition of feeling. **E. Insanity**, insanity characterized by exaggeration and exaltation of feelings.

**Empansement** (*ou(g)-pon(g)s'-mont g*) [Fr.]. A disease of sheep marked by abdominal swelling.

**Empathema** (*em-path-e'-mah*) [ἐν, in; πάθημα, suffering; *pl., Empathemata*]. A dominant or ungovernable passion or source of suffering. **E. atonicum**, hypochondriasis. **E. entonicum**, active mania. **E. inane**, harebrained and purposeless passion and excitement.

**Emphylysis** (*em-flis-is*) [ἐν, in, on; ὄλυσις, eruption; *pl., Emphylyses*]. Any vesicular or exanthematous eruption.

**Emphractic** (*em-frak'-tik*) [ἐμφράττειν, to obstruct]. 1. Obstructive; closing the pores of the skin. 2. Any agent that obstructs the function of an organ, especially the excretory function of the skin.

**Emphraxis** (*em-fraks'-is*) [ἐμφραξις, obstruction]. (Obstruction; infarction; congestion).

**Emphyma** (*em-fi'-mah*) [ἐν, in; φύμα, growth; *pl., Emphyymata*]. A tumor.

**Empysema** (*em-fiz-e'-mah*) [ἐμυσάειν, to inflate]. The abnormal collection of air in the connective tissue of a part, causing swelling and crepitation. **E., Cutaneous**, that occurring in the connective tissues beneath the skin, usually of the face. **E., Gangrenous**. See *Edema, Malignant*. **E., Interlobular**, a form of empysema following the course of the interlobular septa. This condition is due to traumatism, as after tracheotomy, or in direct injury to the lungs.

**E., Pulmonary**, a chronic condition of the lungs in which there is a dilatation of the alveoli with destruction of the alveolar walls, resulting in a loss of the normal elasticity of the lung-tissue. This is associated with more or less marked dyspnea, with hacking cough, and defective aëration of the blood, giving rise to a certain degree of cyanosis. The chest becomes full and round—"barrel-shaped"—and a line of distended veins may often be seen surrounding the body at the lower margin of the ribs, constituting the so-called "*emphysematous girdle*." There is a hyper-resonant note over the chest, with feeble inspiratory sound and numerous râles of all kinds. Hypertrophy and dilatation of the right heart are frequent complications. The margins of the lungs are often the seat of large bullæ due to extensive destruction of the alveolar tissue. The most frequent causes of emphysema are whooping-cough and chronic lung-affections attended with severe coughing-spells. **E., Surgical**. See *Aërodermectasia*.

**Emphysematous** (*em-fiz-em'-at-us*) [ἐμυσάειν, to inflate]. Affected with or of the nature of emphysema.

**E. Girdle**. See *Emphysema*.

**Emphytriatreusis** (*em-fit-re-at-ru'-sis*) [ἐμφύτρος, innate; ἰατρειά, treatment]. The treatment of disease by an untrained person, whether clairvoyant, medium, trance-doctor, telepathist, mesmerist, or seventh son of a seventh son.

**Empiric** (*em-pir'-ik*) [ἐμπειρικός, experiential, practical]. One practising medicine without philosophic or scientific principles, simply from the results of his own experience, or that of others. As commonly used it is nearly synonymous with quack.

**Empiricism** (*em-pir'-is-izm*) [ἐμπειρικός, experimental, practical]. 1. Dependence upon experience or observation. 2. Quackery.

**Empiricist** (*em-pir'-is-ist*) [ἐμπειρικός, experimental, practical]. One who depends upon experience in the treatment of disease.

**Emplastrum** (*em-plas'-trum*) [ἐμπλάσσειν, to plaster up; *pl., Emplastra*]. A plaster. In pharmacy, a cohesive, tenacious substance, insoluble in water, used as an excipient and containing a prescribed medicinal substance intended to be spread in a thin layer upon chamois, kid, or muslin. The excipient is usually lead oleate or Burgundy pitch. (See *Lead* and *Piv.*) There are 13 official *emplastra*. **E. califaciens**. See *Cantharis*.

**Empresiomania** (*em-pre-se-o-ma'-ne-ah*) [ἐμπρησις, conflagration; *uavia, mania*]. Pyromania; insane desire to burn houses or other articles; maniacal incendiarism.

**Empresmomania** (*em-pres-mo-ma'-ne-ah*) [ἐμπρησις, a burning; *mania, madness*]. Same as *Empresiomania*.

**Empresmus** (*em-pres'-mus*) [ἐμπρησμός, a burning]. Inflammation; phlogosis.

**Emprosthotonia** (*em-pros-thot-o'-ne-ah*). Same as *Emprosthotonos*.

**Emprosthotonos** (*em-pros-thot'-o-nus*) [ἐμπροσθεν, forward; *τόνος, tension*]. Tonic muscular spasm that bends the upper and lower parts of the body forward; it is one of the symptoms in some cases of tetanus, etc.

**Empytis** (*em-pi'-tis-is*) [ἐμπύειν, to spit upon]. Hemorrhage from the lungs; hemoptysis.

**Empyema** (*em-pi-e'-mah*) [ἐν, in; πύον, pus]. Pus in the pleural cavity or in the chest. It may be *primary*, which is rare, or *secondary*. There is associated a hectic type of fever, with chills and sweating. If not treated it will rupture spontaneously through the lung or chest-wall. Empyema is most frequently encoun-

tered in children, but may occur from pleurisy, tuberculosis, septic conditions, and infectious fevers in any individual. **E. necessitatis**, an empyema in which the pus burrows between the intercostal spaces and appears as a subcutaneous tumor. **E., Pulsating**, empyema attended with pulsation of the chest wall.

**Empyematous** (*em-pi-mat-us*) [*ē*, in; *πῶρ*, pus]. Of the nature of or affected with empyema.

**Empyemic** (*em-pi-em'ik*). See *Empyematous*.

**Empyema** (*em-pi-e-ma*) [*ἐμπίημα*, to suppurate]. A pustular eruption, as smallpox; any disease characterized by phlegmonous pimples gradually filling with purulent fluid.

**Empyocoele** (*em-pi-oel*) [*ē*, in; *πῶρ*, pus; *κύλη*, tumor]. A purulent serosal tumor.

**Empyomphalus** (*em-pi-om'fal-u*) [*ē*, in; *πῶρ*, pus; *ὄμφαλός*, navel]. A collection of pus at or about the navel.

**Empyreumatic** (*em-pi-ru-mat'ik*) [*ἐμπερνευα*, a live coal; *πῦρ*, on fire]. Obtained from some organic substance by the aid of strong heat; as an empyreumatic oil.

**Emulgent** (*em-ul'jent*) [*ἐμυλγέρε*, to milk out]. 1. Draining; applied to the renal arteries as draining out the urine. 2. An emulgent vessel. 3. Any remedy that stimulates the emunctory organs. **E. Veins**. See *Vein*.

**Emulsin** (*em-ul'sin*) [*ἐμυλγέρε*, to milk out], 10 (C<sub>9</sub>H<sub>15</sub>N<sub>3</sub>O<sub>6</sub>) + 8 (Bull). A ferment contained in bitter almonds. It is also called *Synaptase*. Its union with amygdalin forms hydrocyanic acid. See *Amygdalin*.

**Emulsio** (*em-ul'si-on*) [L.; *pl.*, *Emulsion's*]. See *Emulsion*.

**Emulsion** (*em-ul'shun*) [*emulsio*, emulsion]. Water or other liquid in which oil, in minute subdivision of its particles, is suspended. The U. S. P. and N. F. together contain formulae of some 19 emulsiones.

**Emulsionize** (*em-ul'shun-iz*) [*emulgere*, to milk out]. To transform into an emulsion. The pancreatic juice *emulsionizes* fats.

**Emulsive** (*em-ul'siv*) [*emulgere*, to milk out]. Forming or readily entering into an emulsion.

**Emunctory** (*em-munk'tor-ē*) [*emungere*, to blow the nose, to wipe out]. 1. Excretory; excreting or removing effete matters and waste-products. 2. Any organ or part that has an excretory or purifying function, as the liver, kidneys, bowel, skin, or lungs.

**Emydin** (*em'id-in*) [*ἐμύς*, the fresh water tortoise]. A white proteid substance procured from the yolk of the eggs of turtles.

**Enamel** (*en-am-el*) [ME., *enamaile*, enamel]. 1. The vitreous substance of the crown of the teeth. See *Teeth*. 2. A vitreous substance used for painting on porcelain, glass, and for covering metals with various kinds of ornamental work. It is composed of coloring matters which consist of metallic oxides, fluxes of vitrifiable substances, as silicates, borates, or boro-silicates. See *Porcelain Teeth*. **E.-blue**. See *Smalts*. **E.-cell**. See *Ameloblast*. **E.-chisel**, a dental instrument shaped like a chisel, with a straight or oblique edge, and used for cutting away the enamel and denture of the teeth. **E.-column**, **E.-fiber**, **E.-prism**, **E.-rod**, any one of the minute six-sided prisms of which the enamel of a tooth is composed. **E.-cuticle**. See *Cuticle*. **E.-germ**, an *Ameloblast*, *q. v.*

**Enanthema** (*en-an-thē'ma*) [*ē*, in; *ἀνθήμα*, bloom, eruption; *pl.*, *Enanthemata*]. An eruption within the body, in distinction from *Erythema*.

**Enanthematous** (*en-an-thē-mat-us*) [*ē*, in; *ἀνθήμα*, bloom, eruption]. Of the nature of or accompanied by an enanthema.

**Enanthesis** (*en-an-thē-sis*) [*ē*, in; *ἀνθίσθαι*, to bloom].

1. An eruption of the skin, not connected with an internal disease. 2. An exanthematous rash.

**Enanthylic Acid** (*en-an-thil'ik*). See *Acid*.

**Enantioblastous** (*e-nan-te-o-blast'us*) [*ἐναντίος*, opposite; *βλαστός*, germ]. In biology, applied to the embryo of orthotropous seeds when placed at the end opposite the hilum.

**Enantiomorphous** (*en-an-te-o-mor'fus*) [*ἐναντίος*, opposite; *μορφή*, form]. Similar but contrasted or reversed in form. Thus the two hands are *enantiomorphous*.

**Enarthrodia** (*en-ar-thro'de-ah*). See *Enarthrosis*.

**Enarthrodial** (*en-ar-thro'de-al*) [*ē*, in; *άρθρον*, a joint]. Having the character of an enarthrosis.

**Enarthrosis** (*en-ar-thro'sis*) [*ē*, in; *άρθρον*, joint]. A ball-and-socket joint, like that of the hip; a variety of diarthrosis. See *Diarthrosis*.

**Enation** (*e-na't-shun*) [*ἐνασθαι*, to be born]. In biology, having outgrowths resulting from excessive development. In ethnology, maternal relationship.

**Encanthis** (*en-kan'this*) [*ē*, in; *κάνθος*, canthus]. A reddish-colored morbid growth in the inner canthus of the eye.

**Encapsulation** (*en-kap-su-la'-shun*) [*en*, in; *capsula*, a capsule]. Fixation as in a capsule; the absorption of a bacillus in a giant-cell; the enclosure of a foreign body in a tough sheath.

**Enceinte** (*en(s)-sant'*) [Fr., *incincta*, girdled]. With child; pregnant.

**Encephal** (*en-sef'al*). Same as *Encephalon*, *q. v.*

**Encephalgia** (*en-sef-al-je-ah*) [*ἐγκεφαλός*, the brain; *ἄλγος*, pain]. Pain in the head.

**Encephalatrophy** (*en-sef-al-at-rōf'tik*) [*ἐγκεφαλός*, brain; *ἀτροφία*, wasting]. Relating to brain-atrophy.

**Encephalic** (*en-sef-al'ik*) [*ἐγκεφαλός*, the brain]. Pertaining to the encephalon.

**Encephalin** (*en-sef'al-in*) [*ἐγκεφαλός*, the brain]. A nitrogenous glucosid extracted from brain-tissue.

**Encephalon** (*en-sef'al-le-on*) [dim. of *ἐγκεφαλός*, the brain]. The cerebellum.

**Encephalitic** (*en-sef-al-it'ik*) [*ἐγκεφαλός*, the brain; *ιτις*, inflammation]. Relating to or affected with encephalitis.

**Encephalitis** (*en-sef-al-it'is*) [*ἐγκεφαλός*, brain; *ιτις*, inflammation]. Inflammation of the encephalon; brain-fever.

**Encephalocoele** (*en-sef'al-o-sel*) [*ἐγκεφαλός*, brain; *κύλη*, tumor]. A hernia of the brain through a cranial fissure.

**Encephalocœle** (*en-sef'al-o-sel*) [*ἐγκεφαλός*, brain; *κοιλία*, hollow]. A ventricle of the brain.

**Encephalodialysis** (*en-sef-al-o-di-al'is-is*) [*ἐγκεφαλός*, brain; *διάλυσις*, dissolution]. Softening of the brain.

**Encephalodynia** (*en-sef-al-o-din'te-ah*) [*ἐγκεφαλός*, brain; *ὀδύνη*, pain]. Same as *Encephalgia*.

**Encephaloid** (*en-sef'al-oid*) [*ἐγκεφαλός*, brain; *εἶδος*, like]. 1. Resembling brain-tissue. 2. Soft carcinoma. See *Carcinoma*.

**Encephalolith** (*en-sef'al-o-lith*) [*ἐγκεφαλός*, brain; *λίθος*, stone]. A calculus of the brain; a brain-stone.

**Encephalolithiasis** (*en-sef'al-o-lith-it'-se-is*) [*ἐγκεφαλός*, brain; *λίθασσις*, the formation of calculi]. The formation of brain-stones.

**Encephalology** (*en-sef-al-ol'-o-jē*) [*ἐγκεφαλός*, brain; *λόγος*, science]. The anatomy, physiology, and pathology of the brain.

**Encephaloma** (*en-sef'al-ol'-mah*) [*ἐγκεφαλός*, brain; *δύνα*, tumor; *pl.*, *Encephalomata*]. 1. Tumor of the brain; hernia cerebri. 2. Encephaloid carcinoma.

**Encephalomalacia** (*en-sef'al-ol-mal'-se-ah*) [*ἐγκεφαλός*, brain; *μαλακία*, softening]. Softening of the brain-substance.

**Encephalomere** (*en-sef'-al-o-mer*) [ἐγκεφαλος, brain; μέρος, share]. Any one of the succession of natural segments of axial parts into which the brain is divisible.

**Encephalometer** (*en-sef'-al-om'-et-er*) [ἐγκεφαλος, brain; μετρον, measure]. An instrument for measuring the cranium and locating certain brain-regions.

**Encephalo-myelopathy** (*en-sef'-al-o-mi-el-op'-ath-e*) [ἐγκεφαλος, brain; μυελός, marrow; πάθος, disease]. Any disease that is both an encephalopathy and a myelopathy; any cerebro-spinal disease.

**Encephalon** (*en-sef'-al-on*) [ἐν, in; κεφαλή, the head]. The contents of the cranium. The brain.

**Encephal narcosis** (*en-sef'-al-o-nar-ko'-sis*) [ἐγκεφαλος, brain; νάρκωσις, to benumb]. Stupor from some brain-lesion.

**Encephalonicus** (*en-sef'-al-ong'-kus*) [ἐγκεφαλος, brain; όγκος, a tumor]. See *Encephalophyma*.

**Encephalopathy** (*en-sef'-al-op'-ath-e*) [ἐγκεφαλος, brain; πάθος, disease]. Any disease of the brain.

**Encephalophyma** (*en-sef'-al-o-fi'-mah*) [ἐγκεφαλος, brain; φῆμα, a growth]. A tumor of the brain.

**Encephalorrhagia** (*en-sef'-al-or-ah'-je-ah*) [ἐγκεφαλος, brain; ρήγνιναι, to break forth]. Cerebral hemorrhage.

**Encephalotome** (*en-sef'-al-o-tom*) [ἐγκεφαλος, brain; τομή, section]. An instrument for slicing the encephalon for examination or preservation.

**Encephalotomy** (*en-sef'-al-o'-o-me*) [ἐγκεφαλος, brain; τομή, section]. 1. The anatomy or dissection of the brain; surgical incision of the brain. 2. Obstetric craniotomy.

**Enchondroma** (*en-kon-dro'-mah*) [ἐν, in; χόνδρος, cartilage; όμα, tumor; pl., *Enchondromata*]. 1. A tumor arising from or resembling cartilage in texture, etc.; chondroma. 2. A cartilaginous growth within an organ or tissue.

**Enchondrosis** (*en-kon-dro'-sis*) [ἐν, within; χόνδρος, cartilage; pl., *Enchondroses*]. An outgrowth of cartilage from an osseous or cartilaginous structure; the process by which an enchondroma is developed.

**Enchylema** (*en-ki-le'-mah*) [ἐν, in; χυμός, juice]. In biology, the basal substance of a cell-nucleus (Kernsaft); it is a hyaline, fluid, granular substance, containing the other nuclear elements.

**Enchymatous** (*en-kim'-at-us*) [ἐν, in; χεῖν, to pour]. In biology, applied to cells that are distended by infusion, as glandular epithelia.

**Enclave** (*en-klav'-ou(g)-klahz'*) [Fr.]. Any substance enclosed within a foreign tissue, as an oil-globule in a cell; any exclave (*q. v.*) considered in relation to the part that surrounds it.

**Enclavement** (*ou(g)-klahz'-mon(g)*) [Fr.]. Retention due to a constriction; impaction, as of the head in the pelvic strait.

**Enclitic** (*en-klit'-ik*) [ἐγκλιτικός, leaning on]. Not synclitic.

**En Clou** (*ou(g)-kloo'*) [Fr.]. See *Culture*.

**Encoleuse** (*en-ko-le'-o-sis*) [ἐν, in; κόλπος, sheath]. Invagination.

**Encolpitis** (*en-kol-pi'-tis*) [ἐν, in; κόλπος, vagina]. Mucous vaginitis.

**Encraty** (*en'-krat-e*) [ἐγκράτεια, mastery]. Self-control; continence or strict temperance.

**Encyclic, Encyclical** (*en-sik'-lik, en-sik'-lik-al*) [ἐν, in; κύκλος, a circle]. In biology, applied to flowers having the organs arranged with an equal number of parts, in alternate whorls; isomalous.

**Encysted** (*en-sist'-ed*) [ἐν, in; κύστις, a bag]. Enclosed in a cyst, or capsule. Aneurysms, herniae, or tumors may become encysted.

**Encystment** (*en-sist'-ment*) [ἐν, in; κύστις, a bag]. The process of becoming encysted.

**End** [ME., *ende*]. The terminal point of a thing. **E.-bud**, or **E.-bulb**, the terminal bulb of a nerve in the skin. **E.-bulb of Krause**. See *Corpuscle*. **E.-plate**, the expanded terminal of a motor nerve upon a bundle of muscular fibers. **E.-organ**, the general name for the terminal organ or part of a sensory nerve-fiber, of whatever kind.

**Endangeitis** (*end-an-je-i'-tis*) [ἐνδον, within; ἀγγειον, vessel; ιτις, inflammation]. Inflammation of the endangium.

**Endangium**, or **Endangeion** (*end-an'-je-ion, -on*) [ἐνδον, within; ἀγγειον, vessel]. The intima or innermost coat of a blood-vessel. See *Intima*.

**Endanthem** (*end-an'-them*) [ἐνδον, within; ἀνθῆν, to bloom]. A term applied to a mucous exanthem.

**Endarteritis** (*end-ar-ter-i'-tis*) [ἐνδον, within; ἀρτηρία, artery; ιτις, inflammation]. Inflammation of the intima, or innermost coat of an artery. The *acute form* is rare, and only occurs in the aorta and the larger arteries. Ulceration is very rarely present. The *chronic form*, also named *Atheroma*, and *Arteritis deformans*, is a peculiar change or degeneration occurring in the arterial coats of the aged, and is preceded by a fatty degeneration of the tissues of the arteries. Syphilis is supposed to play an important part in the production of this condition. The immediate cause, however, is mechanical irritation due to the force of the circulation. The fatty debris and the cholesterol that are formed during the degenerative process accumulate in spaces beneath the intima and constitute the so-called *atheromatous abscesses*. The so-called *atheromatous ulcer* is formed by one of these abscesses breaking through the intima. The sequelae of *atheromatous degeneration* are very grave. Aneurysm, thrombosis, embolism, and apoplexy frequently result, and hence, the ultimate prognosis is bad. **Arterio-capillary Fibrosis**, or **Arterio-sclerosis**, is a peculiar change occurring in the small vessels throughout the body, and consisting in a thickening of the adventitia and intima by a deposit of a hyaline-fibroid material which diminishes the caliber of the vessels, increases the arterial tension, and thus gives rise to the hypertrophy of the heart that is present in this condition.

**Endeictic** (*en-dik'-tik*) [ἐν, in; δεικνύναι, to show]. Symptomatic; serving as an indication.

**Endeixis** (*en-diks'-is*) [ἐνδείξις, a pointing out]. A symptom, sign, or indication.

**Endemann and Prochazka's Test**. See *Tests*.

**Endemic** (*en-dem'-ik*) [ἐν, in; δῆμος, a people]. A term applied to diseases that exist among small numbers of persons or within a limited area. An *endemic* disease may or may not become epidemic; it is in general due to some local cause. **E. Colic**. See *Colic*.

**Endemicity**, or **Endemism** (*en-dem-is'-it-e, or en'-dem-izm*) [ἐν, in; δῆμος, a people]. The quality of being endemic.

**Endemiology** (*en-dem-e-ol'-o-je*) [ἐν, in; δῆμος, a people; λόγος, science]. The science of endemic diseases.

**Endepidermis** (*end-ep-e-der'-mis*) [ἐνδον, within; ἐπι, upon; δέρμα, the skin]. The inner layer of the epidermis.

**Endermatic** (*en-der-mat'-ik*) [ἐν, in; δέρμα, the skin]. Within the skin. Pertaining to a method of administering medicines through the skin, by rubbing, etc.

**Endermic** (*en-der'-mik*). Same as *Endermatic*.

**Enderon** (*en'-der-on*) [ἐν, in; δερμα, skin]. The true skin or derm, together with the non-epithelial portion of the mucous membrane.

**Enderonic** (*en-der-on'-ik*) [ἐν, in; δερμα, skin]. Pertaining to or of the nature of the enderon.

**Endoxoteric** (*en-deks-o-ter'-ik*) [ἐνδον, within; ἐξωτερικός, outer]. Due both to internal and external causes.

**Endo-** (*end'-o-*) [*ἔνδω*, within]. A prefix, meaning within.

**Endo-arteritis** (*en-dō-arter-i'tis*). See *Endarteritis*.

**Endo-auscultation** (*en-dō-ask-ul-ta'-shun*) [*ἔνδω*, within; *auscultar*, to listen to]. A method of auscultation devised by Bianchi by using the ordinary esophageal tube passed into the stomach, to auscult the gullet and stomach, and through them, to a certain degree, the heart and lungs.

**Endoblast** (*en-dō-blast*) [*ἔνδω*, within; *βλαστός*, a germ]. The cell-nucleus, or cytoblast. See *Hypoblast*.

**Endoblastic** (*en-dō-blast'ik*) [*ἔνδω*, within; *βλαστός*, a germ]. Relating to the endoblast.

**Endocardiac, Endocardial** (*en-dō-kar'di-ak, en-dō-kar'di-al*) [*ἔνδω*, within; *καρδία*, the heart]. Relating to the endocardium; situated within the heart.

**Endocarditic** (*en-dō-kar'di'tik*) [*ἔνδω*, within; *καρδία*, the heart]. Pertaining to or affected with endocarditis.

**Endocarditis** (*en-dō-kar'di'tis*) [*ἔνδω*, within; *καρδία*, the heart; *ῥις*, inflammation]. Inflammation of the endocardium or lining membrane of the heart. Acute rheumatism is the most frequent cause, though pneumonia, gout, or any infectious disease may precede. The valves are nearly always the parts affected, and usually those of the left heart. The disease is prone to terminate fatally or result in permanent injury to the valves. Fibrinous deposits or vegetations project into the cavity of the heart; the thickened endocardium is liable to become athromatous, with chronic ulceration. Acute endocarditis may be divided into *simple* and *malignant*. Chronic endocarditis includes chronic disease of the valves of the heart. There is a fibrous or cirrhotic thickening of the latter, associated with contraction and calcification. Usually this chronic disease, like the acute, is confined to the left heart, and it is generally rheumatic in origin. **E., Malignant or Ulcerative.** Also called *diphtheric, infection*, and *septic endocarditis*. A rapidly fatal type due to septic infection. It is marked by high fever, chills, and profound prostration. This is followed by the development of a murmur, purpuric skin-eruptions, hematuria, delirium, convulsions, hemiplegia, enlargement of the spleen, the typhoid state, and death. Frequently no cause can be found. Ulcerations are found around and in the valves, and in these ulcers micro-organisms are present in large quantities. **E. polyposa**, a form of ulcerative endocarditis in which there is an excessive deposit of fibrin, producing polypoid masses. **E. pustulosa**, a form of ulcerative endocarditis in which minute abscesses occur in the substance of the valves. **E., Simple**, the ordinary variety of acute endocarditis, usually associated with a mitral-systolic murmur. **E., Chronic**, associated with valvular lesions. The following forms are met with: 1. *Aortic Incompetence*; 2. *Aortic Stenosis or Obstruction*; 3. *Mitral Incompetence*; 4. *Mitral Stenosis*; 5. *Pulmonary Incompetence*; 6. *Pulmonary Stenosis or Obstruction*; 7. *Tricuspid Incompetence*; 8. *Tricuspid Stenosis*; 9. *Combined valvular disease*. **Aortic Incompetence** is produced by a retraction of the edges of the valves, which have become rigid and thickened; as a result the aorta is not shut off from the left ventricle during the diastole, and there is a leakage of a small amount of blood into that cavity. A *diastolic* murmur is thus produced. This is frequently associated with a marked degree of arterio-sclerosis. Sudden death occurs in aortic incompetence more frequently than in any other valvular affection. The pulse is the so called Corrigan or water hammer pulse. **Aortic Stenosis or Obstruction** is due to thickening

and curling, with calcification of the valves. This usually occurs in the aged. A systolic murmur is produced, accompanied in the late stages of the disease by a tendency to syncope, giddiness, and anemia. The pulse is slow and small, but regular. **Mitral Incompetence**, the most frequent of all valvular lesions, is due to curling of the valve-cusps or to shortening of the chordæ tendineæ. There is usually produced an immense hypertrophy of the walls of the ventricles. Late in the disease compensation fails and general edema ensues. Dyspnea is a frequent symptom, associated with cyanosis and albuminuria. The murmur is systolic in time; the pulse is normal during the stage of compensation, afterward small and irregular. This is a common form among children. **Mitral Stenosis**, due to fibrous thickening and contraction of the mitral cusps. The opening may be reduced to a mere fissure. If due to a thickening and shortening of the chordæ tendineæ the thickened and adherent valves are drawn in a funnel-shape toward the floor of the ventricle. Mitral stenosis usually occurs in women. A presystolic murmur is produced, associated with duplication of the second sound. **Pulmonary Incompetence**, the rarest of valvular diseases, may be due to congenital abnormalities, or may follow some diseased condition, as malignant endocarditis. The murmur is diastolic in time. **Pulmonary Stenosis or Obstruction**, usually congenital, is due to fetal heart-disease. The patients usually die before they are ten or twelve years old. A systolic murmur is produced. **Tricuspid Incompetence** is due to endocarditis or to dilatation of the right ventricle and tricuspid orifice. Compensation is never adequate, and hence venous stasis, cyanosis, and dropsy soon follow. A systolic murmur is produced. **Tricuspid Stenosis** is a rare condition and usually secondary to mitral stenosis. It is marked by a presystolic murmur. **Combined Valvular Disease**; frequently two of the foregoing murmurs may coexist. The most usual combinations are as follows: 1. Aortic obstruction and regurgitation; 2. Mitral obstruction and regurgitation; 3. Mitral obstruction and tricuspid regurgitation; 4. Aortic obstruction and mitral regurgitation; 5. Double valvular disease at aortic and mitral orifices (four murmurs). **E. ulcerosa**, the ulcerative form of endocarditis. **E. verrucosa**, a form of endocarditis characterized by the production of endocardial vegetations situated mostly upon the curtains of the cardiac valves. It is seen usually upon the left side of the heart.

**Endocardium** (*en-dō-kar'de-um*) [*ἔνδω*, within; *καρδία*, the heart]. The colorless, transparent membrane lining the interior of the heart.

**Endocarp** (*en-dō-karp*) [*ἔνδω*, within; *καρπός*, fruit].

In biology, the inner hard and stony membranous or fleshy layer of a pericarp; e.g., the stone of a peach.

**Endocarpoid** (*en-dō-kar'poid*). In biology, applied to lichens that have the apothecia immersed in the thallus.

**Endocelarium** (*en-dō-se-lat'-re-um*) [*ἔνδω*, within; *κοιλία*, the belly]. In biology, the visceral epithelium of the body-cavity.

**Endocervical** (*en-dō-ser'vīk-al*) [*ἔνδω*, within; *cervix*, neck]. Relating to the inside of the uterine cervix.

**Endocervicitis** (*en-dō-ser-vis-i'tis*) [*ἔνδω*, within; *cervix*, neck; *ῥις*, inflammation]. Inflammation within the canal of the cervix uteri.

**Endochondral** (*en-dō-kon'dral*) [*ἔνδω*, within; *χόνδρος*, cartilage]. Situated or occurring within a cartilage.

**Endochorion** (*en-dō-kō'-re-on*) [*ἔνδω*, within; *χόριον*, the chorion]. The inner chorion; the vascular layer of the allantois.

**Endochorionic** (*en-do-ko-re-on'-ik*) [*éndov*, within; *χόριον*, the chorion]. Relating to the endochorion.

**Endochrome** (*en'-do-krom*) [*éndov*, within; [*χρῶμα*, color]. In biology, the coloring-matter, other than green, of the endoplasm of a cell, or that of diatoms or of flowers.

**Endochylema** (*en-do-ki'-lem-ah*) [*éndov*, within; *χυρός*, juice]. In biology, the semi-fluid substance filling the protoplasmic reticulum of a cell.

**Endochyme** (*en'-do-kim*) [*éndov*, within; *χυμός*, juice]. In biology, the formative cell-sap elaborated from the chyme.

**Endoclinial** (*en-do-klí'-nal*) [*éndov*, within; *κλίνειν*, to lean]. In biology, having the clinode, an organ analogous to the hymenium, inclosed in a conceptacle.

**Endocolpitis** (*en-do-kol-pí'-tis*) [*éndov*, within; *κόλπος*, vagina]. Same as *Eu-olpitis*.

**Endocone** (*en'-do-kon*) [*éndov*, within; *κῶνος*, cone]. In biology, one of the internal cones formed by the siphon-sheaths in certain cephalopods.

**Endocranitis** (*en-do-kra-ní'-tis*) [*éndov*, within; *κρανιον*, the skull; *τις*, inflammation]. Inflammation of the endocranium; pachymeningitis externa.

**Endocranium** (*en-do-kra'-ne-um*) [*éndov*, within; *κρανιον*, the skull]. That part of the cerebral dura that adheres to the inner surface of the cranial bones. One of the processes projecting into the cephalic cavity, as the *tentorium* or *cephalophragma*.

**Endocyemate** (*en-do-sí'-em-át*) [*éndov*, within; *κίημα*, an embryo]. In embryology, applied to that form of development in which the embryo is invaginated in a fold of the blastodermic membrane, an amnion being formed; the opposite of *Epicyemate*.

**Endocyesis** (*en-do-sí'-e'-sis*) [*éndov*, within; *κεῖν*, to conceive; *pl.*, *Endocyeses*]. In biology, the process that gives rise to an endocyemate embryo.

**Endocyma** (*en-do-sí'-mah*) [*éndov*, within; *κίμα*, a fetus]. A form of double monstrosity in which the parasite is contained within the body of the autosite.

**Endocyst** (*en'-do-sist*) [*éndov*, within; *κίστις*, bladder]. In biology, the endoderm or inner layer of the cecum or common dermal system of a colony of Polyzoa. See *Ectocyst*.

**Endoderm** (*en'-do-derm*) [*éndov*, within; *δέρμα*, skin]. In biology, the simple nutritive cell-layer lining the cavity of the primitive intestine, the enteron, and its modifications or derivatives. The vegetative germinal layer. See *Blastoderm*.

**Endodermis** (*en-do-der'-mis*) [*éndov*, within; *δέρμα*, skin]. In biology, the layer of cells surrounding a fibro-vascular cylinder.

**Endodontitis** (*en-do-don-tí'-tis*) [*éndov*, within; *ὀδός*, a tooth; *τις*, inflammation]. Inflammation of the lining membrane of a tooth.

**Endogastritis** (*en-do-gas-trí'-tis*) [*éndov*, within; *γαστήρ*, stomach; *τις*, inflammation]. Inflammation of the mucous membrane of the stomach.

**Endogen** (*en'-do-jeu*) [*éndov*, within; *γεννᾶν*, to produce]. A plant, the growth of which is by means of new matter deposited in the interior of the trunk or branch. A member of one of the great primary classes of flowering-plants; a monocotyledon. See *Exogen*.

**Endogenous** (*en-doj'-en-us*) [*éndov*, within; *γένεσ*, producing]. In biology, applied to the stems of monocotyledons and their manner of growth; also to spore-formation or cell-formation inside of a parent-cell.

**Endognathal** (*en-dog'-na-thal*) [*éndov*, within; *γνάθος*, jaw]. In biology, applied to the pulpiform appendages formed by the modification of the three terminal joints of the third thoracic limb in certain crustaceans.

**Endognathion** (*end-og-na'-the-on*) [*éndov*, within; *γνάθος*, jaw]. The middle portion of the superior maxilla.

**Endogonium** (*en-do-go'-ne-un*) [*éndov*, within; *γονος*, seed]. In biology, a gonidium formed inside of a receptacle or parent-cell, as in the *Saprolegniae*, *Mucorini*, *Vaucheria*.

**Endo-laryngeal** (*en-do-lar-in'-je-al*) [*éndov*, within; *λάρυγξ*, the larynx]. Within the larynx. **E.** Operations, operations performed within the larynx.

**Endolemma** (*en-do-lem'-ah*) [*éndov*, within; *λίμμα*, husk]. Same as *Neurilemma*.

**Endolymph** (*en'-do-limf*) [*éndov*, within; *lymphá*, water]. The fluid of the membranous labyrinth of the ear.

**Endolymphangeal** (*en-do-lim-fan'-je-al*) [*éndov*, within; *lymphá*, lymph; *ἀγγεῖον*, vessel]. Situated or belonging within a lymph-vessel; as an endolymphangeal nodule.

**Endolymphic** (*en-do-lim'-fik*) [*éndov*, within; *lymphá*, lymph]. Relating to or of the nature of endolymph.

**Endomersion** (*en-do-mer'-shun*). See *Objective*.

**Endomesoderm** (*en-do-me'-so-derm*) [*éndov*, within; *μέσος*, middle; *δέρμα*, skin]. In biology, applied to two cells that appear on the side of the blastopore in the embryos of molluscs and annelids, giving rise by division to the two primitive mesoderm cells, and to a portion of the lining of the mesenteron.

**Endometrial** (*en-do-me'-tre-al*) [*éndov*, within; *μήτρα*, the womb]. Pertaining to the endometrium; situated within the uterus.

**Endometritis** (*en-do-me-trí'-tis*) [*éndov*, within; *μήτρα*, the womb; *τις*, inflammation]. Inflammation of the endometrium. **E.**, **Cervical**, of the cervical portion. It gives rise to the condition known as *erosion*, *ulceration*, or *granular degeneration of the cervix*, a very frequent condition. There is leukorrhea, pain in the back, and congestion of the cervix and pelvic viscera, with metrorrhagia or menorrhagia, or both, together with some failure of the general health. This condition is due to traumatism, usually in parturition. **E.**, **Chronic Purulent**, occurs in old women and is marked by an accumulation of pus in the uterine cavity with a purulent leukorrhea. **E.**, **Corporeal**, that of the body of the uterus. **E.**, **Decidual**, of the decidual membrane of the impregnated uterus. It may be *diffuse* (thickening and development of connective tissue) or *polypoid* (with polypoid growths). **E.**, **Fungous**, that in which the lining membrane is hypertrophied, with the formation of vascular granulations. This is also called *hemorrhagic endometritis*. **E.**, **Hemorrhagic**. See *E.*, *Fungous*.

**Endometrium** (*en-do-me'-tre-um*) [*éndov*, within; *μήτρα*, uterus]. The lining membrane of the uterus.

**Endometry** (*en-don'-et-re*) [*éndov*, within; *μέτρον*, measure]. The measurement of the interior of an organ or cavity, as of the cranium.

**Endomyocarditis** (*en-do-mi-o-kar-dí'-tis*) [*éndov*, within; *μῦς*, muscle; *καρδία*, heart; *τις*, inflammation]. Inflammation of both endocardium and myocardium.

**Endomysial** (*en-do-miz'-e-al*) [*éndov*, within; *μῦς*, muscle]. Pertaining to or of the nature of endomysium.

**Endomysium** (*en-do-miz'-e-um*) [*éndov*, within; *μῦς*, muscle]. The extension of the perimysium between the muscular fibers.

**Endonephritis** (*en-do-nef-rí'-tis*) [*éndov*, within; *νεφρός*, kidney; *τις*, inflammation]. Synonym of *Pyelitis*.

**Endoneural** (*en-do-nu'-ral*) [*éndov*, within; *νεῦρον*, nerve]. Relating to or situated within the interior of a nerve.

**Endoneurial** (*en-do-nu'-re-al*) [*éndov*, within; *νεῦρον*, a nerve]. Relating to the endoneurium.

**Endoneurium** (*en-do-nū'-re-um*) [*ἔνδον*, within; *νῆρον*, a nerve]. The delicate connective tissue holding together the fibrils of a bundle of nerves.

**Endoparasite** (*en-do-par'-as-it*) [*ἔνδον*, within; *παράσιτος*, parasite]. An entozoan or internal parasite; one living within its host.

**Endoparasitic** (*en-do-par-as-it-ik*) [*ἔνδον*, within; *παράσιτος*, a parasite]. Of the nature of an endoparasite.

**Endopatagium** (*en-do-pat'-a-um*) [*ἔνδοι*, within; *πατάγιον*, the border of a woman's gown]. In biology, that part of the wing membrane of a bat lying between the body, the humerus, the lower extremity, and a hypothetic line drawn downward from the elbow and intersecting the free margin of the membrane. (Allen.)

**Endopathic** (*en-do-pat'-ik*) [*ἔνδον*, within; *πάθος*, disease]. Pertaining to the origin of disease from conditions or causes not derived from without. See *Exopathic*.

**Endopericarditis** (*en-do-per-ik-ar-di'-tis*) [*ἔνδοι*, within; *περί*, around; *καρδία*, the heart; *ιτις*, inflammation]. Inflammation of both endocardium and pericardium.

**Endoperimyocarditis** (*en-do-per-e-mi-o-ka-r-di'-tis*) [*ἔνδοι*, within; *περί*, around; *μύς*, muscle; *καρδία*, heart; *ιτις*, inflammation]. Inflammation of endocardium, pericardium, and myocardium.

**Endoperineuritis** (*en-do-per-e-nū-rī'-tis*) [*ἔνδοι*, within; *περί*, around; *νῆρον*, a nerve; *ιτις*, inflammation]. Inflammation of both endoneurium and perineurium.

**Endophlebitis** (*en-do-fle-bī'-tis*) [*ἔνδοι*, within; *φλέψ*, vein; *ιτις*, inflammation]. Inflammation of the inner coat of a vein or veins.

**Endophleum** (*en-to-fle'-um*) [*ἔνδοι*, within; *φλόος*, bark]. In biology, the liber, or inner bark; bast.

**Endophragm** (*en-to-fram*) [*ἔνδοι*, within; *φράγμα*, a partition]. In biology, a partition formed by the chitinous plates projecting inward from the lateral wall of the somites of a crustacean.

**Endophyllous** (*en-do-fīl'-us*) [*ἔνδοι*, within; *φύλλον*, leaf]. In biology, enclosed within a sheath, as the young leaves of monocotyledons.

**Endophyte** (*en-to-fīt*) [*ἔνδοι*, within; *φύτον*, a plant]. Same as *Entophyte*.

**Endophytous** (*en-do-fīt'-it-us*) [*ἔνδοι*, within; *φύτον*, a plant]. In biology, applied to the larvæ of certain insects that bore into the stems and roots of plants.

**Endoplasm** (*en-do-plazm*) [*ἔνδοι*, within; *πλάσμα*, a thing formed]. In biology, the inner granular protoplasm of a protozoan or of a histologic cell.

**Endoplast** (*en-to-plast*) [*ἔνδοι*, within; *πλάστος*, formed]. In biology, the nuclear body of a protozoan; the homologue of the nucleus of a histologic cell. (Huxley.)

**Endoplastule** (*en-do-plast'-ul*) [*ἔνδοι*, within; *πλάστος*, formed]. In biology, a small oval or rounded body, often found attached to the endoplast of a protozoan; the homologue of the nucleolus of a histologic cell. Cf. *Entoplast*.

**Endopleura** (*en-to-plē'-rā*) [*ἔνδοι*, within; *πλευρά*, a rib; *πλ.*, *Endopleura*]. In biology, the delicate seed coat; it is also called tegmen.

**Endopleurite** (*en-to-plē'-rit*) [*ἔνδοι*, within; *πλευρά*, a rib]. In biology, one of the lateral apodermal partitions arising from the interepimeral membrane connecting every pair of somites in certain crustaceans.

**Endopodite** (*en-os'-tī*) [*ἔνδοι*, within; *ποῖς*, foot]. In biology, the inner of the two main divisions of the crustacean limb, when fully developed it consists of seven joints, becoming in the thoracic region an ambulatory limb.

**Endoptile** (*en-toptīl*) [*ἔνδοι*, within; *πτίλον*, feather, down, leaf]. Same as *Monocotyledonum*.

**Endorhizal** (*en-do-rī'-zal*) [*ἔνδοι*, within; *ρίζα*, root]. In biology, applied to monocotyledonous embryos having the radicle enclosed within a sheath.

**Endosalpingitis** (*en-do-sal-pin-jī'-tis*) [*ἔνδοι*, within; *σαλπιγξ*, trumpet, tube; *ιτις*, inflammation]. Inflammation of the lining membrane of a Fallopian tube.

**Endosare** (*en'-do-sark*) [*ἔνδοι*, within; *σάρξ*, flesh]. In biology, the inner protoplasm of a protozoan; also applied by Huxley to a tissue derived from the endocyst (the inner layer of the common dermal system of a colony of Polyzoa), and composed, for the most part, of fusiform cells, constituting the connection between the polypides.

**Endoscope** (*en'-do-skōp*) [*ἔνδοι*, within; *σκοπεῖν*, to observe]. An instrument for the examination of a body-cavity through its natural outlet.

**Endoscopy** (*en-dos'-ko-pe*) [*ἔνδοι*, within; *σκοπεῖν*, to observe]. The practice or process of using the endoscope. The examination of cavities or organs within the body by means of an endoscope.

**Endosiphon** (*en-do-sī'-fun*) [*ἔνδοι*, within; *σίφων*, a tube]. In biology, the inner siphon of a cephalopod.

**Endoskeleton** (*en-do-skel'-et-un*) [*ἔνδοι*, within; *σκελετόν*, a dry body]. In biology, as distinguished from exoskeleton, applied to the internal skeletal structures of any animal, whether they are bony, cartilaginous, chitinous, calcareous, or silicious, if covered by flesh and integument.

**Endosmometer** (*en-dos-mom'-et-er*) [*ἔνδοι*, within; *ὤσμος*, a thrusting; *μέτρον*, a measure]. An instrument for measuring endosmosis.

**Endosmose** (*en'-dos-mōs*). Same as *Endosmosis*.

**Endosmosis** (*en-dos-mō'-sis*) [*ἔνδοι*, within; *ὤσμος*, impulsion]. The passage of a liquid from without inward, through a porous septum or diaphragm; inward osmosis. See *Osmosis*. E., Electric, cataphoresis.

**Endosmotic** (*en-dos-mōt'-ik*) [*ἔνδοι*, within; *ὤσμος*, a thrusting]. Pertaining to endosmosis. E. Equivalent, the weight of distilled water that passes into the flask of the endosmometer in exchange for a known weight of the soluble substance. This, e. g., for salt is 4.3; for sugar 7.1.

**Endosome** (*en'-do-sōm*) [*ἔνδοι*, within; *σῶμα*, body]. In biology, the inner layer of the body of a sponge, developed from the endoderm and associated mesoderm.

**Endosperm** (*en'-do-sperm*) [*ἔνδοι*, within; *σπέρμα*, seed]. In biology, the albumin of a seed.

**Endospore** (*en'-do-spor*) [*ἔνδοι*, within; *σπόρος*, seed]. In biology, (1) a bacterium-spore formed by free cell-formation, as distinguished from an arthrospore; (2) the inner coat of a spore.

**Endosteal** (*end-os'-te-al*) [*ἔνδοι*, within; *ὀστέον*, a bone]. Relating to endosteum.

**Endosteitis** (*end-os-te-ī'-tis*) [*ἔνδοι*, within; *ὀστέον*, a bone; *ιτις*, inflammation]. Inflammation of the endosteum.

**Endosternite** (*en-do-ster'-nit*) [*ἔνδοι*, within; *στέρνον*, the breast-bone]. In biology, a sternal piece of the endothorax developed to support a series of muscles in various arthropods.

**Endosteum** (*end-os'-te-um*) [*ἔνδοι*, within; *ὀστέον*, bone]. The vascular membranous layer of connective tissue lining the medullary cavity of bones; the internal periosteum.

**Endostoma** (*en-dos'-to-mah*) [*ἔνδοι*, within; *στόμα*, the mouth; *πλ.*, *Endostomata*]. In biology, a structure found in certain crustaceans behind and giving support to the labrum.

**Endostoma** (*end-os-to'-mah*) [*ἔνδοι*, within; *ὀστέον*, bone; *πλ.*, *Endostomata*]. A bony tumor within a bone, or in a cavity surrounded by bone.

**Endostome** (*en'-do-stom*) [ἐνδόν, within; στόμα, the mouth]. In biology, the orifice of the inner coat of an ovule.

**Endostosis** (*end-os-to'-sis*) [ἐνδόν, within; ὀστέον, bone: *pl.*, *Endostoses*]. Ossification of a cartilage.

**Endostracum** (*en-dos'-trak-um*) [ἐνδόν, within; ὀστράκον, shell]. In biology, the inner layer of the exoskeleton of a crustacean.

**Endostyle** (*en'-do-stil*) [ἐνδόν, within; στῆλος, a column]. In biology, an organ for the secretion of mucus, forming the ventral edge of the branchial sac, and extending from the peripharyngeal bands anteriorly to the posterior end of the sac of Ascidiaceans; it is also called the *hypobranchial groove*.

**Endotheca** (*en-do-the'-kah*) [ἐνδόν, within; θήκη, a case: *pl.*, *Endothecae*]. In biology, the inner layer of the lining investment of the visceral chamber of a coral.

**Endothecium** (*en-do-the'-se-um*) [ἐνδόν, within; θήκη, a case]. In biology, the tapetum or inner lining of an anther-cell.

**Endothelial** (*en-do-the'-le-al*) [ἐνδόν, within; θηλή, nipple]. Pertaining to endothelium.

**Endothelioid** (*en-do-the'-le-oid*) [ἐνδόν, within; θηλή, a nipple; εἶδος, form]. Resembling endothelium.

**Endothelio-inoma** (*en-do-the'-le-o-in-o'-mah*) [ἐνδόν, within; θηλή, a nipple; ἴς, a fiber; ὄμα, a tumor: *pl.*, *Endothelio-inomata*]. A malignant inoma or fibroma of endothelial origin.

**Endothelioleiomyoma** (*en-do-the'-le-o-li-o-mi-o'-mah*) [ἐνδόν, within; θηλή, nipple; ἁλὺς, smooth; μῦς, muscle; ὄμα, tumor: *pl.*, *Endothelioleiomyomata*]. Endothelial and malignant leiomyoma; myosarcoma.

**Endothelioma** (*en-do-the'-le-o'-mah*) [ἐνδόν, within; θηλή, a nipple; ὄμα, a tumor: *pl.*, *Endotheliomata*]. A tumor of the endothelium, usually, if not always, a sarcoma or malignant growth.

**Endotheliomyxoma** (*en-do-the'-le-o-miks-o'-mah*) [ἐνδόν, within; θηλή, nipple; μύξα, mucus; ὄμα, a tumor: *pl.*, *Endotheliomyxomata*]. Endothelial and malignant myxoma.

**Endotheliorhabdomyoma** (*en-do-the'-le-o-rab-do-mi-o'-mah*) [ἐνδόν, within; θηλή, nipple; ῥάβδος, a rod; μῦς, muscle; ὄμα, a tumor: *pl.*, *Endotheliorhabdomyomata*]. Endothelial and malignant rhabdomyoma.

**Endothelium** (*en-do-the'-le-um*) [ἐνδόν, within; θηλή, nipple]. The internal lining membrane of serous, synovial, and other internal surfaces; the homologue of epithelium.

**Endothermic** (*en-do-ther'-mik*) [ἐνδόν, within; θερμῆ, heat]. Relating to the absorption of heat. **E. Substances**, or **Compounds**, those of which the formation is attended with an absorption of heat.

**Endothoracic** (*en-do-tho-ra'-sik*) [ἐνδόν, within; θώραξ, thorax]. Situated or occurring within the thorax.

**Endothorax** (*en-do-tho'-raks*) [ἐνδόν, within; θώραξ, a breastplate; the chest]. In biology, the interior framework, or apodermal system of the cephalothoracic region of a crustacean, furnishing processes for the support of the soft parts.

**Endyma** (*en'-dim-ah*) [ἐνδύμα, garment]. The endyma, or lining epithelial membrane of the ventricles of the brain, and of the cavity of the spinal cord.

**Endymal** (*en'-dim-al*) [ἐνδύμα, garment]. Relating to the endyma.

**Endysis** (*en'-dis-is*) [ἐνδύσις, a putting on]. In biology, the process of acquiring plumage by a bird.

**Enecation** (*en-ek-a'-shun*) [*e*, out; *necare*, to kill]. Destruction of life; complete exhaustion.

**Enechema** (*en-ek-e'-mah*) [ἐν, in; ἤχημα, sound, ringing]. Tinnitus aurium.

**Enecia** (*e-ne'-she-ah*) [ἐνέκης, continuous]. A continuous fever.

**Enema** (*en'-em-ah*) [ἐνema; ἐν, in; ἔναι, to send: *pl.*, *Enemata*]. A rectal injection for therapeutic or nutritive purposes.

**Enepidermatic**, or **Enepidermic** (*en-ep-e-der-mat'-ik*, or *der'-mik*) [ἐν, in; ἐπίδερμις, the epidermis]. Pertaining to the treatment of disease by applications to the skin.

**Energy** (*en'-er-ge*) [ἐνέργεια; ἐν, in; ἔργον, work]. The power or force displayed by an organism. The capacity for doing work. **E., Conservation of**, the law that the various forms of energy can be transformed one into the other without loss. **E., Kinetic**, the power of a body in motion. **E., Potential**, the possible power of a body at rest. Physiologically, its measure is the amount of heat that may be obtained by complete combustion of the chemic compounds representing the potential energy.

**Enervate** (*e-ner'-vat*) [*enervare*, to weaken]. To weaken.

**Enervation** (*e-ner-va'-shun*) [*enervatio*, weakness].  
1. Weakness; lassitude; languor from lack of nerve-stimulus; neurasthenia; the reduction of the strength.  
2. The removal of a section of a nerve.

**Enervose** (*e-ner'-vos*) [*enervus*, without nerves]. In biology, applied to leaves destitute of nerves or veins.

**Enuresis** (*en-u-re'-sis*). See *Enuresis*.

**Engagement-stage of Labor**. See *Descent-stage*.

**Engastrius** (*en-gas'-tre-us*) [ἐν, in; γαστήρ, belly]. A monstrosity in which one fetus is included within the peritoneal cavity of another.

**Engelmann's Middle Disc**. A light disc, separating two darker discs of a muscle-case. It is also called *Hensen's disc*.

**Engensis** (*en-jen'-es-is*) [ἐν, in; γενέσθαι, to be produced]. In biology, the fourth of Broca's four degrees of fecundity in the union of two species. Cf. *Agensis*, *Dysgenesis*, *Paragensis*.

**Engine** (*en'-jin*) [ME., *engin*, a mechanical contrivance]. An apparatus for producing some mechanical effect. **E., Dental**, a foot-power machine, embracing the following devices and combinations: The use of a flexible wire shaft, with a flexible sheath over it. See *Dental Engine*. **E., Surgical**, an electric or foot-power machine, used with a flexible wire shaft. It is employed in surgery, in drilling, boring, and smoothing bone, etc.

**Engle System**. See *Cremator*.

**English** (*ing'-glish*) [ME., *English*]. Belonging or pertaining to England. **E. Cholera**. See *Cholera*.

**E. Disease**. Synonym of *Rhachitis*. **E. Position**. See *Postures*, *Table of*. **E.-red**. See *Colothar* and *Venetian-red*. **E. Sweating Fever**. See *Anglicus sudor*. **E. Teeth**, artificial teeth with beautiful coloring, and soft translucency, rendering them well adapted for matching the natural teeth.

**Engomphosis** (*en-gom-fó'-sis*) [ἐν, in; γόμφος, nail]. Gomphosis, *q. v.*

**Engorged** (*en-gorj'd*) [Fr., *engorgement*, a choking up]. Congested. **E. Papilla**. See *Choked Disc*.

**Engorgement** (*en-gorj'-ment*) [Fr., *engorgement*, a choking up]. Over-distention of the vessels of a part, with stagnation of the circulation. Vascular congestion.

**Enlargement** (*en-larj'-ment*). See *Auxes*, *Auxesis*, *Hypertrophy*.

**Enlarger** (*en-larj'-jer*). See *Amplifier*.

**Enneagynous** (*en-e-aj'-in-us*) [ἐννέα, nine; γυνή, a woman]. In biology, applied to flowers having nine pistils.

**Enneander** (*en-e-an'-der*) [ἐννέα, nine; ἀνδρ, a man]. In biology, applied to a flower having nine stamens.

**Enneapetalous** (*en-ep'-tə-ləs*) [*ἑννα*, nine; *πτεῖλον*, a leaf]. In biology, applied to a flower having nine petals.

**Enneaspermous** (*en-ə-sper'-mə*) [*ἑννα*, nine; *σπέρμα*, seed]. In biology, applied to fruits having nine seeds.

**Enodal** (*en-ə-dəl*) [*ἐν*, priv; *νότα*, a knot]. In biology, without nodes or joints.

**Enoinomania** (*en-ə-nō-mā-ni-ah*) [*ἐν*, in; *οἶνος*, wine; *μανία*, madness]. Delirium tremens.

**Enomania** (*en-mā'-n-ah*) [*οἶνος*, wine; *μανία*, madness]. Excessive use of or desire for intoxicating liquors; insanity due to intoxication. Also, delirium tremens. See *Meth mania*.

**Enophthalmia** (*en-əff-thal'-m-ah*) [*ἐν*, in; *ὀφθαλμός*, eye]. Retraction of the eyeball in the orbit.

**Enophthalmos** (*en-əff-thal'-mos*) [*ἐν*, in; *ὀφθαλμός*, the eye]. Recession of the eyeball into the orbit.

**Enosomania** (*en-ə-sō-mā-ne-ah*) [*ἐνός*, trembling; *μανία*, madness]. Insanity marked by terror, the patient expecting for himself the most dreadful visitations.

**Enostosis** (*en-ə-stō'-sis*) [*ἐν*, in; *ὀστέον*, bone]. A tumor within the medullary canal of a bone, or a bony tumor originating in bone.

**En Piqué** (*en-sik'-er*) [Fr.]. See *Culture*.

**Ensate** (*en'-at*) [*ensis*, a sword]. In biology, sword-shaped; ensiform.

**Ensiform** (*en'-fōrm*) [*ensis*, a sword; *forma*, form]. Shaped like a sword. **E. Appendix**, the sword-shaped, cartilaginous process of the sternum; the xiphoid cartilage.

**Ensisternal** (*en-sis-ter'-nal*) [*ensis*, sword; *στέρον*, the breast-bone]. Pertaining to the ensisternum.

**Ensisternum** (*en-sis-ter'-num*) [*ensis*, sword; *στερον*, the breast bone]. The xiphisternum or ensiform cartilage.

**Ensomphalic** (*en-som-fal'-ik*) [*ἐν*, in; *σῶμα*, body; *ὀμφαλός*, navel]. Pertaining to an ensomphalus. See also *Teratim*.

**Ensomphalus** (*en-som-fal-us*) [*ἐν*, in; *σῶμα*, body; *ὀμφαλός*, navel]. A double monstrosity, with practically complete and functional organs, but united by some more or less superficial bond.

**Enstactum** (*en-stak'-tum*) [*ἐν*, in; *σταζειν*, to drop; *πλ.*, *Enstatu*]. A liquid collyrium.

**Enstrophe** (*en-stro'-fē*) [*ἐν*, in; *στροφειν*, to turn]. Inversion, as of the margin of an eyelid.

**Entad** (*en'-tad*) [*ἐντός*, within; *ad*, to]. From without inward; toward a center; the opposite of *Ectad*.

**Ental** (*en'-tal*) [*ἐντός*, within]. A surface, aspect, or structure farther from the periphery or nearer the center than that with which it is contrasted. Deep, internal, profound. Compare the opposite, *Ectal*: also *Penton* and *Durston*, *Table of*.

**Entasia, or Entasis** (*en-tal'-e-ah*, or *en'-tas-is*) [*ἐντασις*, a straining]. A generic term for spasmodic muscular action; tonic spasm.

**Entatic** (*en-tat'-ic*) [*ἐν-ατικός*, causing straining]. Causing spasm or strain; aphrodisiac.

**Entera** (*en'-ter-ah*) Plural of *Enteron*, *q. v.*

**Enteradenography** (*en-ter-ad-en-og'-ra-fi*) [*έντερον*, intestine; *αδής*, gland; *γραφειν*, to write]. A treatise on the intestinal glands.

**Enteradenology** (*en-ter-ad-en-ol'-o-jē*) [*έντερον*, intestine; *αδής*, gland; *λογία*, science]. The anatomy, physiology, and pathology of the intestinal glands.

**Enteragra** (*en-ter-ah'-grah*) [*έντερον*, intestine; *ἀγρᾶ*, seizure]. Constriction of the intestine.

**Enteralgia** (*en-ter-ah'-jē*) [*έντερον*, intestine; *ἀλγος*, pain]. Pain in the bowels. **E. inflammatoria**. Synonym of *Acute Intestinal Catarrh*.

**Enterectasis** (*en-ter-ek'-tas-is*) [*έντερον*, intestine; *ἐκτασις*, dilatation]. Dilatation of some part of the small intestine.

**Enterectomy** (*en-ter-ek'-to-me*) [*έντερον*, intestine; *ἐκτομή*, excision]. Excision of a part of the small intestine.

**Enterelcosis** (*en-ter-el-ko'-sis*) [*έντερον*, intestine; *ἐλκωσις*, ulceration]. Ulceration of the bowel.

**Enteroplocele** (*en-ter-ep-ih'-lo-sel*) [*έντερον*, intestine; *ἐπιπλοή*, caul; *κήλη*, hernia]. Hernia in which both bowel and omentum are involved.

**Enteroplocephalocoele** (*en-ter-ep-ih-lom-fal'-o-sel*) [*έντερον*, bowel; *ἐπιπλοή*, caul; *ουφαλός*, navel; *κήλη*, hernia]. Umbilical hernia, with protrusion of the omentum.

**Enteric** (*en-ter'-ik*) [*έντερικός*; *έντερον*, bowel]. Pertaining to the intestines. **E. Fever**, typhoid fever. To demonstrate bacilli of enteric fever see *Guffky's Method* and *Woodhead's Method*, under *Stains*, *Table of*.

**Enterischiocele** (*en-ter-is'-ke-o-sel*) [*έντερον*, intestine; *ischion*, ischium; *κήλη*, hernia]. Intestinal hernia through the great sciatic notch.

**Enteritic** (*en-ter-it'-ik*) [*έντερον*, bowel; *ιτις*, inflammation]. Relating to enteritis.

**Enteritis** (*en-ter-i'-tis*) [*έντερον*, bowel; *ιτις*, inflammation]. Inflammation of the small intestine. **E., Chronic Exudative**. Synonym of *E., Pseudo-membranous*. **E., Membranous**. Synonym of *E., Pseudo-membranous*. **E., Pellicular**. Synonym of *E., Pseudo-membranous*. **E., Pseudo-membranous**, a non-febrile affection of the bowel, consisting in a peculiar, and usually persistent, morbid condition of the intestinal mucous membrane, marked by the periodic formation of viscous, shreddy, or tubular exudates composed chiefly of mucin, on the discharge of which temporary amelioration of the accompanying acute digestive and nervous symptoms occurs. The disease appears mainly in middle life and usually in females.

**Entero-** (*en'-ter-o-*) [*έντερον*, bowel]. A prefix denoting relation to the intestines.

**Entero-anastomosis** (*en'-ter-o-an-as-to-mo'-sis*) [*έντερον*, bowel; *ἀναστομειν*, to bring to a mouth]. The surgical creation of an anastomosis between two parts of the intestine; or the union of two parts of the intestine after the excision of a segment.

**Enterobrosis** (*en-ter-o-bro'-sis*) [*έντερον*, bowel; *βρωσις*, an eating]. Perforation or ulceration of the intestine.

**Enterocoele** (*en'-ter-o-sel*) [*έντερον*, bowel; *κήλη*, tumor]. A hernia containing a loop of intestine. **E., Rectal**, having a covering of the rectal wall. **E., Vaginal**, having a covering of the vaginal wall.

**Enterocentesis** (*en-ter-o-sen-te'-sis*) [*έντερον*, intestine; *κέντησις*, puncture]. Surgical puncture of the intestine.

**Enterochlorophyl** (*en'-ter-o-klo'-ro-fil*) [*έντερον*, bowel; *χλωρός*, yellowish-green; *φύλλον*, a leaf]. MacMunn's term for a chlorophyl found by him in the so-called livers of many invertebrates.

**Enterocholecystostomy** (*en-ter-o-ko-le-sis-to-s'-to-me*) [*έντερον*, bowel; *χολή*, bile; *κίστις*, cyst; *στόμα*, mouth]. Same as *Cholecystenterostomy*.

**Entero-cholecystotomy** (*en-ter-o-ko-le-sis-to'-to-me*). Same as *Cholecystenterotomy*.

**Enterocleisis** (*en-ter-o-kli'-is*) [*έντερον*, bowel; *κλείσις*, a closing]. Occlusion of the bowel.

**Enteroclysis** (*en-ter-ok'-lis-is*) [*έντερον*, bowel; *κλύσις*, a drenching]. Injection of nutrient-material into the intestine in cholera, collapse, etc.; more generally, any rectal enema or clyster.

**Enteroclyster** (*en-ter-o-kli'-ter*) [*έντερον*, bowel; *κλύσμα*, a clyster]. A rectal clyster or enema.

**Enterocolitis** (*en-ter-o-ko-lit'-tis*) [*ἐντερον*, bowel; *κόλον*, the colon; *ιτις*, inflammation]. Inflammation of the small intestine and of the colon.

**Enterocystocele** (*en-ter-o-sis'-to-sel*) [*ἐντερον*, intestine; *κύστις*, bladder; *κήλη*, tumor]. Hernia involving the urinary bladder and the intestine.

**Enterodynia** (*en-ter-o-din'-e-ah*) [*ἐντερον*, bowel; *ὄδυνη*, pain]. Pain referred to the intestines.

**Entero-epiplocele** (*en'-ter-o-e-pip'-lo-sel*). See *Enteropiplocele*.

**Enterogastritis** (*en-ter-o-gas-tri'-tis*) [*ἐντερον*, intestine; *γαστήρ*, belly; *ιτις*, inflammation]. Inflammation of the stomach and intestine.

**Enterogastrocele** (*en-ter-o-gas'-tro-sel*) [*ἐντερον*, bowel; *γαστήρ*, belly; *κήλη*, tumor]. A hernia containing the gastric and intestinal walls; abdominal hernia.

**Enterography** (*en-ter-og'-ra-fe*) [*ἐντερον*, intestine; *γράφειν*, to write]. A treatise on or a description of the intestines.

**Enterohematin** (*en-ter-o-he'-mat-in*) [*ἐντερον*, intestine; *αἷματινος*, of blood]. In biology, a coloring-matter found in many invertebrates (e.g., the livers of molluscs), the mother-substance of histohematin. It is the same as the *Hemochromogen* and *Helicorubin* of Krukenberg.

**Enterohemorrhage** (*en-ter-o-hem'-or-aj*) [*ἐντερον*, intestine; *αἷμα*, blood; *ῥηγνύναι*, to burst forth]. Intestinal hemorrhage.

**Enterohydrocele** (*en-ter-o-hi'-dro-sel*) [*ἐντερον*, intestine; *ὕδωρ*, water; *κήλη*, hernia]. Hydrocele complicated with intestinal hernia.

**Enter-ischioccele** (*en-ter-o-is'-ke-o-sel*) [*ἐντερον*, intestine; *ἰσχίον*, ischium; *κήλη*, tumor]. Same as *Enterischioccele*.

**Enterolith** (*en'-ter-o-lith*) [*ἐντερον*, bowel; *λίθος*, a stone]. A concretion formed in the digestive-tube.

**Enterolithiasis** (*en-ter-o-lith'-i'-as-is*) [*ἐντερον*, bowel; *λίθιασις*, the formation of calculi]. The formation of intestinal calculi.

**Enterology** (*en-ter-ol'-o-je*) [*ἐντερον*, bowel; *λόγος*, science]. The science of the intestinal viscera; the anatomy, physiology, pathology, and hygiene of the intestines.

**Enteromalacia** (*en-ter-o-mal-a'-se-ah*) [*ἐντερον*, bowel; *μαλακία*, softness]. Pathologic softening of the bowel-walls.

**Enteromenia** (*en-ter-o-me'-ne-ah*) [*ἐντερον*, bowel; *μήν*, month]. Vicarious menstruation by the bowel.

**Enteromerocele** (*en-ter-o-me'-ro-sel*) [*ἐντερον*, bowel; *μηρόε*, thigh; *κήλη*, hernia]. Femoral hernia involving the intestine.

**Enteromesenteric** (*en-ter-o-mes-en-ter'-ik*) [*ἐντερον*, bowel; *μέσος*, middle; *ἐντερον*, bowel]. Pertaining to the intestine and the mesentery.

**Enteron** (*en'-ter-on*) [*ἐντερον*, intestine; *pl.*, *Entera*]. 1. The intestinal or alimentary canal, exclusive of those parts that are of ectodermal origin. 2. The intestine.

**Enteroncus** (*en-ter-on'-kus*) [*ἐντερον*, bowel; *ὄγκος*, mass]. A tumor of the bowel.

**Enteroneuria** (*en-ter-o-nu'-re-ah*) [*ἐντερον*, intestine; *νεῦρον*, nerve]. An intestinal disease dependent upon some neurosis.

**Enteropathy** (*en-ter-op'-ath-e*) [*ἐντερον*, bowel; *πάθος*, disease]. Any disease of the intestines.

**Enteropistole** (*en-ter-o-per-is'-to-le*) [*ἐντερον*, bowel; *περιστολή*, a winding about]. 1. Peristaltic motion of the bowels. 2. Any constrictive obstruction of the intestinal-tube.

**Entero-peritonitis** (*en-ter-o-per-it-on-i'-tis*) [*ἐντερον*, bowel; *περιτόναιον*, the peritoneum; *ιτις*, inflammation]. Combined inflammation of the intestines and

adjacent peritoneum; inflammation of the peritoneal coat of the intestine.

**Enteropexia** (*en-ter-o-peks'-e-ah*) [*ἐντερον*, bowel; *πῆξις*, fixation]. Fixation of a portion of the intestine to the abdominal wall, for the relief of enterop-tosis, splanchnoptosis, etc.

**Enterophlogia** (*en-ter-o-flo'-je-ah*) [*ἐντερον*, bowel; *φλόγαια*, a burning]. Synonym of *Acute Intestinal Catarrh*.

**Enterophlogosis** (*en-ter-o-flo-go'-sis*) [*ἐντερον*, bowel; *φλόγωσις*, a burning]. Synonym of *Acute Intestinal Catarrh*.

**Enterophthisis** (*en-ter-off'-this-is*) [*ἐντερον*, bowel; *φθίσις*, wasting]. Intestinal tuberculosis.

**Enteroplastic** (*en-ter-o-plas'-tik*) [*ἐντερον*, bowel; *πλαστικός*, formed]. Pertaining to enteroplasty.

**Enteroplasty** (*en'-ter-o-plas-te*) [*ἐντερον*, bowel; *πλάσσειν*, to form]. Any plastic operation upon the intestine to repair injuries of its walls.

**Enteroplegia** (*en-ter-o-ple'-je-ah*) [*ἐντερον*, bowel; *πληγή*, a stroke]. Paralysis of the bowels.

**Enteroplex** (*en'-ter-o-pleks*) [*ἐντερον*, bowel; *πλέξιν*, to interlace]. See *Enteroplexia*.

**Enteroplexia**, or **Enteroplexy** (*en-ter-o-pleks'-e-ah*, or *en'-ter-o-pleks-e*) [*ἐντερον*, intestine; *πλέξιν*, to inter-lace]. A method of treatment of wounds of the intestine in which union of the bowel is obtained by different means, but particularly by an apparatus, the *enteroplex*, without the use of needle and thread. The enteroplex is formed of two aluminum rings so constructed that they will fit the one into the other. These are inserted into the cut ends of the bowel, and then the two are pressed together, the intestinal walls being brought into apposition.

**Enteroproctia** (*en-ter-o-prok'-she-ah*) [*ἐντερον*, intestine; *προκτίς*, anus]. The existence of an artificial anus, or of an opening into the bowel for fecal discharge.

**Enteroptosis** (*en-ter-op-to'-sis*) [*ἐντερον*, bowel; *πτῶσις*, a fall]. Glénard's term for a combination of neurasthenia with gastro-intestinal disturbance and prolapse of the abdominal organs, particularly the transverse colon, with looseness of the mesenteric and peritoneal attachments. It is also called *Splanchnoptosis*.

**Enterorrhagia** (*en-ter-or-a'-je-ah*) [*ἐντερον*, bowel; *ῥηγνύναι*, to burst forth]. Intestinal hemorrhage. Excessive discharge of any kind from the intestine.

**Enterorrhaphy** (*en-ter-or'-a-fe*) [*ἐντερον*, bowel; *ῥαφή*, suture]. Suture, or stitching, of the intestine.

**Enterorrhea** (*en-ter-or-e'-ah*) [*ἐντερον*, intestine; *ῥοία*, a flow]. Diarrhea.

**Enterorrhesis** (*en-ter-or-eks'-is*) [*ἐντερον*, bowel; *ῥήξις*, rupture]. Rupture of the bowel.

**Enterosarcocele** (*en-ter-o-sar'-ko-sel*) [*ἐντερον*, intestine; *σάρξ*, flesh; *κήλη*, a hernia]. Intestinal hernia with sarcocele.

**Enterosepsis** (*en-ter-o-sep'-sis*) [*ἐντερον*, bowel; *σῆψις*, putrefaction]. Intestinal toxemia or sep-sis. A condition of unusual activity in the contents of the intestinal canal, by which the ptomaines of putrefaction are produced in such manner, or in such quantity, that they are absorbed and give rise to a state of intoxication.

**Enterosis** (*en-ter-o'-sis*) [*ἐντερον*, bowel; *νόσος*, disease; *pl.*, *Enteroses*]. Any intestinal disease.

**Enterostenosis** (*en-ter-o-sie-no'-sis*) [*ἐντερον*, bowel; *στένωσις*, contraction]. Stricture or narrowing of the intestinal canal.

**Enterostomy** (*en-ter-es'-to-me*) [*ἐντερον*, bowel; *στόμα*, mouth]. Incision and suture of the small intestine to the abdominal wall for introduction of food by this artificial mouth, in case of impossibility of food-entrance by the normal route.

**Enteroteratoma** (*en-ter-o-ter-at-o'-mah*) [*ἐντεροί, bowel; τερατ-, monster; ὄμα, tumor*]. A solid tumor of the umbilicus in new-born infants, composed of the remains of the omphalic duct.

**Enterotome** (*en'-ter-i-to-m*) [*ἐντερον, bowel; τομος, cutting*]. The name of various instruments used in cutting-operations upon the intestine.

**Enterotomy** (*en-ter-ot'-o-mē*) [*ἐντερον, bowel; τέμνειν, to cut*]. Incision, dissection, or anatomy of the intestine.

**Enterozoön** (*en-ter-o-zo'-on*) [*ἐντερον, intestine; ζῶον, an animal; πλ., Enterocæta*]. A parasite of the intestine.

**Entheomania** (*n-the-o-ma'-nē-ah*) [*ἐνθεός, inspired; μανία, madness*]. Mania in which the patient believes himself to be inspired; religious insanity.

**Ethnetic** (*en-eth'-ik*) [*ἐνθεῖναι, to put in*]. Introduced; coming from without; applied especially to syphilitic and other specific contagious diseases. The list of ethnetic diseases given by Dr. Hartschorn, in Pepper's "System of Medicine," is as follows: 1. Only produced by contact or inoculation—primary syphilis, gonorrhea, vaccinia, hydrophobia. 2. Contagious also by atmospheric transmission through short distances—variola, varioloid, varicella, measles, diphtheria, scarlatina, rōtheln, mumps, whooping cough, typhus, relapsing fever. 3. Endemic, occasionally epidemic—malarial fever, dengue, yellow fever. 4. The zymotic or ethnetic diseases—influenza, cerebrospinal fever, erysipelas, puerperal fever, tropical dysentery, typhoid fever, cholera, plague.

**Entiris** (*en-ti'-ris*) [*ἐντός, within; ἵρις, rainbow*]. The uvea of the iris, forming its inner and pigmentary layer.

**Entoblast** (*en'-to-blast*) [*ἐντός, within; βλαστός, a bud, germ*]. In biology, the nucleolus or germinal spot of a histologic cell. Cf. *Endoplastule*.

**Entobliquus** (*en-to-bli'-kwus*) [*ἐντός, within; obliquus, oblique*]. The obliquus internus muscle of the abdomen. See *Muscles, Table of*.

**Entobranchiate** (*en-to-brang'-ke-at*) [*ἐντός, within; βράχια, gills*]. In biology, having internal or concealed branchia.

**Entocarotid** (*en-to-kar-ot'-id*) [*ἐντός, within; κύρος, support*]. The internal carotid artery. See *Arteries, Table of*.

**Entocele** (*en'-to-sel*) [*ἐντός, within; κήλη, hernia*]. Internal hernia (as through the diaphragm); ectopia; morbid displacement of an internal organ.

**Entoceliac, or Entocelian** (*en-to-sel'-le-ak, or en-to-sel'-le-an*) [*ἐντός, within; κοίλια, hollow*]. Situated within a brain-cavity or ventricle.

**Entochoroidea, or Entochorioidea** (*en-to-kō-roi'-de-ah, or k-roi'-dē-ah*) [*ἐντός, within; χοριοειδής, like a membrane*]. The inner lining of the choroid membrane of the eye, made up mainly of capillaries.

**Entocinerea** (*n-to-an'-el-re-ah*) [*ἐντός, within; cinereus, ashy*]. Cineritious or gray brain-substance surrounding the cavities of the brain and spinal cord.

**Entocondylar** (*en-to-kōn'-dī-lar*) [*ἐντός, within; κωνόζος, a condyle*]. Pertaining to an inner condyle.

**Entocondyle** (*en-to-kōn'-dī-l*) [*ἐντός, within; κωνόζος, a condyle*]. An inner condyle, as of the humerus or the femur.

**Entoconid** (*en-to-kō'-nī-l*) [*ἐντός, within; κώνος, cone*]. The inner and posterior cusp of a lower molar tooth.

**Entocornea** (*en-to-kōr'-nē-ah*) [*ἐντός, within; cornuus, horny*]. That part of Descemet's membrane that lines and adheres to the inner surface of the cornea.

**Entocuneiform** (*en-to-kū'-nē-if-orm*) [*ἐντός, within; cuneus, a wedge; forma, form*]. The inner cuneiform bone of the foot.

**Entocyte** (*en'-to-sit*) [*ἐντός, within; κύτος, cell*]. The contents of a cell, including nucleus, nucleolus, granulations, etc.

**Entoderm** (*en'-to-derm*) [*ἐντός, within; δέρμα, skin*]. Same as *Endoderm*.

**Entoectad** (*en-to-ek'-tad*) [*ἐντός, within; ἐκτός, external; ad, to*]. From within outward.

**Entogastric** (*en-to-gas'-trik*) [*ἐντός, within; γαστήρ, stomach*]. Relating to the interior of the stomach.

**Entoglossal** (*en-to-glos'-al*) [*ἐντός, within; γλῶσσα, tongue*]. Situated within the tongue.

**Entogluteus** (*en-to-glu-te'-us*) [*ἐντός, within; γλῶττός, the rump*]. The gluteus minimus muscle. See *Muscles, Table of*.

**Entojugular Vein** (*en-to-jū'-gu-lar*) [*ἐντός, within; jugular, a little yoke*]. The internal jugular vein. See *Vein*.

**Entomere** (*en'-to-mēr*) [*ἐντός, within; μέρος, a part*]. In embryology, one of the cells forming the center of the mass of blastomeres in the developing mammalian ovum, the outer blastomeres being called *ectomeres*.

**Entomion** (*en-to'-me-on*) [*ἐντομή, notch*]. See *Cranio-metric Points*.

**Entomogenous** (*en-to-moj'-en-us*) [*ἐντομον, an insect; γένεσις, produced*]. In biology, applied to fungi growing upon or within insects. Cf. *Entomophytous*.

**Entomography** (*en-to-mog'-ra-fe*) [*ἐντομον, an insect; γράφειν, to write*]. A written treatise on insects.

**Entomology** (*en-to-mol'-o-jē*) [*ἐντομον, insect; λέγειν, to speak*]. That department of zoology devoted to the description of insects.

**Entomophilous** (*en-to-moff'-il-us*) [*ἐντομον, insect; οἰλέειν, to love*]. Insect-loving or insect-attracting. E. Flowers, flowers attracting insects by their secretions and thus securing cross fertilization through the insects that carry the pollen to other flowers.

**Entomophytous** (*en-to-moff'-it-us*) [*ἐντομον, insect; φυτός, grown*]. In biology, applied to fungi that grow upon or within the bodies of insects. Cf. *Entomogenous*.

**Entomosis** (*en-to-mo'-sis*) [*ἐντομον, insect; νόσος, disease*]. Any disease due to parasitic insects.

**Entomotaxy** (*en-to-mo-taks'-e*) [*ἐντομον, insect; τάξις, arrangement*]. The systematic preparation and arrangement of insects.

**Entotomy** (*en-to-mol'-o-mē*) [*ἐντομον, insect; τομή, a cutting*]. Insect anatomy.

**Entomozoaia** (*en-to-mo-zo-a'-re-ah*) [*ἐντομον, an insect; ζῶον, a living being*]. A type of bilateral animals nearly equivalent to the *Arthropoda*.

**Entonia** (*en-to'-ne-ah*) [*ἐντονία, tension*]. Rigidity or tension of a voluntary muscle; tonic spasm.

**Entonic** (*en-ton'-ik*) [*ἐντονία, tension*]. Characterized by entonia, or by violent tonic spasm.

**Entoparasite** (*en-to-par'-as-it*) [*ἐντός, within; παράσιτος, parasite*]. An internal parasite; an entozoan or entophyte.

**Entopectoralis** (*en-to-pek-tor-a'-lis*) [*ἐντός, within; pectoralis, of the breast*]. The pectoralis minor muscle. See *Muscles, Table of*.

**Entoperipheral** (*en-to-per-iph'-er-al*) [*ἐντός, within; περιφέρειν, to carry around*]. Originating or situated within, and not upon the periphery.

**Entophthalmia** (*en-toff-thal'-me-ah*) [*ἐντός, within; ὁφθαλμία, a disease of the eyes*]. Inflammation of the internal parts of the eyeball.

**Entophyte** (*en'-to-fit*) [*ἐντός, within; φυτόν, a plant*]. An internal parasite of vegetable nature; as a schizomycete or bacterium.

**Entoplastic** (*en-to-plas'-tik*) [*ἐντός, within; πλάσσειν, to form*]. Same as *Endoplastic*.

**Entoplastron** (*en-to-plas'-tron*) [ἐντός, within; *plastron*, a breastplate: *pl.*, *Entoplastra*]. In biology, the internal clavicular scute, or anterior median piece of the plastron of a chelonian.

**Entoptic** (*en-top'-tik*) [ἐντός, within; ὀπτικός, pertaining to vision]. Pertaining to the internal parts of the eye. **E. Phenomena**, visual phenomena caused by peculiarities or imperfections of the eye itself, such as *muscæ volitantes*.

**Entoptoscopic** (*en-top-to-skop'-ik*) [ἐντός, within; ὥψ, eye; σκοπεῖν, to inspect]. Relating to entoptoscopy.

**Entoptoscopy** (*en-top-to-skop'-e*) [ἐντοσ, within; ὥψ, eye; σκοπεῖν, to inspect]. The investigation or observational study of the interior of the eye, or of the shadows within the eye.

**Entorectomy** (*en-tor-ek'-to-me*) [ἐντερον, bowel; ἐκτομή, excision]. Resection of a diseased portion of the bowel.

**Entoretina** (*en-to-ret'-in-ah*) [ἐντός, within; *retina*, retina]. The innermost layer of the retina, itself composed of five layers, and an inner limiting membrane.

**Entorrhagia** (*en-tor-ah'-je-ah*) [ἐντός, within; ῥήγναι, to burst forth]. Internal hemorrhage.

**Entosternite** (*en-to-ster'-nit*). See *Endosternite*.

**Entosthoblast** (*en-tos'-tho-blast*) [ἐνθωβλη, from within; βλαστός, germ]. The supposed nucleus of a nucleolus.

**Entostosis, or Entosteosis** (*en-tos-to'-sis, -tos-te-o'-sis*) [ἐντός, within; ὀστέον, bone]. An osseous growth within a medullary cavity.

**Entotic** (*en-tot'-ik*) [ἐντός, within; οὖς, ear]. Pertaining to the internal ear. **E. Phenomena**, sounds caused by abnormalities of the auditory mechanism itself.

**Entotriceps** (*en-tot'-re-seps*) [ἐντός, within; τρεῖς, three; κεφαλή, head]. The internal head or division of the triceps muscle of the arm.

**Entozoal** (*en-to-zo'-al*) [ἐντός, within; ζῷον, an animal]. Caused by or dependent upon entozoa.

**Entozoön** (*en-to-zo'-on*) [ἐντός, within; ζῷον, an animal: *pl.*, *Entozoa*]. An animal parasite living within another animal.

**Entrails** (*en'-trels*) [M.E., *entraile*]. The bowels and abdominal viscera.

**Entropium** (*en-tro'-pe-um*). See *Entropion*.

ENTROPION.

**Entropion** (*en-tro'-pe-on*) [ἐν, in; τρέπειν, to turn]. Inversion of the eyelid, so that the lashes rub against the globe of the eye, producing inflammation, pannus, etc. It may be cicatricial, organic, or spastic in origin. **E., Superciliary**, the incurvation of the hairs of the eyebrow into the palpebral fissure and against the conjunctiva, causing the same symptoms as are present in ordinary entropion.

**Enucleation** (*e-nu-kle-a'-shun*) [*e*, out of; *nucleus*, a kernel]. The operation of exsecting or shelling-out from its seat or capsule a tumor, etc. **E. of Eye**, excision of the eyeball from the orbit.

**Enucleator** (*e-nu'-kle-a-tor*) [*e*, out of; *nucleus*, a kernel]. An instrument used in performing enucleation.

**Enuresis** (*en-u-re'-sis*) [ἐνυρίειν, to be incontinent of urine]. Incontinence of urine. A frequent affection of early childhood, due to a variety of pathologic conditions, including the presence of ascariides, phimosis, and vulvitis. **E. nocturna**, involuntary emptying of the bladder during sleep.

**Envelop** (*en'-vel-op*) [Fr., *enveloppe*]. An investing membrane, or layer.

**Environment** (*en-vi'-ron-ment*) [Fr. *environner*, to surround]. The totality of influences acting upon the organism from without. See *Evolution*, *Factors of*.

**Enzoötic** (*en-zo-o'-ik*) [ἐν, in, or among; ζῷον, animal]. Affecting beasts in a certain district; as an enzoötic disease.

**Enzoöty** (*en-zo'-o-te*) [ἐν, in, among; ζῷον, an animal]. An enzoötic disease.

**Enzyme** (*en'-zim*) [ἐν, in; ζύμη, leaven]. 1. Kühne's name for the soluble ferments. 2. Any ferment formed within the living organism. 3. Any chemic or hydrolytic ferment, as distinguished from organized ferments, such as yeast. Enzymes are most active between 30° and 35° C., and are destroyed by boiling.

**Enzymic** (*en-zi'-mik*) [ἐν, in; ζύμη, leaven]. The nature of the action of an enzyme.

**Enzymosis** (*en-zi-mo'-sis*) [ἐν, in; ζύμη, leaven]. The action of an enzyme.

**Enzymotic** (*en-zi-mo'-ik*) [ἐν, in; ζύμη, leaven]. Pertaining to enzymes.

**Eonosos, or Eonosus** (*e-on'-o-sos, or -sus*) [ἥως, morning; νόσος, illness]. See *Morning Sickness*.

**Eosin** (*e'-o-sin*) [ἥως, the dawn],  $C_{20}H_8Br_4O_5$ . Tetra-bromfluorescein; an important dye produced by the action of bromin on fluorescein suspended in glacial acetic acid. It occurs in red or yellowish-red crystals, and is used as a stain in histology. See *Fuchsin*. **E. colors**. See *Pigments*, *Conspectus of*.

**Eosinophile** (*e-o-sin'-o-fl*) [*eosin* from ἥως, dawn; φίλιν, to love]. In bacteriology and histology, applied to microbes or histologic elements showing a peculiar affinity for eosin-stain.

**Eosinophilous** (*e-o-sin-off'-il-us*) [ἥως, dawn; οὐίεν, to love]. Staining readily with eosin. Applied to certain granules in the lymphoid blood-cells that stain with acid anilin-dyes.

**Epactal** (*e-pak'-tal*) [ἐπακτός, brought in]. Inter-calated; supernumerary; Wormian. **E. Cartilages**. See *Cartilage*.

**Epanetus** (*e-pan'-et-us*) [ἐπάνετος, relaxing]. Remittent fever.

**Epanisognathous** (*ep-an-is-og'-na-thus*) [ἐπί, upon; ἄνισος, unequal; γνάθος, jaw]. In biology, having the upper teeth narrower than the lower ones.

**Epapophysis** (*ep-ap-off'-is-i*) [ἐπί, upon; ἀπόφυσις, apophysis]. A median process placed dorsally of the centrum of a vertebra.

**Eparterial** (*ep-ar-te'-re-al*) [ἐπί, upon; ἀρτηρία, artery]. Situated above an artery.

**Epaxial** (*ep-aks'-e-al*) [ἐπί, on; *axes*, axis]. Situated or extending over an axis.

**Epencephal** (*ep-en'-sef-al*). See *Epencephalon*.

**Epencephalic** (*ep-en-sef-al'-ik*) [ἐπί, on; ἐγκέφαλος, brain]. Pertaining to the epencephalon.

**Epencephalon** (*ep-en-sef'-al-on*) [ἐπί, on; ἐγκέφαλος, brain]. The after-brain or hind-brain; the cerebellum and pons taken together; or, as some define it, the cerebellum, pons, and oblongata taken together.

**Ependyma** (*e-pen'-dim-ah*) [ἐπέδνυμα, an upper garment]. The lining membrane of the cerebral ventricles and of the central canal of the spinal cord; endyma.

**Ependymal** (*e-pen'-dim-al*) [ἐπέδνυμα, an upper garment]. Pertaining to the ependyma.

**Ependymitis** (*ep-en-dim-i'-tis*) [*ἐπένδυσις*, an upper garment; *ιτις*, inflammation]. Inflammation of the ependyma.

**Ephebic** (*ep'-e-bik*) [*ἐφηβικός*, belonging to puberty]. Pertaining to youth, adolescence, or puberty.

**Ephebiology** (*ep'-e-bi-ol-og-ee*) [*ἐφηβικός*, youth; *λόγος*, science]. The science of youth, adolescence, and puberty.

**Ephedra** (*ep'-e-drah*) [*ἐπί*, upon; *ἔδρα*, a seat]. A genus of gnetaceous plants with four N. American, several S. American, and many other species. See *Asparagus*. **E. antisiphilitica**, and **E. trifurca**, of Texas, etc., are used in gonorrhea, urethritis, and leukorrhea, and as vulneraries. **E. andina**, of S. America, and **E. distachia** or **vulgaris**, **E. equisetina**, **E. flava**, **E. fragilis**, and **E. monostachya**, of the old world, have similar properties.

**Ephedrin** (*ep'-e-drin*) [*ἐπί*, upon; *ἔδρα*, a seat]. The active principle of *Ephedra vulgaris*, proposed as a mydriatic by Nagai. It is a cardiac depressant and harmless mydriatic. The dose of the hydrochlorate in collyria gr. ss in ℥ij distilled water. For instillation gutt. ii-ij. Unof.

**Ephelis** (*ep'-e-lis*) [*ἐφελίς*; *ἐπί*, on; *ἥλος*, wart; *pl.*, *Epheles*]. A freckle. See *Lentigo*.

**Ephemera** (*ep'-e-m'-er-ah*) [*ἐφήμερος*, daily]. The name given by old physicians to short and slight febrile attacks occurring in the lying-in period. These fevers were of frequent occurrence, and of slight significance. They indicated a small amount of septic infection. **E. maligna**. See *Anglicus sudor*.

**Ephemeral** (*ep'-e-m'-er-al*) [*ἐφήμερος*, living a day]. Temporary. Applied to fevers that pass away in a day.

**Ephesis** (*ep'-e-sis*) [*ἐφασίς*, a longing]. A longing; lust.

**Ephialtes** (*ep'-e-al'-tes*) [*ἐπιώτης*; *ἐπί*, upon; *ἅλλειν*, to leap]. See *Nich mare*.

**Ephidrosis** (*ep'-id-ro'-sis*) [*ἐπί*, upon; *ἰδρωσις*, sweating]. Perspiration. See *Hyperidrosis*. **E. cruenta**, bloody sweat. See *Hemidrosis*. **E. flava**, yellow sweat. **E. lactea**, white or milky sweat. **E. nigra**, black sweat. **E. tincta**. See *Chromidrosis*. **E. viridis**, greenish sweat.

**Ephippium** (*ep'-ip'-e-um*) [*ἐπιππιον*, saddle-cloth; *ἐπί*, on; *ἵππος*, horse; *pl.*, *Epheppia*]. 1. Same as *Sella turcica*. 2. In biology saddle-shaped capsules formed from the carapace of adult cladocera, and containing the winter (or ephippial) eggs.

**Epian** (*ep'-e-an*) [*ῥ.*, a raspberry]. The yaws; frambesia, *q. v.*

**Epiblast** (*ep'-e-blast*) [*ἐπί*, upon; *βλαστός*, a sprout]. The external or upper layer of the blastoderm, called, also, the *ectoderm* or *neuro-epidermal layer*, from which is developed the central nervous system and epidermal tissues, including the epithelium of the sense-organs.

**Epiblemma** (*ep'-e-bla-mah*) [*ἐπί*, upon; *βαλάνειν*, to throw; to throw over or to cloak]. In biology, the imperfectly formed epidermis in submerged plants and on the extremities of growing roots.

**Epibole** (*ep'-e-bol*). See *Epiboly*.

**Epiboly** (*ep'-e-bol*) [*ἐπί*, upon; *βάλλειν*, to throw]. In biology, a term introduced by Salenka to indicate the enclosure of the large yolk-mass by the overgrowth of cleavage cells. Cf. *Emboly*.

**Epibranchial** (*ep'-e-bran'-ch-al*) [*ἐπί*, upon; *βράγχια*, gills]. In biology, applied to various structures; as that portion of the carapace of a crustacean that forms part of the roof of the branchial chamber; the terminal horn of the hyoid bone of a bird, etc.

**Epibulbar** (*ep'-e-bul'-bar*) [*ἐπί*, upon; *βοῦλον*, bulbus, bulb]. Situated upon the globe of the eye; as an epibulbar tumor.

**Epicalyx** (*ep'-e-ka'-lyks*) [*ἐπί*, upon; *κάλυξ*, calyx; *pl.*, *Epicalyces*]. In biology, an involucre resembling an exterior or accessory calyx.

**Epicanthis** (*ep'-e-kan'-this*) [*ἐπικανθίς*; *pl.*, *Epicanthides*]. See *Epicanthus*.

**Epicanthus** (*ep'-e-kan'-thus*) [*ἐπί*, on; *κανθός*, angle of the eye]. A fold of skin passing from the nose to the eyebrow over the inner canthus of the eye.

**Epicardium** (*ep'-e-ka'-rd-e-um*) [*ἐπί*, upon; *καρδία*, heart]. The visceral layer of the pericardium.

**Epicarp** (*ep'-e-ka'-rp*) [*ἐπί*, upon; *καρπός*, fruit]. In biology, the outer skin of a fruit.

**Epicele**, **Epicæle** (*ep'-i-sel*) [*ἐπί*, upon; *κοιλία*, belly]. 1. In biology, applied to such a body-cavity as that of vertebrates or that represented by the atrium of an ascidium. 2. The cephalic portion of the fourth ventricle, constituting the cavity of the epencephalon.

**Epicentral** (*ep'-e-sen'-tral*) [*ἐπί*, upon; *κέντρον*, center]. In biology, adhering to a vertebral centrum, as some of the scleral spines in the herring.

**Epicerebral** (*ep'-e-ser'-e-bral*) [*ἐπί*, upon; *cerebrum*, the brain]. Situated over or on the cerebrum; as the epicerebral space between the brain and the pia.

**Epichilium** (*ep'-e-kil'-e-um*) [*ἐπί*, upon; *χείλος*, lip, brim; *pl.*, *Epichilia*]. In biology, applied to the upper portion of the lip of an orchid.

**Epichorion** (*ep'-e-ko'-re-on*) [*ἐπί*, upon; *χόριον*, the chorion]. 1. The decidua reflexa. 2. The epidermis.

**Epiclidium** (*ep'-e-klid'-e-um*) [*ἐπί*, upon; *κλειδιον*, clavicle; *pl.*, *Epiclidia*]. In biology, a separate ossification of the distal end of the clavicle in birds; according to Parker it represents the precoracoid of reptiles.

**Epiclinal** (*ep'-e-klid'-nal*) [*ἐπί*, upon; *κλινη*, a bed]. In biology, placed upon the receptacle.

**Epicælia** (*ep'-e-sel'-le-ah*). See *Epicele*.

**Epicoma**, **Epicomus** or **Epicome** (*e-pik'-o-mah*, *e-pik'-o-mus*, *e-pik'-o-me*) [*ἐπί*, upon; *κόμη*, hair]. A parasitic monstrosity having an accessory head united to the principal fetus by the summit.

**Epicondylar** (*ep'-e-kon'-dil-ar*) [*ἐπί*, upon; *κόνδυλος*, a condyle]. Relating to an epicondyle.

**Epicondyle** (*ep'-e-kon'-dil*) [*ἐπί*, upon; *κόνδυλος*, a condyle]. 1. Any supracondylar eminence upon a bone, as the humerus. 2. Less correctly, the external condyle of the humerus.

**Epicondylar - cubitalis** (*ep'-e-kon'-dil-o - ku-bit-a'-lis*) [*ἐπικόνδυλος*, an epicondyle; *cubitum*, the elbow]. The anconeus muscle. See *Muscles*, Table of.

**Epicondylar - radialis** (*ep'-e-kon'-dil-o-ra-de-a'-lis*) [*ἐπικόνδυλος*, an epicondyle; *radius*, the radius]. The supinator brevis muscle. See *Muscles*, Table of.

**Epicotyl** (*ep'-e-kot'-il*) [*ἐπί*, on; *κοτυλήδιον*, a cup-shaped hollow (cotyledon)]. In biology, the stem of a young plant between the cotyledons and the lowest true leaves.

**Epicranial** (*ep'-e-krat'-ne-al*) [*ἐπί*, upon; *κρανιον*, the cranium]. Relating to the epicranium.

**Epicranium** (*ep'-e-krat'-ne-um*) [*ἐπί*, upon; *κρανιον*, cranium]. The structures covering the cranium.

**Epicrisis** (*ep'-e-kri'-sis*) [*ἐπικρισις*, determination]. The phenomena of disease succeeding the crisis; a secondary crisis.

**Epicrusis** (*ep'-e-kru'-sis*) [*ἐπί*, upon; *κρούσις*, stroke]. 1. Massage by strokes or blows; percussion; therapeutic scouring.

**Epicyemate** (*ep'-e-si-e'-mât*) [*ἐπί*, upon; *κίνημα*, an embryo]. In embryology, applied to that form of development in which the embryo remains outside and above the yolk-vesicle. It is characteristic of fishes and batrachians.

**Epicyesis** (*ep'-e-si-e'-sis*) [*ἐπί*, over; *κνέειν*, to be pregnant]. Superfetation.

**Epicystic** (*ep-e-sis'-tik*) [*ἐπί*, upon; *κίστις*, bladder]. Suprapubic; situated above the urinary bladder.

**Epicystitis** (*ep-e-sis-ti'-tis*) [*ἐπί*, upon; *κυστίς*, bladder; *ιτις*, inflammation]. Inflammation of the tissues above the bladder.

**Epicystostomy** (*ep-e-sis-to-to'-me-ah*). Same as *Epicystotomy*.

**Epicystotomy** (*ep-e-sis-to't'-o-me*) [*ἐπί*, upon; *κίστις*, a bladder; *τέμνειν*, to cut]. Suprapubic incision of the bladder.

**Epicyte** (*ep'-e-sit'*) [*ἐπί*, upon; *κύτος*, cell]. The cell-wall or hyaline cuticle of cells.

**Epidemesis** (*ep-e-dem'-e'-sis*) [*ἐπιδημισις*]. Same as *Epidemia*.

**Epidemia** (*ep-e-de'-me-ah*) [*ἐπιδημία*, an epidemic]. Any epidemic disease, or epidemic of disease. **E. puerorum**. Synonym of *Whooping-cough*.

**Epidemic** (*ep-e-dem'-ik*) [*ἐπί*, upon; *δῆμος*, people]. A term applied to diseases that involve large numbers of persons, or spread over a wide area, in contradistinction to *Endemic*.

**Epidemicity** (*ep-e-dem-is'-it-e*) [*ἐπί*, upon; *δῆμος*, a people]. The quality of being epidemic.

**Epidemiography** (*ep-e-de-me-og'-ra-fe*) [*ἐπιδημιος*, epidemic; *γράφειν*, to write]. A description of epidemic diseases.

**Epidemiologic** (*ep-e-dem-e-o-loj'-ik*) [*ἐπιδημιος*, epidemic; *λόγος*, science]. Relating to epidemiology.

**Epidemiology** (*ep-e-dem-e-ol'-o-je*) [*ἐπιδημιος*, epidemic; *λόγος*, science]. The science of epidemic diseases.

**Epidemy** (*ep'-e-dem-e*). See *Epidemia*.

**Epiderm** (*ep'-e-derm*). See *Epidermis*.

**Epiderma** (*ep-e-der'-mah*) [*ἐπί*, upon; *δέρμα*, skin; *πλ.*, *Epidermata*]. Any abnormal outgrowth from the epidermis.

**Epidermal** (*ep-e-der'-mal*) [*ἐπί*, upon; *δέρμα*, skin]. Relating to or composed of epiderm.

**Epidermatic, Epidermic** (*ep-e-der-mat'-ik*, *-der'-mik*) [*ἐπί*, upon; *δέρμα*, skin]. Relating to the epidermis. **E. Method**, a method of administering medicinal substances by applying them to the skin. It is also called *Intradermic method*.

**Epidermatoid** (*ep-e-der'-mat-oid*) [*ἐπί*, upon; *δέρμα*, skin; *ειδος*, likeness]. Resembling the epidermis.

**Epidermic** (*ep-e-der'-mik*). Same as *Epidermatic*. **E. Erythema**. See *Acerodynia*. **E. Globes**. See *Cancer-nests*. **E. Grafting**. See *Reverdin's Operation in Operations, Table of*. **E. Pearls**. See *Cell-nests*.

**Epidermidomycosis** (*ep-e-der'-mid-o-mi-ko'-sis*) [*ἐπι-δερμιά*, epiderm; *μύκης*, fungus]. A disease due to the growth of parasitic fungi upon the skin.

**Epidermin** (*ep-e-der'-min*) [*ἐπί*, upon; *δέρμα*, skin]. A base for ointments prepared by melting one-half ounce of white wax in a warm mortar and triturating with this one-half ounce of powdered gum arabic until a homogeneous paste is obtained. To this is added a boiling mixture of one-half ounce each of water and glycerin and the whole is stirred until cold. Epidermin, thus prepared, is a semi-fluid, creamy substance, which, when exposed to the air in a thin layer, forms a strongly adherent, flexible pellicle or coating. When medicaments are to be added they are always previously rubbed up in glycerin.

**Epidermis** (*ep-e-der'-mis*) [*ἐπί*, upon; *δέρμα*, the skin]. The outer layer of the skin. The scarf-skin, consisting of a layer of horny cells, that protects the true skin. It has neither blood-vessels nor nerve-filaments. **E., Appendages of**, a generic name for the hair, nails, etc., growing from the epiderm.

**Epidermization** (*ep-e-der-miz-a'-shun*) [*ἐπιδερμίζω*, epiderm]. 1. The formation of epiderm. 2. Skin-grafting.

**Epidermolysis** (*ep-e-der-mol'-is-is*) [*ἐπιδερμω*, epiderm; *λύσις*, separation]. *Acantolysis bullosa*; *Dermatitis bullosa*; a rare skin-disease in which bullæ form upon the slightest pressure. The disease shows itself in infancy, and occurs especially upon the hands and feet. The lesion begins as a red spot, which is itchy; in two hours a bulla forms, enlarges, and then gradually subsides, drying into a scale. It is most pronounced in summer.

**Epididymal, or Epididymic** (*ep-e-did'-em-al, -im-ik*) [*ἐπί*, upon; *διδυμοί*, the testes]. Relating to the epididymis.

**Epididymis** (*ep-e-did'-im-is*) [*ἐπί*, upon; *διδυμοί*, the testes]. The small body lying above the testes. The superior end is the *globus major*, the inferior, the *globus minor*.

**Epididymitis** (*ep-e-did-im-i'-tis*) [*ἐπιδιδυμιά*, epididymis; *ιτις*, inflammation]. Inflammation of the epididymis.

**Epidosis** (*ep-id'-o-sis*) [*ἐπιδωσις*]. Enlargement; increase; exacerbation.

**Epidrome** (*ep-id'-ro-me*) [*ἐπιδρομή*, a running upon]. Active, or (more often) passive, congestion.

**Epidural** (*ep-e-dur'-ral*) [*ἐπί*, upon; *durus*, hard]. Upon or over the dura. **E. Space**, the space outside the dura mater of the spinal cord and brain.

**Epifolliculitis** (*ep-e-fol-ik-u-lit'-tis*) [*ἐπί*, upon; *folliculus*, a follicle; *ιτις*, inflammation]. Inflammation seated about the hair-follicles of the scalp.

**Epigamic** (*ep-e-gam'-ik*) [*ἐπί*, upon; *γάμος*, marriage]. In biology, applied to those bright tints and patterns displayed by many animals during courtship. Cf *Allepigamic*.

**Epigaster** (*ep-e-gas'-ter*) [*ἐπί*, upon; *γαστήρ*, belly]. The large intestine; hindgut.

**Epigastralgia** (*ep-e-gas-tral'-je-ah*) [*ἐπιγαστρικόν*, epigastrium; *ἄλγος*, pain]. Pain in the epigastrium.

**Epigastric** (*ep-e-gas'-trik*) [*ἐπί*, upon; *γαστήρ*, belly]. Relating to the epigastrium. **E. Reflex**. See *Reflexes, Table of*.

**Epigastrium** (*ep-e-gas'-tre-um*) [*ἐπί*, upon; *γαστήρ*, stomach]. The upper and middle part of the abdominal surface; the epigastric region.

**Epigastrius** (*ep-e-gas'-tre-us*) [*ἐπί*, upon; *γαστήρ*, the stomach]. A form of double-monstrosity, in which one fetus in an undeveloped condition is contained within the epigastric region of the other.

**Epigea, or Epigæa** (*ep-e-je'-ah*) [*ἐπί*, upon; *γαῖα*, earth]. A genus of trailing ericaceous plants. **E. repens**, trailing arbutus of N. America, has valuable diuretic properties. See *Trailing Arbutus*.

**Epigeal** (*ep-e-je'-al*) [*ἐπί*, upon; *γαῖα*, the earth]. In biology, growing on or out of the ground, or living near the surface of the ground.

**Epigenesis** (*ep-e-je'-es-is*) [*ἐπί*, upon; *γένεσις*, generation]. In biology, the theory that holds the embryo to be the result of the union of the male and female elements, and the fully formed organism the result of a gradual process of differentiation, in distinction to the theory of encasement, preformation, or evolution, which held the embryo to preëxist enfolded in a minute form within the germ.

**Epigenous** (*ep-ij'-en-u*) [*ἐπί*, upon; *γενε*, produced]. In biology, growing upon the surface or upper side of a leaf or other part, as many fungi. Cf *Epiphyllous*.

**Epigeous** (*ep-e-je'-us*) [*ἐπί*, upon; *γαῖα*, the earth]. In biology, growing on or near the ground. Same as *Epigeal*.

**Epi-glottic** (*ep-e-glot'-ik*) [*ἐπί*, upon; *γλωττίς*, glottis]. Relating to the epiglottis.

**Epi-glottitis** (*ep-e-glot-id-i'-tis*) [*ἐπιγλωττίς*, epiglottis; *ιτις*, inflammation]. Inflammation of the epiglottis.

**Epiglottis** (ep-e-'glōt'is) [ἐπί, upon; γλωττίς, glottis]. A thin fibro-cartilaginous valve that aids in preventing food and drink from passing into the larynx.

**Epiglottitis** (ep-e-'glōt'it'is). See *Epiglottiditis*.

**Epignathous** (ep-i-'gnath'us) [ἐπί, upon; γνάθος, jaw]. In biology, hook billed; applied to birds in which the upper half of the beak overreaches the under half and is deflected over it.

**Epignathus** (ep-i-'gnath'us) [ἐπί, upon; γνάθος, jaw]. A twin monstrosity in which the parasite is united to the superior maxillary bone of the autosite.

**Epigonium** (ep-e-'gon'ium) [ἐπί, upon; γόνυ, seed]. In biology, the old archegonium in mosses and *Hepliastrum*, after the capsule has developed.

**Epigynous** (ep-i-'gin'us) [ἐπί, upon; γυνή, a woman]. In biology, growing upon the ovary.

**Epihippic Fever** (ep-e-'hip'ik) [ἐπί, upon; ἵππος, horse]. See *Erysipel*.

**Epilation** (ep-i-'lat'ion) [ἐ, out of; pilus, a hair]. The extraction of hair.

**Epilatorium** (ep-i-'lat'or'ium) [l.]. An application for permanently removing hair.

**Epilatory** (ep-i-'lat'or'e) [ἐ, out of; pilus, a hair]. 1. Extracting the hairs; depilatory. 2. An epilatorium.

**Epilemma** (ep-e-'lem'ah) [ἐπί, upon; ἑλεμα, husk; pl., *Epillemata*]. The neurilemma of very small branches or funiculi of nerve-filaments.

**Epilepsia** (ep-e-'lep'se-ah). See *Epilepsy*. **E. curiosa**. See *Epilepsy, Accelerative*. **E. gravis**. See *Grand mal*. **E. larvata**. See *Epilepsy, Masked*. **E. mitis**. See *Petit mal*. **E. saltatoria**. Synonym of *Chorea*. **E. vertiginosa**, *Petit mal, q. v.*

**Epilepsy** (ep-i-'lep'si) [ἐπιληψία, a laying hold of]. A nervous affection characterized by sudden loss of consciousness and power of coordination of motion with tonic and clonic convulsions, the paroxysms lasting but a short time. This form of the disease is the "true" affection, the *haut mal* or *grand mal* of the French. The *petit mal* (*abortive epilepsy, epileptic aetia*) is less severe, and may consist of only a slight loss of consciousness, with retained coordination of motion. The so-called *epileptiform seizure* is a localized convulsion without loss of consciousness. See *Epilepsy, Jacksonian*. An epileptic seizure is often introduced by an *aura*, a peculiar sensation preceding the spasmodic seizure, which is quickly followed by the characteristic *epileptic cry*. The origin of the epileptic attack is in all probability a powerful discharge of energy from the cortical cerebral cells. The disease is most common in females, and is influenced by heredity and age; it is rare for it to occur after forty years of age. Traumatism and severe mental strain may act as exciting causes. **E., Accelerative**, *Epilepsy, wistia*; epilepsy in which the patient runs before falling down in a fit. **E., Acute Infantile**, a name given to the eclampsia of infants. **E., Cardiac**, paroxysmal tachycardia. **E., Cortical**. See *E., Jacksonian*. **E., Focal**. See *E., Jacksonian*. **E., Jacksonian**, spasmodic contractions in certain groups of muscles due to local disease of the cortex, always confined to one-half of the body and with retention of consciousness. **E., Masked**, *E. larvata*, the less severe form of true epilepsy, in which the patient does not fall. **E., Partial**, *E., Jacksonian, q. v.* **E., Peripheral**. Same as *E., Jacksonian*. **E., Pleural**. See *Pleural*. **E., Procrustic**, there is propulsion of the body in some special direction. **E., Reflex**, due to some reflex nervous. **E. of the Retina**, a temporary anemia of the retina occasionally observed during an epileptiform seizure. **E., Saturnine**, epileptiform convulsions due to lead poisoning. **E., Sensory, Thalamic epilep-**

**sy**; a form of epilepsy in which sensory disturbances predominate; it is believed to be due to a lesion of the optic thalamus. **E., Spinal**, paroxysms of clonic spasm in the lower extremities sometimes observed in the course of spastic paraplegia. **E., Symptomatic**. See *E., Jacksonian*. **E., Thalamic**. See *E., Sensory*. **E., Toxic**, that induced by toxic substances in the blood.

**Epileptic** (ep-il-'ep'tik) [ἐπιληψία, a laying hold of]. Pertaining to or like epilepsy. Also one affected with epilepsy. **E. Aura**. See *Aura*. **E. Cry**, the vocal sound or cry in epilepsy, from laryngeal spasm. **E. Equivalents**, instead of the convulsive attacks in epilepsy there may from time to time be transient psychic disturbances that consist in states of either excitement or depression. These are the so-called *epileptic equivalents*. **E. Hemiplegia**, sometimes follows the fit, especially after unilateral convulsions. **E. Interval**, the period of time between the epileptic paroxysms. During this period there are in the majority of cases, if not in all, some abnormal manifestations, as disorders in the cardiac rhythm, irregularity in the pupils, and cerebral disorders. **E. Mania**, slight maniacal tendencies following or taking the place of the fit. **E. Seizure**. See *Epilepsy*. **E. State**, a state of profound and sometimes comatose depression, with frequently recurring epileptic attacks, often speedily fatal. **E. Vertigo**, giddiness is a common sensation of epilepsy, but is erroneously applied to attacks of minor epilepsy.

**Epilepticism** (ep-il-'ep'tis-izm) [ἐπιληψία, a laying hold of]. The epileptic state, or status epilepticus.

**Epileptiform** (ep-il-'ep'tif'orm) [ἐπιληψία, a laying hold of; forma, form]. Resembling epilepsy in the symptoms. **E. Tic**, a variety of facial neuralgia accompanied by spasmodic movements of the face. This occurs in the degenerative period of life, and especially in those who present a decided family history of insanity.

**Epileptiginous** (ep-il-'ep'tij'-in-us). Same as *Epileptogenous*.

**Epileptogenous** (ep-il-'ep-toj'-en-us) [ἐπιληψία, epilepsy; γεννάν, to produce]. Producing epilepsy. **E. Zone**, Brown-Séquard's term for that portion of the skin of the face and neck of guinea-pigs which, if irritated after section of the spinal cord near the twelfth dorsal vertebra, will give rise in a short time to epileptiform convulsions.

**Epileptoid** (ep-il-'ep'toid) [ἐπιληψία, a laying hold of; εἶδος, likeness]. 1. Resembling epilepsy. 2. A person subject to various nervous attacks of the general nature of epilepsy.

**Epilobium** (ep-il-'ob'ium) [ἐπί, upon; λοβός, a pod, a lobe]. A genus of herbs including the *willow-herb*, a demulcent, tonic, and astringent drug.

**Epilose** (ep-i-'los) [ἐ, priv.; pilosus, hairy]. Without hair; bald.

**Epilymph** (ep-i-'limf) [ἐπί, upon; lymph, water]. The fluid between the bony and the membranous labyrinth.

**Epimerite** (ep-e-'me-rit) [ἐπί, upon; ὤμος, thigh]. In biology, an anterior, deciduous, proboscis-like, prehensile organ, attached to the protomerite or anterior segment of a septate gregarine.

**Epimeron** (ep-e-'me-ron) [ἐπί, upon; ὤμος, thigh]. In biology, one of the lateral pieces helping to form the pleuron, or a part of the segment of an arthropod, often giving attachment to the legs.

**Epimytilis** (ep-i-'m'il-is) [ἐπί, over; μύλη, millstone]. The patella.

**Epinasty** (ep-i-'nas-te) [ἐπί, upon; ναστός, pressed close]. In biology, curvature produced by excessive growth on the upper side of an extended organ.

**Epinephritis** (*ep-e-nef-ri'-tis*) [*ἐπί*, upon; *νεφρός*, kidney; *itis*]. Inflammation of a supra-renal capsule.

**Epineural** (*ep-e-nu'-ral*) [*ἐπί*, upon; *νεῦρον*, a nerve]. In biology, applied to structures attached to a neural arch.

**Epineurium** (*ep-e-nu'-re-um*) [*ἐπί*, upon; *νεῦρον*, a nerve]. The nerve-sheath, or sheath of any of the larger fascicles of nerve-tissue.

**Epinyctis** (*ep-in-ik'-tis*) [*ἐπί*, upon; *νύξ*, night]. A pustule appearing or becoming worse at night.

**Epipticon** (*ep-e-op'-tik-on*) [*ἐπί*, upon; *ὀπτικός*, of seeing]. In biology, a ganglionic swelling in the optic nerve of insects (Hickson).

**Epiotic** (*ep-e-ot'-ik*) [*ἐπί*, above; *οἶς*, ear]. Situated above or on the cartilage of the ear.

**Epipastic** (*ep-e-pas'-tik*) [*ἐπιπάσσειν*, to sprinkle]. Designed to be sprinkled upon some surface; sprinkled with some substance; applied to plasters sprinkled with some agent, as cantharides, used as a vesicant.

**Eripedometer** (*ep-e-pe-dom'-et-er*) [*ἐπίπεδον*, surface; *μέτρον*, measure]. An instrument for use in measuring various complex deformities of the body.

**Epipetalous** (*ep-e-pet'-al-us*) [*ἐπί*, upon; *πέταλον*, leaf or petal]. In biology, applied to stamens or other structures when borne upon the petals.

**Epipharynx** (*ep-e-far'-inks*) [*ἐπί*, upon; *φάρυγξ*, pharynx]. In biology, the median projection on the internal surface of the upper lip of an insect.

**Epiphenomenon** (*ep-e-fe-nom'-en-on*) [*ἐπί*, on; *φαινόμενον*, phenomenon; *pl.*, *Epiphenomena*]. An exceptional sequence or unusual complication arising in the course of a disease.

**Epiphora** (*e-pif'-or-ah*) [*ἐπιφορά*; *ἐπί*, upon; *φέρειν*, to bear]. A habitual or persistent overflow of tears, due to over-secretion or impeded outflow through the normal channels of excretion. Lachrymation, *q. v.*

**Epiphyllous** (*ep-e-fil'-us*) [*ἐπί*, upon; *φύλλον*, a leaf]. In biology, borne on a leaf, as certain fungi. Cf. *Epigenous*.

**Epiphyseal, or Epiphysial** (*ep-e-fiz'-e-al*) [*ἐπί*, upon; *φύειν*, to grow]. Relating to or of the nature of an epiphysis.

**Epiphyseitis** (*ep-e-fiz-e-i'-tis*) [*ἐπίφυσις*, an epiphysis; *itis*, inflammation]. Inflammation of an epiphysis, or of the epiphyseal part of a bone.

**Epiphysis** (*e-pif'-is-is*) [*ἐπί*, upon; *φύειν*, to grow]. A process of bone attached for a time to another bone by cartilage, but in most cases soon becoming consolidated with the principal bone. **E. cerebri**, the pineal gland.

**Epiphysitis** (*e-pif-is-i'-tis*). See *Epiphyseitis*.

**Epiphyte** (*ep'-e-fit*) [*ἐπί*, upon; *φύτον*, a plant]. In biology, a plant growing on another plant, but not nourished by it; also, a parasitic plant living upon another plant; also, a plant parasitic upon an animal.

**Etoplasm** (*ep'-e-plasm*) [*ἐπί*, upon; *πλάσμα*, plasma]. In the sporangium of many fungi, a part of the protoplasm remaining after formation of the spores.

**Epiplastron** (*ep-e-plas'-tron*) [*ἐπί*, upon; *F.*, *plastron*, a breastplate]. In biology, one of the two anterior lateral plates of the plastron of a turtle; probably the homologue of the clavicle of other vertebrates.

**Epiplerosis** (*ep-e-ple-ro'-sis*) [*ἐπί*, upon; *πληρωσις*, filling]. Engorgement; repletion; distention.

**Epiplura** (*ep'-e-plu'-rah*) [*ἐπί*, upon; *πλευρά*, a rib]. In biology, variously used to designate a structure superposed upon a rib, as the spines of certain fishes, the hooked processes or splint-bones passing from rib to rib in birds, or the inflexed outer border of a beetle's elytrum.

**Epiplexus** (*ep-e-pleks'-us*) [*ἐπί*, upon; *plexus*, a network]. The choroid plexus of the epicele.

**Epiplocele** (*e-pip'-lo-sel*) [*ἐπιπλόων*, caul; *κήλη*, hernia]. Omental hernia.

**Epiploenteroceles** (*e-pip-lo-en-ter'-o-sel*) [*ἐπιπλόων*, caul; *έντερον*, intestine; *κήλη*, hernia]. A hernia containing both omentum and intestine.

**Epiploenteroöschocele** (*ep-ip-lo-en-ter-o-os'-ke-o-sel*) [*ἐπιπλόων*, caul; *έντερον*, intestine; *ὄσχεον*, scrotum; *κήλη*, hernia]. Intestinal and omental hernia into the scrotum.

**Epiploic** (*ep-ip-lo'-ik*) [*ἐπιπλόων*, caul]. Relating or belonging to the epiploön.

**Epiploischocele** (*ep-ip-lois'-ke-o-sel*) [*ἐπιπλόων*, caul; *ischion*, hip; *κήλη*, hernia]. Omental hernia through the sciatic notch or foramen.

**Epiploitis** (*e-pip-lo-i'-tis*) [*ἐπιπλόων*, caul; *ιτις*, inflammation]. Inflammation of the omentum; omental peritonitis.

**Epiplomerocle** (*ep-ip-lo-mer'-o-sel*) [*ἐπιπλόων*, caul; *μηρός*, thigh; *κήλη*, hernia]. Femoral hernia containing omentum.

**Epiplophalocle** (*ep-ip-lom-fal'-o-sel*) [*ἐπιπλόων*, caul; *ὀμφαλός*, navel; *κήλη*, hernia]. Umbilical hernia with protruding omentum.

**Epiploön** (*e-pip'-lo-on*) [*ἐπί*, upon; *διπλός*, double; *pl.*, *Epiploa*]. The great omentum. **E.**, **Gastrocolic**, the great omentum. **E.**, **Gastro-hepatic**, the lesser omentum.

**Epiploschocele** (*ep-ip-los'-ke-o-sel*) [*ἐπιπλόων*, caul; *ὄσχεον*, scrotum; *κήλη*, hernia]. Omental hernia descending into the scrotum.

**Epipodite** (*e-pip'-o-dit*) [*ἐπί*, upon; *πούς* (ποδ-), foot]. A third appendage of the limb of a crustacean, articulating with the coxopodite, and passing into the branchial chamber; it is also called the *flabellum*.

**Epipodium** (*ep-e-po'-de-um*) [*ἐπί*, upon; *πούς* (ποδ-), foot]. In biology, one of the lateral appendages of the foot in certain molluscs, as the wing-like structures of pteropods.

**Epipsyche** (*ep-is-i'-ke*) [*ἐπί*, after; *ψυχή*, soul]. Applied by Haeckel to the oblongata proper.

**Epipteric** (*ep-ip-ter'-ik*) [*ἐπί*, upon; *πτερόν*, a wing]. Situated over the alisphenoid. **E. Bone**. See *Bone*.

**Epipteros** (*e-pip'-ter-us*) [*ἐπί*, upon; *πτερόν*, a wing]. In biology, winged at the top; applied to seeds.

**Epirrhizous** (*ep-e-ri'-zi-us*) [*ἐπί*, upon; *ρίζα*, root]. In biology, growing upon roots.

**Episcleral** (*ep-e-skle'-ral*) [*ἐπί*, upon; *σκληρός*, hard, sclerotic]. Situated on the outside of the sclerotic coat.

**Episcleritis** (*ep-e-skle-ri'-tis*) [*ἐπί*, upon; *σκληρός*, hard; *ιτις*, inflammation]. A localized inflammation of the subconjunctival tissues.

**Episeio-** (*ep-is'-e-o-*). For words thus beginning, see *Episio-*.

**Episeioncus** (*ep-e-si-on'-kus*) [*ἐπίσειον*, pubes; *ὄγκος*, a mass]. A tumor in the pubic region, or of the labia.

**Episeitis** (*ep-iz-e-i'-tis*). See *Episioitis*.

**Episematic** (*ep-e-sem-at'-ik*) [*ἐπί*, upon; *σημα*, a sign]. In biology, applied to that form of mimetic coloration which serves as a signal of recognition to other individuals and thus enables them to escape; as the white tail of the rabbit. (Poulton.)

**Episiocele** (*ep-e-si'-o-sel*) [*ἐπίσειον*, pubes; *κήλη*, hernia]. Pudendal hernia; vulvar protrusion.

**Episioclisia** (*ep-e-si-o-kli'-e-ah*) [*ἐπίσειον*, pubes; *κλίσις*, locking, closure]. Surgical closure of the vulva.

**Episiohematoma** (*ep-e-si-o-hem-at-o'-mah*) [*ἐπίσειον*, pubes; *αἷμα*, blood; *ῥυμα*, tumor; *pl.*, *Episiohematoma*]. Hematoma of the vulva or pudenda.

- Episioitis** (*ep-e-si-o-i-tis*) [*i*-pi-si-on, pubes; *i*-tis, inflammation]. Inflammation of the pudenda.
- Episioplasty** (*ep-e-si-o-plas-ti*) [*i*-pi-si-on, pubes; *pl*-as-taiw, to form]. A plastic operation upon the pubic region, or on the vulva.
- Episiorrhagia** (*ep-e-si-or-a'-ah*) [*i*-pi-si-on, the pubes; *rrh*-gna, to break forth]. Hemorrhage from the vulva.
- Episiorrhaphy** (*ep-e-si-or-a'-phi*) [*i*-pi-si-on, pubes; *rrh*-phi, seam]. An operation for the cure of prolapsed uterus or procidentia uteri.
- Episiotomy** (*ep-e-si-o-ti-mi*) [*i*-pi-si-on, vulva; *tom*-y, section]. Incision through the vulva in childbirth, to prevent rupture of the perineum and to facilitate labor.
- Epispadias** (*ep-es-pa-d'i-as*) [*i*-pi, above; *sp*-eiv, to pierce]. Abnormal opening of the urethra upon the upper part of the penis, either on the dorsum or on the glans.
- Epispasis** (*ep-i'-pa-is*) [*i*-pi, upon; *sp*-as-c, a drawing]. An eruption or skin-affection due to medical treatment; a drug-exanthem.
- Epispastic** (*ep-es-pas'-tik*) [*i*-pi, upon; *sp*-as-c, a drawing]. 1. Rubefacient, or vesicatory. 2. A vesicatory or substance producing a blister.
- Episperm** (*ep'-e-sp*) [*i*-pi, upon; *sp*-er-ma, seed]. In biology, the outer seed-coat, also called the testa.
- Episplenitis** (*ep-es-plen-i'-tis*) [*i*-pi, upon; *sp*-l'n, spleen; *-itis*, inflammation]. Inflammation of the fibrous coat of the spleen.
- Epistasis** (*ep-i'-stas-is*) [*i*-pi, upon; *ist*-as-thai, to stand]. A scum or film of substance floating on the surface of urine.
- Epistaxis** (*ep-i'-tak'-i*) [*i*-pi-sta-zen, to distil]. Hemorrhage from the nose.
- Episternite** (*ep-es-ter'-nit*) [*i*-pi, upon; *sp*-er-non, breast-bone]. In biology, applied to the lateral pieces of the segment of an arthropod; a pleurite; specifically one of the valves of the ovipositor in orthopterous insects.
- Episternum** (*ep-es-ter'-num*) [*i*-pi, upon; *sp*-er-non, breast bone]. In biology, variously applied to designate a part above or anterior to the sternum; as the presternum of a mammal, the epiplastron of a turtle, or the anterior of the three pieces of the pleuron of an insect.
- Epistoma** (*ep-i'-st*-o-ma) [*i*-pi, upon; *st*-oma, mouth]. In biology, variously used to designate some part placed above, or anterior to the mouth, as the osseous portion of the metope or facies of a macrurous crustacean, that lies immediately in front of the oral aperture.
- Epistrophe** (*ep-i'-st*-ro-fe) [*i*-pi, upon; *sp*-er-phron, to turn]. In biology, applied to the arrangement assumed by chlorophyl grains under the influence of light, on those surfaces of the cell wall that are at right angles to the plane of incident light.
- Epistropheus** (*ep-i'-st*-ro-fy-us, *-pis'-tro-phus*) [*i*-pi-stro-phos]. A synonym of the axis, or second cervical vertebra.
- Epithalline** (*ep-e-tha'-lin*) [*i*-pi, upon; *th*-al-lon, a branch]. In biology, growing upon the thallus.
- Epitheca** (*ep-e-tha'-ka*) [*i*-pi, upon; *th*-ka, a case]. In biology, a secondary calcareous investment or tegumentary secretion surrounding the theca of certain corals.
- Epithecium** (*ep-e-thi'-um*) [*i*-pi, upon; *th*-ka, a case]. In biology, the surface of the fruiting disc in certain lichens and fungi.
- Epithelial** (*ep-e-thi'-le-al*) [*i*-pi, upon; *th*-li, a nipple]. Pertaining to epithelium; made up of the elements of epithelium. **E. Pearls.** See *Pearls*.

- Epithelical** (*ep-e-thi'-le-al*) [*i*-pi, upon; *th*-li, a nipple; *-al*, a cell]. An epithelial cell.
- Epithelioid** (*ep-e-thi'-le-oid*) [*i*-pi, upon; *th*-li, nipple; *-oid*, likeness]. Resembling epithelium.
- Epithelioma** (*ep-e-thi'-le-ol'-mah*) [*i*-pi, upon; *th*-li, nipple; *-oma*, a tumor; *pl.*, *Epitheliomata*]. Carcinoma involving skin or mucous membrane. **E. molluscum.** Synonym of *Molluscum contagiosum*.
- Epithelium** (*ep-e-thi'-le-um*) [*i*-pi, upon; *th*-li, nipple]. The cuticle or cellular-structure of mucous surfaces, and also of the skin of the body. **E. chrotale**, the ectoderm. **E., Ciliated**, a form in which the cells bear vibratile filaments or cilia at their free extremities. **E., Columnar**, distinguished by prismatic-shaped or columnar cells. **E., Nucleated**, consisting of circular or hexagonal cells, each containing a nucleus.

- E., Pavement**, or **Cuboidal**, cubical or polygonal cells covering the surface like the stones of a pavement. **E., Squamous**, the cells have been reduced to flattened, scaly plates. **E., Stratified**, the cells are arranged in distinct layers. **E., Tessellated**. Same as *E., Pavement*. **E., Transitional**, intermediate between simple and stratified.
- Epithem** (*ep'-ith-em*) [*i*-pi-thi-ma, a poultice; *pl.*, *Epithemata*]. Any local application; as a compress, fomentation, lotion, or poultice; from this definition some writers exclude salves, plasters, and ointments.
- Epithema** (*ep-ith-e'-mah*). See *Epithem*.
- Epithesis** (*ep-ith'-es-is*) [*i*-pi-thi-nai, to lay on]. The surgical correction of deformed or crooked limbs.
- Epithyme** (*ep'-ith-im*) [*i*-pi, upon; *thi-mos*, thyme]. The European plant, *Cuscuta epithymum*, so called as growing parasitically upon thyme; it is said to be useful in melancholy, jaundice, and constipation.
- Epithymia** (*ep-e-thi'-me-ah*) [*i*-pi-thi-mia, longing]. Any natural longing or desire; a yearning.
- Epitrichium** (*ep-e-trik'-e-um*) [*i*-pi, upon; *tri-chion*, hair]. A superficial cellular layer of epidermis, found in embryonic and fetal life.
- Epitrochlea** (*ep-e-trok'-le-ah*) [*i*-pi, upon; *tro-chia*, a pulley]. The internal condyle of the humerus.
- Epixylous** (*ep-piks'-il-us*) [*i*-pi, upon; *xi-lon*, wood]. In biology, applied to fungi or other plants that grow upon wood.
- Epizoidice** (*ep-e-zo'-is-id*) [*i*-pi, upon; *z*-on, an animal; *-eide*, to kill]. A drug or preparation that destroys external parasites.

**izoön** (*ep-e-zo'-on*) [*ἐπί*, upon; *ζῷον*, an animal; cf., *Epizoa*]. An animal living as a parasite upon mother; an external parasite, as distinguished from an *Entozoön*.

**epizootic** (*ep-e-zo'-ot'-ik*) [*ἐπί*, upon; *ζῷον*, animal]. 1. Affecting the lower animals epidemically. 2. A contagious, or generally prevalent disease affecting animals.

**Epizooty** (*ep-e-zo'-o-te*) [*ἐπί*, upon; *ζῷον*, animal]. An epizootic disease.

**Eponychium** (*ep-o-nik'-e-um*) [*ἐπί*, upon; *ὄνυξ*, fingernail]. A horny condition of the epidermis from the second to the eighth month of fetal life, indicating the position of the future nail.

**Eponym** (*ep'-o-nim*) [*ἐπώνυμος*, named after a person]. A term derived from the name of a person. See *Table of Eponymic Diseases*, under *Disease*.

**Epoöphorectomy** (*ep-o-o-for-ek'-to-me*) [*ἐπαφώροπος*, epoöphoron; *ἐκτομή*, excision]. Surgical removal of the epoöphoron.

**Epoöphoron** (*ep-o-off'-or-on*) [*ἐπί*, upon; *ᾠοφόρος*, laying eggs]. Same as *Parovarium*.

**Epostoma** (*ep-os-to'-mah*) [*ἐπί*, upon; *ὀστέον*, bone]. An exostosis.

**Epsilon-bacillus**. See *Bacteria, Synonymic Table of*.

**Epsom Salts** (*ep'-sum*). See *Magnesium*.

**Epsstein's Dressing**. A method of dressing the umbilical cord. It consists of the ordinary linen quadrangular belly-plastron with a central cap-like receptacle for the umbilical stump.

**Epulis** (*ep-ul'-lis*) [*ἐπί*, upon; *ὄλγα*, the gums]. A hard, fibrous tumor of the alveolar processes of the jaws.

**Epuolosis** (*ep-u-lo'-sis*) [*ἐπούλωσις*; *ἐπί*, upon; *ὄλη*, scar]. Cicatrization; a cicatrix.

**Epulotic** (*ep-u-lot'-ik*) [*ἐπί*, upon; *ὄλη*, scar]. 1. Promoting epulosis or cicatrization. 2. A remedy or application that promotes the healing of wounds or sores.

**Equation** (*e-kwa'-zhun*) [*quare*, to make equal]. In chemistry, a collection of symbols so arranged as to indicate that if the bodies represented by the symbols be brought together a chemie reaction will take place. **E., Personal**, an allowance for individual peculiarity or error in an observer's work, in order to render it approximately accurate.

**Equator** (*e-kwa'-tor*) [*quare*, to make equal]. An imaginary circle surrounding a sphere. **E. of a cell**, the boundary of the plane through which division takes place. **E. of the eye**, the *equator oculi*: the boundary of the transverse and central vertical plane of the eye. **E. of a Lens**, the angular edge at the meeting of the anterior and posterior surfaces of the lens.

**Equatorial** (*e-kwa-tor'-e-al*) [*quare*, to make equal]. Pertaining or belonging to an equator. **E. Plate**. See *Karyokinesis and Plate*.

**Equilibration** (*e-que-lib-ra'-shun*) [*equilibrare*, to balance equally]. Equipoise; even balance.

**Equilibrium** (*e-quil'-ib-ri-zm*) [*equilibris*, evenly balanced]. The opinion that every voluntary act may be counteracted by an opposing inhibitory volition.

**Equilibrium** (*e-kwe-lib'-re-um*) [*aequus*, equal; *libro*, balance]. An even balancing of a body or condition. **E., Stable**, when, after slight disturbance, the body will return to its original condition or position. **E., Unstable**, when it will not so return.

**Equination** (*e-kwin-a'-shun*) [*equinus*, of a horse]. 1. Inoculation with the virus of equine smallpox. 2. Inoculation with the virus of equinia.

**Equinia** (*e-kwin'-e-ah*) [*aequus*, a horse]. Glanders. Farcy. A contagious, specific disease, with both local and general symptoms, derived from the horse or ass. It affects chiefly the skin, mucous membranes and

lymphatics, and begins with a purulent nasal discharge, the respiratory, ocular and oral membranes being further successively involved. It is of microbic origin. See *Bacillus mallei*, in *Bacteria, Synonymic Table of*.

**Equinist** (*ek'-kwin-ist*) [*aequus*, a horse]. One who believes in the equine origin of a disease, e. g., of tetanus.

**Equipollent** (*e-kwip'-o-lent*) [*aequus*, equal; *pollere*, to be strong]. Of equal power or efficiency; said, for example, of opposing muscles, or of parents in their influence upon offspring.

**Equisetum** (*ek-wis-e'-tum*) [*aequus*, a horse; *seda*, bridle]. A genus of cryptogamous plants; the horse-tails, or scouring rushes. **E. hiemah** and **E. palustre**, of Europe and N. America, are reputed to be effective and harmless diuretics.

**Equitant** (*ek'-wit-ant*) [*equitare*, to ride]. In biology, literally, riding. Applied to leaves, like those of the iris, which are vertical and folded lengthwise, so that each leaf, toward the base, overlaps or straddles the next; also applied to the longitudinally folded antennae of certain insects.

**Equivalence, Equivalency** (*e-kwiv'-al-ens, e-kwiv'-al-en-se*) [*aequus*, equal; *valere*, to be worth]. Equality of valence or saturating-power. See *Valence*. In chemistry, the property possessed by an element or radical of combining with another element or radical or of replacing it in a compound body in definite and unalterable proportions. It is sometimes used as synonymous with *valence* or *quantivalence*.

**Equivalent** (*e-kwiv'-al-ent*) [*aequus*, equal; *valere*, to be worth]. Of equal valency. **E. Focus**. See *Focus*.

**Equivocal** (*e-kwiv'-o-kal*) [*aequus*, equal; *vox*, sound]. Of doubtful significance, as equivocal symptoms.

**Eradication** (*e-rad-ik-a'-shun*) [*e*, out; *radicare*, to root]. Complete or thorough removal.

**Eradiculose** (*e-rad-ik'-u-los*) [*e*, priv.; *radicula*, a rootlet]. In biology, destitute of rootlets or rhizoids.

**Erasene** (*er'-as-en*) [*eradere*, to scratch out; from the power of erasing grease-spots]. A trade-name for California abietene. See *Abietene*.

**Erasion** (*e-ra'-zhun*) [*e*, out; *radere*, to scrape]. The act of scraping or curing.

**Erb's Point**. See *Point*. **E. Reaction of degeneration**. Deviation from the normal formula of muscular response to galvanism. **E. "Upper-arm type" of palsy**. A myotrophy characterized by paralysis of the deltoid and often of the supraspinatus and infraspinatus, the biceps, brachialis anticus, and the supinators. See *Diseases, Table of*.

**Erbium** (*ur'-be-um*) [*L.*]. A rare element; symbol *Er*. See *Elements, Table of*.

**Erdmann's Test**. See *Tests, Table of*.

**Erdmann and Uslar's Test**. See *Tests, Table of*.

**Erect** (*e-rekt'*) [*erectus*, set up]. Upright; in the state of erection. **E. Posture**. See *Postures, Table of*.

**Erecthites** (*e-rek-thit'-tez*) [*ἑρῆτις*, ground-sel]. A genus of composite plants. **E. hieracifolia**. Fireweed; a coarse composite-flowered plant common in waste-lands in N. America; it is astringent and tonic. **Unof.**

**Erectile** (*e-rek'-til*) [*erigere*, to set up]. Pertaining to or possessing the characteristic stiffening, rigidity, or erection. **E. Glossitis**. See *Glossitis, Parenchymatous*. **E. Tissue**, that which is capable of erection; consisting of a network of expansile capillaries that under stimulus becomes engorged with blood.

**Erection** (*e-rek'-shun*) [*erigere*, to set up]. The condition of temporary and functional fullness and firmness of the penis, clitoris, etc., due to sexual excitement, friction, etc., the mechanism consisting in an overfilling of the blood-vessels with inhibition of the

- return circulation. **E.-center.** See *Center*. **E., Persistent.** Synonym of *Pruripism*, *q. v.*
- Erectopatent** (*er-ek-to-pa'tent*) [*erectus*, erect; *patens*, spreading]. In biology, intermediate between erect and spreading, as the fore-wings of a butterfly in repose.
- Erector** (*er-ek'tor*) [*erigere*, to erect]. Any muscle, the function of which it is to erect or elevate a part. See *Muscle*, *Part of*. **E. pili**, the unstriped muscular fibers causing the erection of the hair and the phenomenon called *goose flesh* or *goose-skin*.
- Eremacausis** (*er-em-ik-aw'sis*) [*hēma*, slowly; *kaiōō*, burning]. Slow oxidation or gradual decay, without combustion.
- Eremoblast** (*er-em'-blast*) [*έρημος*, solitary; *βλαστος*, a germ, sprout]. A unicellular plant.
- Eremophobia** (*er-em-ə-fō-be-ah*) [*έρημος*, desolate; *φοβία*, fear]. The same as *Agoraphobia*, *q. v.*
- Erethin** (*er'e-thin*) [*ἐρεθίζειν*, to irritate]. The name given by Klebs to that constituent of tuberculin which occasions fever.
- Erethism** (*er'e-thizm*), **Erethismus** (*er-e-thiz'-mus*) [*ἐρεθισμός*, irritation]. An abnormal heightening of nervous irritability. **E. ebriosorum.** Synonym of *Diprium tremens*. **E. hydrophobia.** Synonym of *Hydrophobia*. **E. tropicus.** See *Insolation*.
- Erethismal** (*er-e-thiz'-mal*) [*ἐρεθισμός*, irritation]. Of the nature of an erethism.
- Erethismic** (*er-e-thiz'-mik*), or **Erethistic** (*er-e-thiz'-tik*) [*ἐρεθισμός*, irritation]. Relating to, or affected with, erethism.
- Erg** [*ērgōr*, work]. See *Electric Units*.
- Ergasiomania** (*ur-gas-e-o-ma'-ne-ah*) [*ἐργασία*, work; *μανία*, madness]. Mania for performing operations.
- Ergasiophobia** (*ur-gas-e-o-fō-be-ah*) [*ἐργασία*, work; *φοβία*, fear]. Timidity in operating. A dread of operations.
- Ergogenesis** (*ur-go-jen'-es-is*) [*ἐργον*, work; *γένεσις*, production]. Same as *Ergogeny*.
- Ergogenetic** (*ur-go-gen-et'-ik*) [*ἐργον*, work; *γένεσις*, production]. Of the nature of, or pertaining to, ergogeny.
- Ergogeny** (*ur-gōj'-en-e*) [*ἐργον*, work; *γένεσις*, production]. In biology, the energy, both potential and kinetic, involved in the adaptive processes of living organisms; it includes both *kinetogeny* and *statogeny* (Ryder).
- Ergograph** (*ur'-go-graf*) [*ἐργον*, work; *γράφειν*, to write]. A recording ergometer. An instrument for recording the extent of movement produced by a contracting muscle, or the amount of work it is capable of doing.
- Ergometer** (*ur-gm'-et-er*) [*ἐργον*, work; *μέτρον*, measure]. A variety of dynamometer.
- Ergostat** (*ur'-go-stat*) [*ἐργον*, work; *ιστάειν*, to stand]. An apparatus for testing muscular strength.
- Ergot**, or **Ergota** (*ur'-got*, or *ur'-gōt'-ah*) [Fr., *ergot*, a spur; *gen.*, *Ergothē*]. 1. In farriery, the horny stub below the pastern joint, hidden by the fetlock of the horse. 2. The hippocampus minor. 3. A fungus, *Claviceps purpurea*, a parasite upon rye. It contains *glutoline*, a *glutamine* acid, and *cornutin*, to which its properties are due. It is a powerful excitomotor, hemostatic, and gastro-intestinal irritant, but is used most frequently to promote uterine contraction in childbirth. It is valuable internally in amenorrhea and atonic spermatorrhea; topically in gonorrhea, conjunctivitis and inflammations of mucous membranes. Its effects are most prompt by hypodermatic injection. Dose gr x-5j. **E., Ext.**, Fld., prepared with dilute hydrochloric acid, alcohol, and water. Dose 3 ss-ij. **E., Ext., Liquid** (B. P.).
- Dose ℥x-xxx. **E., Ext.**—**Ergotin.** Dose gr. ij-xx, hypodermatically gr. ¼-v. **E., Infus.** (B. P.). Dose 3 j-ij. **Injectio Ergotinæ Hypodermica** (B. P.), ergotin 1, camphor-water, 2. Dose subcutaneously ℥ij-x. **E., Tinctura** (B. P.). Dose ℥x-5j. **E., Vinum**, 15 per cent. Dose 3j-3j. **Sclerotinic Acid**, thought to be identical with ergotinic acid.
- Ergotin** (*ur'-go-tin*) [Fr., *ergot*, a spur]. 1. A precipitate or extract prepared from the tincture of *Secale cereale*; it is an emmenagogue, and parturient. Dose ʒ½ to ʒ grain, repeated as may be needed. Unof. The name is applied in commerce to many different preparations of ergot; often to the *extractum ergotæ*, U. S. P. 2.  $C_{36}H_{52}N_2O_5$ . An amorphous, brown alkaloid found in ergot. It is probably the same as ecboilin.
- Ergotinine** (*ur-got'-in-in*) [Fr., *ergot*, a spur],  $C_{35}H_{46}N_2O_6$ . An alkaloid from ergot of rye, occurring in white needles; it is effective in hemorrhage, in erysipelas, and in certain brain-affections. For hypodermatic injection, ʒs to ʒs gr. is used, dissolved in lactic acid and water.
- Ergotism** (*ur'-got-izm*) [Fr., *ergot*, a spur]. The constitutional effects of overdoses of ergot or of the persistent use of food containing ergot. These are manifested by severe cramps, chiefly in the muscles of the leg, ending in tonic contraction of these muscles—the *spasmodic* form; and secondly by gangrene of the extremities—the *gangrenous form*. The symptoms may be acute or chronic. See *Pellagra*.
- Ergotol** (*ur'-got-ol*) [Fr., *ergot*, a spur]. A proprietary liquid preparation of ergot, recommended for hypodermatic injection.
- Ergten** (*erg'-ten*) [*ἐργον*, work]. See *Electric Units*.
- Erianthous** (*er-e-an'-thus*) [*ἐριον*, wool; *ἄνθος*, flower]. In biology, woolly-flowered.
- Erichsen's Disease.** See *Diseases*, *Eponymic Table of*. **E. Operation.** See *Operations*, *Table of*.
- Eriocolin** (*er-ik'-o-lin*) [*ἐρείκη*, heath],  $C_{34}H_{56}O_{21}$ . A substance found in *Uva ursi*. It is an amorphous, yellowish glucosid with a bitter taste, yielding with diluted acids sugar and an essential oil—*ursone*.
- Erigeron** (*er-ij'-er-on*) [*ἰριγέρων*, groundsel; *gen.*, *Erigerontis*]. Fleabane. The plant *E. canadense*, having physiologic actions like those of oil of turpentine, but less irritant. It is efficient as a hemostatic in menorrhagia. **E. bellidifolium** and **E. philadelphicum** afford similar oils, and have the same properties. **E., Ol.**, the essential volatile oil of erigeron. Dose ℥x-3 ss. Unof.
- Eringö** (*er-ing'-ö*). See *Eryngo*.
- Eriodictyon** (*er-e-o-dik'-te-on*) [*έριον*, wool; *δίκτυον*, a net]. Yerba Santa or Mountain-balm. The leaves of *E. glutinosum*, a shrub of California, an excellent expectorant, and valuable as an excipient for quinin, the taste of which it largely conceals. It is useful in bronchial affections. **E., Ext.** Fld. Dose ℥xv-5j. **E., Ext.** Dose gr. ij-x. **E. tomentosum** and **E. angustifolium** have the same uses. The latter are unofficial.
- Eriophorous** (*er-e-off'-or-us*) [*έριον*, wool; *φέρειν*, to bear]. In biology, wool-bearing.
- Eriophyllous** (*er-e-off'-il-us*) [*έριον*, wool; *φύλλον*, a leaf]. In biology, woolly-leaved.
- Erlangen Blue.** Same as *Berlin Blue*.
- Erlau Green.** Same as *Bremen Green*.
- Erlicki's Fluid.** A hardening-fluid used especially for tissues of the central nervous system. It consists of potassium bichromate, 2.5 parts; cupric sulphate, 0.5 parts; water, 100 parts.
- Eroderit** (*er-od'-ent*) [*e*, out; *rodere*, to gnaw]. 1. Cautetic; causing erosion. 2. A caustic application or agent.

**Erogenic**, or **Erogenous** (*er-o-jen'-ik* or *er-oi'-en-us*) [*ἔρως*, love; *γεννᾶν*, to produce]. Producing or stimulating the sexual appetite.

**Eromania** (*er-o-ma'-ne-ah*). See *Erotomania*.

**Erose** (*e-ros'*) [*erodere*, to gnaw off]. In biology, irregularly toothed, as if gnawed.

**Erosion** (*e-ro'-zhun*) [*erosio*; *erodere*, to eat out]. Disintegration of tissue by mechanical, chemic, or morbid action. **E. of the Cervix**, an ulcerated condition of the neck of the womb resulting from chronic endometritis. It is also called *ulceration* or *granular degeneration of the cervix*.

**Erostrate** (*e-ros'-trat*) [*ε*, priv; *rostrum*, a beak]. In biology, not beaked.

**Erotia** (*e-ro'-she-ah*) [L.]. A genus of composite-flowered plants. **E. lanata**, white sage or winter-fat; a composite-flowered forage-plant of the Western U. S.; valued locally in intermittent fevers. Unof.

**Erotic** (*er-ot'-ik*) [*ἔρως*, love]. Pertaining to the sexual passion.

**Eroticism** (*er-ot'-is-izm*) [*ἔρως*, love]. An erotic disposition; erotic display; tendency to erotomania.

**Erotomania** (*er-o-tik-o-ma'-ne-ah*) [*ἔρωτικός*, loving; *μανία*, madness]. Same as *Erotomania*.

**Eroticism** (*er-ot'-o-sizm*). Same as *Erotomania*, *q. v.*

**Erotomania** (*er-ot-o-ma'-ne-ah*) [*ἔρως*, love; *μανία*, madness]. Morbid, abnormal exaggeration of love generally; more limited to the imaginatively than to the carnal aspect of the sentiment; insanely-perverted sexual feeling. See *Lymphomania* and *Satyriasis*. **E. personalis**. Synonym of *Satyriasis* and of *Lymphomania*.

**Erotomaniac** (*er-ot-o-ma'-ne-ak*) [*ἔρως*, love; *μανία*, madness]. A patient who is afflicted with erotomania.

**Erratic** (*er-at'-ik*) [*erraticus*, wandering]. Moving about from place to place; irregular; strange or unusual; eccentric, peculiar.

**Errhine** (*er'-in*) [*ἔρ*, in; *ῥίς*, the nose]. 1. Causing discharges from the nose. 2. A medicine that, applied to the mucous membrane of the nose, increases nasal secretions. A sternutatory.

**Error** (*er'-or*) [L., "wandering"]. Displacement or perversion in any function; aberration, mental or optic.

**Erskine's Method**. See *Treatment, Methods of*.

**Erbescence** (*er-u-bes'-ens*) [*erubescencia*, blushing]. Redness of the skin.

**Eruca** (*er-oo'-kah*) [L., a caterpillar; a colewort]. A genus of cruciferous plants. **E. sativa**, the garden rocket, an herb of Asia and Europe, used as a salad. It is a stimulant and diuretic, and is considered to be aphrodisiac and galactagogue. Unof.

**Erucic Acid** (*er-oo'-sik*). See *Acid*.

**Eruciform** (*er-oo'-sif-orm*) [*eruca*, a caterpillar; *forma*, form]. In biology, said of larvae, spores, etc., that are shaped like a caterpillar.

**Erucivorous** (*er-u-siv'-or-us*) [*eruca*, a caterpillar; *vorare*, to eat]. In biology, applied to birds and other animals that feed upon caterpillars.

**Eruclation** (*e-ruk-ta'-shun*) [*eructare*, to belch]. Belching.

**Erugation** (*er-oo-ga'-shun*) [*erugatio*; *e*, out; *ruga*, wrinkle]. The removal of wrinkles.

**Erugatory** (*er-oo'-gat-or-e*) [*e*, out; *ruga*, a wrinkle]. 1. Tending to remove wrinkles. 2. A remedy for wrinkles.

**Erugineous** (*er-oo-jin'-e-us*). Same as *Eruginous*.

**Eruginose** (*er-oo'-jin-ös*). Same as *Eruginous*.

**Eruginous** (*er-oo'-jin-us*) [*æruginosus*; *ærugeo*, rust]. Having the nature or the color of verdigris.

**Eruptent** (*e-rum'-pent*) [*erumpere*, to break out]. In biology, applied to parts or organs that appear as if bursting out.

**Eruption** (*e-rup'-shun*) [*erumpere*, to burst out]. A bursting forth of any kind or from any part, but applied especially to the chief symptom of certain skin-diseases, consisting in pimples, vesicles, rash, etc.; the breaking forth of a tooth from the gum.

**Eruptive** (*e-rup'-tiv*) [*erumpere*, to burst out]. Attended by an eruption, as an eruptive fever.

**Eruthrocyte** (*er-uth'-ro-sut*). Incorrect form of *Erythrocyte*, *q. v.*

**Eryngo** (*er-ing'-go*) [*ὑρίγγη*, a thistle]. Any plant of the umbelliferous genus *Eryngium*, especially **E. campestre** and **E. maritimum** of Europe. These plants, with others of the genus, were formerly made into sweetmeats, and were regarded as polychrest remedies, but were especially prized as aphrodisiacs. Unof.

**Erysipelas** (*er-is-ip'-el-as*) [*ἐρύσιπλος*, red; *πέλλα*, skin]. An acute, specific, constitutional febrile disease, with a peculiar redness and inflammation of the skin and subcutaneous tissue, generally of the face. It is due to streptococci. The period of incubation varies from a few hours to three or four days. The symptoms are an initial chill or rigor, malaise, high temperature, vomiting or nausea, and the characteristic rash, with a well-defined margin, upon the skin. It may terminate fatally. Albumin may appear in the urine. At the conclusion of the attack desquamation takes place, either branny or in flakes. The development of erysipelas is favored by filth, over-crowding, and defective ventilation. One attack rather predisposes to subsequent attacks. **E. carbunculosum**. Synonym of *Anthrax*. **E. malignum internum**, an acute, suppurative, rapidly spreading inflammation of cellular tissue beginning in the pelvis after parturition. It is one form of puerperal fever. It is usually rapidly fatal. Antisepsis properly applied at the time of delivery will prevent its occurrence. **E. migrans**, wandering erysipelas. **E. phlegmonodes**, a form of erysipelas in which there is pus-formation, with marked constitutional symptoms. **E. Recurrent**, *pseudo-erysipelas*, a frequent disease in strumous children, but occurring also in adults, and especially in women. It is entirely confined to the face, especially around the nose and upper lip, and is unattended with marked constitutional symptoms. It is not amenable to treatment, and is very prone to recur. **E. simplex**, the ordinary facial form of erysipelas. **E. suffusum**. Synonym of *Erythema*. **E., Wandering**, a chronic or sub-chronic form in which the process successively disappears from one part of the body to appear at another part.

**Erysipelatous** (*er-is-ip-el'-at-us*) [*ἐρύσιπλος*, red; *πέλλα*, skin]. Of the nature of or affected with erysipelas.

**Erysipeloid** (*er-is-ip-el'-oid*) [*ἐρύσιπλος*, red; *πέλλα*, skin; *ειδος*, likeness]. A peculiar affection of the palms of the hands or soles of the feet, characterized by zones of violaceous-red eruption with burning and itching; it is due to wound-infection.

**Erythanthema** (*er-ith-an'-the-mah*) [*ἐρύσιπλος*, red; *ἀνθήμα*, a flowering]. A skin-disease marked by redness. The term is variously applied by some to denote an eruptive disease depending upon vaso-motor, or other nervous disorder. It is used to designate a class of cutaneous efflorescences that have in common a basis of erythema.

**Erythema** (*er-ith-e'-mah*) [*Ἐρυθμα*, a blush]. Rose rash: a redness of the skin that may be made to disappear temporarily by pressure. **E. ab igne**, a form of *E. hyperemicum* produced by the constant irritation of artificial heat. It occurs as rings and gyrate patterns on the front of the legs, and is of a deep-red color, gradually becoming browner in tint. This pig-

mentation is permanent. *E. annulare*, a form of *E. multifforme* in which the lesions shrink and desquamate at the center, but continue to extend at the periphery by a raised margin. It is also called *E. iracinationum*. These rings may wander over the entire body, intersecting each other and forming elaborate figures with crescentic edges (*E. gyratum*). Occasionally new rings develop concentrically around older ones. The forms and varieties of color produced give rise to the name *E. iris*. *E. bullosum*. See *E. vesiculosum*. *E. circinatum*. See *E. annulare*. *E. congestivum*, *E. hyperæmicum*; a mere congestion of the skin; the simplest form of erythema. Swelling is absent or insignificant in the congested areas, and the tint of redness varies from the brightest red to a rosy or purple hue. *E. endemicum*. See *Pellagra*. *E. Epidemic*. See *Acrolytia*. *E. exudativum*, an acute or subacute non-contagious, inflammatory skin-disease, characterized by the development of symmetrically distributed, raised erythematous patches, usually discrete, varying greatly in form and size, accompanied by slight transudation of blood or by copious hemorrhage into the skin, occasionally terminating as vesicles or blebs, and specially liable to relapse. This may be attended with constitutional rheumatic symptoms. *E. figuratum*, is marked by efflorescence in gyrate lines. *E. fugax*, a variety of *E. hyperæmicum*; it consists in a transitory redness of a patchy character, suddenly appearing on the face and trunk of young individuals and gradually disappearing in a few minutes or hours. It is frequently associated with indigestion, worms, etc. *E. furfuracea*. Synonym of *Pityriasis rosea*. *E. gangrænosum*, a term applied to spontaneous patches of superficial gangrene or ulceration seen chiefly in hysterical women. They are undoubtedly self-induced, and are asymmetric, usually on the left side, and in easily accessible positions. *E. gyratum*. See *E. annulare*. *E. hyperæmicum*. See *E. congestivum*. *E. induratum*, a variety of *E. exudativum* attacking the calf, or the leg immediately below, more frequently than the front of the legs. It occurs either in diffuse, ill-defined patches or in nodules, bright-red at first but gradually assuming a violet hue. The nodules may be superficial or deep, a quarter of an inch to an inch or more in diameter, and may be slowly absorbed, or necrose and slough out, leaving a very indolent ulcer. The condition is most common in strumous individuals. *E. intertrigo*, *intertrigo*; *eczema intertrigo*; a chronic form of *E. hyperæmicum* resulting from pressure or the rubbing together of folds of skin. It is common in infants and fat adults. *E. iris*, *Herpes iris*. See *E. annulare*. *E. keratodes*, a diffuse condition of tylosis of the palms and soles. *E. leve*, a common skin affection, a variety of *E. hyperæmicum*, likely to appear upon the tense skin of dropsical parts. It may go on to dermatitis and sloughing. *E. marginatum*, an infrequent variety of *E. multifforme*, which generally begins as a flat disc a quarter or half an inch in diameter, and very rapidly enlarges at the periphery, subsiding *papipus u* in the center. It has similar adjacent lesions, and in a few days traverses the circumference of a limb, or a large area on the trunk, leaving a fawn-colored pigmentation that slowly disappears. *E. multifforme*, *E. polymorpha*; a variety of *E. exudativum*, common in young adults of either sex, and appearing especially in spring and autumn. The eruption first appears almost invariably on the backs of the hands and feet thence spreading to the forearms and legs. In severe cases the trunk and face, and even the mucous membranes may be affected. The lesions consist of flat or slightly convex papules, sharply defined, deep red or

purplish in color, varying in size from a pin's head up, partially disappearing on pressure. This is the commonest form (*E. papulatum*). If the papules coalesce to form larger lesions the condition is described as *E. tuberculatum*. *E. nodosum*, *dermatitis contusiformis*, a further development of *E. tuberculatum*. Multiple (seldom more than a dozen) raised, rosy patches, round or oval in the direction of the limb, from one-half to three inches in diameter, suddenly develop along both tibiae, and often along the ulnar side of the forearms. They are exquisitely tender, tense and shining. The condition chiefly occurs in children and delicate young women. See *Bacillus of Demme* under *Bacteria*, *Synonymatic Table of*. *E. papulatum*. See *E. multifforme*. *E. paratrimma*, the erythema that appears over a bony prominence, etc., immediately before the formation of a bed-sore. It is a variety of *E. hyperæmicum*. *E. pellagrosus*. A synonym of *Pellagra*. *E. pernio*. See *Pernio*. *E. polymorphe*. See *E. multifforme*. *E. purpuricum*, *Purpura thrombotica*; a variety of erythema resembling *Peliosis rheumatica*, but characterized by its erythematous appearance and the absence of alteration by pressure. It is attended with no general symptoms, or with slight pains in some of the joints, or with edema of the legs. *E. roseola*, a variety of *E. hyperæmicum*; it consists in the development of congestive patches of a delicate rose-color, scarcely raised above the surface of the skin, varying in size from a split-pea to a fingernail, and either diffused over the whole surface of the body or in figured groups. It is common in young children in association with digestive troubles. Its different stages have been called *Roseola infantilis*, *æstivalis*, *autumnalis*, *annulata*, but these terms are not now generally used. *E. scarlatiniforme*, a variety of *E. hyperæmicum*; it appears as a vivid, punctiform eruption, sharply defined in places, attended with high temperature, often seen after injuries or surgical operations. It is followed by furfuraceous desquamation. *E. scarlatiniforme desquamativum*, a more pronounced form of *E. scarlatiniforme*, with a greater tendency to be diffuse instead of punctiform, of longer duration, and with a great liability to recur at certain seasons. The mucous membranes are often involved and desquamation occurs in large flakes. *E. simplex*, a variety of *E. hyperæmicum*; characterized by a congestive redness of moderate intensity. It appears as diffuse or circumscribed, variously-sized lesions, which are usually not raised above the integument. It may be idiopathic or symptomatic; and if the latter, brought about by a great number of external irritants, including heat and cold, etc. *E. solare*, *E. simplex* due to the heat of the sun. *E. tuberculatum*. See *E. multifforme*. *E. tuberosum*. Same as *E. tuberculatum*. *E. urticans*, the early or pink stage of the urticarial wheal. It is a variety of *E. hyperæmicum*. *E. vesiculosum*, the occurrence of vesication in the progress of *E. multifforme*. If the blebs are large the condition is termed *E. bullosum*.

**Erythematous** (*er-ith-em'-at-us*) [ἐρυθμα, a blush]. Of the nature of erythema.

**Erythemoid** (*er-ith-em'-oid*), **Erythematoïd** (*er-ith-em'-at-oid*) [ἐρυθμα, erythema; εἶδος, resemblance]. Resembling erythema.

**Erythrasma** (*er-ith-ras'-mah*) [ἐρυθράς, red]. A rare disease of the skin, always attacking the axillæ or inguinal regions, or the nates. It forms reddish or brownish, sharply defined, slightly raised, desquamating patches, that cause no itching or inconvenience. It is due to the microorganism, *Microsporon minutissimum*, and is readily curable.

**Erythremelalgia** (*er-ith-rem-el-al'-je-ah*). See *Erythromelalgia*.

**Erythremia** (*er-ith-re'-me-ah*) [*ἐρυθρόμια*, red; *αἷμα*, blood]. 1. The normal condition of the arterial blood. 2. Arterial blood in the veins.

**Erythrin** (*er'-ith-rin*) [*ἐρυθρίν*, red],  $C_{20}H_{22}O_{10}$ . An ether-like derivative of orsellinic acid. It occurs in the lichen *Rocella fusiformis*, and is extracted from it by means of milk of lime. It crystallizes with  $H_2O$  molecules of water and is soluble with difficulty in hot water. Exposure to the air causes it to assume a red color.

**Erythrina** (*er-ith-ri'-nah*) [*ἐρυθρίνα*, red]. A genus of leguminous trees, shrubs and herbs, of some 25 species, three or more of which grow in the U. S. **E. coral-lodendron**, coral tree of tropical America, is sedative, hypnotic, diuretic, purgative, vermifuge and pectoral. Other species have similar properties. Unof.

**Erythrine** (*er'-ith-rin*) [*ἐρυθρίνη*, red]. Red.

**Erythrism** (*er'-ith-rizm*) [*ἐρυθρίσμος*, red]. In biology, applied to conditions of dichromatism in which the normal colors of the integument are affected by an excess of red pigment, as often shown in the plumage of a bird.

**Erythrite** (*er'-ith-rit*). See *Erythrol*.

**Erythroblast** (*er-ith'-ro-blast*) [*ἐρυθρόβλαστος*, red; *βλαστός*, germ]. A rudimentary red blood-corpuscle.

**Erythrocarpus** (*er-ith'-ro-kar'-pus*) [*ἐρυθρόκαρπος*, red; *καρπός*, fruit]. In biology, red-fruited.

**Erythrochloropia** (*er-ith'-ro-klo-ro'-pe-ah*) [*ἐρυθρόχλωρος*, red; *χλωρός*, green; *ὤψ*, eye]. A form of subnormal color-perception in which green and red are the only colors correctly distinguished.

**Erythrochloropy** (*er-ith'-ro-klor'-o-pe*) [*ἐρυθρόχλωρος*, red; *χλωρός*, green]. Ability to distinguish red and green colors only.

**Erythrocrucorin** (*er-ith'-ro-kru'-or-in*) [*ἐρυθρόκρουορ*, red; *crucor*, blood]. Same as *Hemoglobin*.

**Erythrocyte** (*er-ith'-ro-sit*) [*ἐρυθρόκυτος*, red; *κύτος*, cell]. A red blood-corpuscle.

**Erythrocytosis** (*er-ith'-ro-si-to'-sis*) [*ἐρυθρόκυτωση*, red; *κύτος*, cell]. The formation of red blood-corpuscles.

**Erythrodermia** (*er-ith'-ro-der'-me-ah*) [*ἐρυθρόδερμα*, red; *δέρμα*, skin]. Abnormal redness of the skin.

**Erythrodermitis** (*er-ith'-ro-der-mit'-tis*) [*ἐρυθρόδερμιτις*, red; *δέρμα*, skin; *ιτις*, inflammation]. A chromodermatosis characterized by erythema and superficial dermatitis.

**Erythrodextrin** (*er-ith'-ro-d-eks'-trin*) [*ἐρυθρόδεκστριν*, red; *dexter*, right]. A dextrin formed by the action of saliva on starch. It yields a red color with iodine.

**Erythrogen** (*er-ith'-ro-jen*) [*ἐρυθρόγενος*, red; *γεννᾶν*, to produce]. A green substance that has been found in unhealthy bile, and which (apparently without good reason) has been regarded as "the base of the coloring-matter of the blood."

**Erythroglucin** (*er-ith-ro-glu'-sin*). See *Erythrol*.

**Erythrogranulose** (*er-ith-ro-gran'-u-lös*) [*ἐρυθρόγραμμα*, red; *granulum*, a little grain]. A granular substance, found in starch-grains, coloring red with iodine.

**Erythroid** (*er'-ith-roid*) [*ἐρυθρόειδος*, red; *εἶδος*, resemblance]. Reddish; of a red color.

**Erythrol** (*er'-ith-rol*) [*ἐρυθρόλος*, red],  $C_4H_{10}O_4$ . Also called *Erythroglucin*, *Erythrite* or *Phycite*. A principle which exists as erythrin (orsellinate of erythrite) in many lichens and some algae. It forms large quadratic crystals that dissolve readily in water, with difficulty in alcohol, and are insoluble in ether. It is a polyhydric alcohol with a sweet taste melting at  $126^\circ C$ . and boiling at  $330^\circ C$ .

**Erythrolein** (*er-ith-ro'-le-in*) [*ἐρυθρόλειν*, red; *oleum*, oil],  $C_{26}H_{22}O_4$ . A fatty liquid compound contained in

litmus. It is soluble in alcohol, ether, and alkalies, and in dyeing yields a purple color.

**Erythrolitmin** (*er-ith-ro-lit'-min*) [*ἐρυθρόλιτμιν*, red; *Dan.*, *lit*, lac; *moes*, pulp],  $C_{26}H_{33}O_{13}$ . A red coloring-matter obtained from litmus; it is crystalline and soluble in alcohol.

**Erythromelalgia** (*er-ith-ro mel-al'-je-ah*) [*ἐρυθρόμια*, red; *μέλος*, limb; *ἄλγος*, pain]. Red neuralgia; terminal neuritis. A variety of chronic dermatalgia characterized by burning and then aching pain of a part, usually one or more extremities, intensified by warmth and accompanied by flushing and local fever.

**Erythrophage** (*er-ith'-ro-fāj*) [*ἐρυθρόφαγος*, red; *φαγεῖν*, to eat]. Any one of the phagocytic cells which, lying about a hemorrhagic area, take up the pigment of the blood or even red-corpuscles. They are remarkable for their brilliant color (red to golden).

**Erythrophlein** (*er-ith-rof'-le-in*) [*ἐρυθρόφλεϊν*, red; *φλεῖν*, bark]. A poisonous alkaloid from *Casca bark*.

**Erythrophleum** (*er-ith-ro-fle'-um*). See *Casca Bark*.

**Erythrophobe** (*er-ith'-ro-fób*) [*ἐρυθρόφοβος*, red; *φοβέιν*, to fear]. One fearing or disliking red colors.

**Erythrophobia** (*er-ith-ro-fób-be-ah*) [*ἐρυθρόφοβία*, red; *φόβος*, fear]. Morbid intolerance of red colors; sometimes observed after operations for cataract.

**Erythrophyl** (*er-ith'-ro-fil*) [*ἐρυθρόφυλλον*, red; *φύλλον*, leaf]. In biology, a red coloring-matter found in autumn leaves, ripe fruits, etc. It is also called *Phyl-lerithrin* and *Phyterythrin*.

**Erythropia** (*er-ith-ro'-pe-ah*) [*ἐρυθρόπια*, red; *ὥψ*, vision]. A condition in which objects appear as if colored red.

**Erythropsia** (*er-ith-rof'-se-ah*) [*ἐρυθρόπσια*, red; *ὥψ*, vision]. An abnormality of vision in which all objects appear red; red vision; it has been observed in alcoholic ataxia with optic atrophy, after subcutaneous injections of strychnin.

**Erythropsin** (*er-ith-ro'-sin*) [*ἐρυθρόρσιν*, red; *ὥψ*, vision]. An organic substance of the retina. In the presence of light it is believed to form different combinations, constituting color-perception. It is called *visual purple* and *Rhodopsin*, *q. v.*

**Erythrorhetin** (*er-ith-ro-ret'-in*) [*ἐρυθρόρητιν*, red; *ῥετιν*, resin],  $C_{38}H_{36}O_{14}$ . The red resin of rhubarb.

**Erythrose** (*er'-ith-ros*) [*ἐρυθρόσος*, red],  $C_4H_8O_6$ . Tetrose. A substance derived from erythrol. It is probably a mixture of an aldose and a ketose. It is next to the lowest glucose. See *Carbohydrates*, *Table of*.

**Erythrosin** (*er'-ith-ro-sin*) [*ἐρυθρόσιν*, red],  $C_{30}H_{18}N_2O_6$ . A compound produced by the action of  $HN_3$  on tyrosin. It is used as a coloring-matter. See *Pigments*, *Conspectus of*.

**Erythrosis** (*er-ith-ro'-sis*) [*ἐρυθρόσις*, red]. Arterial plethora, or the redness of the skin due to it.

**Erythroxylin** (*er-ith-roks'-il-in*) [*ἐρυθρόξυλιν*, red; *ξύλον*, wood]. A precipitate from the tincture of *Erythroxylon coca*. It is a nerve and stimulant. Dose  $\frac{1}{4}$  to 1 grain. Unof.

**Erythroxylon** (*er-ith-roks'-il-on*) [*ἐρυθρόξυλον*, red; *ξύλον*, wood; *gen.*, *Erythroxyl*]. *Coca*, *Cuca*. The leaves of *E. coca*, a shrub indigenous to the Andes. (Not to be confounded with *cocoa*.) It contains an alkaloid, *Cocain*,  $C_{17}H_{21}NO_4$ , *q. v.*, to which its properties are mainly due. It is an aromatic tonic and cerebral stimulant, developing a remarkable power of enduring hunger and fatigue. Large doses cause hallucinations. Its effects are similar to those of coffee, but are more intense. It is much used by the natives for sustenance during long journeys. The leaves, smoked, are beneficial in hay-fever. **E. coca** (B. P.). Dose gr. ij-xv. **E.**, **Ext.**, **Fld.** Dose  $\frac{5}{16}$  ss-ij. **Extractum Cocæ Liquid** (B. P.). Dose  $\frac{5}{16}$  ss-ij. Wines and elixirs of coca are numerous.

**Erythruria** (*er-ith-ru' re-ah*) [*ἑρυθρία*, red; *οὐρ*, urine]. The passage of reddish urine. Hematuria.

**Esbach's Test.** See *Tests, Table of*.

**Eschar** (*es'-kar*) [*ἑσχα*, a scab]. The slough or scab following cauterization, burn, etc.

**Escharodermatitis** (*es-kar-der-mai'tis*) [*ἑσχα*, a scab; *δέρμα*, skin; *ῥιτις*, inflammation]. A skin inflammation marked by the formation of eschars.

**Escharosis** (*es-kar-oi'tis*) [*ἑσχα*, a scab]. The formation of an eschar; escharotic action.

**Escharotic** (*es-kar-oi'tik*) [*ἑσχα*, a scab]. 1. Caustic; productive of a slough or scab. 2. A substance that, applied to the skin, produces an eschar. A caustic.

**Eschel Blue.** See *Smalts*.

**Escherich, Bacillus of.** See *Bacteria, Synonymatic Table of*.

**Eschka's Test.** See *Tests, Table of*.

**Eschomelia** (*es-kom-el'-eh*) [*ἑσχα*, worst; *μέλος*, a limb]. A monstrosity in which there is a defective limb.

**Eschricht's Yellow Canals.** See *Canals*.

**Eschrolalia** (*es-kro-li'-le-ah*) [*αἰσχρολογία*, shameful; *λογία*, speech]. Same as *Coprolalia*.

**Eschschromythesis** (*es-kro-mi-the'-sis*) [*αἰσχρολογία*, base; *ῥιτις*, to utter]. The utterance of obscene language by delirious or insane patients.

**Eschscholtzia** (*es-sholtz'-e-ah*) [after *Eschscholtz*, a German zoologist]. A genus of papaveraceous herbs.

**E. californica**, California Poppy, a plant growing in California, is recommended as an excellent and harmless soporific and analgesic. Dose of the fluid extract, ℥xv-xxx. Unof.

**Esculapian** (*es-kul'-e-pe-an*) [*Esculapius*, the god of medicine]. 1. Medical; pertaining to medicine. 2. A physician.

**Esculetin** (*es-kul'-e-tin*) [*Esculus*, the Italian oak],  $C_8H_6O_4$ . A substance present in the bark of the horse chestnut, partly free, and partly as the glucosid *esculin*, from which it is prepared by decomposition with acids or ferments. It crystallizes with a molecule of water in fine needles or leaflets.

**Esculin** (*es-kul'-in*) [*Esculus*, the Italian oak],  $C_{12}H_{16}O_9$ . A glucosid contained in the bark of the horse chestnut, *Esculus hippocastanum*. It crystallizes in fine needles with  $1\frac{1}{2}$   $H_2O$ , and melts when anhydrous at 205 C.; it is soluble with difficulty in water and alcohol.

**Eserin** (*es'-er-in*) [*Esera*, native name of the plant or bean],  $C_{15}H_{21}N_3O_7$ . A poisonous alkaloid derived from *Phytoligma*, q. v. It is chiefly used to produce myosis, to lessen intra-ocular tension, etc.

**Esiphonal** (*es'-i-fun-al*) [*es*, priv.; *σῆμα*, a tube]. Having no siphons, as certain shells; asiphonate.

**Esmarch's Bandage, or Apparatus.** An elastic rubber bandage used upon a limb to be amputated, in order to drive the blood out of it by the pressure of progressive application of turns about the limb toward the trunk.

**E.'s Operation.** See *Operations, Table of*.

**E.'s Paste**, a caustic paste composed of one part each of white arsenic and sulphate of morphia, eight parts of calomel, and forty-eight of gum arabic. **E.'s Tubes**, test-tubes lined by a thin layer of gelatin for culture purposes.

**Esmarching** (*es'-march-ing*) [after *Esmarch*, a German surgeon]. The application of the Esmarch bandage, so as to drive the blood out of a part or member.

**Esocolitis** (*es-ko-li'tis*) [*ἑσω*, within; *κόλον*, colon]. Inflammation of the mucous membrane of the colon; dysentery.

**Esoderm** (*es-od'-erm*) [*ἑσω*, within; *δέρμα*, skin]. In biology, the delicate membrane forming the ental surface of the integuments of insects.

**Esodic** (*es-sod'-ik*) [*ἑς*, into; *ὁδός*, way]. Afferent or centripetal; conveying impressions toward the central nervous system—applied to certain nerves and nerve-filaments.

**Esoenteritis** (*es-o-en-ter-i'tis*) [*ἑσω*, inward; *ἐντέρον*, bowel; *ῥιτις*, inflammation]. Inflammation of the mucous membrane of the intestines.

**Esogastritis** (*es-o-gas-tri'tis*) [*ἑσω*, inward; *γαστήρ*, belly; *ῥιτις*, inflammation]. Inflammation of the mucous membrane of the stomach.

**Esogenetic** (*es-o-gen-et'-ik*) [*ἑσω*, within; *γενᾶν*, to produce]. Produced or arising within the organism.

**Esophagalgia** (*es-sof-ag-al'-je-ah*) [*οἰσοφαγία*, esophagus; *ἄλγος*, pain]. Pain in the esophagus.

**Esophageal** (*es-sof-aj'-e-al* or *es-sof-aj'-e'-al*) [*οἰσοφαγός*, esophagus]. Pertaining or belonging to the esophagus.

**E. Glands.** See *Gland*. **E. Plexus.** See *Plexus*.

**Esophagectomy** (*es-sof-aj-ek'-to-me*) [*οἰσοφαγός*, esophagus; *ἐκτομή*, a cutting out]. Extirpation of cancer of the gullet with resection of the walls of the organ.

**Esophagectomy** (*es-sof-aj-ek'-to-me*) [*οἰσοφαγός*, esophagus; *ἐκτομή*, away from a place]. Displacement of the esophagus.

**Esophagism** (*es-sof-aj'-izm*), **Esophagismus** (*es-sof-aj'-iz'-mus*) [*οἰσοφαγός*, esophagus]. Spasmodic contraction of the esophagus.

**Esophagitis** (*es-sof-aj'-i'tis*) [*οἰσοφαγός*, esophagus; *ῥιτις*, inflammation]. Inflammation of the esophagus.

**Esophagocele** (*es-sof-aj'-o-sel*) [*οἰσοφαγός*, esophagus; *κήλη*, hernia]. An abnormal distention of a portion of the esophagus or of the entire tube; hence it may be general, annular, or pouched.

**Esophagodynia** (*es-sof-aj'-o-din'-e-ah*) [*οἰσοφαγός*, esophagus; *δύνη*, pain]. Same as *Esophagalgia*.

**Esophagomalacia** (*es-sof-aj'-o-mal'-e-ah*) [*οἰσοφαγός*, esophagus; *μαλακία*, softness]. Morbid softening of the esophagus.

**Esophagomycosis** (*es-sof-aj'-o-mi-ko'-sis*) [*οἰσοφαγός*, esophagus; *μύκης*, a fungus]. Mycotic disease of the esophagus.

**Esophagopathy** (*es-sof-aj'-op'-ath-e*) [*οἰσοφαγός*, esophagus; *πάθος*, disease]. Any disease of the esophagus.

**Esophagoplegia** (*es-sof-aj'-o-pl'e'-je-ah*) [*οἰσοφαγός*, esophagus; *πληγή*, a stroke]. Paralysis of the esophagus.

**Esophagorrhagia** (*es-sof-aj'-or-a'-je-ah*) [*οἰσοφαγός*, esophagus; *ῥήγναι*, to break forth]. Hemorrhage from the esophagus.

**Esophagoscope** (*es-sof-aj'-o-skōp*) [*οἰσοφαγός*, esophagus; *σκοπεῖν*, to view]. An instrument for examining the interior of the esophagus by artificial light.

**Esophagoscopy** (*es-sof-aj'-os'-ko-pe*) [*οἰσοφαγός*, esophagus; *σκοπεῖν*, to view]. Examination of the interior of the esophagus.

**Esophagospasm** (*es-sof'-aj'-o-spazm*). See *Esophagismus*.

**Esophagostenosis** (*es-sof-aj'-o-ste-no'-sis*) [*οἰσοφαγός*, esophagus; *στένωσις*, constriction]. Constriction of the esophagus.

**Esophagostomy** (*es-sof-aj'-os'-to-me*) [*οἰσοφαγός*, esophagus; *στόμα*, mouth]. The formation of an artificial opening in the esophagus.

**Esophagotome** (*es-sof-aj'-o-tōm*) [*οἰσοφαγός*, esophagus; *τείνειν*, to cut]. An instrument devised for cutting into the esophagus.

**Esophagotomy** (*es-sof-aj'-ot'-o-me*) [*οἰσοφαγός*, esophagus; *τομή*, a cutting]. Opening of the esophagus by an external incision.

**Esophagus** (*es-sof'-ag-us*) [*οἰσφᾶν*, to carry; *φαγεῖν*, to eat]. The gullet. The musculo-membranous canal, about nine inches in length, extending from the pharynx to the stomach.

**Esophoria** (*es-o-fo'-re-ah*) [*ἔσω*, inward; *φορεῖν*, to bear]. See *Heterophoria*.

**Esorhinus** (*es-or-in'-us*) [*εἴσω*, within; *ῥίς*, nose]. Lissauer's term for a skull in which the angle formed between the lines running from the premaxillary point and the incisive foramen to the naso-frontal point is between  $0^\circ$  and  $20^\circ$ .

**Esoteric** (*e-so-ter'-ik*) [*ἰσωτερός*, within; *ἑσωτερικός*, secret, mysterious]. Arising within the organism.

**Esotropia** (*e-so-tro'-pe-ah*) [*εἴσω*, inward; *τρίπειν*, to turn]. Convergent strabismus. See *Strabismus*.

**Essence** (*es'-ens*) [*essentia*, essence]. 1. That quality of a thing giving it peculiarity of power. 2. The peculiar qualities of a drug extracted and reduced to a small compass. 3. A solution of an essential oil in alcohol.

**Essential** (*es-en'-shal*) [*essentia*, essence]. Pertaining to the essence of a substance. Pertaining to the peculiar and distinctive characteristic of a disease. **E. Oils**; the essential or volatile oils (*attars*) are found extensively distributed throughout the vegetable kingdom. They occur in almost all parts of the plants except the cotyledons of the seeds. They impart the peculiar and characteristic odors to the plants, furnish the perfumes, spices, and aromatics, and many of them possess valuable medicinal properties. Chemically, essential oils are often divided roughly into three classes,—oils composed of hydrocarbons only, oils containing hydrocarbons mixed with oxygenated products, and oils containing sulphur compounds. A more exact, but still quite general, chemic division is the following: 1. Oils consisting chiefly of *terpenes* ( $C_{10}H_{16}$ ) and oxidized products allied thereto; examples, oil of turpentine, oil of lemon, oil of camphor. 2. Oils consisting chiefly of *cedrenes* ( $C_{15}H_{24}$ ) and oxidized products allied thereto; examples, oil of cedar, oil of cubeb, oil of cloves. 3. Oils consisting chiefly of *aromatic aldehyds* and allied bodies; examples, oil of bitter almonds, oil of cinnamon. 4. Oils consisting chiefly of *etheral salts*. These may be either (*a*) oxygen salts, as in oil of wintergreen, or (*b*) sulphur salts, as in oil of mustard, oil of garlic. **E. Paralysis**, paralysis without characteristic anatomic lesions.

**Ester** (*es-ter*). Any compound ether in which both an alcohol radical and an acid radical are present. **E. Halogen**, a derivative of the alcohols, obtained by heating them with the hydrogen haloids, or with the halogen derivatives of phosphorus. **E. Haloid**, also called *alkylogen*; any product of the action of the halogen hydrid on the alcohols. The haloid esters are perfectly analogous to the true esters produced by the action of alcohols and oxygen acids.

**Esthacyte** (*es'-thas-it*) [*αἰσθησάται*, to perceive; *κύτος*, a cell]. In biology, one of the sense-cells of a sponge, granular, spindle-shaped, bearing palpo-cils.

**Esthematology** (*es-them-at-ol'-o-je*) [*αἰσθημα*, a perception; *λόγος*, science]. The science of the sensations and of the sense-apparatus.

**Esthesia** (*es-the'-ze-ah*) [*αἰσθησις*, sensation]. 1. Capacity of perception; feeling, or sensation. 2. Any nervous disease that affects the senses or perceptions.

**Esthesin** (*es'-thes-in*) [*αἰσθησις*, sensibility],  $C_{35}H_{59}NO_3$ . A feebly basic body, said by Thudichum to be obtainable from brain-tissue.

**Esthesiodermia** (*es-the-ze-o-der'-me-ah*) [*αἰσθησις*, sensation; *δέρμα*, skin]. An affection of the skin with disturbance of the sensory function, which may be decreased, increased, or abolished.

**Esthesiogen** (*es-the'-ze-o-jen*) [*αἰσθησις*, sensation; *γεννᾶν*, to produce]. Any material, as a metal, which in certain states of the body appears to have a specific effect upon the sensibility of the patient.

**Esthesiogenic** (*es-the-ze-o-jen'-ik*) [*αἰσθησις*, sensation; *γεννᾶν*, to produce]. Relating to the production of sensations.

**Esthesiogeny** (*es-the-ze-o'-en-e*) [*αἰσθησις*, sensation; *γεννᾶν*, to produce]. The production of altered or perverted sensations.

**Esthesiography** (*es-the-ze-og'-ra-fe*) [*αἰσθησις*, sensation; *γράφειν*, to write]. A description of the organs of sensation and perception.

**Esthesiology** (*es-the-ze-ol'-o-je*) [*αἰσθησις*, a feeling; *λόγος*, science]. A treatise on, or the science of, the senses.

**Esthesiomania** (*es-the-ze-o-ma'-ne-ah*) [*αἰσθησις*, feeling; *μανία*, madness]. Insanity marked by perverted moral feeling and by purposeless eccentricities.

**Esthesiometer** (*es-the-ze-om'-et-er*) [*αἰσθησις*, sensation; *μέτρον*, a measure]. An instrument for measuring tactile sensibility.

ESTHESIOMETER OF SIEVEKING. (From Aitkin.)

**Esthesiometry** (*es-the-ze-om'-et-re*) [*αἰσθησις*, sensation; *μέτρον*, measure]. The measurement or estimation of tactile sensibility.

**Esthesioneurosis** (*es-the-se-o-nu-ro'-sis*) [*αἰσθησις*, perception; *νεῦρον*, nerve]. Any nervous disease in which there are disorders of sensation.

**Esthesis** (*es-the'-sis*) [*αἰσθησις*, sensation]. Sensibility; sense-perception; a feeling or sense-impression.

**Esthesodic** (*es-the-sod'-ik*) [*αἰσθησις*, sensation; *ὁδός*, a way]. Serving to convey sense-impressions, as to the brain.

**Esthetophore** (*es-thet'-o-for*) [*αἰσθητός*, sensible; *φέρειν*, to bear]. In biology, the hypothetic physical basis of consciousness (Cope).

**Esthiomene** (*es-the-om'-en-e*) [*ἔσθιομένη*, eating]. Lupus excedens; lupus of the vulva; a very rare and chronic disease commencing during the menstrual period. It is a form of ulceration accompanied by fibrous overgrowths of the surrounding and adjacent tissues. It produces hard, cicatricial tissue on healing. There is a process of imperceptible disintegration of the tissues, but no sloughing. Death may result from hemorrhage or perforation into the peritoneal cavity or bladder.

**Esthiomeneous** (*es-the-om'-en-us*) [*ἔσθιομένη*, eating]. Corroding; phagedenic.

**Esthophysiology** (*es-tho-fiz-e-ol'-o-je*) [*αἰσθησις*, sensation; *φύσις*, nature; *λόγος*, science]. The physiology of sensation and of the sense-apparatus.

**Estival** (*es'-tiv-al*) [*æstas*, summer]. In biology, produced in summer.

**Estivation** (*es-tiv-a'-shun*) [*æstivare*, to pass the summer]. In biology, (*a*) the dormant condition of certain plants and animals during the summer; (*b*) the arrangement of the floral organs in the bud.

**Estlander's Method**. See *Treatment, Methods of*. **E. Operation**. See *Operations, Table of*.

**Estromania** (*es-tra-ma' ne-ah*) [*εἰστροπία*, gad fly; lust; *αἵμα*, madness]. Same as *Nymphomania*.

**Estrual** (*es' trued'*) [*εἰστροπία*, gad-fly]. Pertaining to estruation.

**Estruation** (*es-tru a' shun*) [*εἰστροπία*, gad fly]. The condition of being under the influence of intense sexual passion.

**Estrum, Estrus** (*es'-trus, -strus*) [*εἰστροπία*, gad-fly]. Any vehement passion or desire; the sensation in animals occurring at the crisis of coition. The orgasm.

**Estuarium** (*es-tu a' re-um*) [*αἶθρ*, heat]. A vapor-bath. Also a stove designed to apply warm, dry air to all parts of the body at the same time.

**Estuation** (*es-tu a' shun*) [*αἶθρ*, heat]. Heat; boiling; fever; a heated state.

**Esypos** (*es' yu*) [*ἐσψος*]. The yolk or suint of wool. See *Suint*.

**Ethal** (*et' tal*) [*αἶθρ*, the upper air],  $C_{16}H_{33}OH$ . Cetyl alcohol; a substance separated from spermaceti by Chevreul, and named by him. It is a solid, fusible at nearly the same point as spermaceti, and on cooling crystallizes in plates. It is susceptible of union with various bases, with which it forms salts or soaps.

**Ethaldehyd** (*et' al' de-aid*). See *Acetaldehyde*.

**Ethane** (*et' an*) [*αἶθρ*, the upper air]. Paraffin; any one of the products of the dry distillation of wood, turf, bituminous shales, lignite, and bituminous coal, and other coals rich in hydrogen. The ethanes are thus present in illuminating gas and the light tar-oils. Petroleum contains them already formed. The lowest members, up to butane, are gases at ordinary temperatures, soluble in alcohol and ether. The intermediate members form colorless liquids of faint, characteristic odor, insoluble in water, but miscible with alcohol and ether. The higher members are crystalline solids (paraffins), soluble in alcohol, and more readily in ether. The specific gravities of the liquid and solid hydrocarbons increase with the molecular weights, but they are always less than the specific gravity of water. The boiling points, too, rise with the molecular weights. The isomerids of normal structure possess the highest boiling points; the lowest are those of the quaternary hydrocarbons. For *Table of Ethanes* see under *Hydrocarbon*.

**Ethene** (*et' en*). Same as *Ethylene*. **E. Chlorid**. See *Anæthum*.

**Ether** (*et' ther*) [*αἶθρ; αἰθήρ*, the upper air]. 1. The tenuous subtle fluid filling space and interpenetrating all bodies; the medium of transmission of the vibratory activities called light, heat, electricity, and magnetism. 2. A thin, colorless, volatile, and highly inflammable liquid; in composition a diethylidic oxide ( $C_2H_5)_2O$ , known also as ethylic ether. It is used mainly as a solvent for fats and oils, and as an anesthetic. Internally it is anæsthetic, antispasmodic, diaphoretic, and narcotic. Inhaled it is an anæsthetic, and a cardiac stimulant in toxic doses, paralyzing the respiratory centers. See also *Anæsthetic*. The term is used also to designate a large class of organic compounds. See *Table* annexed. **E. Acetic**, has properties like those of ethylic ether. Dose  $m \times \frac{5}{3}$ . **E., Commercial**, contains 34 per cent of ether. It is unfit for use except as a solvent. **E. fortior**, should contain 94 per cent. of ethylic ether. Dose  $m \times \frac{5}{3}$ . **E., Hydriodic**, unof. Dose for inhalation  $m \times \frac{5}{3}$ . **E., Hydrobromic**, unof. Dose  $m \times \frac{5}{3}$ . **E. Oleum**, contains equal parts of ether and heavy oil of wine. **E., Spt.**, of, ether 32.5 and alcohol 67.5. **E., Comp. Spt.**, of, Hoffman's anodyne. Ether 32.5, alcohol 65, ethereal oil 2.5 per cent. Dose  $m \times \frac{5}{3}$ . **E. nitrous, Spirit**, *æther spirit of nitro*, a solution of ethyl nitrite in alcohol. Dose  $\frac{5}{3}$  ss. There is also a large class of mainly volatile

compounds known as ethers which are products of the union of two monovalent alcohol radicals through the agency of an oxygen atom. They are the oxides of the alcohol radicals, and are neutral, volatile bodies, nearly insoluble in water. The lowest members are liquid; the highest are solids. **E.-acids**, the so-called neutral esters. They are not volatile; are soluble in water, and yield bases with salts. **E.-drinking, E.-intoxication**, a form of tipping somewhat common in some parts of Ireland. Thus taken, ether is similar in effects to alcohol, but more rapid in action, and its use is attended with profound moral degeneration. **E., Mixed**, ether containing different alcohol radicals. **E., Simple**, ether containing two similar alcohol radicals.

TABLE OF ETHERS.  
OF THE FATTY COMPOUNDS.

| NAME.          | FORMULA.            | PHYSICAL CONDITION.                       | BOILING-POINT (CENTIGRADE) | SPECIFIC GRAVITY.      |
|----------------|---------------------|---|----------------------------|------------------------|
| Methyl, . . .  | $(CH_3)_2O$         | Gas, normally, Liquid at $-23^{\circ} C.$ |                            |                        |
| Ethyl, . . .   | $(C_2H_5)_2O$       | Liquid.                                   | $35^{\circ}$               | 0.736 at $0^{\circ}$ . |
| Propyl, . . .  | $(C_3H_7)_2O$       | Liquid.                                   | $60-62^{\circ}$            |                        |
| Butyl, . . .   | $(C_4H_9)_2O$       |   |                            |                        |
| Amyl, . . .    | $(C_5H_{11})_2O$    | Liquid.                                   | $176^{\circ}$              | 0.779.                 |
| Cetyl, . . .   | $(C_{16}H_{33})_2O$ | Solid.                                    | $300^{\circ}$              |                        |
| Vinyl, . . .   | $(C_2H_3)_2O$       |   | $39^{\circ}$               |                        |
| Allyl, . . .   | $(C_3H_5)_2O$       |   | $85^{\circ}$               |                        |
| Vinyl ethyl, . | $C_2H_3O.C_2H_5$    | Liquid.                                   | $35.5^{\circ}$             |                        |
| Allyl ethyl, . | $C_3H_5O.C_2H_5$    | Liquid                                    | $66^{\circ}$               |                        |

**Ethereal** (*e-the' re-al*) [*αἶθρ*, the upper air]. Pertaining to the ether or to ether.

**Ethereomania** (*e-the-re-o-ma' ne-ah*) [*αἶθρ*, ether; *μανία*, madness]. The mania for drinking ether; ether-intoxication.

**Ethereomaniac** (*e-the-re-o-ma' ne-ak*) [*αἶθρ*, ether; *μανία*, madness]. One who is addicted to the use of ether as a stimulant.

**Etherify** (*et' ther-if-i*) [*αἶθρ*, ether; *facere*, to make]. To convert into ether.

**Etherism** (*et' ther-izm*) [*αἶθρ*, ether]. The phenomena produced upon the animal economy by the administration of ether.

**Etherization** (*e-the-riz-a' shun*) [*αἶθρ*, ether]. The administration of ether to produce anesthesia. This is effected by inhalation of the vapor.

**Etheromania** (*e-the-r-o-ma' ne-ah*) [*αἶθρ*, ether; *μανία*, madness]. See *Ethereomania*.

**Ethics** (*eth'-iks*) [*ἠθικός*, moral]. The science of human feelings, thoughts, and actions relating to duty or

morality. **E., Medical**, the duties a physician owes to himself, his profession and his fellow-men.

**Ethidene** (*eth'-id-en*) (*ether*, ether),  $C_2H_4$ . Ethyldene; a bivalent radicle. **E. Chlorid**, or **Dichlorid**, a colorless, transparent, oily fluid, tasting and smelling like chloroform, with a specific gravity of 1.174 at 17° C., and boiling at 60° C. It is prepared from aldehyd by acting upon it with pentachlorid of phosphorus; it is also formed as a bye-product in the preparation of chloral, and is separated by distillation and subsequent fractionation. It is insoluble in water, but soluble in alcohol, chloroform, ether, and oils. It is less inflammable than chloroform, but rapidly decomposes. It has been used as a general anesthetic. See *Anesthetic*. **E. Diethylate**. See *Acetal*.

**Ethiopification** (*e-the-op-if-ik-a'-shun*) [*αιθιοψ*, an Ethiopian; *facere*, to make]. A darkening of the skin such as sometimes results from the misuse of mercurial, silver, or arsenical remedies.

**Ethmocephalus** (*eth-mo-sef'-al-us*) [*ἠθμός*, ethmoid; *κεφαλή*, head]. A variety of single autositic monsters of the species cyclocephalus, in which there is a representative of the nose in the shape of a proboscis terminating anteriorly in two imperfect nostrils or in a single opening. There are two eyes and two eye-sockets.

**Ethmocranial** (*eth-mo-kra'-ne-al*) [*ἠθμός*, ethmoid; *κρανίον*, skull]. Relating to the ethmoid and to the rest of the cranium.

**Ethmofrontal** (*eth-mo-frun'-tal*) [*ἠθμός*, ethmoid; *frontalis*, front]. Relating to the ethmoid and frontal bones.

**Ethmoid** (*eth'-moid*) [*ἠθμός*, a sieve; *εἶδος*, likeness]. The cribriform bone of the nose, perforated for the transmission of the olfactory nerve; it forms a part of the base of the skull.

**Ethmoid or Ethmoidal** (*eth'-moid*, *eth-moi'-dal*) [*ἠθμός*, a sieve; *εἶδος*, likeness]. Relating to the ethmoid bone.

**Ethmoiden** (*eth-moi'-den*) [*ἠθμός*, a sieve; *εἶδος*, likeness]. Belonging to the ethmoid bone in itself.

**Ethmoiditis** (*eth-moi-d-i'-tis*) [*ἠθμός*, a sieve; *εἶδος*, likeness; *ιτις*, inflammation]. Inflammation of the ethmoid bone, or of the ethmoid sinuses.

**Ethmoplecosis** (*eth-mo-ple-ko'-sis*) [*ἠθμός*, sieve; *πλέκειν*, to twine; *ρῶσος*, disease]. Any disease attacking the cellular tissue.

**Ethmoturbinal** (*eth-mo-tur'-bin-al*) [*ἠθμός*, a sieve; *turbo*, a top]. Relating to the turbinal portions of the ethmoid bone, forming what are known as the superior and middle turbinated bones.

**Ethmyphe** (*eth'-mif-e*) [*ἠθμός*, sieve; *ἰψή*, web]. The connective tissue.

**Ethmyphitis** (*eth-mif-i'-tis*) [*ἠθμός*, sieve; *ἰψή*, web; *ιτις*, inflammation]. Inflammation of the ethmyphe or connective tissue; cellulitis.

**Ethnic** (*eth'-nik*) [*ἔθνος*, a race]. Pertaining to race. **E. Idiocy**. See *Idiocy*, *Ethnic*.

**Ethnology** (*eth-nol'-o-je*) [*ἔθνος*, a nation; *λόγος*, science]. The comparative study of the races of mankind.

**Ethoxycaffeïn** (*eth-oks-e-kaf'-e-in*),  $C_{10}H_{14}N_4O_3$ . A remedy recommended to relieve the pain of herpes zoster, migraine, and neuralgia. In overdoses it has a toxic effect; gr. viij causes drunkenness and vomiting. Dose gr. iv. Unof.

**Ethusa** (*e-thu'-sah*) [*αιθευ*, to burn]. A genus of umbelliferous plants. **E. cynapium**, or fools' parsley, has poisonous qualities. It was formerly used as an emmenagogue. Unof.

**Ethusin** (*e-thu'-sin*) [*αιθευ*, to burn]. A poisonous alkaloid obtainable from *Ethusa cynapium*, or fools' parsley.

**Ethyl** (*eth'-il*) [*αιθῆρ*, ether; *ἴζη*, material],  $C_2H_5$ . The hypothetical radicle of alcohol. **E. Blue**. See *Pigments*, *Conspectus of*. **E. Bromid**,  $C_2H_5Br$ , Bromethyl; monobromethane. A rapid and transient anesthetic. Narcosis is produced in one-half to one minute, and does not last much longer. See *Anesthetic*. **E. Bromid, Liq.**, 1 in 200, used in angina pectoris. Dose ʒss-ij. Unof. **E. Chlorid**,  $C_2H_5Cl$ , Chloric Ether. An anesthetic resembling chloroform in action. It is sometimes followed by corneal opacity. See *Anesthetic*. Unof. **E. Eosin**. Same as *Primrose*. **E. Green**. See *Pigments*, *Conspectus of*. **E. Iodid**,  $C_2H_5I$ . Hydriodic Ether. Used to relieve the dyspnea of bronchitic asthma and edematous laryngitis. Dose to be inhaled,  $\mathfrak{m}$  v, three or four times daily. Unof. **E. Purple**. See *Pigments*, *Conspectus of*.

**Ethylamin** (*eth-il'-am-in*) [*αιθῆρ*, ether; *ἴζη*, material; *αμιν*]. A non-poisonous ptomaine formed in putrefying yeast, in wheat-flour, and in the distillation of beet-sugar residues. It is a strongly ammoniacal liquid, boiling at 18.7° C., and is miscible with water in every proportion; it is combustible, and possesses strong basic properties.

**Ethylene** (*eth'-il-en*) [*αιθῆρ*, ether; *ἴζη*, matter]. Olefiant gas,  $C_2H_4$ . A colorless, poisonous gas having an unpleasant, suffocating smell. It burns with a bright luminous flame, and when mixed with air explodes violently. It is one of the constituents of illuminating gas, and has strong affinities, especially for chlorin, with which it unites to form an oily compound. **E. Blue**. See *Pigments*, *Conspectus of*. **E. Bromid**, a light brownish-colored liquid with the formula,  $C_2H_4Br_2$ . It has been used with great benefit in epilepsy in  $\frac{3}{4}$  to  $2\frac{1}{4}$  minim doses two or three times daily. Unof. **E. Chlorid**. See *Ethene chlorid*.

**Ethylidene** (*eth-il'-id-en*). See *Ethidene*.

**Ethylidenediamin** (*eth-il'-id-en-di'-am-in*).  $C_2H_4(NH_2)_2$ . A poisonous ptomaine obtained from decomposing haddock. Injections of the ptomaine in mice and guinea-pigs produce abundant flow of secretion from the nose, mouth, and eyes; the pupils dilate and the eyeballs project. Violent dyspnea follows and continues until death, which does not take place for twenty-four hours or more. The heart is stopped in diastole.

**Etiolate** (*e'-te-o-lät*) [*F.*, *étioier*, to blanch]. In biology, to blanch or be whitened by the exclusion of light.

**Etiolation** (*e-te-o-lä'-shun*) [*Fr.*, *étioier*, to blanch]. The paleness or blanching, in plants or animals, from confinement in darkness.

**Etiolin** (*e'-te-o-lin*) [*Fr.*, *étioier*, to blanch]. The yellow pigment of etiole leaves.

**Etiology** (*e-te-ol'-o-je*) [*αἰτία*, a cause; *λόγος*, science]. A treatise on, or pertaining to, the causes of disease.

**Etrotomy** (*e-trol'-o-me*) [*ἑτρον*, pelvis; *τομή*, section]. A name proposed for pelvic section. Cf. *Pubetrotomy*.

**Euanthol** (*u-an'-thol*) [*εὖ*, well; *ἄνθος*, a flower; *oleum*, oil],  $C_{11}H_{14}O$ . Euanthylie aldehyd, a product of the distillation of castor-oil; it is a liquid of pungent odor, boiling at from 153° to 154° C.

**Eucalin** (*u'-kal-in*) [*εὖ*, well; *καλύπτειν*, to cover],  $C_6H_{12}O_6$ . A glucose arising from the fermentation of melitose. Its properties are similar to those of inosite. It is non-fermentable, and dextrorotatory.

**Eucalyptol** (*u-kal-ip'-tol*) [*εὖ*, well; *καλύπτειν*, to cover],  $C_{10}H_{18}O$ . An antiseptic camphor, prepared from the essential oil derived from the distillation of the leaves of *E. globulus*, and other species of the genus. It is used in bronchitis and chronic catarrh; and also in ear-diseases and in urethritis, and externally in various liniments and washes. Dose  $\mathfrak{m}$ iv, in capsules, three times daily. Unof.

**Eucalyptus** (*u-kal-íp-tus*) [*év*, well; *καλύπτειν*, to cover]. The leaves (lanceolate, after three years' growth) of *E. globulus*, or Blue Gum, native to Australia, but now cultivated in California. It contains a volatile oil, that yields *eucalyptol*, a camphor, by distillation. It is an aromatic bitter, promoting digestion. It is highly antiseptic and anti-malarial, and is valuable in atonic dyspepsia and in intermittent fevers. **E., Ext.** Dose gr. iij-x. **E., Fld. Ext.,** alcoholic. Dose  $\text{m}\times$ - $\text{z}\text{j}$ . **E. Gum** (B. P.); also called Australian Kino; a red gum from the bark of the *E. caradocensis*, *E. resinifera*, and *E. rostrata* of Australia. It is intensely astringent, and valuable in the treatment of relaxed throat. Dose gr. ij-x. The genus *Eucalyptus* embraces many species of trees and shrubs, nearly all of which appear to have useful medicinal properties. **E. Honey**, honey gathered by bees from the flowers of various species of *Eucalyptus*. It is highly aromatic, containing eucalyptol (17 per cent.), cymol, and a terpene. It is valued in Australian domestic practice as a cure for almost all catarrhal troubles. **E. Manna**, a variety of manna produced in Australia from *E. riminalis*, *E. mannifera*, and *E. dumosa*. **E. Ol.**, the volatile oil. Dose  $\text{m}\nu$ -xxx, in capsules or emulsion. **E., Tinct.** Unof. Dose  $\text{z}\text{ss}$ -ij. **E. Unguentum** (B. P.). Seldom used.

**Eucheuma** (*u-ku'-mah*) [*év* *χυμος*, well-flavored]. A genus of sea-weeds. **E. gelatinæ** and **E. spinosum**, from S. E. Asian seas, afford some part of the agar-agar of commerce.

**Euchlorin** (*u-kló'-rin*) [*év*, well; *χλωρός*, greenish]. A mixture of chlorous acid and free chlorin.

**Euchroic Acid** (*u-kro'-ik*). See *Acid*.

**Euchylia** (*u-ki'l'-e-ah*) [*év*, well; *χυμός*, the chyle]. A normal condition of the chyle.

**Euchymia** (*u-kim'-e-ah*) [*év*, well; *χυμός*, juice]. A healthy condition of the fluids of the body.

**Eucinesia, Eukinesia** (*u-kin'-e-se-ah*) [*év*, well; *κίνησις*, motion]. Normal power of movement.

**Eucrasia** (*u-kra'-ze-ah*) [*év*, well; *κράσις*, mixture]. Good health; a sound constitution; the reverse of dyscrasia.

**Eucyclic** (*u-sik'-lik*) [*év*, well; *κύκλος*, a circle]. In biology, applied to flowers, the organs in each whorl of which equal in number, and alternate with, those of the adjoining whorl.

**Eudiometer** (*u-de-om'-et-er*) [*év* *δία*, calm weather; *μέτρον*, measure]. An instrument for ascertaining the purity of the air, and for the analysis of gases.

**Eudipleural** (*u-de-plu'-ral*) [*év*, well; *δύς*, two; *πλευρά*, side]. In biology, bilaterally symmetric.

**Euesthesia** (*u-es-thé'-ze-ah*) [*év*, well; *αἴσθησις*, sensation]. The sense of well being; vigor and normal condition of the senses.

**Eugenesia** (*u-en'-es-is*) [*év*, well; *γένεσις*, generation]. In biology, fertility.

**Eugenia** (*u-j'-n'-ah*) [after Prince Eugene of Savoy]. A genus of more than 500 species of myrtaceous trees and shrubs, mostly tropical. **E. caryophyllata** yields *clove*, *q. v.* *Pimenta* is a product of *E. pimenta*. Various other species are medicinal, and some afford edible fruits. **E. chicken**. See *Chicken*.

**Eugenic Acid** (*u-en'-ik*). See *Eugenol*.

**Eugenin** (*u-en-in*). See *Caryophyllin*.

**Eugenol** (*u-j'-n'-ol*) [*eu* *genia* = *baum*, oil],  $\text{C}_{10}\text{H}_{12}\text{O}_2$ . **Eugenic Acid**; a substance that occurs in clove oil, and in allspice. It is an aromatic oil that boils at  $247^\circ\text{C}$ . It is antiseptic, and a local anesthetic in dentistry. Dose gr. xv, well diluted. Unof.

**Eukinesia** (*u-kin'-e-ah*). See *Eugenesia*.

**Eulachon Oil**, or **Eulachoni Oleum** (*u'-lak-on*, or *u-lak'-on*) [native name in North Pacific

islands]. Candle-fish Oil. The oil of the fish *Thaleichthys pacificus*, or candlefish. It is less disagreeable than cod-liver oil, for which it is often substituted. Dose  $\text{z}\text{j}$ -iv. Unof.

**Eulyptol** (*u-lip'-tol*). An antiseptic substance composed of six parts of salicylic acid and one part each of carbolic acid and essence of eucalyptus. It does not produce albuminates when applied to wounds. Dose internally,  $\text{z}\text{ij}$ -iiss per diem. See *Eucalyptus*.

**Eumerism** (*u'-mer-izm*) [*év*, well; *μέρος*, a part]. In biology, opposed to dysmerism; an aggregate of eumeristic parts.

**Eumeristic** (*u-mer-is'-tik*) [*év*, well; *μερίζειν*, to divide]. In biology, applied to an aggregation of like parts arranged in a regular series, as a tapeworm.

**Eumerogenesis** (*u-me-ro-jen'-es-is*) [*év*, well; *μέρος*, division; *γένεσις*, generation]. In biology, development by fission, or the multiplication of like parts, producing a regular series.

**Eumeromorph** (*u'-mer-o-morf*) [*év*, well; *μέρος*, a division; *μορφή*, shape]. An organism resulting from eumerogenesis, as an arthropodous bacillus-filament.

**Eunuch** (*u'-nuk*) [*εὐνοῦχος*, guardian of the couch]. One from whom the genital organs have been removed or mutilated so as to render him impotent.

**Eunuchism** (*u'-nuk-izm*) [*εὐνοῦχος*, guardian of the couch]. The condition of being a eunuch.

**Eunonymin** (*u-on'-im-in*) [*εὐώνυμος*, having a good name]. A precipitate from the tincture of Wahoo, *Eunonymus americanus*; it is tonic, laxative, and expectorant. Dose  $\frac{1}{2}$  to 3 grains. Unof.

**Eunonymus** (*u-on'-im-us*) [*εὐώνυμος*, having a good name]. 1. A genus of celastraceous shrubs and trees. 2. Wahoo. The bark of *E. atropurpureus* is an astringent tonic and purgative, resembling rhubarb, jalap, aloes, etc., but rather milder. It is beneficially employed in dropsy and hepatic affections. **E., Ext.** Dose gr. j-v. **E., Ext., Fld.** Dose  $\text{z}\text{ss}$ -ij. **E., Tinct.** (1 in 5). Dose  $\text{m}\times$ -xl. *E. americanus* has similar properties.

**Eupareunia** (*u-par-u'-ne-ah*) [*év*, well; *πάρευνος*, spouse]. Sexual compatibility.

**Eupathia, or Eupatheia** (*u-path-i'-ah*) [*εὐπάθεια*; *év*, well; *πάθος*, feeling]. 1. Euphoria. 2. Sensitiveness to impressions.

**Eupatorin** (*u-pat-o'-rin*) [*εὐπατόριον*, agrimony]. 1. A precipitate from the tincture of Thoroughwort, *Eupatorium perfoliatum*; it is aperient, emetic, febrifuge and tonic. Dose 1 to 3 grains. Unof. 2. A crystalline glucosid from *Eupatorium cannabinum* of Europe. See also *Eupurpurin*.

**Eupatorium** (*u-pat-o'-re-um*) [*εὐπατόριον*, agrimony]. A genus of composite-flowered plants. In pharmacy, *Eupatorium* denotes the leaves and flowering-tops of *E. perfoliatum*, thoroughwort, or boneset. It is a bitter tonic, diaphoretic, aperient and emetic, of value in remittent and typhoid fevers, and thought, also, to be a teniafuge. **E., Fld. Ext.** Dose  $\text{m}\times$ - $\text{z}\text{j}$ . **E. purpureum**, trumpet-weed, another American species, has similar qualities (see *Eupurpurin*), but is more markedly diuretic, as is also *E. amarissimum*, of the U. S. Many other species of this large genus are actively medicinal.

**Eupepsia** (*u-pep'-se-ah*) [*év*, well; *πέπτειν*, to digest]. Sound or normal digestion.

**Eupeptic** (*u-pep'-tik*) [*év*, well; *πέπτειν*, to digest]. Possessing a good digestion; promoting digestion.

**Euperistalsis** (*u-per-is-tal'-sis*) [*év*, well; *περί*, around; *στάσις*, compression]. The quiet peristaltic movements of the intestines in health. See *Peristalsis*.

**Euphonia** (*u-fo'-ne-ah*) [*év*, well; *φωνή*, voice]. A normal, good, and clear condition of the voice.

**Euphony** (*u'-fon-e*). See *Euphonia*.

**Euphorbia** (*u-for'-be-ah*) [*εὐφώριον*, an African plant]. A genus of some 700 species of trees, shrubs and herbs, mostly with a milky, acrid, or poisonous juice. **E. resinifera**, of Africa affords *euphorbium*. **E. lathyris**, yields oil of euphorbia, an active, but uncertain cathartic. From **E. drummondii**, drumin is prepared. In N. America, **E. corollata**, **E. ipecacuanha**, **E. vulgaris**, **E. prostrata**, and other native species have been employed in medicine, there being about 100 species in the U. S. **E. pilulifera**, of S. America and Australia, has reputed value in asthma and cardiac dyspnea. Dose of the extract gr. j.; of the fluid extract 3 ss-j; of the tincture 3 ss-j; to be used with great caution. **E. piscidia**, of tropical America, a virulent poison, is locally employed as a caustic. Many other species are actively medicinal.

**Euphorbin** (*u-for'-bin*) [*εὐφώριον*, an African plant]. A precipitate from a tincture of the root of *Euphorbia corollata*; it is an emetic, expectorant, vermifuge and arterial sedative. Dose 1/4 to 3 grains. Unof.

**Euphorbium** (*u-for'-be-um*) [*εὐφώριον*, an African plant]. An acrid gum-resin afforded by *Euphorbia resinifera* and *E. officinarum*. It is strongly purgative and vesicant, and is now mainly employed in veterinary medicine.

**Euphoria** (*u-for'-e-ah*) [*εὐφορία*, easily carried]. 1. The sense of well-being or health. 2. Ability to endure pain.

**Euphoric** (*u-for'-ik*) [*εὐφορία*, easily carried]. Marked by or pertaining to euphoria.

**Euphorin** (*u-for'-in*) [*εὐφορία*, easily carried],  $C_9O_4H_{11}$ . Phenyl-urethan, derived from anilin, a white crystalline powder, nearly insoluble in water, soluble in weak alcohol. It is recommended as a safe and rapid antipyretic in doses of from 5 to 30 grains daily. Unof. See *Phenyl-urethan*.

**Euphrasia** (*u-fra'-ze-ah*) [*εὐφροασία*, delight]. Eye-bright. A small annual, formerly much used in eye-affections. It is of utility as an astringent lotion in conjunctivitis, and invaluable in breaking up nasal catarrh and in hay-fever. **E.**, Tinct., strength 1 g. Dose m j-v.

**Eupiton** (*u'-pit-on*),  $C_{25}H_{26}O_9$ . Eupitonic acid. An aurin into which six methoxyl groups have been introduced. It forms orange-yellow crystals, melting with decomposition, at 200° C.

**Euplastic** (*u-plas'-tik*) [*εὖ*, well; *πλάσσειν*, to form]. Susceptible of being transformed into sound, healthy, and permanent tissue.

**Eupnea** (*ūp-ne'-ah*) [*εὖ*, well; *πνέειν*, to breathe]. Normal and easy respiration.

**Eupurpurin** (*u-pur'-pu-rin*) [*εὖ*, well; *purpura*, purple]. A precipitate from the tincture of *Eupatorium purpureum*; it is diuretic, stimulant, astringent, and tonic. Dose 1 to 4 grains. Unof.

**Eurhipidurous** (*u-rip'id-u'-rus*) [*εὖ*, well; *ῥίπις*, a fan; *οὐρά*, tail]. In biology, applied to such birds as have a fan-like arrangement of the tail-feathers.

**Eurhodins** (*u'-ro-dins*). Dyes derived from the phenazines by the introduction of one or more amido-groups. They are feeble bases.

**European Cholera**. Synonym of *Cholera*.

**Europhen** (*u'-ro-fen*). A preparation of iodine recommended as a substitute for iodoform. It is a valuable antiseptic, antisyphilitic, and antituberculous. In skin-diseases, a 5 to 10 per cent. ointment is employed. It is used hypodermatically in doses of gr. 1/4-iss. Chemically, it contains one atom of iodine joined to two molecules of isobutylcresol. Unof. **E.-aristol**, a preparation of europhen with aristol; a substitute for iodoform.

**Eurycephalic**, or **Eurycephalous**, (*u-ris-ef-al'-ik*, *u-ris-ef'-al-us*) [*εὐρύς*, wide; *κεφαλή*, head]. Broad-headed; having a very wide skull.

**Eurycerous** (*u-ris'-er-us*) [*εὐρύς*, broad; *κέρας*, a horn]. In biology, having broad horns.

**Eurychasmus** (*u-rik-az'-mus*) [*εὐρύς*, broad; *χάσμα*, a chasm]. Lissauer's term for a skull in which the angle formed between the lines joining the point of the wing of the vomer and the posterior nasal spine and anterior margin of the foramen magnum is between 153° and 154°.

**Eurycoronine** (*u-rik-or-o'-nin*) [*εὐρύς*, broad; *κορώνη*, crown]. In biology, having broad-crowned molar teeth.

**Eurypylous** (*u-rip'-il-us*) [*εὐρύς*, wide; *πίλη*, a gate]. In biology, applied to such structures as have wide and directly communicating openings.

**Eurystomatous** (*u-ris-to'-mat-us*) [*εὐρύς*, wide; *στόμα*, mouth]. In biology, applied to animals with large, wide mouths.

**Eurythermal** (*u-rith-er'-mal*) [*εὐρύς*, wide; *θερμη*, heat]. Capable of sustaining a great range of temperature.

**Eusomphalus** (*u-som'-fal-us*) [*εὖ*, good; *ομφαλός*, navel]. A double monstrosity in which the vital functions of each individual are independent, and in which each has a distinct umbilicus.

**Eustachian** (*u-sta'-ke-an*) [*εὐσταχυς*, rich in corn]. Pertaining to the Italian anatomist, Eustachio. **E. Artery**. See *Arteries*, Table of. **E. Catheter**, an instrument for dilating and otherwise treating the Eustachian tube; it is introduced along the floor of the nose. **E. Tube**, the canal extending from the tympanum to the pharynx. **E. Valve**, a prolongation or continuation of the lining membrane of the post-cava into the right auricle of the fetal heart to about half of its breadth. Its function is to direct the blood from the post-cava across the auricle toward the foramen ovale.

**Eustachius**, Canal of. See *Canal*.

**Eustomatus** (*u-sto'-mat-us*) [*εὖ*, well; *στόμα*, mouth]. In biology, having a well-formed oral aperture.

**Eustrongylus** (*u-stron'-jil-us*) [*εὖ*, well; *στρογγύλος*, round]. A genus of parasitic nematode worms. **E. gigas**. See *Thread-worms*, and *Parasites (Animal)*, Table of.

**Eusystole** (*u-sis'-to-le*) [*εὖ*, well; *συστολή*, contraction]. A normal contraction of the cardiac cavities.

**Eutaxia** (*u-taks'-e-ah*) [*εὖ*, well; *τάξις*, order]. A normal condition of the body.

**Euthanasia** (*u-than-a'-ze-ah*) [*εὖ*, well; *θάνατος*, death]. An easy or calm death.

**Euthycoryphus** (*u-thik-or'-if-us*) [*εὐθύς*, straight; *κορυφή*, the head]. Lissauer's term for a skull in which the parietal angle is between 142° and 151°.

**Euthymetopus** (*u-thim-et'-o-pus*) [*εὐθύς*, straight; *μέτωπον*, the forehead]. Lissauer's term for a skull in which the angle between the lines joining the metopion and bregma and nasion is between 141° and 151.5°.

**Euthymia** (*u-thim'-e-ah*) [*εὖ*, well; *θυμός*, mind]. Tranquility; cheerfulness.

**Euthyopisthocranius** (*u-the-o-pis-tho-kra'-ne-us*) [*εὐθύς*, straight; *ὀπισθογράνιον*, the occiput]. Lissauer's term for a skull in which the angulus summi occipitis is between 154° and 172°.

**Euthyranus** (*u-the-u'-ran-us*) [*εὐθύς*, straight; *οὐρανός*, the roof of the mouth]. Lissauer's term for a skull in which the angulus summi palati is between 163.5° and 180°.

**Eutocia** (*u-to'-ke-ah*) [*εὖ*, well; *τόκος*, childbirth]. An easy natural delivery.

- Eutrophic** (*u-trof'ik*) [*ei*, well; *τροφειν*, to nourish]. Pertaining to eutrophy; promoting the nutritive process; well nourished.
- Eutrophy, or Eutrophia** (*u' tro-fē*, or *u-trof'-fe-ah*) [*ei*, well; *τροφειν*, to nourish]. A state of normal or healthy nutrition; the condition of being well-nourished.
- Eutropic** (*u-trof'-ik*) [*ei*, well; *τροφειν*, to turn]. In biology, turning or revolving with the sun.
- Euxanthin** (*ik-san't-shin*) [*ei*, well; *ξανθος*, yellow],  $C_{19}H_{16}O_{10}$ ; the essential constituent of *Parrotia*, *q. v.* It forms small yellow crystals.
- Evacuant** (*-ik'-u-ant*) [*evacuare*, to empty]. 1. Promoting evacuation. 2. A medicine that increases the secretion or evacuation of an organ, especially the bowels. A purgative.
- Evacuation** (*ev-ak-u-a'-shun*) [*evacuatio*, a voiding]. Defecation; the act of voiding; that which is voided.
- Evalvular** (*-al'-u-lar*) [*e*, priv.; *valva*, a valve]. In biology, destitute of valves.
- Evaporation** (*ev-ap-or-a'-shun*) [*e*, priv.; *vapor*, vapor]. In pharmacy, the process of converting a liquid into vapor by the agency of heat.
- Eve and Lingard, Bacillus of.** See *Bacteria, Synonymatic Table of*.
- Evectics** (*ev-ek'-tik-s*) [*ελεκτικός*, in good health]. An old name for hygiene; the science of good health.
- Even-headed** (*ev'-en hed'-ed*). Neither right-headed nor left-headed. Even-headedness is a condition common among the lower animals, and among idiots, imbeciles, and races of men of low development.
- Evening Primrose** (*ev'-ning prim'-roz*). The flowering tops of *Oenothera biennis*, recommended for asthma with gastric irritability. Dose of the fld. ext. 3 ss-3 j. Unof.
- Eventration** (*ev-en-tra'-shun*) [*e*, out of; *venter*, the belly]. Extrusion of the abdominal viscera, especially in a monstrosity. The term is used also as a synonym of *Penthaeus Abdomen*, *q. v.*
- Evergreen-oak** (*ev'-ur-grēn-ok*). See *Oak-bark*.
- Everitt's Salt.** A compound of iron and potassium cyanid. E.'s Test. See *Tests, Table of*.
- Everlasting** (*ev-ur-las'-ting*). A popular name for certain plants of the genera *Gnaphalium* and *Antennaria*, small composite-flowered plants. *A. divica* of Europe is antiseptic. *A. margaritacea* of N. America is tonic and astringent, and is considered a good sudorific. *A. plantaginifolia* has similar qualities. See also *Life-everlasting*.
- Evernia** (*ev-ur'-ne-ah*) [*ev*, well; *ἐρως*, sprout]. A genus of parmeliaceous lichens. E. *prunastri*. See *Ant. Evernia*.
- Evernicic Acid** (*ev-ur-nin'-ik*). See *Acid*.
- Eversion** (*ev-er'-shun*) [*eversio*, a turning out]. A turning outward. E. of the Eyelid, a folding of the lid up in itself for the purpose of exposing the conjunctival surface or sulcus. See also *Ectropium*.
- Evertebral** (*ev-er'-te-bral*) [*e*, priv.; *vertebra*, a vertebra]. Not vertebral in character, nor derived from vertebrae.
- Evidence** (*-id-ēns*) [*evidens*, clear]. In legal medicine, the means by which the existence or non-existence of the truth or falsehood of an alleged fact is ascertained or made evident; proof, as of insanity.
- E. Circumstantial**, evidence the conclusions based upon which are beyond actual demonstration. **E., Conclusive or Positive**, evidence that admits of no doubt. **E., Expert**, that given before a jury by an expert in any science, art, profession, or trade.
- Evil** (*ev'-il*) [*VL*, evil; *ill*]. 1. A disease. 2. Synonym of *Sin*.
- Eviration** (*ev-i-rā'-shun*) [*evirare*, to castrate]. 1. Castration. 2. Emasculation; a form of sexual per-

version in which there is a deep and permanent assumption of feminine qualities, with corresponding loss of manly qualities. The opposite of this is termed *Defeminization*.

**Visceration** (*ev-is-er-a'-shun*) [*e*, out; *viscera*, the bowels]. The removal of the viscera. **E. of the Eye**, removal of the entire contents of the globe of the eye, leaving the sclerotic intact,—an operation in place of enucleation, and following which some operators insert a glass or metallic shell-globe, called an *artificial vitreous*, to preserve the shape, etc., of the eye-ball. **E., Obstetric**, the removal of the abdominal or thoracic viscera of the fetus in embryotomy.

**Evolution** (*ev-o-lu'-shun*) [*evolutio*; *evolvere*, to unroll].

1. The development or temporary growth and organic change that take place in the uterus during pregnancy.
2. In biology, (1) the doctrine of incasement or preformation of the early physiologists, which supposed that all parts of the fully-formed animal or plant were present in a minute form in the germ. Cf. *Epigenesis*. (2) The doctrine of descent often spoken of as Darwinism, based upon the capacity of every plant and animal to produce other individuals of a like kind, but varying to a greater or less degree according to the differentiation induced by special environment and natural selection. Cf. *Pangenesis*, *Blastogenesis*, *Epigenesis*, *Ontogeny*, *Phylogeny*, *Natural Selection*. **E., Factors of**, the recognized factors of evolution are at least five, viz.: (1) Pressure of an environment affecting function and function affecting structure, and the changed structure and function inherited and integrated through successive generations. (2) *Use and disuse* of organs reacting on growth-force and producing change in form, structure, and size of parts, and such change inherited and integrated through successive generations. (3) *Natural selection* among individuals of those most in accord with an ever-changing environment—or, as it has been otherwise called, "*survival of the fittest*." (4) *Sexual selection* (the selection by the female, among varying male individuals, of the strongest or the most attractive. Among mammals, the selection is mainly of the strongest, as decided by battle; among birds, of the most attractive, as determined by splendor of color or beauty of song. (5) *Physiologic selection*, or selection of those varieties the individuals of which are fertile among themselves, but sterile or less fertile with other varieties and with the parent stock. This has also been called "*segregate fecundity*" by Gulick and *homogamy* by Romanes. These five factors are not universally recognized. The first two are Lamarckian, the second two Darwinian factors. In the Lamarckian factors the changes occur during individual life, and the offspring is supposed to inherit them unchanged. In the Darwinian factors, on the contrary, the changes are in the offspring, and the individuals during life are supposed to remain substantially unchanged. The fifth factor has been brought forward by Romanes and Gulick and is not yet universally recognized. (6) To these recognized factors of organic evolution must now be added, in *human evolution*, another and far higher factor, viz., conscious, voluntary coöperation in the work of evolution, conscious striving for the betterment of the individual and of the race. This factor consists essentially in the formation and pursuit of ideals. This is called a factor, but it is also much more than a factor. It stands in place of nature herself—it is a higher, rational nature using all the factors of physical nature for its own higher purposes. To distinguish the evolution determined by this factor from organic evolution, it is called *progress*. Underlying all these factors as their nec-

essary condition, and therefore themselves not called factors, are two opposite operative principles, viz., *heredity and variability*. Like the conservative and progressive elements in society, one tends to fixedness, the other to change. The one initiates change, the other accumulates its effects in successive generations. The one tries all things, the other holds fast to whatever is good. They are both equally necessary to the successful operation of any or all of the factors. **E.**, **Ontogenetic**, the development of an embryo from an egg. **E.**, **Phylogenetic**, the evolution of species. **E.**, **Spontaneous**, a term expressive of the unaided occurrence in childbirth of a series of changes, whereby a shoulder-presentation is transformed within the pelvis into a combined breech-and-shoulder-presentation and delivery effected.

**Evulsion** (*e-vul'-shun*) [*evulsio*; *evellere*, to pluck out]. The forcible tearing or plucking away of a part, as a polypus, tonsil, etc.

**Ewald's Test-breakfast**. A method used in ascertaining the condition of the gastric juice. It consists of 35 to 70 grams of white bread and 300 cm. of water, or a cup of weak tea without milk or sugar.

**Ewald and Boas's Method**. A method of removing the contents of the stomach. It is carried out by causing the patient to make forcible voluntary contraction of the abdominal muscles, steady pressure being applied to the epigastrium.

**Exacerbation** (*eks-as-er-ba'-shun*) [*exacerbatio*; *exacerbare*, to be violent]. Increased or paroxysmal violence of the symptoms of a disease.

**Exaggerated** (*eks-aj'-er-a-ted*) [*exaggerare*, to heap up]. Larger; more marked; increased. **E.** **Breathing**. See *Breath-sounds*. **E.** **Lithotomic Posture**. See *Postures, Table of*.

**Exalbuminous** (*eks-al-bul'-min-us*) [*ex*, priv.; *albumen*, the white of an egg, from *albus*, white]. In biology, applied to seeds in which the nutritive matter, endosperm or albumin, is stored within the embryo.

**Exalgin** (*eks-al'-jin*) [*ἔξ*, out; *ἄλγος*, pain],  $C_9H_{11}NO$ . Methylacetanilid; a benzene derivative allied to phenacetin. It is a valuable analgesic and antipyretic in doses of one-half to four grains. Unof.

**Exalt** (*eks-awlt'*) [*exaltare*, to lift up; *exalt*]. In chemistry, to purify or refine.

**Exaltation** (*eks-awlt'-a'-shun*) [*exaltatio*, an uplifting]. 1. Increase of functional activity. 2. Increase of mental activity. 3. A morbid mental state characterized by self-satisfaction, ecstatic joy, abnormal cheerfulness, or optimism, or by delusions of grandeur.

**Examination** (*eks-am-in-a'-shun*) [*examinare*, to examine]. Investigation, as for the purpose of diagnosis; it is variously qualified as *bimanual*, *digital*, *oral*, *physical*, etc.

**Exangia**, or **Exangeia** (*eks-an-je'-ah*) [*ἔξ*, out; *ἄγγειον*, vessel]. Any dilatation or distention of a blood-vessel, such as aneurysm, varix, or capillary enlargement.

**Exanimation** (*eks-an-im-a'-shun*) [*ex*, out; *anima*, spirit]. Real or apparent death; fainting.

**Exannulate** (*eks-an'-u-lāt*) [*ex*, priv; *annulus*, a ring]. In biology, applied to ferns, the sporangium of which lacks the annulus.

**Exanthera**, or **Exanthem** (*eks-an'-them-ah*, or *eks'-an-them*) [*ἐξάνθημα*, eruption; *pl.*, *Exanthemata*]. 1. An eruption upon the skin. 2. Any exanthematous or eruptive fever. 3. In biology, any irregular spot on the surface of a leaf or other organ. A *Table of the Exanthemata* is appended on page 450. **E.**, **Syphilitic**. See *Roseola, Syphilitic*.

**Exanthematic** (*eks-an-them-a'-ik*). See *Exanthematos*. **E.** **Typhus**. See *Typhus Fever*.

**Exanthematology** (*eks-an-them-at-ol'-o-je*) [*ἐξάνθημα*, eruption; *λόγος*, science]. The science of the exanthematous diseases.

**Exanthematous** (*eks-an-them'-at-us*) [*ἐξάνθημα*, eruption]. Of the nature of or characterized by exanthema, or eruption; of the nature of an eruptive fever.

**Exanthesis** (*eks-an-the'-sis*) [*ἐξάνθησις*, a blossoming; *pl.*, *Exantheses*]. 1. The breaking out or appearance of an exanthem. 2. Any exanthematous disease. **E.** **rosalia arthrodynia**. Synonym of *Dengue*.

**Exanthinic Acid** (*eks-an-thin'-ik*). See *Acid*.

**Exanthropia** (*eks-an-thro'-pe-ah*) [*ἔξ*, out; *ἀνθρωπος*, men]. Morbid dislike of human society; *apanthropia*.

**Exarteritis** (*eks-ar-ter-i'-tis*) [*ἔξ*, out; *ἀρτηρία*, artery; *τις*, inflammation]. Inflammation of the outer coat of an artery.

**Exarthrima** (*eks-ar-thrim'-ah*) [*ἔξ*, out; *ἄρθρον*, joint; *pl.*, *Exarthrimata*]. Luxation or dislocation of a joint.

**Exarticulate** (*eks-ar-tik'-u-lāt*) [*ex*, priv.; *articulare*, to join]. In biology, applied to limbs, antennae, palpi, or other appendages destitute of joints.

**Exarticulation** (*eks-ar-tik-u-lā'-shun*) [*ex*, out; *articulus*, joint]. 1. Luxation of a joint. 2. Amputation at a joint.

**Excandescencia** (*ex-kan-des-en'-she-ah*) [*ex*, out; *candescere*, to glow]. Angry or furious mania; a paroxysm of insane fury.

**Excarnation** (*eks-kar-na'-shun*) [*ex*, out; *caro*, flesh]. The removal of superfluous tissue from an anatomic preparation.

**Excaudate** (*eks-kaw'-dāt*) [*ex*, priv.; *cauda*, tail]. In biology, tailless.

**Excavation** (*eks-kav-a'-shun*) [*excavare*, to hollow out]. A hollow or cavity, as in the lungs or in a tissue. **E.** **of the Optic Nerve**, a hollowing or "cupping" of the disc, or optic nerve-entrance, that may be *physiologic* or *congenital*, and without particular significance; or *pathologic*, the result of glaucoma, optic atrophy, etc.

**Excavator** (*eks'-kav-a-tor*) [*excavare*, to hollow out]. A dental instrument for opening and forming cavities and removing decayed matter from them; *e. g.*, the hatchet, hoe, and chisel.

**Excentric** (*eks-sen'-trik*) [*ex*, out; *centrum*, center]. 1. See *Eccentric*. 2. Out of the center or median line. **E.** **Pains**, radiating pains, symptomatic of spinal disease, due to irritation of the posterior nerve-roots. The pains are felt to be in the peripheral organs, hence the name.

**Excerebration** (*eks-ser-e-bra'-shun*) [*ex*, out; *cerebrum*, brain]. The removal of the fetal brain in the process of embryotomy.

**Excipient** (*eks-sip'-e-ent*) [*excipere*, to take up]. In pharmacy, any substance used to give an agreeable or convenient form to the ingredients of a prescription.

**Exciple** (*ek'-sip-l*) [*excipulum*, a receiving-vessel]. That part of a lichen forming the rim of the perithecium, or immediately surrounding it.

**Excision** (*eks-sizh'-un*) [*excisio*, a cutting out]. The operation of removing a part or tissue by cutting; a cutting out.

**Excitability** (*eks-sit-ab-il'-it-e*) [*excitare*, to rouse]. The property of reacting to stimulus.

**Excitant** (*ek-sit'-tant*) [*excitare*, to rouse]. A remedy that stimulates the activity of an organ.

**Excitation** (*ek-sit-a'-shun*) [*excitare*, to rouse]. The act of stimulating or irritating. **E.**, **Direct**, in electrotherapeutics, the excitement of a muscle by placing an electrode on the muscle itself. **E.**, **Indirect**, the excitement of a muscle through its nerve.

## TABLE OF THE EXANTHEMATA.

| NAME.          | Onset of Eruption.     | Stage in Eruption. | Time of Appearance.                                | CHARACTER OF ERUPTION.  | DURATION OF ERUPTION.  | LOCATION.                                | DESQUAMATION.                           | DURATION OF DIS-EASE. | CON-VALESCENCE. |
|----------------|------------------------|--------------------|--|---|--|--|---|-----------------------|-----------------|
| Erysipelas.    | Few hours—3 to 4 days. | (10) 1 day.        | Within 24 hours.                                   | Erllorescence; bright-red; polished; with well-defined, raised margin.  | 4 to 5 days.   | Face.                                    | Branny, or in large flakes.             | 1 to 3 weeks.         | Crisis.         |
| Measles.       | 2 to 3 days.           | 1 day.             | 4th day.   | Macule, small, dark-red, with crescentic borders. Complete in 24 hours. | 4 to 5 days.   | Face; then downward over body.           | Branny. 8-11 days.                      | 2 weeks.              | Crisis.         |
| Rubella.       | 8 to 12 days.          | 24 to 48 hours.    | Within 48 hours.                                   | Macule; rose-colored; rounded; discrete.                                | 3 days.  | Face and scalp; then downward over body. | Slightly branny.                        | 4 to 7 days.          | Crisis.         |
| Scarlatina.    | 1 to 21 days.          | 1 to 2 days.       | Within 24 hours.                                   | Diffuse; scarlet; punctate.   | 7 to 10 days.  | Neck, chest, face; then over body.       | Scales or large flakes. About one week. | 2 to 3 weeks.         | Lysis.          |
| Typhoid Fever. | 5 to 25 days.          | 6 to 8 days.       | 7th day.   | In crops. Rose-colored, lenticular spots.                               | Each crop 3 to 5 days. Last 10 to 20 days or throughout the whole course of the fever. | Abdomen, chest, and back.                | Slightly branny or none.                | 3 to 4 weeks.         | Lysis.          |
| Typhus Fever.  | 4 to 12 days.          | 5 days.            | Usually 5th day; may be on 3d or not till 7th day. | Measly spots; petechiæ; streaks; color, mulberry-red.                   | Few days, or may last throughout the course of the disease.                            | Sides of chest and abdomen; arms; back.  | Slightly branny.                        | 2 to 4 weeks.         | Crisis.         |
| Varicella.     | 4 to 14 days.          | 1 to 2 days.       | Within 12 to 24 hours.                             | In crops. Vesicles.   | 5 to 8 days.   | Back, chest, arms.                       | Crusts. 5-8 days.                       | 2 weeks.              | Lysis.          |
| Varicella.     | 8 to 14 days.          | 3 days.            | 4th day.   | Umbilicated pustules.   | 21 to 25 days.   | Face, and over body.                     | Crusts. 12-22 days.                     | 4 to 5 weeks.         | Lysis.          |

**Excito-** (*eks'-to*) [*excitare*, to rouse]. A Latin prefix denoting stimulation or excitation. **E.-motor**, exciting or arousing motor function; also, a drug or agent that increases activity of the motor nerve-centers. **E.-nutrient**, arousing or quickening the processes of nutrition. **E.-reflex**, pertaining to a reflex action that ends in muscular action. **E.-secretory**, arousing the function or process of secretion. **E.-vaso-motor**, carrying stimulus to vaso motor centers.

**Excitor** (*eks'-tor*) [*excitare*, to rouse]. One who or that which stimulates or excites.

**Exclave** (*eks'-klay*, *eks'-klay'*) [Fr.]. A detached portion of any organ, as of a pancreas or ovary.

**Exclusion** (*eks'-kloo'-shun*) [*excludere*, to shut out]. A shutting out. **E. Diagnosis by**, the reaching of a final or most probable diagnosis by successively excluding one hypothesis after another, as impossible, from a consideration of the symptoms.

**Excochleation** (*eks'-klay'-shun*) [*ex*, out; *cochlea*, shell, spiral]. The scraping out of material with the curet.

**Excoriation** (*eks'-koo'-ree'-shun*) [*ex*, from; *corium*, the skin]. 1. Abrasion or removal, partial or complete, of a limited portion of the skin. 2. A lesion of the skin resembling, as a rule, the surface is denuded only as far as the stratum mucosum. It heals without leaving a scar. It is usually seen in pruritic diseases.

**Excreation** (*eks'-kree'-shun*). See *Excretion*.

**Excrement** (*eks'-kre-ment*) [*excernere*, to separate; to excrete]. An excreted substance; the feces.

**Excrement** (*eks'-kre-ment*) [*excrecere*, to grow out]. An old name for the hair, nails, etc.

**Excrementitious** (*eks'-kre-men-tish'-us*) [*excernere*, to separate; to excrete]. Pertaining to the excrement.

**Exerescence** (*eks'-kres'-ens*) [*exerescere*, to grow out]. An abnormal outgrowth upon the body. See *Cauliflower Exerescence*.

**Excreta** (*eks'-kre'-tah*) [*pl.*; *excernere*, to separate]. The natural discharges of the body, particularly those of the bowels; feces.

**Excretin** (*eks'-kre-tin*) [*excernere*, to separate].  $C_{20}H_{26}O$ . One of the constituents of feces. It occurs in little leaves or tufts mixed with needles, insoluble in cold or hot water, soluble in hot alcohol and ether; its reaction is neutral.

**Excretion** (*eks'-kre'-shun*) [*excretio*; *excernere*, to excrete]. The separation of the waste products of an organ, or of the body as a whole, out of the blood. The material so excreted.

**Excretory** (*eks'-kre-tor-e*) [*excretio*; *excernere*, to excrete]. Pertaining to excretion. **E. Duct**, a canal conveying the excretion from the excretory organ to the discharging point. See *Duct*.

**Excurrent** (*eks'-kur'-ent*) [*ex*, out; *currere*, to run]. Leading or going outward, as an *excurrent* canal.

**Excurvation** (*ex-kur'-val'-shun*) [*ex*, out; *curvare*, to curve]. A deformity of the eyelid affecting almost

exclusively the upper palpebra, and one in which the tarsal cartilage becomes turned outward. It occasionally develops in protracted cases of granular conjunctivitis.

**Exedent** (*ek'-se-dent*) [*exedens*; *ex*, out; *edere*, to eat]. Rodent; eating away the tissues.

**Exelcysmos** (*eks-el-sis'-mos*) [*ēξ*, from; *ἐκκῆναι*, to draw]. Extraction, as of teeth.

**Exencephalocele** (*eks-en-sef'-al-o-sel*) [*εξ*, out; *ἐγκέφαλον*, brain; *κήλη*, hernia]. Cerebral hernia; an exencephalous tumor; a mass of brain-substance outside of the cranial cavity.

**Exencephalon** (*eks-en-sef'-al-on*). Same as *Exencephalus*.

**Exencephalus** (*eks-en-sef'-al-us*) [*ēξ*, out; *ἐνκέφαλος*, brain]. A species of single autositic monsters characterized by a malformed brain, situated, at least in part, without the cranial cavity, the bony walls of which are themselves imperfect. The specimens of this nature are divided into two main classes—those with and those without a spinal fissure. 2. A variety of autositic monsters of the foregoing species in which there is an arrested development of the cranial bones, with protrusion of the brain, associated with an extensive spina bifida.

**Exenteratio bulbi**. See *Exenteration of the Orbit*.

**Exenteration** (*eks-en-ter-a'-shun*) [*ēξ*, out; *ἐντερον*, intestine]. 1. Removal of the intestines or thoracic viscera in embryotomy. 2. In ophthalmology, the operation of evisceration of the contents of the eyeball, leaving the globe as a stump in the orbit. **E. of the Orbit**, the removal of the contents of the orbital cavity.

**Exenteritis** (*eks-en-ter-i'-tis*) [*ēξ*, out; *ἐντερον*, bowel; *ιτις*, inflammation]. Inflammation of the outer or peritoneal coat of the intestine.

**Exercise** (*eks'-er-siz*) [*exercere*, to keep busy]. Functional activity of the muscles; often applied to such activity when its purpose is the preservation or restoration of the health. **E., Active**, that exerted by the will of the patient. **E., Passive**, when the part is moved by another, or acted upon, as in massage. **E. Bones**, Rider's bones; osseous growths occasionally found in the muscles.

**Exeresis** (*eks-er'-es-is*) [*ēξ*, out; *αἰρέειν*, to take]. Surgical removal, as by excision or extraction; evacuation.

**Exfetation** (*eks-fe-ta'-shun*) [*exfetatio*]. Ectopic or extrauterine fetation.

**Exfoliation** (*eks-fo-le-a'-shun*) [*exfoliatio*; *exfoliare*, to shed leaves]. The lamellar (or other) separation of bone or other tissue from the living structure in *Dry Necrosis*, etc.

**Exhalant** (*eks-ha'-lant*) [*exhalare*, to breathe out]. 1. Serving for exhalation; exhaling. 2. A pore or organ of exhalation.

**Exhalation** (*ex-hal-a'-shun*) [*exhalare*, to breathe out]. The process of giving off or exhaling vaporous or effluvial matters; the vapor, subtle particles, etc., given off by the body through the skin or lungs.

**Exhaustion** (*eg-zawst'-yun*) [*exhaurire*, to pour out]. Great loss of vital and nervous power from fatigue or protracted disease.

**Exhibit** (*ek-zib'-it*) [*exhibere*, to give]. To administer as a medicine.

**Exhibition** (*ek-zib-ish'-un*) [*exhibere*, to give]. In legal medicine, the exposing of the genitalia in public places.

**Exhibitionism** (*ek-zib-ish'-un-izm*) [*exhibere*, to give]. A perversion of the sexual feeling that leads the patient to expose the genital organs.

**Exhibitionist** (*ek-zib-ish'-un-ist*) [*exhibere*, to give]. An insane person who wilfully and indecently exposes himself.

**Exhilarant** (*ek-zil'-ar-ant*) [*exhilarare*, to cheer]. An agent to enliven and cheer the mind. **E. Gas**, nitrous oxid gas.

**Exhumation** (*ex-hu-ma'-shun*) [*ex*, out of; *humus*, the ground]. The digging up after interment of a dead body, for examination in medico-legal inquiries, or for reinterment.

**Exindusiate** (*eks-in-du'-se-at*) [*ex*, priv.; *induere*, to put on; *indusium*, the covering of the fruit-dots in ferns]. In biology, applied to such ferns as lack the indusium.

**Exner's Solution**. See *Stain*, Table of.

**Exocardiac**, or **Exocardial** (*eks-o-kar'-de-ak*, or *eks-o-kar'-de-al*) [*ēξω*, out; *καρδια*, heart]. Originating or situated outside of the heart.

**Exocarditis** (*eks-o-kar-di'-tis*) [*ēξω*, out; *καρδια*, heart; *ιτις*, inflammation]. Inflammation of the outer surface of the heart. Also a synonym of *Pericarditis*.

**Exocarp** (*eks'-o-karp*) [*ēξω*, outside; *καρπός*, fruit]. In biology, the outer layer of a pericarp when the latter consists of more than one layer.

**Exoccipital** (*eks-ok-sip'-it-al*) [*ex*, out; *occiput*, the occiput]. Lying to the side of the foramen magnum. **E. Bone**, the neurapophysial or condyloid part of the occipital bone, with which in adult life it is consolidated.

**Exocelar** (*eks-o-se'-lar*) [*ēξω*, outside; *κοιλία*, body-cavity]. In biology, situated on the outer or somatic wall of the body-cavity.

**Exocelarium** (*eks-o-se-la-re'-um*) [*ēξω*, outside; *κοιλία*, body-cavity]. In biology, the epithelium of the outer wall of the body-cavity.

**Exocelum** (*eks-o-se'-lum*) [*ēξω*, outside; *κοιλία*, the body-cavity]. In biology, the extra-embryonic part of the body-cavity shut off by the somatic and splanchnic stalks at the umbilicus. (Sevenka.)

**Exochorion** (*eks-o-ko'-re-on*) [*ēξω*, outside; *χορίον*, chorion]. The external layer of the chorion.

**Exocolitis** (*eks-o-ko-li'-tis*) [*ēξω*, out; *κόλον*, colon; *ιτις*, inflammation]. Inflammation of the outer or peritoneal coat of the colon.

**Exocranium** (*eks-o-kra'-ne-um*) [*ēξω*, out; *κρανίον*, cranium]. The outer surface of the skull; the pericranium.

**Exodic** (*eks-od'-ik*) [*ēξω*, out; *ὁδός*, a way]. Transmitting impulses outward from the central nervous system; efferent; centrifugal.

**Exodontosis** (*eks-o-don-to'-sis*). See *Exostosis of the Teeth*.

**Exodyne** (*eks'-o-din*) [*ēξω*, out of; *ὀδὴν*, pain]. A mixture of acetanilid 90, sodium salicylate 5, and sodium bicarbonate 5; it is used as an anodyne.

**Exogamy** (*eks-og'-am-e*) [*ēξω*, outside; *γαμος*, marriage]. The law that forbids marriage between persons of the same family. (Lang.)

**Exogastritis** (*eks-o-gas-tri'-tis*) [*ēξω*, out; *γαστήρ*, belly; *ιτις*, inflammation]. See *Perigastritis*.

**Exogen** (*eks'-o-jen*) [*ēξω*, outside; *γενῆς*, producing]. In biology, one of the two primary classes of flowering-plants, characterized by the growth of the stems in concentric layers; more properly called Dicotyledons.

**Exogenetic** (*eks-o-jen-et'-ik*) [*ēξω*, outward; *γενῆς*, to produce]. Due to an external cause; not arising within the organism.

**Exogenous** (*eks-og'-en-us*) [*ēξω*, out; *γενῆς*, to produce]. Of the nature of an exogen; growing by accretions to the outer surface.

**Exognathite** (*eks-og'-nath-it*). See *Bucephphysis*.

**Exogonium** (*eks-o-go'-ne-um*). See *Jalap*.

**Exometritis** (*eks-o-me-tri'-tis*) [*ēξω*, out; *μήτρα*, womb; *ιτις*, inflammation]. Perimetritis; less correctly, parametritis. See *Metritis*.

**Exomphalos** (eks-om'fal-os) [ēz, out; ὠμ'φ'αλ'ος, navel].  
 Unlike prominence of the navel; also, umbilical hernia.

**Exoneural** (eks-on'yu'al) [ēz, out; ν'ευ'ρ, nerve].  
 Occurring or situated outside of the nervous apparatus.

**Exopathic** (eks-op'ath-ik) [ēz, out; -παθ'ic, disease].  
 Pertaining to those causes of disease coming from without it or beyond the organism. See, also, *Endopathic*.

**Exoperidium** (eks-op'eri-d-um) [ēz, outside; peri-d-um (from περι-δω, dim. of περι-α, a leather pouch), the covering of the sperm case]. The outer peridium of a fungus having more than one, as the earth star.

**Exophoria** (eks-op'hor-i-ah) [ēz, out; φ'ο'ρ'ια, E., Pseudo-, an outward bending of the eyes excited by lessening the activity of the accommodative centers, as when hyperopia has been corrected by convex lenses. This condition also exists in uncorrected myopia.

**Exophthalmic** (eks-op'thal-m-ik) [ēz, out; ὀφθαλμ'ος, eye]. Pertaining to exophthalmos. **E. Goiter.** See *Goiter*.

**Exophthalmometer** (eks-op'thal-mom'et-er) [ēz, out; ὀφθαλμ'ος, eye; μέτρον, measure]. An instrument for measuring the degree of exophthalmos.

**Exophthalmos, Exophthalmus** (eks-op'thal-mos, -mus) [ēz, out; ὀφθαλμ'ος, eye]. Abnormal prominence or protrusion of the eyeballs. **E., Pulsating**, that characterized by a bruit and pulsation, due to an aneurysm that pushes the eye forward.

**Exoplasm** (eks-op'la-zm) [ēz, outside; π'λάσσειν, to form]. In biology, the outer protoplasm of a unicellular organism or histologic cell.

**Exopodite** (eks-op'od-it) [ēz, outside; ποδ'is (ποδ-, foot). In biology, the outer of the two main divisions of the typical crustacean limb or appendage. (Cf. *Endopodite* and *Biocephysis*).

**Exorhinus** (eks-or'i-nus) [ēz, without; ῥίς, nose]. Lissauer's term for a skull in which the angle between the lines joining the nasion and the alveolar point and rhinion is between 1° and 20.5°.

**Exormia** (eks-or'm-ah) [ēz-ορμ'ια, to go forth]. Any papular skin disease.

**Exoskeleton** (eks-o-skel'et-un) [ēz, outside; σκελετόν, a frame body]. In biology, the outer envelop of many of the lower forms of life for the protection and attachment of organs, representing an integument in formed by the deposition of chitin, lime, or other hardening substance. See *Dermoskeleton*.

**Exosmose** (eks-os-mo-sis) [ēz, out; ὠσμός, thrust]. Outward osmosis. See *Endosmosis* and *Osmosis*.

**Exosmotic** (eks-os-mot'ik) [ēz, out; ὠσμός, thrust]. Pertaining to or characterized by exosmosis.

**Exospore** (eks-sp'or) [ēz, outside; σπορον, seed]. In biology, the outer coat of a spore.

**Exostome** (eks-ost-om) [ēz, outside; στόμα, mouth]. In biology, the orifice in the outer coat of the ovule, or the outer peristome of a moss.

**Exostosis** (eks-ost-ō-sis) [ēz, out; ὀστέον, bone]. Abnormal enlargement or growth of bone, especially a deposit of bony tissue upon the surface of a pre-existing bone. **E. of the Teeth**, exostosis dentium; **Exostoma**, an outgrowth from a tooth. The bony part of a tooth subject to exostosis is the root, and the development of the affection usually commences at or near the extremity, extending from thence upward, it sometimes covers a greater or less portion of the external surface. **E., Ivory**, a bony outgrowth of extreme hardness and of small size, rarely exceeding that of a small walnut. It springs usually from the exterior of one of the cranial bones.

