FLORISTS' EXCHANGE

THE

G. E. Stone
Hatch Expt. Sta.
1907

We are a straight shoot and aim to grow into a vigorous plant
A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 1

NEW YORK AND CHICAGO, JANUARY 5, 1907

One Dollar Per Year

SPIREA

For Easter Forcing

If you have not all the spirea that you want for Easter and Decoration Day, we still have a few thousand fine clumps left, which we offer as long as unsold as follows:

Gladstones. The best of all the spireas. Free bloomer, fine large spikes. Extra. Selected clumps \$12.00 per 100.

Astilboides Floribunda. \$5.00 per 100; case of 300 clumps for \$12.00.

Compacta Multiflora. Strong clumps, \$6.00 per 100.

Japonica. Strong clumps, \$5.00 per 100.

GLADIOLUS COLVILLEI

Alba "The Bride." White. 75c. per 100; \$6.00 per 1000.

Ruhra. Red. 60c. per 100, \$5.00 per 1000.

MINIATURE HYACINTHS, or DUTCH ROMANS

We still have a few thousand of these left, which we can supply in a fine assortment of named varieties. \$2.00 per 100, \$16.00 per 1000.

These can be potted up, if done at once, and will make nice Easter stock.

NARCISSUS

Double Von Sion. We have a few thousand extra quality bulbs to offer. \$1.50 per 100 \$12.00 per 1000.

Princeps. A few thousand extra sized bulbs. 75c. per 100, \$6.50 per 1000.

Single Von Sion. \$1.25 per 100, \$10.00 per 1000.

TULIPS

Cottage Maid. The best pick for late forcing. \$1.00 per 100, \$8.00 per 1000.

Keizerskroon. (Grand Duc.) The favorite forcing variety. \$1.75 per 100, \$15.00 per 1000.

LILY OF THE VALLEY

Pierson's Premier. Best selected Berlin for earliest forcing. \$1.50 per 100, \$13.00 per 1000. Case of 2000 for \$24.00.

If you can use any of the stock offered, let us have your order quickly.

Seed Trade Report.
AMERICAN SEED TRADE ASSOCIATION
 Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

On December 23, 84 bags of seeds, valued at \$1,021, were shipped to Havana.

M. Philippe de Vilmoren of Paris, France, has just issued an instructive pamphlet, on the subject of "Theoretical and Practical Notes on the Selection of Seeds." It is printed in the French language.

The Maine Agricultural Experiment Station says: "Agricultural seeds must be true to name and carry a guarantee of the percentage of purity. Considerable poor and unguaranteed grass seed was sold in 1906. Such sales must cease."

SAN FRANCISCO, CAL.—Frederick Cleaves, for many years confidential man and head bookkeeper of the E. J. Bowen Seed Company, has been arrested, and is now in prison on a charge of forgery and a shortage in his accounts amounting to between \$6,000 and \$7,000, made by his former employers, by whom he had always been held in the highest esteem.
 ALVIN.

MITCHELL, S. D.—The Dakota Improved Seed Company, which was organized here several weeks ago, made the purchase of a valuable quarter section of land lying a half mile southwest of the university, which will be utilized in growing the seeds. The company will use this farm as the basis for its business, although it will contract with farmers in various parts of the State to grow seeds which will be acclimated with a view of supplying the southern, central, northern and western portions. In the Spring the company will begin active operations in its business.

FREE SEEDS.—It was stated by a member of the Agricultural Committee of the House, who is spending his vacation in Washington, that the committee would undoubtedly repeat its recommendation against the continuance of free seed distribution. It is felt that the practice cannot be discontinued without the greater effort on the floor of the House. Though the abuse amounts to considerable in the aggregate, the individual cases, whether real or fancied, are urged in a way to appeal to false sentiment of generosity toward the agriculturists; hence it is difficult even to laugh the practice out of existence.—N. Y. Commercial.

IMPORTS OF SEEDS.—December 24 and 25, 1906.—Maltus & Ware, 2 cases plants; 7 cases bulbs; H. Frank Darrow, 4 boxes trees; Peter Henderson & Co., 64 bushels seeds, 1 case seeds, 1 cask seeds; Andreas Olsen, 150 bags clover seed; T. C. Pollack, 13 cases lily of the valley pips; Schulz & Ruckgaber, 105 cases lily of the valley pips; L. J. Spence, 890 bags sugar beet seed; J. M. Thorburn & Co., 1 case seeds; W. Taat, 2 cases lily of the valley pips; Chas. F. Zentgraf, 267 cases seeds; C. A. Haynes & Co., 5 cases palm seeds; Busk & Jevons, 1 case plants; C. C. Abel & Co., 50 cases live plants; International Despatch, 1 case live plants; A. Rölker & Sons, 55 cases plants; H. Frank Darrow, 3 bags seeds; R. J. Godwin's Sons, 152 packages agricultural seeds; Kennedy & Moon, 10 bags seeds.
 December 26, 1906.—Peter Henderson & Co., 1 case cauliflower seed, 8

Sheldon & Co., 307 packages plants; F. B. Vandegrift Co., 109 packages plants; Silva, Bussenius & Co., 4 bags seed.

European Notes.

At the beginning of a new year one naturally makes good resolutions, and starts a diary. By way of a start, therefore, be it resolved that nothing whatever in the way of gloomy reports shall form part of these notes except under the strongest provocation. This will give the writer and readers a much needed rest.

The prospects for the coming year are decidedly encouraging. Warehouses are practically empty, and the contract demand from your side has shown a healthy expansion which betokens prosperity. The financial settlement of last season's liabilities has been one of the most satisfactory on record; and, if the belief that the free seed fraud is to be stopped proves to be well founded, our good friends in the States should have a chance to do some profitable trade.

H. Southporer of Port Hope, Ont., is in London, looking for pea contracts.

One of the London Bridge firms, Simpson & Slade, an offshoot from Jacob Wrench & Sons, has assigned during the present week.

Otto Putz of Erfurt has joined the ranks of authors in the realm of sweet peas. A long, instructive and interesting article from his pen appears in "Die Gartenwelt" for December 1 and December 8. Mr. Putz was a deeply interested visitor to the 1905 exhibition of the National Sweet Pea Society and has been one of the moving spirits in the exhibition held at Erfurt during the past year.

EUROPEAN SEEDS.

CATALOGUES RECEIVED.

ALBERT SCHENKEL, Hamburg, Germany.—General Catalogue of Seeds and Plants. Illustrated.

JOHN PEED & SON, West Norwood, London, S. E.—Illustrated Catalogue of Vegetable and Flower Seeds, etc.

IOWA SEED COMPANY, Des Moines, Ia.—The floral subject selected is a bunch of violets, after a painting by Paul de Longpre.

W. W. RAWSON & COMPANY, Boston, Mass.—Special Price List of Seeds for Market Gardeners, also Florists' Wholesale Price List. Handy and complete Booklets.

IOWA SEED COMPANY, Des Moines, Ia.—Thirty-seventh Annual Catalogue of Seeds, Bulbs, Plants, etc., with an interesting list of Novelties and Specialties. In addition to handsome cover designs, colored plates of various varieties of Corn and Flower Collections are furnished.

GERMAIN SEED COMPANY, Los Angeles, Cal.—General Illustrated Catalogue of Seeds, Bulbs, Plants, Supplies, etc. This firm, one of the oldest on the Pacific Coast, has in its 36 years of business watched the development of the seed industry in California. "Foreign countries, from which we formerly imported seeds are now becoming our best customers, being quick to realize the superiority of California seeds." From all of which comes the firm's motto: "California Seeds the World."

D. LANDRETH SEED COMPANY, Bristol, Pa.—Illustrated Catalogue of Vegetable and Flower Seeds, Field Seeds and Small Fruit Plants and Fruit Trees. The business of this firm and its predecessors has been in active operation in America for 123 years, running through the eighteenth, nineteenth and twentieth centuries, and testimonials from concerns who have used Landreth's seeds for periods ranging from 15 years downward, demonstrate the quality of the stock handled, as well as the firm's satisfactory business methods. The catalogue is very complete, as usual, and is profusely illustrated.

FREDERICK ROEMER, Quedlinburg, Germany.—Wholesale Catalogue of Flower Seeds. A list of novelties is included in the catalogue. Mr. Roemer directs especial attention to the annual Gladiolus Brecon. Of it he says: "It is not only that the seedlings produce fully developed flower spikes in the same year, when seeds have been sown early in the season, but also the following years the bulbs show the same luxuriant development. In the first year the bulbs grow to the size of those of medium-sized crocus, nevertheless these small bulbs show the same growth as those of the older classes of gladiolus plants that were grown from largest-sized bulbs, and most of these small bulbs produce 2 and even 3 fine large flower spikes. The second year the bulbs reach their full size, and planted in the following year, most of these bulbs produce 3 and 4 fine flower spikes."

WALTER P. STOKES, Philadelphia, Pa.—Catalogue of Vegetable, Farm and Flower Seeds Implements, etc., beautifully illustrated with half-tone cuts. In his greeting Mr. Stokes says: "After twenty-five years of honorable and successful seed-growing and seed-selling, it seemed best to allow the firm of Johnson & Stokes to be dissolved by limitation. For all of that time, as a partner in the old firm and for the past several years its active business manager, I have given close personal application to every detail, both of the seed-growing and of the seed-selling, and in connection with this I have individually owned and operated the large and complete Floracraft Trial Grounds and Greenhouses which are situated at my home in Moorestown, Burlington County, N. J., where I have over 30,000 square feet of greenhouse glass, and over 10 acres of ground given over entirely to trials of new vegetables and

flowers and for testing the quality of the stocks which are sent to me by my various growers.

"It is my wish that the experience and practical knowledge thus gained may be of service to my customers not only through the medium of my circulars and catalogues, but through personal contact and personal correspondence."

BURPEE'S FARM ANNUAL.—When reviewing this welcome yearly visitor to our desk it has been customary for us to say that the standard of excellence seen in its predecessors has been fully maintained. The present year's issue, however, compels us to go a step further for the high standard of those which have preceded it has been exceeded, brought about by the largely increased number of pages devoted to half-tone illustrations direct from photographs, a feature of this year's Annual particularly enhancing and instructive. The usual excellent list of novelties is provided, among which special attention is directed to two new unique bush lima beans—Fordhook and the Burpee Improved. These cannot fail to be of great interest to gardeners generally. Then in flowers there is the new "Royal Race" of variegated-leaved tall nasturtiums—Variegated Queen and Variegated Crystal Queen—and the new dwarf nasturtium Golden Midnight. The firm maintains its interest in sweet peas; among the new kinds listed are Burpee's "Brilliant-Blue," a "true deep Oxford blue, the tips of the wings showing bright cyan blue tint," Paradise, an improvement on the well-known Countess Spencer; Evelyn Byatt and Phyllis Unwin. The cover designs depict in colors Burpee's "Earliest Pink" tomato, new early Globe onion, Golden Bantam sugar corn, and true Southport Red Globe onion. In other points the Annual shows its usual completeness and instructiveness, being profusely illustrated.

In connection with several of this year's novelties, Burpee has used the expression "New Creations." In justification of which he quotes the subjoined letter from Luther Burbank, who has formerly employed that designation: "As to the words 'New Creations,' all that is necessary for anybody to educate themselves up to the use of it will be to look in any dictionary. It is simply old-fashioned bigoted ignorance that objects to it under these circumstances. As to Nature's making hybridizations, I have just given a course of lectures at Stanford University on that and similar subjects, and I want to say right here that Nature is and always has been trying experiments. Ninety-nine out of every one hundred are absolutely flat failures and are rejected. The one-hundredth survives, and makes a new species. Now, Nature cares no more for a man than she does for a hen or a plant, so she never creates them for his special use. She leaves that for man to do for himself. I am doing that as are many others, and though I may be self-confident I can readily prove that my experiments in new creations are fully as successful as those of Nature herself. "Your two new bush Lima beans interest me extremely. They may not necessarily be a late hybridization. They may be latent tendencies brought out by environments, as you of course may know."

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
Orlando Harrison, Berlin, Md., president; J. W. Hill-Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

PLANTS AND SEED FOR NAME.—The "yellow balls" are the *Sapindus marginatus*, commonly called soap berry. Although a native of the South, growing from Georgia to Texas, it has proved hardy at Philadelphia. The berries are so beautiful it should receive more attention than it does. The other specimen with black berries appears to be the *Laurus carolinensis*, called red bay. It is also known under the name of *Persia carolinensis*. We are not as positive of this name fitting the specimen, but have little doubt of it. A specimen when in flower would settle it. J. M.

Horticultural Topics.

The sweet-scented, half-hardy rhododendrons that used to be met with in greenhouses in Winter are now rarely seen. A white one, Countess of Derby, used to be a favorite.

Magnolia cordata is rarely to be met with in cultivation. It is the only yellow of all known magnolias. Others have shades of yellow, *Fraseri* for one; but none equals *M. cordata*. This can be increased by budding or grafting it on the acuminata or tripetala stock. Tripetala is preferred as better than acuminata for transplanting.

Polyanthuses succeed very well outdoors all Winter if a thickness of forest leaves is placed over them in early Winter. Under trees, where leaves cover them naturally, is a good place for them.

Our native flame-colored *azalea*, *A. calendulacea*, varies in the color of its flowers from flame to yellow and dark pink. It is the parent of many of the beautiful kinds in cultivation. It has been suggested that many of the wild azaleas are natural hybrids between *calendulacea* and *nudiflora*.

Papaw is the proper spelling of the name of this tree. It is sometimes spelled pawpaw, perhaps because it is generally so pronounced. It is a popular belief that some trees are infertile, but botanists do not recognize that any are.

Whether it be single specimens or hedges of evergreens, early in Spring is a good time to prune them. Although some evergreens will push afresh from old wood, not all will, and the safe plan is not to prune below the live foliage. Spring pruning encourages strong growth; when pruning is done in Summer it promotes bushiness.

Frost is not necessary to the perfecting of persimmon fruit, as so many persons think it is. It simply hastens decay, which ripening is the commencement of. In the South, where freezings do not occur, or if they do it is late in the Winter, the persimmon ripens to perfection when given time.

Propos of the discussion on the hardiness of the various eucalyptus trees, although it is certain there are none of them hardy in a way to admit of their being grown as timber trees excepting in a few favored States where but little frost prevails, there is one, *E. ficifolia*, which bears scarlet flowers of much beauty, making a handsome species for a conservatory.

The trouble with walnuts and hickory nuts not growing when sown in Spring, as so many persons claim exists, comes from the failure to preserve them damp all Winter, as should be done. They need to be in damp soil from within a short time of their ripening until sown in Spring.

Trees in Wet Ground.

A neighbor who had a large grove of trees growing in a low situation through which a stream of water ran, conceived the idea that his grounds would be greatly benefitted could he cut wide ditches through the group, dam up the stream to some extent, that the wide ditches would fill with water, making several small islands of his group of trees, the several islands to be connected by rustic bridges. Those who saw him at work and noticed the result after it was completed, contended that the trees would not survive; that the water was above the level of the roots which would kill the trees. The trees were about 20 feet high. The work was completed in Spring, and as predicted the water killed the trees, all being dead by Autumn. It remains to be said that the one who did the work was not a gardener. Had he been he would have known better. It was a good lesson for all who saw it. It is true, large trees are often seen where water is but a few inches under ground, but these trees have grown on in this position from their seedling sizes, and examination would show that their roots penetrated no deeper than the soil on the top which the water did not reach. This can be seen often where large trees in low grounds have blown over in gales. Full grown trees are occasionally seen of this description in which the exposed roots thrown high by the prostrate trunks, show no more than a foot in depth, while of a spread of some 12 feet in circumference.

The neighbor referred to, or any one else in a similar case, could have trees on his islands were he to set out small ones, for these would not extend their roots below the water line. If the ground be but a foot higher than the level of the water, it will do. It is not the season now for the planting of trees, but it is for the formation of islands, hence these notes at this time.

Where Aucubas are Hardy.

In a nursery catalogue of a Pennsylvania firm now before us mention is made of the worthlessness of the *Aucuba japonica* for use indoors at Christmas time, and in connection therewith it is added that it is "hardy south of Washington." As advice to the public in a general way, this suggestion of its hardiness is very fair, as the plant might not survive the Winters in all situations north of Washington, nevertheless it will do so in Philadelphia when it is in a well-sheltered situation.

In the neighborhood of Woodland Cemetery, bordering the Schuylkill River, in a private garden, the *aucuba* grew and flourished for many years, and two years ago the plants were still there. In addition to the advantage the plants derived from their proximity to the river, they had the advantage of being near a dwelling and also of being in the midst of other trees and shrubs that gave them shelter. Any

Othera Japonica.

English horticultural papers occasionally refer to a desirable hardy evergreen shrub bearing red berries, the *Othera japonica*. This shrub is a near connection of the holly, and, in fact, has been classed as one by some botanists. It has small white flowers, as hollies have, and in Autumn and Winter carries red berries. This shrub was given a trial in Germantown, Pa., some years ago, and although but a small plant it proved hardy in sheltered places. When exposed it lost the immature ends of its latest growth. No doubt if larger plants, with hard wood, were set out in situations where thorough ripening of the shoots would result, it would pass through our Winters unscathed.

This evergreen is from Japan, and now that there is a marked increase in landscape gardening and planting work in the South, as nurserymen tell us there is, such a desirable evergreen as *Othera japonica* should be in demand. Nurserymen who look to supply Southern trade should procure this *othera*, at the same time remembering that it has stood the Philadelphia Winters when in a sheltered place.

Picea (Abies) Orientalis.

The *Picea orientalis* is catalogued by many nursery firms under its old name, *abies*; but in common use its name, *oriental spruce*, is employed

oftener than any other. It is one of the most elegant evergreens we have, hardy, fast growing and always of the darkest green color. It is a native of the Caucasus, and is therefore hardy almost anywhere in this country.

It is sometimes said by those not well acquainted with the trees that the *oriental spruce* resembles the *Norway spruce*; but to those fairly familiar with the two there is not the least trouble in knowing the one from the other. A glance at our illustration would enable any one to say it was not a *Norway spruce*. The growth is finer in every way, and the tree always taller in proportion to its spread at base than is the case with the *Norway spruce*. A specimen of *Norway spruce* of the height of this *oriental* would be as many as four feet wider at the base than this is.

Whenever a tall, pyramidal tree of evergreen character is required, no mistake would be made by planting an *oriental spruce*.

In the illustration before us this *spruce* is one of a group of evergreens interspersed with deciduous trees forming one of the boundary lines of the grounds of John T. Morris, Esq., Chestnut Hill, Philadelphia. It was photographed in early Spring; and, though the Winter was just over, it was as bright and green as if it had just completed fresh growth.

On old estates the tree is often conspicuous because of its comparatively lofty growth and narrow outline.

This *spruce* forms a great many roots, hence is not difficult to transplant. It does very well planted early in September, when a good watering is given it at the time. Early Spring is another good time for it, planting it as soon as the frost leaves the ground. It is a tree that does not push into growth early, so if set as soon as it can be in Spring, it has a chance to become established before the warm weather comes.

Picea (Abies) Orientalis

one possessing such plants for the Christmas occasion and desiring to plant them outside should keep them inside in a cool moist place until Spring, then plant them in the most sheltered place available.

Seedless Persimmons.

Of late we hear much of seedless persimmons as something desirable. No doubt as a single tree on a lawn such would be valued by those who like the taste of this fruit. It is not a fruit that could be cultivated for selling purposes. It is not in good condition for eating until after it has hung on the tree until dead ripe, at which stage it is too soft for shipping. If it could be gathered while yet lacking full ripeness and shipped to market in this state, it would probably sell to some extent; but shipping it in this condition is not practicable. Even the Japanese persimmon, a much superior fruit, is not adapted to be grown as one for distant shipping. To some persons the seedless persimmon is something new, but in files of the *Gardeners' Monthly*, 25 years ago, mention is made of such a tree. The late Judge Miller of Missouri had seedless persimmons many years ago. Such trees are met with now and again in a wild state, but their propagation seems little called for.

An Outdoor Climber for Summer.

A greenhouse climbing shrub sometimes seen as an outdoor one Winter and Summer in the south of England, is the *Physianthus albens*. In former years it was often met with in greenhouse collections here, and no doubt it is still to be found where collections are kept up.

As an outdoor plant for climbing purposes it used to be in great favor, making a growth of 10 feet in favorable places, and never failing to bloom profusely. The flowers are white, with a shade of pink, bunches of a half dozen or so coming from the axils of the leaves. They are quite large, in appearance not unlike those of a *campanula*, while belonging to the *asclepias* order. While not remembering having seen the name applied to it in print, greenhouse lads used to call it the "cruel plant" because it entrapped insects. If my recollection serves me right this entrapping came about through a sticky substance in the mouth of the corolla. At any rate, it is one of several other greenhouse plants that make admirable subjects for outdoor use in Summer, such as the *allamanda*, *stigmaphyllon*, etc.

The *physianthus* is propagated from cuttings made in late Winter. If grown on from the start they will flower the first Summer when planted outdoors.

WE ARE NOW GRAFTING ROSES

This is the Best Time to Place your Order.

In this Way you will Get Just What you Want

Read what some of your customers say about our stock of previous years:

Auburn, R. I., April 28, 1906. "The grafted Richmond we had from you this spring were as nice as could be, which has been the case with all too stock we ever had from you. You may rest assured when we want grafted roses or plants of any kind you can furnish you will have our order." (Signed) The J. A. BUDLONG & SON CO.

Hyde Park, Dutchess Co., N. Y. "I would like to thank you for the quality of grafted roses and American Beauties, on our roots, which you have sent as each year. I con-

sider the stock A No. 1 in every respect and doubt if better could be obtained from any other firm." (Signed) HENRY J. ALLEN, Gardener to Mr. F. W. Vanderbilt, Archdale, Mass., April 30, 1906. "I never saw finer or cleaner stock sent out by any firm than I received from you this year." (Signed) W. WESTLAND, Gardener to Mr. Francis Blake, Flashing, L. I., May 1, 1906. "The Richmond rose plants came to hand in good shape, fine healthy stock, well packed and good count. I am very much pleased with them

as I have been in the past with all stock purchased of you. It gives me great pleasure to send an order to your house for I know I will get just what my order called for, no roots, no roots, but clean, healthy stock." (Signed) A. L. THORNE, Whitinsville, Mass., April 26th, 1906. "The rose plants received from you this spring were the best I ever received from any source." (Signed) THOMAS HOWDEN, Gardener for Mr. Arthur F. Whitin, Lenox, Mass., Dec. 4th, 1906. "The grafted rose stock which you have supplied me with for the past six or seven years has been of the highest quality and has given me the greatest satisfaction. I have great pleasure to again send you my order." (Signed) EDWIN JENKINS, Supt. Bellefontaine Gardens, Morton Grove, Ill., Dec. 12, 1906. "The grafted Killarney you supplied us was extra fine. Our only regret was that instead of getting 2600 plants we didn't order twice as many." POEHLMANN BROS. COMPANY.

We intend to maintain our usual high standard this year. Send for catalog of varieties and prices.

Buffalo.

Christmas Echoes. Everybody reports holiday trade exceptionally fine. Monday preceding Christmas naturally forced a lot of trade on the last day, and taxed the florists to their fullest capacity. December 23 and 24 the thermometer registered from ten to twelve degrees above zero, which made delivering with any expediency, very difficult.

W. J. Palmer reports business good, having had a large stock of azaleas, ardisias, poinsettias and cyclamen in plants, while in the cut flower line he carried a fine stock of roses, carnations, violets, lily of the valley, etc. Poinsettias seemed to sell best, bringing from \$1 to \$5 per plant; azaleas, from \$3 to \$10, and ardisias from \$3 to \$5. Carnations seemed to have the call in the cut flower line. L. H. Neubeck reports business excellent.

Mrs. Meyers, mother-in-law to L. H. Neubeck, died here recently. The local florists extend their sincerest sympathy to the family.

J. Benson of Palmer's upper store has been ill for the past two weeks with a severe case of grip.

W. J. Palmer has increased his delivery services by the addition of an automobile. W. H. G.

Philadelphia.

The meeting of the Florists' Club on Tuesday night, brought out quite a good attendance. The paper read by S. S. Skidelsky was worth going far to hear, and will no doubt be discussed far and near and we hope prove beneficial to the trade.

The general committee to manage the S. A. F. convention in August was appointed; this committee will soon hold a meeting and get matters into working shape. At the February meeting, John E. Haines will tell us what he thinks about the carnation exhibition at Toronto. S. J. Reuter, Westerly, R. I., was a visitor here this week. George Burton has suffered a great loss in the death of his wife which occurred on Christmas day. DAVID RUST.

FOR SALE

Greenhouse Material milled from Gulf Cypress, to any detail furnished, or our own patterns as desired, cut and spliced ready for erection. Estimates for complete constructions furnished.

WOOD BROTHERS, Fishkill, N. Y. Mention the Florists' Exchange when writing.

Notice is hereby given that the co-partnership heretofore existing between Jean Frederick Anderson and Thomas Peter Christensen, under the firm name of Anderson & Christensen, in the business of florists at Short Hills, N. J., has this day been dissolved; the said John Frederick Anderson having purchased the interest of said Thomas Peter Christensen and assumed all the firm's indebtedness.

DATED, December 29, 1906. The greenhouses are all stocked with good salable plants in first-class condition, and the business will be continued as if no change had taken place; and all every body is guaranteed the same fair treatment as in the past.

Respectfully, J. P. ANDERSON, Successor to ANDERSON & CHRISTENSEN, Short Hills, N. J.

CHANGES IN BUSINESS.

GUTHRIE, OKLA.—Furrow & Co. florists, has been incorporated, capital stock \$15,000; incorporators E. H. Furrow, E. E. Furrow and J. W. Furrow. PIQUA, O.—Herman G. Hershey, has sold his business to Frank Seibert of Wheeling, W. Va. Mr. Hershey will go to Denver, Col. His wife is unable to stand this climate.

FRANKLIN, MASS.—M. J. Van Leeuwen of the Continental Nurseries is planning the construction of an up-to-date greenhouse, also a show garden of specimen plants, and possibly opening up an office in Boston. A collection of every kind of shrub and evergreen hardy in this section will be grown.

SUMMIT, N. J.—Thomas Christensen, who has sold his interest in the firm of Anderson & Christensen, Short Hills, N. J., of which firm he was one of the partners, will, in the near future, build a range of glass in this neighborhood and grow palms and ferns for the trade. Mr. Christensen is an expert grower and will undoubtedly make a success of the cultivation of these two specialties.

Rose Troubles.

(1) After putting new board benches in one of our rose houses last Summer, we were told by a "grower" to paint them with crude oil, as it would preserve the wood and make the benches last twice as long as without it; and as lumber is high, and going higher, we did the painting. The second day after we applied the oil we put in the soil and planted the roses. They started off nicely and grew well until about the first of November, when they began to take on a stunted look and are still in a sort of sleepy mood, losing a number of the bottom leaves and all their usual vigor. We lay it to the crude oil. Do you think that could be the cause? KING.

—We do not believe that the painting of the boards with crude oil has anything to do with the present condition of the rose plants. The weather since November has been anything but favorable for the culture of roses, and we are rather of the opinion that lack of sunshine and perhaps insufficient temperature during the cold weather, are more than anything else the cause of the stunted appearance of the plants. Give the roses the best treatment possible in regard to temperature, watering, etc., and they will, no doubt, come out all right as soon as we get a little more sunshine.

I am having some trouble with my roses, so am sending one for your inspection to see if you can tell me what is the matter, and perhaps give me a remedy for the trouble. The plants grew well until a few weeks ago when they commenced (in different parts of the bench) to turn yellow. They still continue to grow, but very weakly, and eventually drop their leaves and die. The old foliage on the plants keeps green, but the new growths are quite yellow when they show the first signs of going. I have wondered whether it could be club root; if so, what are some of the causes of it? C. S. B.

—Just what is the trouble with the roses in question we are unable to determine from the specimen sent. We are positive, however, that it is not club root. We are inclined to think, that the benches are not watered to their full depth when water is given, and would suggest that when water is applied, enough of it should be afforded to saturate the soil clear through to the boards, so that the lower roots are sure of not getting into a too dry condition. We believe that this is the fault, but as we said before, we cannot be positive from the meager information supplied regarding their previous treatment.

Time to Sow Seeds.

(2) When is the proper time to sow seeds of Phlox Drummondii, salvia, verbena, Ten-week stocks, etc., to have the plants in bloom about May 15? New Jersey. BEGINNER.

—To have the plants mentioned in flower by May 15, we would make the sowings of seed as early in January as possible. The stocks might come on a little too early, but if it is seen that such is the case, they can be retarded slightly; at all events, it will be better to have them a little too early than run the risk of having them too late.

Carnations.

(3) I send you some foliage from a carnation plant—Flora Hill. The plants are in a moderate sandy soil and do not seem to thrive. They were late purchased plants, and have not done any good so far. Can you give me a good formula for feeding them? We planted them in a bench where chrysanthemums had been previously growing, adding a little well-rotted manure to the soil. BEGINNER.

New Jersey.

—The carnation plant sent for examination was not suffering from any disease, but from being in a too poor soil. It was a mistake to plant the carnations in the same soil in which

a crop of chrysanthemums had been grown. We would recommend giving the carnations a watering with lime water, then in three or four days start to feed them with liquid manure, affording light applications about once a week.

Referred to Our Readers.

We desire to purchase an injector for applying carbon bi-sulphide about 12 inches into the soil. Also copper plant labels, for the permanent labeling of trees and plants. Decorative Plants.

ALLAMANDAS.—If allamandas had nothing else to commend them but the color of their flowers, that in itself would be sufficient to cause them to be grown extensively. There are in cultivation very few plants that produce flowers of yellow color serviceable to florists, and at the same time well adapted for various forms of decoration. Allamanda flowers, in the hands of an accomplished decorator, are capable of producing graceful and brilliant effects in dinner table work as well as when used in more elaborate decorations of dwellings.

When the only purpose in growing allamandas is for the production of flowers, the tall variety is still the best; but if it is desirable to have on hand for decorative purposes plants in pots or tubs profusely covered with gorgeous yellow blossoms, there is nothing to equal Allamanda Williamsii. Although this variety was introduced into England fifteen years ago, and into this country about thirteen years ago, it is not yet grown extensively as its merits warrant; but its growth in popular estimation is of a steady character. When once grown successfully, always grown. This variety is dwarf and well adapted for growing and flowering in small tubs, or in ten and twelve-inch pots. Allamandas are very easily propagated from cuttings, placed in sand over a bottom heat of 75 degrees. Probably the better method is that of cutting each cutting into a thumb pot, first filling the pots with sand and peat, or sand and leaf mold in equal proportions. After the cuttings are inserted in the pots and the soil made firm around them, they should be well watered and the pots then plunged in the sand in a propagating bed. Shading will be necessary for a while. In about three weeks the cuttings will be rooted and the tops will start to grow; then it will be well to remove them from the sand, and place them on the surface where they may remain until the pots are well filled with roots, when it becomes necessary to shift them into larger pots, using compost much the same as for the cuttings, except that less sand will suffice.

When the roots have made good headway in the pots into which the plants have been shifted, the points of the plants should be pinched; this will cause the remaining buds to put out shoots, and these when they have made two or three joints or whorls of leaves should also be pinched. Young plants intended for rafters or pillars should not be pinched until they have attained to the height when it is desirable to have two or more shoots. The plants will require repotting the first year as often as they have filled their pots with roots, but after the first year they require only one potting, if they have attained a size fitting them for the size of pots wherein they are to bloom, and his potting should be done soon after they start to grow in the Spring. A good compost for allamandas, after the shift from the second size pot, is three parts of good fibrous loam and one part of sand or charcoal. Good drainage is absolutely necessary, and when in full vigor of growth sunlight is indispensable. They should be pruned every Spring to within a joint or two of last year's wood. They require an abundance of water when in active growth, and very little when resting.

DIPLADENIAS.—When well grown and managed, there are but few plants that equal the dipladenias in the beauty of their flowers. Probably the reason why they are not more generally grown is the belief that their culture is extremely difficult. While it is perfectly true in their case, as in the case of many other plants shunned for the same reason, that until their requirements are thoroughly understood, success is almost impossible; but when a grower becomes familiar with their needs there is nothing unsurmountable in their successful cultivation. Care in watering is the most important consideration in growing dipladenias. When in active growth they will not continue in a thrifty condition, unless they get all the water good for them. And right here is where the best judgment is required in knowing how much is good for

Mention the Florists' Exchange when writing.

the plants. Any more than that is very apt to ruin them. Plants with vigorous shoots need more water than those of shy growth. When the plants are done flowering they require to be rested, but never should be subjected to an absolute drying off process. Very little water is necessary, however, when they are at rest, and it may be safer to err on the dry side than on the other. A temperature of about 55 degrees suits them in the Winter, while at rest.

Dipladenias are easily propagated from cuttings of wood with one or two joints, taken off the plants in the Spring when they begin to grow. The cuttings should be placed in sand, over a good bottom heat, where they will root quickly. When the roots are about one inch long they should be carefully removed from the sand and just as carefully potted into small pots. The material for the first potting may be composed of peat and sand in equal proportions and for subsequent pottings porous, lumpy peat two parts and sand and charcoal one part will do. Or they may be potted in fern root fiber and thrive equally well. Good drainage is absolutely necessary for their well-being. When engaged in the work of potting the plants great care is necessary in order to avoid injuring the roots, which, if damaged, will greatly retard the growth of the plants thereafter.

Dipladenias, like most other plants grown in a high temperature, are subject to the attacks of insects, and the safest way of preventing injury by these pests is a free use of the syringe, until the plants are in flower at least. The plants in their growing and flowering season require a rather warm temperature; some growers keep them in a temperature as high as 90 degrees, but I have seen them in good condition where the temperature was more than 10 degrees less than that. When the plants are in their most dormant condition they should be cut back. If this be done after active growth has commenced, they are liable to bleed, and the plants will suffer in consequence.

Dipladenias are sometimes grown from seed and that with such success that the plants flowered the first year; even so the cutting method of propagation is the more satisfactory. D. M.

ADVERTISING RATES.

One-half inch, 75c.; ¾-inch, \$1.00; 1-inch, \$1.25, special positions extra. Send for Rate Card showing discount of 10c., 15c., 25c., or 35c., per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

Copy must reach this office by 12 noon Wednesday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

The index to Volume XXII, 1906, of the Florists' Exchange accompanies this week's issue as a Supplement. Subscribers failing to receive same should kindly notify us of the fact.

The Florists' Exchange acknowledges, with thanks, receipt of a beautiful portfolio containing handsome photographs of Christmas baskets, specimen plants of Begonia Gloire de Lorraine, etc., from Samuel Murray, Kansas City, Mo. A credit to Mr. Murray's enterprise, as well as to his skill as a decorative artist and grower.

PUBLICATIONS RECEIVED.

HINTS AND HELPS FOR YOUNG GARDENERS. By H. D. Hemenway. Price 35c. Illustrated. The author, who was formerly director of the school of horticulture at Hartford, Conn., now of Northampton, Mass., says that this little work was written as a guide to school and home gardeners, being intended not only for youthful gardeners, but also for those young in experience. The hints and helps given are all of a practical nature, and will be found of great service to those engaged in the work of school gardening. Excellent planting tables for vegetables and flowers are furnished, and the instructions generally are such as can be readily assimilated by the young mind. The teaching of horticulture in schools is, we are pleased to observe, being more and more recognized as an important part of the curriculum, and such books as the present do much to help along the good work. "Establishing a school garden may change the entire healthfulness of a neighborhood," says Mr. Hemenway. "The school grounds themselves may be better planned and more healthful, but the best effect may be at the home. The school gardener soon wants a garden at home. . . It opens up a source of revenue, creates a love of industry and respect for property, and is often the beginning of better things. The gardener becomes a better American citizen." All of which we thoroughly endorse.

A Correction.

Editor Florists' Exchange:

I call attention to an error in regard to the publishing of account of chrysanthemum exhibit of Robert Leupke, the same being furnished to you by myself. The exhibit was made at Houston and not at the State Floral Society's show at Waco, as you have it.

S. J. MITCHELL,

Houston, Tex.

Credit.

The Philadelphia Florists' Club inaugurated the present year's proceedings with a pertinent discussion on that all-important subject credit. The club was fortunate in its selection of an essayist—S. S. Skidelsky—than whom no man is more familiar with the American florists' trade, or is better equipped to talk on the topic in hand. Mr. Skidelsky's paper appears in full on pages 13 and 14 of this week's number of The Florists' Exchange. His remarks should be carefully read and thoughtfully considered by those who would see this business placed on a workable footing, as regards the granting of credit, satisfactory to all concerned.

The essayist is not an advocate of the "pay as you go plan," believing it to be untenable under the present system of business operations. Rather does he favor quite liberal credit terms; but he emphasizes the fact that all obligations should either be met on maturity, or satisfactory explanation of default of payment forthcoming. He deprecates the indifference shown by too many in the trade to statements, bills, letters, etc., which neglect has drawn upon the craft the opprobrium of "slow pay," and not without good foundation.

Mr. Skidelsky believes the trade papers could greatly assist in eliminating from the business the "deadbeats" that prove such a menace to its proper conduct. So far as The Florists' Exchange is concerned, we are practically assisting in this very laudable endeavor at all times. And in this respect we have to use common parlance, "troubles of our own." A statement as to how we do business may prove helpful to others. It is our practice, by means of the list supplied by the National Florists' Board of Trade (a medium of information we recommend to all who would safeguard their interests) and in other ways, to ascertain the standing of all parties unknown to us seeking credit, in the granting of which we are guided by this information. And if at any time an advertiser fails to do business with us on business principles, his patronage ceases, so far as we are concerned. We do not believe in the policy of "all is fish that comes to our net." Healthy selection is our motto, hence the columns of The Florists' Exchange are at no time clogged with the advertisements of parties whose financial standing or business methods are such as to bring the paper into disrepute, or to cause loss and annoyance to our patrons or to ourselves.

We are not of Mr. Skidelsky's view that the S. A. F. O. H. should take a hand in the credit regulation of the craft. It is not the province of that society to run any member's business for him, however much it may desire to aid him, by suggestion, in the operating of that business. The granting of credit is optional, not compulsory, and he is wise who first sees to it that those who seek credit privileges are worthy of them; also, when abused, that such privileges are entirely withdrawn.

Mr. Skidelsky touches, among other things, on the perplexing problem of dealing with the "four hundred," in credit matters. This terrible drawback could be helped were the "fellow around the corner" to act in co-operation with those having outstanding accounts to collect refusing to supply further goods until all legitimate debts were liquidated. This leads to the thought of combination for self-preservation in business matters, something that has been found practicable in other lines of trade. So long as cowards, men of weak backbone or lacking stamina are found in the trade, just so long will the credit hunter and payment shirker be difficult of eradication from it. Combination that sticks means much in this credit business, common business sense in dealing with the subject probably more. And the "bite" that comes when these are absent, is often salutary in its effect, though at times not to the extent that one would look for or expect.

We congratulate the Philadelphians on the selection of the theme, and Mr. Skidelsky on his treatment of it. May the discussion prove as healthy as it should do, tending to the benefit of all concerned not only in the year on which we have just entered, but for many years to come.

CLUB AND SOCIETY DOINGS.

CONNECTICUT HORTICULTURAL SOCIETY.—The annual meeting of this society was held in County Building, on Friday, December 28, at 8 p. m. President Sternberg in the chair. The treasurer and secretary submitted their annual reports which showed the affairs of the society to be in a flourishing condition. Officers were elected for 1907 as follows: President, A. C. Sternberg; vice-president, J. F. Huss; treasurer, W. W. Hunt; secretary, Alex. Cumming; pomologist, C. H. Sierman; statistician, G. A. Parker. The next meeting will be held on January 11, when an exhibit of carnations will be made. ALEX. CUMMING.

NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY.—The December meeting of this society was held on the afternoon of the 12th. Three new members were elected and one nominated to active membership. The roll of active members now musters 76. This meeting closed the second year of the society's existence. From its birth, two years ago, with a chartered membership of 14, this society has steadily progressed both in the keen interest manifested by its members and in its financial standing. As an organization it has brought together the gardening fraternity of quite an extended area, having in view always the elevation of the profession as its chief aim.

In the point competition H. F. Meyer scored 83 1-3 with poinsettias, tomatoes and cucumbers; S. J. Trepas, 80 with tomatoes and cauliflower.

The prize for 25 carnations arranged for effect was awarded H. F. Meyer. For best flowering plant A. Mackenzie was first with a beautiful growth specimen of Begonia Gloire de Lorraine in a 4-inch pot; S. J. Trepas, second, with a well-grown cyclamen.

The annual dinner of the society was voted to be held on Wednesday, January 23.

The treasurer's report showed a substantial balance in the treasury after meeting all expenses.

The following officers were elected for the ensuing year: President, Alexander Mackenzie; vice-president, H. F. Meyer; secretary, John F. Johnston; treasurer, E. J. Brown; corresponding secretary, J. W. Everett.

On behalf of the members of the society and in a brief and appropriate speech, J. W. Everett presented the retiring president, Thos. Harrison, with a handsome gold scarfpin, as an expression of the society's appreciation of the valuable services rendered during his two years of office. President Harrison suitably replied thanking the members for their support.

JOHN F. JOHNSON.

American Carnation Society.

New York to Toronto.

For the trip to Toronto, we will use the New York Central Lines, and arrangements have been made to attach an extra sleeper to train leaving Grand Central Station 8:00 p. m. Tuesday, January 22, arriving Toronto, 10:50 a. m. Wednesday, for the accommodation of members from New York and contiguous territory. In order that we may early perfect all arrangements for the car, it is requested that members advise the undersigned as soon as possible if going, and space desired.

The rate authorized is one and a third fare on the certificate plan, or \$11.85 from New York going, and one-third, or \$3.95 returning, conditioned on there being 100 in attendance from all quarters, and also on members securing certificates when purchasing tickets and having same properly vised in Toronto before returning.

Going tickets will be sold and certificates issued January 18 to 23, and certificates will be honored for tickets returning until January 29.

The cost of berth New York to Toronto is \$2.50. Tickets can be purchased and certificates secured from any of the New York Central Lines offices, or, if desired, arrangements will be made to have same delivered.

If any prefer to leave in the morning, they may take the Empire Express, 8:30 o'clock, arriving in Toronto at 9:05 p. m.

Society of American Florists and Ornamental Horticulturists.

Appointment of Directors.

President William J. Stewart has appointed as directors, to serve for three years: John K. M. L. Farquhar of Boston, Mass., and Samuel Murray, Kansas City, Mo.

[We congratulate President Stewart on his selection. Mr. Farquhar is a Scotsman, and is a member of the firm of R. & J. Farquhar & Company, Boston. He is well known to the S. A. F. O. H. members through the able and interesting lectures he has delivered before that body, and the interest he has taken otherwise in the affairs of the organization.

Mr. Murray is also a native of Scotland, and is one of the prominent Western craftsmen, being the owner of a store and greenhouse plant in Kansas City, Mo. Mr. Murray will bring to the office of director a knowledge of trade requirements that cannot fall to be of great value in the deliberations of the board.—Ed. F. E.]

OUR READERS' VIEWS

Prevention of Corruption Act.

Editor Florists' Exchange:

In quoting from the "Journal of Horticulture" in your Christmas number, on the above subject, you are unwittingly helping to spread an entirely false impression. The writer of that paragraph was not at the meeting in question, as it was confined to nurserymen and seedsmen, and his remarks are as misleading as it is possible to be. The unanimous feeling of the meeting was that whatever had been the custom in the past it was impossible for any business man to attempt to continue a system which might at any time after January 1, (when the new Act comes into force) land him in prison for two years.

The old firms here did not grudge the gardener the 5 per cent he has been so long accustomed to, but they welcome the new law which will stop the rascals who for the past few years have been sending out travelers to buy the gardeners' custom at any price, trusting to recoup themselves by robbing the employer.

ONE WHO WAS AT THE MEETING.

Renaming American Carnations in England.

Editor Florists' Exchange:

Your correspondent, Henry Eichholz (see page 629 of The Florists' Exchange, November 24, 1906), deserves the thanks of all British growers of American carnations for his timely note concerning the carnation, Mrs. W. T. Omwake.

Obviously "New Yorkers," who by his note to the London "Gardeners Chronicle," casts so serious a reflection upon the integrity of the British nurseryman, is not a carnation specialist; or if so, he must be occasionally touched with color-blindness, otherwise he would have seen that Mrs. W. T. Omwake and Rose-Pink Enchantress, when exhibited before the Royal Horticultural Society, were very distinct in color. This much was clear to many at any rate, the undersigned among the number.

The varieties when placed before the committee for certificate were not in first-class condition and no award was made to either variety.

The parent of the above named sports, viz., Enchantress, is quite a favorite here and is extensively cultivated, and the children of such a parent when more mature will of a surety be received with favor.

Your many readers will be interested to know that a special Winter Carnation Society to promote the cultivation of the American carnation in England has recently been formed, and that its first exhibition held on December 4 was quite a success.

E. H. JENKINS.

Hampton Hill, Middlesex, England.

The Tariff on Glass.

Editor Florists' Exchange:

I notice in the column devoted to "Our Readers' Views," some correspondence on the tariff on glass. Is it not absolutely useless to expect this Congress to take the duty off glass? Did not the party in power get in power with the money and influence of the trusts, i. e. the Glass Trust and the rest of them? Granting this fact, is it not folly to ask them to vote against the power which created them? Dog won't eat dog. Just imagine for a moment those in power voting for a reduction on the glass tariff and then coming around to the Glass Trust for their usual handsome contribution to the campaign fund for the next election! I'll venture the opinion that the man that would go for the money would be told to go to some warm place where he didn't need glass.

I would like to see the tariff reduced just as much as any one, for the whole system is nothing but class legislation with 49 per cent protection to the manufacturer and 1 per cent. to the workman. It simply gives the workman the privilege of handling more money, paying \$2.40 for shoes that used to be bought for \$1.50, for instance. Now, brothers, if you can coax those in power to reduce the tariff wire me at once, for I want to be among the first to know it. We all agree that at present we florists have hold of "the heavy end of the stick."

M. W. ROSEN.

Sports.

Editor Florists' Exchange:

I have never given any consideration to the scientific side of the subject of "sports" or natural variations, either in greenhouse plants or in the seed crops as grown in the field, simply classing them as desirable new types and colors to be propagated if possible, or undesirable rogues to be pulled out or cast aside to preserve the purity of stock in a standard variety.

My experience has covered the same length of time and much the same character of work as Mr. O'Mara's, and his article appears to me to be an excellent historical record of the most valuable sports in greenhouse plants for the period of time covered in his article. If Mr. O'Mara will go back a little farther in his recollections, he will recall

the old tri-colored and fancy zone-leaved geraniums such as Mrs. Pollock, which were quite prolific in sports; and also how that the nursery apprentices each one had to make his individual experiments in trying to propagate the snow white shoots from the old "Mountain of Snow" geraniums.

The only thing in this line that has impressed me as being clearly demonstrable has been the very great number of original sports with sweet peas in the California climate to the dwarf Cupid and bush types, which, in my opinion, is an attempt by nature to provide a mulch or carpet of foliage on the ground to keep the soil about the roots cool and moist during the hot dry months. This tendency is also shown in the two new bush lima beans offered by W. Atlee Burpee & Company, this season, which were natural sports occurring under similar conditions.

E. D. DARLINGTON.
Superintendent of Trials, Fordhook Farms.

Birnie on Water and Wind.

Editor Florists' Exchange:

It seems to me that Job is a queer cuss. He ends his epistle of December 22 with "compliments" to friends and foes, but with characteristic inconsistency proceeds to criticize and find fault with all and sundry in his next. He works himself into a frenzy regarding the compliments extended to your Boston contemporary, and ends his rather cynical

The Late Elijah W. Wood.

screed with a snarl at Mr. McGorum's letter on "Rose House Wisdom." Of course, the extreme antipathy of Mr. McGorum to water in an undiluted state is prominently set forth in his letter, but I guess he is not the only florist who takes the precaution of soaking his strawberry in a small "glass" before eating it. The average florist is very particular as to the quality of his drinking water anyway. Anyone who attends the S. A. F. conventions will bear me out on this. On reaching the convention city the familiar cry is always heard: "Look out for the drinking water, 'taint good," and invariably those who neglect that solemn warning are taken with "cramps." The S. A. F. convention is always held in a dry time anyway; even the river at Dayton was dry when we were there last Summer.

Mr. McGorum asserts in his able letter that "human beings are largely composed of water." This may be right in the majority of cases, but I think he would find, on analysis, that the anonymous scribblers in the trade press, be they ghosts or human beings, are about 99 per cent. wind, leaving very little for either water or brains. Trade press poets belong also to this class, always excepting the Bard of Western Springs. I know George Watson will coincide with me in this matter; and I will say, in his defence, that he is not scared of mosquitoes, and that he would have bravely faced even those Barnesat mosquitoes, if it had not been for an unfortunate combination of Summer trousers and cane-bottomed chairs.

An article in one of your contemporaries last week under the caption "The Routine of Potting" seems to me to be superfluous, and suggests the idea that either the Editor is mighty short of copy or the scribe is greatly in need of the penny-a-line. To print such stuff in a paper supposed to be read only by professional men is obviously needless, and is a reflection on their ability. The men who read the trade papers are out of the baby class, and many of them were able to pot plants as well and quite as fast as the writer of that article when he was playing with his jumping-jack or some equally innocent toy. We could get along without such gush, just as well as we could get along without Job's cranky reflections, or the letters of

JOHN BIRNIE.

John Bird.

John Bird, long a resident of Raysville, east of Knightstown, Ind., is dead. He was born in England in 1828, settled in Indiana in 1857, engaged in the nursery business, and at one time was one of the best-known nurserymen in eastern Indiana. He was a birthright member of the Friends' Church, and prominent in that society. He is survived by his widow, one son, George Bird, and a brother, Samuel Bird, all of Raysville.

William Charlton.

William Charlton, treasurer of the Morris County Gardeners and Florists' Society, and a well-known wholesale and retail florist, died at his home in Madison, N. J., on December 28, 1906. He was 73 years old and leaves a widow and one daughter to mourn his loss.

Mr. Charlton was honest and upright in business and private life and had a very large circle of friends. Many loving tributes of flowers were sent to the funeral by his brother florists, including a huge wreath of carnations, roses and lily of the valley from the society which he served so long and so faithfully. He was a native of Yorkshire, England.

John T. Doyle.

John T. Doyle died at his residence in Menlo Park, near San Francisco, at an early hour in the morning of December 23 from pneumonia after a two weeks' illness. He was born in New York City in 1819 and came to California in the Winter of 1852 and soon became a noted florist and fruit grower adjoining the town site of Menlo Park, of which town he was in 1874 appointed a Trustee and became president of the first Board of Trustees. He was also appointed a Regent of the State University when it was founded in 1868, and served three terms as Horticultural Commissioner for the State at large. All San Francisco florists knew Mr. Doyle as a producer of the choicest roses, carnations and violets.

He leaves a widow and a family of grown sons and daughters.

Elijah W. Wood.

Elijah W. Wood, who died at his home in West Newton, Mass., on Monday, December 31, 1906, had long been associated with horticultural and more especially pomological interests, having been, up to his retiring last year from the position, chairman of the fruit committee of the Massachusetts Horticultural Society, for a quarter of a century.

Mr. Wood was born in Upton, Mass., June 7, 1826, of New England parentage, several generations of the family having lived and died in the rural district, a few miles from Worcester, Mass. He moved to Boston in the early fifties, and shortly afterward took up a suburban residence in Newton, where he has since made his home. In 1876 he retired from mercantile pursuits and has since devoted himself entirely to his home and horticultural pursuits, to which his whole family have always been attached. He had always been active in political affairs, both local and State. He was a member of the Legislature in 1885, 1886 and 1887. He was elected to the Newton Board of Aldermen in 1877 and served again in 1878 and 1883. He was a member of the school committee from 1874 to 1883, and at one time was a candidate for the position of mayor.

In 1869 Mr. Wood joined the Massachusetts Horticultural Society and had taken an active part in the progress of the association since then. For many years he was the representative of the society in the State Board of Agriculture, and for eighteen years was trustee of the State Agricultural College.

His wife, who was well known in horticultural circles in Boston and vicinity, passed away in January last.

Mr. Wood leaves three sons, all engaged in horticultural pursuits, and one daughter. Elijah A. is well known as a chrysanthemum expert, and at one time was president of the Chrysanthemum Society of America. William K. is the Western representative of The Florists' Exchange, with headquarters in Chicago.

LADIES' AUXILIARY S. A. F. O. H.—The Ladies' S. A. F. pins have been received, and will be forwarded to all members as soon as the secretary, Mrs. Chas. H. Maynard, returns from North Carolina, where she has been called by sickness.

The Wide House Question

As Proven by the Experience of L. B. Coddington,
One of the Largest Jersey Rose Growers.

How is a man to know things in this world—absolutely know before he invests several thousands in an idea that may be still in its experimental stages? The grower must be a sort of gambler, willing to take a long chance and put a theory into practice to uphold his personal views.

Being determined to get at the bottom of the wide house question, I visited L. B. Coddington's range at Murray Hill, N. J., where along with five three-quarter span cypress houses, each 350 by 18½ feet, he has two

that the eave line with its metal plate and glazing bar bracket make an indestructible joint of great strength and give a freedom from ice; that because of the framing's absolute rigidity and the care with which expansion and contraction have been taken care of, the glass breakage is practically nothing. This last house of ours has thoroughly convinced me that 400 feet is about the right length for economy in working and freedom from the complicated heating problems of the extremely long ones which need ex-

tion with the 2½ feet floor rise, each bench is about 5 inches higher than its southerly neighbor. During the shortest day you can stoop down to the edge of the bench on the farthest walk and always see the sun. Then you understand the highest bench is perfectly easy to work without any elevation of the walk or the mighty

"It's steam; the gravity system. You see all these houses are connected with center passages and the 8-inch mains and 5-inch returns are in trenches right through them. There are two 1¼-inch pipes under each bench, two flows under one bench, two returns under next lower, and four 1¼-inch pipes hanging on each side of the house."

"Then do you think the large house is cheaper to heat?" (Here the foreman chimed in emphatically.) "Decidedly. We haven't figured it out on a percentage basis, but here is a comparison: When there are two pipes on the 18½-foot house, then by the same token there should be four on the 37½-foot house and six on the 55-foot, but we only run three on the 37½-foot and four on this."

"How do we account for it?" "Well," said Mr. Coddington, "there isn't so much outdoors about the big house and then there's that big volume of heated air up there, and, as I said before, once heated up, it is easy enough to keep up. Yes, there is a great economy and convenience in working one of these large houses; to my mind that's one of the strongest points."

"Now you must see the work room. We wanted it as near fire-proof as possible. The siding is plaster board with a pebble-dash finish on the outside, and this floor is made with iron beams and brick arches between, the whole thing cemented over. Another time we would make a solid concrete floor and no bricks. In the boiler cellar these concrete walls were built right in the trenches without any framing, and then the cellar dirt dug out. An experiment, but it worked and saved all that expense of framing a mould."

"Yes, we are in every way satisfied with the construction of that big house. The firm who erected it know their business and understand putting things through, and they back up their advertisements with 'pleasant dealing.' You can put me down as a firm believer in the iron frame house, the wide house."

LEDDRA WOOD.

Plan of Coddington Wide Greenhouse

L. B. Coddington's Wide Greenhouse—Exterior View

400 foot houses, iron frame, one 37½ feet wide, and his last one 55 feet wide. He looked like the right man to talk wide houses to, because he had tried the narrow, the wider and the widest and stood in a position to make comparisons.

Mr. Coddington has always been in the rose business and in addition to this range at Murray Hill, owns another at New Providence, N. J., of 62,000 square feet glass area. He is one of those wiry, hustling sort of men who dig right into things; believes in spending money to save money; is familiar with the various constructions and houses of any importance all over the country; has tried erecting his own houses and having it done by the builder. He stands in a position to know things and he does—knows them in a quiet, unassuming way that carries its own conviction.

What Mr. Coddington and his wide-awake foreman told me about this last house erected by Hitchings & Company, I want you to know the thoroughness with which this house was thought out and built, the superiority of the iron frame construction and the advantages of the wide house.

I said to him: "In general terms, how do you like your big house?"

"Like it in every way, and it's a satisfaction to know that such a construction gives us all possible light,

pensive anchoring of heating pipes and all that sort of thing."

"What is the height of the ridge?" "Let me see, the sides are 6 feet, with a 22 foot ridge." (See cut of section). "You see that gives us a big volume of air up there, then when once heated, it is a protection against sudden changes and preserves a more uniform temperature and humidity."

"What is all this talk about better ventilation?"

"It's absolutely true, the fresh air is more evenly distributed because there's more air for distribution, and when it does reach the plants, it's thoroughly warmed up and acts like an insulation against chills. Yes, there are fifty foot runs of sash operated by one of these easy running gears, and right here is where one of the economies in working a large house comes in, for your men can shut down the sash in about half the time it takes to run up and down three small houses covering the same space."

"Now tell me about your benching."

"Well, the house runs east and west at a perfect level, but with an inside rise of 2½ feet from south to north; then the first bench is only 16 inches in height; each following bench is 2 inches higher, making the back one 32 inches. Taking this in connec-

tion with the 2½ feet floor rise, each bench is about 5 inches higher than its southerly neighbor. During the shortest day you can stoop down to the edge of the bench on the farthest walk and always see the sun. Then you understand the highest bench is perfectly easy to work without any elevation of the walk or the mighty

unhandy way of straddling from bench to bench in making your 'cuts.'"

"Let's see, how many benches are there?"

"Nine, 3 feet 11 inches wide, with ten 22-inch walks. Four plants to a bench are all that can be worked to advantage, and I believe thoroughly in the side walk. You make up in quality what you possibly lose in quantity, and that's another thing strongly in favor of the wide house. The quality certainly is better, and quality is what we fight for."

"Twelve thousand plants! It must take a lot of wiring?"

"About eleven miles, more than I'd care to walk this cold day."

"The heating?"

Our Credit System, Its Uses and Abuses.

(Read by S. S. Skidelsky before the Philadelphia Florists' Club, January, 1907, meeting.)

I deem it an honor as well as a privilege to address you upon a subject that it seems to me has never received the consideration it merits, either at the hands of our numerous florists' clubs or of our national society.

Tribute to the Trade.

At the very outset, however, and before I approach the subject properly, namely, "Our credit system, its uses and abuses," I wish to premise my remarks by paying a brief tribute to the members of our craft scattered throughout this great American continent. It is no exaggeration to assert that there is no body of men more honorable, more honest and straightforward than our brother florists. It is a noteworthy fact, one scarcely requiring any proof, that during the panic of 1893 when business conditions were most deplorable; when the stringency of the money market and the general stagnation and business depression were most appalling in their consequences; when the professional calamity howlers and the unscrupulous demagogues aired their theories to the already kindled fire of fear and discontent; when the so-called "first laws" of self-preservation began to assert themselves in a manner that brought disaster and financial ruin to many a business house, our brother florists, as a body be it said to their everlasting glory and credit, put their shoulders to the wheel harder, never thinking of joining the procession of bankrupts. It is an actual fact—and I challenge anybody to disprove it—that there were fewer failures in proportion among the florists, either compulsory or otherwise, than among any other body of business men. I could easily name a number of florists, who during those memorable dark days, saw fit to deprive themselves and their families of things generally considered as absolute necessities, in order to meet their obligations.

S. S. Skidelsky.

Men capable of such self-sacrifice, men possessed of such moral stamina, of such business integrity and honesty of purpose need not hesitate inscribing their names upon the roll of honor.

Perhaps Pope had some gardener in view when he said that "an honest man is the noblest work of God."

Of course there are exceptions, but of these later. That much for our honesty and business integrity.

Credit System Needs Modernizing.

Can we claim as much for our business methods, or, to be more exact, for our credit system, as compared with that of other progressive business men? Hardly. While it is true that we are keeping pace with the times in many other respects; while we are advancing steadily and uninterruptedly along lines of general progress, increasing our facilities, modernizing our stores and our greenhouses, improving our products; while we have been exchanging views and opinions as to the best methods of marketing our products, going even so far as to touch upon the ideal employer and employee, it has never occurred to us to consider seriously the means and ways and the best methods of modernizing our credit system. A question of momentous importance to our own interests, strange to say, seems to have escaped our attention.

A Brilliant Example.

Viewed from whatever standpoint, and whatever arguments we may bring to bear upon the subject, it is undeniably true that our credit system is in its primitive state, lacking those sound fundamental business principles which are at the basis of every sound financial or industrial institution. It is said of the late Marshall Field, the merchant prince of two generations, that his first step at the very outset of his brilliant business career, was to establish a sound credit system. A rule from which he never deviated and which perhaps more than any other factor was responsible for and contributed so largely toward his colossal fortune, was to collect his outstanding accounts and to meet his own obligations upon maturity. What is true of Marshall Field, the merchant prince, holds equally true of John Smith, once upon a time the struggling market gardener, whom we now see making rapid strides along the highway of progress. The reason? Easily explained: "I pay as I go," says Mr. Smith, "and in order to be able to do this I collect my own accounts promptly." Simple enough in itself, yet a rule of this sort seems to constitute the corner stone, the very foundation of one's success.

Pay as You Go Doctrine Not Tenable.

"To pay as one goes" does not imply, however, spot cash transactions. Such a modus operandi, is no longer tenable under our present business conditions. Nor is credit, as such, to be dispised or condemned on general principles. On the contrary,

credit well regulated and judiciously used is a blessing and a privilege that can scarcely be overestimated. Were it not for this privilege, I venture to say there are many among us to-day who should have never achieved the success they enjoy. How often do we hear of the man, who in years gone by had made his first start in life by building his first little greenhouse on a paltry few dollars borrowed from either friend or shark, stocking it with a few geraniums and other truck, obtained on credit from some reputable establishment or other? If we trace the history of the successful florist of to-day, we can see at a glance that credit has in a large measure contributed towards his success. I say "in a large measure" advisedly, because other qualifications, such as hard work, perseverance, will power and energy, were of equal importance as a means to his successful business career.

Advantages of Credit.

I reiterate, credit is a privilege that is not to be dispised by any business man, no matter how conservative in his enterprises or how determined to steer clear of debt. Broadly speaking, it is credit, inspired by confidence and backed by enterprise, that is responsible for the remarkable development of our natural resources—the wonder of the world. It is credit inspired by confidence that is accountable for the prosperity which we enjoy to-day. Credit has been the means of launching many a successful industry, giving employment to hundreds and thousands of men; credit has been the means of enabling many an individual to stem the tide of adversity and to rise to affluence and wealth. The struggling market gardener of a few years ago would have never perhaps become the successful grower of to-day, if it were not for that blessed privilege—credit. I will go further and say that credit has been the means whereby most of our modern, mammoth greenhouse establishments have come into existence.

Credit, coupled with hard work, energy and business integrity, has made it possible for the enterprising man of to-day to achieve his success in much less time than it took the florist of a generation ago by the slow "pay as you go" process—in its literal sense. We are progressing, so to speak, in a geometrical ratio, by leaps and bounds, as it were, no longer satisfied to let "well enough alone," no longer content, like the immortal Micawber, to "wait until something turns up." We must create our own opportunities and we are doing it to our hearts' content, thanks to that blessed privilege—credit. If there is anything to be turned up we are generally inclined to take a hand in the turning process ourselves. We seem to realize that faint heart never won success, hence fear and hesitation no longer keep us in check. If we are determined to "get there," it is seldom indeed that we fail in our object.

Abuse of Credit a Menace.

But all good things have their limitation and what is beneficial or wholesome in some cases often produces the contrary effect in others. Assuming that credit, well regulated and judiciously used, is a privilege that the strictly honorable and enterprising business man cannot fail but make the most of, it becomes an absolute menace—often to a business community at large—when placed at the disposal of the unscrupulous trickster. To illustrate my idea: I know of a florist in the West, doing a thriving business, who seems to take especial delight in defrauding his creditors. He buys everything, in or out of sight, in Holland, Belgium or New Jersey, throwing his goods on the market at prices compared with which those of his legitimate competitors seem prohibitory. Here is a case of credit misapplied, the result proving detrimental not only to the man sustaining a direct loss, but to the florists in the immediate vicinity as well.

I will cite another case: There is a florist in one of the Middle States who makes it a practice to order every new seedling carnation in sight. Unlike the careful, ultra-conservative grower who pays his bills and who, as a matter of course, wants to know something about the variety offered, the man I speak of orders indiscriminately, on the principle of "something to gain and nothing to lose," never paying for the stock. The season following, he offers rooted cuttings at a reduced price, underselling the very man he victimized, thus doing him a double injury. And yet, despite such instances (I could cite many others), despite the fact that tricksters under the assumed names of florists are encroaching upon the legitimate trade in a manner most injurious to our common interests, in our anxiety to outdo our competitors, to swell our volume of business we are inclined to take chances, we fail to discriminate, to draw the line most rigorously, as it needs to be drawn, between those worthy of our confidence and those who should be blacklisted in letters so large and conspicuous, that he who runs may read.

Honest Failure No Disgrace.

And right here I wish to be understood, that I am in no wise reflecting upon the honor of those who through no fault of their own, but owing to adverse business conditions or unforeseen circumstances, were compelled to liquidate their affairs as best they could, in other words, to fail in their business. Such men deserve our sincere sympathy, and it behooves us as men and as members of a noble craft to do all within our power to aid them. It is the scamp, not the unfortunate victim of circumstances—the man (God save the name!) who lays his trap for the unsuspecting Hollander, who scans the trade papers and

peeks his cloths, as he sees fit, to sult his own nefarious designs; it is a fellow of this sort, I say, that deserves our unqualified censure and our uttermost condemnation. Aside from the moral element involved, aside from the fact that scoundrelism should be discouraged on general principles, we must view the situation from the standpoint of self-interest, of self-protection. It is a duty which we owe to ourselves, to our fellow-members, to the community at large, to turn the rascals down and out. It is high time indeed that we realize the situation as it affects our common interests. Often the misdeeds of one miscreant will reflect upon the honor of the innocent. It is but human nature to profit by experience. If John has victimised us, it is not likely that we will place our implicit confidence in Tom, notwithstanding the fact that the latter means us no harm.

It is in instances of this sort where credit not only ceases to be a blessing and a privilege, but it becomes an absolute curse, and the sooner we realize it the sooner we devise some means and ways whereby to put an end to such abominable practices, the better for all concerned. Our trade papers can and should help us to accomplish this worthy object, for there is no means more effective, there is no weapon more powerful than the press. Under the glare of its far-reaching searchlight, human rats invariably go under cover.

If credit is a privilege, that privilege must not be abused. Fortunately, such men, the black sheep in our fold, are but in the minority and need not be considered in connection with our credit system, as practiced by the rank and file, the men whose honesty and honorable intentions are beyond reproach, who meet their obligations in the long run.

Florists "Slow Pay."

A few weeks ago I happened to meet a fellow traveler representing a Western crockery concern, who in the course of our conversation remarked to me that "the florists are awfully slow pay; that while other business men will either pay upon maturity, or else will write to the house and ask for an extension of time, the florists, as a rule, do neither; that statements, letters and drafts seem to have no effect upon them. Eventually, of course, they pay, but they do so to suit their own convenience, regardless of conditions or terms."

I need hardly add that there is a deal of truth in these remarks, and that the man knew whereof he spoke. As a matter of fact—and I say it without any fear or reservation—in the majority of cases, terms are honored more in the breach than in the observance. To be sure, the average florist means well, he means to pay his bills—some time; he has good intentions, but—and here comes the rub—good intentions never were and never will be a negotiable asset! Good intentions can never pay any account. A book full of "good intentions" is no more effective and can no more sustain the stability of a business house, than a prayer of Dowie, for example, can stay the ravages of an incurable disease. Like prayer, good intentions are good enough in their place, but in this matter of fact world, unless backed by something tangible, something negotiable, good intentions are of no particular consequence.

It seems to me—and again I say that without any fear or reservation—that some of the best men in our business have but a mistaken idea as to the duties and obligations they owe to a business house. Just because they see fit to patronize a business house, it does not necessarily follow that they have the right to ignore the business terms as laid down by that house.

Liberal Business Terms Advocated.

I do not mean to convey the idea that I am an advocate of iron clad rules, that none but strict conditions should govern all business transactions, transpiring between buyer and seller. On the contrary I believe in liberal business methods; I believe in liberal business terms. I hold that any man worthy of credit is entitled to all due consideration and liberal treatment, and I likewise believe that privileges of this sort should not be abused unnecessarily.

A Suggestion.

Assuming for the sake of argument, that such a thing as a committee of credit men, appointed by and acting under the direct supervision of the Society of American Florists, were possible; assuming furthermore that such a committee had the power to act, to pass judgment and to lay down rules and regulations in all matters pertaining to our business or credit system, would it not appeal to each and every one of us if this committee saw fit to pass a resolution something of the following order?

1. Resolved that no business house is worthy of patronage unless it manifests a liberal spirit towards its patrons.
2. Resolved that no business house need or dare expect the good will of any florist in good standing unless it shows consideration for and a good will of its own toward its patrons.
3. Resolved that no florist is entitled to credit; and to all the advantages accruing therefrom unless he realizes the need of paying heed to statements, of answering business letters and of honoring drafts.
4. Resolved that any florist of good standing reserves the right to exact the most liberal terms possible, but when once agreed upon, such terms are to be honored not in the breach, but in the observance, and be it further
5. Resolved that if any florist finds himself in straitened circumstances and is not able to meet his obligations in due time, such florist is obliged to

write and explain matters of his creditors, said creditors to make all due allowances and to show all due consideration as the case might warrant."

The "Four Hundred" a Bad Factor.

One of our greatest shortcomings in the regulation of our credit system, it seems to me, lies in the fact of our very loose methods in dealing with the "four hundreds" of our towns. It is a matter of record that "society folk," while nowise backward in following the dictates of fashion, are decidedly so in paying their flower bills. It is not unusual to hear that Mr. So and So, a prominent man about town, occupying a magnificent mansion, driving fast horses or a \$5,000 automobile, has not paid his flower bill since "June a year ago." Nor is it out of the ordinary to learn that Madame Blanc, who gave Mr. Florist a carte blanche order some ten months ago, has left for the seashore, the mountains or for Europe without giving her flower bill the least thought.

"Of course" Mr. Florist tells us, "the money is good, and it won't do at all to send a second bill, much less to press for a settlement. Mr. So and So or Madame Blanc might feel offended. No, it won't do at all."

Then, there is another reason to be considered: there is a competitor around the corner who is just looking for the chance of carrying such accounts on his books for one or two years.

Our Credit System Antiquated.

That our credit system is defective, antiquated and out of accord with our present business conditions is self-evident and need not be dwelt upon at greater length here. Nor is it my object to suggest any new methods to you or to point out the remedy. I submit this question to your own good judgment and

wages, and the land was in almost constant use. One crop followed another in almost continuous succession. The produce was hauled to market over night in market wagons. This convenience to the market was at times of great advantage. The farmer was his own salesman, and if the prices did not suit him he could take his load home again. On the other hand, if there was a shortage of the produce he had on hand he would telegraph for an assistant to rush another load to market as soon as possible. These conditions make market gardening within twenty miles of the big markets of New York very profitable.

The land speculators have changed all this. Not-

few have moved further out on Long Island, but they find the conditions there are wholly different. All their produce must be shipped by way of the Long Island railroad, and their manure brought out in the same way. The freight rates are so high and the conditions of shipment so difficult and uncertain as to be practically prohibitive. A shipper from Norfolk, Va., can get his produce to the Manhattan markets almost as quickly and cheaply as the Long Island farmer.

It is safe to assume that market gardening under the conditions which formerly prevailed about New York City is a thing of the past. The city consumers must hereafter depend upon the railroads and steamboats for their supplies. The old-fashioned market wagon loaded with baskets of vegetables, with its high seat and canvas cover, will soon be a curiosity. The effect must be to increase the value of farm lands in the market garden sections of the South within reasonable transportation distance. Already the effects of the new order of things may be noticed in the large receipts of lettuce and other green vegetables from the South. Early potatoes and green peas from Long Island will hereafter appear only as a part of the fiction of the New York hotel menu. One of the unfortunate things about the new order of things is the additional advantage which it gives to the speculator. With hundreds of farmers competing with each other the law of supply and demand regulated prices; now a combination of the middlemen and speculators may at any time advance the price of produce to the consumer and at the same time reduce the compensation of the producer. Formerly a "corner" in lettuce or strawberries or celery was almost impossible; now it only requires an agreement between a few large commission houses to bring it about.

Experiments are making by officials of the Long Island railroad on the east end of the Island to show the productiveness of the so-called barren plains. Without, however, a very considerable reduction in freight rates or some radical change in methods of handling produce at the terminals of the railroad, there is little prospect of the intensive farming or market gardening of the west end of the island being reproduced on the poorer land of Suffolk County.

Spiraea Gladstone With Background of Poinsettias. Growers, Bertermann Bros. Co., Indianapolis

sincerely hope that you may give it your earnest and serious consideration. It is a question that concerns as all alike, the wholesaler as well as the retailer, the man who has already made his start in life as well as the young man who bends all his energies and all his ingenuity towards that end.

A Start at Reform Necessary.

Philadelphia, the horticultural center of the United States, a city, whence so many good things have sprung in the past, is pre-eminently fit to take up the work of reform. And this is a most opportune time to undertake a work of this sort. Our national society meets here in August. There are many good things in store for us, we may be sure of that. Some may tell us something about the ideal gardener or employer, some about conducting our stores, others about operating our greenhouses with profit. Let us hope that some good soul may tell us how to bring about the much-needed reform in our credit system—a subject well worthy of the earnest consideration of the best men in our society.

Abandoned Market Gardens and Farms.

The effect of the abandonment of large areas of land in New York City upon the seed trade as reported in last week's Florists' Exchange is only one of the results of the land boom of the last two years. It is roughly estimated that in Greater New York and Nassau county, Long Island, there are at least 50,000 acres of land which are not cultivated. A considerable part of this land has been taken out of cultivation during the past two years. This land was, according to the last United States census the most intensely cultivated, that is to say, the most productive land in this country. It was fertilized by manure from the stables of the city, the farmers taking a load of produce to the market and returning with a load of manure. The labor was performed for the most part by German men and women, who worked almost continuously at low

withstanding the profits of the small farmers, they could not resist the temptation to accept three thousand or more dollars per acre for their land, when, in many cases, it only cost a few hundreds. They have sold out. Their farms and gardens are cut up into small so-called building lots and are growing up with weeds and underbrush. As a rule the farmers have given up farming altogether. A

Carnation House of Bertermann Bros. Co., Showing Construction

As a Matter of Course You are Looking for the Best and the Most Profitable Pink Carnation. What Shall it Be? Our Answer Is: Invest in the

ROSE PINK ENCHANTRESS

It is a Sure Thing and Ours is the Only True,
Dark Pink Sport of Enchantress Worth Growing

Enough were Disseminated in Various Sections of the Country During the Past Season to Prove that it is the Best and the Most Profitable Variety in Sight To-day. But we will let the Following Letters Speak for Themselves:

"Rose-Pink Enchantress is by far the best carnation we have ever grown. Have had it in bloom now for two months and it has commanded 25 per cent. better price than any other fancy carnation. Its pleasing color makes it a quick seller and am sure it will be one of the most popular varieties for years to come."—Mrs. R. Mauff, Denver, Colo.

"It is identical with Enchantress except for the lovely pink color. The 700 plants we have, although doing well, cannot furnish one-fourth enough to supply the demand for this color continually ordered in advance."—C. F. Baker & Son, Utica, N. Y.

"The stock of Rose-Pink Enchantress furnished by you last spring was of a high character; the plants are producing blooms superior to its parent (Enchantress). We believe it to be far superior. Its shade of pink is a color long sought after. We are sure it is one of the best acquisitions in Carnations we have had in a long time."—J. Breitmeyer's Sons, Detroit, Mich.

"Our Rose-Pink Enchantress are simply grand and we shall not sell any cuttings, but reserve all for ourselves."—Geo. E. Buxton, Nashua, N. H.

"We are much pleased with the Rose-Pink Enchantress. We grew it under glass all summer and began to cut in August. It was a little light early, but far superior to Enchantress, which was a washy color. The color is fine now, just the shade the public wants. We shall grow 5,000 of them next season."—W. J. Palmer & Son, Buffalo, N. Y.

"We are much pleased with the Rose-Pink Enchantress bought of you last season. We find it strong and healthy, coming into bloom early, and being a clear pink, just the color needed. Shall plant more of it next year. We consider it one of the best varieties sent out the last few years."—Patten & Co., Tewksbury, Mass.

"Would say we consider it the finest thing we have in Carnations and we have nearly all the latest."—Fairview Greenhouses, Victoria, B. C.

"I believe your Rose-Pink Enchantress is if anything, better than the original. The color is fine."—John Murchie, Sharon, Pa.

"Rose-Pink Enchantress bought of you has proven most satisfactory; fine, clean Joost color, with all the qualities and size of Enchantress, if anything stronger in growth. Consider it the best pink on the market."—J. Louis Loose, Washington, D. C.

"We are very favorably impressed with the Rose-Pink Enchantress; it is a much stronger grower than the Enchantress, of a pleasing color, and one that we will plant largely next season."—J. Gammage & Sons, London, Ontario.

"We consider Rose-Pink Enchantress one of the finest carnations of its color in recent introduction. It not only seems to be of sturdier habit than its parent, but the flowers actually come larger. It has come to stay. What it may do to Lawson! Time will tell."—Crabb & Hunter, Grand Rapids, Mich.

"We have so many failures put on the market in these late years that it is a pleasure to strike something that is really good. This we can say of the Rose Pink Enchantress, having all the merits of a good Carnation, this meaning a free bloomer, beautiful color and a fine commercial flower. A practical, excellent Carnation."—Mianapolis Floral Co., Mianapolis, Minn.

"We consider the Rose Pink Enchantress one of the best in the market and have given our foreman instructions to propagate every one possible. We think it is an ideal variety and are sure that it will be one of our leading kinds for the next few years."—Geo. A. Kuhl, Pekin, Ill.

"The color of Rose Pink Enchantress is grand, its growth more vigorous than Enchantress, my neighbor florist is delighted with it."—George Corbett, Cincinnati, O.

"We consider the Rose Pink Enchantress equal in every respect to the light pink and in color, far superior. We intend to grow it much heavier next year."—Honaker, "The Florist," Lexington, Ky.

"I consider the Rose Pink Enchantress equally as good as the 'Light Pink One, which is known over the whole universe as the best on the market today. The color of the Rose Pink Enchantress, being the same as that of Joost, adds still more to the merit of this variety. There is no chance for anyone to make a mistake in growing 'Rose Pink' and we are going to propagate all we can for next year."—Jacob Schulz, Louisville, Ky.

"The Carnation Rose Pink Enchantress that you sent out is all right, a good seller and a good grower, in fact it is a 'Chip of the old block' in every respect, except color. We will grow a big lot of it next year. We were lucky to get a thousand of it last year."—Joy & Son, Nashville, Tenn.

"The Rose Pink Enchantress is one of the most noteworthy novelties that has been offered in some time; with us it is the most vigorous grower on the place. So many novelties fail to fill the bill, that when one gets something that does it is a pleasure to say so."—Salter Bros., Rochester, N. Y.

"In regard to the Rose Pink Enchantress would say that we are well pleased with the variety, the color is pleasing and a color that takes well with our customers and we shall grow it in quantity another year."—A. N. Pierson, Cromwell, Conn.

"In regard to Rose Pink Enchantress I can say that ours are doing fine. It seems to be as profitable, if not more so, a Carnation as Enchantress, and the color is all you can wish."—Fred Burkl, President Pittsburg Rose & Carnation Co., Gibsonia, Pa.

"Our experience with Rose Pink Enchantress Carnation purchased from you last season has been very gratifying throughout. We are certainly much pleased with it and shall grow them in large quantities next season."—Wm. Roethke Floral Co., Saginaw, Mich.

"If you remember I received my cuttings from the last batch—on May 3d, but they started off to grow at once, I grew them on until I had them in 5-inch pots before planting. It has done so well that the plants are fully as strong as the Light Pink Enchantress, though at least two months younger. It is evidently a stronger grower than Enchantress, the color is an ideal pink and there is no doubt that it will become one of the leading pink varieties and just as indispensable as Enchantress. No one need hesitate buying stock of it."—F. J. Fillmore & Son, St. Louis, Mo.

"The Rose Pink Enchantress you furnished pleases us very much. The color is very fine and just what the public wants. The cuttings you furnished were very good and we have now large and strong plants. We shall grow a big batch of it next season."—Emil Buettner, Park Ridge, Ill.

Don't Hesitate, Don't Doubt. THE ROSE PINK ENCHANTRESS is Sure to Prove a Splendid Investment
Price for Strong-Rooted Cuttings, February and Later Deliveries, \$7.00 Per 100. \$60.00 Per 1,000

S. S. SKIDELSKY

824 No. 24th St., Philadelphia

B. SCHROETER

59 Broadway, Detroit, Mich.

ADDRESS ALL CORRESPONDENCE TO S. S. SKIDELSKY

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

The Christmas Trade.

From what I can gather everybody seems satisfied with the past Christmas business. Many stores cleaned out entirely, not having a plant left fit to sell. Anyone who has a few pieces on hand will easily dispose of them for New Year's, and many are buying quite heavily in anticipation of a good business then. This holiday is getting better every year, and as it follows so close on Christmas, it proves a good outlet for left over stock.

Sales of cut flowers were, in most cases, heavier than last year; and, I think, flowers are getting back into favor as Christmas offerings. The plant trade was especially difficult this season, owing to the extreme cold weather, for which few were prepared. The growers, however, were fortunate, most of them making their deliveries before the cold weather set in. A great many plants were reported frozen by customers which, of course, means that these have to be replaced, the retailer being the loser.

Very little was shown that was new or original or in any way different from former years. Pans of *Cypripedium insigne* were largely in evidence and one store made quite a feature of them by filling them out with branches of black alder. The latter, coming from cold storage and being well berried, made an otherwise dull plant bright and attractive, and a ready seller. The pans were covered with red raffia baskets. *Araucaria excelsa* were also made a feature here. The plants were removed from the pots and fastened to ten-inch papier mache saucers, sphagnum moss being used to fill in with. Well berried holly was then used to cover up the moss. These plants made handy center-pieces for Christmas dinner tables, and sold largely for that purpose.

A Broadway store had for sale some large orange plants, the baskets being covered with black velvet, tied with orange and black ribbon—a most striking effect?

Another prominent florist went in extensively for "fancy poultry," in the shape of birds of paradise, ostriches, quail, etc., their bodies forming egg-shaped boxes for the reception of bunches of violets, or other small corsages. Imitation steel-bound chests, having the appearance of being rusted, were also used, and for the same purpose.

Holly painted white and frosted was the attraction of one Fifth Avenue store window. This was suggested by a society leader last season, and it proved a great success. The "hall room" of her home was decorated entirely with it. She gave orders for large quantities of holly to be painted white (leaves only), the berries to be left in their natural color. While the paint was still moist, glass crystals were thrown over the branches giving a splendid imitation of snow. Twelve cases of holly were treated in this manner and it took a large force of "painters" nearly a week to complete the work. But it was well worth the trouble and, of course, money was no object.

A Christmas Dinner Decoration

of *Adiantum Farleyense* and English mistletoe is perhaps worthy of description. It was for a large party of twenty covers. A gold service was used. A low center-piece and four loving cups were filled with *Adiantum Farleyense* and English mistletoe, the latter predominating. A. *Farleyense* and well-berried mistletoe were laid on the cloth in formal designs. The effect was exceedingly rich, but most customers call for something brighter for Christmas.

The very large table that I saw was treated as follows: The whole table, except about two feet around the edge (reserved for service), was covered with green moss; small Christmas trees, none of them being of over twelve inches high, were stood around at irregular intervals, giving one the impression of a growing forest. Frosting was thrown over the whole for a snow effect. Miniature sleds drawn by dogs, a couple of bears, a miniature frozen lake made of glass with a log cabin on its banks, and a group of trappers, made a very appropriate decoration, the fragrance from the natural spruce trees being most agreeable.

Stock on the Market.

Lilac has appeared on the market in small quantities and is very good, it being quite early. *Narcissus Golden Spur* is also here. I saw some gardenias this week from Pennsylvania, with stems eighteen to twenty-four inches long, quite the finest I have ever seen, the foliage and flowers being perfect. A dollar and a half was readily paid, and the flowers were really worth it.

D. RAYBUN.

IN MEMORY OF THE LATE LEWIS ULLRICH.

—David J. Salter, a prominent citizen of Tiffin, O., and a warm friend and admirer of the late Lewis Ullrich, bequeathed on Christmas Day to the city of Tiffin a parcel of ground to be beautified, maintained and owned by the city and to be forever known as "Ullrich Place." The ground is the triangular tract at the intersection of and between Clinton Avenue and Hunter Street and extending for 100 feet on each of said streets from the intersection thereof. Mr. Salter says: "This ground contains a magnificent maple grove and is so located that it can be transformed into a bower of beauty which will be the pride of every citizen and at the same time be a memorial and testimonial of one who has done more than any other person to assist in beautifying our city and inculcating in the minds of the people a love of the beautiful in nature and in art.

"I desire that the improvement and beautifying of 'Ullrich Place' be placed under the direction of the Present Day Club of the city of Tiffin, with which Mr. Ullrich was affiliated, in conjunction with the members of his family, and I hereby appoint Hon. John C. Royer and R. L. DeRan, solicitor of the city of Tiffin, to see that the deed to said property is made out and executed in accordance with the views above expressed."

Archie Walker
Pres-Elect Montreal Gardeners and Florists' Club

Magnolia Soulangiana as a Tree.

At the present time nearly all the specimens of *Magnolia Soulangiana* seen on lawns are in bush shape, the form of growth they are usually sold in in nurseries. But although they are sold in this form it is always optional whether the shape be continued or not. If not desired as a shrub, cut away all the shoots but one strong central one. Should there be none of this description, cut the whole bush down to within six inches of the ground in early Spring, and then as new shoots are formed cut away all but one strong central one. This one will be the basis of the coming tree. This plan often gives better results than any other, for the stronger the bush cut down the more vigorous will be the shoots it will make when Spring comes.

The few specimens of this magnolia, and of *M. conspicua* of tree shape seen on lawns are objects of great beauty, and the wonder is that more of them are not grown in this way. The plane, the linden and the poplar are bereft of foliage often before the Summer days are over. On the other hand, the magnolia has its foliage green and perfect until the freezing weather comes. All Summer long it is of a deep pleasing green; and these merits are in addition to its having beautiful flowers in the earliest days of Spring.

Some of the lawn specimens seen on the older estates here are fine shade trees. They were started as trees when young, are five to six feet above ground before the branches appear; and as well developing spreading heads were made, they are excellent shade trees. For a lawn shade tree *Magnolia Soulangiana*, *M. conspicua* and their hybrids could well be used much oftener than they are.

Nurserymen advocate early Spring planting of the magnolia north of Virginia. There is something in Fall planting the trees do not like; and whether it be Spring or Autumn the pruning knife should be used freely at transplanting time.

JOSEPH MEEHAN.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 25th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 MADISON AVENUE. My facilities for delivering flowers for any and all occasions are unexcelled; I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

LAMBROS MULINOS, 503 Fifth Avenue, and 301 Columbus Avenue. I have at all times a superb stock of reasonable cut flowers and can fill telegraphic orders at a moment's notice.

Kansas City, Mo.

SAMUEL MUREAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonal varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. FOLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders, placed with us, will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway. J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Tex. and La. Mail and telegraphic orders solicited.

GERBERA JAMESONII.—In reference to the communication which appeared in your columns on October 27, I may say that it is quite erroneous to state that *Gerbera Jamesonii* occurs only in the Kaap Valley. It is common at various points all along the eastern slope of the Drakensberg Range, at an altitude of about 2,000 to 2,500 feet. I have found it in great quantity on the Government Tobacco Estate in the Zoutpansberg district, about 150 miles north of Barberton, and have heard of its occurrence in plenty in the Middleburg district.

I have seen plants bearing flowers of the various colors referred to by Mr. Graham-Lawrence, which are not of infrequent occurrence, though not common. There is also considerable variation in the tints of red displayed by different plants.

The "Barberton Daisy," as it is called in the Transvaal, grows luxuriantly in Pretoria gardens (altitude 4,500 feet), withstanding several degrees of frost and forming handsome clumps of dark green foliage.

During the last three dry years it has been rather unusual to find fertile seed on either wild or cultivated plants, but this year my plants are bearing more fertile seed, perhaps on account of the better rainfall, or perhaps because the plants are older.—**JOS. BURTT-DAVY, Agrostologist and Botanist, Pretoria, in Gardeners' Chronicle.**

Imperial and Pink Imperial Carnations

LEADING CARNATIONS

ARISTOCRAT (Beautiful Cerise)
RED RIDING HOOD (Scarlet)

Also many other good ones. Early delivery of well rooted first-class healthy cuttings. Send in your order early. Catalogue ready Jan. 1st, 1907.

CHICAGO CARNATION CO.,

A. T. PYFER, Mgr. JOLIET, ILL.

Mention the Florists' Exchange when writing.

MABELLE--New Pink Carnation for 1907

Color.—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. Size.—Three to four inches in diameter when established. Odor.—Pleasing, but not strong. Stems.—Invariably strong, but always graceful, ranging from 12 to 50 inches during the season. Habit, etc.—A very quick and vigorous grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Sets away rapidly, blooms early and gives long stems right from the start. Productiveness.—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery Jan. 5th to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000.

THE H. WEBER & SONS CO., OAKLAND, MD.

Mention The Florists' Exchange when writing.

SURPLUS STOCK

In Excellent Condition

New Year's the time for parties and balls, is now on the programme. What will you use to decorate? Take my advice and use for a centerpiece an **ARK OAKRY**, **CELESTIA**, **ROBERTA** or **GLAUCIA**—the kind and size I grow. You will be surprised what a lovely effect they will have when placed upon tables of dinner or supper parties, or any other place in the house. These plants have just got on hand now from Wood and Sons.

Price: 8-7 in. pots, 4-5 year old, as broad as high, 4-5-6 tiers, from 22-36 in. in height, \$1.50, \$1.75, \$2.00 to \$2.50 each. **Glauca** specimens 7 in. pots, 38 in. high, 38 in. wide, 5 tiers, \$2.50 to \$3.00; 6 in. pots, 3 years old, 4-5 tiers, \$1.00, \$1.25 to \$1.50 each.

KENTIA FORSTERIANA PALMS not coarse with us; have plenty and can meet all wants, cheaper than ever; 6 1/2 to 6 in. pots, 30 in. high, 6 good leaves, 60c., 76c., and 85c. each, 7 in. pots, made up, 1 large size, about 40 to 46 in. high in the centre, and three smaller size plants 25 to 30 in. high around, which gives them a fine appearance, price, \$2.00 to \$2.50 each. 6 in. pots, single plants 36 to 45 in. high, 5 to 6 good leaves, 4 years old, \$1.25 to \$1.50, \$1.75 each. 6 in. pots, 32 to 36 in. high, 5 to 6 good leaves, \$1.00 each, 5-1-2 to 6 in. pots, 30 in. high, 5 good leaves, 4 years old, 76c. to 85c. each.

ARECA SAPIDA, just imported from Belgium, something new, looks like Kentia palms, about 25 in. high. Look! only 50c. each, worth \$1.00. This is a bargain seldom offered.

ASPARAGUS SPRENGERI, 4 in. pots, 10c.

FERNS,

All raised in pots and not on benches as follows:

NEPHROLEPIS BARROWSII, 7 in. pots, as big as a bushel basket, 75c. to 1.00 each. 6 in. pots, large, ready for 7 in., 50c.; 6-1-2 in. 40c.; 5 in., 30 to 35c.; 4 in. 25c.

BOSTON FERNS, 7 in., very bushy, only 75c.; 6 in., 50c. or 55.00 per doz.; 5 in., 30c. to 35c.; 4 in. 25c.

NEPHROLEPIS SCOTTII, 6 in., as big as a washb., worth \$2.00, now \$1.25; 7 in., as big as a bushel basket, worth \$1.25, now 75c.; 6 in., 5c.; 5-1-2 in. 40c.; 4 in. 20c.

MAIDEN HAIR FERNS, (*Adiantum Conocatum*), 6 in. pots, 35c. and 40c.

AZALAS FOR FASTER FLOWERING Plants now in bloom or bud, 76c., \$1.00 and \$1.25 each.

BEGONIA, new improved **ERFORDI**, uses bloomer for Christmas and all through the winter, pinkish flowers, 4 in. pots, 20c.

BEGONIA FLAMBEAU, good seller, large, 4 in., fit for 6 in., 20c.

DRACAENA BRUANTII, Imported from Belgium. This is the best dracaena grown for house cultivation. Most favored all over Europe; can stand any amount of dry heat, dust or dirt, always full of green waxy foliage from top to bottom. 6 in. pots, about 30 in. high, 60c.

FERNS for dishes, best varieties, 2 1/2 in., 5 c., 3 in., very strong, 6c.

All goods must travel at purchaser's risk.

When ordering, say whether the plants should be shipped in the pots or not. Cash with order.

REVIEW OF THE MARKET

NEW YORK.—The cut flower trade for New Year's day, and the two days preceding, was of but an ordinary nature. It has come to be understood now that there is not much more to be done in the flower line on the first day of January than there is on an ordinary Saturday; and the prices of stock of all kinds were regulated accordingly. We should mention here that a general cutting of values went into effect the day following Christmas—rather an unusual proceeding—but made necessary this time on account of the quantities of stock left over and regular daily shipments coming in, which had to be disposed of at some price or other.

Sunday and Monday were two stormy, wet days, and values averaged quite low. It has been usual to maintain Christmas values until after New Year's for some years past, but this time such a thing was impossible; and weather conditions were, to a degree, responsible for the lower prices on the days mentioned.

On Tuesday the weather was fair and more cheerful and a partial recouping of the selling price in some lines was accomplished. The best American Beauty roses were pushed to 75c. each, and the best grades of tea roses were disposed of at from 15c. to 20c. each; the latter price was, however, only obtained for a limited supply of superfine quality. These figures seem low in comparison to those that ruled at Christmas, still they are much better than what had been obtainable during the latter part of last week and the beginning of this one.

Carnations were in quite heavy supply, and prices diminished equally as much as did those on roses. For novelties 10c. was considered the outside, and such varieties as Enchantress, which a week ago would have fetched 12c., were freely offered at 6c. each. Red kinds have been plentiful and have been disposed of in quantities at \$5 per 100; ordinary grades, in all colors, have been obtainable at any time since Christmas at \$2 and \$3 per 100.

The shipments of violets on Monday evening were heavier than anticipated, and clearances were out of the question unless figures were made to suit the speculators, and this the dealers strenuously objected to in many instances, with the natural consequence that many violets were left over on Tuesday at closing time. Prices ruled at from 60c. to \$1.25 per 100.

Orchids, lily of the valley, Paper White narcissus and lilies were plentiful enough for all calls and some to spare.

Novelties in supply were wallflowers, nasturtiums, jonquils and white lilacs; the two latter mentioned flowers met with some encouragement but as regards the former nobody seemed over anxious for them.

Sweet peas are coming in regularly, and there is still a scattering supply of chrysanthemums. Gardenias are bringing but \$1 each for the best, and it may be observed that finer stock of these was never before offered at this season of the year.

Asparagus and smilax are in fair demand daily; the supply of these two staple products seems to be so regular and even now that seldom does a change occur in their market values.

CHICAGO.—The aftermath of probably the greatest holiday trade that this city has ever seen, in a little that was not well known before, yet, however well posted one may be, there is always something to learn. It became evident in the middle of the preceding week that red stock of roses and carnations, especially the former, was shy and that more goods had been sold than could be delivered; consequently the prices were unstable, and it was a matter of getting all that the purchaser would pay. On Sunday the pickled carnations, particularly white and an abundance of other white stock, made their nod to the market, and prices dropped on this line, yet good colored stock held its own. It is safe to say that everything, with the exception of white carnations, Roman hyacinths, Paper White narcissus and surprising as it may seem, poinsettias, which were in over supply, cleaned up to the entire satisfaction of all parties concerned. It may be mentioned incidentally that there was more stevia than could be taken care of; and mignonette was rather more in supply than in demand, as was also lily of the valley except in high grade stock.

It was reported through the market on the holiday rush that Pochmann Brothers were to largely increase their floor space in the basement of the Atlas Block, but it is asserted by the holders of the leases on all three sides where extensions would be possible, that if the extension occurs it will have to be on an upper floor.

Violets were much in demand during the holidays, and were as a general rule in excellent form.

Nothing succeeds like success, and the grower who has confidence enough to consign his goods to a commission man of his own selection should certainly have confidence enough to send these goods when they are ready and let his agent, who is in close touch with the market, use the goods to the best advantage. That means "success."

The following were the prices quoted on January 1, 1907: American Beauty, per dozen, 36 in., \$5 to \$6; 30 in., \$4 to \$5; 24 in., \$3 to \$4; Roman hyacinths, per 100, \$2 to \$4; carnations, 1.50 to \$2; fancy, \$2 to \$4. Prices of adiantum and asparagus same as last week. Lilies, \$16; cattleyas, \$50 to \$75; smilax, \$8 to \$12; lily of the valley, \$2 to \$4. Violets, ferns and galax, as also Paper White narcissus, remain unchanged.

W. K. W.

BOSTON.—There is quite a change in the market this week and high prices have not been maintained except in a few instances. Carnations are now plentiful, selling at from \$3 to \$5 for the best grades, while a few fancies bring \$6. There is not a heavy demand for white carnations. Roses sell at from \$4 to \$12, while some exceptional blooms of the common sorts bring \$2 per dozen. American Beauty still maintain a fairly good price, the best grades bring \$6 and \$9 per dozen. Violets are at 75c. and \$1; sweet peas \$1, while some extra fine blooms bring \$1.50. Lilies are not plentiful. Callas bring \$1.50 and \$2 per dozen; lily of the valley, from \$2 to \$5; mignonette, \$2 to \$5. Paper White narcissus and hyacinths bring \$2. Yellow narcissus have made their appearance, selling at \$4. There is practically no change in the prices of greens.

J. W. D.

PHILADELPHIA.—From Christmas day until New Year's the market was somewhat sluggish; flowers did not move at all well. This week a large amount of business developed for New Year's day, and the vim given to the market has held up very well. American Beauty roses are selling at \$9 per dozen for the very best; a large lot carried over from last week went at \$10 per 100, for a decoration. Tea roses are in rather better supply. Some extra choice Killarney from the East are selling at \$25 per 100; all regular varieties are going at from \$10 per 100 up. Carnations are more plentiful, general stock selling at from \$2 to \$6 per 100, while some extra choice Enchantress brought \$8 per 100.

Double violets are at \$2 per 100 this week, the large singles at \$1 and \$1.50 per 100. Mignonette brings \$4 to \$8 per 100; sweet peas, \$1 to \$1.50, a few extras \$2 per 100. Narcissus Von Sion sells at \$8 to \$10 per 100; gardenias, 50c.; cattleyas, 50c., and 75c. for selection of color. Asparagus and cut ferns are moving more freely.

DAVID RUST.

PROVIDENCE, R. I.—Business here since Christmas has been very good with stock of most kinds scarce and high priced. And it looks as though this condition of things would last for some time, owing to the extraordinary demand caused by the general holiday trade and the extra number of social events.

The wedding decorations for the Goddard-D'Andigne wedding were to the most elaborate ever seen in this city; they were furnished by O'Connor, on Saturday, December 29.

Monday next is the inauguration of P. J. McCarthy, one of the most popular Democratic mayors elected to the seat in this city. It is also inauguration day for our City Fathers and it is predicted by the retail florists here that it will be another banner day, judging from the way orders are coming in. C. A. J.

LATEST CHRISTMAS REPORTS.

ST. LOUIS.—The general outcome of business for Christmas was from all reports very satisfactory, and the florists all over the city enjoyed a full share of patronage from the great multitude of shoppers. Some of our uptown florists, who handle great numbers of blooming plants, sold out clean. The weather was favorable for delivery, and plants needed only little wrapping. Begonia Gloire de Lorraine led; next came poinsettias and azaleas, then cyclamen, araucarias and other decorative plants. Made-up plants in hampers and birch bark baskets were in great demand.

Not only was the plant trade above the average, but the cut flower trade was also quite extensive—very much better than last year's and with better prices on almost every variety and grade. Fancy stock came high, but no question was asked when quality was shown, especially in the case of carnations. They brought \$12 per dozen for the best; other fancy roses of the smaller varieties sold at \$15 per 100. Carnations, when fancy, brought \$8, and nothing under \$4 per 100 was sold. Violets were never better in quality at \$2 per 100. Bulbous stock, as usual, was plentiful, with no increase in price.

In greens the market was in full supply. Holly, mistletoe and wreathing sold well.

Among the most prominent retailers' reports, are the following: George Walbart found a large increase in both plants and cut flowers. Mrs. Avery's trade was fully up to last year's. C. Young & Sons Company did a big business in both plants and cut flowers. F. C. Weber had a large stock and cleaned out early. Ellison, Kalish, Windt and F. H. Weber had all they could do. Charles Connors, at Michel's, had his hands full, as did Sanders and Alex. Waldhart & Sons. Henry Ostertag is glad it's over. Riessen and Foster, downtown, had a great rush on Monday and Tuesday.

All of the north and south St. Louis florists report a good demand for almost everything. So the Christmas business of 1906 goes down as the best in years.

ST. PATRICK.

ST. PAUL.—Business this Christmas was nothing short of a revelation to nearly all of the dealers. While a big trade was anticipated, no one expected it to be as heavy as it really was. Every bit of holly and green was sold and a great many re-orders were sent in. Christmas trees sold well and there is not one to be seen at the different places. Plant sales were heavy, and the only things not sold were a few Gloire de Lorraine begonias and azaleas. Poinsettias went fast and at good prices. The cut flower business seemed to puzzle the most of the trade. The demand was unusually strong and the supply was equal to it. Roses brought good prices; specimen stock of Richmond and Killarney sold at \$50 and \$5 per dozen, and in some cases \$6 per dozen. Bride and Bridesmaid brought \$3 and \$3.50 per dozen. Carnations sold at \$2.50 and \$2 per dozen, the latter price being asked by most of the trade. American Beauty ran from \$8 to \$24 per dozen. A great many were sold at \$15 and \$18; in fact, that price seemed to be the limit. Violets brought \$4 and \$5 per 100; the quality was not as good as it should have been, but the flowers had the color and sold readily. Roman hyacinths and Paper White narcissus found slow sale and in a great many cases were disposed of only in making up assortments.

L. May & Company report business the best they have had for a great many years. Plants sold exceptionally well and prices seemed to cut but very little figure when customers got what they fancied. Poinsettias in pans appeared to have the lead in sales; cut poinsettias also went well. Azaleas did not go so well as expected, and it begins to look as though the poinsettia were fast driving it out as a holiday plant. Cyclamen commanded a good price, ranging from \$1 to \$6 for specimen plants. Cut flower sales were unusually heavy.

Colberg & Lemke, who but recently succeeded the Swanson Floral Company, report an active business. Their trade seemed to run heavily on cut flowers; they handled some very fine Richmond selects which sold for \$6 and \$10 per dozen. They also disposed of a large number of elegantissima ferns at big prices. Their cut poinsettias were as good as ever seen in this locality.

Holm & Olsen were very busy; their sales appeared to run more to plants than with other dealers. Their poinsettias in

pans were very good. They also had a large number of Gloire de Lorraine begonias, which did not move as fast as other stock.

C. F. Vogt, also Vogt Brothers, did well both in plants and cut flowers, but they claim the former led in sales. They turned out some excellent holly wreaths, very artistically arranged, which commanded a good figure. Princess pine sold well with them, in fact, they cleaned out of it entirely.

Otto Hierserkon reports a very fine trade, and an exceptionally heavy demand for holly and green wreathing. It was noticeable that about every merchant's store in his locality was decorated with holly and green.

E. F. Lemke reports a very satisfactory trade and claims that his demand was principally for cut flowers. Plants did not sell very well with him.

Krink & Son sold about all they could cut and appeared well satisfied with results.

The Randaley Floral Company turned over a great many Christmas trees in addition to a heavy business in cut flowers and plants.

MILLWAUKEE.—With only about four days of sunshine during December stock came in better than expected for Christmas. However, many more roses and carnations could have been sold had they been available. Roses showed the effects of the dark weather more so than carnations, and much sorting out was required to make up shipping orders. The average grade of carnations was fine; the select red and Enchantress brought \$10 per hundred, good shipping stock from \$6 to \$8. Roses sold at a higher figure than last year, the best class stock brought \$18 to \$20; medium grade, \$10 to \$15, and shorts, \$6 to \$8. Stevia was plentiful; about \$1.50 per hundred was the average price. Roman hyacinths, lily of the valley and Paper White narcissus came in freely, selling at about \$3 per hundred.

Violets were plentiful, \$2 per 100; \$2 per hundred was the top figure for good stock. American Beauty never soared so high before; the prices demanded were almost beyond reason, yet the flowers sold. However, the supply was so limited that some one was willing to pay any price to get them. Poinsettias were fairly plentiful and sold at better figures than last year.

There was a heavy call for plants. Good cyclamen were scarce, but there was a quantity of azaleas, poinsettias and primroses to be had. Very few Gloire de Lorraine begonias were seen this year. Holly and mistletoe were plentiful, but bouquet green was very scarce. The produce commission men are cutting quite a figure in the handling of Christmas goods nowadays; almost any kind of decorative stock is now carried by them.

HARTFORD, CONN.—The weather was certainly against us this time, nevertheless there was a greater amount of business done at Christmas than ever before. All kinds of cut flowers were short of the demand and orders had to be refused a number of days before Christmas. Roses were very scarce; it so happened that nearly all the rose crops were off around here, consequently very few good flowers were in the market. Liberty brought from \$2 to \$3; Bride, Bridesmaid and Golden Gate, \$1.50 to \$2.50 per dozen. Carnations were as usual most in demand, although there was a greater supply of them than a year ago. Many more could have been sold if available. They brought \$1.50 per dozen for the best and \$1 for ordinary. Violets were of good quality and sold well at \$2 per hundred. Roman hyacinths, Paper White narcissus, stevia, mignonette, and sweet peas went about as usual; they were used to good advantage in making up boxes of mixed flowers.

In the plant line, poinsettias and cyclamen were perhaps the best sellers. The first named sold readily at from \$1 to \$2 per pan; a few of the higher priced ones were disposed of at \$3 and \$5 per pan. Good cyclamen plants brought from \$1 to \$2 each. Gloire de Lorraine begonias sold well at from \$1 to \$2 per pan. There was a scarcity of azaleas; those available sold readily at from \$1.50 to \$3 each. Small primroses brought 25c. and 35c. each. Jerusalem cherries in 5-inch pots realized 50c. and 75c. each. There was a good demand for all kinds of ferns; but palms and other decorative plants did not seem to sell as well as last year. There was but very little call for baskets of made-up plants.

California Plant Notes.

An eupatorium, known here specifically as arboreum, is now in full bloom and will so continue until May. The umbels are loose and as much as a foot in diameter. If given room to develop the plant grows to a large size. The stems, of an inch or two in diameter, are as hard as those of any other shrub.

Sweet alyssum is a perennial here, and if kept sheared close soon after the blossoms begin to be on the decline, may be had in bloom every day of the year.

Bignonia venusta, just now coming into flower, is one of our most attractive Winter-flowering plants. It is surprising how low a temperature it will endure and do well. This entire family of plants is one of the most valuable we grow in Southern California. B. venusta is followed in early Spring by B. siderifolia, with its larger creamy white flowers in great profusion. This variety is succeeded by B. buccinatoria, with its large bright red blooms with a yellow throat. At the same time the deciduous varieties are in their glory.

Japan persimmons are so well adapted to California climatic conditions that they will soon be one of our staple products for home consumption. They are too soft for shipment, therefore will not appear in Eastern markets. Wherever they will stand the climate they should be largely planted. Some varieties produce fruit of a pound weight, and that too without a seed.

The beauty of Solanum Rautouneitii must be seen to be appreciated. Shrubby in habit, it is one of the most desirable subjects we grow on this coast. The flowers are of an intense violet blue, with a centre of gold.

Fatsia papyrifera is now in full bloom for the second time this season—an unusual thing for this sub-tropical plant.

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers.

If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.) We can supply them at \$2.50 per 1000, or 500 for \$1.50 and can make a reduction of those prices on large quantities.

As a small extra cost we can put your imprint on each leaflet. Try a thousand and see what a help they are in selling goods.

YOUNGSTOWN, OHIO.—John Walker says the Christmas trade this year in this section has been fully 36 per cent better than for any previous year.

There was ample stock of all kinds, excepting red roses, which were very scarce. Violets and carnations were the best sellers in cut flowers, followed by roses, Roman hyacinths, Paper White narcissus, cut poinsettias, etc. In plants the poinsettia in pots and pans had the call, large numbers being disposed of. There was also a good demand for Begonia Gloire de Lorraine in 6 inch pans, Boston and Scottil ferns in 6, 8 and 10 inch pans. Ficus and medium-sized kentias and araucarias sold well. There were large numbers of boxwood, holly, and lycopodium designs disposed of in wreaths, baskets and balls. The prices realized on all the stock were about the same as last season.

DAVENPORT, IOWA.—John T. Temple writes: "The volume of Christmas trade was slightly better than last year's. Prices were about the same. Carnations were in good supply. The stock of roses was a little short. There was a good sale for poinsettias and Gloire de Lorraine begonia plants. A red cut flower was Bourvardia Lelanthe, an old but useful flower for the occasion. Altogether it was a prosperous Christmas."

INDIANAPOLIS, IND.—Holiday trade in this section is a pleasant memory for every one connected with it. A greater volume of business was transacted than ever before, and records were broken. The highest anticipations were realized, and the retailers were permitted to take orders and fill them as long as they were able, or until their stock was gone. Orders were late in arriving. Until Sunday matters moved steadily but slowly, and many preparations were made for the last rush. All day Monday orders were unusually heavy; it taxed the capacity of all to have them ready for delivery by daylight Christmas. Several stores closed their doors earlier than usual Tuesday, as it was impossible to fill orders properly and take care of the heavy counter trade.

A light fall of snow, with a temperature of about 20 degrees, made the weather ideal. Flowers were easily handled and few were frozen. The general prosperity of the public was directly noticeable, as customers were easily served, and prices were a secondary object with many. Stock in general, was of better quality than in former years, and in some lines, as plants, the quantity unlimited. Paper stock, in several cases, particularly roses, was a disappointment, as the quality was far below what it ordinarily is; with the great demand made upon the growers at this time, orders are filled with stock as it grows, and are, of course, not selected. Perhaps 25 per cent. of the American Beauty at this season are bull-heads, so it is impossible to serve all properly. Orders sent the growers later than Saturday could not have been filled at any price. Home-grown Bride and Bridesmaid were unusually fine, and enormous quantities were supplied the store men at \$10 to \$15 per 100.

Hamper and baskets, selling at \$5 to \$15, went extremely well. Moderately priced novelties, such as small Gloire de Lorraine begonias in fancy baskets, or dwarf poinsettias in birch ferneries, were sold out early. These brought \$1 to \$2 each.

Although many thousand violets were supplied by the local growers, the supply was not nearly sufficient at \$2 per dozen for a few select ones were shipped in at \$1.50 to \$2 per 100. Paper White narcissus found a heavy sale at \$1 per dozen, retail. Poinsettias were more generally grown this year, and customers were often prone to buy cut flowers with 6 to 7-inch stems at \$6 to \$9 per dozen in place of American Beauty at \$18 to \$24 per dozen.

Carnations were more plentiful than in former years, although prices were about the same—\$5 to \$8 per 100 wholesale, and \$1 to \$2 per dozen retail. The dark weather preceding Christmas caused a good many sleepy Enchantress to be on hand, but altogether this grand variety led in sales by a wide margin. Few cattleyas were to be had, though there were demands for them frequently. No trouble was found in securing cypripediums at \$2 per dozen. A quantity of sweet peas were wholesaled in the market at \$1 per 100.

With the exception of a number of Spirea Gladstone there were no distinctly novel plants in the market. Choice azaleas were soon sold at fancy prices, but the number was restricted to a few dozen in this market. Well-grown flats containing four to eight poinsettias were much in favor at \$2.50 to \$6 each.

The quality of Gloire de Lorraine begonias was never better, and they found many friends. In the writer's opinion this graceful flower has reached the zenith of its career, and must in the future be relegated to the past, as flower buyers wish a new favorite. Ardisias and Jerusalem cherries naturally were in demand. All kinds of foliage plants were sold in quantities. The various flower stores were most beautifully and tastefully decorated this year. Bells were much in evidence with some, but, as is well known, few were sold. It becomes more evident each season that a flower store is for flowers only, with ferns, azaleas, and pot covers and ribbons, added. Not many of the artificial flowers were indulged in.

Tomlinson Hall market reports an excellent holiday business. All the good stock brought there was soon closed out at fancy prices. The green goods market was a prosperous one this season. The seed houses engaged in it were enabled to sell out completely. Not a yard of laurel or lycopodium was carried over. Holly and mistletoe were also well cleaned up. Boxwood was much in evidence with the florists this season, both in wreaths and small artificially made trees, which were used for table decorating. I. B.

BURLINGTON, VT.—Our Christmas trade was as good as last year's and prices were higher. Carnations brought from \$1 to \$2 per dozen, roses from \$2 to \$1. Paper White narcissus and Roman hyacinths, 75c.; poinsettias (cut) \$3. Since Christmas business continues fair using up all the stock as it opens; and as the weather is now dull and rainy stock promises to be very short for New Year's S. B.

ERIE, PA.—There was a marked increase in trade for the holidays this year compared with last year, estimated variously at from 10 to 30 per cent. The cold wave that visited this section on the morning of December 24 necessitated the wrapping of all plants to protect them from frost. It was good shopping weather, however, and florists had nothing to complain of on this score. No novelties were offered, except perhaps the new art bells, which took very well. These were home manufactured by several ladies not connected with the florist business. They consisted of a form of papier mache covered with green crepe paper on the inside and red on the outside and were ornamented with red ribbon. Plants went very well, especially poinsettias in pans. Azaleas, also, in the colored varieties, went as well as ever. The supply of cut flowers was about equal to the demand, and most of the stock was home grown and very fine. Prices on all stock were about the same as last year.—A. J. BAUR.

PITTSFIELD, MASS.—For Christmas trade the sale of cut flowers was about the same as last year. Carnations in colors sold at better prices in proportion than other flowers. Well-grown flowering plants went well; holly also was in great demand. The bulk of business was equal to last year's.—**JOHN WHITE.**

DUBUQUE, IA.—The Harkett Floral Company reports Christmas trade ahead of last year's. Cut flowers and plants both went well, at fair prices.

Chicago. A Retrospect.

With the ups and downs which probably characterize this market more particularly than any of the other large markets in the country, the year 1906 goes down into history with a record of a continual increase in prosperity of a larger ratio than in any year of the last quarter of a century, which practically covers the existence of the business on a large scale in the middle West. In no one year has there been so much new glass erected and so much reconstruction carried out. This has made a record year with the greenhouse material concerns with headquarters in Chicago, the lumber, glass, boiler and pipe men, as well as the furnishers of all the incidentals, each coming in for a generous increase over any preceding year. It is far within the bounds of safety to state that within the limits of this city and its immediate environs upwards of three million square feet of glass were erected or remodeled during the year that has just passed. The produce from this large addition of productive area has called for more active service by the score and a half of wholesalers and commission houses whose headquarters lie within a fifty yard radius of the corner of Wabash avenue and Randolph street, every one of which reports a most satisfactory year and, with one or two exceptions, a large increase in business over last and preceding years.

The growers all report for the year more than pleasing results. The Summer dullness, accompanied with an extreme drought and the unfavorable cloudy weather of November and December were not without their gloomy effects, yet taking the year through it may be justifiably claimed that ninety-nine growers out of every hundred have prospered.

Chicago has not been without its losses during the last year, but more through the hand of death than from a financial standpoint. Early in the year Joseph A. Budlong, a pioneer grower of vegetables and cut flowers, met with an accident which was followed within a few hours by death. The following month, on February 13, George Wietor, one of the oldest and most successful of Chicago's greenhouse men, passed away after a lingering illness, in the prime of his manhood. James Hartshorne was taken away in Midsummer. Three great losses to the fraternity of florists in Chicago.

Among the retailers the reports are generally of a perfectly satisfactory nature. **News Notes.**

Owing to an unexpected call to Washington on technical matters which are to come up before the Agricultural Committee, William J. Stewart will not be able to turn over the books of the S. A. F. O. H. to the new secretary until a later date than was planned. Mr. Hauswirth expects to leave for Boston by the middle of the month if not before, and then the transfer of accounts, etc., will be carried out.

Phillip Kirchner, the manager of the Chicago conservatories of E. M. Barton at 4629 Greenwood avenue, is quite proud of a very handsome white sport of Dr. Enguehard chrysanthemum, which originated on the place the past season and has been named Mrs. Enos M. Barton. Though the stock is limited, it is probable that the variety will be placed on the market. Growers who saw the variety the past Fall pronounce it among the best.

A. Dietsch will shortly leave for his annual trip to the city of Mexico. The concern has a lot of orders already booked for Spring delivery.

Adam Schillo and John C. Moninger were severely affected by a recent fire.

Mr. Dekema of Jensen & Dekema leaves shortly for San Francisco, Los Angeles, and other southern points where it is hoped that the inclination toward tuberculosis may be overcome. **W. K. W.**

New York.

The Week's News.

The last few days of the old year were accompanied with very disagreeable weather—warm and rainy—and, no doubt, that was the cause of so many complaints being heard about poor business. With the coming of New Year, however, the social season of this town is supposed to begin in earnest; we may hope for a rather lively time in retail circles from now on until the beginning of Lent.

The seed business may now be said to be on the eve of its busiest season. Catalogues are being rushed out, and this year they are handsomer than ever before. The general prosperous condition of all classes of people throughout the land would indicate that the coming Spring will be a record breaker for the seed stores.

W. C. Krick, manufacturer of Krick's letters, has had to advance the price of same owing to the increased cost of the raw material.

Hicks & Crawbuck report a most satisfactory increase in their florist supply business. They handled a line of static wreaths during the recent holidays that met with a very good demand.

The eleventh annual smoker of the Morris County Gardeners and Florists' Society will be held in Masonic Hall, Madison, N. J., on Wednesday evening, January 9. A good time is assured those who attend this annual celebration.

Sidney Kaufman, said to be employed by a florist on East Thirty-fourth street, committed suicide on Sunday morning last in the Knickerbocker hotel, by shooting himself in the head. Before shooting himself he had first fired a pistol shot, with the intent to kill, at a woman, who had been staying with him, and she died shortly after. The woman was married, and the reason for the rash acts is said to be because she would not elope with him.

The December 18, 1906, bulletin of the New York Botanical Garden is a descriptive guide to the grounds, buildings and collections.

A. M. Henshaw, wholesale florist, 52 West Twenty-eighth street, received this week a cablegram from Bristol, England, informing him of the death of his mother. She was 63 years old, and leaves a husband and nine children to mourn her loss. The sympathy of the trade will go out to Mr. Henshaw in his sad bereavement.

Orlando Harrison, president of the American Association of Nurserymen, E. Albertson, Bridgeport, Ind., and Professor Craig, Ithaca, N. Y., were in town last Saturday attending the conference of Economic Entomologists.

F. A. Anderson, who for many years has been a partner in the firm of Anderson & Christensen, fern specialists, Short Hills, N. J., has purchased Mr. Christensen's interest in the business, and henceforward will conduct the same in his own name. The firm of Anderson & Christensen has won much favor in the trade by their business integrity and square dealing and we have no hesitancy in saying that Mr. Anderson will continue to uphold the good name the firm has succeeded in establishing.

George F. Struck, who for some time has been a traveling man for Lager & Hurrell, Summit, N. J., will in addition represent The F. R. Pierson Company, on the road. Mr. Struck informs us that he is to represent the above mentioned firms on a commission basis only.

St. Louis.

News Notes.

The first meeting in the new year of the St. Louis Florists' Club will take place next Thursday, hereafter in the new meeting hall in the Burlington building, 310 Olive street. This meeting should be well attended by the members to inspect the new hall. The flower show committee has something extraordinary to report, and a general discussion on the holiday trade from the retail, wholesale and grower's standpoint will be held.

The newly organized horticultural society held a meeting on Tuesday, December 18, at C. C. Sander's place, 5600 Delmar avenue. Ten members were present, with President H. Young in the chair. President Irish of the

Florists' Club was also in attendance by special invitation. The next meeting will take place on Tuesday, January 15, when some prominent speakers will be invited to address the assemblage. Among those present were H. Young, O. G. Koenig, F. H. Meinhardt, Alex. Waldbart, A. Jablonsky, C. C. Sanders, F. C. Weber, John Stiedel and Theo. Miller. The next meeting place has not yet been announced.

W. C. Smith has accepted the appointment of superintendent at the annual chicken show, which takes place next week. Mr. Smith filled a similar position last year.

Frank Fillmore slipped on the ice and badly fractured his ribs, which laid him up the past week. Frank, Jr., reports that his father will be out by the end of the week.

Alex. Siegel will after the first of the year move to his new location in the old Grand Leader Building on Broadway, north of Washington avenue.

Mrs. Ayers had two of the old-timers helping her out during the holiday rush; they were W. J. Pilcher and J. W. Potts. Walter Retzer has taken the place vacated by Will Adeles.

Chairman Frank Weber, in company with President Irish, spent a day the past week among the downtown business men in the interest of the flower show. The results were very gratifying. Secretary Bencke reports that the fund is increasing every day and that by the next meeting more than half of it will be subscribed.

C. Young & Sons Company made a great show of blooming plants last week. James Young, the president, reports a big trade during the week.

Des Moines, Ia.

News Notes.

The past Christmas business seemed to be satisfactory to all concerned. Poinsettias were noticeable in all the windows, particularly that of the Iowa Floral Company, and sold readily at \$5 and \$6 per dozen. First quality Enchantress carnations were all cleaned up at \$2 per dozen, and all other varieties at about \$1.50. In the plant line azaleas, as usual, were the leaders. Some poinsettias in pans were in evidence, and a variety of other blooming plants, as well as a good supply of ferns and palms. Bouquet green was scarce, consequently wreathings sold at a high price; in fact, the supply was not equal to the demand at that. There seemed to be plenty of holly, which was fairly well berried.

Lozier's and the Alpha Floral Company made a leader of double violets, and sold a large quantity of them at a good price. The Iowa Floral Company had but little call for the double, but sold a large quantity of the single Princess of Wales. The Alpha Floral Company says that its business was about one-third larger than last year's. This is the first Christmas for the Iowa Floral Company, so they cannot make any comparison, but they are well satisfied with the patronage that came to them.

A. Lozier is in the South for his health, and the business is being ably

managed by his brother Harvey during his absence.

Gus. Papas got back to his store Christmas day, after having spent three weeks in the hospital, undergoing a very critical operation. During his absence the Alpha business was in charge of G. A. Conopolus of Chicago.

Chas. McAniff, manager of Vaughan's greenhouses, this city, is wearing the smile that won't come off, and handing out the cigars. It's a girl this time.

We regret to announce the death of the wife of Wm. L. Morris, as the result of an operation and after a very short illness. Until a year ago Mr. Morris had been for many years one of the most prominent florists of the city. The Des Moines Florists' Club authorized Mr. Stevens of the Iowa Floral Company to send a floral offering. Mr. Morris has the sympathy of the craft in his bereavement.

THE LOOSE ENDS

Some firms seem to have an idea that if the big things of your house are rushed through on time and made ready to stock up, that the small things—the loose ends—can be done any old time. You may have had experience in trying to get men back "on the job again," and how you have to fight for the finishing touches—that's why we want you to know us and our way of making a complete job complete. There'll be no loose ends and you'll have pleasant dealing.

Newport, R. I.

Trade Notes.

As was expected a quiet week succeeded the rush of Christmas, but there promises to be a good deal doing in the cut flower line for New Year's day.

Many owners of estates here who spend the Winter in New York and other large cities were this Christmas more than ordinarily bountiful in their remembrance of their gardeners.

Visitors here recently included John Morrison representing Weeber & Don and John H. Cheyne representing Schlegel & Fottler Company, Boston.

A firm located in Warren in this State has invented and introduced an artificial calyx for the keeping together of carnation blooms that are liable to split. It seems a meritorious article and I think if it is properly brought to the attention of growers its manufacture will be profitable.

D. M.

Boston.

The Week's News.

The action of the Police Commissioner in enforcing the Sunday blue-laws caused considerable worry and not a little bother among many both in the retail and wholesale flower trade. On Saturday the police gave notice that no business of any kind could be transacted on Sunday, but several florists who had orders in ran chances and delivered their goods. Many arrests in all lines of business were made, and it is said that several in the flower line were of the number. These test cases it is hoped will be the means of action being taken to repeal a law which has for years seemed ridiculous.

Welch Brothers say their Christmas trade was far greater than ever before, that their better facilities for handling greatly helped them during the rush and that they have had fewer complaints from buyers than ever before. They, as is their custom, had two American Express teams for their exclusive use.

Wm. F. Reagan of Lawrence, Mass., has a fine new delivery wagon of the most up-to-date style. J. W. D.

Cincinnati.

News Gittings.

The old year is now a matter of history, and I think it has been very kind to the florists throughout our land. We have had no serious mishap; business has been prosperous and no assignments are recorded among the craft. We shall pray that 1907 will treat us just as well.

Saturday evening the Cincinnati Florists' Society will start the new year with a smoker in their rooms at the Jabez Elliott Flower market. Papers will be read and there will be other amusements. If the standholders in the market could only look to their own interests they would, every one of them, join the society and help push floriculture ahead, instead of trying to retard the movements of the organization. The shows held by the society in their club rooms in years past put many dollars in the pockets of the standholders. During the past year these shows have been cut out, and there is no question about the effects being felt. The only remedy is for these standholders who do not belong to the society to join and at once. You will all find it a paying investment, besides being instructive and entertaining. Begin the new year by sending in your application for membership. The dues are two dollars a year.

The Central Passenger Association has now granted the one and one-third fare for the round trip to Toronto, Ont.; making the fare about \$14 for the round trip from Cincinnati. Don't forget to ask for a certificate when buying your ticket. Our Canadian brethren promise us a good time and you know President Dunlop. You can get more than your money's worth by making this trip and attending the meeting of the most progressive floricultural society in America. You see, you are seen, and have

plenty of chance to be heard. This is all important to members. Make up your minds now to go, and if not a member of the Carnation Society become one. Again money well spent.

New Year's trade amounts to very little now in comparison with that at other holidays. Stock is scarce. Prices remain about the same as for Christmas. E. G. GILLET.

Kalamazoo, Mich.

News Notes.

Grofvert and DeSmit have dissolved partnership Mr. DeSmit retiring and Abram Grofvert taking over the greenhouses and business. This movement makes no change in the management, as Mr. Grofvert has had charge of the plant since its erection.

The order requiring the Dunkley Company to vacate city property (as noted in last week's Florists' Exchange) simply referred to a few odds and ends they allowed to stand on a side street adjacent to their greenhouses; the city fathers just now being very strenuous, doubtless in view of the Spring elections.

To yourself and readers I wish a Happy and a Prosperous New Year. S. B.

Detroit, Mich.

The Floral department of the Strand Grocery Company, under the management of Murray Patterson, has been set adrift through the failure of the company.

The florists throughout the country extend their heartfelt sympathy to Robert Flowerday in his time of trouble. HARRY.

SAN RAFAEL, CAL.—On December 19, in accordance with a decision of a convention held for the purpose December 5, the gardeners, florists and nurserymen of Marin County, California, organized themselves into the Marin County Horticultural Society and elected the following officers: President, John T. Jack; vice-president, J. Hetherington; secretary, Thos. P. Redmayne; treasurer, Richard Lohrmann.

Membership will embrace those actively engaged in any branch of horticulture. A majority of the profession in the county are already on the roll and much enthusiasm is shown. Everything points to a successful organization, and an exhibition during the coming year is in contemplation. T. P. R.

WE DON'T KNOW OF ANY-THING MORE JARRING than the everlasting repairing of a house—the repairs here and there, at the eave line, another post rotted off, the roof sagged and glass broken, and so on, 'till the day of reckoning comes at the end of the year and you find out what a sink hole your house has been. Your day of reckoning comes at the end of the year, but we start with ours—start at the very start to reckon on the life of materials and construction, to figure on the chances of repairs and a way to get around them. That's how we came to make the galvanized, ice clearing eave plate and sash bar clasps; the angle iron posts and cast iron foot pieces—we were after durability and rigidity, and we got it.

Now it's a question whether you want one of our "laster" houses of the spend-money-every-year-on-repairs kind.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION
Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

The total number of Farmers' Bulletins printed by the Department of Agriculture during the last fiscal year was 437, of which 404 were reprints, numbering 5,632,000 copies, and 33 were new publications, numbering 875,000 copies—6,568,000 copies in all.

In a recent decision by T. S. Sharretts, general appraiser, the board decided that lily of the valley pips must stand duty on a higher valuation basis. The pips, which were from H. Wrede of Hamburg, were entered at 20 marks per 1,000, whereas the local officials raised the price to 20.90 marks per 1,000.

UTICA, N. Y.—The Batchelor Seed Store of Utica was incorporated December 31, 1906, and January 1, 1907, \$5,000. The directors are Wm. M. Ross and Charles T. Saul of Syracuse and Arthur C. Langdon of Utica.

HOLLISTER, CAL.—A. J. Pieters, of the A. J. Pieters Seed Company, writing on January, 1907, says:

"As I advised you sometime ago I expected to leave for the East during December, but the almost continual rains we have had here has made it impossible to get away. I hope to leave now about the middle of this month. I presume you know about the heavy storm we had in December, when in various places between 5 and 11 inches of rain fell in 36 hours. Since that time we have had rains every two or three days so the planting of seeds has been seriously delayed."

"I hope to go East before the end of this month and see our friends of the trade during February."

Stokes Seed Store

219 MARKET ST., PHILADELPHIA.

Mention the Florists' Exchange when writing.

FLORAL PARK, N. Y.—The Brooklyn Eagle of recent date says: "Ex-Senator John Lewis Childs, who still holds between 300 and 400 acres at Floral Park, which is valued at from \$3,000 to \$4,000 per acre and upon which he raises his large crops of flowering bulbs, shipped to all parts of the world, has bought between 500 and 600 acres between St. James and Stoney Brook, Suffolk County, and will eventually move his entire business down to the new location in Suffolk County and dispose of his Floral Park lands for residence purposes."

CHICAGO, ILL.—J. C. Robinson of Waterloo, Neb., passed through this city on his way to the meeting of the executive committee of the American Seed Trade Association.

H. W. Buckbee of Rockford, Ill., was in this city the first of the week. Wm. Hageman, New York, stopped over for a few days on his way West.

Vaughan's Seed Store are remodeling their retail sales floor, making a number of changes which will add to their convenience for handling their local trade. Also it may be mentioned that several carloads of tuberosa bulbs have been received through their New York office, both for export and home trade. The concern will have their catalogue ready within a few days, which will be forwarded on application.

TOLEDO, O.—Toledo, the greatest clover seed mart in the world, is now obliged to buy large quantities of the seed in foreign market, says the "Elate."

This unusual condition is occasioned by the shortage in the crops this year in this country. March seed is being purchased at \$8.40 a bushel, or about 14 cents a pound, but this price, Toledo dealers say, is not in excess of what has been paid in this country. Toledo dealers are buying quantities of clover seed in English, German and Italian markets, because the stock cannot be secured in America. There is no duty attached to it. Toledo dealers are interested in the pure food law concerning the purchase of clover seed, which makes it mandatory that samples of all foreign seed be first submitted to the United States Department of Agriculture before entering. This will mean that a first grade seed will be more in evidence in America, as other grades will be designated according to their worth by the Government inspectors.

It may be possible that this session will knock out the appropriation for the free distribution of common garden seeds, but it is very doubtful if the hands of the Department of Agriculture will be so strengthened that its great work of seeking for new seeds and plants that can be made useful in this country can be widened. If Congress would quit monkeying with the whole seed question and leave it entirely to the Department, with a liberal appropriation, great good would be accomplished. The Department is in hearty sympathy with its work, and is conducted with ability in most if not all its bureaus, and it should be dealt with liberally by Congress. But there are too many corporate interests, too many political interests all pulling at the doors of Congress for other interests to get their full deserts.

MUSTARD SEED.—The representative of commercial interests of Southern States in Northern Europe writes the Department of Commerce and Labor that the European mustard seed crop having been nearly destroyed, with consequent higher prices, the sale of American mustard seed would be possible. He therefore desires prompt communication with American dealers who can supply large quantities of the seed.

IMPORTS OF SEEDS, etc.—December 31, 1906 and January 1, 1907.—Hamburg American Line, 105 bags seed; Murray & Mitchell Manufacturing Company, 213 bags seed; Henry Nungesser & Company, 45 cases seed; A. Olsen, 150 bags clover seed; L. J. Spence, 400 bags sugar beet seed; G. W. Sheldon & Company, 300 bags sugar beet seed; Maltus & Ware, 4 cases plants; P. E. Anderson & Company, 17 bags seed; E. Hoenicke, 47 bushels roots. To order, 15 bushels seed, 546 bags seed, 36 bags orris seed.

January 4, 1907—J. S. Bartle, 223 bags seed; Wakem & McLaughlin, 3 bushels seed; Maltus & Ware, 3 cases plants; A. Rhotert, 5 packages flower garden seed, etc.; J. M. Thorburn and garden seed, etc.; J. M. Thorburn Vaughan's Seed Store, 16 bags seed.

January 5 and 6, 1907.—H. F. Darrow, 31 cases lily of the valley pips; Peter Henderson & Company, 3 boxes seed; Herrmann's Seed Store, 6 boxes seed; R. F. Lang, 120 cases lily of the valley pips; A. Olsen, 150 bags clover seed; Portland Seed Company, 5 bags field seed; A. H. Ringk, 2 bags roots, 2 bags seeds; J. M. Thorburn & Company, 25 bags seed; Vaughan's Seed Store, 40 cases lily of the valley pips; R. F. Downing & Company, 10 bags seed; Holland-America Line, 19 packages seed; Maltus & Ware, 3 cases plants; J. M. Thorburn & Company, 20 bags grass seed; Vaughan's Seed Store, 16 bags seed.

THIS CONGRESSMAN BUYS "FREE SEEDS"—In the report of the hearing on the free seed distribution before the House Committee of Agriculture on December 12 last, the following statements appear:

"MR. DAVIS (of Minnesota). I buy 15,000 to 25,000 (packages of seed) every year aside from my regular quota. I have to do it in order to comply with the requests.

"THE CHAIRMAN. Do you buy from members of Congress?"

"MR. DAVIS. I buy some from the Department and some from men around the corridors here, who claim they have obtained them from the city Congressmen, who have no use for them. They sell them to me at reduced figures.

MR. CROMER. You never buy them from the seed men?"

"MR. DAVIS. I buy them for cash as cheaply as I can.

"THE CHAIRMAN. From fellow members of Congress?"

MR. DAVIS. No; I buy them from agents or from young men around the corridors here, who come to me and say, "Will you give me so much a package for 5,000 packages?" I ask them where they get them, and they say they get them from city members who do not need them in their districts and have them for sale."

If there is any better evidence of "graft" connected with this free (?) seed farce than the foregoing, coming from the lips of a United States Member of Congress, we have not seen it. We were not before aware that the Department of Agriculture was authorized to sell, or made a practice of selling the government seeds. It would be interesting to know where the purchase money for these seeds bought of the Department goes? It is easy to guess where it lands in the case of the seeds sold "around the corridors by agents or young men," who obtain their packages from city members. How long is such a state of affairs to be tolerated by our legislators worthy of that honored name?

Catalogue Covers, Premiums, Etc.

Editor Florists' Exchange:

For some time, the writer has been seeing in the several trade papers, comment by the various seed houses on catalogue covers, the use of premiums, etc., to draw trade.

Under separate cover, by even mail, we forward you a copy of our general catalogue for 1907, also a copy of our booklet "Why." We think we have a pretty good article in the way of a catalogue, for the class of trade for which it is intended. We have never at any time in the history of our business, made a practice of offering one dollar's worth of seed for forty cents; neither have we ever given the privilege of selecting one dollar and twenty-five cents worth, or perhaps more, for one dollar. Our prices are plainly carried out, and we have found this by far the best means of handling the trade.

We have made quality the first consideration, and we think our customers appreciate this, for the reason that we have gathered together the most critical gardeners into our list of buyers, from Florida to Boston. We have, however, for our mail order trade, tried the booklet this year for the first time. It is our intention, if it makes good, to use a series of booklets as a follow-up. It occurs to us that the booklet has been used with unvarying success in other businesses and we are, at present, having excellent returns from its use. It is only intended as a means of establishing interest and gathering new names which it is accomplishing to our entire satisfaction. We would like your comment on the idea, and would appreciate any additional ideas you may furnish us.

J. F. NOLL & CO.

Newark, N. J.

[A notice of your catalogue appears in another column. "Why?" contains some excellent practical hints to the farmer and gardener concerning seeds, and other advice. The next thing to securing names, which is the expressed intent of the pamphlet, is to get and hold the business that these names represent. Selling goods of superior quality, fair dealing, giving value for value, etc., help toward this end—all of which seems to be the aim of our correspondence.—Ed. F. E.]

European Notes.

With from 15 to 50 inches of snow over the whole of the northern half of Europe and severe frosts to keep it solid, all agricultural operations are suspended, and much of the railway and steamship traffic is seriously interrupted. There is much less snow in the south, and as the frost in the Riviera is very severe the French florists, as well as the growers of choice flower seeds, will have a bad time. Farther north the plants are protected by the snow and should escape injury.

Another instance of the tyranny of the Morgan steamship combine is furnished by the withdrawal of the direct steamer to New York, although huge consignments of cargo are awaiting despatch. This means a delay of 14 days at the most critical period of the year.

The glass roof of the pea-picking warehouse of Watkins & Simpson, London, was smashed in by a heavy fall of snow from a building near by and one of the pickers had to be conveyed to the hospital.

EUROPEAN SEEDS.

CATALOGUES RECEIVED.

NORTHAMPTON NURSERIES, Northampton, Mass.—Catalogue of Trees, Shrubs, Herbaceous Perennials, Roses, etc.

WALDO ROHNERT, Gilroy, Cal.—List of Vegetable and Flower Seeds, Sweet Peas a specialty, for the growing of which Mr. Rohnert is prepared to contract.

CHICO NURSERY COMPANY, Chico, Cal.—General Catalogue of Fruit and Ornamental Trees, Grape Vines, Small Fruits, Shrubs, Roses, etc. The firm's motto is "High Grade Nursery Stock true to Name." Illustrated.

CALIFORNIA NURSERY COMPANY, Niles, Cal.—Catalogue of Fruit and Ornamental Trees, Evergreens, Palms, Roses, etc. This firm has 600 acres under cultivation, and was awarded the gold medal for Nurseries at the Louisiana Purchase Exposition.

Dr. R. E. KUNZE & COMPANY, Phoenix, Ariz.—Price List of Cactaceae. This concern collects cactus plants for the U. S. National Museum at Washington, D. C., and the botanical gardens of several European countries. Those interested in this class of plants will find the list of much service.

R. & J. FARQUHAR & COMPANY, Boston, Mass.—Garden Annual for 1907. A very attractive catalogue, profusely illustrated, many of the pictures being half tone reproductions from photographs of natural subjects. The cover designs, in color, are Incarvillea Delavayi and Foxgloves. The lists of offerings enumerated are very complete in every line.

A. T. BODDINGTON, New York.—Catalogue of Flower and Vegetable Seeds, Bulbs, Plants, Supplies, etc. An interesting list of Novelties and Specialties is furnished, and the general lists are complete and comprehensive. A commendable feature of this catalogue, which is profusely illustrated, is seen in the various cultural directions written by well-known practical growers in the several lines of which they treat. The catalogue, generally, shows great care in its compilation and make-up, and the cover design of a conventional character by Harry A. Bunyard, is very attractive.

J. F. NOLL & CO., Newark, N. J.—Printed on enameled paper, profusely illustrated, with handsome covers showing on the front a spray of Kriemhilde dahlias and on the back a choice selection of vegetables, all very natural as to color and quite tempting in appearance, this carefully prepared and printed catalogue of Seeds, Plants, Bulbs and Poultry Supplies furnishes good evidence of the fact that seedsmen in order to maintain and increase their line must not only handle the best obtainable but must, as well, clothe their offerings in an attractive way in order to gain first the eye and then the ear of the people.

J. M. THORBURN & COMPANY, New York.—General Catalogue of High Class Seeds, Bulbs, Plants, Supplies, etc. In contradistinction to the majority of catalogue makers, the Messrs. Thorburn do not believe in flaming or gaudily colored covers, those of their catalogue being of the plainest kind, the firm name printed in white lettering on a dark brown background, a poppy flower and foliage and a bunch of celery, also in white, forming the only ornamentation—artistic and attractive. The catalogue, profusely illustrated, contains the usual lists of the best novelties and standard varieties, with the customary planting directions and useful tables regarding time of flowering, height, color, etc. of a long enumeration of plants. The firm has been in existence one hundred and five years, and is now located at 33 Barclay street, the store running through to Park place. Also Trade Price List of Seeds, etc.

JAMES J. H. GREGORY & SON, Marblehead, Mass.—General Catalogue of Seeds, Plants, Bulbs, Small Fruits, Implements, etc. Illustrated. An interesting list of Novelties and Specialties. Regarding 1906 crops Mr. Gregory says: "Did any of us, of the three-score-and-ten class, ever see a better season for sweet corn, or, in eastern New England, a worse one for beans and cucumbers? It was a season that emphasized more than ever before the value of rust-proof varieties in the bean family. An onion seed blight prevailed all over the country from the Atlantic to the Pacific, nearly ruining vast areas in California, and some vast areas in New England as badly. Another blight in the South struck some of the sections devoted to watermelons. In Europe, where is raised most of the radish seed sold in this country, the crop was nearly a failure; and this was true of some of the varieties of beet, mangel-worm and rutabaga seed. With these exceptions, the seed crop has, in general, been up to the average yield."

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

Orlando Harrison, Berlin, Md., president; J. W. Hill-Des Moines, Ia., vice-president; George C. Scager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

VERNON, TEX.—The Tecumseh nursery of Cedarville, Ohio, is putting in a nursery at this place. A few cars of their tree stock have already arrived. I. H. Frantz, the proprietor, is here, looking after the planting of the nursery stock.

VALLEYFORD, WASH.—H. M. Leslie has purchased land here and will start a nursery. A complete line of apple, pear, and peach trees will be carried, and such other fruit as proves favorable in this section.

TOPEKA, KAN.—Walter Wellhouse, of Topeka, won the contest for the office of secretary of the State Board of Horticulture at the meeting held on December 28, 1906, by a vote of 42 out of 83. His opponents were W. H. Barnes, the present secretary; A. V. Wilson, of Wyandotte county, and E. A. Popnow, of the State agricultural college. Mr. Wellhouse, the new secretary, is a son of Fred. Wellhouse, the "apple king" of Kansas. The other officers elected were: Edwin Taylor, of Wyandotte, president; Edwin Snyder, of Jefferson, vice-president; Edward Hoover, of Sedgwick, treasurer.

WESTERN ASSOCIATION OF NURSERYMEN.—At the seventeenth annual meeting, held at Kansas City, Mo., December 18, the following officers were elected: President, A. Willis, Ottawa, Kans.; vice-president, George A. Marshall, Arlington, Neb.; secretary and treasurer, E. J. Holman, Leavenworth, Kans.; executive committee, F. H. Stannard, Ottawa, Kans.; W. P. Stark, Louisiana, Mo.; R. J. Bagby, New Haven, Mo.; D. S. Lake, Shenandoah, Ia.; E. P. Bernardin, Parsons, Kans.

W. P. Stark spoke on the subject "Should commercial planters get the benefit of wholesale prices and where should the line be drawn on what constitutes a commercial planter?" A varied discussion followed, but it was left unsettled where the line should be drawn. J. W. Schuette introduced the subject of a uniform standard of grading stock. This resulted in the creation of the following committee: A. L. Brooke, Ralph Lake, Herbert Chase, F. H. Stannard and J. W. Schuette, with instructions to formulate grades with a view to a national standard on apple, peach, pear, plum and other stock, to make a full report at the next meeting. A two-days' meeting was ordered to be held July 8-10, 1907.

Horticultural Topics.

Colorado, New Mexico and Arizona furnish us many handsome evergreens, hardy in our coldest States. To add to the list of hardy sorts the following European ones are almost of Arctic hardness: *Pinus cembra*, *Abies pichta* and *Picea orientalis*.

In city yards in New York the Japanese persimmon is hardy. But as a tub plant, to be housed in a cold cellar, barn or stable, it is more satisfactory. Care should be taken that the plant is a fruiting one.

It was supposed for a long time that there were no trees of salisburya entirely fertile, but many cases are known where trees of it, miles away from any other one, have borne fruit. The Landreths of Bristol, Pa., had such a one as long ago as 1871; and other cases of the same nature exist in Philadelphia. The seeds, sown in Spring, grow readily.

Schinus molle, the Australian pepper tree, so-called, is a valued shade tree in California. It bears racemes of rose-colored berries in the Fall, which are highly ornamental. Florists have taken to using them for Christmas. Cut in lengths of two to three feet, they are very useful for many purposes. The leaves have an aromatic odor, and are retained on the branches for many weeks.

Cementing hollow trunked trees is to be recommended, as it prevents moisture accumulating which, with air, causes further rotting of the wood. But every bit of rotten wood should be scooped out first, that the cement may set close to the outer or live wood.

Azaleas, kalmia, rhododendron and similar seeds can be sown indoors and with fair success. They are so dust-like in appearance that a mixture of the moss, sand and leaf mold should be prepared, the seeds sown on the surface of it, and then covered with glass, with some shading afforded to promote darkness.

Ordinary pears are not supposed to thrive in the South, but a Mississippi correspondent writes of a Seckel pear grafted on an apple stock, which is a great success. As a rule the Kieffer, Le Conte and kindred sorts are looked on as the ones for the far South.

Morus multicaulis is looked upon as a form of *M. alba*, the common white mulberry, being a form the flowers of which are entirely male instead of having those of both sexes, as is usual with mulberries. No one would think from its appearance that it had any relationship to *alba*. Its leaves remind one of those of the catalpa, and grow in shape like an inverted bowl.

Shallow Sowing of Seeds.

A not uncommon question asked of seedsmen is how deep to sow seeds. Oftener than not seeds are sown too deep. Good seeds often fail to grow from this cause. A rule, and a good one, is to let the size of the seed be a guide to the depth of covering. For instance, a seed one-eighth inch in width should be sown one-eighth inch deep. Seeds need dampness and darkness to germinate, and with these provided there is not such a great depth of soil required. This is where the firming of the soil is such a great advantage to the seeds. It promotes both dampness and darkness, and with the soil firmly pressed on the seeds, but little of it suffices.

Another benefit a light covering firmly pressed down confers is, that seeds push their way up better than when the depth of soil is greater. This aids the weaker seeds, for often there are seeds that never push through the soil, being weaker than others, and not having the strength to lift the covering above them.

Grafting *Euonymus Americanus*.

There is so much beauty in the fruit of the *Euonymus americanus* that it deserves a place in all collections of shrubs. The difference in its pods of seeds from those of other *euonymuses* is in its having warty-looking pods, and the pods are of an orange-scarlet color. As with all the species, when the pods open the deeper colored scarlet seeds are displayed. As the *Euonymus americanus* grows in its wild state it is often but a trailing shrub; sometimes an upright growth of a few feet will be made. As the display of its fruit would be seen to much better advantage were it taller, it has been suggested that if grafted on the *E. atropurpureus*, another native species, or on the *E. europæus*, both of which grow to the size of large shrubs or small trees in time, specimens would be obtained which would be of a most ornamental character.

There is a growing demand for native shrubs and trees of merit that are but little known, and were nurseries to keep a supply of *Euonymus americanus* grafted on tall *E. atropurpureus*, there would surely be a call for them.

A Bed of Evergreens.

Where the grounds of the Congressional Library Building, Washington, D. C. begin, there is a bed of evergreens which attracts the attention of all who pass by it. It is a very large bed, and, placed where it is, at the junction of two avenues, it pleases because of its appropriate position, as well as the

Bed of Evergreens on Congressional Library Grounds, Washington, D. C.

Those who have tried the light covering, firmly pressed down on the seeds, are greatly in favor of the practice. Another thing to remember is, that soil for covering should always be light, so as not to pack hard about the seeds.

Hardy Rhododendrons.

There seems to be a never-ending discussion of the subject of hardy rhododendrons, for it has been going on for 50 years or more, and it is still a matter for a difference of opinion. So much depends on situation governing hardness that differences of opinion may well arise; and much, too, depends on soil and the vigor of plants.

It was of interest to come recently on an article written by Samuel Parsons, which appeared in the *Gardeners' Monthly* in 1877. It related to the hardness of rhododendrons, and he made three classes of them—hardy, almost hardy and tender. In the hardy class he named *Roseum grandiflorum*, *Bicolor*, *Everestianum*, *Purpureum grandiflorum*, *Album elegans*, Mrs. Milner, H. W. Sargent, *Caractacus*, Charles Bagley and Lady Armstrong.

His almost hardy ones consisted of Lee's Purple, *Blandyanum*, Mrs. Clutton, *Scipio*, *atrosanguineum*, Titian, Minnie, Purity, Stella, Mrs. Halford.

In the tender column are found *concessum*, John Waterer, *Barclayanum*, Sir Robert Peel, Michael Waterer.

This list is of interest to-day, though given 30 years ago, for it will strike many of those familiar with rhododendrons that the list—old as it is—would not be considered very far wrong at the present time.

In the vicinity of Philadelphia *Blandyanum* and Mrs. Clutton usually winter fairly well, so much so as to merit a position in the hardy list.

nice collection of evergreens it contains. There is not in the whole of the evergreens, any of particular rarity; they are simply well selected sorts, such as are to be had from all nurseries. The pleasure in viewing them comes more from the nice arrangement of sorts and their healthy appearance than from looking on rare varieties. There are in the collection, such well known kinds as white spruce, golden and Chinese Arbor vitæ, Austrian and mountain pine, tree box, hemlock spruce, *retinispora*, yews and like plants. Our recollection is that there are no broad-leaved evergreens in the assortment, all being of a coniferous nature.

When planting a bed of this kind, one must have in mind that in time many of the subjects will become too large. It is well to use such sorts as will admit of pruning back as occasion demands it, but prune as one will, the plants will need thinning out in time, or perhaps a re-arrangement of the whole bed.

Although there is no need of protecting the evergreens named in Washington, such beds are great protection to sorts that may need it; and often some of doubtful hardness can be had to thrive when placed among others in a large bed.

Many evergreens have foliage of a pleasing golden color, others that of a variegated nature, and these are so handsome and make such a desirable display, that they are employed to form whole beds, and at all seasons of the year such a bed is a pleasing object. Prominent in this class of evergreens are the several varieties of golden and silver-tinted Arbor vitæ, of both the American and the Chinese species, the golden yews, the several *retinisporas*, and the gold and the silver-tinted *euonymuses*. These evergreens are attractive the whole year through, even in Winter. The yews are particularly so just as their new growth is perfecting itself in early Summer.

GRAND NEW CANNAS

William Saunders

The flowers are large, of splendid form, and are born very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze. Height, 3 1/2 to 4 feet. We believe that **Wm. Saunders** is decidedly the most perfect canna of this type that has been introduced. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Ottawa
is a strong grower, very robust and 5 to 6 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.
Note:—We had this canna on trial among the Canadian experimental stations last summer and this is the official report of their expert:
Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 massed in one bed during the past season, this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 13 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size." 50c. each; \$5.00 per doz.; \$35.00 per 100.

New York

Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest varieties of cannas. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

ROSES Shrubby

The Johnson Seed Company.

This concern, of which Herbert W. Johnson of the old firm of Johnson & Stokes, Philadelphia, Pa., is president, was established in July, 1906, on the expiration, by limitation, of the last-named firm. In the catalogue just issued by the new concern appear the following statements which are of general interest:

Mr. Johnson says: "Before establishing the late firm of Johnson & Stokes in 1881, I served an apprenticeship of nine years with one of the best-known seed houses in Philadelphia, since which time I have taken personal and complete charge of the growing of and contracting with private growers for the entire garden seed supply of Johnson & Stokes. Thus I offer you the benefit of thirty-four years' all-round experience as employee, partner, seed-grower, business head and manager of a successful seed business."

Concerning the personnel of the new firm it is stated:

"In appreciation of their hard work for so many years, which contributed so largely to the success of the old firm, it was my desire to give to several of the old and deserving employees an interest in the business, by making them stockholders. With this object in view, the Johnson Seed Company was formed at that time, of which I am still the active business head and seedsman, being president and general manager; also giving, as I have done in the past twenty-five years, close personal supervision to our seed crops during growth.

"Joseph F. Bradley, for twenty-four years with the late firm of Johnson & Stokes, continues as manager of the order department of garden and grass seeds and poultry supplies. William J. Sherry, for twenty-two years with the late firm of Johnson & Stokes, also retains his old position as manager of the flower seed, bulb and mail order departments. Clifford Phillips, who has had charge of the books and accounts of Johnson & Stokes for twenty years, is secretary and treasurer of the new company. A large number of other old and competent employees also remain in their former positions."

The principal store of the firm is at 217 Market street. Since July 1 last over \$7,000 have been expended in the addition of new fixtures and other facilities to meet the requirements of trade.

The Johnson Seed Company also has seed testing and plant growing houses at Pavonia, N. J., but does not raise any stock of ornamental plants, cut flowers, etc., for market. In addition there are the Cedarcroft seed gardens and trial grounds, which comprise 28 acres of a great variety of soils, for the testing of flowers and vegetables, and for growing and developing choice high-grade seed stocks for planting at Gardendale or on the firm's other seed farms or those of its expert private contract growers.

Notes on Gladiolus.

A PROMISING YELLOW GLADIOLUS.—While yellow is far from being a rare color in gladiolus species and garden varieties, it is seldom found in clear, bright shades, and is usually associated with other tints or markings in the same flower. Good self-colored yellows are much to be desired, and breeders have from the earliest stages of improvement of this favorite flowering plant worked earnestly to obtain them, but so far the varieties that have found their way in commerce are too pale, or if the body color is good, there are often too conspicuous markings of other tints. Good yellow species for breeding purposes have always been lacking, for though the prevailing color of several wild kinds is yellow, it is so often obscured or associated with other colors, usually a dominant shade of red, that the progeny, even under the most careful systems of hybridization and selection, do not show up pure yellow varieties. Two really pure yellow-flowered species have recently been introduced from South Africa, and there is good promise that fine self-colored garden varieties suitable for general culture may be evolved from at least one of them. The first came to the Rural Grounds in 1899, kindly submitted for trial by Herr Max Leichtlin, Baden Baden, Germany, whose collector found it in the mountains of Central Madagascar. It proved to be a small plant, scarcely as large as a freesia, and a winter bloomer. No practicable degree of retarding or of early planting could induce it to bloom in summer. The flowers, however, were of good size and of a wonderfully pure and bright yellow, with no other marks or shadings whatever. A single hybridization was effected between it and a new red-and-yellow summer-blooming species of vigorous growth, also collected in Madagascar, resulting in very ordinary salmon-colored progeny, which, when later crossed with the best available commercial yellow variety, produced a fine bright self-colored flower borne on a robust plant. The original yellow Madagascar species has so declined in vitality that we fear it will soon be lost to cultivation. This species has not, to our knowledge, been named, and no further specimens have been collected.

GLADIOLUS PRIMULINUS.—We appear to have in this newly-introduced species a most hopeful source for breeding yellow varieties. While its existence has been known since 1890, its introduction to horticulture apparently dates from 1904, when Mr.

Francis Fox, Wimbledon, England, a distinguished civil engineer associated with the building of the great railroad bridge over the mighty chasm just below the Victoria Falls of the Zambesi River, of South Africa, first flowered and exhibited a superior natural variety of the species from corms he had collected in the "rain forest," as the wooded belt near the bottom of the gorge is called. This rain forest is constantly drenched with mist from the falls, almost the greatest in the world, and the vegetation there is usually provided with means for sheltering its essential organs of reproduction from the ever-falling moisture. The particular species of gladiolus under consideration was found growing almost under the falls, where nearly all parts of the plant are constantly bathed in warm moisture, the anthers and stigmas being protected from wet by the sheltering hood of the bloom, formed by the drooping upper petals or perianth divisions. Mr. Fox has named this beautiful variety "Maid of the Mist," on account of its very peculiar habitat, and kindly supplied the writer with sufficient corms for a very thorough trial. We have formed great hopes of it from two seasons of culture and observation, during which many hundreds of hybridizations were effected between it and selected species and garden varieties, generally with a view of developing better yellow kinds. Nearly 2,000 cross-bred seedlings have been raised, about 150 of which bloomed last summer. One, at least, bears flowers much larger than the parent, of excellent form and nearly as good a shade of yellow, with no other coloring whatever. The vigor of growth possessed by the

flowers larger and the plant more vigorous than that of the original *Gladiolus primulinus* found along the lower reaches of the Zambesi River. The great prospective value of this Victoria Falls variety lies in its vigor and adaptability to culture as well as its fine coloring. The Madagascar species had as good flowers, but it was small and weak, so difficult to grow that the stocks both here and in Europe died out under the most careful treatment. As *Primulinus* now stands it appears worthy of cultivation for its own sake as well as for breeding purposes.

YELLOW GARDEN GLADIOLI.—Quite a number of gladiolus varieties are listed as "yellow." While this is, of course, the prevailing tint they often disappoint purchasers from their lack of purity. The yellow is usually combined with red or purple, and is often too pale or dull to be agreeable. The yellow shades, as a rule, do not increase as freely as the reds and pinks, and are usually held at higher prices. Canary Bird, which originated in Long Island, we regard as the finest yellow now in commerce. The color is good and clear and is commonly free from other markings, the only objections being the moderate size of the flowers and the weak and crooked form sometimes assumed by the spike. Ferdinand Passay, sent out several years ago by the Lemoines, of Nancy, France, is the best yellow of the "butterfly" type we have tried. The shade is light sulphur, and there is the usual crimson blotch characteristic of this group. Isaac Buchanan is an old and still popular variety of the gandavensis type. It has a dense spike of narrow, deep yellow flowers thickly

First Floor of Johnson Seed Company's Store, 217 Market Street, Philadelphia. Photo Taken One Week Before Christmas, 1906.

Maid of the Mist variety of *Gladiolus primulinus* and the readiness with which it crosses with other species appear to foreshadow great possibilities as a breeder of desirable new forms. The hybrids already bloomed show it to be prepotent, either when used as a seed or pollen parent, over all other colors, except intense red, and it even then impresses rich yellow throats in the blooms of its offspring.

A GOOD GROWER.—It might be supposed that this very distinct gladiolus, the outcome of countless generations of special adaptation to very peculiar conditions, would not do well away from the steamy atmosphere and saturated soil of its native locality, but it turns out to be a thrifty grower under ordinary garden conditions. In dry soil the blooms are smaller and the leaves more rigid than if allowed plenty of moisture at the roots, but a saturated atmosphere does not seem to be needed for the perfect development of plant and flower. Good-sized corms send up from one to five strong spikes, about four feet high at blooming time. They are furnished with the usual side spikes, and will average eight blooms each. The flowers last two or three days, standing our hot sun very well. The foliage is very upright and deep green in color. It is a rather early bloomer, opening in July when planted in May, and blooms splendidly in winter when grown under glass. The color of the blooms is uniform bright yellow all over, inside and out. The shade is said to be much richer,

flaked with dull red or purple. It has been in commerce over 40 years, and nothing much better has yet appeared. The much heralded "yellow" novelties usually turn out to be commonplace seedlings that should never be offered to the public. Growers generally find that yellow hybrid varieties produce red seedlings, no matter what pollen is used on them, and most of the few meritorious yellow kinds now known are thought to have been grown from red-flowered parents. The introduction of a good yellow species that not only breeds true, but is able to impress its coloring on cross-bred progeny, is therefore a cheering incident.—W. V. F., in Rural New Yorker.

ELBERON (N. J.) HORTICULTURAL SOCIETY on January 7 held a most interesting meeting. The principal feature was the elegant display of fine carnations consisting of fifteen vases of which the following varieties were shown, Enchantress, Mrs. Lawson, Victory, Robert Craig, Lady Bountiful, White Lawson, and one large vase of Winsor from Pierson Company of Tarrytown, N. Y., which was admired by all. Mr. Bauer gave an interesting talk on the carnation of the past and present in a most able manner. The society as an organization held true to the old and tried varieties of carnations, and certainly were loyal to Red Lawson, Enchantress, and Lady Bountiful. F. W. D.

WE ARE NOW GRAFTING ROSES

This is the Best Time to Place your Order.

In this Way you will Get Just What you Want

Read what some of your customers say about our stock of previous years:

Auburn, R. I., April 28, 1906.
 "The grafted Richmond we had from you this spring were as nice as could be, which has been the case with all the stock we ever had from you. You may rest assured when we want grafted roses or plants of any kind you can furnish you will have our order."
 (Signed) The J. A. BUDLONG & SON CO.

Hyde Park, Dutchess Co., N. Y.
 "I would like to thank you for the quality of grafted roses and American Beauties, on own roots, which you have sent me each year. I can-

sider the stock A No. 1 in every respect and doubt if better could be obtained from any other firm."
 (Signed) HENRY J. ALLEN,
 Gardener to Mr. F. W. Vanderbilt.

Amherst, Mass., April 30, 1906.
 "I never saw finer or cleaner stock sent out by any firm than I received from you this year."
 (Signed) W. WESTLAND,
 Gardener to Mr. Francis Blake.

Flushing, L. I., May 1, 1906.
 "The Richmond rose plants come to hand in good shape, fine healthy stock, well packed and good count. I am very much pleased with them

as I have been in the past with all stock purchased of you. It gives me great pleasure to send an order to your house for I know I will get just what my order called for, no outs, no runts, but clean, healthy stock."
 (Signed) A. L. THORNE.

Whitinsville, Mass., April 25th, 1906.

"The rose plants received from you this spring were the best I ever received from any source."
 (Signed) THOMAS BOWDEN,
 Gardener for Mr. Arthur F. Whitin.

Lenox, Mass., Dec. 4th, 1908.
 "The grafted rose stock which you have supplied me with for the past six or seven years has been of the highest quality and has given me the greatest satisfaction. I have great pleasure to again send you my order."
 (Signed) EDWIN JENKINS,
 Supt. B. Lafontaine Gardens.

Morton Grove, Ill., Dec. 12, 1906.
 "The grafted Killarney you supplied us was extra fine. Our only regret was that instead of getting 2600 plants we didn't order twice as many."
 FOELLMANN BROS. COMPANY.

We intend to maintain our usual high standard this year. Send for catalog of varieties and prices.

ROSES

A New Development in Rose Growing.

For some time past The Floral Exchange at Ridgely, Md., has had its establishment was too near the Delaware River to grow American Beauty roses successfully, so the proprietors have been looking around for a new location and finally have purchased a farm of 50 acres at North Wales, Pa., 22 miles from Philadelphia. A new corporation has been formed under the name of The Florex Gardens, with D. Fuerstenberg, president; H. C. Geiger, treasurer; and Eugene Bernheimer, secretary. George Samtman, formerly of Myers & Samtman, has been engaged as superintendent.

While the new company has not yet positively decided just what it will do, the present intention is to build one large single-span trussed house, 150 feet wide by 425 feet long, covering 1 1/2 acres of ground, and to hold 40,000 plants of American Beauty. This variety only will be grown on the new place, giving up the houses at Edgely entirely to tea roses. It is hoped to start operations at once, so that the place can be in working order by next July.

North Wales is a good shipping point, being on the North Penn. division of the Reading railway. The ground is close to the station.

We learn that some parties are looking up land values, etc., around Hillside, Pa., where the famous Liberty and Richmond roses are grown.
 DAVID RUST.

Lilium Speciosum in Pots.

(4) Please give instructions for starting and blooming Lilium speciosum in pots for Summer. A succession of batches desired.

Penna. A. M. B.
 —Pot the bulbs separately in 5-inch pots and plunge them in a cold frame. Commencing about the first week in March, bring a few into the greenhouse once a week; leaving the last batch to flower in the frame.

A Boiler Question.

(5) I am building a small greenhouse, 11 x 30 feet. I am offered a boiler that was used for heating a dwelling. Can it be employed as a greenhouse heater?

New Jersey. A. D.
 —Any boiler that is in good repair is suitable for heating a greenhouse, whatever it may have been used for previously.

Stocks for Memorial Day.

(6) Please tell me if Ten-week stocks for cut flowers for Memorial Day can be grown under sash covered with prepared cloth, by starting them in the greenhouse and transplanting to frames first of April, the frames being heated by hot water pipes. SUBSCRIBER.

Maine.
 —Stocks sown the latter part of this month, and treated in the manner suggested, should be quite satisfactory for cut flower purposes for Memorial Day.

Kindly tell me when is the best time to sow seeds of stocks to have them in flower to cut for Decoration Day; also if the same sowing will produce good salable plants in flower in 3 1-2-inch pots for the same occasion; and if not, when is the best time to sow for pot plants? What are considered the best kinds for cut flowers, and for pot culture? Mass. A SUBSCRIBER.

—The stocks required for cutting purposes we would sow at once; in the case of those intended for pot sales we would sow the seed the middle of February. Consult any seedman's catalogue for the best varieties.

Roses.

(7) Will alfalfa sod composted with cow manure make a good soil for growing roses?

Is rain water as good or better than water from wells for watering roses in greenhouses? I have a pond that I can use for holding water, and by carrying water through pipes from the roofs of my greenhouses I can have a large supply to draw from. Furthermore, there would be the liquid manure from the stable and yards running into it.

Whom can I address as to analyzing soil and water for growing roses, chrysanthemums, and carnations?

Kan. W. E. B.
 —We have had no experience with alfalfa turf, but if it decays in a manner similar to what other turf does it will make good sod for roses. Rain water is good for plants, because it is soft. Water from a pond is equally so, therefore just as good as rain water, so there is no need to try and save all the rain water.

To obtain analysis of soil and water, address your State Experiment Station, or the Department of Agriculture, Washington, D. C.

Under separate cover I send you one of my roses together with some of the soil in which they are planted. I got the small plants about June and planted them in three-inch pots, which I bedded in the ground, and in this way grew the plants until about the first of October, when I planted them in my greenhouse. The plants were a little small, but looked thrifty, and I thought they had done very well considering the unusual wet weather last Summer. Some of the pots had a grub worm working in them during the Summer and those plants were much smaller. After planting them in the bed they shot out a number of small shoots and had little flowers. I then wrote you asking what to do to make the flowers larger, and you replied that you thought the next crop would be larger and that the liquid cow manure I was using was all that was necessary. I trimmed the plants back then, thinking it would make them more bushy and that they would produce stronger flower shoots. Since then they have hardly done anything, although I have watered them every week or two with liquid manure and done everything else I know of to make them grow.

The soil I planted them in was composed of about equal parts of good garden soil, woods dirt, sand and sifted compost made from rotted leaves, grass, sweepings, etc., I also put some manure with the soil. Last week I practically replanted one of my beds, that is, pulled up the plants, shook the roots apart, stirred up the soil thoroughly and replanted them. Around the roots of about half the roses I found a large fish-worm and three or four others around in the bed. Please tell me what you think is the matter and whether there is anything wrong with my soil. I hardly think the cause could be altogether from the worms, as all the roses have been affected alike.

North Carolina. R. E. G.
 —The soil mentioned as used for the roses is entirely unsuitable. The good garden soil and the manure would have been all right, but the other materials should have been left out. In addition to the soil used being unsuitable, the treatment accorded the plants has been equally so. The cutting back of the young growths at this season of the year was a very unwise thing to do.

If inquirer will read carefully the articles on rose culture, as they appear in The Florists' Exchange, he will gain much information regarding rose culture under glass. If the rest of the plants are similar to the one sent for inspection, we would clean out the benches entirely and start afresh with new plants and new soil. I am interested in six rose houses, 20 x 150 feet. These houses are suffering severely from thrips that appear on the rose petals, having made their way into the green buds, eating the roses as they matured. What can I do to thoroughly exterminate them?

We seem to have exhausted, without apparent effect, the usual remedies, such as spraying with nicotine, painting the steam pipes with nicotine, spraying with Ivory soap suds and kerosene. Last year we had the specialist who advertised in your columns spend a week fumigating with hydrocyanic gas, but all without results.

Now we grow splendid roses apart from this scourge which, of course, completely spoils them. We grow the plants in solid beds, and do not want to throw out the 10,000 plants next Summer. Would it be possible in the Summer, when the plants are resting and we find no market for the blooms, to burn sulphur in all of the six houses, which are open construction,

JAN 12 1907

without actually killing the plants themselves? We would, of course, expect to destroy the foliage temporarily;

New York. M. L.
 —It would seem that every known method for the removal of thrips has been tried in the present case; and the next thing in order would be to find out the source from which the thrips come. If there is any uncultivated land in the neighborhood it might be from it that the thrips come in the Fall, and become so numerous in the greenhouses during the Winter months that it is impossible to get rid of them all. Or it might be that they proceed from accumulations of leaves and rubbish under the benches in the houses. If everything inside and outside is properly cared for, the insects can be subdued by persistent efforts, and we would rely as much upon the Ivory soap method as any other, giving two or three syringings a week, and keeping up the treatment right along until the thrips were all exterminated. Fumigating with sulphur would kill the plants, and we would not attempt its use.

Scale on Palms.

(8) Please name the best remedy for scale on palms?
 New York. VIRIDIS.
 —To remove the scale from palms apply any of the tobacco insecticides, all of which make a suitable wash.

Hardiness of Azalea Indica.

(9) How low a temperature will Azalea indica stand without injury?
 VIRIDIS.
 —With the exception of the two varieties *Kempferi* and *amena*, the Indian azaleas are all tender greenhouse plants, and while dormant, they will stand a temperature of 40 degrees without injury. A few specimens of *Azalea indica alba* have withstood the Winters in Philadelphia and a few in Greenwood Cemetery, Brooklyn, N. Y., but under most favorable conditions in regard to their surroundings.

HEATING.

Growers' Problems Solved by U. G. Scollay.

In a 100-foot house, 18 feet wide, with a 4-inch overhead flow take care of 16 1 1/4-inch returns, eight on each side wall, on the uphill system and what will be the temperature maintained at zero? The house stands alone, exposed sides, and one end. Will a 3 1/2-inch pipe be all right, instead of the 4-inch? I have a small boiler heating a house of 100 x 100 feet, with three 2-inch flows under bench piping uphill system. I want to put in the overhead system uphill using one 3-inch flow instead of the three 2-inch flows. Can I connect the three 2-inch flows from the boiler into the 3-inch flow? Is that all right—the difference between one 3-inch and three 2-inch? Will the three 2-inch feed the one 3-inch; all hot water heating?
 F. W. H.

—Provided that the house, 100 x 18 feet, has no glass on the sides, I would say that the amount of pipe as mentioned will maintain a temperature of about 65 degrees inside when the thermometer is at zero outside. You mention "uphill" system, and an overhead main—I presume you mean to allow the overhead main to rise from the boiler end to the far end of the greenhouse, that is, the highest point will be at the far end where you will put on the air vent? You must be sure and have the 16 runs of 1 1/4-inch pipe all drop with good grade to the boiler. I prefer the 4-inch to the 3 1/2-inch overhead main in your case. I would also suggest that you make the 3 1/2-inch pipes into four coils of four pipes each, placing a full opening gate valve on each coil between the overhead and the coil at the far end. Regarding the 100 x 11 foot house, I would say that surface, which I assume to be 2-inch, and connect it in the same manner to the overhead main as described for the 100 x 18 foot house. You do not state how many returns you have in the smaller house, so I cannot furnish you a lay-out in detail. If the boiler for the small house is fitted with three 2-inch flows you can arrange to have them flow into one 3-inch main. The combined area of three 2-inch pipes is greater than one 3-inch, but in your case it will not matter. Be sure in both houses to have the same area in the returns to the boiler as in the flows.
 U. G. SCOLLAY.

DREER'S SELECT DAHLIAS

Varieties Specially Suited for Cut Flowers.

Strong dormant field roots, grown at our own Nurseries where every precaution has been taken in the handling and our customers may depend on receiving stock absolutely true to name.

Winsome (Cactus). A fine white	1.50	10.00
Wm. Agnew (Decorative). Brilliant red	1.00	8.00
White Swan (Show). A good white of medium size	1.50	10.00
Waltheri (Cactus). Sulphur shading to white centre	4.00	30.00
Zephyr (Cactus). Crimson carmine	2.50	15.00
Zulu (Decorative). Deep maroon shaded black	1.00	8.00

	Per Doz	Per 100
A. D. Livalo (Quilled) Pink	\$1.00	\$8.00
Aezir. (Cactus) Warm cardinal red	1.00	8.00
Aunt Chloe. (Cactus) Rich black maroon	1.00	8.00
Admiral Dewey (Decorative). Rich french purple	1.00	8.00
Baron Schroder (Decorative). Purple with bluish shading	1.00	8.00
Catherine Dner (Decorative). The favorite Newport red	1.00	8.00
Clifford W. Bruton (Decorative). Bright yellow	1.00	8.00
Countess of Lonsdale (Cactus). Pleading Salmon	1.50	10.00
Eva (Cactus). Medium sized pure white	2.50	15.00
Earl of Pembroke (Cactus). Rich plum color	1.00	8.00
Fire-rain (Decorative). New Brilliant red	3.00	20.00
Floradora (Cactus). Blood red	2.50	16.00
Florence N. Stredwick (Cactus). A grand white	2.50	15.00
Flora (Cactus). The ideal white	4.00	30.00
Frute (Cactus). Soft rose pink, passing to cream centre	2.50	15.00
Gigantea (Giant). An immense creamy white	2.50	15.00
Gurellinde (Cactus). Finest yellow	2.50	15.00
Grand Duke Alexie (Quilled). Standard Ivory white	1.50	10.00
Hohenzollern (Cactus). Bronzy orange	1.00	8.00
Keynes White (Cactus). Free flowering white	1.00	8.00
Krischilde (Cactus). Soft pink	1.50	10.00
Lyndhurst (Decorative). Brilliant red	1.00	8.00
Lenax (Cactus). Coral red enfused sprout	4.10	30.00
Mary D. Hallock (Quilled). A useful yellow, very free	1.00	8.00
Mrs. Alfred Morean (Show). A fine large pink	1.50	10.00
Mrs. May Loumls (Show). White enfused with soft roses	1.50	10.00
Mrs. Winters (Decorative). Fine white	1.00	8.00
Mrs. Roosevelt (Giant). Pink	2.50	15.00
Nymphsea (Decorative). Light pink	1.00	8.00
Sylvia (Decorative). Soft pink	1.00	8.00
Standard Fearor (Cactus). Rich fiery scarlet	1.00	8.00
Strahlen Krone (Cactus). Intense cardinal red	1.00	8.00
Thuringia (Cactus). Very large fiery red	4.00	30.00
Uncle Tom (Cactus). Deep maroon	2.50	15.00
Victor von Scheffel (Cactus). Beautiful soft pink	2.50	15.00
Volker (Cactus). A grand yellow	1.50	10.00

SINGLE CENTURY DAHLIAS

Good divided roots—field grown stock.

Crimson Century. Rich velvety crimson	2.00	15.00
Scarlet Century. Brilliant rich scarlet	3.50	25.00
White Century. Large pure white	4.00	30.00
Twentieth Century. The standard single	1.50	10.00

HENRY A. DREER, 714 Chestnut St., PHILADELPHIA

New York.

News of the Week.

The first meeting of the year of the New York Florists' Club will be held on Monday evening, January 14, in the club's rooms, corner of Twenty-third street and Eighth avenue. At this meeting the newly elected officers will be installed, always a most interesting event, and much other important business will come before the members, so that a large attendance is assured.

George Fallon, a Greek florist, well and favorably known to the trade, who kept a flower shop at Eighty-second street and Columbus avenue, and who boarded with Mr. and Mrs. Weidman, one block away, became infatuated with Mrs. Weidman, and on Monday last, because she resented his attentions, shot her in the head and slashed her with a razor, from which injuries she died. In the meantime Mrs. Weidman had pulled a revolver and shot Fallon through the head, and he is now in the Bellevue hospital, not likely to recover.

G. F. Ditzenberger, formerly in business as a florist in Bay Ridge, Brooklyn, has formed a partnership with his brother-in-law, R. Siedler, of Woodcliff, N. J., where they have built two greenhouses, each 125 by 26 feet, for the cultivation of carnations. Their firm name is the Woodcliff Floral Company.

Julius Kretschmar suffered a slight paralytic attack a few days before Christmas, but is recovering nicely now. Mr. Kretschmar had a similar attack several years ago from which he fully recovered.

The Horticultural Society of New York held its fourth regular meeting of the season in the rooms of the American Institute, 19-21 West Forty-fourth street, on Wednesday, January 9, when Dr. H. H. Rusby gave an il-

lustrated lecture on "The Wild Grains and Nuts of the United States."

The Tarrytown Horticultural Society held its annual dinner on Wednesday evening, January 9; and the Morris County Gardeners and Florists' Society held its annual smoker the same evening.

St. Louis.

News Notes.

L. Bauman, of L. Banman & Co., Chicago, is in town this week with a line of florists' supplies.

Frank M. Ellis is in town, but says that by the end of next week he will leave for his future home in Panama, where he is interested in a large banana plantation. Smith & Co., who are his successors, are doing quite well, and are receiving some nice shipments from new consignors, as well as all the old ones.

The St. Louis Horticultural Society will hold its next meeting on the night of January 21. The place of meeting has as yet not been announced. Some prominent speakers will address the gathering.

James North & Company, will this week open their new retail store at Vandeventer and Finney avenues. This firm has had an office down town where they did a shipping business in funeral work for out-of-town orders.

C. A. Kuehn has had an unusual amount of extra fine stock of late in roses and carnations, which are cleaning up fairly well each day.

Henry Berning is receiving nearly every day some 40,000 California violets of fine quality. His growers are among the best in Kirkwood, where most of our violets come from.

At Augermuller's some extra fine quality stock of all kinds is being received, especially in American Beauty roses.

Wm. Adles is reported as being in Chicago.

The St. Louis Florists' Club will hold its next meeting this week Thursday in the new meeting hall, 310 Olive street, at which a large attendance is expected.

Frank A. Weber, of the firm of H. J. Weber & Sons, left last week for an extended Eastern trip in the interest of his nursery business.

ST. PATRICK.

Cleveland, O.

The marriage of Mr. Gilbert L. Shutt, late of the Park Board of Minneapolis, Minn., to Miss Helen T. Updegraff, daughter of the late Judge Robert D. Updegraff and granddaughter of the late Congressman J. T. Updegraff, was solemnized at the family residence 6314 Franklin ave., December 23, 1906.

The bride is well known in Cleveland circles and is one of the most popular young women of the West Side. The young couple left amidst many congratulations and good wishes for their future home, corner Hamline and Hoyt avenues, St. Paul, Minn.

Mr. Shutt is a hard-working, enthusiastic and progressive horticulturist, having spent his whole life at his chosen profession. He for a number of years was employed by some of the leading firms in the country, such as the Wm. H. Moon Company, the Storrs & Harrison Company, J. C. Vaughan, Robert Simpson, the Park Floral Co., Denver, etc. He was employed on the Westinghouse and Jones estates, Pittsburg, Pa., for some time and later as superintendent of "Ben Macdunn," one of the best equipped and most beautiful rural estates in Michigan. He has resigned his position with the Park Board to associate himself with the Hoyt Plant & Seed Company of St. Paul, where he will take charge of the fast growing work of their landscape engineering and nursery department.

One-half inch, 75c.; ¾-inch, \$1.00; 1-inch, \$1.25, special positions extra. Send for Rate Card showing discount of 10c., 15c., 25c., or 35c., per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

Copy must reach this office by 12 noon Wednesday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

American Breeders' Association.

The meeting of this organization will be held at Columbus, O., January 15, 16, 17, and 18, 1907. The association will be the guest of the Ohio State Board of Agriculture and of the College of Agriculture of the Ohio State University, and will meet in conjunction with the various agricultural organizations of the State. The Association headquarters will be the Great Southern Hotel, corner Main and High streets; rates—European plan, \$1 per day and up; American plan, \$2 per day and up.

A most interesting and comprehensive program has been prepared. Chas. Willis Ward, Queens, N. Y., will preside over the plant section on Tuesday and Wednesday morning, and the following papers of interest to our readers will be presented: "Carnation Breeding," by Fred Dörner, Lafayette, Ind.; "A Plant Breeder's Trip to Eurasia," by Professor Hansen; "Teaching the Subject of Breeding," by Professor L. H. Bailey; "Problems in Breeding," by Dr. H. J. Webber; "Gladioli Results," by H. H. Groff; "Disseminating New Varieties of Plants," by C. W. Ward; "Important Plant Development Problems," by Dr. A. F. Woods; "Hereditry," by Dr. A. G. Graham; "Securing Accurate Descriptions of Varieties," by Professor L. C. Corbett, and G. M. Tracy.

Burbankiana.

A correspondent sends us the following clipping from the New York Telegram, and adds, "ask our friend Pat if that's true?"

"Notice that Mr. Patrick O'Mara, who combats many of the claims of 'Wizard' Burbank, is lecturing before the Horticultural Society of New York. This thing wouldn't have happened if Mr. Burbank had told his right name, which is Luther O'Burbank."

Also the following from the New York Herald, with the remark, "I would like to know what John Blinrie has to say about it."

"He has given us 'seedless' apples and pears, but think of the good that the California wizard Burbank would do if he found a way to distil 'harmless' whiskey."

WILL APPEAR

in our issue of

JANUARY 26, 1907.

'Tis an opportunity for Advertisers of Carnation Stock not to be missed. Send in your copy early.

Improved Plan of Free Seed Distribution.

Reform in the plan and character of the distribution of free seeds by the United States Government, finds no more ardent advocate than Professor B. T. Galloway, Chief of the Bureau of Plant Industry, Department of Agriculture. Ever since the governmental distribution of free seeds has been placed under his supervision, Dr. Galloway has endeavored, so long as Congress compels the carrying out of this farce, to so order things that the seeds sent out from Washington shall prove of the greatest utility—should they possess any such—to agriculturists and citizens throughout the country, who desire to be recipients of the governmental "pap," and so condone, if not encourage its eleemosynary paternalism, by sending seeds adapted to particular localities, thus doing away with the miscellaneous and indiscriminate scattering of seeds heretofore in vogue. Professor Galloway, however, has always been convinced of the comparative uselessness of the distribution of common varieties of garden and field seeds by our lawgivers; and has for years, with commendable pride in the dignity and helpfulness of his department, has been endeavoring to devise ways and means whereby the appropriation for free seeds, etc., may be diverted into much more useful channels than at present obtains. The opportunity recently came to him, when he appeared before the Agricultural Committee of the House, to present some of the projects he has in contemplation and otherwise carried to a culmination, in the furtherance and promotion of his proposed plan of reform. The plan as outlined by Dr. Galloway before the committee in question, which has received the sanction of Secretary of Agriculture Wilson, proposes:

First: The abandonment of the miscellaneous distribution of ordinary seeds.

Second: The securing, through all the sources at the command of the Department, of valuable new seeds, plants, bulbs, etc., which are being developed at home and which are known only locally; the distribution and testing of these new things in regions where it is believed they may have value.

Third: The securing from abroad of new seeds, plants, etc., for introduction into this country, and the upbuilding of agricultural industries as a result of this work.

In order to crystallize the suggestions made in the foregoing, Dr. Galloway submitted the subjoined outline of a substitute for the existing authority for the purchase and distribution of seeds.

"For the purchase, propagation and testing of new, rare and uncommon seeds, bulbs, trees, shrubs, vines, cuttings and plants foreign and domestic; for the rent of buildings (not to exceed \$3,000); the employment of agricultural explorers, local and special agents, clerks, assistants, and all other necessary labor required in the city of Washington and elsewhere; the purchase of necessary office fixtures and supplies, paper, twine, gum, printing, postal cards, fuel, gas and electric current, transportation, traveling expenses and all necessary material for securing, testing, propagating, packing and distributing the seeds, bulbs, trees, etc., above specified—two hundred and forty-two thousand dollars. And the Secretary of Agriculture is hereby directed to spend the said sum, as nearly as practicable, for the encouragement and advancement of agriculture and horticulture throughout the United States, through the systematic introduction of new, rare, or uncommon seeds, bulbs, trees, vines, cuttings, etc., in the establishment of new or the improvement of existing plant industries; in collating, digesting, reporting and illustrating the results obtained through the testing and distribution of new and rare seeds, bulbs, and plants herein provided for, and the Secretary of Agriculture is further directed to purchase such new and rare seeds, bulbs, plants, vines, and cuttings in such manner as he may deem expedient, obtaining, so far as practicable, the advice and co-operation of Senators, Representatives, and Delegates in Congress; providing that such seeds, bulbs, and plants shall be distributed to actual experimenters only for experimental tests and that the Secretary of Agriculture shall cause a record to be kept of all persons to whom seeds, bulbs, or plants are sent, in order that reports on the results of the experiments may be secured in as many instances as possible, and provided further that the Secretary shall, so far as practicable, co-operate with the State experiment stations and practical farmers, fruit growers and others, in order that the seeds, bulbs, and plants may be distributed with due regard to their adaptability to the various soil and climatic conditions prevailing in the United States. The Secretary of Agriculture is hereby also directed to prepare annually a report showing what the results of the distribution have been."

In giving his testimony Dr. Galloway said:

"In explanation of the foregoing I may say that the Department has been doing this kind of work for a number of years, as is well understood by the Members of this Committee. The amount annually appropriated for foreign exploration work has been increased from \$20,000 to \$37,780. In addition to this we have expended about \$63,000 annually in

the purely demonstration work and the upbuilding of new industries. In order that this work might be systematically carried on, we have, as has been done with all the other work of the Bureau, divided the lines of investigation into various projects, each of which is specific and each of which shows on its face, I think, the value that would result to the country by carrying it out.

"We have now developed and elaborated about 75 distinct projects, with the machinery and men for carrying them on. To conduct all this work would require more funds than the total appropriation here asked for, but in view of the fact that the projects are arranged as projects, we could bring them within the scope of the present appropriation, although we believe that additional funds could be used to good advantage.

"Now the question will naturally be asked, In what manner would these different lines of work be conducted, and in what way would they benefit the districts where the seeds and plants might be sent? Some of this work would be done through individuals secured directly by the Department, and a considerable portion would be done through individuals secured as a result of the advice and co-operation of the Senators and Members who know the individual needs of their constituents and districts. I may cite our present tobacco work as an example of the manner in which all of these lines of investigation would be carried on, with such modifications as the exigencies of each case might require. Under the old plan of a few years ago it was customary for the Department to go to the trade and simply purchase a certain number of pounds of the different varieties of tobacco seed offered by tobacco seed growers. No special effort was made by these growers in the matter of developing types. In fact the Department secured just the ordinary everyday seed used by the majority of small growers. Three or four years ago the Department entered upon a critical investigation of tobacco types with a view to the breeding and selection of those which would be better adapted to existing conditions in the different sections. This work has been in charge of one of our ablest young men and has been quite successful in a number of sections. High grade types of tobacco have been developed by breeding and selection, which make it possible for practical growers to realize much more from their crops than they have ever done before. It is this carefully and scientifically selected seed which the Department is now sending out to the different tobacco growing sections which have, up to this time, been studied. Instead, however, of assigning each Member in the tobacco districts a certain number of packages, at the end of the season and with a knowledge of how valuable types we have and what the types are, we have asked the Members who have constituents capable of taking hold of this matter to furnish us with a certain number of names of reliable parties with whom we could get into correspondence. We take up the matter with them in a careful way, go over the ground, confer with them relative to their soil conditions, and supply them with sufficient seed to make a demonstration and comparison with the seed that they are already using. This correspondence is always conducted in such a way as to shift to the Department the responsibility of not being able to supply seed to everyone.

"This, in brief, would be our general plan in handling all of these projects. In the matter of work on dry land, alfalfa, for example, it is our desire to introduce these alfalfas into the drier sections of the United States, namely, the Panhandle of Texas, western Kansas, eastern Colorado, western Nebraska, eastern Wyoming, and western South Dakota.

"We could secure the names of a sufficient number of reliable men in these districts to enable us to start the work and if it were successful, the Member through whose instrumentality the work was inaugurated would, of course, get the credit therefor. By the plan here proposed, Senators and Members would be relieved of all the necessity of distributing each year a certain specific number of packages. They would be relieved of any criticism that might be made on the ground that because Mr. A. secured this thing, Mr. B. ought to have a supply also. They would, instead, be equally instrumental with the Department in introducing new and valuable industries in their respective districts and the upbuilding of agriculture therein."

From the printed report of the hearing before the House Committee, a copy of which is now before us, it would seem that the majority of the members thereof were in hearty accord with Dr. Galloway's plan. One or two of the more hidebound legislators desired to see the old method of distribution continued, although also favoring the new. It is to be hoped that when the subject is presented to the House it shall have the full endorsement of the Agricultural Committee, receive unanimous or a big majority approval there, so that a practice, which has been proven by evidence is breeding a horde of mendicants throughout the country, may be abolished, and a useful, valuable, helpful, and commendable custom substituted therefor.

OUR READERS' VIEWS

Sports.

Editor Florists' Exchange:

Referring to the contribution on "Sports," prepared by my friend, Patrick O'Mara. I have read this article with much interest, and heartily agree with him in his conclusions that we know very little of the true cause of ordinary variations, much less extreme variations, which we call "sports" or bud varieties. In speaking in a general way of the phenomena of variation and sporting, people are very apt to say that certain environments, including the food supply, are the cause of variation or of sporting. I think it would be better if in discussing these questions we were to say that, instead of causing the variations, these environments allowed the variations to occur. In other words, every plant has a certain potential which cannot be seen or pre-determined, but when the plant is brought under a certain environment, different perhaps from the environment in which it previously existed, this becomes manifest in decided variations or in sporting, using the word sport in the same sense as a variation or bud variety. If, instead of saying that we can induce these changes, we were to say that we can provide conditions which, if the plants contain these latent tendencies, will give it opportunity to manifest them, we would be coming much nearer the truth than the present and common way of expressing these phenomena.

I think that Mr. O'Mara's ideas are not at all in conflict with those held by all plant breeders and horticulturists in general, that the basis for variation in any particular direction must reside in the plant itself, and that it is impossible to foretell with any degree of certainty what direction these lines of variations will take, and it is also impossible for him to provide conditions which will cause the plant, or induce the plant to manifest these latent tendencies. He may produce the extreme conditions, and if the plant feels the result of them to a sufficient degree and also carries the latent tendency of variation, then it is possible for the variation to occur, otherwise not.

With hybrids, however, the case is somewhat different, and I suppose that we might argue that all of our plants, since they are of mongrel origin, are hybrids in one sense of the word, and that all the variations might be accounted for by the Mendelian theory. Since the Mendelian theory has been expounded many cross-bred and hybrid plants have been developed, which have tendencies that conform pretty definitely to mathematical rules, and this theory has placed the work of plant breeding, particularly with hybrids, upon a very much more satisfactory basis than it was previously. Because hybrids do not always show an intermediate condition in the first generation from seed they were frequently discarded as of no value. The Mendelian idea is that the breaking up does not occur in the first generation, but takes place in the second generation, and that it takes place in definite proportions. This has proven to be the case in many instances; in fact in a great majority of instances, and it is now deemed best to select from the second generation the particular tendency which most nearly conforms to the ideal sought and in that way start toward the final goal. The breeding work which has been done since the Mendelian theory was expounded some five years ago, has brought much more satisfactory results than that which was attempted prior to that date, simply because breeders have learned that the second generation can be counted upon to give variations which do not occur in the first.

The more discussion we can have upon such subjects, bringing out apparent contradictions and misinterpretations, the more healthful and helpful will be the future observations. I commend Mr. O'Mara's article to everyone interested in this subject, as it contains most interesting and valuable historical data.

L. C. CORBETT,

Horticulturist, Bureau of Plant Industry.

Dept. of Agr., Washington, D. C.

The Hill Company Explains.

Editor Florists' Exchange:

The cataloguing of Double Dryden in our list last Spring grew out of a careless oversight on the part of the catalogue maker. In a lot of our own seedlings, from which were selected Richmond Beauty, Alice of Vincennes, Gen. L. Wood, etc., we had several slightly double forms of the English round-flowered and fancied, which were labeled Double Crabbe, Double Dryden, Double Chancer, etc., for descriptive purposes; most of them proved very slow growers and were not disseminated. In 1902 a stock plant of Mr. Eichholz's Double Dryden was bought for comparison, and later lost sight of. Last Winter our grower, noting plants labeled Double Dryden, referred to our seedling book, found description and handed it in with the novelty list. The facts were discovered very early in the year, and the variety was dropped into the standard list.

The incident shows an oversight, but, we think, is no argument against the registry system.

Richmond, Ind.

THE E. G. HILL CO.

Reflections on Current Topics.

Mr. EDITOR.—I see by the trade papers that more Scotsmen have been receiving horticultural honors in America; one new director of the S. A. F. being a native of "The land of brown heath;" the other, though born in Brooklyn, N. Y., was reared in Scotland, and, on account of that fact and of his many excellent qualities, will be claimed by the Scotch, anyway. (No bagpipe introduction, I hope.)

In speaking of Sam Murray's good traits one of your contemporaries says: "his characteristic modesty is such that his name seldom has appeared in the reports of the discussions; he ever has been more ready to listen to the opinions of others than to voice his own." That is a most excellent qualification, and seems to be one possessed by the majority of the recent appointees to the S. A. F. directorate. They are silent men, but that is no indication that they don't think and work. You will notice that those who have most to say in the reports are, generally, the fellows who aspire to the presidency, or, having got there, continue to orate ever afterwards through force of habit.

One of your other contemporaries makes much of the re-election of a director. He, too, from the reports, is a man of few words. The inference from all this is, the less you say the more valuable you are, and the more you're thought of. There is no reason or wonder, though, why a good man should not receive a re-appointment on the executive board, any more than a good president is worthy of re-election. The S. A. F. wants and needs the best—always—and, as a rule, gets it.

That essay on credit by Mr. Skidelsky is a hum-

General S. M. Weld
President Mass. Hort. Society

ner, and Philadelphia seems to me to have been a good place for its promulgation. The essayist reverses the order of things by first flattering the trade, telling them what noble examples of self-sacrifice they all are, or were, then going for them, in a general way, about their lax business methods, and how slow they are in paying their bills, etc. The usual plan is like that adopted by the Quaker, who after rolling his antagonist in the mud handed him a brush to clean his clothes, considering the latter act a Christian duty. However, we are glad to have our defects so clearly pointed out by Mr. Skidelsky. He talks like one who speaks from experience, and every word he utters has the ring of genuine sincerity. The greatest drawback about credit, I think, is a too indiscriminate and careless granting of the privilege; in other words, it is too easily obtained. And when that is the case, it is valued and, of course, abused, accordingly. The conducting of a business on other people's money is, in my opinion, not at all creditable to the conductor; and something that every self-respecting merchant will steer clear of as far as he can. There is a good deal in the saying, "pay your debts and be respected." How much we all admire the type of man portrayed by Longfellow in the Village Blacksmith: "He looks the whole world in the face, for he owes not any man." The "payment shlrker," as you term him, generally, when a creditor is around, looks for a convenient back-door.

* * *

A Chicago contemporary commends the "reader" form of advertisement recently adopted by a Baltimore craftsman, and quotes the effort. It is a bit of fine writing; but I am somewhat of Henry Ward Beecher's view, who says: "There is nothing more detestable than fine writing. It is painted emptiness." Besides the commercialism shown in the

climax of the "reader" referred to spoils the whole thing and is sure to heighten resentment rather than custom. For advertising purposes there is nothing like saying what you have to say in as few words as possible. It costs less, and, to my mind, shows greater business acumen than a long rigmarole of platitudes and empty nothings.

The bosom of the Boston paper editor I notice continues to "swell with the praise which he hears from his own tongue," as Dr. Johnson puts it. But then the Boston man may believe more in the statement of Erasmus, who asserts: "It is right that he whom no one else will commend should bestow commendations on himself" or—ask for them from others. Our friend in the Huh, if he continues to tell what a "rara avis" in horticulture is appearing under his management will actually begin to believe the statement himself. However, it may be that after the "boastin'" journal has passed the Jumping-Jack stage of its career, the editor may come to regard his present Jack Hornerisms as worthy of being placed in the "gush" category, alongside the watery whimperings of Birnie, and the effusions of

JOB.

Massachusetts Horticultural Society.

At the meeting held on Saturday, January 5, the newly-elected president, General Stephen M. Weld, delivered his inaugural address. After complimenting the organization on the excellent work it had accomplished, General Weld made a few suggestions, the carrying out of which would tend to broaden the work and increase the usefulness of the society. He praised the school garden work inaugurated about fifteen years ago; and thought much good could be done by aiding the State in the control and possible extermination of the gypsy and brown-tail moths, as well as of various other pests which attack fruits, vegetables and flowers. Speaking of the finances of the society President Weld said: "For the year ending December 31, 1906, the income was \$21,710.71 and the expenses were \$24,112.73. For the year 1905 the income was \$17,811.37, the expenses were \$20,588.27. For the last 4 years the average expenses were \$22,042.32, and the average income was \$19,372.05. No business concern, whether incorporated or not, can be run successfully with such figures as these. We must cut down our expenses to our income, or increase our income." As tending toward the latter end the speaker recommended the increased use of the hall for the purposes of fairs and lectures, urging the improvement of the acoustic properties of the lecture room. He dwelt upon the need of adding to the membership, and the securing of as many bequests as possible from friends of horticulture. In the latter connection he announced two legacies recently bequeathed to the organization, one of \$3000; this sum to be held in trust and the income therefrom expended in prizes for the best specimens of such fruit or vegetables as may be selected by the trustees, the trust to be known as the "Benjamin V. French Fund;" another of \$5000, this sum to be held in trust and the income therefrom distributed in prizes for such specimens of flora as the trustees may select, this trust to be known as the "John Allen French Fund."

The president suggested as a means of decreasing expenses, a reduction both of the number and the amount of the society's cash prizes, and the giving of certificates of merit, or medals, which would not be so expensive. This was in line with the work of the most successful horticultural societies abroad. He closed his interesting address with a complimentary reference to the excellence and usefulness of the society's library.

After the meeting some of the members discussed among themselves the various recommendations made in the address; considerable differences of opinion were developed, especially in regard to the limiting of the number of cash prizes, which have already become less liberal than they were a few years ago.

Plant breeding has been in use but about 200 years, though it was discovered in 1691. The first notable example was Fairbank's carnation, or "Fairbank's sweet william," as it was then called. The important work in plant breeding began in the latter half of the last century.

AMONG THE GROWERS

Mount Clemens, Mich.

August von Boeselager, although he is far away from his fellow tradesmen, has not lost any of the growing genius for which his name has become familiar to Detroit retailers. He grows good carnations, of which Mrs. Lawson, Enchantress, Lady Bountiful, Wm. Scott, G. H. Crane and Harlowarden are his mainstays. When chrysanthemums are gone, lettuce and Winter radish offer desirable substitutes. Here also one may find good California single violets and a few fair double ones. Every inch of space is used. Sweet peas are grown to the best advantage around the supports for the roof. A bed of thrifty callas speaks for itself.

Anthony Ottes devotes his glass to vegetables after cutting a crop of chrysanthemums, and discontinues it when he gets his bedding stock sufficiently advanced to demand the space. His soil is well adapted to the growing of vegetables, being very sandy. So well do they grow that three crops of lettuce and radish are grown along with one crop of cucumbers and tomatoes.

James Taylor grows carnations principally, and grows them well. Mr. Taylor is very much interested in the forced circulation of hot water under the Holley Castle system. HARRY.

John E. Haines, Bethlehem, Pa.

A very interesting collection of carnations was seen at this place. Mr. Haines, who began this business 12 years ago, he tells us, has all his life-time been a great lover of flowers. He has taken a great fancy to raising seedlings and has a very fine collection. Twelve years ago he put up a small greenhouse to raise lettuce, radishes, etc., more as a pastime than for profit. In a few years he began experimenting on carnations, etc., and finally devoted all his time to raising new varieties of the flower, finding the work so interesting and having fine success in that line.

The variety John E. Haines is looking grand, full of buds from one end of the house to the other. Wm. Mangan, the foreman, tells us the plants look that way from the time they begin to bloom until thrown out in July. He says they make three blooms to any other red he has yet seen. In color, it certainly is a very fine scarlet. Though it was disseminated in 1906, orders are coming in nicely this year.

The benches of Imperial and Pink Imperial show that these varieties are very vigorous growers. The stems rise high above anything else grown in his houses. The colors are takers in his vicinity as well as in New York, at A. J. Guttman's store, where they found ready sale at the Christmas holidays. Mr. Haines was not able to supply one-third of the demand. Each year he uses more plants for flowering purposes and each year the demand is greater.

Among his coming varieties is a fine Daybreak pink, a shade deeper than Enchantress, somewhat like the La France rose shade, beautifully formed, fine calyx. A flower now in bloom measures 3 3/4 inches. It has long, stiff stems and is a very thrifty grower. He has also a pink which he has marked No. 6. Mr. Haines tells us that it is the greatest producer of flowers he has ever grown or heard of,

beginning very early and continuously flowering the whole year round, being good for field-blooming as well as indoors. The Star of Bethlehem, is of a pleasing shade of yellow, a very free bloomer and has a good stem.

There are other very promising pink, white, red and variegated seedlings coming on.

On the place can be seen growing Enchantress,

John E. Haines,
Carnation Specialist

My Maryland, White Perfection, Pocahontas and Jessica.

Wm. J. Mangan, a good all around man, has charge of the growing part, and is proving to be very efficient. The houses never looked better. He has worked among flowers nearly all of his lifetime, starting at the age of ten. The last six years previous to entering the employ of Mr. Haines, he was in the employ of John Wanamaker, Esq., of Philadelphia. He certainly is a careful man in the management of the carnation, as well as in the rooting of cuttings, the propagating bed being filled with fine, healthy stock.

Mr. Haines is also assisted by his daughter, Mrs. Geo. Haines Weber, who takes great interest in the business and aids her father by keeping the books and attending to the correspondence.

In the Summer of 1906, there were erected on the place three greenhouses. They are filled with his three new varieties, John E. Haines which was disseminated in 1906, Imperial and Pink Imperial. Their productiveness and vigorous growth can well be seen in the photos, which were taken on December 28, 1904, after Christmas, when blooms were closely cut, to supply the great demand. J.

Strength of Packing Boxes of Various Woods.

The Forest Service of the United States Department of Agriculture has been making some investigations into this subject, the results of which are set forth in a recent circular (47) from which we take the following particulars, which should be of much interest to shippers of plants.

Purpose of Tests.

The increasing demand for boxes, combined with the decreasing supply of lumber suitable for their manufacture, has practically revolutionized the methods of box making. Many kinds and sizes of boxes are demanded by the different trades, and the long-continued use of certain woods has often convinced the customer that these are the only ones which can be used for the purpose. But with the increasing scarcity of familiar material the manufacturer is being forced to adopt new woods, and it was with the purpose of determining the merits of different kinds of wood as box material that the tests here described were undertaken.

Woods Tested.

The woods tested were Michigan white pine, New England white pine, loblolly pine, western spruce, western hemlock, cottonwood, and red gum.

Construction of Boxes.

The lumber for the boxes used in the tests was of average box quality, and contained only sound, live knots. Most of it was kiln-dried, and at the time of test contained about 14 per cent. of moisture. It was of the same width and thickness for all boxes of the same size and style, and when more than one piece was used in any side or end it was tongued and grooved. While it is now known that sap stains do not affect the strength of wood, yet it was required that the lumber furnished should be free from them.

The nails were cement-coated wire box nails. No steel bands or other strengthening elements were used.

The shooks were made up into boxes at a factory in Louisville, Ky., under the inspection of a member of the Forest Service. From the factory the boxes were shipped to the testing laboratory at Purdue University, Lafayette, Ind.

Three sizes of boxes were made, designated as small, medium, and large. The small boxes were identical with those commonly used for small articles up to 100 pounds. The medium boxes corresponded to those used for hardware, soap, or canned goods up to 250 pounds. The large boxes were like those used for dry goods up to 600 pounds. Four boxes of each size were made of each kind of wood.

The styles of the boxes numbered 1, 2, 3, and 4 were as follows: No. 1, plain without battens; No. 2, four square battens on each end; No. 3, four bevel battens on each end; No. 4, two battens on each end.

Three or five nails to each piece were used on the ends, as specified. When a box was made with a batten, every third nail was driven into the batten. Along the sides three nails were used in 18-inch lengths, four nails in 30-inch lengths, and five nails in 40-inch lengths. The nails in the battens were staggered and clinched with 5-inch spacing.

Benches contain Imperial, Pink Imperial and John E. Haines' INTERIOR VIEWS OF CARNATION HOUSES OF JOHN E. HAINES, BETHLEHEM, PA.

Results of Tests.

New England white pine is the standard by which the others are judged. It shows that of the weeds tested cottonwood was the strongest for medium and large boxes, and red gum for boxes of small size. For all sizes cottonwood and red gum occupied the first two positions in regard to strength. The weakest wood differed for each kind of box. For the large size it was western spruce, for the medium size Michigan white pine, and for the small size North Carolina pine. Red gum was the heaviest wood in all cases, although yellow pine and North Carolina pine closely approached it in this respect.

The factors of weight and strength for a given wood vary with the different boxes. When goods are shipped at high freight rates this factor of combined weight and strength is important. The strength per unit of weight of New England white pine boxes is the standard by which the strength of the others is judged, and is therefore taken as 100 per cent. Here, of the weeds tested cottonwood appears the strongest. Another fact brought out is that while for small boxes four species—namely, cottonwood, red gum, western spruce, and western hemlock—show a greater strength per unit of weight than does white pine, yet for boxes of large size the strength of white pine per unit weight is exceeded only by that of cottonwood. It is true that neither western hemlock nor Michigan white pine were tested for large boxes, yet their relative positions in the tests for the other two sizes plainly indicate that their strength per unit of weight decreases more than that of New England white pine with the increase in the size of the box.

Slight differences of seasoning of the wood enter into these results to modify somewhat the conclusions. The strength of the large boxes is largely the strength of the joints, and depends on the holding force of the nails and the size and character of the battens.

In addition to this series of tests to indicate the relative value of the woods used in furnishing strength to a box, other matters were suggested by manufacturers for investigation.

The relative strength of square and bevel battens in the case of large boxes was tested. Two large boxes of each of seven species of wood were furnished with level battens and tested as described. There was no advantage in beveling the battens, since the square battens made a somewhat stronger box.

The possibility of saving lumber by substituting thin end boards for end boards of standard thickness was investigated. The standard sizes cannot be reduced without reducing the strength of the box.

In the case of small boxes of New England pine, the strength of lock-cornered boxes exceeded that of the dovetailed boxes and the latter that of the nailed boxes.

In addition to the tests of boxes under a load applied along the diagonal, other boxes were tested under a load applied along the entire length of the edge of the box, and these tests confirm the results of the tests described above.

In all, 171 boxes were made up and tested. A further conclusion to be drawn from the tests is that the majority of nails at the end of the side, top, and bottom boards should be driven into the end boards rather than into the battens. For example, if five nails are to be used at the end of the side board, three should be driven into the side boards and two into the battens. This would prevent the common failure due to the nails in the side boards pushing out a section of the weed.

American Carnation Society.

President Dunlop has authorized me to announce through the trade papers that exhibits for the show to be held in Toronto, Ont., January 23 and 24, will

Interior of Walter Ramsay's Greenhouse

have to be staged by 2 p. m., January 23 instead of 1 p. m., as announced in the premium list. This addition of one hour to the time for staging was thought advisable on account of the fact that some of the trains do not get into Toronto until 10:30, and if they should be a bit late, it would not give exhibitors time to get their flowers staged by 1 p. m.

Kindly remember that entries are to reach the secretary not later than Wednesday, January 16. Entries made at the show cost \$1 for each entry, and if they do not reach here by the 16th, there is danger of their coming in after I have left for Toronto. ALBERT M. HERR, Secretary. Lancaster, Pa.

DR. WEBBER GOES TO CORNELL.—Professor Herbert J. Webber of the Bureau of Plant Industry has resigned from the Government service to accept a professorship at Cornell University. He has been in charge of the plant breeding experiments of the Agricultural Department. He entered the Government service in 1892. Dr. Webber has produced new varieties of long staple upland cotton, which is regarded as a valuable contribution to scientific agriculture. He has also developed a hardy orange capable of withstanding a severe frost. When this result was obtained, however, instead of being a hardy orange it was found to be a composite fruit, with the combined characteristics of the orange, the lemon and the tangerine. Dr. Webber will not take up his duties at Cornell until next Spring, when he will take charge of a new department of the university to be known as the department of experimental plant biology.

THE WORCESTER (MASS.) HORTICULTURAL SOCIETY has issued its programme of meetings for discussion during the Winter season of 1907, which, as usual is an interesting one.

America's Most Northerly Greenhouse Plant.

The Walter Ramsay greenhouses at Edmonton, Northern Alberta, have the distinction of being the most northerly range of glass on the American continent. Their location is about 375 miles north of the state of Montana international boundary line, about 900 miles farther north than New York, and nearly 3000 miles distant from that city by rail.

Being greatly sheltered by the Rocky Mountains the Winters are not nearly as severe as might be expected; and although the thermometer shows very low readings occasionally the intense calmness and dryness of the atmosphere makes the cold quite bearable.

The city of Edmonton, known extensively at present as the Gateway to the "Last West," has only reached the dignity of a city the past three years, formerly being only a Hudson Bay Company trading post. It has at present a population of about 15,000, which is rapidly growing.

The greenhouses of Mr. Ramsay, five in number, each 150 x 21 ft. 9 in., are the latest pattern King Construction, built ridge and furrow and give every satisfaction. The heating is done by a No. 490 Florence low pressure steam boiler which works satisfactorily. During the almost continuous sunlight of Midsummer growth of all kinds is very rapid, but at the present time the very short days are not conducive to rampant growth. This is especially noticeable of lettuce and tomatoes.

The present Christmas being practically the first that residents have been able to get modern and fresh flowers, brought out a very satisfactory trade. Of course the supply of cut flowers was unequal to the demand, but good flowering plants made up the deficiency. FRED. BENNETT.

Hedges of Ligustrum Japonicum.

The wish that the California privet was entirely evergreen is so often expressed that it is certain there would be a good demand for a species, that is, Ligustrum japonicum, were it better known. Having in mind the latitude of Philadelphia, the California privet is evergreen only in well sheltered places, where free from the severest cold and from cutting winds. In the same locality, L. japonicum is evergreen through the entire Winter. Its foliage will be scorched when the weather freezes hard and the sun shines on the plant throughout the day, just as happens to rhododendrons under similar circumstances, but it is nevertheless a good evergreen. Were it used in a hedge, as the California privet is, one would protect the other and in this way a beautiful evergreen hedge would result.

How far north this evergreen privet will endure the Winter remains to be seen. It has been in collections here for several years, and in a few instances hedges of it have been set out which were satisfactory and attractive. While it has withstood the severity of our Winters when standing alone, it has preserved the bright green of its foliage better when in a hedge, as it naturally would.

This privet will root from hard weed in Spring, but not as freely as it will form half-ripened shoots made into cuttings in Midsummer or before. Those acquainted with the common myrtle of Europe, Myrtus communis, see in the Ligustrum japonicum foliage a great resemblance to that of the former.

All of the following trees are grown for the production of rubber: Hevea brasiliensis, Castilloa elastica, Sapium Marmieri, Hancornia speciosa and Manihot Glazievil. What is known as Para rubber is the hevea, and this is considered the best of all. Half of the world's supply comes from the valley of the Amazon.

Common Names for Plants.

Much as may be said in favor of having common names for plants, it cannot be disputed that to be intelligible the world over, the scientific appellation is the only one to be recognized. To latinize the names of varieties appears uncalled for often, and yet in the commerce of the world it assists trade to have even these.

Plant collectors unacquainted with the botanical names of plants are a plague to the nurseryman. Take the case of cedar for instance; depending on which part of the country the collector is in, all the following trees are called cedar—Chamaecyparis thujoides, Libocedrus decurrens, Thuja occidentalis, Cupressus Lawsoniana and all the many juniperus. If it be New Jersey, it is chamaecyparis, as this is the white cedar tree, while red cedar is Juniperus virginiana. From collectors unacquainted with scientific names it is impossible to know what will be received under a common name, unless one is well acquainted with the trees that grow with them. There is nothing better to do than for catalogue makers to stand by scientific names. When these are rightly adopted there is no fear of being misunderstood, both buyer and seller know what they are doing, and trade is made easier for all concerned.

Walter Ramsay's Greenhouse Establishment at Edmonton, Northern Alberta, Can.

A Prominent Plant Propagator.

Among the increasing number of men in the United States who are devoting much of their time and attention to the improvement of plants and flowers by hybridization and cross-fertilization few names stand out more prominently, are more favorably or wider known than that of Antoine Wintzer of the firm of Conard & Jones Company, West Grove, Pa.

It has therefore occurred to The Florists' Exchange that a brief sketch of Mr. Wintzer's career, as well as a look at his portrait, would prove of much interest to its readers, and we have pleasure in presenting both herewith:

Antoine Wintzer's father emigrated to America in 1854. He brought with him all his family except the oldest son, who was then an active participant in the Crimean War. The elder Wintzer was a professional gardener and soon obtained a good position after landing at New York. Antoine was six years old when they arrived, and between the years 1854 and 1862 he attended the public schools—most of the time at Flushing, New York, where his father had moved in 1857. In March 1862, when he was 15 years old Antoine entered the Parsons establishment as an apprentice. At this time the Parsons were the largest growers of nursery stock in America.

Mr. Wintzer inherited a genius for finding out the requirements of plant life, and under the skillful supervision of J. R. Trumpy, he rapidly acquired the practical features of growing grapes and roses. After spending two years with Parsons, he became dissatisfied, because the line of work they kept him at was too restricted—so he left and engaged with Eugene Bauman, one of the most prominent landscape gardeners in the East. His idea was to learn landscape work, but Mr. Bauman, who had now settled at Rahway, N. J., found that Mr. Wintzer was such a skillful propagator that he gave him full charge of the one greenhouse he then owned. He allowed Mr. Wintzer to experiment with different methods of propagation, and it was here that Mr. Wintzer reached settled conclusions, in certain lines, especially in the propagation of hardy shrubbery, and he still feels that his experience with Mr. Bauman was a most valuable asset in his life work.

At Rahway Mr. Wintzer contracted malaria, and left his position with Mr. Bauman, to recuperate at his father's home in Flushing. After regaining his health he felt afraid to go back to Rahway, so he engaged with Mahlon Moon at Morrisville, Pa., as propagator of evergreens, roses, etc., but his stay here was a short one, he being again threatened with an attack of malaria. From Morrisville he went to Sewickley, Pa., and engaged with James Wardrope. Mr. Wintzer's stay with Mr. Wardrope was short, as he again contracted malaria and left for home; yet Mr. Wintzer has most delightful recollections of his short sojourn at Wardrope's.

This brings us to a new chapter in the life of Mr. Wintzer. After recovering from the attack of malaria, he went to West Grove, Pa., and accepted a position with Dingee & Conard. He arrived at West Grove on July 31, 1866, the anniversary of his wife's birth, so he says he cannot forget the date. On August 1 he commenced work for the concern as propagator. They had two small greenhouses, 10x80 feet each, at this time. This firm at that time was doing a general nursery business, having over three hundred acres devoted to the growing of fruit and ornamental trees, shrubbery, roses, etc., which they sold almost entirely through agents. The business proved to be unprofitable. The firm perceived that there was an increasing demand for roses grown on their own roots and Mr. Wintzer was very successful in growing roses by a process which he claims was his own invention. At this time the roses were sold almost entirely as one-year plants and shipped by mail to the purchaser. By advertising in a very few papers, enough customers were found to take all the roses the firm could grow in the few greenhouses that then comprised the plant. Other greenhouses were built and a catalogue published to help make sales. The business grew and prospered, and almost every year new greenhouses were added. This continued till the year 1892 when the greenhouses numbered seventy.

Mr. Wintzer's ability as a propagator was now fully established; he had produced fine healthy rose plants all these years and the number he could grow was only limited by the space at his command to grow them in. Unfortunately, also in 1892, differences arose in the management of the Dingee & Conard Company and the late Alfred F. Conard, who had always been president of the company, withdrew, and a year later, in 1893, Mr. Wintzer also withdrew.

Mr. Wintzer had purchased a small farm about one mile from West Grove and had built thereon a commodious modern residence, and in the Fall of 1893 he erected there two greenhouses. His business was continued with varying success and connections till 1897. He was very anxious to enlarge the business, and the late Alfred F. Conard, who had been associated with him for so many years previous to 1892, and S. Morris Jones, a business man of West Grove, knowing Mr. Wintzer's great ability as a propagator, they furnished capital to organize the Conard & Jones Company. The new company purchased from Mr. Wintzer 35 acres of ground and his greenhouse plant, which had grown to seven greenhouses. That year the company erected seven more greenhouses, an up-to-date

packing house, a large boiler room, and coal bins, and a frost-proof house for storing dormant plants. The new company has been successful. The plant has been largely increased, so that in 1907 the company ranks among the largest in this line of business in America. They issue a catalogue of 136 pages; roses having first place, and in connection therewith shrubbery, cannas, bedding and decorative plants, flower seeds and bulbs.

In 1893, when Mr. Wintzer started business on his own account, he commenced a careful methodical line of work to improve the canna, in which he has been successful beyond his most sanguine expectation, but most deservedly so, for no one who has not followed him in it, can imagine the amount of work, or the time required to develop a shade of color when there is no parent of that shade to work with. It takes exceptionally good judgment on the part of the hybridizer to improve each succeeding year the feature in the plant or flower that he is trying to develop. Mr. Wintzer has shown that he has this ability in a marked degree, and Mont Blanc, Buttercup, Betsy Ross, West Grove, Maiden's Blush, and other varieties that he has succeeded in originating, place him in the first rank, if not at the head of canna producing experts.

Mr. Wintzer at the age of 59 is still as hard a worker as ever; his health is good and we look forward to many more years of successful work from his hands and brain. Above everything else, Mr. Wintzer wants it to be understood that rose

Antoine Wintzer

growing is his specialty; he wants the company that he is connected with to be recognized as second to no other concern in disseminating roses of the very best quality, and on their own roots, and he wants to live long enough to establish the fact that his method of propagating roses is the very best that has yet been devised for producing roses of the highest grade and greatest vigor of growth.

Mr. Wintzer is vice-president of the Conard & Jones Company, and has been general manager of the greenhouse department ever since the company started in 1897.

The New Philippine Lily.

One of the very few good things brought here from the Philippine Islands is the Benguet or white trumpet lily of Luzon, *Lilium philippinense*, says Dr. Van Fleet in the Rural New Yorker. It was first collected in 1874, and introduced in a small way to the European trade, but though recognized as very desirable it did not attain commercial importance until the American occupation of the Philippine Archipelago. Since then it has been imported in increasing numbers, and finds favor wherever tried, among professional as well as amateur growers. If bulbs can be procured in sufficient quantity this elegant species will go far to replace, for Easter blooming, the other white trumpet kinds so extensively known. The Benguet lily is in reality a very distinct form of the variable, long-tubed *Lilium longiflorum*, the type of which grows naturally in China and Japan, and is therefore closely related to *L. Harrisii*, the very tree-flowering variety popularly known as the Bermuda Easter lily. It has longer and more perfectly proportioned blooms, at times fully nine inches in length, borne on stiff but slender stems two feet high, clothed with very narrow grasslike foliage. Notwithstanding its almost tropical origin, this lovely lily grows well under ordinary greenhouse conditions, blooming with great certainty in about 90 days after starting into growth. The flowers are not as numerous as with

the best strains of *longiflorum* and *Harrisii*, the largest obtainable bulbs seldom producing more than four blooms, but they are so refined in their elegant tapering form, their waxy purity of color and richness of perfume, as fairly to outclass other white-flowered forcing varieties. We do not know of any trials in the open ground, but in all probability it will not prove hardy in the North, although bulbs have been frozen during transportation without appreciable harm.

Of Easy Culture.

Three ordinary commercial bulbs, potted up last January, bloomed beautifully in the Rural Grounds glasshouse in early April, and the bulbs, contrary to general experience with potted lilies, doubled in size by the time growth ceased in September. They were grown singly in six-inch pots of rather poor loamy soil, but were provided with good drainage and fertilized with weak liquid manure every week after six inches of growth had been made until Midsummer. After the stems died down in October the pots were allowed to dry out and in fact, to lie outside, but protected from rain, until hard freezing weather in late November. The bulbs under this treatment came out firm and plump, and we expect them to bloom still better the coming season. Thus far the bulbs in commerce appear free from the dreaded bacterial disease that plays havoc with our regular Easter lilies. They were offered last season at \$3 the dozen, and will probably rise in value as the demand increases. One present drawback is that the collected bulbs do not arrive in time for early potting. They are seldom ready for distribution before January, while Bermuda-grown *Harrisii* and Japan *longiflorum* are usually to be had in early September, but this difficulty is likely to be overcome as their culture on this continent is better understood. One importer is trying the experiment of growing his stock in Porto Rico, with what success we have not learned.

A Charming Wild Flower.

The natural distribution of *Lilium philippinense* appears to be pretty much confined to the plateau of Benguet on the Island of Luzon, the most northern of the Philippine Islands, where it grows abundantly on grassy slopes in clay soil of very moderate fertility. The flowering season is August and September, the massive fragrant trumpets being so numerous in localities as to whiten the hillsides. At this season, there is much rain and humidity, but afterward a prolonged drought sets in, the tops die down and the bulbs become entirely dormant—a cultural hint that should be carefully followed by the grower.

We found little difficulty in hybridizing the Benguet lily with good specimens of *Harrisii* and *longiflorum*, and hope to bloom the results in due time. It appears to be a good seeder under ordinary cultural conditions, and is also quite free in forming bulblets about the stem near the surface of the soil, so that it may be regarded as easy to propagate. The Department of Agriculture at Washington, D. C., has also crossed this species with various forms of *longiflorum*, and we understand is about to experiment with its outdoor culture in California and the South. Those of our readers who would care to grow a belated Easter lily of unique and elegant type, might test this Philippine acquisition in their window gardens and greenhouses. Bulbs will shortly be available, and will be offered by several prominent dealers. The main requirement, besides light and cool growing temperature, seems to be thorough drainage, but plenty of water and weak soluble fertilizer until the blooms are perfected, then gradual tapering off to complete dryness. Plant the bulbs near the center of a five or six-inch pot of garden soil. Space above the bulb is needed for the fibrous stem roots that have so much to do with the development of good flowers. The earth should be well moistened after planting, and the pots are best kept in a moist and cool dark place until growth starts.

Hardiness of the Fremontia

There is so much praise bestowed on the *Fremontia californica* in the English horticultural papers, that it makes us wish greatly that this beautiful shrub could be grown in our Northern States. It has been tried several times in Pennsylvania, but has failed every time. In California papers, this shrub is said to be found on high elevations, where it is much colder than lower down where it is more abundant, and perhaps if seeds were secured from these in high altitudes, plants might be obtained that would be hardy with us.

It is related that those who gather the seeds of *fremontia* have to wear gloves, because of a fuzziness attached to it that greatly irritates the skin. *Fremontia* is not the only case of this nature from the Pacific coast; the *Acer macrophyllum* is another. The seeds are full of minute hairs, which greatly irritate the hand that comes into contact with them.

The flowers of *fremontia* are light yellow, some two inches across; and really it is the calyxes and not the petals that are called the flowers.

Decorative Plants.

ADIANTUM FARLEYENSE. — Of all the ferns in cultivation Adiantum Farleyense is admittedly the choicest and most decorative; and were it not the ease that the difficulty in raising a stock of it has in the past been very much exaggerated, growers would take more kindly to its cultivation, knowing as they do of a ready market at all seasons for plants and fronds.

In the growing of Adiantum Farleyense, if there is one detail that requires stricter attention than another it is cleanliness—a clean house, clean pots, clean sand, clean soil, and above all a clean bench for the pots to stand on.

Adiantum Farleyense is propagated by division of the crowns, and as every requisite condition for successful work is more likely to be generally available from now on than at a much later period, operations should not be much longer delayed.

The first step in preparation is the filling of the bench with clean sand. What I mean by filling is a reasonable depth of sand—about 3 1-2 inches.

When the sand is ready and in condition the stock plants can be divided. If the operator is fortunate in being in a position to choose, he will do well to use only medium-sized plants for breaking up.

DREER'S SUPERB DOUBLE PETUNIAS

For nearly half a century we have been making a specialty of DOUBLE PETUNIAS and our strain is accepted as second to none, either here or in Europe.

HENRY A. DREER, - Philadelphia, Pa.

Mention the Florists' Exchange when writing.

As noted before, the plants when young, thrive best when placed over a gentle bottom heat, and as moisture is always necessary it will be well to put sphagnum moss on the bench for the pots to stand upon.

When the plants are young and making luxuriant growth they require more shade than they will later, after they are a little hardened.

Plants started into growth from divided stock now will, if carefully attended to, make good specimen plants by July, and nice young stock, easily marketable, at a much earlier period.

Adiantum Farleyense needs good drainage without fail, and careful watering, and that at the roots only; syringing overhead destroys them.

FERNS FOR FERNERIES

From 2 1/2 in. pots, \$3.00 per 100; \$25.00 per 1000. Asparagus Plumosus and Sprengeri, 2 1/2 in. pots, \$2.50 per 100; \$20.00 per 1000.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

Window Decorating.

A well-dressed window is an all important subject in all branches of business and especially so with the retail florist. And surely there is nothing quite so beautiful and attractive as a well-decorated florists' window! I have often heard the remark from customers that the florists' windows of New York are the most beautiful in the world. I do not think, however, this remark should be confined to this city, as I consider the best flower stores of the larger cities are well up to those of New York in that respect.

A retail florists' window is usually a good barometer of the business done inside, and should always be the acme of neatness and good taste. Cleanliness is the first principle of a good window decoration. I have often made the remark, "It matters little what you put in your window so long as it be clean." The best way to make sure of this, is to change your window decoration every day and have the place thoroughly washed inside and out. Glazed tiling is the best flooring for the florists' window, as water will not injure or make it unsightly, and it is easily cleaned up. Rubber tiling is being used to advantage by some up-to-date florists, and it saves breakage in pots and vases. The most attractive windows are often those that have the least in them, although a well-filled window, if arranged right, can be made very attractive.

Always put the very best you have in your window whether it be plants or flowers. Every flower should be perfect, and every plant a specimen. Be careful to have a window that harmonizes. To be on the safe side it is better to confine your decoration to one color, although a judicious blending, or a striking combination, is often a winner. Never mix colors if it can be avoided. Kaleidoscopic effects are not good as window decorations; a massing of color is far more effective. Some flower stands seen in this city, and even some stores, remind one of a crazy quilt, absolutely no regard as to arrangement—yellow, red, pink and blue all being jumbled together.

I noted in a Fifth avenue window the other day a very clever arrangement—a large square case, with a glass front built to represent a picture on an easel. It was about four feet square, lined throughout with green silk, and lighted from above with miniature electric lights. Several vases of choice flowers, including orchids and gardenias, were tastefully arranged and placed inside, the effect from the street being that of a beautiful painting. A feature of this kind, if well done, will attract a great deal of attention and that should be the aim of the window decorator. He must be a creative genius, with endless resources.

If you have a large decoration on hand, get your stock a day or two ahead, and use it in your window. Nothing will attract like a large quantity of one variety of flower. One firm this Winter, who was fortunate enough to book some large dinner orders, filled its window entirely with Enchantress carnations and Adiantum Farleyense. Three thousand flowers were used in the window at once, and several hundred were sold that day to transients, owing to the display made. On another occasion this concern's window was filled with potted lilacs. These were used next day, as a screen to hide the musicians at a large dinner given by one of the millionaire customers. Such affairs always afford an opportunity for elaborate window displays, and every advantage should be taken of them. A large wedding decoration booked last Summer by this firm was entirely due to its excellent window decorations, the customer giving it as her reason for wishing the concern to do her work, which goes to prove the value of careful and artistic window decoration.

The average florist has a habit of allowing his window display to dwindle almost to nothing during the Summer months. This is undoubtedly a great mistake. Of course, it hardly pays to keep a display of cut flowers at this season, but a window may be made very attractive with foliage plants, such as crotons, aracas or ferns in variety, Cibotium Schiedel being particularly good, with its fresh cool green fronds. The plants must, however, be kept fresh and free from dust. An aquatic display has much to recommend it as a Summer window as then water lilies are at their best. A large tank filled with a variety of these charming flowers, in addition to other aquatics, will attract much attention, and a supply of them may

be obtained throughout the Summer months. Nelumbiums, nymphæas, Cyperus alternifolius, papyrus and a host of other suitable plants may be included. And if a fountain can be conveniently introduced, it will add much to the cooling effect. Frogs, minnows, gold fish, and even turtles all add to the interest, and afford a touch of reality.

D. RAYBUN.

CLUB AND SOCIETY DOINGS.

NEW JERSEY FLORICULTURAL SOCIETY.—The installation of new officers, reading of reports and the conferring of seven silver cups engaged the attention of this society at its meeting on January 4. The officers installed were: W. J. Bennett, president; Arthur T. Caparn, vice-president; Henry Halbig, secretary; and William Reid, treasurer. The master of ceremonies was the retiring president, D. Kindsgrab. The secretary's report showed seventy members in good standing, five in suspension under the by-laws, and ten dropped. Five new members have been elected during the year of which only three have qualified. The society has held eleven competitive shows, a Fall exhibition and special rose and dahlia nights. The winners of the seven silver cups were: Peter Duff, William Reid, Max Schneider, William Phillips, Arthur T. Caparn, A. W. Bodwell and Lager & Hurrell. Eighty-six certificates were given during the year; among the recipients of these were: Julius Roehrs Company, Alex. J. Guttman, F. R. Pierson Company, Lager & Hurrell, John E. Haines, and Joseph A. Manda. A balance of three hundred dollars remains in the treasury.

Essays or addresses have been made at nine meetings at which the average attendance was thirty-two.

It was decided to continue the monthly floral displays, and the giving of medals is under consideration in place of silver cups to which several drawbacks exist. An invitation was read from the

Arrangement of Cattleyas and Adiantum

Artists, L. L. May & Co., St. Paul, Minn.

Morris County Society to attend its smoker on the 5th. Among the floral exhibits of the evening were a vase of lily of the valley shown by Julius Roehrs Company and a white Cattleya labiata by Thomas Jones, Short Hills, N. J.

J. E. D.

MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held on Friday evening, January 4, President Hale in the chair. Five new members were elected. The society is in good financial standing, which is encouraging. Arrangements were completed for our annual dinner, to be held, as usual, at the Sheridan Hotel; we are all anticipating a good time. Arrangements were also made for the society's annual ball for the early part of February. The installation of officers for the year was as follows: President, W. W. Kennedy, vice-president, Percy Hicks; secretary, H. A. Kettel; financial secretary, George R. Kuhn; treasurer, N. Butterbach. H. A. Kettel exhibited a fine vase of tulips which scored 80 points.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 MADISON AVENUE. My facilities for delivering flowers for any and all occasions are unexcelled; I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

LAMBROS MULINOS, 503 Fifth Avenue, and 301 Columbus Avenue. I have at all times a superb stock of seasonable cut flowers and can fill telegraphic orders at a moment's notice.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders, placed with us, will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1708 Broadway, J. A. Valentine, Preset. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Tex. and La. Mail and telegraphic orders solicited.

LENOX (Mass.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held January 5, President F. Heeremans in the chair. The entertainment committee submitted a program for the ensuing meeting nights. For the February meetings they have arranged the annual dinner for the 2nd, and carnation night for the 16th. H. A. Bunyard of New York, gave a very interesting talk in which he offered a medal to the winner of the society's checker tournament, and a donation from A. T. Boddington, toward our Fall show premium list. A. J. Lovelass was awarded a first-class certificate for Cypripedium Leeannum Adela, a seedling raised by himself, also diplomas for Cypripedium insigne Sanderae, C. insigne Harefield Hall, and C. Leeannum Chinkaberryannum. J. R. Shields was awarded a cultural commendation certificate for some extra fine plants of Begonia Gloire de Lorraine and a diploma for Primula obconica. G. F.

A CALYX SUPPORT.—Maxfield & Dimond, Warren, R. I., are introducing to the trade a patented device for the prevention of the splitting of the calyx of carnation flowers. The device is made of spring brass, is somewhat of the shape of an entire calyx, with an interlocking arrangement at the base to hold it in position when placed around the calyx of the flower.

THE WEEK'S WORK.

Timme's Timely Teachings.

After the Holidays.

Holidays in general and the happenings before and during Christmas in particular afford a deal of timely teaching. Prosperous times were reflected in the lavish holiday displays. In the dense throng of purchasers that crowded streets and stores for weeks, and in the enormous business done on every hand, florists have done exceedingly well. The lavish holiday displays, in the dense and their goods been in every case of the right kind, color and price and in plentiful supply, there is no telling. Why, it would almost seem as if nothing better for a whole year's campaign could be planned than the growing of Christmas stock alone in all the colors from brightest pink to flaming scarlet. A specialist in this sort would fare no worse than the farmer; he would have one great harvest, one grand haul, and at the rest of the year, for preparations with some time left to count his money. Anyone taking this hint seriously would do well to confine his efforts to the growing of red roses and carnations alone, for these two items have invariably been scarce at every Christmas, bringing prices that put all kinds of small coin out of circulation. Nothing, it seems, will ever be able to displace these matdorees in the Christmas floral arena, not even the gorgeously bright poinsettia. For the first time we had of poinsettias a few too many; perhaps lots of these would have been left over had there been enough carnations. It is the red carnation that has its inning at Christmas.

A Plethora in White.

As usual there was an over-abundance of white flowers and white flowered plants. It seemed, especially, to be the Christmas. White carnations, Roman hyacinths, Paper White narcissi, lilies, mignonette and stevia, all are welcome and desirable when supplied in moderate quantities and regular shipments right along throughout the season, as I have often advised. Christmas crops for the commission house, or when all thrown on the market at one time, the profits in their raising will amount to little. Lots of white material remained unsold after Christmas. It is nice and always pleasing to relieve bright colors with a tinge of white, but that is about all the use white stock can be put at Christmas. Some white flowering plants are disposed of through the aid of artificial rimming in bright and strongly contrasting colors, but though pretty enough in appearance, such articles occur slowly. Were it not that funerals occur around Christmas as well as at other times, little use would there be for large quantities of white flowers at that holiday.

The Christmas Plant Trade.

The number of holiday customers who prefer plants to cut flowers is still on the increase. This Christmas, as also last, any plant that was in fairly decent shape sold readily. The prices obtained and obtainable were about the same as last year for the same kind and grade of stock. What is new this season, however, taken all through, was better than that handled last year, I believe at any previous Christmas. For this reason the receipts for plants must amount to considerably more than they did in former years. This year's plant trade from Easter to Christmas proved that the most active and best paying business is done in medium-sized and moderately-priced single specimens of whatever kind they happen to be.

Made-up and appropriately trimmed plant arrangements sell as fast almost as they can be handled, especially at the very last hour, but do not yield the clear profit that single plants do. A high-priced basket or receptacle of a dozen plants, filled with a great number of plants and adorned with a lot of costly ribbon, must bring a high price to leave a fair margin of profit to the one who raised the plants. Some close figuring must be done to arrive at a sound and comfortable footing in the field of horticultural traffic. But it certainly is an easy flowing line of trade, and in localities where it flourishes cost seems to be no bar to public appreciation.

Some of the larger-sized single specimens in flowering plants, the least at many were left over from this season's holiday sales, a few still being after this date. The sales in this line have in no way dropped off, even more stock being sold all through than last Christmas. But the supply seems to have been uncommonly large this season, which fully accounts for the greater number left over. All kinds of foliage plants sold well, more being dis-

posed of than last year, also more having been used in made-up arrangements of this type of filling in fancily striped baskets and in many other ways, into favor with a large class of buyers. Large and medium-sized plants of the decorative species met with ready sales right along for weeks. The natural green forms a most attractive setting to a bit of bright trimming artistically adjusted.

The Christmas Tree.

Fifty years ago the New Year and the Fourth of July were the only two public holidays observed in this country. Christmas was a day like any other; everybody worked or attended to work-a-day business as usual, unless it happened to fall on a Sunday. The Christmas tree only lived in the memory of people who had emigrated from continental Europe. A year after the close of the Civil War I first beheld with keen delight a few cut-down spruces offered as Christmas trees, vividly recalling childhood joys. Little then did I expect, war-worn and crippled as I was, to ever witness so widespread a revival of the time-honored custom as is evidenced nowadays.

It is stated that this season in Chicago alone the number of Christmas trees sold amounted to 750,000. Nearly as many more were rejected, remained unsold or were lost by shipwreck on the lakes in the great storm a week before Christmas. Last year one-and-a-half million young spruces and hemlocks were cut down in Vermont alone for the Christmas trade in the principal Eastern cities, a much greater number having likely been brought to the markets this last Christmas. In the last few years at least the million trees, from two to fifteen feet high, have actually been wasted in having been cut down and then found to be not good enough or too late for the trade. These are the only authentic figures I can put my finger on concerning this branch of the holiday business. Here is food for thought.

How much longer will our forests hold forth the needed supply? These young trees, sacrificed on the altar of the holiday spirit, are the finest and most thrifty of their kind. What splendid timber, what an immense money value, they would have grown into in fifteen or twenty years! It would seem that statements like those just cited would furnish sufficient cause for alarm, unless we are justified in upholding the shopworn belief that our forests are inexhaustible. Few stop to think of the economic questions connected with the lavish sacrifices made to the sentiment of the season. It is not at all unlikely that a time is near at hand when fine nursery stock at hand when fine nursery stock will take the place of spontaneous woodland products in meeting the increasing demand for natural greens of nearly all kinds. A truly glorious future awaits the araucaria, now already fast gaining favor with the better class of patronage. These Norfolk Island pines, as well as pot-grown hardy evergreens, may yet have to pose as Christmas trees, not cut down in their prime, but living symbols of a living spirit.

Propagation.

Florists who raise any and all kinds of plants for an ever open market carry out their business at all seasons of the year with hardly any let-up at any time. Still these growers, as well as all the rest of indoor gardeners, wisely manage their affairs in such a way as to have the largest and main part of the work come in at a time when conditions are most favorable for the multiplication of stock. This, with few exceptions, is the case in Midwinter. Were it not for the great scarcity of room and time prevailing before the holidays, there would be no better period for the propagation of many kinds of stock, roses and carnations included, than the two last months of the old year. The percentage of loss in cuttings and seedlings then is the smallest and the young stock, after being potted up or pricked off, makes a more promising headway in the two first months of the new year than it would later on in the season. This is true in the case of all hothouse and hard-wooded greenhouse stock and would also bring best results in working up stock of many kinds of softer growth, were they cared for properly and attended to as required in their subsequent stages of progress, which, if they are admitted, is almost impossible to do in early Spring, the high pressure period of the plant grower.

For this reason and because many of the stock plants are only coming into right condition now, most of all the propagating is done in January and February. During these two months the propagating house should be run at its full capacity; not a square foot must be idle any longer than can possibly be helped. And if this is the case, an astonishingly large quantity of new stock for the coming season can be called into existence in a comparatively small area of sand bed.

The Propagating Bench.

The bench or benches on which most or all of the propagating is done should be exposed to the full light, but be so built or fixed up as to afford ready means for convenient and expeditious placing and removal of shading contrivances, of whatever kind these may be. The heating pipes underneath should be sufficient in number, prompt in responding to the fireman's exertions and placed within a few inches below the bench carriers or cross-pieces. Any bench not level or already showing signs of decay, should be rejected or reconstructed for same purpose. A wooden bottom will never give as good results as a tile or slate bottom. The latter, common roof-slate a little over a foot square, a quarter of an inch thick, placed on iron or wooden cross-bars, I have now used for many years in my propagating benches, and I know of nothing better for the purpose. Plenty of minute openings for perfect drainage are provided for in placing the slates. On these a layer of coarsely broken up soil, usually the rough leavings from the sittings of potting soil, is spread about half an inch in thickness. On this the sand, if the benches are to serve the purpose of rooting cuttings, and a thin layer of sifted ashes if for seed-trays.

The Sand.

In all my experience of many years in the rooting of cuttings of the usual greenhouse kinds, not excepting carnations, I have never been able to discover the least difference as to suitability for the purpose in the various grades of sand I was compelled to use. As long as the sand was strictly pure it fulfilled its mission, no matter whether it was white, yellow or brown, coarse and gritty or fine and dust-like. I have to buy every handful of sand, and for several years now use the sand from our lake shore with unflinching good results. I use the same sand two and three times within a few months, never removing any until all the propagating is done and the benches are needed otherwise. Should I run out of sand for propagation, being unable to procure more at any cost—and this occurs sometimes—I employ finely sifted soil, made as triflingly lighter as the mixture of sand, and never fail to root any of the ordinary cuttings in it. Where the bottom heat is strongest I use a layer of three inches of sand, less where the pipes send a mild, steady heat through the tiles into the bed. The sand when in actual use as a medium to hold unrooted cuttings in position, should be constantly warm to the touch, never hot or heated to a degree contrasting strongly with the temperature of the house; and this should never be so high as to excite top growth before root formation has begun. When this has taken place bottom heat is readily, and light and air more freely admitted.

The Cuttings.

The principal points to be observed in propagation by cuttings are proper condition of the cutting when taken from the stock plants, the avoidance of anything that might cause the cuttings to wilt either before or after they have been put in the sand, and good firming of the sand when putting them in. Complete success depends on whether or not the administration is headed, if all other things are in order, in the smallest batch of cuttings, some will in most cases generally refuse to root along with the rest of them, but the actual loss will be exceedingly light if the stem end of the cuttings has the right degree of firmness, neither too hard nor too soft, this difference being in the many kinds of stock to be propagated. We hear a good deal of cutting bench fungus, a destroyer of stock I know only from what I have seen on some nearby places. I never had a tinge of it on my own place. I think cuttings, too soft, quickly decaying and not removed in time, start the trouble. The rotting wood of an old bench may also aid in its development. Cuttings properly selected and cared for should go through the process of forming roots without any harassing trouble.

FRED W. TIMME.

CANADIAN NEWS

OTTAWA—The weather for Christmas was all right—cold, of course, but not extremely so. The supply was ahead of that of former years and the sales record-breaking. Everything was cleaned up that was in salable condition. Graham Brothers' new store, Scrim's store and plant annex and the Wright Floral Company did a steady business the whole week through and on Monday it was a big rush all day, with stock just holding out to the finish.

The old reliable Boston fern took the lead; hundreds were sold at from 75c. to \$5. Pteris and Scottii all going when the Boston were disposed of. Next came Jerusalem cherries and azaleas. One firm sold 350 each of these. Next came cyclamen; there were many good ones and they sold well at from 75c. to \$2. dollar plants being the favorites. Gloire de Lorraine begonia when good sold on sight at reasonable figures, but it seems to me that there is no plant so subject to a "fancy price" without cause and also damaging to its popularity. Poinsettias sold at 50c. to \$2. Bulbous plants were cleaned out.