Histologically, it is marked by the absence of Haversian canals.

**Exostotic** (eks-os-ot'ik) [ēz, out; ὀστέον, bone]. Of the nature of exostosis.

**Exoteric** (eks-o-ter'ik) [ēz-ωτερικός, external]. Synonymous with *Exopathic*.

**Exoterorhinus** (eks-o-ter-or-i'-nus) [ēz-ωτερος, outside; ῥίς, nose]. Lissauer's term for a skull in which the angle between the lines joining the nasion and the alveolar point and rhinion is between 22.5° and 45°.

**Exotheca** (eks-o-the'-kah) [ēz, outside; θήκη, a case].

In biology, the proper calcareous investment of the visceral chamber of a coral.

**Exothecium** (eks-o-the'-se-um) [ēz, outside; θήκη, a case]. In biology, the epidermis of the anther.

**Exothyropexy** (eks-o-thi'-ro-peks-e) [ēz, without; θυρεός, a shield; π'ῆξις, fixation]. Partial extrusion of goiter, with subsequent atrophy from constriction, cicatrization, etc.

**Exotic** (eks-ot'ik) [ēz-ωτικός, foreign]. Pertaining to plants and products from another country.

**Exotropia** (eks-o-tro'-pe-ah). See *Strabismus*.

**Expansive** (eks-pant'-sif) [expandere, to spread out]. Comprehensive; wide-extending. **E. Delirium**, insane over-estimation of one's mental or bodily powers. See *Exaltation*.

**Expectant** (eks-pek'-tant) [expectare, to look out for]. Awaiting or expecting; applied to a plan of treatment consisting in watching the progress of a disease, and not interfering with therapeutic measures, unless warranted by special symptoms.

**Expectation** (eks-pek'-tū'-shun) [expectare, to expect]. Same as *Expectant*. **E. of Life**, the average number of years that persons of a given age, taken one with another, live, assuming that they die according to a given table of the probabilities of life. It thus has no relation to the most probable life of a single given individual. **E. of L., Complete**, the addition of one-half year to the curtate expectation to allow for that portion of a year lived by each person in the year of his death. **E. of L., Curtate**, the average number of whole or completed years lived by each person.

**Expectorant** (eks-pek'-to-rant) [ex, out; pectus, breast]. 1. Promoting expectoration. 2. A remedy that promotes expectoration.

**Expectoration** (eks-pek'-tor-at'-shun) [ex, out; pectus, breast]. 1. The ejection from the mouth of material brought into it by the air-passages. 2. The fluid or semi-fluid matters from the lungs and air-passages expelled by coughing and spitting. **E., Prune-juice**. See *Prune-juice*. **E., Rusty**. See *Rusty Expectoration*.

**Expellent** (eks-pell'-ent) [expellere, to drive out]. A medicine that has power to expel a *materies morbi*.

**Experiment** (eks-per'it-im-ent) [experimentare, to experiment]. A trial or test.

**Experimentum** (eks-per-im-ent'-tum) [L.]. Same as *Experiment*. **E. mirabile of Kirchner**, a hypnotic phenomenon in animals, a hen, e.g., remaining in a fixed position when the head is pressed down and a chalk line made from its beak.

**Expert** (eks'-pert) [expertus, proved]. A person especially qualified in a science or art. **E., Medical**, a physician peculiarly fitted by experience or special learning to render an authoritative opinion in medico-legal or diagnostic questions.

**Expiration** (eks-pi'-rat'-shun) [expirare, to breathe out]. The act of breathing forth, or expelling air from the lungs.

**Expiratory** (eks-pi'-rat-or-e) [expirare, to breathe out]. Relating to or concerned in the expiration of air.

**Expire** (*eks-pir'*) [*expirare*, to breathe out]. To breathe out; to die.

**Explanate** (*eks'-plan-at*) [*explanare*, to flatten, spread out]. In biology, spread out, flattened; applied to parts usually rolled or folded.

**Exploration** (*eks-plor-a'-shun*) [*explorare*, to search out]. The searching out the condition of a diseased organ or part by means of auscultation, palpation, percussion, etc. Also the searching of a wound to learn its nature, course, etc., and if foreign bodies may be present. Also the examination of the female genital organs by the finger or instrument for diagnostic purposes.

**Explorator, Explorer** (*eks'-plor-a-tor*, *ex-plor'-er*) [*explorare*, to search out]. An instrument for use in exploration. **E., Electric**, an instrument for detecting a bullet by means of the electric current.

**Exploratory** (*eks-plor'-at-or-e*) [*explorare*, to search out]. Pertaining to exploration. **E. Puncture**, the puncture of a cavity or tumor and extraction therefrom of some of the contents to learn their nature. **E. Trocar**, one especially adapted for exploratory puncture.

**Explosion** (*eks-plo'-shun*) [*explodere*, to drive away]. 1. The sudden expansion of a body of small volume into great volume, with the resulting effects. 2. The sudden and violent occurrence of any symptom or function.

**Explosive** (*eks-plo'-siv*) [*explodere*, to drive away]. See *Consonants*. **E. speech**, speech characterized by suddenness and explosiveness of enunciation.

**Exposure** (*eks-po'-shur*) [*exponere*, to expose]. 1. The act of laying bare, as the genitals. 2. The state of being open to some action or influence, as of cold or wet.

**Expression** (*eks-presh'-un*) [*expressus*; *exprimere*, to press out]. 1. A pressing out. The forcible separation of liquids from solids by pressure. 2. The recognizable manifestation through the facial lineaments or the voice of any subjective feeling. **E. of Fetus or Placenta**, assisting the expulsion of fetus or placenta by pressure upon the abdominal walls.

**Expulsion** (*eks-pul'-shun*) [*expulsio*; *expellere*, to drive out]. The act of driving out. **E., Spontaneous**, the extrusion of the fetus or the placenta without external aid.

**Expulsive** (*eks-pul'-siv*) [*expellere*, to drive out]. Pertaining to the extrusion or driving out of the fetus in childbirth, the voiding of the feces, urine, etc.

**Exsanguination** (*ek-sang-gwin'-a'-shun*) [*ex*, priv.; *sanguis*, blood]. The forcible expulsion of blood from a part, as before amputation.

**Exsanguine** (*ek-sang'-gwin*) [*ex*, priv.; *sanguis*, blood]. Bloodless.

**Exsanguinity** (*ek-sang-gwin'-it-e*) [*ex*, priv.; *sanguis*, blood]. Bloodlessness; extreme pallor.

**Excised** (*ek-sin'-ded*) [*ex*, out; *scindere*, to cut]. In biology, terminating abruptly in an angular notch.

**Exscreation** (*ek-skre-a'-shun*) [*ex*, out; *scrare*, to hawk]. The act of clearing the throat by hawking and spitting.

**Exsculptate** (*eks-kulp'-tat*) [*exsculpere*, to carve out]. In biology, presenting a sculptured appearance.

**Exsert, Exserted** (*ek'-sert*, *ek-ser'-ted*) [*exserere*, to thrust out]. In biology, projecting, as a stigma beyond the anthers.

**Exsertus** (*ek-ser'-tus*) [*L.*]. Protruding; sometimes applied to teeth that protrude. See *Dens exsertus*.

**Exsiccatae, Exsiccati** (*ek-sik-at'-e,-i*) [*exsiccare*, to dry up]. In biology, the dried plants of an herbarium.

**Exsiccation** (*ek-sik-a'-shun*) [*ex*, out; *siccus*, dry]. The process of depriving a solid of its moisture or volatile constituents by the agency of moderate heat.

**Exsiccative** (*ek-sik'-at-iv*) [*exsiccare*, to dry up]. 1. Having a strong drying tendency. 2. A desiccating or drying remedy or application.

**Exsiccator** (*ek'-sik-a'-tor*) [*exsiccare*, to dry up]. A closed glass vessel containing a tray of  $H_2SO_4$ , used to dry and cool substances preparatory to weighing.

**Exspuition** (*eks-pu-ish'-un*) [*ex*, out; *spuere*, to spit]. Expectoration; spitting.

**Exstipulate** (*ek-stip'-u-lat*) [*ex*, without; *stipula*, a stipule]. In biology, destitute of stipules.

**Exstrophy** (*eks'-tro-fe*) [*ἐκστρόφειν*, to evert]. 1. The turning of a hollow organ inside out; the state of being turned inside out. 2. Congenital absence of the anterior wall of the bladder and abdomen with extroversion of the bladder.

**Exsuccation** (*ek-suk-ka'-shun*) [*ex*, out; *succus*, juice]. Same as *Ecchymosis*.

**Exsuccous** (*ek-suk'-us*) [*ex*, without; *succus*, juice, sap]. In biology, juiceless. Also written *Exsuccous*.

**Exsufflation** (*ek-suf-la'-shun*) [*ex*, out; *sufflare*, to blow]. Forced discharge of the breath.

**Exta** (*eks'-tah*) [*L., pl.*]. The viscera, especially those of the chest.

**Extension** (*eks-ten'-shun*) [*extendere*, to stretch out]. 1. The opposite of *flexion*: the straightening of a flexed limb by the natural and functional process; the state of a limb that is not flexed. 2. Traction made upon a fractured or dislocated limb in order to bring the parts into proper apposition. **E., Angular**, a method of reducing and maintaining old dislocations of the hip. **E., Counter-**, traction upon the trunk or the trunk-end of a fractured limb in addition to extension. **E., Double**, traction applied to both limbs in hip-joint disease, etc. **E. Stage in Labor**, one of the stages of labor, consisting in the bending of the fetal head, the occiput toward the back.

**Extensor** (*eks-ten'-sor*) [*extendere*, to extend]. That which stretches out or extends. **E. Muscles**. See *Muscles*, *Table of*. **E. Tetanus**, in general spasm the extensor muscles overcome the flexors, and the spasm thus becomes an *extensor tetanus*.

**Extenuation** (*eks-ten-u-a'-shun*) [*ex*, out; *tenuis*, thin]. Thinness; leanness of body; delicacy.

**Extern** (*eks'-tern*) [*externus*, outward]. 1. Outside; outside the gates of a hospital. 2. An out-door patient.

3. A medical student, or graduate, who attends to out-door charity cases. **E. Maternity**, a lying-in in a private house.

**Externalization** (*eks-tern-al-iz-a'-shun*) [*externus*, outward]. The process of externalizing, or embodying. **E. of Sensation**. See *Sensitization*.

**Externomedian** (*eks-tern-no-me'-de-an*) [*externus*, outward; *medius*, middle]. In biology, outside the median line.

**Extesticulate** (*eks-tes-tik'-u-lat*) [*ex*, out; *testiculus*, a testicle]. To castrate.

**Extinction** (*eks-tink'-shun*) [*extinguere*, to extinguish]. Complete abeyance or final loss, as of the voice; also, incomplete loss.

**Extine** (*eks'-tin*) [*externus*, outside]. In biology, the outer coat of a pollen-grain. Also *Exine* (Schacht).

**Extirpation** (*eks-ter-pa'-shun*) [*extirpare*, to root out]. Thorough excision or out-rooting of a part, as of a gland, a tumor, the uterus, the ovaries, etc. **E. of the Eyeball**, complete removal of the globe of the eye. Enucleation.

**Extra-** (*eks'-trah-*) [*L.*]. A prefix, meaning *outside*, *without*. **E.-axillary**, in biology, applied to a branch or bud somewhat out of the axil. **E.-current**, the induced electric current. **E.-enteric**. In biology, perivisceral. **E.-neural**, situated or occurring outside of a nerve. A term applied to certain nervous

affections of which the true seat is more or less remote from the point which manifests the symptoms of nerve embarrassment. **E.-ocular**, outside the eye, or ocular; in *Oology*, applied to those antennae of insects that are located at a distance from the eyes. **E.-pelvic**, situated or occurring outside the pelvis. **E.-polar Region**, that lying outside the poles, as opposed to the Intra-polar Region, or area, that lying within or directly beneath the poles. **E.-uterine**, without the uterus. **E.-u. Pregnancy**. See *Pregnancy*. **E.-u. Life**, that after birth.

**Extracapsularium** (eks-trak'ksh-ū-l'ar-ē-um) [*extra*, beyond, outside; *capsula*, capsule; *-um*, *Extracapsularium*]. In *biology*, that portion of a radiolarian outside the central capsule.

**Extracardial** (eks-trak'kard-ē-āl) [*extra*, without; *cardi*, heart]. Situated or occurring outside of the heart.

**Extracloacal** (eks-trak'klo-ā-k'āl) [*extra*, without; *cloaca*, a sewer]. In *biology*, situated outside the cloaca.

**Extracostal** (eks-trak'kōst'āl) [*extra*, without; *costa*, a rib]. Outside of the ribs. **E. Muscle**, any external intercostal muscle. See *Muscle*, Table of.

**Extracureus** (eks-trak'krū-ē-us) [*extra*, outside; *curea*, a leg]. The vastus externus muscle. See *Muscle*, Table of.

**Extract**, **Extractum** (ek' trakt', -trakt' -um) [*extractus*; *extrahere*, to extract; *pl.* *Extracta*]. In pharmacy, a solid or semisolid preparation, made by extracting the soluble principles of a drug and evaporating the solution to a proper consistence. Alcohol and water are the most common solvents. There are 33 official extracts. **E., Alcoholic**, that in which alcohol is the solvent. **E., Aqueous**, that prepared by using water as the solvent. **E., Fluid**, in pharmacy, an alcoholic or hydroalcoholic solution of the solid principles of a vegetable drug of such strength that 1000 grams of the drug are fully represented by one liter of the fluid extract. There are 88 official fluid extracts, besides 53 in the *V. F.*

**Extraction** (ek-trakt' -shun) [*extrahere*; *ex*, out; *trahere*, to draw]. The drawing out of a body, as a calculus, a tumor, or a tooth. Also, the pharmaceutical process of making an extract, chiefly by the action of some menstruum, as alcohol, ether, or water. **E. of Cataract**, removal of the cataracts lens by surgical operation. The methods proposed or practised are almost numberless. **Davies's Method**, improved by *Beer*, consists in making a semicircular flap upward in Davies's, downward in Beer's in the cornea, or at the margin, with rupture of the capsule and expression of the lens. The method is being revived and, with modification, adopted by a large number of modern operators, and is named the **Flap-extraction**. The **Discission-operation** is used in soft cataract, and consists in introducing a needle, whereby the capsule is broken and the aqueous humor gains access to the lens substance, which is then dissolved or removed by suction. In *v.* **Graefe's Peripheral Linear Method**, the Graefe linear incision is made 1.5 mm. from the corneal border, and 2 mm. below the horizontal tangent of the upper border of the cornea, and is at first directed downward, for the most part there is finally made opposite the point of puncture. The cut upward is then made parallel to the plane of the iris, followed by an anterior, capsulotomy, and expression of the lens. The third nov. **Graefe's Modified Linear Extraction** consists chiefly in bringing the capsule to the corneal border by **Needling**, or **needle-operation** See *Operation*. The **Simple Method**, now advocated by many ophthalmic surgeons, consists in a penetrating incision and an

omission of the iridectomy. The **Suction Method** consists in the extraction of soft cataracts by sucking the lenticular matter through a syringe nozzle introduced into the lens-substance, or by other methods. See *Operations*, Table of.

**Extractive** (eks-trak'tiv) [*ex*, out; *trahere*, to draw].

1. In pharmacy, a substance which, during the process of making an extract from a vegetable or drug of vegetable origin, becomes dark, and finally insoluble. 2. Any one of a class of nitrogenous bodies (such as creatin and xanthin) that may be extracted in small amount from various animal tissues. By some writers they are classed as protein compounds.

**Extractor** (eks-trak'tor) [*ex*, out; *trahere*, to draw].

An instrument for extracting bullets, sequestræ, etc. **E., Screw**, one armed with a screw-attachment; a *tirefond*.

**Extractum** (eks-trak'tum). See *Extract*. **E. ferri pomatum**, or **E. pomi ferratum**, ferrated extract of apples; official in the German Pharmacy and given in the National Formulary; it is an extract of sour apples, 50 parts, with iron one part. It contains a crude malate of iron.

**Extralfloal** (eks-trah-flo' -al) [*extra*, outside; *flos*, a flower]. In *biology*, placed without the flower.

**Extrafoliaceous** (eks-trah-fō-le-ā'-she-us) [*extra*, outside; *folium*, leaf]. In *biology*, separated from the leaves.

**Extralimital** (eks-trah-lim'-it-āl) [*extra*, outside; *limes*, bounds, limit]. In *biology*, not included in a given area, either on the surface of a plant or animal, or on the earth's surface.

**Extramalleolus** (eks-trah-mal-e'-o-lus) [*extra*, without; *malleolus*, a small hammer]. The outer malleolus of the ankle.

**Extrambulacral** (eks-tram-bu-lā'-kral) [*extra*, without; *ambulacrum*, a walk, alley]. In *biology*, located outside the ambulacra.

**Extramedullary** (eks-trah-me-dul'-ar-e) [*extra*, without; *medulla*, marrow]. Situated or occurring outside of the medulla.

**Extraneous** (eks-tra'-ne-us) [*extraneus*, external]. Existing or belonging outside the organism. **E. Body**, a foreign or intrusive body, present within the organism.

**Extraordinary** (eks-tror'-dīn-a-re) [*extra*, beyond; *ordo*, rule]. Out of the common; special. **E. Ray**. See *Ray*.

**Extrathecal** (eks-trah-the'-kal) [*extra*, outside; *theca*, box, case]. In *biology*, located outside the theca.

**Extravasation** (eks-trav-as-ā'-shun) [*extra*, outside; *vas*, a vessel]. Filtration or effusion of blood, serum or fluid from any vessel into adjacent tissues.

**Extraversio gonadium** (eks-trah-ver'-ze-o go-na'-dum) [*l.*]. In *biology*, pendent external gastro-genital pouches in certain *Medusa*.

**Extremital** (eks-trem'-it-āl) [*extremus*, outermost]. Situated towards, or pertaining to, an extremity; distal.

**Extremity** (eks-trem'-it-e) [*extremus*, outermost]. An arm or leg; the distal or terminal end or part of any organ; a hand or foot.

**Extricate**, **Extricated** (eks'-trik-at, -ā'-ted) [*extricare*, to disentangle]. In *biology*, applied to the normally extruded parts of certain insects, as the ovipositors.

**Extrinsic** (eks-trin'-sik) [*extrinsicus*, from without]. External, outward. **E. Muscles**, those attached to the trunk and extending to the limbs.

**Extrorse** (eks trors') [*extrorsus*, toward the outside]. In *biology*, turned outward or away from the body or central axis.

**Extroversion** (eks-tro-ver'-shun). See *Exstrophy*.

**Extubation** (*eks-tu-bu'-shun*) [*ex*, out; *tubus*, a pipe]. The removal of a laryngeal tube; opposed to intubation.

**Exuberance** (*ex-tu'-ber-ans*) [*ex*, out; *tuber*, mass]. A swelling or protuberance.

**Exumescence** (*eks-tu-mes'-ens*) [*ex*, out; *tumescere*, to swell]. A projection or swelling.

**Exuber** (*ex-u'-ber*) [*ex*, from; *uber*, breast: *pl.*, *Exuberans*]. A weaned child. Cf. *Sububer*.

**Exudate** (*eks'-u-dat'*) [*exudare*, to sweat]. Material that has filtered through the walls of vessels into the adjacent tissues.

**Exudation** (*eks-u-da'-shun*) [*exudare*, to sweat]. Filtration or oozing of the serum of the blood through the walls of the vessels; a mass formed by such filtration.

**Exudative** (*eks'-u-da-tiv'*) [*exudare*, to exude]. Of the nature of or characterized by exudation.

**Exulceration** (*eks-ul-ser-a'-shun*) [*ex*, out; *ulcerare*, to ulcerate]. A superficial ulceration.

**Exumbilication** (*eks-um-bil-ik-a'-shun*) [*exumbilicatio*; *ex*, out; *umbilicus*, navel]. Marked protrusion of the navel.

**Exumbral** (*eks-um'-bral*) [*ex*, out; *umbra*, shade]. In biology, all those parts lying above the free margin of the umbrella of *Medusæ*; the opposite of *subumbral*.

**Exumbrella** (*eks-um-brell'-ah*) [*ex*, out; *umbrella*, the disc of aculephs]. In biology, the convex outer surface of the umbrella in *Medusæ*.

**Exuviæ** (*eks-u'-ve-æ*) [L.]. Cast-off matters; shreds of epidermis; also, sloughed materials.

**Exuviate** (*eks-u'-ve-ât*) [*ex*, out; *uere*, to put on; from *induvie*, clothes]. To moult, shed, or slough off skin, shells, hairs, or feathers of animals.

**Exuviation** (*eks-u'-ve-a'-shun*) [*exuvie*, slough; *exuere*, to put off]. The shedding of the deciduous teeth, or other epidermal part.

**Eyckmann's Test.** See *Tests*, Table of.

**Eye** (*i*) [M.E., *eye*]. The organ of vision. **E., Accommodation of.** See *Accommodation*. **E., Appendages of,** the eyelids, brows, and lachrymal apparatus. **E., Apple of,** formerly the eyeball; the pupil. **E., Artificial,** a thin shell of glass, celluloid, or other substance, colored like the natural eye, placed in the socket after enucleation. **E., Compound,** the organ of vision formed of several crystal spheres, as in the lower crabs. **E., Diagrammatic, of Listing,** a diagram of the eye for the more exact calculation of the passage of rays of light through the eye. **E., Pineal or Epiphysial,** the rudimentary median eye in some lizards. **E., Schematic,** an ideal or normal eye. **E.-ball,** the globe of the eye. **E.-ball, Dislocation of.** See *Dislocation*. **E.-bone,** a sclerotal, *q. v.* **E.-bright.** See *Euphrasia*. **E.-brow,** the supercilium, the connective tissue, skin, and hairs above the eye. The hairs serve chiefly to prevent the sweat from falling into the eye. **E.-cells,** cup-shaped cells of porcelain, enameled black, to place over the eye after operations. **E.-current,** the normal electric current that passes from the cornea (positive) to the optic nerve (negative) under the stimulus of light. **E.-doctor,** an oculist. **E.-drops.** See *Collyrium*. Also an old name for tears. **E.-glass,** a lens worn in one eye. **Eye-glasses, pince-nez,** worn instead of spectacles, and held in position by a spring acting upon the bridge of the nose. **E.-ground,** a synonym of the fundus oculi or internal aspect of the vitreous chamber of the eye. **E.-lashes,** the cilia; the hairs of the eyelid. **E.-lashes, Evulsion of,** pulling out the lashes. **E.-lashes, Transposition of,** shifting an excised strip of cilia and lid-edge containing the hair-bulbs to a new position, or otherwise altering the

direction of the lashes by operation. **E.-lens,** the lens of a microscope to which the eye is applied; an eye-piece. **E.-lid,** the protective covering of the eyeball, composed of skin, glands, connective and muscular tissue, the tarsus and conjunctiva, with the cilia at the free edge. **E.-lid Closure.** See *Reflexes*, Table of. **E.-piece.** Synonym of *Ocular*. **E.-point,** the point above an ocular or simple microscope where the greatest number of emerging rays cross. **E.-salve,** a medicated salve for the eyes. **E.-shade, Ward's,** a circular disc of black rubber connected by an arm with the tube of the microscope. It enables the observer to keep both eyes open. **E.-speculum,** an instrument for retracting the eyelids. **E.-stone,** a small calcareous disc, the operculum of various Gasteropod molluscs (*Turbinidæ*); or sometimes a flattened concretion from the stomach of a European crawfish (*Lapillus cauvri*). In domestic practice it is placed under the eyelid for the removal of a foreign body that has found its way into the eye. **E.-strain,** the excess and abnormalism of effort, with the resultant irritation, caused by ametropia or heterophoria. It is applied also to the effects of excessive use of normal eyes. **E.-souffle,** a murmur said to be heard in anemia by means of the stethoscope on the globe of the eye. **E.-teeth,** the canine teeth of the upper jaw; dog-teeth. **E.-wash,** a medicated water for the eye; a collyrium. **E.-water,** a collyrium; also the aqueous humor. **E.-winker,** an eyelash.

MUSCLES OF THE EYE. TENDON OR LIGAMENT OF ZINN.

1. Tendon of Zinn. 2. External rectus divided. 3. Internal rectus. 4. Inferior rectus. 5. Superior rectus. 6. Superior oblique. 7. Pulley for superior oblique. 8. Inferior oblique. 9. Levator palpebrae superioris. 10, 10. Its anterior expansion. 11. Optic nerve.

POSTERIOR HEMISPHERE OF THE GLOBE OF THE EYE.

1. Optic nerve. 2. Central artery of the retina. 3. Short, posterior, and external ciliary arteries. 4. Short, posterior, and internal ciliary arteries. 5, 5, 6, 6, 6. External and internal posterior ciliary arteries. 7. Posterior long ciliary artery, and long ciliary nerve. 8. Artery and nerve of opposite side. 9, 10. Superior and external choroid veins. 11, 12. Inferior choroid veins. 13. Attachment of inferior oblique muscle. 14. Tendon of superior oblique.

THE LACRIMAL AND MEIBOMIAN GLANDS, AND ADJACENT ORGANS OF THE EYE.

1. 1. Bone with an orbit.
2. 2. Inner portion of orbicularis palpebrarum.
3. 3. Attachment to circumference of base of orbit.
4. 4. Origin for transmission of nasal artery.
5. 5. Muscle of Horner (inner tarsi).
6. 6. Meibomian glands.
7. 7. Orbital portion of lacrimal gland.
- 8, 9, 10. Palpebral portion.
- 11, 12. Mouths of excretory ducts.
- 12, 13. Lacrymal puncta.

IRIS AND CHOROID.

1. Optic nerve.
- 2, 2, 2, 2. Sclerotic, divided in four equal parts and turned back.
- 3, 3. Pigmentary granulation of its inner layer.
4. Section of lamina fusca.
- 5, 5, 5, 5. Cornea, divided in four equal parts.
- 6, 6. Canal of Schlemm.
7. Outer surface of choroid.
8. Superior and internal trunk of vasa vorticosa.
- 9, 9. Irregular border limiting the choroid zone posteriorly.
- 10, 10. Anterior half of this zone; ciliary muscle.
- 11, 11. Ciliary nerves.
12. Long ciliary artery.
- 13, 13, 13. Anterior ciliary arteries.
14. Iris.
15. Small arterial circle of iris.
16. Pupillary orifice.

VERTICAL SECTION OF EYE IN ITS ANTERO-POSTERIOR AXIS.

1. 1. Cornea.
2. 2. Middle portion of sclerotic.
3. 3. Posterior portion.
4. 4. Portion of optic nerve.
5. 5. Internal tunic.
6. 6. Sclerotic sheath (portion of superior rectus).
7. 7. Sclerotic in vicinity of insertion of superior rectus.
- 8, 8. Superior and inferior recti.
9. 9. Cornea.
10. 10. Its central portion.
11. 11. Posterior ciliary vessels.
12. 12. Junction of cornea and sclerochoroid.
- 13, 13. Canal of Schlemm.
14. 14. Canal of Schlemm.
15. 15. Canal of Schlemm.
16. 16. Canal of Schlemm.
17. 17. Ciliary muscle.
18. 18. Ciliary body.
19. 19. Kermel.
20. 20. Origin of cornea.
21. 21. Middle layer of cornea.
22. 22. Central artery of retina.
23. 23. Branches of central artery.
24. 24. Hyaloid membrane.
25. 25. Zone of Descemet.
26. 26. Posterior wall of canal of Petit, formed by the union of the iris.
27. 27. Ciliary muscle.
28. 28. Iris.
29. 29. Iris.
30. 30. Iris.
31. 31. Iris.
32. 32. Iris.

THE CILIARY MUSCLE.

- 1, 1. Crystalline lens.
2. 2. Hyaloid membrane.
- 3, 3. Zone of Zinn.
4. 4. Iris.
- 5, 5. Radiating portion of ciliary muscle.
6. 6. Section of circular portion.
7. 7. Venous plexus of a ciliary process.
8. 8. Sclerotic.
9. 9. Middle layer of cornea.
10. 10. Anterior hyaline layer of cornea.
11. 11. Epithelial covering of this layer.
12. 12. Posterior hyaline layer of the cornea, or membrane of Descemet.
13. 13. Fibers in which this layer terminates, or ligamentum pectinatum.
14. 14. Epithelial covering of posterior hyaline layer.
15. 15. Junction of sclerotic and cornea.
16. 16. Section of canal of Schlemm.

RELATIONS OF THE EYE AND THE LACRYMAL EXCRETORY APPARATUS.

1, 1. Canaliculi. 2, 2. Puncta lacrymalia. 3, 3. Inner extremity of tarsal cartilage. 4, 4. Free borders of lids. 5. Lacrymal sac. 6. Attachment to maxillary bone of superior tendon. 7. Bifurcation of lacrymal sac. 8, 8. Two branches.

SECTION OF CILIARY BODY AND IRIS.

1, 1. Ciliary processes. 2, 2. Their base or rounded extremity. 3, 3. Their apex. 4. A process with bifurcated extremity. 5, 5. Reticulated folds, or ciliary processes of the second order. 6, 6. Venules that emanate from these. 7, 7. Ora serrata of choroid. 8, 8. Veins of choroid. 9. Section of iris. 10, 10. Circumference of iris. 11, 11. Small ring of iris. 12, 12. Large ring of iris.

VERTICAL SECTION THROUGH THE UPPER EYELID.

A. Cutis. 1. Epidermis. 2. Corium. 3. Subcutaneous connective tissue. 4. Pigment cells. 5. Sweat-glands. 6. Hair follicles. 7. Orbicularis muscle. 8. Sections of nerves. 9. Arteries. 10. Veins. 11. Cilia. 12. Modified sweat-glands. 13. Circular muscle of Riolan. 14. Meibomian gland. 15. Section of an acinus of the same. 16. Posterior tarsal glands. 17. Tissue of the tarsus. 18, 19. Tissue of the tarsus. 20. Pretarsal or submuscular connective tissue. 21, 22. Conjunctiva, with its epithelium. 23. Fat. 24. Fat. 25. Loosely-woven posterior end of the tarsus. 26. Section of a palpebral artery.

## F

**F.** Abbreviation of *Fabricius*; also of *Fila*, make, and of *Fals*, let there be made.

**Fl.**, or **Fld.** Abbreviation of *Fila*.

**Ft.** Abbreviation of *Fili*, let there be made.

**Faam** (*fā-m*) [*fama*, Asia]. The plant *Angustifolia*, used in Asia and in France as a substitute for tea.

**Faba Ignata** (*fā-bā*) [*ignata*, a bean]. See *Ignatia*.

**Fabella** (*fā-bā*) [*faba*, a bean]. A sesamoid sesamoid bone or small bone occasionally developed in the gastrocnemius muscle at the posterior aspect of the knee joint.

**Fabiana** (*fā-biā*) [*faba*, a bean]. See *Pohi*.

**Face** (*fā*) [*face*, the face]. A name applied to the lower and anterior part of the head, including the eyes, nose, mouth, cheeks, lips, etc. **F.-ache**. See *F. facialis*.

**F.**, **Hippocratic**. See *Facies*. **F.-plug**, a small layer of cerumen lying on the membrana tympani. **F.-presentation**, a presentation of the fetal face in labor.

**Facet** (*fā-sit*) [*Fr.*, *façette*, a little face]. A small plane surface. The articulating surface of a bone. Also, the flat surface occasionally seen on calculi, caused by friction upon each other. In biology, a segment of the compound eye of an insect.

**Facial** (*fā-shiāl*) [*Fr.*, *faciale*, of the face]. Pertaining to the face, as *facial* paralysis. **F. Angle**, the divergence between a line drawn from the upper jaw tangent to the forehead, and another to the external auditory foramen. **F. Artery**. See *Arteries*, *Table of*. **F. Nerve**. See *Nerves*, *Table of*. **F. Palsy**, or **Paralysis**. See *Paralysis*. **F. Spasm**. See *Spasm*. **F. Trophoneurosis**. Synonym of *Atrophy*, *Progressive Unilateral Facial*. **F. Vein**. See *Vein*.

**Facies** (*fā-shiēs*) [*L.*, *face*]. Appearance, especially that of the face. **F.**, **Cardiac**, an anxious expression occasionally seen in the early stages of chronic valvular disease. **F. hepatica**, a peculiar earthy appearance of the face, often observed in organic disease of the liver. **F. hippocratica**, the Hippocratic countenance, indicative of the rapid approach of dissolution; the nose is pinched, the temples hollow, the eyes sunken, the ears swollen and cold, the lips relaxed, the skin livid.

**F. ovarina**, the characteristic expression of women suffering from ovarian disease. The features are emaciated and sunken, the expression anxious, the forehead narrowed, the eyes hollow, the nostrils open and widely dilated, the lips long and compressed, the angles of the mouth depressed, with wrinkles encircling the mouth. **F. stupida**, the typhoid face.

**Factitious** (*fā-shi-ti-ōs*) [*factitius*, to make]. Made by art. **Artificial**, as *factitious* teeth, etc.

**Facultas** (*fā-shi-tas*) [*L.*]. See *Faculty*.

**Facultative** (*fā-shi-ti-ōs*) [*facultas*, capability]. Pertaining to acquired power. Possessing a power that is only occasionally or occasionally exercised.

**F. facultative**, an organism that is capable of living either with or without free oxygen. **F. acrobia**. See *Acrobia*. **F. anaërobia**. See *Anaërobia*.

**F. Hyperopia**, a division of manifest hyperopia. **F. Parasite**, applied to such a bacterium, denoting its mode of life, as that of fungi, play the part of a parasite. **F. Saprophyte**, applied to a fungus that is usually saprophytic but occasionally parasitic.

**Faculty** (*fā-shi-ti-ōs*) [*facultas*, capability]. A special action of the mind through the instrumentality of an organ, or together, and function, particularly any acquired, transient or facultative function. Also, the

corps of professors and instructors of a university and its colleges. **F.**, **Medical**, the corps of professors and instructors of a medical college.

**Fæcal**, **Fæces** (*fā-kal*, *fē-sēz*). See *Fecal*, *Feeces*.

**Fæcula** (*fā-kū-lah*). See *Fecula*.

**Fæx** (*fāks*) [*L.*, "lees": *pl.*, *Feeces*]. The dregs or sediment of any liquid. **F. sacchari**, treacle or molasses.

**Fag** [origin uncertain]. Exhaustion; tire. See *Brain-fag*.

**Fagara** (*fā-gā-rah*) [*L.*]. The genus *Xanthoxylon*, *q. v.*

**Fagin** (*fā-jin*) [*fagus*, a beech-tree]. A principle contained in the husks of the nuts of the common beech (*Fagus*). It is said to be poisonous and narcotic.

**Fagopyrum** (*fā-gō-pi-rum*). See *Buckwheat*.

**Fagus** (*fā-gus*) [*L.*, "beech-tree": *gen.*, *Fagi*]. A genus of cupuliferous trees; the beeches. **F. sylvatica**, the common beech. The bark is said to be antipyretic, the nuts anthelmintic and anticalculous. **Unof.**

**Faham** (*fāh-ahm*). Same as *Faam*.

**Fahrenheit's Thermometer**. See *Thermometer*.

**Faint** (*fānt*) [*ingere*, to feign; *ME.*, *faynt*, weak]. A condition of languor. Also, a state of syncope or swooning.

**Fainting** (*fānt-ing*) [*ingere*, to feign; *ME.*, *faynt*, weak]. A swoon; the act of swooning. **F. Sickness**. Synonym of *Epilepsy*.

**Faintness** (*fānt-nes*). See *Syncope*.

**Faith-cure** (*fāth-kur*). The system or practice of attempting or pretending to cure diseases by religious faith and prayer alone. "It differs from mind-cure, in that the faith-curers have no mind, while the mind-curers have no faith." **F.-doctor**. See *F.-healer*. **F.-healer**, one who practises the faith-cure.

**Falcate** (*fāl-kat*) [*falx*, a sickle]. In biology, sickle-shaped.

**Falcial** (*fāl-se-al*) [*falx*, a sickle]. Relating to the falx cerebri.

**Falcicula** (*fāl-sik-ū-lah*). See *Facula*.

**Falciform** (*fāl-sif-orm*) [*falx*, a sickle; *forma*, form]. Having the shape of a sickle. **F. Ligament**. See *Ligament*. **F. Process**, a process of the dura mater that separates the hemispheres of the brain; the falx. See also *Ligament*, *Femoral*, of *Iley*.

**Facula** (*fāl-kū-lah*) [*dim.* of *falx*, a sickle]. The falx cerebelli.

**Fall** (*fāl*) [*ME.*, *fallen*, to fall]. To be dropped in birth, as a lamb. **F.-drink**, a Swiss and German cordial, of exceedingly varied composition and flavored with many aromatic and other herbs, as arnica, achillea, asperula, etc. It is regarded as a sovereign remedy for bruises and the effects of falls. **Unof.** **F. Fever**. Synonym of *Typhoid Fever*, *q. v.* **F.-rhéotome**, an arrangement whereby a weight injures a muscle, and at the same time breaks and makes a galvanometer circuit; by this instrument it was shown that the demarcation current took a certain time to develop.

**Fallacia** (*fāl-a-se-ah*) [*L.*]. An insane delusion; an hallucination. **F. auditoria**, a delusion as to hearing. **F. optica**, any visual illusion.

**Falling** (*fāl-ing*) [*ME.*, *fallen*, to fall]. Dropping; losing one's equilibrium. **F.-sickness**, a common term for epilepsy. **F. of Womb**. See *Uterus* and *Prolapsus*.

**Fallopian** (*fal-o'-pe-an*) [*Fallopius*, an Italian anatomist]. Of or pertaining to Fallopius. **F. Artery.** See *Arteries*, *Table of*. **F. Tubes.** See *Oviducts*.

RIGHT FALLOPIAN TUBE. (After Morris.)

**Fallopian, Aqueduct of.** See *Aqueduct*. **F., Arch of.** See *Arch*. **F., Canal of.** See *Aqueduct*. **F., Hiatus of,** an opening in the petrous portion of the temporal bone, for the transmission of the petrosal branch of the Vidian nerve.

**Fallow Wards.** Certain wards in hospitals that are occasionally cleared of patients and are then temporarily disused.

**False** (*falsus*) [*falsus*, deceptive]. Not genuine. Feigning or closely counterfeiting. **F. Amnion**, the vesicula serosa, which disappears as the chorion is developed. **F. Ankylosis**, ankylosis due to rigidity of the soft tissues. **F. Bittersweet.** See *Climbing Staff-tree*. **F. Conception.** See *F. Germ*. **F. Germ**, a mole, *q. v.* **F. Gromwell**, the root of *Onosmodium virginianum*, reputed to be tonic and diuretic. Dose of the fld. ext. ℞xv-5 ss. Unof. **F. Hearing.** See *Pseudocousma*. **F. Image**, the image of the deviating eye, in diplopia. **F. Joint**, a result of non-union of a fractured bone. **F. Measles.** Synonym of *Röthelu*, *q. v.* **F. Membrane**, a fibrinous exudate upon a surface, as the fauces. **F. Pains**, pains that precede true labor-pains. **F. Passage**, a passage formed by the laceration of any canal, *e. g.*, the urethra, caused by the forcible introduction of a catheter or other instrument in the wrong direction. **F. Pelvis**, the portion of the pelvic cavity situated above the linea ileo-pectinea. **F. Peritonitis**, hysterical manifestations simulating peritonitis. **F. Pneumonia**, peripneumonia notha. **F. Pox.** Synonym of *Varicella*. **F. Ribs.** See *Ribs*. **F. Water**, a collection of fluid in catarrhal endometritis.

**Falsetto** (*fawel-set'-o*) [Ital.]. A voice both high-pitched and peculiarly modified as to quality; the highest register of the human voice. It is more obvious in the male than in most female voices.

**Falsification** (*fawel-sif-ik-a'-shun*) [*falsus*, deceptive; *facere*, to make]. The fraudulent adulteration of foods or medicines; counterfeiting.

**Falx** (*falks*) [L.]. A sickle. Same as *Falx cerebri*. In biology, variously used to designate falciform structures; *e. g.*, the poison-fangs of a serpent or the chelicere of a spider. **F. cerebelli**, the falcula; a sickle-like process between the lobes of the cerebellum. **F. cerebri**, the sickle-like process of the dura, separating the hemispheres of the cerebrum.

**Famelic** (*fam-el'-ik*) [*famelicus*, hungry]. Marked

by extreme hunger; effective in overcoming the sensation of hunger.

**Famelica** (*fam-el'-ik-ah*) [*famelicus*, hungry]. Febris famelica; fever accompanied by hunger.

**Fames** (*fa'-mes*) [L.]. Hunger. **F. bovina**, bulimia. **F. canina** ('dog-hunger'), bulimia. **F. lupina**, ('wolf-hunger'), extreme bulimia.

**Family** (*fam'-ile*) [*familia*, a household]. The persons belonging to a household. In biology, a class of genera similar in organic structure. **F. Ataxia.** See *Paramyoclonus multiplex*. **F. Diseases**, those diseases that are hereditary.

**Famine** (*fam'-in*) [*fames*, hunger]. Severe and continued hunger. Also, a general scarcity of food, which results in the starvation of many people. **F. Bread**, a lichen, *Umbilicaria arctica*, found in frozen regions, and serviceable, in extremity, as human food. **F. Fever.** Same as *Relapsing Fever*, *q. v.*

**Fanaticism** (*fən-ad'-is-izm*) [*fanaticus*, pertaining to a temple]. Perversion and excess of the religious sentiment. It often trenches upon the domain of insanity; and is sometimes an outcome, at other times a cause, of mental disease.

**Fang** [ME., *feng*, a catch]. In biology, any prehensile part or organ. See *Teeth*.

**Fantome** (*fam'-tum*). See *Phantom*.

**Far** [E. dial.]. The young of swine; a litter of pigs.

**Far** [ME., *fer*, at a distance]. At a distance. **F. Point.** See *Punctum remotum*. **F.-sightedness**, a colloquial term for *Hypermetropia*.

**Farabeuf's Operation.** See *Operations*, *Table of*.

**Farad** (*far'-ad*) [after Michael Faraday, a chemist]. The unit of electric capacity. Practically a capacity sufficient to hold one coulomb of current having a potential of one volt. The micro-farad,  $\frac{1}{1,000,000}$  of the theoretic farad, is commonly used. A practical form of condenser of one farad capacity consists of 300 leaves of tinfoil, each 16 centimeters in diameter, separated by leaves of mica. The entire surface is about of 1.1 sq. meters area. See *Electric Units*.

**Faradic** (*far-ad'-ik*) [named from its discoverer, Michael Faraday]. Pertaining to induced electric currents. **F. Current**, the induced electric current. See *Current*. **F. Induction** is brought about by a current of electricity passing through a wire exciting a wave of electricity in a second wire placed near or parallel with it at the instant of opening and closing the circuit.

**Faradimeter** (*far-ad-im'-et-er*) [*Faraday*; *μετρον*, a measure]. An instrument for measuring the strength of an induced electric current.

**Faradism** (*far'-ad-izm*) [after Michael Faraday, a chemist]. 1. Induced electricity. 2. The application of induced currents to the treatment of disease.

**Faradization**, or **Faradism** (*far-ad-is-a'-shun*, or *far'-ad-izm*) [after Michael Faraday, a chemist]. The application of the induced current to a diseased part, or for disease.

**Farado-puncture** (*far-ad-o-punk'-chür*) [*Faraday*; *punctura*, a puncture]. The passage of a faradic current into the tissues by acupuncture.

**Farcimen** (*far-si'-men*) [*farciminum*, farcy; *pl.*, *Farcimina*]. Farcy; also, a farcy-bud.

**Farcin** (*far'-sin*) [Fr.]. Same as *Farcy*.

**Farcinia** (*far-sin'-e-ah*). Synonym of *Equinia*.

**Farcinoma** (*far-sin-o'-mah*) [*farciminum*, farcy; *buä*, a tumor; *pl.*, *Farcinomata*]. A farcy-bud, or glandular tumor; less correctly, farcy, or glanders.

**Fartus** (*far'-tus*) [L., a "stuffing"]. Emphraxia; congestion; infarction.

**Farcy** (*far'-se*). See *Equinia* and *Bacillus of Nocard*, under *Bacteria*, *Synonymatic Table of*. **F.-bud**, or

**F.-button** A nodular swelling in the course of a lymphatic vessel in glands.

**Fardel-bound** [*fardel-bound*] [*fardel*, a load; ME., *fardel*]. 1. A term applied to meat cattle or sheep affected with inflammation of the stomasum, or of the *intestines*, with impaction of food in the latter. **Fardel-bound**, *portulaca*, said to have "lost the calf."

**Farding-bag**, [*fardling-bag*]. The first stomach of a ruminant animal; the *pouch* or *rumen*.

**Fartara** [*fartara*] [*fartara*, meal].

**Farina** [*farina*] [*farina*, meal]. The ground or pulverized meal of seeds, especially that of corn, barley, rye, and wheat. In biology, applied to the pulvis of flowers, and to the powdery substance found in certain insects.

**Farinaceous** [*farinaceous*] [*farina*, meal]. Having the nature of or yielding flour. Also, applied to very fine farinaceous excretions.

**Farinose** [*farinose*] [*farina*, meal]. In biology, covered with a flour like powder, as certain leaves and insects.

**Farrant's Solution.** See *Mountain Fart*, and *Medic.*

**Farre's Tubercles** See *Farre's Symptoms*, *Fibre of*.

**Farriery** [*farriery*] [*farriery*, pertaining to iron]. The art of treating the diseases of horses; veterinary surgery.

**Farrow** [*farrow*] [ME., *farrow*, *faren*, a little pig]. 1. A little pig. 2. To bring forth, as pigs.

**Fascia** [*fascia*] [*fascia*, a band; *pl.*, *Fasciæ*]. The ramia rana, fibrous covering of muscles and other organs. In biology, applied to any broad, transverse band of color on the hair, feathers, scales, or stems. **F.**, Anal. See *F.*, *Anal.* **F. of Arm** (*Brachial*), invests the muscles of the arm attached to the clavicle, acromion, and spine of the scapula. **F.**, Cervical, Deep, invests the muscles of the neck and encloses the vessels and nerves. **F.**, Cervical, Superficial, that just beneath the skin. **F.**, Cloquet's. See *Aponurotomy*. **F.**, Cranial, a firm, dense layer, adherent to the skin and occipito-frontalis muscle. **F.**, Cremasteric, forms a looped, thin covering of the spermatic cord. **F.**, Cribriform, the sieve-like covering of the sphenoid opening. **F. dentata**, a serrated band of cinerea of the hippocampal gyrus of the cerebrum. **F. of the Dorsum of the Foot**, forms a sheath for the dorsal tendons of the foot. **F.**, Iliac, lines the back part of the abdominal cavity, covering the psoas and iliacus muscles. **F.**, Infundibuliform, the funnel-shaped membrane enclosing the spermatic cord and testis in a distinct pouch. **F.**, Intercolumnar, forms the margins of the external abdominal ring, forming a sheath for the cord and testis. **F.**, Intercostal, a thin, firm layer of fascia covering the outer surface of the external intercostal and the inner surface of the internal intercostal muscles. **F.**, Ischio-rectal, covers the perineal aspect of the levator ani muscle. **F. lata**, the dense fibrous aponeurosis surrounding the thigh, called the *Deep F. of the Thigh*. **F.**, Deep, of Leg, continuous with the last, surrounds the leg. **F.**, Lumbar, the posterior aponeurosis of the transverse muscle, divided into three layers. **F. of Mamma**, part of the superficial fascia of the breast, which therefore has two layers, one passing in front, and one behind the mamma. **F. nodosa**, *Pachy's Knot*, a knotted bandage formerly used to make compression over the temporal artery. **F.**, Obturator, continuation of the pelvic, surrounding the obturator foramen. **F.**, Pelvic, lines the cavity of the pelvis, becoming continuous with the transverse and the iliac fascia. **F.**, Perineal, the *Deep*, called the triangular ligament, closes the lower part of the outlet of the pelvis, it is crossed by the perineal and ramus of the rectum.

**F.**, Plantar, the fibrous membrane of the sole of the foot. **F.**, Recto-vesical, the visceral layer of the pelvic fascia, investing the prostate, bladder, and rectum. **F.**, Spermatic, a thin fascia attached to the external abdominal ring, and prolonged down over the outer surface of the chorda testis. **F. spirales**. See *Twia*. **F.**, Temporal, a strong fibrous investment covering the temporal muscle. **F.**, Transversalis, a fascia continuous with the iliac and pelvic fasciæ, and lying between the transversalis muscle and the peritoneum.

**Fascial** [*fash'-e-at*] [*fascialis*, of a fascia]. Pertaining to or of the nature of a fascia.

**Fasciate** [*fash'-e-at*] [*fascia*, a bundle or band]. In biology, banded; also applied to monstrous stems that grow flat.

**Fasciation** [*fash'-e-at-shun*] [*fasciatio*; *fascia*, a bandage]. The art or act of bandaging.

**Fascicle** [*fash'-ik-let*] [*dim.* of *fascis*, a bundle]. In biology, a bundle, as a compact inflorescence or a cluster of leaves. See *Fasciculus*.

**Fasciculate**, or **Fasciculated** [*fash'-ik-let*, *fash'-ik-let*] [*fasciculus*, a little bundle]. Arranged in fasciculi, or little bundles.

**Fascicule** [*fash'-ik-let*] [*fasciculus*, a small bundle]. In biology, applied to brush-like bundles of hairs often seen on caterpillars, etc.

**Fasciculus** [*fash'-ik-let*] [*dim.* of *fascis*, a bundle; *pl.*, *Fasciculi*]. A little bundle, as the fasciculus of fibers that compose a nerve. **F.**, Olivary. See *Fillet*, *Olivary*. **F. of Türk**, the crossed pyramidal tract of the spinal cord.

**Fascination** [*fash'-in-at-shun*] [*fascinatio*, a bewitching]. A form of incomplete hypnotism, intermediate between somnambulism and catalepsy; the alleged controlling influence of one person over another.

**Fasciola** [*fash'-i-ol-ah*] [*l.*, a small bandage]. The dorsal continuation of the fascia dentata of the cerebrum. **F. hepatica**. See *Trematodes*. **F. hepaticum**. See *Distoma hepaticum*.

**Fasciole** [*fash'-e-ol*] [*fasciola*, a small bandage]. In biology, a narrow transverse band or stripe.

**Fascioliasis** [*fash'-e-ol'-as-is*] [*fasciola*, a small bandage]. A term employed in England for *Distomiasis* (Wiame), or *Distomatosis* (Zundel).

**Fasciotomy** [*fash'-e-ol'-o-me*]. See *Aponurotomy*.

**Fast** [ME., *fast*, firm, stiff; *fasten*, to fast]. Fixed; immovable; close; sound, as sleep; to abstain from food; abstinence from food. **F. Color**. See *Pigments*, *Colors*, and *Dye-stuffs*. **F.-blue**. Same as *Alkali Blue*, *Couper's Blue*, *Methylene-blue*. See *Pigments*, *Conspectus of*. **F.-brown**. See *Pigments*, *Conspectus of*. **F.-green**. See *Pigments*, *Conspectus of*. **F.-red**. See *Pigments*, *Conspectus of*. **F.-yellow**. Same as *Acid Yellow*. See *Pigments*, *Conspectus of*.

**Fastidium** [*fash'-tid'-e-um*] [*l.*, "a loathing"]. A loathing for food or drink.

**Fastigatum** [*fash'-tig-at-tum*]. See *Nucleus fastigii*.

**Fastigate**, **Fastigated** [*fash'-tig'-e-at*, *-at-ted*] [*fastigatus*, sloping, pointed]. In biology, tapering gradually; close, parallel.

**Fastigium** [*fash'-tig'-e-um*] [*l.*, "summit"]. 1. The acme of any disease. 2. A dorsal extension of the adult epicle into the cerebellum; its cephalic and caudal slopes meet like a gable roof, whence its name.

**Fasting** [*fa'-ting*] [ME., *fasten*, to fast]. The partial or complete abstinence from food. **F.-cure**. See *Limotherapy*. **F.-mania**, a prevalent or epidemic practice of absolute and complete fasting, mainly for exhibition and profit, such as occurred in 1890-91. Fifty five days appears to be the extreme limit reached as yet by any professional abstainer from food. **F.-**

girls, hysterical women who, for the sake of gaining sympathy and attention, pretend to fast, but for the most part secretly obtain food.

**Fat** [ME., *fat*, fat]. See *Adeps*, *Tissue*, and *Oil*. **F.-ball**, a mass of fatty substance on the dorsal aspect of the buccinator muscle; called also *Bichat's fat-ball*. **F.-cell**, a form of connective-tissue cell containing oil-globules. **F.-column**, a columnar-shaped space filled with adipose tissue found in the thicker portion of the cutis vera. **F.-necrosis**, a peculiar form of

necrosis of a tissue occurring in pin-point sized areas of a dead-white color. It is seen usually in the interlobular pancreatic tissue, mesentery, omentum, and abdominal fatty tissue generally, and frequently in connection with pancreatic disease. **F.-rickets**, that form of rickets in which there is not excessive emaciation.

**Fatal** (*fa'tal*) [*fatalis*, *fatum*, fate, destiny, death]. Ending with death; mortal; deadly; as a *fatal* accident or attack.

**Fatigue** (*fa-tēg'*) [*fatigo*, weariness]. Weariness, tiredness. That condition of diminished capacity for work produced in a muscle by prolonged activity. **F.-diseases**, those caused by constant repetition of certain movements, such as *Tailors' cramp*, *Writers' cramp*, *Scriveners' palsy*, etc. See *Cramp*, and *Spasm*. **F.-stuffs**, decomposition products that have accumulated in the muscular tissue during exhaustive efforts; among them are phosphates, phosphoric acid, carbonic acid, and perhaps glycerin-phosphoric acid.

**Fatty** (*fat'-e*) [ME., *fat*, fat]. A qualification applied to certain carbon derivatives, including fats and fatty acids. They were better called marsh-gas or methane derivatives, as they can all be obtained from methane, CH<sub>4</sub>. See *Acids*, *Fatty*. **F. Degeneration**. See *Degeneration*. **F. Heart**. See *Heart*. **F. Nutmeg**. Same as *Nutmeg Liver*.

**Fatuity** (*fat-u'-it-e*) [*fatuitas*, foolishness]. Amentia or dementia.

**Fauces** (*fa'u-sēz*) [L.]. The gullet or windpipe. The space surrounded by the palate, tonsils, and uvula. In biology, the throat of a monopetalous flower or the cavity of a gasteropod shell as exposed in the first whorl. **F., Isthmus of**, the space at the back of the mouth enclosed by the margin of the palate, the back of the tongue, the pillars of the soft palate and the tonsils. **F., Pillars of**, the folds of mucous membrane between the base of the uvula and the posterior border of the tongue.

**Fauchard's Disease**. See *Diseases*, *Table of*.

**Faucial** (*fa'u'-se-al*) [*fauces*, the gullet]. Pertaining to the fauces.

**Faucitis** (*fa'u-si'-tis*) [*fauces*, the gullet; *itis*, inflammation]. Inflammation of the fauces; isthmitis.

**Fault** (*fault*) [ME., *fault*, a lack]. In electricity, any failure in the proper working of a circuit due to ground-contacts, cross-contacts, or disconnections. These may be of three kinds: 1. Disconnections; 2. Earths; 3. Contacts.

**Fauna** (*fa'u-nah*) [*Faunus*, the god of agriculture: *pl.*, *Faune* or *Faunas*]. The entire animal life of any geographic area or geologic period.

**Faunorum ludibria** (*fa'u-nō'-rum lu-dib'-re-ah*) [L., "sport of the fauns"]. An old designation for nightmare and for epilepsy.

**Favaginous** (*fav-aj'-in-us*) [*favus*, a honeycomb]. Resembling favus; having a honeycombed surface.

**Favella** (*far-ell'-ah*) [*favilla*, embers: *pl.*, *Favellæ*]. In biology, an irregular mass of spores embedded in a gelatinous material, and constituting a form of sporocarp found in the Floridæ.

**Faveolate** (*fav-e'-o-lāt*) [*favus*, honeycomb]. Favose, honeycombed; same as alveolate.

**Faveolus** (*fav-e'-o-lus*) [*favus*, a honeycomb: *pl.*, *Faveoli*]. In biology, a pit or cell like that of the honeycomb.

**Faviform** (*fav'-if-orm*) [*favus*, honeycomb; *forma*, form]. Resembling a honeycomb; a designation of certain ulcerated surfaces.

**Favous**, or **Favose** (*fav'-us* or *fav-ōs'*) [*favus*, honeycomb]. Resembling a honeycomb; resembling favus; alveolate; filled with polygonal depressions.

**Favulus** (*fav'-u-lus*) [dim. of *favus*, a honeycomb: *pl.*, *Favuli*]. Any one of the honeycomb-like depressions or alveoli of the gastric mucous membrane.

**Favus** (*fa'-vus*) [*favus*, honeycomb]. *Tinea favosa*; *Honeycomb Ringworm*, a parasitic skin-disease due to the presence of a vegetable parasite, the *Achorion schönleini*, which, growing in the epidermis, hair, and nails, causes varying grades of inflammation, alterations of structure, and, when occurring upon hairy parts, partial or complete loss of hair. It is characterized by the presence of variously-sized, sulphur-yellow, cup-shaped crusts, having a peculiar musty odor, which are found on microscopic examination to be composed almost entirely of the elements of the fungus. **F.-cup**, any one of the cup-shaped crusts that characterize favus.

**Faxwax** (*faks'-waks*) [*fax*, hair; Ger., *wachsen*, to grow]. The ligamentum nuchæ, or the material of which it is composed. It is also called *paxwax*.

**Fear** (*fēr*) [ME., *feer*]. An emotion of dread; apprehension; the feeling which in its intenser manifestations is called terror or fright.

**Feather** (*feh'-er*) [AS., *fedher*]. One of the epidermal appendages of birds. **F. Respiration-register**. See *Anæsthetic*.

**Feature** (*fe'-chūr*) [*factura*, a making]. Any single part or lineament of the face.

**Febricity** (*f'-bris'-it-e*) [*febris*, a fever]. Feverishness.

**Febricula** (*f'-brik'-u-lah*) [L., dim. of *febris*, fever]. A term indicating a slight and short fever, most frequently encountered among children. The rash that accompanies it is very similar to that of scarlet fever.

**Febrifacient** (*feb-re-fa'-se-ent*) [*febris*, a fever; *facere*, to make]. Causing fever.

**Febriferous** (*fe-brif'-er-us*) [*febris*, a fever; *ferre*, to bear]. Causing or conveying fever.

**Febrific** (*fe-brif'-ik*) [*febris*, a fever]. Febrifacient.

**Febrifugal** (*fe-brif'-u-gal*) [*febris*, fever; *jugare*, to dispel]. Removing or dispelling fever.

**Febrifuge** (*feb'-rif-ūg'*) [*febri*, fever; *fugare*, to dispel]. 1. Antipyretic; cooling, lessening or relieving fever. 2. An agent that lessens fever.

**Febrile** (*feb'-līn*) [*febrilis*, *febris*, a fever]. Pertaining to or having the symptoms of a fever.

**Febrility** (*feb'-rīl-ē-tē*) [*febris*, a fever]. The quality of being febrile; feverishness.

**Febris** (*feb'-ris*) [*l.*]. See *Fever*. *F. bullosa*, Synonym of *Pseudotuberculosis*. *F. catarrhalis*, Synonym of *Indigestion*. *F. dysenterica*, Synonym of *Dysentery*. *F. famelica*, See *Jandervia*. *F. flava*, See *Fever*, *Yellow*. *F. nigra*, Synonym of *Fever*, *Cholera*. *F. recurrens*, Synonym of *Fever*, *Relapsing*. *F. remittens*, See *Fever*, *Remittent*.

**Fecal** (*feb'-ak*) [*feces*, sediment]. Pertaining to or consisting of feces.

**Fecaline** (*feb'-ak-ēn*). Same as *Feculent*.

**Fecaloid** (*feb'-ak-ōid*) [*fec*, feces; *lōid*, likeness]. Resembling feces.

**Feces** (*feb'-is*) [*fecer*, sediment]. The dregs of a liquor, as wine. Also, the alvine discharges or excretions of the bowels.

**Fechner's Law**. See *Law*.

**Fecula** (*feb'-ū-lā*) [dim. of *fecer*, sediment]. The starchy part of a seed. Also the sediment subsiding from an infusion.

**Feculent** (*feb'-ū-lent*) [*feculentus*, impure]. Abounding in or of the nature of feces; excrementitious; sedimentary, muddy.

**Fecundate** (*feb'-ū-n-āt*) [*fecundare*, to fecundate]. To impregnate; to render pregnant.

**Fecundation** (*feb'-ū-n-ā-shun*) [*fecundatio*; *fecundus*, fruitful]. Fertilization; impregnation; the act of making fruitful. *F.*, Artificial, impregnation by means of artificial intromission of the spermatic fluid into the vagina or uterus.

**Fecundity** (*feb'-ū-n-ē-tē*) [*fecunditas*, fruitfulness]. The capacity of reproduction. *F.*, Segregate. See *Hermaphrodite*.

**Fed**. See *Cross-fertilization Experiment*.

**Feeble** (*feb'-l*) [*ME.*, *feble*, weak]. Lacking strength; weak. *F.*-minded, idiotic.

**Feed** (*fed*) [*ME.*, *fedan*, to nourish]. 1. To supply with food; to graze; to eat. 2. Food, especially that for lower animals; fodder.

**Feeder** (*feb'-lēr*) [*ME.*, *fedan*, to nourish]. 1. An instrument used in the forcible feeding of insane patients who obstinately refuse to eat. 2. See *Cross-fertilization Experiment*.

**Feeding** (*feb'-līng*) [*ME.*, *fedm*, to nourish]. The taking of food or aliment. *F.*, Artificial, the introduction of food into the body by means of artificial devices, such as the stomach pump or in the form of an enema. Also, the nourishing of a child by food other than the mother's milk. *F.*-bottle, a glass flask armed with a rubber nipple, used in feeding liquid food to infants. *F.*-cup, a cup used in the forcible feeding of the insane. *F.*, Forcible, the administration of aliment by compulsion to such patients as refuse to take food in the natural manner. *F.*-gland, a chyle-gland or mammary gland of working bees. *F.*-groove, a narrow trough on the tongue of a worker bee, along which the honey is brought by compression of the honey-comb. *F.* by the Rectum, the introduction of food into the rectum in the form of an enema or suppository. *F.*-system. See *Rectum*.

**Feel** (*fel*) [*ML.*, *fel'ēn*, to feel]. To have a sensation of; to be affected; to have perception by means of the sense of touch.

**Feeler** (*fel'-ēr*) [*ML.*, *fel'ēn*, to feel]. See *Antenna*.

**Feeling** (*fel'-īng*) [*ME.*, *fel'm*, to feel]. The sense of touch; any emotion or sensibility; any conscious state of nervous activity, any sensation.

**Feet** (*fel*). The plural of *Foot*, *q. v.* *F.*, **Frosted**. See *Chillblain*.

**Fegaritis** (*feh-gar-ī-tis*) [*Sp.*; *irig*, inflammation]. An old name for a form of gangrenous stomatitis.

**Fehling's Method**. A method of dressing the umbilical cord. The stump is wrapped in cotton-wool powdered with a mixture of salicylic acid one part, and starch five parts. It becomes mummified. *F.'s Solution*, a solution for testing for sugar in the urine; as this solution does not keep well, Prof. Hölzl advises its manufacture as follows: To be kept in two distinct parts. (a) Take copper sulph. 34.64 gms. and water enough to make 500 c.c. *M.* (b) Pure Rochelle salt 173 gms.; sol. sodium hydrate (sp. gr. 1.33), 100 c.c., and water enough to make 500 c.c. For use, mix equal volumes, and thus make Fehling's solution. See *Copper*. *F.'s Test for Sugar*. See *Tests*, *Table of*.

**Feigned Disease**. See *Disease*.

**Fel** [*L.*]. Bile. *F. bovis*, or *F. bovinum*, ox-gall. The biliary liquid of the domestic ox, *Bos taurus*. It is a dark-green, ropy substance, consisting mainly of sodium glycocholate and sodium taurocholate, together with cholesterin. It is a tonic, antiseptic, and purgative, useful in emulsifying the fatty portions of food. *F. b. inspissatum*, 100 parts fresh ox-gall, strained and evaporated to 15 parts. Dose gr. v-xv. *F. b. purificatum*, ox-gall 3, alcohol 1 part. This should stand 24 hours before straining; then evaporate to the consistency of a pilular mass. Dose gr. v-xv.

**Fell's Method**. A method of forced respiration in cases of narcotic poisoning or drowning, by means of an apparatus consisting of a tracheotomy-tube attached to a bellows. *F.'s Paste*, **Caustic**, or **Cancer-salve**, a famous salve formerly used in epithelioma. Its formula was: chlorid of zinc and powdered sanguinaria root, of each one ounce; starch, enough to make a paste; apply on pieces of kid leather or wash-leather.

**Fellator** (*fel'-at-or*). See *Passivism*.

**Fellatrice** (*fel'-at-rēs'*) [*Fr.*]. The female agent in irritation, who receives the male organ in her mouth and by friction with the lips or tongue produces the orgasm.

**Fellic Acid** (*fel'-ik*) [*fel*, bile],  $C_{23}H_{40}O_4$ . A constituent of the bile.

**Fellmongers' Disease**. Anthrax; so called as attacking dealers in fells, or pelts, and skins.

**Fellows' Syrup of Hypophosphites**. A proprietary preparation. Each dram contains hypophosph. of iron gr. j, quinin gr.  $\frac{3}{4}$ , strychnin gr.  $\frac{1}{8}$ , calcium and manganese aa gr. j, potassium q. s. Dose  $\frac{5}{8}$  j. Unof.

**Felo-de-se** (*fel'-lo-de-se*) [*Sp.*]. A suicide. Also, any one who commits an unlawful malicious act, the consequence of which is his own death.

**Felon** (*fel'-on*). See *Paronychia*.

**Felt** [*fel'trum*, felt]. A fabric of hair or wool entangled together by heating and rolling. Felt splints are employed in surgery.

**Female** (*fel'-mal*) [*feminea*, *femella*; *femina*, woman]. Belonging to the sex that conceives and bears young. In surgery, denoting that part of a double-limbed instrument that receives the complementary part. *F. Catheter*, a catheter having a short tube with a slight curve to correspond to the female urethra.

**Feminism** (*fem'-in-izm*) [*femina*, a woman]. Arrested development of the male organs of generation, accompanied by various mental and physical approximations to the characters of the female sex.

**Feminity** (*fem-in'-it-ē*), or **Femininity** (*fem-in-in'-it-ē*) [*femina*, a woman]. The sum of those qualities that distinguish the female sex.

**Feminonucleus** (*fem-in-o-nū'-kle-us*) [*femina*, woman; *nucleus*, a kernel]. The embryonic female nucleus, as distinguished from the corresponding male nucleus.

**Femoral** (*fem'-or-al*) [*femur*, the thigh bone]. Pertaining to the femur. **F. Arch.**, that formed by Poupert's ligament. **F. Artery.** See *Arteries*, Table of. **F. Canal.** See *Canal*. **F. Hernia.** See *Hernia*. **F. Ligament of Hey.** See *Ligament*. **F. Ring,** the abdominal end of the femoral canal, normally

THE FEMORAL RING AND SAPHENOUS OPENING.  
(After Holden)

- (The arrow is introduced into the femoral ring).  
1. Crural arch. 2. Saphenous opening of the fascia lata.  
3. Saphena vein. 4. Femoral vein. 5. Gimbernat's ligament. 6. External abdominal ring. 7. Position of internal ring.

closed by the crural septum and the peritoneum. **F. Sheath,** a continuation downward of the fasciæ that line the abdomen. It contains the femoral vessels. **F. Vein.** See *Vein*.

**Femoren** (*fem'-or-en*) [*femur*, the thigh-bone]. Belonging to the femur in itself.

**Femorocèle** (*fem'-or-o-sel*) [*femur*, femur; *κήλη*, hernia]. Femoral hernia.

**Femoro-rotulian** (*fem'-or-o-ro-tul'-le-an*) [*femur*, the thigh-bone; *rotula*, the patella]. Pertaining to the femur and the rotula or patella.

**Femoro-tibial** (*fem'-or-o-tib'-e-al*) [*femur*, the thigh-bone; *tibia*, the shin-bone]. Relating to the femur and the tibia.

**Femur** (*fe'-mer*) [L., *pl.*, *Femora*, or *Femurs*]. The thigh-bone, the longest and heaviest bone of the body, articulating with the acetabulum and the tibia. See *Bones*, Table of.

**Fenestra** (*fe-nest'-trah*) [L., a window]. 1. In anatomy, a name given to two apertures of the ear, the *F. ovalis* and *F. rotunda*. 2. The open space in the blade of a forceps. 3. An opening in a bandage or dressing for drainage, etc.

**Fenestral**, or **Fenestrate** (*fe-nest'-tral*, *fe'-nes-trät*) [*fenestra*, a window]. Having apertures or openings.

**Fenestrated** (*fe-nest'-tra-ted*) [*fenestra*, a window]. Perforated. **F. Membrane of Henle**, the outer membrane of the inner coat of the arteries.

**Fenestrella** (*fe-nest'-rell'-ak*) [dim. of *fenestra*, a window; *pl.*, *Fenestrellæ*]. In biology, a transparent spot in the wing-cover of certain insects.

**Fenestrule** (*fe-nest'-trül*) [*fenestra*, a window]. In biology, a small open space, as between the anastomosing branches of the cecum of a polyzoan.

**Fenger's Operations.** See *Operations*, Table of.

**Fennel** (*fen'-el*) [ME., *fenel*]. An umbelliferous plant, *Feniculum capillare*, native to the Old World and common in cultivation. Its dried fruit (*Feniculum*, U. S. P.) is aromatic and carminative, but is chiefly used as a corrigent, as for senna and rhubarb. See *Feniculum*.

**Fenner's Guaiac-mixture.** See *Guaiac-mixture*.

**Fenugreek** (*fen'-u-grek*) [*fenum*, hay; *græcium*, Greek].

The leguminous plant, *Trigonella fenum-græcum*; also its mucilaginous and oily seed; it is used in plasters and poultices, and is valued in veterinary practice, chiefly as a vehicle for other medicines.

**Fenwick's Operation.** See *Operations*, Table of.

**Feraconitin** (*fer-ak-on'-it-in*). Same as *Pseudaconitin*, *q. v.*

**Feral** (*fe'ral*) [*feralis*, deadly]. Deadly or fatal; as a *feral* disease.

**Fergusson's Method.** See *Treatment*, *Methods of*. **F.'s Operations.** See *Operations*, Table of.

**Ferine** (*fe'-rin*) [*ferinus*, wild; *fera*, a beast]. Noxious, malignant, or violent; as a *ferine* disease.

**Ferment** (*fer'-ment*) [*fermentum*, leaven, yeast]. Any microorganism, proteid, or other chemic substance capable of producing fermentation, *i. e.*, the oxidation and disorganization of carbohydrates. Cf. *Enzym*; *Zymaze*. **F., Organized, or Living**, one that grows and multiplies at the expense of the substance in which it occurs—this takes place only so long as the ferment is living. Yeast is the representative of this class, causing fermentation by splitting up sugar into CO<sub>2</sub> and alcohol. See *Fermentation*. **F., Unorganized, or Non-living**, a nitrogenous body produced within the body by the vital activity of the protoplasm of the cells. These ferments are soluble in water and glycerin, and can be precipitated by alcohol. The following is a list of this class: **Ptyalin**, in saliva, converts starch into maltose. **Pepsin**, in gastric juice, converts proteids into peptones in an acid medium. There are also in the gastric juice milk-curdling, fat-splitting, and lactic acid ferments, whose functions are indicated by their names. In the pancreatic juice, there are **F., Diastatic** or **Amylopsin**, converting starch into maltose; **Trypsin**, converts proteids into peptones in an alkaline medium; **F., Emulsive**, emulsify fats; **F., Fat-splitting**, or **Steapsin**, splits fats into glycerin and fatty acids, and **F., Milk-curdling**. In the intestinal juice, there are **F., Diastatic**, which changes maltose into glucose; **F., Proteolytic**, which changes fibrin into peptone; **Invertase**, which changes cane-sugar into grape-sugar; and **F., Milk-curdling**, and **F., Diastatic**, are also found in blood, chyle, liver, milk, etc. **Pepsin** and other ferments are also found in muscle and urine; and, lastly, a **Fibrin-forming F.** is also found in blood.

**Fermentation** (*fer-men-ta'-shun*) [*fermentum*, leaven]. The decomposition of complex molecules under the influence of ferments (organized) or zymazes or enzymes (unorganized), frequently accompanied by the assimilation of one or more molecules of water (hydrolysis). Processes of oxidation and deoxidation sometimes accompany fermentation. The ordinary transformation termed *eremacausis* or *decay*, is an oxidation process. Putrefaction is applied especially to those fermentations involving nitrogenous matter and accompanied by the disengagement of offensive gases. In these cases, the growth of one or more species of microbes is correlated with the chemic changes in the medium. **F., Acetic**, the fermentation whereby weak alcoholic solutions are converted into vinegar, caused by the *Bacillus aceti*, etc. **F., Albuminoid**; the agents of this decomposition are the *Bacillus albuminis*, *B. catenula*, *B. claviformis*, *B. distortus*, *B. filiformis*, *B. geniculatus*, *B. scaber*, *B. tenuis*, *B. urocephalus*, etc. **F., Ammoniacal**; the agent of the ammoniacal fermentation of urine is the *Micrococcus ureæ*. **F., Butyric**, the conversion of butter-fat into butyric acid, due to a microbe, *Bacillus butyricus*. **F., Gluconic**; glucose is transformed by the action of the *Micrococcus oblongus*. **F., Lactic**, the decomposition or "souring" of milk, caused by the microbe, *Bacillus lactis*.

**F., Propionic**; the *Bacillus propionicus* decomposes saccharine solutions, producing propionic acid. **F., Putrefactive**, the decomposition commonly known as putrefaction, caused by various microbes, especially the *Mesentericus corymbosus* (putr., aurus, citrus, tenuis, etc.). **F., Test.** See *Test*, *Table*. **F., Viscous**, the change produced in the culture-medium by the *Mesentericus corymbosus*, a gummy substance being developed.

**Fermentemia** (*fer-men-tē-mē-ah*) [*fermentum*, leaven; *emia*, blood]. The abnormal presence of a ferment in the blood.

**Fermentogen** (*fer-men-tō-jen*) [*fermentum*, leaven; *genesis*, to produce]. Any substance (like pepsinogen or trypsinogen) that on the reception of the appropriate stimulus is changed into a ferment.

**Fern** (M.E., *fern*) [*ferum*]. Any cryptogamous plant of the order *Funari*. See *Alpinum*.

**Ferntickle** (*fer-nū'tik-ūl*) [Prov. Eng.]. A freckle; a blemish.

**Ferralum** (*fer-a-lūm*) [*ferrum*, iron; *alumen*, alum]. A proprietary disinfectant, consisting largely of the sulphate of iron and aluminum.

**Ferramentum** (*fer-a-men-tū-tum*) [*ferum*, iron; *amentum*, handle]. A surgical instrument of iron or steel.

**Ferran, Peronospora of.** See *Peronospora*.

**Ferrein, Canal of.** See *Canal*. **F., Pyramids of.** See *Pyramid*.

**Ferric** (*fer'ic*) [*ferrum*, iron]. A prefix that indicates the ferri, as distinguished from ferrous compounds. Containing iron as a quadrivalent element.

**Ferrier's Snuff.** A snuff used in acute rhinitis. Its formula is hydrochlorate of morphin gr. ij, powdered acacia ʒij, and subnitrate of bismuth, ʒvj. See *Bismuth*.

**Ferro-** (*fer'ō*) [*ferrum*, iron]. A prefix used with the names of certain (ferrous) compounds and salts of iron.

**Ferrocyanid** (*fer-ō-si'-an-id*) [*ferrum*, iron; *cyanogen*]. A compound of ferrocyanogen with an element or radical. That of potassium (*Potassii ferrocyanidum*) is orange; that of iron was so formerly. That of zinc (*Zinci ferrocyanidum*) is sometimes given as a medicine. Dose gr. 1-4, in pill. **F. of Potassium and Acetic Acid Test.** See *Tests*, *Table*.

**Ferrocyanogen** (*fer-ō-si-an'-ō-jen*) [*ferrum*, iron; *cyanogen*]. The quadrivalent radical,  $\text{Fe}(\text{CN})_6$ .

**Ferrous** (*fer'us*) [*ferrum*, iron]. Containing iron as a bivalent element. Cf. *Ferrie*.

**Ferrozone** (*fer'ō-zōn*) [*ferrum*, iron; *ōzon*, to smell]. A mineral consisting in part of iron protosulphate; it is used as a precipitant for sewage.

**Ferruginous** (*fer-ū' (m) us*) [*ferrugo*, rust; *ferrum*, iron]. Salty as *Chargat*.

**Ferrule** (*fer'ū-l*) [*ferrum*, iron]. A metallic hoop placed around a broken tooth; an instrument used with an attached lever in aligning irregularly placed teeth.

**Ferrum** (*fer'ūm*) [*ferum*, *ferri*]. Iron.  $\text{Fe} = 56$ . (Composition, 1371.) A metal having a luster varying from silvery-gray to gray. In pharmacy, a fine crystalline, and sometimes a coarse powder. Externally many of the soluble salts of iron make excellent styptic and astringent agents. **F. redactum**, (*Quercus's Iron*, from its ferruginous color) is a fine powder obtained by the reduction of ferric oxide to ferrous. It is a combination of the bases of the two sulphates of which it is composed. It is commonly in large, long-conical, double-pointed, and is a stimulant and slightly astringent iron. It is highly valuable in anæmia, the hæmorrhages of the uterine. Dose gr.

j-v. **F. redacti, Trochisci** (B.P.), each containing gr. 1 of iron. **Ferri acetat.**, Liq., a 33 per cent. solution in water. **F. acetat.**, Liq., fort (B.P.). Dose  $\text{m}$  j-viii. **F. acetat.**, Tinct., has liq. ferri acetat 50, alcohol 30, acetic ether 20 parts. It is styptic and stimulant. Dose  $\text{m}$  x-ʒ ij. **F. bromid.**, Fe-Br<sub>2</sub>. Dose gr. v-xx. **F. bromidi, Syr.**, contains 10 per cent. of ferric bromid. It is a sedative tonic, recommended in nervous disorders. Dose  $\text{m}$  v-xxx. **F. carb. saccharat.**, contains 15 per cent. of ferrous carbonate. It is a stimulant to digestion. Dose gr. ij-x, with food. **F. carb.**, Massa, Vallet's mass; ferrous sulphate 100, sodium carbonate 110, honey 38, sugar 25, syrup and distilled water aa q. s. ad fac. 100 parts. Dose gr. ij to v, after food. **F. carb.**, Pil. (B.P.). Dose gr. v-xx. **F., Mist., aromat.** (B.P.). Dose ʒ j-ij. **F., Mistura, comp.**, Griffith's mixture; ferrous sulphate 6, myrrh, sugar, aa 18, potassium carbonate 8, spt. lavender 50, rose-water 900. This is essentially a carbonate of iron. Dose ʒ ss. **F., Pilulæ, comp.**, Griffith's pill, containing each, ferrous sulphate gr. ʒ4, sodium carb. gr. ʒ4, myrrh gr. iss, syrup q. s. Dose gr. ij to vj. **F. chloridum**,  $\text{Fe}_2\text{Cl}_6 \cdot 12\text{H}_2\text{O}$ , strongly acid, astringent, hemostatic, and styptic. It is never used internally. **F. chlorid.**, Liq. (Liq. fer. perchloridi, B.P.), an aqueous solution containing 38 per cent. of the salt. Dose  $\text{m}$  ij-x; rarely used. Liq. fer. perchlor. fort. (B.P.), a powerful styptic.  $\text{Fe}_2(\text{C}_6\text{H}_5\text{O}_2)_2 \cdot 6\text{H}_2\text{O}$ . **F. chlorid.**, Tinct., contains liq. ferri chlor. 25, alcohol q. s. It is very commonly used, and is one of the best tonic preparations. Dose  $\text{m}$  v-xx. **Tinct. fer. perchloridi** (B.P.). Dose  $\text{m}$  x-xx. **F. citras**, soluble in water, insoluble in alcohol; a mild stimulant. Dose gr. ij-v. **F. citras, Liq.**, a solution of ferri citrat., 35 per cent. in strength. Dose  $\text{m}$  v-xxv. **F. citras, Vinum**, ammonio-ferric citrate 4, tinct. orange peel, syrup, aa 12, stronger white wine 72 parts. Dose ʒ j-ij. **F. hypophosphis**,  $\text{Fe}_2(\text{H}_2\text{PO}_2)_6$ , ferric hypophosphite, soluble in very dilute hydrochloric acid. Dose gr. v-x. **F. iodium saccharat.**, soluble in water. It is a tonic. Dose gr. v-xxv. **F. iodid.**, Pil., contains reduced iron, iodine, liquorice, sugar, acacia, and water, coated with balsam of tolu in ether. Dose j-ij pills. **F. iodidi, Syr.**, contains 10 per cent. of the iodid. Dose  $\text{m}$  v-xxx. **F. lactas**,  $\text{Fe}(\text{C}_3\text{H}_5\text{O}_3)_2 \cdot 3\text{H}_2\text{O}$ , ferrous lactate,—best solvent, sodium citrate. Dose gr. j-ij. **F. nitratis, Liq.**, aqueous, contains 6 per cent. of the salt; it is styptic and astringent. Dose  $\text{m}$  v-xv. **F. oxalas**,  $\text{Fe}_2(\text{C}_2\text{O}_4)_2 \cdot \text{H}_2\text{O}$ . Dose gr. ij in pill. **F. oxid. hydratum** (Ferri peroxid. hydrat. B.P.),  $\text{Fe}(\text{HO})_3$ , ferric hydrate, prepared by adding aq. ammonie 8 parts to a solution of ferric sulphate 10 parts. It is an antidote for arsenical poisoning, and should be prepared as needed. Dose ʒ j. **F. oxid. hydrat. cum magnesia**, should be prepared as needed from sol. ferric sulphate 1000 gr., water 2000 grains, to which is added magnesia 150 gr., water ʒ xxxij. It is an antidote for arsenic. **F., Emplastrum**, strengthening-plaster; ferric hydrate q. olive-oil 5, Burgundy pitch 14, lead-plaster 72. **F., Trochisci**, have each of ferric hydrate dried gr. v, vanilla gr. ʒ4, sugar and mucilage of tragacanth q. s. Dose j-ij each day. **F. phosphas**,  $\text{Fe}_3\text{P}_2\text{O}_8 \cdot 8\text{H}_2\text{O}$ , an adjuvant to laxative pills, gr. v-x. **F. phosphat.**, Syr. (B.P.). Dose ʒ j. **Fox's Pill** (B.P.), Bland's Pill. See *Pill*. **F. pyrophosphas**, tasteless and non-astringent. Dose gr. ij-v. **F. subchloridi, Syr.** (B.P.). Dose ʒ ss-j. **F. sulphas**,  $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$ , *copperas*, protosulphate of iron, ferrous sulphate, astringent and irritating. It is an ingredient of pil. aloes et ferri, q. v. **F. sulph. exsicc.**,  $\text{FeSO}_4 \cdot \text{H}_2\text{O}$ . Dose gr. ss-ij in pill. **F. sulph. granulatus** (Ferri sulphas granulata, B. P.),  $\text{FeS}$ .

$O_7H_{12}O$ , the foregoing precipitated from its solution by alcohol. Dose gr. ss-ij. **F. subsulph.**, *Liq.*,  $Fe_2O_3(SO_4)_3$ , Monsel's solution, an aqueous solution of basic sulphate of iron, powerfully astringent, styptic and hemostatic; it is rarely given internally. Dose  $\mu$ ij-x. **F. valerianas**,  $Fe_2(C_5H_9O_2)_6$ , valerianate of iron, soluble in alcohol. Dose gr. j-ij, in pill. **F. et ammonii citras**, citrate of iron 3, water of ammonia 1 part. Dose gr. ij-v. **F. et ammonii sulphas**, ammoniac sulphate of iron, ferric alum. This is the least astringent of the sulphates. Dose gr. ij-v. **F. et ammonii tartras** (**F. tartaratum**, B.P.), ammoniac tartrate of iron. Dose gr. v-xx. **F. et potassii tartras**, the least disagreeable of all iron preparations. Dose gr. v-x. **F. et quininæ citras**, contains 12 per cent. of quinin. It is astringent and stimulant. Dose gr. iij-v. **F. et quin. cit.**, *Liq.*, of doubtful value. Dose  $\mu$ v-xv. **F. et quin. citras solubilis**, used in preparing *vinum ferri amarum*. **F.**, *Vinum amarum*, bitter wine of iron, contains sol. citrate of iron and quinin 8, tinct. orange-peel 12, syrup 36, stronger white wine 44. It is a good substitute for the various "elixirs of calisaya and iron." Dose  $\mathfrak{z}$ j-iv. **F. et strychninæ citras**, contains 1 per cent. of strychnin. It is astringent and stimulating. Dose gr. j-ij. **F. et ammonii acetat. Liq.**, Basham's mixture, contains tinct. fer. chlorid 2, acetic acid 3, liq. ammonii acet. 20, elixir aurantii 10, syrup 15, water 50 parts. It is very agreeable, tonic and diuretic. Dose  $\mathfrak{z}$ ij-v. *Unofficial preparations.*—**F. albuminas**. Dose gr. x-xxx. **F. arsenias**,  $Fe_2As_2O_8$  (not to be confounded with arsenit of iron). Dose gr.  $\frac{1}{16}$ - $\frac{1}{8}$ . **F. dialysatum**, dialyzed iron, a ten per cent. oxychlorid in water. It is astringent and styptic, but only feebly chalybeate. Dose  $\mu$ x-xxx. *Liq. ferri dialyzat.* (B.P.). Dose  $\mu$ x-xxx. **F. et manganesii iodidi, Syr.**, containing in each fluid ounce 50 grains of iodids in proportion of 3 of iron to 1 of manganese. Dose  $\mu$ x-xxx- $\mathfrak{z}$ j. **F. et manganesii phosphat.**, *Syr.*, syrup of phosphate of iron and manganese. Each dram contains 2 gr. phosph. of iron and 1 grain of manganese. Dose  $\mathfrak{z}$ j. **F.**, *Mistura, aromat.*, pale cinchona bark 4, calumba 2, cloves 1, iron-wire 2, tinct. cardamom. comp. 12, tinct. orange-peel 2, water of peppermint 50. Dose  $\mathfrak{z}$ j-ij. **F.**, *Mist.*, **laxans**, ferrous sulphate gr. ij, magnesium sulphate  $\mathfrak{z}$ j, dilute sulphuric acid  $\mu$ ij, spt. chloroform  $\mu$ xx, water of peppermint ad  $\mathfrak{z}$ j. **F.**, *Mist.*, **salicylat.**, olei gaultheriæ  $\mu$ xxxij, fer. ferri chlorid  $\mathfrak{z}$ iv, sodii salicylat.  $\mathfrak{z}$ iv, acid. citric. gr. x, glycerin.  $\mathfrak{z}$ j, liq. ammonii citrat. (B.P.) q. s. ad  $\mathfrak{z}$ j; iron to be added last in mixing. **Ferro-salin.**, *Mist.*, magnesium sulphate  $\mathfrak{z}$ j, potassium bitartrate  $\mathfrak{z}$ j, dried sulphate of iron gr. x, water  $\mathfrak{z}$ xxxij. Dose a wineglassful. **F. phosphatum, quininæ et strychninæ, Syr.**, Easton's syrup, unof. Each  $\mathfrak{z}$ j contains gr. j phosph. of iron, gr. j quinin, and gr.  $\frac{1}{16}$  strychnin. **F. Salicylas**. Dose gr. j-v. **F. Tersulphatis, Liq.**, solution of ferric sulphate, used in making other iron preparations.

**Fertile** (*fer'-til*) [*fertilis*, fruitful]. Prolific, fruitful. In botany, applied to flowers having a pistil.

**Fertilization** (*fer'-til-i-z'-shun*) [*fertilis*, fruitful]. Impregnation; fecundation; the initial act of sexual reproduction; it consists essentially in the union of two cells possessing respectively male and female qualities.

**Fertilizing Pouch** (*fer'-til-i-z-ing pouch*). A folded apparatus connected with the oviduct of queen bees.

**Ferula** (*fer'-u-lah*) [*L.*, "a rod"]. 1. Giant fennel. A genus of the order Umbellifere. See *Asafetida*, *Galbanum*, *Sumbul*, *Sagapenum*. 2. A splint.

**Fervor** (*fer'-vor*) [*L.*, "heat"]. Fever-heat; it is defined as being more *calor* than less than *ardor*.

**Fessitude** (*fes'-it-üd*) [*fessus*, weary]. A sensation of weariness.

**Fester** (*fes'-ter*) [*ME.*, *fester*]. 1. Any small or superficial ulceration. 2. To inflame slightly.

**Festination** (*fes-tin-a'-shun*) [*festinare*, to hasten]. A symptom of paralysis agitans and other diseases in which the patient shows in walking a tendency to take quicker and quicker steps. Propulsion or retropulsion are coincident symptoms.

**Fetal** (*fe'-tal*) [*fetus*, an offspring]. Pertaining to the fetus.

**Fetation** (*fe'-ta'-shun*) [*fetus*, a fetus]. 1. The formation of a fetus. 2. Pregnancy.

**Fetich, Fetish** (*fe'-tish*). Any material object regarded with veneration or awe.

**Fetichism, Fetichism** (*fe'-tish-izm*) [*Fr.*, *fetich*]. The term applied by Binet to the sexual perversion exhibited by collectors of napkins, shoes, etc. He maintains that these articles play here the part of the fetish in early theology. The favors given by the women to the knights in the Middle Ages were both tokens of remembrance and sexual excitants of satisfaction. Fetichism is the association of lust with the idea of certain portions of the female person, or with certain articles of female attire. It is designated as *dress-f.*, *hair-f.*, *hand-f.*, *glove-f.*, *shoe-f.*, etc., according to the object worshipped.

**Fetichist** (*fe'-tish-ist*) [*Fr.*, *fetich*]. An individual whose sexual interest is confined exclusively to parts of the female body, or to certain portions of female attire.

**Feticide** (*fe'-tis-id*) [*fetus*, an unborn offspring; *cedere*, to kill]. The killing by intent of the fetus in the womb.

**Fetid** (*fe'-tid*, or *fel'-id*) [*fetere*, to become putrid]. Having a foul odor. **F. Stomatitis**. Synonym of *Ulcerative Stomatitis*.

**Fetiferous** (*fe-tif'-er-us*) [*fetus*, a fetus; *ferre*, to bear]. Pregnant.

**Fetiparous** (*fe-tip'-ar-us*) [*fetus*, a fetus; *parere*, to produce]. Giving birth to a fetus.

**Fetlock** (*fel'-lok*) [*ME.*, *fitlokes*]. A tuft of hair growing behind the pastern-joint of horses. **F.-joint**, the joint of a horse's leg next to the foot.

**Fetlow** (*fel'-lo*) [*E.*, dial]. A kind of whitlow or felon, seen upon cattle.

**Fetometry** (*fe-tom'-et-re*) [*fetus*, offspring; *metron*, measure]. The measurement of the fetus, especially of its cranial diameters. The measurements usually made are as follows:—

TABLE OF MEASUREMENTS.

| 1. OF THE CHILD.                                  |        |                |  |
|---|--------|----------------|--|
| Length, . . . . .                                 | 50     | cm. (20 in)    |  |
| Bisacromial, . . . . .                            | 12     | " (4 8 "       |  |
| 2. HEAD.  |        |                |  |

**Fetor** (*fel'-tor*) [*L.*]. Stench; offensive odor. **F. narium**. Synonym of *Ozena*.

**Fetter-bone** (*fel'-er-bôn*). In farriery, the same as great pastern. See *Pastern*.

**Fettered** (*fel'-erd*). In biology, applied to animals, as the seal, which have the hind limbs modified so as to unfit them for walking.

**Fetus** (*fe'-tus*) [*fetus*, offspring]. The young of viviparous animals in the womb; the embryo in the later stages of development. The following is a table of the development of the embryo and fetus in the

different months of pregnancy. *First Month.* Indistinguishable from ovum of other mammals. It is a flattened vesicle. The embryo is nourished by a yelk-sac which, even at the end of the first month, is larger than the cephalic extremity of the fetus. The

DIAMETERS OF THE FETAL HEAD. (Tarnier.)

visceral arches are distinct. The heart, first traces of liver and kidneys, eyes, rudimentary extremities, oral and anal orifices are formed. The spinal canal closes (spina bifida results if this fails to occur at this time). Length, 1 cm., or .4 inch. *Second Month.* Grows to 4 cm. in length (1.57 inches), and is about the size of a pigeon's egg. The visceral clefts close, except the first, which forms the external auditory meatus, tympanum, and Eustachian tube. At this time arrest of development results in hare-lip, umbilical hernia, or exomphalos. Eyes, nose, and ears are distinguishable. The first suggestion of hands and feet appears, and these are webbed. External genitals also now develop, but sex is not to be differentiated. *Third Month.* Maternal blood affords nourishment; 9 cm. long (3.6 inches), and about the size of a goose-egg. Fingers and toes lose their webbed character and nails appear as fine membranes. Points of ossification are found in most of the bones. The neck separates the head from the trunk, and sex is determined by the appearance of the uterus. Weight, 30 grms. = 463 grains. *Fourth Month.* 16 cm. = 6 in. in length. Vernix caseosa is present. Intestines contain meconium. Sex is well defined. Weight, 55 grms. = 848.76 grains. *Fifth Month.* 25 cm. = 10 in. Vernix caseosa appears in places. The face is senile in appearance and wrinkled. Eyelids begin to open. Quickening occurs. Heart sounds are heard. Weight, 273 grms. = 108 oz. *Sixth Month.* 30 cm. = 12 in. Hair grows longer. Eyebrows and lashes appear. The testicles approach the inguinal rings. Weight, 715 grms. = 23 oz. *Seventh Month.* 35 cm. = 14 in. Papillary membrane disappears. Weight, 1213 grms. = 39 oz. *Eighth Month.* 40 cm. = 16 in. Down on the face begins to disappear. The left testicle has descended. Ossification begins in the lower epiphysis of the femur. The nails do not project beyond the finger tips. Weight, 1617 grms. = 4½ lbs. *Ninth Month.* 45 cm. = 18 in. Subcutaneous fat increases. Diameter of the head about 1 to 1½ cm. less than at term. Weight, 1977 grms. = 5½ lbs. *Mature*

LENGTHS AND WEIGHTS OF THE FETUS AT DIFFERENT STAGES OF ITS DEVELOPMENT.

| Month | Length (cm.) | Length (in.) | Weight (grms.) | Weight (grains.) |
|-------|--------------|--------------|----------------|------------------|
| 1st   | 1            | .4           | 5              | 76               |
| 2nd   | 4            | 1.57         | 55             | 848.76           |
| 3rd   | 9            | 3.6          | 30             | 463              |
| 4th   | 16           | 6            | 55             | 848.76           |
| 5th   | 25           | 10           | 1213           | 39               |
| 6th   | 30           | 12           | 715            | 23               |
| 7th   | 35           | 14           | 1213           | 39               |
| 8th   | 40           | 16           | 1617           | 4½               |
| 9th   | 45           | 18           | 1977           | 5½               |

*Fetus.* 50 cm. long = 20 inches; weight, 2737 grms. = 7½ lbs. Skin is rosy; lanugo has disappeared. The nails are perfect and project beyond the finger tips. The eyes are opened. The center of ossification in the lower epiphysis of femur is 5 mm. in diameter, while that of the cuboid bone is just beginning to show. Diameters of head are normal. **F., Amorphous.** See *Anideus*. **F. Anideus.** See *Anideus*. **F. in fetu** (fetus within the fetus), the name applied to those interesting inclusions in which the stronger fetus in its growth has included within its organism the parts of the weaker fetus. **F. papyraceus**, the name given to the malformation resulting in a twin pregnancy, when, owing to an inequality in the circulation of the embryos, the weaker fetus dies, and by the continually increasing pressure of the growing fetus is flattened more and more against the uterine walls, until the mass has a thickness little greater than stout parchment. **F., Position of**, the position occupied by the fetus in the mother's womb. It may be oblique, transverse, or longitudinal. Also, the position occupied by the fetus with reference to the mother's pelvis. See *Table* (p. 467). **F., Presentation of**, that part of the fetus that presents in labor. See *Presentation*.

**Feuillea** (*fu-il'-e-ah*) [after Louis Feuillet, a French naturalist]. A genus of cucurbitaceous climbing plants. The seeds of *F. cordifolia*, of Jamaica, are emetic and purgative. *F. trilobata*, of Brazil, has similar qualities. Unof.

**Fever** (*fel'-ver*) [*febris*, a fever]. A systemic disease or symptom of disease whose distinctive characteristic is elevation of temperature, accompanied also by quickened circulation, increased katabolism or tissue-waste, and disordered secretions. **F., Abdominal.** See *F., Typhoid*. **F., Adeno-nervous.** Synonym of *Plague, q. v.* **F., Adeno-typhoid.** Synonym of *F., Mediterranean*. **F., African.** See *F., Yellow*, and *Dengue*. Also the same as *F., Congo*. **F. and Ague.** See *F., Intermittent*. **F., Amatory.** See *Amatory*. **F., Anomalous**, one the symptoms of which are irregular. **F., Aquamalarial.** Same as *F., Malarial*. **F., Ardent.** A non-specific, continued fever occurring in hot climates, in which the ordinary symptoms of febrile are exaggerated. See *Ardent*. **F., Articular.** See *Dengue*. **F., Asthenic**, one with a low-fever temperature, weak circulation, and great loss of nervous force. **F., Ataxic.** See *F., Typhus*. **F., Atypic.** See *F., Anomalous*. **F., Ballast**, fever on shipboard; said to be due to decaying organic matter in the ballast. **F., Barbadoes.** Synonym of *F., Yellow*. **F., Barcelona.** Synonym of *F., Yellow*. **F., bark.** See *Alstonia*. **F., Bilious**, one accompanying affections of the digestive organs. **F., Black.** Synonym of *Cerebro-spinal meningitis*. **F., Blackwater**, a fever occurring on the west coast of Africa, and characterized by attacking only those who have already suffered from malarial fever. There is a chill followed by lumbar pain, slight jaundice, fever, and the passage of porter-like urine. Bilious vomiting may occur, and death with uræmic symptoms. It occurs in paroxysms—in other words, it is a paroxysmal hemoglobinuria. **F., Bladdery.** 1. A vulgar name for *Pemphigus*. 2. Same as *F., Catheter*. **F., blister**, a vesicular or pustular dermal eruption seen near the mouth, after a febrile disturbance, often occurring after a common cold. See *Herpes facialis* and *H. labialis*. **F., Boa Vista.** Synonym of *F., Yellow*. **F., Bona**, a form of malignant malarial fever in Algeria. **F., Bouquet.** Synonym of *Dengue*. **F., Brain**, fever associated with cerebral disturbance, or with inflammation of the cerebral meninges. **F.,**

TABLE OF THE POSITIONS AND PRESENTATIONS OF THE FETUS.

| PRESENTATION. | FREQUENCY.                     | VARIETIES.                | SYMBOL. | FREQUENCY OF VARIETIES. | POSITION OF FETUS.   | POSITION OF FETAL HEART-SOUNDS.                             | MORTALITY.          |                       |
|---------------|--------------------------------|---------------------------|---------|-------------------------|--|---|---------------------|-----------------------|
|               |                                |                           |         |                         |  |   | FETAL.              | MAINFETAL.            |
| Vertex.       | 95 per cent. of all cases.     | Left occipito-anterior.   | L.O.A   | 70 per cent.            | Occiput to left acetabulum, forehead to right sacro-iliac joint; back to left; extremities to right, above.            | One inch below, and to left of umbilicus.                   | 5 per cent.         | Less than 1 per cent. |
|               |                                | Left occipito-posterior.  | L.O.P.  |                         | Occiput to left sacro-iliac joint, forehead to right acetabulum; back in left flank; extremities to right, anteriorly. | In left flank, below a transverse line through umbilicus.   | Over 9 per cent.    |                       |
|               |                                | Right occipito-anterior.  | R.O.A.  |                         | Occiput to right acetabulum, forehead to left sacro-iliac joint; back to right; extremities to left, above.            | Near median line, below umbilicus.                          | Over 9 per cent.    |                       |
|               |                                | Right occipito-posterior. | R.O.P.  | 30 per cent.            | Occiput to right sacro-iliac joint, forehead to left acetabulum; back in right flank; extremities to left, anteriorly. | In right flank, below a transverse line through umbilicus.  | 5 per cent.         |                       |
| Face.         | $\frac{1}{2}$ of 1 per cent.   | Left mento-anterior.      | L.M.A.  | Second in frequency.    | Chin to left acetabulum, forehead to right sacro-iliac joint; back to right; extremities to left.                      | Left side of abdomen, below umbilicus.                      | 13 to 15 per cent.  | 6 per cent.           |
|               |                                | Left mento-posterior.     | L.M.P.  |                         | Chin to left sacro-iliac joint, forehead to right acetabulum; back to right; extremities to left.                      | Left side of abdomen, below umbilicus.                      |                     |                       |
|               |                                | Right mento-anterior.     | R.M.A.  |                         | Chin to right acetabulum, forehead to left sacro-iliac joint; back to left; extremities to right.                      | Right side of abdomen, below umbilicus.                     |                     |                       |
|               |                                | Right mento-posterior.    | R.M.P.  | Most common.            | Chin to right sacro-iliac joint, forehead to left acetabulum; back to left; extremities to right.                      | Right side of abdomen, below umbilicus.                     |                     |                       |
| Brow.         | $\frac{1}{4}$ of 1 per cent.   | Left fronto-anterior.     | L.F.A.  |                         | Brow to left acetabulum; chin to right sacro-iliac joint; back to left; extremities to right, above.                   | Left side of abdomen, below umbilicus.                      | 30 per cent.        | 10 per cent.          |
|               |                                | Left fronto-posterior.    | L.F.P.  |                         | Brow to left sacro-iliac joint; chin to right acetabulum; back to left; extremities to right, above.                   | Left side of abdomen, below umbilicus.                      |                     |                       |
|               |                                | Right fronto-anterior.    | R.F.A.  |                         | Brow to right acetabulum; chin to left sacro-iliac joint; back to right; extremities to left, above.                   | Right side of abdomen, below umbilicus.                     |                     |                       |
|               |                                | Right fronto-posterior.   | R.F.P.  |                         | Brow to right sacro-iliac joint; chin to left acetabulum; back to right; extremities to left, above.                   | Right side of abdomen, below umbilicus.                     |                     |                       |
| Shoulder.     | $\frac{1}{2}$ of 1 per cent.   | Left dorso-anterior.      | L.D.A.  | Most common.            | Head in left iliac fossa, back anterior; extremities on right side, in upper part of abdomen.                          | Left side of abdomen, below umbilicus.                      | Almost 50 per cent. | 11 per cent.          |
|               |                                | Left dorso-posterior.     | L.D.P.  |                         | Head in left iliac fossa, back posterior; extremities on right side, in upper part of abdomen.                         | Frequently cannot be heard.                                 |                     |                       |
|               |                                | Right dorso-anterior.     | R.D.A.  |                         | Head in right iliac fossa, back anterior; extremities on left side, in upper part of abdomen.                          | Right side of abdomen, below umbilicus.                     |                     |                       |
|               |                                | Right dorso-posterior.    | R.D.P.  |                         | Head in right iliac fossa, back posterior; extremities on left side, in upper part of abdomen.                         | Right side of abdomen, below umbilicus toward the flank.    |                     |                       |
| Breech.       | 3 to 4 per cent. of all cases. | Left sacro-anterior.      | L.S.A.  | Most common.            | Sacrum to left acetabulum; back to left anterior; abdomen to right posterior.  | Left side of abdomen, above umbilicus.                      | 30 per cent.        | Less than 1 per cent. |
|               |                                | Left sacro-posterior.     | L.S.P.  |                         | Sacrum to left sacro-iliac joint; back to left posterior; abdomen to right anterior.                                   | Left side of abdomen, above umbilicus and toward the back.  |                     |                       |
|               |                                | Right sacro-anterior.     | R.S.A.  |                         | Sacrum to right acetabulum; back to right anterior; abdomen to left posterior.   | Right side of abdomen, above umbilicus.                     |                     |                       |
|               |                                | Right sacro-posterior.    | R.S.P.  |                         | Sacrum to right sacro-iliac joint; back to right posterior; abdomen to left anterior.                                  | Right side of abdomen, above umbilicus and toward the back. |                     |                       |

Breslau, a malarious and malarial disease in Breslau in the middle of the 18th century. Its nature is not known. **F., Brokenwing.** Synonym of *Dengue*. **F., Bucket.** Synonym of *Leishman*. **F., Bulam.** Synonym of *F., Yellow*. **F., Burdwan,** a form of Indian malarial fever. **F., bush.** Spice wood. The bark and fruit of *Cassia fistula* is an irritant stimulant and tonic. Its properties are due to a volatile oil. **Dose of the bark** ext. 5 gr. of the berries (No. 5). **Unof.** **F., bush, California.** See *Garriga*. **F., Camp.** See *F., Typhoid*. **F., Carbuncular.** Synonym of *Anthrax*. **F., Catarrhal,** one with a catarrhal character of the air-passages. Synonym of *Atrophic*. **F., Catheter,** a severe remittent typhoid fever following the passage of the catheter in the bladder. **F., Cerebro-spinal,** a malignant epidemic fever characterized by spasmodic contraction of the muscles of the neck, retraction of the head, hyperreflexia, etc., with lesions of the cerebral and spinal membranes. It is due to a specific poison. **F., Cesspool.** Synonym of *F., Yellow*, or *F., Malarial*. **F., Chickahumny.** A synonym of *F., Typhomalarial*. **F., Child-bed.** See *F., Puerperal*. **F., Colorado.** Synonym of *Dengue*. **F., Congestive,** a malarial form, a remittent or intermittent malarial fever. Also synonym of *Suppurative Meningitis*. **F., Congo.** *Atrophic*. A form of fever, of malarial origin, and of a pernicious type, that prevails on part of the W. African coast. **F., Contagious.** Synonym of *F., Typhoid*. **F., Continued,** one in which there is a slowly continuous rise of temperature until a high grade is reached, whence the fever gradually or slowly subsides. **F., Country.** See *F., Typhoid*. **F., Cretan.** Same as *F., Malta*. **F., New, of Crete.** Synonym of *F., Mediterranean*. **F., Dandy.** Synonym of *Dengue*. **F., Date.** Synonym of *Leishman*. **F., Deccan.** Synonym of *F., Typhomalarial*. **F., Diary.** Synonym of *F., Typhomalarial*. **F., Dothienteric.** Synonym of *F., Typhoid*. **F., Dynamic.** Synonym of *F., Typhoid*. **F., Elephantoid,** a name given to the series of the symptoms that often attend the onset of *Phlebotomus* infection. **F., Enteric.** See *F., Typhoid*. **F., Epidemic Catarrhal.** Synonym of *Atrophic*. **F., Epidemic Gastro-rheumatic.** Synonym of *Leishman*. **F., Epihippic,** influenza in the horse. **F., Eruptive,** that accompanied or succeeded by an eruption on the skin. Examples are *F., Scarlet*, *Measles*, *Typhoid*, *Smallpox*, *Vaccination*, *Varicella*, *Erythema*, *Dengue*. **F., Eruptive Epidemic, of India.** Synonym of *Dengue*. **F., Essential.** See *F., Typhoid*. **F., Famine.** See *F., Typhoid*. **F., Feco-malarial.** See *F., Mediterranean*. **F., few,** the herb *Pyrola parviflora*, a stimulant tonic with emmenagogue and anthelmintic properties. **Dose of the ext.** 5 gr. **Unof.** **F., Five-day.** Synonym of *F., Relapsing*. **F., Florida.** *Common Fever*; a typhoid fever occurring in tropical or sub-tropical countries, resembling malaria or typhoid fever. It is due to the prolonged action of high temperatures. **F., Gastric,** a form used indefinitely to designate a form of fever associated with abdominal symptoms. It may be a simple febricula or some gastric infection. **F., Gastrobilious.** See *F., Mediterranean*. **F., Gibraltar.** Synonym of *F., Mediterranean*. **F., Hay,** a disease of the mucous membranes of the mouth and respiratory passages, also at times involving the conjunctiva and eyelids. It is marked by a profuse nasal mucus, sneezing, and abundant lachrymation, with sub-acute pulmonary attacks and great depression. It is due to the pollen of the grains and

other grasses, and to dust, odors, perfumes, and irritating substances acting upon a hypersensitive Schneiderian membrane in those with a marked nervous constitution. It is also attributed to the influence of microbes that float in the air. Climate seems to be a potent factor in the etiology in certain cases. **F., Heat.** Synonym of *Insolation*. **F., heat,** the heat of fever. **F., Hectic.** Synonym of *Tabes mesenterica*. Also the fever that accompanies pulmonary tuberculosis and other diseases attended with suppuration. **F., Hemo-gastric.** See *F., Yellow*. **F., Hospital.** See *F., Typhoid*. **F., Idiopathic,** one the cause of which escapes detection. **F., Inflammatory.** Synonym of *Anthrax*. **F., Intermittent,** one in which the symptoms intermit, with intermediate periods of freedom from the febrile attack. This is the common form of malarial fever. **F., Italian.** Synonym of *Influenza* and of *F., Mediterranean*. **F., Jail.** Synonym of *F., Typhoid*. **F., Jungle,** a remittent fever of India. **F., Kendal.** Synonym of *F., Yellow*. **F., Leghorn.** Synonym of *F., Yellow*. **F., Lent.** Synonym of *F., Typhoid*. **F., Levant.** Synonym of *F., Relapsing*. **F., Low,** fever of an asthenic type. **F., Lung,** acute croupous pneumonia. **F., Lying-in.** Synonym of *F., Puerperal*. **F., Maculated.** Synonym of *F., Typhoid*. **F., Malarial,** a febrile condition of periodic character dependent upon the presence of the hematzoa malariae. **F., Malarial Typhoid,** typhoid fever modified by simultaneous malarial infection. **F., Malignant,** a severe and fatal form of any fever. **F., Malta.** See *F., Mediterranean*. **F., Marsh.** Synonym of *F., Malarial*. **F., Mediterranean,** Gastrobilious Fever; Feco-malarial Fever; Malta Fever; Italian Fever; Neapolitan Fever; Cretan Fever; Rock Fever; Gibraltar Fever; a specific febrile disease occurring particularly on the Mediterranean coast, and characterized by long, irregular pyrexia, frequent relapses, rheumatic complications, constipation, and the absence of ulceration of Peyer's patches. It has an incubation period of from six to nine days. The temperature may rise to 104° or 106° F., and in fatal cases to 110° F. The course is often prolonged to from three months to a year or more. The mortality rate is about two per cent. **F., Mesenteric.** Synonym of *Tabes mesenterica*. **F., Miassmatic.** Synonym of *F., Malarial*. **F., Military,** an affection formerly very common, occurring in an epidemic form, with a prodromal stage of two or three days, during which there is great irritation of the skin, debility, and a feeling of suffocation. This is followed by profuse sweating, high fever, precordial and epigastric distress, and the appearance on the third or fourth day of a rash, first upon the neck and breast, consisting of numerous round or irregular spots, in the center of which vesicles arise that finally burst and form crusts. Desquamation and slow convalescence follow. **F., Military.** Synonym of *F., Typhoid*. **F., Milk,** a form of slight puerperal septicemia, formerly thought to be due to the formation of milk in the mother's breast. **F., Mountain.** Synonym of *F., Typhoid*. **F., Mucous.** A synonym of *F., Typhoid*, *q. v.* **F., Neapolitan.** See *F., Mediterranean*. **F., New.** Synonym of *F., Malta*. **F., Night-soil.** Synonym of *F., Typhoid*. **F., Ochlotic.** Synonym of *F., Typhoid*. **F., Paludal.** See *F., Intermittent*. **F., Panama,** an endemic fever on the Isthmus of Panama; pernicious malarial fever. **F., Periodic.** See *F., Intermittent*. **F., Pernicious,** a malignant fatal type of remittent or intermittent malarial fever. **F., Peyerian.** Synonym of *F., Typhoid*. **F., Prison,** typhus fever. **F., Puerperal,** Metria; an acute, heterogenetic, contagious febrile affection of women in child-bed. It is due to the im-

introduction of germs and septic material into the system, the poisonous agents finding entrance through the wounds and lacerations of the genital tract consequent upon parturition. In some cases these wounds take on an unhealthy condition with the formation over them of a whitish or grayish pellicle; they then form the so-called *diphtheric ulcers*, although they bear no relation to true diphtheria. In other cases there may start up a gangrenous condition spreading rapidly to the adjoining tissues. Virchow calls this variety *Erysipelas Malignum Internum*, *q. v.* It may assume a number of other forms, all of which are of a greater or lesser degree of gravity. **F., Puking.** Synonym of *Milk-sickness*. **F., Pulmonic.** A synonym of *Croupous Pneumonia*. **F., Putrid.** Synonym of *F., Typhus*. **F., Pyogenic.** Synonym of *Strangles*. **F., Pythogenic.** Synonym of *F., Typhoid*. **F., Quinin,** fever produced by large doses of quinin; it is attended with hematuria, dysuria, dyspnea, threatened collapse. **F., Red.** Synonym of *Dengue*. **F., Relapsing,** *Famine Fever*; an acute specific febrile disease characterized by a short paroxysm of fever, ending in crisis, followed by a well-marked remission, and that by a relapse on or about the fourteenth day. The fever is high and the patient restless; there is no characteristic eruption; but the patient emits a peculiar musty odor like that of burning straw. Epistaxis, often profuse, is present. A crisis is usual on the seventh day and is attended usually by some critical discharge. In seven days, or a little sooner, the relapse occurs, lasting from a few hours to seven days or more. During convalescence there may be a flaky desquamation. There is always in this disease marked enlargement of the spleen; the liver also is enlarged, as well as the kidneys. The disease is due to the presence in the blood of a specific spirillum, which is only seen during the paroxysms. **F., Remittent,** a paroxysmal fever with exacerbations and remissions, but not intermissions; usually applied specifically to remittent malarial fever. **F., Rheumatic.** See *Rheumatism*. **F., Rock.** Synonym of *F., Mediterranean*. **F., Scarlet.** See *Scarlatina*. **F., Septic,** one due to the admission of septic matter into the system. **F., Seven-day.** Synonym of *F., Relapsing*. **F., Seventeen-day.** Synonym of *F., Relapsing*. **F., Ship.** Synonym of *F., Typhus*. **F., Shoddy,** an illness occurring among shoddy-grinders. The symptoms are headache, malaise, dryness of the fauces, and difficulty of breathing. The acute symptoms subside in six or eight hours, but cough and expectoration remain as a chronic condition. **F., Siam.** Synonym of *F., Yellow*. **F., Simple Continued,** a continued, non-contagious fever, varying in duration from one to twelve days, and usually ending in recovery, **F., Solar.** Synonym of *Dengue*. **F.-sore,** a colloquial name for necrosis of the tibia; also a fever-blister. **F., Spirillum.** Synonym of *F., Relapsing*. **F., Splenic.** Synonym of *Anthrax*. See *Pustula maligna*. **F., Sthenic,** fever characterized by abnormal increase of the cardiac and vital activities. **F., Stiff-necked.** Synonym of *Dengue*. **F., Sudoral.** Synonym of *F., Mediterranean*. **F., Summer, hay-fever.** **F., Sun.** Synonym of *Insolation*. **F., Three-day.** Synonym of *Dengue*. **F., Traumatic,** that following traumatism, surgical or accidental. **F.-twig.** See *Climbing Staff-tree* and *Celastrus*. **F., Typhoid,** Enteric Fever; an acute continued fever due to a specific virus, the bacillus typhosis, and characterized by peculiar intestinal lesions, splenic enlargement, maculæ on the skin (rose spots), headache, delirium, diarrhea, prostration, etc. The morbid changes are chiefly in the lower part of the ileum, occasionally

in the upper part of the colon, and consist in a necrotic inflammatory infiltration of the follicular structures and neighboring parts, commonly called "Peyer's patches," with a catarrhal inflammation of the rest of the intestinal mucous membrane. The stools are the characteristic liquid ochre-colored passages, resembling pea-soup. Epistaxis is frequently an early symptom. The duration of the disease is usually about four weeks. There may be, however, an abortive form of the disease ending at from the eighth to the fourteenth day. The *ajfbrite form*, which is rare, may have a normal or even subnormal temperature throughout the entire course. Perforation of the bowel, peritonitis, hemorrhage, and tympanites are some of the complications of the disease. Relapses occur in a certain proportion of the cases. The poison of typhoid fever usually enters the system through the drinking-water, or milk, or by inhaling effluvia from drains. Direct contagion from the sick to the healthy plays but a small part in the dissemination of typhoid fever. See *Table of Exanthemata*. **F., Typhoid, Ambulatory,** the latent form, with illy-defined symptoms, so that the patient scarcely feels ill enough to go to bed. The prognosis in this form of the disease is often grave. **F., Typhoid, Atypical.** Synonym of *F., Mediterranean*. **F., Typhoid, Canine,** a peculiar form of typhoid fever occurring only among patients who have been previously subject to malaria. The period of invasion is from one to three days, during which the patient complains of general discomfort and constipation. This is followed by a rapid development of the fever, the temperature almost immediately reaching 104° F. After the third day diarrhea, epistaxis, and intestinal hemorrhage occur. The fever subsides at the end of the first week, though the diarrhea and enlargement of the spleen continue. The pulse is always slow. **F., Typhoid, Intermittent.** Synonym of *F., Mediterranean*. **F., Typho-malarial,** a malarial fever with typhoid symptoms. **F., Typhus,** an acute, specific, epidemic, contagious, exanthematous fever, probably due to a specific infecting germ, and characterized by a peculiar petechial eruption, depression of the vital powers, profound cerebral manifestations, and absence of any discoverable lesion. It terminates by crisis on or about the fourteenth day, or by death from exhaustion or coma. See *Exanthemata, Table of*. **F., Typhus, Abdominal.** Synonym of *F., Typhoid*. **F., Typhus, Walking,** typhus fever in which the vital powers are not greatly reduced, so that the patient does not go to bed. **F., Urinary,** the febrile disturbance that follows the use of the catheter or bougie, or other operation upon the urinary organs, or any distinct impression made upon the urethra or bladder by some other means than these. Urinary fever varies in severity, from a slight chill and moderate rise of temperature to a well-marked chill with considerable rise of temperature. **F., Vitular.** See *Collapse, Parturient*. **F., Vitulary.** See *Collapse, Parturient*. **F.-wort.** See *Triosteum*. **F., Wound.** Synonym of *F., Traumatic*. **F., Yellow,** an acute, specific, infectious, contagious, paroxysmal, malignant fever, occurring mainly in sub-tropical regions, and characterized by three stages—the febrile, the remission, and the collapse. The poison of the disease is destroyed by frost. The period of incubation varies from one to fourteen days. The onset is sudden, the temperature high. There is a tendency to hemorrhage from the nose, mouth, vagina, kidneys, or stomach; the skin and conjunctivæ acquire a yellow tint or even a deep olive or mahogany color. There may be vomiting of altered blood. In fatal cases there is found a granular

degeneration of the liver cells. One attack of the disease protects against subsequent seizures; negroes display a peculiar immunity to the disease.

**Feverish** (*fē'v-er-ī-sh*) [*fever*, fever]. Somewhat affected with fever; moribund.

**Fexism** (*fēks'iz-m*) [*Ausim*]. A form of cretinism seen in Styria (Austria); its victims are locally called *fexi*.

**Fiber** (*fī'ber*) [*fibra*, a thread]. A filamentary or thread-like structure. Applied to the thread-like filaments of muscular, cartilaginous, and tendinous tissues. **F.**, **Axial**, the central or axial band of a nerve fiber; it is called also the *axis* of *Waller* and the *axis-cylindric*. **F.**, **Beale's**, a spinal nerve fiber seen in sympathetic ganglion-cells. It becomes a medullated nerve. **F.**, **Bühlmann's**, peculiar lines formed in carious teeth due to the *Wallerian* process. **F.**, **Gottstein's**, the external ciliated cells and nerve-fibers of the auditory nerve in the cochlea. **F.** of **Corti**. See **Corti**. **F.** of **Gerdy**, a transverse band of fibers supporting the lamellae crosswise and forming the web of the fingers. **F.** of **Müller**, a supporting connective tissue that unites the various layers of the retina. **F.** of **Remak**, certain pale and non-medullated nerve-fibers, found mostly in branches of the sympathetic nerve. **F.** of **Sharpey**, delicate processes or rods that pass through and rivet together the concentric laminae of bone. **F.**, **Sustentacular**. See **F.** of **Müller**. **F.** of **Tomes**, elongated and branched processes of the odontoblasts of the pulp, filling the dentinal tubules of teeth.

**Fibra** (*fī'br-ah*) [*lat. pl., fibra*]. Same as *Fiber*.

**Fibration** (*fībr-ah'shun*) [*fibra*, fiber]. Fibrous construction; arrangement of fibers.

**Fibril**, or **Fibrilla** (*fī'br-il*, or *fi-brill'ah*) [*dim. of fibra*, a fiber]. A small fiber or component filament of a fiber. A name applied to minute nerve-filaments.

**Fibrillar** (*fī'br-il-lar*) [*fibrilla*, a small fiber]. Pertaining to fibrils. **F.** **Contractions**, spontaneous contractions successively taking place in different bundles of muscular fibers; they are characteristically observed in progressive muscular atrophy.

**Fibrillary** (*fī'br-il-lar-ē*). Same as *Fibrillar*.

**Fibrillation** (*fī'br-il-lah-shun*) [*fibrilla*, a small fiber]. The quality of being fibrillar; also a fibrillar contraction; the acquirement of new fibrils. **F.** of **New Tissue**, the appearance of fibrillae in new-formed tissue.

**Fibrin** (*fī'br-in*) [*fibra*, a fiber]. A native albumin or proteid, a substance that, becoming solid in shed blood, plasma, and lymph, causes coagulation of these fluids. It then exists in the shape of innumerable, extremely delicate, closely packed, microscopic, closely retractile fibrils, entangling the blood-corpuscles, as in a spider's web, and with them forming the blood clot or *fibrina sanguinis*. Fibrin forms about 0.2 percent of the blood and is insoluble in water and ether. It is changed into syntonin by dilute hydrochloric acid. **F.**-**ferment**, a ferment obtainable from blood serum after clotting has occurred. It does not exist in the living, circulating blood. Its activity is destroyed by heating to 70° F.

**Fibrination** (*fībr-ah-nay-shun*) [*fibra*, a fiber]. The acquirement of an abnormal amount of fibrin.

**Fibrinogen** (*fībr-in'j-en*) [*fibra*, a fiber; *γεννάν*, to produce]. A native proteid of the globulin class, obtained from blood plasma, serous transudations, etc. According to Schmidt it is one of the chief elements in the formation of fibrin (the other being Paraglobulin), which occurs dissolved in the plasma, aided by a thym ferment.

**Fibrinogenic** (*fībr-in-aj-nē'ch*) [*fibra*, a fiber; *γεννάν*, to produce]. Of the nature of fibrinogen.

**Fibrinogenous** (*fī-brin-ōj'ēn-us*) [*fibra*, a fiber; *γεννάν*, to produce]. Forming or producing fibrin.

**Fibrinoplastic** (*fī-brin-ō-plas'tik*) [*fibra*, a fiber; *πλαστικός*, to form]. Of the nature of fibrinoplastic.

**Fibrinoplastin** (*fī-brin-ō-plas'tin*). See *Paraglobulin*.

**Fibrinous** (*fī'brin-us*) [*fibra*, a fiber]. Of the nature of or containing fibrin.

**Fibrinuria** (*fī-brin-ū'rē-ah*) [*fibra*, a fiber; *ουρ*, urine]. The presence of fibrin in the urine to an extent that causes its coagulation after the liquid has been voided. It usually occurs in the course of villous cancers of the bladder, or after the use of cantharides.

**Fibro-** (*fī'bro-*) [*fibra*, a fiber]. A prefix used to denote fibrous structure.

**Fibro-areolar** (*fī-bro-ar-ē'ol-lar*) [*fibra*, fiber; *areola*, dim. of *area*, an open space]. Containing both fibrous and areolar tissues.

**Fibroblast** (*fī'bro-blast*) [*fibra*, fiber; *βλαστός*, germ]. A connective-tissue cell.

**Fibro-bronchitis** (*fī-bro-brong-kī'tis*) [*fibra*, fiber; *βρογχος*, the windpipe; *ιτις*, inflammation]. Bronchitis with the expectation of fibrinous casts.

**Fibro-carcinoma** (*fī-bro-kar-sin-ō'-mah*) [*fibra*, fiber; *καρκίνωμα*, carcinoma; *πλ.*, *Fibrocarcinomata*]. A carcinoma with fibrous elements.

**Fibro-cartilage** (*fī-bro-kar'til-āj*) [*fibra*, a fiber; *cartilago*, gristle]. Cartilage with more or less copious intermixture of fibrous elements.

**Fibro-cartilaginous** (*fī-bro-kar'til-āj-in-us*) [*fibra*, fiber; *cartilago*, gristle]. Composed of or containing fibro-cartilage.

**Fibro-cellular** (*fī-bro-sell-u-lar*) [*fibra*, fiber; *cella*, cell]. Both fibrous and cellular; fibro-areolar.

**Fibro-chondritis** (*fī-bro-kon-drit'is*) [*fibra*, fiber; *χόνδρος*, cartilage; *ιτις*, inflammation]. Inflammation of fibro-cartilage.

**Fibrocyst** (*fī'bro-sist*) [*fibra*, fiber; *κυστίς*, cyst]. A fibroma that has undergone cystic degeneration.

**Fibro-elastic** (*fī-bro-e-las'tik*) [*fibra*, fiber; *ελαστικός*, elastic]. Consisting partly of fibrous elastic tissue.

**Fibro-enchondroma** (*fī-bro-en-kon-dro'-mah*) [*fibra*, fiber; *έν*, in; *χόνδρος*, cartilage; *όμα*, tumor; *πλ.*, *Fibro-enchondromata*]. An enchondroma containing fibrous elements.

**Fibro-glioma** (*fī-bro-gli-ō'-mah*) [*fibra*, fiber; *γλία*, glue; *όμα*, tumor; *πλ.*, *Fibrogliomata*]. A tumor consisting in part of fibrous and in part of glious elements.

**Fibroid** (*fī'broid*) [*fibra*, fiber; *ειδος*, likeness]. A term applied to such structures as possess a fibrous appearance, but cannot be separated into fibers. Also, a fibroid tumor. **F.** **Heart**, a chronic form of myocarditis in which there is a development of fibrous connective tissue in the cardiac muscle. **F.** **Induration**. See *Induration*. **F.** **Phthisis**, the very chronic form of phthisis, in which the inflammatory products have taken on a fibroid change.

**Fibroin** (*fī'bro-in*) [*fibra*, fiber],  $C_{15}H_{23}N_3O_6$ . An albuminoid; a white, shining substance, the chief constituent of the cocoons of insects and spider-web. See also *Fibrorin*.

**Fibro-lipoma** (*fī-bro-lip-ō'-mah*) [*fibra*, fiber; *λίπος*, fat; *όμα*, tumor; *πλ.*, *Fibro-lipomata*]. A neoplasm constituted of both fibrous and fatty elements.

**Fibroma** (*fī-bro'-mah*) [*fibra*, a fiber; *όμα*, a tumor; *πλ.*, *Fibromata*]. 1. Any fibrous-tissue tumor; it is called also *inoma*. 2. See *Molluscum fibrosum*. **F.**, **Concentric**, a soft, red, vascular form of uterine fibroma, forming a general enlargement of the uterus, concentrically surrounding the uterine cavity. It contains a relatively greater abundance of muscular tissue than the other varieties of fibromata. **F.** **fungoides**. See

*Granuloma fungoides* and *Mycosis*. **F. lipomatodes**. Same as *Xanthoma*, *q. v.* **F. molluscum**. Synonym of *Molluscum fibrosum*. **F. simplex**. Synonym of *Molluscum fibrosum*.

**Fibromyitis** (*fi-bro-mi-i'tis*) [*fibra*, fiber; *μῆς*, muscle; *itis*, inflammation]. Inflammation of a muscle, leading to its fibrous degeneration.

**Fibro-myoma** (*fi-bro-mi-o'-mah*) [*fibra*, fiber; *μῆς*, muscle; *ōma*, a tumor: *pl.*, *Fibro-myomata*]. A tumor composed of fibrous and muscular tissue.

**Fibromyxoma** (*fi-bro-miks-o'-mah*) [*fibra*, fiber; *μῆξ*, mucus; *ōma*, a tumor: *pl.*, *Fibromyxomata*]. A fibroma that is undergoing a myxoid change.

**Fibroplastic** (*fi-bro-plas'tik*) [*fibra*, fiber; *πλασσειν*, to form]. Showing a tendency toward the formation of fibers; a term applied to certain cases of spindle-celled sarcoma.

**Fibrorin** (*fi-bror'-in*) [*fibra*, fiber]. In biology, the substance of which the webs of spiders are composed.

**Fibro-sarcoma** (*fi-bro-sar-ko'-mah*) [*fibra*, fiber; *σάρξ*, flesh; *ōma*, tumor: *pl.*, *Fibro-sarcomata*]. A spindle-celled sarcoma, with elements that cause it to resemble a fibroma.

**Fibro-serous** (*fi-bro-se'-rus*) [*fibra*, fiber; *serum*, whey]. Having the qualities of a fibrous and serous structure. **F.-s. Membranes**, thin, transparent, glistening structures forming closed sacs, that contain certain organs. They are the peritoneum, the two pleure, the pericardium, the tunica vaginalis testis, the arachnoid, and synovial membranes.

**Fibrosis** (*fi-bro'-sis*) [*fibra*, fiber]. The development of interstitial fibrous tissue; it occurs as a disease-process in the coats of the smaller blood-vessels at about middle life. **F., Arterio-capillary**. See *Endarteritis*.

**Fibrous** (*fi'-rus*) [*fibra*, a fiber]. Containing fibers; of the character of a fiber.

**Fibula** (*fib'-u-lah*) [*L.*, a buckle]. The smaller or splint-bone at the outer part of the lower leg articulating above with the tibia, and below with the astragalus and tibia. It forms the external malleolus.

**Fibulad** (*fib'-u-lad*) [*fibula*, a buckle; *ad*, to]. Toward the fibula; on the fibular side.

**Fibular** (*fib'-u-lar*) [*fibula*, a buckle]. Relating to the fibula.

**Fibulare** (*fib-u-la'-re*) [*L.*: *pl.*, *Fibularia*]. Same as *Calcaenum*.

**Fibulen** (*fib'-u-len*) [*fibula*, a buckle]. Belonging to the fibula in itself.

**Fibulo-calcaneal** (*fib-u-lo-kal-ka'-ne-al*) [*fibula*, a buckle; *calcaneum*, the heel]. Pertaining to or connecting the fibula and the calcaneum.

**Ficarin** (*fik'-ar-in*) [*ficus*, a fig]. A neutral principle obtained from the common ficary; it is used internally and externally for piles.

**Ficary** (*fik'-ar-e*) [*ficaria*; *ficus*, a fig; a hemorrhoid]. The *Ranunculus ficaria*, pilewort, a common European herb, long a popular remedy for piles.

**Fichtelite** (*fich'-tel-it*) [*Ger.*, *fichtel*],  $C_{18}H_{32}$ . A mineral resin that occurs, together with retene, in the peat of fossil pines. It crystallizes in vitreous prisms, and melts at 46° C.

**Pick's Angle**. See *Angle*.

**Ficoin** (*fi'-ko-in*) [*ficus*, a fig]. Doliarin, or cradin; a form of papayin, or vegetable pepsin, obtained from various species of *Ficus*.

**Ficosis** (*fi-ko'-sis*). See *Sycosis*.

**Ficus** (*fi'-kus*) [*L.*, a fig-tree]. 1. The fig. The fleshy receptacle of *F. carica*, native to Asia Minor, and cultivated throughout Europe and tropical America. It contains 62 per cent. of grape-sugar when dry. It is somewhat laxative and fairly nutritious, and is a constituent of *Confectio semine*. The genus

*Ficus* contains many species. Forms of papayin (cradin, doliarin) occur in several species. Others afford caoutchouc, lac, etc. 2. A hemorrhoidal or condylomatous tumor.

**Fiddle, Scotch** (*fid'-l*) [*ME.*, *fidel*]. The itch.

**Fiddler's Muscle**. See *Fidicinal*.

**Fidgets** (*fi'-ets*) [*dim.* of *fidge*]. Uneasiness; restlessness; dysphoria, *q. v.*

**Fidicinal Muscle** (*fid-is'-in-al*) [*fidicinus*, for playing on stringed instruments]. *Musculus fidicinalis*; any one of the four lumbrical muscles of the hand. See *Muscles*, *Table of*.

**Fidispinalis** (*fid-is-pi-na'-lis*) [*fidicinus*, for playing on stringed instruments; *spina*, the back]. The muscle called multifidus spine. See *Muscles*, *Table of*.

**Field** (*feld*) [*ME.*, *feld*]. Any space or area, especially the field of vision. **F., Contraction of the**, occurs in certain retinal and cerebral affections. **F.-glass**, in an eye-piece, the lens farthest from the eye. **F.-hospital**, a temporary hospital on a battle-field. **F. of Vision**, sometimes spoken of simply as *the field*.

FIELD OF VISION OF THE LEFT EYE.

The extent of indirect vision with fixation of the visual axis upon one point. Its limit for white light is about 90° outward, 70° inward and above, and 60° downward. The **F. for Colors** is more restricted; that for blue is nearly as large as that for white, while that for red and green is more narrow. **F., Testing the**. See *Perimeter*.

**Fifth Nerve**. See *Trifacial*. **F. Ventricle**. See *Ventricle*.

**Fig** [*ME.*, *fig*, a fig]. See *Ficus*. **F.-wart**. See *Verruca acuminata*. **F.-wort**, the herb *Scrophularia nodosa*, an alternative, diuretic, and anodyne. It is sometimes used in the form of an ointment for piles. Dose of the fld. ext. 5 ss-j. Unof.

**Figure of Eight**. See *Bandage*.

**Fila** (*fi'-lah*) [*L.*]. Plural of *Filum*, *q. v.*

**Filament** (*fil'-am-ent*) [*filum*, a thread]. A small, thread-like structure or part of an organ, as a muscle, nerve, or tendon. **F., Spermatic**, the caudal filament of a spermatozoön.

**Filaria** (*fi-la'-re-ah*) [*filum*, a thread]. A genus of nematode or thread-worms of the family *Filariidae*. See *Parasites (Animal)*, *Table of*. **F. bancrofti**. See

- Thelodontia* and *Parasites (Animal)*, *Table of*. **F. conjunctiva** has been taken from the human conjunctiva; it is found chiefly in Africa. **F. lentis** has been found in cataractous lenses. **F. medinensis**. See *Thelodontia*, *Conjunctiva*, and *Parasites (Animal)*, *Table of*. **F. sanguinis hominis**. Craw-craw; the embryo of a nematode worm native to the Gambia coast of Africa, which, entering the blood and lymphatics, causes abscesses in the lymphatic glands, certain forms of *Elephantiasis*, etc. **F. scroti**, when the lymphatics of the scrotum are involved, or, otherwise, if those of the pelvis are obstructed. See *Parasites (Animal)*, *Table of*. **F. sanguinolenta**. See *Thelodontia* and *Parasites (Animal)*, *Table of*.
- Filariasis** (*fil'ar-i-ah-sis*) [*fil'ar*, a thread]. A diseased state due to the presence in human blood of *Filaria sanguinis* or of an entozoon of some allied species.
- File** (*fil'*) [ME., *file*, a file]. See *Raspitory*, *Nyster*. **F. cutter's Disease**, a form of pneumokoniosis. **F., Dental**, *Dodontine*; *Scalprum dentarium*; *Lima dentaria*; a tooth-file; an instrument for the removal of a portion of one or more teeth. There are files for separating incisor, bicuspid, and molar teeth, etc.
- Filhos**, Caustic of. A cauterizing paste composed of quicklime and caustic potash mixed with alcohol.
- Filices** (*fil'is-es*) [*fil-*, *fil'*, of *Filix*, a fern]. Ferns. See *Fern*.
- Filiform** (*fil'iform*) [*fil'um*, a thread; *forma*, form]. Thread-like. **F. Bougie**. See *Bougie*. **F. Papillæ**, the smallest and most numerous of the papillæ of the tongue, occurring over its whole surface. **F. Apparatus**, in biology, the longitudinally striated, homogeneous, strongly retractive, cellulose cap, often found at the apex of each of the two cells (*synergidae*) forming a part of the germinal apparatus or egg-apparatus of plants.
- Filipuncture** (*fil'ip-un'chû*) [*filum*, thread; *punctura*, a puncture]. The passing into an aneurysmal sac of wire-threads, hairs, or the like, to promote coagulation.
- Filix** (*fil'iks*) [*fil-*, *fil'*, of *Filix*]. A general name for any fern. **F. femina**, or *feminea*, the fern now called *Asplenium filix femina*, female fern or spleen-fern. See *Asplenium*. **F. mas**, male fern. See *Fern*.
- Filixolin** (*fil'ik-solin*) [*fil'ix*, fern; *oleum*, oil]. The oily oil of *Male Fern*.
- Filleau's Method**. See *Treatment, Methods of*.
- Fillet** (*fil'et*) [*fil-*, *fil'*, a thread]. A loop-shaped band or a tape loop passed through the handles of an electrode for pulling or about some part of the fetus, for the purpose of making traction. Also see *Immature*. **F., Olivary**, a fasciculus of nerve-fibers enclosing the olivary body of the medulla. **F. Test**. See *Testis*, *Testis of*.
- Filling** (*fil'ing*) [ME., *fil'ian*, to fill]. The material used in making a cavity in carious teeth.
- Film** [ME., *fil'm*, a film]. A pellicle or thin skin; an epidermis of the cornea.
- Filoplume** (*fil'op-lum*) [*filum*, thread; *pluma*, a feather]. In biology, an extremely slender, thread-like feather, usually destitute of vane, very abundant on certain canaries.
- Filo-pressure** (*fil'op-ress-ur*) [*filum*, a thread; *pressura*, a pressure]. Compression of a vessel by means of a wire or a ligament.
- Filovariocosis** (*fil'op-ri-ko-sis*) [*filum*, a thread; *variococcos*, a blood vessel]. A varicosity of the axis-arteries of a parasitic, in the formation of one.
- Filter** (*fil'ter*) [*fil'ter*, to filter]. An apparatus for straining and removing from water or other liquid solutions the impurities it may contain. **F. Paper**, a paper of close, firm mesh, much used by pharmacists for filtration.
- Filth** [ME., *filthe*, foulness]. Foul, offensive matter. **F.-disease**, any disease due to filth. **F.-dread**. See *Myophobia* and *Rupophobia*.
- Filtration** (*fil'tra-shun*) [*filtrum*, felt]. The operation of straining through bibulous paper. The best white filter-paper should be used for filtering alkaline or alkalioidal solutions.
- Filtrum** (*fil'trum*) [*fil-*, felt; *pl.*, *Filtra*]. 1. Felt, *q. v.* 2. A filter or strainer.
- Filum** (*fil'ium*) [*fil-*]. Any thread-like or filamentous structure; in surgery, a thread or wire. **F. coronarium**, a cord-like ridge that runs along the auricular opening of the heart. **F. terminale**, the terminal strands of the spinal cord, extending from the first lumbar vertebra through the cauda equina.
- Fimbria** (*fin'bree-ah*) [Lat., a "fringe": *pl.*, *Fimbriae*]. Corpus fimbriatum; tenia hippocampi; a zone consisting of alba alone, and forming, as it were, a margin for the hippocamp. There is one in each hemicerbrum between the hippocamp and the rima. **F. ovarica**, one of the fimbriae of the Fallopian tube nearly double the length of the others, and characterized by the great size of its secondary fringes. It leads toward the ovary.
- Fimbriae** (*fin'bree-eh*) [*fimbria*, a fringe]. Threads; a fringe. **F. of Fallopian Tube**, the fringe-like processes of the outer extremity of the oviduct.
- Fimbrial** (*fin'bree-ah*) [*fimbria*, a thread]. Relating to the fimbria or to fimbriae.
- Fimbriated** (*fin'bree-ah-ted*) [*fimbria*, a thread]. Fringed; having a shred-like or fimbrial border.
- Fimbriocoele** (*fin'bree-ah-sel*) [*fimbria*, a thread; *κῆλη*, hernia]. Hernia enclosing some or all of the fimbriae of an oviduct.
- Fimetarius** (*fin-et-ah-re-us*) [*finus*, dung]. In biology, growing on dung.
- Finckler and Prior, Spirillum of**. See *Bacteria*, *Synonymatic Table of*.
- Fine** (*fin*) [ME., *fin*, fine]. Opposed to coarse. **F. Adjustment**. See *Adjustment*.
- Finger** (*fin'ger*) [ME., *finger*]. A digit of the hand. **F., Clubbed**. See *Clubbed Fingers*. **F., Insane**, a finger affected with a variety of chronic whitlow; it is seen in certain cases of confirmed brain-disorder. **F., Mallet**, a deformity of a finger characterized by deficient extension or undue flexion of the terminal phalanx. **F.-stall**, a rubber covering for a finger. **F., Transparent**, a small, round plate of glass set in a metal frame, used by Liebreich in place of digital pressure in lupus-examinations. A lens may be used in place of plain glass, thus illuminating the skin. **F., Trigger**. See *Trigger-finger*.
- Fingers and Toes, Numbering of**. Among anatomists the rule is almost universally followed of numbering from the thumb and great toe (pollux and hallux). Occasionally the index finger is considered number one.
- Fining** (*fin'ing*) [ME., *fin*, fine]. A term applied to the "clearing" of wine. It consists in adding to muddy wine some albuminous or similar substance that will mix with the suspended matter and carry it to the bottom or bring it to the surface. The substances most generally employed are white of egg, ox-blood, and milk, or mixtures of these substances.
- Finlay's Micrococcus**. See *Bacteria*, *Synonymatic Table of*.
- Finn** (*fin*). The cysticercus or larva of a tape-worm.
- Fiocca, Bacillus of**. See *Bacteria*, *Synonymatic Table of*.

**Fir** (*fir*) [ME., *fir*, the fir-tree]. See *Abies*. **F.-balsam**. See *Abies balsamea*. **F.-wool**, a fiber prepared in Germany from pine-leaves. It has been recommended as a material for the clothing of invalids. **F.-wool Extract**, an extract prepared from the leaves of *Pinus sylvestris* in the process of separating fir-wool. It is used in chronic rheumatism. Unof. **F.-wool Oil** (*Oleum pini sylvestris*, B. P.), the fragrant volatile oil distilled from the leaves of *Pinus sylvestris*, used mainly by inhalation. Dose, for rheumatism, 10–20 drops, four times a day.

**Fire** (*fir*) [ME., *fire*]. The visible heat of burning bodies. **F.-damp**, the gas contained in coal, often given off in large quantities, and exploding, on ignition, when mixed with atmospheric air. **F. measles**. Synonym of *Röteln*. **F.-weed**. See *Erechtithites* and *Epilobium*.

**Firing** (*fir'-ing*) [ME., *fire*, fire]. The application, either slight or caustic, of a hot metallic cauter. The sterilization of a vessel or flask by the combustion of contained alcohol.

**Firming** (*furm'-ing*) [*firmus*, firm]. Hardening of the flesh of a slaughtered animal. Marked flaccidity of the flesh is a sign of an unhealthy condition of the meat.

**First** (*first*) [ME., *first*]. Before all others; foremost in rank. **F. Intention**. See *Healing*. **F. Light Oil**, the fraction of coal-tar distilling at a temperature up to 170° C. It includes a small percentage of ammonia-liquor which is mechanically contained in the tar, and is separated from the tar-oils by being allowed to stand and settle out, when it is drawn off. The specific gravity of this fraction is about .975, and it is made up of benzene, toluene, and higher homologues, with phenol, cresol, naphthalene, etc.

**Fischer's Operation**. See *Operations*, *Table of*. **F.'s Test**. See *Tests*, *Table of*.

**Fisetin** (*fi-se'-tin*). Same as *Fustin*.

**Fish** [ME., *fisch*]. A vertebrate with gills and fins, inhabiting the water. **F.-berry**. See *Cocculus indicus*. **F.-gelatin**. See *Glue* and *Isinglass*. **F.-roe Bodies**. See *Fungus Foot*. **F.-skin Disease**. See *Ichthyosis*.

**Fisher's Brain-murmur**. See *Signs and Symptoms*, *Table of*. **F.'s Train-murmur**. See *Signs and Symptoms*, *Table of*.

**Fissate** (*fis'-at*) [*fissus*; *findere*, to cleave]. In biology, applied to antennae or other structures having the terminal portion divided or split into two parts.

**Fissile** (*fis'-il*) [*findere*, to split]. That which may be split or cleft. In biology, formed of plates or scales closely placed together.

**Fission** (*fish'-un*) [*fissus*; *findere*, to cleave]. In biology, spontaneous self-division of unicellular organisms or histologic cells, as a process of multiplication.

**Fissipalmation** (*fis-ip-al-ma'-shun*) [*fissus*; *findere*, to cleave; *palmā*, palm]. In biology, applied to animals having the toes incompletely webbed.

**Fissipara** (*fis ip'-ar-ah*) [*fissus*; *findere*, to cleave; *parus*, produce]. In biology, applied in a general way to all organisms that multiply by spontaneous self-division.

**Fissiparation** (*fis-ip-ar-a'-shun*) [*findere*, to split; *parere*, to produce]. A form of cell-division. See *Cell*.

**Fissiparous** (*fis-ip-ar-us*) [*findere*, to split; *parere*, to produce]. Propagating by fission; applied to unicellular organisms or histologic cells that undergo spontaneous self-division in the process of multiplication. See *Fission*.

**Fissural Integer** (*fish'-ur-al in'-te-ger*). See *Integer*.

**Fissuration** (*fish-ur-a'-shun*) [*findere*, to split]. Same as *Fission*. Also applied to the arrangement of the fissures of various organs, such as the brain.

**Fissure** (*fish -ūr*) [*fissura*; *findere*, to cleave]. A groove or cleft. A term applied to the clefts or grooves in various organs. **F.**, **Abdominal**, a separation of the recti muscles of the abdomen, either above and below the umbilicus, or both. **F.**, **Accessory**, the inferior end of the cartilaginous portion of the Eustachian tube. **F.**, **Adoccipital** (*of Wilder*), an inconstant cerebral fissure, extending across the caudal portion of the precuneus, and forming an acute angle with the occipital fissure. **F.**, **Ammon's**, during the early fetal period, a pyriform fissure in the lower portion of the sclerotic coat of the eye. **F.**, **Amygdaline** (*of Wilder*), a cerebral fissure on the mesal aspect of the tip of the temporal lobe; it may be identical with the basirrhinal fissure of Owen; it is collocated with the amygdala. **F.**, **Anal**. See *F. of the Anus*. **F.**, **Anterior** (*of Burdach*), a cerebral fissure, probably the presylvian. **F.**, **Anterior** (*of spinal cord*). See *F.*, *Anterior Median* (*of spinal cord*). **F.**, **Anterior Lateral** (*of spinal cord*), a groove on the ventro-lateral aspect of the spinal cord. **F.**, **Anterior Median** (*of medulla oblongata*), the continuation of the ventral fissure of the cord into the oblongata, where it terminates at the pons in the foramen cecum. **F.**, **Anterior Median** (*of spinal cord*), a deep longitudinal groove in the median line of the ventral aspect of the spinal cord. **F.**, **Antero-lateral**, a slightly marked depression along the ventro-lateral column of the spinal cord, separating the latter into the ventral and lateral columns. **F.**, **Antero-medial**. See *F.*, *Anterior Median* (*of spinal cord*). **F.**, **Antero-parietal**. See *F.*, *Precentral*. **F.**, **Antitragohelicine**, a fissure between the helix and the antitragus of the external ear. **F.**, **Antorbital** (*of Owen*), a transverse fissure on the orbital surface of the frontal lobe of the brain near its cephalic margin. **F. of the Anus**, a linear ulcer at the muco-cutaneous junction of the anus, giving rise to intense suffering on defecation. **F.**, **Ape**, 1. The dorsal extension of an unusually deep occipital fissure. 2. An independent fissure on the lateral aspect of the cerebrum, between the occipital and temporal regions (*the exoccipital fissure of Wilder*). **F.**, **Auricular**, an opening situated between the vaginal and mastoid processes of the petrous portion of the temporal bone, through which passes the auricular branch of the pneumogastric nerve. **F.**, **Basirrhinal** (*of Owen*), a short fissure near the tip of the temporal lobe of the brain. **F.**, **Basisylvian** (*of Wilder*), the stem of the Sylvian fissure on the ventral aspect of the cerebrum. **F. of Bichat**. See *F.*, *Cerebral*, *Transverse*. **F.**, **Branchial**, any one of the visceral clefts. **F. of Broca**. See *F.*, *Limbic*. **F.**, **Burdach's**. See *F.*, *Anterior*, and *F.*, *Superior*. **F. of Calamus scriptorius**, the termination of the mesal fissure of the fourth ventricle at the apex of the calamus. **F.**, **Calcarine**, a fissure on the mesal aspect of the cerebrum, extending from near the occipital end and joining the occipital fissure; it is collocated with the calcar or hippocampus minor. **F.**, **Callosal** (*of Owen*), the space between the dorsal surface of the callosum and the overhanging cortex. **F.**, **Calloso-marginal**, one on the mesal surface of the cerebral hemisphere, dividing the area between the callosum and the margin into nearly equal parts; opposite to the splenium it turns in a dorsal direction. **F.**, **Central**, a deep and constant fissure extending from the dorsal margin in a ventro-cephalic direction, at an angle of about 67° with the meson; it crosses the lateral aspect of the cerebrum at about the middle of its length; the fissure of Rolando. **F.**, **Cephalic**, in *Schizonemertines*, a longitudinal fissure on each side of the head. **F.**, **Cerebral**, **Great**. See *F.*, *Cerebral*,

*Transverse (of the brain)*. F., Cerebral, Inferior. See F., *Transverse, Inferior*. F., Cerebral, Small. See F., *Transverse, Inferior*. F., Cerebral, Transverse. See F., *Transverse (of brain)*. F., Cervical, a congenital cleft in the cervical region, produced by a failure of union of the vertebral clefts. F., Choroidal. See F., *Choroid, Denticulate*. F., Circuminsular (of *W. H. W.*), the groove surrounding the base of the insula. F., of Clevenger. See F., *Cerebral, Inferior*. F., Collateral, a fissure on the mesal aspect of the cerebrum between the sulcus cerei and subcollateral gyri; it is collected with the collateral eminence. F., Collateral, Inferior, in lower animals, a slight depression in the spinal cord corresponding to the ventrolateral fissure in man. F., Collateral, Superior, in lower vertebrates, a groove in the spinal cord corresponding to the posterolateral groove in man. F., Constant (of *W. H. W.*), any fissure of the adult cerebrum that is always present in a given species or group. Among the human constant fissures are: Calcarine, callosal, central, collateral, circuminsular, olfactory, hippocampal, Sylvian, transinsular, occipital, orbital, parietal, postcentral, precentral, subfrontal, supertemporal. F., Coronal (of *Owen*), on the lateral aspect of the cerebral cerebrum, the frontal portion of the third cranial fissure. F., Cruciate, in nearly all the canivora, a fissure extending laterad, and forming, with its opposite, a Roman cross with the intercerebral fissure. F., Dentate. See F., *Hippocampal*. F., Dorsal, in embryology, the dorsal median fissure of the spinal cord. F., of the Ductus venosus, a fissure of the fetal liver, lodging the ductus venosus. It is indistinct in the adult. F., of Ecker. See F., *Occipital, Denticulate*. F., Ectoccipital (of *Owen*), an ill-defined transverse fissure near the tip of the occipital lobe of the brain. F., Ectofrontal (of *Owen*), a fissure corresponding in position with the anterior fissure of Sylvius. F., Ectorrhinal (of *Owen*), a furrow just lateral of the base of the olfactory crus. F., Ectosylvian (of *Owen*), in Carnivora, the first or lowest arched fissure. F., Ectotentorial (of *Owen*), the outer fissure on the ventral surface of the occipital lobe. F., Endomesognathica, an occasional fissure in the superior maxilla, between the endognathion and mesognathion. F., Entoccipital (of *Owen*), an ill-defined fissure on the occipital lobe. F., Entolambdoid. See F., *Adaptic*. F., Entorbital (of *Owen*), an inconstant fissure between the olfactory and orbital fissures. F., Entorrhinal. See F., *Ectorrhinal*. F., Entotentorial. See F., *Ectotentorial*. F., Episylvian (of *Wilder*), an inconstant dorsal branch of the Sylvian fissure. F., Ethmoid, the superior hiatus of the nares. F., Exoccipital (of *Wilder*), the ape fissure, *q. v.* F., Falcial (of *Owen*), a fissure on the mesal surface of the frontal lobe. F., Fetal, Ocular, in the embryonic eye, a fissure in the thick wall surrounding the lens. A coloboma results if it be not closed. F., Fimbrial, a small and constant depression between the foveola and the fimbria. F., Frontal (of *Owen*), the precentral and supracentral fissures of man. F., Frontal, First. See F., *Frontal, Superior*. F., Frontal, Inferior, the subfrontal fissure. F., Frontal, Superior, the supracentral fissure. F., Frontal, Vertical. See F., *of Roland*. F., Fronto-marginal, an inconstant fissure in the fronto-marginal convolution. F., for the Gall-bladder, a shallow depression on the lower surface of the right lobe of the liver for the accommodation of the gall-bladder. F., of Glaser. See F., *of Glaserius*. F., of Glaserius, a small fissure in the outer wall of the tympanic cavity opening into the glenoid fossa. It lodges the processus gracilis of the

malleus, and transmits the laxator tympani muscle and the anterior tympanic artery. F., Glenoid. See F., *of Glaserius*. F., Hippocampal, a constant fissure of the cerebrum extending from the splenium to near the tip of the temporal lobe; it is collocated with the hippocamp. F., Horizontal. See F., *Calcarine*. F., Horizontal, Great (of brain). See F., *Calcarine*. F., Hyposylvian (of *Wilder*), an inconstant ventral branch of the fissure of Sylvius. F., Incisor, a fissure separating the intermaxillary bone from the superior maxilla. F., Infero-lateral. See F., *Calcarine*. F., Inflected, an inconstant indentation of the dorsal margin of the cerebrum, a little cephalad of the central fissure. F., Infra-orbital. See F., *Suborbital*, and F., *Spheno-maxillary*. F., Insular (of *Wilder*), one of the fissures crossing the insula. F., Intragyrar (of *Wilder*), a small cerebral fissure occasionally developed between the larger fissures. F., Intra-orbital, in the dog's brain, a fissure between the olfactory bulb and the supraorbital fissure. F., Intraparietal. See F., *Parietal*. F., Intraparacentral (of *Wilder*), a nearly constant depression in the paracentral gyrus. F., Intercerebral (of *Wilder*), the great longitudinal fissure of the brain. F., Intergyrar (of *Wilder*), a fissure between two cerebral gyri. F., Interhemispherical. See F., *Longitudinal, Great (of brain)*. F., Interhemispheric. See F., *Longitudinal, Great (of brain)*. F., Interlamellar, one of the fissures separating the lamellæ of the cerebellum. F., Interlobar (of *Wilder*), the fissures of the brain separating the lobes. F., Interlobular, the great longitudinal fissure of the cerebrum. F., Interlobular, Great. See F., *of Sylvius*. F., Intermedial (of *Jensen*), an inconstant fissure near the end of the fissure of Sylvius. F., Interpalpebral. See F., *Palpebral*. F., Interparietal. See F., *Parietal*. F., Interpeduncular, the depression between the crura cerebri. F., of Jensen. See F., *Intermedial*. F., Lambdoid, 1 (of *Owen*), the occipital fissure, *q. v.*; 2 (of *Wilder*), in the fetus, between the third and second months, a sharply defined transverse depression in the occipital lobe, collocated with the lambdoid suture. F., Lateral, a straight fissure between the suprasylvian and the longitudinal fissures. F., Lateral (of *Owen*), an inconstant fissure on the mesal surface of the frontal lobe. F., Lateral (of spinal cord). See F., *Antero-lateral*. F., Lateral, Posterior (of spinal cord). See F., *Postero-lateral*. F., Limbic (of *Broca*), the fissure surrounding Broca's great limbic lobe. It includes the supercallosal, precuneal, and part of the collateral fissures. F., Longitudinal (of brain). See F., *Longitudinal, Great (of brain)*. F., Longitudinal (of liver), a deep fissure on the under surface of the liver, separating the right and left lobes. F., Longitudinal, Great (of brain), the deep mesal fissure that divides the cerebrum into two hemispheres. F., Longitudinal, Medialateral. See F., *Intercerebral*. F., Longitudinal, Posterior (of spinal cord), a deep, narrow groove, extending the whole length of the spinal cord, in the middle line posteriorly. F., Longitudinal, Superior. See F., *Intercerebral*. F., Marginal (of *Owen*), a fissure on the mesal surface of the cerebrum, forming the cephalic boundary of the paracentral convolutions. F., Maxillary, a fissure on the internal surface of the superior maxilla for the maxillary process of the palate bone. It extends obliquely downward and forward from the lower portion of the orifice of the antrum. F., Medial, a fissure parallel with and posterior to the fissure of Rolando. F., Median, Posterior (of spinal cord). See F., *Longitudinal, Posterior (of spinal cord)*. F., Me-

**difrontal** (*of Owen*), an inconstant fissure, subdividing the medifrontal convolutions. **F., Mediotemporal** (*of Wilder*), inconstant and irregular fissures, ventrad of the supertemporal fissure. **F., Meso-exognathic**, an occasional fissure in the superior maxilla between the exognathion and mesognathion. **F., Midfrontal**. See *F., Medifrontal*. **F., Midoccipital**. See *F., Orbital*. **F., Midorbital**. See *F., Orbital*. **F.-needle**, a spiral needle for bringing together the lips of a wound. **F. of Nipple**, a linear ulceration radiating from the nipple during lactation. It results from improper care of the breast. **F., Occalcarine** (*of Wilder*), the common stem of which the occipital and calcarine fissures are branches. **F., Occipital**. 1 (*of Owen*), the mid-occipital fissure, an illy-defined, inconstant fissure on the dorso-caudal slope of the occipital lobe; 2 (*of Pansch*), a deep and constant fissure, situated between the parietal and occipital lobes of the brain; the occipito-parietal. **F., Occipital, Anterior** (*of Schwalbe*), a fissure between the occipito-temporal and the inferior temporo-sphenoidal lobes of the brain. **F., Occipital, External**. See *F., Ape*. **F., Occipital, Inferior** (*of Cuvenger*), a small fissure between the second and third occipital convolutions. **F., Occipital, Transverse** (*of Ecker*), a transverse fissure on the dorsal surface of the occipital lobe of the brain; it is part of the paroccipital fissure. **F., Occipito-parietal**. See *F., Occipital*. **F., Occipito-temporal**. See *F., Collateral*. **F., Olfactory**, a depression on the ventral aspect of the frontal lobe, lodging the olfactory bulb and crus. **F., Orbital**, a fissure on the orbital surface of the frontal lobe external to the olfactory fissure. **F., Orbital, Anterior**. See *F., Spheno-maxillary*. **F., Orbital, Posterior**. See *F., Sphenoid*. **F., Orbito-frontal**, a partial fissure on the lateral aspect of the brain, separating the super-frontal and orbital convolutions. **F. of Owen**. See *Fissures, Antorbital, Basirrhinal, Callosal, Coronal, Ectoccipital, Ectofrontal, Ectorrhinal, Ectosylvian, Ectotentorial, Entoccipital, Entorbital, Falcial, Frontal, Lambdoid, Marginal, Medifrontal, Occipital, Postfrontal, Posthippocampal, Postoccipital, Postorbital, Postseptal, Postsylvian, Rhinal, Septal, Subfalcial, Subsylvian, Supercallosal, Supersylvian*. **F., Palpebral**, the space between the eyelids extending from the outer to the inner canthus. **F. of Pansch**. See *F., Occipital*. **F. of Pansch and Dalton**. See *F., Parietal*. **F., Paracentral** (*of Wilder*), a fissure on the mesal surface of the cerebrum, surrounding the paracentral lobule. **F., Parallel**. See *F., Supertemporal*. **F., Parietal**. 1 (*of Wilder*), the parietal portion of the intraparietal fissure; 2 (*of Pansch and Dalton*), a fissure between the parietal lobules, beginning near the ventral end of the central fissure, and running to near the tip of the occipital lobe; it includes the parietal and paroccipital fissures. **F., Parieto-occipital**. See *F., Occipital*. **F., Parieto-occipital, External**, the lateral portion of the occipital fissure. **F., Paroccipital** (*of Wilder*), the occipital portion of the intraparietal fissure. **F., Peritoneal**, a fissure of the lateral mesoblastic plates of the embryo, constituting the rudiment of the great visceral cavity. **F., Perpendicular, External**. See *F., Parieto-occipital, External* and *F., Ape*. **F., Perpendicular, Internal**, the portion of the occipital fissure on the mesal surface of the hemisphere. **F., Petro-squamosal**, or **Petro-squamous**, a small fissure between the petrosa and internal surface of the squamosa. **F., Petro-tympanic**, a fissure in the tympanic ring, lodging the long process of the malleus. **F., Petroso-angular**, a fissure between the apex of the pyramidal portion of the petrosa and the great wing

of the sphenoid. **F., Petro-basilar**, a fissure between the petrosa and the sphenoid and occiput, joining the middle lacerated and jugular foramina. **F.-plane**, a term employed to designate the entire length and depth of a fissure of the brain. **F., Pomatic** (*of Wilder*), in monkeys, a fissure crossing the cerebrum opposite the dorsal end of the occipital fissure; it forms the margin of the poma or occipital operculum. **F., Portal**. See *F., Transverse* (*of Wilder*). **F., Postcalcarine** (*of Wilder*), an inconstant vertical fissure at the occipital end of the cerebrum. **F., Postcentral**, a fissure just posterior and parallel to the central fissure. **F., Postero-intermediary**, a slight depression in the dorsal portion of the cervical region of the spinal cord. **F., Posterolateral**, a groove on the posterior portion of the side of the spinal cord, corresponding to the line of emergence of the posterior roots of the spinal nerves. **F., Postero-median** (*of spinal cord*). See *F., Median, Posterior* (*of spinal cord*). **F., Postfrontal** (*of Owen*), the frontal fissure. **F., Posthippocampal** (*of Owen*). See *F., Calcarine*. **F., Postoccipital** (*of Owen*), an inconstant vertical fissure forming the anterior boundary of the superior occipital convolution. **F., Postorbital** (*of Owen*), a portion of the orbital fissure. **F., Postparoccipital** (*of Wilder*), an inconstant fissure in the occipital portion of the paroccipital gyrus. **F., Postseptal** (*of Owen*), a small vertical fissure on the mesal surface of the posterior portion of the occipital lobe. **F., Postsylvian** (*of Owen*), the supertemporal or parallel fissure. **F., Precentral**, a fissure running parallel with the ventral portion of the central fissure. **F., Precuneal**, a right-angled fissure in the precuneus. **F., Preoccipital**, a fissure on the ventral aspect of the brain, separating the occipital and temporal lobes. **F., Preorbital**, the antorbital fissure. **F., Preparaoccipital** (*of Wilder*), a fissure in the parietal portion of the paroccipital gyrus. **F., Presylvian** (*of Wilder*), the anterior branch of the fissure of Sylvius. **F., Pterygoid**, the space between the lower ends of the pterygoid plates of the ethmoid. **F., Pterygo-maxillary**, a vertical fissure in the zygomatic fossa, opening above into the spheno-maxillary fossa. **F., Pterygopalatine**. See *F., Pterygoid*. **F., Purse-like** (*of Reil*), the vallicula, *q. v.* **F. of Reil**. See *F., Purse-like*. **F., Reticular**. See *F., Postcentral*. **F., Rhinal** (*of Owen*), the fissure separating the olfactory bulb and crus from the cerebrum proper. **F. of Rolando**. See *F., Central*. **F., Rostral**, in *Ungulates*, a fissure on the mesal aspect of the cerebrum. **F., Sagittal**. See *F., Intercerebral*. **F. of Santorini**, two transverse fissures in the cartilaginous auditory meatus. **F. of Schwalbe**. See *F., Occipital, Anterior*, and *F., Supercallosal*. **F., Semilunar**. See *F., Calcarine*. **F., Septal** (*of Owen*), an inconstant fissure in the cuneus, posterior to the calcarine. **F., Sphenoid**, a triangular fissure between the greater and lesser wings of the sphenoid bone. It transmits the third, fourth, sixth, and ophthalmic division of the fifth, cranial nerves, and the ophthalmic vein. **F., Spheno-maxillary**, a fissure between the orbital plate of the sphenoid and the lateral margin of the superior maxilla. **F., Splenial**, a fissure in the brain of the dog near the splenius. **F., Subcentral** (*of Wilder*), an inconstant fissure at the ventral end of the postcentral fissure. **F., Subfalcial** (*of Owen*), a small fissure on the mesal surface of the frontal lobe. **F., Subfrontal**, a fissure between the middle and inferior frontal convolutions. **F., Suboccipital**, an inconstant fissure in the occipital convolution of the brain.

**F., Suborbital**, a fissure in the superior maxillary portion of the floor of the orbit. It is the upper termination of the infraorbital canal. **F., Subseptal**, a fissure on the cuneus between the calcarine and the collateral fissures. **F., Subsylvian**, 1 (of Owen), an inconstant fissure on the ventral aspect of the frontal lobe; 2 (of Wilder), the constant horizontal branch of the fissure of Sylvius. **F., Subtemporal**, an inconstant fissure in the middle temporal and subtemporal convolutions. **F., Superior (of Burdach)**, a fissure of the cerebrum between the lateral surface of the insula and the lateral surface of the operculum. **F., Supercallosal**, 1 (of Wilder), the cephalic portion of the callosomarginal fissure; 2 (of Owen), the callosomarginal fissure. **F., Supercallosal**, 1 (of Wilder), the cephalic portion of the callosomarginal fissure; 2 (of Owen), the callosomarginal fissure. **F., Supercallosal**, 1 (of Wilder), the cephalic portion of the callosomarginal fissure; 2 (of Owen), the callosomarginal fissure.

LATERAL ASPECT. 1. Preoperculum. 2. Subcentral fissure. 3. Mesal aspect of the cuneus, the fissure cephalad of it is the subcallosal.

callosal fissure; 2 (of Owen), the callosomarginal fissure. **F., Supercallosal** (of Schwalbe), the fissure passing to and included of the dorsal portion of the callosal fissure. **F., Superfrontal**, a fissure on the lateral aspect of the frontal lobe, marking off the second frontal convolution. **F., Superoccipital**, an irregular fissure in the upper portion of the occipital surface of the posterior lobe of the brain. **F., Superseptal**, a fissure in the cuneus, almost parallel with the occipital fissure. **F., Supersylvian (of Owen)**, a convex, the second arched fissure on the lateral surface of the cerebrum. **F., Subtemporal**, a constant fissure parallel with the fissure of Sylvius. **F., Suprasylvian**. See *F., Supersylvian*. **F. of Sylvius**, a large fissure of the brain beginning on the outer side of the anterior perforated space, and extending outward to the surface of the hemisphere. It presents two thick cephalic branches, subcallosal and precallosal, and a long caudal branch, which separates the posterior and anterior parietal lobes. The insula is situated between the branches. **F., Sylvian**. See *F. of Sylvius*. **F., Temporal, First**. See *F., Super-*

*temporal*. **F., Temporal, Inferior**. See *F., Subtemporal*. **F., Temporo-occipital**. See *F., Collateral*. **F., Temporosphenoidal**, a name applied to both the supertemporal and subtemporal fissures. **F., Temporosphenoidal, Superior**. See *F., Supertemporal*. **F., Tentorial**. See *F., Collateral*. **F., Transverse (of brain)**, the transverse fissure separating the anterior from the posterior and middle portions of the brain. It transmits the folds of pia that form the choroid plexus. **F., Transverse (of cerebellum)**. See *F., Horizontal (of cerebellum)*. **F., Transverse (of liver)**, a fissure crossing transversely the lower surface of the right lobe of the liver. It transmits the portal vein, hepatic artery and nerves, and hepatic duct. **F., Transverse, Great (of brain)**. See *F., Transverse (of brain)*. **F., Transverse, Inferior**, a fissure between the cerebellum and the oblongata. It transmits a fold of the pia to the fourth ventricle. **F., Transverse, Superior**. See *F., Transverse (of brain)*. **F., Transinsular (of Wilder)**, the deepest of the fissures crossing the insula. **F., Transtemporal**, one of the inconstant short fissures on the lateral surface of the temporal lobe. **F., Triradiate**. See *F., Orbital*. **F., Umbilical**, the anterior portion of the longitudinal fissure of the liver, separating the left and quadrate lobes. **F., Uncinate**. See *F., Collateral*. **F., Ventral**. See *F., Median, Anterior (of spinal cord)*. **F., Wernicke's**, an inconstant vertical fissure on the lateral surface of the cerebrum midway between the end of the fissure of Sylvius and the caudal end of the cerebrum; the occipital fissure. **F. of Wilder**. See *Fissures*, *Adoccipital*, *Amygdalene*, *Basisylvian*, *Circuminsular*, *Constant*, *Episylvian*, *Exoccipital*, *Intercerebral*, *Insular*, *Interlobar*, *Intergyrus*, *Intragyrus*, *Intraparacentral*, *Lambdoid*, *Mediotemporal*, *Paracentral*, *Paroccipital*, *Pomitic*, *Postcalcarine*, *Postparoccipital*, *Preparoccipital*, *Presylvian*, *Subcentral*, *Subsylvian*, *Supercallosal*, *Transinsular*, *Zygial*. **F., Zygial (of Wilder)**, any fissure that presents a pair of branches at either end of a connecting bar. **F., Zygomatico-sphenoid**, a space between the orbital surface of the great wing of the sphenoid and the malar bone.

**Fissured** (*fish'-ürd*) [*fissus*: *findere*, to cleave]. Cleft; split.

**Fist** [*ME., fist*, the fist]. 1. The firmly-closed hand. 2. Same as *Boxista*.

**Fistula** (*fis'-tu-lah*) [*flu*, a "pipe"]. An abnormal, tube-like passage in the body. **F., Aërial**, a small opening in the neck communicating with the larynx, following imperfect closure of incised wounds of the throat. The voice is defective in consequence. **F., Anal**, an abnormal channel of communication between the bowel and the surface in the neighborhood of the anus. **F., Biliary**, an abnormal channel of communication with a biliary duct or the gall-bladder. **F., Blind**, a variety of anal, urinary, or other abnormal tract with but one opening. **F., Blind, External**, an anal fistula with but one opening, and that external. **F., Blind, Internal**, an anal fissure with but one opening, and that internal. **F., Blind, Urinary**, a suppurating track opening into the urethra, but without external opening. **F., Branchial**, an opening that extends from the surface of the neck to the pharynx; it is an unclosed branchial cleft, a relic of fetal life. **F., Complete**, one having two openings, an internal and external. **F., Fecal**, an abdominal fistula, communicating with the intestine. **F., Gastric**, an opening into the stomach, generally artificial, through the abdominal wall. It is sometimes used for feeding a patient who cannot swallow. **F., Horseshoe**, a variety of fistula in ano, the external opening being on

one side of the anus and the internal opening on the other. **F. in Ano.** See *F., Anal.* **F., Incomplete,** one with a single opening. **F., Mammary, or Milk,** a fistula of the mamma or of its ducts. In **F. recto-labial, recto-urethral, recto-vaginal, and recto-vesical,** the gut communicates by a fistulous track with the labia majora, the urethra, the vagina, or the bladder, respectively. **F., Thiry's,** an artificial intestinal fistula made by dividing the intestine in two places; the loop so cut out is still supplied with blood and nerves from its mesentery; it is emptied of its contents, and one end is closed by sutures, while the other is stitched to the abdominal wound, and the intestinal juice is thus collected. **F., True,** one that discharges the secretion of an organ. **F., Vella's,** is the same as Thiry's, except that both ends of the loop are left free and are sutured to the wound in the abdomen. **F., Vesical,** a fistula of the urinary bladder.

**Fistular, Fistulate** (*fist'-tu-lar, -lat*) [*fistula*, a tube].  
Fistulous; of the form or nature of a fistula.

**Fistulotome** (*fist'-tu-lat-om*) [*fistula*, a fistula; *τέμνειν*, to cut]. A cutting-instrument used in the operative treatment of fistula.

**Fistulous** (*fist'-tu-lus*) [*fistula*, a tube]. Of the nature of or affected with a fistula.

**Fit** [ME., *fit*, a struggle]. A popular name applied to any sudden paroxysm of a disease, but especially to one of epilepsy. **F., Nine-days',** Tetanus neonatorum.

**Fivefinger** (*iv-fing'-er*). 1. The plant *Potentilla canadensis* (see *Potentilla*). 2. *Ampelopsis quinquefolia* (see *American Ivy*).

**Fixation** (*fiks-a' shun*) [*fixus*, fixed]. A making firm or rigid. **F., Field of,** in optics, the region bounded by the utmost limits of distinct or central vision, and which the eye has under its direct control through its excursions, without movements of the head. **F.-forceps,** those used for fixing or holding a part in position during a surgical operation.

**Fixator** (*fiks-a'-tor*) [L.]. A term applied to a muscle that holds a part immovable, as the diaphragm.

**Fixature** (*fiks'-at-ūr*). See *Bandolin*.

**Fixed** (*fiks't*) [*fixus*, firm]. Firm; immovable. **F. Idea,** a morbid belief, opinion, or conception, entertained constantly by certain insane patients, and more or less permanently dominating the entire mind. **F. Oils.** See *Olea fixa*.

**Fixi dentes** (*fiks'-i den'-tēz*) [L.]. The teeth of the second dentition.

**Fixing** (*fiks'-ing*) [*fixus*, fixed]. The first stage in the preparation of tissues for histologic or pathologic examination. The chief fixing agents are—corrosive sublimate, nitric acid, alcohol, osmic acid, Flemming's solution, Fol's solution, Müller's solution, picric acid, picro-sulphuric acid, acetate of copper. See *Stains, Table of*.

**Fixuræ** (*fiks-u'-re*) [*fixura*, fixure]. In biology, the fibrils by which lichens and many other thallophytes attach themselves to their substratum.

**Flabby** (*flab'-e*) [E. dial.]. Lax or flaccid; deficient in firmness.

**Flabellarium** (*flab-el-a'-re-um*) [*flabellum*, a fan]. A vibraculum; a whip-like process of a polyzoan.

**Flabellate** (*flab-el'-ät*) [*flabellum*, a fan]. In biology, fan-shaped; applied to leaves, antennæ, etc.

**Flabellation** (*flab-el-a'-shun*) [*flabellare*, to fan]. In surgery, the act of keeping a wound or fracture cool by fanning.

**Flabelliform** (*flab-el'-if-orm*). Same as *Flabellate*.

**Flabellinerved** (*flab-el'-in-urvd*) [*flabellum*, fan; *nervus*, a nerve]. In biology, applied to leaves, such as those of the Ginkgo tree, with veins or nerves radiating from a common point.

**Flabellum** (*flab-el'-um*) [L., fan]. The set of white fibers radiating from the stria terminalis of the cerebrum into the corpus striatum. See also *Epipodite*.

**Flaccid** (*flak'-sid*) [*flaccidus*, flaccus, flaccid]. See *Flabby*.

**Flaccidezza** (*flah-che-del'-sah*) [Ital. for *flaccidity*]. Same as *Flacherie*.

**Flaccidity** (*flak-sid'-it-e*) [*flaccidus*, flaccus, flaccid]. Flabbiness; lack of normal reaction or firmness.

**Flachérie, or Flachery** (*flash'-er-e*) [Fr.]. A disease attacking silk-worms whose digestive apparatus is weakened by disease or heredity. It is said to be caused by a bacterium, *Micrococcus bombycis*. See *Micrococcus bombycis* and *Bacillus* β of Hofmann, under *Bacteria*, *Synonymic Table of*.

**Flag** [ME., *flagge*]. One of various endogenous plants with ensiform leaves. In biology, a flagellum; a part of the reproductive apparatus of certain gasteropods (Helix) projecting from the *vas deferens*. **F., Blue.** See *Iris*. **F., Sweet.** See *Acorus*.

**Flagellate** (*flaj'-el-ät*) [*flagellum*, a whip]. In biology, furnished with slender, whip-like processes.

**Flagellation** (*flaj-el-a'-shun*) [*flagellare*, to whip]. 1. One of the many means used for the purpose of masochistic gratification in the sense of subjection to the woman; the lustful feeling arising from a mechanical irritation of the genito-spinal center. 2. Flogging, formerly used as a local stimulant and counter irritant, and once employed in the control of the insane. Latterly it has been recommended as a check for post partum hemorrhage. See *Percussion*.

**Flagelliform** (*flaj-el'-if-orm*) [*flagellum*, a whip; *forma*, form.]. Having the form of a flagellum or whip-lash.

**Flagellula** (*flaj-el'-u-lah*) [dim. of *flagellum*, a whip]. A flagellate spore; a zoöspore.

**Flagellum** (*flaj-el'-um*) [L., a whip; *pl.*, *Flagella*]. Any long vibratile cilium. See also *Flag*. In biology, applied to the various long, slender, lash-like appendages of bacteria, zoöspores, infusoria, etc., and to slender runners, and tendrils of higher plants.

**Flagg's Drill-stock.** See *Drill-stock*.

**Flail** (*fläl*) [ME., *flaile*]. An arm or leg not under muscular control. **F.-joint,** a condition of preternatural mobility frequently following resection of a joint.

**Flajan's Disease.** Synonym of *Exophthalmic Goiter*.

**Flake** (*fläk*) [ME., *flake*, a flake]. A small, scale-like fragment, as of epidermis. **F. Manna,** the best and purest commercial manna, so called from its form.

**Flambage** (*flam-bahzh'*) [Fr.]. The singeing of wounds for therapeutic purposes.

**Flank** (*flank*) [ME., *flank*]. The part of the body between the ribs and the upper border of the ilium.

**Flannagan Garbage-cart.** See *Garbage-cart*.

**Flannel Rash.** See *Scabiorrhea corporis*.

**Flap** [ME., *flap*, a loose, flexible part]. A loose and partly detached portion of the skin or other soft tissue.

**F. Amputation.** See *Amputation*. **F. Extraction.** See *Extraction of Cataract*. **F. Operation.** See *Operations, Table of*.

**Flapless** (*flap'-les*) [ME., *flap*, a loose, flexible part; *less*, a suffix signifying without]. Without flaps. **F. Amputation.** See *Operations, Table of*.

**Flash-point.** The temperature at which a petroleum oil gives off vapors which, mixing with air, cause an explosion or flash of flame, dying out, however, at once.

**Flask** (*fläsken*, a flask). A narrow-necked, globular glass bottle. **F., Boiling,** a small flask, with a wide neck, provided on the side with an exit-tube; it is employed for determining the boiling-point. **F.-clamp,** an instrument in the form of a press, employed in vulcanite work for closing flasks after packing. **F.,**

**Moulding.** See *Moulding-flask*. **F.-press**, a screw-press for closing the sections of a vulcanite flask after packing. **F.**, **Vulcanite**, in dentistry, an iron, brass, or bronze box for holding the model and teeth in the vulcanized rubber process. It is generally divided into two sections, one of which is closed by an adjustable lid, the other having a bottom, and is locked by pins or bolts.

**Flat** [ME., *flat*] Living on one plane. **F.-ear.** See *Mart's Ear*. **F.-foot**, depression of the plantar arch; it differs from splay-foot or talipes valgus in that the sole is not everted. **F.-worm.** See *Tape-worm*.

**Flatulence** (*flat' u-ſens*) [*flatulentus*; *flatus*, breath]. A condition marked by the presence of gases in the alimentary canal. It arises mainly from the fermentation of the contents of the stomach and intestines.

**Flatulent** (*flat' u-lent*) [*flatus*, breath]. Characterized by, or attended with the presence of, flatulence.

**Flatus** (*flat' us*) [L.]. A term applied to gases in the digestive tract.

**Flavanilin** (*flav' an' ilin*) [*flavus*, yellow; *anilin*],  $C_{16}H_{11}N_3$ . A beautiful yellow dye produced by heating acetanil with zinc chlorid to  $270^{\circ}C$ . It forms colorless crystals that become yellow on exposure to the air. See *Pigments*, *Conspectus of*.

**Flavaurin** (*flav' aur' in*). See *Pigments*, *Conspectus of*.

**Flavescent** (*flav' es' cent*) [*flavescere*, to become yellow]. Yellowish.

**Flavin** (*flav' in*) [*flavus*, yellow]. A yellow dye-stuff prepared from quercitron bark by the action of  $H_2SO_4$ .

**Flavophenin** (*flav' o-phenin*) [*flavus*, yellow; *phenyl*],  $C_{12}H_9N_3O_6$ . A yellow coloring-matter. See *Chrysin*.

**Flavopurpurin** (*flav' pur' pu- rin*) [*flavus*, yellow; *purpura*, purple],  $C_{11}H_7O_5$ . A coloring-matter occurring in golden yellow, acicular crystals. See *Pigments*, *Conspectus of*.

**Flavus** (*flav' us*) [L.]. Yellow.

**Flaw** [ME., *flaw*, a flake]. A disease in which the skin peels from the nails.

**Flax** (*flax*) [ME., *flax*, flax]. The best known and probably the most valuable of the bast-fibers, derived from the flax plant, *Linum usitatissimum*. The linen fiber, when cleansed, has a blonde or even white color, a white, silky luster, and great strength. It is less pliant and elastic than cotton, but is a better conductor of heat. Chemically, it is, like cotton, a pure cellulose. **F.**, **New Zealand**, a fiber obtained from the leaves of *Phormium tenax*, which acquires a length of one to two meters. The fiber, as prepared by hand scraping, is soft, white, and of silky luster. Its chief value is for rope making and for coarse textures. The rope made from this fiber is, however, weakened when wet by sea-water, and must therefore be kept well oiled. **F.-dresser's Phthisis**, a form of pulmonary weakness. **F.-seed.** See *Linum*.

**Flay** (*flay*) [ME., *flay*, to skin]. To skin.

**Flea** (*flay*) [ME., *flay*, a flea]. See *Puler*, and *Parasites* (*Anim.*), *Table of*. **F.-bane.** See *Erigeron*. **F.-bite**, the bite of a flea. **F.-powder.** See *Bubach*.

**Fleam** (*flay*) [*flay*, a vein]. A phlebotome; a veterinary lancet for venesection.

**Flechsig, Method of.** A method of differentiating nerve tracts in the brain and spinal cord. It consists in noting the successive periods at which the fibers of the tract become medullated during the process of development. **F.**, **Tract of.** See *Tract*.

**Fleck's Disinfectant.** A disinfectant solution containing copper, 70 parts, and chlorinated lime 20 parts, in 1000 parts of water.

**Fleece of Stelling.** An interlacing of fibers passing from the cerebellum to the tentorium of the cerebellum.

**Fleischl's Law.** See *Lary*.

**Fleischmann's Bursa.** The sublingual bursa.

**Fleitmann's Test.** See *Tests*, *Table of*.

**Floma salada** (*fla' mah sal-a'-da*) [Sp.]. Synonym of *Aerodynia*.

**Fleming's Tincture.** An alcoholic preparation of aconite, stronger than the official tincture. Dose, two minims.

**Flemming's Method.** A method of preparing tissue for histologic study. Small bits of tissue are fixed in 0.1 to 0.5 per cent. solution of chromic acid, and the hardening completed with alcohol. **F.'s Mixture**, a mixture used in histologic investigations. Its composition is as follows: One per cent. solution of osmic acid, 10 parts; one per cent. solution of chromic acid, 25 parts; two per cent. solution of acetic acid, 5 parts, water 60 parts.

**Flesh** [ME., *flesh*, flesh]. The soft tissues of the body, especially the muscles.

**F.-brush**, a brush for rubbing the surface of the body. **F.**, **Goose.** See *Cutis anserina*. **F.-juice**, the juice derived from meat by expression. **F.**, **Proud**, a colloquial term for the soft and inflamed granulations of the edges of a wound.

**F.-wound**, a slight or superficial wound. **F.-worm.** See *Thread-worms*.

**Fleshy** (*flesh' e*) [ME., *flesh*, flesh]. Mainly composed of muscular tissue.

**Fleury's Method.** See *Treatment*, *Methods of*.

**Flexed-toe** (*flekst'-to*). See *Hammer-toe*.

**Flexibilitas** (*fleks-ib-il'-it-as*) [L.]. Flexibility. **F. cerea**, a condition of the limbs in catalepsy in which they resist passive movement and seem as if made of wax.

**Flexible** (*flekst'-ib-il*) [*flexus*, bent]. That which may be bent. **F. Catheter**, a catheter made of flexible substance. **F. Collodion.** See *Pyroxylin*. **F. Pillar.** See *Pillar*.

**Flexile** (*flekst'-il*) [*flexilis*, pliable]. Easily bent.

**Flexion** (*flekst'-shun*) [*flexus*, bent]. The operation or process of bending; the condition of being bent; the opposite of extension. **F.**, **Forcible**, in surgery, a mode of treating aneurysm by a forcible bending, as, for example, of the knee, so as to compress the popliteal artery, thereby reducing the volume of blood; also a means of breaking up articular adhesions by mechanical bending. **F. and Extension**, certain passive Swedish movements used principally for regulating the circulation in certain parts, and for relieving local congestion. **F.-stage of Labor**, one of the stages of labor, consisting in a bending of the fetal head forward toward the chest.

**Flexor** (*fleks'-or*) [*flexus*, bent]. Any muscle that bends a limb or part. See *Muscles*, *Table of*.

**Flexuous** (*flekst'-u-us*) [*flexere*, to bend]. In biology, alternately curved in opposite directions.

**Flexura** (*fleks'-u'-rah*) [L., a bending]. A bending or curve in an organ. In veterinary anatomy, the so-called knee (in fact the wrist) of the horse.

**Flexure** (*flekst'-ur*) [*flexura*, a bending]. A bending. **F.**, **Sigmoid.** See *Sigmoid Flexure*.

**Flighty** (*flit'-te*) [Dan., *vlugtig*, volatile]. Slightly delirious.

**Flint's Formula.** See *Alimentation*, *Rectal*. **F.'s Murmur.** See *Signs and Symptoms*, *Table of*. **F.'s Pill**, a pill containing half a grain of iron combined with all the inorganic salts found in the blood in the normal proportion, except chlorid of sodium, which is in excess.

**Floating** (*flot'-ing*) [ME., *floten*, to float]. Free to move around. **F. Kidney**, one that is misplaced or movable; wandering. **F. Liver**, a movable liver. **F. Ribs.** See *Ribs*. **F. Spleen**, one that is separate from its attachments, and displaced.

**Flocchi** (*flok'-i*) [L., Plural of *floccus*, a tuft. **F. volitantes**. Same as *Musce volitantes*.

**Floccillation** (*flok-sit-a'-shun*) [*floccillatio*]. Same as *Carphology*.

**Floccitation** (*flok-sit-a'-shun*) [*floccitatio*]. Same as *Carphology*.

**Floccose** (*flok'-ös*) [*floccus*, a flock of wool]. In biology, composed of or bearing tufts of woolly or long and soft hairs.

**Floccular** (*flok'-u-lar*) [*flocculus*, a little flock of wool]. Pertaining to the flocculus.

**Flocculence** (*flok'-u-lens*) [*floccus*, a lock of wool]. In biology, a soft, waxy excretion, resembling wool, found on certain insects, *e. g.*, the woolly Aphis.

**Flocculent** (*flok'-u-lent*) [*floccus*, a flock of wool]. Flaky, downy, or woolly; coalescing in flocky masses.

**Flocculus** (*flok'-u-lus*) [dim. of *floccus*, a tuft of wool]. 1. A bilobular mass attached to the medipeduncle of the brain at the peduncular sulcus, and wedged, as it were, between the rounded contiguous angles of the cephalic and caudal regions of the cerebellum. Along with it is the *paraflocculus*, a single-lobed mass. Their functions and their representatives in other mammals are little known. 2. In biology, a small bunch of stiff hairs.

**Floccus** (*flok'-us*) [L., a flock or tuft of wool: *pl.*, *Flocchi*]. In biology, a small tuft of woolly hairs.

**Flood's Ligament**. See *Ligament*.

**Flooding** (*flood'-ing*) [ME., *flood*, a flood]. A copious bleeding from the womb during, after, or just at childbirth; any excessive uterine hemorrhage.

**Floor** (*flor*) [ME., *floor*, floor]. The basal limit of any hollow organ or open space; as the *floor* of a ventricle, of the antrum, of an orbit, or of the pelvis. **F.-space**, the distance apart of beds required to afford proper ventilation in hospitals. It should be not less than  $\frac{1}{3}$  of the cubic space.

**Flora** (*flor'-rah*) [*Flora*, the goddess of flowers]. The entire plant-life of any geographic area or geologic period.

**Florence Lake**. See *Pigments, Conspectus of*.

**Florentine Lake**. Same as *Florence Lake*.

**Flores** (*flor'-rez*) [L., Plural of *flos*, a flower. 1. The flowers or blossoms of any plant used as a medicine. 2. A flocculent or pulverulent form assumed by certain medicines and chemicals after sublimation; as *flores sulphuris*, flowers of sulphur; *flores benzoës*, flowers of benzoïn, or sublimated benzoic acid.

**Florescence** (*flor-es'-ens*) [*florescere*, to begin to bloom]. The opening of flowers; blossoming.

**Floret** (*flor'-et*) [*flos*, flower]. In biology, an individual flower of a head or cluster of flowers; it is also called *floscule*.

**Florid** (*flor'-id*) [*floridus*, abounding with flowers]. Bright-red in color; rosy; as a florid cheek, or countenance. **F. Phthisis**. See *Galloping Consumption*.

**Florida** (*flor'-id-ah*) [*floridus*, abounding with flowers]. One of the Southern states of the United States. **F. Allspice**, the leaves of *Calycanthus floridus*, a pleasant aromatic stimulant. Dose of the fld. ext., gr. x-xxx. Unof. **F., Fever**. See *Fever*.

**Florisugent** (*flor-is-u'-jent*) [*flos*, flower; *sugere*, to suck]. Applied to birds and insects that suck the nectar of flowers.

**Flos** [L., a "flower"]. A flower. Singular of *Flores*, *q. v.*

**Floscule** (*flos'-kül*) [dim. of *flos*, a flower]. See *Floret*.

**Flour** (*flour*) [old spelling of *flower*]. A finely-ground meal; this may be from either wheat, rye, barley, oats, maize or Indian corn, and rice, although

wheat-flour is used in far the largest amount. Wheat-flour contains starch, dextrin, cellulose, sugar, albumin, gliadin or gluten, mucin or mucedin, fibrin, cerealín, fat, mineral matter, and water. The first four are carbohydrates, or non-nitrogenous substances, and they form nearly three-fourths of the entire weight of the flour. The nitrogenous matter consists of at least five principles, three of which, gluten (or gliadin), mucin (or mucedin), and fibrin, constitute the bulk of the material known as crude gluten, which is the substance left when flour is kneaded with water and afterwards washed to remove the starch and any soluble substance. The remaining two nitrogenous principles, albumin and cerealín, are soluble in water, and are carried away with the starch in the process of washing. Crude gluten possesses a peculiar adhesiveness, arising from the presence of gliadin, which is a highly tenacious body, and which is not present in the same form in other cereal flours. The vegetable albumin is accompanied also by small amounts of legumin, or vegetable casein, which is also soluble in water. The *cerealín* is a soluble nitrogenized ferment occurring especially in the husk or bran of wheat and other cereals. It has a powerful fermentative action on starch, rapidly converting it into dextrin and other soluble bodies. The difference in the composition of

|                   | FINE WHITE FLOUR. |                   | COARSE WHEAT BRAN. |                  |
|-------------------|-------------------|-------------------|--------------------|------------------|
|                   | In 100 parts.     | In one pound.     | In 100 parts       | In one pound.    |
| Water, . . .      | 13.0              | 2 ozs., 35 grs.   | 14.0               | 2 ozs., 105 grs. |
| Fibrin, etc., .   | 10.5              | 1 oz., 297 grs.   | 15.0               | 2 ozs., 175 grs. |
| Starch, etc., .   | 74.3              | 11 ozs., 358 grs. | 44.0               | 7 ozs., 17 grs.  |
| Fat, . . . . .    | 0.8               | 0 ozs., 57 grs.   | 4.0                | 0 ozs., 280 grs. |
| Cellulose, . .    | 0.7               | 0 ozs., 49 grs.   | 17.0               | 2 ozs., 316 grs. |
| Mineral matter, } | 0.7               | 0 ozs., 49 grs.   | 6.0                | 0 ozs., 422 grs. |

the several parts of the wheat-grain is seen in the foregoing table given by Church. **F.-ball**, a much-used food for infants suffering from summer-complaint. It is made as follows:—Two or three pounds of wheat-flour, tied in a bag, are boiled continuously for 12 hours; the outer shell is then scraped off, and the inner, yellow portion (mainly dextrin) is grated and used to make a thin gruel.

**Flouren's Doctrine**. A theory that the whole of the cerebrum is concerned in every psychic process.

**Flow** (*flo*) [ME., *flouen*, to flow]. The free discharge of a liquid, as the blood.

**Flower** (*flou'-er*) [ME., *floure*, flower]. See *Flos*.

**Flower, Angle of**. In craniometry, the naso-malar angle.

**Fluctuation** (*fluk-tu-a'-shun*) [*fluctuare*, to float or roll]. The wave-like motion of contained fluid upon pressure, or by succession.

**Fluid** (*flu'-id*) [*fluere*, to flow]. A substance whose molecules move freely upon one another; any liquid constituent, or secretion of the body. See *Amniotic*, *Condys*, *Culture*, *Labarraque's*, and other fluids. **F. Extract**. See *Extractum Fluidum*. **F.-ounce**. See *Weights*. **F.-dram**. See *Weights*. **F., Scarpa's**, the

endolempia. **F. Vein**, the name given to the eddies produced in a cavity of the heart by regurgitating blood coming in contact with the current entering the cavity in the normal direction. The oscillation of the particles of blood are attended with a blowing sound or murmur.

**Fluigram** (*flu'-ig-ram*) [*fluere*, flow; *gramma*, a small weight]. In medicine and pharmacy the gram and the cubic centimeter are the most important metric units, and to express their close relationship the cubic centimeter has been very appropriately termed a *Fluigram*.

**Fluke** or **F.-worm** (*flu'-k*) [*ML.*, *fluca*, a fluke]. Any trematode worm, especially *Plasmodium hepaticum*, *q. v.* See *Flumens*, and *Flumens* (*Animal*), Table of.

**Flumen dysentericum** (*flu'-men dis-en-ter-ik-um*). Synonym of *Dysentery*.

**Fluor** (*flu'-or*) [*L.*, flow]. 1. A liquid state. 2. The menstrua. **F. albus**, white flow; an old name for *Leucorrhoea*. **F. muliebris**. Synonym of *Leucorrhoea*.

**Fluoranthene** (*flu'-or-an-then*) [*fluere*, a flow],  $C_{15}H_{10}$ . Liquid; a substance that occurs in the "stubby-fat" obtained from the distillation of the "stubby." It crystallizes from alcohol in needles or plates, melting at 107-110° C., and dissolves readily in hot alcohol, ether, and carbon tetrachloride.

**Fluorene** (*flu'-or-en*) [*fluere*, a flow],  $C_{15}H_{10}$ . A substance based in color; it can be obtained by passing diphenylmethane through a combustion-tube heated to redness. It is very soluble in hot alcohol, less so in cold alcohol; it crystallizes in colorless plates having a violet fluorescence, melts at 113° C., and boils at 215° C.

**Fluorescein** (*flu'-or-sin*) [*fluor*, a flow],  $C_{20}H_{12}O_5 \cdot H_2O$ . Resorcinol phthalate. An anhydrid of resorcinol, prepared by heating phthalic anhydrid with resorcinol to 200° C. It occurs as a yellowish or dark-red powder decomposing at about 290° C. From it are derived the most coloring matters, *q. v.*

**Fluorescence** (*flu'-or-sen-s*) [*fluere*, to flow]. A property possessed by certain substances, consisting in the emission of colors while light is being passed through them. Quinin, fluor-par, and several structures of the eye, possess this power. See also *Phosphorescence*.

**Fluorescent Resorcinol**. Same as *Resorcin Blue*.

**Fluorescigenous** (*flu'-or-sin-ij-en-us*) [*fluere*, to flow; *gignere*, to produce]. Giving rise to fluorescence.

**Fluorescin** (*flu'-or-sin*) [*fluere*, to flow],  $C_{20}H_{11}O_5$ . A colorless amorphous product of the reduction of fluorescein. On account of its neutral quality and green fluorescence, it has been used to study the movements of the intracellular fluids.

**Fluorid** (*flu'-or-id*) [*fluere*, to flow]. A basic salt of fluorine.

**Fluorin** (*flu'-or-in*) [*fluere*, a flow].  $F=19$ ; quantivalence 1. One of the elements. It has not been isolated, but is probably a gas. All its salts are highly corrosive and poisonous in their full strength. See *Fluoride*, Table of. Ammonium fluorid is recommended by Gahan for hypertrophy of the spleen. Dose  $\text{Mv}$  of  $\text{NH}_4\text{F}$  30 to 60 grains. **Hydrofluoric acid**, is an anesthetic and an anesthetic. Inhalations of the dilute vapor have been recommended in diphtheria and tuberculosis.

**Fluorindulenes** (*flu'-or-in-dul-en*) [*fluere*, a flow]. A series of the indulin closely allied to the indulins. They are produced by the protected heating of azophenin or azophenol with ortho-phenylamines. They dissolve in alcohol with beautiful fluorescence and form crystals of a fluorescent salt.

**Fluoroform** (*flu'-or-o-form*) [*fluere*, a flow; *forma*,

form],  $\text{CHF}_3$ . A gas, the fluorin analogue of chloroform.

**Flush** [origin obscure]. A temporary redness, as the hectic flush; it is due in many cases to vaso-motor paresis.

**Flushing** (*flush'-ing*) [origin obscure]. 1. A frequent symptom in the subjects of cardiac palpitation, and especially in Graves' disease. It implies a condition of vaso-motor irritability with a paresis of the arterioles in certain areas. It is often accompanied by local perspiration. It is seldom a marked symptom of organic disease. 2. The process of cleansing by a rapid flow of liquid.

**Flute-player's Cramp**. See *Cramp*.

**Flux** (*fluks*) [*fluxus*, flowing]. 1. An abnormal flow of any of the excretions of the body, especially the feces. Also, a synonym of *Dysentery*. 2. In chemistry, any highly-fusible substance or mixture, as the subborate of soda, employed in the fusion of metals. **F., Sebaceous**. See *Seborrhoea*.

**Fluxion** (*fluks'-shun*) [*fluxus*, a flowing]. A gathering of blood or other fluid in one part of the body; congestion, or hyperemia.

**Fluxus** (*fluks'-us*) [*L.*]. A flow or a flowing. **F. cruentus**. Synonym of *Dysentery*. **F. dysentericus**. Synonym of *Dysentery*. **F. sebaceous**. Synonym of *Seborrhoea*. **F. splenicus**. Synonym of *Melena*. **F. torminosus**. Synonym of *Dysentery*.

**Fly** (*fli*) [*ME.*, *flye*, a fly]. A dipterous insect. For parasitic flies, see *Parasites* (*Animal*), Table of. **F.-agarric**. See *Agaricus muscarius*. **F.-blister**, **Flying Blister**. See *Blister*. **F.-poison**. See *Amianthum*. **F.-sickness**. See *Barcoo*.

**Foal** (*fol*) [*ME.*, *fole*, a foal]. The young of the equine genus of quadrupeds, of either sex.

**Focal** (*fo'-kal*) [*focus*, a point; a fire-place]. Pertaining to or occupying a focus. **F. Disease**. See *Disease*. **F. Hemorrhage**, localized hemorrhage, in contradistinction to diffuse or disseminated hemorrhage. **F. Meningitis**, meningitis involving but a small area of the membranes. **F. Myelitis**, localized myelitis, in contradistinction to diffuse or disseminated myelitis. **F. Sclerosis**, the chronic form, sometimes called *Sclerotic Myelitis*.

**Focil** (*fo'-sil*) [*foecile*, a spindle]. Any bone of the forearm or leg. **F. majus**, the ulna. **F. majus cruris**, the tibia. **F. minus**, the radius. **F. minus cruris**, the fibula.

**Focus** (*fo'-kus*) [*focus*, a point; *pl.*, *foci*]. The principal seat of a disease. The point (called *principal focus*) to which converge the rays of light that pass through a convex lens or are reflected from a concave mirror. **F., Equivalent**, in microscopy, when the real image of an objective of a certain focal length is of the same size as that produced by a simple converging lens whose focal distance equals that of the objective, it is said to have an equivalent focus. **F., Negative**, or **Virtual**, the imaginary focus of an object placed within the principal focus. **Conjugate Foci**, interdependent foci.

**Focusing** (*fo'-kus-ing*) [*focus*, a point]. The mutual arrangement of an object and the optic parts of a microscope so that a clear image may be seen. **F. Down**, in microscopy, focusing by moving the objective down or toward the object, but at the risk of damaging it. **F. Up**, focusing by moving the objective up or away from the object.

**Foderé's Test**. See *Birth*.

**Feniculum** (*fen-ik'-u-lum*) [*L.*; *gen.*, *Feniculi*]. Fennel. The fruit of *F. vulgare*, with properties due to a volatile oil. It is a mild stimulant and aromatic carminative. **F., Aq.**, 2 parts of the oil in 1000 of

water. Dose  $\overline{5}$ ss- $\overline{5}$ j. **F.**, **Ol.**, the volatile oil. Dose mjj-v. See also *Fennel*.

**Foerster's Shifting-type.** See *Signs and Symptoms*.  
**Förster's Method.** See *Cataract, Artificial Maturation of*. **F.'s Operation.** See *Operations, Table of*.

**Fœtal** (*fo'-tal*). See *Fetal*.

**Fœtor** (*fo'-tor*). See *Fetor*.

**Fœtus** (*fo'-tus*). See *Fetus*.

**Fokker's Method.** A method of estimating uric acid in the urine. 200 c.c. of urine are made strongly alkaline by sodium carbonate, and after an hour 20 c.c. of a concentrated solution of ammonium chlorid are added. The mixture is allowed to stand at a low temperature for 48 hours, when the precipitate that forms is collected on a weighed filter and washed. The filter is washed with dilute HCl (1 in 10), and the filtrate collected; this operation is repeated till all the acid urate on the filter is dissolved. The filtrates are mixed, allowed to stand for 6 hours, and the uric acid which then separates is collected on the same filter, washed twice with water, then with alcohol, till all acid reaction disappears, dried at 110° C., and weighed. To the weight obtained add 0.03 gram, and subtract the weight of the filter; the remainder is the weight of uric acid in 200 c.c. of urine.

**Fol's Fixing-fluid.** A modification of Fleming's solution, used, as is the latter, for the fixation of cells undergoing indirect cell-division. See *Stains, Table of*. **F.'s Yellow.** See *Pigments, Conspectus of*.

**Fold** (*fold*) [**ME.**, *fold*, a fold]. A term applied to the plication or doubling together of various parts of the body. **F.**, **Aryteno-epiglottidean**, a fold of mucous membrane stretched between the sides of the epiglottis and the apex of the arytenoid cartilage. **F.**, **Palpebral**, the fold formed by the reflection of the conjunctiva from the eyelids on to the eye. There are two folds, the superior and inferior. **F.**, **Recto-vaginal**, the fold of the peritoneum in females descending in front of the rectum and behind the vagina. It corresponds with the *recto-vesical fold* of males. **F.**, **Vater's**, the plica transversalis or transverse fold of the duodenum, situated just above the opening of the pancreatic and biliary ducts.

**Folders** (*fol'-derz*) [**ME.**, *fold*, a fold]. English usage for Pince-nez or "eye-glasses."

**Folia** (*fo'-le-ah*) [*pl. of folium*, leaf]. 1. Leaves; a term much used in pharmacopeias and dispensaries, and designating the leaves of such plants as are used in medicine. 2. The intervening thin plates between the crevices of greater or less depth (*rimulae*) upon the entire surface of the adult cerebellum.

**Foliaceous** (*fo-le-a'-se-us*) [*folium*, a leaf]. Leaf-like.

**Foliation** (*fo-le-a'-shun*) [*foliare*, to put forth leaves]. The act of leafing out; frondescence.

**Folie** (*fo-le'*) [**Fr.**]. Insanity. **F. à deux** (*fo-le'-ah duh'*). [**Fr.**] See *Insanity, Communicated*. **F. Circulaire** (*fo-le'-ser-ku-lär'*). Cyclic insanity. **F. du Doute.** See *Doubt, Insanity of*. **F.**, **Alternate**. Cyclic Insanity, *q. v.*

**Follicolous** (*fo-le-ik'-o-lus*) [*folium*, a leaf; *colere*, to dwell]. In biology, growing upon leaves.

**Foliolate** (*fo'-le-öl*) [*folium*, a leaf]. In biology, a leaflet or leaflet-like organ.

**Foliose** (*fo'-le-ös*) [*foliosus*, leafy]. Abounding in leaves, leaflets, or leaf-like appendages.

**Folium** (*fo'-le-um*) [**L.**, a leaf; *pl.*, *Folia*]. 1. In biology, a leaf. At the time of Cæsalpinus it applied equally to sepals, petals, or ordinary leaves. 2. Any lamina or leaflet of gray matter, forming a part of the arbor vite of the cerebellum.

**Folius, Process of.** Process of Rau; a process at the junction of the handle with the neck of the malleus.

It passes anteriorly into the Glaserian fissure. It is about three-and-a-half lines long in the new-born infant. After birth it unites with the under wall of the Glaserian fissure.

**Follette** (*fol-el'*) [**Fr.**]. Synonym of *Influenza*.

**Follicle** (*fol'-ik-l*) [*folliculus*, dim. of *follis*, bellows]. 1. In anatomy, a very small secretory cavity or sac, as one of the follicles of Lieberkühn. 2. In biology, a simple pod, splitting only by the ventral suture. **F.**, **Graafian**, one of the small vesicular bodies in the cortical layer of the ovary, consisting of flattened granular cells with oval nuclei and membrana propria, each about  $\frac{1}{1000}$  inch in diameter. **F.**, **Sebaceous**, one of the sacs lying within the skin that secrete the oily fluid with which the skin is softened.

**Follicular** (*fol'-ik-u-lar*) [*folliculus*, a little follicle]. Relating or appertaining to a follicle.

**Folliculitis** (*fol'-ik-u-lit'-tis*) [*folliculus*, a follicle; *itis*, inflammation]. Inflammation of a group of follicles, as of the hair. **F. barbæ.** See *Sycosis*. **F. decalvans**, Quinquand's Disease: a chronic folliculitis of the hairy parts, especially of the scalp, which leads to a cicatricial alopecia. The patches are about the size of a shilling, irregular in outline, and almost smooth and polished, but with some granular points at the periphery, and red points on the white, atrophied, cicatricially-depressed surface. **F. exulcerans.** See *Hydroadenitis phlegmonosa*.

**Folliculium** (*fol'-ik-u'-le-um*). The liquor folliculi. See *Liquor*.

**Folliculose** (*fol'-ik-u-lös*) [*follis*, a bellows]. Full of follicles. Having the appearance of follicles.

**Fomentation** (*fo-men-ta'-shun*) [*fomentare*, to foment]. The application of cloths soaked in hot medicinal solutions, to reduce inflammation or to allay pain. Also, the application of hot dry cloths. Also, the medicament, or other material, so applied.

**Fomes** (*fo'-mēs*) [**L.** for "tinder": *pl.*, *Fomites*]. Any substance (as a garment, carpet, letter) capable of acting as the medium for the transmission of an infectious disease.

**Fonifero** (*fo-nif'-er-o*). See *Phonophore*.

**Fons pulsatilis** (*fons pul-sat'-il-is*) [**L.**]. See *Fontanel*.

**Fontaine's Chamber.** See *Anesthetic*.

**Fontana, Canals of.** See *Canal*. **F.'s Markings, or Striæ of.** Delicate microscopic transverse folds of nerve-fibers, to which is due the fact of the non-retraction of the fibers when divided. **F.'s, Spaces**, those between the processes of the ligamentum pectinatum iridis. See *Canal*.

**Fontanel, or Fontanelle** (*fon-tan-el'*) [dim. of *fontana*, a spring, from the appearance and feeling]. A

FONTANELS OF FETAL SKULL.

membranous space of the infant's skull, from delayed ossification of the cranial bones. **F.**, **Anterior**, that at the point of union of the frontal, sagittal, and coronal sutures. See also *Bregma*. **F.**, **Posterior**, that at

the point of junction of the apex of the lamboid and the sagittal sutures.

**Foniculus** [*Fonticulus*] (city of *Font*, fountain)

1. The depression at the root of the neck, just cephalad of the sternum, in a fully *infant* *infant* *infant*. 2. A small artificial pier or tube.

**Food** [*Alimentum*] Anything used for the nourishment or sustenance of tissue. The substances ordinarily employed as elements. **F.**, Albumin-spring, one that diminishes the metabolism of albuminates. **F.-accessories**, a term given to the various substances used as condiments, which give flavor to food or

#### ANIMAL FOODS.

|            | Water. | Proteids. | Digestible & lipoproteic bodies. | Non-digestible bodies. | Salts. |     |

| Flour          |        |           | 90                               |                        | 4      | 0.5 |

stimulate the digestive secretions, as well as to the well-known stimulants, tea, coffee, cocoa, alcohol, etc. **Foods, Isodynamic.** Those producing an equal amount of heat. **F., Plastic, proteids.** **F., Respiratory,** fats and carbohydrates. (The nomenclature of the last two rests upon an erroneous theory.)

**F., Classification of** (according to Yeol) :—

| Organic | Nutritive       | Chemical               | Properties   | Uses                               |
|---------|-----------------|------------------------|--|------------------------------------|
|         |                 |                        |  |                                    |
| N       | Nitrogenous     | Albuminates            | These are of nearly the same chem. composition as albumin. <i>Ex. albumin</i> —Albumin, fibrin, syntonin, myosin, globulin, casein, from the animal; <i>legumin</i> and <i>legumin</i> , from the vegetable kingdom. <i>are also called</i> nitrogenous substances referred to as <i>albuminates</i> and known as— | (Gelatin<br>(Casein,<br>(Chondrin. |
|         |                 |                        |  |                                    |
| N       | Non-nitrogenous | Lipids or Hydrocarbons | containing carbon, hydrogen, and oxygen; the proportion of oxygen being sufficient to convert all the hydrogen into water. <i>Ex. lipids</i> —Oleum, stearin, margarin. <i>These are also called</i> hydrocarbons.   | (Lipids or Hydrocarbons            |
|         |                 |                        |  |                                    |
| N       | Non-nitrogenous | Carbohydrates          | containing carbon, hydrogen, and oxygen; the two latter elements in the proportion of 1:2:1. <i>Ex. carbohydrates</i> —Starch, dextrin, sugar, etc. <i>These are also called</i> carbohydrates.  | (Carbohydrates                     |
|         |                 |                        |  |                                    |
| I       | Inorganic       | Minerals               | Water, salt, etc. <i>Ex. minerals</i> —Sodium and potassium, calcium, magnesium, iron, phosphorus, etc.  | (Minerals                          |
|         |                 |                        |  |                                    |

**F., Complete,** a food that contains all the alimentary

substances required for the support and maintenance of animal life. The only complete food afforded by the animal kingdom is eggs. **F.-cure,** dietetic treatment of disease. **F.-stuffs or F.-substances,** the materials, from both the animal and vegetable kingdoms, that may be employed for the purpose of supplying nourishment to the body, and providing the elements necessary for the formation of tissue. **F.-vacuole,** a temporary space often noticed in protozoa, containing nutritive matter. **F.-yolk,** all that portion of the yolk that does not undergo segmentation, but serves to nourish the embryo; nutritive protoplasm; deutoplasm.

**Fool's Parsley.** See *Ethusa*.

**Foot** [*ME., foot*]. 1. The terminal extremity of the leg; one of the organs of locomotion. In bimana

and quadrumana it consists of the tarsus, metatarsus, and phalanges, or toes. 2. The base of a microscope. 3. A measure of length equal to twelve inches or 30.479 cm. **F.-clonus.** See *Clonus* and *Ankle-clonus*. **F.-bath,** a pediluvium. **F.-drop,** a falling of the foot due to a paralysis of the flexors of the ankle. It is seen in neuritis. See *Dropped Foot*. **F., Fungus.** *Madura Foot*; *Mycetoma*; *Ulcus grave*. An endemic disease of India affecting the foot, which increases in size, this increase being attended with the development of mammillated pustules, in each of which is a deep-seated sinus. The sinuses are lined by a distinct membrane, and contain characteristic "fish-roe bodies" of a white, yellowish, reddish, or blackish color. These bodies are composed mainly of fatty and caseous matters, the results of decomposition, encrusted with salts and blood-pigment. The bones are slowly absorbed, and gangrene or exhaustion may carry off the patient. The disease is most common in adult males. A fungus, *Chionophaga carteri*, appears to be the active cause of the disease. **F.-halt,** a disease of sheep, said to be caused by worms in the foot. **F.-mange,** a parasitic disease of the heels and lower parts of the legs, especially the hind ones, of a horse, giving rise to great itching and irritation. It is due to an acarus, *Symbiotus equi*. **F.-and-mouth Disease,** a rare affection that occurs in sheep, cows, pigs, and horses, and is occasionally transmitted to man. It manifests itself by the appearance of vesicles and bullae in the mouth and on

FOOT, PLANTAR ASPECT.

1. Inferior surface of calcaneum.
2. Inner tuberosity.
3. Outer tuberosity.
4. Angular depression between these tuberosities.
5. Inferior portion of head of astragalus.
6. Plantar surface of cuboid, for attachment of inferior calcaneo-cuboid ligament.
7. Tuberosity of cuboid.
8. Scaphoid.
9. Tuberosity of scaphoid.
10. Inferior portion of internal cuneiform.
11. Apex of middle cuneiform.
12. Apex of internal cuneiform.
- 13, 14, 15, 16, 17. First, second, third, fourth and fifth metatarsal bones.
18. Tuberosity of fifth metatarsal bone.
19. Two sesamoid bones.
20. First phalanx of great toe.
21. Last phalanx of great toe.
- 22, 23. First, phalanges of remaining toes.
- 23, 23. Second and third phalanges of these toes.

the feet at the margins of the hoofs, and in cows, on the udder and teats. In man, vesicles form in the mouth, on the hands and feet. In two or three days, these rupture, discharging an opaque, yellowish fluid, and leaving dark-red ulcers. There are also fever, anorexia, pain on eating, swelling of the tongue, fetid breath, salivation, and derangement of digestion. See *Eczema epizootica*, and *Streptocytus of Eczema epizootica*, Schottelius, under *Bacteria*, *Synonymatic Table of*. **F.-phenomenon.** See *Ankle-clonus*. **F.-pound**, the work required to overcome a force equal to raising the weight of a

pound through the space of a foot. See *Unit*. **F.-poundal**, the work done by a poundal acting through one foot. **F.-rot**, a disease of sheep, said to be due to pasturing in wet ground. One form is contagious, and the disease is said by some to be tuberculous in nature.

**Footling** (*foot'-ling*) [*ML.*, *foet*]. With the foot or feet foremost; as a footling presentation in obstetrics. **Foramen** (*fô-ra'-men*) [*forare*, to pierce]. A passage or opening, especially one in a bone. A *Table of Foramina* is appended.

## TABLE OF FORAMINA.

| NAME.                                 | LOCATION.   | TRANSMITS.  |
|---------------------------------------|---|---|
| Accessory transverse.                 | Anomalous foramina in the transverse processes of the cervical vertebrae.   | An anomalous and accessory vertebral artery.  |
| Acoustic.                             | The same as the internal auditory meatus.   | The auditory and facial nerves.   |
| Alveolar, anterior.                   | See <i>Dental, inferior</i> .   |   |
| Alveolar, inferior.                   | See <i>Dental, inferior</i> .   |   |
| Alveolar, posterior.                  | In the superior maxilla.  | Superior posterior dental vessels and nerves  |
| Amplum pelveos.                       | See <i>Obturator</i> .  |   |
| Anonymous of Ferrein.                 | See <i>Hiatus Fallopii</i>  |   |
| Anteorbital.                          | In mammals, an orifice in the cheek-bone in front of the orbit, corresponding to the infraorbital foramen of man.                   | Superior maxillary division of the trifacial nerve; occasionally the masseter muscle. |
| Antorbital.                           | See <i>Anteorbital</i> .  |   |
| Aortic.                               | An opening in the diaphragm.  | The aorta.  |
| Arachnoid.                            | See <i>Foramen of Magendie</i> .  |   |
| Atlantal.                             | In many animals, a hole through the ventral border of the atlas; only exceptionally present in man.                                 | Suboccipital nerve; vertebral artery.   |
| Atrio-ventricular, common.            | In some animals, an auriculo-ventricular opening common to both auricles and ventricles.  | Blood.  |
| Auditory, external.                   | The external meatus of the auditory canal.  | Sound-waves to tympanic membrane.   |
| Auditory, internal.                   | See <i>Acoustic</i> .   |   |
| Auricular.                            | The mouth of the external auditory meatus.  | Sound-waves to tympanic membrane.   |
| Bartholin's.                          | See <i>Obturator</i> .  |   |
| Bichat's.                             | A supposed communication between the subarachnoid space and the cavity of the third ventricle of the brain.                         |   |
| Of Botal or Botallo.                  | In the fetus, the opening between the two auricles of the heart, situated at the lower posterior portion of the septum auricularum. | Blood.  |
| Carotic.                              | The inferior aperture of the carotid canal.   | Carotid vessels.  |
| Carotico-clinoid.                     | Sphenoid bone; an occasional foramen, formed by the union of the apices of the anterior and middle clinoid processes.               |   |
| Carotico-tympanic.                    | See <i>Canal, Carotico-tympanic</i> .   |   |
| Carotid, external.                    | The external aperture of the carotid canal.   | Internal carotid artery and carotid plexus.   |
| Carotid, internal.                    | The internal aperture of the carotid canal.   | Internal carotid artery and carotid plexus.   |
| Cavernous.                            | Sphenoid bone; a small passage.   | The median vertebral vein.  |
| Cecal, anterior.                      | Also called <i>prepontile fossa</i> ; the depression at the cephalic margin of the pons.  |   |
| Cecal (of <i>frontal bone</i> ).      | Formed by the frontal bone and the crista galli of the ethmoid; a small foramen.  | A vein, occasionally.   |
| Cecal (of <i>medulla oblongata</i> ). | See <i>Cecal, anterior</i> .  |   |

TABLE OF FORAMINA.—*Continued.*

| NAME.                                 | LOCATION.  | TRANSMITS.   |
|---------------------------------------|--|--|
| Cechnal pharynx.                      | Median line of posterior wall of the pharynx; a depression in the mucous membrane.   |  |
| Cechnal posterior.                    | A depression just below the pons.  | The ventral median fissure terminates in this.   |
| Cechnal (of retina).                  | See <i>Fovea centralis</i> .   |  |
| Cechnal (of eye).                     | See <i>Fovea centralis</i> .   |  |
| Cechnal (of upper and middle).        | See <i>Fovea</i> .   |  |
| Cechnal (of tongue).                  | Posterior termination of the median raphe of tongue.   | A number of small glands open into it.   |
| Central.                              | See <i>Fovea centralis</i> .   |  |
| Central (of the nucleus).             | See <i>Chiasma centrale</i> .  |  |
| Central (of Sembrat-fing).            | See <i>Central (of the retina)</i> .   |  |
| Cervical.                             | Transverse processes of the cervical vertebrae.  | The vertebral artery and vein.   |
| Cervico-vascular.                     | See <i>Carotico-schind</i> .   |  |
| Cervico-vascular.                     | The largest of several openings at the base of the modiolus.   |  |
| Cervico, after.                       | See <i>Foramen of Monro</i> .  |  |
| Concha.                               | The orifice of the conchal recess.   |  |
| Conchoid, anterior.                   | See <i>Conchoid, anterior</i> .  |  |
| Conchoid, posterior.                  | Behind the conchoid of the occipital bone, opening externally into the occipital fossa.  | Veins.   |
| Conchoid, anterior.                   | A small foramen near the anterior condyloid foramen.   | A vein, occasionally.  |
| Conchoid, anterior (basilar process). | Anterior to and to the outer side of each occipital condyle, passing downward, outward, and forward through the basilar process. | The hypoglossal nerve; occasionally a meningeal branch of the ascending pharyngeal artery. |
| Conchoid, posterior.                  | The fossa behind the occipital condyles.   | A vein to the lateral sinus.   |
| Coraco-clavicular.                    | In some animals an orifice formed by the articulation of the coracoid bone with the scapula.                                     |  |
| Coracoid.                             | In reptiles, the obturator foramen.  |  |
| Coraco-clavicular.                    | The space between the transverse process of a vertebra and the neck of its corresponding rib.                                    | Branches of intercostal arteries and nerves.   |
| Coracoid.                             | A notch in the acetabulum converted into a canal by a ligament.  | Vessels and nerves.  |
| Cribrosa.                             | Small openings in the lamina cribrosa of the ethmoid bone.   | Filaments of the olfactory nerves.   |
| Cranio-fibular, anterior.             | An aperture in the upper part of the tibio-fibular interosseous membrane.  | The anterior tibial vessels.   |
| Dental inferior.                      | The external aperture of the inferior dental canal, in the ramus of the inferior maxilla.  | Inferior dental vessels and nerves.  |
| Dorsum.                               | See <i>Quadratus</i> .   |  |
| Diaphragmatic.                        | Several canals through the diaphragm.  | The esophagus, aorta, vagus nerves, inferior vena cava, and other structures.              |
| Diaphragmatic (of the heart).         | See <i>Aortic</i> .  |  |
| Diaphragmatic (of the pharynx).       | See <i>Esophageal</i> .  |  |
| Diploë.                               | Small openings in the inner plate of the cranial bones, leading from the cranial cavity into the diploë.                         | Veins.   |
| O. Dorsum.                            | See <i>Foramen of Winslow</i> .  |  |
| Emissary.                             | The same.  | The emissary veins.  |
| Episternal.                           | See <i>Foramen of Winslow</i> .  |  |
| Episternal.                           | In some animals on the inner condyle of the humerus; sometimes present or represented in man by a groove.                        |  |

TABLE OF FORAMINA.—*Continued.*

| NAME.                      | LOCATION.  | TRANSMITS.   |
|----------------------------|--|--|
| Esophageal.                | The diaphragm.   | The esophagus.   |
| Ethmoid, anterior.         | A canal formed between the ethmoid and frontal bones.  | The nasal branch of the ophthalmic nerve; anterior ethmoid vessels.  |
| Ethmoid, posterior.        | See <i>Canal, Ethmoid, posterior.</i>  | Posterior ethmoid artery and vein.   |
| Frontal.                   | The supra-orbital notch of the frontal bone when it is converted into a canal by an overlying process of bone.   | Supraorbital vessels and nerves.   |
| Fronto-ethmoid.            | The foramen cecum in the suture between the frontal and ethmoid bones.   |  |
| Glandulosum Morgagni.      | See <i>Foramen cecum (of tongue).</i>  |  |
| Of Huschke.                | A perforation often found near the inner extremity of the tympanic plate; it is due to an arrest of development.   | Connects the glenoid fossa of the temporal bone with the external auditory meatus.   |
| Incisive.                  | See <i>Incisor</i>   |  |
| Incisor.                   | Aperture of the incisor canal in the alveolar margin.  | Nerves and vessels to the incisor teeth.   |
| Infra-maxillary.           | The inferior dental canal, <i>q. v.</i> , under <i>Canal.</i>  |  |
| Infra-orbital.             | In the superior maxilla, the external aperture of the infra-orbital canal.   | The infraorbital nerve and artery.   |
| Infra-pubic.               | See <i>Obturator.</i>  |  |
| Innominate.                | Temporal bone.   | The Vidian nerve.  |
| Intercarpal.               | The carpus of batrachians.   |  |
| Interclinoid.              | A canal formed by an anomalous process, connecting the middle and posterior clinoid processes of the sphenoid.   |  |
| Intermaxillary.            | See <i>Incisor.</i>  |  |
| Interorbital.              | In birds, a space in the bony plate separating the orbits  |  |
| Intervertebral, anterior.  | The aperture formed by the notches opposite to each other in the laminae of adjacent vertebrae.  | The spinal nerves and vessels.   |
| Intervertebral, posterior. | The space between the articular processes of adjacent vertebrae, except the first cervical.  |  |
| Ischiadic, major.          | See <i>Sacro-sciatic, great.</i>   |  |
| Ischiadic, middle          | An open space left between an anomalous and the normal sacro-spinal ligament.  |  |
| Ischiadic, minor or small. | See <i>Sacro-sciatic, small.</i>   |  |
| Ischio-pubic.              | See <i>Obturator.</i>  |  |
| Jugular.                   | See <i>Lacerated, posterior.</i>   |  |
| Jugular, spurious.         | An anomalous opening in the squamous portion of the temporal bone.   | A vessel that connects the external jugular vein with an intracranial vessel.  |
| Lacerated, anterior.       | See <i>Sphenoid fissure.</i>   |  |
| Lacerated, inferior.       | See <i>Spheno-maxillary fissure.</i>   |  |
| Lacerated, jugular         | See <i>Lacerated, posterior.</i>   |  |
| Lacerated, middle.         | An irregular aperture between the apex of the petrous portion of the temporal bone and the body and great wing of the sphenoid, and the basilar process of the occipital bone. | The carotid artery and the large superficial petrosal nerve.   |
| Lacerated, orbital.        | The <i>Sphenoid Fissure, q. v.</i>   |  |
| Lacerated, posterior.      | The space formed by the jugular notches of the occipital and temporal bones, divided into two portions.  | The <i>posterior portion</i> , the internal jugular vein; the <i>anterior portion</i> , the 9th, 10th, and 11th cranial nerves, and the inferior petrosal sinus. |
| Lacerated, superior.       | See <i>Sphenoid fissure.</i>   |  |
| Of Magendie.               | An orifice in the membranous roof of the fourth ventricle.   |  |
| Magnum.                    | See <i>Magnum occipitale.</i>  |  |

TABLE OF FORAMINA.—*Continued.*

| NAME.                                | LOCATION.  | TRANSMITS.  |
|--------------------------------------|--|---|
| Magnan ischia.                       | The <i>Obturator foramen</i> , q. 5.   |   |
| Magnan occipitale.                   | A large oval aperture, centrally placed in the lower and anterior part of the occipital bone.  | The spinal cord and its membranes; the spinal accessory nerves; the vertebral arteries. |
| Malar.                               | The malar bone.  | Nerves and vessels.   |
| Mandibular.                          | See <i>Dental, inferior</i> .  |   |
| Mandibular, anterior.                | See <i>Mental</i> .  |   |
| Mandibular, posterior.               | See <i>Dental, inferior</i> .  |   |
| Mastoid.                             | A small foramen behind the mastoid process.  | A small artery from the dura; a vein opening into the lateral sinus.                    |
| Mastoid, posterior.                  | See <i>Mastoid</i> .   |   |
| Maxillary, anterior.                 | See <i>Mental</i> .  |   |
| Maxillary, inferior.                 | See <i>Dental, inferior</i> .  |   |
| Maxillary, posterior.                | See <i>Dental, inferior</i> .  |   |
| Maxillary, superior.                 | See <i>Canal, Dental, posterior</i> .  |   |
| Mechum.                              | See <i>Lacerated, middle</i> .   |   |
| Medulle spinalis.                    | See <i>Vertebral</i> .   |   |
| Medullary.                           | See <i>Nutrient</i> .  |   |
| Medullary (of the vertebral column). | See <i>Vertebral</i> .   |   |
| Of Melbomius.                        | See <i>Cecum (of the tongue)</i> .   |   |
| Meningeal.                           | An anomalous opening in the squamous portion of the temporal bone.   | A branch of the middle meningeal artery.  |
| Mental.                              | A foramen in the inferior maxilla, external to the incisive fossa, midway between the upper and lower borders of the bone, and in the interval between the two bicuspid teeth. | Mental nerve and vessels.   |
| Of Monro.                            | An opening behind the anterior pillars of the fornix through which the lateral ventricle of the brain communicates with the third ventricle.                                   | The choroid plexus.   |
| Monro, anterior of.                  | See <i>Foramen of Monro</i> .  |   |
| Monro, primitive.                    | The primitive foramen that connects the third with the lateral ventricle of the brain.   |   |
| Morgagni's.                          | See <i>Cecum (of tongue)</i> .   |   |
| Nasal.                               | Small canals that perforate the nasal bones.   | Vessels and nerves.   |
| Nutrient.                            | The canal connecting the medullary cavity of the bone with its external surface.   | The nutrient vessels.   |
| Nutrient (of femur).                 | The aperture near the upper part of the linea aspera of the femur.   | Nutrient artery.  |
| Nutrient (of humerus).               | The aperture slightly below the middle of the humerus.   | The nutrient artery.  |
| Nutrient (of radius).                | The aperture on the anterior surface of the radius.  | The nutrient artery.  |
| Nutrient (of ulna).                  | The aperture on the anterior surface of the ulna.  | The nutrient artery.  |
| Obturator.                           | The large ovoid opening between the ischium and the pubis, internal and inferior to the acetabulum; it is partly closed in by a fibrous membrane.                              | Obturator vessels and nerves.   |
| Occipital.                           | See <i>Magnan occipitale</i> .   |   |
| Occipital, superior.                 | See <i>Superior occipital</i> .  |   |
| Occipitale, magnan.                  | See <i>Magnan occipitale</i> .   |   |
| Oculi.                               | The pupils.  | Rays of light.  |
| Olfactory.                           | Numerous foramina in the cribriform plate of the ethmoid.  | Olfactory nerves.   |
| Omental, great.                      | The communication between the cavities of the greater and lesser omenta.   |   |

TABLE OF FORAMINA.—*Continued.*

| NAME.                              | LOCATION.   | TRANSMITS.   |
|------------------------------------|---|--|
| Omental, lesser or small.          | See <i>Foramen of Winslow</i> .   |  |
| Oödes.                             | See <i>Obturator</i> .  |  |
| Optic.                             | The canal at the apex of the orbit, the anterior termination of the optic groove, just beneath the lesser wing of the sphenoid bone.          | Optic nerve; ophthalmic artery   |
| Optic (of the <i>choroid</i> ).    | The choroid.  | The optic nerve-fibers pass through this to their expansion in the retina.   |
| Optic (of the <i>sclera</i> ).     | The sclerotic coat of the eye   | The optic nerve.   |
| Orbital, anterior internal.        | See <i>Ethmoid, anterior</i> .  |  |
| Orbital, internal.                 | See <i>Canal, Ethmoid, anterior</i> .   |  |
| Orbital, superior.                 | See <i>Supraorbital</i> .   |  |
| Ossis pubis.                       | See <i>Obturator</i> .  |  |
| Oval (of the <i>heart</i> ).       | See <i>Foramen of Botal</i> .   |  |
| Oval (of the <i>hip</i> ).         | See <i>Obturator</i> .  |  |
| Oval (of <i>innominate bone</i> ). | See <i>Obturator</i> .  |  |
| Oval (of the <i>sphenoid</i> ).    | An ovoid aperture near the posterior margin of the great wing of the sphenoid.  | The inferior maxillary division of the trigeminal nerve; the small meningeal artery; occasionally, the small petrosal nerve. |
| Pacchionian.                       | The depressions on the inner surface of the skull.  | For the Pacchionian bodies.  |
| Palatine, anterior.                | See <i>Canal, Incisor</i> .   |  |
| Palatine, great posterior.         | The <i>Posterior palatine canal, q. v.</i>  |  |
| Palato-maxillary.                  | See <i>Canal, Palato-maxillary</i> .  |  |
| Of Panizza.                        | The communication between the right and left aortic arches of reptiles.   | Blood.   |
| Papillaria.                        | The opening of the uriniferous tubules at the apices of the pyramids of Malpighi.   | Urine.   |
| Parietal.                          | Near the posterior superior angle of the parietal bone; inconstant.   | An emissary vein of the superior longitudinal sinus; occasionally a small branch of the occipital artery.                    |
| Pelvic, large.                     | See <i>Obturator</i> .  |  |
| Pneumatic.                         | In birds, a large aperture near one end of the long pneumatic bones communicating with the interior.  | Permits the entrance of air.   |
| Posterior.                         | See <i>Lacrated, posterior</i> .  |  |
| Postglenal.                        | See <i>Postglenoid</i> .  |  |
| Postglenoid.                       | In comparative anatomy, an opening immediately posterior to the root of the zygoma.   |  |
| Postpalatine.                      | The <i>Posterior palatine canal, q. v.</i>  |  |
| Pre-acetabular.                    | In the <i>Cheiroptera</i> , an opening formed by a process extending from the ilio-pectineal eminence to the anterior extremity of the ilium. |  |
| Pro sinu petroso inferiore.        | An anomalous roundish opening formed by adjacent portions of the petrous portion of the temporal bone and the occipital bone.                 | The inferior petrosal sinus.   |
| Profundum.                         | See <i>Iter ad infundibulum</i> .   |  |
| Pterygo-palatine.                  | The external aperture of the pterygo-palatine canal.  | Pterygo-palatine vessels; pharyngeal nerve.  |
| Quadrate.                          | The diaphragm.  | The inferior vena cava.  |
| Repugnatoria.                      | In <i>Cheilognatha</i> , apertures of cutaneous glands on each side of the back, in rows.   | Secrete a defensive corrosive fluid.   |

TABLE OF FORAMINA.—*Continued.*

| NAME.   | LOCATION.  | TRANSMITS.  |
|---|--|---|
| Retina centrale.                                  | See <i>Fovea centralis</i> .   |   |
| Of Rivini.  | An opening in the tympanum, the existence of which is disputed.  |   |
| Rotundum.   | See <i>Round</i> .   |   |
| Round.  | A roundish opening in the great wing of the sphenoid bone.   | The superior division of the fifth nerve.   |
| Sacral, anterior ( <i>four on either side</i> ).  | On anterior surface of sacrum, connecting with sacral canal.   | The anterior branches of sacral nerves.   |
| Sacral, posterior ( <i>four on either side</i> ). | The posterior surface of the sacrum, external to the articular processes.  | Posterior branches of sacral nerves.  |
| Sacro-sciatic, great.                             | The oval space between the lesser sacro-sciatic ligament and the innominate bone.  | The pyriformis muscle, the gluteal, sciatic, and pudic vessels and nerves.          |
| Sacro-sciatic, small.                             | The space included between the greater and lesser sacro-sciatic ligaments and the portion of the innominate bone between the spine and tuberosity of the ischium.  | Internal obturator muscle; the internal pudic vessels and nerves.                   |
| Saphenous.  | See <i>Saphenous Opening</i> .   |   |
| Scapular.   | The supra-scapular notch, when it is converted into a foramen by a ligamentous or bony structure.  | Suprascapular nerve and artery.   |
| Of Scarpa.  | Bony canals opening into the incisor canal.  | The naso-palatine nerves.   |
| Sclerotic, anterior.                              | The opening in the sclerotic which is filled in by the cornea.   |   |
| Sclerotic, posterior.                             | See <i>Optic (of the sclera)</i> .   |   |
| Of Stæmmering.                                    | See <i>Fovea centralis</i> , and <i>Central (of the retina)</i> .  |   |
| Spheno-frontal.                                   | In the cartilaginous basis of the skull, between the labyrinths of the ethmoid and the alæ parvæ of the sphenoid and the anterior sphenoid.  |   |
| Sphenoidal, anterior.                             | A rare anomalous opening in the pterygoid process of the sphenoid bone.  | The internal maxillary artery.  |
| Spheno-palatine.                                  | The space between the sphenoid and orbital processes of the palate and sphenoid spongy bone; it opens into the nasal cavity.   | Branches from Meckel's ganglion; the nasal branch of the internal maxillary artery. |
| Spheno-spinosum.                                  | See <i>Spinosum</i> .  |   |
| Spinal.   | See <i>Vertebral</i> .   |   |
| Spinosum.   | The great wing of the sphenoid bone, near its posterior angle.   | The middle meningeal artery.  |
| Spöndli.  | See <i>Spheno-frontal</i> .  |   |
| Of Stensen.                                       | See <i>Canal, Incisor</i> .  |   |
| Sternal.  | Near the inferior termination of the sternum; inconstant.  | Vessel.   |
| Stylo-mastoid.                                    | Between the styloid and mastoid processes of the temporal bone, constituting the external aperture of the aqueduct of Fallopius.   | Facial nerve; stylo-mastoid artery.   |
| Suborbital.                                       | The orifice at the anterior end of the infraorbital canal.   | Infraorbital artery and nerve.  |
| Subsacral.  | See <i>Sacral, anterior</i> .  |   |
| Supersacral.                                      | See <i>Sacral, posterior</i> .   |   |
| Supracondyloid.                                   | See <i>Epitrochlear</i> .  |   |
| Supra-orbital.                                    | A notch in the superior orbital margin at the junction of the middle with the inner third, sometimes converted into a foramen by a bony process or a ligamentous band. It is the orifice of a groove in the upper wall of the orbit. | Supra-orbital artery, veins, and nerve.   |
| Supratrochlear.                                   | The thin plate of bone between the olecranon and the coronoid fossa of the humerus; inconstant.  |   |
| Of Tarinus.                                       | The <i>Hiatus Fallopii, q. v.</i>  |   |
| Of Thebesius.                                     | Small depressions on the inner surface of the heart, especially in the right auricle.  | Some of these are cul-de-sacs; others are the mouths of the venæ minimæ cordis.     |
| Thyreoid.   | See <i>Thyroid</i> .   |   |

TABLE OF FORAMINA.—*Continued.*

| NAME.                 | LOCATION.   | TRANSMITS.  |
|-----------------------|---|---|
| Thyroid.              | 1. A foramen in the ala of the thyroid cartilage, more or less completely covered by perichondrium. 2. See <i>Obturator</i> .   |   |
| Trachelian.           | See <i>Vertebralarterial</i> .  |   |
| Transverse.           | See <i>Vertebralarterial</i> .  |   |
| Venæ cavæ.            | See <i>Quadrata</i> .   |   |
| Venæ saphenæ.         | See <i>Saphenous Opening</i> .  |   |
| Venosum.              | See <i>Quadrata</i> .   |   |
| Vertebral.            | The space included between the body and arch of a vertebra  | The spinal cord and its appendages.                                 |
| Vertebralarterial.    | The foramina in the transverse processes of the cervical vertebrae.   | Vertebral artery and vein.  |
| Vesalious.            | A minute inconstant aperture at the root of the pterygoid process of the sphenoid bone.   | A small vein.   |
| Vicq d'Azyr's.        | See <i>Foramen cecum, anterior and posterior</i> .  |   |
| Vidian.               | See <i>Canal, Vidian</i> .  |   |
| Of the vomer.         | The posterior aperture of the canal of the vomer.   |   |
| Of Winslow.           | An aperture situated between the liver and stomach, bounded in front by the portal vein, hepatic artery and duct, behind, by the inferior vena cava, below, by the hepatic artery, and above, by the liver. It is formed by folds of the peritoneum, and establishes communication between the greater and lesser cavities of the peritoneum. |   |
| Zygomatic, anterior.  | See <i>Zygomatico-facial</i> .  |   |
| Zygomatic, external.  | See <i>Zygomatico-facial</i> .  |   |
| Zygomatic, internal.  | See <i>Zygomatico-temporal</i> .  |   |
| Zygomatic, posterior. | See <i>Zygomatico-temporal</i> .  |   |
| Zygomatic, superior.  | See <i>Zygomatico-temporal</i> .  |   |
| Zygomatic, temporal.  | See <i>Zygomatico-temporal</i> .  |   |
| Zygomatico-facial.    | The aperture of the malar canal on the facial surface of the malar bone.  | Malar division of temporo-malar branch of superior maxillary nerve. |
| Zygomatico-temporal.  | The external aperture of the malar canal, on the temporal surface of the malar bone.  | Malar division of temporo-malar branch of superior maxillary nerve. |

**Foraminated** (*fo-ram'-in-a-ted*) [*foramen*, an opening]. Containing foramina.

**Foraminiferous** (*fo-ram-in-if'-er-us*). Same as *Foraminated*.

**Forbes, Micrococcus of.** See *Bacteria, Synonymatic Table of*. **F., Operation of.** See *Operations, Table of*.

**Force** (*for's*) [*fortis*, strong]. That which produces or arrests motion. The rate of transformation of energy in time. Whatever may be converted into motion (Robert Mayer).

**Forced** (*forst*) [*fortis*, strong]. Accomplished by an unusual exertion of force. **F. Feeding.** See *Swallowing and Feeding*.

**Forceps** (*for'-seps*) [*forceps*, a pair of tongs]. An instrument with two blades and handles for purposes of seizing, traction, etc., in surgical, obstetric, and other operations. **F., Angular**, one bent for introduction into a canal. **F., Arterial**, one specially adapted for seizing an artery; many varieties are named after inventors. **F., Bone**, one exceptionally strong, for use in operations upon bones. **F., Bull-dog**, a forceps with sharp teeth (as for holding an artery). **F., Bullet**, one of peculiar construction, to extract bullets. **F., Cannula**, long, slender forceps enclosed

in a tube, that opens by protruding the blades. **F., Catch**, a forceps with a catch on the handle. **F., Craniotomy**, the halves are crossed and adapted to embryotomy. **F., Dental**, adapted for extraction of teeth. This was probably among the first, and, perhaps, almost the only instrument employed for the extraction of teeth, until the invention of Garengoeut, in the early part of the eighteenth century. But from the time of Celsus, down to this period, the forceps used for the extraction of teeth were so rude in their construction and so illy adapted for the purpose, that for the removal of the molar teeth the employment of the key-instrument became general, both among dentists and physicians. At the present time, however, forceps have been so greatly improved that the key is but little used. **F., Duck-bill.** See *Duckbill*. **F., Ectropion**, adapted for seizing the lid in operations for ectropion. **F., Gouge**, cutting-forceps for operations upon bone. **F., Hemostatic**, a forceps for controlling hemorrhage. **F., Iridectomy**, a delicate forceps for seizing the iris. **F., Midwifery**, or **Obstetric**, a forceps for grasping the fetal head in difficult labor and by traction aiding its exit; there is a great number of varieties. **F.,**

**Rat-toothed**, a form of forceps used in the removal

SIMPSON'S OBSTETRIC FORCEPS.

With Pouliet Tape-attachment for Axis-traction.

of bullets, or other foreign bodies, from wounds. **F.**, Spring, same as *F.*, Catch.

**Forcible** (*for'-sib'l*) [*fortis*, strong]. With force or power. **F.** Extension. See *Extension*.

**Forcinate**, **Forcipated** (*for'-sip-at*, *-a-ted*) [*forceps*, forceps]. In biology, forceps-like.

**Forcipressure** (*for'-e-presh'-ür*) [*forceps*, a pair of tongs; *pressura*, a pressing]. The arrest of a minor hemorrhage by catching the end of the divided vessel with a pair of spring forceps, the pressure being kept up for 24-36 hours.

**Fore** (*for*) [ME., *for*, before]. Applied to the part that is in front or first. **F.-arm**, that part of the arm between the wrist and the elbow. **F.-brain**, the anterior of the encephalic vesicles into which the primary nervous axis of the embryo divides at an early stage; at a later stage, the prosencephalon. **F.-finger**, the index finger. **F.-foot**, the foot of a fore-limb. **F.-front**, the forehead. **F.-gut**, the cavity in the raised cephalic end of the embryo, called also headgut. The rudimentary pharynx and duodenum, with the intermediate portions of the future alimentary canal, are included in the foregut. **F.-head**, that part of the face between the orbits of the eyes, the hair above, and the temples at the sides. **F.-limb**, the pectoral limb of an animal. **F.-milk**. 1 The colostrum, *q. v.* 2. The first part of the milk taken from the teat at any one milking. It is less rich in butter than is the after milk, or strippings. **F.-skin**, the prepuce, *q. v.*; the term sometimes designates also the dewlap occasionally seen upon the throat of an aged person. **F.-waters**, a name sometimes given to that portion of the amniotic sac and its contents in advance of the presenting part in labor.

**Foreign** (*for'-en*) [ME., *foren*, foreign]. Alien; exotic; not native; irrelevant. **F. Body**, a substance in a wound, organ, or cavity not normally present.

**Forensic** (*for'-en'-sik*) [*forensis*, belonging to the forum]. Pertaining to a court of law. In medicine, that part of the science connected with judicial inquiry. Also, medical jurisprudence.

**Forest's Method**. See *Artificial Respiration*.

**Forficate** (*for'-fik-at*) [*forfex*, scissors]. In biology, deeply-forked.

**Fork** [ME., *fork*, a fork]. A name frequently given to the space between the thighs.

**Form** [*forma*, shape]. The external shape or configuration of the body, or of a part of a body.

**Formaldehyd** (*form-al'-de-hid*) [*formica*, an ant; *aldehyd*]. Formic aldehyd. See *Aldehyd*, *Formic*.

**Formalin** (*for'-mal-in*) [*formica*, an ant], HCOH. A proprietary germicide composed of a 40 per cent. solution of formaldehyd. Unof.

**Formanilid** (*form-an'-il-id*) [*formica*, an ant; *anilin*], C<sub>11</sub>H<sub>7</sub>NO. A substance obtained on digesting anilin with formic acid, or by rapidly heating anilin with oxalic acid. It consists of colorless prisms, readily soluble in water, alcohol, and ether, melting at 46° C.

**Formatio** (*for-mat'-she-o*) [L.]. A formation. **F. reticularis**, the intercrossing of the fibers of the anterior columns in the medulla.

**Formative** (*form'-at-iv*) [*formare*, to form]. Plastic; molding. **F. Cell**, a large spheric, refractive cell beneath the hypoblast.

**Formic Acid** (*for'-mik*). See *Acid*.

**Formicant** (*for'-mik-ant*) [*formicare*, to crawl like an ant]. Creeping, or moving with a small and feeble action; applied to the pulse when it is unequal and scarcely perceptible.

**Formication** (*for'-mik-at'-shun*) [*formica*, an ant]. A sensation like that produced by ants or other insects crawling upon the skin. **F.**, Cocain. See *Cocain-bug*.

**Formol** (*for'-mol*) [*formica*, an ant], CH<sub>2</sub>O. A name given to formic aldehyd or formaldehyd. It is a powerful antiseptic, ranking as one of the best, but its microbicidal power in a given time is very feeble.

**Formula** (*form'-u-lah*) [dim. of *forma*, a form; *pl.*, *Formulae*]. A prescribed method. In pharmacy, a list of the names and respective quantities of substances entering into a composition. In chemistry, a method of representing the gravimetric structure of a compound by symbols. **F.**, **Constitutional**, or **Rational**, one that indicates only the union of individual atoms, such as are especially characteristic of the compound. **F.**, **Empiric**. See *F.*, *Unitary*. **F.**, **Graphic**. Same as *F.*, *Constitutional*. **F.**, **Rational**. Same as *F.*, *Constitutional*. **F.**, **Structural**, one that indicates the complete grouping of all of the atoms, representing the whole chemie deportment of a given compound. **F.**, **Unitary**, or **Empiric**, one that belongs to an entire series of bodies that are isomeric, yet wholly different, and that affords no hint as to the character of the compound.

**Formulary** (*for'-mu-la-re*) [*formula*; dim. of *forma*, form]. **F.**, **National**, a collection of widely used and well known preparations, omitted from the U. S. Pharmacopeia, but collected and published by the American Pharmacutic Association.

**Formyl** (*for'-mil*) [*formica*, the ant; *ἵζη*, matter], CHO. The radicle of formic acid.

**Forne's Method**. See *Anesthetic*.

**Forneaux Jordan's Operations**. See *Operations*.

**Fornicate** (*for'-nik-at*) [*fornix*, an arch]. In biology, bearing fornicies; overarched. To commit fornication.

**Fornication** (*for-nik-a'-shun*) [*fornicari*, to fornicate]. The illicit sexual intercourse of an unmarried person of either sex with another, whether married or not.

**Fornicolumn** (*for'-ne-kol-um*) [*fornix*, an arch; *columna*, a column]. The anterior pillar of the fornix, one in each hemisphere. It is a bundle of fibers ascending from the albicans and thalamus, passing just caudad of the precommissure, forming the cephalic boundary of the porta, and ending in the temporal lobe.

**Fornicommissure** (*for-ne-kom'-is-shur*) [*fornix*, an arch; *commissura*, a commissure]. A lamina of greater or less thickness uniting the two hemiforncines of the brain. It is not a true commissure, nor even fibrous in structure.

**Fornicrista** (*for-ne-kris'-tah*). See *Crista*.

**Fornix** (*for'-niks*) [*fornix*, an arch]. 1. The projecting bundle of the gyrus hippocampi, from which it collects the medullated nerve-fibers through the fimbria. Through the fornix the transition from the hemispheres to the diencephalon is established. 2. In biology, a vaulted or arched arrangement or appendage, as the scales in the throat of some corollas, or the hollow beneath the umbo of a bivalve-shell. **F. descendens**. See *Bundle of Vicq d'Azyr*.

**Förster's Method**. See *Cataract, Artificial Maturation of*. **F.'s, Operation**. See *Operations, Table of*.

**Fortification Spectrum** (*for-tif-ik-a'-shun spek'-trum*). Teichopsia; the appearance of a peculiar subjective visual sensation in migraine. The luminous shape of its outer edge assumes a zigzag form, with angles like those of a fortification.

**Fosforus** (*fös'-for-is*). A commendable orthography for *phosphorus*. It has been recommended for adoption by recent spelling-reformers.

**Fossa** (*fös'-ah*) [*fossa*, a ditch: *pl.*, *Fossæ*]. A depression, furrow, or sinus. **F., Canine**, the depression on the external surface of the superior maxillary bone, giving rise to the origin of the *levator anguli oris* and *compressor nasi* muscles. **F., Condyloid**, a fossa behind each condyle of the occipital bone. **F. coronaris**, the boundary between the disc and corona, in *Medusa*. **F., Cranial**, any fossa of the skull. **F., Digastric**, a deep groove on the inner aspect of the mastoid process for the attachment of the digastric muscle. **F., Digital**, a deep depression at the base of the inner surface of the great trochanter of the femur. **F., Glenoid**, the fossa in the temporal bone that receives the condyle of the lower jaw. **F., Hyaloid**, a depression in the anterior surface of the vitreous body for the crystalline lens. **F., Hyoid**, a small cavity external to the ary-epiglottic fold on either side of the larynx. It is also called the *Sinus pyriformis*. **F., Iliac**, the smooth internal surface of the ilium. **F., Incisive**, a depression in the superior maxillary bone just above the incisor teeth. **F., Infraclavicular**. See *F., Mohrenheim's*. **F. innominata**. Same as *F. scaphoidea*. **F., Jugular**, a deep excavation in the petrous portion of the temporal bone, forming part of the posterior lacerated foramen. **F. lachrymalis**, the depression in the frontal bone for the reception of the lachrymal gland. **F., Lenticular**. Same as *F., Hyaloid*. **F., Mohrenheim's**, the infraclavicular fossa; a triangular depression beneath the clavicle. **F., Myrtiform**. Same as *F., Incisive*. **F., Nasal**, the nostrils. See *Nasal Fossa*. **F. navicularis**, *Morgan's fossa*, a fossa within the penis, formed by a dilatation in the spongy portion of the urethral passage. **F., Occipital**, a fossa behind the condyle of the occipital bone. **F., Olfactory**, the fossa in the fetus that develops into the nasal fossa. **F. ovalis**, an oval depression in the right auricle of the heart. **F.,**

**Palatine**, the anterior palatine canal passing through the palatine process of the superior maxillary bone. It branches into four compartments, the foramina of Stensen, and the foramina of Scarpa. **F. patellaris**, a depression on the anterior aspect of the vitreous humor in which rests the posterior surface of the lens. **F., Pituitary**, a depression below the olivary process of the sphenoid bone lodging the pituitary body. **F., Prepontile**, the anterior foramen cecum. See *Foramina, Table of*. **F., Pterygoid**, the notch separating the external and internal plates of the pterygoid process of the sphenoid. **F. of Rosenmüller**, a depression on the posterior wall of the naso-pharynx immediately behind the Eustachian orifice. **F. scaphoidea**, the curved depression between the helix and antihelix of the external ear. **F. sigmoidea**, a deep groove on the internal surface of the mastoid portion of the temporal bone into which the mastoid foramen opens. **F., Sphenomaxillary**, a triangular space at the angle of the sphenomaxillary and pterygo-maxillary fissures. **F., Sublingual**, a depression on the internal surface of the inferior maxillary bone, for containing the sublingual gland. **F., Submaxillary**, the oblong depression on the internal surface of the inferior maxillary bone, which contains the submaxillary gland. **F., Subscapular**, a broad cavity on the internal surface of the scapula. **F., Temporal**, the fossa on either side of the head filled by the temporal muscle. It is formed by parts of the frontal, sphenoid, parietal, temporal, and malar bones. **F., Trochanteric**. Same as *F., Digital*. **F., Zygomatic**, a cavity below and on the inner side of the zygoma.