Scrim had a grand lot of plant baskets, ranging in price from \$4 to \$20. Wright Floral Company and Graham Brothers also cleaned out about the same number, and the sale of these did not interfere with the cut flower sales, which were ahead of last year's. Carnations easily took the lead. The local crop was plentiful and of the best quality. Those ordered from outside also came in good; \$1.50 per dozen and \$2 for extras were the ruling prices. Roses were not so plentiful as they might have been but of good quality and sold well at \$3 to \$4. Stock of American Beauty was limited. Some very fine roses were shipped in from Boston, U. S.

Large quantities of lily of the valley were sold—mostly local grown. Scrim took out of cold storage an original case of 2,500 and it seemed as if every pip told. These were never opened, but sent straight to Mr. Scrim when received, and it seems to me a very good thing to chance the condition of the package when received and store the pips away as originally packed. Hyacinths, narcissus, and stevia sold out. Violets were short for the demand. Graham Brothers had a fine cutting of W. H. Chadwick chrysanthemums which sold at \$3 per dozen.

Since Christmas we have had a very mild spell of weather, quite a relief to the coal bin. New Year's day trade was very good, the demand for cut flowers being ahead of that of former years and quite a lot of plants was sold. Carnations were in great demand, selling at Christmas prices.

WOOD BROS., FISHKILL, N. Y.
Mention the Florists' Exchange when writing.

and as we had some sunny weather between New Year's and Christmas, the local cut was larger than expected. There was also a big demand for funeral flowers.

We are now turning our thoughts to the lily business and speculating on the probable results. The best in sight at present are L. Harrish, Azores grown; they are looking very fine, with no disease, and promise to be of medium height. Lillium giganteum, which did not arrive until the beginning of December, I potted at once, placed in the warmest house under the center bench, with pipes all round. They started right off, top and bottom (although rather harsh treatment) and are coming along fine, many of them being six inches high. I really believe they will be in for Easter. I tried a few last year, in the same way, that came in late and the flowers were all right.

Tulips are just coming, also new lily of the valley which promises to be very good.

The receipt of all stock from Europe has been very unsatisfactory this year. The spiraea and new dahlias came in the middle of December, arriving here on the freight wagon with the thermometer standing at 24 below zero. Dahlias gone. I do not know if the extreme freeze would hurt our rhododendrons and acubas arriving about the same time. Then the week before Christmas our rubrum, album and auratum lilies came very hard frozen; I don't know how they will turn out. Our European shippers want to be a little more in a hurry about their shipments.

TORONTO. — Christmas business this year was better than ever before; nearly all report a great advance over other years. Dunlop's manager had to turn away orders for both choice roses and violets. The weather was very cold both on Saturday and Monday, and plants did not sell as well as they have done in some years. Cut flowers were very scarce in the early part of the week, but a couple of fine days helped both roses and carnations, immense quantities of which were to be seen on Saturday. I have not for many years seen so little pickled stock around as this Christmas. Roses were generally good; some very fine American Beauty, Richmond and Killarney were sold and prices were high; and it was not the growers only who put them up. Some very fine poinsettias were offered, the best of them coming from Gammage of London. Splendid carnations and violets came in from Brampton. Tidy had a nice bunch of lallias in his window; and Dunlop showed some good cat-tleas.

There were plenty of azaleas offered, also ferns and palms. But few Gloire de Lorraine begonias were seen this year, also few good cyclamen. They were asked for, but were not much missed, as the weather was so cold. Scarcely any berried plants were sold. Holly was more popular than ever before, and holly wreaths were sold by the hundreds. Mistletoe was not as good as is usually seen here, but what was offered was sold out clean.

MONTREAL. — The newly-elected president of the Montreal Gardeners and Florists' Club, Archibald Hunter Walk-

er, whose portrait appeared in last week's issue, was born at Largs Ayershire, Scotland, May 12, 1874. At the age of fourteen he went to work with his father at Cathkin House, Rutherglen, remaining there three years. He then went to Aschnaig House, Sitchmorlie, where he worked 3 1/2 years, going to Drumlanrig Castle for four years, and from there to Canada in 1900. He worked two years for S. S. Bain, and has been with Hall & Robinson since that time.

Mr. Walker is an able grower of all lines of florists' stock, being especially well up in holiday pot plants. He has made a great many friends since coming to Montreal, and is held in high esteem by all. With a genial disposition and his word as good as his bond, it goes without saying that Mr. Walker's future is bound to be successful.

W. C. H.
FREDERICTON, N. B.—The weather being mild several days preceding Christmas made it favorable for delivering. The trade all and all was very satisfactory. Carnations sold at from \$1 to \$1.50; all seemed to want the best quality, and the call was for red, crimson or pink; no one wanted white. Carnations are our leading specialty. Sales of roses were made at from \$2 to \$4 per dozen, except American Beauty, which brought from \$6 to \$12 per dozen. Violets and lily of the valley sold out. Roman hyacinths and narcissus did not go well. In plants, azaleas, poinsettias, Gloire de Lorraine begonias, cyclamen, primroses, obconica and chinense were sold a little in advance of last year. There was an increased demand for fern dishes, also for Asparagus plumosus. A greater demand was experienced for Piersoni and Tarrytown fern, also for holly.—J. BEBBINGTON & SON.

Detroit, Mich.

Murray Patterson, who left the service of the Strand on Saturday before New Year's, was not long in securing a stand. He made a bargain with Edward A. Fetters, for the latter's store, took possession and commenced doing business in his new store January 1, 1907. The terms upon which Mr. Fetters sold, provided for a thirty day option. This option gave him first chance to buy, in case Patterson is not satisfied. Mr. Fetters was not in good health and it was his intention to retire from active life for a short time at least. He intends to make a trip to Europe in the near future.

The club rooms were well filled with a good contingent of both growers and retailers Wednesday evening, January 2, 1907 in anticipation of the lively exchange of views which was to follow. The subject of the evening was "Christmas Trade," and it was well handled. The members present enjoyed the pleasure of smoking in honor of a visitation of the stork to the home of Ed. Phillips. Mr. Phillips is in the employ of Beard Brothers. Another smoker is also in sight, as A. Sylvester has a little baby girl. Two boxes of cigars are required to fill the order in his case.

BUSINESS DIFFICULTIES.

CEDAR RAPIDS, MICH.—On December 29, 1906, Fred H. Shaver et al, filed suit in the superior court against Howard L. Morgan et al. The suit is for \$105 rent due the Shaver estate from the Cedar Rapids Floral Company. A landlord's writ of attachment was secured and the stock and other property belonging to the company was levied on, John Burianek, Jr., being appointed receiver.

MABELLE-- New Pink Carnation for 1907

Color.—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest and does not injure the color. Size.—Three to four inches in diameter when established. Odor.—Pleasant, but not strong. Stems.—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.—A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after bending. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness.—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery Jan. 6th to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000.

Plant Notes.

A SEASIDE SHRUB.—There are not many dark red foliaged shrubs or trees that thrive well on the seashore, but Prunus Pissardii grows and thrives remarkably well in very exposed places near the ocean. This prunus is very decorative either when planted in considerable numbers in a group or as single specimens. A good plan to adopt when planting Prunus pissardii, even if the ultimate object be specimens, is to plant them when small in clumps, or groups, and as they need more room remove as many as necessary until finally, if desirable, only one specimen remains where the original group stood. A unique if not pleasing effect is produced with Prunus Pissardii and California privet planted promiscuously in an extensive group. To some the contrast between the two might not appeal very strongly, but occasionally contrasts are required in spots, if for nothing else than to emphasize what is harmonious.

HOLLYHOCKS grown from seed sown late in the Fall or early in the Winter should not be checked in any way if it is desired that they should bloom next Summer. If the seedlings have been pricked off into flats and are now crowding, about half the number of plants in each flat should be removed carefully, taking a little soil along with the roots of every plant. These should either be put into other flats, or what will be still more satisfactory, be potted into small pots and later on when they require it, shifted into 3 or 3½-inch pots. Then there will be no question about their flowering next Summer.

ENGLISH IVY.—Although the increased demand for English ivy recently has been very pronounced, I question if there is much money in it in its small size, I mean in plants rooted in the Fall and marketed in the Spring following. Considering the difference in the price obtained for these and that received for plants carried over another year, it would seem more profitable to carry larger plants, especially since many consider the work necessary on ivy the first six months more bothersome, if not greater than that necessary during the more extended period following.

ECHEVERIAS do very well in a cold frame all Winter if protected from frost. They require but little water; in fact, if they were watered when put in they will do without any more until Spring. If by accident the plants get frozen a little, do not uncover them until they and the ground in which they are planted get thawed out.

Rip Van Winkle

Has finally got awake, and finds that he has at least 125,000 Geraniums in 2 in. pots and in fine condition, and will sell at \$18.00 per 1000; composed of the following varieties: Poitevine, La Favorite, F. Perkins, Viaud, Doyle, D. Grant, Brnanti, Paetour, Brett, Nutt and several other varieties. This is to make room "Get a move on you," and get some fine stock.

REVIEW OF THE MARKET

NEW YORK.—While the retailers throughout the city report a general good business, it is evident throughout the wholesale district that there are more than enough flowers coming in to maintain the prices and there seems to be a general inclination all around toward a cheapening for all kinds and grades. It is a noticeable fact also at this time that the quality of Bride and Bridesmaid roses is away below the usual grade. The recent lack of sunshine and the muggy weather we have had, are no doubt responsible in a great measure for these conditions. While there is an occasional sale of American Beauty of the best grade at 60c. each, the majority are offered at 50c., and the same seems to be enough to supply all demands at that figure. Owing to the fact above mentioned, the values of Bride and Bridesmaid are not so firm as are those of such varieties as Killarney, Uncle John and Richmond.

Carnations are weakening in values perceptibly, and in many instances stock is falling away in quality, pink varieties particularly showing a faded appearance, brought about, no doubt, by lack of sunshine.

Lilies are keeping fairly firm in price, but the same cannot be said of lily of the valley, which is almost becoming a glut, and is freely offered at prices ranging from \$1 to \$3 per 100. The incoming of large supplies of Roman hyacinths seem always to affect the sales of lily of the valley, and as the former can be had in quantity at any price from \$1 to \$2 per 100, lily of the valley is somewhat ignored by many buyers for the time being.

Cattleyas are offered at figures ranging from 40c. to 60c., and do not go very briskly. Paper White narcissus are very plentiful, and \$2 per 100 is considered a good price for them. Tulips, in both red and white colors, are coming in fairly large numbers, many of them, however, being rather short in stem. There are still supplies of cut poinsettias and Euphorbia jacquiniflora, for which there does not seem to be much demand. Lilac is coming in more plentifully, but does not move at all satisfactorily.

PHILADELPHIA.—The market has been slow this week; all kinds of stock have been lagging, with no snap to the business. American Beauty are still held at \$9 for the very best. Tea roses are rather more plentiful; good prices are obtained for a few very choice flowers of Killarney, Bride and Bridesmaid; these have brought \$20 per 100, the general stock of teas going at from \$10 to \$12 per 100.

Carnations are more plentiful. Some extra choice Enchantress and Beacon have sold at \$3 per 100; other stock can be bought at from \$2 per 100 upward. Euloh stock sells slow. Golden Spur narcissus being the best seller at \$3 to \$10 per 100.

Cattleyas are in good supply at \$60 per 100. Gardenias are also more plentiful; \$6 per dozen is still asked, but a lower price can be given on 100 or more. All green stocks are selling slowly. Asparagus plumosus and Sprengeri are quoted at 60c. per bunch; smilax at \$15 per 100. Violets are in excess of demands; \$1.50 per 100 is asked for the best doubles and \$1 per 100 for the best large singles, but they hang at those prices. Some extra choice lily of the valley has been coming in for which \$6 per 100 is obtained. D. R.

MILWAUKEE.—Trade since Christmas has been beyond expectations. The supply of roses has decreased considerably and high prices were maintained. Carnations, however, are coming in more freely and in sufficient quantity to meet all demands. White leads the call and prices rule firm. Violets have dropped in price and are being moved slowly at \$1 per 100. The supply of stevia is shortening up and returns will double on it now until the end of the season. Paper White narcissus, Roman hyacinths, lily of the valley and French Trumpet Major narcissus are plentiful; \$2 per 100 are the prevailing prices. Dark, foggy, rainy weather continuously for almost a month now is showing its effect on the stock. Roses seem to suffer the most; weak stems and discolored flowers are much in evidence. Carnations appear soft, \$2 dozens and daffodils are coming on slowly.

Much propagating is now being done to work up a stock of bedding plants. The early frost nipped all the outdoor stock before stock plants were taken in, and a shortage is expected, especially in geraniums, coleus and vincas. P.

ST. LOUIS.—Trade for the past week has entirely subsided to its normal condition, although the uptown florists claim that the cut flower trade for New Year's was very surprising; quite a number of large orders being filled on the first day in the New Year. The weather since has been very fine and clear, and a great glut in violets and of other stock as well is looked for this week. The past week's stock of all kinds was not any too plentiful in roses and carnations. Of bulbous stock there is more than enough in the market. Quite a number of big events in the social world will take place this week, for which a lot of extra fancy stock is needed, and as stock to be plentiful there will be no trouble in filling orders of any size. Prices are down from those of a week ago. Some extra fancy stock in smaller roses can be bought for \$3 per 100 and from that down to \$2 and \$4 for seconds. American Beauty are coming in of better quality, extra long, and are selling at \$6 and \$8 per dozen and over according to length of stem.

The quality of carnations is keeping up. Prices are somewhat lower than during the holidays; \$1 and \$5 will buy extra large stock to be plentiful \$2 and \$3 for next choice. Violets are coming in fine and are too abundant for the demand. This week 25c. to 35c. per hundred for extra fine California is the price. No doubles to speak of are in this market. Bulbous stock is quite plentiful. Roman hyacinths are down to 2c., Paper White narcissus, 3c., and good lily of the valley runs from 4c.; callas, 12c. to 15c.; sweet peas, 75c. to \$1 per 100. All greens are in plenty at usual price. ST. PATRICK.

INDIANAPOLIS.—New Year's business was a surprise. For several years this holiday has been decreasing in the florist's estimation, but the one just past stands forth as an extremely busy one. There was little decorating, but the counter trade on that day nearly equaled that of Christmas. Violets, orchids and other seasonal flowers were in demand. American Beauty sold well at \$4 to \$5 per dozen. Since then miserable weather has checked all lines of trade, excepting funeral work, which has been particularly heavy. Roses are clearly showing the effects of about ten days of dark, warm weather. Bride and Bridesmaid have decreased in price to \$8 and \$10 per 100 for select stock. Richmond and Liberty are selling well at \$7 to \$15 per 100. American Beauty bring \$3 to \$5 per 100, although a large part are bulbheads. A few poor Mme. Abel Chateaux are shipped in at \$10 per 100.

Carnations, particularly red, are as scarce as they were during the holidays; \$4 to \$5 per 100 is the prevailing price for them. A limited quantity of jonquils sell on sight at \$3.50 per 100. Paper White narcissus and Roman hyacinths are plentiful at \$4 per 100. Excellent home-grown sweet peas bring \$1.50 per 100.

Plants are still selling well. Medium-sized azaleas, cyclamen and primroses are readily wholesaled at fancy figures.

Tomlinson Hall market reports a lively business, but the amount of stock brought there at present is very limited, as several of the growers retail their output at home. I. E.

BOSTON.—Business has been good the past week. There has been a brisk market for roses, but carnations and violets weakened toward the end of the week. There are not many good American Beauty to be had, consequently a comparatively high price has been maintained. Some very fine Richmond and Killarney are being brought in which realize higher prices than are general for these varieties.

Carnations are of fine quality bringing from \$2 to \$6, according to grade. Violets have dropped somewhat in price. Yellow narcissus are getting plentiful at \$4 and \$5; Paper White are abundant at \$1.50 and \$2. Lily of the valley brings from \$3 to \$5; mignonette \$3 and \$4 while fancy grades realize a little more. Lilies sell at \$1.20, but not many are in the market. Sweet peas bring \$1 and \$1.50. J. W. D.

NEW BEDFORD, MASS.—Trade since the holidays has been very good, with an active demand for cut flowers. The supply was none too plentiful. Prices were the same as at Christmas. The usual values now prevail—60c. and 60c. per dozen for carnations; roses \$1.50 and \$2 per dozen. Violets have been rather scarce lately. Some good sweet peas are now coming in; these bring \$1 per hundred.

LATER CHRISTMAS REPORTS

GRAND RAPIDS, MICH.—The weather preceding Christmas was very unfavorable for growing, being dark and cloudy right at Christmas; it turned cold and bright, making the wrapping of plants and their safe delivery rather burdensome. Numerous instances of both frozen plants and flowers were noted. All the florists were heavily stocked to meet the usual holiday demand, and every salable flowering plant and all cut flowers were cleaned up to the last scrap, except that a few more carnation orders could have been filled by one of the down town stores. The heaviest demand was for something red—roses, carnations, poinsettias, anything so it was red. At the last stretch nothing red, in flowers or plants of any kind, could be had for love or money. Carnations and roses were so scarce that none but original shipping orders could be filled in full; some could not be filled at all. This was especially true of late rose orders. Business showed a healthy increase in the call for flowering plants; more could have been sold if the supply had been greater. Holly, as usual, was very popular. Brown's seed store handled it in carload lots, supplying some of the florists and pretty nearly every corner grocery in town with wreathing and holly. Red bells were overdone and have fallen flat, as far as the florists are concerned; the dry goods stores handled them in quantity, retailing them at just about what the florists paid for theirs at the supply houses.

In plants poinsettias led; the three firms best stocked with these were Henry Smith, Grand Rapids Floral Company and Crabb & Hunter Floral Company. Cross had a fine lot of cyclamen, and they were his leaders. Azaleas came next and all had a good supply, as they did also of Roman hyacinths and Paper White narcissus in pans. The volume of business was, as a whole, about 20 per cent in excess of last year's. Violets were in fair supply and sold well, but as a matter of record, fewer violets were picked in this market Christmas week, than in any similar week in the past fifteen years. The violet industry here is on the wane.

Prices were: American Beauty from \$2 per dozen to \$1.50 each, other roses \$1.50 to \$2.50 per dozen; carnations, 75c. to \$1 per dozen; lilies, \$3 per dozen; violets, 35c. per bunch of 15 or 60c. for bunch of 25; Paper White narcissus, and Roman hyacinths, 75c. per dozen; poinsettias, from \$3 to \$6 per dozen. G. F. C.

COLUMBUS, OHIO.—There seem to be as many different opinions regarding the volume of Christmas business, as compared with other years as there are among the florists of the city; but the writer feels that if, on the whole, we did an average trade, we did very well under the many adverse circumstances against which we contended. In the first place the weather from start to finish could not have been worse; it rained, it snowed, and there was no sun worth counting. This would not have been so bad had the temperature been seasonably cold, but it was so warm that our streets became and stayed a nasty mess of slippery mud. Again, for some days before the holiday buying started, there was heavy incident to the whole trade that the cost price of all cut flower stock would be such that our flower sales would be limited to the regular customers. What makes a great holiday business here, is when retail prices can be made such that the general public come in and buy. But prices must be reasonable to have them do so. When American Beauty roses are at \$12 to \$20 a dozen; white roses \$2 to \$3.50, and red roses at \$3 to \$4; carnations, \$1.50 to \$2.50, Paper White narcissus, \$1, lily of the valley, \$1, by the dozen; we need never expect any large amount of outside trade.

Owing to so little sun all through December, plants were only of fair quality; and while they sold very well and at good prices, there were plenty of them left over. As regards Christmas greens of all kinds, the demand was very good in fact, I think somewhat in excess of that of previous years. But here again the supply was

ahead of the call. This was especially noticeable in Christmas trees of which there were many left over; but I noticed that many lots of this surplus stock were of especially poor quality. In regard to holly this season it went hard; it was so very poor in quality—poor color, few berries, and much of it very woody—customers found fault with it on sight and it certainly did take superhuman efforts on the part of the salesmen to get rid of the "stuff." Prices of greens were just about as in past seasons; it was especially noted that an unusual demand for laurel wreathing developed. Christmas, 1906. F. W.

SAN FRANCISCO.—Christmas day was not marked by ideal winter weather, yet shoppers refused to remain indoors and those who had not had opportunity to purchase flowers on Christmas eve crowded the flower booths on the great holiday. One veteran florist put it this way: "We had one of the biggest 'second day' Christmas sales in the history of the firm," and this, substantially, was the report from every flower store section of the city.

In a medium size city like this it is altogether remarkable that the monthly average number of union labor toilers in rebuilding the city at from \$3.50 to \$7 per day per man has been from 35,000 to 40,000. This state of affairs has been in vogue for eight months and money is abundant. Florists tell me these workmen have made a colossal record this Christmas season as free and easy buyers and that only the choicest of blossoms were good enough for them.

The florists got their prices this holiday season at one object and probably did not know they were advance prices of from 20 to 35 per cent above normal. I found no novelties, growers having had all they could do since the earthquake to get things in order to supply in abundance the ordinary run of seasonable products, having more accurately discounted the season's abnormal demand and got themselves in readiness with the adequate supplies. American Beauty roses sold at from \$5 to \$7 per dozen and teas at from \$1.75 to \$6. Chrysanthemums brought \$1 to \$2.50; carnations, 75c. and \$1.25; orchids, \$1 to \$1.60 each. Decorated crocks and vases of poinsettias sold well at 75c. and \$1, a quarter of a dollar was the usual price for small bunches of violets. Fine plants were in good demand, such as Begonia Gloire de Lorraine, azaleas and cyclamen. Lily of the valley was a good seller, also Roman hyacinths and Paper White narcissus, and many thousands of holly-decked wreaths were disposed of.

KNOXVILLE, TENN.—The weather was not propitious for any large increase in Christmas business—sharp frosts, snow and slush prevented many from shopping. All the florists, however, are quite satisfied with the business done. There was a heavy call for violets and red carnations; the supply of both was far below the demand. Carnations had the lead in cut flowers and sold at from \$1.50 to \$2 a dozen. American Beauty realized \$5 to \$10 per dozen; other roses, \$2.50 to \$4. Hyacinths, Paper White narcissus and lily of the valley sold well and were cleaned up. Cut poinsettias found a ready sale at \$12 per dozen. In pot plants azaleas took the lead and were cleaned out at good prices. Poinsettias in pots were quite a feature and were eagerly bought up. There was a brisk trade in palms and ferns. Begonia Gloire de Lorraine found few customers and seems to have had its day in this market. There was more holly on the streets than ever before; the quality was good, but much was unsold. The call for immortal wreaths was the largest ever known. H. A. Y.

DAYTON, O.—J. E. Heiss says his Christmas trade was about the same as last year. There was a very healthy demand for plants, especially azaleas, cyclamen and Gloire de Lorraine begonias. The supply of cut roses and carnations was about equal to the demand, but there was a shortage of American Beauty and violets. Poinsettias moved well, both in plants and cut. The weather was unusually unfavorable for a good supply of all cut flowers.

High Grade Cut Flowers
Open Evenings until 8

NEW LONDON, CONN.—Christmas trade was slightly better than last year's. In cut flowers carnations led, as usual; roses also sold unusually well. Everything in cut flowers sold out clean and the supply of carnations was not nearly equal to the demand. A much larger business could have been handled if more carnations had been obtainable, as many orders were turned away. The quality was the best ever handled. Carnations sold for \$1 and \$1.25 per dozen as against 75c and \$1 last year. Choice roses brought \$2.50 per dozen—same as last year. Sweet peas were in unusually fine condition and sold out clean at 25c per dozen.

In plants the Begonia Gloire de Lorraine easily led. They were in superb condition in 5 and 6 inch pots and sold for \$1, \$1.50 and \$2 each. Araucarias also went well. Flowering plants, such as 'primroses, cyclamen and azaleas, were decidedly late in blooming, but those that were in sold well. The weather was very cloudy for some time before Christmas and that made a decided shortage in the cut.—EDWARD A. SMITH.

POUGHKEEPSIE, N. Y.—Christmas trade this year was very good, as everybody had money to spend, and they are more and more every year giving flowers and plants as gifts. Among the plants the best sellers were a number of pans of growing poinsettias with from 8 to 10 plants in each and a foot or a foot and a half in height. We put a number of these in brass jardinières and the combination sold very well. A lot of small hanging baskets lined with zinc pans were filled with moss and then finished off with choice sprays of holly, a bell, and plenty of ribbon; these sold as fast as we could make them up and brought good prices. Flowers were very scarce, but our retail prices remained the same as last year's. W. G. SALTFOED.

YORK, PA.—Christmas business was 15 per cent. better than that of former years. Plants sold very well, as did baskets made up of blooming plants, ferns, etc. Cut flowers were somewhat scarce and higher in price than in former years; and they did not sell as well. C. E. S.

News Notes.

There was a large attendance at the inaugural meeting of the Massachusetts Horticultural Society on Saturday. General Stephen M. Weld, the new president of the society, was introduced by Mr. Hunnewell, one of the vice-presidents.

Reports by the chairmen of the various committees were read. J. K. M. L. Farquhar, for the committee on exhibitions, gave a review of the different shows during the year; A. H. Fewkes, for the committee on plants and flowers, told of the number of prizes that had been awarded. The reports of Wilfred Wheeler on fruits, and Warren W. Rawson on vegetables, were also read, as well as that on children's gardens by H. S. Adams, the chairman of the committee.

The program of lectures and discussions for the Winter season of the Massachusetts Horticultural Society has been issued as follows, the meetings to be held at 11 a. m., at Horticultural Hall:

January 12—The Iris and its Culture, by J. Woodward Manning, Reading.

January 19—Peach-growing Possibilities of New England, by A. A. Hixon, Worcester.

January 26—The Collecting of Orchids, by John E. Lager, Summit, N. J.
 February 2—The Renovation of an Old Orchard, by Geo. T. Powell, New York.

February 9—The Home Vegetable Garden, by John W. Duncan, Jamaica Plain.

February 19—Certain uses of the School Garden, by Miss Anne Wittington, Boston.

February 23—Forestry from a Commercial Standpoint, by Prof. F. Wm. Rane, Boston.

March 2—Planting for Streets and Waysides, by John A. Pettigrew, Boston.

March 9—Some Bacterial Diseases in Plants; Their Nature and Treatment, by Professor H. H. Whetzel, Ithaca, N. Y.

March 30—Gardens of Italy, with Stereopticon Illustrations, by J. K. M. L. Farquhar, Boston.

At the meeting of the board of trustees of the Massachusetts Horticultural Society on Saturday, the resignation of the treasurer, C. E. Richardson, who has held the office for many years, was presented. Walter Hunnewell was appointed treasurer, and W. P. Rich was appointed secretary, librarian and superintendent of the building.

The Boston contingent to the meeting of the American Carnation Society at Toronto, will leave Boston about 4:30 on the afternoon of the 22nd inst. The fare from Boston, on the certificate plan, is \$16.50, and all intending going should not fail to get certificates at the starting point. Full particulars may be had by writing to William Nicholson, Framingham, Mass.

The next meeting of the Gardeners and Florists' Club will be on the 15th inst. It is Ladies' Night and special attractions are on the program. Make an endeavor to be present and bring your lady friends along. By the decision of several judges of the municipal courts last week, florists were held exempt from the Sunday bane laws, which are being so strictly enforced by the present Police Commissioner. This was welcome news to many last Sunday, who delivered their orders as formerly.

Phil. Hauswirth, Chicago, secretary of the S. A. F. O. H., was in town this week on business for the society.

J. W. DUNCAN.

Passaic, N. J.

Mr. McAllister the florist was run into by a trolley, and his wagon wrecked. Mr. McAllister was bruised considerably, but is recovering from his injuries.

W. L. Hundertmark closed his flower store on Monday and filed a voluntary petition in bankruptcy.

ALLIANCE, O.—A recent fire in the greenhouse establishment of George Kiser did damage to the extent of about \$200.

NEW BEDFORD, MASS.—Christmas trade was a record-breaker in this section. Everything was sold out clean. The sale of evergreen wreaths was away beyond last year's record; most of those sold brought from \$1 upward. Some good holly was seen, well berried and with good foliage. There was a good supply of Christmas trees which sold at from 25c. to \$2 or \$3. Nothing in the way of novelties was offered in the plant line. Well-grown azaleas, cyclamen, primroses, ferns and palms found ready sale and brought good prices. This branch of the business exceeded last year's volume. The cut flower trade was a hummer, with the demand far ahead of the supply. The week previous to Christmas being so dull and cloudy curtailed the cut a great deal. Prices ranged from 75c. to \$1.50 per dozen for carnations; for roses from \$2 to \$3 per dozen. Violets and sweet peas were also on the market. Prospects for New Year's trade seem bright, with prices holding firm as stock is very scarce.

Pittsburg.

The Week's News.

Trade conditions so far as the new year is concerned, were satisfactory. New Year's Day was observed with many delightful entertainments and large receptions. The old time custom of keeping "open house" has been revived somewhat, and many families were at home throughout the afternoon. The ordinary trade in cut flowers for the holiday was about as usual, and prices were perhaps a little lower than for Christmas. Stock was of good quality.

The weather is peculiarly Spring-like—the thermometer in the sixties, and plenty of rain. If this condition should continue much longer great harm will be done to vegetation.

M. Foss, whose greenhouses are in the suburbs of Allegheny, suffered a loss of about \$1,000, through carelessness of an employee neglecting the fire; stock was frozen during the holiday cold spell.

Mrs. Heid, mother of Oscar Heid, the Allegheny market florist, died last week.

Erhardt & Schwartz furnished the decorations for the Concordia Club's ball on New Year's night, which were quite elaborate.

The smoker to be held by the Florists' Club this month has been somewhat delayed on account of several members of the committee being too busy to give the matter much attention; but all will likely be arranged for a near date and invitations sent out.

The Pittsburg Rose and Carnation Company is still buying more property adjoining its farms in Bakers town; the last purchase was 28 acres of land.

P. S. Randolph of Randolph & McClements has sold the property on South Highland avenue, on which their store room is located, for \$100,000. Mr. Randolph bought the property about fifteen years ago for \$6,500, and five years ago offered it for \$50,000, but could find no purchaser. Randolph & McClements have bought the business of the late C. Siebert, the East End florist, including the large greenhouse on Stanton avenue, and the lease on the buildings at Baum street, which are well arranged, with store room and conservatories. The plot is fairly large and not entirely built up, and the firm having a long lease will erect more buildings and remove their store to that location within the year.

The South View Floral Company has been sending in some stock of good quality from its new plant on the South Side Hills, and the stockholders are well satisfied with the results of the new enterprise which is managed by Ernst Fischer, the well-known plant grower.

E. C. REINEMAN.

Kalamazoo, Mich.

Retrospective.

Summing up the business of the last year, the chief points noted are: a general increase in the volume of trade, probably due to good times and a larger population; prices on pot plants and bedding stock averaged as usual, but on cut flowers values were lower at times, which will reduce the average somewhat compared with previous years. Working expenses show an increase, owing to advances on labor, material, etc. Some rebuilding and improvements were done, but no practical increase of the glass area in this vicinity is noted. The florists in general express themselves satisfied with the past year's business, and are expecting to do better yet in the future. New Year's trade was as good as expected, although no great rush was needed to supply all wants.

Chicago.

Trade Notes.

The report is received that the carnation rooted cutting demand is far ahead of any previous year at such an early date.

T. E. Waters, who has spent the past two years in Minneapolis and Chicago with retail houses, opened the year by entering the employ of Vaughan & Sperry, thus returning to his old line, he having been at different times for upwards of a decade connected with the leading wholesale houses in Boston.

The report which was carried on New Year's night that the lumber houses on Blackhawk and Hawthorn and Wood streets was burning up was considerably exaggerated. The five-story structure filled with inflammable material, occupied by the Chicago Linoleum Company and in close proximity to the huge lumber piles, was destroyed, and it was only by the strenuous exertions of the large section of the fire department that the report was not fulfilled, as the lumber was several times on fire.

At the Chicago Rose Company's headquarters John Ziska in charge of the cut flower department reports a more than fair receipt of goods of excellent quality which sell readily at good prices.

Peter Reinberg's sales department is to be congratulated on having had for the past few weeks an exceedingly large supply of short to medium length American Beauty roses, of which good generous shipments are still being received, particularly from the block of houses east of Robey street.

The J. A. Budlong establishment is still showing an A1 special cut of Bride and Bridesmaid roses from their grafted stock. It is reported that other concerns will go into grafted teas this year on more than an experimental scale, as manetti stock is arriving in lots up to fifty thousands.

The Benthay-Coatsworth Company is receiving a good cut of roses of very satisfactory quality.

Emerson Coatsworth who was re-elected Mayor of Toronto on New Year's day, and who will doubtless participate in the reception of the American Carnation Society, is a cousin of L. Coatsworth of this city.

C. S. Grant, who has recently managed Frank William's State street Store, has returned to Small's New York store with which he was formerly connected.

Chas. Balluff has been slightly incapacitated for the past week owing to the spraining of his wrist, caused by the giving way of a ladder at the Eaton Flower shop.

It does not seem probable, from what is said, that the delegation from Chicago to Toronto will be a large one.

H. E. Philpot of the Chicago Floral Company of Winnipeg, Manitoba, arrived here Sunday morning. He reports that they had a very satisfactory Christmas business and that his company has moved into more commodious quarters nearer the city.

E. Becker of Becker & Jackson, at whose establishment many of the florists have held their suppers and reunions, dropped dead after midnight of the opening of the New Year.

Vaughan & Sperry continue their past success in violets both single and double, and are now receiving an especially fine line of lily of the valley, as well as other general supplies.

W. H. Edwards of Hinsdale, Ill., has posts set for two houses, to be erected in the Spring, the products principally to be devoted to local trade.

A. L. Randall offers a fine exhibition of Easter ideas, and Miss Toner reports that important features are still to arrive.

Henry Payne of Hinsdale has completed a commodious propagating house and is going largely into carnation cuttings; though he will continue to grow asparagus, he will discontinue adiantum and his other specialties in this line.

C. L. Washburn is spending a few days recuperating at West Baden.

WM. K. WOOD.

Philadelphia.

News Notes.

Starting Tuesday, January 8, the Florists' Gun Club will begin a series of five shoots at the Wissinoming grounds for a handsome and valuable trophy donated to the club by a big manufacturing concern. The conditions of the shoots are that a series of five are to be held on the second and fourth Tuesday of each month. Each gunner is to shoot at fifty targets, handicap rise, with the use of both barrels. The scores of three shoots only will be used in making up the winning total. Any member attending more than three shoots may select his three best scores. All contestants will start at a 16-yard rise, and will be handicapped by their own score, the handicap changing on each twenty-five targets.

Business has been quiet this week. During the early days of the week there were very few social affairs going on, except one or two dinners before the opera on Tuesday evening. The private hall of James W. Paul, Jr., will be given at Horticultural Hall; the decorations are by Habermehl's. This ball will also make a lot of dinner table decorations for that evening.

Victor Groshens, for many years manager of the Hugh Graham Company nurseries at Logan, has given up that position, with the view of building a plant of his own. He has been succeeded as manager, by George Hoelph, who has his second man at Logan.

The Johnson Seed Company reports a very good business; orders for flower seeds are coming in very satisfactorily. The new catalogue goes out this week; it was made up on the same lines as those of the old Johnson & Stokes catalogue, thereby retaining the firm's identity with customers.

Alex. B. Scott has gone South for a few weeks to recuperate; he finds this necessary after the severe attack of bronchitis he went through.

The finance committee of the Florists' Club, for the S. A. F. convention, met on Tuesday, and organized by electing Chas. D. Ball, chairman; J. Wm. Colfesh, treasurer, and Edwin Lonsdale, secretary.

JACKSON, 50 Third Ave., Albany, N.Y.

New Orleans, La.

News Notes.

Christmas trade in this city was satisfactory. Flowers were scarce and rather high in price. There was also a shortage of Christmas trees; for two or three days before Christmas there was not a tree to be had for love or money. This was caused by one dealer who heretofore at Christmas always brought in a carload, but who this year neglected to do so, consequently many an old Arbor vitae and various other shrubs did duty as Christmas trees.

At the last meeting of the New Orleans Horticultural Society it was decided to hold a chrysanthemum show in 1907. The secretary of the society, C. R. Panter, would be pleased to receive from secretaries of other societies prospectuses and prize schedules of shows so as to see what is done in other cities.

E. G. Hill, Richmond, Ind., spent a few days in this city recently.

The first killing frost of the season appeared on December 23, which put an end for the time to all outdoor flowers.

Jas. A. Newsham of the Nashville avenue rose gardens has just replaced one of his boilers with another of larger capacity.

CRESCENT CITY.

WINONA, MINN. — Fuhlbruegge Brothers, who operate a greenhouse plant on East Fifth street in this city, opened the ew twice tat of the — opened the new year with a capacity of nearly twice that of the beginning of the year just closed. During the past few months they have been making extensive improvements at their greenhouses and the business they are doing now is almost double that of a year ago. Three new greenhouses were erected, giving them a total of seven houses and 23,000 square feet of glass. One of the new houses is 24 x 100 feet in size, one 12 x 100 feet and the other 8 x 100 feet. The total cost of the improvements will not be less than \$4,000, and it is their intention to do more along this line during the present year.

St. Paul.

News Notes.

L. L. May Company had the McCormick-Ferguson wedding, Thursday, December 27, which was one of the nicest decorations so far this season. Color effects to harmonize with the colors of each room were used. The stairways were profusely trimmed with wild smilax, poinsettias being interspersed, which produced a beautiful effect. The work was done by J. W. Hoffman, manager of their retail department.

E. F. Lemke has still some very fine chrysanthemums. The demand for them, however, is light; they appear to be out of season, and customers do not take well to them.

Thos. Cashman, proprietor of the Clinton Falls Nursery Company, Owatonna, Minn., called recently. He said he was well pleased with his Christmas trade in the cut flower line, and was fortunate in having his roses all in crop for that occasion.

H. Krinke has been confined to his bed for the last three weeks, but is reported as improving. PAUL.

Milwaukee, Wis.

News Items.

The Florists' Club had a well attended meeting Thursday evening last. The newly elected officers were installed. Lunch and refreshments were served.

The mild weather has been kind to the coal pile, and perhaps this saving to the grower will make up for the loss in the shortage of stock.

N'o Zweifel will probably be the only Milwaukeean attending the American Carnation Society's show at Toronto.

Ed. Winterson, Phil. Hauswirth and George Asmus spent New Year's day in Milwaukee. P.

KNOXVILLE, TENN.—A. N. Crouch has just put in his store a steel ceiling with electric lights all around which gives a most charming effect.

C. Baum is cutting some good carnations, his Enchantress being the best. H. Y.

YOU don't have to bother painting the interior of U-Bar Greenhouses every year or so. U-Bar Greenhouses are the best greenhouses built because the interior finish is aluminum and it's a finish that lasts. It's just as light as the day it was put on five years ago in the first house we tried it in. Not a speck of mildew to be seen. It's just the kind of house that fills the gardener and the owner with merited pride. Send for U-Bar Catalog. HERE IS EXACTLY WHAT YOU ARE UP AGAINST when you use the wooden posts in your house: to start with, you place them every 4 feet, 2 inches to centers. The cast iron foot piece we put every 8 feet 4½ inches. Now you see with our foot piece you dig just half the number of post holes—spend just half the time and bother of lining up,—use just half the amount of paint—and you get just half the shade. With the wooden posts, it's a case of extra post holes and cost of concreting, extra time, extra paint, quick rotting, quick sagging and increased shade.

The wooden post is a costly case of weakness at the very point it should be strongest. Get our cast iron foot pieces and save money and get them now.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol XXIII. No. 3

NEW YORK AND CHICAGO, JANUARY 19, 1907

One Dollar Per Year

WHAT A FEW OF OUR CUSTOMERS SAY ABOUT THE

Winsor Carnation Cuttings

THAT WE ARE SHIPPING

We Have Still to Receive the First Complaint

"Winsor arrived in splendid condition, and we do not hesitate to say that it is the finest lot of cuttings we have ever received of any novelty, and it is a pleasure to receive such stock."

JENSEN & DEKEMA, Chicago, Ill.

"The rooted cuttings of Winsor arrived Saturday night—but they are as fresh as can be. I do not think I will loose any. You do your packing almost to perfection, and you deserve credit for it."

J. A. CARBONE, West Berkeley, Cal.

"I enclosed find draft to pay for Winsor cuttings. These were fine, and arrived in good condition, and we thank you for liberal count."

P. CLAUSEN, & SON, Albert Lea, Minn.

"The Winsor cuttings were very fine. Thanks for the extra hundred."

CLARKE BROS., Portland, Oregon.

"Winsor came in fine shape, and entirely satisfactory."

CHAS. H. TOTTY, Madison, N. J.

See our full page advertisement in this number, for list of the carnation cuttings that we are offering

A TEXAS VIEW OF FREE SEEDS.—The South Texas Fruit and Truck Growers' Association at a recent meeting resolved that the association should thank the Texas representatives in Congress for past favors in the way of free seeds, but assure them these favors were mistaken kindnesses on their part; that they condemn the practice of free distribution of garden seeds as an economic waste, wholly unjustifiable; that "in the future we will not accept from the government free garden seeds; and that we urge our representatives as a favor, which we will appreciate, to vote against the bill appropriating funds for the distributing of free garden seeds, and to use their influence to have the amount thus saved appropriated to the experiment stations of the country."

The South Texas Fruit and Truck Growers' Association consists of affiliated local associations throughout South Texas and the gulf coast country, comprising a membership of more than 1,300.

HUNTSVILLE, ALA.—The scarcity of cotton seed has caused all of the cotton oil mills of this city to close down temporarily. The seed crop was very short in this section, and even the limited supply available is not received with regularity because of the shortage of cars.

1018 MARKET ST., PHILA.

APPLYING THE NURSERY INSPECTION LAW TO BULBS.—A local paper of Fort Smith, Ark., in a recent issue states: "A new ruling by the State Entomologist this past Fall has proven a radical departure from the past customs of the department, and not a little inconvenience to many importers in the State. The ruling is that the nursery inspection laws shall be extended to cover certain bulbs, which, under the new ruling, cannot be imported into the State unless the packages containing them bear the stamp of the inspector."

In reply to an inquiry, a Chicago importing house wrote: "We are familiar with the inspection laws of the various States; the law of Arkansas differs in no degree from the rest; yet such a ruling as the one in question by the entomologist of Arkansas has no parallel in this country. "This Fall we imported from Holland a cargo of bulbs which were rigidly inspected and were shipped by us into a score of States. The portion which were shipped to Arkansas and stopped by the railroads, on the order of the entomologist, were the only shipments in any way questioned. If the recent ruling is enforced the importation of such bulbs into Arkansas will be driven out of the hands of the importers of that State into the mail and express lines directly to mail order patrons."

BURBANK TO ISSUE A BOOK.—The world, says the New York Sun, is to get a set of volumes clearly defining from a scientific standpoint Luther Burbank's work in the creation of new fruits and flowers. For many years Burbank has been getting requests from all over the world for such a work, and he has at last consented to stand sponsor for it. It will be issued under his authority. There will be ten volumes, and in them Burbank hopes to furnish a complete description of his labors, which will do away with thousands of queries he is asked to answer each year.

BOSTON.—W. W. Rawson and Company have installed an electric sign on the corner of their store building which flashes "Rawson's Seeds." This is the first seed house in this city to adopt this method of advertising. This firm has just leased an additional four acres of land at Marblehead for the cultivation of dahlias, their list of which includes over 375 varieties.

Thos. Howarth, for several years with T. J. Grey & Company, is now with R. J. Farquhar & Company. Peter Miller, recently with Jos. Breck & Sons, is expected to arrive from Scotland next week where he has been visiting for several weeks past. On his return he will join the

Tomato, Sparks' Earliana. Stokes' special strain. This is not to be compared with the sort usually offered. Per oz. 40c, 1-1 lb. \$1.25, 1 lb. \$4.00.
Rhubarb, for forcing. Whole clumps that have been frozen and are just ready for business. Per doz. \$2.00, 100 \$20.00, 1000 \$100.00.
Five-Year Old Asparagus, for forcing. Very profitable. Same price as Rhubarb.

establishment of T. J. Grey & Company.

A. Watkins of New York and George Miller of Newark, Ohio, are now on the staff of W. W. Rawson & Company. Invitations are out for a dinner party to be given by W. W. Rawson to his friends, at the Vendome on the 23rd inst. to celebrate his sixtieth birthday anniversary.

J. W. D. GENERAL APPRAISERS' HEARINGS DURING 1907.—The Treasury Department has issued the following circular:

In accordance with T. D. 27097, dated February 8, 1906, appointing fixed calendar dates for the hearing of customs appeals at the ports outside of the port of New York, the hereinafter-mentioned dates at the hereinafter-mentioned ports are hereby fixed and designated for the year 1907. In all respects not herein expressly or by necessary implication modified, said T. D. 27097 is continued in full force and effect.

Baltimore (office of the appraiser): January 12, February 9, March 13, April 13, May 11, June 3, July 13, September 14, October 12, November 9, and December 14.

Boston (office of the appraiser): January 18, February 18, March 15, April 19, May 17, June 21, July 19, September 20, October 18, November 15, and December 20.

Chicago (office of the appraiser): February 6, March 6, April 3, June 5, July 3, September 4, November 6, and December 4.

Los Angeles (office of the collector): February 26, June 25, and November 23.

New Orleans (office of the appraiser): April 9 and September 11.

Philadelphia (office of the appraiser): January 11, February 8, March 8, April 12, May 10, June 7, July 12, September 13, October 11, November 8, and December 12.

Portland, Ore. (office of the appraiser): February 15, June 14, and November 13.

St. Louis (office of the surveyor), April 6 and September 7.

St. Paul (office of the collector): February 9, June 8, and November 9.

San Francisco (office of the appraiser): February 20, June 19, and November 18.

Seattle (office of the appraiser): February 13, June 12, and November 11.

European Notes.

A few miniature blizzards are still raging locally in various parts of Europe, but on the whole the snow has cleared away and left the land exposed to the rather severe frosts which continue. As the sun has practically no power at present, the danger to plant life from alternate frost and thaw is absent, and it hardly seems possible that any serious injury has been the result up to the present.

The close of the Christmas holidays, and the cessation of the press of holiday traffic has liberated consignments of seeds from southern ports that had been wellnigh given up as lost. It seems incredible that goods should be two months on the way between Naples and London, but such is the case; in fact, a shipment of early flowering bulbs which left Naples in July was more than ten weeks on the road. The results of these delays must be very disastrous to the Italian seed growers.

As the culture of green beans for market in the south of France has, in

CHOICE VEGETABLE SEEDS FOR FORCING

"STOKES' STANDARDS."

Are Simply the Cream of the Lists. You can't get better value.

Cucumber, Perfection Hot-House Forcing. Repeated selections of green, upright White Spine. Per oz. 50c, 1-1 lb. \$1.50, 1 lb. \$5.00.
Cauliflower, "Stokes' Standard." The very earliest in existence, close-growing, compact, perfect snow-white heads. Per pkt. 25c, 1/2 oz. \$2.50, 1-1 lb. \$7.50.
Lettuce, Stokes' Big Boston. A splendid strain of this very popular greenhouse lettuce. Per oz. 15c, 1-1 lb. 40c, 1 lb. \$1.25.
Lettuce, Stokes' Grand Rapids. A fine forcing strain, the true underground sort. Per oz. 15c, 1-1 lb. 40c, 1 lb. \$1.10.
Radish, Stokes' Scarlet Globe Forcing. The true 18 to 20 day sort, with small top and of a deep scarlet color. Per oz. 10c, 1-1 lb. 25c, 1 lb. 75c.
Radish, Stokes' White Marble. 18 to 25 day sort, snow-white, crisp and tender. Per oz. 10c, 1-1 lb. 25c, 1 lb. 75c.

This is not to be compared with the sort usually offered. Per oz. 40c, 1-1 lb. \$1.25, 1 lb. \$4.00.

Stokes' Seed Store

219 MARKET ST., PHILADELPHIA.

Mention the Florists' Exchange when writing.

a measure, superseded the culture of seeds we shall soon have to seek "fresh fields and pastures new" for crops that are associated with this highly favored district.

The brisk demand for peas from your side is very welcome, and as our samples are on the whole good, and the conditions at the time of reguering were extremely favorable, they can hardly fail to give satisfaction, and will, we hope, lead to the revival of a trade that had almost died out. Owing to lack of plants for other crops, and the very excellent yield obtained last season, there is every probability that a larger acreage than usual of the large wrinkled marrow varieties will be planted in England this year.

Market seeds are receiving attention now that the New Year has opened. White clover is said to be good and abundant. Red clover is the same so far as England is concerned, but the keen competition among buyers for shipment to your side has opened the eyes of the farmers, and a rise of from 3 to 5 shillings per hundredweight is the result. Rape has again moved upward and is now quoted at an advance of 25 cents per 100 pounds, really good samples easily bring over higher prices. The probabilities are that as sowing time comes round, a further considerable rise is certain. Thousand-headed kale, which has been suggested as a substitute, is now fetching double the money it realized two years ago. The scarcity of sheep feed will prevent any surplus of this article being thrown on the market next season.

EUROPEAN SEEDS.

CATALOGUES RECEIVED.

FLETCHER & HARRISON, Cleveland, Tenn.—Surplus List of One-year Peach and Two-year Apple.

SCHLEGEL & FOTTLER COMPANY, Boston, Mass.—Illustrated Catalogue of Seeds, Bulbs and Plants, with list of Specialties. The firm says: "Our new salesroom on the street floor has proved to be a decided attraction and our business has largely increased since we leased the entire building 26 and 27 South Market street. No more critical and exacting class of trade can be found than that of the market-gardeners and florists around Boston, and to them annually we have sold large quantities of seed for many years."

JOHNSON SEED COMPANY, Philadelphia, Pa.—Garden and Farm Manual, 1907, being a Catalogue of Vegetable and Flower Seeds, Bulbs, Supplies, etc. A long list of Novelties and Specialties among them Dreamwood Muskmelon, Longkeeping Prizetaker Onion and Jack Rose Tomato, which form the cover designs. The catalogue is profusely illustrated, many of the pictures being half-tone cuts from photographs from life. Also Wholesale Catalogue for Winter and Spring 1906-7.

WEEBER & DON, New York.—Catalogue of Garden, Farm, and Flower Seeds, etc. A profusely illustrated catalogue with a well selected list of Novelties and Specialties including the Don Tomato, extra early for forcing, Brussels Sprouts Brechin Castle, Turnip White Model, etc., in vegetables, and the best of the new things in flowers. The standard offerings are, as usual, complete and comprehensive. The cover designs, taken from photographs, show results from the use of the firm's "Central Park" Lawn Grass Seed, and "Sure Crop" Mushroom Spawn.

IDEAL CONCRETE MACHINERY COMPANY, South Bend, Ind.—Catalogue concerning Concrete Machinery for its manufacture, etc. A very complete and interesting publication. Illustrated Copies can be secured by remitting 25c. to the firm named.

JOHN LEWIS CHILDS, Floral Park, N. Y.—Illustrated Catalogue of Flowers, Vegetables and Plants. Special attention is directed to Novelties in Early-flowering Garden Pinks, Burbank's New Shasta Daisies, and Nicotiana Sandera hybrids. A specialty of this firm is Phenix Rebeccah. The offers listed are complete and comprehensive. This is the firm's 33rd edition of its catalogue. To meet increasing patronage the concern has established a bulb and seed growing park in California, and another bulb and seed farm on Long Island (Childsville, 600 acres), the gardens now aggregating nearly 1000 acres.

WM. ELLIOTT & SONS, New York.—Catalogue of Seeds, Bulbs, Plants, Supplies, etc., with an interesting List of Novelties and Specialties, the former including Sweet Peas, Norway Turnip, Mrs. Alfred Watkins, Frank Dolby, E. J. Castle, Impatiens, Holstii hybrids, Ricinus panormitanus, Chrysanthemum carinatum, Northern Star, etc. The lists of standard offerings, are, as usual, very complete. The present is the firm's sixth and annual catalogue. It is profusely illustrated, and the cover designs are most attractive, the front one being that of a Japanese garden scene, in color, with pretty maidens viewing a patch of iris, the back cover design being formed of Phlox Drummondii grandiflora Sunbeams in color.

W. W. RAWSON & COMPANY, Boston, Mass.—Catalogue of Seeds, Bulbs, Plants, Supplies, etc. This catalogue is of more than ordinary interest inasmuch as it has been produced under difficulties which do not often confront catalogue-makers. After the disastrous fire of last Spring the firm was left without an illustration of any kind, and had to procure everyone of the pictures used in the catalogue, which are all halftones taken from photographs. The results is a most attractive catalogue, profusely and artistically illustrated—a credit to the firm's enterprise and pluck. Many Novelties are presented; also excellent planting tables for Flowers and Vegetables. The new Shasta Daisies have been selected as a cover design.

PETER HENDERSON & COMPANY, New York.—Everything for the Garden; a beautiful and handsomely gotten-up catalogue, maintaining well the high artistic standard of its predecessors. The "garden beautiful;" and the "garden beautiful;" are portrayed by charming rare and native illustrations on a white background with embossed lettering in gold. The offerings of Seeds, Bulbs, Plants, Supplies, etc., show their customary completeness and comprehensiveness, while the lists of Novelties and Specialties are full and interesting. The pages of the catalogue are profusely and attractively illustrated, among those in color being Ponderosa tomato; the Henderson collection of new Sweet Peas, showing the latest novelties; "the Delightful" collection of Ever-blooming Roses, including Cardinale, Triumph, and Van Dupuy and others; and the "Imperial Japanese" collection of Chrysanthemums. A complete index adds value to the catalogue, which is well worthy of perusal.

HENRY A. DREER, Philadelphia, Pa.—The Garden Book for 1907. An indication of the wonderful growth of this well-known house's business is afforded by the statement that the annual catalogue of the concern has grown from a four page leaflet in 1838 into a handsome and instructive book of 224 pages, in 1907, the latter containing, as the firm says, "what is undoubtedly the most complete offering of horticultural needs under one cover in any country." This year a change has been made in the arrangement of the book by placing the Novelties and Specialties directly in front of the General List of each year, instead of tacked on together as heretofore. These are numbered in every line and well deserving of the attention of every progressive florist and gardener. The cover designs, always beautiful, are, we think, more charming than ever before. The front one shows a reproduction of spikes of Salvia Bonfire and Gysophilis elegantis alba grandiflora embossed in natural colors; the back cover design representing flowers of the Ever-blooming Hybrid Sweet William, with sprays of Gysophilis paniculata, or "baby's-breath" in natural color. There are contained in the Garden Book beautiful colored plates of collections of Novelties in vegetables; select large-flowering Phlox Drummondii, fancy dahlia Frank Smith, and a collection of Iceland poppies, all lovely and life-like. Every one interested in the cultivation of a garden, or engaged in conducting a greenhouse establishment should procure a copy of this handsome valuable publication.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

TRENTON, N. J.—The State Horticultural Society at its annual meeting elected the following officers: President, Horace Roberts, Moorestown; vice-president, Ellas S. Blake, Little Silver; secretary, Miss Mary W. Budd, Mt. Holly; treasurer, George E. DeCamp, Roseland. Mr. DeCamp succeeds I. J. Blackwell, of Titusville, who retired on account of ill health.

Horticultural Notes.

Foreign journals mention that when the Chionanthus virginica is grafted on the ash it never fruits. It is more than likely that the sterile form was used for grafting. At any rate, why graft it at all when seeds can be had so easily, and grow so freely as they do?

The Sicily nut, which is sometimes found in nursery lists, is a very large variety of filbert. It is sometimes called Barcelona nut. To increase it layering is resorted to, although it will come fairly true from seed.

In those States having a climate too cold for the average kinds of peach trees those with large flowers should be tried. It is claimed that they are harder than those with small flowers.

Russian olive, so-called, is *Elaeagnus hortensis angustifolia*. The common name of all *elaegnuses* is wild olive or oleaster. It is a rather misleading name as the plant has no affinity to the true olives, which are oleas. Silver thorn is a much better name for all the *elaegnus*, for one and all have thorny stems and silvery leaves.

The oak-leaved mountain Ash has the same flowers and berries as the common one, and in addition has the large cut-leaved foliage that makes it valued as a variety. So far as concerns the berries, it can be planted in place of the typical form if so desired.

Just how the Siberian Arbor vitae got its name, Siberian, is hard to say, as it is but a variety of the American, *Thuja occidentalis*, just as are the golden, the variegated and many other varieties of it. Many years ago the late Robert Douglas sowed a quantity of seed of the Siberian. The result was, that the greater number of the seedlings were pure American Arbor vitae, the remainder varying from this to the Siberian in appearance.

A correspondent writing from Florida states that some of his Japanese persimmons change their sexual character as years pass by. He had one that for six years bore but male flowers; then it had a few female ones, and from year to year thereafter it bore increased numbers of female flowers, becoming satisfactorily fertile. Such cases are not uncommon among trees and shrubs.

Juglans prapauriensis is not a dwarf form of the English walnut as some suppose. It gets to be a good-sized tree. Its merits are its early fruiting qualities. One does not have to wait ten years for it to grow to a bearing size, as is the case with the common one, *J. regia*.

Cercidiphyllum Japonicum.

A fine Japanese tree, still not over common in collections, is the *Cercidiphyllum japonicum*. Travelers in Japan tell us that it is one of the finest forest trees of that country, and from its appearance here, when in favorable situations, this statement can well be believed. Without knowing the nature of the ground it occupies in its native forests, it has proved here to be a moisture-loving tree, doing far better when in a deep, moist soil than when in a shallow, dry one. The foliage is of a light green; the leaves being almost heart-shaped, and when at their best almost the size of those of the English linden. The male blossoms are on separate trees from those bearing the female, but so far as concerns this as a merit it matters not which one it is, as the flowers are greenish-white and almost inconspicuous. But there is a difference in the growth of the trees which many think favors the female form. Francis Canning, of the botanic gardens of Smith College, Northampton, Mass., says, "I think the female form of this tree much the handsomer of the two forms. It is easily distinguished from the male form by its more spreading habit, the male form being columnar in outline."

As already said there is no occasion to be particular which one is had so far as concerns the flower display, but for the sake of getting seeds for propagating purposes; or for curiosity seeds may be desired; in this case the two forms of trees should be near each other. The seeds are contained in small, narrow pods; and although the tree is in the natural order *Magnoliaceae*, to ordinary observers no relationship to magnolias is apparent in it.

Although withstanding our severest Winters, with the mercury away below zero, Nicholson says of it in England that "it proves hardy on walls in our more southern districts." This statement may have appeared before many tests of the tree for hardiness had been made, for surely it would withstand the climate anywhere in Great Britain.

Soaking Seeds Before Sowing Them.

A question was asked me recently whether osage orange seed would grow when a year or more old and had been kept dry. This question was answered in the affirmative. Excepting a few flower and vegetable seeds and some coniferous ones all seeds are at their best when fresh, and when they are a year or more old it is safe to say they are not quite as good as at first. But in the case of the osage orange many nurserymen use the seeds when a year old, and with quite satisfactory results. It seems to make but little difference, excepting that old seeds are longer in sprouting than when new. It appears to require more moisture to swell the seed coats the older seeds are. As seasons in Spring are often short the soaking of old seeds, or even of new ones with hard coats, is to be recommended. Osage orange seeds should be soaked in tepid water for 24 hours. Hard seeds, such as those of honey and yellow locust, should have boiling water poured on them and then be allowed to remain in the water for perhaps two days. But it is recommended that as soon as any of the seeds come to the surface of the water they should be skimmed off and sown at once; or they will rot. It follows that ground for sowing should be prepared before the seeds are put to soak.

In dry seasons many seeds perfectly good fail to grow because of lack of moisture, and no doubt better results would follow the soaking of many seeds besides those with hard-shelled coats.

Propagating the Eglantine.

Mrs. J. W. Sparkman of Tennessee writing of the eglantine and its seeds states it is in a half wild condition there in some places. This may be, as where conditions are suitable the seeds vegetate very well. Nurserymen propagate it by securing the pods in the Fall, pounding them to pieces, letting them rot for a few days, and then washing out the seeds. Should the weather be open the seeds may be sown at once; but if mixed with slightly damp sand and kept in a cool place through the Winter they do very well sown in early Spring. In this way beds of seedlings are easily had. In olden times the common dog rose, *Rosa canina*, of England, was known to some as eglantine. Nicholson says of Eglantine: "A name that has been the subject of much discussion, both as to its exact meaning and as to the shrub to which it belongs," but he agrees with the general opinion that the name belongs to the *Rosa rubiginosa*, the sweetbrier.

A few plants of the eglantine should always be included in the planting of shrubs, especially when they are to be near a dwelling. In early morning, when dew is on them or after a shower, there is a fragrance from the leaves which is very agreeable.

Hovenia Dulcis.

A Japanese tree, introduced to this country some thirty years or more ago, is the *Hovenia dulcis*. Not much is known of this tree by our gardeners, and

this may be partly accounted for by the fact that it is not sufficiently hardy to stand the rigors of the colder States. It is hardy about Philadelphia, and no doubt it will stand the Winters north of that city. There are some quite large specimens in Bucks County, Pa., as well as in the city of Philadelphia, but the specimen illustrated is growing in the White Lot, near the President's grounds, Washington, D. C. It is crowded rather more than we liked, but it happens two others we know of are in the same condition, so we took the present one for illustration.

As stated, the *hovenia* comes from Japan. It has good-sized, shining, green leaves, and its flowers are small, white and borne in flat heads, in appearance somewhat like those of hawthorn. Its pink, thick, fleshy fruit stems are eaten by the Japanese.

To get the benefit of the flowers on trees of the size of the *hovenia* pictured, the planting of them should be in open situations where they may develop well, and the branches be near the ground. From what we have seen of this tree, the *Hovenia dulcis*, we believe it would make a very handsome lawn subject, and we would recommend its trial as such. It can be increased from cuttings or seeds. The latter can be obtained from Japan, or from the trees growing here, as they flower and fruit freely. Green wood cuttings are used, made when the wood is in a half-ripe state, in early Summer. And there is layering, which done in late Spring, gives rooted plants by Fall.

Some years ago, when the late curator of Kew, George Nicholson, was in this country, he was much interested in seeing some of the large trees of *hovenia* growing about Philadelphia.

An Evergreen Climber for Walls.

It is rare to see the *Euonymus radicans* used as a vine for covering walls, a position it is well fitted for. In fact the first mention of it when it was introduced was in connection with its beauty as seen climbing up trees in Japan. That it could be used as the common ivy is, is proved by the beauty it presents in the few cases where it has been so employed. In most cases its use is confined to covering low walls, a position it suits well. As there is no other evergreen creeper of equal hardness to it, and but few persons that do not care for an evergreen vine on their dwellings, this *euonymus* should be brought to the attention of those looking for a vine for the purpose. It is not a vine that will take the place of the English ivy where this is hardy, as its foliage is smaller, and the vine sets close to the house. But the English ivy will not endure the Winter much farther north than Philadelphia, while the *euonymus* can be grown in all but the very coldest States.

Euonymus radicans is not a species as it is often thought to be, but it is a variety of the well known *E. japonicus*; so it is claimed. It is, however, so unlike *japonicus* in every way, hardness and all, that one feels almost like doubting the correctness of our botanical authorities in making it a variety of *E. japonicus*. JOSEPH MEEHAN.

Hovenia Dulcis

Catalpa for Timber.

The demands all nurserymen experience for catalpa seedlings for forestry purposes bring up the question whether the *C. bignonioides* is not of use for the purpose as well as *C. speciosa*, the one preferred in the West. It is admitted by all that the latter is hardier than *bignonioides*, which fact makes it alone suited to the colder parts of our country. But where the *bignonioides* is hardy, as it is all over the Middle States, it could certainly be planted to advantage where any difficulty exists in getting the *speciosa*. The reason why *speciosa* is preferred even here, is because it is of more tree-like growth than the other, making a taller tree. All trees make a straighter growth when they are grown close together, and planted in this way the *bignonioides* would make a straight growth. This end is better obtained if when the seedlings are two or three years old they are cut down to the ground in late Winter. Shoots will be then made which will be 5 to 6 feet high by Fall and as straight as a line. Regarding the durability of the wood of the *C. bignonioides* there is no reason to doubt it being as lasting as that of the *C. speciosa*. Over 30 years ago its durability was known, and it was mentioned in the horticultural magazines of that day, probably before *C. speciosa* was known, for this one was not named until 1879.

ROSES

Planning for the Future.

With the holidays past, it behooves the growers to make plans for next season. Now is the time to decide about how much space is to be allotted to the different varieties, for we now have more than three or four to choose from, not counting some of the later additions. But each grower should raise those varieties which do best with him to make the most money.

Having formed an idea of what is wanted, preparations should be made for propagating or grafting. Where a new variety is to be tried, better order stock now so as to get nice plants early in the season, thus giving them a fair start.

On large places thousands of cuttings are already in the sand. Some possibly may have started potting, but the great majority of growers wait till about now to begin operations, for, in the first place, it is not advisable to cut out much wood from the plants, in the shortest days of the year, especially when we have so cloudy weather as at present. Then, also, it necessitates tearing out a room for young plants, which means some loss of flowers. Not alone that, but stock is seldom wanted for benches till the latter end of May or June, and if started too early the plants will be potbound in fours long before then.

Propagation.

With nearly all varieties propagating is quite a simple matter, the first requisite being clean, sharp sand; if a little coarse it will not matter. This should be screened. Where a separate house is not provided, select a bench where the pipes can be boxed in, so as to furnish bottom heat. Remove the soil and wash out the bench well, then apply a heavy coating of hot lime. Arrange the drainage so that the sand will not wash through. The sand should be packed as firmly as possible before any cuttings are put in.

The next step is to procure some well-ripened wood from clean healthy plants. This should be carefully looked after, for if healthy young stock is desired weak or off-colored stock must be avoided. Two-eye cuttings are the best. Use a sharp knife, making the lower cut right below the lower eye. If small, leave on four, and if larger only two leaves. Use wood as near alike as possible to insure even rooting.

After the cuttings are in the sand give a good watering, and then, if possible maintain a temperature of from 64 to 66 degrees in the sand with about ten degrees cooler on the top. The latter, however, can only be secured where a regular propagating house is used. Never allow the sun to strike the cuttings; also avoid draughts. If the drainage is right, a watering each day will be necessary, but a little care exercised will soon show how much water should be afforded.

It will take from three to four weeks for nearly all roses to root, except American Beauty—these from four to five weeks. The latter rose is at times difficult to manage, and when small numbers are wanted, or a separate house is not available, it would, perhaps, be better to purchase

WE ARE NOW GRAFTING ROSES

This is the Best Time to Place your Order.

In this Way you will Get Just What you Want

Read what some of your customers say about our stock of previous years:

Auburn, R. I., April 28, 1906.
 "The grafted Richmond we had from you this spring were as nice as could be, which has been the case with all the stock we ever had from you. You may rest assured when we want grafted roses or plants of any kind you can furnish you will have our order."
 (Signed) The J. A. BUDLONG & SON CO.

Hyde Park, Dutchess Co., N. Y.
 "I would like to thank you for the quality of grafted roses and American Beauties, on own roots, which you have sent us each year. I con-

sider the stock A No. 1 in every respect and doubt it better could be obtained from any other firm."
 (Signed) HENRY J. ALLEN,
 Gardener to Mr. F. W. Vanderbilt.
 Aahuradade, Mass., April 30, 1906.
 "I never saw finer or cleaner stock sent out by any firm than I received from you this year."
 (Signed) W. WESTLAND,
 Gardener to Mr. Francis Blake.

Fineburg, L. I., May 1, 1906.
 "The Richmond rose plants came to hand in good shape, fine healthy stock, well packed and good count. I am very much pleased with them

as I have been in the past with all stock purchased of you. It gives me great pleasure to send an order to your house for I know I will get just what my order called for, no outs, no runs, but clean, healthy stock."
 (Signed) A. L. THORNE,

Whitinsville, Mass., April 26th, 1906.
 "The rose plants received from you this spring were the best I ever received from any source."
 (Signed) THOMAS HOWDEN,
 Gardener for Mr. Arthur F. Whitin.

Leaon, Mass., Dec. 4th, 1906.
 "The grafted rose stock which you have supplied me with for the past six or seven years has been of the highest quality and has given me the greatest satisfaction. I have great pleasure to again send you my order."
 (Signed) EDWIN JENKINS,
 Supt. Bellefontaine Gardens.

Morton Grove, Ill., Dec. 12, 1906.
 "The grafted Killarney you supplied me was extra fine. Our only regret was that instead of getting 2800 plants we didn't order twice as many."
 FOEHLMANN BROS COMPANY.

We intend to maintain our usual high standard this year. Send for catalog of varieties and prices.

A. N. PIERSON

Cromwell, CONN.

plants in 2 1/4 or 2 3/4-inch pots, than to bother raising them yourself.
 With due respect to some of our best growers, it is safe to say that the larger portion of the plants grown commercially are on their own roots. It is claimed that grafted plants are always more vigorous growers, but after careful trial we have found they are so early in the season, but when the shorter days come along and the young stock throws up a few bottom canes there is not much difference. It is certainly easier to take care of own root than grafted stock. But this point must be decided by each grower for himself.

Grafting.
 Grafting is a much more difficult operation than the sticking of a batch of cuttings, requiring far more care and attention. The stock used is mostly manetti, imported, though some American grown, is now being employed. This is generally potted about four to six weeks, and kept in a temperature of 40 degrees or below, but above freezing. The one-eighth inch stock is about the best size to use, though stock and cion should be of as uniform a size as possible. Cut the manetti as close to the pot as is possible for convenient handling, by making a slanting cut about three-fourths of an inch long, then cut the cion to suit. If the latter is smaller than the stock, place it to one side so that the bark of one fits closely with the other. Tie securely with raffia, and keep the cion moist by covering it with moist rag.

The grafting frame should be as nearly air-tight as possible and so arranged that a temperature of 80 degrees can easily be maintained. As for the propagating bench, first apply a good coating of whitewash to the woodwork, then arrange for free drainage; finally finish off with screened ashes or sand on which to stand the pots. Before these are put in, give the prepared bench a good soaking; this will furnish enough moisture for the plants for three or four days. Keep the frame close and if the temperature is maintained near 80 degrees they will "take" in about two weeks. Gradually harden off the grafted plants by raising the sash or top of the frame a little more each day. When the union is complete and the plants are well-hardened, they should be put in another place, staked and carefully tied, and then receive practically the same care as is given other young stock. PENN.

For Decoration Day SPIRÆAS

Are a most useful plant
 We have an excellent lot in cold storage, extra large clumps, and offer them as follows:
 Spiræa Japonica. Per 12 60c., per 100 \$4.50, per case, about 300, \$12.00.
 Spiræa Compacta Multiflora. Per 12 60c., per 100 \$4.50, per case, about 300, \$12.00.
 Spiræa Aetiloideæ Floribunda. Per 12 60c., per 100 \$4.50, per case, about 300, \$12.00.
 Spiræa H. White (new). Undoubtedly one of the finest and most profitable Spiræas for florists. Per 12 \$1.00, per 100 \$7.50, per case, about 300, \$21.00.

POT GROWN LILACS
 Extra strong and well set with buds.
 50 Marie Le Graye. 50 Chas. X. 50 Wd. Cassier Perier. 50 Md. Lemoine, \$8.00 per dozen while they last
 50 Dentzia Lemoinei (pot grown), at 18c. each

GRAND NEW CANNAS

William Saunders
 The flowers are large, of splendid form and are born very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze. Height, 3 1/2 to 4 feet. We believe that **Wm. Saunders** is decidedly the most perfect canna of this type that has been introduced. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Ottawa
 is a strong grower, very robust and 5 to 6 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.
 Note:—We had this canna on trial among the Canadian experimental stations last summer and this is the official report of their expert:
 Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 massed in one bed during the past season, this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 13 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size." 50c. each; \$5.00 per doz.; \$35.00 per 100.

New York
 Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest varieties of cannas. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Send for our list and prices of 60 other leading varieties of cannas.
 Are our great specialty, 2 1/2 and 4 in. pot plants we have in great variety. Teas, Hybrid Teas and H. P. Roses on their own roots, Philadelphia Rambler, Crimson Rambler, Dorothy Perkins and other climbers in strong field plants.
 in variety. Viburnum Plicatum, Spiræas, Altheas, Deutzias, Weigelas, Barberry Thunbergii, Hydrangea Pan. Grandiflora, Honeysuckles, etc.

CARNATION NUMBER NEXT SATURDAY

Our issue for January 26 will contain a full report of the annual meeting and exhibition of the American Carnation Society, to be held in Toronto, Wednesday and Thursday, January 23 and 24. To all carnation growers, we would say, that this issue will present a most favorable opportunity to make special offerings of plants or rooted cuttings of carnations.

Never before were buyers so eagerly on the lookout for good carnation stock, both in standard varieties and in novelties. YOU SHOULD SECURE YOUR SHARE OF THIS TRADE. Send your advertisement intended for that issue so as to reach us not later than Wednesday noon, January 23, 1907.

FOR SALE One (1) No. 536 Burnham Boiler hot water, new. Capacity 2800 sq. ft. of heating surface. This boiler is absolutely new and was taken in trade by me. Special low price to first customer. J. E. GALLAGHER, Manufacturer of Pipe and Fittings, 86 John Street, NEW YORK, N. Y. Mention the Florists' Exchange when writing.

Philadelphia. At the ball given by Mr. James W. Paul, Jr., at Horticultural Hall, the decorations were by Habermehl's Sons and were very effective. More cut flowers were used than has been customary at many of these affairs in recent years. American Beauty roses were foremost in all the work. E. Habermehl tells the writer they used 3,000 Beauties. There were also numbers of azaleas and lilies used. The front of the stage was divided as it were into three sections. The center section was composed of lilies interspersed with palms, etc. These were massed five feet high, at one side gradually sloping to one foot high-- s-i-acmrdllu w section were massed pink azaleas and on the right white azaleas, each section backed with palms and other plants as a screen to hide the orchestra. Around the main floor were screens back of which was the promenade. The arches of the screen effect were of lattice work covered with wild smilax, the whole outlined with miniature electric lights. On the stairway the balustrades were outlined with small lights; at this point many Cibothum Scheidel in 19 and 12 inch pots were used and were very effective. P. J. Hauswirth paid us two visits while on his eastern trip, Fridy of last week and Tuesday of this week. Wm. Gude was in town on Tuesday. The finance or ways and means committee of the Florists' Club for the S. A. F. Convention met on Tuesday, when the subcommittees, to cover the eight sections into which the city or county has been divided, were appointed. Work will now go right along. The Pennsylvania Horticultural Society met Tuesday evening when Dr. Henry Skinner, Professor of Entomology, gave a very interesting illustrated lecture on "How Insects Live Through the Winter," in which he gave the habits of all the most destructive insect pests and showed where to find them during the winter months. A very nice exhibit of orchids was staged by Mr. G. Roehling, Trenton, N. J., James Goodyear, gardener, consisting of Cattleya Trianae, Mrs. E. Warren Hook, for which a silver medal was awarded. This is a light colored flower, with rich pink shading to purple markings or rings. Cypripedium adrastus (Lecanum X Boxallii) was also given, gave a medal, and was a very perfect flower. Cypripedium insignis Sanders a grand plant in about an 8-inch pan and having 12 perfect flow-

ers received certificate for culture. Laelia anceps Williamsii, a grand specimen with 35 flowers, certificate for culture. There were also cut flowers of four types of Laelia anceps viz. rosea, Williamsii, Schroederiana and Hollidiana. The competition of the evening was for prizes offered by Henry F. Michell Company for Primula sinensis, the prize being awarded to Mrs. Charles Wheeler (Wm. Fowler, gardener), this being the fourth year that this exhibitor has taken the prize. A certificate was awarded in addition. DAVID RUST. Boston. The employees of the firm of A. H. Hews & Company, flower pot manufacturer, Cambridge, Mass., were entertained to a banquet by Mrs. Hews on Saturday the 12th inst. This is an annual event by which Mrs. Hews keeps fresh, with the employees, the memory of the late A. H. Hews. George McKee, the president of the company, presided; and after the dinner an enjoyable evening was spent listening to songs by the Harvard quartet and specialties by several other artists. SOUTHAMPTON, N. Y.—A horticultural society has been organized here styled the Southampton Horticultural Society. The first regular meeting was held January 14 and the following officers elected: President, H. W. Clark; vice-president, Wm. F. Halsey; recording secretary, Wm. Gray; treasurer, Julius King; executive committee, F. Babcock, U. L. Agar, Martin McLaughlin and Jas. Guilfoyle. The Seed Adulteration Law. Through the efforts of Henry W. Wood, President of the American Seed Trade Association, a conference has just been held in Washington with the Chief of the Bureau of Plant Industry and the officers directly under him for the purpose of discussing the administration of the seed adulteration law. Some of the more important questions brought up were in relation to the present methods of obtaining samples for analysis, the limit below which the presence of foreign seed in a sample should not be considered as adulterants, and methods for preventing the importation of yellow trefoil for adulterating purposes. The conference was very harmonious and satisfactory, and it is believed will lead to a better understanding between the Department of Agriculture and the reputable seedsmen, who are just as much interested in stopping willful adulteration as the Department.

Salvia Splendens "Bonfire"

New Crop DREER'S RELIABLE FLOWER SEEDS

The following short list embraces but a few of the things which should be sown early. New Crops are now ready to send out.

Table listing various seeds like Ageratium Blue Perfection, Alyssum Little Gem, etc. with prices.

Table listing various seeds like Salvia Splendens (Scarlet Sage), Ball of Fire, etc. with prices.

Our Wholesale and Retail Catalogues for 1907 have been mailed to the trade. In case you have not received a copy, let us know, and we will send you another.

tain the most complete offering of Seeds, Plants and Bulbs in the country. Do not wait until the Spring rush, but order Now.

THE WEEK'S WORK.

Timme's Timely Teachings.

The Raising of Stock.

It is time to wisely plan for the coming season's work. To lay the course to be pursued and to consult notes and memoranda bearing on bygone experience. It is true there is neither a distinctly marked beginning or ending of seasons as understood by florists, one morning into the other and all combining to make things lively from one end of the year to the other.

To raise new stock from seeds or cuttings, although entailing much work, is in itself nothing especially difficult or perplexing, calling for far less knowledge or skill than the treatment of the stock in its equipment and especially final stages of development.

When trying to catch a train, but a works mischief when trying to catch a train in anything grown by commercial florists. It is not a whit less disastrous to be too early than it is to be too late with whatever may be raised for the stock trade. Success depends on having the stock ready to go at the right time, and this again depends on when the first start is made.

Bedding Plants.

The time has passed long ago when the raising and marketing of bedding plants was looked upon as a line of horticultural activity scarcely worth considering. Many of the florists, who in their high-held dignity regarded the industry with contempt when they first started into business on their own account at the outskirts of a large city, gladly turned to it as a means of timely salvation when their neighborhood grew up and home trade knocked at their door.

Much of the stock raised for outdoor effects during the Summer season is worked up from last year's stock plants. These until stripped of the last batch of cuttings must now occupy a favored spot, on a warm and well-lighted bench. Sturdy, short-jointed growth is the best for cuttings, and unless there is enough of this for home propagation it is wiser to purchase rooted cuttings, or good two-inch stock, to complete the needed supply than to root material unfit for propagation.

And while making up an order in this line some things not represented in the collection carried, should also be sent for in limited quantities in order to widen the range in variety and thus open up the best opportunities for the grower as well as his customers to test new sorts and to become familiar with varieties that might prove of greater value for that particular locality than some of those handled heretofore.

Cuttings.

As already said, good cuttings only will grow into good plants, and spindly and yellowish, unhealthy shoots should be shunned for the purpose of propagation. It is well to use the cuttings as they reach the desired size and proper condition for rooting, thus obtaining several successive batches of the most prominent kinds. The first lot of cuttings, should the stock plants hold forth the ready material, could now be struck of begonias, fuchsias, lemon verbenas, salvias, lantanas, double petunias, ivy-leaved geraniums, vincas, scented and fancy geraniums, English ivies, heliotropes and lobelias, with one or two more batches to follow later on.

BOSTON FERNS

Very fine bushy stock from 6 in. pots 60c.; 7 in pots \$1.00; 8 in pots \$1.50; 9 in. pot \$2.00. FRANK N. ESKESEN, MADISON, N. J.

DREER'S SELECT DAHLIAS

Varieties Specially Suited for Cut Flowers.

Strong dormant field roots, grown at our own Nurseries where every precaution has been taken in the handling and our customers may depend on receiving stock absolutely true to name.

There are many things in the pot plant and bedding line yet grown from cuttings which could with less expense and greater satisfaction be raised from seeds. In the case of the various kinds of lobelia, for instance, of verbenas, nasturtium, petunias, antirrhinum, Marguerites, Impatiens, Begonia semperflorens and salvia, a vastly better kind of stock is obtained by making a sowing in time or several in succession than by saving, housing and properly accommodating a lot of old stock plants and working up a new stock from cuttings. The seeds of all these, as they can now be had from all of our reputable seed firms, are as reliable as to vitality as if the grower had raised them himself, come as true to variety, name and color as it will ever be possible to produce them, and seedlings are better in all respects than plants raised from cuttings.

When to Sow Seeds.

Much of what florists grow is started by sowing seeds, but at present we will only consider the kinds of stock that come under the head of bedding plants and as such are raised from seeds and grown into good salable shape for that particular trade. All those kinds I shall find occasion to mention, if grown in a gardener-like manner, can readily be disposed of in great numbers wherever there exists any sort of up-to-date bedding plant trade. Where this is the case it will be found that this is a branch of the florist's business yielding good profits and full of bright possibilities for beginners.

Now and up to the middle of February the following kinds of seeds should be sown—lobelia, grevillea, Musa ensata, snapdragons, impatiens, Nicotiana glauca, verbena, myosotis, torenia, verbena and salvia.

From the beginning of March until the middle of April we start the seeds of petunia, nicotiana, cobra, ageratum, Phlox Drummondii, maurandya, centaurea, Marguerite carnation, celosia and annual dianthus.

All through April several sowings are made of the following sorts, scabiosa, schizanthus, asters, cosmos, stocks, wallflowers, zinnias and single dahlias.

In May many varieties of perennials for a following year's bedding trade are sown, such as pyrethrum campanula, delphinium, gallardia, digitalis, Shasta daisy, etc. These are sown outdoors in well-prepared seed beds, (not in frames) and are transplanted into the open field when large enough. Some of these are potted up in the Fall, as they sell best in that form the following Spring, while many of the perennials, now much called for, are sold in the form of large clumps dug from the field.

How to Sow Seeds.

Where many thousands of seedlings must be raised, as is the case where plants are grown for the wholesale trade or in fact on any fairly well-located retail place, things should be in ship-shape and so arranged and provided for as to cause no delay, confusion or inconvenience in carrying on the work as it should be. Any lengthy and detailed instruction on this point would be of little avail, if the grower himself is unable to detect faultiness in method or to quickly find means of bettering ways and equipment so as to economize in time and labor, without in the least curtailing the possibilities of good results.

Not just necessary, but most helpful for the raising of seedlings at this time of the year is a bench with brisk bottom heat. Wooden trays or boxes, not too heavy to handle, all of one size and just nicely fitting into this bench, are best to use for most of the seeds named. Let them be strongly made, three inches deep, provided with openings for drainage and with a bottom layer of an inch or so of unsifted fresh soil. On this an inch and a half of sifted good potting earth, moderately moist, is placed, and after being nicely leveled the seeds are sown. With a smooth piece of wood the soil is firmed and at the same time the seeds pressed into it. It is now when the watering is done, not before the seeds are sown as is so often advised. Any ordinary watering-can with a finely-punctured rose will do for the purpose of the first and every subsequent watering, since with any sort of care it is nearly impossible to disturb the seedlings. In adopting this way of sowing the seeds, only a very slight covering of sifted hops or light compost is needed for most of the kinds. This receives no watering until the little plants show above the soil, which is from three to eight days on a bottom-heat bench.

After Treatment.

If a good watering has been given at the time of sowing, no more will be needed for the coming of seeds until the plants are up, paper, lath shadings or muslin frames being used for shading during this interval. Those boxes, first showing the green tinge of sprouting seeds, are lifted and placed under a glass or themselves under bottom heat but now exposed to the full light. They now, as they grow, need water more regularly and will soon be in a condition when a removal to cooler and more airy quarters is necessary. Most

HENRY A. DREER, 714 Chestnut St., PHILADELPHIA

of the kinds are fast growers and will in a few weeks need a transplanting, either a potting up into small pots or a pricking off into other, deeper boxes, any good kind of potting soil being right for nearly all kinds. And now the half-hardy sorts, such as verbenas, petunias, stocks, snapdragons, lobelias, phlox, dianthus, wallflowers, dahlias and asters, should be placed in the coolest house, one with an abundance of ventilation and the clearest of direct light. Some of these, if the season is well enough forward, may go into frames. Whatever is in pots of the selling size should be placed, the pots closely packed and touching, where they can remain without further handling until picked over and thinned out in the selling. It is well never to lift any pot and tear it from its under-rooting until actually sold or brought forward for repotting. All the seedlings of this kind need no stopping or pinching in. They all grow into sturdy, bushy, well-branched plants without this aid, but not without the fullest allowance of air and light. The closer they can be stood to the glass the finer will they be. Any of them wanted for continued pot culture should be shifted along and re-potted before they become root-bound.

The Selling of the Stock.

In recent years I have been successful in educating many of my best customers up to the point of knowing good stock when they see it. This is not so easy to do as it would seem to anyone not in the bedding plant trade. We have yet lots of buyers, and new ones coming every Spring, who will prefer the poorest strip of a plant with a flower to the finest and sturdiest one without bloom, though it may show ever so many buds. The grower who manages to have all his stock in bloom at the right time is sure to win out against him who has the very thriftiest stock but behind in bloom. This will always be so and must be reckoned with and borne in mind from the start. But it is just as true that a poor plant stands no show alongside a good one, when both of them are flowering, which again proves that to hit it right must be the good grower's main aim. He should try to have all his plants in full bloom when the bedding season is on, which is not hard to do in the case of geraniums, heliotropes, pansies, ver-

Member The Florists' Exchange when writing.

benas, petunias, lobelias and others, while many kinds, of course, as asters, dahlias, Marguerite carnations and the like are readily sold to a class of people who know enough of plants not to look for flowers on these at bedding out time. With the exceptions of daisies, pansies and a few other things which are sold in clumps from frames or out of the border, all bedding plants are now

sold out of pots, this form being preferred by all householders who plant their own beds. The grower also finds it to his advantage to raise all he can in pots. The potting up takes no longer than pricking off, and the difference in price amounts to enough to render the former the most profitable way of doing business; it being also the most satisfactory to buyers.

American Carnation Society.

On Wednesday and Thursday of next week, January 23 and 24, 1907, the American Carnation Society holds its sixteenth annual meeting, with the customary accompanying exhibition, at Toronto, Ont. There is every indication of a most successful show and convention; the brethren across the line are doing all in their power in the preparatory work which shall conduce to that end. Assembly Hall of City Hall is where the affair will take place. Arrangements have been made with the Custom House authorities whereby undue delay to consignments of flowers, etc., for the exhibition will be avoided, and a special shipping label will be provided by Secretary Herr, Lancaster, Pa., to all who make an entry with him.

The prize list including the special premiums offered, is such as should call forth the largest

display of carnations ever brought together by this always interesting event in horticultural circles. An enumeration of the prizes has already appeared in our columns.

When one recalls the extensive and comprehensive character of the literature that has been issued by the American Carnation Society, and also has in mind the great wealth of contributions concerning the divine flower appearing in the trade press, the difficulty of presenting something new in the way of essays at each annual meeting of the organization at once becomes apparent. But the officers of the society have not fallen short in this respect for the Toronto convention, where will be discussed such interesting subjects as, "Are There Too Many New Carnations Introduced?" "Greenhouse Construction," "Carnations from a Canadian's Point of View," and, taking into consideration the growing popularity of the American carnation abroad, papers dealing with "American Carnations and Their Prospects in Europe," have been solicited, one from a grower in England, another from a Denmark specialist. In addition to the papers contained in the program the Question Box will doubtless elicit perplexing problems, the solution of which by those present will be of general benefit. It will thus be seen that a literary feast of no mean character is promised.

Albert M. Herr
Secretary A. C. S.

John H. Dunlop
President A. C. S.

It is only necessary to refer to the well-known hospitality of the Canadian brethren, who in their generous and courteous treatment of the stranger within their gates stand second to none.

A most important subject that will come up before the society for discussion and settlement will be the report of the Committee on Rules, composed of Messrs. C. W. Ward, F. R. Pierson, and J. A. Valentine. In this report the committee will make suggestions regarding a practical plan of inspection of new varieties at the establishments of growers who seek for such new sorts the society's certificate. The object of this innovation is to make the certificate, in a larger measure than now obtains, indicative of the real worth of the newcomers, thus becoming a more reliable guide to purchasers of novelties than it at present affords, at the same time rendering the much-coveted and highly-valued certificate more difficult of acquisition. The drift of the discussion on this subject at Boston last year was to the effect that, in addition to the reports of the visiting committees, the owners of the novelties be requested to furnish, under affidavit, information relating to the varieties not apparent to the committees, such as number of flowers per plant produced, the number of defective blooms, etc., the desire of the society being to collate every valuable point about a new carnation that should be known by intending purchasers. In other words, the blooms exhibited, and the raiser's bald statements concerning the variety, as to its growth, habit, productiveness, and other attributes, are no longer to "go" in the granting of a certificate by the American Carnation Society.

The certifying of new varieties has been, above all others perhaps, the one branch, of the society's work that has received most careful consideration, and, unfortunately, one that has been the most severely criticised. That it has been of value to the originator and distributor, and, to a greater or less extent, to the purchaser of carnation novelties is unquestionable, hence we suppose, the so-

ciety's pertinacity in holding on to it in its varying forms. Whether the plan as outlined at Boston, which, no doubt, in its most salient features will be incorporated in the report of the Committee on Rules, will increase the certificate's value, is a question that can hardly be finally decided offhand.

Looking at it from a disinterested point of view, and bearing in mind that an introducer of a new carnation could not, for his own self-interest as a merchant, willingly and maliciously utter and promulgate false statements concerning his introduction, the procedure proposed to be put in operation by the society appears to us to put a premium on the honesty and integrity of the American carnation specialists. If the word of a man cannot be believed without an affidavit, it would seem to be a risky undertaking to accept it with one. On the other hand, the introducer with "nothing to hide," may welcome this kind of investigation with the calmness and serenity that come from a complete knowledge of himself and his correct business methods—although wondering why these should be thus challenged. The society's proposed plan, as we see it, is simply the pitting of the visiting committee against the introducers as to veracity, capability to judge the merits of a carnation, and each from an interested standpoint—the one as seller, the other as buyer. It necessitates on the part of the society the appointment of committees, the men composing which shall be fearless, liberal-minded, unbiased, competent as expert judges in every particular, men whose morale is above the slightest suspicion—something that may not, as a whole, be always available or presented. Nor should the fact be forgotten that occasions are not wanting where expert inspection of novelties, where growing, with a view to certification of these, as well as in a general way, has been abortive; though these exceptions may go to prove the rule.

Far be it from us, however, to throw cold water on any scheme tending to the improvement of trade

Vice-President A. C. S.

Fred. A. Dorner
Treasurer A. C. S.

methods or to that which will make business run smoother or become more profitable to all concerned. Our object is to point out the drawbacks and difficulties of the committee-inspection and affidavit method, as these present themselves to us; and they are of so pronounced a character that, all things considered, we view them more in the light of a hindrance than a help to the society. We, however, await patiently the result of the deliberations at Toronto on a question that has, we think, great bearing on the organization's future welfare.

In this connection it may be of interest to summarize the various suggestions made with a view to the society getting at the actual merits of a new carnation and its adaptability to different localities, since the organization of the American Carnation Society.

At the initial meeting, held at Philadelphia October 15, 1891, the committee on resolutions recommended: "To submit all new varieties to a test committee of practical and successful carnation growers to be located in different sections of the country, to be named by the executive committee and approved by the president." We do not know that this plan was ever put into active operation.

In his address at Buffalo, February 16, 1892, President Lonsdale said: "It was proposed at the initial meeting in Philadelphia, that new varieties be tested by the vice-presidents representing the various sections of the country. These officers might hesitate to undertake so delicate a duty but if the plants came to them through the secretary under number, there need be no objections raised, and all that would be necessary for each vice-president to do, would be to report to the secretary upon the behavior of the varieties under trial. I hope that some such measure will be adopted before it gets too late, for I feel sure that seedling carnations will soon be as plentiful as seedling chrysanthemums." This suggestion in its entirety, too, as far as we know went by the board; and how true was Mr. Lonsdale's prediction regarding seedling carnations.

At the Pittsburg meeting in 1893 the matter was again up for discussion. There Mr. Hill advocated the testing of new varieties for three years before dissemination, and recommended tests in different parts of the country and in different soils. It was at the Pittsburg meeting that the society first decided to grant certificates of merit to varieties not in commerce, Mr. Hill advising that the judges "question very closely the growers and originators of these new varieties as to their characteristics."

Mr. Hill, then president, referred again to the matter in his address at Indianapolis in 1894, urging care in the bestowal of the society's medals and certificates. "Better that disappointment should occur to originators than that this society should endorse any variety that does not measure up to the very best—or a little better—than any at present in commerce. On the other hand, it is important that proper encouragement be given to those working on the lines of raising new varieties," said Mr. Hill.

At this meeting Fred Dorner in his paper on "New Carnations and Their Introduction into Commerce," said:

"The introduction of new varieties is a topic of much discussion. A great deal of dissatisfaction is experienced by seller and buyer. Various ways have been suggested to test the merits of a variety before it is thrown on the public, to save the purchaser from buying worthless stuff. A suggestion was once offered to appoint experimental stations, noted growers in different parts of the country to try their adaptation to locality as well as to test their merits on the originator's description. But what will all these measures avail in a large country like ours? Can we restrict the usages and liberties of trade as long as there is no physical or moral harm done by the article in question? Can the American Carnation Society compel a grower to observe its rules? No; not even if the society compel its own members. For if the membership becomes a fetter to his ideas he will simply leave it. Our society is not a society for amusement; it treats of our occupation, and any wrong, supposed or real, on one side, with dollars on the other, will soon decide which way to go."

Mr. Dorner added:

"I repeat it again, every grower must experiment for himself and grow that which will do best with him. He is not expected to try every new variety he sees advertised, but to select what may suit his wants or may prove a betterment over what he is growing, and give them a test on his place. It is unjust for one to condemn a variety he cannot grow with profit while another can. The grower of a new variety, if honest in his convictions, can not be blamed when it turns out a failure at other places. Sometimes the introducer of a new variety is accused of propagating the life out of a variety in trying to fill all his orders from a small number of plants. Such an accusation may sometimes be true; but on the other hand, the buyer sometimes follows this same example and keeps on propagating from the young, weakened plants and makes two and three out of one. The question of this kind of practice can be answered with the adage, 'as we sow we reap.'"

"Like all new articles, our new carnations have to run the gauntlet of taste and criticism of the grower and consumer; if tasteful to the consumer and remunerative to the grower, it is a 'go.'"

Eugene Dalledouze, presiding at the Boston meeting in 1895, recommended the method in vogue by the Chrysanthemum Society of America, in having judges in all the carnation centers, "members who, without favor or prejudice, will pass on the merits of new varieties as far as practicable. The plants should be seen growing not less than twice in the season, so that the judges may be able to report fully the particulars of each variety at our annual meetings." The plan proposed at Boston last year seems a slight amplification of the one recommended by Mr. Dalledouze eleven years ago. In the discussion following, it was suggested that the various florists' and gardeners' clubs could do

the work of inspection better than committees of the American Carnation Society, and the matter "was referred to the executive committee, with power to act."

It seems that committees were appointed in various localities, several reports appearing in the 1896 proceedings of the New York meeting, where Fred Dorner presided.

The subject was revived at the Cincinnati meeting in 1897, Richard Wilterstatter in the chair. Mr. Hill, while acknowledging that errors of judgment were liable to occur, said: "I believe that the men who are striving and seeking to introduce new varieties of carnations are conscientious in their endeavor and conscientious in regard to the statements they make concerning them." He believed that "before long we shall arrive at a method of dealing with this particular subject that will be much more satisfactory than obtains at the present time."

At Chicago in 1898, W. N. Rudd, president, a discussion of the matter also ensued. In a paper by Mr. Dorner, in regard to visiting committees Mr. Dorner said: "To see them (the varieties) once would be, in my opinion, not much better than the present system, and to see them several times would, by the increasing number of seedlings grown every year, cause more expense than the society or the growers would care to shoulder." Mr. Dorner favored the appointment of standing committees in the principal cities, "and let them sit once a month for five successive months, say the 15th of November, December, January, February and March," be-

George Mills
Superintendent of A. C. S. Exhibition

fore whom flowers of the novelties could be shown.

President Wm. Nicholson, at Philadelphia, in 1899, recommended the sending of a few plants of new varieties to prominent growers in different parts of the country for trial. The exhibition of a plant of a new variety was at this meeting characterized as "a humbug, a fraud, and an unnecessary element." Greenhouse examination was advocated. Mr. Ward discussing the subject said: "The man who buys carnations to any extent goes to the greenhouses anyway, if he is wise, and makes up his mind there. That is the only proper way." Mr. Ward also favored for the general benefit, to get some expert "to go to the greenhouses and examine the plants and report to the society before the certificate is awarded." He added: "Of course, we all know that there is the element of partiality in all these things, and the friendship of one man to another insensibly colors his reports. It is a known fact in human nature in everything that is reported upon, and an absolutely impartial report is almost an impossibility to get." He also said: "I have been opposed to making these certificates commercial affairs. * * * Having a variety refused a certificate to-day does not cut any figure with me, or with the majority of people who purchase carnation plants or new varieties."

Mr. Rudd expressed himself thus: "In my opinion the certificate simply says to us, that the variety, when grown to the limit, is capable of producing a very fine flower—at that period. It is utterly out of the question to go beyond that. This country is too big, and this society is too small, to enable us to follow that matter to the logical end, and that is to examine the variety at various times in the year as it is growing in the houses. We cannot do that, and we may as well give it up."

Subsequently in the discussion Mr. Rudd said: "I would rather take the opinion of these judges as to the qualities of the flower, and then take the man's word as to how many it will produce, and whether it is a clean, free grower and various things of that kind." This referred to gentlemen whom the speaker knew to "be good reputable business men, and honest as we go."

At Buffalo in 1900, Wm. P. Craig, president, the visitation matter was again exploited in a general

way. At the Baltimore meeting in 1901 (President Halliday) the matter remained dormant in statu quo. The same condition existed at Indianapolis in 1902, Fred Lemon, acting-president. The matter was still in abeyance at the Brooklyn, N. Y., meeting in 1903, presided over by Mr. Ward.

It was again revived by President Rackham at the Detroit meeting in 1904, who said: "I do not think no variety should be eligible for either a certificate or registration which has not been shown at least three times during the season, say October, January, and April, for two years before such a committee." Mr. Rackham also endorsed Mr. Nicholson's suggestion as to sending a few plants for trial to prominent growers in different parts of the country. At this meeting Wm. Scott of Buffalo discussed the subject of "Exhibiting Carnations on lines similar to those of the Chrysanthemum Society of America." Mr. Scott advocated the selection of ten or twelve florists in different parts of the country to whom a few plants of new varieties should be sent for trial. "They should not be men or firms that are interested in the distribution of their own seedlings. That is evident, for human nature is still human nature, and a man who had a scarlet variety which he was putting on the market would hardly feel that it was his duty to grow and boost some other fellow's scarlet variety. If he did, he would be more saintly and unselfish than any one who has lived for nearly 2,000 years."

"We cannot make this compulsory, either with those who are to give these new varieties a trial in their houses or on the man who intends sending out his new varieties, but I believe there would be no difficulty in finding a good, capable man in every neighborhood glad to grow twenty-five plants of any variety sent to him."

In the discussion Mr. Rudd reiterated his views on this matter. He said: "The idea that this society can ever, or ever will be able to put the seal of commercial merit on a new variety is all rot. You never have done it, you never will do it, and you cannot do it." He was of opinion that there was benefit in having a variety tested in different parts of the country, reports on the tests to be made public.

Mr. Ward said: "I know that the only way, the only practical way I can get any knowledge of what a carnation will do with me, in my soil and under my conditions, is to take it on my place and grow it."

A motion was carried at Detroit to the effect "That certificated varieties intended for dissemination the following year be sent to such localities for trial as the Board of Directors may designate, under proper restriction. Reports of such trials to be made to the secretary of the American Carnation Society by the individual grower or a committee of a local club."

President Hartshorne took up the subject in his address in Chicago in 1905. He recommended the exhibiting of new varieties at shows held at different seasons of the year, and the granting of the society's certificates for the period at which the flowers were shown. He also favored visits of inspection at the grower's establishment by committees appointed by the president. In the discussion of that part of Mr. Hartshorne's address, Mr. Ward, as a member of the committee appointed to consider same said, in regard to the recommendation for a visiting committee to visit different seedling growers and judge of the seedlings growing at different times of the year: "It was the sense of this committee that that was not a practical suggestion. We have a committee of that kind in connection with the New York Florists' Club, and while in the main it is working fairly well, we find that there is a great deal of local prejudice there, and that sometimes that prejudice makes quite a considerable feeling where these things are judged; so the recommendation to cover the whole United States we cannot see that it is practical and we have reached the conclusion to report against that recommendation."

The discussion of the subject at Boston last year has already been touched upon.

The foregoing citations from the society's reports are given to show the perplexing nature of the problem under consideration, as well as to present the opinions of prominent men in the society on a most important subject that is ever recurring in the society's deliberations, one that seems very difficult of satisfactory adjustment.

Important to Exhibitors at Toronto.

The arrangements for the carnation convention are all made, and all that is wanted is good weather and a good crowd of delegates to make it a grand success. Exhibitors should be sure to use the official label, and also be sure to pay single first-class one way and ask for a certificate so that all may get the benefit of the cheap rates. The official label will simplify matters with our custom department at this end. We have made arrangements for all goods so labeled coming without any trouble. Stock sent by express should be addressed to E. F. Collins, City Hall, Toronto, and stock sent in other ways should be sent in "bond to Toronto," when we will not have any trouble in getting it released. To exhibitors coming with their stock, be sure and have it "bonded to Toronto," as if not in bond it will be examined at the border and duty collected on it. Again, use the official label and ship "in bond to Toronto." Come all who can and have a good time with us. THOS. MANTON,

CARNATIONS

Many are of the opinion, freely expressed at recent exhibitions, that the ultimate limit in the improvement of the carnation has been reached and that nothing superior to what has already been accomplished need henceforth be looked for. The never-ceasing onward movement in all lines of progressive endeavor, as witnessed on every hand, affords a forcible argument against this view. One of scarcely inferior force is supplied by the fact that the utterly perfect carnation is still wanting.

When, in estimating the worth of the present-day carnation, the plant, its constitution, habit and behavior—and not merely the very best one of its blooms—is considered, it will be found that there is yet plenty of room for improvement. In the advancement of carnation culture a most splendid course has been run. But it is time to grant sober survey and staid contemplation a place alongside boundless enthusiasm.

The Exhibition Carnation.

Carnation blooms, as displayed at our public shows, produce a dazzling effect and usually form the most attractive feature among the various exhibits. As a means of arousing greater interest and promoting trade, nothing more fully answering the purpose could probably be planned. But when this gorgeous array of blooms has been brought together for the sole purpose of guiding the judges in deciding upon the merits of varieties thus set before them, this purpose is not fully served. Flowers as staged nowadays in no way reflect the true status of the present-day carnation. The prizes awarded cannot be relied upon as truly setting forth the real value of any one variety as gauged by the commercial grower. There was a time when this could safely be done, not so now. Twenty-five or fifty blooms, selected for exhibition purposes from as many as five or ten thousand plants, and these under

Imagination vs. Reality.

The fact that the carnation is the leading flower as to popularity and extent of cultivation, has led a great many people to look upon its culture as the most profitable of industrial pursuits. In an abstract point of view this is all very well, but in actual practice it has proved deplorably wrong. The profits now possible to be realized in the raising of carnation blooms for the wholesale market are in no way commensurate with the cost of production, or proportioned to the profits made in most other lines of floricultural exertion. Effusions respecting the great profits in carnations which imaginative enthusiasts indulge in from time to time very rarely bear the dry light of numerical calculation.

There are growers, no doubt, who by an occasional hit or combination of favorable junctures have for a season, or probably two, made money by growing carnations for the cut flower market. But in trying to make things come their way a second time, or to hold fortune's favor for a number of successive seasons, they generally were out in their reckoning and met with results more or less discouraging. Of the many beginners who invariably went into carnations first, few remained in it any great length of time, either selling out to some other new-comer or turning their places into something that more liberally rewarded their labors. And what would become of those large, superbly planned carnation establishments, were it not for the prop that their millionaire owner's idle capital affords, or for the flourishing sale of plants and rooted cuttings; or should all this fail, a timely branching out into other lines of commercial plant traffic? It is not the raising of carnation blooms, pure and simple, that will uphold them. Even those who consider empty halo worth striving for cannot afford for any great length of time to disregard substantial gain. Anyone who has sampled all the different varieties of experience in the growing of carnations commercially, while perhaps seeing no cause for regret, finds still less for boundless gratification when summing up the net profits at the end of the average season.

most eagerly sought for and brought the highest price, which certainly is not now the case. I will not state it as a fact, but it is likely that indoor culture during all or the greater part of Summer, as practiced nowadays, aside from its being more expensive than old-time field culture, also tends to diminish net receipts by inducing the plants to throw most of their flowers at the most unfavorable seasons as far as demand and prices are concerned.

The frequent renewal and providing of reliable stock for every ensuing season, owing to the rapid deterioration of present-day varieties, now is a matter of considerable expense and great uncertainty. But there is no choice; either this or incurring still greater loss by holding on to varieties fast giving out and barely worth growing.

Then, too, the great loss of stock from various causes, often beginning in the cutting bench and never coming to a stop until it ends with the wholesale sacrifice of the finished product at the overstocked market, is a vastly deeper cut into the clear profits of present-day carnation culture than most growers are aware of. The loss of valuable stock through stem rot alone amounts to many thousands of dollars every year, while the loss through waste of salable blooms at times when the cut brings nothing or very little is incalculable.

All these are causes most active in the lessening of clear earnings looked forward to by the actual carnation grower. But there are others not less obvious to anyone observant and on familiar terms with truth-telling figures. There is nothing quite so convincing as one's own accurate figures.

What Is Needed.

What now is most needed is a greater number of those varieties, commonly styled commercial or bread and butter carnations, these to help us along until finally the ideal carnation makes its appearance. This, as I have it in mind, should combine all the good qualities found in the present-day exhibition as well as commercial carnation, as also those once possessed by the carnation of bygone days. The reclaiming of these properties, naturally inherent in the species, but lost while striving for length of stem and size of bloom, should be made one of the chief aims in future hybridization. On these qualities—health, lasting vigor and profusion of bloom—we build our hopes of being adequately rewarded for labors in a line of carnation culture, far more important than the mere capturing of prizes awarded to a handful of blooms searched for among thousands of plants. What now is most needed is a race of carnations, not necessarily less exacting as to culture, but more to be relied upon as bringers of satisfying returns when grown as producers of marketable flowers for wholesaling. This, I think, should be the cardinal point in estimating the value of a carnation. Uncle John Thorpe set up a lofty ideal for hybridists to aim at, little aware perhaps that one of his own productions came nearer to being the commercial grower's ideal than any other variety since sent out. I claim that no carnation introduced since ever paid the actual grower better, or for so long a period, as did Portia in its time. Nor do a great many of the newer carnations prove as profitable as once did Lizzie McGowan, Grace Wilder and William Scott.

FRED W. TIMME.

Split Flower

Model of the Pincers

Flower after Mending

Baur Floral Company's Clip for Mending Bursting Carnation Blooms

the highest of culture and at their very best at the time, furnish, in my opinion, no reliable standard for correctly judging that variety.

It has already been found necessary to divide the newer productions into two classes—the exhibition and the commercial carnation—a proceeding at all times indicative of something amiss in the affairs of progressive effort. It might well be asked what is the difference between the two? Are exhibition carnations too good for the general market, and commercial varieties not good enough to be exhibited? Are exhibition carnations such that under an extra amount of pampering care produce amazingly fine flowers, but so sparingly and at such a cost that they cannot be grown for the market with anything like adequate profit? What then, I ask, has been accomplished in the interests of him who grows carnations for a living? Is it not about time to do something for him?

Some time ago—not at the holidays—I had occasion to admire a few hundred carnation blooms of the exhibition type at the salesroom of one of our largest growers. The flowers were held at \$8 per hundred. I considered it a good price according to what carnations then brought, and said so. But I was assured by the grower that everyone of the blooms, moving slowly at 8c. a piece, cost him 10c. to produce—a profit truly out of sight.

Why Should This Be So?

Why should carnations, as produced to-day, they being much finer, much more in demand and bringing higher prices, be less profitable to grow than those raised years ago? Is it to be inferred that steadily advancing improvement runs on lines concurrent with steadily decreasing profits? Surely the conclusion is one to be avoided if by any possibility a less startling explanation can be found. The larger amount of capital invested in up-to-date carnation houses, as compared with those of former times, the greater cost of equipment and running repairs, the higher price of material, labor and fuel, all combine in cutting down clear gain. But all this has not increased initial and running expenses any more in the growing of carnations than in that of other crops, which latter prove as profitable as ever and some even more so. Why not carnations? Truly it cannot be laid to a decline in interest or lack of cultural information. We must search farther.

Going back to a time when long-stemmed carnation blooms had already displaced the stemless flowers on the market, say twenty years ago, we find, in comparing notes, that at that time plants produced twice and three times as many marketable flowers as do plants to-day, averaging up from ten to fourteen varieties, as grown then and now. And besides this, it is found that at that period the main crops of flowers were marketed at seasons when they were

Manipulating Split Carnation Flowers.

Improved methods in growing carnations and the introduction of improved varieties, though having made great progress in the last decade or two, have not as yet mitigated to any great degree the provoking habit in the divine flower of producing a large percentage of malformed blooms, commonly termed "splits." How to mend these flowers so as to enable the dealer to obtain as high a price for them as possible has no doubt engaged the best thoughts of not a few carnation specialists. Split carnations are a product of every carnation growing establishment, which, we are safe to say, will be with us for some years to come at least, and what careful cultural methods fall to accomplish while the blooms are developing on the plants must be provided after they are cut. As yet, little progress has been made in the introduction of appliances calculated to turn these malformed flowers into a product deserving of recognition in commerce or on exhibition tables. It remains for us, then, to find some means of fastening the calyx and petals into their natural position that is either entirely invisible, or if detected, leaves no room for any objection.

A little device, recently invented, and for which a patent has been applied by the inventor, A. J. Baur, Erie, Pa., we believe gives us something that is practically invisible and leaves no possible room for objection from even the most particular customer; for instead of passing around or through the flowers, the little wire clip used serves simply to clasp together the two broken edges of the split calyx, holding it in its natural position and bringing the petals into exactly the position that they would have occupied, had the calyx not been split. So thoroughly well is this accomplished, that the flowers, after being thus mended, have been regularly sold with the highest grade at the highest price of fancy blooms, and thus far not a single objection has been heard.

The accompanying illustrations give a good idea of the work done by the device mentioned. Figures 1 and 2 are reproduced from photos as nearly true

to life as an expert photographer was able to make them. They were taken from the same flower, of the variety Mrs. Thos. W. Lawson, before and after mending. The small portion of the wire clip used to mend the break that shows outside the calyx, may be seen in the illustration if carefully looked for. No effort was made to conceal anything in taking and finishing the pictures, the photographer being instructed to bring out the details as nearly true to life as possible. The wire clip, being made of galvanized wire, is almost absolutely invisible against the color of carnation foliage. In the illustration showing the mended flower, a slight malformation may be seen in the arrangement of the petals. This is due to the difficulty of having been compelled to put on the clip with a common pair of pliers, the brass model being in the hands of the manufacturer at the time of taking the pictures. One of the guard petals was destroyed in the operation, giving a portion of the flower an empty appearance. Figure 3 shows the pliers that are used in applying the clips. The photograph was taken from a wooden model, for the reason that the brass model was in the hands of the manufacturer. It was not possible to show the smaller details in the instrument on this account, but the picture gives a good idea of the general construction of the pliers. The jaws are shaped so that the wire clips can be easily and quickly picked up. The front end of the pliers is provided with two prongs, by means of which the stray petals are pushed up into their natural position with one movement, and the act of catching the two broken edges of the calyx and pressing down the teeth of the clip, complete the operation, and it is all done in much less time than it takes to tell it. The clip used at present and shown in the picture is made of No. 22 wire, but a smaller size wire will be used in those that will be offered for sale, namely No. 25.

The inventor anticipates a great demand for the device, and with that in view has given a large order for its manufacture. He will be at the convention of the American Carnation Society to be held at Toronto this month, where his invention and the work done by it will pass under the critical scrutiny of the foremost carnation men of the country, and expects soon thereafter to have the article ready to offer to the trade. E.

A Critical View of Winsor Carnation.

At Scarborough, N. Y., there is a most wonderful transformation occurring, for here among the foothills, on newly purchased land, coming right down to the railroad station, the F. R. Pierson Company is establishing what most assuredly is destined to be the most picturesque and beautifully located plant nursery in America. These grounds at present cover nearly sixty acres, and many fine collections are to be seen. The newly acquired grounds form part of an idealic landscape. High up on the bluffs are obtained superb views of the Hudson River, with its guarding Catskill Mountains or palisades stretching away on both sides many miles in the distance; and from the ravines or vales here can be caught the most enchanting views of an unparalleled panorama of nature's own work. Mr. Pierson intends to enrich this scenery by an extensive and select collection of the flora of all countries grouped in ways that will not only command admiration, but do much to encourage higher ideals in landscape work. Here, too, there is being brought into existence, as it were, a veritable ocean of glass; monster crystal-

New Houses of F. R. Pierson Company, Scarborough, N. Y.

like plant forums or palaces surpassing the dreams of past generations.

In addition to the well-known eight 300-foot rose houses, there have recently been built three plant houses over 300 feet in length and nearly sixty feet in width. To merely stand at the end of one of these gigantic structures almost bewilders one, and conjures up memories of the days—even in our own time—when the entire commercial plant houses of the State could almost be put within one of these magnificent triumphs.

'Twas here, in one of these enormous plant houses, built on the U-bar design, that we, in company with a party of expert growers from many States, found ourselves amazingly admiring one of the grandest sights we at least have seen for many years, and positively the best individual flower-growing picture we have ever seen. It was a house of blooms and buds of the new carnation Winsor. Stop a minute and follow me; let your imagination and the facts commingle in pleasure and surprise. We are in an immense glass house which in itself represents the very highest type of a commercial plant house—the most advanced product of horticultural-architectural brains. This particular house is 300 feet long, 50 wide, heated and ventilated by the latest improvements among which are numerous innovations. In it are ten seemingly endless beds or solid benches divided half way by a 6-foot passage-way. In these beds are planted fifteen (15,000) thousand Winsor carnation plants and on these plants—by a carefully counted bench—a fair average would place the number of visible buds and blooms on these 15,000 Winsor carnation plants this day, the 9th of January, at 165,000. Some may look upon these figures with vast incredulity, but they are there to be seen nevertheless. Is there anywhere such another sight? Was there ever such a sight?

And what is this carnation? Let us consider it from a cultural standpoint; yet first let us say it is one of the divinest of the "Divine flowers." In its

history we find that it is a seedling raised from the pollen of the varieties Daybreak and Albertini, on that of Lawson, resultant in an entirely distinct and far superior creation, yet, withal, retaining all in its excessive superiority, that which is best in its triple parentage. If there is any predominant element in its bearing it is that which distinguishes the Lawson. Its robustly healthy and profuse foliage is, if anything, a shade lighter than that of the above mentioned variety. Its flowers are borne proudly on a stiff, sturdy, upright stem on an average of from 14 to 24 inches in length, sufficiently long enough for all and every purpose for which carnations are used. There is none of that costly and unfortunate snappy brittleness about the stem that characterizes those of other varieties, for its stem is loth to part with the flower as the bloom is in its tenacity of loveliness. In all of these thousands of developed and prospective flowers not a single bursted calyx was discernible, nor have we heard of any among the thousands that have gone before. In size it is the equal of Lawson or the vast majority of those known to commerce. In productiveness it has no equal. Among its myriads of foliage there is not the slightest sign of weakness or the ills peculiar to many carnations. It is in every way the commercial carnation, par-excellence, of to-day and of the future; and when we say "commercial carnation" we mean to give it the full significance of that appellation which is warranted by its past and present actualities and its vividly apparent prospects. Here, as if to prove in a practical way its longevity and endless productiveness are three benches of Winsor planted two years ago. They have never been disturbed, merely receiving the ordinary culture necessary to stock plants. To-day, they are a mass of healthy foliage, blooms and buds, vying in a way with their progeny's grandeur—a revelative sight indeed to behold.

Twelve thousand of the plants were put out in these solid beds from 2½-inch pots last June. Large shipments of flowers were gathered in early Octo-

Carnation Winsor in Greenhouses of F. R. Pierson Company, Scarborough, N. Y.

CLUB AND SOCIETY DOINGS.

ber. In November ten thousand blooms were picked. In December twenty thousand flowers were shipped from them to the most critical of all markets, and the fairest calculation is that they will produce thirty thousand select flowers in this month of January. The yield at present for these twelve thousand plants averages one thousand fine blooms a day, with an endless chain of them in sight; and so by this it will be seen that Winsor answers the call magnificently at and during the time flowers are most profitably wanted. It is in no way or sense one of those spasmodic or uncertain varieties called "croppers." It is a continuous and dependable bloomer, and in this particular it is at once the poor man's friend and the rich man's pride. "Pick and come again to-morrow," is a consistent and applicable motto for this grand flowering plant.

To illustrate how highly it is valued in the New York cut flower market would require much space; suffice it to state that it brought \$20 per hundred, wholesale, at Christmas, and now averages from eight to twelve cents. Some time ago, in our "Retailers' Notes" (which particular item was reprinted in European horticultural papers), we stated the day would come when American growers would supply Europe in Winter with American grown carnations. We had in our mind's eye at that time such a carnation as the Winsor, which for its lasting qualities unusually mark and establishes its claim to being one of the most durable and best of all shippers—a vital consideration in the market at least.

In our depiction of Winsor as growing in the so-called solid bench, it must not be inferred that we either argue in favor of this system or that Winsor is particularly susceptible to its advantages, for in one of the other large houses mentioned it is shown grown on elevated benches, and under various treatments, on and through all of which it surpassingly recommends itself to the most critical. For instance, the plants on one elevated bench were from 2½-inch pots and planted here on August 1. Flowers were gathered from these in November, and there is a fine crop on them now. This particular bench is the wonder and admiration of all visitors.

There are many hundreds of new beginners and long-struggling flower growers in this country who cannot afford to either invest sparse capital or devote their days and nights in doubtful experiments with highly-colored and floridly-lauded novelties. Winsor especially appeals to those who need a surety. The conditions attendant to the present era demand to be met with a large amount of resolute certainty. No one, not even the wealthiest, can afford to deal with or look complacently on failures or a too long deferred success. Immediate and lasting results are every business man's ambition, and it is a certainty that Winsor will be a boon to all who grow it; more especially will its great qualities recommend it to the small grower with a local trade, the private gardener, who must provide flowers at all times, and to those who supply the needs of a fastidious market.

While it establishes a new standard in the pink color, one which will often be referred to and equals most flowers in size, and will in every sensible way equal the best exhibition varieties, yet unlike most fancy carnations it does not depend for future existence or popularity on the temporary and fast-fleeting praise or victories of the exhibition table. Winsor from its present appearances intends to stay and long remain an ideal money-making carnation. Its color is solid pink, almost true pink, darker than that of William Scott, much lighter than that of Mrs. Lawson. The retailer values it highly because its color renders it adaptable to all uses. It is sublime under artificial light, inspiring in daylight, lending its beauty to conform with the laws of harmony when in juxtaposition with most other flowers. We recommend it because it is more than good—it is magnificent.

J. IVERA DONLAN.

James Sharkey.

James Sharkey died at his home in Roslindale, Mass., on Friday, January 11, after an illness lasting only three weeks. Mr. Sharkey, who was one of the well-known gardeners of Boston, was born in Ireland 55 years ago. He was a graduate of the Glasnevin Botanical Gardens, Dublin, subsequently being with Hugh Low & Company, Clapton Nurseries, England. On coming to America he was in the employ of Professor Sargent at his Brookline estate, afterward having charge of the estate of Mrs. A. W. Blake. He was for more than a decade connected with the Boston Public Grounds Department, then in charge of the late William Doogue. About 4 years ago he left this department and for a year or more had charge of the planting of various estates for Edward MacMulkin. For the past three years Mr. Sharkey has been with the firm of R. & J. Farquhar & Company, having done considerable ornamental planting for them in various sections of the country; but recently he had been in charge of their greenhouse department at Roslindale. Mr. Sharkey was of a retiring disposition but will be missed by a host of friends for whom he had at all times a kindly word.

J. W. D.

NEW YORK FLORISTS' CLUB.—The meeting held on Monday evening, January 14, 1907, was one full of interest, it being the occasion of installation of officers, the reading of inaugural addresses, appointment of committees for the year, and other important business. There was a large attendance of members. The retiring president, John Scott, introduced the newly elected president, C. H. Totty. Mr. Scott, in his valedictory remarks, complimented the club on the work done during the year, which had tended to make the twelve months just past a banner year in the history of the organization.

Mr. Totty makes a first-class presiding officer, and went into the work of his new office like an old-timer. In the course of his opening address he referred to the progress which the club had made, both in increase of membership and in the regard with which it is considered by the horticultural world. His aim would be to put no obstacle in the path of its progress or to deviate from the policy that had successfully marked the terms of his predecessors. He made a suggestion that the club appoint a committee on closer relations with the S. A. F., and thought that much good would result if all the horticultural societies throughout the country had a connection with each other through the national organization. Regarding the title of the club, he questioned whether the name had not in the past acted—as some of the

Single Bloom of Carnation Winsor.

members thought it had—to keep out a large body of private gardeners, who, as practical horticulturists, would be valuable men in the club's ranks. If such a view did exist, he urged that means to correct it should be found. Whether this could best be done by personal solicitation, or through the operation of a special committee, he left to the club to decide. At all events, an effort should be made to induce more private gardeners to become members. He recommended that the award committee use its best judgment in scoring exhibits, so that the New York Florists' Club's approval placed on any new plant or flower will mean that that particular variety is worthy of such an honor. He advised keeping the merit marks up to the standard, and to be governed, as in the past, by an honest and conservative estimate of the novelties submitted for adjudication.

A greater use of the question box was also urged. He recommended a continuance of the outing, which was the "children's and mothers' day;" and suggested the establishment of a bowling team in connection with the club, regretting that New York makes such a poor bowling showing at the annual conventions of the S. A. F. The question of the annual dinner was also touched upon.

Mr. Totty said he would like to see some provision made before long for a permanent home for the club, and would favor the appointment of a building committee which could look over the field and study out ways and means to acquire title to property in the name of the club. He hoped a financial plan could be evolved whereby, without touching upon the present balances of the club, something could be done as a commencement along this line.

In conclusion, Mr. Totty asked for the encouragement and support of every member during his term of office.

He was followed by Vice-president A. J. Manda, who also touched, among other things, upon the necessity of acquiring a larger membership from the ranks of the private gardeners, and the continuance of monthly exhibits. Brief speeches were also made by Secretary Young, Treasurer Wheeler,

trustees John Scott and W. F. Sheridan, all promising their best efforts in behalf of the organization.

President Totty appointed the following committees for the year: Legislative—Patrick O'Mara, W. F. Sheridan and E. V. Hallock. Essay—Alexander Wallace, John Scott and Patrick O'Mara. Award—W. H. Duckham, S. S. Butterfield, Joseph A. Manda, Jr., Henry Hurrell, R. C. Pye, Harry Turner and H. Hoffmeier. Exhibition—James T. Scott, A. J. Guttman, C. Webber, E. Dailledouze, Philip Kessler and H. Weston. Outing—Frank H. Traendly, J. A. Shaw, Alfred Rickards, G. Burnett, W. E. Marshall, John Donaldson, Alfred Zeller, M. Gottleb and A. H. Langjahr. House and Entertainment—John B. Nugent, Jr., Wm. Rickards and R. M. Schultz. Dinner—John Scott, John Birnie and W. F. Sheridan.

Treasurer Weathered read his report, showing a balance of \$2034.57 in the treasury.

W. J. Stewart on behalf of the committee read resolutions prepared on the death of Mrs. E. V. Hallock, which were ordered spread on the minutes and a copy sent to the family of the deceased.

The following were elected members: Paul Niehoff, J. D. Cockcroft, John Seligman, Joseph Levy, Malachi Tierney, and C. R. Glockner.

Nominations were made as follows: Robert E. Berry, H. A. Hornecker, A. Weissenberger, A. Bergerow, A. E. Faulkner and George E. Dickinson. John Donaldson was elected a trustee to serve out the unexpired term of Mr. Totty, elected to the presidency.

Considerable discussion ensued on Mr. Wheeler's motion to change the by-laws whereby the treasurer would be placed under bonds. The matter was ultimately referred to the board of trustees.

Secretary Young read a letter from C. H. Allen, Floral Park, N. Y., expressing appreciation of his election to honorary membership.

A very pleasant feature of the evening was the presentation of a handsome silver tea set to Charles B. Weathered, the retiring treasurer. Mr. Sheridan in making the presentation said:

"The roll of membership of the New York Florists' Club contains the name of a man who was one of its organizers. During the life of the club he has been a most zealous worker in its interests. He has given his time and effort to carry it through periods when it seemed there was little left but its name. He has aided all its officers by his advice. His loyalty was certain; his enthusiasm never flagged. He was one of the incorporators of the club and its treasurer for nineteen years, always resisting any unnecessary draft on its funds, yet with his own purse he was ever ready to assist all projects that might redound to the fame of the club. All of us can testify to his unfailing courtesy. That he should be always reminded of their appreciation and esteem, his fellow members have delegated to me the pleasant duty of presenting to Mr. Weathered a tea set to grace his board, to remind him of the esteem and affectionate regard in which he is held, and to wish him and Mrs. Weathered a long and happy life." (Applause.)

Mr. Weathered received a grand ovation, the members rising to their feet and applauding him for several minutes. He feelingly, and with tears in his voice, expressed his great appreciation of the gift, which was highly prized by himself, and which he knew would be equally prized by Mrs. Weathered. It had always been a pleasure to him to work on behalf of the New York Florists' Club, and this token of their appreciation and esteem would be handed down to those of his family who are coming along as an incentive to them to do likewise.

Phil. Hauswirth, of Chicago, secretary of the S. A. F., was present, and made a neat speech, in which he urged the carrying out of the president's suggestion relative to the appointment of a committee on closer relations with the national society. He believed every club in the country ought to do that. In the early days each of the florists' clubs was organized to do the preparatory work connected with the annual convention of the S. A. F., and he was of the opinion that the same interest should be maintained. Referring to the contemplated national flower show to be held in Chicago, Mr. Hauswirth pleaded for the co-operation of eastern growers, without which, he said, it would be impossible to present representative examples of the stock grown in America. He lauded the ability of the eastern growers whose stock was second to none in the country.

President Totty, in speaking of the recent exhibition held in Chicago, stated that had the members witnessed the able and speedy manner in which the work of getting up a show was done there, they would think the decision a wise one to hold the national flower show in that city.

Benjamin Hammond, Fishkill, N. Y., secretary of the American Rose Society, spoke a good word for the forthcoming exhibition of that society to be held next March in Washington, D. C. He told of the great benefit of flower shows generally, and said that it was the duty of every florist to help such shows along.

Robert Simpson, president of the Rose Society, followed, speaking on the same lines as Mr. Hammond. Mr. Simpson suggested that it would be a good plan for some of the members of the club and others interested in New York to donate special premiums for this particular exhibition. He urged the growers to make a representative display of rose plants in pots.

A discussion then followed on the nature of the annual dinner; some favored a beef-steak dinner, or one on lines different from those of the past two or three years. It was finally decided that the annual feast, as usual, be enjoyed some time in

February, and that the price of the tickets be \$5. President Totty appointed as a committee on closer relations with the S. A. F.; Alexander Wallace, W. F. Sheridan, John Birnie, F. H. Trendly and John Scott.

The meeting, which for interest and business done augurs well for the success of the present administration, adjourned at a late hour.

The exhibits consisted of a plant of moschosma, shown by W. H. Duckham, Madison, N. J., which was covered with tiny white flowers, somewhat resembling the tamarix in appearance. The award committee expressed the wish that the plant be shown again. The moschosma is closely allied to the herb basil, and if the variety exhibited can be successfully raised from seed, it should be a desirable subject for commercial purposes. F. G. Mense, Glen Cove, L. I., showed a plant of a new dwarf salvia, *S. nana compacta*. The plant was one year old from seed, and was covered with rich scarlet blossoms; the committee requested that this variety be shown again. Edward J. Norman, Lee, Mass., showed a collection of *Cypripedium insigne*, in variety, for which he was awarded a cultural certificate. The Cottage Gardens Company, Queens, N. Y., exhibited a vase of well-grown blooms of the new carnation Beacon; this variety having already been awarded a preliminary certificate, no further award can be given until the club's committee visits the grower's establishment. W. C. Krick, Brooklyn, showed some of his patented flower pot hangers and holders, for which he received the thanks of the club.

ST. LOUIS FLORISTS' CLUB.—At the meeting on Thursday afternoon of last week the members had a hot old time. Regarding the flower show proposition, it looked like the case of one man closing up shop in order to give the other man a chance. The meeting opened at 2:30 p. m., with President Irish in the chair, being attended by forty members, a few visitors, and a delegation from The Horticultural Society. After regular routine business the chair called for the report of the flower show committee. F. A. Weber being out of the city, Secretary Beneke read the report, stating that \$2,540 had been subscribed. This amount did not seem to satisfy some of the members, who moved to squash the flower show, as the \$10,000 had not been raised. This motion was very sensibly ruled out of order by the chair, as the minutes showed that the time allowed the committee to raise this sum was the February meeting. Two applications for membership were presented—one by Pierre Schneider, the other by Henry Niemeyer, both of Kirkwood, Mo., growers for this market. Frank Fillmore moved to have a carnation exhibition at the next meeting, and \$50 in prizes were offered the trustees to rent a hall for same and have full charge of the exhibition. Swan Peterson, Gibson City, Ill., exhibited a vase of his fine white seedling carnation, No. 127. This the judges awarded eighty-five points, and voted it as a coming commercial variety. The judges were Emil Schray, J. F. Ammann and A. Jablonsky.

The question box brought out a number of interesting topics which caused quite a discussion. The next meeting will take place February 14 in the hall provided by the trustees, when the carnation exhibition will be held. This meeting will be open to all florists and the public, to whom notices will be sent by the secretary. ST. PATRICK.

WASHINGTON (D. C.) FLORISTS' CLUB.—The premium list for the Spring exhibition to be held in conjunction with the American Rose Society, March 13, 14, 15, 1907, has been issued, and embraces prizes for stock seasonable at that time. Premiums have been donated by Peter Henderson & Company, S. C. Briggs, Henry F. Michell Company, John Clark, Peter Bisset, George Field, the local florists' club, George H. Brown and Charles McCaughey. Special prizes are offered for the best hybrid geranium, best seedling carnation, and best seedling rose, the two latter to be shown for the first time. Copies of the list can be had on application to Charles McCaughey, secretary, Eighteenth and Kearney streets. N. E.

TARRYTOWN N. Y. HORTICULTURAL SOCIETY.—The eighth annual dinner of the society was served in the Florence Hotel Wednesday evening, January 9, when upwards of sixty members and their guests partook of a well prepared menu, and spent a very enjoyable evening. The tables were tastefully decorated with carnations; sweet peas, *Adiantum Farleyense*, *Asparagus plumosus*, and *A. Sprengeri*. Some fine vases of Winsor carnation came from the F. R. Pierson Company and were greatly admired. Mr. Saltford of Poughkeepsie had a number of blooms of a monster pink carnation seedling, each bloom measuring four inches or over. A great feature in this variety is its fine serrated petals and full center. It may be best described as very much resembling a carnation poppy.

Among the many after dinner orators were W. A. Ely, who ably officiated as toastmaster; District Attorney Yeung and Surrogate Millard. F. R. Pierson told of the good work accomplished by this society, not only locally, but wherever horticulture was the issue throughout the United States. He said that the society had a financial credit of nearly \$1,000—and hoped in the near future that the permanent fund would be strong enough to carry the society, independent of annual collections.

DAVID McFARLANE.

MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY.—The third annual dinner of this society was held at the Sheridan Hotel, Thursday evening, January 10. About sixty members and invited guests sat down to a bountiful supply of good things. The tables were tastefully decorated with plants and flowers supplied by the members. Judging by the happy expression on all faces I am safe in stating that one and all passed a pleasant evening. Regrets were heard from all present at the absence of one of our members—yes, and the father of this society—but I know if he was not there in person his heart was with us. I refer to Nicholas Butterbach who was confined to his home by a serious illness. Morris county was represented by Messrs. Herrington, Totty, and Schultz. Mr. Herrington officiated as toastmaster. We were fortunate in securing his services for this occasion, his

Pres. Toronto Gardeners and Florists' Club

BOSTON GARDENERS AND FLORISTS' CLUB.—There was an attendance of just three hundred and sixteen members and ladies at the meeting of the Gardeners and Florists' Club on Tuesday evening to welcome the new officers to their respective chairs, and listen to the entertaining talk on gardens of Southern Europe by John K. M. L. Farquhar. Mr. Wheeler in opening the meeting thanked the members for the support that had been given him during the past two years, and in a few well chosen words introduced his successor in office—Thos. H. Westwood. Mr. Westwood in assuming charge of the meeting thanked the members for the honor conferred upon him, and asked for the co-operation of all the members in assisting him to further the interests of the club for the coming year.

The treasurer's annual report showed a balance of \$446.09 to the credit of the club, a substantial increase over last year's. Seven new members were elected. A letter from William Nicholson, resigning from the executive committee, was received with much regret. William Downs was elected to the vacancy.

On the exhibition tables were two exceptionally well-grown plants of *Begonia Gloire de Lorraine* from William Downs, for the excellent cultivation of which an award of superior merit was made. *Begonia Gloire de Lorraine* var. *superba* was exhibited by R. & J. Farquhar & Company and report of merit awarded. A similar award was given new violet Boston, exhibited by William Sim, which is a decided improvement on any other single violet that has yet been shown here. Some very well-grown cyclamen were exhibited by S. J. Goddard, and a vase of carnation Beacon by Peter Fisher.

The business session being short the entertainment part was started by recitations by Miss Grey, daughter of Thos. J. Grey, a former president and one of the original members of the club. Mr. Farquhar in beginning his lecture threw on the screen portraits of several of the officers and prominent members of the club, a feature which was received with great applause. He then carried his hearers on a brief trip from Gibraltar through the Mediterranean to Italy and back through Southern France to Paris. After the lecture refreshments were served and another of the "nights" for which the club is getting famous passed into history. J. W. DUNCAN.

NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY held a meeting on January 8, with Alex. Mackenzie in the chair. Two members were elected. The monthly point competition for 1906 resulted as follows: Winner of gold medal, S. J. Trepass; silver medal, H. F. Meyer; bronze medal, A. Mackenzie. F. Boulon & Son won the prize for 100 single violets; H. F. Meyer, that for 18 carnations arranged for effect. Chas. Lenker was the winner for best flowering plant. The executive committee is composed of Thomas Harrison, James Duthie, C. Bertanzel, A. Johnson, and William Maher. J. W. E.

Toronto—The Convention City.

The beauties of the convention city—Toronto—are not unknown to many members, who were fortunate enough to journey there when the S. A. F. crossed the border to hold its annual convention. Rich in historic memories, Toronto is a city of homes, its buildings comparing favorably with those of any to be found in the Dominion or in our own country. Parks of large expanse and great natural beauty may be seen in every section of the city, while the deep ravines of Rosedale, the heights on the Northern boundary, and the wonderful panorama of Lake Ontario's changing tints lend their added loveliness to the surroundings. Even in Winter Toronto is not without its attractive charms, the climate being very moderate.

City Hall, Toronto
Where Exhibition and Meeting of A. C. S. will be held

remarks being timely and to the point. He kept things moving from start to finish. William F. Woodhill of Brooklyn rendered tender solos, and A. J. and W. C. Rickards and Percy Hicks all helped along the musical part of the program. W. T.

PROVIDENCE (R. I.) FLORISTS' CLUB.—On Thursday evening, January 10, 1907, the members of the Florists' Club of Providence, to the number of about 50, celebrated the eleventh anniversary of their organization with a dinner and entertainment. The festivities took place in the new store building of Rennie & Thompson, 135-137 Washington street. The room and tables were elaborately decorated for the occasion with palms and cut flowers.

The dinner, which began at 8:30, was preceded by a social half hour. It was followed by a stereopticon entertainment, the first part of which was of an amusing nature and consisted partly of good-naturedly humorous hits at the pet traits and peculiarities of club members, which were received with glee by their fellow members. The second portion of the entertainment consisted of a travel lecture, accompanied with views of England, Scotland, Ireland and Wales. The lecture was by W. B. Wilson, field secretary of the Sunday School Association. Dr. A. J. Wheeler of the Rhode Island Agricultural College was present as the guest of the club. Arrangements for the occasion were in charge of a committee consisting of M. Sweeney, chairman; William Appleton, Alexander Macrae and Secretary William E. Chappell.

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

The Carnation in Decorative Work.

The carnation, probably the best known flower in the temperate world, and especially dear to the hearts of Americans at this season, when we are reminded of the great and lovable man whose favorite blossom it had the honor to be, inspires me to devote my article this week to that most useful florists' flower.

Fifteen years almost covers the evolution of the carnation as it is known in this country, from the comparatively insignificant varieties, such as Lizzie McGowan, Daybreak and William Scott to the grand selection of to-day with their ever increasing numbers. The rapid improvement of this flower in the United States has been a source of wonderment both here and in Europe, more especially in England,

fewer than three thousand flowers being consumed. They were used to decorate the ball room, on the supper tables and even as cotillion favors, pretty corsages for the ladies, and buttonholes for the gentlemen being a pretty feature.

A dinner decoration of carnations and white lilac was very handsome, the variety used for this occasion being Winsor. A vase about three feet high occupied the center of the table; this was filled with lilac, very loose and feathery, with a large "spray cluster" of Winsor carnation facing either end of the table and reaching almost to the cloth. Four large crescents of Adiantum Farleyense (with the points turned outwards) and Winsor carnations filled in the vacant places. These were built rather low, so as not to detract from the center piece.

Carnations are being extensively used for debutante bouquets, and largely for wedding outfits. Those for debutantes are usually combined with other flowers. A most stunning effect may be obtained by combining purple lilac and Enchantress carnations. The ribbon can be of either pink, the shade of the carnations, or of that of the foliage, green. Crimson carnations do splendidly with mignonette, Cypripedium insigne or C. Leeanum, lily of the valley or any of the smaller white flowers. A bouquet of mixed carnations, if carefully constructed in harmonious colors, creates a very striking effect.

A wedding outfit in which yellow carnations were

Store Window of W. J. Palmer, Buffalo, N. Y. Decorated for McKinley Day, 1906.

where cultivators have fully awakened to the value of American bred carnations, for Winter and Summer flowering. Twelve years ago the only varieties that flowered at all there in Winter were Miss Jolliffe, a cherry red variety called Winter Cheer and a few others, that we would call very shy bloomers. But they doubtless have the advantage over us with Summer flowering sorts especially those which are grown outdoors, probably owing to the difference in climate. We seem to be entirely unable to grow the wonderful Malmaison types, which appear to be the envy of our American customers, who never weary of telling us about this wonderful variety; although a lady, who had spent the last few years in England, asked a New York salesman, if that were not the Malmaison carnation, pointing to a vase filled with superb Enchantress I presume we should feel flattered.

Carnations to-day have taken an important place with our customers. They are no longer looked upon as cheap; in fact, they are no longer cheap. We get just as many important orders for decorations where carnations are to be used as we do for roses. Ever since Mrs. Thomas W. Lawson startled the American public, selling at the hitherto unheard of price of nine dollars per dozen, the carnation has climbed, until it bids fair to be a rival of the rose. Enchantress and that type are claiming the most attention at present, at least in New York. It is most deservedly popular with the grower, retailer and their customers, and is used on every occasion. At a large ball given to society last week, Enchantress carnation was used entirely, no

used was unique. Bowl-shaped gilded baskets, with convenient handles for carrying, were filled with yellow carnations and their own foliage; the showier effect was obtained by long sprays of Acacia pubescens intermingled with tiny loops of narrow gauze ribbon. The handles were also tied with large French bows of wide gauze of the same hue. Carnation foliage, where it can be obtained, should always be used; it is far better than any other green but as a rule is hard to get. I believe it would be profitable to grow as a green; I am sure it would be eagerly bought up.

The lasting qualities of the carnation form one of its recommendations, and the most lasting varieties are naturally the most popular. But my experience has been that it largely depends on the grower and principally on the cutting. The buyer soon gets to know whose carnations last the longest, and naturally places his orders with the wholesaler that handles that kind. The impression among some growers seems to be that the larger their flowers are the more money they can get for them; and for that reason they leave them on the plants too long. A fresh, young flower, even if a little smaller, is much better than fully developed ones that have seen their best days on the plants.

D. RAYBUN.

PLANTS AND FLOWERS.—I send you a flower of a white Cattleya maxima for your inspection. One of the well-known orchid growers informs me that he has heard of but one other plant. It has been expanded about three weeks.

A. A. R.

Mass.
—The cattleya flowers were in rather poor condition when they reached this office. It is evident that the plant is Cattleya maxima alba.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

American Carnation Society.
Varieties Registered.

By Baur & Smith, Indianapolis, Ind.

SAINT NICHOLAS.—The brightest scarlet we have ever seen in any carnation; exactly identical with the geranium Trego in color. Does not dull in aging. Large blooms on fine long and strong stem, and very free. At its best during Midwinter, but comes in early and continues late. Clean, vigorous upright grower, with strong constitution. Both parents were seedlings.

MAY.—A full shade deeper and brighter than Enchantress. Bloom of large size and wellformed, opens up the center petals as soon as the bloom is unfolded. Of good substance, and never bursts the calyx. Stem of good, medium length and as strong as that of Mrs. Lawson. A fine healthy grower and very free, comes in very early and never lets up until Midsummer. Both parents seedlings.

By The Chicago Carnation Co., Joliet, Ill.

BEAU BRUMMEL.—A large white overlaid with crimson, on the order of Prosperity, having more color than this variety; a cross between a white seedling of our own and Harlowarden; an early, free and continuous bloomer, producing large, well-formed flowers on good strong stems.

ALBERT M. HERR, Secretary.

Lancaster, Pa.

OUR CARNATION NOVELTIES FOR 1907

Winsor, White Enchantress, and Helen M. Gould

ONE way to judge carnations is to see them on the exhibition tables. A better and more convincing way is to see them growing; therefore we cordially invite all carnation growers to visit us and judge for themselves regarding the superiority of the above-named sorts.

Our carnation houses are at **Scarborough-on-Hudson** (not Tarrytown). Friends who desire to visit us can take the N. Y. C. & H. R. R. R. from New York. Trains leave there every half hour. Scarborough is the first station north of Tarrytown. Our grounds adjoin the station, and the greenhouses are about five minutes walk from the station.

We are growing **25,000 plants of Winsor** for cut flowers, alone, for the New York market this season, which shows the faith we have in it. This will also enable visitors to see it growing in quantity, and, besides that, will give us enough plants to get a great abundance of fine, healthy cuttings without over-propagating. We have already booked a large quantity among the large growers, and anticipate for this variety the largest sale of any new carnation that has ever been distributed, as large growers who have seen it are enthusiastic in regard to its value. Those who have seen it have immediately placed large orders for it, so we recommend those who have not ordered to place order without delay, so as to ensure early delivery.

For full description of these three valuable novelties, see our wholesale price list. Of course, we shall have all of these varieties on exhibition at Toronto, where they can be seen, and where they will speak for themselves.

WHOLESALE PRICES ROOTED CUTTINGS SPRING 1907

Winsor. Soft silvery pink. The best color, best keeper, best shipper, best seller—best every way. \$12.00 per 100, \$100.00 per 1,000.

White Enchantress. Has the large size, long stem, productive habit of Enchantress, but is pure white. \$12.00 per 100, \$100.00 per 1,000.

Helen M. Gould. A beautiful sport of Enchantress. Ground color lovely shade of silvery pink, with very fine pencilings of carmine, making an exceedingly exquisite combination. While on close observation this variety is variegated, the general effect is one beautiful tone of dark pink. Exceedingly valuable, because it combines the earliness, freedom, long stem, and large size of Enchantress, giving another color possessing all the other desirable qualities of Enchantress. \$12.00 per 100, \$100.00 per 1,000.

Beacon. Orange-scarlet. A vigorous, healthy grower, of ideal habit. A profuse bloomer, with long stems. \$12.00 per 100, \$100.00 per 1,000.

Aristocrat. Cerise-pink. Will be planted largely in place of Lawson. \$12.00 per 100, \$100.00 per 1,000.

Melody. Daybreak sport of Lawson, about the same color as Enchantress, but much brighter, and does not fade like Enchantress. Also a much better keeper and shipper. Those who grow the Lawson varieties exclusively will find this very valuable and desirable, because it gives an improved Enchantress color, which is so popular, and at the same time can be grown in the same house with the other Lawsons. An extra fine thing in every way and in great demand. A great addition to the Lawson class. \$10.00 per 100, \$75.00 per \$1,000.

Rose Pink Enchantress. A sport of Enchantress. Color, dark rose-pink. \$7.00 per 100, \$60.00 per \$1,000.

White Perfection. A novelty of 1906, and a variety for which there is a great demand this season. A third larger than Lady Bountiful and a more perfect flower. \$6.00 per 100, \$50.00 per 1,000.

Victory. Scarlet. This is giving great satisfaction, being a free blooming, profitable scarlet. \$6.00 per 100, \$50.00 per \$1,000.

Red Lawson. A fine red. Our stock of this is superior to many stocks of Red Lawson that we have seen. \$4.00 per 100, \$30.00 per 1,000.

Variegated Lawson. The most productive of the variegated sorts. A favorite. Outblooms Mrs. M. A. Patten. \$4.00 per 100, \$30.00 per 1,000.

White Lawson. An excellent white. \$4.00 per 100, \$30.00 per 1,000.

Lady Bountiful. Pure white. \$4.00 per 100, \$30.00 per 1,000.

Enchantress. \$3.00 per 100, \$25.00 per \$1,000.

Mrs. M. A. Patten. \$3.00 per 100, \$25.00 per 1,000.

Mrs. Thos. W. Lawson. \$3.00 per 100, \$20.00 per 1,000.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

A. T. De La Mare Ptg. & Pub. Co.

MABELLE--New Pink Carnation for 1907

Color--A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. Size--Three to four inches in diameter when established. Odor--Pleasing, but not strong. Stems--Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.--A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness--Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery Jan. 15th to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000.

REVIEW OF THE MARKET

NEW YORK.—The cut flower business is not keeping up to the record that was made early in 1906, neither in regard to prices obtained nor to quantities of material used. Supplies at this time, while not being at all heavy, are more than ample for all demands, consequently prices are anything but firm. American Beauty roses, as well as other commercial varieties, are not clearing out satisfactorily; though the supply is not by any means heavy. Carnations are not so firm in values as they were last week. Lilies, callas and lily of the valley also are showing a tendency to reduced figures. The increase in the supply of white and light-colored tulips, which are chiefly sought for funeral work, is, in a great measure, the reason why the prices of lilies, etc., are not so firm. Cattleyas have become rather more plentiful, and do not clear out as well as they ought to. Gardenias are coming in very heavily now, and can be bought at anywhere from 15c each to \$4 per dozen.

Violets being ordered on the streets at 20c and 30c per bunch, and that about explains the violet situation just now. Paper White narcissus and Roman hyacinths are becoming more plentiful; sweet peas are coming in daily though it seems hard yet to get more than \$1.50 per dozen bunches. They will probably do better when they can be had with longer stems.

What with warm weather and the society people attending automobile shows in Madison Square Garden, it would seem that for the time being the florist shops are not getting a great deal of attention from the city's four hundred.

PHILADELPHIA.—Up to Tuesday afternoon, business in cut flowers had not been equal to that of the past few weeks; buying along all lines slackened up considerably. There is a very noticeable falling off in the supply of roses, especially American Beauty; and no doubt prices will stiffen considerably before the week is out. This is caused by the continued dull weather. Prices have been, so far this week, for American Beauty \$9 per dozen for the best; we heard of two sales at \$10 per dozen for the very best flowers. Killarney is still away ahead of other teas in demand, ranging in price at from \$12 to \$15 per 100; a few sold at \$20. A few choice Richmond brought \$25 per 100. All teas range at from \$10 to \$15 for regular good stock.

Carnations are a little below the prices of the past three weeks; \$6 per 100 is about the top figure for fancy, other stock ranging from \$2 to \$4. Harrisii or longiflorum lilies bring \$2 per dozen flowers; Freesia, \$2 to \$6 per 100; mignonette, \$2 to \$3 per 100. Of violets there are by far no dozen for the demand; double scull slowly at \$1 per 100; singles, 50c. to 75c. Good lily of the valley is in demand at from \$3 to \$5 per 100.

Cattleyas realize 50c. per flower; gardenias, \$3 per dozen and are plentiful. Adiantum Layanum, cut fronds, bring \$3 per 100 and is in demand. Of both Asparagus plumosus and Sprengeri the supply is far in excess of the demand.

DAVID RUST.

ST. LOUIS.—The cut flower trade around the city is not what it should be, at this time of the year. The week opened with rainy, disagreeable weather. Supplies of stock at the wholesale houses are increasing daily, and prices are suffering accordingly. Among the retailers nothing of any importance has been reported. Our wholesalers state that shipping trade is somewhat slow, but the local demand has improved. One of the most notable features of the market last week was the fall in prices of carnations; some days fancy stock only brought 3c, and even 2c, when bought in thousand lots. Roses, too, suffered. Fancy long American Beauty are down to \$3 per dozen, with the smaller sorts at \$5 to \$6 per 100 for extra good stock. Violets are not so abundant this week, owing to cloudy weather; 35c. to 40c. is obtained for extra fancy California. Bulbous stock is over plentiful, with prices much lower.

ST. PATRICK.

BUFFALO, N. Y.—Trade has been very slow the last two weeks; seemingly the flower buying public have not recovered from the holidays. Roses have not been as good as usual, especially good Bride and Bridesmaid. We have been getting in some good Liberty and Richmond from the East that are really as large as American Beauty. Carnations seem to be very plentiful. Violets and lily of the valley are holding their own. Gardenias are coming into the local market and find a ready sale.

W. H. G.

BOSTON.—There has been a fairly good market all week. Violets have been the most plentiful of any of the staples; they have been at times druggery and dropped in price to 25c., while the better grades remained at 75c. American Beauty roses have had a good demand, the maximum price being \$9 per dozen, while other grades realized from \$1.50 per dozen, upward. Bride and Bridesmaid brought from \$3 to \$16 per 100; Killarney, \$1.75 to \$3 per dozen; Richmond and Liberty, from \$2 to \$4 per dozen. Lilies are not yet plentiful; they sell at from \$1.50 and \$2 per dozen. Callas bring \$1.50 per dozen. Carnations have had a good demand; colored varieties fetching \$4 and \$5, while \$3 and \$4 was the best price for white sorts. Yellow narcissus are now at from \$3 to \$5, while Paper White and Roman hyacinths realize \$1.50 and \$2. Mignonette is rather scarce at \$2, \$3 and \$4. Lily of the valley brings from \$2 to \$4. Sweet peas are plentiful; the best grades go at \$1 and \$1.50. Snapdragon brings \$1.50. Stevia sells at 25c. a bunch; adiantum readily fetching the latter figure. Smilax brings \$12.50. Asparagus plumosus, 50c. per string, while Sprengeri sells at from \$1.50 to \$4 per dozen bunches.

J. W. D.

H. Junge,
Pres.-elect Indiana State Florists'
Association.

INDIANAPOLIS.—Dark, unseasonable weather prevails. Its effect upon flowers is distinctly noticeable, as they are scarce, also of poor quality. Funeral work proved to be the mainstay last week, as regular counter trade and decorating have been distinctly quiet. Many flowers are sent to the sick and to hospitals, as the weather affects both plant life and humanity.

The local supply of roses is not sufficient, and many are shipped in. Prices are easier than a week ago. Select Bride and Bridesmaid are wholesaled at \$3 to \$6 per 100. Richmond and Liberty are generally in demand at \$7 to \$15 per 100. Many more American Beauty are retained since the price has reached \$10 to \$50 per 100, wholesale.

A quantity of sweet peas are most welcome at \$1 per 100, as a variety of stock is lacking. Roman hyacinths and Paper White narcissus are a material aid in funeral work, at \$3 to \$3.50 per 100. Violets are not plentiful at \$1 to \$1.50 per 100; few Hudson River violets are used. Jonquils find a quick sale at \$4 per 100.

Many carnations are showing weak stems. Prices are about the same—\$2.50 to \$4 per 100 for first grade stock. Fifty per cent. of the Lewsons received are split; these generally bring \$1.50 to \$2 per 100.

Plant trade shows an increase over former years. Growers have no trouble in disposing of any well-grown azaleas, cyclamen, primroses and Gloire de Lorraine begonias at the highest figures. Few of these ever reach Tomlinson Hall market, as they are bargained for in advance.

Indianapolis.

Annual Meeting State Florists' Association.

The Indiana State Florists' Association held its twentieth annual meeting at the Commercial Club building on the afternoon and evening of January 8; there was also an exhibit of flowers. About twenty members were present. At the business session the following officers were elected: President, Herman Junge, Indianapolis; first vice-president, Charles Knopf, Richmond; second vice-president, Fred Huckreide, Indianapolis; secretary, A. F. J. Baur, Indianapolis; and treasurer, John Heidenreich, Indianapolis. A committee, consisting of H. W. Rieman, Carl Sonnensmidt and William Hatfield, was selected to do the society's judging for one, two and three years, respectively. J. A. E. Haugh, Fred Huckreide and F. J. Harritt were appointed an auditing committee. Lunch served by the club helped to make the evening a pleasant one.

A number of exhibits came from distant points, but there were few local ones. E. G. Hill Company's exhibit of Rhea Rhed rose proved to be the star attraction. The judges awarded it ninety points. In color this rose is a shade between an American Beauty and a Richmond rose; in growth it much resembles the former. It is generally conceded that our "national rose grower" is keeping pace with the times, and will soon have another batch of cuttings ready for the American market. The same company exhibited three vases of seedling carnations—one a bright red, another, a bright pink, and another, shell pink. Stuart & Haugh of Anderson, Ind., showed a fine vase of the leading varieties in carnations. The E. K. & B. Floral Company of Richmond had a new carnation, Superior, which scored eighty-five points. Miss Sarah Hill, a new white of theirs, was well received.

Mabelle, a bright pink carnation, sent by Weber & Sons of Oakland, Md., arrived in fine shape, and also scored eighty-five points. Much regret was expressed that the fine lot of Winsor, sent by the F. R. Pierson Company, did not arrive in better condition. John E. Haines of Bethlehem, Pa., sent two nice lots of carnations—one of Imperial, another of Pink Imperial. Both are well thought of in this section.

Pittsburg.

News Notes.

Trade conditions the past week were fair, and there was an abundance of stock of all sorts. Roses and carnations are of good quality and hold up well in price, Roman hyacinths are too plentiful, and tulips are rather high in price for the quality. Lily of the valley is coming in heavily and finds slow sale. House plants are selling fairly well and can be handled safely this Spring-like weather, for it still continues in the fifties and sixties with too much rain.

The Carnation Society's convention in Toronto will be fairly well attended from one neighborhood; about a half dozen are going among them Messrs. Burki, Wyland and Lorch. The fare for the round trip will be \$12.35 and the party leaves Tuesday, January 22, about 11 p. m. Any one wishing to go with the party can get further information from the Pittsburg Cut Flower Company, Olvin avenue.

Tuesday, January 22, is the date of the Florists' Club smoker, to be held in the Rathskeller below our regular

MRS. H. BURNETT

New Salmon-Pink Carnation for 1907. A Seedling from Mrs. Lawson and an English Variety. Awarded 2 First-class Certificates and an Award of Merit. A lovely warm Salmon-Pink flower. Petals of good shape and substance. Calyx perfect. Delightful clove fragrance. 2 1/2 to 3 1/2 in. in diameter according to season. Stems 18 to 36 inches. A rapid and easy grower. Very productive. Many shades deeper than Enchantress and keeps its color better. Keeps for a long time after being cut and travels splendidly. Just the shade that everybody wants and one not yet produced in America. Price, \$5 per 100 established in 2-inch pots.

H. BURNETT

St. Margarets, Guernsey, Eng.

meeting room. Card playing will be the main feature, with a little music and plenty of liquid and solid refreshments. Now, smoke up boys and get there, for we want every member to attend. Those going to the Toronto convention can spend the evening with us and get the train in five minutes' time from the hall. A short business meeting will be held to nominate officers for the year, and the secretary will be present to receive dues from those members who are forgetful and others who wish to be relieved of their coin.

Mrs. Ludwig, wife of J. W. Ludwig the Allegheny market florist, who received painful injuries from a fall before the holidays, is able to be out again.

E. C. REINEMAN.

IOWA FALLS, IA.—Miss Jennie Smuck has disposed of her interest in the Riverside greenhouses to J. P. Murphy of New Hampton. Mr. Murphy has been engaged in the florist and greenhouse business at New Hampton for several years and having sold out there, decided to locate here. He has moved his family here and will take immediate possession of the business. Miss Smuck's future business plans are not announced.

COLUMBIA CITY, IND.—The Wagstaff greenhouses of West Van Buren street have been removed to the twenty-five acre farm belonging to Mr. and Mrs. Albert Wagoner and located just west of the city limits. The new greenhouse is 21 x 100 feet and a steam heating plant with a forty h. p. engine is being installed. The establishment will be added to in the near future.

Trade Notes.

Dark, gloomy weather is still with us, and the cut flowers now coming into the market show plainly its effects in soft growth and weak stems. Business remains very fair. Charles Knopf of Richmond, Ind., was in the city Saturday calling upon the craft and soliciting orders for the new white seedling carnation, Miss Sarah A. Hill. I only hope the variety may prove worthy of its name-sake, for without throwing any bouquets at Miss Hill, she is one among many, and is undoubtedly the best posted lady on floriculture in the United States to-day. Many of the sterner sex must take off their hats to Miss Sarah A. Hill, especially when it comes to chrysanthemums.

The monthly meeting of The Cincinnati Florists' Society was called to order by President Murphy. Secretary Ohmer stated that there remained in the treasury of the society \$129.35; this was very gratifying. Chas. Knopf addressed the meeting at length, telling of his trip to Chicago. S. J. Heider of Hillsboro, a new beginner in the florist business, gave a little talk. Like the Japs, he was looking for information. Gus Adrian was called on and said principally that the small growers around Cincinnati used to get their names in the trade papers once in a while, but were overlooked now. Well, Gus is a good fellow, and he is doing a nice quiet business out in Clifton and making money. Then there is Henry Schwarz; he is another of those quiet fellows that mind their own business and is making money. I could name a lot of growers around this city that have small places that are making more money than the big fellows. Some of these days I will visit all of them, and tell the trade what they have and how they grow it. E. G. GILLET.

Chicago. The Week's News. The first annual reception of the employees of the Ernst Wlenhoer Company will be held at the Sulthold Club House, 1768 Wrightwood avenue on Wednesday evening, January 30. The committee in charge is composed of Messrs. Bergmann, Adams, Robertson and Pisterick. C. L. Washburn, who has been recuperating at West Baden, has returned feeling much improved. Joe Beaver has severed his connection with Lubliner & Trinz. The last word from P. J. Hauswirth reaching Chicago was that he had arrived at the Hub after a pleasant trip and will return via Toronto. At the meeting of the Flower Growers' Market, held last week, the following officers were elected: President, Emil Buettner; vice-president, Walter Tonner; treasurer, F. R. Hills; secretary, A. Henderson; manager, Percy Jones. Governor Deneen appointed two new Lincoln Park commissioners last Thursday, Mr. Wilk, vice-president of the Union Trust Company of Chicago, taking the position recently resigned by Mr. Whitney who moved to Evanston, and Mr. Austrian, advertising manager of the Abendpost, to succeed Mr. Linn who resigned last Spring. At the meeting of the Gardeners and Florists' Union No. 10615 held at 12 Clark street on Wednesday evening last, the year opened very auspiciously with large attendance and a promise of successful succeeding meetings. Louis Gresnz of the Basset & Washburn concern, who has been ill for the past week or more, is reported on the road to recovery. H. N. Bruns is still positive that his lily of the valley pips will turn out well. He has four-fifths of a thousand cases now in cold storage and as reported they are in the best of condition. Among recent visitors we noted Wilfred Wheeler of Concord, Mass. W. K. W.

Dallas, Tex. The Morning News of Sunday, January 6, 1907 devotes considerable space to narratives and illustrations connected with the florist industry of this city. It is stated that "within a few years Dallas has become the principal floral market of the Southwest and the prediction is confidently made that it will not be many seasons before Texas raised American Beauty roses will be a competitor in the markets of Chicago and New York. The demand for cut flowers and hothouse plants in this section of the country is far beyond the facilities for supplying it. "The most striking example of the unusual boom in the commerce of flowers is the success made by Col. E. H. R. Green. Col. Green has engaged successfully in the railroad business, in baseball, in chicken raising, politics and automobiling, but he declares that none of these diversions pays so large a return on the investment as does the floral business. "The Green Floral Company started in business at Terrell five years ago. Ready sale of stock indicated a lucrative business if handled properly. Two years ago Terrell was outgrown and Col. Green entered in the wholesale business at Dallas. Three miles south of the city he has the largest and completest system of greenhouses south of Chicago. A large force of workmen are engaged in building additional greenhouses and when the work is finished according to the plans Texas will have the largest floral plant in the world. Col. Green now has twenty-seven acres devoted to the culture of flowers and plants, eight acres of which are under glass. The plant is heated by steam and is kept at a temperature of 65 in the Winter months. A system is also installed for the cooling of the atmosphere fed upon by the plants in the Summer months." It is estimated that Texas does a floral business valued at about \$400,000. The views of John R. Lomas, Henry Holtkamp, W. P. Hiebert, Ernest Neitsche, Otto Lang, the Dallas Floral Company and Seth Miller all indicate a prosperous condition of the florist business, with an optimistic opinion as to the future. A. M. Davenport has a specialty in primroses and cyclamen of extra fine quality. A. N. Pierson, Cromwell, Conn., was a visitor this week. J. W. D.

Boston. News Notes. There was a good attendance at the first lecture of the season of the Massachusetts Horticultural Society on Saturday morning, when J. Woodward Manning, the well-known Reading nurseryman, delivered an illustrated talk on the iris. There was considerable discussion on the subject after the lecture by various members of the society. S. N. Wax, one of Boston's old-time florists who retired from active business a few years ago, spent his 77th birthday with his two sons of the firm of Wax Brothers—Samuel and Martin—at the home of the latter on Sunday. Mr. Wax is hale and hearty for a man of his years; and that he may see many more anniversaries is the wish of his many friends. J. G. Holmes of Saugus has a fine crop of antirrhinum at the present time for which he finds ready sale. F. Dolansky of Lynn is cutting an immense crop of sweet peas, having some of the finest flowers coming into the Boston market.

News Notes.

Trade in general is pretty fair although there exists a marked scarcity of good stock. The quality of carnations is fair with the exception of split ones which are very numerous. A large demand for white exists and everything in sight is snapped up at 4c. and 5c. Roses are in good demand even though the greater number of them have very weak stems. There is an abundance of Roman hyacinths and Paper White narcissus; in fact, any bulbous stock not seriously affected by the lack of sunshine is to be had in quantity.

Fred Miesel & Son had a very close call from Jack Frost on January 8. They heat their plant by hot water with an Ideal boiler. Section No. 1 of the boiler was cracked and began to leak so badly at night that they were unable to put water into it fast enough. When it became impossible to use the furnace all hands started the fumigating pans to keep the plants from freezing. Gust H. Taepke proved a friend in need as did Theodore Mitchell. Mr. Taepke furnished a half dozen small stoves; Theodore Mitchell volunteered his services which were greatly appreciated. They succeeded in keeping the frost out until the section could be sawed out and plugged. But little damage was sustained, the house being in cinerarias, heliotrope and colieus.

G. Tegelaar visited Detroit last week. He is the first Dutch bulb merchant seen in these parts this season. HARRY.

HEATING.

It is proposed to heat a small greenhouse, 16x20 feet, a rough sketch of which I enclose, by means of a return flue as recommended by Henderson in his "Practical Floriculture," i. e., by locating the furnace at "A," carrying the flue under the benches and back to the top of furnace (as indicated by red lines in the diagram of ground plan). What I wish to know is (a) what should be the size of grate and height of fire-box of furnace? (b) The best size of flue? What should be the rise in inches of flue from "A" to "B" in order that the fire should burn well? (c) If I will be able to secure a minimum temperature of 45 degrees if the temperature outside is 10 degrees above zero? And (e) about how much coal will the furnace require during the season, the average temperature outside being about 35 degrees and the required temperature inside 50 degrees? The glass surface in the roof is 400 square feet and in the gable and sides 104 square feet.

Maryland W. R. C. C.
The size of grate for your furnace should be about 13x17, and the height of the fire-box not less than 12 inches, with a depth of ash pit, say, 10 inches. The best size flue for your requirements would be 10 inches inside measurement. Before replying to your question as to rise necessary to give the flue its correct length, I would say, that if I were in your place I would run this flue in a different way from your plan. I would suggest that you place your furnace under the east side of the work room, and carry the flue around the east side, across the south end, thence around the west side of chimney located in the corner of the work room or outside the house at about the same point. The rise from the furnace to the chimney I would make about 15 inches in all. This method insures a much better distribution of heat than the one you illustrate in your drawing, and is the method followed in most cases. As to your coal consumption, that is a hard matter to compute to a nicety in such a small job; the severity of the season and many other things such as construction of your house, draft of chimney, care given to the flue, would all have important bearings on this.

U. G. SCOLLAY.
I have a house 105 feet 6 inches long, 17 feet wide, 3 feet to gutter on south side, 4 feet to gutter on north side, 9 feet to ridge. My boiler is a horizontal tubular, 8 feet long, 30 inches in diameter with twenty 3-inch flues, the fireplace is 3 feet long, 2 feet wide. The chimney is 30 feet high with an opening at the top 5x9 1-2 inches. The piping, as per plan enclosed, goes from the boiler, 3 inch, into the greenhouse uphill, then rises to the top of the house at start, then all down to the boiler. I cannot get this house above 50 degrees at any time. Steam is used. How could the house be piped for hot water using the same boiler? A SUBSCRIBER.

The boiler you specify has a capacity of about 12 horse power, and is good for 1,000 square feet of steam surface. The grate you mention is good for about 900 square feet. The very weak spot in your outfit is the chimney, which you say is 5x9 1-2 inches, or that is commonly known as a 4 x 8 flue. When you take into consideration the roughness and irregularities of the brickwork from the bottom up, you will find your flue has, in all probability, no more than a 4 x 8 capacity. The flue for a boiler of this size should be 12 inches in order to obtain proper results. One very important item you have forgotten to mention in connection with the information that "steam" is used, is, how much steam. If you are able to get up five pounds in the severest weather, you should be able to warm your house to 60 degrees without trouble. Less pressure would probably answer if you had, say, 1 1/4-inch pipe under the benches; that is, less pressure would give you quick circulation, but with the 1-inch piping you would find the higher pressure necessary. It is a miracle to me if you are able to get up a pressure of any kind with the size of chimney you have. I would advise you to discard it entirely and build a new one; or put up a sheet iron flue, of say, 13 or 14 inches diameter.

Other things you neglect to give in your statement and sketch are the depth of the boiler pit below the grade of the house, and the height of the water line of the boiler. I am unable to pass on other possible features of your trouble on this account. Are you sure that your coils are sufficiently above the water line of boiler to insure their being filled with steam and not water? You could not change your present job to hot water with any advantage. In fact, you would be worse off, for your 1-inch flue is entirely unsuitable for that system, whereas it can be used in steam with fair results. If you should determine to install hot water, you should use 1 1/2 inches of 2-inch pipe under the benches, with a 4-inch main overhead. In

this case you would also have to build the new chimney. My advice to you, taking it for granted that your piping is now properly run for steam, and that all other details are as they should be, is to build a new chimney, and see if you do not get the results you require. I am sure you will.

U. G. SCOLLAY.
I have an upright tubular boiler which I put into my greenhouse when I knew less than I do now about boilers. It was second-hand. After I had it a few years I put in new boiler tubes. I gave it the same care each and every year; but it is a fact the tubes I put in lasted no longer than the old tubes did, which were in the boiler when I purchased it. Next Spring I must put in new tubes. What kind of iron does Mr. Scollay recommend? If I have some made to order, the old fashioned way, would they last any longer and how many mouths in advance would I have to give the order for making the tubes? B.

Your inquiry is one often met with, and, frankly, the trouble you experience is often the cause of very annoying complications to us in our business relations with customers. We do not manufacture boiler tubes, hence I cannot give you much in the way of comparative analyses of iron and steel, which are both used in making tubes, but I can give you some slight idea of the differences we find in cases under our own observation. The best charcoal iron tubes are supposed to be the most durable and satisfactory, and, as a rule, they are; but I have seen instances where we have bought tubes guaranteed to be of the above quality, and where they did not last over five years. For our repair work we strenuously insist upon charcoal iron tubes from the concerns furnishing us this line of goods, but, sad to say, we fear we do not always get them, even though the jobbers may conscientiously believe them to be what we call for. I have seen boilers, new ones I mean, set up, in which the first set of tubes lasted ten years; the second set lasted not over three, and we sent to the manufacturers of the boiler asking for a set such as were put in the boiler when new. These we received, and put in, and found no better than the second set. What else can this be but a difference in quality between the first and the others? The same water is used, the same conditions exist.

To illustrate still further, one case in mind is where we replaced several defective tubes in an old boiler, and in three years, at least three or four of these new tubes gave out, while every one of the old tubes remaining was still in good condition. I could go on and give many curious instances relating to the boiler tubes, but the above will suffice I think. In conversation with large manufacturers of tubes, they have assured me, that steel tubes in some parts of the country outlast wrought iron ones. The engineer of a small coasting steamer told me of leaving New York with an entirely new outfit of tubes, and after trading in Southern waters for eighteen months, was compelled to retube throughout. So far, after three years constant use in the North, his tubes are but little affected. He blamed the water of the South for his trouble, and I think he is right from all I can learn; but at the same time there may be a difference in the quality of the tubes that would partly account for it. I cite these cases in order to show you that yours is a very common one, so far as the life of boiler tubes is concerned. I would apply to the most reputable house you can find, and order strictly best charcoal iron tubes. I do not know that you can get boiler tubes made to order for such a small job as yours would be; if such is the case, I

THE HEATING QUESTION

Heating a greenhouse is radically different from other heating; it's so different that the usual heating engineers fail to give anything like a satisfactory results—a case where patronizing "home trade" is apt to prove a continual annoyance and expense. When we say heating, we have more in mind than the right boiler—there's a right way, an economical way to pipe for the most rapid circulation—it's a proposition that should be placed only in the hands of those who know the greenhouse business.

New Orleans, La.
News Notes.

Thursday, Friday and Saturday, February 14, 15 and 16 (Mardi Gras week), are the dates on which the Society of Southern Florists will hold its first annual exhibition. All committees have been appointed and are working hard to make this their first show a great success. Robert Lockerbie is chairman of the arrangement committee, with C. W. Eichling, the first vice-president, as chairman ex officio. In addition to plants, flowers, etc., there will be a display of florists' supplies, sundries and boilers; and from the space already applied for all classes will be well filled. The florists of the North are cordially invited to co-operate with their Southern confreres in making the show a grand success. There never has been a better opportunity of placing before the Southern buyer that which he needs, as the city at that time furnishes so many attractions, including the world-famed Mardi Gras, which attracts visitors from all over the States.

Some idea of the mild weather we are experiencing can be gathered from the statement that the writer saw during the past week, thousands of narcissus, one of the polyanthus section, in bloom, together with white, and blue Roman hyacinths in the open at C. Holst's nurseries. Early varieties of sweet peas are also a mass of flowers.

Justin St. Mard has a fine stock of washingtonia and other hardy palms that are largely used in New Orleans for sidewalk planting. Mr. St. Mard finds the market overstocked with palms; he intends reducing his stock and building cottages on a portion of his garden.

Among those installing new boilers is Chas. Eble with a Wilkes, and Frank Rieth with a large size Hitchings. Mr. Rieth intends building two new greenhouses in the near future. If the present weather could be depended on New Orleans florists could dispense altogether with boilers. Rieth's crop of callas is a pleasure to look at, for at several places here the calla disease is prevalent and seems to be one of those diseases that are hard to check.

Louis Seiber, who since its formation has been secretary to the Metairie Ridge Nursery Company and previous to that was in the employ of Harry Papworth, has left their employment and gone to Ponchatoula, La., to manage a range of glass erected for cucumber raising by a Chicago lady.

Ziegler & Werner have dissolved partnership; the business will be carried on by Mr. Zeigler.

Robert Lockerbie has resigned his position as rose grower to the Metairie Ridge Nursery Co.
CRESCENT CITY.

DANVILLE, N. Y.—F. M. Smith has rented 20 acres more land, and now has 43 acres of a truck garden. He reports a very successful business during 1906.

News Notes.

Miss Alice Ellison, daughter of Mr. and Mrs. Ellison of the Ellison Floral Company, was married the past week to Harry Wardy of Grand Rapids. The couple will make their home in Chicago.

C. A. Kuehn's wire shop was partly damaged by an early morning blaze in his building on Saturday last. Damage, less than \$500, is fully insured.

Frank Weber, of the nursery firm of H. J. Weber & Sons, has returned from his eastern trip. He says he had an enjoyable time with friends in the trade.

Our visitors the past week were: Henry Johan of Collinsville, Ill.; J. F. Ammann of Edwardsville, Ill.; Swan Peterson of Gibson City, Ill.; and A. F. Longren of Joliet, Ill.

Mr. Bentzen of the Bentzen Floral Company has been very sick the past week, but is improving from last reports.

President Irish of the Florists' Club will call a special officers' meeting this week to formulate plans to raise the balance of the \$10,000 guarantee fund for the flower show, before the next meeting of the club.
ST. PATRICK.

LOWELLVILLE, O.—Ralph Darrow met with a very painful accident last week while engaged in putting some new tubes in the boiler used for heating the new greenhouses. Mr. Darrow stopped the flue with straw, and after having finished the work he set fire to the straw and very soon a violent explosion occurred, due to gas that had formed in the flue. The flame struck Mr. Darrow in the face, burning him very painfully.

CLEVELAND, O.—On January 28 The Cleveland Florists' Exchange will open a wholesale commission house and growers' market at 606 Huron road. Besides representing the growers of this locality they will carry a full line of florists' supplies. George W. Smith, who the past Summer disposed of his growing and retail business, will have full charge of the new venture.

HENRY A. DREER,
714 Chestnut St., Phila., Pa.

WINONA, MINN.—H. J. Fuhlbrugge, the well-known florist, residing at 220 Kansas street, has got into the municipal political race and has filed for the position of alderman from the Third ward. Mr. Fuhlbrugge is a Republican.
LISBON, O.—John M. Handte, the veteran florist, passed his 60th mile stone Wednesday, January 2, 1907, and was most generously remembered by the members of the Masonic Lodge of which order he has been a member many years. In the evening a committee called at his home and presented him with a well filled purse with the best wishes of his Masonic Brothers.

YOU can see plain enough that with this valley connection the U-Bar construction is just about as light as any construction can be, and be enduring. U-Bar Greenhouses are the best greenhouses built because there's no other construction admits of such light connection, or makes such connection in as mechanical, yet pleasing way. The gardener likes the results these houses give—the owner likes both the looks and the results. Send for U-Bar Catalog. Pierson U-Bar Co., Designers and Builders of U-Bar Greenhouses, Metropolitan Building, 4th Avenue and 23 St., New York.

THE FLORISTS' EXCHANGE

IN KANSAS CITY, MO.

Mr. A. F. Barbe is one of the leading florists. His houses are built with our material. Sometime ago he wrote us: "Enclosed please find check for Material sent me. I find everything entirely satisfactory, and the cutting and fitting is perfect." This testimonial as well as all others which we publish are genuine and not solicited—we can prove it to anyone. We would like a chance to prove that our material is the best.

HERE ARE SOME JUST SO THINGS

about our galvanized ice-clearing eave plate. In the first place, it fits snugly over the fascia, with 2 inches inside the house in direct contact with the heat, while 3 inches extend on the outside, carrying the weather drip entirely free of the sill. The sash bar clasps are secured directly to it by countersunk screws—the bar is screwed to and firmly held by the sash bar clasp. The eave joint is then wood against iron, instead of wood against wood, making a joint free from decay. The clasp carries off all drip leaving the ends of sash bar always dry, a protection against end rot.

You will not only add to the life of your house, but thrive its rigidity. We sell this eave plate with clasps attached—put it into your very next house. Write for prices.

FLORISTS' EXCHANGE

We are a strong force to grow into a vigorous plant
 A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, SEEDSMEN AND THE TRADE IN GENERAL

Vol XXIII. No. 4

NEW YORK AND CHICAGO, JANUARY 26, 1907

One Dollar Per Year

CARNATION WINSOR

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time do-

ing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullast winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

Strong Rooted Cuttings. February delivery, \$12.00 per 100, \$100.00 per 1000.

GERANIUM NOVELTIES

SYCAMORE. Originated four years ago by the St. Clair Floral Co., Belleville, Ill., who claim that it is one of the best bright clear Salmon Pink bedders in the country. A cross between Mrs. E. G. Hill and Paul Bruant, has a vigorous habit and is always in bloom. 20 cts. each; \$2.00 per doz.; \$15.00 per 100.

BRUANT'S 1906 NOVELTIES. We offer a collection of thirty different varieties all of which are perfect specimens of the well-known Bruant race, including the Cyclops. 50 cts. each; one of each \$10.50.

LEMOINES 1906. Fifteen varieties among which are some of the most beautiful combinations of colors that we have ever seen, every one worthy a place in every collection. 35 cts. each; one of each \$5.00.

ROZAIN BOUCHARLATS 1906 VARIETIES. Messrs. Bouchard, Lyons, France, have quite a reputation as producers of excellent new Geraniums; among the sixteen varieties there are some fine ones. 25 cts. each; one of each \$3.50.

ALLIANCE. 1905 introduction. A cross between an Ivy and a zonal. A beautiful shade of lilac white, blotched with crimson rose. Excellent habit for vase or pot plants. 25 cts. each; \$2.50 per doz.; \$20.00 per 100.

CAESAR FRANCK. 1905 introduction. Double Ivy, magnificent shade of soft crimson; splendid habit. 25 cts. each; \$2.50 per doz.; \$20.00 per 100.

FLEUVE BLANC. A pure white semi-double and perfect type of Bruant race. \$1.50 per doz. \$10.00 per 100.

CALADIUM ESCULENTUM, 1st size, \$2.00 per 100. 2nd size, \$1.00 per 100.

MADEIRA VINE ROOTS, \$1.00 per pk. \$3.50 per bus.

HARDY ENGLISH IVY. Extra strong. \$2.00 per 100, \$18.00 per 1000.

European Notes.

Winter has once more left us, and as the weather is not only mild but also dry we are able to take stock of our growing plants and are pleased to find that they remain practically ununhurt by the December frosts.

While the European trade in general may well be described as dull, the demand for named sweet peas of the better kinds increases every day. Holders of reliable stocks of Hon. Mrs. E. Kenyon, Gladys Unwin and King Edward VII are reaping a rich harvest just now. The bush section is practically ignored, and the Cupid class does not grow in popular favor. Should the present dry spell continue for a few days more we shall be able to open the stacks of sweet peas still unthrashed owing to the continuous rains during the late Autumn.

While trade is low, prices are lower, and it is to be hoped that the climax of folly in this direction has been reached in the catalogue issued by a firm near London, wherein all seeds are quoted at one halfpenny (one cent) per packet. The head of the concern is said to be a schoolmaster who is anxious to build up a business to occupy his time when he shall be considered unfit for further scholastic duties. The bulk prices in the same list should prevent the appropriation of the sprat of the proverbial mackerel.

The Simpson & Slade concern will apparently have to be wound up in the bankruptcy court. The store, which is well situated, will be occupied by A. & E. Moss, the survivors of the old Wrench business.

Mr. Prashkauer, founder of the company which bears his name, has just died on the way home from Mombassa, Central Africa, where he had been attending to the cultures for his company. His death, which is attributed to overwork in an unhealthy climate, will be a great loss to the concern which has the control of a very large business in South America. EUROPEAN SEEDS.

NOTES FROM HOLLAND.—Now that the old year is closing upon us we can not help looking backward for a moment. From the standpoint of bulb growers the season has been a very favorable one, notwithstanding the grave fact that prices realized on hyacinths, what may be said to be the main and standard crop of the district, have still been below the cost of production. However, the prospects are much brighter than what they were last year at this time, and considering that the end of the shipping season of this year found a shortage all round of hyacinths, and the dealers unable to fill all the orders in hand, it indicates that prices even under normal conditions will be higher the coming season. Should we, however, have to face an insufficient crop to meet the usual demand, there is no telling what prices may come to.

Crocus are no doubt in the same or perhaps even a more favorable condition, as stocks have been generally much reduced and although the already prevailing higher prices may interfere somewhat with the sales, this could not possibly make up for the short supply in the market.

In tulips the season has been a very unusual one for not only did the crop suffer from the effects of the cold weather and disease, but the local demand for all the best trade sorts, and the enormous demand from America, especially in red and scarlet tulips, caused the prices on some sorts to go up very sharply. In consequence the export trade to England suffered because late orders could not be filled, but the advantage was that it enabled dealers in England who had a supply on hand to sell them at good prices, and even to sell all they had in the way of tulips. No doubt such a state of affairs must also have a favorable effect on the producer on this side, and, taking it all round, there is every prospect of a satisfactory season in the approaching year.

We are now under twelve inches of

snow, and no frost could do any harm to any of our bulb crops under such a cover. Notwithstanding that it has put a stop to all outside work, the growers are all ready to welcome a fortnight of sharp frost, be it only to put a stop to and kill some of the overabundant supply of vermin that has increased wonderfully during the last two summer-like Winters, and has been trying to live on bulbs whenever nothing else more suitable to their taste could be found. If therefore the new year's day should find us in as good and beautiful white covering as Christmas did, it will no doubt delight the hearts of all who are interested in bulb growing.—Horticultural Trade Journal.

FORD SEED COMPANY, Ravenna, O.—Catalogue of Vegetable, Field and Flower Seeds, Small Fruits, Supplies, etc. Illustrated. The firm says "Quality is never sacrificed in order to make low prices."

A. N. PIERSON, Cromwell, Conn.—Wholesale List of Roses, Carnations, Chrysanthemums, Palms, Ferns, Plants for Easter and Miscellaneous Stock. The best of the new things are included. Illustrated.

F. T. BUXTON, Nashua, N. H.—Illustrated Circular concerning the Economy Greenhouse Bracket—a very useful device.

DINGEE & CONARD COMPANY, West Grove, Pa.—New Guide to Rose Culture; a very comprehensive Catalogue of Roses, also of Plants, Shrubs, Hardy Perennials, etc. Profusely illustrated. For cover designs, in color, the beautiful Rose Killarney and the new "pink Baby Rambler," Anny Muller, have been selected. Several colored plates of collections of Roses are included in the catalogue, which contains much valuable information on the subject of Roses generally.

JOSEPH BRECK & SONS, Boston, Mass.—Catalogue of Field, Flower and Vegetable Seeds, Supplies, Implements, etc., with a list of well-selected Novelties and Specialties. This firm has been in business since 1822 and on its "Roll of Honor" are names of customers whose patronage has been retained from 40 to 72 years.

TEXAS SEED AND FLORAL COMPANY, Dallas, Tex.—Catalogue of Seeds, Plants, and Poultry Supplies for the South. Illustrated. The new four-story building, recently erected by this firm, has greatly improved its facilities for handling an ever-increasing business. Our Southern readers should secure a copy of this interesting catalogue.

S. M. ISBELL & COMPANY, Jackson, Mich.—Illustrated Catalogue of Farm, Garden, and Flower Seeds, with a list of Novelties and Specialties, including new Tomato Isbell's Alpha, pinky, a very early variety. The firm says: "The growing season of 1906 will go down in the history of our business as one of great improvement in the quality of our stocks."

VAUGHAN'S SEED STORE, Chicago and New York.—Illustrated Catalogue of Seeds, Bulbs, Plants, Hardy Perennials, Ornamental and Flowering Shrubs, Fruit and Shade Trees, etc. This is the thirtieth annual catalogue issued by this well-known house. Owing to the present strike the usual unique and attractive lithograph covers are missing this year; and plate covers take their place. There is an interesting list of Novelties and Specialties; among those in vegetables may be mentioned new Bohemian radish, Hoodoo melon, Ailsa Craig onion, Vaughan's Magnum Dulce pepper, Upright Sweet Salad pepper, Witham wonder, new early dwarf pea, and new pea Prince Edward. In flowers, Cosmos Woodside Early-flowering, Burbank's Dahlias, and all the newest in sweet peas, also the new annual Hollyhocks. Regarding the seed crops of 1906 it is stated: "Onion seed is probably of average lower germination and less in quantity than for many years. Beans are a good crop; peas, fair; sweet corn, abundant; muskmelon and best foreign-grown radish are scarce; other seeds about normal." The offerings in every department are, as usual, very complete.

DREER'S SUPERB DOUBLE PETUNIAS

For nearly half a century we have been making a specialty of DOUBLE PETUNIAS and our strain is accepted as second to none, either here or in Europe. We annually plant many thousand seedlings from which only the finest double fringed forms are selected for propagating purposes, thus improving the strain every season, and this year's collection is the original and most pleasing one we have yet set out. We offer fifteen distinct varieties. 3 inch pnts. 75cts. per doz.; \$6.00 per 100; the set of 15 for \$1.00 2 1/2 inch pnts. 60cts. 4.00

Seed of Our Superb Strain of Fringed Petunias. Double, 75cts. per 500 seeds; \$1.50 per 1000 seeds. Single, 50cts. per trade packet. Our Quarterly Wholesale List offers a full line of seasonable Plants, Seeds and Bulbs.

Two Unique "New Creations" in Bush Limas!

FORDHOOK AND THE BURPEE-IMPROVED,— Both of which are entirely "New Creations!"

Nature with her millions of crosses, occasionally surpasses any efforts of the most successful hybridizers. These wonderful Novelties, now exclusively introduced by us, have been bred from two plants (one of each type) discovered in a crop of Challenger Pole Limas, in 1903, by our friend Henry Fish, of Santa Barbara County, California.

BURPEE'S BUSH LIMA, originating in Chester County, Pa., blazed the way for the wonderful popularity of the Bush Lima to-day. Since then improved selections have been developed,—notably *Burpee's Quarter-Century Strain*,—but little did we think that Nature would so completely eclipse all the efforts of man, and directly from the *parent pole Lima* produce in distant California two new types that would surpass not only all other Bush Limas, but—in size of beans—all existing pole Limas!

These Two Bush Limas are sold only in sealed packets. Each packet contains twelve perfect hand picked beans. **Per pkt. 25 cts.** With our discount of one-third these two Bush Limas will be mailed to Market Gardeners and Florists at the net rate of any **3 pkts. for 50 cts.; 6 pkts for \$1.00, or \$2.00 per doz. pkts.** assorted as desired.

Three Pods, exactly natural size reproduced from a Photograph of the Unique **FORDHOOK BUSH LIMA** now first introduced

The New Burpee-Improved Bush Lima

"This is the finest Bush Lima that has ever been introduced.

The bush is sturdy in habit and twenty to twenty-four inches high, with large leaves. It bears its beans on long spikes in very prolific clusters, well out from the plant. There are from four to seven pods in each cluster and often as many as eleven. Each pod contains three, four, or five beans, and there are more pods containing five than there are containing three beans; so that there is an improvement of from one to two beans in each pod, and this, taken with the greatest number of pods borne, makes the yield enormous. In quality this bean ranks with the very best and the beans are of large size. In earliness it comes between *Henderson's* and *Burpee's Bush*, and is about a week earlier than the latter variety. This bean is bound to be the greatest, most popular Bush Lima,—a continuous bearer."

Quoted verbatim from Report sent us August 29, 1906, when the crop was inspected (between the time of our two visits) by our friends, Messrs. C. C. MORSE & Co., the well-known seedsmen of California. After the writer had returned from Santa Barbara County, in July last, he met the son of "the discoverer" in the office of The Morse Company, San Francisco. Mr. Morse was so interested in the story of these New Beans that he would have the crops examined, although his firm had no pecuniary interest in either variety.

Fordhook Bush Lima

"This bean is of the type of *Dreer's Bush Lima*, which it most nearly resembles. Its height is from twenty-two to twenty-four inches, and it bears its beans in clusters of two to five well out from the plant on long spikes. There are from three to five beans in each pod with an average of four. The beans are round and thick like those of *Dreer's Bush* and have the same mild, delicious flavor. This bean (like the above) is far ahead of anything which anybody has known in Lima beans up to the present. Its productiveness is far ahead of *Dreer's Bush*,—is earlier by four or five days and is better all around."—Quoted from letter dated August 29, 1906, of Messrs. C. C. MORSE & Co., San Francisco, California, after their representative had inspected the crop,—see note above. For our own description see page 12 of BURPEE'S FARM ANNUAL.

Pods, Natural Size, of THE NEW "BURPEE-IMPROVED" BUSH LIMA

One Thousand Dollars in Cash Prizes

Never before in the history of the Seed trade have there been presented two such unique REMARKABLE NEW VEGETABLES! We are determined, therefore, to have their merits established in this first year of their introduction. With one prize of \$150.00, —several of \$50.00 each, and other liberal cash prizes,—we will pay, on these two new Limas, this season, more than

One Thousand Dollars—see page 199 of BURPEE'S FARM ANNUAL for 1907

"The Leading American Seed Catalog"

The "Silent Salesman" of the world's largest mail-order seed trade. An Elegant New Book of 200 pages with hundreds of illustrations from photographs, it tells only the plain truth about the very best SEEDS THAT GROW. It describes Grand Novelties in Flowers and Vegetables, of unusual importance, which cannot be obtained elsewhere. If interested, write 10-day, name *The Florists' Exchange*,—and the book is yours.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
 Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Horticultural Notes.

Broussonetia papyrifera, the paper mulberry, is again being used for a shade tree. The fertile form which is now appearing in collections, bears dark red fruit of much beauty. It is claimed for this one that it does not sucker as much as the other does. The tree is valuable in Japan because of the great quantities of paper made from its inner bark.

Our tulip tree, *Liriodendron tulipifera*, is often praised by those European gardeners who are familiar with it, as well they may. It is a beautiful tree, free from all diseases and from attacks of insects. It needs planting young and to be well pruned to have it do well. It grows readily from seeds.

A Staunton (Va.) writer names the *Celtis occidentalis* as a good street tree. It would never be so thought of here, there are so many better ones. With us it is much subject to the objection that it forms numerous "crow's nests," which disfigure the tree greatly.

A greenhouse climber which is an excellent one for using outside in Summer is the *Stigmaphyllon ciliatum*. It is from Brazil, and has beautiful yellow flowers.

Prinos verticillatus, the deciduous holly, is not always dioecious. Some plants have perfect flowers, as many isolated plants of it bear evidence. The berries are often used in holly wreaths when holly berries are scarce.

Rubus phanicolasius is a good plant with which to form a clump. Set where it can propagate itself it soon spreads, forming a pretty object. Its stems clothed with red hairs, leaves of silvery whiteness on the underside and pretty red fruit, all commend it. Even as a fruiting raspberry it is a favorite with some.

Whitewash in which a little sulphur has been intermixed is good to apply to the trunks of trees, first scraping off the loose bark that may be attached to the wood. If white is objectionable, soot or some other material can be added to produce a color desired.

Fully half the number of nursery catalogues spell the Oldmixon peach Old Mixen. The peach was named in honor of a gentleman of the name of Oldmixon. Such a valuable peach, old though it is, is entitled to the right spelling of its name.

English bird cherry, *Cerasus padus*, has been favorably mentioned as a street tree. It certainly makes a satisfactory tree, becoming of good size in time, having foliage free from insect attacks and making a shapely subject. Birds are fond of its fruit, which ripens early.

Picea Pungens.

The silvery blue color of *Picea pungens glauca* has caused this evergreen to be so much esteemed for planting that many have no knowledge of the desirability of the ordinary green form, *P. pungens*, yet it is one of the most desirable of evergreens and is often of a better habit than the glauca. The reason is that glauca, or the Colorado blue spruce, as it is called, is largely propagated by grafting, and evergreens so increased do not always form the same outline as those raised from seeds. The common green form of *P. pungens* as found in nurseries are all seedlings hence the natural growth of them all. When seedlings of *Picea pungens* are procured there will be all shades of color found from green to the best silver types, and efforts should be made by nurserymen to have all represented in their collections. The common green one, *pungens*, wherever seen on our lawns, is a tree of pleasing outline, more symmetrical in growth than the greater number of the blue ones.

As stated, so much has been said of the blue that to many the existence of the green one is not known, hence these few notes to call attention to its worth.

The beauty and hardness of this spruce have created a great demand for it in Europe as well as at home, seeds and seedlings finding their way there in large quantities.

Seeds or Seedlings for Forestry Purposes.

Because of the interest in forestry subjects apparent everywhere at this time, the question whether to obtain seeds or seedlings is often put to nurserymen by prospective buyers. Considering the care and experience necessary to the successful raising of seedlings the experimenting with seeds is not likely to be as satisfactory to the average buyer as would be the obtaining of seedlings. Even experienced nurserymen are not always successful with seeds, so much depends on the season for success and the weather is beyond one's control. If experienced men fail with seeds, what can these inexperienced expect? There is no better way than to prepare ground well and then set out seedlings where they are wanted. With seedlings of proper size, say of about a foot in height, there should be no failures, and it is safe to recommend seedlings

in place of seeds in nearly all cases. An amateur had much better procure seedlings than endeavor to raise them himself.

Some cases of broadcast sowing of seeds have been fairly successful at times. In white pine sowings seeds have been sown in that manner on the top of late snows. The snow as it melted carried the seeds with it far enough into the soft ground that they germinated very well. In meadows of thin grass pine seeds are sometimes sown in this way. They grow, and the grass shades the seedlings through the first Summer, much to their advantage. The great call on nurserymen for forest tree seedlings is likely to continue, as a widespread interest in the subject of forest tree planting is evidenced on all sides, and stocks of seeds and seedlings must be kept up.

Rich Ground for Quinces.

Where space is limited dwarf pear trees are planted instead of standards the dwarfs being those worked on the quince stock. Many pears succeed well on the quince; other sorts, such as Seckel and Bartlett, do not do as well as some, but can be had of good promise when they have been double-worked on the quince. In double-working, sorts are selected known to thrive well on the quince, and these are budded on it in the usual way. The next season, when the shoots from the buds have nearly completed their growth, buds of the feeble kinds, or of those that do not grow well when directly con-

plis. The chinquapin is always in demand because of the oddity of its dwarfness and its small black chestnuts. In the dwarf Japanese chestnut there are the same merits, with the difference of having chestnuts instead of chinquapin nuts; and these chestnuts are as large as good-sized fruit of ordinary American chestnuts.

There is no reason why chestnut seed imported from Japan would not grow if properly packed. Dried earth is a good material to use, the nuts well mixed with it and then nailed up practically airtight. In this way the nuts of all such trees will keep in good condition for months.

Cephalotaxus Pedunculata.

The several species of *cephalotaxus* hardy here are greatly valued. Evergreens of all kinds are; and the *cephalotaxus*, looking so much like the yew, is greatly prized by all who have it or know of it. There is a general resemblance to the yew in all the species; the name, in fact, denotes this. The one illustrated, *Cephalotaxus pedunculata*, is one of the best we know of. It is a Fairmount Park, Philadelphia specimen, one of which the former superintendent of the hall, the late Charles H. Miller, was very proud.

As a glance at the picture will show, there is a great deal of the appearance of the yew in this specimen. The appearance of the foliage and the style of growth are those of the English yew. But yet,

Cephalotaxus Pedunculata

nected with the quince, are inserted in the young growth of the pear wood, and in this way succeed well.

It is not always because the stock is unsuitable that dwarf pears do not thrive. Often the cause is unsuitable soil. The quince must have rich ground, rich and moist. Thriving trees follow the application of liquid manure, their foliage quickly showing appreciation of the food provided.

But few stocks of the quince are raised here, the importation of them proving satisfactory. Those who do propagate them find layering a good plan. Soil is heaped around the bushes, that the shoots may root into it. Quince shoots are so stiff and unyielding that it is not possible to bend them to the ground as is done in other ordinary layering. Among the several varieties of quince the one known as Orange has been long a favorite, and no one would regret planting it.

Dwarf Japanese Chestnuts.

Japanese chestnut trees, as usually found in nursery collections, are really trees although of but a small growth. There is, however, a variety found in some collections that is but a small shrub, of much the same style of growth as our chinquapin chestnut, the *Castanea pumila*, and like it bearing fruit when but two to three feet high. This dwarf variety, or whatever it may be, is so wholly unlike the other and is so desirable and such a novelty, that those interested should look to importing it from Japan when sending to that country for sup-

as its free-growing branches indicate, it makes longer shoots in a given time than the yew does. This specimen is growing alongside a path which leads to Horticultural Hall, and from its beauty and variety attracts a good deal of attention at all times, even when snow is on the ground. In this respect, conifers, to which class this *cephalotaxus* belongs, are all fully as interesting in Winter as in Summer, though of all seasons late Autumn seems to us to be the best. Deciduous trees have then shed their leaves, making more pronounced the beauties of evergreens, and wintry weather has not arrived to hinder the leisurely inspection of one's treasures.

In the laying out of grounds a nice assortment of evergreens should always be interspersed with deciduous trees and shrubs, if for no other reason than the one that we give—the enjoyment they afford in late Autumn and through the Winter. Our *cephalotaxus* is always interesting; there is no season when it is passed by unnoticed. Just as in the case of yews, there is at all times a deep, rich green color to the foliage.

The *cephalotaxus* have been classed as yews by some botanists and as *pedocarpus* by others, but *cephalotaxus* is the recognized name for them.

So far as relates to the hardness of the fine species we illustrate, the specimen speaks for itself. It is one of the many trees and shrubs coming into the possession of Fairmount Park after the ending of the Centennial Exposition, and has, doubtless, seen thirty years of life in its present position; and we do not think it has ever suffered from the cold of Winter.

CARNATIONS

The Raising of Seedlings.

Germinating in a few days and rapidly growing into size, carnations are the least exacting of the many things easily raised from seeds. They never damp off or yield to ailments that befall many other kinds of seedlings. Transplanted when about an inch in height, afforded ordinary care as to moisture, air and light, and then shifted along in pots or planted out in the field in early Spring, they quickly and lustily grow into sturdy plants, showing their first buds in about five months after the seed has been sown. Few, indeed, are the gardening operations that present so little difficulty, or are carried on with such lightly gained success as the raising of carnation seedlings.

But now, as the first flowers begin to expand, the inexperienced is often called upon to curb his exultation in what up to this juncture seemed astonishing success. Seedling carnations, unlike most other things raised from seeds, never come uniformly true to lineage, vary most strikingly in all the characteristics found in carnations, no two being alike in a lot of hundreds and the majority of them invariably inferior to those that produced the seeds from which they sprung or existing kinds of acknowledged merit.

But the possibility of securing among hundreds of worthless seedlings one or several distinctly new and, to all appearance, vastly superior to any now under cultivation, progenitors of future varieties of great value, is never excluded. And, therefore, in spite of all discouragement to be met with, there is nothing in all the world of horticultural exploits so alluringly captivating, so vividly interesting, as the raising of carnations from seeds.

Securing the Seeds.

The first step to be taken in the raising of seedlings is to raise the seeds. As yet seeds obtained by careful cross-fertilization of American varieties cannot be bought. It is scarcely needful to point out the important part that seeds play in this sort of work. When the principal aim in view is—and certainly should be—to secure one or more new kinds, ranking high in point of excellence, coming as near as possible to being perfect in all respects, it naturally must follow that only the best flowers on the best plants should be selected for pollen and seed bearers. This is not so simple a matter as it may appear. If ever deliberation and well-weighed circumspection are of value it is in choosing the parents for a progeny looked forward to with high hopes and fervent expectations. As a rule—not sufficiently fixed to serve as an absolutely reliable guide—it may be said that the probability of finding good plants among seedlings from white or pink flowering parents is much greater than from yellow or red flowering seed bearers, and that a good new pink is most to be relied upon as holding its own for years to come, while the true scarlets of good form and habit are usually the dearest to give out and to yield to deterioration.

It is a rule, much more trustworthy as a guide than the foregoing, that vigor of growth, healthy constitution and freedom of bloom can, with greater certainty, be transmitted from parent plants to offspring than color, size and shapeliness of the seed bearing flowers.

Much depends on environment and condition of the seed bearing plants, and probably also on the state of the weather during the period in which the seeds are attaining ripeness. Condition of pollen and stigma when fertilizing also plays an important part in the raising of good seeds.

When to Raise the Seeds.

It is a fact that cross-fertilization of bench grown American carnations, carried on in the bright days of

It Will Mean Dollars to You

ENDORSED BY THE HIGHEST AUTHORITIES

Invisible, Inexpensive, Indispensable, Instantaneously Applied

Have You Ever Figured
HOW MUCH YOU ARE LOSING
EVERY YEAR?

We believe we are safe in estimating the loss through so-called "splits" at from 15 to 20 per cent. of the entire cut. If you had a chance to save all these flowers and sell them for the highest price, would you not do it? That is just what the BAUR CLIP and PLIERS will do for you at a minimum of time and expense. Made of galvanized wire and only a very small portion appearing on the outside of the calyx; the clips

are practically INVISIBLE. They make a perfect job and are INSTANTLY ADJUSTED with our pliers, an instrument WORTH ITS WEIGHT IN GOLD, finely finished and thoroughly nickel plated. Every tool guaranteed.

PLIERS, \$3.00; WILL PAY FOR ITSELF IN A FEW DAYS. 1000 CLIPS, \$1.00

Send for it to-day. Cash with order. Orders filled in strict rotation. Your money back if you are not fully satisfied. Full directions with every outfit. Ready about February 10. Carriage charges prepaid in any part of United States or Canada. Pats. applied for.

BAUR FLORAL CO., 18 W. 10th St., ERIE, PA.

Spring and early Summer, results in the most successful fecundation and the speediest and most perfect ripening of the seeds. At that time vital pollen can be had in abundance and the reproductive organs of the seed bearers are most eager to receive it. But all this only proves what is well-known to everyone conversant with the workings of nature, which ever makes her greatest efforts at perpetuation, with no time to lose, at the last stages in the life of a plant. In short, it shows that carnations, like all else, when most anxious to bear seeds, are beyond their prime and very near the end of their career, either for that season or as regards their entire course of existence.

This explains why the final outcome of a start made with Summer-raised seeds hardly ever proves as satisfactory as the results obtained with seeds from flowers that were fertilized during late Fall and Winter, when the plants were at their best. Flowers that "took" in November or December will ripen their seeds in good time for a timely sowing in February or March. These seeds, when taken from the brownish, dry and shriveled pod, need not undergo any drying process, but may be sown at once. But seeds obtained by later fertilization, that do not attain proper ripeness until quite late, had better be dried on glass or paper and then be stored away and carried over until next season, when they can be sown in early February, which is the best time for the starting of carnation seeds, not so much for the sake of the seedlings as for the convenience of the grower.

European-Grown Seeds.

Seeds of all the distinctive varieties found in the perpetual, tree and picotee strains of carnations, are listed in European catalogues, seeds obtained by careful hand-fertilization of perfect flowers on perfect plants. Last Summer I witnessed the process at several seed-growing establishments in Germany and can testify to its being done in a manner bound to bring the best possible results. The

plants set apart for the purpose were pot-grown, vigorous bushes, full of bloom in all the stages from swelling bud to ripening seed pod. The fully opened flowers were the finest of their kind, I would want nothing better for my best trade, or anything more thrifty and prolific than those plants.

But I knew from experience that little of real value for the American grower need be expected to spring from these seeds. A few good plants for the pot plant trade might thus be secured, but for bedding out or for Winter-flowering they seem disinclined to adapt themselves to our climatic conditions and our methods of culture. The only good that might possibly come from carnations of European origin would be by making use of them in attempts at intercrossing with American sorts, having for their object the infusion of new blood. There is, I think, urgent need of some such steps to be taken in the near future, calling for the exercise of trained judgment and much patience.

Some of the establishments in Southern France and all the district engaged in raising cut flowers for nearly all parts of Northern Europe, continually originate new carnations merely for their own places. The best and most promising of the seedlings are grown on from year to year until they give out, when they are replaced by others obtained in the same manner. Many of the seedlings, though not carried over for future stock, furnish an abundance of flowers considered good enough for cutting and shipping in mixed grades. Some named standard sorts, mostly French, are grown, and a few American varieties were on trial here and there. But the main reliance of the growers, I was told, rests in the varieties continually worked up from home-grown seedlings.

Looking Forward.

The course taken by these French growers permits of being adopted here. What I saw strengthened my belief in the feasibility of such a plan, one by which many of the difficulties

now confronting carnation growers may most readily be overcome. Considering the instability of the newer carnations, the rapid decline of older varieties, it would seem that alone the fresh vigor of a home-grown and therefore well-known variety would place its value far above older kinds, even if not superior otherwise.

But I would not advise the raising of new sorts merely with that end in view. The danger of falling from better to worse lurks in all work not prompted by ambition of a higher order. Retrogression can only be avoided by a continuous forward movement on the course set by those who considered the very best none too good striving for. On the inherent value of the seeds alone, as I have tried to make plain, depends all and everything in the raising of seedling carnations. FRED W. TIMME.

MABELLE

New Pink Carnation for 1907

Color.—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. **Size.**—Three to four inches in diameter when established. **Odor.**—Pleasing, but not strong. **Stems.**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **Habit, etc.**—A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **Productiveness.**—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. No discounts. Delivery Jan. 5th to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000. First-class certificates Madison and Indianapolis.

Plant Notes.

DRACÆNA INDIVISA is a plant that no grower of stock for sale should be without. It is so well suited to various uses that it is unquestionable if there is any other decorative plant indispensable to such a degree as it is to all classes of growers of miscellaneous stock. It is unapproachable for window boxes, where the weather may and often is too severe for the existence of any things of less merit; for small tubs and medium-sized vases indoors or outdoors there is nothing to beat it for endurance except the aspidistra, and it is in no way suitable for such purposes. Dracæna indivisa may also be planted outdoors in any well sheltered bed or border where in company with other material it will prove very graceful and effective.

This dracæna is readily raised from seed, and this seed may now be sown in sandy soil, in pans or flats placed in a warm part of a house. When the seedlings are of sufficient size they should be potted into the smallest sized pots and grown on and shifted into larger pots only when they are absolutely in need of more room. The growth of the plants will be hastened if in the early Summer of the second year they are planted in a sheltered position outdoors, in rich soil, and in the Fall taken up and repotted into pots the desired size for sale. With this variety of dracæna, as well as with some of the more tender varieties, it often occurs that opportunity arises for disposing of many when they are small or of moderate size, and it perhaps occurs just as frequently that growers who are also retail florists find many uses to which to put these small plants during their first year of existence.

DAHLIAS are comparatively easily grown and, to suit the purposes of some, easily enough multiplied, that is by the old-fashioned way of dividing the tubers or "toes." But it must be admitted that the best results in quality and size of blooms are obtained from plants propagated from cuttings in the Spring. Plants from division are not so easily grown as single stem plants as are those from cuttings, and since it is now recognized that better flowers are borne by plants of single stems and then allowed to branch moderately than from those with stems innumerable coming out of the ground, it will be seen how desirable the cutting method is. Many who have tried propagating dahlias failed in nine cases out of ten for the following reasons: That the stock plants were kept in a too warm temperature and the cuttings the same after being put in the sand; or that the cuttings were shaded too much, aggravated perhaps by the result of the former condition causing the wood to be too soft.

When it is decided to begin propagating dahlias from cuttings the desired number of each variety of the stock to be propagated from should be placed on a bench in a light, airy part of a house where the temperature does not rise much above 60 degrees. A lower temperature than that will suit, but most likely a much lower one is not practicable when propagation will be under way. Every clump should be carefully labeled so that there will arise no doubt as to the plants propagated being true to name. Enough soil should be put around the tubers to barely cover them. Very little if any bottom heat to start them into growth is needed or desirable. Whenever growth has proceeded to the extent of cuttings that are from two to three inches long being visible, they should be taken with a sharp knife. It is better to sever the cutting with a little of the bark or outer skin of the remaining stock adhering to it; and it is also advisable to cut slantingly, thereby leaving on the cutting a kind of an oval heel. This precaution will aid in the resistance to damping which is always well to guard against.

When all the cuttings are in condition those from one variety are taken

Red Riding Hood. Chicago Carnation Co., A. T. Pyfer, Joliet, Ill.

Mention the Florists' Exchange when writing.

OUR GRAND SCARLET, \$12.00 per 100; \$100.00 per 1000. A. T. Pyfer, Joliet, Ill. Mgr.

off in the way indicated; a label should be handy and the name of the variety written on it and placed in the sand back of the first cutting or in front of the last of that variety. The sand wherein the cuttings are to be rooted should be clean. A little bottom heat will do no harm; on the contrary, I think it hastens the rooting of dahlias as well as the rooting of most other things, but it must be very little else the cuttings will not root. If the cuttings were stocky and the result of slow growth, very little shade is necessary at any time.

When the cuttings have made short roots they should be immediately potted into the smallest size pots available. They are not over discriminating in the matter of soil, but for the first potting it will be well if for the most part the compost be composed of leaf-mold and sand. For the next and subsequent pottings if more than one is deemed advisable, a more strengthening and lasting material will be needed, and nothing is better than good fibrous loam. All along the plants should be grown as cool as possible until the time arrives when they can be placed in frames outdoors.

In beginning propagating a list should be made of all the varieties in stock; also a list of the number necessary to be grown of each of these varieties. This will relieve the grower of much annoyance and uncertainty. M.

GRAFTED ROSES

THE GRAFTING SEASON is a most interesting and a very important one on a large plant like ours. We ordered one hundred and sixty thousand Manetti stock for this winter's work. All orders received before the grafting is over will be carefully filled and the plants

reserved for each customer. It is therefore an advantage to our patrons to make their wants known as early as possible. We offer this year the following assortment: Bride, Bridesmaid, Bon Silene, Etoile de France, Franz Deegan, Golden Gate, Ivory, Gen. McArthur, Kate Moulton, Kaiserin Augusta Victoria, Killarney, La Detroit, Liberty, Mme. Abel Chatenay, Mme. Caroline Testout, Mme. Hoste, Mrs. Pierpont Morgan, Maman Cochet, Marechal Niel, Perle Des Jardins, Papa Gontier, Richmond, Rosalind Orr English, Souv. Du President Carnot, Souvenir De Wootton, Tom Field, Uncle John, Wellesley.

The above grafted from 2 1/4 inch pots, \$15.00 per 100; \$120.00 per 1,000 for A No. 1 stock; nothing else will be sent out. On their own roots, from 2 1/2 inch pots, repotted from 2 inch, \$6.00 per 100; \$50.00 per 1,000.

American Beauty. On own roots, from 2 1/2 inch pots, \$8.00 per 100; \$75.00 per 1,000; 3 inch pots, \$12.00 per 100; \$100.00 per 1,000; April, May and June delivery.

Mme. Norbert Levavasseur. (The Baby Rambler.) An everblooming dwarf Crimson Rambler. We will furnish May delivery plants of this sensational rose from 2 1/2 inch, at \$2.50 per dozen; \$15.00 per 100.

Making a Water Lily Pond.

(10) I want to make a water lily pond about 100 feet in diameter. How deep should I dig it? I refer you to an article in 'The Florists' Exchange, March 24, 1906, about Twin Oaks. Will you kindly inform me where I can get the water lilies mentioned therein; also inform me how to grow them?
 W. E. B.

Wichita, Kan.
 —The depth the pond should be dug will depend on what water lilies are intended to be grown in it, how wintered, and the depth or thickness of the ice formed in Winter. If the pond is intended for tender lilies, the roots of which have to be wintered in a greenhouse or cellar, then a depth of two feet finished will be sufficient. This will allow of twelve inches of soil on the bottom of the pond (or boxes of the same depth), in which to plant the lilies, and twelve inches of water over the crowns of the plants. On the other hand, if the pond is to

PRICE, \$1.50
The FLORISTS' EXCHANGE, 2-8 Duane St., New York

accommodate both hardy and tender lilies, the depth should be sufficient to allow of twelve inches of soil, and the crown of the hardy lilies which are to remain in the pond to be from 3 to 6 inches below the thickest ice formed in the Winter, as many of the finest hardy lilies will not stand actual freezing.

Water lilies require a good rich soil, one inclined to clay preferred. The soil should be mixed with equal parts cow manure, and frequently turned so as to become thoroughly incorporated. At the last turning a good dusting of bone meal should be added, and the soil will then be ready for use.

There are two methods of growing water lilies; one is to plant the lilies on the bottom of the pond; the other is to plant in boxes. For small ponds boxes are much more convenient, keeping the roots of the lilies within their allotted space, and not allowing them to run over the pond. For the hardy lilies boxes 3x3x1 foot will be found a good size. This will also be a good size for the zanzibarensis and gracilis types. While the lotus and dentata types will require boxes 4x4 x1 foot. For the Victoria a box 8x8 x1 foot will be none too large.

The hardy lilies can be planted from the time growth commences in the Spring through the Summer until the month of August. A good rule to follow would be to plant them as soon as it would be safe to sow corn. The tender lilies should not be planted before it would be safe to set out cobs, or not until the temperature of the water in the pond reaches 70 or 75 degrees; for the Victoria regia not until the water reaches 75 to 80 degrees. If the pond is heated artificially and these temperatures can be maintained, the lilies can be planted much earlier than they can be in an unheated pond.

After the plants are set out the soil should be covered with from one to two inches of coarse sand, or fine gravel, to prevent the manure from rising to the surface of the water, also to prevent the fish from uprooting the plants. A generous number of gold fish should be kept in all ponds to keep down the aphid and mosquito larvae. For a pond of the dimensions given, from 50 to 100 fish should be secured to start with. The after cultivation consists of removing all decaying or unsightly leaves, allowing enough water to flow in to keep the pond full, yet not allowing a great stream to run through continually so that the temperature of the water will be lowered, especially if tender lilies are growing in the pond. The water lilies named in 'The Florists' Exchange of March 24, 1906, can be purchased from H. A. Dreer, Riverton, N. J.
 PETER BISSET.

A Pink Snapdragon.

(12) Is there a pink snapdragon? If so, where can the seed be obtained?
 G. S. N.
 —A. T. Boddington, seedsman, 342 West Fourteenth street, New York City, is cataloguing a pink snapdragon, and doubtless can supply the seed of same.

Jan. 26, 1907

Bulbs for Easter Flowering.

(13) When is the proper time to bring Duc Von Thol tulips, Von Sion daffodils and hyacinths to light and heat to have them in bloom at Easter? The bulbs are started about one-half inch.

New York. C. G. R.

—The hyacinths and tulips may be brought into light and heat twenty-one days before Easter, and the Von Sion narcissus should be allowed about thirty days.

When should Lilium Harrisii show buds, and what temperature should they have to be right for Easter?

New York. P. D.

—If the buds show by the 15th of February, they will come in all right for Easter without any undue forcing. At the present time the plants should be receiving a night temperature of 60 degrees, with a corresponding raise of temperature during the day.

Feeding Ten-Week Stocks.

(14) Will you kindly state in your paper whether it is well to continue feeding Ten-week stocks with liquid fertilizer after the blossoming begins?

Mass. S. E. B.

—A little weak liquid manure can be given to Ten-week stocks right through their flowering period to good advantage. Stocks are not so sensitive in this matter as some other flowering plants.

Transplanting Wild Rhododendrons.

(15) I would like to know how early I can take up wild rhododendron plants for shipping, and if a plant taken from wet soil will grow in dry.

A. N. W.

—In transferring the wild rhododendrons from a wet or marshy situation to a dry one, great care would have to be taken during the first year to afford them plenty of water. They should be lifted or transplanted as early in the Spring as possible, just as soon as the frost is out of the ground, and they then can be shipped without danger of their roots being frozen.

A House for Ferns.

(16) What is the best style of house for growing ferns, and how should it stand—east and west or north and south?

R. H. C. Conn.

—While ferns can be grown in houses that are unsuitable for most other crops, we would say that in building a new house for ferns it would be folly to do other than erect one that could be utilized for some other crops if necessary. A house, three-quarter span, running east and west, would be the most advantageous to build.

Growing Smilax.

(17) Will you kindly tell me the best way to grow smilax on a large scale, where to plant, etc., and how many crops I can cut in a year? Can I grow them more than one year without removing?

SMILAX. Conn.

—The best way to grow smilax is to have it in solid beds, raised 10 or 12 inches above the floor of the greenhouse, using a soil that is very rich, similar to that used for roses. A temperature of 60 degrees at night should always be maintained; and three or four crops can be produced in one year. While smilax can be grown year after year from the same roots, it is advisable not to do so, as the best results are secured from planting new stock every year.

Grafting Lemons.

(18) A bush, about 8-years old, 6 feet high, strong and healthy, raised from an ordinary lemon seed, in an 8-inch pot now and kept in the greenhouse, was given to me for grafting. I tried it in different ways as I graft roses and other fruit trees, but without success. Is there a special way of grafting lemons?

H. H. New Jersey.

—In grafting the lemon we would advise that the operation be performed just before growth is expected to commence. This can be done either by cutting off the head of the stock and crown-grafting, or by attaching the graft to the growing shoot, the same as is done in whip-grafting. It should be borne in mind, however, that moss only should be used for covering same.

(19) Kindly tell me what the trouble is with my American Beauty roses. They are growing well but form but a few buds. Some of them reached up to the glass, and these I tied down. They had good treatment, and were planted in the middle of July. I enclose some leaves; the light green ones are from young shoots growing from the bottom, but they don't all have this appearance. The others are from long canes. Would you advise me to cut back the plants? Some one told me to do so, if so, please state to how many eyes.

New York. V. C.

—Do not cut back the roses by any means; keep them rather on the dry side, though not enough to injure the plants in any way. Buds will soon begin to show now, no doubt. To have cut the growths back would have wasted an entire crop. The leaves sent show no indication of disease of any kind.

Roses, Holly, Cycas.

(20) Can roses be rooted from cuttings under shaded frames outdoors, or which is the best way to root them without a greenhouse? (2) Can holly (Southern) be grown successfully from cuttings? (3) Tell me how to plant and care for cycas stems; kind of soil, etc.

Louisiana.

—Roses can be successfully propagated in shaded frames outdoors through the Summer by first putting 18 inches or so of loose stable manure in the bottom and firming down well before placing the soil and sand.

Holly can not be grown with any degree of success from cuttings, but is easily raised from seed.

Cycas stems, when they arrive should be put into pots just large enough to leave 2 or 3 inches of space around the sides. But two or three inches of the base of the stem should be inserted in the soil. After they are potted, plunge the pots either in soil or spent manure in a greenhouse, and they will be just as well if placed under the benches, provided there is no drip from plants that stand above them. A moderately light soil should be used, one in which there is no green manure of any kind, and care should be taken that the pots are drained properly so that the soil will not become sour before active growth starts. Any ordinary greenhouse temperature is suitable for cycas, but if it is intended to grow them quickly, they can be put into a house where 60 degrees at night is maintained, as soon as the young leaves begin to unfold and root action has started.

Cycas Revoluta; Palms.

(21) We enclose a portion of a Cycas revoluta leaf that has turned yellow. Can you tell what causes this? Our kentias are of a yellowish-green, not the color they ought to be. Our small kentias seem to be all right—those in four inch pots. Our glass is shaded.

New Jersey. W. & N.

—In regard to the leaves of Cycas revoluta decaying from the tips downwards, we would say that it is a pretty sure sign that the plants are not being treated correctly. The trouble probably arises from the plants being over-potted or over-watered, or perhaps both. The same trouble is, no doubt, affecting the kentias, and we would advise taking them out of the pots, re-potting in new soil and allowing but a little space around the ball for the new soil; then there will be less likelihood of danger arising from over-watering.

Remedy for White Fly.

(22) Will you please give me the name of the acid to be used as remedy for white fly. How much will it take for a house 20 x 100 feet? Can I use the same in the house where palms, ferns and bedding stock are raised without doing harm to any of those plants?

Pa. P. B.

—For full information regarding remedies for white fly, we would refer you to our issue of November 17, 1906, page 598.

ARTHUR T. BODDINGTON 342 W. 14th. St., New York

Heating. Growers' Problems Solved by U. G. Scollay

I am thinking of building a 15x100 foot 3/4 span house, 7 feet on north and 5 feet high, south side, with 2 foot fixed glass on south side. Will later build a propagating house against the north side. Will you kindly tell me, how many lines of 3-inch boiler tubing I will need to heat this house to 65 degrees in zero weather? Also advise me which end of this house had best be the cool end, in case I put a partition in the center of it, and run part of it at 55 degrees. The house will run east and west, with the boiler on the west end. Could you suggest a better arrangement? J. R.

To absolutely maintain 55 degrees inside, with zero outside, in the house described, I would advise nine runs of 3-inch boiler tubes. A good arrangement for this piping would be to place three under the south bench, three under the north bench, and three under the middle bench (having two pipes of this middle bench placed under the south side of it, and one under the north), and on the north bench three pipes. In case you desire to have a partition in the house, your best plan would be to have the cool end on the east side furthest from the boiler. I suggest this because you will keep the warmer section in use when it will not be needed in the case of the cooler. You could arrange the piping so that you could bring your coils for the cold section from the ends of the circulations in the warm house. To maintain 55 degrees inside I would suggest that you run seven lines of the same size boiler tubing. I would caution you against using the 3-inch boiler tubes for one flow and one return mains, for they will not be large enough. If you intend to use the 3-inch tubes between the boiler and piping, I would suggest that you divide the job so that you will have two flows and two returns from the boiler to the coils, and divide them so that each of these flow and return mains will carry about an equal proportion of the whole heating surface. The arrangement as you lay it out is a very good one, and the house in question should be a very profitable one. If these lines of heating are carried out you will have no trouble to maintain the temperature, provided, of course, that you have ample boiler capacity and connections are all made similar to the previous articles described in The Florists' Exchange for houses of this description. U. G. SCOLLAY.

CANNA ROOTS

Allemania, Shenandoah, Anstris, Henderson, Pennsylvania, Italia, Mlle. Berat, F. Vaughan, \$2.00 per 100; \$17.50 per 1000. West Virginia, Mrs. Kate Gray, \$3.00 per 100; \$25.00 per 1000. Emberea, 4 in. \$3.00 per doz.; 2 in. \$4.00 per doz. Asparagne Sprenger, 3 in. \$4.00 per 100. Hibiscus, 2 in. \$2.50 per 100, in variety. Ferns, 2 in. Boston, \$3.00, 2 in. Scott's, \$3.00, 2 in. Tarrytown, \$5.00 per 100. Culeus Ontings, 6 in. per 100, \$5.00 per 1000.

THE NATIONAL PLANT CO., Dayton, Ohio

GRAND NEW CANNAS William Saunders Ottawa

The flowers are large, of splendid form, and are born very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze. Height, 3 1/2 to 4 feet. We believe that Wm. Saunders is decidedly the most perfect canna of this type that has been introduced. 50c. each; \$5.00 per doz.; \$35.00 per 100.

is a strong grower, very robust and 5 to 6 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.

Note:—We had this canna on trial among the Canadian experimental stations last summer and this is the official report of their expert: Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 massed in one bed during the past season, this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 12 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size." 50c. each; \$3.00 per doz.; \$35.00 per 100.

Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest winter of a canna. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Send for our list and prices of 60 other leading varieties of cannas.

New York ROSES Shrubby

Are our great specialty, 24 and 4 in. pot plants we have in great variety. Tea Hybrid Tea and H. P. Roses on their own roots. Philadelphia Rambler, Crimson Rambler, Dorothy Perkins and other climbers in strong field plants.

Copy must reach this office by 12 noon Wednesday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

Fire! Fire!!

Owing to a fire which occurred in our building on Thursday morning, January 24, and the gutting of the floor above us, the floor on which the offices, etc., of The Florists' Exchange are situated was flooded with water, suspending temporarily all operations; the present issue is about 36 hours late, for which fact, under the circumstances, we ask the indulgence of our patrons, particularly our advertisers, the index to whom is unavoidably omitted from the current number, for the reason given.

Chrysanthemum Society of America.

The president of the Chrysanthemum Society of America on assuming office will be glad to consider any suggestions which may appear for the good of the society. Lovers of the Autumn Queen are invited to communicate their ideas, and the hearty co-operation of every member of the society is most desirable for the accomplishment of the success which should be ours. The year is before us with all its grand possibilities; let each one contribute his share of interest, and the good results will be gratifying to us all. Let there be no drones in the hive of the C. S. A. during the year 1907. DAVID FRASER, Secretary.

McKinley Day.

I would respectfully call the attention of the carnation growers and florists to the recurrence of McKinley Day on January 29, 1907, and would emphasize and endorse the comments appearing in recent issues of the trade papers.

The trade is responsible for the success or failure of this day, dedicated to the expression of respect for our martyred President. Far better lose your entire day's stock, or absolutely donate it to the public, than to antagonize this awakening sentiment of the American public by exorbitant and prohibitive prices for President McKinley's favorite and beloved flower, on this coming anniversary of his birth.

It is to your interest that the public should know of this day; there is not a paper in this country that will not give space referring to and commenting upon it. A discriminating and judicial distribution of a few carnations, either white, red or pink, will emphasize the significance of the day, and the wearers will excel themselves in arousing the dormant sentiment of their friends and acquaintances.

And, lastly, and most important, contribute \$1 or more, if you can, to the Florists' Memorial Fund for the McKinley Monument, and receive by return mail a handsome steel-engraved certificate; then place this in a prominent place on January 29 thereby offsetting, to a degree, any impression of selfishness on your part in a public movement that benefits your business.

Our list will be closed and published at an early date, therefore send your subscription at once to Dayton, Ohio.

H. M. ALTICK,
Chairman.

American Carnation Society.

Favored by propitious weather the American Carnation Society held a most successful meeting and exhibition at Toronto, Ont., Wednesday and Thursday, January 23 and 24. A comprehensive summary of the proceedings, together with a full report of the exhibition is given in this issue. The report will be continued next week.

The hearty welcome accorded by the Canadian brethren to all the visitors across the line was greatly appreciated; and it was generally conceded by the craftsmen in the Dominion that the visit of the Carnation Society to Canada will be of considerable benefit not only to the special industry championed by the organization but to the florist trade generally as well as to the society itself.

We hope to present a review of the proceedings in our next issue.

Free Seeds Eliminated in Agricultural Bill.

The present free seed distribution is eliminated in the agricultural appropriation bill, which was before the House on Wednesday, January 23, and in its place \$238,000—the amount of the current appropriation—is proposed to be devoted to the purchase of rare and uncommon seeds and their distribution to experimenters, through the Department of Agriculture, rather than by Members of Congress. The measure provides, however, that Members of Congress shall co-operate with the department in submitting names of such experimenters to whom seeds shall be distributed.

The free seed men are already organized to fight the provision, in order to continue the old free seed distribution now in force.

National Council of Horticulture.

The first installment of the 1907 service of the National Council of Horticulture's press bureau was distributed the current week by James Burdett, 1720 W. One Hundred and Fourth place, Chicago, to a greatly enlarged mailing list. It consisted of four articles prepared by volunteers under the direction of Professor H. C. Irish, secretary of the society, as follows: "The Modern Gladiolus," "Poppies," "Designing a Planting Scheme," and "Evergreens for Ornament."

As it has been suggested by some contributors to the council's press service that they would like to advertise in some of the newspapers using the service, the following list is issued of newspapers that used the service last year and expressed themselves as wishing to have it continued.

The News League of Ohio, including Dayton Daily News and Springfield Daily News; Louisville Times; Spokane (Wash.) Spokesman-Review; Madison (Wis.) Democrat and the string of papers served by it with plate matter; St. Louis Globe-Democrat, semi-weekly edition; St. Louis Star-Chronicle; Cleveland Press, and about 50 other papers served by the Newspaper Enterprise Association of Cleveland; Philadelphia Evening Bulletin; Memphis Commercial-Appeal; Chicago Tribune, Chicago Daily News, Washington Evening Star; Worcester (Mass.) Evening Gazette; Brooklyn (N. Y.) Daily Eagle; Grand Rapids (Mich.) Herald; Ohio State Journal, Columbus, O.; Kansas City Star; Milwaukee Journal, Milwaukee Evening Wisconsin; The News, Buffalo; Cincinnati Gazette, published by Commercial-Tribune Company; Twentieth Century Farmer, weekly publication of the Omaha Bee; Minneapolis Tribune.

The Kellogg Newspaper Company of Chicago, the American Newspaper Union of New York, and the Chicago Newspaper Union of Chicago have supplied their subscribers, numbering several thousands, which they have classified in various lists covering certain territory.

It is earnestly desired that the names of newspapers, to which contributors wish this service to be sent, or which express a desire for the service, be sent to Mr. Burdett, in order to make the mailing list as efficient as possible.

Carnation Night in Philadelphia.

The next meeting of the Florists' Club of Philadelphia will be "Carnation Night," date of which is Tuesday, February 5. John E. Haines, the carnation expert of Bethlehem, Pa., will deliver a paper on his experiences with carnations.

Exhibits of all meritorious novelties are invited by the committee in charge, and it is to be hoped all the very best will be on hand so that the progressive florists of Philadelphia—the horticultural center of the country—may have an opportunity of examining them carefully, and as a consequence placing their generous orders for those which meet their fancy. Please ship, prepaid, in care of David Rust, Horticultural Hall, Broad street above Spruce, Philadelphia, Pa., and they will be properly taken care of upon arrival.

N. B. It would be better to forward them a day sooner than is sometimes thought necessary so that they may be sure to arrive on time, as on former occasions some shipments from a distance have been delivered a day late.

All interested in carnations are invited to be present whether they themselves have superior varieties to exhibit or not. EDWIN LONSDALE,
Secretary.

American Rose Society.

March will soon be here and the rose show in the city of Washington, D. C., now calls for attention. It is desired that a committee meeting be held on Wednesday evening, January 23, 1907, at Hotel Martiniere, Thirty-third street and Broadway, New York City.

Now, gentlemen, if possible to do so let us boom the society. At the recent New York Florists' Club meeting, President Simpson and the writer were present and had an opportunity to say a few words in the interest of the society.

List of Premiums Now Offered.

\$10.00 cash prize, by an amateur, for best foliage rose in village dooryards.

\$25.00 cup, by F. R. Pierson, Tarrytown, N. Y., for best collection of hybrid Wichuriana.

\$25.00 cup, by H. O. May, Summit, N. J., for exhibit of American seedling rose not introduced.

\$50.00 silver cup, by Robert Simpson, Clifton, N. J., for best collection of Rambler roses.

\$10.00 cash prize by Mrs. S. C. Briggs, for six or more blooms of any new rose never before exhibited.

\$25.00 cup, by Henry F. Michell Company, Philadelphia, Pa., for fifty blooms Richmond rose.

\$5.00 gold piece, by Miss M. I. Hammond, Fishkill-on-Hudson, N. Y., for the prettiest exhibit to be decided by three ladies visiting Washington.

\$25.00 silver cup, by Welch Brothers, of Boston, Mass., for sweepstakes; best vase of roses in the exhibition. BENJAMIN HAMMOND,
Secretary.

R. Gidionsen.

Reinhold Gidionsen, 87 years old, a florist, died at his residence, No. 2201 Arsenal street, St. Louis, Mo., on January 8, 1907, after a brief illness. He had been a resident of the city for thirty-three years. He was born in Schleswig-Holstein, Germany, and participated in the Revolution of 1848. Mr. Gidionsen is survived by a widow, four sons—Albert, Herman, Edward and Oscar—and one daughter.

H. Salmon.

Hearson Salmon died at his home, 177 Milburn street, Rochester, N. Y., January 17, aged 47 years. He leaves, besides his mother, Mrs. Ann Salmon, three brothers, Frank, Walter, and Herbert, and three sisters.

Deceased was for a number of years a trusted employee of Salter Brothers, and had been a great sufferer from asthma. This, combined with a severe attack of la grippe, ultimately caused his death.

The sympathy of the trade is extended to the family in their bereavement. C.

James Braik.

James Braik, Assistant Superintendent of Parks, Buffalo, N. Y., died suddenly at his home, 1263 Elmwood avenue, Wednesday, January 16, 1907.

Capt. Braik, who was 58 years of age, was recently seized with a severe attack of rheumatism from which he was convalescing. His wonted energy returned to such an extent that on the morning of the day on which he died he disposed of a number of business matters, among which was the forwarding to the Park Department of his annual requisition for Spring flower seeds and bulbs.

Capt. Braik was appointed Assistant Superintendent of Parks in 1887. He was born in Scotland, and previous to his arrival in this country he served as a soldier in the British army, in the 79th Cameron Highlanders. He was a prominent member of the local branch of St. Andrew's Scottish Society, having occupied the position of president from November, 1892, till November, 1893. He retained his love for military life and was the first captain of the Gordon Highlanders of Buffalo. He was a past master of a Masonic lodge before going to that city nineteen years ago.

Capt. Braik's breadth of knowledge concerning both the practical and the scientific side of park improvement made him particularly well fitted for his official position. He is survived by his widow.

He was an active member of the Buffalo Florists' Club, and an enthusiastic bowler. At a special meeting of the club, held to take action on his death, the following resolutions were adopted:

"That we have heard with profound sorrow of the death of our esteemed associate James Braik. His long and faithful work in the parks of our city and his upright character have endeared him to his fellow workmen and to the citizens of Buffalo.

"In his death the city loses a faithful, competent and enthusiastic servant, and his associates a staunch friend."

The funeral took place on Saturday afternoon, from the family home, and was under the direction of Lake Erie Commandery.

Jan. 26, 1906.

James Mallon.

James Mallon, known in Brooklyn, N. Y., for over fifty years as a florist and proprietor of the store at Willoughby and Fulton streets, died Saturday noon, January 19, after a lingering illness at his home, 306 State street. Mr. Mallon had been ill for about two weeks and his death was due to a complication of diseases superinduced by old age, he having recently passed his seventy-fifth year.

Mr. Mallon came to this country at the age of 15, with his parents, from County Tyrone, Ireland. His father became engaged in the florist business, and soon turned it over to the younger man, who started the store at Fulton and Willoughby streets, Brooklyn. He later established a greenhouse at 20 Smith street, under the old Bijou Hotel, and for years he was known as the father of the business in the city. About twelve years ago, because of infirmities, he was compelled to give up active business and he turned the store over to his two sons, John P. and Joseph F. Mallon, who have conducted it since.

Although Mr. Mallon did not take an active part, he was at the place of business every day, and during the rush of Christmas week he worked as much as sixteen hours a day. The exertions then, according to the physicians who have attended him, were largely responsible for his weakened condition when attacked by the fatal illness.

Mr. Mallon was married to Miss Bridget Scanlon and they had four children, who now survive them. Mrs. Mallon's death occurred little more than a year ago. Beside the two sons who have taken their father's place in the florist business, they had two daughters—Mrs. Mary Fuery and Mrs. A. G. Piggott.

Since he first came to this country Mr. Mallon has taken a great interest in politics, although he has never held office or been actively engaged in any of the campaigns. He was a fast personal friend of Hugh McLaughlin, one of the old time Democratic leaders of Brooklyn, and he was a member of the Third Ward Young Men's Democratic Club, also of the St. Patrick's Society. His place at Willoughby and Fulton streets was the rendezvous for many of the most prominent men of the city, and to many of them has he proved an adviser, whose words were well worth heeding.

The funeral took place from the Catholic Church of St. Charles Borromeo, of which he was a member, and services were conducted by Father Bobler, the pastor. The interment was made in Holy Cross Cemetery on Tuesday.

The funeral ceremonies were simple and impressive. The services were attended by many relatives and hundreds of friends, among the latter men who are well known in the political world. A simple wreath of lavender lying on the casket was the only floral offering.

OUR READERS' VIEWS

Parentage of Carnation Winsor.

Editor Florists' Exchange:

In the interesting article on the Winsor carnation so ably written by J. I. Donlan, and published in last week's issue, there is a sentence which to me is somewhat puzzling. Mr. Donlan says that Winsor is the result of a cross between Daybreak and Albertini X with Lawson thus making Winsor the proud possessor of two fathers and one mother. I do not profess to be much of a botanist, and it is a few years since I attended an elementary class of botany, yet I have a faint recollection from our lessons on hybridisation that this is an impossibility. Can you enlighten me on the subject?

W. H. WAITE.

[We presume Mr. Donlan meant that the Winsor was the result of a cross of Daybreak and Albertini and that progeny again crossed with Mrs. Lawson, but shall be pleased if Peter Murray, the originator of Winsor, will give the correct parentage of the variety.—Ed.]

Reflections of an Old Reader.

Editor Florists' Exchange:

If we are not remote from civilization, we are in a measure from the centers of floriculture and horticulture. Although we have often desired to visit these brighter lights in person and their establishments, the opportunity is not always at hand. The next best thing is to light our pipe and take The Florists' Exchange and other papers and read the topics of the day. Your intensely interesting arti-

cles on the different topics in connection with the trade, also Timme's Timely Teachings, Job's Reflections on Current Topics, etc., are always highly interesting. By-the-by Mr. Timme did not respond to the request of one of the readers of The Florists' Exchange in regard to the publication of his portrait. We presume he is like ourselves, going down the western side of the hill of life. In his Timely Teachings of January 12, in reference to Christmas, he mentions the past of fifty years ago. We old-timers would prefer the company of those of our own age, more than that of the present generation; it is a little more congenial.

Another old-timer you mention in your very interesting article on Mr. Wintzer is J. R. Trumpy. I remember Mr. Trumpy had a reputation as the best propagator in the United States over thirty years ago, when I was in the trade around Boston. I quote what you say, "Mr. Wintzer inherited a genius for finding out the requirements of plant life." This is what all of us florists and gardeners need to do—an important text for every young florist. The world is a trial ground or school, and we are all practitioners or students, always learning and always forgetting.

We would say to Mr. Timme, to Job and other valuable contributors to The Florists' Exchange, go on with your contributions, and we will be intensely interested in reading them until our harvest of life is past and our Summer is ended. Such is the desire of
J. B. BEBBINGTON.

Fredericton, N. E.

For McKinley Day.

Daniel B. Long of Buffalo, N. Y., sends us a sample of his show card calling attention to "Carnation Day," as McKinley's birthday, January 29, has come to be named. The card shows a portrait of the martyred President bordered with carnation flowers in color. This is an excellent advertising sign for the occasion to which it refers, and as such should prove of great value to retail florists.

Class A—100 Blooms.

White—First, Chicago Carnation Co., Joliet, Ill., with White Perfection; second, J. D. Cockcroft, Northport, L. I., with Georgia.

Enchantress shade of Pink—First, Chicago Carnation Co., with Enchantress; second, John E. Haines, Bethlehem, Pa. with Pink Imperial.

Lawson shade of Pink—First, Chicago Carnation Co., with Aristocrat; second, John Riemels, Woodhaven, N. Y., with Winsome.

Scott shade of Pink—First, F. R. Pierson Co., Tarrytown, N. Y., with Winsor; second Stafford Flower Farms, Stafford Springs, Conn., with Enchantress.

Scarlet—First, Cottage Gardens Co., Queens, N. Y., with Robert Craig; second, same firm, with Beacon.

Crimson—First, Cottage Gardens Co., with Creole Beauty; second, J. D. Cockcroft, with Harvard.

There were no entries in the yellow variegated and white variegated classes.

Any other color—First, John E. Haines with Pink Imperial.

Class B—50 Blooms.

White—First, Chicago Carnation Co., with White Perfection; no second.

Enchantress shade of Pink—First, Chicago Carnation Co., with Enchantress; second, Dale Estate, Brampton, Ont., with the same variety.

There were no awards in the classes for fifty blooms Lawson shade of pink and fifty blooms Scott shade of pink.

Scarlet—First, Guttman & Weber, Lynbrook, L. I., with Victory; second, F. R. Pierson Co., with Red Lawson.

In the classes for crimson, yellow variegated, white variegated and any other color, no awards were made.

Class C—25 Blooms.

White—First, Chicago Carnation Co., with White Perfection; second, Dale Estate, with White Lawson. There was no award in this class for Enchantress shade of pink.

Lawson shade of Pink—First, Dale Estate, with Pink Lawson; no second.

No award was given for Scott shade of pink.

Scarlet—No first; second, Dale Estate with Flamingo.

Crimson—First, E. Crowhurst, with Harlowarden; second, Dale Estate, with Governor Roosevelt.

Yellow variegated—No first; second, Dale Estate, with an unnamed seedling.

There was no award for white variegated.

Any other color—First, Dale Estate, with Nelson Fisher; no second.

American Carnation Society Medals.

Silver medal for 100 blooms any variety, any color—Cottage Gardens Co., with Alma Ward.

Bronze medal, for same number of blooms—Dalle-douze Brothers, Flatbush, N. Y., with No. 348.

Medals of Society of American Florists.

Silver medal for fifty blooms of a variety not yet disseminated—Cottage Gardens Co., with Alma Ward.

Bronze medal, for same number of blooms—Baasett & Washburn, Chicago, with seedling No. 20.

Special Prizes.

The silver cup, valued at \$50, donated by the Canadian Horticultural Association for six vases of 50 blooms in each, distinct varieties—F. R. Pierson Co., with Winsor.

The Steele, Briggs Seed Company, Toronto, silver cup, valued at \$25, for six vases 25 blooms each, distinct varieties—W. J. Lawrence, Eglinton, Ont.

The Montreal Gardeners and Florists' Club cup, valued at \$25, for the exhibitor making the largest display in all classes, being counted as part toward this display was won by the F. R. Pierson Co., Tarrytown, N. Y.

The R. W. King Co. Toronto, Ont., silver cup, valued at \$25, for the best 100 carnations in four varieties, four vases, competition restricted to the users of King's greenhouses—W. J. Lawrence.

The Dale Estate, Brampton, Ont., silver cup, valued at \$25, for vase of 100 blooms of the best carnation to be disseminated during 1907—The Cottage Gardens Co., with Beacon.

John H. Dunlop, Toronto, ten dollar prize for best vase of 50 blooms, distinct from other entries—Richard Witterstaetter, Sedamsville, Ohio, with Aristocrat.

W. Gammage, London, Ont., \$10 prize for best 25 blooms, pink seedling or sport darker than Enchantress and lighter than Lawson, never before winning a prize or medal—Dalle-douze Brothers, with No. 348.

The \$10 prize offered by W. J. Lawrence, Eglinton, Ont., for best vase 50 blooms, not more than three varieties, open to growers having less than 20,000 feet of glass, was won by E. Crowhurst.

The John H. Dunlop prize of \$5 for best vase of 12 blooms open to private gardeners only—M. Tierney, with Mrs. Robert Hartshorne.

The Vair \$5 prize for best vase of 25 red carnations was won by Guttman & Weber, New York, with Victory.

Certificate of Merit.

John Riemels, Woodhaven, N. Y., pink seedling No. 32, scored 86 points.

Afterglow, light cerise, exhibited by William Nicholson, Framingham, Mass., scored 87 points.