**Fosset, or Fossette** (*fös-et'*) [Fr.]. A dimple or small depression.

**Fossilin** (*fös'-il-in*) [*fossilis*, dug up]. A trade-name for a product resembling vaselin.

**Fossula** (*fös'-su-lah*) [dim. of *fossa*, a ditch: *pl.*, *Fossule*]. 1. In biology, a small fossa. 2. Any one of the numerous slight depressions on the surface of the cerebrum. **F. olfactoriæ**, the olfactory depressions of *acraspede medusæ*.

**Fothergill's Disease, or Faceache**. See *Diseases, Table of*. **F.'s Sore-throat**, a synonym of the angino variety of scarlet fever (*Scarlatina anginosa*).

**Foubert's Test**. See *Death*.

**Foudroyancy** (*foo-droi'-an-se*) [Fr.]. The property of being foudroyant.

**Foudroyant** (*foo-droi'-ant*) [Fr.]. Sudden and overwhelming; fulminant; fulgurant.

**Foul** (*fawl*) [ME., *foul*, foul]. Filthy; offensive; disgusting. **F.-in-the-foot**. See *F.-rot*. **F.-rot**, an inflammatory disease of the hoofs of cattle; it is attended with suppuration.

**Foulage** (*foo-lahzh'*) [Fr., 'fulling, or pressing']. In massage, a form of manipulation of the tissues. See *Fulling*.

**Foulbrood** (*fovel'-brood*). A contagious zymotic disease of the honey-bee and its larva, due to the presence of the *Bacillus alvei*. See *Bacteria, Synonymic, Table of*.

**Foullioy's Operation**. See *Operations, Table of*.

**Founder** (*fovent'-des*) [*fonters*, to pour]. Laminitis (*q. v.*) of the horse's fore feet, with the accompanying disorders of related parts. **F., Chest**, founder in a horse, marked or accompanied by atrophy of the chest-muscles.

**Foundling** (*fund'-ling*) [Ger., *fundlen*, found]. An abandoned infant.

**Four** (*for*) [ME., *fevaur*, four]. Twice two. **F.-drug Ointment**. See *Basilicon Ointment*. **F. Masters**, Suture of the. See *Suture*. **F.-tailed Bandage**. See *Bandage*.

**Fourchet, or Fourchette** (*four-shet'*) [*Fr.*, a fork].

1. A fold of mucous membrane at the posterior junction of the labia majora. 2. A forked instrument used in division of the frenum linguae.

**Fournier's Method.** See *Treatment, Methods of*.

**Fovea** (*fo-ve'-ah*) [*fovet*, a small pit]. Applied to many depressions in the body or its organs, but more particularly to the *fovea centralis retinae*, a little pit in the *macula lutea* opposite the visual axis, the spot of distinct vision, where the retinal cones are massed together and the rods and some other parts are absent. It is opposite the center of the cornea. **F. hemielliptica**, recessus ellipticus; sinus semiovalis; a small fossa on the inner wall of the labyrinth, between the fovea hemispherica and the orifices of the semicircular canals. **F. hemispherica**, recessus sphericus; a depression in the forepart of the inner wall of the labyrinth.

**Foveate** (*fo-ve'-at*) [*fovea*, a small pit]. In biology, deeply pitted.

**Foveola** (*fo-ve'-lah*) [*dim. of fovea*, a small pit]. 1. A small pit or depression. 2. The depression at the summit of each papilla of the kidney. **F. coccygea**, a slight depression—a congenital defect—a little above the anus and at the apex of the coccyx. It is due to imperfect development. **F. inguinalis**, a somewhat funnel-shaped depression in the external inguinal fossa. It is open in fetal life, and is the abdominal end of the inguinal canal, through which the testis descended. **F. radialis**. See *Anatomist's Snuffbox*.

**Fovilla** (*fo-vill'-ah*) [*fovere*, to warm, to cherish: *pl.*, *Foville*]. In biology, the protoplasmic contents of a pollen-grain.

**Fowler's Method.** A method of estimating the amount of urea in the urine. It consists in mixing one volume of the urine with seven volumes of liquor sodæ chloratæ (U. S. P.) and comparing the specific gravity before and after effervescence. See *Urea*. **F.'s Solution**. See *Artemin*.

**Fox's Apparatus.** An apparatus for treating fracture of the clavicle. It consists of a pad in the axilla with a suspensory apparatus from the opposite shoulder.

**Fox-glove** (*fox'-gluv*). See *Digitalis*.

**Foxination** (*fox-in-a'-shun*). See *Hypnotism*.

**Fractional** (*frak'-shun-al*) [*fractio*, a breaking]. Pertaining to fractions. **F. Cultivation**, the isolation of one variety of microorganism from a mixture of several, in order to study or cultivate it. This is done by attenuation of the medium so that a drop will probably contain but one organism. Distilled water was first used as the attenuating medium, but gelatinized media are now used. Brefeld and Nägeli suggested the procedure, and Lister isolated the first microbe, the *Bacillus lactici* of Cohn. **F. Distillation**. See *Distillation*.

**Fractionation** (*frak'-shun-a'-shun*) [*fractio*, a breaking]. Chemical separation by successive operations.

**Fractura** (*frak-tur'-ah*) [*L.*]. A fracture. **F. dentis**, fracture of a tooth.

**Fracture** (*frak'-tur*) [*fractura*; *frangere*, to break]. The breaking of a bone, either by external force, or by the action of the muscles of the body. Applied also to the breaking of a cartilage. **F., Barton's**, an oblique fracture of the lower end of the radius, beginning on the articulating surface. **F.-bed**, a doubly-inclined plane used in the treatment of fractures of the hip. **F.-box**, a long box with no ends or cover, used in the immobilization of fractured bones. **F., Capillary**, consisting of only a fine crack or fissure. **F., Commi-nuted**, with shattering of the bone. **F., Colles'**, one of the lower end of the radius with displacement back-

ward. **F., Complete**, entirely through the bone. **F.,**

COMMINUTED FRACTURE OF CLAVICLE. (Moullin.)

Complicated, with injury of adjacent parts. **F., Compound**, with a communicating wound of the skin. **F., Depressed**, with depression of the fractured part below the normal level, as in fracture of the skull. **F., Double**, one bone is fractured in two places. **F., Dupuytren's**, fracture of the fibula, with retraction and displacement outward, and with laceration of the ligaments of the foot. **F., Epiphyseal**, with separation of the epiphysis of a bone. **F., Greenstick**, one

GREENSTICK FRACTURE OF THE RADIUS. (Moullin.)

side of the bone is broken, the other bent. **F., Im-pacted**, with forcible compression of the fragments into each other. **F., Moore's**, fracture of the lower end of the radius, with laceration of the internal lateral ligament and detachment of the triangular interarticular cartilage, which allows of the dislocation of the head of the ulna and the imprisonment of the styloid process under the annular ligaments. **F., Pott's**, same as *F., Dupuytren's*, but without laceration of the inferior tibio-fibular ligaments. **F., Shepherd's**, a fracture of the astragalus, the outer projecting edge being detached. **F., Simple**, without rupture of the overlying skin or mucous membrane. **F., Smith's**, fracture of the lower end of the radius, from a quarter of an inch to an inch from the articular surface. **F., Spontaneous**, with but a slight force to cause it, as when there is disease of the bone.

**Frænulum** (*fræn'-u-lum*). See *Frenulum*.

**Frænium** (*fræ'-num*). See *Frenum*.

**Fragilitas** (*fraj-il'-it-as*) [*L.*]. Brittleness. In physiology, a want of flexile strength. **F. crinium**, an atrophic condition of the hair in which the individual hairs split into numerous fibrillæ, the cleavage in many cases being recognizable as far as to the roots, the fibrils often curling in several turns away from the axis of the shaft. **F. ossium**, abnormal brittleness of the bones.

**Fragmentation** (*frag-men-ta'-shun*) [*fragmentum*, a piece]. The subdivision into fragments; the separation of certain forms of bacilli, or other microorganisms, into joints which become new individuals; the division or segmentation of a cell. **F. of Calculi**, **Spontaneous**, the exfoliation and breaking up of a calculus by the action of the uric acid or other morbid products in the bladder.

**Frambesia** (*fram-be'-ze-ah*) [*fram-basia*, raspberry]. Yaws; Pian; Ambonyna Button; Parangi; Coco; Endemic Verrugas. A tropical contagious disease of the skin, of long duration, characterized by dirty or bright-red raspberry-like tubercles, appearing usually on the face, toes, and genital organs. It is most frequent in young colored people.

**Frambesial** (*fram-be'-ze-al*) [*fram-basia*, a raspberry]. Resembling, or pertaining to frambesia.

**Frambesioid** (*fram-be'-ze-oid*) [*fram-basia*, a raspberry; *oidos*, likeness]. Resembling frambesia, or one of its tubercles.

**Franchimont's Test.** See *Tests, Table of*.

**Francis' Test.** See *Tests, Table of*.

**Franciscea** (*fran-sis'-e-ah*). See *Manaca*.

**Franck's Pill.** A purgative pill containing aloes 4, rhubarb 2, syrup of absinth, q. s.

**Franco's Operations.** See *Operations, Table of*.

**Frangible** (*fran'-jib-l*) [*frangere*, to break]. Liable to fracture; breakable.

**Frangula** (*fran'-gu-lah*) [origin uncertain]. The bark (one year old) of *Rhamnus frangula*, or alder buckthorn. The fresh bark is a violent irritant; the old bark is a non-irritant purgative much used in the constipation of pregnancy. **Ext.** Rhamni Frang. (B. P.). Dose gr. xv- $\overline{5}$ j. **F., Ext., Fld.** Dose  $\overline{5}$ ss-ij. **Ext. Rham. Frang. Liq.** (B. P.). Dose  $\overline{5}$ j-iv.

**Frangulin** (*fran'-gu-lin*) [origin uncertain],  $C_{20}H_{20}O_{10}$ . Rhamnoxanthin; a lemon-yellow, crystalline, odorless, and tasteless glucosid found in *Buckthorn*.

**Frank** [ME., *frank*, open]. Of a benign or favorable tendency; as a *frank* inflammation; sometimes also applied to remedies, in a similar sense.

**Frank's Operation.** See *Operations, Table of*.

**Fränkel's Apparatus.** A pneumatic apparatus. **F.'s Pneumobacillus.** See *Bacteria, Synonymatic Table*.

**Frankenhäuser, Ganglion of.** See *Ganglia, Table of*. **F.'s Micrococcus.** The micrococcus of pernicious anemia. See *Bacteria, Synonymatic Table of*.

**Frankenia** (*fran'-ke'-ne-ah*) [after Johann Franke]. A genus of heath-like herbs and undershrubs. **F. grandiflora**, of California, called *Yerba rheuma*, is astringent, and is a popular remedy for nasal, urethral and vaginal catarrhs. **F. portulacifolia**, of St. Helena, has been used as a substitute for tea. Other species of the genus are aromatic and stimulant. Unof.

**Frankfort Black.** See *Pigments, Conspectus of*. **F. Plane.** See *Plane*.

**Frankincense** (*fran'-k-in-sens*) [*francum incensum*, pure incense]. A name given to a variety of resinous aromatic substances, especially the exudation of *Abies excelsa*; the term was originally, and properly, the same as *olibanum*. It is the concrete turpentine scraped off the trunks of *Pinus australis* and *P. teda*. It is used externally as a slight stimulant and is contained in *Emplastrum picis* (B. P.).

**Frankland's Artificial Human Milk.** A nutritious preparation made from cow's milk as follows:—Allow  $\frac{1}{4}$  of a pint of new milk to stand 12 hours; remove the cream, and mix it with  $\frac{2}{3}$  of a pint of perfectly fresh cow's milk. Take the milk from which the cream was removed, and put into it a piece of rennet about an inch square (fluid rennet may be employed). Keep the vessel containing it in a warm place, until the milk is fully curdled, an operation requiring from 5 to 15 minutes according to the activity of the rennet. Break up the curd repeatedly, and carefully separate the whole of the whey, which should then be rapidly heated to boiling in a small tin-pan placed over a spirit-lamp or gas-lamp. During the heating a further quantity of casein, technically called "fleetings," separates, and must be removed by straining through clean muslin. Now dissolve 110 grains of powdered sugar of milk in the hot whey, and mix it with  $\frac{2}{3}$  of a pint of new milk to which the cream from the other fluid has already been added. The artificial milk should be used within 12 hours of its preparation. **F.'s Method**, a method of estimating the quantity of organic matter present in water. The organic carbon is oxidized and obtained as  $CO_2$ , and the organic nitrogen is liberated in the free gaseous state and measured.

**Franklin** (*fran'-k'-lin*) [from Benjamin Franklin]. A unit of static or frictional electricity. **F. Spectacles.** See *Bifocal*.

**Franklinic** (*fran'-k'-lin'-ik*) [from B. Franklin] Frictional. **F. Electricity**, static or frictional electricity. **Franklinism** (*fran'-k'-lin'-izm*). Same as *Franklinization*.

**Franklinization** (*fran'-k'-lin'-iz-a'-shun*) [after B. Franklin]. The therapeutic use of frictional or static electricity.

**Frasera** (*fra'-zer-ah*). See *American Columbo*.

**Fraserin** (*fra'-zer-in*) [after John Fraser, an English botanist]. A precipitate from a tincture of the root of *Frasera carolinensis*; it is atonic, stimulant, and mildly astringent. Dose 1 to 3 grains. Unof.

**Fraunhofer's Lines.** See *Absorption*, and *Lines Table*.

**Fraxin** (*fraks'-in*) [*fraxinus*, an ash-tree],  $C_{21}H_{22}O_{13}$ . A glucosid from the bark of certain species of ash (*Fraxinus excelsior*, etc.). It forms fine, white, four-sided prisms, of a bitter taste. It has been proposed as a remedy for gout, rheumatism, etc.

**Fraxinus** (*fraks-in'-us*) [L., "ash-tree."]. A genus of trees, order *Oleaceae*, to which the various species of the ash belong. **F. americana**, is useful in dysmenorrhea. A wine (*Vinum fraxini americane*, N. F.) is prepared from its inner bark. Dose, one fluidrachm. **F. excelsior**, of Europe, affords a medicinal bark, its leaves, and wood formerly being official. Chinese wax is collected from the branches of **F. chinensis**; and manna from **F. ornus** and **F. rotundifolia**.

**Freak** (*fræk*) [ME., *freke*, bold]. A popular name for a deformed person.

**Freckles** (*frek'-lz*). See *Lentigo* and *Ephelides*.

**Freestone-hewers' Lung.** Synonym of *Pneumokoniosis*.

**Freezing** (*frē'-ing*) [ME., *freesen*, to freeze]. The congelation of liquids, especially of water. **F.-fluids**, liquid preparations, with boric acid, syrupy or gummy in consistence, in which tissue-specimens are immersed prior to freezing and section-cutting. **F.-machine**, an apparatus for producing intense cold by the evaporation of condensed gases. **F.-microtome**, a microtome attached to a contrivance for freezing artificially the tissue to be sectionized. It is used with very soft tissues. **F.-mixture**, a mixture of salts which absorb heat in undergoing solution. **F.-point**, the temperature at which a liquid freezes.

**Frère, Micrococcus of.** See *Bacteria, Table of*.

**Fremitus** (*frem'-it-us*) [L., a murmur]. A tremor caused by the sympathetic vibration of some part or organ of the body in consonance with some other vibrating body. Also, a murmuring. **F., Friction**, the vibrations produced by the rubbing together of two dry surfaces of the pleura, and felt by the hand. It is met with frequently in dry pleurisy. **F., Rhonchal**, vibrations produced by the passage of air through a large bronchial tube containing mucus. It is most often felt in bronchitis. **F., Tactile**, the vibratory sensation conveyed to the hand applied to the chest of a speaking person. **F., Tussive**, the thrill felt when the hand is placed upon the chest while the patient coughs. **F., Vocal**. See *Vocal*.

**Fremontia** (*fre-mon'-she-ah*) [after John C. Fremont, an American explorer]. A genus of malvaceous shrubs. **F. californica**, Californian slippery elm, is not related botanically to the true elms, but its bark is used in the same way as that of the slippery elm.

**French** [*Francus*, a Frank]. Pertaining to France.

**F. Blue.** See *Artificial Ultramarine* under *Pigments, Conspectus of*. **F. Crust**, or **F. Distemper**. Synonym of *Syphilis*. **F. Green**. Same as *Schweinfurt Green*.

**F. Measles**. Synonym of *Rötheln*, q. v. **F. Method**, the manual method of instruction of deaf-mutes. **F. Mulberry**. See *Callicarpa*. **F. Pox**. Synonym of

*Syphilis*. **F. Purple**. Same as *Archeol*. See *Pigmentum*, *Conspicuum*. **F. Red**. See *Pigmentum*, *Conspicuum*. **F. Spirit**, Brandy. **F. White**. Same as *Wine*, *Lard*.

**Frenetic** (*frē-nē-tik*) [*Fr.*, *frenétique*]. Relating to mental disorder.

**Freno-secretory** (*frē-nō-sē-kret-ō-ri*) [*frē-nō*, bridle; *sē-kret*, a separation]. Exercising a restraining or inhibitory power over the secretions.

**Frenulum** (*frē-nū-lum*) [*frē-nū*, a bridle; *pl.*, *Frenula*]. A small or minute frenum. The name given to the cleft portion of the valvula of the mesencephalon. In biology, a strong elastic bristle on the upper edge and near the base of the secondary wing of butterflies and moths, which folds the secondaries when at rest; it serves to lock the wings together.

**Frenum** (*frē-nū-m*) [*L.*, a curb]. A ligament, fold of integument, or other part, that checks or limits the movements of any organ. **F. dentis**, the socket of a tooth. **F. labiorum**, the fourchet or lower commissure of the *labia pudendi*. **F. linguæ**, the bridle of the tongue. **F.**, **Macdowell's**, the accessory fibers strengthening anteriorly the intermuscular septum of the deep fascia of the arm attached to the great pectoral tendon. **F. of Penis**, the fold on the lower surface of the glans penis connecting it with the prepuce.

**Frenzy** (*frē-nē-zē*) [*ῥηνήσις*; *ῥηνή*, brain; mind]. Extreme and violent mania. **F.**, **Transitory**, a condition of impaired consciousness characterized by either an intense maniacal frenzy or a confused hallucinatory delirium, the duration of which does not exceed the period of a day or two.

**Frère Côme**, **Arsenical Paste** of. Arsenious acid and animal charcoal, each one part; mercuric sulphid, four parts; to be used only over a small area at a time. **F. C.'s Operation**. See *Operations Table*.

**Fresco Colors**. See *Pigments, Colors, and Dyestuffs*.

**Fret** [*ME.*, *freten*, to eat up]. An abrasion; a chafing; herpes; tetter.

**Fretting** (*frē-tī-ng*) [*ME.*, *freten*, to eat up]. A chafing. *Synonym of* *Tormenta*.

**Fretum** (*frē-tū-m*) [*L.*, a strait]. A constriction. **F. of Haller**, in the fetal heart, the constriction between the auricles and the ventricles.

**Freund's Operations**. See *Operations, Table of*. **F.'s Test**. See *Tests, Table of*.

**Frey's White Mass**. A substance for injecting tissues. Precipitate from 125 to 185 c. c. of a cold, saturated, aqueous solution of barium chlorid by adding  $H_2SO_4$ , drop by drop. Allow the precipitate to settle for 24 hours, and decant the clear fluid. The remaining mucilaginous mass is mixed with an equal volume of strong gelatin solution.

**Friable** (*frī-ā-b-l*) [*fricare*, to rub]. Easily broken or crumbled.

**Friar's Balsam** (*frī-ā-rz bāl'-sam*). A name given to the *Balanum traumaticum*, N. F., and also to the very similar *Tinctura benzoini composita*, U. S. P. See *Benzoin*, and *Wald's Balsam*.

**Fricke's Operation**. See *Operations, Table of*.

**Friction** (*frīk'-shun*) [*frictio*; *fricare*, to rub]. 1. The act of rubbing. The process, in medicine, called shampooing. Also the inunction of a medicinal substance by rubbing. 2. In massage, firm circular manipulations, always followed by centripetal strokings. Friction may be practised with the thumb, with the tips of the fingers, or with one hand. **F.-fremitus**. See *Fremitus*. **F.-sound**, the sound observed in auscultation, as a result of the rubbing together of adjacent parts, as of the pleural folds, the pericardium, or the peritoneum.

**Friedländer, Bacillus of**. See *Bacteria, Synonymatic Table of*. **F.'s Hematoxylin Solution**. See *Stains, Table of*. **F.'s Method**, a method of staining *Pneumonia-cocci*. See *Stains, Table of*. **F.**, **Microbe of**. See *Bacteria, Synonymatic Table of*.

**Friedreich's Ataxia or Disease**. Hereditary Ataxia, or Hereditary Ataxic Paraplegia, or Postero-lateral Sclerosis, depending on combined posterior and lateral sclerosis of the cord, and differing from tabes and ataxic paraplegia in the early age of its appearance, its hereditary nature, and some other features. Also applied to *Paramyoclonus multiplex*. See *Diseases, Table of*. **F.'s Sign**. See *Signs and Symptoms, Table of*.

**Fright** (*frīt*) [*ME.*, *frist*, fright]. Sudden and extreme fear. **F.-neuroses**, Page's term for certain neuromimetic disorders following injury. This class of cases is generally considered under the name of "*traumatic hysteria*." Fright-neuroses are frequently encountered in males as the result of railway injuries.

**Frigorific** (*frig-or-īf'-ik*) [*frigus*, cold; *facere*, to make]. 1. Producing extreme cold. 2. That which produces extreme cold. **F. Mixture**, **Arnott's Mixture**; a mixture used as a local anesthetic. It consists of two parts of ice, and one of salt. These are pulverized separately in a canvas or linen bag, and then thoroughly mixed and surrounded by a piece of gauze. As soon as the mixture begins to melt it should be placed over the part to be anesthetized.

**Fringe** (*frīnj*) [*ME.*, *fringe*, a fringe]. See *Fimbria*. **F.-tree**, the bark of the root of *Chionanthus virginica*, a mild diuretic, aperient, and reputed alterative. Dose of the fld. ext. 3 ss-j. Unof. See *Chionanthus*.

**Frog** [*ME.*, *frogge*, a frog]. 1. An amphibian of the family *Ranidae*. 2. In farriery, an elastic, horny substance that grows in the middle of the sole of a horse's foot, dividing it into two branches, and running toward the heel in the form of a fork. 3. A popular name for *Ranula*, q. v. It is also called *Frog-tongue*. **F.**, **Cohnheim's**. See *Cohnheim*. **F.-face**, a facial deformity due to the growth of polypi or other tumors in the nasal cavities. A temporary condition of this kind may be due to orbital cellulitis or facial erysipelas. **F.-gait**, a peculiar hopping progression due to contractions of the flexors and adductors of the thighs, and to paralysis of the adductors. It is one of the results of infantile diplegia. **F.-headed**, the appellation given to anencephalic monsters, from their peculiar contour, which is due to the imperfect development of the orbits and the consequent apparent prominence of the eyes. **F.-spawn Matter**. See *Boiled-sago Matter*. **F.-tongue**. See *Frog*.

**Froissement** (*frōis-mon(g)*) [*Fr.*, bruising]. In massage, a form of "*rough attachment*," of the skin and superficial tissues. See *Attachement*.

**Frôlement** (*frōl-mon(g)*) [*Fr.*]. A brushing; in massage, a succession of slow, backward-and-forward movements, as from a center to a periphery, and the reverse. It is done with the palmar surface of the fingers, or with the roulet.

**Fromage de Brie** (*frō-māzh du(r)-brē*). See *Cheese*.

**Frohmann's Lines**. See *Line*.

**Frond** (*frōnd*) [*frons*, a leafy branch]. In biology, a leaf-like expansion of certain invertebrates, especially such as resemble plants. A thallus, or organ in which the functions of leaf and stem are not fully differentiated.

**Frondescence** (*frōn-dōs'-ens*) [*frondescere*, to put forth leaves]. In biology, the state of bursting into leaf. Cf. *Foliation*, and *Phyllophy*.

**Frondose** (*frōn'-dos*) [*frondosus*, leafy]. In biology,

having thin, expanded parts. Thalloid, or like a thallus.

**Frons** (*fronz*) [L.; *gen.*, *Frontis*]. The forehead.

**Front** (*frunt*) [*frons*, the forehead]. The forehead.

**F. Combination.** See *Combination*. **F.-tap Contraction of Gowers.** See *Contraction*, and *Reflexe*, *Table of*.

**Frontad** (*frunt'-tad*) [*frons*, the forehead; *ad*, to]. Towards the frontal aspect.

**Frontadiform** (*frunt'-tad'-if-orm*) [*frons*, front; *forma*, form]. In biology, having the body extended in the direction of the forehead.

**Frontal** (*frunt'-al*) [*frontalis*, of the forehead]. 1. Pertaining to the anterior part or aspect of an organ or body. 2. More often, belonging to the *frons* or forehead. **F. Bone**, the anterior bone of the skull and superior bone of the face. **F. Crest.** See *Crest*. **F. Eminence.** See *Eminence*. **F. Lobe.** See *Lobe*. **F. Section.** See *Section*. **F. Sinuses**, the cavities, one over each orbit, of the frontal bone. **F. Triangle.** See *Triangles*, *Table of*.

**Frontalis Muscle** (*fron-tal'-lis*) [*frontalis*, of the forehead]. The frontal portion of the occipito-frontal muscle. See *Muscles*, *Table of*.

**Fronten** (*frunt'-ten*) [*frons*, the forehead]. Belonging to the frontal bone in itself.

**Frontlet** (*frunt'-let*) [*frons*, the forehead]. In biology, applied to the forehead of a bird when distinguished by some peculiarity.

**Fronto-** (*frunt'-to*) [*frons*, the forehead]. A prefix denoting anterior position; or, more often, expressing a relation with the *frons*, or forehead. **F.-alveolar**, relating to the frontal and alveolar regions. **F.-ethmoid**, relating to the frontal and ethmoid bones. **F.-occipital**, relating to both forehead and occiput. **F.-triangle.** See *Triangle*. **F.-orbital**, relating to forehead and orbit.

**Frontodymia** (*frun-to-dim'-e-ah*). Same as *Cephalopagus* and *Cephalodymia*.

**Frost** [old Danish, *froste*, frost]. In farriery, to sharpen the front and hind parts of a horse's shoes. **F.-bite**, injury to the skin or a part from extreme cold, resulting in inflammation and gangrene; pagopexia. **F.-itch**, a name for *Prurigo hiemalis*. **F.-wort.** See *Helianthemum*.

**Frosted Feet** (*fros'-ted fēt*). See *Chilblain*.

**Froth** [ME., *frothe*, froth]. Foam, as from the mouth. **F., Bronchial**, that coming from the bronchial tubes, as in asthma.

**Frottage** (*frot-alzh'*) [Fr.]. A form of sexual perversion in which the orgasm is induced by simply rubbing against or toying with the clothing of women. An individual so afflicted is called a *frotteur*.

**Frotteur** (*fro-tair'*) [Fr.]. See *Frottage*.

**Frown** [ME., *frownen*, to scowl]. To scowl. A wrinkling of the brow.

**Frozen Attitude** (*fro'-zen at'-it-ud*). See *Attitude*.

**Fruticulose** (*fruk-tik'-u-lös*) [*fruticulus*, dim. of *fructus*, fruit]. In biology, bearing much fruit.

**Fructification** (*fruk-tif-ik-a'-shun*) [*fructificare*, to bear fruit]. In biology, fecundation, fertilization, impregnation; the act of forming, or the production of fruit, of whatever sort.

**Fructose** (*fruk'-tös*) [*fructus*, fruit],  $C_6H_{12}O_6$ . Fruit-sugar, formerly called *levulose*; it is found in almost all sweet fruits. It is formed, together with grape-sugar, in the so-called *inversion*, or decomposition of cane-sugar, by boiling with acids or by the action of ferments. The mixture of the two is called *invert-sugar*. Fruit-sugar forms a thick syrup, which at  $100^\circ C$ . dries to a gummy, deliquescent mass. It may be crystallized in fine, silky needles, fusing at  $95^\circ C$ . It is more slowly

fermented by yeast than grape-sugar. It reduces an alkaline copper solution in the same proportion as the latter. See also *Carbohydrates*, *Table of*.

**Fruchjahrkatarrh** [Ger.]. See *Ophthalmia*, *Spring*.

**Frugivorous** (*fru-jit'-or-us*) [*frux*, fruit; *vorare*, to devour]. Fruit-eating.

**Frühlingskatarrh** (*fré'-lingz-kat-ar*) [Ger.]. See *Vernal Conjunctivitis* and *Ophthalmia*, *Spring*.

**Fruit** (*froot*) [*fructus*, fruit]. The developed ovary of a plant, and especially the succulent, fleshy parts gathered about the same. Also applied to the offspring of animals. **F.-sugar.** See *Sugar* and *Fructose*.

**F.-dots.** See *Sorus*.

**Frumentaceous** (*fru-men-ta'-she-us*) [*frumentum*, grain]. Belonging to or resembling grain.

**Frumentum** (*fru-men'-tum*) [L.]. Wheat or other grain. *Spiritus frumenti*, whisky. See *Spiritus*.

**Frutescent** (*fru-te'-ent*) [*frutex*, a shrub]. In biology, somewhat shrubby.

**Frutex** (*fru'-teks*) [L., a shrub, a bush; *pl.* *Frutice*]. In biology, a shrub; a woody, perennial plant, generally having several stems and not exceeding twenty feet in height.

**Fruticose**, or **Fruticous** (*fru'-tik-os*, or *-us*) [*frutex*, a shrub]. Shrubby.

**Fruticulose** (*fru-tik'-u-lös*) [*fruticulus*, dim. of *frutex*, a shrub]. In biology, resembling a small shrub.

**Fryer's Apparatus.** A transfusion apparatus made of a single piece of rubber with two bulbs. **F.'s Operation.** See *Operations*, *Table of*.

**Fuchsin** (*fook'-sin*) [after Leonard Fuchs],  $C_{20}H_{19}N_3 \cdot HCl$ . Roscin, Magenta, Eosin, Anilin-red. The hydrochlorid of rosanilin, a lustrous, green, crystalline salt imparting an intense red to solutions. In large doses it produces violent emesis and purging. Injected into a vein it causes staggering and trembling. It is said to be efficient in reducing albuminuria. Dose gr.  $\frac{1}{2}$ -iv. See *Pigments*, *Conspectus of*. **F.-bodies**, the name given by Russel to certain bodies found in carcinomata to which he attributes the causation of the growths; he refers them to the sprouting fungi. Other observers find similar bodies which they hold to be *coccidia*, while others consider them as crystals of safranin or other pigments used in the preparation.

**Fuchsinophile** (*fook-sin'-o-fil*) [*fuchsin*; *oîkeîn*, to love]. Readily stained by fuchsin.

**Fuciphagous** (*fu-si'-ag-us*). Same as *Fucivorous*.

**Fucivorous** (*fu-siv'-or-us*) [*fucus*, a seaweed; *vorare*, to devour]. In biology, applied to such animals as the dugong, certain marine turtles, etc., that feed on sea-weeds.

**Fucus** (*fu'-kus*) [*οἶκος*, seaweed]. A genus of marine algae, the rock-weeds. **F. vesiculosus**, bladder-wrack, sea-wrack; a marine alga abundant on the seashore; it is used as an alterative and tonic. It is employed in goiter and glandular enlargements, but mainly as an empiric remedy for the absorption of fatty tissue in obesity. An extract for such purpose is sold under the name of anti-fat. Dose of the solid extract, gr. x; of the fluid extract,  $\mathfrak{z}$ j-ij. Unof.

**Fuel** (*fu'-el*) [ME., *fucl*, a wood-yard]. Combustible matter. **F.-gas**, natural gas mixed with air, used largely for manufacturing purposes as a substitute for solid fuel. Artificial gas, of the water-gas type, not enriched with hydrocarbons for rendering it illuminant, is also sold as fuel-gas.

**Fugacious** (*fu-sa'-shus*) [*fugere*, to flee]. In biology, falling off, or fading early; fleeting; fugitive.

**Fugitive Color** (*fu'-jit-iv kul'-or*). See *Pigments*, *Colors*, and *Dye-stuffs*.

**Fulgurant** (*ful'-ju-rant*) [*fulgurare*, to flash; *fulgur*, lightning]. Severe and terrific; as fulgurant pains.

**Fulguration** (*ful'ju-ra'-shun*) [*fulgurare*, a stroke of lightning]. 1. Lightning stroke. 2. A sensation of swiftly darting pains.

**Fuliginous** (*fu-li'-in-us*) [*fuliginosus*, full of soot]. Smoke-like; very dark; soot-colored; applied to lips that are covered with dry, black crusts, as a "fuliginous coating."

**Fuligo** (*fu-li'-o*) [L.]. Soot; sordes. **F. ligni**, the soot of a wood-fire; ointments and tinctures of it are popularly esteemed. It is a good disinfectant. **F. kali**, a preparation of soot boiled in caustic potash, and used in skin-diseases. Cf. *Anthrakokali*.

**Full** [ME., *ful*, full]. 1. Replete; filled. 2. Intoxicatd. 3. Entire. **F. Bath**. See *Bath*.

**Fullers' Earth** (*ful'-erz' urth*). A siliceous non-fictile clay, used in the fulling of cloth, on account of its soapy quality; it was formerly used as an absorbent, like lole.

**Fuller's Lotion**. A lotion for rheumatic joints, composed of carbonate of soda, 6 drams; laudanum, 1 ounce; glycerin, 2 ounces, and water, 9 ounces. Saturate hot cloths with this and apply. **F.'s Pill**, a purgative pill, containing aloes, senna, asafetida, galbanum, myrrh, sulphate of iron, saffron, mace, oil of amber, honey, and alcohol.

**Fulling** (*ful'ing*) [ME., *fullunge*, fulling]. In massage, a valuable method of kneading, named from the motion used by fullers in rubbing linen between their hands. It consists in holding the limb between the palms of both hands, with the fingers fully extended, and making a rapid to-and-fro movement with each, the result being that the limb is rolled back and forth between the hands.

**Fulmar Oil** (*ful'-mar*) [ME., *fulmar*]. Oil cast up from the stomach of the fulmar (*Procellaria glacialis*), a sea bird of the N. Atlantic. It has the general qualities of cod-liver oil.

**Fulminant**, or **Fulminating** (*ful'-min-ant*, or *ful'-min-a-ting*) [*fulminare*, to lighten]. Sudden, severe, and rapid in course; as fulminant glaucoma. Same as *Eudryant*, q. v.

**Fulminate** (*ful'-min-at*) [*fulmen*, lightning]. A compound of fulminic acid with a base, usually silver, gold, or mercury, characterized by highly explosive qualities.

**Fulminating** (*ful'-min-a-ting*). See *Fulminant*.

**Fulvous** (*ful'-vus*) [*fulvus*, deep-yellow, tawny, flame-colored]. Having a tawny-yellow color.

**Fumaria** (*fu-ma'-re-ah*). See *Fumitory*.

**Fumarin** (*fu'-mar-in*) [*fumus*, smoke]. An alkaloid from *Fumaria officinalis*; recommended as strongly antipyretic. Unof.

**Fumigation** (*fu-mig-a'-shun*) [*fumigare*, to smoke]. Disinfection by exposure to the fumes of a vaporized disinfectant.

**Fumitory** (*fu-mit-or-e*) [*fumus*, smoke; *terra*, earth]. The plants *Fumaria officinalis*, and *F. bulbosa*, herbs native to Europe; formerly esteemed as polychrest remedies, but now neglected; they are actively deobstruent and antifebrile. Unof.

**Fumous** (*fu'-m-us*) [*fumus*, smoke]. In biology, smoke-colored; fuliginous.

**Fumus** (*fu'-mu*) [L.]. Smoke. **F. terre**, old name for *Fumitory*.

**Function** (*funck'-shun*) [*fungi*, to perform]. The normal or special action of a tissue, organ, or part of the body.

**Functional** (*funck'-shun-al*) [*fungi*, to perform]. Pertaining to the special action of an organ, whether physiologic or pathologic. **F. Disease**, one without appreciable organic alterations. **F. Spasm**, a term applied to any of the so called fatigue-diseases.

**Functionalization** (*funck-shun-al-iz-a'-shun*) [*functio*, a function]. Restoration of a lost or diseased function.

**Fundal** (*fun'-dal*) [*fundus*, the bottom]. Relating to a fundus.

**Fundament** (*fun'-dam-ent*) [*fundamentum*; *fundus*, bottom]. 1. The foundation or base of a thing. 2. In embryology, the rudiment. 3. The anus.

**Fundamental** (*fun'-dam-ent'-al*) [*fundamentum*; *fundus*, bottom]. Pertaining to the foundation. **F. Tissue**, in biology, unspecialized parenchyma; those tissues of a plant through which the fibro-vascular bundles are distributed.

**Fundus** (*fun'-dus*) [*fundus*, the bottom]. The base of an organ. **F. Glands**, microscopic tubular glands of the cardiac portion of the gastric mucous membrane. **F. oculi**, the posterior and interior portion of the eye seen by the ophthalmoscope, comprising chiefly the retina, papilla, retinal vessels, etc. **F. uteri**, the part of the womb remotest from the cervix, and situated cephalad from the outlets of the oviducts. **F. vesicæ**, the basis, floor, or *bas fond* of the urinary bladder.

**Fungate** (*fung'-gat*) [*fungus*, a toadstool]. To grow up with a fungus form or appearance. Also to grow rapidly like a fungus (applied to certain pathologic growths).

**Fungi** (*fun'-ji*). See *Fungus*.

**Fungicide** (*fun'-jis-id*) [*fungus*, a toadstool; *cedere*, to kill]. 1. Destructive to fungi; bactericide. 2. An agent that destroys fungi or bacteria.

**Fungiform** (*fun'-jif-orm*) [*fungus*, a mushroom; *forma*, form]. Having the form of a mushroom. **F. Papillæ**, elevations upon the middle and back part of the tongue.

**Fungin** (*fun'-jin*) [*fungus*, a toadstool]. A peculiar principle found in most of the fungi. It is a whitish, soft, insipid, fleshy substance, insoluble in water, alcohol, ether, or weak  $H_2SO_4$ , soluble in heated hydrochloric acid.

**Fungoid** (*fung'-goid*) [*fungus*, a toadstool; *eidōs*, likeness]. Resembling a fungus; fungous.

**Fungosity** (*fung-gos'-it-e*) [*fungus*, a toadstool]. A fungous growth; the quality of being fungous.

**Fungous** (*fung'-gus*) [*fungus*, a toadstool]. Having the appearance or qualities of a fungus; excrescent, soft and swiftly-growing. **F. Endometritis**. See *Endometritis*.

**Fungus** (*fung'-gus*) [*fungus*, a toadstool; *pl.*, *Fungi*]. 1. An order of plants without stems, leaves or roots, consisting of juxtaposed cells, without chlorophyll. They reproduce by spores. The chief classes are the *Hymenomycetes*, *Basidiomycetes*, *Ascomycetes*, *Schizomycetes*, and *Oömycetes*. 2. A spongy, morbid excrescence, as proud-flesh. **F. of Brain**, hernia cerebri. **F. of Dura Mater**, a tumor of the skull, of malignant nature, originating in the layers of osteal cells. **F. Foot**. See *Foot*. **F. hæmatodes**, a bleeding tumor, generally a soft cancer.

**Funic** (*fu'-nik*) [*funis*, a rope]. Pertaining to the funiculus or umbilical cord.

**Funicular** (*fu-nik'-u-lar*) [*funis*, a rope]. Relating to the funiculus. **F. Souffle**, a hissing sound synchronous with that of the fetal heart, heard in auscultating the pregnant abdomen. It is heard in only from 14 to 15 per cent. of cases, and is referable to the umbilical cord.

**Funiculitis** (*fu-nik-u-lit'-tis*) [*funiculus*, the spermatic cord; *itis*, inflammation]. Inflammation of the spermatic cord.

**Funiculus** (*fu-nik'-u-lus*) [L., a cord; dim. of *funis*, a rope]. 1. In biology, applied to various cord-like structures, as the spermatic cord, the umbilical

- cord of mammals or its analogue in lower animals, the ultimate nerve-bundles, the attachment of the base of the stomach of a polyp with the bottom of its cell, the slender part of the clubbed antenna of an insect, the stalk of an ovule or seed, etc.
2. A bundle of nerve-fibers in a sheath of perineurium.
3. A name, variously qualified, for the different columns of the spinal cord and oblongata; as the *F. cuneatus*, *F. gracilis*, *F. of Rolando*, *F. teres*. **F. cuneatus.** See *Column of Burdach*. **F. gracilis.** See *Column of Goll*.
- Funiform** (*fu'-ni-form*) [*funis*, rope; *forma*, shape]. In biology, resembling a rope or cord.
- Funis** (*fu'-nis*) [L.]. A cord; applied to the umbilical cord.
- Funnel** (*fun'-el*) [Old Fr., *fonel*]. 1. A wide-mouthed, conic vessel ending in a tube, designed to aid in the speedy and safe transfer of liquids from one vessel to another. It is also used as a support for paper-filters.
2. An infundibulum. **F. Mitral**, a condition of the mitral valve in mitral stenosis in which the left auricle and the valve-structures are transformed into a hollow cone. This condition is also called *Button-hole Mitral*.
- F., Muscular**, the funnel-shaped space bounded by the four straight muscles of the eye; its apex is at the optic foramen, the eyeball forms its base, and along its axis runs the optic nerve. **F.-shaped Pelvis**, a congenital deformity of the pelvis, in which it retains its fetal or funnel shape. **F., Vascular**, the light-hued depression at the center of the disc of the retina; if exaggerated, it forms a so-called physiologic cup.
- Funny Bone** (*fun'-e bon*). The internal condyle of the humerus. Being crossed superficially by the ulnar nerve, blows upon it give an unpleasant sensation to the hand; whence the name.
- Fur** [ME., *furre*, fur]. A coating of morbid matters, including an increased amount of epithelium, seen upon the tongue in various conditions of disease.
- Furan** (*fu'-an*) [*furfur*, bran],  $C_4H_4O$ . Furfuran; tetrol; a product of the destructive distillation of pine-wood; it is also produced synthetically by the distillation of pyromucic acid. It is a liquid, insoluble in water, with a peculiar odor, and boiling at  $32^\circ C$ . It yields bluish-violet dyestuffs with isatin and sulphuric acid, and violet-red with phenanthraquinone.
- Fürbringer's Method.** A method of cleansing the hands and nails of operators. The hands and forearms having been thoroughly cleansed by scrubbing with soap and warm water and the nails carefully cleansed, the hands and forearms are dipped for at least a minute in absolute alcohol, then immediately into warm bichlorid of mercury solution (1:1000) and well scrubbed with a nail-brush, the nails receiving particular attention.
- Furca** (*fu'-kah*) [L., a fork]. A fork. **F. orbitalis**, the orbital fork; one of the earliest signs of the orbit seen in the embryo; it is a mere trace of bifurcated bony tissue.
- Furcate** (*fu'-kat*) [*furca*, a fork]. In biology, forked; divided into two equal branches.
- Furcula** (*fu'-ku-lah*) [L., dim. of *furca*, a fork]. In biology, applied to various forked structures, as the united clavicles (wish-bone or merry-thought) of a bird, or the bifid processes of certain insects.
- Furfur** (*fu'-fur*) [L.]. Dandruff or perrigo; scurf; the bran of flour. **F., Microsporon.** See *Tinea versicolor*.
- Furfuraceous** (*fu'-fu-ah'-she-us*) [*furfur*, bran]. Resembling bran. Applied also to dandruff-covered skin.
- Furfuran** (*fu'-fu-ran*). See *Furan*.
- Furfurin** (*fu'-fu-rin*) [*furfur*, bran],  $C_{15}H_{12}N_2O_3$ . A basic crystalline principle derivable from furfural; it has been proposed as an antipyretic and tonic remedy.
- Furfuro** (*fu'-fu-rol*) [*furfur*, bran; *oleum*, oil],  $C_5H_4O_2$ . The aldehyd of furfuryl alcohol is produced in the distillation of bran with dilute  $H_2SO_4$ , or of sugar, etc. It is also derived from arabinose or xylose and occurs in the decomposition-products of albuminoid bodies, as meat, cheese, urine, etc. With phenylhydrazin it forms a nearly insoluble compound, *furfurohydrason*. It is a colorless volatile oil, with an aromatic odor. Its specific gravity at  $130^\circ C$  is 1.163. It boils at  $162^\circ C$ . It combines with dimethylanilin to form a green dye-stuff, corresponding to malachite green. It exists in certain new whiskies; but as the spirit becomes older the furfuro gradually disappears.
- Furibund** (*fu'-re-bund*) [*furibundus*, raging]. Raging; maniacal (applied to certain insane patients).
- Furor** (*fu'-ror*) [L.]. Madness; fury; a maniacal attack. **F. genitalis.** Same as *Erotomania*. **F. epilepticus**, epileptic insanity. **F. transitorius.** See *Mania*, *Transitory*. **F. uterinus.** See *Nymphomania*.
- Furred** (*furd*) [ME., *furre*, fur]. Having an abnormal coating of granular or epithelial scales and other matter; as a furred tongue.
- Furrow** (*fu'-ro*) [ME., *furwe*, a groove]. A groove or trench. **F., Auriculo-ventricular**, the great transverse groove separating the auricles of the heart from the ventricles. **F., Digital**, one of the transverse lines or furrows on the palmar surface of the fingers. **F., Genital**, a groove appearing on the genital tubercle of the fetus at the end of the second month. **F., Interventricular**, two longitudinal grooves separating the two ventricles of the heart. **F., Jadelot's.** See *Jadelot's Lines*, or *Furrows*.
- Furrowing** (*fu'-ro-ing*) [ME., *furwe*, a groove]. In biology, the process of segmentation of the yolk of an egg in some animals, as *Amphibia*.
- Furuncle** (*fu'-rung-kl*). See *Furunculus*.
- Furunculosis** (*fu-rung-ku-lo'-sis*) [*furunculus*, a boil]. The morbid condition that is associated with the production of furuncles.
- Furunculous** (*fu-rung'-ku-lus*) [*furunculus*, a boil]. Characterized by a continuous production of furuncles.
- Furunculus** (*fu-rung'-ku-lus*) [L.]. A boil. A local inflammatory affection, commonly involving a skin-gland or hair-follicle, ending in necrosis and central suppuration of adjacent parts. It begins with painful induration, followed by swelling, finally suppurating and sloughing at the "core." **F. orientalis**, Oriental Boil, Aleppo Boil, Delhi Boil, Biscara Button, Gafsa Button, Kandahar Sore, Pendjeh Sore, Natal Sore. A local disease, marked by the successive formation of papule, tubercle, scab, and sharply circumscribed ulcer on the face, especially the cheeks and angle of the mouth. It is common along the shores of the Mediterranean Sea.
- Fuscescent** (*fus-es'-ent*) [*fuscus*, dusky]. In biology, of a dark-brownish tinge.
- Fuscin** (*fus'-in*) [*fuscus*, dark]. Retinal melanin. A pigment found as minute granules imbedded in the cell-substance and processes of the retinal epithelium.
- Fuscoferruginous** (*fus-ko-fer-oo'-jin-us*) [*fuscus*, dark; *ferruginous*, rusty]. Brownish; rust-colored.
- Fuscotestaceous** (*fus-ko-tes-ta'-she-us*) [*fuscus*, dark, dusky; *testaceous*, brick-colored]. Dull reddish-brown.
- Fuscous** (*fus'-kus*) [*fuscus*, dusky]. Grayish-brown.
- Fusel Oil** (*fu'-zel*). See *Alcohol*.
- Fusible** (*fu'-zib-l*) [*fusus*, melted]. That which may be fused or melted. **F. Calculus.** See *Calculus*.
- Fusiform** (*fu'-sif-orm*) [*fusus*, a spindle; *forma*, shape]. Spindle-shaped; larger in the middle and diminishing in diameter toward either end; applied to cells, fibers, etc.

**Fusion** (*fū'-shun*) [*fusi*; *funder*, to pour out]. The process of liquefying a solid by the agency of heat.

**Fuso-cellular** (*fū'-seel' u-lar*) [*fusa*, a spindle; *-ula*, a cell]. Spindle-celled; as a fuso-cellular sarcoma.

**Fustic** (*fu' tik*) [*Fr.* *fustic*]. A yellow dye stuff, the wood of *Clusia tinctoria*, an urticaceous tree of tropical America. The wood of *Rhus tinctoria*, or Venetian sumach, is called *young fustic*.

**Fustigation** (*fus-tig-a'-shun*) [*fustigare*, to beat]. Flagellation.

**F., Electric**, an application of electricity in which the surface of the body is rapidly tapped with the electrodes of an induced current.

**Fustin** (*fus'-tin*) [*fustus*, a knotted stick],  $C_{15}H_{10}O_6$ . A yellow crystalline coloring-matter obtained from *Rhus cotinus*. See *Pigments, Conspectus of*.

**Fuzzball** (*fuz'-bawl*). See *Bovista*.

## G.

**G.** Abbreviation of *gram*.

**Gabbett's Method.** A method of detecting tubercle-bacilli in cover glass preparations. See *Stains, Table of*.

**Gabian** (*ga'-bi-an*) [*Fr.*]. A variety of naphtha or petroleum from Gabian, a town of France, in Hérault; oleum galbanum.

**Gaboon Chocolate** (*ga'-oon' chok'-o-lit*). See *Iba*.

**Gad-fly** (*ga'-i' th*) [*Lat.* a goad; *ME.*, flye, a fly]. A dipterous insect belonging to the genus *Tabanus*. Also applied to flies of the genus *Erista*.

**Gadinin** (*ga'-din-in*) [from *Gadus callarias*, haddock],  $C_7H_7NO_2$ . A ptomaine obtained from decomposing haddock, and also from cultures of the bacteria of human feces. It acts as a decided poison when given in large doses.

**Gaduin** (*ga'-u-in*) [*gadu*, the codfish],  $C_3H_{10}O_2$ . A fatty principle occurring in cod liver oil; it is a dark-brown, brittle substance.

**Gadus** (*ga'-tus*) [*γᾱδς*, the whiting]. A genus of fish. *G. morrhua*, the cod; a fish from the livers of which cod liver oil is obtained. See *Morrhua*.

**Gæophagia** (*je-o'-fa'-jia*). See *Gephygia*.

**Gaertner, Ducts of.** See *Duct*.

**Gaffky's Method.** A method of staining the bacillus of typhoid fever. See *Stains, Table of*.

**Gafsa Button** (*gal'-sah but'-u*). See *Purpurula murex*.

**Gag** (*ga'-gen*, to suffocate). An instrument, generally made of flexible rubber, placed between the teeth to prevent closure of the jaws during the administration of nitrous oxid gas, or in operations on the mouth.

**Gage's Solution.** See *Stains, Table of*.

**Gaiac** (*ga'-iak*). Same as *Gururum*.

**Gaillard's Suture.** See *Suture*.

**Gait** (*ga'* [AS]). The manner of progression by walking. The peculiarities of the gait may assume great diagnostic importance in cases of central nervous disorder. **G., Cerebellar**, a gait in which the feet are widely spread apart for support, and associated with a staggering movement. It is due to disease, usually tumor, of the middle lobe of the cerebellum. **G., Equine**, a gait in which the foot hangs down and cannot be moved, progression being accomplished by flexing the thigh on the abdomen. It is seen in peroneal paralysis. **G., Frog**, the characteristic hopping gait of infantile paralysis.

**Gal.** Abbreviation of *gallon*.

**Galactacrasia** (*gal'-ak'-tā'-re-ah*) [*gala*, milk; *-ia*, priv.; *κράσις*, mixture]. Defect or abnormality in the composition of the milk.

**Galactæmia** (*gal'-ak'-tē'-mē-ia*). See *Galacthemia*.

**Galactagogue** (*gal'-ak'-tā'-gō*) [*gala*, milk; *ἀγωγός*, leading]. 1. Leading the secretion of milk. 2. An

agent that increases the secretion of milk in the breast.

**Galactangioleucitis** (*gal'-ak'-tan'-je-o-lu-si'-tis*) [*gála*, milk; *ἀγγεῖον*, vessel; *λευκός*, white]. Lymphangitis associated with lactation.

**Galactapostema** (*gal'-ak'-tap-os-te'-mah*) [*γάλα*, milk; *ἀπόστημα*, abscess; *pl.*, *Galactapostemata*]. Milk-abscess; mammary abscess associated with lactation.

**Galactedema** (*gal'-ak'-te-de'-mah*) [*γάλα*, milk; *οίδημα*, a swelling]. Swelling of the mamma due to accumulation of milk within it.

**Galacthemia** (*gal'-ak'-thē'-me-ah*) [*γάλα*, milk; *αἷμα*, blood]. 1. A milky state or appearance of the blood. 2. Bloody milk, or the giving of bloody milk.

**Galactia** (*gal'-ak'-te-ah*) [*γάλα*, milk]. A genus of diseases, according to Good's Nosology, embracing defective or abnormal secretion of milk. **G. virorum**, the secretion of milk by the male.

**Galactic** (*gal'-ak'-tik*) [*γαλακτικός*, milky]. Relating to or promoting the flow of milk.

**Galactidrosis** (*gal'-ak'-tid-ro'-sis*) [*γάλα*, milk; *ἰδρῶς*, sweat]. The sweating of a milk-like fluid.

**Galactin** (*gal'-ak'-tin*) [*γάλα*, milk]. 1. Same as *Lactose*.

2. An amorphous alkaloid or base, reported to be obtainable from milk. 3. A wax obtained from the sap of the S. American cow-tree, *Galactodendron utile*; it is used locally in candle-making. 4.  $C_5H_{10}O_5$ , a carbohydrate from the seeds of leguminous plants.

**Galactirrhæa** (*gal'-ak'-ter-e'-ah*). See *Galactorrhæa*.

**Galactoblast** (*gal'-ak'-to-blast*) [*γάλα*, milk; *βλαστός*, a germ]. A peculiar fat-containing globule found in the acini of the mammary gland.

**Galactocèle** (*gal'-ak'-tō-sēl*) [*γάλα*, milk; *κῆλη*, tumor]. 1. A cystic tumor of the female breast due to a collection of milk and resulting from closure of a milk-duct. 2. Hydrocele with milky contents.

**Galactodendron** (*gal'-ak'-to-den'-dron*) [*γάλα*, milk; *δένδρον*, a tree]. The cow-tree. See *Brosimum*.

**Galactoglycosuria** (*gal'-ak'-tō-gli-ko-su'-re-ah*) [*γάλα*, milk; *γλυκύς*, sweet; *οὔρον*, urine]. Glycosuria dependent upon lactation.

**Galactoid** (*gal'-ak'-toid*) [*γάλα*, milk; *εἶδος*, form]. Resembling milk.

**Galactoma** (*gal'-ak'-tō'-mah*) [*γάλα*, milk; *ῥμα*, a tumor; *pl.*, *Galactomata*]. Same as *Galactocèle*.

**Galactometer** (*gal'-ak'-tōm'-et-er*). See *Lactometer*.

**Galactoncus** (*gal'-ak'-tōng'-kus*) [*γάλα*, milk; *ὄγκος*, a swelling]. Same as *Galactocèle*.

**Galactonic Acid** (*gal'-ak'-tōn'-ik*). See *Lactonic Acid*.

**Galactophagous** (*gal'-ak'-tōff'-ag-us*) [*γάλα*, milk; *φαγῶν*, to eat]. Milk-eating.

**Galactophlebitis** (*gal'-ak'-tō-flē-bi'-tis*) [*γάλα*, milk; *φλέβη*, vein; *τις*, inflammation]. 1. Milk-leg; phleg-

- masia alba dolens; phlebitis associated with lactation.
2. Phlebitis in a suckling child.
- Galactophlysis** (*gal-ak-toff'-tis*) [*γάλα*, milk; *φλύσις*, eruption]. A vesicular eruption containing a milk-like fluid, and associated with a suppression of lactation.
- Galactophora** (*gal-ak-toff'-or-ah*) [*γάλα*, milk; *φέρειν*, to bear]. Remedies that increase the secretion of milk.
- Galactophoritis** (*gal-ak-toff'-or-i'-tis*) [*γάλα*, milk; *φέρειν*, to bear; *τις*, inflammation]. Inflammation of a milk-duct.
- Galactophorous** (*gal-ak-toff'-or-us*) [*γάλα*, milk; *φέρειν*, to bear]. Milk-bearing. **G. Ducts**, the excretory ducts of the mammae.
- Galactophorus** (*gal-ak-toff'-or-us*) [*γάλα*, milk; *φέρειν*, to bear]. An artificial nipple placed over the natural organ in order to facilitate suckling and also to protect the natural nipple when abraded.
- Galactophthisis** (*gal-ak-toff'-this-is*) [*γάλα*, milk; *φθίσις*, consumption]. Emaciation and debility due to excessive secretion of milk.
- Galactophya** (*gal-ak-toff'-ig-ah*) [*γάλα*, milk; *φείγειν*, to shun]. Remedies employed to arrest the secretion of milk.
- Galactophygous** (*gal-ak-toff'-ig-us*) [*γάλα*, milk; *φύγη*, flight]. Having the power to reduce or arrest the secretion of milk.
- Galactoplasia** (*gal-ak-to-pla'-ne-ah*) [*γάλα*, milk; *πλάνη*, a wandering]. The metastasis of milk; any secretion or discharge of a milky fluid consequent upon a suppression of lactation.
- Galactoplerosis** (*gal-ak-to-ple-ro'-sis*) [*γάλα*, milk; *πλήρωσις*, a filling]. Distention of the mamma from hypersecretion of milk, or from closure of the milk-ducts.
- Galactopoietic** (*gal-ak-to-poi-et'-ik*) [*γάλα*, milk; *ποιεῖν*, to make]. Inducing the secretion of milk; concerned in the secretion of milk.
- Galactoposia** (*gal-ak-to-po'-ze-ah*) [*γάλα*, milk; *πόσις*, drinking]. "Milk-cure." The treatment of diseases by the use of a milk-diet.
- Galactopyretic** (*gal-ak-to-pi-ret'-ik*) [*γάλα*, milk; *πυρετός*, fever]. Relating to milk-fever.
- Galactopyretus** (*gal-ak-to-pi'-ret-us*) [*γάλα*, milk; *πυρετός*, fever]. Milk-fever; the febricula that may attend the establishment of lactation; it is a form of septic infection.
- Galactorrhea** (*gal-ak-tor-el'-ah*) [*γάλα*, milk; *ροία*, a flow]. An excessive secretion and flow of milk in a nursing woman.
- Galactoschesis** (*gal-ak-tos'-kes-is*) [*γάλα*, milk; *σχέσις*, retention]. The retention or suppression of the milk.
- Galactoscope** (*gal-ak'-to-skop*). See *Lactoscope*.
- Galactose** (*gal-ak'-tos*) [*γάλα*, milk].  $C_6H_{12}O_6$ . Lactose; the aldose of dulcitol. It is formed on boiling milk-sugar with dilute acids, and is obtained from such gums as yield mucic acid when oxidized. It crystallizes in nodules of grouped needles or leaflets, that melt at 166° C. Its solution is dextro-rotatory. It readily reduces alkaline copper-solutions and is fermentable with yeast. See *Carbohydrates*, *Table of*.
- Galactosis** (*gal-ak-to'-sis*) [*γαλάκτωσις*; *γάλα*, milk]. The secretion of milk.
- Galactostasis** (*gal-ak-tos'-tas-is*) [*γάλα*, milk; *στάσις*, stoppage]. A morbid collection or stoppage of the milk.
- Galactosyrinx** (*gal-ak-to-sir'-ingks*) [*γάλα*, milk; *σῆραξ*, a pipe]. Lacteal fistula.
- Galactotherapy** (*gal-ak-to-ther'-ap-e*) [*γάλα*, milk; *θεραπεῖν*, treatment]. 1. The treatment of disease in suckling infants by the administration of the remedies to the mother or wet-nurse. 2. Milk-cure; galactoposia.
- Galactotrophy** (*gal-ak-tol'-ro-fi*) [*γάλα*, milk; *τροφή*, nourishment]. Nourishing with milk only.
- Galactozemia** (*gal-ak-to-ze'-me-ah*) [*γάλα*, milk; *ζημία*, loss]. 1. Loss, diminution, or suppression of the milk by failure of secretion. 2. Loss of milk by wastage; oozing of milk from the nipple.
- Galactozyme** (*gal-ak'-to-zim*) [*γάλα*, milk; *ζύμη*, leaven]. 1. A drink made by the fermentation of milk, as kefir, or kumiss; also milk fermented with common yeast.
- Galacturia** (*gal-ak-tu'-re-ah*) [*γάλα*, milk; *ουρμή*, urine]. Milkiness of the urine; chyluria.
- Gala-heptose** (*ga-lah-hep'-tos*). See *Carbohydrates*, *Table of*.
- Galanga**, or **Galangal** (*gal-ang'-gah*, or *gal'-an-gal*) [*Chin.*]. The rhizome of *Alpinia officinarum*, and of *Kaempferia galanga* (great galangal), much resembling ginger. It was formerly brought from China and India, but is now little used. Unof.
- Galax** (*gal'-laks*) [*γάλα*, milk]. A genus of diapensiaceous plants. **G. aphylla**, of N. America (carpenter's leaf, "galax," beetle-weed), has an astringent root, and the leaves are said to be vulnerary. Unof.
- Galazyme** (*gal'-az-im*) [*γάλα*, milk; *ζύμη*, leaven]. A fermented drink, made on the Continent, from milk by adding to it sugar and a special ferment.
- Galbanum** (*gal'-ban-um*) [Heb., *khelbenah*, white milk]. 1. A gum-resin of *Ferula galbaniflua*, and *F. rubricaulis*, native to Asia. It is expectorant, stimulant, and antispasmodic, and is useful in chronic bronchitis and catarrh. Dose gr. x-xx. **G., Pil., Comp.**, each pill contains galbanum gr. iss, myrrh gr. iss, asafetida gr. ss, and syrup. Dose ij-ijj. **G., Emplastrum**, galbanum 16, turpentine 2, Burgundy pitch 6, lead-plaster 76 parts. 2. Locally, in the U. S., Burgundy pitch is popularly called *galbanum* and is sold under that name.
- Galbiati Knife** (*gal-be-at'-e*) [*Galbiati*, an Italian obstetrician]. A special knife used in the operation of symphysiotomy.
- Galbulus** (*gal'-bul-us*) [L., the nut of the cypress-tree: *pl.*, *Galbuli*]. In biology, a closed, fleshy, berry-like cone, as the fruit of the juniper.
- Gale** (*gal'*) [ME., *gale*, gale]. 1. A shrub, *Myrica gale*, sweet gale of cool regions; it has an aromatic odor, and is used locally for external parasites. See *Sweet Gale*. 2. The fern-gale, or sweet fern. See *Sweet Fern*. **G. bedouine**. See *Lichen simplex*.
- Galea** (*ga'-le-ah*) [*galea*, *γάλα*, helmet: *pl.*, *Galeæ*]. 1. A form of head-bandage. 2. Headache extending all over the head. 3. The aponeurotic portion of the occipito-frontal muscle. 4. In biology, applied to various helmet-shaped parts or organs. **G. capitis**, a fascial investment covering the crown of the head.
- Galeamaurosis** (*ga-le-am-aw-ro'-sis*) [*γάλα*, cat. weasel; *αυανρόν*, to darken]. See *Ammaurotic Cat's Eye*.
- Galeanthropy** (*ga-le-an'-thro-pe*) [*γάλα*, cat, weasel; *άνθρωπος*, man]. A form of zoanthropy in which the patient believes himself to be transformed into or inhabited by a cat.
- Galeati, Glands of**. See *Crypts of Lieberkühn*.
- Galen** (*gal'-len*). An ancient physician, A. D. 130-200.
- G.'s Anastomosis**, that between the superior and inferior laryngeal nerves. **G.'s Bandage**. See *Bandage*.
- G.'s Cerate**, a cerate composed of white wax, 1; oil of almonds, 4; rose-water, 3. **G., Veins of**. See *Vein*.
- Galena** (*ga-le'-nah*) [*γάληνη*, lead ore]. 1. A remedy for poison. 2. Native lead sulphid.
- Galenic, Galenical** (*ga-len'-ik, -al*) [*Galen*, an ancient physician]. Relating to or consistent with the teachings of Galen. Medicines were said to be *galenic*

(a) when they were of vegetable origin, and not chemic or spagyrical; (b) when they were designed for the use of human patients, and were not veterinary; (c) the term was often nearly equivalent to *officinal*, or *pharmaceutical*, in the modern sense of the latter word.

**Galenism** (*gal'ē-niz-m*) [*galēn*, an ancient physician]. The system or theory of medicine taught by Galen and his followers.

**Galeopsis** (*gal'ē-ōp's*) [*galē*, a weasel; *opsis*, appearance]. A genus of labiate plants; hemp nettle. **G. ladanum**, of Europe, is a popular remedy for coughs. The oil of the seeds of **G. tetrahit**, of Europe and N. America, is said to be a vermifuge. *Unif.*

**Galeropia**, or **Galeropsia** (*gal'ēr-ō'p'ah*, or *gal'ēr-ōp'ē-ah*) [*galēra*, cheerful; *opsis*, vision]. A preternaturally clear and light appearance of objects due to some perversion of the visual apparatus.

**Galianconism** (*gal'ē-in'ē-niz-m*) [*gal'iankon*, a short-armed person; *galē*, weasel; *a-kon*, elbow]. Atrophy of the arm, with shortening.

**Galipe's Test.** See *Test*, *Phlegm*.

**Galipea** (*gal'ē-p'ē-ah*) [*L.*]. A genus of tropical American rutaceous shrubs and trees. **G. cusparia** and **G. officinalis** afford *anguina bark*, *q. v.*, also called *cusparia bark*.

**Galipein** (*gal'ē-p'ē-in*) [*Galipea*],  $C_{20}H_{21}NO_3$ . An alkaloid from cusparia bark.

**Galipot** (*gal'ē-p'it*) [*Fr.*]. Crude Burgundy pitch. Cf. *Gallipot*.

**Galium** (*gal'ē-um*) [*gal'ium*, milk-wort]. A genus of rubraceous plants of many species, several of which are used in popular medicine. Among them are **G. californicum**, **G. circæzans**, **G. pilosum**, and **G. trifidum**, in N. America, and **G. mollugo**, **G. cruciatum**, and **G. verum** in Europe. See, also, *Ladies' Broom*. **G. aparine**, goose-grass, cleavers, or clevers, a succulent plant, the juice of which is a popular remedy in strumous affections, and is said to be a mildly diuretic. Dose of the juice  $\frac{3}{4}$  v; of the fluid extract  $\frac{5}{8}$  ii. *Unif.*

**Gall** (*gal'ah*) [*ME.*, *gal'e*; *gallē*, bile]. The bile. The juice normally secreted by the liver. See *Galla*. **G.-bladder**, the pear-shaped sac in the right lobe of the liver, constituting the reservoir for the bile. See *Cholecyst*. **G.-cyst**, the gall bladder. **G.-duct**. See *Duct*. **G.-fever**, a synonym of intermittent fever. **G.-stones**, the calcareous concretions occasionally formed in the gall bladder and its ducts. They are usually of small size, but may be as large as a pigeon's egg. They are composed of the bile-pigments and acids, cholesterol, various salts, especially of lime and magnesia. Cholesterol is the chief constituent. They give rise to acute attacks of intense pain, the so-called *biliary colic*.

**Galla** (*gal'ah*) [*L.*]. Nut-gall. An excrescence on the leaves of dyer's oak, *Quercus lusitanica*, caused by the deposited ova of an insect. It contains tannic acid from 10-75 per cent., gallic acid 5 per cent. Dose gr. xv. **G.**, **Tinct.**, 20 per cent. Dose  $\frac{5}{8}$  ss-iiij. **G.**, **Unguentum**, 20 per cent. See *Acid, Tannic*. **G.**, **Unguentum, cum opii** (B.P.), an astringent and sedative ointment.

**Gallacetophenone** (*gal'ah'et-ō-f'ē-non*) [*galla*, gall; *acetum*, acid; *phenyl*]. A yellow powder with the formula  $CH_3CO \cdot C_6H_5(OH)$ , prepared from pyrogallol acid. It is used as a 10 per cent. ointment in dermatology.

**Gallein** (*gal'ē-in*),  $C_{12}H_{10}O$ . Pyrogallol-phthalein; one of the coal tar colors, obtained on heating pyrogallol acid with phthalic anhydride to 200° C. It dissolves with a dark red color in alcohol, and with a

beautiful blue color in alkalies. It is an important dye-stuff, producing tolerably fast shades of purple and violet on cotton, wool, and silk. See *Pigments*.

**Gallic** (*gal'ik*) [*gala*, an oak-gall]. Pertaining to the oak-gall or nut-gall. **G. Acid.** See *Acid, Gallic*.

**Gallipoli Oil** (*gal'ē-pō'le*). See *Turkey-red Oil*.

**Gallipot** (*gal'ē-p'it*) [*OD.*, *glypot*, a gallipot]. An apothecary's pot for holding ointments or confections.

**Gallisin** (*gal'is-in*) [*galla*, an oak-gall],  $C_{12}H_{21}O_{10}$ . An unfermentable carbohydrate found in starch-sugar. It is prepared by fermenting a 20 per cent. solution of starch-sugar with yeast at 18° or 20° C. for five or six days. In the pure state it is a white, amorphous, extremely hygroscopic powder; its taste is at first sweet, but afterward becomes insipid; it is easily decomposed by heat; is readily soluble in water, nearly insoluble in absolute alcohol. It is dextro-rotatory and reduces copper-solutions.

**Gallium** (*gal'ē-um*) [*Gallia*, Gaul]. A rare metal (symbol Ga., sp. gr. 5.935), extremely fusible, and related in chemic properties to aluminum, like which it is capable of forming a series of alums. Some of its compounds are poisonous. See *Elements, Table of*.

**Gallivorous** (*gal'iv'or-us*) [*galla*, a gall-nut; *vorare*, to eat, devour]. In biology, applied to the larvae of gall-producing insects that feed on the inside of the nut-gall.

**Gallization** (*gal'iz-ah'shun*). A method of improving wine, by which the must of a bad year is brought up to the standard found to belong to a good must (24 per cent. of sugar, 0.6 per cent. of acid, and 75.4 per cent. of water) by correcting the ratio of acid to sugar. This is done by adding sugar and water in sufficient quantity.

**Gallocyanin** (*gal-ō-si'-an-in*) [*galla*, gall (-nut); *kyanoc*, blue],  $C_{15}H_{12}N_2O_5$ . A compound produced by the action of nitroso-dimethyl-anilin upon gallic acid, catechuic acid, etc. It forms shining green needles, and serves as a beautiful violet-colored lake in calico print. See *Pigments, Conspectus of*.

**Galloflavin** (*gal-ō-flav'in*). See *Pigments*.

**Gallois' Test.** See *Tests, Table of*.

**Gallon** (*gal'-on*) [*ME.*, *galon*, a gallon]. A standard unit of volumetric measurement, having in the United States a capacity of 231 cu. in., and equivalent to a weight of 58.328.8 grains of distilled water at maximum density. In Great Britain its capacity is 277.27 cu. in. **G.**, **Miniature**, in water-testing, a name given to 70 c.c.

**Gallop Rhythm** (*gal'-up rithm*). A peculiar form of cardiac arrhythmia, in which the sounds resemble the footfall of a horse in cantering. It is expressed by the words "rat-ta-tat." It is most frequently heard in interstitial nephritis and arterio-sclerosis. It is said to be met with also in healthy persons.

**Galloping Consumption.** The popular term for that very rapidly fatal form of pulmonary tuberculosis, in which there is rapid destruction of the lung-tissue on both sides. It is also called *Florid Phthisis*. **G. Paresis**, rapidly progressive general paralysis.

**Galton's Whistle.** An instrument used for testing the perception of high tones by the ear.

**Galvanic** (*gal-van'ik*) [*Galvani*, an Italian physician and scientist]. Pertaining to galvanic or chemic electricity. **G. Battery.** See *Battery*. **G. Belt**, a belt composed of alternate plates of copper and zinc, separated by pieces of felt moistened with a dilute acid. It is designed to be worn around the waist for the continuous application of galvanism. **G. Caution.** See *Caution*. **G. Discs**, discs of two dissimilar metals arranged alternately, between which a communication is established when moistened and placed on the skin.

**G. Poulitice**, minute pieces of zinc and copper wrapped in cotton-wool, each pair separated by flannel, all inclosed in a bag, one side of which is made of rubber-cloth and the other of cotton. The cotton side is placed next the skin, perspiration exciting galvanic action.

**Galvanism** (*gal'-van-izm*) [*Galvani*, an Italian physician and scientist]. Primary dynamic or current electricity.

**Galvanization** (*gal'-van-iz-ə'-shun*) [*Galvani*, an Italian physician]. The transmission of a current of low electro-motive force through any part of the body for the purpose of diagnosing or curing disease. **G.**, **Central**, a variety of general galvanization in which the kathode is placed in the epigastrium and the anode is moved over the body. **G.**, **General**, galvanization of the entire body.

**Galvano-** (*gal'-van'-o-*) [*Galvani*, an Italian physician]. A prefix denoting connection with chemic or current electricity. **G.-caustic Amputation**, an amputation in which the soft parts are divided with the galvanic-cautery loop, the bone being sawn through. **G.-cauterization**, the application of the galvanic cautery. **G.-cautery**. See *Cautery*. **G.-contractility**, muscular contraction produced by the galvanic current. **G.-emesis**, the production of vomiting by galvanism. **G.-faradization**, the simultaneous excitation of a nerve or muscle by both a voltaic and a faradic current. **G.-hypnotism**, a hypnotic state induced by an electric current. **G.-magnetism**, same as *Electromagnetism*. **G.-puncture**, the introduction of fine needles, that complete an electric circuit, into the skin or other tissue. Also, a form of galvano-cautery employing a current of the necessary electro-motive force to heat the needles to whiteness. **G.-therapeutics**. See *Electro-therapeutics*.

**Galvanometer** (*gal'-van-om'-et-er*) [*Galvani*, an Italian physician; *μέτρον*, a measure]. An instrument used for the qualitative determination of the presence of an electric current.

**Galvanoscope** (*gal'-van'-o-skōp*) [*Galvani*, an Italian physician; *σκοπεῖν*, to view]. An instrument for detecting the direction and presence of a galvanic current.

**Galvanoscopy** (*gal'-van-os'-ko-pē*) [*Galvani*, an Italian physician; *σκοπεῖν*, to examine]. The use of the galvanoscope.

**Galvanotonus** (*gal'-van-ot'-on-us*) [*Galvani*, an Italian physician; *τόνος*, tension]. 1. Same as *Electrotonus*. 2. The "closing tetanus." The continued tetanus of a muscle between the make and break contraction.

**Galvanotropism** (*gal'-van-ot'-ro-pizm*) [after *Galvani*; *τρέπω*, to turn round]. In biology, the turning movements of growing organs under the influence of a current of electricity.

**Gambir, Gambier** (*gam-bēr'*) [*Malayan*]. A kind of catechu produced from the leaves and shoots of *Uncaria gambir*, a rubiaceous plant of the Malayan region. It has the general properties of official catechu. See also *Pigments, Conspectus of*. Unof.

**Gamboge** (*gam-bōzh'*). See *Cambogia* and *Pigments*.

**Game Leg** (*gam'-leg*). A popular term for a lame leg.

**Gamenomania** (*gam-en-o-ma'-ne-ah*). See *Gamomania*.

**Gametangium** (*gam-et-an'-je-um*) [*γαμέτη*, wife; *ἄγγειον*, a vessel]. In biology, a cell or organ producing or containing sexual elements, or gametes.

**Gamete** (*gam'-et*) [*γαμέτιν*, to marry]. In biology, any sexual reproductive body.

**Gametophyte** (*gam'-et-o-fit*) [*γαμέτη*, a wife; *γαμέτης*, a husband; *φυτόν*, a plant]. In biology, the sexual form of such plants as exhibit alternate generation.

**Gamgee Tissue** (*gam'-ge*). Absorbent cotton-wool.

**Gamic** (*gam'-ik*) [*γάμος*, marriage]. In biology, sexual.

**Gammacism** (*gam'-as-izm*) [*gammacismus*; *γάμμα*, the letter G]. Difficulty in pronouncing any guttural consonant; guttural stammering.

**Gamogastrous** (*gam-o-gas'trus*) [*γάμος*, marriage; *γαστήρ*, the womb]. In biology, applied to a compound pistil in which the ovaries only are united.

**Gamogenesis** (*gam-o-jen'-es-is*) [*γάμος*, marriage; *γένεσις*, origin]. Sexual reproduction.

**Gamogenetic** (*gam-o-jen-et'-ik*) [*γάμος*, marriage; *γένεσις*, origin]. Relating to gamogenesis.

**Gamomania** (*gam-o-ma'-ne-ah*) [*γάμος*, marriage; *μανία*, mania]. Insane desire of marriage.

**Gamomorphism** (*gam-o-mor'-fizm*) [*γάμος*, marriage; *μορφή*, form]. Puberty; sexual maturity.

**Gamopetalous** (*gam-o-pet'-al-us*) [*γάμος*, marriage; *πέταλον*, a leaf]. In biology, sympetalous; having the petals more or less united.

**Gamophyllous** (*gam-o-fi'-ul*) [*γάμος*, marriage; *φύλλον*, a leaf]. In biology, symphyllous; having the floral envelopes united into a single perianth-whorl.

**Gangliac, Ganglial, Gangliar** (*gang'-gle-ak, gang'-le-al, gang'-le-ar*). Same as *Ganglionic*.

**Gangliasthenia** (*gang'-gle-as-the'-ne-ah*) [*γάγγλιον*, ganglion; *ἀσθένεια*, weakness]. Ganglionic asthenia; neurasthenia due to defect of ganglionic function.

**Gangliform** (*gang'-glif-orm*) [*γάγγλιον*, ganglion; *forma*, form]. Formed like, or having the nature of, a ganglion.

**Gangliitis** (*gang'-gle-i'-tis*) [*γάγγλιον*, a ganglion; *ιτις*, inflammation]. Inflammation of a ganglion.

**Gangliocytin** (*gang'-gle-o-si'-tin*) [*γάγγλιον*, nucleus; *κύτος*, cell]. Same as *Cytophosphatid*.

**Ganglioma** (*gang'-gle-ol'-mah*) [*γάγγλιον*, ganglion; *ῥμα*, a tumor; *πλ.*, *Gangliomata*]. A tumor or enlargement of a lymphatic ganglion.

**Ganglion** (*gang'-gle-on*) [*γάγγλιον*, a knot; *πλ.*, *Ganglia*]. 1. A separate and semi-independent nervous center communicating with other ganglia or nerves, with the central nervous system, and peripheral organs. 2. An enlarged bursa in connection with a tendon. 3. A lymphatic gland. **G.-capsule**, the envelop of a ganglion containing the ganglion-cells or nerve-cells. **G.-cell**, any one of the nerve-cells characteristic of

MULTIPOLAR GANGLION-CELL.

a. Axis-cylinder process. b. Pigment

the ganglia, whether found in a ganglion or not. **G.-corpuscle**, a ganglion-cell. **G.-globule**, a ganglion-

celi. An alphabetic table of the principal ganglia is appended, showing their location, roots, and distribution. **Ganglia, Basal**, the ganglia at the base of

the brain, comprising the corpora striata (caudate and lenticular nuclei), thalami, and corpora quadrigemina.

## TABLE OF GANGLIA.

| NAME.                         | LOCATION.  | ROOTS.  | DISTRIBUTION.                             |
|-------------------------------|--|---|---|
| Acustical, max. mouth.        | See <i>Semibranchia</i> .  |   |   |
| Acoustic.                     | In grasshoppers, the termination of the acoustic nerve.  | Ganglionic chain.                                 | Organ of hearing.                         |
| Adiposities.                  | See <i>Petrous</i> .   |   |   |
| Anterior (or thalamic).       | The anterior tubercle of the thalamus.   |   |   |
| Anticiliary.                  | See <i>Otic</i> .  |   |   |
| Auerbach's.                   | Several minute ganglia situated in Auerbach's plexus, <i>q. v.</i>   | Sympathetic.                                      | Sympathetic.                              |
| Auricular.                    | See <i>Otic</i> .  |   |   |
| Auricular, posterior.         | See <i>Temporal</i> .  |   |   |
| Auriculo-ventricular.         | See <i>Bidder's</i> .  |   |   |
| Augous.                       | See <i>Impar</i> .   |   |   |
| Basal.                        | At base of cerebrum; they include: corpora striata, thalami, corpora geniculata, corpora quadrigemina, locus niger, nuclei tegmenti.                                   |   |   |
| Basal optic.                  | See <i>Optic, basal</i> .  |   |   |
| Bonaldi's (Ven.).             | In the auricular septum of the frog's heart.   | Sympathetic.                                      | Heart.                                    |
| Bidder's (2).                 | In the auricular septum of the frog's heart.   | Termination of the cardiac branches of the vagus. | Heart.                                    |
| Bondarek's.                   | Above the root of one of the upper incisor teeth, at the point of communication between the posterior nasal branch of Meckel's ganglion and the anterior dental nerve. | Dental nerves.                                    | Dental nerves.                            |
| Branchial.                    | In <i>Mollusca</i> , near the branchia.  | Ganglionic chain.                                 | Branchia.                                 |
| Buccal.                       | In <i>Mollusca</i> , at the point of union of the esophagus with the buccal mass.  | Cerebral ganglia.                                 | Nerves to the mouth and alimentary canal. |
| Cardiac, lesser.              | See <i>Cardiac, superior</i> .   |   |   |
| Cardiac, superior (Wrisberg). | Beneath the arch of the aorta.   | Superficial cardiac plexus.                       | Cardiac plexus.                           |
| Carotid.                      | In the lower part of the cavernous sinus, beneath the carotid artery.  | Filaments from the carotid plexus.                | Carotid plexus.                           |
| Carotid, inferior.            | Lower portion of the carotid canal.  | Carotid plexus.                                   | Filaments to the carotid artery.          |
| Carotid, internal.            | See <i>Carotid, superior</i> .   |   |   |
| Carotid, superior.            | Upper portion of the carotid canal.  | Carotid plexus.                                   | Filaments to the carotid artery.          |
| Casarian.                     | See <i>Gasserian</i> .   |   |   |
| Gastric, lateral.             | Near the spleen.   | Splenic plexus.                                   | Filaments to the spleen.                  |
| Gastric, left.                | The left semilunar ganglion ( <i>q. v.</i> ).  |   |   |
| Gastric, middle.              | In front of the aorta above the celiac plexus.   | Hepatic plexus.                                   | Filaments to the liver.                   |
| Gastric, right.               | The right semilunar ganglion ( <i>q. v.</i> ).   |   |   |
| Cephalic.                     | Sympathetic ganglia of the head. They include the olivary, sphenopalatine, maxillary, and submaxillary.  |   |   |
| Cerebral.                     | In <i>Mollusca</i> , above the esophagus.  | Ganglionic chain.                                 | To the head.                              |

TABLE OF GANGLIA.—*Continued.*

| NAME.                        | LOCATION.  | ROOTS.   | DISTRIBUTION.  |
|------------------------------|--|--|--|
| Cerebral, anterior.          | A name for the corpus striatum.  |  |  |
| Cervical, first.             | See <i>Cervical, superior</i> .  |  |  |
| Cervical, great.             | See <i>Cervical, superior</i> .  |  |  |
| Cervical, inferior.          | Between the neck of the first rib, and the transverse process of the last cervical vertebra. | Three lower cervical, first dorsal.  | Cardiac nerves and plexus, etc.  |
| Cervical, lower.             | See <i>Cervical, inferior</i> .  |  |  |
| Cervical, middle or thyroid. | Opposite the fifth cervical vertebra; near the inferior thyroid artery.                      | Fifth and sixth cervical nerves, spinal nerves and ganglia.                      | Thyroid gland, cardiac nerve, cavernous plexus.                                  |
| Cervical, oval.              | See <i>Cervical, superior</i> .  |  |  |
| Cervical (of vagus nerve).   | See <i>Inferior (of vagus)</i> .   |  |  |
| Cervical, second.            | See <i>Cervical, middle</i> .  |  |  |
| Cervical, stellate.          | See <i>Cervical, middle</i> .  |  |  |
| Cervical, superior.          | Opposite the second and third cervical vertebra.   | Four upper cervical, petrosal, vagus, glosso-pharyngeal, and hypoglossal nerves. | Superior, inferior, external, internal branches; carotid and cavernous plexuses. |
| Cervical, third.             | See <i>Cervical, inferior</i> .  |  |  |
| Cervical, upper.             | See <i>Cervical, superior</i> .  |  |  |
| Cervical (of uterus).        | Near the cervix uteri.   | Filaments from the hypogastric plexus, sacral ganglia, and sacral nerves.        | Uterine nerves.  |
| Of the chorda tympani.       | In <i>Invertebrata</i> , above the Glaserian fissure.  | Chorda tympani nerve.  | Chorda tympani.  |
| Ciliary.                     | See <i>Ophthalmic</i> .  |  |  |
| Of the circumflex nerve.     | On the branch of the circumflex nerve.   | Circumflex nerve.  | Filaments to <i>teres minor</i> , deltoid, and fascia.                           |
| Of Cloquet.                  | Incisor foramen.   | Naso-palatine nerves.  | Naso-palatine nerves.  |
| Coccygeal.                   | See <i>Impar</i> .   |  |  |
| Cochlear.                    | See <i>Spiral</i> .  |  |  |
| Corti's.                     | See <i>Spiral</i> .  |  |  |
| Cranio-cervical.             | See <i>Cervical, superior</i> .  |  |  |
| Diaphragmatic.               | See <i>Phrenic</i> .   |  |  |
| Ehrenritter's.               | See <i>Jugular</i> .   |  |  |
| Extraventricular.            | A name for the lenticular nucleus  |  |  |
| Facial.                      | See <i>Geniculate</i> .  |  |  |
| Of Frankenhäuser.            | See <i>Cervical, uterine</i> .   |  |  |
| Frontal.                     | In <i>Invertebrata</i> , the ganglion from which arises the pharyngeal nerve.                | Ganglionic chain.  | Pharyngeal nerve   |
| Fusiform.                    | See <i>Cervical, superior</i> .  |  |  |
| Gasser's (A. P.).            | See <i>Gasserian</i> .   |  |  |
| Gasserian, or semilunar.     | Fossa on the anterior part of the petrosa, near the apex.                                    | Fifth cranial nerve, carotid plexus.   | Ophthalmic, superior and inferior maxillary nerves.                              |
| Geniculate.                  | Aqueduct of Fallopius.   | Large and small superficial petrosal.  | Facial.  |
| Great.                       | See <i>Cardiac, superior</i> .   |  |  |
| Of the habenula.             | A ganglion situated in the trigonum habenulæ near the thalamus.                              |  |  |
| Hepatic.                     | Around the hepatic artery.   | Hepatic branches of the semilunar ganglion.                                      | Liver.   |

TABLE OF GANGLIA.—*Continued.*

| NAME.                        | LOCATION.  | ROOTS.   | DISTRIBUTION.                                  |
|------------------------------|--|--|--|
| Hirschfeld's.                | A name for the hippocampal gyrus.  |  |  |
| Hypogastric.                 | See <i>Cervical (cf. uterus)</i> .   |  |  |
| Impar, or Coccygeal.         | Anterior surface of the tip of the coccyx, uniting the two sympathetic nerves. | Sympathetic.   | Sympathetic.                                   |
| Inferior (of vagus).         | Near jugular foramen.  | Hypoglossal and cervical nerves and various plexuses.  | Vagus.   |
| Intra-esophageal.            | In <i>Mammæa</i> , beneath the esophagus.                                      | Ganglionic chain.  | Foot.  |
| Inframaxillary, anterior.    | Near the incisor teeth.  | Inferior maxillary nerve.  | Filaments to the teeth.                        |
| Inframaxillary, posterior.   | Near the last molar tooth.   | Inferior maxillary nerve.  | Filaments to the teeth.                        |
| Interarticular.              | Bifurcation of the common carotid.   | Carotid plexus.  | Sympathetic.                                   |
| Interoptic.                  | The gray matter of the interoptic lobes.                                       |  |  |
| Interosseous.                | Back of the wrist.   | Interosseous nerve.  | Nerves to the carpus.                          |
| Intervertebral.              | Near the intervertebral foramen.   | Spinal cord.   | Dorsal root of spinal nerve.                   |
| Jugular (Ehrenritter's).     | Upper part of the jugular foramen.   | Glossopharyngeal.  | Continuation of the glossopharyngeal.          |
| Jugular (of vagus).          | Jugular foramen.   | Vagus.   | Vagus.   |
| Lateral (several in number). | Surrounding the subclavian artery.   | Branches of the inferior cervical ganglion.  | Subclavian artery.                             |
| Lenticular.                  | See <i>Ophthalmic</i> .  |  |  |
| Lingual.                     | See <i>Submaxillary</i> .  |  |  |
| Ludwig's.                    | Right auricle of the heart.  | Cardiac plexus.  | Cardiac plexus.                                |
| Lumbar (4 or 5).             | On each side and behind the abdominal aorta.                                   | Sympathetic.   | Sympathetic.                                   |
| Maxillo-tympanic.            | See <i>Otic</i> .  |  |  |
| Meckel's.                    | See <i>Spheno-palatine</i> .   |  |  |
| Meckelian.                   | See <i>Spheno-palatine</i> .   |  |  |
| Mesenter's.                  | Intestinal sub-mucosa.   | Sympathetic.   | Sympathetic.                                   |
| Mesenteric, inferior.        | The inferior mesenteric artery.  | Inferior mesenteric plexus.  | Mesentery and intestine.                       |
| Mesenteric, lateral.         | Left side of the body.   | Superior mesenteric plexus.  | Mesentery and bowel.                           |
| Mesenteric, superior.        | Near the origin of the superior mesenteric artery.                             | Superior mesenteric plexus.  | Sympathetic.                                   |
| Of Meynert.                  | See <i>Optic, basal</i> .  |  |  |
| Müller's.                    | See <i>Jugular and Prostatic</i> .   |  |  |
| Nasal.                       | See <i>Meckel's</i> .  |  |  |
| Neparo-ortic.                | See <i>Renal</i> .   |  |  |
| Nephro-lumbar.               | Junction of the branches of the lumbar and spermatic nerves.                   | Lumbar and spermatic nerves.   | Kidney and lumbar region.                      |
| Ophthalmic.                  | Posterior part of the orbit.   | Nasal branch of the ophthalmic, third, cavernous plexus, and Meckel's ganglion.                        | Short ciliary.                                 |
| Otic.                        | See <i>Ophthalmic</i> .  |  |  |
| Optic, basal (Of Meynert).   | Beneath the third ventricle, near the optic tract.                             | Gray matter of the cerebrum.   | Optic tract.                                   |
| Optic, inferior.             | See <i>Optic, basal</i> .  |  |  |
| Orbital.                     | See <i>Ophthalmic</i> .  |  |  |
| Of Arnold's.                 | Below the foramen ovale.   | Inferior maxillary, auriculo-temporal, glosso-pharyngeal, facial, sympathetic, and internal pterygoid. | Tensor tympani, tensor palati, chorda tympani. |

TABLE OF GANGLIA.—*Continued.*

| NAME.                           | LOCATION.  | ROOTS.   | DISTRIBUTION.  |
|---------------------------------|--|--|--|
| Pedal.                          | See <i>Infra-esophageal</i> .  |  |  |
| Petrosal.                       | See <i>Petrous</i> .   |  |  |
| Petrous (Andersch's).           | Petrous portion of the temporal bone, lower border.  | Glosso-pharyngeal.                             | Tympanic, sympathetic, and vagus.  |
| Pharyngeal.                     | Near ascending pharyngeal artery.  | Carotid plexus.                                | Carotid plexus   |
| Pharyngeal, soft.               | On the lingual artery, near the pharyngeal ganglion.   | Carotid plexus.                                | Lingual plexus.  |
| Phrenic.                        | Under the diaphragm at the junction of the right phrenic nerve and phrenic plexus.   | Sympathetic.                                   | To the diaphragm, inferior vena cava, supra-renal capsule, hepatic plexus. |
| Phrenic, major.                 | Point of union of the phrenic nerves with the spinal and sympathetic systems.  | Phrenic, spinal, and sympathetic.              | Filaments to the diaphragm.  |
| Phrenic, secondary.             | Near the diaphragm.  | Anterior, superior, transverse plexus.         | Filaments to the diaphragm.  |
| Phrenico-hepatic.               | Lower surface of the diaphragm.  | The phrenic plexus.                            | Filaments to the diaphragm and liver.                                      |
| Plexiform.                      | See <i>Gasserian</i> .   |  |  |
| Pneumogastric.                  | See <i>Vagus</i> .   |  |  |
| Of the portio dura.             | See <i>Geniculate</i> .  |  |  |
| Post-esophageal.                | In insects, around the gullet.   | Cephalic ganglia.                              | Nerves to the mouth.   |
| Postoptic.                      | See <i>Optic, basal</i> .  |  |  |
| Pre-esophageal.                 | See <i>Cephalic</i> .  |  |  |
| Prostatic (of Müller).          | On the prostate.   | Prostatic plexus.                              | Filaments to seminal vesicles and cavernous tissue of penis.               |
| Pterygo-palatine.               | See <i>Meckel's</i> .  |  |  |
| Remak's.                        | Tissue of the heart, near the superior vena cava.  | Sympathetic.                                   | Sympathetic.   |
| Renal.                          | Around the renal artery.   | Renal plexus.                                  | Renal artery   |
| Renal, anterior communicating.  | In front of the renal artery.  | Renal plexus.                                  | Kidney.  |
| Renal, left aortic.             | Point of origin of the renal artery.   | Renal plexus.                                  | Kidney.  |
| Renal, posterior communicating. | Behind the renal artery.   | Renal plexus.                                  | Kidney.  |
| Reticulate.                     | Medulla oblongata.   | The gray matter scattered through the medulla. |  |
| Rhinic.                         | See <i>Meckel's</i> .  |  |  |
| Of Ribes.                       | Anterior communicating artery of the brain. (It is the upper termination of the sympathetic.)                                    | Branches from the two superior ganglia.        | Sympathetic.   |
| Sacral (4 or 5).                | Ventral surface of the sacrum.   | Sympathetic.                                   | Sympathetic.   |
| Sacral, accessory (4).          | Along the middle sacral artery.  | Sympathetic.                                   | Middle sacral artery.  |
| Scarpa's.                       | Near the internal auditory meatus, at the point of junction of the facial nerve and the vestibular branch of the auditory nerve. | Facial and auditory nerves.                    | Internal ear.  |
| Schacher's.                     | See <i>Ophthalmic</i> .  |  |  |
| Schmiedel's.                    | In the carotid plexus.   | Fifth nerve, third branch.                     | Sympathetic.   |
| Semilunar (2, right and left).  | Near the supra-renal bodies, in front of the crura of the diaphragm.   | Solar plexus and great splanchnic nerves.      | Solar plexus.  |
| Semilunar.                      | See <i>Gasserian</i> .   |  |  |
| Solar.                          | See <i>Semilunar</i> .   |  |  |

TABLE OF GANGLIA.—*Continued.*

| NAME.  | LOCATION.  | ROOTS.   | DISTRIBUTION.  |
|--|--|--|--|
| Spermatic, inferior.   | On the spermatic artery, near the internal abdominal ring.   | Sympathetic.   | Cord and testicle.   |
| Spermatic, superior.   | Around the spermatic artery.   | Sympathetic.   | Sympathetic.   |
| Spermatico-renal.  | In a plexus formed by the inferior branches of the renal plexus.                                   | Renal plexus.  | Spermatic artery and kidney.   |
| Sphenoidal.  | See <i>Mickel's</i> .  |  |  |
| Spheno-palatine (Mickel's).  | Spheno-maxillary fossa, near the spheno-palatine foramen.  | Superior maxillary, facial, sympathetic.                     | Anterior, posterior, and external palatine, naso-palatine, superior nasal, Vidian, pharyngeal. |
| Spinal.  | See <i>Intervertebral</i> .  |  |  |
| Spiral.  | Spiral canal of the modiolus.  | Cochlear nerve.  | Filaments to the osseous lamina and to the organ of Corti.                                     |
| Splanchnic.  | See <i>Semilunar</i> .   |  |  |
| Stomachic.   | The first thoracic ( <i>q v.</i> ).  |  |  |
| Stomato-gastric.   | In <i>Mollusca</i> , the upper surface of the stomach.   | Sympathetic.   | Sympathetic.   |
| Sub-esophageal.  | See <i>Infra-esophageal</i> .  |  |  |
| Sub-intestinal.  | See <i>Meissner's</i> .  |  |  |
| Sublingual.  | See <i>Submaxillary</i> .  |  |  |
| Submandibular.   | See <i>Submaxillary</i> .  |  |  |
| Submaxillary.  | Above the submaxillary gland.  | Gustatory, chorda tympani, submaxillary, sympathetic.        | Mouth, submaxillary gland, and Wharton's duct.   |
| Superior.  | See <i>Jugular</i> .   |  |  |
| Superior (of Vagus).   | Jugular foramen.   | Superior cervical and petrous ganglia, and spinal accessory. | Vagus.   |
| Supra-esophageal.  | In <i>Mollusca</i> , above the esophagus.  | Ganglionic chain.  | Esophagus.   |
| Supra-maxillary.   | Above the canine tooth.  | Anterior superior dental nerve.                              | Anterior superior dental nerve.  |
| Supra-renal.   | Junction of the great splanchnic nerves.   | Solar plexus.  | Supra-renal plexus.  |
| Temporal.  | External carotid artery, near the parotid gland.   | Superior cervical ganglion and carotid plexus.               | Temporal region.   |
| Thoracic (12).   | Between the transverse processes of the vertebrae and the heads of the ribs.                       | Sympathetic.   | Splanchnic nerves and branches to spinal nerves and plexuses.                                  |
| Thyroid, inferior.   | See <i>Cervical, middle</i> .  |  |  |
| Thyroid, superior.   | See <i>Cervical, superior</i> .  |  |  |
| Transverse.  | See <i>Semilunar</i> .   |  |  |
| Tympanic.  | Canal between the lower surface of the petrosa and the tympanum.                                   | Tympanic branch of the glossopharyngeal.                     | Tympanum.  |
| Vagus (1) of the root, see <i>Jugular</i> (2) of the trunk (1) <i>root</i> . | Below the jugular foramen.   | Vagus.   | Vagus.   |
| Vidian's.  | Above the root of the second bicuspids, at the junction of the middle and posterior dental nerves. | Posterior and middle dental nerves.                          | Filaments to the teeth.  |
| Ventricular.   | See <i>Bulter's</i> .  |  |  |
| Vertebral.   | See <i>Cervical, inferior</i> .  |  |  |
| Vesico-vaginal.  | Ventral wall of the vagina.  | Vesico-vaginal plexus.                                       | Sympathetic.   |
| Vestibular.  | Aqueduct of Fallopius.   | Geniculate ganglion.   | Vestibular nerve.  |
| Visceral.  | See <i>Impar</i> .   |  |  |
| Of Wrisberg.   | See <i>Cardiac</i> .   |  |  |

**Ganglionic** (*gang-gle-on'-ik*) [γάγγλιον, a ganglion]. Pertaining to or of the nature of a ganglion. **G. Centers**, masses of gray matter of the brain lying between the floor of the lateral ventricles and the decussation of the anterior pyramids of the cord. They include the optic thalami, corpora striata, and others.

**Ganglionitis** (*gang-gle-on-i'-tis*). See *Ganglitis*.

**Gangliopathy** (*gang-gle-op'-ath-e*) [γάγγλιον, a ganglion; πάθος, disease]. Any disorder dependent upon a diseased condition of a ganglion; any diseased state of a ganglion.

**Gangræna** (*gang-gre'-uah*) [L.]. Gangrene. **G. contagiosa**. See *Gangrene, Hospital*. **G. nosocomialis**. See *Gangrene, Hospital*. **G. oris**. See *Stomatitis*.

**Gangrænosis** (*gang-gre-no'-sis*). See *Gangrenosis*.

**Gangrene** (*gang'-gren*) [γάγγραινα, a sore, from γαίρειν, to gnaw]. Mortification or death of a part of the body from failure in nutrition. The putrefactive fermentation of a dead limb or tissue. **G., Circular**, a form of mortification occurring usually on some part of the lower extremity, and not exceeding in size a silver half-dollar. It involves the skin and subcutaneous tissues and is accompanied by signs of exhaustion. **G., Constitutional**, that dependent upon systemic disease, such as diabetes, or circulatory disease. **G., Diabetic**. See *Sphaceloderma*. **G., Dry**, shriveling and desiccation from insufficiency of blood. **G., Embolic**, that caused by an embolus that cuts off the supply of blood. **G., Hospital**, a contagious form arising under crowded conditions without antiseptic precautions. **G., Moist**, a form with abundance of serous exudation and rapid decomposition. **G., Nosocomial**, hospital gangrene. **G., Primary**, that without preceding inflammation of the part. **G., Pulpy**. See *G., Hospital*. **G., Secondary**, a form with preceding inflammation. **G., Senile**, that attacking the extremities of the aged. **G., Symmetric**, that attacking corresponding parts of opposite sides. It is called, also, *Raynaud's G.* See, also, *Sphaceloderma*. **G., White**, a moist gangrene of chronic form, in which there is a serous exudate with lymphatic obstruction, followed by complete anemia. It is unaccompanied by the characteristic color-change of other varieties of gangrene.

**Gangrenopsis** (*gang-gren-op'-sis*) [γάγγραινα, gangrene; ὄψις, the face]. Synonym of *Cancerum oris*.

**Gangrenosis** (*gang-gren-o'-sis*) [γάγγραινα, gangrene; νόσος, disease]. The condition of being or of becoming mortified or gangrenous.

**Gangrenous** (*gang'-gren-us*) [γάγγραινα, gangrene]. Pertaining to or being of the nature of gangrene. **G. Emphysema**. See *Edema, Malignant*.

**Ganja** (*gan'-jah*) [Hind.]. Synonym of *Cannabis indica*.

**Gannal's Solution**. A preservative fluid containing one part of aluminum acetate in 20 parts of water.

**Ganoin** (*gan'-o-in*) [γάινος, brightness]. In biology, the dense enamel-like form of bone of the plates of a ganoid fish.

**Gant's Line**. See *Lines, Table of*.

**Gantelet** (*gan'-let*). See *Gauntlet*.

**Gape** (*gap, or gāp*) [ME., *gapen*, to yawn]. To yawn; the act of yawning.

**Gapes** (*gāps*) [ME., *gapen*, to gape]. A disease of young fowls, caused by the presence of a nematode worm, *Syngamus trachealis*, in the trachea. See *Parasites, (Animal) Table of*.

**Gaping** (*gap'-ing*). See *Pandiculation* and *Yawning*.

**Gaps, Cranial** (*gapz*) [ME., *gapen*, to gape]. Certain occasional congenital fissures of the skull.

**Garcacin** (*gar-an'-sin*) [origin unknown]. The product obtained by the action of concentrated  $H_2SO_4$  on pul-

verized madder, at a temperature of  $100^{\circ}C.$  ( $212^{\circ}F.$ ). It is a valuable dye. See *Pigments Conspectus of*.

**Garbage** (*gar'-baj*) [ME., *garbage*, the entrails of fowls]. The refuse materials of kitchen-cookery, etc. **G. and Waste**. See *Sewage, Disposal of*. **G.-cart**, Flannagan Automatic, a variety of cart much used for the collection of garbage. **G.-furnace**, a furnace in use in cities and towns to consume the waste material of the place.

**Garbling** (*gar'-bling*) [OF., *garbeler*, to sift]. The assorting of a drug and its separation into grades of different quality.

**Garcinia** (*gar-sin'-e-ah*) [after Laurent *Garcin*, a French botanist]. A genus of guttiferous trees of Old-world tropical regions. **G. hanburii**, **G. morella**, **G. pictoria**, and **G. travancorica** afford gamboge. **G. mangostana** yields the palatable fruit called mango-steen.

**Garden Rocket**. See *Eruca sativa*.

**Garel, Sign of**. See *Signs and Symptoms, Table of*.

**Gargarism** (*gar'-gar-izm*) [γαργαρίζω, to gargle; *pl.*, *Gargarismata*]. A gargle.

**Garget** (*gar'-get*) [ME., *gargat*, the throat]. 1. A swelling of the throat in swine or cattle. 2. A hard, knotty condition of the udder in cows, that sometimes follows calving, due to the sudden distention of the bag with milk; it is attended with inflammation. At times it is tuberculous in nature. It is also called "Weed" and *Mammitis*. **G.-root**, a name improperly given to the root of *Phytolacca decandra* (see *Phytolacca*); so called because it is regarded as a cure for garget in cows.

**Gargle** (*gar'-gl*) [Fr., *gargouille*, the throat]. To rinse or wash the interior of the throat and upper part of the pharynx. Also, a wash for the throat.

**Gargling** (*gar'-gling*) [Fr., *gargouille*, the throat]. Rinsing the throat. **G., von Troitsch's Method of**, the patient takes a mouthful of fluid, throws back the head, and then, instead of making the customary "gurgle," allows the liquid to pass as far down as possible. The act of deglutition is then performed, without, however, letting the fluid be swallowed.

**Garland** (*gar'-land*). See *Karyokinesis*.

**Garlic** (*gar'-lik*). See *Allium*.

**Garnet-brown**. See *Pigments, Conspectus of*.

**Garretson's Bandage**. See *Bandage*.

**Garrod's Theory**. The theory that gout is due to an increase in the uric acid in the blood, either from increased production or diminished elimination. The alkalinity of the blood is also lessened; hence the urates are deposited in the tissues. **G.'s Test**. See *Tests, Table of*.

**Garrot** (*gar'-ot*) [Fr., *garotter*, to bind]. An instrument for compression of an artery by twisting a circular bandage about the part.

**Garroting** (*gar'-ot-ing*) [Sp., *garrote*, strangulation by means of an iron collar]. In forensic medicine, a term used in England to signify the forcible compression of a victim's neck by robbers or criminals.

**Garrulity** (*gar-ool'-lit-e*) [*garrere*, to prattle]. Talkativeness. **G. of the Vulva**. See *Vulva*.

**Garrya** (*gar'-e-ah*) [after *Garry*, a botanist]. California fever-bush; skunk bush, or quinin-bush. The leaves of *G. fremontii*, a bitter antiperiodic, popular on the Pacific coast as a remedy for malarial diseases. Dose of the fld. ext.  $\text{m}\bar{x}$ -xxx. Unof.

**Garryin** (*gar'-e-in*) [*Garry*, a botanist]. An alkaloid said to exist in the leaves of *Garrya fremontii*.

**Gärtner, Canals or Ducts of**. See *Canal*.

**Gas** (*gaz*). Any substance that is normally æriform. Substances normally in a liquid or solid state are usually called *vapors* when changed to the æriform

- condition. **G.-black.** See *Pigments, Conspectus of*.  
**G., Nitrous Oxid.** See *Nitrous Oxid.*
- Gaskell's Clamp.** See *Clamp*.
- Gasolene** (*gas'-o-len'*) [*gas*]. Canadol. A product obtained from petroleum, boiling at 70° to 90° C; specific gravity, .660 to .690, or 80° to 75° B. It is used in the extraction of oils from oil-seeds and in carbureting coal-gas.
- Gasp** [*ME. ga'pən, to yawn*]. To catch for breath. To breathe spasmodically with open mouth.
- Gasser's Arteries.** See *Arterie, Table of*. **G.'s Ganglion.** See *Ganglia, Table of*. **G., Nerve of.** See *Nervus, Table of*.
- Gasserian Arteries.** See *Arteries, Table of*. **G. Ganglion.** See *Ganglia, Table of*.
- Gaster** (*gas'-ter*) [*γαστήρ, stomach*]. The stomach; the abdomen. **G. basalis**, the apical canal, peduncle tube, or *tubus capularis* of hydroid polyps. **G. buccalis**, the esophagus of Medusæ. **G. centralis**, the central cavity of Medusæ. **G. coronaris**, the perogaster of Medusæ. **G. principales.** See *Axogaster*.
- Gasterangiophraxis** (*gas'-ter-an-je-em-fraks'-is*) [*γαστήρ, stomach*; ἀγγειον, vessel; ἔμφοσις, obstruction]. 1. Congestion of the stomachic blood-vessels. 2. Pyloric obstruction.
- Gasterasthenia** (*gas'-ter-as-the'-ne-ah*) [*γαστήρ, stomach*; ἀσθένεια, weakness]. Weakness or debility of the stomach.
- Gasterataxia** (*gas'-ter-at-aks'-e-ah*) [*γαστήρ, stomach*; ἀταξία, disorder]. Disordered state of the functions of the stomach; that state of the stomach-walls in which some parts are hardened or thickened, while others are softened or inflamed.
- Gasterechema** (*gas'-ter-ek'-e'-mah*) [*γαστήρ, stomach*; ἦχημα, sound]. A sound heard in the auscultation of the stomach.
- Gasterectasis** (*gas'-ter-ek'-tas-is*) [*γαστήρ, stomach*; ἐκτασις, dilatation]. Dilatation of the stomach; it is usually due to pyloric obstruction, but may also result from muscular weakness, and from over-distention from excessive eating and drinking.
- Gastero-** (*gas'-ter-o-*) [*γαστήρ, belly*]. See *Gastro-*.
- Gasterotheca** (*gas'-ter-o-the'-kah*) [*γαστήρ, stomach*; θηκη, case; πλ., *Gasterotheca*]. In biology, the part of the pupa or chrysalis-case that covers the abdomen.
- Gasterozooid, Gastrozooid** (*gas'-ter-o-zo'-oid, gas-tro-zo'-oid*) [*γαστήρ, stomach*; ζωον, animal; εἶδος, form]. In biology, one of the nutritive zooids of a polyp-colony.
- Gastræa** (*gas'-tre'-ah*) [*γαστήρ, stomach*; πλ., *Gastræa*]. In biology, Hæckel's term for a hypothetical, primeval, two-layered, saecular organism; the supposed ancestral type of the gastrula stage of the present Metazoan.
- Gastræmia** (*gas'-tre'-me-ah*). See *Gastremia*.
- Gastral** (*gas'-tral*) [*γαστήρ, the stomach*]. Pertaining to the gaster or stomach; gastric.
- Gastralgia, Gastralgia** (*gas'-tral'-j-ah, -je*) [*γαστήρ, stomach*; ἄλγος, pain]. Pain in the stomach. A mild form is sometimes called *gastrodynia*.
- Gastread** (*gas'-tre-ad*) [*γαστήρ, stomach*]. In biology, an animal the morphologic development of which stops at the gastrula stage.
- Gastrectasia** (*gas'-trek-ta'-ze-ah*). See *Gastrectasis*.
- Gastrectasis** (*gas'-trek-ta'-sis*) [*γαστήρ, stomach*; ἑκτασις, a stretching out]. Dilatation of the stomach.
- Gastrectomy** (*gas'-trek'-to-me*) [*γαστήρ, stomach*; ἐκτομή, a cutting out]. Resection of any diseased part of the stomach.
- Gastrelcobrosis** (*gas'-trek-ko-bro'-is*) [*γαστήρ, stomach*; ἕλκος, ulcer; βροσσις, an eating]. Ulceration of the stomach.
- Gastrelcosis** (*gas'-trek-ko'-sis*) [*γαστήρ, stomach*; ἕλκος, ulceration]. Ulceration of the stomach.
- Gastremia** (*gas'-tre'-me-ah*) [*γαστήρ, stomach*; αἷμα, blood]. Congestion of the coats of the stomach.
- Gastrenteralgia** (*gas'-tren-ter-al'-je-ah*) [*γαστήρ, stomach*; ἐντέρον, intestine; ἄλγος, pain]. Neuralgia of the stomach and bowels.
- Gastrenteromalacia** (*gas'-tren-ter-o-mal-al'-se-ah*) [*γαστήρ, stomach*; ἐντέρον, intestine; μαλακία, softening]. Softening of the stomach and intestines (ascribed by some to be merely a post-mortem condition).
- Gastreum** (*gas'-tre-um*) [*γαστήρ, stomach*]. In biology, the under or ventral surface of a bird.
- Gastric** (*gas'-trik*) [*γαστήρ, stomach*]. Pertaining to the stomach. **G. Artery.** See *Arteries, Table of*. **G. Crisis**, a severe, paroxysmal attack of pain in the stomach, accompanied by obstinate vomiting, faintness, and occasionally by slowness and irregularity of the pulse. These crises are met with in locomotor ataxia, *q. v.* **G. Digestion**, that part of the digestion of food performed by the gastric juice; the conversion of albuminous bodies into peptones. **G. Fever.** See *Fever*.
- G. Fistula**, a perforation or communication other than the normal one between the stomach and peritoneal cavity, or with the outer part of the body. **G. Follicles.** See *Glands, Peptic*. **G. Insufficiency**, a term applied to the early stages of dilatation of the stomach. **G. Juice**, the normal secretion of the tubular, peptic glands of the stomach. It is a clear, colorless liquid, having an acid reaction, and containing from .5 to 2 per cent. of solid matter in solution. A small amount of hydrochloric acid, .2 to .4 per cent., and a ferment called *pepsin*, are the essential elements. **G. Plexus**, a subdivision of the solar plexus distributed to the stomach. It joins branches of the left pneumogastric nerve. See *Plexus*. **G. Veins**, two veins of the stomach; the lesser one is called the pyloric, the greater the coronary. See *Vein*.
- Gastricism** (*gas'-tris-izm*) [*γαστήρ, stomach*]. 1. The theory that ascribes most diseases to some gastric derangement. 2. A gastric disorder.
- Gastrimargia, or Gastrimargism** (*gas'-trim-ar'-je-ah, or -jizm*) [*γαστήρ, belly*; μάργος, greedy]. Insane or furious gluttony.
- Gastritic** (*gas'-trit'-ik*) [*γαστήρ, stomach*]. Pertaining to or affected with gastritis.
- Gastritis** (*gas'-trit'-tis*) [*γαστήρ, stomach*; ιτις, inflammation]. Inflammation of the coats of the stomach. It may be acute or chronic. **G. polyposa**, that form associated with a rough, wrinkled, mammillated condition of the gastric mucous membrane.
- Gastro-** (*gas'-tro-*) [*γαστήρ, stomach*]. A prefix denoting some relation with or complication of the stomach.
- Gastro-adenitis** (*gas'-tro-ad-en-i'-tis*) [*γαστήρ, stomach*; ἄδην, gland; ιτις, inflammation]. Inflammation of the glands of the stomach.
- Gastro-arthritis** (*gas'-tro-ar-thrit'-tis*) [*γαστήρ, stomach*; ἄρθρον, a joint; ιτις, inflammation]. Gout in the stomach and joints at the same time.
- Gastrobrosis** (*gas'-tro-bro'-sis*) [*γαστήρ, stomach*; βρωσις, a gnawing]. Perforating ulcer of the stomach.
- Gastrocele** (*gas'-tro-sel*) [*γαστήρ, stomach*; κήλη, hernia]. A hernia of the stomach.
- Gastrocelus** (*gas'-tro-sel'-lus*) [*γαστήρ, stomach*; κοίλας, hollow]. In biology, applied to one of the depressions at the base of the second abdominal tergita in certain insects.
- Gastrocephalitis** (*gas'-tro-sef-al-i'-tis*) [*γαστήρ, stomach*; κεφαλή, head; ιτις, inflammation]. Concurrent inflammation of the stomach and of the brain.

**Gastrocholia** (*gas-tro-ko'-le-ah*) [*γαστήρ*, stomach; *χόλη*, bile]. Concurrent gastric and biliary disorder.

**Gastrocnemius** (*gas-trok-ne'-me-us*) [*γαστήρ*, stomach; *κνήμη*, leg]. See *Muscles*, Table of.

**Gastrocolic** (*gas-tro-kol'-ik*) [*γαστήρ*, stomach; *κόλον*, the large intestine]. Pertaining to both the stomach and the colon.

**Gastrocolitis** (*gas-tro-ko-li'-tis*) [*γαστήρ*, stomach; *κόλον*, colon; *ιτις*, inflammation]. Concurrent inflammation of the stomach and large intestine.

**Gastrocolotomy** (*gas-tro-ko-lot'-o-me*) [*γαστήρ*, stomach; *κόλον*, colon; *τέμνειν*, to cut]. The establishment of an artificial communication between the stomach and the colon.

**Gastrocolpotomy** (*gas-tro-kol-pot'-o-me*) [*γαστήρ*, stomach; *κόλπος*, vagina; *τέμνειν*, to cut]. The operation of Cesarean section in which the opening is made through the *linea alba* into the upper part of the vagina.

**Gastrocystis** (*gas-tro-sis'-tis*) [*γαστήρ*, belly; *κύστις*, bladder]. In biology, the single-layered blastodermic vesicle of mammals.

**Gastroderma** (*gas-tro-der'-mah*) [*γαστήρ*, stomach; *δέρμα*, skin]. In biology, the *lamina gastralis*, or intestinal epithelium.

**Gastrodiagnosis** (*gas-tro-di-al'-is-is*) [*γαστήρ*, stomach; *ἵσσις*, a loosening]. A solution of continuity in the gastric wall.

**Gastrodiaphane** (*gas-tro-di'-af-an*) [*γαστήρ*, stomach; *διά*, through; *φαίνειν*, to show]. See *Gastrodiaphany*.

**Gastrodiaphanoscopy** (*gas'-tro-di-af-un-os'-ko-pe*) [*γαστήρ*, stomach; *διά*, through; *φαίνειν*, to show; *σκοπεῖν*, to inspect]. The examination of the stomach by means of the diaphanoscope.

**Gastrodiaphany** (*gas-tro-di-af'-an-e*) [*γαστήρ*, stomach; *διά*, through; *φαίνειν*, to show]. A method of exploration of the stomach by means of the *gastrodiaphane*. This consists of a soft stomach-tube, at the gastric extremity of which is placed an Edison's hard-glass lamp, from which conducting wires, containing a current-interrupter, run to a portable storage-battery. The stomach should be free from food and moderately distended with water. The gastric extremity of the gastrodiaphane, after being lubricated with oil or glycerin, is introduced into that viscus, and the circuit is closed. If no pronounced thickening of the anterior stomach wall exists, trans-illumination in a dark room, with the patient erect, permits the outlines of the stomach to be seen as a zone of reddish hue on the abdominal wall.

**Gastrodidymus** (*gas-tro-did'-im-us*) [*γαστήρ*, stomach; *δίδυμος*, double]. A double monstrosity with one abdominal cavity.

**Gastroduodenal** (*gas-tro-du-o-de'-nal*) [*γαστήρ*, stomach; *duodeni*, twelve each]. Pertaining to the stomach and the duodenum.

**Gastroduodenitis** (*gas-tro-du-od-en-i'-tis*) [*γαστήρ*, stomach; *duodeni*, twelve each; *ιτις*, inflammation]. Inflammation of the stomach and duodenum.

**Gastroduodenostomy** (*gas'-tro-du-od-en-os'-to-me*) [*γαστήρ*, stomach; *duodeni*, twelve each; *στόμα*, mouth]. A surgical operation upon the stomach and the duodenum, in which a new passage from the one to the other is established.

**Gastrodynia** (*gas-tro-din'-e-ah*) [*γαστήρ*, stomach; *δύνη*, pain]. A mild pain in the stomach. See also *Gastrogia*.

**Gastroectasis** (*gas-tro-ek'-tas-is*). Same as *Gastrectasis*.

**Gastro-electrization** (*gas-tro-e-lek-triz-a'-shun*) [*γαστήρ*, stomach; *ἤλεκτρον*, amber]. The therapeutic application of electricity to the stomach.

**Gastroelectrotomy** (*gas-tro-el-ek-troi'-o-me*) [*γαστήρ*,

stomach; *ἔλκτρον*, a sheath; *τομή*, a cutting]. A method of performing Cesarean section. An incision is made into the vagina (after the abdominal section), instead of into the uterus, and if the child cannot be extracted in this way, an incision is made into the os uteri.

**Gastroenteralgia** (*gas-tro-en-ter-al'-je-ah*) [*γαστήρ*, stomach; *έντερον*, bowel; *ἄλγος*, pain]. Concurrent pain in the stomach and bowels.

**Gastroenteric** (*gas-tro-en-ter'-ik*) [*γαστήρ*, stomach; *έντερον*, bowel]. Pertaining to both stomach and bowels.

**Gastroenteritis** (*gas-tro-en-ter-i'-tis*) [*γαστήρ*, stomach; *έντερον*, bowel; *ιτις*, inflammation]. Concurrent inflammation of stomach and bowels.

**Gastroenterostomy** (*gas-tro-en-ter-oi'-to-me*) [*γαστήρ*, stomach; *έντερον*, bowel; *στόμα*, mouth]. Formation of a fistulous communication between the stomach and the small intestine in obstruction of the pylorus.

**Gastroenterotomy** (*gas-tro-en-ter-oi'-o-me*) [*γαστήρ*, stomach; *έντερον*, bowel; *τέμνειν*, to cut]. Intestinal incision through the abdominal wall.

**Gastroepiploic** (*gas-tro-ep-i-p'-lo'-ik*) [*γαστήρ*, stomach; *επιπλόον*, caul]. Pertaining to stomach and omentum.

**Gastro-esophageal** (*gas-tro-e-so-fá'-je-al*) [*γαστήρ*, stomach; *οισοφάγος*, the esophagus]. Pertaining to both the stomach and the esophagus.

**Gastrofaradization** (*gas'-tro-far-ad-iz-a'-shun*) [*γαστήρ*, stomach; *Faraday*]. The application of faradism to the stomach.

**Gastrog galvanization** (*gas'-tro-gal-van-iz-a'-shun*) [*γαστήρ*, stomach; *Gohvani*]. The application of galvanism to the stomach.

**Gastrohepatic** (*gas-tro-he-pat'-ik*) [*γαστήρ*, stomach; *ήπαρ*, the liver]. Relating to both stomach and liver.

**Gastrohysterectomy** (*gas'-tro-his-ter-ek'-to-me*) [*γαστήρ*, the stomach; *ήστέρα*, the womb; *εκτομή*, a cutting out]. The Porro-Cesarean operation. See *Operations*, Table of.

**Gastrohysterotomy** (*gas-tro-his-ter-oi'-o-me*) [*γαστήρ*, stomach; *ήστέρα*, womb; *τέμνειν*, to cut]. The Cesarean section, *q. v.*

**Gastrolith** (*gas'-tro-lith*) [*γαστήρ*, stomach; *λίθος*, a stone]. A calcareous formation in the stomach; gastric calculus; bezoar.

**Gastrolithiasis** (*gas-tro-lith-i'-as-is*) [*γαστήρ*, stomach; *λίθιασις*, the formation of calculi]. A morbid condition associated with the formation of gastroliths.

**Gastrology** (*gas-trol'-o-je*) [*γαστήρ*, stomach; *λόγος*, science]. A treatise on the stomach and its functions.

**Gastromalacia** (*gas-tro-mal-a'-se-ah*) [*γαστήρ*, stomach; *μαλακία*, softening]. An abnormal softening of the structural tissue of the stomach; it is generally believed to be due to post-mortem acidity.

**Gastromelus** (*gas-trom'-el-us*) [*γαστήρ*, stomach; *μέλος*, limb]. A monster with accessory limbs attached to the abdomen.

**Gastromenia** (*gas-tro-me'-ne-ah*) [*γαστήρ*, stomach; *μήν*, month]. Vicarious menstruation by the stomach.

**Gastrometritis** (*gas-tro-me-tri'-tis*) [*γαστήρ*, stomach; *μήτρα*, womb; *ιτις*, inflammation]. Gastritis concurrent with metritis.

**Gastromycetes** (*gas-tro-mi-se'-tēz*) [*γαστήρ*, stomach; *μύκης*, mushroom]. A group of fungi, the spores of which are enclosed in a cavity or pouch.

**Gastrop pancreatic** (*gas-tro-pan-krr-at'-ik*) [*γαστήρ*, stomach; *πάγκρεας*, pancreas]. Both gastric and pancreatic.

**Gastropathy** (*gas-trop'-ath-e*) [*γαστήρ*, stomach; *πάθος*, disease]. Any disease or disorder of the stomach.

**Gastro-pericarditis** (*gas-tro-per-ik-ar-di'-tis*) [*γαστήρ*, stomach; *περί*, around; *καρδία*, heart; *ιτις*, inflammation]. Gastritis concurrent with pericarditis.

**Gastroperiodynia** (*gas-tro-per-i-o-din'-e-ah*) [*γαστήρ*, stomach; *περίοδος*, period; *πῶς*, pain]. Periodic gastralgia.

**Gastrophrenic** (*gas-tro-frēn'-ik*) [*γαστήρ*, stomach; *φρήν*, diaphragm]. Relating to both stomach and diaphragm.

**Gastroplegia** (*gas-tro-plē'-e-ah*) [*γαστήρ*, stomach; *πῶς*, stroke]. Paralysis of the stomach.

**Gastropore** (*gas-tro-pōr*) [*γαστήρ*, stomach; *πῶς*, pore]. In biology, the mouth-opening of a gastrozooid.

**Gastroptosis** (*gas-tro-ptō'-sis*) [*γαστήρ*, stomach; *πτῶσις*, fall]. A prolapse or downward displacement of the stomach.

**Gastro-pylorotomy** (*gas-tro-pi-lor-ek'-to-me*) [*γαστήρ*, stomach; *πύλωρ*, a gate-keeper; *ἐκτομή*, excision]. Surgical excision of the pyloric portion of the stomach.

**Gastropyræ** (*gas-tro-py'-e-ah*) [*γαστήρ*, stomach; *πύρ*, fire]. Inflammation or phlegmasia of the stomach.

**Gastrorrhagia** (*gas-tror-a'-je-ah*) [*γαστήρ*, stomach; *ῥήγναι*, to break forth]. See *Hematemesis*.

**Gastrorrhaphy** (*gas-tror-a'-fe*) [*γαστήρ*, stomach; *ῥαφή*, suture]. Suture of wounds of the abdominal wall or stomach.

**Gastrorrhea** (*gas-tror-e'-ah*) [*γαστήρ*, stomach; *ῥοια*, a flow]. Excessive secretion, or regurgitant flow, of gastric mucus or liquid.

**Gastrorrhexis** (*gas-tror-eks'-is*) [*γαστήρ*, stomach; *ῥήξις*, a breaking]. Rupture of the stomach.

**Gastroscope** (*gas-tro-skōp*) [*γαστήρ*, stomach; *σκοπεῖν*, to see]. An instrument for viewing the interior of the stomach. It consists essentially of a tube with an incandescent electric light and reflecting prisms.

**Gastroscope** (*gas-tros'-kō-pe*) [*γαστήρ*, stomach; *σκοπεῖν*, to see]. The inspection of the interior of the stomach by means of the gastroscope.

**Gastrosis** (*gas-tro'-sis*) [*γαστήρ*, stomach; *νόσος*, disease; *pl.*, *Gastroses*]. A general term for any disease of the abdomen or of the stomach only.

**Gastrosphongioma** (*gas-tro-sfon-je-ō'-mah*) [*γαστήρ*, stomach; *σφόνγη*, sponge; *ῥῆμα*, tumor; *pl.*, *Gastrosphongiomata*]. A fungus of the stomach.

**Gastrosplenic** (*gas-tro-splēn'-ik*) [*γαστήρ*, stomach; *σπλήν*, spleen]. Relating both to the stomach and the spleen.

**Gastrosplenitis** (*gas-tro-splēn-i'-tis*) [*γαστήρ*, stomach; *σπλήν*, spleen; *itis*, inflammation]. Inflammation of both stomach and spleen.

**Gastrostegæ** (*gas-tro-stēj*) [*γαστήρ*, stomach; *στέγη*, a roof]. In biology, one of the short, wide, transverse scutes or scales that cover the ventral surface of a snake.

**Gastrostenosis** (*gas-tro-ste-nō'-sis*) [*γαστήρ*, stomach; *στενός*, narrow]. A stricture or morbid contraction of the stomach.

**Gastrostomy** (*gas-tro-stō-me*) [*γαστήρ*, stomach; *στομα*, mouth]. The establishing of a fistulous opening into the stomach.

**Gastrosuccorrhea** (*gas-tro-uk-or-e'-ah*) [*γαστήρ*, stomach; *υἱος*, juice; *ῥοια*, a flow]. Reichmann's disease; hypersecretion of the gastric juice.

**Gastrothoracic** (*gas-tro-tho-rak'-ik*) [*γαστήρ*, belly; *θώραξ*, thorax]. Pertaining both to the abdomen and the thorax.

**Gastrotome** (*gas-tro-tōm*) [*γαστήρ*, stomach; *τομή*, a cutting]. A cutting instrument used in gastrotomy.

**Gastrotomy** (*gas-tro-tō-m*) [*γαστήρ*, stomach; *τομή*, to cut]. Incision of the abdomen or the stomach.

**Gastrotrichous** (*gas-tro-trik'-u*) [*γαστήρ*, stomach; *τριχ*, hair]. In biology, having the ventral surface of the body ciliated.

**Gastro-typhoid** (*gas-tro-ti'-fōid*) [*γαστήρ*, stomach;

*τῖφος*, smoke]. Typhoid fever with pronounced gastric symptoms.

**Gastrovascular** (*gas-tro-vas'-ku-lar*) [*γαστήρ*, stomach; *vasculum*, a little vessel]. Common to the functions of digestion and circulation, as the body-cavity of some animals.

**Gastroxia** (*gas-troks'-e-ah*) [*γαστήρ*, stomach; *ἄξις*, acid]. Abnormal acidity of the contents of the stomach.

**Gastroxynsis** (*gas-troks-in'-sis*) [*γαστήρ*, stomach; *ἄξις*, to irritate]. Rosshach's term for hyperchlorhydria; a periodic form of nervous dyspepsia with hyperacidity of the gastric juice. It is, in fact, a neurosis of secretion that may be quite independent of the time of digestion. It is a rare condition, and is associated either with profound neurasthenia or with locomotor ataxia. It is marked by a gnawing, unpleasant sensation in the stomach, severe headache, and the vomiting of a clear, watery, intensely acid secretion.

**Gastrula** (*gas-tru-lah*) [*γαστήρ*, belly; *pl.*, *Gastrule*]. In biology, a stage in the development of Metazoans, in which the germ consists of a two-layered sac, produced by the invagination of the one-layered, hollow germ-sphere, the blastula.

**Gastrulation** (*gas-tru-lah'-shun*) [*γαστήρ*, belly]. In biology, the process of formation of the gastrula by the invagination of the blastula.

**Gastruria** (*gas-tru'-re-ah*) [*γαστήρ*, stomach; *οὔρον*, urine]. A supposed passage of urine into the stomach.

**Gate-vein** (*gat'-vān*). An old name for the portal vein.

**Gathering** (*gath'-er-ing*) [ME., *gadering*, a gathering]. A popular name for an abscess, pustular inflammation, or suppurating sore.

**Gattine** (*gat'-ēn'*) [F.]. A disease of the silk-worm.

**Gaubius' Table**. See *Dose*.

**Gaule's Experiment**. See *Cytotoxon*.

**Gaultheria** (*gaw-thē'-re-ah*) [after Dr. Gaultier, a Canadian physician]. Wintergreen, Teaberry. The leaves of wintergreen, *G. procumbens*, an evergreen plant, with properties due to a volatile oil, methyl salicylate, which is also found in black birch and several other plants. It is stimulant, astringent, and antipyretic, and is used in rheumatism and gout, or when salicylic acid is indicated. G., OL., oil of wintergreen, much used as a flavor. Dose, miiij-x. G., Spt., oil of wintergreen 5, alcohol 95. Dose, 5 ss-ij. G. fragrans, of India, affords an identical oil.

**Gaultherilene** (*gaw-thēr'-il-ēn*) [after Dr. Gaultier, a Canadian physician], C<sub>10</sub>H<sub>16</sub>. A peculiar hydrocarbon found in the oil of gaultheria. It is a colorless, yellow or reddish liquid, of a peculiar strong and aromatic odor, a sweetish, warm, and aromatic taste, a slightly acid reaction, and a specific gravity of about 1.180. It is readily soluble in alcohol.

**Gaultier's Reagent**. See *Tests*, Table of.

**Gauntlet** (*gahnt'-let*, or *gawnt'-let*) [OF., *gantelet*, dim. of *gant*, a glove]. A surgical bandage that covers the hand and fingers like a glove. See *Bandage*.

**Gauze** (*gauz*). A thin, open-meshed cloth used for surgical dressings. When impregnated with antiseptic solutions or substances it is called *antiseptic gauze*, or, according to the substance used, it is spoken of as *iodoform-gauze*, *sublimate-gauze*, etc. See *Carbasus*.

**Gavage** (*gar-ahzh'*) [Fr.]. 1. The regular feeding of an infant with freshly-drawn mother's milk, through a small, soft catheter passed into the stomach at each feeding. 2. The administration of liquid nourishment through the stomach-tube.

**Gavard's Muscle**. See *Muscles*, Table of.

**Gay-Lussac's Laws**. See *Laws*.

**Gazeol** (*gaz'-e-ol*) [Fr., *gazéol*]. A mixture of naph-

thalin, 1 part; benzene, 10 parts; acetone, 10 parts; coal-tar, 100 parts; aqua ammoniac (20 per cent.), 1000 parts; it is recommended as affording a vapor for inhalation in whooping-cough.

**Geber's Glomerules.** The convolutions of the terminal branches of the nerves supplying the epithelial lining of the mouth.

**Geddes' Fluid Extract.** See *Abies*.

**Geissler's Apparatus.** An apparatus for estimating the quantity of carbonic acid in a carbonate.

**Geissospermum**, or **Geissin** (*gi-so-sper'-mum*, or *gi'-sin*) [*γείσσον*, cornice; *σπέρμα*, seed],  $C_{19}H_{24}N_2O_2 + H_2O$ . An alkaloid from the bark of *Geissospermum laeve*; it is a depressant of the respiration and of the cardiac action.

**Geissospermum** (*gi-so-sper'-mum*) [*γείσσον*, cornice; *σπέρμα*, seed]. A genus of apocynaceous trees. **G. laeve** and **G. vellosii**, of Brazil, afford *Pao-pereira* ("pear-tree") bark, an active febrifuge and astringent. Unof.

**Geitonogamy** (*gi-ton-og'-am-e*) [*γείτων*, a neighbor; *γάμος*, marriage]. In biology, fertilization of one flower by pollen from another flower of the same plant.

**Gelasma** (*jel-az'-mah*) [*γῆλασμα*, laughter], or **Gelasmus** (*jel-az'-mus*) [*γελᾶστος*, laughable]. Insane or hysteric laughter.

**Gelatin** (*jel'-at-in*) [*gelare*, to congeal]. An albuminoid substance of jelly-like consistence, obtained by boiling skin, connective tissue, and bones of animals in water. The glue of commerce is an impure variety. See *Glue*. **G. Bath.** See *Bath*. **G., Blasting.** See *Blasting Gelatin*. **G. Capsules**, capsules of gelatin designed for containing medicines of nauseating taste. **G. Culture-medium**, a jelly made by a solution of the best commercial food-gelatin in the proportion of 6, 8, or 10 parts to 100 of water, with 1 or 2 parts of dried peptones or glucose (the latter not to be used if the culture is to be made on slides) for increased nutritive value. Bicarbonate of soda is used to neutralize the acid reaction. This, in bacteriology, is simply known as *Gelatin*. **G.-dynamite.** See *Blasting Gelatin*. **G., Liquid**, a substance for fastening paper to glass, wood, or paper; its formula is:—

|   |                           |
|---|---------------------------|
| Gelatin or clear glue, . . . . .          | 75 to 100 grams (33)      |
| Commercial acetic acid (No. 8), . . . . . | 100 c.c. (3.4 f3)         |
| Water, . . . . .                          | 100 c.c. (3.4 f3)         |
| 95 per cent. Alcohol, . . . . .           | 100 c. (3.4 f3)           |
| Glycerin, . . . . .                       | 15 to 30 c.c. (½ to 1 f3) |

Crush the glue and put it into a bottle with the acid; set in a warm place and shake occasionally. After three or more days add the other ingredients. **G., Medicated**, a soft basis consisting of gelatin 3, zinc oxid 3, glycerin 5, water 9 parts, to which antiseptic or other medicaments may be added. It is preferable to greasy ointments. All unof. **G. Sugar.** See *Glycin*.

**Gelatinigerous** (*jel-at-in-ij'-er-us*) [*gelatina*, gelatin; *gerere*, to bear]. In biology, applied to such organisms as secrete a gelatinous investment.

**Gelatinoid** (*jel'-at-in-oid*) [*gelare*, to freeze; *εἶδος*, likeness]. 1. Resembling gelatin. 2. Any member of a class of nitrogenous substances, including chondrin, collagen, elastin, gelatin, etc.

**Gelatinous** (*jel-at-in-us*) [*gelare*, to freeze]. Resembling or having the nature of gelatin. **G. Tissue.** See *Animal Tissue*.

**Gelatio** (*jel-at'-she-o*) [L.]. Synonym of *Frostbite*.

**Gelation** (*jel-at'-shun*) [*gelatio*, a freezing]. 1. Freezing; congelation; also frost-bite, or chilblain. 2. Catalepsy.

**Geld** [ME., *gelden*, to castrate]. To castrate; to emasculate.

**Gelding** (*gell'-ding*) [ME., *gelding*, a eunuch]. 1. Castration. 2. A castrated person or animal.

**Gelidium** (*jel-id'-e-um*) [*gelum*, cold]. A genus of seaweed. **G. corneum**, affords gelosin, and others, as **G. spiniform**, supply some portion of the agar-agar of commerce.

**Gelle's Experiment.** A diminution of the bone-conduction of sound resulting from compression of the air in the external auditory canal.

**Gellert's Green.** Same as *Rinnmann's Green*.

**Gelose** (*jel-oz')* [*gelare*, to freeze]. 1. The gelatinizing principle of agar-agar. 2. A culture-medium used in bacteriologic investigation. Gelatin liquefies at 23° or 24° C., and is thus inferior to gelose for those cultures that require a higher degree of heat for their proper development. Agar-agar contains a considerable proportion of chemic gelose. Of the agar-agar a jelly is made, 2 to 3 parts (to 100) of dried peptone added; 10 to 15 parts of this substance to 50 parts of water, with 1 to 5 of glycerin, form a nutritive jelly which is called *gelose*, from its essential ingredient. It is also called *Parabin*.

**Gelosin** (*jel'-o-sin*) [*gelare*, to freeze]. A mucilage resembling gelatin, and extracted from some kinds of agar-agar and from various species of algae. It is soluble in water and alcohol, and is an excellent excipient for powders, tinctures, and salts, and is serviceable in bacterial cultures. Unof.

**Gelsemin** (*jel'-sem-in*) [*gelseminum*, jasmine]. 1.  $C_{11}H_{19}NO_2$ , a poisonous alkaloid from *Gelsemium*, *g. v.* 2. A precipitate or resinoid from a tincture of the root-bark of *Gelsemium sempervirens*; it is a febrifuge, antispasmodic, emmenagogue, and narcotic; dose ½ to 1 grain. Unof.

**Gelseminin** (*jel-sem'-in-in*) [*gelseminum*, jasmine]. An alkaloid of *Gelsemium*. It is an amorphous yellowish-white, bitter, very poisonous powder, soluble in ether and chloroform, less so in alcohol and water. Dose gr. ½ to 3.

**Gelseminum** (*jel-se'-me-um*) [*gelseminum*, jasmine].  $C_{11}H_{19}NO_2$ . Yellow Jasmine. The root of *G. sempervirens*, abundant in the southern U. S., with properties mainly due to an alkaloid, *gelsemin*, a powerful motor depressant, antispasmodic, and diaphoretic. In toxic doses it produces diplopia, extreme muscular weakness, and anesthesia, death occurring from asphyxia. It is useful in exaltation of nerve-action and in cerebro-spinal meningitis, and is especially valuable in remittent and malarial fevers. Dose gr. ij-xx. **G., Ext., Alcoholic** (B. P.). Dose gr. ¼-½. **G., Ext., Fld., alcoholic.** Dose mjj-xx. **G., Tinct.**, 15 per cent. in strength. Dose ℥x-5j. **Gelseminin**, the alkaloid. Dose gr. ½ to 3. **G., Hydrochloras**, freely soluble in water. Dose gr. ½ to 3. **G., Hydrochlorat., Liq.**, one grain in one dram. Dose mjj-ij, hypodermatically.

**Gely's Suture.** See *Suture*.

**Gemellus** (*jem-el'-us*) [dim. of *geminus*, twin]. Double. In pairs. **G. Muscle**, the gastrocnemius muscle, on account of its double origin. See *Muscles*, *Table of*.

**Gemina** (*jem'-in-ah*) [L., twins]. A name for the cor-pora quadrigemina, or optic lobes. They constitute the larger part of the mesocellic roof.

**Geminate** (*jem'-in-at*) [*geminus*, a twin]. In pairs. In biology, parts that are disposed in pairs.

**Geminiflorous** (*jem-in-if-lo'-rus*) [*geminus*, twin; *flos*, flower]. In biology, applied to plants that produce flowers in pairs.

**Geminous** (*jem'-in-us*) [*geminus*, a twin]. Same as *Geminate*. **G. or Connate Teeth**, twin-formation of two teeth from the occurrence of a double dental germ in a single sac, from which are developed two

teeth of the same class, when normally there should be but one.

**Gemma** (*jem'-ah*) [*L.*, a swelling bud, a germ: *pl.*, *Gemmae*]. In biology, one of the various asexual reproductive bud like processes of cryptogams.

**Gemmation** (*jem-a' shun*) [*gemmare*, to put forth buds]. In biology, asexual reproduction by budding, as distinguished from fission and free-cell formation. Gemmation occurs in certain cryptogams and in the *Calentaria*, *Phlox*, and *Tunicata* among animals, in which the bud arises as an evagination of the ectoderm only. Cf. *Idioplasm*, *Blastemic*, and *Budding*.

**Gemmipara, Gemmiparæ** (*jem-ip'-ar-ah, -e*) [*gemma*, a bud; *parere*, to produce]. In biology, organisms that reproduce by budding.

**Gemmule** (*jem'-ul*) [*gemma*, a little bud; dim. of *gemma*, a bud]. In biology, (a) one of the small buds produced by a gemmiparous organism. (b) In Darwin's theory of pangenesis, one of the invisible granules or atoms, being given off continually by all the cells of the body, conveyed into the blood and circulated through the body to finally settle down in other cells, especially the germ-cells. Each gemmule is supposed to reproduce the cell from which it is derived, and the gemmules of the different cells become active in the same order as that in which the corresponding cells followed each other in the ontogeny of the parent. Galton accepted the "gemmule hypothesis," but denied the circulation of the gemmules. Brooks attributes to the male germ-cell a particularly strong power of attraction for the gemmules, so that it collects a special mass of them and stores them up. Cf. *Anlage*, *Biophor*, *Determinant*, *Id*, *Idioplasm*, *Heredity*.

**Gena** (*je'-nah*) [*L.*, the cheek: *pl.*, *Genæ*]. In biology, applied to a rather poorly defined region on the side of the head of various animals; the cheek.

**Genal** (*je'-nal*) [*γενν*, the cheek]. Relating to the gena, or cheek.

**Genepi** (*j n'-ep-e*). See *Genipi*.

**Genera** (*jen'-er-ah*) [*pl.* of *Genus*, *q.v.*].

**General** (*jen'-er-al*) [*generalis*, of a kind]. Common to a class; universal. **G. Anatomy**, histology, especially comparative histology. **G. Anemia**, oligemia; also, deficiency of hemoglobin in the blood. **G. Paralysis**, or **Paresis**. See *Paralysis*, *General*, of the Insane.

**Generale** (*ju-ne-rall'-e*) [*Fr.*]. Synonym of *Influenza*.

**Generate** (*jen'-er-at*) [*generare*, to beget]. To beget; to produce of the same kind.

**Generatio æquivoca** (*jen-er-a'-she-o e-kwiv'-o-kah*) [*L.*]. See *Generation*, *Æquivocal*.

**Generation** (*jen-er-a' shun*) [*generatio*, a begetting]. The begetting or production of offspring. **G., Alternate**, in biology, the alternation of asexual with sexual generation, the offspring of one process differing from that of the other, e.g., the asexual fern and the sexual prothallium, the asexual hydroid-polyp and the sexual medusa. **G., Alternations of**. See *Alternations of Generation*. **G., Equivocal**, spontaneous generation; birth from parentage of another form; abiogenesis. **G., Fissiparous**. See *Fission*. **G., Organs of**, those that are functional in reproduction; the genitalia. **G., Spontaneous**, abiogenesis; the generation of living from non living matter.

**Generator** (*jen'-er-a-tor*) [*generare*, to generate]. One who, or that which, begets or causes. **G.-gas**, a gas formed from coal, varying in composition according to the kind of coal employed and the manner of working; it is used to gasify coke and for the production of heat and power.

**Generic** (*jen-er'-ik*) [*genus*, a kind]. Pertaining to the same genus.

**Genesial** (*jen'-e-ze-al*) [*γενεσις*, origin]. Pertaining to generation. **G. Cycle**, the periods of ovarian, uterine, and mammary activity into which the reproductive life of the female is divided; the first extending from puberty to conception, the second from conception to gestation, and the third from gestation through lactation.

**Genesiology** (*jen-e-ze-ol'-o-je*) [*γενεσις*, reproduction; *λόγος*, science]. The science of reproduction.

**Genesis** (*jen'-es-is*) [*γενεσις*, production]. The act of begetting; development; origin; formation; generation.

**Genetic** (*jen-et'-ik*) [*γενεσις*, generation]. Pertaining to generation, or to anything inherited. **G. Affinity**, relationship by direct descent.

**Genetous** (*jen'-et-us*) [*γενεσις*, generation]. Congenital; existing from some point or period in fetal life; as genetous idiocy.

**Genèvrete** (*zhen-a-vret'*) [*Fr.*]. A drink made by the fermentation of wild fruits with juniper-berries and wine; it is popular in parts of Switzerland.

**Genga's Bandage**. See *Bandage*.

**Genial** (*je'-ne-al*) [*gena*, chin]. Pertaining to the chin.

**G. Tubercles**, four prominent tubercles on the internal surface of the lower jaw.

**Genian** (*je'-ne-an*) [*gena*; *γενειον*, chin]. Pertaining to the chin.

**Geniculate, Geniculated** (*jen-ik'-u-lāt, -ed*) [*geniculare*, to bend the knee]. In biology, kneed, or abruptly bent. **G. Bodies**, the corpora geniculata; two oblong, flattened bodies on the outer side of the corpora quadrigemina and under the back part of the optic thalamus. See *Geniculum*. **G. Ganglion**. Same as *Intumescencia gangliiformis*.

**Geniculum** (*jen-ik'-u-lum*) [*genu*, knee]. One of the two eminences on the latero-caudal aspect of the diencephal; the *post-geniculum* is mesad and more distinct, and the *pre-geniculum*, laterad and less distinct.

**Genio-** (*je'-ne-o-*) [*γενειον*, the chin]. A prefix denoting connection with the chin. **G.-hyoglossus Muscle**. See *Muscles*, *Table of*. **G.-hyoid Muscle**. See *Muscles*, *Table of*.

**Genioplasty** (*je'-ne-o-plas-te*) [*γενειον*, chin; *πλάσσειν*, to form]. Plastic surgery, or a plastic operation, upon the chin.

**Genipap** (*jen'-e-pap*) [*native Guiana, Genipapo*]. The agreeable edible fruit of *Genipa americana*, a rubiaceous tree of tropical America. Cataplasms are made of the unripe fruit.

**Genipi** (*jen'-ip-e*) [*Fr.*, *génépi*]. A green bitter-sweet cordial, or liquor, made from Alpine herbs of the genera *Artemisia*, *Achillea*, etc.

**Genista** (*jen-is'-tah*) [*L.*]. A genus of leguminous plants. **G. canariensis**, affords some part of the so-called oil of rhodium. **G. purgans**, of W. Europe, is purgative and emetic. **G. tinctoria**, dyer's broom, is diuretic and purgative. Unof.

**Genital** (*jen'-it-al*) [*genitalis*, pertaining to generation]. Pertaining to the organs of generation or to reproduction. **G. Cord**, the union of the two ducts of Wolff and of Müller to form a common cord in the embryo. **G. Eminence**, or **Tubercle**, an elevation appearing about the sixth week of embryonic life, in front of the cloaca, and from which the penis or clitoris is developed. **G. Fissure**, a furrow extending from the genital eminence of the embryo to the cloaca. **G. Folds**, two plications at the side of the orifice of the cloaca. **G. Furrow**. Same as *G. Fissure*. **G. Sense**, the degree of vigorousness of the development of ovisacs.

**Genitalia** (*jen-it-a'-le-ah*) [*genitalis*, pertaining to gen-

eration]. The organs of generation. In the *male* these consist of two testicles or seminal glands, with their excretory ducts; a musculo-glandular organ, the prostate, which provides a material for the dilution of the semen; an organ of copulation, the penis; and a canal, the urethra, piercing the prostate and penis, and

EXTERNAL GENITALIA OF FEMALE.

1. Labia majora of right side. 2. Fourchet. 3. Labia minora.
4. Clitoris. 5. Urethral orifice. 6. Vestibule. 7. Orifice of the vagina. 8. Hymen. 9. Orifice of the vulvo-vaginal gland.
10. Anterior commissure of the labia majora. 11. Orifice of the anus.

serving for the transit of the generative and urinary secretions. The *female* genitals include an *external* part, the vulva, and the vagina, or passage-way leading to the *internal* organs; the latter include the ovaries, or organs of ovulation, with their ducts or Fallopian tubes, and the uterus, a musculo-mucous sac in which the ovum undergoes development and by which the fetus is ultimately expelled.

**Genitalist** (*jen'-it-al-ist*) [*genitalis*, pertaining to generation]. One who is a specialist in the treatment of diseases and affections of the genital organs.

**Genito-** (*jen'-it-o-*) [*genitus*, begotten, from *gignere*, to be born]. A prefix denoting connection or relation to the genital organs. **G.-anal**, pertaining to the genitals and the anus. **G.-crural**. See *Nerves*, Table of. **G.-enteric**, relating to the genitals and to the intestine. **G.-spinal Center**. See *Center*. **G.-urinary**, relating to the genitals and the urinary organs.

**Gennari, Line of**. See *Lines*, Table of.

**Genoblast** (*jen'-o-blast*) [*gēvos*, sex; *βλαστός*, germ]. 1. The nucleus of the impregnated ovum, regarded as bisexual. 2. An ovum or spermatozoid.

**Genocatachresia** (*jen'-o-kat-ak-re'-se-ah*) [*gēvos*, sex; *κατάχρησις*, misapplication]. Perversion of the sexual instinct.

**Genometabole** (*jen'-o-me-tab'-o-le*) [*gēvos*, sex; *μεταβολή*, change]. The modification of sexual character that may follow the menopause.

**Gentele's Green**. See *Pigments*, *Conspectus of*.

**Gentian**, or **Gentiana** (*jen'-she-an*, or *jen'-she-a'-nah*) [*gentiana*, gentian]. The root of *G. lutea*, a European, and of *G. catesbeii*, an American species, a simple, non-astringent bitter. It is highly esteemed as a

stomachic tonic in convalescence from acute diseases and malarial fever. **G.-blue**. Same as *Spirit blue*. **G., Ext.** Dose gr. j-v; dose of the British extract gr. ij-x. **G., Ext., Fld.** Dose 3 ss-j. **G., Infusum, Comp.**, unof., gentian 10, bitter orange peel 2½, coriander 2½, alcohol 40, water to make 320. Dose 3j-3j. **G., Mist., Alkaline**, unof., dil. hydrocyanic acid miiij, sodium bicarb. gr. xv, infus. gentian. comp. to make 3j. Dose 3j. **G. et Sennæ, Mist.**, unof., infus. of senna 3 iij, comp. tinct. cardamom 3j, comp. infus. of gentian 3vj. Dose 3x. **G., Tinct., Comp.**, contains gentian 10, bitter orange peel 4, cardamom 1, dil. alcohol to make 100. Dose 3 ss-j.

**Gentiogenin** (*jen'-she-oi'-en-in*). See *Gentiopicroin*.

**Gentiopicroin** (*jen'-she-o-pik'-rin*) [*gentiana*, gentian; *πικρός*, bitter], C<sub>20</sub>H<sub>30</sub>O<sub>12</sub>. The principal constituent of *Gentian*. It is a peculiar, intensely bitter, crystal line glucosid, forming clear, radiate, or clustered needles, soluble in water and dilute alcohol, insoluble in ether. Diluted acids separate it into sugar and *gentiogenin*, a yellow, bitter, neutral powder.

**Gentisin** (*jen'-tis-in*) [*gentiana*, gentian], C<sub>11</sub>H<sub>10</sub>O<sub>5</sub>. A coloring matter contained in gentian root; it crystallizes in yellow needles.

**Genu** (*je'-nu*) [*genu*, the knee; *pl.*, *Genua*]. 1. The knee. 2. Any bent or knee-shaped structure; as the *genu* of the corpus callosum, or of the optic tract. **G. corporis callosi**, the cephalic reflected part of the corpus callosum. **G.-cubital**, relating to the knee and the elbow; as the *Genucubital Posture*, in surgery. See *Postures*, Table of. **G. extrorsum**, out-knee; outward bowing of the knee; bow-leg. **G. facialis**, the curved portion of the bundle of rootlets emerging from the subnuclei of the *Nidus facialis*, and causing, together with the underlying nidus of the abducens, the *Eminentia facialis* on the floor of the fourth ventricle. **G.-pectoral**, relating to the knee and the chest. **G.-p. Posture**, the (so-called) Knee-chest Posture. See *Postures*, Table of. **G. recurvatum**, the backward curvature of the knee-joint. **G. valgum**, inward curving of the knee; knock-knee; in-knee. **G. varum**. Same as *G. extrorsum*.

**Genual** (*jen'-u-al*) [*genu*, the knee]. Pertaining to a knee or to a genu.

**Genuclast** (*jen'-u-klast*) [*genu*, knee; *κλῆν*, to break]. An apparatus for the forcible correction of knee-joint deformities or adhesions.

**Genuflex** (*jen'-u-fleks'*) [*genu*, knee; *flexus*, bent]. Bent at, or like, the knee. Also, bent at any joint.

**Genuflexion**, **Genuflection** (*jen'-u-flek'-shun*) [*genu*, knee; *flexus*, bent]. The bending or flexion of the knee.

**Genuflexuous** (*jen'-u-fleks'-u-us*) [*genu*, knee; *flexus*, a bending]. In biology, zig-zag, with knee like bendings.

**Genus** (*je'-nus*) [*genus*, a family; *pl.*, *Genera*]. A species or a number of species marked by one or more common characteristics that distinguish them from other groups of species.

**Genyantralgia** (*jen'-e-an-tral'-je-ah*) [*γενν*, jaw. *άντρον*, cave; *ἀλγος*, pain]. Pain or neuralgia in the antrum of Highmore.

**Genyantritis** (*jen'-e-an-tri'-tis*) [*γενν*, jaw; *άντρον*, cave; *τις*, inflammation]. Inflammation of the genyantrum.

**Genyantrum**, or **Genyantron** (*jen'-e-an'-trum*, or *-tron*) [*γενν*, jaw; *άντρον*, cave]. The maxillary antrum, or antrum of Highmore.

**Genyplasty** (*jen'-e-plas-te*) [*γενν*, cheek, chin, jaw; *πλασσειν*, to form]. An operation for reforming or restoring the cheek or jaw, imperfect either from injury or from congenital malformation.

**Geoblast** (*jé'-blast*) [*γῆ*, earth; *βλαστός*, germ]. In biology, a plumule that in germination rises above the ground, leaving the cotyledons buried, e. g., that of the pea.

**Geoffroya** (*jé'-froy-á*) [after *Geoffroy*, a French physician]. A genus of leguminous trees. *G. spinulosa* and *G. vermicifuga* are S. American trees with antitubercle seeds. Unof.

**Geogenous** (*jé'-joo-nus*) [*γῆ*, earth; *γεννέω*, produce]. In biology, applied to such plants as grow on the ground, rather than on other plants; specifically applied to fungi.

**Geographic Tongue**. An eruption on the dorsum of the tongue, which is always covered with sinuous, map-like lines. It is very chronic and obstinate in its nature, and most frequently attacks young children. It is probably the expression of a trophic neurosis.

**Geography** (*jé'-joo-ree*) [*γῆ*, earth; *γραφειν*, to write]. In medicine, a description of the earth's surface with reference to climatology and the distribution of disease, with relation to origin and locality.

**Geolin** (*jé'-lin*) [*γῆ*, earth; *λίον*, oil]. A trade-name for a petroleum resembling vaselin.

**Geology** (*jé'-joo-lee*) [*γῆ*, earth; *λόγος*, science]. The science treating of the structural development of the earth.

**Geomatism** (*jé'-má'-tíz-m*) [*γῆ*, earth; *μαζός*, even]. In biology, the tendency of organisms to adjust themselves to the attraction of gravitation by symmetric growth in horizontal planes.

**Geomaly** (*jé'-má'-lee*). Same as *Geomatism*.

**Geometry** (*jé'-má'-tíz-ee*) [*γῆ*, earth; *μετρον*, a measure]. That branch of mathematic science that treats of the relations of magnitudes.

**Geophagia** (*jé'-af'-jee-ah*). See *Geophagism*.

**Geophagism** (*jé'-ff'-á'-izm*) [*γῆ*, earth; *φαγεῖν*, to eat]. The practice of earth-eating or clay-eating; chthonophagia.

**Geophagist** (*jé'-ff'-á'-íz-út*) [*γῆ*, earth; *φαγεῖν*, to eat]. A dirt eater.

**Geophagous** (*jé'-ff'-á'-us*) [*γῆ*, earth; *φαγεῖν*, to eat]. Added to dirt-eating.

**Geophagy** (*jé'-ff'-á'-ee*). See *Geophagism*.

**Geophilous** (*jé'-ff'-il-ús*) [*γῆ*, earth; *φιλος*, loving]. In biology, ground-loving, e. g., certain snails.

**Georgia Bark** (*jé'-je-ah*) [after King *George*, of England]. The bark of *Pin-kneya pubens*, a tree of N. America; it is said to be febrifuge. Unof.

**Geotropic** (*jé'-tróp'-ik*) [*γῆ*, earth; *τρέπειν*, to turn]. Affected by or turning toward the earth; exhibiting a tendency to grow toward the earth. The roots of plants are *geotropic*.

**Geotropism** (*jé'-tróp'-izm*) [*γῆ*, the earth; *τρέπειν*, to turn]. In biology, the tendency of roots and other parts to grow downward toward the earth.

**Geotropy** (*jé'-tróp-ee*). Same as *Geotropism*.

**Gephyrocereal** (*jé'-roo-sá'-keel*) [*γέφυρα*, a bridge; *κέρειον*, tail]. In biology, applied to fishes in which the dorsal tubin is replaced by the union of the dorsal and anal fins.

**Geranium** (*jé'-rí-um*) [*γέρων*, geranium]. A precipitate from the tincture of Crane-bill, *Geranium maculatum*. It stimulates and contracts the caliber of the capillary vessels of the mucous membranes, etc. Dose 1 to 3 grains. Unof.

**Geranium** (*jé'-rí-um*) [*γέρων*, geranium; *γεν.*, *Gerani*]. Crane-bill root. The root of *G. maculatum*, with properties due to tannic and gallic acids. It is useful in diarrhea, infantile colic, etc. **G., Ext.**, Fld. Dose 1 to 5 grs.

**Geratic** (*jé'-at'-ik*) [*γῆρας*, old age]. Relating to old age.

**Geratology** (*jér-at-ol'-o-já*) [*γῆρας*, old age; *ζῆεν*, to speak]. That department of biology that treats of the decadence and gradual extinction of a group of organisms.

**Gerber's Food**. A variety of infantile milk-food having the following composition: Water, 0.78; fat, 2.21; grape-sugar and milk-sugar, 6.06; cane-sugar, 30.50; starch, 38.48; soluble carbohydrates, 44.70; albuminoids, 9.56; ash, 1.21.

**Gerdy, Fibers of**. See *Fibers*. **G., Ligament of**. See *Ligament*.

**Gerhardt's Sign**. See *Signs and Symptoms, Table of*.

**G.'s Test**. See *Tests, Table of*. **G., Type Theory of**, the molecules were considered as residues that remain unaltered in certain reactions.

**Gerlach's Ammonia-carmin**. See *Stains, Table of*.

**G.'s Carmin Mass**, a warm-flowing mass for injecting tissues. Dissolve 5 gm. of carmin in a mixture of 4 c.c. of water and 0.5 c.c. of ammonia. Allow the solution to stand several days, and mix with 8 parts of a solution of gelatin, 1 to 2. Filter and inject at a temperature of 40° C.

**G.'s Network, or Plexus**, an exceedingly delicate fibrous network of the finest nerve-fibrils in the gray matter of the cord. **G.'s Theory**, pertains to the connection of the nerve-fibers and ganglionic cells of the cord. **G.'s Tubal Tonsil**, a granular condition sometimes noticed at the orifices of the Eustachian tubes in chronic inflammations in this region, and due to swelling of the muciparous glands of the tube. **G.'s Valve**, the fold of mucous membrane that surrounds the mouth of the vermiform appendix.

**Gerlier's Disease**. An affection (of farm-hands) characterized by sudden paroxysms of ptosis, vertigo, muscular paresis, and cervico-occipital pain. See *Diseases, Eponymic Table of*.

**Germ** (*jérm*) [*Lu.*, *germen*, sprig, offshoot, embryo]. In biology, (a) a portion of matter potentially vital and having within itself the tendency to assume a definite living form (Harvey); a spore, a seed, an embryo. (b) A microbe or bacterium. **G.-area**, the germinal area, the germinal disc, *area germinativa*, the spot on an ovum where the development of the embryo begins. **G., Asexual, or Unisexual**. See *Parthenogenesis, Germ-plasm, Evolution, and Reproduction*. **G.-band**, in embryology, one of the bands that unite to form the primitive streak. **G.-cell**. 1. The germinal vesicle in a non-fertilized ovum. 2. The ovum that has been impregnated, but which is still a single cell; a cytula, or a blastomere; a simple sphere. See also *Heredity*. **G., Dentina**, a tooth-papilla, or tooth pulp. **G. of Disease**, the special virus or spore through which a disease becomes communicable. **G.-disc**. See *G.-area*. **G. Epithelium**, cylindrical cell on the surface of the median plate of the mesoblast. **G.-flesh**. See *Sarcophyte*. **G.-gland**, a germ-producing gland; an ovary or a testicle. **G.-history**, ontogeny, *q. v.* **G.-layer**, in biology, any one of the membranes of a developing germ, as the *blastophylla*, *epiblast*, *mesoblast*, *hypoblast*, *endoderm*, *ectoderm*, *mesoderm*, *somatopleure*, *splanchnopleure*. **G.-plasm**, in biology, a term introduced by Weissmann to indicate the reproductive or hereditary substance of living organisms. It is held to contain all the primary constituents of the entire organism; it is never produced neogenetically, but is ever passed on from the germ-cell in which an organism originates in direct continuity to the germ cells of succeeding generations. It causes the production of the new individual by directing the process of division in ontogeny, in the course of which it becomes changed in a regular manner. It is composed primarily of biophores (*q. v.*) or bearers of vitality, the smallest units that exhibit vital force. (Cf. *pangenet*

of De Vries, *physiologic units* of Herbert Spencer, *plastides* of Elsberg, and *plasomes* of Wiesner.) These biophores unite into groups called *determinants* (*q. v.*), each of which is a primary constituent of a cell. Groups of determinants in turn combine to form *ids* (Cf. *ancestral germ-plasms*), which correspond to the small granules hitherto called *micro-somata* (*q. v.*). The ids again form groups called *idants* (*q. v.*), which correspond with the *chromatosomes* (*q. v.*) or rod-like granular masses of chromatin in the nucleus. **G.-plasma**, the protoplasm of the ovum or germ, supposed to determine the character of the resultant offspring; the physical basis of heredity and of the conservation of the species. Its alleged unchangeableness is called "the immortality of the germ-plasma." See *Protoplasm*. **G.-plasms**, **Ancestral**, Weismann's term for bodies of a highly complex constitution, each containing all the primary constituents that are necessary to the formation of an organism ("Athenplasmen"), afterward supplanted by the word *id*, (*q. v.*). **G.-pore**, in cryptogamic botany, a simple pit in the coat of a spore or an opening that serves as a place of exit for the tubular outgrowths from the spore at the time of germination (De Bary). **G.-sac**, the vesicle constituting the blastoderm of mammals. **G., Specific**, same as *Germ*. **G.-theory**, the doctrine of the origin of every organism from a germ or germ-plasm; *blastogenesis*, as distinguished from *neogenesis*, or spontaneous generation. Also the doctrine that certain diseases are dependent upon the presence of certain microorganisms. **G.-tube**, in cryptogamic botany the filamentous growth of a spore upon germination. **G.-vesicle**. See *Germinal Vesicle*.

**German** (*jer'-man*) [*Germanus*, German]. Pertaining or belonging to Germany. **G. Breast-tea**, a decoction of althea, *q. v.* **G. Black**. Same as *Frankfort Black*. **G. Chamomile**. See *Matricaria*. **G. Disease**. Synonym of *Influenza*. **G. Ichthyol**. See *Thiol*. **G. Measles**. See *Rubeola*. **G. Method**, the oral method of instruction for deaf-mutes. **G. Tinder**. See *Amadou*.

**Germander** (*jer-man'-der*, or *jer'-man'-der*) [*M.E., germanwider*, germander]. A popular name for plants of the labiate genus *Teucrium*. *T. chamaedrys*, of Europe, is a popular polychrest remedy. *T. narinum* is diaphoretic, tonic, and emmenagogue. Unof.

**Germarium** (*jer-mal'-re-um*) [*germen*, germ]. In biology, applied to the ovary of certain invertebrates.

**Germicidal** (*jer'-mis-i-dal*) [*germen*, a germ; *cadere*, to kill]. Destructive of germs.

**Germicide** (*jer'-mis-id*) [*germen*, germ; *cadere*, to kill]. A microbicide; an agent that destroys germs.

**Germiculture** (*jer'-me-kul'-chur*) [*germen*, germ; *cultura*, culture]. The artificial culture of bacteria.

**Germifuge** (*jer'-mif-uj*) [*germen*, a germ; *fugare*, to banish]. 1. Having the power of expelling germs. 2. An agent that expels germs.

**Germinal** (*jer'-min-al*) [*germen*, a germ]. Pertaining to a germ or the genesis of a tissue or organ. **G. Area**, the *Area germinativa*, or *embryonal shield*, a white round spot upon one side of the vitelline membrane in which the blastoderm becomes double. **G. Disc**. See *Disc*. **G. Matter**. See *Protoplasm*. **G. Membrane**, the blastoderm. **G. Spot**, the nucleolus of the ovule. **G. Vesicle**; (a) the blastosphere or blastodermic vesicle; (b) a lacuna in the substance of the germ; (c) the imperfectly formed germ-cell in the embryo-sac previous to fertilization. Cf. *Gastrocyctis*. **Germination** (*jer-min-a'-shun*) [*germinatio*, sprouting, budding]. In biology, the development of an embryo from the ovum. Sprouting of a seed or spore.

**Germule** (*jer'-mul*) [*germen*, a germ]. An imipient germ.

**Gerocomia**, or **Gerocomy** (*jer-o-ko'-me-ah*, or *jer'-o-me*) [*γῆρως*, old man; *κομειν*, to care for]. The hygienic and medical care of old people.

**Gerocomium** (*jer-o-ko'-me-um*) [*γῆρως*, old man; *κομειν*, to care for]. A home or institution for aged people.

**Geromarasms** (*jer-o-mar-as'-muc*) [*γῆρως*, old man; *μαρasmus*, a wasting]. Emaciation and weakness characteristic of extreme old age.

**Geromeninguria** (*jer-o-men-in-gul'-re-ah*) [*γῆρως*, old man; *μυρμηξ*, membrane; *ουρην*, urine]. That senile condition in which the urine contains membranous shreds.

**Geromorphism** (*jer-o-mor'-fiz-m*) [*γῆρως*, old age; *μορφή*, form]. Decreptitude of the cutaneous system; appearance of age in a young person.

**Geroni speciosa** (*jer-o'-ne-sp'-he-o'-ah*) [L.]. An Andean plant, having a local reputation as a remedy for syphilis and rheumatism. Unof.

**Gerontoxon** (*jer-on-tok'-on*). See *Arca unli*.

**Geropigia** (*jer-o-pi'-e-ah*) [*Port.*]. A strongly sweetened and colored mixture of brandy and grape-juice, used in adulterating and fortifying wines.

**Gerst's Method**. See *Treatment, Methods of*.

**Gestation** (*jes-ta'-shun*) [*gestatio*; *gestare*, to bear]. Same as *Pregnancy*. **G., Abdominal**, the form of extra-uterine gestation in which the product of conception is developed in the abdominal cavity. **G., Double**. 1. Twin pregnancy. 2. The coexistence of uterine and extra-uterine pregnancy. **G., Ectopic**. Same as *G., Extra-uterine*. **G., Extra-uterine**, pregnancy in which the product of conception is not contained in the uterine cavity. **G., Dorsal**, the hatching of eggs on the back, as occurs in certain batrachians, *e. g.*, the Surinam toad. **G., Mammary** or **Pouch**, the completion of growth in a pouch, as in marsupials. **G., Oral**, applied to the hatching of eggs in the mouth, as occurs in some fishes.

**Geum** (*je'-um*). See *Azens*.

**Gheel System** (*gel sis'-tem*) [from *Gheel*, a town in Belgium]. The colony-plan of housing, boarding, and treating the insane, which prevails at Gheel, in Belgium.

**Giacomi's Method**. A method of staining the bacillus of syphilis. See *Stains, Table of*.

**Giacomini's Method of Preserving the Brain**. Immerse the brain in a saturated solution of chlorid of zinc; turn several times daily and inject 600 grms. of the liquid through the carotids. Remove the membranes in 48 hours. Allow the brain to remain in the solution until it begins to sink, then immerse in alcohol for 10 days. Immerse in glycerin until it sinks; remove, allow to dry, and varnish.

**Giampetro-Löwenberg Method**. A method of introducing the Eustachian catheter. The catheter is passed into the pharynx, and the beak is then turned toward the opposite tube and the catheter withdrawn until it catches on the posterior edge of the septum narium, when it is rotated in the opposite direction through an arc of at least 180° into the tube which it is desired to catheterize.

**Giant** (*ji'-ant*) [*γίγας*, large or ponderous]. An adult of a species excessively developed in stature and proportions. **G.-cell**. See *Cell*. **G. Pelvis**. See *Pekis*, *Female*, *Deformities of*. **G.-powder**. See *Dualm*. **G.-swelling**. See *Angio-nevrotic Edema* and *Urticaria tuberosa*. **G. Urticaria**. See *Urticaria edematosa*.

**Giantism** (*ji'-an-tizm*) [*γίγας*, large]. Excessive overgrowth; the quality of being gigantic. **Gigantism**.

**Gianuzzi, Cells or Crescents of.** Granular protoplasmic cells found in mucous glands between the mucous cells and the basement membrane; they play an important part in the functional activity of the gland. They are also called *denticulate* cells. See *Cell*.

**Gibbes' Method.** A method of staining tubercle-bacilli. See *Stain*, *Table of*.

**Gibbon's Hydrocele.** See *Dropsy*, *Table of*.

**Gibbosity** (*ji-b'os-i-ti*) [*gi-b'os*, a hunch, a hump]. In biology, a hump or irregular protuberance.

**Gibbous** (*ji-b'us*) [*gi-b'us*, hunched]. Swollen, convex, protuberant, especially upon one side.

**Gibert's Pityriasis.** See *Diseases*, *Table of*. **G.'s Syrup.** See *Hydrargyrum*.

**Giblets** (*ji-b'lets*) [OF., *gibélet*, *giblets*]. The entrails of fowl.

**Gibraltar Fever.** Synonym of *Yellow Fever* and of *Mediterranean Fever*.

**Gibson's Bandage.** See *Bandage*.

**Gid** (*gid*) [ME., *gidie*, dizzy]. Staggers in sheep, a disease caused by a cystic worm in the brain, formerly called *Cenurus cerebri*, *q. v.* See under *Parasites* (*Animals*), *Table of*.

**Giddiness** (*gid'-e-ness*) [ME., *gidie*, dizzy]. A sensation of whirling or unsteadiness of the body, usually accompanied by more or less nausea. See *Gid*.

**Giesbrecht's Method.** A method of mounting serial sections. Make a solution of brown shellac in alcohol; filter and paint on warmed slides; allow to dry. Over this paint a thin layer of creasote and put the sections in place. Then heat the slide on a water-bath for fifteen minutes at the melting-point of paraffin. Allow to cool; dissolve the paraffin in turpentine; mount in balsam. The tissue must have been stained *en masse* before embedding.

**Gigantism** (*ji-gan'-tizm*) [*gi-gas*, giant]. Abnormally exaggerated size; excessive overgrowth; great hypertrophy or auesis. **Giantism.**

**Gigantoblast** (*ji-gan'-to-blast*) [*gi-gas*, giant; *blas-tos*, a germ]. A large germ said to exist in the blood in cases of pernicious anemia. It somewhat resembles the larger megalocyte.

**Giganto-cellular** (*ji-gan'-to-sell'-u-lar*) [*gi-gas*, giant; *cella*, cell]. Characterized by giant-cells; as *Giganto-cellular Endotheloma*.

**Gigartina** (*gi-ar-ti'-nah*) [L.]. A genus of seaweeds, several species of which are used in the same way as *Carraheen*, for human food. Some of the agar agar of commerce is believed to be the product of plants of this genus.

**Gigerium** (*ji-jer'-e-um*) [*gigeria*, the entrails of poultry]. In biology, the gizzard of birds, or the thickened muscular portion of the stomach in certain mammals. See *Gizzard*.

**Gigger** (*ji-g'-er*). See *Pulex*.

**Gila monster.** See *Holodermis*.

**Gill** (*gil*) [ME., *gile*, *gyll*, a gill]. One of the respiratory organs of such animals as breathe the air that is mixed with water. The gills first appear in the *Polychæta*. Cf. *Branchia*. **G.-hearts**, contractile expansions, with but a single cavity, at the base of the blood-vessels conducting the blood to the branchiae in the higher crustacea.

**Gillenia** (*gil-el'-neah*) [after Dr. Arnold Gill, a German botanist]. A genus of rosaceous herbs. **G. stipulacea** (Bowman's root, Indian physic) and **G. trifoliata**, both of N. America, are good, safe, and effective substitutes for ipecac. Unof.

**Gillenin** (*gil'-en-in*) [after Dr. Gill, a German botanist]. The active principle of *American Ipecac*. It

is a bitter, slightly odorous, permanent powder with emetic properties.

**Gimbernat's Ligament.** See *Ligament*.

**Gin** (*jin*) [ME., *gynpre*, juniper]. Common grain-spirit distilled and aromatized with juniper-berries. The finest gin, known as "Holland," is made in the distilleries of Schiedam, whence also the name "Schiedam Schnapps." See *Spiritus juniperi*. **G.-drinker's Liver.** See *Cirrrosis*. and *Hobnail Liver*. **G.-liver.** See *Cirrrosis*.

**Gingelly Oil** (*jin-jell'-e oil*). See *Sesami*, *Oleum*.

**Ginger** (*jin'-jer*). See *Zingiber*.

**Gingiva** (*jin-jiv'-ah*) [L. "the gum;" *pl.*, *Gingivæ*]. The vascular tissue surrounding the necks of the teeth and covering the alveoli.

**Gingival** (*jin-jiv'-al*) [*gingiva*, the gum]. Pertaining to the gums. **G. Line**, a blue or purplish line along the gums where they meet the teeth, indicative of chronic lead-poisoning; also, the reddish line on the gums sometimes seen in tuberculosis, etc. **G. Margin**, the line or edge of the gums where they meet the teeth; the free edge of the gums.

**Gingivalgia** (*jin-jiv'-al'-je-ah*) [*gingiva*, gum; *algos*, pain]. Neuralgia of the gums.

**Gingivitis** (*jin-jiv'-i-tis*) [*gingiva*, the gums; *itis*, inflammation]. Ulitis; inflammation of the gums. **G., Expulsive**, osteo-periostitis of a tooth, which is gradually expelled from its socket.

**Ginkgo** (*ging'-ko*) [Jap.]. A genus of taxaceous trees. **G. biloba**, a native of Eastern Asia, is now common in the U. S. Its edible seeds are astringent and are said to restrain or to slow the secretion of urine. Unof.

**Ginglymoid** (*ging'-glim-oid*) [*γίγγυμος*, a hinge; *ειδος*, likeness]. Resembling a hinge-joint.

**Ginglymus** (*ging'-glim-us*). See *Diarthrosis*.

**Ginseng** (*jin'-seng*) [Chinese, *jintsan*, ginseng]. The fleshy root of several species of *Panax* or *Aralia*. *A. ginseng*, of Eastern Asia, and *A. quinquefolia*, of the U. S., are the best-known species. Ginseng is an aromatic bitter with tonic properties. Unof.

**Giraffe, Girafy** (*jir-af'*, *-af'-e*). See *Endemic Colic* and *Dengue*.

**Giraldensian Organ or Organ of Giralde's.** The par-epididymis. It is composed of a number of flat, white bodies, each of which consists of a collection of tubes blind at each end. It is situated at the posterior portion of the epididymis, between the head and the vas deferens.

**Girdle** (*gir'-dl*) [ME., *girdel*, a waistband]. Any band designed to go around the body. **G., Emphysematous.** See *Emphysema*. **G., Neptune's**, an abdominal bandage used in applying the wet-pack.

**G.-pain**, a sensation as if a girdle were drawn tightly around the body. When not hysteric, it is characteristic of disease of the myelon, or of the nerve-roots. **G., Pelvic**, the bones (or cartilages) forming the support for the lower limbs of vertebrates. In mammals they consist of the ilia, ischia, and os pubes.

**G.-sensation.** Same as *G.-pain*. **G., Shoulder**, the system of bones designed for the support of the upper limbs or arms. In man, the scapule and clavicles compose this structure.

**Girgensohn's Method.** A method of removing proteids from a liquid. Mix the solution with half its volume of a solution of common salt; add tannin in slight excess, and the proteids will be entirely precipitated.

**Girmir** (*gir'-mir*) [Arab]. Tartar of the teeth.

**Giroflé** (*jir-o-fla'*). See *Pigments*, *Conspectus of*.

**Gizzard** (*gis'-ard*) [OF., *gesier*; L., *gigerium*]. The strong muscular stomach of birds; also, the corre-

- sponding organ at the pylorus of certain mammals. **G.-skin**, the lining membrane of a gizzard. Pigeons' gizzard-skins, dried and triturated, are a popular remedy for dyspepsia. See *Inglutin*.
- Glabella** (*gla-bel'-ah*) [dim. of *glaber*, smooth]. The triangular space between the eyebrows. See *Cranio-metric Points*.
- Glabbad** (*gla-bel'-ad*) [dim. of *glaber*, smooth; *ad*, to]. Toward the glabellar aspect of the head.
- Glabellar** (*gla-bel'-ar*) [dim. of *glaber*, smooth; *ad*, to]. Pertaining to the glabella.
- Glabbellen** (*gla-bel'-en*) [dim. of *glaber*, smooth]. Belonging to the glabella in itself.
- Glabbello-inial** (*gla-bel'-o-in'-e-al*) [dim. of *glaber*, smooth; *inior*, the nape of the neck]. Included between the glabellum to theinion.
- Glabbello-obeliac** (*gla-bel'-o-o-be'-le-ak*) [dim. of *glaber*, smooth; *ὀβελός*, a spit]. Included between the glabella to the obelion.
- Glabbello-occipital** (*gla-bel'-o-ok-sip'-it-al*) [dim. of *glaber*, smooth; *occiput*, the occiput]. Included between the glabellum to the occiput.
- Glabbellum** (*gla-bel'-um*) [*glaber*, smooth]. Same as *Glabella*.
- Glabrate** (*gla'-brāt*) [*glabrare*, to make smooth]. In biology, becoming or tending to smoothness or baldness.
- Glabrous** (*gla'-brus*) [*glaber*, smooth]. Smooth. In biology, destitute of hairs or down.
- Glacial** (*gla'-she-al*) [*glacies*, ice]. Icy; resembling ice in appearance, as glacial acetic or phosphoric acid.
- G. Phosphoric-acid Test**. See *Tests*, *Table of*.
- Glacialin** (*gla-she-a'-lin*) [*glacies*, ice]. An antiseptic substance used for the preservation of foods. It consists of borax, boric acid, sugar, and glycerin.
- Glaciation** (*gla-she-a'-shun*) [*glacies*, ice]. A condition like that of ice; erosive effect like that of moving ice.
- Gladiate** (*glad'-e-āt*) [*gladius*, a sword]. In biology, ensiform, or sword-shaped.
- Gladiolin** (*glad-i'-o-lin*) [*gladius*, a sword]. An alkaloid from brain-tissue.
- Gladiolus** (*glad-e-o'-lus*) [dim. of *gladius*, a sword]. 1. The middle or second piece of the sternum. 2. A genus of iridaceous flowering-plants. **G. segetum**, of Europe, is said to be aphrodisiac and emmenagogue. Unof.
- Glair** (*glār*) [ME., *glayre*, the white of egg]. The white of egg; any thin, viscous substance, as a mucous discharge.
- Glairidin** (*glār'-id-in*). Same as *Glairin*.
- Glairin** (*glār'-in*) [ME., *glayre*, the white of egg]. A peculiar organic, gelatinous substance found on the surface of some thermal waters. It is also called *baregin*, *plombierin*, *zoögene*, *glairidin*, *sulphurain*, and *zoidin*. See *Baregin*.
- Glairy** (*glār'-e*) [*glayre*, the white of egg]. Slimy; also, albuminous.
- Glaisher's Factors**. A table of figures for calculating the dew-point.
- Glama** (*gla'-mah*) [L.]. Lippitudo. An accumulation of gummy or hard material at the inner canthus of the eye; the material so accumulated.
- Gland** [*glans*, an acorn]. A name given to numerous bodies or organs of the body, both secretive and excretive in function, withdrawing from the blood material for other purposes, or that is injurious or of no use to the economy. In structure they may be simple, saccular, or tubular. Also, the bulbous end of the penis and clitoris. **G., Abdominal Salivary**, a term for the pancreas. **G., Absorbent**. See *G., Lymphatic*. **G., Accessory Lachrymal**. See *G. of Krause*. **G., Accessory Lactiferous**. See *G. of Montgomery*. **G., Accessory (of Pancreas)**. See *G., Brunner's*. **G., Accessory (of Parotid)**. See *Socia parotidis*. **G., Accessory (of Rosenmüller)**. See *G., Rosenmüller's*. **G., Accessory Supra-renal**, a small gland sometimes connected with and resembling the supra renal capsules. **G., Accessory Thyroid**, a small mass of gland tissue connected with the thyroid gland. **G., Acinose**, one composed of acini. **G., Acinous**. See *G., Racemose*. **G., Aggregate**. See *G., Cowper's*. **G., Aggregated (of Bruch)**, a number of follicles in the conjunctiva, at the palpebro-sclerotic reflection. **G., Agminated**. See *G., Peyer's*. **G., Albumin**, in *Catoda*, the gland that secretes the albuminous coating of the ovum. **G., Anal**, a lymphatic and odoriferous gland situated near the anus. **G., Angular**. See *G., Submaxillary*. **G., Anomalous**. See *G., Ductless*. **G., Anteprostatic**. See *G., Cowper's*. **G., Aporic**. See *G., Ductless*. **G.-area**, the depressed area, from the alveolar epithelium of which the mammary gland is developed. **G., Arterial**, one of a number of small gland-like bodies connected with the arterial system. **G., Arytenoid**, a small muciparous gland in front of the arytenoid cartilage. **G., Atrabiliary**, an old name for the Supra-renal Capsule. **G., Auricular, Anterior**, a lymph-gland anterior to the external auditory meatus. **G., Auricular, Posterior**. See *G., Subauricular*. **G., Axillary**, one of the lymph-glands situated in the axilla. **G. of Bartholin**. 1. A small gland on either side of the vagina, opening through a duct, on the inner side of the nymphæ. 2. See *G., Sublingual*. **G., Bauhin's**. See *G., Nuhn's*. **G. of Benham**. See *G., Lophophoral*. **G., Blandin's**. See *G., Nuhn's*. **G., Blind**. See *G., Ductless*. **G., Blood**. See *G., Hematopoietic*. **G., Blood-vascular**. See *G., Hematopoietic*. **G. of Boerhaave**. See *G., Miliary*. **G., Bowman's**, one of the tubular glands of the olfactory region. **G., Brachial**, one of the lymph-glands of the arm and the fore-arm. **G., Branchio-tympanic**. See *G., Tympanic*. **G., Bronchial**. 1. One of the lymph-glands of the bronchi and root of the trachea. 2. See *G., Thyroid*. **G. of Bruch**. See *G., Aggregated*. **G., Brunner's**, one of the granular racemose bodies found in the wall of the duodenum. **G., Buccal**, one of the glands between the buccinator muscle (of the cheek) and the adjacent mucous membrane. **G., Buccal, Inferior**. See *G., Molar*. **G., Bulbo-cavernous**. See *G., Cowper's*. **G., Bulbo-urethral**. See *G., Cowper's*. **G., Byssus**. See *G., Byssus*. **G., Byssus**, in *Lamellibranchiata*, a gland near the foot, secreting the substance that forms the byssus. **G., Calciferous**, in the earth-worm one of several pairs of lateral glandular bodies in the esophagus whose function it is to secrete a calcareous substance. **G., Camphor**, one of the camphor-secreting glands of the camphor-tree. **G., Cardiac**, one of the acinous glands in the mucosa at the distal extremity of the esophagus. **G., Cardiac Gastric**. See *G., Oxyntic*. **G., Cardiac Lymphatic**. See *G., Mediastinal, Superior*. **G., Carotic**. See *G., Intercarotid*. **G., Carotid**. See *G., Intercarotid*. **G., Cecal**, one of the lymph-glands around the cecum. **G., Celiac**, one of the lymph-glands on the abdominal aorta, above the superior mesenteric artery. **G., Cement**. 1. One of certain glands in insects whose function it is to secrete the sebum that surrounds the ova prior to their discharge. 2. In *Cirripedia*, one of the glands in the antennæ secreting a sticky substance. **G., Ceruminiparous**. See *G., Ceruminous*. **G., Ceruminous**, one of the convolute glands secreting the cerumen of

the ear. **G., Cervical**, one of the lymph glands of the neck; these are also called cervical ganglia. **G., Cervical, Deep**, one of the lymph glands contained in two groups, superior and inferior, that are deeply-seated in the neck. They empty into the right lymphatic duct, through the jugular lymphatic. **G., Cervical, Inferior, Deep**, the lower group of deep cervical glands in the supra-clavicular fossa. **G., Cervical, Middle**, one of the lymph glands in the neck, corresponding to the lower portion of the larynx. **G., Cervical, Posterior**, any one of the deep lymph glands situated along the anterior border of the trapezius muscle on either side of the neck. Enlargement of these glands is one of the earliest evidences of the secondary stage of syphilis. **G., Cervical, Superficial**, one of the superficial lymph glands in the upper anterior portion of the neck. **G., Cervical, Superior, Deep**, the upper of the deep cervical lymph glands, near the bifurcation of the common carotid artery. **G., Cervical, Upper, Deep**. See *G., Cervical, Superior, Deep*. **G., Choroid**, in certain *Amphibia*, a vascular plexus around the optic nerve. **G., Choroideal**. See *G., Choroid*. **G., Circumanal**. See *G., Anal*. **G., Closed**. See *G., Ductless*. **G., Coccygeal** (or *Luschka's*). 1. A small arterial gland on the top of the coccyx, ventrally. 2. See *G., Urogenital*. **G., Colic**. See *Crypts of Lieberkuhn*. **G., Colleterial**. See *Colleterium*. **G., Compound**, one in which the secreting surface is contained in numbers of small pouches. A gland whose duct is branched. **G., Concatenate**. See *G., Cervical, Deep*. **G., Conglobate**. See *G., Lymphatic*. **G., Conglomerate**. See *G., Racemose*. **G., Congregate**. See *G., Peyer's*. **G., Coniferous**, an old name for the disoid tracings in the wood-cells of gymnosperms. **G., Convoluted**, a tubular gland with a highly convoluted blind termination. **G., Cowper's** (or *Méry's*), in the male, one of two small acinous glands, situated between the two layers of the triangular ligament, anteriorly to the prostate gland. **G., Cowperian**. See *G., Cowper's*. **G., Cubital**, one of the lymph-glands of the elbow. **G., Cubital, Deep**, any one of the deep lymph glands around the elbow-joint. **G., Cubital, Superficial**, any one of the lymph-glands situated over the inner condyle of the humerus in the subcutaneous connective tissue. **G., Cutaneous**, any one of the various glands of the skin. They include the hair, sudoriparous and sebaceous glands. **G., Cyathiform**, in biology, small, fleshy, cup-like glands, secreting a viscid fluid. **G., Decidual**, any one of the glands of the decidua. **G., Dental** (of *Sorres*), one of the small, white epithelial bodies on the mucous membrane of the jaw, over the point of emergence of the teeth. **G., Diapnogenous**. See *G., Sudoriparous*. **G., Digestive**, in biology, one of certain glands situated on the leaves or other portions of some insectivorous plants; they secrete a fluid capable of digesting albuminoid substances. **G., Dorsal**. See *G., Sudoriparous*. **G., Ductless**, a gland without a duct. **G., Duodenal**. 1. See *G., Brunner's*. 2. One of the lymph glands of the duodenal mesentery. **G., Duverney's**. See *G. of Bartholin*. **G., Ebner's**, one of the acinous glands of the tongue situated in the region of the circumvallate papillae. **G., Enteric**. See *Crypts of Lieberkuhn*. **G., Epiglottic**, one of the muciparous glands about the posterior surface of the epiglottis. **G., Esophageal**, one of the acinous lymph-glands under the mucous membrane of the esophagus. **G., Excretory**, one of the glands that secrete the excrementitious matters of the body. **G., External**, in botany, one of the glands on the outer surface of a plant organ. **G., Facial**, one of the

lymph-glands of the face. **G., Facial, Deep**, one of the lymph-glands beneath the buccinator muscle. **G., Facial, Superficial**. See *G., Auricular, Anterior*. **G., Femoral**. See *G., Inguinal*. **G., Fever**, an infectious constitutional disorder characterized by rapid and painful enlargement of the cervical lymphatic glands, with considerable elevation of temperature. **G., Floral**. See *G., Nectariferous*. **G., Follicular**, one consisting of or beginning in follicles. **G., Follicular (of the tongue)**, one of the lymph-glands in the mucous membrane at the base of the tongue. **G., Fundus**. See *G., Oxyntic*. **G. of Galeati**. See *Crypts of Lieberkuhn*. **G., Gastric**, any one of the glands of the stomach, tubular or peptic. Those lining the fundus of the stomach are the true pepsin-secreting glands. **G., Gastro-epiploic, Inferior**, one of the lymph-glands surrounding the greater curvature of the stomach. **G., Gastro-epiploic, Superior**, one of the lymph-glands in the gastro-phrenic ligament. **G., Genal**. See *G., Buccal*. **G., Genital**. See *G., Sexual*. **G., Globate**. See *G., Lymphatic*. **G., Globular (of Mirbel)**, in biology, one of the spheric glands forming a pulverulent surface upon the calyx, corolla and anthers of many labiate plants. **G., Glomerate**. See *G., Racemose*. **G., Green**, in *Crustacea*, a gland on the side of the anterior portion of the body. Its duct opens on a cervical eminence, just below the antenna. **G., Guérin's**. See *G., Skené's*. **G. of Guettard**. See *G., Military*. **G., Guttural**. See *G., Pharyngeal*. **G., Hair**, the sebaceous gland of a hair-follicle. **G., Harder's**. See *G., Harderian*. **G., Harderian**, a small gland in the nictitating membrane of many of the lower animals. **G. of Havers** (also called synovial fringe), one of the fatty bodies lying behind the highly vascular fringe-processes that project from a synovial membrane into the cavity of a joint; these were formerly believed to be the glands that secreted the synovia. **G., Haversian**. See *G. of Havers*. **G., Hematopoietic**, any one of the glands that are supposed to take part in the formation of the blood, as the spleen, thymus, supra-renal capsules, etc. **G. of Henle**. See *G., Aggregated (of Bruch)*. **G., Hepatic**, one of the lymph-glands in the ligaments around the liver. **G., Hermaphrodite**, in hermaphrodite animals, a gland answering both as ovary and testicle. **G., Hibernating**, in hibernating animals, one of the masses of fatty tissue, supposed to aid in sustaining life during hibernation. **G., Honey-comb**. See *G., Peyer's*. **G., Hydrophorous**. See *G., Sudoriparous*. **G., Hypogastric**. See *G., Iliac, Internal*. **G., Iliac, Anterior**, one of the lymph-glands anterior to the iliac arteries, and situated between the fifth lumbar vertebra and the femoral ring. They receive the lymphatic and efferent vessels of the inguinal glands. **G., Iliac, External**. See *G., Iliac, Anterior*. **G., Iliac, Internal**, one of the lymph-glands in the course of the hypogastric artery and vein. **G., Iliac, Superior**, one of the lymph-glands near the crest of the ilium. **G., Infraclavicular**, one of the small lymph-glands situated below the clavicle, between the deltoid and pectoral muscles. **G., Inguinal, Deep**, one of the lymph-glands in the crural ring, around the femoral artery and vein. **G., Inguinal, Superficial**, one of the lymph-glands in the superficial fascia just above Poupart's ligament. **G., Infundibular**, the infundibulum of the brain. **G., Intercarotid**, a minute body of glandular structure, of unknown function, situated at the bifurcation of the common carotid artery. **G., Intercellular**, one of the multicellular vegetable glands, supplying the walls between the cells. **G., Intercoastal**, one of the lymph-glands

in the posterior portion of the intercostal spaces. **G., Internal**, in botany, a gland below the surface of a plant-organ. **G., Interocular**, in comparative anatomy, the ectocranial portion of the epiphysis cerebri. It is regarded as the rudiment of the third eye. **G., Interungulate**, in sheep, a muciparous gland between the hoofs. **G., Intestinal, Solitary**, one of a number of peculiar white isolated lymph-glands distributed through the intestinal mucous membrane. **G., Jugular, Inferior**. See *G., Cervical, Deep.* **G., Jugular, Superficial**. See *G., Cervical, Superficial.* **G., Jugular, Superior**. See *G., Cervical, Superior, Deep.* **G. of Kölliker**. See *G., Bowman's.* **G. of Krause**, one of a number of acinous glands in the orbital portion of the conjunctiva. **G., Labial**, one of several racemose glands near the edges of the lips. **G., Lachrymal**, a compound racemose gland in the upper and outer portions of the orbit, whose function it is to secrete the tears. **G., Lachrymal, Inferior**, the lower portion of the lachrymal gland. **G., Lachrymal, Superior**, the upper portion of the lachrymal gland. **G., Lactiferous**. See *G., Mammary.* **G., Laryngeal, Anterior, Posterior**, one of the acinous lymph-glands in the laryngeal mucous membrane. **G., Lateral**, in *Cestodes*, one of the glands situated on either side of the uterus. **G., Lenticular**. 1. In botany, one of the oily or fatty glands found in plants. 2. One of the conglobate glands in the mucous membrane of the stomach. **G. of Lieberkühn**. See *Lieberkühn, Crypts of.* **G., Lingual, Anterior**. See *G., Nuhn's.* **G., Lingual, Lateral**, one of the acinous glands at the edge of the tongue. **G., Lingual, Lymphatic**, one of two or three glands on the outer surface of the hyoglossus muscle. **G., Lingual, Posterior**, one of the acinous lymph-glands on the dorsum lingue near the foramen cecum. **G. of Littre (or of Morgagni)**, one of the small racemose muciparous glands in the mucous membrane of the cavernous portion of the urethra. **G., Lobulated**. See *G., Racemose.* **G., Lophophoral (of Benham)**, in biology, a border of glandular tissue, surrounding the lophophore. **G., Lumbar**, one of a number of lymph-glands, situated in the lumbar region, behind the peritoneum. **G., Luschka's**. See *G., Coccygeal.* **G., Lymph**. See *G., Lymphatic.* **G., Lymphatic**, a small oval mass of lymphoid tissue in the course of a lymphatic vessel. There are supposed to be between 500 and 600 in man. The chyle and lymph pass through them to the blood. **G., Lymphatic, Solitary**. 1. A simple isolated lymph gland. 2. See *G., Intestinal, Solitary.* **G., Mammary**, one of the glands, in mammals, that secrete milk. **G., Mastoid**. See *G., Subauricular.* **G., Maxillary, Internal**. See *G., Facial, Deep.* **G., Mediastinal**, one of the lymph-glands in the mediastinum. **G., Mediastinal, Anterior**, one of several small lymph-glands in the lower portion of the anterior mediastinum. **G., Mediastinal, Posterior**, one of the lymph-glands in the posterior mediastinum surrounding the esophagus and thoracic aorta. **G., Mediastinal, Superior**, one of the lymph-glands in the upper portion of the mediastinum. **G., Meibomian**, one of the minute sebaceous follicles between the cartilage and conjunctiva of the eyelids. **G. of Meibomius**. See *G., Meibomian.* **G., Méry's**. See *G., Cooper's.* **G., Mesenteric**, one of the lymph glands of the mesentery. **G., Meseraic**. See *G., Mesenteric.* **G., Mesocolic**, one of the lymph-glands in the mesentery of the colon. **G., Miliary**. 1. (of *Boerhaave*) any one of the sudoriparous glands. 2. (of *Mirbel*) in biology, one of the minute granules on the green parts of plants. 3. (of *Guetlard*) a stoma.

**G. of Mirbel**. See *G., Miliary*, and *G., Globular.* **G., Molar**, one of the large buccal glands situated near the molar teeth, between the masseter and buccinator muscles of the cheek. **G., Moll's**, one of the modified sweat glands on the free margin of the eyelids opening into the hair follicles of the eyelashes. **G., Montgomery's**, one of the microscopic sebaceous glands of the areola of the breast. **G. of Morgagni**. See *G. of Littre.* **G., Moriform**. See *G., Racemose.* **G., Morrenian**, in biology, one of certain glands of worms, as the earth-worm, whose function is that of assimilation. **G., Mucilaginous**, a name given to one of the fringed processes of synovial membranes. See *G., Haversian.* **G., Muciparous**. See *G., Mucous.* **G., Mucous**, one of the glands in mucous membranes, secreting mucus. **G., Mucous, Salivary**, a salivary gland mainly secreting mucus. **G., Mushroom-shaped**, a peculiar accessory male genital organ in certain insects, probably the analogue of the seminal vesicle. **G., Musk**, the glandular structure in certain animals secreting musk. **G. of Naboth** (also called *follicle of Naboth*), a pathologic vesicle in the mucous membrane of the uterine cervical canal. **G., Nabothian**. See *G. of Naboth.* **G., Nasal**. 1. See *G., Supra-orbital*. 2. (of *Rathke*). See *Jacobson's Organ.* **G., Nasal, External**, in birds, a gland in the frontal or nasal bone emptying into the nasal cavities. **G., Nectar**. See *G., Nectariferous.* **G., Nectariferous**, in biology, a gland secreting honey or nectar. **G., Nerve**, the supra-renal capsule. **G., Nervous (of the pelvis)**. See *G., Coccygeal.* **G., Nidamental**, in biology, a gland secreting a peculiar viscid material that invests the ova. **G., Nuck's**. See *G., Nuhn's.* **G., Nuhn's**, one of the acinous glands near the apex of the tongue. They are also called *Nuck's*, *Bauhin's*, and *Blondin's glands*. **G., Occipital**, one of the lymph-glands situated over the occipital insertion of the trapezius. **G., Odoriferous**, one of the glands secreting odoriferous substances, as behind the cervix of the penis, secreting the smegma. **G., Oil**. See *G., Sebaceous.* **G., Oviducal**, in *Elasmobranchia*, a gland connected with the oviduct. **G., Oxyntic**, one of the glands of the cardiac region of the stomach, supposed to secrete the acid of the gastric juice. **G. of Pacchioni**. See *Pacchionian Bodies.* **G., Pacchionian**. See *Pacchionian Bodies.* **G., Palatal**. See *G., Palatine.* **G., Palatine**, a small acinous gland that with others forms a continuous layer beneath the mucous membrane of the hard and soft palate. **G., Palpebral**. See *G., Meibomian.* **G., Pancreatico-splenic**, one of the lymph-glands following the course of the splenic artery and vein. **G., Papillary**, in biology, a papilla-like gland on the under surface of a leaf of labiate plants. **G., Parotic**. See *G., Parotid.* **G., Parotid**, a large salivary gland situated in front of the ear. **G., Parotid, Lymphatic**. See *G., Auricular, Anterior.* **G. of Pecklin**. See *G., Peyer's.* **G., Pectoral**, one of the lymph-glands on the lower portion of the pectoralis major muscle. **G., Pepsin**. See *G., Oxyntic.* **G., Peptic**. See *G., Oxyntic.* **G., Perspiratory**. See *G., Sudoriparous.* **G., Petiolar**, in botany, a gum-secreting gland occurring on the petiole. **G., Peyer's**, one of a number of lymph-follicles of the bowel occurring mainly in the ileum. They are especially involved in typhoid fever. **G., Peyerian**. See *G., Peyer's.* **G., Pharyngeal**, one of the racemose glands in the pharyngeal mucous membrane. **G., Phrenic**, one of the lymph-glands in the lower portion of the anterior mediastinum. **G., Pilous**. See *G., Hair.* **G., Pineal**. See *Pineal Gland.* **G., Pituitary**, a term for the hypophysis of

the brain. See *Pituitary Body*. **G.**, **Plexiform**. See *G.*, *Peyer's*. **G.**, **Poison**, a gland in venomous insects and snakes that secretes the poisonous substance. **G.**, **Popliteal**, one of the lymph-glands surrounding the popliteal vessels. **G.**, **Precrural**, in comparative anatomy, one of the lymph-glands following the course of the *uretus circumflex ilii*. **G.**, **Prehyoid**, an accessory thyroid gland above the hyoid bone. **G.**, **Prelaryngeal**, a lymph-gland on the crico-thyroid membrane, between the crico-thyroid muscles. **G.**, **Prepectoral**, in comparative anatomy one of the lymph-glands surrounding the lower portion of the jugular vein. **G.**, **Preputial**. See *G.*, *Lison's*. **G.**, **Pre-scapular**, in comparative anatomy, one of the lymph-glands situated beneath the elevator humeri muscle. **G.**, **Prostate**. See *Prostatic Gland*. **G.**, **Prostatic**. See *Prostatic Gland*. **G.**, **Pulmonary**, one of the lymph-glands in the pulmonary substance. **G.**, **Purple**, in *Gasteropoda*, one of the glands secreting the so-called Tyrian purple. **G.**, **Pyloric**, one of the glands of the stomach mainly situated near the pylorus and secreting the gastric juice. **G.**, **Racemose**, a compound follicular gland resembling a bunch of grapes. It is composed of a number of acini with a single excretory duct. **G.** of Rathke. See *G.*, *Nasal*. **G.**, **Renal**, the suprarenal capsule. **G.**, **Reticulate**, a lymph-gland containing reticular tissue. **G.**, **Retroperitoneal**, one of the lymph-glands behind the peritoneum. **G.**, **Rivini's**. See *G.*, *Sublingual*. **G.**, **Rosenmüller's**. 1. The inferior lachrymal gland (*accessory of Rosenmüller*). It is the fore part of the lachrymal gland, which is separated from the rest of the gland by a fibrous septum. It is also called the palpebral portion of the lachrymal gland. 2. The lymph-gland situated in the crural ring. **G.**, **Saccular**, a gland formed by a sacculization of a mucous or serous membrane. **G.**, **Sacral**, one of the lymph-glands on the anterior face of the sacrum. **G.**, **Salival**. See *G.*, *Salivary*. **G.**, **Salivary**, a gland whose function it is to secrete saliva. **G.**, **Salivary**, **External**. See *G.*, *Parotid*. **G.**, **Scapular**, one of the lymph-glands near the axillary border of the scapula. **G.**, **Scent**. See *G.*, *Odoriferous*. **G.**, **Sebaceous**. 1. One of the minute acicular glands in the corium of the skin, secreting sebum. 2. See *G.*, *Cement*. **G.**, **Sebiferous**. See *G.*, *Sebaceous*. **G.**, **Sebiparous**. See *G.*, *Sebaceous*. **G.**, **Secreting**. See *G.*, *Secretory*. **G.**, **Secretory**, any gland of the body yielding a secretion. It is an arrangement of cells by which certain elements are separated from the blood that circulates in the capillary vessels which are in contact with the cells. **G.**, **Seminal**, the testicle. **G.**, **Septal**, in biology, one of the secreting glands in the septa between the loculi of the ovaries of lilaceous plants. **G.**, **Serous**. See *G.*, *Albuminous*. **G.**, **Serous**, **Salivary**, one of those salivary glands the secretion of which contains a characteristic albuminous substance, with little or no mucin. **G.** of Serres. See *G.*, *Ductal*. **G.**, **Sexual**, the ovary or testis. **G.**, **Simple**, a gland composed of but one secreting sac, with a single and unbranched tube. **G.**, **Skene's**, one of the two mucous glands just within the meatus urinarius of the female; they are frequently the seat of latent gonorrhea. **G.**, **Solitary**, one of the glands scattered through the mucous membrane of the small intestine. **G.**, **Spinning**, one of the tubular glands near the anal or oral orifice of certain spiders and other insects; it secretes a viscid material that hardens on exposure to the air. **G.**, **Stalked**, in botany, a gland situated upon a stalk. **G.**, **Staphylinae**. See *G.*, *Pilulinae*. **G.**, **Sternal**, one of the lymph-glands on the upper costal cartilages, near the

sternum. **G.**, **Subauricular**, one of the lymph-glands situated below and behind the ear. **G.**, **Sub-caudal**, a gland located near the base of the tail, the secretion from which yields the peculiar penetrating odor of the fox and other animals. **G.**, **Subconjunctival**. See *G.*, *Meibomian*. **G.**, **Sublingual**, the smallest of the salivary glands. There is one on either side beneath the tongue. **G.**, **Submaxillary**, a large salivary gland situated in the submaxillary triangle. **G.**, **Submaxillary Lymphatic**, one of the lymph-glands in the submaxillary triangle. **G.**, **Suboccipital**. See *G.*, *Occipital*. **G.**, **Substernal**. See *G.*, *Sternal*. **G.**, **Suburethral**. Same as *G.* of *Coreper*. **G.**, **Sudoriferous**. See *G.*, *Sudoriparous*. **G.**, **Sudoriparous**, one of the peculiarly convoluted glands in the subcutaneous connective tissue that secrete the sweat. **G.**, **Supraclavicular**. See *G.*, *Cervical*. **G.**, **Superior**, **Deep**. **G.**, **Supra-hyoid**, one of the small lymph-glands between the anterior bellies of the digastric muscles. **G.**, **Supra-orbital**, in biology, a gland in the orbit of birds communicating with the nasal passages. **G.**, **Suprarenal**, the suprarenal capsules. **G.**, **Sweat**. See *G.*, *Sudoriparous*. **G.**, **Tarsal**. See *G.*, *Meibomian*. **G.**, **Tarso-conjunctival**. See *G.*, *Meibomian*. **G.**, **Tartar**, one of the hypothetic glands thought to secrete the tartar of the teeth. **G.**, **Temporary**, the name occasionally given to the Graafian follicle. **G.**, **Thoracic**, **Deep**, one of the lymph-glands situated on the outer surface of the serratus magnus muscle. **G.**, **Thoracic**, **Superficial**. See *G.*, *Pectoral*. **G.**, **Thymus**, a temporary organ lying mainly in the neck, attaining its full growth at two years and practically disappearing at puberty. **G.**, **Thyroid**, a ductless lobulated gland situated in the lower middle ventral portion of the neck, in front of the trachea and below the thyroid cartilage. **G.**, **Tibial**, **Anterior**, a lymph-gland on the anterior surface of the interosseous ligament of the leg. **G.**, **Tracheal**, one of the minute ovoid acinous glands in the tracheal mucous membrane, especially on its posterior surface. **G.**, **Trachoma** (*of Henle*). See *G.*, *Aggregated (of Bruch)*. **G.**, **Tubular**, a gland composed mainly of a tube-like structure. **G.**, **Tubular**, **Compound**, one composed of a number of small tubules with a single duct. **G.**, **Tympanic**, a swelling upon the tympanic nerve, situated near or within the tympanic canal, and believed to be of the same nature as the coccygeal gland. **G.**, **Tyson's**, one of the sebaceous glands on the corona of the glans penis and on the prepuce. See *G.*, *Odoriferous*. **G.**, **Urethral**. See *G.* of *Littre* and *G.*, *Skene's*. **G.**, **Uropygial**, the oil-secreting gland situated over the coccyx of birds. **G.**, **Uterine**, one of numerous tubular follicles in the uterine mucous membrane, secreting the so-called uterine milk. **G.**, **Utricular**. 1. In biology, one of the spaces in the epidermis filled with a colorless fluid. 2. See *G.*, *Uterine*. **G.**, **Vaginal**, one of the acinous glands in the vaginal mucous membrane. **G.**, **Venenific**. See *G.*, *Poison*. **G.**, **Veneniparous**. See *G.*, *Poison*. **G.**, **Vesalius's**, one of the pulmonary and bronchial mucous glands. **G.**, **Vesicular**. See *G.*, *Utricular (1st def.)*. **G.**, **Vulvo-vaginal**. See *G.* of *Bartholin*. **G.**, **Wax**, in insects, one of the glands of the surface secreting a wax-like material. **G.**, **Weber's**, one of the tubular mucous glands of the tongue situated chiefly near the root. **G.**, **Yolk**, the vitellarium, *q. v.* **G.**, **Zeiss's**, one of the sebaceous glands of the eyelashes. **G.**, **Zygomatic**. See *G.*, *Auricular*, *Anterior*.

**Glanderos** (*glan'-der-us*), or **Glandery** (*glan'-der-é*) [*glandula*, a gland]. Affected with glanders.

**Glanders** (*glan'-der-z*). A contagious disease of horses,

sometimes communicated to man. For staining the microorganism of glands see *Schutz's Method*, *Kühne's Method*, or *Löffler's Method*, under *Stains*, *Table of*. See *Equinia*.

**Glandilemma** (*glan-dil-em'-ah*) [*glans*, gland; *ῥήμα*, husk]. The capsular covering of a gland.

**Glandula** (*glan'd'-u-lah*) [L.: *pl.*, *Glandulae*]. A little gland.

**Glandular** (*glan'd'-u-lar*) [*glandula*, a gland]. Relating to, or of the nature of, a gland. **G. Hypertrophy**, a term used to indicate an enlargement of a lymph-gland, without any appreciable cause. **G. Pes-tilence**, synonym of the *Plague*, *q. v.* **G. Plague**, synonym of the *Plague*, *q. v.*

**Glandule** (*glan'd'-ul*) [*glandula*, a gland]. A small gland.

**Glandulin** (*glan'd'-u-lin*) [*glandula*, a gland]. Extract of gland-tissue.

**Glans** (*glanz*) [*glans*, a corn]. 1. The head of the penis or of the clitoris. 2. A gland; an enlarged gland. 3. A suppository or pessary. 4. In botany, a nut. The name applied to fruits like the filbert, acorn, chestnut, etc. **G. clitoridis**, the small round tubercle of the clitoris analogous to the glans penis of the male. **G. penis**, the conical-shaped body forming the head of the penis.

**Glareose** (*glar'-e-ōs*) [*glarea*, gravel]. In botany, growing in gravel.

**Glaser's Fissure**. See *Fissure*.

**Glaserian Artery**. See *Arteries*, *Table of*. **G. Fissure**. See *Fissure*.

**Glaserius**, *Fissure of*. See *Fissure*.

**Glasgow Committee**. See *Anesthetic*.

**Glass** (*glas*) [ME., *glas*, glass]. A brittle, hard, and transparent substance consisting usually of the fused, amorphous silicates of potassium and calcium, or sodium and calcium, with an excess of silica. When glass of a high refractive index is required, lead silicate is also added. **G.-blowers' Cramp**. See *Cramp*. **G.-blowers' Disease**, a term formerly used to designate any infectious disease of the lips, especially syphilitic eruptions. Also, applied to pulmonary emphysema. **G.-blowers' Patch**, a condition of the dorsum of the tongue very similar to smokers' patch, and due to an analogous cause. **G., Crown**, a very hard glass, made from sodium sulphate or lime, without lead. It has a low refractive index, but considerable chromatic dispersion. It is used for making lenses for optic instruments. **G., Flint**, that composed of lead and potassium silicates. It has a very high refractive index. **G. Slides**. See *Slides*. **G., Soluble**, potassium or sodium silicate.

**Glasses** (*glas'-es*) [ME., *glas*, glass]. A synonym of spectacles or eye-glasses. **G., Bifocal**, those that have a different refracting power in the upper part from that in the lower. **G., Hyperbolic**, those ground in the form of an hyperbola. **G., Periscopic**, those in which the curvature of one surface exceeds that of the other. See *Meniscus*. **G., Prismatic**, those formed of prisms; used in insufficiency and paralysis of the ocular muscles. **G., Protective**, for shielding the eyes against light; they are made of London smoke or blue glass. **G., Spheric**, those ground in the form of a sphere. **G. Stenopaic**, those consisting of a blackened disc of metal in which is placed a small round hole or a narrow slit; they are used for examining astigmatic eyes.

**Glassy Degeneration**. See *Degeneration*. **G. Swelling**, a synonym of amyloid infiltration.

**Glauber's Salt**. See *Sodium*.

**Glaucedo** (*glaw-se'-do*) [L.]. *Glaucoma*.

**Glaucescence** (*glaw-ses'-ens*) [*glaucescens*]. A bluish-gray or sea-green luster or bloom; the quality of being somewhat glaucous.

**Glaucous** (*glaw-ses'-ent*) [*ῥαυκός*, silvery]. In biology, slightly glaucous, or bluish gray.

**Glaucin** (*glaw'-sin*) [*ῥαυκός*, sea-green]. Cow-pox; so-called from the color of the pocks.

**Glaucium** (*glaw'-se-um*) [*ῥαϊκόν*, horn poppy]. A genus of papaveraceous herbs; horn-poppy. **G. luteum** and **G. corniculatum** are acrid herbs, with diuretic and alterative properties. Unof.

**Glaucoma** (*glaw'-ko'-mah*) [*ῥαυκός*, sea-green]. A disease of the eye the essential and characteristic symptom of which is an abnormally heightened intraocular tension, resulting in hardness of the globe, excavation of the papilla or optic disc, a restriction of the field of vision, corneal anesthesia, colored halo about lights, and lessening of visual power that may, if unchecked, proceed to blindness. The etiology is obscure. **G. absolutum**, or **consummatum**, the completed glaucomatous process, with blindness. **G. acutum**, the first or the renewed attack, with the characteristic and inflammatory symptoms, generally intermitting after a few days. **G., Auricular**, a disease of the middle ear characterized by a great increase in the intra-labyrinthine pressure. **G. evolutum**, the second stage of glaucoma. **G. fulminans**, an acute attack coming on with great suddenness and violence. **G. hæmorrhagicum**, or **apoplecticum**, that associated with retinal hemorrhage. **G. malignum**, a grave form, attended with violent pain and rapidly leading to blindness. **G., Secondary**, that consequent upon other ocular diseases. **G. simplex**, that form without inflammatory symptoms.

**Glaucomatous** (*glaw'-kom'-at-us*) [*ῥαυκός*, sea-green]. Affected with or pertaining to glaucoma.

**Glaucosis** (*glaw'-ko'-sis*) [*ῥαυκός*, sea-green]. The blindness resulting from glaucoma.

**Glaucosuria** (*glaw'-ko-su'-re-ah*) [*ῥαυκός*, sea-green; *οὐρὸν*, urine]. The presence of indican in the urine, which is thereby discolored.

**Glaucous** (*glaw'-kuz*) [*ῥαυκός*, sea-green]. Of a blue-gray or dull sea-green tint; having a blue, or pale-green luster covered with a silvery bloom, as the leaves of the cabbage.

**Glaukuria** (*glaw'-ku'-re-ah*). See *Glaucosuria*.

**Glaux** (*glawks*) [*ῥαύξ*, *ῥάξ*, the milk-vetch]. A genus of primulaceous herbs. **G. maritima**, salt-wort, is said to be an effective galactagogue. Unof.

**Glea** (*gle'-ah*) [*ῥοία*, glue]. A mucilaginous substance secreted by many inferior organisms, and which frequently serves as a matrix in which they lie embedded.

**Glean** (*glèn*) [origin obscure]. The afterbirth of a domestic animal.

**Gleet** (*glet*) [ME., *glet*, gleet]. The chronic stage of urethritis, with muco-purulent discharge.

**Gleety** (*gle'-te*) [ME., *glet*, gleet]. Thin and ichorous; resembling the discharge of gleet.

**Glénard's Disease**. See *Diseases*, *Table of*.

**Glène** (*gle'-ne*) [*ῥήνη*, pit]. 1. The glenoid cavity. 2. The interior of the eye. *Obsolescent*.

**Gleno-humeral** (*gle'-no-hu'-mer-al*) [*ῥήνη*, pit; *humerus*, the humerus]. Pertaining to the glenoid cavity and to the humerus.

**Glenoid** (*gle'-noid*) [*ῥήνη*, a cavity; *εἶδος*, form]. Having a shallow cavity; pertaining to a shallow cavity. **G. Cavity**, the articular depression in the head of the scapula. **G. Fossa**. See *Fossa*.

**Glenoin** (*gle'-no'-in*). Same as *Trinitrin*.

**Glenovertebral** (*gle'-no-ver'-te-bral*) [*ῥήνη*, a cavity; *vertebra*, a vertebra]. Pertaining to the glenoid and vertebral borders of the scapula.

**Gleogene** (*gle'-o-jen*) [*ῥοιός*, a sticky substance; glue; *γενής*, producing]. In biology, secreting a glairy, mucilaginous substance.

**Glia** (*gl'ah*) [*gl'ia*, glue]. The neuroglia; hindweb. It contains peculiar cells called glia-cells. **G.-cells**. See *Dorsal Cells*.

**Gliadin** (*gl'adin*) [*gl'ia*, glue]. A proteid obtainable from wheat gluten; it is tenacious and gelatinous when moist, brittle and glassy when dry. Also a synonym of *Hæmatin*. See *Glutin*.

**Gliding Movement** (*gl'id-ing'ment*). The most simple kind of movement that can take place in a joint, one surface gliding or moving over another, without any angular or rotary movement.

**Glioma** (*gl'io-mah*) [*gl'ia*, glue; *ōma*, a tumor; *pl.*, *Gliomata*]. A variety of round-celled sarcoma, consisting of a tumor of neuroglia-cells, occurring in the central mass of the brain or of the spinal cord. **G. of the Retina** ("encephaloid of the retina"), a glioma springing from the connective tissue of the retina, usually occurring in the young, and involving the choroid, optic nerve, and extending finally into the brain. **G., Pseudo-, of the Retina**, metastatic purulent choroiditis, simulating the appearance of retinal glioma.

**Gliomatosis** (*gl'io-mat'osis*) [*gl'ia*, glue; *ōma*, a tumor; *pl.*, *Gliomata*]. The aggregation of exuberant masses of glioma-like tissue in the spinal cord—a condition thought to precede the development of syringomyelia.

**Gliomatous** (*gl'io-mat-us*) [*gl'ia*, glue; *ōma*, a tumor]. Of the nature of, or affected with, glioma.

**Gliomyxoma** (*gl'io-miks-ō'mah*) [*gl'ia*, glue; *myxa*, mucus; *ōma*, a tumor; *pl.*, *Gliomyxomata*]. A tumor having the characters of both glioma and myxoma.

**Gliosarcoma** (*gl'io-sar-kō'mah*) [*gl'ia*, glue; *sārx*, flesh; *ōma*, a tumor; *pl.*, *Gliosarcomata*]. A tumor with both the neuroglia-cells of glioma and the fusiform cells of sarcoma.

**Gliosid** (*gl'io-sis*) [*gl'ia*, glue; *rosos*, disease]. A brain-disease marked by foci of sclerosed gray substance, with the formation of lacunar spaces within the foci. It differs from ordinary diffused sclerosis in its histology and symptomatology.

**Glischruria** (*gl'io-krut-re-ah*) [*gl'ios*, viscid; *ōipov*, urine]. Mucous degeneration of the urine, supposed to be due to the presence of a microörganism, the *Bacterium glischrum*.

**Glisson's Capsule**. See *Capsule*.

**Glissonian Cirrhosis**. Synonym of *Perihepatitis*. See also *Disease*, *Table of*.

**Glister** (*gl'is-ter*). A clyster or enema.

**Globe of the Eye**. The eyeball.

**Globiferous** (*gl'ob'if-er-us*) [*globu*, a ball; *ferre*, to bear]. In biology, applied to antennæ or similar structures bearing a large globose joint.

**Globin** (*gl'ob-in*) [*gl'obin*, a globe]. A proteid derivable from hemoglobin. There is also a class of similar proteins grouped together as globins.

**Globinometer** (*gl'ob-in-ō-mē-ter*) [*globu*, a globe; *metron*, a measure]. An instrument devised with special reference to the calculation of the percentage-amount of oxyhemoglobin in a given amount of blood.

**Globo-cellular** (*gl'ob-ō-sēll'ul-er*) [*globu*, a globe; *cella*, a cell]. Round-celled, as globo-cellular sarcoma.

**Globoid** (*gl'ob-oid*) [*globus*, a round body; *eidōs*, form].

In biology, a globular or amorphous particle of the double phosphate of calcium and magnesium, often found associated with crystalloids in protein-granules.

**Globose** (*gl'ob-ōs*) [*globosus*, round as a ball]. Spheric in form, or nearly so.

**Globular** (*gl'ob'ul-lar*) [dim. of *globus*, a globe]. Having the shape of a globe or sphere.

**Globularia** (*gl'ob-ū-lar'ia*) [*globulus*, a little ball]. A genus of selaginaceous herbs and shrubs. **G. alypum**, of the old world, affords leaves that are a good substitute for senna. **G. puticosa** and **G. vulgaris** have similar properties.

**Globule** (*gl'ob'ul*) [dim. of *globus*, a ball]. A small globe; a blood-corpuscle or lymph-corpuscle. In biology, any minute spheric structure. In pharmacy, a small pill or pellet. See also *Oil-globule*. **G. of Donné**. See *Blood-plates* and *Hæmatoblast*. **G. in Pulp**, a globular mass of dentine within the substance of the dental pulp.

**Globulicidal** (*gl'ob-ū-lis-i-dal*) [*globulus*, a little ball; *cedere*, to kill]. Destructive to the blood-corpuscles.

**Globulicide** (*gl'ob-ū-lis-i-da*) [*globulus*, a globule; *cedere*, to kill]. 1. Destructive of blood-cells. 2. An agent that destroys blood-cells.

**Globulimeter** (*gl'ob-ū-lim'et-er*) [*globulus*, a little ball; *metron*, a measure]. An instrument for estimating the corpuscular richness of blood.

**Globulin** (*gl'ob'ul-in*) [*globulus*, a little ball]. 1. A general name for various proteids comprising globulin, vitellin, paraglobulin, or serum-globulin, fibrinogen, myosin, and globin, which differ from the albumins in not being soluble in water; one species, existing in the crystalline lens, is specially designated as *globulin*. They are insoluble in distilled water, but soluble in dilute neutral saline solutions. These solutions are coagulated by heat, and precipitated by a large amount of water. They yield acid-albumin when acted upon by dilute acids, and alkali-albumin when acted upon by dilute alkalis. **Vegetable Globulins** have been studied, and named *vegetable myosin*, *vitellin*, and *paraglobulin*; they are found in the seeds of plants. 2. A blood-platelet.

**Globulinuria** (*gl'ob-ū-lin-ū-re-ah*) [*globulus*, a little ball; *ōipov*, urine]. The presence of globulin in the urine.

**Globulism** (*gl'ob'ul-izm*) [*globulus*, a little ball]. The administration of medicine in globules; homeopathy.

**Globulose** (*gl'ob'ul-ōs*) [*globulus*, a little ball]. Any product of the gastric digestion of a globulin.

**Globulus** (*gl'ob'ul-us*) [L.]. The *Nucleus globuliformis* of the cerebellum. It is a mass of gray matter between the fastigium and the embolus.

**Globus** (*gl'ob-bus*) [L.]. A ball or globe. **G. epididymis**. See *Epididymis*. **G. hystericus**, the "lump" or choking sensation occurring in hysteria, caused probably by spasmodic contraction of the esophageal and pharyngeal muscles. **G. major**, the larger end or head of the epididymis. **G. minor**, the lower end of the epididymis. **G. pallidus**, the inner and lighter part of the lenticular nucleus.

**Glochidiate** (*gl'ok'id'ē-āt*) [*glōxhē*, a projecting point]. In biology, barbed. Tipped with barbs, or with a doubly-hooked point.

**Glochidium** (*gl'ok'id'ē-um*) [*glōxhē*, a projecting point; *pl.*, *Glochidia*]. In biology, a stage in the development of lamellibranchiate molluscs [*Unio*, *Anodon*], the ova of which develop up to a certain stage in the gill-pouches of the parent, and remain there as *gllochidia* until some fish or wading-bird comes into their vicinity, when the gllochidia issue forth, and, swimming as Pectens by the flapping of their valves,

attach themselves, like external parasites, to the animal whose presence has stimulated their efforts; here they become encysted and transformed into young Unios or Anadons.

**Glochis** (*glo'-kis*) [*γλωχίς*, a projecting point: *pl., Glochines*]. In biology, a barbed spine or point.

**Glome** (*glom*) [*glomus*, a ball]. Same as *Glomerule*.

**Glomerate** (*glom'-er-at*) [*glomerare*, to wind around]. A descriptive term applied to any gland consisting of vessels bunched together like a ball of thread; conglomerate.

**Glomerule** (*glom'-er-ül*) [dim. of *glomus*, a ball of yarn]. In biology, a capitate cyme; a cluster of spores.

**Glomerulitis** (*glom'-er-u-lit'-tis*) [*glomerulus*, a small ball; *itis*, inflammation]. Inflammation of the glomeruli of the kidney.

**Glomerulo-nephritis** (*glom'-er'-u-lo-nef-ri'-tis*) [*glomerulus*, a little ball; *νεφρός*, the kidney; *itis*, inflammation]. Inflammation of the Malpighian bodies of the kidney.

**Glomerulus**, or **Glomerule** (*glom'-er'-u-lus*, or *glom'-er-ül*) [dim. of *glomus*, a ball]. A knot or small rounded mass. A coil of arterial blood-vessels projecting into the capsular widening of the lumen of each uriniferous tubule and with it composing the Malpighian body peculiar to the vertebrate kidney. **G. Malpighii**. See *Malpighian Bodies*. **G., Olfactory**, a group of nerve-cells, a number of which are embedded in the olfactory nerve-fibers.

**Glonoin** (*glo-no'-in*). See *Nitroglycerin*.

**Gloriosa** (*glo-re-o'-sah*) [*gloriosus*, glorious]. A genus of splendid biliceous plants with poisonous juices. **G. superba**, of India, is alterative and tonic, and its starch is said to cure hemorrhoids. Unof.

**Glossa** (*glos'-ah*) [*γλῶσσα*, the tongue]. The tongue; also the faculty of articulate speech.

**Glossagra** (*glos-a'-grah*) [*γλῶσσα*, tongue; *ἀγρα*, seizure]. Gouty pain in the tongue.

**Glossal** (*glos'-al*) [*γλῶσσα*, tongue]. Pertaining to the tongue.

**Glossalgia** (*glos-al'-je-ah*) [*γλῶσσα*, tongue; *ἄλγος*, pain]. Any pain in the tongue, especially neuralgia of the tongue.

**Glossanthrax** (*glos-an'-thraks*). Synonym of *Anthrax*.

**Glossarium** (*glos-a'-re-um*) [*γλῶσσα*, a tongue: *pl., Glossaria*]. In biology, the slender, elongated labrum of a dipterous insect, as the mosquito.

**Glossate** (*glos'-ät*) [*γλῶσσα*, tongue]. In biology, having a tongue or glossa; applied to suctorial as distinguished from mandibulate insects.

**Glossauxesis** (*glos-avks-e'-sis*) [*γλῶσσα*, tongue; *αἰξ-ησις*, increase]. Enlargement of the tongue.

**Glossectomy** (*glos-ek'-to-mö*) [*γλῶσσα*, tongue; *ἐκτομή*, excision]. Amputation or excision of the tongue.

**Glossitic** (*glos-it'-ik*) [*γλῶσσα*, tongue; *itis*, inflammation]. Pertaining to or affected with glossitis.

**Glossitis** (*glos-it'-tis*) [*γλῶσσα*, tongue; *itis*, inflammation]. Inflammation of the tongue. **G., Dissecting**, a form of chronic superficial glossitis characterized by deep furrows upon the tongue that appear to penetrate into the mucous membrane. **G., Idiopathic**. Same as **G., Parenchymatous**. **G., Interstitial**. Same as **G., Parenchymatous**. **G., Parasitic**, an inflammation of the tongue said to be due to parasitic vegetations. It is also called *Glossophytia*. **G., Parenchymatous**, an inflammation of the tongue involving its substance as well as the mucous membrane.

**Glosso-** (*glos'-o-*) [*γλῶσσα*, tongue]. A prefix denoting connection with the tongue.

**Glossocoele** (*glos'-o-sel*) [*γλῶσσα*, tongue; *κίη*, tumor].

Swelling or edema of the tongue, with consequent extrusion of the organ.

**Glossodesmus** (*glos-o-dez'-mu*) [*γλῶσσα*, tongue; *δεσμός*, bond]. The frenum linguae.

**Glossodynia** (*glos-o-din'-e-ah*) [*γλῶσσα*, tongue; *ὄδυνη*, pain]. Pain in the tongue, sometimes accompanied by exfoliation of its epithelium.

**Glosso-epiglottic** (*glos'-o-ep-e-glöt'-ik*) [*γλῶσσα*, tongue; *ἐπιγλωττίς*, epiglottis]. Pertaining to both tongue and epiglottis.

**Glosso-epiglottidean Ligament**. See *Ligament*.

**Glossograph** (*glos'-o-graf*) [*γλῶσσα*, tongue; *γραφειν*, to write]. An instrument for registering the movements of the tongue in speech.

**Glossography** (*glos-og'-ra-fe*) [*γλῶσσα*, tongue; *γραφειν*, to write]. A descriptive treatise upon the tongue.

**Glossohyal** (*glos-o-hi'-al*) [*γλῶσσα*, tongue; *ὑοειδής*, the hyoid bone]. Pertaining to the tongue and the hyoid bone.

**Glossoid** (*glos'-oid*) [*γλῶσσα*, tongue; *εἶδος*, appearance]. Resembling a tongue.

**Glossolalia** (*glos-o-lä'-le-ah*) [*γλῶσσα*, tongue; *λαλέω*, speech]. The alleged speaking in foreign or unknown tongues by somnambulists.

**Glossology** (*glos-ol'-o-je*) [*γλῶσσα*, tongue; *λόγος*, a treatise]. A treatise concerning the tongue.

**Glossolysis** (*glos-ol'-is-is*) [*γλῶσσα*, tongue; *λίσσις*, a loosening]. Paralysis of the tongue.

**Glossomegistus** (*glos-o-mi-jist'-tus*). Synonym of *Glossitis*, *Parenchymatous*.

**Glossoncus** (*glos-on'-kus*) [*γλῶσσα*, tongue; *ὄγκος*, tumor]. A swelling of the tongue.

**Glossopathy** (*glos-op'-ath-e*) [*γλῶσσα*, tongue; *πάθος*, disease]. Any disease of the tongue.

**Glosso-pharyngeal** (*glos'-o-far-in'-je-al*) [*γλῶσσα*, tongue; *ὤφρυξ*, pharynx]. Pertaining to the tongue and the pharynx. See *Nerves*, *Table of*.

**Glosso-pharyngeus** (*glos'-o-far-in'-je-us*) [*γλῶσσα*, tongue; *ὤφρυξ*, pharynx]. A portion of the superior constrictor muscle of the pharynx. See *Muscles*, *Table of*.

**Glossophyte** (*glos'-o-fit*) [*γλῶσσα*, tongue; *φυτεω*, plant]. A parasitic vegetation growing on the tongue.

**Glossophytia** (*glos-o-fit'-e-ah*) [*γλῶσσα*, tongue; *φυτεω*, a plant]. Black tongue. A dark discoloration of the tongue, due to accumulations of spores, dead epithelium, and accidental impurities.

**Glossoplasty** (*glos'-o-plas-te*) [*γλῶσσα*, tongue; *πλάσσειν*, to form]. Plastic surgery of the tongue.

**Glossoplegia** (*glos-o-ple'-je-ah*) [*γλῶσσα*, tongue; *πληγή*, stroke]. Paralysis of the tongue.

**Glossoptosis** (*glos-op-to'-sis*) [*γλῶσσα*, tongue; *πτωσις*, a fall]. Synonym of *Macro glossia*.

**Glossorrhagia** (*glos-o-rä'-je-ah*) [*γλῶσσα*, tongue; *ῥήγνιναι*, to burst forth]. Hemorrhage from the tongue.

**Glossorrhaphy** (*glos-orä'-af-e*) [*γλῶσσα*, tongue; *ῥαφή*, suture]. Surgical suturing of the tongue.

**Glossoscopy** (*glos-os'-kō-fē*) [*γλῶσσα*, tongue; *σκοπεῖν*, to inspect]. Diagnostic inspection of the tongue.

**Glossosemeiotics** (*glos-o-sem-e-ol'-iks*) [*γλῶσσα*, tongue; *σημεῖον*, to mark]. The study or science of the diagnostic and prognostic signs exhibited by the tongue.

**Glossospasm**, or **Glossospasmus** (*glos'-o-spazm*, or *glos-o-spas'-mus*) [*γλῶσσα*, tongue; *σπασμος*, spasm]. Spasm of the tongue.

**Glossosteresis** (*glos-o-ster-e'-sis*) [*γλῶσσα*, tongue; *στέρησις*, privation]. Surgical excision of the tongue; absence of the tongue.

**Glossotheca** (*glos-o-the'-kah*) [*γλῶσσα*, tongue; *θήκη*,

a case: *pt.*, *Gl. s. thea*. In biology, that part of a pupa-case inclosing the sucking-organ of an insect.

**Glossotilt** (*glōt' - tilt*) [*γλωσσα*, tongue; *τίλτιν*, *τίλτιν*, to pull]. An instrument by which the tongue is drawn forward during the process of artificial respiration.

**Glossotomy** (*glōt' - o-mē*) [*γλωσσα*, tongue; *τεμνω*, to cut]. The dissection of the tongue. Also, the excision of the tongue.

**Glossy Skin.** A peculiar neurastis of the skin, characterized by a smooth, shining, red appearance, accompanied by intense burning pain. See *Atrophoderma neurastis*.

**Glossypertrophia**, or **Glossypertrophy** (*glōs-e-pertroph' - ē*, or *glōt' - trōf' - ē*) [*γλωσσα*, tongue; *πέρω*, over; *τροφή*, nutrition]. Hypertrophy of the tongue.

**Glottagra** (*glōt' - ā*) [*γλωττα*, tongue; *ἀγρα*, seizure]. Glottisagra.

**Glottal** (*glōt' - āl*) [*γλωττις*, glottis]. Pertaining to the glottis.

**Glottalgia** (*glōt' - āl - jī - ā*) [*γλωττα*, tongue; *ἀλγος*, pain]. Glossalgia.

**Glottic** (*glōt' - ik*) [*γλωττα*, tongue]. 1. Pertaining to the tongue. 2. Pertaining to the glottis.

**Glottid** (*glōt' - id*) [*γλωττις*, glottis]. An act of the vocal bands whereby the form of the glottis is changed; also, any sound produced by such a change.

**Glottidean** (*glōt' - id - ē - an*) [*γλωττις*, glottis]. Pertaining to the glottis.

**Glottis** (*glōt' - is*) [*γλωττις*; *γλωττα*, tongue]. The *rima glottidis*. The opening between the arytenoid cartilages, or the interval between the vocal bands; also, the structures collectively that surround that opening. Over it is the epiglottis, a thin lamella of cartilage covering the larynx during deglutition.

**Glottiscope** (*glōt' - is - kōp*) [*γλωττις*, glottis; *σκοπεῖν*, to inspect]. A form of laryngoscope.

**Glottitis** (*glōt' - itis*). See *Glossitis*.

**Glottology** (*glōt' - ol' - o - jē*). See *Glossology*.

**Glove** (*glōv*) [*ME.*, *glove*, a glove]. A protection for the hand, with separate partitions for each finger; it is used therapeutically in certain skin-diseases of the hand; also as a guard against septic poisoning. **G. Alphabet.** See *Dalgaro Alphabet*.

**Glovers' Stitch** (*glōv' - ers' stitch*). The continuous suture in surgery. See *Suture*.

**Gluconum** (*glū - ō' - num*). See *Beryllium*.

**Glucogen** (*glū - kō - jēn*). See *Glycogen*.

**Glucohemia** (*glū - kō - hē' - me - ā*). See *Glycemia*.

**Gluco-heptose** (*glū - kō - hē' - tos*). See *Carbohydrates*, *Table of*.

**Glucometer** (*glū - kōm' - et - er*). See *Glycimeter*.

**Gluconic Acid** (*glū - kōn' - ik*). See *Acid*.

**Glucose** (*glū - kōs*) [*γλυκός*, sweet].  $C_6H_{12}O_6$ . Grape-sugar, Starch sugar. A substance obtained from starch by the action of the natural ferment, diastase, and by the catalytic action of mineral acids. It is less soluble, and therefore less sweet, than cane-sugar, but equally nutritious. It is much used as an adulterant of cane-sugar. Its varieties are numerous, dextrose and levulose being the best known. Dextrose differs from levulose in its behavior to the polarized ray of light, which is turned by the former to the right, and by the latter to the left. Glucose crystallizes in regular masses, melting at 86° F. See *Carbohydrates*, *Table of*. **G. Vinegar.** See *Vinegar*.

**Glucosid** (*glū - kō - sid*) [*γλυκός*, sweet]. Any member of a series of compounds that may be resolved by the presence of an acid into glucose and another principle.

**Glucosin** (*glū - kō - sin*) [*γλυκός*, sweet]. Any one of a series of platinum bases obtained by the action of ammonia on glucose. One of these,  $C_{14}H_{16}N_2(C=6)$ ,

corresponds in formula and general properties with a remarkable unnamed base formed during the alcoholic fermentation of sugar or molasses,—*Morin's base*,  $C_{11}H_{10}N_2$ ; a colorless, strongly refracting, very mobile oil, with a nauseous, pyridin-like odor. It causes stupor, paralysis, impairment of sensibility, dilatation of the pupils, slowing of the pulse and depression of the temperature, coma, and death. Similar alkaloidal bases have also been found in petroleum, paraffin-oil, chloroform, benzole, ether, amyl alcohol, and in most solvents in common use.

**Glucosis** (*glū - kō' - sis*). Same as *Glycosuria*.

**Glucosuria** (*glū - kō - sū' - re - ā*). See *Glycosuria*.

**Glue** (*glū*) [*gluere*, to draw together]. A decomposition-product of many nitrogenous animal tissues. These lose their organized structure, on heating with water, swell up, and gradually go into solution. The solutions, even when very dilute, gelatinize on cooling, forming a jelly that dries to a horny translucent mass. This mass is glue, or gelatin, as the finer grades are termed. It dissolves in hot water and forms a liquid possessing notable cementing-power. Two proximate principles seem to be present as characteristic in all preparations of glue: *glutin*, obtained chiefly from the hide and larger bones, and *chondrin*, from the young bones while yet in the soft state, and the cartilages of the ribs and joints. Of these the former much exceeds the latter in adhesive power. *Hide-glue* is the variety that shows most strongly the adhesive property. Its color may vary considerably without any impairment of its adhesive power. It is usually of a gray to amber or brown-yellow color, and translucent or partially opaque. It should be clear, dry, and hard, and possess a glassy fracture. It should swell up but not dissolve in cold water, but should dissolve in water at 62.5° C. (144.5° F.). *Cologne Glue* is manufactured from scrap-hide which, after liming, is carefully bleached in a chlorid-of-lime bath and then thoroughly washed. *Russian Glue* contains some inorganic admixture. It is of a dirty-white color, and contains from four to eight per cent. of white lead, chalk, zinc-white, or barytes. *Size-glue* and *Parchment-glue* are both skin-glues prepared with special care. *Bone-glue* or *Bone-gelatin* is a clear product free from offensive odor. It is much used for culinary purposes and for medicinal applications, and for lining or clarifying wines, etc. It is largely used in the manufacture of gelatin capsules, of court-plaster, and of gelatin emulsions with bromid and chlorid of silver for coating photographic dry plates. *Patent Glue* is a very pure variety of bone-glue of deep dark-brown color. It is very glossy and swells up very much in water. *Isinglass*, or *Fish-gelatin*, is the finest and best of animal glues. It is pure white, nearly transparent, dry and horny in texture, and free from smell. It dissolves in water at from 35° to 50° C. (95° to 122° F.) without any residue, and in cooling produces an almost colorless jelly. *Liquid Glue*. By the action of nitric or acetic acid upon a solution of glue its power to gelatinize may be completely dissipated, while its adhesive power is not at all interfered with.

**Glue's Corpuscles.** Compound granular corpuscles; compound granule-cells. Larger or smaller cells densely crowded with droplets of fat, occurring in tissues that are the seat of fatty degeneration. By transmitted light the globules of fat show as black dots, and the whole corpuscle looks like a mulberry. They are the only pathognomonic evidences of softening of nerve-tissue.

**Glumaceous** (*glū - mā' - she - us*) [*gluma*, a husk]. In biology, possessing chaff-like bracts or glumes.

**Glume** (*glām*) [*gluma*, a hull or husk]. In biology, one of the floral envelopes in the grasses.

**Glumellule** (*glu-mel'-ūl*). Same as *Lodicule*.

**Glusidum** (*glu'-sid-um*) [*γλυκίς*, sweet],  $C_6H_4-\langle \begin{smallmatrix} CO \\ SO_2 \end{smallmatrix} \rangle NH$ . Saccharin. Benzoyl-sulphonic-imid, a coal-tar derivative. It is an intensely sweet, white powder, 200 times as sweet as cane-sugar. It is antiseptic, and is used to disguise the taste of nauseous medicine. It may be used as a sweetening-agent in diabetes and in the treatment of corpulency.

**Glutaric Acid** (*glu-tar'-ik*). See *Acid*.

**Gluteal** (*glu'-te-al*) [*γλουτός*, the buttock]. Pertaining to the buttocks. **G. Artery**. See *Arteries*, *Table of*. **G. Muscles**. See *Muscles*, *Table of*. **G. Nerve**. See *Nerves*, *Table of*. **G. Reflex**. See *Reflexes*, *Table of*.

**Gluten** (*glu'-ten*) [*gluten*, glue]. A substance resembling albumin, with which it is probably identical. It occurs abundantly in the seed of cereals, in the form of cubic cells surrounding the starchy fecula of the seed. It consists mainly of gluten-fibrin, gluten-casein, gliadin, and mucodin. **G.-bread**, a variety of non-starch-containing bread for use by diabetics. It is made as follows: Take one quart of sweet milk, or milk and water, one heaping teaspoonful of good butter, one-fifth of a cake of compressed yeast beaten up with a little water, and two eggs well beaten. Stir in the gluten-flour until a soft dough is formed, knead as in making ordinary bread, put in pans to raise, and when light, bake in a hot oven. **G.-soap**, a bland and soothing variety of soap, containing a considerable proportion of gluten.

**Gluteo-femoral** (*glu'-te-o-fem'-or-al*) [*γλουτός*, the buttock; *femur*, the femur]. Relating to the buttock and the thigh.

**Gluteus** (*glu'-te-us*) [*γλουτός*, the buttock]. One of the large muscles of the buttock. See *Muscles*, *Table of*.

**Glutin** (*glu'-tin*). See *Glue*.

**Glutition** (*glu-tish'-un*) [*glutire*, to swallow]. Deglutition.

**Glutitis** (*glu-ti'-tis*) [*γλουτίς*, buttock; *ιτις*, inflammation]. Inflammation or suppuration of a buttock.

**Glyceleum** (*gli-se'-le-um*) [*γλυκίς*, sweet; *ἐλαιον*, oil]. A mixture of glycerin 2 parts, olive oil 6 parts, almond-meal 1 part; it is used as a base for ointments.

**Glycemia** (*gli-se'-me-ni*) [*γλυκίς*, sweet; *αἷμα*, blood]. The presence of glucose in the blood.

**Glycerid** (*gli-s'-er-id*) [*γλυκερός*, sweet]. A compound ether of the triatomic alcohol, glycerol or glycerin. Some of the glycerids exist ready-formed, as natural fats, in the bodies of plants and animals, and many more may be produced artificially by the action of an acid upon glycerol.

**Glycerin, Glycerinum** (*gli-s'-er-in*, *gli-s'-er-i'-num*) [*γλυκερός*, sweet],  $C_3H_5(HO)_3$ . Propenyl hydrate. A viscous, syrupy, colorless substance derived from certain fats—mainly palm-oil—by decomposing them with superheated steam. Pure glycerin is an emollient; the impure article an irritant to the skin. Dose ʒj-ij. It is an efficient internal remedy in acne and flatulence, and may be used in rectal enemata or in suppositories with soap or gelatin ( $\frac{1}{10}$ ), in chronic constipation. See *Glycerol*. **Glycerinum acid carbolici** (B. P.), glycerin 4, carboic acid 1. **G. acid. gallici** (B. P.), gallic acid 1, glycerin 4. **G. acid. tannici** (B. P.), tannic acid 1, glycerin 4. **G. aluminis** (B. P.), alum 1, glycerin 5. **G. boracis** (B. P.), borax 1, glycerin 4, distilled water 2. **G. p-umbi subacetat.** (B. P.), acetate of lead 5, oxid of lead  $3\frac{1}{2}$ , glycerin 20, distilled water 12. **G. traga-canthæ** (B. P.), tragacanth 3, glycerin 12, distilled

water 2. **Glycerini, Suppos.** (B. P.), each contains 70 per cent. by weight of glycerin. **Glycerin-Cupric Test** (for sugar); to an inch of potassium hydrate in a test-tube add a few drops of copper sulphate and a few drops of glycerin. Boil and add the suspected urine by small amounts up to less than one inch in the tube. Sugar will throw out the cuprous oxid, red or yellow. **G.-Jelly**, a valuable preparation for the treatment of eczema. It is made as follows: Gelatin, 4 drams; oxid of zinc,  $2\frac{1}{2}$  drams; glycerin,  $\frac{1}{2}$  ounce; water, 6 drams. Heat the water, dissolve the gelatin in it, then add the glycerin and zinc, and stir till cold. Before using, the jelly is melted by gentle heat in a water bath, and applied with a soft brush. See *Mounting-media*.

**Glycerinum** (*gli-s'-er-i'-num*) [*γλυκερός*, sweet; *gen.*, glycerin; *pl.*, *Glycerina*]. 1. Glycerin, *q. v.* 2. A solution of some medicinal agent in glycerin, *q. v.*

**Glycerite, or Glyceritum** (*gli-s'-er-it* or *gli-s'-er-i'-tum*) [*γλυκερός*, sweet]. A mixture of medicinal substances with glycerin. There are six official glycerites, besides several others in the National Formulary. **G. acidi carbolici**, carboic acid 2, glycerin 8. **G. acidi tannici**, tannic acid 2, glycerin 8. **G. amyli**. See *Amylum*. **G. vitelli**. See *Vitellus*.

**Glycerize** (*gli-s'-er-iz*) [*γλυκερός*, sweet]. To treat or mix with glycerin.

**Glycerol** (*gli-s'-er-ol*) [*γλυκερός*, sweet],  $C_3H_8O_3$ . Glycerin; a substance produced in small quantities in the alcoholic fermentation of sugar. It is prepared exclusively from the fats and oils. It is a thick, colorless syrup, of specific gravity 1.265 at  $15^\circ C$ . It has a pure, sweet taste, hence its name.

**Glycerose** (*gli-s'-er-os*) [*γλυκερός*, sweet],  $C_3H_6O_3$ . Triose; a substance derived from glycerol. It is the lowest glucose, and is a mixture of glycerol aldehyd and dioxo-acetone. See *Carbohydrates*, *Table of*.

**Glyceryl** (*gli-s'-er-il*) [*γλυκερός*, sweet]. A designation applied to the trivalent group  $CH_2CH_2CH_2$ . It is the hypothetic triatomic radicle of glycerol and the glycerids, and is also called *propenyl*. **G. Borate**. See *Boroglycerin*.

**Glycid** (*gli'-sid*) [*γλυκίς*, sweet],  $C_3H_6O_2$ . An anhydrid of glycerin, not yet isolated. **G. Compounds**, certain compounds formed from glycerol-derivatives by the loss of  $H_2O$  or  $HCl$ . These are again readily converted into glycerol-derivatives.

**Glycin** (*gli'-sin*) [*γλυκίς*, sweet],  $C_2H_5NO_2$ . Also called *Glycocol* and *Glycocin*, *Amido-acetic Acid*, or *Gelatin-sugar*. It does not occur in the free state in the animal body, but enters into the composition of several important substances, as hippuric and glycocholic acids. It is acid in reaction, and has a sweet taste. It crystallizes in large, colorless, hard rhombohedra, or four-sided prisms, easily soluble in water. See *Glycocol*.

**Glycina** (*gli-s-i'-nah*). Soya-bean. See *Sofa*.

**Glycocholic Acid** (*gli-ko-kol'-ik*) [*γλυκίς*, sweet; *χολή*, bile]. An acid found in the bile. See *Acid*.

**Glycidid** (*gli'-ko-sid*). See *Glucosid*.

**Glycocin** (*gli'-ko-sin*). See *Glycin*.

**Glycocol** (*gli'-ko-kol*) [*γλυκίς*, sweet; *κόλλα*, glue]. The same as *Glycin*, *q. v.* The *Glycocols*, *Alanins*, or *Amido-fatty Acids* are crystalline bodies, usually of a sweet taste, and readily soluble in water.

**Glycocyamin** (*gli-ko-si'-am-in*) [*γλυκίς*, sweet; *κυανός*, blue; *amin*],  $C_3H_7N_3O_2$ . Guanido-acetic Acid; a substance obtained by the direct union of glycocol with cyanamid. It is soluble in 120 parts of cold water and rather readily in hot water; insoluble in alcohol and in ether. It forms crystalline compounds with acids and bases.

**Glycodrupose** (*gli-kod-rup'-oh*) [*glykōs*, sweet; *drupōs*, an ever ripe olive]. The substance turning the olive into a ripe olive.

**Glycogen** (*gli-jen*) [*glykōs*, sweet; *gēn*, to produce].  $C_6H_{10}O_5$ . A white, amorphous powder, acidic, and soluble, forming an aqueous solution with water, and insoluble in alcohol. It is commonly known as animal starch. It occurs in the blood and the liver, in which it is contained, and is obtained by extracting from glucose. See *glycogenolysis*, *glycol*.

**Glycogenolysis** (*gli-jen-oh'-liss*) [*glykōs*, sweet; *gēn*, to produce; *liss*, to break down]. The formation of sugar in the animal kingdom, similar to that in plants.

**Glycogenic** (*gli-jen-ik*) [*glykōs*, sweet; *gēn*, to produce]. Pertaining to glycogen or to glycogenolysis.

**Glycogenin** (*gli-jen-in*) [*glykōs*, sweet; *gēn*, to produce]. The animal precursor of glycogen.

**Glycyrrhiza** (*gli-sir-ih'-zā*) [*glykōs*, sweet; *rhiza*, root]. The licorice root in the blood, especially the portion in greater quantity; glycyrrhiza.