No. 99, Bay State, exhibited by A. Roper, Tewksbury, Mass., scored 85 points.

Toreador, exhibited by H. Weber & Sons, Oakland, Md., scored 86 points.

The judges were Messrs. Eugene Dalle-douze, J. A. Valentine, W. N. Radcliff, Fred Burt, and C. F. Guenther, the late staging of the exhibits making it imperative that extra judges be elected. William Scott, of Buffalo, who was to have acted as judge, was kept at home by sickness. William Nicholson, of Framingham, Mass., also one of the judges, was with the Boston party, consequently did not arrive in time.

Miscellaneous Exhibits.

J. A. Peterson, of Cincinnati, showed varieties of begonias, Adiantum Farleyense, and Carnation Aristocrat.

A. Gilchrist, Toronto, exhibited Nephrolepis Whitmanii and Adiantum Mariessii.

The Steele-Briggs Seed Co., Toronto, staged a splendid collection of Primula obconica.

W. J. Palmer, Buffalo, had a sport from Mrs. Thomas W. Lawson like Prosperity in its markings, but not as large as that variety; also a pink sport of Lawson of a pleasing shade of color.

The King Construction Company made an exhibit of a section of their greenhouses, showing style of construction, etc.

The Baur Floral Co., Erie, Pa., exhibited their clips and pliers for mending split carnation blooms. Maxfeld & Dizon, of Warren, R. I., showed their brass calyx holder. W. H. Grever, Buffalo, staged some of his ever-ready pot covers.

The Bedford Park Floral Co. had a beautiful vase of Richmond roses. The E. G. Hill Co., Richmond, Ind., staged a vase of the new rose Rhea Reich.

The Editor of our esteemed contemporary, The Florists' Review, has registered a "kick" concerning the publication in his columns of duplicate "manuscripts and illustrations sent simultaneously to all the papers." We laud the stand our Chicago friend has taken, but hope the benefits to trade journalism to be expected from this step will not stop here. Duplication of advertisements, without authority, would seem to be as "useless" as duplicate reading matter. Then again, news appearing a week previously in other papers, worked over and presented as original the following week, would appear to be as "useless" and of so little interest that to "expect any one to read" them would be as great an imposition as any of the journalistic drawbacks herein referred to.

OUR CARNATION NOVELTIES FOR 1907

Winsor, White Enchantress, and Helen M. Gould

ONE way to judge carnations is to see them on the exhibition tables. A better and more convincing way is to see them growing; therefore we cordially invite all carnation growers to visit us and judge for themselves regarding the superiority of the above-named sorts.

Our carnation houses are at **Scarborough-on-Hudson** (not Tarrytown). Friends who desire to visit us can take the N. Y. C. & H. R. R. R. from New York. Trains leave there every half hour. Scarborough is the first station north of Tarrytown. Our grounds adjoin the station, and the greenhouses are about five minutes walk from the station.

We are growing **25,000 plants of Winsor** for cut flowers, alone, for the New York market this season, which shows the faith we have in it. This will also enable visitors to see it growing in quantity, and, besides that, will give us enough plants to get a great abundance of fine, healthy cuttings without over-propagating. We have already booked a large quantity among the large growers, and anticipate for this variety the largest sale of any new carnation that has ever been distributed, as large growers who have seen it are enthusiastic in regard to its value. Those who have seen it have immediately placed large orders for it, so we recommend those who have not ordered to place order without delay, so as to ensure early delivery.

For full description of these three valuable novelties, see our wholesale price list. Of course, we shall have all of these varieties on exhibition at Toronto, where they can be seen, and where they will speak for themselves.

WHOLESALE PRICES ROOTED CUTTINGS SPRING 1907

- Winsor.** Soft silvery pink. The best color, best keeper, best shipper, best seller—best every way. \$12.00 per 100, \$100.00 per 1,000.
- White Enchantress.** Has the large size, long stem, productive habit of Enchantress, but is pure white. \$12.00 per 100, \$100.00 per 1,000.
- Helen M. Gould.** A beautiful sport of Enchantress. Ground color lovely shade of silvery pink, with very fine pencilings of carmine, making an exceedingly exquisite combination. While on close observation this variety is variegated, the general effect is one beautiful tone of dark pink. Exceedingly valuable, because it combines the earliness, freedom, long stem, and large size of Enchantress, giving another color possessing all the other desirable qualities of Enchantress. \$12.00 per 100, \$100.00 per 1,000.
- Beacon.** Orange-scarlet. A vigorous, healthy grower, of ideal habit. A profuse bloomer, with long stems. \$12.00 per 100, \$100.00 per 1,000.
- Aristocrat.** Cerise-pink. Will be planted largely in place of Lawson. \$12.00 per 100, \$100.00 per 1,000.
- Melody.** Daybreak sport of Lawson, about the same color as Enchantress, but much brighter, and does not fade like Enchantress. Also a much better keeper and shipper. Those who grow the Lawson varieties exclusively will find this very valuable and desirable, because it gives an improved Enchantress color, which is so popular, and at the same time can be grown in the same house with the other Lawsons. An extra fine thing in every way and in great demand. A great addition to the Lawson class. \$10.00 per 100, \$75.00 per \$1,000.
- Rose Pink Enchantress.** A sport of Enchantress. Color, dark rose-pink. \$7.00 per 100, \$60.00 per \$1,000.
- White Perfection.** A novelty of 1906, and a variety for which there is a great demand this season. A third larger than Lady Bountiful and a more perfect flower. \$6.00 per 100, \$50.00 per 1,000.
- Victory.** Scarlet. This is giving great satisfaction, being a free blooming, profitable scarlet. \$6.00 per 100, \$50.00 per \$1,000.
- Red Lawson.** A fine red. Our stock of this is superior to many stocks of Red Lawson that we have seen. \$4.00 per 100, \$30.00 per 1,000.
- Variegated Lawson.** The most productive of the variegated sorts. A favorite. Outblooms Mrs. M. A. Patten. \$4.00 per 100, \$30.00 per 1,000.
- White Lawson.** An excellent white. \$4.00 per 100, \$30.00 per 1,000.
- Lady Bountiful.** Pure white. \$4.00 per 100, \$30.00 per 1,000.
- Enchantress.** \$3.00 per 100, \$25.00 per \$1,000.
- Mrs. M. A. Patten.** \$3.00 per 100, \$25.00 per 1,000.
- Mrs. Thos. W. Lawson.** \$3.00 per 100, \$20.00 per 1,000.

AMERICAN CARNATION SOCIETY

Sixteenth Annual Meeting
January 23-24, 1907
Toronto, Ont.

FULL REPORT
OF THE
PROCEEDINGS
AND
EXHIBITION

Fred H. Lemon elected
President for 1907
Next place of Meeting
Washington, D. C.

The meeting of the American Carnation Society, held in Toronto Wednesday and Thursday, January 23 and 24, was favored with beautiful weather. All the delegates arrived in good season, excepting those from Boston, who were five hours late, consequently no flowers from that city were in competition. The general condition of the blooms was not equal to that seen at previous exhibitions; this was accounted for by the unfavorable weather prevailing in all parts of the country. Every grower exhibiting is free to confess that the weather conditions were never before so detrimental to the production of good stock.

F. R. Pierson Company, C. W. Ward, Dale Estate and the Chicago Carnation Company were the largest exhibitors. Mr. Pierson showed Winsor both in the competitive classes and in decorative work. J. I. Donlan arranged a mantel decoration with this variety in a very artistic manner. The mirror was oval in shape; at the lower left hand corner was a specimen plant of *Nephrolepis elegantissima*; single fronds of this fern with carnation foliage being the only other green material used. The mantel was much admired.

The large pink carnation of Dailledouze Brothers showed up fairly well and was the winner of two prizes. A white carnation named Georgia, exhibited by J. D. Cockcroft, Northport, L. I., appeared to good advantage; and the scarlet carnation Mrs. Robert Hartshorne, exhibited by M. Tierney of Highlands, N. J., was awarded a special prize. Pink Imperial as staged by John E. Haines of Bethlehem, Pa., showed up fairly well; but the most admired flowers in the exhibition were Alma Ward, Winsor, Beacon and No. 348.

Opening Session.

The sixteenth annual meeting opened in the City Hall, Toronto, Canada, on January 23, 1907. The first session was held at 8 p. m. There was a large attendance, and the business was put through in excellent shape by President Dunlop.

R. J. Score, chairman of the allied societies, opened the meeting and introduced the Lieutenant-Governor of Ontario, the Hon. Mortimer Clarke, who spoke as follows: "I accept the invitation to preside with very great pleasure indeed because I am myself a lover of flowers, and I like to meet those who have the same taste. As I passed through the room to-night and saw the beautiful specimens of carnations I certainly thought that there is a great deal of truth in the old English adage that 'Flowers bloom best for those who love them.' I have very great pleasure also in welcoming to our city many of you ladies and gentlemen from the other side of the line. We on this side desire to be on friendly terms with our neighbors, and day by day I am very glad to see the good feeling between the two countries seems to be increasing. When we remember that we are influenced by the same aspirations, thoughts and feelings, we begin to feel that the line dividing us is at least an imaginary one. I presume if the carnation will bloom on both sides of the line there cannot be very much difference between the two countries. The great question agitating both countries is better commercial relations between us.

"I don't see why there should be any barriers between the two countries to interfere with the free interchange of commerce. These barriers are relics of the middle ages and ought not to exist between two such countries as Canada and the United States. (Hear, hear.) I can assure you we have nothing but kindly feelings toward you, and the oftener we meet and interchange our thoughts and ideas the better it will be for both countries; and when we unite in the cultivation of a flower so beautiful and charming as the carnation, I feel this will be a very beautiful and delicate and fragrant bond of union between the two countries." (Applause.)

Mr. Score regretted the absence of the Mayor owing to a very important engagement, and introduced the chairman of the reception committee, Alderman J. J. Graham, who extended to the society the city's very cordial and hearty welcome on behalf of his worship the Mayor and expressed the wish that the association's short stay would be a very pleasant and profitable one to the members. Last year they had over 100,000 delegates attending Toronto at various con-

ventions, and a very large percentage of these were composed of delegates from across the line. They found that the relationship that at one time was termed that of cousins had grown a little nearer, and today they were recognized as brothers and sisters, so that there was very little difference between the two countries. (Applause.)

Mr. Score supported the welcome on behalf of the allied societies and stated that he for one would like the geographical line burned off with friendship and to see the old flag that had braved a thousand years and the star spangled banner twined together. (Applause.)

C. W. Ward of Queens, N. Y., returned thanks on behalf of the Carnation Society and said in part: "I perhaps have appreciated the remarks which I have heard from the tongues of the eminent gentlemen more than anything I have ever heard before, for the reason that not long since in discussing the relationship existing between Canada and the United States some of my friends expressed doubts about the future; but the words of welcome I have heard here in the past few minutes have erased from my mind all the doubts brought forth by these expressions heard on the other side of the border." Mr. Ward described at length the great wood and coal resources and the vast grazing lands and grain-raising districts of Canada and stated that the homogeneous race they had in Canada and the United States precluded any such race differences as existed on the European continent. Concluding he said: "We visiting carnationists from the United States thoroughly appreciate the hearty welcome and we all of us have come to the conclusion that when we decided to honor our American Carnation Society we made no mistake when we elected as our president your honored and worthy townsman, Mr. Dunlop." (Applause.)

Fred. Lemon, on behalf of the members of the Carnation Society from the United States, also returned thanks, particularly on behalf of that large contingent of members from the vast region west of the Allegheny mountains. They of the United States were proud to come to Canada and if the representatives of the Dominion and the city and the Toronto Gardeners and Florists' Association could discover in his poor thanks the ring of sincerity so marked in their words of welcome he would be content. (Applause.)

President Dunlop here took the chair and read his address, which was received with applause.

President's Address.

Ladies and Gentlemen, Members of the American Carnation Society: It is with more than ordinary pleasure I welcome you to this the Sixteenth Annual Convention of this progressive and important organization. At our last convention at Boston words of welcome were extended by His Worship the Mayor, by the Secretary of the Massachusetts Horticultural Society (in the absence of its president), the president of the Gardeners and Florists' Club, and replied to by members of this society, men who have by their untiring zeal endeared themselves to us, and who have by perseverance and industry advanced to that high plane which few of us hope to attain. I refer to the Boston welcome on account of the historical connection and the traditional history of that good old commonwealth. But you are welcomed to-night to one of the newer or more modern cities, one that is only beginning to feel the impulse of commercial activity and has not that traditional history of which our last convention city could boast; but none the less hearty and loyal Toronto welcomes you with the true British hospitality that is ever found where the Anglo-Saxon tongue is spoken. Let me here express this wish, may the ties that bind the two greatest English speaking nations, of which Canada is a part and I may say the brightest gem in the British crown, never be severed but be welded more closely together in the bonds of love, esteem, friendship and commercial union.

Pleasing the Public.

We feel highly honored in having you with us on this the first time that the society has met outside of the United States, more especially so as the membership from the Dominion has been very

small. It was not the numerical strength of the Canadian members that brought the convention to Toronto, but the good feeling, the magnanimous spirit and the desire to assist in showing the people of this country the progress and improvement that has taken place in the development of the divine flower. It is of the greatest importance that the educational feature of such an exhibition of carnations as we have in the exhibition hall should be taken advantage of, not only by those who are growing them, but also by the public, who are our best critics; for it is they who are our support and to them we look for approval of our product. No matter how much we cherish any particular variety, it is the public we have to please and whom we should encourage to see the flowers in all stages of development at our greenhouses, and to express their opinion on what we are producing, criticising as it were, thus becoming familiar with the varieties by name, color, etc. And the public like to be consulted and have a knowledge of the different varieties.

We have long looked forward to this time when we could present such a magnificent show and bring to our city the men who have been instrumental in producing such grand flowers, men who are revered by every lover of the divine flower and whose names will ever be remembered as those who by their love and devotion to their chosen calling have given to the world the best that has ever been.

The Certificate Again.

There are not many things that I can speak of in this address that would be considered new, as we on this side feel ourselves students and desire to be taught; but there is one matter of particular importance to all and I feel that we should find a solution or formulate a plan by which we can put it in operation in an intelligent and practical way. It is, "What should qualify a new variety for the American Carnation Society's certificate of merit?" What has been said and done at previous conventions along this line has hardly been satisfactory, or has been found to be defective in some particular. At our last convention at Boston a committee was named to bring in a report, but it was submitted at the last afternoon session, too late to receive that attention a question of so much importance deserves. It should be considered both from the originator's and the buyer's standpoint. The man who devotes his time and brains to the hybridizing of carnations should receive every encouragement from the society, also the grower who buys the new varieties largely from the description of the originator and from the awards that have been made both by this society and at the various exhibitions at which the variety was shown. It may have scored high as seen at the various exhibitions, but there may be some of the most essential points of a first-class commercial variety lacking. The question is, How are we to arrive at a solution? How are we to ascertain if the variety contains the points that go to make up a profitable carnation for the average commercial grower? These should be carefully considered, and when the certificate is awarded it should be a guarantee that these points have been ascertained and proven. The more closely we guard our awards, the more closely we scrutinize these points, so much more will the trade generally rely confidently on the endorsement of this society; and the value of any variety having the endorsement of this society be enhanced. But let us guard jealously the awarding of this certificate, and let it be all that the name implies. We know how closely every award is made, how closely every point is scrutinized in the old land and as a result the award is accordingly prized by the recipient, for he knows his product has been deserving or it would not receive the award.

Work of the Secretary's Office.

Another matter that should receive our attention is the increasing work of the secretary. With the growth of the society his work has increased in a much greater ratio. During the short time I have held office as your president I know the amount of correspondence must be considerable, as from my end he has had reason to know we were working. Then there are the compiling of the premium list, soliciting advertisements, etc. the compiling of the annual report and the preparatory work for each convention, etc. It might be well for this meeting to consider the question and suggest some means of lightening the work either by granting an assistant for a stated time each year, or the purchase of labor-saving appliances, not to exceed a certain sum to be named by the Society. Above all, let us recognize our secretary's ability and make him feel by our words and actions that we appreciate his services. Nothing makes one feel more energetic than to know he has your sympathy and support.

This convention will have served its purpose if it stimulates a still greater interest in the divine flower in our broad Dominion. We have not been as quick to recognize the importance of the carnation as our American brethren and for that reason the development has not been as great as we would desire. We hope that in visiting the greenhouses of this section where carnations are grown you will criticise our work and not be slow to point out our mistakes.

We note with interest the popularity of the carnation in England, also that the American varieties are being largely grown, and from the comments in the horticultural press these varieties are giving very general satisfaction.

I trust that your stay with us may be both pleasant and profitable and I thank you for the honor conferred on me by electing me your president. Before concluding I also wish to thank the gentlemen composing the different committees who have worked so harmoniously and zealously in completing the arrangements for this convention. [Applause.]

On motion of F. E. Dorner, discussion of the report was deferred until Thursday.

The secretary then read his report. On motion of Mr. Ward the report was received and adopted.

The treasurer's report was next read, and duly approved.

F. E. DORNER, Treasurer.	

The secretary read the minutes of special sessions not embodied in the annual report, being a report of a special meeting held in Dayton, last August. Mr. Ward moved and Mr. Lemon seconded its adoption.

John Birnie's paper was read by Herman Simmers. Discussion being invited, Mr. Rudd said: "I want to go on record as saying that there are a lot of people expecting to get too much for their two dollars per out of this society. This society cannot undertake to furnish brains or sense and business experience to the trade at large for two dollars per year. This society cannot undertake to cover the United States of America and say whether a carnation is a good commercial variety or not until tested in commerce. I have not any patience with that sort of thing. The country is too big. You might as well have it understood that this society cannot put the seal of commercial value on carnations. Certificates do not and never will mean commercial value. I think, perhaps, discussion had better be deferred until the matter comes up in the regular order of business to-morrow." Moved by Mr. Gillett, seconded by Mr. Dorner, that discussion be deferred until Thursday.

Choosing next Meeting Place.

An invitation for the next annual meeting place was given by John Bertermann on behalf of Indianapolis, supported by Mr. Dorner. The secretary read two communications from Washington signed by Peter Bisset and C. McCauley of the Florists' Club, inviting the convention to Washington. W. Weber also extended an invitation to Washington. He understood Mr. Gude was to have spoken on the matter, but he had been side-tracked somewhere. Mr. Ward suggested the Indianapolis representatives should waive their claims in favor of Washington. Mr. Gillett, while respecting the claims of Washington, considered the next convention should be held in Indianapolis.

Nomination of Officers.

In the nomination of officers, for president, Mr. Ward moved and M. A. Patten seconded the nomination of W. F. Gude. Mr. Weber nominated J. R. Freeman of Washington. J. S. Wilson moved and W. N. Rudd seconded the nomination of F. H. Lemon. For vice-president, Adolph F. J. Baur was nominated. For secretary, Mr. Ward nominated the present incumbent, Mr. Herr. For treasurer, Mr. Ward nominated Fred. E. Dorner. For one director, William Gammage, London, Ont., was nominated, and for one judge, the present incumbent, W. N. Rudd.

W. Gammage then read his paper.

The report of the judges was read by the secretary.

A discussion followed on the proper color classification of Nelson Fisher, participated in by Messrs. Rudd, Ward and Dailedouze; ultimately a committee, composed of Messrs. Rudd, Ward and Lemon, was appointed to formulate definitely the society's idea as to what the division of color should be, and to present their report at to-morrow morning's meeting.

Owing to the lateness of the hour the question box was held over until to-morrow. The meeting then adjourned.

Second Day's Proceedings.

The delegates at the morning session of the second day were called to order by President Dunlop at 11 o'clock. Messrs. Gillett, Gammage and Swayne were appointed a committee on final resolutions.

The report of the committee on new rules for judging varieties for certificates was to the effect

Fred H. Lemon,
President-elect A. C. S.

that the members of the committee had been unable to come to a unanimous decision, and they requested to be discharged. A discussion ensued participated in by Messrs. Valentine, Rudd, Pendley, Harvey and Nicholson; ultimately on motion of Mr. Gammage, seconded by Mr. Asmus, the report was received and the committee discharged.

The report of the special McKinley fund committee, appointed at Brooklyn in 1903, in reference to the raising of a fund among florists for the caring of the grounds around the McKinley memorial, now in course of erection at Canton, O., was read by Mr. Altick, who spoke at length urging the importance of the fund in relation to the society. On motion of Mr. Rudd the report was unanimously received. Secretary Herr moved that a contribution of \$100 be made by the society to the fund, which was unanimously carried. The committee was discharged.

Mr. Rudd read the report of the committee on color classification, appointed yesterday. A discussion thereon was participated in by Messrs. Dailedouze, Rudd, Nicholson, Weber and Wilson. Mr. Nicholson moved as an amendment that the word "maroon" be stricken out, but the report was adopted as submitted.

The report of the committee on nomenclature was discussed by Messrs. Rudd, Stewart, Valentine and others. George Asmus moved, and the motion carried, that no carnation be eligible for exhibition before the society unless properly registered with the society either previous to or at the meeting, by name.

The committee's recommendation that all names registered before 1896 be eliminated from the society's working list was opposed by Mr. Weber, and a motion to that effect made by him.

Peter Bisset,
Vice-President-elect A. C. S.

The suggestion of the committee that the name "Welcome" registered provisionally by Dailedouze Bros., receive final registration, was adopted on motion of Mr. Hauswirth. Mr. Gammage moved that the committee's report as amended be accepted.

The president read a telegram from Peter Bisset, president of the Washington Florists' Club, extending an invitation to the society to meet in that city in 1908.

A letter was received from Peter Fisher, of Ellis, Mass., expressing regret at his inability to be present through sickness.

Mr. Valentine moved that the resolution passed a year ago regarding visiting committees to growers be revoked. The motion was carried.

Message of Sympathy to Wm. Scott.

A message of condolence was, on motion of Mr. Asmus, sent by the secretary to William Scott, of Buffalo, who was to have acted as judge, Mr. Scott having been afflicted with a severe stroke of paralysis.

R. W. King, Toronto, then read his paper on "Greenhouse Construction," but as the time was limited there was little discussion on it.

Washington

was selected as the next place of meeting.

Election of Officers

The officers elected for the ensuing year were: President, Fred H. Lemon, Richmond, Ind.; vice-president, Peter Bisset, Washington, D. C.; secretary, Albert M. Herr, Lancaster, Pa.; treasurer, Fred E. Dorner, Lafayette, Ind.; director, Wm. Gammage, London, Ont.; judge, W. N. Rudd, Mt. Greenwood, Ill.

The flowers from Boston arrived this morning and were staged.

The visiting ladies were treated to a theatre party; and the delegates invited to visit the Dale Estate at Brampton, Ont., on Friday morning. Many intend taking a look at this immense establishment.

A banquet tendered to the delegates was held at the Queen's Hotel, on Thursday evening, and was largely attended.

Those Present.

- Altick, H. M., Dayton, Ohio.
 - Ashworth, J., Tippecanoe City, Ohio.
 - Asmus G., Chicago.
 - Bates, Guy, Cleveland, O.
 - Baur, A. F. J., Indianapolis, Ind.
 - Bennett, Jos., Montreal.
 - Benson, A. N., Chicago.
 - Berkowitz, Paul, Philadelphia
 - Bertermann, J., Indianapolis, Ind.
 - Brown, E. G., Hamilton, Ont.
 - Buerlein, J. A., Elmhurst, N. Y.
 - Buerlein, P., Elmhurst, N. Y.
 - Bunyard, H. A., New York
 - Burki, E., Gibsonia, Pa.
 - Butterfield, S. S., New York
 - Craig, W. P., Philadelphia
 - Crall, C. A., Monongahela, Pa.
 - Dailedouze, Mr. and Mrs. E., Flatbush, N. Y.
 - Doulan, James I., New York
 - Donlan, J. I., New York
 - Donovan, W., Buffalo, N. Y.
 - Dorner, F. E., Lafayette, Ind.
 - Dorner, Theo., Lafayette, Ind.
 - Dudley, Chas. P., Clarksburg, Va.
 - Elverson, H. H., Pittsburg, Pa.
 - Field, Mr. & Mrs. H. W., Northampton, Mass.
 - Fotheringham, J. R., Tarrytown, N. Y.
 - Fraser, J. A., Kalamazoo, Mich.
 - Gillett, E. G., Cincinnati, Ohio.
 - Gingrich, I., South Bend, Ind.
 - Glauber, E., Denver, Colo.
 - Goddard, S. J., Framingham, Mass.
 - Grassel, A. O., Barneveld, N. Y.
 - Guenther, C. T., Hamburg, N. Y.
 - Guttman, A. J., New York
 - Haines, J. E., Bethlehem, Pa.
 - Halstead, Dr. A. S., Belleville, Ill.
 - Hart, H. A., Cleveland, Ohio
 - Hauswirth, Mr. and Mrs. P. J., Chicago.
 - Herr, A. M., Lancaster, Pa.
 - Herr, D. K., Lancaster, Pa.
 - Kasting, W. P., Buffalo, N. Y.
 - Kill, Mr. & Mrs. Leonard, Chicago, Ill.
 - Kroninger, E. N., Allentown, Pa.
 - Kruger, H. J., Meadville, Pa.
 - Lantenschlager, F., Chicago, Ill.
 - Lemon, F. H., Richmond, Ind.
 - Longren, A. F., Joliet, Ill.
 - Lorch, A. N., Pittsburg, Pa.
 - McConnell, E., Sharon, Pa.
 - McKenna, J., Montreal.
 - Markuisse, I. E., Syracuse, N. Y.
 - Merkel, C. W., Mentor, Ohio.
 - Michell, F. H., Philadelphia, Pa.
 - Miller, F. C., Bracondale Ont.
 - Olsen, Peter, Larchmont, N. Y.
 - Palmer, W. J., Buffalo, N. Y.
 - Patten, M. A., Tewksbury, Mass.
 - Peake, W. J., Buffalo, N. Y.
 - Peirce, E. A., Waltham, Mass.
 - Pennock, S. S., Philadelphia.
 - Peterson, Mr. and Mrs. J. A., Cincinnati, O.

 - Reimels, John, Woodhaven, N. Y.
 - Reuter, S. J., Westerly, R. I.
 - Roper, A., Tewksbury, Mass.
 - Rudd, W. N., Mt. Greenwood, Ill.
 - Warburton, Mr. & Mrs. C., Fall River, Mass.
 - Weber, W., Oakland, Md.
- Others in attendance were: Cameron, Alex.; Cloudsley, J. R.; Hogan, T. M.; McDonald, W.; Nolan, D.; Nopfield, W.; Sears, D. I.

Are There Too Many New Carnations Introduced?

BY JOHN BIRNIE, WEST HOBOKEN, N. J.

Are there too many new carnations introduced? This is the question put to me by the American Carnation Society. I think it will be quite safe to give a negative answer to the question.

Perfection Not Yet Reached.

Beautiful as the American carnation is at the present time the summit of perfection has not yet been reached and generations yet to come will find the goal still in front of them. There was a time—some fifteen or more years ago—that carnation growers throughout the country looked a little askance at the "new carnation," and not without good reason. We had at that time an avalanche of new carnations many of which were found to be worthless, causing considerable loss and disappointment to those who bought them, and with those new carnations several new diseases were introduced which created quite a commotion in carnation growing circles. Strenuous efforts were made to cure or overcome those diseases by the use of quack nostrums, but in many cases the cure was found to be worse than the disease. It might be said here, however, that those diseases never put experienced growers to any great inconvenience; and introducers gradually becoming aware of the fact that carnations grown un-

der proper treatment and natural conditions were immune, those diseases finally disappeared, and today are never seen on any properly handled establishment.

for his benefit and protection. Such being the case all expenses incurred by the examining committees, however appointed, should be paid by the society, even if this necessitate an increase in the annual dues to do so. The introducers, or promoters, could hardly be expected to pay directly for what is so obviously advantageous to the buyer, and might not always be of equal advantage to themselves.

Suggested Widening of Scope.

I am also of opinion that the field ought to be widened by reducing the scale a little, as I believe many carnations that would not score 85 points on the exhibition table, would, when examined growing on the bench, be found to possess other good points, such as health productiveness, habit, etc., which would make them desirable for commercial purposes, and probably prove more profitable than the larger varieties. Many of our best paying commercial carnations to-day would have no show on the exhibition table. The society might with propriety go a step farther and keep a watchful eye on every new carnation from the time it is registered until it makes its debut after receiving its final certificate, and also inquire into the merits and demerits of all new carnations whether they are introduced through the medium of the American Carnation Society or otherwise. Those committees might also, with propriety, take a walk through the introducer's propagating house, just to have a look at those "selected" cuttings, and see if conditions are all right. It is said that cuttings which go in there in good condition often come out with weakened constitution and other ailments which make them of little value to those who buy them. Only by adopting some such methods will the American Carnation Society give the purchaser of new varieties the protection he is entitled to, and at the same time make it impossible to introduce "too many new carnations."

Should Strive for Fragrance.

Our present day carnation introducers seem to be directing their efforts more to increasing the size of the flower than anything else, and their success in that direction is wonderful, but while they are struggling for size, it looks as if they were losing sight of one of the chief attributes of the carnation, namely, fragrance. The only two varieties in commerce at the present time which retain the much-admired clove scent are Flora Hill and Boston Market. A carnation with the color and size of Enchantress and the fragrance of Boston Market would be an acquisition worthy of the efforts of our introducers. Or is strong fragrance a characteristic of the white carnation as it is of the white verbenas? However that may be, an effort in that direction would not be amiss. Taste demands fragrance, just as fashion demands color.

Competition of English Growers.

Size, however, is likely to be the main aim of the American introducer for some time to come, and the successful efforts of their British brethren in the profession to improve the carnation will furnish the incentive. We read of Malmaison carnations 8 inches across, and also of some crosses between English and American varieties which the Englishmen claim are improvements on the latter. Under those circumstances, the American introducer is not likely to rest on his laurels; evidently there are foemen worthy of his steel on the other side of the water.

Varieties for Pot Culture Needed.

Hitherto our introducers have devoted their entire attention to the development of the carnation as a cut flower, but there is another phase of carnation advancement which they have altogether neglected, although they have had numerous hints regarding it both in the trade press and from the platform. I refer to the carnation for pot culture. We need a race of dwarf carnations, of every shade of color. Colors that could not be used in the cut carnation would be very desirable in this class, and fragrance should be one of its prominent features. A race of carnations of the kind mentioned would mark an epoch in the plant trade. They could be grown in ordinary pots for the general plant trade, or put in pans or vases for decorative or holiday purposes. They could be flowered at any time without undue forcing, and would certainly make a far more satisfactory house plant than the short-lived although pretty azalea. They could also be used for Summer planting and would fill a long felt want in that direction, as I think it is extremely improbable that a carnation which would prove to be entirely hardy in our northern latitudes will ever be produced. There won't be "too many carnations introduced" until this much-needed class receives the attention it deserves.

Introducers Should be Encouraged.

Any effort to discourage carnation introducers in their endeavor to improve the carnation would be a mistake. Those whom we might call our professional hybridizers have got hybridizing down almost to a science, and with the magnificent varieties now at their command as subjects to work on, decided improvements may be looked for in the near future, both on this and the other side of the Atlantic. The 4-inch flower may materialize at any time, but that will not satisfy the ambition of our carnation introducers. To them one step in advancement only suggests another, and when the 4-inch carnation is an accomplished fact, they will with characteristic perseverance reach out for one still larger.

Carnations from a Canadian Point of View.

BY WILLIAM GAMMAGE, LONDON, ONT.

When I accepted your invitation to write a paper on the above subject it seemed as if it would be an easy thing to comply with your request, but when the time came for me to prepare the matter it appeared to embrace a good deal more than a casual glance at that innocent looking heading would infer.

Canadians Have Faith in Future.

If I may subdivide it—first, I presume, "Point of View" means, commercial value. Without statistics at hand I have to rely on observation. My first observation would lead me to surmise that we Canadians have a speculative faith in the future, for, year by year, we see new additions to our ranks, new structures of the most modern architectural design, and invariably a large percentage of these new additions are devoted to carnations. Nor are these increased investments confined to new concerns alone, for all along the line you will find the older establishments building, building; not as they used to a few years ago, one or two small houses at a time, but now it is a whole block of houses comprising many thousands of feet of glass, and these, too, are largely devoted to producing carnations for bloom alone, for as yet no one seems to have made any special effort at the "rooted cutting" business.

Nor are these investments confined to the older and more thickly settled portions, but away out in the West, where distance has no meaning, in that country of so much wealth and future pros-

John Birnie, Essayist

William Gammage, Essayist.

perity, we find floral establishments, like mushroom, springing up, not as in the past with pioneers in the business, who with limited capital had to do most of our own building, and not much of it at a time; but like everything else in that country with ample capital to back enterprise, modern establishments are springing, into existence, and in these, too, the carnation holds a place of prominence.

Stimulus Given by Society's Meetings.

The far-reaching stimulus, the effect which this meeting will have on the carnation as a commercial product, will be enjoyed directly by all growers and dealers, both large and small.

To those who have never before attended a meeting of this society the exhibition has been a revelation. It has awakened in them a new ambition, food for thought and action. Educational in its scope, attractive in arrangement, effective in its object, it will have done more to popularize the carnation than any other method we could have employed. So much from this point of view.

Popularity of the Carnation.

Not only has the style of our buildings, their construction and operation undergone changes to meet the ever-increasing demand, but our cultural methods have also kept pace with the necessities of the day. Local conditions here, as well as elsewhere, have their influence. Sections have a demand for color or quality that is not felt in others. Yet go where you will, be it the cosmopolitan city or the rural hamlet, the carnation is the popular flower with the people at large. True it is that no special effort has been made to introduce new carnations of Canadian origin. Up to the present our

growers have devoted their energies to growing for commercial bloom alone, but that we are not backward, where new varieties are concerned, you will find evidenced when you visit the leading growers. To Canadians belongs the honor of first recognizing the merits of some of the leading commercial varieties which have held a place more profitable than many that have been heralded forth with glowing description and brilliant pen pictures of the fabulous returns to be made by investing in them. But alas, how often have our expectations been realized of "getting rich quick" from these investments!

Gone but Not Forgotten.

If we were to go over the list of introductions of from five to ten years ago how many would we find occupying anything like a prominent place with the trade. I venture you can count them on less than the fingers of one hand.

New varieties have come and gone; some introducers have made fame and fortune; others have lost the confidence of the trade by their too sanguine expectations from their pet introductions, or from lack of experience, or want of business morality. Be that as it may, the carnation has gained a prominent pinnacle in commercial floriculture, from which may it never lose its prestige.

From year to year new varieties will come forward, whether better than those of the present day time alone will tell. What is new to-day will be old to-morrow, and the older varieties, like the growers of to-day, will pass into oblivion, and in their place will rise a generation that we earnestly hope will be no discredit to their forefathers.

American Carnations in England.

BY A. F. DUTTON.

In reply to your kind letter of October 27, 1906, to which I am pleased to respond, I give my candid opinion as to the views of my fellow growers and the general opinion of the public now, in regard to the carnations that have been imported from the United States.

It is now some five years since they were first grown and shown to perfection and called American tree carnations, and I have the honor of being the first to show them in the way they are now generally shown here. My first exhibit of note was made at the Temple, 1903, when they caused quite a sensation, and I may say gave the great start to their now present popularity. They first met with a great deal of criticism from the border carnation fancier, and I was told by one who is considered the finest raiser of this kind in our country (I may use his words): "Well, Mr. Dutton, I congratulate you on your exhibit; nothing could be more beautiful." With this remark I was quite content, and knew their day would have to come.

Now they are being grown on quite a large scale as a market flower, where before only the inferior and short-stemmed varieties were seen, such as Dutchess of Fife, Uriah Pike, and Miss Joliffe. But I may add there is a great difference in the quality of the stock of different growers, and it is only the few who can grow them to real perfection.

An English Carnation Society Formed.

Recently a newly formed society, namely, the "Winter-Flowering Carnation Society," held a very successful show at the Botanic, London, in which

the American varieties predominated, there being classes for 36 and 18 blooms of a color, also for groups of cut blooms. The show was in every way a success and a fine lot of flowers was staged.

New English-American Sorts.

I may give a few lines on the new varieties that are being raised from your imported carnations. I consider that before many seasons we shall have some very fine kinds, quite a credit to their parent Britannia (scarlet), which is being disseminated this year; it is the finest scarlet I know. It puts Robert Craig and Victory in the shade, and I firmly believe that we shall have other varieties in time of equal merit to it. But it is not for me to dwell on the possibilities of the future, but with the past and present, which are facts.

Shipping.

In regard to shipping, this will always be a great drawback to business being transacted on a large scale, as it is far too uncertain to please the majority of growers here, who receive the stock. I myself have received very successful shipments, but these have been few and far between. For instance, one consignment turned out well, another from the same grower, turned out the reverse and the loss was 80 per cent. It would have been policy to have burned the entire lots on arrival, as the survivors were weak, unhealthy and infected with rust, also, the spot. I often feel I should like to think I had never to ship any more, as it is always a nightmare when shipping time comes in the Spring.

Prize Winning Sorts here not always the best.

There is one more point, the last but not the least, and that is, many varieties that are so well spoken of and advertised in your papers as gaining different awards of merit prove very poor varieties with us. The following are a few—Fiancee, Cardinal, Ethel Ward, Candace, Indianapolis, Nelson Fisher, Abundance, Flamingo. If this continues, the number of your European buyers will certainly decrease, as it is quite sufficient with the losses we sustain through shipping to make the game worth the candle, when procuring really first-rate standard varieties.

I trust the notes I have made are what you require. I have endeavored to convey the present views as to how your carnations appear to European growers, the growing as a market cut flower, the shipping and the varieties.

BY G. ENGELMANN, SAFFRON WALDEN.

As suggested by the secretary of the American Carnation Society, Albert M. Herr, I will give a few details about the prospects of the American carnation in Europe, and especially England.

Winter-flowering carnations were grown for the English market some thirty years ago. The first were French varieties, and as the demand for choice flowers increased new kinds were raised, some of which enjoyed great popularity for a number of years; and though in size and length of stems they could not be compared with the present-day carnation, in color, fragrance and productiveness, they left little to be desired.

Their Introduction.

The first carnations of American origin were introduced into England about fifteen years ago, and as I am told by one of the first importers turned out to be rather a disappointment. Of later varieties Daybreak was already grown in considerable quantity. However, it was not until the 30,000 dollar Lawson made its appearance that the boom began.

Even then there were but few growers who understood the cultivation of the "divine flower," and I am afraid Mr. Fisher would not have recognized his own child had he seen it in some of the English greenhouses. There were a few, though, that did the trick, and their produce made handsome prices in Covent Garden market. This, of course, was the best means of popularizing the flower, for the English florist is as much after the pound, shilling and pence as his American cousin is after the dollar. There was money in growing carnations, consequently the work was taken up by many new firms. Every new variety that was boomed in America was eagerly imported, grown, and very often thrown away the first year, as many were quite unsuitable for the English climate.

Then came the glorious Enchantress, and with it the germs of the new disease called the "carnation fever," which attacks flower-gardens and flower-lovers. The germ has not been discovered yet, but it is there right enough, I have no doubt, and it spreads fast, too, and makes the disease very catching. I caught it a few years ago, and am not likely to get rid of it again, for it seems incurable. It is a comfort that it is a painless disease, at least as long as the market-prices for the carnation blooms are good.

Enchantress as a Standard.

However this may be, there is no doubt that Enchantress has helped to popularize the American carnation more than any other six varieties taken together. If there is a new variety being introduced, the first question generally is: "Is it as good as Enchantress?" But, alas, I am sorry to say those that have come since have not been as good. But perhaps I should not say I am sorry, rather I am glad they have not been as good, for I think it is really a blessing in disguise that nothing up to the present in other colors has come up to Enchantress, as it shows the hybridiser a goal well worth obtaining plainly before him, and it is certainly easier to work toward something that we can clearly see before us than to try reaching an ideal that only exists in our imagination.

I am afraid I am getting off my track, which you will kindly excuse, for it is one of the symptoms of the "carnation fever," if you start one of those who have the complaint going on this subject it will take a mighty effort to stop him.

Status of American Varieties.

The American carnation stands in England today something like this: There are, I should say, about one million plants grown for the production of cut flowers alone; 90 per cent. of these at least are cultivated in pots. Of the remainder, two-thirds are planted on raised benches and one-third on solid beds. The latter two methods are gaining

Beacon

Growers, Cottage Gardens Co.
Photo by J. F. Johnston

in favor, and in ten years' time I should not be surprised to see this state of things reversed. Besides these, there are a large number grown in private establishments, and hardly any of the up-to-date estates are now without their special carnation house.

The number of the American kinds grown in this way I should estimate at 100,000 to 200,000; 95 per cent. at least are grown in pots. This number is constantly increasing, and there is no doubt that the modern Winter-flowering carnation is beginning a fight for supremacy with the chrysanthemum, which has hitherto been the unassailed Queen of the Autumn and Winter. I calculate that in five years' time there will be at least three times the number named grown in England.

In Other European Countries.

The Continent of Europe is a little behind England as regards the popularity of the American carnation. However, the "fever-germ" has crossed the channel and the North Sea, and the "carnation-fever" has caught on.

have cultivated the American kinds for a few years, and managed to keep the names secret for a time. This game does not do for a long time in the Twentieth Century. There are too many trade papers about, and if there is money in a thing it will come out. This is as it should be; then after all is said and done the policy of the open door is the only progressive one, and always in the end beats the surrounding of places with a Chinese wall. Now that the secret is out, the German trade is all the more eager to obtain the wonders from across the Atlantic, consequently a good trade is being done in young plants.

This is not only the case in Germany, but also in France, Belgium, Russia, Denmark, Austria; in short all the countries on the Continent of Europe are going in for the American carnation, and I don't think I am over-estimating it when I say that within five years there will be fifty times more American carnations grown than there are to-day.

I know of one German grower, who only about two years ago purchased some twenty-five hundred dollars' worth of carnation stock from the South of France, and after giving the American varieties a trial this season intends to discard all his French varieties and grow the American ones in their place.

In Other Lands.

Even beyond Europe the fame of the "divine flower" has spread, for only a month or so ago I sent a fairly large consignment of young plants to Egypt, which arrived in good shape, and I hope will do well. That they are going ahead in Australia is well known. About Asia I cannot say anything, as I have sent no further than to the Crimea. Anyhow, in four Continents out of five the American carnation is known and grown, and the rapidity with which it has found its way is nothing less than phenomenal. This may partly be due to "booming," but vastly more because of its sterling value.

Dangers Ahead.

All this is well and good, but two great dangers are looming ahead. One: How long will it go on before the supply is in excess of the demand? The other and greater: How soon shall we be swamped with innumerable novelties, which according to the raiser will all be better than Enchantress, but which in reality will only be useless rubbish, that must disgust the straight and honest florist and damage the trade for those few new varieties that are really good?

Something About Comparisons.

To discuss how the American carnation as seen in England compares with its brother in the States, or how English methods of growing are inferior or otherwise to the American, would lead too far.

However, one thing I may be allowed to mention by way of apology. If some of you should ever visit one of our English carnation shows in Mid-winter, and find the blooms inferior or perhaps poor in comparison to your perfect specimen, please remember that the chief factor in producing first-class blooms in Winter is the light, and then take into consideration that on the 21st of December the sun rises in London (or rather is supposed to rise) at 8:5 and sets at 3:51. This is according to the almanac; in reality, it does not shine at all through November, December and January—at least, not to any appreciable extent.

I believe that even your best growers, if they came over here, and tried their hand at the game, would be rather disgusted with the result. For this reason alone, I am afraid we shall never be able to produce as good flowers as you do in Mid-winter, unless you send Mr. Edison along with one of the Chicago packers, who between them might manage to bottle up some of the surplus sunshine during the Summer months, that we could let loose in our carnation houses, when it is wanted in the Winter. Until that happy time arrives, we shall have to be satisfied with what we can get in the ordinary way.

Thanking you for the honor you have done me in asking for and listening to these notes, which, I regret I am not able to read personally, I will conclude with the best wishes for the future success of the American carnation in general, and the American Carnation Society in particular.

Vivat, crescat, floreat!

American Carnations in Denmark.

BY PETER RIISE, COPENHAGEN.

Your letter of November 3, 1906, at hand, but I hardly think myself able to do the matter full justice; nevertheless if I can write anything that can be of interest to the American Carnation Society I will be glad to do so.

Carnations are not grown on a very large scale here yet, but they are shipped here from Italy and southern France from November till May, and it is very hard for the home growers to compete with the imported stock.

Varieties Tried.

We cannot get as nice carnations here in Mid-Winter as you can in America, as the days are very short and we get a very little sunshine. I have been growing carnations here since 1899 and have been growing nothing but the American sorts. I started with about 40 plants and grow now about 7,000. The first Winter I had a good deal of

Mrs. Tom Harvey

Growers, Cottage Gardens Co.
Photo by J. F. Johnston

trouble with the plants; a good many would rot on account of the damp and cloudy weather.

The first sorts I started with were Daybreak, Flora Hill, C. A. Dana, William Scott, Triumph, Evelina and Gold Nugget; but, I have now discarded them all with the exception of Triumph and Daybreak. Flora Hill did not give blooms enough, and, besides, white is not as much called for as the colored kinds. C. A. Dana was too small. William Scott came too late with its second crop; it would not come till the last part of May. Evelina rotted all the first Fall in a short time. Gold Nugget did not give flowers enough and the most of them came imperfect; customers will not pay more for yellow than for white or pink. Daybreak all rotted with the exception of two or three plants, and I thought of discarding it; but by careful handling, I have since had very good success with it, and it has up to this date been one of my best paying varieties. It is a little inclined to be weak in the stem in the Winter. The best paying of them all, though, has been Triumph. It blooms early in the Fall, some all through the Winter. It seldom splits, and it gives a good heavy crop early in the Spring, but it sometimes is pretty badly affected with stem rot.

I have since tried Ethel Crocker, Governor Roosevelt and Mrs. Lawson. Crocker splits badly in the Fall and all through the Winter, and don't give a good crop before the middle of Summer—too late to pay. Roosevelt gives a good flower, a good stem, but hardly blooms enough in Fall and Winter to pay; it also comes too late in the Spring with the best crop to be of much account. Lawson splits badly and is rather short in the stem in the Fall, but in early Spring it gives a heavy crop of nice flowers and a good long stem, just in the right time to bring a good price.

In the Spring of 1905 I bought some of the newer American varieties. I got them from England, but they are quite expensive there. They charge from one to two shillings a piece. Others have tried to import them from America, but not with very good success. In the most cases they were dead when they arrived.

The varieties I am trying are Flamingo, Harlowarden, Harry Fenn, the President, America, Enchantress, Prosperity, Floriana, Indianapolis, Nelson Fisher and White Lawson.

I have not formed any decided opinion of them yet, as I only got a dozen of each, and have used them for propagating only last Winter; but my idea of the different varieties so far this Fall has been that Enchantress is a fine flower, good color and stem, but will not give so many blooms as Daybreak, and it was a good deal affected with stem rot in the field. Prosperity I don't think will pay, as variegated colors don't sell so well here, and it has not bloomed very freely so far. Estelle looks as if it would be one of the best. It starts to bloom early and very freely, gives a good-sized flower, stiff stem, not so very long but long enough for our market. It does not split, and it is still full of flowers and buds. Flamingo is a fine flower, but too late. Estelle is the better paying of the two so far. America is too pale in the Winter.

Mechanical Watering

BY LOUIS WITTHOLD.

I have been asked by your secretary to give my views on mechanical watering, and I wish to ask, Do any of us believe that the present mode of watering cannot be improved upon? If we look back at the different things that have been accomplished all along the line in greenhouse construction, heating, etc., even in watering, inasmuch as the hose has superseded the can, we certainly must admit that there is always room for still further improvement. It is only a short time ago when all watering in greenhouses was done with the watering can, and we all know with what prejudice the hose was looked upon as a factor in greenhouse work. This prejudice has gradually been overcome until to-day even our cousins across the water are using rubber tubes to save time and labor.

In the Line of Improvement.

The improvements in construction, pumping machinery, specializing of stock grown, etc., have made possible a saving of a large part of the labor of watering. Formerly a mixture of different kinds of plants was grown in one greenhouse in one grand conglomeration and, of course, each different species of plant needed different care and special attention, and the watering pot or hose could hardly be dispensed with. At the present time, where houses or ranges of houses of one kind of plants are grown, when conditions are equal or as nearly equal as it is possible to get them, this has been changed, and a watering machine can be applied and the labor of watering, which formerly took hours, can now be done in so many minutes, with less waste of water than with the hose and with more accuracy in its distribution.

The question will, of course, be asked, what have I to prove the above assertion? I must admit it is a natural question, as talk is cheap and facts are what we want in this year 1907. Gold bricks are good things for the "con" game man, and we can hardly be blamed for being skeptical about things which are not entirely clear and familiar to us; but is it fair to allow prejudice to put a brake on improvement when every minute of time saved is money in our pocket, and when a labor, which now must be attended to by the most experienced, can be mechanically arranged so that after it has been studied out to the satisfaction of the proprietor he can give his instructions so that water is given in just the amounts he has by experience found best for the good of the plants?

Narratives of Experience.

I have been asked to give my experience up to date. I will say that I, at first, started using a watering system for syringing palms by running a pipe along underneath the plants in the center of the bench, using my patent nozzles which produce a sheet of water in shape, so that when these nozzles are spaced along the pipe they will produce a sheet of water the full length of the pipe. The pipe is connected with a swivel wheel so that it can be turned. If soil only should be watered

Georgia

Grower J. D. Cockcroft

the nozzles can be turned downward, so that soil only is wet without wetting the foliage; and by turning the nozzles upward the foliage can be sprayed. In this way I was able to water or syringe my palms when required with a saving of at least 90 per cent. of time and labor. I then used the system for watering Boston ferns, suspended overhead in the greenhouse, hanging a plant directly under each nozzle so that by turning on the water just a little the water will come from the nozzle in a solid stream and flow into the pot, just as much as is wanted, causing only the drip from the water that runs through the soil; while with a hose at least 90 per cent. of the water would drop on to the plants below. Then by turning on full pressure the plants can also be sprayed, or syringed, if required. In this way I have been enabled to grow double the amount of stock in my palm-houses and with less labor than previously required. I now have a large portion of two ranges of palm and fern houses equipped both at our Lake View Place and at Edgebrook, and am working on more lines right now, as I find the time saved will pay for the outlay in a short time.

The next experiment I made was at Davis Brothers' cucumber houses, Aurora, Ill., and I quote you the following from a letter:

"It saves 90 per cent. of our watering labor. We now have the Wittbold system in all houses; do the watering in an hour which formerly took twelve hours and do better work. We are recommending the system to our friends."

I wish to say that Davis is using it now for the second Winter and is much pleased.

The next experiment was in the lettuce houses of Chamberlain & Bunker, Fremont, Mich., who are large vegetable growers, and the letters I have received from these gentlemen have given me much encouragement. I only mention these two places, as giving a few facts; more would only tire you and would only be a repetition of what these gentlemen have said.

Applicable to Carnation Houses.

You, gentlemen, are representative carnation growers, and I wish to ask if a watering system that can be applied in palm and fern houses, in cucumber and lettuce houses, cannot also be applied in carnation houses? The pipes and nozzles can be so placed that you can water from underneath the plants, that you only water the soil, or spray upward, from underneath the plants, or downward from above, just as the case may require.

I am no carnation grower, but from what experience I have had in other lines, I say it can be done, and it only needs some one to take up the idea with determination to overcome what obstacles are in the way; and as I firmly believe that mechanical watering is practical and will save thousands upon thousands of dollars every year in labor to the greenhouse man when it is understood and will do better work than can be done in any other way, let me suggest that steps be taken by the American Carnation Society to determine the value of mechanical watering, by experimenting or otherwise during the coming year, so that more definite reports can be had at next meeting. I assure you, gentlemen, it will be worth your while.

Mrs. C. W. Ward

Growers, Cottage Gardens Co.
Photo by J. F. Johnston.

In the dark varieties Harry Fenn is to date the best. It has made the best growth in the field, and the color seems to take the best. Harlowarden is rather too dark in Winter. The President made a very poor growth in the field. White Lawson is a nice flower, but as I said white does not pay here. Floriana is one of the colors the most called for, but has bloomed very little so far. Indianapolis, from indications, looks as if it would take the place of Triumph. It blooms early in the Fall, has a stiffer and more wiry stem, a stronger color, and is not troubled so much with stem rot as Triumph. Nelson Fisher is one of the best; a fine color, free blooming, good stem, does not split, has made a good growth in the field and bench, and is not troubled with any kind of disease so far, but it is very hard to propagate in Winter though rotting quite freely in August.

Cultural Methods.

We plant in the field about the first of May and lift again the first part of August, but we hardly get as strong growth as you do in the United States. Heretofore I have been propagating my plants in the Fall and early Winter, but this year I have propagated most of them in August, and I now have very strong plants. I keep them quite cool through the Winter, just about freezing. In that way I take the cuttings from the old plants just before throwing them out. They give very good cuttings at that time, as we are not troubled much with red spider. Our Summer is not so hot and they make a good growth all through the Summer, and in this way we save the plants a good deal in the Fall.

In some places here they keep the young plants in a cold frame all Winter, only protected with glass and shutters, and the ground will at times be frozen hard; but it is mostly the European varieties they keep in that way. I think it a little risky, as I saw in one place where the plants all died in a short time from drip and rot.

When I first started I kept my carnations in a night temperature of about 50 degrees Fahrenheit. The stems would then be rather weak; nevertheless the flowers sold well all through the Winter at five cents a piece. But in the last few years the importations from the South have increased to such an extent that carnations sell here in Midwinter at twenty-five to thirty cents a dozen, nice large flowers, with good stiff stems about 15 to 20 inches long; in fact, better flowers than we can produce here in the short days.

I now keep my plants in about 28 to 40 degrees Fahrenheit through December, January and February. In that way I get a very few flowers in Midwinter, but the plants will be better and stronger in the Spring and will give a good crop in April, May and June, the time when there is the biggest demand for them. On the whole, we have to look for such varieties as will give a good crop in October and November, and again in the Spring, and we will get a better price than in Midwinter. In fact, it is impossible for us to compete with the imported stock when it is at its best. They are at present working on a revision of the Tariff and if we should get a duty on cut flowers, it would be a great help to the florist, and there would be grown a great many more carnations round this city.

I have about 20,000 feet of glass, half of it in carnations. The houses are 100x18 and 100x24 feet, 14x18 double thick glass, heated by hot water.

H. Weber & Sons Co.'s Seedling 24-'02

Secretary's Report.

Your secretary reports having issued the usual printed matter during the year and mailing the same as issued.

There were two deaths reported to the secretary during the year—those of Lewis Ullrich, of Tiffin, Ohio, and J. L. Dillon, Bloomsburg, Pa., the first two that have been reported during my term of office. Mr. Valentine, of Denver, Col., several years back, made some remark about a suitable offering being sent in such cases. There was no action taken in the matter, and I would suggest that an offering be adopted as representative of this society, and, upon similar conditions arising again, the secretary be empowered to wire a florist in the city of the deceased to send such offering with the society's card.

Like most human beings, your secretary is subject to errors, lapse of memory and the losing of important documents, perhaps more so than the most of them. The last year three of these errors happened to get into our premium list. First, the substitution of the name of Eugene Dailedouze for that of William Scott, as judge; second, the use of the name of E. W. King Co., Ltd., instead of the King Construction Company, in the donation of a special; and last but not least, the loss of copy for a half page advertisement and a \$10 special prize, and the non-appearance of either in the premium list. When my attention was called to this, I offered to have the advertisement and premium both printed on a postal card and to send it out to every member at my own expense; but this offer was not accepted.

The advertisements in the premium list amount to \$231.50. These advertisers are worthy of your patronage. This is the only means whereby we can secure the revenue necessary for the expenses of this society, expenses that are increasing faster than the membership. To secure these advertisements, your secretary wrote almost three hundred personal letters, in addition to the printed notices sent all members, and the showing does not measure up with the amount of time and labor expended.

Every member of this society who has anything to advertise, should use this premium list. It is not money thrown away, and is the only contribution the society asks, aside from your annual dues of \$2.

Your president, John H. Dunlop, has given the secretary much valuable assistance during the year, and has certainly well-earned the honor attached to his office. ALBERT M. HERR, Secretary.

Report of Nomenclature Committee.

Your committee reports the registration of the following carnations during the past year:

- Messrs. Stevenson Bros., Govanstown, Md.—Splendor.
- James D. Cockcroft, Northport, N. Y.—Harvard, Georgia and Faust.
- Baur & Smith, Indianapolis, Ind.—Pocahontas.
- F. Dorner & Sons Company, Lafayette, Ind.—Red Chief, Winona and Bonnie Maid.
- J. D. Thompson Carnation Company, Joliet, Ill.—Lncille.
- H. Weber & Sons Company, Oakland, Md.—Toreador.
- Chicago Carnation Company, Joliet, Ill.—Red Riding Hood.
- Malachi Tierney, Highlands, N. J.—Mrs. Robert Hartshorne.
- Messrs. Dailedouze Brothers, Flatbush, N. Y.—Welcome.

The registration of Welcome is provisional and subject to the approval or disapproval of this society, it being a pink sport of Mrs. T. W. Lawson, and will be on exhibition at the meeting.

Registration is getting to be quite a bit of work. One of the above registrations was effected after an interchange of eight letters; several of the others required three and four, owing to the fact that the list of names that have been used is cumbersome large, and also to the fact that some introducers of new varieties do not take the trouble, or do not care to go to the expense of registration.

From the amount of space given by our trade papers to this matter of registration, there is no excuse for any originator not to know that when he names a carnation, the proper thing to do is to have that name registered with the society at once, the cost being but \$1 per name, and it is not obligatory to be a member of the society to have a variety registered.

We therefore again recommend that no variety under name be allowed to compete in the exhibitions of this society unless said name has been properly registered, either with this society or the S. A. F., and that this rule be put in force for our next exhibition, with the privilege of registration the first morning of the exhibition for those who may have previously neglected it, or do not know of this rule.

We would also recommend that all names registered previous to 1896 be eliminated from the working list of this committee.

ALBERT M. HERR,
A. HERRINGTON, } Committee.
EUGENE DAILEDOUZE,

J. D. Cockcroft's New Carnations.

The Originator's Descriptions.

THE HARVARD.—As the name indicates this is a rich crimson variety of the real Harvard color. The flowers average 3½ inches in diameter, and are extremely full and perfect; a malformed bloom being a rare thing. The same is true of the calyx, only two split blooms being found in 5,000 flowers cut of this season. The stems average twenty-four inches in length. In fact, it has the finest habit of any carnation grown on the place, and we have all the standard varieties. We have grown it for cut flowers for four years, and the blooms have commanded the highest price in the New York market. It is free and early.

THE GEORGIA.—This is a white variety of our originating which we have grown now for four years. The flower averages about 3½ inches and is borne on strong stems from 18 to 24 inches. It is very full, with deeply fringed petals; has a calyx which absolutely never bursts, and is unusually fragrant. The plant has a clean and rapid growth with no superfluous grass, every shoot producing a flower. It begins to bloom in September and continues throughout the season with the same freedom as Enchantress, which we have growing in the same house.

We will exhibit this variety and the Harvard at Toronto.

H. Weber & Sons Co. New Carnations.

Originator's Descriptions.

MABELLE, (1907), pink, a few shades lighter than Mrs. Lawson, showing no traces of lavender

or purple, but instead is permeated by a faint yellowish cast, making an exceedingly popular and beautiful color. The blooms are large and well formed; under favorable conditions they attain 4 inches in diameter. Odor is pleasing, but not spicy. Calyx good, practically non-bursting; habit not unlike that of Genevieve Lord, a very early and continuous bloomer, giving long stems right from the start. This variety has the much-prized habit of producing very early, keeping it up until July. We recommend it as a very profitable, up-to-date commercial variety. It requires about the same treatment and temperature as Enchantress.

TOREADOR, In color, a very much improved Prosperity. Parentage, Prosperity X No. 24-'02. Ground color is white, heavily overlaid with scarlet, barring a broad distinct zone of pure white on the edges of the petals. The latter are deeply serrated, and the bloom presents a most striking appearance. It has the stiff stems of the pollen parent, and as long as those of Prosperity. Habit about midway between the two parents. It has an extraordinary constitution, and good blooming plants. Its even late cuttings make

Toreador

H. Weber & Sons Co.

color is immensely popular, and we regard it as the most valuable variety we have as yet raised. In size it is equal to Prosperity at its best, i. e., 3 to 4 inches, the latter being a frequent occurrence.

SEEDLING No. 24-'02.—Color dark pink, a more even and better color than that of Mrs. Lawson, showing the same characteristics as to growth and habit, with stem slightly longer. The parentage of this variety was a dark pink seedling fertilized by Lawson, and it seems to have inherited the good points of both parents.

A Correction.

Editor Florists' Exchange:

In your issue of December 22 just received, I notice your correspondent, J. Harrison Dick, states that at the Winter-Flowering Carnation Society's show, held on December 4, Messrs. Bell & Sheldon, Castel Nursery, Guernsey, were awarded a gold medal and exhibited some promising seedlings, including yellows. Messrs Bell & Sheldon were awarded a large silver medal and also took first for President (36 blooms), and first for Robert Craig (18 blooms) besides other prizes. The gold medal alluded to above was awarded to me for my display in which were shown "the promising seedlings, including yellows" mentioned by Mr. Dick. St. Margarets, Guernsey. H. BURNETT.

Mabelle

Introducers, H. Weber & Sons Co.

The American Carnation in South Australia.

By the Introducer (James Beggs, North Adelaide.)

(A Paper read before the South Australian Carnation and Florists Society.)

Some time ago Dr. Harrold gave me the credit of introducing the American carnation to South Australia and probably Australia. The first I sent out was Lizzie McGowan in 1897; then followed Flora Hill, Ethel Crocker, Leslie Paul, Mrs. Lawson, America, Prosperity, Peru, White Cloud, Golden Beauty, Governor Roosevelt, Harry Penn, General Macco, Stella, Norway, Mrs. Potter Palmer, Gov. Wolcott, Enquirer, Lillian Pond, May Naylor, Floriana, President McKinley, Morning Glory, Dorothy Whitney, Mrs. Nelson, Enchantress, and Harlowarden. Some others that came out were consigned to the rubbish heap, and a greater number did not survive the voyage.

What induced me to get this flower out? It was through reading of its free flowering, long-stemmed, and fragrant qualities, and, so far as I can see, these have not been overestimated in the gardening periodicals of America. Being one of G. Glenn's school—where we were taught that form and shape of petals was the only passport into that select coterie of florists' flowers—it was a bold step to introduce something which many of this school called (and still call) a blackleg. Still, believing in the doctrine of Glenn's teaching, something was wanted to meet the requirements of thousands who did not exhibit, but wished for (I might say), a utility flower—one which would give the best return for the outlay. This want our American cousins have supplied. At the same time, if two perfect flowers were put on the board—one the tree show, and the other American—the first named would have preference. But there is no occasion for clashing, as this society has amply provided for both. There is the Spring blooming or English show, which is grown here, and to a greater extent in Melbourne and Sydney. One cannot help admiring the beautiful form and lovely colors of these, but their short duration of flowering compares unfavorably with the tree show or American, which we call decorative or serrated, to distinguish them from the smooth edge; and it is this type with which we have to deal here. Sydney is the stronghold of the tree show, and many have been raised there from seed. So far the form of flowers is their ideal. Some of these are perfect; but many of the pleasing colors of the American are lacking or their good habit of growth. Take for instance, Edith Gray, or Ravenswood, one of the finest show blooms, but of ungainly habit.

Women's Preferences.

From a decorative point of view a woman would pass by many of these on account of their muddy colors—and let me say, right here, societies such as this one are somewhat selfish or conservative. Women's preferences do not enter into the matter at all. So long as a flower is a model show bloom they ask for no more. We should consider that women have a say to a certain extent as to what kind of flower should be grown, although their fashions (as in dress) may change annually. It is to women that we men look for the beautifying of the home with the most artistic—though not necessarily expensive—arrangements of color and blending in flowers, say, Flora Hill, Mrs. Lawson, Prince Alice, or Pasadena carnation. Some do this with that true simplicity of nature which gladdens the heart of a lover of flowers, and makes him feel that this is one of the magnets which draw and keep him home. But all women, I am sorry to say, do not love flowers, and this reminds me. Many years ago, I walked a distance of sixteen miles to give a bouquet to a girl. (How many of you would walk four now-a-days?) When it was given to her she commenced to pick the flowers to pieces. I remonstrated with her, and the answer was that she "did not like flowers!" Since then, I have concluded that a woman with such a disposition rarely makes a good wife or mother. Her nature is selfish and unsympathetic to those around her.

A Word About the Climate.

Victoria has also produced some good show trees; and last but not the least, South Australia. This State is far ahead in the raising of the American, and in a year or two it will be no more necessary to import carnations of this type, than it is to import chrysanthemums, dahlias, gladiolus, delphiniums, and other florist flowers. To prove the American carnation is adapted to South Australia it is just as well to let the American growers know what this climate is like, and what it is capable of producing. In passing, this paper will be sent on to THE FLORISTS' EXCHANGE, New York—the best paper of its kind in America (specimen copies shown). Anything to be said about this State will come better from me than from one who is a native of South Australia.

I have been reading a good deal about their sister dominion, Canada—of the new land being opened up, and what has to be endured during the long Winters. One item struck me forcibly—that fowls had to have many thicknesses of straw around them to keep out the cold. Here in South Australia they roost on the wire fences if there is nothing else handy; and as for their laying propensities, in competition they average 224 eggs for the year. To show the difference between our climate and the American, a farmer or gardener here can work 50 of the 52 weeks in the year out of doors. It cer-

Walter Wilsbire

Chairman Ex. Com., Toronto Gardeners and Florists' Association

tainly is more than warm during a few weeks in the middle of Summer; but the writer has done a good day's work in the open on the hottest day on record, viz., 180 degrees in the sun, and 114 degrees in the shade, without being distressed. This is owing to the dry, healthy atmosphere. Overcoats are sometimes worn in the Winter, but mine has lasted me ten years, and is still good to wear. Our average rainfall is under 21 inches, and, if it comes opportunely, is all that the farmers require. Our wheat, as you know, is the best in the world; our wool the same, and the fruits produced are varied in the extreme, and of splendid quality. To enumerate some: grapes, oranges, limes, lemons, figs, almonds, apricots, peaches, plums, apples, pears, quinces, mulberries, gooseberries, strawberries, raspberries, cherries, and walnuts. Vegetables, green peas and new potatoes all the year round.

From the city eastwards the ground rises over 2,000 feet in ten miles.

Of course, some of these fruits, etc., have to be produced by irrigation. Then we have our Northern areas in the tropics where all kinds of tropical products can be raised, and which also abound in minerals, waiting for some go-ahead American to come and abstract them. The only country in the world to approach this is California, which has a similar climate. Asparagus plumosus grows abundantly in our gardens, and stephanotis, bougainvilleas, wistarias, tacsonias, and kennedyas flourish on

Albert Houle

Vice-Pres., Toronto Gardeners and Florists' Association

the walls of our houses. An English oak will grow 30 feet in height and 4½ feet in girth in 20 years. Clematis flowers 1 foot across, azaleas, beronias, rhododendrons, Pink Pearl, Mrs. Sterling, and dozens of other varieties do well in our hills where the camellia is at home. Chrysanthemums thirteen inches in diameter are all grown out in the open except for a calico shade when flowers are out. As for cannas and palms, they are rank. The former and dahlias can be left in the ground all the Winter, and not take any hurt. The best honey can be obtained at three cents per pound.

Truly, this short description of our State goes to prove that it is a land which, if not overflowing with milk and honey, is overloaded with the best fruits of the world, where the land is cultivated (and thousands of acres which are not) and these fruits can be washed down with the choicest of wines. Had Moses known of such a land, and the means to get there, he would have dumped the Israelites down upon it to a man. We occasionally have droughts, which do some harm, though sheep farmers calculate in the main they are beneficial. We have a range of mountains running hundreds of miles and every facility for the storage of water, about 20 miles apart. If we practised irrigation to the same extent as in the United States we could laugh at the world, as we have no hailstorms, no blizzards, no snow or ice, and not such extreme cold as they have. But to my text.

A Comparison.

To compare with the growers in America we are like small children holding the strings of their mothers' aprons. This cannot continue, as we are growing slowly and surely, though we may never make such a commercial success as they on account of the facilities for growing flowers here by any working man having a piece of ground, and the small outlay required. To show the contrast between the American Winter and ours, here in South Australia, fine blooms of Mrs. Lawson, Prosperity, Flora Hill, Ethel Crocker, Juanita, Harlowarden, Pasadena, Antonia, Enchantress, etc., are out of doors, protected from rains and sun by a pot or piece of flat wood only. Nevertheless, if a skeleton frame were put up over the heds with movable lights in the Winter and Japanese bamboo blinds in the Summer, a greater return would result.

What do I think of the American nurserymen? Well, as regards business done they are equally as honest as the general run of men in England, Germany, or in these States. I know this much, the E. G. Hill Company have done the best they could for me in putting aside and preparing good strong plants for packing; but where the trouble lies is in the long distance to ship, and the heavy charges in transit. The postal union now adopts the parcel post up to 4 pounds 6 ounces and I think for plants it should be 11 pounds, as then it would allow the plants to be sent in the ball.

Quality of American Sorts.

Do I find all the American carnations good? Not by any means; there are more blanks than prizes. Who is to blame for this? I think, to a certain extent, the nurserymen themselves for not taking more pains to see if each novelty on the market is a distinct improvement on any of the same type before they buy, and if such is the case, to note where it comes in, either in habit, color, form, stem, or perfume. Again, the carnation societies should have a big hand in this when new varieties are judged by them. I have had a novelty which was praised up to the skies, and when it bloomed I found that a variety sent out a year or two before was superior to it. After all, "honesty is the best policy." I threw it out. You might say this was wrong, as it could have been sold to a customer under description when bought. That would be a false pretence, for when you know the flower is not so good as one we already have, you are not only deceiving your neighbor, but you lose the reputation for honest dealing which all men can possess. How very often we see a new carnation take the highest honors, and after dissemination it is found to be only second rate. One can understand a seedling which, as a rule, is more robust than a cutting, going back when propagated, but these prize-takers are from cuttings. How, then, is the falling off accounted for? My theory—but it does not coincide with that of some American growers—is that of over-propagation, especially from plants that have been forced or cultivated for large blooms. We need only go back a few years to the chrysanthemum. Many of these flowers were quite equal to the present-day sorts in size. The question arises, Can you affect the system of man or plants by forcing the constitution to its maximum powers for any length of time? I think so, as a reaction is bound to take place in the form of some disease or loss of vitality in some part, something which may lie dormant for years. Under a proper system of culture, once a good flower, so it should remain, and not go back. The secret of keeping a flower up to the standard is to grow naturally, viz., to plant out in the field the number required for cuttings, and throw out all those that have been forced with manures. This could easily be done instead of the continuous propagation going on from plants which are made exotic to their nature by coddling. Bringing plants from a different soil or situation—provided their constitution is not impaired—is another factor in keeping up the standard.

PERENNIAL GARDENS CO., TOLEDO, O. Mention the Florists' Exchange when writing.

CHANGES IN BUSINESS,

ONARGA, ILL.—The partnership agreement heretofore existing between L. J. Risser and Ludvig Mosbaek, under the firm name of Ludvig Mosbaek, has been dissolved by mutual consent. All debts owing to the firm of Ludvig Mosbaek and all debts owing by the firm have been assumed by the new business which will be continued under the name of the Mosbaek Greenhouse Company of Onarga, the Irequies Canning Company of which L. J. Risser is President, succeeding to the business.

GREENSBORO, N. C.—The firm heretofore doing business under the name and style of Blake & Todd, proprietors of the Greensboro Seed and Plant Company, composed of George Blake and George M. Todd, has by mutual consent been dissolved. George M. Todd having purchased the entire interest of George Blake in the business including the real estate.

CORNWALL-ON-HUDSON, N. Y.—Another new industry has started under the name of The Cornwall Nursery Company. The owners are James F. O'Mara and Thomas O'Neil. Mr. O'Mara began his career as a nurseryman when a boy with the late Edward Payson Roe, the novelist. He was superintendent for about ten years of Dwyer's Nursery in Cornwall, and is a scientific nurseryman of large intelligence and experience. Mr. O'Neil is an expert gardener. He also worked under E. P. Roe, and has been until recently head gardener for Earle E. Carley.

REVIEW OF THE MARKET

NEW YORK.—We do not remember ever before seeing Bride and Bridesmaid roses in such short supply, at this time of the year as they are at present. Considering the additions that have been made in recent years to the glass area devoted to rose culture, the present scarcity would indicate that the varieties named are not being grown so extensively as heretofore, or that the present season has been more unfavorable to rose culture than has been the case in a number of years. It would be interesting if a census could be taken of the average yield per plant for this season, and compare the same with the record of other past years, though it is not supposed that such a thing is possible as so few records are kept.

American Beauty roses are not very plentiful either, and the prices of all roses are so high that the smaller retail dealers find much difficulty in handling the flowers at a profit.

While carnations are coming in in fairly large numbers, the scarcity of roses helps to advance the price, and for the time being, the grower who has enjoyed a good harvest.

Lilies have fallen off somewhat in supply, and as a consequence an advance in values is noted. Other bulbous stock, such as Roman hyacinths, tulips and Paper White narcissus are good carnations may be sold to be enjoying a good harvest.

Lilies have fallen off somewhat in supply, and as a consequence an advance in values is noted. Other bulbous stock, such as Roman hyacinths, tulips and Paper White narcissus are good carnations may be sold to be enjoying a good harvest.

Lilac is in regular supply; some days it clears out nicely, while at other times it is hard to move. Cattleyas have not been selling so well for some reason or other, and C. Percivaliana has at times been unloaded at very low figures. Gardenias continue to come in regularly, and there is little change in their values. Lily of the valley is plentiful and there are several grades in the market. Violets are selling fairly well, though the price for the best does not exceed 10 cent mark.

CHICAGO.—The past week has been a varied one as to weather, starting with snow followed by rain, then a severe touch of extreme cold without sunshine for a long time. This condition makes flowers very scarce. Bride and Bridesmaid roses are not coming in very plentifully; good flowers bring as high as 15c. Carnations, on account of the scarcity of roses, are holding up well in price. There are quite a number of white tulips, yellow narcissus and Paper White coming in. Callas and Easter lilies are more plentiful. Asparagus Sprengeri being scarce makes quite a demand for other greens. The price of ferns has advanced owing to the failure of a great many from cold storage to keep well.

BOSTON.—Market conditions remain quite satisfactory. The good prices of a week ago have been maintained all the past week. In roses there seems to be a scarcity of short-stemmed flowers while long-stemmed sorts bring extra good figures for this season. American Beauty still sell at \$9 per dozen for the best. Richmond and Liberty bring \$4 and \$6 per dozen; Killarney, Wellesley, and the best grades of Bride and Bridesmaid \$2 and \$4 per dozen. Carnations keep their end up; fancies bring \$6 and \$8, while the better grades of standard sorts realize \$3 and \$5. Lilies sell at \$12. Lily of the valley has been selling well at \$2, \$3, \$4 and \$5; Bulbous stock has been bringing better prices than usual; yellow narcissus realize \$3 and \$5; Paper White narcissus \$2 and \$3; hyacinths \$1 to \$4, while tulips readily fetch \$3 and \$4. Mignonette, small, brings \$2 to \$4. Violets are plentiful at 35c. and 60c. J. W. D.

PHILADELPHIA.—There is a great scarcity of cut flowers of all kinds, and while there has not been any great advance in prices it has been a very difficult task for the wholesale dealers to satisfy their customers. The most difficult feature has been in filling ship orders as those customers, not being in touch with the situation, cannot understand a slight advance in price or why they don't get exactly what is ordered.

The best American Beauty are selling at \$9 per dozen. There is a large demand for flowers from \$3 up, and orders cannot be filled. Tea roses range in price from \$6 to \$12 per 100; a few choice Killarney and Richmond have sold at \$20. To obtain white roses appears to be almost an impossibility; they are in strong demand. Cattleyas bring 40c. and 80c. per flower; cypripediums \$15 per 100. Gardenias, \$3 to \$4 per dozen, with supply equal to demand.

Carnations, general stock, are selling at \$3 to \$5 per 100, some choice flowers at \$6 and \$8. Bulbous stock is cleaning up well every day, Roman hyacinths at \$2 and

\$3 per 100; daffodils, \$3 to \$4; Paper White narcissus, \$2 to \$4; tulips, \$1. Bouvardia brings \$4 per 100; mignonette, \$3 to \$8, and in good supply.

There is a strong demand for Lilium Harrisii; cut blooms are selling at \$15 to \$18 per 100. Both white and yellow daisies go quickly at \$3 to \$4 per 100. Violets are selling very slowly, \$1 per 100 being the price for best doubles. Adiantum cuneatum fronds fetch \$1 per 100; A. Leyanum, \$1.50 per 100. There is very little asparagus coming from local growers, but a fair supply is arriving from the South, 50c. per bunch is the usual price. Sweet peas are generally not up to proper quality; they sell at \$1 to \$1.50 per 100. Lily of the valley is at from \$3 to \$5.

INDIANAPOLIS.—The past week's conditions were such that the bright side of the florist's business is related with difficulty. Stock suffered much throughout a week of warm, drizzling weather, coupled with enough downpours to flood a large section and to fill the cellars of growers with water. Notwithstanding the unusually small cut

H. R. Frankland, Pres. Toronto Horticultural Society.

of flowers, prices decreased in all lines. Counter trade has been exceedingly dull. The end of the week brought with it quantities of funeral work, which aided materially in reducing the surplus.

Bride and Bridesmaid roses, the latter somewhat bleached, have been selling readily at \$6 to \$10 a hundred. Richmond at \$7 to \$12. American Beauty at \$5 to \$25 a hundred found a poor market. A few Golden Gate specials bring \$8.

At least 50 per cent. of the carnations are split. Enchantress and other fancy varieties sell at \$3 to \$4 a hundred; medium grades being \$2 to \$2.50; 75c. and \$1. a dozen is the store man's price.

Spring flowers, such as jonquils, sweet peas, mignonette and daisies, are often requested of the retailers.

Violets are more plentiful but the quality is often lacking at 75c. to \$1 a hundred. Excellent lily of the valley is to be had at \$3.50 a hundred. Callas and Harrisii lilies find a regular sale at \$10 to \$12.50 a hundred.

Plant trade has been better than other lines; a well grown azalea, cyclamen or dish of lily of the valley being preferred to cut flowers. ST LOUIS.—The condition of the market the past week was about similar to that of the week previous. The weather was very bad—rain all week and very little sunshine. Some of the retailers complain of dull trade. A fair amount of social work was done in weddings, dinners and receptions, also some funeral work. The stock of roses was not so plentiful as it has been. Bride were very scarce; also American Beauty, which are ranging in price from \$3 to \$4 per dozen for choice. The smaller roses sell for \$5 to \$10 per 100.

Carnations are plentiful enough for the demand, with \$5 the top price for fancy; good whites and pink bring \$2 and \$3 per 100. Mrs. T. W. Lawson are coming in of better quality. Enchantress is the best seller.

In bulbous stock, Roman hyacinths and Paper White narcissus are more than plentiful, the demand not being heavy; prices run from \$1 to \$3 per 100. Callas realize 15c. for choice. Freesias are beginning to come in. Lily of the valley is selling somewhat slowly; supply good.

California violets are down to 25c. and 50c. per 100 with more in the market than the demand calls for. In general everything is in plenty, at usual prices. ST. PATRICK.

Minneapolis.

The Seventh annual Midwinter picnic of the Market Gardeners' Association was held at the Masonic Temple, Saturday afternoon and evening, the 19th; over 1600 gardeners and their friends being present. The afternoon program consisted of addresses by N. H. Reeves, president Gardeners' Association, Mayor J. C. Haynes, S. B. Green and an exceptionally fine reading by Mrs. E. W. Phipps, musical numbers by some of the talented musicians among the members and their families. Then the supper; everyone came prepared for this event, in true picnic style. Baskets were unpacked and vands spread in the large dining hall. After the supper a program of twenty-two numbers was danced.

Much credit is due to our secretary, E. O. Ballard, and the members of the various committees for the great success of the event.

BOSTON, MASS.—On Tuesday, January 22, the store of Penn, the florist, at 41-3 Bromfield street, was damaged to the extent of \$1,500.

W. W. Rawson celebrated his sixtieth birthday on Wednesday, January 23, by entertaining about 400 of his friends at dinner in the Vendome Hotel.

LONOKE, ARK.—The Arkansas Nursery Company has been incorporated with a capital stock of \$25,000, one-half paid up. H. Cates of Little Rock is president, J. M. Cobb, secretary and treasurer. The stockholders are H. Cates, J. M. Cobb and Mrs. Virgina Cobb. It is located near the corporate limits, and will employ a number of people.

ITHACA, MICH.—D. Kleinhaus, who last Spring erected about 4,000 feet of greenhouse at St. Louis, Mich., has just taken his brother into equal partnership with him in the business, and the new firm will be known as Kleinhaus Brothers. They will erect another house this Summer and will grow a full line of cut flowers and potted plants.

CLUB AND SOCIETY DOINGS.

CONNECTICUT HORTICULTURAL SOCIETY.—The regular meeting of this society was held in County Building on Friday, January 11, President Sternberg in the chair. It was "carnation night" and there was a large attendance of members. Splendid exhibits were tabled by F. R. Pierson Company, Tarrytown, N. Y., and A. N. Pierson, Cromwell, Conn. Among local exhibitors were: John Coombs, J. F. Huss, supt. to J. J. Goodwin, and Carl Peterson, superintendent of the Whiting greenhouses, West Hartford. The following awards were made by the judging committee: F. R. Pierson Company, for the fine new variety Winsor, diploma. For Helen Gould, Melody and Rose-pink Enchantress (as one exhibit), certificate of merit. A. N. Pierson was awarded a diploma for an unnamed seedling which, under the electric lights, looked a rich, glowing scarlet. It is a fine, bold flower, with stiff, erect stem and was greatly admired. A certificate of merit was also awarded to A. N. Pierson for a handsome exhibit of Robert Craig and Rose-pink Enchantress. J. F. Huss and Carl Peterson were each awarded a certificate of merit for general displays of carnations. Mr. Huss read an instructive paper on "Carnation Culture" for which he received a vote of thanks.

As a proof that our society is becoming a power in the community, seventeen new members were added to the roll.

Visitor: Ulysses G. Scollay of John A. Scollay, Brooklyn, N. Y.
ALEX. CUMMING.

MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY'S eleventh annual smoker was a most enjoyable affair. About 140 members, guests and friends were present. Little business was transacted. A vote of thanks was given F. R. Pierson Company for the magnificent vase of Winsor carnation sent for decoration; on a previous occasion it got a certificate of merit. A. J. Guttman sent Pink Imperial for which a vote of thanks was also given. It, too, got a certificate of merit previously. Wm. Duckham exhibited, what to most of us was entirely new, a pan of Moschosma riparium. It is a grand Winter-flowering plant, 3 to 5 feet tall, white flowers resembling at a distance those of some spiræas. It is a labiata or mint. You could see nothing but flowers, individually small but almost countless. A balance of \$408.23 was reported in the club's treasury.

The entertainment committee did themselves great credit—coffee, sandwiches, cigars and Totty's famous punch were in plenty for all. The Rickard Brothers brought their friends and materially helped to entertain. Some professional talent of a high order was also with us. We had many out of town guests, among them Wm. Turner and Mr. Goemans of Oceanic; Mr. Ross of Tarrytown; H. L. Hand, of Portchester, N. Y.; Harry Turner, Castlegould, L. I.; and a delegation from Orange, N. J. With us, too, was Harry A. Bunyard of A. T. Boddington, New York, and Mr. Sperling of Stumpp & Walters Company, both of whom helped us to make merry. In local talent we were not wanting, singing, joking and merry-making carried us to 1.30 a. m. when with a lusty three cheers for the Morris County Gardeners and Florists' Society all hied for home.
E. R.

NEWPORT (R. I.) HORTICULTURAL SOCIETY.

—The first regular meeting of the new year of the Newport Horticultural Society was held Tuesday evening, January 8, President Bruce Butterton in the chair. The executive committee of the society held a meeting a few days previously when the following recommendations were the result of the deliberations: That two exhibitions should be held by the society this year, and that both be held in Masonic hall; that at least one thousand dollars be given in premiums exclusive of medals and other marks of recognition; that the price of admission be 25c. instead of 50c. as was customary in years past; that in order to draw a large attendance music and dancing should be provided upon the last evenings of each exhibition; all of which met the hearty approval of the society and were adopted. In connection with the decision to hold two exhibitions it may be stated that until a few years ago this society held two such exhibitions and a departure was made because it was thought that if one large exhibition was held in the Casino, which is the rendezvous of the organization, a larger share of the patronage of the four hundred would be bestowed. But the results from the change did not warrant the consequent neglect of things that should claim recognition if an early Summer exhibition was held to continue the large single Casino exhibition hence the turn around now. The first exhibition will take place in June or early in July when outdoor roses are at their best; the other will be held in September when dahlias are in like condition, although, of course, neither exhibition will by any means be exclusively for either of these features but will include groups of plants, specimen plants and all kinds of cut flowers, fruit, vegetables, and decorations.

The annual ball of the society was held in Masonic hall Tuesday evening, January 9. The selection of those composing the committee of arrangements was assurance that the affair would be a success, but the decided success it turned out to be surpassed all expectations. The decorations of the hall were very effective. The stage was tastefully decorated with bay trees and palms intermingled here and there with foliage plants of brighter color. In the front, as a border, were placed numerous Gloire de Lorraine begonias, the gift of Messrs. R. & J. Farquhar of Boston for the occasion. The ball started at 9 o'clock when Daniel Coughlan and Mrs. Wm. Allan, Jr. led the Grand March, from which time on into the "wee sma' hours" the enjoyment of all present was steady and uninterrupted. The committee of arrangements was composed of Messrs. J. T. Allan, Daniel Coughlan, Alex. Fraser, R. A. Smith, T. B. Connelly, B. M. Anthony and the president. The reception committee comprised James Robertson, J. Gibson, Col. A. K. McMahon, Dr. A. J. Anderson and D. McIntosh. Out of town friends of the society who took an interest in the ball included representatives of Weeber & Don, Hitchings & Co., Stumpp & Walter Co., of New York; R. & J. Farquhar and Schlegel & Fottler Co., of Boston.

L. E. Marquisee's New White Carnation'

Originator's Description.

THE MARCHIONESS.—This seedling is in its third year. It is a very large, high-built, perfectly formed flower, practically non-bursting, extremely free, quick to mature bloom, very early and continuous, producing large, full flowers early in September and full crop in October. It is the freest carnation we have, or ever have seen.

Marchioness
Grower, L. E. Marquisee.

Cycas Leaves.

Kreshover vs. United States.

U. S. Circuit Court, Southern District of New York, January 8, 1907. Suit 4088.

1. Ornamental Leaves—Cycas Palm Leaves Prepared—Wreaths.

Cycas palm leaves, which have been subjected to processes that restore their natural appearance and prevent decomposition, are within the provision in paragraph 425, tariff act of 1897, for artificial or ornamental leaves; and they are not removed from this provision by being arranged in wreaths on wire frames.

2. "Manufacture"—Preservation of Palm Leaves—Wreaths.

The preservative treatment of palm leaves and their arrangement in wreaths on wire frames do not result in such a change in their character or use as to remove them from the provision for "leaves" in paragraph 425, tariff act 1897, to that for "manufacture" of palm leaf in paragraph 449.

On application for review of a decision of the Board of United States General Appraisers.

In the decision below the Board of General Appraisers affirmed the assessment of duty by the collector of customs at the port of New York on goods imported by L. J. Kreshover.

HAZEL, District Judge: The articles in question, consisting of cycas palm leaves and of wreaths made of such leaves, were assessed for duty at 50 per cent. ad valorem under paragraph 425 of the present tariff act, which includes artificial or ornamental leaves, flowers, and stems of whatever material composed, not specially provided for. The protest states that the leaves and wreaths are dutiable at 30 per cent. ad valorem under paragraph 449 which includes manufactures of palm leaf or of which the same is the component material of chief value, or, in the alternative, at 20 per cent. ad valorem under section 6, as non-enumerated manufactured articles. The importers contend that the leaves and wreaths, having passed beyond the condition of mere leaves, are not properly dutiable as artificial or ornamental leaves. The proofs show that the natural leaves are first dried, then boiled in a solution of glycerin, and after again being dried are varnished, the purpose being to restore their natural appearance and prevent decomposition. The single question is whether the articles are more specifically described in the paragraph under which the importers claim they are dutiable, or whether the classification of the collector was correct. It seems to me that, as the object of the treatment of the leaves was to prevent decomposition and to retain or restore their original appearance, they are more appropriately included in the category of artificial or ornamental leaves and can not be classed as an article of manufacture. The wreaths of leaves, it is true, were made in part of metal—that is, the leaves were suitably attached to a circular thin wire frame. The collection of leaves in a wreath was not a transformation or alteration of them; and the wire attachment certainly was not a component part of the wreath, but seems to have been merely an incidental part thereof. No new branches or parts were added. The treatment did not result in a change of the leaves from their former appearance. There was no advance in manufacture in the sense that the process of preservation destroyed the original articles or made them useful for other purposes or altered their trade designation. *Hartranft v. Wiegmann* (121 U. S., 609).

In the cases of *In re Sheldon*, G. A. 4247 (T. D. 1982), and *G. A. 4580* (T. D. 21625), which counsel for the importer points out were followed by the circuit court in the cases of *G. W. Sheldon & Co. v. United States*, No. 3264 (T. D. 26101), and No. 3281 (T. D. 26462), single palm leaves that had been chemically treated were held to be dutiable under paragraph 449 as manufactures of palm leaf, but the question as to whether such articles were dutiable under paragraph 425 was not presented or considered in those cases. The principle of *De Jonge v. Magone* (159 U. S., 562) is not inapplicable, and therefore the decision of the Board of General Appraisers is affirmed.

FOR THE RETAILER

Flowering Shrubs and Garden Flowers.

The forcing of flowering shrubs and garden flowers at this season of the year has become quite a business with some up-to-date growers; and I feel sure these have proved a more than welcome addition, both from the florists' point of view and that of their customers, who grow tired of seeing the same roses and the same carnations, etc., day after day, in our ice boxes and displayed in our windows; although there seems to be an almost endless variety at all times. But the arrival of the flowering shrubs makes a pleasant change, and gives fastidious customers something more to select from, and new ideas for their dinner tables.

Another advantage of flowering shrubs is their length of stem, something we are all looking for at this season, when American Beauty roses are at a premium, and their purchase can only be afforded by our more wealthy patrons.

I am of the opinion that there is a large field opening for the grower of a good class of stock in this line, and undoubtedly it would prove a source of large profit if handled properly. For decorative purposes there is nothing that will give more satisfaction for large effects for the florist's window, the home, or church, than Forsythia suspensa, with its long graceful branches of small bell-like flowers growing in such profusion along the stems, that the total absence of foliage at the flowering period is hardly noticed. Its delicate fragrance is another attribute that recommends it and makes it one of the most popular shrubs for forcing purposes. Fyris japonica, or Cydonia japonica (Japanese quince), with its pretty pink blossoms, is also a great favorite with our customers, and lasts splendidly. Prunus cerasus (Japanese flowering cherry) is very good both for cutting or in plant form, especially when dwarfed, as introduced by the Japanese.

Most of the fruit trees are good for forcing, but are more liable to drop than the kinds mentioned. Peach, apple and the cherry have been used.

Deutzia has also been tried, but drops immediately after coming into full flower and for that reason has been discarded by most florists. Lilac, of course, is no longer a novelty, but has been in general use for years, both purple and white, although the former is seldom to be had in sufficient quantities and a larger supply would be most welcome.

There are doubtless many other varieties of shrubs that would be worth trying. The beautiful wistarias are most desirable as pot plants; also the European laburnum, with its lovely clusters of yellow flowers. This latter has been forced in small quantities with great success, and brings fancy prices as a novelty. There are hosts of others that will merit the attention of any enterprising grower, who would experiment along these lines.

Among the garden flowers that are being forced for the retail trade this season, perhaps the English wallflower, Cheiranthus cheiri, claims the most attention from our customers. A very good supply of this charming old flower has been sent into the market this Winter and proves to be quite popular. It is immediately noticed by customers who are attracted by its odd coloring of rich golden brown; it also has a perfume all its own, that is as refreshing as that of violets and much more enduring.

The antirrhinum, better known as snapdragon, although not here in any quantity at present, is extensively grown for the New York market. Its great assortment of coloring, with its odd-shaped flowers, is quite an attraction. Last Winter it could be had in almost any quantity, some of the spikes ranging from three to four feet in length. It has proven to be extremely useful both for vase work and table decoration. One of the largest dinner decorations I saw last Winter, in which antirrhinums were used, was a marvel. The colors were mixed, ranging from red and purple to white, most of the spikes being used full length, making a wonderful display. Very good effects may be obtained by using them in separate colors, white, and yellow being especially good.

White stock, or gillyflower, is another garden subject that is very useful; some of the colored varieties are also good. The white sorts have been especially well grown of late years, and are quite an addition to our Spring flowers.

Myosotis, the Baby primrose, pansies, etc., all help to make a variety, and the grower of such should receive every encouragement. It is not what we like, but what will suit our customers, with their ever-changing tastes and ideas, that counts.

Richardias or callas, for some reason in past years have lost caste, but I am glad to say are coming back into favor, and are now seen in our best stores and sell to our most critical customers. This surely is a good sign, as I have always admired them and consider them among our more artistic flowers.

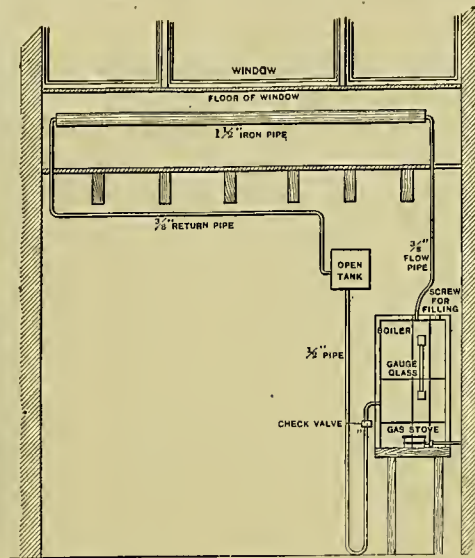

I was surprised to hear the tuberose is the fashionable flower this season, but have been unable to find a reason for it. We have had several members of the smart set insist on having tuberoses, but the flowers seem to be unusually scarce, so we were unable to gratify their wishes. D. RAYBUN.

Preventing Frost on Show Windows.

The annoyance of the store window covered with vapor or with frost during cold weather is an ever recurring one that has given rise to a good deal of ingenuity in developing plans to overcome and prevent it. A tastefully arranged display, one which probably represents hours of preparatory thought, hours spent in the actual arrangement, and in some cases no inconsiderable amount of money, is often practically entirely hidden from passers by through the collection of frost, which moreover is apt to remain on the glass for long periods at a time. The presence of the frost is, of course, due to the condensation of moisture in the air within the room on coming in contact with the cold glass surface, the glass being able to carry away the heat rapidly into the outside air. On account of a relatively high amount of moisture present in the air within the store and the high heat transmitting capacity of the glass the water stays on the glass and if the atmosphere on the outside is cold enough freezes.

Any account of a method of preventing the trouble is sure to be interesting, as one method or suggestion may be impractical in the case of a given show window, while another may be just the thing.

The accompanying idea and the sketch were recently submitted to The Ironmonger of London, by F. S. Francis of New Cross Road, London, England. In his case a window 18 feet long and 14 feet high was the proposition which had to be taken care of. He tried to prevent the window steaming by sending along it sheets of warm air, this tending to

Steam Heating Outfit to Prevent Window Steaming.

provide air that has a higher capacity for moisture than the rest of the air in the display space, besides bringing in contact with the window a supply of air so warm that the window has no time to cool it off sufficiently to bring about the condensation. He tried piping, carrying hot water for the purpose, but the result was that the window would only be cleared of condensation for a distance of 3 or 4 feet from the bottom.

Subsequently he employed 1 1/2 inch piping along the floor of the window about 1 1/2 inches from the glass, heating the pipe by means of steam. This he used through the fogs, which are a notorious characteristic of London atmosphere and which, he says, are the worst in respect to bringing about frost deposition. The steam is generated in a small boiler holding about 4 gallons of water. This is fixed in the cellar and heated by means of a gas burner. He had some trouble at first to prevent the boiler emptying itself, but a siphon and check valve, as shown in the sketch, have overcome this trouble.

The boiler is formed out of tin plate and is 12 inches in diameter and 11 inches high. It is inclosed by a stout sheet iron plate, which forms a 3/4-inch annular space around it, this space affording a passage for the hot products of combustion on their way from underneath the boiler, the arrangement thereby utilizing to a maximum the heat from the gas combustion. This outside guard is 1 1/2 inches higher than the top of the boiler, and it is suggested that a further economy might be effected by covering this with slag wool or asbestos. The check valve is of the mushroom type, made by one of Mr. Francis' own workmen.

The head of water represented by the difference between the position of the open tank, as shown in the sketch, and the opening where the water enters the boiler is about 1 1/2 feet. The results were so successful that the boiler has now been connected to two other flow pipes, each system returning to the open tank. These systems serve two lengths of 1 inch steam pipe in the shop. This is doubtless used for warming purposes in the shop, and it means that the small boiler effectively heats 18 feet of 1 1/2 inch steam pipe and two 12-foot lengths of 1-inch flow and return, 48 feet in all.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 MADISON AVENUE. My facilities for delivering flowers for any and all occasions are unexcelled; I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

LAMBROS MULINOS, 503 Fifth Avenue, and 301 Columbus Avenue. I have at all times a superb stock of seasonable cut flowers and can fill telegraphic orders at a moment's notice.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Oratlot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders, placed with us, will receive careful attention.

Denver, Colo.

THE PARK FLOREL CO., 1706 Broadway. J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLOREST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Tex. and La. Mail and telegraphic orders solicited.

The question of fall is a matter of some importance. The pipe in the window drops 1 1/2 feet in the 18 foot total length, finally dropping sharply to the open tank; the other pipes have about 1 inch fall. The windows are open, so that there is no difficulty about ventilation, and Mr. Francis is of the opinion that in the case of a closed window some means of allowing the hot air in the window to escape might be necessary.

It would be interesting to know from readers something of their experience in the prevention of frost on show windows. No doubt a considerable number have employed schemes of the general lines described in the foregoing, where direct radiation is extended across practically the entire window front and where the temperature of the radiating surface is high enough so that a fairly warm sheet of air is continually sent upward along the window surface.

The feature of the arrangement which perhaps appeals more than anything else is the simple heating apparatus, which can be readily made in any shop. Where stoves are employed for warming, it is naturally difficult to see how a positive supply of air could be carried directly to the window and do very much good in keeping the window cleared. Where stoves are used for general warming, an independent heating outfit, like that shown, is a relatively inexpensive property, and needs only to be run when the outside weather conditions tend to shut off one's window from the public view.—The Metal Worker.

Trials and Tribulations of Detroit Florists.

(Paper read by E. A. Scribner before the Detroit Florists' Club, January 16, 1907.)

This subject covers a wide field. Most of us have been told either personally or by articles we have read that it is a good business policy to square yourself with the customer no matter what the financial cost or injury to your feelings may be. They say it is better from a business standpoint to submit and hope to play even or better than ever on some future transaction.

The troubles I will call your attention to are actual difficulties that different members of the club, including myself have had to contend with.

Mrs. D. steps to the telephone on Christmas day and notifies us that Mrs. So and So has sent her a George Washington cherry tree and "will you kindly send for the one you have just delivered and exchange it for a Boston fern." Now this request, or one very similar comes to all retailers and if it happens to be a good customer what will you do about it? Of course, a customer was justified, but is it fair to hang a dealer because some of his help put a red cover on a Simon Mardner azalea; or after going for a fern dish and planting it with eight ferns and delivering it for 65 cents, then have to call and get it because some other fellow had consented to plant it for 50 cents?

Another case. A lady calls and selects a Piersoni fern at \$1.25 which, by the way, was well worth the money. She has it delivered on Friday in time for a card party; then the following Wednesday she calls up and wants you to "please come and get the fern as it is not satisfactory." As Mrs. F. belongs to one of the oldest and best known families in the city you would hardly like to cry out "stop thief," but what would you call such a deal?

Then you sell a palm in fine condition to a pretty good customer and in three weeks get a request to come and take it back as it is not doing well. Although the deal was entirely closed, as one might expect, you have to take a practically dead or at least a worthless palm back on your hands with no chance to get even on future deals although John hopes to.

Of course, once in a while there is a funny side to a question. For instance, we sell a Gloire de Lorraine begonia to be sent to a party who is sick. The begonia is set inside an open window and gets a draught for a few hours because they know that "plants need air." Next day about noon time every flower had fallen; but in this case it was very easy to show that the plant froze although nothing else in the city froze, unless it was another begonia.

Another aggravating circumstance. A florist sends a poinsettia plant in an 8-inch pot by boy direct to the customer. Very soon he receives a telephone message requesting him to come and get the plant as the pot has been broken. Sure enough it was broken and the plant completely spoiled. Another plant must be sent to square the deal, although no doubt the first plant was delivered in good shape.

This next is a deal between a grower and a retailer. The first daffodils of the season sent to the retailer were in 6 and 8 inch pots, with 20 to 30 blossoms. He kicked on paying 40 cents per pot. Afterward the grower learned that the retailer cut four dozen flowers off the plants and sold them at \$1.25 a dozen and use the pots for a table decoration at \$1 each and got them back in the store next day and sold them at \$1 each. This, you see, is an instance where the grower got a kick from a source that would forever make him suspicious of that retailer.

Another trouble comes from the customer who wants to know what will be in next week. You remember that Mr. Grower has told you that he would have some fine stock of a certain kind next week and you straightway recommend such stock. After booking an order the time comes for you to deliver the goods. You call up Mr. Grower only to find the best sold or they are not quite ready. Then imagine the rest!

Or take a holiday customer. Where you explain to a good customer the conditions that make the price high, he gives an order and after two weeks, comes in to pay his bill. Perhaps that very day he has inquired of some other dealer about prices and found them lower. He may pay the bill but with much dissatisfaction, feeling he has been done.

Another trouble. When sales are good on a certain line the retailer orders from the wholesaler accordingly, only to have his order cut in two, which, of course, is a heavy loss. Later stock becomes more plentiful and Mr. Wholesaler fires in double the quantity although sales are only normal. Easy enough to see the retailer gets hit again.

Then again this trouble of delivering from one end of the city to the other where dwells a population of 400,000 is something terrible to think of, but there seems to be no way out of it, so we must be content.

Again, a new customer moves into the neighborhood. Almost the first deal she has, she asks to have a fern cared for, as it is not doing very well. After Mr. H. explains very fully that owing to lack of room and various other reasons he could not very well accommodate her, he finally consents to take the plant, and after three weeks he gets a telephone call: "If the plant is in good condition, please deliver it to Mrs. So and So up near the water works." Now, following a crow's tracks with a flying machine this distance would be at least eight miles; or, traveling in the usual way, about nine and one-half miles. But after explaining that the plant had only

just begun to recover and looked pretty much as it did when we took it, our prospective new customer was very much put out. With the average florist it does not take much "chinning" from a prospective customer of this calibre to bring out the request that she "go and dust herself."

Another circumstance, which while perfectly legitimate, might ruffle one man's temper a little. A goes to a grower and gets first choice of 50 plants at \$6 a dozen, which he sells at a uniform price of \$1 each. B gets from the same lot second choice of 50 plants and puts them on sale at \$1.50 each. Of course it is not long before he is reminded that he is asking altogether too much or, in other words, the customer can buy cheaper of the other fellow.

Another grower gives an experience that is surely aggravating. He gets a telegram at 1 a. m. to ship a lot of flowering plants by the morning boat. Of course, that means all hands get up and hustle. By keeping at it the plants are shipped as requested and on time. After a wait of three weeks for his money, \$80, he gets instead a notice that the buyer has been closed out on a mortgage held by his father who is a minister in active service of the Lord, with an inclination to do a little of old Nick's work on the side. He never got a cent for his plants. This same man sent a full load of geraniums to a party after a description as to size and color, and at an agreed price of six cents. He got word from the driver, after a seven mile drive, that the plants were not high enough, but would be accepted at four cents. This being clearly a "hold-up" they were ordered back. After an exposure of a 14-mile drive in the hot sun it looked like quite an extensive loss. Fortunately another buyer came along about the time the plants had taken water and bought them at 7 cents, somewhat smoothing over the troubles of the grower.

Another trouble that is serious to either the grower or retailer is the matter of giving credit. If you wish for convenience sake to buy goods on credit at one of the down-town stores you make a personal visit and offer a line of references which, if accepted, makes both a pleasure and a profit for the merchant to do business with you. In the florist business here in Detroit any one can get credit for the asking. The result is every retailer in the city has a lot of worthless accounts on hand that tangles his hair every time he thinks about it. Just imagine a one-horse Woodward avenue florist, who has been in business but a short time, sending out over \$1,600 in bills the first of January, with no hope of ever collecting more than half the amount! I believe this one trouble is why so many of our florists tumble into bed clothed in only a 50 cent night shirt and a troubled look, too infernally poor to borrow a razor to cut their corns with. It seems to me that this club is strong enough and harmonious enough to at least partly correct this growing evil.

Of course, the florist's troubles are measured by the temperament of the florist himself. What would be very annoying to one might not trouble another at all. Just so with the customers. A lady comes to me with a tale of woe, telling how some florist has swindled her. I see that my brother florist knows nothing of the circumstance and persuade her to go and explain the matter to him. She afterwards tells me the matter has been straightened out to her entire satisfaction.

Another customer will use up a lot of time you can hardly spare, telling what she knows about flowers, how beautiful they grow in California, and so on, finally perhaps buying a few flowers with the request that they be delivered at once three miles away, the cost of delivering being more than the profit on the purchase.

Another would-be society woman, who has been reading about Mrs. So and So's reception, has made up her mind to have something very similar and wants for about \$2.50 what was worth nearly \$100. Such customers can rarely, if ever, be satisfied.

Then another kind of customer comes in, usually a man, who don't know one flower from another. He takes a long time leading you to believe he will

buy heavily. After you are about worn out from too much "chin" he buys perhaps 25 or 50 cents' worth.

Another trouble that this club has somewhat smoothed out, but not entirely squelched is the donation to our church fairs. You will remember all over the city are churches of various denominations and everyone of these churches has from one to a dozen helping hand combines, every one a grafter. "Either give us an advertisement for our paper or program or a plant for our first prize and another for our second prize and a few flowers with which to decorate our tables." Now every plant given to any of these people is sold in one way or another and, of course, amounts to a handicap inasmuch as it supplies a want that might be satisfied by the purchase of a plant of some dealer. Of course, these pleaders for the church always offer an argument that we owe everything to the church for its civilizing effect, when every student of social science knows very well that the church, up to date, has done almost nothing for the betterment of humanity.

The fraternal societies are almost as bad in their demands. I don't believe any florist gets returns from any money he may pay into this kind of advertising.

Still another trouble of the retailer. Mr. Smoothman calls with a line of novelties, just out and something particularly fine. Mr. Florist in St. Louis ordered a million, and in Chicago Mr. S. got several orders for a carload. Finally you place a small order for what proves to be a flat failure and this repeated a few times finds you surrounded with a lot of plunder that has cost you good money and is not worth a hurrah in Hades.

There are a thousand and one other troubles that have no room for discussion, so I will just merely relate them as they have a funny side to them, although at times are very serious.

Mr. C., who is a member of this club, started in business over thirty years ago, had got his house pretty well filled with seedlings, and one morning while he was outside doing a little work, a flock of 20 or more of his neighbor's chickens got into the greenhouse. The task of driving them out was so difficult that when every chick was driven out, most of his stock was also out and Mr. C. was nearly out of business. He had a similar experience later when two women came, each with a dog. The dogs very soon got into a fight that lasted until a bed of young smilax was destroyed, also several other plants and a lot of pots. Only by the utmost strategy did the florist keep the women apart, which otherwise would have been his second finish.

In conclusion I wish to say I have asked many brother florists to give me an account of any aggravating circumstance of late happening and the replies have been very numerous. Of course there were many troubles coming to the several florists in common so I have mentioned only a few that would bear discussion. One rather philosophical brother thinks the troubles of the florist are no greater than the troubles of men engaged in other lines of business and winds up a friendly and very welcome letter with these lines: "I expect to pass through this world but once, any good which I can do, therefore, or any kindness I can show, let me do it now, let me not defer or neglect it, for I shall not pass this way again."

LEGISLATION AGAINST PLANT DISEASE IN ENGLAND.—A bill is now being drafted in the legal department of the Board of Agriculture for the purpose of providing the Board with the powers necessary to deal with the importation as well as the extermination of all diseases of a nature likely to spread to the detriment of plant life in this country.—The Gardeners' Chronicle.

Coles's New Carnation House.

The accompanying illustration shows Mrs. Lawson carnation in W. W. Coles's new carnation house at Kokomo, Ind. Here is an excellent example of the advantages of a light house.

This house is of the King truss construction with the glass laid the long way, 24 inches between the bars. The dark weather of the past two months has shown its effect on another carnation house on the place, which is of wooden frame and the bars spaced 16 inches apart. The cut in the old house has decreased while in the new one the plants are as healthy and vigorous as though they had been blessed with plenty of sunshine, and the cut is constantly increasing.

The two benches in the foreground are planted with Variegated Lawson, with White and Pink Lawson at the other end of the house. The two benches on the right contain several new and several of the standard varieties. The old house had the advantage of being planted a month earlier, the new one not being planted till late in September, owing to a delay in getting the bench material.

Coles's King Construction Carnation House

THE WEEK'S WORK.

Timme's Timely Teachings.

Asparagus.

Good, young plants of Asparagus plumosus for the making of new beds in June are obtained with easy facility by sowing the seeds now. And while providing stock for that purpose it is well to go considerably beyond the limit of what might seem sufficient for the size of beds to be stocked, so as to have plenty of plants from which to select the thriftiest for bedding. There need be no fear of finding no good use for those left over, since there are so many ways in which these asparagus plants prove most serviceable material right along throughout the entire year that I have never yet seen the time when there were too many of them.

The same may be said of Asparagus Sprengeri, of which sowings should now also be made. It is an easy matter to nurse up a batch of strong and lively seedlings for the many uses to which they can be put during the coming season and a much more reliable method of providing stock in this line than depending on old, exhausted stools.

For the starting of asparagus seeds one may use ordinary seed trays and a nice grade of well-enriched, sandy soil. In a house of steady warmth, especially if given bottom heat, the seeds will come up quickly so that in five or six weeks the little plants will have reached the right size for being transplanted into 2-inch pots, which should be of the deep or rose type. By keeping them in a temperature of 65 degrees with light, moisture and air judiciously afforded, they will rapidly grow into plants requiring a shift into 3-inch pots, a good size for the planting of permanent borders.

Smilax.

In June or July we renew our smilax plantations, and as with asparagus we prefer young stock for the new start, which, however, is not absolutely necessary in every case. Whether or not it is safe to rely on an old bed, which has already done well for one or even several seasons without renewal depends much on conditions, soil and mode of treatment. Planting with new stock does away with all uncertainty as to the final outcome, a point which is well worth the extra trouble and expense that the raising of young plants may bring with it.

The seeds of smilax are also sown now, and as advised for asparagus, requiring the same kind of soil and degree of temperature. When the little plants show four leaves the first shift from seed box into 2-inch rose pots is given, to be followed by another later on into 3 or 3 1/2-inch pots. During all this time they should have a warm stand in a house of at least 60 degrees of heat, with plenty of light and moisture. When in the 3-inch pots it is time to transfer them to mildly warmed hotbeds out of doors, if such are available. There is nothing in which young stock of smilax—and of many other things, too—can be brought to such perfection, as in a well-working and properly attended hotbed.

In planning new smilax and asparagus plantations for next June or July the following points of importance should be borne in mind: A steady heat of not less than 60 degrees throughout. Winter, plenty of head-room and a deeply worked, heavily enriched soil, a solid bed always being the best place.

Begonias.

Small plants of Begonia Gloire de Lorraine left over from a trade now past, can be grown into very fine specimens for next season's trade. They should be stood in place rather dry and in not much over 50 degrees in heat. In April or May the old earth is shaken off the roots, the top cut down and a replanting into fresh soil and as small plants as possible takes place. Large plants of this begonia, left over from the holidays, are treated in the same manner. If too large to be kept over they may be utilized as stock plants for Spring propagation. In that case they will need no further transplanting. If started into new growth at the latter part of April, an abundance of fine shoots will be had a month later, which will furnish all the cuttings needed.

Many varieties of the flowering greenhouse begonias may now be propagated with the best of success. The new shoots are in place rather dry and sturdy plants of the kind of cuttings to be taken. Rex begonias can also now be propagated, and plants so obtained will during the Summer grow

JAMES VICK'S SONS ROCHESTER, N. Y.

The Leading Specialists and Largest Growers of High Grade Asters in the World.

Five New Varieties For 1907

VICK'S SUNSET. Companion to Daybreak and Purity, in color a delicate pink shading to a deep rich pink in center. Profuse bloomer. Price per packet, 25c.; 2 pkts. 40c.

VICK'S UPRIGHT. Long graceful stems branch out at the ground and grow directly upward. Flowers are symmetrical, double and full to the center. Splendid for cutting. Especially valuable for shipping. Price per packet, 25c.; 2 pkts. 40c.

VICK'S ROYAL PURPLE. An offshoot from the Branching. Unlike its parent it sends out stems close to the ground. A medium early variety but lasting until late in fall. Nearly every stem produces specimen flowers. Price per packet, 20c.; 2 pkts. 35c.

VICK'S BRANCHING ROSY CARMINE. A new color in the Branching Class. Leading florists pronounce it a shade which will be popular with the trade. Price per packet, 25c.; 2 pkts. 40c.

VICK'S CARDINAL. The best bedding Aster ever introduced. A good one for cutting. With its profusion of flowers and brilliant coloring it makes a handsome showing. Price per packet, 25c.; 2 pkts. 40c.

As we would like to know where you saw this ad, please mention The Florists' Exchange when you write.

into good-sized market plants for next year's trade. Well-ripened leaves are used for propagation.

Good plants for Summer blooming, either in pots or outdoor borders, may be had by sowing the seeds now of tuberous-rooted begonias, if the seedlings are kept going in warm and otherwise favorable quarters. At any rate they will be good stock for next year, if started now. A sandy, fibrous loam should be used in the seed pans.

Bedding begonias of the Verner and semperflorens types can now be propagated from cuttings, and would not be too late, if started from seeds at once. All seeds of begonias are small and should be scattered thinly.

Gloxinias.

Earthenware seed pans are to be preferred to wooden boxes for the starting of gloxinia seeds, which should be sown now. A layer of roughly broken up, well-decayed sod soil in the bottom of the pans will assure good drainage, which, with seeds of this kind, should always be looked upon as an important essential to satisfactory results. On this layer finely sifted, sandy compost is spread, which forms the surface for the reception of the seeds. With a smooth piece of wood seeds and soil are firmed and then carefully, but thoroughly watered. Placed on bottom heat in a warm house and covered with pans of glass or paper, the pans will be covered with the young growth in a few weeks, when this direct covering must be removed. In an even temperature of about 65 degrees, and when under the watchful eye of a careful grower, there will be little danger of losing any. A uniform degree of health-promoting moisture can easily be held in well-drained pans, and this is the point on which the welfare of the seedlings mainly depends. It is best not to disturb the roots of small gloxinias any more than is just necessary, and for this reason they are not pricked off into other pans or trays unless a damping off sets in, or they are sown too thickly. If they can be left in their first seed pans until large enough for being potted up into 2 or 2 1/2-inch pots, they will be far better plants than if they should be placed over bottom heat, and when established and beginning to make decided headway the period of anxiety and possible danger has passed. From now on gloxinias are easy enough to manage. In a warm house and moist atmosphere, tempered by judicious ventilation, the plants will reach their last shift in excellent condition.

Primula Obconica.

Sowings of Primula obconica can now be made. Well-drained flats or seed pans and a porous, turfy soil should be used for the purpose. The soil must be evenly spread, the sides of the pan not to be forgotten in firming. The seeds are sown thinly, pressed into the soil, slightly covered and then thoroughly watered. Placed on a bench with bottom heat, and covered with boards on paper, the seeds will not be long in testifying to their vitality by showing growth above ground. It is then time to remove all top covering and to admit the full light and some air on favorable days, the allowance to be increased as the plants make headway and Spring draws nearer. Primulas, unlike gloxinias, are benefited by frequent transplanting from box to box, rapidly gaining in vigor and size by being so treated. They should not be put in pots until well advanced and ready for the 3-inch pots. A still surer way to plant sturdy seedlings that have already undergone a pricking off once or twice into the free soil of a mildly warmed hotbed at good distances and let them there grow into full size for the last shifts into pots.

Some Other Seeds Now to be Sown. Besides the seeds of bedding plants now to be sown and spoken of in a former paragraph, there are a few good things, easily raised from seeds, which also should now be started. Of these I will name Grevillea robusta, Musa Ensete, Draebina indivisa and Aralia Sieboldii. All these are most useful wherever plants for the general market and for the filling of vases and boxes are raised. The seeds of Ten-week stocks, Empress candytuft and mignonette for early Spring cutting and Memorial Day trade should also now be sown.

Poinsettias.

Left over plants of poinsettia, now beginning to drop their leaves, must be allowed to gradually dry out in their pots and given a rest of two or three months. Any fairly warm place under some bench where water cannot reach them will do for them until the beginning of April, when they are potted up into fresh soil. Then stood on a warm and well-lighted bench, and slowly started into growth, an abundance of tolerably firm, new wood will be had for propagating in May, which usually results in finer stock than that obtained by rooting pieces of the old canes. These plants, grown from cuttings of the newly made growth, attain a greater height, which is not a desirable trait, it is true, but they also produce the most magnificent bracts—a distinction worth striving for, when growing poinsettias for cuttings. Those propagated from well-ripened old wood are easier worked into well-branched, compact bushes.

Practical Books for the Trade Published and Controlled exclusively by A. T. DeLaMare Ptg. and Pub. Co., Ltd., Publishers The Florists' Exchange

WATER GARDENING \$2.50 By Peter Bisset. A grand book in every particular, profusely illustrated. Ready February, 1907.

PRACTICAL VIOLET CULTURE 1.50 By Prof. B. T. Galloway. Second edition, revised. Fully illustrated.

THE AMERICAN CABNATION... 3.50 By C. W. Ward. The only practical book on the subject, and most valuable for the professional as well as for the learner. Profusely illustrated.

PRACTICAL PLANT CULTURE... 1.00 By G. W. Oliver. The very best book on the subject, well written, covering all plants cultivated by commercial men for profit, with cultural methods and propagating directions, complete.

SUCCESS WITH HOUSE PLANTS Cloth \$1.00 Paper .50 By Lizzie Page Hillhouse. The best book on the market for florists to sell, or to give to their customers. Many thousands sold.

ARNOLD'S TELEGRAPH CODE... 2.50 By E. A. Arnold. The most valuable and complete code on the market; thoroughly intelligible; covers every need of the florist, seedsman, and nurseryman. Every one of these eminently practical books, written specially for the trade, should be in your library. We will deliver the six books above listed, carriage paid, on receipt of \$10.50.

Euphorbia Fulgens.

A very near relative to poinsettia but greatly differing from it in character is *Euphorbia fulgens*, or *E. jacquiniiflora*, under which name it is also known. Although as easily propagated and in about the same manner as the poinsettia it is somewhat harder to grow into well-branched, shapely bushes, such as in fullest measure justify the pride of the good grower. When well grown and in full bloom it is one of the gems of the hothouse. It also does admirably well in dwelling rooms, lasting in flower for months, and for this reason, I think, it should be more extensively grown by commercial florists than is the case at present. It is altogether an easily managed subject, only baffling the grower's efforts in this one respect, that it refuses of its own accord to break into enough side growth consistent with the making of a compactly shaped plant—an attribute desirable in nearly all potted plants, but especially so in its case. To some extent, and often to the grower's entire satisfaction, this difficulty is overcome by bending down the shoots, which is not so dealt with, will not respond to pinching in or cutting back, and only push forth another single shoot.

Young, well-ripened wood is the best for propagation, and the cuttings, after having bled and dried off, root quickly. Bottom heat and a pretty warm corner in the propagating bed, with moderate moisture at first, tends to accelerate root formation. After being potted up and all through their subsequent stages of growth they require lots of moisture, heat and light, with a short intermission in the fall, when the plants should have a rest to bring about thorough ripening of wood, on which profusion of bloom depends. In repotting older plants a very turfy, roughly broken up soil is used.

Lapagerias.

After being once firmly established in a well-prepared greenhouse border few indoor climbers excel *Lapageria rosea* in point of attractiveness. Grown in pots or tubs they may be had in full bloom in any living room under the care of the most unpracticed hands. The conditions of the greenhouse or cool conservatory, however, are most likely to set forth the plant's exquisite qualities. This is probably the best time for an endeavoring the best method of propagation of lapagerias. Slant side shoots, bent down and kept moist at the joints, immersed in soil, usually furnish all the plants needed. It will prove a good plan, if many are wanted, to select one or more of the strongest potted plants and set these in the center of a nicely prepared bit of solid border. All the shoots may then be utilized in the making of young stock by layering, the canes to be held down by pegs all around the plant. Only the strongest of the new plants will prove entirely satisfactory. Those of feeble growth and sparingly rooted will never

amount to anything worth carrying along. The same remarks apply to plants of *lapageria* raised from cuttings or seeds. Well-decayed turfy sod, dug at the edges of ponds, intermixed with sandy, friable loam and rotted manure is good soil mixture for these beautiful climbing plants. Well-established specimens need feeding when nearing their flowering season.

Bougainvilleas.

Easter comes early and bougainvilleas wanted for that holiday must now be aroused from their state of semi-dormancy. If the wood is well ripened there will be little difficulty in having them covered with exquisite bloom by Easter. Very strong forcing in a heat higher than 65 degrees often causes buds to remain blind or to open imperfectly. A slow start in a temperature of 50 degrees with a gradual rise up to 60 degrees, as the new growth advances, will likely be the extent to which forcing need be carried to bring out the plants in good time. When making growth they require much water and daily sprinkling—essential points in their treatment. Potted bougainvilleas given pleasing shapeliness by wiring, staking and tying and successfully brought into flower, are most attractive subjects, lasting in bloom a long time. Permanently planted out in a warm border of an intermediate house, they furnish an abundance of valuable, long-lasting cut material. Cuttings from the new growth root easily from on.

New York.

News of the Week.

Quite a number from this city left on Tuesday evening over the New York Central Railroad for Toronto, Ont., to attend the annual meeting of the American Carnation Society. J. R. Fotheringham and J. I. Donlan, who will represent F. R. Pierson Company at the meeting, left on Monday evening in order to be there in good season to see to the proper displaying and to the artistic arrangement of the carnation Winsor. Mr. Pierson is to make an elaborate exhibit of this new carnation and is sparing no pains to that end.

The trustees of the New York Florists' Club held an important business meeting on Monday evening. The dinner committee of the club has made arrangements to have the annual dinner at the St. Denis hotel on Saturday evening, February 23. The award committee paid an official visit to the establishment of Dailladonze Brothers, Flatbush, Brooklyn, on Thursday, January 17. President Charles H. Totty is suffering from an attack of the grip. Secretary John Young was slightly indisposed with a hard cold the latter part of last week, but is again fully recuperated.

Many beautiful floral tributes were sent by the trade both wholesale and retail, to the funeral of the late James Mallon, the veteran Brooklyn florist, which was held on Tuesday morning last.

At the recent meeting of the Economic Entomologists of the United States, held in Columbia University, a resolution was adopted recommending uniform inspection laws as applied to nursery stock.

R. McNeff, one of the traveling men for the seed house of Wm. Elliott & Sons, 201 Fulton street, this city, met with a rather severe accident while driving in New Canaan, Conn., recently. The horse ran away and McNeff was thrown out of the vehicle and was bruised considerably; no bones were broken fortunately, and he is now almost recovered and ready for the road again.

It is believed by some of the bowling enthusiasts that the only way to have a successful and well-attended bowling club in this city is to hold the meetings in the afternoon. Members of the craft here reside out-of-town mostly, and when bowling meetings are held it means great inconvenience and not reaching home before the early morning hours, which makes life too strenuous altogether for many. If some one will start an afternoon bowling club, we think it would meet with the approval of a great many and would be a success from the start.

The Holland bulb drummers have begun to arrive, one vessel that reached this port a few days ago having twelve of these energetic salesmen on her passenger list. It would seem that these harbingers of Spring have now got the robin and swallow beaten to a standstill.

The New Jersey Floricultural Society holds its annual smoker at 240 Main street, Orange, on Friday evening, February 1, at eight o'clock.

Philadelphia.

The Week's News.

The topic one hears on every hand this week is the scarcity of cut flowers. The grower is downcast, as the elements are against him, and while prices are good he cannot produce. The retailer cannot get just what stock his customers order; and the commission man who, from the standpoint of the other two, always has the best of the deal, is in hot water with everyone. And with all this the cloudy weather continues. To illustrate the scarcity, the writer saw a shipment of roses unpacked Tuesday. Usually there are upwards of 200 Bridesmaid daily from this grow-

er; to-day there were 39. One box held his entire shipment; usually there are five and six boxes.

Victor Groshens has finally decided to locate at Hillside, Montgomery County, and has bought 20 acres of ground adjoining Edw. Towill and Adolf Farenwald. He has placed an order with Lord & Burnham Company, through D. T. Connor, their representative here, for material for two houses each 29 x 500 feet; these are to be trussed houses, open underneath and to include all latest material, such as iron gutters, etc.

The following left here Tuesday evening for Toronto to attend the Carnation Society's convention: Edward A. Stroud, S. S. Pennock, Wm. P. Craig and Thomas Beattie.

There is considerable going on in the decorating line this week. The Wm. Graham Company had the Kettle Club banquet at the Union League. This is a very elaborate affair this year. It is to be an Italian garden effect. The same firm has a large affair at the Mercantile Club. The Habermehls have the Charity Ball at the Academy of Music, a masquerade ball at the Second Regiment Armory

GROWERS OF CHOICE CUT FLOWERS

Roses, Carnations, Orchids, Etc.

We are fully prepared to fill orders for shipping by Steamers and Express all through the Southern States.

Mention the Florists' Exchange when writing.

Miss Murray had a large trade in American Beauty roses and Gloire de Lorraine begonias. Joseph Bennett grew and sold at wholesale and retail the finest poinsettias I ever saw. The plants were very low, six to eight to the pan, and the color and finish were splendid. Harris & Hopton sold everything they had; not a single plant in bloom was to be seen on the 26th, and they carried a very large stock. No florist had a better display than the McKennas. Their store was decorated with red-shaded lights and their window decorations were superb. E. Graves reports an excellent demand for all lines. Hall & Robinson handled some excellent

TORONTO.—Business since the new year has been rather quiet, with stock by no means plentiful. The weather has been fairly mild, but generally dull, and flowering stock has suffered considerably, but the chances are that we will have some bright weather soon.

I wrote a few days ago that Jay & Son had sold their retail stand to Thomas Plumb, of this city. The deal, however, fell through, and last week Messrs. Jay sold to H. G. Dillemoth, who has for some years been manager of J. H. Dunlop's retail department. Mr. Dillemoth is one of the best store managers in Canada, is very popular in the trade, and there is no doubt of his success in his venture. He has the best wishes of all the growers that he has had dealings with. T. M.

Indianapolis.

News Notes.

The new carnation mender should find a ready sale these days! The argument is heard that carnations should be grown in a manner so that they will not burst. The grower in this section who has succeeded in doing so with the prevailing weather conditions is not on hand.

McKinley's birthday, January 29, is no longer a factor in this market. 'Tis to be regretted, but nevertheless true, that the American public readily forgets in the face of so many current events.

Geranium cuttings have been much in demand this year. Many of the leading varieties are not obtainable in this State, as an unusual number found an early sale.

Messrs. E. G. Hill and John Bertermann visited F. Dorner & Sons last week. Two houses of seedling carnations proved most interesting to them, as the veteran carnation grower always has a choice lot to review with his friends.

Baur & Smith are preparing to erect an additional large house the coming season, which is to be planted with roses.

Visitors: S. Meyers, New York; G. Reising, Chicago; C. Brough, Dayton and M. Lucas, Bloomington, Ind. I. B.

PARIS, TEX.—Hammond's gin, southwest of town, has been burned down. Seed house and contents also burned. Loss on plant, which belonged to D. S. Hammond and J. C. Smith, \$3,500; \$2,600 insurance. Caused by sparks from furnace.

New Rose Rhea Reid.

Rhea Reid is the progeny of a line of red seedlings, the immediate pollen parent being American Beauty. The bloom is of the very largest size and absolutely full; the bud is long and splendidly formed from its earliest stages throughout its development, and the open flower is as big and fine as that of an h. p. The texture is excellent; the color is a clear red, lightening in warm weather to a deep cerise and in Midwinter approaching the Richmond color. The variety is a strong, heavy grower, producing fine canes profusely, every one carrying a fine flower which opens freely. It is a wonderful producer even in dark weather.

The rose requires a rich, heavy soil and generous treatment, as one would infer upon the most casual examination of its growth and habit. To add to its other good qualities it is deliciously fragrant. It will be disseminated in 1908.

E. G. HILL COMPANY.
Richmond, Ind.

New Rose Rhea Reid

Originators, E. G. Hill Company

and the Midwinter ball at Horticultural Hall.

The following visitors were in town from Baltimore on Tuesday: I. Moss and G. Richmond. DAVID RUST.

MONTREAL.—Christmas trade totaled a large increase over last year's. All good flowering plants were sold. Cut flowers went well, but a lot of carnations and violets were left unsold; thousands of both the latter were shipped in at the last moment. The price of violets, \$30 per thousand and wholesale, is far too high for this market. In plants the poinsettia seemed to be the favorite, yet azaleas were in great demand. Cyclamen, ardisias, tulips in pans and baskets, daffodils trimmed with boxwood, and all kinds of ferns and palms sold well. Funeral work was very plentiful all through the holidays.

Richmond roses from the Bedford Park Floral Company; these were of the finest quality seen here. The specials were very large, on 30-inch stems. Their cyclamen were finer than ever before. Although I have no personal reports from the many other florists I can safely say that all did an excellent trade. The Dale Estate of Brampton, Ont., shipped a larger number of boxes of flowers than ever before, and every box was a credit to the firm. Their American Beauty roses were grand, and their orders were filled in a most satisfactory manner.

The club's prize essays for the past year were: Thos. Pewtress, "Orchids for Beginners," first prize; Geo. A. Robinson, "Ferns from Spores," second prize, and G. Vreagde, "Thorns and Thistles," third prize.

Buffalo.

News Notes.

Charles Schnell, formerly of the Wm. Heegerer Company flower department, has started a store of his own on Broadway. John Barth, recently with Werrick Brothers, has taken the place vacated by Mr. Schnell.

The Buffalo Florists' Club met last week at Kasting's and formulated arrangements for a carnation show, also a dinner, in February. Messrs. Wm. Scott, W. A. Adams and Wm. Kasting being on the committee, ought to assure the members a good entertainment.

No doubt several of the local florists will attend the Carnation Society's meeting and show at Toronto.

W. H. G.

BANGOR, ME.—Carl Beers is back in the harness again after being out of the greenhouse business for three years and is once more owner and manager of the big plant on Mount Hope avenue which he built some time ago. He retired from the business three years ago but has been obliged to take possession of the plant which is in excellent condition and well stocked.

Mr. Beers has spent a year in Europe where he visited some of the most famous gardens and floral establishments of the world. He brought home many new ideas, choice bulbs and seeds and also some new wrinkles in decorating. He will as fast as possible open branch agencies.

COLORADO SPRINGS, COLO.—Holiday trade was at least 50 per cent. better than last year's. Plants were the leading feature. Made up ferns in birch bark sold well. In cut flowers violets led. American Beauty roses were a little too high-priced to move well; teas were in good demand at fair prices. Foinsetias, cut, did not hold up well and very few were sold. The cut flower trade was about the same as last year.

to the second floor of Atlas Block. The steady increase of this firm's business has necessitated this change. Pochmann Brothers who have been badly crowded for space, will take up the room vacated by Bentley-Coatsworth which will give them the largest space devoted to cut flowers exclusively in the Chicago market.

Zech & Mann are in line with good Bride and Bridesmaid which sell at a premium these days.

A. L. Randall Company is busy making preparation for Easter supplies and already shows some very fine novelties in this line.

E. H. Hunt reports very good orders for Easter supplies.

Bassett & Washburn are showing some very fine American Beauty roses; as generally, their other stock is up to the mark.

J. A. Budlong reports a good crop of Bride and Bridesmaid.

Chas. McKellar quotes some very fine gardenias, also a quantity of Phalaenopsis amabilis.

Stollery Brothers of Evanston are bringing in some Ajax Princeps narcissus grown from Virginian bulbs, which is a novelty at this time of the year.

On Saturday night the temperature dropped forty-five degrees in a few hours, which made the growers huddle that were not prepared for such a change.

August Jurgens reports the bursting of his boiler on Sunday; he is thankful there were no serious results.

Secretary Hanswirth has returned from Boston, where he had been for a week taking over the business and papers of the S. A. F.

Among those who went to Toronto from Chicago were Mr. and Mrs. P. J. Hanswirth, George Asmus, August Pochmann, P. J. Feley, Mr. and Mrs. Leonard Kill, and Chas. Balluf.

A. Marshall, formerly with Reed & Keller of New York has opened a retail store at 6254 Ashland avenue.

Visitors: Mr. and Mrs. Elberfield, Kansas City, Mo.; L. H. Stafford, Marquette, Mich.; Henry Kusik, Minneapolis, Minn. WM. K. WOOD.

Boston.

News Notes.
 Adin A. Hixon, secretary of the Worcester Horticultural Society, delivered the second lecture of the Winter course of the Massachusetts Horticultural Society on Saturday. His subject was "Peach Growing in New England." There was considerable discussion by prominent fruit growers who attended the lecture.

Death has called away two prominent lovers of horticulture during the past week—Mrs. R. C. Heeper, a daughter of the late F. L. Ames, and owner of a fine estate at Manchester, and Geo. F. Fabyan, from whose Brookline estate many of the fine plants, like cyclamen, cinerarias, calceolarias, etc., have been exhibited at Horticultural Hall.

At the February meeting of the Gardeners and Florists' Club C. W. Ross, street and park superintendent of Newton, will give a talk on "Road-building." Mr. Ross is an expert in this line and his lecture will be of much value to the members.

The Hatch experiment station has issued a bulletin on a new moth of Japanese origin which has been doing injury to shade trees in the Dorchester district. This insect was first discovered on the home grounds of P. Welch, the wholesale florist, who called the writer's attention to it destroying maple trees. It is doubtful if it will multiply sufficiently to become a dangerous pest.

Peter Fisher has a grand showing of his new carnation Beacon at the present time and will send some magnificent blooms to the Toronto meeting. As a producer this variety is superior to any of its color we have ever seen, and is a variety that should be grown by both commercial and private growers.

Considerable anxiety has been felt by the many friends of Robert Cameron, who was in Jamaica only a few days before the earthquake. No anxiety is felt at Mr. Cameron's home, however, as the last accounts from him said he would leave Kingston on January 11 for Cuba.

P. R. Quinlan of Syracuse, N. Y., was among our visitors this week.

News Notes.
 Vaughan & Sperry report that in addition to the large quantity of New York violets they are receiving a liberal supply of choice single violets especially the Princess of Wales. Percy Jones still has a good supply of hexwood that he says does not need assorting.

The Flower Growers' Market through its manager, reports that it is a very busy place these days, local buyers being able to get their wants from the different space holders there.

E. F. Winterston Company is receiving some especially fine Enchantress carnations.

J. B. Deamud Company is having a big run on ferns.

Bentley-Coatsworth Company has made arrangements for larger quarters and will move in the near future

Cincinnati, O.

The Week's News.

Devastation is the only word that describes what this and all other cities are passing through along the Ohio River at this time. The water at this writing is sixty-two feet high and will go to sixty-five feet upon the rise. All truck gardens in the Mill Creek Valley are covered and everything is destroyed. The places of Fred. Walz and Ben. Glins are nearly all under water and the stock ruined. All trains entering the city stop at Eighth street and will probably be driven to the outskirts of the city before Monday morning. Millions of dollars worth of property are laid waste, and business in the bottoms is paralyzed. J. Chas. McCullough's warehouse, as well as the store, is surrounded by water, with three feet of it on the first floors. His office now is at Third and Walnut streets, J. M. McCullough Sons Company's warehouse is also in the same condition. Relief committees are busy moving the destitute to places of safety and supplying food and shelter. Saturday last was the first day of sunshine we have had in weeks, and a faint ray of hope is now furnished. Fortunately, the weather is very mild; the thermometer stands at 70 degrees, whereas, if it were cold, untold suffering would exist.

Business with the retail stores is fair, taking all things into consideration, and all good stock is well cleaned up at the wholesale houses daily. More good roses could be used. Prices are holding fair. Carnations are more plentiful and narcissus and other bulbous stock plentiful.

J. A. Peterson, W. K. Partridge, R. Witterstaetter, Wm. Murphy and E. G. Gillett will comprise the party to Toronto.

Our visitors to see the flood Saturday were Joe Hill and wife and Master John Simon, son of Fred Simon. Master John was very much interested in the boats. E. G. GILLETT.

St. Louis.

News of the Week.

Visitors the past week were A. Schloss of Schloss Brothers, New York, with full line of ribbon samples; F. J. Farney, who represents A. L. Randall Company, Chicago, with a nice line of florists' supplies.

Mary Ostertag has opened her new store at the corner of Olive street and Vandeventer avenue, having moved from her old location at Grand and Olive streets where a new building will replace the old one.

The St. Louis Palm Company, for some time located at 1010 Olive street, is now out of the florist business.

Frank M. Ellis, formerly one of our wholesale florists, left last week Thursday for Panama to make his home there; his family will follow in about a month.

The Bentzen Floral Company has purchased a lot on Grand avenue and Herbert street and will build a store for its retail business, which has grown too large for the old location near Broadway.

John Cannon of The Cannon Floral Company at Webster Grove reports that he will erect a large building at the corner of his place for the government, to be used as a post office.

Among the florists who have entered the city bowling championship this week are C. A. Kuehn, J. J. Bencke, A. Y. Ellison and Louis Schwartzkopf.

Phil. Breitmeyer and M. D. Hulbert of Detroit, Mich., park commissioner and secretary to the commissioner respectively, spent Monday in St. Louis making the rounds of the parks with Commissioner Robert, Secretary Duffy and Superintendent Ostertag in an automobile, leaving for home on the 8:30 Wabash train. Mr. Breitmeyer and Mr. Hulbert visited the principal cities of the South on an inspection tour in the interest of the Detroit parks. As a memento, each of the gentlemen was presented with a Teddy bear by our Park Department.

The St. Louis Horticultural Society was to have held its first annual meeting on Tuesday night of last week at the Hamilton Hotel. Only ten responded to the call and it takes thirty to make a quorum, so those present held an executive session and decided to hold a Spring

flower show in March, the date and place to be made known at the next monthly meeting in February.

President Irish of the Florists' Club held an officers' meeting at the Hotel Rozier on Thursday night of last week. At this meeting it was decided to continue the securing of subscriptions for the flower show and raise, if possible, the \$10,000 fund by the February meeting, at which the time set will expire, unless the committee should ask for more time.

The list of prizes for the carnation exhibition for our next meeting was also completed as follows: Best twenty-five red, first \$5; second, \$3, third, 2; twenty-five light pink, \$5, \$3; twenty-five rose pink, \$5, \$3; twenty-five dark pink, \$5, \$3; twenty-five white, \$5, \$3; twenty-five variegated, \$5, \$3.

This will make up the \$50 allowed to the trustees for prizes. The premiums can only be competed for by local growers and club members. Growers of new carnations will be asked to show new varieties for the benefit of our local tradesmen.
ST. PATRICK.

San Francisco.

News Items.

Thomas Stevenson, who before the disaster conducted the flower store in the Palace Hotel as "The London Florist," has the right of way to resume his former business on the site of the old stand, when the Greater Palace Hotel is rebuilt and opened for guests, said to be April 18, 1909.

The inclement weather continues; stores have been devoid of shoppers, and florists have had to talk with their few customers by telephone.

All the growers in the county feel exceedingly sorry for Sidney Clack, of Menlo Park, who has had more than his share of hard luck the last year. First the earthquake, then a fire did a lot of damage to his place, and the week before last the unprecedented wind storm broke 250 to 300 boxes of glass besides doing other damage. Mr. Clack felt very much like giving it up, but innate love of floriculture swayed him to forget it, and now repairing is being pushed along vigorously at his place.

The Floral Flower Works Company of Eureka, Cal., has come to Oakland with a branch store and found a convenient show and salesroom in connection with the Piedmont Floral and Seed Company on San Pablo avenue.

The California Nursery Company of Niles, Cal., has gone South with a great sample stock and opened a sales-yard for the season in Los Angeles.

The largest cut of lily of the valley in the city for the record business incidental to the Christmas-New Year trade came from the San Mateo county growers, Schwerin Brothers, who had splendid success this year with their unusually large crop.

The Rising and Dunscomb Company, which recently succeeded the Ocean Park Floral Company, founded by E. J. Vawter, also succeeded to the names, good will and business of the Hollywood Rose Company and the West Park Nursery. At Ocean Park the concern has eighteen acres planted with carnations for blooming in the field. So great has the demand become that an additional ten acres is now being planted. There are also two acres of violets, narcissi, etc., in proportion. Asparagus is grown in large quantities, 20,000 strings being produced annually. There are three acres of roses for cut flowers and the local trade takes 20,000 rose plants a year. A retail store is conducted at Ocean Park and a wholesale head-

quarters has recently been opened at 205 North Broadway, in Los Angeles. J. L. Dunscomb, secretary of the company, is a former Chicago railroad man, full of push, and greatly pleased with Southern California as compared with the climate in the immediate vicinity of Dearborn station, where he spent many years.

ALVIN.

St. Paul.

Trade Notes.
Adolph Bagdahl, formerly connected with the Fleishman Floral Company, New York, is now doing the design work for L. L. May & Co.

Holm & Olson are gradually getting their new store fixed up, and when all of the fixtures which they have ordered and received are in place, the firm will have one of the handsomest stores in the country.

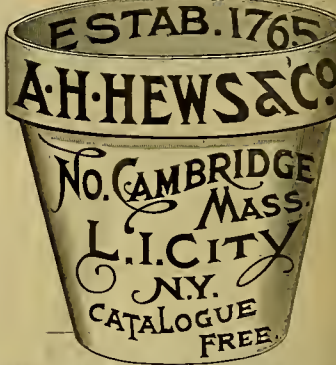

Wm. Hagemann, New York, was with us a few days the past week. He reports a very satisfactory trip so far, orders being away ahead of last year's.

The Remaley Floral Company is trying to dispose of its store, with the object in view of establishing a commission house. Mr. Ramaley's reason for selling is that he is tired of the retail business and long hours.

PAUL.

DAVENPORT, R. I.—The Tri-City Florists' Association held a meeting last week at Rock Island. The subject of discussion was "What Are the Best Plants to Raise for the Easter Trade?" After the meeting refreshments were served. The members will next be entertained by William Knees of Moline and the topic for the evening will be "Hotbeds, Their Making and the Best Flowering Plants to Grow in Them for Commercial Use."

FULTON, ILL.—Fred. A. Hills of the firm of Hills Brothers, proprietors of the big greenhouse industry near the Junction, recently sold his residence property in Morrison to C. R. Burroughs for \$2,000.

Newport, R. I.

Trade Notes.
This is the time of the year when a descent is made on Newport by the fascinating gentlemen representing the large retail seed houses throughout the country; and it seems that this year the number has rather increased than diminished. I say that these gentlemen of the road are fascinating and I say it in all earnestness; and were it not so I doubt very much if all of them would return to headquarters with orders sufficient to warrant their employers sending them again on a like errand. In case that in years gone by, in the ranks of the men of the road who came here to offer the gardeners the compliments of the season and incidentally take any orders given them, there were some unfortunates who went back with sad countenances, there may be a moral in the emphasis I put on the word "fascinating." Cudgeling no longer goes with the boys around here, if ever it did. Among the gentlemen who visited here recently was one from Boston, who possesses among other qualifications for his position the talent of story-telling in an unusual degree. He begins the practice of his art whenever he enters the potting shed or wherever else he finds his victim, and relaxes not for a moment until his departure, except to jot down the orders for packets as they are meekly uttered by the unsuspecting listener. Other men might think that dry reminders of the pressing needs of victims might be of more absorbing interest than the entrancing allurements of story-telling; but this man knows his business.

Among those visiting Newport last week was John H. Cox, representing F. R. Pierson Company of Tarrytown, N. Y. While in Newport Mr. Cox in his sales made specialties of cannabis King Humbert and Tarrytown, in consequence of which, it is understood, he received many orders. Both these cannabis are comparatively new and of great merit for bedding purposes, and there is no doubt that after they are seen here the coming season there will be a great demand for them for the following one.

Providence, R. I.

News Items.
Edward O'Brien, T. J. Johnston's reliable driver, has returned to duty after a week's illness.

John Goodwin, gardener at North Burial Cemetery, who has been ill the past 10 days with the grip, has returned to duty.

One of the most unique designs at the funeral of R. Downey was made by James B. Canning. It was a standing wreath 4 feet high and well proportioned otherwise, all made of bronze galax. One half of the wreath was brought out with Princess of Wales violets, the other half with Bride roses—the base was finished with HARRISII lilies.

J. L. Reynolds with John J. Johnston has recovered from another attack of the grip.

The many friends of Charles Johnston will be pleased to hear he is improving from his recent attack of grip and rheumatism. He expects to come home in a few days.

Rochester, N. Y.

News Items.

After the very severe wind storm, which arrived from the west on Sunday morning, the city is again normal. A number of minor accidents happened; numerous ventilators of greenhouses were blown completely away, while all kinds of houses were given a severe test. Not much snow fell, but the continued dropping of the mercury was a source of discomfort to those having care of fires. However, we hope for a continued cold snap, if only to stop the ravages of the gripe.

The sympathy of the trade is extended to the relatives of Hearson Salmon, who passed away last week.

The Municipal Civil Service Commission met one day last week to establish a list of "feats" for applicants for positions of park foreman, foreman of city greenhouses and foreman of tree trimming. For the last named position practical tests were decided upon, to be demonstrated in the city parks under the supervision of Superintendent Dunbar.

Referring to business here, it has not been very brisk, which, of course, we all expect has been on account of the weather. Azaleas, which for the past two years have sold real well at this time of year, seem to be a somewhat poor investment at this time, although from past records the sales of this plant have increased steadily. Good material finds a ready sale at fair prices, the same values being asked for roses and carnations as last quoted. Violets, lily of the valley and bulbous stock move rather slowly, but on account of there being no great quantity shipped in, they generally are cleared up.

COCKNEY.

DAYTON, O.—The Miami Floral Company, of this city, has increased its capital stock from \$30,000 to \$50,000. Charles E. Pease is president of the company, William Kiefaber, Sr., is vice-president, and William Kiefaber, Jr., is secretary.

FRAMINGHAM, MASS.—S. J. Goddard has received from a firm in Europe an order for 10,000 Helen Goddard carnation plants.

FROST-PROOF ECONOMY

Ideal Hollow Concrete Block construction will protect your greenhouse from frost and secure greatest economy in fuel.

The illustration of hollow block explains its resistance to frost. With the Ideal Concrete Machine you can yourself make these blocks from sand, gravel and cement at little cost—far below the cost of brick, stone or lumber. Ideal Blocks not only give frost protection, but are absolutely fire-proof, and effect a perpetual saving in insurance.

IDEAL Concrete Machines

May be operated by any man without previous experience. The process of making blocks is simple as making mortar. Blocks for every building purpose, with plain, tooled, ornamental face or natural stone effect made with the same machine. Simple, durable and adaptable to any size block within capacity. Our catalogue will show you how to secure frost protection and fuel economy, as well as initial saving over cost of other materials. Write for it and it is freely yours.

WHEN IT COMES TO VENTILATING

your greenhouses, you want an apparatus that first of all is simple in mechanism and takes up least possible room—then it must have both ease of operation and speed of action. When a storm's coming, instant action is often required. —To "grind and grind" at such a time is often disastrous to your plants. Our apparatus is wonderfully light running and rapid. It's the best thing on the market for greenhouses.

The A. T. STEARNS LUMBER CO.
Boston, Mass.

To increase size of boiler, simply remove front section, attach extra base sections, put each section on base and tighten up. No entire new base to buy—no shipping back of old base, no taking of boiler down, no disconnecting of pipes.

We Have Something Particular To Say To You About Our Boiler

WE thought it particular enough to ask The Florists' Exchange to let us have a page talk with you. Well, last Friday afternoon I was being shown around one of the large Jersey ranges by the boss himself. When we came to the boiler cellar there was a great commotion going on—one of the sectional boilers was braced at the end with 3x4 scantlings, and one man was hitting the scantling with a wooden mallet to wedge it tighter, while three men were tightening the long tie rods that ran the entire length of the boiler. Here was a case of replacing a broken center section in one of those long tie

rod boilers, and it's exactly what you would have to do if you set up a new one. Every time a section is put on the base and pushed in place, the scantling has to be sawed off the thickness of the section and re-wedged again. When all the sections are finally on the base, the nipples in place and scantlings wedged down for the last time, then the bolts are tightened. The front and back sections are then pulling together and crowding the others tight—any uneven screwing up of the bolts, and it's ten chances to one you will crack a section. Now after it's all up and fire in, perhaps you find one section connection leaks, so the only thing to do is, tighten up the whole boiler again when you only wanted to tighten that *one particular section*.

There is always the danger of cracking a section or stripping the threads on the long bolts. Now listen! With a "Burnham" there are just as many bolts as there are sections—each section is tightened as it is set up by its short tie bolts—there is no bracing of scantlings—no sawing off—no blocking with washers—no danger of breaking a section, and you can *tighten the exact section you want to* without having to tighten the whole boiler. When you want to add another section or so, we furnish the tie bolts—with the other boilers you must buy new long bolts.

You see what a bungling, time taking, risky proposition those other boilers are. As for the economy, quick-to-respond, absolute reliability of the "Burnham," we have been telling you about that for years, but what we would really like to do is, show you some of the letters of recommendation we have from the biggest men all over the country—or better yet, take you to a nearby range and see the boilers at work and get the opinion *first hand* from the owner.

Put these boiler cold facts under your hat, and next spring when you want a greenhouse boiler made for greenhouse work—buy a "Burnham." We will stand by the "Burnham" and guarantee that the "Burnham" will stand by you. Send for catalog now.

This shows exactly how we use the short tie bolts—you tighten the exact joint you want tight. In ease of set up, adding sections, or making repairs, they are great time savers.

THE FLORISTS' EXCHANGE

We are a straight Hand Expd. grow into a vigorous plant
 A WEEKLY MEDIUM OF INTERCHANGE FOR MEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 5 NEW YORK AND CHICAGO, FEBRUARY 2, 1907 One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention. Won first prize for best 100 pink

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time doing so.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

Strong Rooted Cuttings. February delivery, \$12.00 per 100, \$100.00 per 1000.

F. R. PIERSON CO., TARRYTOWN-ON-HUDSON, NEW YORK.

Mention the Florists' Exchange when writing.

ing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

Strong Rooted Cuttings. February delivery, \$12.00 per 100, \$100.00 per 1000.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION
Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

PHILADELPHIA, PA.—W. Atlee Burpee & Company are distributing the "Fordhook Set of 12 Picture Post-Cards," showing interesting views of this great seed-testing farm.

NEW YORK.—Chas. McTaggart, for many years with the firm of Weeber & Don, seedsmen, is now travelling in the interests of J. M. Thorburn & Company, seedsmen.
David Adams of J. M. Thorburn & Company, will make a trip among the Rhode Island gardeners next week.

WACO, TEX.—A movement is on foot to form a Texas Seed Growers' Association. In the call for a meeting on January 31 it is stated.

"Texas needs a hundred well trained and practical men to breed up and keep breeding up the seeds for Texas crops—corn, cotton, oats, wheat, rice and a long list of vegetable seeds. Those of us who are already in the business know something of the time, care and thought required to produce and keep pure any class of seed. But if it cost a thousand times as much it would still be commendable and profitable work. Therefore, let us meet and form an association for our mutual improvement. Let us meet and discuss the problems of improving the yielding power of our plants. We already have the American Breeders' Association, but few of us can afford to travel half way across the country to hear the lectures upon the latest discoveries in breeding science. We want a State association. It seems desirable, also that some method of seed registration should be devised which would be a protection of the originators of valuable varieties and to planters at large."

EXPORTS OF SEEDS, ETC.—January 23.—To Cape Town, 11 packages seed, valued at \$518; to Glasgow, 200 bags seed, valued at \$200; to Leith, 50 bags clover seed, valued at \$66, 100 bags seed, valued at \$390; to London, 100 bags grass seed, valued at \$746, 9 bags seed, valued at \$157.

January 18, 1907—Shipped from New York to Liverpool, per Etruria, nine packages of seeds, value, \$140.

IMPORTS OF SEEDS Etc.—January 18, 1907—J. H. Ferdinand, one bag of seed; Peter Henderson & Co., one case of seeds; W. Larzelere & Co., four packages of seeds; J. M. Thorburn & Co., six bags of seeds; January 19 and 20—R. J. Godwin's Sons, 32 packages of seeds; Kennedy & Moon, three boxes seeds; Vaughan's Seed Store, 35 packages seeds; Weeber & Don, two cases garden seed; W. Elliott & Sons, two packages seeds; F. R. Pierson Company, one case of seeds. January 21, 1907—McHutchison & Co., 13 packages plants, E. R. Durkee & Company, 300 sacks of seeds.

DREER'S Reliable FLOWER SEEDS.

January 26 and 27, 1907.—C. C. Abel & Company, 44 cases live plants; Atlantic Transport Company, 150 casks mustard seed, 150 bags clover seed; J. B. Gruman, 100 casks seed; Lazerclere & Company, 2 casks seed, 2 cases seed; J. Munroe & Company, 100 bags sugar beet seed; Vaughan's Seed Store, 20 packages seed, etc.

January 28.—Peter Henderson & Company, 1 case seeds; A. Olsen, 638 bags clover seed; Towns & James, 10 bags seed; Vaughan's Seed Store, 1 case flower seeds; Brown Brothers & Company, 398 bags canary seed.

FLOWER SEEDS FOR WEST INDIAN GARDENS.—Consul W. W. Handley of Trinidad believes that it may be of interest to American exporters of flower seeds to have a list of the temperate flower seeds which have been tried in the West Indies, and applies to altitudes of 100 to 700 feet.

Plants which grow well with very little care: Abutilon, Asparagus plumosus, begonia (fibrous rooted), celosia, Ipomoea grandiflora, marvel of Peru Nicotiana affinis, cosmos, dolichos, gounflos, lantana, petunias, ricinus, sunflowers, tuberosa, zinnias, amaranthus, balsam, canna, coleus, datura, gaillardia, marigold, portulaca, solanum, torenia, Vinca rosea.

Plants which require more or less special care in soil, shading or manuring and often do not succeed so well as in temperate zones, but have all flowered fairly well:

Asters, begonia (tuberous rooted), chrysanthemum (show varieties), everlasting flower, violets (California), carnation, cyclamen, clematis, dahlia, dianthus, fuchsia, glorioxia, honeysuckle, lavender, mignonette, nasturtium, geranium, heliotrope, myosotis, Salvia splendens, Sweet William.

The following plants failed to flower, or flowered very poorly; all grew to some size from the seed or bulb: Bermuda lily, Pelargonium (Lady Washington geranium), primulas (Chinese), calceolaria, cineraria, gladiolus, narcissus, pentstemon, pansies, sweet peas, tulips, wallflower.

THE HOUSE OF REPRESENTATIVES DISCUSSES SEED ADULTERATION.—The question of adulteration of seeds was before the House of Representatives on Saturday, January 26, having been introduced in the discussion on the Agricultural Appropriation Bill by Representative Mann of Illinois. In the course of his remarks the honorable gentleman said:

"Under the item which has been carried for several years in the Agricultural appropriation law the Department of Agriculture has been collecting samples of seed, and making analyses. These samples of seed are obtained by mail, by purchase. As a rule the seed houses which send out a quantity of seed by mail are more particular than when sold in other ways. I have obtained, myself, from the Department of Agriculture, from seed which they have collected in this way, and from seed which they have collected at my request, forage seed, during a recent period, not running very far back, over 100 samples bought in the open market, which were adulterated. Some of these adulterations run as high as 90 per cent. adulterant. Of the seed which has been examined by the Department there were 352 samples of alfalfa seed. One hundred and sixty of these, or nearly one-half, were found to contain dodder seed. Of 522 samples of red clover seed, 116 contained dodder seed. Of 61 samples of low-grade red clover seed, imported during the fiscal year 1905-6, 75 per cent. contained dodder seed. And these samples contained also nearly 30 other kinds of weed seed.

"Of seventeen samples, representing an aggregate of 282,000 pounds imported during the fiscal year 1906, less than 50 per cent. was pure alfalfa seed that germinated. Two lots, representing 33,000 pounds each, germinated 8 and 9 per cent. only—only 8 or 9 per cent. of this imported seed. Of sixty-one samples of red-clover seed imported during the same period, representing an aggregate of 990,000 pounds, less than 48 per cent. was red-clover seed that germinated. These seed are sent here for the purpose of adulteration. In Europe there is a system of voluntary seed examination, prevalent as a matter of custom, by which seed in a given locality is examined and the certificate is made, and no one buys seed in one locality from a seedman in another locality, except upon a large scale; and the result is that there is sent to this country an immense quantity of these inferior seeds."

The speaker said he had found some samples of orchard-grass seed which were adulterated by crushing up old oats and mixing with the orchard-grass seed, "and I doubt very much whether any Member of the House would be able to distinguish it unless he were a seed expert." He also said that Canada has a law which

forbids at home the sale of weed seeds, but permits them to be exported. Last year in two samples there were 10,000 pounds of the so-called "clover seed" imported into this country from Canada. Consisting almost entirely of catchfly seed, used either for direct sale or more probably for adulteration. He added: "Last Summer there was but little good onion seed grown in the country. Two years ago there was a smaller quantity than usual of good onion seed grown in this country. I think that this year gentlemen will find very little of it in their Congressional distribution. You may find some, but all of the old onion seed that may have been in the warehouses for the last ten years, perhaps, will be sold this year as fresh onion seed, though not a pound or particle of it will germinate. It will be mixed with seeds, and the percentage of germination of the lot may be one-half. All of the new seed may germinate, but none of the old seed will do so."

Mr. Mann also referred to the large quantities of yellow trefoil seed imported, which he said was "for one purpose only, and that purpose is for using it as an adulterant." He had been informed by the Department of Agriculture that most of the yellow trefoil seed was imported from Hamburg, a considerable proportion of it without being mixed at all, and quantities mixed with alfalfa and clover seed. Mr. Mann exhibited samples of adulterated seed—Kentucky with Canada blue grass and others.

It was pointed out by Mr. Wadsworth that the Secretary of Agriculture, in his report, had stated that "the rank and file of American seedsmen do not follow any such practice and are as anxious as the Department to protect the farmer." Mr. Mann replied, "It is partly for the purpose of protecting the reputable seedsmen from the improper rivalry of the impure seedsmen that I think we ought to have legislation on this subject."

The circulars issued by the Department of Agriculture showing the names of the firms from whom adulterated seeds had been secured, as well as the nature and extent of the adulterations are printed in the Congressional Record of the date mentioned.

European Notes.

The continuance of mild weather has brought a rush of orders from people who invariably leave things till the last minute and expect that the working of the entire establishment must be changed at a moment's notice to compensate for their neglect of proper business methods. As an exceptionally virulent outbreak of grippé has materially thinned the ranks of our most capable assistants, everything continues at high pressure, except prices. These, with the solitary exceptions of red clover and onion, remain at a quite unremunerative level. Clover has a strong upward tendency owing to continued enquiries from your side; while onion has risen in value partly for the same reason and partly because the bulbs for present planting are not keeping well. The growers of onion seed are

not happy, having to choose between sacrificing their seed crops or sacrificing their bulbs. The market prices for the latter are probably the lowest on record. As the crop, owing to the drought, was not more than 40 per cent. of an average, it is difficult for the growers to decide on which horn of the dilemma they may sit with the greatest comfort.

Long and sometimes painful experience makes one shy of prophesying before the event, but it appears absolutely certain that onion seed will be from 25 to 30 per cent. higher in price next season.

N. B. The intelligent reader will please take note that the Californian output has not been taken into account.

As predicted in these notes many months ago, the radish seed growers are practically inaccessible in the matter of price just now. Many of them, and of course, the best, refuse to entertain the culture. This is not to be wondered at when we remember how disastrous have been the results during the past three years. Bearing in mind the fact that stocks are exhausted, it is easy to see that the growers hold the key to the position. Efforts have been made in many districts to supplant the French grown transplanted seed, but so far as the earliest forcing varieties are concerned they have hardly been successful. Everything therefore points to a considerable rise in price for this article. The larger and later varieties, which are grown with good results in more northerly countries, will still be obtainable at moderate prices.

As regards spinach, the usual acreage will be planted in England, where the crop produced last year was above the average. In Germany and Holland higher prices are demanded; in the first named country because of the heavy loss entailed by the poor crops obtained last season, and in Holland partly because sugar beets have given a good result last year and growers are expecting higher prices this year from the sugar fabricants, and partly because the large acreage of winter corn, which has been sown, is doing so well that there will not be anything to plow out. NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
Orlando Harrison, Berlin, Md., president; J. W. Hill-Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

TACOMA, WASH.—The stockholders of the Sunny-side Nursery Company recently increased the capital stock of the company from \$10,000 to \$26,000. T. C. Williams and Dr. J. R. Harvey were taken into the company as stockholders. Mr. Williams has had about thirty years' experience in the nursery business in Illinois. The officers of the company now are: F. G. Spalding, president; W. S. McClain, secretary; Dr. J. R. Harvey, T. C. Williams and H. K. Spalding, trustees. The company has this year sold 100,000 trees and will have half a million ready for the market the coming year.

ROCHESTER, N. Y.—The National Association of Retail Nurserymen held its fourth annual banquet on Tuesday night, January 22, at the Eureka Club, with more than one hundred present. The occasion was one of pleasant reunion. After an elaborate dinner Toastmaster John D. Lynn opened the exercises. The speakers and their subjects were: "Square Deal," C. J. Maloy; "Political Deal," W. K. Gillette; "Nurserymen's Deal," Charles E. Ogden; "The Shrub Common People," Hon. Assemblyman H. R. Glynn. Between the deals selections were given by the Rochester Male Quartette and the Fifty-fourth Regiment Band. Among the members present from out of the city were: Orlando Harrison, of Berlin, Md., president of the American Association of Nurserymen; E. Albertson, Bridgeport, O., chairman of the executive committee and special representative of the American Association of Nurserymen; Professor John Craig, of Cornell University, Ithaca; George S. Josely, Fredonia; D. H. Henry, C. G. Chase and Theodore J. Smith, Geneva; James M. Pitkin, postmaster, Newark, N. Y.; O. D. Green, Syracuse; George C. Perkins, John Watson, C. H. Stuart, William W. Gould, Arthur M. Christy, Newark, N. Y., and W. T. Wood, Richmond, Va. The committee in charge of the dinner was made up of B. F. Allen, chairman; W. W. Wyman, E. S. Osborne and Charles L. Yates. The president of the national association is William Pitkin of this city.

Catalpa for Timber.

Editor Florists' Exchange:

In your issue of January 19, 1907, there is an article on "Catalpa for Timber," by Joseph Meehan. After reading this article I would presume that Mr. Meehan has never investigated very closely the difference between *Catalpa speciosa* and *Catalpa bignonioides*. While *C. bignonioides* is as lasting as *C. speciosa*, it grows slower and branches out sooner. In going over a large plantation of catalpa one can pick out every tree of *C. bignonioides*, as they will be smaller and branch closer to the ground. As to the general appearance of the trees, up to three years there is but little difference, but after that it is very distinct.

A few Westerners have entertained Mr. Meehan's ideas to their sorrow. *C. bignonioides* is not profitable to grow for any purpose; while *C. speciosa* has netted the owners of a few plantations as much as \$115 an acre per year for 13 years. And you could not sell these men a *C. bignonioides* tree. Most of them now grow their own seedlings, as when buying *C. speciosa* they have got *C. bignonioides* instead. Those contemplating growing catalpas, either for nursery or their own use, will do well to investigate them before gathering or buying seed.

CHAS. MURRAY,
Supt. Landscape Dept.
Washington University, St. Louis, Mo.

Horticultural Notes.

Many fail in transplanting the trailing arbutus, *Epigæa repens*, because of neglecting to prune it. It is an evergreen, and one that makes few roots. If the tops were cut back one-half, or if a good ball of soil were taken with the roots, the arbutus is not difficult to transplant.

The round-headed catalpa, the one usually grafted on the common sorts and known as Bungal, is believed to be but a variety of *C. bignonioides*. It was thought to be a variety of *C. Kämpferi* at one time, but it is not, if the *Kämpferi* in cultivation is true to name.

Evergreens when near or under trees have a hard time getting food, the large trees taking from them what they should have. For this reason spreading surface manure about them, as far around as the branches extend, is a signal help to them.

Staphyleas are not seen in collections as often as they should be. Two of them, *S. Bumalda* and *S. colchica*, are superior to our native one, *S. trifolia*. They have white flowers, those of *Bumalda* slightly fragrant, and of *colchica* in little clusters, not unlike a white lilac. In Europe, *S. colchica* is sometimes used for forcing in winter.

Glyptostrobus Pendulus (Taxodium.)

A tree in universal demand when one of upright, conical character is desired, is the one almost universally known as *Glyptostrobus pendulus*, or Chinese cypress. The strange thing in connection with the name is that the tree is not a *glyptostrobus* at all, but simply a form of the well-known deciduous cypress, *Taxodium distichum*. A prominent botanist called it *glyptostrobus* at one time, and it is never listed in nurseries under any other name that we are aware of. That it is but a variety of the common deciduous cypress is evident, for it has been found in a wild state among the cypress trees, and it has appeared in beds of seedlings of the cypress raised in the North. There are other forms of the

Glyptostrobus Pendulus (Taxodium)

deciduous cypress beside this, but, undoubtedly, the *glyptostrobus* is the most distinct of all.

The illustration well represents the habit of growth of this tree. The parent form, the deciduous cypress, is not a great spreader, but the *glyptostrobus* is even of more slender growth than it. The branches are extremely slender, and they may be drooping or otherwise, depending somewhat on the tree and on the stage of growth. The leaves are spirally arranged, needle-shaped, and are close to the stem, bearing but little resemblance to those of the deciduous cypress.

It will be seen that, in the illustration, there are two trees of like character of the *glyptostrobus*. Both are growing alongside the main driveway fronting the Agricultural Building, Washington, D. C. How well they fit the position it is not hard to imagine. Hardly another tree could be named that would do

as well. Probably the *salsburia* would have suited, but the famous avenue of that tree commences at but a stone's throw away from where the *glyptostrobus* are, so it was well not to use the former.

It seemed to us when having the photograph prepared that the trees were excellently well placed, and that nothing could have been substituted to have done as well. As will be seen in the picture, the tall shaft of the Washington monument shows in the distance, and it, too, seems to blend nicely with our *glyptostrobus* trees. It is the knowledge of how trees grow, their shape and general appearance, that is so necessary to the success of one who would become a thorough landscape gardener.

Showing how trees that are found naturally in low ground will thrive in situations much higher, the *glyptostrobus* is a good example. The type is found in swampy ground, actually the roots entirely under water in some instances, yet they will grow in quite high situations, as those photographed prove. The ground on which these trees stand is quite elevated; and many trees on other grounds are to be found on quite high positions. Still, to have them do their best, a damp soil is advised.

The *glyptostrobus* is increased by grafting it on the common deciduous cypress. Done indoors in winter, or outdoors in spring, just as the sap is rising, the work is generally successful.

Rapid Growth of Oak and Hickories.

Contrary to the idea prevailing in times past, the oak and the hickory are among our fast-growing trees. Years ago one of our planters set out a row each of various well-known trees, among them several oaks. Those trees were all within sight of one another, were in the same soil and situation, and had the same care. It is nearly thirty years ago since the trees were planted, and now it shows that the oaks are in every way the equal of their companions. This agrees with what nurserymen have observed of the trees. They tell us that the oak and the hickory are fast growers, quite the equal of any other ordinary trees. The silver maple, poplar and a few other trees could be named as faster growers, but take the ordinary run of nursery trees and the oak and the hickory keep pace with them in growth. The only time they grow slow is the year or two following transplanting. Their transplanting is difficult when of good size unless frequently transplanted previously, and to have success in the operation there must be very heavy pruning. When raised from seeds the plants can stand until two to three feet high, when they should be transplanted. A similar operation should follow three years later. When well established again further removals may follow if desired, but at every transplanting close pruning should not be overlooked. In the end, set out with other trees of the same age, the oak and the hickory will be found fully their equal in size.

Winter Pruning Stock.

In the Southern and the border States there will be but few more weeks before the opening of Spring, with its rush of work, hence the importance of getting performed now every operation possible. Pruning of stock and getting it into shape is one. When trees are young and growing it is a help to let them carry many shoots through the summer, not required eventually, as the more of them the stronger a tree becomes. But many of these, it will be seen now, are not in shape or in positions desired, looking to a well-formed tree, and now is the time to cut them away, and at the same time prune the trees in such a manner that they will assume a good shape and be of pleasing appearance to those who may wish to buy them.

There are customers for trees with tall stems and for those with branches near the ground. Single trees of the latter kind on lawns are often desired. It is better to have the two sorts in different rows in the nursery, the tall ones in one row, the low-branched ones in another, for reasons of cultivation; and when pruning young trees the work can be so arranged.

Landscape gardeners find a good lot of work at winter-pruning among large trees. By cutting away some of the older limbs and encouraging those younger and of more vigor, and then feeding the trees well, many an old orchard has been made almost young again. It is well worth remembering that dead or partly dead wood is drawing on the sap of the tree as much perhaps as live shoots do; and for this reason the pruning away of such limbs is of great advantage to the trees.

At this season of the year such shrubs as flower in summer and autumn may be pruned back well. A good pruning tends to promote vigorous shoots, and these give the flowers. No need to name those that need pruning and those that should not be pruned. Just think whether the shrub is one that flowers in spring or in late summer. If it blooms late, prune it; if it flowers in spring, keep your knife away from it.

Florists and nurserymen who grow shrubs solely for selling do not pay attention to pruning for flowers. They prune for propagation's sake, and all kinds that will grow from cuttings and have long shoots that can be cut into suitable lengths are cut now. These shoots are cut up at once, tied in bundles, and placed in a cellar, in sand, to be set out in nursery rows with the opening of spring. In large establishments, the work of making cuttings of trees and shrubs is started at New Year's, and it is better done early than late; but any time before the sap starts is not considered too late.

Lilliums for the Trade.

The deliveries of Lillium longiflorum and other sorts of Japan lilies are now about over, and it must be admitted that, contrary to the majority of florists' subjects, the trade, both for the European importer and the grower here, has been in an all around satisfactory condition the whole year; for although prices paid for the bulbs have probably been higher than ever before, the cut blooms have always realized sufficient to leave a comfortable margin of profit.

The process of retarding has generally been carried out in a more satisfactory manner, and the percentage of losses to the grower has been considerably less of late. It used to be the custom to retard lilliums under the same conditions as lily of the valley with more or less considerable disaster. It is now generally recognized that lilliums require a much drier air than valley to be a success, as the excessive moisture required to prevent a valley pip from shriveling when stored in the retarding chamber is not required by the more fleshy and solid lillium bulb and causes it to rot and become useless for cultivation.

It is reported that a much larger number than usual is being packed for retarding (probably a record quantity) for use during 1907, and a good sale is already experienced for these in advance. In fact, some dealers report being booked up for retarded stock for the whole of 1907.

A feature of the trade is the unprecedented advance in price for the last Fall and Winter deliveries, also for the retarded stock for the coming season. Why this advance has occurred is not very clear, and not at all appreciated by growers here, for although the profit on last year's cut blooms was satisfactory, it was not sufficient to cover the full 50 per cent. advance in the price of bulbs. The cause is generally ascribed to larger profits being raked in by the dealers and importers in Europe and the growers in Japan. No doubt this is true to some extent, but there are many circumstances which jointly caused the price to rise; chief among them may be the neglecting of the cultivation of stock in the far East during the late war. There is also a much increased call for the bulbs both in England and America; the demand is also much firmer and more decided in its nature—a fact the Japanese, with their keen business tact, are not slow to recognize, with a consequent increased independent attitude toward the buyer.

The demand at the present time is for much larger sizes than formerly; where 6 to 8 inches was the leading size years ago, the florist who grows for market now buys little else than 8 to 10 and 9 to 11. These sizes, of course, are more difficult to procure in sufficient quantity, necessitating a much larger number being grown for stock in Japan than formerly. Also, since the retarding process has reached comparative success, a larger quantity is required, as practically the whole of this trade is an absolute addition, the bloom being now on the markets practically all the year round. Even under the present fairly successful method of retarding, large numbers are annually spoiled in the process.

It was hoped that a remedy for the high prices would be found in the competition of Dutch-grown bulbs, but although the stock from that country is of especially superior quality, the quantity available is so small as to command little consideration. In fact, I am inclined to think that less can now be procured from Dutch sources than was the case years ago.

Many growers and importers are turning their attention, with great hopes for the future, to the new source of supply from the Azores Islands. I recently inspected some large quantities of these bulbs growing in England and they appeared to be of a very promising nature, the growth all around being much superior to any I have ever seen produced by Japanese bulbs. They are also of a much hardier constitution; the blooms are said to possess as much substance as those of the true giganteum type, and all who have

Dreer's Summer Flowering Bulbs

The Begonias and Gloxinias offered by us are the best that skill and careful selection can produce, being grown for us by one of the most expert European specialists.

TUBEROUS-ROOTED BEGONIAS

Single Flowered, Scarlet, Crimson, White, Yellow, Rose and Orange, 40c. per doz.; \$3.00 per 100; \$25.00 per 1000.
 Choice Single Flowered in Mixture, 35c. per doz.; \$2.50 per 100; \$22.00 per 1000.
 Double Flowering, Scarlet, Rose, White and Yellow, 65c. per doz.; \$5.00 per 100; \$40.00 per 1000.
 Choicest Double Flowering in Mixture, 50c. per doz.; \$4.00 per 100; \$35.00 per 1000.

New Hybrid Frilled Tuberous Begonias

A most unique form of flowers of immense size, with wavy or frilled petals, similar to the best forms of single petunias, 25c. each; \$2.50 per doz.; \$20.00 per 100.

tried Azores-grown bulbs express themselves as well pleased with the results.

There is a great and growing demand for longiflorum bulbs in England and it has for a long time been felt that a new source of supply was needed to those at present in existence, if only to cheapen the cost of importing the bulbs. Should they advance any more than they have done during this season, the cultivation would certainly be much curtailed, as at the present price of bloom the cost of production does not leave more than a bare margin of profit.

ENGLISH CORRESPONDENT.

A BIRTHDAY CELEBRATION.—W. W. Rawson, the Boston seedman, celebrated his sixtieth birthday on January 23, by giving a dinner at the Hotel Vendome. Some 400 invitations were sent out and about 275 persons were present at the banquet, including the Governor and Lieutenant-Governor, several members of the Council and many of the prominent market gardeners and florists with whom Mr. Rawson has been associated in his past forty years of active business life. The large banquet hall of the hotel was beautifully decorated, and there were many pleasant incidents during the evening, one of which was the presentation to Mr. Rawson of a very handsome hall clock and a Masonic charm. The menu cards were appreciated by every one; on the front was a portrait of Mr. Rawson, and the cards contained a list of the important events of his life. At the conclusion of the dinner Mr. Rawson rose and in thanking his guests for the honor they had done him in attending, said that he had almost passed forty years of an active and successful business life the past two of which had been partly political. He was old and well, with his property free from incumbrances, so he thought it was high time to celebrate. He then introduced G. L. Gould as toastmaster. Governor Guild was the first speaker called upon by Mr. Gould. The Governor after paying a tribute to Mr. Rawson spoke of Massachusetts as an agricultural state. Among other things he said that Middlesex County, where Mr. Rawson had his greenhouses, stood Number 13 among all the counties of the United States in the value of its agricultural products. Among valuable crops grown in this state the Governor mentioned the cranberries of Cape Cod, the lettuce and cucumbers of Arlington and roses of Natick. Other speakers of the evening were: J. J. McCarthy, Samuel J. Elder, Guy A. Ham, Mayor Wardwell of Cambridge, W. A. Lytle, Rev. W. H. Rider and T. L. Creely. J. W. DUNCAN.

CATALOGUES RECEIVED.

J. ROSCOE FULLER & COMPANY, Floral Park, N. Y.—Illustrated catalogue of Seeds, Bulbs, Plants, etc. This firm has adopted the method of giving definite quantities of seeds for 5c. and 10c., instead of the old plan of selling vegetable seeds in packets.

VICK & HILL COMPANY, Rochester, N. Y.—Illustrated Circular concerning High Grade Asters, new and standard varieties. Among the novelties are several of the Branching class, including Cardinal of a color indicated by its name; Rosy Carmine, spoken very highly of by cut flower dealers, Pink Branching, Violet King, etc. Those interested in this popular class of plants will find the document of considerable value.

M. H. BRUNJES & SON, Brooklyn, N. Y.—Illustrated Catalogue of Seeds, Bulbs, Plants, etc. A neatly printed catalogue in which all the newest and standard things are offered. The present year is the firm's twenty-fifth anniversary and the business continues to increase in a most satisfactory manner. The cover designs—Asters and Yellow Globe Danvers Onion—from photographs, are very attractive.

C. C. MORSE & COMPANY, San Francisco, Cal.—Illustrated Catalogue of Garden and Flower Seeds, with a list of Novelties and Specialties. Sweet peas form a leading line of this concern, a very comprehensive list of which, including several novelties, classified as to color, is presented. In the general disaster of last April the firm was burned out, and is now located temporarily at 71-3 Clay street, the new house being at Santa Clara.

HENRY F. MICHELL COMPANY, Philadelphia, Pa.—Catalogue of Seeds, Bulbs, Plants, Supplies, etc., with an interesting list of Novelties and Specialties, particularly in asters, sweet peas, etc. The catalogue is profusely illustrated, and contains a colored plate showing Michell's "Improved" Semple's Branching Asters. The beautiful embossed cover designs in color—Nasturtium, Michell's Improved Ideal Sweet Corn, extremely early, and Tomato Very First, are very attractive. Also Wholesale Trade Catalogue of Seeds, Bulbs, Plants, and Supplies.

WATKINS & SIMPSON, London, England.—Foreign and Colonial Wholesale Catalogue of Garden and Flower Seeds. There is included a very extensive list of Novelties in Vegetables and Flowers among the latter Alyssum compactum, Little Derrit, an improvement on Little Gem; Anchusa italica, Dropmore variety; several novelties in antirrhinum; Cineraria hybrida compacta Starfish; various new Nasturtiums; and Sweet Peas, Nora Unwin, Mrs. Alfred Watkins, Frank Dolby and D. J. Castle. A colored plate of the Sweet Peas accompanies the catalogue.

CONARD & JONES COMPANY, West Grove, Pa.—New Floral Guide, 1907. Specialties of this house are Roses and Cannas of both of which comprehensive lists are catalogued. Among the former is the new rose, Charles Wagner, and among cannas, William Saunders, Ottawa and New York. General collections of Plants, Bulbs, Shrubs and Fruits are also enumerated, the cata-

logue being profusely illustrated. The cover designs, Roses in color, are very attractive, including Magnifano, White Maman Cochot, Souvenir de Jeanne Cabaud and Charles Wagner.

HOLMES SEED COMPANY, Harrisburg, Pa.—Catalogue of Vegetable, Field and Flower Seeds, Plants, Roots, Supplies, etc., with a full list of novelties and specialties. A feature of this catalogue is the list of premiums offered by the concern. Mr. Holmes is always happy in the selection of his cover designs the present year's being a representation of a young gardener contemplating the break-down of his "go-cart," which apparently proved inadequate for the wealth of products, from Holmes's seeds, heaped upon it. The back cover design shows "Burrell's Gem" Rocky Ford melon.

COX SEED COMPANY, San Francisco, Cal.—Seed and Plant Annual, 1907. Illustrated Catalogue of Seeds, Plants, Small Fruits, etc. The cover subjects are Evelyn Eyatt and Gladys Unwin Sweet Peas, and a collection of Orchid-flowered Cannas. The firm is now located at 125 Market street, San Francisco. It states: "Our seeds were always fresh, but to those who may have had any doubt on this point we would say that every seed we had was destroyed by the fire, so that to those desiring a fresh seed this will surely be a convincing argument." The offerings are, as usual, very complete in all the lines listed.

LEONARD SEED COMPANY, Chicago, Ill.—Catalogue of Vegetable and Flower Seeds, Supplies, etc. A contemporary, in speaking of this concern, says: "The business was established by S. F. Leonard in 1884 and incorporated in 1901. It is the largest seed growing firm of the central West, where a very large part of the seeds used by planters are produced. Its growing points are variously located. Beans in different parts of Michigan and Wisconsin, where the soil produces the bright sample and high germinating quality; peas in selected parts of northern Wisconsin and Michigan, where freedom from bugs and full maturity is assured; vine seeds and sweet corn in several States where the conditions are the most suited to their growth; garden seeds of all kinds at the points safely adapted to their development." Onion sets are a leading specialty of this firm, large quantities being handled. Illustrated.

Lambert's Pure Culture Mushroom Spawn.
 Produced by new grafting process from selected prolific specimens, thoroughly acclimatized.
Has never failed to run.
 Sold by Leaps Seedman.
 Practical instructions on "Mushroom Culture" mailed free on application.
 American Spaw Co.

Sphagnum Moss and Cedar Poles

Moss, 5 barrel bale, \$1.25; 2 bales, \$2.25; 5 bales, \$5.00; 10 bales, \$9.50. Poles, 2 in. butt, 8 ft. long, \$15.00 per 1000; 2 1/2 in. butt, 10 to 12 feet long, \$22.50 per 1000.

R. H. AKERS, Chatsworth, N. J.

GRAND NEW CANNAS

William Saunders

The flowers are large, of splendid form, and are born very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.

Ottawa

is a strong grower, very robust and 5 to 6 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.

Note.—We had this canna on trial among the Canadian experimental stations last summer and this is the official report of their expert:

Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 massed in one bed during the past season this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 13 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size." 50c. each; \$5.00 per doz.; \$35.00 per 100.

New York

Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest varieties of cannas. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Send for our list and prices of 60 other leading varieties of cannas.

ROSES

Are our great specialty, 2 and 4 in. pot plants we have in great variety. Teas, Hybrid Teas and H. P. Roses on their own roots. Philadelphia Rambler, Crimson Rambler, Dorothy Perkins and other climbers in strong field plants.

Shrubbery

in variety. Viburnum Plicatum, Spireas, Altheas, Deutzias, Weigelias, Barberry Thunbergii, Hydrangea Pau. Grandiflora, Honeyuckles, etc.

Send for our Price Lists.

Announcement

OWING to unavoidable accident, and unforeseen delays in the construction of my New addition for the growing of "QUEEN BEATRICE," I find it impossible to produce sufficient young stock to supply the orders already in hand to justify me in disseminating "QUEEN BEATRICE" this Spring.

I make this announcement thus early to avoid inconvenience to those who have reserved space for the Rose. Thanking my many friends for their kind and favorable expression who have seen it grow, and my many patrons who have favored me with their liberal orders for 1907 and have consented to leave their orders stand for 1908 Delivery. Thanking you again, I am,

Most respectfully yours,

F. H. KRAMER.

ROSES

The past season has been a very unsatisfactory one for all florists, for rose growers in particular. There has been but very little sunshine, and as a result the plants have not made their customary growth. However, the tide is turning, and as the days grow perceptibly longer it is hoped there will be a change for the better. If in good health, the plants will from now on require some extra feeding to support the new growth; this can best be applied in the form of liquid manure. Use it weak and often. For best results the manure should be allowed to ferment, then run it into a tank and dilute as desired. If sheep manure can be procured one application every three weeks as a change will prove very beneficial. Of course, where the liquid manure cannot be used, a good mulch of but partly decayed cow manure, to which a small quantity of soil has been added should be applied. Afford it on a clear day and then give the bench a good soaking. When leveling, do not break up the soil too fine. Keep the plants tied, and see that none of the young shoots touch the glass, as two or three freezings will ruin them.

As considerable firing has to be done, give attention to the bottoms of the benches; they are apt to get dry, especially after the mulch is applied.

Unless the hose is properly handled red spider will soon begin to assert itself; so do not wait till the foliage is half gone, but keep an eye on the corners and around the supports.

As the cuttings will soon need potting, get the soil in shape. Put some of it at least into the potting shed where it can dry out a little, it will screen easier and be in much better condition for potting. When the roots of the cuttings are about 1/2 to 3/4 inches long they are at their best; there is then less danger of breaking them while potting. The question of how many thousand can be potted in a day is nothing compared with how the work is done. Pot firmly, and be careful to have the pots even; this facilitates the work of watering, for if all the pots are filled alike they take the same amount of water. It is a waste of time and space to bother with poorly rooted cuttings; discard them now, for it is doubtful if they will ever make good plants. After potting give a good watering, just enough so that the whole ball is nicely moist, not mushy; then, if a clear day, shade with paper. This watering usually will last till the roots have started, but the plants should be shaded for three or four days from the bright sun. The temperature should run from 56 at night to 70 degrees in the daytime.

Give the young stock the front bench where it can get plenty of light. The back benches may be poorer just now, but it pays to make a little sacrifice at this time and get nice stock for next season. It is needless to say the

OUR CARNATION NOVELTIES FOR 1907

Winsor, the most talked about Carnation at the Toronto Convention. Won first prize for best 100 pink.

Winsor, White Enchantress, and Helen M. Gould

ONE way to judge carnations is to see them on the exhibition tables. A better and more convincing way is to see them growing; therefore we cordially invite all carnation growers to visit us and judge for themselves regarding the superiority of the above-named sorts.

Our carnation houses are at **Scarborough-on-Hudson** (not Tarrytown). Friends who desire to visit us can take the N. Y. C. & H. R. R. R. from New York. Trains leave there every half hour. Scarborough is the first station north of Tarrytown. Our grounds adjoin the station, and the greenhouses are about five minutes walk from the station.

We are growing **25,000 plants of Winsor** for cut flowers, alone, for the New York market this season, which shows the faith we have in it. This will also enable visitors to see it growing in quantity, and, besides that, will give us enough plants to get a great abundance of fine, healthy cuttings without over-propagating. We have already booked a large quantity among the large growers, and anticipate for this variety the largest sale of any new carnation that has ever been distributed, as large growers who have seen it are enthusiastic in regard to its value. Those who have seen it have immediately placed large orders for it, so we recommend those who have not ordered to place order without delay, so as to ensure early delivery.

For full description of these three valuable novelties, see our wholesale price list. Of course, we shall have all of these varieties on exhibition at Toronto, where they can be seen, and where they will speak for themselves.

WHOLESALE PRICES ROOTED CUTTINGS SPRING 1907

- Winsor.** Soft silvery pink. The best color, best keeper, best shipper, best seller—best every way. \$12.00 per 100, \$100.00 per 1,000.
- White Enchantress.** Has the large size, long stem, productive habit of Enchantress, but is pure white. \$12.00 per 100, \$100.00 per 1,000.
- Helen M. Gould.** A beautiful sport of Enchantress. Ground color lovely shade of silvery pink, with very fine pencillings of carmine, making an exceedingly exquisite combination. While on close observation this variety is variegated, the general effect is one beautiful tone of dark pink. Exceedingly valuable, because it combines the earliness, freedom, long stem, and large size of Enchantress, giving another color possessing all the other desirable qualities of Enchantress. \$12.00 per 100, \$100.00 per 1,000.
- Beacon.** Orange-scarlet. A vigorous, healthy grower, of ideal habit. A profuse bloomer, with long stems. \$12.00 per 100, \$100.00 per 1,000.
- Aristocrat.** Cerise-pink. Will be planted largely in place of Lawson. \$12.00 per 100, \$100.00 per 1,000.
- Melody.** Daybreak sport of Lawson, about the same color as Enchantress, but much brighter, and does not fade like Enchantress. Also a much better keeper and shipper. Those who grow the Lawson varieties exclusively will find this very valuable and desirable, because it gives an improved Enchantress color, which is so popular, and at the same time can be grown in the same house with the other Lawsons. An extra fine thing in every way and in great demand. A great addition to the Lawson class. \$10.00 per 100, \$75.00 per 1,000.
- Rose Pink Enchantress.** A sport of Enchantress. Color, dark rose-pink. \$7.00 per 100, \$60.00 per 1,000.
- White Perfection.** A novelty of 1906, and a variety for which there is a great demand this season. A third larger than Lady Bountiful and a more perfect flower. \$6.00 per 100, \$50.00 per 1,000.
- Victory.** Scarlet. This is giving great satisfaction, being a free blooming, profitable scarlet. \$6.00 per 100, \$50.00 per 1,000.
- Red Lawson.** A fine red. Our stock of this is superior to many stocks of Red Lawson that we have seen. \$4.00 per 100, \$30.00 per 1,000.
- Variegated Lawson.** The most productive of the variegated sorts. A favorite. Outblooms Mrs. M. A. Patten. \$4.00 per 100, \$30.00 per 1,000.
- White Lawson.** An excellent white. \$4.00 per 100, \$30.00 per 1,000.
- Lady Bountiful.** Pure white. \$4.00 per 100, \$30.00 per 1,000.
- Enchantress.** \$3.00 per 100, \$25.00 per 1,000.
- Mrs. M. A. Patten.** \$3.00 per 100, \$25.00 per 1,000.
- Mrs. Thos. W. Lawson.** \$3.00 per 100, \$20.00 per 1,000.

REVIEW OF THE MARKET

NEW YORK.—The continuous sunless weather makes roses a very scarce article in this market, and prices necessarily remain high. In the case of Bride and Bridesmaid it seems almost impossible to fill orders on the short grades. American Beauty of the fancy grade, not being so absolutely necessary to many of the retailers, the dollar price which is asked for the very finest can hardly be said to be firm, as regular buyers are able to get the flowers at 75c each, though outside customers have to pay \$1 if they demand the best grade. Carnations are getting more plentiful as the week progresses, and while prices are being maintained fairly well it would seem but a question of a few days when there will be a break in values. Lilacs are exceedingly scarce, and the best are held firm at 20c. Lilac as yet does not seem to have become overplentiful, and is clearing out at satisfactory figures. Sweet peas have not yet come to be a feature in New York; this, without doubt, is owing to the cloudy weather, as the plantings of sweet peas for Winter-flowering for this market, are, we believe, much heavier than has been the case for many years. Tulips and narcissus, in the several colors, are all finding a better market than has been the rule for many years, owing to the scarcity of the violet market suffered greatly for overproduction a week ago, but has again become firm, with the price at 50c per 100 for choice. These are the best California. Governor Herrick are selling at 20 cents per 100. Lily of the valley of ordinary quality is meeting with a poor demand at \$2 per 100; special grades run to \$4, and are scarce. Sweet peas are arriving in limited quantities, selling at 75c and \$1 per 100. Bulbous stock, such as tulips, Roman hyacinths and Paper White narcissus are selling well. Von Sion have appeared, but in very small quantities. The green market is in a healthy condition, as there is plenty of smilax, asparagus, adiantum, galax and common trees to be had in any quantity.

CHICAGO.—The clear, bright, cold weather of late has tended to improve the quality of stock, though there is a marked shortage in nearly all lines, especially in all varieties of roses which if of good quality were very desirable property last week. Many shippers found difficulty in filling all requirements of their customers. Colored carnations were perhaps furnished in quantities sufficient for all demands, as fully as any of the principal staples, yet the call was sufficient to clean out these as well as practically everything else every day. Owing to the shortage prices on roses are somewhat higher than is looked for at this season, the best American Beauty being quoted at \$3 per dozen, Bride and Bridesmaid at \$15 per 100, and other roses proportionately strong. This week opened with a storm, and price held firm in all directions, the wholesalers all claiming a very satisfactory business cleaning out of everything at satisfactory figures. Stock generally is in good shape, though there has been some little complaint of sleepy carnations. Bulbous stock is increasing in quantity and variety, adding an attractive Spring feature to the flowers in hand. Green goods generally are in ample supply and of good quality, with the exception of hardy ferns, which are coming out of storage in poor condition; when in first class shape \$3 per thousand is realized for them. W. K. W.

BOSTON.—There has been so much dull weather lately that seldom has a season been seen at this time of the year when such a scarcity of some kinds of flowers was apparent, especially of roses. Then again, the most of the past week has been of the old-fashioned New England Winter type, and some days trade has been rather unsatisfactory. Carnations seem to be more plentiful than roses. Bulbous stock of all kinds has been bringing better prices than for many a day. Lilacs are not very plentiful. There are lots of good lily of the valley. Violets are perhaps the most plentiful of all flowers, and prices on these are low.

PHILADELPHIA.—Conditions in the cut flower market are about as reported last week. The supply is still scarce, but below demands, and great difficulty is experienced in filling orders to the satisfaction of customers. American Beauty roses are quoted at \$9 and \$10 per dozen for the best stock; there is a strong call for lower grades, but few are to be had. Don't ask for tea roses, one hears on every side. Prices range from \$8 to \$15 for general stock; a few Killarney have sold at \$25 per 100, and a few Richmond sold on Tuesday at \$50 per 100. They were very good with 3 1/2 foot stems. Carnations are in fair supply, but more can be used for prices range from \$2 to \$3 per 100 for general stock; fancy flowers of Enchantress and Beacon are selling at \$3 per 100. Violets are selling rather better this week, doubles at \$1 to \$1.25 with \$1.50

per 100 for white; singles, large varieties, at 50c. to \$1 per 100. Bulbous stock is moving very fast. Tulips white and yellow bring \$4 per 100; daffodils from \$1 to \$5 per 100. Paper White narcissus \$2 to \$4 per 100; Roman hyacinths, \$2 to \$3 per 100. Sweet peas are improving in quality and bring \$1 to \$1.50 per 100. Lillium Harris, cut, at \$2 per dozen flowers, are selling fast. DAVID RUST.

ST. LOUIS.—Business the past week in cut flowers, design work and for wedding receptions was reported very good. The weather has been exceedingly mild for the month of January, which created a large supply of cut stock, but the demand was great, so stock was reported scarce. Really fine roses are very scarce just now, and even the supply of the lesser grades has been limited the past week. American Beauty long fancy, are up to \$3 per dozen; those with shorter stems come in more or less deformed. Bride and Bridesmaid, for extra fancy, bring \$20 per 100. Richmond, Ivory and Killarney seem just as scarce, with the trade clamoring for the few that come in. As to carnations, this Monday morning they are also up in price. Any that look fancy fetch \$5 per 100 and small, common stock \$3 and \$4. These prices were owing to McKinley Day, Tuesday. Enchantress and any good white are also in big demand.

INDIANAPOLIS, IND.—Conditions have improved materially, as there have been several bright, crisp days, and stock is much finer and of better color. The volume of business transacted is also much heavier. Counter trade is brisk; and there are numerous funerals calling for quantities of flowers. The heavy supply of stock has not been sufficient lately and much is shipped. Spring flowers, tulips, jonquils, narcissus, sweet peas and freesias are in heaviest demand. Bulbous stock generally wholesales at \$3.50 to \$4 per 100. Select sweet peas bring \$1 to \$2 per 100. Single violets in a ready sale, as they outclass the double in quality, at \$1 per 100.

ST. PATRICK. Conditions are generally off crop and weak-stemmed; the best bring \$7 per 100. Carnations are in fair supply, but for some time, but the price is still firm at \$4 to \$5 per 100 for fancies. Medium grades, including Mrs. Lawson, are sold at \$3 to \$4 per 100. The general retail price is \$4 per dozen. McKinley Day caused no change in prices. Harris' blues and callas find a ready sale at \$10 to \$12.50 per 100. Cyclamen are often cut and sold at \$2.50 per 100.

Plant trade is still very brisk. The supply is augmented by a quantity of lilacs, azaleas, hyacinths and rhododendrons. Tomlinson Hall market reports a most satisfactory business, but the quantity of flowers brought there is not great, as most of them are wholesaled direct. I. E.

NEW BEDFORD, MASS.—With the continued cloudy weather and snowy days it is a hard thing to get blooms enough to supply the demand. Trade is very good with lots of funeral work; but the hardest thing just now is to get stock to fill orders. Prices remain fairly good. Carnations, retail bring from 60c to 75c; roses \$2 to \$3 per dozen. Violets are of fairly good quality; these bring \$1.50 per hundred. Sweet peas are in the market selling at \$1 per hundred. Freesias are also in bloom; these work in very readily for funeral work.

The stock and fixtures of S. S. Peckham at 8 South Sixth street, were sold at auction January 27. Mr. Peckham will devote his time to wholesale growing for the trade at his large range in Fairhaven. W. K. W. reports that his place on Hillman street has things in very good shape. He is putting up another 1,000 square feet of glass; this will be devoted in the Spring to vegetables and afterward to callas. HORTICO.

Indianapolis.

News Notes.
'Tis better to have tried and lost than never tried at all' is the way the local florists philosophize in regard to the next meeting place of the American Carnation Society. Indianapolis hopes to have the pleasure in 1909, and is much satisfied to have the president from this State. Peter Weiland has a new variegated rose; it is a sport of Bridesmaid and is well defined. The grower now has several stock plants. Wm. Hack, the oldest son of the Bendavis florist, has joined the Navy. The employees of Bertermann Brothers Company, at 3010 East Washington street, entertained last week. A most enjoyable time is reported. The Indiana Floral Festival Association has decided not to hold a show this Fall, as neither the new coliseum nor Tomlinson Hall will be available.

ELEGANTISSIMA FERN RUNNERS

Very fine stock, \$1.50 per 100; \$12.00 per 1000.

Chrysanthemums

A very good thing, indeed, is the Baby Rambler rose, good at nearly all times and for many purposes. The most profitable for the retail plantsman to handle is stock purchased when in a dormant state and potted up in the Fall or early Spring. The former, now placed in a house of 45 or 50 degrees, will soon fill their pots with active roots, and if then removed to warmer quarters will be in the best of trim for the Easter trade. These latter roses can stand a deal of high heat when fresh growth is pushing and buds are forming, and willingly respond to a considerable amount of forcing. When they show rapid growth of wood above potbound roots, it is well to give them another shift into larger pots three or four weeks before the first flowers open. This will make much finer plants out of them than what they would be if left in their first pots. It takes a little over three months to bring newly potted dormant plants into full bloom. As regards atmospheric conditions, watering, sprinkling, lighter and ventilation, they require a greater amount of care and attention than other roses under similar culture.

For an all-around plant trade during late Spring, Summer and Fall, as also

THE WEEK'S WORK.

Timme's Timely Teachings.

Rambler Roses.
 The various varieties of Rambler roses potted up in November or pot-grown all along during last Summer, constitute good property for an all-around Spring trade. It is now time to start them into growth in a temperature of from 40 to 50 degrees, first nicely tying them up into shapely form. No pruning other than cutting away dried tips or scraggy undergrowth should be attempted. Frequent sprinkling of the canes will do much toward securing an even break.

Ramblers intended for the Easter trade should now be well under way in the making of a good start. If so, they will easily bear a temperature of 58 or 60 degrees and even a little higher later on, should the grower encounter any doubts as to their being in good time for Easter, which comes early this year. Sprinkling overhead and a moderately humid atmosphere are most beneficial to the steadily advancing new growth. The full light is necessary for perfect development, and sunshine imparts vigor and depth of color to the flowers. They should be held away from Rambler roses in full bloom, since it is apt to turn brightness of color into lusterless hue, and considerably shortens their flowering season. Great care in the matter of ventilation is necessary in the case of Rambler roses under forcing. Mildew always is easier to overcome by long distance combat than by a struggle at close range; in other words, it is easier to keep it away from Ramblers under glass than it is to fight it with remedies, when once this insidious spoiler of beauty has found a firm foothold in the house.

Hybrid and Everblooming Roses.

Potted roses of all kinds, intended for the Spring holidays and bedding plant trade must be given a chance to break into new growth. Most of these will not only bear but require severe pruning before being started afresh. Strong growers, easily singled out from the rest, have their canes, usually few in number but these thick and sturdy, cut down to from six to ten joints above the pots, or lower if wanted for the grower's own use in permanent outdoor plantings. Everblooming roses of the kinds commonly grown in pots for Easter are pruned down to from four to six good eyes, and the very early and straggly growth is cut away entirely. Hybrid medium strength, ordinarily the most satisfactory of all potted roses, grow into good plants from about five eyes, left at the base of each shoot in pruning.

A slow start in a pretty cool house is the best guarantee for success in the forcing of roses. When begun with the aid of top-sprinkling a good break has been secured, a temperature as high as 65 or even 70 degrees may safely be employed in holding the plants at a rapid pace of development, though a little less heat, steadily held, is more likely to bring the best results. In a too low temperature, however, in that of a carnation house for instance, potted roses will never reach a state of perfect development in growth and bloom—a frequent cause of failure with the smaller growers. In this respect roses of nearly all kinds differ greatly from rhododendrons, spiræas, deutzias and many other hard-wooded plants suitable for forcing. Bedding roses not wanted in bloom at planting time may be grown on in a cool house.

Baby Rambler roses.

A very good thing, indeed, is the Baby Rambler rose, good at nearly all times and for many purposes. The most profitable for the retail plantsman to handle is stock purchased when in a dormant state and potted up in the Fall or early Spring. The former, now placed in a house of 45 or 50 degrees, will soon fill their pots with active roots, and if then removed to warmer quarters will be in the best of trim for the Easter trade. These latter roses can stand a deal of high heat when fresh growth is pushing and buds are forming, and willingly respond to a considerable amount of forcing. When they show rapid growth of wood above potbound roots, it is well to give them another shift into larger pots three or four weeks before the first flowers open. This will make much finer plants out of them than what they would be if left in their first pots. It takes a little over three months to bring newly potted dormant plants into full bloom. As regards atmospheric conditions, watering, sprinkling, lighter and ventilation, they require a greater amount of care and attention than other roses under similar culture.

for the Winter holidays, for which they may easily be had in perfect shape and bloom, it is best to put up good dormant stock of varying sizes in the early Spring and let it take its own time in forming white roots and sturdy top-growth. The best specimen plants are those that never leave the house until sold. If grown in frames or in the open they do not present so fresh and healthy an appearance. After they once show flowers they continue in bloom for any length of time. Faded tufts of bloom should be picked off wherever seen.

Lilium Candidum.

One hears and sees little nowadays of *Lilium candidum*, once the all-favored lily for pot culture. The spread of a disease peculiar to this species, and the advent of the *Harrisii* and long-flowered types are responsible for the small measure of interest accorded the beautiful annunciation lily of old. In the last four or five years a decided betterment was evident in the bulbs of this lily, as coming to us from foreign growers, and the difficulty of securing good, sound stock for forcing is not now so great as to furnish cause for its being shunned by lily growers. As a potted lily for Easter and Memorial Day it cannot be excelled.

In its culture as a lily for forcing it differs somewhat from those species now so largely made use of. It is, however, as easily grown as they are, if some few points in treatment, essential to success, are observed, always provided the bulbs are perfectly sound and healthy.

All lilies suffer by being out of ground any length of time and none of them more so than *Lilium candidum*. Imported bulbs of this lily arrive in the latter part of August and should be planted as soon as received, for if lying around dry they will lose in vigor and value from day to day, often expending their stored up energy in the making of roots and top growth while in this dry state. Another point of importance in the successful forcing of this lily is never to subject it to a temperature any higher than 50 degrees; a little lower rather than there is preferable. Fresh, buoyant air during its growing season is better for it than a close, over-moist atmosphere. And, finally, there is nothing so helpful to entire success in the forcing of *Lilium candidum* as a few sound freezings of the potted bulbs before being brought in.

The fact that antirrhinums are true biennials is often lost sight of by those new in the growing of this useful old favorite for its flowers in a cut state. The propagation by cuttings, which invariably root most easily, is well enough for a year or perhaps two from one and the same set of plants, but after that nothing good need be expected to come from plants obtained by this process. It is then time to renew the stock by growing a fresh lot of seedlings; and where snapdragons are raised somewhat extensively, as is the case now on many places, it is best to always have seedlings on hand as a source to draw from in the annual propagation by cuttings. Of course these seedlings also do their share in furnishing flowers, while producing the cuttings; but the bloom is never quite as uniform in color as those raised on plants obtained from carefully selected batches of cuttings.

It is now time for both the rooting of cuttings and the sowing of seeds, and good stock for next season's crop of flowers is to be provided. The seeds of the tall and most improved kinds in separate colors, white, yellow, pink, and red, should be used in the raising of snapdragons for indoor bench culture. The seedling flower the first year, but it is the second growth, coming in the form of sturdy roots from the base of the plants, which grows into those magnificent long and strong-stemmed, large-flowered sprays, that bring the high price and make the growing of snapdragons a most profitable feature. By pinching back cuttings as well as seedlings, as they rapidly grow into size, strong will be had at any time during the Summer or Fall for benching. They may be grown on in pots, with frequent shifting, which is the better way; or they can be raised into size in the field.

Dwarf Snapdragons.

There are many things listed in the seedsmen's catalogues which are of no use for the commercial florist. Knowing this to be a fact we are very apt to look on some of the listed varieties with great contempt, that, were we to give them a trial, would prove exceedingly useful in one way or another, all depending on into whose hands they fall. Many of the old-fashioned garden flowers we think little of have been immensely improved since the time we knew them well, and others now grown under methods greatly differing from old time usages show up in quite a new light.

Two years ago, through some mistake, I received from my seed dealer a

trade package of mixed antirrhinum seed of the dwarf kinds, instead of a tall pink sort. I sowed the seeds in August, transplanted them into pots in late Fall, placed them under a carnation bench, cut them down to within a few inches of the pots in January, gave them a long shift into 5-inch pots and started them into fresh growth on the southernmost bench of my coolest house, close under glass. In a short time I had to find another place for them with more head room, where the maximum heat amounted to 50 degrees, until the bright days of approaching Spring sent it up ever so high. But they were then coming into bloom—the sturdiest, thriftiest plants imaginable. We never found time to remove them to outdoor quarters, as I had intended; and perhaps it was well we did not. They were cleared out fast enough anyway, because they were the principal feature among flowering potted plants that Spring, selling as if they were the choicest greenhouse products, many of them coming in right for Easter. I had intended to cut the flowers, but not a pot remained unsold. They were about eighteen inches high and a mass of brilliant bloom.

Fuchsias.

I am glad to see fuchsias again take up their place of prominence among general greenhouse plants, a position which they came very near losing in the rush and clamor for new things. The widespread revival of interest in fuchsia culture is not so surprising when the excellent attributes possessed by the genus are made a matter of close contemplation. Easily propagated, rapid in their growth, profuse and long lasting in their bloom, good subjects for conservatory and living room, not troubled by disease or insects and altogether distinct in habit and peculiarly pleasing array of pendant flowers, it is no wonder they have managed to stay with us.

By propagating in the early part of Winter large specimens in 8, 9 or 10-inch pots are obtained with ordinary good culture, aiming at extraordinary dimensions in height and spread, resulting from constant push of growth until the desired size is reached when a gradual let-up will throw the plants into a mass of bloom. Such specimens are marvels of beauty, if masterfully finished, but are not what would best suit the commercial grower's peculiar trade in which profits play their part.

For the retailer in potted plants 4 and 5-inch fuchsias, with a few in 6-inch pots, are the best selling and most profitable sizes. These are easily had in fine form by putting in nicely balanced, short-jointed, stocky cuttings now, taken from newly started stock plants of good varieties. Keep the sand warm and moist, or put the plants at once into small pots in sandy soil and place these on bottom heat. Sprinkle often, and pot and repot as soon as needed. Do not pinch in, but stake and tie if necessary. A rose house temperature suits fuchsias, as does the richest of soil.

Pelargoniums.

Every American florist knows that when pelargoniums are spoken of none other than the fancy-flowered section, the so-called Lady Washington varieties, are meant, and not the entire genus bearing that appellation, embracing also all classes commonly called geraniums. When it comes to conveniently adjusted nomenclature, Americans know a thing or two yet to be learned by their European brethren.

Fancy pelargoniums are again coming into favor with a large class of plant buyers. At any rate, it would not do to be entirely without them, and I noticed that many of the retail growers, who had discarded them, have again made provisions for an ample supply in this line.

The main point to be observed in working up a stock for a good class of trade is to throw out all poor, stunted and shabby plants right at the start, for such will never amount to anything worth bothering with, only being a disfiguring part of any good collection, and greatly helping to increase the harassing trouble with greenfly. Stock plants usually produce enough cuttings to allow of making a careful choice before as well as just after rooting, and none but the sturdiest, shapeliest and best rooted should be considered worthy of being grown on.

One-year-old plants are best for a general trade in the Spring, the cuttings of such to be struck now. Those intended for this season's sales should now be in 3 and 4-inch pots, ready for the last shift, after being first started into a lively growth in a fairly warm house. A good, rich soil should be used in repotting. Another cutting back or merely nipping in will increase the number of flowers, but these will be less and smaller. The operation is not done after this and the plants promise to be of fine shape without it. Regular fumigation will keep aphids in check.

United States, Canada, and Mexico, \$1.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Express Money Order Draft on New York, Post Office Money Order or Registered Letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

REGISTERED CABLE ADDRESS:

Flores, New York.

ADVERTISING RATES.

One-half inch, 75c.; ¾-inch, \$1.00; 1-inch, \$1.25, special positions extra. Send for Rate Card showing discount of 10c., 15c., 25c., or 35c., per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

Copy must reach this office by 12 noon Wednesday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

Fire Troubles.

Early on Thursday morning, January 24, a disastrous fire broke out in our building, practically wrecking the top floor. Our offices and workshop being located on the ninth floor and directly underneath, were deluged, the quick work of the Fire Patrol in covering the type, presses, material and stock generally, with tarpaulins, alone saving us from heavy losses through damage by water.

Several of the forms of The Florists' Exchange were on the presses and already prepared to start printing; operations having to be entirely suspended, these forms, as soon as could be, were pulled off and the presswork divided up and taken to three different printing establishments. The remaining news matter, namely that of Thursday, was set up for us in other shops. The Florists' Exchange, it will thus be seen, was issued under somewhat adverse circumstances and was late in going into the Post Office. Had we not been located in one of the best fireproof buildings in this city, our plant would in all probability have been annihilated.

Under the circumstances, we ask and feel that we will receive the indulgence of our readers and patrons for any shortcomings to be noted in our issue of January 26.

Obituary

Arthur J. Newton.

Arthur J. Newton, Norfolk, Va., died at his home near Campostella Heights on Tuesday, January 22, 1907, after a week's illness from pneumonia.

Mr. Newton was born at the North, but had lived in Norfolk for fifty years, and was very highly esteemed throughout this section. He married Miss Annie P. Odend'hal, who, with four sons, survives him. The sons are Messrs. Arthur M., Ernest J., Wm. J. and Alton R. Newton.

He was 62 years of age, his birthday occurring last week.

For many years he was an extensive trucker in the section of Norfolk county where he died, but in recent years he had been at the head of the Newton Floral Company, and carried on an extensive business in that line. He was also President of the Mutual Benefit Association, a farmers' insurance company of Norfolk, Princess Anne and Nansemond counties.

He was a man of the highest integrity, generous of heart and genial of disposition, and his demise will carry sincere regret to a large circle of friends.

Pure Seed Bill Introduced

On Monday, January 28, Representative Hepburn of Iowa introduced a bill to prevent the sale of adulterated or misbranded seed.

American Carnation Society.

In our issue of last week we alluded briefly to the success of the Carnation Society's Toronto meeting and exhibition. It is an event that can always be counted upon as being successful, for there are few, if any, horticultural affairs where specialization is the dominant feature in their creation, in which so much enthusiasm, such keen interest are exhibited, as at the annual convention and show of the American Carnation Society. And that the cultivation of the American varieties of the divine flower is the "one touch of Nature," that makes gardeners in almost every part of the civilized world "kin," was clearly evidenced by the papers from specialists abroad appearing in our last week's number. May it be ever thus.

Beyond giving some sound, practical advice, President Dunlop's address contained no new suggestion or proposition for the society's consideration. The certificate matter was touched upon in a general way, and he seemed anxious that some satisfactory solution of this perplexing problem should, if possible, be reached.

The same subject was referred to in the paper of John Birnie, who, in addition to the proposal to inspect the growing plants, suggested that the cuttings of the new varieties should, with propriety, come in for a share of the visiting committees' scrutiny. It was later announced that the committee appointed to consider the certificate matter could not agree on a practicable plan of inspection, and the whole subject was ultimately dropped. It is to be hoped that it will not again be revived, for a problem that is as far from satisfactory solution at the end of sixteen years as it was when first broached, would seem to have had its fair share of consideration, and ever-recurring discussion of it proves but a waste of time.

In this connection we believe that those who look at this subject from all but the most selfish point of view will endorse the remarks of Mr. Rudd thereon, to which we respectfully refer all concerned.

Mr. Birnie also touched upon a matter that is worthy of attention, namely, recognition by the society of the cultivation of the carnation as a pot plant. This has been alluded to heretofore, but nothing has been done in regard to it. The proposition has, we think, something in it. The encouragement of this branch of carnation culture by the society would tend to create interest in its work among pot plant growers for market, thereby adding to its membership; and a display of carnations in pots at the annual exhibition would relieve the monotony created by cut flowers alone. The rose growers appear to be convinced of the value of a display of roses in pots at the annual show of the American Rose Society, and have made provision for such in their schedules. It might be well for the American Carnation Society to follow this example.

The papers kindly furnished by our foreign brethren are interesting and instructive. They demonstrate the increasing popularity of the American carnation abroad; that many of these varieties often prove as fickle far away from home as they do on their native heath; that nothing but the best sorts will win their way anywhere; and last but not least, that the day is not far distant when the foreigner will prove a formidable rival to the home grower in the production of new varieties of carnations bred from the best American kinds.

The decision of the society to the effect that all varieties competing at its exhibitions under name shall first of all have been registered, cannot in the main, we think, be greatly objected to, although to some the ruling may appear to be somewhat arbitrary; but as the American Carnation Society is paying the premiums, it has, of course, a perfect right to stipulate the rules and regulations under which varieties competing for these prizes shall be governed.

However, as registration of a name is so easily and cheaply accomplished, we presume exhibitors generally may not regard the rule in the light of a hardship.

The committee on color classification seems to have made the most of a difficult proposition. It would greatly facilitate matters, we think, if prizes were offered for individual specified varieties in each color class, as is done at the shows of the Chicago Horticultural Society, for instance, a method that permits of the merits of each sort being measured by those of its own kind; but it takes money to allow of this being done, and the cash balance now in the treasurer's hands precludes the present adoption of such a plan. This leads to the thought that when everything is taken into consideration—the imperative outlays that fall to the lot of the American Carnation Society, the benefits accruing from its operations, especially from its exhibitions—the annual dues seem somewhat inadequate to fully meet every burden, and permit of smooth and satisfactory working, preventing, in a degree at least, the advancement that would result were conditions other than they are, so far as finances are concerned. And as an increased membership seems slow in materializing the only alternative would appear to be an advance of the annual dues.

Taking the Toronto gathering as a whole, we believe it will, when the annual report appears, be considered fully up to the standard of those that have gone before. And as "record-breaking" is the adjectival order of the day, the Washington meeting, next year, with Fred. H. Lemon as president, and the earnest, hard work for which the local craftsmen are famed, will, we doubt not, be fully and fairly entitled to the use of that most significant and satisfactory designation.

Free Seed Discussed by the House.

The plan of Government seed distribution as reported by the Committee on Agriculture was discussed by the House of Representatives as a committee of the Whole House on Friday, January 25, 1907. The substitute paragraph regarding the character and scope of the distribution—copy of which has already appeared in these columns—was reported by the Committee on Agriculture, with the subjoined commentary thereon:

"There has been omitted from the bill the paragraph making appropriation for what is commonly known as the 'Congressional free seed distribution.' In its place there has been substituted a paragraph providing for the purchase, propagation, and testing of new, rare, and uncommon seeds, bulbs, trees, shrubs, vines, cuttings, and plants; foreign and domestic; the sum appropriated for this purpose being \$238,000, the same amount carried by the bill last year for the general distribution.

"The substitute paragraph was drawn in the office of the Secretary of Agriculture and is strongly endorsed by Secretary Wilson, who expresses the emphatic opinion that he can render the farming interests of the country vastly more valuable service by carrying out the provisions of the present bill than would be possible under the old plan. This opinion seems to be fully concurred in by the National Grange, the State granges, and practically all the farmers' organizations of the country, because with almost complete unanimity they have adopted resolutions protesting against the present plan as wasteful and useless. It can not be disputed that the original purpose of the law was to limit the distribution of seeds to the introduction of new and valuable varieties. Your committee believes the best interests of agriculture demand a return to this original purpose."

Representative Candler of Mississippi, who seems to be the most formidable champion of the old method of distribution, gave notice that he would move to strike out the substitute provision and insert the one of last year. The honorable gentleman appeared to be greatly distressed that the provision in the pending bill only provides for seeds for "experimental purposes," and that there "will be no seeds for general distribution." He argued that those Congressmen who might apply for seeds, etc., for experimental purposes would not get them; and that the present was "an effort to increase the power of the bureaucracy, which is one of the banes of the Government to-day."

Representative Clayton of Alabama was of the opinion that Congressmen ought to have a share in the distribution as "a matter of right in our representative capacity, without having to resort to the necessity of going to the head of the Department with hat in hand begging a favor for a constituent." He also advanced the far-fetched suggestion, that it might be possible "at some future time for a partisan Secretary of Agriculture to single out some district where a political friend of his has a hard fight on hand, and give him, if necessary, 400,000 packages of seeds and plants necessary to save his political life."

Another wild and imaginary evil arising before the free-seed supporters was that the "new and rare seeds," etc., might only go into the hands of the seedsmen "for experimental tests," so "that they could sell them to the rest of us on proper occasions."

Much stress was laid on an alleged "lobby" that the seedsmen had had in Washington for some time; while the farmers' interests had only been represented by the Representatives from farming districts. "God bless the farmer, and the Representatives from those districts! We are going to have these seeds," exclaimed the beneficent Clayton.

One of the choicest parts of the debate was the following:

"Mr. Lamb (Virginia): Should the amendment prevail, what will become of the provision carried in the other bill for the distribution of flower seed, and how will you and I send our pretty girls any flower seed?"

"Mr. Candler: We will not have any flower seeds to send to the pretty girls, and they will look longingly with their bright and smiling faces, anxiously desiring the flowers, but we will be compelled to say 'No' to the sweetest, noblest, and best of all God's creation, a pure, beautiful girl. (Applause.)"

"Mr. Clayton: Except a white-haired old lady, who is just as sweet and lovely."

"Mr. Candler: Yes."

One of the most sensible speeches on the subject was that of Representative Scott of Kansas, who argued that the new provision proposed to be inserted in the bill was a return to the original intent of the Government to distribute only new and valuable plants and seeds. He emphasized the fact that the seedsmen were in no way responsible for the provision now offered, which had emanated from the Department of Agriculture itself. He had no criticism to offer regarding the seedsmen sending their representatives before the Committee on Agriculture; and he did not believe there was a man on that committee whose vote was influenced in any degree by any facts brought before the committee by the seedsmen.

Representative Henry of Connecticut took the same stand as he did a year ago in opposition to the distribution of common seeds.

Mr. Zenor of Indiana made a lengthy harangue in which he said, among many other things, that he was opposed to the suggested new provision "because it is not a matter of economy and it does not lighten the burdens of the Government." He could not see that the farmers of the country were to be benefited by the proposed change. There is no provision in this bill for that. "Is it simply for the purpose of gratifying the curiosity and demonstrating the skill, of

these expert scientists that may be selected to investigate and inquire into the improvement and quality of the seeds of this country? I do not believe it is a proper policy."

Tuesday, January 29, the House in committee of the whole voted to continue the free distribution of garden and flower seeds along old lines, and not according to the methods recommended by the Agricultural Committee in the Appropriation bill. The amendment appropriating \$238,000 for the free distribution of ordinary seeds was adopted, as had been the practice for a number of years.

Friday's debate on the free-seed question occupies some 21 pages of the "Congressional Record." It would, we think, be a difficult task to find better examples of obtuseness, of random conclusions, and hastily arrived at opinions than are presented by the speeches of the members opposing the reform plan of seed distribution as submitted by the Department of Agriculture.

Society of American Florists and Ornamental Horticulturists.

S. A. F. O. H. State Vice-Presidents.

President William J. Stewart of the Society of American Florists and Ornamental Horticulturists announces the following appointments as vice-presidents for 1907.

Alabama, E. A. Beaven; Colorado, J. A. Valentine; Connecticut, Peter Zuger; District of Columbia, W. H. Ernest; Florida, C. D. Mills; Illinois, North, George Asmus; Illinois, South, F. L. Washburn; Indiana, J. A. Evans; Iowa, W. A. Harkett; Kansas, Oscar Roebr; Kentucky, A. R. Banner; Louisiana, M. Cook; Maryland, Wm. Weber; Massachusetts, East, E. L. Peirce; Michigan, W. E. F. Weber; Minnesota, John Monson; Mississippi, S. W. Crowell; Missouri, East, W. C. Young; Missouri, West, George M. Kellogg; Nebraska, Geo. E. Swoboda; New Hampshire, Aug. Gaedcke; New Jersey, C. H. Totty; New York, East, Chas. Lenker; New York, West, C. H. Vick; North Carolina, J. Van Lindley; Ohio, South, J. B. Heiss; Ohio North, Geo. Bayer; Pennsylvania, East, P. J. Lynch; South Carolina, C. A. Moss; South Dakota, C. E. Newbury; Tennessee, C. L. Baum; Virginia, H. Brown; West Virginia, C. P. Dudley; Wisconsin, Fred. Holton; Ontario, J. H. Dunlop; Washington, Amy K. Luffman. P. J. HAUSWIRTH, Secretary.

American Rose Society.

The executive committee of the American Rose Society had a well attended meeting on Wednesday evening, January 23, at the Hotel Martinique, New York City. The interest manifested in the coming show from various parts of the country was most encouraging.

It was decided that the opening meeting of the forthcoming Washington convention should be held on March 13, at 8 p. m., the second meeting at 3 o'clock the following afternoon.

The special prize schedule which we have to offer is larger than ever before gathered together, and several more premiums will be added to the list, the determination being to make this a very successful exhibition.

A committee was appointed to wait on President Roosevelt and invite his presence at the show as may suit his convenience.

The schedule of the society will be issued within a very few days.

The following is a list of the special premiums to date:

Special Prizes.

Fifty American Beauty rose, the "Executive Committee's Prizes"—\$50, \$25.

The Lord & Burnham Trophy, valued at \$250, presented by the Lord & Burnham Company, will be awarded in conjunction with the first prize for fifty American Beauty roses in this class, and will become the property of the competitor winning it twice, consecutively or otherwise.

(Won once by Waban Rose Conservatories, Natick, Mass., and by Geo. Barton, Chestnut Hill, Pa.)

Best display of roses all varieties.

The Dorrance challenge cup, value \$250, offered by Benjamin Dorrance; the winner to hold the cup a year and on relinquishing it to the society for another competition, at the end of that period to receive a silver shield suitably engraved, as a permanent record of his having held the cup.

Fifty Golden Gate, silver cup, value \$50, offered by Geo. H. Cook, Washington, D. C.

Fifty Wellesley, silver cup, value \$50, offered by John H. Taylor, Bayside, L. I., N. Y.

Best exhibit of Rambler roses in pots, not less than 12 plants, silver cup, value \$50, offered by Robert Simpson, Clifton, N. J.

Fifty Mrs. Abel Chatenay, silver cup, value \$50, offered by Trendly & Schenck, New York City.

Fifty Richmond, silver cup, value \$25, offered by Henry F. Mitchell Company, Philadelphia, Pa.

Fifty Killarney, \$25 in gold, offered by Dingee & Conard Company, West Grove, Pa.

Fifty Liberty, \$25, offered by W. H. Elliott, Brighton, Mass.

Fifty Bridesmaid, silver cup, value \$25, offered by S. S. Pennock-Meehan Company, Philadelphia, Pa.

Prize for the vase of roses showing the most artistic arrangement in the exhibition, \$25, offered by Welch Brothers, Boston, Mass.

Fifty Richmond, \$25 in gold, offered by E. G. Hill & Company, Richmond, Ind.

Best fifty blooms of any variety of American origin now in commerce, a silver cup, value \$25, offered by Alexander Montgomery, Natick, Mass.

For exhibition American seedling not yet introduced, silver cup, value \$25, offered by H. O. May, Summit, N. J.

Best collection hybrid Wichurajana roses, silver cup,

value \$25, offered by Frank R. Pierson, Tarrytown, N. Y.

Wanted: five Bride, \$12, offered by L. P. Coddington, Murray Hill, N. Y.

For six or more blooms of any new rose never before exhibited, \$10 in cash, offered by Mrs. S. C. Briggs, Washington, D. C.

For best foliage rose suitable for village dooryards, \$10 in cash, offered by Benjamin Hammond, Fishkill Landing, N. Y.

Best show of Ivory, \$10, offered by Benjamin Hammond, Fishkill Landing, N. Y.

Twenty-five General MacArthur, \$15 prize, offered by Edward Hatch, 22 Devonshire street, Boston, Mass.

For the prettiest exhibit to be decided by three ladies visiting the Washington show, a prize of \$5 gold piece, offered by Miss M. I. Hammond, Fishkill-on-Hudson, N. Y.

Special prize for American Beauty rose, \$100 in gold is offered by A. Gude & Bro., Washington, D. C., for one hundred American Beauty, but there must not be less than five entries for this prize.

Society's Medals for Novelties.

Gold medal for the best new rose not yet disseminated, whether of domestic or foreign origin. Exhibits to be judged by the official scale of the American Rose Society, and no gold medal to be awarded to any rose scoring less than 95 points.

Silver medal is offered at the same time and under the same conditions for a novelty scoring not less than 85 points.

It is further ordered that the complete scores of all entries in the competition be filed with the secretary of the American Rose Society before the award of any medal is confirmed. No duplicate medals will be awarded. It is understood that though the award of the gold or silver medal may be made to the same variety from one exhibitor exhibited in different centers, only one medal will be delivered to the exhibitor.

The executive committee of the American Rose Society reserves to itself the right of selection of the judges who shall pass upon the exhibits in the competition for these medals.

BENJAMIN HAMMOND, Secretary.

Fishkill-on-Hudson, N. Y.

The Toronto Banquet.

The banquet, which was held in the dining room of the Queen's hotel on Thursday evening, was participated in by about two hundred people, and was a most enjoyable affair. The decorations were beautifully arranged, and consisted chiefly of carnations contributed by F. R. Pierson Co. and arranged by James I. Donlan. At one end of the large room the Union Jack and the Stars and Stripes were displayed together. The menu offered was as follows:

- | | | | |
|----------------------|--|----------|----------------|
| Olives | Blue Points, Deep Shell | Radishes | Salted Almonds |
| | Chicken Gumbo | | |
| | Fillet of Halibut, Sauce Tartare | | |
| | Pommes Parisienne | | |
| | Tenderloin of Beef Larded, aux Champignons | | |
| | Creamed Spinach | | |
| | Young Turkey, with Cranberry Sauce | | |
| Mashed Potatoes | Cauliflower Cream Sauce | | |
| | Punch a la Romaine | | |
| | Rocky Mountain Grosse Pique, an Cresson | | |
| | English Plum Pudding, Hard & Brandy Sauce | | |
| Neapolitan Ice Cream | Assorted Fancy Cakes | | |
| Walnuts | Fruit | Almonds | Coffee |
| | | | Dehesa Raisins |

The dinner was admirably served. When all the good things had been done full justice to the president of the society, John H. Dunlop, proposed the toast of "The King and the President," and the Yankees and the Canadians joined together in the singing of "God Save the King" and "My Country, 'Tis of Thee." The Blight Male Quartette then rendered "The Old Brigade," in a very acceptable manner.

The toast "Canada and the United States" was proposed by F. R. Pierson and responded to by Mr. Algie and C. W. Ward. Mr. Pierson, in his remarks said that Boston, Mass., leads all the United States in hospitality, he had always thought, but he had now become convinced that Toronto equals Boston in that respect. He hoped that the time would come when the imaginary boundary line between the two countries would be burned away by friendship, and he was glad to know that they have no Governor Swettenham in Canada. He trusted that our Canadian brothers would give the American Carnation Society their full support at its meeting in Washington next year.

C. W. Ward spoke as a Canadian citizen for Canada, and said in part, "We Canadian citizens meet you half way in everything, and we expect that you will do the same." He was not the only American citizen that had been absorbed, as many of them come over here and seek the beautiful girls that Gammage spoke about yesterday. He also said that you Yankees might come to Canada and learn to obey the laws of your country.

Mr. Ward's remarks were followed by a song, "The Homeland," beautifully rendered by W. J. Lawrence, after which Mr. Algie, in the rôle of an American citizen, spoke on the United States. He said "I visited Massachusetts once and gathered a pink Enchantress, who is now the mother of my children, and if all mothers were like her there would be cobwebs in our divorce courts. It was thirty-five years ago that this pink Enchantress was gathered in Boston, and as a result there are 'six brats in two varieties.' I do not feel like a foreigner when under the Union Jack, as our blood is the same, the climate is the same; in fact, we are very much like the two ladies that were going along the street, and a colored gentleman, on being asked if the two ladies were not very much alike, answered, 'Yes, especially the one on this side.' When Canada gives a President for the United States, like the Scotch people did when they gave a King to England, the Yankees will find that the Canadians will have a great deal to do with the Government, just the same as the Scotch are at

present having a great deal to do with the Government of England." Mr. Algie concluded his remarks by reciting one of Kipling's poems, "The Waler Carrier," which was greatly applauded.

The toast "Mayor and Corporation" was proposed by R. J. Score and responded to by Alderman Graham of Toronto; following which the male quartette rendered, "There was a Boy," so well that they had to respond to an encore.

Mr. Duggan proposed the toast, "The Society of American Florists and the Canadian Horticultural Society," and called upon W. J. Stewart, Thomas Manton and P. J. Hauswirth to respond. Mr. Stewart, president of the S. A. F., replied in a very able manner, followed by Secretary Hauswirth, who dwelt at length on the proposed national show to be held in Chicago in 1908, and hoped that the support of every one in the trade would be willingly accorded thereto.

Thomas Manton made one of the best speeches of the evening, appealing in an able manner to his brothers in the trade to get together oftener, to never forget that we are all brothers, and recommended that an arrangement be made whereby a meeting of the Society of American Florists should be held at Niagara Falls, or in close proximity thereto, and that the Canadian florists should also meet near the border at the same time, so that the two societies could come together and get in closer touch with each other.

"The American Carnation Society" was toasted by Mr. Gammage and responded to by president-elect Fred H. Lemon, E. G. Gillett and J. A. Valentine, following which the song "Scotland" was rendered by Mrs. Edwards, who accompanied herself on the mandolin.

At this stage of the proceedings W. N. Rudd presented the cups, prize money and medals won at the exhibition to the successful competitors, each recipient acknowledging the same with a few brief words.

Mr. Bennett of Montreal proposed the toast "The Allied Societies," which was responded to by W. F. Kasting, H. R. Frankland, president of the Toronto Horticultural Society, and John Chambers, superintendent of parks. Mr. Kasting made a special plea for the national flower show, and advised everyone to subscribe to the guarantee fund.

"The Horticultural Press" was proposed by H. M. Altick, and replied to by J. A. Shaw, and H. B. Cowan of the Canadian Florist. Mr. Altick drew attention to the serious illness of Wm. Scott of Buffalo, who, he said, had done a great deal of work for the field in connection with the horticultural press.

H. Simmers proposed "The Ladies," and called upon Mr. Marquisee to respond, which that gentleman did in his usual efficient manner.

The proceedings closed with the singing of "Auld Lang Syne."

The banquet committee was composed of R. J. Score, chairman, and Messrs. W. G. Rook, H. Simmers, H. Dillemut, T. W. Duggan, W. Munton, T. Manton, R. W. King, J. Simmons, D. J. Sinclair, E. Dale, J. R. Milne, E. F. Collins, John Chambers, A. Houle, and H. R. Frankland. W. J. Lawrence was chairman of the music committee.

Notes.

A. M. Tyrell of Calgary, Alberta, Canada, reached Toronto on the evening of the banquet, his train being eighteen hours late.

An effort is being made to create a life membership in The American Carnation Society, and seven gentlemen have already assented to become life members.

Parentage of Winsor Carnation.

Editor Florists' Exchange:

W. H. Waite, in your issue of January 26, takes exception to our remarks concerning the parentage of the new carnation Winsor. That part of our article on this grand carnation is as near as we remember an exact recital of the facts as given by Mr. Murray, the originator. We, of course, have only Mr. Murray's words for it, and these to us are all sufficient. Regarding the possibilities of pollenization, there is much yet to be learned. I for one am ignorant of any authority that can prove the impossibility of mixing pollen. I am glad however that Mr. Waite has brought up this most interesting subject, and hope it will be thoroughly discussed in your columns. Anyhow, get the above carnation to win, sir.

J. IVERA DONLAN.

Editor Florists' Exchange:

I note Mr. Waite's comments in last week's issue regarding Mr. Donlan's remarks on the parentage of carnation Winsor. For the information of all interested in this beautiful carnation, I would state that the originator, Peter Murray, informs me that he obtained the variety five years ago. Mrs. Lawson was used as a seed parent, and the pollen was taken from both Daybreak and Albertini, with the result that he had some fifteen plants, most of which were different. Mr. Murray adds: "I had no idea of keeping them, as there was no convenience for handling them in a small place such as mine, but I liked the color of Winsor and kept the variety, without any idea as to its future development."

I hope this information will set at rest the minds of your readers regarding the parentage of this charming pink carnation, which is meeting with so much favor wherever exhibited.

FRANK R. PIERSON.

Tarrytown, N. Y.

AMERICAN CARNATION SOCIETY

Continuation of Proceedings
of the Toronto Meeting

In last week's issue we presented a very complete summary of the proceedings of the sixteenth annual convention of The American Carnation Society, held at Toronto, Ont. We now subjoin a continuation of the report, giving in full the discussions on the various subjects that came up for consideration by the organization.

The exhibition as a whole was not so extensive perhaps as the one at Boston a year ago; at the same time, it was a most interesting one. Many of the flowers had evidently suffered in transit, as was evidenced on the second day of the exhibition by their rather sleepy appearance. A few there were that stood the ordeal well, and seemingly were as fresh on the second day as on the first. Welcome, by Dailedouze Brothers, and Winsor, by F. R. Pierson Co., both looked exceedingly well up to the finish.

It would seem to us that shipping the flowers at the last moment is not by any means the best way to have them appear fresh during the time they are staged, judging from the fact that some of those lasting the best through the exhibition were cut on Sunday and shipped on the Monday evening previous to the show. The flowers that were exhibited from Boston, which, as we said in our last report, did not arrive until the second day of the exhibition, were staged that morning, and appeared remarkably fresh, showing up to good advantage considering the long time they had been on the road.

The J. H. Dunlop prize of \$10 in gold for the best vase of fifty white blooms, distinct from other varieties, which we stated in last week's report was won by Aristocrat, shown by Richard Witterstaetter, was captured by that gentleman with a white seedling, Number 1009.

There was a general feeling among the visitors that the annual convention should be extended to three days instead of two. Some of the reasons for this put forth seem to warrant those in charge in taking up the matter and giving it due consideration. Take the convention last week, for instance. Most of the exhibitors arrived about mid-day on Tuesday. The flowers were staged in a hurry, and the room cleared by 2 p. m., in order that the judges could go to work; it was 5 p. m. before visitors and exhibitors were again admitted into the exhibition hall. At 7:30 p. m. the first session of the convention opened, and, of course, everybody wanted to be on hand to listen to the business proceedings. This session lasted until almost 11 p. m. On the following morning a business session was held at 10:30, lasting until nearly 1 p. m. Another session opened at 2 p. m., closing at 5 p. m., at which time the exhibition was dismantled and everybody made hurried preparations to attend the banquet, which was called for 7:30 p. m. It will be seen from this program that from the time the judges had finished their work until the closing of the exhibition but twenty-four hours had elapsed.

Now, we would ask, "Do the gentlemen who have come from a distance to exhibit flowers, to see the flowers of other exhibitors and to attend the sessions of the Carnation Society, have time to look over the various exhibits?" In fact, we know positively that many visitors from afar went away from Toronto without having had time to see many of the carnations on exhibition there. If it were possible to extend the meeting one day longer—not to make any more business sessions, but merely to give an additional twenty-four hours so that everybody could go into the exhibition hall and have time for a careful examination of the varieties exhibited—we think it would be a good thing for the society, and particularly beneficial to those who go to the convention for the sole purpose of seeing new varieties so as to be guided in their purchases.

Report of Committee on Rules for Judging

The report of this committee showed that the gentlemen appointed at the Boston meeting to consider new rules for judging carnations had failed to agree, and they desired to be discharged.

Mr. Wilson: I would like to hear from some of the members of that committee.

Mr. Valentine: I do not think the committee have anything further to say except that in regard to these matters we are so diverse—that we cannot really agree on anything. Nothing suggested itself to us as a really practicable way to carry out the ideas of the society expressed in the resolution which they passed a year ago, that certificates should not be granted unless the plants had been examined by a committee of this society in the greenhouses where they grew. We were not able to devise any method we could all agree upon for making an examination, and that is why we ask to be discharged.

Mr. Rudd: I take a great deal of pride in this society. I do not believe any organization has taken up a flower and pushed it so successfully as this society has done, and I think we can all congratulate ourselves on what it has accomplished. Before, however, we depart from our established custom of years and take up an entirely new method of doing business, I think we want to consider the matter very carefully. If we were operating in Canada

alone or in one of the States, then it might be possible for us to make arrangements to visit and examine the plants in their growing state; but we are attempting to cover the whole of Canada and the United States of America, and that is an utterly impossible and impracticable proposition. This visiting proposition is not going to be a panacea and cure-all which some people think it will be for evils which I am not prepared to admit do exist to any great extent. The whole trouble, I take it, was started by the unfortunate Fiancée. Now, Fiancée was growing within 40 miles of Chicago for three years, and you could not have got a committee, a visiting committee, that would have dared to throw that variety down. In my own mind I am positive that your visiting committee would not have cured that trouble.

There is another point, the advancement of the carnation. I do not think this society exists especially for the advancement of people who want to buy some noted cuttings, and I want to say to you gentlemen that although Fiancée turned out to be a terrific failure, I think the exploiting of that carnation, the general advertising it created, and the interest awakened among the buying public, did more good for the carnation than what few dollars were lost in buying something that did not turn out profitable. Let well enough alone, and recognize that your certificate is nothing but an opinion of the quality of the flower shown at your exhibition, and that the commercial value of carnations must be determined in other ways. It is beyond the ability of this society to attempt to say whether a certain carnation shall prove a profitable investment to the buyer or not. (Applause.)

Mr. Fendlay offered the suggestion that about 25 plants should be distributed among some four or five reliable growers to be reported on by them two or three times a year, but the chairman pointed out that that had already been tried to a certain extent.

Louis Wittbold

Essayist on "Mechanical Watering" A. C. S.

(See Page 117, Issue
Jan. 26).

Mr. Harvey: I agree thoroughly with Mr. Rudd. I do not see how a certificate can vouch for anything except the quality of the carnation as it appears on the table. We all know a great many varieties have failed us in different parts of the country, but these failures may be due to conditions which do not exist in the establishment where the varieties were first grown. There is no doubt we have all been disappointed in buying such sorts, but it seems to me that the people who cannot afford to run the risk of failures of new introductions had better wait a few years until the varieties are established as a money-making proposition.

Mr. Nicholson: I believe in letting well enough alone. I do not see very well how you can improve on the present method. Carnations grow differently in different localities, and what we obtain might do well or might do poorly, but still the original might turn out very fine. I for one should be in favor of letting the method stand just as it is.

Mr. Gammage: I move that the report be received and the committee discharged as requested. Mr. Rudd has thoroughly expressed the general opinion of the members, and his ideas are so practical that it would be time wasted to discuss the matter any further. Mr. Asmus seconded the motion, which was carried.

(Color Classification.)

Mr. Rudd brought in the report of the committee on color classification. The committee recommended that the following classes of color be used in the society's schedules:

Flesh pink, being those shades of pink of a flesh or salmon type. Light pink, being those lighter shades of pink verging on true pink and light Lawson. Dark pink, darker than Lawson and also including cerise not dark enough to be classed as red. Red or crimson, including all shades of red that cannot be classed as scarlet or cardinal. Scarlet or cardinal, to include those shades now commonly known in the trade as scarlet. Maroon to cover those shades now classed as crimson, the committee considering that maroon is more properly descriptive of the color than crimson. Any other color, to include any color decidedly distinct from the other colors specified. Yellow and variegated, colors to stand as now classified.

Mr. Dailedouze: I cannot quite see where that maroon comes in. I thought that maroon and crimson were two different colors.

Mr. Rudd: They are practically all crimson, so-called. I would say that I think it is generally considered that the Jack rose is a pretty close approach to the crimson color, and that all of those carnations, or nearly all of them, that we have been calling crimson are nearer to what is called maroon.

Mr. Dailedouze: How does that stand with the Harvard color; does it stand with crimson or maroon?

Mr. Nicholson: The true Harvard color is crimson, and I do not see where you are going to put in maroon. I am decidedly opposed to adopting maroon instead of crimson.

A Delegate: I would like to ask whether "any other color" would take in Toreador, purples and those yellows? Yellows are not specified there.

Mr. Dailedouze: What was this committee appointed for?

The Secretary: To decide the point frequently raised about the class of "any other color," especially in the case of different shades of pink.

Mr. Rudd: I think the committee has rather amplified the instructions. The matter came up originally on the question as to "any other color," from there it drifted into a question of classification of pink, and the committee was appointed to consider that matter and present suggestions at this meeting. The committee found in the course of its discussion that the dividing line between the pinks and the reds was a question of dispute, and they therefore went a little further and considered the reds, and from there proceeded to a consideration of the so-called crimson. (Laughter.) I think any artist will tell you that the word crimson is a misnomer for carnations selling under that name. A true crimson approaches to the Jack rose, and what we are selling as crimson are nearer to maroon.

Mr. Dailedouze: I do not consider Mrs. Lawson is a pink. It seems to me it is a cerise. If you struck out the yellow class instead, there probably would not be so much in it.

Mr. Rudd: We do not intend to strike out any classes now existing. The committee considered they were properly covered and described under the present classification and they submit these recommendations simply as a solution of the colors mentioned. The yellows and variegated will still be as they have always been.

Mr. Wilson: The members of the committee should be experts on color, and I would like to ask Mr. Rudd what the color of his necktie is. (Laughter.) (The tie was a very decidedly scarlet hue.)

Mr. Rudd: I think it is green. (Great laughter.) It was duly moved and seconded that the report be accepted.

Mr. Nicholson moved and Mr. Dailedouze seconded an amendment that the word "maroon" be stricken out.