**Glycol** (*gli-kol*) [*glykōs*, sweet; *kolōs*, to divide]. A divalent alcohol, a compound intermediate in its properties and composition between monohydric alcohol and trihydric glycerol. The glycols are neutral, thick liquids. The solubility of a compound in water increases according to the neutralization of OH groups in it, and glycol is consequently less soluble in alcohol and somewhat volatile. There will also be an appreciable rise in the boiling temperature, while at the same time the body becomes almost tasteless, inasmuch as there occurs a gradual transition from the hydrocarbons to the glycols. In accord with this, the glycols have a specific heat, are readily soluble in water, slightly soluble in ether, and boil at a much higher point than the hydrocarbons having similar monohydric alcohols. The glycols have hydroxyl groups united to different carbon atoms.

**Glycolamid** (*gli-kol-ah'id*) [*glykōs*, sweet; *amid*],  $C_2H_5NO_2$ . A substance crystallizing in needles that melt at  $150^\circ C$ .; it possesses a sweet taste, and dissolves easily in water, but with difficulty in alcohol.

**Glycolic Acid** (*gli-kol'-ik*). See *Lactic*.

**Glycolic Acid** (*gli-kol'-ik*). See *Lactic*.

**Glycolysis** (*gli-kol'-iss*) [*glykōs*, sweet; *liss*, to divide]. The process of decomposition into glycols.

**Glyconin, Glyconum** (*gli-kon-in, -um*) [*glykōs*, sweet]. The glyconic salt of the U. S. Ph. It is a mixture of calcium, potassium, and glyconin 55.

**Glyco-polyuria** (*gli-kol-poh'-yoor-ee-ah*) [*glykōs*, sweet; *polys*, many; *yoor*, to urinate]. Boissier's term for diabetes, associated with excessive quantity of sugar in the urine and with an excess of lactic acid in the blood.

**Glyconum** (*gli-kon-um*). See *Glyconin*.

**Glycyrrhiza** (*gli-sir-ih'-zā*). See *Glycyrrhiza*.

**Glycyrrhizin** (*gli-sir-ih'-zin*) [*glykōs*, sweet; *rhiza*, root]. A substance produced by the action of ammonia upon glyoxal. It is easily soluble in water, alcohol and ether, and crystallizes in brilliant prisms, melting at  $89^\circ C$ . and boiling at  $255^\circ C$ .

**Glyoxim** (*gli-oks'-im*) [*glykōs*, sweet],  $C_2H_3N_2O_2$ . A compound produced by the action of hydroxylamin upon trichloroacetic acid. It is soluble in water, alcohol, and ether; crystallizes in rhombic plates; melts at  $178^\circ C$ .; sublimes without difficulty; has a faintly acid reaction, and forms salts with bases.

**Glyoxylic Acid** (*gli-oks'-il'-ik*). See *Acid*.

**Gmelin's Test**. Same as *Gmelin-Heintz Reaction*.

**Gmelin-Heintz Reaction**. A test for bile-pigments in the urine. See *Tests*, *Table of*.

**Gmelina** (*gmel'-in-ah*) [after *Gmelin*, a Russian scientist]. A genus of verbenaceous shrubs and trees. In India, *G. arborea*, *G. asiatica*, *G. parvifolia*, *G. villosa*, and other species, are employed in catarrhal disorders and in fevers and rheumatism. Unof.

**Gnaphalium** (*gnaf'-al'-e-um*). See *Life-everlasting*.

**Gnat** (*nat*) [ME., *gnat*, a gnat]. A dipterous insect, the *Culex pipiens*, differing but slightly from the common mosquito, with which it is popularly confounded. The "bite" consists in a piercing of the skin and the withdrawal of a minute quantity of blood. The gnat has no sting or poison-glands.

**Gnathalgia** (*nath-al'-je-ah*) [*gnathos*, jaw; *algos*, pain]. Pain or neuralgia of the jaw.

**Gnathankylosis** (*nath-ang-kil'-o'-sis*) [*gnathos*, jaw; *ankylosis*, ankylosis]. Ankylosis of the jaw.

**Gnathic** (*nath'-ik*) [*gnathos*, the cheek-bone]. Pertaining to the cheek or jaw. **G. Index**. See *Alveolar* and *Index*.

**Gnathidium** (*nath-id'-e-um*) [*gnathos*, jaw; *pl.*, *Gnathidia*]. In biology, one of the rami of the lower mandible of a bird.

**Glycyrrhea** (*gli-sir-eh'-ah*) [*glykōs*, sweet; *rhiza*, to flow]. Any discharge of glucose from the body. **Glycyrrhæa urinosa**. Synonym of *Diabetes mellitus*.

**Glycyrrhizin** (*gli-sir-ih'-zin*) [*glykōs*, sweet; *rhiza*, root],  $C_4H_8O_4$ . An amorphous bitter substance in liquorice root.

**Glycyrrhiza** (*gli-sir-ih'-zā*) [*glykōs*, sweet; *rhiza*, root; *gen.*, *Glycyrrhiza*]. Liquorice-root. The root of *G. glabra*, a demulcent and mild laxative, of sweet taste.

In combination with other medicaments it is an excellent expectorant, and is much used as an excipient in pills, troches, etc. **G.**, **Ext.**, the liquorice of commerce, occurring in black rolls. **G.**, **Ext.**, **Liquid** (B. P.). Dose 5j-ij. **G.**, **Ext.**, **Purum**, made with aqua ammoniac and water by percolation and evaporation. **G.**, **Ext.**, **Fld.**, prepared with water and alcohol. **G.**, **Mist.**, **Comp.**, Brown mixture, pure extract, sugar, acacia, aa 3 parts, tinct. opii camph. 12, vin. antimonii 6, spt. nitrous ether 3, water 70. Dose 5j-5ss. **G. et Opii, Trochisci**, have each ext. of glycyrrhiza, gr. ij, ext. of opium gr. 3j, acacia, sugar, oil of anise q. s. Dose j ij. **G.**, **Pulv.**, **Comp.**, compound licorice-powder, senna 18, glycyrrhiza 23, oil of fennel 4, washed sulphur 8, sugar 50.

**Glycyrrhizin** (*gli-sir-ih'-zin*). See *Glycyrrhizinum*.

**Glycyrrhizinum** (*gli-sir-ih'-zin-um*) [*glykōs*, sweet; *rhiza*, root; *gen.*, *Glycyrrhiza*]. A sweet principle derived from liquorice root. **G. ammoniatum** (U. S. P.), ammoniated glycyrrhizin, a sweet preparation used as a substitute for liquorice. Dose gr. v-xv.

**Glyoxal** (*gli-oks'-al*) [*glykōs*, sweet; *ōxalis*, sorrel],  $C_2H_2O_2$ . A substance formed by oxidizing acetaldehyde with  $HNO_3$ . It is an amorphous non-volatile mass that deliquesces in the air, and is soluble in alcohol and in ether.

**Glyoxalin** (*gli-oks'-al-in*) [*glykōs*, sweet; *ōxalis*, sorrel],  $C_2H_3N_2O_2$ . A substance produced by the action of ammonia upon glyoxal. It is easily soluble in water, alcohol and ether, and crystallizes in brilliant prisms, melting at  $89^\circ C$ . and boiling at  $255^\circ C$ .

**Glyoxim** (*gli-oks'-im*) [*glykōs*, sweet],  $C_2H_3N_2O_2$ . A compound produced by the action of hydroxylamin upon trichloroacetic acid. It is soluble in water, alcohol, and ether; crystallizes in rhombic plates; melts at  $178^\circ C$ .; sublimes without difficulty; has a faintly acid reaction, and forms salts with bases.

**Glyoxylic Acid** (*gli-oks'-il'-ik*). See *Acid*.

**Gmelin's Test**. Same as *Gmelin-Heintz Reaction*.

**Gmelin-Heintz Reaction**. A test for bile-pigments in the urine. See *Tests*, *Table of*.

**Gmelina** (*gmel'-in-ah*) [after *Gmelin*, a Russian scientist]. A genus of verbenaceous shrubs and trees. In India, *G. arborea*, *G. asiatica*, *G. parvifolia*, *G. villosa*, and other species, are employed in catarrhal disorders and in fevers and rheumatism. Unof.

**Gnaphalium** (*gnaf'-al'-e-um*). See *Life-everlasting*.

**Gnat** (*nat*) [ME., *gnat*, a gnat]. A dipterous insect, the *Culex pipiens*, differing but slightly from the common mosquito, with which it is popularly confounded. The "bite" consists in a piercing of the skin and the withdrawal of a minute quantity of blood. The gnat has no sting or poison-glands.

**Gnathalgia** (*nath-al'-je-ah*) [*gnathos*, jaw; *algos*, pain]. Pain or neuralgia of the jaw.

**Gnathankylosis** (*nath-ang-kil'-o'-sis*) [*gnathos*, jaw; *ankylosis*, ankylosis]. Ankylosis of the jaw.

**Gnathic** (*nath'-ik*) [*gnathos*, the cheek-bone]. Pertaining to the cheek or jaw. **G. Index**. See *Alveolar* and *Index*.

**Gnathidium** (*nath-id'-e-um*) [*gnathos*, jaw; *pl.*, *Gnathidia*]. In biology, one of the rami of the lower mandible of a bird.

**Glycuronic Acid** (*gli-kur-oh'-ik*). See *Lactic*.

**Gnathion** (*nath'-e-on*). See *Craniometric Points*.

**Gnathite** (*nath'-it*) [*γνάθος*, the jaw]. In biology, one of the jaw-feet of an arthropod; a gnathopodite.

**Gnathitis** (*nath-i'-tis*) [*γνάθος*, jaw; *ιτις*, inflammation]. Inflammation of the jaw or cheek.

**Gnathogramma** (*nath-o-gram'-ah*) [*γνάθος*, jaw, cheek; *γράμμα*, line]. Jadelot's genal line. See *Jadelot's Lines or Furrows*.

**Gnathoneuralgia** (*nath-o-nu-rall'-je-ah*) [*γνάθος*, jaw; *νεῖρον*, a nerve; *ἄλγος*, pain]. See *Gnathalgia*.

**Gnathoparalysis** (*nath-o-par-all'-is-is*) [*γνάθος*, jaw; *παράλυσις*, paralysis]. Paralysis of the jaw.

**Gnathoplasty** (*nath'-o-plas-te*) [*γνάθος*, cheek; *πλάσσειν*, to shape]. Plastic surgery of the cheek.

**Gnathoplegia** (*nath-o-ple'-je-ah*) [*γνάθος*, cheek; *πληγή*, stroke]. Paralysis of the cheek.

**Gnathopodite** (*nath-op'-o-dit*) [*γνάθος*, jaw; *πόδις*, foot]. Same as *Gnathite*.

**Gnathorrhagia** (*nath-or-a'-je-ah*) [*γνάθος*, the cheek; *ῥήγναι*, to burst forth]. Hemorrhage from the mucous membrane of the cheek.

**Gnathoschisis** (*nath-os'-kis-is*) [*γνάθος*, jaw; *σχίζειν*, to split]. Cleft-jaw.

**Gnathospasmus** (*nath-o-spas'-mus*) [*γνάθος*, jaw; *σπασμός*, spasm]. Locked jaw; trismus.

**Gnathostegite** (*nath-os'-tej-it*) [*γνάθος*, jaw; *στέγος*, roof]. In biology, the cover to the mouth-parts of a crustacean formed by the expansion of parts of the third thoracic limbs.

**Gnomonic** (*no-mon'-ik*) [*γνώμων*, a carpenter's square]. In biology, bent at right angles.

**Gnoscopin** (*nos'-ko-pin*).  $C_{34}H_{36}N_2O_{11}$ . A crystalline alkaloid of opium, melting at  $233^{\circ}C$ .

**Goa Ball**, or **Goa Stone** [*Goa*, in Portugal]. A mass of drugs made up into a large bolus, from which enough for a dose is scraped as needed; it is said to have originated at Goa. **G. Powder**. See *Ara-roba*.

**Goadby's Solution**. A solution of salt and corrosive sublimate in water, for preserving meat against putrefaction.

**Goanese Ipecacuanha** (*go-an-eh' ip-e-kak-u-aul'-ah*). See *Naregamia*.

**Goat's-voice** (*gotz'-vois*). See *Egophony*.

**Goblet Cells**. Chalice-like cells lying between the epithelial cells of the intestinal villi.

**Goddard's Astringent Gargle**. An astringent gargle composed of alum 2 drams, pomegranate bark  $\frac{1}{2}$  ounce, red rose petals 1 dram, honey 1 ounce, boiling water 6 ounces.

**Godfrey's Cordial**. A non-official preparation of opium containing from half a grain to a grain and a half of opium to the ounce.

**Goggle-eyed** (*gog'-l'id*) [ME., *goggleyed*]. A vulgar synonym of *Exophthalmos* and of *Strabismus*.

**Goggles** (*gog'-lz*) [ME., *gogelen*, to look askint]. Spectacles with colored lenses and wire or cloth sides, to protect the eyes from excessive light, dust, etc.

**Gogo** (*go'-go*) [African]. The rhizome of *Phrynium beaumontii*, a marantaceous plant indigenous to the western coast of Africa. It is a powerful vermifuge and purgative. It is used in the form of a decoction,  $\frac{5}{8}$  lijs to the Oj. Unof.

**Gogul** (*go'-gul*) [Beng. or Hind.]. A name for various balsamic resins, the product of Asiatic trees of the genus *Balsamodendron*; it is sometimes classed as *Elemi*, and also as *Bdellium*.

**Goiter** (*goi'-ter*) [*guttur*, throat]. Enlargement, particularly if hypertrophic, of the thyroid gland. It is called, also, *Bronchocele* and *Tracheocele*. It generally accompanies cretinism. **G.**, **Anemic**. Synonym of **G.**, **Exophthalmic**. **G.**, **Exophthalmic**, Basedow's

Disease, Graves' Disease. A disease characterized by cardiac palpitation, goiter, exophthalmos, tremor, palpitation usually being the initial symptom; the pulse ranges from 90 to 120. Occasionally the exophthalmos is so extreme as to produce spontaneous dislocation of one or both eyes. There are present *Græfe's lid-sign*, namely, inability of the upper lid to follow perfectly the downward movement of the eye; and, usually, *Stellwag's sign*, viz., apparent widening of the palpebral aperture, due to retraction of the upper lid. The disease is usually encountered in women; its course is chronic, and the ultimate outcome recovery. Death, however, occasionally results. The etiology is obscure, but the disease occurs frequently in those of the neurotic habit. The theories proposed for the explanation of exophthalmic goiter may be placed in three divisions: 1. The *cardio-vascular theories*, which locate the seat of the disease in the heart itself, the vessels, and the blood. 2. The *mechanical theories*, which connect the symptoms with compression of vessels or nerves in the neck by a primarily hypertrophied thyroid. 3. The *nerve theories*, which attribute the disease to disturbance in the vagus nerve, in the sympathetic nerve itself, or in the central nervous system proper. **G.**, **Pulsating**. Synonym of **G.**, **Exophthalmic**. **G.-stick**, the coarse stem of certain kinds of sea-weed (*Sargassum bacciferum*, etc.), used in various places as a cure for goiter.

**Goitrous** (*goi'-trus*) [*guttur*, throat]. Pertaining to or affected with goiter.

**Gokeroo** (*gook'-er-oo*). See *Gokhru*.

**Gokhru** (*gok'-ru*) [E. Indian]. Gokeroo. The fruit of *Pedalium murex*, found in the East Indies, much used by the natives for enuresis and spermatorrhea. It is used in infusion of  $\frac{5}{8}$  j to Oj of boiling water. Dose *ad lib*. Unof.

**Gold** [ME., *gold*, gold]. See *Aurum*. **G.**, **Bichlorid** of, so-called, has been vaunted in the treatment of drunkenness and the opium-habit. The compounds of chlorine and gold are the monochlorid and the trichlorid. **G.-beaters' Cramp**. See *Cramp*. **G.-beaters' Skin**, a thin membrane prepared from the ecum of the ox for gold-beaters' use. It has a limited use in surgery. **G.**, **Annealing** of, the softening of gold by means of heat, to reduce the hardness caused by the mechanical forces to which it has been subjected in its manufacture. See *Annealing*. **G.-brown**. Same as *Phenylene-brown*. **G. Cinnabar**. Same as *Minium*. **G. Crowns**, portions of the natural crowns of teeth capped with gold, thereby restoring the contour. **G.-foil**, **Dentists'** (*aurum foliatum*), gold-leaf. Gold-foil, as used by dentists for filling teeth, is gold hammered into a thin leaf, but finer in quality and of much greater thickness than the article ordinarily known as gold-leaf. **G.-ochre**. Same as *Ochre*. **G.-orange**, an anilin dye employed by Unna for staining lepra-bacilli and tubercle-bacilli. See *Stains*, *Table of*, and *Pigments*, *Conspicuous of*. **G.-plate**, for dental uses, may be made by the following formulas:—

#### 18-KARAT GOLD-PLATE.

|                   |         |
|-------------------|---------|
| Gold, . . . . .   | 18 dwt. |
| Silver, . . . . . | 2 "     |
| Copper, . . . . . | 4 "     |

#### 20-KARAT GOLD-PLATE.

|                      |         |
|----------------------|---------|
| Gold coin, . . . . . | 20 dwt. |
| Silver, . . . . .    | 2 "     |
| Copper, . . . . .    | 2 "     |

**G. of Pleasure**. See *Camelina*. **G.-purple**. Same as *Cassius' Purple*. **G.-solder**, gold alloyed with one or more metals. The following table exhibits the rela-

- tion, seed; *βλαστός*, germ: *pl.*, *Gonoblastidia*). A term applied by Huxley to the organs set apart for the production of generative buds in the *Physophorida* and other *Hydrozoa*. Cf. *Blastostyle*.
- Gonobolia** (*gon-o-bol'-le-ah*) [*γονή*, semen; *βάλλειν*, to throw]. 1. The ejaculation of semen. 2. Spermatorrhea.
- Gonocace** (*gon-ok'-as-ē*) [*γόνυ*, knee; *κάκη*, evil]. Same as *Gonarthroceae*.
- Gonocalyx** (*gon-o-ka'-liks*) [*γόνος*, generation, seed; *κάλυξ*, a cup: *pl.*, *Gonocalices*, *Gonocalyxes*]. In biology, a term applied by Huxley to the investment of the reproductive organs of many of the *Hydrozoa*, having more or less the structure of a nectocalyx, but from whose walls those of the actual genital sac, the *manubrium* of Allman, tend to become independent.
- Gonocèle** (*gon'-o-sel*) [*γόνυ*, knee; *κήλη*, tumor]. A swelling of the knee.
- Gonocèle** (*gon'-o-sel*) [*γονή*, semen; *κήλη*, tumor]. 1. A tumor of a testis, or of a spermatid cord, due to retention of semen. 2. Synonym of *Gonorrheal Rheumatism*.
- Gonocheme** (*gon'-o-kēm*) [*γόνος*, generation, seed; *ἔχειν*, to carry, hold]. In biology, hydroid medusae bearing genitalia.
- Gonochorismus** (*gon-o-kor-iz'-mus*) [*γόνος*, generation, sex; *χωρισμός*, separation]. In biology, the specialization of sex; the differentiation of male or female genitalia in a developing embryo; the separation of the sexes in phylogeny.
- Gonococcus** (*gon-o-kok'-us*) [*γονή*, semen; *κόκκος*, kernel]. A microbe thought to be the specific cause of gonorrhea. See *Gonorrhea*, and *Bacteria*, *Synonymistic Table*.
- Gonocyst** (*gon'-o-sist*) [*γόνος*, generation, seed; *κίστις*, a pouch]. In biology, the inflation of the surface of the zoarium in which the embryos are developed in certain of the *Polyzoa*. See *Gonocyst*.
- Gonoid** (*gol'-noid*) [*γόνος*, semen; *εἶδος*, appearance]. Resembling semen.
- Gonolobus** (*gon-o-lof'-bus*) [*γόνος*, semen; *λοβός*, pod]. A genus of asclepiadaceous plants, all American. *G. macrophyllus*, of the U.S., has a cathartic and poisonous root. Unof. Some varieties of *condurango* are furnished by plants of this genus.
- Gonophore** (*gon'-o-for*) [*γόνος*, seed; *φόρος*, bear]. In biology: 1, a stipe below stamens. 2. The ultimate generative zooid of the *Hydroid-medusa*, that which immediately produces the generative elements. It may be either medusiform or saciform.
- Gonoplasm** (*gon'-o-plazm*) [*γόνος*, seed; *πλάσμα*, anything formed]. In biology, that portion of the protoplasm of the male fertilizing element in certain cryptogams that penetrates and fertilizes the oosphere.
- Gonopod** (*gon'-o-pod*) [*γόνος*, generation; *πούς*, foot]. In biology, one of the specialized abdominal feet of certain male crustaceans, functioning as auxiliary reproductive organs.
- Gonopoesis** (*gon-o-poi-el'-sis*). See *Gonepoesis*.
- Gonopoietic** (*gon-o-poi-el'-ik*) [*γόνος*, generation, seed; *ποιητικός*, productive]. In biology, productive of reproductive elements, as ova or spermatozoa.
- Gonorrhea** (*gon-or-el'-ah*) [*γόνος*, semen; *ῥοία*, a flow]. Etymologically, an involuntary discharge of semen, but generally applied to a specific infectious inflammation of the mucous membrane of the urethra and adjacent cavities. The gonococcus of Neisser is believed to be the specific microbe of gonorrhea. It is a diplococcus, found in clumps of from 10 to 20, surrounded by a mucous envelop. *G. balani*, affects the glans penis. *G.*, *Bastard*. See *G.*, *Mucous*. *G.*, *Dry*, a form unassociated with discharge. *G.*, *Mu-*
- cous*, the so-called abortive or slight superficial catarrh. The inflammation never runs high, and subsides in from seven to fourteen days. *G. preputialis*. See *Balanitis*. *G. sicca*. See *G.*, *Dry*.
- Gonorrheal** (*gon-or-el'-al*) [*γόνος*, semen; *ῥοία*, a flow]. Relating to gonorrhea. *G. Ophthalmia*. See *Ophthalmia*. *G. Rheumatism*, inflammation of one or more joints as a sequel of gonorrhea. *G. Wart*. See *Veneral Wart*.
- Gonoschocele** (*gon-os'-ke-o-sel*) [*γονή*, semen; *ὄσχεον*, scrotum; *κήλη*, tumor]. A distention of the testicle with semen.
- Gonosome** (*gon'-o-som*) [*γόνος*, generation, seed; *σῶμα*, the body]. In biology, the entire assembly of generative zooids in a hydroid colony.
- Gonospherium** (*gon-o-sfe'-re-um*) [*γόνος*, generation, seed; *σφαῖρα*, sphere: *pl.*, *Gonospheria*]. In biology, a form of oögonium in which the protoplasm is condensed at the center of the cell and separated by a space from the cell-wall.
- Gonostroma** (*gon-o-stro'-mah*) [*γόνος*, offspring; *στρώμα*, stroma]. The proligerous disc.
- Gonotheca** (*gon-o-the'-kah*) [*γόνος*, generation, seed; *θήκη*, case: *pl.*, *Gonotheca*]. In biology, the chitinous hull of the reproductive capsules of certain hydrozoans.
- Gonozemia** (*gon-o-ze'-me-ah*) [*γόνος*, semen; *ζημία*, flow]. Excessive secretion or discharge of semen.
- Gonozooid** (*gon-o-zo'-oid*) [*γόνος*, generation; *ζῷον*, animal; *εἶδος*, form]. In biology, one of the sexual zooids of an ascidian.
- Gonyagra** (*gon-e-a'-grah*). See *Gonagra*.
- Gonyalgia** (*gon-e-al'-ja-ah*). See *Gonalgia*.
- Gonybatia** (*gon-e-ba'-she-ah*) [*γόνυ*, knee; *βαίνειν*, to go]. Walking upon the knees; a symptom encountered in some paralytic and paretic cases.
- Gonycampsis** (*gon-e-kamp'-sis*) [*γόνυ*, knee; *κάμψις*, curve]. Deformity of the knee by curvature.
- Gonyocèle** (*gon'-e-o-sel*) [*γόνυ*, knee; *κήλη*, tumor]. Same as *Gonyoncus*.
- Gonyoncus** (*gon-e-ong'-kus*) [*γόνυ*, knee; *ὄγκος*, tumor]. A tumor or swelling of the knee.
- Gonys** (*gol'-nis*) [*γόγγυς*, the chin]. In biology, the line of symphysis of the mandibles of a bird.
- Gonytyle** (*gon-e-ti'-le*) [*γόνυ*, knee; *τύλη*, pad]. A prominent thickening of the skin upon the knee.
- Goodyera** (*good-ye'-rah*) [after John Goodyer, an English botanist]. A genus of orchidaceous plants. *G. repens* of Asia, Europe, and America, is a popular medicine. *G. pubescens* of N. America (rattlesnake plantain, cancer-plant) is applied to sores, cancers, etc. Unof.
- Goose** (*goos*) [ME., *goos*, a goose]. A bird of the family of *Anserines*. *G.-flesh*. See *G.-skin*. *G.-foot*. See *Pes anserinus*. *G.-grass*. See *Galium aparine*. *G.-skin*, *Cutis ansera*, Goose-flesh, a popular name for a well-known condition of the skin marked by prominence about the hair-follicles. See *Arrector pili Muscle*.
- Gore** (*gor*) [ME., *gore*, gore]. Thick or clotted blood.
- Gorged Stomach** (*gorjd stum'-ak*). See *Stomach Stagers*.
- Gorget** (*gor-jer-et'*) [Fr., *gorge*, throat]. A surgeon's gorget, especially a small gorget.
- Gorget** (*gor'-jet*) [*gorges*, a chasm]. A channeled instrument similar to a grooved director. It may be blunt, sharp, hooked, etc. In biology, a throat-patch, as the brilliant throat of the humming-bird.
- Gorgon's Head**. See *Caput medusae*.
- Gosselin's Fracture**. A V-shaped fracture of the distal extremity of the tibia, involving the ankle-joint.
- Gossypin** (*gos-ip'-e-in*) [*gossypium*, the cotton-tree].

A precipitate from a tincture of the root bark of *G. speciosum* (L.) is sometimes used as an emmenagogue and abortifacient. Dose, 1 to 5 grains. [U.S.P.]  
**Gossypine** [*Gossypin*] [*Gossypin*, cotton] In biology, cotton, the seed oil.

**Gossypium** [*Gossypium*] [L., cotton tree; gen., *Gossypium*] *Cotton*. The leaves of the leaf of *G. speciosum* (L.) are broad, ovate, and deprived of fatty matter, it is sometimes used in the treatment of surgery. It is soluble in an aqueous solution of copper sulphate. The root is thought to have emmenagogue properties. **G. purificatum**, purified cotton. **G. rad.**, Cortex, cotton root bark. Dose gr. xix-5. **G. rad., Ext.**, Flid., prepared with ethanol and alcohol. Dose 10-20-5. **G. seminis. Ol.**, the expressed oil containing some of the seed oil of commerce. **G. Tinct.**, 1 fl. oz. Dose 5. See, also, *Pyrogallol*, *Gothard Worm*, *Gothard's*. See *Infratimum*. **Gothic Palate**. An abnormality of the palatal arch. **Guttinger's Line**. See *Line*, *Palate*. **Gottstein's Basal Process**. The infundibular ex- trinsic muscle of the eye. It is connected with the line of the palatal arch of the maxillary nerve. **G.'s Curet**, a curet used for the removal of post nasal growths. **G.'s Fibers**. See *Fiber*.

**Gouge** [*Gouge*] [Fr.] An instrument for cutting or removing bone or other hard structures.

**Gougers** [*Gougers*] [OF., *Gouger*, a soldier's mistress]. A soldier's mistress.

**Gould's Cerate**. See *Pharm.* **G.'s Extract**. See *Pharm.*

**Gould, Methods of**. See *Treatment, Methods of*.

**Gourand's, or Goyrand's, Disease**. See *Diseases, Gout*. **G.'s Hernia**. See *Hernia*.

**Gourdy** [*Gourdy*] [ME., *gourd*, a gourd]. In botany, having swollen legs (said of horses).

**Gout** [*Gout*] [ME., *gout*, the gout; *gutta*, a drop]. A constitutional disease characterized by an excess of uric acid or uric acid urates, especially sodium urate, in the fluids of the body. Sodium urate is deposited about the articular surfaces of the small joints, but in time the arteries, cardiac valves, and connective tissue of the kidneys may be involved. The metatarsophalangeal joint of the great toe is, for many, the favorite point of attack, and the point of attack is another favorite seat. Tophi form about the affected part. To diminished solubility of the uric acid, due to increased acidity of the blood; to increased elimination of uric acid, and failure in function of the kidneys; to persistent plethora of the digestive tract; to various causes, the cause of gout. The symptoms of the acute form are malaise, intense pain in the affected joint, with swelling and redness, pyrexia, chills, scanty and acid urine, irritability and sleeplessness. The paroxysm usually occurs in the night. Other attacks almost invariably follow at irregular intervals. **G. Diaphragmatic**, angina pectoris. **G., Latent or Masked**, a condition ascribed to a gouty condition, but not presenting the typical symptoms of gout. **G., Retrocedent**, that form that is manifested by various internal manifestations, without the customary external symptoms. See *DiCicco's Disease*. **G., Rheumatic**. See *Rheumatism, Rheumatism*.

**Gouty** [*Gouty*] [ME., *gout*, the gout]. Of the nature of gout, affected with gout. **G. Kidney**. See *Kidney, Gouty*.

**Goux, System**. See *System, Goux's*.

**Gowers' Column**. See *Column*. **G.s' Front-tap Contraction**. See *Contraction, Front-tap*. **G.'s Method**, the method of counting the corpuscles of the blood by the hemocytometer. **G.'s Pupil**. See *Pupil, Gowers' Method*, *Pathology*.

**Gowland's Cosmetic, Lotion, or Wash**. A famous lotion used in the treatment of acne, and said to have contained oxymuriate of mercury in an emulsion of bitter almonds.

**Gr.** Abbreviation of *grain*.

**Graafian Follicles, or Vesicles**. Peculiar vesicular bodies existing in the cortex of the ovary as well as in

**GRAAFIAN FOLLICLE AND OVULE, WITH PROLIFEROUS DISC**. the ovarian stroma. Within them the ova mature. See *Vesicle*.

**Gracilis** [*gras'-it-is*] [L., slender]. See *Muscles, Table of*. **G. Experiment**, an experiment performed upon the gracilis muscle of the frog, showing that pure muscular excitation does not travel backward from the muscle to the nerve.

**Gradient** [*grat'-de-ent*] [*gradi*, to step, to go]. In biology, walking, rather than creeping or jumping.

**Graduate** [*grad'-u-at*] [*gradus*, a step]. To take a degree from a college or university. Also, a person on whom a degree has been conferred. Also, in pharmacy, a glass vessel upon which the divisions of liquid measure have been marked.

**Graduated** [*grad'-u-a-ted*] [*gradus*, a step]. Arranged in degrees or steps. **G. Compress**, a compress made of pieces decreasing progressively in size, the apex or smallest piece being applied to the focus of pressure. **G. Cones**. See *Cones*. **G. Full Bath**. See *Bath*.

**Graefe's Collyrium**. The celebrated *collyrium adstringens luteum*. It was made as follows: Camphor, 10 grains; alcohol, 1 ounce; chlorid of ammonium, 15 grains; sulphate of zinc, 30 grains; croci pulv. hispanici, 2 grains; distilled water, 5 ounces. One drop of this, after filtration, is used morning and evening. **G.'s Knife**, a knife for the performance of the operation for cataract. **G.'s Operations**. See *Operations, Table of*. **G.'s Signs or Symptoms**. See, *Signs and Symptoms, Table of*.

GRAEFE'S KNIFE.

**Grafenberg System**. See *Hydrotherapy*.

**Graft** [ME., *graffe*, graft]. A small portion of skin, bone, periosteum, nerve, etc., inserted into or upon a raw surface or tissue deficient in the special structure desired. **G., Sponge**, the insertion of antisepticized sponge to act as a framework for the granulations.

**Graham Bread**. Brown bread; wheaten bread made from unbolted flour.

**Grahamism** [*grat'-am-izm*] [after Sylvester Graham, an American reformer]. Vegetarianism; a theory of dietetic and medical reform started in 1830.

**Grahamite** [*grat'-am-it*] [after Sylvester Graham]. A vegetarian; a follower of the teachings of Sylvester Graham, 1794-1851.

**Grahe's Test.** See *Tests, Table of*.

**Grain** (*grān*) [*granum*, corn]. A general name applied to starch-producing seeds, or to those of the cereals. Also, any small seed. In pharmacy, a small pill. Also, the  $\frac{1}{7000}$  part of the Troy pound.

**Graining-colors.** See *Pigments, Colors, and Dyestuffs*.

**Grains of Paradise** [*Grana paradisi*, "grains of paradise"]. The unripe fruit of *Anomum melegueta*, and of *A. granum paradisi*, brought from W. Africa. It is an aromatic stimulant and diuretic, useful in some cases of neuralgia. Unof.

**Grallatorial** (*gral-at-o'-re-al*) [*grallator*, one who walks on stilts]. In biology, applied to wading-birds.

**Gram, Gramme** (*gram*) [*γράμμα*, a Greek weight]. The weight of a cubic centimeter of distilled water at its maximum density. The gravimetric unit of the metric system of weights and measures. See *Metric System*. **G.** [Anglo-Indian.] A commercial name for the chick-pea, *Cicer arietinum*, and for other varieties of pulse.

**Gram's Fluid.** See *Gram's Solution*. **G.'s Method**, 1. See *Gram's Solution*. 2. See *Treatment, Methods of*. **G.'s Solution**, a test for amyloid liver, and a mordant in staining for tubercle-bacilli, consisting of iodine 1 part, potassium iodide 2, water 300. The preparation is taken from the color-bath, washed and plunged into this solution until it takes a blackish tinge, then washed in alcohol until decolorization is complete. This process is called *Gram's Method*. See *Stains, Table of*.

**Gramineous** (*gram-in'-e-us*) [*gramen*, grass]. In biology, grass-like.

**Graminifolious** (*gram-in-if-o'-le-us*) [*gramen*, grass; *folium*, a leaf]. In biology, having grass-like leaves.

**Graminivorous** (*gram-in-iv'-or-us*) [*gramen*, grass; *vorare*, to devour]. Feeding upon grass.

**Grammatic Acataphasia** (*gram-at'-ik ak-at-af-a'-ze-ah*). The faulty use of words, due not to ignorance, but to some central brain-lesion. See *Acataphasia*.

**Grammopetalous** (*gram-o-pet'-al-us*) [*γράμμη*, a stroke or line; *πέταλον*, a leaf]. In biology, having petals like leaves of grass, linear.

**Grana paradisi** (*gran'-ah par-ad-i'-si*) [L.]. See *Grains of Paradise*.

**Granatum** (*gran-at'-um*) [*granum*, a grain; *gen.*, *Granati*]. Pomegranate. The cortex of the root of *Punica granatum* contains a liquid alkaloid, *pelletierin*,  $C_8H_{13}NO$ , one of the most efficient anthelmintics against tapeworm, rarely failing to bring away the whole worm. **G.**, *Fld. Ext.* Dose  $\frac{3}{4}$  ss-jss. **G.**, *Decoctum*, fresh bark  $\frac{3}{4}$  xvij, water  $\frac{3}{4}$  xvij, boiled to  $\frac{3}{4}$  xij and strained. Dose  $\frac{3}{4}$  iv-vj. *Pelletierin tannas*, tannate of the alkaloid,  $C_8H_{13}NO.C_{14}H_{10}O_6$ . Dose gr. v-xx followed by a quick purgative. **P. sulphas**, very hygroscopic. Dose v-x. All unof.

**Grancher's Sign.** See *Signs and Symptoms, Table of*.

**Grand Mal** (*grand ma(h)l*) [Fr.]. A term for fully-developed epilepsy; major epilepsy.

**Grandeau's Test.** See *Tests, Table of*.

**Grandeur, Delirium of, or Delusions of.** Insane exaltation of mind, with false opinions as to one's own greatness and dignity.

**Grandidentatus** (*gran-de-den-ta'-tus*) [*grandis*, large; *dens*, a tooth]. Having large teeth.

**Grandin** (*gran'-din*) [*grando*, a hailstone]. A peculiar substance found in the urine of pregnant women. It is supposed to produce kystein by its decomposition.

**Grandry's Corpuscles.** A variety of sensitive nerve-terminations consisting of delicately punctate and sharply defined cells that are flattened and lens-like in form, and have a nucleus, the latter being the so-called

*Tactile Cells of Merkel*. They occur in the beak and tongue of the duck and goose, in the epidermis of man and mammals, etc. They are the same as the *Corpuscles of Krause*.

**Graniticoline** (*gran-it-ik'-o-lin*) [It., *granito*, granite; *colere*, to inhabit]. In biology, applied to such lichens as grow upon granite.

**Granny Knot** (*gran'-e not*). A tie of a cord in which in the second loop the end of one cord is over and the other under its fellow, so that the two loops do not lie in the same line. This knot can easily be converted into a slip-knot. See *Knot*.

**Granular** (*gran'-u-lar*) [*granum*, a grain]. Made up of, containing, or bearing granules. **G. Casts.** See *Casts*. **G. Corpuscles.** See *Granule-cell*. **G. Degeneration.** See *Cloudy Swelling*. **G. Degeneration of the Cervix.** See *Erosion*. **G. Kidney**, a kidney affected with diffuse or interstitial nephritis. **G. Lids.** See *Trachoma*. **G. Liver**, a cirrhotic liver. See *Cirrhosis*. **G. Pharyngitis**, follicular pharyngitis.

**Granulated** (*gran'-u-la-ted*) [*granula*, a little grain]. Characterized by the presence of granulations or granules.

**Granulation** (*gran-u-la'-shun*) [*granula*, dim. of *granum*, a grain]. 1. The operation of reducing coarsely crystalline substances to particles of uniform size by solution and rapid evaporation, with constant stirring. Some substances, like ferrous sulphate, are best granulated by filtering a strong solution into alcohol. 2. The formation of new or cicatricial tissue in the repair of wounds or sores, the surface of which has a granular appearance; also, any one of the elevated points of such a surface or formation. **G., Miliary**, a milary tubercle. **G.-tissue**, new or cicatricial tissue made up of granulations, or by the process of granulation.

**Granulative** (*gran'-u-la-tiv*) [*granula*, a little grain]. Pertaining to or marked by the process of granulation.

**Granule** (*gran'-ul*) [*granula*, a little grain]. In anatomy, any small rounded grain, such as is found in the Malpighian bodies of the spleen. Also a spore or an isolated cell. In pharmacy, a small pill. **G., Elementary**, irregular protoplasmic bodies in the blood, smaller than ordinary blood-corpuscles. **G., Seminal**, any one of the solid particles of the semen, consisting of round, granular corpuscles. **G.-cell**, any one of a variety of round cells found in pathologically softened brain-tissue, and densely filled with fat-globules. **G.-mass**, a giant-cell.

**Granulial** (*gran-ul'-le-ah*) [*granula*, a little grain]. Empiric's name for an acute inflammatory condition distinct from tuberculosis, but, like it, characterized by the development of granulations within organs and on serous surfaces.

**Granulistics** (*gran-u-lis'-tiks*) [*granula*, a little grain]. That branch of physics employed in the estimation of the volume or capacity of a body by means of seed, shot, sand, granules, etc.

**Granulitis** (*gran-u-li'-tis*) [*granula*, a little grain; *itis*, inflammation]. Acute miliary tuberculosis.

**Granuloma** (*gran-u-lo'-mah*) [*granulum*, a small grain; *ma*, a tumor; *pl.*, *Granulomata*]. A term used by Virchow to include such a neoplasm as does not advance beyond the stage of granulation-tissue. **G. fungoides**; Mycosis fungoides; Fibroma fungoides; a rare, chronic inflammatory disorder, probably of specific origin, that affects the superficial and deep layers of the skin, and occasionally the mucous membranes. It is marked by the appearance of urticarial, erythematous, or eczematous patches, of irregular shape and size, with well-defined margins, usually upon the scalp and skin of the trunk. Itching is intense, and frequently the

patches become hypertrophic, and firm, hard nodules, varying in size from that of a pea to an apple, either sessile or pedunculated, develop on them. These nodules usually break down, the larger ones, owing to ulcers that involve necrosis, fungating growths of tissue, and discharge thin pus and serum. Death results from a pyæmicæ hæmorrhæ. See *Melanoma*.

**Granulomatous** (*grăn'ul-ô-mat'us*) [*grăn'ul*, a little grain; *ô-mat'us*, forming]. Pertaining to, of the nature of, or affected with, *granuloma*. **G. Inflammation.** See *Inflammation*.

**Granulose** (*grăn'ul-ô-s*) [*grăn'ul*, a grain]. The material that composes the inner portion of starch granules; it is surrounded by coats of cellulose.

**Granum** (*grăn'ul-um*). See *Granum*.

**Granville's Lotion.** A compound liniment of ammonia.

**Grape-cure** (*grăp'ê-kûr*). A cure for pulmonary tuberculosis, consisting in the ingestion of quantities of grapes. Some patients should not take more than an average of two pounds daily, beginning with about a pecked, and other patients should not exceed half-pounds. The laxative influence of the grapes is also beneficial. Irritation of the gums produced by the treatment should be relieved by rinsing the mouth with cold water to which a little bicarbonate of sodium is added. **G.-disease**, a vulgar synonym for tuberculosis disease of cattle. **G.-sugar.** See *Glucose* and *Dextrose*.

**Grapes** (*grăp'êz*). Same as *Grap-disease*.

**Graphite** (*grăf'it*) [*grăf*, to write]. Plumbago, or black lead, an impure allotropic form of carbon. It has been applied externally in skin-diseases; its dilutions are also used by homeopaths. **Unof.**

**Graphology** (*grăf'ô-l-ô-jî*) [*grăf*, writing; *lôgôs*, science]. The study of the handwriting or of written communications, for the purpose of diagnosing nerve-disease or brain lesion.

**Graphomania** (*grăf-mă-ne-ah*) [*grăf*, writing; *man-ia*, madness]. An insane desire to write.

**Graphomaniac** (*grăf-mă-ni-ak*) [*grăf*, to write; *man-ia*, madness]. One affected with graphomania.

**Graphospasm** (*grăf-spăz-m*) [*grăf*, writing; *spăz-m*, spasm]. Writers' cramp.

**Grass** (*grăss*) [ML., *gras*, grass]. Herbage. **G.-oil.** See *Anthracinum*. **G.-stagers**, indigestion of cattle. **G.-tree Resin.** See *Anthorrhæa*.

**Grating** (*grăt-ing*) [*grăt*, a grating]. A frame or screen composed of bars. Also a sound produced by the friction of very rough surfaces against each other. *Acoustic*, a glass ruled with exceedingly fine parallel lines to produce aromatic dispersion in the rays of light reflected from it.

**Gratiola** (*gră-ti-ô-lă*) [*grăti*, grace]. A genus of tripartite seeders. **G. aurea**, **G. carolinensis**, **G. virginiana**, and other N. American species are common in the East, but are little used. **G. officinalis**, or *Peperomia gratiolifolia*, emetic, and diuretic, and is a decided poison. **Unof.**

**Gratiolat' Angle.** See *Angle*. **G.'s Bundle**, optic neuritis extending into the occipital cortex.

**Gratiolin** (*gră-ti-ô-lin*) [*grăti*, grace].  $C_8H_8O_2$ . A crystalline matter derived from *Gratiola officinalis*. It was formerly used as a cathartic.

**Gratiolirhetin** (*gră-ti-ô-lir-ê-tin*) [*grăti*, grace; *rhê-tin*, resin].  $C_{12}H_{16}O_2$ . A resinous substance; a decomposition product of gratolin.

**Grattage** (*gră-tă-j*) [*grăt*, to scratch]. A method of removing tubercles, granules, or patches of trichomatous granulations by rubbing with a hard, strong, or brush.

**Grave** (*grăv*) [ML., *grave*, grave]. An excavation in the earth for interring the dead. **G.-wax.** See *Gravimetry*.

**Gravedo** (*grăv'ê-dô*) [L.]. 1. Muscular rheumatism of the head. 2. Coryza.

**Gravel** (*grăv'êl*) [ME., *gravel*, gravel]. In surgery, a common name for the larger calculi or urinary concretions. Also, difficult or painful micturition. **G.-plant.** See *Trailing Arbutus*. **G.-root**, Queen of the Meadow, the root of *Eupatorium purpureum*, or of *Collinsia canadensis*. See *Eupatorium* and *Collinsia*.

**Graveolent** (*grăv'ê-o-lent*) [*gravis*, heavy; *olere*, to smell]. Having a strong, unpleasant odor; fetid.

**Graves' Disease.** See *Goiter*, *Exophthalmic*, and *Disease*, *Table of*.

**Gravid** (*grăv'id*) [*gravare*, to load]. With child, pregnant. **G. Uterus**, the womb during pregnancy or gestation.

**Gravida** (*grăv'id-ah*) [*gravidus*, pregnant]. A pregnant woman.

**Gravidin** (*grăv'id-in*) [*gravidus*, pregnant]. A peculiar substance occurring in white transparent globules on the surface of the urine voided by pregnant women. **G.-test**, a worthless sign of pregnancy. After the first month of pregnancy the urine of the gravid woman, if allowed to stand from thirty hours to eight days, will have formed upon it a pellicle with a cheesy odor and an appearance like the "fatty scum of cooled broth." Examined microscopically and chemically the pellicle shows fungi, triple phosphates, fat-globules, and sometimes a peculiar form of albumin. It may be found in urine from men, young girls, and very old women, hence is of no value as a test of pregnancy. The test is also called the *Kyestein Test*.

**Gravidism, or Gravidity** (*grăv'id-izm*, or *grav'id-ity*) [*gravidus*, pregnant]. Pregnancy, or the totality of symptoms presented by a pregnant woman.

**Gravimeter** (*grăv-im'ê-t-er*) [*gravis*, heavy; *mêtron*, measure]. An instrument used in determining specific gravities; especially a hydrometer, aërometer, or urinometer.

**Gravity** (*grăv'it-ê*) [*gravis*, heavy]. The property of possessing weight. Also, a condition of serious import. **G., Specific**, the measured weight of a substance compared with that of an equal volume of another taken as a standard. For gaseous fluids, hydrogen is taken as the standard; for liquids and solids, distilled water at its maximum density.

**Gravitz's Theory.** A theory as to the immunity conferred by inoculation. The cells of the body and the bacteria take their nutrition from the same places, and it is a true fight for existence between them. If the cells come out victorious, they become habituated to the struggle with the bacteria, and are more able to resist a second attack, and this quality is transmitted to the succeeding generations of body-cells by heredity. This theory is purely hypothetical.

**Gray** (*gră*) [ME., *gray*, gray]. 1. Of a color between white and black. 2. Having gray hairs. **G. Hepatization.** See *Hepatization* and *Pneumonia*. **G. Induration.** See *Induration*. **G. Infiltration.** See *Infiltration*. **G. Lanolin Ointment.** See *G. Oil*. **G. Matter**, the cinerea. See *Brain*. **G. Oil**, *Oleum cinereum*, a semilluid, fatty, mercurial liquid introduced into medicine by Lang, of Vienna, in 1886. It is used in the treatment of syphilis by injections. It is prepared as follows: A given quantity of lanolin—1 or 2 drams—is rubbed up with sufficient chloroform to emulsify it. This mixture is to be thoroughly triturated, during which operation the chloroform will evaporate. While the mixture is still in a fluid state, metallic mercury to the amount of double the quantity of the lanolin is to be added, the trituration being meanwhile continued. As a result, a pomade of mer-

cury is left, which represents two parts of mercury and one part of lanolin. This is called strong gray lanolin ointment. From this salve-basis a 50 per cent. oleum cinereum, or *gray oil*, may be obtained by mixing three parts with one part of olive-oil. A mild gray lanolin ointment may be made in the same manner as the strong, by taking equal parts of lanolin and mercury and thoroughly mixing them. From this salve-basis a 30 per cent. gray oil may be made by mixing six parts with four parts of fresh almond-oil or olive-oil. **G. Powder**, hydrargyrum cum creta. See *Hydrargyrum*.

**Grease** (*gres*) [ME., *grese*, grease]. Soft or oily animal fat. In farriery, a swelling and inflammation in a horse's leg, with excretion of oily matter and the formation of cracks in the skin. **G.-trap**, a contrivance employed to prevent clogging of waste-pipes, as well as to save the grease, which has considerable commercial value.

**Great** (*grät*) [ME., *gret*, great]. Large. **G. Laurel**, the leaves of *Rhododendron maximum*, an expectorant, useful in obstinate coughs. Dose of the fld. ext.  $\text{m}\nu\text{-xv}$ . Unof. **G. Mortality**. Synonym of the *Plague*. **G. Pox**. Synonym of *Syphilis*, to distinguish it from smallpox.

**Green** (*grën*) [ME., *grene*, green]. 1. Verdant; of the color of grass. 2. Unripe; not mature. **G. Blindness**. Achloropsia, *q. v.* **G. Dragon**, the corm of *Arum dracontium*, an expectorant and diaphoretic. Dose of the fld. ext.  $\text{m}\text{j-x}$ . Unof. **G. Bice**. See *Bremen Green*. **G.-blue**. Same as *Soluble-blue*. **G. Cinnabar**. See *Pigments*, *Conspicuous of*. **G. Gland**, one of the excretory organs (kidney) of a decapod crustacean formerly supposed (in Astacus) to be an auditory organ. The secretions contain uric acid and traces of the base *guanin*. **G.-heart**. See *Bebeeru*. **G.-man**. See *Aceras*. **G. Osier**, the bark of *Cornus circinata*, an astringent, tonic, and febrifuge. Dose of the fld. ext.  $\text{m}\text{xx-}\text{}\text{3j}$ . Unof. **G., Paris**, cupric arsenite. **G., Scheele's**, cupric arsenite. **G., Schweinfurth's**, a compound of cupric arsenite and cupric arsenate. **G.-sickness**. See *Chlorosis*. **G. Smalt**. Same as *Rinmann's Green*. **G.-stick Fracture**. See *Fracture*. **G. Verditer**. See *Bremen Green*.

**Green's Test-types**. A slight modification of *Snellen's Test-types*, *q. v.*

**Greenhow's Cholera-mixture**. A mixture containing guaiacum, cloves, cinnamon, each 1 ounce; brandy, 2 pints.

**Greffotome** (*grej'f-o-töm*) [Fr., *greffe*, graft; *τομή*, cutting]. A knife used in cutting slips for surgical grafting.

**Gregarina** (*greg-ar-e'-nah*) [*grex*, a herd]. A genus of parasitic protozoa, of extremely simple nature. It is not certain that any true *Gregarina* infest the human subject, most of the supposed protozoan parasites of the human species being now referred to other classes or groups. See *Parasites (Animal)*, *Table of*.

**Gregarinosis** (*greg-ar-in-o'-sis*) [*grex*, a herd; *νόσος*, disease]. A morbid condition due to infestation by *Gregarina*.

**Gregarious** (*gre-ga'-re-us*) [*grex*, a flock, a herd]. In biology, clustered, but not matted together, as the fruit-spots of a parasitic fungus; *e. g.*, the cluster-cups.

**Gregory's Powder**. Compound powder of rhubarb. **G.'s Salt**, crude hydrochlorate of morphin containing codein.

**Grenacher's Alcoholic Carmin**. See *Stains*, *Table of*. **G.'s Alum-carmin**. See *Stains*, *Table of*. **G.'s Purpurin Solution**. See *Stains*, *Table of*. **G.'s Solution**. See *Stains*, *Table of*.

**Grenade** (*gren-ad'*). Synonym of *Influenza*.

**Grenet Cell**. See *Cell*.

**Gressorial** (*gres-o'-re-al*) [*gressus*, p.p. of *gradi*, to walk]. In biology, adapted for walking; gradient.

**Griesinger's Disease**. *Cachexia aquosa*.

**Griffe** (*grif*) [Sp., *grifos*, frizzled hair]. 1. In biology, the offspring of a mulatto and a negress, or of a mulatress and a negro. See *Mulatto*. 2. See *Main en griffe*.

**Griffin Hand** (*grif'-in hand*). Same as *Claw-hand*.

**Griffith's Mixture**. See *Ferrum*. **G.'s Pills**. See *Ferrum*. **G.'s Snow-white**. Same as *Zincolite*.

**Grin** [ME., *grinnen*, to show the teeth]. To smile, at the same time showing the teeth.

**Grindelia** (*grin-de'-le-ah*) [after H. *Grindel*, a German botanist]. The leaves and flowering top of *G. robusta*, Wild Sunflower, or Gum-plant, found in California, an antispasmodic and motor-depressant, in large doses producing mydriasis. It is valuable in asthma, bronchitis, and whooping-cough. Dose of the fld. ext.  $\text{m}\text{x-}\text{}\text{3j}$ ; of the alcoholic extract, gr. iij. **G. squarrosa**, common ague-weed, an herb popular in the western U. S. as a remedy for ague and malarial diseases. It has proved serviceable in chronic rheumatism. Dose of the fld. ext.  $\text{m}\text{xv-xxx}$ . Unof. **G. hirsutula** and **G. integrifolia** of the Pacific States have similar qualities. These plants are all highly resinous; their tinctures or infusions are said to cure the dermatitis of rhus-poisoning.

**Grindelin** (*grin'-del-in*). An alkaloid reported to exist in *Grindelia robusta*.

**Grinder** (*grin'-der*) [ME., *gryndere*, a miller]. 1. See *Quizzer*. 2. A molar tooth.

**Grinders' Asthma**. A chronic affection of the lungs resulting from the inspiration of metallic or siliceous dust, accumulating in the lungs, and producing symptoms similar to those of tuberculosis. It is called also *G.'s Rot* and *G.'s Disease*. **G.'s Disease**. See *G.'s Asthma*. **G.'s Phthisis**. See *G.'s Asthma*. **G.'s Rot**. See *G.'s Asthma*.

**Griming** (*grin'-ing*) [ME., *grinnen*, to snarl]. Drawing back the lips, so as to show the teeth. **G.-muscle**. See *Muscles*, *Table of*.

**Grip or Grippe** (*grif*). See *Influenza*.

**Gripe** (*grif*) [ME., *gripen*, to seize]. 1. To suffer griping pains. 2. A spasmodic pain in the bowels; cramp-colic.

**Gripes** (*grifs*) [ME., *gripen*, to seize]. Colic; tormina.

**Grippal** (*grif'-al*) [Fr., *gripper*, to seize]. Pertaining to influenza.

**Grippo-toxin** (*grif-o-toks'-in*) [*la grippe*, an epidemic form of influenza; *toxicum*, poison]. A term introduced by Althaus to designate the toxin of influenza.

**Griseous** (*gris'-e-us*) [*griseus*, gray]. Gray or bluish-gray.

**Grisolle Sign** (*gre-zol'-sin*). A sign said to be a certain means of diagnosis of smallpox. If, upon stretching an affected portion of the skin, the papule becomes impalpable to the touch, the eruption is caused by measles; if, on the contrary, the papule is still felt when the skin is drawn out, the eruption is the result of smallpox.

**Gristle** (*gris'-l*) [ME., *gristel*, cartilage]. The popular name for cartilage.

**Gristly** (*gris'-le*) [ME., *gristel*, cartilage]. Cartilaginous; like gristle.

**Groan** (*grön*) [ME., *grogen*, to groan]. To utter a low, moaning sound, as when in pain. The sound so uttered.

**Grocers' Itch** (*gro'-serz ich*). Eczema of the hands, due to irritation from flour, sugar, etc. It is said to be due, in some cases, to the presence of sugar-mites upon the hands.

**Groin** [*grin*, obscure] The depression between the belly and the thigh.

**Groove** [*groo*, [D., *gruot*, a channel] A furrow or channel. **G.**, Auriculo-ventricular. See *Parasites*. **G.**, Bicipital, the deep groove on the anterior surface of the biceps muscle separating the greater and lesser tubercles. **G.**, Cavernous, a broad groove on the superior surface of the sphenoid bone lodging the internal carotid artery and the cavernous sinus. **G.**, Dental. See *Parasites*. **G.**, Intraorbital, the furrow at the posterior end of the superior maxillary bone on its orbital surface, which usually develops into a canal of the same name. **G.**, Lachrymal, a groove in front of the opening of the nostril, on the inner surface of the superior maxillary bone. **G.**, Medullary, a long shallow groove that appears along the dorsal line on the inner side of the embryo. **G.**, Mylo-hyoid, the groove on the inner surface of the inferior maxillary bone running along the submaxillary fossa to the inferior dental foramen. **G.**, Nasal, the groove in the nasal bone for the nasal nerve. **G.**, Occipital, the groove in the mastoid portion of the temporal bone that lodges the occipital artery. **G.**, Optic, the groove on the superior surface of the sphenoid bone surrounding on either side in the optic foramen. **G.**, Sacral, the channel on the back of the sacrum between the superior and transverse processes. **G.**, Subclavian, the longitudinal groove on the under surface of the clavicle for the attachment of the subclavian muscle. **G.**, Spiral. See *Sinus spiralis*. **G.**, Vertebral, the groove running along the spine on each side of the spinous process.

**Groping-test** (*gr'ping-test*). In ophthalmology, a test for false orientation in paralysis of the ocular muscles. The affected eye does not locate objects in their true place, and if asked to point quickly at an object the patient's finger will be carried to one side of it.

**Gros Mal** (*gron mal'*) [Fr.]. The well-marked form of epilepsy; major epilepsy.

**Gross** [*grus*] [L., *crus*, great]. Coarse; great. **G.**, Anatomy, anatomy considered without reference to histology or the details of minute structure. **G.**, Appearances, macroscopic appearances.

**Grote's Test**. See *Test*, Table of.

**Grough, Grough** (*gruf*). See *Gruff*.

**Ground** [*graund*] [ME., *grund*, ground]. The bottom; soil. **G.**, Ivy, a popular name for *Gaultheria procumbens*. **G.**, Laurel. See *Trailing Arbutus*. **G.**, nut. See *Peanut*. **G.**, nut Oil, peanut oil. A fixed oil extracted from the embryo of the seed of the peanut, *Arachis hypogaea*. It resembles olive-oil in general properties, and for which it is often substituted. **G.**, water. See *Sublim water*.

**Groundsel tree**. See *Fraxinus*.

**Grouse** [*gru*] [OE., *grube*, gray]. A bird of the grouse family. **G.**, berry, a popular name for *Gaultheria procumbens*. **G.**, disease, a disease that attacks and destroys great numbers of red grouse (*Lagopus scoticus* of Europe). It is believed to be due to the overstocking of its haunts and the propagation of the disease by its diseased parents. It is said by some writers to be due to the presence of a parasite, *Strongylus grouse*, in the bronchial passages. See *Parasites* (Animals), Table of.

**Grove Cell**. See *Cell*.

**Grow** [*gra*] [ME., *crewen*, to grow] To increase by a natural process of development.

**Growing** (*gra'ing*) [ME., *crewen*, to grow] In relation to life. **G.**, fever, pyrexia associated with rapid growth. **G.**, pains, a term applied to neuralgic or rheumatic pains of the limbs occurring during

youth, apparently of varied origin and character. **G.**, point, in botany, the tissue immediately about the apical cell; the tip of the stem or other point where cell-division is active; the *Punctum vegetativum*.

**Growth** (*groth*) [ME., *growen*, to grow]. 1. The augmentation of the body that takes place between infancy and adult age. Also, the increase of any part of the body by addition to the number of its cellular elements, without the production of structural abnormality or differentiation into unlike tissues. 2. Any tumor or adventitious structure.

**Grub** [ME., *grubben*, to dig]. 1. A dwarf. 2. See *Comedo*. **G.**, in-the-head. See (*Estrus ovis*, under *Parasites* (Animal), Table of. **G.**, worms. See *Comedo*.

**Gruber's Experiment**. An experiment for detecting anomalies of tension in the ear-membrane. A membrane already excessively tense will give no alteration during Valsalva's experiment (*q. v.*), but if the membrane has been previously unduly relaxed, Valsalva's experiment will, according to Gruber, restore its tension, and the vibrating fork will be heard better by air-conduction, and worse by bone-conduction than before or after. **G.'s Gelatin Bougies**, medicated almond-shaped pieces of gelatin for insertion into the auditory meatus. **G.'s Method**. 1. A method of washing out the tympana. Syringe the fluid into one nostril with the other closed, the fluid entering the tympana by way of the Eustachian tubes. 2. A method of inflating the middle ear. The patient is required to phonate at the moment the inflation-bag is compressed. A short word, ending in a guttural consonant, is advised, as "hic" or "hook."

**Gruel** (*gru'el*) [dim. of *grutum*, meal]. A decoction of corn-meal or oat-meal boiled in water to a thick paste.

**Gruff** (*gruf*) [D., *grof*, coarse]. Any crude drug; also the coarse part of a drug that will not pass through a sieve; the term is used also adjectively, as *gruff* sulphur or saltpeter.

**Grume** (*groom*) [*grumus*, a little heap]. A clot, as of blood; a thick and viscid fluid.

**Grumose** (*gru'-mos*) [*grumus*, a little heap]. Same as *Grumous*.

**Grumous** (*gru'-mus*) [*grumus*, a little heap]. Knotted, clotty, or in granular masses. Formed of coarse, clustered grains.

**Grutum** (*gru'-tum*) [*grutum*, grit]. A small, hard tubercle of the skin, usually seen on the face, and due to retention of sebaceous matter. It is also called *Miliary Tubercle* and *Pearly Tubercle*. See *Milium*.

**Gruyère Cheese** (*gru-yär'*). See *Cheese*.

**Gryposis** (*gri-po'-sis*) [*γριπσις*, curvature]. Curvature. See *Arthrogryposis* and *Onychogryposis*.

**Gscheidlen's Method**. A method of preparing hemoglobin crystals. Take defibrinated blood that has been exposed for 24 hours to the air, and keep it in a closed tube of narrow caliber for several days at 37° C. When the blood is spread on glass the crystals form rapidly.

**Gtt.** Abbreviation of *gutta*, or *gutta*, drop, or drops.

**Guachamaca** (*gwaw-shaw-marw'-kah*) [S. America]. The bark of an apocynaceous tree. **G.**, toxifera, or *Malouetia nitida*, of S. America, furnishes a virulent arrow-poison, somewhat resembling curare; it has been employed in tetanus and hydrophobia. Unof.

**Guachata, or Guachacata** (*gwaw-shaw'-tah*, or *gwaw-shaw-kah'-ah*) [Mex.]. The flowers of a Mexican plant, containing several bitter tonic principles. Unof.

**Guacin** (*gwaw'-sin*) [*guaco*]. A bitter resin from guaco; it is diaphoretic, stimulant, and emetic. Unof.

**Guaco** (*gwaw'-ko*) [S. Amer.]. The leaves of *Mikania guaco*, much used in S. America for snake-bites. It is thought to be of value in chronic rheumatism. Dose of the fld. ext.  $\frac{5}{16}$  ss-j. Unof. Various species of *Mikania* and *Aristolochia* are locally known by this name.

**Guaiac** (*gwi'-ak*) [S. Amer.]. See *Guaiacum*. **G.-mixture**, **Fenner's**. The *Tinctura antiscorbutica* [N. F.], a tincture of the resin of guaiacum and Canada turpentine, in which each fluidram contains  $\frac{1}{3}$  of a grain of the corrosive chlorid of mercury. **G.-test**. See *Tests*, *Table of*.

**Guaiacol** (*gwi'-ak-ol*) [S. Amer.],  $C_8H_8O_2$ . A substance that occurs in wood-tar, and is also produced on heating pyrocatechin with potassium hydroxid and potassium methyl-sulphate to  $180^\circ C$ . It is a colorless liquid that boils at  $200^\circ C$ ., and has a specific gravity of 1.117. It is readily soluble in alcohol, ether, and acetic acid, and is recommended instead of creasote in pulmonary tuberculosis. Dose  $\frac{1}{12}$ -ij, or gr.  $\frac{1}{2}$ - $\frac{1}{8}$ . Sciolla (1893) found that topical applications of guaiacol reduced bodily temperature, and J. Solis Cohen and Da Costa (1894) have applied the method successfully in cases of high temperature in typhoid fever and other febrile diseases. The dose is about 30 drops slowly rubbed on the skin of the abdomen or thigh. Unof.

**Guaiacum** (*gwi'-ak-um*) [Guaiacans, a tribe of S. A. Indians]. Lignum vite. The heart of the tree, and also the oleoresin, of *G. officinale* and *G. sanctum*, a prompt diaphoretic, expectorant, and alterative, efficient in tonsillitis, neuralgic dysmenorrhea, amenorrhea, and rheumatism, and formerly much used as an antisyphilitic. Dose gr. x-xxx. **G., Mist.** (B. P.) Dose  $\frac{5}{16}$  j-iss. **G., Resina**, the resin of the wood of *G. officinale*. **G., Tinct.**, strength 20 per cent. Dose  $\frac{1}{16}$  v- $\frac{5}{16}$  j in mucilage. **G., Tinct.**, **Ammoniat.**, contains guaiac 20, and aromatic spirit of ammonia 80 parts. Dose  $\frac{1}{16}$  v- $\frac{5}{16}$  ss.

**Guanin** (*gwaw'-nin*) [Sp., *guano*, dung],  $C_5H_5N_5O$ . A leukomaine discovered by Unger in 1844, as a constituent of guano. Since then it has been found in small quantities in the pancreas, liver, and muscle-extract, and has been shown to be one of the decomposition products of nuclein in both animal and vegetable organisms. In the case of the lower animals it is evidently the end-product of katabolic change. It is a white, amorphous powder, insoluble in water, alcohol, ether, and ammonia. Guanin and kreatin appear to mutually replace each other—both being substituted guanidins. Guanin is an intermediate product in the formation of urea. It is non-poisonous and a muscle-stimulant. See *Capranica's Tests*.

**Guano** (*gwaw'-no*) [Peruv., *huanu*, dung]. The excrement of sea-fowl found on certain islands in the rainless regions of the Pacific Ocean. It consists essentially of alkaline urates and phosphates. It is used externally in certain skin-diseases. Unof.

**Guarana** (*gwaw'-rah'-nah*) [the name of a tribe of S. A. Indians]. A dried paste prepared from the seeds of *Paullinia cupana*, found in Brazil. It contains an alkaloid, guaranin,  $C_8H_{10}N_4O_2 \cdot H_2O$ , identical with caffeine. It is employed chiefly in nervous sick-headaches. The commercial preparations are not always trustworthy. Dose of the fld. ext.,  $\frac{1}{16}$  v-xxx; of guaranin gr. j-ij; of the solid ext. gr. iij-x; of the tincture (1 in 4)  $\frac{5}{16}$  ss-j.

**Guard** (*gara*) [*garder*, to keep]. An appliance on a knife to prevent too deep incision. **G.-cell**, in biology, one of the two semilunar epidermal cells, inclosing the opening of a stoma in plants.

**Guardian-cells** (*gar'-de-an-selz*). Same as *Guard-cell*.

**Guarinar's Agar-gelatin**. A culture-medium composed of agar agar 3-4 gms., sodium chlorid 5 gms., peptone 25-30 grms., gelatin 40-60 gms., water 50 c.c., meat-infusion 950 c.c.

**Guaycuru** (*gwi'-ku-ru'*) [Sp.]. The S. American name of various plants, as *Statice brasiliensis* and *S. antarctica*. The root is a very powerful astringent. Unof.

**Gubernaculum testis** (*gu-ber-nak'-u-lum test'-tis*) [L.]. The conical-shaped cord attached above the lower end of the epididymis and governing the descent of the testes in fetal growth.

**Gubler's Tumor**. A prominence over the carpus of the dorsum of the hand in chronic wrist-drop from lead-poisoning. See *Signs and Symptoms*, *Table of*.

**Gudden's Atrophy Method**. A method of demonstrating the connection of a nerve-trunk with a center. If a portion of a nerve-trunk is destroyed in a young, growing animal, the peripheral fibers will undergo Wallerian degeneration, while the proximal cells and fibers connected with the destroyed portion will atrophy and disappear. **G.'s Commissure**, a mass of fibers forming the upper (dorsal) part of the optic tracts. They cannot be demonstrated in man except in cases of complete degeneration of the optic fibers proper. **G.'s Ganglion**, the cephalo-dorsal ganglion of the mamillary body of the brain. **G.'s Law**. See *Law*.

**Guérin's Glands**. See *Gland*. **G.'s Method**. See *Treatment*, *Methods of*.

**Guernsey Blue**. See *Pigments*, *Conspectus of*.

**Guettard, Glands of**. See *Gland*.

**Guidi, Canal of**. See *Canal*.

**Guignet's Green**. Same as *Chrome-green*.

**Guillotine** (*gil'-o-tèn*) [after Dr. J. I. Guillotin]. A surgical instrument for excision of the tonsils or growths in the larynx, etc.

**Guimet Blue**. Same as *French Blue*.

**Guinea** (*gin'-e*) [African]. The name of a district on the west coast of Africa. **G. Fever**, a form of intermittent fever. **G.-green**. See *Pigments*, *Conspectus of*. **G. Pepper**. See *Grains of Paradise*. **G.-pig**, an animal of the genus *Cavia*, used in bacteriologic investigation. **G.-worm**, the *Filaria medicinis*, a nematode worm of tropical countries, that in the human tissues in which it burrows may, unless removed, develop to a length of several feet, producing inflammatory ulceration. See *Thread-worm*. **G.-worm Disease**. See *Dracontiasis*.

**Gula** (*gul'-lah*) [L., *pl.*, *Gule*]. The gullet; the neck and throat, or the pharynx and esophagus. In biology: 1. An exoskeletal piece on the under side of the head of certain insects, behind the mentum and between the genæ. 2. The upper portion of the front of the neck of a bird.

**Gulancha** (*goo-lan'-kah*) [E. Ind.]. The plant, *Tinospora cordifolia*, of India. Its stems and roots are diuretic, tonic, and antiperiodic. Unof.

**Gular** (*gul'-lar*) [*gula*, the gullet]. Pertaining to the throat, pharynx, or gula.

**Gulinula** (*gu-lin'-u-lah*) [*gula*, throat]. In biology, applied by Hyatt to that stage in the development of an actinozoan in which the actinostome or gullet is formed; it follows the hydroplanula stage.

**Gullet** (*gul'-et*). See *Esophagus*.

**Gum** [ME., *gumme*, gum]. A name loosely applied to the concreted juices of plants. Chemically, a substance yielding *mucic acid* when treated with nitric acid. See, also, *Gums*, and the names of the various gums. **G. Arabic**. See *Acacia*. **G. Benjamin**. See *Benzoin*. **G.-boil**, abscess of the gum. **G. Dammar**. See *Dammar*. **G.-plant**. See *Grindelia*. **G.-resins**. See *Resins*. **G. Tragacanth**. See *Tragacanth*. **G.-wood Tents**. See *Tupelo*.

**Gumma** (*gum'-ah*) [Fr., *gomme*; *pl.*, *Gummata*]. A soft, elastic tumor resulting from a peculiar kind of caseation of tertiary syphilitic inflammatory deposits.

**Gummatous** (*gum'-at-us*) [*Fr.*, *gummeux*, gum]. Of the nature of or affected with gumma.

**Gummosis** (*gum'-o-sis*) [*Fr.*, *gumme*, gum]. In biology, the transformation of plant tissue into gum.

**Gums** (*gumz*) [*ML*, *gummi*, gum]. 1. Amorphous, transparent substances widely disseminated in plants. They form sticky masses with water, and are precipitated by alcohol. They are odorless and tasteless. 2. See *Resinoid*.

**Gun-cotton**. See *Picric Acid*.

**Gunjah** (*gun'-jah*). See *Cannabis*.

**Gun-tack Deformity**. A deformity caused by fracture at either end of the humerus, in which the long axis of the bone is twisted toward the axilla outwardly from the distal extremity.

**Gunbur's Test**. See *Gold Leaf Test*.

**Gurgling Sound**. The peculiar sound caused by a gas passing through a liquid. It is heard in breathing, when the bronchial or pulmonary cavities contain fluid, and is observed upon palpation of the abdomen in hepatic fever and other conditions in which the bowel is commingled with gas and contained liquid.

**Gurun Balsam** (*gü'-rün*) [*L.*, *Ind.*] *Balanum* (*gü'-rün*), wood oil. An oleo resin obtained from several species of *Diospyros*, trees native to Southern Asia. It is similar to copaiba but more decided in balsamic odors, and is less unpleasant. It is an admirable exsiccant, useful in true leprosy. Dose  $\frac{1}{2}$  to 1, in ethereal. Unof.

**Gussenbauer's Suture**. See *Suture*.

**Gustation** (*gus'-tā-shun*) [*Lat.*, *to taste*]. The sense of taste; the act of tasting. **G., Chromatic**, the sensation of chromatic sensations aroused by the sense of taste of certain substances.

**Gustative** (*gus'-tā-tiv*). See *Gustatory*.

**Gustatory** (*gus'-tā-tiv*) [*Lat.*, *to taste*]. Pertaining to the special sense of taste and its organs. **G. Bud**, a taste-bud. **G. Cell**, a spindle-cell from the interior of a taste bud. **G. Nerve**. See *Vagus*.

**Gut** [*ML*, *int.*, intestine]. A common name for intestine. **G. Suture**, See *Cutgut*. **G.-tie**, volvulus as occurring in the horse.

**Gutta** (*gu'-tā*) [*L.*, *pl.*, Gutter]. A drop. Also, lately used as a minim or sixtieth part of a fluid ounce. **G. nigra**, or **Black-drop**, a dilute acetic acid containing afloat, and flavored with sugar and essence of fruit. **G. rosacea**. See *Anc.* **G. rosea**. Treatment of *A. rosacea*. **G. serena**, a synonym of *Antiseptic*. **G.-percha**, a substance obtained from the milky juice of different trees of the genus *Diospyros* (*gutta*). It forms a fibrous mass, varying in color from nearly white to reddish or brownish, becoming thicker as the pieces cemented together; it has a specific gravity of .67. Hard and somewhat elastic at ordinary temperature, at 25°C. (77°F.) it becomes soft, and at 50°C. (122°F.) it can be kneaded or rolled into plates. It is largely used in insulating wire and cables; the gut solvents are oil of turpentine, chloroform, and carbon disulphid. **G.-p.**, **Liq.**, a solution of 60 parts of commercial chloroform with 40 parts of hot carbon tetrachloride. It is employed as a protective application to slight wounds and eruptions. See also *Pharmaceut.*

**Guttate** (*gut'-at*) [*Fr.*, *a drop*]. In biology, spotted and beaded, or something resembling.

**Guttatim** (*gut'-at-im*) [*Lat.*, *a drop*]. A pharmaceutical term usually applied to drops.

**Gutter-water Passages**. The liquid stools of a diarrhoeal, gummy, or watery condition.

**Guttula** (*gut'-u-lā*) [*L.*, *dim. of gutta*, drop; *pl.*, Gut-tulae]. In botany, a small spot of color.

**Guttulate** (*gut'-u-lat*) [*guttula*, a small drop]. In biology, resembling small drops of oil or resin.

**Guttur** (*gut'-er*) [*guttur*, the throat]. The throat with reference to the trachea. **G. tumidum**. Synonym of *Gelder*.

**Guttural** (*gut'-u-ral*) [*gutturialis*, pertaining to the throat]. Pertaining to the throat. **G. Pouch**, in the horse one of the large air-sacs, diverticula from the Eustachian tubes and lying behind the upper part of the pharynx.

**Gutturomycosis** (*gut-u-ro-mi-ko'-sis*) [*guttur*, throat; *mykē*, fungus]. An ulcerative affection of the guttural pouches of horses and mules, produced by the parasitic fungus, *Gutturomyces equi*.

**Gutturo-palatine** (*gut'-u-ro-pal'-at-in*) [*guttur*, the throat; *palatum*, the palate]. Relating to the pharynx and the palate.

**Gutturo-tetany** (*gut'-u-ro-tet'-an-e*) [*guttur*, throat; *tetanus*, tetanus]. A form of stuttering in which the pronunciation of such sounds as *g*, *k*, *q*, is difficult.

**Guyon's Sign**. See *Signs and Symptoms*, *Table of*.

**Gymnanthous** (*jim-nan'-thus*) [*γυμνός*, naked; *ἄνθος*, flower]. In biology, applied to flowers wanting in floral envelopes.

**Gymnasium** (*jim-na'-ze-um*) [*γυμνός*, naked]. A place designed and fitted with appliances for the systematic exercise of the muscles and other organs of the body. Also, in Germany, a high-school.

**Gymnastic** (*jim-nas'-tik*) [*γυμνός*, naked]. Pertaining to bodily exercise, or to the science of preserving health by bodily exercise.

**Gymnastics** (*jim-nas'-tiks*) [*γυμνός*, naked]. The science of preserving (and of restoring) health by bodily exercise. **G., Medical**, any physical exercise designed to restore or promote health. **G., Ocular**, regular muscular exercise of the eye to overcome muscular insufficiency. **G., Swedish**, a system of exercises to restore strength to parietic muscles, and found useful in a great variety of abnormal chronic conditions.

**Gymnaxony** (*jim-naks'-on-e*) [*γυμνός*, naked; *ἄξων*, axis]. In biology, a monstrous flower in which the placenta, with its ovules, protrudes from the ovary.

**Gymnoblasic** (*jim-no-blas'-tik*) [*γυμνός*, naked; *βλαστός*, germ]. In biology; applied to those hydroid polyps in which the zooids are not inclosed in horny receptacles.

**Gymnobranchiate** (*jim-no-brang'-ke-āt*) [*γυμνός*, naked; *βραγχία*, gills]. In biology applied to those mollusks that have naked gills; nudibranchiate.

**Gymnocarpous** (*jim-no-kar'-pus*) [*γυμνός*, naked; *καρπός*, fruit]. In biology, having the fruit naked; applied to lichens and fungi in which the apothecia and hymenia are naked or exposed.

**Gymnocaulus** (*jim-no-kaw'-tus*) [*γυμνός*, naked; *καύλος*, stalk]. In biology, the immature contractile cord or stalk of a polypid.

**Gymnoceratous** (*jim-no-ser'-at-us*) [*γυμνός*, naked; *κέρας*, horn]. In biology, applied to certain insects with prominent antennae.

**Gymnocidium** (*jim-no-sid'-e-um*) [*γυμνός*, naked; *πλ.*, *Gymnocidia*]. In biology, the swelling at the base of the spore-case in certain mosses.

**Gymnocladus** (*jim-nok'-lad-us*). See *Chicot*.

**Gymnocyta** (*jim-no-sit'-tah*) [*γυμνός*, naked; *κύτος*, a hollow]. In biology, a naked-celled, unicellular organism.

**Gymnocytode** (*jim-no-sit'-tod*) [*γυμνός*, naked; *κύτος*, a hollow]. In biology, a naked, non-nucleated, unicellular organism, as a gregarine while in the monerid stage.

**Gymnodont** (*jim'-no-dont*) [*γυμνός*, naked; *ὀδούς*, tooth]. In biology, having naked teeth; applied to certain fishes, as the parrot-fish, the globe-fish, etc.

**Gymnogen** (*jim'-no-jen*) [γυμνός, naked; γενής, producing]. Same as *Gymnosperm*.

**Gymnogenous** (*jim-noj'-en-us*) [γυμνός, naked; γενή, producing]. In biology, applied to birds that are naked when hatched.

**Gymnogynous** (*jim-noj'-in-us*) [γυμνός, naked; γυνή, female]. In biology, applied to such plants as have the ovary uncovered.

**Gymnomyxine** (*jim-no-miks'-in*) [γυμνός, naked; μύξα, slime]. In biology, applied to the lower protozoa.

**Gymnorhinal** (*jim-nor-i'-nal*) [γυμνός, naked; ρίς, nose]. In biology, applied to birds having the nostrils naked or unfeathered.

**Gymnosomatous** (*jim-no-so'-mat-us*) [γυμνός, naked; σῶμα, body]. In biology, applied to certain molluscs that produce no shell; specifically, naked pteropods.

**Gymnosperm** (*jim'-no-sperm*) [γυμνός, naked; σπέρμα, seed]. In biology, a plant characterized by having naked seeds (not inclosed in a pericarp), as in the coniferae.

**Gymnospor** (*jim'-no-spōr*) [γυμνός, naked; σπόρος, a seed]. In biology, a naked spore.

**Gymnostomous** (*jim-nos'-to-mus*) [γυμνός, naked; στόμα, mouth]. In biology, applied to such mosses as have the mouth of the sporangium destitute of a peristome.

**Gynæ-** (*jim'-e*). See *Gyne-*.

**Gynæcology** (*jim-e-kol'-o-jē*). See *Gynecology*.

**Gynæcomastia** (*jim-e-ko-mas'-te-ah*). See *Gynecomastia*.

**Gynander** (*jim-an'-der*) [γυνή, woman; ἀνὴρ, man]. A man of effeminate or woman-like qualities.

**Gynandria** (*jim-an'-dre-ah*) [γυνή, woman; ἀνὴρ, man]. The same as *Hermaphroditism*.

**Gynandrisms, or Gynandromorphism** (*jim-an'-drizm* or *jim-an'-dro-morf'-izm*) [γυνή, woman; ἀνὴρ, man; μορφή, form]. Hermaphroditism.

**Gynandromorphism** (*jim-an-dro-morf'-izm*) [γυνή, female; ἀνὴρ, male; μορφή, form]. In biology, applied to such insect-monstrosities as combine both male and female characters.

**Gynandrophore** (*jim-an'-dro-fōr*) [γυνή, female; ἀνὴρ, male; φέρειν, to bear]. In biology, a stalk raising the stamens and pistils above the insertion of the corolla.

**Gynandrosporous** (*jim-an-dros'-por-us*) [γυνή, female; ἀνὴρ, male; σπόρος, a seed]. In biology, applied to certain algae that bear both male and female reproductive organs (oögonia and androspores) on the same plant.

**Gynandrous** (*jim-an'-drus*) [γυνανδρός, of doubtful sex]. In biology, having the stamens and pistils more or less intimately united.

**Gynantherous** (*jim-an'-ther-us*) [γυνή, female; ἀνθηρός, flowering]. In biology, applied to flowers in which the stamens have been converted into pistils.

**Gynatresia** (*jim-at-re'-ze-ah*) [γυνή, woman; ἀτρησία, atresia]. Vaginal atresia.

**Gynecatoptron** (*jim-ek-at-op'-tron*) [γυνή, woman; κάτοπτρον, mirror]. A vaginal speculum.

**Gynecian** (*jim-e'-se-an*) [γυνή, a woman]. Pertaining to women.

**Gynecic** (*jim-e'-sik*) [γυνή, woman]. Relating to women.

**Gynecium** (*jim-e'-se-um*) [γυνή, female; οἶκος, house]. In biology, the name applied to the pistils of a flower taken as a whole.

**Gynecologic** (*jim-e-ko-loj'-ik*) [γυνή, a woman; λόγος, science]. Relating to gynecology.

**Gynecologist** (*jim-e-kol'-o-jist*) [γυνή, a woman; λόγος, science]. One who practises in gynecology.

**Gynecology** (*jim-e-kol'-o-jē*) [γυνή, a woman; λόγος, science]. The science and therapeutics of the diseases of women.

**Gynecomania** (*jim-e-ko-ma'-ne-ah*) [γυνή, woman; μανία, madness]. Satyriasis.

**Gynecomastia** (*jim-e-ko-mas'-te-ah*) [γυνή, woman; μαστός, breast]. 1. The excessive development of the breast of a man, either with or without atrophy of the testicles. 2. The secretion of milk by the male.

**Gynecomasty** (*jim-e-ko-mas-te*). See *Gynecomastia*.

**Gynecomazia** (*jim-e-ko-ma'-ze-ah*) [γυνή, woman; μαστός, breast]. Same as *Gynecomastia*.

**Gynecopathy** (*jim-e-kop'-ath-e*) [γυνή, woman; πάθος, disease]. Any disease of, or peculiar to, women; the study of diseases of women.

**Gynecophore** (*jim'-e-ko-for*) [γυνή, female; φέρειν, to bear]. In biology, the canal or receptacle in certain male worms, in which the female is retained, as in *Bilharzia*.

**Gynephobia** (*jim-e-fō-be-ah*) [γυνή, woman; φόβος, fear]. Morbid aversion to the society of women.

**Gyniatrics** (*jim-e-ul'-triks*) [γυνή, woman; ιατρεία, therapy]. Gynecology, or gynecologic therapeutics.

**Gynobase** (*jim'-o-bās*) [γυνή, a female; βάση, base]. In biology, an elevated portion of the receptacle of a flower, bearing the ovary.

**Gynocardia** (*jim-o-kar'-de-ah*). See *Chaulmoogra*.

**Gynodieious** (*jim-o-di-e'-se-us*) [γυνή, female; δῖς, two; οἶκος, house]. In biology, having pistillate flowers on one set of plants and perfect flowers on another set.

**Gynomonecious** (*jim-o-mo-ne'-se-us*) [γυνή, female; μόνος, single; οἶκος, house]. In biology, having both pistillate and perfect flowers upon the same plant.

**Gynophore** (*jim'-o-for*) [γυνή, female; φέρειν, to bear]. In biology: (a) The stalk of a pistil raising it above the receptacle; (b) The branch of a hydroid gonoblastidium that bears only generative buds containing ova.

**Gynoplastic** (*jim-o-plas'-tik*) [γυνή, woman; πλαστικός, suitable for moulding]. Pertaining to the closing of unnatural openings, or to the dilatation of contracted, narrow openings in the female organs of generation.

**Gynostegium** (*jim-o-ste'-je-um*) [γυνή, female; στέγη, a roof]. In biology, the sheath or covering of the gynecium, or female portion of a flower taken as a whole.

**Gypsum** (*jip'-sum*) [γύψος, lime]. Native calcium sulphate. See *Calcium*.

**Gyral** (*jil'-ral*) [gyrare, to turn or whirl]. Pertaining to a gyrus or to gyri.

**Gyration** (*ji-ra'-shun*) [gyrare, to turn or whirl]. A turning in a circle; also, giddiness.

**Gyre** (*jir*) [gyrus, a circle]. A convolution, and a more commendable word than the polysyllable.

**Gyrophora** (*ji-roff'-or-ah*) [γύρος, ring; φέρειν, to bear]. A genus of lichens, some species of which afford the *tripe de roche*, a rock-tripe of Northern Canada. Though tough, acrid, and unpalatable, these lichens are sometimes eaten when other food is not to be had.

**Gyropsoriasis** (*ji-ro-sor-i'-as-is*) [γύρος, round; ψωρίασις, a skin-disease]. Psoriasis occurring in circular patches.

**Gyrosa** (*ji-ro'-sah*) [γύρος, a circle]. A variety of gastric vertigo in which, when the patient is standing, everything turns around him, and he must close his eyes to avoid falling.

**Gyrospsasm** (*ji'-ro-spazm*) [γύρος, circle; σπασμός, spasm]. A peculiar rotary spasm of the head, and sometimes a nodding spasm.

**Gyrus** (*jil'-rus*) [gyrus, γύρος, a circle; pl., Gyri]. A convolution of the brain. See *Convolution*.

## H

**H.** Abbreviation of *Hæmorrhage*. In chemistry, the symbol of hydrogen. In pharmacy, the symbol of *Haarlem*, a draught.

**Haarlem Blue.** Same as *Monard's Blue*.

**Habena** [*ha-be-nä'*] [*ha-be-nä'*, a rein]. 1. A peduncle of the coracoid. A suture ridge at the dorsal margin of the mesal surface of the thalamus, with a dorsal process, extending from the pons to the supracondylar process, which unites it with its opposite. 2. A bandage or strip of plaster for a wound.

**Habenal, or Habenar** [*ha-be-nä'*, or *ha-be-nä'*] [*ha-be-nä'*, a rein]. Relating to the habena.

**Habenula** [*ha-be-nä'*] [*ha-be-nä'*, a rein]. A ribbon-like nucleus. The superficial gray nucleus of the optic thalamus in trout, and superior to the posterior commissure. *H. conarii*. Same as *Habena*. *H. pectinata*, *perforativa*, and *tecta* (or *arcuata*), nuclei of the optic zones, or portions of the basilar ganglia of the internal ear; called also *Zona pectinata*, etc.

**Habenular** [*ha-be-nä'*] [*ha-be-nä'*, a rein]. Pertaining to the habenula.

**Habit** [*ha-bit'*] [*ha-bit'*, to have]. 1. That condition or quality that one naturally possesses, or that may be acquired. 2. The tendency to repeat an action or condition. 3. In biology, the general aspect of a plant or animal and its mode of growth. **H.-chorea.** See *Hysteria*. **H.**, Full of a plethoric constitution. **H.-spasm;** *Habes chorea;* *Convulsive Tic;* *Gilles de la Tourette's Disease.* A choreic disease characterized by simply localized spasmodic movements, or such movements combined with explosive utterances and psychic symptoms (*compulsive tic*). *Habit-spasm* is confined chiefly to young girls, and is marked mainly by spasmodic action of the facial muscles or of the hand. *Compulsive Tic* or *Gilles de la Tourette's Disease* is a psychosis allied to hysteria, and occurring usually in children of a neurotic tendency. It is marked by involuntary muscular movements, usually affecting the face or facial muscles, and by explosive utterances that may resemble a bark or an inarticulate cry. A worst habit may be mimicked at once and repeated over and over again, usually with the involuntary movements. To this the term *h. habitus* has been applied. *Compulsive*, or the use of bad language, is another symptom, and occasionally actions are mimicked (*imitation*). These may also be associated with certain mental disturbances, the patient becoming the subject of a form of obsession or a fixed idea.

**Habitat** [*ha-bit-at'*] [*ha-bit-at'*, to dwell]. The natural locality or geographic range of an animal or plant.

**Habitation** [*ha-bit-a-tion'*] [*ha-bit-a-tion'*, a dwelling]. A dwelling place. The home, dwelling place, or natural habitat of an animal or plant.

**Habitus** [*ha-bit-us'*] [*ha-bit-us'*, to have]. A habit; general appearance or expression.

**Habromania** [*ha-bro-mä-ni-ä'*] [*hä-bro-mä-ni-ä'*, graceful; grace, adjectives]. Mania with pleasant or agreeable delusions.

**Hachement** [*ha-che-mänt'*] [*Fr.*, hacking, or chopping]. In massage, a combination of strokes, usually with the close edge of the hand, sometimes with the border of the forearm.

**Hackberry** [*hak-ber-ri'*]. See *Prickly*.

**Hacking** [*hak-king'*]. See *Instrument* and *Hack-*

**Haddock** [*hak-dök'*] [*ME.*, *haddok*, haddock]. A fish, *Merluccius*, closely allied to the cod. It

is said that the oil of the liver of the haddock is sometimes mixed with cod-liver-oil; but such admixture is probably rare, as it greatly impairs the market value of the oil. Unof.

**Hæckel's Law.** See *Lavo*.

**Hæma-** (*hem'-ah-*) [*aiua*, blood]. A prefix signifying some relationship with the blood. For words (unless unanglicized) thus beginning, see *Hema-*.

**Hæmal** (*hem'-al*). See *Hemal*.

**Hæmanthin** (*hem-an'-thin*). See *Hemanthin*.

**Hæmatoxylin** (*hem-at-oks'-il-in*). See *Hematoxylin*.

**Hæmin** (*hem'-in*). See *Hemin*.

**Hæmo-** (*hem'-o-*). For words thus beginning see *Hemo-*.

**Hæmorrhage** (*hem'-or-aj*). See *Hemorrhage*.

**Hæser and Neubauer's Formula.** A formula for estimating from the specific gravity the total amount of solids in the urine; it is sufficiently accurate for clinical purposes. The estimation is made by multiplying the last two figures of the specific gravity by the factor 2.33, the product of which represents the number of grams of solids in 1000 c.c. of the urine; this must be multiplied by the number of c.c. of the urine under examination and divided by 1000 in order to obtain the correct amount of solids.

**Hagenia** (*haj'-e-ne-ah*). See *Kusso*.

**Hager's Reagent.** A reagent for the detection of sugar in the urine. It consists of the ferrocyanid of iron and caustic potassa.

**Hahnemannism** (*hahn'-e-man-izm*). See *Homeopathy*.

**Haidinger's Brushes.** A visual phenomenon seen upon directing the eye toward a source of polarized light, due to the doubly-refractive character of the elements of the macula.

**Hair** (*här*) [*ME.*, *here*, hair]. The hirsute appendage of the skin. Each hair consists of a bulb and a shaft. The former is situated in the true skin, but is enveloped in a sheath of epidermis. **H.-blanching.** See *Candies*. **H.-bulb**, a whitish, soft, bulbous enlargement at the proximal extremity of the root of the hair. **H.-cap Moss**, Robin's Rye; the leaves and stems of *Polytrichum juniperum*, a powerful diuretic. Dose of the decoction *ad lib.*; of the fld. ext. 3j-ij. Unof. **H.-despoiler**, an individual who is afflicted with a form of sexual perversion, in which the feelings are aroused during the act of mutilating or cutting-off the hair of the victim. **H.-follicle.** See *Follicle*. **H.-gland**, a minute sebaceous gland of the hair-root. **H.-knob**, Henle's term for a hollow, bulbous hair-root. **H.-papilla**, the nipple-like process of the corium from which the hair grows. **H.-pigment**, the coloring matter of the hair. **H.-pith**, the medulla of a hair. **H.-root**, that portion of a hair contained in the follicle. **H.-shaft**, the part of a hair above the root. (See illustration, page 539.)

**Hairy** (*här'-y*) [*ME.*, *here*, hair]. Covered with hair; consisting of hair. **H. Heart.** See *Trichocardia* and *Cor villosum*. **H. Tongue.** See *Nigrities*.

**Halberd-shaped** (*hal'-berd-shäpt*). Same as *Hastate*.

**Hale** (*hä'*) [*ME.*, *heil*, in good health]. Sound; healthy; robust.

**Half** (*hal(h)f*) [*ME.*, *half*, half]. One of two equal parts. **H.-bath.** See *Bath*. **H.-breed**, a popular term applied to offspring whose parents belong to different races. **H.-lying**, in massage, reclining at an angle of about 45°. **H. Neck-rest**, in massage, having one hand supporting the neck posteriorly. **H.-wit**, a

weak-minded person; an idiot. **H.-witted**, idiotic; weak in intellect.

ROOT OF A HAIR AND ITS EPIDERMIC SHEATH.

1, 1. External layer of epidermic sheath. 2, 2. Its inferior extremity. 3, 3. Internal layer. 4, 4. External layer of cuticle of hair. 5, 5. Root of hair. 6. Bulb of root. 7, 7. Its peripheral or fibrous portion. 8, 8. Its central or medullary portion. 9, 9. Internal layer of cuticle of hair.

**Halicore** (*hal-ik'-or-e*) [*ἅλς*, sea; *κόρη*, maiden, mermaid]. See *Dugong*.

**Halimeter** (*hal-im'-et-er*) [*ἅλς*, saltiness; *μέτρον*, a measure]. An instrument for estimating the proportions of water in milk by means of its power to dissolve common salt.

**Halisteresis** (*hal-is-ter-e'-sis*) [*ἅλς*, salt; *στέρησις*, privation]. The loss by fully-formed bones of  $\frac{1}{3}$  to  $\frac{1}{2}$  their lime-salts, resulting in osteomalacia.

**Halituous** (*hal-it'-u-us*) [*halitus*, breath]. Moist, as if from having been breathed upon; applied to the skin.

**Halitus** (*hal'-it-us*) [*L.*, a vapor]. A vapor. Also, expired breath. **H. oris fœtidus**, tainted or foul breath.

**H. sanguinis**, the characteristic smell of the blood, peculiar to each kind of animal.

**Hall's (Marshall) Disease**. See *Diseases, Table of*. **H.'s Method**. See *Artificial Respiration*.

**Haller, Ansa of**. See *Ansa*. **H., Circle of**. See *Circle and Circulus*. **H., Cones of**, the *Coni vasculosa*.

**H., Fretum of**. See *Fretum*. **H., Line of**. See *Lines, Table of*. **H., Network of**, the *Rete vasculosum* of the testis. **H., Passage of**, in the embryo the narrow passage joining the auricle and ventricle of the heart.

**Hallux** (*hal'-eks*) [*L.*]. See *Hallux*.

**Hallucal** (*hal'-u-kal*) [*hallux*, the great toe]. Pertaining to the hallux, or great toe.

**Hallucinatio** (*hal-lew-sin-a'-she-o*) [*L.*]. Hallucination. **H. hypochondriaca**. Synonym of *Hypochondriasis*.

**Hallucination** (*hal-lew-sin-a'-shun*) [*hallucinari*, to wander in mind]. The highest degree of subjective

sensation, dependent alone upon morbid stimulation of the sensory cortical centers. There is the perception of non-existent objects or impressions, creations of the imagination. Hallucinations are variously

classed as hypochondriac, hypnagogic, motor, negative, pseudo-sensorial, unilateral, visual, auditory, gustatory, olfactory, tactile, hemiopic, epileptoid, etc. **Hallux**, or **Hallus** (*hal' uks* or *hal'-us*) [*L.*]. The great toe. The great toe when overriding the second toe. **H. dolorosus**. See *H. flexus*. **H. flexus**; *Hallux rigidus*; *Hallux dolorosus*; a condition allied to and perhaps identical with hammer-toe, in which there is flexion of the first phalanx of the great toe. The second phalanx is usually extended upon the first, and there is more or less rigidity of the metatarsophalangeal joint. **H. rigidus**. See *H. flexus*. **H. valgus**, displacement of the great toe toward the other toes. **H. varus**, displacement of the great toe away from the other toes.

**Halo** (*hal'-lo*) [*ἅλως*, a threshing-floor]. 1. The brownish circle about the female nipple, called also the areola. 2. The luminous or colored circles seen by the patient about light in glaucoma.

**Halogen** (*hal'-o-jen*) [*ἅλς*, salt; *γενῶν*, to produce]. In chemistry, an element that forms a compound of a saline nature by its direct union with a metal. The halogens are chlorine, iodine, bromine, and fluorine, to which cyanogen may be added as a compound halogen.

**Halogenic** (*hal-o-jen'-ik*) [*ἅλς*, salt; *γενῶν*, to produce]. Salt-producing; producing haloids.

**Haloid** (*hal'-oid*) [*ἅλς*, salt; *ειδος*, likeness]. Any one of those compounds that consist of a metal directly united to chlorine, bromine, iodine, fluorine, or cyanogen.

**Halophilous** (*hal-off'-il-us*) [*ἅλς*, salt; *φιλος*, loving]. In biology, applied to plants growing in salt marshes and along sea-coasts.

**Halstern's Disease**. See *Diseases, Table of*.

**Halt** (*harolt*) [*ME.*, halt, lame]. 1. Lame. 2. To limp. 3. A disease in sheep.

**Halter** (*harolt'-ter*) [*ἅλ-τήρ*, a leaping weight; *pl. Halteres*]. In biology, one of the rudimentary hinder wings of a fly; it is also called *poiser* or *balancer*.

**Halteripterous** (*hal-ter-ipt'-ter-us*) [*ἅλ-τήρ*, a leaping weight; *πτερόν*, wing]. Having halteres; applied to dipterous insects.

**Halved** (*halvd*) [*ME.*, half, half]. In biology, applied to bilaterally symmetric organs in which one side is wanting, as in certain leaves.

**Ham** [*ME.*, *hamme*, the ham]. That part of the leg between the knee-joint and the hip-joint. **H.-string**, one of the tendons of the posterior muscles of the thigh. Also, to cripple by cutting the tendons of the muscles of the thigh. **H., Inner**, the tendons of the semimembranosus, sartorius, and semitendinosus muscles. **H., Outer**, the tendons of the biceps flexor cruris.

**Hamamelin** (*ham-am-e'-lin*) [*ἡμᾶμλις*, a kind of medlar or service-tree]. A precipitate from a tincture of the bark of witch-hazel, *Hamamelis virginica*; it is astringent, tonic, and sedative. Dose gr. j-iiij. Unof.

**Hamamelis** (*ham-am-e'-lis*) [*ἡμα*, together with; *μήλον*, apple tree; *gen.*, *Hamamelidis*]. Witch-hazel; the leaves of *H. virginica*, with properties not fully known. It is thought to be tonic, styptic, and sedative, and appears to affect the circulation in a manner similar to aconite. It is highly recommended as a hemostatic. A preparation of this drug is sold under the name of Pond's Extract. **H., Fld. Ext.** Dose  $\text{m-j-5j}$ . **H., Tinct.** (*B. P.*) (*alc.*), 1 in 10. Dose  $\text{m-ij-v}$ .

**Hamann's Acid Carmin**. See *Stains, Table of*.

**Hamarthrosis** (*ham'ar-thrō'sis*) [*ham'*, together, *arthrō'sis*, a joint; *crō's*, inflammation] Joint involving all of the joints.

**Hamate** or **Hamose** (*ham'atē*, *ham'ōsē*) [*hamatē*, a hand; *ōs*, bone], bony, knotted, unguate.

**Hamburg Blue** Same as *London Blue*. **H. White.** See *White*. **H. Yellow.** Same as *London Yellow*.

**Hamilton's Bandage.** See *Bandage*.

**Hammarsten's Theory of Coagulation.** A theory that claims that fibrin is formed from one body only, namely, *Caseinogen*.

**Hammer** (*hām'mēr*) [*ML.*, *hamus*, a hammer]. In anatomy, the malleus. **H.-bone**, the malleus. **H.-cramp.** See *Cramp*, *Neurocramp*. **H., Thermal.** See *Country Doctor*. **H.-toe.** See *Hallux*.

**Hammerman's Cramp.** A spasmodic, and sometimes painful, contraction of the muscles of the upper extremity. It is so named from the fact that it is due to the use of a hammer, and is due to overwork.

**Hammock** (*hām'mōk*) [*Span.*, *hamaca*, a hanging mat]. A small or bed made of netting or canvas, suspended at the ends. It is much used aboard vessels and in tropical regions; it has been used latterly in the transportation of the sick and wounded. Slings for fractured legs, etc., are sometimes called hammocks.

**Hammond's Disease.** See *Athetosis*, and *Diseases*, *Table*.

**Hamular** (*hām'ul-ār*) [*hamus*, a hook]. Pertaining to or shaped like a hook.

**Hamulate**, **Hamulose** (*hām'ul-āt*, *-lē*) [*hamus*, a hook]. Hooked or hook-shaped.

**Hamulus** (*hām'ul-us*) [dim. of *hamus*, a hook; *pl.*, *hamuli*, *Hamuli*]. In anatomy, a hook-shaped process, as of a bone; any unciform process. **H.** of the Cochlea, the hook like process of the osseous lamina at the cupula.

**Hamus** (*hām'us*) [*L.*, a hook; *pl.*, *hami*]. In biology, a hooked process found on the wings of certain insects, which, together with the *tenacul*, helps to keep the wings to the body during flight.

**Hamy's Plane.** See *Plane*.

**Hanchinol** (*hān'chīn-ol*). See *Hemol*.

**Hancock's Operations.** See *Operation*, *Table*.

**Hand** *ML.*, *hēnd*, [hand]. The organ of prehension in human and quadrumania, from palm to the fingers, the metacarpals and the phalanges.

**Hand** *ML.*, *hēnd*, [hand]. The organ of prehension in human and quadrumania, from palm to the fingers, the metacarpals and the phalanges.

**Hand** *ML.*, *hēnd*, [hand]. The organ of prehension in human and quadrumania, from palm to the fingers, the metacarpals and the phalanges.

**Hand** *ML.*, *hēnd*, [hand]. The organ of prehension in human and quadrumania, from palm to the fingers, the metacarpals and the phalanges.

**Hand** *ML.*, *hēnd*, [hand]. The organ of prehension in human and quadrumania, from palm to the fingers, the metacarpals and the phalanges.

**Hand** *ML.*, *hēnd*, [hand]. The organ of prehension in human and quadrumania, from palm to the fingers, the metacarpals and the phalanges.

**Hand** *ML.*, *hēnd*, [hand]. The organ of prehension in human and quadrumania, from palm to the fingers, the metacarpals and the phalanges.

HAND, PALMAR SURFACE.

1. Scaphoid. 2. Semilunar. 3. Capitate. 4. Pisiform. 5. Trapezium. 6. Groove for tendon of flexor carpi radialis. 7. Trapezoid. 8. Os magnum. 9. Unciform. 10. Metacarpal bone. 11, 12. First phalanges of thumb. 13, 14. Second phalange. 15. Third phalanx of thumb. 16. Second phalanx.

chief is folded in the form of a cravat, and the body is so placed on the point of the heel that the portion on the outer side of the foot is one-third longer than the other portion. The short part is held parallel with the sole of the foot while the long part is carried across the instep, turned round the inner part, carried back under the sole of the foot and looped round its own side. The two ends are then tied together for the purpose of exerting traction.

**Handkerchief-Dressing.** A form of temporary dressing for wounds and fractures made of handkerchiefs. There are two varieties, viz., *cravats*, in which the handkerchiefs are folded into rolls like cravats; and *triangles*, the handkerchiefs being folded diagonally in the form of triangles. The most important cravats are the following: **C., Abdomino-inguinal**; two handkerchiefs are folded into cravats and their ends tied together. The body of one is placed beneath the thigh, close up to the nates; the ends are brought to the front, crossed over the groin, then carried round the opposite sides of the body, and tied together on one side rather than behind, so that the knot shall not press injuriously upon the back. **C., Axillo-acromial.** See *C., Parieto-axillaris*. **C., Axillo-cervical**; the body of the cravat is placed in the axilla, the ends crossed over the shoulder, and tied on the opposite sides of the neck. **C., Cervical**; a handkerchief is formed into a cravat, the body placed on the front, back, or sides of the neck, according to the part to be dressed, the ends are carried around, crossed on the opposite side and returned, and fastened with pins. **C., Compound Bis-axillary**; for this two handkerchiefs in cravat form are required. One is tied as an axillo-acromial cravat through one axilla, while the body of the other is placed in the opposite axilla, and its ends, being brought across the chest, one in front and the other behind, are passed through the loop of the first and tied in front of the breast. **C., Compound Bis-axillo-scapular**; form two handkerchiefs into cravats. Tie one as a loose ring, or form the axillo-acromial cravat of one side, and, placing the body of the other in front of the opposite shoulder, bring the ends back, one over the shoulder and the other through the axilla; then form these into a single knot, and complete the dressing by passing the ends through the ring or loop of the other cravat, and tying them into a knot. **C., Fronto-occipito-labialis**; the handkerchief is formed into a cravat and the middle portion is placed upon the forehead; the ends are carried back, crossed upon the posterior part of the neck, brought forward under the ears and crossed over the upper lip. This is used to approximate lip-wounds. **C., Ilio-inguinal**, a double cravat, also called the *sacro bi-crural cravat of Mayor*. The body of a long cravat is placed over the body of the sacrum, the two extremities are brought around the body down in front of each groin and around the thighs, to be fastened on the opposite side of the body. **C., Ilio-inguinal**, or the *cruro-pelvic cravat of Mayor*. The body of a large cravat is placed over the inguinal region, the upper extremity is carried around the body, the lower extremity around the thigh, and the two ends knotted in front. **C., Metatarso-malleolar**; place the body of the cravat obliquely across the dorsum of the foot; carry one end under the foot and up in front of the ankle, and the other around the leg above the malleoli, fastening them together in front of the joint. **C., Parieto-axillaris**; one handkerchief is formed into a cravat, and its body is placed in the axilla, the ends tied over the shoulder, forming the *axillo-acromial cravat*. A second handkerchief is made into a triangle, and its body placed over the side of the head, and its ends tied into the first over the shoulder. It is

used to approximate wounds on the side of the neck and to prevent contraction after burns. **C., Simple Bis-axillary**; place the body of the cravat in the axilla, cross the ends over the shoulder, and after carrying one across the back and the other across the breast, tie them together at the anterior border of the axilla of the opposite side. **C., Simple Bis-axillo-scapulary**; this is a posterior figure-of-eight, and is best formed with a strip of muslin three inches wide and ten yards long. Place the center of the strip in front of the shoulder and the axilla; bring one end back over the top of the shoulder and the

knee, and pinned or tied as they are turned downward. **C., Tibial**; place the body of a handkerchief, folded into a cravat, obliquely across the posterior surface of the leg, and carry the extremities around the limb, the one below the knee, and the other above the malleoli. **Mayor's Bandage for Fractured Clavicle**; the arm is flexed at a right-angle and confined to the side of the chest by a triangular handkerchief, the base being placed above the forearm and the two extremities fastened on the back, the apex hanging down in front. The two folds forming the apex are carried up between the arm and the body and the under one is passed to

Bi-temporal Triangle.

Fronto-occipital Triangle.

Auriculo-occipital Triangle.

Triangular or Hunter's Cap of the Head.

Brachio-cervical Triangle.

Oblique Triangle of the Arm and Chest.

Mayor's Bandage for Fractured Clavicle.

Scroto-lumbar Triangle.  
(Suspensory Bandage of the Scrotum).Ilio-inguinal Cravat (double).  
The Sacro Bi-crural Cravat of Mayor.Ilio-inguinal Cravat.  
(The Cruro-pelvic Cravat of Mayor)

other through the axilla, cross them between the scapulae, carrying the axillary end over the shoulder of the opposite side and back through the axilla, and the humeral end forward through the axilla, the two overlapping each other; then fasten their ends front and back. This is an extemporaneous dressing for fracture of the clavicle. **C., Tarso-patellar**; this requires three handkerchiefs, all in cravat-form. One is to be placed about the knee as a figure-of-eight; a second round the foot in front of the ankle; the third is passed through the loop of the latter, the ends being carried on either side through the figure-of-eight of the

the sound shoulder, while the upper one is carried to the affected shoulder. A broad piece of bandage is fastened to one apex and carried beneath the handkerchief at the back and is then brought up and fastened to the other apex on the opposite shoulder.

The most important triangles are the following: **T.**, **Auriculo-occipital**, a variety of handkerchief-dressing for the head, used in keeping an application to the ear in proper place. The base of the handkerchief is placed in front of the ear to be covered, and the apex directed backward. The lower end is next carried under the jaw and up over the face in front of the

ear on the sound side, where it is made to meet the upper end, the two being tied together. **T., Bi-temporal.** A form of handkerchief head dressing, the base being placed over the temporal region on one side and the apex over the other. The ends are carried round to the opposite temple, crossed, brought back, and secured with pins, and the summit or apex is turned up and pinned above the temporal ridge. **T., Fronto-occipital,** a variety of bandkerchief dressing in which the base is placed over the forehead, while the summit is allowed to hang down over the occiput. The ends are most commonly folded along the sides of the head, above the ears, and either run behind the occipital protuberance, if crossed, brought forward, and pinned at the sides. The apex is then turned forward and pinned to the base of the handkerchief. **T., Malleolo-phalangeal** (from the malleolus and phalanx); where the base under the instep opposite to the instep; and the summit back over the toes and the dorsum of the foot, and carry the ends round the malleoli, making them fast in front. Tie the ends in front, or cross them over the instep and tie under the sole of the foot. **T., Mammary;** fold a handkerchief into a triangle; place its base under the breast and its apex over the corresponding shoulder; then carry one end under the axilla and the other over the opposite side of the neck, tying the two behind the scapula of the affected side, and pin to dress the summit. **T., Oblique, of the Arm and Chest;** the base of the triangle is placed under the wrist, the apex being allowed to project beyond the elbow. The extremity that is next to the chest is carried over the opposite shoulder, the other extremity being passed through the axilla of the injured side and tied with the first extremity over the sound shoulder. The apex is folded backward around the elbow and fastened. **T., Occipito-frontal;** the same as the *fronto-occipital*, only that the handkerchief is reversed, the base being placed over the occiput. **T., Occipito-sternal;** one handkerchief is formed into a triangle and another into a cravat. The latter is tied around the chest, forming the sterno-dorsal cravat. The apex of the former is placed over the occiput and the apex over the forehead. The ends are brought down on each side of the face and fastened to the cravat about the chest. The apex is turned backward over the vertex, and pinned. **T., Palmar;** the base of the handkerchief is placed across the back or the front of the wrist, according as it is designed to dress the palm or dorsum of the hand; the summit is folded back upon the wrist, and secured there by carrying the ends around the wrist. **T., Scroto-lumbar.** See *T., Suspensory*. **T., Simple Brachio-cervical;** the arm being fixed at a right angle the base of the triangle is placed under the wrist, and the two extremities are tied around the neck, the one not being thrown to one side. The apex is brought round the elbow and pinned in front. **T., Suspensory;** *Scroto-lumbar Triangle;* fold one handkerchief into a cravat and tie it around the waist; form another into a triangle, the base of which should be placed under the scrotum, and the extremities brought up, placed beneath the circular cravat and pinned to it. The apex is next carried up, pinned beneath the scroto-lumbar cravat and turned down in front, where it may be fastened with a pin. **T., Vertical,** a form of handkerchief head dressing in which the base of the handkerchief is placed over the vertex, the ends brought down over the ears and crossed under the chin, carried upward and pinned to the descending portion of the handkerchief. The apex is brought round one side of the head, and secured with a pin. **The Triangular or Hunter's Cap of the Head;** a piece of muslin is secured, with the side

sufficiently long to pass over the head and fasten under the chin. First fold it transversely across until one side is within an inch of the opposite side; the short side is then placed beneath; the two corners of the folded edge are turned inward, forming a triangle. The two extremities of the triangle are taken in either hand, and while kept tense are twisted and rolled up to the extent of two inches. Lifting the bandage and approximating the hands cause the two sides to separate. It is placed on the head with the thin edge over the forehead and the rolled edge around the back of the neck. The ends are brought under the chin, and tied.

**Handwriting** (*hand'-ri-ting*). See *Graphology*.

**Hanging** (*hang'-in*). [*ME., hangyng*, hanging]. Death by suspension of the body from the neck, by a rope provided with a slip noose. The immediate cause of death may be asphyxia, cerebral hemorrhage (from strangulation), or dislocation or fracture of the cervical vertebrae.

**Hangnail** (*hang'-nal*) [*AS., angnagl*, a sore by the nail]. A partly detached piece of epidermis at the root of the nail, the friction against which has caused inflammation of the abraded surface.

**Hauwa** [*E. Ind.*]. Synonym, in Bagdad, of *Asiatic Cholera*.

**Hapantismus** (*hap-an-tiz'-mus*) [*ἅπας*, entire]. Complete adhesion between parts or surfaces.

**Haphalgnesia** (*haf-al-je'-ze-ah*) [*ἄψῃ*, touch; *ἄλγος*, pain]. Painful touch by bodies ordinarily not painful.

**Haphemetric** (*haf-e-met'-rik*) [*ἄψῃ*, touch; *μέτρον*, measure]. Relating to esthesiometry. See *Esthesiometer*.

**Haphophobia** (*haf-e-fo'-be-ah*) [*ἄψῃ*, contact; *φόβος*, fear]. The morbid dread of touching persons or things; mysophobia.

**Haphonosus** (*haf-on'-o-sus*) [*ἄψῃ*, touch; *νόσος*, disease]. Any disorder of the sense of touch.

**Haplodermitis** (*hap-lo-der-mi'-tis*) [*ἅπλδος*, simple; *δέρμα*, skin; *τις*, inflammation]. A simple or uncomplicated skin-inflammation.

**Haplodont** (*hap'-lo-dont*) [*ἅπλδος*, single; *ὀδόντ*, (ὀδόντ), tooth]. In biology, applied to animals whose molar teeth have simple or single crowns.

**Haplolichen** (*hap-lo-li'-ken*) [*ἅπλδος*, single; *λεχίν*, lichen]. Same as *Lichen simplex*, *q. v.*

**Haplomelasma** (*hap-lo-mel-as'-mah*) [*ἅπλδος*, simple; *μέλασμα*, a livid spot]. Simple melasma.

**Hapломorphous** (*hap-lo-mor'-fus*) [*ἅπλδος*, simple; *μορφή*, form]. In biology, applied to the simpler forms of certain groups.

**Haploöphone** (*hap-lo'-o-fon*) [*ἅπλδος*, single; *φωνή*, voice]. In biology, applied to the form of the syrinx in certain birds (*e. g.*, *Alcedidae*) which have but one intrinsic syringomyon.

**Haplopathy** (*hap-lo'-ath-ē*) [*ἅπλδος*, simple; *πάθος*, illness]. Any uncomplicated disease.

**Haplopetalous** (*hap-lo-pet'-al-us*) [*ἅπλδος*, single; *πέταλον*, leaf]. In biology, having but a single circle of petals.

**Haplophyma** (*hap-lo-fi'-mah*) [*ἅπλδος*, simple; *φύμα*, a tumor]. A simple tumor.

**Haploscope** (*hap'-lo-skop*) [*ἅπλδος*, single; *σκοπεῖν*, to see]. An instrument for measuring the visual axes.

**Haplostemonous** (*hap-lo-stē-mon-us*) [*ἅπλδος*, single; *στίμων*, a thread]. In biology, having but a single circle of stamens.

**Haplotomia, Haplotomy**, (*hap-lo-to'-me-ah*, *hap-lot'-o-me*) [*ἅπλδος*, simple; *τομή*, a cut]. A simple incision.

**Haptodysporia** (*hap-to-dis-fo'-re-ah*) [*ἅπτως*, tactile, touched; *δύς*, difficult; *δύρος*, bear]. The disagree

able sensation aroused by touching certain objects, as velvet, a peach, or a russet apple.

**Haramaitism** (*har-am-ai'-il-izm*) [Anglo-Indian; from *Haram maiti*, the name of an Hindu offender in this way]. Child-marriage in India; also, the collective physical evils that result from that system.

**Hard** [ME., *hard*, hard]. Solid; firm to the touch. **H.-hack**, the leaves and twigs of *Spiraea tomentosa*; it is astringent and tonic, and a popular New England remedy in diarrhea and *cholera infantum*. Dose gr. v-xv, in decoction; of the fld. ext. 5 ss-j. Unof. The shrub *Potentilla fruticosa* is locally called hardhack; its properties are the same as those of the species named. **H. Palate**. See *Palate*. **H. Pitch**. See *Pitch*. **H. Resins**. See *Resins*. **H.-tack**, a form of biscuit used in the navy and army.

**Hardenbergia** (*har-den-ber'-je-ah*) [after Countess Hardenberg]. A genus of Australian leguminous plants. The root of *H. monophylla*, called lilac, and sarsaparilla, is said to be a good substitute for true sarsaparilla. Unof.

**Hardening** (*hard'-en-ing*) [ME., *hard*, hard]. A stage in the preparation of tissues for microscopic examination. See *Alcohol*, *Ammonium Chromate*, *Ammonium Bichromate*, *Potassium Bichromate*, *Müller's Fluid*, *Erlick's Fluid*, *Chromic Acid*, *Klein's Fluid*, *Rabl's Fluid*, *Corrosive Sublimate*, *Picric Acid*, in *Stains*, *Table of*. Alcohol for pieces under 1 inch square, and the bichromate solutions for larger masses, are best for general use; others in special cases; but in all, full twenty times the bulk of the object should be used. See *Stains*, *Table of*.

**Harder's Glands**. See *Gland*.

**Hare's Method**. A method of determining the position on the skull corresponding to the fissure of Rolando. The pre-Rolandic region occupies 55.7 per cent. of the distance from the glabella to theinion.

**Hare-eye** (*har'-i*). See *Lagophthalmos*.

**Harelip** (*har'-lip*). Congenital fissure of the lip due to arrested facial development. The scheme of the formation of cleft is shown in the annexed illustrations.

**H., Complicated**, with cleft or malformation of the superior maxillary bone also. **H., Double**, two clefts of the lip, or one of each lip. **Twisted or Harelip Suture**, a figure-of-8 suture about a pin thrust through the lips of freshened edges of the cleft. For operations for single harelip see *Clemot's*, *Collis's*, *Dieffenbach's*, *Giraldès's*, *Graefe's*, *Ilagedorn's*, *Malgaigne's*, *Mirault's*, *Nelaton's*, *Paré's*, *Rose's*, *Stokes's Operations*; and for operations for double harelip see *Bardeleben's*, *Blandin's*, *Butcher's*, *Desault's*, *Franco's*, *Gensoul's*, *Langenbeck's*, *Rose's*, *Sédillot's*, *Smith's Operations*, in *Operations*, *Table of*.

**Harlequin** (*har'-le-kwin*) [OF., *harlequin*, a harlequin]. Variegated; party-colored. **H. Fetus**, a fetus with congenital ichthyosis, general seborrhea, or diffuse keratoma. Such subjects are always born prematurely, and have no external ears, eyelids, or lips.

**Harmalin** (*har'-mal-in*) [ἀρμάλιν],  $C_{13}H_{11}N_2O$ . A yellowish crystalline substance used as a dye. See *Pigments*, *Conspectus of*.

**Harmonia** (*har-mo'-ne-ah*) [ἀρμονία, harmony]. A suture (also a mode of suture) between two bones that are apposed closely and immovably upon each other.

**Harmonics** (*har-mon'-iks*). See *Over-tones*.

**Harpoon** (*har-poon'*) [Fr., *harpon*, a grappling-iron]. An instrument for the removal of bits of living tissue for microscopic examination.

**Harrison's Groove**. A transverse curve passing outward from the level of the ensiform cartilage toward

the axilla. It may be deepened at each inspiration in certain diseases, e.g., rickets.

**Hartig's White Mass**. A substance for injecting tissues. Dissolve 125 gms. of lead acetate in enough water to make the whole weigh 500 gms. Dissolve 95 gms. of sodium carbonate in enough water to make the whole weigh 500 gms. One volume of each of these solutions is mixed with two volumes of strong gelatin solution.

**Hartmann's Elixir**. An elixir containing camphor 50 parts, and saffron 1 part, in alcohol 350 parts.

**H.'s Tubes**, small tubes devised to be passed through a perforated drum-membrane for the purpose of irrigating and draining the middle ear cavity.

**Hartshorn** (*harts'-horn*). 1. Cornu cervi. 2. A name popularly given to *ammonium hydrate*. See *Ammonium*.

SCHEME OF FORMATION OF THE FACE AND ARREST OF ITS DEVELOPMENT.

A. First appearance of the face. I, II, III, IV. The four visceral arches. f. Frontal process. 1. Inner nasal process. 2. Outer nasal process. 3. Superior maxillary process. u. Inferior maxillary process. b, c. First and second visceral clefts. a. Eye. z. Tongue. B. Normal union of the embryonic parts. Z. Intermaxillary bone. N'. Nasal orifice. O. Nasal tear-duct. U. Lower jaw (m, abnormal dilatation of the mouth, constituting makrostomia). C. Arrest of the development, constituting oblique facial cleft. D. Arrest of development showing an "oblique facial cleft" (Q).

**Harvest-bug**. See *Leptus autumnalis*.

**Hashish** (*hash'-ish*). See *Cannabis*.

**Hasner's Valve**. A fold of the mucous membrane of the nasal duct at the lower orifice. It is not of constant occurrence. See *Valve*.

**Hassall, Concentric Corpuscles of**. Peculiar bodies found in the medulla of the thymus gland. They consist of a central granular part, around which are disposed layers of flattened nucleated endothelial cells arranged concentrically.

**Hastate** (*has'-tāt*) [*hasta*, a spear]. In biology, shaped like the head of a spear; halberd-shaped.

**Hastifolious** (*has-ti-fō'-le-us*) [*hasta*, a spear; *folium*, a leaf]. In biology, having hastate leaves.

**Hatters' Disease**. A form of constitutional mercurial poisoning occurring in the makers of hats; also a

skinned, etc., arising from the use of mercury and arsenic, also an acute inflammation of the respiratory tract caused by the fumes of arsenic trioxide. All of these conditions being used in the mining. **H.'s Consumption**, a form of tuberculosis occurring in hatters from inhaling of the fumes of dust arising during the process of hat-making and pressing.

**Haunch** (*haunch*, *haunch*) [Fr., *hanche*, haunch]. The part of the body between the hips and the buttocks.

**Haustellum** (*haustellum*) [L., *haustellum*, a machine for drawing water; *haustellum*]. In biology, the sucking apparatus of an animal.

**Haustorium** (*haustorium*) [L., *haustorium*, to draw; *haustorium*]. In biology, the penetrating organs of certain parasitic plants, by means of which they draw nourishment from their host.

**Haustus** (*haustus*) [L., *haustus*, to draw]. In pharmacy, a draft. A portion of medicine in the form of a drink.

**Haut Mal** (*haut mal*) [Fr., *haut mal*]. See *Epilepsy*.

**Havanna-brown**. Same as *Prunel brown*.

**Havers, Canals of**. See *Canal*. **H., Glands of**. See *Gland*. **H., Spaces of**, large and irregular spaces found in growing bone mainly, though also to a limited extent in adult bones.

**Haversian Canal** (*haversian canal*). See *Bone* and *Canal*. **H. System**, a system in bone, consisting of a central opening, or Haversian canal, surrounded by a number of concentric rings.

**Haw** (*haw*, *haw*), an excrescence in the eye]. 1. The corneal eyelid, reflecting membrane, or winker of a horse. 2. A diseased or disordered condition of the corneal eyelid of the horse.

**Hawking** (*hawking*) [ME., *hawk*, to hawk]. Clearing the throat by a peculiar expiratory current of air.

**Hawley's Food**. A variety of Liebig's foods for horses. Its composition is: Water, 0.63; fat, 0.61; glucose, 4.57; cane sugar, 3.44; starch, 10.97; soluble carbohydrates, 70.54; albuminoids, 5.38; etc., 1.50.

**Hay** (*hay*, *hay*) [ME., *hay*, hay]. Grass, cut and dried. **H.-asthma**. See *Asthma*. **H.-cold**. Same as *Rhinitis*. **H.-fever**. See *Fever*.

**Hay's Method**. See *Fracture*, *Methods of*. **H.'s Reaction**. See *Strabismus*, *Test in Test*, *Table of*. **H.'s Test**. See *Test*, *Table of*.

**Haya Poison** (*haya poison*) [said to have been named after Mr. Haya]. A powerful toxic agent from tropical forest, and believed to be derived from some species of *Centropogon*, but this has been disputed. A solution of its watery alkaloid (1 to 2 per cent.) is a powerful local anesthetic, more persistent in its effects than cocaine.

**Haycraft's Method**. A method for the estimation of urea and creatinine. When uric acid is precipitated by an ammoniacal solution of nitrate of silver in the presence of the ammoniacal mixture (see *Ammoniacal Mixture*), the precipitate is stated to contain one molecule of urea to each molecule of uric acid. The uric acid is then determined by dissolving the precipitate in HCl, in which solution the silver is freely estimated volumetrically with a standard solution of potassium chromate. See *Uric Acid*.

**Hayden's Vicarium Compound**. See *Vicarium*.

**Hayden's Compound**. See *Compound*. **H.'s Fluid**, a fluid used in ophthalmology. It consists of distilled water, with the addition of solutions of sodium, two and one-half per cent., potassium, one per cent., and bismuth of mercury, one fourth per cent.

**Hayward's Treatment**. After the operation of arthrectomy for gonorrhea, Hayward packed the

cavity with lint saturated with dilute sulphuric acid, one third the official strength, to hasten the separation of diseased tissues, to stimulate granulations, and to secure ankylosis.

**Head** (*head*) [ME., *hed*, the head]. The anterior or upper part of the body. That part of the body containing the brain or central nerve-system. Also, the upper end of a long bone, as the femur. **H.-ache**, any pain in the head, general or local, arising from any cause whatever. According to Hughlings-Jackson, frontal headaches, such as "sick" and "biliary" headaches, are due to disorders of the digestive system; headache at the vertex, to cerebral troubles; and occipital headache, to anemia. Eye-strain is a frequent source of headache, especially in the frontal region. **H.-breeze**, **Electro-therapeutic**, a device for general static cephalic electrization by a head plate, with numerous insulated pencils for subdividing and accumulating strong currents, and giving more gradual effects. See *Static Breeze*. **H.-birth**, the birth of the fetal head first. **H.-drop**, a peculiar nervous disease seen in Japan during the spring and early summer, supposed to be miasmatic in origin. It is attended with inability to hold the head erect, paralytic symptoms in the limbs, and optic disorders. One attack predisposes to others. **H.-fold**, an inflection or tucking-in of the layers in front of and beneath the head of the embryo. **H.-gut**. See *Fore-gut*. **H.-kidney**. Same as *Pronephros*. **H.-light Oil**. See *Burning Oil*. **H.-locking**, a term in obstetrics denoting the entanglement of the heads of twins at the time of birth. **H.-measurements**. See *Cranimetry*.

**Heal** (*hel*) [ME., *helen*, to heal]. To make whole or sound; to cure. **H.-all**. See *Collinsonia*.

**Healing** (*healing*) [ME., *helen*, to heal]. Union and cicatrization of a wound; applied generally to the cure of disease. **H. by First Intention**, without the granulating process. **H. by Second Intention**, by the intermediation of granulations. **H. by Third Intention**, the direct union of two already granulating surfaces.

**Health** (*helth*) [ME., *helth*, health]. That condition of the body and its organs necessary to the proper performance of their normal functions. A hale or whole condition of body. **H.-lift**, an apparatus for exercising those muscles by which weights are lifted directly upward.

**Hear** (*her*) [ME., *heren*, to hear]. To perceive by the ear.

**Hearing** (*hering*) [ME., *heren*, to hear]. The special sense by which the sonorous vibrations of the air are communicated to the mind. The cerebral center is excited by the vibration of the fluid contents of the labyrinth, or terminal organs of the auditory nerve. Sound presents three elements, pitch, intensity, and timbre. The first depends upon the number of the aërial vibrations; the second upon their amplitude; the third upon their form.

**Heart** (*hart*) [ME., *hart*, heart]. The organ giving the initiative and chief impulse to the circulation of the blood. It is enveloped by a membranous tissue called the *pericardium*. It consists essentially of four cavities, a right auricle and ventricle, and a left auricle and ventricle. The movements of the heart may be recorded by means of the cardiograph, and these tracings, or *cardiograms*, may be of value in the study of diseased conditions. **H., Dilatation of**, the abnormal increase in size of any or all of the cavities of the heart. **H.-burn**, a burning feeling at the epigastrium and lower part of the chest, caused by the acetic or putrefactive fermentation of the gastric contents. **H.-clot**, coagulation of the blood in the cardiac cavities;

cardiac thrombosis. **H.-disease**, any functional or organic pathologic condition of the heart. **H., Fatty**, a name given to two distinct pathologic conditions of the heart-tissue. In the first there is a true fatty degeneration of the muscular fibers of the heart; and in the second there is an increase in the quantity of sub-pericardial fat—a fatty infiltration. The former and

most serious condition is due to a deficiency in the supply of oxygenated blood to the heart, arising either from local or general causes. It gives rise to asthma, angina pectoris, and a tendency to syncope and sudden death. The second condition is usually associated with general obesity, and may present the same symptoms as the first. **H.-hurry, Paroxysmal**. See *Tachycardia*. **H., Hypertrophy of**, an abnormal increase in the muscular tissue of the heart. See,

ANATOMY OF THE HEART, RIGHT SIDE.

1. Cavity of right auricle. 2. Appendix auriculæ. 3. Superior vena cava. 4. Inferior vena cava. 5. Fossa ovalis; the prominent ridge surrounding it is the annulus ovalis. 6. Eustachian valve. 7. Opening of the coronary vein. 8. Coronary valve. 9. Entrance of the auriculo-ventricular opening. Between the figures 1 and 9, several foramina thebesii are seen. *a*. Right ventricle. *b, c*. Cavity of right ventricle. *e, f*. Tricuspid valve. *g*. Long columna carnea. *h*. The "long moderator band." *i*. The two columnæ carnea of the right curtain. *k*. Attachment of chordæ tendineæ of the left limb of the anterior curtain. *l, l*. Chordæ tendineæ of the "fixed curtain" of the valve. *m*. Valve of the pulmonary artery. *n*. Apex of left appendix auriculæ. *o*. Left ventricle. *p*. Ascending aorta. *q*. Its transverse portion. *r*. Descending aorta.

ANATOMY OF THE HEART, LEFT SIDE.

1. Cavity of left auricle. 2. Cavity of the appendix auriculæ. 3. Opening of the two right pulmonary veins. 4. The sinus into which the left pulmonary veins open. 5. Left pulmonary veins. 6. Auriculo-ventricular opening. 7. Coronary vein. 8. Left ventricle. 9. Cavity of the left ventricle. *a*. Mitral valve. *b, b, b*. Columnæ carnea. *c, c*. Fixed columnæ carnea. *d*. Arch of the aorta. *e*. Pulmonary artery. *f*. Obliterated ductus arteriosus. *g*. Left pulmonary artery. *h*. Right ventricle. *i*. Point of the appendix of right auricle.

HORIZONTAL SECTION OF LUNGS AND HEART.

- 1, 1. Upper lobes of lungs. 2, 2. Lower lobes. 3. Dorsal vertebra. 4, 4. Two ribs. 5. Heart. 6. Right auricular appendix. 7. Superior vena cava. 8. Aorta. 9. Pulmonary artery. 10. Left auricle. 11. Left auricular appendix. 12. Mouths of right pulmonary veins. 13. Mouths of left pulmonary veins. 14. Thoracic aorta. 15. Esophagus. (See also pp. 113 and 370.)

SCHEME OF THE BLOOD-PRESSURE.

- H.** Heart. *a*. Auricle. *v*. Ventricle. *A*. Arterial; *C*, capillary; *V*, venous areas. The circle indicates the parts within the thorax. *B, P*. Pressure in the aorta.

also, **Hypertrophy**. **H.-murmurs**. See *Murmur*. **H.-scald**. Same as *H.-burn*. **H.-shock**, Latham's term for sudden cardiac breakdown during exertion, not due to rupture of a valve. **H., Sounds of**, the sounds observed in auscultation of the heart, occurring synchronously with systolic contraction and the closure of the valves, etc. **H., Valves of**. See *Valve*. **H.-starvation**, Fothergill's term for a form of cardiac asthenia occurring in adult age, and characterized by feeble circulation, cold extremities, tendency to vertigo, and pseudo-apoplectic attacks, but with absence of arcus senilis. It is due to general ill-nutrition,

worry, over work, and loss of sleep. Cardigrams of some pathologic conditions of the heart are appended.

P. Contraction of the auricles. *b, c*. Ventricular systole. F. Closure of pulmonary valve. Q. Closure of aortic valve. L. Contraction of the auricles. E. Closure of aortic valve.

**Heat** (*hēt*) [*ML.* *calor*, heat]. A mode or rate of vibration of etheral, atomic, or molecular, or wave-motion. While certain limits of intensity it is essential to the development of all organized beings; above a certain degree, it is destructive to all organization and life. As regards the body, heat indicates a temperature above 98.6°. Also, in physiology, the period of sexual excitement in the females of many animals. **H.**, Animal, the heat generated within the bodies of living animals by the liberation of the latent heat contained in the food. **H.-apoplexy**. See *Insolation*. **H.-asphyxia**. Same as *Insolation*. **H.-centers**, certain parts situated about the mesal and lateral aspects of the corpus striatum, supposed to have the function of regulating or inhibiting the production of body heat. **H.-eruption**. Synonym of *Eczema*. **H.-fever**. See *Insolation*. **H.**, Latent, physiologically, the potential energy existing in a complex potential outside, and which is liberated by the simultaneous action of the latter, or the catabolic processes of the organism. **H.**, Prickly. See *Urticaria*. **H.**, Specific. See *Sarcin*. **H.-spot**, a freckle. Also a freckle of the face. **H.-stroke**, a nervous shock or disturbance by sudden syncope, enfeebled condition and depression, caused by exposure to intense heat. It is called also *Sundb's*. **H.-unit**, the unit measure of heat. It is the amount of heat required to raise one pound of water through one degree of temperature.

**Heave** (*hēv*) [*ML.* *hevo*, to raise]. A disease of horses, characterized by difficult and laborious respiration. It is also called *heaves* or *heaves*.

**Heavy Oil**. See *Crude Oil*.

**Hebephrenia** (*he-be-fren'-i-ak*) [*hēβēn*, puberty; *φρέν*, mind]. A form of mental derangement

occurring in young persons at or soon after the age of puberty.

**Hebephreniac** (*he-be-fren'-ne-ak*) [*hēβēn*, puberty; *φρέν*, the mind]. One who is affected with hebephrenia.

**Hebephrenic** (*he-be-fren'-ik*) [*hēβēn*, puberty; *φρέν*, the mind]. 1. Affected with hebephrenia. 2. One who is affected with hebephrenia.

**Heberden's Asthma**. See *Asthma*, and *Diseases*, Table of. **H.'s Rheumatism**. See *Diseases*, Table of. **H.'s Nodes**. See *Nodes*, and *Signs and Symptoms*, Table of. **H.'s Nodosities**. See *Signs and Symptoms*, Table of.

**Hebetic** (*he-bet'-ik*) [*hēβētikós*, relating to puberty]. Relating to puberty or to adolescence.

**Hebetude** (*heb'-e-tud*) [*hebetudo*; *hebes*, blunt]. Dulness of the senses and intellect. A term applied to the state of partial stupor in affections of the brain.

**Hebetudinous** (*heb-e-tu'-din-us*) [*hebetudo*; *hebes*, blunt]. Affected with hebetude.

**Hebra's Arsenical Paste**. A paste also known as *Cosme's Paste*. It is used in treating lupus vulgaris. It consists of arsenious acid, 10 grains; artificial cinabar, ½ dram; ointment of rose-water, ½ ounce. It is spread on linen and applied accurately by means of a pad and bandage. **H.'s Erythema**. See *Diseases*, Table of. **H.'s Pityriasis**. See *Diseases*, Table of. **H.'s Prurigo**. See *Diseases*, Table of.

**Heckle-cell** (*hek'-e-l-sel*) [*ML.* *hekele*, a heckle; *cella*, a cell]. An epidermal cell having minute, hard, horny projections from its cell-wall.

**Hectic** (*hek'-tik*) [*ἐκτικός*, habitual or consumptive]. Habitual. A word now commonly used in connection

with certain constant symptoms of pulmonary tuberculosis, as **H. Fever**, the febrile symptoms concurrent with pulmonary tuberculosis. **H. Flush**, the flushed cheek accompanying pulmonary tuberculosis. **H. Spot**. Same as *H. Flush*.

**Hectocotylization** (*hek-to-kot-il-i-z-a'-shun*) [*ἐκτόν*, a hundred; *κοτύλη*, a small cup]. In biology, applied to the peculiar sexual modification of the arm of the male cephalopod, or its use as a fertilizing-organ.

**Hectocotylus** (*hek-to-kot'-il-us*) [*ἐκτόν*, a hundred; *κοτύλη*, a cup]. In biology, a specialized arm in certain male cephalopods, which contains the spermatocytes, and is detached and deposited within the mantle-cavity of the female.

**Hectogram** (*hek'-to-gram*) [*ἐκτόν*, one hundred; *γράμμα*, a weight]. One hundred grams, or 1543.2349 grains.

**Hectoliter** (*hek'-to-le-ter*) [*ἐκτόν*, hundred; *λίτρον*, a pound]. One hundred liters, equal to 22.009 imperial gallons, or 26.4 U. S. gallons.

**Hectometer** (*hek'-to-me-ter*) [*ἐκτόν*, hundred; *μέτρον*, a measure]. One hundred meters, or 328 feet, 1 inch.

**Hedeoma** (*he-de-o'-mah*) [*ἡδύς*, sweet; *ὀσμή*, smell]. American Pennyroyal. The leaves and tops of *H. pulegioides*, distinguished by their aroma. Its properties are due to a volatile oil. It is stimulant and carminative, and has some value as an emmenagogue. It is useful in the flatulent colic of children. Its odor is extremely repulsive to fleas and mosquitoes. **H.**, Oil, the volatile oil. Dose mj-x. **H.**, Spt., unof., 10 per cent. of the oil in alcohol.

**Hedera** (*hel'-er-ah*) [*L.*]. A genus of woody vines.

**H. helix**, the true or European Ivy. Its wood is used in making issue-peas. A decoction of the leaves has been used as an alterative and antiepileptic. The berries are purgative and emetic. The gum is emetic and stimulant, and is useful in toothache. Unof.

**Hederic Acid** (*hed-er'-ik*) [*hedera*, European Ivy]. An acid derivable from the leaves of *Hedera helix*, of which it shares the medicinal qualities. Unof.

**Hederin** (*hed'-er in*) [*hedera*, European Ivy]. An intensely bitter alkaloid from the seeds of *Hedera helix*. It is said to be actively febrifuge. (The gum of ivy has also been called *hederin*.)

**Hedge-hog Crystals.** Crystals of urate of soda found as a urinary deposit. The crystals are globular, with spiny projections, and may cause severe vesical irritation.

**Hedge-hyssop** (*hej'-his'-up*). See *Gratiola*.

**Hedonia** (*he-dol'-ne-ah*) [*ἡδονή*, pleasure]. Abnormal cheerfulness; amenomania.

**Hedonism** (*hed'-o-nizm*) [*ἡδονή*, pleasure]. The pursuit of pleasure; in psychic medicine, the unreasoning pursuit of some hobby or whim.

**Hedrocele** (*hed'-ro-sel*) [*ἔδρα*, anus; *κῆλη*, tumor]. A hernia in which the part protrudes through the notch of the ischium. Also, prolapsus of the anus.

**Hedrosyrinx** (*hed-ro-si'-rinks*) [*ἔδρα*, anus; *fundament*; *σὺριξ*, pipe]. Fistula in ano.

**Hedwigia** (*hed-wij'-e-ah*) [after Johann Hedwig]. A genus of amaryllaceous trees. *H. balsamifera*, of the W. Indies, affords a resin, not unlike copaiba in its uses. The bark is antiperiodic, and contains a convulsant alkaloid, which would appear to be a powerful heart-depressant and antithermic.

**Hedysomon** (*hed-e-os'-mon*) [*ἡδύς*, sweet; *ὄσμη*, odor]. A genus of tropical chloranthaceous trees and shrubs. *H. arborescens*, a tree of Jamaica, affords a remedy for dyspepsia. *H. nutans*, a shrub of the W. Indies, has leaves that are good for headaches.

**Heel** (*hel*) [ME., *hech*, heel]. The hinder part of the foot. *H.-bone*. See *Calcaneum*.

**Hegar's Sign.** See *Signs and Symptoms, Table of*.

**Hegar-Kohn Method.** See *Treatment, Methods of*.

**Heidenhain, Demilune Cells of.** See *Demilune and Crescent of Gianuzzi*. *H.'s Method.* See *Stains, Table of*. *H., Parietal Cells of.* See *Delomorphous*. *H., Rods of.* See *Rods*. *H.'s Solution.* See *Stains, Table of*.

**Heimia** (*him'-e-ah*) [after Ludwig Heim, a German botanist]. A genus of lythaceae shrubs of N. and S. America. *H. salicifolia* (hanchinol), found in Texas and far to the South, is resinous, antisiphilitic, hemostatic, and febrifuge. Unof.

**Heintz's Method.** A method of estimating uric acid in the urine. Take 100 c.c. of urine. Add to this 5 c.c. of HCl. Lay the mixture aside for 24 hours. Collect the crystals on a weighed filter-paper, wash with dilute HCl; dry at 100° C., and weigh. The increase in weight will give the percentage of uric acid.

**Heisch's Test.** See *Tests, Table of*.

**Heister's or Heisterian Valve.** A fold of mucous membrane in the cystic duct arranged in a spiral.

**Heitzmann's Theory.** The theory that the axis-cylinder of a nerve-fiber is ordinary connective tissue modified for the transmission of special impulses.

**Hekistotherm** (*hek-is'-to-therm*) [*ἥκιστος*, least, worst; *θερμῆ*, heat]. In biology, a plant that can subsist with a minimum of heat, e.g., a member of the Arctic or Antarctic flora.

**Helcold** (*hel'-koid*) [*ἔλκος*, ulcer; *εἶδος*, likeness]. Resembling an ulcer.

**Helcology** (*hel-kol'-o-je*) [*ἔλκος*, ulcer; *λόγος*, science]. The pathology and treatment of ulcers.

**Helcoma** (*hel-ko'-mah*) [*ἔλκωμα*, an ulcer; *pl., Helcomata*]. An ulcer.

**Helcomenia** (*hel-ko-me'-ne-ah*) [*ἔλκος*, ulcer; *μήν*, month]. Vicarious menstrual discharge from an ulcer.

**Helcoplasty** (*hel'-ko-plas-te*) [*ἔλκος*, ulcer; *πλάσσειν*, to shape]. The treatment of ulcers by skin-grafting.

**Helcopsis** (*hel ko-poi-et'-sis*) [*ἔλκος*, ulcer; *ποίησις*, making]. The surgical formation of an issue, for counter-irritation.

**Helcosis** (*hel-ko'-sis*) [*ἔλκωσις*, ulceration]. The formation and development of an ulcer.

**Helcotic** (*hel-kol'-ik*) [*ἔλκωτικός*, pertaining to an ulcer]. Ulcerative; of the nature of or accompanied by ulceration.

**Helenin** (*hel'-en-in*),  $C_6H_4O$ . Alant Camphor; Inulol; the active principle of inula. It is a faintly odorless and nearly tasteless, volatile substance, insoluble in water, but soluble in ether, oils, and hot alcohol. It is antiseptic and germicidal, and is recommended for use in diphtheria and tuberculosis. Unof.

**Helenium** (*hel-e'-ne-un*) [*ἑλένιον*, elecampane]. 1. Same as *Inula*, q. v. 2. A genus of composite North American herbs. *H. autumnale*, sneezewort. *H. nudiflorum*, and *H. bolanderi* are strongly errhine, and are substituted for arnica. *H. puberulum* is tonic, alterative, and errhine. *H. tenuifolium*, of the Gulf States, is said to be a destructive cattle-poison. Unof.

**Helianthella** (*he-le-an-thel'-ah*) [*ἡλιος*, the sun; *ἄνθος*, flower]. A genus of North American composite herbs. The root of *H. tenuifolia* is aromatic, expectorant, antispasmodic, and, in large doses, emetic. It is of reputed service in pulmonary complaints. Dose of the fld. ext.  $\mathfrak{m}\nu$ -xxx. Unof.

**Helianthemum** (*he-le-an'-them-un*) [*ἡλιος*, sun; *ἄνθος*, flower]. Frostwort; Rock Rose. The herb *H. canadense*, astringent, aromatic, tonic, and alterative. It is useful in diarrhea, scrofula, and secondary syphilis. Dose of the fld. ext.  $\mathfrak{m}\nu$ -xx. Unof.

**Helianthin** (*he-le-an'-thin*) [*ἡλιος*, the sun; *ἄνθος*, a flower],  $C_6H_4SO_2Na.N.N.C_6H_4N(CH_3)_2$ . Methyl-orange; an orange-yellow powder used as a dye and as a test in analyses. See *Pigments, Conspectus of*.

**Helianthus** (*he-le-an'-thus*) [*ἡλιος*, sun; *ἄνθος*, flower]. A genus of composite-flowered plants. The sunflower. *H. annuus*, a commonly cultivated species, affords highly useful, oil-bearing seeds, the seeds of some varieties being also edible. *H. tuberosus*, the Jerusalem Artichoke, has large tuberous roots, sometimes eaten when cooked or pickled. Several of the species are medicinal.

**Helichrysum** (*he-le-kri'-sum*) [*ἡλιος*, sun; *χρυσός*, gold]. A genus of old-world composite plants. The European species (as *H. arenarium*, *H. stoechas*) are aromatic stimulants, used in domestic practice. Several South African species (*H. auriculatum*, *imbricatum*, *nudiflorum*, etc.) are used as pectoral teas.

**Helicin** (*hel'-is-in*),  $C_{13}H_{16}O_4$ . A glucosid, produced by oxidizing salicin with  $HNO_3$ . It dissolves with difficulty in water, crystallizes in small needles, and melts at 175° C.

**Helicine** (*hel'-is-in*) [*ἑλίσ*, a spiral]. 1. Tortile, or spiral in structure. 2. Pertaining to the helix. *H. Arteries*, arteries proceeding from the profunda penis branches of the pudic, and from the dorsal arteries of the penis. See *Arteries, Table of*.

**Helicogyrate** (*hel-ik-o-jit'-rat*) [*ἑλίσ*, a spiral; *γίρος*, a ring]. In biology, having a spiral annulus, as the spore-cases in *trichomanes*.

**Helicoid** (*hel'-ik-oid*) [*ἑλίσ*, a spiral; *εἶδος*, form]. Spiral; coiled like a snail-shell or helix.

**Helicopepsin** (*hel-ik-o-pep'-sin*) [*ἑλίσ*, a spirally coiled snail; *πέψις*, digestion]. A peptic ferment found by Krukenberg in snails.

**Helicorubin** (*hel-ik-o-ru'-bin*) [*ἑλίσ*, a spiral, the snail; *ροβύρι*, ruby]. A pigment of certain invertebrates; the same as *Hemochromogen* and *Enterohematin*, q. v.

**Helicotrema** (*hel'ē-tre-mā*) [*ἥλιος*, *helix*, coil; *τρεμα*, bristle]. The opening connecting the *vestibulum* and *vestibular* at the spiral canal of the cochlea.

**Helioccephalitis** (*hel'ē-sē-fal'it-is*) [*ἥλιος*, sun; *κεφαλίτις*, inflammation]. Inflammation caused by exposure to the sun's rays.

**Heliodorus's Bandage**. See *bandage*.

**Helio mycelitis** (*hel'ē-mī-sē-lit'is*) [*ἥλιος*, sun; *μυκηλίτις*, inflammation]. Mycelitis caused by exposure to the sun's rays.

**Helionosus** (*hel'ē-nō-sus*) [*ἥλιος*, sun; *νόσος*, disease]. Sunstroke.

**Heliophag** (*hel'ē-fag*) [*ἥλιος*, sun; *φαγνν*, to devour]. A name given to the animal pigment cell, as having a supposed absorption of the radiant energy of the sun's light rays.

**Heliophobia** (*hel'ē-fō-bi-ā*) [*ἥλιος*, sun; *φοβός*, fear]. Morbid fear of exposure to the sun's rays.

**Heliopsis** (*hel'ē-ō-pis*) [*ἥλιος*, sun]. A sun-bath; also, sunstroke.

**Heliotherapy** (*hel'ē-ō-thē-rē-ē*) [*ἥλιος*, sun; *θεραπεία*, treatment]. The treatment of disease by exposure of the body to sunlight. Sun-bathing.

**Heliotrope** (*hel'ē-ō-trō-pe*) [*ἥλιος*, sun; *τροπή*, to turn]. Any plant of the boraginaceous genus *Heliotropium*. *H. europæum* is a perant, and is said to cure warts and ulcers. Unof.

**Heliotropin** (*hel'ē-ō-trō-pēn*) [*ἥλιος*, the sun; *τρέπεν*, to turn]. 1. See *Personal*. 2. A poisonous alkaloid from *Heliotropium europæum*, a European species of *Heliotrope*. Its action is little known. Unof.

**Heliotropism** (*hel'ē-ō-trō-pi-zm*) [*ἥλιος*, the sun; *τρέπεν*, to turn]. In biology, that property of a plant or plant organ by virtue of which it bends toward or away from the sunlight.

**Heliotropy** (*hel'ē-ō-trō-pē*) [*ἥλιος*, the sun; *τροπή*, a turning]. Same as *Heliotropism*.

**Helix** (*hel'ēks*) [*ἥλιος*, a coil]. The margin of the external ear.

**Hellebore, Black**. See *Helleborus*. **H., White**. See *Helleborus*.

**Helleborein** (*hel'ē-bō-rē-in*). See *Helleborus*.

**Helleborin** (*hel'ē-bō-rē-in*) [*ἥλιος*, hellebore].  $C_{36}H_{72}O_{16}$ . A crystalline glucosid of *Helleborus*, soluble in water. It is a cardiac and nervous poison of great intensity. See *Helleborus*.

**Helleborism** (*hel'ē-bō-rē-izm*) [*ἥλιος*, hellebore; *ἵσσις*, to dose with hellebore]. The treatment of disease with hellebore; the morbid condition induced by the free exhibition of hellebore.

**Helleborus** (*hel'ē-bō-rus*) [*ἥλιος*, hellebore; *γεν.*, *ἡλίωρος*]. The root of *H. niger*, black hellebore, with properties due to two glucosids, *helleborin*,  $C_{36}H_{72}O_{16}$ , and *helleboridin*,  $C_{36}H_{72}O_{16}$ . It is a drastic hydragogue, cathartic, and emmenagogue, and was formerly a popular remedy for insanity, dropsy, and amenorrhea. *Helleborus* is sometimes used in cardiac affections as a substitute for digitalis, its action being observed in smaller doses and with less irritation. *H. niger*, Ext. Unof. Dose gr. j-x, cautiously. *H. niger*, Ext., Fld. Unof. Dose m-j-xv. *Helleborin*, Unof. Very soluble in water. Dose gr. j-x.

**Heller's Tests**. See *Tests*, *Table of*.

**Hellmund's Ointment**. An anæsthetic ointment composed of acetate of lead, 10 parts; extract of conium, 30 parts; balsam of Peru, 50 parts; Svedenham's laudanum, 5 parts; and rectified oil, 24 parts.

**Helmerich's Ointment**. An ointment used in the treatment of warts. It consists of sublimated sulphur, 1 dram; potassium carbonate, 1 dram; and linseed oil, 5 1/2 ounces. The ointment should remain in

contact with the diseased surface for four or five hours.

**Helmholtz's Apparatus**. A galvanometer consisting of two equal and vertical coils, with a magnetic needle midway between them. **H.'s Ligament**. See *Ligament*. **H.'s Line**. See *Lines*, *Table of*.

**Helminth** (*hel'-minth*) [*ἑλμινθς*, worm]. A worm; an intestinal or entozoic worm.

**Helminthagogue** (*hel-minth'-ag-og*). See *Anthelmintic*.

**Helminthiasis** (*hel-min-thi'-as-is*) [*ἑλμινθιάσις*, to suffer from worms]. A condition marked by the presence of parasites in the body, especially intestinal worms. Also, a disorder or lesion caused by worms.

**Helminthicide** (*hel-minth'-is-id*) [*ἑλμινθς*, a worm; *κτενν*, to kill]. See *Vermicide*.

**Helminthics** (*hel-min'-thiks*). See *Anthelmintics*.

**Helminthochorton** (*hel-min-tho-kor'-ton*) [*ἑλμινθς*, a worm; *χορτος*, grass]. See *Corsican Moss*.

**Helminthoid** (*hel-min'-thoid*) [*ἑλμινθς*, a worm; *εἶδος*, likeness]. Shaped like a worm.

**Helminthology** (*hel-min-thol'-o-jē*) [*ἑλμινθς*, a worm; *λόγος*, science]. A treatise on worms, especially those parasitic within the body.

**Helminthoma** (*hel-min-thol'-mah*) [*ἑλμινθς*, a worm; *ῥῆμα*, a tumor; *pl.*, *Helminthomata*]. A tumor caused by the presence of a parasitic worm. See *Bulam Boil* and *Guinea-worm*.

**Helminthococcus** (*hel-minth-ong'-kus*) [*ἑλμινθς*, a worm; *ὄγκος*, a tumor]. An old term for a parasitic skin-disease.

**Helminthophobia** (*hel-min-tho-fol'-be-ah*) [*ἑλμινθς* (*ἑλμινθ*), a worm; *φόβος*, fear]. A nervous state produced by the presence or thought of parasitic worms.

**Helminthous** (*hel-min'-thus*) [*ἑλμινθς*, a worm]. Wormy.

**Helocerous** (*he-los'-er-us*) [*ἥλιος*, a nail; *κέρας*, horn]. In biology, having capitate antennae.

**Heloderma** (*he-lo-der'-mah*) [*ἥλιος*, wart; *δέρμα*, skin]. A genus of lizards. **H. horridum**, of Mexico, and **H. suspectum**, of Arizona (called *Gila Monster*), are said to be the only known species of venomous lizards.

**Helodermatous** (*he-lo-der'-mat-us*) [*ἥλιος*, a nail, wart; *δέρμα*, skin]. In biology, having a warty or tuberculous skin.

**Helodes** (*he-lo'-dēz*) [*ἥλιος*, a swamp]. Swampy, or marshy. Also, a fever attended with profuse sweating. Also, marsh-fever.

**Helonias** (*hel-o'-ne-as*) [*ἥλιος*, a marsh]. A genus of monocotyledonous plants. **H. dioica**. See *Chamelirion*.

**Helonin** (*hel-o'-nin*) [*ἥλιος*, a marsh]. A crude precipitate from the tincture of *Chamelirion carolinianum*. It is prescribed for uterine affections, and is tonic and diuretic. Caution should be observed in its use. Dose, gr. ij-iv. Unof.

**Helopyra** (*hel-op'-e-rah*) [*ἥλιος*, marsh; *πῦρ*, fever]. Malarial fever.

**Helosis** (*hel-o'-sis*) [*ἥλιος*, nail, bract]. 1. A genus of tropical American plants. **H. brasiliensis**, **cayennensis**, and **jamaicensis**, are styptic and vulnerary remedies. Unof. 2. An old name for inversion of the eyelids; strabismus; eye-spasm; plica polonica; the term is now seldom employed.

**Helvetia Green**. See *Pigment's*, *Conspectus of*.

**Helvolous** (*hel'-vol-lus*) [dim. of *helvus*, yellow]. Tawny, or reddish-yellow.

**Helweg, Triangular Tract of**. A tract that appears either in juxtaposition with, or as the most ventral part of, the ventro-lateral tract of the spinal cord.

**Hemabrometer** (*hem-ab-ar-om'-et-er*) [*αἷμα*, blood;

*βαρὺς*, heavy; *μέτρον*, measure]. A contrivance for the approximate determination of the specific gravity of the blood.

**Hemacelinosis** (*hem-as-el-en-o'-sis*) [*αἷμα*, blood; *κηλίς*, spot; *νόσος*, disease]. A synonym of the disease, *Purpura*.

**Hemachroin** (*hem-ak-ro'-in*) [*αἷμα*, blood; *χρῶμα*, color]. Same as *Hematosin*.

**Hemachrome** (*hem-ak-rom*) [*αἷμα*, blood; *χρῶμα*, color]. The coloring matter of the blood: hematin.

**Hemachrosis** (*hem-ak-ro'-sis*) [*αἷμα*, blood; *χρῶσις*, coloring]. 1. Redness of the blood. 2. Any disease in which the blood is abnormally colored.

**Hemacyanin** (*hem-as-i'-an-in*) [*αἷμα*, blood; *κύανος*, blue]. A blue coloring-matter found in the blood and the bile.

**Hemacytometer** (*hem-as-i-tom'-et-er*). See *Hemocytometer*.

**Hemad** (*hem'-ad*) [*αἷμα*, blood]. 1. Toward the hemal aspect; opposed to *neurad*. 2. A blood-cell or blood corpuscle.

**Hemadonosos** (*hem-ad-on'-o-sos*) [*αἷμας*, blood-stream; *νόσος*, disease]. A disease of the blood or of the blood-vessels.

**Hemadostenosis** (*hem-ad-o-ste-no'-sis*) [*αἷμας*, blood-stream; *στενός*, narrow]. Stricture or narrowing of a blood-vessel.

**Hemadostoeisis** (*hem-ad-os-te-o'-sis*) [*αἷμας*, blood-stream; *ὀστέον*, bone]. Ossification or calcification of blood-vessels.

**Hemadrometer** (*hem-ad-rom'-et-er*). See *Hemadromometer*.

**Hemadrometry** (*hem-ad-rom'-et-re*). See *Hemadromometry*.

**Hemadromograph** (*hem-ad-rom'-o-graf*) [*αἷμα*, blood; *δρόμος*, course; *γράφειν*, to write]. An instrument for registering changes in the velocity of the blood-stream.

**Hemadromometer** (*hem-ad-ro-mom'-et-er*) [*αἷμα*, blood; *δρόμος*, course; *μέτρον*, measure]. A device for measuring the velocity of the blood-current.

**Hemadromometry** (*hem-ad-ro-mom'-et-re*) [*αἷμα*, blood; *δρόμος*, course; *μέτρον*, measure]. Measurement of the speed of the blood-current.

**Hemadynamics** (*hem-ad-i-nam'-iks*) [*αἷμα*, blood; *δύναμις*, power]. Dynamics of the blood-current.

**Hemadynamometer** (*hem-ad-i-nam-om'-et-er*) [*αἷμα*, blood; *δύναμις*, strength; *μέτρον*, a measure]. A contrivance for measuring the tension or pressure of blood within the arteries. Careful experiments show that, in man, the pressure of blood in the carotid artery is equal to about that of six inches of mercury.

**Hemafecal** (*hem-af'-kal*) [*αἷμα*, blood; *feces*, dregs]. Characterized by bloody stools. **H. Jaundice**. See *Jaundice*.

**Hemagogue** (*hem'-ag-og*) [*αἷμα*, blood; *ἡγῶς*, leading]. 1. Promoting the menstrual or hemorrhoidal discharge of blood. 2. An agent that promotes the catamenial or hemorrhoidal flow of blood.

**Hemahysteria** (*hem-a-his-t'-re-ah*) [*αἷμα*, blood; *ἡστέρα*, uterus]. Synonym of *Menorrhagia*.

**Hemal** (*hem'-al*) [*αἷμα*, blood]. 1. Pertaining to the blood or the vascular system. 2. See *Ventral*.

**Hemaleucin** (*hem-al-oo'-sin*) [*αἷμα*, blood; *λευκός*, white]. Fibrin; the white portion of a washed blood-clot.

**Hemalukosis** (*hem-al-oo-ko'-sis*) [*αἷμα*, blood; *λευκός*, white]. The formation of the buffy coat of a clot.

**Hemalopia** (*hem-al-o'-pe-ah*) [*αἷμα*, blood; *ὤψις*, the eye]. Effusion of blood in the eye; erythropsia.

**Hemameba** (*hem-am-e'-bah*) [*αἷμα*, blood; *ἡμερίδις*, a change]. A white blood-cell so called from its resemblance to an ameba.

**Hemangioma** (*hem-an-je-o'-mah*) [*αἷμα*, blood; *ἄγγειον*, vessel; *ῥῆμα*, a tumor; *pl.*, *Hemangiomata*]. An angioma made up of blood-vessels, as distinguished from lymphangioma.

**Hemanthin** (*hem-an'-thin*) [*αἷμα*, blood; *ἄνθος*, a flower]. An alkaloid from *Hemanthus coccineus*; it is poisonous, with the general properties of atropin.

**Hemanthus** (*hem-an'-thus*) [*αἷμα*, blood; *ἄνθος*, flower]. A genus of amaryllidaceous plants; blood-flower. **H. coccineus**, of S. Africa, affords an arrow-poison, with the general properties of atropin. The plant is a diuretic and cardiant. It affords hemanthin. **Unof.**

**Hemaphein** (*hem-af-e'-in*) [*αἷμα*, blood; *σάπης*, dusky]. A brown coloring-matter from blood, regarded as a decomposition-product of hematin; it is probably the same as urohematin.

**Hemaphobia** (*hem-af-o'-be-ah*). See *Hematophobia*.

**Hemapoiesis** (*hem-ap-o'-e'-sis*). See *Hematopoiesis*.

**Hemapoietic** (*hem-ap-o'-e'-ik*). See *Hematopoietic*.

**Hemaphysis** (*hem-ap-off'-is-is*) [*αἷμα*, blood; *ἀποθεῖν*, to put forth]. That part of an ideal or perfect vertebra which forms the antero-lateral part of the hemal arch. In man, all the hemaphyses are either cartilaginous or detached.

**Hemaporis** (*hem-ap-o'-re-ah*) [*αἷμα*, blood; *ἀπορία*, distress]. Any disorder of the blood, e. g. anemia.

**Hemarthron, Hemarthros** (*hem-ar'-thron, hem-ar'-thros*) [*αἷμα*, blood; *ἄρθρον*, joint]. Effusion of blood into the synovial sac of a joint.

**Hemarthrosis** (*hem-ar-thro'-sis*) [*αἷμα*, blood; *ἄρθρωσις*, a joint]. Effusion of blood into a joint.

**Hemastatic** (*hem-as-tat'-ik*). See *Hemostatic*.

**Hemastatics** (*hem-as-tat'-iks*) [*αἷμα*, blood; *στατικός*, standing]. That branch of physiology treating of the laws of the equilibrium of the blood.

**Hemasthenosis** (*hem-as-then-o'-sis*) [*αἷμα*, blood; *ἀσθένεια*, weakness]. A weakening or deterioration of the blood.

**Hematachometer** (*hem-at-ak-em'-et-er*). See *Hematometer*.

**Hematangionosis** (*hem-at-an-je-on'-o-sus*) [*αἷμα*, blood; *ἄγγειον*, vessel; *νόσος*, disease]. Any disease of the blood-vessels.

**Hematangiosis** (*hem-at-an-je-o'-sis*) [*αἷμα*, blood; *ἄγγειον*, vessel]. Any disease of the blood-vessels.

**Hemataporia** (*hem-at-ap-o'-re-ah*). See *Hemaporis*.

**Hematapostasis** (*hem-at-ap-os'-tas-is*) [*αἷμα*, blood; *ἀπόστασις*, a standing away from]. Unequal distribution or pressure of blood, with congestion or effusion in some part of the body.

**Hematapostema** (*hem-at-ap-os-te'-mah*) [*αἷμα*, blood; *ἀπόστημα*, abscess; *pl.*, *Hematapostemata*]. An abscess containing extravasated blood.

**Hemataria** (*hem-at-a'-re-ah*) [*αἷμα*, blood]. The so-called blood-animals.

**Hematedema** (*hem-at-e-de'-mah*) [*αἷμα*, blood; *οἰδήμα*, a swelling]. Swelling due to the effusion of blood.

**Hematein** (*hem-at-e'-in*) [*αἷμα*, blood].  $C_{16}H_{12}O_6$ . A crytalline principle derivable from, and reconvertible into, hematoxylin.

**Hemateleum** (*hem-at-el-e'-um*) [*αἷμα*, blood; *έλαιον*, oil]. A yellow or brownish oily fluid obtained by the dry distillation of blood.

**Hematemesis** (*hem-at-em-es-is*) [*αἷμα*, blood; *ἐμέειν*, to vomit]. The vomiting of blood from any cause. It may be due to *general* or *constitutional* pathologic conditions, or to *local* conditions.

**Hematencephalon** (*hem-at-en-sef'-al-on*) [*αἷμα*, blood; *ἐγκέφαλος*, brain]. A hemorrhage or bleeding within the brain; cerebral apoplexy.

**Hemathermous** (*hem-ath-er'-mus*) [*αἷμα*, blood; *θερμός*, hot]. Having warm blood.

**Hemathidrosis** (*hem-at-id'ro-sis*). Same as *Hematidrosis*.

**Hemathorax** (*hem-at-tho'-raks*). See *Hemathorax*.

**Hematic** (*hem-at-ik*) [*hema*, blood]. Bloody; pertaining to, full of, or having the color of, blood. Also, a blood vessel.

**Hematidrosis** (*hem-at-id'ro-sis*) [*hema*, blood; *idros*, sweat]. Bloody sweat. *Echthyma cruentum*. A sanguinous vesicular eruption by the extravasation of blood into the cells and ducts of the sweat glands, whence it is carried to the surface, mixed with sweat. Synonym, *Chromodermis*.

**Hematimeter** (*hem-at-om-eter*) [*hema*, blood; *metron*, measure]. A device for counting the corpuscles in a given volume of blood.

**Hematimetry** (*hem-at-om-etry*) [*hema*, blood; *metron*, measure]. The estimation of the number or proportion of the blood corpuscles, as by the hemocytometer or hemacytometer.

**Hematin** (*hem-at-in*) [*hema*, blood],  $C_{12}H_8N_4FeO_4$ . A substance formed by decomposing oxyhemoglobin either by acids or alkalis. It occurs as a scaly but noncrystalline mass of brownish black color and metallic luster, strongly resembling iodine. It is a very stable substance, but is insoluble in water, alcohol, ether, chloroform, or benzol, but dissolves freely in dilute acids and in alkaline solutions. For test, see *Tests, Zincke et al.* Also a synonym for *Hematoxylin*, *q. v.*

**Hematinic** (*hem-at-in-ik*) [*hema*, blood]. 1. Relating to hematin, or serving to increase the proportion of hematin in the blood. 2. An agent, such as iron, which tends to increase the proportion of hematin or coloring matter in the blood.

**Hematinometer** (*hem-at-in-om-eter*). Same as *Hematocritometer*.

**Hematuria** (*hem-at-u'-ria*) [*hema*, blood; *ouron*, urine]. Same as *Hemoglobinuria*. See also *Hematuria*.

**Hemato-** (*hem'-at-*) [*hema*; *aiua*, blood]. A prefix signifying blood.

**Hematobious** (*hem-at-oh-ous*) [*hema*, blood; *bios*, life]. Living in the blood.

**Hematobium** (*hem-at-oh-um*) [*hema*, blood; *bios*, life]. 1. A blood corpuscle. 2. A blood-parasite.

**Hematoblast** (*hem-at-oh-last*) [*hema*, blood; *blastos*, germ]. Blood plate; a rudimentary or immature red blood corpuscle.

**Hematocausis** (*hem-at-oh-ah-sis*) [*hema*, blood; *kaivn*, to burn]. The normal oxidation of certain elements of the blood.

**Hematocoele** (*hem-at-oh-el*) [*hema*, blood; *kēlēn*, a tumor]. A tumor formed by the extravasation and collection of blood in a part. **H., Pelvic**, an effusion of blood into the pelvis, usually due to rupture of a Fallopian tube, the seat of an extra-uterine pregnancy. It may also be due to the rupture of an ovary, or of a tumor in the broad ligament; it may follow an abortion, the blood escaping through the Fallopian tube, or it may be due to retention of the menstrual blood with escape of the blood. Physical examination, however may be the cause, reveals a tender swelling in Douglas's cul-de-sac.

**Hematocelia** (*hem-at-oh-el-ia*) [*hema*, blood; *koilia*, a cavity]. Accumulation of blood into the peritoneal cavity.

**Hematoccephalus** (*hem-at-oh-sel*) [*hema*, blood; *kephalē*, head]. Accumulation of blood into, or a sanguinous tumor of, the brain. Also a monstrosity considered to be a collection of blood into the cerebral ventricles. Also a brain tumor that is sanguinous, occurring in the gray matter of anencephalic monstrosities.

**Hematochezia** (*hem-at-oh-eh'-ze-ah*) [*hema*, blood; *chēzein*, to defecate]. The passage of hemorrhagic stools.

**Hematochrosis** (*hem-at-oh-kro'-sis*) [*hema*, blood; *chromos*, coloring; *pl.*, *Hematochroses*]. 1. Any disease characterized by discoloration of the skin. 2. A discoloration of the skin.

**Hematochyluria** (*hem-at-oh-ki-lu'-re-ah*) [*hema*, blood; *chylōn*, chyle; *ouron*, urine]. The presence of blood and chylous material in the urine. It is usually an intermittent condition.

**Hematocolpos** (*hem-at-oh-kol'-pos*) [*hema*, blood; *kōlēpos*, vagina]. Hemorrhage into the vagina. Also a collection of menstrual discharge within the vagina, due to atresia or imperforate hymen.

**Hematocrit** (*hem-at-oh-krit*) [*hema*, blood; *kritēs*, judge; *krainn*, to separate, to judge]. An instrument for making volumetric estimation of the blood by separating by centrifugal action the corpuscles from the serum. A volume of blood and one of Müller's liquid (to prevent coagulation) are placed together in each of two small, thick-walled glass tubes, graduated in fifty parts. The tubes rest on brass holders which are fixed on the axes of a revolving apparatus. After some eight thousand revolutions in from five to seven minutes, the process is complete. The corpuscles and the salt-plasma are separated by a narrow band of leukocytes. The instrument is useful in comparing the blood of different individuals. With a little practice the total error is not more than one per cent.

**Hematocryal** (*hem-at-oh-k'-re-ah*) [*hema*, blood; *krios*, cold]. In biology, of or pertaining to the cold-blooded invertebrates.

**Hematocrystallin** (*hem-at-oh-kris'-tal-in*). Same as *Hemoglobin*.

**Hematocyanosis** (*hem-at-oh-si-an-oh-sis*). Synonym of *Cyanosis*.

**Hematocyst** (*hem-at-oh-sist*) [*hema*, blood; *kystis*, bladder]. A cyst containing blood. Also an effusion of blood into the bladder.

**Hematocyte** (*hem-at-oh-sit*) [*hema*, blood; *kystis*, cell]. A blood-corpuscle.

**Hematocythuria** (*hem-at-oh-si-thu'-re-ah*) [*hema*, blood; *kystis*, cell; *ouron*, urine]. The presence of blood-cells in the urine.

**Hematocytometer** (*hem-at-oh-si-tom-eter*). See *Hemocytometer*.

**Hematodes** (*hem-at-oh-dēs*) [*hema*, blood; *des*, bloody]. Bloody; gorged with or appearing like blood.

**Hematodiarrhea** (*hem-at-oh-di-ar-eh-ah*). Synonym of *Dysentery*.

**Hematodynamics** (*hem-at-oh-di-nam-iks*). See *Hemodynamics*.

**Hematodynamometer** (*hem-at-oh-di-nam-om-eter*). See *Hemodynamometer*.

**Hematodyscrasia** (*hem-at-oh-dis-kra'-se-ah*) [*hema*, blood; *dyskrasia*, bad temperament]. A diseased or dyscrasic state of the blood.

**Hematogenesis** (*hem-at-oh-jen'-es-is*) [*hema*, blood; *genesis*, production]. The development of blood or of blood-corpuscles; the making of blood.

**Hematogenic** (*hem-at-oh-jen'-ik*) [*hema*, blood; *gennan*, to produce]. Pertaining to the formation of blood.

**Hematogenous** (*hem-at-oh-jen'-us*) [*hema*, blood; *gennan*, producing]. Derived from, or having origin in, the blood.

**Hematoglobin** (*hem-at-oh-glo'-bin*). See *Hemoglobin*.

**Hematoglobulin** (*hem-at-oh-glob'-u-lin*). Same as *Hemoglobin*.

**Hematography** (*hem-at-oh-ge'-ra-fe*) [*hema*, blood; *graphein*, to write]. A description of the blood; hematology.

**Hematohidrosis** (*hem-at-o-hid-ro'-sis*). See *Hematidrosis*.

**Hematoid** (*hem'-at-oid*) [*αἷμα*, blood; *εἶδος*, form]. Resembling blood.

**Hematoidin** (*hem-at-oid'-din*) [*αἷμα*, blood; *εἶδος*, resemblance],  $C_{16}H_{18}N_2O_3$ . A derivative of hemoglobin, identical with bilirubin, the pigment of the bile. It occurs as reddish or orange rhombohedral crystals, in old blood-clots, as of cerebral hemorrhages, in corpora lutea, and in the urine of hematuria.

HEMATOIDIN CRYSTALS.

**Hematoin** (*hem-at-o'-in*). Same as *Hematoporphyrin*.

**Hematokrit** (*hem'-at-o-krit*). See *Hematocrit*.

**Hematolin** (*hem-at'-o-lin*) [*αἷμα*, blood],  $C_{66}H_{78}N_8O_7$ . An iron-free derivative of hematin.

**Hematology** (*hem-at-ol'-o-je*) [*αἷμα*, blood; *λόγος*, science]. The science of the blood, its nature, functions, and disorders.

**Hematolysis** (*hem-at-ol'-is-is*) [*αἷμα*, blood; *λύσις*, a solution]. A solution, or an imperfect coagulation, of the blood; diminished coagulability of the blood; a diseased condition marked by destruction of the corpuscular constituents of the blood; impoverishment of the blood.

**Hematolytic** (*hem-at-o-lit'-ik*) [*αἷμα*, blood; *λύσις*, a solution]. Marked by or tending to impoverishment of the blood.

**Hematoma** (*hem-at-o'-mah*) [*αἷμα*, blood; *ῥμα*, tumor; *πλ.*, *Hematomata*]. A tumor, fungus, or swelling containing blood. **H. auris**, *Insane Ear*; an effusion of blood or serum between the cartilage of the ear and its covering, occurring in various forms of insanity. It may be either *acute* or *chronic*, if the former reaching the size of a pigeon's egg in a day or two. It is an elastic tumor, generally painless, with some local heat. It may suppurate and burst, or may shrivel up, in either case leaving considerable deformity. In the majority of cases the left ear is involved, and the condition occurs most frequently among men. **H. of the Dura mater**, an effusion beneath the dura mater, forming membranous sheets. **H., Pelvic**, an effusion of blood into the cellular tissue of the pelvis; it is frequently due to traumatism, or occurs as a complication of pregnancy and the puerperal state, from rupture of dilated veins; it is often the result of rupture of an extra-uterine pregnancy.

**Hematomantia** (*hem-at-o-man'-she-ah*) [*αἷμα*, blood; *μαντεία*, divination]. The arriving at a diagnosis from examination of the blood.

**Hematomatous** (*hem-at-o'-mat-us*) [*αἷμα*, blood; *ῥμα*, a tumor]. Relating to or of the nature of a hematoma.

**Hematomediastinum** (*hem'-at-o-me-de-as-ti'-num*) [*αἷμα*, blood; *mediastinum*, the mediastinum]. An effusion of blood or bloody serum into the mediastinal cavities.

**Hematometer** (*hem-at-om'-et-er*). See *Hemoglobino-meter*.

**Hematometra** (*hem-at-o-me'-trah*) [*αἷμα*, blood; *μήτρα*, womb]. Hemorrhage in the womb. Also, an accumulation of menstrual discharge within the uterine cavity, as a result of obstruction.

**Hematometry** (*hem-at-om'-et-re*) [*αἷμα*, blood; *μέτρον*, measure]. The measurement, or estimation of the measure, of the blood.

**Hematomonas** (*hem-at-o-mo'-na*) [*αἷμα*, blood; *μονάς*, a unit]. A genus of microscopic organisms infesting the blood. See *Agar* and *Plasmodium*.

**Hematomphalocoele** (*hem-at-om-fal'-o-sel*) [*αἷμα*, blood; *ὀμφαλός*, navel; *κύημα*, tumor]. A tumor or a hernia at the navel, distended with blood.

**Hematomyces** (*hem-at-om'-is-es*) [*αἷμα*, blood; *μύκης*, a fungus]. A hematoid variety of encephaloid carcinoma; medullary sarcoma. It is called, also, *Fungus hematodes*.

**Hematomyelia** (*hem-at-o-mi-el'-le-ah*) [*αἷμα*, blood; *μυελός*, marrow]. Hemorrhage into the spinal cord; an accumulation of blood in the central canal of the spinal cord. The symptoms vary with the seat, but paralysis, vaso-motor and trophic changes, loss of sensation, etc., are common.

**Hematomyelitis** (*hem-at-o-mi-el-i'-tis*) [*αἷμα*, blood; *μυελός*, marrow; *ίτις*, inflammation]. An acute myelitis attended with an effusion of blood into the spinal cord.

**Hematoncus** (*hem-at-ong'-ku*) [*αἷμα*, blood; *ὄγκος*, tumor]. Blood-tumor; hemangioma; hematoma.

**Hematopathy** (*hem-at-op'-ath-e*) [*αἷμα*, blood; *πάθος*, disease]. Any disease of the blood.

**Hematopedesis** (*hem-at-o-ped-el'-sis*) [*αἷμα*, blood; *πήδησις*, a leaping]. Cutaneous hemorrhage; hematidrosis.

**Hematopericardium** (*hem-at-o-per-ik-ar'-de-um*) [*αἷμα*, blood; *περικάρδιον*, pericardium]. An effusion of blood into the pericardium, due to rupture or perforation of the walls of the heart.

**Hematophagous** (*hem-at-off'-ag-us*) [*αἷμα*, blood; *φαγεῖν*, to eat]. Blood-eating; pertaining to insects, such as the gnat, mosquito, etc., that suck the blood.

**Hematophilia** (*hem-at-o-fil'-e-ah*). See *Hemophilia*.

**Hematophobia** (*hem-at-o-fó'-br-ah*) [*αἷμα*, blood; *φόβος*, fear]. Morbid dread of the sight of blood.

**Hematophore** (*hem'-at-o-for*) [*αἷμα*, blood; *φέρειν*, to bear]. An instrument used in the transfusion of blood.

**Hematophthalmia** (*hem-at-off-thal'-me-ah*). See *Hemophthalmia*.

**Hematophyte** (*hem'-at-o-fit*) [*αἷμα*, blood; *φυτόν*, a plant]. A vegetable organism, such as a bacillus, living in the blood.

**Hematopinax** (*hem-at-op'-in-aks*) [*αἷμα*, blood; *πίναξ*, tablet; *πλ.*, *Hematopinaces*]. A blood-plaque.

**Hematopisis** (*hem-at-op'-is-is*) [*αἷμα*, blood; *πίνειν*, to drink]. 1. The drinking of blood. 2. A morbid collection of blood in any cavity of the body.

**Hematopisy** (*hem-at-op'-is-e*). See *Hematopisis*.

**Hematoplanesis** (*hem-at-o-plan-el'-sis*) [*αἷμα*, blood; *πλάνησις*, wandering]. See *Hematoplasma*.

**Hematoplasia** (*hem-at-o-pla'-ne-ah*) [*αἷμα*, blood; *πλάνη*, a wandering]. Vicarious or aberrant course or flow of the blood.

**Hematoplasma** (*hem-at-o-plaz'-mah*) [*αἷμα*, blood; *πλάσμα*, plasma]. The plasma of the blood.

**Hematoplast** (*hem-at-o-plast*). Same as *Hematoblast*.

**Hematoplastic** (*hem-at-o-plas'-tik*) [*αἷμα*, blood; *πλαστικός*, plastic]. Blood-forming.

**Hematoplethora** (*hem-at-o-pleth'-or-ah*). Synonym of *Plethora*.

**Hematopoiesis** (*hem-at-o-poi-el'-sis*) [*αἷμα*, blood; *ποιεῖν*, to make]. The making of blood. See *Hematoisis*.

**Hematopoietic** (*hem-at-o-poi-el'-ik*) [*αἷμα*, blood; *ποιεῖν*, to make]. Relating to or forwarding the processes of blood-making.

**Hematoporphyrin** (*hem-at-o-for'-fe-rin*) [*αἷμα*, blood; *πόρφυρος*, purple],  $C_{68}H_{74}N_4O_{12}$ . Iron-free hematin, a metabolic decomposition-product of hemoglobin.

It is produced by dissolving hematin in concentrated  $H_2SO_4$ . It occurs occasionally in urine and in egg-shells of certain birds. See *Porphyria*.

**Hematoporphyrinuria** (*hem-at-ōr'fīr-in'ū-ri-ā*) [*hēmā, blood; -porphyrin, purple; -uria, urine*]. The presence of hematin in the urine.

**Hematoporphyrinoidin** (*hem-at-ōr'fīr-in-ō'id-in*) [*hēmā, blood; -porphyrin, purple*]. A substance similar in color and character to hematin-porphyrin, but less soluble. Like hematin-porphyrin, it is sometimes found in the urine.

**Hematoposia** (*hem-at-ōr'fīr-ō'si-ā*) [*hēmā, blood; -osis, a swelling*]. Blood-throwing as a therapeutic measure in hemorrhoids.

**Hematopsia** (*hem-at-ōr'fīr-ō'si-ā*) [*hēmā, blood; -ōs, eye*]. An extravasation of blood in the subconjunctival tissue of the eye.

**Hematoptysis** (*hem-at-ōr'fīr-ō'ti-sis*) Same as *Hemoptysis*.

**Hematerhachis** (*hem-at-ōr'fīr-ā-kh-s*) [*hēmā, blood; -rakh, spine*]. Hemorrhage within the vertebral canal.

**Hematerreha** (*hem-at-ōr'fīr-ā-eh*) [*hēmā, blood; -pna, a flow*]. Any copious flow or discharge of blood; a hemorrhage.

**Hematorrhosis** (*hem-at-ōr'fīr-ō-rh-ō-sis*) [*hēmā, blood; -ōr'rhōs, serum*]. Separation of the serum of the blood.

**Hematosac** (*hem-at-ōr'fīr-ō-sāk*) [*hēmā, blood; -saccus, a bag*]. A blood cyst.

**Hematosalpinx** (*hem-at-ōr'fīr-ō-sāl-pīnks*) [*hēmā, blood; -salpinx, a trumpet*]. A hemorrhagic distention or obstruction of a Fallopian tube.

**Hematoschecele** (*hem-at-ōr'fīr-ō-she-sel*) [*hēmā, blood; -schem, scrotum; -sēlē, tumor*]. A hemorrhagic tumor or distention of the scrotum.

**Hematoscope** (*hem-at-ōr'fīr-ō-skōp*) [*hēmā, blood; -skopein, to inspect*]. A modified form of, or an attachment to, the spectroscope, for use in examination of blood.

**Hematoscopy** (*hem-at-ōr'fīr-ō-skōp*) [*hēmā, blood; -skopein, to inspect*]. Spectroscopic examination of the blood and blood discs.

**Hematose** (*hem-at-ōr'fīr-ō*) [*hēmā, blood*]. Full of blood.

**Hematosepsis** (*hem-at-ōr'fīr-ō-sēps-is*) See *Septicemia*.

**Hematosin** (*hem-at-ōr'fīr-ō-sīn*) See *Hematin*.

**Hematosis** (*hem-at-ōr'fīr-ō-sis*) [*hēmā, blood; -sis, a process*]. 1. The process of the formation of blood and the development of blood corpuscles. 2. The arterIALIZATION of the blood.

**Hematospectroscope** (*hem-at-ōr'fīr-ō-spek'tro-skōp*) [*hēmā, blood; -scop, to view; -trum, an image; -skopein, to view*]. A spectroscope adapted for use in the study of the blood.

**Hematopermia** (*hem-at-ōr'fīr-ō-mē-ā*) [*hēmā, blood; -permia, a swelling*]. The discharge of bloody semen.

**Hematopongus** (*hem-at-ōr'fīr-ō-pōng'us*) [*hēmā, blood; -pongus, a swelling*]. Medullary scrotum.

**Hematothorax** (*hem-at-ōr'fīr-ō-thō-rāk-s*) See *Hemithorax*.

**Hematotoxic** (*hem-at-ōr'fīr-ō-tōx-ik*) [*hēmā, blood; -toxic, a poison*]. Pertaining to a poisoned or impure condition of the blood.

**Hematotoxin** (*hem-at-ōr'fīr-ō-tōx-in*) [*hēmā, blood; -toxic, a poison*]. A blood-poison or poisonous principle existing in the blood.

**Hematoxylin** (*hem-at-ōr'fīr-ō-k-sīn*) [*hēmā, blood; -xylōn, wood*].  $C_{16}H_{11}O_5$ . The coloring matter of logwood; it is very soluble in water and alcohol, and crystallizes by boiling from with  $H_2O$ . It dissolves in alkalis with a colorless salt. It is a valuable stain in histology. See *Formalin*, *Conspicuous*. H., Delafield's, *See* *Stain*, *Table of*. For other hematoxylin stains, see *Stain*, *Table of*. For other hematoxylin stains, see *Stain*, *Table of*. For other hematoxylin stains, see *Stain*, *Table of*.

**Hematoxylon** (*hem-at-ōr'fīr-ō-k-sīn*) [*hēmā, blood; -xylōn,*

wood]. Logwood. The heart-wood of *H. campechianum*; it occurs as dark brown raspings or a coarse powder, and contains tannic acid and a coloring-principle, *hematoxylin*,  $C_{16}H_{11}O_5$ , that becomes grayish-red by the action of light. It is a mild astringent. H., Ext. Dose gr. v-xx. H., Decoctum, strength 1 to 17. Dose  $\frac{5}{8}$ -ij. Unof.

**Hematozoic** (*hem-at-ōr'fīr-ō-zō-ik*) [*hēmā, blood; -zōon, an animal*]. Pertaining to a hematozoön.

**Hematozoön** (*hem-at-ōr'fīr-ō-zō-ōn*) [*hēmā, blood; -zōon, animal; -pl., Hematozoa*]. Any living organism or animal in the blood.

**Hematozymotic** (*hem-at-ōr'fīr-ō-zī-mōt'ik*) [*hēmā, blood; -zōon, heaven*]. Relating to a blood-ferment, or to fermentation in the blood of a living organism.

**Hematuresis** (*hem-at-ū-r'fīr-ō-sis*) [*hēmā, blood; -ōr'por, urine*]. The passage of bloody urine.

**Hematuria** (*hem-at-ū-r'fīr-ā*) [*hēmā, blood; -ōr'por, urine*]. Hematuresis. Blood in the urine. It may be due to injury, local disease, general disorder, or the presence of entozoa. When only the coloring-matter of the blood is found in the urine, it is termed *hemoglobulinuria* or *hematurinuria*. The color of the urine in hematuria varies from bright-red to a dingy, smoky color, or to merely a tinging of the urine. The urine may be examined for blood-corpuscles by means of the microscope; the presence of blood may be demonstrated by the spectroscope. *Almen's*, or the *guaiacum test*, or *Heller's test* may be made. See *Tests*, *Table of*. H., Intermittent, that form due to malarial poisoning. H., Paroxysmal. Same as H., Intermittent.

**Hemautogram** (*hem-aw'fīr-ō-gram*) [*hēmā, blood; -autōs, self; -gramma, a tracing*]. The tracing made in hemautography.

**Hemautograph** (*hem-aw'fīr-ō-graf*). Same as *Hemautogram*.

**Hemautography** (*hem-aw'fīr-ō-graf*) [*hēmā, blood; -autōs, self; -graphē, to write*]. The tracing of the pulse-curve by the jet of blood from a divided artery caught upon paper drawn in front of it.

**Hemeralopia** (*hem-er-al-ō'fīr-ā*) [*hēmā, day; -ōp, eye*]. Day-vision or night-blindness; a symptom of pigmentary degeneration of the retina, failure of general nutrition, etc. Vision is good by day or in a strong light, but fails at night. See also *Nyctalopia*.

**Hemeraphonia** (*hem-er-af-ō'fīr-ā*) [*hēmā, day; -ā, priv.; -ōph, voice*]. Loss of voice during the day, with return of the power of phonation at night.

**Hemerythrin** (*hem-er'fīr-ō-rin*) [*hēmā, blood; -ēr'fīr'ōs, red*]. The pigment found by Krukenberg in the blood of *Sipunculus nudus*.

**Hemerythrogen** (*hem-er'fīr-ō-ro-gen*) [*hēmā, blood; -ēr'fīr'ōs, red; -gēnē, producing*]. The chromogen of hemerythrin.

**Hemi-** (*hem'fīr*) [*hēm, half*]. A prefix, meaning one-half. In anatomy and physiology it is applied to one of the two lateral halves of the body.

**Hemiablepsia** (*hem-e-ah-lep'fīr-se-ah*) [*hēm, half; -ā, priv.; -ēpsia, blindness*]. See *Hemianopsia*.

**Hemiaccephalus** (*hem-e-ah-sef'fīr-al-us*) [*hēm, half; -ā, priv.; -kephālē, head*]. A variety of omphalositic monsters of the species *Paracephalus*. It is the lowest grade of development in paracephalus, closely approaching true acephalus.

**Hemiachromatopsia** (*hem-e-ah-kro-mat-ōp'fīr-se-ah*) [*hēm, half; -ā, priv.; -chrōma, color; -ōph, vision*]. Subnormal or absent color-vision in corresponding halves of the field of vision.

**Hemialbumin** (*hem-e-al'fīr-bu-min*). See *Anti-albumin*. **Hemialbuminose** (*hem-e-al'fīr-bu-min-ōs*). The same as *Hemialbumose*.

**Hemialbumose** (*hem-e-al'-bu-mos*) [*hmi*, half; *albumen*, the white of egg]. The most characteristic and most frequently obtained by-product of proteid zymolysis. It is the forerunner of hemipeptone. It is frequently found in the urine, and occurs normally in the marrow of bones and in cerebro-spinal fluid. See *Peptones*.

**Hemialbumosuria** (*hem-e-al-bu-mos-u'-re-ah*). Same as *Propeptonuria*.

**Hemialgia** (*hem-e-al'-je-ah*) [*hmi*, half; *άλγος*, pain]. Unilateral neuralgia.

**Hemianalgesia** (*hem-e-an-al-je'-se-ah*) [*hmi*, half; *αν*, priv.; *αλγος*, pain]. Insensibility to pain throughout one lateral half of the body and limbs.

**Hemianasarca** (*hem-e-an-as-ar'-kah*) [*hmi*, half; *ανά*, through; *σάρξ*, flesh]. Edema of one-half of the body.

**Hemianesthesia** (*hem-e-an-es-the-se'-ah*) [*hmi*, half; *αἰσθησις*, want of feeling]. Partial or complete loss of the sense of feeling in a lateral half of the body.

**Hemianopia** (*hem-e-an-o'-pe-ah*). See *Hemianopsia*.

**Hemianopsia** (*hem-e-an-op'-se-ah*) [*hmi*, half; *αν*, priv.; *ὄψις*, sight]. Blindness in one-half of the visual field. It may be bilateral (binocular) or monolateral (monocular or unocular), according as it affects one or both eyes. **H.**, **Binasal**, due to anesthesia of the temporal halves of the retina, the nasal fields thereby failing to be visible. **H.**, **Bitemporal**, the reverse of the last. **H.**, **Crossed** or **Heteronymous**, a general term for either binasal or bitemporal hemianopsia. **H.**, **Homonymous**, right, or left, the most common form, affecting the inner half of one field and the outer of the other. **H.**, **Inferior** and **Superior**, the upper or lower halves of the retina are insensitive.

**Hemianoptic** (*hem-e-an-op'-tik*) [*hmi*, half; *αν*, priv.; *ὄψις*, sight]. Affected with hemianopsia.

**Hemiataxia** (*hem-e-at-aks'-e-ah*) [*hmi*, half; *α*, priv.; *τάξις*, order]. Inability to produce orderly or systematic movements on one side of the body.

**Hemiatheiosis** (*hem-e-ath-et-o'-sis*) [*hmi*, half; *ἄθετος*, without fixed position]. A term for athetosis or involuntary rhythmic movements of one side of the body only.

**Hemiatrophy** (*hem-e-at'-ro-fe*) [*hmi*, half; *ἀτροφία*, lack of nourishment]. Imperfect or impaired nutrition confined to one side of the body.

**Hemiazygous** (*hem-e-az'-ig-us*) [*hmi*, half; *α*, priv.; *ζυγός*, a yolk]. Partially paired; imperfectly azygous. **H. Veins**. See *Vein*.

**Hemibranchiate** (*hem-e-brang'-ke-at*) [*hmi*, half; *βράγχια*, gills]. In biology, having an incomplete branchial apparatus.

**Hemic** (*hem'-ik*) [*αἷμα*, blood]. Pertaining to the blood; hemal.

**Hemicardia** (*hem-e-kar'-de-ah*) [*hmi*, half; *καρδία*, heart]. Half of a four-chambered heart.

**Hemicarp** (*hem'-e-karp*) [*hmi*, half; *καρπός*, fruit]. In biology, one of the separable carpels of a dicarpellary fruit.

**Hemicatalepsy** (*hem-e-kat'-al-et-se*) [*hmi*, half; *καταλῆψις*, catalepsy]. Catalepsy affecting only one lateral half of the subject.

**Hemicentrum** (*hem-e-sen'-trum*) [*hmi*, half; *κέντρον*, center]. Either one of the two lateral elements of the centrum of a vertebra.

**Hemicephalia** (*hem-e-sef'-le-ah*). Synonym of *Hemicrania*.

**Hemicephalus** (*hem-e-sef'-al-us*) [*hmi*, half; *κεφαλή*, head]. A monster fetus in which the cerebral hemispheres and skull are absent or undeveloped. It is a synonym of *Anencephalus*.

**Hemicerebrum** (*hem-e-sef'-e-brum*) [*hmi*, half; *cerebrum*, cerebrum]. A cerebral hemisphere.

**Hemichordate** (*hem-e-kor'-düt*) [*hemi*, half; *chorda*, a string]. In biology, of or pertaining to such animal forms as are intermediate between the *Chordata* and the *Achordata*, e.g., *Balanoglossus*.

**Hemichorea** (*hem-e-k-re'-ah*) [*hmi*, half; *χορεία*, chorea, dance]. Unilateral chorea; a form of chorea in which the convulsive movements are confined to one side of the body only.

**Hemicollin** (*hem-e-kol'-in*) [*hmi*, half; *κόλλα*, glue],  $C_{17}H_{10}N_{14}O_{19}$ . A peptone like substance derived from collagen. It is soluble in 70-80 per cent. alcohol, and is not precipitable by platinum tetrachloride.

**Hemicrania** (*hem-e-kra'-ne-ah*) [*hmi*, half; *κρανιον*, head]. Neuralgia or headache of one-half of the head.

**Hemicranic** (*hem-e-kra'-nik*) [*hmi*, half; *κρανιον*, skull]. Pertaining to half the skull. **H. Equivalents**, a name given to isolated symptoms—flitting scotomata, vomiting, vaso-motor disturbances, etc.—in cases of aborted migraine.

**Hemicyclic** (*hem-e-sil'-klik*) [*hmi*, half; *κύκλος*, a circle]. In biology, having certain of the floral organs arranged in whorls, and others in a spiral.

**Hemidesmus** (*hem-e-dez'-mus*) [*hmi*, half; *δ-σμός*, a band]. Indian sarsaparilla. The dried root of *H. indicus*, imported from India. It is a tonic, alterative, diaphoretic, and diuretic. **H.**, **Syr.** (B.P.). Dose ʒj.

**Hemidiaphoresis** (*hem-e-di-af-or-e'-sis*) [*hmi*, half; *διαφώρισις*, sweating]. Sweating of one lateral half of the body only.

**Hemidrosis** (*hem-id-ro'-sis*). See *Hematidrosis*.

**Hemidyesthesia** (*hem-e-dis-es-the'-se-ah*) [*hmi*, half; *δύς*, difficult; *αἰσθησις*, sensation]. Enfeebled or dulled sensation in a lateral half of the body, or in half of one of the organs of sense.

**Hemidystrophia** (*hem-e-dis-tro'-fe-ah*) [*hmi*, half; *δυσ*, ill; *τροφή*, nourishment]. In biology, the state of being imperfectly nourished.

**Hemi-elastin** (*hem-e-e-las'-tin*). See *Proto-elastose*.

**Hemimelytrum**, **Hemimelytron** (*hem-e-el'-it-rum*, *-tron*) [*hmi*, half; *ἐντρον*, a sheath: *πλ.*, *H-mielytra*]. One of the fore-wings of hemipterous and heteropterous insects, or one of the dorsal scales of certain marine annelids, as in *Hermioni*.

**Hemiencephalon** (*hem-e-en-sef'-al-on*) [*hmi*, half; *ἐγκέφαλος*, brain]. Either lateral half of the brain.

**Hemiencephalus** (*hem-e-en-sef'-al-us*) [*hmi*, half; *ἐγκέφαλος*, brain]. A monstrosity without organs of sense, but possessing otherwise a nearly normal brain.

**Hemipilepsy** (*hem-e-ep'-il-ep-se*) [*hmi*, half; *ἐπιληψία*, epilepsy]. A form of epilepsy in which the convulsions are confined to one lateral half of the body.

**Hemifornix** (*hem-e-for'-niks*) [*hmi*, half; *fornix*, an arch, vault]. A name used to designate the irregular, elongated portion of either paracelian floor, composed of hippocamp, fimbria, and forniculum.

**Hemigamous** (*hem-ig'-am-us*) [*hmi*, half; *γάμος*, marriage]. In biology, applied to grasses in which one floret is neuter and the other male or female.

**Hemiglossitis** (*hem-e-glos-i'-tis*) [*hmi*, half; *γλῶσσα*, tongue; *τισις*, inflammation]. Inflammation of one-half of the tongue only. A definite nodule or lump may be present in the substance of the tongue.

**Hemignathous** (*hem-ig'-na-thus*) [*hmi*, half; *γνάθος*, jaw]. In biology, applied to such birds as have one mandible shorter than the other.

**Hemihidrosis** (*hem-e-hid-ro'-sis*) [*hmi*, half; *ιδρώς*, sweat]. The same as *Hemidiaphoresis*.

**Hemihyperesthesia** (*hem-e-hi-per-es-the'-se-ah*) [*hmi*, half; *ἵπέρ*, over; *αἰσθησις*, sensation]. Hyperesthesia confined to one lateral half of the body.

**Hemihypertrophy** (*hem-i-hi-per'tro-fē*) [*hēi*, half; *trofē*, over; *trofē*, nourishment]. Hypertrophy of half of the body.

**Hemihypesthesia** (*hem-i-hi-pes'tē-sē-ah*) [*hēi*, half; *stē*, u-lt., slow to, perception]. Impairment of sensibility on one lateral half of the body.

**Hemilethargy** (*hem-i-leth'ar-jē*) [*hēi*, half; *leth'ar-jā*, lethargy]. A state of partial lethargy.

**Hemimelus** (*hem-i-mel'us*) [*hēi*, half; *mēlōs*, limb]. An acromioclavicular joint having discent or atrophied humerus, scapula, and axilla, and normal arms and thighs.

**Hemimetaboly** (*hem-i-met'ab-olē*) [*hēi*, half; *metabolē*, transformation]. In biology, incomplete or imperfect metamorphosis; hemimetamorphosis.

**Hemimetamorphosis** (*hem-i-met'ab-ol'is*) [*hēi*, half; *metamorphōsis*, transformation]. In biology, incomplete metamorphosis; hemimetaboly.

**Hemimyasthenia** (*hem-i-myas'tē-nē-ah*) [*hēi*, half; *myas'tē-nē*, weakness]. Myasthenia of one lateral half of the body.

**Hemimyoelonus** (*hem-i-myō-el'ō-nus*) [*hēi*, half; *myō*, muscle; *elōnōs*, contraction]. Clonic spasm of the muscles of one lateral half of the body.

**Hemin** (*hem-i-n*) [*hēi*, half; *n*, iron, blood].  $C_{10}H_{16}N_4FeO_3 \cdot HCl$ . [Fuchsmann's crystals, or hydrochlorid of hematin]. A darkly refractive pleochromatic crystalline substance derived from blood. It is obtained by heating under a cover slip, a drop of fresh blood on a glass slide with a little glacial acetic acid. In the case of blood that has been dried, or in old blood clot or stain, the resi-

HEMIN CRYSTALS.

1. Hemat. 2. Scl. 3. Carb. 4. Pig. 5. Lamb. 6. Pike. 7. Rabbit.

due should be powdered as finely as possible with a mortar and  $NaCl$ . Some of this powder is then placed on a slide and glacial acetic acid added, and heat carefully applied. The crystals are dark brown or black, elongated rhombic plates and prisms belonging to the triclinic system; they are insoluble in water, alcohol, ether, chloroform, or dilute acids.

**Hemineurasthenia** (*hem-i-neur'as'tē-nē-ah*) [*hēi*, half; *neurōs*, nerve; *astē-nē-ah*, weakness]. Neurasthenia confined to one lateral half of the body.

**Hemiptopia** (*hem-i-ptō'pē-ah*) [*hēi*, half; *ptōpē*, eye]. The other name for hemianopia. Hemiptopia refers to the entire half of the retina; hemianopia to that part of the field of vision.

**Hemipopia, Hemipopy** (*hem-i-pō'pē-ah*, *hem' i-pō'pē*). See Hemiptopia.

**Hempagus** (*hem-pā'g-us*) [*hēi*, half; *pagos*, to unite]. A hemipagally monostrouty united by the thoracic and abdominal cavities.

**Hemiparaplegia** (*hem-i-par'ap-lē-ah*) [*hēi*, half; *paraplēgia*, paralysis of the limb]. Paralysis of a lower limb on one side only.

**Hemiparesis** (*hem-i-par'ē-sis*) [*hēi*, half; *pāresis*, im-

pairment of strength]. Paresis, or weakening of the strength on one side of the body only.

**Hemiparesthesia** (*hem-i-par'ēs-thē'zē-ah*) [*hēi*, half; *para*, beside; *asthēsis*, sensation]. Numbness or paresthesia of one lateral half of the body.

**Hemiparetic** (*hem-i-par'et'ik*) [*hēi*, half; *pāresis*, impairment of strength]. Affected with hemiparesis.

**Hemi-peptone** (*hem-i-pep'ton*). See Peptones.

**Hemiphalacrosis** (*hem-i-fal'ak-ro'sis*) [*hēi*, half; *akhrōsis*, baldness]. Baldness affecting one lateral half of the head.

**Hemiphonia** (*hem-i-fō'ne-ah*) [*hēi*, half; *phōnē*, voice]. Speech having the characteristics of half-voice, half-whisper; used by patients in great weakness and exhaustion.

**Hemipinic Acid** (*hem-i-pin'ik*). See Acid.

**Hemiplegia** (*hem-i-ple'jē-ah*) [*hēi*, half; *plēgē*, stroke]. Paralysis of one side of the body, due usually to a lesion of some part of the corpus striatum and internal capsule, of the crus cerebri, or of the cortex or subcortex of the opposite side of the brain. **H.**, **Alternate**, paralysis of the facial muscles upon one side, with paralysis of the trunk and extremities upon the opposite side of the body. **H.**, **Bilateral Spastic**. See *Paraplegia*, *Infantile Spasmodic*. **H.**, **Cerebral**, the ordinary form first described. **H.**, **Crossed**. Same as **H.**, **Alternate**. **H.**, **Facial**, motor paralysis of one side of the face. **H.**, **Hephestic**, from the use of the hammer by smiths, a form of occupation neurosis. **H.**, **Spastic**, a form occurring in infants, in which the affected extremities are subject to convulsive twitchings. **H.**, **Spinal**, paralysis of one side or of the whole body, with loss of sensation of the opposite side. It is due to disease of the spinal cord.

**Hemiplexia** (*hem-i-pleks'-ē-ah*). Same as *Hemiplegia*.

**Hemiprosoplegia** (*hem-i-pro-so-ple'jē-ah*) [*hēi*, half; *prosōpon*, face; *plēgē*, stroke]. Paralysis of one side of the face.

**Hemiprotein** (*hem-i-pro'te-in*). See *Antialbumate*.

**Hemipterous** (*hem-i-pt'er-us*) [*hēi*, half; *ptērōn*, wing]. In biology, applied to certain insects that have the fore-wings partly membranous and partly coriaceous or chitinous.

**Hemirheumatism** (*hem-i-rū'mat-izm*) [*hēi*, half; *rhumatismōs*, liability to rheum]. Rheumatism confined to one lateral half of the body.

**Hemisection** (*hem-i-sek'shun*) [*hēi*, half; *sectio*, a cutting]. Bisection; chiefly applied to division into two lateral halves. See *Medisection*.

**Hemisepium** (*hem-i-sep'tum*) [*hēi*, half; *septum*, a partition]. The lateral half of a septum, as of the heart; the lateral half of the septum lucidum.

**Hemispasm** (*hem'i-es-pazm*) [*hēi*, half; *spasmos*, a spasm]. A spasm or convulsive movement affecting only one side of the body.

**Hemisphere** (*hem'i-is-fēr*) [*hēi*, half; *sphaīra*, a ball]. Half a sphere. **H.**, **Cerebellar**, either lateral half of the cerebellum. **H.**, **Cerebral**, either lateral half of the cerebrum.

**Hemisystole** (*hem-i-sis'to-lē*) [*hēi*, half; *systolē*, a contraction]. A peculiar kind of irregular action of the heart-muscle, in which, with every two beats of the heart, only one beat of the pulse is felt.

**Hemiterata** (*hem-i-er-at-ah*) [*hēi*, half; *teras*, monster]. A class of malformations, including all human bodies presenting any abnormality of development, not grave enough to be called monstrous, nor of the specific character to be classed as heterotaxic or hermaphroditic.

**Hemiteratic** (*hem-i-er-at'ik*) [*hēi*, half; *teras*, a monster]. Pertaining to *Hemiterata*.

**Hemitis** (*hem-i'-tis*) [*αἷμα*, blood; *τις*, inflammation].

A condition of the blood associated with inflammation.

**Hemitriteus** (*hem-it-rit-e'-us*) [*ἡμι*, half; *τρις*, three]. The semi-tertian form of ague.

**Hemitropous** (*hem-i'-ro-pus*) [*ἡμι*, half; *τροπή*, a turning over]. In biology, amphitropous; half anatroplus; applied to the plant-embryo when much curved.

**Hemizonia** (*hem-iz-o'-ne-ah*) [*ἡμι*, half; *ζώνη*, girdle]. A genus of composite-flowered herbs and shrubs, of which some 19 species are Californian; they are called tar-weeds and resin-weeds. They are generally strongly fragrant, resinous plants, locally esteemed for their balsamic qualities. Unof.

**Hemlock** (*hem'-lok*). See *Conium*. **H.-bark**, a bark used in the manufacture of leather. It is taken from *Abies canadensis* of Canada and the United States, and contains nearly fourteen per cent. of tannin. It is said to produce a leather harder than oak-bark, but which is less pliable and more pervious to water. **H.-extract**, a strongly astringent, solid extract of hemlock-bark, *q. v.* It is principally employed in the arts. **H. Spruce**. See *Abies*.

**Hemo-** (*hem'-o-*) [*αἷμα*, blood]. A prefix denoting blood.

**Hemocelum** (*hem-o-se'-lum*) [*αἷμα*, blood; *κοίλα*, a cavity]. A blood-cyst.

**Hemochromogen** (*hem-o-kro'-mo-jen*) [*αἷμα*, blood; *χρῶμα*, color; *γενής*, producing]. An excretory pigment of certain invertebrates. In some beetles it has a respiratory function. It is the same as *Enterohematin* and *Helicorubin*.

**Hemochromometer** (*hem-o-kro-mom'-et-er*) [*αἷμα*, blood; *χρῶμα*, color; *μέτρον*, measure]. Colorimeter; an instrument for estimating the amount of oxyhemoglobin in the blood, by comparing a solution of the blood with a standard solution of picocarmine of ammonia.

**Hemochyle** (*hem'-o-kil*) [*αἷμα*, blood; *χυμός*, juice]. The blood-lymph of vertebrates.

**HemocrySTALLIN** (*hem-o-kris'-tal-in*). See *Hemoglobin*.

**Hemocyanin** (*hem-o-si'-an-in*) [*αἷμα*, blood; *κύανος*, blue],  $C_{867}H_{1363}N_{223}CuS_2O_{258}$  (Griffiths). A blue proteid pigment, having a very constant percentage composition. It is analogous to hemoglobin, but contains copper instead of iron, and forms the chief constituent in the blood of many invertebrates, in which it acts as the carrier of oxygen.

**Hemocyne** (*hem'-o-sin*) [*αἷμα*, blood; *κύων*, *κυνός*, dog]. The serum of dogs' blood.

**Hemocyte** (*hem'-o-sit*) [*αἷμα*, blood; *κύτος*, a cell]. One of the protistan organisms found in the blood of man and animals, *e. g.*, the parasite of malarial fever, as studied by Lavanar, Celli, Machiavava, Golgi, Councilman, Osler, and Pfeiffer. See *Parasites (Animal)* Table of.

**Hemocytolysis** (*hem-o-si-tol'-is-is*) [*αἷμα*, blood; *κύτος*, cell; *λύειν*, to unloose]. The dissolution of blood-corpuscles by means of heat.

**Hemocytometer** (*hem-o-si-tom'-et-er*) [*αἷμα*, blood; *κύτος*, a cell; *μέτρον*, a measure]. A device for estimating the number of corpuscles in the blood.

The instrument of Gowers, illustrated below, and that of Thoma are those most frequently employed.

**HemocytoTRYPsis** (*hem-o-si-to-trip'-sis*) [*αἷμα*, blood; *κύτος*, cell; *τριβεῖν*, to rub]. The breaking up of blood-corpuscles under strong pressure.

**HemodiapEDeSis** (*hem-o-di-ap-ed-e'-sis*) [*αἷμα*, blood; *διαπήδησις*, an oozing through]. The transudation of blood through the skin.

**Hemodromograph** (*hem-o-dro'-mo-graf*). Same as *Hemotachometer*.

**Hemodromometer** (*hem-o-dro-mom'-et-er*). See *Hemadromometer*.

**Hemodynamometer** (*hem-o-di-nam-on'-et-er*). See *Hemadynamometer*.

**Hemogallol** (*hem-o-gal'-ol*) [*αἷμα*, blood; *galla*, gall-nut]. A proprietary substance occurring as a brownish-red powder, and formed by oxidizing the hemoglobin of the blood by pyrogallol. It is used in anemia in doses of gr. iss-viiss. Unof.

**HemogaSTRIC** (*hem-o-gas'-trik*) [*αἷμα*, blood; *γαστήρ*, stomach]. Pertaining to blood in the stomach.

**Hemogenesis** (*hem-o-jen'-es-is*) [*αἷμα*, blood; *γένεσις*, generation]. The formation of blood.

**Hemogenic** (*hem-o-jen'-ik*) [*αἷμα*, blood; *γένεσις*, generation]. Pertaining to the formation of blood; blood-producing.

GOWERS' HEMOCYTOMETER.

A. Pipet for measuring the diluted solution. B. Capillary tube for measuring the blood. C. Cell with divisions on the floor, mounted on a slide. D. Vessel in which the dilution is made. E. Glass stirrer. F. Guarded spear-pointed needle.

**Hemoglobin** (*hem-o-glo'-bin*) [*αἷμα*, blood; *globus*, a round body]. Hematogloblin, HemocrySTALLIN. A doubly refractive, pleochromatic colloid or crystalline matter, existing in the corpuscles of the blood, and to which their red color is due. In man the amount is 13.77 per cent., in woman 12.59 per cent., reduced by pregnancy to from 9 to 12 per cent. It is an oxygen-carrier or respiratory pigment. The crystals of hemoglobin have a dark-red appearance with a strong purple or bluish tint; they are very soluble in water.

**Hemoglobinemia** (*hem-o-glo-bin-e'-me-ah*) [*αἷμα*, blood; *globus*, a round body; *αἷμα*, blood]. A condition in which the hemoglobin is dissolved out of the red corpuscles, probably as the result of the destruction of the latter, and is held in solution in the serum. The blood is "lake"-colored. It occurs in some in-

fectious diseases, and after injecting certain substances into the blood.

**Hemoglobiniferous** (*hem-o-bin-i-f'e-r-us*) [*haima*, blood; *phero*, a round body; *fero*, to bear] Yielding or carrying hemoglobin.

**Hemoglobinocholia** (*hem-o-bin-o-ch'o-li-a*) [*haima*, blood; *cholus*, around body; *cholia*, bile] The presence of hemoglobin in the bile.

**Hemoglobinometer** (*hem-o-bin-o-m'e-t'er*) [*haima*, blood; *metron*, a round body; *metron*, a measure] An instrument for the quantitative estimation of hemo-

globin which, according to W. F. Robertson, are a kind of cross between the hemogenic glands (*e. g.* the spleen) and the lymphatic glands. The small prevertebral glands are examples.

**Hemolysis** (*hem-ol'-i-sis*) [*haima*, blood; *lysis*, solution]. Destruction or breaking-up of the red blood-corpuscles.

**Hemolytic** (*hem-o-lit'-ik*) [*haima*, blood; *lysis*, solution]. Pertaining to hemolysis.

**Hemometer** (*hem-om'-et-er*) [*haima*, blood; *metron*, measure]. See *Hemoglobinometer*. Also, an appa-

GOWEN'S HEMOGLOBINOMETER.

A. Pipette for distilled water. B. Capillary pipet. C. Graduated tube. D. Closed tube containing standard dilution. F. Lancet for pricking the finger.

globin by comparing the color of a solution of blood of unknown with a color of a known valuation.

**Hemoglobinuria** (*hem-o-bin-u'-re-ah*) [*haima*, blood; *phero*, a round body; *uria*, urine]. The presence of hemoglobin, the red coloring matter of the blood, in the urine, due either to its solution out of the red corpuscles, or to disintegration of the red corpuscles. It occurs after transfusion of blood, during certain stages of septicemia, and after severe burns. It is characterized with the presence of the corpuscular elements of the blood in the urine, thus differing from hematuria.

**Hemoglobin Test**: to a suspected sample add a drop of acetic acid and boil; a red coagulum indicates hemoglobin. See also, *Almen's Test*, *Hemin*, and *Hemo*.

**H., Epidemic**, a condition of the new-born marked by jaundice, cyanosis, and nervous symptoms. **H. Intermittent**. See *H., Paroxysmal*. **H., Paroxysmal**, a form characterized by recurring periodic attacks. It is related to cold, and is also closely associated with Raynaud's Disease. **H., Toxic**, that form occurring in consequence of poisoning by various substances, *e. g.*, potassium chlorate.

**Hemoglobulin** (*hem-o-gl'o-bin*) [*haima*, blood; *globus*, a ball] Same as *Hemoglobin*.

**Hemoid** (*hem-oid*) [*haima*, blood; *oidos*, likeness]. Having the appearance of, or resembling, blood.

**Hemology** (*hem-ol'o-jy*) [*haima*, blood; *logos*, science]. The science treating of the blood.

**Hemolitein** (*hem-o-lit'-e-in*) [*haima*, blood; *luteus*, yellow]. A yellow coloring matter obtained from corpora lutea.

**Hemolymph** (*hem-ol'imf*) [*haima*, blood; *lymph*, clear water]. The blood of the higher invertebrata, containing more albumoids and less water than the lymphatic or lymphoid forms. **H. Glands**, a variety

FLEISCHL'S HEMOMETER.

K. Red-colored wedge of glass moved by R. G. Mixing vessel with two compartments *a* and *a'*. M. Table with opening to read off the percentage of hemoglobin on the scale P. T. To move K through R. S. Reflector of Plaster-of-Paris.

ratus for ascertaining the amount of hemoglobin in normal or diseased blood.

**Hemometra** (*hem-o-me't-rah*). See *Hematometra*.

**Hemorrhoiditis** (*hem-o-off-or-i'tis*) [*haima*, blood; *oidos*, egg; *phero*, to bear]. Hemorrhoiditis with hemorrhage.

**Hemopericardium** (*hem-o-per-ik-ar'-de-um*) [*haima*, blood; *peri*, around; *kardia*, the heart]. An effusion of blood into the pericardial cavity. It is due usually to the bursting of an aneurysm of the aorta, but may also follow rupture of the heart, or the bursting of an aneurysm of one of the coronary arteries.

**Hemophagic** (*hem-o-faj'-ik*) [*haima*, blood; *phago*, to eat]. Feeding upon blood; applied to certain animal parasites.

**Hemophagocyte** (*hem-o-fag'-o-sit*) [*haima*, blood; *phago*, to eat; *kytos*, a cell]. Any phagocyte of the blood; a white blood-corpuscle.

**Hemophilia** (*hem-o-fil'-e-ah*) [*haima*, blood; *phileo*, to love]. The hemorrhagic diathesis; an abnormal tendency to hemorrhage, or ease of bleeding. It usually first appears at about the period of the second dentition, and is most frequent among males. Heredity plays a prominent part in this affection.

**Hemophthalmia** (*hem-off-thal'-me-ah*) [*haima*, blood; *ophthalmos*, eye]. A hemorrhage into the interior of the eye. It may arise from contusion, from iridectomy, or by rupture of a vessel.

**Hemophthalmos** (*hem-off-thal'-mos*) [*haima*, blood; *ophthalmos*, the eye]. Blood in the vitreous chamber characterized by a reddish reflex from the pupil.

**Hemophthisis** (*hem-off'-this-is*) [*haima*, blood; *phthisis*, wasting]. Anemia dependent upon undue degeneration of the red blood-corpuscles.

**Hemoplasmodium** (*hem-o-plaz-mo'-de-um*) [*αἷμα*, blood; *πλάσμα*, a moulded figure; *εἶδος*, form]. The plasmodium of malaria. See *Parasites (Animal)*, *Table of*.

**Hemoplastic** (*hem-o-plas'-tik*) [*αἷμα*, blood; *πλάσσειν*, to form]. Same as *Hematoplastic*.

**Hemopneumothorax** (*hem-o-nu-mo-tho'-raks*) [*αἷμα*, blood; *πνεῦμα*, wind; *θώραξ*, the chest]. An effusion of air and blood within the pleura.

**Hemopoiesis** (*hem-o-poi'-e-sis*). See *Hematopoiesis*.

**Hemoptysis** (*hem-op'-tis-is*) [*αἷμα*, blood; *πτέειν*, to spit]. The spitting of blood. The term is confined usually to the expectoration of blood from the lungs. It may be slight or profuse, and death may result from suffocation. The blood is frothy and bright-red. **H.**, **Parasitic**. See *Distoma ringieri*.

**Hemorrhodin** (*hem-or-o'-din*) [*αἷμα*, blood; *ρόδος*, a rose]. A rose-colored albuminoid found in the blood of *Aplysia depilans*; it was discovered by L. Cuénot.

**Hemorrhage** (*hem'-or-aj*) [*αἷμα*, blood; *ῥηγνύναι*, to burst forth]. The flowing of blood from wounded or ruptured vessels. **H.**, **Accidental**, during pregnancy from premature detachment of the placenta when normally situated. **H.**, **Capillary**, oozing of blood from a wound without a flow from large vessels. **H.**, **Collateral**, bleeding occurring in the course of acute inflammations. **H.**, **Complementary**, succeeding upon another hemorrhage that has been cut short. **H.**, **Concealed**, a variety of accidental hemorrhage in which the bleeding takes place between the ovum and the uterine walls, without escape from the genital tract. **H.**, **Consecutive**, ensuing some time after injury. **H.**, **Critical**, occurring at the turning-point of a disease. **H.**, **Petechial**. See *Purpura*. **H.**, **Postpartum**, *primary*, within 24 hours after labor; *secondary*, after 24 hours. **H.**, **Primary**, that immediately following any traumatism. **H.**, **Secondary**, that occurring some time after the traumatism, and usually due to the sloughing of the tissues. **H.**, **Unavoidable**, from detachment of a placenta previa. **H.**, **Vicarious**, suppression of the menses with abnormal discharge of blood from some other part of the body than the vagina.

**Hemorrhagic** (*hem-or-a'-jik*) [*αἷμα*, blood; *ῥηγνύναι*, to burst forth]. Relating to or accompanied by hemorrhage. **H.**, **Diathesis**. See *Hemophilia*. **H.**, **Endometritis**. See *Endometritis*. **H.**, **Infarct**. See *Infarct*. **H.**, **Pneumonia**, a form of pneumonia occurring in elderly people and in certain weakened states of the constitution, characterized by the presence of a large amount of blood in the expectoration.

**Hemorrhaphilia** (*hem-or-af-il'-e-ah*) [*αἱμορραγία*, hemorrhage; *φίλος*, loving]. Synonym of *Hemophilia*.

**Hemorrhæa** (*hem-or-e'-ah*) [*αἷμα*, blood; *ῥοία*, a flow]. A hemorrhage; a flow of blood. **H.** **ventriculi**. See *Hematemesis*.

**Hemorrhelcosis** (*hem-or-el-ko'-sis*) [*αἱμορροΐς*, a hemorrhoid; *ἑλκωσις*, ulceration]. The formation of an ulcer upon a hemorrhoid.

**Hemorrhinia** (*hem-or-in'-e-ah*) [*αἷμα*, blood; *ῥίς*, nose]. Epistaxis; nose-bleed.

**Hemorrhoid** (*hem'-or-oid*) [*αἱμορροΐς*, flowing with blood]. Pile. An enlarged and varicose condition of the vessels in the tissues around the anus, sometimes associated with eversion of the rectal mucous membrane. There is always more or less pain and tenderness, with discomfort in sitting. Hemorrhoids are caused by sedentary habits, constipation, obstruction to the portal circulation, or violent purging. **H.**, **External**, situated without the sphincter ani. **H.**, **Internal**, within the anal orifice.

**Hemorrhoidal** (*hem-or-oi'-dal*) [*αἱμορροΐς*, flowing with blood]. Pertaining to or affected with hemorrhoids.

**Hemoscope** (*hem'-o-skop*). Same as *Hematoscope*.

**Hemosialemesis** (*hem-o-si-al-em'-es-is*) [*αἷμα*, blood; *σάλιν*, saliva; *εἰέναι*, to vomit]. A form of vomiting sometimes observed in hysterical women with dysmenorrhea, the vomited matter consisting largely of saliva and a small quantity of blood, in addition to the ordinary contents of the stomach.

**Hemosiderin** (*hem-o-sid'-er-in*) [*αἷμα*, blood; *σίδηρος*, iron]. Neumann's name for a pigment often found in extravasations and thrombi with hematoidin, but differing from the latter in containing iron.

**Hemospasia** (*hem-o-spa'-ze-ah*) [*αἷμα*, blood; *σπάειν*, to draw]. The drawing of blood to a part; derivative action; the process of dry-cupping, especially when thoroughly carried out.

**Hemospastic** (*hem-o-spas'-tik*) [*αἷμα*, blood; *σπάειν*, to draw]. Effecting or pertaining to hemospasia.

**Hemostasia**, or **Hemostasis** (*hem-o-sta'-se-ah*, or *hem-ost'-tas-is*) [*αἷμα*, blood; *στάσις*, a standing]. 1. Stagnation of the blood-current. 2. Arrest of a flow of blood.

**Hemostatic** (*hem-o-stat'-ik*) [*αἷμα*, blood; *στατικός*, stationary]. Having the power to arrest hemorrhage. Also, an agent or remedy that arrests or restrains bleeding.

**Hemostatics** (*hem-o-stat'-iks*). See *Hemastatics*.

**Hemotachometer** (*hem-o-tak-om'-et-er*) [*αἷμα*, blood; *τάχος*, swiftness; *μέτρον*, a measure]. An instrument for measuring the rate of flow of arterial blood.

**Hemotexis** (*hem-o-teks'-is*) [*αἷμα*, blood; *τῆξις*, a melting]. The dissolution of putrid blood.

**Hemothorax** (*hem-o-tho'-raks*) [*αἷμα*, blood; *θώραξ*, the chest]. An accumulation of blood in a pleural cavity. It may occur under many varied conditions.

**Hemotrophy** (*hem-at'-ro-fe*) [*αἷμα*, blood; *τροφή*, nourishment]. Synonym of *Plethora*, *q. v.*

**Hemp** [ME., *hemp*, hemp]. The hemp-fiber is the product of the *Cannabis sativa*, which is grown for textile purposes chiefly in Russia and Italy, while the seed is grown in India. It is a bast-fiber similar to that of the flax-plant, but coarser and stronger, and of deeper color, and less luster. It is used chiefly for the manufacture of ropes and cordage, and the fabric woven from it, known as canvas, is used in sail making. Hemp is a mixture of cellulose and bastose. **H.**, **Manila**, is a tropical fiber obtained on the Philippine Islands from the leaves of the wild plantain. It furnishes a very superior rope-making fiber, because of its combined lightness and strength, and the finer grades are used for woven goods. The color is yellowish or white, and the white variety has a fine silky luster. **H.**, **Suron**, is grown in India, and furnishes a fiber of light-yellowish color. It resembles jute, although less lustrous. It is well adapted for cordage and netting. **H.**, **Sisal** (or *henequen*), is derived from the fleshy leaves of a species of agave grown in Yucatan and the West Indies. It is used largely in the United States as a substitute for jute in the manufacture of bagging and for cordage, being stronger and lighter than jute. See also *Cannabis*. **H.**-**nettle**. See *Galeopsis*. **H.**-**seed Calculus**, a small rounded urinary concretion composed of oxalate of lime. It may vary in size from a pin's head to that of a hemp-seed, and is smooth and dark-colored. **H.**-**seed Oil**, *oleum cannabis*, is obtained from the seeds of the *Cannabis sativa* or common hemp. It has a mild odor, but mawkish taste, and greenish-yellow color, turning brown with age. Its specific gravity at 15° C. is .9276. It is freely soluble in boiling alcohol, has weaker drying properties than linseed oil, but is used in paint and varnish manufacture and in making soft soaps.

**Hemuresis** (*hē-mū-rē-sis*). Synonym of *Hematuria*.  
**Hen** [ML, *hēn*, a hen]. The female of the domestic fowl. **H.-bane**. See *Hematuria*. **H.-blindness**, a popular name for night blindness. **H.-cluck** Stertor, a form of stertorous respiration heard in some cases of retropharyngeal abscess.  
**Henequen** (*hē-nē-kēn*). See *Hemp*, *Sisal*.  
**Henle's Ansa**. See *Loop*. **H.'s Canals**. See *Canal*. **H.'s Fenestrated Membrane**, the layer of longitudinal muscle fibers of the inner coat of the arteries. **H.'s Fibers**, the spindle fibers forming the fenestrated membrane of Henle. **H.'s Glands**. See *Gland*. **H.'s Layer**, a layer of fat, horny, polygonal, non nucleated cells situated between the cuticula and the external root sheath of a hair bulb. **H.'s Loop**, a loop in the uriniferous tubules. See *Tubule*, *urinary*. **H.'s Muscle**. See *Muscle*, *Transverse*. **H.'s Sheath**, a connective tissue sheath, surrounding terminal nerve fibers. **H.'s Tubular Tumor**. See *Siphonoma*.  
**Henna** (*hē-nā*) [Arab., *Al-hinna*, henna]. A cosmetic machued with the Orient; it is prepared from the leaves of *Lawsonia inermis*, and is sometimes used externally and internally in leucosis and in skin diseases. Unof.  
**Henocardia** (*hē-nō-kārd-ē-ā*) [*hēn*, one; *cardia*, heart]. The condition of having but one auricle and one ventricle in the heart; it is normal in some of the lower animals.  
**Henoch's Purpura**. See *DuRoi's*, *Table of*.  
**Henogenesis** (*hē-nō-jē-nē-sis*) [*hēn* (hēn), one; *gēnesis*, origin]. In biology, the developmental history of an individual organism; ontogenesis.  
**Henosis** (*hē-nō-sis*) [*hēn*, uniting]. 1. Healing or uniting. 2. Symblepharon.  
**Henotic** (*hē-nō-tik*) [*hēn*, one; *tis*, one]. Tending to heal or to promote union.  
**Henry's Law**. See *Law*.  
**Hensen's Disc**. See *Fuchs*, *Mann's Middle Disc*. **H.'s Experiment**, an experiment proving that the so-called auditory hairs of the crustacean *Mysis* vibrate to a particular note. **H.'s Prop-cells**. See *H.'s Supporting Cells*. **H.'s Stripe**, a glistening band in the middle of the under surface of the membrana tectoria of the ear. **H.'s Supporting Cells**, tall columnar epithelial cells on the outer side of the outermost of Hensen's cells of the ear.  
**Hepar** (*hē-pār*) [*hēp*, the liver; *gen.* *Hepatis*]. The liver, near. **H. adiposum**, a synonym of fatty liver. **H. amyloideum**, amyloid degeneration of the liver. **H. sulphuris**, the liver of sulphur; potassium sulphide; formerly much employed in medicine; now mostly by homeopaths.  
**Hepatalgia** (*hē-pāt-ā-ljā*) [*hēp*, liver; *ālgos*, pain]. Pain in the liver, but more especially the paroxysmal pain occasionally affecting the right hypochondrium.  
**Hepatalgic** (*hē-pāt-ā-lj-ik*) [*hēp*, liver; *ālgos*, pain]. Relating to or affected with hepatalgia.  
**Hepatapostema** (*hē-pāt-ā-pōst-ē-mā*) [*hēp*, liver; *postema*, abscess; *pl.* *Hepatapostemata*]. An abscess of the liver.  
**Hepatataxesis** (*hē-pāt-ā-tāks-ē-sis*) [*hēp*, liver; *ataxesis*, derangement]. Emaciation of the liver.  
**Hepatotomy** (*hē-pāt-ō-tō-mē*) [*hēp*, liver; *iktōmē*, a cutting out]. Excision of the liver, wholly or in part.  
**Hepatempfractic** (*hē-pāt-ē-mfrakt-ik*) [*hēp*, liver; *emphraxis*, obstruction]. Relating to hepatempfraxis.  
**Hepatempfraxis** (*hē-pāt-ē-mfrakt-ik*) [*hēp*, liver; *emphraxis*, obstruction]. Hepatic obstruction.  
**Hepathelcosis** (*hē-pāt-ē-lkō-sis*) [*hēp*, liver; *ēlkwōsis*, ulceration]. Ulceration of the liver.  
**Hepatic** (*hē-pāt-ik*) [*hēp*, liver; *gen.* *Hepatis*]. Pertain-

ing or belonging to the liver. **H. Aloes**. See *Aloes*. **H. Duct**. See *Duct*. **H. Lobes**, the natural anatomic divisions of the liver, usually designated as right, left, quadrate, spigelian, and caudate lobes. **H. Plexus**. See *Plexus*. **H. Zones**, certain areas in an hepatic lobule. The central area, capillaries and cells form the *Hepatic-vein Zone*, specially liable to congestive changes; the area next the periphery of the lobule is the *Portal-vein Zone*; and the area between the two the *Hepatic-artery Zone*. **H. Starch**, a synonym of *Glycogen*.  
**Hepatica** (*hē-pāt-ik-ah*) [*hēpātikos*; *hēpār*, liver]. The liverwort; a genus of ranunculaceous plants. **H. triloba** and **H. acutiloba** were formerly esteemed in hepatic, renal, and pulmonary complaints. Unof.  
**Hepatocell** (*hē-pāt-ik-sēl*) [*hēpātikos*; *hēpār*, liver; *cella*, cell]. An hepatic or liver cell; a cell of the liver tissue.  
**Hepatico-ductitis** (*hē-pāt-ik-o-duk-tīt-tis*) [*hēpātikos*, pertaining to the liver; *ductus*, duct; *itis*, inflammation]. Inflammation of the hepatic ducts.  
**Hepatico-pancreatic** (*hē-pāt-ik-o-pan-kre-āt-ik*) [*hēpātikos*, pertaining to the liver; *pankreas*, sweetbread]. Relating to the liver and the pancreas.  
**Hepaticous** (*hē-pāt-ik-us*) [*hēpātikos*, of the liver]. In biology, resembling liver.  
**Hepaticula** (*hē-pāt-ik-ū-lah*) [*hēpār*, liver]. 1. A small liver. 2. A slight degree of hepatitis.  
**Hepatin** (*hē-pāt-in*) [*hēpār*, liver]. Same as *Glycogen*.  
**Hepatirrhagia** (*hē-pāt-ir-ā-jē-ah*) [*hēpār*, liver; *rhēgnai*, to burst forth]. Hemorrhage from the liver.  
**Hepatirrhœa** (*hē-pāt-ir-ē-ah*). See *Hepatorrhœa*.  
**Hepatism** (*hē-pāt-izm*) [*hēpār*, liver]. Derangement of various functions of the body, due or ascribed to some functional or other disorder of the liver.  
**Hepatitis** (*hē-pāt-it-ik*) [*hēpār*, liver; *itis*, inflammation]. Affected with, or relating to, hepatitis.  
**Hepatitis** (*hē-pāt-it-tis*) [*hēpār*, liver; *itis*, inflammation]. Inflammation of the liver. **H. chronica interstitialis**, cirrhosis of the liver. **H., Parenchymatous, Acute**, acute yellow atrophy of the liver. **H. suppurativa**, abscess of the liver.  
**Hepatipoyitis** (*hē-pāt-it-o-pi-it-tis*) [*hēpār*, liver; *piōn*, pus; *itis*, inflammation]. Hepatitis characterized by the formation of abscesses.  
**Hepatization** (*hē-pāt-iz-ā-shun*) [*hēpār*, liver]. An abnormal change in lung-tissue, in which it becomes solid and friable, somewhat resembling the tissue of the liver. **H., Gray**, the condition of a lung in the third stage of pneumonia. **H., Red**, that in the second stage of pneumonia. **H., White**, the condition of the lungs in stillborn syphilitic children. **H., Yellow**, the condition of the lung in the third stage of pneumonia when tinted by the presence of numerous pus-cells. See *Pneumonia*.  
**Hepatocace** (*hē-pāt-ok-ās-e*) [*hēpār*, liver; *kakos*, ill]. Gangrene of the liver.  
**Hepatocarcinia** (*hē-pāt-o-kar-sin-ē-ah*) [*hēpār*, liver; *karkeinōs*, cancer]. Malignant disease of the liver.  
**Hepatocèle** (*hē-pāt-o-sēl*) [*hēpār*, liver; *klēlē*, a tumor]. A form of hernia in which the liver protrudes through an opening in the abdominal wall.  
**Hepatochromate** (*hē-pāt-o-kro-āt-māt*) [*hēpār* (*hēpāt*), the liver; *chrōma*, a color]. Krukenberg's name for *Enterochlorophyll*.  
**Hepatocirrhosis** (*hē-pāt-o-sir-ō-sis*) [*hēpār*, liver; *κίρρōς*, yellow]. Cirrhosis of the liver.  
**Hepatocolic** (*hē-pāt-o-kol-ik*) [*hēpār*, liver; *kolon*, colon]. Relating to the liver and the colon.  
**Hepatocystic** (*hē-pāt-o-sis-tik*) [*hēpār*, liver; *κυστις*, bladder]. Pertaining to the liver and the gall-bladder.

**Hepatodidymous** (*hep-at-o-did'-im-us*) [*ἥπαρ*, the liver; *διδυμος*, double] A monster with a double body from the liver up.

**Hepatoduodenal** (*hep-at-o-du-od'-en-al*) [*ἥπαρ*, liver; *duodeni*, twelve each]. Relating to the liver and the duodenum.

**Hepatodynia** (*hep-at-o-din'-e-ah*) [*ἥπαρ*, liver; *ὀδίνη*, pain]. Pain in the liver.

**Hepatogastric** (*hep-at-o-gas'-tri-ik*) [*ἥπαρ*, liver; *γαστήρ*, stomach]. Pertaining to the liver and the stomach.

**Hepatogastritis** (*hep-at-o-gas'-tri'-tis*) [*ἥπαρ*, liver; *γαστήρ*, stomach; *τις*, inflammation]. Inflammation of both liver and stomach.

**Hepatogenic** (*hep-at-o-jen'-ik*) [*ἥπαρ*, liver; *γεννᾶν*, to beget]. Produced by or in the liver. **H. Icterus**, also called absorption-icterus or jaundice, is caused by the absorption of bile already formed in the liver.

**Hepatology** (*hep-at-og'-ra-jè*) [*ἥπαρ*, liver; *γράφειν*, to write]. A description of the liver.

**Hepatoid** (*hep'-at-oid*) [*ἥπαρ*, liver; *εἶδος*, likeness]. Resembling a liver or liver-substance.

**Hepatolith** (*hep'-at-o-lith*) [*ἥπαρ*, liver; *λίθος*, stone]. Biliary calculus; gall-stone.

**Hepatolithiasis** (*hep-at-o-lith-i'-as-is*) [*ἥπαρ*, liver; *λίθιασις*, presence of calculus]. A disease characterized by gall-stones or concretions in the liver.

**Hepatolithic** (*hep-at-o-lith'-ik*) [*ἥπαρ*, liver; *λίθος*, a stone]. Affected with biliary calculi.

**Hepatology** (*hep-at-ol'-o-jè*) [*ἥπαρ*, liver; *λόγος*, science]. The science of the nature, structure, functions, and diseases of the liver.

**Hepatomalacia** (*hep-at-o-mal'-at-se-ah*) [*ἥπαρ*, liver; *μαλακία*, softness]. Softening of the liver.

**Hepatomegalia** (*hep-at-o-meg-a'-le-ah*) [*ἥπαρ*, liver; *μέγας*, large]. Auxesis of the liver.

**Hepatomyeloma** (*hep-at-o-mi-el'-o-mah*) [*ἥπαρ*, liver; *μυελός*, marrow; *ὄμα*, a tumor; *pl. Hepatomyelomata*]. Medullary carcinoma of the liver.

**Hepatuncus** (*hep-at-ong'-kus*) [*ἥπαρ*, liver; *ὄγκος*, a tumor]. A tumor or swelling of the liver.

**Hepatonecrosis** (*hep-at-o-ne-kro'-sis*) [*ἥπαρ*, liver; *νέκρωσις*, death]. Gangrene of the liver.

**Hepatopancreas** (*hep-at-o-pan'-kre-as*) [*ἥπαρ*, the liver; *πάγκρεας*, the pancreas; *pl. Hepatopancreates*]. In biology, a glandular organ of many invertebrates which exercises a digestive action upon starch and albumin, and at the same time secretes matters similar to those found in the bile of vertebrates.

**Hepatopathy** (*hep-at-op'-ath-e*) [*ἥπαρ*, liver; *πάθος*, disease]. Any hepatic disease or disorder.

**Hepatoperitonitis** (*hep-at-o-per-it-on-i'-tis*) [*ἥπαρ*, liver; *περιτόναιον*, peritoneum; *τις*, inflammation]. Inflammation of the peritoneal or serous coat of the liver.

**Hepatopexia**, or **Hepatopexy** (*hep-at-o-peks'-e-ah*, *hep'-at-o-peks-e*) [*ἥπαρ*, liver; *πῆξις*, fixation]. The suturing of a floating liver in its proper position.

**Hepatophagy** (*hep'-at-o-faj*) [*ἥπαρ*, liver; *φαγεῖν*, to eat]. A giant-cell of a type peculiar to the liver; it is said to absorb and to destroy liver-cells.

**Hepatophyma** (*hep-at-o-fi'-mah*) [*ἥπαρ*, liver; *φύμα*, growth]. Any tumor of the liver.

**Hepato-portal** (*hep-at-o-por'-tal*) [*ἥπαρ*, liver; *porta*, a gate]. Relating to the portal circulation in the liver; portal as distinguished from *reniportal*.

**Hepatoposis** (*hep-at-op-to'-sis*) [*ἥπαρ*, liver; *πτῶσις*, a falling]. Synonym of *Floating Liver*. *q. v.*

**Hepatorrhagia** (*hep-at-or-a'-je-ah*). Same as *Hepatorrhagia*.

**Hepatorrhaphy** (*hep-at-or'-a-fe*) [*ἥπαρ*, liver; *ῥαφή*, suture]. Suture of the liver.

**Hepatorrhea** (*hep-at-or-e'-ah*) [*ἥπαρ*, liver; *ῥοία*, flow]. Morbid or excessive secretion of bile by the liver.

**Hepatorrhesis** (*hep-at-or-eks'-is*) [*ἥπαρ*, liver; *ρήξις*, a rupture]. Rupture of the liver.

**Hepatoscirrhosis** (*hep-at-o-skir'-us*) [*ἥπαρ*, liver; *σκιρῆσις*, an induration]. Scirrhus carcinoma of the liver.

**Hepatoscopy** (*hep-at-os'-ko-pe*) [*ἥπαρ*, liver; *σκοπεῖν*, to examine]. Visual examination of the liver.

**Hepato-splenitis** (*hep-at-o-splen-i'-tis*) [*ἥπαρ*, liver; *σπλήν*, spleen; *τις*, inflammation]. Inflammation of both liver and spleen.

**Hepatotomy** (*hep-at-ol'-o-me*) [*ἥπαρ*, liver; *τέμνειν*, to cut]. Incision of the liver.

**Hephestic** (*hep-es'-tik*) [*Hephestus*, Vulcan]. Prevailing or occurring among hammermen. **H. Cramp**. See *Hammermen's Cramp*. **H. Hemiplegia**. See *Hemiplegia*.

**Hepatocosane** (*hep'-tak-o-sân*) [*ἑπτὰ*, seven],  $C_{27}H_{56}$ . A hydrocarbon contained in beeswax.

**Heptad** (*hep'-tad*) [*ἑπτὰ*, seven]. In chemistry, an atom whose equivalence is seven atoms of hydrogen, or that can be combined with, substituted for, or replaced by, seven atoms of hydrogen.

**Heptagynian** (*hep-taj-m'-e-an*). See *Heptagynous*.

**Heptagynious** (*hep-taj-in'-e-us*). See *Heptagynous*.

**Heptagynous** (*hep-taj-in-us*) [*ἑπτὰ*, seven; *γυνή*, female]. In biology, having seven pistils or styles.

**Heptamerous** (*hep-tum'-er-us*) [*ἑπτὰ*, seven; *μέρος*, a part]. In biology, consisting of seven parts; having the organs in sevens.

**Heptandrous** (*hep-tan'-drus*) [*ἑπτὰ*, seven; *ἄνθρωπος*, man]. In biology, having seven stamens.

**Heptane** (*hep'-tan*) [*ἑπτὰ*, seven],  $C_7H_{16}$ . A paraffin existing as a mobile, colorless liquid. It is contained in petroleum, and is also obtained from the resin of *Pinus sabiniana* by dry distillation. It is also called *abietene*, *theolin*, *erasene*, and *aurantin*. See *Hydrocarbons*, *Table of*.

**Heptapetalous** (*hep-tah-pet'-al-us*) [*ἑπτὰ*, seven; *πέταλον*, a leaf]. In biology, having seven petals.

**Heptaphyllous** (*hep-tah-fil'-us*) [*ἑπτὰ*, seven; *φύλλον*, a leaf]. In biology, having seven leaves.

**Heptatomic** (*hep-tat-om'-ik*) [*ἑπτὰ*, seven; *ἄτομος*, an atom]. Same as *Heptavalent*, *q. v.*

**Heptavalent** (*hep-tav'-al-lent*) [*ἑπτὰ*, seven; *βάλλειν*, having power]. In chemistry, equal to seven atoms of hydrogen in combining or saturating-power; applied to an atom that can be substituted for, or replaced by, seven atoms of hydrogen.

**Heptolactone** (*hep-to-lak'-tôn*) [*ἑπτὰ*, seven; *λακ*, milk],  $C_7H_{12}O_2$ . A substance formed from tetracrylic acid by reducing with hydrobromic acid. It melts at  $11^{\circ} C.$ , and boils at  $220^{\circ} C.$

**Heptoses** (*hep-tos'-ez*) [*ἑπτὰ*, seven]. A division of the glucoses, of the composition  $C_7H_{14}O_6$ . They are prepared by reducing the corresponding heptonic acids,  $C_7H_{14}O_8$  (their lactones), with sodium amalgam. They have similar properties to the hexoses, and are not fermented by yeast. See *Carbohydrates*, *Table of*.

**Heracleum** (*her-ak-le'-um*) [*Ἡράκλειος*, Hercules]. A genus of umbelliferous plants, the cow-parsnips. Several species, especially *H. lanatum*, in North America, and *H. tauricum*, in Europe, are diuretic and expectorant, and the roots and seeds are recommended for use in epilepsy. Unof.

**Herapath's Method**. A method for determining the presence of minute quantities of quinin. For a test-fluid use—

|  | Metric. | Apoth.     |
|--|---------|------------|
| Glacial acetic acid, . . . . .           | 12 c.c. | (3.24 f3). |
| Ninety-five per cent. alcohol, . . . . . | 4 c.c.  | (1.08 f3). |
| Dilute sulphuric acid, . . . . .         |         | 7 drops.   |

A drop of this is put on the slide, and a very minute amount of the quinin-containing substance added.

When dissolved, add an extremely minute drop of an alcoholic solution of iodine. The first effect is the production of the yellow, cinnamon-colored compound of iodine and pepsin, which forms as a small circular spot, the alcohol separates into fine drops, which, by a sort of repulsive movement, drive the fluid away; after a time the acid liquid again flows over the spot, and the colorless crystals of sulphate of iodoquin are slowly produced in beautiful tufts. This test succeeds best without the application of heat.

**Herapathite** (*her'-ap-ath-it*) [from *Herapath*, an English chemist]. An acid of quin-sulphate, occurring in medicinal lattices. It has been used as a remedy in gonorrhea and in bile cases; in microscopy, it is employed in polarizing light.

**Herb** (*herb*) (*h'erb*) [herb, an herb]. An annual, biennial or perennial plant, the stem of which contains little wood and dies down to the ground at the end of the season. **H.-doctor**. See *Herbalist*.

**H.-juice Cure**. See *Cure*.

**Herbaceous** (*her'-be-ous*) [*herba*, grass]. In biology: 1. Applied to stems or other organs that have a fleshy, juicy consistency and perish at the close of the growing season. 2. Feeding upon herbs.

**Herbal** (*her'-bal*) [*herba*, grass]. An old name for a book on herbs; chiefly designating a book on the medicinal virtues of herbs.

**Herbalist** (*her'-bal-ist*) [*herba*, grass]. An herb-doctor or simpler; a so-called botanic physician.

**Herbarium** (*her'-ba-ri-um*) [*herba*, grass]. A collection of dried plants arranged for study; a *hortus siccus*.

**Herbivorous** (*her-be-kar-ni'-or-us*) [*herba*, herb; *vorare*, to eat]. Omnivorous; living upon both animal and vegetable food.

**Herbivora** (*her-be-kar-ni*) [*herba*, grass; *vorare*, to devour]. A name given to a division of mammalia. Animals that feed on vegetation.

**Herbivorous** (*her-be-kar-ni*) [*herba*, grass; *vorare*, to devour]. A descriptive term applied to animals that subsist on vegetation.

**Herb's Corpuscles**. A variety of sensory end-organs found in the mucous membrane of the tongue of the duck; they resemble small Vater's corpuscles, but their lamellae are thinner and closer to each other, while the axis cylinder within the central core is bordered on both sides by a row of nuclei.

**Hercogamy** (*her'-ko-gam-e*) [*ἥρος*, a fence; *γάμος*, marriage]. In biology, the prevention of impregnation or fertilization by some structural obstacle; applied to flowers.

**Herculeus morbus** (*her'-ku-le-us mor'-bus*) [L.]. Synonym of *Hepatitis*.

**Hereditary** (*her-i-ta'-i-er-ee*) [*heres*, an heir]. Acquired by inheritance. **H. Disease**, one transmitted from parent to offspring. **H. Parts**. See *Determinate*. **H. Syphilis**. See *Syphilis*.

**Heredity** (*her-i-ta'-i-ty*) [*hereditas*, heredity]. The transmission of the transmission of physical or mental qualities or tendencies from ancestor to offspring. Darwin's Theory of **Heredity**, or the **Hypothesis of Pangenesis**, supposes that each of the different cells of the body gives off minute *Plasmidules* of *Ektocyt*, or germinal particles, that are capable of reproducing their kind, and which are included in and constitute the germ-cell, and thus reproduce all of the peculiarities of the original organism. Weissmann's Theory of the Continuity or "Immortality" of Germ-plasma, as developed from Nussbaum's proposition that germ substance is directly abstracted from the developing organism and preserved, without essential alteration, to become the germinal rise to sexual elements,

the germ-substance of another generation, by the corollary that the whole nature of the animal or plant depends upon its germinal substance, and that the resemblance of the offspring to the parent is due to every gonoblast containing some germinal matter. According to Nussbaum and Weissmann the cells of the embryo are separated into two kinds: (1) The *germ-cells*, which become the sexual elements; (2) The *somatic cells* or *body-cells*, used as building-material (*Somatoplasm*) of the individual. Kölliker and others have demonstrated that no sharp distinction exists between germ-cells and somatic cells, so that speculations based on such assumed difference necessarily fall to the ground. **Nægele's Theory of Idioplasm and Nutritive Plasma**, is a definite theory of germinal continuity; he assumes the formative force to reside in a specific material substratum, i. e., *idioplasm*—essentially identical with Weissmann's germ-plasma. Minot assumes idioplasm to be the *nuclear substance*, chromatin, the essential factor in the function of heredity, and the nucleus, therefore, the organ of hereditary transmission.

**De Vries' Theory of Intracellular Pangenesis**, suggests that the nuclear substance of the germ plasma is composed of minute particles, *Pangenes*, not cells, but the bearers of the properties of the cells. There are also in the nucleus *Nuclear Rods*, called also *Idants*, and *Chromatin Rods*, which are built up of a series of ancestral plasmas, called *Ids*, each representing "an individuality." The doubling and multiplication of these idants prior to fertilization is in the interest of variety, or variation of form and character of the subsequent individual. This theory claims the same independence for all constituent parts of the cell-body as Weissmann claimed for those of the nucleus. The entire cell is called the *Protoplast*, and its various living, independent parts are called *Pangenes*. The cell is thus likened to a compound organism or colony.

**Hering's Experiment**. A delicate test of stereoscopic vision in which the perception of degrees of depth is tested by means of falling bodies, seen through a long tube. **H.'s Theory**. See *Color-sensation*.

**Hermann's Difference-theory**. See *Difference*. **H.'s Theory**, a theory as to the causation of muscular contraction; he claims that the formation of carbonic anhydrid on contraction is not simply due to oxidation, but rather to the decomposition of inogen, with the formation of certain simpler products, of which carbonic anhydrid is one, and sarcolactic acid and myosin the others.

**Hermaphroditism**, or **Hermaphroditism** (*her-maf'-ro-dizm*, *her-maf'-ro-dit-izm*) [*Ἑρμῆς*, Mercury; *Ἀφροδίτη*, Venus]. The co-existence in a single individual of completely developed ovaries and testicles, or of at least one of each gland. **H., Bilateral**, an ovary and a testicle on each side. **H., Complex**, a rare instance of hermaphroditism in which there are present both the internal and external organs of either sex. **H., Double**. Same as *H., Complex*. **H., Lateral**, an instance in which male organs (especially a testicle) are more or less developed on one side, and female organs (especially an ovary) on the opposite side. **H., Protandrous**, applied to the phenomenon as exhibited by most hermaphrodite platode worms, of developing the male sexual products before the female. **H., Spurious**, doubtful, but not double, sex. **H., Transverse**, an instance in which the external organs indicate the one sex, and the internal the opposite. **H., Unilateral**, on one side an ovary and a testicle, on the other an ovary or a testicle. **H., Vertical**. Same as *H., Complex*.