Mr. Weber: Our specification in regard to color now brings the blotched varieties in competition with the striped sorts. It seems to me it is not at all fair to put them in the same class. Prosperity is not a type to be put in competition with one of the striped class; I think it ought to have a separate class.

Secretary Herr: In getting up the schedule all these varieties of blotched types are supposed to go in with "any other color." I think there has only been one instance where Prosperity has been classed as a striped variety.

Mr. Weber: It seems to me that the blotched varieties are original enough in color not to be classed with what are termed "freaks." We put in purples and odd shades in that latter class. I would not class blotched varieties of the order of Prosperity a freak class.

Mr. Rudd: It seems to me this is not a matter for discussion here but is rather a matter for the directors to take up. If the funds in hand will warrant it, undoubtedly these gentlemen will make a striped class and blotched class.

Mr. Lemon: As a member of the committee who helped to frame this report I would explain that our aim was simplicity. There are hundreds of varying shades of color in the carnation, and it is impossible absolutely to make a class for each one of these varying shades. The simplest way, the way which would give a good sub-division, was the aim of the committee. The idea was to include these blotched varieties in "any other color" and take them from the freak class into a good class of carnations, carnations with some commercial value.

The amendment was lost and the report adopted.

Report of the Committee on Nomenclature.

Mr. Nicholson moved that this report be accepted and placed on record, but Mr. Rudd asked for some more information with regard to the elimination of names registered previous to 1896.

Secretary Herr: We have a pretty fair record of all the names that were ever given to carnations, something like fifteen or sixteen hundred, and in looking over the reports back to 1896 I find there is nothing in commerce to-day that has been registered previous to that time. I thought the elimination of such names would be a great help, as in place of looking over that list we could have a smaller practical working list.

Mr. Rudd: It seems to me that you are taking chances of a mix-up. It is a very difficult thing to say what varieties are completely out of commerce. I shall be inclined to oppose the elimination of any name that has been once borne by a carnation. It seems to be there are plenty of good names without duplicating previous ones. The suggestion in regard to requiring registration before allowing parties to compete in our exhibitions is, I think, most excellent.

Mr. Stewart: I see by the records that medals and awards of value have been given to carnations under number. That seems to me a little irregular. Speaking from memory, I think in the case of the S. A. F. medals the requirement originally was that these medals should not be awarded until the variety had been given a name by which it would be permanently known.

Mr. Valentine: With regard to what Mr. Stewart has just stated I would like to say that if any of us have transgressed in that matter it has been through ignorance. If there is any condition attached to the medals of the S. A. F., I think that that fact ought to be set forth in the schedule, so that the judges would be advised of the fact.

Mr. Stewart: It is a matter of memory, but I think it would be a wise provision. Probably most of the exhibitors would agree to that when they come to think it over.

Secretary Herr: That was the idea in making this suggestion. It was made last year, but no action resulted. In order to get the matter in proper shape you will require to have a motion making that a rule.

Mr. Asmus: I move that that part of the suggestion of the committee be adopted by the society. It is that no carnation shall be eligible for exhibition at the American Carnation Society's meetings unless properly registered with the society either previous to the meeting or at the meeting, by name. Mr. Herr seconded.

Mr. Witterstaetter: Do I understand that a carnation not named can never be entered at this exhibition in the competitive classes?

Secretary Herr: That is the idea.

Mr. Lemon: I think it is entirely wrong that we must name the carnation before entering it. If a carnation entered for a certificate fails, the name cannot be used on another variety, and we are then in the position of having a carnation which we will not introduce and send out. The name is registered of a carnation which is not in commerce. It might be as well to permit an exhibitor to enter a variety under number until a certificate is secured, and the society could then withhold the certificate until the name is registered.

Mr. Valentine: I would like to ask for a little information. It strikes me that the intention of that motion is that no carnation can be entered in competition, not that it cannot apply for a certificate, under number. An application for a certificate is not a competition.

Secretary Herr: That is the idea.

Mr. Witterstaetter: The way I judge my carnations is by leaving the judgment to others. We have entered ours under number, as we do not like to name our carnations unless they are going to be articles of commerce. I believe it is going to complicate matters in having names registered that we may never use. I believe if we allow these numbers to come in in the competitive class we should withhold the prizes awarded them until the varieties are named. The motion was put and carried.

The members then discussed the next recommendation that all names registered before 1896 be eliminated from the working list of the society.

Mr. Weber: I believe we are treading on dangerous ground, and the list, I think, should stand. I am sure there are many varieties now in cultivation that are not offered regularly in our trade papers or catalogues. I know of one instance. We have Buttercup still growing on our place for hybridizing purposes. That variety has been in commerce for more than 20 years. I move that that clause be stricken out. Mr. Asmus seconded and the motion was carried.

Registration of Welcome.

Discussing the suggestion that the registration of the name Welcome, a pink sport of Mrs. Lawson, be allowed, Mr. Gingrich considered that a great many people would not know to what class this sport belonged, and he considered that if they simply called it a flesh Lawson, according to the color classification, it would complicate matters less. Mr. Wilson disagreed. He thought they had too many Lawsons already—Pink Lawson, Striped Lawson and almost every other shade of Lawson. Mr. Weber considered the subject was a proper one for the Nomenclature Committee to take up. Personally, he considered the sport eligible to be given a special name. The motion of Mr. Hauswirth, that Welcome would be accepted

as a sport from Lawson, was duly seconded and carried.

Mr. Gammage moved the adoption of the committee's report as amended. Seconded and carried.

Closing Session.

The president called the meeting to order at 2:45 p. m. The selection of the next place of meeting coming up for consideration, Mr. Ward asked that the rules be suspended and the matter left open for discussion. This was assented to.

Discussion on Next Meeting Place.

Mr. Ward: It is not very often that I take any particular interest in where the society's meeting is held, but this time I feel that if we do not go to Washington we are going to make such a cardinal error that I ought to speak my mind on the subject. I am a member of the American Breeders' Association which has just met at Columbus, O. That association is composed of 1,000 members, comprising the best scientific people throughout the entire world. It has 53 committees that are working upon different problems of breeding, those committees covering all grains, fruits and flowers, all domestic animals, game and pet birds, and all sorts of pet animals. The Honorable James Wilson is president and W. M. Hays, his assistant, is secretary and treasurer. At our last meeting I told Mr. Hays that the Carnation Society's next meeting would undoubtedly be in Washington, and if the society goes to Washington, the breeders' meeting would undoubtedly be fixed at

likelihood will be there and will probably meet in the East next year. Now, if the Carnation Society meets in the East, where are the Western fellows going to?

Mr. Ward: To the East.

Mr. Dornor: I would ask Mr. Ward where the Breeders' Association holds its next meeting?

Mr. Ward: It is fixed for Washington, and the date is named by the council, but will not be acted upon until after the Carnation Society fixes its meeting and date.

Mr. Dornor: The probabilities are we will have three meetings in the East if you vote for Washington this year.

Mr. Ward: The East is a pretty good place to meet in. As far as exhibitions are concerned we will match at Washington whatever Indianapolis can do, and I am sure in point of opportunities of gaining knowledge we will go a great deal better. I have been connected with the Breeders' Association since its organization and from things learned there I have been able to accomplish results possibly tens years earlier than if I had not been connected with that association, which makes me anxious to give my brother carnationists the same opportunity to learn these things.

Mr. Patten: We want to go where we can learn something; a good time doesn't count for everything, and I hope we will go to Washington, where we shall be able to get the benefit of these practical, scientific

Grower, J. A. Peterson, Cincinnati, O.
(Shown at A. C. S. Meeting, Toronto.)

Begonia Agatha

the same time, and a program arranged to give the Carnation Society's members the greatest amount of information and instruction in regard to breeding flowers. Now, if we go to Washington and do not have a paper read, but merely transact routine business and then adjourn and devote our time to attending the sessions of the plant section of the American Breeder's Association, we shall learn more about carnations in those three days than among ourselves in twenty years. I have heard one argument against Washington—that we have no membership there. Now, gentlemen, that has always been urged heretofore as a strong argument in favor of going to a place. Our object is a missionary one, and the fact that we have not any members in Washington is the strongest kind of argument why we should go there and get some. (Applause.) I have a great admiration for the Western florists, fully as much as I have for the eastern or Washington florists, but I will say that the movement toward Indianapolis, in view of the fact that we have been twice there, is not actuated in the best interests of the Carnation Society, but is a purely selfish movement on the part of the Indianapolis and Western people, although I hate to say so. (Laughter.) The American Breeders' Association will meet at Washington under the strongest friendly feeling on the part of President Roosevelt and without any doubt the President will have some connection with our meeting. We shall have all the principal men connected with the agricultural department and with all the scientific departments with which the Government is in connection, and I can assure you that not only will you gain knowledge there, but you will advertise the carnation ten times over. These particular conditions make it very desirable to go to Washington, and will not happen again in the next ten years for the Breeders' Association moves all over the United States and sometimes into foreign countries for its meetings. (Applause.)

Mr. Dornor: I cannot see the selfishness of the Western people in inviting you to Indianapolis. You were there before, in 1902, and I am sure you will admit that he had a good meeting. Probably it is right that Washington should have the meeting, but not a representative is here to urge the claims of that city. We have a good delegation from the State of Indiana and we assure you that if you vote for Indianapolis as the next meeting place, we will guarantee you a good time and a good exhibition. (Applause.)

Mr. Fendley: The S. A. F. meets in Philadelphia in the Summer. The American Rose Society in all

men, who are working along the lines we want to know more about.

Mr. Stewart: Although I strongly believe in Washington as the city where this society should go next year, yet I do not quite agree with Mr. Ward that there is any selfish motive on the part of the Western people. I think Indianapolis in inviting us a third time shows magnificent generosity, and I believe its delegates will go one better and waive their claims in favor of Washington and so make this vote unanimous. (Applause.)

Mr. Ward: I did not mean to cast any aspersion upon Indianapolis. I recognize the difference between selfishness and selfish generosity (Laughter); and I spoke of Indianapolis in the latter respect. It is not to their discredit to invite us there at all, but the point I wish to emphasize is, that if they persist in taking us to Indianapolis when manifestly we ought to go to Washington, then, possibly, they may be guilty of selfishness. (Laughter.)

Mr. Valentine: I really cannot see any claims that Washington has on this society. Until recently Washington had not a single member in this society, and the fact that they have not a representative here seems to me to indicate a great lack of enthusiasm. Mr. Ward's idea is that we are going to boost the carnation business in that locality, but I think we ought to go where there are consistent and energetic boosters of the carnation year in and year out, and I do not know where you will find more of them than in Indiana. If there is anything of interest in Washington to justify us in going there in order to get the benefit spoken of, there is certainly sufficient inducement to take any man there independently of the carnation meeting. (Applause.)

Mr. Rudd: I see several gentlemen in their remarks have assumed it is the manifest duty of this society to go to Washington, and several others think it is the manifest duty to go to Indianapolis. Now, whichever side gets the most votes will be evidence to me that it is the manifest duty of the society to go there. (Laughter.) I move the discussion close. Seconded and carried.

Mr. Dornor and Mr. Weber were appointed tellers. The voting resulted in Washington 46, Indianapolis 34. The result was received with applause. Mr. Lemon, speaking for the minority, heartily endorsed the action of the majority and promised support to the convention at Washington. At the suggestion of a delegate three hearty cheers were given in recognition of Indianapolis's generosity.

American Carnations Abroad.

The following papers were read by Mr. Simmers: "American Carnations and their Prospects in Europe," by C. Engelmann; "American Carnations in England," by A. F. Dutton; "American Carnations in Stacey's," appeared in last week's issue.

All of these papers, with the exception of Mr. Stacey's appeared in last week's issue.

Speaking in reference to Mr. Dutton's paper, Mr. Ward stated that his firm had sent Mr. Dutton at times shipments of from five to ten thousand cuttings of carnations, and had found that, taking all in all, from the first to the last of February was the best time for shipping to England. He considered they had evolved in America a type of carnation better than any other on the face of the globe, for Winter blooming. They had eliminated the English type of border carnation and did not wish to get it into their stock. They had ceased importing English varieties ten years ago, but on the representation of Mr. Dutton were importing a few plants of Britannia and other varieties; but the speaker's opinion was, that if the English growers confine themselves for Winter carnations to American blood, and if the American hybridizers kept away from the English border carnation, the varieties produced would bloom very much better in the Winter time.

Replying to a question from Mr. Patten as to how

took half a day to do it. He used it as an accessory to the hose rather than to supplant it. It did the watering very evenly and assisted also in keeping down red spider, consequently it was not necessary to do much syringing. He thought nobody had got less rust in their houses than he had, because with this system he could do his watering very early in the morning in from 15 to 20 minutes and that gave a full day to dry the plants off, whereas with the hose it was necessary to cut off the blooms in the early morning and by the time that was done it would be 9 or 10 o'clock, and then the ordinary watering or syringing would probably take up till noon. He found his plants were very much cleaner than before.

During the temporary absence of the chairman, Mr. Lemon took the chair.

A Protest.

Under the subject of new business the secretary read letters from the Toronto Gardeners and Florists' Association with reference to the protest made by F. R. Pierson in relation to the carnation Excelsior, which was a variety that had been disseminated, and he wished the American Carnation Society to settle the matter.

Mr. Ward: If it could not be exhibited by other growers I should hold it was an undissemated variety, although it would seem to me that the members of the local society ought to be able to settle such matters among themselves. As I understand

a dozen sports of Enchantress. Mr. Schroeder, Detroit, Mich., had one, and perhaps these others may be just the same. I had a sport, I know, and threw it away. It was not as good, as Mr. Schroeder's; but one of my neighbors had a sport quite as good as Mr. Schroeder's. If it is different, give it a separate name; but do not give it the name of Rose-Pink Enchantress, as that is already on the market.

Mr. Ward: I have had this rose-pink Enchantress almost from the time we grew Enchantress. We have cultivated a few for hybridizing, and we have no less than six different sports ranging from the type of Helen Gould through various shades of rose-pink color. You could take and bunch the whole lot together and there would be no greater difference in the whole set of different sports than there would be in a lot of Scott or Lawson grown and picked at different stages of development. I do not believe, when you come to these dark pink sports of Enchantress, that there is enough difference in habit and profusion of bloom, and there is certainly not enough difference in color for New York dealers to pay any attention to the different rose-pink sports of Enchantress. I do not believe they are entitled to different names.

It was moved by Mr. Weber and duly seconded that the matter be laid on the table. Carried.

General View of American Carnation Society's Exhibition at Toronto, Ont., January 23-24, 1907

his firm got plants into Germany, Mr. Ward stated that the plants were always shipped to England, thence to Germany, as both France and Germany had very stringent regulations to guard against the introduction of San Jose scale. In dealing with customers from Germany, Denmark or Holland it is necessary to have an agent in England through whom to pass the goods. These English nurseries made a charge for receiving, packing and shipping of 10 per cent., which the purchaser on the other side had to stand.

Mr. Fendley stated that Mr. Riise took carnations from the United States when he went to the old country and had been making quite a success of the American carnation, it being such a novelty over there. In Denmark they had rather a peculiar house, the roof on the north side having double glass so that it does not take quite so much heat, and he imagined that this somewhat darkened the house, at least on one side. He knew Mr. Riise was a very successful grower while in America and his chrysanthemums always took good prizes at the Chicago shows.

Mr. Simmers read a paper on "Mechanical Watering," by Mr. Louis Wittbold, Chicago. (See last week's issue, page 117.)

Mr. Fendley stated that within the past year he had made a trial of the Wittbold system of mechanical watering and had found it a great help from early Spring until the dark weather comes on in the Fall, because during that time he was so busy that watering was sometimes neglected when it

the situation Excelsior is a sport of Enchantress. I think that when we have sports of Enchantress, instead of naming them with an absolutely distinct name, they ought to be described as a variation of Enchantress. In that way we would avoid this duplication of names.

Mr. Rudd: It seems the whole question is whether these carnations are of the same kind or whether they are two different and distinct sports. It appeared to the judges that there was quite a marked difference in the vases shown, but it also appeared that that difference was no more marked than might be occasioned by a difference in cultivation. In the opinion of the judges the difference is no more marked than is frequently seen on the same stage in varieties entered as Lawson. It is the view of the judges that in a case of that kind the general tendency should be to suppress the duplication of varieties that are so similar, and that the burden of proof should still rest with the person claiming one of these varieties is decidedly different from the others. Under present conditions it is doubtful if any man living could go into the hall and say definitely whether these were or were not sufficiently distinct to be different varieties. The only way that that could ever be determined would be to visit the houses where they are grown and perhaps grow them side by side.

Mr. Duggan: We claim the variety is most distinct and we had a number of visitors this morning who have had last year's sports from Enchantress.

Mr. Patten: I think there is something like half

A Discussion on Cuttings.

Secretary Herr announced the following question had been propounded. "Why is a so-called top cutting, in other words a cutting off a flowering shoot, not considered equal to one taken from a side shoot? Will such a top cutting ever make a field plant equal to a side shoot cutting, and if not, why? Has anyone proven it by actual test or is it only an accepted theory?"

Mr. Ward: We have considered a top cutting inferior theoretically, because the bud being developed would run rapidly into flower and weaken the plant. In some varieties we tested that out, and at the present time we discard all the top and base cuttings and take the three strongest side shoots, thinking they are the best. We find in some varieties that tend to stool and are very strong growers, that by taking the top cutting we get a plant that is not as vigorous as the side shoot or base cutting, but it will bloom a little freer. By selecting some varieties for a number of years we have imagined—I do not know that we have proved it—that we could take a variety that was a fairly shy bloomer and make it a fairly free bloomer.

Mr. Wilson: I would like to know what a top cutting is?

Mr. Ward: We consider it the last cutting on the top of the stem; the one next to the terminal flower.

Mr. Fendley: When I went into business I made a number of experiments extending over several years to determine what was the best cutting to

take. I noticed at the time that several establishments in the neighborhood of Chicago, when they had something valuable and wanted to get lots of cuttings, would take the bud right off there. (Mr. Fendlay exhibited a stem to illustrate his remarks.) The consequence was, anybody buying that stock would throw it out at the end of the first year. I prefer to cut down to the first strong shoot, and that strong shoot will not very often make a long interval from the first joint or point of insertion in the sand up to the first joint. There is a difference in varieties, but I consider that that cutting is the first cutting; the rest of these would not have made anything.

(Mr. Fendlay pointed out on his specimen stem the most vigorous shoots which should be selected for propagation).

Mr. Wilson: I want to know whether a top cutting is from the top or side shoot, or the base of the plant?

Mr. Fendlay: I should call that a top cutting. (Indicating position on main stem.) The average man will call this one taken off on the side the top cutting, but this is just as much a top cutting as this is.

Mr. Wilson: Although still off the base of the shoot?

Mr. Ward: The difference is this, that the growth on the plant started at the same time as the main stem, and it has been robbed by the main stem and checked and its individual constitution is not as strong as these shoots that have gone on and flowered. So we start out with evidence of weakness right away.

Mr. Wilson: Why is it that a large number of customers write that they won't take any top cuttings? They say they put them in 2-inch pots and in a short time they are flowering; and yet the dealers swear they are not top cuttings.

Mr. Ward: That may be answered in this way, that possibly the dealer's idea is that if he threw off the first cuttings on the top and took the second, then he was not taking the top cuttings, strictly speaking. But if the second cutting was a weak growth, or was taken from a weak stem, as soon as weakness is developed the tendency is to throw it into flower. The plant may be checked in cutting back, in shipping, for want of water at the time of potting, and if you check it the tendency is, in a great many varieties, to throw the plant into bloom. The whole question is a matter of judgment as to the condition of the plant. We have entirely stopped the cutting back of plants, that is, topping off the buds to force the growth of the side shoots.

Mr. Wilson: There are three or four partially dormant buds on the base of this stem; then appear the three ideal cuttings. Now, if these had been taken off only four inches higher and rooted while the stem was in tender growth, would it force those buds out to make good growth and would these make a good plant and be called top cuttings?

Mr. Ward: In some instances we have done well by taking a good strong growth, cutting it back and getting good, strong cuttings from the breaks: We call that rooting the flowering shoots and we have succeeded very well in some instances.

Mr. Wilson: How would you take off those ideal cuttings?

Mr. Fendlay: I have tried every way I could discover, and I don't find very much difference between taking the cutting off with a heel, taking it off with your thumb and first finger so that you get that little original growth on it, or just taking it up and stripping the first two leaves off so as to expose the

Group of Delegates at the Toronto Meeting of The American Carnation Society

inner layers. I find both successful, but by taking these cuttings off with a heel it is a little quicker, and, therefore, we do it in that way. There is a good deal said about weakening the plant, but I don't find any trouble so far as that is concerned.

A Delegate: Coming back to top cuttings, I think a top cutting is any shoot at the end of the flower just before it begins to form a bud.

Mr. Weber: The top cutting, such as the average grower will take, is from cuttings that have gotten to be of a good height. This cutting I have in my hand is a good example of a top cutting. The lower short shoots, before elongated preparatory to flowering, we call top cuttings, and not the small shoots near the top of the flowering stem.

Mr. Patten: I think any carnation grower knows what kind of cutting to take for himself. The only thing is that in purchasing a new variety we have got to be charitable. (Laughter.) If the grower selected the center cutting he would have to charge 50 per cent. more.

Mr. Fendlay: Why not charge \$25 a hundred more? I would rather pay \$25 a hundred and have every

plant good than to pay less and waste my bench space.

Mr. Rudd: I thought I caught the word "Chicago" in connection with bad carnations. I am always prepared to rise to defend my native city when aspersed. I tell you, gentlemen, it is a credit to Chicago, that sort of thing. (Laughter.) We claim to be able to furnish anything that a man wants, and there is a whole lot of fellows who want to buy carnation cuttings at a price at which no earthly man can root good ones for. While they are required I think Chicago will be wise enough to furnish such cuttings. If anybody wants better stock he can get that furnished, and if anybody wants as good stock as sent out anywhere we can still furnish it at a price. And I would add that if anybody wants poor stock we can also furnish it. (Laughter.)

Mr. Fendlay: While I thought that thing was done in Chicago I would state that the best cuttings were bought by me within 100 miles of Chicago. I always expect to pay a good price for a good article, and I only buy a good article when I know it.

To Meet with Breeders' Association.

Mr. Ward: I would like to suggest that a committee be appointed from the Board of Directors of this society to meet a similar committee which I will suggest be appointed from the members of the Board of Control of the American Breeders' Association to confer each with the other in regard to the meeting in Washington. My impression is that a joint meeting can be arranged between this society and the plant section of the Breeders' Association which will be one of the most interesting and one of the largest attended meetings that we have ever had. No doubt the Breeders' Association will provide papers upon the breeding of flowers to be read at that meeting that will be of the very greatest interest and importance, and prove of very great instructive value to the members of this society. I make that a motion.

Mr. Valentine: I beg to second that. It makes for concerted action by both societies and insures a most interesting program. Carried unanimously.

Scoring Prize-Winning Varieties

Secretary Herr announced a further question from the Question Box—"Should not every prize-winning vase of carnations be properly scored according to the scale of points adopted by the society on the data included in our annual report?"

Mr. Rudd: It is certainly the feeling of the judges that scoring is only necessary in the case of new varieties and in the case of close decisions. In the competitive classes all that is necessary to know is the best and the second best exhibit, and if the exhibit is so marked that that can be readily arrived at without scoring, what is the use of scoring? It was considered by the judges to be a kindness to the exhibitors of some varieties which could not possibly secure a certificate not to score their exhibits. At this convention the judges have not scored any variety for certificates when they were unanimous

Carnation Toreador

Exhibitors, H. Weber & Sons Company, Oakland, Md.

In deciding that it could not possibly take a certificate. Those varieties only have been pointed which had some show of winning.

Mr. Valentine: Some varieties were not pointed simply because they did not arrive in a condition to justify the judges in attempting to consider their merits. The flowers had gone to sleep or had experienced some mishap. Therefore, I do not think it is fair to infer that all the varieties which are not scored would not have secured a certificate had they been in shape for us to judge them.

An Employee's Right in New Varieties.

The secretary also read the following question: "Has an employee any right to demand public credit for the origination of a new carnation when said carnation has proven of commercial value to the extent that it is placed on the market for the sale of plants, and where said origination is due entirely to the efforts of the employee?"

Mr. Ward: I may say, from the legal standpoint, the employee would be entitled to credit for originating the variety and his employer would be entitled to the proprietorship on the ground that the employee had been paid for his services.

Final Resolutions.

The secretary read the report of the committee on Final Resolutions which expressed the society's high appreciation of the cordial welcome extended to the members by the City of Toronto through the Lieutenant-Governor and the Mayor, Alderman J. J. Graham and Mr. R. J. Score, the officers of the Electoral District Society, Toronto, the Gardeners and Florists' Association, the Horticultural Society and the press, and extended the society's heartfelt thanks to one and all of their friends in the Dominion who had done so much to make the meeting of 1907 a success.

The resolution was received with applause. The meeting then adjourned.

A Visit to the Dale Estate.

On Friday morning, on invitation of the management of the Dale estate, the delegates were invited to the greenhouses of that company at Brampton, Ont. About one hundred boarded a special train which arrived in Brampton at 11 a. m. En route W. F. Kasting canvassed the delegates for subscriptions toward the benefit fund for Mrs. Harts-horne, Joliet, Ill., and succeeded in raising several hundred dollars.

On arriving at Brampton the party were immediately piloted through the different houses of the immense establishment. There are about sixteen acres under glass, and the construction of the various houses was favorably commented upon by visitors from this side of the line. The houses at this establishment have been spoken of before in these columns, and no detailed description of their structure is necessary here. We may say, however, that it is quite an imposing sight to stand in the center of a carnation house of about four acres in extent, and when once seen is never forgotten.

The boilers, together with the machinery for taking away the ashes, were all very interesting, though we were informed that the automatic stoking apparatus had been discontinued some time ago. The heating is all done by steam, and it takes twenty tons of coal per day to keep the boilers supplied.

One feature that impressed us as being rather good, was the manner in which the houses devoted to the forcing of lily of the valley were utilized. On most establishments lily of the valley is forced in frames in low houses, but here the houses were high enough so that the rafters were covered with orchids that require a tropical temperature, the benches on which the lily of the valley was forced being directly underneath the orchids. This seems to us like economizing heat and a plan that is worthy of adoption by those who force lily of the valley to any extent.

The methods of culture for roses and carnations as seen here differ little from those employed around New York. Some of the roses are planted on solid beds and are run several years, while others are planted in raised benches. Carnations are mostly in beds raised about two feet from the floor, and there were several varieties seen that are not grown very extensively at the present time among American growers, such as Morning Glory, White Cloud, Estelle, etc. A portion of the establishment is devoted to narcissus, tulips, callas and adiantum, and there are several benches of single violets and mignonette in one of the sections.

Previous to our visit we had been under the impression that there was something about the soil and climate of Brampton, Ont., that was conducive to the production of much better flowers than can be raised here in the East, and we are free to admit that we were disappointed in this respect, for neither in the carnation houses nor in the rose houses did we see anything superior to what we have at home. In fact, since getting home we have come to the conclusion that neither in carnations nor roses can the Canadian grower equal in quality the flowers as grown by some of our New York and Jersey plantmen.

The management of the estate took great pains in piloting the delegates over the entire establishment, and thanks are due them for the special courtesies extended.

Greenhouse Construction.

BY R. O. KING, N. A. SC., OF THE KING CONSTRUCTION CO.

During the past few years many papers have been read on greenhouse construction. The general methods of construction have been very thoroughly described, and most of the growers are agreed, for

R. O. King
Essayist, A. C. S.

instance, that cypress is about the best thing to use for the wood work, that iron posts are better than wood posts, that an iron gutter is better than a wood gutter, etc. All of these things are so familiar that it is hardly worth while going into further discussion about them. It will perhaps be more interesting to take up some points of greenhouse construction which are just as important, but which have not received as much attention. For instance, the use of glass up to 24 inches in width makes a lighter and less expensive house than narrow glass. The choice of locality for a greenhouse plant should depend, among other things, on the amount of light available. The application of the scientific principles used in the design of large buildings and bridges to greenhouse construction is something which should interest the grower as well as the designer. The application of these principles has not been necessary in the ordinary construction of small houses where the accumulated experience of many years has been a sufficient guide. When, however, it is necessary to design a house unlike anything previously constructed there is, of course, no experience to fall back on, so a safe design can only be worked out by the application of the scientific methods referred to.

Wide Glass.

Some years ago 16-inch glass was considered about the limit for greenhouse construction. More recently 18-inch glass has been used. In Canada a number of plants are built with 20-inch double diamond English glass. Twenty-inch glass is probably selected because 20 inches square is a good size for butting, and it does not exceed 40 united inches. In the United States where lapped glass is most generally employed the size most in use is 16 x 24

with the bars 16 inches apart. A few of the more daring growers have risked building their houses with the bars 24 inches apart and using this same size glass. In our own experience a number of customers have put the glass in this way. In only one case do we know of any trouble having occurred. Such great advantages in economy of material and the lightness of construction are obtained by the use of this wide glass that it is worth making some study of the requirements that are necessary for the satisfactory use of 24 inch glass.

Breakage from Hail.

It seems unlikely that 24 inch glass will suffer any more damage from hail than 16 inch glass. The reason of this is, that glass laid the 24 inch way has more of a chance to spring than glass laid the 16 inch way, so that in case of a sharp blow such as from a hailstone 24 inch glass, although really weaker, can give way more without breaking than the 16 inch glass, consequently the extra spring makes up for the extra weakness. This action of hail was well illustrated at the Lancaster (Pa.) plant of W. J. Palmer & Son. In July, 1905, a hail storm passed over this plant and broke considerable glass. The house with 24 inch glass, which had just been built, did not suffer any more in proportion than the houses with 16 inch glass. In fact, the greatest damage was done on some 10 inch glass, though this was single thick. It seems that a hailstone big enough to break 24 inch glass will be big enough to break 16 inch glass, so the danger from hail need not worry anyone who wishes to use wide glass.

Dead Weight on Glass.

Glass is likely to be broken by the dead weight of large accumulations of snow and ice; for this reason it is interesting to determine just what weight glass can stand. In Canada, where everyone believes we have a great deal of snow, a number of growers are using 20 inch English double diamond. Now, English double diamond is about as heavy as American single thick. A box of 50 feet of American single thick glass is supposed to weigh 70 pounds, while a box of 100 ft. English double diamond is supposed to weigh 140 pounds. It follows from this that our Canadian friends are using 20 inch single thick glass in localities where much more snow may be expected than in localities in the United States. In addition to this more of the greenhouse plants in Canada are built on the ridge and furrow system so that they get the full benefit of the weight of a sudden snowstorm. We have made some tests on the weight of American double thick glass taken the

Table
Test of Breaking Strength of 16 x 24
American Double Thick A Glass.
1. Supports 24" apart. Sand used for loading.

Weight of light	Load required to break light	Breaking load per square foot
4 lbs 5 ozs	107 lbs	40.2 lbs
4 - 4 -	40 -	15.1 -
3 * 12 -	57 -	21.5 -
4 - 7 -	61 -	23.0 -
4 - 12 -	110 -	41.3 -
4 - 4 -	95 -	31.9 -

Greenhouse Construction

long way and the accompanying table shows the results obtained. The peculiar point about these results is that the strength does not depend at all on the thickness. You will notice that one light of almost the same thickness as the light which took 110 pounds to break, broke at only 40 pounds. Another peculiar feature you will notice is that although the glass is supposed to be double thick and each light should therefore weigh 4 pounds 11½ ounces, in order to make 80 pounds to a box of 19 lights, there is not one light up to weight. You will probably find that this is the general case, and although you pay for double thick glass you really get what ought to be called single thick.

The glass taken for our test was selected at random and the weights found therein are confirmed by some weights taken a short time ago in Philadelphia. Selecting two boxes at random, each light was weighed carefully, and in one box 14 lights out of the 19 weighed less than four pounds each. In the other 13 lights out of 19 weighed less than four pounds each and some of them were very much less than four pounds each. Leaving out of consideration two or three extra heavy lights in each box, the remainder of the glass was practically single thick. This probably explains why Canadian growers find English double diamond really as strong as American double thick. In order to cover this point the weight of six boxes from two different factories is given herewith. This glass is all labeled A double thick and is as fine looking glass as one usually sees. The average weight of one lot is 76.8 pounds per box and the other is 80.8 pounds per box, making both lots very much under requirements of double thick glass.

Referring again to the test of the strength of glass, the peculiar fact that the strength does not depend on the thickness is probably explained by the difference in annealing. If the glass for a greenhouse is to be selected from the point of view of strength, then no other qualification is more

Eldred Pa Glass		Brookville Pa Glass

Greenhouse Construction

Greenhouse Construction—Design of Even Span 150-Foot House

King Construction Company, Builders.

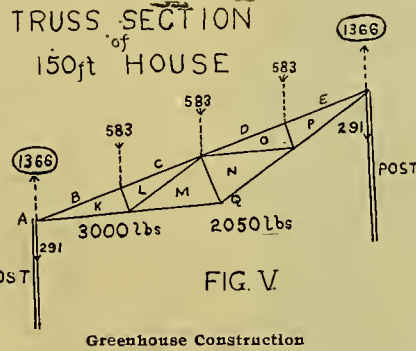

important and we should have some guarantee from the makers that the glass has been properly annealed. The purchase of properly annealed glass has not been given sufficient attention, and it is very likely that a great deal of the annual breakage of glass in greenhouses is due to defective annealing. Certainly if you put some lights in your house which will only stand 40 pounds and others which will stand over 100 pounds, you must expect that the weak ones go first. As glass is now manufactured it is perhaps impossible to devote special attention to greenhouse requirements. The glass people say that the workmen do not like to make greenhouse sizes because they can make more money on larger sizes. The greenhouse trade, however, is increasing rapidly, and improvements are being made in the manufacture of glass, so that perhaps sometime we will be fortunate enough to have a factory making glass especially adapted for greenhouse work.

Sunshine Available in Different Localities.

In locating a greenhouse the only thing not usually considered is the amount of sunlight that is to be expected. Yet there is nothing more important and a guarantee of a good measure of sunlight would be a very valuable asset for a greenhouse plant. Localities only one or two hundred miles apart are found to have very different amounts of sunshine during the Winter months. For instance, before locating the United States Cut Flower Company's plant at Elmira, N. Y., it was found that the sunshine to be expected in that locality is about double what would be expected in Buffalo. (In order to illustrate the great difference in sunshine for different localities Mr. King submitted a table covering the Winter months for the past three years, adding; "It is only possible to give observation for points widely separated owing to the extent of the territory covered, but it should be kept in mind that the difference shown by the table as occurring between points widely separated may also occur between what might be called local points as in the case of Buffalo and Elmira as already referred to.")

Though it is perhaps unnecessary or rather unwise to start a discussion as to the relative merits of houses built detached or built on the ridge and furrow system, still the consideration of this sunshine table leads to the observation that as lack of sunshine is the condition that confronts most of us it

is just as well to build houses to suit that condition. Now to meet that condition you must try to cover as much ground surface as possible with as little structural material as you can get along with. The way to cover ground with a small quantity of material is to use the ridge and furrow system, making the pitch of the roof as low as possible and using as wide glass as you will risk. Remembering that we are meeting the condition of no sunshine, it also follows that it does not matter whether the houses run north and south or east and west. Finally, provided your houses are built to meet that

worst condition, that is, no sunshine, will they not then take care of themselves under better conditions, that is, with sunshine?

Design of Greenhouses from Consideration of Strength of Materials.

It may be interesting to describe the process of designing a new type of greenhouse for which practically no data are furnished by previous actual building experiences. A design for an even span house 150 feet wide and having only five rows of supporting posts has recently been completed. This house is a great departure from present standards, and will set a record for wide houses which is not likely to be surpassed for some time, or, at least, until we can profit from the success or failure of the gentleman who are willing to experiment on such a grand scale. Beginning with the glass, it is desired to lay it with the supporting bars 24 inches apart. Referring to table (1) it is found that the average weight required to break the glass is 30 pounds per square foot. This is equivalent to about one foot of wet snow. The glass is hardly likely to be called upon to stand more than this, so the question of weight against dead weight can be considered settled. The frame work is made strong enough to carry somewhat more weight than the glass could stand, so that the glass would break before the frame work collapsed.

Considering the length of rafter it is seen to divide conveniently into three lengths of 28 feet each on each side of the ridge. As it is desired to use as few posts as possible, suppose it is decided to put in a post at every 28 feet section and carry the intervening space by truss work of the form shown in figure IV. The load that each truss is to carry in order to be strong enough to support the glass

under its breaking load is found by taking the area of roof supported by this truss and multiplying this by the weight per square foot that the glass will bear, that is 30 pounds. Now this is the breaking load of the glass that the truss would be called to bear, but it would be safe to take the working load as one-fourth of this, or 7½ pounds per foot. This even would be a high working weight, as ordinarily the truss has only to carry the weight of the glass which is less than two pounds per foot. Adding 2½ pounds per square foot to cover the weight of the glass and bars we have ten pounds per square foot as the total working load for the truss. Supporting the posts are spaced 3 feet 4 inches apart lengthwise of the house, then each truss has to carry a total working load of 8 feet 4 inches x 28 x 10 pounds or 2,333 pounds. This loading may be considered as being distributed at the joints and the ends of the truss as shown by figure V. The stress or strains produced in the members of the truss can now be determined by means of the device known as the stress or strain diagram. The stress diagram for the truss we are considering is shown by figure VI. It will be noticed that the lines in figure VI are drawn to a scale of 333 pounds to 1 inch, and that they are all paralleled to one or other of the lines in the truss shown in figure V. Attempting further explanation, it may be stated that the length of each line in figure VI represents the number of pounds strain or stress in the corresponding member of the truss. For instance, the line K B in figure VI is parallel to the lines between B K on figure V., that is, the upper member of the truss or the sash bar between the two lower purlins. The line B K is 9.6 inches long, and as 1 inch on this diagram represents 333 pounds the stress or strain in the sash bar is 3,200 pounds. In the same way the stress in the lower truss rod is found to be 3,000 pounds.

After finding in this way the strain in each member of the truss, calculations must be made to obtain the correct size for each. For instance, if the sash bar is of cypress, then it must be heavy enough to stand a working and strain of the 3,200 pounds. In the case under discussion it has been calculated that this bar must be 1½ x 2½, this size giving a working end strain of 3,200 pounds and a breaking strain of 12,800 pounds. The lower member, which we found must carry 3,000 pounds, is in tension, so should be of iron or steel, and by a separate calculation it is found that ¾ inch diameter is suitable for this strain. The other members of the truss are proportioned in the same way.

Having now designed the truss to carry the roof it is necessary to design the posts or columns to carry the truss. The strength of a column depends greatly on its length, so by properly bracing a long slender column it is practically divided by the bracing into a corresponding number of short columns. In the wide house under consideration it is found that 2-inch pipe, properly braced in every direction, will carry the roof.

The design is now complete, leaving the glass the weakest member as it should be, for it is seen that although the breaking strength of the glass is 30 pounds per square foot and the breaking strength of the truss work is the same, yet the glass is not uniform in strength, whereas the trusses are. And as 30 pounds is an average, it follows that half the glass would be broken by the time this load would be reached, and if half the glass is broken, half the weight has gone with it, so our frame work stands to be subjected in the limit to only one-half of its breaking load. There is a good deal of theory about all of this, but many of the gentlemen here now will likely be at the S. A. F. meeting at Philadelphia in August, and there will then be an opportunity to see how it has all worked out.

A Gladiolus Show.

Plans are being made by Arthur Cowee, of Berlin, N. Y., Arthur G. Babcox and the Humphrey Company, for the largest gladiolus exhibit that ever has been attempted in northern Ohio. It will be put on at Euclid Beach during the month of August.

Fifty thousand gladiolus spikes are expected to be shown in this exhibit. They will be of the choicest varieties grown at Meadowdale farm, where the culture has reached the highest stage of perfection. The exhibition probably will be open the whole month.

FOR THE RETAILER

Scarcity of Stock.

Notwithstanding the unprecedented scarcity of roses at this season of the year, business with the first-class retailer has been exceptionally good, in some stores amounting to a rush. The general opinion among buyers is that roses have never before been as scarce within the memory of the oldest of them. Christmas prices are prevailing and there is not enough stock to go around. Stores that are in the habit of using fancy and special grade flowers to fill their orders are eagerly buying ones and twos and paying fancy prices for them.

Lilies have also been at a premium for some time; and if it were not for carnations, which, we are thankful to say, are in good supply, business would be at a standstill for want of flowers to fill orders.

Tulips are also on the market in fair quantities, and are a most welcome addition. Narcissus Golden Spur are also to be had in quantity.

Reports from Toronto are not more favorable, returning delegates announcing a great scarcity there, even greater than here. One of the largest growers, who under normal conditions cuts roses by the thousands, and even ships to this city as a general thing, is only gathering a few hundred roses a day.

in this fern are not so liable to fade. Clusters of *Cyrtopodium Leeanum*, with their pretty white dorsal sepals, formed a most delightful contrast.

The beautiful hardy *Azalea mollis* makes a charming table decoration at this season, the great variety of coloring being unobtainable in any other plant. A large table strewn with lump moss to form a bed and planted with branches of *Azalea mollis*, in graduating colors, from very pale yellow to deep orange, called forth many favorable comments.

The indica varieties of azaleas can also be used with good effect for this purpose. Mme. Van der Cruyssen, Professor Wolters and the charming little *Firefly* being very effective. I saw a very pretty table of the *Firefly* azalea and *apacris*, used in combination, the latter plant predominating. This plant has not been generally employed, but it is well worth a trial. Its pretty spikes of little white flowers are very attractive, especially when massed. Small quantities of *Lilium speciosum album* have been seen this week; and I am surprised there are not more grown. *L. speciosum rubrum* and *roseum* also make their appearance occasionally; they are very popular with our customers, owing doubtless to their unique appearance and good keeping qualities, every bud developing in due season. D. RAYBUN.

CLUB AND SOCIETY DOINGS.

WESTERN NEW YORK HORTICULTURAL SOCIETY.—Never in the history of the Western New

York Horticultural Society has there been assembled so large or a more enthusiastic gathering than was in attendance at its fifty-second anniversary held in Rochester, N. Y., last week. A count of the roll showed a registration of 891 annual members at \$1 each, and three \$10 life memberships—a record breaker. The exhibition was an excellent one, a principal feature of which was a showing of 600 plates of fruit by the New York Agricultural Experiment Station at Geneva, N. Y.

The display of spraying devices and outfits, with engines in action, was by far the largest and most successful ever assembled in this section, and the demonstration that was given won many customers for the various exhibitors.

One of the secrets of the success of these meetings is that the presiding officer, William C. Barry, makes an ideal chairman. No time is allowed by him to go to waste and the attention of members is held throughout each session.

The election of officers resulted as follows: W. C. Barry was re-elected president and S. D. Willard, of Geneva; J. S. Woodward, of Lockport; F. B. Wilson, of Halls Corners, and B. J. Case, ofodus, were elected vice-presidents, John Hall, of Rochester, to whose efforts much of the success of the society is due, was re-elected to the secretaryship for the seventeenth successive year. The salary was increased to \$400 and many complimentary references were made to Mr. Hall's work.

The following committees were appointed:

Executive Committee—C. M. Hooker, Rochester; Duane Bogue, Medina; I. H. Dewey, Rochester; H. S. Wiley, Cayuga.

Botany and Plant Diseases—Professor F. C. Stewart, Geneva; Dr. L. H. Bailey, Ithaca; Albert Perkins, Rochester; C. H. Stewart, Newark; Willis T. Mann, Barker.

Chemistry—Dr. L. L. Van Slyke, Geneva; Dr. A. S. Lattimore, Rochester; Professor L. E. Roberts, Ithaca.

Entomology—Professor R. J. Farratt, Geneva; Professor M. V. Slingerland, Ithaca; Professor E. P. Felt, Albany; J. Rose, South Byron; J. Jay Barden, Stanley; Louis Hooker and Dr. Charles T. Howard, of Rochester.

Foreign Fruits—Irving Rouse, Rochester; I. H. Babcock, Lockport; Frank E. Rupert, Geneva; John Charlton, Rochester; H. J. Peck, Brighton; Nathan Wood, Carlton.

Flowers and Bedding Plants—William Scott, Buffalo; Charles J. Maloy and John A. Charlton, Rochester; Duncan Rhind, Canandaigua.

Garden Vegetables—Abram Franke, Irondequoit; O. M. Taylor, Geneva; L. D. Welsh, Pittsford.

Grapes and Small Fruits—Delos Taylor, Hilton; Edward H. Pratt and George S. Josselyn, Fredonia; Laurence J. Farmer, Pulaski.

Legislation—S. D. Willard, Geneva; C. M. Hooker, C. H. Hooker and William Pitkin, Rochester; Albert Wood Kent, D. S. Beckwith, Albion.

Native Fruits—C. Barry, Rochester; Dr. L. H. Bailey, Ithaca; Professor W. F. Hedrick and S. D. Willard, Geneva; W. J. Edmunds, Brockport; William C. Barry, Rochester; Professor John Craig, Ithaca.

Nomenclature—Professor W. P. Hedrick and S. D. Willard, Geneva; W. J. Edmunds, Brockport; W. C. Barry, Rochester; John Craig, Ithaca.

Ornamental Trees and Shrubs—C. C. Laney, Rochester; Nelson Bogue, Batavia; T. J. Smith, Geneva; C. J. Malloy and John Dunbar, Rochester.

As usual, a large number of interesting papers were presented, and the Question Box contributed its customary share to the value of the proceedings.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 23rd St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 MADISON AVENUE. My facilities for delivering flowers for any and all occasions are unexcelled; I can give prompt service to steamer and theatre trade. Telegraphic orders solicited.

LAMBROS MULINOS, 503 Fifth Avenue, and 301 Columbus Avenue. I have at all times a superb stock of seasonable cut flowers and can fill telegraphic orders at a moment's notice.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders, placed with us, will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway. J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas.

LANG, THE FLOREST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Tex. and La. Mail and telegraphic orders solicited.

An Impression of John Birnie.

Editor Florists' Exchange:

I now know John Birnie. I had heard a great deal and read a great deal about him, but only this week did I become intimately acquainted with him by seeing his portrait in *The Florists' Exchange*. I admit that I was surprised, but agreeably so, at what I have no doubt is a genuine likeness of the man who has no patience with Job. I have no doubt Job has the advantage of me in knowing John Birnie in the flesh, and the absence of that doubt only doubles my admiration for the prowess of Job, because the man whose likeness appears before me now on paper is not one to be tackled by any individual of ordinary attainments. My surprised condition was only entered into when I beheld Mr. Birnie's photograph as reproduced in your paper. I fully expected to find on perusing the columns of matter relating to the Carnation Society's convention that the next president would be John Birnie of West Hoboken, but to my regret I was in that disagreeably disappointed. When I consider how much Mr. Birnie must look like General Grant did, at his age and how well John acquitted himself in the task assigned to him as essayist. I arrive at the conclusion that Hoboken is to blame for the neglect of genius and not Mr. Birnie.

S. H.

Mirror Decoration with Winsor Carnations
By F. R. Pierson Co., at Toronto meeting A. C. S.
Artist, James Ivera Donlan.

These conditions are a great tax on the retailers, and give them many anxious moments. Their customers have to be supplied, and the large number of dinners and entertainments at this season only tend to increase perplexities.

Of course, at a dinner where only one table is used it is difficult to employ more than one variety, or color of flowers, or at the most two; but a very pretty idea, where several tables are to be decorated, is to use a different center-piece for each table. This is especially helpful when flowers are so scarce as at present. Roses, carnations or Spring flowers are all useful for this purpose. At a very large affair given last week, tulips formed the decoration for the tables, a different color being used for each center-piece. At a large dinner dance given in Philadelphia, each table was decorated with a different variety of carnation; corsages for the ladies and boutonnières for the gentlemen were supplied to match each table, so that the gentlemen wearing the Enchantress boutonhole escorted the lady with a corsage of the same flower in to dinner, and they were ushered to a table decorated with the same variety, the idea being to do away with cards used for that purpose.

Plants in Decorative Work.

Adiantum Farleyense, beautiful in itself, is a great help when flowers are scarce, and many attractive effects are to be obtained with this handsome fern. Center-pieces of *A. Farleyense* and *Cyrtopodium Leeanum* were used at a large dinner this week. The baskets were formed by putting the growing plants of this fern on round plateaus. The advantage of this is, that the delicate, tinted fronds, so much admired

Chicago.

The Week's News.

On Monday morning the Bentley-Coatsworth Company commenced moving their books, furniture and other paraphernalia from the basement to the second floor of the Atlas Building, where they now occupy a very desirable location on the corner.

At Peter Reinberg's it is reported that the orders for rooted rose and carnation cuttings are far ahead of all previous years at such an early date.

Hermann Schloss of New York was in town last week showing some of the latest attractive novelties in ribbons.

The excessive death rate in this city of late, probably never equalled, has tended to create an unusual demand for short roses for design work.

February 14, a week from next Thursday, is the regular meeting night of the Chicago Florists' Club and that day has been selected for the holding of the annual carnation exhibition of the club which has of late years proved such an attractive feature. It is expected that the show will be held as last year in the Atlas Building, but positive announcement will be made on this point next week.

Victor Brothers note a marked improvement in the quality of stock and particularly in the color of Bridesmaid roses since this section has been visited with a more generous allowance of sunshine, such a rare commodity with us since Winter set in.

The zero weather, the coldest in two years, which visited Chicago last week, resulted in some loss by frozen shipments. The reports to this effect covered all lines to a greater or less extent, from Eastern violets to productions within six miles of the market.

The report which has become current that a well known tobacco company would soon take possession of J. Mangel's store is denied by that gentleman, who says he has a lease still extending over several years.

Phil. J. Hauswirth, with the main part of the Chicago delegation to Toronto, returned Sunday evening last, reporting a very pleasant and successful convention. The secretary is now fully launched in the midst of his new duties in connection with the S. A. F. O. H.

Kennicott Brothers Company have commenced moving to their new quarters on Wabash avenue and will proceed as they find it convenient to do so.

Vaughan's Seed Store has issued its Spring Catalogue for 1907—the 30th year. This concern has also issued this year a neat memorandum book and 1907 calendar for gardeners. Besides calendars for the current and ensuing years, blank spaces are available for daily and other memoranda such as frost notes, planting notes, notes on pruning, notes on fertilizers, special notes for next year, in addition to all of which is given a fund of important information and reminders which will prove of inestimable value to the gardener, to whom the little book is dedicated.

Advance cards have been received announcing that Paul Berkowitz, representing H. Bayersdorfer & Company of Philadelphia, will be in town next week.

C. W. McKellar is still in daily receipt of a generous consignment of orchids including cattleyas and dendrobiums, and is also handling a choice line of fancy lily of the valley. J. A. Budlong is cutting nice Bride and Bridesmaid roses from the grafted stock which he installed last year.

Poehlmann Brothers have extended the variety of their offerings this week with a generous allowance of Lilium speciosum rubrum.

TRUE STOCK Aquilegia Coerulea Rocky Mountain Columbine From the Rockies

SEED—1 oz. \$1.00; 1/2 lb., \$3.50; 1 lb., \$12.00 by mail. ROOTS—4 and 5 year old, doz. \$1.25; 100 \$3.00 by express.

Order from headquarters. THE BARTEDES SEED CO., DENVER, COLO.

Tulips, narcissi in increased variety, freesia in generous quantity and other Spring flowers are constantly adding to the attractions in the store windows, yet the retailers, with few exceptions, report a rather unsatisfactory business.

The J. B. Deamud Company is among the fortunate ones whose hardy ferns are coming out of storage in excellent form.

A. L. Randall Company has been increasing its shelving in the supply department for the accommodation of the ribbon section. Easter novelties, especially in unique basket creations, continue to arrive, and orders are being booked to a very satisfactory extent.

At E. H. Hunt's much pleasure is evinced at the universal satisfaction expressed by the users of Tobakine Products, for which this house is agent.

The E. F. Winterson Company, who handle W. N. Rudd's output, are calling especial attention to some novelties in the line of seedling carnations which are being shipped in by Mr. Rudd at the present time. It is believed here that they have not been christened, yet they will undoubtedly figure in the higher commercial sorts when they are put upon the market.

WILLIAM K. WOOD.

Cincinnati, O.

News of the Week.

At last the waters have receded and dry land is once more in sight. Cold weather coming on was a god-send, as the rain stopped, which also allayed one of the worst floods we have had since 1884. Business is quiet, and stock is none too plentiful. Roses and carnations are selling out clean nearly every day. Bulbous stock is going abegging, narcissus selling at almost any price.

Our visitors during the past week were quite numerous: B. Eschner and M. Reukauf, from Philadelphia; George F. Struck, representing F. R. Pierson Company and Lager & Hurrell; and R. C. Whitebills, with Slug Shot and other useful articles manufactured by our esteemed friend, Benjamin Hammond; and last, but not least, Wm. Nicholson of Framingham, Mass. Mr. Nicholson came on from Toronto with the Cincinnati and Dayton boys on his way to Richmond, where Mrs. Nicholson is visiting a married daughter.

I am sorry to note that The Florists' Exchange has had such a close call, but how thankful all must be that you were only detained thirty-six hours. Fire and water generally go together, and what one does not destroy the other generally does.

J. A. Peterson and wife, R. Witterstaetter and E. G. Gillett were the delegates to Toronto, Ont. Did we enjoy our visit? We certainly did. A better conducted meeting and show it has never been my pleasure to attend, and the Queen's hotel is certainly o. k., and so are our Canadian brothers—all of them. They can sing and they can talk; and Mr. Algie can beat Kipling at reciting his own poetry. Mr. Lawrence is a singer of great volume, if only a small man; but only think of C. W. Ward accepting one of Mr. Lawrence's silver vases, only to be obliged to give it up a few moments later! That was a mean trick of Rudd's. The Dale estate is the finest establishment I ever saw, and the most complete.

E. G. GILLETT.

Save Your Pinks Before Splitting Don't try to patch them up with wires that would do for the 19th, but not for the 20th Century. A Perfect Flower guaranteed. \$1.75 per hundred, \$15.00 per thousand, 250 at thousand rates.

\$ \$ \$ \$ \$
IT WILL MEAN DOLLARS TO YOU
TO HAVE THIS OUTFIT SOON

ENDORSED BY THE HIGHEST AUTHORITIES

Invisible, Inexpensive, Indispensable, Instantaneously Applied

All who saw our exhibit at the Toronto convention last week pronounced the Baur Clip and Plyer for mending split carnations **A Great Success**. "The slickest thing I ever saw."—A prominent New York wholesaler. "Every up-to-date carnation grower will have one."—A grower from Philadelphia. "You've got the only thing."—A Practical grower from eastern Pennsylvania. "I came to see the thing work and am convinced that it is all that you claim for it."—This from a Canadian grower who brought some hard cases of splits with him and saw us promptly turn them into first-class carnations. We solicited no personal testimonials and no personal orders, well-knowing that all who saw this up-to-date device working would go home satisfied that he needed an outfit. The way orders have come in since then has proven the correctness of our prediction. You who have not seen it need it as much as those who did. You more than need it. You must have it, or drop behind in the profession as an up-to-date grower. It is what you have long been looking for and what you will need every day until settled warm weather sets in. You have racked your brain for some practical means of mending your split flowers, even though you may be only a small grower. You have thought of the good coal and energy you have been wasting every year raising split carnations that found no profitable market. You used clumsy rubber bands and what not, to fix them up. Only to find that the job was not much better after than before. Here is

something that solves your problem as far as it ever will be solved as long as carnations split—as far as it ever needs to be solved—a little practically invisible Wire Clip that holds the calyx and petals in their natural position without in the least affecting any other part of the flower. It does not make a wound that will cause the bloom to wilt before its natural time. It is in all intents and purposes part and parcel of the calyx and holds with a grip of iron. It can't come loose. It is so practical and free from all objections that it will make your split flowers, after mending, sell with those that were not split. A flower properly mended with this device is not a split flower. It is a first-class flower in every way and serves every purpose that will be served in which the accident of splitting did not occur. Our Plyer for putting on these Clips is a wonderful instrument. Wonderful in simplicity and in the work it does. With a little practice the operator can do the work twice as fast as it can be done in any other way and do it much better. Time is money, and if you both save time and make a perfect job you are doubly the gainer. Send for this up-to-date outfit today. Convince yourself. Your money will not be lost, for we will cheerfully return it if you are not fully satisfied with your bargain. Give it a fair trial and it will convince you that it is just what we claim for it and what you have been looking for. It will save its price every few days that you have it and will help to pay your coal bill as it helps to pay ours. Ready about Feb. 10.

BEACON CARNATION

(ORANGE-SCARLET)

ORIGINATED AT

ELLIS, MASS.

Has been tested four years and proved to be of Great Commercial Value

COMMENCING to bloom early in the Fall, it gives a profusion of flowers for Christmas (when scarlet is in demand at remunerative prices) and CONTINUES THROUGHOUT THE WINTER MONTHS. It may not score as high on the exhibition table as some, but WILL FIGURE UP ON THE RIGHT SIDE OF YOUR LEDGER in a manner highly satisfactory.

The blooms, under ordinary culture, average 2 3/4 to 3 inches in diameter, the guard petals are broad, well arranged, and of good substance, the center loosely arranged and not too full. Color, scarlet with a dash of orange, which lightens up the flower, especially during dull, dark weather, making it very brilliant and attractive. The stem is long, stiff and wiry. Calyx long and seldom bursts (less than four per cent. last winter). It propagates easily. The plant is a vigorous, healthy grower, of ideal habit, and a most profuse bloomer. A night temperature of 50 to 52 degrees suits it admirably.

A BENCH OF BEACON IN FULL BLOOM IS A SIGHT NOT EASILY FORGOTTEN

QUIDNICK GREENHOUSES J. H. CUSHING Prop., QUIDNICK, ANTHONY P. O., R. I.

MABELLE

New Pink Carnation for 1907

Color.—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. Size.—Three to four inches in diameter when established. Odor.—Pleasing, but not strong. Stems.—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.—A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness.—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. NO discounts. Delivery Jan. 5th to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000. First-class certificates Madison and Indianapolis.

The H. WEBER & SONS CO., OAKLAND, MD.

Decorative Plants.

ACACIAS.—This group comprises a great number of handsome, free-flowering shrubs, the majority of which are of easy culture and very desirable for decorative work in Spring and early Summer. They are especially well-suited for the decoration of conservatories where they present pleasing and striking contrasts to the other kinds of plants in bloom at the same time. They are now, as they have been in the past, in limited numbers grown for Easter, and it would seem that perhaps in them will be found, in part at least, what is wanted in the way of greater variety for the market at that time every year.

Acacias do not take kindly to forcing because an inordinate degree of heat is disastrous to them, but if left to their own natural way of getting there, several of the varieties suitable for pot culture will, with care, come in right, as a rule, for Easter.

In the main acacias are as easily propagated from cuttings. Those of the half-ripened wood of the side shoots taken off with a beel, in June, and dibbled firmly in small pots, or several in larger pots or pans, filled with sharp sand and these placed over a very gentle heat and kept moist and shaded carefully, will root in a few weeks. The cuttings may be put in the sand and rooted without pots, but usually there is a smaller percentage of dead ones resulting from the former method. Acacias produce seed more or less in abundance and young plants are very frequently obtained from seed, which may be sown either in Autumn when gathered or in February or March in pots or pans, put in a moderately warm temperature till the little plants are about half an inch high, when they should be potted singly into the smallest size pots and after they get somewhat established in these gradually exposed to the full sunlight and air of a light greenhouse. Young plants, whether seeds or cuttings, should be shifted on as they fill their pots with roots; and to obtain shapely specimens, the points of the shoots should be pinched off from time to time during the growing season.

None of the species is over particular in regard to soil, and most of them thrive exceedingly well in good fibrous loam with the addition of a little peat or leaf mold, but it is very important in all cases and at all stages of their growth that ample drainage be provided otherwise the soil may get sour. A condition inevitably fatal to the successful cultivation of any of the species. This holds good when the tall-growing ones are planted in greenhouses permanently also, in which case good drainage should be provided underneath.

Those intended for pot plants should in Summer be removed to a sunny sheltered position outdoors, after being repotted and cut back, where they will make strong and healthier growth and ripen better than they would in a greenhouse. When growing rapidly a good deal of water will be necessary, but as the wood ripens water in smaller quantity will suit their condition better until the wood is ripened, then, but little water will be necessary.

Although acacias like a cool temperature it will of course be understood that as the cold weather comes on their removal to a greenhouse is imperative.

For pot plants *A. armata*, *A. Drummondii* and *A. grandis* are recommended.

ACALYPHAS.—Years ago acalyphas in several varieties were grown in considerable number in pots for greenhouse adornment and for various other decorative purposes before their utility as bedding plants was generally recognized. They were for a time somewhat neglected and continued so until the variety known as *Sanderi* made its appearance. This novelty caused a mild sensation, but from one cause or another its popularity was

Surplus Stock

In Excellent Condition

The time for parties and balls is now on the programme. What will you use to decorate? Take my advice and use for a change an **ARAU-CARIA COMPACTA**, **KOBUSIA** or **GLAUCALIA**—the kind and size I grow. You will be surprised what a lovely effect they will have when placed upon tables of dinner or supper parties, or any other place in the house. These plants I have got on hand now are a **Wonder of Natopus**.

Price: 6-7 in. pots, 4-5 year old, as broad as high, 4-5 tiers, from \$2-35 in. in height, \$1.50, \$1.75, \$2.00 to \$2.50 each. Glauca specimens 7 in. pots, 38 in. high, 36 in. wide, 5 tiers; \$2.50 to \$3.00; 6 in. pots, 3 years old, 4-5 tiers, \$1.00, \$1.25 to \$1.50 each.

KENTIA FORSTERIANA PALMS not scarce with us; have plenty and can meet all wants cheaper than ever; 5 1/2 to 6 in. pots, 30 in. high, 6 good leaves, 60c., 75c., and 85c. each. 7 in. pots, made up 1 large size, about 40 to 45 in. high in the centre, and three smaller size plants 25 to 30 in. high around, which gives them a fine appearance, price \$1.00 to \$2.50 each. 6 in. pots, single plants, 38 to 45 in. high, 5 to 6 good leaves, 4 years old, \$1.25-1.50, \$1.75 each. 8 in. pots, 32 to 38 in. high, 5 to 6 good leaves, 4 years old, \$1.25 to \$1.50 each. 6 in. pots, 32 to 38 in. high, 5 to 6 good leaves, 4 years old, 75c. to 85c. each.

ARECA SAPIDA, just imported from Belgium, something new, looks like *Kentia* palms, about 25 in. high. Look! only 50c. each, worth \$1.00. This is a bargain seldom offered.

ASPARAGUS SPRENGERI, 4 in. pots, 1/c.

FERNS

All raised in pots and not on benches as follows:

NEPHROLEPIS BARROWSII, 7 in. pots, as big as a bushel basket, 75c. to 1.00 each. 8 in. pots, large, ready for 7 in., 50c.; 6-12 in. 40c.; 5 in. 30 to 35c.; 4 in. 25c.

BOSTON FERNS, 7 in., very bushy, only 75c.; 8 in., 50c. or 55.00 per doz.; 6 in., 30c. to 35c.; 4 in. 20c.

NEPHROLEPIS SCOTTII, 8 in., as big as a wash tub, worth \$2.00, now \$1.25; 7 in. as big as a bushel basket, worth \$1.25, now 75c.; 6 in., 50c.; 5-12 in. 40c.; 4 in. 25c.

DRACAENA BRUANTII. Imported from Belgium. This is the best *dracaena* grown for house cultivation. Most favored all over Europe; can stand any amount of dry heat, dust or dirt. Always full of green waxy foliage from top to bottom. 6 in. pots, about 30 in. high, 50c.

CINERARIA HYBRIDA. H. F. Michell's best strain, 2 1/2 in. pots \$4.00 per 100, 3 in. strong plants, ready for a shift, into 5 1/2 or 6 in. pots, \$7.00 per 100; 4 in. \$10.00 per 100.

AZALEA INDICA for Easter blooming, all best American Varieties, 50c. 75c., \$1.00, \$1.25, to \$1.50 each.

AZALEAS in bud and bloom now, Deutsche Perle, Simon Mardner and variegated 80c., 75c. to \$1.00 each.

All goods must travel at purchaser's risk. When ordering, say whether the plants should be shipped in the pots or not. Cash with order.

Commercial Violet Culture

PRICE, \$1.50
 The FLORISTS' EXCHANGE, 2-8 Duane St., New York

short-lived. Taking them all through, I think the best variety for all purposes is *Macefeana*. This is a quick growing variety, with beautiful foliage ranging in color from red to crimson, and forming a handsome decorative plant even in its earliest stages of growth; although it is when planted out in the Summer that it develops into a gorgeous specimen of singular ornament. This variety of *acalypha* stands well in the full sunlight and succeeds surprisingly well in partial shade, although in the latter situation it may be expected to be somewhat devoid of color.

Now is the time to propagate this variety and the methods is to take the cuttings off the stock plants with a beel if possible and put them in the sand. They should be kept shaded for a few days. In about three weeks, if placed over a mild heat, the cuttings will be rooted, when they should be potted into the smallest size pots and later repotted until they are in 4-inch pots, from which they should be planted out early in June. It is a mistake to pinch these plants, because they make finer specimens when allowed to grow unchecked, whether indoors as pot plants or outdoors in beds or borders. D. M.

SCHULTHEIS' SUPERIOR STOCK

Araucaria Excelsa, 6 1/2 in. to 6 in. pots, \$1.00, \$1.25, 4 to 5 tiers; 7-in. pots, \$1.50, \$2.00 and \$2.50; 8 in. pots, 3 1/2 ft. tall, \$3.00.

Azaleas, beautifully flowered, just right, 50c., 75c., \$1.25, \$1.50, \$2.00, \$2.50, and \$3.00 each. Miniature azaleas, \$4.00 and \$5.00 per doz. Also pyramids in quantity from 4 in. 5 in. and 6 in., \$7.00 each.

Begonia Gloire de Lorraine, \$9.00, \$12.00 per doz. Wire hanging baskets, \$1.25, \$1.50 each, can be planted to order.

Pyramia Box, 3 ft. high, \$2.50 to \$3.00 a pair; 3 1/2 ft. high, \$4.00 a pair; 4 ft. high, \$4.50 and \$5.00 a pair; 4 1/2 ft. high, \$6.00 to \$7.00 a pair; 5 ft. high, \$8.00 a pair; 5 1/2 ft. and over, perfect specimens, \$9.00 a pair.

Boston Ferns, 5 in. pots, \$3.00 per doz.; 8 in., \$2.00 each; 9 in., \$2.50 each. Specimens in 12 in. pots, \$5.00, \$6.00 and \$7.00 each; 14 in. pots, \$15.00 a pair.

N. Elegantiissima, 5 1/2 in. pots, \$4.00 per doz.; 6 in. pots, \$6.00 per doz. **Scott's Ferns**, 6 in. pots, \$4.00 per doz.

News Notes.

The carnival season here is well on now and all are busy preparing for the balls. Charles Eble has an order for one and is to furnish 250 baskets of flowers which are to be presented one to each of the lady dancers. This is an novel idea which has been introduced this season for the first time.

Eble and other florists complain of carnations reaching them in a sleepy condition, causing great losses. Many shippers claim that the heated pipes in the express cars produce the condition complained of. Mr. Eble has called upon G. F. Nosler, agent of the American Express Company, who has issued strict orders to all agents on his line to keep boxes containing flowers from heated pipes. Mr. Eble suggests that it might be a good idea if the shippers had labels printed bearing the advice to "keep from extreme heat or from heated pipes," in the place of "to keep from frost."

On the other hand, U. J. Virgin is of the opinion that it is the bad condition in which the flowers are shipped which is the cause of the trouble.

The windows of most of the florist stores are gay at the present time with well-flowered and shapely azaleas; these are principally what were intended for Christmas and New Year, but were a trifle late.

At the recent meeting of the New Orleans Horticultural Society a committee was appointed and an appropriation made for the entertainment of visiting florists to the annual meeting and show of the Society of Southern Florists to be held in this city February 14 to 16 inclusive. CRESCENT CITY.

News Notes.
 The amount of rain that has fallen this season, 13 to 16 inches, is about four times as much as that of last season for the same length of time. There are yet three months of the rainy season which usually gives us a greater precipitation than the first three months, therefore the soil will be well soaked, and bountiful crops assured for the year.

The fabulous returns of well-kept Valencia and navel orange groves the past two seasons—in some instances as much as one thousand dollars per acre net—have wrought up growers of the fruit to a fever of extensive planting and nursery stock, one-year-old trees, one inch caliper, are held at \$1.25 per tree, no matter about the quantity taken. Walnut groves are being converted into firewood, and the ground planted to Valencia oranges principally.

Blight has exterminated all pear orchards in this part of the State; and peaches have become so uncertain that they have been discontinued on the lower levels. Among the foothills and higher elevations, where a lower temperature prevails during the Winter, they are still successfully grown.

The wet weather has brought forth violets in greater quantity than the writer has ever before seen in this market at this season of the year; yet the prices have kept up to about 25c. per hundred. Field-grown carnations have also been in bountiful supply; while outdoor grown roses have suffered some from the rains and consequent cloudy weather.

Seedsmen report business good; while nurserymen are kept busy growing stock to supply the unprecedented demand. The Orange County Nurseries at Fullerton imported from Kansas two carloads of peach trees packed in bulk; a horticultural commissioner inspected every tree to discover if he might, any "borers" in the roots, and he condemned only 50 trees which were promptly consigned to the fire. This is one pest of the fruit grower which does not seem to thrive in this part of the State.

P. D. BARNHART.
Detroit, Mich.

News Notes.
 Cut flowers of all kinds are still very scarce here. Good roses look like gold, and carnations are not much more plentiful. Dealers all over town are scouring the country in order to obtain flowers for the Alger funeral.
 The Detroit Floral Company sustained a loss of about two hundred dollars during a wind storm on Sunday, January 20, 1907. Ventilators were torn from their hinges on the roof; doors were stove in and whole strips of glass were broken into shreds. The wall in the boiler room was blown in and it was only with the utmost exertion that the firm was able to keep the houses from freezing.

The Michigan Cut Flower Exchange was lately incorporated. The members of the firm are now: Philip Breitmeyer, Fred Breitmeyer, Wm. Dilger and Robert Rahaley. Th officers for the ensuing year are: Philip Breitmeyer, president; Wm. Dilger, vice-president; Fred Breitmeyer, second vice-president; Robert Rahaley, secretary and treasurer. The Michigan Cut Flower Exchange was the initial cut flower commission house of Detroit. By steady progress it has made itself what it is to-day. Up to this time it has been backed by Mr. Breitmeyer, who has indeed proved his business genius.
 HARRY.

BIRMINGHAM, MICH.—The work of excavating for a lake 15 acres in extent at Cranbrook, the new estate of George G. Booth, nurseryman, is being carried steadily along all the Winter. A new bridge with an arch of 50 feet span, dam and overflow have been built by the Kahn system of reinforced concrete. H. J. Corfield, who is carrying out the work, hopes to have everything completed and ready for planting by the time Spring arrives. Extensive planting will be carried out on this place.

Newport, R. I.
Trade and News Notes.
 The first real cold spell of the Winter visited Newport the beginning of last week and it has kept us close company ever since. Last Winter was all through so mild that not a pound of ice was harvested in Newport, and that meant that all the ice used by florists and men engaged in various other business undertakings had to be brought here from distant parts, which added greatly to the expenses by reason of the increased cost of the ice. If this cold snap holds for a few days, Jurgens will get his house filled and the ice company theirs also.
 Carl Jurgens has usually a steady demand for roses and lily of the valley during the Summer months from the Avenue florists. To meet this demand Mr. Jurgens will devote the two houses, which he has just completed, to roses for the Summer trade.
 Robert Purshall, who, for several years has been in charge of the estates of Marble House and Belmont, the properties of Mrs. O. H. P. Belmont, is to be transferred to the Long Island tract in the same capacity at "Brokatt," Mrs. Belmont's residence in Hempstead. A successor to Mr. Purshall has not yet been decided upon.

THE FLORISTS' EXCHANGE
2 Duane St., New York

Boston. News of the Week.

The first exhibition of the year of the Massachusetts Horticultural Society was held on Saturday. A regular blizzard was raging all the morning; as a consequence, the show was small but some very good primulas were on the tables. For the best six plants of *Primula sinensis* Wm. Whitman (Martin Sullivan, gardener) was first; C. R. Talbot second, and Geo. M. Anderson, third. For *Primula scutellata* Wm. Whitman was first and Mrs. J. L. Gardeur (Wm. Thatcher, gardener), second. For *Primula obovata* the same exhibitors won the prizes in the order named. Some very fine violets were shown, H. F. Woods being first, N. F. Comley second and C. S. Strout third. There was a small display of carnations, the only exhibitors being H. A. Stevens Company and C. S. Strout, the prizes being about equally divided.

John E. Lager of Summit, N. J., was the speaker in the lecture course on Saturday morning. His subject was "Orchid Collecting." A small but very appreciative audience was in attendance.

Mr. Lager said in part that the most interesting and important field for orchid collections is Colombia; Venezuela and Brazil are second and third. He then described in some detail his visits to the different orchid regions, and in conclusion stated that the prospects for the future are not encouraging. The search for orchids has led many natives to go into collecting, but in many cases they know nothing of the proper methods of securing, packing and shipping the plants. Last year alone several hundred boxes of orchids came from South America in which every plant was ruined by carelessness or ignorance, and one native can do more harm in an orchid region in one year than a collector would do in ten. At the conclusion of the interesting talk a large number of questions were answered by Mr. Lager.

There was no marked difference on McKinley Day in this city. Carnations have been selling well for some time and there has been no surplus lately.

W. W. Rawson left on Saturday for a brief vacation in the South, where he will give vegetable growing some study.

A. L. Rogers of Rogers Brothers, Alpena, Mich., was a visitor this week.
J. W. DUNCAN.

Philadelphia.

News Notes.

There is not very much going on this week. The stores are doing a nice business, but no rush is noticed. The decorators are fairly busy. The William Graham Company have three balls in succession at Horticultural Hall and the Habermehls have the Charity Ball at the Academy of Music. While these affairs are not using many cut flowers, lots of azaleas, lilies and other bulbous plants are employed.

We are very sorry to report that Thomas B. Meehan has met with a sad bereavement; his 9-year-old boy Thomas, fell out of a third story window at his home on Monday, and died later in the hospital. The little fellow was reaching out to get an icicle, when he overbalanced and fell to the cement sidewalk.

Henry F. Michell is at his desk again this week after a three weeks' rest in the South.

John Westcott left on Saturday for Florida for a few weeks' rest.

S. S. Pennock says Will Gude owes a very strong vote of thanks to his friends who rooted for Washington at Toronto, because he was not there to marshal his own forces.

A good attendance is looked for at the Florists' Club meeting on the 5th; many new carnations have been promised for the exhibition.

DAVID RUST.

Commercial Violet Culture

The Florists' Exchange, 2-8 Duane St New, York.

New York.

The Week's News.

Owing to the great inconvenience caused in our office last week by a fire on the floor above us, some of the names of New York delegates to the Carnation Society's convention at Toronto were omitted in the published list. Those from this city and vicinity who visited Toronto were Mr. and Mrs. E. Dilledouze, John Young, F. H. Traendly, E. Leuly, O. Boehler, P. Beurlen and son, J. Niemels, H. A. Bunyard, A. J. Guttman, Marius Matheron, C. W. Ward, F. R. Pierson, J. R. Potheringham and J. I. Donlan.

Through the courtesy of John Chambers, superintendent of parks at Toronto, John Young, F. H. Traendly and H. A. Bunyard were enabled to visit the Government House and witnessed the proceedings of the opening of Parliament. They were also introduced to the Speaker of the House, and were shown every possible courtesy by this high official of the Canadian Government.

On the return journey from Toronto to the United States, Mr. Traendly was the center of a rather embarrassing situation. It seems that on approaching the State line, when the customs inspectors were asking the nationality of each traveler, some joker in the crowd informed one of the inspectors that Mr. Traendly was not an American citizen. The inspector began to question Mr. Traendly rather closely as to his birthplace and citizenship, and the situation grew rather embarrassing for Frank, being only relieved by the laughter of his comrades who were seated a few seats behind, and explanations of the joke to the customs officer.

Mr. Young and Mr. Traendly stopped off at Buffalo on their way home, and spent a few hours visiting the craft in that city, reaching New York during the forenoon of the day following.

W. J. Lawrence of Eglinton, Toronto, whose fine tenor voice was heard at the banquet last Thursday evening, will be with the Toronto Choral Society, singing in Carnegie Hall in this city, on Wednesday, February 13.

At the thirteenth annual meeting of the American Society of Heating and Ventilating Engineers, held in New York on January 22, 23 and 24, U. G. Scollay of Brooklyn was re-elected treasurer of that organization.

Benjamin Hammond, Fishkill-on-Hudson, N. Y., secretary of the American Rose Society, has been suffering from a severe attack of the grip, but is now, we are glad to say, recovering.

Vaughan's Seed Store received this week a carload of Kentucky blue grass, together with another carload of various grasses and clover seed.

The annual smoker of the New Jersey Floricultural Society was held on Friday evening, February 1, in their rooms at 240 Main street, Orange, N. J. As is usual with this society at their annual gathering, they had a most enjoyable time.

Mr. and Mrs. Carl Jurgens, Newport, R. I., sailed for Europe on Tuesday, January 29.

Tuesday was McKinley Day, but close observation did not show that many citizens here were honoring the occasion by wearing carnations, from which fact we would gather that life in New York is so strenuous that sentiment does not enter into it, so far as the business man is concerned.

Albert Crawford, a gardener employed in the greenhouses at Prospect Park, Brooklyn, was found dead in one of the houses one morning last week. It is believed that he went there in the night to take care of some of the plants and was stricken while attending them. He was forty-four years of age, and resided at 129 Gelsion place, Brooklyn.

George Kramer, a man who styled himself "the Luther Burbank of the East," was up before Magistrate Barlow in the West Side police court a day or two ago for selling artificial seeds that were supposed to produce lemon trees and rubber plants. According to witnesses at the trial, Mr. Kramer's operations began four years

ago, and some of these witnesses have been waiting all this time for something to develop from the seeds which they had bought. Kramer was held for the grand jury under \$300 bail, and, as a bondsman refused to sprout, he was taken to the cells. When the plant wizard was escorted to police headquarters to have his picture taken, it was found that there were already a couple of good-sized cabinet portraits of Kramer in the Rogues' Gallery, so that he is evidently an old offender.

There is some talk in wholesale flower circles just now about the formation of a Greek cut flower association, the objects of which are to locate in some central quarter and carry on a regular wholesale flower business for the benefit of the dealers of that nationality. So far as we can gather it would seem that most of the Greek florists throughout the city deal only in the lower grades of flowers, and a few shrewd gentlemen who have taken cognizance of that fact have become speculators to the extent that they buy up only in the cheaper grades of stock, just the kind of goods the Greeks use mostly in their business, and in selling this class of stock to the Greeks make quite a profit on it. The Greeks believing that they can get along to better advantage if the speculators were out of business, are organizing to that end; and while we have no exact information as to who is at the head of the movement, we have been informed that within the next three or four months a fund of \$30,000 will have been subscribed, and the association as a flower buying one will be fairly launched. This may be a dream or it may become an actuality—time alone will tell.

Fleischman, the retail florist, is sending out a paper weight to his friends, which is much admired by all who receive it. The weight is of glass, and enclosed therein is a reproduction in color of one of the most beautiful flowers in creation—lovely woman. The reverse side holds the advertisement of the various stores operated by Mr. Fleischman in New York, Chicago, London, Paris and Berlin.

AURORA, ILL.—J. Smely is out \$8.50 in cash and \$2 for flowers, as the result of a worthless check passed upon him by a swindler.

WE ALL READ THE ADS

of the various firms in their big type claims of "best on earth," "none as good" and all that sort of thing, which by itself actually means nothing—proves nothing! Now there may be any number of firms who turn out good materials—but good materials do not necessarily make good greenhouses—it's a matter of both materials and the form of construction—any one can mill materials—but it takes years of experience to test them out—to know the best thing for the purpose—and when it's best, keep making it better—we do say we have the most up-to-date materials—and we do believe there's no one takes quite the care in selecting them.

HITCHINGS & COMPANY

GREENHOUSE DESIGNERS AND BUILDERS
Manufacturers of Heating and Ventilating Apparatus

1170 BROADWAY, NEW YORK

Heating.

I would feel much indebted to you for your advice in connection with my heating proposition. I enclose a sketch of the houses, A, B and C and boiler room have been built two years, and I am adding D, as shown on the plan. D will be 300 feet long and 41 feet 10 inches wide; south wall arranged for building future houses in that direction, and of the same length. I employ raised benches throughout. Houses are of standard construction, even span, side walls 6 feet high. I intend using steam and 1 1/4-inch pipe for coils. I will install two new horizontal tubular boilers of ample capacity and would like to have your advice as to size and layout of mains and coils. As my cellar is only 4 feet 10 inches below the grade of the houses and cannot be changed on account of water and drainage, I do not know whether to use a steam return tray or not. The old plant (A, B and C) has a hot water system which I will take out and rearrange for steam according to your advice. Would a vacuum system be profitable and easily managed in this case? If so, where could I get details for installing one?
G. M. D.
Indiana.

Your present three houses will each require ten lines of 1 1/4 inch pipe for steam, also each need a 2 inch overhead steam supply line to the far end. If you divide the above ten lines into three coils each, feed each with 1 1/4 inch steam connection from main, making the return from each coil 1 inch. While speaking of "lines" in each coil, it is well to say that it is advisable to put valves on each line at both ends, so that the heat may be regulated by shutting off as many lines as you can do without in the milder weather. This end of the subject has been treated of in many previous numbers of The Florists' Exchange, where you can get further details. Of course, you must also place valves on the steam and re-

turn connection to each coil. The new house D will require 20 lines of 1 1/4-inch pipe; but as you have not given any bench plan of the house, I cannot very well lay out the coils. The main steam line to D should be at least 5-inch with a main return 3-inch. If these are run in direct line from the boilers, it will be well for you to divide up your coils, say with 100 foot coils running west and 200 foot coils running east. This is much better than running coils the entire 300 feet in length.

While on the question of mains, it may be well for you to consider your future building, which you say you may put on the south side of D. You could run a 7-inch steam main now, with a 4-inch return, leaving plugged tees in D in such a way that the extension of the mains may be simply and easily made when wanted. It strikes me the extra expense now would be amply returned later. This we have demonstrated many times.

As to using a return trap, if, as you say, you can go down but 4 feet 10 inches below grade for your boiler room, I fail to see how you can avoid the use of some such method of returning condensation to the boilers. The water line of the boilers will probably be above your coils, hence if you do not use a trap, or pump and receiving tank or governor, your coils will remain full of water. Even with cast iron sectional steam boilers having the lowest water line I know of, you could not run a gravity system very successfully. There are many good return traps in the market, any one of which can easily fill your bill. These, however, require careful setting, and it will be well for you to follow very closely the instructions of the maker you select. A favorite method with many for returning condensation to boilers is through receiving tank and dump. Most pump manufacturers supply these, and descriptions of them are found in their catalogue of pumps.

I regret to say that I have not installed a vacuum system in any extensive range of glass houses as yet, though we have done so in other classes of buildings, and have used appliances made by different concerns, and under different patents. These are in the main very satisfactory and economical. I know there are quite a few large plants in use under glass in Massachusetts and am told they work very well indeed. The following firms will I am sure forward you all particulars with regard to their systems: Paul System Company, Fuller Building, New York; Warren Webster & Company, 17 State street, New York, and the Norwall Manufacturing Company, of 104 West Forty-second street, New York.

I presume it is unnecessary to caution you to protect your main lines from the boiler room to house D. It might be well for you to bring your main return from D back to boiler room through houses C and B, and you could possibly run your main steam line by that route also. This would give you the least possible outdoor exposure of mains. However, as you have sent me no elevation plan, this scheme may not be practicable as to the steam main, for reasons that I do not now see.
U. G. SCOLLAY.

This shows exactly how our Interchangeable Clamp Column Fittings are used.

HERE IS EXACTLY THE WAY WE USE our interchangeable Clamp Column Fittings

in that Giant Arch we have been telling you about lately. See how the Purlin is secured to the Gable Bar by that Purlin Clamp—how every Sash Bar is firmly fastened to the Purlin by the heavy Purlin Clasp—that the Column Fittings are split and tightened together by a single strong bolt, making them easily adjustable. The whole thing is a most convincing argument of the strength and neatness of this combination of 1 1/4 inches Purlin, Column and Cross Tie, forming a light but absolutely rigid Giant Arch running the entire length of your house. It is not only a matter of strength but a mighty lot of time saved in erecting, and when used with our Cast Iron Foot Pieces, makes a certainty of perfect and easy line up of your roof.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol XXIII. No. 6

NEW YORK AND CHICAGO, FEBRUARY 9, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention. Won first prize for best 100 pink

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time do-

ing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Echoatress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Echoatress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR. We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

Strong Rooted Cuttings. February delivery, \$12.00 per 100, \$100.00 per 1000.

F. R. PIERSON CO., TARRYTOWN-ON-HUDSON, NEW YORK.

Mention the Florists' Exchange when writing.

GRAFTED ROSES

WE are now booking orders for early delivery of Richmond, Killarney, Bride, Bridesmaid, Wellesley, Liberty, Kaiserin, Carnot and Bon Silene.

Now is the time to get *Kaiserin Augusta Victoria* for early summer flowering. I have a large quantity of 2 1/4 inch own root stock now ready for shipment.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION
Henry W. Wood, Richmond, Va., president; C. S. Burgo, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

CHARLEVOIX, MICH.—The seed companies are putting out solicitors for acreage this year, a thing they have not usually done in this section.

SEDALIA, MO.—Mr. and Mrs. L. H. Archias of Archias Seed Store are the proud parents of another baby daughter, born Monday morning, January 23.

SPRINGFIELD, O.—Every department of the Superior division of the American Seeding Machine Company is being operated with a large force of men. The officers say that the outlook for trade is most encouraging. In fact they say that the indications are that it will greatly exceed that of last year, which was one of the banner years.

PENNSYLVANIA SEED TRAIN.
—Arrangements have been completed for running a special seed corn train over the Pennsylvania lines in Indiana by the Purdue University experiment station. This run will include the Vandalia and the Grand Rapids and Indiana roads. The train will start February 25 over the Effner and Logansport division, and will continue on the trip fifteen days, covering 1,500 miles of the Pennsylvania system in the State. More than one hundred and sixty-five stops will be made, at which lectures will be given and printed literature distributed.

IMPORTS OF SEEDS, etc.—January 23, 1917.—Davies, Turner & Co., one case seeds; H. Frank Darrow, 7 bags seeds, one cask seeds; Peter Henderson & Co., one case seeds; T. W. Pollock, one case flower seeds; Towns & James, 10 bags seeds; Vaughan's Seed Store, three cases flower seeds; American Express Company, two bags seeds.

January 31, 1917.—J. P. Róosa, one case seed; H. Frank Darrow, 11 bags, six cases and one bale seed.

February 2, 1917.—Peter Henderson & Co., one case bulbs.
February 2 and 3.—J. A. Leigan & Company, one case live plants; Brown Bros. & Company, 710 bags of seed; Buck & Jevins, one case orchids.

February 1, 1917.—Lazard Freres, 250 bags mustard seed; A. W. Fenton, Jr., one case flower seed; Peter Henderson & Company, two packages seed; J. M. Thorburn & Company, 50 cases Lily of the valley pips; Vaughan's Seed Store, 11 packages seed; American Express Company, 76 bags seed, 380 bags clover seed.

A FUTURE NEED—PERHAPS.—Congress having determined to continue the distribution of free seeds, it is believed that next year the issue will be 100 million packets and that in a short time 500 million packets will be the annual normal output.

Congress foreseeing that this absolute necessity for free seed distribution, forced by clamorous constituents upon them, will break up many regular seed firms, is considering the establishment of "Seedsmen's Poor Houses," one located at Atlantic City, one near St. Louis, the other near Chicago. At these National Homes broken-down seedsmen will be supported so far as will go an annual appropriation of \$150 to each man who can, with unquestionable testimony, say that he was once a proprietor of a seed house, either wholesale or retail.

CHICAGO.—Owing to the short crop of California onion seed, large quantities of Louisville seed have been shipped to this market, four or five tons, at least, of this stock already having reached here. It is reported, however, that this seed is not proving altogether satisfactory in testing, in some cases running as low as 40 per cent. There are still some seeds left, held by strong parties at a high price.

Contrary to earlier prophecies, most everything in the garden seed line will be in sufficient abundance to go around, although it is claimed that certain varieties are still more or less in hiding. A genuine scarcity unquestionably exists in some varieties of peas, radishes and California onion seed, but to what extent the shortage will affect the latter will depend on the demand, which in itself will be largely controlled by the result of the final round-up of the returns on the sale of sets which will not be known before next month.

The several jobbing houses in Chicago are now taxed to their full capacity, and it is stated that the business is earlier, with a good prospect of being larger than ever before.

A. G. Brown of Grand Rapids, Mich., was in Chicago this week. One of the leading houses reports a fair supply of onion sets yet on hand which are holding strong at \$1.75 to \$2 per bushel for yellow and red and \$2.25 per bushel for whites.

Although it is a little early to make predictions on the Bermuda crop of Harrisburg bulbs, it is noted in reports reaching here that the growers as usual are firm in their demands as to price. W. K. W.

GOVERNMENT SEED DISTRIBUTION.—There is ground for belief that the Senate Committee will adopt the provision of the Department of Agriculture confining the distribution to really new, rare and valuable seed. Those interested should help to secure such action by Congress, otherwise the public money will be wasted for years to come in the distribution of seed wholly worthless as far as adding anything to the general knowledge of agriculture is concerned.

A prominent member of the Seeds-men's League and of the American Seed Trade Association says in regard to continuing the fight against the free seed distribution: "My individual impulse will be to drop the matter in disgust. Thirty years ago I took over from my father his active opposition against the free seed distribution, which opposition by him had extended since 1850. I have spent considerable money and an immense amount of time and thought, and am now ready to give it up as a bad job."

RIDICULING THE FREE SEED GRAFT.—The Boston (Mass.) Advertiser of January 30 says: Congress has again listened to the wails of the seedless. Ringing in the congressional ears was the piteous plea:

Give me three grains of corn, uncle,
Or three grains of anything;
It will keep the little life I have
Till the coming of the Spring.
Make it three grains of oats, uncle,
Or even a sunflower pip.
Or anything else that will sprout and grow—
A seed, or bulb or slip.

So we have the free seeds over again, with its deluge of foolish seeds and bulbs. Bad habits are always the hardest to cure, and the free seed habit sticks like a burdock. Why not also distribute appliances for sweeping under the furniture, or directions for making a self-building kitchen fire, or something that will button the feminine waist in the back? If the government is to give away fool things, why stop at free seeds?

Referring to the remarks of Representatives Clayton and Candler in regard to Congressmen supplying the "pretty girls," and "white-haired old ladies" with flower seeds, the Philadelphia Press says:

"The pretty girls (Heaven bless 'em!) do not have to send a message to Congress every day to get what they want. The chivalry of the land is assembled there to do their bidding. When they have tired of free flower seeds they can have free ostrich plumes, bangles, garter buckles, hair combs, hatpins and possibly bundles and bundles of lingerie. There won't be any reason why this benevolent policy should stop until every pretty girl in the country gets her Spring hats, Fall hats and all the other things she needs, including a wedding trousseau, under a congressional frank. Pretty girls like these things better even than they like flower seeds. When the millinery, to turn the gossamer, the tailor-made suits arrive the pretty girls will be made even prettier, and they will look longingly with their bright and smiling faces for the arrival of the daily or perhaps tri-weekly mail from Washington. If they are going to take the blame they ought to get the goods."

European Notes.

A thoroughly relaxing spell of unseasonably mild weather has been followed by an Arctic wave which has frozen everything between York and Constantinople as hard as a brick, or buried it in chilling snow. With the thermometer at 49 degrees Fahrenheit below zero in Austria; six inches of snow in Naples and Rome; nineteen degrees of frost in Constantinople and Nice, 37 degrees colder than Ireland, the weather clerk has beaten the record for the past fifty years. In northern Europe the fall of snow has been insignificant, while a biting wind of exceptional force and severity has not only driven the growers indoors for shelter but has practically destroyed the miserable remnant of their growing crops. As the barometer remains exceptionally high there is no immediate prospect of a change.

Although celery, onions and many of the carrots have already been transplanted, the culture which causes us the most anxiety is cabbage. The acreage of this article was so small at the start that any serious injury to the plants left standing is

much to be dreaded, and the entire destruction of all delicate plants by the blizzard now raging is absolutely certain. This will doubtless be good news to some of your readers who hold heavy stocks, especially as some of these stocks are of such poor vitality that they will soon be unsalable.

As beets and mangels are not yet planted out, we are not concerned for their safety.

Horace J. Wright, having become a trader, has resigned the chairmanship of the Floral Committee of the Sweet Pea Society and his brother, Walter P. Wright, has been appointed in his stead. N. B.—It is a rule of the N. S. P. Society that the chairman of this committee must be an amateur.

The brutal murder of William Whiteley, the multi-millionaire and universal provider, is of special interest to all connected with horticulture. At his stores you could purchase anything from a pin to a continent, with a house, wife and family thrown in as a makeweight; so it is not surprising that the florists' business formed one of his 200 departments. Under the peculiar circumstances of his position his competition with the regular traders was very keen and sometimes unfair, as the special surplus offers periodically issued by him simply killed all chance of making a profit by growers not so fortunately circumstanced. "De mortuis nil nisi bonum" is an excellent maxim for those who observe the golden rule, but the man that "wants the earth" must not be surprised if his methods are severely criticised.

The adjourned meeting of the national Potato Society was held on January 22. There was a very meager attendance of members and the promised efforts to resuscitate the society look like "riding a dead horse."

EUROPEAN SEEDS.

JAPANESE LILIUMS.—There is still a great doubt existing among growers as to which are the best types of longiflorum to handle; only a few are able to distinguish the difference between eximeum, multiflorum, and giganteum (Takesima is another name given by some importers to giganteum). Eximeum is the cheapest and the least valuable, producing fewer blooms, and these are of a thin, poor and watery nature, the petals in some cases almost transparent; the growth is poor and the foliage scant; it does not possess sufficient constitution to retard successfully. In spite of this, however, it is probably used in much larger quantities than the other two sorts, perhaps on account of its cheapness and ease of propagation and cultivation in Japan. Multiflorum is simply an improved and glorified form of eximeum, and is, perhaps, a little difficult to distinguish from it, as its general characteristics are the same, excepting that it is stronger in growth and produces more bloom and of a more robust texture. Its constitution is much superior, consequently it is one of the best for retarding. Sometimes the packers in Japan or merchants here mix multiflorum with eximeum, with the result that the batch

grows uneven, some bulbs growing strong with a good number of perfect blooms, while others are poor in growth with only a few blooms; in the majority of cases the result is put down to weak bulbs or poor cultivation, very few growers knowing they have the two sorts mixed. For really reliable work and for retarding and producing the largest number of the finest blooms, L. long. giganteum is the best, and although its price is a long way above either of the other two, the satisfactory results obtained from it make it really the cheapest and most profitable of all three, at least for late retarding. Its very hardy constitution enables it to withstand the effects of long storage much better than either of the others. The variety can be easily distinguished by having a more or less black stem, the leaves are larger and set wider apart, the growth is stronger, the blooms are larger and have more substance, and are perhaps of a purer white; the back of the bloom is a darker green. Any grower intending to take up the cultivation of liliams on a large scale will do well to give all the varieties a trial so as to make absolutely certain he is getting exactly the sort he desires before investing a large sum of money.—L. L. G., in Horticultural Trade Journal, Eng.

CATALOGUES RECEIVED.

THE TEMPLIN COMPANY, Calla, O.—Illustrated Catalogue of Vegetable and Flower Seeds, Bulbs, Plants, etc. This firm has been "at it" for 43 years. The lines offered are very complete, and the cover designs of the catalogue—collections of irises and fruits—embossed in colors, neat and attractive.

M. H. WALSH, Wood's Hole, Mass.—Catalogue of Roses, Hollyhocks, Phlox, Peonies. Beautifully illustrated. All the new hybrid Wichuraiana varieties are listed, as well as the Polyantha Rambler sorts. A colored plate of Evangelina appears as a frontispiece, with Hiawatha, in color, as a cover design.

BRIDGEMAN'S SEED WAREHOUSE (Rickards Brothers, proprietors), New York.—Illustrated Catalogue of Vegetable and Flower Seeds, Hardy Perennials, Ornamental Shrubs and Vines, Small Fruits, etc. Serviceable tables, showing color, height, duration and hardness of plants and flowers are given. This house was established in 1824, and has been "conducted with an eye single to efficiency and the preservation of a reputation early established for reliability and careful discrimination." The aim of the present firm is to maintain what has been set forth. A carefully selected list of Novelties and Specialties is furnished.

JAMES VICK'S SONS, Rochester, N. Y.—Garden and Floral Guide, 1907. An attractively gotten-up Catalogue of Seeds, Bulbs, Plants, Vines and Climbers, etc., profusely illustrated. A specialty of this firm is Asters, of which an interesting list, including many novelties, is furnished; a colored plate of Vick's "Quality" Aster collection accompanying the enumeration and descriptions of the varieties. The general offerings are, as usual, very comprehensive and complete. The concern tests every variety of seed offered in the catalogue at its farm, located at Despatch, N. Y., and "quality" is always the aim. Also a Wholesale Price List, and an interesting and well-illustrated Pamphlet on the "Vick Quality Aster" containing much useful information on the subject of Asters generally and Vick's varieties in particular.

CANNA ROOTS

Plant now to procure good saleable plants for Spring.

Table listing various Canna root varieties such as Alice Roosevelt, Albion Bouvier, Albion, etc., with prices per doz, per 100, and per 1000.

POMOLOGICAL HISTORY OF NEW YORK.—At the last meeting of the Western New York Horticultural Society, the suggestion was made that a committee on pomological history should be appointed, whose duty would be the collecting of records giving the origin and history of important happenings in the pomological world. Such records would take into account the place of origin of important fruits, of the beginnings of important fruit industries, as the planting of the first orchard in any leading fruit region, or the first vineyard in any vine-growing section. New York has an enviable record in the matter of developing varieties of fruits which have been of great value in the orcharding industry of the country. Some of the finest apples in our entire list have been produced within the borders of New York—Esopus Spitzenburg, Northern Spy, Wagner, Primate—and among vines and small fruits the list is very lengthy.

President Wm. Barry appointed a committee to take charge of the work of collecting information on this subject, and the function of the committee will be to ascertain the place of origination of these fine old varieties, and make a report upon the feasibility of erecting tablets or other suitable memorials, which shall properly commemorate the place and time of the origination of these fruits, which have been such important factors in furthering commercial and amateur fruit growing in this country. All persons who are interested in this attractive piece of historical research are requested to send any items of information in their possession to the chairman of the committee, C. S. Wilson, Department of Horticulture, College of Agriculture, Ithaca, N. Y. JOHN CRAIG.

Hardiness of Trees.

Will the following nut trees stand the Winters in open ground in the latitude of New York: English walnut, pecan? Is the persimmon hardy in the same latitude? W. A. M.
New York.

—English walnuts flourish near New York City and along the coast into Connecticut; and even near the lake at Rochester, N. Y., trees of it of good size have been reported. Much the same can be said of the pecan. The persimmon is hardier than the pecan, and no doubt would thrive, as it is native as far north as Philadelphia. But when trees approach the limit of their endurance of a cold climate they rarely bear as satisfactory crops as when in a more congenial climate. J. M.

Pruning the Peach.

I have about fifty peach trees. I cut them back when planted, and they have not been pruned since. They are two years old. Should they be pruned back, like a two-year-old apple tree? W. A.
British Columbia.

—The tendency of peach trees is to grow tall and become bare of branches lower down. As this is not desirable the trees are better pruned. Prune off about a third of the ends of the young branches. At the same time cut away completely such branches as are too close to each other, or that are crossing each other. This will give the trees a good shape. Peach trees become bushy under Summer pruning, just pinching off the ends of growing shoots. The side shoots start to grow at once, making a bushy growth before the Summer ends. J. M.

Horticultural Notes.

Caragana aborescens is a well-known Siberian shrub, bearing pea-shaped yellow flowers, much valued in the Northwestern States, because of its great hardiness. There is one of dwarf growth and handsome large, yellow flowers, *Caragana chamlagu*, from China, but it seems not quite hardy outside of the Southern States.

Juniperus glauca is a variety of *J. virginiana*, and is one of decided merit on account of its gray blue color. The virginiana is our red cedar, and in its wild state it differs much according to locality. Some of its forms in the West bear distinct names; and even the Bermuda cedar is thought to be but a descendant of it, originally from seeds dropped by birds.

The question has been asked whether when selecting wood for grafting, it is better to take from young trees than from older ones. The difference, if any, is not worth considering. To get healthy shoots is the object, such as will make good vigorous growth when they unite with the stock.

Jasminum nudiflorum does better on a northern exposure than on any other, as the flowers are not then enticed to open before frosts are gone, as they are when the plants are in a sunny situation. As a specimen on a lawn this jasmine forms an arched growth of much beauty.

When grapes are to be grafted it should be done below ground, the soil being scraped away a few inches to permit of the operation. When the cion is inserted above ground, failure usually results. After the work is completed only the cion should be visible above ground.

The Seckel pear is such a time in coming into bearing that it is a good plan to work some of it on older bearing trees of any kind. In this way cions become part of the tree, bearing as the rest of the tree does.

In the notes on the *Schinus molle*, which lately appeared, it was mentioned that it is called Australian pepper tree. This is true, but for all that it is not a native of Australia, but of Peru.

The nuts of *Pinus edulis* are still gathered by Indians in Nevada for use as Winter food. The nuts are large and the shells thin. The tree is hardly capable of enduring our Winters, unless well sheltered.

Many of the saxifrages are very early flowering. One wild one, *S. virginiana*, white-flowered, is one of the first to greet us. *S. crassifolia*, from Siberia, has its flower spike ready formed in Autumn, pushes it forward and is in bloom sometimes before frosts have gone. Its flowers are red, and very showy.

When the climate of California is considered it is not strange that so few of the plants from that State do well here. Could we give a dry Summer and rain in Winter, they would receive what they get at home.

Foresters are recommending the short-leaved pine, *Pinus mitis*, for planting for forestry purposes. Excepting the broom pine, *P. palustris*, no better timber pine exists, but persons who propose using this pine in the North should see that seed from Northern trees are obtained, for that from the Southern States would not give seedlings hardy at the North.

Calycanthus praecox
Flowers January 15 or Thereabout
Photo by J. F. Johnston

The effect of atmospheric heat on plants is well illustrated in the case of vines outside of houses, a shoot of which may find its way inside. The latter shoot will burst into leaf in Midwinter, even though the roots be in frozen soil.

Catalpa Kempferi is the small-sized tree with small flowers and slender seed pods, the leaves having a slightly purplish hue. It is a desirable small ornamental tree.

Catalpas for Shade Trees.

The use of the catalpa for avenue planting is occasionally seen, but it is not yet as common as it might be. Some examples of it are in Fairmount Park, Philadelphia; and a few streets on the outskirts of the city have been lined with it. Those in the park are *C. speciosa*, while those in the city are *C. bignonioides*. There seems no good reason for the rejection of the catalpa for such plantings, be it in the city or out of it, especially should the soil be a moist one, which is what these trees like.

There are so many trees used for avenues which are unfit for the purpose, on account of their too heavy growth, that there is good reason for think-

ing the catalpa would become a great favorite were it better known as a street tree. Some have raised the point that the seed pods hanging on the trees all Winter are objectionable, but as the seeds do not fall until toward Spring, this drawback amounts to but little; on the other hand, some regard the pods as objects of interest in the Winter season. It may be said, too, that those who dislike to see the pods might plant the *C. speciosa*, as this species produces but few pods while flowering as freely as the other. It grows taller as well, and this would be considered desirable in some cases.

Mentioning the flowers, the large panicles of catalpas are considered beautiful, and an avenue of the trees in flower would be thought as attractive, almost, as the avenue of horse chestnuts in Bushy Park, London.

One more reason for planting the catalpa is, that it is easily transplanted—something all planters will be glad to know.

Watering Trees in Winter.

Referring to the loss of trees in Winter, how few persons know that it is often largely due to the want of moisture in the soil, yet such is the fact. More than once the writer has watered evergreens in Winter, growing on a dry, sloping bank, because he knew the soil about their roots was very dry. Both evergreen and deciduous trees lose moisture all Winter long, and if moisture in the shape of rain or snow does not fall, it must be provided.

In States subject to high winds, Kansas for one, good-sized trees have been Winter-killed time and again, because of the dryness of the ground. Indeed, one does not need to go to the Western States for examples of this. It has happened here several times when Winters have been cold and dry; even large forest trees suffering. Evergreens suffer the most, because their foliage is transpiring all the time, as well as the wood itself. When rains are frequent in Fall or in Winter, with the ground open, so the water can penetrate it, there is less loss of trees than in seasons of the opposite nature. And when such saturated soil freezes up later and layers of snow cover the ground, this condition is still a further help to trees.

When once it is recognized that trees must have water in Winter as well as Summer—a fact known well enough, of course, but that they are suffering for want of it is not thought of—there will come to mind many ways by which to provide water for them. One way to partly ensure moisture is to mulch the ground about the trees with forest leaves or other material, for it assists not only in preserving moisture but in keeping the ground from freezing hard as well. JOSEPH MEEHAN.

A Very Early Flowering Shrub (*Calycanthus praecox*.)

This is a Chinese or Japanese shrub. It belongs to the natural order of Calycanthaceae. The American species of *Calycanthus* are floridus, glaucus, and occidentalis. The native forms are much better known than this Chinese one, which is very rare to most gardens of this country.

Botanically, the order to which this plant belongs is interesting. It is a small one, consisting of deciduous shrubs of aromatic fragrance with opposite entire leaves, and although closely related to the rose family, yet it has a distant resemblance to the magnolia family.

Those who are acquainted with this shrub know it best probably as *Chimonanthus fragrans*, but recent authorities have styled it *Calycanthus praecox*. Now it is one of the earliest flowering shrubs we have, opening its blossoms in the early part of January; but its flowering in the open is altogether dependent upon weather conditions, so that in the colder districts, where the weather at that time is usually severe, the flower buds fail to expand, remaining persistent in a closed state for some time, then falling to the ground.

At Dorsis, Glen Cove, L. I., where one of these plants grows, during the mild weather of January, 1906, it flowered profusely without any protection whatever. It gives joy and pleasure to see a shrub in full blossom out of doors at that season of the year, no matter how seemingly inconspicuous such flowers may be. The fact of its flowering at such a time endears it to all.

Examine the flowers carefully, botanically, and they will be found most interesting. The sepals, which are generally less conspicuous in most flowers than the petals, are here the prominent parts; in fact, there are no distinct petals. The sepals are arranged in two whorls; the outer ones are of a pale lemon color, thin and wax-like in texture; the inner ones are purplish-brown and striped and are also thin and wax-like. In the center is found a bunch of white stamens. The flowers are very fragrant, having a perfume resembling that of Roman hyacinths.

Calycanthus praecox as a plant is hardy, having nice green opposite leaves. In the colder districts if a little care and attention be given, this plant may be had in bloom in quite severe weather. The shrub should be planted facing south against a wall or similar background so that when Winter comes an improvised greenhouse, of some such material as frame sashes can be constructed readily over it. Within all will be snug, and the plant will open its fragrant blossoms secure from biting Wintry blasts.

One other interesting fact about this shrub is that if sprays with unopened flowers be cut, placed in water, and kept in a dwelling house, the blossoms will expand as do those of forsythia.

The Hepburn Pure Seed Bill.

As mentioned in our issue of February 2, a bill (H. R. 25,031) was on January 28, introduced in the House by Representative Hepburn "to regulate commerce in adulterated and misbranded seed, and for other purposes." The bill has been referred to the Committee on Interstate and Foreign Commerce. It is one of great importance to all who deal in seeds, the full text being as under:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the introduction into any State or Territory or the District of Columbia from any other State or Territory or from any foreign country or shipment to any foreign country of any seed which is adulterated or misbranded, within the meaning of this Act, is hereby prohibited, and any person who shall ship or deliver for shipment from any State or Territory or the District of Columbia to any other State or Territory or the District of Columbia or to a foreign country, or who shall receive in any State or Territory or the District of Columbia or any other State or Territory or the District of Columbia or foreign country, and having so received shall deliver, in original unbroken packages, for pay or otherwise, or offer to deliver to any other person, any seed adulterated or misbranded within the meaning of this Act, or any person who shall sell or offer for sale in the District of Columbia or the Territories of the United States any such adulterated or misbranded seed, or export or offer to export the same to any foreign country, shall be guilty of a misdemeanor, and for such offense be fined not exceeding two hundred dollars for the first offense, and upon conviction for each subsequent offense not exceeding three hundred dollars or be imprisoned not exceeding one year, or both, in the discretion of the court.

SEC. 2. That the Secretary of Agriculture shall make uniform rules and regulations for carrying out the provisions of this Act, including the collection and examination of specimens of seed offered for sale in the District of Columbia, or in any Territory of the United States, or which shall be offered for sale in unbroken packages in any State, having been brought into that State from any other State, Territory, or the District of Columbia, or which shall be received from any foreign country or intended for shipment to any foreign country, or which may be submitted for examination by any chief agricultural officer of any State, Territory, or the District of Columbia, or by the director of any agricultural experiment station in any State or Territory, or by any officer of any foreign country, from which such seed is offered for import into the United States, or to which it is offered for export from the United States.

SEC. 3. That the examinations of specimens of seed shall be made in the Bureau of Plant Industry of the Department of Agriculture, or under the direction and supervision of such Bureau, for the purpose of determining from such examinations whether such seed is adulterated or misbranded within the meaning of this Act, and if it shall appear from any such examination that any such seed is adulterated or misbranded within the meaning of this Act, the Secretary of Agriculture shall cause notice thereof to be given to the party from whom such sample was obtained. Any party so notified shall be given an opportunity to be heard, under such rules and regulations as may be prescribed as aforesaid, and if it appears that any of the provisions of this Act have been violated by such party, then the Secretary of Agriculture may at once certify the facts to the proper United States district attorney, with a copy of the results of the analysis or the examination of such seed duly authenticated by the analyst or officer making such examination, under the oath of such officer. After judgment of the court, notice shall be given by publication in such manner as may be prescribed by the rules and regulations aforesaid.

SEC. 4. That it shall be the duty of each district attorney to whom the Secretary of Agriculture shall report any violation of this Act to cause appropriate proceedings to be commenced and prosecuted in the proper courts of the United States, without delay, for the enforcement of the penalties as in such case herein provided.

SEC. 5. That the term "seed" as used in this Act shall include all vegetable, flower, cereal, grass, clover, forage plant, and other agricultural and horticultural seeds intended for seeding purposes.

SEC. 6. That for the purposes of this Act seeds shall be deemed to be adulterated—

First. If seed purporting to be orchard grass seed contain seed of rye, grass, or meadow fescue; if seed purporting to be Kentucky bluegrass seed contain seed of Canada bluegrass; if seed purporting to be red clover seed contain seed of yellow trefoil, burr

clover, or sweet clover; or if any seed purporting to be seed of one kind or variety contain seed of another kind or variety, such other seed being similar in appearance or of lower market value: Provided, That no seed shall be deemed adulterated within the meaning of this paragraph when it is accompanied by a statement or label in the form and manner prescribed by the rules and regulations in this Act provided for, giving the name and amount or proportion of each of the kinds or varieties of seeds contained therein.

Second. If seed of red clover, alsike clover, alfalfa, or Egyptian clover contain seed of dodder; or if any seed contain weed seed, rendering it unfit for seeding purposes: Provided, That no seed shall be deemed adulterated within the provisions of this paragraph unless it be offered for export to, or has been imported from, a foreign country.

Third. If any seed contain dead seed, or any other matter materially

SEC. 8. That no dealer shall be prosecuted under the provisions of this Act when he can establish a guaranty signed by the wholesaler, jobber, or other party residing in the United States from whom he purchases such articles to the effect that the same is not adulterated or misbranded within the meaning of this Act designating it. Said guaranty, to afford protection, shall contain the name and address of the party or parties making the sale of such articles to such dealer, and in such case said party or parties shall be amenable to the prosecutions, fines, and other penalties which would attach, in due course, to the dealer under the provisions of this Act.

SEC. 9. That any seed that is adulterated or misbranded within the meaning of this Act, and is being transported from one State, Territory, District, or insular possession to another for sale, or having been transported, remains unloaded, unsold, or in original

bond to the effect that such articles shall not be sold or otherwise disposed of contrary to the provisions of this Act, or the laws of any State, Territory, District, or insular possession, the court may by order direct that such seed be delivered to the owner thereof. The proceedings of such libel cases shall conform, as near as may be, to the proceedings in admiralty, except that either party may demand trial by jury of any issue of fact joined in any such case, and all such proceedings shall be at the suit of and in the name of the United States.

SEC. 10. That the Secretary of the Treasury shall deliver to the Secretary of Agriculture, upon his request from time to time, samples of seed which is being imported into the United States or offered for import, giving notice thereof to the owner or consignee, who may appear before the Secretary of Agriculture and have the right to introduce testimony, and if it appear from the examination of such samples that any seed offered to be imported into the United States is adulterated or misbranded within the meaning of this Act, or is otherwise falsely labeled in any respect, or is of a quality forbidden entry into or forbidden to be sold or restricted in sale in the country from which it is exported, or is intended for adulteration purposes, the said seed shall be refused admission, and the Secretary of the Treasury shall refuse delivery to the consignee and shall cause the destruction of any seed refused delivery which shall not be exported by the consignee within three months from the date of notice of such refusal under such regulations as the Secretary of the Treasury may prescribe: Provided, That the Secretary of the Treasury may deliver to the consignee such seed pending examination and decide the matter on execution of a penal bond for the amount of the full invoice value of such seed, together with the duty thereon, and on refusal to return such seed for any cause to the custody of the Secretary of the Treasury, when demanded, for the purpose of excluding it from the country, or for any other purpose, said consignee shall forfeit the full amount of the bond: And provided further, That all charges for storage, cartage, and labor on seed which is refused admission or delivery shall be paid by the owner or consignee, and in default of such payment shall constitute a lien against any future importation made by such owner or consignee.

SEC. 11. That the term "Territory" as used in this Act shall include the insular possessions of the United States. The word "person" as used in this Act shall be construed to import both the plural and the singular, as the case demands, and shall include corporations, companies, societies, and associations. When construing and enforcing the provisions of this Act, the negligence, omission, or failure of any officer, agent, or other person acting for or employed by any corporation, company, society, or association within the scope of his employment or office shall in every case be also deemed to be the act, omission, or failure of such corporation, company, society, or association as well as that of the person.

SEC. 12. That this Act shall be in force and effect from and after six months after its passage.

Decorative Dahlia, Fire Rain

(See page 187)

Courtesy Henry A. Dreer

reducing its value for seeding purposes: Provided, That this paragraph shall extend only to seed intended or offered for export to, or which has been imported from, a foreign country.

Fourth. If there shall be added to it any weed seed, or dead seed, or any other matter materially reducing its value for seeding purposes.

SEC. 7. That for the purposes of this Act seed shall be deemed to be misbranded:

First. When one kind or distinguishable named variety of seed shall be offered for sale under the name of another kind or distinguishable named variety of seed.

Second. If in package form, and the contents are stated in terms of weight or measure, they are not plainly and correctly stated on the outside of the package.

Third. If it be falsely labeled or branded as to the State, Territory, locality, or country in which it is raised or produced.

unbroken packages, or if it is to be sold or offered for sale in the District of Columbia or the Territories, or insular possessions of the United States, or if it be imported from a foreign country for sale, or if it is intended for export to a foreign country, shall be liable to be proceeded against in any district court of the United States within the district where the same is found, and seized for confiscation by a process of libel for condemnation. And if such seed is condemned as being adulterated or misbranded within the meaning of this Act, the same shall be disposed of by destruction or sale, as the said court may direct, and the proceeds thereof, if sold, less the legal costs and charges, shall be paid into the Treasury of the United States, but such goods shall not be sold in any jurisdiction contrary to the provisions of this Act or the laws of that jurisdiction: Provided, however, That upon the payment of the costs of such libel proceedings and the execution and delivery of a good and sufficient

CALENDARS RECEIVED.

H. H. BERGER & COMPANY, New York.—Catalogue of Tested Flower Seeds for all Gardens, imported and domestic Bulbs and Plants. A neatly printed and attractively gotten up Catalogue, with interesting lists of Novelties in Asters, Cinerarias, Calceolarias, Pansies, Dahlias, etc. This firm makes a specialty of Japanese Plants and Bulbs, the offerings of which are, as usual, complete, particular attention being drawn to the Novelties in Japanese Hydrangeas and Azaleas. The cover designs, in white and gold, are very artistic.

STUMPP & WALTER COMPANY, New York.—Catalogue of Vegetable, Field and Flower Seeds, Bulbs, Vines, Conifers, Hardy Perennials, Supplies, etc. This is one of the few catalogues where samples are given to an enumeration of the offerings presented. These are, as usual, very comprehensive and complete. Well-selected lists of Novelties and Specialties are furnished, among the former of which may be mentioned new Potato Merrill, June Pink Tomato, Curie's Dandy Strategem Pea, an improvement on the original Strategem. In flower seeds Novelties in Asters, Candytoft, Lobelias, Cyclamens, etc., are worthy of attention. The cover designs, in color, are handsome, representing a garden scene and a collection of the "World's Best Pansies." A first-class business-like catalogue, on the distribution of which this enterprising firm is to be congratulated.

W. W. WILMORE, Denver, Col.—Catalogue of Dahlias, Peonies, Gladioli, Hardy Plants, etc. Dahlias, are a leading specialty, an interesting and unique and valuable Novelties, is presented in the different classes. Illustrated. Also Trade List.

Three Grand Commercial CHRYSANTHEMUMS

HAVING raised thousands of seedlings in the last twenty years, I have three of the very best seedlings—considering fine form, color and stem for commercial purposes—in cultivation, and will offer a limited number at reasonable prices; nothing better in their season (all are certificated.)

- MRS. R. N. BIRD.** Fine glistening white, incurved, outer petals reflexed; good form and stem; mid-season.
- MRS. JOHN FREIS.** Large, early, incurved yellow, Bonnaffon type; the best early yellow to date; October 15.
- CHAS. RAZER.** Large, pure white, incurved, ivory form, fine stem and foliage; one of the best whites in cultivation; October 25.

PRICE: Each, 25c.; dozen, \$2.50; 100, \$15.00. Equal proportion of each at dozen and 100 rates.

ADDRESS

JOHN FREIS, 54 Highland Ave., FORT THOMAS, KY.

THE NANZ FLORAL CO., Inc. - Owensboro, Ky.

GRAND NEW CANNAS

William Saunders

The flowers are large, of splendid form and are born very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze. Height, 3 1/2 to 4 feet. We believe that **Wm. Saunders** is decidedly the most perfect canna of this type that has been introduced. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Ottawa

is a strong grower, very robust and 5 to 6 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.

Note:—We had this canna on trial among the Canadian experimental stations last summer and this is the official report of their expert:
Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 massed in one bed during the past season, this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 13 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size. 50c. each; \$5.00 per doz.; \$35.00 per 100.

New York

Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest varieties of cannas. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Send for our list and prices of 60 other leading varieties of cannas.

ROSES

Shrubbery

Are our great specialty, 2 1/2 and 4 in. pot plants we have in great variety. Teas, Hybrid Teas and H. P. Roses on their own roots, Philadelphia Rambler, Crimson Rambler, Dorothy Perkins and other climbers in strong field plants.

in variety. Viburnum Plicatum, Spireas, Altheas, Dentzias, Weigelas, Barberry Thunbergii, Hydrangea Pau. Grandiflora, Honeysuckles, etc.

Send for our Price Lists.

THE CONARD & JONES CO., WEST GROVE, PA.

DREER'S RELIABLE FLOWER SEEDS

ORCHID-FLOWERED SWEET PEA, NORA UNWIN

NEW ORCHID-FLOWERED SWEET PEAS

These are a distinct "break" in Sweet Peas, differing from the standard sorts by the extraordinary size of their flowers, usually measuring 2 inches across, and by the standards being crinkled and wavy, while the wings are large and spreading. Another splendid feature is that a very large percentage bear four blossoms to the stem, which are long and strong. To sum up, they possess every characteristic that can be desired in Sweet Peas, and will undoubtedly supersede standard sorts of same color as soon as they become more plentiful.

Countess Spencer. A lovely clear pink, shading darker at the edges. 10 cts. per oz.; 25 cts. per 1/4 lb.; 75 cts. per lb.
E. J. Castle. Rich carmine-rose, shaded with salmon, very striking, especially under artificial light. 17 cts. per pkt.; 5 pkts 75 cts.

Frank Dolby. The largest and finest pale lavender-blue. 17 cts. per pkt.; 5 pkts., 75 cts.

Gladys Unwin. Charming shade of pale rose-pink; extra long stems and very valuable for cutting. 10 cts. per oz.; 25 cts. per 1/4 lb.; 75 cts. per lb.

Helen Lewis. (Orange Countess.) Brilliant orange-rose. 25 cts. per oz.

Helen Pierce. This is the new glloxinia-flowered Sweet Pea, being marbled blue on a white ground, with the veins showing a little deeper, exactly like a mottled Gloxinia. 15 cts. per oz.; 50 cts. per 1/4 lb.

John Ingman. Rich salmon-rose. 15 cts. per oz.; 50 cts. per 1/4 lb.

Mrs. Alfred Watkins. A superb pale pink, similar in shade to the old Princess Beatrice. 17 cts. per pkt.; 5 pkts., 75 cts.

Nora Unwin. The finest white now in existence. 17 cts. per pkt.; 5 pkts., 75 cts.

Phyllis Unwin. A veritable giant among Sweet Peas; color a deep rose-carmine. 15 cts. per oz.; 50 cts. per 1/4 lb.