**Hermaphrodite** (*her-maf'-ro-dit*) [*Ἑρμῆς*, Mercury]:

'Αφροδίτη, Venus]. An individual affected with hermaphroditism, *q. v.*; usually the condition is due to some congenital malformation of the genital organs, such as epispadias, hypospadias, cleft of the scrotum, etc., that makes the determination of sex somewhat doubtful. For varieties, see *Hermaphroditism*.

**Hermaphroditic** (*her-maf-ro-dit'-ik*) [Ἑρμης, Mercury; 'Αφροδίτη, Venus]. Pertaining to hermaphroditism, *q. v.* See also *Teratism*.

**Hermaphroditism** (*her-maf'-ro-dit-izm*). Same as *Hermaphroditism*.

**Hermetic, Hermetical** (*her-met'-ik, her-met'-ik-al*) [Ἑρμης, the god Mercury, the reputed founder of alchemy]. Pertaining to chemistry. Also, having resistance to chemic action. Also, protected from exposure to air. **H. Medicine**, alchemistic or spagyric practice.

**H. Sealing**, the closure of an outlet by cementation or fusion, so that it is impervious to air. Also, the closing or covering of a wound by impervious dressings.

**Hermodyctyl** (*her-mo-dak'-til*) [Ἑρμης, Mercury; δακτύλος, finger]. The root or bulb of *Colchicum variegatum*, or *C. autumnale*; also of *Iris tuberosa*. It was formerly prized in medicine, but is now little used, except in India. Unof.

**Hernia** (*her'-ne-ah*) [*hernia*, from ἔρως, sprout]. A tumor formed by the protrusion of the contents of a cavity (usually the abdominal) through its wall. Hernias may be called after their locality, *Epigastric, Femoral, Inguinal, Perineal, Scrotal, Umbilical*, etc.; according to their condition, *Encysted, Reducible, Strangulated, Purulent*, etc.; according to their contents, *Cerebral, Intestinal, Omental, Vesical*, etc.; or, lastly, according to their origin, *Acquired, Congenital, Infantile*, etc. **H., Abdominal**, a protrusion of a portion of the abdominal viscera through some portion of the parietes. **H., Bèclard's**, a hernia through the saphenous opening. **H., Birkett's**, a hernia of the synovial membrane of a joint, following laceration of the capsular ligament. **H. of the Bladder**, the protrusion of a part of the bladder through one of the openings of the abdominal cavity, viz.: the femoral ring, or external adominal ring; or it may form part of a ventral hernia after celiotomy or injury, or it may take place through an opening in the floor of the pelvis; the term was also formerly applied to cystocele, *q. v.* **H. of Brain**. See *Fungus cerebri*. **H., Bruggiser's**. Same as *H., Properitoneal*. **H., Bursal**. Same as *H., Birkett's*. **H. carnososa**. Synonym of *Elephantiasis arabum*. **H., Cecal**, a hernia containing the cecum (with or without other parts of the bowel). **H. cerebri**. See *Fungus cerebri*. **H., Chronic**, an old hernia. **H. of Cloquet**. See *H., Pectineal-crural* and *Diseases, Table of*. **H., Complete**, a hernia in which the sac and its contents have passed the hernial orifice. **H., Congenital**, a form of indirect inguinal hernia in which the vaginal process of the peritoneum having remained patulous, the bowel descends at once into the scrotum, in direct contact with the testicle. See also *H. of the Cord*. **H., Cooper's**, a variety of femoral hernia with a diverticulum through the superficial fascia. See, also, *Diseases, Table of*. **H. of the Cord**, a congenital condition resulting from arrest of development of the lateral plates, with persistence of the omphalic duct. If the latter does not wither away, the fetal intestines are drawn out into the cord, giving rise to congenital umbilical hernia. **H., Crural**. See *H., Femoral*. **H., Cruro-properitoneal**, a variety in which an additional sac exists between the peritoneum and abdominal wall, in the cellular tissue of the pelvis, and at the side of the bladder. **H., Cystic**. Same as *Cystocele, q. v.* **H., Dia-**

**phragmatic**, a protrusion of a portion of some of the abdominal viscera into the thorax, through a congenital defect in the diaphragm, or through a dilatation or laceration of one of the natural openings. **H., Direct Inguinal**. See *H., Inguinal, Direct*. **H., Dorsal**. Synonym of *H., Lumbar*. **H., Encysted** (of *Cooper*); this form occurs when the ventral orifice closes, but the tunica vaginalis remains patulous, allowing the hernia to descend within the latter, pushing before it the thin septum. **H., Epigastric**, a hernia in the linea alba, between the ensiform cartilage and the umbilicus. **H., External**, one appearing upon the external surface of the body. **H., Femoral**, a protrusion of the abdominal contents through the femoral canal, the tumor appearing on the upper inner aspect of the thigh, below Poupart's ligament. **H. of the Foramen ovale**. See *H., Obturator*. **H. into the Foramen of Winslow**, a lodgment of a portion of intestine in the foramen of Winslow. **H., Funicular**, a hernia into the umbilical cord. See *H., Infantile*. **H., Gastric**. See *Gastrocele*. **H., Goyrand's** or *Gourand's*. See *H., Inguino-interstitial*. **H., Guttural**. Synonym of *Goiter*. **H. of Hesselbach**, a femoral hernia with a diverticulum through the cribiform fascia, the hernia presenting a lobulated appearance. See, also, *Diseases, Table of*. **H. of Holthouse**. See *H., Inguino-crural*. **H., Humoral**. Synonym of *Epididymitis*, or *Svelled Testicle*. **H., Incarcerated**, an old irreducible hernia which has become occluded by the accumulation of gas, feces, or undigested food, thus causing obstruction of the bowels. **H., Incomplete**, one that has not entirely passed through the hernial orifice. **H., Infantile**, that form of direct inguinal hernia that occurs when the funicular portion of the vaginal process of peritoneum has remained patulous. **H., Infantile** (of *Hey*). See *H., Encysted*. **H., Hey's**. See *H., Encysted*. **H., Infrapubic**. Same as *H., Obturator*. **H., Inguinal**, a hernia occupying wholly, or in part, the inguinal canal. **H., Inguinal, Direct**, a protrusion of the abdominal viscera through the parietes at the site of the external abdominal ring, without having traversed the inguinal canal. **H., Inguinal, External**. See *H., Inguinal, Indirect*. **H., Inguinal, Indirect**, one in which the protrusion occurs at the internal ring, and passes along the inguinal canal. **H., Inguinal, Internal**. See *H., Inguinal, Direct*. **H., Inguinal, Oblique**. See *H., Inguinal, Indirect*. **H., Inguino-crural**, or *H. of Holthouse*, a variety of suddenly-developed oblique inguinal hernia, in which, owing to the non-descent of the testicle, or to other causes, the hernia protrudes outward along the fold of the groin. **H., Inguino-interstitial**, an incomplete inguinal hernia. **H., Inguino-labial**, a variety of oblique inguinal hernia in the female, corresponding to the inguino-scrotal hernia of the male. **H., Inguino-properitoneal**, or *H. of Krönlein*, a hernia, with a prolongation of the hernial sac in various directions, within the abdominal walls. **H., Inguino-scrotal**, the common form of oblique inguinal hernia in men past middle life. **H., Intermuscular**. Same as *H., Inguino-properitoneal*. **H., Interparietal**. Same as *H., Inguino-properitoneal*. **H., Invertebrate**. See *H., Chronic*. **H. of Iris**, a prolapse of a portion of the iris after iridectomy, trauma, etc. **H., Irreducible**; a hernia is called irreducible when the protruded viscera cannot be returned to the abdomen by manipulation, with complete disappearance of the symptoms. **H., Ischio-rectal**. Same as *H., Perineal*. **H., Ischiatic**, a protrusion of the bowel through the great sacro-sciatic foramen. **H.-knife**, a probe-pointed knife for incising the constriction of a hernial sac. **H. of**

Krönlein. See *H.*, *Inguinal*, or *Acute*. *H.*, Labial, a protrusion of the bowel between the vagina and the labia of the labium into a tumourous *H.* of Laugier, a femoral hernia through Laugier's ligament. See, also, *Phrenic*, *Table of*. *H.* of Littre, a hernia of the bowel in which only a portion of the hernia is contained in the femoral sheath. *Table of*, *Phrenic*, *Phrenic*, *Phrenic*. *H.* of the Liver. See *Acute*. *H.*, Lumbar, a pro-

trusion at which the fascia is deficient. *H.*, Obstructed. See *H.*, *Incarcerated*. *H.*, Obturator, a protrusion of bowel through the obturator foramen. *H.*, Omental, a hernia containing omentum. This condition is also called *Epiplocele*, *q. v.* *H.* of Ovary, a hernia including ovary, wholly or in part. *H.*, Parainguinal. Same as *H.*, *Properitoneal*. *H.* of Partridge, a femoral hernia, external to the femoral vessels. See, also, *Diseases*, *Table of*. *H.*, Pectineal-

DIRECT INGUINAL HERNIA

FEMORAL HERNIA

trusion of the intestine through Petit's triangle—a space bounded by the external oblique and latissimus muscles and the cost of the diaphragm. *H.* of the Lung. See *Phrenic*. *H.*, Malgaigne's. Same as *H.*, *Scrotal*. *H.*, Mesenteric of Cooper; the passage of a portion of the intestine, an opening in the mesentery. *H.* of Muscles; occasionally, owing to imperfect healing of the deep tissue after wounds, a limited protrusion of the muscle occurs at the point

crural, or *H.* of Cloquet, a variety in which, after passing the femoral ring, the hernia turns within and behind the femoral vessels, resting on the pectineus muscle. *H.*, Perineal, a protrusion of the abdominal contents between the fibers of the levator ani muscle, in front of or to one side of the anus. *H.*, Petit's. Same as *H.*, *Lumbar*. *H.*, Pharyngeal. See *Pharyngocoele*. *H.*, Phrenic. Same as *H.*, *Diaphragmatic*. *H.*, Pleural. See *Pleurocele*. *H.*, Properitoneal, a hernia occupying a position between the planes of the abdominal wall, in front of the parietal peritoneum. *H.*, Pudendal. Same as *H.*, *Labial*. *H.*, Reducible, one that may be returned or reduced by manipulation. *H.*, Retroperitoneal; in this form of hernia the small intestine lodges in the fossa duodeno-jejunalis. *H.*, Sciatic. Same as *H.*, *Ischiatic*. *H.*, Scrotal, that form of inguinal hernia in which the protrusion has entered the scrotum. *H.* of the Spleen. See *Splenocoele*. *H.* of the Stomach. Same as *Gastrocele*. *H.*, Strangulated; a hernia is said to be strangulated when it is so tightly constricted at its neck as to interfere with its return, with the circulation of blood, and the passage of feces. *H.*, Synovial. See *H.*, *Birkett's*. *H.* of Testis, a protrusion of the seminiferous

tubules through a fistulous opening following abscess of the testicle. **H. of the Tongue.** See *Glossocle*. **H. of the Trachea.** See *Tracheocle*. **H., Thyroid.** See *H., Obturator*. **H., Umbilical,** a protrusion of the abdominal contents through the umbilicus. **H. of the Uterus.** See *Hysterocele*. **H., Vaginal,** a protrusion of the abdominal viscera between the uterus and rectum, forming a tumor on the vaginal wall. **H., Velpeau's,** a femoral hernia in front of the femoral vessels. **H., Ventral,** the name applied to protrusions of the abdominal contents through the abdominal walls in situations not usually subject to hernie; e.g., not at the abdominal rings or the umbilicus. **H., Vesical.** See *H. of the Bladder*. **Hernial** (*her'-ne-al*) [*hernia*, a rupture]. Pertaining to hernia. **H. Sac,** the diverticulum of the peritoneum that accompanies a hernia. **Hernio-celiotomy** (*her'-ne-o-se-le-ot'-o-me*) [*hernia*, a rupture; *κοιλία*, belly]. A abdominal section for the relief of hernia. **Hernio-enterotomy** (*her'-ne-o-en-ter-ot'-o-me*) [*hernia*, a rupture; *έντερον*, bowel; *τομή*, a cutting]. Herniotomy combined with enterotomy. **Hernio-laparotomy** (*her'-ne-o-lap-ar-ot'-o-me*) [*hernia*, a rupture; *λαπάρα*, the flank; *τομή*, a cutting]. Same as *Hernio-celiotomy*. **Herniology** (*her-ne-ol'-o-je*) [*hernia*, hernia; *λόγος*, science]. That department of surgery which treats of the causes, diagnosis, and treatment of hernia. **Herniopuncture** (*her-ne-o-punk'-chūr*) [*hernia*, hernia; *punctura*, a pricking]. The puncture of a hernia. **Herniotome** (*her'-ne-o-tom*) [*hernia*, hernia; *τομός*, cutting]. A hernia-knife. **Herniotomy** (*her-ne-ot'-o-me*) [*hernia*, hernia; *τέμνειν*, to cut]. Operation for the relief of hernia by section of the constriction. **Heroic** (*he-ro'-ik*) [*ήρωας*, a hero]. Bold or daring; rash or unusually severe; as *heroic* treatment or measures. **Herophilus, Torcular of.** See *Torcular*. **Herpes** (*her'-pēs*) [*έρπης*; *έρπειν*, to creep]. An acute inflammatory affection, characterized by the development of groups of vesicles on a patch of inflamed skin or mucous membrane. **H. catarrhalis**, herpetic fever; a form of herpes accompanying the onset or crisis of acute febrile disorders, and frequently following a rigor, of which it may be the sole sequel. It is most common in spring and autumn. Its forms are *H. facialis* and *H. progenerialis*. **H. circinatus.** See *Tinea circinata*. **H. circinatus bullosus.** See *Hydroa herpetiforme*. **H. desquamans.** See *Tinea imbricata*. **H. esthiomenos.** See *Lupus*. **H. facialis**, *Herpes labialis*; *Herpes febrilis*; *Hydroa febrile*; an acute, non-contagious, inflammatory disorder of the skin that appears in the form of one or more groups of vesicles. It is commonly called *fever-blisters*. Its usual seats are the lips, angles of the mouth, and the face, generally below the forehead. Owing to its relation to digestive derangements the ulcers are often termed "*dyspeptic ulcers*." **H. febrilis.** See *H. facialis*. **H. gestationis.** See *Hydroa herpetiforme*. **H. iris**, a form of erythema in which a vesicle is seated on an erythematous base. It is usually seen on the backs of the hands and feet. **H. labialis.** See *H. facialis*. **H. miliaris.** Synonym of *Eczema*. **H. phlyctenodes**, Willan's name for *Herpes zoster* occurring elsewhere than on the trunk. **H. preputialis.** See *H. progenerialis*. **H. progenerialis**, *Herpes preputialis*; a form of *H. simplex*, in which vesicles occur upon the glans and prepuce, from the size of a pin's head to that of a small pea. They number from two or three to a dozen. The condition is most common in males.

**H. pyæmicus.** See *Impetigo herpetiformis*. **H. simplex.** A synonym of *H. catarrhalis*. **H. tonsurans.** See *Tinea tonsurans*. **H. tonsurans maculosus.** See *Pityriasis rosea*. **H. zoster**, *Zoster*; *Zona*; *Shingles*; *Ignis sacer*; an acute inflammatory disease of the skin, which consists of grouped vesicles on a reddened base, the lesions being distributed in relation to the course of the cutaneous nerves, and, as a rule, unilateral. They are usually seen in the course of the intercostal nerves, but may follow the course of any nerve. The outbreak of the eruption is usually preceded by severe neuralgic pain. The condition occurs most frequently in young people and in the autumn and spring of the year. **H. z. ophthalmicus**, following the course of the ophthalmic nerve.

**Herpetic** (*her-pet'-ik*) [*έρπηγ*, herpes]. Pertaining to herpes. **H. Bridge.** See *Bridge*. **H. Fever.** See *Herpes catarrhalis*. **H. Sore-throat.** See *Tonillitis, Herpetic*.

**Herpetiform** (*her-pet'-if-orm*) [*έρπης*, herpes; *forma*, form]. Having a likeness to herpes.

**Herpetism** (*her'-pet-izm*) [*έρπηγ*, herpes]. The herpetic diathesis; a constitutional predisposition to herpes.

**Herpetography** (*her-pet og'-ra-fe*). Same as *Herpetology*.

**Herpetoid** (*her'-pet-oid*) [*έρπετον*, a reptile; *ειδος*, likeness]. In biology, resembling a reptile.

**Herpetology** (*her-pet-ol'-o-je*) [*έρπηγ*, herpes; *λόγος*, treatise]. The science of skin-diseases, especially those of an herpetic nature.

**Herpetology** (*her-pet-ol'-o-je*) [*έρπετον*, a reptile; *λέγειν*, to speak]. The classified knowledge of reptiles.

**Hertwig's Theory.** A theory of immunity founded upon the chemotactic action of certain chemic substances. The fact of cardinal importance in this theory is that negative chemotropism may, under certain conditions, become positive.

**Hesperetic Acid** (*hes-per-et-in'-ik*). See *Acid*.

**Hesperidin** (*hes-per'-id in*) [*Εσπερος*, Hesperus].  $C_{22}H_{26}O_{12}$ . A glucosid present in the unripe fruit of oranges, lemons, etc. It separates from alcohol in fine needles, and melts at  $251^{\circ} C$ .

**Hesperidium** (*hes-per-id'-e-um*) [*Εσπερος*, Hesperus (in allusion to the golden apples of the Hesperides); *πλ.*, *Hesperidia*]. In biology, an orange-like fruit, having a succulent flesh covered with a leathery rind; a variety of berry.

**Hesse's Apparatus.** An apparatus for air-analysis.

**Hesselbach's Hernia.** See *Hernia*, and *Diseases, Table of*. **H.'s Triangle.** See *Triangles, Table of*.

**Hessian Crucible** (*hesh'-yan kru'-sib-l*). A crucible made of fine clay and sand, and used for melting gold, silver, and their alloys in the manufacture of gold and silver plates and solders. **H. Purple.** See *Pigments, Conspectus of*. **H. Violet**, and **H. Yellow.** See *Pigments, Conspectus of*.

**Hesthogenous** (*hes-thoj'-en-us*) [*έσθος*, dress, clothing; *γόρος*, offspring]. In biology, applied to birds that are hatched with a covering of down; *ptilopedic*, opposed to *gymnogenous*, *psilopedic*.

**Heteracanth** (*het'-er-ak-anth*) [*έτερος*, other; *ἀκανθα*, spine]. In biology, applied to fishes in which the dorsal and anal fin-spines are asymmetric.

**Heteracephalous** (*het-er-a-sef'-al us*) [*έτερος*, other; *κεφαλή*, head]. See *Heterocephalus*.

**Heteracmy** (*het-er-ak'-me*) [*έτερος*, other, different; *ἀκμή*, prime, maturity]. In biology, applied to plants in which cross-fertilization is secured by the heterochronous maturing of the stamens and pistils.

**Heteradelph** (*het'-er-ad-elf*). See *Heteradelphus*.

**Heteradelphia** (*het-er-ad-elf-fe-ah*) [*έτερος*, other; *ἀδελφός*, brother]. Heteradelphous teratism.

**Heteradelphous** (*het-er-a-del'f-us*) [*ἑτερος*, other; *ἀδελφός*, brother]. Kinetogenic heteradelphous, or to an actinote and its parasite.

**Heteradelphus** (*het-er-a-del'f-us*) [*ἑτερος*, other; *ἀδελφός*, brother]. A paired two-member, consisting of an actinote with an attached parasite, the acal of the latter being absent.

**Heteradenia** (*het-er-a-den'i-a*) [*ἑτερος*, other; *ἀδήρ*, gaster]. 1. Normal glandular structure occurring in a part, mesodermot provided with glands. 2. Glandular structure of a part, different from the normal type.

**Heteradentic** (*het-er-a-den't-ik*) [*ἑτερος*, other; *ἀδὴρ*, tooth]. Pertaining to or consisting of tissue that is mixed normal glandular tissue, though essentially heteradenic.

**Heteradenoma** (*het-er-a-den'o-ma*) [*ἑτερος*, other; *ἀδήρ*, gaster; *ἄνω*, tumor; *μα*, *Heteradenoma*]. A tumor formed of heteradenic tissue.

**Heteralbus** (*het-er-a-l'bus*) [*ἑτερος*, other; *ἄλβος*, a disc]. A double structure in which the parasite is very inconspicuously inserted into a head—and inserted at a distance from the umbilicus of its host, and with no direct connection with the umbilical cord of the latter.

**Heterauxesis** (*het-er-aux'e-sis*) [*ἑτερος*, other, different; *αὐξήσις*, increase]. In biology, any unsymmetric growth, normal or abnormal.

**Heterocious** (*het-er-o-sh'us*) [*ἑτερος*, other, different; *αἰμα*, blood]. In biology, parasitic upon different hosts at different stages of growth.

**Hetero-** (*het-er-o-*) [*ἑτερος*, other]. A Greek prefix denoting diversity or difference.

**Hetero-albumose** (*het-er-o-al'b-u-m'ose*). See *Albumose*.

**Hetero-autoplasty** (*het-er-o-ot'pl-as't-ē*) [*ἑτερος*, other; *αὐτός*, self; *πλαστέω*, to form]. Grafting of cells from one person upon the body of another.

**Heterobiphorid** (*het-er-o-bif'or-id*) [*ἑτερος*, other, different; *βίος*, a manner of living, from *βίος*, life; *φύσις*, nature]. In biology, Weissmann's name for a primitive organism, the constituent biophores of which have been distinguished, in connection with a division of order, into structural or various ways to form the body of the organism. See *Heterobiphorid*.

**Heteroblastic** (*het-er-o-blas't-ik*) [*ἑτερος*, other, different; *βλαστός*, germ, bud]. In biology, arising from a difference of structural nature.

**Heterocarpus** (*het-er-o-kar'p-us*) [*ἑτερος*, other, different; *καρπός*, fruit]. In biology, having more than one kind of fruit.

**Heterocele** (*het-er-o-sel'ē*) [*ἑτερος*, other; *κήλη*, hernia]. A tumor arising at some prolapsed organ, as in a hernia.

**Heterocephalous** (*het-er-o-sel'ē-us*) [*ἑτερος*, other, different; *κεφαλή*, head]. In biology, applied to glands having two or more heads of more than one kind, as *multicellular gland*.

**Heterocephalus** (*het-er-o-sel'ē-us*) [*ἑτερος*, other; *κεφαλή*, the head]. A fetal monstrosity with two heads.

**Heterocephal** (*het-er-o-sel'ē-us*) [*ἑτερος*, other; *κήλη*, hernia]. In anatomy, hernia in a symmetrical or unequally divided hernia.

**Heterocercus** (*het-er-o-sel'ē-us*) [*ἑτερος*, other, different; *κεφαλή*, head]. In biology, applied to a group of insects, the members of which vary as to the form of their antennae.

**Heterochromia** (*het-er-o-krom'i-a*) [*ἑτερος*, other; *χρῶμα*, color]. In biology, having different colors.

**Heterochronia** (*het-er-o-kron'i-a*) [*ἑτερος*, other;

*χρῶμα*, time]. The production of a structure or the occurrence of a phenomenon at an abnormal period of time.

**Heterochronic, Heterochronous** (*het-er-o-kron'ik*, *het-er-ak'ron-us*) [*ἑτερος*, other; *χρόνος*, time]. Irregular in occurrence. Occurring at different times, or at other than the proper time.

**Heterochrony** (*het-er-ak'ron-ē*) [*ἑτερος*, other; *χρόνος*, time]. In biology, out of order as to time, as organs, organisms, or hereditary traits that occur out of the true ontogenetic sequence. Cf. *Homeochronous*.

**Heterocline** (*het'et-er-o-klīn*) [*ἑτερος*, other, different; *κλίμη*, bed]. Same as *Heteroccephalus*.

**Heterocrania** (*het-er-o-kra'ne-ah*) [*ἑτερος*, other; *κράνιον*, skull]. Headache involving but one side of the head.

**Heterocyst** (*het'et-er-o-sist*) [*ἑτερος*, other, different; *κύστις*, a bag, pouch]. In biology, applied to individual cells in the moniliform rows of roundish, chlorophyll-bearing cells of the *Nostocaceae*, which, apparently without any definite law, vary in size and color from those among which they are intercalated; a limiting-cell.

**Heterodactyl** (*het-er-o-dak't-il*) [*ἑτερος*, other; *δάκτυλος*, a finger or toe]. An animal in which the digits are in some way peculiar or irregular.

**Heterodermotrophy** (*het-er-o-der-mot'ro-fē*) [*ἑτερος*, other; *δέρμα*, skin; *τροφή*, nutrition]. Disordered or perverted nutrition of the skin.

**Heterodont** (*het'et-er-o-dont*) [*ἑτερος*, different; *ὀδόντις* (*ὀδοντ*), tooth]. In biology, having more than one sort of teeth, as incisors, canines, molars; the opposite of *Homodont*.

**Heterodromous** (*het-er-od'ro-mus*) [*ἑτερος*, other; *δραμεῖν*, to run]. In biology, growing or turning in opposite directions, as a tendril that coils first one way and then the other.

**Heterodromy** (*het-er-od'ro-me*) [*ἑτερος*, other; *δρόμος*, a running]. In biology, a change in the direction of the spiral in the leaves of the branches and stem. Same as *Antidromy*.

**Heterodymus** (*het-er-od'im-us*) [*ἑτερος*, other; *δίδυμος*, twin]. A double monster, the accessory part being but an imperfect head, with a neck and thorax by which it is implanted in the anterior abdominal wall of its host.

**Heterogamous** (*het-er-og'g-am-us*) [*ἑτερος*, other; *γάμος*, marriage]. In biology, bearing male and female flowers in the same inflorescence or plant.

**Heterogamy** (*het-er-og'g-am-e*) [*ἑτερος*, other; *γάμος*, marriage]. In biology, a term applied to different forms of sexual development arising from difference in nutrition or environment. It is typified in the *Phylloxera vastatrix*, the development of which is far more complex when the insects are bred under ground, on the roots of the grape-vine, compared with that when the insects breed upon the leaves of the vine. In the latter case the successive generations consist of apterous, oviparous females only; in the former the cycle consists of male insects, apterous females for perpetuating, and winged females for spreading the species.

**Heterogeneity** (*het-er-o-jen'e-it-ē*) [*ἑτερος*, other; *γένος*, kind]. The condition or quality of being heterogeneous.

**Heterogeneous** (*het-er-o-jen'e-us*) [*ἑτερος*, other; *γένος*, kind]. Differing in kind or nature; composed of different substances; not homogeneous.

**Heterogenesis** (*het-er-o-jen'ē-sis*) [*ἑτερος*, different; *γένεσις*, generation]. 1. Organic deviation in the situation or character of organs, etc. 2. In biology, a mode of biogenesis, by which the living parent gives rise to offspring that pass through totally different

- series of states from those exhibited by the parents, and do not return into the cycle of the parents (Iluxley). Milne-Edwards has substituted the word *Xenogenesis*, *q. v.*
- Heterogenetic** (*het-er-o-jen-et'-ik*) [*ἑτερος*, other; *γένεσις*, generation]. Pertaining to heterogenesis.
- Heterogenist** (*het-er-og'-en-ist*). See *Abiogenesis*.
- Heterogeny** (*het-er-og'-en-e*). Same as *Heterogenesis*.
- Heterogonous** (*het-er-og'-o-nus*) [*ἑτερος*, other; *γόνος*, generation]. In biology, having several kinds of flowers as regards the length of the stamens and styles; hetero-styled. Cf. *Dimorphous*, *Trimorphous*.
- Heterogony** (*het-er-og'-o-ne*) [*ἑτερος*, other; *γόνος*, generation]. A form of reproduction that consists in the occurrence, in the cycle of development, of individuals differing in structure from the parent forms and existing under special conditions of nutrition.
- Heterogynous** (*het-er-og'-in-us*) [*ἑτερος*, other, different; *γυνή*, female]. In biology, applied to certain groups of insects among which there are two kinds of females, one sexually perfect, the other not.
- Heteroinfection** (*het-er-o-in-fek'-shun*) [*ἑτερος*, other; *inficere*, to taint]. 1. Infection transmitted by a person who is himself not infected. 2. Infection of any organism by a poison not produced within itself; opposed to auto-infection.
- Heteroinoculation** (*het-er-o-in-ok-u-lat'-shun*) [*ἑτερος*, other; *inoculatio*, an ingrafting]. Inoculation of one person by another.
- Heterokinesis** (*het-er-o-kin-et'-sis*) [*ἑτερος*, different; *κινεῖν*, to move]. In biology, Weismann's term for that kind of nuclear division in which the two daughter-nuclei contain different kinds of idioplasm, *i. e.*, nuclear division depending upon a heterogeneous grouping of the primary constituents and resulting in parts containing dissimilar hereditary tendencies. Cf. *Homeokinesis*.
- Heterolalia** (*het-er-o-lal'-le-ah*) [*ἑτερος*, other; *λαλέω*, talk]. The utterance of words other than those intended by the speaker; heterophemy.
- Heterologous** (*het-er-ol'-o-gus*) [*ἑτερος*, other; *λόγος*, relation]. Differing in structure or form from the normal. **H. Series**, a series derived from each other by chemic metamorphoses. **H. Tissues**, morbid tissues that have no structural relation with the normal tissues of the part. **H. Tumors**, tumors constituted of a different tissue from that of the part in or on which they are situated.
- Heterology** (*het-er-ol'-o-je*) [*ἑτερος*, other; *λόγος*, relation]. Abnormality in nature, form, or structure; development of an abnormal structure.
- Heterolopia, Heterology** (*het-er-o-lol'-pe-ah*, *het-er-ol'-o-pe*) [*ἑτερος*, other; *λοπός*, scale]. The presence of abnormal scales, crusts, or scabs.
- Heteromastigata** (*het-er-o-mas'-tig-at*) [*ἑτερος*, other, different; *μάστις*, a whip]. In biology, having more than one kind of flagellum.
- Heteromerous** (*het-er-om'-er-us*) [*ἑτερος*, other; *μέρος*, a part]. In biology, having homologous parts diversely composed.
- Heteromorphism** (*het-er-o-mor'-fiz-m*) [*ἑτερος*, other; *μορφή*, form]. A condition marked by difference in form, as compared with the normal form. In chemistry, the property of crystallizing in different forms. In biology: 1. A state of deviation from a type or norm. 2. Exhibiting different forms at different stages in the life-history.
- Heteromorphosis** (*het-er-o-mor-fo'-sis*) [*ἑτερος*, other; *μόρφωσις*, formation]. Malformation or deformity; any disease characterized by deformity.
- Heteromorphous** (*het-er-o-mor'-fius*) [*ἑτερος*, other; *μορφή*, form]. Differing from the normal in form.
- Heteronephrotrophy** (*het-er-o-nef-rol'-ro-fē*) [*ἑτερος*, other; *νεφρός*, kidney; *τροφή*, nutrition]. Malnutrition or degeneration of any part of the kidney.
- Heteronomous** (*het-er-on'-o-mus*) [*ἑτερος*, other; *νόμος*, law]. In biology, diversification in any series or set of morphologically related structures through specialization.
- Heteronomy** (*het-er-on'-o-me*) [*ἑτερος*, other; *νόμος*, law]. 1. Subordination to a law of adaptive modification. 2. The presence of segmentation. Cf. *Autonomy* and *Homonomy*.
- Heteronym** (*het'-er-o-nim*) [*ἑτερος*, other; *ὄνομα*, name]. An unrelated synonym; a name in one language that corresponds to the same name in another language, but has no near derivative relationship thereto.
- Heteronymous** (*het-er-on'-im-us*) [*ἑτερος*, other; *ὄνομα*, name]. Not homonymous; applied to crossed double visual images, such as are seen when there is a relative divergence of the eyes.
- Heteronymy** (*het-er-on'-im-e*) [*ἑτερος*, other; *ὄνομα*, name]. A system of polyglot nomenclature in which exact synonyms are used in each language to represent corresponding but unrelated words in other languages; compare *paronymy*.
- Hetero-osteoplasty** (*het'-er-o-os'-te-o-plas-te*) [*ἑτερος*, other; *ὀστέον*, bone; *πλάσσειν*, to form]. The surgical grafting of bone, especially with a graft taken from a bone of one of the lower animals.
- Heteropagus** (*het-er-op'-ag-us*) [*ἑτερος*, other; *πηγνύναι*, to unite]. A monstrosity with normal head, upper and lower extremities, but with a parasite attached to the anterior abdominal wall. The parasite has a head and extremities.
- Heteropathic** (*het-er-o-path'-ik*) [*ἑτερος*, other; *πάθος*, disease]. Pertaining to or making use of heteropathy.
- Heteropathy** (*het-er-op'-ath-e*) [*ἑτερος*, other; *πάθος*, affection]. The treatment of a disease by inducing a different morbid condition to neutralize it. Abnormal reaction to stimulus or irritation.
- Heteropelmous** (*het-er-o-pel'-mus*) [*ἑτερος*, different; *πέλμα*, the sole of the foot]. In biology, applied to birds in which each of the flexor tendons of the sole of the foot splits into two.
- Heterophagous** (*het-er-off'-ag-us*) [*ἑτερος*, other, different; *φαγεῖν*, to eat]. In biology, applied to young animals that require to be fed by the parents; altricial.
- Heterophemism** (*het-er-off'-em-izm*). See *Heterophemy*.
- Heterophemy** (*het-er-off'-em-e*) [*ἑτερος*, other; *φήμη*, utterance]. The utterance of one thing when another is intended; heterolalia.
- Heterophonia** (*het-er-o-fo'-ne-ah*) [*ἑτερος*, other; *φωνή*, voice]. Abnormal quality or perversion of the voice.
- Heterophoralgia** (*het-er-o-for-al'-je-ah*) [*ἑτερος*, other; *φορβή*, tending; *ἄλγος*, pain]. Eye-strain or ocular pain caused by heterophoria.
- Heterophoria** (*het-er-o-fo'-re-ah*) [*ἑτερος*, different; *φορβή*, tending]. A tending of the visual lines in some other way than that of parallelism. It may be **Esophoria**, a tending of the lines inward; or **Exophoria**, outward; or **Hyperphoria**, a tending of the right or left visual line in a direction above its fellow; **Hyperesophoria**, a tending of the visual lines upward and inward; **Hyperexophoria**, upward and outward.
- Heterophoric** (*het-er-o-fo'-rik*) [*ἑτερος*, other; *φορβή*, tending]. Due to heterophoria.
- Heterophthongia** (*het-er-off'-thong'-e-ah*) [*ἑτερος*, other; *φθόγγος*, sound]. Synonym of *Ventriloquism*.
- Heterophyadic** (*het-er-o-fi-ad'-ik*) [*ἑτερος*, other, different; *οἰεσθαι*, to grow]. In biology, characterized by producing two kinds of stems, *e. g.*, one fertile, the succeeding one sterile.

**Heterophyllous** (*het-er-oh'fil-ah*) [*hetero*, other, different; *phyllos*, leaf]. In biology, producing more than one kind of leaves on the same stem, as in *Juncus roemerianus*, var. *heterophyllus*, or having the leaves different in the several segments of a stem.

**Heteroplasia** (*het-er-oh'pl-ah*) [*hetero*; other; *plasis*, shaping]. 1. Development of abnormal tissue; the product of a part where it does not normally belong, as tissue that may, or may not, be normal. 2. The gradual removal of the material of an engrafted part, and its replacement by material normal to the part in which it is engrafted.

**Heteroplasm** (*het-er-oh'pl-ah*) [*hetero*; other; *plasma*, something formed]. Heteroplastic material.

**Heteroplastic** (*het-er-oh'pl-ah*) [*hetero*, other; *plastikos*, to form]. 1. Relating to heteroplasia. 2. Differing in substance.

**Heteroplastid** (*het-er-oh'pl-ah*) [*hetero*, other; *plastid*, to form]. A surgical graft.

**Heteroplasty** (*het-er-oh'pl-ah*) [*hetero*, other; *plastia*, to form]. 1. and 2. Same as *Heteroplasia*, *q. v.* 3. Surgical grafting, especially of parts taken from another species.

**Heteroprosopus** (*het-er-oh'pro-suh*) [*hetero*, other; *prosopon*, face]. A fons with two faces; janus or janiform.

**Heteropsychology** (*het-er-oh'saik-oh'lo-jee*) [*hetero*, other; *psyché*, soul; *logos*, treatise]. The study or science of psychology, as based on facts other than those of our own subjective experiences.

**Heteropterous** (*het-er-oh'pt-er-us*) [*hetero*, other, different; *pteron*, wing]. In biology, having the wings composed of several distinct parts, as in the bugs.

**Heterorexia** (*het-er-oh'rek-ah*) [*hetero*, other; *hurexis*, desire]. Heterosis of the appetite.

**Heteroscopy** (*het-er-oh'sk-oh*) [*hetero*, other; *σκοπεῖν*, to examine]. Same as *Heteroscopy*.

**Heteromatous** (*het-er-oh'mat-us*) [*hetero*, other, different; *matos*, body]. In biology, having the body differently constructed, or otherwise varying from a type.

**Heteroporous** (*het-er-oh'por-us*) [*hetero*, other, different; *poros*, pore]. In biology, bearing spores of more than one kind, as *epithema* and *microspores*.

**Heterotropy** (*het-er-oh'tro-pee*) [*hetero*, other, different; *tropos*, a turning]. In biology, a reversal in the direction of growth, as in certain spiral shells.

**Heterostyled** (*het-er-oh'st-ayd*) [*hetero*, different; *στυλός*, a pillar, style]. See *Heterostylis*.

**Heterotaxia** (*het-er-oh'tak-ah*). See *Heterotaxis*.

**Heterotaxis** (*het-er-oh'tak-sis*) [*hetero*, other; *τάξις*, order]. The abnormal disposition or transposition of internal organs, a fault of organization occasionally seen in the human species, *anomaly viscerum*. The transposition is most commonly seen in the abdomen. There is no interference with nutrition or function by the abnormal arrangement of the parts. The opposite of *homotaxis*.

**Heterotopia** (*het-er-oh'toh-pee*) [*hetero*, other; *τοπία*, place]. 1. Any misplacement of normal tissue, especially a congenital malformation of the brain, in which masses of gray matter are found transplanted into the white matter. This condition is invariably associated with epilepsy. 2. The same as *Heterotaxis*. 3. In biology, a mode of excretion or change during growth, characterized by the transfer of cells from one part of the organism to the other.

**Heterotropic** (*het-er-oh'tro-pek*). See *Heterotropy*.

**Heterotropous** (*het-er-oh'tro-pus*) [*hetero*, other; *τροπος*, way]. Characterized by heterotopia; misplaced.

**Heterotropy** (*het-er-oh'tro-pee*). Same as *Heterotopia*.

**Heterotrophia**, or **Heterotrophy** (*het-er-oh'tro'f-ah*, or *het-er-oh'tro'fee*) [*hetero*, other; *τροφή*, sustenance].

Any perversion or disorder of nutrition, local or general. In biology, obtaining nourishment by some abnormal or unusual arrangement.

**Heterotropia** (*het-er-oh'tro'f-ah*). See *Strabismus*.

**Heterotropic** (*het-er-oh'tro'f-ik*) [*hetero*, other, different; *τροπος*, a turning]. In biology, applied to plants the different organs of which behave differently under the same form of irritation. Cf. *Anisotropic*.

**Heterotropous** (*het-er-oh'tro-pus*) [*hetero*, different; *τροπος*, turning]. In biology, applied to any organ or part which is turned in an unusual direction, as an embryo transverse to the axis of the seed; *amphitropous*.

**Heterotypic** (*het-er-oh'tip'ik*), **Heterotypical** (*het-er-oh'tip'ik-al*) [*hetero*, other; *τυπος*, pattern]. Applied to a monstrosity consisting of a well-developed fetus from which grows an immature secondary fetus.

**Heterotypus** (*het-er-oh'tip-us*) [*hetero*, different; *τύπος*, a type]. A double monster having the parasitic fetus hanging from the ventral wall of the principal subject.

**Heteroxanthin** (*het-er-oh-zan'thin*) [*hetero*, other; *ξανθος*, yellow],  $C_{40}H_{56}N_4O_6$ . A leukomaine isolated from urine in 1884. In composition it is methyl-xanthin, and it is intermediate between xanthin and paraxanthin or dimethyl-xanthin; it exists in the urine of man in the same proportion as para-xanthin. It occurs in larger amount in the urine of leukemic patients. It is crystalline, soluble in hot water, insoluble in alcohol and ether. It is thought by Solomon to have its origin in the kidney. Its physiologic action is not yet fully known. Xanthin, heteroxanthin, and paraxanthin form normally an homologous series of xanthin-bodies in the urine.

**Heubner's Disease**. Syphilitic disease of the cerebral arteries. See *Diseases*, *Table of*.

**Heuchera** (*hu'-k-er-ah*). See *Alum-root*.

**Heurteloup** (*hur'-tel-uhp*) [after Baron Heurteloup, the inventor]. An artificial leech or cupping-apparatus.

**Hewitt's Mixture**. A mixture used in treating chlorosis. It consists of compound spirit of ether, compound tincture of lavender, and aromatic spirit of ammonia, each 2 drams; water sufficient to make 2 ounces. Of this one dram is given every two or three hours.

**Hewson's Dressing**. An application for wounds, tumors, etc., consisting of dry earth containing about 50 per cent. of clay. **H.'s Experiments**, experiments made to prove that the blood-vessels exert a restraining influence on coagulation.

**Hexabasic** (*heks-ah-ba't-sik*) [*ἕξ*, six; *βάσις*, a base]. Replaceable by six basic atoms.

**Hexactinal** (*heks-ak'tin-al*) [*ἕξ*, six; *ἄκτις*, ray]. In biology, bearing six rays.

**Hexad** (*heks'ad*) [*ἕξ*, six; *δάκτυλος*, a finger]. In chemistry, an element the atoms of which have six times the saturating power or equivalence of the hydrogen atom.

**Hexadactylism** (*heks-ad-ak'til-izm*) [*ἕξ*, six; *δάκτυλος*, a finger]. Having six fingers or toes.

**Hexagynian** (*heks-aj-in'e-an*) [*ἕξ*, six; *γυνή*, female]. In biology, having six pistils or styles.

**Hexahydric Alcohols** (*heks-ah-hi'drik*). See *Alcohol*.

**Hexamerous** (*heks-am'er-us*) [*ἕξ*, six; *μέρος*, part]. In biology, having six parts, or the parts in sixes.

**Hexandrous** (*heks-an'drus*) [*ἕξ*, six; *ἄνθρωπος*, male]. In biology, having six stamens. It is also called *Hexandrous*, *Hexandrian*.

**Hexane** (*heks'an*) [*ἕξ*, six; *ἄνθρωπος*, male]. The sixth member of the paraffin series of hydrocarbons. It is a liquid, boiling at about 71° C., found in various natural oils.

**Hexapetalous** (*heks-ap-et'-al-us*) [ἑξ, six; πένταλον, a leaf]. In biology, having six petals.

**Hexaphyllous** (*heks-ap'il'-us*) [ἑξ, six; φύλλον, leaf]. In biology, having six leaves or leaflets.

**Hexapod** (*heks-ap'-od*) [ἑξ, six; πούς, foot]. In biology, having six feet, as the true insects.

**Hexapodan** (*heks-ap'-o-dan*). Same as *Hexapod*.

**Hexapterous** (*heks-ap'-ter-us*) [ἑξ, six; πτερόν, a wing]. In biology, having six wings or wing-like appendages.

**Hexastemonous** (*heks-as-tem'-o-nus*) [ἑξ, six; στήμων, warp, taken as stamen]. Same as *Hexandrous*.

**Hexastichous** (*heks-as'-tik-us*) [ἑξαστίχος, of six rows]. In biology, having the parts or organs arranged in six rows.

**Hexatomic** (*heks-at-om'-ik*) [ἑξάς, six; ἄτομος, an atom]. In chemistry, consisting of six atoms; also applied to atoms that are hexavalent, and to alcohols or other compounds having six replaceable hydrogen atoms.

**Hexavalent** (*heks-av'-al-ent*) [ἑξάς, six; valens, having power]. In chemistry, having the same saturating or combining-power as six hydrogen atoms, or a valence of six.

**Hexicology** (*heks-ik-ol'-o-je*). See *Hexiology*.

**Hexiology** (*heks-e-ol'-o-je*) [ἑξίς, habit; λογός, science]. The science of the relations of the organism to its environment.

**Hexoses** (*heks-ol'-sēz*) [ἑξάς, six]. The aldehyd or ketone derivatives of the hexahydric alcohols. They occur frequently in plants, especially in ripe fruits. They are formed by the hydrolytic decomposition of all disaccharids and polysaccharids when they are boiled with dilute acids, or acted upon by ferments. They possess feeble reducing-power. They precipitate cuprous oxid from warm alkaline cupric solutions, one molecule of hexose precipitating about five atoms of copper. This is the basis of the method for the volumetric estimation of glucose by means of Fehling's solution. When exposed to *Schizomycetes* the hexoses readily undergo fermentation. See *Carbohydrates*, *Table of*.

**Hexylamin** (*heks-il'-am in*). See *Caproylamin*.

**Hey's Hernia**. See *Hernia*, *Encysted*. **H.'s Ligament**. See *Ligament*.

**Hiation** (*hi-a'-shun*) [*hiare*, to gape]. The act of gaping or yawning. Cf. *Pandiculation*.

**Hiatus** (*hi-a'-tus*) [*hiare*, to gape]. A space or opening. Also, the vulva. **H. aorticus**. See *Aortic Opening*. **H. of Fallopius**, the shallow groove on the petrous portion of the temporal bone. **H. sacralis**, a slit-like opening on the posterior surface of the sacrum. It is continuous above with the spinal canal. **H. semilunaris**, a crescentic furrow upon the outer wall of the middle meatus of the nose.

**Hibernaculum** (*hi-ber-nak'-u-lum*) [L., a winter residence: *pl. Hibernacula*]. In biology, an organ fitted to protect delicate parts during the winter; a winter bud.

**Hibernation** (*hi-ber-na'-shun*) [*hibernus*, winter]. The dormant condition or winter-sleep of certain animals, notably bears, hedgehogs, etc., in which animation is almost suspended. Respiration and circulation are greatly reduced, and nutrition is performed mainly at the expense of the fatty tissues of the animal.

**Hiccup, or Hiccough** (*hik'-up*) [*hic*, a mimic word; ME., *cough*, a cough]. A spasmodic contraction of the diaphragm causing inspiration, followed by a sudden closure of the glottis.

**Hickory** (*hik'-or-e*) [an American Indian name]. The bark of shellbark hickory, *Hicoria*, or *Carya alba*; it is tonic and anti-intermittent, and useful in malarial fevers. Dose of the fld. ext. ʒ ss-j. Unof.

**Hicks (Braxton), Method of**. In obstetrics a method of performing version. It is the bipolar or combined internal and external method. **H.**, Sign of. See *Signs and Symptoms*, *Table of*.

**Hidden Seizure**. A popular name for various forms of slight or sudden epileptiform attacks.

**Hide** (*hid*) [ME., *hide*, skin]. The skin of an animal. The skins of the ox, cow, buffalo, horse, etc., that are utilized in the manufacture of leather, are especially so termed. If obtained from younger animals of the same kind, they are called *kips*. **H.-bound Disease**. See *Scleroderma*. **H.-bound Skin**. See *Scleroderma*. **H.-glue**. See *Glue*.

**Hidro-** (*hi'-dro-*) [ιδρώς, sweat]. A prefix signifying sweat.

**Hidroa** (*hid-ro'-ah*) [ιδρώς, sweat-spots; sudamina]. Sudamina; any dermal lesion associated with or caused by profuse sweating.

**Hidrocystoma** (*hid-ro-sis-to'-mah*) [ιδρώς, sudamina; κύστις, a cyst; ὄμα, a tumor: *pl., Hidrocystomata*]. A variety of sudamina appearing on the face, especially in women in middle and advanced life.

**Hidromancy** (*hid'-ro-man-se*) [ιδρώς, sweat; μαντεία, divination]. The forming of a prognosis from examination of the perspiration.

**Hidronosis** (*hid-ron'-o-sus*) [ιδρώς, sweat; νόσος, disease]. Any disease of the sweat-glands.

**Hidropedesis** (*hid-ro-ped-e'-sis*) [ιδρώς, sweat; πήδησις, a leaping]. Excessive sweating.

**Hidroplania** (*hid-ro-pla'-ne-ah*) [ιδρώς, sweat; πλάνη, a wandering]. Sweating in an unusual portion of the body.

**Hidropoïesis** (*hid-ro-poi-e'-sis*) [ιδρώς, sweat; ποίεω, to make]. The process of the formation and excretion of sweat.

**Hidropoietic** (*hid-ro-poi-et'-ik*) [ιδρώς, sweat; ποίεω, to make]. Relating to hidropoïesis; sudoriparous.

**Hidrorrhea** (*hid-ror-e'-ah*) [ιδρώς, sweat; ῥοα, a flow]. Excessive flow of sweat.

**Hidrosadenitis** (*hid-rōs-ad-en-i'-tis*) [ιδρώς, sweat; ἄδην, gland; ιτις, inflammation]. Inflammation of the sweat-glands.

**Hidroschesis** (*hid-ros'-kes-is*) [ιδρώς, sweat; σχίσσις, retention]. Retention or suppression of the sweat.

**Hidrosis** (*hid-ro'-sis*) [ιδρώς, sweat]. 1. The formation and excretion of sweat. 2. Abnormally profuse sweating. 3. Any skin-disease marked by disorder of the sweat-glands.

**Hidrotic** (*hid-ro'-ik*) [ιδρωτικός, producing sweat]. 1. Diaphoretic or sudorific. 2. A medicine that causes sweating.

**Hidrotopathic** (*hid-ro-to-path'-ik*) [ιδρώς, sweat; πάθος, disease]. Relating to a morbid state of the perspiratory function.

**Hidrotopoïesis** (*hid-ro-to-poi-e'-sis*) [ιδρώς, sweat; ποιέω, to make]. Same as *Hidropoïesis*.

**Hidrotopoietic** (*hid-ro-to-poi-et'-ik*). See *Hidropoietic*.

**Hidrozymases** (*hi-dro-zi-ma'-sēz*) [ιδρώς, sweat; ζύω, ferment]. Sweat-ferments, including amylase, emulsin, and pepsin.

**Hiera picra** (*hi'-er-ah pi'-krah*) [L., sacred bitters]. Pulvis aloes et canelle. See *Aloes*.

**Hieracium** (*hi-er-a'-se-um*) [ἱεράκιον, hawk-weed]. A genus of composite-flowered herbs. In the old world, **H. murorum** and **H. pilosella**, and in the U. S., **H. scabrum** and **H. venosum** are popularly esteemed as useful remedies. They have astringent and pectoral qualities. Unof.

**Hieralgia** (*hi-er-al'-je-ah*) [ἱερόν, sacred, sacrum; ἄλγος, pain]. Pain in the sacrum.

**High** (*hi*) [ME., *high*, high]. 1. Elevated far above a base. 2. Intensified in physical quality, as temper-

ature **H. Pelvic Posture.** See *Posture, Table of*.  
**H-ride Sitting, n. r. r. r. r. r.** sitting astride a high stool or narrow bench in order to fix the pelvis.  
**Highgate Resin** (hip-o-gat'-ezin). See *Carbon*.  
**Highmore, Antrum of.** A cavity in the superior maxillary bone. **H.'s Antrum of the Testicle.** See *Testis*.  
**Hignorianum, Corpus** (hig-no'-ri-um; and hie'-ri-um) [h. i. See *Corpus*].  
**Hilar** (hie-lar) [hie-lar, a little thing]. In biology, pertaining to the hilum.  
**Hill Diarrhea.** *Hill's disease.* A peculiar type of diarrhea occurring in certain localities of India, marked by persistent loose, watery stool, and often speedy death.  
**Hill's Stopping.** A preparation consisting principally of finely powdered silica, carbonate of lime, and quartz, used for filling teeth.  
**Hilton's Law.** See *Law*. **H.'s Line.** See *Line*, *Table of*. **H.'s Muscle.** See *Muscle, Table of*.  
**H.'s Sac,** a having a pouch.  
**Hilum** (hie-lum) [hie-lum, a little thing; pl., *Hila*]. In biology, (a) the point of attachment of an ovule or a seed to the pericarp, or to the placenta; (b) a small pit, scar, recess, or opening in an animal structure, especially the notch on the internal or concave border of the kidney.  
**Hinckes-Bird Method.** See *Ventilation*.  
**Hind** (hind) [ME., *hindre*, *hind*]. Pertaining to the rear of a person or a thing. **H.-brain,** a division of the brain, developing from a funnel shaped tube in the embryo into a lateral lobe that becomes the cerebellum, and a posterior lobe that becomes the medulla oblongata. **H.-gut,** that part of the embryonic intestine from which the extreme aboral part of the large intestine is developed. See *Esophagus*. **H.-head,** the head. **H.-limb,** one of the posterior limbs of a quadruped.  
**Hinge-joint** (hin'-joiint). See *Diarthrosis*.  
**Hinoid** (hin'-oid) [hin-oid, strength; idoid, form]. In biology, applied to leaves the veins of which are parallel and undivided and set at right angles to the midrib.  
**Hip** (ME., *hip, hipe*). 1. The upper part of the thigh or its junction with the buttocks. 2. The hip-joint. 3. The upper or less part of an insect's leg. 4. To arch like this. 5. The fruit of the rose. *Confection of hip*, confiture de rose de chine. **H.-bath.** See *Bath*.  
**H-bone,** the ischium. **H.-girdle,** the pelvic arch.  
**H.-joint,** the articulation of the femur with the humerus, or innominate bone. **H.-joint Disease,** an articular disease of the hip-joint; an affection of early life, and according as it begins in the head of the femur, the acetabulum, or in the synovial membrane and proper structures of the joint, divided respectively into *Femoral*, *Acetabular*, and *Arthritic*. Its etiology is obscure, its symptoms pain (coxalgia), swelling, and deformity. Coxalgia is incorrectly used as a synonym.  
**Hipling** (hip'-ling) [ME., *hip*, *hip*]. In obstetrics, a manipulation of the uterus.  
**Hippanthropy** (hip-an'-thrope) [hip-anc, horse; anthrope, man]. A form of zoanthropy in which the patient believes that he is a horse.  
**Hippiater** (hip-i'-at-er) [hip-anc, a horse; iatros, a physician]. A horse-doctor. A farrier.  
**Hippiatric** (hip-i'-at-ic) [hip-anc, a horse; iatros, a physician]. Pertaining to veterinary surgery.  
**Hippiatry** (hip-i'-at-ry) [hip-anc, horse; iatros, medical art]. Veterinary medicine, in so far as it relates to the horse, especially.  
**Hippocamp** (hip'-o-kam) [hip-anc, horse; kampos, a sea monster]. The hippocampus major.

**Hippocampal** (hip-o-kam'-pal) [hipos, horse; kampos, a sea monster]. Relating to the hippocampus.  
**Hippocampus** (hip-o-kam'-pus) [hipos, horse; kampos, a sea monster]. A name applied to two elevations, *H. major* and *H. minor*, the former situated in the interior, and the latter in the posterior horn of the ventricles of the brain. When the name *Hippocampus* is used alone, the *H. major* is meant.  
**Hippocoryza** (hip-o-ko-ri'-zah). Synonym of *Equinia*.  
**Hippocras** (hip-o'-kras) [hipos, horse; kras, strength]. An old fashioned cordial or liquor, made of red wine, sweetened and flavored.  
**Hippocrates' Bandage.** See *Bandage*.  
**Hippocratic** (hip-o-krat'-ik) [*Hippocrates*, a Greek physician of the fourth century]. Pertaining to Hippocrates. **H. Expression,** an anxious expression of the countenance, described as characteristic of peritonitis. **H. Face.** See *Facies*. **H. Finger.** See *H. Nail*. **H. Nail,** a peculiar curvature of the nails seen in pulmonary tuberculosis and other lung diseases. They are curved, longitudinally striated, overlapping the finger like the beak of a parrot. The condition is also called *Hippocratic Finger*. **H. Sound.** See *Succession-sound*.  
**Hippocratism** (hip-ok'-rat-izm) [*Hippocrates*, a Greek physician]. Hippocrates' doctrine of imitating nature in the treatment of disease.  
**Hippocrepian** (hip-o-kre'-pe-an) [hipos, a horse; krepis, a boot]. In biology, horse-shoe-shaped; hippocrepi-form, as a certain deformity of the kidney.  
**Hippocrepiiform** (hip-o-kre'-pe-if-orm). See *Hippocrepian*.  
**Hippolith** (hip'-o-lith) [hipos, horse; lithos, stone]. A calculus or bezoar found in the stomach of the horse.  
**Hippology** (hip-ol'-o-je) [hipos, horse; logos, knowledge]. The anatomy, pathology, etc., of the horse.  
**Hippomane** (hip-o-m'-an-e) [hipomane, horse; mania, madness; the ancients believed that horses were madly fond of a plant called by this name]. A genus of euphorbiaceous trees. **H. mancinella** and **H. spinosa**, the manchineel trees of tropical America, are extremely acrid and poisonous, even to the touch. They are used locally in medicine, especially in skin-diseases. Unof.  
**Hippomelanin** (hip-o-mel'-an-in) [hipos, horse; melas, black]. A pigment found in melanotic tumors in horses.  
**Hippopathology** (hip-o-path-ol'-o-je) [hipos, horse; pathos, disease; logos, science]. The science of the diseases of the horse.  
**Hippophagy** (hip-off'-a-je) [hipos, horse; phagein, to eat]. The eating of horse-flesh.  
**Hipposteology** (hip-os-te-ol'-o-je) [hipos, horse; osteon, bone; logos, science]. The science of osteology as applied to the horse.  
**Hippotomy** (hip-ol'-o-me) [hipos, horse; tomé, a cutting]. The anatomy or dissection of the horse.  
**Hippurate** (hip'-u-rat) [hipos, horse; oûron, urine]. Any salt of hippuric acid, q. v.  
**Hippuria** (hip-u'-re-ah) [hipos, horse; oûron, urine]. Excess of hippuric acid in the urine, e. g., after medication with benzoic acid.  
**Hippuric Acid** (hip-u'-rik). See *Acid*.  
**Hippuris** (hip-u'-ris) [hipomuris, horse-tail]. 1. A genus of haloragaceous aquatic herbs, common in all cool regions. **H. vulgaris** is astringent. Unof. 2. The cauda equina, q. v.  
**Hippus** (hip'-us) [hipos, horse, from analogy to the movement of this animal]. Spasmodic pupillary movement, independent of the action of light.  
**Hircin** (her'-sin). See *Acid, Hircic*.

**Hircinous** (*her-si'-nus*) [*hircinus*, of a goat]. In biology, having a goat-like odor.

**Hircismus** (*her-si'-mus*) [*hircus*, a goat]. The goat-like odor sometimes emitted by the human axilla.

**Hircus** (*her'-kus*) [*hircus*, goat]. The tragus.

**Hirschfeld's Ganglion**. See *Ganglia*, *Table of*.

**Hirsute** (*her-sul'*) [*hirsutus*, rough, shaggy]. In biology, thickly covered with rough, shaggy hair.

**Hirsuties** (*her-su'-te-ēz*) [*hirsutus*, shaggy]. Hypertrichosis; hypertrichiasis; polytrichia; trichauxis; that condition in which the hairs of the body are increased in number or size, or grow in unusual situations, or in normal situations in unusual length or number. **H. gestationis**, a growth of hair about the chin and lips in women in the course of pregnancy.

**Hirsutocinerous** (*her-su-to-sin-e'-re-us*) [*hirsutus*, hairy; *cinerous*, ashy]. In biology, having a hairy coat of an ashy-gray color.

**Hirtellous** (*her-tel'-us*) [*hirtus*, hairy]. Minutely hirsute; stiffly pubescent.

**Hirudiniculture** (*hi-ru'-din-e-kul-chur*) [*hirudo*, leech; *cultura*, culture]. The artificial breeding and rearing of leeches.

**Hirudo** (*hi-ru'-do*) [*hircus*, goat]. The leech, *q. v.*

**His, Bursa of**. A dilatation of the end of the archenteron described by His in a human embryo. **H.'s Granule-cell**, a granular cell resembling a leukocyte, found in the ovarian stroma. **H.'s Tissue**, a synonym of *Adenoid Tissue*.

**Hispid** (*his'-pid*) [*hispidus*, bristly]. In biology, bristly. Beset with rigid, spreading hairs or minute spines.

**Hispidulous** (*his-pid'-u-lus*) [*hispidus*, hairy]. In botany, minutely hispid; having short, stiff hairs.

**Histoid** (*his'-toid*). See *Histoid*.

**Histochemic** (*his-to-kem'-ik*) [*histos*, tissue; *χημεία*, chemistry]. Relating to histochemistry.

**Histochemistry** (*his-to-kem'-is-tre*) [*histos*, tissue; *χημεία*, chemistry]. The chemistry of the histologic elements of the body.

**Histodialysis** (*his-to-di-al'-is-is*) [*histos*, web; *διάλυσις*, a resolution]. The dissolution of organic tissue.

**Histogenesis** (*his-to-jen'-es-is*) [*histos*, web; *γένεσις*, generation]. In biology, the process of formation of cells and cell-products.

**Histogenetic** (*his-to-jen-e'-ik*) [*histos*, web; *γεννᾶν*, to produce]. Relating to histogenesis.

**Histogeny** (*his-toj'-en-e*). See *Histogenesis*.

**Histography** (*his-tog'-ra-fe*) [*histos*, tissue; *γράφειν*, to write]. A description or written account of the tissues.

**Histoheatin** (*his-to-hem'-at-in*) [*histos*, web; *αἷμα*, blood]. 1. A pigmentary extractive of the suprarenal bodies; it is found also in various other tissues in the lower animals. 2. One of a class of respiratory pigments; the intrinsic coloring-matters of the organs and tissues of invertebrates. The *histoheatin*s are of wide-spread occurrence in the tissues of both vertebrates and invertebrates. The best known is that found in muscles, viz., myoheatin, *q. v.*

**Histoid** (*his'-toid*) [*histos*, web; *εἶδος*, likeness]. Pertaining to tissue derived from the mesoblast, as a histoid tumor. See *Neoplasm*.

**Histokinesis** (*his-to-kin-e'-sis*) [*histos*, tissue; *κίνησις*, movement]. Movement that takes place in the minute structural elements of the body.

**Histologic, Histological** (*his-to-loj'-ik*, *his-to-loj'-ik-al*) [*histos*, tissue; *λόγος*, science]. Relating to histology.

**Histologist** (*his-tol'-o-jist*) [*histos*, tissue; *λόγος*, science]. One who is expert in histology.

**Histology** (*his-tol'-o-je*) [*histos*, tissue; *λόγος*, science]. The study of the intimate structure of tissues.

**Histolysis** (*his-tol'-is-is*) [*histos*, tissue; *λύσις*, dissolution]. Disintegration and dissolution of organic tissue.

**Histolytic** (*his-tol-it'-ik*) [*histos*, tissue; *λύσις*, dissolution]. Pertaining to histolysis.

**Histomorphology** (*his-to-morf-ol'-o-je*) [*histos*, tissue; *μορφή*, form; *λόγος*, science]. The morphology of the histologic elements of the body.

**Histon** (*his'-ton*) [*histos*, tissue]. A proteid prepared from the nuclei of cells. It belongs to the group of proteids known as albumoses or propeptones.

**Histonomy** (*his-ton'-o-me*) [*histos*, tissue; *νόμος*, a law]. The laws of the development and arrangement of organic tissue.

**Histopathology** (*his-to-path-ol'-o-je*) [*histos*, tissue; *πάθος*, disease; *λόγος*, science]. The study of minute pathological changes or states.

**Histophysiology** (*his-to-fiz-e-ol'-o-je*) [*histos*, web, tissue; *φύσις*, nature; *λόγος*, science]. The science of the functions of the various tissues.

**History** (*his'-tor-e*) [*ιστορία*, a learning by inquiry]. A narrative; story. **H., Biologic**, the life-story of any animal. **H., Medical**, the account obtained from a patient as to his health, past and present, and the symptoms of his disease.

**Histotome** (*his'-to-tom*) [*histos*, tissue; *τομή*, cutting]. A micrometer or other apparatus for cutting tissue for the study of its minute structure.

**Histotomy** (*his-tol'-o-me*) [*histos*, tissue; *τέμνειν*, to cut]. The dissection of any organic tissue.

**Histotripsy** (*his-to-trip'-se*) [*histos*, web; *τρίψις*, a crushing]. The crushing of tissues by an ecraseur.

**Histotromy** (*his-tol'-ro-me*) [*histos*, tissue; *τρόμος*, tremor]. Fibrillary contraction.

**Histotrophic** (*his-to-trof'-ik*) [*histos*, tissue; *τροφή*, nourishment]. Concerning the nutrition of the tissues.

**Histozyne** (*his'-to-zim*) [*histos*, tissue; *ζύμη*, leaven]. A ferment found by Schmiedeberg in the kidneys of pigs, and concerned in splitting up hippuric acid.

**Histrionic** (*his-tre-on'-ik*) [*histrion*, an actor]. Dramatic. **H. Mania**, insanity with affectation and lofty manner. **H. Muscles**, the expressional muscles of the face. **H. Spasm**, spasm of the histrionic muscles.

**Histrionism** (*his'-tre-on-izm*) [*histrion*, a player]. Dramatic action in insanity or in hysteria.

**Hitooch** (*hit-oosh'*). See *Hilouch*.

**Hitouch** (*hit-oosh'*) [Heb.]. Hitooch; the first step in the Jewish rite of circumcision. It consists in cutting off the prepuce.

**Hives** (*hivz*) [origin uncertain]. A name loosely applied to almost any papular eruption of the skin. In Great Britain, the term is applied to *croup*, *laryngitis*, and to *chicken-pox*; in the United States it is limited to a transitory form of *urticaria*, *q. v.*

**Hive-syrup**. See *Scilla* and *Antimonium*.

**Hoang-nan, or Hwang-nao** (*hwang-nao'*) [Chinese]. A Chinese preparation obtained from the bark of *Strychnos gauthieriana*. Its properties are due to a small percentage of strychnin. It is recommended as an alternative in syphilis, leprosy, and similar diseases, and is an alleged preventive of hydrophobia if given in large doses (gr. xv) during the period of incubation. Dose of the powdered drug gr. ij-v; of the aceto-alcoholic extract gr. ʒss-ʒʒ; of the tinct. mʒ-v.

**Hoar** (*hor*) [ME., *hore*, hoar]. Gray; old.

**Hoarhound** (*hor'-hownd*). See *Marrubium*.

**Hoariness** (*hor'-e-nes*). See *Cavities*.

**Hoarse** (*hors*) [ME., *hoors*, harsh]. Harsh; grating; discordant; applied to the voice.

**Hoarseness** (*hors'-nes*) [ME., *hoorsnesse*, hoarseness]. Harshness of the voice depending on some abnormal condition of the larynx or throat.

**Hob-nail Liver, or Hob-nailed Liver.** A liver covered with small elevations like the heads of hob-nails; it is the result of cirrhosis, or of an old and persistent hypertrophy. It is called also *Gon-irritated Liver*.

**Hobokenius, Valves of.** Crescentic or ring-like ridges on the inner surface of the umbilical vessels, producing constriction more than their outer surface.

**Hock (hok) [Ger., *Hochheimer*].** White Hochheimer wine; dark brown white wine.

**Hock, Hough (hok) [ML., *hous*, heel].** The joint on the hind leg of a quadruped between the knee and the foot, corresponding to the ankle-joint in man. In man, the back part of the knee-joint; the ham.

**Hodgen's Apparatus.** A modification of Smith's anterior splanchnic.

**Hodgkin's Disease.** See *Lymphadenoma* and *Disseminated Tubercle*.

**Hodgson's Dilatation, or Disease.** Dilatation of the aorta. It commences with inflammatory and serofibrinous changes in the tissues, going on to extensive degeneration, with dilatation of the first part of the aorta. There is sometimes involvement of the aortic valves, with hypertrophy and dilatation of the heart. See *Dissection, Table of*.

**Hoe (ho) [ML., *hama*, a hoe].** A scraping instrument used in operations for cleft palate, or in dentistry.

**Hoffmann's Anodyne.** See *Ether*. **H.'s Violet.** Same as *Podina*. **H.'s Method.** See *Treatment, Tubercle of*.

**Hofmeister's Method.** A method of expression of the nasal fluid. It is carried out by pressure on the head above, by directly pressing from without upon the occiput and the face from both sides.

**Hofmeister's Method.** A method of removing poisons from a fluid. To the liquid, rendered faintly acid and heated to boiling, add a solution of ferric acetate, made by saturating acetic acid with recently precipitated ferric hydrate. After boiling for a few minutes and filtering, a solution is obtained which contains neither poisons nor iron. This method does not precipitate poisons.

**Hog [ML., *hans*, a gelded hog].** 1. A gelded pig; a barren pig. 2. A glutton. **H.-cholera**, a specific, highly contagious fever of swine, attended with inflammation of the lungs, stomach, intestines, and other organs, usually diarrhea, frequently cough, and extensive necrotic blood in the skin and mucous membranes. It is called also *Pneumonia ritii*. See *Bacillus anthracis, antiseptic use*, under *Bacteria, Table of*.

**H.-gum.** Gum for various West Indian resins. See *Gum*. **H.'s Potato.** See *Cannibals*. **H.-weed.** See *Antennaria*.

**Hohl's Method.** A method of preserving the perineum in labor. It consists in applying resistance to the protruding part, the thumb being applied anteriorly to the vulva and the index and middle fingers posteriorly upon that portion of the head lying nearest the perineum.

**Hologogue** (*holo'-gog*) [*holos*, whole; *agogos*, leading]. A medicine or remedy that expels or drives out the whole of a material substance. A radical remedy.

**Holarrhena** (*holo'-ar-rhena*). See *Witch-haia*.

**Holocodont** (*holo'-odont*) [*holos*, a furrow; *odontos*, a tooth]. In surgery, applied to teeth planted in the alveolar process.

**Holden's Line.** See *Line, Linn.*

**Holder** (*hol'-der*) [ML., *holder*, a holder]. A device for holding instruments, specula, etc., in surgical operations.

**Holder's Plane.** See *Plane*.

**Multi-fast** (*hol'-fast*). A "lumpy jaw" tumor. See *Amphicoma*.

**Hollands** (*hol'-ands*). See *Gin*.

**Hollek** (*hol'-ek*). Same as *Hollyhock*.

**Hollow-foot** (*hol'-o-foot*). See *Cavus*.

**Holly** (*hol'-e*). See *Ilex*.

**Hollyhock** (*hol'-e-hok*) [AS., *holihoc*, hollyhock]. A name given to the *Althea rosea* and other species of *Althea*. See *Althea*.

**Holmgren's Test.** The worsted test for color-blindness. One of the worsteds is placed before the person to be tested, and he is asked to match it as nearly as possible.

**Holo-** (*hol'-o-*) [*holos*, entire]. A prefix signifying entirety.

**Holoblast** (*hol'-o-blast*) [*holos*, whole; *blastos*, germ]. In biology, an ovum that undergoes complete segmentation while germinating.

**Holoblastic** (*hol'-o-blas'-tik*) [*holos*, whole; *blastos*, germ]. In biology, applied to eggs in which the entire yolk is included in the process of segmentation; one in which there is no separate food-yolk.

**Hologastrula** (*hol'-o-gas'-tru-lah*) [*holos*, whole; *gastron*, stomach; *pl.*, *Hologastrulae*]. In biology, the gastrula resulting from the development of a holoblastic ovum.

**Holometabolian** (*hol'-o-met-ab-o'-le-an*). Same as *Holometabolic*.

**Holometabolic** (*hol'-o-met-ab-o'-ik*) [*holos*, whole; *metabolos*, changeable]. In biology, applied to animals that undergo complete metamorphosis or transformation, as insects.

**Holonicarcosis** (*hol'-o-nar-ko'-sis*) [*holos*, complete; *narkosis*, stupor]. Complete narcosis.

**Holopathy** (*hol'-op'-ath-e*) [*holos*, entire; *pathos*, disease]. 1. A general or constitutional disease of which a local disorder is but a manifestation. 2. The theory that local diseases are manifestations of a general disorder.

**Holophanerosis** (*hol'-o-fan'-er-us*) [*holos*, whole; *phaneros*, visible]. In biology, discernible throughout, as the transformation of insects.

**Holophytic** (*hol'-o-fil'-ik*) [*holos*, whole; *phyton*, plant]. In biology, applied to certain protozoa and other animals that, in their mode of nutrition, closely resemble plants.

**Holoplexia** (*hol'-o-plek'-s-e-ah*) [*holos*, whole; *plēxis*, a stroke]. Complete or general paralysis.

**Holopneustic** (*hol'-o-pnu'-stik*) [*holos*, whole; *pneustikos*, pneu, to breathe]. In biology, applied to such insect larvae as possess many pairs of open stigmata, as distinguished from those having no open stigmata, *apneustic* larvae.

**Holorhinal** (*hol'-o-ri'-nal*) [*holos*, whole; *rhis*, the nose]. In biology, applied to the *Galline* and other birds having the anterior margin of the nasal bone concave, with two cornua directed forward, the processes being continuous behind with the body of the bone and with one another.

**Holoschisis** (*hol'-os'-kis-is*) [*holos*, whole; *schisis*, cleavage]. Amitotic or indirect cell-division; amitosis.

**Holosericeous** (*hol'-o-ser-is'-e-us*) [*holos*, whole; *serikēs*, of silk]. In biology, covered with very minute silky hairs.

**Holosteous** (*hol'-os'-te-us*) [*holos*, whole; *osteon*, a bone]. In biology, having a completely bony skeleton.

**Holostomatous** (*hol'-o-sto'-mat-us*) [*holos*, whole; *stoma*, mouth]. In biology, having the mouth entire, neither notched nor with parts missing.

**Holostomous** (*hol'-os'-to-mus*). Same as *Holostomatous*.

**Holotetanus** (*hol'-o-tet'-an-us*) [*holos*, whole; *tetanos*, tetanus]. General tetanus; called also *Holotonia*.

**Holothecal** (*hol-o-the'-kal*) [*ὅλος*, whole; *θήκη*, case]. In biology, booted; applied to birds in which the tarsal envelop is entire.

**Holotomy** (*hol-ot'-o-me*) [*ὅλος*, whole; *τέμνειν*, to cut]. Complete surgical excision of a part or organ.

**Holotonia**, or **Holotony** (*hol-o-to'-ne-ah*, *hol-ot'-o-ne*) [*ὅλος*, entire; *τείνειν*, to stretch]. Same as *Holotetanus*.

**Holotonic** (*hol-o-ton'-ik*) [*ὅλος*, entire; *τείνειν*, to stretch]. Relating to, or characterized by, holotetany.

**Holozoic** (*hol-o-zo'-ik*) [*ὅλος*, whole; *ζῶον*, an animal]. In biology, entirely resembling animals in mode of nutrition.

**Holthouse**, **Hernia of**. See *Hernia*.

**Holting** (*holt'-ing*) [after *Holt*, the inventor of the method]. The divulsion of an urethral stricture by Holt's dilator.

**Holtz Machine**. A particular form of electrostatic induction-machine.

**Homalocephalus** (*hom-al-o-sef'-al-us*) [*ὁμαλός*, flat; *κεφαλή*, the head]. Lissauer's term for "flat-headed."

**Homalocoryphus** (*hom-al-o-kor'-if-us*) [*ὁμαλός*, flat; *κορυφή*, the head]. Lissauer's term for a skull in which the angle formed by two lines drawn from the bregma and the occipital point to the highest point above is between  $132^\circ$  and  $142^\circ$ .

**Homalognatous** (*hom-al-o-gon'-at-us*) [*ὁμαλός*, even, level; *γόνυ*, knee]. In biology, applied to such birds as possess an accessory femoro-caudal muscle and a tufted oil-gland and coeca; the opposite of *Anomalognatous*, in which this combination is never found.

**Homalographic** (*hom-al-o-graf'-ik*) [*ὁμαλός*, same; *γράφειν*, to write]. Pertaining to homology. **H. Method**, a method of showing the structure of the body by means of plane sections of a frozen body.

**Homalography** (*hom-al-og'-ra-fe*) [*ὁμαλός*, level; *γράφειν*, to record]. Anatomy by sections; the representation of structure by means of sketches of various sections.

**Homalometopus** (*hom-al-o-met-o'-pus*) [*ὁμαλός*, flat; *μέτωπον*, the space between the eyes]. Lissauer's term for a skull having a frontal angle between  $130.5^\circ$  and  $141^\circ$ .

**Homalopisthocranium** (*hom-al-o-pis-tho'-kra'-ne-us*) [*ὁμαλός*, flat; *ὀπισθεν*, behind; *κρανίον*, the skull]. Lissauer's term for a skull in which the angle formed by lines joining the external occipital protuberance and the occipital point with the highest point of the skull is between  $140^\circ$  and  $154^\circ$ .

**Homalosternal** (*hom-al-o-ster'-nal*) [*ὁμαλός*, even, level; *στέρον*, sternum]. In biology, having a raft-like or keelless sternum; ratite, as certain birds.

**Homaluranus** (*hom-al-u-ra'-nus*) [*ὁμαλός*, flat; *οὐρά*, a tail]. Lissauer's term for a skull in which the angle formed by lines joining the occipital point and the bregma with the highest point of the skull is between  $147.5^\circ$  and  $163.5^\circ$ .

**Homatropin** (*hom-at'-ro-pin*). See *Atropin*.

**Homeo-** (*ho'-me-o-*) [*ὅμοιος*, like]. A prefix signifying like or similar.

**Homeobiphorid** (*ho-me-o-bi-ff'-or-id*) [*ὅμοιος*, like; *βίος*, life; *φέρειν*, to bear]. In biology, Weismann's name for the lowest and most primitive undifferentiated organism conceivable, having the form of a single biophore, or of a number of similar biophores, in which multiplication and transmission would occur together, no special apparatus being required for the latter process, as a reproduction by binary fission must result in two corresponding halves, each containing similar biophores, and each of which, simply by the multipli-

cation of its units, is able to give rise to a compact organism like the parent. Cf. *Heterobiophorid*.

**Homeochronous** (*ho-me-oh'-ro-nus*) [*ὅμοιος*, like, similar; *χρόνος*, time]. In biology, true ontogenetic sequence; appearance in proper order in time; applied to animals, organs, or hereditary traits. **H. Heredity**, pertaining to the appearance of an organ, trait, tendency or function, whether psychologic, physiologic, or pathologic, at a similar time of life in a series of descendants.

**Homeodont** (*ho'-me-o-dont*) [*ὅμοιος*, like; *ὀδόντς*, tooth]. In biology, applied to teeth that are simple cones.

**Homeokinesis** (*ho-me-o-kin-e'-sis*) [*ὅμοιος*, like; *κινεῖν*, to move]. In biology, Weismann's term for that kind of nuclear division in which the two daughter-nuclei contain similar idioplasm; i. e. nuclear division depending upon a perfectly uniform distribution of the primary constituent and resulting in parts containing similar hereditary tendencies. Cf. *Heterokinesis*.

**Homeomeros** (*ho-me-om'-er-us*) [*ὅμοιος*, like; *μέρος*, part]. In biology, having given organs or parts distributed uniformly throughout.

**Homeomorphic** (*ho-me-o-mor'-fus*) [*ὅμοιος*, like; *μορφή*, form]. Like or similar in form and structure.

**Homeopathic** (*ho-me-o-path'-ik*) [*ὅμοιος*, like; *πάθος*, feeling]. Relating to homeopathy.

**Homeopathist** (*ho-me-op'-ath-ist*) [*ὅμοιος*, like; *πάθος*, feeling]. A practitioner of homeopathy.

**Homeopathy** (*ho-me-op'-ath-e*) [*ὅμοιος*, like; *πάθος*, ailment or disease]. A system of treatment of disease by the use of agents that, administered in health, "would produce symptoms similar to those morbid conditions for the relief of which the agent or medicine is given." The hypothesis expressed by the adage, "*similia similibus curantur*." See *Regular* and *Allopathy*.

**Homeoplasia** (*ho-me-o-pla'-ze-ah*) [*ὅμοιος*, like; *πλάσσειν*, to shape]. The growth of tissue resembling the normal tissue, or matrix, in its form and properties; also the tissue so formed.

**Homeoplastic** (*ho-me-o-plas'-tik*) [*ὅμοιος*, like; *πλάσσειν*, to form]. Pertaining to a neoplasm resembling its matrix-tissue in texture. One differing widely in this respect is **heteroplastic**. If separated in position, it is said to be **heterotopic**; in date, **heterochronic**.

**Homeoplasty** (*ho'-me-o-plas-te*). See *Homeoplasia*.

**Homeosis**, or **Homoiosis** (*ho-me-o'-sis*, or *ho-moi-o'-sis*) [*ὅμοιος*, like; *ὅμοιος*, like]. The assimilation of nutrient material.

**Homeo-therapeutics** (*ho-me-o-ther-ap-u'-tiks*) [*ὅμοιος*, like; *θεραπεύειν*, to serve]. The homeopathic doctrine of therapeutics.

**Homeothermal**, or **Homoiothermal** (*ho-me-o-ther'-mal*, *ho-moi-o-ther'-mal*) [*ὅμοιος*, like; *θερμύς*, heat]. Pertaining to animals that are "warm-blooded," or that maintain a uniform temperature despite variations in the surrounding temperature.

**Homeozoic** (*ho-me-o-zo'-ik*) [*ὅμοιος*, the same, similar; *ζωή*, life]. In biology, applied to geographic areas, zones, or belts, having similar forms of life.

**Homesickness** (*hom'-sik-ness*). Nostalgia. An urgent desire to return to one's home. It may be accompanied by a morbid sluggishness of the functions of the various organs of the body, and may develop into profound melancholy.

**Homicidal** (*hom-is-i'-dal*) [*homo*, a man; *cadere*, to kill]. Pertaining to homicide. **H. Mania**, insanity characterized by murderous impulses.

**Homicide** (*hom'-is-id*) [*homo*, a man; *cadere*, to kill]. The killing of a human being without malice or intent, as distinguished from murder or manslaughter.

Also, the taking of human life in general by another. Also, one who takes the life of another.

**Homiculture** (*hō-mī-kul-tshūr*) [*hō-mī*, man; *cul-tshūr*, culture]. The proposed improvement of the human species by attention to the laws of breeding; eugenics.

**Hominicsection** (*hō-mī-nī-kshē-shūn*) [*hō-mī*, a man; *shūn*, a cutting]. Dissection of the human body; autopsies.

**Homio** (*hō-mī-ō*) [*L.*]. Man. The sole genus of the order *Homioidea*.

**Homoblastic** (*hō-mō-blāstīk*) [*hō-mō*, the same; *blāstōs*, a bud, germ]. In biology, derived from like germs or cells.

**Homocarpous** (*hō-mō-kārp-ūs*) [*hō-mō*, the same; *kārp-ūs*, fruit]. In botany, bearing fruits all of one kind.

**Homocentric** (*hō-mō-sen-trīk*) [*hō-mō*, same; *sen-trōn*, center]. **CONCENTRIC**. Having the same center. **H.** Rays, a pencil of light rays either cone shaped or rod shaped.

**Homocerc** (*hō-mō-sēr-kēr*) [*hō-mō*, the same; *kēr-kōs*, the tail]. Same as *Heterocerc*.

**Homocercal** (*hō-mō-sēr-kēr-āl*) [*hō-mō*, the same; *kēr-kōs*, the tail]. In biology, applied to fishes in which the caudal rays are so disposed as to give the tail an appearance of symmetry with respect to the axis of the body.

**Homocerebrin** (*hō-mō-sēr-brīn*) [*hō-mō*, like; *cere-brīn*, cerebrum]. A substance derivable from brain-tissue, closely resembling cerebrin, but more soluble in alcohol.

**Homochromous** (*hō-mō-khrō-mī-ō*) [*hō-mō*, the same; *khrō-mōs*, color]. In biology, all of one color, as the petals in a flower head, or an entire organism.

**Homocinchonidin** (*hō-mō-sīn-kīn-īd-īn*) [*hō-mō*, the same; *cin-chōn*,  $C_{19}H_{21}N_3O_8$ ]. An alkaloid derived from *cinchona*, American Red bark, one of the *Cinchona* group.

**Homodermic** (*hō-mō-dēr-mīk*) [*hō-mō*, the same; *dēr-m*, the skin]. In biology, of similar blastodermic origin, applied to tissues or organs.

**Homodesmotic** (*hō-mō-dēs-mōt-īk*) [*hō-mō*, like; *dēs-mōt-īk*, local]. Connecting centers of equal importance (as a nerve fiber).

**Homodont** (*hō-mō-dōn't*) [*hō-mō*, the same; *dō-dōn't*, tooth]. In biology, having the teeth alike throughout.

**Homodromous** (*hō-mō-drō-mī-ō*) [*hō-mō*, the same; *drom-ōs*, a course]. In biology, applied to plants in which the spiral arrangement of the leaves on the stem and branches is alike throughout.

**Homodynamy** (*hō-mō-dī-nām-ē*) [*hō-mō*, the same; *dī-nām-ē*, power]. In biology, serial homology; applied to homologous parts (somites or metameris) arranged along the long axis of the body.

**Homeco-** (*hō-mōi-ō-*). For words thus beginning, see *Homoeo-*.

**Homogamous** (*hō-mōi-ō-mī-ō*) [*hō-mōi-ō*, the same; *mōi-ō*, marriage]. In biology, having all the florets of the stamens alike in sex.

**Homogamy** (*hō-mōi-ō-mī-ō*) [*hō-mōi-ō*, same; *mōi-ō*, marriage]. **1.** Homogamy, term for that method of evolution by physiological selection of those varieties, the individuals of which are fertile among themselves, but infertile with other varieties and with the parent stock. It is called the *Segregate Fecundity* by Darwin. See *Isolation*. **2.** In biology, applied to hermaphrodite flowers that mature their stigmas and anthers at the same time.

**Homogen** (*hō-mōi-ō-jen*) [*hō-mōi-ō*, the same; *jēn-ōs*, race]. In biology, derived from the same or similar

parents; having a common ancestor. **2.** One of two organs or organisms having a common ancestor or ancestral part. **H., Ancestral**, *i. e.*, homogenetic homologues that do not arise similarly, though probably descended from common ancestral parts, *e. g.*, the legs of flies of diverse development. **H., Developmental**, *i. e.*, homogenetic homologues that arise similarly, whether descending from the same ancestral part or not, *e. g.*, some of the cranial bones of a Teleostean and of a mammal.

**Homogeneity** (*hō-mōi-ō-jen-ē-tē*) [*hō-mōi-ō*, like; *jēn-ōs*, a kind]. The condition of being homogeneous.

**Homogeneous** (*hō-mōi-ō-jen-ē-us*) [*hō-mōi-ō*, like; *jēn-ōs*, kind]. Having the same nature or qualities. Similar or identical in structure. **H. Immersion**. See *Immersion*. **H. Triplets**. See *Homogeneous Twins*. **H. Twins**, in embryology, when the cleavage force is exerted to its fullest effect, the entire embryonal trace is completely divided; each resulting part may be capable of independent development, whereby two fetuses are produced remarkable for their great similarity; such offspring are known as *homogeneous twins*. They are always of the same sex and possess almost perfect identity of physical characteristics. So also may a secondary fission of one of the halves take place, as an extremely rare occurrence, *homogeneous triplets* resulting from such twofold division of the original area. Such fetuses usually lie within a single chorion, enclosed by a separate or a common amniotic sac, the increased pressure arising from the unusual contents of the limited uterine cavity favoring absorption and disappearance of the amniotic partitions.

**Homogenesis** (*hō-mōi-ō-jen-ēs-īs*) [*hō-mōi-ō*, like; *jēn-vān*, to beget]. Univocal generation; reproduction in which a living parent gives rise to offspring that pass through the same cycle of changes as itself.

**Homogenization** (*hō-mōi-ō-jen-īz-ā-shūn*) [*hō-mōi-ō*, the same; *jēn-vān*, to produce]. The act or process of rendering or of becoming homogeneous; reduction to a common standard; the process of rendering the objects of microscopic study transparent and fixed.

**Homogenous** (*hō-mōi-ō-jen-ūs*) [*hō-mōi-ō*, the same; *jēn-ōs*, race]. In biology, applied to structures that are genetically related, in so far as they have a single representation in a common ancestor.

**Homogenitic Acid** (*hō-mōi-ō-jen-tīz-īk*). See *Acid*.

**Homogeny** (*hō-mōi-ō-jen-ē*) [*hō-mōi-ō-jen-ēs*, of the same race or family]. In biology, an agreement among organisms depending on the inheritance of a common part or having a common ancestor. See *Homogenesis*.

**Homogonous** (*hō-mōi-ō-jen-ūs*) [*hō-mōi-ō*, similar; *jēn-ōs*, offspring]. In biology, having the stamens and pistils alike in all the flowers of the species; homostyled. Cf. *Heterogonous*.

**Homioio-** (*hō-mōi-ōi-ō-*). For words thus beginning, see *Homoeo-*.

**Homoiosis** (*hō-mōi-ōi-ō-sīs*). See *Homeosis*.

**Homologize** (*hō-mōi-ōi-ō-jīz*) [*hō-mōi-ō*, the same; *lō-jēn*, to speak]. In biology: **1.** To recognize as homologous; **2.** To exhibit homology; to correspond in structure.

**Homologous** (*hō-mōi-ōi-ō-jūs*) [*hō-mōi-ō*, the same; *lō-jēn*, to speak]. In biology, corresponding in structure, either directly or as referred to a fundamental type. In chemistry, being of the same chemie type or series; differing by a multiple or an arithmetic ratio in certain constituents, while the physical qualities are analogous, with small differences, as if corresponding to a series of parallels. **H. Tissues**, those identical in type of structure. **H. Tumor**, a name given by Virchow to a tumor consisting of tissue identical with that of the organ whence it springs.

**Homologue** (*hom'-o-log*) [*ὁμός*, same; *λόγος*, proportion]. An homologous organ common to any number of species, classes, or orders of animals; that which has the same relative structure, position, or development as another. The same organ in different organisms under every variety of form and function. We may have: 1. **Homogenetic Homologues**, *i. e.*, parts which, on the evolutionary theory, have a genetic relation, *e. g.*, the humerus of a horse and that of an ox. 2. **Homoplastic Homologues**, *i. e.*, parts closely similar as to relative position, but with no genetic affinity, or only a remote one, *e. g.*, the ventricle of a bat and that of a bird. 3. **Homogenetic Serial Homologues**, *i. e.*, different parts of one individual, the correspondence between which is to be accounted for by the influence of external conditions (the "superinduced segmentation" of Mr. Herbert Spencer), *e. g.*, the fore-limbs and hind-limbs of one side of any animal. 4. **Vertical Homologues**, *i. e.*, different corresponding parts of one individual, of which one part is dorsal, the other ventral, *e. g.*, dorsal and anal fins of certain fishes. 5. **Lateral Homologues**, *i. e.*, different corresponding parts of one individual, of which one part is right and the other left, *e. g.*, the right and left arms of a man. 6. **Antero-posterior Homologues**, *i. e.*, different corresponding parts of one individual, of which one part is anterior, the other posterior, *e. g.*, the mouth and the cloaca. 7. **Radial Homologues**, *i. e.*, different corresponding parts of one individual which radiate from a central axis, *e. g.*, any two arms on the same starfish. 8. **Homotrophic Homologues**, *i. e.*, parts of an individual, the correspondences between which are regarded as due to internal modifying influences, *e. g.*, the eyes and the ears. 9. **Actinologous Homologues**, *i. e.*, successive subdivisions, parts, or regions of a part or segmented organ, *e. g.*, two successive joints of an antenna of a lobster, or the vertebral and sternal parts of the same costal element. 10. **Special Homologues**, *i. e.*, parts of two organisms belonging to the same special skeletal category, *e. g.*, the basi-occipital of man and the cod. 11. **General Homologues**, *i. e.*, parts of two organisms belonging to the same general skeletal category, *e. g.*, the vertebral center of man and that of the cod, or the lateral appendages of the lobster and those of the scorpion. (Mivart.)

**Homology** (*ho-mol'-o-je*) [*ὁμός*, same; *λόγος*, proportion]. The quality of being homologous; also, the morphologic identity of parts or organs in different animals. In biology, a term introduced by R. Owen to indicate a close resemblance between parts, depending upon relations of relative position. (Mivart.)

**Homomalous** (*ho-mom'-al-us*) [*ὁμαλός*, even, level, equal]. In biology, applied to parts or organs that are all turned to one side.

**Homomorphism** (*ho-mo-mor'-fiz-m*) [*ὁμός*, the same; *μορφή*, form]. In biology, superficial resemblance, without true homology; mimicry or adaptive resemblance.

**Homomorphous** (*ho-mo-mor'-fus*) [*ὁμός*, the same; *μορφή*, form]. In biology, exhibiting superficial resemblance, but not truly homologous.

**Homonomous** (*ho-mon'-o-mus*) [*ὁμός*, same; *νόμος*, law]. Governed by or under the same law.

**Homonym** (*hom'-o-nim*) [*ὁμός*, same; *ὄνομα*, name]. That which is homonymous.

**Homonymous** (*ho-mon'-im-us*) [*ὁμός*, same; *ὄνομα*, a name]. 1. A term applied to names that have the same sound or pronunciation, but different meanings. 2. Coming under the same general designation (thus the two external recti muscles are homonymous); occurring on or within the same lateral half

of the body; not heteronomous. **H. Diplopia**, occurs when the image seen by the right eye seems to be on the right side and that seen by the left eye seems to be on the left side. **H. Hemianopia**, occurs when all points in the visual field of each eye lying to the right (Right H. H.) or to the left (Left H. H.) of the fixation-point are not seen.

**Homophthalic Acid** (*hom-off-thal'-ik*). See *Ad.*

**Homophthalimid** (*hom-off-thal'-im-id*) [*ὁμός*, same; *ὀφθαλμός*, eye; *imid*],  $C_9H_7NO$ . A substance produced when the ammonium salt of homophthalic acid is heated. It crystallizes in minute needles, melting at  $233^{\circ}C$ .

**Homophyadic** (*ho-mo-fi-ad'-ik*) [*ὁμός*, the same; *φύεσθαι*, to grow]. In biology, having but one kind of stem, as distinguished from *heterophyadic*.

**Homophyly** (*ho-moff'-il-*) [*ὁμός*, the same; *φυλή*, race]. In biology, correspondence in genetic relationships.

**Homoplasia** (*ho-mo-pla'-sis*) [*ὁμός*, the same; *πλάσις*, formed]. In biology, Lankester's term for structural agreement or modification resulting from the action of identical or nearly similar forces or environments on two or more parts of an organism, or on two organisms, which parts are exactly or nearly alike, or perhaps homogenetic. The same as the "superinduced segmentation" of Spencer.

**Homoplastic** (*ho-mo-plaz'-mik*). Same as *Homoplastic*.

**Homoplasmy** (*ho'-mo-plaz-me*) [*ὁμός*, the same; *πλάσμα*, a thing moulded]. In biology, homoplastic or homomorphic, *i. e.*, showing mimetic resemblances.

**Homoplast** (*ho'-mo-plast*) [*ὁμός*, the same; *πλάστος*, formed, moulded]. In biology; 1. One of any aggregate or fusion of plastids. 2. An organ or part showing mere superficial or mimetic resemblance to another.

**Homoplastic** (*ho-mo-plas'-tik*) [*ὁμός*, the same; *πλάστος*, formed]. In biology, showing close agreement, dependent upon the common action of evoking causes or moulding environment upon homogeneous parts, or on parts that, for other reasons, offer a likeness of material to begin with. (Lankester.)

**Homoplasia** (*ho'-mo-plaz-e*) [*ὁμός*, the same; *πλάσις*, a forming, moulding]. In biology, agreement in the form, structure, and perhaps function, of organs or parts in the same or separate organisms, dependent upon evoking causes other than genetic affinity.

**Homopterous** (*ho-mop'-ter-us*) [*ὁμός*, the same; *πτερόν*, wing, feather]. In biology, applied to insects having wings of the same texture throughout.

**Homorgan** (*hom'-or-gan*) [*ὁμός*, the same; *ὄργανον*, organ]. In biology, an organ resembling another; a homoplast.

**Homosexual** (*ho-mo-seks'-u-al*) [*ὁμός*, same; *sexus*, sex]. Pertaining to the same sex.

**Homosexuality** (*h-mo-seks-u-al'-it-e*) [*ὁμός*, same; *sexualis*, of a sex]. That form of sexual perversion, acquired or congenital, in which the individual conceives a violent sexual passion for one of the same sex, and gratifies it either by sodomy, by titillation, or platonically.

**Homosporous** (*ho-mes'-por-us*) [*ὁμός*, similar; *σπόρος*, seed]. In biology, producing but one kind of spores; isosporous.

**Homostyled** (*ho'-mo-stild*) [*ὁμός*, the same; *στῖλος*, pillar]. See *Homogenous*.

**Homothermic** (*ho-mo-ther'-mik*) [*ὁμός*, same; *θερμη*, heat]. Having uniformity of temperature or bodily heat.

**Homothermous** (*ho-mo-ther'-mus*) [*ὁμός*, the same; *θερμη*, heat]. In biology, applied to animals showing the same degree of bodily heat.

**Homotonic** (*hō-mō-tō-nĭk*) [*hōm*, same; *tonic*, tone, tension]. Having a uniform or even course; applied to diseases.

**Homotopia** (*hō-mō-tō-pĭ-ā*). See *Homotopy*.

**Homotopy** (*hō-mō-tō-pĭ-ē*) [*hōm*, the same; *topos*, place]. In biology, the usual or natural mode of development or change of parts during growth, characterized by the exact or proximal repetition or maintenance of cells or segments already present; also called *repetition*. Antonym of *Heterotopy*.

**Homotropical** (*hō-mō-tō-pĭ-āl*). Same as *Heterotropical*.

**Homotrophie** (*hō-mō-tō-fō-ē*) [*hōm*, the same; *trophi*, nourishment]. In biology, one of two or more homologous parts, traces the structural correspondence of which are due to corresponding internal, modifying conditions, rather than to external environment. 1. **Serial Homotrophes**, *i. e.*, homotrophic homologues, the correspondence between which is antero-posterior, *e. g.*, an extra thumb and an extra digit due to the same side of the body. 2. **Vertical Homotrophes**, *i. e.*, homotrophic homologues that correspond vertically. 3. **Lateral Homotrophes**, *i. e.*, homotrophic homologues of the two sides of one individual, *e. g.*, the right and left eyes. 4. **Antero-posterior Homotrophes**, *i. e.*, homotrophic homologues that correspond antero-posteriorly. (S. G. O. MIVART.)

**Homotrophic** (*hō-mō-tō-fō-ĭk*) [*hōm*, the same; *trophi*, nourishment]. In biology, exhibiting homotrophy. **Homotrophic Homologues**, *i. e.*, parts of an individual, the correspondences between which are regarded as due to internal modifying influences, *e. g.*, the eyes in the ears.

**Homotrophy** (*hō-mō-tō-fō-ĭ*) [*hōm*, the same; *trophi*, nourishment]. In biology, correlations of growth; homotrophy due to internal conditions rather than external environment.

**Homotropous** (*hō-mō-tō-pō-ŭs*) [*hōm*, the same; *tropos*, turn]. In biology, said of the embryo when curved the same as the axis containing it.

**Homotype** (*hō-mō-tĭ-p*) [*hōm*, same; *tipos*, a pattern]. A part corresponding and similar to another part, as the humerus to the femur, a serial homologue, or an analogue.

**Homotypic** (*hō-mō-tĭ-pĭk*) [*hōm*, the same; *tipos*, type]. In biology, showing serial correspondence or identical similarity.

**Homotypical** (*hō-mō-tĭ-pĭk-ēl*). Same as *Homotypic*.

**Homotypy** (*hō-mō-tĭ-pĭ-ē*) [*hōm* = *a*, sameness of form]. In biology, serial or individual homology.

**Homunculus** (*hō-mō-nŭk-ŭ-lŭs*) [L., dim. of *homo*, man]. The fetus; dwarf.

**Honduras Bark** (*hō-n-dŭ-ras bārk*). See *Cassara*.

**Honey** (*hō-nĭ*) [M.L., *hony*, honey]. See *M.L.* **H.-berry**. See *Urtica*. **H.-comb**, the waxy structure formed by bees to a repository for the honey that they produce. **H.-comb Glands**. See *Gland*. **H.-comb Ringworm**. See *Fungus*. **H.-cyst**. See *Bladder*. **H.-dew**, a glutinous liquid exuded by aphides, and frequently to be noticed covering the lower of the *Fragaria*, *Syrphum*, oak, maple, plum, apple, rose, currant, etc. Its taste is newkish, its color golden, and its color often as dark as molasses. Commonly first found in the oak and sycamore. **H.-stone**. See *Marble*. **H.-oil**.

**Honorarium** (*hō-nō-rĕ-ŭ-m*) [L.]. A professional fee, especially one that is not for a gift, no formal gift, such as one having been made.

**Hoof** (*hō-f*) [M.L., *hōf*, a hoof]. The casing of hard, horny substance that invests the ends of the digits or innominate bones in many animals. **H.-bound**, in far-

riery, having a dryness and contraction of the hoof, resulting in pain and lameness. This condition is also called *Contracted Heels*.

**Hook** [M.L., *hok*, a hook]. A curved instrument. See *Hamus*. **H., Blunt**, an instrument described by its name, for exercising traction upon the fetus in an arrested breech-presentation. **H., Tyrrel's**, a blunt, slender hook for operations upon the eye.

**Hooke's Law**. See *Law*.

**Hooper's Pill**. A pill containing aloes, crystallized sulphate of iron, extract of hellebore, myrrh, soap, canella, and ginger.

**Hooping-cough** (*hō-pĭ-ing-kawf*). See *Pertussis*.

**Hoose** (*hoo*) [M.E., *hose*, hoarse]. Sheep-cough. A disease of sheep, lambs, etc., due to the presence of *Strongylus filaria*, a nematode worm, in the lungs and air passages (see under *Parasites, Animal*), and characterized by a husky cough, anorexia, dry muzzle, constipation, and dyspnea.

**Hoove, Hooven** (*hoo, hoo-en*) [dial., *hooven*]. Distention of the stomach of a ruminant animal with gas, caused by the fermentation of food. It is generally due to eating too much green food.

**Hop**. See *Humulus*.

**Hope's Camphor-mixture**. A mixture containing nitric acid, camphor-water, and tincture of opium. It is used in the treatment of serous or choleraic diarrheas.

**Hopea** (*hō-pĕ-ah*) [after John Hope, a Scotch botanist]. A genus of dipterocarpaceous trees of S. Asia. Several species afford resins known in commerce as *Dammar*. Unof.

**Hopein** (*hō-pĕ-in*). See *Humulus*.

**Hoppe-Seyler's Method**. A method of preparing hemoglobin crystals. Mix defibrinated blood with ten volumes of a 20 per cent. salt-solution, and allow it to stand for two days. Remove the clear upper fluid with a pipet, wash the thick deposit of blood-corpuscles with water, and shake it for a long time with an equal volume of ether, which dissolves the blood-corpuscles. Remove the ether, filter the lake-colored blood, add to it one-fourth of its volume of cold alcohol (0° C.) and allow the mixture to stand in the cold for several days. The crystals can be collected on a filter and pressed between folds of bibulous paper.

**Hordeiform** (*hor-dĕ-if-orm*) [*hordeum*, barley; *forma*, form]. Shaped like a grain of barley.

**Hordein** (*hor-dĕ-in*) [*hordeum*, barley]. A mixture of a proteid with starch-cellulose; it exists in barley-starch, but is not soluble.

**Hordeolum** (*hor-dĕ-o-lum*) [*hordeum*, a grain of barley]. A sty; a furuncular inflammation of the connective tissue of the lids, near a hair-follicle.

**H., External**, *H. zeissianum*; one produced by supuration of one of Zeiss's glands. **H., Internal**, *H. meibomianum*; one produced by supuration of one of the Meibomian glands. **H. meibomianum**. See *H., Internal*. **H. zeissianum**. See *H., External*.

**Hordeum** (*hor-dĕ-um*) [L.]. Barley, *q. v.* **H. decortiatum**, barley deprived of its husk; commonly called *pearl barley*. **H. germinatum**, malt. Also, one of several granular elevations described by Spitzka on the floor of the fourth ventricle.

**Horchound** (*hor-hornd*). See *Marrubium*.

**Horizon** (*hor-i-zon*) [*hōrĭzōn*, horizon]. 1. The line separating the visible from the invisible part of the earth from a single point of view. 2. In craniometry, a line that extends around the skull, touching the lower border of the orbital cavities and passing through the auricular points.

**Horizontal** (*hor-i-zōn-tal*) [*hōrĭzōn*, the horizon]. Parallel to the horizon. **H. Posture**. See *Postures, Table of*.

**Horlick's Food.** A variety of Liebig's foods for infants. Its composition is: Water, 3.39; fat, 0.08; grape-sugar, 34.99; cane-sugar, 12.45; no starch; soluble carbohydrates, 87.20; albuminoids, 6.71; ash, 1.28.

**Hormion** (*hor'-me-on*) [*ὁρμῖον*, the first]. See *Cranio-metric Points*.

**Hormogone, Hormogon** (*hor'-mo-gon*). Same as *Hormogonium*.

**Hormogonium** (*hor-mo-go'-ne-un*) [*ὁρμον*, a cord, chain; *γενος*, offspring: *pl.*, *Hormogonia*]. In biology, a short, moniliform reproductive body, found in the Nostocs.

**Horn** [ME., *horn*, horn]. The hard projection, used as a defensive weapon, growing on the heads of certain animals. Horns may be permanent, as in the ox; or deciduous, as in the deer. Also, the hardened epithelial substance of which the horn is composed. **H., Cutaneous.** See *Cornu cutaneum*. **H.-blende**, a common mineral, occurring massive or in prismatic crystals, of various colors, from white, through green shades, to black. It is a silicate of lime, magnesia, or iron. It is sometimes used in the manufacture of porcelain teeth for shading the body or enamel. **H.-distemper**, a disease of cattle affecting the core of the horn. **H.-pock.** See *Warty Smallpox*. **H.-pox**, a variety of varicella in which the lesions resemble papules. See also *Warty Smallpox*.

**Horner's Mixture.** See *Red Mixture*. **H.'s Muscle.** See *Muscles*, *Table of*.

**Horny** (*horn'-e*) [ME., *horn*, horn]. Composed of, or resembling, horn. **H. Band of Tarinus**, a band of white fibers running between the optic thalamus and the corpus striatum. See *Band*. **H. Epithelium.** See *Trachoma*.

**Horologic** (*hor-o-loj'-ik*) [*ὁρολόγιος*, lit., telling the hour]. In biology, applied to such flowers as open or shut at certain hours.

**Horological** (*hor-o-loj'-ik-al*). Same as *Horologic*.

**Horopter** (*hor-op'-ter*) [*ὁπός*, boundary; *ὁπτήρ*, an observer]. The sum of all the points seen singly by the two retinae while the fixation-point remains stationary. "A circle passing through the center of rotation of each eye and through the apex of the point of fixation of the visual lines." (*Mueller*.) "A line representing the curve along which both eyes can join in sight." (*Noyes*.)

**Horopteric** (*hor-op-ter'-ik*) [*ὁπός*, boundary; *ὁπτήρ*, observer]. Pertaining to an horopter.

**Horrida cutis** (*hor'-id-ah kut'-tis*) [L.]. Goose-skin. *Cutis anserina*.

**Horripilation** (*hor-ip-il-a'-shun*) [*horrere*, to stand on end; *pilus*, the hair]. A sensation as if the hairs of the skin were stiff and erect.

**Horripilator** (*hor-ip-il-a'-tor*). Same as *Arrector pili*.

**Horrors** (*hor'-orz*) [*horror*, a shaking, terror]. A popular name for *Delirium tremens*, *q. v.*

**Horse** (*hors*) [ME., *hors*, a horse]. A member of the genus *Equus*; a domestic beast of burden. **H.-chestnut.** See *Æsculus hippocastanum*. **H.-chestnut bark**, the bark of the horse-chestnut (*Æsculus hippocastanum*), said to be used in leather-manufactures for the production of an extract under the simple name of *chestnut extract*. **H.-distemper**, influenza. **H.-doctor**, a farrier; a veterinary surgeon. **H.-drench**, a dose of physic for a horse. **H.-foot.** See *Talipes equinus*. **H.-leech**, a large leech, the *Hæmopsis* of Southern Europe and Northern Africa; also a horse-doctor. **H.-power.** See *Unit*. **H.-pox. 1.** A pustular disease of horses, which, communicated to cows, produces cow-pox. It is also called *pustular grease*. **2.** See *Coitus Disease*. **H.-radish**, the fresh

root of *Cochlearia armoracia*, with properties due to a volatile oil. It is stimulant, diuretic, and externally a rubefacient, and is much used as a condiment. Dose of the fld. ext. ʒj-ij. **Armoraciæ, Spt., Comp.** (B.P.). Dose ʒj-ij. **H.-shoe Fistula**, a name applied to a fistulous track surrounding the rectum in a semicircle, either in front or behind. **H.-shoe Hy-men.** See *Hymen*. **H.-shoe Kidney**, the union of the lower ends of the two kidneys, so that they appear to form a single organ of a form somewhat like that of a horse-shoe. **H.-sickness.** See *Anthrax*. **H.-tail.** See *Equisetum*. **H.-weed.** See *Collinsonia canadensis*.

**Horsikin** (*hor'-sik-in*) [ME., *hors*, a horse]. A model used in teaching the anatomy and surgery of the horse.

**Horsley's Method.** A method of determining the position of the fissure of Rolando. It is carried out by means of an instrument made to encircle the head, and having an arm fixed at an angle of 67°, which indicates the position of the fissure. **H.'s Test.** See *Tests*, *Table of*.

**Horst's Eye-water.** *Collyrium adstringens luteum*. An eye-solution prepared as follows: Take of ammonium chlorid, 50 centigrams, and zinc sulphate, 125 centigrams, dissolve in 200 grams of distilled water, and add a solution of 40 centigrams of camphor in 20 grams of dilute alcohol, and 10 centigrams of saffron. Digest for 24 hours with frequent agitation, and filter.

**Hospital** (*hos'-pit-al*) [*hospitale*, a large house]. A building for the care and treatment of sick or infirm people. **H. Fever**, a feverish condition formerly common in hospitals, due to ill-ventilation and unsanitary conditions. Also, the fever symptomatic of gangrene. Also, a synonym of *Typhus Fever*. See *Fever*. **H. Gangrene**, a contagious, phagedenic gangrene occasionally attacking wounds or open sores. It is confined mainly to military hospitals, and is of microbic origin.

**Hospitalism** (*hos'-pit-al-izm*) [*hospitale*, a large house]. The morbid influence arising from the gathering of diseased persons in a hospital, a condition that seems to have a tendency to produce septic diseases.

**Hospitalization** (*hos-pit-al-iz-a'-shun*) [*hospitale*, a large house]. Confinement in a hospital for treatment.

**Hospitalomania** (*hos-pit-al-o-ma'-ne-ah*) [*hospitale*, a large house; *mania*, madness]. A mania for founding or visiting hospitals.

**Host** (*host*) [*hostis*, a stranger, a landlord]. The organic body upon which parasites live.

**Hot** [ME., *hot*, hot]. Having or yielding the sensation of heat; stimulating; biting. **H.-air Bath.** See *Bath*. **H. Bath.** See *Bath*. **H.-blanket Pack**, a rubber sheet and one or two woolen blankets are placed upon the bed. A heavy woolen blanket is wrung out of water at 110° F., spread upon the dry blanket, the patient placed upon it and wrapped with it like a mummy. The dry blankets and rubber sheet are wrapped over this, and the patient is allowed to remain in this pack from half an hour to two hours. It is useful in suppression of urine. **Hot-box**, Japanese, a device for applying dry heat to a part. **H. Drops**, the *Tinctura capsici et myrrhe*, N. F.; they are useful in many painful conditions of the stomach and bowels, when there is no inflammation or organic disease; it is called also "number six." **H. Eye**, Hutchinson's term for a persistent hyperemia of the conjunctiva seen in gout. **H.-spots.** See *Temperature-sense*. **H. Wet-pack**, instead of wringing the linen sheet out of cold water, as in the *Wet-pack*, it

is dipped into water at 110° F., well wrung out and spread upon the blanket, as in the cold pack. The patient is wrapped in this and allowed to remain for an hour. Then he is removed to the side of the bed upon which he is to lie, gently rubbed over with a rough water-gloved hand, and at 65° F. squeezed out by the hand, quickly dried and left alone. This method is usually very efficacious in treating **H.-wind Stroke**, a form of non-fatal, not unlike sunstroke, but caused by the wind, and far more fatal than sunstroke; it is common in India.

**Hottentot Apron** [*hot'ten-to't*]. See *Vulvamen double*, **H. Deformity**. See *Deformity*.

**Hottentotism** [*hot'ten-to'tizm*]. An extreme form of *stomatitis*, sometimes congenital, and often due to an abnormality of the deformity of the vocal organs.

**Hough** (*haugh*) [*AS.* *hoh*, the hough]. The lower part of the tongue.

**Hound's Tongue** [*houn'dz tan*]. The leaves and root of *Urtica dioica* *Sourb.*, an anodyne, demulcent, andstringent. Dose of the li ext. 3ss j. Unof.

**Hour-glass Contraction**. See *Contraction*.

**House** [*hous*] [*ML.* *haus*, a house]. In biology, a cellular structure, representing the cellulose coat of higher *acotyleds*, in which the lowest *Tunicata*, as represented by *Leptotheca*, shelter themselves. **H.-maid & Knee**. See *Leptotheca*, *Bufo*. **H.-physician**, the medical physician in a hospital. **H.-refuse**, the refuse, including manure, both animal and vegetable, waste paper, and other waste material from a household, and which does not enter the drains. **H.-surgeon**, the resident surgeon in a hospital.

**Houston's Folds, or Valves**. Three folds of mucous membrane within the rectum. They are directed obliquely. **H.'s Muscle**. See *Muscle*, *Table of*.

**Hove, Hoven** [*hoh*, *hoh-ven*]. See *Hove* and *Blow*.

**Hovius, Canals of**. See *Canal*. **H., Plexus of**. See *Plexus*, *Table of*.

**Howard's Method**. See *Artificial Respiration*.

**Howells's Lacune, or Pits**. Certain deep or shallow depressions, sometimes simple, and at times quite complex, occurring in bones undergoing absorption, at one edge of the bone bordering on vascular surfaces, and seen on making a microscopic examination. These lacunae are usually filled or lined by larger and smaller granular, frequently multinuclear cells—the so-called *osteoclasts*.

**Hoyer's Alcoholic Carmin**. See *Spirit*, *Table of*. **H.'s Carmin**. See *Carmin*, *Table of*. **H.'s Solution**. See *Solution*, *Table of*.

**Huanokin** [*huan'-kin*] [from *Huanu*, a place-name]. An alcohol from *Cantharidin*, said to be strongly astringent. Unof.

**Hubbell's Wheat Food**. A variety of farinaceous diet for infants, with the following composition: Water, 7.78; fat, 0.41; cane-sugar, 7.50; cane sugar, 4.87; starch, 67.09; whole carbohydrates, 14.29; minerals, 10.13; ash, 1.6; gum, cellulose, etc., undetermined.

**Huchard's Diet**. See *Diet*, *Method of*.

**Huckle-bore** [*huck'-bore*] [*ML.* *huck-bore*, the aspidochelone]. The *Aspidochelone*.

**Hudson's Apparatus**. An apparatus to support the intermetacarpals in the treatment of wrist drop.

**Huetter's Bandage**. See *Bandage*. **H.'s Method**, a method of inducing profluvium. It consists in applying a bladder filled with water or decoction of *Opuntia* to the head of the female.

**Hüfner's Method**. A method of obtaining glycolic acid. A new HCl is added to fresh bile, the mixture shaken, and the mucous material so precipitated is filtered off. Ethyl ether and HCl are added to the

filtrate; the proportions of the filtrate, acid, and ether are respectively 100, 5, and 30. The mixture is shaken and allowed to remain some hours, when crystals form, which are then collected on a filter, washed with water holding HCl and ether in solution, and dried in the air. By recrystallization the crystals are obtained perfectly colorless.

**Hufeland's Cerate**. A preparation used in treating sore nipples. It consists of zinc oxid and lycopodium each 2 parts, simple cerate 30 parts.

**Hughes Bennett's Diuretic**. A diuretic mixture employed in chronic nephritis, composed of pulverized potassium acetate, 2 drams; sweet spirit of niter, half an ounce; water sufficient to make two ounces; one dram of this is given three times daily.

**Huguier's Canal**. See *Canal*. **H.'s Disease**. See *Diseases*, *Table of*. **H.'s Glands**, two small glands opening into the vagina.

**Huingan** [*hwin'-gan*] [*S. Amer.*]. The seed of a plant (*Durara dependens*) native to the Andes. The infusion is used in urinary affections. Unof.

**Human** (*hu'-man*) [*humanus*, human]. Pertaining to or characteristic of man. **H. Dolphin**, a monster with complete union of the lower limbs. **H. Milk**, mother's milk. It derives its origin from an overgrowth of epithelial cells lining the lactiferous ducts, with infiltration with fat, and subsequent rupture. Its specific gravity is 1024–35, its reaction alkaline. Each minute fat-globule is surrounded by a pellicle of serum-albumin. The chemical composition of human milk is as follows:—

|                   | Meigs. | Vogel. | Gandret. |
|-------------------|--------|--------|----------|
| Water, . . . . .  | 87.163 | 89.5   | 88.1     |
| Fat, . . . . .    | 4.283  | 3.5    | 4.0      |
| Casein, . . . . . | 1.046  | 2.0    | 2.2      |
| Sugar, . . . . .  | 7.407  | 4.8    | 5.2      |
| Ash, . . . . .    | 0.101  | 0.17   | 0.5      |

**Humation** (*hu-ma'-shun*) [*humore*, to inter]. Interment; inhumation.

**Humboldt Blue**. Same as *Spirit-blue*.

**Hume's Test**. See *Tests*, *Table of*.

**Humectant** (*hu-mek'-tant*) [*humectare*, to make moist]. 1. Moistening; like a poultice; diluent. 2. A diluent; a substance used to moisten.

**Humeral** (*hu'-mer-al*) [*humerus*, the shoulder]. Pertaining to the humerus.

**Humeren** (*hu'-mer-en*) [*humerus*, the shoulder]. Belonging to the humerus in itself.

**Humero-** (*hu'-mer-o-*) [*humerus*, the shoulder]. A prefix signifying relationship with the shoulder. **H.-cubital**, relating to the humerus and the ulna. **H.-c. Amputation**, amputation at the elbow-joint. **H.-radial**, relating to the humerus and the radius. **H.-scapular**, relating to the humerus and the scapula. **H.-s. Amputation**, amputation at the shoulder-joint. **H.-ulnar**, relating to the humerus and the ulna. **H.-u. Amputation**, amputation at the elbow-joint.

**Humerus** (*hu'-mer-us*) [*L.*]. The bone of the upper arm. Also, the shoulder.

**Humid** (*hu'-mid*) [*humidus*, moist]. Moist; damp. **H. Tetter**. See *Eczema*.

**Humidity** (*hu-mid'-it-e*) [*humor*, moisture]. The state or quality of being moist. **H., Absolute**, the actual amount of water present in the air at any moment, regardless of saturation. **H., Relative**, the relative amount of water present in air which is not saturated, as compared to what the air should contain at the existing temperature were its condition that of saturation.

**Humifuse** (*hu'-mif-us*) [*humus*, the ground; *fundere*, to pour]. In biology, spread over the surface of the ground.

**Humming-top Murmur or Sound**. See *Bruit de double*.

**Humor** (*hu'-mor* or *u'-mor*) [L.]. Any fluid or semi-fluid part of the body. **H.**, Aqueous, the transparent fluid that fills the anterior chamber of the eye. **H.**, Crystalline. See *Lens*, *Crystalline*. **H.**, Vitreous, the transparent gelatin-like substance filling the posterior chamber of the eye.

**Humoral** (*hu'-mor-al*) [*humor*, moisture]. Pertaining to the natural fluids of the body. **H. Pathology**, an obsolete theory that all diseases result from a disordered or abnormal condition of the fluids or humors of the body.

**Humoralism** (*hu'-mor-al-izm*), or **Humorism** (*hu'-mor-izm*). Same as *Humoral Pathology*.

**Humoralist** (*hu'-mor-al-ist*) [*humor*, moisture]. The name given to one who was an advocate of the supreme importance of the blood in the processes of health and disease.

**Humoro-vitalism** (*hu'-mo-ro-vi'-tal-izm*) [*humor*, moisture; *vita*, life]. The obsolete belief that the fluids of the body are the seat of life.

**Humpback** (*hump'-bak*). See *Kyphosis*.

**Humulin** (*hu'-mu-lin*) [*humulus*, hop]. 1. The same as *Lupulin*. 2. A concentrated preparation from the tincture and decoction of hops. Unof.

**Humulus** (*hu'-mu-lus*) [L.; *gen., Humuli*]. Hop. The strobiles of *H. lupulus*. It contains various principles, hopien and lupulin being the most important. It is a bitter stomachic tonic and feeble hypnotic, increasing the cardiac action. A poultice of hops is a favorite remedy for painful conditions and in inflammations. **H.**, Infusum, unof.,  $\bar{3}$  ss-Oj. Dose  $\bar{3}$ j-iv. **H.**, Tinct., 20 per cent. in strength. Dose  $\bar{3}$ j-ij. *Lupulinum*, the glandular powder. Dose gr. v-xv. **L.**, Ext. (B. P.) Dose gr. v-x. **L.**, Fld. Ext., alcoholic. Dose  $\bar{m}$ x- $\bar{5}$ j. **L.**, Oleoresina, ethereal. Dose gr. ij-v. **L.**, Tinct., unof., strength 12½ per cent. Dose  $\bar{3}$  ss-ij.

**Humus** (*hu'-mus*) [L., the earth, ground, soil]. Vegetable mold. It contains ulmin and ulmic acid, humin and humic acid. **H. Pigments**, certain pigmentary bodies of a more or less dark-brown color, produced when carbohydrates are treated with acids or alkalis. When urine is treated with acids in the presence of oxygen, it becomes darker from the formation of some of these humus-pigmented substances by the action of the acids on the carbohydrates.

**Hunchback** (*hunch'-bak*). See *Kyphosis*.

**Hungarian** (*hung'-ga'-re-an*) [*Hungaria*, Hungary]. Pertaining to Hungary. **H. Balsam**, or **H. Turpentine**, a thin turpentine from the branches of *Pinus pumilio*. **H. Disease**. Synonym of *Typhus Fever*.

**Hungary Blue**. Same as *Cobalt-blue*.

**Hunger** (*hung'-ger*) [ME., *hunger*, hunger]. A condition marked by a sensation of emptiness of the stomach, with intense desire for food. **H.-cure**. See *Nestiatria*. **H.-pest**. Synonym of *Relapsing Fever*, *q. v.* **H.-typhus**. Synonym of *Relapsing Fever*, *q. v.*

**Hunter, Canal of**. See *Canal*. **H.'s Line**. See *Lines*, *Table of*. **H.'s Method**, a method of treating aneurysm by ligating the artery on the proximal side of the sac.

**Hunterian Chancre**. See *Chancre*.

**Huntingdon's Chorea**. Hereditary Chorea. An affection characterized by irregular movements, disturbance of speech, and gradual dementia. It is frequently hereditary, is associated with psychic troubles, and occurs between the thirtieth and fortieth years. The disease has no connection with Sydenham's Chorea. See *Chorea*, *Hereditary*, and *Diseases*, *Table of*.

**Huntsman's Cup**. See *Trumpet Plant*.

**Hunyadi Janos** (*hun-yah'-de*) [from the name of the Hungarian national hero, otherwise called *John Cor-*

*vinus*]. An aperient mineral water from Buda-Pesth, in Hungary. It is an effective laxative or cathartic. It should be taken in the quantity of from a half to one wineglassful, fasting.

**Hura** (*hu'-rah*) [S. Amer.]. A genus of poisonous euphorbiaceous trees of tropical America. **H. brasiliensis**, **H. crepitans**, and **H. strepens**, are the best-known species. They have the general acid, pustulant, and cathartic properties of nearly all euphorbiaceous plants. Unof.

**Huschke, Auditory Teeth of**. Nipple-like projections along the free border of the labium vestibulare of the ear. **H.**, Canal of. See *Canal*. **H.**, Foramen of. See *Foramen*. **H.**, Valve of, the fold of mucous membrane at the point where the common canal formed by the junction of the canaliculi enters the lachrymal sac.

**Husky** (*hus'-ke*) [E. dial., *hasky*, rough, dry]. Harsh, rough, as the voice.

**Hutchinson's Lotion**. A lotion used in the treatment of eczema. It has the following composition: Liquor plumbi subacetatis, ½ ounce; liquor carbonis detergentis, 2½ ounces. Of this one teaspoonful is mixed with a pint of water, and used as a lotion. **H.'s Patch**. See *Signs and Symptoms*, *Table of*. **H.'s Teeth**, a notched or furrowed condition of the free edges of the permanent teeth, especially the central incisors of the upper jaw, due to inherited syphilis. See *Signs and Symptoms*, *Table of*. **H.'s Treatment**. See *Treatment*, *Methods of*. **H.'s Trio of Symptoms**. See *Signs and Symptoms*, *Table of*.

**Huttoning** (*hut'-on-ing*) [after *Hutton*, the inventor]. A method of manipulating a luxated joint, introduced by one Hutton, a bone-setter.

**Huxham's Tincture**. See *Cinchona*.

**Huxley's Angle**. See *Angle*. **H.'s Layer, Membrane, or Sheath**, a layer of nucleated, elongated, polygonal cells lying within Henle's layer of the inner root-sheath of hairs.

**Huygenian Ocular** (*hi-je'-ne-an*). See *Ocular*.

**Huygens, Theory of**. The undulatory theory of light.

**Hyalin** (*hi'-al-in*) [*ὑαλος*, glass]. A translucent substance, called also *canalized fibrin*, that sometimes occurs in miliary tubercle. Also, the membrane or sac forming the walls of hydatid cysts. Also, a substance found in echinoderms and other invertebrates. Its centesimal formula is, C=45.3 to 44.1; H=6.5 to 6.7; N=5.2 to 4.5; O=43 to 44.7.

**Hyaline** (*hi'-al-in*) [*ὑαλος*, glass]. Resembling glass in transparency. **H. Cartilage**. See *Cartilage*. **H. Cast, or Cylinder**, a clear, nearly transparent urinary tube-cast. **H. Degeneration**, a degeneration of fibrous tissue, which becomes transparent, jelly-like, and homogeneous in structure.

**Hyalinosis** (*hi-al-in-o'-sis*) [*ὑαλος*, glass]. Hyaline or waxy degeneration.

**Hyalinuria** (*hi-al-in-u'-re-ah*) [*ὑαλος*, glass; *οὔρον*, urine]. The presence of hyalin in the urine.

**Hyalitis** (*hi-al-i'-tis*) [*ὑαλος*, glass; *τις*, inflammation]. Inflammation of the hyaloid membrane. It is also used as a synonym of inflammation of the vitreous humor.

**Hyalogen** (*hi-al'-o-zen*) [*ὑαλος*, glass; *γεννᾶν*, to produce]. One of the albuminoids found in cartilage; it is readily changed into hyalin, whence the name.

**Hyaloid** (*hi'-al-oid*) [*ὑαλος*, glass; *ειδος*, form]. Transparent; like glass. **H. Artery**, in the embryo, a branch of the arteria centralis retinae, traversing the vitreous humor to the posterior capsule of the lens. Its hyaloid sheath forms the *Canal of Cloquet*. Persistence of this artery after birth has been observed. **H. Membrane**, a delicate, transparent membrane

surrounding the vitreous humor, except in front, where it becomes fibrous and strong and forms a leaflet of the zonula of Zinn.

**Hyaloiditis** (*hi-al-oid-i'tis*). See *Hyalitis*.

**Hyalonyxis** (*hi-al-on-i-k'sis*) [*hi-al-on*, glass; *ixis*, a puncture]. Puncture of the vitreous body of the eye.

**Hyalophagia** (*hi-al-oh-fay-jah*) [*hi-al-on*, glass; *phag*, to eat]. The practice of eating glass, sometimes seen among idiotic persons.

**Hyaloplasm** (*hi-al-op-laz'm*) [*hi-al-on*, glass; *plasma*, plasma]. The clear, fluid, homogeneous portion of the hyaloplasm surrounding the spongiosplasm of a living cell. The term is also used as a general synonym of *reticulum*.

**Hybrid** (*hi-bri'd*) [*hi-bri*, insult]. The offspring of two widely kinds of distinct but closely related species. Among animals, the mule is the best known hybrid.

**H. Measles**. Synonym of *Rubeola*, p. 7.

**Hybridism, or Hybridity** (*hi-bri'd-i-z'm, hi-bri'ti-at-e*) [*hi-bri*, insult]. Crossbreeding; mixture of races; the combination of various diseases.

**Hybridization** (*hi-bri'd-i-z'ash'n*) [*hybrid*, a mongrel; *ize*, insult]. Crossbreeding.

**Hydantoic Acid** (*hi-dan-to'ik*). See *Acid, Glycolic*.

**Hydantoïn** (*hi-dan-to'in*)  $C_2H_4N_2O_2$ . Glycolyl urea. A substance that crystallizes from hot water and from alcohol in needles that melt at  $200^\circ C.$ , and have a neutral reaction and sweet taste.

**Hydarthrosis** (*hi-dar-thro'sis*). See *Hydrarthrosis*.

**Hydatenterocele** (*hi-dat-en-ter-o-sel*) [*hidrop*, water; *teron*, bowel; *cele*, a tumor]. Hydrocele with intestinal hernia.

**Hydatid** (*hi-dat'id*) [*hidropis*, vesicle]. A cyst with aqueous contents formed by the larva of a tenia, *Echinococcus hydatidicus*, the larva of a small tapeworm, *Teniarctia hydatida*, which, in its adult (strobila) condition is only known to infest the dog and the wolf, while the larva (hydatids) are of frequent occurrence in many other mammals. Three principal forms of hydatids are recognized, viz., exogenous, endogenous, and metastatic. The first is sparingly found in man, but is extremely common in the lower animals, where the second is most frequently developed in the human subject, the third kind being found only in man. Cf. *Hydatid*. See *Parasite (Animal)*, Table of.

The term *hydatid* is frequently, also, loosely applied to vesicular tumors and cysts of many kinds. Hydatids are most frequent in the liver, but are found in almost any tissue, even in bone.

**H. Disease**, a disease characterized by the presence in various portions of the body of cysts containing the embryo of the *Tenia hydatidica*. The symptoms vary according to the location of the tumor.

**H. Fremitus**, a modified sound of vibration occasionally obtained on palpating an hydatid cyst. Placing the palm of one hand upon the tumor, and striking the dorsum with the fingers of the other hand, a tremor or thrill is perceived. This is due to the physical condition of a cyst containing fluid, and provided with a tense elastic wall.

**H. Mole**. See *Chorion, Cystic Degeneration*, and *Mole*.

**H. of Morgagni**, one of certain three varieties of the tunica vaginalis testis; also a similar structure connected with the imbricated tunic of the Fallopian tube. The c hydatids are the remnants of the Mesarian duct.

**H. Tapeworm**. See *Tenia hydatidica*.

**Hydatidiform** (*hi-dat-id'if-orm*) [*hidropis*, hydatid; *form*, form]. Having the form of an hydatid. Resembling a hydatid.

**H. Degeneration of the Chorion, or Vesicular Mole**. See *Mole* and *Chorion, Cystic Degeneration of*.

**Hydatidocele** (*hi-dat-id'-o-sel*) [*hidropis*, hydatid; *cele*, tumor]. Osechocele with hydatid cysts.

**Hydatidoma** (*hi-dat-id-o'-mah*) [*hidropis*, hydatid; *oma*, a tumor]. Any hydatid cyst or tumor.

**Hydatidosis** (*hi-dat-id-o'-sis*) [*hidropis*, hydatid]. The condition of being affected with hydatids.

**Hydatogenesis** (*hi-dat-o-jen'-es-is*) [*hidrop*, water; *genesis*, production]. The formation of water within the tissues or cavities of the body.

**Hydatoncus** (*hi-dat-ong'-kus*) [*hidrop*, water; *oncus*, a tumor]. Any cyst, or watery tumor.

**Hydatorrhea** (*hi-dat-or-el'-ah*) [*hidrop*, water; *rhoia*, flow]. A copious flow of water.

**Hydatotherapy** (*hi-dat-o-ther'-ap-e*). See *Hydrotherapy*.

**Hyderabad Commission**. See *Anesthetic*.

**Hydnocarpus** (*hid-no-kar'-pus*) [*hidron*, mushroom; *karpos*, fruit]. A genus of poisonous bixaceous tropical trees. **H. (or Gynocardia) anthelminticus**, is anthelmintic and useful in skin-diseases. **H. inebrians** and **H. wightianus** have similar uses. Unof.

**Hydracetic** (*hi-dras'-et-in*) [*hidra*, a water-serpent],  $C_{11}H_5N_2O_2(C_2H_5O)$ . A derivative of coal-tar and a powerful antipyretic and antirheumatic; its use, however, is attended with danger. Dose gr.  $\frac{1}{2}$  to ij. An ointment (10 per cent.) is recommended in psoriasis. Unof.

**Hydracid** (*hi-dras'-id*) [*hidrop*, water; *acidum*, acid]. A term sometimes used in chemistry to denote an acid formed by a combination of hydrogen and some acid element or radicle other than oxygen. Hydrochloric acid, HCl, and hydrogen or hydric sulphid,  $H_2S$ , are examples.

**Hydradenitis** (*hi-drad-en-i'tis*) [*hidrop*, water; *adēn*, gland; *itis*, inflammation]. 1. Same as *Hidrosadenitis*. 2. Lymphadenitis. **H. destruens suppurativa**. See *Hydrosadenitis phlegmonosa*.

**Hydradenoma** (*hi-drad-en-o'-ma*). Same as *Hidradenoma*.

**Hydræmia** (*hi-dre'-me-ah*). See *Hydremia*.

**Hydræropericardium** (*hi-drah-e-ro-per-ik-ar'-de-um*) [*hidrop*, water; *hērō*, air; *peri*, around; *kardia*, heart]. The presence of fluid and gas in the pericardium.

**Hydræropleuria** (*hi-drah-e-ro-plu'-re-ah*) [*hidrop*, water; *hērō*, air; *pleura*, side]. Same as *Hydropneumothorax*.

**Hydragogue** (*hi'-drag-og*) [*hidrop*, water; *agōgos*, leading]. 1. Expelling water. 2. A purgative that causes copious liquid alvine discharges.

**Hydramin** (*hi'-dram-in*) [*hidrop*, water; *amin*]. Any one of the oxyethyl bases produced by the action of aqueous ammonia upon ethylene oxid. The hydramins are thick, strongly alkaline liquids, that decompose upon distillation.

**Hydramnios** (*hi-dram't-ne-os*) [*hidrop*, water; *amnion*, fetal membrane]. An abnormal amount of amniotic fluid.

**Hydrangea** (*hi-dran'-je-ah*) [*hidrop*, water; *aggeion*, vessel]. A genus of saxifragaceous shrubs. The root of **H. arborecensis**, much used by the Cherokee Indians for calculi in the bladder, is said to be of some utility. Dose of the liquid extract ʒss-ij; of a decoction ʒj-ij. Unof.

**Hydrangeion** (*hi-dran'-je-on*) [*hidrop*, water, lymph; *aggeion*, vessel; *pl.*, *Hydrangeia*]. A lymphatic vessel.

**Hydrangeitis** (*hi-dran-je-i'tis*) [*hidrop*, water; *aggeion*, a vessel; *itis*, inflammation]. Inflammation of a lymphatic vessel; lymphangitis.

**Hydrangiology** (*hi-dran-je-ol'-o-je*) [*hidrop*, water; *aggeion*, vessel; *logos*, science]. The science of the nature, functions, and diseases of the lymphatics.

**Hydranth** (*hi'-dranth*) [*ἵδρα*, hydra; *ἄνθος*, flower]. In biology, the proper nutritive zooid of the Hydrosoma.

**Hydrargism** (*hi-drar'-gizm*). See *Mercurialism*.

**Hydrargyria** (*hi-drar-jir'-e-ah*). See *Mercurialism*.

**Hydrargyriasis** (*hi-drar-jir'-i-as-is*). See *Mercurialism*.

**Hydrargyrisim** (*hi-drar'-jir-izm*). See *Mercurialism*.

**Hydrargyromania** (*hi-drar-jir-o-ma'-ne-ah*) [*ἵδραρυγία*, mercury; *μανία*, madness]. Insanity due to the unwise use of mercury.

**Hydrargyrophobia** (*hi-drar-jir-o-fa'-be-ah*) [*ἵδραρυγία*, mercury; *φόβος*, fear]. Morbid dread of mercurial medicines.

**Hydrargyrophthalmia** (*hi-drar-jir-off-thal'-me-ah*) [*ἵδραρυγία*, mercury; *ὀφθαλμία*, ophthalmia]. Ophthalmia due to mercurial poisoning.

**Hydrargyrum** (*hi-drar'-jir-um*) [*ἵδραρυγός*, mercury; *γεν.*, *Hydrargyri*]. Mercury. Quicksilver.  $Hg = 200$ ; quantivalence 11, IV. The only liquid metallic element, hence the common name, *quicksilver*. See *Elements, Table of*. In medicine, the metal, its nitrate, oxids, chlorids, and iodids are the salts most commonly, the sulphid and cyanid less frequently, used. In small doses continued not too long a time it is a tonic, purgative, and alterative. In larger doses, or too long continued, it is likely to produce pytalism. In "biliousness," mercurial purgatives have long been a favorite remedy, blue-mass, and mercurous chlorid or calomel being usually employed. In syphilis, mercuric chlorid and mercuric iodid are generally considered specific. Mercury in the form of calomel is useful in glandular inflammations. Formerly it was much used in the same form in typhoid fever and malarial fevers. The soluble salts of mercury are highly poisonous. **H. ammoniatum**, ammoniated mercury, "white precipitate," mercurammonium chlorid,  $NH_2HgCl$ , is used externally. **H. ammoniati**, Ung., "white precipitate ointment" —ammoniated mercury 10, benzoated lard 90 parts. **H. benzoas**,  $Hg(C_6H_5CO_2)_2$ . Dose, in pill, gr.  $\frac{1}{15}$ . **H. carbolas**, easily absorbed. Dose, in pill, gr.  $\frac{1}{8}$ – $\frac{1}{2}$ . **H. chloridum corrosivum**,  $HgCl_2$  (**H. perchloridum**, B. P.), corrosive chlorid of mercury, mercuric chlorid, "bichlorid of mercury," "corrosive sublimate." Soluble in water and alcohol; antisyphilitic. Dose gr.  $\frac{1}{80}$ – $\frac{1}{10}$ . Very poisonous. **Liq. hydrarg. perchlorid.** (B. P.), contains gr. ss. of the mercurial salt to the ounce. Dose  $\frac{3}{8}$ ss–ij. **H. chloridum mite**,  $Hg_2Cl_2$  (**H. subchloridum**, B. P.), mild chlorid or subchlorid of mercury, mercurous chlorid, "calomel,"—laxative, tonic, and antipyretic. Insoluble in water and alcohol. Dose gr.  $\frac{1}{20}$ –x. **H. subchlor.**, Ung. (B. P.), 1 to 6½ of benzoated lard. **H. cum ammonia**, Emplastrum. See *Ammonium*. **H. cum creta**, mercury with chalk, "chalk-mixture," "gray powder," contains mercury 38, clarified honey, 10, prepared chalk 57, water q. s. Dose gr. ss–x. **H. cyanidum**,  $Hg(CN)_2$ , mercuric cyanid. Soluble in water and alcohol. It is recommended, with aconite, in diphtheria. Dose gr.  $\frac{1}{100}$ – $\frac{1}{10}$ . Poisonous. **H., Emplastrum**, mercurial plaster—mercury 30, oleate of mercury 12, lead-plaster q. s. **H. et arsenii iod.**, Liq., Donovan's Solution. See *Arsenic*. **H. flav.**, Lotio, unof., "yellow wash" for syphilitic sores—corrosive sublimate gr. xvij, lime-water  $\frac{3}{4}$  x. **Gilbert's Syrup**, unof., hydrarg. biniodid. gr. iij, potass. iodid. gr. cij, water  $\frac{3}{4}$  iij, syrup q. s. **ad  $\frac{3}{4}$  x.** **H. iodid. flavum**,  $HgI_2$ , green iodid of mercury, mercurous iodid. Dose gr.  $\frac{1}{10}$ – $\frac{1}{5}$ . **H. iodid. rubrum**,  $HgI_2$ , red iodid or biniodid of mercury, mercuric

iodid. Soluble in a solution of potassium iodid. Poisonous. Dose gr.  $\frac{1}{50}$ – $\frac{1}{10}$ . **H. iodid. rub.**, Ung. (B. P.), one in 28. **H., Liniment** (B. P.), contains one part of mercury in six. **H., Massa**, "blue mass," "blue pill," has mercury 33, liquorice 5, althca 25, glycerin 3, confection of rose 34. It is used mainly as a purgative. Dose gr. ss–xx. **H. nigra**, Lotio, unof., "black wash" for syphilitic sores—calomel gr. xxx, lime-water  $\frac{3}{4}$  x. **H. nitrat.**, Liq., solution of mercuric nitrate. It is used as an escharotic. **H. nitrat. rub.**, Ung., unof., red ointment of mercuric nitrate, brown citrine ointment; it is made with cod-liver oil. **H. nitrat.**, Ung., citrine ointment,—mercury 7, nitric acid 17, lard-oil 76. **H. nitrat.**, Ung., Dil. (B. P.), citrine ointment and soft paraffin, 1 in 2. **H. oleat.**, contains yellow oxid 20, oleic acid 80. **H. oxid. flav.**, yellow oxid of mercury. Insoluble in water; soluble in nitric and hydrochloric acids. It is used in the preparation of ointments, etc. **H. oxid. flav.**, Ung., contains 10 per cent. of the oxid. **H. oxid. rub.**, red oxid of mercury. Dose gr.  $\frac{1}{50}$ – $\frac{1}{10}$ . **H. oxid. rub.**, Ung., contains 10 per cent. of the oxid. **H. salicylas**,  $HgC_6H_4OCO_2$ . Dose gr.  $\frac{1}{3}$ , in pill. **H. subsulph. flav.**,  $Hg(HgO)_2SO_4$ , yellow subsulphate of mercury, basic mercuric sulphate, "turpeth mineral." Soluble in nitro-hydrochloric acid. Dose, for emesis, gr. ij–v. **H. succinimidum** has been recommended for hypodermatic use. **H. sulph. rub.**, red mercuric sulphate, "cinnabar," is used only by fumigation. **H., Suppositoria** (B. P.), each contains gr. v of mercurial ointment. **H. tannas**, a green powder, rapidly absorbed. Dose gr. j, in pill. **H., Unguent.**, mercurial ointment, "blue ointment,"—mercury 450, lard 225, suet 225, comp. tinct. benzoin 40, old mercurial ointment 100; these are triturated until the globules of mercury disappear under a magnifying glass. It is used to produce the physiologic effects of mercury by inunction.

**Hydrarthrosis** (*hi-drar-thro'-sis*) [*ἵδραρ*, water; *ἄρθρον*, joint]. An effusion of fluid into a joint, usually the result of chronic synovitis. It is called also **Hydrops articuli**, dropsy of the joint, white swelling, etc.

**Hydrarthrus** (*hi-dras'-thrus*). See *Hydrarthrosis*.

**Hydrastin** (*hi-dras'-tin*) [*ἵδραρ*, water; *δρᾶν*, to act],  $C_{22}H_{23}NO_6$ . 1. An alkaloid occurring together with berberin ( $C_{20}H_{11}NO_4 + 4\frac{1}{2}H_2O$ ) in the roots of *Hydrastis canadensis* (q. v.);  $1\frac{1}{2}$ –4 grains may be given per diem, in divided doses. In overdoses it may have poisonous effects. 2. A precipitate from a tincture of the root of *Hydrastis canadensis*: it is laxative, cholagogue, alterative, tonic, antiseptic, etc. Dose gr. j–ij. Unof.

**Hydrastinin** (*hi-dras'-tin-in*) [*ἵδραρ*, water; *δρᾶν*, to act],  $C_{11}H_{13}NO_3$ . An alkaloid obtained by the oxidation of hydrastin. It is useful in chronic metritis and in salpingitis, controls hemorrhage, and is a good substitute for ergot. It stimulates the cardiac muscle and causes contraction of the lumen of arteries. Dose of the hydrochlorate gr. ij–iv, hypodermatically.

**Hydrastis** (*hi-dras'-tis*) [*ἵδραρ*, water; *δρᾶν*, to act]. Golden seal. The roots of *H. canadensis*, with properties due to several alkaloids, the principal being hydrastin, q. v. It is a simple, bitter tonic, with antiperiodic properties, and arrests the movements of white blood-corpuscles. It is useful in catarrh of the stomach and urinary organs, and as a lotion in gonorrhea and gleet. Dose of the fld ext.,  $m_v$ –xxx; of the tinct. (20 per cent.)  $\frac{3}{8}$ ss–ij. **H., Ext., Liquid.** (B. P.) Dose  $m_v$ –xxx. **H., Glyceritum**, hydrastis 10, glycerin 5, alcohol and water, q. s. **H., Tinct.**, 20 per cent. strength. Dose  $m_{xx}$ – $\frac{3}{4}$  j. Unof.

**Hydrate** (*hi'-drat'*) [*idōp*, water]. A compound of an elementary atom, or of a radical, with the radical *hydroxyl* H-O- or -O-H, as the hydrogen atom may be positive or negative. Practically a hydrate is considered as a molecule of water with its basic atom of hydrogen replaced by another or other positive atom, as potassium hydrate, K-O-H, is derived from water, H-O-H.

**Hydration** (*hi'-drat'-shun*) [*idōp*, water]. The process by which a body in substance becomes impregnated or saturated with water.

**Hydrazin** (*hi'-drä-zin'*) [*idōp*, water; *azotum*, nitrogen], H<sub>2</sub>N<sub>2</sub>. 1. Diamid; a colorless, stable gas, soluble in water, having a peculiar odor and a strong alkaline reaction. Urthine is prepared from it. See *Phenylhydrazine*. 2. One of a class of bodies derived from hydrazin by replacing one or more of its hydrogen atoms by a compound radical.

**Hydrazones** (*hi'-drä-zon'*) [*idōp*, water; *azotum*, nitrogen]. Phenylhydrazones; a group of chemic bodies produced by the action of phenylhydrazin upon carbonyl compounds. They are usually crystalline compounds, insoluble in water. They are yellow or brown in color, and almost invariably decompose upon fusion.

**Hydreum** (*hi'-drö-um*) [*idōp*, water; *oikos*, house; *cf.* *Hydra*]. In biology, the sac for the reception of the reticulated tentacles attached to the swimming-foot of certain hydroids.

**Hydrectasis** (*hi'-dräk'-tä-sis*) [*idōp*, water; *ἐκτασις*, a stretching out]. Distention by water or by a watery fluid.

**Hydremesis** (*hi'-drēm'-e-sis*) [*idōp*, water; *ἐναισις*, vomiting]. The vomiting of a watery material.

**Hydremia** (*hi'-drē-mi-ä*) [*idōp*, water; *αἷμα*, blood]. A watery condition of the blood due to defective renal excretion or to imperfect fibrination. It accompanies albuminuria and certain other exhausting diseases.

**Hydrencephal** (*hi'-drēn'-ef-äl*) [*idōp*, water; *ἐγκέφαλος*, brain]. A hydrocephalic brain.

**Hydrencephalitis** (*hi'-drēn'-ef-äl-i-tis*) [*idōp*, water; *ἐναισις*, brain; *itis*, inflammation]. Inflammatory hydrocephalus.

**Hydrencephalocoele** (*hi'-drēn'-ef-äl-o-ē-l*) [*idōp*, water; *ἐναισις*, brain; *κῆλη*, hernia]. Encephalocoele in which the tumor is in part composed of a watery fluid. *H. palatina*, a variety of hydrencephalocoele in which the dura mater, distended with serum, projects into the mouth, forming a tumor possibly as large as a small apple.

**Hydrencephalus** (*hi'-drēn'-ef-äl-us*). See *Hydrocephalus*.

**Hydrenterocele** (*hi'-drēn'-ter'-o-ē-l*) [*idōp*, water; *ἐναισις*, intestine; *κῆλη*, hernia]. Intestinal hernia, the sac of which contains some extravasated fluid.

**Hydrenterorrhea** (*hi'-drēn'-ter'-o-ē-ä*) [*idōp*, water; *ἐναισις*, intestine; *ῥοια*, flow]. A watery diarrhea.

**Hydriasis** (*hi'-drä-sis*). See *Hydro-therapeutics*.

**Hydriatic** (*hi'-drä-tik'*) [*idōp*, water; *ιατρικός*, healing]. Pertaining to the cure of disease with water.

**Hydriatic** (*hi'-drä-tik'*) [*idōp*, water; *ιατρική*, physician]. Respecting to the treatment of disease with water.

**Hydriatry** (*hi'-drä-ti-ä-ry*). See *Hydro-therapeutics*.

**Hydric** (*hi'-drik'*) [*idōp*, water]. Containing water.

**Hydrid** (*hi'-drid'*) [*idōp*, water]. A chemic compound containing hydrogen united to an element.

**Hydriodic** (*hi'-drä-dik'*) [*idōp*, water; *ιώδης*, like a violet]. Containing hydrogen and iodine. *H. Acid*, HI, a heavy, colorless gas, with a suffocating odor and a caustic action. It freezes at -55° C. The syrup of

hydriodic acid contains 1 per cent. of absolute HI. Dose, ʒj-iv, well diluted.

**Hydro-** (*hi'-dro-*) [*idōp*, water]. A prefix signifying water, or that water forms a structural part. See, also, *Hydrate*.

**Hydroa** (*hi'-drö'-ä*) [*idōp*, water; *ὄν*, egg]. A term including a group of vesicular and bullous skin-affections presenting many points of affinity with vesicating erythemata, herpes, and pemphigus. The group includes the diseases described as *Dermatitis herpetiformis*, *Pemphigus pruriginosus*, *Urticaria vesicans*, and *Herpes gestationis*, and is by no means uncommon.

Hydroa occurs in individuals of the neurotic temperament; its course is chronic, but with a decided tendency toward ultimate recovery. (*Hydroa*, as the name of a skin-disease, is much confused in meaning with *Hydra*, *q. v.*)

*H. bullosa*. See *H. pruriginosus*. *H. æstivale*. See *H. vacciniforme*. *H. febrile*. See *Herpes facialis*. *H. gestationis*, that of pregnancy.

*H. herpetiforme*. Also called *Dermatitis herpetiformis*; *Herpes gestationis*; *Herpes circinatus bullosus*; *Pemphigus circinatus*. See *Pemphigus pruriginosus*. *H. pruriginosus*. *Hydroa bullosa*; a very rare form, attended at its development with intense itching, and sometimes preceded by slight febrile symptoms, followed by the formation of small bullæ not exceeding the size of a split pea, and commencing as vesicles, without any antecedent lesion. Slight umbilication occurs, followed by desiccation, and the formation of scales or crusts. Successive crops are formed, the bullæ being discrete or grouped irregularly, but never in circles. *H. puerorum*. See *H. vacciniforme*. *H. vacciniforme*. *Hydroa æstivale*; *Hydroa puerorum*; *Recurrent summer eruption*; a recurring summer eruption of boyhood, usually with vesicles that leave scars. The disease generally begins in the first, second, or third year of life, and is often preceded by articular symptoms. The eruption develops chiefly on the uncovered parts, and is generally preceded by burning or pain, fullness of the region attacked, anorexia, and insomnia. Red spots appear, and on these rounded vesicles develop, singly or in groups, varying in size from that of a millet-seed to that of a large pea. They may coalesce into an irregularly outlined flattish bulla. The redness remains as an areola. These bullæ dry up, rupture, or become umbilicated, and form crusts which, on separating, leave slightly depressed scars resembling those of smallpox. The pathology is unknown.

*H. puerorum*. See *H. vacciniforme*. *Hydroa æstivale*; *Hydroa puerorum*; *Recurrent summer eruption*; a recurring summer eruption of boyhood, usually with vesicles that leave scars. The disease generally begins in the first, second, or third year of life, and is often preceded by articular symptoms. The eruption develops chiefly on the uncovered parts, and is generally preceded by burning or pain, fullness of the region attacked, anorexia, and insomnia. Red spots appear, and on these rounded vesicles develop, singly or in groups, varying in size from that of a millet-seed to that of a large pea. They may coalesce into an irregularly outlined flattish bulla. The redness remains as an areola. These bullæ dry up, rupture, or become umbilicated, and form crusts which, on separating, leave slightly depressed scars resembling those of smallpox. The pathology is unknown.

**Hydroadipsia** (*hi'-drö-ad-ip'-se-ä*) [*idōp*, water; *ἀ*, priv.; *δίψα*, thirst]. Absence of thirst, or of desire for water.

**Hydrobenzamid** (*hi'-drö-ben'-zam-id'*) [*idōp*, water; *benzoin*; *amid*], C<sub>21</sub>H<sub>18</sub>N<sub>2</sub>. Azobenzoyl hydrid, a crystalline compound, soluble in alcohol.

**Hydrobenzoïn** (*hi'-drö-ben-zö'-in*) [*idōp*, water; *benzoin*], C<sub>11</sub>H<sub>11</sub>O<sub>2</sub>. A compound prepared by the action of sodium amalgam on benzoïn. It dissolves with difficulty in water, is readily soluble in alcohol, and crystallizes in large, shining, rhombic plates, melting at 134° C.

**Hydrobilirubin** (*hi'-drö-bil'-e-rü'-bin*) [*idōp*, water; *bilis*, bile; *ruber*, red], C<sub>29</sub>H<sub>40</sub>N<sub>4</sub>O<sub>7</sub>. A rose-red or brown red pigment formed by treating a solution of bilirubin or biliverdin in dilute alkali with sodium amalgam. It is slightly soluble in water, easily so in alcohol, ether, and chloroform. It is a coloring-matter of feces, said to be identical with stercobilin, and is sometimes found in urine.

**Hydrobiosis** (*hi'-drö-bi-ö'-sis*) [*idōp*, water; *βίος*, life]. In biology, the origin and maintenance of life in fluid media.

**Hydrobromate** (*hi-dro-bro'-mät*) [*ὑδρῶς*, water; *βρῶμος*, a stench]. A basic salt of hydrobromic acid.

**Hydrobromic** (*hi-dro-bro'-mik*) [*ὑδρῶς*, water; *βρῶμος*, stench]. Composed of hydrogen and bromin. **H. Acid.** See *Acid, Hydrobromic*. **H. Ether**,  $C_2H_5Br$ . Bromid of ethyl. A colorless, translucent liquid, with a neutral reaction, ethereal smell, and a pungent, sweet taste; its specific gravity is 1.4733; it boils at  $104^\circ F.$  ( $40.7^\circ C.$ ), and burns with difficulty with a green, smokeless flame. It is prepared by distilling alcohol with either bromin, hydrobromic acid, or bromid of phosphorus. It is only slightly soluble in water, but freely so in ether or alcohol. It is used as an anesthetic. See *Anesthetic*.

**Hydrobromid** (*hi-dro-bro'-müd*). Same as *Hydrobromate*.

**Hydrocaffeic Acid** (*hi-dro-kaf-e'-ik*). See *Acid*.

**Hydrocarbon** (*hi-dro-kar'-bon*) [*ὑδρῶς*, water; *carbo*, charcoal]. A name applied to any one of a multitude of compounds composed mainly of hydrogen and carbon, but also under certain conditions containing other elements as substitution-products. The possibilities of the number of such compounds may be seen in the following series, perhaps the simplest, carbon, C, being a tetrad, and requiring four monad atoms to saturate its quantivalence:—

Methane,  $CH_4$ .  
Ethane,  $C_2H_6$ .  
Propane,  $C_3H_8$ .  
Butane,  $C_4H_{10}$ .  
Pentane,  $C_5H_{12}$ .  
In either of these one or more atoms of hydrogen may be replaced by other atoms or radicals without altering the structure of the compound.

It will be noticed that the members of the series differ by  $CH_2$  in the present case. The various members of the Fat-series are usually indicated as follows:—

Paraffin Series,  $C_nH_{2n+2}$ ,  
Olefins,  $C_2H_{2n}$ ,  
Acetylenes,  $C_2H_{2n-2}$ ,  
in which  $n$  stands for any number of carbon atoms. Thus, if  $n = 3$ , the corresponding member of the Paraffin series would be  $C_3H_8$ , etc. All the hydrocarbons are inflammable. They occur in nature as marsh-gas (fire-damp), natural gas, naphtha, petroleum, asphaltum, ozocerite, etc., in a multitude of forms. They, with their derivatives, form the subject-matter of organic chemistry. A *Table of the Hydrocarbons* is appended.

## TABLE OF HYDROCARBONS.

### 1. PARAFFINS (ETHANES), $C_nH_{2n+2}$ .

| NAME.            | FORMULA.    | PHYSICAL CONDITION. | MELTING-POINT (CENTIGRADE). | BOILING-POINT (CENTIGRADE). | SPECIFIC GRAVITY (AT THE MELTING-POINT). |
|------------------|-------------|---------------------|-----------------------------|-----------------------------|--|
| Methane, . . .   | $CH_4$      | Gas                 |                             |                             | 0.5595                                   |
| Ethane, . . . .  | $C_2H_6$    | Gas                 |                             |                             |  |
| Propane, . . . . | $C_3H_8$    | Gas                 |                             |                             |  |
| Butane, . . . .  | $C_4H_{10}$ | Gas                 |                             | $0^\circ$                   |  |
| Pentane, . . . . | $C_5H_{12}$ | Liquid              |                             | $37-39^\circ$               |  |
| Hexane, . . . .  | $C_6H_{14}$ | Liquid              |                             | $71.5^\circ$                | 0.653                                    |

| Triphenyl, . . . | $C_{10}H_6$ | Liquid |     | 80°  | 0.851 |
| Triphenyl, . . . | $C_{10}H_6$ | Liquid | -6° | 85°  | 0.867 |
| Toluene, . . .   | $C_{10}H_6$ | Liquid |     | 110° | 0.860 |

TABLE OF HYDROCARBONS.—Continued.

## 5. HYDROCARBONS.—Continued.

| NAME.               | FORMULA.       | PHYSICAL CON-<br>DITION. | MELTING-POINT<br>(CENTIGRADE). | BOILING-POINT<br>(CENTIGRADE). | SPECIFIC GRAVITY<br>(AT THE MELTING-<br>POINT). |
|---------------------|----------------|--------------------------|--------------------------------|--------------------------------|---|
| Cumene, . . .       | $C_9H_{12}$    | Liquid                   |                                | 153°                           | 0.879   |
| Mesitylene, . . .   | $C_9H_{12}$    | Liquid                   |                                | 163°                           |   |
| Pseudocumene, . . . | $C_9H_{12}$    | Liquid                   |                                | 166°                           | 0.8722  |
| Cymene, . . .       | $C_{10}H_{14}$ | Liquid                   |                                | 175-176°                       |   |
| Durene, . . .       | $C_{10}H_{14}$ | Solid                    | 79-80°                         | 190°                           |   |
| Prehnitol, . . .    | $C_{10}H_{14}$ | Liquid                   |                                | 204°                           |   |

## 6. OTHER HYDROCARBONS.

|                          |                |                                   |          |          |       |
|--------------------------|----------------|-----------------------------------|----------|----------|-------|
| Methyl, . . .            | $CH_3$         | Does not exist in the free state. |          |          |       |
| Allyl, . . .             | $C_3H_5$       | Does not exist in the free state. |          |          |       |
| Butyl, . . .             | $C_4H_9$       | Does not exist in the free state. |          |          |       |
| Benzyl, . . .            | $C_7H_7$       | Does not exist in the free state. |          |          |       |
| Styrol, . . .            | $C_8H_8$       | Liquid                            |          | 144-145° | 0.925 |
| Indene, . . .            | $C_9H_8$       | Liquid                            |          | 177-178° | 1.040 |
| Naphthalene, . . .       | $C_{10}H_8$    | Solid                             | 79°      | 218°     |       |
| Terpinolene, . . .       | $C_{10}H_{16}$ | Liquid                            |          | 185-190° |       |
| Acenaphthene, . . .      | $C_{12}H_{10}$ | Solid                             | 95°      | 277°     |       |
| Diphenyl, . . .          | $C_{12}H_{10}$ | Solid                             | 71°      | 254°     |       |
| Fluorene, . . .          | $C_{13}H_{10}$ | Solid                             | 113°     | 295°     |       |
| Diphenyl methane, . . .  | $C_{13}H_{12}$ | Solid                             | 26.5°    | 262°     |       |
| Anthracene, . . .        | $C_{14}H_{10}$ | Solid                             | 213°     |          |       |
| Phenanthrene, . . .      | $C_{14}H_{10}$ | Solid                             | 99°      | 340°     |       |
| Tolane, . . .            | $C_{14}H_{10}$ | Solid                             | 66°      |          |       |
| Stilbene, . . .          | $C_{14}H_{12}$ | Solid                             | 120°     |          |       |
| Dibenzyl, . . .          | $C_{14}H_{14}$ | Solid                             | 52°      | 284°     |       |
| Fluoranthene, . . .      | $C_{15}H_{10}$ | Solid                             | 109-110° |          |       |
| Methyl anthracene, . . . | $C_{15}H_{12}$ | Solid                             | 190°     |          |       |
| Pyrene, . . .            | $C_{16}H_{10}$ | Solid                             | 148°     |          |       |
| Chrysene, . . .          | $C_{18}H_{12}$ | Solid                             | 250°     | 436°     |       |
| Retene, . . .            | $C_{18}H_{14}$ | Solid                             | 95°      | 390°     |       |
| Triphenyl methane, . . . | $C_{19}H_{16}$ | Solid                             | 95°      |          |       |
| Picene, . . .            | $C_{22}H_{14}$ | Solid                             | 338°     | 519°     |       |
| Cervl, . . .             | $C_{27}H_{16}$ | Does not exist in the free state. |          |          |       |

## BENZENE SERIES.

|                                     | Boiling-point. | Specific gravity. |
|-------------------------------------|----------------|-------------------|
| Benzene, $C_6H_6$ , . . . . .       | 80.1° C.       | .884 at 15° C.    |
| Toluene, $C_6H_5.CH_3$ , . . . . .  | 110.3° C.      | .872 " "          |
| Xylene, $C_6H_4.(CH_3)_2$ {         | 142°-143° C.   | .866 " "          |
| <i>o</i> -Xylene                    | 139.8° C.      | .862 " 19.5° C.   |
| <i>p</i> - " "                      | 136°-137° C.   | .853 " 20° C.     |
| Pseudocumene { $C_6H_3.(CH_3)_3$    | 164.8° C.      | .869 " 9.8° C.    |
| Mesitylene { $C_6H_3.(CH_3)_3$      | 164.8° C.      |                   |
| Durene, $C_6H_2.(CH_3)_4$           | 189°-191° C.   |                   |
| Pentamethylbenzene, $C_6H.(CH_3)_5$ | 230° C.        |                   |
| Hexamethylbenzene, $C_6(CH_3)_6$    | 264° C.        |                   |

**Hydrocardia** (*hi-dro-kar'-de-ah*). See *Hydropericardium*.

**Hydrocaulus** (*hi-dro-kav'-lus*) [*ιδωρ*, water; *καυλός*, a stem; *pl.*, *Hydrocauli*]. In biology, the main stem of a hydrozoan colony.

**Hydrocele** (*hi'-dro-sel*) [*ιδωρ*, water; *κήλη*, tumor]. A collection of serous fluid in the tunica vaginalis testis, or in connection with the testicle or cord. The term is applied, also, to a serous tumor in other locations.

**Hydrocelia** (*hi-dro-se'-le-ah*) [*ιδωρ*, water; *κοιλία*, belly]. Dropsy of the belly or abdominal region.

**Hydrocellulose** (*hi-dro-sel'-u-los*) [*ιδωρ*, water; *cellula*, a little cell],  $C_{12}H_{22}O_{11}$ . A body formed by moistening cellulose with a dilute mineral acid, and then drying. It is used in photography.

**Hydrocelodes** (*hi-dro-sel'-o'-des*) [*ιδωρ*, water; *κήλη*, tumor; *είδος*, form]. A tumor resembling hydrocele, but due to an extravasation of urine.

**Hydrocenosis** (*hi-dro-sen'-o'-sis*) [*ιδωρ*, water; *κένωσις*, evacuation]. An evacuation of water either by the use of hydragogue cathartics or by the operation of "tapping" the cavity containing the accumulation of fluid. See *Paracentesis*.

**Hydrocnetic** (*hi-dro-sen'-o'-ik*) [*ιδωρ*, water; *κένωσις*, evacuation]. Relating to or causing hydrocenosis.

**Hydrocephalic** (*hi-dro-sef'-al'-ik*) [*ιδωρ*, water; *κεφαλή*, head]. Pertaining to or affected with hydrocephalus.

**H. Cry.** the shriek of pain of the hydrocephalic child during the exacerbations.

**Hydrocephalitis** (*hi-dro-sef'-al-i'-tis*). See *Hydrencephalitis*.

**Hydrocephalocoele** (*hi-dro-sef'-al-o-sel*) [*ιδωρ*, water; *κεφαλή*, head; *κήλη*, a tumor]. Congenital hydrocephalus in which the encephalon protrudes through the ununited or undeveloped cranial wall.

**Hydrocephaloid** (*hi-dro-sef'-al-oid*) [*ιδωρ*, water; *κεφαλή*, head; *είδος*, form]. Pertaining to or resembling hydrocephalus. **H. Disease**, Marshall Hall's Disease; a disease resembling hydrocephalus, sometimes observed in poorly-nourished infants just after weaning. It is a condition of nervous exhaustion, generally coming on after a prolonged illness, or following premature weaning. There is a stage of irritability and one of torpor. The pulse is irregular, the fontanel flaccid and hollow, and there is no, or but slight, tendency to vomiting. Stimulants and tonics arrest the progress of the condition.

**Hydrocephalus** (*hi-dro-sef'-al-us*) [*ιδωρ*, water; *κεφαλή*, head]. A collection of fluid in the cerebral ventricles (*internal hydrocephalus*) or outside the brain-substance (*external hydrocephalus*), preventing closure of the fontanels and causing enlargement of the skull. The head may measure as much as thirty inches in circumference. Wormian bones develop in the sutures and fontanels; the eyeballs are rendered prominent and at the same time their axes are depressed. Often there is a retardation of the mental development, and the patient usually dies within a few years. An acute hydrocephalus occurs in meningeal inflammation. The chronic form is congenital or infantile.

**Hydrochinone** (*hi-dro-ki'-nōn*) [*ιδωρ*, water; *quinone*],  $C_6H_6O_2$ . A substance existing in urine as an ethereal compound with  $H_2SO_4$ ; it is largely the cause of the dark color that this excretion assumes after the absorption of phenol on exposure to the air.

**Hydrochlorate** (*hi-dro-klo'-rat*) [*ιδωρ*, water; *χλωρός*, green]. Any salt or compound of hydrochloric acid.

**Hydrochloric Acid** (*hi-dro-klo'-rik*). See *Acid*, *Hydrochloric*.

**Hydrochlorid** (*hi-dro-cho'-rid*) [*ιδωρ*, water; *χλωρός*, green]. Same as *Hydrochlorate*.

**Hydrocholecystis** (*hi-dro-ko-le-sis'-tis*) [*ιδωρ*, water; *χολή*, bile; *κίστις*, bladder]. Dropsy of the gall-bladder.

**Hydrocinnamic Acid** (*hi-dro-sin-am'-ik*). See *Acid*.

**Hydrocirsocele** (*hi-dro-sir'-so-sel*) [*ιδωρ*, water; *κίρσος*, venous enlargement; *κήλη*, tumor]. Hydrocele accompanied with varicose veins of the spermatic cord.

**Hydrocælia** (*hid-ro-se'-le-ah*). See *Hydrocelia*.

**Hydrocæroulignone** (*hi-dro-se-ru-tig'-non*) [*ιδωρ*, water; *carulus*, blue; *lignum*, wood],  $C_{16}H_{18}O_6$ . A divalent phenol, crystallizing from alcohol and glacial acetic acid in colorless leaflets, and melting at  $190^{\circ}C$ .

**Hydrocollidin** (*hi-dro-kol'-id-in*) [*ιδωρ*, water; *κόλλα*, glue]. A highly poisonous ptomaine-base, so named by Gautier and Etard, and declared by them to be identical with the hydrocollidin obtained by Cahours and Etard from the action of selenium on nicotine. Nencki, on the other hand, asserted its identity with a base (*collidin*) isolated by him in 1876, to which he had ascribed the formula  $C_2H_{11}N$ . The formula of Gautier and Etard's hydrocollidin is  $C_8H_{13}N$ . This ptomaine was obtained from chloroformic extracts, from putrefying mackerel, and putrefying horse-flesh and ox-flesh. The free base is an almost colorless, alkaline, oily fluid, having a strong, penetrating odor like syringa. So small a dose as 0.0017 gram of the hydrochlorid, injected into birds, produced dizziness, paralysis, and death. The pupils remain normal, and the heart stops in diastole.

**Hydrocolpocoele** (*hi-dro-kol'-fo-sel*) [*ιδωρ*, water; *κόλπος*, vagina; *κήλη*, tumor]. A serous tumor of the vagina.

**Hydrocotarnin** (*hi-dro-ko-tar'-nin*) [*ιδωρ*, water; *cotarnin*],  $C_{12}H_{15}NO_3 + \frac{1}{2}H_2O$ . A crystalline alkaloid occurring in small amount in opium. It melts at  $50^{\circ}C$ , and is readily soluble in alcohol, ether, and chloroform.

**Hydrocotoin** (*hid-ro-ko'-to-in*) [*ιδωρ*, water; *Sp.*, *coto*, a cubit],  $C_{15}H_{14}O_4$ . An alkaloid of coto-bark, occurring in yellowish crystals without taste.

**Hydrocotyle** (*hi-dro-ko'-il-e*) [*ιδωρ*, water; *κοτύλη*, a cup]. Pennywort; a genus of umbelliferous herbs. The leaves of *H. asiatica* serve as a bitter tonic and alterative, and are very serviceable in skin-diseases, syphilitic sores, and leprosy. *H. centella*, of S. Africa, *H. umbellata*, of America, and *H. vulgaris*, of Europe, have been employed in medicine, but their properties are little known. *H. bonariensis*, of S. America, is diuretic. All unif.

**Hydrocrania** (*hid-ro-kra'-ne-ah*). Same as *Hydrocephalus*.

**Hydrocyanic** (*hi-dro-se-an'-ik*). See *Cyanogen*, and *Acid*, *Hydrocyanic*.

**Hydrocyst** (*hi'-dro-sist*) [*ιδωρ*, water; *κίστις*, bladder]. A cyst containing a water-like liquid. Sometimes it is synonymous with hydatid. In biology, Huxley's name for singular organs found in certain of the Hydrozoa (especially the *Physophoridae*). They are pyriform sacs of ectoderm and endoderm, closed at their distal ends, but in free communication with the somatic cavity at their proximal ends; they are arrested polypites in which the mouth has never become developed.

**Hydroderma** (*hi-dro-der'-mah*) [*ιδωρ*, water; *δέρμα*, skin]. Dropsy of the skin.

**Hydrodictyotomy** (*hi-dro-dik-te-ot'-o-me*) [*ιδωρ*, water; *δίκτυον*, net; *τομή*, section]. Surgical incision of the retina for the relief of edema.

**Hydrodiuresis** (*hi-dro-di-u-re'-sis*) [*ιδωρ*, water; *διά*, through; *ὑπερτείνω*, to make water]. A copious flow of watery urine.

**Hydro-electric** (*hi-dro-elek'trik*) [*ἵδωρ*, water; *ἤλεκτρον*, electricity]. Pertaining to electricity developed by the physical action of fluids or in connection with water. **H. Bath**, a bath in which the metallic lining of the tub is connected with one pole of a battery, the other being in contact with the person of the patient.

**Hydrofluoric Acid** (*hi-dro-flu'or-ik*). See *H. F.*

**Hydrogaster** (*hi-dro-gas'ter*). Synonym of *Gastritis*.

**Hydrogen** (*hi-dro-jen*) [*ἵδωρ*, water; *γεννάν*, to produce].  $H$ .  $1$  (Atomic weight,  $1$ ). A gaseous element, one part of water weighs .0896 gram. It is easily ignited and occurs in nature combined with oxygen in the form of water ( $H_2O$ ). It has been liquefied at a temperature of  $-253^\circ F$ . under a tension of .650 atmospheres—2 pounds of about 4.7 tons per square inch. It combines with carbon, oxygen, and chlorine, it forms a multitude of radicals formerly known as "organic" compounds, but now often synthetically formed. It is used largely in the qualitative determination of arsenic and antimony, and for combining with oxygen to produce intense heat. It has also been used by inhalation in pulmonary tuberculosis. See *Element*, Table of. **H. peroxid**, or **dioxid**, an unstable compound having the composition  $H_2O_2$ . It is a powerful anti-septic and germicide, and is used as a disinfectant in diphtheria, glandular swellings, and suppurative inflammations, and as an antiseptic to relieve the paroxysms of whooping-cough. It is the basis of most hair bleaching solutions. Dose .5 ss. n. Unof. **H. d.**, **Aqua**, solution of hydrogen in alcohol; contains 3 per cent. by weight of the peroxide. **H. sulphid**. See *Acid Hydrosulphuric*.

**Hydrogenesis** (*hi-dro-jen'-e-sis*) [*ἵδωρ*, water; *γεννάν*, to produce; *γένεσις*, Hydrogenesis]. 1. The collection or formation of a watery fluid. 2. Any disease in which there is a preponderance or degeneration of mucous secretion, fat, bile, or milk.

**Hydrohematocele** (*hi-dro-hem'-at-o-sel*) [*ἵδωρ*, water; *αἷμα*, blood; *κύστις*, tumor]. Hematocele associated with hydrocele.

**Hydrohemia** (*hi-dro-hem'-e-mi*). Same as *Hydremia*.

**Hydrohemostat** (*hi-dro-hem'-o-stat*) [*ἵδωρ*, water; *στασις*, blood; *στένω*, stopped]. A device for stopping hemorrhage by means of hydrostatic pressure.

**Hydrohemothorax** (*hi-dro-hem-o-tho'-raks*) [*ἵδωρ*, water; *αἷμα*, blood; *θώραξ*, thorax]. An effusion of hemorrhagic fluid into the pleural cavity.

**Hydrohymenitis** (*hi-dro-hi-men'-i-tis*). See *Hydrometritis*.

**Hydrohystera** (*hi-dro-his't-er-ah*). See *Hydrometra*.

**Hydroid** (*hi-dro'id*) [*ἵδωρ*, water; *εἶδος*, form]. 1. Like water. 2. Living in water.

**Hydrolactometer** (*hi-dro-lak't-om'-e-ter*) [*ἵδωρ*, water; *λακτίνη*, milk; *μετρητήρ*, measure]. An instrument used in estimating the percentage of water in any given sample of milk.

**Hydrolatum** (*hi-dro-lat'-um*) [*ἵδωρ*, water; *γεννάν*, to produce; *ἵδωρ*, water]. A medicated water.

**Hydroleum** (*hi-dro-leum*) [*ἵδωρ*, water; *εἶδος*, oil]. A proprietary remedy consisting of an emulsion of cod liver oil and pancreatin and borax.

**Hydrology** (*hi-dro-jol-og-ee*) [*ἵδωρ*, water; *λόγος*, science]. A treatise on the nature and uses of water.

**Hydrolymph** (*hi-dro-limf*) [*ἵδωρ*, water; *lymph*, water]. A term applied to the blood of certain animals which is composed largely of the salt or fresh water in which they live and containing a small amount of corpuscular elements.

**Hydrolyte** (*hi-dro-lit*) [*ἵδωρ*, water; *λύσις*, dissolving]. A substance that, like sulphuric acid, distastes, erodes, etc., induces hydrolysis; an hydrolytic agent.

**Hydrolyte** (*hi'-dro-lit*) [*ἵδωρ*, water; *λύσις*, dissolving]. The substance hydrolyzed.

**Hydrolytic** (*hi-dro-lit'-ik*) [*ἵδωρ*, water; *λύσις*, to dissolve]. Pertaining to the decomposition of water, or the liberation of water during a chemie reaction. **H. Ferments**, those causing a combination with the elements of water in the substances they decompose.

**Hydroma** (*hi-dro-mah*) [*ἵδωρ*, water; *ῥῆμα*, a tumor; *pl.*, *Hydromata*]. A tumor containing water. A cyst or sac filled with water or serous fluid. Also, an edematous swelling. Also, the cystic dilatation of a lymphatic of the neck.

**Hydromania** (*hi-dro-ma'-ne-ah*) [*ἵδωρ*, water; *μανία*, madness]. 1. Intense or maddening thirst. 2. Mania with desire for suicide by drowning.

**Hydromel** (*hi'-dro-mel*) [*ἵδωρ*, water; *μέλι*, honey]. A fermented mixture of honey and water, whether medicated or not; a kind of mead or metheglin.

**Hydromeningitis** (*hi-dro-men-in-jit'-tis*) [*ἵδωρ*, water; *μνίνηξ*, a membrane; *ιτις*, inflammation]. Inflammation of the membranes of the brain or cord, accompanied by effusion of watery fluid.

**Hydromeningocele** (*hi-dro-men-in'-go-sel*) [*ἵδωρ*, water; *μνίνηξ*, membrane; *κύστις*, a tumor]. A cystic tumor of the meninges, protruding through the skull. Also, a cystic tumor in the arachnoid cavity or in the continuation of the subarachnoid space.

**Hydrometer** (*hi-drom'-et-er*) [*ἵδωρ*, water; *μέτρον*, a measure]. An instrument for determining the specific gravity of liquids or solutions containing water.

**Hydrometra** (*hi-dro-mel'-tra*) [*ἵδωρ*, water; *μήτρα*, the womb]. A collection of water or mucus in the womb. It may result from congenital atresia in infants, but usually follows an endometritis with stenosis of the cervix.

**Hydrometrectasia** (*hi-dro-me-trek-ta'-ze-ah*) [*ἵδωρ*, water; *μήτρα*, womb; *εκτασις*, a stretching out]. Hydrometra causing distention of the uterus.

**Hydromicrencephalia** (*hi-dro-mi-kren-sef'-a'-le-ah*) or **Hydromicrencephaly** (*hi-dro-mi-kren-sef'-al-e*) [*ἵδωρ*, water; *μικρός*, small; *ἐγκέφαλος*, the brain]. Micrencephaly leading to, or complicated by, a serous effusion within the cranial cavity.

**Hydromphalocoele** (*hi-drom-fal'-o-sel*) [*ἵδωρ*, water; *ὀμφαλός*, navel; *κύστις*, hernia]. Cystic tumor in the sac of an umbilical hernia.

**Hydromphalus** (*hi-drom-fal-us*) [*ἵδωρ*, water; *ὀμφαλός*, navel]. A tumor at the navel distended with water. It may arise either from ascites or umbilical hernia.

**Hydromyelia** (*hi-dro-mi-el'-le-ah*) or **Hydromyelus** (*hi-dro-mi-el-us*) [*ἵδωρ*, water; *μυελός*, marrow]. Dilatation of the central canal of the spinal cord with an accumulation of fluid. It may be moderate or extreme.

**Hydromyelitis** (*hi-dro-mi-el-i'-tis*) [*ἵδωρ*, water; *μυελός*, marrow; *ιτις*, inflammation]. Same as *Hydromyelitis interna*.

**Hydromyringia**, or **Hydromyrinx** (*hi-dro-mir-in'-gah* or *hi-dro-mir-rinks*) [*ἵδωρ*, water; *myrinx*, the tympanic membrane]. 1. The distention of the membrana tympani with water effused within its substance. 2. Less correctly, the same as *Hydrotympanum*.

**Hydronephthol** (*hi-dro-naf'-thel*) [*ἵδωρ*, water; *νάφθα*, asphalt]. A proprietary preparation recommended as an odorless, non-poisonous, and non-corrosive antiseptic. It is regarded by some as identical with betanaphthol. Dose gr. ij-v. Unof.

**Hydronephthylamin** (*hi-dro-naf-thil'-am-in*) [*ἵδωρ*, water; *νάφθα*, asphalt; *amin*],  $C_{10}H_{11}N$ . A compound, called also tetrahydrobetanaphthylamin; a solution of 1 to 5 per cent., whether used topically

or hypodermatically, causes great dilatation of the pupil.

**Hydruncus** (*hi-dron'g'-kus*) [*ἵδωρ*, water; *ὄγκος*, mass]. A distention or swelling caused by an accumulation of water. See, also, *Edema* and *Anasarca*.

**Hydronephrosis** (*hi-dro-nef-ro'-sis*) [*ἵδωρ*, water; *νεφρός*, kidney]. A collection of urine in the pelvis of the kidney from obstructed outflow. The obstruction may be caused by an impacted calculus, a stenosed ureter, congenital deformities, or new-growths. The cyst may vary in size, being either very small or enormous. Hydronephrosis is marked clinically by the presence of a tumor in the renal region, soft and fluctuating, and usually painless. **H.**, Intermittent, one in which there is from time to time the occurrence of a free discharge of urine, with diminution in the size of the renal tumor; ordinarily the retention is the result of twisting or kinking of a ureter.

**Hydronephrotic** (*hi-dro-nef-ro't'-ik*) [*ἵδωρ*, water; *νεφρός*, kidney]. Relating to, affected with, or of the nature of, hydronephrosis.

**Hydronosos** (*hi-dron'-o-sus*) [*ἵδωρ*, water; *νόσος*, disease]. A disease attended with dropsy.

**Hydroparesis** (*hi-dro-par'-es-is*) [*ἵδωρ*, water; *πάρσις*, paralysis]. A paretic affection characterized by watery effusions, such as are seen in beriberi.

**Hydropathy** (*hi-dropt'-ath-e*) [*ἵδωρ*, water; *πάθος*, disease]. The treatment of diseases by the use of water, externally and internally.

**Hydropedesis** (*hi-dro-ped-e'-sis*). See *Hydropedesis*.

**Hydropericarditis** (*hi-dro-per-ik-ar-di'tis*) [*ἵδωρ*, water; *περί*, around; *καρδία*, heart; *τις*, inflammation]. Pericarditis accompanied by serous effusion into the pericardium.

**Hydropericardium** (*hi-dro-per-ik-ar'-de-um*) [*ἵδωρ*, water; *περί*, around; *καρδία*, heart]. A collection of water within the pericardium. It may be active, passive, or mechanical, but is generally the result of kidney-disease, valvular lesions of the heart, or chronic affections of the lungs.

**Hydroperididymia** (*hi-dro-per-e-did-im'-e-ah*) [*ἵδωρ*, water; *περί*, around; *διδυμος*, testicle]. Hydrocele.

**Hydroperitoneum** (*hi-dro-per-it-on-e'-um*). See *Ascites*.

**Hydrophallus** (*hi-dro-fal'-us*) [*ἵδωρ*, water; *φαλλός*, penis]. A dropsical swelling of the penis.

**Hydrophilous** (*hi-droff'-il-us*) [*ἵδωρ*, water; *φίλος*, loving]. In biology, applied to plants that are fertilized through the agency of water.

**Hydrophlegmasia** (*hi-dro-fleg-ma'-ze-ah*) [*ἵδωρ*, water; *φλεγμασία*, inflammation]. Any phlegmasia or inflammation characterized by serous effusion.

**Hydrophobe** (*hi'-dro-fób*) [*ἵδωρ*, water; *φόβος*, fear]. A person who is affected with rabies.

**Hydrophobia** (*hi-dro-fó-be-ah*) [*ἵδωρ*, water; *φόβος*, dread]. A symptom of rabies in man, consisting in fear of, or inability to swallow, water. The term is used commonly as a synonym of *Rabies*, and particularly of the disease in man. **H.**, Pseudo-. See *Pseudo-hydrophobia*.

**Hydrophobic** (*hi-dro-fó-bik*) [*ἵδωρ*, water; *φόβος*, dread]. Pertaining to, or having the nature of, hydrophobia. **H.** Tetanus. See *Kópf-tetanus*.

**Hydrophobophobia** (*hi-dro-fó-bo-fó-be-ah*) [*ἵδωρ*, water; *φόβος*, fear]. A morbid and intense dread of hydrophobia.

**Hydrophone** (*hi'-dro-fón*) [*ἵδωρ*, water; *φωνή*, the voice]. An instrument used in auscultatory percussion, the sound being conveyed to the ear through a column of water.

**Hydrophthalmia** (*hi-droff-thal'-me-ah*) [*ἵδωρ*, water; *ὄφθαλμός*, eye]. An increase in the fluid contents of

the eye, resulting in *glaucoma*, *keratoglobus*, *staphyloma*, etc.

**Hydrophthalmos** (*hi-droff-thal'-mos*). See *Keratoglobus*.

**Hydrophyllum** (*hi-dro-fil'-e-um*) [*ἵδωρ*, water; *φυλλόν*, leaf]. In biology, one of the protective envelopes of the nutritive zooids in a colony of hydrozoa.

**Hydrophyr** (*hi'-dro-fer*) [*ἵδωρ*, water]. Brücke's name for a variety of peptone insoluble in alcohol. See *Peptone*.

**Hydrophysocle** (*hi-dro-fi'-zo-sel*) [*ἵδωρ*, water; *οἶσα*, air; *κλήη*, tumor]. Hernia containing both serous fluid and a gas.

**Hydrophysometra** (*hi-dro-fi-zo-me'-trah*) [*ἵδωρ*, water; *οὔσα*, wind; *μήτρα*, womb]. An abnormal collection of water, or other fluid, and gas, in the womb.

**Hydrophyton** (*hi-droff'-it-on*) [*ἵδωρ*, water; *φυτόν*, a plant; *πλ.*, *Hydrophyta*]. In biology, the branching structure furnishing support to a colony of hydrozoa.

**Hydropic** (*hi-dropt'-ik*) [*ἵδρωτικός*, dropsical]. Pertaining to dropsy.

**Hydropica** (*hi-dropt'-ik-ah*) [*ἵδρωτικός*, dropsical]. Medicines useful in dropsy; especially diuretic remedies.

**Hydroplanula** (*hi-dro-plan'-u-lah*) [*hydra*, a genus of hydrozoans; *planula*, a stage of the embryo]. In biology, an embryo hydrozoan between the planula and the tentaculated actinula.

**Hydroplasm** (*hi'-dro-plazm*) [*ἵδωρ*, water; *πλάσμα*, plasma]. A fluid constituent of protoplasm, or of any plasma.

**Hydropneumatoxis** (*hi-dro-nu-mat-o'-sis*) [*ἵδωρ*, water; *πνευμάτωσις*, inflation]. An abnormal or morbid collection of water, or other fluid, and air, within any of the tissues of the body. See, also, *Hydropneumonia*.

**Hydropneumonia** (*hi-dro-nu-mo'-ne-ah*) [*ἵδωρ*, water; *πνεύμων*, the lung]. A disease thought to consist of a serous infiltration into the lung; pulmonary edema; also, an effusion within the pleura sometimes accompanying pneumonia.

**Hydropneumopericardium** (*hi-dro-nu-mo-per-ik-ar'-de-um*) [*ἵδωρ*, water; *πνεύμα*, air; *περικάρδιον*, pericardium]. A morbid collection of air and water within the pericardium. It causes the clacking sound commonly known as the "water-wheel" sound.

**Hydropneumothorax** (*hi-dro-nu-mo-tho'-raks*) [*ἵδωρ*, water; *πνεύμα*, air; *θώραξ*, thorax]. Air (or gas) and water (or serous effusion) in the pleural cavity.

**Hydropolyp** (*hi-dro-pol'-ip*) [*ἵδωρ*, water; *πολύπους*, polyp]. In biology, a hydroid polyp; a nutritive zooid of a hydrozoan colony.

**Hydrops** (*hi'-drops*) [*ἵδρωσις*, dropsy]. Dropsy; an abnormal collection of fluid in a cavity or part of the body. See *Anasarca*. **H.** articuli, a watery effusion into the synovial cavity of a joint. **H.** cerebri, hydrocephalus. **H.** fibrinosus, effusion into a joint, with fibrinous deposits. **H.** oculi. Same as *Hydrophthalmia*. **H.** paralyticus, that in paralyzed parts. **H.** renalis. See *Hydronephrosis*. **H.** spurium, from obstruction of the natural outlet of a secreting organ. **H.** tubæ. Same as *Hydrosalpinx*, *q. v.* **H.** tubarum. See *Hydrosalpinx*. **H.**, Tuberculous, a copious effusion into a joint from tuberculous affection of the synovial membrane. **H.** vesicæ felleæ, dropsy of the gall-bladder.

**Hydroptic** (*hi-dropt'-tik*). Same as *Hydropic*.

**Hydropneumothorax** (*hi-dro-pi-o-nu-mo-tho'-raks*) [*ἵδωρ*, water; *πνέον*, pus; *πνεύμα*, air; *θώραξ*, chest]. Hydropneumothorax, associated with the presence of pus.

**Hydrosalpinx** (*hi-dro-pi-o-sal'-pingks*) [*ἵδωρ*, water; *πνέον*, pus; *σάλπιγξ*, tube]. An accumulation of water and pus in an oviduct.

- Hydopyretic** (*hi-dro-pyret'ik*) [*ὑδρῶς*, water; *πυρετός*, heat]. Pertaining to, or affected with, hydopyretosis.
- Hydopyretosis** (*hi-dro-pyret'ō-sis*) [*ὑδρῶς*, water; *πυρετός*, heat]. Sweating fever.
- Hydroquinin** (*hi-dro-kin'ē-n*) [*ὑδρῶς*, water; *κίνησις*, Peruvian bark],  $C_{12}H_{10}N_2O_2$ . An alkaloid obtained from cinchona, said to be an admirable antipyretic. *Urid*.
- Hydroquinone** (*hi-dro-kin'ō-n*) [*ὑδρῶς*, water; *κίνησις*, Peruvian bark],  $C_6H_4(OH)_2$ . Quinine, a divalent phenol that combine on heating with dilute  $H_2SO_4$ , or from the oxidation of aniline. It crystallizes in monoclinic crystals, and becomes a plastic mass that melt at  $169^\circ$ . It is readily soluble in water, alcohol, and ether, and is a valuable antipyretic, without producing important side effects. It is also used as an antiseptic. *Dos*, gr. xv-xx. *Urid*.
- Hydrorhiza** (*hi-dro-rhiz'is*) [*ὑδρῶς*, water; *ρίζα*, root]. In botany, the disc of attachment of a *Hydra* or the hydroidous organs in other *Hydræ*.
- Hydrorrhachiocentesis** (*hi-dro-rak'ē-o-sen-tē'sis*) [*ὑδρῶς*, water; *ράχαις*, spine; *κέντρον*, puncture]. Puncture of the spinal meninges in the treatment of hydrocephalus.
- Hydrorrhachis** (*hi-dro-rak'is*) [*ὑδρῶς*, water; *ράχαις*, spine]. Dropsical effusion within the vertebral canal. *H. interna*, syringomyelia, *p. i.*
- Hydrorrhachitis** (*hi-dro-rak'it'is*) [*ὑδρῶς*, water; *ράχαις*, spine; *ῖτις*, inflammation]. Hydrorrhachis with inflammation. See *Spondylitis*.
- Hydorrhea** (*hi-dro-rē'ah*) [*ὑδρῶς*, water; *ῥοία*, flow]. A flow of water. *H. gravidarum*, a condition occurring occasionally in the pregnant woman, in which there is a periodic discharge from the uterus of thin mucus that accumulates as a result of hypertrophy of the uterine glands with excessive secretion.
- Hydrosadenitis** (*hi-dro-sa-den'it'is*) [*ὑδρῶς*, water; *αδέν*, gland; *ῖτις*, inflammation]. See *Hidrosadenitis*.
- H. phlegmonosa**, a furunculus beginning as a swelling. It is also called *Hydradenitis destruens* (Politzer), *Anitis* (Barthélemy), and *Hydradenitis cutanea* (Lukasiewicz).
- Hydrosalpinx** (*hi-dro-sal'pinks*) [*ὑδρῶς*, water; *σάλπιγξ*, trumpet]. A distention of the Fallopian tube with a fluid substance, and its obstruction at the fimbriated extremity, caused by inflammation. It is frequently a result of gonorrhea.
- Hydrosarca** (*hi-dro-sar'kah*). See *Anasarca*.
- Hydrosarcocele** (*hi-dro-sar'ko-el*) [*ὑδρῶς*, water; *σάρξ*, flesh; *κήλη*, hernia]. Sarcocele with dropsy of the tunica vaginalis testis, or with true hydrocele.
- Hydroschocele** (*hi-dro-sko-el*) [*ὑδρῶς*, water; *σχέλον*, armpit; *κήλη*, a tumor]. Dropsical hernia of the armpit.
- Hydrosoma** (*hi-dro-sō'mah*) [*ὑδρῶς*, water; *σῶμα*, body; *πύμα*, *Hydra*]. In biology, the entire double-branched body of a *Hydra*.
- Hydropermatocyst** (*hi-dro-per-mat-o-sist*) [*ὑδρῶς*, water; *σπέρμα*, seed; *κύστις*, cyst]. A hydrocele which also contains permatozoa.
- Hydrophygmograph** (*hi-dro-fiz'mo'raf*) [*ὑδρῶς*, water; *σπέρμα*, seed; *γράφω*, to write]. A sphygmograph apparatus, in which the registering device is actuated by the fluctuation of a body of water.
- Hydrostatic** = **Hydrostatics** (*hi-dro-stat'ik*, or *ik*) [*ὑδρῶς*, water; *στατός*, standing]. The science treating of the mechanical and properties of liquids in a state of equilibrium. *H. Test.* See *Birch*.
- Hydrostomia** (*hi-dro-stō'mah*) [*ὑδρῶς*, water; *στόμα*, mouth]. Excessive secretion of saliva from the mouth.
- Hydroudopathy** (*hi-dro-ud'op'ah*) [*ὑδρῶς*, water; *ὄψω*, well; *πάθος*, suffering]. For treatment of dis-

ease by sweating and the use of water internally or externally, or both.

- Hydrosulphuric acid** (*hi-dro-sul-fut'rik*). See *Acid*.
- Hydrotheca** (*hi-dro-the'kah*) [*ὑδρῶς*, water; *θήκη*, a case; *πύλ*, *Hydrotheca*]. In biology, a polyp-cell; the cuticular investment of a hydroid polyp, forming a cup-like receptacle allowing the protrusion of the distal moiety of the polypite.
- Hydrotherapeutics** (*hi-dro-ther-ap-u'tiks*) [*ὑδρῶς*, water; *θεραπεία*, to heal]. That part of balneology treating of the hygienic use of water, and of its therapeutic application to the body. See also, *Bath* and *Aqua*.
- Hydrotherapy** (*hi-dro-ther'ap-e*). See *Hydrotherapeutics*.
- Hydrothion** (*hi-dro-thi'ōn*) [*ὑδρῶς*, water; *θειον*, sulphur]. Hydrogen sulphid.
- Hydrothionammonia** (*hi-dro-thi-on-am-o-ne'me-ah*) [*ὑδρῶς*, water; *θειον*, sulphur; *ammonia*, ammonia; *αἷμα*, blood]. The presence of hydrosulphid of ammonium in the blood.
- Hydrothionemia** (*hi-dro-thi-on-e'me-ah*) [*ὑδρῶς*, water; *θειον*, sulphur; *αἷμα*, blood]. The presence of hydrogen sulphid in the blood; also, the train of morbid symptoms resulting therefrom.
- Hydrothionuria** (*hi-dro-thi-on-u're-ah*) [*ὑδρῶς*, water; *θειον*, sulphur; *οὔρον*, urine]. Hydrogen sulphid in the urine.
- Hydrothoracic** (*hi-dro-tho-ra'tik*) [*ὑδρῶς*, water; *θώραξ*, thorax]. Pertaining to hydrothorax.
- Hydrothorax** (*hi-dro-tho'raks*) [*ὑδρῶς*, water; *θώραξ*, chest]. A non-inflammatory dropsy of the pleura, usually involving both sacs. *H. purulentus*. Synonym of *Empyema*.
- Hydrotis** (*hi-dro'tis*) [*ὑδρῶς*, water; *οὖς*, ear]. Dropsy of, or effusion into, the ear.
- Hydrotomy** (*hi-dro'to-me*) [*ὑδρῶς*, water; *τέμνειν*, to cut]. A method of dissecting certain tissues by the forcible injection of water into the arteries and capillaries, whereby the structures are separated.
- Hydrotropism** (*hi-dro'tro-pizm*) [*ὑδρῶς*, water; *τρόπος*, a turn]. In biology, that state of a growing plant or organ which causes it to turn either away from, or toward, moisture.
- Hydrotympanum** (*hi-dro-tim'pan-um*) [*ὑδρῶς*, water; *tympanum*, the ear-drum]. Dropsical effusion into the cavity of the middle ear.
- Hydrovarium** (*hi-dro-va're-um*) [*ὑδρῶς*, water; *ovarium*, ovary]. Ovarian dropsy, or cystoma.
- Hydroxid** (*hi-droks'id*) [*ὑδρῶς*, water; *ὀξύς*, sharp]. A metallic or basic radicle combined with one or more hydroxyl groups. Hydroxids may be regarded as formed from water (HOH) by the substitution for one of its hydrogen atoms of a metal or basic radicle.
- Hydroxyl** (*hi-droks'il*) [*ὑδρῶς*, water; *ὀξύς*, sharp]. A compound radicle, OH, that has never been isolated, but which is a factor in a vast number of chemical compounds. Thus, the oxygen bases are regarded as compounds of hydroxyl with electropositive atoms or radicles, e. g., sodium hydroxid, NaOH. Water may be regarded as hydroxyl hydrid, HOH.
- Hydroxylamin** (*hi-droks'il'am-in*) [*ὑδρῶς*, water; *ὀξύς*, sharp; *αμίν*]. A basic substance (NOH<sub>2</sub>) known only in solution in water or in combination with acids. It is prepared by passing nitric-oxid gas through a solution containing nascent hydrogen. The aqueous solution is colorless and odorless, with a strong alkaline reaction. Hydroxylamin hydrochlorid is recommended as a good substitute for chrysarobin in the treatment of skin-diseases.
- Hydrozoön** (*hi-dro-zō'ōn*) [*ὑδρῶς*, water; *ζῶον*, an animal]. A cnidarian of the sub-class *Hydrozoa*, containing the orders *Hydridae*, *Hydromedusæ*, *Siphonophora*.

**Hydruresis** (*hi-dru-re'-sis*) [*ἵδωρ*, water; *οἰρησις*, *οἶρον*, urine]. The passage of a relatively large proportion of water in the urine.

**Hydruria** (*hi-dru'-re-ah*) [*ἵδωρ*, water; *οἶρον*, urine]. Excessive excretion of water by the kidneys, with or without decrease in the amount of the solid constituents of the urine. The urine is pale, limpid, and of low specific gravity. The amount of water discharged in the twenty-four hours is enormously increased. The condition occurs most frequently in men, usually under twenty years of age.

**Hydrurilic Acid** (*hi-dru-ril'-ik*). See *Acid*.

**Hydymenitis** (*hi-dri-men-i'-tis*) [*ἵδωρ*, water; *μῆν*, membrane; *ιτις*, inflammation]. Any inflammation of a serous membrane or surface.

**Hygeia** (*hi-je'-ah*), or **Hygieia** (*hi-je-i'-ah*) [*ἡγίεια*, health]. The state or condition of health.

**Hygiene** (*hi'-je-en*) [*ἡγιεινός*, good for the health]. The science that treats of the laws of health in its broadest sense.

**Hygienic** (*hi-je-en'-ik*) [*ἡγιεινός*, good for the health]. Pertaining to health, or its maintenance. **H. Vinegar**, a vinegar composed of oils of clove and lavender, each 4.0; oil of marjoram, 2.0; oil of benzoës, 50.0; spiritus vini, 500; concentrated acetic acid, 1000.

**Hygienist** (*hi-je-en'-ist*) [*ἡγίεια*, health]. One who is a student of, or an expert in, hygiene.

**Hygieneology** (*hi-je-ol'-o-je*) [*ἡγίεια*, health; *λόγος*, relation]. The science of health; hygiene.

**Hygrechema** (*hi-grek-e'-mah*) [*ὑγρός*, moist; *ἤχημα*, sound; *pl.*, *Hygrechemata*]. The peculiar sound produced by a liquid, as heard upon mediate or immediate auscultation.

**Hygrin** (*hi'-grin*) [*ὑγρός*, moist; from its liquid form],  $C_{12}H_{13}N$ . A liquid, oily alkaloid, derived from coca (*q. v.*). It has the power of strongly dilating the pupil, but has no anesthetic properties.

**Hygrinic** (*hi-grin'-ik*) [*ὑγρός*, moist]. Pertaining to, or composed of, hygrin. **H. Ether**, a substance of uncertain composition, said to have mydriatic properties. Unof.

**Hygro-** (*hi'-gro-*) [*ὑγρός*, moist]. A prefix denoting moist or wet.

**Hygroblepharic** (*hi-gro-blef'-ar-ik*) [*ὑγρός*, moist; *βλεφαρον*, eyelid]. Serving to moisten the eyelid, as a hygroblepharic duct.

**Hygrocele** (*hi'-gro-sel'*) [*ὑγρός*, moist; *κήλη*, a tumor]. Same as *Hydrocele*.

**Hygrodermia** (*hi-gro-der'-me-ah*) [*ὑγρός*, moist; *δέρμα*, skin]. An edematous non-inflammatory skin-affection.

**Hygrology** (*hi-grol'-o-je*) [*ὑγρός*, moist; *λόγος*, science]. The science of the fluids, or so-called humors, of the body.

**Hygroma** (*hi-gro'-mah*) [*ὑγρός*, moist; *δύα*, tumor; *pl.*, *Hygromata*]. A serous bursa or cyst.

**Hygromatous** (*hi-gro'-mat-us*) [*ὑγρός*, moist; *δύα*, tumor]. Pertaining to, or characterized by, a hygroma.

**Hygrometer** (*hi-grom'-et-er*) [*ὑγρός*, moist; *μέτρον*, measure]. An instrument for determining quantitatively the amount of moisture in the air. This amount, constantly varying, is expressed in terms of the percentage required to saturate the air at the particular temperature observed.

**Hygrometric** (*hi-gro-met'-rik*) [*ὑγρός*, moist; *μέτρον*, measure]. 1. Pertaining to hygrometry, or the quantitative determination of atmospheric moisture. 2. Readily absorbing water, as a hygrometric salt; hygroscopic.

**Hygrometry** (*hi-grom'-et-re*) [*ὑγρός*, moist; *μέτρον*, measure]. The measurement of the moisture of the air.

**Hygrophanous** (*hi-grof'-an-us*) [*ὑγρός*, moist; *φάνης*,

show]. In biology, applied to such plant structures as are transparent when wet, but opaque when dry.

**Hygrophila** (*hi-grof'-il-ah*) [*ὑγρός*, moist; *φίλος*, loving]. A genus of dicotyledonous gamopetalous plants.

**H. spinosa**, is a shrub used in Ceylon and India as a diuretic in dropsy. Unof.

**Hygrophobia** (*hi-gro-fó'-be-ah*) [*ὑγρός*, moist; *φόβος*, fear]. Insane dislike of water or of moisture.

**Hygroplasm**, or **Hygroplasma** (*hi'-gro-plazm* or *hi-gro-plaz'-mah*) [*ὑγρός*, moist; *πλάσμα*, anything formed]. In biology, the fluid part of protoplasm (Nägeli). (Cf. *Stercoplasma*.)

**Hygroscope** (*hi'-gro-skōp*) [*ὑγρός*, moist; *σκοπεῖν*, to inspect]. An instrument that indicates variations in the moisture of the air.

**Hygroscopic** (*hi-gro-skop'-ik*) [*ὑγρός*, moist; *σκοπεῖν*, to see]. Having the property of absorbing moisture from the air.

**Hygroscopy** (*hi-gros'-ko-pe*) [*ὑγρός*, moist; *σκοπεῖν*, to view]. Same as *Hygrometry*.

**Hylogenesis** (*hi-lo-jen'-es-is*) [*ὑλη*, matter; *γενεσις*, formation]. The formation of matter.

**Hylogeny** (*hi-loj'-en-e*). Same as *Hylogenesis*.

**Hylopathism** (*hi-lop'-ath-izm*) [*ὑλη*, matter; *πάθος*, disease]. Any disease arising from defect or disorder of the body-substance.

**Hylophagous** (*hi-loff'-ag-us*) [*ὑλη*, wood; *φαγεῖν*, to eat]. In biology, applied to certain animals that feed upon wood.

**Hymen** (*hi'-men*) [*ὑμην*, membrane]. The fold of mucous membrane at the vaginal entrance. **H., Imperforate**, a congenital abnormality, the hymen not having an opening, and thus closing the vaginal outlet or inlet. **H., Forms of**: 1. *Bifenestrate*, or *hymen biforis*, with two openings. 2. *Bilobate*, with two lobes. 3. *Circular*, with a small foramen. 4. *Cribriiform*, with many holes. 5. *Denticular*, with a serrate edge. 6. *Double* (rare). 7. *Fimbriate*, with fringed edges. 8. *Horseshoe*, with its convexity downward. 9. *Imperforate*. 10. *Normal*. 11. *Semilunar*, same as 10, or normal. 12. *Hymen septus*, divided across by a slit. 13. *Hymen subseptus*, covering only the anterior and posterior portions of the passage.

**Hymenal** (*hi-me'-nal*) [*ὑμην*, membrane]. Pertaining to the hymen. **H. Tubercles**. See *Myrtiform Caruncles*.

**Hymeneia** (*hi-men-e'-ah*) [*ὑμην*, membrane]. A genus of leguminous trees. **H. courbaril**, locust-tree, indigenous to tropical America; is a good arterial sedative and astringent in hemoptysis, hematuria, dysentery, etc. Dose of the fluid extract grt. x-xx. This tree and others of the genus afford copal and animé. Unof.

**Hymeniferous** (*hi-men-if'-er-us*) [*ὑμην*, membrane; *ferre*, to bear]. In biology, having a hymenium.

**Hymenitis** (*hi-men-i'-tis*) [*ὑμην*, membrane; *ιτις*, inflammation]. Inflammation of the hymen, or of any membranous structure.

**Hymenium** (*hi-me'-ne-um*) [*ὑμηνιον*, dim. of *ὑμην*, a membrane; *pl.*, *Hymenia*]. In biology, the spore-bearing surface in fungi.

**Hymenocallis** (*hi-men-o-kall'-is*) [*ὑμην*, membrane]. A genus of amaryllidaceous plants. **H. rotata**, grows in the southern U. S. This and other species afford bulbs that may be substituted for squill. Unof.

**Hymenography** (*hi-men-og'-ra-fe*) [*ὑμην*, membrane; *γράφειν*, to write]. Same as *Hymenology*.

**Hymenology** (*hi-men-ol'-o-je*) [*ὑμην*, membrane; *λόγος*, science]. The science of the nature, structure, functions, and diseases of membranous tissue.

**Hymenomalacia** (*hi-men-o-mal-a'-se-ah*) [*ὑμην*, mem-

sternum]. 1. Relating to the hyoid bone and the sternum. 2. In biology, the second lateral piece of the plastron of a turtle; it is also called *Hypoplastron*.  
**Hyp** (*hip*) [*i-po*, under]. A popular name for hypochondriasis, or persistent depression of spirits; hypo.  
**Hypacousis, Hypacusia, Hyperacousis, or Hypakusis** (*hip-ak-u'-sis*) [*i-po*, under; *ἀκουσις*, hearing]. Hardness of hearing from defect of the auditory nerve.  
**Hypæsthesia** (*hip-es-the'-ze-ah*). See *Hyperesthesia*.  
**Hypalbuminosis** (*hip-al-bu-min-o'-sis*) [*ὑπό*, under; *albumen*]. Morbid diminution in the proportion of albumin in the blood. It is caused by anything that gives rise to an increased consumption of albumin or the part of the organism.  
**Hypalgæsia** (*hip-al-jé'-ze-ah*) [*ὑπό*, under; *ἄλγησις*, painfulness]. Diminished sensitiveness to pain.  
**Hypalgia** (*hip-al'-je-ah*) [*ὑπό*, under; *ἄλγος*, pain]. Slight or moderate pain; diminished sensibility to pain.  
**Hypalgic** (*hip-al'-jik*) [*ὑπό*, under; *ἄλγος*, pain]. Slightly painful; experiencing slight pain.  
**Hypanisognathism** (*hip-an-is-og'-nath-izm*) [*ὑπό*, under; *ἄνισος*, unequal, uneven; *γνάθος*, the jaw]. In biology, a lack of correspondence between the teeth of the opposite jaws. Cf. *Anisognathism* and *Epanisognathism*.  
**Hypanisognathous** (*hip-an-is-og'-na-thus*) [*ὑπό*, under; *ἄνισος*, unequal, uneven; *γνάθος*, the jaw]. In biology, having the upper teeth broader than the lower.  
**Hypanthium** (*hip-an'-the-um*) [*ὑπό*, under; *ἄνθος*, a flower; *pl.*, *Hypanthia*]. In biology, an enlarged receptacle.  
**Hypanthodium** (*hip-an-tho'-de-um*) [*ὑπό*, under; *ἄνθος*, a flower; *εἶδος*, form]. See *Synconium*.  
**Hypapophysis** (*hip-ap-off'-is-is*) [*ὑπό*, under; *ἀπόφύσις*, apophysis; *pl.*, *Hypapophyses*]. An anterior or ventral apophysis from the centrum of a vertebra in the human skeleton; the atlas is held by some to have an hypophysis, which is blended with the ring of that vertebra.  
**Hypapoplexia** (*hip-ap-o-pleks'-e-ah*) [*ὑπό*, under; *ἀποπληξία*, apoplexy]. A slight apoplexy.  
**Hypatonia** (*hip-at-o'-ne-ah*) [*ὑπό*, under; *ἀτονία*, atony]. A slight amount of atony.  
**Hypemia** (*hip-el'-me-ah*). See *Hyperhemia*.  
**Hyper-** (*hi'-per-*) [*ὑπέρ*, above]. A Greek prefix signifying above, beyond, or excessive.  
**Hyperacidity** (*hi-per-as-id'-it-e*) [*ὑπέρ*, over; *acidum*, acid]. Excess of acidity.  
**Hyperacousis, Hyperacusia, Hyperacusic, or Hyperakusis** (*hi-per-ak-u'-sis*, *hi-per-ak-u'-ze-ah*) [*ὑπέρ*, over; *ἀκουσις*, hearing]. Morbid acuteness of the sense of hearing; auditory hyperesthesia. Also, a highly developed capability of the discernment of pitch and timbre of musical sounds.  
**Hyperactivity** (*hi-per-ak-tiv'-it-e*) [*ὑπέρ*, over; *agere*, to do]. Excessive or abnormal activity.  
**Hyperadenosis** (*hi-per-ad-en-o'-sis*) [*ὑπέρ*, over; *ἄδην*, gland; *νόσος*, disease]. Enlargement of the lymph-glands; Hodgkin's disease.  
**Hyperæmia** (*hi-per-e-me-ah*). See *Hyperemia*.  
**Hyperæsthesia** (*hi-per-es-the'-ze-ah*). See *Hyperesthesia*.  
**Hyperakusis** (*hi-per-ak-u'-sis*). See *Hyperacousis*.  
**Hyperalbuminosis** (*hi-per-al-bu-min-o'-sis*) [*ὑπέρ*, over; *albumen*, albumin]. An increase in the amount of albumin in the blood, which may be either relative or absolute. It is often due to the excessive ingestion of albuminous food, with insufficient exercise.  
**Hyperalgæsia** (*hi-per-al-jé'-ze-ah*) [*ὑπέρ*, over; *ἄλγησις*, pain]. Excessive sensibility to pain.  
**Hyperalgæsic** (*hi-per-al-jé'-sik*) [*ὑπέρ*, over; *ἄλγησις*, pain]. Exhibiting or appertaining to hyperalgæsia.

**Hyperalgia** (*hi-per-al'-je-ah*) [*ὑπέρ, over; ἄλγος, pain*]. Excessive pain. **H.**, Acoustic, excessive hyperakusis.

**Hyperaloniemia** (*hi-per-al-on-e'-me-ah*) [*ὑπέρ, over; ἄλς, salt; αἷμα, blood*]. Excess of blood-salts.

**Hyperamnesia** (*hi-per-am-ne'-ze-ah*). See *Hypermnnesia*.

**Hyperanabolism** (*hi-per-an-ab'-o-lizm*) [*ὑπέρ, over; ἀναβάλλειν, to build up*]. Hypertrophy or excess of construction of a tissue or part.

**Hyperanthrax** (*hi-per-an-thraks'-is*). Synonym of *Asiatic Cholera*.

**Hyperaphia** (*hi-per-a'-fē-ah*) [*ὑπέρ, over; ἀφή, touch*]. Excessive sensitiveness to touch.

**Hyperaprophdisia** (*hi-per-af-ro-diz'-e-ah*) [*ὑπέρ, over; ἀφροδισία, aphrodisia*]. An over-strong venereal appetite.

**Hyperapophyseal** (*hi-per-ap-o-fiz'-e-al*) [*ὑπέρ, over; ἀπόφυσις, apophysis*]. Pertaining to a hyperapophysis.

**Hyperapophysis** (*hi-per-ap-off'-is-is*) [*ὑπέρ, over; ἀπόφυσις, apophysis*]. A process projecting backward from a neural spine.

**Hyperarthritis** (*hi-per-ar-thr-i'-tis*) [*ὑπέρ, over; ἄρθρον, joint; ιτις, inflammation*]. Severe arthritis.

**Hyperasthenia** (*hi-per-as-the'-ne-ah*) [*ὑπέρ, over; ἀσθένεια, weakness*]. Extreme weakness.

**Hyperauesis** (*hi-per-awks'-e'-sis*) [*ὑπέρ, over; αὐξίσις, increase*]. Extreme increase in the size of a part.

**Hyperbolic** (*hi-per-bol'-ik*) [*ὑπέρ, over; βάλλειν, to throw*]. Exaggerated.

**Hyperbrachycephalic** (*hi-per-brak-e-sef'-al'-ik*) [*ὑπέρ, over; βραχύς, short; κεφαλή, head*]. Extremely brachycephalic.

**Hyperbrachycephaly** (*hi-per-brak-e-sef'-al-e*) [*ὑπέρ, over; βραχύς, short; κεφαλή, head*]. Extreme brachycephaly.

**Hyperbulia** (*hi-per-bu'-le-ah*) [*ὑπέρ, over; βουλή, will*]. Exaggerated wilfulness or obstinacy; abnormal or insane development of will-power.

**Hypercardia** (*hi-per-kar'-de-ah*) [*ὑπέρ, over; καρδία, the heart*]. Cardiac hypertrophy.

**Hypercatabolism** (*hi-per-kat-ab'-o-lizm*) [*ὑπέρ, over; κατά, down; βάλλειν, to throw*]. Wasting or excess of destruction of a tissue or part.

**Hypercatharsis** (*hi-per-kath-ar'-sis*) [*ὑπέρ, over; κάθαρσις, cleansing*]. Excessive purging, or the result of too free use of cathartic medicines.

**Hypercedemonia** (*hi-per-se-de-mo'-ne-ah*) [*ὑπέρ, over; κηδεμονία, anxiety*]. 1. Extreme anxiety or grief. 2. Excessive care on the part of the physician.

**Hypercele** (*hi-per-sel*) [*ὑπέρ, over; κοιλία, belly*]. The dorsal portion of the epicle.

**Hypercenosis** (*hi-per-sen-o'-sis*) [*ὑπέρ, over; κένωσις, evacuation*]. Excessive evacuation, as by purging or bleeding.

**Hyperchlorhydria** (*hi-per-klor-hi'-dre-ah*) [*ὑπέρ, over; χλωρός, green; ὕδωρ, water; γίνομαι, to form*]. Excess of hydrochloric acid in the gastric secretion. Rossbach's Disease. See *Diseases, Eponymic, Table of*.

**Hypercholesteremia** (*hi-per-ko-les-ter-e'-me-ah*) [*ὑπέρ, over; χολή, bile; στέαρ, fat; αἷμα, blood*]. Excess of cholesterol in the blood.

**Hypercholia** (*hi-per-ko'-le-ah*) [*ὑπέρ, over; χολή, bile*]. An excessive secretion of bile.

**Hyperchroma** (*hi-per-kro'-mat'*) [*ὑπέρ, over; χρώμα, color*]. The excessive formation of the pigment of the skin, as in phthiriasis or syphilis.

**Hyperchromatemia** (*hi-per-kro-mat-e'-me-ah*) [*ὑπέρ, over; χρώμα, color; αἷμα, blood*]. An increase in the color of the blood; excess of coloring-matter in the blood.

**Hyperchromatic** (*hi-per-kro-mat'-ik*) [*ὑπέρ, over; χρώμα, color*]. Exhibiting hyperchroma.

**Hyperchromatism** (*hi-per-kro'-mat-izm*). Same as *Hyperchroma*.

**Hyperchromatosis** (*hi-per-kro-mat-o'-sis*) [*ὑπέρ, over; χρώμα, color*]. Excessive pigmentation, as of the skin.

**Hypercinesia** (*hi-per-sin-e'-ze-ah*). See *Hyperkinesia*.

**Hypercrinia** (*hi-per-kri'-e-ah*) [*ὑπέρ, over; κρίνειν, to separate*]. Abnormal or excessive secretion.

**Hypercyesis** (*hi-per-si-e'-sis*) [*ὑπέρ, over; κύησις, conception*]. Superfetation.

**Hypercyrtosis** (*hi-per-sir-to'-sis*) [*ὑπέρ, over; κύρτωσις, curvature*]. Extreme curvature, as of the back or a limb.

**Hyperdactylia** (*hi-per-dak-til'-e-ah*) [*ὑπέρ, over; δάκτυλος, finger*]. Polydactylism.

**Hyperdermatosis** (*hi-per-der-mat-o'-sis*) [*ὑπέρ, over; δερμα, skin*]. Hypertrophy of the skin.

**Hyperdicrotic** (*hi-per-di-u-re'-sis*) [*ὑπέρ, over; δικροτός, a double beat*]. Affected with marked or delayed dicrotism; pertaining to the pulse when the pulse-curve shows the aortic notch below the base-line.

**Hyperdicrotism** (*hi-per-dik'-rot-izm*) [*ὑπέρ, over; δικροτός, a double beat*]. Strongly marked or excessive dicrotism.

**Hyperdistention** (*hi-per-dis-ten'-shun*) [*ὑπέρ, over; distendere, to stretch*]. Forcible or extreme distention.

**Hyperdiuresis** (*hi-per-di-u-re'-sis*) [*ὑπέρ, over; διουρέειν, to pass urine*]. Excessive secretion of urine.

**Hyperdynamia** (*hi-per-di-nam'-e-ah*) [*ὑπέρ, over; δύναμις, energy*]. Excessive strength or exaggeration of nervous or muscular function.

**Hyperdynamic** (*hi-per-di-nam'-ik*) [*ὑπέρ, over; δύναμις, energy*]. Pertaining to, or marked by, hyperdynamia.

**Hypereccrisia** (*hi-per-ek-kris'-e-ah*) [*ὑπέρ, over; ἐκ, out; κρίνειν, to separate*]. Excessive excretion.

**Hyperchema** (*hi-per-ek-e'-mah*) [*ὑπέρ, over; ἤχημα, sound; πλ., Hyperchemata*]. A normal sound abnormally exaggerated.

**Hyperchesis** (*hi-per-ek-e'-sis*) [*ὑπέρ, over; ἤχησις, sound*]. Abnormal loudness of voice.

**Hyperemesis** (*hi-per-em'-e-s-is*) [*ὑπέρ, over; ἐμεσις, vomiting*]. Excessive vomiting. **H.** gravidarum. See *Morning Sickness*.

**Hyperemetic** (*hi-per-em-e'-ik*) [*ὑπέρ, over; ἐμεσις, vomiting*]. Pertaining to, or characterized by, excessive vomiting.

**Hyperemia** (*hi-per-e'-me-ah*) [*ὑπέρ, over; αἷμα, blood*]. A condition of plethora or congestion. **H.**, Active, caused by an excessive supply of blood. **H.**, Passive, caused by an impediment to the removal of the blood. **H.** of the Dental Pulp, a condition due to the overfilling of the vessels of the pulp with blood, the resulting pain being sharp and lancinating, and paroxysmal in character, especially in its earlier stages.

**Hyperencephalus** (*hi-per-en-sef'-al-us*) [*ὑπέρ, over; ἐγκέφαλος, brain*]. A variety of single autotistic monsters of the species *exencephalus*, in which there is the same deformity as in podencephalus, but in a higher degree. There is often hydrocephalus, and the body is likely to be deformed in other regions.

**Hyperenterosis** (*hi-per-en-ter-o'-sis*) [*ὑπέρ, over; ἔντερον, bowel*]. Hypertrophy of the intestines.

**Hyperphidrosis** (*hi-per-ef-hid-ro'-sis*) [*ὑπέρ, over; ἐκίδρωσις, perspiration*]. Excessive or long-continued sweating.

**Hypererethisia, or Hypererethism** (*hi-per-er-eth-iz'-e-ah, or hi-per-er'-eth-izm*) [*ὑπέρ, over; ἐρεθισμός, irritation*]. Excessive nervous or mental irritability.

**Hypererythrocythemia** (*hi-per-er-ith-ro-si-the'-me-ah*) [*ὑπέρ, over; ἐρυθρός, red; κύτος, cell; αἷμα, blood*]. Excess of red corpuscles in the blood.

**Hyperesophoria** (*hi-per-es-ofo-ri-ah*) See *Heterophoria*.

**Hyperesthesia** (*hi-per-es-ti-ze-shi-ah*) [*hi-per*, over; *esthesia*, sensation]. Excessive or excessive sensibility of the sense. It may be a symptom or a disease.

**Hyperesthetic** (*hi-per-es-ti-ze-shi-ah*) [*hi-per*, over; *esthesia*, sensation]. Pertaining to hyperesthesia.

**Hyperexophoria** (*hi-per-es-ofo-ri-ah*) See *Heterophoria*.

**Hyperfecundation** (*hi-per-fek-un-dah-shun*) Same as *Hyperfecundation*.

**Hyperflexion** (*hi-per-flek-shun*) [*hi-per*, over; *flexio*, a bending]. Excessive or excessive flexion. This is one condition of treating myopia.

**Hypergenesis** (*hi-per-je-ne-sis*) [*hi-per*, over; *genesis*, production]. Excess of productivity of the parts or organs of the body. It may be normal, as in the increase of the number of a species; or abnormal, as seen in neoplasms. Also, an excessive production of the elements of a tissue or organ.

**Hypergenetic** (*hi-per-je-net-ik*) [*hi-per*, over; *genesis*, production]. Marked by enlargement or increase of size. See also *Hyperplasia*.

**Hypergeusia** (*hi-per-ju-'i-ah*) [*hi-per*, over; *geusia*, taste]. A normal acuteness of the sense of taste.

**Hyperglobulia** (*hi-per-glo-'bu-'ah*) [*hi-per*, over; *globulia*, a ball]. Polythymic plethora. An abnormal increase of the red blood corpuscles; hypererythrocytosis.

**Hyperglycemia** (*hi-per-gli-'se-mi-ah*) [*hi-per*, over; *glycemia*, sweetness; *ai-ma*, blood]. Excess of sugar in the blood.

**Hyperglycogenia** (*hi-per-gli-'ko-ji-'ne-ah*) [*hi-per*, over; *glycogen*, sweet; *ia*, producing]. The excessive production of glycogen.

**Hyperhidrosis, or Hyperidrosis** (*hi-per-hid-'ro-'sis*, or *hi-per-id-'ro-'sis*) [*hi-per*, over; *idrosis*, sweat]. Excessive sweating. A functional disorder of the sweat-glands marked by excessive secretion. It may be general or local.

**Hyperhydremia** (*hi-per-hi-dre-'mi-ah*) [*hi-per*, over; *hydremia*, water; *ai-ma*, blood]. Excess of water in the blood.

**Hyperhypnosis** (*hi-per-hip-no-'sis*) [*hi-per*, over; *hypnos*, sleep]. Excessive or excessive drowsiness and sleep.

**Hypericum** (*hi-per-'i-um* or *hi-per-'i-um*) [*hi-per*, over; *icum*, a suffix]. See *John's wort*; a genus of plants, mostly herbs or shrubs, with a resinous juice. *H. perforatum* one of the commonest of the 160 species, has astringent, stimulant, and diuretic properties, and is used extensively in homeopathic practice. Dose of the tincture, one to five of the 60 (ext. 5)-ij. Unof.

**Hyperideation** (*hi-per-ide-'ah-shun*) [*hi-per*, over; *idea*, thought]. Excessive or excessive mental activity.

**Hyperidrosis** (*hi-per-id-'ro-'sis*) See *Hyperhidrosis*.

**Hyperino-epithelioma** (*hi-per-'i-no-ep-i-thi-'le-'mah*) [*hi-per*, over; *i-no*, epithelium; *epi*, upon; *theli*, nipple; *ma*, tumor; *o*, a suffix]. *Hyperino-epithelioma*. Scirrhous carcinoma with an abundance of fibrous elements.

**Hyperinemia** (*hi-per-in-'e-mi-ah*) [*hi-per*, over; *in*, inner; *e-mi*, blood]. An exaggerated tendency to the formation of fibrin in the blood.

**Hyperinnervation** (*hi-per-in-ner-'ve-shun*) [*hi-per*, over; *in*, muscle]. 1. Overinnervation of the muscular fiber. 2. Abnormal increase in the nerve fibers in the blood; hyperinnervation.

**Hyperistic** (*hi-per-ist-ik*) [*hi-per*, over; *is*, fiber]. Characterized by hyperesthesia.

**Hyperinvolution** (*hi-per-in-vo-'lu-shun*) [*hi-per*, over; *involution*, process of involution]. An extreme diminution in size of the organs, usually observed in excessive involution occurring after pregnancy.

**Hyperisotonia** (*hi-per-i so-to-'ne-ah*) [*hi-per*, over; *isos*, equal; *tonos*, tone]. Unusual equality of tone or tension; applied to muscles.

**Hyperkeratosis** (*hi-per-ker-at-'o-'sis*) [*hi-per*, over; *keras*, horn, cornea]. Hypertrophy of the cornea either in extent or thickness.

**Hyperkinesia** (*hi-per-kin-'et-'ze-ah*) [*hi-per*, over; *kinesis*, energy]. 1. Any exaggerated spasm or muscular contraction. 2. Excessive irritability. 3. Impulsive insanity.

**Hyperkinesis** (*hi-per-kin-'et-'sis*) [*hi-per*, over; *kinesis*, energy]. 1. See *Hyperkinesia*. 2. A disease or diseased condition marked by hyperkinesia.

**Hyperkinetic** (*hi-per-kin-'et-'ik*) [*hi-per*, over; *kinesis*, energy]. Pertaining to, or marked by, hyperkinesia.

**Hyperlactation** (*hi-per-lak-'ta-'shun*) [*hi-per*, over; *lactare*, to give milk]. Prolongation of lactation beyond the ninth month. If persisted in, it produces an exhausted physical condition of the mother known as *Tubes lactealis*. This condition is marked by anemia, with cramp-like pains of the upper extremities when the child is put to the breast.

**Hyperleukocythemia** (*hi-per-lu-'ko-si-the-'me-ah*) [*hi-per*, over; *leukos*, white; *kytos*, cell; *ai-ma*, blood]. Excess in the proportion of white cells in the blood; leukocythemia.

**Hyperleukontemia** (*hi-per-lu-'kon-te-'me-ah*) [*hi-per*, over; *leukon*, albumin; *ai-ma*, blood]. Increase in the albuminous elements of the blood.

**Hyperlipemia** (*hi-per-lip-'et-'me-ah*) [*hi-per*, over; *lipos*, fat; *ai-ma*, blood]. Excess of fat in the blood; lipemia.

**Hyperlithuria** (*hi-per-lith-'u-'re-ah*) [*hi-per*, over; *lithos*, stone; *ouron*, urine]. Excess of lithic acid in the urine. Same as *Lithuria*.

**Hyperlogia** (*hi-per-lo-'je-ah*) [*hi-per*, over; *logos*, speech]. Excessive or maniacal loquacity.

**Hyperlymphia** (*hi-per-limf-'e-ah*) [*hi-per*, over; *lymph*, water]. An increase in the amount of lymph in the body.

**Hypermastia** (*hi-per-mas-'te-ah*) [*hi-per*, over; *masos*, breast]. Excessive development or hypertrophy of the mammary gland, which remains normal in structure.

**Hypermetamorphosis** (*hi-per-met-am-or-'fo-'sis*) [*hi-per*, over; *metamorphosis*, a transformation]. In biology, applied to insects that undergo transformation more completely or having more stages than ordinary.

**Hypermetropia** (*hi-per-me-tro-'pe-ah*). Same as *Hyperopia*, *q. v.*

**Hypermetropic** (*hi-per-me-tro-'p-ik*) [*hi-per*, over; *metron*, measure; *ops*, eye]. Affected with, or pertaining to, hypermetropia. **H. Disc.** See *Disc*.

**Hypermnnesia, or Hypermnnesia** (*hi-perm-ne-'ze-ah*, or *hi-perm-ne-'si*) [*hi-per*, over; *mnesis*, memory]. Abnormal exaltation of the power of memory.

**Hypermotility** (*hi-per-mo-til-'it-e*) [*hi-per*, over; *motilis*, motile]. Excessive action. **H., Gastric**, excessive churning action of the gastric walls, often accompanied with hyperacidity due to increased secretion of HCl.

**Hypernervia** (*hi-per-ner-'ve-ah*). See *Hyperneuria*.

**Hyperneuria** (*hi-per-ner-'ve-ah*) [*hi-per*, over; *neuron*, nerve]. Excessive nerve action.

**Hypernidation** (*hi-per-nid-'at-shun*). See *Supernidation*.

**Hypernea** (*hi-per-ne-'ah*) or **Hypernoia** (*hi-per-noi-'ah*) [*hi-per*, over; *noiein*, to think]. Excessive or abnormal mental activity; also, the uncontrolled and incongruous activity of the imagination in some cases of insanity.

**Hyperodontogeny** (*hi-per-o-don-toj-'en-e*) [*hi-per*, over; *odon*, tooth; *gennao*, to beget]. The phenomenon of

a third dentition late in life. It is supposed to be due to the development of one or more superfluous tooth-germs that have remained dormant.

**Hyperoitis** (*hi-per-o-i'-tis*) [*ὑπερώα*, palate; *ιτις*, inflammation]. Inflammation of the palate.

**Hyperonychia** (*hi-per-o-nik'-e-ah*) [*ὑπέρ*, over; *ὄνυξ*, nail]. Hypertrophy of the nails.

**Hyperope** (*hi'-per-op*) [*ὑπέρ*, over; *ὥψ*, sight]. One who is affected with hyperopia.

**Hyperopia** (*hi-per-o'-pe-ah*) [*ὑπέρ*, over; *ὥψ*, sight]. That condition of the refractive media of the eye in which, with suspended accommodation, the focus of parallel rays of light is behind the retina; it is due to an abnormally short antero-posterior diameter of the eye, or to a subnormal refractive power of its media.

**H., Absolute**, that which cannot be corrected completely by accommodation, so that there is indistinct vision even for distance. **H., Axial**, that due to abnormal shortness of the antero-posterior diameter of the eye, the refractive power being normal. **H., Facultative**, that which may be corrected by the accommodation, so that there is distinct vision at a distance. **H., Latent**, that part of the total that cannot be overcome by the accommodation, or the difference between the manifest and the total hyperopia. **H., Manifest**, that which the accommodation can overcome, or that corrigible by a convex glass aided by the accommodation. **H., Relative**, a high hyperopia in which distinct vision is possible only when excessive convergence is made. **H., Total**, the entire hyperopia, both latent and manifest.

**Hyperorthognathy** (*hi-per-or-thog'-na-the*) [*ὑπέρ*, over; *ὀρθός*, straight; *γνάθος*, the jaw]. Excessive orthognathy; the condition of having a cranial index greater than 90°.

**Hyperosmia** (*hi-per-oz'-me-ah*) [*ὑπέρ*, over; *ὀσμή*, smell]. An abnormal or morbidly acute sense of smell; also, the presence of olfactory illusions.

**Hyperosphresis** (*hi-per-os-fre'-sis*) [*ὑπέρ*, over; *ὀσφρησις*, the power of smelling]. Exaggeration of the sense of smell.

**Hyperostosis** (*hi-per-os-to'-sis*) [*ὑπέρ*, over; *ὀστέον*, bone]. Exostosis or general hypertrophy of bony tissue.

**Hyperparasite** (*hi-per-par'-as-ul*) [*ὑπέρ*, over; *παράσιτος*, parasite]. In biology, a parasite including in itself another parasite.

**Hyperparasitism** (*hi-per-par'-as-it-izm*) [*ὑπέρ*, over; *παράσιτος*, parasite]. The infestation of parasites by other parasites.

**Hyperpepsia** (*hi-per-pep'-se-ah*) [*ὑπέρ*, over; *πέψις*, digestion]. Hayem's term for a form of dyspepsia characterized by an excess of chlorids in the gastric juice, without an excess of free hydrochloric acid.

**Hyperphagia** (*hi-per-fa'-je-ah*) [*ὑπέρ*, over; *φαγεῖν*, to eat]. Excess in eating. See *Bulimia*.

**Hyperphasia** (*hi-per-fa'-se-ah*) [*ὑπέρ*, over; *φάσις*, saying]. Hyperlogia; insane volubility; lack of control over the organs of speech.

**Hyperphoria** (*hi-per-fa'-re-ah*). See *Heterophoria*.

**Hyperphrasia** (*hi-per-fra'-ze-ah*) [*ὑπέρ*, over; *φράσις*, utterance]. The incoherent and exaggerated utterance of an insane person.

**Hyperphrenia** (*hi-per-fre'-ne-ah*) [*ὑπέρ*, over; *φρήν*, mind]. Passionate mental exaltation of the insane.

**Hyperphysemia** (*hi-per-fi-z'-me-ah*) [*ὑπέρ*, over; *αἷμα*, air; *αἷμα*, blood]. Excess of gases in the blood, or the abnormal conditions associated with such excess.

**Hyperplasia** (*hi-per-pla'-ze-ah*) [*ὑπέρ*, over; *πλασις*, moulding]. The excessive deposit or augmentation of the elements of the tissue composing an organ.

**Hyperplastic** (*hi-per-plas'-tik*) [*ὑπέρ*, over; *πλαστικός*, fit for moulding]. Pertaining to hyperplasia.

**Hyperplerosis** (*hi-per-ple-ro'-sis*) [*ὑπέρ*, over; *πλήρωσις*, fulness]. Excessive repletion or fulness.

**Hyperplexia** (*hi-per-pleks'-e-ah*) [*ὑπέρ*, over; *πλήξις*, stroke]. 1. Ecstasy. 2. Melancholia with stupor.

**Hyperpnea**, or **Hyperpnoia** (*hi-per-pne'-ah*, or *hi-per-pnoi'-ah*) [*ὑπέρ*, over; *πνῶν*, breath]. Panting or labored respiration; dyspnea.

**Hyperporosis** (*hi-per-po-ro'-sis*) [*ὑπέρ*, over; *πώρωσις*, cementing or uniting]. An excessive formation of callus in the reunion of fractured bones.

**Hyperpraxia** (*hi-per-praks'-e-ah*) [*ὑπέρ*, over; *πράξις*, exercise]. The excessive restlessness of movement characterizing certain forms of mania.

**Hyperpresbyopia** (*hi-per-pres-be-o'-pe-ah*) [*ὑπέρ*, over; *πρέσβυς*, old; *ὥψ*, eye]. Excessive presbyopia. Obs.

**Hyperpsalaphesia** (*hi-per-sel-af-el'-ze-ah*) [*ὑπέρ*, over; *ψηλάφωσις*, touch]. Abnormal increase of tactile sensibility.

**Hyperpyretic** (*hi-per-pi-ret'-ik*) [*ὑπέρ*, over; *πῦρ*, fire]. Pertaining to hyperpyrexia.

**Hyperpyrexia** (*hi-per-pi-reks'-e-ah*) [*ὑπέρ*, over; *πῦρ*, fire; *ἔχειν*, to have]. A condition marked by excessively high temperature or aggravated febrile symptoms.

**Hypersarcoma**, or **Hypersarcosis** (*hi-per-sar-ko'-ma*, or *hi-per-sar-ko'-sis*) [*ὑπέρ*, over; *σάρξ*, flesh; *ὄμα*, a tumor]. 1. Excessive granulation, fungosity, or proud-flesh. 2. Obesity; hypertrophy.

**Hypersecretion** (*hi-per-se-kre'-shun*) [*ὑπέρ*, over; *secretio*, a secreting]. Excessive secretion.

**Hypersomnia** (*hi-per-som'-ne-ah*) [*ὑπέρ*, over; *somnus*, sleep]. Excessive sleep.

**Hyperspasmia** (*hi-per-spaz'-me-ah*). Synonym of *Convulsions*.

**Hypersplenla** (*hi-per-sple'-ne-ah*). See *Splenomegalia*.

**Hypersthenia** (*hi-per-sthen'-e-ah*) [*ὑπέρ*, over; *σθένος*, strength]. A condition of exalted strength or tone of the body.

**Hypersthenic** (*hi-per-sthen'-ik*) [*ὑπέρ*, over; *σθένος*, strength]. Characterized by hypersthenia.

**Hypersystole** (*hi-per-sis'-to-le*) [*ὑπέρ*, over; *συστολή*, systole]. An excessively strong systole.

**Hyperthermia** (*hi-per-ther'-me-ah*) [*ὑπέρ*, over; *θέρμη*, heat]. Excessive elevation of temperature.

**Hyperthymia** (*hi-per-thi'-me-ah*) [*ὑπέρ*, over; *θυμός*, mind]. 1. Mental hyperesthesia; morbid oversensitiveness. 2. Vehement cruelty or foolhardiness as a symptom of mental disease. 3. Moral insanity.

**Hypertonia** (*hi-per-to'-ne-ah*) [*ὑπέρ*, over; *τόνος*, tone]. 1. Excess of muscular tonicity. 2. Increased intra-ocular tension.

**Hypertonic** (*hi-per-ton'-ik*) [*ὑπέρ*, over; *τόνος*, tone]. Characterized by hypertonia.

**Hypertrichiasis** (*hi-per-trik-i'-as-is*). See *Hirsuties*.

**Hypertrichosis** (*hi-per-trik-o'-sis*). See *Hirsuties*.

**Hypertromos** (*hi-per'-tro-mos*) [*ὑπέρ*, over; *τρόμος*, tremor]. Excessive tremor or fear.

**Hypertrophia** (*hi-per-tro'-fe-ah*) [*ὑπέρ*, over; *τροφή*, nourishment]. Same as *Hypertrophy*. **H. cordis**, hypertrophy of the heart.

**Hypertrophic** (*hi-per-tröf'-ik*) [*ὑπέρ*, over; *τροφή*, nourishment]. Marked by hypertrophy or excessive size.

**Hypertrophy** (*hi-per'-tro-fe*) [*ὑπέρ*, over; *τροφή*, nourishment]. This word etymologically denotes simply over-nourishment, but it has unfortunately become synonymous with excessive growth or size of an organ or part (auxesis), whether this is due to over-nourishment, over-use, or to any other condition. **H., Cardiac**, may follow dilatation of the heart, or be caused by valvular disease, diseased condition of the aorta, diseases of the kidneys and other distant organs, by constitutional disease, by excessive use of tobacco

and of some drugs, or excessive muscular action. It is attended with dilatation of the heart, increase in the cardiac area of fulness and increased arterial pressure, headache, vertigo, dyspnea, palpitation, and yawning of the head. **H.** **Compensatory**, that following dilatation of the heart, or absorptive or regurgitant valvular disease, and produced by the efforts of that organ to make good the deficiency resulting from losing cardiac power. Let the circulation be restored, and the various compensating symptoms will disappear. **H.** **Concentric**, increase in the thickness of the organ, but with limitation in the capacity of its chambers. **H.** **Excentric**, without hypertrophy, with dilatation. **H.** **Falae**, the thickening of the heart wall is due to some process or to adventitious form as growth. **H.** **Idiopathic**, that depending on the absence of other disease of the heart or structure, or of the structure of other organs. **H.** **Numerical**, as a total increase in the number of the constituent muscle cells of the heart-wall. **H.** **Simple**, the walls are thicker than usual, the size of the cavities remaining unchanged. **H.** **True**, the hypertrophy consists in an increase in the muscular tissue itself.

**Hypertropia** (*hīp'ē-trō'pē-ah*) [See *Strabismus*].

**Hyperuremia** (*hīp'ē-rē-mē-ah*) [*hīp'ē*, over; *ūr*, urine; *ah*, blood]. Excess of urea in the blood.

**Hyperuremia** (*hīp'ē-rē-mē-ah*). Same as *Polyuria* and *Hyperuria*.

**Hyperuricemia** (*hīp'ē-rē-mē-mē-ah*) [*hīp'ē*, over; *uric*, uric; *ah*, blood]. Excess of uric acid in the blood.

**Hyperventilation** (*hīp'ē-vēn'thē-ah-shūn*) [*hīp'ē*, over; *vent*, to breathe]. A method of treating some diseases by exposing the body to drafts of air.

**Hypesthesia** (*hīp'ē-stē-zē-ah*) [*hīp'ē*, under; *hīstē*, sensation]. Impairment of sensation; lessened sensibility.

**Hyphe** (*hīp'ē-ah*) [*hīp'ē*, a weaving, web; *phē*, *Hyphē*]. In biology, the filament or thread of a fungus; the minute hyphae form the *mycelium*.

**Hypheemia** (*hīp'ē-mē-ah*) [*hīp'ē*, under; *ah*, blood]. 1. Stagnation, dilatancy of blood. 2. Hemorrhage from the globe of the eye.

**Hyhidrosis** (*hīd'ē-rō-sē-ah*) [*hīd'ē*, under; *hīdros*, sweating]. Deficiency of perspiration.

**Hyphodrome** (*hīp'ē-drō-mē*) [*hīp'ē*, a weaving; *drōmos*, a running]. In biology, a leaf in which the veins are more or less confined in the thick mesophyll.

**Hypnology** (*hīp'ē-nō-lō-jē*) [*hīp'ē*, web; *hōlos*, science]. Science of sleep.

**Hypomycetes** (*hīp'ē-mī-sē-ah*) [*hīp'ē*, web; *mīkēs*, small]. A group of fungi having the spores naked, on prominent footstalks.

**Hypostroma** (*hīp'ē-strō-mē-ah*) [*hīp'ē*, a web; *strōma*, a bed]. Same as *Myeloma*.

**Hypotomy** (*hīp'ē-tō-mē-ah*) [*hīp'ē*, a web; *tomē*, a cutting]. The cutting of the brain.

**Hypotaxis** (*hīp'ē-tāksē-ah*) [*hīp'ē*, under; *tāx*, *hōs*, fiber]. A tendency of filum of the blood.

**Hypnotic** (*hīp'ē-nōt'ik*) [*hīp'ē*, under; *tāx*, *hōs*, fiber]. Pertaining to or associated with, hypnosis.

**Hypnagogic** (*hīp'ē-nō-gō-jē*) [*hīp'ē*, sleep; *hōs*, *hōs*, leading]. 1. Pertaining to or associated with the inception of sleep. 2. Induced by sleep.

**Hypnal** (*hīp'ē-nāl*) [*hīp'ē*, sleep]. A drug composed of stramonium and alcohol hydrate, proposed as an hypnotic. It is narcotic, odorless, and crystalline, and soluble in water. Dose, gr. xv. Lind.

**Hypnopaegic** (*hīp'ē-nō-pē-jē*) [*hīp'ē*, sleep; *hōs*, *hōs*, leading]. A medicine that induces sleep; an hypnotic.

**Hypniater** (*hīp'ne'ā-ter*) [*hīp'nos*, sleep; *hīp'ē*, practitioner]. A somnambulistic or clairvoyant doctor; a hypnotizer or mesmerist.

**Hypnic** (*hīp'ē-nīk*) [*hīp'nikōs*, producing sleep]. 1. Pertaining to or inducing sleep. 2. An agent that induces or influences sleep.

**Hypnobat**, or **Hypnobate** (*hīp'ē-nō-bāt*) [*hīp'nos*, sleep; *hōs*, walking]. A sleep-walker; somnambulist.

**Hypnobia** (*hīp'ē-nō-bā-she-ah*) [*hīp'nos*, sleep; *hōs*, walking]. Somnambulism.

**Hypnocyst** (*hīp'ē-nō-sist*) [*hīp'nos*, sleep; *hōs*, *hōs*, bladder]. In biology, an encysted unicellular organism not undergoing sporulation.

**Hypnogenetic**, **Hypnogenic**, **Hypnogenous** (*hīp'ē-nō-jen-ē'ik*, *hīp'ē-nō-jen'ē-ik*, *hīp'ē-nō-jen-ē-us*) [*hīp'nos*, sleep; *hōs*, to produce]. 1. Producing or inducing sleep. 2. Inducing hypnotism.

**Hypnography** (*hīp'ē-nō-g'ra-fē*). Same as *Hypnology*.

**Hypnolepsy** (*hīp'ē-nō-lep-sē*) [*hīp'nos*, sleep; *hōs*, seizure]. Narcolepsy; morbid sleepiness.

**Hypnology** (*hīp'ē-nō-lō-jē*) [*hīp'nos*, sleep; *hōs*, science]. The science of sleep, its disorders, and its hygienic effects.

**Hypnone** (*hīp'ē-nōn*). See *Acetophenone*.

**Hypnopathy** (*hīp'ē-nōp'ath-ē*) [*hīp'nos*, sleep; *hōs*, disease]. Sleep due to a diseased or morbid condition of the body, brain, or mind; also, narcolepsy; sleepy disease.

**Hypnophobia** (*hīp'ē-nō-fō-bē-ah*) [*hīp'nos*, sleep; *hōs*, fear]. Morbid dread of sleep; also, nightmare or night-terror.

**Hypnosis** (*hīp'ē-nō-sis*) [*hīp'nos*, sleep]. An artificial condition produced by hypnotizing. Also, the gradual approach of sleep. **H.**, **African**. See *African Lethargy*.

**Hypnosperm** (*hīp'ē-nō-sperm*) [*hīp'nos*, sleep; *hōs*, seed]. In biology, a resting spore. Cf. *Hypnospor*.

**Hypnospor** (*hīp'ē-nō-spor*) [*hīp'nos*, sleep; *hōs*, a spore]. In biology, a resting spore.

**Hypnotherapy** (*hīp'ē-nō-ther'ap-ē*) [*hīp'nos*, sleep; *hōs*, healing]. Hypnotic treatment of disease.

**Hypnotic** (*hīp'ē-nōt'ik*) [*hīp'nos*, sleep]. A remedy that causes sleep. A soporific. Also, pertaining to hypnotism.

**Hypnotism** (*hīp'ē-nōt'izm*) [*hīp'nos*, sleep]. A state of artificial somnambulism; it may be produced by various means, as, for example, by having the subject look with concentrated attention at any small object so near that effort is required to converge the axes of the eyes. It is characterized by a partial or complete absence of volition, sensation, and self-consciousness, except so much as comes from the hypnotizer or some dominating will or idea. There are four main methods of inducing hypnotism, all originating in France. These are as follows: **Charcot's Method**; it consists in making gentle pressure over the eyeballs, and, finally, rubbing the top of the head. **Luys' Transference Method**; the hypnotism is induced by having the patient sit with his back to the light and look steadily at a rapidly revolving mirror placed two or three feet from him, on which the light is directly shining. The constant flash of the light soon wears the eyes and produces sleep. **Nancy Method**; in this method hypnotism is induced by means of suggestion entirely, the patient submitting to the will of the operator. **Voisin's Method**; Braidism; the patient lies upon the broad of his back and gazes steadily at a bright silvered ball, suspended from the ceiling and at a distance of about nine inches from his eyes. The method of fascination is also used, the operator gazing fixedly in the subject's eyes at a distance of about a foot. See, also, *Somnambulism*.

**Hypnotizable** (*hip-not-iz'-ab-l*) [*ὑπνός*, sleep]. Susceptible of being hypnotized.

**Hypnotization** (*hip-not-iz-a'-shun*) [*ὑπνός*, sleep; *facere*, to make]. The employment of the means used to hypnotize a person; the induction of hypnotism.

**Hypnotoid** (*hip'-not-oid*) [*ὑπνός*, sleep; *εἶδος*, form]. Resembling hypnotism.

**Hypo-** (*hi'-po-*) [*ὑπό*, under]. A prefix denoting deficiency or lack.

**Hypo** (*hip'-o*) [*ὑπό*, under]. A popular name for *hypochondriasis*, lowness of spirits, or imaginary illness, or exaggeration of slight ailments.

**Hypoæmia** (*hi-po-e'-me-ah*). See *Hyphæmia*.

**Hypoalbuminosis** (*hi-po-al bu-min-o'-sis*). See *Hyalbuminosis* and *Hypoalbuminemia*.

**Hypoaionemia** (*hi-po-al-o-ne'-me-ah*) [*ὑπό*, under; *ἄλς*, salt, *αἷον*, of salts; *αἷμα*, blood]. A deficiency of the salts of the blood.

**Hypoarria** (*hi-po-a'-re-ah*) [*ὑπό*, under; *ὠάριον*, dim. of *ὄον*, an egg]. In biology, a pair of oval ganglia found on the ventral side of the region of the thalami in most fishes.

**Hypoblast** (*hi'-po-blast*) [*ὑπό*, under; *βλαστός*, sprout]. The internal layer of the blastoderm, or the ental layer of cells of the embryo of a metazoan; it is called, also, the endoderm, endoblast, entoderm, or epithelioglandular layer; from it is developed the intestinal epithelium (except that of the mouth and anus) and that of the glands opening into the intestines; also, the epithelium of the air-passages.

**Hypoblepharon** (*hi-po-blef'-ar-on*) [*ὑπό*, under; *βλέφαρον*, lid]. 1. An artificial eye. 2. A swelling under the eyelid.

**Hypobromite** (*hi-po-bro'-mit*) [*ὑπό*, under; *βρώμος*, stench]. A salt of hypobromous acid. **H. Method**, a method of estimating the quantity of urea in urine, based upon the fact that when urea is acted upon by sodium hypobromite (or calcium hypochlorite) it is decomposed into nitrogen, carbon dioxide, and water.

**Hypobulia** (*hi-po-bu'-le-ah*) [*ὑπό*, under; *βούλη*, will]. Loss or deficiency of will-power.

**Hypocardia** (*hi-po-kar'-de-ah*) [*ὑπό*, under; *καρδία*, heart]. Downward displacement of the heart.

**Hypocatalepsy** (*hi-po-kat-al-ep'-sis*) [*ὑπό*, under; *κατά*, down; *λαμβάνειν*, to seize]. Slight catalepsy, or epilepsies.

**Hypocatharsis** (*hi-po-kath-ar'-sis*) [*ὑπό*, under; *καθαίρειν*, to purge]. A gentle purgation.

**Hypochilium** (*hi-po-kil'-e-um*) [*ὑπό*, under; *χείλος*, the lip: *pl.*, *Hypochilia*]. In biology, the lower part of the lip of certain orchids.

**Hypochlorhydria** (*hi-po-klor-hi'-dre-ah*) [*ὑπό*, under; *χλωρός*, green; *ῥόδον*, water]. A condition in which there is a diminished amount of HCl in the gastric juice. It is usually associated with an overproduction of lactic acid, and is often due to a state of lowered general nutrition.

**Hypochlorite** (*hi-po-klo'-rit*) [*ὑπό*, under; *χλωρός*, green]. Any salt of hypochlorous acid. Calcium hypochlorite is the essential constituent of bleaching-powder.

**Hypochlorous Acid** (*hi-po-klo'-rus*). See *Acid*.

**Hypocholesteremia** (*hi-po-kol-es-ter-e'-me-ah*) [*ὑπό*, under; *χολή*, bile; *στεάρον*, fat; *αἷμα*, blood]. Decrease or deficiency of the cholesterol in the blood.

**Hypochondria** (*hi-po-kon'-dre-ah*) [*ὑπό*, under; *χόνδρος*, cartilage]. 1. The regions below the costal arches on either side. 2. Same as *Hyochondriasis*.

**Hypochondriac** (*hi-po-kon'-dre-ak*) [*ὑπό*, under; *χόνδρος*, cartilage]. 1. Pertaining to the hypochondrium. 2. A person who is affected with hypochondriasis.

**Hypochondriasis** (*hi-po kon-dri'-as-is*) [*ὑποχονδριακός*, affected in the hypochondria]. A disturbance of the functions of the nervous system similar to that in melancholia, in which the patient believes himself suffering from bodily disease. It is characterized by alternate spells of moodiness and excitability. **H. pituitosa**. Synonym of *Membranous Enteritis*.

**Hypochondrium** (*hi-po-kon'-dre-um*) [*ὑπό*, under; *χόνδρος*, cartilage: *pl.*, *Hypochondria*]. The upper lateral region on either side of the mesial line of the abdomen.

**Hypochromatemia** (*hi-po-kro-mat-e'-me-ah*) [*ὑπό*, under; *χρώμα*, color; *αἷμα*, blood]. Deficiency of the coloring-matter of the blood.

**Hypochromatic** (*hi-po-kro-mat'-ik*) [*ὑπό*, under; *χρῶμα*, color]. Deficient in coloring-matter.

**Hypochromia** (*hi-po-kro'-me-ah*) [*ὑπό*, under; *χρῶμα*, color]. Abnormal pallor or transparency of the skin, occurring in certain skin-diseases.

**Hypochrosis** (*hi-po-kro'-sis*) [*ὑπό*, under; *χρῶσις*, coloring]. Abnormal paleness; lack of normal coloration.

**Hypochyma** (*hi-po-ki'-mah*) [*ὑπό*, beneath; *χίειν*, to pour]. An old name for cataract.

**Hypocist** (*hi'-po-sist*) [*ὑπό*, under; *κίστος*, cistus]. 1. The plant *Cytinus hypocistis*, of the old world. 2. The dark astringent extract prepared by drying the sap of the foregoing plant and the juice of its berries. It is useful for hemorrhages and diarrhea. **Unof.**

**Hypoclidium** (*hi-po-kli'-de-um*) [*ὑπό*, under; *κλείς*, a key; the clavicle: *pl.*, *Hypoclidia*]. In biology, the inferomedian process formed at the junction of the clavicles of a bird.

**Hypoclysis** (*hip-ok'-lis-is*) [*ὑπό*, under; *κλύσις*, a clyster]. The administration of an enema.

**Hypocotyl** (*hi-po-kot'-il*) [*ὑπό*, under; *κοτυλήδων*, cotyledon]. A short term for *Hypocotyledonous stem*.

**Hypocotyledonous** (*hi-po-kot-il-el'-don-us*) [*ὑπό*, under; *κοτυλήδων*, cotyledon]. In biology, situated below the cotyledons.

**Hypocraterimorphous** (*hi'-po-kra-ter-im-or'-fus*) [*ὑποκρατήριον*, the stand of a crater; *μορφή*, form]. Applied to certain flowers the corolla of which have a flat, spreading limb surmounting a straight tube; salver-shaped.

**Hypocyrtois** (*hi-po-sir-to'-sis*) [*ὑπό*, under; *κύρτωσις*, curvature]. A slight amount of curvature.

**Hypocystotomy** (*hi-po-sis-tot'-o-me*) [*ὑπό*, under; *κύστις*, bladder; *τομή*, a cut]. Perineal cystotomy.

**Hypoderm** (*hi'-po-derm*) [*ὑπό*, under; *δέρμα*, skin]. 1. Subcutaneous tissue. 2. A hypodermatic injection. 3. In biology, applied to the epithelial membrane lining the cuticular, crustaceous, or chitinous investment of arthropods; also called *Hypodermis*.

**Hypoderma** (*hi-po-der'-mah*) [*ὑπό*, under; *δέρμα*, skin]. In biology: 1. A layer of cells, usually collenchyma, just beneath the epidermis of a leaf or stem. 2. A genus of dipterous insects, the bot-flies. See *Parasites (Animal)*, *Table of*.

**Hypodermatic** (*hi-po-der-mat'-ik*) [*ὑπό*, under; *δέρμα*, skin]. Pertaining to that which is under the skin, or to the introduction of medicines beneath the skin.

**Hypodermatoclysis** (*hi-po-der-mat-ok'-lis-is*), or **Hypodermoclysis** (*hi-po-der-mok'-lis-is*) [*ὑπό*, under; *δέρμα*, skin; *κλύσις*, injection]. A method of supplying fluid to the body to replace that lost through excessive purging, as in cholera, or in cases of hemorrhage. It consists in the introduction into the subcutaneous tissues of certain quantities of normal saline solution.

**Hypodermatomy** (*hi-po-der-mat'-o-me*) [*ὑπό*, under; *δέρμα*, skin; *τέμνειν*, to cut]. Subcutaneous surgical section of parts.

- curvature produced by growth on the under side of an extended organ. Cf. *Epinasty*.
- Hyponeuria** (*hi-po-nu'-re-ah*) [*ὑπό, under; νεῦρον, nerve*]. Slight or diminished nerve-power.
- Hyponoetic** (*hi-po-no-et'-ik*) [*ὑπό, under; νοητικός, understanding*]. Under the control of the will.
- Hyponome** (*hi'-po-nom*) [*ὑπό, under; νῦμειν, to dwell in, to inhabit*]. In biology, the exhalant funnel of a cephalopod.
- Hyponomous** (*hi-pou'-o-mus*) [*ὑπό, under; νῦμειν, to feed*]. Spreading or eating below the surface; applied to certain ulcers, etc.
- Hypopepsia** (*hi-po-pep'-se-ah*) [*ὑπό, under; πέψις, digestion*]. A disorder of digestion in which there is a notable diminution in the functional activity, glandular and chemic, of the stomach.
- Hypophemia, Tropical**. See *Aukylostomiasis*.
- Hypophlœodic** (*hi-po-fle-od'-ik*) [*ὑπό, under; φλοιός, bark*]. In biology, situated beneath the bark.
- Hypophlœous** (*hi-po-fle'-us*). Same as *Hypophlœodic*.
- Hypophosphite** (*hi-po-fos'-fit*) [*ὑπό, under; phosphorus*]. Any salt of hypophosphorous acid. Several hypophosphites (as of calcium, potassium, sodium) are official, and many others are used to a limited extent.
- Hypophosphorous Acid** (*hi-po-fos-fô'-rus*). See *Acid*.
- Hypophrasia** (*hi-po-fra'-ze-ah*) [*ὑπό, under; φράσις, phrase, utterance*]. Meagerness or poverty of speech, as a sign of cerebral disease.
- Hypophyllum** (*hi-po-fil'-e-um*) [*ὑπό, under; φύλλον, a leaf; φλ., Hypophyllia*]. In biology, a sheath-like petiole, without laminae.
- Hypophyllous** (*hi-poff'-il-us*) [*ὑπό, under; φύλλον, leaf*]. Same as *Hypogenous*.
- Hypophyseemia** (*hi-po-fi-se'-me-ah*) [*ὑπό, under; φύσα, air; αἷμα, blood*]. Deficiency of gaseous elements in the blood.
- Hypophysis** (*hi-poff'-is-is*) [*ὑπό, under; φέρειν, to grow*]. The pituitary body, *q. v.*; sometimes called the *H. cerebri*.
- Hypoplasia** (*hi-po-plu'-ze-ah*) [*ὑπό, under; πλάσσειν, to mould*]. Deficiency or arrested development of any organ or tissue. See *Aplasia*.
- Hypoplastemia** (*hi-po-plas-te'-me-ah*). See *Hypoplasticemia*.
- Hypoplasticemia** (*hi-po-plas-tis-et'-me-ah*) [*ὑπό, under; πλαστικός, plastic; αἷμα, blood*]. Deficient plasticity of the blood.
- Hypopraxia** (*hi-po-praks'-e-ah*) [*ὑπό, under; πράσσειν, doing*]. Inactivity; listlessness; inefficiency as a sign or result of cerebral disorder.
- Hypopselaphesia** (*hi-po-sel-af-et'-ze-ah*) [*ὑπό, under; ψηλάσσειν, touch*]. Diminution of sensitiveness to tactile impressions.
- Hypoptilum** (*hi-po'-til-um*) [*ὑπό, under; πτεῖλον, feather; πλ., Hypoptila*]. In biology, the entire after-shaft of a feather, including the vanes; hyporachis.
- Hypoptyalism** (*hi-po-ti'-al-izm*) [*ὑπό, under; πτεῖλον, feather; πλ., Hypoptila*]. A mild or slight ptalism.
- Hypopygium** (*hi-po-pij'-e-um*) [*ὑπό, under; πυγή, the rump; πλ., Hypopygia*]. In biology, the male clasp-organ of dipterous insects.
- Hypopyon** (*hi-po'-pe-on*) [*ὑπό, under; πῖον, pus*]. A collection of pus in the anterior chamber of the eye, secondary to inflammation of adjacent tissues.
- Hypoquebrachin** (*hi-po-kve-brak'-in*) [*ὑπό, under; quebracho*],  $C_{21}H_{26}N_2O_2$ . An alkaloid of *Quebracho*, occurring in yellow masses, melting at about 80° C., and soluble in alcohol and ether.
- Hyporachis** (*hi-po-rak'-is*) [*ὑπό, under; ράχης, the spine*]. In biology, the stem or rachis of the after-shaft; the *hypoptilum* of a feather
- Hyporadioli** (*hi-po-ra-di'-o-li*) [*ὑπό, under; radius, radius*]. In biology, the barboles of the after-shaft of a feather.
- Hyporrhea** (*hi-por-e'-ah*) [*ὑπό, under; ρεῖν, to flow*]. A slight hemorrhage.
- Hyposmia** (*hi-po'-me-ah*) [*ὑπό, under; ὀσμή, smell*]. Diminution of the sense of smell.
- Hypospadia, or Hypospadias** (*hi-po-spa'-de-ah, hi-po-spa'-de-as*) [*ὑπό, under; σπᾶν, to draw*]. An abnormal opening and ending of the urethra upon the under surface of the penis, or in the under wall of the urethra. It is variously classed, according to the position of its opening, as glandular (or balanic), balanopeneile, penile, peno-scrotal, scrotal, or perineal. Certain tribes of the Arabs, Africans, and native Australians produce an artificial hypospadias.
- Hypostaphylitis** (*hi-po-staf-il-i'-tis*) [*ὑπό, under; σταφύλις, uvula; τσις, inflammation*]. Slight inflammation of the uvula.
- Hypostasis** (*hi-pos'-tas-is*) [*ὑπόστασις, a standing under*]. A word loosely used to denote feces, or any sediment falling from a liquid, especially the sediment of urine. Also, a form of passive hyperemia caused by the dependent position of the part affected.
- Hypostatic** (*hi-po-stat'-ik*) [*ὑπόστασις, a standing under*]. Due to, or of the nature of, hypostasis.
- H. Congestion**. Same as *Hypostasis, q. v.*
- H. Pneumonia**, Pirry's term for the variety of pneumonia secondary to most of the acute febrile diseases, and occurring in the final stage of many chronic diseases. It is in part due to the mechanic gravitation of blood to the part affected, as to the back, in cases of long-continued dorsal decubitus.
- Hyposternum** (*hi-po-ster'-num*) [*ὑπό, under; στέρνον, the breast; πλ., Hyposterna*]. In biology, the third lateral piece of the plastron of a turtle; also called *Hypoplastron*.
- Hyposthenia** (*hi-po-she'-ne-ah*) [*ὑπό, under; σθένος, strength*]. Weakness; subnormal strength.
- Hyposthenic** (*hi-po-sthen'-ik*) [*ὑπό, under; σθένος, strength*]. 1. Tendency to, or characterized by, hyposthenia; applied to diseases that are more than ordinarily enfeebling. 2. A medicine that reduces the action of the heart without affecting its rhythm.
- Hypostoma** (*hi-pos'-to-mah*) [*ὑπό, under; στόμα, mouth; πλ., Hypostomata*]. In biology, applied (a) by Meigen and Bouché to the clypeus of *Diptera*, and by Meiner to a curved broad sclerite behind the *lamina labialis* of the inner stipes in the mouth of *Myriopods*; (b) to the proboscis of *Hydroidea*.
- Hypostomatous** (*hi-po-sto'-mat-us*) or **Hypostomous** (*hi-pos'-to-mus*) [*ὑπό, under; στόμα, mouth*]. In biology, having the mouth inferior or ventral.
- Hypostome** (*hi'-po-stōm*). Same as *Hypostoma*.
- Hypostyptic** (*hi-po-stip'-tik*) [*ὑπό, under; στενπτικός, astringent*]. 1. Moderately or mildly styptic. 2. A mildly styptic medicine.
- Hyposynergia** (*hi-po-sin-er'-je-ah*) [*ὑπό, under; συνεργία, coöperation*]. Defective coöordination.
- Hypostyle** (*hi-po-sis'-to-le*) [*ὑπό, under; συστολή, systole*]. Deficiency of the cardiac systole.
- Hypostylosia** (*hi-po-sis-to'-le-ah*). See *Hypostylosis*.
- Hypotension** (*hi-po-ten'-shun*) [*ὑπό, under; tensio, a stretching*]. Diminished or abnormally low tension; hypotonia.
- Hypothallus** (*hi-po-thal'-us*) [*ὑπό, under; θαλλός, a young shoot or branch, a frond; πλ., Hypothalli*]. In biology, a delicate filamentous mass upon which is developed the thallus of a lichen.
- Hypothecium** (*hi-po-the'-se-um*) [*ὑπό, under;θήκη, a case*]. In biology, that portion of a lichen thallus immediately around or beneath the apothecium.

**Hypothenar** (*hi-pō'thē-nar*) [*ὑπό*, under; *θηνάρ*, palm]. The fleshy eminence on the palm of the hand over the metacarpal bone of the little finger. Also, the prominence on the palm at the base of the fingers. Also, the ball of the foot.

**Hypothermal** (*hi-pō'ther-mal*) [*ὑπό*, under; *θερμός*, heat]. Pertaining to a temperature placed at least 5° below 0° C. or 45° F. or 15° and 25° C. Also, pertaining to the condition at the temperature of the body.

**Hypothermia** (*hi-pō'ther-mi-ä*) [*ὑπό*, under; *θερμία*, heat]. Decrease in the heat of the body.

**Hypothecary** (*hi-pō'the-er-i*) [*ὑπό*, under; *ῥήκη*, a position]. A hypothecation or title for discussion or discussion. A library assumed as true.

**Hypotonia**, **Hypotonus** (*hi-pō'tō-ni-ä*, or *hi-pō'tō-nus*) [*ὑπό*, under; *τόνος*, tension]. Decrease of normal muscular pressure.

**Hypotony** (*hi-pō'tō-ni*) [*ὑπό*, under; *τόνος*, tension]. See *hypotonia*. **H.**, Gastric, the reverse condition of gastric hypermotility.

**Hypotreme** (*hi-pō'tre-mä*) [*ὑπό*, under; *τρήμα*, a hole, (hole, a stretched, *trē*, *hypotremē*)] In entomology, one of a pair of strong lateral processes extending obliquely across the anterior coxosternal foramina to the lower borders of the anterior spiracles in certain insects (e.g., *Hypotreme*); they strengthen the anterior part of the thoracic wall. (*L. = trē*.)

**Hypotrichous** (*hi-pō'tri-ku-s*) [*ὑπό*, under; *τριχός*, hair]. In biology, applied to such infusoria as have the locomotory cilia on the under side of the body.

**Hypotrophy** (*hi-pō'trō-fi*) [*ὑπό*, under; *τροφή*, to nourish]. Subnormal nutrition. A defect in the constructive or assimilating powers of the organism. It may be congenital or acquired, and varies much in degree in different individuals, or even in the same individual at different times.

**Hypouræmia** (*hi-pō'ur-ē-mi-ä*) [*ὑπό*, under; *οὐρῶν*, urine; *αἷμα*, blood]. Diminution of the uræa normally present in the blood.

**Hypouricæmia** (*hi-pō'ur-ic-ē-mi-ä*) [*ὑπό*, under; *οὐρῶν*, urine; *αἷμα*, blood]. Decrease in the uric acid of the blood.

**Hyporocritia** (*hi-pō'ro-krī-ti-ä*) [*ὑπό*, under; *ροκρία*, matter; *αἷμα*, blood]. A deficient or too scanty secretion of urine.

**Hypoxanthin** (*hi-pō'zan-thin*) [*ὑπό*, under; *ξανθός*, yellow; *ἵν*, H<sub>2</sub>N<sub>2</sub>O<sub>5</sub>]. A xanthine, also known as *Guanoine* or *guanine*. It occurs, accompanying adenin and guanine, in many of the animal tissues and organs (e.g., in guano) in 1%. In minute quantities it is a normal constituent of urine. It has also been found in plants, seeds, ferns, and fishes. It is a crystalline body, soluble in alcohol and boiling water, insoluble in cold alcohol and ether. Hypoxanthin appears to be one of the products formed by the decomposition and oxidative oxidation of protoplasmic matter previous to the formation of urea and urea. It is produced from allantoin by the action of nitrous acid. It is non-poisonous. See *Guanoine*, *Urea*, and *Uricum*.

**Hypicephaly** (*hi-pī-er-ä*) [*ὑπό*, on high; *κεφαλή*, head]. The condition of a skull with a cranial index of more than 100.

**Hypicranium** (*hi-pī-er-ä-ni-um*) [*ὑπό*, on high; *κρανιον*, skull]. A term for a skull having the ratio between breadth and height as 82.5° to 90.4°.

**Hypiliform** (*hi-pī-er-ä-ni-um*). See *Hypicranium*.

**Hypodont** (*hi-pō-dōnt*) [*ὑπό*, on high; *δόντις*, tooth]. In biology, applied to mouth animals as have teeth furnished with long roots and short root.

**Hypophoria** (*hi-pō-fō-ri-ä*) [*ὑπό*, height; *φορεῖν*, to

ness]. Mountain-sickness; balloon-sickness; characterized by nausea, headache, epistaxis, etc.

**Hypsophobia** (*hi-pō-fō-be-ä*) [*ὑψος*, height; *φόβος*, fear]. Morbid dread of being at a great height; acrophobia.

**Hypsophyl** (*hi-pō-fil*) [*ὑψοῦ*, on high; *φύλλον*, a leaf]. In biology, one of the leaf-like or bract-like structures subtending a flower or an inflorescence.

**Hypsopisthus** (*hi-pō-pis'the-us*) [*ὑψοῦ*, on high; *ὀπίσθεν*, occiput]. Lissauer's term for a skull in which the angle included between the radius fixus and the line joining the hornion and lambda is between 33° and 41°.

**Hypural** (*hi-pū-räl*) [*ὑπό*, under; *οὐρά*, tail]. In biology, located beneath the tail.

**Hyraceum** (*hi-rä-er-ä-um*) [*ἵραξ*, a mouse]. A product from South Africa, somewhat resembling castoreum, and believed to be an excretion, perhaps fecal, of *Hyrax capensis*, the so-called South African cony or cliff badger. Its use is the same as that of castor.

**Hyssop** (*his'op*) [*ὑσσωπός*, an aromatic plant]. Hedge-hyssop. The leaves and tops of *Hyssopus officinalis*, an aromatic stimulant, carminative, and tonic, much employed in chronic catarrh of the respiratory tract. Dose of the fld. ext. 5j-ij. Unof. See also *Lophanthus* and *Gratiola*.

**Hystera** (*his'ter-ä*) [*ἱστέρα*, womb]. The uterus or womb. Also, the vulva. Also, the placenta or after-birth.

**Hysteralgia** (*his'ter-äl'-jē-ä*) [*ἱστέρα*, womb; *ἄλγος*, pain]. Pain in the womb.

**Hysteranesis** (*his'ter-än'-es is*) [*ἱστέρα*, womb; *ἄνεσις*, relaxation]. Relaxation and atony of the uterus.

**Hysteranthous** (*his'ter-än'-thus*) [*ἱστέρος*, later; *ἄνθος*, a flower]. In biology, applied to plants in which the leaves do not appear till after the flowers have appeared.

**Hysteratresia** (*his'ter-ät-re'-zē-ä*) [*ἱστέρα*, womb; *ἄπρετος*, imperforate]. An imperforate or impervious condition of the mouth of the womb.

**Hysteriauxesis** (*his'ter-äwks-ē'-sis*) [*ἱστέρα*, womb; *αὐξήσις*, enlargement]. Enlargement of the uterus, normal (as in pregnancy) or abnormal.

**Hysterectomy** (*his'ter-ek'tō-mē*) [*ἱστέρα*, womb; *ἐκτομή*, a cutting out]. Excision or removal of the womb by surgical operation. **H.**, **Vaginal**, removal of the womb through the vagina.

**Hysterelcosis** (*his'ter-el-kō'-sis*) [*ἱστέρα*, womb; *ἱκκωσις*, ulceration]. Ulceration of the uterus.

**Hysteria** (*his'tē-re-ä*) [*ἱστέρα*, womb]. A functional disturbance of the nervous system, supposed by early physicians to be due to a disordered condition of the womb. It is now often considered a neurosis; it is not with certainty known whether it is due to structural alteration in any part of the central nervous system, or to abnormal blood-supply. Paralyzes, impairment of vision, convulsions, sensory disturbances, and psychic manifestations, are usually prominent symptoms. Major and minor types are differentiated. The popular significance of the term is that of feigned disease, but the physician usually considers the affection real. It is more frequently encountered in females than in males. **H.**, **Epileptiform**, a synonym of *Hystero-epilepsy*. **H.**, **Major**, hystero-epilepsy. **H.**, **Minor**, hysteria of a mild form.

**Hysteric**, **Hysterical** (*his'ter'-ik*, *his'ter'-ik-äl*) [*ἱστέρα*, womb]. Pertaining to hysteria, *q. v.* Also, pertaining to the womb. **H.** **Temperature**. See *Thermal Ataxia*.

**H. Breast**, a condition of the breast in neurotic women marked by excessive superficial tenderness, diffuse swelling, constant variation in size and hardness, and by the recurrence of these symptoms at the menstrual epochs. **H. Dyspnea**, intensely rapid

breathing, 50 to 150 respirations per minute, occurring in neurotic individuals, without corresponding alteration of the pulse-rate. **H. Somnolence**, the early stage or lighter form of *H. Trance*. **H. Trance**, a peculiar condition in which the patient sinks into a lethargic, corpse-like condition, lasting from a few hours to several days.

**Hystericism** (*his-ter-'is-izm*) [*ἵστέρα*, womb]. The hysteric diathesis or temperament; proneness to the exhibition of hysteric symptoms.

**Hysterics** (*his-ter-'iks*) [*ἵστέρα*, womb]. A popular term for hysteric or convulsive movements and conditions.

**Hystericephalitis** (*his-ter-ic-en-sef-al-'it-tis*) [*ἵστέρα*, womb; *ἐγκεφαλον*, brain; *τις*, inflammation]. Encephalitis and meningitis following repeated attacks of hysteria.

**Hysterionica** (*his-ter-e-on-'ik-ah*) [*ἵστέρα*, womb]. A composite-flowered herb of South America (*H. bayla-huen*) of considerable efficacy in the treatment of acute and chronic affections of the respiratory apparatus. It is also a stomachic and intestinal antiseptic of value in the treatment of flatulent dyspepsia. Dose of the fluid extract m-v-xv. Unof.

**Hysteritis** (*his-ter-'it-tis*). See *Metritis*.

**Hysterizable** (*his-ter-iz-'a-bl*) [*ἵστέρα*, womb; *able*, able]. Capable of being thrown into a hysteric condition.

**Hystero-** (*his-'ter-o-*) [*ἵστέρα*, uterus]. A prefix signifying relation to the uterus, or to hysteria.

**Hystercatalepsy** (*his-ter-o-kat-'al-ep-se*) [*ἵστέρα*, womb; *κατάληψις*, catalepsy]. A form of hysteria accompanied by catalepsy.

**Hysterocele** (*his-'ter-o-sel*) [*ἵστέρα*, uterus; *κῆλη*, hernia]. Hernia containing the uterus, or part of it.

**Hysteroclisis** (*his-ter-o-klit-'sis*) [*ἵστέρα*, womb; *κλείσις*, closure]. The closure of the os uteri by scarifying and suturing the labia; an operation formerly employed in the treatment of vesico-uterine fistula.

**Hysteroecyosis** (*his-ter-o-si-'e-'sis*) [*ἵστέρα*, womb; *κύησις*, pregnancy]. Uterine pregnancy.

**Hysteroecystocele** (*his-ter-o-sist-'to-sel*) [*ἵστέρα*, womb; *κύστις*, bladder; *κῆλη*, hernia]. Hysterocele complicated by cystocele; hernia of the womb and the bladder, or parts of them.

**Hystero-demonopathy** (*his-ter-o-de-mon-op-'ath-e*) [*ἵστέρα*, womb; *δαίμων*, a demon; *πάθος*, disease]. Hysteric demonopathy or demonomania.

**Hysterodynia** (*his-ter-o-din-'e-ah*) [*ἵστέρα*, womb; *δύνη*, pain]. Pain in the womb.

**Hystero-epilepsy** (*his-ter-o-ep-'il-ep-se*) [*ἵστέρα*, womb; *ἐπιληψία*, epilepsy]. A form of hysteria accompanied by convulsions resembling those of epilepsy. Gowers advises the term *hysteroïd* in reference thereto.

**Hystero-epileptogenous** (*his-ter-o-ep-il-ep-toj'-en-us*) [*ἵστέρα*, womb; *ἐπιληψία*, epilepsy; *γεννᾶν*, to produce]. Producing hysteric epilepsy.

**Hysterogenic** (*his-ter-o-jen-'ik*) [*ἵστέρα*, womb; *γεννᾶν*, to beget]. Causing or producing hysteria.

**Hysterogenic** (*his-ter-o-jen-'ik*) [*ἵστέρος*, later; *γένεα*, produce, bear]. In biology, applied to intercellular spaces or structures appearing late in the life of a plant. Cf. *Protogenic*.

**Hysterogeny** (*his-ter-oj'-en-e*) [*ἵστέρα*, womb; *γεννᾶν*, to produce]. The induction of the hysteric state or paroxysm.

**Hysteroid** (*his-'ter-oid*) [*ἵστέρα*, womb; *εἶδος*, form]. Resembling hysteria. See *Hystero-epilepsy*. **H. Convulsions**, convulsive movements with hysteric symptoms in various organic diseases of the brain, in epilepsy, and in hydrophobia.

**Hysterolith** (*his-'ter-o-lith*) [*ἵστέρα*, womb; *λίθος*, stone]. Calculus or stone in the womb.

**Hysterolithiasis** (*his-ter-o-lith it-'as-is*) [*ἵστέρα*, womb; *λίθιασις*, the formation of calculi]. The formation of hysteroliths.

**Hysterology** (*his-ter-ol-'o-jē*) [*ἵστέρα*, womb; *λογία*, science]. The anatomy, physiology, and pathology, of the uterus.

**Hysteroloxia** (*his-ter-o-loks'-e-ah*) [*ἵστέρα*, womb; *λοξός*, oblique]. Oblique displacement or position of the uterus.

**Hysteromalacia** (*his-ter-o-mal-a'-se-ah*) [*ἵστέρα*, womb; *μαλακία*, softness]. Softening of the tissues of the womb.

**Hysteromalacoma** (*his-ter-o-mal-ak-o'-mah*) [*ἵστέρα*, womb; *μαλακος*, soft]. Softening of the womb or of any part of it.

**Hysteromania** (*his-ter-o-mal-ne-ah*) [*ἵστέρα*, womb; *μανία*, madness]. Hysteric insanity; also, nymphomania.

**Hysterometer** (*his-ter-om'-et-er*) [*ἵστέρα*, womb; *μέτρον*, measure]. An instrument for measuring the length of the intra-uterine cavity.

**Hysterometry** (*his-ter-om'-et-re*) [*ἵστέρα*, womb; *μέτρον*, measure]. The measurement of the womb or of its internal space.

**Hysteromyoma** (*his-ter-o-mi-o'-mah*) [*ἵστέρα*, womb; *μῦς*, muscle; *ῥμα*, tumor; *pl.*, *Hysteromyomata*]. Myoma or fibro-myoma of the womb.

**Hysteromyomatous** (*his-ter-o-mi-o' mat-us*) [*ἵστέρα*, womb; *μῦς*, muscle; *ῥμα*, tumor]. Of the nature of or pertaining to hysteromyoma.

**Hysteromyomectomy** (*his-'ter-o-mi-o-mek'-to-me*) [*ἵστέρα*, uterus; *μῦς*, muscle; *ἐκτομή*, excision]. Removal of a hysteromyomatous growth. Removal of the body or supravaginal portion of the uterus for fibroid tumor.

**Hysteroncus** (*his-ter-ong'-kus*) [*ἵστέρα*, womb; *ὄγκος*, a tumor]. A tumor or swelling of the uterus.

**Hystero-neurasthenia** (*his-'ter-o-nu-ras-the'ne-ah*) [*ἵστέρα*, womb; *νεῖρον*, nerve; *ἀσθενεία*, weakness]. Neurasthenia resulting from womb-disease.

**Hystero-neurosis** (*his-'ter-o-nu-ro-'sis*) [*ἵστέρα*, womb; *νεῖρον*, nerve; *νόσος*, disease]. A reflex action resulting from irritation of the uterus.

**Hystero-oöphorectomy** (*his-'ter-o-o-off-or-ek'-to-me*) [*ἵστέρα*, womb; *ὠόφορος*, egg-bearing; *ἐκτομή*, a cutting out]. The surgical removal of the uterus and ovaries together.

**Hystero-paralysis** (*his-ter-o-par-al-'is-is*) [*ἵστέρα*, womb; *παράλυσις*, palsy]. Paralysis or weakness of the walls of the womb.

**Hysteropathic** (*his-ter-o-path-'ik*) [*ἵστέρα*, womb; *πάθος*, disease]. Of the nature of, or pertaining to, hysteropathy.

**Hysteropathy** (*his-ter-op'-ath-e*) [*ἵστέρα*, womb; *πάθος*, disease]. Any disease or disorder of the womb. Also, hysteria.

**Hysteropathy** (*his-ter-op'-ath-e*) [*ἵστέρος*, later; *πάθος*, illness]. Same as *Deuteropathy*.

**Hysteropexia**, **Hysteropexy** (*his-ter-o-peks'-e-ah*, *his-'ter-o-peks-e*) [*ἵστέρα*, womb; *πήξις*, a fastening]. Abdominal fixation of the uterus by a surgical operation.

**Hystrophore** (*his-'ter-o-for*) [*ἵστέρα*, womb; *φορός*, bearing]. A form of uterine pessary.

**Hysterophrenic** (*his-ter-o-frn-'ik*) [*ἵστέρα*, womb; *φρην*, the mind]. Opposed to hysterogenic.

**Hysteroplegia** (*his-ter-o-pl-'je-ah*) [*ἵστέρα*, womb; *πληγή*, a stroke]. Same as *Hystero-paralysis*.

**Hysteropnix** (*his-ter-op'-niks*) [*ἵστέρα*, womb; *πνίξ*, suffocation]. Globus hystericus.

**Hysteropsophy** (*his-ter-op'-so-fē*) [*ἵστέρα*, womb; *ψόφος*, sound, utterance]. The escape of air from the uterus with an audible sound.

**Hystero-psychopathy** (*his-ter-o-psy-kah'-ah*) [*ἵστέρα, womb; ψυχή, the mind; πάθος, ailment*]. Mental disorder involving disturbance of the senses.

**Hysteropsychosis** (*his-ter-o-psy-kah'-ah*) [*ἵστέρα, womb; ψυχή, the mind*]. Mental disorder associated with hysterical action.

**Hysterotomy** (*his-ter-o-tom'-ee*) [*ἵστέρα, womb; τομή, section*]. Cutting of the womb. See *Incision*.

**Hysterorrhaphy** (*his-ter-o-rah'-fe*) [*ἵστέρα, womb; ράφη, suture*]. The closure of a uterine incision or laceration by suture.

**Hysterorrhea** (*his-ter-o-rah'-ee*) [*ἵστέρα, womb; ῥέω, flow*]. A leakage from the uterus.

**Hysterorhexis** (*his-ter-o-rah'-is*) [*ἵστέρα, womb; ρήξις, rupture*]. Rupture of the womb.

**Hysterosalpinx** (*his-ter-o-sal'-pinx*) [*ἵστέρα, womb; σάλπιγξ, tube*]. A fallopian tube or duct.

**Hysteroscope** (*his-ter-o-skop'-ee*) [*ἵστέρα, womb; σκοπεῖν, to view*]. A means of exam. with a reflector.

**Hysterospasm** (*his-ter-o-spaz'-m*) [*ἵστέρα, womb; σπασμός, spasm*]. Uterine spasm.

**Hysterostomatome** (*his-ter-o-stom'-at-om*) [*ἵστέρα, womb; στόμα, mouth; ὄμα, section*]. A knife for use in hysterostomy.

**Hysterostomy, or Hysterostomatotomy** (*his-ter-o-stom'-at-om'-ee*, or *his-ter-o-stom'-at-om'-ee*) [*ἵστέρα, womb; στόμα, mouth; ὄμα, section*]. Surgical incision of the os uteri, or its enlargement by a cutting operation.

**Hysterotokotomy** (*his-ter-o-to-kot'-om*) [*ἵστέρα, womb; τόκος, birth*]. Cesarean section.

womb; τόκος, birth; τομή, section]. Cesarean operation, or delivery through an incision into the womb.

**Hysterotome** (*his-ter-o-tom*) [*ἵστέρα, womb; τομή, a cutting*]. A hysterotomy-knife or cutting-instrument for use in hysterotomy.

**Hysterotomotocia** (*his-ter-o-to-mo-to'-se-ah*) [*ἵστέρα, womb; τομή, cutting; τόκος, birth*]. An incision into the womb for the removal of a fetus; hysterotokotomy.

**Hysterotomy** (*his-ter-o-t-om*) [*ἵστέρα, womb; τομή, section*]. 1. Surgical incision of the uterus. 2. Cesarean section. See *Cesarean Operation*.

**Hysterotrachelorrhaphy** (*his-ter-o-tra-kel-or'-ra-fe*) [*ἵστέρα, womb; τραχήλος, neck; ῥάφη, suture*]. A plastic operation for the restoration of a lacerated cervix uteri.

**Hysterotrachelotomy** (*his-ter-o-tra-kel-or'-om*) [*ἵστέρα, womb; τραχήλος, neck; τομή, section*]. Surgical incision of the neck of the womb.

**Hystero-traumatism** (*his-ter-o-trau'-mat-izm*) [*ἵστέρα, womb; τραύμα, wound*]. Hysterical symptoms due to or following traumatism.

**Hysterotismus** (*his-ter-o-tris'-mus*) [*ἵστέρα, womb; τρισμα, a creaking*]. Spasm of the uterus.

**Hystriasis** (*his-tris-i'-as-is*) [*ἵστρις, a hedgehog*]. A disease of the hair in which the latter "stares" or stands stiffly out like the hair of the hedgehog.

**Hystriasmus** (*his-tris-i'-as-is*). See *Ichthyosis hystrix*.

**Hystrix** (*his'-triks*) [*ἵστρις, porcupine*]. Same as *Ichthyosis hystrix*.

## I.

1. The symbol of Iodine.

**Iamatology** (*i-am-at'-ol-ee*) [*ἱαμα, remedy; λόγος, word*]. The science of remedies, or of therapeutics; iamatology. Obsolete.

**Iasis** (*i-as'-is*) [*ἱάσις, treatment, cure*]. Medical or surgical treatment.

**Iateria, or Iatoria** (*i-at-er'-ia, or i-at-er'-ia*) [*ἱατρική, medicine; ἱατρικά, therapeutics*]. Therapeutics; the art or practice of medicine.

**Iatraliptic** (*i-at-er'-lipt-ik*) [*ἱατρικός, physician; ἀντιπτερόν, anodyne*]. Acting by using ointments and friction. 1. Method. Same as *Iatromathematic Method*.

**Iatromedical** (*i-at-er'-med-ik*) [*ἱατρική, practice of medicine; ἱατρικά, therapeutics*]. The science of medical therapeutics; therapeutics. Obsolete.

**Iatromedical treatment** (*i-at-er'-med-ik, treatment*). Medical or surgical treatment.

**Iatromedical** (*i-at-er'-med-ik*) [*ἱατρική, medical*]. Pertaining to the practice of medicine or therapeutics.

**Iatromedical** (*i-at-er'-med-ik*) [*ἱατρική, medical*]. A Greek prefix signifying relation to medicine or to physicians.

**Iatrochemic, Iatrochemical** (*i-at-er'-chem-ik, i-at-er'-chem-ik*) [*ἱατρικός, physician; χημεία, chemistry*]. Pertaining to the chemical therapeutics or therapeutics.

**Iatrochemist** (*i-at-er'-chem-ist*) [*ἱατρικός, physician; χημικός, chemist*]. A student of iatrochemic or iatrochemical therapeutics.

**Iatrol** (*i-at-er'-ol*) [*ἱατρικός, physician*]. Obsolete.

**Iatrol** (*i-at-er'-ol*) [*ἱατρικός, physician*]. Obsolete.

anilid; an odorless and non-toxic antiseptic agent, said to be three times as effective, weight for weight, as iodoform. Unof.

**Iatroliptic** (*i-at-er'-lipt-ik*). See *Iatraliptic*.

**Iatrolology** (*i-at-er'-ol-ol-ee*) [*ἱατρικός, physician; λόγος, science*]. The science of medicine; an account of, or treatise on, physicians.

**Iatromathematician** (*i-at-er'-math-em-at-ist'-an*) [*ἱατρικός, physician; μαθηματικός, a mathematician*]. A physician of a 17th century school (chiefly Italian) which ascribed vital activities to the sizes of pores and particles, to friction and consequent retardation, and to other mechanical causes. He asserted that all vital phenomena are mechanical.

**Iatrophysics** (*i-at-er'-fis-iks*) [*ἱατρικός, physician; φυσικός, pertaining to nature*]. The relation of physics to medicine or the application of physics to disease or therapeutics. The materialistic explanation of disease; applied especially to an obsolete theory of the 17th century, that sought to explain physiologic and therapeutic facts by means of the principles of physics (dynamics and statics).

**Iatrotechnics** (*i-at-er'-tek-niks*) [*ἱατρικός, physician; τέχνη, art*]. The art of healing.

**Iba** (*i'-bah*) [African]. Gaboon chocolate; a substitute for chocolate from *Irringia gabonensis*, a simarubaceous tree of W. Africa. Unof.

**Icajin** (*ik'-aj-in*) [African, *icaja*]. A poisonous alkaloid derived from an African ordeal-drug called *icaja*.

It somewhat resembles brucin, and is probably derived from some species of *Strophanthus*. Unof.

**Ice** (is) [ME., *ise*, ice]. Water in its solid state, to which it is reduced by a temperature of 0° centigrade, or 32° Fahrenheit. **I.-bag**, a bag of waterproof material filled with ice, for application to any part of the body. **I.-cap**, a bladder or rubber cap filled with pounded ice for application to the head in case of congestion. **I.-cot**, a bed cooled by ice, so as to reduce the temperature of the patient. **I.-cradle**, a device that consists in the suspension over a febrile patient in bed, by means of iron frames or barrel-hoops, of a number of zinc buckets kept half-filled with ice and enclosed in a light covering. The patient is covered with a muslin sheet and provision is made for the circulation of pure air in the cradle. The temperature of the patient is to be taken at least every four hours, and if it falls to 100° the apparatus is to be removed. If a sense of chilliness appears hot bottles are to be applied to the feet. **I.-poultice**, or **I.-compress**, an application of broken ice used for local refrigeration.

**Iceland** (is'-land) [ME., *ise*, ice; ME., *land*, land]. An island of the Arctic Ocean. **I. Moss**. See *Cetraria*. **I. Spar**, a transparent calcium carbonate, crystallized in rhomboidal prisms. It has the property of dividing and doubly refracting a ray of light.

**Ichor** (i'-kor) [ἰχώρ, serum, or pus]. An acrid and thin puriform discharge from an ulcer or wound.

**Ichoroid**, or **Ichorous** (i'-kor-oid, i'-kor-us) [ἰχώρ, serum, or pus; εἶδος, like]. Resembling or relating to pus containing serum and disintegrated tissue.

**Ichorrhea** (i'-kor-e'-ah) [ἰχώρ, pus; ῥοία, a flow]. A copious flow of ichor.

**Ichorrhemia** (i'-kor-e'-me-ah) [ἰχώρ, ichor; αἷμα, blood]. The presence in the blood of ichorous matter; septicemia; pyemia.

**Ichthiasis** (ik-thi'-as-is). See *Ichthyosis*.

**Ichthidin** (ik'-thid-in) [ἰχθίς, fish]. A substance resembling lardacein, but obtained from the eggs of cyprinoid fishes.

**Ichthin** (ik'-thin) [ἰχθίς, fish]. An albuminous substance obtained from the eggs of some fishes, and also from cartilaginous fishes and frogs.

**Ichthulin** (ik'-thu-lin) [ἰχθίς, a fish; ὕλη, matter]. A lardaceous substance, with the percentage-composition,  $C_{52.5}H_{88}N_{15.2}S_1P_{0.6}$ , found in the eggs of fishes and in salmon. It is akin to ichthin and ichthidin.

**Ichthyiasis** (ik-the-i'-as-is). Same as *Ichthyosis*.

**Ichthyic** (ik'-the-ik) [ἰχθυικός, of a fish, fishy]. Pertaining to, or resembling, a fish; piscine; ichthyoid; ichthyomorph; ichthyopsidan.

**Ichthyisation** (ik-the-iz-a'-shun) [ἰχθίς, fish]. In biology the process of intensification of fish-like characters.

**Ichthyocolla** (ik-the-o-kol'-ah) [ἰχθίς, fish; κόλλα, glue]. Isinglass. The air-bladder of the sturgeon, *Acipenser huso*. It occurs in horny, translucent, white sheets, that form a jelly with hot water. It is the purest form of gelatin, and is used as a food, for clarifying liquids, and as a test for tannic acid. **I., Emplastrum**, court-plaster; it consists of isinglass 10, glycerin 1, alcohol 40, water and tinct. benzoin q. s., spread upon fine white silk bolting-cloth and dried.

**Ichthyography** (ik-the-og'-ra-fi) [ἰχθίς, fish; γραφειν, to write]. A description of fishes; ichthyology.

**Ichthyoid** (ik'-the-oid) [ἰχθίς, fish; εἶδος, form]. Resembling a fish; fish-like.

**Ichthyol** (ik'-the-ol) [ἰχθίς, fish; oleum, oil],  $C_{26}H_{36}S_2Na_2O_6$ . Sodium sulpho-ichthyolate. A preparation obtained from certain varieties of fossiliferous shale occurring in the Tyrolese Alps. It has a characteristic bituminous odor and taste. It is a good antiphlogistic,

and has proved efficient in eczema and psoriasis, and in gynecology. It is used in the form of a 10 to 20 per cent. ointment, as a solution in glycerin, equal parts, or in the pure state. **I., German**. See *Thiol*. **Ichthyology** (ik-the-ol'-o-je) [ἰχθίς, fish; λογος, science]. The science of fishes, their anatomy, distribution, and biology.

**Ichthyomorph** (ik-the-o-mor'-fik) [ἰχθίς, a fish; μορφή, form]. In biology, having the morphologic characters of a fish; ichthyopsidan.

**Ichthyophagous** (ik-the-off'-ag-us) [ἰχθίς, fish; φαγειν, to eat]. Fish-eating. A word applied to such animals as subist on fish.

**Ichthyopterygium** (ik-the-op-ter-ij'-e-um) [ἰχθίς, a fish; πτερίγιον, a wing or fin]. The fore limb or hind-limb of a vertebrate, modified as a fin.

**Ichthyosis** (ik-the-ol'-sis) [ἰχθίς, fish; νόσος, disease]. *Xeroderma ichthyoides*, *Ichthyosis vera*, *fish-skin disease*; a congenital skin-disease, usually involving the entire surface of the body, aggravated by cold, and characterized by extreme dryness of the skin and by

the development of epidermal plates coarsely resembling the scales of a fish, and forming in some cases verrucous growths, sessile and pedunculated, freely projecting from the surface. **I. congenita**. See *Seborrhea squamosa neonatorum*. **I. follicularis**, a form in which the sebun and epithelium are heaped up around the orifices of the hair-follicles; it is especially seen upon the extensor surfaces of the arms and legs. **I. hystrix**; *Ilystricismus*; a rare skin-disease characterized by warty-looking growths, consisting of elongated and hypertrophied papillae, covered by greatly thickened, dark-brown, horny epidermis, and forming flat-topped or pointed, spinous projections. These are grouped together to form patches, often unilateral and distributed along the course of cutaneous nerves. They are seldom present on the face. Usually they offer no subjective symptoms. **I. linguæ**, an acquired affection of the tongue in which it becomes dry and scaly. **I. nacrée**. See *I. simplex*. **I. nigricans**. See *I. simplex*. **I. nitida**. See *I. simplex*. **I. palmæ vel palmaris et plantaris**, the exceptional form confined solely to the palms and soles. **I. sauroderma**. See *I. simplex*. **I. scutellata**. See *I. simplex*. **I. sebacea**. Synonym of *Seborrhea*. **I. sebacea cornea**. See *Darier's Disease*. **I. serpentina**. See *I. simplex*. **I. simplex**, the common form of ichthyosis in which the whole surface has a tessellated appearance, from being covered with large, angular, dirty-white, finely corrugated, papery scales that are adherent, and therefore slightly depressed in the center (*I. scutellata*), while the edges are detached, transparent, and shining (*I. nacrée* or *I. nitida*). In still higher grades the scales adhere together to form thin plates, and being of a greenish tint, resemble a serpent's skin (*I. serpentina*); when there are still thicker plates, the appearance of a crocodile hide is produced (*I. sauroderma*). The older the plates the darker they become, so that they may vary from olive-green to black (*I. nigricans*). The hair is dry, harsh, and dull-looking, and the scalp branny; the nails may be pitted and brittle. Itching is frequent. Warmth ameliorates the condition by favoring sweating. **I. spinosa**, a form of *I. hystrix*, in which the scales are spiny. **I. vera**. See *Ichthyosis*.

**Ichthyotic** (ik-the-ol'-ik) [ἰχθίς, fish]. Relating to or affected with ichthyosis.

**Ichthyotomy** (ik-the-ol'-o-me) [ἰχθίς, a fish; τομή, a cutting]. The dissection or anatomy of fishes.

**Ichthyotoxicum** (ik-the-o-tox'-ik-um) [ἰχθίς, fish; τοξικόν, poison]. A name loosely given to poisoning

**Ideo-motor** (*i-de-o-mo'-tor*) [*idea*, a mental image; *movēre*, to move]. Pertaining conjointly to ideation and movement. **I. Center**, that part of the gray matter which, influenced by ideation, excites muscular movement. **I. Movements**, unconscious movements, due to impulses of the mind when the attention is otherwise absorbed.

**Ideopegma** (*i-de-o-peg'-mah*) [*ιδέα*, idea; *πηγμα*, a thing fixed; *pl.*, *Ideopegmata*]. A fixed or dominant idea that colors all the thoughts of the patient and thus creates a monomania.

**Ideophrenia** (*i-de-o-fre'-ne-ah*) [*ιδέα*, form; *φρήν*, mind]. Insanity with marked perversion of ideas.

**Ideophrenic** (*i-de-o-fren'-ik*) [*ιδέα*, form; *φρήν*, mind]. Relating to, or marked by, ideophrenia.

**Ideoplastic** (*i-de-o-plas'-tik*) [*ιδέα*, idea; *πλασσειν*, to form]. Giving shape to the ideas; that stage of hypnotism in which the idea impressed on the brain of the subject is translated into action.

**Ideosynchysia**, or **Ideosynchysis** (*i-de-o-sin-kī'-ze-ah*, or *i-de-o-sin'-kīs-is*) [*ιδέα*, idea; *σῆζχρυσια*, a pouring together]. Confusion of ideas; delirium.

**-ideus** (*-id'-e-us*) [*ιδιος*, one's own]. A suffix having the sense of possession or ownership.

**Idianoia** (*id'-e-an-oi'-ah*) [*ιδιος*, own, peculiar; *νόος*, mind]. Same as *Idiocy*.

**Idiempresis** (*id'-e-em-pre'-sis*) [*ιδιος*, own; *ἐμπρησις*, burning]. Spontaneous combustion. Also, spontaneous inflammation.

**Idio-** (*id'-e-o-*) [*ιδιος*, own]. A prefix signifying individual peculiarity.

**Idiobiology** (*id'-e-o-bi-ol'-o-je*) [*ιδιος*, peculiar; *βίος*, life; *λέγειν*, to speak]. The physiology of any particular organized body, as opposed to *Biontology*, *q. v.* (J. Aitken Meigs.)

**Idioblast** (*id'-e-o-blast*) [*ιδιος*, peculiar; *βλαστός*, offshoot]. In biology, a histologic cell having a character different from that of the surrounding cells, owing to a difference either in its form or its contents, *e. g.*, the stellate hair in the interior of the tissue of *Αζμ-φάκω* (Sachs).

**Idiocrasy** (*id'-e-ok'-ras-e*) [*ιδιοκρασία*: *ιδιος*, own; *κράσις*, mixture]. Same as *Idiosyncrasy*.

**Idioctonia** (*id'-e-ok-to'-ne-ah*) [*ιδιος*, own; *κτόνος*, killing]. Self-murder; suicide.

**Idiocy** (*id'-e-o-se*) [*ιδιώτης*, a private person]. A condition of mental deficiency, usually accompanied by physical degeneracy. It is characterized by a peculiar coarse, brutal, and cunning nature, with marked physical peculiarities. It is more common in males than in females. **I. of Deprivation**, that in which from birth there is a loss of two or more of the senses, with consequent lack of external impressions. **I., Eclampsic**, that following infantile convulsions. Fourteen per cent. of cases of idiocy are said to be of this origin. **I., Epileptic**, that associated with epilepsy. Such cases are the subjects of epileptic convulsions through life. **I., Ethnic**, a characteristic of certain idiocies of the Caucasian race, in which individuals are seen who present a kind of mimicry of various other races of mankind. Among the types of genetous idiocy thus characterized, writers have described the *American-Indian* type, the *Ethiopian* or *negroid*, the *Kalmuck*, the *Malayan*, and the highly characterized *Mongolian* type, which includes about ten per cent. of all cases of idiocy. **I., Genetous**, those cases in which, although the causation is indefinite, the condition dates from fetal life. **I., Hydrocephalic**, that dependent upon hydrocephalus. **I., Inflammatory**. See *I., Traumatic*. **I., Microcephalic**, that associated with smallness of the head. A circumference less than eighteen inches implies

idiocy. **I., Paralytic**, that from paralysis following injury before or after birth. **I., Traumatic**, that due to injury during labor or in early childhood.

**Idioderma** (*id'-e-o-der'-mah*). Same as *Dermatitis tuberosa*.

**Idiodinic** (*id'-e-o-din'-ik*) [*ιδιος*, one's own; *δίνος*, rotation, a round area, taken in the sense of "pore"]. In biology, applied to animals that bring forth or reproduce by means of a special genital pore.

**Idio-electrics** (*id'-e-o-e-lek'-triks*) [*ιδιος*, own; *ἡλεκτρον*, amber]. A name formerly applied to such bodies as amber, resin, or glass, which are readily electrified by friction, and which were then supposed to be electric in themselves.

**Idioglossia** (*id'-e-o-glos'-e-ah*) [*ιδιος*, own, peculiar; *γλῶσσα*, tongue]. Extremely defective utterance, but one in which the same sound is used to express the same idea, even though the sounds used belong to no known language.

**Idiologism** (*id'-e-ol'-o-jizm*) [*ιδιος*, own; *λόγος*, utterance]. A characteristic expression or form of utterance peculiar to any person, especially to an insane person.

**Idiometrilitis** (*id'-e-o-me-tri'-tis*) [*ιδιος*, own; *μήτρα*, womb; *ιτις*, inflammation]. Inflammation of the parenchymatous substance of the womb.

**Idiomiasma** (*id'-e-o-mi-az'-mah*) [*ιδιος*, own; *μιασμα*, stain, defilement; *pl.*, *Idiomiasmata*]. A term for any noxious exhalation from the body.

**Idiomology** (*id'-e-o-mol'-o-je*) [*ιδίωμα*, a peculiar phraseology, idiom; *λέγειν*, to speak]. The study of the peculiarities of speech of various races.

**Idio-muscular** (*id'-e-o-mus'-ku-lar*) [*ιδιος*, own; *musculus*, muscle]. Peculiar to muscular tissue; not involving any nerve-stimulus or any function of the organism, except those of the muscle itself. **I. Contraction**, the contraction of a fatigued or tired muscle under certain conditions of extraneous stimulus.

**Idioneurosis** (*id'-e-o-nu-ro'-sis*) [*ιδιος*, own; *νεῖρον*, a nerve; *νόσος*, disease]. An affection due to some disturbed or abnormal condition of the nerves supplying the affected part; a simple and uncomplicated neurosis.

**Idionym** (*id'-e-o-nim*) [*ιδιος*, own; *ὄνυμα*, name]. A term restricted in its application to a particular organ.

**Idiopathic** (*id'-e-o-path'-ik*) [*ιδιος*, own; *πάθος*, disease]. Not consequent or dependent upon another disease, or known or recognized cause. The antithesis of sympathetic, deuteropathic. **I. Dysmenorrhea**, painful menstruation unassociated with organic lesion or displacement.

**Idiopathy** (*id'-i-op'-ath-e*) [*ιδιος*, own; *πάθος*, disease]. **1.** An idiopathic disease or condition. **2.** The fact or quality of being idiopathic.

**Idiophrenic** (*id'-e-o-fren'-ik*) [*ιδιος*, own; *φρήν*, mind]. Due to disease of the brain; a term used to designate certain forms of insanity.

**Idioplasm** (*id'-e-o-plasm*) [*ιδιος*, peculiar; *πλασμα*, a thing formed]. In biology, a term introduced by Nägeli for a special hereditary reproductive substance not contained in the body of the cell, but in the *chromosomes* of the nucleus, controlling and determining the actual characters of the particular cell, and also those of all of its descendants. Each idioplasm is composed of several or many *ids* (*q. v.*), which are capable of growth and multiplication by division; although much smaller in bulk than the rest of the living substance of the cell or body (*trophoplasm*), idioplasm is the active element in the process of formation, and determines the detailed construction of the trophoplasm, which is the passive element. **I., Accessory** (*Neben-idioplasm*), a special, minute group of "supple-

**Ileopisolitis** (*il-e-o-pis-o-lit-tis*) [*εἰλεῖν*, to roll; *πίσμη*, a pea; *ιτις*, inflammation]. Inflammation of Peyer's patches or glands.

**Ileoproctostomy** (*il-e-o-prok-tost-to-me*) [*εἰλεῖν*, to roll; *πρωκτός*, rectum; *στόμα*, mouth]. The surgical establishment of an artificial communication between the ileum and the rectum.

**Ileorectostomy** (*il-e-o-rek-tost-to-me*). See *Ileoproctostomy*.

**Ileos** (*il'-e-os*). See *Ileus*.

**Ileostomy** (*il-e-os'-to-me*) [*εἰλεῖν*, to roll; *στόμα*, mouth]. The surgical establishment of a passage through the abdominal wall into the ileum, or from the ileum to some other hollow organ.

**Ileotyphus** (*il-e-o-tif-fus*) [*εἰλεῖν*, to roll; *τίφος*, smoke]. Enteric or typhoid fever.

**Ileum** (*il'-e-um*) [*εἰλεῖν*, to roll]. The lower portion of the small intestine. It receives its name from its peristaltic movement.

**Ileus** (*il'-e-us*) [*εἰλέω*; *εἰλεῖν*, to roll]. Same as *Ileac* or *Iliac Passion*; volvulus. **I. inflammatorius**. Synonym of *Acute Intestinal Catarrh*. **I. spasmodicus**. Synonym of *Enteralgia*.

**Ilex** (*il'-eks*) [*L.*, the holm-oak]. A genus of aquifoliaceous trees and shrubs of many species; the hollies. **I. aquifolium**, common European holly; the bark and leaves have medicinal uses. **I. cassine**. See *Cassena*. **I. opaca**, American holly; it has the properties of *I. aquifolium*. **I. glabra**, and **I. verticillata**, of the U. S., are tonic, febrifuge, and astringent. See also *Maté*. All unof.

**Iliā** (*il'-e-ah*) [*L.*: *pl. of Ilium*]. The iliac bones; the flanks or loins.

**Iliac** (*il'-e-ak*) [*ilia*, the flanks]. Pertaining to the ilium or to the flanks. **I. Aneurysm**, one occurring at the groin. **I. Artery**. See *Arteries*, *Table of*. **I. Crest**, the upper free margin of the ilium to which the abdominal muscles are attached. **I. Fascia**. See *Fascia*. **I. Fossa**. See *Fossa*. **I. Muscle**. See *Muscles*, *Table of*. **I. Region**, one of the regions into which the abdomen is conventionally divided. See *Abdomen*.

**Iliaco-** (*il'-ak-o-*) [*ilia*, the loins]. A prefix signifying relation to the loins. **I.-femoral**, relating to the ilium and the femur. **I.-trochanteric**, relating to the ilium and the great trochanter of the femur.

**Iliacus** (*il'-ak-us*). See *Muscles*, *Table of*.

**Iliadelphus** (*il-e-ad-el'-fus*) [*ilia*, flanks; *ἀδελφός*, brother]. A monstrosity double from the pelvis upward.

**Ilicin** (*il'-is-in*) [*ilex*, the holm-oak]. A crystalline febrifugal principle from the leaves of *Ilex aquifolium*.

**Ilien** (*il'-e-en*) [*ilia*, the loins]. Belonging to the ilium in itself.

**Ilio-** (*il'-e-o-*) [*ilium*, the ilium]. A prefix to denote relation to or connection with the ilium. **I.-capsularis**, a muscle occasionally found in man, originating at the anterior inferior spine of the ilium and inserted into the ilio-femoral ligament. See *Muscles*, *Table of*. **I.-femoral**, pertaining conjointly to the ilium and the femur. **I.-f. Crease**. See *Crease*. **I.-f. Ligament**, an inverted V-shaped ligament extending obliquely across the hip-joint, from the anterior inferior spine of the ilium to the trochanters of the femur, preventing over-extension of the joint. **I.-f. Triangle**, a triangle of which the base is a line drawn from the summit of the great trochanter to the anterior superior spine of the ilium, and the apex is formed by lines drawn backward from the anterior superior spine and upward from the summit of the trochanter. See *Triangles*, *Table of*. **I.-hypogastric**, pertaining conjointly to

the ilium and the hypogastrium. **I.-h. Nerve**. See *Nerves*, *Table of*. **I.-inguinal**, pertaining to the ilium and the groin. **I.-i. Nerve**. See *Nerves*, *Table of*. **I.-lumbar**, pertaining conjointly to the ilium and the loins. **I.-l. Artery**, a branch of the posterior division of the internal iliac artery, supplying the iliacus, and also the psoas and quadratus lumborum muscles. See *Arteries*, *Table of*. **I.-l. Muscle**, that part of the quadratus lumborum muscle that is inserted into the tips of the processes of the lumbar vertebrae. See *Muscles*, *Table of*. **I.-pectineal**, pertaining conjointly to the ilium and the pubes. **I.-p. Ligament**, that part of the iliac fascia by which Poupart's ligament and the sheath of the crural vessels are attached to the os pubis. **I.-p. Line**, the ridge reaching from the spine of the os pubis to the auricular surface of the ilium. See *Lines*, *Table of*. **I.-pelvic**, pertaining conjointly to the ilium and the pelvis. **I.-p. Abscess**, suppuration sometimes occurring over the iliacus muscle during labor, and commonly due to the laceration of muscular fibers. **I.-perineal**, relating to the ilium and the perineal region. **I.-polymeli**, a monstrosity with supernumerary limbs attached to the ilium. **I.-psoas**, pertaining conjointly to the ilium and the loins. **I.-p. Muscle**. See *Muscles*, *Table of*. **I.-pubic**, relating to both ilium and pubes. **I.-spinal**, relating to the ilium and the spinal column. **I.-tibial**, pertaining to or connecting the ilium and the tibia. **I.-t. Band**, a thickened portion of the fascia lata extending from the outer tuberosity of the tibia to the iliac crest. **I.-trochanteric**, pertaining to the ilium and a trochanter.

**Ilium** (*il'-e-um*) [*L.*]. The upper part of the *os innominatum*. The haunch-bone.

**Ilixanthin** (*il-iks-an'-thin*) [*ilex*, holly; *ξανθός*, yellow],  $C_{17}H_{20}O_{11}$ . A yellow crystalline coloring-matter found in holly. The crystals melt at  $198^{\circ} C.$ , and are soluble in hot water and alcohol.

**Ill** (*il*) [*ME.*, *ille*, *ill*]. Sick; diseased; unwell.

**Illacrimation** (*il-lak-rim-a'-shun*) [*illacrimatio*; *in*, on; *lacrima*, a tear]. Same as *Epiphora*.

**Illaqueation** (*il-lak-ue-a'-shun*) [*illaqueare*, to ensnare]. A method of changing the direction of misplaced cilia, by withdrawing them, by a noose, through an opening in the adjacent tissue of the lid.

**Illegitimacy** (*il-e-jit'-im-a-se*) [*in*, not; *legitimus*, according to law]. The condition of being unlawful, or not legitimate.

**Illegitimate** (*il-e-jit'-im-at*) [*in*, not; *legitimus*, according to law]. Not in accordance with statutory law.

**I. Child**, one born out of lawful wedlock; a bastard.

**Illequation** (*il-e-kua'-shun*). See *Illaqueation*.

**Illicium** (*il-is'-e-um*) [*illicere*, to entice]. Star Anise. The fruit of *Illicium anisatum*, with properties due to a volatile oil identical with oil of anise. *Illicium* is properly the name of a genus of magnoliaceous trees and shrubs. **I. floridanum**, of the Gulf States, has poisonous leaves. **I. religiosum**, of Asia, is said to be highly poisonous. **I. verum**, is said to yield the star anise of commerce. Unof.

**Illness** (*il'-nes*) [*ME.*, *ille*, *ill*]. Sickness; disease; an attack of disease.

**Illumination** (*il-oo-min-a'-shun*) [*illuminare*, to make light]. A light produced by a luminous body, and reflected by surrounding objects. In photometry, the unit of intensity of illumination is that given by a standard candle at a distance of one foot. **I., Dark-ground**, in microscopy, a condition in which the object appears self-luminous on a dark background. This occurs when the rays of light are too oblique to enter the front lens of the objective, except such as

are reflected, refracted, and from the object itself. **I. of Eye**, the lighting up of the interior of the eye by means of the ophthalmoscopic mirror. **I. Oblique**, in ophthalmology, an illumination produced by crossing the rays of light upon an object at any angle other than that of oblique vision. **Adaptive illumination** of the camera obscura or of a drawing apparatus of a similar type.

**Illuminator** (*im-lu-mi-nay-er*) [*illuminare*, to make light]. An instrument or person who illuminates for controlling devices. **I. Abbe**, an illuminating apparatus for microscopes designed by Ernst Abbe.

**Illuminum** (*im-lu-mi-num*) [*illuminare*, to make light]. A term sometimes used synonymously with *illumination* in connection with direct intercourse with, or produced by, consciously being.

**Illusion of perception** (*il-lu-zhun*, a misleading). A false or deceptive mental impression. This differs from hallucination in that it is a false interpretation by the mind of a real sensation. The senses are not at fault as in the case of illusions, and the defective process is purely mental. The difference between illusion and hallucination is, however, by no means a constant one.

**Illusional** (*il-lu-zhun-ah-l*) [*illudere*, a mocking]. Of the nature of an illusion.

**Illutatum** (*il-lu-tay-tum*) [*lutum*, mud]. Treatment of disease by the mud bath.

**Image** (*im-aj*) [*imago*, a likeness]. The picture of an object formed by the focused rays of light proceeding from it. **I. After**. See *After image*. **I., Diffusion of**. See *Diffusion*. **I., Direct**, or **I., Erect**, that of the fundus oculi as seen with the ophthalmoscope, the details of the fundus presenting their natural relations. **I., Inverted**, that obtained by interposing between the ophthalmoscope and the observed eye a high power lens; it is an aerial image at the focus of the lens used. **I., Real**, that made by the focused reflected rays. **I., Refraction**, an image due to the refraction of light up in entering and leaving an object. Two things are involved: 1. The form of the object. 2. The relative refractive power of the object and the medium media. **I., Subjective**, a phosm; also a visual hallucination. **I., Virtual**, that produced by the imaginary focus of the rays, as, *e. g.*, behind a mirror.

**Imaginal** (*im-aj-in-ah-l*) [*imago*, an image]. Pertaining to the *Imagery*. **I. Discs**, in entomology, the discs given by Weismann to curious encapsulated groups of embryonal cells, connected with the nerves and precursors of certain insect larvae (*Diptera*). They are the rudiments from which the nymph is developed.

**Imagination** (*im-aj-in-ah-shun*) [*imaginatio*, imagining]. The picture-making power of the mind. The faculty by which one creates ideas or mental pictures by means of the data derived from experience, ideas combined, extended, and combined in new forms.

**Imago** (*im-aj*) [*I.*; *gen.*, *Imagini*]. An image. Also, the final, adult, or reproductive stage of an insect.

**Imbalance** (*im-bal-ans*) [*dis*, not; *balan*, to balance]. Lack of balance, loss of the power of keeping the exact equilibrium; lack of harmonic balance between the elements of the body.

**Imbecility** (*im-beck-ih-l*) [*imbecilis*, feeble in mind]. Feeble in mind.

**Imbecity** (*im-beck-ih-ty*) [*imbecilis*, imbecility]. Mental imbecility or feebleness; to that of idioy, but of less degree.

**Imbibe** (*im-bih*) [*imbibere*, to drink]. To drink or imbibe.

**Imbibition** (*im-bih-ish-un*) [*imbibitio*, a drinking in]. The sucking up, or capillary absorption, of moisture, liquids, or gaseous substances by inorganic, or by dead or torpid organic bodies.

**Imbawelling** (*im-bow-el-ing*). Same as *Evisceration*.

**Imbricate** (*im-brik-at*) [*imbricare*, to cover with tiles]. Applied to that arrangement of scales, feathers, leaves, or floral organs in the bud, in which they overlap like shingles on a roof.

**Imbricated** (*im-brik-a-ted*) [*imbricare*, a roof-tile]. Distinguished by overlapping. Applied to the position and arrangement of scales in certain squamous diseases of the skin.

**Imitation** (*im-it-ah-shun*) [*imitari*, to imitate]. A production that is similar to, or a copy of, another object or process. **I., Morbid**, the occurrence of a convulsive or mental affection brought about by observing a similar affection in another; mental contagion.

**Immaculate** (*im-ak-u-lat*) [*in*, not; *macula*, a spot]. Pure; spotless.

**Immarginate** (*im-ar-jin-at*) [*in*, not; *marginare*, to furnish with a border]. In biology, having no well-defined border.

**Immature** (*im-at-ur*) [*immaturus*, unripe]. Not ripe; not yet of an adult age or growth.

**Immediate** (*im-me-d-ah-l*) [*in*, not; *medio*, the middle]. Direct. Without anything intervening, as *immediate auscultation* or *percussion*. **I. Contagion**, that from a direct source. **I. Ligature**. See *Ligature*. **I. Union**, union by first intention, or without suppurative granulation.

**Immedicable** (*im-med-ik-ab-l*) [*in*, not; *medicare*, to cure]. That which does not yield to medicine or treatment. Incurable.

**Immersion** (*im-mer-shun*) [*in*, in; *mergere*, to dip]. The plunging of a body into a liquid. In medicine, treatment by a continued bath. See *Oil-immersion*, *Water-immersion*. **I.-bath**, the liquid employed for immersion. **I.-battery**, a form of battery in which, by inclining the cell, the elements are immersed in the liquid. **I., Homogeneous**, a fluid between the objective of a microscope and the cover-glass, having about the same refractive and dispersive power as the glass. **I., Objective**, a microscope-objective, usually of high power, the lower lens of which is immersed in a drop of water, glycerin, or oil, placed on the cover-glass of the object under examination.

**Immissio** (*im-ish-e-o*) [*I.*]. Insertion. **I. catheteris**. See *Catheterism*. **I. penis**, introduction of the penis into the vagina.

**Immission** (*im-mish-un*) [*immissio*, a letting in]. Introduction, as of a catheter.

**Immobilization** (*im-mob-il-iz-ah-shun*) [*immobilis*, immovable; *facere*, to make]. The surgical fixation of a part (as a fractured bone) by means that prevent any local motion.

**Immortality** (*im-mor-tal-ih-ty*) [*immortalitas*, undyingness]. Exemption from death; unending existence. **I. of Germ-cells**. See *Heredity*; also, *Germ-plasma*. **Immune** (*im-mun*) [*immunis*, safe]. 1. Safe from attack; protected by vaccination, or some analogous procedure, or by previous illness. 2. A person who is protected against any special virus. **I. Animal**. See *Control-experiment*.

**Immunity** (*im-mun-ih-ty*) [*immunitas*, exemption]. The condition of an organ, or of the body, whereby it resists the development of infectious or morbid processes. The inoculation of attenuated virus and of chemic compounds are examples of methods by which immunity is acquired. It has also been shown that inflam-

matory action is inhibitive of bacterial development. **I., Acquired**, that derived from a previous attack of the same disease or from a modified form, as varioloid, or artificially produced by inoculation. **I., Artificial**, that produced by inoculation with the virus of a disease. **I., Natural**, the natural resistance of the tissues or system. Immunization may be transient or permanent, relative or absolute.

**Immunization** (*im-mūn-iz-a'-shun*) [*immunitas*, exemption]. The act or process of endowing with immunity.

**Immunize** (*im'-mūn-iz*) [*immunis*, exempt]. To give or to acquire immunity.

**Impact** (*im'-pakt*) [*impactus*; *impingere*, to drive into or against]. A forcible striking against.

**Impacted** (*im-pak'-ted*) [*impactus*; *impingere*, to drive into or against]. Driven against and retained, as a wedge. **I. Fracture**, one in which the fragments of bone are driven into one another in such a manner as to cause shortening.

**Impaction** (*im-pak'-shun*) [*impactio*, impact]. The state or quality of being impacted; fracture with fixation of the fragments; obstinate constipation; the wedging of the fetal head in the pelvic canal.

**Impalement** (*im-pal'-ment*) [*in*, in; *pal*, a pale or picket]. The perforation of the body or a part by a rod or stake.

**Impalpable** (*im-pal'-pa-bl*) [*impalpabilis*, impalpable]. That which cannot be felt; unappreciable by touch. **I. Powder**, a powder so fine that its separate particles cannot be felt.

**Impalsy** (*im-paral'-ze*) [*in*, in; *ME.*, *palsey*, palsy]. To paralyze.

**Impaludism** (*im-pal'-u-dizm*) [*in*, in; *palus*, a marsh]. Chronic malarial poisoning.

**Impar** (*im'-par*) [*in*, not; *par*, equal]. Odd or unequal. **I., Ganglion**, a small ganglion on the coccyx. See *Ganglia*, Table of.

**Imparipinnate** (*im-par-ip-in'-āt*) [*impar*, unequal; *pinnatus*, feathered]. In biology, unequally pinnate; having an odd leaflet at the apex.

**Impatiens** (*im-pa'-she-enz*) [*L.*, impatient]. Touch-me-not; jewel-weed or balsamine; a genus of geraniaceous plants. **I. balsamina** and **I. lutea**, of the old world, and **I. fulva** and **I. pallida**, of the U. S., are diuretic, emetic, and cathartic. Unof.

**Impatiinid** (*im-pa'-te-in-id*) [*impatiens*, impatient]. A resinous emetic principle obtainable from *Impatiens lutea*. Unof.

**Impennate** (*im-pen'-āt*) [*in*, not; *pennatus*, winged]. In biology, applied to such birds, as the penguin, as have short wings covered with scale-like feathers.

**Impennous** (*im-pen'-us*) [*in*, not; *penna*, wing]. In biology, without wings.

**Imperative** (*im-per'-at-iv*) [*imperativus*, imperative]. Peremptory; absolute; binding. **I. Idea**. See *Idea*, *Imperative*.

**Imperatoria** (*im-per-at-o'-re-ah*) [*imperatorius*, belonging to a commander]. A genus of umbelliferous plants; masterworts. **I. ostruthium**, false pellitory of Spain, is an aromatic stimulant, once prized as a polychrest remedy, but now little used. Unof.

**Imperfection** (*im-per-fek'-shun*) [*imperfectus*, imperfect]. A physical defect.

**Imperforate** (*im-per'-for-āt*) [*in*, not; *perforare*, to pierce]. Congenitally and abnormally closed; applied to an opening of the body, as the anus, vagina, etc. See *Occlusion* and *Obstruction*.

**Imperforation** (*im-per-for-a'-shun*) [*imperforatio*; *in*, not; *perforare*, to bore through]. Occlusion; applied especially to the anus, hymen, vagina, etc.

**Imperial** (*im-pe'-re-al*) [*imperialis*, pertaining to an

empire]. Sovereign; commanding. **I.-blue**. Same as *Spirit-blue*. **I. Drink** or **Draft**, *potus imperialis*, a solution of a half-ounce of potassium bitartrate in three pints of hot water, to which are added four ounces of sugar and half an ounce of fresh lemon-peel. It is a good diuretic and refrigerant drink. Unof. **I. gralum**, a farinaceous food for infants. Its composition is: Water 5.49, fat 1.01, a trace each of grape-sugar and cane-sugar, starch 78.93, soluble carbohydrates 3.56, albuminoids 10.51, gum, cellulose, etc., 0.50, ash 1.16. **I.-green**. Same as *Schrocinfurth-green*. **I.-violet**. Same as *Rosanilin-violet*.

**Imperialin** (*im-pe' re al in*) [*imperialis*, pertaining to an empire]. An alkaloid from *Fritillaria imperialis*, or crown imperial; it acts upon the heart. Unof.

**Impermeable** (*im-per'-me-a-bl*) [*in*, not; *per*, through; *meare*, to go]. Not capable of being traversed.

**Impervious** (*im-per'-ve-us*) [*in*, not; *pervius*, capable of passage]. Not permitting a passage through.

**Impetiginoid** (*im-pet-ij'-in-oid*) [*impetigo*, impetigo; *impetere*, to attack; *eidōs*, like]. Same as *Impetiginous*.

**Impetiginous** (*im-pet-ij'-in-us*) [*impetigo*; *impetere*, to attack]. Affected with or resembling impetigo.

**Impetigo** (*im-pet-i'-go*) [*impetigo*; *impetere*, to attack]. An acute inflammatory skin-disease characterized by one or more pea-sized or finger-nail sized, discrete, rounded, and elevated firm pustules, unattended, as a rule, by itching or other subjective symptoms. The pustules are rounded, with thick walls, and are surrounded by areolæ. They appear suddenly, and come out one after another during the first week of the attack, attain full size, and then undergo absorption or crusting. No scar or pigmentation follows. The disease is likely to occur in children. **I. annua**. See *Aleppo Boil*. **I. capitis**. Same as *Eczema capitis*. **I. contagiosa**, *Porrigio contagiosa*; an acute, inflammatory, contagious disease, due to the presence of a microorganism, and characterized by the appearance of vesico-pustules or blebs, that dry into flat, straw-colored, granular-looking crusts. The disease occurs usually in children. The vesicles vary in size from minute points to that of a quarter of a dollar, and the contents, at first serous, become seropurulent, and then dry up. The disease is most prone to attack the face and hands. **I., Duhring's**, differs from the foregoing by being non-infectious. See *Diseases*, Table of. **I. erysipelodes**, an old term for *Eczema pustulosum*, with deeper inflammation than usual. **I. granulata**. Same as *Pediculosis*. **I. herpetiformis**, *Herpes pyemicus*; a very rare disease of the skin, characterized by the formation of superficial military pustules, that may be discrete, but are usually closely set. The contents of the pustules are at first opaque, but become greenish-yellow, and dry up into dirty-brown crusts. The disease spreads until the whole surface is covered with swollen, crusted, and excoriated patches. It develops first on the inner side of the thighs, and about the groins, navel, breasts, and axillæ, and is mainly seen in pregnant women. The termination is fatal, as a rule. **I. rodens**, an old term for a carcinomatous disease of the skin. **I. scabida**, an old term for *Eczema pustulosum*, with unusually thick crusting. **I. sparsa**, an old term for small, scattered patches of *Eczema pustulosum*. **I., Syphilitic**. See *Syphilid*, *Impetiginous*.

**Impetus** (*im'-pe-tus*) [*L.*]. **I.** Force or momentum. **2.** The onset or attack of a disease, or of a paroxysm.

**Implantation** (*im-plan-ta'-shun*) [*implantatio*; *in*, in; *plantare*, to set]. The act of setting in. Also, the transplantation of a tooth from the jaw of one person

method of meeting. Also, the sequencing of a program  
 from the time of its inception to the final act of doing  
 it. The sequential report of a completed process by unit  
 or the developed code. I. End-to-end, the sequential  
 manner of the end of a device. *Metaphor*. As of the  
 device, as a device. I. Hypodermatic, the intro-  
 duction of a code into the form of a code  
 under the code by the sequential process. I.  
 Teatologic, a code sequentially connecting of an in-

**Implexus** (complexus) [entwikkeld, 28] ontwikkel, en

impliment *implēre* (to) without, *plura*,  
[noted] in strategy, realization

**Imponderable** *im-pŏn-dĕ-ră-bŭl* [*im*, not; *pŏn-dĕ-ră*, that which can be weighed] That which cannot be weighed. 1. Fluids, an obsolete term, formerly applied to light, heat, and electricity.

Importation (importats'ya) {*on, m; portiro, to*  
 (1902) Transference from another locality or foreign  
 country. 1 of Disease, the carrying of the conta-

In posthumate (by the *de-mat* [corrupt form of *apost-*])

**Imposthume** (*pos' tu-m*) [a corrupt form of *aposthume*]. An abscess.

**Impotence** (*im-pŭt'ns*), [*in*, not; *pot-um*, to be able]. Lack of power, applied especially to male incapacity of procreation. It is variously qualified as *atonic*, when due to spinal or central exhaustion; *paralytic* or *peric*, when the impulse that leads to the performance of the function is abolished; *psychic*, when due to fear, bashfulness, or mental disturbance; *symptomatic*, when due to some drug, or to a disturbance of the health.

**Impregnation** (*im-preg-nā'shun*) [*impregnatio*, the state of being with child]. The state of being pregnant; the act of impregnating; fecundation; fertilization.

**Impressio** (*im-prēsh'yo*) [L.]. An impression. **I. colica**, an impression on the under surface of the right lobe of the liver for the hepatic flexure of the colon. **I. renalis**, an impression behind the *I. colica* for the right kidney and suprarenal capsule.

**Impression** (*im-pré-h'yun*) [*Impressio*; *imprimere*, to print, *poû*]. A hollow or depression. 1. **cup**, in dentistry, a cup or tray of metal, porcelain, gutta-percha, or other substance, used for conveying to the mouth and holding in position the material for impression. 1. **Digital**, the mark made by the pressure of a finger upon an edematous limb, or upon the neck of a stricture. 1. **Rhomboid**, a broad impression on the inferior surface of the clavicle, near the sternal end, for the attachment of the rhomboid ligament.

**Impressionable** *im-presh' un-uhl* [*impressio*, an impression] Readily susceptible to impressions. I. **Heart**, the condition of the heart in which it is very liable to functional disturbance.

**Impressorium** (*im'pres-ur-um*) [L.] The seat of  
impression; antherium

**Impuberal** (*im-pu-ber-uhl*) [*im-pu-ber, im-pube-uhl*; *in*, not; *pubes*, hairs] Devoid of hair on the pubes. Not of adult age.

Impulse (the fact) [instigation; impelling, to drive forward] the continuing force. Also, the shock and trembling in the chest walls caused by the beating of the heart. Also, a sudden spontaneous contraction of the muscle of the heart occurring at the end of the systole, but of the heart occurring at the end of the systole in the mid-intervall space to the left of the ventricle. I. Morbid, any strong, unnatural impulse or contraction of the heart.

of the occipital bone. It is called *incarial*, because, in the skeletons of ancient Peru, the land of the *Incas*, it is often persistent as a distinct bone.

**Incarnatio** (*in-kar-na't-she-o*) [L.]. Conversion into flesh. **I. unguis**, the ingrowing of a nail. See *Onychogryphosis*.

**Incarnation** (*in-kar-na't-shun*). 1. Granulation; healing process. 2. See *Conception*.

**Incarnification** (*in-kar-nif-ik-a'-shun*). Same as *Incarnation*.

**Incasement** (*in-kas't-ment*) [*in*, in; ME., *casse*, a box]. The act of inclosing in a case. **Incasement, Encasement, Theory of**, the doctrine that the ovum or spermatozoid of the first animal of each species incased the germs of all subsequent individuals of the species. This theory was also called that of *Preformation*. Cf. *Evolution*.

**Incest** (*in'-sesh*) [*incestus*, not chaste]. Carnal intercourse between persons of near relationship.

**Inch** [ME., *inche*, inch]. The twelfth part of a foot. It equals 25.39954 millimeters.

**Incidence** (*in'-sid-ens*) [*incidere*, to fall upon]. A falling upon. The direction in which one body strikes another. **I., Line of**, the path of a ray or a projectile. **I., Point of**, the point upon which the ray or projectile is reflected or strikes.

**Incident** (*in'-sid-ent*) [*incidere*, to fall upon]. Falling upon.

**Incineration** (*in-sin-er-a'-shun*) [*in*, in; *cineres*, ashes]. The process of heating organic substances in contact with the air until all organic matter is driven off, and only the mineral ash remains.

**Incised** (*in-sizd'*) [*incidere*, to cut]. Cut or notched. **I. Wound**, one made by a sharp-edged instrument.

**Incisiform** (*in-si't-sif-orm*) [*incisor*, incisor; *forma*, form]. In biology, resembling an incisor tooth.

**Incision** (*in-sizh'-un*) [*incisio*, or *incisura*, an incision]. The act of cutting into any tissue of the body.

**Incisive** (*in-si't-siv'*) [*incidere*, to cut]. Having the quality of cutting. Pertaining to the incisor teeth. **I. Canal**. See *Canal*. **I. Foramina**. See *Foramen*. **I. Fossa**. See *Fossa*. **I. Teeth**. See *Incisor*.

**Incisor** (*in-si't-sor*) [*incidere*, to cut]. Any cutting instrument. **I. Nerve**, the branch of the inferior dental nerve supplying the incisor and canine teeth. See *Nerves*, *Table of*. **I. Teeth**, the four most anterior teeth in each jaw.

**Incisura** (*in-si-su'-rah*) [*incidere*, to cut into]. A notch. Also, an incision. **I. cerebelli**, one of two notches separating the hemispheres of the cerebellum, the one in front and the other behind. **I. intertragica**, the deep notch in the pinna of the ear separating the tragus and the anti-tragus. **I. santorini**, a fissure extending in a vertical direction through the cartilage of the auditory canal.

**Incisure** (*in-sizh'-ur*) [*incisus*, p. p. of *incidere*, to cut into]. A slit or notch. **I.'s of Schmidt and Lautermann**, oblique lines running across the white substance of the inter-annular segments of stretched medullated nerve-fibers.

**Inclaudent** (*in-klaw'-dent*) [*in*, not; *claudere*, to close]. In biology, not closing.

**Included** (*in-klud'-ed*) [*in*, in; *claudere*, to shut in]. Applied to stamens or pistils that do not project beyond the corolla, but are contained within it.

**Inclusio fetalis** (*in-klu't-se-o fi'-tal-lis*) [L.]. A form of fetal parasitism in which the parasite is more or less included and overgrown by the tissues of the autostite.

**Inclusion** (*in-klu'-zhun*) [*includere*, to enclose or shut in]. The state of being shut in. Also, the act of shutting in; that which is shut in.

**Incoagulable** (*in-ko-ag'-u-la-bl*) [*in*, not; *coagulare*, to curdle]. That which will not curdle or coagulate.

**Incoherence** (*in-ko-her'-ens*) [*incoherentia*; *in*, not; *coherere*, to cling together]. The quality of being incoherent; absence of connection of ideas or of language; incongruity or inconsequence of diction.

**Incoherent** (*in-ko-her'-ent*) [*in*, not; *coherere*, to stick together]. Not connected or coherent; without ability to preserve that sequence of words or of ideas that is necessary to convey meaning.

**Incombustibility** (*in-com-bus-tib-il'-it-e*) [*in*, not; *comburare*, to burn up]. The state of being incombustible.

**Incombustible** (*in-com-bus'-tib-il*) [*in*, not; *comburare*, to burn up]. Incapable of burning.

**Income** (*in'-kum*) [ME., *income*, income]. The amount of food taken *per diem*.

**Incompatibility** (*in-kom-pat'-ib-il'-it-e*) [*in*, not; *compatibilis*, compatible]. That relation between medicines that renders their admixture unsuitable. This incompatibility may be physiologic, *chemic*, *physical*, or *therapeutic*.

**Incompatible** (*in-kom-pat'-ib-il*) [*in*, not; *compatibilis*, endurable]. Incapable of mixture without undergoing such chemic or physical changes as impair or destroy the usefulness of the compound; physiologically antagonistic, and therefore useless to prescribe.

**Incompetence, Incompetency** (*in-kom'-pet-ens*, *in-kom'-pe-ten-se*) [*in*, not; *competere*, to be capable; *incompetens*, insufficient]. Incapacity; inadequacy. Inability to perform natural functions. **I., Mental**, a disorder of mind sufficient to produce irresponsibility. **I., Aortic, Mitral, Pulmonary, Tricuspid**. See *Endocarditis*. **I., Valvular**. See *Insufficiency*.

**Incomplete** (*in-kom-plét'*) [*in*, not; *completus*, complete]. Partial, as an incomplete hernia. **I. Copulation**. See *Coitus reservatus*. **I. Hernia**. See *Hernia*.

**Incongruence** (*in-kon'-gru-ens*) [*incongruens*, inconsistent]. Lack of congruence. **I., Retinal**, lack of correspondence in the situation of the perceptive elements of the two retinae.

**Incongruity** (*in-kon-gru'-it-e*) [*in*, not; *congruere*, to go together]. Absence of agreement or of needful harmony.

**Incontinence** (*in-kon'-tin-ens*) [*in*, not, *continere*, to contain]. Inability to control the evacuation of the feces or the urine; involuntary evacuation. This term is sometimes used as a synonym of venereal indulgence, lewdness. **I., Seminal**. See *Spermatorrhea*.

**Incoördination** (*in-ko-or-din-a'-shun*) [*in*, not; *con*, together; *ordinare*, to order]. In pathology, the inability to produce voluntary muscular movements in proper order or sequence; lack of harmony between the will and the muscular activity. **I. of Ocular Muscles**. See *Insufficiency*.

**Incorporation** (*in-kor-por-a'-shun*) [*in*, in; *corpus*, a body]. The process of intimately mixing the particles of different bodies into a practically homogeneous mass.

**Incrassate** (*in-kras'-ät*) [*in*, in; *crassare*, to make thick]. In biology, thickened or swollen.

**Incrassation** (*in-kras-a'-shun*) [*incrassatio*; *in*, in; *crassus*, thick]. The process of making thick, as by inspissation; enlargement of a part, due to fatness.

**Incrassative** (*in-kras'-a'-iv*) [*incrassare*, to make thick]. 1. Having the power to make thick or thicker. 2. Formerly a medicine supposed to correct a thinness of the humors.

**Incremation** (*in-kre-ma'-shun*). See *Cremation*.

**Increment** (*in'-kre-ment*) [*incrementum*, growth]. Increase or growth.

**Incremental** (*in-krem-ent'ul*) [*in-krem-ent*, *grow*].  
Pertaining to increment or growth. **I. Lines.** See  
Scales. **I. Zone.** In a scale, the

**Incrustate** (*in-kres-tat*) [*in-kres-tat*, *be*, *crust*]. In  
biology, having a coat or covered with more or less of  
growth or substance.

**Incrustation** (*in-kres-tay-shun*) [*in-kres-tay-shun*, *to*, *cover*  
with *crust*]. The condition of a part. A scale for  
instance, is a crustaceous deposit on organic tissue as a  
result of growth or disease.

**Incubation** (*in-kub-ey-shun*) [*in-kub-ey-shun*, *in*, *it*, *on*, *eggs*].  
In medicine, the period between the implanting of the  
embryo and the development of the fetus. **I. of**  
the period of incubation in some of the most important  
diseases, is as follows: *Cholera*, 1-2 days.

**Incubator** (*in-kub-ey-tor*) [*in-kub-ey-tor*, *in*, *it*, *on*, *eggs*]. A  
device by which the artificial hatching of eggs or cultivation  
of microorganisms is possible at a constant temperature for the  
purpose of the incubation of the embryo. **I. of** a prematurely born. **I.**  
Cradle, a cradle for a child with double walls, be-  
tween which water at the desired temperature may be  
kept, and regulated by means of pipes and stop cocks.  
**I. of** Turner's, an apparatus for the rearing of pre-  
mature children, consisting of a box with two compart-  
ments, one containing the child, the other, and lower  
compartment, being filled with warm water, so as to  
keep a uniform temperature of 80°-88° F.

(INCUBATOR OR COUVEUSE  
From *Practical Obstetric Nursing*.)

**Intubous** (*int-tyoo-sus*) [*in-tu-u*, *lying upon*]. In biol-  
ogy, with the tip of one leaf lying flat over the base of  
the next above.

**Incubus** (*in-kub-us*) [*in*]. **I.** Nightmare; ephialtes.  
A demon, supposed to be a demon that beset  
sleepers, and the incubus was supposed to consort  
with men. **I. vigilanti.** See *Incubus*.

**Incus** (*in-kus*) [*in*, *incus*, *incus*]. Relating  
to the incus.

**Incus** (*in-kus*) [*in*, *incus*]. In biology,  
bearing incus.

**Incus** (*in-kus*) [*in*, *incus*]. In composition,  
signifying incus in the incus. **I. malleal**, re-  
lating to the malleus and the incus. **I. orbicular**, re-  
lating to the malleus and the incus. **I. stape-**  
dial, relating to the malleus and the incus. **I. tym-**  
panic, relating to the malleus and the incus.

**Incision** (*in-kay-shun*) [*in*, *incise*, *a*, *wed-*  
ding]. **I.** The operation of a doctor, or of the fetal  
scalpel. **I. of** the incision of the

**Incurable** (*in-kur-ey-bul*) [*in*, *incur*, *to*, *care for*].  
That which cannot be cured or restored to wholeness.

**Incurvation** (*in-kur-ey-shun*) [*in*, *incurv*, *to*, *bend*].  
The state of being bent or curved.

**India** (*in-dee-ah*) [*in*, *india*, *in*, *india*]. In bi-  
ology, the Indian tree, the bark of the bark of bones in

the middle ear of a mammal; (*b*) A portion of the  
mouth parts of a rotifer.

**Indazole** (*in-da-zol*) [*in*, *indazole*]. A substance formed  
by heating hydrazin-cinnamic acid. It crystallizes  
from hot water in colorless needles, melting at 146°  
C., and boiling at 270° C.

**Indecent** (*in-de-sent*) [*indecent*, *unbecoming*]. Not  
decent; obscene. **I. Exposure.** See *Exhibitionism*.

**Indecision** (*in-de-si-shun*) [*in*, *not*; *decisio*; *decidere*,  
to decide]. Morbid irresolution; want of firmness or  
of will; abulia or hypobulia.

**Indehiscent** (*in-de-his-tent*) [*in*, *not*; *hiscere*, to gap].  
In biology, not opening spontaneously.

**Indene** (*in-den*) [*in*, *indene*]. A hydrocarbon that occurs  
with coumarone in that fraction of coal-tar boiling at  
170°-182° C. It is a clear oil, boiling at 177°-178°  
C. Its sp. gr. is 1.040 at 15° C.

**Indentation** (*in-den-tay-shun*) [*in*, *in*; *dens*, a tooth].  
A condition of being notched or serrated. **I. of**  
**Tongue**, the notching of the borders of the tongue  
made by the teeth, and visible especially during in-  
flammation of the tongue.

**Index** (*in-deks*) [*in*]. The first finger. Also, the re-  
lation or ratio of one part to another, taken as a  
standard. **I.** **Altitudinal**, the height of a skull  
multiplied by 100 and divided by its length. **I.**  
**Alveolar**, the degree of prominence of the jaws,  
measured by the basi-alveolar length multiplied by 100  
and divided by the basi-nasal length. When the  
alveolar index is less than 98, the skull is *orthognathic*,  
when more than 103, *prognathic*, when intermediate,  
*mesognathic*. **I.** **Basilar**. Same as *I.* **Alveolar**.  
**I. of Breadth**. Same as *I.* **Cephalic**. **I.** **Cephalic**,  
the breadth of a skull multiplied by 100 and divided  
by its length. When this is below 75, the skull is  
called *dolichocephalic*, when above 80, it is called  
*brachycephalic*, between these limits, *mesocephalic*.  
**I.** **Cephalo-orbital**, the ratio of the solid contents  
of the two orbits to the contents of the cranial cavity,  
multiplied by 100. **I.** **Cephalo-spinal**, the ratio of  
the measure of the foramen magnum in square milli-  
meters to that of the cranial cavity in cubic centi-  
meters, multiplied by 100. **I.** **Cerebral**, the ratio of  
the greatest transverse to the greatest antero-posterior  
diameter of the cranial cavity, multiplied by 100.  
**I.** **Digit**, the forefinger. **I.** **Facial**, the ratio of the  
distance of the ophryon from the alveolar point to the  
transverse diameter measured from one zygoma to the  
other, multiplied by 100. **I.** **Finger**, the forefinger. **I.**  
**Gnathic**, the ratio of the distance between the basion  
and the alveolar point to the distance between the  
basion and the nasal point, multiplied by 100. **I.**  
**Nasal**, the greatest nasal width multiplied by 100, and  
divided by the nasal length. When the nasal index ex-  
ceeds 53, the nose is *platyrhine*, when less than 48, it  
is said to be *leptorhine*, if between these numbers, *meso-*  
*rhine*. **I.** **Orbital**, the orbital height multiplied by 100  
and divided by the orbital width. If the orbital index be  
above 80, it is called *megasemic*, if under 84, *microse-*  
*mic*, if between, *mesosemic*. **I.** **Refractive**, the coefficient  
of refraction. **I.** **Thoracic**, taken at its widest part is  
100 times the sagittal, divided by the transverse  
measurement. **I.** **Vertical, of Height**, the ratio of  
the vertical diameter of the skull to the maximum  
antero-posterior diameter, multiplied by 100.

**India** (*in-de-ah*) [*Asiatic*]. A country of Asia. **I.**  
**Liver**, a condition of hyperemia and enlargement of  
the liver, associated with general anemia and cachexia,  
cyanosis, anasarca, and irritable and irregular pulse.  
**I.** **Rubber**, the prepared concrete juice obtained mainly  
from an Indian tree, *Ficus elastica*, and a South  
American tree, *Siphonia elastica*. It is valuable

chiefly for its elasticity and its insolubility in water. It is with difficulty soluble in oil of turpentine, but is highly soluble in carbon disulphid. It melts at  $248^{\circ}\text{F.}$ , and remains unchanged up to  $500^{\circ}\text{F.}$  It is hardened and used in mechanical dentistry as a base for artificial teeth. It is also called *Caoutchouc, q. v.*

**Indian** (*in'-de-an*) [*India*]. Pertaining to India, the West Indies, or to the aboriginal Americans. **I. Basket**, a hollow cylinder woven of twigs of the willow, or of strips of other wood, used in applying extension to a dislocated limb. The greater the extension, the more firmly does the device cling to the surface. **I.-blue**. Same as *Indigo*. **I. Black-root**, the root of *Pterocaulon pycnostachium*. It has reputed alterative properties. Dose of the fluid extract  $\text{m}\times\text{v}$ – $\text{xxx}$ . Unof. **I. Corn**. See *Zea mays*. **I. Hemp**. See *Cannabis*. **I. Liqueur**. See *Abrus*. **I. Physic**, American *Ipecacuanha*, the bark of the root of *Gillenia trifoliata*, a mild emetic and cathartic. Dose of the fluid extract,  $\text{m}\times\text{x}$ – $\text{xl}$ . Unof. **I. Sarsaparilla**. See *Hemidesmus*. **I. Tobacco**. See *Lobelia*. **I. Turnip**. See *Dragon Root*. **I. Madder**. Same as *Mungeet*. **I. Meal**, corn-meal. **I. Ochre**. Same as *Ochre*. **I. Plague**. Synonym of the *Plague, q. v.* **I. Potato**. See *Apios*. **I.-purple**. See *Pigments, Conspectus of*. **I.-red**. Same as *Colcothar* and *Ochre*. **I.-yellow**. Same as *Purree*.

**Indican** (*in'-dik-an*) [*indicum, indigo*],  $\text{C}_{26}\text{H}_{31}\text{NO}_{17}$ . The natural glucosid by the decomposition of which indigo-blue is produced from the various species of indigo-producing plants. It forms a transparent brown syrup, the aqueous solution of which has a yellow color, bitter taste, and slightly acid reaction. It is occasionally detected in the urine.

**Indicant** (*in'-dik-ant*) [*indicans; indicare, to indicate*]. **1.** Serving as an index or as an indication. **2.** A fact or symptom that indicates a certain treatment; an indication.

**Indicanuria** (*in'-dik-an'-ur-re-ah*) [*indicum, indigo; oĩpov, urine*]. The morbid excretion of indican in the urine.

**Indication** (*in'-dik-a'-shun*) [*indicatio, an indication*]. A sign or symptom, especially when it points out the proper course of treatment; the inference drawn from the various symptoms or signs in any particular case.

**Indicator** (*in'-dik-a'-tor*) [*indicare, to point out*]. **1.** The index-finger. **2.** The extensor indicis muscle. See *Muscles, Table of*.

**Indicium** (*in'-dish'-e-um*) [*L.: pl., Indicia*]. A symptom or sign; a discriminating or diagnostic mark.

**Indifferent** (*in'-dif'-er-ent*) [*in, not; differens, different*]. **1.** Not specially differentiated. **2.** Not acted upon in a special way by any reagent.

**Indifferentism** (*in'-dif'-er-ent-izm*) [*in, not; differens, different*]. Lack of special differentiation.

**Indifulvin** (*in-de-ful'-vin*) [*ινδύκων, indigo; fulvus, yellow*]. A yellowish substance occurring in two varieties, and produced by the action of dilute acids on indican.

**Indifuscin** (*in-de-fus'-in*) [*ινδύκων, indigo; fuscus, dark*],  $\text{C}_{24}\text{H}_{20}\text{N}_4\text{O}_9$ . A substance produced by the action of dilute acids on indican.

**Indigenous** (*in-dij'-en-us*) [*indu, in; gignere, to beget*]. Native, and not exotic. Originating or belonging to a certain locality or country.

**Indigestion** (*in-di-jes'-chun*) [*indigestio; in, not; digerere, to digest*]. Same as *Dyspepsia*.

**Indigitation** (*in-dij-it-a'-shun*) [*in, in; digitus, a finger*]. A displacement of a part of the intestine by intussusception.

**Indigluclin** (*in-de-glu'-sin*) [*ινδύκων, indigo; γλυκύς, sweet*],  $\text{C}_6\text{H}_{10}\text{O}_6$ . A yellow syrup, one of the decomposition products of indican.

**Indiglycin** (*in-de-gli'-sin*). Same as *Indigluclin*.

**Indigo** (*in'-dig-o*) [*ινδύκων, indigo*]. A blue pigment formed during the fermentation of *Indigofera anil, I. tinctoria*, and other species. It is insoluble in alcohol or water, but freely soluble in strong sulphuric acid; it is used mainly in the arts as a dye-stuff. Chemically, it is a mixture of several principles, the chief being a blue coloring-matter, *indigotin*. Therapeutically, it is an irritant to the mucous membrane of the alimentary tract, producing intense nausea. It has been used advantageously in epilepsy, chorea, and convulsions, in doses varying from  $\mathfrak{z}$ ij– $\mathfrak{z}$ ij daily. Unof. **I.-blue**,  $\text{C}_{16}\text{H}_{10}\text{N}_2\text{O}_2$ . Indigotin; a chromogen found in ordinary indigo, of which it constitutes the principal ingredient. It is also derived from wood (*Isatis tinctoria*). It occurs in the plant as a glucosid, *indican*. Indigo-blue is a dark-blue powder with a reddish glimmer; it becomes metallic and copper-like under pressure. It is insoluble in water, alcohol, and ether, and is odorless and tasteless. It dissolves in hot anilin with a blue color, and crystallizes from hot oil of turpentine in beautiful blue plates. **I.-brown**, a resinous substance of a brown color, obtained by boiling an aqueous solution of indican with an acid. It is composed of a mixture of *indihumin*,  $\text{C}_{10}\text{H}_9\text{NO}_3$ , and *indirhethin*,  $\text{C}_{18}\text{H}_{17}\text{NO}_3$ , the former soluble and the latter insoluble in alcohol. **I.-carmin**, a sodium salt of indigotin-disulphonic acid; it is used as a blue dye, a washing-blue, and is a delicate test for sugar. **I.-carmin Test for Sugar**; put in 30 minims of water one part each of indigo-carmin and sodium carbonate; heat gently to solution; add one drop of urine, and boil quietly. A change to red or yellow indicates sugar. See *Tests, Table of*. **I. Extract**. See *Indigo-carmin*. **I.-red**. See *Indirubin*. **I.-white**,  $\text{C}_{16}\text{H}_{12}\text{N}_2\text{O}_2$ . Indigogen; a substance obtained by the reduction of indigo-blue. It occurs as a white crystalline powder, soluble in alcohol, ether, and the alkalis, with a yellowish color. It rapidly reoxidizes to indigo-blue by exposure to the air. **I., Wild**. See *Baptisia*.

**Indigogen** (*in'-dig-o-jen*). See *Indigo-white* and *Uro-xanthin*.

**Indigotin** (*in-dig-o'-tin*). See *Indigo-blue*.

**Indigouria** (*in-dig-o'-ur-re-ah*) [*ινδύκων, indigo; oĩpov, urine*]. The presence of indigo in the urine; it is due to a decomposition of indican. See *Cyanurin*.

**Indihumin** (*in-de-hu'-min*). See *Indigo-brown*.

**Indirect** (*in-di-rekt'*) [*in, not; dirigere, to be in a straight line*]. Not direct. **I. Division of Cells**. See *Karyokinesis*. **I. Vision**, that perception of an object in which the image falls on some other spot than the macula.

**Indirhethin** (*in-dir-e'-tin*). See *Indigo-brown*.

**Indirubin** (*in-de-ru'-bin*) [*ινδύκων, indigo; rubum, red*],  $\text{C}_{16}\text{H}_{10}\text{N}_2\text{O}_2$ . A substance isomeric with indigo-blue, and very similar in its entire character to this substance. It is produced by effecting the condensation of indoxyl with isatin by means of a dilute soda-solution. It is also called *indigo-red*.

**Indisin** (*in'-dis-in*). Same as *Mauvein, q. v.*

**Indisposition** (*in-dis-po-zish'-un*) [*indispositio, unsuitableness*]. Any slight illness or disturbance of the functions of the body.

**Indissoluble** (*in-dis'-o-lu-bl*). See *Insoluble*.

**Indium** (*in'-de-um*) [*indicum, indigo, so-called from its indigo-blue spectral line*]. A rare metal. Symbol *In.*, atomic weight, 113.7. It is very soft, and resembles lead in its properties. See *Elements, Table of*.

**Individual** (*in-div-id'-u-al*) [*in, not; dividere, to divide*]. A single being; one of a group or species.

the period of normal adolescence or even into adult life.

**Infarct** (*in-fark't*) [*infarcire*, to fill in]. An obstruction or plug. **I., Anemic**, a pale wedge-shaped area in an organ due to the occlusion of a blood-vessel by an embolus, the tissues in the distribution of the vessel undergoing coagulation-necrosis. **I., Hemorrhagic**, a dark-red wedge-shaped area in an organ due to the occlusion of a vessel by an embolus, with the subsequent extravasation of blood into the tissues beyond the point of obstruction. The base of the wedge is toward the periphery, the apex toward the hilum of the organ. The condition is most common in the spleen, the kidney, and the lung. **I., Uric Acid**, the deposition of crystals of uric acid in the renal tubules of the newborn.

**Infarction** (*in-fark'-shun*) [*infarcire*, to stuff in]. The plugging of a vessel by an embolus; the masses of extravasated blood in the tissues in embolism; obstruction; infarct.

**Infarctus** (*in-fark'-tus*). See *Infarct*.

**Infect** (*in-fek't*) [*inficere*, to put in, or corrupt]. To communicate or transmit the specific virus or germs of disease.

**Infection** (*in-fek'-shun*) [*infectio*, infection]. The communication of disease-germs or virus, by any means, direct or indirect.

**Infectious** (*in-fek'-shus*) [*infectio*, infection]. Having the quality of transmitting disease or the agents that cause disease. See also *Contagious*. **I. Endocarditis**, ulcerative endocarditis; malignant endocarditis. **I. Pseudo-rheumatism**. See *Pseudo-rheumatism*.

**Infective** (*in-fek'-tiv*) [*infectio*, infection]. Infectious. **I. Angioma**. See *Angioma serpiginosum*.

**Infectivity** (*in-fek-tiv'-it-e*) [*inficere*, to infect]. Infectiousness; the quality of being infectious.

**Infecundity** (*in-fe-kun'-dit-e*) [*in*, not; *fecundus*, fruitful]. Sterility, barrenness.

**Inferent** (*in'-fer-ent*). Same as *Afferent*.

**Inferior** (*in-fe'-re-or*) [comp. of *inferus*, low]. Lower.

**Inferius** (*in-fe'-re-us*) [*L.*]. Inferior.

**Infero-lateral** (*in'-fer-o-lat'-er-al*) [*inferus*, low; *latus*, side]. Situated below and to one side.

**Infero-posterior** (*in'-fer-o-pos-te'-re-or*) [*inferus*, low; *posterius*, posterior]. Situated backward and below.

**Infertility** (*in-fer-til'-it-e*) [*in*, not; *fertilis*, fertile]. Same as *Sterility*.

**Infibulation** (*in-fib-u-la'-shun*) [*in*, in; *fibula*, a clasp]. An operation formerly employed to prevent the retraction of the prepuce over the glans penis in order to prevent copulation. It consisted in passing a ring through opposite edges of the prepuce. In a similar manner a ring was passed through the labia of the vagina in order to insure the chastity of females.

**Infiltrate** (*in'-fil-trät*) [*in*, in; *filtrare*, to strain]. To ooze into the interstitial spaces of a tissue; also, the substance thus having passed.

**Infiltration** (*in-fil-tra'-shun*) [*infiltratio*, infiltration]. The abnormal diffusion of any fluid from without into an organ or tissue, affecting it mechanically so as to destroy its function. **I. of Bone**, a tuberculous infiltration of bone, consisting either of matter that becomes puriform, or else of gray cancellous matter. **I., Calcareous**, deposits of lime or other calcium salts within any tissue of the body. **I., Cellular**, the primary exudation into a tissue, conveying white corpuscles. **I., Fatty**, the presence of oil or fat-globules in the interior of a cell. **I., Gray**, an opaque condition of the lung found after death from acute tuberculosis, the lung being of a dirty ash-gray color, with no appearance of lobulation or of the normal pulmonary structure. **I., Plastic**, that of a character from

which new normal growth may develop. **I., Red**, a form of infiltration of the lung in acute tuberculosis in which the lung presents a more or less hyperemic appearance, and is soft and granular. **I., Sanguineous**, an extravasation of blood. An ecchymosis. **I., Tuberculous**, a confluence of tuberculous granulations.

**Infinite** (*in'-fin-it*) [*infinitus*, boundless]. Immeasurably or innumerable great. **I. Distance**, a term in optics to denote parallelism of the light rays. Absolute parallelism does not exist, but, practically, rays from an object 20 feet away are so considered and so called.

**Infinitesimalism** (*in-fin-it-es-im-al-izm*) [*infinitus*, boundless]. The doctrine that favors the infinitesimal dilution of drugs with the view of potentizing them, or developing their power over disease.

**Infirm** (*in-ferm'*) [*infirmus*, not strong or firm]. Weak or feeble.

**Infirmary** (*in-fer'-ma-re*) [*infirmarium*, an infirmary]. A hospital. An institution where ill and infirm people are maintained during the period of treatment.

**Infirmity** (*in-fer'-mit-e*) [*infirmitas*, weakness]. Weakness. Feebleness due to disease or senility.

**Inflame** (*in-flam'*) [*inflammare*, to set on fire]. To undergo inflammation. To become unduly heated and turgid with blood, owing to a morbid condition.

**Inflammatio** (*in-flam-at'-she o*) [*L.*]. A burning. **I. ventriculi**. See *Gastritis*.

**Inflammation** (*in-flam-at'-shun*) [*inflammatio*, a burning]. A condition of nutritive disturbance characterized by hyperemia, with proliferation of the cells of a tissue or organ, and attended by one or more of the symptoms of pain, heat, swelling, discoloration, and disordered function. **I., Adhesive**, a synonym of *Healing by First Intention*. **I., Aplastic**, and **I., Plastic**. See *Lymph*. **I., Granulomatous**, a chronic form of inflammation occurring usually in scrofulous or syphilitic individuals, with the formation of granulation-tissue of low vitality. This tissue breaks down into small abscesses, the latter uniting to form fistulous tracks without any tendency to the formation of cicatrices. **I. of the Periosteum of a Tooth**, periodontitis. See *Odontalgia*, and *Periostitis*, *Dental*. **I., Pyo-gangrenous**, a form of rapidly progressive inflammation, with the production of a gangrenous focus, surrounded by a zone of suppuration. **I., Regenerative**, that form of inflammation which is followed by cicatrization. See also *Theories of Inflammation*.

**Inflammatory** (*in-flam'-at-o-re*) [*inflammare*, to inflame]. Pertaining to inflammation. **I. Blush**, synonym of *Erythema*. **I. Corpuscle**. See *Corpuscle*, *Gluge's*. **I. Exudation**, the fluid exuded from an inflamed part. **I. Fever**. See *Traumatic Fever*. **I. Focus**, the central or culminating spot of an inflamed part, or that at which suppuration begins. **I. Fungoid Neoplasm**. See *Mycosis*. **I. Infiltration**, the exudation escaping into the interstices of an inflamed tissue and not removed by the lymphatics. **I. Zone**, the area of gangrenous formation bounded by the line of demarcation between dead and living tissue. Also, the line of demarcation.

**Inflation** (*in-fla'-shun*) [*inflatio*; *inflare*, to puff up]. Distention with air. In surgery, distention of the bowels with air, to relieve obstruction; or of the lungs, for artificial respiration; or of the Eustachian tube, for therapeutic purposes.

**Inflected** (*in-flek'-ted*) [*in*, in; *flectere*, to bend]. In biology, bent inward or downward.

**Inflexed** (*in-fleks't*) [*inflectere*, to bend]. In biology, bent. Same as *Inflected*.

**Inflorescence** (*in-flor-es'-ens*) [*in*, in; *florescere*, to begin to blossom]. In biology: (a) blossoming, flowering; (b) a flower-cluster.

**Influenza** (*in-flu-enz-ah*) [*Ital.*, an influence, formerly thought to be due to the stars]. A specific, contagious, epidemic infection characterized by catarrhal inflammation of the mucous membrane of the respiratory tract, accompanied by a mucopurulent discharge, fever, and prostration. There is a strong tendency to the development of bronchopneumonia. At times symptoms referable to the parasympathetic system predominate, at other times the symptoms are mainly referred to the nervous system. The aged, weak, and young are especially liable. The disease is popularly called by the French name of *grippe*. See *Biology of Influenza*, *Modern Medicine*, *Textbook of Bacteriology*.

**Influx** (*in-fluk-s*) [*fr.*, *in*; *fluere*, to flow]. An inflow. The act of flowing in.

**Infamous** (*in-fa-m'us*) [*fr.*, *in*; *fama*, to dig]. In biology, that is not expressed. Cf. *intestinum*.

**Infra-** (*in-fra*) [*Lat.*, below]. A Latin prefix meaning below or beneath.

**Infra-axillary** (*in-frak-sil-ary*) [*infra*, below; *axilla*, the armpit]. Below the armpit.

**Infra-brachial** (*in-fra-brak-ee-ah*) [*infra*, below; *brachia*, arm]. Beneath or below the gills.

**Infra-buccal** (*in-frak-buk-ah*) [*infra*, below; *bucca*, the cheek]. In molluscs beneath the buccal mass.

**Intracervical** (*in-tra-sev-ik-ul-ah*) [*infra*, below; *cervix*, the neck, the collar bone]. Below the collar bone.

**Intracommissure** (*in-frak-kom-is-ur*) [*infra*, below; *commissura*, to unite]. The inferior commissure of the brain.

**Infracoractor** (*in-frak-kon-strik-tor*) [*infra*, below; *corro*, to bind together]. The inferior constrictor of the pharynx. See *Muscles*, *Table of*.

**Infracortical** (*in-fra-kort-ik-ul*) [*infra*, below; *cortex*, a bark]. Lying beneath the cortical substance of the brain.

**Intracostal** (*in-tra-kost-ah*) [*infra*, below; *costa*, a rib]. Between the ribs.

**Intracostales** (*in-tra-kost-ah-lee*). See *Muscles*, *Table of*.

**Intraction** (*in-trak-shun*) [*in*, in; *fractio*, breaking]. A transverse fracture of a bone. Also, an indentation or denting inward.

**Infradiaphragmatic** (*in-tra-di-af-rag-mat-ik*) [*infra*, below; *diaphragma*, a cross; *diaphragma*, wall]. Situated below the diaphragm.

**Infrahyoid** (*in-fra-hi-oid*) [*infra*, below; *hyoid*, hyoid bone]. Situated below the hyoid bone.

**Intramammary** (*in-tra-mam-ary*) [*infra*, below; *mamma*, the breast]. Situated beneath or below the mammary gland.

**Inframaxillary** (*in-fra-mak-sil-ary*) [*infra*, below; *maxilla*, the jaw]. Below or under the jaw.

**Infrarobital** (*in-fra-ro-bit-ah*) [*infra*, below; *orbita*, orbit]. Beneath or below the orbit. **I. Artery**, the branch of the internal maxillary artery traversing the infrarobital canal. **I. Canal**, the canal in the superior maxillary bone that transmits the infrarobital vessels and nerve. **I. Foramen**, the aperture in the superior maxillary bone through which the infrarobital vessels pass. **I. Groove**, the groove in the superior maxillary bone leading to the infrarobital canal. **I. Nerve**, the branch of the superior maxillary nerve at the infrarobital foramen.

**Infrapubic** (*in-fra-pub-ic*) [*infra*, below; *pubes*, the pubes]. Situated below the pubes.

**Infrarectal** (*in-fra-ek-tal*) [*infra*, below; *rectum*, rectum]. The inflow of the rectum into the eye.

**Infrascapular** (*in-fra-skap-ular*) [*infra*, below; *scapula*, shoulder blade]. Below the shoulder blade.

**Infraspinal** (*in-fra-spi-nal-tus*). See *Muscles*, *Table of*.

**Infraspinous** (*in-fra-spi-nus*) [*infra*, below; *spina*, a spine]. Beneath a spine, as of the scapula or a vertebra. **I. Fascia**, the dense membranous fascia covering the infraspinous muscle. **I. Muscle**. See *Muscles*, *Table of*.

**Infrasternal** (*in-fra-ster-nal*) [*infra*, below; *sternum*, breast-bone]. Below the sternum. **I. Depression**, the depression of the ensiform cartilage, commonly called the pit of the stomach.

**Infratemporal** (*in-fra-tem-po-ral*) [*infra*, below; *tempora*, the temple]. Situated beneath the temporal bone.

**Infrathoracic** (*in-fra-tho-ra-sik*) [*infra*, below; *thorax*, thorax]. Below the thorax.

**Infratrochlea** (*in-fra-trok-le-ah*) [*infra*, below; *trochlea*, a pulley]. Below the trochlea. **I. Nerve**. See *Nerves*, *Table of*.

**Infratubinal** (*in-fra-tur-bin-al*) [*infra*, below; *turbo*, a wheel, top]. Inferior tubinal. See *Bones*, *Table of*.

**Infravaginal** (*in-fra-vaj-in-al*) [*infra*, below; *vagina*, sheath]. Situated below the vaginal vault.

**Infraction** (*in-frik-shun*) [*infraction*, a rubbing in]. The rubbing of a surface with an ointment or liniment.

**Infundibula** (*in-fun-dib-ul-ah*) [*L.*]. Plural of *Infundibulum*, *q. v.* **I. of Kidneys**, the calices or the divisions of the pelvis of the kidney formed by the confluence of the calices. **I. of Lungs**, the elongated sacs (set about with air-cells) in which the smallest air-passages terminate. **I. subgenitalia**. See *Dennia*.

**Infundibular** (*in-fun-dib-ul-ah*) [*infundibulum*, a funnel]. Of the nature of or belonging to an infundibulum.

**Infundibuliform** (*in-fun-dib-ul-lif-orm*) [*infundibulum*, a funnel; *forma*, a form]. Funnel-shaped. **I. Fascia**, the funnel-shaped membranous layer that invests the spermatic cord.

**Infundibulum** (*in-fun-dib-ul-um*) [*infundere*, to pour into]. In biology, a term frequently and variously applied to funnel-shaped organs or parts. **I. of Brain**, a funnel-shaped mass of gray matter attached to the pituitary body. **I. of Cochlea**, a small cavity at the end of the modiolus. **I. of Heart**, the arterial cone from which the pulmonary artery arises. **I. of Oviduct**, the cavity formed by the fringes at the ovarian end of an oviduct.

**Infuscate** (*in-fus-kat*) [*infuscare*, to make dark or dusky]. In biology, clouded or darkened.

**Infused** (*in-fuz-d*) [*infundere*, to pour in]. Extracted; steeped. **I. Oils**. See *Olea infusa*.

**Infusion** (*in-fu-zhun*) [*infusio*, *infusum*, an infusion]. **1.** See *Infusum*. **2.** The slow and gentle injection of water or of a medicated liquid into a vein, or into parenchymatous tissues.

**Infusor** (*in-fu-zor*) [*L.*]. An instrument by means of which water or a medicated liquid may be made to flow slowly into a vein, or into the parenchymatous tissues.

**Infusoria** (*in-fu-so-re-ah*) [*infusum*, an infusion]. A class of microscopic, ciliated organisms belonging to the order of *Protozoa*. They are so called because they often develop in great numbers in organic infusions. They reproduce by fission.

**Infusum** (*in-fu-zum*) [*L.*; *gen.*, *Infusi*; *pl.*, *Infusa*]. An infusion. In pharmacy, a preparation made by treating a vegetable substance with hot or with cold water, without boiling. Infusions should, in the absence of specific directions, contain 1 part of the substance to 10 of water. There are four official *infusa*, and two in the National Formulary, besides a large number in the British Pharmacopoeia.

**Ingesta** (*in-jes'-tah*) [*ingerere*, to carry into]. Substances introduced into the body, especially for purposes of alimentation.

**Ingestion** (*in-jes'-chun*) [*ingestio*, ingestion]. 1. The introduction of food or nutrition into the mouth or stomach. 2. The process by which a cell takes up foreign matters, such as bacilli or smaller cells.

**Ingluvial** (*in-glū'-ve-al*) [*ingluvies*, the crop]. Pertaining to the ingluvies.

**Ingluvies** (*in-glū'-ve-ēz*) [*in*, in; *glutire*, to swallow]. In biology, the most anterior dilatation of the alimentary canal, as the crop or craw in birds, the paunch or rumen in mammals, the sucking-stomach of insects.

**Ingluvin** (*in'-glu-vin*) [*ingluvies*, crop or craw of a bird]. A preparation obtained from the gizzard of the fowl, *Pullus gallinaceus*, used as a substitute for pepsin and pancreatin. It is very efficient in the vomiting of pregnancy. Dose gr. x-xx.

**Ingot** (*ing'-got*) [ME., *ingot*, a mold for molten metal]. A bar of gold, silver, or other metal, cast in a mold.

**Ingrassias, Processes, or Wings of.** The lesser wings of the sphenoid bone.

**Ingravescent** (*in-grav-es'-ent*) [*ingravescere*, to become heavy]. Increasing in weight or in severity. **I. Apoplexy.** See *Apoplexy*.

**Ingravitation** (*in-grav-id-a'-shun*). See *Impregnation*.

**Ingradient** (*in-gre'-de-ent*) [*ingredi*, to step into]. Any substance that enters into the formation of a compound.

**In-growing Nail.** See *Onychogryphosis*.

**Inguen** (*ing'-gwen*) [L.]. The groin, *q. v.*

**Inguinal** (*in'-gwin-al*) [*inguen*, the groin]. Pertaining to the groin. **I. Arch,** the crural arch. **I. Canal,** the canal transmitting the spermatic cord in the male, and the round ligament in the female. It is situated parallel to and just above Poupert's ligament. **I. Glands,** the superficial and the deep glands of the groin. **I. Hernia.** See *Hernia*. See, also, *Ligament, Region, Ring*. **I. Plague.** Synonym of *Plague*.

**Inguino-** (*in'-gwin-o-*) [*inguen*, the groin]. In composition, pertaining to the groin. **I.-abdominal,** pertaining conjointly to the groin and the abdomen. **I.-crural,** relating to the groin and the thigh. **I.-cutaneous,** relating to the integument of the groin.

**Ingurgitation** (*in-gur-jit-a'-shun*) [*ingurgitatio*, a swallowing]. 1. The act of swallowing; deglutition. 2. Excess in eating or drinking.

**Inhalation** (*in-ha-lē'-shun*) [*inhalatio*; *inhalare*, to draw in]. The in-breathing of air or other vapor. **I.-diseases,** those due to the inspiration of air containing dust or any finely divided matter. See *Grinders' Disease*. **I. of Medicines,** the introduction into the air-passages or lungs of medicinal substances in the form of vapor or fine spray.

**Inhale** (*in-hāl')* [*inhalare*, to breathe in]. To inspire or draw air or other vapor into the lungs.

**Inhaler** (*in-hāl'-ler*) [*inhalare*, to breathe in]. An instrument for inhaling a gas or the vapor of a liquid medicine. **I., Nitrous-oxid,** a breathing-tube for the inhalation of nitrous-oxid gas; it is constructed of vulcanized rubber or metal. See *Anesthetic*.

**Inherent** (*in-he'-rent*) [*inherere*, to cleave to]. Constitutional; innate; natural to the organism; not casual or derivative.

**Inheritance** (*in-her'-it-ans*) [F., *inheriter*, to inherit]. The act of inheriting. **I., Particulate,** the reappearance of single peculiarities in the offspring. **I., Use,** the inheritance of acquired characters; the acquisition by the offspring of changes in the body-cells of the parent.

**Inherited** (*in-her'-it-ed*) [*in*, in, to; *heres*, heir]. Derived from an ancestor. **I. Disease,** a disease that has been transmitted to a child by its parent.

**Inhibit** (*in-hib'-it*) [*inhibere*, to check]. To check, restrain, or suppress.

**Inhibition** (*in-hib'-it-ion*) [*inhibitio*, restraint]. The act of checking, restraining, or suppressing; any influence that controls, retards, or restrains. Inhibitory nerves and centers are those intermeduating a modification, stoppage, or suppression of a motor or secretory act already in progress. **I., Mental,** the involuntary restraint that active mental states exercise over bodily functions, normal or otherwise. **I., Vasomotor,** an influence exerted on the contractile walls of the blood-vessels, that causes their dilatation by a diminution of their tone. **I., Voluntary,** the checking or temporary restraint of a reflex by force of will.

**Inhibitive** (*in-hib'-it-iv*). See *Inhibitory*.

**Inhibitory** (*in-hib'-it-o-re*) [*inhibitorius*, inhibitory]. Having the power to restrain or hold in check. **I. Center of Setschenow,** a cerebral center in the optic lobes of the brain of the frog, the stimulation of which checks spinal reflexes. **I. Nerves of the Heart,** those of the vagus supplied by the cardio-inhibitory center, through the spinal accessory nerve. **I. Nerves of Respiration,** certain afferent fibers in the laryngeal branches of the vagus nerve, that exert an inhibitory action on the inspiratory act of respiration. **I. Centers,** nerve-centers that inhibit, restrain, or even arrest the action of other centers. **I. Fibers,** centrifugal nerve-fibers that affect other centers so as to moderate or nullify their action.

**Inhumation** (*in-hu-mā'-shun*) [*inhumare*, to put in the ground]. Burial of the dead in the ground. See *Ulmation*.

**Iniad** (*in'-e-ad*) [*iviov*, the occiput]. Toward the inial aspect.

**Inial** (*in'-e-al*) [*iviov*, occiput]. Pertaining to the inion. **I. Aspect,** the posterior aspect of the head.

**Inien** (*in'-e-en*) [*iviov*, occiput]. Belonging to the inion in itself.

**Iniencephalus** (*in-e-en-sef'-al-us*) [*iviov*, occiput; *ἐγκεφαλος*, brain]. A variety of single autostic monsters of the species *Exencephalus* in which there is the same deformity of the skull as in notencephalus, with the addition of a spinal fissure involving the cervical and thoracic vertebrae.

**Iniodymus** (*in-e-od'-im-us*) [*iviov*, occiput; *διδυμος*, double]. A teratism with one body and two heads joined at the occiput.

**Inio-glabbellar** (*in'-e-o-gla-bel'-ar*) [*iviov*, occiput; *glaber*, smooth]. Relating to or joining the inion and the glabella.

**Inion** (*in'-e-on*) [*iviov*, occiput]. The external protuberance of the occipital bone. See *Cranimetric Points*.

**Iniops** (*in'-e-ops*) [*iviov*, occiput; *ὄψ*, face]. A catadidymous monstrosity with the parts below the navel double, the thoraces joined into one, and one head with two faces, the one incomplete.

**Inirritative** (*in-ir'-it-a-tiv*) [*in*, not; *irritare*, to irritate]. Not irritant; soothing.

**Initial** (*in-ish'-al*) [*in*, into; *ire*, to go]. Beginning or commencing. **I. Cells,** germ-cells. **I. Sclerosis,** the primary induration of a hard chancre. **I. Stage of Labor.** See *Labor, Stages of*.

**Initis** (*in-i'-tis*) [*ic*, muscle, fiber; *itis*, inflammation]. Inflammation of fibrous or muscular tissue.

**Inject** (*in-jek'-it*) [*in*, into; *jacere*, to throw]. To effect the introduction of a liquid into any cavity of the body, natural or artificial, by means of a syringe or similar instrument. In pathology, to produce a condition of distention of the capillaries with blood.

**Inosinic Acid** (*in-o-sin'-ik*). An ammonium derivative from muscle, of unknown constitution.

**Inosis** (*in-o'-sis*). See *Inogenesis*.

**Inosite** (*in'-o-sit*) [*is*, fiber],  $C_6H_{12}O_6 + 2H_2O$ . A saccharine substance occurring sparingly in the human body, especially in the muscles. It also occurs in diabetic urine and in the urine of chronic nephritis. It is found in abundance in the vegetable kingdom, particularly in unripe beans. It forms large efflorescent crystals (rhombic tables); in microscopic preparations it is usually obtained in tufted lumps of fine crystals. It is readily soluble in water, but insoluble in absolute alcohol and ether.

**Inosituria** (*in-o-sit'-u'-re-ah*) [*is*, fiber; *oïpov*, urine]. The presence of inosite in the urine.

**Inosteoma** (*in-o-ste-at'-mah*) [*is*, fiber; *στέαρ*, fat; *ōma*, tumor: *pl.*, *Inosteomata*]. A steatoma with fibrous elements.

**Inosuria** (*in-o-sit'-re-ah*). See *Inosituria*.

**Inotagmata** (*in-o-tag'-mat-ah*) [*is* (*iv*), strength, force; *τάγμα*, a regular arrangement, as of soldiers]. In biology, Engelmann's name for hypothetic, contractile elements that generate the force of protoplasmic motion; they are held to be uniaxial and doubly refractive; also written *Isotagmata*.

**Inquest** (*in'-kwest*) [*inquesita*; *in*, into; *querere*, to ask]. A judicial inquiry. **I., Coroner's**, an inquiry concerning the cause of the death of one who has died by violence or in some sudden or unknown way.

**Inquiline** (*in'-kwil-in*) [*l.*, *inquilinus*, an inhabitant of a place that is not his own]. In biology, a commensal or messmate; an animal inhabiting an abode that it does not produce.

**Inquination** (*in-kwin-a'-shun*) [*inquinatio*, pollution]. Pollution; infection; corruption.

**Inquisition** (*in-kwiz-ish'-un*) [*inquisitio*, an inquiry]. The inquiry or hearing before a jury or commission concerning the sanity or lunacy of a criminal or a person charged with crime.

**Insaccation** (*in-sak-a'-shun*) [*in*, in; *saccus*, sac]. Encystment; enclosure in a sac.

**Insalivation** (*in-sal-iv-a'-shun*) [*in*, in; *saliva*, the spittle]. The mixture of the food with saliva during mastication.

**Insalubrity** (*in-sal-u'-brit-e*) [*in*, not; *salubris*, wholesome]. Unwholesomeness of air or of climate.

**Insanability** (*in-san-ab-il'-it-e*) [*in*, not; *sanabilis*, curable]. Incurableness; the quality or state of being incurable.

**Insane** (*in-sān'*) [*in*, not; *sanus*, sound]. Deranged or diseased in mind. **I. Ear**. See *Hematoma auris*.

**Insaniola** (*in-san-i'-o-lah*) [*dim.* of *insania*, insanity]. A slight or minor degree of insanity.

**Insanitary** (*in-san'-it-a-re*) [*in*, not; *sanitas*, health]. Not sanitary; not in a proper condition as respects the preservation of health (said of houses, buildings, and their surroundings).

**Insanitation** (*in-san-it-a'-shun*) [*in*, not; *sanitas*, health]. Lack of proper sanitary conditions; defect of sanitation.

**Insanity** (*in-san'-it-e*) [*insanitas*, insanity]. A derangement or abnormal condition of the mental faculties, with or without loss of volition and of consciousness. Insanity may be due to defective development, to acquired disease, or to natural decay. It is characterized, according to its form, by a variety of symptoms, the most common of which are change of character and habits, moroseness, confusion, elation, melancholy, mania, delusions, and hallucinations. The psychotic tendency is the chief predisposing cause, and on this some one of the many exciting causes will act and result in the final break-down. The vast

majority of cases of insanity occur between the ages of twenty-five and forty-five. Melancholia, mania, delusional insanity, and dementia are the four principal types of the affection. According to Kraft-Ebing, insanity may be divided into two great groups, according as the disorder is the result of a disturbance of the developed brain or of an arrest of brain-development. He places insanity ordinarily so-called under the first head; his subdivisions are as follows:—

#### A. Mental affections of the developed brain.

##### I. Psychoneuroses.

###### 1. Primary curable conditions.

###### a. Melancholia

###### α. Melancholia passiva.

###### β. Melancholia attonita.

###### b. Mania

###### α. Maniacal exaltation.

###### β. Maniacal frenzy.

###### c. Stupor.

###### 2. Secondary incurable states.

###### a. Secondary monomania.

###### b. Terminal dementia.

###### α. Dementia agitata.

###### β. Dementia apathetica.

##### II. Psychic degenerative states.

###### a. Constitutional affective insanity (*folie raisonnante*).

###### b. Moral insanity.

###### c. Primary monomania.

###### a. With delusions.

###### αα. Of a persecutory tinge.

###### ββ. Of an ambitious tinge.

###### β. With imperative conceptions.

###### d. Insanities transformed from the constitutional

###### neuroses.

###### a. Epileptic.

###### β. Hysterical.

###### γ. Hypochondriac.

###### e. Periodic insanity.

##### III. Brain diseases with predominating mental symptoms.

###### a. Paralytic dementia.

###### b. Cerebral syphilis.

###### c. Chronic alcoholism

###### d. Senile dementia.

###### e. Acute delirium.

#### B. Mental results of arrested brain-development: idiocy and cretinism.

**I., Acquired**, that arising after a long period of life of mental integrity. **I., Alcoholic**, that induced by alcoholic excess, usually a result of hereditary tendencies. **I., Alternating**. See **I., Circular**. **I., Circular**, cyclothymia; alternating insanity; a form of insanity recurring in cycles varying in length from a few days to many months. The arrangement of the cycle varies in different individuals, but is constant in a given case. Thus melancholia may be followed by mania, and this by a lucid interval, the passage from one mental condition to the other being abrupt or gradual.

**I., Climacteric**, insanity occurring at or near the menopause. **I., Communicated**, that transmitted by association with an insane person. **I., Confusional**, stuporous insanity; delusional stupor; mania hallucinatoria; surgical insanity; puerperal mania; post-febrile insanity; an acute insanity produced by nervous shock or exhausting disease, without distinct constant emotional depression or exaltation, with marked failure of mental power or complete imbecility, often accompanied by hallucinations and loss of physical power. Recovery is usually complete. **I., Doubting**, a form of melancholia according to Régis, but according to others a psycho-convulsive mental disease closely allied to delusional insanity, which consists in an uncontrollable doubt and indecision regarding the occupations, duties, or events of the day, of religion, etc. **I., Epidemic**, a form occasionally manifested among a number of people in common association, as in convents or schools. **I., Febrile**, a maniacal form, occasionally occurring in the course or as a sequel of acute inflammation or fever. **I., Hereditary**, that transmitted from parent to child, and not induced by other

apparent cause. **I.**, Ideational, a term applied to any form in which there is marked perversion of the reasoning powers. **I.**, Impulsive, a term in which the patient possesses an irresistible desire to commit acts of violence. **I.**, Moral, a term marked by perverse disregard of the moral law, especially with one impairment of the reasoning and intellectual faculties. **I.**, of Pregnancy, a term occurring during pregnancy, characterized by melancholia, suicidal inclination, and absorption of friends and relatives. **I.**, Primary, a term, often associated, that arises with the development of the body. It may also proceed from acquired mental or other conditions. **I.**, Puerperal, a term sometimes applied to the delirium of childbirth, but more properly to the mania occurring after delivery. **I.**, Simultaneous, when two or more persons simultaneously become affected at the same time. **I.**, Menstrual. See *I., Periodic*. **I.**, Periodic, a condition dependent upon original or acquired psychomotor, in which attacks of insanity occur at regular or irregular intervals. If occurring in women at the menstrual period it is called *Menstrual Insanity*. **I.**, Stuporous, the primary acute form of dementia; a disease chiefly met with in youth and early maturity. It is usually due largely to masturbation, and is also called *Stupor morbosus*. See also *I., Convulsional*. **I.**, Surgical. See *I., Tumor*. **I.**, Volitional, such forms as are marked by derangement of the will.

**Insatiability** (*in-sat-i-abil-i-ty*) [*in*, not; *saturare*, to satisfy]. The property of being insatiable. See *Avoria*.

**Insatiable** (*in-sat-i-abil-i-ty*) [*in-sat-i-abil-i-ty*], that which cannot be satisfied. Inordinately greedy; incapable of being satisfied. **I.**, Appetite. See *Bulimia*.

**Inscriptions tendence** (*in-scrip-t-i-ones-tend-i-ces*) [*in-scrip-t-i-ones-tend-i-ces*]. The inscriptions on the testis abominis muscle.

**Insculpt** (*in-sculpt*) [*in-sculpt*, to cut or carve in]. In botany, applied to lichens that grow in the depression of rocks.

**Insect** (*in-sekt*) [*in-sekt*, in insect]. Any member of the class of animals called *Insecta*. **I.**, powder, the powdered flowers of several species of *Extractions of Chalcid*, an insecticide in common use. In the United States the flowers of *P. cinereus* are extensively grown for this purpose. See *Florida*. **I.**, Wax. See *Chinese Wax*.

**Insected** (*in-sekt*) [*in-sekt*, p. p. of *insectare*, to cut in]. Insected or cut into.

**Insecticide** (*in-sekt-i-sid-i-ty*) [*in-sekt-i-sid-i-ty*, insect; *caedere*, to kill]. A substance that is destructive to insects.

**Insectiform** (*in-sekt-i-form*) [*in-sekt-i-form*, an insect; *forma*, form]. Resembling an insect.

**Insectivora** (*in-sekt-i-vo-ra*) [*in-sekt-i-vo-ra*, an insect; *vorare*, to devour]. An order of plantigrade animals belonging to the *Mammalia*, and living upon insects.

**Insectivorous** (*in-sekt-i-vo-rus*) [*in-sekt-i-vo-rus*, an insect; *vorare*, to devour]. In biology, the property of eating and consuming insects, such as is possessed by certain plants.

**Insectivorous** (*in-sekt-i-vo-rus*) [*in-sekt-i-vo-rus*, insect; *vorare*, to devour]. In biology, feeding upon insects.

**Insectology** (*in-sekt-i-ol-ogy*) [*in-sekt-i-ol-ogy*, insect; *logos*, discourse]. The science treating of insects.

**Inserment** (*in-ser-ment*) [*in-ser-ment*, to plant seed]. The planting of seed. The introduction of seeds.

**Insensibility** (*in-sens-i-bil-i-ty*) [*in*, not; *sensire*, to feel]. The condition or state of being insensible; absence of consciousness; anaesthesia.

**Insensible** (*in-sen-sib-il*) [*in*, not; *sensire*, to feel]. Without the sense of feeling. Incapable of being perceived or recognized by the senses. Unconscious.

**Insertion** (*in-ser-ti-shun*) [*insertio*; *inserere*, to set in]. The act of setting or placing in; or, that which is set in; the point at which a muscle is attached to the part that it moves; the place or the mode of attachment of an organ to its support. **I.**, Velamentous, the attachment of the umbilical cord to the margin of the placenta.

**Insidious** (*in-sid-i-ous*) [*insidia*, an ambush]. Deceitful, stealthful. Hidden from external view. **I.**, Disease, one, the onset of which is gradual or inappreciable.

**Insipid** (*in-sip-i-d*) [*insipidus*, unsavory]. Tasteless.

**Insitio dentis** (*in-sish-i-e-o dent-tis*) [*I.*]. Implantation of a tooth.

**In situ** (*in si-tu*) [*in*, in; *situ*, position]. A Latin phrase meaning in a given or natural position.

**Insolatio** (*in-so-la-ti-shun*) [*insolatio*; *in*, in; *sol*, sun].

1. Exposure to the sun, either as a prophylactic treatment or as a cause of disease.
2. Sunstroke.
3. In pharmacy, the drying or bleaching of substances by exposure to the sun.

**Insolubility** (*in-sol-u-bil-i-ty*) [*insolubilis*, insoluble]. The quality of being insoluble; lack of solubility.

**Insoluble** (*in-sol-u-bl*) [*in*, not; *solubilis*, soluble]. Incapable of solution.

**Insomnia** (*in-som-ni-ah*) [*in*, not; *somnus*, sleep]. Want of sleep; inability to sleep.

**Inspection** (*in-spek-ti-shun*) [*inspectio*, or *inspectus*, a beholding]. In medicine, the examination of the body or any part of it.

**Inspersion** (*in-sper-gat-shun*) [*inspergere*, to sprinkle into]. The sprinkling or dusting of a part with a fine powder.

**Inspiration** (*in-spir-a-ti-shun*) [*inspiratio*; *in*, in; *spirare*, to breathe]. That part of respiration consisting of the drawing in of the breath.

**Inspiratory** (*in-spi-rat-or-e*) [*in*, in; *spirare*, to breathe]. Pertaining to the act or function of inspiration.

**I.**, Spasm, a rare form of hysteric spasm of the larynx occurring only during inspiration, the vocal bands instead of separating, tending to approach one another.

**Inspissant** (*in-spis-a-t*) [*inspissans*; *in*, in; *spissare*, to thicken].

1. Tending to thicken; thickening the blood or other fluids.
2. An agent that tends to increase the thickness of the blood or some other fluid.

**Inspissate** (*in-spis-a-t*) [*inspissare*, to thicken]. To make thick by evaporation or by absorption of the liquid menstruum.

**Instaminate** (*in-stam-i-nat*) [*in*, not; *stamen*, a stamen]. Without stamens.

**Instauration** (*in-stav-ra-ti-shun*) [*instauratio*, renewal]. The first appearance of a physiologic condition; the establishment of a new function.

**Instep** (*in-step*) [*instep*, the bend of the foot]. The arch of the foot, or its dorsal aspect.

**Instillation** (*in-stil-la-ti-shun*) [*instillatio*; *instillare*, to put in little by little]. The pouring of a liquid *guttatum*, or little by little. To introduce into a cavity, canal, or sac, drop by drop.

**Instinct** (*in-stink-tiv*) [*instinguere*, to impel]. In biology, organic habits registered in the nervous system of the race (Grant Allen). An inherited natural impulse, unassociated with a reasoning conception as to cause and effect.

**Instinctive** (*in-stink-tiv*) [*instinguere*, to impel]. Prompted or determined by instinct; of the nature of instinct.

**Institute** (*in-stip'-u-lat*) [*in*, without; *stipula*, a stalk]. In biology, without stipules.

**Institute** (*in'-stit-ut*) [*instruere*, to set up]. A statement of principles. Also, any establishment for the statement or dissemination of principles. **Institutes of Medicine**, the explanation or philosophy of the laws of the science of medicine, physiology, pathology, therapeutics, and hygiene, or the general and elementary principles of the same. The term is used sometimes as a synonym of physiology.

**Instrument** (*in'-stru-ment*) [*instrumentum*; *instruere*, to build]. Any mechanical tool or device used in operation or treatment. **I., Exploring**, for examining teeth to ascertain the work necessary to be done; more especially for determining the presence of caries of the teeth.

**Instrumentarium** (*in-stru-men-ta'-re-um*) [L.]. A supply or collection of surgical, dental, or other instruments.

**Instrumentation** (*in-stru-men-ta'-shun*) [*instrumentum*, an instrument]. The care and management of a surgeon's instruments.

**Insuccation** (*in-suk-a'-shun*) [*in*, into; *succus*, juice]. The steeping of a drug for a considerable time in water before using it in any pharmaceutical process.

**Insufficiency** (*in-suf-fish'-en-se*) [*insufficiencia*; *in*, not; *sub*, under; *facere*, to make]. Incapacity of normal action, on account of some deficiency, as of size; the quality of not being sufficient for a special function or duty. In ophthalmology, a disturbance of equilibrium of the ocular muscles, that is overcome by the effort of binocular vision, and so does not produce strabismus. It is also called *latent* or *dynamic squint*. **I., Aortic**. See *Endocarditis*. **I. of the Cardiac Valves**, imperfect closure, permitting regurgitation. **I. of the Externi**, or esophoria; the internal recti ocular muscles are more powerful than the externi, or more accurately, the power of adduction, or convergence, is excessive. **I. of the Interni**, or exophoria; the external recti are predominant or the power of adduction is subnormal. **I. of Muscles, Active**, a phenomenon of a muscle acting on two or more joints when the joints over which it passes are so changed that it cannot contract actively any further than to the extent of the shortening from which it begins to be active. **I. of Muscles, Passive**, the analogue of the phenomena of active insufficiency whereby motion of the part is prevented from the position of the joint, the muscle being too short to act under such circumstances. **I. of the Ocular Muscles**, heterophoria, or unbalance; high degrees result in strabismus, diplopia, asthenopia, etc. **I., Mitral**. See *Endocarditis*. **I., Pulmonary**. See *Endocarditis*. **I., Tricuspid**. See *Endocarditis*.

**Insufflation** (*in-suf-fla'-shun*) [*insufflare*; *in*, in; *sufflare*, to puff]. The blowing of any finely divided substance upon a surface or into a cavity, or the filling of any cavity with air, gas, or vapor.

**Insufflator** (*in'-suf-la-tor*) [*in*, in; *sufflare*, to blow]. A small instrument for blowing fine powders into a cavity or on a surface. Also, one for blowing air into the lungs.

**Insula** (*in'-su-lah*) [L.]. **1.** In anatomy, the island of Reil. **2.** Any detached part or exclave of an organ. **3.** A blood-islet, or island. See *Island*.

**Insular** (*in'-su-lar*) [*insula*, an island]. Isolated in condition; also, pertaining to the Island of Reil. **I. Sclerosis**, *Disseminated, Cerebro-spinal*, or *Multiple Sclerosis*. A disease characterized by scattered islets of sclerosis in the brain and cord. It is called *sclerose en plaques disseminées* by the French, and *multiple sclerosis* by the Germans. It is distinctly a disease of

early adult life, and is of about equal frequency in the two sexes. The causes are obscure. The disease has been observed to follow infectious diseases, exposure to wet and cold, and traumatism. In some cases a neuropathic predisposition has been present. The symptoms vary according to the situation of the islets; the most common are motor derangement, a jerky tremor, paresis or paralysis, and ocular symptoms, as diplopia and amblyopia, with nystagmus, and occasionally atrophy of the discs. The tremor is ordinarily absent during repose, but appears on attempted movement, and is hence designated, intention tremor. The speech is a characteristic one, very slow, each syllable being pronounced with difficulty; hence it is said to be of a "scanning" nature. Vertigo is also a very frequent symptom, and in the advanced stage the mind undergoes deterioration, and dementia may make its appearance. The knee-jerks are exaggerated and ankle-clonus is present. The lesions of the disease are small grayish or yellow gelatinous patches scattered throughout the brain and in both the white and gray matter of the cord.

**Insulate** (*in'-su-lāt*) [*insulare*, to make like an island]. To isolate or separate from surroundings. In electricity, to surround a conductor with a non-conducting substance or with one having an exceedingly high degree of resistance.

**Insulation** (*in-su-la'-shun*) [*insulatio*; *insulare*, to make like an island]. The process of insulating; the state or quality of being insulated.

**Insult** (*in'-sult*) [*insultus*; *in*, upon; *saltare*, to leap]. The beginning of a paroxysm or of an attack of a disease. **I., Apoplectic**, an apoplectic stroke.

**Insusceptibility** (*in-sus-sep-tib-il'-it-e*) [*insusceptibilis*, not susceptible]. Absence of contagious quality; it differs from Immunity in being applied to the disease instead of the person.

**Integer** (*in'-te-ger*) [L.]. An entity. **I., Fissural**, a term designating a fissure of the brain, which is independent in some species or individuals, and deepest at or about the middle of its length, corresponding nearly with the place of first appearance.

**Integral** (*in'-te-gral*) [*integer*, whole]. Entire; essential.

**Integration** (*in-te-gra'-shun*) [*integratio*, a renewing]. The blending of separate parts into one, as in the embryo.

**Integrity** (*in-teg'-rit-e*) [*integritus*; *integer*, whole]. Wholeness; entirety. Also, virginity.

**Integument** (*in-teg'-u-ment*) [*integumentum*; *in*, upon; *tegere*, to cover]. A covering, especially the skin. In botany, the envelop surrounding the ovule of phanerogamous plants. **I., Fetal**, the fetal membranes.

**Intellect** (*in'-tel-ekt*) [*intellectus*; *inter*, between; *legere*, to choose]. The mind or reasoning power. **I., Deranged**. See *Insanity*.

**Intelligence** (*in-tel'-ij-ence*) [*intelligentia*, intelligence]. The understanding that comes from the perception of qualities and attributes of the objective world, and is manifested in the purposive employment of means to attain an end.

**Intemperance** (*in-tem'-per-ans*) [*in*, not; *temperantia*, mildness]. Want of moderation; immoderate indulgence, especially with reference to alcoholic liquors.

**Intensity** (*in-ten'-sit-e*) [*intensio*, stretched, strung]. Concentration of energy or activity. Also, a high degree of energy or power. **I., Specific**. See *Specific*.

**Intensive** (*in-ten'siv*) [*intense*, stretched; strong]. Gradually increased in force or energy. Strong (stronger) in increasing the sexual passions. **1. Method of Pasteur.** See *Pasteur*.

**Intention** (*in-ten'shun*) [*intendere*, a stretching out]. See *Motion*. **1. Tremor**, a tremor coming on when attempts at voluntary motion are made.

**Inter-** (*in-ter'*) [*inter*, between]. A Latin prefix signifying between.

**Interaccessory** (*in-ter-ak'ss-er-i*) [*inter*, between; *accessory*, the act by]. Situated between accessory processes of the vertebrae. **1. Muscles**, short lumbar muscles connecting the accessory processes of the vertebrae.

**Interarticular** (*in-ter-art'i-ku-lar*) [*inter*, between; *articular*, a joint]. Situated between joints. **1. Fibro-cartilage**, the flattened cartilaginous plates, especially in shape, between the articular cartilages of the joints.

**Interarytenoid** (*in-ter-ar'i-ten-oid*) [*inter*, between; *arytenoid*, a cartilage, *oid*, likeness]. Between the two arytenoid cartilages. **1. Muscle.** See *Muscles, Table of*.

**Interauricular** (*in-ter-aw'r-i-ku-lar*) [*inter*, between; *auricular*, a cartilage]. Situated between the auricles or cartilages.

**Interbrain** (*in-ter-brayn*). See *Dienephalon* and *Dienecephalon*.

**Intercadence** (*in-ter-ka-dens*) [*inter*, between; *cadere*, to fall]. The irregular beating of the pulse, which seems incessantly to have an additional beat between normal pulsations.

**Intercadent** (*in-ter-ka-dent*) [*inter*, between; *cadere*, to fall]. Exhibiting the quality of intercadence.

**Intercalary** (*in-ter-ka-lar-i*) [*inter*, between; *calare*, to insert]. Placed or inserted between. **1. Growth**, a growth of new material interstitially deposited.

**Intercalatum** (*in-ter-ka-l'at-um*) [*inter*, between; *calare*, to insert]. *Substantia nigra; locus niger*; a dark mass of crescentic outline situated between the anterior root and the dorsal tegmentum of the crus cerebri.

**Inter-capillary** (*in-ter-ka-p'i-la-er*) [*inter*, between; *capilla*, a hair]. Between capillaries.

**Intercarotic, Intercarotid** (*in-ter-ka-ro't-ik*, *in-ter-ka-ro't'id*) [*inter*, between; *carotid*, to produce sleep]. Situated between the external and internal carotids. **1. Ganglion.** See *Ganglia, Table of*.

**Intercavernous** (*in-ter-ka-vern'us*) [*inter*, between; *caverna*, a cave]. Situated between two antra, or between the two cavernous sinuses.

**Inter-cellular** (*in-ter-sel'lu-lar*) [*inter*, between; *cellula*, a small cell]. Among or between cells.

**Inter-central** (*in-ter-sen'tral*) [*inter*, between; *central*, central]. Between centers.

**Intercerebral** (*in-ter-se-re-bral*) [*inter*, between; *cerebrum*, cerebrum]. Between the right and left cerebral hemispheres.

**Interchondral** (*in-ter-on'dr'al*) [*inter*, between; *chondr*, cartilage]. Between cartilages; by means of the interposition of cartilages.

**Interodium** (*in-ter-od-i-um*). See *Glabella*.

**Inter-visible** (*in-ter-iv'i-ble*) [*inter*, between; *visibilis*, visible]. A transparent tissue which in all vertebrates before the time of parturition, and also in the invertebrates, is developed along ventral of the notochord, or between the notochord. In the typical vertebrates this tissue ultimately exists; but some classes have proved to have never an extra-sternal structure analogous to the one of vertebral animals.

**Interclavicular** (*in-ter-klav'i-ku-lar*) [*inter*, between; *clavula*, a small bone]. Between the clavicles.

**Interdental** (*in-ter-den'tal*) [*inter*, between; *dens*,

bed; *edens*, resemblance]. Between the clinoid processes of the sphenoid bone.

**Intercolumnar** (*in-ter-kol-um'-nar*). See *Fascia*.

**Intercondylar, or Intercondyloid** (*in-ter-kon't-dil-ar*, *in-ter-kon't-dil-oid*) [*inter*, between; *kondylus*, a knob; *edens*, likeness]. Between condyles. **1. Eminence**, the spine or knob separating the two condylar portions of the tibia. **1. Fossa**, the notch between the condyles of the femur. **1. Line**, a transverse line crossing above the intercondyloid fossa, and joining the condyles. **1. Notch.** Same as *1. Fossa*.

**Intercostal** (*in-ter-kost'al*) [*inter*, between; *costa*, a rib]. Pertaining to the space between ribs. **1. Arteries**, the aortic arteries of the intercostal spaces. See *Arteries, Table of*. **1. Muscles.** See *Muscles, Table of*. **1. Nerves**, the anterior divisions of the dorso-spinal nerves. See *Nerves, Table of*.

**Intercosto-humeral** (*in-ter-kos't-to-hu'-mer-al*) [*inter*, between; *costa*, rib; *humerus*, the bone of the upper arm]. Pertaining to the arm and the space between the ribs.

**Intercourse** (*in-ter-kors*) [*intercurtus*, commerce]. Communication. **1. Carnal**, sexual connection; coition. **1. Sexual.** Same as *1. Carnal*.

**Intercoxal** (*in-ter-koks'al*) [*inter*, between; *coxa*, hip]. Situated between the coxae or hips.

**Intercurrent** (*in-ter-kur'-ent*) [*inter*, between; *currere*, to run]. Occurring or taking place between. **1. Disease**, a term loosely applied to diseases occurring sporadically during a period of prevailing endemic or epidemic diseases. Also applied to a disease arising or progressing during the existence of another disease in the same person.

**Interdental** (*in-ter-den'tal*) [*inter*, between; *dens*, a tooth]. **1. Between the teeth.** **2. An interdentalium.** **1. Splint**, a splint used in fracture of the jaw, consisting of a metallic frame at the neck of the teeth, held by wire sutures passing between the teeth.

**Interdentalium** (*in-ter-den't-sho-um*) [*inter*, between; *dens*, a tooth]. The space between any two of the teeth.

**Interdiction** (*in-ter-dik'-shun*) [*interdictio*, a prohibiting]. A judicial or legal process that deprives an insane person or one suspected of insanity of the management of his own affairs or of the affairs of others.

**Interdigital** (*in-ter-dij'-it-al*) [*inter*, between; *digitus*, a finger]. Between fingers. **1. Membrane**, the skin between the toes of palmate-footed animals. **1. Space**, that between adjacent fingers.

**Interdigitation** (*in-ter-dij-it-a'-shun*) [*inter*, between; *digitus*, a finger]. The locking or dovetailing of similar parts, as the fingers of one hand with those of the other; or of the ends of the *obliquus externus* muscle with those of the *serratus magnus*.

**Interfascicular** (*in-ter-fas-ik'-u-lar*) [*inter*, between; *fasciculus*, a bundle]. Situated between fasciculi.

**Interfemoral** (*in-ter-fem'-or-al*) [*inter*, between; *femur*, the thigh]. Between the femurs or thighs.

**Interfere** (*in-ter-fer'*) [*inter*, between; *ferire*, to strike]. In horses, to strike one hoof or the shoe of one hoof against the opposite leg or fetlock.

**Interference** (*in-ter-fer'-ens*) [*inter*, between; *ferire*, to strike]. Interposition. **1. of Light**, the mutual neutralization of waves of light, as shown in Newton's rings, when the crest of one wave falls upon the trough of another. **1. of Sound**, the neutralization of two sound waves, one by the other.

**Interfibrillar** (*in-ter-fi'-bril-ar*) [*inter*, between; *fibra*, a fiber]. In biology, situated between the fibrillae of tissues.

**Interfilar** (*in-ter-fi'-lar*) [*inter*, between; *filum*, a thread]. In biology, existing between the filaments of a reticulum.

**Interganglionic** (*in-ter-gang-gle-on'-ik*) [*inter*, between; γάγγλιον, a tumor, ganglion]. Connecting one ganglion with another; lying between ganglia.

**Interglandular** (*in-ter-gland'-u-lar*) [*inter*, between; glandula, a gland]. Situated between glands.

**Interglobular** (*in-ter-glob'-u-lar*) [*inter*, between; globulus, a ball]. Situated between globules. **I. Spaces**, irregular cavities seen in a section of dentine, after the earthy matter has been removed by putting a tooth in dilute acid. They are so called because surrounded by minute globules of dentine.

**Interyral** (*in-ter-ji'-ral*) [*inter*, between; gyrus, a gyre]. Situated between two or more gyri.

**Interhemispheric** (*in-ter-hem-e-ser'-e-bral*) [*inter*, between; *hmi*, half; cerebrum, cerebrum]. Situated between the cerebral hemispheres.

**Interhemispheric** (*in-ter-hem-is-fer'-ik*) [*inter*, between; *hmi*, half; σφαίρα, sphere]. Situated between hemispheres.

**Interinhibitive** (*in-ter-in-hib'-it-iv*) [*inter*, between; *inhibere*, to inhibit]. Mutually inhibitory.

**Interjectional** (*in-ter-jek'-shun-al*) [*inter*, between; *jicere*, to throw]. Interjected; thrown between. **I. Speech**, the expression of emotions by inarticulate sounds.

**Interlaminar** (*in-ter-lam'-in-ar*) [*inter*, between; lamina, a leaf]. In biology, situated between laminae.

**Interlobar** (*in-ter-lof'-bar*) [*inter*, between; lobus, a lobe]. Situated between lobes.

**Interlobular** (*in-ter-lof'-u-lar*) [*inter*, between; lobulus, a lobule]. Between lobules. **I. Emphysema**. See *Emphysema*.

**Intermalar** (*in-ter-mal'-lar*) [*inter*, between; mala, the cheek-bone]. Situated between the malar bones.

**Intermarriage** (*in-ter-mar'-aj*) [*inter*, between; maritus, a husband]. Marriage between persons related by consanguinity, or between persons of different races.

**Intermastoid** (*in-ter-mas'-toid*) [*inter*, between; μαστός, breast; εἶδος, likeness]. Situated between or connecting the two mastoid processes.

**Intermaxilla** (*in-ter-maks-il'-ah*) [*inter*, between; maxilla, jaw]. The premaxilla; the intermaxillary bone.

**Intermaxillary** (*in-ter-maks-il-a-re*) [*inter*, between; maxilla, jaw-bone]. Between the maxillary bones. **I. Bone**, the small bone that receives the incisors, situated between the superior maxillary bones of the fetus. It also occurs in most mammals.

**Intermediate** (*in-ter-me'-de-al*) [*inter*, between; medius, the middle]. Situated between. **I. Dysmenorrhea**. See *Dysmenorrhea*. **I. Carbon-atoms**, those connected with two other carbon-atoms, having two valence-units that may be saturated by two hydrogen-atoms (or other elements).

**Intermeningeal** (*in-ter-men-in'-je-al*) [*inter*, between; μῆνις, membrane]. Between the dura and the arachnoid; or, between the latter and the pia. **I. Hemorrhage**, a hemorrhage between the meninges of the brain or spinal cord.

**Intermenstrual** (*in-ter-men'-stru-al*) [*inter*, between; menstrualis, menstrual]. Between the menstrual periods.

**Interment** (*in-ter'-ment*) [*in*, in; terra, the earth]. The burial of the body.

**Intermetacarpal** (*in-ter-met-ak-ar'-pal*) [*inter*, between; μετá, beyond; καρπός, the wrist]. Between the metacarpal bones.

**Intermetatarsal** (*in-ter-met-at-ar'-sal*) [*inter*, between; μετá, beyond; τάρσος, tarsus]. Between the metatarsal bones.

**Intermission** (*in-ter-mish'-un*) [*intermissio*, a breaking off]. The interval between the paroxysms of a fever.

Also, an interval in which the pulse fails to beat in rhythmic time.

**Intermittent** (*in-ter-mit'-ent*) [*inter*, between; *mittere*, to send or occur]. Occurring at intervals. **I. Fever**. See *Fever*. **I. Insanity**. See *Insanity*, *Cyclic*. **I. Ligature**. See *Ligature*. **I. Pulse**, one the rhythm of which is interrupted by pauses at irregular intervals.

**I. Hemisystole**, a very rare condition sometimes encountered in cases of mitral insufficiency, in which with every two beats of the heart only one beat of the pulse is felt.

**Intermuscular** (*in-ter-mus'-ku-lar*) [*inter*, between; musculus, a muscle]. Situated between muscles.

**Intern** (*in-tern'*) [*Fr.*, interne]. An in door or resident physician in a hospital; a member of an in door staff of physicians.

**Internal** (*in-ter'-nal*) [*internus*, inward]. Situated within or on the inside. **I. Capsule**, the band of white nerve-matter between the thalamus and the interventricular portion of the striatum. **I. Capsule**, Knee of, the angle formed by the junction of the two divisions of the internal capsule. **I. Cell-formation**, free cell-formation; endogenous cell-formation. That mode of cell-division in which new cells are formed within the walls of an old cell, as distinguished from fission and gemmation.

**Internarial** (*in-ter-na'-re-al*) [*inter*, between; nares, nostrils]. Situated between the nostrils.

**Interneural** (*in-ter-nu'-ral*) [*inter*, between; νεῦρον, nerve]. Situated between neural spines.

**Internode** (*in'-ter-nod*) [*inter*, between; nodus, a knot]. The space between adjacent joints or knots, as the phalanx of a finger or a toe. That part of a nerve-fibril between Ranvier's nodes is called the *internodal segment*.

**Internodium** (*in-ter-no'-de-un*). Same as *Internode*.

**Internuclear** (*in-ter-nu'-kle-ar*) [*inter*, between; nucleus, a kernel]. Situated between nuclei.

**Internuncial** (*in-ter-nun'-shal*) [*inter*, between; nuncius, a messenger]. Serving as a connecting or announcing medium, e.g., the nerves in their relation to the muscles and the will.

**Internus** (*in-ter'-nus*). See *Internal*.

**Interoptic** (*in-ter-op'-tik*) [*inter*, between; opticus, optic]. Between the optic lobes, tracts or nerves of the brain.

**Interorbital** (*in-ter-or'-bit-al*) [*inter*, between; orbita, the orbit]. Situated between the orbits. **I. Bone**, the median bone of fishes. **I. Plate** and **I. Septum**, a structure of the fore-brain, with its extension, found in certain fishes and reptiles.

**Interosseous** (*in-ter-os'-e-us*) [*inter*, between; ossa, a bone]. Between two bones. **I. Arteries**, a name given to various branches of the dorsal, palmar, plantar, and metatarsal arteries of the hand, foot, and forearm. See *Arteries*, *Table of*. **I. Muscles**, a name given to certain muscles of the hand, foot, and forearm. See *Muscles*, *Table of*. **I. Nerves**, the nerves supplying the interosseous muscles. See *Nerves*, *Table of*.

**Interpalpebral** (*in-ter-pal'-pe-bral*) [*inter*, between; palpebra, the eyelid]. Between the palpebrae. **I. Spot**. See *Pinguecula*. **I. Zone**, that part of the cornea and of the scleral conjunctiva that ordinarily is not covered by the lids.

**Interpapillary** (*in-ter-pap'-il-a-re*) [*inter*, between; papilla, a papilla]. Between papillae.

**Interparietal** (*in-ter-par-i'-et-al*) [*inter*, between; paries, walls]. Between walls. **I. Bone**, a term sometimes applied to the upper, squamous, and non-cartilaginous part of the occipital bone. **I. Fissure**. See *Fissure*. **I. Suture**, the sagittal suture, or that formed by the approximation of the parietal bones.

**Interpeduncular** (*in-ter-ped-un-cu-lar*) [*inter*, between; *pedunculus*, a little foot]. Situated between the cerebral or cerebellar peduncles. **I. Space**, the space between the posterior peduncles that forms the posterior part of the base of the third ventricle.

**Interphalangeal** (*in-ter-fal-ang-e-al*) [*inter*, between; *phalanx*, a finger]. Between the fingers or the toes.

**I. Articulations**, the glenoid articulations of the fingers and of the toes.

**Interplacental** (*in-ter-pla-sen-tal*) [*inter*, between; *placenta*, a breast]. Between the placental lacunae.

**Interpolation** (*in-ter-poh-lay-shun*) [*inter*, between; *to put up*]. The surgical transfer of tissue to a new part of the body and adjoin to another.

**Interpubic** (*in-ter-pub-ic*) [*inter*, between; *pubis*, pubes]. Situated between the pubic bones. **I. Disc**, the fibrocartilaginous mass forming the symphysis of the pubes.

**Interradial** (*in-ter-rad-ial*) [*inter*, between; *radius*, a ray]. Situated between two rays.

**Intertrigonal** (*in-ter-trig-on-al*) [*inter*, between; *trigona*, a triangle; *trigone*, a horn]. In biology, a part of the horny sheath of the bill in certain birds.

**Interrenal** (*in-ter-re-nal*) [*inter*, between; *ren*, the kidney]. Situated between the kidneys.

**Interrupted** (*in-ter-rupt-ed*) [*interrumpere*, to break apart]. Broken; irregular. **I. Breathing**. See *Breathings*.

**Interrupter** (*in-ter-rupt-er*) [*interrumpere*, to break apart]. One who, or that which, interrupts; specifically, a device for breaking an electric current.

**Interscapular** (*in-ter-scap-u-lar*) [*inter*, between; *scapula*, the shoulder blade]. Between the shoulder blades. **I. Region**, the part of the chest between the two shoulder blades. **I. Reflex**. See *Reflexes*, *Table of*.

**Interscapulum** (*in-ter-scap-u-lum*) [*inter*, between; *scapula*, shoulder blade; *pl.*, *Interscapula*]. In biology, the region of the back between the shoulder blades.

**Interspace** (*in-ter-space*) [*inter*, between; *spatium*, a space]. An interval between the ribs, or between the *alveoli* or tubules of a tissue or organ.

**Interspinal** (*in-ter-spi-nal*) [*inter*, between; *spina*, a spine]. Between spines; specifically, between the *vertebrae* of the vertebral column. **I. Muscles**. See *Muscles*, *Table of*.

**Interspinous** (*in-ter-spi-nal*) [*inter*, between; *spina*, a spine]. Situated between spinous processes, as of the vertebrae.

**Interstice** (*in-ter-sit-ium*) [*interstitium*, a space between]. A space or interval. Also, a pore.

**Interstitial** (*in-ter-sit-i-al*) [*interstitium*, space between; *pl.*, *Interstitial*]. Pertaining to any space or interval between parts or organs, and especially applied to that which is placed between parenchymatous substances. **I. Absorption**, the absorption of the products of a morbidly altered exit or abscess. Also, any *vascular absorption*. **I. Atrophy**, a condition caused by various diseases of the bones (*arthritis ossificans*), in which the mineral matter has been absorbed to such an extent that only reticulated tissue remains. **I. Hypertrophy**, a condition in certain diseases of the bones in which there is an excessive deposit of mineral matter in the Haversian canals and lacunae. **I. Keratitis. See *Keratitis*. **I. Pregnancy**. See *Pregnancy*.**

**Intertransversales** (*in-ter-trans-ver-sal-es*) [*inter*, between; *transversus*, a transverse line]. A name given to the short bundles of muscular fibers extending

between the transverse processes of contiguous vertebrae. See *Muscles Table of*.

**Intertriginous** (*in-ter-trig-in-us*) [*inter*, between; *trigone*, to rub]. Of the nature of or affected with intertrigo.

**Intertrigo** (*in-ter-trig-o*) [*inter*, between; *terere*, to rub]. An erythematous eruption or lesion of the skin produced by friction of adjacent parts. See *Erythema*.

**Intertrochanteric** (*in-ter-tro-kan-ter-ik*) [*inter*, between; *τροχαντηρ*, trochanter]. Between the trochanters. **I. Line**. See *Lines*, *Table of*.

**Intertubular** (*in-ter-tul-bu-lar*) [*inter*, between; *tubulus*, a tube]. Between tubes. **I. Substance**, the translucent, granular substance of the dentine of the tooth, containing most of its earthy elements.

**Inteureteric** (*in-ter-u-ret-er-ik*) [*inter*, between; *ουρητηρ*, ureter]. Situated between the ureters or their outlets.

**Intervaginal** (*in-ter-vaj-in-al*) [*inter*, between; *vagina*, sheath]. Between sheaths. **I. Space**, that found within the sheaths of the optic nerve.

**Interval** (*in-ter-val*) [*inter*, between; *vallum*, a rampart]. A space or lapse either of time or distance, as the interval between the paroxysms of a fever, or between two organs or parts of the body. **I. Focal**, the distance between the anterior and posterior focal points. **I. Sacro-cotyloid**, a space existing between the promontory of the sacrum and the posterior part of the cotyloid cavity or acetabulum.

**Intervenium** (*in-ter-ven-ue-ne-um*) [*inter*, between; *vena*, vein; *pl.*, *Intervenias*]. In biology, the space between the veins of leaves.

**Interventricular** (*in-ter-ven-trik-u-lar*) [*inter*, between; *ventriculum*, a ventricle]. Between ventricles, e.g., of the heart. **I. Septum**, the fibrous septum or partition between the ventricles of the heart.

**Interveneular** (*in-ter-ven-u-lar*) [*inter*, between; *venula*, a little vein]. In biology, situated between the veins of an insect's wing.

**Intervertebral** (*in-ter-ver-te-bral*) [*inter*, between; *vertebra*, a bone of the spine]. Between the vertebrae. **I. Discs**, the lenticular discs of fibro-cartilage between the adjacent surfaces of the bodies of the vertebrae. **I. Foramen**. See *Foramen*. **I. Notch**, the notch at the base of the pedicle of the laminae on the sides of the body of each vertebra. **I. Substance**. Same as *I. Discs*.

**Intervillous** (*in-ter-vil-lus*) [*inter*, between; *villus*, a tuft of hair]. Situated between villi.

**Intestinal** (*in-tes-tin-al*) [*intestinum*, the intestine]. Pertaining to the intestine. **I. Absorption**, the absorption of the peptonized products of digestion by the capillaries, veins, and lacteals of the mucous membrane of the intestines. **I. Anastomosis**. See *Anastomosis*. **I. Arteries**, the arteries of the intestines, of which the principal trunks are the celiac axis and the mesenteric branches. The lower part of the rectum is supplied by the hemorrhoidal branches of the iliac and pudic arteries. See *Arteries*, *Table of*. **I. Canal**, the entire intestinal passage from the beginning of the duodenum to the anus. **I. Cast**. Same as *I. Mole*. **I. Concretion**. See *Enterolith*. **I. Fever**. Synonym of *Typhoid Fever*. **I. Fistula**, a fistula or unnatural aperture in any part of an intestine. **I. Glands**, the glands found in the *I. Canal*. See *Gland*. **I. Juice**, the liquid secretion of the intestinal glands. **I. Mole**, the membranous discharge from the bowel in *Pseudomembranous Enteritis*. **I. Obstruction**, arrest of or interference with the progress of the feces. **I. Tract**, or *Tube*. Same as *I. Canal*.

**Intestine** (*in-tes'-tin*) [*intestinus*, intestine]. The part of the digestive tube extending from the beginning of the duodenum to the anus. **I., Large**, comprises

THE LARGE INTESTINE.

a. Entrance of the small intestine. b. Appendix vermiformis. c. Caput cæcum coli. d. Transverse colon. e. Descending colon. f. Sigmoid flexure. h. Rectum. i. Anus.

the cecum, colon, and rectum. **I., Small**, consists of the duodenum, jejunum, and ileum.

**Intestinorum inflammatio** (*in-tes-tin o'-rum in-flam-a'-she-o*) [*L.*, "Inflammation of the intestines"]. See *Enteritis*.

**Intestinulum** (*in-tes-tin'-u-lum*) [*L.*, a small intestine: *pl.*, *Intestinula*]. **1.** The small intestine. **2.** A cerebral convolution or gyrus. **3.** The umbilical cord or navel-string.

**Intextine** (*in-teks'-tin*) [*intus*, within; *externus*, without]. In biology, a supplementary inner layer of the extine of the pollen-grains of certain plants.

**Intima** (*in'-tim-ah*) [*intimus*, inmost] A term used instead of *tunica intima*; the innermost coat, or thin, transparent endothelial lining of the heart and blood-vessels, consisting of a layer of irregular, long, fusiform, nucleated, squamous cells.

**Intine** (*in'-tin*) [*intus*, within]. In biology, the inner coat of the pollen-grain.

**Intolerance** (*in-to'l'-er-ans*) [*intolerans*; *in*, not; *tolerere*, to bear]. Want of endurance or ability to stand pain. Impatience. Also, the inability to endure the action of a medicine.

**Intonation** (*in-to-na'-shun*) [*intonere*, to thunder]. **1.** The rumbling or gurgling sound produced by the movement of flatus in the bowels. **2.** The tone of the voice.

**Intortion** (*in-tor'-shun*) [*intortus*, p. p. of *intorquere*, to curl, to twist]. In biology, the winding, bending, or twisting of a part or organ.

**Intoxicant** (*in-toks'-ik-ant*) [*intoxicare*, to intoxicate]. **1.** Intoxicating; capable of producing intoxication or poisoning. **2.** A drug or agent capable of producing intoxication.

**Intoxication** (*in-toks-ik-a'-shun*) [*intoxicare*, to poison]. A word popularly used to denote the effect of the excessive use or of an overdose of an alcoholic liquor: in a wider sense, any poisoning; the state resulting from an overpowering dose of any poison. **I., Septic.** See *Septicæmia*. **I., Uremic.** See *Uremia*.

**Intra-** (*in'-trah-*) [*intra*, within]. A Latin prefix sig-

nifying within. **I.-abdominal**, within the cavity of the abdomen. **I.-arachnoid**, within the arachnoid space. **I.-articular**, within a joint. **I.-capsular**, within the capsular ligament of a joint.

**Intrabiontic** (*in-trah-bi-on'-tik*) [*intra*, within; *βίος*, life; *ὄν* (*on*), being]. In biology, applied to phenomena occurring within, and determined by, an individual organism. **I. Selection**, Weismann's term for the principle formulated by Roux, of the struggle of the parts concerned in ontogeny.

**Intracardiac** (*in-trah-kar'-de-ak*) [*intra*, within; *καρδία*, heart]. Situated or produced within the heart-cavity.

**Intracartilaginous** (*in-trah-kar-til-aj'-in us*) [*intra*, within; *cartilago*, cartilage]. Within a cartilage. **I. Ossification.** See *Ossification*.

**Intracellular** (*in-tra-sel'-u-lar*) [*intra*, within; *cellula*, a little cell]. In biology, existing or happening within the cell. **I. Digestion**, also called *parenchymatous digestion*; digestion as exhibited by unicellular organisms. **I. Pangenesis.** See *Heredity* and *Pangenesis*.

**Intracerebral** (*in-trah-ser'-e-bral'*) [*intra*, within; *cerebrum*, cerebrum]. Within the cerebrum.

**Intracervical** (*in-trah-ser'-vik-al*) [*intra*, within; *cervix*, cervix]. Within the cervical canal of the uterus.

**Intraciliary** (*in-trah-sil'-e-a-re*) [*intra*, within; *cilium*, an eye-lash]. Situated within the ciliary region.

**Intracranial** (*in-trah-kra'-ne-al*) [*intra*, within; *κράνιον*, the skull]. Within the skull. **I. Hemorrhage**, an escape of blood within the cranial cavity; cerebral hemorrhage.

**Intracutaneous** (*in-trah-ku-ta'-ne-us*) [*intra*, within; *cutis*, the skin]. Within the skin-substance.

**Intracystic** (*in-trah-sis'-tik*) [*intra*, within; *κύστις*, a cyst]. Situated or occurring within a cyst.

**Intradermic** (*in-trah-der'-mik*) [*intra*, within; *δέρμα*, skin]. Same as *Intracutaneous*.

**Intradural** (*in-trah-du'-ral*) [*intra*, within; *durus*, hard]. Situated or occurring within the dura.

**Intrafetation** (*in-trah-fe-ta'-shun*) [*intra*, within; *fetus*, a fetus]. The formation of a fetus within another fetus.

**Intragyrus** (*in-trah-ji'-ral*) [*intra*, within; *gyrus*, a gyre]. Within a gyre of the brain.

**Intrahepatic** (*in-trah-he-pat'-ik*) [*intra*, within; *ἥπαρ*, liver]. Within the liver-substance.

**Intralamellar** (*in-trah-lam-ell'-ar*) [*intra*, within; *lamella*, a thin plate]. In biology, within the lamellæ.

**Intraligamentous** (*in-trah-lig-am-en'-tus*) [*intra*, within; *ligamentum*, a ligament]. Within or between the folds of a ligament, as a cyst.

**Intralingual** (*in-trah-ling'-gwai*) [*intra*, within; *lingua*, tongue]. Within the substance of the tongue.

**Intralobular** (*in-trah-lob'-u-lar*) [*intra*, within; *lobulus*, a little lobe]. Within a lobe or lobule. **I. Vein**, a vein traversing a liver-lobule. **I. Plexus**, a network of vessels in a liver-lobule.

**Intramembranous** (*in-trah-mem'-bran-us*) [*intra*, within; *membrana*, a membrane]. Within a membrane.

**Intrameningeal** (*in-trah-men-in'-je-al*) [*intra*, within; *μῆνις*, membrane]. Situated within the substance of the membranes of the brain or spinal cord. **I. Hemorrhage**, an effusion of blood into the sac of the dura mater.

**Intramolecular** (*in-trah-mo-lek'-u-lar*) [*intra*, within; *molecula*, a molecule]. Within the molecules of a substance.

**Intramural** (*in-trah-mul'-ral*) [*intra*, within; *mura*, a wall]. Intraparietal. Within the substance of the walls of an organ.

**Intramuscular** (*in-tra-mus'-ku-lar*) [*intra*, within; *musculus*, a muscle]. Within the substance of a muscle.

**Intranasal** (*in-tra-nas'-al*) [*intra*, within; *nasus*, nose]. Within the cavity of the nose.

**Intranuclear** (*in-tra-nu'-kle-er*) [*intra*, within; *nucleus*, a kernel]. Within a nucleus.

**Intra-ocular** (*in-tra-ok'-u-lar*) [*intra*, within; *oculus*, eye]. Within the globe of the eye. **I. Hemorrhage**, an effusion of blood into the globe of the eye. **I. Pressure, or Tension**. See *Pressure*.

**Intra-orbital** (*in-tra-ok'-i-tal*) [*intra*, within; *orbita*, orbit]. Within the orbit. **I. Aneurysm**, an aneurysm of the artery that of the eye, and usually involving a branch of the ophthalmic artery. **I. Hemorrhage**, a hemorrhage taking place within the orbit, but behind the capsule of the eye.

**Intra-osseous** (*in-tra-oss'-u-s*) [*intra*, within; *os*, a bone]. Within the substance of a bone.

**Intraovarian** (*in-tra-ov'-er-ian*) [*intra*, within; *ovarium*, ovary]. Within the ovarian stroma.

**Intraparietal** (*in-tra-par'-i-tal*) [*intra*, within; *paries*, wall]. 1. Within the wall or the substance of the wall of an organ. 2. Within the parietal region of the peritoneum, i. e., the *I. Forure*.

**Intrapelvic** (*in-tra-pel'-ic*) [*intra*, within; *pelvis*, basin]. Within the pelvic cavity.

**Intraperitoneal** (*in-tra-per'-i-ton'-al*) [*intra*, within; *peritonium*, the peritoneum]. Within the peritoneum or mesenteric sac that covers the abdominal viscera.

**Intraplacental** (*in-tra-plas'-en-tal*) [*intra*, within; *placenta*, cake]. Within the placental tissue.

**Intrapleural** (*in-tra-plu'-al*) [*intra*, within; *πλεῦρα*, a rib]. Within the pleural cavity.

**Intrapolar** (*in-tra-pol'-ar*) [*intra*, within; *polus*, pole]. Between the poles or ends of an axis. See, also, *Interpolar*.

**Intrapulmonary** (*in-tra-pul'-mo-na-re*) [*intra*, within; *pulmo*, the lung]. Within the substance of the lung.

**Intraretinal** (*in-tra-ret'-in-al*) [*intra*, within; *retina*, retina]. Within the substance of the retina.

**Intrascleral** (*in-tra-skel'-er-al*) [*intra*, within; *σκληρὸς*, hard]. Situated, occurring, or performed within the sclera.

**Intrascrotal** (*in-tra-skrot'-al*) [*intra*, within; *scrotum*, scrotum]. Within the scrotal sac.

**Intraspinal** (*in-tra-sp'-inal*) [*intra*, within; *spina*, spine]. Within the spinal canal.

**Intratesticular** (*in-tra-test'-ik'-u-lar*) [*intra*, within; *testis*, a testicle]. Within the testicle.

**Intratubal** (*in-tra-tub'-al*) [*intra*, within; *tuba*, a tube]. Within a fallopian tube.

**Intratympanic** (*in-tra-tim'-pan-ik*) [*intra*, within; *tympanum*, the ear drum]. Within the tympanic cavity.

**Intraurethral** (*in-tra-u-reth'-al*) [*intra*, within; *urethra*, urethra]. Within the urethra.

**Intra-uterine** (*in-tra-ut'-er-in*) [*intra*, within; *uterus*, womb]. Within the womb. **I. Amputation**, a spontaneous or induced amputation occurring occasionally to some part of the fetus. Another that becomes constricted by the pressure of the other parts. **I. Drowning**, death of the fetus in utero from efforts at respiration, which are frustrated, as air being drawn into the lungs, the blood of the respiratory efforts is an embolus of blood in the cord or placenta. **I. Fracture**, fracture of a bone in a fetus in utero. **I. I. e.**, that period of the existence of an animal between conception and birth.

**Intravasation** (*in-tra-vas'-a-shun*) [*intra*, within; *vas*, vessel]. The entrance of a foreign matter, as pus, into a blood vessel.

**Intravascular** (*in-tra-vas'-ku-lar*) [*intra*, within; *vasculum*, a small vessel]. Within the blood-vessel system.

**Intravenous** (*in-tra-ve'-nus*) [*intra*, within; *vena*, a vein]. Within, or into the veins. **I. Infusion, or Injection**, the introduction of a saline solution or other liquid into the veins.

**Intravertebral** (*in-tra-ver'-te-bral*) [*intra*, within; *vertebra*, a vertebra]. Same as *Intraspinal*.

**Intravesical** (*in-tra-ves'-ik-al*) [*intra*, within; *vesica*, bladder]. Occurring or situated within the bladder.

**Intrinsic** (*in-trin'-sik*) [*intrinsecus*, on the inside]. Inherent, inward. Peculiar to a part, e. g., certain muscles.

**Intro-** (*in'-tro-*) [*intro*, within]. A Latin prefix signifying within.

**Introcession** (*in-tro-ses'-shun*) [*introcedere*, to go into]. A depression or sinking in, as of a surface.

**Introflexion** (*in-tro-flek'-shun*) [*intro*, within; *flectio*, a bending]. A bending in; inward flexion.

**Introitus** (*in-tro'-it-us*) [*intro*, within; *ire*, to go]. Any aperture or opening in the body. **I. pelvis**, the inlet of the pelvis. **I. vaginae**, the external aperture of the vagina.

**Intromission** (*in-tro-mish'-un*) [*intro*, within; *mittere*, to send]. The introduction of one body within the walls of another, as of the penis into the vagina.

**Intorse** (*in-tors'-*) [*intro*, within; *versus*, p. p. of *vertere*, to turn]. In biology, applied to stamens that turn toward the axis of the flower.

**Introspection** (*in-tro-spek'-shun*) [*intro*, within; *spicere*, to look]. The act of looking inward. **I.**, Morbid, the morbid habit of self-examination; insane, or quasi-insane, dwelling upon one's own thoughts, feelings, impulses, fears, or conduct.

**Intussusception** (*in-tro-sus-sep'-shun*) [*intro*, within; *suscipere*, to receive]. The slipping or telescoping of one part of the intestine upon another part; intussusception.

**Introvenium** (*in-tro-ve'-ne-um*) [*intro*, within; *vena*, vein]. In biology, a condition of leaves in which the veins are infossous, or sunk and embedded in the parenchyma.

**Introversion** (*in-tro-ver'-shun*) [*intro*, within; *vertere*, to turn]. A turning within, as, introversion of the uterus. **I. of the Iris**, a bending backward of the iris in such a way that it lies upon the ciliary body.

**Introvert** (*in-tro-vert'-*) [*intro*, within; *vertere*, to turn]. In biology, turned in.

**Intruse** (*in-trūs'*) [*intrusus*, p.p. of *intrudere*, to thrust in]. In biology, projecting inward.

**Intubation** (*in-tu-ba'-shun*) [*in*, in; *tubus*, a pipe]. The passage of a tube into or past the larynx, to allow the entrance of air into the lungs in croup, diphtheria, etc., or to dilate a stricture, etc.

**Intumescence** (*in-tu-mes'-ens*) [*intumescencia*; *intumesce*, to swell]. A swelling, of any character whatever. Also, an increase of the volume of any organ or part of the body.

**Intumescencia** (*in-tu-mes-en'-sho-ah*) [*I.*]. A swelling. **I. gangliiformis**, the reddish gangliiform swelling of the seventh nerve in the aqueductus Fallopii in the petrous portion of the temporal bone.

**Intussusception** (*in-tus-su-sep'-shun*) [*intus*, within; *suscipere*, to receive]. Invagination or involution of one part of the intestine within another part. It is of frequent occurrence in the young. It is caused by undue peristalsis. The site of the intussusception varies; thus, it may be—**I. Ileo-cecal**, the ileum with the ileo-cecal valve descending into the cecum and colon; this is the most common variety; **2. Colic**, the invagination being limited to the large intestine; **3. Ileal**, when the ileum alone is involved; **4. Ileo-**

*colic*, when the ileum prolapses through the lips of the ileo-cecal valve.

**Inula** (*in'-u-lah*) [L.]. Elecampane. The root of *I. helenium*. It contains a crystalline substance, helenin,  $C_6H_8O$ , the dose of which is gr.  $\frac{1}{2}$  -  $\frac{1}{4}$ , and from 20 to 40 per cent. of a starch, known as *inulin*. It is a gentle stimulant, and is employed in bronchitis and to hasten the appearance of the skin-symptoms in exanthematous fevers. Dose gr. xx -  $\overline{5}$ j of the root, or  $\overline{5}$ j - ij of a decoction,  $\overline{3}$  ss to the Oj. The genus *Inula* contains various coarse composite-flowered herbs of the old world, several of which have properties similar to those of the official species.

**Inulin** (*in'-u-tin*) [*inula*, elecampane],  $C_6H_{10}O_5$ . 1. A vegetable principle found in the roots of dahlia, in chicory, and other plants. It is a white powder, with which iodine gives a yellow color, and is soluble in hot water. See *Carbohydrates*, Table of. 2. The precipitate from a tincture of the root of *Inula helenium*; an aromatic stimulant, tonic, and expectorant. Dose 1 to 3 grains. Unof.

**Inulol** (*in'-u-lol*). See *Alantol*.

**Inunction** (*in-un-k'-shun*) [*inunctio*; *inungere*, to anoint]. The act of rubbing an oily or fatty substance into the skin. Also, the substance used for anointment. **I. Treatment**, a form of treatment of syphilis. It consists in rubbing into the skin metallic mercury or some mercurial preparation, mixed or suspended in a fatty vehicle. It is active, sure, and rapid, but dirty and unpleasant. It is best used in the form of the blue ointment of a strength of fifty per cent. The application should be made upon different portions of the body in successive treatments.

**Inustion** (*in-us'-chun*) [*inustio*, a burning in]. A burning in; deep or thorough cauterization.

**Invagination** (*in-vaj-in-a'-shun*) [*invaginatio*; *invaginare*, to ensheath]. The sheathing or telescoping of a part or organ by a canal-like structure, as the intestine. An operation for obliterating a hernial canal by the inflammation resulting from pushing the skin inward and suturing the parts together.

**Invalid** (*in'-val-id*) [*invalidus*; *in*, not; *valere*, to be well]. One who is not well, especially one who is chronically ill or whose convalescence is slow.

**Invaliding** (*in'-val-id-ing*) [*in*, not; *valere*, to be well]. The placing of a soldier or officer on the list of invalids, and thus excusing him from active duty.

**Invalidism** (*in'-val-id-izm*) [*in*, not; *valere*, to be well]. Chronic ill-health; the state or condition of being an invalid.

**Invenose** (*in-ve'-nōs*) [*in*, not; *vena*, a vein]. In biology, destitute of veins.

**Invasion** (*in-vā'-zhun*) [*invasio*; *in*, upon; *vadere*, to go]. The beginning or attack of a disease. Also, the manner in which the disease begins its attack. **I.-disease**, one due to the presence in the body of some animal parasite, as the tapeworm or the protozoan of malaria.

**Invermination** (*in-ver-min-a'-shun*) [*in*, in; *vermis*, worm]. A condition of having intestinal worms; ill-health due to parasitic worms; helminthiasis.

**Inverse Temperature**. A complete reversal of the usual course of the temperature, so that the morning temperature exhibits the maximum, and the evening temperature the minimum. It is not infrequently seen in acute tuberculous affections, and rarely in typhoid fever.

**Inversio palpebrarum** (*in-ver'-she-o pal-pe-bra'-rum*). Synonym of *Entropion*.

**Inversion** (*in-ver'-shun*) [*inversio*; *in*, not; *vertere*, to turn]. A turning or placing in a position the opposite of the normal position. In chemistry, a decomposition of certain sugars and other carbohydrates, induced

by the action of a ferment or dilute acid, by which the elements of water are added to a carbohydrate, each molecule of which breaks up into two molecules of a different carbohydrate. **I. of Bladder**, a condition in which the bladder is in part or completely pushed into the dilated urethra. It occurs in females only.

**I. of Eyelashes**. See *Entropion*. **I. of Uterus**, a condition in which the uterus is partially or completely turned inside out.

**Invert** (*in-ver't*) [*in*, in; *vertere*, to turn]. To turn in an opposite direction. **I.-sugar**, an amorphous saccharine substance, the chief constituent of honey, and produced by the action of ferments or dilute acids on cane-sugar. It is regarded as a mixture of equal parts of dextrose and levulose. A solution of cane-sugar turns the polarized ray of light to the right, while invert-sugar turns it to the left. From this inversion of the action on polarized light the process is called inversion, and the product invert-sugar.

**Invertase** (*in-ver'tās*). Same as *Invertin*, *q. v.*

**Invertebrata** (*in-ver-te-bra'-tah*) [*in*, not; *vertebra*, backbone]. Animals that have no spinal column.

**Invertin** (*in-ver'tin*) [*in*, not; *vertere*, to turn]. A ferment found in the intestinal juice, and produced by several species of yeast-plant; it converts cane-sugar in solution into invert-sugar. See *Ferments*.

**Investing** (*in-ves'ting*) [*investire*, to invest]. Ensheathing, surrounding. In dentistry, embedding a denture in what is known as investing-material, for the purpose of soldering the linings or backings of the teeth to the plate.

**Inveterate** (*in-vel'-er-āt*) [*inveteratus*; *vetus*, old]. Long established, and obstinately resisting treatment, as an inveterate skin-disease.

**Invirility** (*in-vir-il'-it-e*) [*in*, not; *virilis*, of a man]. Lack of manly qualities, especially lack of virile power; male impotency.

**Inviscation** (*in vis-ka'-shun*) [*in*, in; *viscum*, bird-lime]. The mixing of food with the saliva during mastication.

**Invital** (*in-vi'-tal*) [*in*, not; *vita*, life]. In biology, non-living or dead matter.

**In vitro** (*in vit'-ro*) [L.]. In the glass; applied to phenomena that are observed in experiments carried out in the laboratory with microorganisms, digestive ferments, and other agents, but that may not necessarily occur within the living body.

**Involucel** (*in-vol'-u-sel*) [dim. of *involutum*, involucre]. In biology, a secondary involucre.

**Involucre** (*in'-vo-lu-ker*) [*involvere*, to roll up, to wrap up]. In biology, the bracts at the base of a flower-cluster.

**Involutum** (*in'-vo-lu'-krum*) [*involvere*, to enwrap; *pl.*, *Involuta*]. The covering of a part. The sheath of bone enveloping a sequestrum in dry necrosis.

**Involuntary** (*in-vol'-un-ta-ry*) [*involuntarius*; *in*, not; *volo*, *velle*, to will]. Performed independently of the will; not by an act of the will. A term applied to certain motions and functions of the various organs of the body that are not controlled by, or are not dependent on, the will. **I. Contraction**, muscular contractions not resulting from an act of the will. **I. Muscles**, those that are not governed by the will.

**Involute** (*in'-vo-lūt*) [*involvere*, to roll up, to wrap up]. In biology, rolled up, as the edges of certain leaves in the bud.

**Involution** (*in-vō-lu'-shun*) [*involutio*; *involvere*, to roll upon]. The retrogressive change to their normal condition that certain organs undergo after fulfilling their functional purposes. **I. of the Uterus**, the return of the uterus, which after gestation weighs about two pounds, to its normal weight and condition. **I.-forms**, a term applied to microorganisms that deviate

from a type, or under the same name changes, probably as a result of intuitive variations. They are free combinations, but Myers, or others, they predict.

**Inward** (*i-o'-ward*) [*iōw*, like a violet]. Toward the center. **I. Convulsions.** See *inward* in *Latin* (over).

**Iodal** (*i-o'-dal*) [*iōw*, like a violet].  $C_4H_4O$ . A compound formed on the type of iodoal, but containing iodine instead of chlorine. It is reported to resemble iodoal in its solubility, but is seldom used as a remedy. **Dose.**

**Iodantipyrin** (*i-o'-an-ti-pi-rin*) [*iōw*, like a violet]. See *antipyrin*.

**Iodate** (*i-o'-dat*) [*iōw*, like a violet]. Any salt of iodoal.

**Iodated** (*i-o'-dat-ed*) [*iōw*, like a violet]. Charged with iodoal.

**Iodatum** (*i-o'-dat-um*) [*iōw*, like a violet]. Charged with iodoal. **Herapathite**, iodinated starch.

**Iodia** (*i-o'-dia*) [*iōw*, like a violet]. A proprietary remedy said to be made from iodoal, menispermum, etc., with a few grains of potash on iodoal and two grains of iodoal, prepared in such a manner. **Dose** as an alterative, 5 grs.

**Iodic Acid** (*i-o'-dic*) [*iōw*, like a violet].

**Iodid** (*i-o'-d-id*) [*iōw*, like a violet]. A compound of iodoal with alcohol or other substance.

**Iodidem** (*i-o'-d-id-em*) [*iōw*, like a violet]. *gen.* **Iodidum** (*i-o'-d-id-um*) [*iōw*, like a violet].

**Iodin**, or **Iodum** (*i-o'-din*, or *i-o'-dum*) [*iōw*, like a violet].  $I = 126.5$ ; valence 1; specific gravity 4.93 at 15° C. (62.6° F.). A non-metallic element which is brittle, volatilizing at a low temperature, and giving off a brownish-purple vapor. It occurs in codfish-oil, in some marine plants, and in shell-fish. It is soluble in alcohol, in solution of potassium iodid, and in solution of sodium bicarb. In its elementary state it is an irritant to the skin, and is much used as a tincture for producing counter irritation. See *Elements, Table of Elements* iodid, the principal form for internal use, is an alterative, ranking as a specific in tertiary syphilis, and when necessary, available in all forms of that disease. It is also an excellent remedy in hepatic cirrhosis and chronic bronchitis. Combined with ammonium it is valuable in cutaneous affections. **Acidi hydriodici**, **Syr.**, contains 100 per cent. of the absolute acid. **Dose** 5 grs. **Ammonii iodidum**. See *Ammonium*.

**Iodized Phenol**, **unf.**, a mixture of iodoal and carbolic acid, used as a disinfectant. **I.**, **Lini-**ment (B. P.), one part of iodin in nine. **I.**, **Liquor** (B. P.), one of iodin in 20. **Iodi, Liq., Comp.**, **L.**, **Liquor** (B. P.), iodin 5, potassium iodid 10, water 85 parts. **Dose** 75-100, diluted. **I.**, **Tinct.**, 8 per cent. in alcohol. **Dose** 75-100. For local use. **I.**, **Trichlorid**, **unf.**, recommended by Langelbach as an antiseptic in surgery. **I.**, **Ung.**, iodin 4, potassium iodid 1, water 2, benzal and oil 3 parts. **I.**, **Vapor** (B. P.), for inhalation, 5 j of iodin to 3 j of water. **Amylum iodatum**, iodoal 100, iodin 5, starch 95 parts, distilled water 100 parts, triturated and dried. **Dose** 5 j-3 j. **Potass iodidum**, **KI**. **Dose** gr. v-3 j. **Potass. iodid.**, **Ung.**, common potass. iodid 12, sod. hyposulph. 1, linseed oil 6, benzoated lard 81 parts. **Sodi iodidum**, **NaI**, **dilij**, 5 cent. **Dose** gr. v-3 j. **I.-green**. See *P. n. n.*, *Conjunctiv.* of. **I.-scarlet**. See *P. n. n.*, *Conjunctiv.* of. **I.-violet**. See *P. n. n.*, *Conjunctiv.* of.

**Iodism** (*i-o'-d-ism*) [*iōw*, like a violet]. A condition arising from the prolonged use of iodin or iodin compounds, marked by swelling of the conjunctiva and of the mucous membrane of the respiratory passages, larynx, etc., and accompanied with symptoms resembling those of iodine poisoning.

**Iodure** (*i-o'-dur*) [*iōw*, like a violet]. An iodid.

**Ioduret** (*i-o'-d-u-ret*) [*iōw*, like a violet]. An iodid.

**Ion** (*i'-on*) [*iōw*, *iōw*, going]. An element set free by electrolysis, and classified as an *anion* or *kation*, according as it is set free at the positive or negative pole.

**I.**, **Migration** of, the transference of an ion from one pole to another.

**Ionidium** (*i-o'-nid-um*) [*iōw*, a violet]. A genus of violaceous herbs and shrubs. **I. ipecacuanha**, produces what is called *white ipecac*; this and several other species are emetic and cathartic. See also *Cinchuchulli*. None is official; but the roots of several species are said to be mixed with commercial ipecac.

**Ionthus** (*i-on'-thus*) [*iōw*, *iōw*, going]. That form of acne that often accompanies the first appearance of the beard. A general name for acne and the diseases that resemble it.

**Iodized** (*i'-o'-d-izd*) [*iōw*, like a violet]. Impregnated with iodin, as cotton, glycerin, etc.

**Iodoform** (*i-o'-do-form*) [*iōw*, like a violet; *forma*, form]. Tri-iodo methane,  $CHI_3$ . Iodid of *Formyl*. A compound containing about 91 per cent. of iodin. It is an antiseptic and feeble anesthetic, and is highly useful for local application to wounds, abrasions, and indolent sores. Internally it is a tonic. It seems to exert a special influence upon tuberculous processes. Its odor may be disguised by means of thymol or oil of rose. **Dose**, internally, gr. j-v. **I.**, **Suppos.** (B. P.), each containing gr. iij of iodoform. **I.**, **Unguent.**, for fetid sores.

**Iodoformism** (*i-o'-do-form-izm*) [*iōw*, like a violet; *forma*, form]. Poisoning with iodoform.

**Iodoformize** (*i-o'-do-form-iz*) [*iōw*, like a violet; *forma*, form]. To impregnate with iodoform.

**Iodol** (*i'-o'-dol*) [*iōw*, like a violet],  $C_{14}H_{11}I$ . An iodo-carbamid existing in the form of an amorphous brown powder, soluble in ether and oil. It is more actively antiseptic than iodoform and is free from odor. Locally it is an anesthetic, and favors granulation. It is of reputed service as an application to syphilitic sores, etc. **Dose** gr. ss-v. **Unof.**

**Iodo-naphthal-beta** (*i-o'-do-naf'-thol-ba'-tah*) [*iōw*, like a violet; *náphtha*, naphtha; *beta*, the second Greek letter]. The diiodid of naphthol-beta, suggested as a substitute for iodoform as an antiseptic dressing. **Unof.**

**Iodophenin** (*i-o'-do-fe'-nin*) [*iōw*, like a violet; *phenyl*]. A compound allied to phenacetin. It is an efficient bactericide, but is objectionable because of its strong evolution of iodin, of which it contains about 50 per cent. It is a crystalline powder, of an iodin-odor and a burning taste, and colors the skin yellow. It melts at 266° F. (130° C.). **Unof.**

**Iodophthisis** (*i-o'-doff'-this-is*) [*iōw*, like a violet; *phthisis*, a wasting]. The emaciation, or local or general wasting that may result from free use of iodin as a remedy.

**Iodopyrin** (*i-o'-do-pi'-rin*) [*iōw*, like a violet; *πiρ*, fire]. Iodantipyrin. A chemie compound of iodin and antipyrin, with the composition,  $C_{11}H_{11}IN_2O$ . It is an antipyretic in doses of from one to five grains. **Unof.**

**Iodo-quin Sulphate**. Same as *Herapathite*.

**Iodosis** (*i-o'-do'-sis*). Same as *Iodism*.

**Iodotannin** (*i-o'-do-tan'-in*) [*iōw*, like a violet; *ME.*, *tannen*, to tan]. An aqueous mixture of iodin and tannin.

**Iodotherapy** (*i-o'-do-ther'-ap-e*) [*iōw*, like a violet; *θεραπεία*, therapy]. The treatment or cure of disease by the use of iodin or its compounds.

**Iodum** (*i-o'-dum*). See *Iodin*.

**Iodure** (*i'-o'-dur*) [*iōw*, like a violet]. An iodid.

**Ioduret** (*i-o'-d-u-ret*) [*iōw*, like a violet]. An iodid.

**Ion** (*i'-on*) [*iōw*, *iōw*, going]. An element set free by electrolysis, and classified as an *anion* or *kation*, according as it is set free at the positive or negative pole.

**I.**, **Migration** of, the transference of an ion from one pole to another.

**Ionidium** (*i-o'-nid-um*) [*iōw*, a violet]. A genus of violaceous herbs and shrubs. **I. ipecacuanha**, produces what is called *white ipecac*; this and several other species are emetic and cathartic. See also *Cinchuchulli*. None is official; but the roots of several species are said to be mixed with commercial ipecac.

**Ionthus** (*i-on'-thus*) [*iōw*, *iōw*, going]. That form of acne that often accompanies the first appearance of the beard. A general name for acne and the diseases that resemble it.

**Iopterous** (*i-op'-ter-us*) [*iov*, a violet; *πτερόν*, a feather]. In biology, having violet-colored wings.

**Iotacism** (*i-o'-las-izm*) [*ιωτακισμός*, iotacism]. 1. Inability to pronounce distinctly the proper sound of the letter *i*. 2. Substitution of the long *e* sound for the *e* sounds of other vowels.

**Iotium** (*i-o'-te'-re-um*) [*ιός*, poison; *τερεῖν*, to pierce; *pl.*, *Ioteria*]. In biology, a poison-gland.

**Ipecac** (*ip'-e-kak*). See *Ipecacuanha*. **I.**, American. See *Gillenia*. **I.**, **White**. See *Ionidium*.

**Ipecacuan** (*ip'-e-kak'-u-an*). See *Ipecacuanha*.

**Ipecacuanha** (*ip'-e-kak'-u-an'-ah*) [Brazil., *ipecauguen*]. Ipecac. The root of *Cephaelis ipecacuanha*, found in Brazil. It contains an alkaloid, *emetin*,  $C_{20}H_{30}NO_5$ , and is an emetic, expectorant, and cholagogue; in very small doses, gr.  $\frac{1}{8}$ , it is a mild tonic. It is used mainly as a safe and prompt emetic, in membranous croup, and in the summer diarrhea of children. Dose as an expectorant gr. ss-ij; as an emetic gr. xv-xxx. **I.**, **Acetum**. (B. P.) Dose  $\mathfrak{m}\mathfrak{v}$ -xl. **I.**, **Ext.**, **Fld.** Dose  $\mathfrak{m}\mathfrak{j}$ -v. **I.**, **Syr.**, 5 per cent. strength. Dose  $\mathfrak{z}\mathfrak{j}$ - $\mathfrak{z}$ ss. **I.**, **Vin.**, 7 per cent. in strength. Dose  $\mathfrak{m}\mathfrak{j}$ - $\mathfrak{z}\mathfrak{j}$ . **I.**, **Trochisci**, contain each  $\frac{1}{4}$  gr. of the drug. **I.** et **morphinæ**, **Trochisci**, contain each, morphin sulph. gr.  $\frac{1}{32}$ , ipecac gr.  $\frac{1}{16}$ , with flavoring-oil and sugar. **I.** et **opii**, **Pulvis** (Pulv. ipec. comp., B. P.) Dover's powder, contains ipecac and opium each 10, sugar of milk 80 parts. Dose gr. ij-xv. **I.** cum **scilla**, **Pil.** (B. P.) Dose gr. v-x. **I.** et **opii**, **Tinct.**, deodorized tinct. of opium 100, evaporated to  $\mathfrak{z}\mathfrak{s}$ , fld. ext. ipecac 10, alcohol q. s. ad 100. Dose  $\mathfrak{m}\mathfrak{v}$ -xxx. **Emetin**. Dose as an expectorant gr.  $\frac{1}{16}$ - $\frac{1}{10}$ ; as an emetic  $\frac{1}{8}$ - $\frac{1}{4}$ .

**Ipomœa** (*ip'-o-me'-ah*) (*ψ*, worm; *βοτάνη*, like). A genus of convolvulaceous plants; bindweeds. **I.** **batatas** is the sweet potato. **I.** **purga**. See *Jalap*. **I.** **pandurata**, of the U. S., resembles jalap in its action. The seeds of *I. cœrulea* are recommended as a useful intestinal stimulant. **I.** **turpethum** affords turpeth-root, *q.v.* Many other species are medicinal. Unof.

**Iralgia** (*i-ral'-je-ah*). See *Iridalgia*.

**Irascibility** (*i-ras-ib-il'-it-e*) [*irasci*, to be angry]. The quality of being choleric, irritable, or of hasty temper. It is a frequent symptom in some varieties of insanity and in neurasthenia, and in some cases it amounts to a species of insanity.

**Iridæmia** (*ir-id-æ-me'-ah*). See *Iridemia*.

**Iridal** (*i'-rid-al*) [*iris*, iris]. Relating to the iris.

**Iridalgia** (*i-rid-al'-je-ah*) [*iris*, iris; *άλγος*, pain]. Pain referable to the iris.

**Iridauxesis** (*ir-id-awks-el'-sis*) [*iris*, iris; *αἰσχίσις*, increase]. Auxesis or tumefaction of the iris.

**Iridavulsion** (*ir-id-av-ul'-shun*) [*iris*, iris; *avellere*, to tear away]. Surgical avulsion of the iris.

**Iridectome** (*ir-id-ek'-tom*) [*iris*, iris; *ἐκτομή*, a cutting out]. A cutting instrument used in iridectomy.

**Iridectomy** (*ir-id-ek'-to-me*) [*iris*, iris; *ἐκτομή*, excision]. The cutting out of a part of the iris. **I.**, **Antiphlogistic**, one performed in inflammatory processes for therapeutic purposes. In **Optic I.** the piece of iris excised is over a portion of the lens or beneath a portion of cornea clearer than that exposed in the natural pupil, as a result of which additional vision is gained. See *Pupil*, *Artificial*. **I.**, **Preliminary**, is performed in advance of the extraction of cataract, instead of at the same time.

**Iridectropium** (*ir-id-ek-tro'-pe-um*) [*iris*, iris; *ἐκτροπῶν*, eversion]. Eversion of a part of the iris.

**Iridemia** (*ir-id-el'-me-ah*) [*iris*, iris; *αἷμα*, blood]. Hemorrhage from the iris.

**Iridenclæsis**, or **Iridenkleisis** (*ir-id-en-kli'-sis*) [*iris*, iris; *ἐγκλείν*, to lock in]. See *Iridodæsis*.

**Iridentropium** (*ir-id-en-tro'-pe-um*) [*iris*, iris; *ἐντροπή*, a turning in]. Inversion of a part of the iris.

**Irideremia** (*ir-id-cr-el'-me-ah*) [*iris*, iris; *ἰρρημία*, lack]. Absence of one or both irides.

**Iridescence** (*ir-id-es'-ens*) [*iridescere*, to shine with rainbow-colors]. The property of breaking up light into the spectral colors.

**Iridesis** (*ir-id-el'-sis*). See *Iridodæsis*.

**Iridian** (*i-rid'-e-an*) [*iris*, iris]. Relating to the iris; iridal.

**Iridicolor** (*ir-id'-ic-ul-or*) [*iris*, a rainbow; *color*, color]. In biology, iridescent; exhibiting prismatic colors.

**Iridin** (*i'-rid-in*) [*iris*, iris]. *Irisin*; a precipitated extract of *Blue Flag*. See *Iris*.

**Iritis** (*ir-id-i'-tis*). Same as *Iritis*.

**Iridization** (*ir-id-iz-a'-shun*) [*iris*, iris]. The subjective appearance, as of an iridescent halo seen by persons affected with glaucoma.

**Iridocœle** (*i-rid'-o-sel*) [*iris*, iris; *κῆλη*, hernia]. Protrusion of a part of the iris through a wound or ulcer.

**Iridochoroiditis** (*ir-id-o-ko-roid-i'-tis*) [*iris*, iris; *χόριον*, chorion; *εἶδος*, likeness; *τις*, inflammation]. Inflammation of both the iris and the choroid of the eye, the form usually assumed in sympathetic ophthalmia.

**Iridocinesis** (*ir-id-o-sin-el'-sis*). See *Iridokinesis*.

**Iridocyclitis** (*ir-id-o-sik-lil'-tis*) [*iris*, iris; *κύκλος*, a circle; *τις*, inflammation]. Inflammation of the iris and the ciliary body. See *Cyclitis*.

**Iridocyclochoroiditis** (*ir-id-o-sik-lo-ko-roid-i'-tis*) [*iris*, iris; *κύκλος*, circle; *χόριον*, chorion; *εἶδος*, likeness; *τις*, inflammation]. Combined inflammation of the iris, the ciliary body, and the choroid.

**Iridocyte** (*ir'-id-o-sit*) [*iris*, rainbow; *κύτος*, cell]. Any cell that produces color, either by means of its structure or its contents.

**Iridodæsis** (*ir-id-od'-es-is*) [*iris*, iris; *δέσις*, a binding together]. An obsolete method of displacing the normal pupil by ligature, instead of iridectomy.

**Iridodialysis** (*ir-id-o-di-al'-is-is*). See *Cordialysis*.

**Iridodonesis** (*ir-id-o-do-ne'-sis*) [*iris*, iris; *δόνσις*, a trembling]. Tremulousness of the iris; hippus.

**Iridokinesis** (*ir-id-o-kin-el'-sis*) [*iris*, iris; *κίνησις*, movement]. Any movement of the iris, normal or otherwise.

**Iridomalacia** (*ir-id-o-mal-a'-se-ah*) [*iris*, iris; *μαλακία*, softness]. Morbid softening of the iris.

**Iridomotor** (*ir-id-o-mo'-tor*) [*iris*, iris; *movere*, to move]. Promoting the motion of the iris.

**Iridoncosis** (*ir-id-on-ko'-sis*) [*iris*, iris; *ὄγκωσις*, a puffing out]. Thickening of the iris.

**Iridoncus** (*ir-id-on'-g'-kus*) [*iris*, iris; *ὄγκος*, mass]. A tumor or swelling of the iris.

**Iridoparalysis** (*ir-id-o-par-al'-is-is*) [*iris*, iris; *παράλυσις*, paralysis]. Paralysis of the iris.

**Iridoparesis** (*ir-id-o-par'-es-is*) [*iris*, iris; *πάρεσις*, a letting go]. A slight or partial paralysis of the iris.

**Iridoplasia** (*ir-id-o-pla'-ne-ah*) [*iris*, iris; *πλάνη*, a wandering]. Same as *Hippus*.

**Iridoplasma** (*ir-id-o-pla'-mah*) [*iris*, iris; *πλάσμα*, anything formed]. A form of degeneration of the iris.

**Iridoplegia** (*ir-id-o-ple'-je-ah*) [*iris*, iris; *πληγή*, stroke]. Paralysis of the sphincter of the iris.

**Iridoptosis** (*ir-id-op-to'-sis*) [*iris*, iris; *πτῶσις*, a falling]. Prolapse of the iris.

**Irido-pupillary** (*ir-id-o-pu'-pil-a-re*) [*iris*, iris; *pupilla*, the pupil of the eye]. Pertaining to the iris and the pupil.

**Iridorrhæxis** (*ir-id-or-reks'-is*) [*iris*, iris; *ρήξις*, a breaking]. Iridectomy with iridavulsion. Rupture of the iris.

**Iridoschisis**, or **Iridoschisma** (*ir-i-dos'ish-i-sis*, [*ir-i-dos'ish-i-sis*, -*ish-i-sis*, -*ish-i-sis*], [*ir-i-dos'ish-i-sis*, -*ish-i-sis*, -*ish-i-sis*]).  
 Cleft of the iris.  
**Iridatome** (*ir-i-dat'om-e*) [*ir-i-dat'om-e*, -*om-e*, -*om-e*], a cutting.  
 A small instrument used in iridotomy.  
**Iridotomy** (*ir-i-dot'om-ee*) [*ir-i-dot'om-ee*, -*om-ee*, -*om-ee*], a cutting.  
 An incision of the iris into the eye.  
**Iridotomy** (*ir-i-dot'om-ee*) [*ir-i-dot'om-ee*, -*om-ee*, -*om-ee*], a cutting.  
 An incision of the iris into the eye.  
**Iris** (*ir-i-sis*) [*ir-i-sis*, -*is*, -*is*], the colored part of the eye, situated between the cornea and the lens; attached to the posterior ciliary body and ciliary body; the colored part of the eye. 1. The iris. 2. Blue flag. The iris is a thin, transparent, biconvex structure, containing a resinous

FIG. 18. THE IRIS.

1. Outer surface. 2. 3. 4. 5. 6. 7. 8. 9. 10. 11. 12. 13. 14. 15. 16. 17. 18. 19. 20. 21. 22. 23. 24. 25. 26. 27. 28. 29. 30. 31. 32. 33. 34. 35. 36. 37. 38. 39. 40. 41. 42. 43. 44. 45. 46. 47. 48. 49. 50. 51. 52. 53. 54. 55. 56. 57. 58. 59. 60. 61. 62. 63. 64. 65. 66. 67. 68. 69. 70. 71. 72. 73. 74. 75. 76. 77. 78. 79. 80. 81. 82. 83. 84. 85. 86. 87. 88. 89. 90. 91. 92. 93. 94. 95. 96. 97. 98. 99. 100. 101. 102. 103. 104. 105. 106. 107. 108. 109. 110. 111. 112. 113. 114. 115. 116. 117. 118. 119. 120. 121. 122. 123. 124. 125. 126. 127. 128. 129. 130. 131. 132. 133. 134. 135. 136. 137. 138. 139. 140. 141. 142. 143. 144. 145. 146. 147. 148. 149. 150. 151. 152. 153. 154. 155. 156. 157. 158. 159. 160. 161. 162. 163. 164. 165. 166. 167. 168. 169. 170. 171. 172. 173. 174. 175. 176. 177. 178. 179. 180. 181. 182. 183. 184. 185. 186. 187. 188. 189. 190. 191. 192. 193. 194. 195. 196. 197. 198. 199. 200. 201. 202. 203. 204. 205. 206. 207. 208. 209. 210. 211. 212. 213. 214. 215. 216. 217. 218. 219. 220. 221. 222. 223. 224. 225. 226. 227. 228. 229. 230. 231. 232. 233. 234. 235. 236. 237. 238. 239. 240. 241. 242. 243. 244. 245. 246. 247. 248. 249. 250. 251. 252. 253. 254. 255. 256. 257. 258. 259. 260. 261. 262. 263. 264. 265. 266. 267. 268. 269. 270. 271. 272. 273. 274. 275. 276. 277. 278. 279. 280. 281. 282. 283. 284. 285. 286. 287. 288. 289. 290. 291. 292. 293. 294. 295. 296. 297. 298. 299. 300. 301. 302. 303. 304. 305. 306. 307. 308. 309. 310. 311. 312. 313. 314. 315. 316. 317. 318. 319. 320. 321. 322. 323. 324. 325. 326. 327. 328. 329. 330. 331. 332. 333. 334. 335. 336. 337. 338. 339. 340. 341. 342. 343. 344. 345. 346. 347. 348. 349. 350. 351. 352. 353. 354. 355. 356. 357. 358. 359. 360. 361. 362. 363. 364. 365. 366. 367. 368. 369. 370. 371. 372. 373. 374. 375. 376. 377. 378. 379. 380. 381. 382. 383. 384. 385. 386. 387. 388. 389. 390. 391. 392. 393. 394. 395. 396. 397. 398. 399. 400. 401. 402. 403. 404. 405. 406. 407. 408. 409. 410. 411. 412. 413. 414. 415. 416. 417. 418. 419. 420. 421. 422. 423. 424. 425. 426. 427. 428. 429. 430. 431. 432. 433. 434. 435. 436. 437. 438. 439. 440. 441. 442. 443. 444. 445. 446. 447. 448. 449. 450. 451. 452. 453. 454. 455. 456. 457. 458. 459. 460. 461. 462. 463. 464. 465. 466. 467. 468. 469. 470. 471. 472. 473. 474. 475. 476. 477. 478. 479. 480. 481. 482. 483. 484. 485. 486. 487. 488. 489. 490. 491. 492. 493. 494. 495. 496. 497. 498. 499. 500. 501. 502. 503. 504. 505. 506. 507. 508. 509. 510. 511. 512. 513. 514. 515. 516. 517. 518. 519. 520. 521. 522. 523. 524. 525. 526. 527. 528. 529. 530. 531. 532. 533. 534. 535. 536. 537. 538. 539. 540. 541. 542. 543. 544. 545. 546. 547. 548. 549. 550. 551. 552. 553. 554. 555. 556. 557. 558. 559. 560. 561. 562. 563. 564. 565. 566. 567. 568. 569. 570. 571. 572. 573. 574. 575. 576. 577. 578. 579. 580. 581. 582. 583. 584. 585. 586. 587. 588. 589. 590. 591. 592. 593. 594. 595. 596. 597. 598. 599. 600. 601. 602. 603. 604. 605. 606. 607. 608. 609. 610. 611. 612. 613. 614. 615. 616. 617. 618. 619. 620. 621. 622. 623. 624. 625. 626. 627. 628. 629. 630. 631. 632. 633. 634. 635. 636. 637. 638. 639. 640. 641. 642. 643. 644. 645. 646. 647. 648. 649. 650. 651. 652. 653. 654. 655. 656. 657. 658. 659. 660. 661. 662. 663. 664. 665. 666. 667. 668. 669. 670. 671. 672. 673. 674. 675. 676. 677. 678. 679. 680. 681. 682. 683. 684. 685. 686. 687. 688. 689. 690. 691. 692. 693. 694. 695. 696. 697. 698. 699. 700. 701. 702. 703. 704. 705. 706. 707. 708. 709. 710. 711. 712. 713. 714. 715. 716. 717. 718. 719. 720. 721. 722. 723. 724. 725. 726. 727. 728. 729. 730. 731. 732. 733. 734. 735. 736. 737. 738. 739. 740. 741. 742. 743. 744. 745. 746. 747. 748. 749. 750. 751. 752. 753. 754. 755. 756. 757. 758. 759. 760. 761. 762. 763. 764. 765. 766. 767. 768. 769. 770. 771. 772. 773. 774. 775. 776. 777. 778. 779. 780. 781. 782. 783. 784. 785. 786. 787. 788. 789. 790. 791. 792. 793. 794. 795. 796. 797. 798. 799. 800. 801. 802. 803. 804. 805. 806. 807. 808. 809. 810. 811. 812. 813. 814. 815. 816. 817. 818. 819. 820. 821. 822. 823. 824. 825. 826. 827. 828. 829. 830. 831. 832. 833. 834. 835. 836. 837. 838. 839. 840. 841. 842. 843. 844. 845. 846. 847. 848. 849. 850. 851. 852. 853. 854. 855. 856. 857. 858. 859. 860. 861. 862. 863. 864. 865. 866. 867. 868. 869. 870. 871. 872. 873. 874. 875. 876. 877. 878. 879. 880. 881. 882. 883. 884. 885. 886. 887. 888. 889. 890. 891. 892. 893. 894. 895. 896. 897. 898. 899. 900. 901. 902. 903. 904. 905. 906. 907. 908. 909. 910. 911. 912. 913. 914. 915. 916. 917. 918. 919. 920. 921. 922. 923. 924. 925. 926. 927. 928. 929. 930. 931. 932. 933. 934. 935. 936. 937. 938. 939. 940. 941. 942. 943. 944. 945. 946. 947. 948. 949. 950. 951. 952. 953. 954. 955. 956. 957. 958. 959. 960. 961. 962. 963. 964. 965. 966. 967. 968. 969. 970. 971. 972. 973. 974. 975. 976. 977. 978. 979. 980. 981. 982. 983. 984. 985. 986. 987. 988. 989. 990. 991. 992. 993. 994. 995. 996. 997. 998. 999. 1000.

SECTION OF CILIARY BODY AND IRIS.

1. Ciliary processes. 2. Their bases or rounded extremities. 3. Their apices. 4. A process with bifurcated ends. 5. 6. Reticulated folds, or ciliary processes of the second order. 7. 8. Venules that emanate from the ciliary processes. 9. 10. Venules of choroid. 11. 12. Section of iris. 13. 14. Circumference of iris. 15. 16. Small ring of iris. 17. 18. Large ring of iris.

principle, *iridin*. The fresh rhizome is purgative, emetic, and diuretic, and is serviceable in catarrh of the duodenum, and in malarial ailments. **I., Ext.** Dose gr. j-v. **I., Absence of.** See *Irideremia*. **I., Angle of,** that formed by the junction of the cornea and the iris. **I.-contraction.** See *Reflexes*, *Table of*. **I.-green.** Same as *Bladder-green*. **I., Prolapse of (or Hernia of),** protrusion of a portion of the iris through an opening in the cornea or sclera; when the iris is adherent the condition is called *anterior synechia*; when the iris is adherent to the lens behind, the condition is called *posterior synechia*. **I., Tremulous,** arises from non-support of the iris in aphakia or dislocation of the crystalline lens. **Irish (i'-rish)** [ME., *Irish*, Irish]. Pertaining to Ireland. **I. Ague.** Synonym of *Typhus Fever*, q. v. **I. Moss.** See *Chondrus*. **Irisin (i'-ris-in)** [*iris*, iris]. The precipitate from a tincture of the root of Blue-flag, *Iris versicolor*; it is cholagogue, sialagogue, and diuretic. Dose 2 to 4 grains. Unof. **Iritis (i'-rit-ik)** [*itis*, iris; *itis*, inflammation]. Of the nature of, pertaining to, or affected with, iritis. **Iritis (i'-rit-tis)** [*itis*, iris; *itis*, inflammation]. Inflammation of the iris, called after its origin, or character, blennorrhagic, rheumatic, diabetic, syphilitic, plastic, serous, primary, secondary. **I., Condylomatous, I. papulosa;** that accompanied by the formation of papules or condylomata in the iris. **I. gummosa,** that in which gummata are formed in the iris. **I. papulosa.** See *I., Condylomatous*. **Iridomy (i-rit'-o-me).** See *Iridotomy*. **Iron (i'-ern)** [ME., *iron*, iron]. See *Ferrum*. **I. Bath.** See *Bath*. **I. Minium.** Same as *Colcothar*. **I. Wood,** the heart-wood of *Ostrya virginica*, a tonic, antiperiodic, and alterative. It has been successfully used in malarial diseases, neuralgia, and strumous affections. Dose of the fld. ext., 5 ss-j. Unof. **Irradiating (ir-ra'-de-a-ting)** [*irradiare*, to emit rays in every direction]. Radiating from a center, as a pain arising from a definite focus of irritation. **Irradiation (ir-ra-de-a'-shun)** [*irradiatio*; *irradiare*, to emit rays in every direction]. A phenomenon in which, owing to the difference in the illumination of the field of vision, or its background, objects appear much larger than they really are. **Irreducible (ir-re-dus'-ib-ut)** [*in*, not; *reducere*, to lead back]. That which cannot be reduced or restored to its normal condition. In chemistry, applied to a compound that cannot be separated. In surgery, applied to a fracture or dislocation that cannot be replaced. **I. Hernia.** See *Hernia*. **Irregular (ir-reg'-u-lar)** [*in*, not; *regula*, rule]. Not regular; not normal or according to rule; not rhythmic; not recurring at proper intervals. **Irregularity (ir-reg'-u-lar'-it-ee)** [*in*, not; *regula*, a rule]. Lack of regularity; unevenness. **I. of the Teeth,** deviation of the teeth from their natural arrangement is of frequent occurrence, and is dependent upon a variety of causes. The following are among the most frequent: 1. Want of synchronism between the destruction of the roots of the temporary teeth and the growth of the permanent teeth. 2. The premature removal of one or more of the temporary teeth. 3. Disproportion between the size of the alveolar arch and the teeth. 4. Supernumerary teeth. 5. Malformation of the jaws.

**Irrespirable** (*ir-res-pi'-rab-l*) [*in*, not; *respirare*, to breathe]. Not capable of being breathed.

**Irrigant** (*ir'-ig-ant*) [*irrigare*, to lead water to]. A substance or wash used in or by irrigation.

**Irrigation** (*ir'-ig-a'-shun*) [*irrigare*, to lead water to]. The application of water, especially a stream, to an inflamed or abnormal tissue for purposes of moistening, antiseptics, cooling, or flushing the part.

**Irrigator** (*ir'-ig-a-tor*) [*irrigare*, to lead water to]. An apparatus, or device, for accomplishing the irrigation of a part, surface, or cavity.

**Irritability** (*ir'-it-ab-il'-it-e*) [*irritabilitas*, irritability]. The quality of being susceptible to excitement or irritation. **I.**, **Faradic**, the muscular contraction caused by a secondary or induced current. **I.**, **Galvanic**, the muscular contraction caused by the direct current. **I.**, **Muscular**, the inherent contractile quality of a muscle. **I.**, **Nervous**, the property of a nerve to transmit impulses upon stimulation. See, also, *irascibility*.

**Irritable** (*ir'-it-ab-l*) [*irritabilis*, easily excited]. Easily inflamed. Susceptible to irritation. **I.** **Bladder**, a condition of the bladder marked by constant desire to void urine. **I.** **Breast**, a neuralgic condition of the mammary gland, usually associated with uterine affections, or with intercostal neuralgia. **I.** **Heart**, Da Costa's term for a peculiar condition of the heart characterized by precordial pain, dyspnea on exertion, palpitation, and irregularity of the heart's action. It is induced by over-exertion, masturbation, and neurotic tendencies. Hypertrophy may occasionally develop. **I.** **Spine**, a condition of spinal anemia frequently occurring in young hysteric females. There is pain along the spine, with tenderness on pressure, and vertigo, nausea, palpitation, and neuralgias. **I.** **Testicle**. See *Testicle*. **I.** **Tongue**, the clean, very red tongue, with enlarged red papillae about its tip, seen in the dyspepsia of drunkards.

**Irritant** (*ir'-it-ant*) [*irritare*, to excite]. **1.** Causing, or giving rise to, irritation. **2.** An agent or remedy that induces irritation or inflammation. **I.**, **Chemic**, one acting by virtue of its affinity for the elements or compounds of organic tissue, as nitric acid, or potassic hydrate. **I.**, **Mechanical**, one causing lesions or inflammations by mechanical operation, as cuts, contusions, pressure, or distention. **I.**, **Nervous**, one acting through the medium of the nerves.

**Irritation** (*ir'-it-a'-shun*) [*irritatio*, excitement]. A condition of undue excitement. Also, an inflamed state. Also, the stimulus necessary to the performance of the functions of an organ.

**Irritative** (*ir'-it-a-tiv*) [*irritare*, to excite]. Exciting or irritating. **I.** **Fever**, a febrile condition dependent upon the presence in the body of irritating substances. Also a synonym of *Simple Continued Fever*.

**Irrorate** (*ir'-or-at*) [*in*, upon; *rorare*, to distil dew]. In biology, minutely dotted, as if with small dew-drops.

**Irrumation** (*ir'-u-ma'-shun*) [*irrumare*, to give suck]. Same as *Buccal Coitus*, *q. v.*

**Isabel**, *Isabelle* (*iz'-a-bel*) [*Isabelle*, a woman's name]. Drab, or yellowish gray.

**Isadelphous** (*i-sad-el'-fus*) [*isos*, equal; *ἀδελφός*, brother]. In biology, having an equal number of stamens in each bundle or brotherhood.

**Isambert's Disease**. Acute miliary tuberculosis of the larynx and pharynx.

**Isandrous** (*i-san'-drus*) [*isos*, equal; *ἀνὴρ*, a male]. In biology, having stamens alike and corresponding in number to the petals.

**Isanthous** (*i-san'-thus*) [*isos*, equal; *ἄνθος*, a flower]. In biology, having regular flowers.

**Isatin** (*i'-sat-in*) [*ἰσάτις*, wood],  $C_8H_5NO_3$ . A substance obtained by the oxidation of indigo with  $HNO_3$ . It crystallizes in yellowish red monoclinic prisms, melting at  $201^\circ C$ . It dissolves in water and in alcohol with a reddish-brown color; it has a disagreeable odor. **I.-yellow**. See *Pigments*, *Conspectus of*.

**Isatoxim** (*i-sat-oks'-im*) [*ἰσάτις*, wood; *τοξικόν*, poison],  $C_8H_5N_2O_2$ . A substance prepared from isatin and hydroxylamin. It crystallizes from alcohol in yellow needles, and melts at  $202^\circ C$ .

**Isatropylcocain** (*i-sat-ro'-pil-ko-ka'-in*),  $C_{19}H_{22}NO_4$ . An amorphous alkaloid from coca leaves. It has no anesthetic properties, but is said to be an active cardiac poison. Unof. See *Cocain*.

**Ischemia** (*is-ke'-me-ah*) [*ἰσχεῖν*, to check; *αἷμα*, blood]. Bloodlessness. Deficiency of the supply of blood to a part. Local anemia.

**Ischemic** (*is-kem'-ik*) [*ἰσχεῖν*, to check; *αἷμα*, blood]. Affected with or relating to ischemia.

**Ischesis** (*is'-kes-is*) [*ἰσχεῖν*, to check]. Retention or suppression of a discharge or secretion.

**Ischiadic** (*is-ke-ad'-ik*). Same as *Ischiatic*.

**Ischiagra** (*is-ke-a'-grah*) [*ἰσχίον*, hip; *ἀγρᾶ*, seizure]. Gout in the hip.

**Ischial** (*is'-ke-al*) [*ἰσχίον*, ischium]. Pertaining or belonging to the ischium.

**Ischialgia** (*is-ke-al'-je-ah*) [*ἰσχίον*, hip; *ἄλγος*, pain]. Sciatica; neuralgia of the hip.

**Ischialgic** (*is-ke-al'-jik*) [*ἰσχίον*, hip; *ἄλγος*, pain]. Relating to or affected with ischialgia.

**Ischiatic** (*is-ke-at'-ik*) [*ἰσχίον*, hip]. Pertaining to the ischium. **I.** **Notches**, the notches, greater and lesser, of the ischium. The former transmits the pyriformis muscle, gluteal vessels, and superior gluteal nerve, the latter the tendon of the obturator internus, its nerve, and the pudic vessels and nerve. These notches are called also sacro-sciatic notches. (See illustration on p. 228.)

**Ischiatitis** (*is-ke-at-i'-tis*) [*ἰσχίον*, hip; *ἰτίς*, inflammation]. Inflammation of the sciatic nerve.

**Ischiatocele** (*is-ke-at'-o-sel*). See *Ischiocele*.

**Ischidrosis** (*is-kid-ro'-sis*) [*ἰσχεῖν*, to suppress; *ἰδρώς*, sweat]. Suppression of sweat.

**Ischidrotic** (*is-kid-ro'-ik*) [*ἰσχεῖν*, to suppress; *ἰδρώς*, sweat]. Causing a retention or suppression of the sweat.

**Ischien** (*is'-ke-en*) [*ἰσχίον*, hip]. Belonging to the ischium in itself.

**Ischigalactic** (*is-ke-gal-ak'-tik*) [*ἰσχεῖν*, to restrain; *γάλα*, milk]. **1.** Tending to check the flow of milk. **2.** An antigalactic agent or medicine.

**Ischio-** (*is'-ke-o-*) [*ἰσχίον*, hip]. A prefix indicating relationship to the ischium. **I.-anal**, pertaining to the ischium and the anus. **I.-bulbar**, pertaining to the ischium and the bulb of the urethra. **I.-capsular**, pertaining to the ischium and the capsular ligament of the hip. **I.-cavernosus**, the muscle that compresses the veins of the *crus penis* and assists in the erection of the penis. The **I.-clitorianus** has a similar relation to the clitoris. See *Muscles*, *Table of*. **I.-fibular**, pertaining both to the ischium and the fibula. **I.-neuralgia**, sciatica. **I.-perineal**, belonging to or pertaining to both ischium and perineum; pertaining to the space between the anus and the scrotum. **I.-pubectomy**. See *Farabaut's Operation*. **I.-sacral**, relating to the ischium and the sacrum. **I.-tibial**, relating both to the ischium and the tibia. **I.-vertebral**, relating to the ischium and the vertebral column.

**Ischiocele** (*is'-ke-o-sel*) [*ἰσχίον*, hip; *κῆλη*, tumor]. Ischiatic hernia.

**Ischiocerite** (*is-ke-os'-er-rit*) [*ἰσχίον*, hip-joint; *κέρας*, horn]. In biology, the third joint of the developed

- appearance of a crateriform. It is borne upon the basiconic and bears the macrotrichia.
- Ischiodidymus** (*ischio-did-y-mus*) [*ischio*, hip; *didymus*, double]. A double eminence situated at the hips.
- Ischiognathite** (*ischio-gna-thite*) [*ischio*, hip; *gnathos*, jaw]. The third joint of any one of the mouth parts of an arthropod.
- Ischiomycelitis** (*ischio-my-sel'i-tis*) [*ischio*, hip; *loins*; *mycelis*, mycelia, etc.; *itis*, inflammation]. Lumbar mycelitis; mycelomycelitis.
- Ischiopagus** (*ischio-pa-gus*) [*ischio*, hip; *pagos*, united]. A symmetrical insectivore united by the mesopods and the wings.
- Ischiophtalmia** (*ischio-ph-tal-mia*) [*ischio*, hip; *ophthalmos*, a visual]. Strabismus associated with or due to hip joint disease.
- Ischiopodite** (*ischio-pod'i-tye*) [*ischio*, hip joint; *podite*, foot]. In biology, the third joint of the inner endopod of the two middle divisions of the typical limb of a crustacean.
- Ischirectal** (*ischio-rect'al*) [*ischio*, ischium; *rectus*, straight]. Relating to both ischium and rectum.
- I. Abscess** or **I. Cellulitis**, an inflammation of the anal sac or of the ischirectal fossa involving the rectum and the duct. Suppuration may occur at any point of the inflammation, but is ordinarily near the anus. **I. Fascia**. See *Fascia*. **I. Fossa**, a deep fossa filled with fatty tissue situated on either side of and between the rectum and the ischium.
- Ischium** (*isch-i-um*) [*ischio*, hip]. 1. The inferior part of the os innominatum or hip-bone; the bone upon which the body rests in a sitting posture. It forms a part, prox. of the acetabulum. (See illustration on p. 228.) 2. The third joint of any appendage of a crustacean, e. g., the *ischionathite* and the *ischipodite*.
- Ischnagryia** (*isch-na-gr'i-a*) [*ischion*, feeble; *agryia*, pain]. A condition attended with slight development of the secondary convulsions.
- Ischnous** (*isch-nous*) [*ischos*, thin]. Emaciated.
- Isch-** (*isch*) [*isch*, to suppress]. A prefix meaning to suppress, to stop, or checked.
- Ischidiermia** (*isch-id-er'mi-a*) [*ischio*, to suppress; *diernia*, disease]. The suppression of a mucous discharge.
- Ischolenois** (*isch-no-i-s*) [*ischio*, to suppress; *nois*, discharge]. The suppression of any established or normal discharge.
- Ischobolia** (*isch-bo-li-a*) [*ischio*, to suppress; *bolē*, bile]. A suppression of the flow of bile.
- Ischogalactia** (*isch-ga-lak'ti-a*) [*ischio*, to suppress; *galactia*, milk]. Suppression of the natural flow of milk.
- Ischodachia** (*isch-da-k'i-a*) [*ischio*, to suppress; *dachia*, lacrymation]. Suppression of the lachryal flow.
- Ischumenia** (*isch-me-ni-a*) [*ischio*, to suppress; *men*, monthly, menstrual]. Suppression of the menstrual flow.
- Ischophonia** (*isch-o-fon-i-a*) [*ischio*, to suppress; *phonia*, voice]. Aphonia. An impediment in speech.
- Ischopyria** (*isch-o-p'i-ri-a*) [*ischio*, to suppress; *pyria*, pus]. The checking of any discharge of pus.
- Ischopermia** (*isch-pe-r'mi-a*) [*ischio*, to check; *perma*, semen]. Suppression of semen.
- Ischurctic** (*isch-ur-ek'tik*) [*ischio*, to suppress; *alpor*, urine]. 1. Relating to or relieving ischuria. 2. A remedy or agent that relieves retention or suppression of urine.
- Ischuria** (*isch-ur-i-a*) [*ischio*, to suppress; *alpor*, urine]. Retention or suppression of urine. **I. paradoxica**, the condition in which there is an excessive dribbling of the bladder, with constant dribbling of urine.
- Ischyomycelitis** (*isch-yo-my-sel'i-tis*). See *Ischyomycelitis*.

- Isidium** (*is-id'ee-um*) [*Is.*; *pl.*, *Isidia*]. In biology, an excrescence frequently found upon lichens; it corresponds to a soredium.
- Isinglass** (*is'-zing-glas*). See *Ichthyocolla* and *Glue*. **I., Vegetable**. See *Agar-agar*.
- Island** (*is'-land*) [*ME.*, *iland*, island]. See *Insula* and *Blood-island*. **I. of Reil**, the central lobe of the hemisphere of the brain, situated at the base, on either side of the fissure of Sylvius. See *Insula*.
- Iso-** (*is'-sə*) [*isos*, equal]. A prefix signifying equality.
- Iso-amylamin** (*is-o-am-il'-am-in*) [*isos*, equal; *amylum*, starch; *amin*]. A ptomaine obtained in the distillation of horn with potassic hydrate; it also occurs in the putrefaction of yeast. It boils at 95° C., and is non-poisonous. See *Ptomaines*, *Table of*.
- Iso-apiol** (*is-o-a'l'-p-i-ol*) [*isos*, equal; *apium*, parsley; *oleum*, oil]. A substance obtained from apiol, exercising a powerful influence upon the vasomotor system.
- Isobar** (*is'-so-bar*) [*isos*, equal; *βάρος*, weight]. In meteorology, a term denoting a line drawn through points having the same synchronous barometric pressure.
- Isobrious** (*is-o'-bre-us*) [*isos*, equal; *βρίαν*, to be strong, to make strong]. In biology, applied to dicotyledonous embryos, the two lobes of which grow with equal vigor; isodynamous.
- Isocapro lactone** (*is-o-kap-ro-lak'tōn*) [*isos*, equal; *capra*, a goat; *lac*, milk],  $C_6H_{10}O_2$ . A compound produced by the distillation of terebic acid. It melts at about 7° C.; boils at 206° C., or 207° C.; at 0° C. it is soluble in double its bulk of water.
- Iso-cercal** (*is-o-ser'-kal*) [*isos*, equal; *κέρκος*, tail]. In biology, having the tail symmetrically divided by the straight back-bone.
- Ischolesterin** (*is-ko-les'-ter-in*) [*isos*, equal; *χολή*, bile; *στεαρ*, fat],  $C_{26}H_{44}O$ . A substance isomeric with cholesterol, and found in distilled sheep's fat; it melts at 138° C.
- Isocholin** (*is-o-ko'-lin*) [*isos*, equal; *χολή*, bile],  $C_5H_{15}NO_2$ . A body isomeric with cholin; it is found in flyagaric, and may be formed by oxidizing cholin.
- Isochromatic** (*is-o-kro-mat'-ik*) [*isos*, equal; *χρῶμα*, color]. Having the same color.
- Isochronism** (*is-sok'-ro-nizm*) [*isos*, equal; *χρόνος*, time]. The quality of occurring at equal intervals of time, or lasting for equal periods of time.
- Isochronous** (*is-sok'-ro-nus*) [*isos*, equal; *χρόνος*, time]. Having, occurring at, or occupying equal intervals of time.
- Isocoria** (*is-ko'-re-ah*) [*isos*, equal; *κόρη*, pupil]. Equality in diameter of the two pupils.
- Isocyclus** (*is-so-sil'-klus*) [*isos*, equal; *κύκλος*, circle]. In biology, an organism consisting of a series of similar rings.
- Isodactylous** (*is-o-dak'-til-us*) [*isos*, equal; *δάκτυλος*, digit]. In biology, having the toes and digits alike.
- Isodimorphism** (*is-o-di-morf'-ism*) [*isos*, equal; *διμορφος*, two-formed]. A form of dimorphism, characterized by the appearance of a substance in two similar but incompatible forms.
- Isodiometric** (*is-o-di-o-met'-orms*) [*isos*, equal; *διά*, through; *μέτρον*, measure]. Having equal diameters.
- Isodont** (*is'-so-dont*) [*isos*, equal; *ὀδόν*, tooth]. Having teeth of the same size and shape.
- Isodulcite** (*is-o-dul'-sit*). See *Rhamnose*.
- Isodynamia** (*is-o-di-nam'-e-ah*) [*isos*, equal; *δύναμις*, force]. The property of being isodynamic.
- Isodynamic** (*is-o-di-nam'-ik*) [*isos*, equal; *δύναμις*, force]. Having equal force. **I. Foods**, those that produce an equal amount of heat in undergoing the chemie changes of digestion.

**Isodynamous** (*i-so-di'-nam-us*) [*ἴσος*, equal; *δύναμις*, power, force]. Same as *Isobrious*.

**Iso-electric** (*i-so-e-lek'-tric*) [*ἴσος*, equal; *ἤλεκτρον*, amber]. Equally electric; applied to two bodies or points. **I. Curves.** See *Tension-curves*. **I. Surfaces.** See *Tension-planes*.

**Isogamous** (*i-sog'-am-us*) [*ἴσος*, equal; *γάμος*, marriage]. A term used to designate that mode of reproduction in which the uniting gametes are of equal size. The same as conjugating.

**Isogamy** (*i-sog'-am-e*) [*ἴσος*, equal; *γάμος*, marriage]. In biology, conjugation of similar gametes.

**Isogeny** (*i-sog'-en-e*) [*ἴσος*, equal; *γένος*, kind]. In biology, having a general similarity of origin.

**Isognathous** (*i-sog'-na-thus*) [*ἴσος*, equal; *γνάθος*, jaw]. In biology, having the molar teeth of both jaws alike.

**Isogonic** (*i-so-gon'-ik*) [*ἴσος*, equal; *γόρος*, offspring]. In biology, characterized by isogonism.

**Isogonism** (*i-sog'-o-nizm*) [*ἴσος*, equal; *γόρος*, offspring]. In biology, the production by different stocks of sexual organisms of identical structure.

**Isogynous** (*i-sog'-in-us*) [*ἴσος*, equal; *γυνή*, female]. In biology, having the pistils or carpels equal in number to the sepals.

**Isolate** (*is'-so-lat* or *i'-so-lat*) [*isola*, an island]. To separate one from another. To place apart. In chemistry, to separate an element from its combination. In electricity, to insulate.

**Isolation** (*is-o-lat'-shun*) [*isola*, an island]. The act or process of isolating, or the state of being isolated; separation of those ill of contagious diseases from other persons.

**Isologous** (*i-sol'-o-gus*) [*ἴσος*, equal; *λόγος*, method, ratio, or system]. Having similar relations or proportions. A qualification applied to compounds containing a like number of carbon-atoms, with a gradually decreasing number of hydrogen-atoms.

**Isolophobia** (*is-o-lo-fó'-be-ah*) [*isola*, an island; *φόβος*, fear]. Morbid dread of being alone.

**Isomastigate** (*i-so-mas'-tig-at*) [*ἴσος*, equal; *μάστιξ*, a whip]. In biology, applied to organisms bearing two or more similar flagella.

**Isomer** (*i'-som-er*) [*ἰσομερής*, having equal parts]. An isomeric body. The same as *Isomerid*.

**Isomere** (*i'-so-mēr*) [*ἰσομερής*, having equal parts]. In biology, a portion of one organism that is homologous with a portion of another organism.

**Isomeric** (*i-so-mer'-ik*) [*ἴσος*, equal; *μέρος*, a part]. In chemistry, applied to substances having the same centesimal composition, but the molecules of which have an essentially different structure and chemic properties; e. g., aldehyd and ethylene oxid, both of which have the formula  $C_2H_4O$ . The former, however, has the structure—

Methyl. Carbonic  
oxid.

while the latter is composed of two molecules of ethylene, joined by an atom of oxygen, thus  $(CH_2)_2-O-(CH_2)_2$ . This, the most common type of isomerism, is sometimes called *metamerism*. The term is also applied to substances having the same centesimal composition, but whose molecular weights are in even multiples, a type of isomerism commonly called *polymerism*. Also, in crystallography, applied to any substance that crystallizes in more than one form. Also, applied to a substance existing in two or more forms, a type of isomerism called *allotropism*. **I. Theory of Nerve-force**; Herbert Spencer's hypothesis that in nervous action the disturbance transmitted is a wave of isomeric change, the alter-

nation of isomeric states depending upon both nerve-fiber and molecular continuity.

**Isomerids** (*i-som'-er-ids*) [*ἰσομερής*, consisting of equal parts; *ἴσος*, equal; *μέρος*, a part]. A name applied to different substances possessing the same molecular composition. **I., Physical**, a designation applied to derivations to which one and the same structural formula must be assigned. They have been explained by assuming them to be different aggregations of molecules that were chemically similar. See also *Physical Molecules*.

**Isomerism** (*i-som'-er-izm*) [*ἴσος*, equal; *μέρος*, a part]. The phenomenon of bodies of like composition and like number of atoms being different in physical or in chemic properties, or in both. **I., Geometric.** *Alloisomerism*, q. v. **I., Spatial.** Same as *I., Geometric*.

**Isomerous** (*i-som'-er-us*) [*ἴσος*, equal; *μέρος*, part, share]. In biology, having an equal number of parts, ridges, or markings.

**Isometric** (*i-so-met'-rik*) [*ἴσος*, equal; *μέτρον*, measure]. Of equal measure. **I. Act**, the tension of a muscle when stimulated, its length remaining constant.

**Isometropia** (*i-so-met-ro'-pe-ah*) [*ἴσος*, equal; *μέτρον*, measure; *ὥψ*, eye]. Equality of kind and degree in the refraction of the two eyes.

**Isomorph** (*i'-so-morf*) [*ἴσος*, equal; *μορφή*, form]. In biology, one of two similar organisms belonging to different groups.

**Isomorphic** (*i-so-mor'-fik*) [*ἴσος*, equal; *μορφή*, form]. In biology, pertaining to morphologic similarity.

**Isomorphism** (*i-so-mor'-fizim*) [*ἴσος*, equal; *μορφή*, form]. Similarity in crystalline form. Also, the replacement of one element in a crystalline salt by another, without alteration of form or system. **I., Heteromeric**, a condition of dissimilarity in molecular composition. **I., Isomerous**, a condition of similarity in molecular composition. **I., Polymeric**, the substitution of two or more atoms of one element for one of another, without alteration of crystalline form.

**Isonitrosoacetones** (*i-so-ni-tro-so-as'-et-ōnz*). A group of colorless crystalline bodies, readily soluble in ether and in chloroform, and as a rule soluble with difficulty in alcohol. Their alkaline solutions have an intensely yellow color.

**Isonitroso-compounds** (*i-so-ni-tro'-so-kom'-pōendz*). Compounds that contain the bivalent oximid group  $=N.OH$  linked to carbon.

**Isomonic** (*i-so-nom'-ik*) [*ἰσονομικός*, having equality of laws]. In chemistry, applied to isomorphism existing between two compounds of like composition.

**Isonym** (*i'-so-nim*) [*ἴσος*, equal; *ὄνομα*, a name]. A paronym.

**Isopathotherapy** (*i-so-path-o-ther'-ap-e*). Same as *Isopathy*.

**Isopathy** (*i-sop'-ath-e*) [*ἴσος*, equal; *πάθος*, suffering]. A term used to denote the treatment of disease by the administration of one or more of its own products. Thus, smallpox would be treated by the administration internally of the variolous excretions.

**Isopelletierin** (*i-so-pel-et'-e-er-in*) [*ἴσος*, equal; *pelletierin*]. A substance found in the root-bark of *Punica granatum*. It has the same properties as pelletierin.

**Isopepsin** (*i-so-pep'-sin*) [*ἴσος*, equal; *πίψις*, digestion]. **1.** A body formed by heating pepsin to a point between  $104^{\circ}$  and  $140^{\circ}$  F. It changes albumin into parapeptone. **2.** Same as *Parapeptone*.

**Isopetalous** (*i-so-pet'-al-us*) [*ἴσος*, equal; *πέταλον*, a leaf]. In biology, having the petals alike.

**Isophoria** (*i-so-fó'-re-ah*) [*ἴσος*, equal; *φóρος*, a tending]. A condition in which the eyes lie in the same horizontal plane, the tension of the vertical muscles of

each eye being equal, and the visual lines lying in the same plane].

**Isophorous** (*is-ō'phō-rus*) [*isōs*, equal; *phōō*, to hear]. In biology, of equal taxonomic importance, as a species and its colonial forms.

**Isopia** (*is-ō'pē-ā*) [*isōs*, equal; *ōps*, eye]. A term proposed to indicate equal acuteness of vision in the two eyes.

**Isopleural** (*is-ō'plē-ur-āl*) [*isōs*, equal; *pleura*, a rib]. Isopleural is symmetric.

**Isopogonous** (*is-ō'pō-gō-nus*) [*isōs*, equal; *pogōn*, beard]. In anatomy, applied to feathers, the wicker which is alike on both sides of the rachis.

**Iso-propylamin** (*is-ō'prō-pil-ā-mīn*). See *Propylamin*.

**Isopters** (*is-ō'ptēr-s*) [*isōs*, equal; *ptērō*, observer]. The curves of relative visual acuity of the retina at different distances from the macula, both for form and for color.

**Isopurpurin** (*is-ō'pū-rā-rīn*) [*isōs*, equal; *purpura*, purple],  $C_{14}H_{10}O_{11}$ . A coal-tar color used in dyeing, closely allied to alizarin; it is formed by heating beta-naphthol with isulphonic acid with sodium and potassium chlorate. It produces a yellow shade of red. See *Pigments*, *Constitution of*.

**Isoquinolin** (*is-ō'kīn-īn*) [*isōs*, equal; *quinolin*],  $C_{10}H_8N$ . A substance that occurs together with quinaldine and primary quinolin in the crude quinolin from coal-tar. It is very similar to quinolin, solidifies at  $67^{\circ}\text{C}$ . in a crystalline mass, melting at  $20\text{--}22^{\circ}\text{C}$ ., and boiling at  $237^{\circ}\text{C}$ .

**Isosaccharic Acid** (*is-ō'sak-ā-rīk*). See *Acid*.

**Isosaccharin** (*is-ō'sak-ā-rīn*) [*isōs*, equal; *sakcharon*, sugar],  $C_{12}H_{12}O_8$ . An isomerid of saccharin. It results from the action of lime upon milk-sugar and maltose.

**Isoscope** (*is-ō'skōp*) [*isōs*, equal; *skopein*, to see]. An instrument consisting of two sets of parallel vertical wires, one of which can be superimposed on the other. It is designed to show that the vertical lines of separation of the retina do not correspond exactly to the vertical meridians.

**Isospore** (*is-ō'spōr*) [*isōs*, equal; *spōros*, a seed]. In botany, a plant producing but one kind of spore; a *cryptogame*.

**Isosporous** (*is-ō'spō-rus*) [*isōs*, equal; *spōrā*, seed]. Same as *Isosporangium*.

**Isostemonous** (*is-ō'stēmō-nus*) [*isōs*, equal; *stēmon*, a stamen]. In botany, having the stamens of the same number as the parts of the calyx or corolla.

**Isotagmata** (*is-ō'tag-mat-ā*). See *Inotagmata*.

**Iso-therapeutics** (*is-ō'thr-āp-ū-tīk*). Same as *isogalactherapeutics*.

**Isothermal** (*is-ō'thr-ū-māl*) [*isōs*, equal; *thermy*, heat]. Of equal or uniform temperature. **I. Lines**, in physiological geography, lines drawn through places having the same average temperature for a given period of time. Isotherms as it frequently happens that two places having the same annual average temperature may have, one a climate of great extremes, the other a very equable climate, or it may be customary to display comparative isotherms for the six warm and the six cold months of the geographical regions. **I. Zones**, zones bounded by isothermal lines.

**Isotome** (*is-ō'tōm*) [*isōs*, equal; *tomē*, a cutting]. In botany, an imaginary line or plane indicating homology in regions or fracture.

**Isotonia** (*is-ō'tō-nē-ā*) [*isōs*, equal; *tōnos*, tension]. Equality of tension of the blood.

**Isotropic** (*is-ō'trōp-īk*) [*isōs*, equal; *trōpō*, turning]. Having the same properties throughout; isotropous; *isotropal*.

**Isotropous** (*is-ō'trō-pūs*) [*isōs*, equal; *trōpō*, a turn-

ing]. Having the same shape and appearance, from whatever point observed. A term applied to singly-refracting bodies.

**Isozooid** (*is-ō-zō-ōid*) [*isōs*, equal; *zōon*, animal; *ēidos*, form]. In biology, a zooid resembling the organism producing it. Cf. *Allozooid*.

**Issue** (*ish'-u*) [Fr., *issue*, from *exire*, to go out]. A discharging ulcer, especially that made artificially for purposes of drainage, or counter-irritation. **I.-pea**, a pea or pea-shaped pellet (as of ivy-wood, or orris-root), inserted into an issue to keep up suppuration. Orange-seeds are also used for the same purpose.

**Istarin** (*is'-tar-in*). A nitrogenous, phosphorized substance of complex structure occurring in brain-tissue. Its properties have not been investigated.

**Isthmic**, or **Isthmic** (*is'-me-ak* or *is'-mik*) [*isthmós*, a narrow passage]. Pertaining to any isthmus, as that of the fauces.

**Isthmitis** (*is-mi'-tis*) [*isthmós*, a narrow passage; *itis*, inflammation]. Inflammation of the fauces.

**Isthmo-** (*is'-mo-*) [*isthmós*, a neck]. A prefix signifying the fauces.

**Isthmocatarrhus** (*is-mo-kat-ar'-us*) [*isthmós*, isthmus; *katarrheō*, to flow down]. A catarrh of the faucial isthmus.

**Isthmodynia** (*is-mo-dīn'-e-ah*) [*isthmós*, neck; *ōdēnē*, pain]. Pain in the faucial isthmus.

**Isthmoid** (*is'-moid*) [*isthmós*, a neck; *ēidos*, likeness]. Resembling an isthmus.

**Isthmopathy** (*is-mop'-ath-e*) [*isthmós*, neck; *πάθος*, disease]. A disease of the faucial isthmus.

**Isthmoplegia** (*is-mo-plē'-je-ah*) [*isthmós*, neck; *πλήγη*, stroke]. Paralysis of the faucial tract.

**Isthmopolypus** (*is-mo-pol'-ip-us*) [*isthmós*, isthmus; *πολύπους*, polyp]. A polyp of the fauces.

**Isthmorrhagia** (*is-mor-a'-je-ah*) [*isthmós*, isthmus; *ῥήγνιναι*, to burst forth]. Hemorrhage from the throat.

**Isthmospasm** (*is'-mo-spazm*) [*isthmós*, isthmus; *σπασμός*, spasm]. Spasm of the isthmus of the fauces.

**Isthmus** (*is'-mus*) [*isthmós*, isthmus]. The neck or constricted part of an organ. The part of the brain which, situated axially, serves to unite the forebrain, the cerebellum, and the spinal cord. **I., Gyrus**, a narrow gyrus connecting two adjoining gyri; an annectant convolution or *pli de passage*. **I. of Faoes**, the space between the arches of the palate. **I. of Thyroid Gland**, the transverse cord connecting the lobes of the thyroid body.

**Isuretin** (*is-urē'-tin*) [*isōs*, equal; *οὔρον*, urine],  $CH_4N_2O$ . A substance isomeric with urea; it appears on evaporating the alcoholic solution of hydroxylamin and hydrogen cyanid. It crystallizes in rhombic prisms similar to those of urea, and melts at  $104\text{--}5^{\circ}\text{C}$ .

**Italian** (*i-tal'-yan*) [*Italus*, an Italian]. Of or pertaining to Italy. **I. Fever**. Synonym of *Influenza*, and also of *Mediterranean Fever*. **I. Leprosy**. See *Pellagra*. **I. Method**. See *Taghiacotian Method*.

**Itch** (*ich*). See *Scabies*. **I., Army**. See *Army*. **I., Bakers'**. See *Baker*. **I., Barbers'**. See *Barber*. **I., Bricklayers'**. See *Bricklayer*. **I., Drunkards'**, an intense itching frequent in old alcoholics. **I., Grocers'**. See *Grocer*. **I.-mite**. See *Acarus scabiei*. **I., Norway**, an extreme form of general scabies of the body, resulting in fish-scale-like desquamation. Hebra's first case was from Norway. **I., Warehousemen's**. Same as *I., Grocers'*.

**-ite** (*it*). A suffix employed in mineralogy denoting a mineral, or of mineral origin. A contraction of *λίθος*, a stone.

**Iter** (*i'-ter*) [*iter*, a journey]. A passage affording communication between two or more parts. **I. ad infundi-**

**bulum**, the passage between the third ventricle of the brain and the infundibulum. **I. a palati ad aurem**, the Eustachian tube. **I. a tertio ad quartum ventriculum**, the aqueduct of Sylvius, extending from the third ventricle to the fourth. **I. chordæ anterioris**, the aperture through which the chorda tympani nerve leaves the tympanum. **I. chordæ posterioris**, the aperture through which the chorda tympani nerve enters the tympanum. **I. dentium**, the canal of the permanent dental sac opening behind the corresponding temporary tooth and through which the permanent tooth rises.

**-itis** (*i'-tis*) [*ιτις*, inflammation]. A suffix used to denote inflammation.

**Ivory** (*i'-vor-e*) [ME., *ivory*, ivory]. The hard bone-like substance of the tusks of elephants. **I.-black**. See *Carbo animalis*, and *Pigments, Conspectus of*. **I.**,

**Dental**. See *Dentine*. **I.-brown**. See *Pigments, Conspectus of*. **I. of Tooth**. See *Dentine*.

**Ivy** (*i'-ve*) [ME., *ivy*, ivy]. See *Hedera*. **I.-pea**, an issue-pea made of the wood of the ivy. **I.**, Poison. See *Rhus*.

**Ixodes** (*iks-o'-dez*) [*ιξωδης*, sticky; *ιξος*, bird-lime; *ειδος*, form]. An insect of the natural order *Acaridea*. See *Parasites (Animal), Table of*.

**Ixyomyelitis** (*iks-e-o-mi-el-i'-tis*) [*ιξις*, waist; *μυελος*, marrow; *ιτις*, inflammation]. Myelitis of the dorsal region of the spinal cord; ischiomyelitis; osphyomyelitis.

**Izal** (*i'-zal*). Thorncliffe disinfectant; a by-product obtained in the process of coke-formation; it possesses strong disinfectant properties without any irritating quality. It mixes well with water, and has an agreeable odor. Unof.

## J

**Jabber** (*jab'-er*) [ME., *jaber*, to chatter]. To talk rapidly and indistinctly; to chatter.

**Jaborandi** (*jab-or-an'-de*) [Braz.]. The leaves of *Pilocarpus pennatifolius*, a valuable diaphoretic. See *Pilocarpus*.

**Jaborin** (*jab'-or-in*) [Braz., *Jaborandi*],  $C_{11}H_{16}N_2O_5$ . An alkaloid derivable from pilocarpin by the action of heat and sulphuric acid. It is an amorphous, strongly basic substance, and has properties resembling those of atropin. Unof.

**Jacaranda** (*jak-ar-an'-dah*) [Brazilian]. A genus of bignoniaceous plants of tropical America. **J. caroba** is antisyphilitic, and is of service in the treatment of urethritis, rheumatism, and skin-diseases. Dose of the fl. ext. gtt. xvi-fl. ʒj. **J. lancifoliata**, is used by the natives of Brazil in urethritis. Dose of an ʒij to Oj tincture ℞xv; of the fl. extract, gtt. xvi-xxx. Unof.

**Jaccoud's Sign**. See *Signs and Symptoms, Table of*.

**Jack** (*jak*) [ME., *jacke*, a personal name]. A popular term for horse-flesh salted and subsequently washed in order to deprive it of its peculiar taste. **J.-knife Posture**. See *Postures*.

**Jacket** (*jak'-et*) [Fr., *jaque*, a coat of mail]. A short coat. **J.**, **Bark**, a jacket stuffed with powdered cinchona. **J.**, **Cotton**, a jacket lined with cotton, sometimes used in the treatment of pneumonia. **J.**, **Plaster-of-Paris**, a mould of plaster-of-Paris cast upon the body or part, for keeping it rigid and fixed in a desired position, in sprain or dislocation of the spine, etc. **J.-poultice**, a poultice applied about the whole surface of the thorax; it is sometimes used in the treatment of pneumonia. **J.**, **Straight**, a system of leather straps used to bind violently insane persons in order to prevent self-inflicted injury.

**Jackson's Pectoral Syrup**. A cough-medicine containing morphin hydrochlorate, sugar, sassafras pith, gum arabic, and water.

**Jacksonian Epilepsy**. Focal, cortical, or symptomatic epilepsy. A spasm limited to a single group of muscles in the face, arm, or leg, due generally to irritative lesion of the motor area of the brain; the spasm may also involve other groups of muscles; consciousness is usually

retained; there is danger of the convulsions becoming general. See *Epilepsy*, and *Diseases, Table of*.

**Jacob's Membrane**. A name sometimes applied to the layer of rods and cones of the retina. **J.'s Ulcer**. See *Rodent Ulcer*, and *Diseases, Table of*.

**Jacobson's Anastomosis**. The tympanic plexus. See *Plexus*. **J.'s Canal**. See *Canal*. **J.'s Cartilage**, a strip of cartilage under Jacobson's organ, firmly adherent to the latter, but distinct from the septal cartilage of the nose, to the outer side of the ventral edge of which it is situated. **J.'s Nerve**, the nerve of the tympanum. See *Nerves, Table of*. **J.'s Organ**, a short, rudimentary canal, extending along the septum of Stensen's duct, and ending in a cul-de-sac.

PLASTER JACKET. (Sayre.)

**Jacquart, Angle of**. See *Angle*.

**Jacquemin's Sign**. See *Signs and Symptoms, Table of*.

**Jactation** (*jak-ta'-shun*). See *Jactitation*.

**Jactitation** (*jak-tit-a'-shun*) [*jactitare*, to pour forth]. The restlessness and tendency to frequent changes of

- position that characterizes severe distress in disease. *J.*, Periodic. See *NERVES*, *OF*.
- Jadelot's Lines or Furrows.** Certain furrows of the face of children in serious illness. Three sets are designated: 1. The **Genal Furrow**, from the mouth almost to the outer line; the angle of the nasal furrow are said to indicate disease of the gastro-intestinal tract or abdominal viscera; 2. The **Labial Furrow**, from the angle of the mouth downward to the lower part of the face, which is thought direct attention to the lungs; 3. The **Nasal Furrow**, from the nasal side in a semicircle about the mouth. 4. The **Oculo-zygomatic Furrow**, beginning at the inner canthus of the eye, and passing outward below the lower lid, to end at the cheek; it is said to point to diseases of the cerebro-spinal nervous system. See also *2*, *3*, *4*, *5*, and *6*, and *7*, and *8*, and *9*, and *10*, and *11*, and *12*, and *13*, and *14*, and *15*, and *16*, and *17*, and *18*, and *19*, and *20*, and *21*, and *22*, and *23*, and *24*, and *25*, and *26*, and *27*, and *28*, and *29*, and *30*, and *31*, and *32*, and *33*, and *34*, and *35*, and *36*, and *37*, and *38*, and *39*, and *40*, and *41*, and *42*, and *43*, and *44*, and *45*, and *46*, and *47*, and *48*, and *49*, and *50*, and *51*, and *52*, and *53*, and *54*, and *55*, and *56*, and *57*, and *58*, and *59*, and *60*, and *61*, and *62*, and *63*, and *64*, and *65*, and *66*, and *67*, and *68*, and *69*, and *70*, and *71*, and *72*, and *73*, and *74*, and *75*, and *76*, and *77*, and *78*, and *79*, and *80*, and *81*, and *82*, and *83*, and *84*, and *85*, and *86*, and *87*, and *88*, and *89*, and *90*, and *91*, and *92*, and *93*, and *94*, and *95*, and *96*, and *97*, and *98*, and *99*, and *100*.
- Jäger's Test-types.** A series of types of varying size for testing the power of vision.
- Jag (Jag), (Jag, Jag.)** A popular slang name for a state of drunkenness; also, for enough liquor to produce a state of drunkenness. The term has been adopted into the Jargon of certain proprietary cures for the alcohol habit.
- Jaggery (Jaggery) [E. Ind.]** The name given to a very superior East Indian palm sugar, sometimes refined in England but chiefly consumed in the country of its production.
- Jail-fever.** See *VERMIN*, *OF*, *Typhoid Fever*, *q. v.*
- v. Jaksch's Disease.** Pseudoleukocytchemia of infants. See *DIAGNOSIS*, *Table of*.
- Jalap, or Jalapa (jal'-ap or jal'-ap-ah)** [named from Jalapa, a city of Mexico]. The tuber of *Ipomoea purpurea*, a plant with properties due to two resins, jalapin and convolvulin. It is an active hydragogue cathartic, especially useful in combination with calomel. *J.*, Abstractum, an ingredient of pill, cathartic comp., Dose gr. v. *J.*, Ext. Dose gr. v-xv. *J.*, Resina, prepared from the tincture by water. Dose gr. i-v. *J.*, Pulv., Comp., contains jalap 35, potassium bicarbonate 55. Dose gr. x-5j. *J.*, Tinct. 11 25. Dose 5ss-1.
- Jalapin (jal'-ap-in)** [from *Jalap*, a city of Mexico], 1. A gummy resin from *Convolvulus orizabensis*, very similar in properties to convolvulin; it is actively cathartic. 2. The precipitate from a tincture of the tuber of *Ipomoea jalapa*; an irritant hydragogue cathartic. Dose gr. i-mf.
- Jamaica (Jam'-a-ick) [W. Indies].** An island of the West Indies. *J.* Dogwood. See *PHYLLARIA*. *J.* Kino. See *SHRUBS*.
- Jamaican (Jam'-a-ick-in).** Same as *Berberin*.
- Jambou (jam'-bu) [Fr., jambou].** A genus of *Myrtaceae* S. Arabian trees. The bark of *J. aquea*, *J. domestica*, and *J. vulgaris* is astringent; the fruit, green apple, or jambou, is edible; the fruit and leaves are refrigerant, and the seeds are aromatic. Unof.
- Jambou (jam'-bu) [E. Ind.]** The root of *Myrtaceae*, a Brazilian tree. It is thought to be somewhat astringent, but its properties are not definitely known. Dose of the oil ext. m-x-xxx. Unof.
- Jambou (jam'-bu) [E. Ind., jambou].** The dried and powdered fruit of *Myrtaceae*, *jamboum*, a shrub of the order of *Myrtaceae*, growing in Western India. It has astringent properties in the diarrheas of children, and has also been found to lessen the amount of sugar and some associated in diabetes. Dose gr. ij-x; of the fluid extract of the root, m-x-x. Unof.
- James's Pill.** A pill containing equal parts of James's powder, myrrhine, and oil of clove and myrrh. *J.*'s Powder. See *DIAGNOSIS*.
- Jamestown Weed.** See *Solanum*.

- Janosik's Embryo.** A human embryo described by Janosik as having two gill-pouches and three aortic arches.
- Janus, or Janiceps (ja'-nus or jan'-is-eps)** [*Janus*, a two-faced divinity; *caput*, head]. A syncephalic monstrosity with two faces.
- Japan (jap'-an') [Chin., Jih-pun].** An island on the eastern coast of Asia. *J.* Colors. See *Pigments*, *Colors*, and *Dye-stuffs*. *J.-black.* See *Pigments*, *Conspectus of*. *J. Lacquer.* Same as *J.-black*. *J. Wax,* a wax obtained by boiling the berries of several trees of the genus *Rhus*, from incisions in the stems of which flows the famous Japan lacquer varnish. It is properly a fat, as it consists almost entirely of glyceryl palmitate. Its specific gravity is .999 and its melting-point 120° F. (49° C.). When freshly broken, the fractured surface is almost white or slightly yellowish-green and the odor tallow-like. It is used for mixing with beeswax in the manufacture of candles and wax matches.
- Japanese (jap'-an-eez') [Japan, an island on the east coast of Asia].** Pertaining to Japan or its inhabitants. *J. Method of Resuscitation;* it consists in drawing forward the tongue and making rapid passes with paper fans soaked in water and aqua ammoniac. The object is to get as much of the vapor of ammonia into the lungs as possible. This method is also called *Japanese Fanning*. *J. Fanning.* See *J. Method of Resuscitation*. *J. Hot-box,* a device for applying dry-heat to a part, as the eyes.
- Jar (Pers., jarrah, a little crucer).** A small earthen or glass vessel without handle or spout. *J., Leyden,* an electric condenser consisting of a glass jar lined, externally and internally, in its lower two-thirds with tin. See *Leyden*.
- Jargon (jar'-gon) [ME., jargoun, chattering].** Confused, unintelligible talk; gibberish; babble; characteristic of some forms of idiocy and insanity.
- Jargonize (jar'-gon-iz) [ME., jargoun, chattering].** To utter unintelligible sounds.
- Jarich's Ointment.** An ointment containing pyrogallac acid, 5j, and lard, one ounce.
- Jarjavay's Muscle.** See *Muscles*, *Table of*.
- Jasmine (jaz'-min) [Pers., yasmin, jasmine].** See *Jasminum*. *J.-yellow.* See *Gelsemium*.
- Jasminum (jaz'-min-um) [Pers., yasmin, jasmine].** A genus of oleaceous plants, mostly of tropical old-world origin; jasmine. Many of the species are cultivated for their fragrant flowers, and for their essential oil. Some of the species are vermifuge, others lactifuge, and still others are used in the treatment of skin-diseases. Unof.
- Jatropa (jal'-ro-fah) [ιατρος, a physician; τροφή, nourishment].** A genus of euphorbiaceous plants having irritant, cathartic, and emetic properties. See *Barbadoes Nut* and *Tapioca*. *J. macrorhiza*, the root of a plant indigenous to Mexico and the Southern United States, possessed of alterative and cholagogue properties; in large doses it is a hydragogue cathartic and emetic. Dose of the fluid extract 3ss-ij. Unof. *J. Oil,* the oil of the Barbadoes nut.
- Jaundice (javw'-dis) [Fr., jaunisse, yellowness].** A condition arising from obstruction of the biliary passages. It is characterized by a yellowish coloration of the skin, and may be associated with languor, malaise, nausea, vomiting, itching of the skin, diarrhea or constipation, clay-colored stools, slow pulse, and depression of temperature. Certain of the secretions of the body also are discolored, as the urine. *J., Acute Febrile.* See *Weil's Disease*. *J., Acute Infective.* See *Weil's Disease*. *J., Black,* an extreme degree of jaundice. *J., Blue,* a synonym of *Cyanosis*. *J., Hema-*

togenous, the yellowish discoloration of the skin, resulting from disorganization of the red blood-corpuscles. **J., Hemafecal**, jaundice associated with bloody stools. **J., Hepatogenic**. See *Hepatogenic*. **J., Malignant**, acute yellow atrophy of the liver. **J., White**. Synonym of *Chlorosis*.

**Jaune** (*zhon*) [Fr.]. Yellow. **J.-brilliant**. Same as *Cadmium-yellow*.

**Java Tea**. The leaves of *Orthosiphon stamineus*, the infusion of which is reputed to be diuretic in doses of 3 j-ij. See *Orthosiphon*.

**Javelle's Water**. A solution of potassium or sodium hypochlorite.

**Jaw** [ME., *jarwe*, jaw]. See *Maxilla*. **J.-bone**, a maxilla, especially the inferior maxilla. **J.-disease**, a term for phosphorus-necrosis. **J.-jerk**, a tendon reflex obtained by suddenly depressing the lower jaw. See *Reflexes*, *Table of*. **J.-less**, without jaws. **J., Lock**, or **Locked**. See *Trismus*. **J., Lumpy**, actinomycosis of cattle. **J.-pocking**, a Scottish term for *Wattles*, *q. v.* **J.-tooth**, a molar tooth.

**Jaws** (*jarws*). See *Maxillary Bones*.

**Jealousy** (*jel'-us-e*) [ME., *jalous*, jealous]. A feeling of resentful suspicion caused by belief in the rivalry of another person in the love or favor of one's husband or wife. When excessive, unreasonable, or abnormal, it may be looked upon as a symptom of insanity.

**Jecinorous** (*jes-in'-or-us*) [*jecur*, *jecoris*, liver]. Hepatic.

**Jecoral** (*jek'-or-al*), **Jecorary** (*jek'-or-a-re*), **Jecorose** (*jek'-or-os*) [*jecur*, *jecoris*, liver]. Hepatic; relating to the liver.

**Jecorin** (*jek'-or-in*) [*jecur*, *jecoris*, liver],  $C_{105}H_{186}N_3 \cdot SP_3O_{46}$ . A complex body found by Drechsel in the liver-substance. In its properties it somewhat resembles lecithin, but it reduces Fehling's solution. It occurs also in the spleen, muscle, brain, etc.

**Jecur** (*je'-ker*) [L.]. The liver. **J. aselli**, the liver of the cod-fish. **J. lardaceous**, waxy or lardaceous liver.

**Jeffersonia** (*jeffer-so'-ne-ah*) [after Thomas Jefferson, a president of the U. S.]. A genus of berberidaceous plants. **J. diphylla**, a N. American berberidaceous plant, useful in rheumatism, and a good substitute for senega. It is tonic and in large doses expectorant; it is also called *rheumatism-root* and *twin-leaf*. See *Twin-leaf*. Unof.

**Jeffries, Bacillus of**. See *Bacteria*, *Synonymatic Table of*.

**Jejunal** (*jej-u'-nal*) [*jejunus*, dry]. Pertaining to the jejunum.

**Jejunitas** (*je-ju'-nit-as*) [L.]. Fasting.

**Jejunitis** (*jej-u-nit'-tis*) [*jejunus*, dry; *itis*, inflammation]. Inflammation of the jejunum.

**Jejunium** (*je-ju'-ne-um*) [L., *pl.*, *jejunia*]. A fast.

**Jejuno-colostomy** (*jej-u-no-ko'-los'-to-me*) [*jejunus*, dry; *κόλον*, colon; *στόμα*, mouth]. The surgical formation of an artificial passage between the jejunum and the colon.

**Jejuno-ileitis** (*jej-u-no-il-e-i'-tis*) [*jejunus*, dry; *εἰλεν*, to roll; *itis*, inflammation]. Inflammation of the jejunum and the ileum.

**Jejuno-ileostomy** (*jej-u-no-il-e-os'-to-me*) [*jejunus*, dry; *εἰλεν*, to roll; *στόμα*, mouth]. The surgical formation of an artificial communication between the jejunum and the ileum.

**Jejunostomy** (*jej-u-nos'-to-me*) [*jejunus*, dry; *στόμα*, mouth]. The making and maintenance of an artificial opening through the abdominal wall into the jejunum. The operation is designed to permit the introduction of food in cases of carcinoma of the pylorus and similar affections.

**Jejuno-typhoid** (*jej-u-no-ti'-foid*) [*jejunus*, dry; *τιφος*, smoke; *ειδος*, likeness]. Typhoid fever with involvement of the jejunum or its glands.

**Jejunum** (*jej-u'-num*) [*jejunus*, dry, empty, because thought to be empty after death]. The two-fifths of

c. Cardiac, p. Pyloric parts of stomach. d. Duodenum. i. Jejunum and ileum. ac. Ascending, tc. transverse, and dc. descending colon. r. Rectum. a. Anus.

the small intestine extending between the duodenum and the ileum. Also a synonym of *Fasting*.

**Jelly** (*jel'-e*) [*gelare*, to freeze]. In pharmacy, a soft, non-viscid, but somewhat elastic substance, of which hydrated gelatin is the best example. Domestic fruit-jellies consist of the inspissated juice of the fruit, with one or two parts of sugar, together with the natural mucilage of the seeds of the fruit. Many of the imported jellies sold in the United States contain no fruit-juice, being for the greater part ordinary animal gelatin acidified with tartaric acid, and flavored artificially. **J., Glycerin**. See *Mounting-media*; also, *Glycerin-jelly*. **J., Wharton's**. See *Wharton*.

**Jennerian** (*jen-er'-e-an*) [after Jenner, an English physician]. Pertaining to Jenner, or to the theory or practice of vaccination.

**Jensen's Fissure**. See *Fissures*, *Table of*.

**Jequiritin** (*jek-ir'-it-in*). A soluble active principle obtained from jequirity seeds. See *Abrus*.

**Jequirity** (*jek-ir'-it-e*). See *Abrus*.

**Jerk** [origin uncertain]. See *Chin-jerk*, *Elbow-jerk*, *Jaw-jerk*, *Knee-jerk*, *Toe-jerk*, etc. **J.-finger**. See *Spring-finger*.

**Jerkers** (*jerk'-ers*). See *Jumpers*.

**Jerks** [origin uncertain]. A form of hysteric and almost maniacal agitation, accompanied by sudden distortions of the body. It has been epidemic in certain seasons of unusual religious excitement.

**Jersey Tea**. See *Red-root*.

**Jervin** (*jer'-vin*) [*jerva*, green hellebore-root],  $C_{26}H_{37}NO_3$ ; a poisonous, crystalline alkaloid found in varieties of *veratrum*.

Jesuits' Bark. A name for *Cinchona*. J. Drops. See *Urtica dioica*.

Jetolin (jē'tō-lin). See *Pyrethrum*, *Compositae*.

Jewel-weed (jē-wel-weed). See *Impatiens*.

Jewlap (jē-wap). See *Althaea*.

Jigger Flea. See *Pulex*.

Junanis (jū-nā-nis) [jang]. A vulgar synonym of *Althaea*.

Juniper (jū-ni-pur). See *Juniperus*.

Jingko (jīng'ko). See *Ginkgo*.

Job's Tears. See *Coronaria*.

Jobert's Suture. See *Suture*.

Joe Pye Weed. See *Eupatorium purpureum*.

Johnson's Picro-saccharimeter. See *Picro-saccharimetry*.

Joint (jōint) [ME., *joint*]. See *Articulation*. J.-dis-ease. Any local affection involving the joints and bones surrounding them. J., Charcot's, a disease of the joints, sometimes involving the dorsals. It is characterized by a swelling, due to effusion of fluid into the articular cavity and about the surrounding tissues, followed by a lax condition, and ending in distortion or deformity of the joint, sometimes with diminished range of motion, and at other times with excessive range of motion. J.-felon. See *J. ill.* J.-ill, a term applied to two very different forms of disease in cattle. 1. To *acti arthritis*, resulting from septic inflammation of the navel; 2. To an acute exudative arthritis, in which large quantities of plastic lymph are thrown into the cavity of the joint, leading to permanent swelling and deformity. J.-less, without joints. J.-mice. See *Corpora libera articularum*. J.-oil, the synovia.

Jones's Bence, Albumin. See *Albumin*.

Jorissenne's Sign. See *Sign and Symptoms, Table of*.

Joule (jōul) [after J. P. Joule, an English physicist]. A unit of work, equal to one calorie divided by 4200. See *Calorie*, *Heat*. J.'s Law. See *Law*.

Jowl (jowl) [ME., *jūw*, jaw]. The cheek.

Judas Tree (jū-das-tree). Red-bud. The bark of *Gelsemium*, an astringent, much used in diarrhoea and in case of infection in leukorrhea. Dose of the leaf and root, 3j. Unof.

Jugal (jū-gal) [Jugal, a yoke]. Connecting or joining, as in a yoke. J. Bone, the malar bone. J. Points. See *Trigeminus Points*. J. Process. See *Jugal*.

Juglandin (jū-gan'din) [jū-lin, a walnut]. A principle found in the bark of the root bark of *Butterworth*, *Fraxinus americana*; it is alterative, tonic, laxative, diuretic, etc. Dose 2 to 5 grams. Unof.

Juglans (jū-gans) [L., "walnut"]. A genus of trees, including the true walnut. J. regia, the European walnut, has abundant and attractive leaves, which have been found to be full in expelling tapeworm. The other walnut, J. nigra, has the same properties. Fraxinus, the inner bark, collected in autumn of the fruits (J. cinerea, a mild cathartic, very popular in Germany and Japan, constipation. Dose of the oil, 3j. Unof.

Juglone (jū-glon) [Juglan, walnut],  $C_{10}H_6(O_2)_4.OH$ . An active principle occurring in the bark of the European walnut; it is a brown crystalline or orange hydroquinone, soluble in alcohol. It is almost insoluble in water, consists of green needles, and melts with decomposition at about 150-152°C. It has the smell of fresh nutmeg, and is a powerful irritant. Unof.

Jugu-machinery (jū-gu-mach-er-ee) [jugu-mach, a yoke; machinery, a verb]. Belonging to the jugular vein and the muscles.

Jug-sound. A form for *jugum*, *jugum*.

Jugular (jū-gu-lar) [Jugularis, jugulum, throat].

Pertaining to the throat. J. Fossa. See *Fossa*. J. Veins. See *Vein*.

Jugulation (jū-gu-la'shun) [jugulatio, a killing]. The swift and sudden shortening of an attack of disease by therapeutic measures; also, the arrest of an epidemic by prompt and effective measures.

Jugulocephalic (jū-gu-lo-sef-al'ik) [jugulum, the throat; kephalē, head]. Pertaining to the throat and the head.

Jugulum (jūg'ul-lum) [L.: *pl.*, *jugula*]. The collar-bone; also, the throat.

Jugum (jū'gum) [L.: *pl.*, *jugula*]. A yoke. In biology, a pair of leaflets in a compound leaf. J. penis, a cushioned forceps or compressor applied to the penis to prevent incontinence of urine. J. sphenoidale, the line of fusion of the orbito-sphenoid bones. Juice (jūs) [jus, broth]. The fluid or liquid contained in the tissue of an animal or plant. Various secretions of the body are known as juices, e.g., the gastric, intestinal, and pancreatic juices. J.-canals, spaces within the connective tissue, constituting the origin of the lymphatic vessels. J., Gastric. See *Gastric*. J., Intestinal, the intestinal secretion, *succus entericus*, the secretion of the follicles of Lieberkühn mainly, but in the duodenum including that of Brunner's glands. J., Pancreatic. See *Pancreatic*.

Jujube (jū'jūb) [jūbaba, fruit]. The fruit of the jujube tree, *Zizyphus jujuba*. J.-paste, a confection, originally containing the pulp of jujubes, but now made of gum-arabic, or of gelatin, variously flavored.

Julaceous (jū-la'she-us) [ulus, catkin]. In biology, resembling a catkin.

Julep (jū'lep) [Pers., *jūlab*, a sweet drink]. A sweetened and aromatized alcoholic or medicated drink.

Jumbai-bean (jūm'bi-ben) [Negro dial., *Jumbai*, an evil spirit]. The *Lucania glauca*, a leguminous tree resembling the locust, found in the West Indies. The eating of the fruit or the foliage by horses and cattle results in the loss of hoofs, horns, and hair of tail and mane.

Jumpers (jūm'perz) [ME., *jumpen*, to jump]. A name applied to those afflicted with a neurosis characterized by motor incoordination and convulsive movements of any part of the body, but especially of the lower extremities, so that springing movements or jumping movements follow efforts to walk, etc. The name has also been given to hysteric fanatics whose devotional frenzy is accompanied by acts of leaping and distortion; and also to certain persons whose powers of will and control over their movements are in part abolished. See *Latah*, *Myriachit*, *Palmas*, and *Saltatoric Spasm*.

Jumping (jūm'ping). See *Palmas*.

Juncture (jūnk-tū'rah) [L.]. A suture, as of bones.

June (jūn) [Junius, a Roman name, meaning young]. The sixth month of the year. J.-cold. Synonym of *Hay-fever*. J. Lobster. See *Buckle-shell*.

Jungle Fever. See *Fever*.

Juniper (jū-ni-pur). See *Juniperus*.

Juniperin (jū-ni-pur-in) [juniperus, the juniper-tree]. A yellow, resin-like powder found in juniper-berries.

Juniperus (jū-ni-pur-us) [L., *gen.*, *juniperi*]. 1. A genus of berry-bearing coniferous trees. Besides the official species (see *Juniperus*, 2), there are several other medicinal species. 2. Juniper, the fruit of *J. communis*; its properties are mainly due to a volatile oil, and it is a stomachic tonic, diuretic, and aphrodisiac. The oil is eliminated by the kidneys. It is valuable in chronic pyelitis and cystitis. J., Infusum, unof., consists of juniper-berries 3j, boiling water Oj. J., Ol., the volatile oil. Dose m-v-xx. J., Spt., 5 parts of the oil in 95 of alcohol. Dose 3j-3j. J., Spt.,

**Comp.**, the gin of commerce; oil of juniper 8, oil of caraway 1, oil of fennel 1, alcohol 1400, water q. s. ad 5000 parts. Dose 5ss-j. **J. oxycedrus** affords oil of cade, *q. v.* See also *Sabina*. Oil of Cade, a tar obtained by the distillation of juniper-wood; it is sometimes used externally in eczema and psoriasis. Unof.

**Junk** [l'ort., *junco*, a rush]. In surgery, a quilted cushion forming a sling in which to suspend a fractured limb. It was formerly made of rushes or reeds.

**Junker's Inhaler.** See *Anesthetic*.

**Junket** (*junk'-et*) [ME., *junket*, a rush]. Curds and whey; a delicacy for invalids, prepared by taking ½ pint of fresh milk heated to an agreeable temperature, adding 1 teaspoonful of rennet or essence of pepsin, and stirring well. Let the mixture stand till curdled, and serve with sugar and nutmeg.

**Junod's Boot.** A boot-shaped case, usually of stiff leather, made to enclose the leg so that, the air being exhausted, the blood-vessels and tissues of the limb are dilated by the excess of blood. It has been employed to relieve inflammation and congestion of the viscera.

**Jurema** (*ju-re'-mah*) [Braz.]. A leguminous Brazilian tree, *Stryphnodendron jurema*. Its bark is astringent, and is said to be narcotic. Unof.

**Juriballi** (*ju-rib-al'-e*) [W. Ind.]. A name for several meliaceous trees and their astringent and antipyretic bark, among which are *Trichilia moschata*, *Soyimida febrifuga*, and *Khaya senegalensis*.

**Jurisprudence** (*ju-ris-pru'-dens*) [*jus*, law; *prudencia*, skill]. The science of the interpretation and application of the law. **J., Medical**, the application of medical knowledge to the principles of common law.

**Jurubeba** (*ju-ru-be'-bah*) [Braz.]. The leaves and juice of a shrub, *Solanum insidiosum*, indigenous to Brazil. It is an alterative, tonic, diuretic, and drastic cathartic. Dose of the fluid extract gtt. j-v. Unof.

**Jury** (*ju'-re*) [*jurare*, to swear]. A body of men legally appointed to determine the guilt or innocence of a prisoner, or to determine the facts in judicial inquiries. **J.-leg**, a wooden leg. **J. of Matrons**, a body of twelve matrons, formerly empaneled in England to determine if a murderess, for whom such plea was made, were pregnant. **J.-mast**, a steel shaft with curved iron rods attached, sometimes employed to support the head in disease of the upper vertebræ; it is mainly used in connection with Sayre's treatment of spondylitis. See annexed illustration.

**Jus** (*jūs*) [L.]. See *Juice*, and *Jusculum*.

**Jusculum** (*jus'-ku-lum*) [L., a decoction]. A soup or broth; gruel or porridge.

**Jusetmond's Arsenical Powder.** A preparation of arsenic used in various skin-affections. It consists of

sulphuretted antimony, 16 parts; arsenious acid, one part. These are melted in a crucible, and, when cold, the mass is reduced to a powder, and five parts of extract of opium are added.

**Justicia** (*jus-tis'-e-ah*) [named from a Mr. Justice, a botanist]. A genus of acanthaceous herbs and shrubs.

**J. adhatoda** is antispasmodic and febrifuge. **J. ec-bolium** is anti-icteric, diuretic, and deobstruent. **J. echiioides**, diuretic. **J. gendarussa**, diaphoretic. **J. pectoralis** is bechic and stomachic. Unof.

**Justo-major Pelvis** (*jus'-to-ma'-jor*). See *Pelvis*, *Female*, *Deformities of*.

**Justo-minor Pelvis.** See *Pelvis*, *Female*, *Deformities of*.

**Jute** (*jut*) [Beng., *jüt*, matted hair]. The bast fiber of two species of the genus *Corchorus*, grown chiefly in India and Ceylon. The fibers have a length of 2.5 meters, or even more, are of a yellowish-white color, and have a fine luster. Jute contains no free cellulose, but consists of bastose. When treated with iodine and sulphuric acid, it yields a deep-brown color.

**Juvantia** (*ju-van'-she-ah*) [L., "aiding"]. Adjuvant remedies or medicines. See *Adjuvant*.

JURY-MAST. (Sayre.)

**Juventus** (*ju-ven'-tus*) [*juvenis*, young]. A term formerly applied to that period of life between the ages of twenty-five and thirty-five years.

**Juxtaposition** (*jus-tah-po-zish'-un*) [*juxta*, near; *positio*, position]. Situation adjacent to another; the act of placing near; apposition.

## K

**K** The symbol of *Kalium*, or its more commonly used equivalent, *Potassium*.

**K.** or **Ka.** In the nomenclatures, the abbreviation of *Kakodai*, or of *Kakutrophi*.

**Kaater's Method.** A method of staining tubercle-bacilli. See *Staining, Tubercle*.

**Kabbalistic, Cabalistic** (*kab-bal-ist-ik*) [Heb., *kabba-lik*, mystery]. Pertaining to the *kabala*, which included a system of the treatment of diseases by superstitious agencies.

**Kair** (*kair'*) [Arab., *Laqman*]; dreamy enjoyment; *Laqman* (*laq-man*), such as follows the use of certain drugs (Hib. *qum*, or *hush-shi*).

**Kairin** (*kair-in*) [Jap., the right time],  $C_{10}H_{13}NO$ ,  $(C_{10}H_{11})_2O$ . An aromatic alkaloid prepared from *Juniper*. It is valuable as a powerful antipruritic; it also produces diarrhoea and emesis; its use is sometimes followed by collapse. Its general properties are similar to those of antipyrin, *q. v.* Dose gr. iij-iv.

**Kairocill** (*kai-ro-sil*) [Grec., the right time; *kōrōa*, *q. v.*],  $C_{10}H_{13}NO$ . An artificial alkaloid prepared from *Juniper*.

**Kairolin**, or **Kairolina** (*kai-ro-lin*, or *ki-ro-lin-nah*) [Jap., the right time],  $C_{10}H_{13}N$ . Methylquinolin alkaloid. An antipruritic resembling kairin, but less efficacious. Unof.

**Kakke** (*kak-ke*) [Chinese for "leg-disease"]. Epidemic and epidemic multiple neuritis, or beriberi, as seen in Japan and Southern Asia.

**Kako-** (*kak-o-*) See *Kakodai*.

**Kakodyl** (*kak-od-yil*). See *Cetyl*.

**Kakomyia** (*kak-om-yia*). See *Cucomyia*.

**Kakutrophia** (*kak-ut-rof-ia*). See *Cucutrophia*.

**Kaladana** (*kal-a-dan-nah*) [orig. unknown]. An East Indian root-rubaceous plant, *Ipomoea* (*Pharbitis*) *nil.* It is regarded as a safe and good cathartic. Dose of the powdered drug, ʒss-ʒij; of the resin, gr. iv-vij.

**Kalanchoe** (*kal-an-choe*) [Chinese]. An East Indian succulaceous plant. Its leaves are used in the form of poultice for ulcers and boils, the juice as an antipruritic. Unof.

**Kali** (*kal-i*, or *kal-ah*) [Ar., *qali*, potash] Potassium, *q. v.* K-blue. Same as *Borlan-blue*.

**Kalidium** (*kal-id-um*) [*kalidun*, dim. of *kalā*, cot., *q. v.*; or *kalidun*]. In biology, the spore-capsule of certain *Moss*.

**Kaligenium** (*kal-i-jen-um*) [Ar., *qali*, potash; *geniviv*, to begin]. Pertaining to the production of potassium.

**Kaligraph** (*kal-i-graph*) [Grec., beautiful, *q. v.*, to write]. An instrument for the use of those afflicted with written tremor. It is essentially a pantograph, so arranged that by moving the letters very large at one point, they are reproduced at a natural size at another.

**Kalimeter** (*kal-i-mi-ter*). See *Kalimetry*.

**Kalimetry** (*kal-i-mi-ter-ee*). See *Atrophimetry*.

**Kaline** (*kal-i-ne* or *kal-in*). See *Alumina*.

**Kaliaya** (*kal-i-ya*). See *Culinary*.

**Kalium** (*kal-i-um*). A synonym of *Potassium*, *q. v.*

**Kaloua** (*kal-ou-ah*) [after Peter Kaloua, an explorer]. Genus, *Miconia* Lindl., Sharp Laurel. Broad leaved Amer. *Calceol* tree. The leaves of *K. latifolia*, a well known evergreen, flourish in the United States, having different, caudex, sedative, and astringent properties. It is a popular tonic, and has proved especially efficacious in the specific affections. Dose gr. i-iv of the 75% extract. Unof. **K.**

**angustifolia**, like the foregoing, is poisonous. Its decoction is a popular remedy for sores and ulcers, to which it is applied hot. Unof.

**Kalmuck Type.** See *Idiocy, Ethnic*.

**Kamala** (*kam-a'-lah*) [Hind., *kamila*]. *Rottlera*. The glands and hairs from the capsules of *Mallotus philippensis* (*Rottlera tinctoria*), native to Southern Asia and Abyssinia. It is a purgative and anthelmintic, much used for the expulsion of lumbricoid and other parasitic worms. Dose ʒj-ʒj of an ʒvj to ʒxvj alcoholic tincture.

**Kambi** (*kam'-be*) [E. Ind.]. An aromatic gum, like elemi, from *Gardenia lucida*, a plant of India. Unof.

**Kamela** (*kam-e'-lah*) or **Kamila** (*kam-e'-lah*). See *Kamala*.

**Kammerer and Giacomi's Apparatus.** An apparatus for air-analysis.

**Kanarin** (*kan'-ar-in*),  $C_3N_3HS_2$ . A substance obtained from KCNS by electrolysis; it is probably identical with pseudo-cyanogen sulphid, and is employed as a yellow or orange dye for wool, not requiring a mordant.

**Kandahar Sore** (*kan'-da-har*). See *Furunculus orientalis*.

**Kandelia** (*kan-de'-le-ah*) [E. Ind., *kandel*]. A rhizophoreaceous plant found in the Malay Islands. **K. rheedii**, a small tree found in India, where its bark, mixed with dried ginger, or pepper and rose-water, is used in diabetes. Unof.

**Kandel** (*kan'-dol*). A volatile constituent of coal-tar, proposed as a local anesthetic. Its rapid evaporation freezes the superficial tissues. It is possibly identical with rhigolene, *q. v.* Unof.

**Kangaroo Method** (*kang-gar-oo'*). H. C. Wood's term for the method of treating disease by giving, at short intervals, powerful remedies whose influence is short-lived. **K. Tendon**, a material derived from the tail of *Macropus giganteus*, the great kangaroo. It is used in surgery for ligatures. See *Ligature*.

**Kanten** (*kan'-ten*) [Jap.]. A variety of agar-agar, or Japanese sea-weed isinglass, used in the arts, and as a food.

**Kaolin** (*ka'-o-lin*) [Chin., *kaoling*, "high ridge"]. White clay, China clay. The silicate of aluminum, obtained from the decomposition of felspar. It is sometimes used as a protective application in eczema. **K.**, Ung., i in 3, allays irritation if applied to abraded skin. Unof.

**Kaposi's Disease.** See *Atrophoderma pigmentosum*, and *Xeroderma pigmentosum*; also, *Diseases, Table of*. **K.'s Ointment**, an ointment used in the treatment of scabies. It consists of naphthol, 40 grains; green-soap, 2½ drams; prepared chalk, ½ dram; lard, ½ ounce. It is also called the compound naphthol-ointment.

**Kappeler's Method.** See *Anesthetic*.

**Karabic Acid** (*kar'-ab-ic*). See *Acid, Succinic*.

**Karakin** (*kar'-ak-in*) [N. Zeal., *karaka*]. A white crystalline body, apparently a glucosid, obtained from the nuts of the karaka (*Corynocarpus laevigata*). It is an intensely bitter, crystalline body, soluble in water, alcohol, and alkalies, insoluble in ether and chloroform, and melts at 100° C.

**Kardio-** (*kar'-de-o-*). See *Cardio-*.

**Karlinski, Bacillus of.** See *Bacteria, Synonymatic Table of*. **K.**, *Proteus of.* See *Bacteria, Synonymatic Table of*.

**Kartulis, Bacillus of.** See *Bacteria, Synonymatic Table of*.

**Karyogamic** (*kar-e-o-gam'-ik*) [*κάρων*, nucleus; *γάμος*, marriage]. Pertaining to the blending of nuclei, as in reproduction.

**Karyokinesis** (*kar-e-o-kin-e'-sis*) [*κάρων*, a nut (nucleus); *κίνησις*, movement, change]. A complicated series of changes accompanying the maturation of the ovum and the extrusion of the polar globule; indirect or nuclear cell-division, characterized by a radiate arrangement of the protoplasm immediately about the "centrosome" and the "sphere of attraction" at one pole, but outside of the nucleus, and following the division of the "sphere of attraction" into two halves of clear protoplasm; also, by changes in the nucleoplasm, the chromatin becoming granular and

KARYOKINESIS.

A. Nuclear reticulum, resting stage. B. Preparing for division. C. Wreath stage. D. Monaster with achromatic spindle. E. Barrel or pithode stage, or metakinesis, *i. e.*, chromatin-fibrils traveling along the achromatic spindle toward the poles. F. Diaster. G. Daughter-wreath stage. H. Daughter-cells passing to resting-stage.

arranged as a transverse band or disc, while the achromatin is transformed into threads (*karyomita*), forming a spindle-shaped structure (*nuclear, spindle, barrel-form, pithos*), stretching between the two astral systems, or suns. The entire arrangement, central disc, spindle, and the two suns, constitutes the so-called amphiasier, or diaster, and, in connection with the production of the polar globules, the archiamphiasier. The groups of the V-shaped chromatin-grains, produced by the division of the central disc, are then translated to the ends of the spindles, and form two polar crowns (*Carnoy's couronne polaire, the wreaths, rosets, spirems*); the spindle-threads break and are drawn toward the polar crowns, and two daughter-nuclei result.

**Karyokinetic** (*kar-e-o-kin-e'-ik*) [*κάρων*, nucleus; *κίνησις*, motion]. In biology, applied to the active stages of nuclei.

**Karyolysis** (*kar-e-o-l'-is-is*) [*κάρων*, nucleus; *λύνειν*, to loose]. The segmentation of the nucleus of the cell.

**Karyolytic** (*kar-e-o-lit'-ik*) [*κάρων*, nucleus; *λύνειν*, to loose]. Relating to karyolysis.

**Karyomita** (*kar-e-o'-mit-ah*) [*κάρων*, nucleus; *μίτος*, a thread]. In biology, the achromatin-threads forming the nuclear spindle in a dividing or active nucleus.

**Karyomitoic** (*kar-e-o-mit-o'-ik*) [*κάρων*, nucleus; *μίτος*, a thread]. Relating to karyomitosis.

**Karyomitoma** (*kar-e-o-mit-o'-mah*). See *Cell-body*.

**Karyomiton** (*kar-e-on'-it-on*). See *Chromatin*.

**Karyomitosis** (*kar-e-o-mit-o'-sis*) [*κάρων*, nucleus; *μίτος*, a thread]. The division or splitting of the nuclear mass of chromatin-fibers.

**Karyomitotic** (*kar-e-o-mit-o'-ik*) [*κάρων*, nucleus; *μίτος*, a thread]. Relating to karyomitosis.

**Karyoplasm** (*kar'-e-o-plazm*) [*κάρων*, a nut, kernel; *πλάσμα*, anything formed]. In biology, the nuclear substance of a cell. See *Chromatin*.

**Karyoplasma** (*kar-e-o-plaz'-mah*). Same as *Karyoplasm*.

**Karyosoma** (*kar-e-o-so'-mah*) [*κάρων*, nucleus; *σῶμα*, a body, *pl.*, *Karyosomata*]. A nuclear microsoma; a round body resembling a nucleolus, contained in the segmentation-nucleus of the ovum.

**Karyostasis** (*kar-e-o'-ta-sis*) [*κάρων*, nucleus; *στάσις*, a stoppage]. The resting-stage of nuclei of cells. It is opposed to karyokinesis.

**Karyostatic** (*kar-e-o-stat'-ik*) [*κάρων*, nucleus; *στάσις*, a stoppage]. Pertaining to karyostasis.

**Karyostenosis** (*kar-e-o-ste-no'-sis*) [*κάρων*, a nucleus; *στενός*, narrow; *στενόειν*, to make narrow]. The simple division of the nucleus of a cell. This process is called also *akinetik*, or *direct division*.

**Kassu** (*kas'-oo*) [E. Ind.]. A black astringent substance obtained from areca nuts, and used for the same purpose as true catechu.

**Kata-** (*kat'-ah-*). For words thus beginning, and not found under K., see *Cata-*.

**Katabolergy** (*kat-ab-ol'-er-je*). See *Catabolergy*.

**Katabolic** (*kat-ab-ol'-ik*). See *Catabolic*. **K. Nerves**, thermo-excitatory, as distinguished from *anabolic*, or thermo-inhibitory, nerves.

**Katabolism** (*kat-ab'-o-lizm*). See *Catabolism*.

**Katacrotic** (*kat-ak-rot'-ik*). Same as *Catadiacrotic*.

**Katadiacrotic** (*kat-ah-di-krot'-ik*). See *Catadiacrotic*.

**Katadiacrotism** (*kat-ad-ik'-rot-izm*). See *Catadiacrotism*.

**Katadidymus** (*kat-ad-id'-im-us*). See *Catadidymus*.

**Katalepsy** (*kat'-al-ep-se*). See *Catalepsy*.

**Katalysis** (*kat-al'-is-is*). See *Catalysis*.

**Katantostomus** (*kat-an-to-sto'-mus*). See *Catantostomus*.

**Katanturaniscus** (*kat-an-tür-an-is'-kus*). See *Catanturaniscus*.

**Katanturanus** (*kat-an-tür'-an-us*). See *Catanturanus*.

**Kataplasm** (*kat'-ap-lazm*). See *Poultice*.

**Katastate** (*kat'-as-tät*). See *Catastate*.

**Katatonie** (*kat-at-o'-ne-ah*). See *Catatonie*.

**Katelectrotonic** (*kat-el-ek-tro-ton'-ik*). See *Catelectrotonic*. **K. Zone**. See *Zone*.

**Katelectrotonus** (*kat-el-ek-trol'-o-nus*). See *Catelectrotonus*.

**Katharophore** (*kath-ar'-o-för*) [*καθαρός*, clean; *φορέειν*, to carry]. An instrument for cleansing the urethra.

**Katharsis** (*kath-ar'-sis*). See *Catharsis*.

**Kathetometer** (*kath-et-om'-et-er*) [*κάθᾳ*, against; *μέτρον*, measure]. An instrument for ascertaining the level of fluids.

**Kathion** (*kath'-e-on*). See *Cation*.

**Kathode** (*kath'-öd*) [*κάθᾳ*, down; *ὁδός*, path]. The negative pole of a galvanic battery.

**Kathodic** (*kath-od'-ik*) [*κάθᾳ*, down; *ὁδός*, path].

Pertaining to the kathode or negative pole of a galvanic battery. In biology, turned in the opposite direction to that of the genetic spiral. **K. Closure-contraction**, the muscular contraction occurring when the circuit is closed with the rheophore on a motor point. **K. Opening-contraction**, the muscular contraction that occurs when the circuit is opened.

**Katin** (*kat-in*) [*Av. kat khat, kat*]. An alkaloid found in *Cattleya* spp., with properties somewhat like those of strychnine.

**Kation** (*kat-ion*). See *Cation* and *Electrolysis*.

**Katolotou** (*kat-ol'-toe*). See *Chloroform*.

**Katouraniscia** (*kat-our-an'-is-ee*). See *Urticaria* or *Nettle*.

**Katouranus** (*kat-our'-a-nus*). See *Urticaria*.

**Kauri** (*kaw-ree*). Same as *Gum*. **K. Gum**. See *Gum*.

**Kava**. **Kava-kava** (*kat'-a-vah*) [*Hebrew*]. *Ava kava*. The medicinal kava has yielded *2* to *3* percent of *kava*, a shrub native to South America and the South Sea Islands. It is a stimulant and anodyne compound, producing intoxication when taken in large doses. In small and moderate doses it produces a powerful action in allay-  
ing fatigue. Dose of the fluid extract 5 ss. Unof.

**Kavara** (*kat'-a-rah*) [*Hebrew*, *kar*]. A neutral substance obtained from the fruit of *Kava-kava*.

**Kavai**, **Kaviac**, or **Kaviar** (*kat'-a-vee, kat'-a-vee, kat'-a-vee*). Same as *Kava*.

**Kealey and Mattison's Food**. A variety of Liebig's food for infants. Its composition is: Water 27.95; fat, whole 2.00; sugar, 10.75; cane sugar, 7.58; no albumin, certainly not less than 71.50; no albuminoids; no salt.

**Keller's Corpuscles**. Oval or lens-shaped bodies (present in the blood of fresh-water mussels).

**Keloid** (*kel-oid*) [*AS. kel, a-shel*]. In biology, a projecting growth of a surface, as the two anterior petals of a papilionaceous corolla, or the crest of the breast-bone.

**Keen's Sin**. See *Sin* and *Synonym*, *Table of*.

**Kepher** (*kef'-er*). See *Asper*.

**Keere nugra**. Same as *or Mafura Food*.

**Kefir** (*kef'-ir*). See *Asper*.

**Kefyr** (*kef'-ir*) [*Armenian*]. A nutritious substance obtained by a peculiar fermentation of cows' milk produced in certain fungi. **K.-seed**, a substance containing the ferment (*Bacillus auai-ni*) of kefir. It is used in preparing the genuine kefir. See *Bacteria*, *Commensals*, 296, et.

**Kehrer's Operation**. See *Caesarian Operation*, in *Opera-tion*, 2, 10, et.

**Keimplasm**, **Keimplasma** (*keim'-plazm, keim'-plaz-m*) [*Gr. keim, germ, bud; plasma, plasm*]. A substance term for the hereditary transmission of a particular trait or germ-form that he believes to be passed on from generation to generation without altera-tion. See *Keim*, *Keim*.

**Kellectome** (*kel'-ek'-tome*) [*Gr. a tumor; ek, out; tome, to cut*]. A cutting instrument introduced in-  
strument. It is used to cut out a tumor, in order to obtain a part of the substance for examination.

**Keloid** (*kel-oid*) [*Gr. kel, a tumor; oid, like*]. 1. The same as *Keim*. 2. See *Keloid*.

**Kellermann** (*kel'-er-mann*) [*Gr. H. Kellermann, 1848*]. A system of chemotherapy that professes to treat diseases by means of a chemical substance leads to the dis-  
covery of a new method of passing from the blood through the tissues.

**Keloid** (*kel-oid*) [*Gr. kel, a tumor; oid, like*]. A tumor of the skin, which is caused by the action of a chemical substance on the lower layers of the skin.

**Kellipin's Ointment**. See *Ointment*.

**Keloid** (*kel-oid*) [*Gr. kel, a tumor; oid, like*]. A tumor of the skin, which is caused by the action of a chemical substance on the lower layers of the skin. It is a tumor of the skin, which is caused by the action of a chemical substance on the lower layers of the skin. It is a tumor of the skin, which is caused by the action of a chemical substance on the lower layers of the skin.

ances more than the white. It is commonest in mid-  
dle age; its favorite sites are the sternum, shoulders,  
and neck. The lesion is crab-like in appearance,  
hence its name. **K. of Addison**, forms contractions  
of the skin and fasciæ, giving a hide-bound look to the  
part. It arises spontaneously at the sites of cicatrices  
and other injuries to the skin. See *Diseases*, *Table of*.  
**Kelology** (*kel'-ol'-o-je*) [*Gr. kel, hernia; logos, science*].  
The science of hernias.

**Kelotomy** (*kel'-ol'-o-me*). See *Celotomy* and *Hernio-tomy*.

**Kelp** [*origin obscure*]. 1. Burnt sea-weed, from which  
iodin is obtained. 2. The *Fucacea laminaria* and  
other large sea-weeds.

**Kelvin** (*kel'-vin*) [*in honor of Lord Kelvin*]. A com-  
mercial unit of electricity; one thousand watt hours.

**Kemperdick's Apparatus**. An apparatus for reducing  
the temperature in fever. It consists of a rubber bag  
to be introduced into the rectum having an entrance-  
tube and an exit-tube, thus permitting a continuous flow  
of water.

**Kempherid** (*kem'-fer-id*) [*after Kempher, a German  
traveler*].  $C_{16}H_{12}O_6$ . A yellow, crystalline body ob-  
tained from the resin of *Kemperia galanga*.

**Kenogenesis** (*ken-o-jen'-es-is*) [*Gr. kenos, empty; genesis, genesis*]. Evolution of forms not true to the parental  
type, but variously adapted or modified. A vitiated  
individual development in which the phylogenetic evo-  
lution is not truly epitomized.

**Kenogenetic** (*ken-o-jen'-et-ik*) [*Gr. kenos, empty; genesis, generation*]. In biology, having a vitiated germ-  
history.

**Kenogeny** (*ken-oj'-en-e*). See *Kenogenesis*.

**Kenophobia** (*ken-o-fob'-be-ah*) [*Gr. kenos, empty; phobos, fear*]. The morbid fear of open spaces or places.  
Same as *Agoraphobia*.

**Kenosis** (*ken-o'-sis*). See *Cenosis*.

**Kenospudia** (*ken-o-spu'-de-ah*). See *Cenospudia*.

**Kentish Ointment**. The compound resin-ointment  
made by adding one dram of turpentine to each ounce  
of the ordinary resin-ointment. It is a useful stimulat-  
ing application to severe burns.

**Kentrokinesis** (*ken-tro-kin'-e-sis*) [*Gr. kentro, center, spur; kinesis, motion*]. The influence of any motor nerve-  
center; excitomotor action.

**Kentucky Coffee-bean**. See *Chicot*.

**Kephalic** (*kef'-al'-ik*) [*Gr. kephale, head*]. See *Cephalic*. **K.  
Acid**. An acid described by Thudichum as existing in  
brain-tissue.

**Kephalin** (*kef'-al-in*). See *Cephalin*.

**Kephalograph** (*kef'-al-o-graf*). See *Cephalograph*.

**Kephalometer** (*kef'-al-on'-et-er*). See *Cephalometer*.

**Kephalo-phosphoric Acid** (*kef'-al-o-fos-for'-ik*). See  
*Acid*.

**Kephalyl** (*kef'-al-il*) [*Gr. kephale, head; il, matter, prin-  
ciple*]. The radicle of kephalic acid.

**Kephyr** (*kef'-er*). See *Kefyr*.

**Keracele** (*ker'-as-el*) [*Gr. keras, horn; kele, tumor*]. A  
horny tumor on the hoof of horses.

**Keraphyllocele** (*ker-af-il'-o-sel*) [*Gr. keras, horn; phyllos, leaf; kele, tumor*]. A horny growth between the  
covering of the horse's hoof and the deeper tissues.

**Keraphyllous** (*ker-af-il'-us*) [*Gr. keras, horn; phyllos, leaf*]. Composed of horny layers.

**Kerasene**, or **Kerasin** (*ker'-as-en or ker'-as-in*) [*Gr. keras, horn*],  $C_{16}H_{14}NO_2$ . A nitrogenous substance; one  
of the cerebriins obtained from brain-substance.

**Keratalgia** (*ker'-at'-je-ah*) [*Gr. keras, cornea; algos, pain*]. Pain in the cornea.

**Keratectasia** (*ker-at-ek'-at'-se-ah*) [*Gr. keras, horn, cornea; ectasis, extension*]. The forward protrusion or bulging  
of the cornea. A bulging forward of the deeper layers

of the cornea, after loss of the superficial lamina. It differs from staphyloma in the absence of perforation, and in the non-involvement of the iris.

**Keratomy** (*ker-at-ek'-to-me*) [*κέρας*, horn, cornea; *ἐκτομή*, a cutting out]. Surgical excision of a part of the cornea.

**Keratitis** (*ker-at-i'-as-is*) [*κέρας*, horn]. A morbid condition characterized by the growth of horny excrescences.

**Keratic** (*ker-at'-ik*) [*κέρας*, horn]. Horny.

**Keratin** (*ker'-at-in*) [*κέρας*, horn]. The basis of horny tissues, hair, nails, feathers, etc. It is a mixture of various complex substances. Decomposed, it yields leucin and tyrosin. It is used in pharmacy.

**Keratinian** (*ker-at-in'-e-an*) [*κέρας*, horn]. Relating to keratin or to the cornea.

**Keratinization** (*ker-at-in-iz-a'-shun*) [*κέρας*, horn].

1. The development of a horny quality in a tissue.
2. The coating of pills with keratin.

**Keratitis** (*ker-at-i'-tis*) [*κέρας*, cornea; *τις*, inflammation]. Inflammation of the cornea. **K., Asthenic.** See *K., Phlyctenular*. **K., Astigmatic**, a form of keratitis said to be due to uncorrected astigmatism. **K. bullosa**, the formation of large or small blebs upon the cornea of an eye, the seat of iridocyclitis, interstitial keratitis, or glaucoma. **K., Circumscribed**, limited to a part of the cornea. **K. contagiosa**, a contagious, suppurative variety occurring in cattle. **K., Cretaceous**, a calcareous infiltration of the corneal epithelium. **K., Deep.** See *K. profunda*. **K., Diffuse.** See *K., Interstitial*. **K., Dotted.** See *K. punctata*. **K., Fascicular**, a form of phlyctenular keratitis in which one of the ulcers, originally formed at the margin of the cornea, creeps across its surface, followed by a leash of distended blood-vessels. **K., Granular**, due to conjunctival granulations; pannus. **K., Herpetic**, characterized by the formation of small vesicles on the cornea, which ulcerate and then heal. Relapses are common. **K., Hypopyon**, an ulcerative form accompanied by the formation of pus in the anterior chamber. **K., Inherited.** See *K., Interstitial*. **K., Interstitial**, a form of keratitis in which the entire cornea is invested with a diffuse haziness, almost completely hiding the iris. The surface of the cornea presents a ground-glass appearance. Later, from ciliary injection, blood-vessels form in the superficial layers of the cornea, and produce a dull-red color, the "salmon patch" of Hutchinson. The entire cornea may become cherry-red. The disease is most frequent between the ages of five and fifteen, and occurs in syphilitic individuals. **K. maculosa.** See *K. superficialis punctata*. **K., Marginal**, a form of phlyctenular keratitis in which the phlyctenules are arranged around the margin of the cornea. **K. marginalis**, a rare form of keratitis that must not be confounded with the marginal form of phlyctenular keratitis. It occurs in elderly people, and consists of a yellowish-gray zone of opacity immediately joining the sclera, which pushes into the clear cornea and occupies about one-half the circumference. **K. neuromyalytica**, keratitis following paralysis of the fifth nerve. It does not usually occur in partial paralysis of the nerve. Its cause is loss of trophic influence, aided by mechanical irritation and drying of the cornea. **K. of Reapers**, a traumatic form due to irritation of the cornea of reapers by beards of grain. **K. pannosa**, a superficial form in which blood-vessels develop beneath and in the epithelium. The latter undergoes hyperplasia and becomes in part opaque. **K., Parenchymatous.** See *K., Interstitial*. **K., Phlegmonous.** See *K. purulenta*. **K., Phlyctenular**, a disease of the eye

characterized by the formation upon some portion of the cornea of small papules or pustules, often associated with the formation of a similar lesion upon the conjunctiva. It is marked by much local congestion, lachrymation, and intense photophobia. The papules may develop into ulcers. **K. profunda**, an unusual form of keratitis characterized by the formation of a gray opacity in the center of the cornea, covered by superficial and stippled corneal layers. **K. punctata.**

1. A secondary affection of the cornea in association with affections of the iris, choroid, and vitreous. It is characterized by the formation of opaque dots, generally arranged in a triangular manner upon the posterior elastic lamina of the cornea. It is sometimes designated as *Descemetitis*. 2. Also a term given to an inflammatory affection of the cornea in which isolated white spots appear in Descemet's membrane, surrounded by cloudy areas. It occurs in children before puberty, and is probably syphilitic. **K. purulenta**, accompanied by the formation of pus. **K., Pustular.** See *K., Phlyctenular*. **K., Rheumatic**, occurring in a rheumatic subject. **K., Ribbon-like**, a name applied to the formation of a transverse calcareous film on the cornea, especially in elderly people. It is usually symmetric, and occurs chiefly in men of the gouty diathesis. **K. scrofulosa.** See *K., Interstitial*. **K., Secondary**, due to disease of other parts. **K., Specific.** See *K., Interstitial*. **K., Strumous.** See *K., Phlyctenular*, and *K., Interstitial*. **K. subepithelialis centralis.** See *K. superficialis punctata*. **K. superficialis punctata**, a disease of the cornea associated with severe conjunctivitis and with catarrh of the respiratory tract. In two or three days punctiform or linear spots appear immediately beneath the epithelium, the overlying conjunctiva being slightly hazy. It is also called *K. subepithelialis centralis*, and *K. maculosa*. **K. suppurativa.** See *K. purulenta*. **K., Sympathetic**, that following inflammation of the other eye. **K., Syphilitic.** See *K., Interstitial*. **K. tænulosa.** See *K., Phlyctenular*. **K., Trachomatous.** See *Pannus*. **K., Traumatic**, that consequent upon wounds or other injury of the cornea. **K. ulcerosa**, a form in which one or more ulcers involving part of the cornea are present. **K. variolosa**, that occurring in smallpox. It is purulent and often arises from a corneal pustule. **K., Vascular**, a superficial vascularity of the cornea occurring in pannus, etc. **K., Vesicular.** See *K., Phlyctenular*.

**Keratocoele** (*ker'-at-o-sel*) [*κέρας*, cornea; *κύλη*, tumor]. A hernia of Descemet's membrane through the cornea.

**Keratochromatosis** (*ker-at-o-kro-mat-oi'-sis*) [*κέρας*, horn; *χρῶμα*, color]. Discoloration of the cornea.

**Kerato-conjunctivitis** (*ker'-at-o-kon-junk-tiv-i'-tis*) [*κέρας*, horn, cornea; *conjunctivus*, connecting; *τις*, inflammation]. Simultaneous inflammation of the cornea and the conjunctiva.

**Kerato-conometer** (*ker-at-o-ko-nom'-et-er*) [*κέρας*, cornea; *κῶνος*, cone; *μέτρον*, measure]. An instrument for estimating astigmatism by the images reflected from the cornea.

**Keratoconus** (*ker-at-o-ko'-nus*). See *Keratoglobus*.

**Keratode** (*ker'-at-od*) [*κέρας*, horn; *εἶδος*, like]. The horny substance composing the skeleton of certain sponges.

**Keratodecœle** (*ker-at-od'-e-o-sel*). See *Keratocœle*.

**Keratodeonyxis** (*ker-at-od-e-o-niks'-is*). See *Keratonyxis*.

**Keratoderma** (*ker-at-o-der'-mah*) [*κέρας*, horn; *δέρμα*, skin]. 1. The cornea. 2. A horny condition of the skin.

**Keratodermatitis** (*ker-at-o-der-mat-i'-tis*) [*κέρας*, horn; *δέρμα*, skin; *τις*, inflammation]. Inflammation of the keratoderma; keratitis.

**Keratodermatocele** (ker-at-o-der-mat'-o-sell) [κέρατ, horn; δερμα, skin; τμήν, part; τμήν, tumor]. See *Keratoma*.

**Keratodermatomalacia** (ker-at-o-der-mat'-o-mal'-a-sia) [κέρατ, horn; δερμα, skin; μαλ, malacia, softness]. Softening of the cornea.

**Keratodermatosis** (ker-at-o-der-mat'-o-sis) [κέρατ, horn; δερμα, skin; τήσις, disease]. A skin affection characterized by changes in the horny elements of the skin.

**Keratodermia** (ker-at-o-der-mat'-i-a) [κέρατ, horn; δερμα, skin]. See *Keratoma*.

**K. erythematosa** symmetrical, lesions of the sides and palms, in which the horns point inwards at the tip up surface.

**Keratodermities** (ker-at-o-der-mat'-i-tes) [κέρατ, horn; δερμα, skin; τήσις, inflammation]. A group of inflammatory dermatitis affections.

**Keratogenous** (ker-at-o-ge-nous) [κέρατ, horn; γεννᾶν, to beget]. Pertaining to the formation of horny growths.

**K. Membrane**, that part of the skin or layer of cornea that develops into nails, claws, and hoofs.

**Keratoglobus** (ker-at-o-glob'-us) [κέρατ, cornea; globus, globe]. Enlargement and protrusion of the cornea. The sclerotic may also become distended in severe cases. When so extensive as to prevent closure of the lids, it has been called buphthalmos. When the distortion is irregular, irregular, and cone-shaped, the apex of the cone being the center of the cornea, it is called keratoconus, or conical cornea. When the protrusion is apical, or connected with synchia of the lids, it is called staphyloma of the cornea, or anterior staphyloma. When due to increase in the fluids of the eye, with increased tension and uniform ectasia, it is called staphyloma. Enlargement of the cornea is also called megalo-cornea.

**Keratoglossus** (ker-at-o-gloss'-us) [κέρατ, horn; γλῶσσα, tongue]. See *Macula*, Table 1.

**Keratohyalin** (ker-at-o-hyal'-in) [κέρατ, horn; ἵαλος, glass]. A peculiar substance occurring in granules in the deeper layers of the skin. These granules are insoluble in ether, alcohol, and water, and are present in the process of keratinization of the rete cells. See *keratinization*.

**Keratoid** (ker-at-oid) [κέρατ, horn; εἶδος, like]. Keratoid.

**Kerato-itis** (ker-at-o-ri'-tis) [κέρατ, cornea; ἴτις, inflammation]. Combined inflammation of the cornea and the iris.

**Keratoleukoma** (ker-at-o-leuk'-mah) [κέρατ, horn; λευκ, white; ομα, Keratoleukoma]. A leukoma or whitish opacity of the cornea.

**Keratolytic** (ker-at-o-lyt'-ic) [κέρατ, horn; λύσις, solution]. Dissolving skin; a curious and rare condition of the skin in which the latter, like the serpent's, is cast off periodically, that of the limbs coming off like snakes at intervals.

**Keratolytic** (ker-at-o-lyt'-ic) [κέρατ, horn; λύσις, solution]. Pertaining to keratolysis.

**Keratoma** (ker-at-o-mah) [κέρατ, horn; ὅμα, tumor; ἰα, inflammation]. 1. See *Callosity*. 2. Congenital keratoma, the keratoma, dating from fetal life, of the cornea, due to the pigment.

**Keratomalacia** (ker-at-o-mal'-a-sia) [κέρατ, cornea; μαλ, malacia]. A softening of the corneal tissue.

**Keratome** (ker-at-o-meh) [κέρατ, cornea; τμήν, a cutting]. A small, with a smaller, saw-like blade, used for making the section and the cornea in the operation of keratotomy.

**Keratometer** (ker-at-o-met'-er) [κέρατ, cornea; μέτρον, measure]. An instrument for measuring the curves of the cornea.

**Keratomycosis** (ker-at-o-mi-kō'-sis) [κέρατ, cornea; μυκη, fungus]. A fungoid growth of the cornea, or the diseased condition therewith associated.

**K. aspergillina**, a form characterized by the presence of *Aspergillus glaucus*.

**Keratoncus** (ker-at-on'-gus) [κέρατ, horn; ὄγκος, a tumor]. Any horny tumor.

**Keratonosis** (ker-at-on'-o-sis). See *Keratosis*.

**Keratonyxis** (ker-at-o-niks'-is) [κέρατ, cornea; νύξις, needling]. The needling of a soft cataract by puncture through the cornea; also, the old operation of couching a cataract with the needle.

**Keratoplasia** (ker-at-o-pla'-ze-ah) [κέρατ, horn; πλάσσειν, to form]. The reparative renewal of the horny layer of the skin.

**Keratoplastic** (ker-at-o-plas'-tik) [κέρατ, horn; πλαστική, formed]. Pertaining to keratoplasty.

**Keratoplasty** (ker-at-o-plas'-te) [κέρατ, cornea; πλάσσειν, to form]. Plastic operation upon the cornea, especially the transplantation of a button or excised portion of cornea from the eye of a lower animal to that of man. This is effected by means of a peculiar trephine, with which the tissue to be transplanted is removed from the animal's eye and the place for its reception is made in the human eye. The operation is sometimes called trephining the cornea.

**Keratorrhesis** (ker-at-o-rhs'-is) [κέρατ, horn; ῥήξις, rupture]. Rupture of the cornea, due to ulceration or traumatism.

**Keratosis** (ker-at-o-skle-rh'-tis) [κέρατ, cornea; σκληρός, hard; τήσις, inflammation]. Inflammation of the cornea and the sclera.

**Keratoscope** (ker-at-o-skop) [κέρατ, cornea; σκοπεῖν, to observe]. An instrument for examining the cornea, and testing the symmetry of its meridians of curvature.

**Keratotomy** (ker-at-o-s'-ko-pe) [κέρατ, cornea; σκοπεῖν, to observe]. Examination of the cornea. See *Retinoscopy*.

**Keratose** (ker-at-ōs) [κέρατ, horn]. Horny.

**Keratosis** (ker-at-o'-sis) [κέρατ, horn; νόσος, disease]. Any one of a class of skin-diseases characterized by thickened epidermis, and the presence of such callosities as horns, warts, etc. See *Callosity*.

**K. follicularis**. See *Darier's Disease*.

**K. obturans**, a condition of the external auditory meatus due to desquamation of the epithelium, the mass being colored by cerumen and containing cholesterol-crystals.

**K. pilaris**, Lichen pilaris; Lichen spinulosus; Pityriasis pilaris; a chronic affection of the skin marked by a pin-head-sized conical elevation investing the hair-follicle, and somewhat resembling gooseflesh and ichthyosis. The skin becomes dry and hard, and feels like a nutmeg-grater. The disease appears in workmen who are uncleanly, and in scrofulous children, and it occurs chiefly on the thighs, arms, and forearms.

**K. senilis**, a cornification of the skin of old people, general or partial, circumscribed or diffuse, and often limited to certain definite regions, as the face and dorsal surfaces of the hands and feet. The lesions consist of light or dark yellowish, brownish, or blackish points, dry, scaling, and horny, or scaling and greasy. These may become the seat of an epitheliomatous process.

**Keratotomy** (ker-at-o-tōm). See *Keratome*.

**Keratotomy** (ker-at-ol'-o-mē) [κέρατ, cornea; τέμνειν, to cut]. Surgical incision of the cornea.

**Keraunographic** (ker-aw-no-graf'-ik) [κεραυνός, lightning; γράφειν, to write]. Pertaining to the pictorial impressions of near objects sometimes seen upon the body of a person who has been struck by lightning.

**Keraunoneurosis** (ker-aw-no-neu-ro'-sis) [κεραυνός, lightning; νευρον, nerve; νόσος, disease]. Nervous disease due to lightning-stroke.

**K., Unsymmetric**, a term given by Rokitsansky to a kidney that is normal in position and conformation, though occasionally rather enlarged, its fellow being deficient. **K., Wandering**. See *K., Floating*. **K., Waxy**. Same as *K., Amyloid*. **K.-worm**. See *Thread-worms and Parasites (Animal), Table of*.  
**Kiestine** (*ki-es-tin*). See *Gravidin*. **K. Test**. See *Gravidin Test*.  
**Kif** [African]. An Algerian mixture, the principal ingredient of which is *Cannabis indica*. Also, the dreamy state induced by the use of hashish.  
**Kilian's Line**. See *Lines, Table of*. **K.'s Pelvis**, a halisteretic pelvis; a pelvis the seat of osteomalacia.  
**Killosis** (*kil-o'-sis*). Synonym of *Strabismus*.  
**Kilogram** (*kil'-o-gram*) [*χιλιοι*, one thousand; *γραμμα*, a gram]. One thousand grams, or 2.2 pounds avoirdupois.  
**Kilogrammeter** (*kil'-o-gram-et'-er*) [*χιλιοι*, one thousand; *γραμμα*, gram; *μέτρον*, a measure]. A term denoting the energy required to raise one kilogram one meter in height; equivalent to 7.233 foot-pounds.  
**Kiloliter** (*kil'-o-le-ter*) [*χιλιοι*, thousand; *λιτρα*, a liter]. One thousand liters, or 35.31 cubic feet.  
**Kilometer** (*kil'-o-me-ter*) [*χιλιοι*, thousand; *μέτρον*, measure]. One thousand meters, or 1093.6 yards.  
**Kilostere** (*kil'-o-ster*) [*χιλιοι*, thousand; *στερής*, solid]. One thousand cubic meters.  
**Kilowatt** (*kil'-o-wot*) [*χιλιοι*, thousand; *watt*]. One thousand watts of electricity; same as the *keltin*.  
**Kin** [M.E., *kin*, kin]. Race; family; breed; kind; relationship.  
**Kina**, or **Kino-kina** (*ki'-nah* or *ki'-no-ki'-nah*). Cinchona bark, *q. v.*  
**Kinæsthesia** (*kin-es-the'-ze-ah*). See *Kinesthesia*.  
**Kincough**, or **Kinkcough** (*kin'-kof* or *king'-kof*). Synonym of *Whooping-cough*.  
**Kinematic** (*kin-em-at'-ik*) [*κίνημα*, a motion]. Pertaining to *Kinematics*.  
**Kinematics** (*kin-em-at'-iks*) [*κίνημα*, a motion]. The science of motion without reference to its origin or effects.  
**Kinepock** (*kin'-pok*). Synonym of *Vaccinia, q. v.*  
**Kinesalgia** (*kin-es-al'-je-ah*) [*κίνησις*, movement; *άλγος*, pain]. Local pain following upon muscular contraction.  
**Kinesia** (*kin-e'-ze-ah*) [*κίνησις*, movement]. Movement-cure; systematic use of motion for therapeutic or hygienic purposes.  
**Kinesiatic** (*kin-es-e-al'-rik*) [*κίνησις*, movement; *ιατρικός*, therapeutic]. Relating to kinesitherapy.  
**Kinesiatrics** (*kin-es-e-al'-riks*). Same as *Kinesitherapy*.  
**Kinetic** (*kin-et'-ik*). See *Kinetic*.  
**Kinesiesthesiometer** (*kin-es-e-es-the-ze-om'-et-er*) [*κίνησις*, movement; *αἴσθησις*, perception; *μέτρον*, measure]. An instrument devised by Hitzig for testing the muscular-sense. It consists of seventeen wooden balls of the same diameter, but of different weights.  
**Kinesiology** (*kin-es-e-al'-o-je*) [*κίνησις*, motion; *λόγος*, discourse]. The science of movements, considered especially as therapeutic or hygienic agencies.  
**Kinesiometer** (*kin-es-e-om'-et-er*) [*κίνησις*, motion; *μέτρον*, measure]. An instrument for determining quantitatively the motion of a part.  
**Kinesineurosis** (*kin-es-e-o-nu-ro'-sis*) [*κίνησις*, movement; *νεῖρον*, a nerve; *νόσος*, disease]. Functional abnormalism of the motor centers or nerves.  
**Kinesionosos** (*kin-es-e-om'-o-sos*) [*κίνησις*, movement; *νόσος*, disease]. Any disease marked by impairment of the power of motion.  
**Kinesiotherapy** (*kin-es-e-o-ther'-ap-e*) [*κίνησις*, movement; *θεραπεία*, therapy]. The treatment of disease by systematic active or passive movements.

**Kinesipathic** (*kin-es-ip-ath'-ik*) [*κίνησις*, motion; *παθος*, disease]. Pertaining to kinesipathy.  
**Kinesipathist** (*kin-es-ip'-ath-ist*) [*κίνησις*, motion; *παθος*, disease]. One who practises the gymnastic treatment of disease.  
**Kinesipathy** (*kin-es-ip'-ath-e*) [*κίνησις*, motion; *παθος*, disease]. 1. Kinesionosos. 2. (Incorrectly) kinesiotherapy.  
**Kinesis** (*kin-e'-sis*) [*κίνησις*, motion]. The general term for all the physical forms of energy, as opposed to *Metakinesis*, a term intended to express the psychologic exhibition of coördinates or correlates of kinesis. According to a monistic conception of the universe, both are the double aspects of one underlying reality.  
**Kinesitherapy** (*kin-es-e-ther'-ap-e*) [*κίνησις*, motion; *θεραπεία*, cure]. See *Swedish Movements*.  
**Kinesodic** (*kin-es-od'-ik*) [*κίνησις*, motion; *ὅδος*, way]. Pertaining to those nerve-fibers conveying motor influences. Also, the motor tracts of the nerve-system.  
**Kinesotherapy** (*kin-es-o-ther'-ap-e*). Same as *Kinesiotherapy*.  
**Kinesthesia** (*kin-es-the'-ze-ah*). Same as *Kinæsthesia*.  
**Kinesthesia** (*kin-es-the'-sis*) [*κινέειν*, to move; *αἴσθησις*, sensation]. That quality of sensations whereby one is aware of one's positions and movements, especially those of the automatic type; it is distinct from the muscular sense.  
**Kinesthetic** (*kin-es-the'-ik*) [*κινέειν*, to move; *αἴσθησις*, sensation]. Relating to kinesthesia.  
**Kinetia** (*kin-e'-she-ah*) [*κίνησις*, motion]. A term applied to all forms of motion-sickness. It includes such disorders as sea-sickness and car-sickness.  
**Kinetic** (*kin-et'-ik*) [*κινητικός*, producing motion]. That which produces motion. Pertaining to those forces that produce motion.  
**Kinetics** (*kin-et'-iks*) [*κινητικός*, producing motion]. The science of force as developing motion.  
**Kinetogenesis** (*kin-et-o-jen'-es-is*) [*κινέειν*, to move; *γένεσις*, origin]. In biology, the origin of animal structures, either directly or indirectly through movements.  
**Kinetogenetic** (*kin-et-o-jen-et'-ik*) [*κίνησις*, motion; *γένεσις*, genesis]. Of the nature of or pertaining to kinetogenesis.  
**Kinetogenetically** (*kin-et-o-jen-et'-ik-al-e*) [*κινέειν*, to move; *γένεσις*, production]. In biology, originating through movement.  
**Kinetogeny** (*kin-et-oj'-en-e*) [*κινητός*, verbal adj. of *κινέειν*, to move; *γενής*, producing]. In biology, applied to the agency of that energy developed in the motions of organisms and their parts, in the modification of the forms and proportions of their hard parts.  
**King's Blue**. Same as *Smalts*. **K.'s Evil**, a name formerly popularly applied to scrofula, on account of a belief that it could be cured by the touch of the king. **K.'s Yellow**. See *Orpiment*, and *Pigments, Conspectus of*.  
**Kinic Acid** (*kin'-ik*). See *Acid, Quinic*.  
**Kink** (*kingk*) [D., *kincken*, cough]. 1. The whoop in whooping-cough. 2. A synonym of whooping-cough. 3. A flexion or a twist. **K.-cough**, a synonym of whooping-cough. **K.-host**, a synonym of whooping-cough. See *Pertussis*.  
**Kino** (*ki'-no*) [E. Ind.]. The inspissated juice of *Pterocarpus marsupium*, found in India, and similar in action to tannic acid; it is used mainly as a constituent of gargles and diarrhea-mixtures. **K., Tinct.**, 10 per cent. of the drug. Dose ℥x-ʒij. **K., Pulv.**, Comp. (B.P.), kino 15, opium 1, cinnamon 4. Dose gr. v-xx. Various similar substances are called by this name. **K., Jamaica**, is produced by the tree *Coccoloba unifera*. See *Coccoloba*. **K., Australian**, is

retention of an excess of fluid in the eye, from closure of the canal leading through the pectinate ligament into Schlemm's canal.

**Knife** (*nif*) [ME., *knif*, knife]. An instrument for cutting. In surgery, knives are of various shapes and sizes, according to their use. **K.-needle**, a needle with a cutting edge, used in the dissection of cataracts.

**Knitter's Cramp** (*nit'-er-kramp*). See *Cramp*.

**Knitting** (*nit'-ing*) [ME., *knitten*, to knit]. The union and becoming rigid of a fracture.

**Knob** (*nob*) [ME., *knobbe*, a knob]. A protuberance. **K.-root**. See *Collinsonia canadensis*.

**Knock-knee** (*nok'-ne*). See *Genu valgum*.

**Knopperrn** (*knop'-ern*) [Ger.]. Galls from immature acorns of several species of oak, largely used in Austria for tanning. They contain from twenty-eight to thirty-five per cent. of tannin.

**Knot** (*not*) [ME., *knotte*, a knot]. An interlacement of ends or parts of one or more cords or threads so that they cannot be readily separated. **K., Clove-hitch**, a knot consisting of two single, contiguous loops, the

the primitive streak. **K., Reef**, a knot so formed that the ends come out alongside of the standing parts and the knot does not jam. It is also called *Square Knot*. **K., Sailor's**. Same as *K., Reef*. **K., Square**. Same as *K., Reef*. **K., Staffordshire**, a knot used in ligating the pedicle in ovariectomy. The ligature is passed through the pedicle, and withdrawn so as to leave a loop, which is passed over the tumor, and one of the free ends is then drawn through the loop; both ends are then passed through the pedicle, tightened, and tied. It is also called *Tait's Knot*. **K., Stay**, a term applied by Ballance and Edmunds, to a knot formed by two or more ligatures in the following way: On each ligature separately is made the first hitch of a reef-knot, which is tightened so that the loop lies in contact with the vessel, without constricting it; then taking the two ends on one side together in one hand, and the two ends on the other side in the other hand, the vessel is constricted sufficiently to occlude it, after which the reef-knot is completed. The simplest method of completing the knot is to treat the two ends in each hand as a single thread, and to tie them as if

CLOVE-HITCH KNOT.

COMBINED SURGEON'S AND REEF KNOT.

STAFFORDSHIRE KNOT.

GRANNY KNOT.

REEF, OR SAILOR'S KNOT.

SURGEON'S KNOT.

free ends toward each other. It is used for making extension in the reduction of dislocations. **K., Double**. Same as *K., Friction*. **K., False**. Same as *K., Granny*. **K., Friction**, one in which the ends are wound twice around each other before they are tied. **K., Gerdy's Extension**, resembles the clove-hitch; it is employed in making extension of the leg at the ankle. **K., Granny**, a tie of a cord in which in the second loop the end of one cord is over, and the other under its fellow, so that the two loops do not lie in the same line. This knot may easily be converted into a slip-knot. **K.-grass**: 1. *Arrhenatherum odoratum*; 2. *Avena elatior*; 3. *Hippuris vulgaris*; 4. *Illecebrum*; 5. *Polygonum*; 6. *Triticum repens*. **K., Hensen's**, a fixed point in the mammalian blastodermic vesicle at which the formation of the primitive axis and notochordal canal begins. It marks the anterior extremity of

completing a single reef-knot. **K., Surgical**, a double knot made by passing the thread twice through the same loop. **K., Tait's**. See *K., Staffordshire*. **K.-weed**, *Centaurea nigra*. See also *Collinsonia canadensis*.

**Knuckle** (*nuk'-l*) [ME., *knokel*, a knuckle or joint]. Any one of the joints of the phalanges with the metacarpal bones or with each other; also a loop of intestine.

**Knuckling** (*nuk'-ling*) [ME., *knokel*, a knuckle or joint]. In farriery, a partial dislocation of the fetlock-joint, in which the relative position of the pastern-bone to the cannon and coronet bone is changed, the pastern becoming more nearly perpendicular, with the lower end of the cannon-bone resting behind the center line of the suffraginis, while the lower end of this bone rests behind the center line of the coronet. It is also called *Cocked Ankles*.

**Kobelt's Tubes**. Blind tubes of the parovarium.

**Koch's Apparatus**. An apparatus for air-analysis. **K., Bacillus of**. See *Bacteria*, *Synonymatic Table of*.

**K Comma-bacillus** of. See *Bacterium*. The comma-shaped bacillus. **K's Damp Apparatus**. See *Vaporometer*. **K's Eruption**, an eruption resembling that of measles or scarlet fever, but all spots being red, not white, and the eruption being the secretion of bacteria.

**K's Lymph**. See *Lymph*. **K's Method, or Koch's Löfflich Method**, for isolating bacteria from fluids. See *Isolation*. **K's Method of Sterilization**, a method of sterilizing fluids. The fluid is held in a flask by a short glass tube or funnel tube, and is exposed to the steam of a pressure water bath. The method is very simple, and has not the expense of the other methods. **K's Plates**, thin casting and measuring plates for use in determining the number of bacteria in a fluid. **K's Rules**, rules formulated by Koch for the treatment of diseases with before a given micro-organism has been found to be the cause of an infectious disease. 1. The micro-organism must be present in every case of the disease, and not in cases of other diseases. 2. It must be isolated and grown on artificial media. 3. The bacteria when injected into an animal must produce the disease in question. 4. The micro-organism must again be found in the fluid causing the disease, was thus produced. **K's Specific**. See *Specific*. **K's Steam Apparatus**, an apparatus for sterilization by steam. **K's Treatment**. See *Treatment*. *Method*.

**Kachin**. See *Language*. *Language*, p. 7.

**Kärberle's Næud**. A *Naevus* used in the performance of abdominal hysterectomy.

**King's Cylinders**. An apparatus for testing the permeability of high tubes by the ear. **K's Manometric Flames**, backward or zigzag flame pictures seen in a revolving mirror, and produced by the vibrations of the voice against a thin membrane that separates the gas reservoir supplying a small burner from the air-cylinders into which one speaks. The form of the flame picture is characteristic for each vowel, and varies with the pitch. **K's Rods**, steel rods for measuring notes of very high pitch. Same as *K's Cylinders*.

**Kofacker-Sadler's Law**. See *Law*.

**Kohlrausch's Fold**. See *Third Schinler*.

**Kono-mia m** (*kon'-m'-ia*) [*kon-mi*, common; *kon-mi*, common]. A disease emanating from the soil.

**Kola-nut** (*ko'-la*) [African]. The seed of *Cola acuminata*, and is found in Central Africa as a substitute for tea and coffee. It contains an alkaloid similar to caffeine and is a central stimulant and cardiac tonic. Taste of chocolate, pungent, fracture, 5; of the fluid *cola*, etc. See *Cola*. *Food*.

**Kola (kola)** [African name]. An Abyssinian disease resembling malaria.

**Kolerium** (*ko'-ler-i-um*) See *Colerium*.

**Koliker's Columns**. See *Alloch-chomus*. **K's Gland**. See *Gland*. **K's Lamina or Membrane** of. See *Membrane*.

**Kolometra** (*ko'-lo-m'-e-tra*) [*kol-mi*, glue; *metra*, tissue] Same as *Kolometra*.

**Kolomow's Excretion**. See *Excretion*. *Table*.

**Kolophthys** (*ko'-lo-f'-th'-ys*) [*kol-mi*, glue; *phthys*, glue] Same as *Kolophthys*.

**Kolpo** (*ko'-lo*) [*kol-mi*, glue] Same as *Kolpo*.

**Kolpocystotomy** [*kol-mi*, glue; *cyst*, bladder] See *Colpocyst*.

**Kolpocystomorphia** (*ko'-lo-f'-th'-ys*) [*kol-mi*, glue; *cyst*, bladder] Same as *Colpocyst*.

**Kolpocystitis** [*kol-mi*, glue; *cyst*, bladder] Same as *Colpocyst*.

**Kombe** (*ko-m'-bah*) [African]. An African arrow-poison (kombe inee) extracted from *Strephanthus kombé*.

**Komeceras, Komoceras** (*ko-mes'-er-as, ko-mos'-er-as*) [*kom*, the hair; *keras*, horn]. In biology, applied to such a horn as that of the American prong-horn, formed of matted hair.

**Kommabacillus** (*k-m'-ah-bas-il'-us*). See *Bacteria*, *Synonymic Table* of.

**Koniantron** (*ko-ne-an'-tron*) [*kon*, dust; *antron*, antrum]. An instrument for spraying fluid into the tympanic cavity.

**Koosso, or Koosoo** (*koos'-soo*). See *Brayera*.

**Kopf-tetanus** (*keff'-tet-an-us*) [Ger.]. Cephalic tetanus, due to wounds of the head, chiefly in the region of the fifth nerve. Initial trismus is associated with paralysis of the face on the side of the injury. In some cases there is also pharyngeal spasm, so that the name **Hydrophobic Tetanus** has also been given to this form of tetanus.

**Kopiopia** (*kop-e-o'-pe-ah*). See *Copiopia*.

**Kopp's Asthma**. See *Asthma*.

**Koprikin** (*kop'-rik-in*) [*kopri*, dung]. A term applied by Hünefeld to undigested animal matter in the feces.

**Kore-** (*kor'-e*). See *Core*.

**Koronion** (*ko-ro-ne-on*). See *Craniometric Points*.

**Koroscopy** (*ko-ro-s'-ko-pe*). See *Retinoscopy*.

**Kosin** (*ko'-sin*) [Abyssinian, *cusso*],  $C_{31}H_{38}O_{10}$ . Same as *Koussin*. See *Brayera*.

**Koso** (*ko'-so*). Same as *Brayera*, q. v.

**Kossein** (*ko'-e-in*) [Abyssinian, *cusso*]. A crystalline body contained in koosso. It is soluble in ether, in alcohol, and in acids. It is slightly styptic.

**Koubasoff, Bacillus** of. See *Bacteria*, *Synonymic Table* of.

**Koumiss** (*koos'-mis*) [Tartar, *kumiz*, fermented mare's milk]. An alcoholic drink made by the fermentation of milk. As made by the fermentation of mare's milk, it has long been a favorite beverage with the Tartars and other Asiatic tribes. Cow's milk has been used chiefly in making it, both in Europe and America. Mare's milk is the more suitable for fermentation because of the larger percentage of milk-sugar that it contains. The composition of the koumiss as prepared from both mare's milk and cow's milk is shown in the accompanying analyses from various sources:—

#### ANALYSIS OF KOUMISS.

|  | WATER. | MILK-SUGAR. | LACTIC ACID. | ALBUMINOIDS. | FAT. | ALCOHOL. | CARBON DIOXID. | ASH. |
|--|--------|-------------|--------------|--------------|------|----------|----------------|------|
| Koumiss from mare's milk (Fleischmann).  | 91.53  | 1.25        | 1.01         | 1.91         | 1.27 | 1.85     | 0.88           | 0.29 |

**K-cure**, a method of treating pulmonary tuberculosis. Large quantities of koumiss can be easily digested, and its use is frequently attended by a gain in weight.

The patients rise early and take a glass of koumiss every half hour, except during the two hours preceding dinner and supper. Meat and fats form the chief part of the ordinary food; sweets, fruit and salads are avoided, as well as ices, coffee, and spirits. If the koumiss causes diarrhea, lime-water is used to arrest this. At first a few glasses only are taken daily to gradually accustom the patient to the cure.

**Koussin** (*kooś'-in*). See *Brayera*.

**Kouso** (*kooś'-o*). See *Brayera*.

**Kowalevsky, Canal of**. See *Canal*.

**Krameria** (*kra-me'-re-ah*) [after J. G. H. *Kramer*, an Austrian physician]. A genus of polypetalous herbs. *Rhatany*, the root of *K. triandra* and *K. tomentosa*, shrubs native to South America, possesses the same astringent qualities as tannic acid. It is a popular remedy for fissure of the anus, spongy guins, etc. **K., Ext.**, in water. Dose gr. v-x. **K., Ext., Fld.** Dose  $\mathfrak{m}\nu$ - $\mathfrak{z}$  ss. **K., Infus.** (B. P.) Dose  $\mathfrak{z}$ j-ij. **K., Syr.**, contains of the fluid extract 45, syrup 55. Dose  $\mathfrak{z}$  ss- $\mathfrak{z}$  ss. **K., Trochisci**, contain each gr. j of the extract. **K., Tinct.**, 20 per cent. Dose  $\mathfrak{m}\nu$ - $\mathfrak{z}$ j.

**Krameric Acid** (*kra-me'-rik*) [after J. G. H. *Kramer*, an Austrian physician]. An acid contained in *Krameria*.

**Krampton's Muscle**. The muscle of the so-called ciliary ligament in the avian eye.

**Krarkoff's Method**. A method of extracting soluble animal ferments; it consists in precipitating these and the albuminoids by means of ammonium sulphate; subsequent treatment with acids renders the albuminoids insoluble, and the ferments are readily extracted with water.

**Kraurosis** (*kraw-ro'-sis*) [*κραῦρος*, dry]. Shriveling and dryness of a part, especially of the vulva.

**Krause's Corpuscles**. Terminal nerve-corpuscles described by W. Krause (1860) as existing in the conjunctiva, the genitals, and other parts of the human body, and differing from the Pacinian corpuscles only

KRAUSE'S END-BULB.

a. Nucleated capsule. b. Core. c. Fiber entering and branching, terminating in core at d.

in the absence of a thick laminated investment. **K.'s Embryo**, an embryo of the fourth week, in which there is an absence of the allantoic stalk, the allantois hanging from the posterior extremity of the embryo. **K.'s End-bulbs**, terminal bodies of sensory nerves in the skin and membranes of all mammals. They are elongated, oval, or round bodies, 0.075 to 0.14 mm. long. **K., Glands of**. See *Gland*. **K.'s Membrane**, a structure that extends from the sarcolemma through the fiber of a muscle, making a complete partition. **K.'s Method**, a method of inducing premature labor. It consists in passing a flexible bougie into the uterine cavity. **K.'s Muscle**, the

coraco-cervicalis muscle. See *Muscles*, Table of. **K.'s Nerve**. See *Nerves*, Table of. **K.'s Process**, a process for the separation of the two coloring matters of chlorophyll. 1. Prepare a solution by allowing fresh bruised leaves to be acted upon for a few hours in the dark by warm 65 per cent. alcohol; decant. 2. Shake one volume of this solution with two volumes of benzol; after a time the turbid liquid separates into a benzol layer above having a bluish-green color, and an alcohol layer below tinged yellow. The yellowish pigment is called by Krause *xanthophyl*, the bluish-green, *kyanophyl*. According to Wiesner, *kyanophyl* is nearly pure chlorophyll freed from its associated yellow pigment xanthophyl. It is believed by many that the yellow pigment separated by this process is identical with that found in plants blanched (etiolated) in darkness, and which has been called etioline (Goodale).

**Kreatin** (*kre'-at-in*). See *Creatin*.

**Kreatinin** (*kre-at'-in-in*). See *Creatinin*.

**Kremnitz White**. Same as *White Lead*.

**Krems White**. Same as *White Lead*.

**Kreolin** (*kre'-o-lin*). See *Crocin*.

**Kresol** (*kre'-sol*). See *Cresol*.

**Krinosin** (*krin'-o-sin*). See *Crinosin*.

**Krishaber's Disease**. See *Diseases*, Table of.

**Kristeller's Method**. A method of hastening tedious labor by fetal expression by means of rhythmic pressure on the fundus uteri. Pressure is made on the fetus while the entire child is still in the genital canal.

**Krohn's Glands**. A pair of glands in the cephalothorax of certain of the *Arachnoidea* (*Phalangida*, *Cyphophthalmida*).

**Kronecker's Center**. The inhibitory center of the heart. It may be injured in cardiocentesis.

**Krönlein's Hernia**. See *Hernia*, *Inguino-properitoneal*, and *Diseases*, Table of.

**Krull's Treatment**. See *Treatment*, *Methods of*.

**Krypto-** (*krip'-to-*). See *Crypto-*.

**Kühne's Method**. A method of staining bacilli, and *K.'s Modification of Gram's Method*. See *Stains*, Table of. **K.'s Carbol**. Methylene-blue, methylene-blue 1.5, absolute alcohol 10. Rub up and gradually add 100 parts of a five per cent. solution of carbolic acid. **K.'s Motorial End-plates**, a peculiar form of nerve-ending. The same as the *Hillocks of Doyère*. **K.'s Pancreas-powder**, an extract prepared by the prolonged extraction of fresh pancreas of ox with alcohol and then with ether.

**Kuhnt, Cylinder-cone of**. See *Cylinder*.

**Kujawah** (*ku'-jah-waw*) [E. Ind.]. An apparatus used in India, by means of which wounded persons may be carried on camels.

**Kumbecephalic** (*kum-be-sef-at'-ik*) or **Kumbokephalic** (*kum-bo-kef-at'-ik*). See *Cymbokephalic*.

**Kumiss** (*koo'-mis*) or **Kumyss** (*koo'-mis*). See *Koumiss*.

**Kümmel** (*kim'-el*) [Ger., "*cumin*."]. A liqueur, or cordial, originating in Germany and Russia, and flavored with fennel, caraway, cumin, or coriander.

**Kummerfeld's Lotion**. A cosmetic used in dermatology. It consists of spirit of camphor and spirit of lavender, each  $\frac{1}{2}$  dram; precipitated sulphur 15 grains; cologne-water one dram, distilled water 2 ounces.

**Kumysgen** (*koo-mis'-jen*) [Tartar, *kumiz*, fermented mare's milk; *yevvär*, to beget]. A preparation used for the production of koumiss.

**Kupffer's Cells**. Liver-cells which, according to Asp and Kupffer, present exceedingly minute intracellular passages that pass from the bile capillaries into the interior of the cells, where they communicate with

curious small cavities or vesicles. **K.'s Method.** See *Meckel's Vesicle*. **K.'s Vesicle**, a small, globular cavity near the posterior extremity of the embryo in teleostean fishes.

**Kurung Oil** (*koo'-rung*). See *Phosphorus*.

**Küsmaul's Cornu**. A demonstration of diabetes insipidus associated with the presence of a tumor in the brain, and the removal of the tumor. See *Diabetes*. **Küster's Disease**, a form of the spinal paralysis. See *Paralysis*. *Küster*.

**Küstner's Sign**. See *Sign* and *significance*. *Küstner*.

**Kutabuth** (*koo-ta-buth*) [*Alaki*]. *Melantholus craticholus*.

**Kwan, or Kwang** (*kwan*, or *kwang*) [*Yam*]. A kind of herb made in Kwantung of the roots, natural, or baked, and infused with the decoction of various sweet herbs.

**Kyanking** (*kyan'-king*) [after *Kyan*, the inventor]. A wood preserving process having for its object the preservation of the protein matters in wood cells, thus preventing putrefaction by impregnating the wood with a solution of mercuric chlorid. Impregnation with a 50 per cent. solution of zinc chlorid is called *Burmanizing*. See *Preservative*. *Kyanking-fluid*.

**Kyanophyl** (*kyan'-o-fil*) [*Yam*], dark-blue; *kyan*, a blue. The bluish-green pigment of chlorophyll. Same as *Chlorophyll*.

**Kyestein** (*kye'-stin*) [*Yam*], conception; *kyest*, covering. A clay deposit upon decomposing urine, at once first thought to be diagnostic of pregnancy.

**Kylopodia** (*kye'-lo-pod-ia*) [*Yam*], twisted; *kyos*, twisted. See *Club-foot*.

**Kylosis** (*kye'-lo-sis*) [*Yam*], twisted. Same as *Club-foot*.

**Kymograph** (*kye'-mograph*). **Kymographion** (*kye'-mograph-ion*) [*Yam*], wave; *kyos*, to write. An instrument for reproducing graphically the variations in the pressure of the blood.

**Kymoscope** (*kye'-m-es-kop*) [*Yam*], wave; *kyos*, to inspect. A device used in the observation and study of the blood current.

**Kynurin** (*kye'-nu'-rin*) [*Yam*], a dog; *oyon*, urine.  $C_8H_5N_2O_2$ . A crystalline substance obtained from uric acid. It may also be made by oxidizing diethoxy and diethoxyimic acid with chromic acid. It crystallizes in needles containing  $3H_2O$ .

**Kyphocolorachitic** (*kye'-fo-kol'-rak-ill'-ik*) [*kyos*, hump-back; *kyos*, clench; *kyos*, spine]. *Kyphocolorachitic*.

**Kyphocoliosis** (*kye'-fo-kol'-ill'-is*) [*kyos*, hump-back; *kyos*, a bending]. *Kyphosis* combined with *coliosis*.

**Kyphoscoliotic** (*kye'-fo-sko-le-oll'-ik*) [*kyos*, hump-back; *skolios*, oblique]. Characterized by or pertaining to kyphoscoliosis.

**Kyphosis** (*kye'-fo'-sis*) [*kyos*, hump-back]. Hump-back. Angular curvature of the spine, with the prominence or convexity turned dorsad. **K. bicyclistarum**, a curvature of the spine, due to error in posture in bicycle-riding.

**Kyphotic** (*kye'-fo'-tik*) [*kyos*, hump-back]. Relating to, of the nature of, or affected with, kyphosis.

**Kysthoproptosis** (*kye'-tho-prop-to'-sis*) [*kyos*, a hollow; *pyroptosis*, a falling forward]. Prolapse of the vagina.

**Kysto-** (*kye'-to-*). See *Cysto-*.

**Kystoma** (*kye'-to-mah*). See *Cystoma*.

KYMOGRAPH. (Ludwig.)

a, a. Artery. C. Revolving-cylinder. c. Height of mercury in tube; the difference between this point and d indicates the pressure within the vessel. d, s. Float on mercury in tube. f. Writing-style.

**Kytharrhagia** (*kith-ar-a'-je-ah*). See *Cytharrhagia*.

**Kythemolytic** (*kye'-them-o-lyl'-ik*) [*kytos*, cell; *aiμα*, blood; *lysis*, solution]. Pertaining to, characterized by, or causing, the destruction of blood-cells.

**Kytomitom** (*kye'-tom'-it-om*) [*kytos*, cell; *mitos*, thread]. The network in the body of the nucleus of the cell.

**Kytoplasm** (*kye'-to-plazm*) [*kytos*, cell; *πλάσμα*, plasm]. The protoplasm of the cell.

## L

**L.** The abbreviation of *Left*, of *Lumbar*, of *Lithium*, and of *Libra*, a pound.

**λ** denotes wave-length. For instance  $\lambda$  506, means a wave-length equal to 506 millionths of a millimeter. Sometimes the letters W. L. are used instead of  $\lambda$ .

**Lb.** Contraction of *liber* = pound.

**Lab, or Lab-ferment.** The ferment of rennet producing coagulation of milk. It is separated from the proenzyme, *labzymogen*, by means of the acids of the gastric juice, and especially by HCl. Labzymogen resists the action of alkalies, which, even in very small amounts, destroys the lab. A temperature of 35° to 40° C. is most favorable to the action of lab. At 70° C. the lab is destroyed, but not the labzymogen.

**Labarraque's Liquor.** See *Liquor*. **L.'s Solution.** See *Chlorin*.

**Labbé, Vein of.** See *Vein*.

**Labdacism** (*lab'-das-izm*). Same as *Lambdacism*.

**Labdanum** (*lab'-dan-um*). See *Ladanum*.

**Labellum** (*la-bel'-um*) [dim. of *labium*, a lip; *pl.*, *Labella*]. In biology: (a) One of the petals of an orchid, which, properly the upper one, is made the lower by a semi-twist of the ovary. It is larger than the other petals and offers a landing-place for insects; it is carried backward in the form of a spur, and then assumes the functions of a nectary and so attracts visitors (Cheshire); (b) One of the mouth-parts of an insect.

**Labes** (*la'-bez*) [L.]. An old name for the plague; also, for any depravation or lowering of the standard of health.

**Labial** (*la'-be-al*) [*labium*, a lip]. Pertaining to the lips. **L. Bone.** See *Intermaxillary*. **L. Frenum**, frenum of the lips.

**Labialism** (*la'-be-al-izm*) [*labium*, a lip]. The tendency to pronounce any articulate sounds as if they were labials; the addition of a labial or labio-dental quality to an articulate sound.

**Labials** (*la'-be-alz*) [*labium*, a lip]. The consonant-sounds; they are formed mainly by the lips. See *Consonants*.

**Labiate** (*la'-be-ät*) [*labium*, a lip]. In biology, lipped. Shaped like, or functioning as, a lip. **L. Plants**, the *Labiate*, or mintworts; an order of square-stemmed plants, mostly herbs, with aromatic properties, many of the species being highly charged with volatile oils.

**Labiatiform** (*la-be-at'-if-orm*). See *Labiate*.

**Labidometer** (*lab-id-om'-et-er*) [ $\lambda\alpha\beta\acute{\iota}\varsigma$ , forceps; μέτρον, a measure]. A forceps used in measuring the dimensions of the head of a fetus in the pelvis.

**Labidophorous** (*lab-id-off'-or-us*) [ $\lambda\alpha\beta\acute{\iota}\varsigma$ , forceps; φέρω, bearing]. Applied to insects having organs resembling pinchers.

**Labidopron** (*lab-id-o'-pre-on*) [ $\lambda\alpha\beta\acute{\iota}\varsigma$ , forceps; πρίων, saw]. A forceps-saw.

**Labiella** (*la-be-el'-ah*) [*labium*, a lip]. In biology, a minute, rounded, median portion of the deutomala in myriapods; it corresponds in a degree to the lingua of hexapods (Packard).

**Labile** (*la'-il*) [*labilis*; *labi*, to glide]. 1. In electro-therapeutics a labile application is the passing of the electrode—usually the negative—along and touching the skin over the track of a nerve. 2. Deciduous.

**Labimeter** (*lab-im'-et-er*). Same as *Labidometer*.

**Labio-alveolar** (*la'-be-o-al-ve'-o-lar*) [*labium*, lip; *alveolus*, a small hollow]. Pertaining to the lip and to one or more dental alveoli.

**Labio-chorea** (*la'-be-o-ko-re'-ah*) [*labium*, lip; χορεία, dancing]. A choreic affection of the lips, and the stammering that results from it.

**Labio-choreic** (*la'-be-o-ko-re'-ik*) [*labium*, lip; χορεία, dancing]. Relating to lip-stammering.

**Labio-dental** (*la'-be-o-den'-tal*) [*labium*, lip; *dens*, a tooth]. Pertaining to the lips and the teeth.

**Labio-glosso-laryngeal** (*la'-be-o-glos'-o-lar-in'-je-al*) [*labium*, lip; γλῶσσα, tongue; λάρυγξ, larynx]. Pertaining conjointly to lips, tongue, and larynx. **L. Paralysis.** See *Bulbar Paralysis*.

**Labio-glosso-pharyngeal** (*la'-be-o-glos'-o-far-in'-je-al*) [*labium*, lip; γλῶσσα, tongue; φάρυγξ, pharynx]. Pertaining conjointly to lips, tongue, and pharynx.

**Labiomancy** (*la'-be-o-man-sy*) [*labium*, lip; μαντεία, divination]. The power of understanding what is said by observing the motions of the lips in speech.

**Labio-mental** (*la'-be-o-men'-tal*) [*labium*, lip; *mentum*, chin]. Relating to lip and chin.

**Labio-nasal** (*la'-be-o-na'-sal*) [*labium*, lip; *nasus*, nose]. Labial and nasal; pertaining to lip and nose.

**Labio-palatine** (*la'-be-o-pal'-at-in*) [*labium*, lip; *palatum*, palate]. Relating to lip and palate in common.

**Labioplastic** (*la-be-o-plas'-tik*) [*labium*, lip; πλάσσειν, to form]. Pertaining to an operation for restoring the lip, after injury or partial destruction of the same; chiloplastic.

**Labiose** (*la'-be-ös*) [*labium*, lip]. In biology, resembling a true labiate flower.

**Labiotenaculum** (*la-be-o-ten-ak'-u-lum*) [*labium*, lip; *tenaculum*, a holder]. An instrument for holding the lips in a position required for examination or operation.

**Labipalp** (*la'-be-palp*) [*labium*, a lip; *palpare*, to stroke, to feel]. In biology, a labial palp or feeler.

**Labitome** (*lab'-it-öm*) [ $\lambda\alpha\beta\acute{\iota}\varsigma$ , forceps; τομή, cutting]. Cutting-forceps.

**Labium** (*la'-be-um*) [L.: *pl.*, *Labia*]. A lip. Also, any structure consisting of a strip or flap of elastic tissue that closes upon an orifice. In biology, applied to various lip-like structures in animals and plants, usually the lower when two are present, the upper being called the *labrum*. **L. austriacum**, Austrian lip; the thick, pendent upper lip of the Austrian reigning family. **L. cerebri**, the margins of the cerebral hemispheres that overlap the corpus callosum. **L. duplex**, a congenital longitudinal duplication of the mucosa of the upper, and rarely of the lower lip. **L. externus pudendi**. See *L. majus*. **L. internus pudendi**. See *L. minus*. **L. leopoldinum**, a thick, pendent lower lip; named after Emperor Leopold. **L. leporinum**. See *Hare-lip*. **L. majus**, or **L. pudendi majus**, one of two folds of skin of the female external genital organs, arising just below the mons veneris, surrounding the vulval entrance, and meeting at the anterior part of the perineum. **L. minus**, **L. pudendi minus**, or **nympha**, one of two folds of mucous membrane at the inner surfaces of the labia majora. **L. tympanicum**, the portion of the lamina spiralis forming the lower border of the sulcus spiralis. **L. urethrae**, the lateral margins of the external urinary meatus. **L. vestibulare**, the overhanging extremity of the lamina spiralis that forms the upper part of the sulcus spiralis.

**Labor** (*la'-bor*) [L.]. Work. Parturition; bringing forth young. That natural process by which a pregnant woman expels the product of conception at the expiration of the period of pregnancy, normally.

one day after conception. **L.**, Abnormal, departing from the normal course. **L.**, Artificial, when effected by using instruments. **L.**, Natural, when effected by nature. **L.**, Atonic, when protracted by reason of inability of nature as preparation for labor of the uterus. **L.**, Conduct of, management of, labor, the behavior of, of the parturient woman. **L.**, Difficult, labor. **L.**, Dry, when there is a deficiency of the liquor amnii, or when there has been a premature rupture of the bag of waters. **L.**, False, or False Pain. **L.**, Induced, labor brought on by artificial means. **L.**, Insanity of. See *Insanity*. **L.**, Instrumental, one requiring manual or instrumental means to advance the child. **L.**, Metastatic, labor in which the true pains cease entirely, and are succeeded by another contraction of neighboring organs, thereby increasing all the functions of the trunk and limbs. **L.**, Mixed, resulting from the lead thus in labor between the period of normal gestation. **L.**, Natural, Normal, Physiologic, when effected by the true power of the maternal organism. **L.**, Obstructed. See *Obstruction*. **L.**, Pathologic, when deviating from the normal type by reason of weakness in the maternal tissues, anomalies of the pelvis, or of the fetus, or of complications, all being causes of Obstructed **L.**. **L.**, Postponed, delayed beyond the normal time. **L.**, Premature, taking place before the normal period of gestation, but when the fetus is viable. **L.**, Stages of, ordinary divisions of the period of labor, the one begins with dilatation of the os, and ends with complete dilatation, so that the head can pass; the second ends with the expulsion of the child; the third (posterior) consists in the expulsion of the placenta. **L.**, Mechanism of, the mechanism by which a normal uterine appendage traverses the birth canal and is expelled. **L.**-pains, the pains of, or the contraction of the uterine muscle. **L.**, Perverse, labor in which there is no a normal position of the child. **L.**, Precipitate, labor in which the expulsion of the fetus and the placenta take place with undue celerity. **L.**, Protracted, labor prolonged beyond the usual time (10-24 hours in primipara, 2-6 hours in multipara). **L.**, Spontaneous, labor accomplished without artificial aid.

**Laboratory** (*lab-or-ə-tōr-ē*) [*labor-ā-torium*, from *labor-āre*, to work]. A room or place designed for experimental work in chemistry, physiology, biology, etc.

**Laborde's Method.** See *Treatment, Methods of*. **L.'s** Sign. See *Sign*.

**Labrador Tea** (*lab'-er-ē-ā*). The leaves of *L. dum* (*Labrador dracunculifolius*), expectorant, and tonic. Dose of the tea, 5 to 10 cc. U.S.P.

**Labrette** (*lab'-ret*, or *lab'-ret'*) [*labrum*, lipped]. A support for the lip. **L.**, lipped.

**Labrum** (*lab'-rum*) [*L.*, a lip edge, margin; *pl.*, *labra*]. The bony, or lip like structure, usually the upper, when both are present, the lower being the *mentum*.

**Laburnum** (*lab'-ū-rum*) [*laburnum*, laburnum]. Also called *goose*. An alkaloid found in *Cytisus laburnum*.

**Laburnum** (*lab'-ū-rum*) [*L.*]. The leaves of *Cytisus laburnum* (the properties of which are due to an alkaloid, *laburnum*) are used as a diuretic and resolvent; and are also sometimes used as a cathartic.

**Labyrinth** (*lab'-ir-in'*) [*labyrinthos*, a maze]. A name given to the internal structure of the internal ear comprising the vestibule, cochlea, and the semicircular canals. **L.**, Bony. See *L.*, *Osseous*. **L.**, Cortical, the covering of the internal structure of the internal ear and the perilymph.

substance of the kidney. See *Kidney*. **L.**, Membranous, the membranous cavity within the osseous labyrinth, from which it is partly separated by the perilymph. It comprises two sacs contained within the vestibule, the semicircular canals and the canal of

LABYRINTH OF THE EAR LAID OPEN.

*a.* Fovea elliptica. *b.* Fovea hemispherica. *c.* Common entrance of the posterior and superior semicircular canals. *d.* Opening of the aqueduct of the vestibule. *e.* Superior semicircular canal. *f.* Posterior. *g.* Inferior semicircular canal. *h.* Spiral canal of cochlea. *i.* Opening of the aqueduct of the cochlea. *j.* Lamina spiralis.

the cochlea. **L. of the Kidney.** See *Labyrinth, Cortical*. **L.**, Osseous, the bony capsule of the internal ear, communicating in front with the cochlea and behind with the semicircular canals. **L.**, Pit. See *Ear*. **Labyrinthal** (*lab'-ir-in'-thal*), **Labyrinthic** (*lab'-ir-in'-thik*). See *Labyrinthine*.

**Labyrinthine** (*lab'-ir-in'-thin*) [*λαβύρινθος*, a maze]. Pertaining to a labyrinth. **L.**, Vertigo. See *Ménière's Disease*.

**Labyrinthus** (*lab'-ir-in'-thus*) [*L.*: *pl.*, *Labyrinthi*]. A labyrinth.

**Lac** (*lak*) [Pers., *lak*, lac]. A resinous incrustation produced on the bark of the twigs and branches of various tropical trees (*Urostigma religiosa*, *Mimosa cinerea*, *Butea frondosa*, *Schleichera trijuga*, of Ceylon, India, and Burmah, *Croton lacciferum*, of Ceylon, *Croton draco*, *Acacia greggii*, *Larrea mexicana*, of Mexico), by the puncture of the female lac-insect *Carteria* (*Coccus*) *lacca*. This crude exudation constitutes the *stick-lac* of commerce. *Shellac* is prepared by spreading the resin into thin plates after being melted and strained. In the preparation of the shellac, the resin is freed from the coloring-matter, which is formed into cakes, and is known as *lacc-dye*. See *Pigments, Conspectus of*. *Button-lac* differs from shellac only in form, appearing in cakes about three inches in diameter and one-sixth of an inch thick. *Bleached lac* is prepared by dissolving lac in a boiling lye of pearl ash or potassic hydrate, filtering and passing chlorine through the solution until all the lac is precipitated. *Seed-lac* is the residue obtained after dissolving out most of the coloring-matter contained in the resin. The common shellac is used in varnishes, lacquers, and sealing-wax; the bleached lac in pale varnishes and light-colored sealing-wax. **L.-beet**, a fruit used in Siam for diarrhea and dyspepsia. **L.**, Stick, lac as taken from the twigs on which it is formed. **L. sulphuris**, milk of sulphur; sulphur precipitatum (U. S. P.) **L.**, White. See *Bleached lac*.

**Lacca** (*lak'-ak*). See *Lac*.

**Laccate** (*lak'-at*) [Pers., *lak*, lac, or sealing-wax]. In biology, appearing as if varnished or lacquered.

**Laccin** (*lak'-in*) [Pers., *lak*, lac]. A substance resembling wax, extracted from lac. It is insoluble in water, soluble in alcohol, in ether, in hydrochloric acid, and in potassic hydrate.

**Lacerate** (*las'-er-ât*) [*ζακερός*, torn]. In biology, with a margin appearing as if torn. **L. Foramen.** See *Foramina*, Table of.

**Laceration** (*las-er-a'-shun*) [*laceratio*; *lacerare*, to tear]. Mechanical rupture by a tearing action, whether accidental or surgical. See *Dilaceration*. **L. of the Infratrochlear Nerve.** See *Budal's Operation in Operations*, Table of. **L. of Perineum**, a tearing through the wall separating the lower extremity of the vagina and rectum, which occurs occasionally to women in childbirth.

**Lacerator** (*las'-er-a-tor*) [*lacerare*, to tear]. An instrument used in effecting surgical laceration.

**Lacertiform** (*las-er'-tif-orm*) [*lacerta*, lizard; *forma*, form]. Lizard-shaped.

**Lacertoid** (*las-er'-toid*) [*lacerta*, lizard; *ειδος*, like]. Resembling a lizard.

**Lachesis** (*lak'-e-sis*) [*λάχεσις*, destiny, fate]. 1. A genus of venomous South American reptiles. 2. The venom of *L. mutus* (the bushmaster snake), and also a homeopathic preparation of the poison.

**Lachnanthes** (*lak-nan'-thēs*) [*λάχνη*, soft, woolly hair; *άνθος*, a flower]. A genus of North American bloodworts. **L. tinctoria**, red-root, is a plant popular in parts of the United States as an expectorant and alterative in pulmonary tuberculosis. Dose of a 10 per cent. tincture, m.x. Unof.

**Lachrymal** (*lak'-rim-al*). See *Lacrymal*.

**Lacinia** (*las-in'-e-ah*) [*L.*, a lapet, flap, as of a garment: *pl.*, *Lacinie*]. In biology, one of the fimbriae at the ovarian extremity of the oviduct; a narrow lobe, as in an incised leaf; or, specifically, the slender apex of the maxilla of a beetle. Cf. *Galea*.

**Laciniate** (*las-in'-e-ât*) [*lacinia*, a flap]. In biology, fringed; cut into narrow flaps.

**Laciniform** (*las-in'-if-orm*) [*lacinia*, a flap; *forma*, form]. In biology, fringe-like.

**Laciniola** (*las-in-i'-o-lah*) [dim. of *Lacinia*: *pl.*, *Laciniolæ*]. In biology, a small lacinia.

**Lacinula** (*las-in'-u-lah*) [dim. of *Lacinia*, a flap: *pl.*, *Lacinnulæ*]. In biology, a small lacinia.

**Lacmoid** (*lak'-moid*). Same as *Resorcin-blue*.

**Lacmus** (*lak'-mus*). See *Litmus*.

**Lacquer** (*lak'-er*) [*Pg.*, *lacre*, sealing-wax]. An opaque varnish containing lac. **L., Burmese**, a natural varnish consisting of a thick, grayish terebinthinous liquid, collected from the *Melanorrhœa usitata* of Burmah. It dissolves in alcohol, turpentine-oil, and benzene, assuming greater fluidity. Locally, it is used in lacquering furniture, temples, idols, and varnishing vessels.

**Lacrima** (*lak'-rim-ah*). See *Lacryma*.

**Lacrimal** (*lak'-rim-al*). See *Lacrymal*.

**Lacryma** (*lak'-rim-ah*) [*L.*: *pl.*, *Lacrymæ*]. A tear.

**Lacrymal** (*lak'-rim-al*) [*lacryma*, a tear]. Having reference to the organs of the secretion, transfer, or excretion of tears. **L. Apparatus**, the lacrymal gland, ducts, canal, sac, and nasal duct. See *Eye*. **L. Artery**, the first branch of the ophthalmic artery, supplying the gland. See *Arteries*, Table of. **L. Bone**, a bone upon the nasal side of the orbit, articulating with the frontal, the ethmoid, and superior maxillary bones, in which begin the lacrymal groove and nasal duct. See *Bones*, Table of. **L. Canals**, or **Canaliculi**, *superior* and *inferior*, extend from the lacrymal puncta to the sac, and serve to convey the excess of tears from the eye to the nose. See *Canal*. **L. Caruncula**. See *Caruncle*. **L. Crest**. See *Crest*. **L. Ducts**, seven to fourteen in number, extending obliquely from the gland to the fornix conjunctive, carrying the tears to the conjunctival surface of the globe. See *Duct*. **L. Gland**, the gland secreting the

tears, situated in a depression of the frontal bone, the *L. fossa*, at the upper and outer angle of the orbit. See *Gland*. **L. Lake**, the inward prolongation of the palpebral fissure of the eyelids. **L. Papilla**. See *Papilla*. **L. Probe**, a probe for exploring or dilating the canaliculi and nasal duct. **L. Puncta**, the minute orifices of the canaliculi, upon the eyelids near the

RELATIONS OF THE EYE AND THE LACRYMAL EXCRETORY APPARATUS.

1, 1. Canaliculi. 2, 2. Puncta lacrymalia. 3, 3. Inner extremity of tarsal cartilage. 4, 4. Free borders of lids. 5. Lacrymal sac. 6. Attachment to maxillary bone of superior tendon. 7. Bifurcation of lacrymal sac. 8, 8. Two branches.

inner canthus. **L. Sac**, a sacciform enlargement of the upper part of the nasal duct, into which the canaliculi empty. **L. Style**, a probe used in stricture of the nasal duct. **L. Tubercle**. See *Tubercle*.

**Lacrymation** (*lak-rim-a'-shun*) [*lacryma*, a tear]. An excessive secretion, or an overflow, of tears, from any cause.

**Lacrymatome** (*lak-rim'-at-ôm*) [*lacryma*, tear; *τομή*, cutting]. A cutting-instrument used in dilating the nasal duct or the canaliculi; a syringotome.

**Lacrymiform** (*lak-rim'-if-orm*) [*lacryma*, a tear; *forma*, form]. In biology, tear-shaped; guttiform.

**Lacrymin** (*lak'-rim-in*). See *Dacryolin*.

**Lacrymotomy** (*lak-rim-of'-o-me*) [*lacryma*, tear; *τομή*, cutting]. The division of strictures of the lacrymal passages.

**Lactagogue** (*lak'-tag-og*). See *Galactagogue*.

**Lactalbunin** (*lak-al'-bu-min*) [*lac*, milk; *albumin*]. A proteid contained in milk in small quantities— $\frac{1}{2}$  of 1 per cent. It resembles serum-albumin very closely, differing in specific rotatory power, in its coagulability by heat, and in its precipitation of neutral salts.

**Lactamic Acid** (*lak-tam'-ik*). See *Alanin*.

**Lactamid** (*lak'-tam-id*) [*lac*, milk; *amid*],  $C_3H_7NO_2$ . A substance formed by the union of lactic acid and ammonia. It forms crystals readily soluble in water and in alcohol, and melts at  $74^\circ C$ .

- Lactamin** (*lak-tā-mīn*) [See *Alamin*].
- Lactant** (*lak-tant*) [*lactare*, to suckle]. Suckling.
- Lactate** (*lak-tat*) [*lactare*, to suckle]. Any salt of lactic acid.
- Lactated Food**. A baby's food for infants. Its composition is: Water 77.1, fat 1.64; starch 30.43; soluble carbohydrates 3.07; albuminoids 11.85; ash 2.11; milk 100 parts.
- Lactatic** (*lak-tat-ik*) [See *Lactate*].
- Lactation** (*lak-tā-shun*) [*lactare*, to suckle]. Suckling; the period during which the child suckles.
- Lactical** (*lak-tik-əl*) [*lac*, milk]. 1. Pertaining to milk. 2. Any one of the lactases of the small intestine that acts on the chyle.
- Lactean** (*lak-tē-an*) [*lac*, milk]. See *Lactate*.
- Lactem** (*lak-tēm*) [*lac*, milk]. Same as *Lactin*.
- Lacteous** (*lak-tē-us*) [See *Lactate*].
- Lactescence** (*lak-tēs-sens*) [*lactare*, to turn to milk]. Milkiness (*lactum* applied to the chyle).
- Lactescent** (*lak-tēs-sent*) [*lactare*, to turn to milk]. Milky, or secreting a milky sap or fluid.
- Lactic** (*lak-tik*) [*lac*, milk]. Pertaining to milk or its derivatives. **L. Acid**. See *Acid*, *Lacti*, and *Stains*, *Tests*. **L. Ether**,  $(C_2H_5O_2C_2H_5)(C_{10}H_{19}O_6)$ . A gummy substance resulting from the distillation of equal parts of calcium lactate, absolute alcohol, and sulphuric acid. It is soluble in water, in alcohol, and in ether, and boils at 77° C. **L. Fermentation**. See *Fermentation*.
- Lactica** (*lak-tik-ə*) [*lac*, milk]. An old name for typhoid fever.
- Lactid** (*lak-tid*) [*lac*, milk].  $C_6H_8O_4$ . A volatile substance, one of the anhydrides of lactic acid produced by dry distillation of that acid. It crystallizes from alcohol in rhombic plates that melt at 124.5° C., and boil at 255° C.; it dissolves slowly in water, with the gradual formation of lactic acid.
- Lactiferous** (*lak-tif-er-us*) [*lac*, milk; *ferre*, to carry]. A term applied to vessels that convey milk. **L. Ducts**, the ducts of the mammary gland. **L. Glands**, the mammary glands. **L. Swelling**, a distension of the breast arising from obstruction of a lactiferous duct.
- Lactific** (*lak-tif-ik*) [*lac*, milk; *ficere*, to make]. Producing milk.
- Lactiflorous** (*lak-tif-lor-us*) [*lac*, milk; *flos*, flower]. In botany, having milky white flowers.
- Lactiform** (*lak-tif-orm*) [*lac*, milk; *forma*, form]. Resembling milk.
- Lactifuge** (*lak-tif-ū*) [*lac*, milk; *fugare*, to drive away]. A drug or agent that causes a lessening in the secretion of milk.
- Lactigenous** (*lak-tif-ū-n-us*) [*lac*, milk; *γεννάν*, to produce]. Milk-producing.
- Lactimid** (*lak-tim-id*) [*lac*, milk; *imid*],  $C_3H_5NO$ . A substance produced by heating alanin in a current of HCl to 180–200° C. It consists of colorless leaflets or needles that melt at 275° C., and dissolve readily in alcohol and in water.
- Lactin** (*lak-tin*) [*lac*, milk]. Sugar of milk; lactose.
- Lactinated** (*lak-tin-əd*) [*lac*, milk]. Containing mixed milk.
- Lactiphagous** (*lak-tif-ə-ū*) [*lac*, milk; *φαγίν*, to eat]. Consuming milk.
- Lactipotus** (*lak-tif-ə-tus*) [*lac*, milk; *potare*, to drink]. Milk drinking.
- Lactis** (*lak-tis*) [Gen. of *lac*, milk]. Pertaining to milk. **L. redundantia**, an excessive flow of milk. **L. retentio**, suppression of the flow of milk.
- Lactima** (*lak-tē-mā*) [*lac*, milk; *λακίζω*, to kick; *μα*, Lactomometer]. The kicking or motion of the fetus in utero.

**Lactivoros** (*lak-tiv'-or-us*) [*lac*, milk; *vorare*, to devour]. Subsisting on milk.

**Lacto-** (*lak'-to-*) [*lac*, milk]. A Latin prefix denoting connection with or relation to milk. **L.-pepsin**, a preparation of pepsin. According to Heger, its composition is: Pure pepsin 10 parts, pancreatin 7.6 parts, sugar of milk 50 parts, extract of malt 5 parts, lactic acid 2.6 parts, hydrochloric acid (25 per cent.) 10 parts, glycerin 20 parts. To this is added enough powdered tragacanth to make a pill-mass. The adult dose is about 15 grains. **L.-peptine**, a proprietary mixture claimed to contain pepsin, diastase, and pancreatin, acidulated with lactic and hydrochloric acids. One dram should peptonize  $\frac{3}{4}$  viij of albumin, casein or fibrin, or emulsinize  $\frac{3}{4}$  xvj of cod-liver oil. Dose, gr. v–xv. See *Pepsin*. Unof. **L.-peptone**, same as *L.-peptine*. **L.-phosphate**, any phosphate combined with lactic acid. **L.-proteid**, any proteid of milk, as caseinogen or lactalbumin. **L.-protein**, a derivative of milk.

**Lactobiose** (*lak-to'-be-ös*). See *Galactose*.

**Lactobutyrometer** (*lak-to-bu-tir-om'-et-er*) [*lac*, milk; *βοιτρυον*, butter; *μέτρον*, measure]. An instrument used in estimating the proportion of butter in milk.

**Lactocoele** (*lak'-to-sel*) [*lac*, milk; *κύημα*, tumor]. A cyst containing a milky fluid. Same as *Galactocoele*.

**Lactocrit** (*lak'-to-krit*) [*lac*, milk; *κριτής*, a judge]. An apparatus for testing the quantity of fatty substance in a sample of milk.

**Lactodensimeter** (*lak-to-den-sim'-et-er*) [*lac*, milk; *densus*, dense; *μέτρον*, measure]. A variety of lactometer.

**Lacto-globulin** (*lak-to-glob'-u-lin*) [*lac*, milk; *globus*, a ball]. One of the native proteids of milk; lactalbumin.

**Lactoglucose** (*lak-to-glu'-kōs*) [*lac*, milk; *ζυκίς*, sweet]. A saccharine substance, produced in the fermentation-fluid along with galactose. It is probably the same as glucose.

**Lactokrit** (*lak'-to-krit*). See *Lactocrit*.

**Lactolin** (*lak'-to-lin*) [*lac*, milk; *oleum*, oil]. Condensed milk.

**Lactometer** (*lak-tom'-et-er*). An instrument for determining the specific gravity of milk.

**Lactone** (*lak'-ton*) [*lac*, milk],  $C_{10}H_{16}O_4$ . An aromatic, colorless, inflammable fluid, derived from the dry distillation of lactic acid. The *lactones* are generally liquids, readily soluble in water, of neutral reaction, possessing a faintly aromatic odor, and can be distilled without decomposition.

**Lactonic Acid** (*lac-ton'-ik*). See *Acid*.

**Lactoscope** (*lak'-to-skōp*) [*lac*, milk; *σκοπεῖν*, to examine]. An instrument for estimating the proportions of water and fat globules of milk.

**Lactose** (*lak'-tos*) [*lac*, milk],  $C_{12}H_{22}O_{11} + H_2O$ . Milk-sugar; it occurs in the milk of mammals, in the

LACTOMETER.

Stem on the right graduated as used in Boston. Stem on the left shows graduation adopted in New York. Central stem graduated to show percentage of solids.

amniotic liquor of cows, and in certain pathologic secretions. It crystallizes in white, hard, rhombic prisms, containing one molecule of water. It is soluble in water, has a faint sweet taste, and is insoluble in alcohol. Its aqueous solution is dextro-rotatory. It melts at 205° C. It is much used in pharmacy for making triturations, and is the vehicle of most homeopathic preparations. See *Carbohydrates*, *Table of*.

**Lactoserum** (*lak-to-se'-rum*) [*lac*, milk; *serum*, whey]. The serum or whey of milk.

**Lactosuria** (*lak-to-sin'-re-ah*) [*lac*, milk; *οἶον*, urine]. The presence of lactose in the urine; a condition occasionally seen in pregnancy.

**Lactotoxin** (*lak-to-tox'-in*) [*lac*, milk; *τοξικόν*, poison]. A poisonous substance found in milk.

**Lactous** (*lak'-tus*) [*lactosus*, milky]. Milky.

**Lactuca** (*lak-tu'-kah*) [*L.*, "lettuce"]. A genus of composite-flowered herbs; the lettuces. *L. altissima*, *L. elongata*, *L. montana*, *L. sativa* (common garden lettuce), and *L. virosa*, afford lactucarium; but the *L. virosa* is the source recognized in the U. S. Pharmacopeia. *Lactuca* (B. P.) is also a synonym of *Lactucarium*, *q. v.*

**Lactucarium** (*lak-tu-ka'-re-um*) [*L.*; *gen.*, *Lactucarii*]. Lettuce. The milky juice of *Lactuca virosa*, a biennial plant. It contains a crystalline substance, *lactucerin*, to which its properties are thought to be due. It is a mild hypnotic, with sedative and diuretic properties, somewhat similar to opium, but without depressant after-effects. It is frequently an ingredient of patented cough-mixtures; varieties of commercial lactucarium are produced by other species of *Lactuca*, *q. v.* *L.*, *Ext.* (B. P.) Dose gr. v-xv. *L.*, *Ext.*, *Fld.* Dose ℥x-ʒj. *L.*, *Syr.*, contains 5 per cent. of the drug. Dose ʒj-ʒj. *L.*, *Tinct.*, dose ʒss-ʒij.

**Lactucerin** (*lak-tu'-ser-in*) [*lactuca*, lettuce; *cera*, wax]. A crystalline substance existing in lactucarium, *q. v.*

**Lactuceryl** (*lak-tu'-ser-öl*) [*lactuca*, lettuce; *oleum*, oil],  $C_{36}H_{60}O_2$ . A crystalline substance existing in lactucerin; it occurs in two isomeric forms.

**Lactic Acid** (*lak-tu'-sik*) [*lactuca*, lettuce].  $C_3H_5O_2$ . A yellow, amorphous body found in lactucarium. It is insoluble in chloroform, ether, benzin, and carbon bisulphid. In some respects it resembles oxalic acid. See *Acid*.

**Lactucin** (*lak-tu'-sin*) [*lactuca*, lettuce]. A crystalline extractive of lettuce and of lactucarium.

**Lactucol** (*lak-tu'-kol*) [*lactuca*, lettuce],  $C_{13}H_{20}O$ . A substance crystallizing in needles, formed when lactucerin and potassium hydrate are melted together.

**Lactucon** (*lak-tu'-kon*). Same as *Lactucin*.

**Lactucopieric Acid**, **Lactucopierin** (*lak-tu-ko-pik'-rik*, *lak-tu-ko-pik'-rin*) [*lactuca*, lettuce; *πικρός*, bitter],  $C_{41}H_{72}O_{21}$ . An amorphous, bitter principle contained in lactucarium.

**Lactumen** (*lak-tu'-men*) [*lac*, milk; *pl.*, *Lactumina*]. A synonym of *Porrigo larvalis*. Also, applied to that form of aphthæ in which the spots have a fanciful resemblance to clots of curd.

**Lactupierin** (*lak-tu-pik'-rin*). See *Lactucopieric Acid*.

**Lacuna** (*la-ku'-nah*) [*lacus*, a lake; *pl.*, *Lacunæ*]. A little hollow space. A mucous or lymphatic follicle. *L.*, *Absorption*. See *Howship's Lacunæ*. *L. amatorum*, the vertical groove in the center of the upper lip. *L. Bone*. See *Bone*. *L. of Cementum*, spaces in the cement of the teeth analogous to those in bone. *L. cerebri*, the infundibulum of the brain. *L. of Cornea*, spaces between the laminae of the cornea. *L. graafiana*, Graafian follicles. *L.*, *Haversian*. See *Bone*. *L.*, *Howship's*. 1. Depressions on the surface of bone beneath the periosteum.

2. Carious excavations in bone filled with granulation-tissue. *L.*, *Intervillous* (*of placenta*), the spaces in the maternal portion of the placenta filled with blood, and in which the fetal villi hang. *L. labii superioris*. See *L. amatorum*. *L. laterales sinus superioris*, depressions along the groove of the superior longitudinal sinus. *L. magna*, the largest of the orifices of the glands of Littre, situated on the upper surface of the fossa navicularis. *L. morgagni*, the orifices of the glands of Littre, or the glands themselves. *L. pharyngis*, a depression at the opening of the Eustachian tube into the pharynx. *L. of Tongue*, the foramen cecum. See *Foramina*, *Table of*. *L. of Urethra*, follicular depressions in the mucous membrane of the urethra, most abundant along the floor, especially in the region of the bulb. Their mouths are directed forward.

**Lacunal** (*la-ku'-nal*), or **Lacunar** (*la-ku'-nar*) [*lacus*, lake]. Pertaining to the lacunæ. *L. Spaces*, the irregular fissures between the fasciculi of connective tissue, forming the beginnings of the lymphatic vessels.

**Lacunose** (*la-ku'-nos*) [*lacuna*, a pit, a hollow]. In biology, having pits, depressions, or spaces.

**Lacunosorugose** (*la-ku'-no-so-ru'-gōs*) [*lacuna*, pit, hollow; *rugæ*, a wrinkle]. In biology, deeply pitted or wrinkled, as the stone of a peach.

**Lacunula** (*lak-u'-nu-luh*) [dim. of *lacuna*, a lake; *pl.*, *Lacunule*]. A small or minute lacuna; an air-space, such as is seen in a gray hair when magnified.

**Lacus** (*la'-kus*) [*L.*]. A small hollow or cavity in a tissue. *L. derivations*, one of the venous spaces in the tentorium cerebelli communicating with the superior longitudinal and lateral sinuses. *L. lacrymalis*, the space at the inner canthus of the eye, near the punctum, in which the tears collect. *L. sanguineus*, the utero-placental sinus.

**Lacustrine** (*la-kus'-trin*) [*lacus*, a lake]. In biology, inhabiting lakes or ponds.

**La Dando** (*lah dan'-do*). Synonym of *Influenza*.

**Ladanum** (*lad'-an-um*) [*L.*; *Gr.*, *ζήδανον*]. The concrete gummy and resinous juice of various species of *Cistus*, growing in the Mediterranean region; as *C. ladaniferus*, *C. creticus*, *C. salvifolius*, *C. cyprinus*, *C. ledon*, and *C. villosus*. It is a greenish-gray solid, of bitter taste, formerly in high esteem. It is now chiefly used in making pastils for fumigation.

**Ladendo** (*lad-en'-do*). Synonym of *Influenza*.

**Ladriere** (*lah-dra-re'*) [*Fr.*]. See *Measles*.

**Ladric** (*lah-drik*). Pertaining to measles.

**Lady Crespigny's Pill**. A pill of aloes and cinchona; aloes socotr. ʒj, ext. cinchona ʒij, cinnam. ʒj, syr. absinth. q. s. It is a stomachic and laxative. Dose gr. x-xx.

**Lady Hesketh's Pill**. A pill similar to *Lady Crespigny's Pill*, *q. v.*

**Lady Webster Pill**. See *Aloe*.

**Lady's Bed-straw**. Cheese-rennet. The herb *Galium verum*, a refrigerant and diuretic. Dose, fld. ext. ʒss-j. Unof. *L.'s Slipper*. See *Cypripedium*.

**Læmoparalysis** (*le-mo-par-al'-is-is*). See *Lemoparalysis*.

**Lænnec's Cirrhosis**. Atrophic cirrhosis of the liver; a form of chronic interstitial hepatitis of the liver in which the organ is greatly reduced in size and may be deformed. The weight may be reduced to a pound or a pound and a half; the surface of the organ is granular; and its substance is composed of greenish yellow islands surrounded by grayish-white connective tissue. *L.'s Perles* and *L.'s Râle*. See *Signs and Symptoms*, *Table of*. *L. tubercles*, the military granulations of tuberculosis.

**Læsis** (*le'-sis*). See *Lesion*.

one of the laminae of the cerebellum. **L.**, **Concentric**, one of the plates of bone surrounding the Haversian canals. **L. coriaria**, the part of the somatopleure from which the corium and possibly the cutaneous muscles are developed. **L.**, **Cribriform**. See *Lamina cribrosa*. **L.**, **Fundamental or General**, a general term applied to all varieties of osseous lamellae. **L.**, **Haversian**. See *L.*, *Concentric*. **L.**, **Homogeneous**, the clear, apparently structureless layer of an osseous lamella. **L.**, **Intermediate**, one of the plates filling the spaces between the concentric layers of bone. **L.**, **Interstitial**. See *L.*, *Intermediate*. **L.**, **Investing**. See *L.*, *Concentric*. **L. medullaris**, the epiblastic layer forming the central nervous system and organs of special sense. **L.**, **Medullary**, the internal lamellae forming the wall of the medullary cavity of hollow bones. **L. mesenterica**, that portion of the splanchnopleure from which the mesentery, and the muscular and fibrous parts of the intestines are derived. **L. mucosa**, that part of the hypoblast from which the epithelia of the gastrointestinal tract and its glands are developed. **L. of Nail**, an elevation on the corium, dove-tailing into a furrow on the under surface of the nail. **L.**, **Perineural**, the perineurium. **L.**, **Periosteal or Peripheral**, a superficial lamella of bone lying under the periosteum. **L. renalis**, that portion of the mesoblast from which the kidneys and generative organs are developed. **L.**, **Special**. See *L.*, *Concentric*. **L.**, **Striped**, the dark portion of a bone-lamella which has a striped appearance. **L.**, **Triangular**, a fibrous layer connecting the choroid plexuses of the third ventricle of the brain. **L.**, **Vascular**. See *Endochorion*.

**Lamellar** (*lam-ell'-ar*) **Lamellate** (*lam-ell'-ät*) [*lamella*, a thin plate]. Having the nature of, or resembling any thin, osseous or membranous tissue; composed of lamellae or thin plates. **L. Cataract**. See *Cataract*.

**Lamelliferous** (*lam-el-ij'-er-us*) [*lamella*, a thin plate; *ferre*, to bear]. Composed of lamellae.

**Lamelliform** (*lam-ell'-if-orm*) [*lamella*, a small plate; *forma*, form]. Having the shape of a lamella.

**Lamelligerous** (*lam-el-ij'-er-us*). See *Lamelliferous*.

**Lamelliped** (*lam-ell'-ip-ed*) [*lamella*, a small plate; *pes*, foot]. Having a flat or lamelliform foot.

**Lamellose** (*lam'-el-ös*). See *Lamellar*.

**Lamellule** (*lam-ell'-ül*) [*lamellula*, dim. of *lamella*, a plate]. A very small plate.

**Lameness** (*läm'-nes*) [ME., *lame*, *lame*]. The state of being lame. **L.**, **Cross**, a peculiar gait of horses in which the lameness seems to be in the leg on the opposite side of the one diseased. **L.**, **Kennel**, a rheumatic affection of dogs. **L.**, **Uterine**, weakness of the uterus due to disease.

**Lamin** (*lä'-min*) [*laminum*, the dead-nettle]. An alkaloid said to exist in *Lamium album*, *q. v.*

**Lamina** (*läm'-in-ah*) [*L.*, a plate or scale: *pl.*, *Laminae*]. A descriptive term used to designate foliated structure. Also, any thin layer of bone, membrane, or other tissue. **L.**, **Arcuate** (*of the cerebellum*), a bundle of fibers uniting the contiguous convolutions of the cerebellum. **L.**, **Arcuate** (*of the cerebrum*), a band of fibers uniting adjacent convolutions of the cerebrum. **L. ascendens** (*of the palate bone*), the vertical plate of the palate. **L. axilis**, the primitive streak of the blastoderm. **L.**, **Basal** (*of the placenta*), the decidua serotina. **L.**, **Bowman's**, the structureless membrane between the anterior layers of epithelium and the fibrous tissue of the cornea of the eye. **L. cacuminis**, a narrow band connecting the posterior superior lobes of the cerebellum. **L. of Cerebellum**, the layers of white matter, covered

externally with gray substance, that arise from the central white axis of the cerebellum. **L. chrotalis**, the dermal plate or covering. **L. cinerea**, the connecting layer of gray matter between the corpus callosum and the optic chiasma; the terna. **L. cinerea convoluta**, the tuber cinereum. **L. conarii**, the lower lamella of the recess of the pineal gland. **L. concharum**, the inner surface of the lateral masses of the ethmoid bone. **L. connectens**, the posterior cerebral commissure. **L. connectiva**, the *colloderma*, *q. v.* **L. cortis**, the *membrana tectoria* of the internal ear. **L. cornea**, a thickened band of the ependyma of the lateral ventricle covering the tertia semicircularis. **L.**, **Cribriform**, the cribriform plate of the ethmoid. See also *L. cribrosa of the Temporal Bone*. **L. cribrosa** (*of the choroid*), in lower animals that portion of the choroid which is perforated for the passage of the optic nerve. **L. cribrosa** (*of the fascia lata*), the cribriform fascia covering the saphenous opening. **L. cribrosa anterior**, the anterior perforated space. **L. cribrosa anterior inferior**, the anterior part of the inferior fossula, through which branches of the cochlear nerve pass. **L. cribrosa media**, the middle part of the inferior fossula transmitting the branches of the auditory nerve going to the sacculi. **L. cribrosa posterior**, the posterior perforated space. **L. cribrosa of the Sclerotic**, the perforated lamina through which the optic nerve enters the globe of the eye. **L. cribrosa of the Temporal Bone**, a small laminated bone forming the boundary of the internal auditory meatus. **L. of the Cricoid Cartilage**, the flat posterior plate of the cricoid cartilage. **L.**, **Crystalline**, the anterior part of the capsule of the crystalline lens. **L. dentata**, the dentate fascia. **L. denticulata**, the covering of the outer fifth of the vestibular surface of the bony cochlea, from which delicate teeth-like elevations project into the scala vestibuli. **L. dorsalis**, one of the two ridges bordering the medullary groove, that unite to form a canal which finally develops into the cerebro-spinal canal. See *Plates, Medullary*. **L.**, **External Medullary**, the outer of the two white layers of the lenticular nucleus. **L.**, **Fibrocuteaneous**, the parietal mesoblast. **L.**, **Fibrointestinal**, the visceral mesoblast. **L. fusca**, the pigmentary tissue of the sclera forming the ectal layer of the perichoroidal sinus. **L. gastralis**, the gastroduerma, *q. v.* **L.**, **Gray**. See *L. cinerea*. **L. grisea**, the gray matter of the spinal cord. **L.**, **Internal Medullary**, the inner of the two white layers of the lenticular nucleus. **L.**, **Lateral** (*of the sphenoid bone*), the external pterygoid plate. **L. lentis**, one of the layers of the crystalline lens. **L. mastoidea**, the basal plate of the mastoid process of the temporal bone. **L.**, **Median** (*of the sphenoid bone*), the internal pterygoid plate. **L. medullaris media cerebelli**, the valve of Viessens. **L. medullaris thalami**, a layer of white matter between the optic thalamus and the internal nucleus of the striate body. **L. medullaris transversa**, a delicate layer of gray matter covering the aqueduct of Sylvius. **L. medullaris triangularis**, the lyra of the fornix. **L. modioli**, the bony lamina spiralis of the cochlea. **L. muscularis**, the myoderma, *q. v.* **L. nervea involvens**, a delicate layer of nerve-matter covering the ventricular surface of the ependyma. **L. neurodermalis**, the epiblast. **L.**, **Nuclear**, the nuclear layer. **L. palatina**, the horizontal plate of the palate bone. **L. papyracea**, the os planum of the ethmoid bone. **L. pedunculorum**, one of the layers of which the crura cerebri are composed. **L. perforata**, either perforated space. **L. pigmenti**, a delicate layer of

pigment cells between the tibia and the choroid. **L.**, Posterior Elastic, the posterior layer of the choroid, the lamellæ of Descemet. **L. prima cutis**, the epidermis. **L. propria** (*of the eye*), the lamellæ, the middle or third layer of the tympanic membrane. **L.**, Protovertebral, that portion of the vertebral lamina in the side of the chorda dorsalis, which the posterior lamina subsequently form. **L. quadrifemina**, a layer of gray matter, forming the roof of the equine spinal cavity. **L. Quadrilateralis**, a form of the vertebral lamina. **L.**, Reticular, the hyaline membrane of the inner ear, often called the membrane of Reissner. **L. secundaria**, one of the secondary vertebral lamina. **L. semicircularis**, See *Semicircular canals*. **L. sphenopetrosa**, a small plate of bone on the sphenoid formation of the greater wing of the sphenoid bone. **L. spiralis**, a thin plate of bone, common in the inner part and membranous in the outer, which divides the spiral tube of the cochlea into the scala tympani and the scala vestibuli. **L. spiralis ossea**, a thin plate of bone that winds spirally around the cochlea of the cochlea. **L. superchoroidea**, the lamina of the eye. **L. tectoria**. See *Tectum*. **L. terminalis**. **L.**, Terminal. **L.**, See *L. terminalis*. The anterior terminal plate of the anterior lamina. **L. terminalis**. See *Terma*. **L. triangularis** (*of the sphenoid bone*), the posterior triangular part of the great wing of the sphenoid bone. **L. transversa**, one of the transverse laminae of the cerebellum. **L.**, Tympanic, the tympanic plate of the posterior portion of the temporal bone. **L.**, Vascular, the endothelium. **L. of Vertebra**. See *Vertebra*. **L. ventralis**, one of the lateral mesoblastic plates. **L. vitra**, the inner or vitreous table of the skull. **L. visceralis**, one of the thickened layers of mesothelium on each side of the notochord, which by proliferation are splitting from the splanchnopleure and ectodermis. **L.**, Vitreous (*of the choroid*), a homogeneous membrane covering the inner surface of the choroid, it is also called the membrane of Bruch.

**Laminæ** (*lam-in-æ*) [*lamina*, a thin plate]. The sensitive plates of soft tissue, covering the entire anterior surface of the middle bone in the horse. See also *Lamina*.

**Laminage** (*lam-in-aj*) [*Fr.*]. Flattening; the compression or bulging of the fetal head to facilitate delivery.

**Laminal**, **Lamnar** (*lam-in-al*, *lam-in-ar*) [*lamina*, a layer]. Consisting of laminae; having the form of a lamina. **L. Tissue**, a synonym of *Connctive Tissue*.

**Lamina** (*lam-in-a*) [*lamina*, a thin plate]. **L.**, A general term, sometimes. Several species are rich in iodine. **L.**, The small lower part of the stem of *L. officinalis*. **L. Bougie**, a bougie made of the wall of a ligament or arterial duct. **L. Cornica**. **L. digitata**, small ear of iron, tangle; sea-tangle, sea-belt, or sea-weed; carn-tangle, dead-man's sea-weed. **L. officinalis**, found in Scotland, very rich in iodine. **L.**, The term used for the manufacture of tents and awnings. **L. esculenta**, an edible species said to be a good muscular promoter. **L. Probe**, a probe made of the plant, used to dilate the canaliculi and small ducts. **L. purpurina**, ribbon weed; sea belt, sea-tangle, or sea-weed, and jetish; it is used as food, and is also vegetable. **L. Tent**, a tent made of the tissue of the plant for dilatation of the canaliculi.

**Laminate**, **Laminated** (*lam-in-ait*, *lam-in-at*). See *Lamina*.

**Lamination** (*lam-in-a'-shun*) [*lamina*, a layer]. Arrangement in plates or layers. An operation in embryotomy, consisting in cutting the skull in slices.

**Laminectomy** (*lam-in-ek'-to-me*) [*lamina*, a layer; *ectomy*, excision]. The operation of removing the posterior vertebral arches.

**Lamineur** (*lam-in-ur*) [*lamina*, a layer]. An instrument for performing laminage, *q. v.*

**Laminitis** (*lam-in-i'-tis*) [*lamina*, plate; *itis*, inflammation]. Inflammation of the laminae of a horse's hoof; founder.

**Laminose** (*lam-in-os*) [*lamina*, a thin plate]. Thin, membranous, or plate-like.

**Lamium** (*la'-me-um*) [*L.*, the dead-nettle]. A genus of labiate plants. **L. album**, the leaves and stems of the plant *L. album*, with properties due to an alkaloid, *Laminin*. It is useful in menorrhagia. Dose of the tincture 3 ss-ij. Unof.

**Lamnar** (*lam'-nar*) [*lamina*, a thin plate]. A term applied to nails that are flat, short and broad.

**Lamnectomy** (*lam-nek'-to-me*). Same as *Laminectomy*.

**Lamp** (*la'm-pas*, a lamp). A vessel containing a liquid capable of burning, and a wick. It is used to give light. **L.**, **Aphlogistic**, a lamp devised by Davy in which glowing platinum furnishes the light. **L.-black**, a fine black substance, almost pure carbon, made by burning coal-oils in an atmosphere deficient in oxygen, or by allowing a gas-flame to impinge on a cold surface. See *Pigments*, *Conspectus of*. **L.**, **Laryngoscopic**, a small incandescent lamp used in laryngoscopy. One form is provided with reflectors and lenses by means of which light can be projected into the mouth, pharynx, and larynx. **L.**, **Lee's**, a lamp used in mercurial fumigation. **L.**, **Mercurial**, a lamp consisting of two cups, an upper for holding the mercury, a lower for holding water. The latter is heated by means of a Bunsen burner, the water and mercury being both vaporized. **L.**, **Spirit**, one in which alcohol is used to produce heat rather than light. **L.**, **Van Buren's**, a device for mercurial fumigation.

**Lampas** (*lam'-pas*) [*Fr.*, *lampas*, lampas]. A congestive swelling of the fleshy lining of the roof of the mouth, in the horse.

**Lampers** (*lam'-perz*). See *Lampas*.

**Lamprophony** (*lam-proff'-o-ne*) [*λαμπρός* sounding; *φωνη*, voice]. A sonorous, ringing quality of the voice.

**Lampsana** (*lamp-sa'-nah*). See *Lapsana*.

**Lampsis** (*lamp'-sis*) [*λαμπή*, a shining]. Splendor, brilliancy.

**Lana** (*la'-nah*) [*L.*]. Wool.

**Lanate** (*lan'-at*) [*λίπος*, wool]. Woolly; lanuginous; lanigerous; lanose.

**Lancaster Black-drop**. Acetum opii; vinegar of opium.

**Lance** (*lans*) [*lancea*, a lance or spear]. **L.**, A lancet.

**L.**, To open, as with a lancet or bistoury. **L.**, **Mauriceau's**, a lance-shaped knife for opening the fetal head in embryotomy.

**Lanceate** (*lan'-se-at*) [*lancea*, a lance]. See *Lanceolate*.

**Lanceolar** (*lan'-se-o-lar*). See *Lanceolate*.

**Lanceolate** (*lan'-se-o-lat*) [*lancoola*, a little lance]. In biology, shaped like a lance-head; thin and tapering towards each end.

**Lancet** (*lan'-set*) [*dim. of lancea*, a lance]. A two-edged surgical instrument for incising tumors, etc. **L.**, **Gum**, a small instrument in which the cutting portion has a convex edge and is at right-angles to the shaft. **L.**, **Spring**, one in which the blade is thrust out by means of a spring, which is controlled by a trigger. **L.**, **Thumb**, one with a double-edged, broad blade.

**Lanciform** (*lan'-sif-orm*) [*laneca*, lance; *forma*, form]. Lance-shaped.

**Lancinate** (*lan'-sin-ät*) [*lancinare*, to tear]. To lacerate, to pierce, or to tear.

**Lancing** (*lan'-sin-a-ting*) [*lancinare*, to tear]. Tearing; shooting. **L. Pains**, rending, tearing, or sharply-cutting pains, common in posterior spinal sclerosis.

**Lancing** (*lan'-sing*). See *Lance*.

**Lancisi, Nerves of**. The *stric longitudinales*. The slight ridges of the callosum of the brain bounding the raphé. See *Nerves, Table of*.

**Landmarks** (*land'-marks*) [ME., *landmark*, the boundary of a country]. Superficial marks (such as eminences, lines, and depressions) that serve as guides to, or indications of, deeper-seated parts. The knowledge of landmarks is of the utmost importance, both to the surgeon and the physician.

**Landolph's or Landolfi's Paste**. A caustic application composed of the chlorids of zinc, antimony, bromin, and gold, which is used pure, or weakened by mixing with basilicon ointment in varying proportions. It should be spread on the surface with a spatula, or applied on charpie, and allowed to remain for 24 or 48 hours.

**Landolphia** (*lan-dol'-fe-ah*) [after Capt. *Landolph*, an explorer]. A genus of tropical climbing shrubs, including the African rubber-tree, a source of caoutchouc.

**Landolt's Method**. A method of determining insufficiency of the internal recti muscles. A small lamp or candle is surrounded by a blackened chimney, a vertical slit in which serves as an object of fixation. The light is then approximated to the eyes, and when the internal recti are no longer able to maintain the necessary convergence, two images of the slit are seen.

**Landouzy-Dejerine Type**. A type of muscular atrophy. See *Diseases, Table of*.

**Landry's Disease or Paralysis**. Acute ascending paralysis; a form of atonic paralysis described by Landry, characterized by loss of motor power in the lower extremities, gradually extending to the upper extremities, and to the centers of circulation and respiration, without characteristic sensory manifestations, trophic changes, or variations in electric reaction. See *Diseases, Table of*.

**Land-scurvy**. See *Purpura hemorrhagica*.

**Landzert, Angle of**. See *Angle*.

**Lanesin, or Lanessin** (*lan'-es-in*) [*lana*, wool]. A proprietary preparation of wool-fat similar to lanolin.

**Lanfranc's Collyrium**. A stimulant application to ulcers, containing aloes and myrrh, each 5 parts; acetate of copper, 10 parts; trisulphid of arsenic, 15 parts; rose-water, 380 parts, and white wine, 1000 parts.

**Lang's Oil**. See *Gray Oil*.

**Lang's Method**. A method of testing for CO<sub>2</sub> in the air. It consists in shaking in a bottle full of the air to be tested, a half ounce of clear fresh lime-water. If the air contains 7 parts per 1000 of CO<sub>2</sub>, a turbidity of the fluid will occur.

**Langenbeck's Operation**. See *Operations, Table of*.

**Langerhans' Cells**. Certain modified epithelial cells forming the simplest nerve-endings. **L.'s Granular Layer**, the stratum granulosum of the epidermis.

**Langier's Apparatus**. A form of immovable splint for a limb. It is composed of strips of brown paper impregnated with starch-paste. **L.'s Bandage**. See *Bandage*.

**Langley, Oxyntic Cells of**. See *Delomorphous*. **L.'s Test**. See *Tests, Table of*.

**Language** (*lang'-gwoj*) [*lingua*, the tongue]. The articulate sounds, signs, or symbols whereby thought is communicated. **L., Center for**. See *Aphasia*.

**Languor** (*lang'-gwor*) [L., faintness]. Lassitude. Disinclination to take bodily exercise, or to exert oneself.

**Laniaries or Laniary Teeth** (*la'-ne-ar-e-éz*) [*Dentes laniarii*; *laniare*, to rend]. The cuspid teeth; applied more particularly to those of carnivorous animals.

**Laniariform** (*la-ne-ar'-if-orm*) [*laniare*, to rend; *forma*, shape]. Shaped like the canine teeth of carnivora.

**Laniary** (*la'-ne-a-re*) [*laniare*, to rend]. In biology, applied to well-developed canine or lacerating teeth.

**Lanigerous** (*lan-ij'-er-us*) [*lana*, wool; *gerere*, to bear]. In biology, producing, or covered with wool or a woolly growth; lanate; lanose; lanuginous.

**Lank** [ME., *lank*, lank]. Lean, thin, attenuated.

**Lanoleum** (*lan-ol'-le-um*). See *Lanolin*.

**Lanolin** (*lan'-o-lin*) [*lana*, wool; *oleum*, oil]. A cholesterolin-fat obtained from sheep's wool, introduced as a basis for ointments. It does not saponify or become rancid, and is characterized by remarkable penetrative powers.

**Lanose** (*la'-nos*) [*lana*, wool]. In biology, woolly; wool-like; lanate.

**Lantana** (*lan-w'-nah*) [L.]. A genus of verbenaceous shrubs and herbs, principally natives of tropical America. A few grow native in the U. S. **L. aculeata** is an aromatic stomachic. **L. brasiliensis** and **L. camara** are among the antipyretic species. Unof.

**Lantanin** (*lan'-tan-in*) [*lantana*]. An alkaloid extractive of *Lantana brasiliensis*, called *Yerba sagrada*. It is asserted to have antiperiodic and antipyretic properties, and has been successfully used in intermittent fevers. Dose, gr. xv-xxx. Unof.

**Lantermann's Notches or Segments**. Conico-cylindric segments in the medullary sheath of a nerve-fiber; they are marked off from one another by the incisures of Schmidt.

**Lantern of Aristotle, or Aristotle's Lantern**. In biology, the oral skeleton of a sea-urchin. **L.-jaws**, a colloquialism for a long, thin visage.

**Lanthanum** (*lan'-than-um*), or **Lanthanium** (*lan-tha'-ne-um*) [*λανθάνειν*, to conceal; *lanthanum* was a substance concealed from the knowledge of chemists]. A rare metallic element; symbol La., atomic weight, 138. Little is known of its medicinal properties. See *Elements, Table of*.

**Lanthopin** (*lan'-tho-pin*) [*λανθάνειν*, to conceal], C<sub>23</sub>H<sub>25</sub>NO<sub>4</sub>. A finely crystalline alkaloid of opium. It occurs in white crystals fusible at 200° C.

**Lanuginose, Lanuginous** (*lan-u'-jin-ös, lan-u'-jin-us*) [*lanuginosus*, woolly]. In biology, woolly, downy, lanate, lanose, lanigerous.

**Lanugo** (*lan-u'-go*) [*lana*, wool]. The down-like hair that appears upon the fetus at about the fifth month of gestation; the downy growth often seen upon the face of women and girls. **L. prima**, the first growth of beard. **L. pudendorium**, pubic hair.

**Lap** [ME., *lappen*; Gr. *λάπτειν*, to lap with the tongue]. 1. To lick up. 2. A lick. 3. That part of the body formed by the anterior aspect of the thighs.

**Lapactic** (*lap-ak'-tik*) [*λαπάσσειν*, to empty]. 1. Emptying; evacuant. 2. Any purgative substance.

**Lapara** (*lap'-ar-ah*) [*λαπάρος*, loose]. 1. The loins; loosely applied to the abdomen. 2. Diarrhea.

**Laparacely** (*lap'-ar-as-él*). See *Laparocely*.

**Laparectomy** (*lap-ar-ek'-to-me*). See *Enterectomy*.

**Laparelytrotomy** (*lap-ar-el-it-rot'-o-me*). Same as *Laparo-clytrotomy*.

**Laparocele** (*lap'ar-o-sel'*) [*lap'ar-o-sel'*, loin; *cel'*, tumor] Laceration in abdominal hernia.

**Laparocholecystotomy** (*lap'ar-o-kol'-es-tot'-o-mē*) [*lap'ar-o-kol'-es-tot'-o-mē*, loin; *chole'*, gall; *cyt'*, bladder; *tom'*, cutting]. Laparotomy combined with cholecystotomy.

**Laparoclysis** (*lap'ar-o-kli'-sis*) [*lap'ar-o-kli'-sis*, loin; *clis'*, a drawing]. An incision into the peritoneal cavity.

**Laparocystectomy** (*lap'ar-o-kis-tet'-o-mē*) Same as Laparocystotomy.

**Laparocolotomy** (*lap'ar-o-kol'-ot'-o-mē*) [*lap'ar-o-kol'-ot'-o-mē*, loin; *kol'*, colon; *ot'*, a cutting]. Inguinal or abdominal hernia.

**Laparocolpotomy** (*lap'ar-o-kol'-pot'-o-mē*) See Laparocystectomy.

**Laparocystectomy** (*lap'ar-o-kis-tet'-o-mē*) [*lap'ar-o-kis-tet'-o-mē*, loin; *chole'*, gall; *cyt'*, bladder; *tom'*, cutting]. An operation performed on a distended extrauterine pregnancy, the contents of the fetus and the entire sac. It is performed like an abdominal section for any cystic tumor in the abdominal cavity with dense adhesions. The sac is then evacuated, if not, as indicated, and left in situ, if necessary, after ligation.

**Laparocystotomy** (*lap'ar-o-kis-tot'-o-mē*) [*lap'ar-o-kis-tot'-o-mē*, loin; *chole'*, gall; *cyt'*, bladder; *tom'*, a cutting]. 1. Suprapubic incision. 2. An operation in advanced extrauterine pregnancy for the removal of the fetus, the sac being allowed to remain.

**Laparo-clytotomy** (*lap'ar-o-kli'-tot'-o-mē*) [*lap'ar-o-kli'-tot'-o-mē*, loin; *clis'*, sheath; *tom'*, a cutting]. An operation devised by Jorg as a substitute for the Cesarean operation. It consists in an incision over Poupart's ligament, drawing up the peritoneum until the vagina is reached, when the latter is incised transversely, the cervix dilated, and the child thus extracted above the neck. It is usually successful about 50 per cent.

**Laparo-enterotomy** (*lap'ar-o-en-ter'-ot'-o-mē*) [*lap'ar-o-en-ter'-ot'-o-mē*, loin; *enter'*, intestine; *tom'*, a cutting]. An opening of the intestine through an abdominal incision.

**Laparogastrotomy** (*lap'ar-o-gas-trot'-o-mē*) [*lap'ar-o-gas-trot'-o-mē*, loin; *gast'*, stomach; *tom'*, a cutting]. The opening of the stomach through an abdominal incision.

**Laparohysterectomy** (*lap'ar-o-his-ter-ek'-to-mē*) [*lap'ar-o-his-ter-ek'-to-mē*, loin; *hys'*, womb; *tom'*, a cutting]. The removal of the womb through an incision in the abdominal wall.

**Laparo-hyster-oophorectomy** (*lap'ar-o-his-ter-o-o-phor-ek'-to-mē*) [*lap'ar-o-his-ter-o-o-phor-ek'-to-mē*, loin; *hys'*, womb; *ter'*, uterus; *tom'*, a cutting out]. Removal of the womb and ovaries through an incision in the abdominal wall.

**Laparohysterotomy** (*lap'ar-o-his-ter-ot'-o-mē*) See Laparohysterectomy.

**Laparo-ileotomy** (*lap'ar-o-il'-e-ot'-o-mē*) [*lap'ar-o-il'-e-ot'-o-mē*, loin; *ile'*, intestine; *tom'*, a cutting]. The formation of an artificial anus in the ileum.

**Laparokelyphotomy** (*lap'ar-o-kel'-yot'-o-mē*) [*lap'ar-o-kel'-yot'-o-mē*, loin; *kel'*, a swelling; *tom'*, a cutting]. Same as Laparocystectomy.

**Laparokystotomy** (*lap'ar-o-kis-tot'-o-mē*) See Laparocystectomy.

**Laparomyia** (*lap'ar-o-mi'-a*) [*lap'ar-o-mi'-a*, loin; *my'*, muscle; *ia*, inflammation]. Inflammation of the muscular portion of the abdominal wall.

**Laparomysectomy** (*lap'ar-o-mis-ek'-to-mē*) [*lap'ar-o-mis-ek'-to-mē*, loin; *my'*, muscle; *tom'*, a cutting out]. Removal of a myoma through an abdominal incision.

**Laparomyotomy** (*lap'ar-o-mis-ot'-o-mē*) See Laparomyia.

**Laparonephrectomy** (*lap'ar-o-nef-ek'-to-mē*) [*lap'ar-o-nef-ek'-to-mē*, loin; *nef'*, kidney; *tom'*, a cutting out]. Nephrectomy by an abdominal incision.

**Laparonephrotomy** (*lap'ar-o-nef-rot'-o-mē*) [*lap'ar-o-nef-rot'-o-mē*, loin; *nef'*, kidney; *tom'*, a cutting]. Nephrotomy through an abdominal incision.

**Laparosalpingectomy** (*lap'ar-o-sal-pin-gek'-to-mē*) [*lap'ar-o-sal-pin-gek'-to-mē*, loin; *sal'*, tube; *tom'*, a cutting]. Removal of a Fallopian tube through an abdominal incision.

**Laparosalpingotomy** (*lap'ar-o-sal-pin-got'-o-mē*) [*lap'ar-o-sal-pin-got'-o-mē*, loin; *sal'*, tube; *tom'*, a cutting]. 1. Cutting into an oviduct through an abdominal incision. 2. Laparosalpingectomy.

**Laparoscope** (*lap'ar-o-skop*) [*lap'ar-o-skop*, loin; *σκοπεῖν*, to examine]. An instrument for examining the abdomen.

**Laparoscopy** (*lap'ar-os'-ko-pe*) [*lap'ar-o-skop*, loin; *σκοπεῖν*, to examine]. The examination of the abdomen by the stethoscope, plessimeter, or by other instrumental means.

**Laparosplenectomy** (*lap'ar-o-splen-ek'-to-mē*) [*lap'ar-o-splen-ek'-to-mē*, loin; *spl'*, spleen; *ek'*, a cutting out]. Removal of the spleen through an abdominal incision.

**Laparosplenotomy** (*lap'ar-o-splen-ot'-o-mē*) [*lap'ar-o-splen-ot'-o-mē*, loin; *spl'*, spleen; *tom'*, a cutting]. The surgical incision or entrance upon the spleen through the abdominal walls.

**Laparotome** (*lap'ar-o-tom*) [*lap'ar-o-tom*, loin; *tom'*, a cutting]. A cutting instrument used in laparotomy.

**Laparotomist** (*lap'ar-ot'-o-mist*) [*lap'ar-o-tom*, loin; *tom'*, a cutting]. A surgeon who performs laparotomy.

**Laparotomy** (*lap'ar-ot'-o-mē*) [*lap'ar-o-tom*, loin; *tom'*, a cutting]. 1. Surgical incision through the abdominal wall; celiotomy. 2. Surgical entrance into the abdominal cavity through the loin or flank. (The definition first given is that offered by most lexicographers, and is in accord with common usage; but objection has been made to this use of the word. The second definition is believed to represent the etymologically more correct use of the term.) **L., Conservative**, abdominal section, with a view either to aspiration of the distended Fallopian tubes, or to breaking down adhesions and freeing the diseased uterine appendages.

**Laparotyphlotomy** (*lap'ar-o-tif-lot'-o-mē*). Synonym of Typhlotomy.

**Laparovaginal** (*lap'ar-o-vaj'-in-al*) [*lap'ar-o-vaj'-in-al*, loin; *va-gi-na*, sheath]. Pertaining to the abdomen and the vagina.

**Larysisterotomy** (*lap'ar-is-ter-ot'-o-mē*). Same as Laparohysterotomy.

**Lapaxis** (*lap'-aks'-is*) [*lap'ar-aks'-is*, evacuation]. Evacuation.

**La Perleche**. See Perlèche.

**Lapides cancerum** (*lap'id-ēs kang-kro'-rum*) [L.]. See Crab's-eyes.

**Lapidillum** (*lap'id-il'-um*) [dim. of *lapis*, stone]. A scoop for removing stones from the bladder.

**Lapidose** (*lap'id-os*) [*lapis*, a stone]. In biology, inhabiting stony places.

**Lapillation** (*lap-il'-a-shun*) [*lapillus*, a small stone]. The formation of stones; lithogenesis, *q. v.*

**Lapis** (*lap'-is*) [L., a rock]. An alchemic term applied to any non-volatile substance. **L. dentium**, tartar of the teeth; salivary calculus. **L. divinus**, aluminated copper; a preparation used in ophthalmology. It is made by fusing together 32 parts each of cupric sulphate, potassium nitrate, and alum, and adding a mixture of 2 parts each of camphor and alum. **L. lunaris**, silver nitrate. **L. lazuli**, a beautiful blue stone of complex composition, formerly employed as a purgative and emetic, and in epilepsy. **L. lunaris**, silver nitrate. **L. mitigatus**. See *Argentum*. **L. mutabilis**. See *Tabasheer*. **L. nauticus**, a lode-stone.

**Laplace's Formulæ.** 1. For preparing acid sublimate solution, 1 to 1000: Take of bichlorid of mercury, 1 gram; nitric acid, 5 grams; water 1000 grams. 2. For preparing acid sublimate tablets: Take of bichlorid of mercury, 1 gram; tartaric acid, 5 grams. Make into one tablet. This is to be dissolved in one liter (1000 grains) of water. 3. Acid sublimate gauze is prepared by dipping the gauze in the foregoing solution, wringing it out, and allowing it to dry in a clean atmosphere.

**Lappa** (*lap'-ah*) [L.; *gen.*, *Lappæ*]. Burdock. The root of the common burdock, *Arctium lappa*, contains a bitter principle, a resin, and tannin. It is aperient and diuretic and has some reputation as an alterative in constitutional blood diseases. A tincture of the seed has been recommended in skin-diseases. The dose of the root is  $\frac{3}{4}$ -ij, in infusion or tincture; of the fluid extract,  $\mathfrak{m}\times$ - $\frac{3}{4}$ .

**Lappaceous** (*lap'-a'-she-us*) [*lappa*, a bur]. In biology, bur-like.

**Lappet** (*lap'-et*) [ME., *lappet*, lappet]. In biology, the wattle of a bird.

**Lapsana** (*lap'-san-ah*) [*ῥαβάνη*, an eatable herb]. A genus of composite plants. **L. communis**, was formerly used as a laxative and in skin-diseases.

**Lapsus** (*lap'-sus*) [*labi*, to fall]. A fall; ptosis. **L. palpebræ superioris**, ptosis of the eyelid. **L. pilorum**, alopecia. **L. unguium**, falling of the nails.

**Larch** [ME., *larche*, larch]. See *Larix* and *Tamarac*.

**Larcher's Sign.** See *Death*.

**Lard and Lard-oil** [ME., *larden*, lard]. Adeps. The fat of the pig melted by gentle heat and strained. Crude lard is white, granular, and of the consistency of a salve, of faint odor and sweet, fatty taste. Its specific gravity is .938 to .940 at 15° C. Exposed to the air it becomes yellowish and rancid. When compressed at 32° F., it yields 62 parts of colorless lard-oil and 38 parts of compact lard. Lard is used in cooking; lard-oil for greasing wool, as a lubricant, and an illuminant.

**Lardacein** (*lar'-dal'-se-in*) [ME., *larden*, lard]. An animal proteid, an indigestible amyloid substance, chiefly occurring as a pathologic infiltration into various organs, as the liver, or spleen.

**Lardaceous** (*lar'-dal'-she-us*) [ME., *larden*, lard]. See *Amyloid*. **L. Kidney.** See *Bright's Disease*.

**Larinoid** (*lar'-in-oid*) [*ῥαρινός*, fat; *εἶδος*, like]. Lardaceous; as larinoid carcinoma.

**Larix** (*la'-riks*) [L., *gen. Laricis*]. Larch. The dried bark of *Larix europæa*, the European larch, similar in action to balsamic and terebinthinate remedies. It is expectorant, stimulant, and astringent. **L., Tinct.** (B.P.) Dose  $\mathfrak{m}\times$ -xxx. See, also, *Tamarac*.

**Larkspur** (*lar'-spur*). The seed of *Delphinium consolida*, a diuretic and emmenagogue. Dose of the fld. ext.,  $\mathfrak{m}\frac{1}{2}$ -x. Unof.

**Larnaude's Disinfecting-fluid.** A solution of zinc sulphate containing a little copper sulphate.

**Larrey's Amputation.** See *Operations*, *Table of*. **L.'s Apparatus**, a form of immovable dressing made by saturating the bandages in a mixture of camphorated spirit, lead-water, and white of egg. **L.'s Bandage.** See *Bandage*.

**Lartigue's Pills.** Pills used in the treatment of gout, containing compound extract of colchicum 20 parts, and extract of digitalis, one part.

**Larva** (*lar'-vah*) [*larva*, a ghost; pl. *Larvæ*]. The young stage of such animals as undergo transformation. The form that insects take in emerging from the egg, commonly known as the caterpillar or "grub" stage. Also, applied to the immature form distinguishing many of the lower vertebrates before maturity. **L., Lovén's**,

the young of the marine worm *polygordius*. **L., Müller's**, the free-swimming young of the polyclad platodes, *Thysanozoön* and *Yungia*.

**Larvaceous** (*lar'-val'-she-us*), **Larval** (*lar'-val*) [*larva*, a mask]. Covering the face like a mask.

**Larval** [*larva*, a ghost]. 1. Pertaining to or existing in the condition of a larva. 2. Same as *Larvaceous*. **L. Paludism.** See *Dumb Ague*. **L. Pneumonia.** See *Pneumonia*. **L. Scarlatina**, a mild case of scarlet fever in which the rash is absent.

**Larvate** (*lar'-vat*) [*larvatus*, masked]. Concealed; masked; applied to diseases and conditions that are hidden by more obvious conditions, or by some peculiarity of their symptoms.

**Larviform** (*lar'-vif-orm*) [*larva*, a larva; *forma*, shape]. Resembling or being a larva.

**Larvigerous** (*lar'-vij'-er-us*) [*larva*, ghost, mask; *gerere*, to carry]. In biology, bearing the larval skin.

**Larviparous** (*lar'-vip'-ar-us*) [*larva*, larva; *parere*, to bring forth]. In biology, bringing forth young that have reached the larval state.

**Larvivorous** (*lar'-viv'-or-us*) [*larva*, larva; *vorare*, to devour]. In biology, feeding on larvæ.

**Laryngalgia** (*lar-in-gal'-je-ah*) [*ῥάρηξ*, larynx; *ἄλγος*, pain]. Pain or neuralgia of the larynx.

**Laryngeal** (*lar-in'-je-al*) [*ῥάρηξ*, larynx]. Pertaining to the larynx. **L. Artery.** See *Arteries*, *Table of*. **L. Cough**, an hysterical manifestation in young women. It is a paroxysmal cough, with a peculiar hoarse and muffled sound, like the barking of a dog. **L. Crisis**, an acute laryngeal spasm, occurring in the course of tabes dorsalis. **L. Dilator**, an instrument designed to dilate the larynx, when the latter has become constricted by cicatricial tissues, or from other causes. **L. Edema**, infiltration of a fluid or semi-fluid into the submucous connective tissue of the larynx. It is usually associated with some disease or injury of the larynx, and occurs mainly between the eighteenth and thirty-fifth years. It is characterized by dyspnea and dysphagia. **L. Epilepsy**, a peculiar neurosis of the larynx characterized by a sense of suffocation during sleep. There is no discoverable lesion. **L. Mirror**, a small circular, silvered-glass mirror used in laryngoscopy. **L. Nerve.** See *Nerves*, *Table of*. **L. Paralysis**, a loss of power of some or of all of the muscles of the larynx. **L. Pouch.** See *Pouch*. **L. Reflex.** See *Reflexes*, *Table of*. **L. Spaces**, the upper, middle, and lower parts into which the larynx may be conveniently divided. **L. Vertigo.** See *Vertigo* and *L. Epilepsy*.

**Laryngectomy** (*lar-in-gek'-to-me*) [*ῥάρηξ*, larynx; *ἐκτομή*, a cutting out]. An operation for the extirpation of the larynx.

**Laryngemphraxis** (*lar-in-gem-fraks'-is*) [*ῥάρηξ*, larynx; *ἐνφραξις*, stoppage]. Closure or obstruction of the larynx.

**Laryngismal** (*lar-in-jiz'-mal*) [*ῥάρηξ ἰσμεν*, to vociferate]. Relating to laryngismus.

**Laryngismus** (*lar-in-jiz'-mus*) [*ῥάρηξ ἰσμεν*, to vociferate]. A term loosely applied to various spasmodic affections of the larynx, such as epileptic spasm. See *Laryngeal Epilepsy*. **L. paralyticus**, a paralysis of the recurrent laryngeal nerve in horses, producing the affection called "roaring." **L. stridulus**, laryngospasm; spasmodic croup; spasm of the glottis. A spasmodic affection of the larynx, mainly confined to the early period of childhood. There is a sudden arrest of respiration, with increasing cyanosis, followed by long, loud crowing inspirations. This affection occurs in rachitic children and especially in such as are of the neurotic tendency. The attack may be severe enough to terminate life.

**Laryngitis** (*lar-in-jit'-is*) [*laryn'-it'-is*; *lar-in-jit'-is*]. A general inflammation of the larynx accompanied by more or less edema, and, sometimes, purulent degeneration and discharge. In severe cases there may be stridor, dyspnea, and suffocation. In infants it is called the croupy disease or croupy cough. It also may assume a catarrhal character in the infant and larynx, with or without the croupy cough, etc. **L.**, **Atrophic**, a chronic laryngitis with atrophy of the mucous membrane. **L.**, **catarrhalis**, catarrhal inflammation of the larynx. **L.**, **Croupous**. See *Croup*. **L.**, **Diphtheric**. See *Diphtheria*. **L.**, **Dry**, a chronic form in which the membrane is small or dries into crusts. **L.**, **Edematous**. See *Laryngeal Edema*. **L.**, **Fetid**, a form with a stinky exudate that decomposes. **L.**, **Follicular**, a form in which the mucous folds are inflamed. **L.**, **Glandular**. See *L.*, *Glandular*. **L.**, **Granular**. See *L.*, *Granular*. **L.**, **Hypertrophic**, a chronic form with hypertrophy of the mucous folds. **L.**, **Membranous**. See *Diphtheria*. **L.**, **Parenchymatous**. See *L.*, *Phlegmonous*. **L.**, **Phlegmonous**. See *Laryngeal Edema*. **L.**, **Polypous**, a form characterized by the presence of polyps. **L.**, **Pseudo-membranous**, an inflammation of the laryngeal mucous membrane characterized by the presence of a pseudo-membrane of a whitish-gray color of varying consistency, and different degrees of adhesion. It is usually met with between the second and seventh years. There is a paroxysmal cough, with hoarseness and increasing dyspnea, with occasional attacks of suffocation. Death frequently results. **L.**, **Serous**. See *Laryngeal Edema*. **L.**, **Simple**, a simple catarrhal laryngitis. **L.**, **Spasmodic**, a form in which there is spasm of the glottis. **L.**, **Stridulous**, laryngitis with stridor. **L.**, **Submucous**. See *L.*, *Phlegmonous* and *Laryngeal Edema*. **L.**, **Suffocative**, diphtheria. **L.**, **Tuberculous**, laryngeal tuberculosis. A chronic, usually purulent, inflammation of the larynx due to the introduction of "tubercles." There may be infiltration, necrosis, and destruction of the cartilages. **L.**, **Ulcerative**, characterized by the presence of ulcers.

**Laryngicæ** (*lar-in-jik'-e*) [*laryn'-jic'-e*; *lar-in-jik'-e*]. See *Larynx*.

**Laryngocentesis** (*lar-in-jen-ti-sis*) [*laryn'-jen-ti-sis*; *lar-in-jen-ti-sis*]. Surgical puncture or incision of the larynx.

**Laryngofistula** (*lar-in-jis-ti-lu*) [*laryn'-jis-ti-lu*; *lar-in-jis-ti-lu*]. Division of the larynx for the removal of tumors or foreign bodies.

**Laryngography** (*lar-in-jig'-o-f-i*) [*laryn'-jis-ti-lu*; *lar-in-jig'-o-f-i*]. A description of the larynx.

**Laryngologic**, **Laryngological** (*lar-in-jol'-o-jik*, *lar-in-jol'-o-jik*) [*lar-in-jol'-o-jik*; *lar-in-jol'-o-jik*]. Pertaining to laryngology.

**Laryngology** (*lar-in-jol'-o-jik*) [*lar-in-jol'-o-jik*; *lar-in-jol'-o-jik*]. The anatomy, physiology, and pathology of the larynx.

**Laryngometry** (*lar-in-jom'-e-tre*) [*laryn'-jis-ti-lu*; *lar-in-jom'-e-tre*]. The method of measurement of the larynx.

**Laryngotomical** (*lar-in-jot'-o-mik*) [*laryn'-jis-ti-lu*; *lar-in-jot'-o-mik*]. Situated at any portion of the larynx.

**Laryngoparalysis** (*lar-in-jop'-a-rail'-is*) [*laryn'-jis-ti-lu*; *lar-in-jop'-a-rail'-is*]. Loss of the voice or paralysis of the vocal bands from various affections, and not from local disease.

**Laryngopathy** (*lar-in-jop'-a-thi*) [*laryn'-jis-ti-lu*; *lar-in-jop'-a-thi*]. Any disease of the larynx.

**Laryngophantom** (*lar-in-jop'-a-nt'*) [*lar-in-jop'-a-nt'*; *lar-in-jop'-a-nt'*]. An artificial larynx designed for illustrative purposes.

**Laryngo-pharyngeal** (*lar-in'-go-far-in'-je-al*) [*laryn'-jis-ti-lu*; *larynx*; *pharynx*]. Pertaining conjointly to larynx and pharynx.

**Laryngo-pharynx** (*lar-in'-go-far-in'-ks*) [*laryn'-jis-ti-lu*; *larynx*; *pharynx*]. The inferior portion of the pharynx. It extends from the greater cornua of the hyoid bone to the inferior border of the cricoid cartilage.

**Laryngophony** (*lar-in-joff'-o-ne*) [*laryn'-jis-ti-lu*; *larynx*; *phoni*, voice]. The sound of the voice observed in auscultation of the larynx with the stethoscope; also, the sound of the voice observed in auscultation of a large cavity in the lung.

**Laryngophthisis** (*lar-in-joff'-this-is*) [*laryn'-jis-ti-lu*; *larynx*; *phthisis*, wasting]. Laryngeal tuberculosis.

**Laryngoplasty** (*lar-in-jop'-las-te*) [*laryn'-jis-ti-lu*; *larynx*; *plastis*, to shape]. Plastic surgery or operation upon the larynx.

**Laryngoplegia** (*lar-in-jop'-le'-je-ah*) [*laryn'-jis-ti-lu*; *larynx*; *plegia*, stroke]. Paralysis of one or more muscles of the larynx.

**Laryngorrhagia** (*lar-in-jor-a'-je-ah*) [*laryn'-jis-ti-lu*; *larynx*; *rhé-rhai*, to burst forth]. Hemorrhage from the larynx.

**Laryngorrhea** (*lar-in-jor-e'-ah*) [*laryn'-jis-ti-lu*; *larynx*; *rhéa*, a flow]. Excessive secretion of the laryngeal mucosa, especially on attempting to use the organ.

**Laryngoscope** (*lar-in'-go-sköp*) [*laryn'-jis-ti-lu*; *larynx*; *skopein*, to examine]. An instrument for examination of the interior of the larynx.

**Laryngoscopist** (*lar-in-jos'-ko-pist*) [*laryn'-jis-ti-lu*; *larynx*; *skopein*, to examine]. An expert in laryngoscopy.

**Laryngoscopy** (*lar-in-jos'-ko-pe*) [*laryn'-jis-ti-lu*; *larynx*; *skopein*, to examine]. Examination of the interior of the larynx by means of the laryngoscope.

**Laryngospasm** (*lar-in'-go-spaz-m*) [*laryn'-jis-ti-lu*; *larynx*; *spasmos*, spasm]. Spasmodic contraction or closure of the glottis; spasmodic croup, as distinguished from inflammatory croup.

**Laryngospasmopsellismus** (*lar-in-jos-paz-mop-sel-is-mus*) [*laryn'-jis-ti-lu*; *larynx*; *spasmos*, spasm; *psellismus*, stammering]. Spasmodic stammering of laryngeal origin, without the utterance of words.

**Laryngostasis** (*lar-in-jos-tas'-is*) [*laryn'-jis-ti-lu*; *larynx*; *stasis*, stagnation]. A Small. **b.** Large. Synonym of *Croup*.

**Laryngo-stenosis** (*lar-in'-go-ste-no'-sis*) [*laryn'-jis-ti-lu*; *larynx*; *stenosis*, contraction]. Contraction in size or in caliber of the larynx.

**Laryngosyrinx** (*lar-in-jos-si'-ringks*) [*laryn'-jis-ti-lu*; *larynx*; *syrinx*, pipe; *ph.*, *Laryngosyringes*]. A laryngeal tube.

**Laryngotome** (*lar-in'-go-tom*) [*laryn'-jis-ti-lu*; *larynx*; *tomé*, a cutting]. A cutting-instrument used in laryngotomy.

**Laryngotomy** (*lar-in-jol'-o-me*) [*laryn'-jis-ti-lu*; *larynx*; *tomé*, to cut]. The operation of incision of the larynx. **L.**, **Complete**, incision of the larynx through its whole length. **L.**, **Median**, incision into the larynx through the thyroid cartilage. **L.**, **Subhyoid**, incision into the larynx through the thyro-hyoid membrane. **L.**, **Superior**, and **L.**, **Thyro-hyoid**, incision into the larynx through the thyro-hyoid membrane.

LARYNGOSCOPIC MIRRORS. a Small. b. Large.

**Laryngo-tracheal** (*lar-in'-go-tra'-ke-al*) [*λάρυγξ*, larynx; *τραχεία*, the windpipe]. Pertaining conjointly to the larynx and the trachea.

**Laryngotracheitis** (*lar-in'-go-tra-ke-it'-tis*) [*λάρυγξ*, larynx; *τραχίτις*, windpipe; *ίτις*, inflammation]. Inflammation of the larynx and the trachea.

**Laryngotracheopyra** (*lar-in'-go-tra-ke-op'-ir-ah*). Synonym of *Croup*.

**Laryngotracheotomy** (*lar-in'-go-tra-ke-ot'-o-me*) [*λάρυγξ*, larynx; *τραχίς*, windpipe; *τομή*, cutting]. That form of the operation of tracheotomy in which the cricoid cartilage, and one or more of the upper rings of the trachea are divided.

**Laryngo-typhoid** (*lar-in'-go-ti'-foid*), **Laryngotyphus** (*lar-in'-go-ti'-fus*) [*λάρυγξ*, larynx; *τύφος*, smoke]. Typhoid fever associated with marked laryngeal complications.

**Larynx** (*lar' inks*) [*λάρυγξ*, larynx]. The upper part of the air-passage between the trachea and the base of the tongue. It comprises three single cartilages, the

cies of which have been employed in medicine. **L. latifolium**, or laserwort, is tonic and stimulant; its root abounds in a cathartic gum resin. Unof.

**Lash** [ME., *lashe*, the flexible end of a whip]. An eye-lash.

**Lassaigne's Test.** See *Semen* and *Tests*, *Table of*.

**Lassar's Paste.** A paste used in the treatment of erythema intertrigo. It consists of salicylic acid 30 grains, oxid of zinc and powdered starch each 6 drams, vaselin 2 ounces. This is spread over the involved area. It is curative and affords protection from discharges.

**Lassitude** (*las'-it-ut*) [*lassitudo*; *lassus*, tired]. A state of exhaustion or weakness, arising from causes other than fatigue.

**Lasso-cell.** One of the peculiar filiferous cell-like structures of celerentates, having the power of throwing out with great rapidity the contained thread, which produces a stinging sensation when brought in contact with the skin; a netting cell; an urticating organ.

**Lata, or Latah** (*la'-tah*) [Jav.]. An hysteric neurosis locally prevalent in Java, nearly identical with the disorder of the jumpers in Maine and Canada, and with the myriachit of Siberia. The will and the motor centers appear to lack coördination, and the patient becomes to some extent obedient to the will of others, in spite of his own volitions. See *Palmus* and *Chorea*, *Automatic*.

**Latebra** (*lat'-eb-rah*) [*latebra*, a hiding-place: *pl.*, *Latebræ*]. In biology, the central space of the food-yolk of a meroblastic ovum.

**Latebricole** (*lat'-eb'-rik-ul*) [*latebra*, a hiding-place; *colere*, to dwell]. In biology, inhabiting a hiding-place, as certain spiders, crabs, etc.

**Latency** (*la'-ten-se*) [*latere*, to be hid]. The condition of being latent or concealed.

**Latent** (*la'-tent*) [*latere*, to be hid]. Concealed. Not manifest. In physics, applied to heat that apparently disappears when a liquid is vaporized or a solid melted. **L. Period**, the time required for the incubation of a disease. **L. Squint.** See *Insufficiency*.

**Laterad** (*la'-er-ad*) [*latus*, the side; *ad*, to]. Toward the lateral aspect.

**Lateral** (*la'-er-al*) [*lateralis*, belonging to the side]. At, belonging to, or pertaining to the side. Situated on either side of the median vertical plane. See *Position* and *Direction*, *Table of*. **L. Column**, that column of the spinal cord between the ventral and dorso-lateral fissures. **L. Ginglymus**, an articulation in which a pivot turns within a ring or a ring around a pivot. **L. Laparo-nephrectomy**, Langenbuch's operation. See *Operations*, *Table of*. **L. Line**, in biology, a very delicate organ of sense, usually tubular, that runs along each side of almost all fishes. According to M. de Sède, it is sensitive to the faintest movements of the water, giving the fish continual information as to the state of the medium in which it lives. **L. Operation**, that form of operation in lithotomy in which the opening is made on the right or left side of the perineum. **L. Organs.** See *Organs*. **L. Plates**, the part of the mesoblast lying external to the provertebræ. **L. Sclerosis, Amyotrophic**, a disease of the lateral columns and anterior gray matter of the cord. It is characterized by motor weakness and a spastic condition of the limbs, associated with atrophy of the muscles and final involvement of the nuclei in the medulla oblongata. The cause is unknown, and death may result in from two to three years. **L. Sclerosis, Primary, Spasmodic Tabes dorsalis**; *Spasmodic Spinal Paralysis*; *Spastic Paraplegia*; a sclerotic disease of the crossed pyramidal tracts of the cord characterized by paralysis of the limbs, with rigidity, increased

LARYNX, FRONT VIEW, SHOWING THE LIGAMENTS AND INSERTION OF MUSCLES.

O. h. Os hyoides. C. th. Thyroid cartilage. Corp. trit. Corpus triticeum, or lesser cornu of the hyoid bone. C. c. Cricoid cartilage. C. tr. Tracheal cartilage. Lig. thyro-hyoid med. Middle thyro-hyoid ligament. Lig. th-h. lat. Lateral thyro-hyoid ligament. Lig. cric-thyr. med. Middle crico-thyroid ligament. Lig. cric-trach. Cricotracheal ligament. M. st-h. Sternohyoid muscle. M. th-hyoid. Thyro-hyoid muscle. M. st-th. Sternothyroid muscle. M. cr-th. Cricothyroid muscle.

thyroid, the cricoid, and the epiglottis, and three pairs of cartilages, the arytenoids and those of Santorini and Wrisberg. It is lined by an extremely sensitive mucosa, which is thrown into two transverse, lipped folds that constitute the vocal bands.

**Lascivious** (*las-iv'-e-us*) [*lascivia*, wantonness]. Libidinous. Wanton. Having an unlawful desire.

**Laser** (*la'-ser*) [L.]. 1. A gum-resin highly prized by the ancients; probably the same as *Asadulcis*, q. v. 2. The resin of *Laserpitium latifolium*. Unof.

**Laser, Bacillus of.** See *Bacteria*, *Synonymatic Table of*.

**Laserpitium** (*las-er-pish'-e-um*) [L.]. A genus of resinous and umbelliferous old-world herbs, various spe-

to the right, and absence of this right rotative disorder. A peculiar convulsive jerking of the limbs, and absence of the limbs may be readily excited. Most are born frequently paralytic, and the disease usually results between the ages of twenty and thirty. Strains, exposure, and trauma are mentioned as causes. The disease is long. **L. Sclerosis**, Secondary, an ascending degeneration that takes place in the lateral column of the spinal cord after and before lesions of the cerebro-spinal axis. **L. Sinuses**, the five veins of the dura mater situated in the internal margin of the tentorium cerebri. **L. Ventricle**. See *Encephalon*.

**Laterality** (*lat-er-ah-ty*) [*lat-er-ah-ty*, belonging to the side]. Direction of development on one side.

**Laterolateral** (*lat-er-oh-lat-er-ah-ty*) [*lat-er-oh-lat-er-ah-ty*, lateral]. The development of a thing upon one or the other side of the body.

**Laterolateral** (*lat-er-oh-lat-er-ah-ty*) [*lat-er-oh-lat-er-ah-ty*, lateral]. Local motion on one side. Directed to one side.

**Lateron** (*lat-er-on*) [*lat-er-on*, side]. Belonging to the lateral aspect or side.

**Lateritious**, **Lateritious** (*lat-er-ah-ty-us*) [*lat-er-ah-ty-us*, lateric]. Pertaining to an urinary sediment resembling lateric dust.

**Latericorn** (*lat-er-ah-ty*) [*lat-er-ah-ty*, side; *cornu*, horn]. In botany, one of the lateral pieces of the bill sheath of a horned bird.

**Laterocumbent** (*lat-er-oh-kum-bent*) [*lat-er-ah-ty*, side; *cum-bent*, to lie]. Lying on the side.

**Lateroflection**, **Lateroflexion** (*lat-er-oh-flek-shun*). See *Lateroflexion*.

**Laterobius** (*lat-er-oh-bi-us*) [*lat-er-ah-ty*, side; *folium*, a leaf]. In botany, covering the side of a leaf.

**Laterograde** (*lat-er-oh-grade*) [*lat-er-ah-ty*, side; *gradus*, step]. Progressing sideways.

**Laterocurved** (*lat-er-oh-kurv*) [*lat-er-ah-ty*, side; *curvus*, curved]. In botany, applied to such leaves as have curved nerves.

**Laterorectus** (*lat-er-oh-rect-us*) [*lat-er-ah-ty*, side; *rectus*, straight]. The nervus capitis lateralis muscle. See *Muscles, Table of*.

**Lateroversion** (*lat-er-oh-ver-shun*). See *Lateroversion*.

**Latero-abdominal** (*lat-er-oh-ab-dom-in-ah-ty*) [*lat-er-ah-ty*, side; *abdomen*, pertaining to the abdomen]. Pertaining to the side and the abdomen. **L. Posture**, Sims' position. See *Position, Table of*.

**Laterocaudal** (*lat-er-oh-caud-ah-ty*) [*lat-er-ah-ty*, side; *cauda*, tail]. In botany, directed laterally and posteriorly.

**Latero-cervical** (*lat-er-oh-cerv-ah-ty*) [*lat-er-ah-ty*, lateral; *cervix*, the neck]. At or about the side of the neck.

**Laterodorsal** (*lat-er-oh-dors-ah-ty*) [*lat-er-ah-ty*, side; *dorsum*, back]. In botany, parallel at one side of the upper surface.

**Lateroflection**, or **Lateroflexion** (*lat-er-oh-flek-shun*) [*lat-er-ah-ty*, lateral; *flectere*, to bend]. Flexion or bending to one side.

**Lateromarginal** (*lat-er-oh-mar-jin-ah-ty*) [*lat-er-ah-ty*, side; *marginal*, border]. Situated on the lateral edge.

**Lateromaxillary** (*lat-er-oh-max-ill-ah-ty*) [*lat-er-ah-ty*, side; *maxilla*, jaw]. Situated on the side of the jaw of the neck.

**Lateropulsion** (*lat-er-oh-pul-shun*) [*lat-er-ah-ty*, lateral; *pulsio*, to have]. A convulsive motion or bearing to one side, characteristic of certain cerebral neurones.

**Lateroretroversion** (*lat-er-oh-ret-ro-ver-shun*) [*lat-er-ah-ty*, lateral; *retro*, backward; *versio*, to turn]. Retraction of the head, with deviation to one side.

**Laterotigmatal** (*lat-er-oh-tig-mat-ah-ty*) [*lat-er-ah-ty*, side; *tigma*, a mark]. In zoology, located on the side of the body above the abdomen.

**Lateroversion** (*lat-er-oh-ver-shun*) [*lat-er-ah-ty*, side; *versio*, to turn].

**Laterotigmatal** (*lat-er-oh-tig-mat-ah-ty*) [*lat-er-ah-ty*, side; *tigma*, a mark]. In zoology, located on the side of the body above the abdomen.

**Lateroversion** (*lat-er-oh-ver-shun*) [*lat-er-ah-ty*, side; *versio*, to turn].

**Laterotigmatal** (*lat-er-oh-tig-mat-ah-ty*) [*lat-er-ah-ty*, side; *tigma*, a mark]. In zoology, located on the side of the body above the abdomen.

**Lateroversion** (*lat-er-oh-ver-shun*) [*lat-er-ah-ty*, side; *versio*, to turn].

**Laterotigmatal** (*lat-er-oh-tig-mat-ah-ty*) [*lat-er-ah-ty*, side; *tigma*, a mark]. In zoology, located on the side of the body above the abdomen.

**Lateroversion** (*lat-er-oh-ver-shun*) [*lat-er-ah-ty*, side; *versio*, to turn].

to turn]. A term applied to the deviation of the uterus from the central position. It may be quite consistent with health and require no treatment.

**Latex** (*lat-ek-s*) [*lat-er-ah-ty*, liquid; *ph.*, *Latices*]. The sap or the juice of the tubes or vessels of plants. **L.-cells**, cells giving rise to latex or milky juice.

**Latham's Theory**. A theory as to the constitution of the proteid molecule; it claims that the living proteid is composed of a chain of cyanalcohols, or cyanhydrins, as they are sometimes termed, united to a benzene nucleus.

**Lathyrin** (*lat-er-ir-in*) [*lat-er-ah-ty*, pulse]. A bitter extractive of lathyrus.

**Lathyrism** (*lat-er-ir-izm*) [*lat-er-ah-ty*, pulse]. Lupinosis; an affection, observed only in males, produced by the use of meal from varieties of vetches, chiefly the *Lathyrus sativus* and *L. cicera*. The grain is popularly known as the chick-pea. It gives rise to a form of spastic paraplegia, with tremor, involving chiefly the legs, and this may proceed to complete paraplegia. There is exaggeration of the knee-jerk and ankle-clonus. The arms are rarely, if ever, affected. It appears to be a slow sclerosis induced by this toxic agent.

**Lathyrus** (*lat-er-ir-us*) [*lat-er-ah-ty*, pulse]. A genus of leguminous plants. **L. cicera**, a species of vetch, commonly known as "chick-pea." **L. sativus**. See *Lathyrism*.

**Latibulum** (*la-tib-uh-lum*) [*lat-er-ah-ty*, to lie hid]. A lurking-place for disease, infection, or poison.

**Laticiferous** (*lat-is-ih-er-us*) [*latex*, liquid; *ferre*, to bear]. In biology, producing or containing latex, or milky juice.

**Laticostate** (*lat-ik-oh-tat*) [*lat-er-ah-ty*, broad; *costa*, rib]. Having broad ribs.

**Latifia** (*la-tif-eh-ah*) [Cf. *Rafafia*]. An alcoholic liqueur, or aromatic cordial, with tonic drugs, as gentian, cherry-bark, quassia, and rhubarb; it is called also Dutch bitters.

**Latifoliate** (*lat-ih-oh-le-ah-ty*) [*lat-er-ah-ty*, broad; *folium*, a leaf]. Broad-leaved.

**Latipennate** (*lat-ih-en-ah-ty*) [*lat-er-ah-ty*, broad; *pennatus*, winged]. In biology, broad-winged.

**Latipennine** (*lat-ih-en-in*). Same as *Latipennate*.

**Latissimus** (*lat-is-im-us*) [superl. of *latus*, wide]. An adjective signifying widest. It is used as descriptive of certain muscles. **L. colli**. See *Muscles (Platysma myoides), Table of*. **L. dorsi**. See *Muscles, Table of*.

**Latrine** (*la-tren*) [Fr.]. A water-closet or privy, especially one in a public place or institution.

**Lattice-work of the Thalamus**. The formatio reticularis, q. v.

**Latus** (*lat-us*) [*lat-er-ah-ty*]. Broad. **L. ani**, synonym of *Levator ani*. See *Muscles, Table of*.

**Laudable** (*law-da-bl*) [*laudabilis*, or *laudandum*, praiseworthy]. Formerly, indicative of a healthy or improving condition; characterizing an active inflammation, as *laudable pus*. (Obs.).

**Laudanin** (*law-dan-in*) [*lat-er-ah-ty*, a gum].  $C_{20}H_{25}NO_4$ . One of the alkaloids of opium. It is soluble in chloroform and in alkaline solutions.

**Laudanosin** (*law-dan-oh-sin*) [*lat-er-ah-ty*, a gum],  $C_{20}H_{25}NO_4$ . A crystallizable alkaloid of opium.

**Laudanum** (*law-dan-um*) [derivation undetermined; by some derived from *laudatum medicamentum*, the praiseworthy drug; by others from *laude dignum*, worthy of praise; by others, again, from *Ladanum*]. Tinctura opii. See *Opium*. **L., Liquid**. Synonym of *Vinum opii*. See *Opium*. **L., Rousseau's**, a preparation used in Belgium, France, and Mexico, consisting of opium, honey, beer-yeast, water, and alcohol. **L.,**

- Sydenham's.** Synonym of *Vinum opii*. **L., Warner's,** an ammoniated tincture of opium. Unof.
- Laugh** (*lahf*) [ME., *laughen*, to laugh]. 1. To make an audible expression of mirth. 2. The audible expression of mirth. **L., Canine, L., Sardonic.** Synonyms of *Risus sardonius*, *q. v.*
- Laughing, or Laughter** (*lahf'-ing, lahf'-ter*) [ME., *laughen*, to laugh]. A succession of rhythmic, spasmodic expirations with open glottis and vibration of the vocal bands. **L. Gas,** nitrous oxid, or protoxid of nitrogen. See *Nitrous Oxid* and *Anesthetics*. **L. Muscle,** the risorius. See *Muscles, Table of*.
- Laugier's Hernia.** See *Hernia* and *Diseases, Table of*.
- Laumonier's Ganglion.** The superior carotid ganglion.
- Laurel** (*law'-rel, lor'-el*) [*laurus*]. See *Cherry-laurel, California Laurel, Great Laurel, Kalnia, Laurus. L.-water, aqua laurocerasi.* See *Cherry-laurel*.
- Laurer, Canal of.** See *Canal*.
- Laurin** (*law'-rin*) [*laurus, laurel*],  $C_{22}H_{30}O_3$ . A fatty, crystallizable substance obtainable from the berries of the European laurel, *Laurus nobilis*.
- Lauro-cerasus** (*law-ro-ser'-as-us*) [*laurus, laurel; cerasus, cherry-tree*]. See *Cherry-laurel. Lauro-cerasi folia*, the leaves of the European cherry-laurel.
- Laurus** (*law'-rus*) [L.]. A genus of old-world trees and shrubs; the true laurels. Formerly the plants that produce benzoin, camphor, cassia, cinnamon, etc., were assigned to this genus, but at present it is much restricted by botanists. **L. nobilis**, the noble laurel, is indigenous in the south of Europe. Its fragrant oils (one essential, from the leaves, and the other fixed, from the berries) are chiefly used in liniments. Unof.
- Lauryl** (*law'-ril*) [*laurus, laurel*],  $C_{12}H_{25}$ . A univalent radicle, the hydrid of which is dodecane.
- Laurylene** (*law'-ril-ên*) [*laurus, laurel*],  $C_{12}H_{24}$ . A liquid with a high boiling-point, found in certain mineral oils.
- Lauth's Ligament.** See *Ligament. L.'s Violet.* See *Pigments, Conspectus of*.
- Lava** (*lah'-vah*) [L., a flood or torrent]. The molten ejecta of a volcano.
- Lavage** (*lav'-ahsh'*) [Fr.]. Irrigation or washing out of an organ, such as the stomach, the bowel, etc.
- Lavamentum** (*lav-am-en'-tum*) [*lavare, to wash*]. An injection.
- Lavandula** (*lav-an'-du-lah*). See *Lavender*.
- Lavater, Angle of.** See *Angle*.
- Lavatera** (*lav-at-e'-rah*) [after the two *Lavaters*, physicians of Zurich]. A genus of malvaceous trees, shrubs, and herbs, natives of the old world. **L. thuringiaca, L. triloba**, and others abound in mucilage, and are used as demulcent remedies. Unof.
- Lavation** (*lav-a'-shun*) [*lavatio, from lavare, to wash*]. Lavage. **L. of the Blood**, intravenous injection of water.
- Lavatory** (*lav'-at-or-e*) [*lavatorium, a place for bathing*]. A wash or lotion for a diseased part.
- Lave'** (*lāv*) [*lavare, to wash*]. To wash; bathe.
- Lavel** (*lav'-el*) [Prov. Eng.]. A local name for the epiglottis.
- Lavement** (*lāv'-ment*) [*lavare, to wash*]. 1. A wash; the act of washing. 2. A clyster or enema.
- Lavender** (*lav'-en-dor*) [*lavare, to wash*]. The flowers of *Lavandula vera*, having properties due to a volatile oil. It is aromatic, stimulant, and carminative, but is used mainly as a flavor and as an adjuvant to other medicines. **Lavandulæ, Ol.**, the volatile oil distilled from the whole herb. Dose  $\mathfrak{m}$ j-v. **L., Ol., Florum**, the oil distilled from the fresh flowers; preferable to the preceding. Dose  $\mathfrak{m}$ j-v. A constituent of *Spt. odoratus*. **L., Spirit of**, 5 parts of the oil in 95 of alcohol; a perfume. Dose  $\mathfrak{ss}$ -j. **L., Tinct., Comp.**, oil of lavender 8, oil of rosemary 2, cinnamon 18, cloves 4, nutmeg 10, red saunders 8, alcohol 680, water 270, dilute alcohol to make 1000. Dose  $\mathfrak{ss}$ -ij. A constituent of Fowler's solution. To the labiate genus *Lavandula* also belong *L. spica*, or broad lavender (which furnishes the oil of spike), and other medicinal species.
- Laveran's Corpuscles, or Plasmodia.** The *Plasmodia malarie*, first described by Laveran as *Oscillaria malarie*. See *Parasites (Animal), Table of*, and *Plasmodium*.
- Laville's Liquid Mixture, or Antigout Remedy.** A mixture used in acute rheumatism. It is said to be a tincture of quinin and colocynthin, but very probably the active principle in it is colocynthin. See *Colocynthis*.
- Lavipedium** (*lav-ip-el'-de-um*) [*lavare, to wash; pes, foot*]. A foot-bath; a pediluvium.
- Law** (*law*) [ME., *lawe*, a law]. A generalized and epitomized statement of facts. A general rule, or constant mode of action of forces, or phenomena. A rule of action prescribed by authority. See *Jurisprudence*. **L. of Abridged Transmission**, the forms assumed by an individual in its ontogeny differ somewhat from the accepted ancestral type. **L. of Adaptation**, the law that a living organism, under whatsoever conditions, will mould itself into harmony with those conditions, and thus continue its existence, whether in a more perfect or less perfect form. **L., Angström's, of Absorption-spectra**, the "rays that a substance absorbs are precisely those that it emits when made self-luminous." **L., Ampère's.** See *Ampère*. **L. of Avogadro**, equal volumes of all gases and vapors, at like temperature and like pressure, contain an equal number of molecules. **L., Baer's**, the principle that the evolution of any animal form is determined, *first*, by increasing histologic and morphologic differentiation, and *secondly*, by transition from a more general to a more specific type. **L., Bell's**, the law that the ventral roots of the spinal nerves are motor, and the dorsal sensory. See also *Wallerian Degeneration*. **L., Berthollet's**, when two salts in solution can by double decomposition produce a salt less soluble than either, this salt will be produced. **L., Boudin's**, that antagonism exists between tuberculosis and malaria. **L., Boyle's**, at any given temperature the volume of a given mass of gas varies inversely to the pressure that it bears. This is also called *Mariotte's Law*. **L., Brewster's**, the angle of polarization of a body is equal to that angle of incidence at which the reflected rays are at right angles to those refracted. **L., Charles's**, equal increments of temperature add equal amounts to the product of the volume and pressure of a given mass of gas. The increase is  $\frac{1}{273}$  of its volume measured at  $-273^{\circ}\text{C}$ ., which is the zero of absolute temperature. **L., Colles'**, a child born of a mother who is without obvious venereal symptoms, and which, without being exposed to any infection subsequent to its birth, presents symptoms of syphilis when a few weeks old, can infect the most healthy nurse, whether she suckle it or merely handle and dress it, while it will not infect its own mother, even though she suckle it while it has venereal ulcers of the lips and tongue. **L. of Contemporaneous Transmission**, changes in an individual appear at the same time as they appeared in its ancestor. **L., Coulomb's**, the force of attraction or repulsion between two charges of electricity is proportional to the quantity of electricity acting, and inversely proportional to the square of the distance between them. **L., Dalton's, or L., Dalton-Henry's**, although the volume of a gas

assumed by a liquid medium constant, the work it performs multiplied by the density of the absolute gas rises and falls in proportion to its pressure. **L. of Definite Proportion**, where two or more elements combine in fixed and constant proportions. **L., Delbœuf's**, a mechanical quantity of work equal to the work of a weight of unit weight, at unit height, and if not increased by a resistance, will produce a velocity, the product of which by the above space equals to such number. **L. of Diffusion of Gases through Membranes**. See **L., Graham's**. **L. Donders'**. See **L., Helmholtz's**. **L., Dulong and Petit's**, the product of the specific heat of elements in the solid state multiplied by their atomic weights are approximately the same, i. e., the atomic heat of elements is constant. **L. of Electrotonus**, in pathophysiology, the secondary and rate of nervous production are diminished, while the electromotive power is increased in relation to the electrotonus, the excitability and rate of nervous conduction are increased, while the electromotive power is diminished. **L. of Eccentric Sensations**, that abnormal sensations, whether in the nerve cells themselves or elsewhere in the course of the nerves leading to the yield, consciousness always refers the sensation to the presence of some external cause of excitement, i. e., the power of a sensation always produces every sensation that reaches the consciousness generally, and is, in a word, the cause of the excitement is outside. **L., Faraday's**: 1. The quantity of electricity decomposed in a given time is proportional to the strength of the current acting upon it. 2. The quantities of the substances decomposed are proportional to their electro-chemical equivalents. 3. The electromotive force is a constant. 4. The strength of the electromotive force is the same in all parts of the electrolyte. **L., Fechner's**, the more expanded and sensitive sensation of physical laws as to the relation between the intensity of stimuli and the changes in the resulting sensation, a constant ratio existing between the strength of the stimulus and the intensity of the sensation. With increase of the stimulus the sensation increases only as the logarithm of the stimulus. A lower unit (*the half*) or final intensity of excitability, there is an upper or maximal range of excitability. Between the two is the range of sensitivity. **L., Fleischl's**, of Contraction, that the excitability of a nerve varies at different points in course. **L. of Functional Substitution**. See **L., Gay-Lussac's**. See **L., Gay-Lussac's**. See **L., Graham's**. **L., Goudell's**, *See L., Ryle's Practice*: "When the cervix uteri is relaxed as one, rose, pregnancy is probable." **L., Graham's**, the rate of diffusion of gases through porous membranes is in inverse relation to the square root of their density. **L., Gudden's**, lesions of the young of the eye give rise to lesions of the normal development. **L., Hæckel's Fundamental Biologic**, the principle that every organism, in its development, through a series of stages, each of which represents a step in the evolution of the organism, progresses in such a definite, frequently determined or predetermined manner, and the environment having no influence, in other words, "that the influence of the environment on the physiology of the organism is negligible." **L., Hilton's**, that a nerve trunk supplying a given joint also supplies the muscles moving that joint and the skin over the insertion of those muscles. **L. of Homotopic Transmutation**, variation or a paired characters appear in the parts of an individual as if these of the pro-

genitor. **L., Hook and Gravesande's, of Elasticity**, that the tension is directly proportionate to the length of the body extended, and to the amount of the extending weights, and that it is also inversely proportionate to the diameter of the extended body. **L., Huxley's**, the physical differences between man and the higher apes are less marked than those between the higher and the lower apes. **L., Joule's**, the heating-power of a current is proportional to the product of the resistance, the square of the current-strength, and the time the current flows. **L., Kirchhoff's**, in electricity: 1. The sum of all the positive currents is equal to the sum of all the negative currents, and, hence, if we add these, the result is zero. 2. The sum of all the electromotive forces in any circuit is equal to the sum of all the products obtained by multiplying the separate currents by the resistances through which they are flowing. 3. In optics, the law that a transparent body absorbs from a beam of light passing through it those rays which it emits in the incandescent state. See **L., Angström's**. **L., Kofacker-Sadler's**, a law as to the cause of the difference of sex. From a study of 80,000 cases these observers conclude that if the husband is younger than the wife there are as many boys as girls; if both are of the same age there are 1029 boys to 1000 girls; if the husband is older, 1057 boys to 1000 girls. **L., Kopp's (of boiling points)**, the addition of  $\text{ClH}_2$  to members of certain homologous series of chemic compounds raises the boiling-point about  $19.5^\circ \text{C}$ . **L., Lenz's**, the law in electro-magnetic induction that the direction of induced currents is such that their reaction arrests the motion that produces them. **L., Levert's**, that in placenta previa there is a marginal insertion of the cord. **L., Listing's**, pertains to the movements of the eye ball: when moved from the position of rest, the angle of rotation in the second position is the same as if the eye were turned about a fixed axis perpendicular to the first and second positions of the visual line. **L., Louis'**, in adults the lungs usually contain tubercle when it is present elsewhere in the body. **L., Magnus's**, in thermo-electricity, the law that "in circuits of the same metal throughout, no electromotive force is produced by variation in temperature or of section of the conductor at different parts of the circuit." **L., Malaguti's**, when two salts are mixed in solution double decomposition occurs and four salts are formed (metathesis), the proportions of each depending on the strength of union of the respective basic and acid radicles. **L., Mariotte's**, the law of physics that the volume of a gas varies inversely as the pressure to which it is subjected. See **L., Boyle's**. **L. of Molecular Weights**, the molecular weight of an element is twice its atomic weight (with the exception of  $\text{H}_2$  and  $\text{Cl}_2$ ); the molecular weight of a compound is equal to half the sum of the atomic weights of its elements. **L. of Multiple Proportions**, that two substances uniting to form a series of chemic compounds, do so in proportions that are simple multiples of one another or of one common proportion. **L., Newton's**, the unit force is that force which, acting for unit time on the unit mass, produces unit velocity. **L., Ohm's**, the law that the current-strength varies directly as the electromotive force, and inversely as the resistance. It is usually expressed by the formula  $C = \frac{E}{R + \gamma}$ , in which C is the current in ampères; E, the electromotive force in volts; R, the resistance of the external, and  $\gamma$ , that of the internal part of the circuit, in ohms. **L. of Organic Balance**, excessive development of one part of an organism is counterbalanced by deficient growth of another part. **L., Pfüger's**, "a given tract of nerve is stimulated by

the appearance of kathelectrotonus and the disappearance of anelectrotonus—not, however, by the disappearance of kathelectrotonus, or by the appearance of anelectrotonus.” **L. of Progress**, the law of progressive increase in the perfection of organisms in the successive periods of the earth's history. **L., Psycho-physical.** See *L., Fechner's*. **L. of Reciprocal Proportions**, two elements combining with a third do so in proportions that are simple multiples or simple fractions of those in which they combine with each other. **L. of Refraction**, that rays of light entering a denser medium are deflected toward a perpendicular drawn through the point of incidence, and those entering a rarer medium are deflected away from the same perpendicular. **L., Ritter's or Ritter-Valli's**, if a nerve be separated from its center, or if the center die, the excitability of the nerve is *increased*: the increase of excitability begins at the central end, and travels towards the periphery; the excitability then *falls* until it disappears entirely. **L. of Sexual Transmission**, a parent transmits characteristics to children of his or her sex not transmitted to the opposite sex. **L., Stokes':** 1. See *L., Angström's*. 2. Every muscle in relationship with an inflamed mucous or serous surface becomes paralyzed. **L., Tait's**, in every disease of the abdomen or pelvis in which the health is destroyed or life is threatened, and in which the condition is evidently not due to malignant disease, an exploration of the cavity by celiotomy should be made. **L., Toynbee's**, a law concerning intra-cranial disease secondary to otitis. It is that the cerebellum and lateral sinus suffer from disease of the mastoid, while the cerebrum is endangered by caries of the tympanic roof. **L., Valli-Ritter's.** See *L., Ritter-Valli's*. **L., Van der Kolk's**, the sensory fibers of a mixed nerve are distributed to parts that are moved by muscles that receive the motor fibers of the same nerve. Thus, in nerve-lesions the chief sensory symptoms are always peripheral or distal from the chief motor symptoms. **L., Volta's, of Tension**, the contact of two different substances produces an electromotive force equal to the algebraic difference of their electric condition, which difference is constant for the same substances. **L., Vulpius's**, the functions of a destroyed portion of an animal's brain are assumed by the remaining portion. **L., Wallerian, of Degeneration**; from experiments Waller showed that the trophic centers of the ventral roots of spinal nerves lie in the multipolar nerve-cells of the ventral horns of gray matter, while those of the dorsal roots lie in the ganglia placed upon them. Generalized, the law predicates that the course of the impulses in a nerve may be ascertained by tracing the course of the subsequent degeneration. **L., Weber's**, the principle that that variation of stimulus that causes the smallest appreciable variation in sensation maintains, approximately, a fixed ratio to the total stimulus. See also *L., Fechner's*.

**Lawn-tennis Arm.** Displacement of the tendon, or body (or both) of the pronator radii teres. Common in lawn-tennis players. **L.-t. Knee.** See *Knee*. **L.-t. Leg**, tendinous, fascial, or muscular rupture in the calf or sura.

**Lawsonia** (*law-so'-ne-ah*). See *Henma*.

**Lax** (*laks*) [*laxus*, loose]. Loose; not tense.

**Laxarthrus** (*laks-ar'-thruss*) [*laxus*, loose; ἄρθρον, joint]. Luxation of a joint.

**Laxative** (*laks'-at-iv*) [*laxativus*; *laxare*, to loosen]. 1. Aperient; mildly cathartic. 2. An agent that loosens the bowels; a mild purgative.

**Laxator** (*laks-a'-tor*) [*laxare*, to loosen]. That which

loosens or relaxes. A name applied to various muscles. **L. tympani.** See *Muscles, Table of*.

**Laxitas** (*laks'-it-as*) [*L.*]. Looseness. **L. alvi**, diarrhea. **L. gingivarum**, spongy gums. **L. intestinorum**, diarrhea. **L. ventriculi**, atony of the stomach.

**Laxity** (*laks'-it-e*) [*laxitas*, looseness]. Lack or loss of tone or tension; a relaxed, loose, or spongy state of a tissue.

**Layer** (*la'-er*) [*ME., leyer*, a layer]. A mass of uniform, or nearly uniform, thickness, spread over or covering a considerable area. **L., Bacillar** (*of the retina*), the layer of rods and cones of the retina. **L., Basement**, basement membrane, *q. v.* **L., Bowman's.** See *Lamina, Bowman's*. **L., Fibrous** (*of the pericardium*), the outer layer of the pericardium, continuous above with the deep cervical fascia. **L., Fundamental**, one of the three layers of the blastoderm, *q. v.* **L., Ganglionic**, a layer of angular cells of the cerebral cortex, best developed in the motor area. **L., Germinal.** See *L., Fundamental*. **L., Henle's**, the outer layer of the inner root-sheath of the hair. **L., Huxley's**, the inner layer of the inner root-sheath of the hair. **L., Horny** (*of the epiderm*), the superficial layer of the skin. **L., Inner Molecular**, one of the layers of the retina. **L., Latticed**, the formatio reticularis, *q. v.* **L., Malpighian**, the rete mucosum of the skin. **L., Ollier's.** See *L., Osteogenetic*. **L., Osteogenetic**, the lower layer of periosteum, connected with the formation of bone. **L., Papillary** (*of the skin*), the upper layer of the true skin, having papillary projections fitting into the epidermis. **L., Pigmentary** (*of the retina*), the innermost layer of cells of the retina extending also to the choroid, ciliary body, and iris. **L., Primitive**, or *Primordial*, the layers of the blastoderm; by some applied to epiblast, hypoblast, and mesoblast; by others to the first two only. **L. of Rods and Cones.** See *L., Bacillar*, and *Retina*. **L., Serous**, the ental layer of serous membranes, consisting of endothelium.

**Layering** (*la'-er-ing*) [*ME., leyer*, a layer]. The propagation of plants by layers.

**Layette** (*lay-et'*) [*Fr.*]. The full outfit of garments, bedding, etc., for a new born child.

**Layman** (*la'-man*) [*D., le-man*, a layman]. A member of the laity.

**Lazar** (*la'-zar*) [from *Lazarus*, a Biblical name]. An old name for a leper, or for any person having a repulsive disease.

**Lazaret Fever.** A synonym of *Typhus Fever, q. v.*

**Lazaretto** (*laz-ar-et'-o*) [*Ital.*, a pest-house]. A quarantine establishment. Also, a place for fumigation and disinfection.

**Lazari malum** (*laz'-ar-i ma'-lum*) [*L.*, “Lazarus' ill'"]. Synonym of *Leprosy*.

**Lazulite** (*laz'-u-lit*) [*S., azul*, blue]. A mineral of a light-blue color, composed of the hydrous phosphate of aluminum, magnesium, and iron.

**Leaching** (*lech'-ing*) [*ME., leechen*, to wet]. In chemistry, removing by percolation.

**Lead** (*led*) [*ME., leed*, lead]. See *Plumbum*. **L., Black.** See *Graphite*. **L.-colic.** See *Colic*. **L.-encephalopathy**, a morbid condition of the brain due to chronic lead-poisoning. **L.-line**, blue line; the line of discoloration on the gums in cases of chronic lead-poisoning. **L.-pipe Contraction**, Weir Mitchell's term for the marked resistance encountered in attempting to flex the legs in cases of spastic paraplegia of infants, the resistance gradually yielding as the effort to flex is maintained; also the condition of the limbs in the cataleptic state in which they maintain any position that is given them. **L.-pipe Paralysis.** Same as

**Lectulus** (*lek'-tu-lus*) [dim. of *ictus*, bed]. An old name for various forms of splints, cushions, and pads used in surgery; also, a bed or couch; a couch or mattress containing medicinal substances. **L. medicatus**, a dry fomentation.

**Ledon** (*le'-don*) [*λήδων*, cistus]. See *Ladanum*.

**Ledoyen's Disinfecting-fluid**. A solution of lead nitrate.

**Ledran's Suture**. See *Suture*.

**Ledum** (*le'-dum*) [*λήδων*, a species of cistus]. A genus of ericaceous shrubs. **L. palustre**, marsh-tea, the leaves of which have been used as a febrifuge and sedative, and in skin-diseases. **Unof**.

**Ledyson, Powder of**. A powder containing Armenian bole, with powdered charcoal, slaked lime, sal ammoniac, and powdered cinnamon.

**Leech** (*lech*) [AS., *leece*, physician]. 1. *Hirudo medicinalis*, or other worm-shaped aquatic and blood-sucking animals employed in surgery. 2. Formerly a medical practitioner; a physician. 3. To extract blood by leeching. See *Hirudo*. **L., Artificial**, an apparatus for cupping. See *Heurteloup*. **L.-craft**, an archaic name for the art of healing. **L., Horse**. See *Horse-leech*. **L.-tube**, a glass tube in which a leech is placed so that its mouth will come in contact with the skin of the part over which the tube is placed.

**Leecher** (*lech'-er*) [ME., *leeche*, a physician]. A person who applies leeches.

**Lees** (*lez*) [AS., *les*, dregs]. The dregs or solid matter held in suspension by a liquid, that finally settles at the bottom of the vessel. Especially the sediment of vinous liquors. Also, a valuable side-product in the manufacture of wine. It is the deposit formed on the bottom of the casks, and consists of from 30 to 40 per cent. of vegetable matter, the remainder being tartrates, sulphates (in plastered wines), alumina, phosphoric acid, etc.

**Leeting** (*le'-ing*). The exudation on the surface of the skin in eczema.

**Le Fort's Operation**. See *Operations, Table of*.

**Left** [ME., *left*, left]. Sinistral; opposite of right. The left-hand side. In man and other mammals, the side containing the larger part of the heart. **L.-brained**, having the speech-center in its normal situation, in the left third frontal, or subfrontal convolution. **L.-handed**, having more power and dexterity in the left than in the right hand. **L. Lateral Recumbent Position**. See *Postures, Table of*.

**Leg** [ME., *leg*, leg]. The lower extremity of man, especially that part from the knee to the ankle. An organ of locomotion in man and other animals. **L., Bandy**, bow-leg. **L., Barbadoes**, elephantiasis of the leg. **L., Black, of Canada**, a condition of purpura affecting the legs of Canadian lumbermen. **L., Cochin**. See *L., Barbadoes*. **L., Crossed**, a crossing of the axes of the legs. **L., Dentist's**, a painful cramp in the leg-muscles of dentists. **L., Dover's**, a term for hypochondriasis. **L.-ill**. See *Black Leg*. **L., Lawn-tennis**. See *Lawn-tennis Leg*. **L., Milk**, phlegmasia alba dolens. **L., Scissors**. See *L., Crossed*. **L., Weeping**, a leg the seat of eczema madidans. **L., White**. See *L., Milk*.

**Legal** (*le'-gal*) [*lex legis*, law]. Pertaining to law. **L. Medicine**, medical jurisprudence.

**Legal's Disease**. Headache due to meningo-tympanic disease. See *Diseases, Table of*.

**Legitimacy** (*le-jit'-im-as-e*) [*legitimare*, to make lawful]. The condition of being within the bounds of the law. Also, the statutory recognition of a child born within wedlock, or within a period of time necessary to gestation, which may elapse after the death of the father.

**Legume** (*leg'-um* or *leg-um'*) [*legere*, to gather (so-called because it may be gathered by the hand)]. In biology, the fruit of plants of the pea or pulse family, a pod splitting along both sutures, and formed from a simple pistil.

**Legumin** (*leg'-u-min*) [*legumen*, pulse]. A proteid compound in the seeds of many plants belonging to the natural order of leguminosæ. Vegetable casein. See *Casein*.

**Leguminosæ** (*leg-u-min-o'-se*) [*legumen*, pulse]. The pulse family; an important family of plants comprising the bean, the clover, the lentil, the pea. Licorice, indigo, gum arabic, senna, are also obtained from species of this family.

**Leguminous** (*leg-u'-min-us*) [*legumen*, pulse]. Pertaining to or resembling the *Leguminosæ*.

**Leicester System**. A system of combating smallpox that consists in isolation, quarantine, and disinfection, without vaccination.

**Leiocephalous** (*li-o-sef'-al-us*) [*λείος*, smooth; *κεφαλή*, head]. Having a smooth head.

**Leioderma** (*li-o-der'-me-ah*) [*λείος*, smooth; *δέρμα*, skin]. A disease of the skin marked by abnormal glossiness, and by atrophy.

**Leiodermatous** (*li-o-der'-mat-us*) [*λείος*, smooth; *δέρμα*, skin]. Smooth-skinned.

**Leiomyoma** (*li-o-mi'-o'-mah*) [*λείος*, smooth; *μῦς*, muscle; *ωμα*, a tumor: *pl.*, *Leiomyomata*]. A tumor consisting largely of unstripped muscle-fibers.

**Leipilous** (*li-op'-il-us*) [*λεῖος*, smooth; *πίλος*, wool]. Same as *Leiocephalous*.

**Leipus** (*li'-o-pus*) [*λείος*, smooth; *πούς*, foot]. Synonym of *Talipes planum*, or flat-foot.

**Leiotrichous**, **Liotrichous** (*li-ol'-rik-us*) [*λείος*, smooth;  *τρίχis*, hair]. Having smooth or straight hair. See *Lissotrichous*.

**Leiphemia** (*li-fe'-me-ah*) [*λείπειν*, to fail; *αἷμα*, blood]. Failure, poverty, or a depraved state of the blood.

**Leipodermia** (*li-po-der'-me-ah*) [*λείπειν*, to leave; *δέρμα*, skin]. A deficiency of the skin, especially of the prepuce.

**Leipomeria** (*li-po-me'-re-ah*) [*λείπειν*, to leave; *μέρος*, part]. A monstrosity with absence of one or more limbs.

**Leipopsychia** (*li-pop-si'-ke-ah*) [*λείπειν*, to fail; *ψυχή*, spirit]. Fainting; weakness; asphyxia.

**Leipothymia** (*li-po-thi'-me-ah*) [*λείπειν*, to fail; *θυμός*, mind]. A fainting or syncope.

**Leipothymic** (*li-po-thi'-mik*) [*λείπειν*, to fail; *θυμός*, mind]. Faint; affected with or pertaining to leipothymia.

**Leipsic Green**. Same as *Schweinfurth Green*. **L. Yellow**. Same as *Chrome-yellow*.

**Leipyria** (*li-pir'-e-ah*) [*λείπειν*, to fail; *πῦρ*, fire]. Coldness, as of the extremities, during a high fever.

**Leitch's Blue**. See *Pigments, Conspectus of*.

**Leiter's Apparatus, Coil, or Tubes**. Tubes of soft, flexible metal designed for application about any part of the body. Cold water is passed through the tubes, thereby reducing the temperature of the parts encased.

**Leithner's Blue**. Same as *Cobalt-blue*.

**Lekene** (*le'-ken*). The principal constituent of Caucasian ozokerite; it melts at 79° C., and has the composition  $C_{24}H_{20}O_2$  or  $C_{24}H_{20}$ .

**Lema** (*le'-mah*) [*λήμη*, rheum]. The collection of dried matter sometimes seen at the canthus of the eye.

**Lembert's Suture**. See *Suture*.

**Lémery's Powder**. A stimulant and digestive powder containing cinnamon, ginger, nutmeg, cloves, mace, musk, and raisins. **L.'s Salt**, magnesium sulphate.

**Lemithochorton** (*lem-ith-o-kor'-ton*). Same as *Helminthochorton*.

**Lentiform** (*len'-tif-orm*). See *Lenticular*.

**Lentiginæ** (*len'-tij'-in-ez*) [*lens*, a lentil]. See *Lentigo*.

**L. leprosa**, the pigmented spots of macular leprosy.

**Lentiginose, Lentiginous** (*len'-tij'-in-oz*, *len'-tij'-in-us*) [*lentiginosus*, freckled]. Affected with lentigo. Speckled or freckled.

**Lentigo** (*len'-ti'-go*) [*lens*, a lentil; *pl.*, *Lentiginæ*]. A freckle; ephelid. A circumscribed spot or patch of pigment, small in size, and occurring mainly on the face and hands. Freckles rarely occur before the age of eight years, and are not common in aged persons. They are most frequent among people of light complexion. Those occurring upon parts of the body not exposed to the sun's rays are called "cold freckles." **L. æstiva**, summer freckles. **L. congenita**, pigmented nevus.

**Lentil** (*len'-til*) [*lenticula*, a lentil]. The plant *Lens esculenta*; also its flat lenticular seed, a kind of pulse, valued as an article of food.

**Lentitis** (*len'-ti'-tis*). See *Phakitis*.

**Lentoid** (*len'-toid*) [*lens*, lentil; *ειδος*, like]. Lens-shaped, or lenticular.

**Lentor** (*len'-tor*) [*lentor*; *lentus*, adhesive]. Viscidity of a liquid; slowness of any function, or process. **L. cordis**, sluggishness of the heart.

**Lentous** (*len'-tus*) [*lentus*, thick]. Thick, tenacious, or viscid.

**Lenus** (*le'-nus*) [*λαγός*, a depression]. A depression; the torcular herophilii, *q. v.*

**Lenz's Law**. See *Law*.

**Leonard's Tint**. A name for methyl-violet, pentamethyltriarnido-triphenylcarbinol, used for staining microscopic sections and bacteria.

**Leonine** (*le'-o-nin*) [*leoninus*, belonging to a lion]. Lion-like; resembling a lion.

**Leontiasis** (*le-on-ti'-as-is*) [*leo*, a lion]. A variety of elephantiasis in which the patient's face is said to resemble that of a lion. See *Elephantiasis* and *Leprosy*. **L. ossea**, **L. ossium**, a form of sclerosis of bone, following osteitis, in which nodular deposits are seen upon the diseased bone. **L. vitulina**, a congenital disease characterized by a painless enlargement of the face, giving it some resemblance to that of a calf.

**Leontodin** (*le-on'-to-din*) [*λεων*, a lion; *οδους*, a tooth]. The precipitate from a tincture of the root of dandelion, *Leontodon taraxacum*: it is a tonic, diuretic, aperient, and hepatic excitant. Dose two to four grains. Unof.

**Leontodon** (*le-on'-to-don*). See *Taraxacum*.

**Leonurus** (*le-on-u'-rus*). See *Motherwort*.

**Leopard's Bane** (*lep'-ardz ban*). See *Arnica*.

**Lepal** (*le'-pal*) [*λεπις*, a scale]. In biology, a barren stamen; a stamenode.

**Leper** (*lep'-er*) [*λεπρός*, scaly]. One affected with leprosy.

**Lepidin** (*lep'-id-in*) [*λεπις*, scale],  $C_9H_6(CH_3)N$ . 1. Methyl-quinolin, a substance that occurs with quinolin and quinaldin in coal-tar, and is obtained on distilling cinchonin with potassic hydrate. It possesses an odor like that of quinolin, and boils at  $257^{\circ}C$ . 2. A bitter principle from *Lepidium iberis*: it is reputed to be antipyretic. Unof.

**Lepidium** (*lep'-id'-e-um*) [*λεπιδιον*; *λεπις*, scale]. A genus of cruciferous herbs; cress, or peppergrass. **L. iberis**, **L. latifolium**, **L. ruderale**, **L. sativum**, and **L. virginicum**, have been used in medicine. They are antiscorbutic, and stimulant, and are reputed to be antipyretic. Unof.

**Lepido-** (*lep'-id-o-*) [*λεπις*, scale]. A prefix signifying a scale, or scaly.

**Lepidoid** (*lep'-id-oid*) [*λεπις*, scale]. Having the appearance of a scale.

**Lepidoplastic** (*lep'-id-o-plast'-tik*) [*λεπις*, scale; *πλασσειν*, to form]. Forming scales.

**Lepidoptera** (*lep'-id-op'-ter-ah*) [*λεπις*, scale; *πτερον*, a wing]. An order of insects distinguished by feather-like scales and a spirally-coiled suctorial apparatus. The order includes butterflies and moths.

**Lepidosarcoma** (*lep'-id-o-sar-ko'-mah*) [*λεπις*, scale; *σarkoma*, sarcoma]. A sarcoma covered with scales, occurring in the mouth.

**Lepidosin** (*lep'-id'-o-sin*) [*λεπις*, scale]. A substance in the scales of fishes analogous to dentine.

**Lepidosis** (*lep'-id-o'-sis*) [*λεπις*, scale]. Same as *Ichthyosis*. Also, a synonym of *Lepra* and of *Pityriasis*.

**Lepidote** (*lep'-id-ot*) [*λεπις*, a scale]. In biology, scurfy or covered with small scales.

**Le Pita**. Synonym of *Tinea imbricata*.

**Lepocyta** (*lep'-os'-il-ah*) [*λεπος*, a scale, a husk; *κυτος*, a hollow, a cavity]. In biology, a unicellular organism furnished with a limiting membrane. Cf. *Gymnocyta*.

**Lepocyte** (*lep'-o-sit*) [*λεπος*, a scale, a husk; *κυτος*, a hollow]. In biology, a nucleated cell possessing a cell-wall. Cf. *Gymnocyte*.

**Leposteophyton**, or **Leposteophytum** (*lep'-os-te-o-fi'-ton*, *lep'-os-te-o-fi'-tum*) [*λεπος*, scale; *οστρον*, bone; *φυτον*, plant]. A new growth of bone, scaly in character.

**Lepothrix** (*lep'-o-thriks*) [*λεπος*, scale; *θριξ*, the hair]. A condition in which the hairs of the axillæ or scrotum are fringed with feather-like masses along the shaft, or become encased in a sheath of hardened sebaceous matter.

**Lepra** (*lep'-rah*) [*λεπρα*, leprosy]. 1. Leprosy. An endemic, chronic, and highly malignant disease, somewhat analogous to syphilis in pathologic character. It is prevalent in Europe and Asia, especially along the Mediterranean shores, but is rare in North America. It is a constitutional disease preceded by malaise, debility, and languor, followed by characteristic bullous, macular, or tubercular lesions of the skin. Its cause is the *Bacillus lepre* discovered by Hansen. See *Leprosy*, and *Bacteria*, *Synonymic Table of*, and also *Psoriasis*. 2. A so called "false leprosy," apparently a form of psoriasis. **L. alba** or *albida*, white leprosy. **L. alphas**. See *Psoriasis*. **L. anæsthetica**. See *Leprosy*. **L. antanea**. Same as *Leprosy*, *Tuberculated*. **L. fungifera**. Synonym of *Frambesia*. **L. ichthyosis**. *Ichthyosis*, *q. v.* **L. italica**, or *mediolanensis*, pellagra, *q. v.* **L. maculosa**, the stage of true leprosy, characterized by the presence of pigment-spots. **L. mediolanensis**. See *L. italica*. **L. melas**, black leprosy. **L. mutilans**, the final stage of true leprosy, in which there is a loss of members. **L. nervorum**. See *Leprosy*, *Nerve*. **L. nervosa**. Same as *Leprosy*, *Anæsthetic*, *q. v.* **L. nodosa**, or **L. Nodular**. See *Leprosy*. **L. Non-tuberculated**. See *Leprosy*. **L. of Willan**, psoriasis. **L. tuberosa**. See *Leprosy*, *Tuberculated*. **L. umbrosa**. See *Leprosy*, *Black*. **L. vera**. See *Leprosy*. **L. vulgaris**, a synonym of psoriasis.

**Leprelcrosis** (*lep'-rel-ko'-sis*) [*λεπρα*, lepra; *ελκος*, ulceration]. Leprous ulceration.

**Lepriasis** (*lep'-ri'-as-is*) [*λεπρα*, leprosy]. A synonym of leprosy and of psoriasis; an obsolescent term vaguely used to designate various scaly diseases of the skin.

**Lepric** (*lep'-rik*) [*λεπρικος*, leprous]. Pertaining to lepra.

**Leprologist** (*lep'-rol'-o-jist*) [*λεπρα*, leprosy; *λογος*, science]. An expert or specialist in leprology.

**Leprology** (*lep'-rol'-o-jy*) [*λεπρα*, leprosy; *λογος*, science]. The science of leprosy.

**Leptomeningitis** (*lep-to-men-in-jī-tis*) [*λεπτός*, slight; *μήνιξ*, membrane; *τις*, inflammation]. Inflammation of the pia and arachnoid of the brain and the spinal cord, in contradistinction to *Pachymeningitis*, though meningitis alone usually signifies the same as leptomeningitis. See *Meningitis*. **L. cerebrealis**, an inflammation confined usually to the pia of the convex surface of an anterior lobe of the cerebrum. **L., Cerebro-spinal**, an inflammation of the pia of the brain and cord. **L. spinalis**, an inflammation of the pia of the spinal cord. **L., Tuberculous**, an inflammation of the pia due to the presence of the tubercle-bacillus.

**Leptomeninx** (*lep-to-men-t-ingks*) [*λεπτός*, delicate; *μήνιξ*, membrane; *πλ.*, *Leptomeninges*]. The pia or the arachnoid; in the plural (*leptomeninges*), usually the arachnoid and pia taken together.

**Leptophonia** (*lep-to-fō-ne-ah*) [*λεπτός*, delicate; *φωνή*, voice]. Delicacy, gentleness, or weakness of the voice.

**Leptophonic** (*lep-to-fon-t-ik*) [*λεπτός*, thin; *φωνή*, voice]. Having a weak voice.

**Leptoprosope** (*lep-to-prō-ro-sop*) [*λεπτός*, thin; *πρόσωπον*, face]. A person, or a head, with a long, narrow face.

**Leptoprosopia** (*lep-to-pro-sof-pe-ah*) [*λεπτός*, thin; *πρόσωπον*, face]. Narrowness of the face.

**Leptoprosopic, Leptoprosopous** (*lep-to-pro-sof-t-ik*, *lep-to-pros-t-o-pus*) [*λεπτός*, thin; *πρόσωπον*, face]. Having a long, narrow face.

**Leptorhine** (*lep-to-rin*) [*λεπτός*, thin; *ρίς*, nose]. Having a slender nose or proboscis. See *Index*.

**Leptorrhina** (*lep-tor-in-e-ah*) [*λεπτός*, thin; *ρίς*, nose]. Narrowness of the nasal bones, or smallness of the nasal index.

**Leptorrhizous** (*lep-tor-it-zus*) [*λεπτός*, thin; *ρίζα*, root]. Having a slender root.

**Leptosporangiate** (*lep-to-spo-ran-t-je-āt*) [*λεπτός*, slender; *σπορά*, seed; *ἀγγεῖον*, vessel]. In biology, having sporangia formed from a single cell.

**Leptothrix** (*lep-to-thriks*) [*λεπτός*, thin; *θρίξ*, hair]. A genus of bacteria, whose elements form straight filaments, often of great length; possibly indistinguishable from the genus *Bacillus*. **L. buccalis**, occasionally found in the mouth, plays a part in the formation of dental tartar and in the production of caries of the teeth. **L. gigantea**, found in tartar of the teeth. See *Bacteria, Synonymatic Table of*.

**Leptotrichia** (*lep-to-trik-e-ah*) [*λεπτός*, delicate; *θρίξ*, hair]. Abnormal or excessive fineness and delicacy of the hair.

**Leptoxylem** (*lep-to-xī-lem*) [*λεπτός*, slender; *ξύλον*, wood]. In biology, undeveloped or rudimentary xylem.

**Leptus** (*lep-tus*) [*λεπτός*, thin]. A genus of beetles. **L. autumnalis**, harvest bug; mower's mite. A parasite that burrows under the skin, causing lesions similar to those of itch. See *Parasites (Animal), Table of*.

**Lerema** (*ler-e-mah*) [*λήρημα*, idle talk; *πλ.*, *Leremata*]. An idle or childish utterance, as in senility, idiocy, or dementia.

**Leresis** (*ler-e-sis*) [*λήρησις*, a speaking foolishly]. Garrulosity; insane or senile loquacity.

**Leros** (*le'-ros*) [*λήρος*, foolish speaking]. Slight delirium, with talkativeness.

**Lerp** [Australian]. A kind of manna found upon the *Eucalyptus dumosa*, or mallee, an Australian shrub. **L.-amylum**,  $C_6H_{10}O_5$ , a peculiar carbohydrate found in the thready portion of lerp.

**Lesage, Bacillus of.** See *Bacteria, Synonymatic Table of*.

**Lesbian Love** [*λέσβιος*, Lesbian]. See *Tribadism*.

**Lesbianism** (*les'-be-an-izm*) [*λέσβιος*, Lesbian]. The doctrine of Lesbian love.

**Leschenema** (*les-ken-el-mah*) [*λέσχη*, talk; *λεσχηρεύειν*, to chat]. Insane, senile, or hysteric loquacity.

**Lesion** (*le'-zhim*) [*lesio*; *ledere*, to hurt]. Any injury, hurt, or wound in any part of the body. In pathology, any morbid change. **L., Central**, one affecting the central nervous system. **L. of Continuity**, a division or break in any part that is normally continuous. **L., Diffuse**, one involving all the tissues of an organ. **L., Focal**, in the nervous system a circumscribed lesion giving rise to distinctive and localizing symptoms. **L., Initial**, of Syphilis, the chancre. **L., Irritative**, in the nervous system a lesion exciting the functions of the part wherein it is situated. **L. of Nutrition**, any pathologic alteration in the capillary system, consisting of increase or decrease in the amount of blood required for assimilation and absorption. **L., Organic**, a morbid structural change in the tissues of an organ. **L., Peripheral**, a lesion of the nerve-trunks or of their terminations. **L., Primary**, of the Skin, the change in the skin occurring in the developing stage of a skin-disease. This may be manifested by the macule, the papule, the tubercle, the pomphus, the phyma, the vesicle, the bulla, the pustule. **L., Primary**, of Syphilis. See *L., Initial*. **L., Secondary**. 1. In the skin, the change occurring in the primary lesion, due to irritation or other causes. It comprises erosions, ulcers, rhagades, squamæ, cicatrices or scars, crusts, and pigmentation. 2. One of the secondary lesions of syphilis. See *Syphilis*. **L., Systematic** or **Systemic**, in the spinal cord a lesion affecting one or more distinct systems or tracts, as in posterior sclerosis, in which the posterior columns or tracts are diseased. **L., Traumatic**, one due to an injury.

**Lesser's Triangle.** See *Triangles, Table of*.

**Lethal** (*le'-thal*) [*letalis*; *letum*, or *letum*, death]. Deadly; pertaining to or producing death.

**Lethal** (*le'-thal*) [*λήθη*, forgetfulness],  $C_{12}H_{26}O$ . An alcohol found in spermaceti.

**Lethality** (*le-thal'-il-e*) [*lethalitas*, from *letum*, death]. Deadliness.

**Lethargic** (*leth-ar'-jik*) [*λήθαργικός*, from *λήθη*, a forgetting]. Relating to, affected with, or of the nature of, lethargy.

**Lethargogenic** (*leth-ar-go-jen'-ik*) [*λήθαργος*, forgetting; *γεννᾶν*, to produce]. Giving rise to lethargy.

**Lethargus** (*leth-ar'-gus*). See *African Lethargy*.

**Lethargy** (*leth'-ar-jē*) [*λήθαργία*; *λήθη*, forgetfulness]. A condition of drowsiness or stupor that cannot be overcome by the will. See, also, *Somnambulism*. **L., African**, the African sleeping-sickness. **L. of Silkworms.** See *Flachérie*.

**Lethe** (*le'-the*) [*λήθη*, forgetfulness]. Total loss of memory; amnesia.

**Letheomania** (*le-the-o-ma'-ne-ah*) [*λήθη*, oblivion; *μανία*, madness]. Morbid longing for narcotic drugs.

**Letheon** (*le'-the-on*) [*λήθη*, forgetfulness]. An old trade name for ethylic ether, used as an anesthetic.

**Lethiferous** (*leth-if'-er-us*) [*λήθη*, forgetfulness; *ferre*, to bear]. Producing sleep.

**Letificant** (*le-tif'-ik-ant*) [*latificare*, to make glad]. A term applied to any remedy acting as a stimulant tonic in melancholy and languor.

**Lettered** (*le'-erd*) [*littera*, a letter]. In biology, possessing markings that resemble letters.

**Letterwort** (*le'-ter-wert*). Same as *Hellebore*, *q. v.*

**Lettuce** (*le'-us*). See *Lactucarium*.

**Letzerich, Bacillus of.** See *Bacteria, Synonymatic Table of*.

**Leube and Riegel's Test-dinner.** A dinner to ascertain the condition of the secretory function of the stomach. By consumption of 1 c. of food (e.g., 200 grains of malted, 50 grains of white bread, and 200 cc. of water).

**Leube's Pancreatic Meat-emulsion.** See *Leube's Test-dinner*.

**Leuc-** *See* *leuko-* (white) and *leuco-* (not found below).

**Leuca** (leu'-ka). Synonym of *leukemia*.

**Leucethraps** (lu'-eth-raps). *Leucos*, white; *thraps*, *Althaea*.

**Leuce** (lu'-se). *Leucos*, white. White leprosy;

*leucoderma*.

**Leucemia** (lu'-se-mi-a). See *Leukemia*.

**Leuchem** (lu'-chem). See *Leukemia*.

**Leucin** (lu'-sin) [*leucos*, white], C<sub>6</sub>H<sub>9</sub>NO<sub>2</sub>. A crystalline substance obtained with amino caproic acid, occurring in the pancreas, spleen, thymus gland, and other parts of the body. It is a product of pancreatic digestion. It occurs in the urine, especially in yellow albumin in the liver and in yellow blood. In the human form it crystallizes in rounded two-sided prisms generated and at times exhibiting indistinct striation. When pure, it forms very small, white, rhombic, flat crystals, very soluble in hot water, and only to the touch. See *Sherer's Test* in *Leucin*.

**Leucosis** (lu'-si-sis) [*leucos*, white]. 1. Abnormally excessive proliferation or production of leucin, as in the liver. 2. Acute yellow atrophy of the liver.

**Leucism** **Leucismus** (lu'-z-mus, lu'-z-mus) [*leucos*, white]. A leucism, whiteness resulting from bleaching of epidermis; albinism.

**Leucitis** (lu'-si-tis). Same as *S. leptitis*.

**Leuco-** (lu'-ko). 1. A word not found under this form.

**Leucumain** (lu'-ku-main). See *Leukumain*.

**Leukangitis** (lu'-kang-i-tis). Synonym of *Lymphangitis*.

**Leukanilin** (lu'-kan-i-lin) [*leucos*, white; *anilin*], C<sub>20</sub>H<sub>11</sub>N. A substance obtained by digesting the indole with concentrated ammonium sulphid. It occurs as a white, crystalline precipitate which separates from water by rapid evaporation. It yields to aniline by oxidation.

**Leukamur** (lu'-ka-mur). See *Lukoderm*. L., Acquired. See *Leukoderm*. L., Congenital. See *Leukoderm*.

**Leukemia** (lu'-ke-mi-a) [*leucos*, white; *aima*, blood].

A disease of the blood and the blood-making organs. Characterized by a more or less permanent increase in the number of white blood-corpuscles and the number of leucos, and by enlargement of the spleen, and less lymphatic glands, together or separately. The disease is chronic; a history of malaria or syphilis is often present in some of the cases. The most characteristic symptom is the increase of white corpuscles in the blood. Instead of the ordinary ratio of white to red—1 to 500—it may be 1 to 20, 1 to 10, or even 1 to 1. Existing changes are seen in the peripheral form of the disease. The forms of leukocytes established by Ehrlich (see *Leukocytes*). In the myelo splenic form of the disease the leukocytes are only slightly, if at all increased. The polymorphs are present in much larger numbers than normal. The polymuclear neutrophils become increased. In addition to these, cells and forms not normal found here found—the myeloblasts, large immature red blood cells, blood with neutrophilic granules. They are held to originate in the bone marrow. There is moderate oligocythemia and a corresponding reduction in the amount of hemoglobin. The liver and kidneys may be the seats of a

diffuse lymphatic infiltration; more rarely there are distinct lymphatic tumors. Charcot-Leyden crystals can be found in the blood after death. Fever, dizziness, and hemorrhage, and a peculiar form of retinitis, are often present. The disease is usually fatal.

**Leukemic** (lu'-ke'-mik) [*leukos*, white; *aima*, blood]. Pertaining to leukemia.

**Leuko-** (lu'-ko) [*leukos*, white]. A prefix signifying white.

**Leukoblast** (lu'-ko-blast) [*leukos*, white; *βλαστος*, germ].

1. The germ of a leukocyte; also, a leukocyte itself.
2. A cell in bone-marrow, of a type that is believed to become developed into a red blood-corpuscle.

**Leukocarpous** (lu'-ko-kar'-pus) [*leukos*, white; *καρπός*, fruit]. In biology, bearing white fruit.

**Leukochroos**, or **Leukochrus** (lu'-kok'-ro-os, lu'-kok'-rus) [*leukos*, white; *χρῶς*, skin]. Having a white skin.

**Leukocotin**, or **Leukocotoin** (lu'-ko-kot'-in, lu'-ko-kot'-in) [*leukos*, white; *coto*], C<sub>21</sub>H<sub>20</sub>O<sub>6</sub>. A body found in coto-bark.

**Leukocrystallin** (lu'-ko-kris'-tal-in) [*leukos*, white; *κρυσταλλος*, clear ice]. Peculiar crystals occasionally found in the blood of leukemic patients.

**Leukocyte** (lu'-ko-sit) [*leukos*, white; *κύτος*, cell].

The colorless or white corpuscle of the blood. Leukocytes have ameboid movement and are formed in the lymphadenoid tissue of the spleen, lymphatic glands, intestinal tract, bone-marrow, etc., and probably also in the lymph and blood. Their average diameter is .01 mm. (.00039 inch). In normal blood Ehrlich distinguishes the following varieties: 1. *Lymphocytes*—small cells with a large nucleus that stains deeply, and a small amount of protoplasm. 2. *Large uninuclear leukocytes*—large cells with a single large

A. Lymphocyte. B. Large uninuclear leukocytes. C. Transitional forms. D. Dd. Multinuclear forms—neutrophile cells. E. Eosinophile cells.

nucleus, staining less deeply, and a large amount of protoplasm. 3. *Transitional forms*—cells with a single indented nucleus. 4. *Multinuclear cells*, with neutrophilic granules—cells having a polymorphous nucleus or several nuclei. These constitute 70 per cent. of the entire number of white blood corpuscles. 5. *Eosinophile cells*. In leukemia another cell, the *myelocyte*, makes its appearance. This is a large uninuclear cell, with neutrophilic granules. Löwit recognizes two classes, leukoblasts and erythroblasts, the latter the antecedents of the red corpuscles. Most authorities reject this division, however. L., Alpha, and L., Beta, two terms used by Heyl, the former to express leukocytes that disintegrate during the coagulation of the blood; the latter, those that do not.

**Leukocythemia** (lu'-ko-si-the'-me-ah) [*leukos*, white; *κύτος*, cell; *aima*, blood]. See *Leukemia*.

**Leukocythemic** (lu'-ko-si-the'-mik) [*leukos*, white; *κύτος*, cell; *aima*, blood]. Pertaining to leukemia.

**Leukocytic** (lu'-ko-sit'-ik) [*leukos*, white; *κύτος*, cell]. Relating to or characterized by leukocytes.

**Leukocytogenesis** (*lu-ko-si-to-jen'-es-is*) [*λευκός*, white; *κύτος*, cell; *γενᾶν*, to beget]. The formation of white blood-corpuscles, or leukocytes.

**Leukocytolysis** (*lu-ko-si-to'l'-is-is*) [*λευκός*, white; *κύτος*, cell; *λύσις*, solution]. The destruction of leukocytes.

**Leukocytoma** (*lu-ko-si-to'-mah*) [*λευκός*, white; *κύτος*, cell; *ῥῆμα*, tumor: *pl.*, *Leukocytomata*]. Any tumor containing cellular growths similar in constitution to the white corpuscles of the blood, such as tubercle, lupus, etc.

**Leukocytosis** (*lu-ko-si-to'-sis*) [*λευκός*, white; *κύτος*, cell]. A moderate and transient increase in the number of colorless blood-corpuscles, not accompanied, as in leukemia, by splenic and true glandular enlargement or disease of the bone-marrow.

**Leukocytotic** (*lu-ko-si-to'l'-ik*) [*λευκός*, white; *κύτος*, cell]. Pertaining to leukocytosis.

**Leukocyturia** (*lu-ko-si-to'-re-ah*) [*λευκός*, white; *κύτος*, cell; *οὔρον*, urine]. The presence of colorless blood-corpuscles in the urine.

**Leukoderma** (*lu-ko-der'-mah*) [*λευκός*, white; *δέρμα*, skin]. *Leukasmus*; *achroma cutis*; *leukopathia*; a congenital pigment-anomaly of the skin, in which, at the time of birth or soon after, whitish patches or bands, irregularly outlined and usually isolated, appear upon the skin of the child. See *Vitiligo*. **L., Acquired.** See *Vitiligo*. **L., Congenital.** See *Albinismus*. **L., Neuritic**, **L., Neurotic**, a localized pigment-atrophy, of nervous origin. **L., Syphilitic.** See *Syphilitid*, *Pigmentary*.

**Leukodermic** (*lu-ko-der'-mik*) [*λευκός*, white; *δέρμα*, skin]. Exhibiting or pertaining to leukoderma.

**Leukodontous** (*lu-ko-don'-tus*) [*λευκός*, white; *ὀδούς*, tooth]. Having white teeth.

**Leukogallol** (*lu-ko-gal'-ol*) [*λευκός*, white; *galla*, gall],  $C_{18}H_{10}Cl_{12}O_{14}$ . A colorless substance, soluble in water, prepared by treating an acetic acid solution of pyrogallol with chlorin and hydrochloric acid.

**Leukogasterous** (*lu-ko-gas'-ter-us*) [*λευκός*, white; *γαστήρ*, belly]. White-bellied.

**Leukogene** (*lu'-ko-jen*) [*λευκός*, white; *γενᾶν*, to beget]. A bleaching-agent.

**Leukohemia** (*lu-ko-hem'-e-ah*). See *Leukemia*.

**Leukohemic** (*lu-ko-hem'-ik*). See *Leukemic*.

**Leukoinitis** (*lu-ko-in-o'-tis*) [*λευκός*, white; *ίς*, fiber; *ιτις*, inflammation]. Rheumatic inflammation of the white fibrous elements of the bronchi.

**Leukol** (*lu'-kol*). See *Chinolina*.

**Leukolin** (*lu'-ko-lin*). See *Chinolina*.

**Leukolomous** (*lu-ko-lo'-o-mus*) [*λευκός*, white; *λῶμα*, border of a garment]. Having a white border.

**Leukolysis** (*lu-kol'-is-is*) [*λευκός*, white; *λύσις*, solution]. The process of destruction of the colorless corpuscles of the blood.

**Leukoma** (*lu-ko'-mah*) [*λευκωμα*; *λευκός*, white]. An opacity of the cornea the result of an ulcer, wound, or inflammation, and presenting an appearance of ground glass. The term has been used also for albinism. See *Leukoplaques*. **L., Partial**, a leukoma circumscribed to a part of the cornea. **L., Total**, a leukoma involving the entire cornea.

**Leukomain**, or **Leucomain** (*lu-ko'-ma-in*) [*λευκωμα*, white of egg]. The name applied by Gautier to the nitrogenous bases or alkaloids necessarily and normally developed by the vital functions or metabolic activity of living organisms, as distinguished from the alkaloids developed in dead bodies, and called by Selmi ptomains. From their chemic affinities leukomains may be divided into two groups: the *Urid acid group*, comprising *Adenin*, *Carnin*, *Gerontin*, *Guanin*, *Heteroxanthin*, *Hypoxanthin*, *Paraxanthin*, *Pseudoxanthin*, *Spermin*, *Xanthin*; and

the *Kreatinin group*, in which are classed *Amphi-kreatinin*, *Cruso-kreatinin*, *Xantho-kreatinin*, and some unnamed bases. The appended table, p. 674, is modified from the work of Vaughan and Novy.

**Leukomainemia** (*lu-ko-ma-in-e'-me-ah*) [*λευκωμα*, white of egg; *αἷμα*, blood]. The presence of leukomains in the blood; the retention or imperfect elimination of the various excretory products of the living cells of the organism.

**Leukomaine** (*lu-ko-ma'-in-ik*) [*λευκωμα*, white of egg]. Pertaining to, or of the nature of, a leukomain.

**Leukomatoid** (*lu-ko'-mat-oid*). See *Leukomatous*.

**Leukomatorrhea** (*lu-ko-mat-or-e'-ah*) [*λευκωμα*, white of egg; *ῥοια*, a flow]. An excessive whitish secretion. **L. salivalis**, salivation. **L. urinalis**, albuminuria. **L. vaginalis**, leukorrhea.

**Leukomatosis** (*lu-ko-mat-o'-sis*) [*λευκωμα*, white of egg; *νόσος*, disease]. Abnormal increase of albumin in a part, as in the cornea, the lens, the joints; also amyloid degeneration.

**Leukomatous** (*lu-ko'-mat-us*) [*λευκωμα*, white of egg]. Having the nature of leukoma. Affected with leukoma.

**Leukomelanin** (*lu-ko-mel'-an-ik*), **Leukomelanous** (*lu-ko-mel'-an-us*) [*λευκός*, white; *μέλας*, black]. Having a light, or fair skin, and black hair.

**Leukomoria** (*lu-ko-mo'-re-ah*) [*λευκός*, white, pale; *μωρία*, folly]. Restless or wandering melancholy; melancholia errabunda.

**Leukomyces** (*lu-kom'-is-es*) [*λευκός*, white; *μύκης*, fungus, mushroom: *pl.*, *Leukomycetes*]. The genus *Agaricus*, or mushroom.

**Leukomycosis** (*lu-ko-mi-ko'-sis*) [*λευκός*, white; *μύκης*, fungus]. A name applied to leukemia, based on its supposed infectious origin.

**Leukomyelitis** (*lu-ko-mi-el-i'-tis*) [*λευκός*, white; *μυελός*, marrow]. Inflammation of the white or fibrous substance of the spinal cord. **L. posterioris chronica**, posterior sclerosis; locomotor ataxia.

**Leukomyelopathy** (*lu-ko-mi-el-op'-ath-e*) [*λευκός*, white; *μυελός*, marrow; *πάθος*, disease]. Any disease of the white substance of the myelon or spinal cord.

**Leukon** (*lu'-kon*) [*λευκός*, white]. In biology, a race with fair complexions and yellow or red hair. Cf. *Xanthochroia*.

**Leukonecrosis** (*lu-ko-ne-kro'-sis*) [*λευκός*, white; *νέκρωσις*, death]. A form of dry gangrene, distinguished by light or nearly natural color, instead of the usual dark color of gangrene.

**Leukonic Acid** (*lu-kon'-ik*). See *Acid*.

**Leukonostoc** (*lu-ko-nos'-tok*) [*λευκός*, white, and *nostoc*]. A genus of schizomycetes, having its elements disposed in chains and enveloped in a sheath of tough jelly. **L. mesenteroides**, is abundant in molasses, beet-root juice, and in sugar-refineries. See *Bacteria*, *Synonymatic Table of*.

**Leukopathic** (*lu-ko-path'-ik*) [*λευκός*, white; *πάθος*, disease]. Relating to or affected with leukopathia.

**Leukopathy** (*lu-kop'-ath-e*), **Leukopathia** (*lu-ko-path'-e-ah*) [*λευκός*, white; *πάθος*, suffering]. Any deficiency of coloring-matter; albinism. See *Leukoderma*. **L., Congenital.** See *Albinism*. **L., Acquired.** See *Leukoderma*. **L., Partial.** See *Vitiligo*. **L., Universal.** Albinism.

**Leukophagium** (*lu-ko-faj'-e-um*), **Leukophagum** (*lu-koff'-ag-um*) [*λευκός*, white; *φαγείν*, to eat]. An old remedy for pulmonary tuberculosis, consisting of almonds, rose-water, and partridge-flesh.

**Leukophilous** (*lu-koff'-il-us*) [*λευκός*, white; *φίλος*, loving]. In biology, light-loving.

**Leukophlegmasia** (*lu-ko-fleg-ma'-ze-ah*) [*λευκός*, white; *φλέγμα*, phlegm]. **I.** A condition marked by a

tendency to decay, accompanied by a pain, badly  
 skin, and general edema of the white body, edema  
 skin, putting on pressure. 2. *Leukoplasia* all adolens.  
 Aves, *Leukoplasia* erythema. L. *Æthiopum*,  
*Alpina* *concreta*. L. *dolens* *puerperarum*. Same  
 as *Phlegmona alba dolens*, p. 10. L., *Essential*, a  
 tumor in which there is a rapid and widespread swell-  
 ing, with fever, edema, and bloody urine. L., *Hys-*  
*teric*, a condition born occurring in hysterical patients.  
 L., *Primary*. See *L. leucoplasia*. L., *Urinary*,  
*amnesia* following suppression of urine.

## TABLE OF LEUKOMAINS.

**Leukopiper** (*lu-ko-pi'-per*) [*λευκός*, white; *piper*, pep-  
 per]. White pepper.

**Leukoplakia** (*lu-ko-pla'-ke-ah*) [*λευκός*, white; *πλάξ*,  
 surface]. Whitening of a surface. L. *buccalis*, a  
 chronic superficial glossitis characterized by the pres-  
 ence of pearly-white or bluish-white patches on the  
 surface of the tongue. This condition is also called  
*Leukoma*. It is a rare affection in individuals under  
 twenty, and in women. It is due to some irritant  
 cause, such as the smoking of a pipe and the wearing  
 of tooth-plates.

| NAME.                       | FORMULA.                         | DISCOVERER.              | SOURCE.  | PHYSIOLOGIC ACTION.                        |
|-----------------------------|----------------------------------|--------------------------|--|--|
| <i>Ammonium nitrate</i>     | $C_2H_5N_3O_4$                   | Gautier.                 | Muscle.  |  |

| <i>Urethidic acid</i>       | $C_2H_3NO_2$                     | Pouchet.                 | Urine.   |  |
| <i>Urethidic acid</i>       | $C_2H_3N_3O_2$                   | Pouchet.                 | Urine.   |  |
| <i>Urethidic acid</i>       | $C_2H_3N_3O_2$                   | Gautier.                 | Muscle.  |  |
| <i>Urethidic acid</i>       | $C_2H_3N_3O_2$                   | Gautier.                 | Muscle.  |  |
| <i>Urethidic acid</i>       | $C_2H_3N_3O_2/C_2H_3N_3O_2$ (PS) | Eliacheff.               | Normal urine.  | Slightly poisonous.                        |
| <i>Urethidic acid</i>       | $C_2H_3N_3O_2$                   | Eliacheff.               | Urine in tuberculosis  | Poisonous.                                 |
| <i>Urethidic acid</i>       | See <i>Paraxanthine</i>          |                          |  |  |
| <i>Urethidic acid</i>       | $C_2H_3N_3O_2$                   | Mareet.                  | Most animal tissues; certain<br>plants; certain calculi.               | Slightly poisonous; mus-<br>cle-stimulant. |
| <i>Urethidic acid</i>       | $C_2H_3N_3O$                     | Gautier.                 | Muscle.  | Poisonous.                                 |

**Leukophlegmatic** (*lu-ko-pla'-mat-ik*) [*λευκός*, white;  
*φlegμα*, phlegma]. Affected with or pertaining to leu-  
 koplakia.

**Leukophlegmatoides** (*lu-ko-pla'-mat-oides*). See *Leu-*  
*koplasia*.

**Leukophthalmia** (*lu-ko-ftal'-me-ah*) [*λευκός*, white;  
*οφθαλμός*, ophthalmos]. Having or caused by white eyes.

**Leukophyll** (*lu-ko-fil'-us*) [*λευκός*, white; *φυλλον*,  
 phyllon, leaf]. Having white sides or flanks. (See *Leu-*  
*kopleurosis*.)

**Leukoplaques** (*lu-ko-plaks*) [*λευκός*, white; *πλάξ*, sur-  
 face]. The white patches of *Leukoplakia buccalis*, q. v.

**Leukoplasia** (*lu-ko-pla'-ze-ah*). See *Leukoplakia*.

**Leukoplast**, or **Leukoplastid** (*lu-ko-plast'*, or *lu-ko-*  
*plast'-id*) [*λευκός*, white; *πλασσειν*, to form]. In  
 biology, one of the starch-forming, colorless, proteid  
 bodies found in cells not exposed to light; amyloplast.

**Leukoplaxia** (*lu-ko-plaks'-e-ah*). See *Leukoplakia*.

**Leukopleurous** (*lu-ko-plu'-rus*) [*λευκός*, white; *πλευρόν*,  
 rib]. Having white sides or flanks.

**Leukopodious, Leukopodous** (*lu-ko-po'-de-us, lu-ko-po'-o-dus*) [*λευκός*, white; *πούς*, foot]. Having white feet.

**Leukopogous** (*lu-ko-p'o-gus*) [*λευκός*, white; *πώγων*, beard]. White-bearded.

**Leucopous** (*lu'-ko-pus*). See *Leukopodous*.

**Leukops** (*lu'-kops*) [*λευκός*, white; *ὤψ*, eye]. An individual having white eyes.

**Leukopterous** (*lu-ko-p'ter-us*) [*λευκός*, white; *πτερόν*, wings]. In biology, possessing white wings.

**Leukorrhagia** (*lu-kor-a'-je-uh*) [*λευκός*, white; *ῥεγνύναι*, to burst forth]. An excessive leukorrheal flow.

**Leukorrhea** (*lu-kor-e'-ah*) [*λευκός*, white; *ῥοία*, a flow]. A whitish muco-purulent discharge from the female genital canal, popularly called "the whites." **L., Cervical**, that due to disease of the cervix uteri. **L., Infantile**, a form occurring in female infants, due to lack of cleanliness, to irritant urine, or to worms. **L., Menstrual**, a variety occurring in young anemic girls at the menstrual period, instead of the menses. **L. nabothi**, a sero-sanguineous discharge occurring for two or three days before labor. **L. masculina syphilitica**. Synonym of *Gonorrhea, q. v.* **L. of Pregnancy**, a vaginal discharge in the pregnant woman. It is more abundant than in the non-pregnant state, and is sometimes confounded with hydrorrhoea gravidarum. **L., Periodic**, a periodic form coinciding with the menstrual periods. **L., Uterine, L., Vaginal, L., Vulval**, forms due to uterine, vaginal, and vulval inflammation respectively.

**Leukorrheal** (*lu-kor-e'-al*) [*λευκός*, white; *ῥοία*, flow]. Of the nature of, or pertaining to, leukorrhea.

**Leukosarcoma** (*lu-ko-sar-ko'-mah*) [*λευκός*, white; *σάρκωμα*, a fleshy tumor: *pl., Leukosarcomata*]. A non-pigmented sarcoma.

**Leukoscope** (*lu'-ko-skop*) [*λευκός*, white; *σκοπεῖν*, to inspect]. An instrument used in testing for color-blindness.

**Leukosin** (*lu'-ko-sin*) [*λευκός*, white]. A principle said by some to be present in asthma-crystals, and in crystals found in the blood in certain cases of leukemia.

**Leukosis** (*lu-ko'-sis*) [*λευκός*, white: *pl., Leukoses*]. 1. Any disease of the lymphatic system. 2. Abnormal whiteness of the skin. Also, the development and progress of leukoma.

**Leukospermous** (*lu-ko-sper'-mus*) [*λευκός*, white; *σπέρμα*, seed]. In biology, bearing white seeds.

**Leukotic** (*lu-kot'-ik*) [*λευκός*, white]. Relating to leukoma.

**Leukotin** (*lu-ko'-tin*) [*λευκός*, white].  $C_{21}H_{20}O_6$ . A crystalline substance found in *Paracoto*; it is soluble in alcohol, ether, and chloroform.

**Leukotrichous** (*lu-kot'-rik-us*) [*λευκός*, white; *θρίξ*, hair]. White-haired.

**Leukoturic Acid** (*lu-kot-ur'-rik*). See *Oxalantin*.

**Leukous** (*lu'-kus*) [*λευκός*, white]. White.

**Leukuresis** (*lu-ku-re'-sis*) [*λευκός*, white; *οὔρον*, urine]. Albuminuria.

**Leusin** (*lu'-sin*). See *Leucin*.

**Levant Plague**. Synonym of the *Plague, q. v.* **L. Wormseed**. See *Santonica*.

**Levantine Plague**. Synonym of the *Plague, q. v.*

**Levasseur Sign**. See *Death*.

**Levator** (*le-va'-tor*) [*l., "a lifter:" pl., Levatores*]. 1. That which raises or elevates, as certain muscles. See *Muscles, Table of*. 2. An instrument used for raising a depressed portion of the skull.

**Leven** (*lev'-en*). See *Leaven*.

**Lever** (*lev'-er*) [*levare*, to elevate]. 1. A vectis or one-armed tractor, used in obstetrics. 2. A dental instrument, used in lifting out decayed stumps. **L.,**

**Davy's**, an aorta-compressor. It is a wooden bar, which is introduced into the rectum.

**Levert's Law**. See *Lawe*.

**Levicellular** (*lev-e-sell'-u-lar*) [*levis*, smooth; *cellula*, cell]. Smooth-celled, as a levicellular myoma, or a levicellular muscle-fiber.

**Levigable** (*lev'-ig-a-bl*) [*levigare*, to make smooth]. Susceptible of being levigated, or reduced to fine powder by a mechanical process.

**Levigate** (*lev'-ig-at*) [*levigare*, to make smooth]. To reduce to a fine powder by rubbing or grinding; to triturate.

**Levigation** (*lev-ig-a'-shun*) [*levigatio*; *levigare*, to make smooth]. The trituration of a substance made into a paste with water or other liquid. When performed with a muller on a slab of porphyry it is called *porphyrazation*.

**Levis's Apparatus**. An apparatus for treating fracture of the clavicle, composed of an axillary pad and a sling. **L.'s Splints**, supporting structures made of light metal, and perforated, for use in the treatment of fractures.

**Levitation** (*lev-it-a'-shun*) [*levitas*, lightness]. 1. The pretended elevation of the body into the air without support, a feat professedly performed by various modern thaumaturgists. 2. The subjective sense of being aloft, and without support; a symptom in certain cases of insanity.

**Levogyrous** (*le-vo-jit'-rus*) [*levus*, left; *γίρος*, a turn]. See *Levorotatory*.

**Levorotatory** (*le-vo-ro'-tat-o-re*) [*levus*, left; *rotare*, to turn]. Causing to turn toward the left hand; a levorotatory crystal is one that turns the rays of polarized light to the left.

**Levulan** (*lev'-u-lan*) [*levus*, left],  $C_6H_{10}O_5$ . An anhydride of levulose obtained from beet-sugar molasses.

**Levulin** (*lev'-u-lin*) [*levus*, left]. A carbohydrate identical with synanthrose, occurring in immature grain and the tubers of certain composite flowers.

**Levulinic Acid** (*lev-u-lin'-ik*). See *Acid*.

**Levulosan** (*lev-u-lō'-san*) [*levus*, left],  $C_6H_{10}O_5$ . A dehydration-product prepared by heating levulose.

**Levulose** (*lev'-u-lōs*) [*levus*, left],  $C_6H_{12}O_6$ . The natural sugar of fruits. It reduces an alkaline solution of copper sulphate. See *Sugar, Glucose, and Fructose*.

**Levulosuria** (*lev-u-lōs-ur'-re-ah*) [*levus*, left; *οὔρον*, urine]. The presence of levulose, or fruit-sugar, in the urine.

**Lewinin** (*lu'-in-in*) [from Dr. *Lewin*, who described it]. The alpha resin of kava, *q. v.*; it is said by Lewin to be as effective a local anesthetic as cocaine.

**Lexipharman** (*leks-ij-ar'-mak*) [*λήξις*, cessation; *φαρμάκον*, poison]. An alexipharmac.

**Lexipyretic** (*leks-ip-i-ret'-ik*) [*λήξις*, cessation; *πυρετός*, fever]. 1. Febrifugal; antipyretic. 2. A febrifugal medicine.

**Leyden** (*li'-den*) [Dutch]. A town in Holland. **L. Battery**. A series of Leyden jars connected tandem. **L.-blue**. Same as *Cobalt-blue*. **L. Jar**, a glass jar coated within and without with tinfoil, reaching nearly to the neck, and surmounted by a knobbed conductor in connection with the inner coating. It is designed for the temporary "accumulation" of electricity, or rather for the preservation of the high potential to which the inner foil may be charged. It is discharged by connecting the outer foil with the knob. The jar was first made in the town of Leyden, its discovery being due to Cuneus, a pupil of Muschenbreeck. It is also called Kleistian jar or Kleist's jar. Kleist was a prebendary of Cammin, in Pomerania, and is said to have invented the jar independently of Cuneus, and a year before him, viz., in 1745. **L.,**

Periodic Vomit of. Synonym of *Axon-worth's Disease*.

Leyden's Crystals. See *Charles Leyden's Crystals*.

Leydig's Cells. See *Robert Leydig's Cells*, in the epididymis and in the testis. L., Duct of. See *Duct*.

Liatris [li-á'triss] [lī-á'triss, u-nō-wiss]. A genus of composite flowers. L., *cylindrica*, L. *elegans*, and L. *spicata* are common. L. *scariosa* and L. *squarrosa* are particularly common as remedies for rattlesnake-bite. L. *odoratissima*, sometimes vanilla, contains camphor, but having no principle of the tonka bean. L., *Umbell.*

Libanotus [li-bá-nō'tus] [lī-bá-nō'tus, from λιβανός, *trachinotus*]. An old name for libanum.

Libanus [li-bá-nus] [lī-bá-nus, trachinense]. Frankincense, or libanum.

Libavium. Fuming Liquor of. An old name for anhydrous nitric acid.

Liber [li-bér] [lī] A bark. L. *pharmaceuticus*, a drug-store.

Liber [li-bér] [lī] The inner bark of a tree. The inner layer of the bark in Gymnosperms and Dicotyledons.

Liberation [li-bér-á'sh-n] [*liberare*, to make free]. The act of freeing. L. of the Arms, in breech-pneumonia, the bringing down of the arms of the tree when they have become extended along the sides of the child's head.

Liberomotor [li-bér-mō'tōr] [*liberare*, to disengage; *motor*, mover]. Setting free or disengaging motor energy.

Libidinous [li-bí'd-in-us] [*libidinosus*, lustful]. Characterized by strong sexual desire.

Libido [li-bí'dō] [lī]. Desire; lust. L. *intestinalis*, desire for defecation. L. *sexualis*, lust. L. *urinæ*, desire to urinate.

Liborius, Bacillus of. See *Bacteria, Synonymatic Table*.

Libra [li-brá] [lī] A weight of twelve ounces, or 5760 grains. Also, applied to the avoirdupois pound of sixteen ounces, or 7000 grains.

Libriform [li-brí-form] [*liber*, inner bark; *forma*, form]. In botany, resembling liber or bast. L. Cells, those cells of the wood that are excessively thick-walled and resemble bast or liber-fibers.

Lice [lī] See *Licence*.

License [lī-sens] [lī-sens, licence]. An official permit or authority conferring on the recipient the right and privilege of exercising his profession.

Licentiate [lī-sens-í-át] [*licentiatu*, one licensed]. A term sometimes applied to a person who practises a profession by the authority of a license.

Lichen [lí-chen] [lī-chen, a lichen]. A generic term to a well-defined group of inflammatory affections of the skin, in which the lesions consist of solid papules throughout the entire course of the disease. L. *acuminatus*, a variety of L. *ruber* in which the papules are acuminated. It is usually a very acute variety, accompanied by grave constitutional symptoms (fever, irritability, sweats, prostration), and by itching. The papules are minute, firm, conic, capped with scales, very closely aggregated, but can generally be recognized by surrounding the hair-follicles. L. *agrippæ*, see *Lichen punctum*. L. *annulatus* scirpiginosus. See *Lichen annulatus*. L. *Carrageen*, lichen. L. *circinatus* scirpiginosus. See *S. circinatus*. L. *circumscriptus*. Same as L. *circinatus* scirpiginosus. See also *Lichen papulosum*. L. *confertus*, a thick lichen characterized by the presence of superficial pustules occurring in clusters. L. *corneus*, a form in which there are thickened horny patches. L. *diabeticum*. See *Vanheurn's Lichenism*.

L. *disseminatus*, a variety in which the lesions are irregularly scattered over the body. L. *ferox* or L. *ferus*. See L. *agrippæ*. L. *gyratus*. See *Seborrhæa corporis*. L. *hæmorrhagicus*, a petechial papular eruption. L. *inveterata*, a chronic intractable form, with marked thickening of the skin. L. *lividus*, a severe form of purpura in which hemorrhage occurs into the lesions around the follicles. L. *menti*. See *Sycosis*. L. *obtusus*, *Lichen ruber obtusus*; a variety of L. *planus* in which the lesion consists of medium-sized papules, hemispherically formed, flattened on the top, and marked in the center by a fine indentation, hard, dry, smooth, wax-like, translucent to brownish-red, and scaleless. The disease is less acute than L. *acuminatus*, itches less, and is mostly circumscribed. The hair and nails never suffer. L. *pilaris*, *Lichen spinulosus*; *Lichen spinosus*; an inflammatory disease of the hair-follicles, in which a spinous epidermic peg occupies the center of the papule. It is a rather rare disease and occurs mostly in children. The papules appear in crops, each one being the size of a pin's head, red, conic, and containing in its center a horny spine that projects about one-sixteenth of an inch. There is little or no itching. See also *Keratosis pilaris*. L. *planus*, *Lichen ruber planus*; *Lichen psoriasis*; an inflammatory skin-disease, with an eruption made up of papules that are broad and angular at the base, flat and apparently glazed on the summit, slightly umbilicated, and of a dull purplish-red color. These lesions are usually symmetrically disposed, and are generally situated on the flexor surfaces of the forearms, about the wrists, the flanks, around the waist, and the knees, and calves, and also on the mucous membranes. The papules may be discrete or may coalesce, and itching may be slight or severe. L. *planus verrucosus*, a late stage of L. *planus*, characterized by wart-like enlargements of the papillæ, which are covered with dense horny crusts of a dirty-lilac hue. They are usually seen on the lower part of the leg. L. *psoriasis*. See L. *planus*. L. *ruber*, *Lichen ruber acuminatus*; a very rare skin-disease, with lesions consisting, in the beginning, of discrete, miliary, conic papules, but, as the disease advances, becoming aggregated and forming continuous red, infiltrated, and scaling patches. The whole surface may eventually become involved. The nails of the fingers and toes become affected, being of a dirty-brown color, rough, flaky, and breaking off short. The etiology and pathology of this condition are obscure. L. *ruber acuminatus*. See *Pityriasis rubra pilaris* and *Lichen ruber*. L. *ruber moniliformis*, a rare variety in which, besides the ordinary papules and plaques, there are thick moniliform bands in the flexures of the limbs, on the abdomen, and on the neck. L. *ruber obtusus*. See L. *obtusus*. L. *ruber planus*. See L. *planus*. L. *scrofulosum*. See L. *scrofulosus*. L. *scrofulosus*, *L. scrofulosum*; a form occurring in strumous children. The eruption is situated on the trunk especially upon the back, either diffusely or in patches. The papules are very small, pale, conic, and surmounted by fine scales; they cause no itching, and on fading leave a rather persistent yellowish pigmentation. L. *simplex*, *Gale bedouine*; the popular stage of eczema. See *Eczema papulosum*. L. *spinulosus*. See L. *pilaris*. L. *spinulosus*. See *Keratosis pilaris* and *Lichen pilaris*. L. *strophulosus*. See *Strophulus*. L. *syphiliticus*, the minute papular syphilid. See *Syphilid, Follicular*. L. *tropicus*. See *Prickly Heat*. L. *urticatus*. See *Urticaria papulosa*. Licheniasis [lí-chen-í-as-is] [lī-chen, lichen]. The condition of one affected by one of the forms of lichen. L. *strophulus*. See *Lichen strophulus*.

**Lichenicolous** (*li-ken-ik'-o-lus*) [*λίχην*, a lichen; *colere*, to inhabit]. Growing as a parasite upon lichens.

**Licheniform** (*li-ken'-if-orm*) [*λίχην*, lichen, tree-moss; *forma*, form]. Shaped like a lichen.

**Lichenin** (*li'-ken-in*) [*λίχην*, lichen],  $C_6H_{10}O_5$  or  $C_{12}H_{20}O_{10}$ . Moss-starch; a starch-like body found in lichens, especially in *Cetraria*, *Ramalina*, *Usnea*, *Parmelia*, *Cladonia*, and in Corsican moss (*Alsidium helminthochorton*). Iodin imparts a dirty-blue color to it. It is insoluble in cold water, but forms a jelly with hot water. See *Cetraria*; also, *Carbohydrates*, Table of.

**Lichenism** (*li'-ken-izm*) [*λίχην*, lichen]. In biology, the special form of consortism or symbiosis exhibited by algae and fungi in lichens. Cf. *Schwendener's Theory*.

**Lichenoid** (*li'-ken-oid*) [*λίχην*, lichen; *είδος*, like]. 1. Same as *Dextrolichenin*. 2. See *Wandering Rash*.

**Lichnoerythrin** (*lik-no-er'-ith-rin*) [*λίχην*, lichen; *ερυθρός*, red.]. A group of red coloring-matters found especially in lichens.

**Lichnoxanthin** (*lik-no-zan'-thin*) [*λίχην*, lichen; *ξανθός*, yellow]. A group of yellow coloring-matters occurring in both the highest and lowest classes of plants, but especially developed in lichens.

**Lichtheim's Schema**. A diagrammatic representation of the centers and pathways concerned in written and spoken language. In the schema, A represents the center for visual memories, and O that for auditory memories. M is the center for muscular memories concerned in speech, and W that for muscular memories connected with writing. I is the center for intellectual concepts. Taking the word "bell" as an example, at A will be stored the memory of the appearance of the bell, at O that of the sound of the word, at M the memory of the muscular movements necessary to pronounce the word, and at W those concerned in writing it. I represents the center of the intellectual concept of the object "bell"—the knowledge of its uses and properties. The lines indicate afferent, efferent, and connecting pathways.

LICHTHEIM'S SCHEMA.

**Licinium** (*li-sin'-e-um*) [*licium*, a thread of a web: *gen.*, *Licini*]. Lint; surgeon's lint or charpie.

**Lick** (*lik*) [*λήκω*, to lick]. To rub with the tongue; to lap.

**Licoperdon** (*li-ko-per'-don*). See *Lycoperdon*.

**Licorice** (*lik'-or-is*) [ME., *licorice*, *licorice*]. See *Glycyrrhiza*. L., Indian. See *Abrus*.

**Lid** [ME., *lid*, lid]. See *Eyelid*. L.-cells, in biology, the "stigmatic cells" which for a time close the neck of the archegonium in cryptogamic plants. L.-clamp. See *Blepharostat*.

**Lie** (*li*) [ME., *lien*, to lie]. 1. To rest in a recumbent position. 2. A popular name for a "gift-spot" or white spot upon a finger nail.

**Lieberkühn's Reflector** (*le'-ber-kèn*) [after *Lieberkühn*, a German physician]. A device attached to a microscope for the purpose of throwing light upon opaque objects. L.'s Ampulla. See *Ampulla*. L., Crypts of. See *Crypt*. L., Glands of. See *Gland*. L.'s Jelly, an insoluble variety of alkali-albumin formed by adding strong potash to undiluted white of egg.

**Liebermann's Reaction**. See *Tests*, Table of.

**Liebig** (*le'-big*). A celebrated German chemist and physiologist. L.'s Beef-tea, the soluble extractive matter of lean meat. It is prepared by macerating a pound of lean meat, free from fat and cut into small pieces, in a pint of cold water, in which mxxx of hydrochloric acid and gr. xl of sodium chlorid have been dissolved. The liquid is expressed and strained. L.'s Bouillon. See *Bouillon*. L.'s Extractum carnis, a proprietary preparation consisting of the soluble fibrin of meat with the natural mineral salts and a flavoring principle, osmazome. L.'s Foods, those infant-foods in which the starch is to a great extent converted into sugar by malting. L.'s Infants' Food, a highly nutritious food made in the following manner: Mix well  $\frac{1}{2}$  ounce of ground malt with  $\frac{1}{2}$  ounce of wheat-flour and  $7\frac{1}{4}$  grains of potassium bicarbonate; add 1 ounce of water and 5 ounces of fresh cow's milk. Warm over a slow fire, and keep stirring until it begins to thicken. Remove from the fire, stir for five minutes, replace it on the fire, and remove it as soon as thick. As the starch is converted into dextrin and sugar by the diastase of the malt, it will become a thin and sweet liquid. Then, finally, boil it well. Strain through muslin. L.'s Method, a method of estimating the chlorids in the urine, by precipitation by mercuric nitrate. See also *Urea*.

**Liebreich's Bandage**. See *Bandage*. L.'s Solution, a solution of cantharidinate of potassium for hypodermatic injection in the treatment of tuberculosis. Cantharidin 2, hydrate of potassium 4 (or hydrate of sodium 3), distilled water 200. Heat to solution and add distilled water q. s. to 10,000. Dose by hypodermatic injection,  $\frac{1}{2}$  to 1 c.c. (8 to 16 minims). It causes transudation of blood-serum at the seat of the tuberculosis.

**Lien** (*li'-en*) [L.]. The spleen. L. mobile. See *Wandering Spleen*.

**Lienal** (*li'-en-al*) [*lien*, the spleen]. Relating to the spleen.

**Lienculus** (*li-en'-ku-lus*) [dim. of *lien*, spleen: *pl.*, *Lienuli*]. A detached part or exclave of the spleen.

**Lienic** (*li-en'-ik*) [*lien*, a spleen]. Pertaining to the spleen.

**Lienitis** (*li-en-i'-tis*) [*lien*, spleen; *ιτις*, inflammation]. Splenitis.

**Lienocoele** (*li-en'-o-sèl*) [*lien*, a spleen; *κίλη*, hernia]. Hernia of some part or of all of the spleen.

**Lienomalacia** (*li-en-o-mal'-a-se-ah*) [*lien*, spleen; *μαλακία*, softening]. Morbid softening of the tissue of the spleen.

**Lienteric** (*li-en-ter'-ik*) [*λείος*, smooth; *έντερον*, intestine]. Pertaining to or affected with lientery.

**Lientery** (*li'-en-ter-e*) [*λείος*, smooth; *έντερον*, intestine]. A kind of diarrhea in which the food passes rapidly through the bowels without undergoing digestion.

**Liernur System**. See *Sewage*, Disposal of.

**Lieutaud, Uvula of**. A longitudinal mesial ridge in the trigone of the bladder.

**Life**, *art*. [*ME*, *af*, *lin*]. The time or principle of living or causing the persistence of organs and beings. The power for which a condition exists and continues, held in variant by response to emotions or sensations and adapted to its environment. **L.**, Animal, the function, depending directly on the primary-germ function, present outside voluntary motion, as distinguished from *Psychology*; that is, the functions of vegetative, respiratory, reproduction, etc.; **L.**, Change of, that period in the life of a female at which menstruation ceases, the climacteric period. **L.**, Duration of, *See* *Life*. **L.**, Everlasting; Undying, the *Ardis coccinea*, *pergracuum* and *A. Adonis*, from, astringent, and anodyne. They constitute a scientific remedy of some repute for affections of the chest and bowels. Dose of a decoction of one of the plants *℞v* ʒj. **Unof**. **L.**, Expectation of, the average number of years presumed to be expected to live, as calculated from statistics. The following table, taken from those constructed by W. Oglet, of the English Registrar-General's department, shows the average expectation of life at given ages, and also the number of persons of each sex, among every million born at a given time, who may be expected to be alive at the end of each year after that. The figures are based on the death-rates of the years 1871-80:—

| Age. | Of 1,000,000 born, the number surviving at the end of each year of life. |           | Mean after-lifetime (expectation of life). |          |
|------|--|-----------|--|----------|

**L.**, Extra-uterine, post-natal existence. **L.**, Fetal, life of the fetus. **L.**, Intra-uterine, life within the uterus. **L.**, Mean Duration, the expectation of life at birth. **L.**, Reproductive, **L.**, Sexual, that period of life during which the individual is capable of begetting or bearing offspring. **L.-root**, ragwort. The herb *Senecio aureus* gathered in flower; an expectorant, diuretic, alterative, and tonic. It was formerly used by the Indians as a vulnerary, and is a favorite remedy with eclectic practitioners. Dose of a decoction *ad lib.*; of the fld. ext. *℞xxx-ʒj*; of a strong tincture, *℞viii-xx*; of *senecin*, its resinoid, gr. *j-iiij*. **L.-table**, a table constructed to show the number and ages of the living, and the number and ages of the dying in a community or society. Halley's Life-table, the earliest English table, was constructed in the second half of the 18th century, and suggested De Moivre's Hypothesis. Price's Northampton Life-table was used by the Equitable Life Assurance Co., of New York, upon its establishment in 1762. These tables were not constructed by a comparison of the deaths and the living at each age, but from the deaths only; and as births and deaths are not equal, and as migration also disturbs the stability of population, these tables are not correct, as they overstate the mortality of young adults

and do not dissociate males and females. Dr. Farr constructed three English Life-tables, designated respectively, Nos. 1, 2, and 3, and various other tables have been made, called the Healthy Districts, the Upper Class Experience, the Healthy Males, the Clerical Experience-tables, etc. The last noteworthy table is the New English Life-table, by Dr. Ogle, which starts with a million males and a million females and shows the number surviving at each age, and the mean expectation of life at each age. See *Life, Expectation of*. **L.-time, Mean After.** Synonym of *Expectation of life*. See *Life, Expectation of*. **L. Vegetative.** See *L., Animal*.

**Lift-cure** (*lift-kür*). The therapeutic use of the "health lift" (*q. v.*), and of other similar devices.

**Ligament** (*lig'-am-ent*), **Ligamentum** (*lig-am-ent-tum*) [*ligamentum*; *ligare*, to bind]. A band of flexible, compact connective tissue connecting the articular ends of the bones, and sometimes enveloping them in a capsule. **L., Accessory.** See *L., Coraco-humeral*. **L., Acromio-clavicular**, a broad ligament covering the acromio-clavicular articulation and extending from the clavicle to the acromial process of the scapula. **L., Acromio-clavicular, Inferior**, one extending from the clavicle to the acromial process of the scapula, across the lower portion of the acromio-clavicular articulation. **L., Alar** (*of knee*), one of the two folds of synovial membrane on either side of the mucous ligament. **L., Annular** (*of radius*), that surrounding the head of the radius. **L., Annular** (*of stapes*), that extending from the base of the stapes to the oval window. **L., Annular, Anterior** (*of ankle*), the broad ligament covering the anterior surface of the ankle-joint. **L., Annular, Anterior** (*of wrist*), a strong ligament extending from the trapezium to the ulniform bone, confining the flexor tendons. **L., Annular, External** (*of ankle*), that joining the posterior border of the external malleolus and the external surface of the calcaneum. **L., Annular, Internal** (*of ankle*), one joining the internal malleolus and the inner surface of the os calcis. **L., Annular, Posterior** (*of carpus*), a strong ligament reaching from the styloid process and lower end of the radius, across the back of the wrist to the styloid process of the ulna. **L., Anterior** (*of ankle*), a small ligament in front of the ankle-joint. **L., Anterior** (*of elbow*), that extending from the coronoid process of the ulna to the coronoid fossa of the humerus. **L., Anterior** (*of knee*), the ligamentum patellæ. **L., Anterior** (*of malleus*), that extending from the spine of the sphenoid to the anterior portion of the head and neck of the malleus. **L., Anterior** (*of uterus*), one of the fibrous and peritoneal folds extending from the bladder to the uterus. **L., Anterior** (*of wrist*), a strong, broad ligament extending from the anterior surface of the upper row of carpal bones to the lower ends of the ulna and radius. **L., Arcuate**, one of the arched ligaments extending from the body of the diaphragm to the last rib, and to the transverse process of the first lumbar vertebra. **L., Arnold's**. See *L., Suspensory* (*of incus*). **L., Arterial**, the fibrous remains of the ductus arteriosus. **L., Aryteno-epiglottic**, one of the ligamentous folds joining the epiglottis and the arytenoid cartilage. **L., Arytenoid, Inferior**, one of the false vocal bands. **L., Astragalo-calcaneal, External**, that joining the external surface of the astragalus and the outer margin of the calcaneum. **L., Astragalo-calcaneal, Internal**, one extending from the os calcis to the posterior margin of the sustentaculum tali. **L., Astragalo-calcaneal, Posterior**. See *L., Calcaneo-astragaloid, Posterior*. **L., Astragalo-navicular, Superior**. See *L., Astragalo-scaphoid, Superior*. **L.,**

**Astragalo-scaphoid, Internal**, one joining the inner surfaces of the astragalus and the scaphoid. **L., Astragalo-scaphoid, Superior**, one joining the anterior extremity of the astragalus and the upper surface of the scaphoid. **L., Atlanto-axial**. See *L., Atlo-axoid*. **L., Atlanto-axial, Deep**. See *L., Atlo-axoid, Anterior*. **L., Atlanto-axial, Posterior**, one joining the neural arches of the atlas and the axis. **L., Atlanto-axial, Superficial**. See *L., Atlanto-axial, Anterior*. **L., Atlanto-occipital**. See *L., Atlo-occipital*. **L., Atlanto-occipital, Posterior**. See *L., Occipito-atlantal, Posterior*. **L., Atlo-axoid**, that joining the atlas and the axis. **L., Atlo-axoid, Anterior**, that joining the ventral margins of the atlas and the axis. **L., Atlo-occipital**, that joining the atlas and the occiput. **L., Auricular, Anterior**, a broad ligament extending from the zygoma to the cauda helix. **L., Auricular, Posterior**, one reaching from the mastoid process to the posterior surface of the ear. **L., Auricular, Superior**, a portion of the temporal fascia, inserted into the upper portion of the cartilage of the ear. **L. of Barkow**, ligamentous fibers in the fatty tissue in the upper portion of the olecranon fossa. **L., Bellini's**. See *L., Tindino-trochanterian*. **L., Bertin's**, the ilio-femoral ligament. **L. of Bigelow**. See *L., Ilio-femoral*. **L., Broad** (*of liver*), a broad fold of peritoneum extending from the diaphragm to the upper surface of the liver. **L., Broad** (*of lungs*), one of the folds of the pleura, connecting the lower surfaces of the lungs with the diaphragm. **L., Broad** (*of uterus*), a fold of peritoneum extending laterally from the uterus to the pelvic wall. **L., Burns' (Allen)**. See *L., Hey's*. **L., Calcaneo-astragaloid, Internal**. See *L., Astragalo-calcaneal, Internal*. **L., Calcaneo-astragaloid, Interosseous**, that uniting the calcaneum and the astragalus. **L., Calcaneo-astragaloid, Posterior**, one joining the calcaneum and the posterior border of the astragalus. **L., Calcaneo-cuboid, Dorsal**. See *L., Calcaneo-cuboid, Superior*. **L., Calcaneo-cuboid, Internal**, one joining the inner surfaces of the calcaneum and the cuboid. **L., Calcaneo-cuboid, Interosseous**. See *L., Calcaneo-cuboid, Internal*. **L., Calcaneo-cuboid, Long**, one running from the under surface of the calcaneum to the under surface of the cuboid. **L., Calcaneo-cuboid, Short**, a thick ligament extending between the os calcis and the under surface of the cuboid. **L., Calcaneo-cuboid, Superior**, one attached to the dorsal surface of the calcaneum, and inserted into the dorsal surface of the cuboid. **L., Calcaneo-fibular**, that joining the apex of the external malleolus to the outer surface of the calcaneum. **L., Calcaneo-navicular, Inferior**. See *L., Calcaneo-scaphoid, Inferior*. **L., Calcaneo-scaphoid, Dorsal**. See *L., Calcaneo-scaphoid, External*. **L., Calcaneo-scaphoid, External**, that extending from the calcaneum at its articulation with the astragalus to the external surface of the scaphoid. **L., Calcaneo-scaphoid, Inferior**, one joining the anterior and inner end of the calcaneum to the under surface of the scaphoid. **L., Calcaneo-scaphoid, Interosseous**. See *L., Calcaneo-scaphoid, External*. **L., Calcaneo-scaphoid, Plan-tar**. See *L., Calcaneo-scaphoid, Inferior*. **L., Calcaneo-scaphoid, Superior**. See *L., Calcaneo-scaphoid, External*. **L., Camper's**, the deep layer of the perineal fascia covering the bulb of the urethra and the crura of the penis. **L., Capsular**, a heavy fibrous structure surrounding an articulation, and lined by synovial membrane. **L., Carcassonne's**. See *L., Pubo-vesical, Middle*. **L., Carpal, Anterior**, that covering the palmar surface of the carpus. **L., Carpal, Common**, the annular ligament of the wrist-

joint. **L., Carpal, Dorsal**, short ligaments binding together the dorsal surfaces of the carpal bones. **L., Carpal, Posterior**. See *L., Anular, Posterior (of carpus)*. **L., Carpo-metacarpal, Dorsal**, those joining the dorsal surfaces of the carpal and metacarpal bones. **L., Carpo-metacarpal, Interosseous**, one joining the carpal bones and the first to the third and fourth metacarpal bones. **L., Carpo-metacarpal, Palmar**, those joining the palmar surfaces of the metacarpal to the carpal bones. **L., Caudal**, fibrous tissue forming a sac over the two lower vertebrae of the caudex. **L., Check**, one controlling the movement of a joint. **L., Ciliary**. See *L., pectinatum*. **L., Cleido-costal**. See *L., Rhomboid, L.*, **Colles**. See *L., Panniculus*. **L., Conoid**, the inner portion of the coraco-clavicular ligament. It is attached to the medial process of the scapula and the coracoid process of the clavicle. **L., Cooper's Suspensory**. See *L., Suspensory of Mammary*. **L., Coraco-acromial**, a triangular-shaped ligament extending from the tip of the acromial process to the outer surface of the coracoid process of the scapula. **L., Coraco-clavicular**, that joining the coracoid process of the scapula and the clavicle. **L., Coraco-humeral**, that joining the coracoid process of the scapula with the upper and posterior portion of the capsule of the shoulder joint and the upper part of the humerus. **L., Coracoid**, a fibrous structure forming the scapular branch, extending from the coracoid process to the supra scapular notch. **L., Corniculo-pharyngeal**, ligamentous fibers extending from the cornicula of the larynx to the walls of the pharynx. **L., Coronary (of tibia)**, short fibers binding the semilunar cartilages to the head of the tibia. **L., Coronary (of liver)**, a vertical fold extending from the posterior edge of the liver to the diaphragm. **L., Coronary (of radius)**. See *L., Annular (of radius)*. **L., Costo-central**, ligamentous tissue binding the head of a rib to the vertebral body. **L., Costo-central, Anterior**, a fan-shaped ligament extending from the vertebrae and the inter vertebral cartilages to the head of the rib. **L., Costo-clavicular**. See *L., Rhomboid, L.*, **Costo-colic**. See *L., Phrenico-colic*. **L., Costo-coracoid**, that joining the first rib and the coracoid process of the scapula. **L., Costo-pericardiac**, that joining the upper costo-sternal articulations with the pericardium. **L., Costo-sternal, Anterior**, a fibrous structure under the sternum and the anterior edges of the costal ends of the true ribs. **L., Costo-sternal, Posterior**, one joining the sternum and the posterior surface of the costal ends of the true ribs. **L., Costo-transverse**, one of the ligaments binding the ribs to the adjacent transverse processes of the dorsal vertebrae. **L., Costo-transverse, Anterior**. See *L., Costo-transverse, Interarticular*. **L., Costo-transverse, Interarticular**. See *L., Costo-transverse, Middle*. **L., Costo-transverse, Long**. See *L., Costo-transverse, Anterior*. **L., Costo-transverse, Middle**, one running between the anterior surface of the transverse process of a dorsal vertebra and the neck of the adjacent rib. **L., Costo-transverse, Posterior**, one joining the transverse process of a dorsal vertebra and the inferior of the adjacent rib. **L., Costo-transverse, Superior**, one running between the lower margin of the transverse process of a dorsal vertebra, and the head of the upper margin of the neck of the adjacent rib. **L., Costo-vertebral**, one of those joining the costal to the adjacent vertebra. **L., Costo-vertebral, Interarticular**, one of the strong ligaments joining the dorsal articular ribbed fibro cartilages and the costal to the heads of the ribs. **L., Costo-xiphoid**, fibrous tissue binding the cartilages of the fifth and

seventh ribs to the xiphoid cartilage. **L., Cotyloid**, a ring of fibro-cartilaginous tissue at the margin of the acetabulum. **L., Cowper's**. Same as *L., Pubic*. **L., Cranio-vertebral**, one of those extending between the cranium and the vertebrae. **L., Crico-arytenoid, Posterior**, one of those joining the cricoid and arytenoid cartilages posteriorly. **L., Crico-pharyngeal**, that extending between the upper and posterior margin of the cricoid cartilage and the anterior pharyngeal wall. **L., Crico-Santorinian**, one of those binding together Santorini's cartilages and the cricoid cartilage. **L., Crico-thyroid**, one of those joining the cricoid and thyroid cartilages. **L., Crico-thyroid, Anterior**, one on the anterior surfaces of the cricoid and thyroid cartilages. **L., Crico-thyroid, Middle**, the crico-thyroid membrane. **L., Crico-tracheal**, that joining the cricoid cartilage and the uppermost tracheal ring. **L., Crucial (of atlas)**. See *L., Cruciform*. **L., Crucial (of the fingers)**, one of the small ligaments running obliquely on the palmar surface of the phalangeal joints. **L., Crucial, Anterior**, the smaller crucial ligament of the knee, extending from the upper surface of the tibia to the inner surface of the external condyle of the femur. **L., Crucial, External**. See *L., Crucial, Anterior*. **L., Crucial, Internal**. See *L., Crucial, Posterior*. **L., Crucial, Posterior**, one extending from the popliteal notch of the tibia, and the external semilunar cartilage, to the anterior portion of the internal condyle of the femur. **L., Cruciate**, a V-shaped process of the deep fascia of the leg, situated at the bend of the ankle. It extends from the internal malleolus to the external surface of the anterior portion of the calcaneum. **L., Cruciform**, a cross-shaped ligament, formed by the transverse ligament of the atlas and a vertical band of fibers extending from the middle of this ligament to the body of the axis. **L., Cuneiform, Interosseous**. See *L., Interacuneiform*. **L., Deltoid**. See *L., Lateral Internal (of ankle-joint)*. **L., Dentate**. See *L., Denticulate*. **L., Denticulate**, a band of fibrous connective tissue passing from the arachnoid to the pia in the interval between the anterior and posterior nerve-roots. **L., Douglas's**, the folds of peritoneum extending between the dorsal surface of the uterus and the ventral surface of the rectum. **L., Duodeno-renal**, a peritoneal fold joining the transverse mesocolon and the parietal peritoneum in the region of the right kidney. It forms the posterior boundary of Winslow's foramen. **L. of Ellis**. See *L. of the Rectum*. **L., External (of malleus)**, that running from the outer wall of the tympanum to the crista capitis mallei. **L., Falciform**, a sickle-shaped expansion of the great sacro-ischiatic ligament, extending along the inner margin of the tuberosity and inferior ramus of the ischium. **L., Falciform (of liver)**. See *L., Broad (of liver)*. **L. of Fallopius**. See *L., Poupert's*. **L., False (of bladder)**, one of the peritoneal folds radiating from the urinary bladder. **L., False, Superior (of the bladder)**, one of the peritoneal folds, running in the median line, from the fundus of the bladder to the umbilicus. **L., Femoral**. See *L., Hey's*. **L., Flood's**, the gleno-humeral ligament. **L., Gastro-colic**, the fold of the great omentum attached to the colon and the stomach. **L., Gastro-hepatic**, the fold of the great omentum attached to the stomach and the liver. **L., Gastro-lienal**. See *L., Gastro-splenic*. **L., Gastro-pancreatic**, a sickle-shaped peritoneal fold joining the posterior surface of the stomach and the anterior surface of the pancreas. **L., Gastro-phrenic**. See *L., Phrenico-gastric*. **L., Gastro-splenic**, a peritoneal fold joining the gastric cul-de-sac and the

Middle thyro-hyoid ligament. Lig. thy-h. lat. Lateral thyro-hyoid ligament. Lig. cric-thyr. med. Middle crico-thyroid ligament. Lig. cric-trach. Cricotracheal ligament. M. st-h. Sterno-hyoid muscle. M. th-hyoid. Thyro-hyoid muscle. M. st-th. Sterno-thyroid muscle. M. cr-th. Cricothyroid muscle.

of the glenoid. **L. of Gerdy**, the suspensory ligament of the patella, extending from the coracoid process to the sac, surrounding the hollow of the patella. **L., Gimbernat's**, a triangular expansion of the aponeurosis of the external oblique muscle, connected anteriorly to Gimbernat's ligament and attached to the iliopectineal line. **L., Gleno-humeral**, a portion of the coraco-humeral ligament, attached to the inner and upper portion of the humeral groove. **L., Glenoid**, one of those along the phalanges (palmar surface) and the corresponding metacarpal bones. **L., Glenoid, articular**, a ring of fibro cartilaginous tissue situated to the rim of the glenoid fossa. **L., Gleno-epiglottic**, an elastic ligamentous band connecting the epiglottis to the hyoid bone. **L., Gleno-epiglottidean**. See **L., Gleno-epiglottic**. **L., Helmholtz's**, that portion of the anterior ligament of the bladder that is attached to the spina tympanica. **L., Hepatico-colic**, a peritoneal fold joining the under surface of the right lobe of the liver and the ascending meso-colon. **L., Hepatico-duodenal**, a peritoneal fold running from the transverse fissure of the liver to the duodenum. It forms the anterior boundary of Winslow's foramen. **L., Hepatico-renal**. See **L., Hepatico-colic**. **L., Hey's**, also called the femoral ligament; a sickle-shaped expansion of the fascia lata. **L., Hunter's**, a band of the round ligament of the uterus. See **L., Ligament of uterus**. **L., Hyo-epiglottic**, one joining the under surface of the epiglottis and the upper surface of the hyoid bone. **L., Ilio-femoral**, a strong ligament extending from the anterior inferior iliac spine to the lesser trochanter and the intertrochanteric line. **L., Ilio-femoral, Anterior**, the anterior portion of the ilio-femoral ligament. **L., Ilio-femoral, Inferior**. See **L., Ilio-femoral, Anterior**. **L., Ilio-femoral, Lateral**. See **L., Ilio-femoral, Anterior**. **L., Ilio-femoral, Superior**, one extending from the anterior inferior spine of the ilium to the proximal end of the anterior intertrochanteric line. **L., Ilio-lumbar**, a ligament extending from the transverse process of the fifth lumbar vertebra to the sac crest and the anterior surface of the sacro-iliac articulation. **L., Ilio-lumbar, Inferior**. See **L., Ilio-lumbar**. **L., Ilio-lumbo-vertebral**. See **L., Ilio-lumbar**. **L., Ilio-pectineal**, that portion of the pectineal ligament extending from the ilio-pectineal line to the anterior aspect of the hip. **L., Ilio-pubic**. See **L., Pectineal**. **L., Ilio-sacral, Anterior**. See **L., Sacrotuberous, Inferior**. **L., Ilio-sacral, Intermuscular**. See **L., Sacrotuberous, Intermuscular**. **L., Ilio-sacral, Long Posterior**. See **L., Sacrotuberous, Long Posterior**. **L., Ilio-sacral, Short Posterior**. See **L., Sacrotuberous, Short Posterior**. **L., Ilio-trochanteric**. See **L., Ilio-femoral, Superior**. **L., Inferior (of glottis)**, one of the inferior or true vocal bands. **L., Inferior (of scapula)**, one extending from the handle of the scapula to the inferior wall of the triquetrum. **L., Infundibulo-varian**, that portion of the free edge of the broad ligament of the uterus, extending between the uterine tube and the pelvic end of the ovary. **L., Infundibulo-pelvic**, that portion of the free edge of the broad ligament of the uterus, joining the infundibulum and the pelvic wall. **L., Inguinal**. See **L., Pectineal**. **L., Inguinal, External**, the part of Ponsard's ligament passing over the anterior superior iliac spine to the femoral foramen. **L., Interarticular (of knee)**. See **L., Cruciate**. **L., Interarticular (of elbow)**. See **L., Cruciate**. **L., Interchondral**, one of those joining adjacent costal cartilages. **L., Interclavicular**, one passing to the sternal extremities of the clavicles and the sternum. **L.,**

**Intercostal**, one of those joining adjacent ribs. **L., Intercostal, External**, one of those filling the intercostal spaces externally between the sternum and the intercostal muscles. **L., Intercostal, Internal**, one of the fibrous bands uniting adjacent ribs. **L., Intercrural**, one of those connecting the laminae of the vertebrae. **L., Intercuneiform**, one of those joining the cuneiform bones of the tarsus. **L., Interhyal**, one in the embryo joining the malleus and the stylohyal cartilage. **L., Interlobular**, a prolongation of the pleura, between the lobes of the lungs. **L., Intermetacarpal**, one of those joining the metacarpal bones. **L., Intermetacarpal, Dorsal**, one of four ligaments running transversely across the dorsal surfaces of the upper ends of the metacarpal bones. **L., Intermetacarpal, Palmar**, one of those joining the palmar surfaces of the upper ends of the metacarpal bones. **L., Intermetatarsal**, one of those joining the metatarsal bones. **L., Intermetatarsal, Dorsal**, a ligamentous structure joining the dorsal surfaces of the bases of the metatarsal bones. **L., Intermetatarsal, Plantar**, one of those joining the plantar surfaces of the upper ends of the metatarsal bones. **L., Intermuscular**, a fascial prolongation between muscles. **L., Interosseous, Inferior Tibio-fibular**. See **L., Tibio-fibular Interosseous, Inferior**. **L., Interspinal**. See **L., Interspinal**. **L., Interspinous**, one extending between the spinous processes of adjacent vertebrae. **L., Intertransverse**, one extending between the transverse processes of adjacent vertebrae. **L., Ischio-capsular**, one extending from the ischium, near the acetabulum, to the zona orbicularis. **L., Ischio-femoral**, one running from the ischium to the great trochanter. **L., Jugal (of larynx)**. See **L., Crico-Santorinian**. **L., Lateral (of liver)**, one of the peritoneal folds between the sides of the liver and the under surface of the diaphragm. **L., Lateral, External (of ankle)**, that running between the external malleolus and the calcaneum. **L., Lateral, External (of carpus)**, that extending from the scaphoid bone to the styloid process of the radius. **L., Lateral, External (of elbow)**, that extending from the annular ligament of the radius to the external condyle of the humerus. **L., Lateral, External (of jaw)**, that extending from the lower border of the zygoma to the outer surface of the neck of the inferior maxilla. **L., Lateral, External (of knee)**, that joining the head of the fibula and the internal condyle of the tibia. **L., Lateral, External (of wrist)**. See **L., Lateral, External (of carpus)**. **L., Lateral, Internal (of ankle-joint)**, one joining the internal malleolus, and the astragalus, calcaneum, and scaphoid. **L., Lateral, Internal (of carpus)**, a ligamentous cord joining the styloid process of the ulna, the pisiform bone, and the anterior annular ligament. **L., Lateral, Internal (of elbow)**, one extending from the coronoid process of the ulna and the inner edge of the sigmoid fossa, to the internal condyle of the humerus. **L., Lateral, Internal (of jaw)**. See **L., Lateral, Internal (of Temporo-maxillary articulation)**. **L., Lateral, Internal (of knee)**, one extending from the internal condyle of the femur to the internal condyle and shaft of the tibia. **L., Lateral, Internal (of temporo-maxillary articulation)**, one extending from the inferior maxilla, near the inferior dental foramen, to the spinous process of the sphenoid bone. **L., Lateral, Long External (of knee)**, one running from the external condyle of the femur to the head of the fibula. **L., Lateral, Short External (of knee-joint)**, one extending from the head of the fibula to the external condyle of the femur and posterior portion of the

capsular ligament. **L., Lateral, Short Internal** (*of knee-joint*), one joining the upper portion of the tibia and the internal fibro-cartilage. **L., Lauth's**, the transverse ligament of the atlas. **L., Longitudinal** (*of liver*). See **L., Broad** (*of liver*). **L., Lumbo-costal**, the anterior edge of the lumbo-dorsal fascia. **L., Lumbo-iliac**. See **L., Ilio-lumbar**. **L., Lumbo-sacral**, a part of the ilio-lumbar, extending from the sacrum to the ilium, across the sacro-iliac synchondrosis. **L., Mauchart's**. Same as **L., Odontoid, Alar**. **L., Metacarpal, Transverse**, one joining the distal extremities of the four inner metacarpal bones. **L., Metacarpo-phalangeal, Anterior**. See **L., Glenoid**. **L., Metacarpo-phalangeal, Lateral**, one joining the lateral surfaces of the phalanges and metacarpal bones. **L., Metatarsal, Interosseous**, one of those joining adjacent metatarsal bones. **L., Metatarsal, Transverse**, one uniting the distal extremities of the metatarsal bones. **L., Metatarso-phalangeal, Lateral**, one joining the lateral surfaces of the phalanges and metatarsal bones. **L., Metatarso-phalangeal, Plantar**, one of those joining the plantar surfaces of the phalanges and metatarsal bones. **L., Mucous** (*of knee-joint*), a fold of synovial membrane extending from the intercondyloid fossa to the lower margin of the patella. **L., Naviculo-cuboid**, one of those between the scaphoid and cuboid bones. **L., Naviculo-cuneiform**, one of those joining the scaphoid and cuneiform bones. **L., Oblique** (*of forearm*). See **L., Round** (*of forearm*). **L., Obturator**, the obturator membrane. **L., Obturator, External**. See **L., Occipito-atlantol, Posterior**. **L., Occipito-atlantol, Lateral**, one of those joining the transverse processes of the atlas to the jugular processes of the occipital bone. **L., Occipito-atlantol, Posterior**, one joining the dorsal arch of the atlas and the posterior margin of the great foramen. **L., Occipito-atloid, Anterior**, a ligament joining the anterior arch of the atlas to the anterior margin of the great foramen. **L., Occipito-axial**. See **L., Occipito-axoid**. **L., Occipito-axoid**, a strong ligament attached to the clivus of Blumenbach above and to the body of the axis and adjoining vertebra below. **L., Odontoid**, any one of the broad, strong ligaments arising on either side of the apex of the odontoid process and connecting the atlas with the skull. **L., Odontoid, Alar**. See **L., Odontoid, Lateral**. **L., Odontoid, Lateral**, one of the ligaments joining the condyles of the occiput and the odontoid process of the axis. **L., Odontoid, Middle**, one joining the anterior margin of the great foramen and the tip of the odontoid process. **L., Omoclavicular**. See **L., Coraco-clavicular**. **L., Orbicular** (*of radius*). See **L., Annular** (*of radius*). **L., Ovarian**, a band of muscular fibers, extending from the posterior surface of the uterus on either side to the ovary. **L., Palmar**. See **L., Glenoid**. **L., Palpebral**. See **L., Tarsal**. **L., Palpebral, External**, that joining the outer margin of the orbit and the tissues of the eye-lid. **L., Palpebral, Internal**, one extending from the nasal process of the superior maxilla to the lacrymal spine of the lacrymal bone and the inner end of the tarsal cartilage. **L., patellæ**, a strong fibrous structure, extending from the tubercle of the tibia upward to become the tendon of the quadriceps extensor muscle; it embraces the patella. **L., Patellar, Lateral**, one of those joining the sides of the condyles of the femur and the patella. **L., pectinatum**, the spongy tissue at the junction of the cornea and sclera in the sinus of the anterior chamber of the eye. It forms the root of the iris. **L., Phalangeal, Anterior**, one of the ligaments on the palmar and plantar surfaces of the phalanges. **L., Phalan-**

**geal, Lateral**, one of those joining the sides of contiguous phalanges. **L., Phrenico-colic**, a peritoneal fold joining the diaphragm and the splenic flexure of the colon. **L., Phrenico-gastric**, a peritoneal fold between the diaphragm and the cardiac end of the stomach. **L., Phreno-colic**. See **L., Phrenico-colic**. **L., Phreno-splenic**. See **L., Suspensory** (*of spleen*). **L., Plantar, Deep**. See **L., Calcaneo-cuboid, Short**. **L., Plantar, Long**. See **L., Calcaneo-cuboid Long**. **L., Plantar, Short**. See **L., Calcaneo-cuboid, Short**. **L., Pleuro-colic**. See **L., Phrenico-colic**. **L., Posterior** (*of ankle-joint*), a transverse ligament covering the ankle-joint posteriorly. **L., Posterior** (*of elbow*), a ligament covering the elbow posteriorly. **L., Posterior** (*of incus*), one joining the horizontal process of the incus and the posterior tympanic wall. **L., Posterior** (*of knee-joint*), one bounding the knee posteriorly. **L., Posterior** (*of malleus*), the posterior portion of the external ligament of the malleus. **L., Posterior** (*of sacro-coccygeal articulation*). See **L., Sacro-coccygeal, Posterior**. **L., Posterior** (*of wrist*), one covering the dorsal surface of the carpus. **L., Poupart's**, the ligament extending from the anterior superior spine of the ilium to the spine of the pubis and the pectineal line. It is the lower portion of the aponeurosis of the external oblique muscle. **L., Pterygo-maxillary**, one joining the apex of the internal pterygoid plate of the sphenoid and the posterior extremity of the internal oblique line of the lower jaw. **L., Pubic**, a portion of the fascia lata attached to the crest of the pubes. **L., Pubic, Anterior**, a band of fibrous tissue covering the anterior surface of the pubis. **L., Pubic, Inferior**, a triangular ligament, extending from the symphysis of the pubis to the rami of the pubic bones. **L., Pubic, Posterior**, one covering the symphysis pubis posteriorly. **L., Pubic, Superior**, one extending across the upper surface of the symphysis pubis. **L., Pubo-femoral**, one joining the margin of the obturator foramen, the pectineal eminence and the superior ramus of the pubis with the lesser trochanter of the femur. **L., Pubo-prostatic**, the anterior true ligament of the bladder. **L., Pubo-vesical, Middle**, in the female, a ligament between the anterior surface of the bladder, the inferior pubic ligament and the crura of the clitoris. **L., Pulmonary**. See **L., Broad** (*of lung*). **L., Pylori-colic**, one running from the pyloric end of the stomach to the transverse colon. **L., Radio-carpal**. See **L., Lateral, External** (*of carpus*). **L., Radio-ulnar, Anterior**, a ligament uniting, anteriorly, the lower end of the ulna and the anterior edge of the sigmoid cavity of the radius. **L., Radio-ulnar, Posterior**, one joining the posterior surface of the lower end of the ulna, and the posterior margin of the sigmoid cavity of the radius. **L., Radio-ulnar, Round**. See **L., Round** (*of forearm*). **L., of the Rectum**, that part of the recto vesical fascia extending to the side of the rectum. **L., of Retzius**, the outer portion of the anterior annular ligament of the leg. **L., Rhomboid**, one joining the cartilage of the first rib and the tuberosity of the clavicle. It is a part of the costo-clavicular ligament. **L., Round** (*of forearm*), one joining the coronoid process of the ulna and the tuberosity of the radius. **L., Round** (*of hip*). See **L., teres**. **L., Round** (*of liver*), a fibrous cord running from the umbilicus to the notch in the anterior border of the liver. It represents the remains of the obliterated umbilical vein. **L., Round, Posterior**, a muscular band extending from the posterior surface of the uterus through the broad ligament to the sub-peritoneal pelvic fascia. **L., Round** (*of superior radio-ulnar articulation*). See **L., Round** (*of forearm*).

**L., Round** (*of uterus*), a ligament running from the anterior surface of the fundus of the uterus, through the ligament canal to the transverse uterus. **L., Sacro-coccygeal, Anterior**, one rounded ligament extending from the first vertebra of the sacrum to the last sacral vertebra anteriorly. **L., Sacro-coccygeal, Lateral**, one of those joining the sides of the sacrum and the coccygeal processes of the coccygeal vertebrae. **L., Sacro-coccygeal, Posterior**, one extending from the lower portions of the sacrum to the posterior surface of the coccyx. **L., Sacro-iliac, Anterior**, a thin fibrous structure covering the pelvic surfaces of the sacrum and ilium. **L., Sacro-iliac, Interosseous**, one connecting the interosseous iliac. **L., Sacro-iliac, Long**. See *L., Sacro-iliac, Oblique*. **L., Sacro-iliac, Oblique**, a portion of the posterior sacro-iliac ligament, arising from the greater spine of the ilium. **L., Sacro-iliac, Posterior**, one extending from the side of the sacrum to the posterior spines of the ilium. **L., Sacro-iliac, Short**, that extending from the posterior surface of the sacrum to the side of the sacrum. **L., Sacro-ischiatic, Great**. See *L., Sacro-ischiatic, Great*. **L., Sacro-ischiatic, Lesser**, one extending from the apex of the os sacrum to the point of junction of the sacrum and coccyx. **L., Sacro-sciatic, Anterior**. See *L., Sacro-sciatic, Lesser*. **L., Sacro-sciatic, Great**, a triangular-shaped ligament extending from the os sacrum, coccyx, and inferior iliac spine, to the tubercle of the ischium. **L., Sacro-sciatic, Large**. See *L., Sacro-sciatic, Great*. **L., Sacro-sciatic, Lesser**. See *L., Sacro-sciatic, Lesser*. **L., Sacro-sciatic, Posterior**. See *L., Sacro-ischiatic, Great*. **L., Sacro-sciatic, Small**. See *L., Sacro-ischiatic, Lesser*. **L., Sacro-spinal**. See *L., Sacro-ischiatic*. **L., Sacro-spinous**. See *L., Sacro-ischiatic*. **L., Sacro-vertebral**. See *L., Sacro-ischiatic*. **L., of Schlemm**, a ligament at the shoulder joint. **L., Spheno-maxillary**. See *L., Internal Lateral (of Temporo-maxillary articulation)*. **L., Spiral**, one attached to the wall of the cochlea. **L., Stellate**. See *L., Costo-vertebral, Anterior*. **L., Sternal, Anterior**, one connecting the manubrium and the gladiolus anteriorly. **L., Sternal, Posterior**, one joining the posterior surfaces of the two upper bones of the sternum. **L., Sterno-clavicular, Anterior**, a fibrous structure extending anteriorly from the sternum to the inner end of the clavicle. **L., Sterno-clavicular, Posterior**, one joining the clavicle and the sternum posteriorly. **L., Sterno-costal, Anterior**. See *L., Costo-sternal, Anterior*. **L., Sterno-costal, Posterior**. See *L., Costo-sternal, Posterior*. **L., Sterno-xiphoid**. See *L., Sternum, Anterior*. **L., Stylo-hyoid**, a fibrous cord extending from the apex of the styloid process of the temporal bone, to the lesser cornu of the hyoid bone. **L., Stylo-maxillary**, a ligament joining the styloid process of the temporal bone and the under margin of the posterior margin of the ramus of the inferior maxilla. **L., Stylo-myoid**. See *L., Stylo-maxillary*. **L., Sub-pubic**. See *L., Pubic, Inferior*. **L., Superior (of clitoris)**, one extending from the clitoris over the base of the vagina, and blending with the perineum. **L., Superior (of incus)**. See *L., Suspensory (of incus)*. **L., Superior (of malleus)**, a round ligament extending from the head of the malleus to the upper and outer wall of the tympanic cavity. **L., Supra-scapular**. See *L., Crural*. **L., Supra-spinal**, one uniting the spines of the spinous processes of the vertebrae. **L., Supra-spinous**. See *L., Supra-spinal*. **L., Suspensory (of clitoris)**. See *L., Pubic, Inferior*. **L., Suspensory (of liver)**, one connecting the inferior right lower portion of the stomach to the umbilicus. **L., Suspensory (of malleus)**, the zonule of Zinn.

**L., Suspensory (of diaphragm)**, that portion of the prevertebral fascia, attaching the center of the diaphragm to the bodies of the last cervical and first dorsal vertebrae. **L., Suspensory (of humerus)**. See *L., Coraco-humeral*. **L., Suspensory (of incus)**, *Arnold's ligament*, connecting the body of the incus with the roof of the tympanum. **L., Suspensory (of liver)**. See *L., Broad (of liver)*. **L., Suspensory (of malleus)**. See *L., Superior (of malleus)*. **L., Suspensory (of mamma)**, a fibrous band extending from the fascia above over the anterior surface of the mamma. **L., Suspensory (of mesentery)**, the root of the mesentery. **L., Suspensory (of penis)**, that attaching the upper portion of the dorsum of the penis to the anterior surface of the symphysis pubis. **L., Suspensory (of spleen)**, a peritoneal fold attaching the spleen to the lower surface of the diaphragm. **L., Suspensory (of uterus)**. See *L., Broad (of uterus)* and *L., Round (of uterus)*. **L., Tarsal**, the tarso-orbital fascia. **L., Tarso-metatarsal, Dorsal**, one of those joining the metatarsal and tarsal bones. **L., Tarso-metatarsal Interosseous, External**, that joining the external surface of the external cuneiform bone and the third and fourth metatarsal bones. **L., Tarso-metatarsal Interosseous, Internal**, one joining the internal cuneiform and second metatarsal bones. **L., Tarso-metatarsal Interosseous, Middle**, one joining the external cuneiform and second metatarsal bones. **L., Tarso-metatarsal, Plantar**, one of those joining the plantar surfaces of the tarsal and metatarsal bones. **L., Tendino-trochanterian, Bellini's ligament**, a strong ligament extending from the capsule of the hip-joint to the greater trochanter of the femur. **L., teres**, a rounded fibrous cord attached to the center of the articular surface of the head of the femur, and extending to the margin of the cotyloid notch of the acetabulum. **L., Thyro-arytenoid**. See *Vocal Bands*. **L., Thyro-arytenoid, Inferior**, one of the inferior or true vocal bands. **L., Thyro-arytenoid, Superior**, one extending between the inner surface of the upper portion of the thyroid cartilage and the anterior surfaces of the apices of the arytenoid cartilages. **L., Thyro-epiglottic**, one extending from the notch between the wings of the thyroid cartilage to the apex of the epiglottis. **L., Thyro-hyoid**, the thyro-hyoid membrane. **L., Thyro-hyoid, Lateral**, one of those joining the tips of the greater cornua of the hyoid bone and the superior cornua of the thyroid cartilage. **L., Thyro-hyoid, Middle**, the center line of the thyro-hyoid membrane. **L., Tibio-fibular, Inferior Posterior**, one at the lower tibio-fibular articulation, running obliquely downward from the tibia to the fibula. **L., Tibio-fibular, Inferior Transverse**. See *L., Tibio-fibular, Transverse*. **L., Tibio-fibular Interosseous**, one extending between the tibia and the fibula. **L., Tibio-fibular Interosseous, Inferior**, one joining the tibia and the fibula at their lower extremities. **L., Tibio-fibular, Posterior Inferior**. See *L., Posterior (of lower tibio-fibular articulation)*. **L., Tibio-fibular, Posterior Superior**, one joining the posterior surface of the external tuberosity of the tibia and the head of the fibula, posteriorly. **L., Tibio-fibular, Superior Posterior**. See *L., Tibio-fibular, Posterior Superior*. **L., Tibio-fibular, Transverse**, one extending between the lower posterior border of the tibia and the external malleolus. **L., Tibio-tarsal**, one extending from the lower anterior margin of the tibia to the upper surface of the astragalus. **L., Transverse (of acetabulum)**. See *L., Transverse (of hip-joint)*. **L., Transverse (of atlas)**, one attached to two small tubercles on the inner surface of

the atlas, and surrounding the odontoid process of the axis. **L., Transverse** (*of hip-joint*), one extending across the cotyloid notch of the acetabulum. **L., Transverse** (*of knee-joint*), one extending from the anterior margin of the external semilunar fibro-cartilage to the extremity of the internal semilunar fibro-cartilage. **L., Transverse, Medial** (*of tarsus*), one extending from the first cuneiform to the bases of the third and fourth metatarsal bones. **L., Transverse** (*of shoulder-joint*). See **L., Coraco-acromial**. **L., Transverso-costal**. See **L., Costo-transverse**. **L., Trapezoid**, the anterior or external portion of the coraco-clavicular ligament, extending from the upper surface of the coracoid process of the scapula, to the under surface of the clavicle. **L., Triangular**: 1. *The coraco-acromial ligament, q. v.* 2. That portion of the aponeurosis of the external oblique muscle extending from the outer portion of Poupert's ligament to the linea alba. **L., Triangular** (*of liver*). See **L., Lateral** (*of liver*). **L., Triangular, Anterior** (*of pelvis*). See **L., Pubic, Inferior**. **L., Utero-rectal**. See **L., Utero-sacral**. **L., Utero-sacral**, one of the recto-uterine folds of peritoneum. **L., Utero-vesical**, one of the folds of peritoneum connecting the bladder to the uterus. **L., Vertebral, Posterior**, one extending from the axis to the sacrum, along the posterior surface of the bodies of the vertebrae. **L., Vesico-uterine**. See **L., Utero-vesical**. **L., Weitbrecht's**. A bundle of fibers upon the anterior aspect of the interosseous ligament of the radio-cubital articulation. **L., Winslow's**, the posterior ligament of the knee-joint. See **L., Posterior** (*of knee-joint*). **L., Y-shaped** (*of Bigelow*), the *Ilio-femoral ligament*. **L. of Zinn**, the tendinous origin of the external, inferior, and internal recti muscles of the eye.

**Ligamental** (*lig-am-en'tal*), **Ligamentary** (*lig-am-en'ta-re*) [*ligare*, to bind]. Of the nature of a ligament.

**Ligamentous** (*lig-am-en'tus*) [*ligamentum*, from *ligare*, to bind]. Of the nature of, or pertaining to, a ligament.

**Ligamentum** (*lig-am-en'tum*) [**L.**: *pl.*, *Ligamenta*]. See *Ligament*. **L. dentis**, a name given to that portion of the gum which is attached to the neck of a tooth.

**Ligation** (*li-ga't-shun*) [*ligatio*: *ligare*, to tie]. The operation of tying, especially of tying arteries. **L. of Cord**, applying a ligature about the umbilical cord of the new-born child. **L., Multiple**, the application of several ligatures in the course of a vessel. **L. in Continuity**, ligation of a vessel in its course for the cure of an aneurysm or to arrest hemorrhage at some distant point.

**Ligator** (*li-ga'tor*) [*ligare*, to bind]. An instrument used in placing and fastening ligatures.

**Ligature** (*lig-at-ūr*) [*ligatura*: *ligare*, to tie]. A cord or thread of any material for tying arteries, etc. **L., Animal**, one made from sheepgut or catgut, or the tendons or sinews of various animals. **L., Articulated**, the *Écraseur, q. v.* **L., Aseptic**, one rendered free from infective material by soaking in and cleansing with germicidal solutions, or by boiling or heating. **L., Buckskin**, the first absorbable ligature used by Physick, who employed untanned buckskin. **L., Carbolized**, a ligature rendered aseptic by carbolic acid. **L., Catgut**, a ligature made from the middle coat of the sheep's intestine, and rendered aseptic and tough by carbolic acid or perchlorid of mercury. **L., Chromicised**, a ligature hardened by treatment with a solution of chromic acid. **L., Deer-skin**, a ligature formed of a thin strip cut from prepared deer-skin and rendered aseptic. **L., Double**, the

application of two ligatures to a vessel, between which it is divided. In the case of a pedunculated growth it refers to two ligatures passed through the same opening and tied at opposite sides. **L., Elastic**, a narrow band or thread of india-rubber applied tightly to a part so as to destroy the tissues and by compression to lead to separation. It is used in the treatment of hemorrhoids, anal fistula, and in the removal of pedunculated growths. **L., Erichsen's**, one consisting of a double thread, one-half of which is white, the other half black; it is used in the ligation of nevi. **L., Hemp**, a thread made from hemp-fibers rendered aseptic. **L., Horshair**, an excellent ligature formed by plaiting together a number of strands of horshair. After immersion in oil for some time it becomes extremely supple, and is capable of slow absorption. **L., Immediate**, a ligature including the vessel alone. **L., Intermitent**, a tourniquet applied above a poisoned wound to interrupt the blood current; it is occasionally relaxed to allow of renewal of the circulation. **L., Kangaroo**, a ligature made from the smaller tendons of the kangaroo's tail, dried and carbolized. It is stouter than the catgut ligature, and is not absorbed so readily. **L., Lateral**, partial occlusion of the lumen of a vessel by a loose ligature. **L., "Loose,"** a ligature employed by the younger Cline and South. It consists in the application of a thread around an artery so loosely as not to interfere with the passage of the blood. It was erroneously believed to cause an inflammation that would completely block up the vessel. **L., Mediate**, one enclosing some of the soft parts as well as the artery. **L., Metallic**, one made of silver or other metal. **L., Momentary**, the momentary application of a tight ligature so as to rupture the intima of an artery. **L., Ox-aorta**, a form of broad ligature introduced by Barwell for the purpose of tying an artery without lacerating its inner and middle coats; it consists of the middle coat of the aorta of the ox, cut spirally, allowed to dry, and, ten minutes before using, soaked in a five per cent. solution of carbolic acid in water. **L., Permanent**, one made of non-absorbable material. **L., Phlebotomy**, the application of a band to a limb to produce distention of the veins to facilitate venesection. **L., Provisional**, a ligature applied during an operation, with the intention of removing it before the completion of the operation. **L., Quadruple**, two double ligatures passed at right angles through a growth and tied in four sections; it is used in the strangulation of nevi. **L., Scarpa's**, one employed in the ligation of arteries; it consists of a small fold of linen which is placed against the vessel and over which the ligature is tied. **L., Silk**, a thread of silk for ligating vessels. **L., Silkworm-gut**, a material recommended for purposes of ligation by MacSweeney in 1818. It is the fiber drawn out from the silkworm killed when it is just ready to spin its cocoon. **L., Soluble**, an animal ligature capable of being absorbed. **L., Tendon**, the tendon, or strips of tendons, of various animals, as those of the kangaroo, deer, and whale, dried and carbolized. **L., Wire**, a metallic wire for the ligation of arteries and other parts. After its application it is cut short and allowed to become encapsulated.

**Light** (*lit*) [**ME.**, *light*, *ligh*]. That form of energy which, when impinging upon the retina, gives rise to the sensation of vision. The old theory was the so-called *Emission*, or *Corpuscular Theory*, which regarded light as consisting of minute material particles emitted by the luminous body and giving rise to the sensation of vision by impinging upon the retina. The accepted, or *Undulatory Theory* regards light as a form of ethereal vibration or undu-

Lily of the Valley. See *Convallaria majalis*.

**Limb** (*lim*) [ME., *lim*, a limb]. 1. A member of an animal body, other than the head or trunk; a leg or arm. 2. In biology, the lateral area, border, or margin of an organ or part. An organ of prehension or locomotion. **L.**, **Anterior** (*of the internal capsule*), the part of the internal capsule in front of the knee, included between the caudate and the lenticular nucleus. **L.**, **Artificial**, a mechanical substitute for an arm or a leg. **L.-girdle**, the bony or cartilaginous junction of a limb and the trunk. **L.**, **Pectoral**, the upper or fore-limb. **L.**, **Pelvic**, the lower or hind limb. **L.** **Plexus**, the supposed rearrangement of nerve-strands so as to connect nerves derived from different parts of the spinal cord with particular groups of muscles. **L.**, **Posterior** (*of the internal capsule*), the portion behind the knee, situated between the caudate nucleus and the optic thalamus. **L.-root**, the part of a skeleton that bears a limb.

**Limbate** (*lim'-bat*) [*limbu*, a border]. Bordered.

**Limban** (*lim-bal'-shun*) [*limbus*, a border]. In biology, the formation of an extended border; a lateral thickening.

**Limbéd** (*lim'*) [ME., *lim*, a limb]. Having limbs.

**Limbic** (*lim'-bik*) [*limbus*, a border]. Marginal; pertaining to a border. **L.** **Fissure**. See *Fissure*. **L.** **Lobe**, that surrounding the corpus callosum.

**Limburger Cheese**. See *Cheese*.

**Limbus** (*lim'-bus*) [L.]. A border. The circumferential edge of any flat organ or part. **L. corneæ**, the edge of the cornea at its junction with the sclerotic coat. **L. laminæ spiralis**, the spiral membranous cushion, at the border of the osseous lamina spiralis of the cochlea. **L. luteus**. See *Macula lutea*. **L. vieussensii**, that portion of the edge of the *septum secundum* in the fetal heart of the rabbit that forms part of the boundary of the foramen ovale.

**Lime** (*lim*) [Ar, *limûn*, a lemon]. The fruit of several species of *Citrus*, as *C. limetta*. **L.-juice**, the juice of the lime. It should contain, when bottled, a small percentage of sulphurous acid, to prevent fermentation.

**Lime** (*lim*) [ME., *lim*, lime]. The popular name for calcium oxid, CaO (quicklime), and calcium hydrate, Ca(OH). Calcium oxid (quicklime) has a great affinity for water and for CO<sub>2</sub>. On contact with the former, slaked lime is formed, with the evolution of heat. On living tissues it acts as a caustic. **L.**, **Burnt**, **L.**, **Caustic**, calcium oxid, quicklime. **L.**, **Chlorid of**, **L.**, **Chlorinated**, the chlorid of lime of commerce, is not a distinct chemie compound; its chief constituent, and the one on which its disinfectant properties depend, is calcium hypochlorite, which liberates chlorine. **L.-secreting Glands**. See *Morrens' Glands*. **L.**, **Milk of**, a milky fluid consisting of calcium hydrate suspended in water. **L.**, **Quick**, **L.**, **Slaked**, common terms for lime. **L.-ointment**, an ointment consisting of slaked lime 4, lard 1, and olive oil 3. **L.-water**, a solution of calcium hydrate in water. It is astringent and alkaline, and prevents the formation of dense coagula if added to milk. It is used in cases of diarrhea and vomiting.

**Limen** (*li'-men*) [*limên*, a harbor]. Threshold.

**Limic** (*lim'-ik*) [*limós*, hunger]. Pertaining to hunger.

**Liminal** (*lim'-in-al*) [*limên*, threshold]. Least; lowest; minimal. **L.** **Intensity**. See *Law, Fisher's*.

**Limitans**, **Limiting** (*lim'-it-ans*, *lim'-it-ing*) [*limên*, threshold]. Bounding. **L. Membrane**, the thin membrane on which the epithelial tissue of the various glands rests. **L. Membrane**, **External**, the thin layer between the outer nuclear layer of the retina and that of the rods and cones. **L. Membrane**, **Internal**, in the eye, the inner layer of the retina.

**Limitrophic** (*lim-it-rof'-ic*) [*limu'-gu*, a name given to Roman lands furnishing subsistence to soldiers]. Regulating the processes of nutrition; a qualification, sometimes applied to the great ganglionic cord of the sympathetic nerve-system, or to that system at large, pertaining to the sympathetic nerves.

**Limnemic** (*lin-ne'-mik*) [*limnê*, marsh]. Pertaining to, or caused by the influence of, a marsh.

**Limnophitis** (*lin-no-ne-f'-is*) [*limnê*, marsh; *phitis*, noxious odor]. Any miasm or noxious odor arising from marshy ground or swamps.

**Limoctonia** (*lim-ek-tô-ne-ah*) [*limnê*, hunger; *ctônai*, to destroy]. Death from hunger; suicide by hunger.

**Limonene** (*li'-mo-nen*) [*limnê*, a lemon]. The same as *Citrene*, q. v.

**Limonum** (*li-mô'-num*) [L.: gen., *Limnîs*; from the Arabic *limûn*]. Lemon. The fruit of *Citrus limonum*, of the same genus as the orange and the lime. The rind contains a volatile oil, isomeric with oil of turpentine. The pulp yields about 7 per cent. of citric acid, C<sub>6</sub>H<sub>8</sub>O<sub>7</sub>, which has about the same properties as acetic acid, but has much value as a refrigerant and antiscorbutic. The expressed juice is largely employed as a refrigerant drink in fevers. **L.**, **Oil**, the volatile oil. Dose m-j-v. **L.**, **Spt.**, "essence of lemon," 6 parts of oil and 4 of peel in 90 parts of alcohol. **L.**, **Succus** (B. P.), used in preparing syrupus limonis. **L.**, **Syr.**, lemon-juice 40, lemon-peel 2, sugar 60, water q. s. ad 100. Dose 5j. **L.**, **Tinct.** (B. P.) Dose 5ss-ij. *Acidi citrici*, Syr., citric acid, water, aa 8, spt. of lemon 4, water qso.

**Limophoitis** (*lim-o-fô-it'-is*), **Limophoitis** (*lim-o-fô-it'-is*) [*limós*, hunger; *phôis*, madness]. Insanity due to hunger or lack of nutrition.

**Limophoitic** (*lim-o-fô-it'-sik*) [*limós*, hunger; *phôis*, to wander]. Insane from hunger or under-feeding.

**Limophthisis** (*lim-off'-this-is*) [*limós*, hunger; *phôis*, wasting]. The wasting of the body due to privation and lack of food.

**Limopsora** (*lim-op-sô'-rah*) [*limós*, hunger; *psôra*, itch]. A kind of scabies (or pruritus?) asserted to attack man and other animals after long deprivation of food.

**Limopsorus** (*lim-op-sô'-rus*) [*limós*, hunger; *psôra*, itch]. A disease, like scurvy, pellagra, or famine-fever, due to poor or insufficient food.

**Limosenc** (*lim-o-ser'-ik*) [*limós*, hunger]. Pertaining to or caused by hunger.

**Limosis** (*lim'-sis*) [*limós*, hunger; *fl. Limosus*]. Unnatural appetite; a class of diseases distinguished by depraved appetite.

**Limotherapy** (*lim-o-ther'-o-f-e*) [*limnê*, hunger; *therapeia*, a treatment]. The treatment of disease by partial or total deprivation of food. This method is useful in certain stages of syphilis, in the treatment of aneurysm, and is recommended in some cases of malignant disease.

**Limp** [AS., *lemp*, awkward]. A halting gait. See *Claudication*.

**Limprecht's Method**. See *Nitrogen*.

**Linagogue** (*lin'-ag-og*), **Linagogus** (*lin-ag'-og-us*) [*linum*, thread; *agôgos*, leading]. An instrument used in guiding the course of a suture.

**Linament** (*lin'-am-ent*) [*linum*, flax]. Charpie; lint; a tent for a wound.

**Linaria** (*lin-a'-re-ah*) [*linum*, flax]. A genus of herbs. **L. vulgaris**. See *Antirrhinum*, *linaria*.

**Lincture** (*link'-tūr*) [*linctus*; *lingere*, to lick]. A medicine to be taken by licking; an electuary; looch, loch, or eclegma [Old.]

**Linctus** (*link'-tus*) [L.]. Same as *Lincture*.

**Line** (*lin*) [*lin*], a *lin*. In geometry, that extended or dimension in which has length, but neither breadth nor thickness. Also, the  $\frac{1}{16}$  part of an inch. In anatomy, a boundary or guide mark. A *Table of Lines* is appended. **L., Atmospheric**, those lines of Fraunhofer's spectrum due to absorption of light-rays

by the atmosphere. **L., Atrope**, a name given by Helmholtz to the perpendicular to the plane of the axes of rotation of the eye. **L., Colored** (*of the enamel*), one of the concentric striae of enamel prisms. They may indicate the laminar formation of the enamel. **L.-writing**. See *Ataxiagram*.

## TABLE OF LINES OR LINEÆ.

| NAME.                                       | HEIGHTENING, SIGNIFICANCE, ETC.                               | DESCRIPTION.  |
|---|---|---|
| <i>Abdominal</i> .                          | See <i>L. umbil.</i>  |   |
| <i>Of accommodation</i> .                   | In optics.  | Czermak's term for that portion of the visual line in which lie objects that are seen with distinctness, and with a given state or degree of accommodation.   |
| <i>Abn.</i>                                 | In anatomy.   | 1. A tendinous raphe extending in the median line of the abdomen from the pubes to the ensiform cartilage. It is formed by the blending of the aponeuroses of the oblique and transversalis muscles.<br>2. <i>Hunter's line</i> , the anterior peduncles of the pineal gland.   |
| <i>Abdominal</i> .                          | Distention of the abdomen from pregnancy, ascites, or tumors. | Glistening white lines in either iliac region of the abdomen.   |
| <i>Alveolo-basilar</i> .                    | Cranimetry.   | A line joining the basion and the alveolar point.   |
| <i>Alveolo-nasal</i> .                      | Cranimetry.   | A line joining the nasal and the alveolar point.  |
| <i>Alveolar</i> .                           | Anatomy.  | 1. A rough longitudinal ridge on the posterior surface of the middle third of the femur, dividing below into two and above into three ridges.<br>2. A ripa; especially the line of rupture of the pia and endyma on the dorsal surface of the thalamus, corresponding with the margin of the fornix and the choroid sulcus of Schwalbe. |
| <i>Atmospheric</i> .                        | In spectroscopy.  | That portion of Fraunhofer's lines produced by the absorption of light-rays by atmospheric air.   |
| <i>Atrope</i> .                             | Optics.   | The line normal to the plane of the axes of rotation of the eye.  |
| <i>Attended</i> .                           | Distention of the abdomen.                                    | See <i>L. albicantes</i> .  |
| <i>Auriculo-bregmatic</i> .                 | Cranimetry.   | A line passing from the auricular point to the bregma, and dividing the pre-auricular from the post-auricular part of the cranium.  |
| <i>Axillary, axillar and axillar</i> .      | In physical diagnosis.  | Vertical lines extending downward from the axilla on the side of the trunk.   |
| <i>Batizger's</i> .                         | See <i>L., Inner and Outer</i> .                              |   |
| <i>Brain-pin</i> .                          | Brain-surgery.  | A line running backward from the infra-orbital ridge through the middle of the external auditory meatus, and prolonged to the middle line of the head posteriorly.  |
| <i>Basion-alveolar</i> .                    | Cranimetry.   | See <i>L., Alveolo-basilar</i> .  |
| <i>Basion-bregmatic</i> .                   | Cranimetry.   | The line joining the basion and the bregma.   |
| <i>Basion-occipital</i> .                   | Obstetrics.   | The external conjugate diameter of the pelvis.  |
| <i>Basion-vertex</i> .                      | Cranimetry.   | The line separating the anterior from the posterior portion of the skull. It extends from one auditory foramen over the vertex to the other.  |
| <i>Blue</i> .                               | In chronic lead-poisoning.                                    | A blue-black line at the dental margin of the gums.   |
| <i>Brachial</i> .                           | In surgery.   | See <i>L., Test</i> .   |
| <i>Bronchial</i> .                          | See <i>L., Conjugal</i> .                                     | In various diseases.  |
| <i>Cassini's (or May)</i> .                 | Cranimetry.   | A line running from the external auditory meatus to a point just below the nasal spine.   |
| <i>Cubital</i> .                            | In palmistry.   | The line that runs across the palm of the hand from the radial side to the base of the index finger.  |
| <i>Crestal</i> .                            | Cranimetry.   | Any line joining certain points on the surface of the skull.  |
| <i>Of Cranium</i> .                         | Anatomy.  | See <i>L. media mesolabii</i> .   |
| <i>Diaphanous</i> .                         | Chronic copper-poisoning.                                     | A green line at the margin of the gums, with a similar green stain extending for some distance on the teeth.  |
| <i>Concentric brown and grey (enamel)</i> . | Teeth, and enamel (see note well)                             | Concentric brown lines or striae crossing the enamel-prisms of the teeth.   |

TABLE OF LINES OR LINEÆ.—*Continued.*

| NAME.  | DEPARTMENT, SIGNIFICANCE, ETC.           | DESCRIPTION.   |
|--|--|--|
| Contour.   | Microscopic anatomy.                     | Lines in dentine more or less parallel with the pulp-cavity, probably due to the presence of interglobular spaces.   |
| Corrigan's.  | Chronic copper-poisoning.                | A purple line at the junction of the teeth and gums.   |
| Costo-articular.   | In physical diagnosis.                   | A line drawn between the sterno-clavicular articulation and the point of the eleventh rib.   |
| Costo-clavicular.  | In physical diagnosis.                   | See <i>L., Parasternal.</i>  |
| Cruciate (4 in number).                                    | In anatomy.                              | Ridges upon the ental surface of the occipital bone that radiate from the internal occipital protuberance.   |
| Crull's.   | Craniometry.                             | See <i>L., Supraorbital.</i>   |
| Curved, inferior ( <i>of the ilium</i> ).                  | In anatomy.                              | A line extending from the upper part of the anterior-inferior spinous process of the ilium, and terminating at the middle of the great sciatic notch.  |
| Curved, inferior ( <i>of the occipital bone</i> ).         | In anatomy.                              | A ridge extending transversely across the outer surface of the occipital bone at about one-third of the distance between its anterior border and the anterior border of the foramen magnum.                    |
| Curved, inferior ( <i>of the parietal bone</i> ).          | In anatomy.                              | See <i>L., Temporal.</i>   |
| Curved, middle ( <i>of the ilium</i> ).                    | In anatomy.                              | A line commencing about an inch or an inch and a half behind the anterior superior spine of the ilium and arching backward and downward to the upper margin of the great sciatic notch.                        |
| Curved, superior ( <i>of the ilium</i> ).                  | In anatomy.                              | A line commencing about two inches in front of the posterior extremity of the crest of the ilium and curving downward and forward toward the posterior part of the great sciatic notch.                        |
| Curved, superior ( <i>of the occipital bone</i> ).         | In anatomy.                              | A semicircular line, passing outward and forward from the external occipital protuberance.   |
| Curved, superior ( <i>of the parietal bone</i> ).          | In anatomy.                              | A ridge upon the outer surface of the parietal bone, parallel to and slightly above the temporal line.   |
| Of Daubenton.  | Craniometry.                             | A line joining the opisthion and the projection of the lower border of the orbit.  |
| Of demarcation.  | In surgery.                              | A line of division between healthy and gangrenous tissues.   |
| Of De Salle.   | In abdominal and other wasting diseases. | See <i>L., Nasal.</i>  |
| Dobie's.   | Microscopic anatomy.                     | The thin, dark disc or membrane passing transversely through and bisecting the clear zone or stria in a striated muscle-fiber.   |
| Doornick's horizontal line.                                | Craniometry.                             | A line drawn from the median incisors to the maximum occipital point.  |
| Douglas's.   | Topographic anatomy.                     | See <i>L., Semicircular.</i>   |
| Eberth's.  | Microscopic anatomy.                     | The lines of junction of the cardiac muscle-cells.   |
| Ectental.  | Microscopic anatomy.                     | The line of junction of the ectoderm and endoderm.   |
| Ellis's curved line.                                       | In pleurisy.                             | The curved line followed by the upper border of a pleuritic effusion, or of a hydrothorax. It is somewhat like the letter S, the highest point being in the axilla, from which it descends toward the sternum. |
| Embryonic.   | Embryology.                              | The primitive trace in the center of the germinal area of the ovum.  |
| Eminens ( <i>of the cricoid cartilage</i> ).               | Anatomy.                                 | A mesal ridge of the dorsal half of the cricoid cartilage.   |
| Eminens ( <i>of the patella</i> ).                         | Anatomy.                                 | A ridge on the posterior surface of the patella, dividing that surface into two unequal parts, the outer of which is the larger.   |
| Eminens ( <i>of the posterior pyramid, also of Reil</i> ). | In anatomy.                              | A ridge descending posteriorly from the summit of the pyramis cerebelli.   |
| Eminens transversa ( <i>of the hyoid bone</i> ).           | Anatomy.                                 | The horizontal ridge crossing the ventral surface of the body of the hyoid bone.   |
| Eminentes.   | Anatomy.                                 | The ridges upon the costal surface of the scapula, in the sub-scapular fossa.  |
| Facial.  | Craniometry.                             | 1. A straight line tangential to the glabella and some point at the lower portion of the face. 2. See <i>L., Camper's</i> .  |

TABLE OF LINES OR LINEÆ.—*Continued.*

| NAME.                                    | TERMINOLOGY, SIGNIFICATION.                                       | DESCRIPTION.  |
|--|---|---|
| Of the                                   | In palmistry.   | A line beginning near the wrist and running up the middle of the palm toward the base of the index-finger.  |
| Esophageal (or pharyngeal) (line)        | Anatomy.  | The whitish, dentated border of the mucosa of the esophagus at its junction with the mucosa of the stomach.   |
| Of the eye                               | In optics.  | An imaginary line drawn from the object viewed through the center of rotation of the eye.   |
| Focal                                    | In optics.  | The lines, anterior and posterior, that bound the focal interval.   |
| Of the ring-finger                       | In palmistry.   | A line running upward to the base of the ring-finger.   |
| Fraunhofer's                             | In spectroscopy.  | The black lines that cross a very pure solar spectrum. They are produced by the light from lower portions of the solar surface passing through certain incandescent metallic vapors in the luminiferous envelop of the sun, and in the aqueous vapor and permanent gases of the earth's atmosphere. |
| Fundamental (or L. of the eye)           | In spectroscopy.  | A black line occupying the position of a luminous line in the spectrum when a metallic vapor is interposed in the ray of light; the position of the line varies with different metals.  |
| Fundamental                              | Microscopic anatomy.  | Transverse lines or striae appearing on the axis-cylinder of medullated nerve-fibers, near the nodes of Ranvier, after the fibers have been stained with silver nitrate. Their significance is unknown.   |
| Frontal minimum                          | Cranimetry.   | The shortest transverse measurement of the forehead.  |
| Furca                                    | In pregnancy.   | The pigmentation of the linea alba.   |
| Gust's (of section)                      | In surgery.   | A section of the femur, through an imaginary line below the trochanter major.   |
| Gunn's (or child's)                      | Supposed to indicate disease of some abdominal organ.             | A line in a child's face, running downward from the region of the malar bone to join the nasal line.  |
| Of the gum                               |   | Same as <i>L. of Baillarger</i> .   |
| Gingival (or gum)                        | Characteristic of various diseases.                               | A reddish streak or margin at the reflected edge of the gums.   |
| General, anterior or inferior, posterior | See <i>L., Curved (of the thumb), Inferior Middle, Superior</i> . |   |
| Gingival                                 | Anatomy.  | A line following the general direction of the upper margin of the zygoma.   |
| Of Haller                                | Anatomy.  | See <i>L., splendens</i> .  |
| Of the heart                             | In palmistry.   | A line beginning between the thumb and index-finger, and extending across the center of the palm of the hand parallel to the line of the heart.   |
| Of the liver                             | In palmistry.   | See <i>L., Hepatic</i> .  |
| Of the heart                             | In palmistry.   | See <i>L., Cardiac</i> .  |
| Of the stomach                           | In optics.  | See <i>L., Atrope</i> .   |
| Horizontal                               | In palmistry.   | A line beginning at the wrist near the line of life and running upward to the base of the little finger.  |
| Horizontal                               | In anatomy.   | A white line marking the point of junction of the skin of the perineum with the mucosa of the anus, and also the point of separation of the external from the internal sphincter. It is not always readily detected.  |
| Horizontal                               | Topographical anatomy. Of value in description of the hip-joint.  | A sulcus below the fold of the groin, starting from the femoro-scapular furrow, and fading away between the great trochanter and the anterior superior iliac spine. It crosses the middle of the capsule of the hip.  |
| Horizontal                               | Topographical anatomy.  | See <i>L., Eberth's</i> .   |
| Horizontal                               | Topographical anatomy.  | See <i>L., alba</i> .   |
| Of the orbit                             | In ophthalmology.   | A line tangential to the lower margin of the orbit, and passing through the auricular point.  |
| Iliac                                    | Anatomy.  | The iliac portion of the ilio-pectineal line.   |
| Ilio-pectineal                           | Anatomy.  | The bony ridge marking the brim of the true pelvis, situated partly on the ilium and partly on the pubis.   |
| Iliopubic                                | Anatomy.  | See <i>L., Ilio-pectineal</i> .   |

TABLE OF LINES OR LINEÆ.—*Continued.*

| NAME.   | DEPARTMENT, SIGNIFICANCE, ETC.   | DESCRIPTION.   |
|---|--|--|
| Incremental ( <i>Salter's</i> ).                                  | Microscopic anatomy.   | A curved line in dentine, supposed to indicate the laminar structure, and to correspond to the successive laminæ or strata of dentine.   |
| Inner ( <i>of Baillarger</i> ).                                   | Anatomy.   | A thin, whitish line parallel to the surface, seen with the naked eye, in a section of the gray matter of the cerebrum. It is the fifth line from without inward.  |
| Innominate.   | Obstetrics.  | See <i>L., Ilio-pectineal</i> .  |
| Interauricular.   | Craniometry.   | A line joining the two auricular points.   |
| Intercellular.  | Microscopic anatomy.   | The narrow intervals between contiguous cells of epithelium or endothelium. They are filled by the cell-cement.  |
| Intercondylar.  | Anatomy.   | A transverse ridge joining the condyles of the femur above the intercondyloid fossa.   |
| Intercondylean.   | Anatomy.   | See <i>L., Intercondylar</i> .   |
| Interjugal.   | Craniometry.   | A line joining the jugal points.   |
| Intermalar.   | Craniometry.   | A line joining the malar points.   |
| Intermediate.   | Microscopic anatomy.   | See <i>L., Dobie's</i> .   |
| Intermediate ( <i>of the ilium</i> ).                             | Anatomy.   | The ridge upon the crest of the ilium between its inner and outer lip.   |
| Intertrochanteric, anterior ( <i>of the femur</i> ).              | Anatomy.   | A line upon the anterior surface of the femur, separating the neck and shaft, extending between the tubercle and a point close to and in front of the lesser trochanter.   |
| Intertrochanteric, posterior ( <i>of the femur</i> ).             | Anatomy.   | A ridge on the posterior surface of the femur, extending between the greater and lesser trochanters.   |
| Intertuberal.   | Anatomy.   | A line joining the inner borders of the ischial tuberosities, immediately below the small sciatic notch.   |
| Jadelot's.  | Various diseased conditions.   | See <i>L., Genal, Labial, Nasal, and Oculozygomatic</i> .  |
| Of Kilian.  | Anatomy.   | See <i>L. prominens</i> .  |
| Kirchoff's.   | In spectroscopy.   | See <i>L., Fraunhofer's</i> .  |
| Labial ( <i>of Jadelot</i> ).                                     | Supposed to indicate pulmonary disease.  | A line on an infant's face running downward and backward from the angle of the mouth.  |
| Lateral.  | Comparative anatomy.   | In fishes, the line of openings of ducts on either side of the body.   |
| Of life.  | In palmistry.  | A line starting near the wrist, skirting the base of the thumb, and terminating between the thumb and the line of the head.  |
| Ligar's.  | In anatomy; the upper point of trisection of the first indicates the emergence of the gluteal artery; the middle of the second, the spot where the sciatic artery leaves the pelvis. | Two lines, one joining the posterior iliac spine at a point midway between the tuber ischii and the great trochanter; the other from the posterior iliac spine to the inner point of trisection of a line between the tuber ischii and the trochanter. |
| Mamillary.  | Physical diagnosis.  | A vertical line passing through the center of the nipple.  |
| Media mesolobii.  | Anatomy.   | The raphé of the callosum.   |
| Media scroti.   | Anatomy.   | The raphé of the scrotum.  |
| Median.   | Anatomy.   | A line joining any two points at the periphery of the meson or median plane of the body.   |
| Mylo-hyoidean.  | Anatomy.   | See <i>L., Oblique, Internal (of the inferior maxilla)</i> .   |
| Nasal ( <i>of Jadelot</i> ). Also called <i>De Salle's line</i> . | Supposed to indicate abdominal disease and other wasting diseases.   | A line on a child's face, starting at the upper margin of the ala nasi, and, encircling the angle of the mouth, extending downward to the outer edge of the orbicularis muscle.  |
| Naso-alveolar.  | Craniometry.   | See <i>L., Alveolo-nasal</i> .   |
| Naso-basilar.   | Craniometry.   | The line drawn through the basion and the nasal point.   |
| Naso-lambdaoid ( <i>of Poirier</i> ).                             | Craniometry.   | A line drawn from the naso-frontal groove to a point one centimeter above the lambda. It is of value in determining the position of the fissure of Rolando.  |
| Naso-subnasal.  | Craniometry.   | The line running from the subnasal spine to the naso-frontal suture.   |
| Nélaton's.  | In surgery; in dislocation of the femur backward the trochanter is always found above this line.   | A line drawn from the anterior superior spine of the ilium to the most prominent part of the tuberosity of the ischium.  |

TABLE OF LINES OR LINEÆ—*Continued.*

| NAME.                          | DERIVATION, ORIGIN, AND ETC.   | DESCRIPTION.   |
|--------------------------------|--|--|
| Streaks.                       | Anatomy.   | The optic axis of a crystal.   |
| Streak.                        | Anatomy.   | The discoloration of the linea alba in pregnancy.  |
| Streaked surface.              | Anatomy.   | The inferior curved line of the occiput.   |
| Streaked surface.              | Anatomy.   | The external occipital protuberance.   |
| Streaked surface.              | Anatomy.   | The superior curved line of the occiput.   |
| Striae (of the tibia).         | Anatomy.   | A prominent ridge on the internal surface of the shaft of the tibia, commencing above at the inner side of the head, and terminating in the interosseous ridge at the lower fourth of the bone.  |
| Striae (of the tibia).         | Anatomy.   | A prominent ridge running from the lower part of the bicipital tuberosity, downward and outward, to form the anterior border of the bone.  |
| Striae (of the tibia).         | Anatomy.   | A line extending downward and outward from the tubercle of the thyroid cartilage.  |
| Striae (of the tibia).         | Anatomy.   | A rough ridge that crosses the posterior surface of the tibia obliquely downward from the back part of the articular facet for the fibula to the internal border.  |
| Striae, internal of the tibia. | Anatomy.   | A prominent ridge on the external surface of the inferior maxilla just below the mental foramen, from which it runs outward, upward, and backward to the anterior margin of the ramus.   |
| Striae, internal of the tibia. | Anatomy.   | A ridge on the internal surface of the lower jaw, commencing at the posterior portion of the sublingual fossa, continuing upward and outward so as to pass just below the last two molar teeth.  |
| Striae (of the tibia).         | Supposed to indicate cerebro-spinal function.                              | A line on a child's face running from the inner angle of the eye, downward and outward, to the malar bone.   |
| Striae.                        | Supplies an insertion of the internal muscles from the shaft of the femur. | The line for the tendon of the adductor magnus, running from the tubercle of the femur to the intercondyloid notch.  |
| Striae (of the tibia).         | Anatomy.   | A thin, whitish line parallel to the surface, seen with the naked eye in a section of the gray matter of the cerebrum. It is the third line from without inward.   |
| Striae.                        | Microscopic anatomy.   | See <i>L., Contour</i> .   |
| Striae.                        | Comparative anatomy.   | A dark line in the electric plate of <i>Gymnotus</i> , separating the plate into two parts.  |
| Striae.                        | Comparative anatomy.   | In <i>molluscs</i> , the lines left in the dead shell by the muscular margin of the mantle.  |
| Striae.                        | Physiological anatomy.   | A line midway between the two nipples.   |
| Striae.                        | Obstetrics.  | The axis of the parturient canal.  |
| Striae.                        | Obstetrics and anatomy.  | That portion of the ilio-pectineal line which is formed by the pubic bone.   |
| Striae.                        | See <i>L., Nomenclature</i> .  |  |
| Striae.                        | Anatomy.   | See <i>L., Oblique (of the tibia)</i> .  |
| Striae.                        | Embryology.  | The primitive streak of the embryo.  |
| Striae (of the tibia).         | See <i>L., Contour</i> .   |  |
| Striae (of the tibia).         | See <i>L., Contour</i> .   |  |
| Striae (of the tibia).         | Anatomy.   | The promontory of the sacrum.  |
| Striae.                        | Anatomy.   | A well-marked eminence on the femur commencing about the middle of the posterior intertrochanteric line, and descending vertically for about two inches along the posterior surface of the shaft.  |
| Striae.                        | Anatomy.   | See <i>L., eminens (of the posterior pyramid)</i> .  |
| Striae.                        | Tracingography.  | The line connecting the bases of the upward strokes in a tracing of the pulse. In quiet breathing it is nearly straight, but in labored respiration and in some diseased conditions it becomes a more or less regular curve, due to the influence of the respiration on the circulation. |
| Striae.                        | In surgery.  | Same as <i>L., Nélaton's</i> .   |
| Striae.                        | Microscopic anatomy.   | See <i>L., Incremental</i> .   |

TABLE OF LINES OR LINEÆ.—*Continued.*

| NAME.  | DEPARTMENT, SIGNIFICANCE, ETC.                   | DESCRIPTION.  |
|--|--|---|
| Scapular.  | Physical diagnosis.                              | A vertical line downward from the lower angle of the scapula.   |
| Schreger's.                                      | Microscopic anatomy.                             | Lines in dentine, having a general parallelism to the pulp-cavity. They are caused by a row of the primary or great curvatures of the dentinal tubules.   |
| Semicircular ( <i>Douglas's</i> ).               | Topographic anatomy.                             | The curved lower edge of the internal layer of the aponeurosis of the internal oblique muscle of the abdomen, where it ceases to cover the posterior surface of the rectus abdominis.   |
| Semilunar ( <i>of Spigelius</i> ).               | Topographic anatomy.                             | A curved tendinous condensation of the aponeurosis of the external oblique muscle of the abdomen, running along the outer border of the rectus abdominis.   |
| Of sight.  | In optics.                                       | An imaginary line drawn from the object viewed to the center of the pupil.  |
| Sinuuous, inferior ( <i>of the anus</i> ).       | Anatomy.   | The convoluted line at the junction of the mucosa of the rectum with the integument at the anus.  |
| Solea.   | Anatomy.   | Oblique line of the tibia at the attachment of the soleus muscle.   |
| Spigel's.  | Topographic anatomy.                             | See <i>L., Semilunar</i> .  |
| Of Spigelius.                                    | Topographic anatomy.                             | See <i>L., Semilunar</i> .  |
| Splendens ( <i>of Haller</i> ).                  | Anatomy.   | A longitudinal fibrous band extending along the middle line of the anterior surface of the spinal pia.  |
| Sternal.   | Physical diagnosis.                              | The median line of the sternum.   |
| Sterno-mastoid.                                  | In surgery.                                      | A line drawn from a point between the two heads of the sterno-mastoid muscle to the mastoid process.  |
| Supracondylar, external ( <i>of the femur</i> ). | Anatomy.   | The external, inferior continuation of the linea aspera of the femur.   |
| Supracondylar, internal ( <i>of the femur</i> ). | Anatomy.   | The inner of the two ridges into which the linea aspera of the femur divides.   |
| Supra-orbital.                                   | In craniometry.                                  | A line extending horizontally across the forehead immediately above the root of the external angular process of the frontal bone.   |
| Temporal.  | Anatomy.   | A curved line on the outer surface of the parietal bone, just below the parietal eminence, forming in part the upper boundary of the temporal fossa.  |
| Test ( <i>Bryant's</i> ).                        | Surgery.   | A line for detecting fracture or shortening of the neck of the femur. If two lines are drawn to meet at right angles, one of them backward from the anterior superior spinous process of the ilium, and the other upward from the top of the trochanter major; the latter is the test-line. Its length is to be compared with the same line on the uninjured side.  |
| Thompson's.                                      | Frequently noticeable in pulmonary tuberculosis. | A red line of vascular tissue along the margin of the gums.   |
| Topinard's profile.                              | Craniometry.                                     | A line joining the intersuperciliary point and the most prominent point of the chin.  |
| Transverse ( <i>of the abdomen</i> ).            | Anatomy.   | The tendinous intersections in the course of the rectus abdominis muscle.   |
| Transverse ( <i>of the fourth ventricle</i> ).   | Anatomy.   | The striæ acusticæ of the fourth ventricle.   |
| Transverse ( <i>of sacrum</i> ).                 | Anatomy.   | Ridges formed by the lines of union of the four sacral vertebræ.  |
| Trapezoid.                                       | Anatomy.   | The line of attachment of the trapezoid ligament on the inferior surface of the outer portion of the clavicle.  |
| Of Vicq d' Azyr.                                 | Anatomy.   | See <i>L., Outer (of Baillarger)</i> .  |
| Virchow's.                                       | Craniometry.                                     | The line extending from the root of the nose to the lambda.   |
| Visual.  | Optics.  | An imaginary line, drawn from a point looked at, through the nodal point of the eye, to the macula lutea.   |
| Vogt's alveolar line.                            | Craniometry.                                     | A line extending from the maximum occipital point to the superior alveolar point.   |
| <i>L., Zöllner's.</i>                            | In optics ( <i>for test-purposes</i> ).          | Draw three parallel horizontal lines one centimeter apart, and through the upper and lower ones draw short, oblique, parallel lines in the direction from above and the left to below and the right; through the middle line draw similar oblique lines, but in the opposite direction; then the three horizontal lines no longer appear to be parallel; they are actually so, but some appear to converge and others to diverge. |

**Linea** (*lin'ya*) [*lin*, a line]. See *Line*.

**Lineage** (*lin'ij*) [*lin*, a, a line]. The line of descent from an ancestor, especially.

**Lineal** (*lin'yal*) [*lin*, a, a line]. Pertaining to lineage. See *Lineage*.

**Lineament** (*lin'ay-mant*) [*lin*, a line; *ment*, a part, a part]. The outline of the face, or of any of its features. Also, the outline of the anatomy.

**Linear** (*lin'yar*) [*lin*, a, a line]. Resembling or pertaining to a line. Applied in biology to an organ that is more or less linear, longer than broad, and that has parallel margins. **L. Craniectomy.** See *Craniectomy*.

**L. Extraction.** See *Extraction*. **L. Fracture,** one running in a line, and attended with little or no displacement of the fragments.

**Lineate** (*lin'ay-tye*) [*lin*, a, a line]. Marked with lines.

**Linea** (*lin'ya*). See *Line*.

**Linolea** (*lin'ol-ay*) [*lin*, a small line; *ole*, *Linolea*]. A name for bent line.

**Lineolate** (*lin'ol-ay*) [*lin*, a, a little line]. In biology, minutely lined or scored.

**Linolelet** (*lin'ol-ay-let*) [*lin*, a, a small line]. In biology, a minute line.

**Living's System.** A method of treatment of disease by gymnastic and other rhythmic movements of the body, employed by Living, a Swedish physician; kinesitherapy. See *General System*.

**Lingam** (*lin'gam*). See *Phallus*.

**Lingism** (*lin'iz-um*). See *Living's System*.

**Lingua** (*lin'gwah*) [*lin*, gen. and *ph*, *Lingua*]. The tongue. **L. frænata**, tongue-tie. **L. geographica**, localization of the tongue. **L. Posterior**, the epiglottis. **L. propendula**, an obsolete synonym of *Marasmus*.

**Lingual** (*lin'gwah*) [*lin*, a, a tongue]. Shaped like the tongue. Pertaining to the tongue. **L. Artery.** See *Artery*, *Table of*. **L. Bone.** See *Hyoid Bone*. **L. Muscle.** See *Muscle*, *Table of*. **L. Nerve.** See *Nerve*, *Table of*.

**Lingualis** (*lin'gwah*). See *Muscle*, *Table of*.

**Linguetta** (*lin'gwah-tye*) [*lin*, dim. of *lingua*, a tongue]. A small tongue. **L. laminosa.** See *Lingula*.

**Linguliform** (*lin'gwah-form*) [*lingua*, tongue; *forma*, form]. Shaped like a tongue.

**Lingula** (*lin'gwah*) [*dim.* of *lingua*, a tongue]. A transversely flattened lobule between the valve of *Ventricle* and the central lobule of the cerebellum. It is called, also, the *linguella laminosa*. Also, a small, flattened part of the petrous process of the temporal bone. It is also called the *ligula* and the *processus petrosus anterior*. Also, the line of demarcation between the general, pal surface of the myel and *metencephalon*, and the endymal, metacelian surface. **L. mandibularis**, the prominent, thin scale of bone partly surrounding the large foramen of the lower jaw, the basis for the attachment of the sphenomandibular ligament. **L. of Wrisberg**, the connecting chord between the motor and sensory roots of the trifacial nerve.

**Lingulate** (*lin'gwah-tye*) [*lin*, a, a tongue]. dim. of *lingua*, tongue. (Carnegie Museum).

**Linhart's Mixture.** See *Linhart's*.

**Linent** (*lin'ent*). See *Linentum*.

**Linentum** (*lin'ent-um*) [*lin*, a, a line; *ment*, to smear; *ph*, *Linentum*]. A liniment. A thin, liquid ointment for external use, especially one containing a solution of a medicinal substance in alcohol, or of oil or oily mixtures. There are some official liniments, and 23 others are given in the U. S. Dispensatory. **L. exsiccans.** See *Exsiccans*. **L. St. John Long's**, a powerful counter-irritant consisting of oil of turpentine, acetic

acid, and yolk of egg. **L., Stokes'**, a stimulating liniment containing oil of turpentine 100, acetic acid 15, rose-water 80, linseed oil 4, and the yolk of one egg. **L., Swediaur's**, a salve for application to carcinomatous ulcers, containing arsenious acid and olive oil.

**Linin** (*lin'inn*) [*linum*, flax]. 1. A strongly purgative principle obtainable from *Linum catharticum*, or purging flax. Unof. 2. In biology, minute threads extending between the individual microsomes (*ids*) in a cell nucleus. (O. von Rath.) The achromatin of the nuclear network; *parachromatin*, less correctly called *nucleo-hyaloplasm*.

**Linitis** (*lin'it-tis*) [*linit*, web; *itis*, inflammation]. An inflammation of the network of filamentous areolar tissue surrounding the vessels of the stomach. **L., Plastic**, a term for fibrinous infiltration of the pylorus. **L., Suppurative**, suppurative or phlegmonous gastritis.

**Link** (*lingk*) [ME., *lenke*, a link]. A loop of a chain. **Linoleic Acid** (*lin'ol-ay-ik*). See *Acid*.

**Linolein** (*lin'ol-ay-in*) [*linum*, flax; *oleum*, oil]. The neutral fat contained in linseed oil, to which the drying property of the oil is due. It is, chemically, a linoleate of glycerin.

**Linseed** (*lin'sed*). See *Linum*. **L. Oil**, *Oleum lini*, is expressed from the seeds of the *Linum usitatissimum*, or flax-plant. By cold pressure is obtained a pale, tasteless oil, which is used in Russia and Poland in cooking, as a substitute for lard or butter. By warm pressure an amber-colored or dark-yellow oil is obtained. Linseed oil is, when fresh, somewhat viscid, but as a drying-oil it gradually absorbs oxygen, and becomes thick and eventually dry and hard. It is used in the preparation of paints, varnishes, printers' ink, and oil-cloth. **L. Poultice**, a poultice made of linseed meal.

**Lint** [*linum*, flax]. A loosely woven or partly felted mass of broken linen-fibers, made by scraping and "picking" old linen cloth. It is used as a dressing for wounds and raw surfaces. See *Charpie*. **L., Common**, lint that is twilled on one side and "woolly" on the other. In the spreading of an ointment the twilled side is used.

**Lintum** (*lin'te-um*) [*lin*]. Lint. **L., Patent**, English charpie; lint that is scraped on both sides, a soft finish being thus given to the two surfaces. **L., Picked**, charpie.

**Linum** (*lin'num*) [*lin*: gen., *Lini*]. Flaxseed. Linseed. The seeds of *L. usitatissimum*, the common flax-plant, containing 30-40 per cent. of fixed (linseed) oil in the embryo of the seed, and 15 per cent. of mucilage in the epithelium. It is a demulcent, emollient, and expectorant, useful in all inflammations of mucous membranes. **L., Cataplasma** (B. P.), made from linseed meal. **L. catharticum** is an active purgative and vermifuge. **L., Farina** (B. P.), flaxseed meal used as a poultice. **L., Ol.**, the fixed oil of flaxseed expressed cold; a glycerid of linoleic acid. Dose  $\frac{3}{4}$  ss-ij. **L., Infus.**, unof., "flaxseed tea," flaxseed  $\frac{3}{4}$  ij, licorice root  $\frac{3}{4}$  j, water  $\frac{3}{4}$  x, infused four hours. Dose indefinite. **L., Semen**, linseed or flaxseed. **Carron Oil**, linseed oil emulsified in lime-water. The genus *Linum* contains several other species.

**Liodermia** (*li'ol-dor-me-ah*) [*leior*, smooth; *déppa*, skin]. A condition of smoothness and glossiness of the skin. **L. essentialis cum melanosí et telangiectasia.** Synonym of *Xeroderma pigmentosum*.

**Liomyoma** (*li'ol-mi'ol-mah*) [*leior*, smooth; *myoma*, a muscle tumor]. A tumor composed of unstriped muscular tissue; its most common seat is the uterus, where, on account of the admixture of fibrous tissue, it is known as uterine fibroid.

**Liotrichous** (*li-ot'-rik-us*). See *Leiotrichous*.

**Lip** [ME., *lip*, lip]. Either of the fleshy folds surrounding the orifice of the mouth; or one of the labia majora. See *Labium*. **L.-protector**, a shield for protecting the lip during a dental operation. **L.-reading, German System of**, a method of teaching deaf-mutes to speak by imitating the movements of the lips and tongue, while modulation is secured by feeling the vibrations of the teacher's larynx, the pupil in this way attempting to control the natural harshness of the laryngeal sounds. **L.-salve**, a cosmetic ointment for the lips.

**Lipa** (*li'-pah*) [L.]. Fat.

**Lipacidemia** (*lip-as-id-el-me-ah*) [*λίπος*, fat; *acidus*, sour; *αἷμα*, blood]. The presence of fatty acids in the blood, with diminution of its alkalinity.

**Lipaciduria** (*lip-as-id-ul-re-ah*) [*λίπος*, fat; *acidus*, acid; *οὐρον*, urine]. The presence of fatty acids in the urine.

**Lipæmia** (*lip-el-me-ah*). See *Lipemia*.

**Liparin** (*lip'-an-in*) [*λίπος*, fat]. A substitute for cod-liver-oil, consisting of pure olive-oil and six per cent. of oleic acid. It speedily emulsifies in weak solutions of soda, has an agreeable taste, and is readily taken. The dose is from 2 to 6 tablespoonfuls daily.

**Lipara** (*lip'-ar-ah*) [*λιπαρός*, fatty]. An emollient plaster.

**Liparia** (*lip-a'-re-ah*) [*λιπαρία*, fatness]. Fatness; obesity.

**Liparocele** (*lip'-ar-o-sel*) [*λιπαρός*, fat; *κήλη*, a tumor]. A fatty tumor or cyst; a hernia containing fatty tissue.

**Liparoid** (*lip'-ar-oid*) [*λιπαρός*, fatty; *εἶδος*, like]. Resembling fat.

**Liparomphalos** (*lip-ar-om'-fal-os*) [*λιπαρός*, fat; *ὄμφαλος*, the navel]. A fatty tumor situated at the navel, or involving the umbilical cord.

**Liparoscirrhus** (*lip-ar-o-skir'-us*) [*λιπαρός*, fat; *σκιρρός*, a carcinomatous growth]. A fatty, scirrhous tumor.

**Liparotrichia** (*lip-ar-o-trik'-e-ah*) [*λιπαρός*, fat; *τρίξ*, hair]. Abnormal greasiness of the hair.

**Liparous** (*lip'-ar-us*) [*λιπαρός*, fat]. Fat; obese.

**Lipemania** (*li-pe-ma'-ne-ah*). See *Lypemania*.

**Lipemia** (*lip-el-me-ah*) [*λίπος*, fat; *αἷμα*, blood]. The presence of an emulsion of fine oil-globules in the blood, a condition sometimes noted in diabetes. **L., Intra-ocular**, a condition characterized by marked distention of the retinal vessels, and a salmon-colored fundus. **L. retinalis**. Same as *L., Intra-ocular*.

**Lipocela** (*lip'-o-sel*). Synonym of *Liparocele*, *q. v.*

**Lipochrin** (*lip'-o-krin*) [*λίπος*, fat; *ἔχρος*, sallow]. A yellow pigment obtained from the fat-globules in the retinal epithelium. It is soluble in chloroform, ether, and benzol. It is probably closely allied to the yellow coloring-matter of many other animal fats. It is slowly bleached by sunlight.

**Lipochrome** (*lip'-o-krôm*) [*λίπος*, fat; *χρῶμα*, color]. Any one of the very numerous fatty pigments of the animal economy, such as the chromophanes and lutein. They are fatty pigments characterized by exhibiting absorption-bands, which, though varying somewhat in position according to the solvent employed, are usually situated toward the violet end of the spectrum. Under this class of pigments are included the *luteins*. These fatty pigments are found in the blood and viscera of many invertebrates.

**Lipodermatous** (*lip-o-der'-mat-us*) [*λείπειν*, to leave; *δέρμα*, skin]. Affected with lipoderma.

**Lipoderma** (*li-po-der'-me-ah*). See *Lipodermia*.

**Lipofibroma** (*lip-o-fi-bro'-mah*) [*λίπος*, fat; *fibroma*, a fibrous tumor]. A lipoma with fibrous elements.

**Lipogastrosis** (*lip-o-gas-tro'-sis*) [*λείπειν*, to leave; to be lacking; *γάστρον*, stomach]. In biology, absence of a proper enteric cavity, or stomach.

**Lipogenesis** (*lip-o-jen'-es-is*) [*λίπος*, fat; *γένεσις*, birth]. The formation or deposit of fat.

**Lipogenous** (*lip-oj'-en-us*) [*λίπος*, fat; *γενῖναι*, to beget]. Fat-producing.

**Lipoid** (*lip'-oid*) [*λίπος*, fat; *εἶδος*, like]. Resembling fat or oil.

**Lipoma** (*lip-o'-mah*) [*λίπος*, fat; *ῥμα*, a tumor; *πλ., Lipomata*]. A fatty tumor. **L. arborescens tuberculolum**, tuberculous disease of a joint, in which the whole inner surface of the synovial membrane is covered with sessile or pedunculated papillomatous growths, small and rather uniform in size. If these become detached they constitute the so-called rice-bodies. **L. colloides**, myxo-lipoma. **L., Cystic**, one containing cysts. **L., Fibrous**. See *Lipofibroma*. **L., Myxo-**, a lipoma containing myxomatous tissue. **L., Pendulous**, *Lipoma pendulum*. **L. pendulum**, a lipoma having a pedicle. **L., Telangiectatic**, one containing many dilated blood-vessels.

**Lipomatoid** (*lip-o'-mat-oid*). See *Lipomatous*.

**Lipomatosis** (*lip-o-mat'-o'-sis*) [*λιπωμα*, a fatty tumor]. A general deposition of fat; obesity.

**Lipomatous** (*lip-o'-mat-us*) [*λιπωμα*, a fatty tumor]. Of the nature of a lipoma; fatty.

**Lipomeria** (*lip-o-me'-re-ah*) [*λείπειν*, to leave; *μέρος*, a part]. A monstrosity having one limb absent.

**Lipomyxoma** (*lip-o-miks-o'-mah*) [*λίπος*, fat; *μύξωμα*, a myxomatous tumor; *πλ., Lipomyxomata*]. A myxoma with fatty elements.

**Liposarcous** (*lip-o-sar'-kus*) [*λείπειν*, to leave; *σάρξ*, flesh]. Lean; emaciated.

**Liposis** (*lip-o'-sis*). See *Lipomatosis*.

**Lipospongosis** (*lip-o-spun-go'-sis*) [*λίπος*, fatty; *σπόγγος*, sponge]. The formation of a fatty or sponge-like outgrowth.

**Lipostomatous** (*lip-o-sto'-mat-us*) [*λείπειν*, to leave; *στόμα*, mouth]. Absence of a mouth.

**Lipostomosis** (*lip-o-sto-mo'-sis*) [*λείπειν*, to leave; to be lacking; *στόμα*, mouth]. In biology, absence of the oral aperture.

**Lipostomy** (*lip-os'-to-me*) [*λείπειν*, to leave; *στόμα*, mouth]. Atrophy of the mouth.

**Lipothymia** (*lip-o-thi'-me-ah*). See *Leipothymia*.

**Lipotype** (*lip'-e-tip*) [*λείπειν*, to leave; to be lacking; *τύπος*, impression, type]. In biology, a type of organism, the absence of which is characteristic of a particular district or region; thus the *Bovide* and *I'veridæ* are lipotypes of the neotropical region.

**Lipoxenous** (*lip-oks'-en-us*) [*λείπειν*, to leave; *ξένος*, host]. In biology, applied to a parasite that leaves its host and completes its existence independently.

**Lippa** (*lip'-ah*). *Lippitudo*, *q. v.*

**Lippia** (*lip'-e-ah*) [after Augustus Lippi, a French physician]. A genus of verbenaceous plants. The leaves of *L. mexicana*, growing in Mexico and the U. S., are demulcent and expectorant, and do not nauseate. Dose of the tincture ʒss-j. *L. dulcis* and *L. graveolens* have similar uses. Unof.

**Lippich's Polarimeter**. A polarimeter for the quantitative determination of sugar in the urine.

**Lippiol** (*lip'-e-ol*) [*Lippia: oleum*, oil]. A medicinal camphor derivable from *Lippia mexicana*. Unof.

**Lippitude** (*lip'-e-tud*), **Lippitudo** (*lip-e-tu'-do*) [*lipus*, blear-eyed; a watery condition of the eyes]. A condition marked by a moist and raw margin of the eyelids, with a discharge of purulent matter. **L. angularis**, a chronic inflammation of the lids at the external canthus. **L. neonatorum**, ophthalmia neonatorum.

**Lipsis** (*lip'-sis*) [*λείψις*, a leaving]. Cessation; ending.

**L. animi**, fainting.

**Lipuria** (*lip-u'-re-ah*) [*λίπος*, fat; *οὐρον*, urine]. The presence of fat in the urine.

**Lipyl** [*lip'yl*] [*lipos*, fat, oil, matter], C 11. The supposed radical of glycerol (which oil is made for glycerol, G 11).

**Liquable** [*li'kwə-bəl*] [*liquare*, to render liquid] Capable of being liquefied.

**Liquatice** [*li'kwə-tis*] [*liquare*, to render liquid] The liquid obtained by melting lard.

**Liquation** [*li'kwə-shən*] [*liquare*, to render liquid] The act of melting.

**Liquorant** [*li'kwə-rənt*] [*liquorare*, to liquify] 1. Having the power to liquify or soften. 2. An agent that has the power to liquify a hard difficult to graze.

**Liquidation** [*li'kwə-shən*] [*liquare*, to render liquid, to bring to liquid state] The condition of having been changed to a liquid. Also, process of change from a solid. **L. necrosis**. See **Necrosis**.

**Liqueactive** [*li'kwə-ak-tiv*] [*liquare*, to render liquid] Possessing the faculty of being acted on by liquidation.

**Liquecent** [*li'kwə-sənt*] [*liquare*, to render liquid] Becoming or passing to liquid. **L. fluid**.

**Liquor** [*li'kwə*] [*liq*, to render liquid] Any cordial or alcoholic drink, especially a compound of alcohol with some flavoring agent, usually a mixture of aromatic oils, it is often combined with a bitter substance derived from roots. Formerly the liquors were used as medicine, but now they are mostly served with the meals. Sometimes employed as vehicles for various poisons.

**Liquid** [*li'kwid*] [*liquere*, to melt]. That kind of a substance in which the molecules are in a state of motion between attraction and repulsion; a substance that flows and takes the shape of the containing vessel. Water between 0° and 100°C. is the best example. **L. Acid-green**. See **Prismat**, **Compound of**. **L. blue**. Same as **Indigo blue**. **L. Gelatin**. See **Gelatin**. **L. Glue**. See **Glue**. **L. Hager's**, a solution of ammonium sulphid or hydrogen sulphid, made by dissolving 0.2 gram of sulphur in 5 ccm. Carbon bisulphid, and adding 5 ccm. of liquid and 1 cc. of ether. **L. Indigo blue**. Same as **Soluble Blue**. **L. Maynard's Adhesive**, carbolic. **L. of Regnaud**. See **Mercury**.

**Liquidambar** [*li'kwid-əm-bər*] [*liquida*, liquid; *ambar*, amber] A genus of sumac-like trees. **L. altingia**, of Malaya, affords a portion of commercial resin. **L. orientale**, of Asia, affords styracis. **L. styraciflua**, of North America produces gum, liquid, resinous, affords a stimulant gum, and is useful in diarrhoea and in coughs and colds. The name of **liquidambar** has been applied to the wood of other trees (*Comptonia asplenifolia*, *Viola*).

**Liquidly** [*li'kwid-lī*] [*liquida*, liquid] Fluidity; the state of being liquid.

**Liquidform** [*li'kwid-fōrm*] [*liqua*, liquid; *fōrma*, form] Of the nature of a liquid.

**Liquor** [*li'kwə*] [*liq*, to render liquid] In pharmacy, any medicinal water of non-volatile substances, except solutions, dressing groups, but excluding the solution of galls (see the subentries). There are 20 official forms, and 5 large numbers besides are given in the U. S. Pharmacopoeia. From the U. S. National Formulary and the British Pharmacopoeia. In anatomy, any fluid in the body. **L. acidus halleri**, consists of 1 part of salivary mucus and 1 part of alcohol, named for John Haller, 1793. **L. amni**, the fluid contained in the amniotic sac, in which the fetus lies. The word is sometimes used for the two parts. A. the outside of membrane is termed the decidua

that of the fetus. It serves a number of useful functions, and in labor protects the fetus and cord from pressure, dilates the os and lubricates the genital canal. **L. Cotunnii**, the perilymph secreted by the fibro-serous membrane of the internal ear. **L. entericus**, the intestinal juice. **L. folliculi**, the fluid filling the follicle or space about the developing ovum in the ovary. **L. gastricus**, the gastric juice. **L. Labarraque's**, liquor sodæ chlorate. **L. lymphæ**, the fluid portion of lymph, analogous to liquor sanguinis. **L. Malt**, a name given to beer, ale, stout, etc. Malt liquors are made by fermenting an infusion of malt (barley) in the presence of hops and other substances. **L. Morgagni**, the small quantity of fluid found between the crystalline lens and its capsule. **L. pancreaticus**, pancreatic juice. **L. sanguinis**, the blood plasma; the fluid portion of the blood. **L. scarpæ**. See **Endolymph**. **L. sedans**. See **Viburnum**. **L. seminis**, a colorless, transparent, and albuminous liquid, which, along with the spermatozoa and seminal granules, constitutes the semen. **L. Spirituous**, a distilled alcoholic liquor. **L. stypticus**, liquor ferri chloridi.

**Liquorice** [*lik' or-is*]. See **Glycyrrhiza**. **L., Wild**. See **Ahrus**.

**Lirate** [*li'-rat*] [*lira*, a ridge]. Ridged or furrowed.

**Lirella** [*li-rell'-ah*] [*lira*, a furrow]. In biology, the peculiarly furrowed apothecium of certain lichens.

**Liriodendrin** [*li-ri-o-dend'-drin*] [*λειριον*, lily; *δένδρον*, tree]. An alkaloidal precipitate from the bark of *Liriodendron tulipifera*. It is stimulant, tonic, and diuretic, and is said to have toxic qualities. Unof.

**Liriodendron** [*li-ri-o-dend'-dron*] [*λειριον*, lily; *δένδρον*, tree]. A genus of magnoliaceous trees. **L. tulipifera**, of N. America and Asia, is the tulip-tree, mis-called poplar. Its bark is stimulant, tonic, and antipyretic. Dose of the saturated tincture one fluidram. Unof.

**Lisfranc's Operations**. See **Operations**, **Table of**. **L.'s Tubercle**, a rough spot on the anterior surface of the first rib near the superior border. It serves for the attachment of the scalenus anticus muscle.

**Lisle's Fever-powder**. A powder similar to **James's Powder**, q. v.

**Lisp** [**ME.**, *lispen*, to lisp]. To imperfectly pronounce the sibilant letters.

**Lisping** [*lis'p-ing*] [**ME.**, *lispen*, to lisp]. A defect of speech, natural or acquired, in which sibilant letters are sounded like linguals, especially *s* as *th*. It sometimes arises from too great length of the tongue.

**Lissauer's Angles**. See **Angles**. **L., Columns of**. See **Column**. **L.'s Tract**, a group of fine nerve-fibers in the spinal cord lying ventrad and dorsad of the entrance of the dorsal roots. These fibers, which proceed from dorsal roots at a lower level, are supposed to be in relation with the posterior vesicular column.

**Lissotrichous** [*lis-ot'-rik-us*] [*λίσσος*, smooth; *τριχίς*, hair]. In biology, having straight, smooth hair; less correctly written *leiotrichous* and *liotrichous*.

**Listen** [*lis'-n*] [**ME.**, *listnen*, to listen]. To give heed to; to give ear.

**Lister's Method**. See **Listerian Methods**, and also, **Fractional Cultivation**.

**Listerian Methods of Dressing Wounds**. Carbolic acid was the first antiseptic, but from its volatility and slowness of action as a germicide, it was replaced by corrosive sublimate. But this proved irritating and was precipitated by the albumin of the blood-serum. What might be called the **Third Method** was the antiseptic dressing called **Sero-sublimate Gauze**,

consisting of a gauze charged with a solution of corrosive sublimate in the serum of horses' blood. This was found difficult to manufacture and was harsh and non-absorbent. The **Fourth Method** consisted in a combination of chlorid of ammonium and bichlorid of mercury, called **Sal-alembroth**. This was likewise objectionable because of its ready solubility in the blood-serum. **Fifth Method**, a gauze containing three or four per cent. by weight of the biniodid of mercury. This proved irritating to the skin. A **Sixth Method** consists in the employment of gauze impregnated with a solution of a double cyanid of zinc and mercury colored with rosanilin. This is said to be non-volatile, unirritating, insoluble in water, and only soluble in 3000 parts of blood-serum. It possesses but little germicidal power, while but 1:1200 keeps animal fluids free from putrefaction. **Seventh Method**; lately Lister has returned to the use of carbolic acid, preferring it to corrosive sublimate: (1) because it is a more powerful antiseptic; (2) because it has greater penetrating power. He combines it with the use of the double cyanid gauze, preparing the latter with a 1 to 20 solution of carbolic acid.

**Listerine** (*lis'-ter-in*) [after *Lister*, an English physician]. A proprietary preparation said to contain thyme, eucalyptus, baptisia, gaultheria, and mentha arvensis, with two grains of benzo-boric acid in each dram.

**Listerism** (*lis'-ter-izm*) [after *Lister*, an English physician]. A general name for the antiseptic and aseptic treatment of wounds according to the principles first enunciated by Lister. See *Listerian Methods*.

**Listing's Law**. See *Law*. **L's Reduced Eye**, in optics, a schematic simplified eye in which there is a mean nodal or principal point lying between the two nodal or principal points, the distance between these two points being so small (only 0.4 mm.) that they may practically be assumed to be one. By this arrangement there is gained but one refractive surface for all the media of the eye. See *Eye*.

**Liter** (*le'-ter*) [*litra*, a pound]. The unit of capacity in the metric system, equal to 0.88036 of an imperial quart, or 1.056 United States quarts; it is the volume of one kilogram of water at its maximum density.

**Lithogogectasia** (*lith-ag-o-jek-ta'-ze-ah*) [*λίθος*, stone; *αγωγός*, leading; *εκτασις*, a stretching out]. Lithectasy.

**Lithagogue** (*lith'-ag-og*) [*λίθος*, stone; *αγωγός*, leading]. Any agent or remedy, not mechanical, which tends to expel calculi from the bladder.

**Litharge** (*lith'-arj*). See *Lead* and *Pigments*, *Conspectus of*.

**Lithate** (*lith'-āt*) [*λίθος*, stone]. Any salt of lithic (uric) acid; a urate.

**Lithectasy** (*lith-ek'-tas-e*) [*λίθος*, stone; *εκτασις*, a stretching out]. Dilatation of the urethra and neck of the bladder for the removal of calculi.

**Lithectomy** (*lith-ek'-to-me*) [*λίθος*, stone; *εκτομή*, a cutting out]. Same as *Lithotomy*.

**Lithemia** (*lith-el'-me-ah*) [*λίθος*, stone; *αἷμα*, blood]. Modified gout. A condition in which, owing to defective metabolism of the nitrogenous elements, the blood becomes charged with deleterious substances, principally, perhaps, of the uric acid group, although their exact chemie nature is not determined.

**Lithemic** (*lith-el'-mik*) [*λίθος*, stone; *αἷμα*, blood]. Pertaining to or suffering from lithemia.

**Lithenate** (*lith'-en-āt*). See *Lithate*.

**Lithia** (*lith'-e-ah*) [*λίθος*, a stone],  $\text{Li}_2\text{O}$ . Oxid of lithium, an alkaline caustic. **L. Water**, mineral water containing lithium salts in solution. In the United States, are the *Buffalo Lithia Water*, water

from Buffalo Lithia Springs, Mecklenburg County, Va.; *Farmville Lithia Water*, from Farmville, Va.; *Londonderry Lithia Water*, from Londonderry N. H. The proportion of bicarbonate of lithia contained in the three waters mentioned is as follows: Londonderry, 8.620, Buffalo, 1.484-2.25, Farmville, 1.99.

**Lithiasic Acid** (*lith-e-as'-ik*). Uric acid, *q. v.*

**Lithiasis** (*lith-i'-as-is*) [*λίθος*, stone]. The formation of calculus, especially of urinary calculus, and of gouty concretions in general; also the general state of the body that favors such calculous formation. **L. conjunctivæ**, an affection of the eyes characterized by calcareous degeneration of the secretion at the mouths of the Meibomian ducts, commonly seen in elderly people, especially such as are rheumatic. On evertng the lids the small, yellowish-white concretions, gritty to the touch, may be found.

**Lithiate** (*lith'-e-āt*). See *Urate*.

**Lithic** (*lith'-ik*) [*λίθος*, stony]. 1. Pertaining to stone, or calculus. 2. Pertaining to lithium. **L. Acid**. See *Acid*, *Uric*.

**Lithium** (*lith'-e-um*) [*λίθος*, stone; *γεν.*, *Lithi*].  $\text{Li} = 7$ ; quantivalence 1. One of the rarer alkaline metals, a few of the salts only being used in medicine. See *Elements*, *Table of*. Because of its low atomic weight, its high saturating-power makes its salts more highly alkaline than those of sodium and potassium. The carbonate and citrate are used largely in rheumatism and gout. **L. benzoas**,  $\text{LiC}_6\text{H}_5\text{O}_2$ . Dose gr. ij-x. See *Benzoic Acid*. **L. bromidum**,  $\text{LiBr}$ . See *Bromin*. **L. carbonas**,  $\text{Li}_2\text{CO}_3$ , not deliquescent. Dose gr. ij-xv. **L.-carmin** solution. See *Stains*, *Table of*. **L. citras**,  $\text{Li}_3\text{C}_6\text{H}_5\text{O}_7$ , deliquescent. Dose gr. v-xxx. **L. guaiacum**, contains 3 parts of guaiacum and 1 of lithium. Dose gr. v. **L. hippuras**, used in gout. Dose gr. v-x. **L. oxidum**. See *Lithia*. **L. salicylas**,  $2\text{LiC}_7\text{H}_5\text{O}_3 \cdot \text{H}_2\text{O}$ . See *Salix*. **Liquor lithiæ effervescens** (B. P.), useful in gout. Dose  $\text{f}\frac{\text{ss}}$  v-x.

**Lithiuria** (*lith-e-ul'-re-ah*) [*λίθος*, stone; *οὔρον*, urine]. Lithuria, *q. v.*

**Lithobexis** (*lith-o-beks'-is*) [*λίθος*, stone; *βήξ*, cough]. Cough with expectoration of calcareous particles.

**Lithocenosis** (*lith-o-sen-o'-sis*) [*λίθος*, stone; *κένωσις*, evacuation]. The extraction of the fragments of calculi that have been crushed or mechanically divided.

**Lithoclast** (*lith'-o-klast*). See *Lithotrite*.

**Lithoclastic** (*lith-o-klas'-tik*) [*λίθος*, stone; *κλάειν*, to break]. Relating to the surgical crushing of a calculus in the bladder.

**Lithoclasty** (*lith'-o-klas-te*). Lithotritry, *q. v.*

**Lithoclysmia** (*lith-o-kliž'-me-ah*) [*λίθος*, stone; *κλίσμα*, clyster]. An injection of solvent liquids into the bladder for the removal of calculi.

**Lithocyst** (*lith'-o-sist*) [*λίθος*, stone; *κύστις*, bladder]. In biology: (a) One of the marginal bodies, in the form of little bags of crystals, found in the covered-eyed *Medusæ*; rudimentary or incipient organs of vision; they are the exclusive seat of spontaneity, so far as the so-called "primary movements" are concerned. (b) One of the "crystal-cells" of plants.

**Lithocystotomy** (*lith-o-sis-tof'-o-me*) [*λίθος*, stone; *κύστις*, bladder; *τομή*, a cut]. Lithotomy, *q. v.*

**Lithocysturia** (*lith-o-sis-tul'-re-ah*) [*λίθος*, stone; *κύστις*, bladder; *οὔρον*, urine]. Disease of the bladder caused by lithuria.

**Lithodectasy** (*lith-o-dek'-tas-e*). Lithectasy, *q. v.*

**Lithodialysis** (*lith-o-di-al'-is-is*) [*λίθος*, stone; *διαλύειν*, to dissolve]. 1. The solution of calculi in the bladder. 2. The surgical operation of breaking or crushing a vesical calculus, previous to its removal by mechanical or other means.

**Lithodalytic** (lith'-o-dal'-yik) [lith', stone; dalye, dissolving]. Pertaining to or taking place in litholysis.

**Lithodolite** (lith'-o-dol'-it) [lith', stone; dol, dolomite]. In geology, denoting a dolomite.

**Lithodramic** (lith'-o-dram'-ik) [lith', stone; drama, L. *Forceps*, to grasp]. Capable of entering a stone. **L. Forceps**, a variety of forceps used in operation for stone in the bladder.

**Lithodysalite** (lith'-o-dys'-al-it) See *Lithodysalite*.

**Lithofelic** or **Lithofelline Acid** (lith'-o-fel'-ik, lith'-o-fel'-in) [lith', stone; fellic, ferric].  $\text{C}_2\text{H}_2\text{O}_4$ . An acid found in lithified corals.

**Lithogenic** (lith'-o-jen'-ik) [lith', stone; gennai, to produce]. The formation of calculi or stones.

**Lithogenoma** (lith'-o-jen'-o-ma) [lith', stone; gennai, to produce]. Pertaining to or causing the formation of calculi or stones.

**Lithogeny** (lith'-o-jen'-i) See *Lithogenoma*.

**Lithoid**, **Lithodal** (lith'-o-id, lith'-o-dal) [lith', stone; oide, oia]. Resembling a stone.

**Lithokelyphopædion** (lith'-o-kel'-yph-o-pæ'-de-on) [lith', stone; kelyphos, shell; pædia, child]. Calcification of the bone with the first rudiments.

**Lithokelyphos** (lith'-o-kel'-yph-os) [lith', a stone; kelyphos, an egg shell]. See *Lithokelyphos*.

**Lithokonon** (lith'-o-kon'-on) [lith', stone; konon, to pulverize]. An instrument formerly used in pulverizing vesical calculi.

**Litholalic** (lith'-o-lal'-ik) [lith', stone; lala, to seize]. An instrument for grasping and holding a vesical calculus during an operation for its removal.

**Litholaby** (lith'-o-lab'-i) See *Lithotripsy*.

**Litholapaxy** (lith'-o-lap'-ak-si) [lith', stone; lapazein, to crush]. An operation for crushing stone in the bladder and removing the fragments at the same sitting by urethra.

**Litholein** (lith'-o-lein) [lith', stone; lein, oil]. A substitute for cod liver oil, and, because of its antiseptic and anesthetic qualities, proposed as a substitute for it. It is oily, of neutral reaction, without smell or taste, and contains no fat.

**Lithology** (lith'-o-lô-jî) [lith', stone; logos, treatise]. The science of the nature and treatment of calculi.

**Litholysis** (lith'-o-lî-sis) [lith', stone; lysis, solution]. See *Litholysis*. **L.** Voltaic, electrolytic litholysis.

**Litholyte** (lith'-o-lî-t) [lith', stone; lyen, to loosen]. A solution used in the litholytic treatment of calculi.

**Litholytic** (lith'-o-lî-tik) [lith', stone; lyen, to loosen]. Pertaining to litholysis, or the dissolving of calculi in the bladder.

**Lithomalacia** (lith'-o-mal'-i-as-i) [lith', stone; mala, bad; kiasis]. The softening of a stone in the bladder; the softening of the calculus.

**Lithometer** (lith'-o-met'-er) [lith', stone; metron, measure]. An instrument for estimating the size of a vesical calculus.

**Lithonetra** (lith'-o-net'-ra) [lith', stone; netra, net]. A lithotome constructed of, or within, the stone.

**Lithomy** (lith'-o-mî) [lith', stone; myn, to mill]. An instrument for pulverizing a calculus.

**Lithomyl** (lith'-o-mî-l) Same as *Lithotripsy*.

**Lithonephros** (lith'-o-neph'-ros) [lith', stone; nephros, kidney]. Denotes the removal of calculi.

**Lithonephritis** (lith'-o-neph'-rit) [lith', stone; nephros, kidney; itis, inflammation]. Inflammation of the kidney due to the presence of renal calculi.

**Lithonephrotomy** (lith'-o-neph'-ro-tô-mî) [lith', stone; nephros, kidney; tomia, cut]. Surgical incision of the kidney for the removal of a renal calculus.

**Lithonlytic**, **Lithonthryptic** (lith'-on-lit'-ik, lith'-on-thryp'-tik) See *Lithotripsy*.

**Lithontripsy** (lith'-on-trip'-se) [lithos, stone; tripzein, to rub]. Synonym of *Lithotripsy*, *q. v.*

**Lithotriptic** (lith'-on-trip'-tik) [lithos, stone; tripzein, to rub]. See *Lithotripsy* and *Antilithic*.

**Lithotriptor** (lith'-on-trip'-tor) [lithos, stone; tripzein, to rub]. A lithotrite.

**Lithopædion** (lith'-o-pæ'-de-on) [lithos, stone; pædion, child]. The calcified or mummified remains of a dead fetus carried in the uterus, its appendages, or the abdominal cavity, sometimes long beyond the normal period of gestation.

**Lithophagy** (lith'-off'-aj-e) See *Lithotripsy*.

**Lithophan** (lith'-o-fan) See *Pigments, Conspectus of*.

**Lithophone** (lith'-o-fon) [lithos, stone; phoni, sound]. An instrument for detecting by sound the presence of calculi in the bladder.

**Lithophthisis** (lith'-off'-this-is) [lithos, stone; phthisis, phthisis]. Tuberculosis of the lungs with calcareous concretions.

**Lithoplatomy** (lith'-o-plat'-om-e) [lithos, stone; platos, wide]. Removal of a vesical calculus by dilating the urethra.

**Lithopriny** (lith'-op'-rin-e) See *Lithotripsy*.

**Lithoprion** (lith'-op'-re-on) [lithos, a stone; prion, a saw]. An instrument for sawing instead of crushing a vesical calculus.

**Lithoprism** (lith'-op'-riz-e) [lithos, stone; prisms, sawing]. The operation of sawing through a stone in the bladder.

**Lithoscope** (lith'-o-skop) [lithos, stone; skopein, to examine]. An instrument for the detection and examination of calculi in the bladder.

**Lithotecnon** (lith'-o-tek'-non) [lithos, stone; teknon, child]. Same as *Lithopædion*, *q. v.*

**Lithoterethrum**, **Lithoteron** (lith'-o-ter'-eth-rum, lith'-o-ter'-et-ron) [lithos, stone; teretron, gimlet]. A lithotrite.

**Lithothlibia** (lith'-o-thlib'-e-ah) [lithos, stone; thliben, to press]. The operation of crushing a vesical calculus between a sound introduced into the bladder and a finger in the rectum or vagina.

**Lithothryptic** (lith'-o-thrip'-tik) [lithos, stone; thruptikos, breaking; threpein, to break]. Same as *Lithotripsy*.

**Lithothryptist** (lith'-o-thrip'-tist) [lithos, stone; threpein, to break]. One who practises lithotripsy.

**Lithothryptor** (lith'-o-thrip'-tor) [lithos, stone; threpein, to break]. An instrument used in lithotripsy.

**Lithothrypty** (lith'-o-thrip'-e) [lithos, stone; threpein, to break]. Lithotripsy; the operation of crushing a calculus.

**Lithotome** (lith'-o-tom) [lithos, stone; tomia, a cutting]. A cutting-instrument for use in lithotomy; a cystotome. **L. caché**, a lithotome in which the blade is concealed, but is readily made to protrude after the introduction of the instrument.

**Lithotomic** (lith'-o-tom'-ik) [lithos, stone; tomia, a cutting]. Relating to lithotomy. **L. Posture**. See *Postures, Table of*.

**Lithotomist** (lith'-o-tom'-ist) [lithos, stone; tomia, a cutting]. A surgeon who practises or performs lithotomy.

**Lithotomy** (lith'-o-tô-mî) [lithos, stone; tomia, to cut]. Incision into the bladder to remove a calculus. **L.**, Bilateral, entrance into the bladder by means of a curved incision into the perineum just in front of the rectum, the lithotome entering by an incision into the urethra at this point. **L.**, Central. See *L.*, Median. **L.**, High, **L.**, Hypogastric, a suprapubic cystotomy for the removal of a stone. **L.**, Lateral, the perineal incision is about 1½ inches in front of the rectum and to the left of the raphé, the cut being

downward and outward, with the patient on his back and the thighs elevated. **L., Median or Marian**, the perineal incision is made in the median line one-half inch in front of the anus, by a straight, double-edged bistoury. **L., Medio-bilateral**, a modification of the bilateral, consisting in a median incision through the perineum, with division of each lateral lobe of the prostate. **L., Medio-lateral**, a modification of the lateral operation, the perineal incision being made in the median line, and the prostatic incision laterally. **L., Perineal**, a lithotomy through a perineal incision. **L. Position**. See *Postures, Table of*. **L., Pre-rectal**, a modification of the bilateral, in which after a median incision through the perineum, the anterior wall of the rectum is dissected from the bulb of the urethra, and the membranous urethra is punctured just anterior to the prostate, the latter being divided by the lithotome. **L., Recto-vesical**, extraction of a vesical stone by an incision through the rectum. **L., Renal, Nephrolithotomy**. **L., Supra-pubic**, by an incision above the pubis at a point where the bladder is not covered by peritoneum. **L., Urethral**, an incision through the membranous portion of the urethra for removal of a calculus imbedded in the urethra. **L., Vaginal**, by incision through the vaginal wall.

**Lithotomy** (*lith-ot'-o-ne*) [*λίθος*, stone; *τείνειν*, to stretch]. Removal of a vesical calculus through an artificial fistula, which is gradually dilated.

**Lithotresis** (*lith-o-tré'-sis*) [*λίθος*, stone; *τρήσις*, a boring]. The drilling of holes through a calculus, as a step in its destruction and removal.

**Lithotripsy** (*lith-o-trip'-se*) [*λίθος*, stone; *τριβειν*, to rub]. The operation of crushing calculi of the bladder. See annexed illustration.

THE LITHOTRITE IN POSITION DURING THE OPERATION OF LITHOTRITY.

**Lithotriptic** (*lith-o-trip'-tik*) [*λίθος*, stone; *τριβειν*, to rub]. Relating to lithotripsy.

**Lithotriptor** (*lith-o-trip'-tor*) [*λίθος*, stone; *τριβειν*, to rub]. An instrument designed for crushing calculi in the bladder. **L., Urethral**, an instrument for crushing urethral calculi.

**Lithotrite** (*lith'-o-trit*) [*λίθος*, stone; *τερεν*, to rub]. An instrument for crushing or pulverizing a vesical calculus.

**Lithotritic** (*lith-o-trit'-ik*) [*λίθος*, stone; *τερεν*, to rub]. Pertaining to lithotrity.

**Lithotrity** (*lith-ot'-rit-e*), **Lithotriture** (*lith-ot'-rit-ūr*)

[*λίθος*, stone; *τερεν*, to rub]. The process of crushing a stone in the bladder, by the lithotrite, into fragments small enough to pass through the urethral canal.

**L., Electric**, lithotrity by means of electrolysis.

**Lithotrypsis** (*lith-o-trip'-sis*). Same as *Lithotrity*, *q. v.*

**Lithotrypterion** (*lith-o-trip'-ter'-e-on*) [*λίθος*, a stone; *τριβειν*, to rub]. A small lithotrite.

**Lithotryptor** (*lith-o-trip'-tor*), **Lythotrypter** (*lith-o-trip'-ter*). Same as *Lithotrite*, *q. v.*

**Lithous** (*lith'-us*) [*λίθος*, stone]. Having the nature or composition of stone.

**Lithoxyduria** (*lith-oks-id-ut'-re-ah*) [*λίθος*, stone; *ὀξύς*, acid; *οὔρον*, urine]. The morbid presence of xanthic acid in the urine.

**Lithuresis** (*lith-u-re'-sis*) [*λίθος*, stone; *οὐρησις*, making water]. The voiding of small calculi with the urine.

**Lithuria** (*lith-ut'-re-ah*) [*λίθος*, stone; *οὔρον*, urine]. A condition marked by excess of lithic acid, or its salts, in the urine.

**Lithurorrhœa** (*lith-u-ror-et'-ah*). Same as *Lithuresis*.

**Litigation Symptoms**. Various vague manifestations of nervous shock following injury, concerning which the question of malingering arises, and which may become the subject of medico-legal inquiry.

**Litmate** (*lit'-mat*) [Dan., *lac*, lac; *moes*, pulp]. A salt of litmic acid.

**Litmic Acid** (*lit'-mik*) [Dan., *lac*, lac; *moes*, pulp]. A constituent of litmus.

**Litmus** (*lit'-mus*) [Dan., *lac*, lac; *moes*, pulp]. Archil. A blue pigment obtained from *Rocella tinctoria*, a lichen. It is employed in chemic determinations to detect the presence of acids and alkalies. See *Pigments, Conspectus of*. **L. Paper, Blue**, unsized paper steeped in a solution of litmus; it turns red on contact with acid solutions. **L. Paper, Red**, unsized paper steeped in litmus tincture colored red with acid; it turns blue on contact with alkaline solutions. **L. Solution, L. Tincture**, a solution of litmus used for the determination of reaction as to acidity or alkalinity.

**Litrameter** (*lit-ram'-et-er*) [*λίτρα*, pound; *μέτρον*, measure]. An instrument for ascertaining the specific gravity of fluids.

**Litre** (*le'-ter*). See *Liter* and *Metric System*.

**Litter** (*lit'-er*) [ME., *litter*, a litter; *lectica*, a couch]. An extemporized stretcher or couch, with handles, for carrying the sick or wounded. **L., Halsted's**, a litter made of two poles, united by two transverse iron bars, and a piece of canvas stretched between the poles. It has four legs, each 14 inches in length. **L., Hand**, a litter that is carried by hand. **L., Schell's**, a litter similar to Halsted's, but instead of having stationary legs the handles are hinged, serving as legs.

**Little, Disease of**. Infantile spasmodic tabes. See *Diseases, Table of*.

**Littoral** (*lit'-or-al*) [*litus*, littoralis, sea-shore]. Belonging to or inhabiting the shore.

**Littre's Glands**. See *Gland*. **L.'s Hernia**, diverticular hernia. See *Diseases, Table of*, and *Hernia*.

**L.'s Operation**. See *Operations, Table of*. **L.'s Suture**. See *Suture*.

**Litura** (*lit-u'-rah*) [*litura*, an erasure, blot, blur; *pl.*, *lituræ*]. In biology, a blurred marking.

**Liturate** (*lit'-u-rat*) [*liturare*, to erase]. Marked with abrasions of the surface. To abrade.

**Live** (*liv*) [ME., *liven*, to live]. To continue in being. To have life.

**Live** (*liv*) [by apheresis from *alive*]. Living; animate; manifesting life. **L.-birth**, birth characterized by "the manifestation of some certain sign or signs of life by the child after it is completely born."

**L.-blood**, the name given to the sensation of fluttering

**Lobate, or Lobed** (*lo'-bat, lobd*) [*lobus, a lobe*]. In biology, possessing lobes, or of the form of a lobe.

**Lobe** (*lob*) [*λόβος, lobus, a lobe*]. Any one of the parts or divisions into which an organ may be separated by fissures and constrictions; as the lobes of the brain, liver, ear, etc. A more or less rounded part or projection of an organ. **Lobes of Brain**; each half of the convex cerebral surface is divided by fissures into five lobes, the frontal, parietal, occipital, temporo-sphenoidal, and central, or island of Reil, to which some writers add a fronto-parietal lobe. See *Brain* and *Fissure*. **Lobes of Liver**. See *Liver*. **L., Marginal**, the first frontal convolution running along the margin of the longitudinal fissure. **Lobes, Optic**, the tubercula quadrigemina. **L., Slender** (*of the cerebellum*). The fourth of the five lobes on the under surface of either hemisphere of the cerebellum.

**Lobelacrin** (*lo-bel-a'-krin*) [from M. de *Lobel*, a French botanist]. An acrid principle derivable from *Lobelia inflata*. Unof.

**Lobelet** (*lob'-let*). Same as *Lobule*.

**Lobelia** (*lo-be'-le-ah*) [from M. de *Lobel*, a French botanist]. The leaves and tops of *L. inflata*, an expectorant, antispasmodic, and emetic; in larger doses a motor depressant and narcotic. It is valuable in asthma and dry cough, and is the main ingredient of empiric cures for pulmonary tuberculosis. It makes an excellent enema in strangulated hernia. **L., Acetum**, 10 per cent. of the drug. Dose  $\mathfrak{m}\nu$ - $\mathfrak{z}\mathfrak{j}$ . **L., Fld.** Ext. Dose  $\mathfrak{m}\mathfrak{j}$ -x. **L., Infus.**, unof.,  $\mathfrak{z}\mathfrak{j}$  to Oj. Dose  $\mathfrak{z}\mathfrak{j}$ - $\mathfrak{z}\mathfrak{j}$ . **L., Tinct.**, 20 per cent. of the drug. Dose  $\mathfrak{m}\nu$ -xxx. **L., Tinct., Ætherealis** (B. P.) Dose  $\mathfrak{m}\mathfrak{x}$ -xxx. The genus *Lobelia* contains many species, most of them having little-understood medicinal qualities.

**Lobelin** (*lo-be'-lin*) [from M. de *Lobel*, a French botanist]. 1. A precipitate from the tincture of *Lobelia inflata*; an emetic, nervine, anti-spasmodic, resolvent and relaxant. Dose, as an emetic 1 to 3 grains in warm water, repeated, if necessary, in ten minutes, until an effect is produced. As a diaphoretic and expectorant from  $\frac{1}{4}$  to  $\frac{1}{2}$  grain. Unof. 2. An oily liquid alkaloid, from the plant *Lobelia inflata*; actively poisonous. Unof.

**Lobopneumonia** (*lo-bo-nu-mo'-ne-ah*). See *Pneumonia, Croupous*.

**Lobstein's Cancer**. Retroperitoneal sarcoma. It often attains a considerable size. See *Diseases, Table of*.

**Lobular** (*lob'-u-lar*) [*lobulus, a little lobe*]. Like a lobule. Pertaining to any lobule. **L. Pneumonia**. See *Pneumonia, Catarrhal*.

**Lobulate, Lobulated** (*lob'-u-lät, lob'-u-la-ted*) [*lobulatus, from lobulus, a little lobe*]. Consisting of small lobes or lobules.

**Lobulation** (*lob-u-la'-shun*) [*lobulus, small lobe*]. Division into lobules. **L., Congenital**, preservation in adult life of the fetal lobulation of an organ.

**Lobule** (*lob'-ül*) [*lobus, a lobe*]. See *Lobulus*. **L., Oval**, the paracentral lobule. **L., Paracentral**, the superior connecting convolution of the ascending frontal and ascending parietal gyri. **L., Pneumogastric**, the flocculus of the cerebellum.

**Lobule** (*lob'-u-lät*) [dim. of *lobulus, a lobule*]. A minor lobule, especially of the lung; a group, or series of groups, of five or six air-sacs connected with the dilated end of a bronchiole.

**Lobulization** (*lob-u-liz-a'-shun*). See *Lobulation*.

**Lobulus** (*lob'-u-lus*) [dim. of *lobus, a lobe*; *pl., Lobuli*]. A small lobe or division of an organ. **L. caudatus**, the tailed lobe, or elevation of the liver that separates the right extremity of the transverse fissure from the commencement of the fissure for the inferior vena cava.

**L. centralis**, the superior vermiform process; the island of Reil. **L. corporis striati**, the island of Reil; the lenticular nucleus. **L. of Ear**, the soft mass at the lower part of the pinna of the ear. **L. fissuræ sylvii**, the island of Reil. **L. hepatis anonymus**. See *Liver, Quadrate Lobe of*. **L. paracentralis**, the mesial aspect of the upper portion of the ascending parietal convolutions, in front of the up-curved end of the colloso-marginal fissure. **L. quadratus**, the square lobe upon the inferior surface of the right lobe of the liver. **L. spigellii**, the lobule projecting from the posterior portion of the inferior surface of the liver. **L. tubercis**, the nodule of the cerebellum; the supra-marginal gyrus. **L. vagi**, the flocculus of the cerebellum.

**Lobus** (*lo'-bus*) [*L., a lobe*]. A lobe. Any well-defined, rounded part of an organ. **L. caudatus**. See *Lobulus*. **L. opertus**, the insula of the brain. **L. quadratus**. See *Lobulus*.

**Local** (*lo'-kl*) [*localis; locus, place*]. Not general. Affecting a part or place.

**Localization** (*lo-kal-iz-a'-shun*) [*locus, a place*]. The designation of the seat of any pain, irritation, injury, or

DIAGRAM OF THE MOTOR AREAS ON THE OUTER SURFACE OF A MONKEY'S BRAIN. (Horsley and Schäfer.)

DIAGRAM OF THE MOTOR AREAS ON THE MARGINAL CONVOLUTION OF A MONKEY'S BRAIN. (Horsley and Schäfer.)

disease, or the process by which a general condition manifests itself in a particular place. The faculty of locating sensory impressions. **L., Cerebral**, the determination of the anatomic position of the centers in the brain that preside over certain physiologic acts; or of the seat of pathologic conditions interfering with the proper function of these centers. See illustrations annexed. **L., Spinal-cord**; Gowers' table, showing the approximate relations to the spinal nerves of the various functions of the cord, is given herewith.

|   | MOTOR   | SENSORY.   | REFLEX.                       |
|---|---|--|-------------------------------|
| C<br>1<br>2<br>3<br>4<br>5<br>6<br>7<br>D1                        | Sterno-mastoid<br>Trapezius<br>Diaphragm<br>Serratus<br>Shoulder<br>Arm<br>Hand<br>(ulnar, lowest). | Neck and scalp.<br>Neck and shoulder.<br>Shoulder.<br>Arm.<br>Hand | Scapular.                     |

FIG. 144 AND TABLE SHOWING THE APPROXIMATE RELATION TO THE SPINAL NERVES OF THE VARIOUS MOTOR, SENSORY AND REFLEX FUNCTIONS OF THE SPINAL CORD. (Arranged by W. R. Gowers, from anatomic and pathologic data.)

Localized (*lo' ke-ah*) [*loce*, a place] Confined to a particular part.

Lochia (*lo' ke-ah*) [*loce* + *chē*, a little place: *pl.*, *Lochia*] In lochia, a placation of a bacillus.

Lochial (*lo' ke-ah*) [*loce*, a place; *chē*, a little place] (Old.) Lochial the lochia.

Lochia (*lo' ke-ah*) [*loce*, a place; *chē*, a little place] The discharge from the genital apparatus during from two to four weeks immediately after L. alba, the white flow that takes place from about the seventh day.

L. rubra, the pink flow from about the first to a day.

serosa, the serous discharge taking place about the fifth day.

Lochia (*lo' ke-ah*) [*locheia*, childbirth]. Childbirth; confinement. (Rare.)

Lochial (*lo' ke-ah*) [*locheia*, *lochos*, lying-in]. Pertaining to the lochia.

Lochiation (*lo ke-ah-shun*) [*locheia*, *lochos*, lying-in]. Aveling's term for the excretion of the lochia.

Lochioceliitis (*lo ke-ah-se-le-i-tis*) [*lochos*, puerperal; *celia*, abdomen; *-itis*, inflammation]. Puerperal abdominal inflammation.

**Lochiocolica** (*lo-ke-o-kol'-ik-ah*) [*λόχιος*, puerperal; *κολικός*, pertaining to the colon]. Pain in the abdominal region dependent upon, or associated with, some lochial irregularity.

**Lochiodochium** (*lo-ke-o-dol'-ke-um*). See *Lochodochium*.

**Lochiometra** (*lo-ke-o-mel'-trah*) [*λόχια*, lochia; *μήτρα*, uterus]. A collection of lochia in the uterus.

**Lochiopyra** (*lo-ke-op'-ir-ah*) [*λόχιος*, relating to childbirth; *πῦρ*, fire, fever]. Puerperal fever. Same as *Lochopyra*.

**Lochiorrhagia** (*lo-ke-or-af'-je-ah*) [*λόχια*, lochia; *ῥήγνιναι*, to burst forth]. An excessive flow of the lochia.

**Lochiorrhea** (*lo-ke-or-el'-ah*) [*λόχια*, lochia; *ῥοία*, a flow]. An abnormal flow of the lochia.

**Lochiorrhoic** (*lo-ke-or-el'-ik*) [*λόχια*, lochia; *ῥοία*, flow]. Pertaining to lochiorrhea.

**Lochioschesis** (*lo-ke-os'-kes-is*) [*λόχια*, lochia; *σχίσσις*, retention]. Suppression or retention of the lochia.

**Lochioschetic** (*lo-ke-os-ket'-ik*) [*λόχια*, lochia; *σχίσσις*, retention]. Pertaining to lochioschesis.

**Lochocacocolpia** (*lo-ko-kak-o-kol'-pe-ah*) [*λόχος*, childbed; *κακός*, evil; *κόλπος*, vagina]. Vaginal or vulval gangrene after childbirth.

**Lochoceliitis** (*lo-ko-se-le-i'-tis*). See *Lochioceliitis*.

**Lochodochium** (*lo-ko-dol'-ke-um*) [*λόχος*, childbirth; *δέχεσθαι*, to receive]. A lying-in hospital; a maternity.

**Lochomeleagra** (*lo-ko-mel-e-a'-grah*) [*λόχος*, childbirth; *μέλος*, limb; *ἄγρυ*, seizure]. An attack of pain in the limbs of parturient women.

**Lochometritis** (*lo-ko-me-tri'-tis*) [*λόχος*, childbirth; *μήτρα*, womb; *ιτις*, inflammation]. Inflammation of the womb consequent upon delivery; puerperal metritis.

**Lochometrophlebitis** (*lo-ko-me-tro-fle-bi'-tis*) [*λόχος*, childbirth; *μήτρα*, womb; *φλέψ*, vein; *ιτις*, inflammation]. Phlebitis of the uterine veins in puerperal women.

**Locho-oöphoritis** (*lo-ko-o-off-or-i'-tis*) [*λόχος*, childbed; *ὠόν*, egg; *φορός*, bearing; *ιτις*, inflammation]. Puerperal inflammation of an ovary.

**Lochoperitonitis** (*lo-ko-per-it-on-i'-tis*) [*λόχος*, childbed; *περιτόναιον*, peritoneum; *ιτις*, inflammation]. Inflammation of the peritoneum following childbirth.

**Lochopyra** (*lo-ko-p'-ir-ah*) [*λόχος*, childbed; *πῦρ*, fire, fever]. Puerperal fever.

**Lochos** (*lo'-kos*) [*λόχος*, childbirth]. A pregnant woman; childbed. (Obs.)

**Lochotyphus** (*lo-ko-ti'-fus*) [*λόχος*, childbed; *τύφος*, stupor]. Puerperal fever of a typhoid type.

**Lock** (*lok*) [ME., *lok*, lock]. 1. Anything that fastens something else. 2. To fasten by means of a lock; to fasten so as to impede motion. **L.-finger**, a peculiar and very uncommon affection of the fingers in which they suddenly become fixed in a flexed position. The locking is due to the presence of a small fibrous growth in the sheath of the extensor tendon. **L.-hospital**, an English hospital for the treatment of venereal diseases; it was originally kept with locked doors, whence the name. **L.-jaw**, tetanus; trismus. **L.-spasm**, Weir Mitchell's term for a severe form of writer's cramp, the hand becoming spasmodically firmly contracted, the spasm being followed by complete relaxation.

**Locked** (*lokt*) [ME., *lok*, a lock]. Fastened by means of a lock; immovable. **L. Heads**. See *Head-locking*. **L. Jaw**. See *Trismus*. **L. Joint**, Pajet's term for a condition similar to that described as lock-finger, but usually involving a knee-joint.

**Loco** or **L. Plant** or **L. Weed** (*lo'-ko*) [Sp. for "crazy"]. A name given in parts of the U. S. to

various species of *Astragalus*, *Hosackia*, *Oxytropis*, and *Sophora*, poisonous plants that are believed to cause loco-disease in cattle and horses. **L.-disease**, a local epizootic disease of cattle and horses, believed to be liable to follow the eating of any one of the plants called *loco*.

**Locoed** (*lo'-kod*) [Sp., *loco*, crazy]. Suffering from *Loco-disease*, q. v.

**Locomobile** (*lo-ko-mol'-bil*) [*locus*, place; *mobilis*, movable]. Having the power to change place, or to move from a place.

**Locomobility** (*lo-ko-mol'-bil'-it-e*) [*locus*, place; *mobilis*, movable]. The quality of being locomobile.

**Locomotility** (*lo-ko-mo-til'-it-e*) [*locus*, place; *motilitas*, motility]. The quality or power of moving from place to place.

**Locomotion** (*lo-ko-mol'-shun*) [*locus*, place; *movere*, to move]. Animal movement. **L. of an Artery**, the straightening out of a curved artery under the impulse of the pulse-wave.

**Locomotive** (*lo-ko-mol'-tiv*) [*locus*, a place; *movere*, to move]. Moving from place to place; able to change its place; pertaining to locomotion. **L. Pulse**. See *Corrigan's Pulse*.

**Locomotivity** (*lo-ko-mo-tiv'-it-e*) [*locus*, place; *movere*, to move]. The power to move from one place to another.

**Locomotor** (*lo-ko-mol'-tor*) [*locus*, a place; *motor*, a mover]. 1. Pertaining to locomotion. 2. That which moves from place to place. **L. Ataxia**, or **L. Ataxy**. See *Ataxy* and *Tabes*.

**Locomotorium** (*lo-ko-mo-to'-re-um*) [*locus*, a place; *motor*, mover; *pl.*, *Locomotoria*]. In biology, the motive apparatus of an organism; the bones, muscles, and tendons.

**Locomotory** (*lo-ko-mol'-tor-e*) [*locus*, place; *movere*, to move]. Pertaining to locomotion.

**Loculament** (*lok'-u-lam-ent*) [*loculamentum*, a case, box, cell]. Same as *Loculus*.

**Loculamentum** (*lok-u-lam-en'-tum*). Same as *Loculus*.

**Locular, Loculate** (*lok'-u-lar, lok'-u-lat*) [*loculus*, a cell]. In biology, possessing one or more cell-like subdivisions; divided into or having loculi.

**Locule** (*lok'-ul*). See *Loculus*.

**Loculicidal** (*lok-u-lis-i'-dal*) [*loculus*, a cell; *cædere*, to cut]. In biology, applied to seed-capsules that split open along the dorsal suture.

**Loculus** (*lok'-u-lus*) [dim. of *locus*, a place; *pl.*, *Loculi*]. In biology, a small space or cavity; a small compartment or cell, as the seed-chamber of a fruit.

**Locus** (*lo'-kus*) [L.: *pl.*, *Loci*]. An indefinite term in anatomy, meaning a place or position. **L. cinereus**, **L. cæruleus**, **L. ferrugineus**, a bluish-tinted eminence on the fasciculi teretes of the fourth ventricle of the brain. **L. luteus**, the regio olfactoria of the nose; so called from the yellowish color of the epithelium. **L. minoris resistentiæ**, a spot of diminished resistance—a term given to a locality, varying in different individuals, and often accidentally developed, whose resistance to the invasion of disease is less than that of other parts. **L. niger**, a dark area in the center of a section of the crus cerebri. See *Intercalatum*. **L. perforatus**, a name given to the anterior and the posterior perforated space at the base of the brain through which many vessels pass. **L. prædilectorius**, the point of election. **L. ruber**, the red nucleus of the tegmentum.

**Locust-tree**. See *Hymenæa courbaril*.

**Lodicule** (*lod'-ik-l*). Same as *Lodicule*.

**Lodicula** (*lod-ik'-u-lah*). Same as *Lodicule*.

**Longevity** (*lon-jev'-it-e*) [*longa*, long; *vita*, life]. Long life.

**Longi-** (*lon'-je-*) [*longus*, long]. A prefix signifying length or extent.

**Longicaudate** (*lon-je-kav'-dat*) [*longus*, long; *cauda*, a tail]. In biology, having a long tail.

**Longiductor** (*lon-je-duk'-tor*) [*longus*, long; *ductor*, leader]. The adductor longus muscle. See *Muscles*, *Table of*.

**Longimanus** (*lon-je-ma'-nus*) [*longus*, long; *manus*, hand]. Long-handed.

**Longing** (*larang'-ing*) [ME., *longen*, to desire earnestly]. The earnest desire for anything; it is a condition often present in the female during pregnancy.

**Longipede** (*lon-je-pe'-dat*) [*longus*, long; *pes*, foot]. Long-footed.

**Longiperoneus** (*lon-je-per-o-ne'-us*) [*longus*, long; *peronē*, fibula]. The peroneus longus muscle. See *Muscles*, *Table of*.

**Longipes** (*lon'-je-pēs*). See *Longipede*.

**Longisect** (*lon-je-sekt'*) [*longus*, long; *secare*, to cut]. To make a longisection, *q. v.*

**Longisection** (*lon-je-sekt'-shun*) [*longus*, long; *sectio*, cutting]. Longitudinal section; especially used of the body from extremity to extremity. The division of a body into sections parallel with its long axis. See *Position and Direction*, *Table of*.

**Longissimus** (*lon-jis'-im-us*) [super. of *longus*, long]. Longest. **L. capitis**, **L. cervicis**, the trachelomastoid muscles. See *Muscles*, *Table of*. **L. dorsi**. See *Muscles*, *Table of*.

**Longitude** (*lon'-jit-ūd*) [*longitudo*, length]. Angular distance from any standard meridian perpendicular to the plane of the axis.

**Longitudinal** (*lon-jit-ū'-din-al*) [*longitudinalis*, pertaining to length]. In anatomy, lengthwise, or in a direction the opposite of transverse. **L. Fissure**, of the *cerebrum*. See *Fissures*, *Table of*. **L. Sinus**, the triangular subcranial venous channel extending from the crista galli to the tentorium.

**Longus** (*larang'-gus*) [*L.*, long]. Long. **L. colli**. See *Muscles*, *Table of*. **L. capitis**, the rectus capitis anticus major muscle. See *Muscles*, *Table of*. **L. dorsi**. The longissimus dorsi muscle. See *Muscles*, *Table of*. **L. lumborum**, an inconstant muscle attached to the bodies of the two upper lumbar vertebrae and the three lower dorsal vertebrae.

**Lonsdale's Apparatus**. An apparatus for treating fracture of the patella, consisting of movable arms suspended from two upright rods that are attached to a long posterior splint. To these arms are fastened padded plates that hold the fragments together.

**Loöch** (*lo-ok'*) [Fr.]. Same as *Loch*.

**Loodianah Disease**. See *Anthrax*.

**Loofah** (*loo'-fah*). See *Luffa*.

**Look-at-his-face Disease**. Carate; a form of syphilitic skin-disease in Spain, characterized by blotches upon the face.

**Loong**. See *Lung*.

**Loop** [ME., *lope*, a loop]. A folding of a cord, fiber, tube, or cord-like structure, upon itself. **L. of Henle**. See *Tubuli uriniferi*. **L.**, Obstetric, the fillet.

**Looped** (*loopt*) [ME., *lope*, loop]. Doubled upon itself; containing loops. **L. Tubes of Henle**. See *Tubuli uriniferi*.

**Loose** (*lūs*) [ME., *loos*, loose]. Lax; wanting power of restraint; as *loose bowels*. **L. Ligature**. See *Ligature*.

**Looseness** (*loos'-nes*) [ME., *loos*, loose]. Popular name for diarrheæ. **L. of the Teeth**, *Odontoseisis*; *Odontosismus*; this results from disease of the gums and the gradual destruction of the alveolar processes.

**Loosestrife** (*loos'-strif*). See *Lysimachia*.

**Lophadia** (*lo-fud'-e-ah*). See *Lophia*.

**Lophanthus** (*lo-fan'-thus*) [*λόφος*, crest; *ἄνθος*, flower]. A genus of labiate plants, popularly called hyssops, or hedge-hyssops. **L. anisatus**, **L. nepetoides**, and **L. urticæfolius** of North America have the general properties of the mint-family. Unof.

**Lophia** (*lo'-fe-ah*) [*λόφος*, the back of the neck]. The upper part of the back near the first dorsal vertebra.

**Lophin** (*lo'-fin*) [*λόφος*, a tuft],  $C_{21}H_{18}N_2$ . Triphenyl glyoxalin; a substance produced by distilling amarin. It is not readily soluble in alcohol, crystallizes in long needles, and melts at 275° C.

**Lophodontous** (*lo-fe-o-don'-tus*) [*λόφος*, crest; *ὀδοίς*, tooth]. Having crested molar teeth.

**Lophodont** (*lo'-fo-dont*) [*λόφος*, a crest; *ὀδοίς*, tooth]. In biology, applied to that dentition in which the crowns of the molar teeth possess ridges or crests, as distinguished from *bunodont*. See *Lophodontous*.

**Lophophore** (*lo'-fo-for*) [*λόφος*, a crest; *φόρος*, bearing]. In biology, the frame or stage surrounding the mouth of a polyzoan and giving support to the tentacles.

**Lophosteon** (*lo-fos'-te-on*) [*λόφος*, a crest; *ὀστέον*, bone: *pl.*, *Lophostea*]. In biology, the median one of the five bones that make up the sternum of a carinate bird.

**Loquacity** (*lo-kvas'-it-e*) [*loquacitas*; *loquax*, talkative]. Volubility of speech; talkativeness; a condition that is frequently excessive in various forms of mental disorder.

**Lorate** (*lo'-rat*) [*lorum*, a thong, or lash]. In biology, shaped like a long strap.

**Lordoma** (*lor-do'-mah*) [*λορδοῦν*, to bend inward]. The anterior or forward incurvation of the spine.

**Lordoscoliosis** (*lor-do-sko-le-o'-sis*) [*λόρδωσις*, *λορδόειν*, to bend; *σκολίωσις*, crookedness]. Lordosis with scoliosis.

**Lordosis** (*lor-do'-sis*) [*λόρδωσις*, *λορδόειν*, to bend]. A curvature of the spine with a forward convexity. **L.**, Paralytic, lordosis due to paralysis of either the spinal or the abdominal muscles. **L. valgorum**, genu valgum, *q. v.*

**Lordotic** (*lor-dot'-ik*), **Lordotic** (*lor-dos'-ik*), **Lordous** (*lor'-dus*) [*λόρδωσις*, *λορδόειν*, to bend]. Bent with the convexity turned ventrad; applied to the spinal column.

**Lore** (*lor*) [*lorum*, a thong, lash, strap]. In biology, the space between the eye and the bill or nostrils in birds and reptiles.

**Loreta's Operation**. 1. The forcible dilatation of the pylorus for the relief of stricture after celiogastrotomy. 2. The treatment of aneurysm by the introduction of metal wire into the sac, through which a current of electricity is then passed. See *Operations*, *Table of*.

**Lorica** (*lor-ri'-kah*) [*L.*, a corselet, cuirass: *pl.*, *Loricæ*]. In biology, a protective sheath or carapace.

**Loricæ** (*lor'-ik-āt*) [*lorica*, a coat of mail]. In biology, covered with a protective coat.

**Lorication** (*lor-ik-a'-shun*) [*lorica*, a leather cuirass]. The protection of a glass vessel against heat by a coating of sand and clay.

**Loriculate** (*lor-ik'-u-lāt*) [*loricula*, a small breastplate]. Consisting of long divisions.

**Lorum** (*lo'-rum*) [*L.*, thong, whip, strap: *pl.*, *Lora*]. Same as *Lore*.

**Lourd, Lourderie** (*loord, loor'-der-e*). See *Gid*.

**Losi-piercing** (*lo'-se-pēr'-sing*). See *Thoka-losi*.

**Losophan** (*lo'-so-fan*). Tri-iodo-cresol, an agent said to be strongly parasitocidal, and useful in parasitic dermatoses, whether due to fungous or animal parasites.

**Losterfer's Corpuscles.** The granular masses alleged by Losterfer to have been found in the blood of syphilitic patients.

**Lote** (lot) See *Lotus*.

**Lotio** (lot-ee-oh) See *Lotion*. L. adstringens. Astringent lotion, consisting of five parts of sulphuric acid and two parts each of tannin and alcohol.

**L. nigra** See *Hydrocyanic*.

**Lotion** (lot-ion) (Lotus, a water). Any fluid, in a solution or emulsion, of external use. L. Black. See *Hydrocyanic*. L. Cold Evaporating. Camph. acet. 3ss, glycer. 3ss, water 3i. Or, camph. subacet. 13i, tannin 3i, glycer. 3i, water 3i. Or, for external use. L. Goulard's. Rhus plumbi subacetatis. See *Hydrocyanic*. L. for Mouth, with pyrolig. 3i, glycer. 3i, water 3i. Or, tinct. myrrh 3ss, oil of cloves 5, water 13i. L. Red, zinc sulph. 3i, glycer. 3i, water 3i, tinct. lavender comp. 3i, 3ss, water 3i.

**Lotophagus** (lot-off-ah-sus) [*lotus*, lotus; *phagen*, to devour]. *Lotus* eating.

**Lotura** (lot-ee-ur) (L.) L. carnalis. L. carnalis, a stimulant and serous liquid some times introduced in cases of dysentery or diarrhea.

**Lotus's Angina.** See *Lotus's Angina*. L.'s Angle. See *Angle*. L.'s Law. See *Law*.

**Louping-ill** (loo-ping-ill) (L. illud, *illud*, to spring). Louping-ill is a kind of sleep causing them to spring up, going forward slowly. It is due to the presence of a cystic parasite in the spinal canal. See *Parasites*, under *Piratus* (Animal), Table of.

**Louise** (loo-ee) See *Pedicularis*.

**Lousiness** (loo-ee-niss) See *Pediculus*.

**Lousy** (loo-ee) [ML., *lous*, a louse]. Affected with pediculosis.

**Loused Panes.** See *Lentilium*.

**Lovage** (lov-ah) (ML., *herbaria*). The root of *Ligusticum officinale* and *Ligusticum sibiricum*, stimulant, emmenagogue, and emmenagogue drugs. Dose of dried root 13i. Unof.

**Love** (lov) (ML., *amor*, to love). 1. To regard with strong affection. 2. Sexual passion. L.-potion. See *Lotion*.

**Low Crown.** An artificial crown inserted into the crown part of a tooth. It consists of a gold-backed porcelain facing, to which is attached a combined gold and porcelain shell. In its proper form, is called a "deepening," and which fits into an enlarged root-socket of a denture base.

**Lower Tubercle of.** See *Tubercle*.

**Loxa Bark** (loxa-bark) Pale cinchona; the bark of *Cinchona officinalis*.

**Loxarthron** (loks-ar-thron) [*loxos*, slanting; *arthron*, joint]. A joint in abnormal direction of a joint, determined by spasm or fixation.

**Loxarthrosis** (loks-ar-thro-sis) [*loxos*, awry; *arthrosis*, joint]. Abnormality of a joint.

**Loxarchenus** (loks-ar-chenus) [*loxos*, oblique; *archenus*, arch]. Lissauer's term for a skull in which the angle formed by the intersection of the radius fixus and a line drawn between the nasion and theinion is between 14° to 20°.

**Loxia** (loks-ee-ah) See *Loxia*.

**Loxia** (loks-ee-ah) [*Loxia*, distorted]. Distorted, awry; twisted.

**Loxochordia** (loks-oh-chor-dia) [*loxos*, oblique; *chorda*, chord]. Lissauer's term for a skull in which the angle formed between the intersection of the radius fixus and the line drawn from the bregma to the lambda is between 17° and 27°.

**Loxocoryphus** (loks-oh-kor-ee-fus) [*Loxia*, oblique;

*Loxia*, the head]. Lissauer's term for a skull in which the angle formed by the intersection of the radius fixus and a line connecting the bregma and the lambda is between 17° and 28.5°.

**Loxocyesis** (loks-oh-si-ee-sis) [*Loxia*, awry; *kyesis*, pregnancy]. Oblique displacement of the gravid uterus.

**Loxodont** (loks-oh-dont). **Loxodontous** (loks-oh-dont-ous) [*Loxia*, slanting; *odont*, tooth]. Having teeth placed at abnormal angles with the jaw.

**Loxolophodont** (loks-oh-lof-oh-dont) [*Loxia*, slanting; *Loxia*, a crest; *odont*, tooth]. In biology, a form of dentition in which oblique crests connect the anterior internal tubercle of the upper molars with two external tubercles; this is characteristic of a gigantic Ungulate.

**Loxometopus** (loks-oh-met-oh-fus) [*Loxia*, oblique; *metopon*, the space between the eyes]. Lissauer's term for a skull in which the angle formed by the intersection of the radius fixus and a line drawn from the bregma to the nasal point is between 43° and 47°.

**Loxophthalmos** (loks-off-thal-fos). Synonym of *Strabismus*, q. v.

**Loxopisthius** (loks-oh-pis-the-us) [*Loxia*, oblique; *opisthi*, hinder]. Lissauer's term for a skull in which the angle formed by the intersection of the radius fixus and a line drawn through the lambda and theinion is between 95° and 104°.

**Loxopisthocranium** (loks-oh-pis-tho-kra-ne-us) [*Loxia*, oblique; *opistheon*, behind; *kranion*, skull]. Lissauer's term for a skull in which the angle formed between the radius fixus and a line drawn through the lambda and the opisthion is between 119° and 130°.

**Loxoprosopus** (loks-oh-pros-oh-fus) [*Loxia*, oblique; *prosopon*, face]. Lissauer's term for a skull in which the angle formed by the intersection of the radius fixus and a line drawn from the nasion to the alveolar point is between 78.5° and 89.5°.

**Loxopterygin** (loks-oh-ter-ee-jin) [*Loxia*, oblique; *pteryx*, a wing]. C<sub>26</sub>H<sub>34</sub>N<sub>2</sub>O<sub>2</sub>. A white amorphous alkaloid obtained from the bark of *Loxopterygium lorentzii*.

**Loxopterygium** (loks-oh-ter-ee-jum) [*Loxia*, oblique; *pteryx*, wing]. A genus of anacardiaceous trees. L. lorentzii, L. sagotii, red quebracho, the bark of which is used as a substitute for cinchona. Unof.

**Loxorhinus** (loks-oh-rhin-us) [*Loxia*, oblique; *rhis*, nose]. Lissauer's term for a skull in which the angle formed between the radius fixus and a line drawn from the nasion to the subnasal point is between 77.5° and 87.5°.

**Loxotic** (loks-oh-ik). See *Loxic*.

**Loxotmesis** (loks-oh-met-sis). See *Loxotomy*.

**Loxotomy** (loks-oh-oh-me) [*Loxia*, oblique; *tomē*, a cutting]. That form of amputation commonly known as the "oblique section."

**Loy's Disease.** Horse-pox. See *Diseases*, Table of.

**Lozenge** (loz-enj) [ME., *losange*, lozenge]. A medicated tablet with sugar as a basis. See *Trochiscus*.

**Lubido** (lu-bid-oh). See *Libido*.

**Lubricant** (lu-brik-ant) [*lubricare*, to make smooth]. Making smooth, oily, or slippery.

**Lubricating** (lu-brik-a-ting) [*lubricare*, to make smooth]. Making smooth or slippery. L. Oils, oily products obtained chiefly from petroleum and used for lubricating purposes. Some crude petroleum oils are natural lubricating oils, requiring little or no treatment to fit them for use. The other petroleum lubricating oils are obtained in one of two ways—either by driving off the light hydrocarbons from the crude oil, yielding what is called a "reduced oil," or they are the oils obtained by distilling the petroleum residuum in tarstills. The lightest of the lubricating oils, varying in gravity from 32° B. to 38° B., are frequently called "neutral oils." They are largely used for the purpose of

- mixing with animal or vegetable oils, and it is therefore necessary that they should be thoroughly deodorized, decolorized, and deprived of the blue fluorescence, or "bloom," characteristic of petroleum distillates that contain paraffin. Heavier lubricating oils are called "spindle" oils and "cylinder" oils. The most important characters to be possessed by these oils are high fire-test, low cold-test, and a high degree of viscosity.
- Lubrication** (*lu-brik-a'-shun*) [*lubricare*, to make smooth]. The process of making smooth or slippery by the application of a lubricant.
- Lubricity** (*lu-bris't-it-e*) [*lubricare*, to make slippery]. A synonym of lasciviousness; slipperiness.
- Lubricous** (*lu'-brik-us*) [*lubricus*, *lubricare*, to make smooth]. Smooth, slippery.
- Luca**, **Horizontal Plane of**. See *Plane*.
- Lucent** (*lu'-sent*) [*lucere*, to shine]. Bright, shining.
- Lucernal** (*lu-sev'-nal*) [*lucerna*, a lamp]. Pertaining to lamp-light.
- Lucet**, **Bacillus of**. See *Bacteria*, *Synonymatic Table of*.
- Lucid** (*lu'-sid*) [*lucidus*, clear]. Clear, shining, unobscured. In biology, having a smooth, shining surface.
- L. Interval**, the transitory return of normal mental action and sanity in certain forms and cases of insanity.
- Lucidity** (*lu-sid'-it-e*) [*lucidus*, clear]. Clearness; lucid interval.
- Lucidium** (*lu'-sid-um*) [*lucidus*, clear]. Clear. **L.**, **Septum**. See *Septum*.
- Luciferase** (*lu-sif'-er-az*) [*lucifer*, light-bringing]. The name applied by Dubois to one of the two diastatic substances which become phosphorescent when mixed in the presence of water, and which are found in the mollusc, *Pholas dactylifera*, the mouth of which is luminous.
- Luciferin** (*lu-sif'-er-in*) [*lux*, *lucis*, light; *ferre*, to bear]. A crystalline body obtained from the light-producing organs of certain animals.
- Lucifer-match Disease** or **L.-match Maker's Disease**. Necrosis of the jaw due to phosphorus-poisoning.
- Luciform** (*lu'-sif-orm*) [*lux*, light; *forma*, form]. Resembling light.
- Lucifugal** (*lu-sif'-u-gal*) [*lux*, light; *fugere*, to flee]. Fleeing from or avoiding light.
- Lucifugous** (*lu-sif'-u-gus*) [*lux*, light; *fugere*, to flee]. In biology, applied to organisms that avoid light.
- Lucilia** (*lu-sil'-e-ah*) [*L.*]. A genus of dipterous insects, the larvae of which act as facultative parasites, producing various forms of myiasis, *q. v.* See *Parasites (Animal)*, *Table of*.
- Lucilin** (*lu'-sil-in*) [*lux*, *lucis*, light]. A commercial mixture of lamp-petroleum and brown coal-oil.
- Lucina** (*lu-sil'-nah*) [*lux*, light]. The goddess of childbirth. **L. sine coitu**. Parthenogenesis, *q. v.*
- Lucomania** (*lu-ko-ma'-ne-ah*) [*λύκος*, wolf; *μανία*, mania]. Same as *Lycanthropy*, *q. v.*
- Lucuma** (*lu-ku'-mah*) [*nat. Peruvian*]. A genus of tropical American sapotaceous trees. **L. caimito**, of S. America (called *abi* and *abiaba*) is strongly tonic and antiperiodic, and is useful in diarrhea; other species have similar qualities. Unof.
- Lucumin** (*lu-ku'-min*) [*lucuma*]. A bitter principle obtained from *Lucuma caimito*. It is recommended for use in diarrhea and in intermittent fevers. Dose gr. j-vij. Unof.
- Ludwig's Angina**. A cellulitis of the neck, usually a secondary inflammation in the specific fevers, particularly diphtheria and scarlet fever. It may, however, occur idiopathically or result from trauma. The swelling is marked in the submaxillary region. It is also called *Louis's Angina*. See *Angina*, and *Diseases*, *Table of*. **L.'s Angle** (*Angulus ludovici*), the angle that exists in some cases of emphysema between the manubrium and the body of the sternum. See *Angle*.
- L.'s Ganglion**. See *Ganglia*, *Table of*.
- Lücke's Test**. See *Tests*, *Table of*.
- Lues** (*lu'-es*) [*L.*]. Formerly a pestilential disease; at present used as an euphemism for syphilis. **L. deifica**, **L. divina**, epilepsy.
- Luetic** (*lu-et'-ik*) [*lues*, a plague]. Affected with or relating to lues; syphilitic.
- Luffa** (*luf'-ah*) [*Arab.*]. A genus of cucurbitaceous plants. **L. acutangula**, the strainer vine, of India, having an edible fruit, a purgative and emetic root, and oil-bearing seeds. **L. amara** has similar uses. **L. cylindrica**, the "wash-rag," "towel gourd," or "vegetable sponge," bears a fruit which when dry contains a sponge-like network of fibers. This is sometimes used as a substitute for a sponge or towel. **L. purgans**, of S. America, affords a strongly purgative resin. Unof.
- Lugol's Caustic**. A solution of iodine and potassium iodide, of each one part, in water two parts. **L.'s Solution**. See *Iodin*.
- Lumbaginous** (*lum-baj'-in-us*) [*lumbus*, loin]. Affected with, or pertaining to, lumbago.
- Lumbago** (*lum-ba'-go*) [*lumbus*, the loin]. Pain in the structures about the loins, whether neuralgic or rheumatic.
- Lumbar** (*lum'-bar*) [*lumbus*, the loin]. Pertaining to the loins, especially to the region about the loins. **L. Abscess**, an abscess in the lumbar region. **L. Arteries**. See *Arteries*, *Table of*. **L. Colotomy**. See *Lumbo-colotomy*. **L. Myalgia**, lumbago. **L. Nephrectomy**, nephrectomy through an incision in the lumbar region. **L. Nephrotomy**, nephrotomy through an incision in the lumbar region. **L. Nerves**. See *Nerves*, *Table of*. **L. Reflex**. See *Reflexes*, *Table of*. **L. Region**. See *Abdomen*.
- Lumben** (*lum'-ben*) [*lumbus*, loins]. Belonging to the loin in itself.
- Lumberman's Itch**. Same as *Army Itch*.
- Lumbifragium** (*lum-bif-ra'-je-um*) [*lumbus*, loin; *frangere*, to break]. Lumbar hernia.
- Lumbiplex** (*lum'-be-pleks*). The lumbar plexus.
- Lumbiplexal** (*lum-be-pleks'-al*) [*lumbus*, loin; *plexus*, net]. Pertaining to the lumbiplex.
- Lumbo-abdominal** (*lum'-bo-ab-dom'-in-al*) [*lumbus*, loin; *abdomen*, abdomen]. Pertaining to the loin and the abdomen.
- Lumbocolotomy** (*lum'-bo-ko-lot'-o-me*) [*lumbus*, loin; *κόλον*, colon; *τομή*, a cutting]. Colotomy performed in the lumbar region.
- Lumbo-costal** (*lum-bo-kos'-tal*) [*lumbus*, loin; *costa*, rib]. Pertaining to the loins and the ribs.
- Lumbodorsal** (*lum-bo-dor'-sal*) [*lumbus*, loin; *dorsum*, back]. Pertaining to the lumbar and dorsal regions.
- Lumbodynia** (*lum-bo-din'-e-ah*) [*lumbus*, loin; *δύσιν*, pain]. Same as Lumbago.
- Lumbo-inguinal** (*lum-bo-in'-gwin-al*) [*lumbus*, loin; *inguen*, groin]. Pertaining to the lumbar and inguinal regions.
- Lumbosacral** (*lum-bo-sa'-kral*) [*lumbus*, loin; *sacrum*, sacrum]. Pertaining to the lumbar and sacral regions.
- Lumbricales** (*lum-brik-a'-lēz*). See *Muscles*, *Table of*.
- Lumbricide** (*lum'-bris-id*) [*lumbricus*, earth-worm; *cedere*, to kill]. A drug fatal to lumbricoid worms.
- Lumbriciform** (*lum-bris'-if-orm*). See *Lumbricoid*.
- Lumbricoid** (*lum'-brik-oid*) [*lumbricus*, earth-worm; *είδος*, likeness]. Pertaining to, or resembling, a lumbricus.

**Lumbricus** (*lumbricoides*) [*lum*, *ph.*, *lumbricus*]. A genus of worms including the common earth worm and certain parasitic species. See *Parasites (Animal)*, Table.

**Lumen** (*lu-men*) [*luen*, *lum*]. The cavity or canal of any hollow organ; the cavity of a vessel; more especially the proximal extremity.

**Luminiferous** (*lu-min-er-ous*) [*luen*, *ph.*, *light*; *ferre*, *ph.*, *carrying*]. Carrying light.

**Luminosity** (*lu-min-er-ous-ness*) [*luen*, *ph.*, *light*]. The property of emitting light.

**Lophotus**, **Bacillus** of *St. Louis*, *Sin-*

**Lump** [*lu*], *lump*, a *lump*]. 1. A small mass or protuberant part. 2. A dull person. 3. An old name, especially used for truncheon, scepter, or the coronal guards.

**Lumpy** (*lu-py*) [*lu*, *lump*, a *lump*]. Stomping, etc., or consisting of, lumps. *L.* jaw. See *Stomatognathus*.

**Lunacy** (*lu-nas-ee*) [*luen*, *ph.*, *moon*]. A popular name for insanity, so called from the tradition held that it was influenced by the moon.

**Lunar** (*lu-nar*) [*luen*, *ph.*, *moon*]. Pertaining to the moon; especially (*luna* of the alchemists).

*L.* Caustic. See *Argentum* and *caustic*.

**Lunare**, *O. lunare* [*luen*, *ph.*, *moon*]. The crescentic horn of the carpus.

**Lunatic** (*lu-nat-ic*) [*luen*, *ph.*, *moon*], pertaining to the moon. *Mentation*.

**Lunate** (*lu-nat*) [*luen*, *ph.*, *like a crescent*]. In shape, crescent-shaped, or having crescentic markings.

**Lunatic** (*lu-nat-ic*) [*luen*, *ph.*, *moon*]. Associated with lunacy or insanity.

**Lunatism** (*lu-nat-izm*) [*luen*, *ph.*, *moon*]. An old name for various diseases supposed to be under the controlling influence of the moon.

**Lun's Apparatus**. A triangular frame of iron used to correct malposition of the uterus. *L.'s Oil*, an oil used for anesthetic cateters. It consists of olive oil and one of each one ounce, carbolic acid one dram.

**Lune** (*luen*) [*luen*, *ph.*, *moon*]. A fit of lunacy or madness.

**Lunella** (*lu-nel-lah*) [*luen*, *ph.*, *moon*]. Same as *clavellum*.

**Lunet** or **Lunette** (*lu-net*) [*Fr.*]. A spectacle lens.

Also, a general term including telescopes, marine-glasses, opera-glasses, and all similar devices to aid vision.

**Lung** [*lu*, *lung*, *lung*]. The organ of respiration, in which the impure venous blood is oxidized by the air drawn through the trachea, bronchi, and air-vessels. There are two lungs, a right and a left, the former usually consisting of three, the latter of two lobes. The lobes are situated in the thoracic cavity, and are enveloped by the pleura. At the root or hilum the trachea and its branches, and the pulmonary artery and veins enter, and the pulmonary and bronchial veins and lymphatic vessels. The lung proper consists of minute air-vessels held in place by connective tissue trabeculae. Capillaries traverse the walls of the air-vessels and bring the arterial blood in close proximity of the air. The average weight of the adult right lung is 2.2 ounces; that of the left 2.0 ounces. *L.*, Black, inflammation of the lung. *L.*, Coal-miner's, *L.*, Collier's, inflammation of the lung. *L.*-fever, chronic pneumonia. *L.*-grown, having the pleura adherent to the lung. *L.*, Miner's, anthracosis of the lung. *L.*-tick, a form of pneumonia prevalent among laborers of South Africa. *L.*-struck, suffering from pneumonia of the lungs. *L.*-tester, a pyrometer. *L.*-wort, a plant which grows in the lungs. *L.*-wort,

the leaves of *Pulmonaria officinalis*, a demulcent and mucilaginous drug. It is a favorite medicine in lung-complaints. Dose of the fld. ext. 5 ss-j. Unof.

RELATION OF LUNGS TO OTHER THORACIC ORGANS.

1. Left side of heart. 2. Right side of heart. 3. Coronary artery.
4. Left auricle. 5. Right auricle. 6. Superior vena cava. 7. Pulmonary artery. 8. Origin of aorta. 9. Arch of aorta. 10. Innominate artery. 11. Right common carotid artery. 12, 12. Subclavian arteries.
13. Scalenus anticus muscle. 14. First rib. 15. Larynx. 16. Trachea.
- 17, 17. Pneumogastric nerves. 18, 18. Phrenic nerves. 19. Right lung.
20. Left lung. 21, 21. Diaphragm. 22, 22. Seventh pair of ribs.

**Lungen** (*lung-en*) [*Ind.*]. The name given in India to a form of diarrhea, the most frequent disease of elephants, caused by the trematode parasite *Amphistoma havakii*, Cobbold. See *Parasites (Animal)*, Table of.

**Lunula** (*lu-nu-lah*) [*dim.* of *luna*, moon]. The white convex or semilunar area of a nail near the root; onyx. *L. of the Cardiac Valves*, the delicate edges of the leaflets of the semilunar valves. *L. of Giannuzzi*. See *Crescents of Giannuzzi*. *L. lacrymalis*, a small crest of bone separating the atrium of Highmore from the lacrymal groove.

**Lunular** (*lu-nu-lar*), **Lunulate** (*lu-nu-lat*). See *Lunate*.

**Lunule** (*lu-nul*) [*dim.* of *luna*, the moon]. In biology, applied to crescentiform impressions or marks upon various animals.

**Luny** (*lu-ne*) [*luna*, moon]. A popular term for crazy.

**Lupia** (*lu-pe-ah*) [*lupus*, wolf]. A name given to several kinds of malignant tumor, phagedenic ulcer, and fungoid growth, and also to a wen. See also *Molluscum*. *L. cancrrosa*, carcinoma developing in atheroma of the skin. *L. scrofulosa*, scrofuloderma tuberculosum.

**Lupiform** (*lu-pif-orm*) [*lupus*, a wolf; *forma*, form]. Same as *lupoid*.

**Lupigenin** (*lu-pij-en-in*) [*lupus*, a wolf],  $C_{17}H_{12}O_6$ . A substance resulting from the decomposition of lupini by acids.

**Lupin** (*lu-pe-in*) [*lupus*, a wolf],  $C_{29}H_{32}O_{16} + 7H_2O$ . A bitter principle found in germinating lupine seeds.

**Lupine** (*lu-pin*) [*lupus*, a wolf]. A popular name for various leguminous plants of the genus *Lupinus*,

many of which are poisonous. A large number of the species are American.

**Lupinidin** (*lu-pin'-id-in*) [*lupus*, a wolf],  $C_8H_{15}N$ . A liquid alkaloid obtained from *Lupinus luteus*.

**Lupinin** (*lu'-pin-in*) [*lupus*, a wolf],  $C_{21}H_{10}N_2O_2$ . An alkaloid, or tertiary amine, from the seeds of *Lupinus luteus*; also, an alkaloid from the seeds of *Lupinus albus*; also, a glucoside from the leaves of both species. All three are paralyzants, depressing the motor and sensory centers. The one first named has been proposed as a substitute for quinine.

**Lupinosis** (*lu-pin-o'-sis*) [*lupus*, a wolf]. A disease of cattle said by some to be produced by eating the herbage of certain poisonous species of lupine. See *Lathyrism*.

**Lupinotoxin** (*lu-pin-o-toks'-in*) [*lupinus*, lupine; *τοξικόν*, poison]. A resinoid derived from certain poisonous species of lupine, and said to be capable of producing the symptoms of lupinosis.

**Lupiology** (*lu-pe-ol'-o-je*) [*lupia*, wen; *λόγος*, science]. The science of malignant tumors.

**Lupoid** (*lu'-poid*) [*lupus*, wolf; *είδος*, like]. Having the nature of lupus.

**Lupomania** (*lu-po-ma'-ne-ah*) [*lupus*, wolf; *μανία*, madness]. Rabies.

**Lupotome** (*lu'-po-tom*) [*lupus*, wolf; *τομή*, a cutting]. A cutting or scarifying instrument sometimes used in the treatment of lupus.

**Lupous** (*lu'-pus*) [*lupus*, wolf]. Affected with or pertaining to lupus.

**Lupulin** (*lu'-pū-lin*) [*lupus*, *lupulus*, hop]. 1.  $C_{32}H_{50}O_7$ . A crystalline principle obtainable from powdery glands of the hop-plant. See *Humulus*. It is said to be strongly narcotic. 2. The yellow, resinous powder of hops, composed mainly of dried glands from the strobiles of the plant; it is the *lupulinum* of the U. S. P. Its fluid extract and oleoresin are official. Dose of the fld. ext., gr. 10-15; of the oleoresin, gr. ij-v. 3. The precipitate from a tincture of the cones of hops, *Humulus lupulus*, a nervine, hypnotic, febrifuge, antiperiodic, and tonic. Dose from 1 to 2 grains. Unof.

**Lupulina** (*lu-pū-li'-nah*) [L.: *gen.*, *Lupulina*]. Same as *Lupulin*.

**Lupulinum** (*lu-pū-li'-num*) [L.: *gen.*, *Lupulini*]. Same as *Lupulin*.

**Lupulus** (*lu'-pū-lus*). See *Humulus*.

**Lupus** (*lu'-pus*) [L., a wolf]. *Lupus vulgaris*: a chronic disease of the skin and some mucous membranes, characterized by the formation in the connective tissue of nodules of granulation-tissue. It passes through a number of clinical phases, and terminates by ulceration or atrophy, with scar-formation. The cause of the disease is the tubercle-bacillus. L., *Acne*, an obstinate papular eruption of doubtful character occurring in the localities usually selected by *Acne vulgaris* and sometimes associated with it. L., *Acneiform*. See *L. erythematosus sebaceus*. L., *anatomicus*, the anatomic tubercle. L., *Cazenave's*, *lupus erythematosus*, *q. v.* See also *Diseases*, *Table of*. L., *Common*, *lupus vulgaris*. L., *Disseminated Follicular, adenoid acne*; a variety of acne confined to the face, especially in the situations usually occupied by acne. The papules are from a large pin's head to a pea in size, conic and deep-red. They may coalesce to form a lupus-like tissue. L., *disseminatus*, a term applied to any case of lupus with multiple patches. L., *eczema*, a form of *L. erythematosus* resembling eczema. L., *endemicus*. See *Aleppo Boil*. L., *erythematoses*. Synonym of *L. erythematosus*. L., *erythematosus*, *L. erythematoses*; Cazenave's lupus; a form not due to the tubercle-bacillus. It occurs, as a rule, in multiple patches, with a tendency to symmetric arrange-

ment, chiefly about the face and head, occasionally on the extremities, and rarely on the trunk. The patches are sharply defined at the border, flat, very slightly raised, and with a tendency to the formation of crusts. The color is bright-red, and there are no nodules. The disease tends to spread slowly at the periphery, and new patches may form in the neighborhood of the old. Feeble circulation favors the development of the disease. It is most common in females of adult or middle age. L., *erythematosus aggregatus*. See *L. erythematosus disseminatus*. L., *erythematosus circumscriptus*, the most common form, attacking chiefly the head and face, especially the nose, cheeks, and ears, often symmetrically. It appears in the early stage as isolated or grouped, small, red spots, about an eighth of an inch in diameter, with a yellowish-spot at the center, and a small closely adherent scale. These slowly extend peripherally and ultimately coalesce into patches of a dirty yellowish-white appearance. Cicatrization occurs in the center. The disease is one of long duration. L., *erythematosus corneus*, *L. erythematosus* in which the scales are not greasy. L., *erythematosus discoides*, the asymmetric form of *L. erythematosus*. L., *erythematosus discretus*, a form of *L. erythematosus* in which irregular patches are scattered over various parts of the body. It is associated with constitutional symptoms—fever and pains in the head, bones, joints, etc. L., *erythematosus disseminatus*. *L. erythematosus aggregatus*; *Lupus-psoriasis*; a rare form of *Lupus erythematosus*, characterized by a wider diffusion of the eruption, an extension by repeated outbreaks, and by the fact that the patches never coalesce. It is a chronic disease usually, but may be acute. L., *erythematosus sebaceus*, a form with special involvement of the sebaceous glands. L., *erythematosus telangiectodes*, a variety characterized by marked dilatation of the cutaneous blood-vessels. L., *Erythematous*, *lupus erythematosus*. L., *exedens*. Synonym of *L. vulgaris*. L., *exfoliatus*. See *Lupus maculosus*. L., *exuberans*, a form of lupus, usually *L. exuberans*, associated with papillary excrescences. L., *exulcerans*, a term used to distinguish that form in which the destruction of tissue is rapid or intense, or in which the epidermis is lost and a secreting ulcerating surface is disclosed. L., *frambæiformis*, *L. frambæioides*. See *L. exuberans*. L., *Fungous*. Synonym of *Lupus exuberans*. L., *hæmorrhagicus*, *L. erythematosus disseminatus* associated with hemorrhagic vesicles and blebs that dry and form crusts. L., *hypertrophicus*, that variety in which new connective-tissue formation predominates over the destructive process, and markedly raised, thick patches result. L., *idiopathicus*. Synonym of *L. vulgaris*. L., *impetiginosus*, a form of *L. erythematosus* in its earlier stages resembling impetiginous eczema. L., *lymphaticus*. See *Lymphangioma circumscriptum*. L., *maculosus*, a variety characterized by the eruption of very soft, smooth, brownish-red, semi-translucent miliary nodules, which develop in the connective tissue of otherwise healthy skin without subjective sensations. This eruption constitutes the earliest sign of lupus. When the surface desquamates, the name *Lupus exfoliatus* is given to it. L., *miliaris*. See *L. Acne*. L., *mutilans*, *lupus exedens*, causing destruction of tissue and disfigurement. L., *Necrogenic*, the anatomic tubercle. L., *non-exedens*, lupus without ulceration. L., *papillaris*, *L. papillomatosus*, a form characterized by papillary growths that may reach the size of the palm. These are most frequently seen on the extremities and buttocks, and occur only on ulcerated surfaces. L., *per-*

**Lycomania** (*li-ko-ma'-ne-ah*) [*λύκος*, wolf; *μανία*, madness]. Synonym of *Lycanthropy*, *q. v.*

**Lycoperdon** (*li-ko-per'-don*) [*λύκος*, wolf; *πέρσσαι*, to break wind]. A genus of gasteromycetous fungi. **L. bovista**, fist-ball, puff-ball, devil's snuff-box. This has been used as a styptic, and is now to some extent employed in nervous diseases. The funes have been used as an anesthetic. **L. giganteum**, the giant puff-ball; similar to *L. bovista*. **L. proteus**. See *L. giganteum*.

**Lycopersicon, Lycopersicum** (*li-ko-per'-sik-on*, *li-ko-per'-sik-um*) [*λύκος*, wolf; *περσίκος*, peach]. A section of the *Solanaceae*, of which several species are well known. See *Solanum*.

**Lycopin** (*li'-ko-pin*) [*λύκος*, wolf; *πούς*, foot]. A precipitate from a tincture of *Lycopus virginicus*, an astringent, styptic, sedative, and tonic. Dose from 1 to 4 grains. Unof.

**Lycopodin** (*li-ko-po'-din*) [*λύκος*, wolf; *πούς*, foot],  $C_{32}H_{52}N_2O_3$ . A bitter alkaloid found in *Lycopodium clavatum* and *L. complanatum*. It is readily soluble in water, ether, and in alcohol. Unof.

**Lycopodium** (*li-ko-po'-de-um*) [*λύκος*, wolf; *πούς*, foot]. Club-moss, witch-meal, wolf's-claw. In medicine, the sporules of *L. clavatum* and other varieties, in the form of a light, fine, yellowish powder, are used as a desiccant and absorbent on moist and excoriated surfaces; in pharmacy, as an inert powder in which to imbed pills to prevent their adhering to each other. Lycopodium is inflammable and slightly explosive, whence the name "vegetable sulphur." A large number of species are known. **L. clavatum**, lycopodium. **L. complanatum**, common club-moss, ground-pine, found in Europe and North America. **L. inundatum**, marsh club-moss. **L. officinale**. See *L. clavatum*. **L. phlegmasia**, an Asiatic species said to possess aphrodisiac properties. **L. recurvum**. See *L. selago*. **L. rubrum**, a species which is actively purgative. It has been employed in South America in elephantiasis. **L. saussurus**, Brazilian piligon. Its alkaloid, *piliginin*, is a powerful emetic, purgative, and convulsant. **L. selago**, fir-moss, fir-club-moss, tree-moss; a species found in Europe and North America. It is cathartic and emetic in its action. Unof.

**Lycopus** (*li'-ko-pus*). See Bugleweed.

**Lycorexia, Lycorhexy** (*li-kor-eks'-e-ah*, *li'-kor-eks-e*) [*λύκος*, wolf; *ῥεξις*, appetite]. A wolfish or canine appetite; bulimia.

**Lycostoma** (*li-kos'-to-mah*) [*λύκος*, wolf; *στόμα*, mouth]. Cleft palate.

**Lye** (*li*) [ME., *ley*, lye]. The solution of alkaline hydrates obtained by leaching ashes; any alkaline solution.

**Lyencephalous** (*li-en-sef'-al-us*) [*λύειν*, to loosen; *ἐγκέφαλος*, brain]. Having cerebral hemispheres that are loosely united.

**Lygismus** (*li-jis'-mus*) [*λυγισμός*, from *λυγίζειν*, to bend]. A melodious, flexible voice; also, dislocation.

**Lygmus** (*lig'-mus*) [*λυγμός*]. Synonym of *Hiccough*.

**Lygodesmia** (*li-go-des'-me-ah*) [*λύγος*, twig; *δεσμός*, bond]. A genus of composite-flowered herbs. **L. spinosa**, of Nevada and California, has about its stem, at the ground, a tuft of woolly or silky fiber, useful as a hemostatic. Unof.

**Lygophilous** (*li-goff'-il-us*) [*λύγη*, twilight; *φιλεῖν*, to love]. Seeking dark places.

**Lying-down, Lying-in**. See *Puerperal State*.

**Lyma** (*li'-mah*) [*λύμα*, washings: *pl.*, *Lymata*]. 1. Filth, or sordes. 2. Lochia.

**Lymph** (*limf*) [*lymphā*, water]. The fluid in the lymphatic vessels, the product of the filtration of the

liquid portion of the blood through the walls of the capillaries. Applied, also, to certain products of lymph-exudation in wounds, etc. **L., Animal**, vaccine-lymph obtained from an animal. **L., Aplastic**, a lymph-product of inflammation that will not form embryonic tissue. It is called, also, *Corpuscular* or *Croupous lymph*. **L., Bovine**, vaccine-material obtained from a cow or a calf. **L., Calf**, vaccine from the calf. **L.-cell, L.-corpuscle**, a leukocyte occurring in the lymph. **L.-corpuscles**, the colorless corpuscles of the lymph. **L., Euplastic**. See *L., Plastic*. **L., Fibrinous**. Same as *L., Plastic*. **L.-follicles**, branched lacunar labyrinthine parts composed of adenoid tissue intercalated in the course of the lymphatic vessels. They are not true glands. **L.-glands**. See *Lymphatic Glands*. **L.-hearts**, exist in certain cold-blooded animals, the frog, *e. g.*, having two axillary and two sacral hearts for pumping the lymph. **L., Humanized**, vaccine from a human being. **L., Inflammatory**, that thrown out as a product of inflammation in wounds, etc. **L., Koch's**, a term for the fluid called, by Koch, *paratubercloid*, now known as *tuberculin*. See *Tuberculin*. It is recommended by Koch for hypodermatic injection in cases of tuberculous disease. **L., Plastic**, fibrinous lymph; that forming embryonic tissue. **L.-scrotum**, an anasarctous condition of the scrotum due to the presence of *Filaria sanguinis hominis* in the blood-stream. See *Filaria*. **L.-spaces**, the lacunæ that occur in connective tissue, and contain lymph. **L., Utitine**. See *L., Calf*.

**Lymphaden** (*lim-fa'-den*) [*lymphā*, water; *ἄδην*, gland]. Any lymphatic gland.

**Lymphadenectasis** (*lim-fad-en-ek'-tas-is*) [*lymphā*, lymph; *ἄδην*, gland; *ἐκτασις*, distention]. A tumor of a lymph-gland, due to dilatation of its sinuses.

**Lymphadenhypertrophy** (*lim-fad-en-hi'-per'-tro-fē*) [*lymphā*, lymph; *ἄδην*, gland; *ἵπτερ*, over; *τροφή*, nourishment]. Hypertrophy of the lymphatic glands.

**Lymphadenia** (*lim-fad-e'-ne-ah*) [*lymphā*, lymph; *ἄδην*, gland]. A general hyperplasia of the lymphatic tissue with or without leukocytosis.

**Lymphadenism** (*lim-fad'-en-izm*) [*lymphā*, lymph; *ἄδην*, gland]. The general condition of disease that accompanies lymphadenoma.

**Lymphadenitis** (*lim-fad-en-i'-tis*) [*lymphā*, lymph; *ἄδην*, gland; *τις*, inflammation]. Inflammation of a lymphatic gland. **L., Cutaneous**, mycosis fungoides. **L., Septic**, a form due to the presence of microorganisms. **L., Simple**, lymphadenitis due to irritation.

**Lymphadenoid** (*lim-fad'-en-oid*) [*lymphā*, lymph; *ἄδην*, gland; *ειδός*, like]. Resembling, or of the nature of, a lymphatic gland.

**Lymphadenoma** (*lim-fad-en-o'-mah*) [*lymphā*, lymph; *ἀδηνόμα*, a glandular tumor: *pl.*, *Lymphadenomata*]. Hodgkin's disease; Malignant lymphoma; Pseudo-leukemia; Anæmia lymphatica; Adénie [Fr.]. A disease of the lymphatic structures of the body characterized by a hyperplasia, and often a new formation of lymphatic tissue in glands, spleen, and bone-marrow. The cervical glands are usually first involved. The blood, as a rule, presents the characters of anemia without increase in the number of white corpuscles. Pyrexia, often of a remittent type, is common. The disease occurs most frequently in males. The duration is from two to five years, and the disease results fatally. Occasionally lymphadenoma is converted into a true leukemia. **L., Hard**, a form characterized by indurated, firm, glandular swellings. **L., Leukemic**, when associated with leukemia. **L., Soft**, a form in which the enlarged lymphatic glands are soft.

- Lym. hadenosis** (*lim-fa-den-oh-sis*) [*lymph*, lymph; *aden*, gland; *haden*, adenoid]. Cutaneous lymphadenosis. Synonym: *lymphadenitis cutanea*.
- Lymphadermia** *Cutaneous* (*lim-fa-der-mi-a*) [*lymph*, lymph; *ader*, dermis].
- Lympheduct** (*lim-fa-duk-t*) [*lymph*, lymph; *duk*, duct].
- Lymphemia** (*lim-fa-mi-a*) [*lymph*, lymph; *emi*, emic].
- Lymphagurges** (*lim-fa-gur-jis*) [*lymph*, lymph; *gurgis*, gurgling]. A group that narrows the circulation of lymph.
- Lymphaneurysm** (*lim-fa-neu-ri-zm*) [*lymph*, lymph; *aneurysm*, aneurysm]. A tumor caused by dilatation of lymphatic vessels. **L. Ganglionar**, an aneurysm formed at the bulbous dilatations of the lymphatic vessels. **L. Sporadic**, a localized form, usually of the thoracic or abdominal region.
- Lymphance** (*lim-fa-n*) [*lymph*, lymph].
- Lymphangectasia** (*lim-fa-ek-ta-si-a*) [*lymph*, lymph; *ek-ta-si-a*, ectasis, widening]. Abnormal dilatation of the lymphatic vessels. See *Angiomas*.
- L. Endemic**, a form common in the tropics, and generally due to filariasis.
- Lymphangiectodes** (*lim-fa-ek-tod-es*). See *Lymphangioma cavernosum*.
- Lymphangienchysis** (*lim-fa-en-ki-ni-sis*) [*lymph*, lymph; *en-ki-ni-sis*, a pouring in]. Injection of the lymphatic vessels.
- Lymphangiography** (*lim-fa-ngi-og-ra-fi*) [*lymph*, lymph; *angi*, vessel; *og-ra-fi*, graphic, to write]. A description of the lymphatics.
- Lymphangiology** (*lim-fa-nj-ol-oh-jy*) [*lymph*, lymph; *angi*, vessel; *ol-oh-jy*, treatise]. The anatomy, physiology, and pathology of the lymphatics.
- Lymphangioma** (*lim-fa-nj-oh-ma*) [*lymph*, lymph; *angi*, vessel; *oma*, tumor; *ph*, *Lymphangiomata*]. A dilated or varicose condition or tumor of the lymphatic vessels. **L. capillare varicosum**. Synonym of *L. cavernosum*. **L. cavernosum**. Synonym of *L. circumscriptum*. **L. circumscriptum**. *Lymphangioma*. *Enkelmann's disease*, a very rare disease of the skin occurring in early life. It is marked by the formation of small yellow vessels, deeply situated in the skin, with thick and firm walls, and connected with the lymphatics. Their usual seats are the shoulders, trunk, face, neck, thighs, and arms. The disease gradually spreads and tends to recur. Its cause is unknown. **L. tuberosum multiplex**, a very rare disease of the skin, probably congenital, characterized by the formation of large, rounded nodules or tubercles, the size of lentils, or arranged in groups or clusters, but extending indistinctly over the trunk. They dip down into the subcutaneous tissue, and both feel and look like the tuberculous tumor, and both feel and look like the infection they owe to be made up of greatly enlarged lymphatics.
- Lymphangiomyoma** (*lim-fa-nj-oh-mi-oh-ma*). See *Myoma*.
- Lymphangion** (*lim-fa-nj-on*) [*lymph*, lymph; *angion*, vessel]. A lymphatic vessel.
- Lymphangopyra** (*lim-fa-ngi-oh-pi-ra*) [*lymph*, lymph; *angi*, vessel; *pyra*, pus, fire]. A fever due to or accompanying a disease of the lymphatics.
- Lymphangopneumony** (*lim-fa-ngi-oh-pneu-mo-ni*) [*lymph*, lymph; *angi*, vessel; *pneu-mo-ni*, pneumonia]. Inflammation by absorption of the lymphatics.
- Lymphangitis** (*lim-fa-nj-oh-si-tis*) [*lymph*, lymph; *angi*, vessel; *itis*, inflammation]. Dissection or anatomy of the lymphatics.
- Lymphangitomy** (*lim-fa-nj-oh-mi*) [*lymph*, lymph; *angi*, vessel; *mi*, incision]. Incision of a lymphatic vessel. **L. Tubular**, a tube involving the chest, comprising and attended with the pro-

duction of red lines on the skin. **L. Wandering**, a form occurring usually on the back of the hand, and due to frequent contact with putrefying tissues. It occurs in reticular patches connected by wavy lines.

**Lymphangoncus** (*lim-fa-nj-on-kus*) [*lymph*, lymph; *angi*, vessel; *on-kus*, a tumor]. A firm swelling of the lymphatic vessels.

**Lymphapostema** (*lim-fa-poh-s-te-mah*) [*lymph*, lymph; *apostema*, abscess; *ph*, *Lymphapostemata*]. A lymphatic abscess.

**Lympharia** (*lim-fa-re-ah*) [*lymph*, lymph]. A name proposed for lymphatic tissue.

**Lymphate** (*lim-fa-t*) [*lymph*, water]. Raving; frightened into madness.

**Lymphatic** (*lim-fa-tik*) [*lymphaticus*; *lymph*, lymph]. Pertaining to lymph; containing or characterized by lymph. **L. Edema**. See *Lymphedema*. **L. Glands**, the glands intercalated in the pathway of the lymphatic vessels, through which the lymph is filtered. **L. Temperament**. See *Temperament*. **L. Vessels**. See *Lymphatics*.

**Lymphatico-sanguine** (*lim-fa-tik-o-san-ti-gruin*) [*lymph*, lymph; *sanguis*, blood]. Both lymphatic and sanguine. See *Temperament*.

EFFERENT LYMPHATICS OF CERVICAL AND AXILLARY GLANDS.

1. Superior extremity of thoracic duct. 2. Its entrance at the junction of the internal jugular and left subclavian veins.

**Lymphatics** (*lim-fa-tiks*) [*lymph*, lymph]. The lymphatic vessels, including capillaries, afferent and efferent vessels, and ducts or trunks; the lymph-vessels; capillary tubes extending to nearly every part of the body, from which they take up the lymph, forming the principal part of the absorbent system. *Afferent* or *inferent* lymphatics, those that convey lymph to the lymphatic glands; *efferent* lymphatics, those that conduct lymph from the glands.

LYMPHATIC GLANDS AND VESSELS OF THE CAVITY OF THE AXILLA.

LYMPHATIC GLANDS AND VESSELS OF THE INGUINAL REGION.

**Lymphatism** (*lim'-fat-izm*) [*lymphatismus*]. The lymphatic temperament; scrofula.

**Lymphatitis** (*lim-fat-i'-tis*). See *Lymphangitis*.

**Lymphatocele** (*lim-fat'-o-sel*) [*lymphā*, lymph; κήλη, tumor]. A tumor composed of dilated lymph-vessels.

**Lymphatology** (*lim-fat-ol'-o-je*). See *Lymphology*.

**Lymph-canicular** (*limf'-kan-at-ik'-u-lar*) [*lymphā*, lymph; *canaliculus*, small channel]. Pertaining to the ultimate channels of the lymphatic vessels.

**Lymphedema** (*lim-fe'-de'-mah*) [*lymphā*, lymph; οἰδῆμα, edema]. Edema due to accumulation of lymph; serous edema.

**Lympheduct** (*lim'-fe-duk't*) [*lymphā*, lymph; *ducere*, to lead]. A lymphatic vessel or duct.

**Lymphemia** (*lim-fe'-me-ah*) [*lymphā*, lymph; αἷμα, blood]. Leukemia characterized by pathologic processes in the lymphatic glands, which become hypertrophied; the kidney or liver sometimes presents what appears to be an element composed of lymphatic tissues.

**Lymphenteritis** (*lim-fen-ter-i'-tis*) [*lymphā*, lymph; *ἐντέρον*, bowels; *τις*, inflammation]. Inflammation of the bowels attended with serous infiltration. 2. Inflammation of the serous coat of the intestine; peritonitis.

**Lymphhepatitis** (*limf-hep-at-i'-tis*) [*lymphā*, lymph; *ἥπαρ*, liver; *τις*, inflammation]. Inflammation of the peritoneal coat of the liver.

**Lymphneurysma** (*lim-fu-riz'-mah*). See *Lymphaneurysma*.

**Lymphexosmosis** (*lim-feks-os-mo'-sis*) [*lymphā*, lymph; *ἔξ*, out; *ὥστος*, thrust]. Exosmosis of lymph; passage of lymph outward, through the coats of the lymph-vessels.

**Lymphitis** (*lim-fē'-tis*). See *Lymphangitis*.

**Lymphoblast** (*lim'-fo-blast*) [*lymphā*, lymph; βλαστός, germ]. Any cell with a nutritive function.

**Lymphocele** (*lim'-fo-sel*) [*lymphā*, lymph; κήλη, tumor]. A tumor containing an abnormal collection or quantity of lymph.

**Lymphocyte** (*lim'-fo-sit*) [*lymphā*, lymph; κύτος, a cell]. 1. A lymph-cell. 2. One of Ehrlich's classes of leukocytes, comprising those small cells having large nuclei and a very small amount of protoplasm. See *Leukocyte*.

**Lymphocythemia** (*lim-fo-si-the'-me-ah*) [*lymphā*, lymph; κύτος, cell; αἷμα, blood]. A condition of the blood in which the lymphocytes are increased.

**Lymphodermia** (*lim-fo-der'-me-ah*) [*lymphā*, lymph; δέρμα, skin]. An affection of the lymphatics of the skin. *L. perniciosa*, a certain form of *Mycosis*, or fungoid granuloma.

**Lymphoduct** (*lim'-fo-duk't*). See *Lympheduct*.

**Lympho-gastritis** (*lim-fo-gas-tri'-tis*) [*lymphā*, lymph; γαστήρ, stomach; *τις*, inflammation]. Lymphatic gastritis.

**Lymphogenous** (*lim-foi'-en-us*) [*lymphā*, lymph; γεννᾶν, to beget]. Producing lymph.

**Lymphoid** (*lim'-foid*) [*lymphā*, lymph; εἶδος, like]. Having the appearance or character of lymph.

**Lymphology** (*lim-fol'-o-je*) [*lymphā*, lymph; λόγος, science]. The study of the anatomy and physiology of the lymphatic system.

**Lymphoma** (*lim-fō'-mah*) [*lymphā*, lymph; ὄμα, tumor; *pl.*, *Lymphomata*]. A lymph-tumor; also, lymphadenoma. The term includes formations not strictly tumors but hyperplasias of the tissues proper to lymphatic glands. *L.*, **Heteroplastic**. Synonym of *Lymphadenoma*. *L.*, **Leukemic**. See *Lymphadenoma*, *Leukemic*. *L.*, **Malignant**. Synonym of *Lymphadenoma*. *L.*, **Scrofulous**, tuberculous enlargement of lymphatic glands. *L.*, **Typhoid**, the formation of small lymphatic masses in the intestinal peritoneum and in the liver and kidneys in typhoid fever.

**Lymphomatous** (*lim-fō'-mat-us*) [*lymphā*, lymph; ὄμα, tumor]. Of the nature of, affected with, or relating to, lymphoma.

**Lymphoncus** (*lym-fon-kus*) [*lympho*, lymph; *kyw*, round]. A kind of lymphatic swelling. **L. iridis**, *iris lymphoncus*.

**Lympho-nephritis** (*lym-fy-ny-fy-tis*) [*lympho*, lymph; *nyph*, kidney; *itis*, inflammation]. Inflammation of the kidney or other sources of the lymph.

**Lymphopathy** (*lym-fy-ah-ty*) [*lympho*, lymph; *ty*, disease]. Any disease of the lymphatic organs.

**Lympho-peritonitis** (*lym-fy-py-ty-on-ty-tis*) [*lympho*, lymph; *py*, peritoneum; *ty*, inflammation]. *Lymphatic peritonitis*.

**Lymphopyra** (*lym-fy-py-rah*). See *Lymphangiopyra*.

**Lymphorrhagia** (*lym-fy-ry-ah*) [*lympho*, lymph; *ry*, to flow; *ah*, to flow]. An effusion or flow of lymph from a ruptured lymphatic vessel.

**Lymphorrhea** (*lym-fy-ry-ah*) [*lympho*, lymph; *ry*, to flow; *ah*, to flow]. A discharge of lymph from a wound, internal or external.

**Lympho-sarcoma** (*lym-fy-sar-kom-ah*) [*lympho*, lymph; *sar*, sarcoma; *kom-ah*, *Lympho-sarcoma*]. Properly, a kind of sarcoma having some of the structural changes of a lymphatic gland; also, a sarcoma seated upon or involving a lymphatic gland. **L. thymicum**, a lympho-sarcoma originating in a persistent thymus gland and associated with metastasis to various parts of the body.

**Lympho-sarcomatosis** (*lym-fy-sar-kom-ah-mat-oh-sis*) [*lympho*, lymph; *sar*, sarcoma; *mat-oh-sis*, a condition or disease marked by the development of lympho-sarcoma; also, the process of such development].

**Lymphosis** (*lym-fy-sis*) [*lympho*, lymph]. The elaboration of lymph.

**Lymphostasis** (*lym-fy-stay-sis*) [*lympho*, lymph; *stay-sis*, a standing]. Stasis or stoppage of the flow of lymph.

**Lymphotomy** (*lym-fy-tom-ty*). See *Lymphangiectomy*.

**Lymphotorrhea** (*lym-fy-ty-ry-ah*) [*lympho*, lymph; *ty-ry*, to flow; *ah*, to flow]. A serous or watery discharge from the eye.

**Lymphuria** (*lym-fy-ry-ah*) [*lympho*, lymph; *ry*, to flow; *ah*, to flow]. A condition in which the urine spontaneously excretes, but contains no fat, as it does in chyluria.

**Lynx** (*lynx*) [*lynx*, a subling]. Hiccough; violent coughing.

**Lyon's Apparatus**. See *Urea* and *Disinfection*.

**Lynx Blue**. Same as *Spirit blue*.

**Lypemania** (*lyp-eh-mah-nay-ah*) [*lyp-eh*, sadness; *manay-ah*, madness]. A form of dementia accompanied by profound mental depression and refusal to take food.

**Lyperphrenia** (*lyp-eh-fy-ry-nay-ah*) [*lyp-eh*, sadness; *manay-ah*, madness]. Melancholia.

**Lypothymia** (*lyp-eh-thy-may-ah*) [*lyp-eh*, sadness; *thy-may-ah*, mind]. Melancholia; severe mental prostration from grief. This condition is not to be confounded with *Lycethymia*.

**Lyra** (*ly-rah*) [*lyra*, a lyre]. A lyre. **L. of Fornix**, cotton for plural, transverse, and oblique lines on the outer surface of the fornix, the arrangement of which bears a fanciful resemblance to a harp. **L. of**

**Uterus**, the uterine arbor vitæ. **L. of Vagina**, the vaginal rugæ.

**Lyrate** (*ly'-rat*) [*lyra*, a lyre]. In biology, lyre-shaped.

**Lysemia** (*ly-se'-me-ah*) [*lysis*, solution; *aima*, blood]. A dissolution of the blood, or a losing of the integral parts of it.

**Lysigenetic** (*ly-is-jen-et'-ik*). Same as *Lysigenous*.

**Lysigenic** (*ly-is-jen-et'-ik*). Same as *Lysigenous*.

**Lysigenous** (*ly-is-jen-et'-us*) [*lysis*, a setting free; *gennēs*, born, produced]. In biology, a term applied to intercellular spaces formed by the breaking down of contiguous cells. Cf. *Schizogenic*.

**Lysimachia** (*ly-is-mah'-ke-ah*) [*lysis*, a loosing; *μάχη*, battle]. A genus of primulaceous plants of many species. **L. nemorum**, **L. nummularia**, **L. vulgaris**, of Europe, and **L. quadrifolia**, and other N. American species are used in domestic medicine. Unof.

**Lysinosis** (*ly-is-in-oh-sis*) [*lysis*, to loose (a raveling or shred)]. Hertz's term for a disease of the lungs due to the inhalation of cotton-fibers.

**Lysioplasta** (*ly-is-las'-tah*) [*lysis*, a loosing; *πλασσειν*, to mould]. Diseased states marked by excessive secretion.

**Lysis** (*ly'-sis*) [*lysis*, to loose]. A term somewhat loosely used, but now applied to the gradual decline of a disease, especially a fever.

**Lysol** (*ly'-sol*). A saponified phenol derived from cresols by the action of nascent soap. It is an excellent disinfectant in from one to three per cent. solutions, and has been used in dermatology and gynecology. Unof.

**Lyssa** (*ly'-ah*) [*λύσσα*, madness]. 1. A synonym of *Hydrophobia* or *Rabies*. 2. Mania or madness.

**Lyssic** (*ly'-ik*) [*λύσσα*, madness]. Pertaining to rabies; due to rabies.

**Lyssin** (*ly'-in*) [*λύσσα*, madness]. The specific virus or germ of hydrophobia.

**Lyssodegma** (*ly-s-o-deg'-mah*). Synonym of *Lyssodexis*.

**Lyssodexis** (*ly-s-o-deks'-is*) [*λύσσα*, madness; *δύκνειν*, to bite]. The bite of a rabid dog.

**Lyssoid** (*ly'-oid*) [*λύσσα*, rabies; *ειδός*, like]. Resembling rabies; resembling madness.

**Lyssophobia** (*ly-s-oh-fy-be-ah*) [*λύσσα*, madness; *φόβος*, fear]. Morbid dread of rabies; pseudo-hydrophobia.

**Lyterian** (*ly-te'-re-an*) [*λυτήριος*, loosing]. Indicative of a lysis, or of a favorable crisis, terminating an attack of disease.

**Lythrum** (*lyth'-rum*) [*λύθρον*, bloody defilement]. A genus of lythraceous plants. **L. salicaria**, or willow-herb, is used as an astringent in leukorrhea, diarrhea, and hemorrhage from the lungs. Unof.

**Lytic** (*ly'-ik*) [*lyticus*, λύτικός]. Relating to a lysis, or to a solution.

**Lytta** (*ly'-ah*). 1. Synonym of *Hydrophobia*. 2. A long, median, pointed, fibrous or cartilaginous process (*glossohyal*) in the tongue of carnivora. It is the "worm" of the dog's tongue, commonly held to be a parasite and often extracted by fanciers. **L. vesicatoria**. See *Cantharis*. **L. vittata**, the potato-fly, containing one per cent. or more of cantharidin.