For complete list of Standard Sweet Peas, as well as Flower Seeds of all kinds, see our Wholesale Price List, free on application to all florists.

PLANT CULTURE

PRICE \$1.00 A. T. DE LA MARE PTG. & PUB. CO., 2 Duane Street, New York

Boston. News of the Week.

The subject of the lecture at Horticultural Hall on Saturday was "The Renovation of an Old Orchard." George T. Powell of New York was the speaker, and the attendance was the best this season. The speaker gave a history of his practical experiences in the work of renovating old orchards, telling of the methods of cultivation, pruning, etc., which he had adopted and the results he had obtained. He also spoke at length on the various insect enemies and gave remedies for their destruction. There was a very lively discussion, proving that the fruit growers of New England are getting alive to the cultivation of orchards for which much of the country is adapted.

Julius Zinn, the well-known Beacon street florist, has in his store a pair of fancy cats which he exhibited at the recent show, capturing no less than five prizes with them, one prize being a bronze medal.

The Shady Hill Nursery Company, it is expected, will sell out its entire nursery, including all the stock tools, real estate, etc., at auction in early Spring.

H. N. Eaton of South Sudbury is still bringing in a limited quantity of chrysanthemums daily to the Park street market.

J. K. M. L. Farquhar spent a few days in Lenox this week.

Among recent visitors were O. C. Simmonds, Chicago, and C. B. Weathered, New York.

J. W. DUNCAN.

Copy must reach this office by 12 noon Wednesday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

PUBLICATIONS RECEIVED.

THE HORTICULTURAL DIRECTORY AND YEAR BOOK, Publishers, The Journal of Horticulture, 12 Mitre Court Chambers, Fleet street, London, E. C., England.—This is a very useful publication and should be of the greatest service to those of our readers who do business in Great Britain and the Continent of Europe. It contains a list of the leading nursery and seed houses, of the private gardeners in England, Scotland and Wales, besides an enumeration of the principal tradesmen in European countries and the colonies of Great Britain. There are also given lists of the Botanical Gardens and Public Parks in the British Empire; tables of weights and measures, postal information, and numerous serviceable hints on things that horticulturists should know. We can supply copies of the Directory.

Carnation Show at Chicago.

The following notice has been sent out by the Chicago Florists' Club to many carnation specialists, but the invitation to participate in the show next Thursday is general and applies to everyone, whether in receipt of a personal application or not.

"On February 14 the Chicago Florists' Club will hold its annual carnation show. It is the aim of the club to make this show one of the best ever given and in order to accomplish this we are asking the hearty support of yourselves as well as other growers of novelties. We hope you will assist us all you can to make this show a success. You can do this by placing before the public a display of carnations of some kind, be it one, two or more exhibits, which we assure you will be highly pleasing to the club. We not only expect this show to be of large proportion, but we expect the same to differ slightly from other shows in this respect, in that we are asking all growers to give a little write-up touching on the growing and the handling of varieties which they may place on exhibition, as well as to culture required. In fact, placing before the craft whatever information you feel free to give, as we think that such information will not only be of value to growers, but it will also aid greatly in obtaining and bringing carnations to a higher state of perfection. It is progression that the industry needs, and information is an important factor and of great value to the grower.

"Out-of-town florists can forward their exhibition blooms to Ed. Winterson at 45 Wabash avenue, where they will be taken in until the time of the show, which will be during the afternoon of February 14, the evening of which will also be devoted to our club meeting, to which you are cordially invited."

Obituary

John J. Colmant.

John J. Colmant, florist and nurseryman, Birmingham, Ala., died at his home there on Thursday, January 24. He was 76 years of age, and leaves a widow, two daughters and three sons—John, Oscar, and Lucius. In the death of Mr. Colmant the district loses one of its very best citizens.

The National Board of Trade and Parcels Post.

The National Board of Trade at its recent meeting in Washington, D. C., to the utter astonishment of its most progressive members and in face of the able presentation of the affirmative report of its committee (of which W. Atlee Burpee is a member), favoring the system, went on record as opposing parcels post at present. A great deal of quiet work had been done to create sentiment against parcels post on the false supposition that it was antagonistic to the interests of the country merchants throughout America, and consequently, as a result to jobbers and manufacturers.

In his report, the chairman of the committee, Finley Acker of Philadelphia, reviewed the conditions and the several contentions regarding parcels post. He pointed out that the system had its birth in the United States, but in its infancy it was strangled, "presumably by a powerful corporate agency, which by the imposition of subsequent excessive express rates, has forced the commercial interests of this country to pay them tribute to the extent of hundreds of millions of dollars."

Alluding to the advantages of the parcels post system in other countries, the report says:

"Parcels post was incorporated into the British postal system about 1880 and it permits packages to be sent from any post office to any other post office in the United Kingdom at the rate of six cents for one pound and a gradually lessened rate up to eleven pounds for twenty-four cents.

"What was the practical result of this policy? In 1885 nearly 23,000,000 parcels were exchanged in Great Britain, and in 1900 over 75,000,000 were exchanged.

"At about the same period 150,000,000 exchanges were made in Germany through its domestic parcels post; 37,000,000 in France; 31,000,000 in Austria-Hungary; while over 300,000,000 exchanges were made by the countries enjoying the benefit of a domestic parcels post, and over 25,000,000 exchanges were made through the Foreign Parcels Post.

"How many of these 325,000,000 exchanges would have been made had the exchange facilities been inefficient or had the high rates prevailed which are charged by American express companies?"

"Do not these figures of 325,000,000 exchanges, which to-day no doubt aggregates 400,000,000 annually, lift the question of parcels post entirely out of the domain of a single interest or locality and place it upon the important plane of national and international importance, and give to it a dignity and vitality which classes it among the other world-wide recognized and efficient forms of transportation?"

The report then goes thoroughly and ably into the history of parcels post in America. In the 1874 United States Official Postal Guide it is specified that among other articles enumerated, seeds, cuttings, bulbs, roots, cions, the postage shall be "one cent for each two ounces or fraction thereof." This rate remained operative for only one year, when the word "ounce" was inserted instead of the words "two ounces." The report clearly hints that the influence bringing about the change was not that of the people, but of the express companies who "regulate their rates on small packages by the post office rate."

The groundlessness of the apprehensions and fears concerning the introduction of parcels post were likened to those which have been expressed all through human history against every labor-saving service that was ever invented.

The incongruities of the "grotesque classifications of the present third and fourth class mail matters" were also touched upon and examples of same cited, and the following resolutions presented:

WHEREAS, the National Board of Trade recognizes in the Domestic and Foreign Parcels Post system, as operated by the leading nations abroad, a valuable agency for stimulating internal and foreign commerce; and regards Parcels Post as one of the important agencies for furnishing cheap and efficient transportation facilities to the advantage of the entire community; and

WHEREAS, conditions as to space for handling, and railway charges which now prevail in this country, are not adapted to the inauguration of the European system of Parcels Post at this time;

RESOLVED, That the National Board of Trade reaffirms its advocacy of the inauguration of a Parcels Post as promptly as the Post Office Department is able to adapt such a system to the special needs and conditions of this country, provided the same is operated without loss to the government;

RESOLVED, That as a preliminary step to the above, we recommend the immediate consideration of third and fourth classes of mail matter at the authorized rate of 1874, namely, one cent for each two ounces, as embodied in House Resolution 4549, and in conformity with the repeated requests of Post Office officials.

The Board, however, as stated, went back on the position it had heretofore maintained on this question, by opposing the parcels post at present—an action which is considered not only amusing, but diametrically at variance with all for which the National Board of Trade stands—"the principles of absolute equity toward all American interests."

Greenhouse Construction.

In R. O. King's paper reproduced on pages 156 and 157 of our issue of February 2, the title of figure 5 (P. 157) should read "Trussed Section of 150-foot House"; and the weight marked as 1366 should have read 1166.

Notes and Comments.

JAMES BRAIK OF BUFFALO IS DEAD!—And thus has passed away another of my oldest and warmest friends. When that grand old man, William McMillan was superintendent of the Buffalo parks, Mr. Braik was his assistant, and after Mr. McMillan left there Mr. Braik was continued in his old position, but with more power; in fact, he was the practical superintendent. He was a good gardener, and a vigorous executive head, genial throughout and straining every point to serve and oblige his fellow craftsmen and friends; and one of the most beautiful traits in his character was his emphatic and never-dying devotion to the name and fame of his unequalled preceptor, William McMillan.

AND JAMES SHARKEY TOO HAS GONE!—Between 25 and 30 years ago I knew him well. He was a fine fellow and a good gardener, but unusually modest and retiring. For years I had lost track of him, hearing nothing of him. He used to glory in telling me of the Glasnevin Botanical Gardens near Dublin, and well he might, for not only are they exceedingly beautiful in themselves, but gardening is splendidly done there. The finest disas I ever saw were grown there, and so, too, were filmy ferns, sarracenias, cephalotes and many other gems. He also was a personal friend of that greatest of all British gardeners, William Robinson, of the London Garden, and of this he was very proud.

COSMOS KLONDYKE.—Not a true cosmos, but a bidens. This matters little, however; it is a most beautiful flower. Under ordinary conditions it blossoms a little later than the common cosmos, and for this reason I would suggest that it be grown as a 1st plant only. At the chrysanthemum show at the Phipps conservatory last November it was one of the most strikingly beautiful and showy plants in the exhibition. It is very easily raised from seed. Being a rank grower, it needs rich soil, pinching during Summer, and to be pot-bound as Autumn advances to throw it into generous bloom. Its flowers are as large and wide open as those of ordinary cosmos and of a deep golden yellow color.

BEDDING PLANTS.—We grow a great many and a large variety, too, and in May most anything that is thrifty and in good bloom will sell readily; but head over all stands the geranium. Therefore our gardener reasons in this way: "If I can get more for geraniums than I can for vincas, heliotropes and the other things, and geraniums cost less to raise, why should I bother with the other plants?" But money with us isn't everything, so we stick to many things for variety's sake. In the matter of colored leaved plants we aren't using nearly as many coleuses as formerly; alternantheras are giving us better and more lasting satisfaction.

TORONTO.—I have been there a few times. It is one of the most beautiful cities in North America, and the florists there can grow roses and carnations, too, I can tell you. I was there last August, but except friend Chambers of the parks, who had to stay at home to open the exposition, most of the boys were at Dayton at the Convention or hunting some other cool place. Mercy, wasn't it hot! One day we had a trolley ride around the city. The guide on the coach was very versatile and described the shade trees along the streets with a knowledge and decision that was remarkable and paid particular attention to the "English walnut" trees that were rather numerous and laden with fruit. At my request the coach was stopped and we picked some "walnuts" and opened them. In no other way could I convince this megaphone man that his "English walnuts" were nothing more or less than common American buckeyes! You might think he'd get mad, but no; he was a real jolly, good-natured Canuck with whiskers. Superintendent English of the Wintoner parks was with us, and he being a Johnnie Bull, when he said "buckeye" there was no more "walnut." But there was a good deal of pleasant chaff among the passengers.

RAMBLER ROSES.—We are having "funny" weather; to-day like Summer, to-morrow half way to or past zero. This is killing on somewhat tender plants. A stiff before-Christmas freeze sets them to rest, then comes an after New Year's Summer warmth and the buds swell and get green; then a frigid, icy spell, and the prematurely swollen and breaking buds and exposed wood are killed. This happened to me in the case of our Philadelphia Rambler roses last Winter. Although well mulched with manure, they got killed to the snow line and we didn't have a blossom from them last Summer, but the Crimson Ramblers growing alongside of them were not materially injured and they bloomed extravagant. This Winter we laid the Philadelphia Ramblers down flat on the ground and covered them all over with boards and manure, as we do with raspberries or tender roses.

CHRISTMAS DECORATIONS IN THE CEMETERY.—The attention given to this matter is becoming greater and greater every year, and I am giving it every encouragement. This decoration consists largely of draping tombs, monuments and vaults with laurel and ground pine roping, covering graves with berried holly, and the placing of wreaths upon the graves. Tons of such decorations are used every Christmas in this cemetery and thousands of graves are decorated. The Christmas business in cemetery work is a great item with our retail florists. In the

way of set pieces wreaths alone are conspicuous; crosses, anchors and the like are in limited number. Wreaths run from a frail little 10c. holly ring to one of \$5, and all sizes of wreaths of magnolia, laurel, or boxwood, either alone or made up with red Immortelles, say from a dollar to ten or twenty dollars. But the prevailing wreaths are of red Immortelles, either alone or relieved with boxwood, statice, galax; and some of these are very massive. Purple Immortelles are also used in heavy wreaths, but not much in small ones. A vast number of baskets filled with boxwood sprays and studded with red Immortelles are also used; so are bunches of the same, set on the graves like bouquets. We have a great many endowed lots in this cemetery and we decorate most of these at Christmas time, some of them very elaborately, and this has a wonderful effect in stimulating others to do likewise, adding much to the business of our city florists.

WILLIAM FALCONER.

OUR READERS' VIEWS

The Florist and the Church.

Editor Florists' Exchange:

I notice quite a lengthy article in the issue of The Florists' Exchange of January 26, on "The Trials and Tribulations of Detroit Florists," read by E. A. Scribner before the Detroit Florists' Club. There is one paragraph that I think needs the attention of every public-spirited florist, or anyone else interested in the welfare of the community in which he lives. It is that in which Mr. Scribner speaks of the church. To use his own words: "Every student of social science knows very well that the church up to date has done almost nothing for the betterment of humanity."

I would like to ask Mr. Scribner through your paper, if they have such things as public schools, colleges or hospitals in Detroit? If they have, and I think they do, where did they come from?

And when it comes to the florists' business, it seems to me that the three greatest holidays of the year are due directly or indirectly to the church.

E. TIRRELL DENHAM.
Mass.

Mixing Carnation Pollen.

Editor Florists' Exchange:

I have never experimented with using more than one variety of pollen in making a cross, and so cannot speak from experience. I believe, however, that it is quite possible to fertilize successfully with mixed pollen, and see no reason why Mr. Murray's word should be questioned. I have often had this same idea in my mind when making crosses, but have always neglected trying the experiment; owing chiefly to the fact that we prefer to have an absolutely correct record of the parentage of any variety we originate. Since this subject has been opened up, we will do a little experimenting along this line, and may report our results at the Washington meeting of the American Carnation Society.

WILLIAM WEBER.
Oakland Md.

Editor Florists' Exchange:

Regarding the application of mixed pollen, I have never considered this good practice. My idea has been that one of two things would result:

First. All the fertile seeds in the pod would be impregnated by one variety of pollen.

Second. Some seeds would be impregnated by one variety of pollen and some by the other.

In either case nothing is gained over separate crosses and uncertainty is the result.

It has been stated that Mr. Burbank pursued this course, and that his wonderful skill enabled him to say which pollen had been effective by examining the resulting seedlings. This would indicate that the method was adopted, not in order to secure combined action on individual ovules, but to make fertilization more sure. However, I have seen nothing over his own signature on this point.

To summarize—I would not dare say that it is impossible for two differing pollen grains to act simultaneously in fertilizing the same ovule, but it seems to me very unlikely to happen.

W. N. RUDD.

Editor Florists' Exchange:

In my short practice I have never used mixed pollen, neither have I ever heard of it being used until the present discussion now before your readers, so I would not like to approve or condemn such practice.

MALACHI TIERNEY.
New Jersey.

Birnie Discusses Rudd's Remarks.

Editor Florists' Exchange:

I gather from a contemporary that in the discussion which followed the reading of one of the papers read before the American Carnation Society at Toronto, a gentleman hailing from the Windy City asserted that it contains "some rank heresies," and as a logical sequence he must consider the writer of the paper a heretic. The gentleman proceeds to inform his hearers that he has no "patience," a fact which would appear to have been so palpable that it was needless to call their attention to it. He might, however, have gone farther and informed

them that he was not overburdened with either tact or diplomacy, and was neither properly primed nor loaded. I guess he went off at halfcock.

The paper referred to was written altogether from a buyer's standpoint, and it is hard to see where the heresy comes in, unless it can be considered heresy to advocate measures that will be of benefit to the buyer. The certificate in its present shape amounts to nothing but a prize for a few selected flowers, and the buyer will only have what he has had heretofore—the questionable privilege of traveling a thousand or more miles in the Winter-time, just to look at them. If he buys, he buys altogether on chance; the certificate is no guide to him whatever.

It seems to me that a report such as a visiting committee would necessarily make, describing the carnation as seen growing, mentioning its faults and virtues as seen by them, is something that the buyer has a right to expect, and I think he would not object to pay the expenses; obviously it would be to his advantage to do so. That the visiting committee would not prove a "cure all" is admitted, but the report of a visiting committee should be a part of the certificate, or the certificate should be abolished altogether.

JOHN BIRNIE.

The Term "New Creations."

Editor Florists' Exchange:

In your review of Burpee's Farm Annual on page 4 of The Florists' Exchange you record the fact that he has used the expression "New Creations" in connection with several of his novelties. It is remarkable that a house of the pretensions of the one referred to should find it necessary to borrow a phrase of doubtful worth for advertising purposes; something original might have been expected from such a source. Mr. Burpee, however, does not seem to be altogether sure of his ground, and in "justification" of his action quotes a letter from Mr. Burbank, whom he evidently considers an authority.

The roundabout and indirect method adopted by Mr. Burbank in replying to his critics is characteristic. The letter to Mr. Burpee, however breaks that "sphinx-like silence," and will give those who read it a very good idea of Mr. Burbank's opinion of himself.

It will be observed that Mr. Burbank puts himself definitely on record as being a creator. "I am doing that," says Mr. Burbank. "That" is creating hens and plants. No doubt he impressed the fact on those long suffering Stanford University students that a plant breeder creates plants, a poultry breeder creates hens, a horse breeder creates horses, and so on; also that those who don't believe in this are "old-fashioned, bigoted and ignorant." Ignorance in this case might be bliss!

Mr. Burbank, perhaps reluctantly, states that there are "others;" but one can very readily read between the lines that in his estimation those "others" are very "small potatoes," and that he considers himself to be the great "I Am." It is extremely doubtful if any of those "others" would give Mr. Burbank much thanks for putting them in the same class as himself. If for "self-confident" we read "self-conceited" it gives a more complete picture of the man. The letter brings very vividly to mind that famous Hoch der Kaiser recitation of Admiral Coghlan, "Me und Got."

"Nature cares no more for a man than she does for a hen or a plant, so she never creates them for his special use. She leaves that for man to do for himself. I am doing that. "I wonder if Mr. Burbank actually believes that last quotation himself? It seems hardly possible. It is, however, altogether contrary to Bible teaching. In the twenty-first verse of that comprehensive chapter of Genesis we find it written: "And God created * * * every winged fowl after his kind." And after creating them they are by no means forgotten, for we find in the thirtieth verse of the same chapter that "to every beast of the earth, and to every fowl of the air, I have given every green herb for meat." And in the next verse: "God saw everything that he had made, and beheld it was very good." Burbank claims that his "creations are fully as successful as those of Nature herself!"

"Nature is and always has been trying experiments." This axiom has been recognized and acknowledged by florists and others so long before Burbank's time that it seems superfluous for him to propound it with so much emphasis, and that Nature makes good in plants once in a hundred times may be news to many. Personally, I think if such be the case, she would be doing better than Burbank.

But Mr. Burbank on the whole seems to have a very poor opinion of Nature. If he could cipher out what relation Nature bears to the Infinite it is possible he would regard her with more respect, and probably with some awe and reverence.

To the assertion that Nature neglects Burbank's hen or any other hen, Nature herself gives a flat contradiction. Of course, the hen in her domesticated condition is taken out of Nature's hands to a certain degree; she is provided with food, shelter, etc. But what causes her to throw off her surplus feathers as warm weather approaches; and what provides her with a nice, new coat before Winter comes round again? But there are other hens; prairie hens for instance, which are not domesticated. What cares for them? That thirtieth verse above referred to will answer this question.

Burbank's letter is certainly a very remarkable effusion. His direct claim to be considered a creator leaves Dowie altogether in the shade, and it is evident that, like that fakir, he has reached the parting of the ways. Certainly public opinion can not be expected to stand for much more. I have heard that opinion expressed by a great many intelligent men.

JOHN BIRNIE.

H. E. Fiske Seed Co.'s Store.

The illustration shows the new store of the H. E. Fiske Seed Company, the latest addition to the list of Boston, (Mass.) seed houses. The building is entirely new, occupying the site of the building burned last Spring at 13 Faneuil Hall square.

The store is one of the best, and is in one of the best locations in the city. Mr. Fiske, who always will be found at the helm, has a line of strictly new and reliable seeds for the many wants of his numerous customers.

J. W. D.

Several interesting communications from readers are unavoidably laid over till a future issue.

Store of H. E. Fiske Seed Co., Boston, Mass.

Salvia Zurich.

Editor Florists' Exchange:

One of the most important all-around novelties suitable for bedding is undoubtedly the new scarlet sage Zurich (Salvia splendens compacta Zurich). My attention was called to this plant several times during the last year through the European floricultural press reporting the various flower shows held through Germany, and it is remarkable how unanimous all the reports were in praise of this magnificent plant. It originated with the park department of Zurich in Switzerland about four years ago and has since been tried by a limited number of prominent parks and florists in Germany.

Salvias are much more used throughout Europe than in America as bedding plants, and all the varieties, such as Clara Bedman and Ball of Fire, are far better known there than here, but this new salvia, Zurich, is said to beat them all. It is of the dwarfest habit, dwarfier than Ball of Fire, which is the dwarfest we have had so far, never exceeding 18 inches in height, and its flowers are produced in wonderful freedom while still small plants, making it practically an everblooming variety. I have no doubt that it will soon find its way to our side.

A great drawback with Salvia splendens and its other so-called early flowering varieties has always been its late time in blooming, and a new variety which will unfold its wealth of flowers with a geranium, must be welcomed to all florists who have groups to plant for effect. Zurich is also said to last much longer when in flower, blooming long after the ordinary salvias are through. One of my correspondents calls it the "Gloire de Lorraine of salvias," which, he says, is a fitting description though far-fetched.

J. L. SCHILLER.
Toledo, O.

AMONG THE GROWERS

Novelties Recently Seen at Dreer's Nursery.

TRITOMA (KNIPHOPHIA) TRICOLOR.—Since the introduction of Tritoma Pfizeri the tritomas have become almost indispensable in the border. Many new varieties have been since introduced, all of which possess some peculiar points of merit, but the majority of these have inclined to tall or giant

perennials. It is a true perennial, requiring no special care after being planted, but reappears season after season with its masses of beautiful centaurea-like lavender-blue flower. Admirers of this plant will welcome this new white-flowered form which is being introduced by Henry A. Dreer this season. It is described as being a counterpart of its parent in habit of growth, freedom of bloom, etc.; but its color is a pure glistening white.

GYPSOPHILLA PANICULATA FL. PL.—The old single-flowered form of Gypsophilla paniculata has always been a popular Summer cut flower, its delicate misty sprays of flowers adding a grace and beauty when combined with other subjects that cannot be secured with any other flower. In this double flowering form the airiness of the misty sprays is not at all disarranged, while the fullness of the flow-

"It will no doubt surprise many lovers of the dahlia when we tell them that this beautiful fancy variety is not new or even of recent introduction, it having been offered in our own catalogue in 1868; and while we are uncertain as to the exact year of its introduction, it is safe to assume that it was over a half century ago. It was raised in Philadelphia, by Mr. Gerhardt Schmitz, who seems to have been the Burbank of his time. An article which appeared in the Philadelphia Florist in 1852—fifty-five years ago—says of him: 'Old Gerhardt is a great one to raise seedlings of pears, peaches, strawberries, dahlias, etc. He now occupies the old Passyunk nursery. This is the mark for dahlias in all varieties. His seedlings are justly celebrated, and can

New Hybrid Impatiens

Philadelphia

forms, such as Obelisque, a saffron colored variety, growing from 4 to 5 feet high, Star of Baden Baden, a buttercup yellow with green shadings and long protruding orange red stamens, a perfect giant, reminding one of Eremurus robustus, with its stems from 5 to 7 feet high and spikes of bloom from 15 to 18 inches long. Still another very distinct strong growing variety is Triumph, growing from 5 to 6 feet high, of salmon orange color. But prettiest of all is Tritoma tricolor, a dainty pigmy among the above, never growing over 2½ feet high, its flower heads from 4 to 5 inches long, in which three distinct colors are combined in the same spike of flowers, the buds at first appearing cochineal red, changing to canary yellow as they develop and finally opening a sulphur white. It is remarkably free flowering, being in bloom from early in August until October, and will prove a popular addition to this class of plants.

STOKESIA CYANEA ALBA.—It is only since the popularization of hardy perennial plants during the past 10 or 12 years that our beautiful native blue Stokes aster, Stokesia cyanea, has been well known, and it now is one of the most popular of our hardy

er gives it a purer and clearer white color. This variety was introduced some three years ago, but until the present season was sold at too high a price to permit of its extensive planting. It is now offered at a price which brings it within the range of commercial work, and is certain to become a standard Summer cut flower.

DAHLIAS.—In looking over the many color plate subjects in the retail catalogues for 1907 it is interesting to note, in connection with the growing popularity of the dahlia, a colored illustration in Dreer's Garden Book for 1907 of that old favorite fancy variety Frank Smith, a sort which is no doubt known to every lover of the dahlia, though to

most of us it is probably new, that this variety originated half a century since, as gleaned from the description given in the Dreer Catalogue and which as a bit of horticultural history herewith follows:

Tritoma Tricolor

H. A. Dreer

compete with those of any cultivator, and struck us during the past season as worthy of note among the immense variety of this much cultivated flower, which seems now to command reawakened interest."

It is convincing proof that a dahlia which has stood the test of over half a century, during which time hundreds, yes thousands of varieties have been introduced only to disappear again, must have exceptional merit. Frank Smith remains to-day the most beautiful fancy dahlia. It is of an intense purplish maroon shading to black, each petal tipped with white with carmine red shading; and while a percentage of the flowers, as in all fancy varieties, come self-colored, it is then one of the finest dark varieties in cultivation.

Another dahlia of importance especially to the cut flower trade that was noticed on the Dreer trial grounds during the past Summer is the new decorative variety Fire Rain (Feuer-regen), a German introduction, that in color and form is identical with that favorite old variety Lyndhurst, which on account of its brilliant cardinal red color is always in great demand as a cut flower, but which owing to its

Aster Early Wonder

Courtesy

Stokesia Cyanea Alba

Philadelphia

non-free-flowering habit (except in specially favorable seasons) is grown only in limited quantity. Fire Rain combines all of the good points of form, color, etc., of Lyndhurst, but it is at the same time one of the freest flowering sorts. Its flowers are borne on long, strong, wiry stems, making it an ideal cut bloom.

Another promising decorative variety which was noticed is a large creamy white of a type similar to Mrs. Roosevelt and Mme. Van den Dale, but of better form and finish. On account of its large size it has very appropriately been named Gigantica.

Among the newer cactus dahlias my attention was especially attracted to Walthari. This is undoubtedly the most artistic in form and soft coloring. It is a deep flower of fair size, with long incurved petals which at the center of the flower are of a soft canary yellow gradually passing to white at the edge of the bloom.

Of other cactus varieties which are not yet generally known the following were specially noted:

Amos Perry, an early fiery red, fine for massing.

Else, an indescribable combination of buttercup-yellow and rose—a grand flower.

Charm, a fancy cactus, the center of the petals being white, edged yellow and salmon pink.

Dainty, lemon yellow shading to a glowing rose with a tip of yellow at the point of each petal.

Eva, a small but free-flowering white.

Flora, a large ideal white, which, we think, for purity of color has no equal.

H. W. Sillem, very large, frequently seven inches in diameter, perfect in form and of a brilliant, rich cardinal red.

Florence M. Stredwick, a very dainty white, fine for cutting.

Frute, soft rose-pink passing to a cream center—very beautiful.

Gottelinde, an early-flowering, beautifully formed primrose yellow.

Lenau, coral red suffused with apricot shading to salmon rose.

Mrs. Clinton, deep amber shading to a rosy-scarlet, very rich and of perfect form.

Reliable, a large, bold, striking flower, of a salmon carmine and yellow.

Princess von Reuss, deep carmine red of medium size and exquisite form.

Shooting Star, large flowers of very regular form, of a bright golden yellow.

Thuringia, intense fiery red, a brilliant and fine formed flower.

Victor von Scheffel, much in the style of Kriemhilde, but softer in color.

Zephyr, crimson carmine intensified by bronzy shadings.

TEUTONIC.

CARNATIONS

John E. Haines's Experience with Carnations.

(Paper read before the Philadelphia Florists' Club at the January, 1907, meeting.)

A few weeks ago John W. Young wrote to me urging me to make a speech or write up something on carnations, to deliver before you this evening. I appreciated his kindness, but I really hesitated in complying with his wishes, as speaking in public is a new feature for me to enter upon, and a career of speech-making, at my age, may not be as successful as my work in raising carnations has been. I have concluded to give you my experience in growing the divine flower, and tell you how I drifted into this line of business in my advanced age.

Early Trials.

After serving a period in the Civil War I learned the trade of molding, which I followed until, owing to poor health, I was compelled to change my occupation. I became a retail coal oil merchant, and, later, in connection with this, I also had a few acres of land which I devoted to trucking. Finally, at the age of 48, I sold out the oil business to the Standard Oil Company. Then I built one greenhouse, 80x22 feet, to raise lettuce and radishes. Meanwhile I kept on trucking, raising all kinds of vegetables, and am doing the same to-day. My lettuce crop was very successful the first year, and the following one I put up another house of the same size. The lettuce crop was again very successful, and in two years more I erected three more houses. Florists began to pay me visits and to praise my good work in lettuce growing, but they told me that my good success with lettuce had about reached its limit and I would find out that succeeding crops would not always reach this same standard. The following year I grew 50,000 lettuce, but it was not quite as good as it had been in previous years, although it was not bad.

Gets Government Seeds.

At this period I became deeply interested in the florist trade papers and devoted most of my spare time to reading them. I sent on to the Government for seeds, and among the collection received was a packet of carnation seed. I again raised some lettuce, and began growing a few flowering plants, a few roses, carnations, etc. Lettuce was not a success that year, but the flowers did very well.

This increased my interest in the latter. My favorite was the carnation. With the florist's help which I had hired I commenced experimenting on the stock I received from the Government and a few standard sorts that I had purchased. The Government stock came mostly in bullheads and single blooms. There were also among them a few very fine plants, possessing fine stems and vigorous growth. We hybridized these with the following varieties: Jubilee, G. H. Crane, William Scott, Lizzie McCowan, New York, Albertini, etc. I was very successful, getting numerous good ones. I would raise them for a while, discover some bad trait, then discard them. I kept on trying and discarding until I secured enough stock of seedlings of my own, which, compared with the standard varieties I had on the place, were superior to those, in my opinion.

Trials Exhibiting.

Seeing glowing accounts in the papers of the flower shows held at various places, I decided to visit an exhibition and discover how my carnations compared with those of others. The first show I attended was held at Brooklyn, N. Y. I enjoyed my first visit at the shows, and found, to my delight, that my carnations were at least good enough to exhibit. Then I discarded most of the other stock and devoted my space, which I kept increasing a little year by year, to seedling carnations of my own raising. Lettuce was a dead member. I found the growing of the carnation the more interesting, and to-day, you see, I am still making a specialty of raising seedlings—a work which gives me extreme pleasure. I have visited some shows each year, and at times have come home feeling overjoyed with success, at other times disappointed. You florists, no doubt, have had similar experience. We all leave home feeling confident that our flowers cannot be

growing carnations in a sandy soil, but I believe it can also be prepared in compost to grow carnations equal to those raised in clay soil. It may even do better, I cannot tell.

Feeding.

In feeding the plants I begin as soon as I have fire in the house. I feed them lightly, now and then, and keep them on the move. I do not use liquid manure, but afford sheep manure, bone flour, air-slacked lime and wood ashes.

Temperature.

I have not kept a night fireman, except on extremely cold nights. I run my houses between 45 and 52 degrees. In one of my houses I have taken out the partition on one side, for growing violets. The temperature of this place is usually about 45 degrees, when the others are at 50 degrees. Here I always have been growing my namesake. I find that in this house my best carnation flowers are produced, and yet the plants are very prolific.

Troubles Encountered.

The troubles connected with the raising of this flower I have also met with, and have been kept busy fighting them. One of these troubles at one time was stem rot, as they call it. I will not undertake to say what the cause of it is, nor the remedy. There are many different opinions on this great question. I will relate to you an experience I had one year in this line. In the Fall I buried vegetables, such as turnips, radishes, beets, etc. In the Spring, when the ground was prepared for planting, there were still in a certain patch vegetables that had either rotted or frozen, also some salt hay which had been used for covering bulbs, and tomato vines grown the previous year. Here

Center-piece of Winsor Carnations

Artist, James Ivera Donlan.

beaten, but when we got to the exhibitions we see such fine displays that certainly open our eyes. Every time I come home, however, with renewed courage and aroused ambition to do better.

Treatment of Plants.

As to the treatment of the carnation, first I began by watering my plants at night. My reason for doing this was as follows: Early in the morning, after a good rainfall at night, I had a habit of taking a walk into my truck patch. Everything looked so fresh and crisp that it seemed to me I could almost see exactly how much things had grown overnight. I concluded that night watering would be the best method, and for a while followed it. The plants were doing finely. All florists, however, who came to visit me, and all the papers gave instructions for watering in the morning, and I finally changed to the generally accepted plan of watering, though I must say I did not see a decided difference.

By attending the different conventions and club meetings, and reading the different essays of various writers, I discovered that my way of growing the carnation was not so different from other florists' methods. I gradually learn more, get new ideas talking to different florists and visiting other greenhouse establishments.

The Secret of Long Stems.

The question "How do you get such long, strong stems on your carnations?" is often put to me. As I have said before, my methods are not different from those of others; I claim the secret of long stems lies in the varieties I have. In the other standard sorts I had been growing, I could see no difference in that respect.

Preparation of Soil.

The soil on my place is heavy. I prepare it by making a compost. I have never had experience in

planted my young stock of carnations. The plants raised on this patch suffered from stem rot. It was so peculiar; only these plants were infected. Those which did not get it in the field got it after planting in. This taught me that I must be very careful not to have any decaying or fermented matter around the place. I have been very strict as regards cleanliness. All refuse must be taken away immediately, and the surroundings of the plants kept sweet and clean. I have used air-slacked lime occasionally for this purpose.

Another trouble is that dreadful disease rust. From all my past experience I find that by taking the best of care of the plants, beginning at the time of planting in and taking all the precautions that would be taken if the plants were infected right along, the rust will seldom appear at all. "An ounce of prevention is worth a pound of cure." My plants are watched closely; if any show the least symptoms of rust, the infected leaves are at once removed.

To avoid the much-hated thrips and greenfly, the plants are sprayed with Nicotinic acid, say, once a week, but precaution is taken to choose a bright day for the work. I also begin this treatment as soon as the plants are put into the house. I find it more successful than the method of smoking, practiced by me in previous years. Since the present treatment has been given, my plants are molested very little with the pests.

These are some of my experiences. It is impossible for me to relate all of the little details. I feel that there is still a great deal for me to learn. My interest is at its highest point. My aim is to do better each year. I hope to meet you often in the future, to hear your experiences and views on the various questions. This way of meeting to tell each others' views, and visiting each others' places, I believe will lead to a grand advancement in the culture of the universal favorite, the carnation.

FOR THE RETAILER

Stock Still Scarce.

Thanks to colder weather and the accompanying sunshine, roses are becoming a little more plentiful and a great deal better in quality. But prices are still abnormally high at this season of the year, and the supply of stock is none too generous. A grower of American Beauty roses, with a large range of glass, shipped three special flowers one day last week and the rest of his cut being in proportion gives one an idea of the prevailing scarcity. It is impossible to obtain in sufficient quantities Mme. Abel Chatenay, Uncle John, Richmond and the newer varieties of roses, the demand being much greater than the supply.

A Wedding Decoration.

A wedding decoration at a Fifth avenue church was perhaps the most notable event of the week; and although not an elaborate affair it was pretty and simple. The chancel was well filled with palms on either side well back to the altar, the high effects being obtained by using tall stumps fifteen to twenty feet in height, surmounted by large, spreading heads of Florida palm leaves. This style of decoration has come into general use; in fact, it has be-

should not be put on the table until the last moment, as it is usually very perishable and only lasts an hour or two at the most, being unreliable even when put in water.

Flowering Plants for Table Decoration.

The use of flowering plants for table decoration is becoming quite a fad with the four hundred in New York, anything with a flower on it being called into service. A splendid old-fashioned subject for this purpose is the camellia with its rich green foliage and beautiful waxy flowers. It was used this week at a Seventeenth Century dinner, and it certainly carried out the idea, the effect being most imposing. Stuffed boars' heads were among the ornaments, and antique silver of the seventeenth century period, high candlesticks without the usual shades, added to the completeness of the plan.

Azalea Van der Cruyssen was used on another occasion; this variety lights up splendidly at night and makes a brilliant decoration.

A wreath made entirely of Lillium speciosum album, with a large cluster of cattleyas and Adiantum Farleyense recently attracted my attention in a Broadway store; the effect was beautiful. It was a standing wreath, four feet across, about two-thirds being made of the lilies and the remainder of cattleyas and A. Farleyense. The base, or stand, was filled in with some large cypas leaves and a cluster of callas. No ribbon was employed.

D. RAYBUN.

McKinley Day at Washington.

Government officials, members of Congress and private citizens wore the late President's favorite flower in silent memory of a martyred public servant and in the interest of patriotism and good citizenship. President Roosevelt had on his desk a great vase of fine carnations, and a similar bunch of carnations adorned the desk of Secretary Loeb. Members of the cabinet each wore one of the handsome flowers as they appeared at the cabinet meeting. Postmaster-General Cortelyou, one of the founders of the Carnation League of America, presented to each of the bureau and division chiefs and to each member of his own executive staff a beautiful carnation to be worn during the day.

CANTON, O.—"Carnation Day" was observed in Canton public schools by the recital of incidents in the life of McKinley by teachers and pupils. The public schools were dismissed early in the afternoon to allow pupils to attend a McKinley human-flag concert in the Auditorium, where 400 girls were dressed to represent a human flag. The concert was repeated in the evening, when Mrs. McKinley occupied a box. A local florist placed on the McKinley casket, by order of Postmaster-General Cortelyou, a large wreath made of carnations, tulips and hyacinths. Many other floral remembrances were sent to the McKinley tomb by Canton and out-of-town friends of Mrs. McKinley.

A LAUREL DECORATION was executed by Myer, on Tuesday, February 5, for the wedding of Miss Beatrice Morgan to Mr. Pruyn, of Albany, N. Y. The parlor of this old-fashioned house, situated in Stuyvesant sq., N. Y., was garlanded with heavy laurel roping, studded with clusters of carnations. Large pyramid bay trees lined the sides, reaching from floor to ceiling. Between the bay trees were placed five-foot pedestals covered with laurel, on which were placed candelabra with candles furnishing the light; as the house is so old fashioned, iting the light; as the house is so old fashioned, it has never known gas or electric light. The bridal party received in front of a background of laurel; the mantels were banked with Prince of India azaleas; the mirrors draped with fresh smilax. The soft light of the candles on this immense quantity of green gave an effect which can only be imagined. St. George's Church, which is opposite the bride's home, was decorated with arches of laurel along the center aisle. On each side along the pews were bunches of lilies. On the altar were vases of lilies, and on each side were huge groups of palms. The balcony was garlanded with laurel roping, as was also the organ loft. The white and green effect was beautiful and pleasing to the eye. This decoration was ably completed by Myer's lieutenant, Maurice Kleinman, assisted by a corps of decorators, to the satisfaction of all concerned. Five hundred yards of laurel roping were used.

Auction Sale Prices.

S. S. Peckham, florist, New Bedford, Mass., last week offered his entire stock and fixtures for sale at his Sixth street greenhouses. A local paper reporting the result of the sale says:

"About everything sold went at ridiculously low prices, the entire plant, itself costing about \$3,500, and a large stock of florist's fixtures and plants, the whole representing an investment of several thousand dollars, going for less than \$1,000. Here's a sample of the prices paid for some of the plant stock: 126 primroses in pots, 6 cents each; 240 asparagus plants in pots, 2 cents each; 19 pots of cyclamen, 22 cents each; 4 tulips in pots, 21 cents each; 16 azaleas in pots, 40 cents each; 8 geraniums in pots, 10 cents each; 14 azaleas in pots, 25 cents each; lot of ferns, 1 cent a pot; lot of palms, 14 cents each; 21 Jerusalem cherries in pots, 13 cents each; 18 rubber plants in pots, 10 cents each; 26 palms, 25 cents each; lot of palms, 6 cents each; 11 ferns in pots, 25 cents each; 5 crotons in pots, 6 cents each; 3 large fir trees in pots, 40 cents each; 86 small fir trees in pots, 25 cents each; 5 bay trees, 10 feet in height, \$1.25 each; immense jardiniere of ferns with standard, \$3.

"The above are all good examples of the prices for

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the normal commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dallas, Texas:

LANG, THE FLORIST, the largest flower store in the South, Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

which all of the stock of plants were sold. Three hundred flower frames went for \$14, a box of 9x7 glass for 30 cents, and about a thousand pots and saucers for 25 cents.

"The prices for which the greenhouses were sold were more ridiculous still. The first bid on the office building was \$1, and it finally sold for \$15. The three greenhouses sold for the prodigious sum of \$17, the boiler house for \$5, the boiler, piping and radiators for \$19, 300 feet of lead pipe for \$6. Totalling up the entire separate sales for the plant, exclusive of the plants, the auctioneer found he had received the sum of \$62. The property was then put up as a whole, and by bids which were in most cases a raise of 50 cents or a dollar, but never over five, the property was sold for an even \$100.

"About all the local florists attended the sale, and the fact that the plants were knocked down for such a low figure gave the auctioneer his chance to twit the florists about how much they must make on the people who buy flowers. The florists didn't buy so many of the flowers as did some of the others present. The low prices had the effect of interesting every one and some said they simply bought the plants to give away. The man who bought 126 primroses was in a quandary as to what his wife would say when the plants arrived, and another who had 16 azaleas on his hands questioned the propriety of his purchase. It will be up to the heads of several families to make an explanation when they apprise their wives of what they have been doing with their money. But the atmosphere was so catching that there was really no help for it but to pick up some of the bargains.

"The terms of the sale are that the buildings are to be removed from the premises before February 15, unless the purchaser can make arrangements with the land owners to renew the lease. Mr. Peckham sells out his retail business to devote his entire time to his wholesale business in Fairhaven."

Bridal Bouquet of Winesap Carnations.

By F. R. Pierson Co.

Artist, James Ivers Donlan.

come an almost indispensable addition where large decorative effects are to be obtained. And if well carried out it looks quite natural to the inexperienced eye. Natural palms were used to finish off the groups. Large clusters of growing lilacs in pots and bunches of white roses, met the eye in appropriate situations, the white and green effects being most pleasing. At each pew was placed a large cluster of white roses, and sprays of epacris tied with ribbon, the epacris making the bunches most attractive and pretty. The pillars were covered with wild smilax, starting within about eight feet from the ground and continuing over from one to the other, forming an arch. Large spray clusters of Alma Ward carnations were arranged about ten feet from the floor of the church, and continued up to the apex of each arch, and, mingling with the Southern smilax, gave one the impression of growing vines in full flower. The bridal bouquet was a wonderful creation of white lilac and Phalaenopsis amabilis, surrounded with A. Farleyense and tied with white ribbon. The bridesmaids carried bouquets of Oncidium splendendum, made up in sheaf form and tied with yellow silk chiffon.

Some Other Decorations.

Sweet peas were charmingly arranged for a large supper given this week. Tables for ten covers were used, the tables being eight in number. Tall glass vases about three feet in height occupied the center of the table; they were filled with large loose bouquets of the sweet pea, Blanche Ferry. The vines had been sacrificed and were hung in graceful festoons from the bouquets, falling to the tablecloth, no other green being used.

At another affair white lilac and Narcissus Golden Spur were employed with good effect, the two flowers being combined in large centerpieces. Lilac

CLUB AND SOCIETY DOINGS.

THE RETAIL FLORISTS' ASSOCIATION OF CHICAGO.—This organization, which has been for several months past in a state of dormancy, now shows signs of rejuvenation and at a recent meeting elected the following officers for the current

C. W. Eichling,
Vice-pres. Society of Southern Florists.

year: President, George Walther; vice-president, George Asmus; secretary, A. Lange; treasurer, C. H. Fiske. It is the intention of the most active members to endeavor to create enthusiasm among the others in the belief that there is much work which could be done by this organization which would ultimately benefit the whole trade.

THE HORTICULTURAL SOCIETY OF CHICAGO filled all its offices but one, for the present year, at a meeting held at the Auditorium Annex on Wednesday of last week. W. N. Rudd, who served last year as secretary under protest, positively declined to further perform the duties of the office which was accordingly left open for the present. The officers elected were: President, E. G. Uiblein; first, second and third vice-presidents, W. C. Egan, Ernst Wienhoeber, and R. H. Warder respectively; treasurer, Ernst Wienhoeber; assistant secretary, E. A. Kanst; executive committee, P. J. Hauswirth, E. A. Kanst, George Asmus, Leonard Kill, J. C. Vaughan, W. N. Rudd, August Poehlmann, and J. B. Deamud; directors, Clarence Buckingham, John J. Glessner, Harlow N. Higinbotham, E. G. Uiblein, Charles H. Wracker, Charles L. Hutchinson, Martin A. Ryerson, F. O. Lowden, John J. Mitchell, and W. E. Kelley.

W. K. W.

ELBERON (N. J.) HORTICULTURAL SOCIETY.—An interesting meeting of this society was held on Monday, January 21, President Robertson in the chair. One new member was elected and two proposed. In the competition for points, A. Bauer scored 90 for a vase of freesia Purity, and P. Murray the same number with a vase of mignonette Golden Machet. I. Kennedy showed a vase of Roman hyacinths; F. Dettlinger staged some good vegetables, and A. Greib exhibited single violets.

W. F. Ross, representing F. R. Pierson Company, Tarrytown, N. Y., was present, and made a few remarks.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.—The regular meeting was held Tuesday evening, January 29, President Howard Nichols in the chair. A fine lot of cyclamen plants were on exhibition. Joseph Bradley, gardener for Mr. Lidenburgh, Hastings, won the first prize with three excellent yearling plants, which any expert cyclamen grower would have felt proud to produce. President Nichols offers a prize for the best twelve roses other than American Beauty for the February meeting. H. C. Griffin of Tarrytown was unanimously elected to honorary membership. Two of the essays on vegetables that were in competition for the Peter Henderson & Company Prize at the Fall show were read, and a lively discussion followed. The authors of the essays were George Standen and Charles Newton.

Resolutions of sympathy were read and adopted on the death of John Egan, one of the society's charter members. Mr. Egan was one of the pioneers as well as one of the most able gardeners in this section. For many years he was in charge of the Guerny estate at Irvington, but latterly had

conducted a florist business in Tarrytown. He was one of the best grape growers in his day and his name was well associated with the production of many things first-class in floriculture. Resolutions of condolence were also sent to Claude Wilson, florist, Debbs Ferry, on the death of his son.

D. M.

NEW JERSEY FLORICULTURAL SOCIETY.—The regular monthly meeting and annual smoker of this society was held on February 1 in the rooms in Orange, N. J. It was a social affair for the members and their friends, and the evening was given up to music, short addresses and refreshments. Among the invited guests were Robert E. Berry, Nell Campbell and William F. Ross, all of whom took part in the proceedings. Carnation Winsor was shown by F. R. Pierson Company, Tarrytown, N. Y., and was received with marks of special favor by the gardeners present. Its color under the electric light is particularly pleasing and harmonious from a decorative standpoint, and its form and substance improve as the season advances, this being its third appearance before the society. Seedling carnations were displayed by Henry Hornacker, a grower of East Orange; and three vases of choice orchids by Julius Roehrs Company, Rutherford, N. J. From the neighboring estates came the almost perfectly grown *Euphorbia jacquiniæiflora* from Peter Duff; a specimen *Cattleya Schroederæ* from Sydney and Austin Colgate, flowered by William Reid; and hyacinths in good form and color from Charles Hathaway, grown by Max Schneider. The extraordinary size of the latter flower was laid by the grower to his planting as soon as the bulbs were received in August, burying, and bringing them out gradually from frame to cellar to forcing heat, the total result accomplished in about six weeks in a moderately cool house.

J. B. D.

Society of Southern Florists.

The first annual convention of this society will be held in New Orleans, on February 14, 15, and 16. For the last three months, various committees have been at work perfecting arrangements for the convention. The meeting place, 210 Camp street, is admirably adapted for the purpose, room for both the trade exhibit and meetings being in the one building, and is centrally located.

This convention is fraught with endless opportunities for mutual benefit and the local committee earnestly trust that a very large number of Southern and Northern florists by their attendance will seize "the tide in the affairs of men, which, taken at

the flood, leads on to fortune." Space in the exhibition hall has been liberally taken, but even now late comers can be accommodated. Prices of space are as follows, viz., 100 square feet, \$15; 50 square ft., \$10; 25 square ft., \$5. All exhibits should be addressed to T. D. Baker, chairman, 2241 Carondelet street, and, of course, all express charges must be prepaid.

A special exhibit of all kinds of cut flowers will be held on the second day of the convention, and it

Joseph Steckler
Treas. Society of Southern Florists

is hoped the commission houses and large wholesale growers who have, or would like to have, an extensive share of the trade in the South, will fall in line and make this a noticeable feature. There is always more or less complaint about the condition of cut flowers on arrival in this market and a really good display would have a tendency to settle many vexing problems in the minds of both retailers and wholesalers.

Several interesting papers will be read, and Professor Barnett will deliver a lecture on some live horticultural subject, with lantern slides, which is sure to be a rare treat.

The question box will be open at each session, and this together with much routine and executive business will fully occupy the attention of the members.

Those who intend taking in the famous Mardi Gras, preceding the convention, will do well to communicate with Mr. Lapouyade, 4412 Bienville street, chairman of a large and energetic reception committee, who will endeavor to find them suitable quarters. The hotels are crowded at that season, and it is well to have a roosting place ensured beforehand. The treasurer, Jos. Steckler, 512 Gravier street, wishes all intending members to send in their subscription of one dollar immediately so as to avoid all delay on the morning of the convention.

One of the first fruits of this convention is sure to be a long list of building operations, and those greenhouse builders who are on the ground can reasonably look for good business. Florists supply houses ought also to get fat orders for Easter novelties. The trade in these two lines will increase by leaps and bounds, and manufacturers must not forget that it is the "early bird," etc.

The entertainment feature has been liberally provided for and true Southern hospitality will be freely dispensed. A grand banquet will wind up the convention on the evening of the 16th. Mayor Behrman of New Orleans will welcome the delegates and Professor Stubbs is slated to reply.

CRESCENT CITY.

FREESIA PURITY is again in bloom in the Rural Grounds' glasshouse, says Dr. Van Fleet, in Rural New Yorker, and is even better than last year, all the plants grown from the larger corms carrying from 60 to 95 buds and blooms each. Planted three in six-inch pots, they grow over 20 inches high under ordinary cool greenhouse treatment, and from veritable banks of bloom at this season. There is a touch of yellow in the throats of some of the blooms, but the general effect is that of translucent, alabaster whiteness. Very good specimens of commercial *Freesia refracta alba*, growing near, look cheap and tawdry beside Purity, but have more fragrance than the latter. The commercial *refracta* generally have but five to seven blooms in a raceme, while those of Purity often open 9 to 11 large flowers. The production of such a strain by prolonged breeding within the species is a meritorious horticultural achievement. The originator, Rudolph Fischer, Great Neck, L. I., is still endeavoring to perfect his strain, and spares no effort to keep it up to its present high standard.

Robert C. Berckmans
President Society of Southern Florists

SCHULTHEIS' SUPERIOR STOCK

Araucaria Excelsa, 5 1/2 in. to 6 in. pots, \$1.00, \$1.25, 4 to 5 tiers; 7-in. pots, \$1.60, \$2.00 and \$2.50; 8 in. pots, 3 1/2 ft. tall, \$3.00.

Azaleas, beautifully flowered, just right, 50c., 75c., \$1.25, \$1.50, \$2.00, \$2.50 and \$3.00 each. Miniature azaleas, \$4.00 and \$5.00 per doz. Also pyramids in quantity from 4 in. 5 in. and 6 in., \$7.00 each.

Begonia Gloire de Lorrains, \$9.00, \$12.00 per doz. Wire hanging baskets, \$1.25, \$1.50 each, can be planted to order.

Pyramid Box, 3 ft. high, \$2.50 to \$3.00 a pair; 3 1/2 ft. high, \$4.00 a pair; 4 ft. high, \$4.50 and \$5.00 a pair; 4 1/2 ft. high, \$6.00 to \$7.00 a pair; 5 ft. high, \$8.00 a pair; 5 1/2 ft. and over, perfect specimens, \$9.00 a pair.

Boston Ferns, 5 in. pots, \$3.00 per doz.; 8 in., \$2.00 each; 9 in., \$2.60 each. Specimens in 12 in. pots, \$5.00, \$6.00 and \$7.00 each; 14 in. pots, \$15.00 a pair.

N. Elegantisissima, 5 1/2 in. pots, \$4.00 per doz.; 6 in. pots, \$6.00 per doz.

Scottii Ferns, 5 in. pots, \$4.00 per doz.

N. Whitmanii, 4 1/2 in. pots, \$9.00 per doz.

N. Piersoni, 8 in. pots, \$16.00 per doz.

Lilacs, white and purple, in pots, \$2.00; also larger plants.

Tulips, in pans, 35c., 50c., 75c. and \$1.00 each.

Tulips, in flats, \$2.00, \$2.50 each, 50 in a flat.

Hyacinths, doz., \$2.00.
Crocus, blue, white and yellow, 35c. per pan.
Snowdrops, 25c. a pot.

COMING ON FOR EASTER!
 3 homes **Crimson Ramblers**, **Dorothy Perkins**, in all shapes; **Baby Ramblers**, **Lilac**; **Heather**, yellow, pink, white, shell-pink; **Boronia**, **Acacia**, **Oranges**, **Azaleas**, and two houses of **Lilies**.

Aspidistra green, 5 1/2 in., \$9.00 per doz.; 6 in. pots, \$12.00 per doz.; 6 1/2 in. pots, \$18.00 per doz.

Daisies, English, \$12.00, \$18.00 and \$24.00 per doz.

English Ivy, 4 1/2 in. pots, \$2.00 per doz.; \$15.00 per 100; 3 to 4 ft. high.

Kentia Forsteriana, combinations, 3 and 4 plants in an 8 in. pot, \$2.50 to \$3.00; 9 in. pots, \$5.00 each; 10 in. pots, \$6.00 and \$7.00 each.

Kentia Belmoreana and **Forsteriana**, all sizes, single and combinations, from 5 1/2 in. pots, 75c., \$1.00 to \$10.00 each. Give us a trial.

Livistonia Stanensis, superior to **Lantania Borbonica**, 6 1/2 in. pots, \$9.00 per doz.; 7 in. pots, \$12.00 per doz.; 8 in. pots, \$18.00 per doz.

Pandanus Veltchii, 4 in. pots, \$3.00 per doz.; 5 in. pots, \$4.50 per doz.; 8 in. pots, \$2.50 each.

Cash or satisfactory New York reference. When sending orders, please state whether plants are to be shipped with or without pots.

THE WEEK'S WORK.

Timme's Timely Teachings.

Easter Lilies.

Much of the plant grower's attention now centers in the stock to be had in readiness for the coming Easter. Of this, without question, lilies hold the foremost place. To time longiflorum lilies, either of the Bermuda or Japan types, with anything like precision for any set date always calls for the exercise of a fair amount of good judgment, backed by previous experience. But even where this is not lacking, it very often becomes quite difficult to avoid disappointing results.

In the forcing of lilies for Easter very much depends on whether this holiday comes early or late, as also on the degree of ripeness in the bulbs, when planted, which is not the same every season. Then again, progress in forcing, though under the grower's immediate control, is greatly influenced by weather conditions—the most uncertain of interfering agencies to be taken into account.

Easter this year is early (March 31) and this is an advantage in many ways. The holiday rush is more widely separated from the main onset of the general Spring trade, clearing space and affording two more weeks of valuable time for the preparator of the plant-grower. And in the forcing of lilies for Easter it removes to a considerable extent, the difficulties experienced by lily specialists last year, when the stock put forth at Easter proved the most unsatisfactory for years, all owing to the lateness of that important holiday. This is explained by the fact that it is much easier and more productive of high grade lily stock to push growth, even under extreme measures, if necessary, than to hold it back when once started.

Lilies to be right for this year's Easter should now be well forward in crown growth. By the first week in March they should plainly show their buds clustering in the heart of the crown. In this is the case they will be in good time when held at a steady pace in a temperature of 60 to 65 degrees. Those in a lot like these that show an inclination to become stunted or evince slowness in growth after that date should be sorted out and subjected to a heat of 10 or 15 degrees higher, which usually will bring most of them in line with the rest of the lot, provided, of course, that they were sufficiently furnished with roots.

Lilies of the Japan longiflorum class, only recently started into active growth, if well rooted can still be forced into bloom by Easter, by need dropping and gradual heat, rise in temperature until by the second week in March the 75 degree mark is reached and then steadily adhered to, will promote a splendid development and bring about a timely finish of the greater number. Those in need of responding to high pressure forcing right at the start must be separated from the remainder before the highest point of heat is reached and carried along in slower stages, which will avert the onset of disease and probable loss thereby and make them good selling stock after Easter and away into Spring.

Bermuda lilies now showing buds above the foliage should not be held back by reducing the temperature in which they were making their growth, in order to hold them for Easter. This would only result in stunted, second-grade stock. But if these lilies were not too far advanced in development of buds and had been grown cool they might then be carried along nicely until Easter in the same low temperature with a slight rise later on in March.

As with everything else making a rapid growth under excessive thermal conditions, so do lilies require great quantities of water at the roots when well under way in a course of severe forcing. The maintenance of a moderately humid atmosphere in the lily house, and a steadily held temperature of whatever may be deemed proper as to degree, count for much in successful lily culture under glass, more than can be readily given credit for. Frequent sprinkling is necessary, and fumigation at regular intervals, going hand in hand with the utmost care in ventilation, is the most reliable expedient in holding down greenfly. Just at this time a sharp lookout must be kept for colonies of this insect pest, established away down in the crown of well-advanced lilies where smoke cannot reach them. It would mean the speedy ruin of the pushing clusters of buds. Tobacco or nicotine, applied in liquid form, not too strongly made, is here the best remedy.

Dutch Bulbs.

The prevalence of dark and cloudy weather throughout this season up to the present time, while shortening the cut of flowers considerably in all the leading lines, has not had this effect as far as the output of bulbous flowers is concerned. Dutch bulbs willingly respond to forcing in any kind of weather, coming even better in the days of semi-darkness than in those of bright sunshine. And thus it happened that the scarcity in cut material of the better

kinds greatly sharpened the demand for what could be had in tulips, hyacinths and narcissi up to this time, which, however, marked only the beginning of this season's extensive efforts in the forcing of bulbs.

From now on all Holland bulbs, planted in time and now well supplied with roots, may successfully be forced.

Tulips, more than most other Dutch bulbs, are largely grown in boxes for cutting. Where many varieties are to be handled for this purpose alone, it is a good plan to keep up a well-regulated succession, bearing in mind that some may be forced quite early with fair success, while others do much better when bloomed quite late toward Spring. Of varieties most useful for cutting I name **Proserpine**, **Yellow Prince**, **Crimson King**, **Keiserkroon** and **La Reine** as such that could now be most easily forced into a good grade of bloom. All the double-flowered sorts, such as **Yellow Tournesol** and **Salvator Rosa**, force better in two or three weeks from now, as do also **Murillo**, **Scarlet Tournesol**, **Cottage Wlad**, **Victorian**, **Erillien** and the **Forbald** varieties. Parrot tulips and all the dwarf double-flowering sorts, all fine for pots, show up best when forced rather late. Many of the above named come in nicely for Easter, if so desired. Tulips come finest when forced in a high heat, about 70 degrees, and then gradually hardened off in cooler quarters after the bloom is fully out, but bottom heat at all times is detrimental to perfect development. A steady forcing from three to four weeks will bring tulips into bloom. When grown under general Spring trade hardly any real forcing is required.

Dutch hyacinths, narcissi, and some other bulbs belonging to this class, are made to look their gayest, when fully out, by being grown slowly in a light, cool house on a bench affording moderate bottom heat. If there is any choice, then the single-flowering **Dafoedisi** and **hyacinths** should first be brought into the house, and the double-flowering sorts be reserved for later forcing. All these show a marked improvement in the depth and lustre of color in their flowers when regularly fed with liquid stimulants.

Violets.

This is the very best time for the rooting of violet cuttings or for the boxing of rooted runners. The first essential, the one so often overlooked in spite of all the advice so freely extended, is perfect health and unmistakable vigor of any part taken from the old plants for propagation. No days are lengthening and becoming brighter as Spring draws nearer, an abundance of side growth is put forth by violets of any variety not entirely exhausted by either disease or mismanagement. And it is now when it is easiest to discriminate between good and bad material, for these new runners, as well as by the appearance of the old stools.

Stock that has done and is still doing fairly well, having been grown in a house and under conditions suitable for violets, usually furnishes enough of the very choicest material for propagation at this time to render the taking of any other entirely unnecessary. And yet, as I have reason to know, the average greenhouse assistant, set to gathering in the runners for propagation and acting under explicit instructions, soon falls back into his old way of taking material of almost any type, entirely forgetting the need of close examination. None but the healthiest, sturdiest runners should be selected for the making of future stock, and when such are not held forth by what is on the place it is best to purchase new stock for the coming season's propagation at violet growing. It is strange, indeed, that this admonition, so oft repeated and of such vast importance in the bringing of success with violets, is but rarely heeded by most of the smaller growers seeking advice.

Violet cuttings may be rooted in the sand of the regular propagating bench, choosing for them the coolest end of the bed and boxing them up when rooted. Or they may be dibbled in or pricked out into flats, about three inches deep and of convenient size to lift. In this case a sandy soil, fairly rich and thrown through a finely-meshed sieve, is employed instead of pure sand. These flats allow of being placed wherever it would seem most favorable for the wellbeing of the young stock after it has become well established or is, at least, beyond the first stage of germination, during which period a good shading on bright days is needful. Ample provision for drainage must be made in filling the trays with soil, and care in watering the cuttings also is necessary, as well as in the spraying from overhead. The runners or cuttings must in no time be given the slightest chance to wilt, neither before nor after insertion, and it is well to take off but a limited number at a time, so that during all the time of preparing them for the sand or the soil they remain fresh and crisp. Many of the runners will have made a beginning in the formation of tiny roots while yet in the bench and attached to the old stools. This alone should furnish no reason for taking them in preference to unrooted runners, unless they also possess all the other attributes looked for in a violet cutting. Watered carefully and guarded against sunshine, the cutting will soon be in a condition to bear the full light and a more generous

allowance of fresh air, which latter can be given in unstinted measure after roots have formed. A high shelf, close up to the glass, in a cool and airy house is a good place for the stock growing in trays.

Chrysanthemums.

Although there is yet plenty of time for the propagation of chrysanthemums to be grown as purely commercial stock, it is now the proper time to begin operations when it is intended to give some of the slow-growing varieties a more thorough trial by making an early start than heretofore. It will be found that early struck cuttings of such kinds and many varieties usually making a very soft growth right after being rooted will grow into a better grade of stock than those struck in the warmer days of Spring.

Again, the grower of chrysanthemums for exhibition purposes must rely on early propagation as productive of the best possible results. The month of February is considered none too soon for the taking of the first cuttings if these can be had in proper shape and condition. It is easy to call for a plentiful supply of good cuttings from plants placed on a warm and well-lighted bench. Cuttings from old clumps not properly taken care of or being kept under the bench and deprived of room and light will root, but are not the kind that promise best. It always pays to give stock plants of all kinds the most favorable position that can be found, and chrysanthemums furnish no exception to this well-established rule.

Only well-shaped, sturdy, short-jointed cuttings should be taken for propagation. The best and in fact, the only ones to take are those coming from the ground about the crown of the clump of roots all around the base of the old stem. Thin and spindly shoots and those coming directly from the stem should be rejected, since they will never amount to anything worth having.

It is always necessary in preparing the cuttings for the sand in the lowermost leaves. They will root in any ordinary propagating bench, but must be kept crisp and fresh by frequent sprinkling and by a shading on sunny days. Leaving them in the sand until the roots have grown to much over half an inch in length weakens them to a considerable extent, and potting them as soon as the first beginnings to root-formation are made sure of is one of the important points that should be observed, if first-class plants are to be the issue. They are then placed in cooler quarters and afforded plenty of light and air.

English Ivy.

All the varieties of hederæ—and there are a great many—deserve to be brought back to their old-time popularity, not so much as subjects for conservatory and living rooms as for screening and ornamentation during the Summer. In late years English ivies, clean and nicely grown and offered in the usual market sizes, have sold well at nearly all seasons. But it is in the Spring, when the busy plantsman always seeks an screening and trailing plants with a deep green dense foliage, appreciates ivies most. And the people, too, have begun to prefer them to the everlasting and omnipresent vincas. But ivies are most serviceable in many other ways besides being good filling material for window boxes or vases. It is only necessary to have them in order to find good use for them. English ivy propagates easy enough at any time, but if plants too old and bulky or bare and unshapely were now cut into pieces and these rooted, good thrifty stock could be worked up for future use.

ARAUCARIA AND AZALEA INDICA

Our Specialty

The time for parties and balls is now on the programme. What will you use to decorate? Take my advice and use for a change an ARAUCARIA COMPACTA, ROBUSTA or GLAUCOA—the kind and size I grow. You will be surprised what a lovely effect they will have when placed upon tables of dinner or supper parties, or any other place in the house. These plants I have got on hand now are a Wonder of Nations.

Price: 6-7 in. pots, 4-5 years old, as broad as high, 4-5-6 tiers, from 22-25 in. in height, \$1.50, \$1.75, \$2.00 to \$2.50 each. Glauca specimens 7 in. pots, 36 in. high, 36 in. wide, 5 tiers, \$2.50 to \$3.00; 6 in. pots, 3 years old, 4-5 tiers, \$1.00, \$1.25 to \$1.50 each.

KENTIA FORSTERIANA PALMS not scarce with us; have plenty and can meet all wants, cheaper than ever; 5 1/2 to 6 in. pots, 30 in. high, 5 good leaves, 60c., 75c., and 85c. each. 7 in. pots, made up, 1 large size, about 40 to 45 in. high in the center, and three smaller size plants 25 to 30 in. high around, which gives them a fine appearance, price \$2.00 to \$2.50 each. 6 in. pots, single plants 36 to 45 in. high, 5 to 6 good leaves, 4 years old, \$1.25, \$1.50, \$1.75 each. 6 in. pots, 32 to 36 in. high, 5 to 6 good leaves, \$1.00 each. 5 1/2 to 6 in. pots, 30 in. high, 5 good leaves, 4 years old, 75c. to 85c. each.

ARECA SAPIDA, just imported from Belgium, something new, looks like Kentia palms, about 25 in. high. Lock only 50c. each, worth \$1.00. This is a bargain seldom offered.

ASPARAGUS SPRENGERI, 4 in. pots, 10c.

FERNS

All raised in pots and not on benches as follows:

NEPHROLEPIS BARROWSII, 7 in. pots, as high as a bushel basket, 75c. to \$1.00 each. 6 in. pots, large ready for 7 in., 50c.; 5 1/2 in. 40c.; 5 in. 30 to 35c.; 4 in. 25c.

BOSTON FERNS, 7 in., very bushy, only 75c.; 6 in., 50c. or \$5.00 per doz.; 5 in., 30c. to 35c.; 4 in. 20c.

NEPHROLEPIS SCOTTII, 8 in.; as high as a wash tub, worth \$2.00, now \$1.25; 7 in.; as high as a bushel basket, worth \$1.25, now 75c.; 6 in., 50c.; 5 1/2 in. 40c.; 4 in. 20c.

DRACAENA BRUANTI, 6 in. pots, 30 in. high, 50c. each.

CINERARIA HYBRIDA, H. F. Mitchell's best strain, 2 1/2 in. pots, \$4.00 per 100, 3 in. strong plants, ready for 7 in., 50c.; 5 1/2 or 6 in. pots, \$7.00 per 100; 4 in. \$10.00 per 100.

AZALEA INDICA for Easter blooming, all best American varieties, 50c., 75c., \$1.00, \$1.25, to \$1.50 each. AZALEAS in bud and bloom now, Deutsche Palm, Strone, Mariner and variegated 60c.; 75c., to \$1.00 each.

All goods must travel at purchaser's risk. When ordering, say whether the plants should be shipped in the pots or not. Cash with order.

GODFREY ASCHMANN

Importer and Wholesale Grower of Ferns, 1012 Ontario St., PHILADELPHIA, PA.

St. Louis, Mo.

News Notes.

Visitors the past week were: B. Eschner of M. Rice & Company, Philadelphia; Arnold Ringler and J. F. Lembke, both representing W. W. Barnard & Company, of Chicago; R. W. Eastlick, a representative of the Bombay Reed Manufacturing Company, of Columbia, S. C.; and C. B. Knickman selling nursery stock for McHutchinson & Company of New York. J. J. Klerns, representing H. A. Dreer, Philadelphia, got in with the cold wave Sunday morning.

C. C. Sanders recently purchased 17 acres of land on the North and South road to be used for the planting out of young nursery stock. This makes three places operated by Mr. Sanders.

D. I. Bushnell, one of our leading seedsmen, has returned home after an extended trip through South America.

W. H. Smith, father of William C. Smith, died on Sunday last after a lingering illness. Mr. Smith was a brother-in-law of W. Edlefsen and father-in-law of A. V. Hunkel of Holton & Hunkel, Milwaukee. The funeral took place Tuesday afternoon from his late residence, 1716 North Grand avenue. The trade extend their sympathy to William C. Smith and his mother.

Dr. William Trelease, director of the Missouri Botanical Garden, has gone on an extended trip through the West India Islands, looking up rare plants for the Garden. He will be absent two months.

The Trustees of Tower Grove Park, who receive an appropriation each year of \$25,000 from the city for maintenance, have in their report to the Municipal Assembly asked for an increase, claiming the old amount not enough.

C. A. Kuehn and J. J. Beneke will spend a few days in Kansas City, Mo., next week on business and pleasure. While there they will both take part in the State bowling tournament.

The St. Louis Horticultural Society has applied for \$200 of the Shaw prizes for their Spring flower show to the directors of the Missouri Botanical Garden.

C. Young & Sons Company have issued their Spring catalogue which is very handsomely gotten up with colored plates.

James W. Dunford, Clayton, who has more glass than any other florist here, has a fine lot of bulbous stock coming on for the Easter trade; lilies especially are looking fine.

The florist bowlers had a fine time on last Monday night at the new De-soto alleys. Some very good scores were made during the evening. George Schriever was high man with 549; Henry Lohrenz was second with 499; Kuehn next, 476; Smith, 471; Fred Alves, 423 and Ed. Gerlach, 404. ST. PATRICK.

Indianapolis.

News Notes.

St. Valentine's Day, just two weeks hence, has proven itself most worthy of the florists' attention. The popularity of flowers as valentines is increasing each year, as the general public seems to appreciate the natural messengers of affection much more than those made of manufactured material. The local florists are making preparations for an unusual call on that day.

The State Florists' Association of Indiana held its monthly meeting February 5. The subject considered was the annual Spring show.

E. N. Weygandt has a fine crop of Blanche Ferry sweet peas.

D. M. Parry, the buggy manufacturer, is to arrange his conservatory on a commercial basis by adding more glass.

Mr. Craig of the Sefton Manufacturing Company is accompanied by his bride on the present trip. His many friends wish them good luck.

Fred Dorner visited the carnation growers in this city last week; other visitors were: M. Reukauf, en route to California; Mr. Struck, Summit, N. J.; and Mr. Whitehill, Fishkill, N. Y. I. B.

St. Paul.

News Notes.

E. F. Lemke is cutting some of the finest violets ever seen in this market; they are single, the flower being almost as large as a pansy and the stems fully 12 inches long. His Enchantress and Lawson carnations are also very fine. Undoubtedly the improvements made in his Snelling avenue greenhouses have repaid him well.

Wm. Swanson of Hangen & Swanson, violet growers, was bitten by a mad dog a few weeks ago, and has gone to Ann Arbor, Mich., for treatment. It is hoped by the trade in general that nothing serious will result.

L. L. May & Company's roses are just beginning to come in nicely; the bright weather of the past weeks has helped out wonderfully and we can expect much better conditions in the rose market.

The Warrendale Floral Company has sent in some very nice Bride and Bridesmaid the past week; their Richmond have not done so well, but on account of the short supply were sold readily.

Helm & Olson have ordered a number of walnut fixtures for their new store. PAUL.

Buffalo.

News Notes.

We have had the first week of steady cold weather, beginning Sunday, January 23, with the worst storm in the history of Buffalo. The wind blew at the rate of 84 miles per hour, and did a great deal of damage.

J. H. Rebstock has opened a wholesale store at No. 11 Chippewa street. This will enable him to cater to the market trade.

John Pickelman has opened a branch store in Genesee street near Elm.

Wm. F. Kasting and W. J. Palmer have returned from the Toronto convention. They report having had a good time, considering that the temperature was sixteen degrees below zero. Several of the delegates stopped off here on their way home, among them George Asmus and Phil. J. Hauswirth of Chicago; Paul Berkowitz, S. S. Pennock and W. P. Craig from Philadelphia, and J. E. Valentine from Denver, Col.

W. J. Palmer & Son had the Letchworth ball decoration at the Twentieth Century Club, using palms, American Beauty roses and Harrisii lilies.

There was a large attendance at the funeral of the late James Braik last week. The services were held in the home on Elmwood avenue in Delaware Park, Saturday afternoon. Rev. James R. Logue of the First United Presbyterian Church conducted the funeral. Delegations were present from the Florists' Club, St. Andrew's Scottish Society and the Buffalo Gordon Highlanders, of which Mr. Braik was first captain. Members of the park department served as honorary bearers, the active bearers being members of Lake Erie Commandery 20, Knights Templar. Burial was in Forest Lawn cemetery. W. H. G.

Grand Rapids, Mich.

The Week's News.

The weather has been very unseasonable for January. On the 18th and 19th it was warm and fairly poured night and day, causing the Grand River and all its tributaries to flood; then the thermometer dropped, the rain turned to snow, and the water froze up solid under a zero temperature. An ice jam formed, and the ice and water flooded a portion of the West side. Gangs of men have been making sand bag embankments to stay the course of the flood, and with a fair degree of success. All the factories in the flooded districts had to shut down; now that the worst of the danger is over, some expect to re-open Monday. The downtown district suffered from basements and cellars filling up with water and ice, backed up from the sewers.

The Florists' Club, which has been dormant for several years, was re-organized at a meeting held Thursday night at the Board of Trade rooms, on Pearl street. Henry Smith presided, with Mr. Freyling as secretary.

22 FIRST PRIZES THIS SEASON

Is a record we are proud of and one that should WARRANT you to send US your order for rooted cuttings, as you are assured of clean, healthy stock; first class in every respect.

	Per 100	Per 1000

February and March Delivery

CARNATIONS and GERANIUMS

Send for list of varieties and prices.

ALBERT M. HERR, LANCASTER, PA.

The idea is to expand the club so that it will include not only florists but lettuce growers, nurserymen, seedsmen, or any one interested in horticulture in any of its branches. A committee of three was appointed to draw up a set of new by-laws, consisting of N. B. Stover, Frank M. Strong and George F. Crabb. Another committee consisting of Mr. Freyling, George F. Crabb and Alfred Hanna was appointed to prepare a list of prices on bedding stock. There was an attendance of 14, and judging from the interest taken and the enthusiasm shown, the revived club will be a success. GEORGE F. CRABB.

Toledo, O.

News Items.

Our last club meeting was a very lively affair, with carnations the main issue. It is to be greatly regretted that the present members were so few in number, but they had to attend to their firing to a very large extent, as the night was very cold. A nice bunch of Aristocrat, as we guessed the name, was sent to the club from Joliet; and should this not be the right guess the Chicago Carnation Company will please inform us hereof. Kuhuke's scarlet seedling, which was also shown, promises to be a good thing; it has good substance, is of fine color and kept well with me, who took a few flowers home.

The blood of our club has been started to quicker circulation through the decision that the next meeting shall be devoted entirely to carnations, and all members and the nearby florists will be asked to exhibit some of their choicest flowers and attend "in corpore." We have some pretty good growers in town and in the neighborhood, and ought to be able to put up a good show.

The Perennial Gardens Company will make the new Pink Baby Rambler Anny Müller and the new Salvia Zurich their leading specialties. Their new plant, consisting of six houses, each 18x125 feet, is now in perfect order, and the electric circulator, furnished by the Holly-Castle Company, works to their entire satisfaction.

David Johnson, a market gardener, is making preparations for the erection of two new houses for lettuce, each 40x200 feet; the material will be bought all locally. S.

BAUR FLORAL CO., Erie, Pa.

MABELLE--New Pink Carnation for 1907

Color--A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most pinks, the brightest sun does not injure the color. Size--Three to four inches in diameter when established. Odor--Pleasing, but not strong. Stems--Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.--A very quick active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness--Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. No discounts. First class certificates Madison and Indianapolis. Delivery Jan. 8th to 10th and later. Price, \$12.00 per 100, \$100.00 per 1000.

REVIEW OF THE MARKET

NEW YORK.—We have been treated to a genuine blizzard this week, and, of course, the flower business has suffered accordingly. Roses continue anything but plentiful, still, with the exception of American Beauty, there seems to be enough to meet the demand at the prices asked, and there are occasions when sales have to be made at values below our quoted figures, in order to effect a clearance. American Beauty roses are an extremely scarce article yet, and the supply of the best grades is quickly moved each day.

Carnations are becoming more plentiful, and while they are clearing out fairly well prices are hardly so firm as they have been for several weeks back. Cattleyas are in rather heavier supply than they were, and prices are somewhat easier when ordered in quantity. The demand for these flowers, considering that we are at the height of the social season, is not so heavy as one would expect.

Lily of the valley is increasing in quantity, and on some days it is a rather difficult proposition, as the demand is erratic. Lilac is coming in from many sources now, and values are not nearly so firm as they have been for several weeks. Many bunches of excellent quality are being offered at 75c. each. The lasting qualities of lilac are perhaps less understood by retailers than those of any other commercial flower. If it were generally known that much of the lilac that is being forced at the present time will keep for seven or eight days in perfect condition, we think there would be a livelier demand for this favorite Spring flower than there is.

Lilies and callas continue in steady supply, with no change in values. Tulips have become much more plentiful and many of them are freely offered at \$2 per 100. Narcissus, in their several varieties are coming in heavier, and are not averaging so well as last week.

Violets are selling at about the same prices as a week ago, and the ordinary blooms, quite a number of single varieties are reaching this market, but for some reason or other they do not seem to take when they are to be had in quantity. During the last few days 20c. a bunch has been the selling price for a good many of them, including the new variety Governor Herrick.

Lent will soon be here now, and with its coming no doubt some of the social entertainments among certain classes will be curtailed; at the same time, judging from previous years, the natural gain in quantity of greenhouse-grown flowers coming from the ever-increasing sunshine, and a corresponding easing up on prices, will give an added impetus to business that will more than offset any loss of trade through religious scruples.

On Tuesday, owing to the heavy snow fall, (we had a fall of 11 inches) deliveries of flowers to the wholesale district were very irregular, and there were many instances where stock was frozen badly, owing to the delay, together with insufficient wrapping material being used. Few buyers were out on that day, however, and there was little doing. Wednesday opened up bright and clear, and as the streets had been partially freed from the snow, traffic became easier and business began to assume its normal condition.

CHICAGO.—Scarcity of stock is still the paramount issue, and some days recently have witnessed considerable difficulty in filling orders, especially in roses. The possessors of good rose stock could command any reasonable, and not infrequently what would appear to be an unreasonable figure for their goods. Other lines have held strong and sold at high prices in sympathy with the condition of the rose market.

Business this week seemed to open on Monday a trifle off compared to last week, but the weather conditions were most unfavorable, a snow storm succeeding several of the coldest days of the Winter having produced a most depressing effect in the retail business, which was doubtless reflected, to some extent, among the wholesalers, though shipping was pretty good.

Carnations appeared to be in full supply the first of the week, though prices held as they did in all lines. In this connection it may be well to mention that though we do not quote Bride and Bridesmaid at over 15c. there have doubtless been many sales made at somewhat higher figures, 20c. and even 25c. having been quoted, it being a difficult, if not an impossible proposition to fill all orders at quoted prices. Even when fair weather returns it will doubtless require several weeks of sunshine to result in a crop of bushes which are now languishing in the gloom. W. K. W.

PHILADELPHIA.—This week flowers are scarcer than ever, with weather conditions worse. The scarcity is most pronounced in roses. It is almost impossible to get white roses; one large wholesale house only received six on Tuesday. At present writing the best American Beauty are selling at \$10 per dozen; \$12 could be obtained easily if the flowers were to be had in a better quality. Tea roses are very scarce, and it is easy to get \$25 per 100 for good flowers; the majority coming in are very poor.

Carnations are in fair supply; the best flowers of Enchantress are selling at \$8 per 100, while general stock is bringing from \$2.50 per 100 upward.

Tulips are in good supply and selling fast; Couronne d'Or is bringing \$5 per 100, other varieties \$3 and \$4. Daffodils, while in good supply are not equal to the demand; \$4 per 100 is paid readily for good stock. Lilies realize \$2 per dozen; mignonette, \$3 to \$6 per 100. Of violets the supply is not quite so large; \$1.25 per 100 is top price for doubles. Sweet peas, choice stock, sell at \$2 per 100; gardenias, \$4 to \$6 per dozen; cattleyas, 50c. per flower. Lily of the valley at \$3 to \$5 per 100 is selling well.

DAVID RUST. BOSTON.—The past month has been a very satisfactory one in the cut flower trade, and the present prospects are good. Business as a rule is brisk, and the prices realized compare very favorably and even exceed those of any previous year. The past week has seen no exception to the good business; during the rest of the month, roses continue scarce, the best grades of American Beauty still bringing \$9 per dozen, and in some cases of exceptional, selected blooms \$10 is the price. Richmond and Liberty bring \$4 and even \$6 per dozen for the longest stemmed fancy blooms; other good grades bring \$2 to \$3 per dozen. Killarney sells well at \$3 per dozen for the best grades. Bride and Bridesmaid bring \$2 per dozen for fancy grades. There are very few short-stemmed flowers on the market.

Carnations seem to be plentiful enough for the demand, but the best grade of blooms is on the market, and the prices brought are quite satisfactory, ranging from \$2.50 to \$5.

Lilies are not overabundant at \$2 per dozen. Bulbous stock is getting a little more plentiful; Paper White narcissus and a hybrid bring \$3, while yellow narcissus readily bring \$4. Tulips realize \$4, an excellent grade of La Reine being brought in by some of the growers. Violets are very plentiful, bringing from 35c. to 75c. Sweet peas bring \$1.50; mignonette, \$3 and \$4. Some good snapdragons are being brought in. Sixmax calls at \$12.50 and \$15. Asparagus remains unchanged, and no change has recently been made in the prices of hardy ferns and other greens. J. W. D.

ST. PAUL.—Business the past week has been very quiet, no doubt due to the extremely cold weather. The thermometer has registered below zero every day with but one exception. We have, however, been favored with considerable sunshine, which is opening up stock nicely, and from now on the market will be much better. It has almost been impossible to get good roses; none of the growers were cutting any on account of the dark weather, and even though the demand has been light, there was not a sufficient number on the market to supply a weak demand. Bulbous stock has helped out wonderfully, and orders for funeral work were made up almost entirely of it. Carnations have been coming in fairly well; there seems however, to be quite a shortage of white varieties. A great many "spliffs" are on the market, but on account of the shortage of roses they move quite readily. Violets were hard to obtain in this market until a week ago; since then two of our violet growers have brought in some stock which is the best ever offered here. One grower has some Princess of Wales which covered a silver dollar when spread out, and with 12 inch stems; they were pronounced as being the best seen on this market for a number of years. As owing to the small cut of them (about 800 daily) he has only a sufficient number with which to supply his own retail trade. Easter lilies are beginning to look well and from a glance through the different greenhouses one is firmly convinced that a great many more are being grown than in any previous year. If they turn out only fairly well, we shall have a sufficiency for the trade unless the demand is unusually heavy. Baby Rambler roses are also being grown in large numbers. The stock of azaleas and hydrangeas, appearing to be about the same as in past seasons. The experience which some of the grower had last year with spiraea is well shown by the

small number they are growing this year; after Easter last year the majority of the trade, had a great many spiraea on hand which they could not sell at any price, furthermore could make no good use of them. PAUL.

INDIANAPOLIS.—The various branches of the flower business were kept busy last week. Counter trade, except on disagreeable days, was heavy. A liberal amount of funeral work has caused cheaper grades of stock to sell readily. Palms and other decorative plants are often moved under adverse weather, so occasional lots of frozen plants are almost unavoidable.

The call for Spring flowers becomes earlier each year, and it takes constant attention on the salesman's part to have orders other than those for Jonquills, sweet peas and tulips. Roses are more plentiful, but prices have not broken. Sweet peas are difficult to obtain at \$14 per dozen. Bride, sell at \$10 per 100; seconds are often called for at \$5 to \$6 per 100. Excellent Richmond and Liberty are received at \$8 and \$12. The demand for American Beauty has been light at \$5 to \$35 a hundred. Really select carnations are difficult to obtain at \$12 per 100; a majority sold are of medium grades at \$2.50 to \$3 a hundred.

Single violets are more plentiful at \$1 a hundred; the best doubles bring \$1.50. Bulbous stock, such as lily of the valley, Roman hyacinths, Paper White narcissus and the Bride, are in demand in any quantity; price \$3 to \$4 a hundred. Some fine Dutch hyacinths are now in the market at \$2.50. Cut lilacs find many buyers at 25c. per spray.

The variety of blooming plants is much greater and sales show an increase in this line. Tomlinson Hall Market reports a busy week. The volume of business was greater than in the preceding week, as there was much stock on hand. I. B.

ST. LOUIS.—We are pleased to note from reports of some of the leading florists that the past week was a good one from a business standpoint. The volume of work and everybody had his share of it. Although stock was scarce, very little trouble was experienced filling orders. We are to-day, Monday, having our first touch of Winter weather with snow and very cold. Mr. J. C. Grant says he saw his shadow last Saturday, so we can look for six weeks more of Winter. In this locality fancy stock in roses has a big call, but the flowers are very scarce in all grades, with prices high. Anything good brings \$8 to \$15 per 100; some extra fancy 20c. Long American Beauty run from \$6 to \$8 per dozen.

Carnations are generally all bought up long before noon hour. The extra fancy are at \$5 per 100 with \$3 and \$4 for next choice. Enchantress are at present of extra fine quality. Violets are selling well and the supply has shortened up considerably; the best California are at 75c. but 40c. and 50c. buys very good stock. Everything in the bulb line is in plenty and is selling well at usual prices. The green market is also in a healthy condition. Fancy ferns are at \$2.50 per 1000. S. A. B. C.

NEWPORT, R. I.—For a week or two the market has been rather dull, but during the past few days several florists were kept on the move with funeral orders. A great part of the stock seen here lately was not in anyway first-class, and that such work has been very agreeable to those engaged in it because it cleared out a lot of material that could not otherwise have been easily disposed of. Roses are scarce, very scarce in fact, so much so that florists carry very few in stock. Carnations are not over plentiful either, but surprisingly good considering the weather. Violets are very good, but selling somewhat slowly, although a pretty good price is maintained. Strings of asparagus are scarce and more expensive than they have been for many years; cause unknown. Plants have just at present no disposition to move them not even an earthquake, although in some stores they have the appearance of being in close touch with an eruption of Mount Vesuvius, but there are better times coming when even these old lodgers will find new habitations, especially the palms and ferns. D. M.

ROCHESTER, N. Y.—Nothing of importance is going on, business having been normal for some time. There is a decided shortage in the market of roses, carnations and lily of the valley. Prices for same keep up; roses \$5 to \$10 per 100; carnations \$2.50 to \$5 per 100. Bulbous stock is coming in in fairly good shape, although short of stem.

Last week H. E. Wilson had a sale of Primula obconica and other flowering plants, and in this way cleared out a lot of stock. Primulas of different varieties may be seen offered for sale at a 3/4 inch per at 10c. each. In the five and ten cent store here. Not many were sold, as that price was even too much for the kind of stock offered. COCKNEY.

Trade Notes. Business remains in a most satisfactory state, according to the story told by the retailers, quite a large amount of funeral work still doing, and owing to much sickness prevailing the call for small lots of flowers for the sick room amounts to quite a good total and fully offsets the lack of social events owing to the above cause.

The lengthening days are now helping the quality of all kinds of stock, but the severely cold weather does not improve the quantity cut much. The past two weeks have been the stormiest thus far this season, but beyond blowing out a few dozen lights of glass and, in one instance, a smokestack down, no material damage is reported.

Spring flowers, such as tulips, daffodils, etc., are now on the market in quantity and as usual find ready sale. Some very fine mignonette and violets were on display at Fisher & Rocklin's last week, making an effective show as these two articles have been scarce here thus far this season.

H. Fisher of the above firm was married to Miss Goldstein of Indiana Harbor on January 29 last, and after a tour South returned to Kalamazoo where the happy couple will go to housekeeping in the immediate future. The trade extend congratulations.

McKinley Day called for an extra number of carnations, and while no large amount was noticeable on the streets they were chiefly used for decorative purposes indoors. I don't think, however, this day will ever create the great popular demand for carnations as we hoped for. S. E.

FIRES.

DECHERD, TENN.—On January 26 the residence of John M. Miller, a well-known nurseryman, was burned. Only a small part of the furniture was saved. The loss was estimated at \$1,000. As far as could be learned, there was no insurance.

GRAND RAPIDS, MICH.—The boiler room and entire heating plant of the greenhouse belonging to John Baker, Alger avenue and South East Street, was destroyed by fire early Sunday morning of last week, entailing an actual property loss of about \$1,500. The fire naturally shut off heat in the greenhouses and though temporary arrangements were made it is feared the loss will be far heavier than just the actual loss of property.

GRAND FORKS, N. D.—The Devils Lake nursery and greenhouse, owned by P. J. Kerstein, is practically a ruin, as the result of a fire Saturday evening, January 26. The blaze, which was apparently caused by a defective heater flue, had gained considerable headway when discovered by Mr. Kerstein. The loss will fall heavily upon Mr. Kerstein, as he had no insurance on the plants and nursery stock, which constituted his entire stock in trade. The total loss is approximated at \$4,000, with insurance of \$1,200 on the house and barn. The damage to the house will amount to \$600.

If you are dissatisfied with the results from a large amount of advertising space, for which you pay little money, try a little less space at a higher rate and get your money's worth, with interest added. In short, advertise in the The Florists' Exchange.

News Notes. Genuine Winter weather has been served to us the past week or more, with the thermometer hugging the zero point for several days, which had an effect on business, shortening up stock. Not very much is doing in the cut flower line. In spite of the bad, cloudy weather roses and carnations are of fair quality. Bulbous stock is coming in freely; tulips are more abundant, but extra choice ones are yet scarce. A good many Harrisii lilies and callas are offered at from 15c up. Plant trade was checked considerably by the cold wave.

The Florists' Club's smoker last week was well attended. No doubt a few of the growers stayed away on account of the low temperature. The evening was passed in a pleasant way—a short entertainment by several of the boys, card playing, etc. A brief business session was held to nominate officers for the year, which resulted in the old officers being renominated. One new member was elected.

Your correspondent has been selected as vice-president for Western Pennsylvania for the S. A. F. O. H. for the year.

Not very many carnations were worn here on McKinley Day; the people of our good old Republican State are neglectful in this matter, but in our city, as a rule, flowers are not much seen in the lapels of men's coats.

A nice bunch of Winsor carnations was shown the night of the smoker; everybody thought well of the variety. E. C. REINEMAN.

PAULDING, O.—Another rose-pink sport of Enchantress has appeared in the establishment of J. M. Hawkins. He has named it Helen Phipps; so says the Toledo Blade.

Chicago.

News of the Week.
 Anton Then left last week for a business and pleasure trip to Birmingham, Ala.

Wietor Brothers booked a single order last week for 10,000 rooted cuttings of American Beauty roses. With the other specialists in rooted cuttings in this section, this concern reports a very favorable opening in this line this season.

Among last week's visitors was noted B. Juergens of Peoria, Ill.

The first of February witnessed the dissolution of the retail concern of Dunn & Huebner, 72 Randolph street. Henry C. Dunn will continue in business at the old stand, and a new concern under the firm name of Huebner & Brown, will shortly open a retail store at 90 Washington street.

Stollery Brothers opened up their stand in the Flower Growers' Market last week and will carry their usual lines of potted plants and cut flowers. This concern grows bulbs extensively and this season is experimenting with 25,000 Virginia grown bulbs with evident promise of satisfactory success.

N. A. Benson of Denver, Colorado, returning from Toronto last week, stopped over in Chicago and placed an order for greenhouse material for an appreciable increase in his establishment.

George Economopolis will open a retail establishment shortly at the northwest corner of Adams street and Wabash avenue.

The social side of the fraternity was given an excellent exemplification at Svithoid Club House on Wednesday evening of last week when the employees of The Wienhoeber Company gave their first informal reception. More than fifty couples tripped the light fantastic toe to the strains of Goldsmith's orchestra, the grand march being led by Mr. and Mrs. Dunnean Robertson. Refreshments were served and vocal selections were rendered by Miss Johnson and Mr. Meyer. The trade in its various branches was well represented among the terpsichoreans, and when the participants sought their homes in the small hours of the morning they were profuse in their congratulations tendered to the committee who had the arrangements in charge, consisting of Messrs. V. Bergman, W. W. Adams, D. A. Robertson, and F. Pisternick.

N. J. Rupp of the John C. Moninger Company returned last week from Milwaukee with a nice bunch of orders for greenhouse material to be delivered this Spring, including some for new plants and several for additions.

G. L. Huseroft of Steubenville, Ohio was in town the first of the week on a business trip.

It speaks well for the physical condition of the members of the craft in Chicago to note that when grip in combination with half a dozen other infectious and contagious ailments is rampant, the hospitals are filled and the doctors are worked overtime, the florists are all to be found steadily plodding away at their wonted vocations, with no complaint further than here and there an isolated cold of more or less severity.

It is expected that a good delegation from here will represent Chicago at the Bloomington convention and exhibition of the Illinois State Florists' Association on Tuesday and Wednesday, the 19th and 20th inst.

H. J. Stockman, the landscape engineer of the Vaughan's Seed Store staff, Western Springs, was in the city the first of the week in connection with some improvements to be made by a wellknown commission man in the surroundings of his suburban residence.

The Bentney-Coatsworth Company completed their arrangements for doing business in their new quarters on the second floor of the Atlas Building in short order after the signal was given to move. There are now on this one floor the salesrooms of four wholesale growers and three commission houses all told, disposing daily of the product of upward of four million square feet of glass.

NAZARETH, PA.—O. C. Ports, formerly of West Collingswood, N. J., is now manager for Mrs. Geiger here. The plant consists of 20,000 feet of glass, heated by steam. Four houses, each 20 x 150 feet, are devoted to carnations, the varieties principally grown being Mrs. Thomas W. Lawson, Queen Louise, Boston Market, The Queen, Enchantress, John E. Haines, and Lady Bountiful. A general collection of plants is also grown. Mr. Ports is getting the establishment into good condition, and is well pleased with his position.

MIDDLEBORO, MASS.—One of the large greenhouses belonging to Mrs. Calvin D. Kingman on the corner of Center and Oak streets collapsed last week. The collapse was caused by the weight of snow.

The club meeting next Thursday evening will be an important one and a large attendance is anticipated, owing to the accompanying carnation show, which will open in the afternoon, a more extended announcement of which will be found elsewhere in this issue.

Poehlmann Brothers' Company, having procured the lease of the quarters formerly occupied by The Benthley-Coatsworth Company, the first of the month, commenced immediately to remove the partition and make other alterations and improvements, all of which are now practically completed, more than doubling their floor space and giving them one of the most convenient and perfectly equipped stores in the market.

It is said that in the greenhouse material line as in several others of the trade departments business this year is coming in earlier than in previous seasons. A representative of one of the largest houses remarked last week, that his concern had already booked a goodly number of orders, while in January of last year, a record-breaking year with construction houses, little had been done with greenhouse patrons, beyond making estimates. It was also stated that good grade of cypress is not over-abundant, and an order placed recently for 650,000 feet would not be promised delivered before next September.

The Boulevard Floral Company, H. Elizabeth Carlson, proprietor, had a unique order for decorating the reception and ball rooms of the club house at Hinsdale on Thursday evening of last week, when Mesdames Davis and Butter gave a reception to Mr. and Mrs. O. P. Bassett on the eve of their departure for a foreign tour. The natural flowers were furnished by local growers, but the Boulevard Company produced some remarkable effects, ceiling and others, by the use of artificial flowers and foliage.

Some of the retailers express disappointment that February 14, St. Valentine's Day, should have been selected by the Florists' Club for its annual carnation show, as this is generally a gala day for the operators of the flower stores. However, it seems probable that during the latter part of the day, by the time the show is in good running order, the retail business will be so nearly all executed that time may be afforded to visit the exhibition.

The E. F. Winterson Company has entered the ranks of rooted carnation cutting purveyors for which Chicago is noted, and among a general line of favorites mention particularly a good stock of White Perfection.

Vaughan & Sperry seem pleased with the results of their endeavors which, notwithstanding the scarcity of stock, show a constantly increasing total in the amount of their business.

Vaughan's Seed Store last week mailed 20,000 of their Spring flower seed catalogues. This house received another carload of tuberose bulbs in excellent condition last week. They are also making extensive alterations in the floor and balcony arrangements at the Randolph street store.

Kennicott Brothers Company are receiving outdoor grown single narcissus from Mississippi much earlier than ever before. Last year the first shipment arrived on St. Valentine's Day, February 14, and a note was made on the books that it was a month earlier than ever before and 1907 found them coming in several weeks earlier still. Does this signify an early Spring?

At Bassett & Washburn's a booming business is reported it being next to impossible to fill orders for Bride, Bridesmaid and American Beauty roses and lilies, with which this house is having decided success with cold storage giganteum that find a ready market at \$3 per dozen.

At E. H. Hunt's they are receiving something a little out of the ordinary in the line of carnations.

William Hagemann, New York, was a recent visitor.

Mr. and Mrs. O. P. Bassett left on Monday for New York intending to sail on Thursday on the White Star liner, Arabic, for a foreign tour extending over several months.

At P. Reinberg's salesrooms the management are congratulating themselves on having, during this unprecedented dearth of roses, a fine crop of Uncle John and Richmond which "help out" to a marked degree.

The A. L. Randall Company is handling a choice line of white lilac for which a demand rather better than ordinarily met with is reported.

Visiting Chicago.—E. L. Kiley, Budd Park Floral Company, Kansas City, Mo.; Mr. and Mrs. Brinckman, Michigan City, Ind.; B. Eschner, M. Rice & Co., Philadelphia; Martin Reukauf and Paul Borkowitz representing H. Bayersdorfer & Co., Philadelphia. Wm. K. WOOD.

New York.

The Week's News.
The meeting of the New York Florists' Club will be held on Monday evening next, February 11, in the club's rooms, corner of Twenty-third street and Eight avenue. In addition to the regular business, A. J. Guttman will give a talk on the recent convention of the American Carnation Society, held in Toronto, Ont. Mr. Guttman's remarks will likely be supplemented by the views and impressions of the other club members who were present at the meeting and exhibition of that society. Chairman W. F. Sheridan, of the dinner committee of the club, has issued a circular letter to the members, conveying the information that the twentieth annual dinner will take place at the St. Denis hotel, corner of Broadway and Eleventh street, on Saturday, February 23. The price of the tickets is \$5 each, and the work of the committee will be very much simplified if members who intend attending this annual enjoyable event will send in their acceptances as early as possible. Make checks payable to W. F. Sheridan, 39 West Twenty-eighth street.

Last week we made mention of a certain George Kramer who was up before Magistrate Barlow for selling artificial seeds. It transpires that the man's real name is Rudolph Reiber, and that he has been operating for several years, selling what he called the seed of a new and rare plant, and charging one dollar for a small packet. His dupes were many, but, unluckily for him, one of his customers bought a second packet of seed, seeing that the first one never grew anything, and, submitting the seed to an expert, found that it was nothing more or less than a palm leaf fan, crushed and ground until it resembled fine seed. At the court of special sessions, Reiber was sentenced to one year in jail and to pay a fine of \$500.

Over in New Jersey, men and women who would become teachers under the State Board of Education must have some knowledge about planting corn and potatoes, as that Board has conceived the idea that it would be more in the right direction if children in public schools were taught elemental agriculture.

Christian Bonnet, of the firm of Bonnet & Blake, wholesale florists, Brooklyn, is able to be at business again after a long siege of rheumatism which kept him confined to his home.

Chas. F. Drawiel, retail florist, is now permanently located at 425 Fifth avenue, Brooklyn, within a few doors of the old location which he occupied for many years.

Professor J. C. Arthur and F. D. Kern of Purdue University, Lafayette, Ind., are making researches in the Garden herbarium, New York Botanical Garden, Bronx Park, in plant rusts, for publication in "North American Flora."

The most severe storm of the winter blew in on Monday evening with high wind and snow, and continued throughout the day following, making traffic of all kinds almost impracticable. Extremes of weather always have a bad effect on the flower trade, and we presume every other business as well. Fortunately for New York, these driving snow storms are not attended with such a low temperature as is

the case in the middle western towns, for which we should be most thankful.

The second annual dinner of the Nassau County Horticultural Society was held on Wednesday afternoon at the Oriental Hotel, Glen Cove, L. I. Forty-four sat down to a most tempting dinner. The tables were beautifully decorated with potted plants and cut flowers. President Mackenzie presided and made the welcome address. Then came Mr. Scott of Tarrytown; Mr. Connie of Stamford, Conn.; Mr. Duthie of Oyster Bay, and James Holloway of Glen Cove. Mr. Woodill of New York presided at the piano. Songs were sung by Rickards Bros., Mr. Speedling, Mr. Cook of New York; Mr. Russell of Westbury, and John F. Johnston. The medals won in the competition points were awarded to S. J. Trepass, gold medal; H. F. Meyer, silver medal; Alex. Mackenzie, a bronze medal. After the medals were presented a song by the company ended the evening's enjoyment.

Commenting on the wearing of violets, the New York Press says: "With one month of 1907 passed, it appears many society maidens must have made New Year resolutions not to wear violets. Far less frequently than of old are those fragrant blossoms seen smuggled against fur neck pieces or peeping from Russian sable coats as the wearers of those furs take unnecessary constitutional down the avenue. At matinees, too, one notes that the theater no longer is filled with the subtle perfume of violets. Instead, the girl of fashion wears an orchid—sometimes a dozen of them, if her pocketbook permits."

Philadelphia.

News Items.
The northeastern snow storm struck this city in great force Monday and by Tuesday morning ten inches of snow had fallen which drifted very badly in many localities. The thermometer went to 12 degrees Monday night. Shipments of flowers by express are much delayed; some of the branch railroads did not get anything in until late in the afternoon on Tuesday.

Social affairs keep up, and the decorators are busy. The William Graham Company had the German Charity Ball at the Academy of Music on Monday, and a large dinner dance at Mrs. Brinton Cox's residence on Wednesday. The Habermehls have the Second Assembly Ball on Friday at the Bellevue-Stratford.

The only damage so far heard of, as a result of the snow storm, is that part of the roofs of the houses on the Hugh Graham Company's Nursery at Logan, fell in with the weight of a snow drift.

The wholesale establishment of H. T. Dumont & Company was visited by fire Monday night. It is supposed to have caught fire from an oil stove that was always left burning on cold nights. The damage was slight and business goes right along.

J. A. Valentine, Denver, Col., and George Stewart, Tuxedo Park, N. Y., were in town on Tuesday.

R. Faust treasurer of the S. S. Pennock-Meehan Company is, we are sorry to report, very sick with typhoid fever.

John Westcott sends word from Port Orange, Fla., that he is feeling much better from the change in climate and that the temperature on the day he wrote was 73 degrees in the shade.

Florists' Club Meeting.

In spite of the snow storm and poor transportation facilities, there was the best attendance at the meet-

ing on Tuesday, that we have had for several months. Expectation of seeing the new carnations was the drawing card. The following were staged: Wenonah Carnation Gardens, Wenonah, N. J., Charles Lelsy, grower; pink seedling (Enchantress Lawson) a good one; vase of 100 Enchantress and three vases of seedlings, one from Enchantress, very like the parent, but with decided fragrance.

H. Weber & Sons Company, Oakland, Md., vase of Mabelle.

H. P. Potter, Wilmington, Del., variegated seedling (Lawson Queen), apparently a good commercial flower.

W. A. Manda, South Orange, N. J., light pink seedling (Mrs. Frances Joost Prosperity).

John Kuhn, three vases of pink seedlings.

John E. Haines, South Bethlehem, Pa., vase of John E. Haines, and one each of Pink Imperial and Imperial, all of which were greatly admired.

Stratford Flower Farms (Edw. A. Stroud), vases of Lieutenant Peary, Beacon, and Enchantress, all very choice flowers.

Samuel Batchelor, gardener to Mr. C. B. Newbold, vase of Enchantress and vase of cut sprays of Bougainvillea catretia.

At the March meeting P. J. Lynch of Dinee & Conard Company, West Grove, Pa., will read a paper on the "Mailing Plant Trade."

In addition to the paper of John E. Haines, Edw. A. Stroud read some notes on the Carnation Society's Toronto convention, which will give later. DAVID RUST.

ELMIRA, N. Y. There was a meeting of the Directors of the United States Cut Flower Company held on Wednesday, January 30, at which time it was decided to increase the capacity of the plant one-half. The company has at the present time 18 greenhouses 200 feet in length, and 18 more 100 feet in length will be added at once. It is expected that work will be commenced as soon as possible and that the houses will be ready for use by the first of July. When the new houses are completed the company will have a total of 150,000 feet of glass and further enlargements are planned which will bring the planting area up to a million feet.

The new greenhouses will cost \$25,000. The company was originally incorporated with \$600,000 stock and more stock will be issued as fast as the plant is enlarged.

The officers of the company are: William R. Compton, president and general manager; directors, William R. Compton, Francis Insater, H. N. Hoffman, H. C. Mandeville, and Seymour Lowman. Among the stockholders are J. Sloat Fassett, John Brand and G. L. St. Johns, president of the New York Steam Company.

Trade Notes.

Wichers & Son, the Gretna florists, wholesale growers of ferns, etc., have their houses well stocked with Boston and its varieties. A fine batch of N. Whitmanii growing alongside of Tarrytown shows its marked improvement over that variety. Mr. Wichers intends discarding Tarrytown; he thinks Whitmanii and Scottii are the two varieties that will be grown most in the future. The firm has installed a Hitchings boiler, and will build two more houses the coming Summer.

The committee appointed for the chrysanthemum show to be given by the New Orleans Horticultural Society in November consists of the following members: Ed. Baker, chairman; C. W. Eichling, J. A. Newsham, Paul Abele, P. A. Chopin, Charles Eble, R. Lockerbie, Claude Ory, H. Sheurmann, with C. R. Panter, secretary, whose address is 2320 Calhoun street.

Among the latest additions to the ranks of the New Orleans florists are C. R. Panter, a daughter, and Claude Ory, a son that tips the scales at twelve pounds.

A well-attended meeting of the Society of Southern Florists was held Thursday of last week to perfect arrangements for the convention and trade exhibit to be held February 14, 15 and 16. Chairman R. Lockerbie presided, with Paul Abele Acting Secretary. It was decided to invite the public to the exhibition hall and to the meetings free of charge. The New Orleans Horticultural Society voted the sum of \$100, while the members present subscribed an additional amount personally toward the purpose. Joseph Steckler was thanked for a liberal donation. Considerable floor space has already been engaged and a good exhibit from out of town florists and supply houses is expected.

Among the features of the programme are: Address of welcome by Mayor Behrman; reply by Professor Stubbs; paper on "Chrysanthemum Growing in the South," F. P. Davis, Mobile, Ala.; "Profitable Orchids for the Southern Florist," J. A. Newsham; "Packing, Shipping and Express Rates," C. W. Eichling; "Rose Growing Under Glass in the South," R. Lockerbie; "What the South Can Grow for Northern Markets," W. R. Wichers, Gretna, La.; "Injurious Insects and Remedies," Professor Newell; "Experience With Carnations in Alabama," W. T. Patterson, Jr., of Montgomery; "Elementary Horticulture in the Public Schools," E. Baker; "The Needs of the Retail Trade in the South," C. Eble. A banquet to the visiting florists will be the closing feature.

CRESCENT CITY.

TOPPENISH, WASH.—What is said to be the largest single sale of nursery stock ever effected was made here recently when the Washington Nursery Company made a contract with the Arcadia Irrigation Association for 1,000,000 apple trees. The Arcadia Company is developing an immense tract of land near Spokane.

SOME TRUTHS ARE SELF-EVIDENT

while others you have to fairly hammer in a man. Fact is, we all have to be hammered. You know a thing is good—have even suggested it to others but sometimes it's hard to break away and get in line. Just for example: there is that ice-clearing eave plate of ours—none of you want festoons of ice clinging to the plate, neither do you care about having the sash bar "center rot" and let your roof down. But in the face of all this you will buy your materials of some local concern who mill out a wooden plate and give you a line of talk about its "just as goodness," cheapness and all that sort of thing. Before you know it, you have bought another everlasting repair bill house. Saved a few dollars at the start—and headed straight for repair troubles at the same time.

If you want a lighter house, a stronger house, one that's easier to put up and lasts twice as long when it is up—then whatever you do, put that eave plate of ours with sash bar clasps attached, into your next house. Write at once for prices.

Vol XXIII. No. 7

NEW YORK AND CHICAGO, FEBRUARY 16, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention. Won first prize for best 100 pink

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise, for the present, February delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time do-

ing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

Strong Rooted Cuttings. February delivery, \$12.00 per 100, \$100.00 per 1000.

F. R. PIERSON CO., TARRYTOWN-ON-HUDSON, NEW YORK.

Mention the Florists' Exchange when writing.

GRAFTED ROSES

GERANIUM NOVELTIES

SYCAMORE. Originated four years ago by the St. Clair Floral Co., Belleville, Ill., who claim that it is one of the best bright clear Salmon Pink bedders in the country. A cross between Mrs. E. G. Hill and Paul Bruant, has a vigorous habit and is always in bloom. 20 cts. each; \$2.00 per doz.; \$15.00 per 100.

BRUANT'S 1906 NOVELTIES. We offer a collection of thirty different varieties all of which are perfect specimens of the well-known Bruant race, including the Cyclops. 50 cts. each; one of each \$10.50.

LEMOINE'S 1906. Fifteen varieties among which are some of the most beautiful combination of colors that we have ever seen, every one worthy a place in every collection. 35 cts. each; one of each \$5.00.

ROZAIN BOUCHARLATS 1906 VARIETIES. Messrs. Boucharat, Lyons, France, have quite a reputation as producers of excellent new Geraniums; among the sixteen varieties there are some fine ones. 25 cts. each; one of each \$3.50.

ALLIANCE. 1905 introduction. A cross between an Ivy and a zonal. A beautiful shade of lilac white, blotched with crimson rose. Excellent habit for vase or pot plants. 25 cts. each; \$2.50 per doz.; \$20.00 per 100.

CAESAR FRANCK. 1905 introduction. Double Ivy, magnificent shade of soft crimson; splendid habit. 25 cts. each; \$2.50 per doz.; \$20.00 per 100.

FLEUVE BLANC. A pure white semi-double and perfect type of Bruant race. \$1.50 per doz. \$10.00 Per 100.

CALADIUM ESCULENTUM, 1st size, \$2.00 per 100. 2nd size, \$1.00 per 100.

MADEIRA VINE ROOTS, \$1.00 per pk. \$3.50 per bus.

HARDY ENGLISH IVY. Extra strong. \$2.00 per 100, \$18 00 per 1000.

A cordial invitation is extended to all interested in Horticulture to visit us. Cowenton Station, Philadelphia division, B. & O. R. R. 12 miles north of Baltimore.

RAWSON'S ASTERS

are just a little superior to anybody else's

The product of our seeds can always demand a better price than those grown from seeds obtained elsewhere. The following is an extract from a letter received last fall from a most critical grower:

"Your Midsummer Aster has been a great money-maker for me. For every flower that I have brought into the Boston Market I have received from \$1.00 to \$1.50 per hundred more than for any other variety raised from seeds purchased elsewhere". J. W. Simpson.

RAWSON'S TWO GREAT QUALITY ASTERS

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

BEAUMONT, TEX.—E. L. Cleveland of Portland, Me., one of the oldest seed potato dealers in the United States, was a recent visitor here, and expressed himself as being most favorably impressed with the possibilities of the surrounding country for profitable culture of potatoes.

WACO, TEX.—The Texas Seed Growers' Association is the name of a new organization formed here, following the meeting of the corn growers. The object is to improve field, garden and orchard seed in Texas, and to protect the interests of the buyers and sellers of seed in Texas. Following are the officers: President, T. V. Munson, Denison; vice-president, A. V. Mebane, Lockhart; secretary-treasurer, D. A. Saunders, Waco.

SMITH'S GROVE, KY.—Says a local paper: "Jim Kirby has bought not less than 10,000 bushels of orchard grass seed this season. He has shipped three car-loads of seed and has two more to go. He has recently purchased the best machine made to clean the seed, and now Smith's Grove has as good a seed house as is located anywhere. A four-horse-power engine drives the machine and its work is perfect. It seems that Smith's Grove is fast coming to the front in orchard grass business."

IMPORTS OF SEEDS, ETC.—February 4, 1907.—Brown Brothers & Company, 13 bags anise seed, five bushels quince seed; Ackert, Merrill and Condit, 400 bags clover seed; James E. Ward and Company, 10 sacks plants; Ed. Meurer, one barrel plants; Walker & Lea Company, 50 plants.
February 5, 1907.—H. Frank Darrow, one cask seeds.

EXPORTS OF SEEDS, ETC.—Shipped from New York, February 5, to Hamilton, Bermuda, 13 packages of seed, valued at \$135; to Hamburg, 795 bags of grass seed, valued at \$6,390, and 11 packages seed, valued at \$238.

February 7, 1907.—From New York to Copenhagen, eight cases of seed, valued at \$209; to Leith 50 bags of clover seed, valued at \$574; 220 bags of grass seed, valued at \$2,679; to Stettin, 1187 bags of grass seed, valued at \$4,710.

DREER'S Reliable FLOWER SEEDS.

Asters are one of our specialties and we do not believe it possible to get finer stock at any price.

We offer below a few of the most important sorts for the Florist. For complete list see our current wholesale Price list, mailed free on application to any Florist.

Early Wonder. A new variety and the earliest of all, blooming by the end of June, flowers high grade on long stems and pure White. 40 cts. per trade pkt: \$2.00 per oz.

Daybreak. A fine mid-season sort, color Daybreak pink, 40 cts. per trade pkt: \$2.50 per oz.

Purity. Similar to Daybreak but pure White. 40 cts. per trade pkt: \$2.50 per oz.

Lavender Gem. Exquisite soft color, early flowering 50 cts. per trade pkt.

Snow Drift. Early pure White of Comet type, 50 cts. per trade pkt: \$3.00 per oz.

White Fleece. The finest White of the Comet type, long stemmed large flowers of purest White, 50 cts. per trade pkt: \$4.00 per oz.

Violet King. A new color in the late branching type, 40 cts. per trade pkt: \$2.50 per oz.

Dreer's Superb Late Branching.

The finest strain procurable, and the best of all for late blooming, Pure White, Shell Pink, Rose Pink, Deep Purple, Lavender, and Crimson, each 25 cts. per trade pkt: \$1.00 per oz.; Finest Mixed, 25 cts. per trade pkt; 75 cts. per oz.

Sow Now. Ageratum, Centaurea, Lobelia, Petunia, Salvia, etc., etc. See list for prices etc.

OMAHA, N.E.—Monsieur A. Rousset of Paris, France, was made defendant in a suit for \$3,500 filed in the district court by the Nebraska Seed Company. The plaintiff represents that on November 16, 1906, it entered into a contract with M. Rousset for 2,000 bales of Lucerne seed of a certain specified quality, the contract price being \$11.40 per 100 pounds. The plaintiff paid to the defendant \$48,840 for 1,950 bales of the seed, but when the goods arrived it proved to be of a quality inferior to that specified in the contract. The difference between the market price of the seed specified in the contract and the seed delivered, says the plaintiff, is \$3,500, and for this sum judgment is asked against the Frenchman. A writ of attachment is asked upon certain assets of M. Rousset, alleged to be in the hands of the Adams Express Company.—Bee

DUBUQUE, IA.—F. B. Mills & Company, Rose Hill, N. Y., are making investigations with a view to establishing their main office here. In a letter to the local postmaster the concern says:

"We are a mail order seed house, supplying our goods direct to the planter in every part of the world. During the past twenty years we have built up a very large trade in all parts of the country and have now outgrown our facilities. We have been obliged to secure temporary quarters to handle this year's business. Our Western trade is growing so fast that we are considering moving our main office to some central location, so we can better serve our customers in the South and West. We can see that the West is becoming our best field and we must take better care of our customers. Express and freight is too large an item for our Western customers from our present location. We are well equipped in every way; have our own printing office and mail annually a million catalogues, our postage accounts being over \$40,000, and we employ over 200 people. We understand your city has good shipping facilities, and we wish to ask you if you think any inducement could be offered if we locate our headquarters there?"

OPPOSED TO THE PURE SEED LAW.—In the House of Representatives, on Wednesday, January, 30 1907, Hon. M. E. Driscoll, of New York, made a speech against the pure seed law. He said there was no general demand for such a law; that it was not necessary and would serve no good purpose. The damage, if any, resulting from the sale of adulterated or misbranded seed was a monetary damage. It may be measured in dollars and cents. There is no permanent injury or damage, and there is no loss which can not be made good under the law as it is in the several States. "Do we need a national seed inspection law or other seed law to protect our farmers against such threatened damage? Certainly not. That trade has regulated and will

regulate itself, and the farmer has ample protection under the common law." Mr. Driscoll urged that the seedsman is apt to be a better judge of seeds than the man who would be employed by the government at a moderate salary. The seedsman has a reputation to maintain. He will not willingly buy or sell fraudulent seeds. If he did his business would not last long. The speaker did not think there was much of the fraud complained of practiced. A pure seed law, or a seed inspection law is unnecessary, and an unnecessary law is a bad law. It would also be, Mr. Driscoll said, an undue interference with the commercial and business affairs of our seedsmen and farmers, and would be paternalism in a matter which can be easily regulated by the laws of the several States. It would just be as wise to pass laws to protect every line of trade, and create bureaus, and appoint inspectors, agents, and clerks, to the end that all men may be kept honest. He repeated that a law of this kind is not demanded by the people interested. It is not necessary. It would be an undue extension of Federal power. It would be expensive, and should not be enacted.

THE BOARD OF GENERAL APPRAISERS has overruled the protest of J. L. Hopkins & Company against the assessment of duty by the collector of customs at the port of New York on the authority of abstract 12933 relating to pumpkin seed.

Cycas stems, classified as nursery stock under paragraph 252, tariff act of 1897, were claimed by Alex. Murphy & Company, Philadelphia, to be free of duty under paragraph 552, as palm leaves in their natural state. The protest was overruled by the Board of General Appraisers.

NOTES FROM HOLLAND.—Europe is having a very strange winter. In the Southern part the ground is covered with thick snow after a severe frost, causing a very limited quantity of French flowers. Florists who depend on French flowers principally for winter work are very disappointed, but this shortage is creating a very good market for our bulbs, and the result is an increasing demand for 1907.

About the prospects of the crop here nothing can be said. Up till Christmas the weather was extremely soft, but just now we are having severe frosts followed by blizzards now and then, making the bulb growers afraid that many fields on which the bulbs stood uncovered may have suffered from the heavy frosts. For these reasons they expect that prices will advance, which soon will be proved by the green sales next spring. J. B.

European Notes.

February finds us still in the embraces of winter, and although accompanied with heavy falls of snow around Berlin and in the northern half of the British Isles, farther south this protection is lacking, and the growing plants are exposed to the destructive force of the bitterly cold winds. All of which should lead holders of reliable stocks to obtain for them their full value.

It is somewhat remarkable that while in southern France and Italy the cold has been very severe, in the western districts of France the winter has been unusually mild and moist, only one very severe frost being recorded. This will not affect to any appreciable extent the shabby remnant of former greatness which is now the distinguishing feature of this very important district.

Owing to the almost entire absence of large contract orders from your side and the heavy surpluses, especially in Holland, which were being offered at such ruinously low prices, very slender provision was made for 1907 crops by growers of cabbages and turnips. The scorching drought destroyed the greater half of what was sown, so that from this district the output of these articles this year will be practically nil.

As regards annual crops, the severe frosts are preparing for us a splendid seed bed, and if growers were only as yielding as their fields all would be well. The peasant farmers of France are not built that way, and as sowing time for the earliest varieties is now close at hand, dealers will be forced to submit. As a consequence, the quantities placed will be only enough to barely cover engagements already made, so that any small surplus that may be produced will easily command a high price.

Once again the German houses are to the fore with absurdly low offers, and rumors reach us that very large quantities of these cheap radishes intended for the English trade have been sold away from their legitimate owners to some of the French houses and that considerable present trouble and an entire absence of such orders in the future is likely to be the result. One very ambitious firm in the "Vaderland" is having a hot old time just now as regards the past season's transactions and a phenomenally cold wave as regards the future. Honesty is the best policy after all.

In regard to present business the very acceptable stream of orders that continue to reach us from your side is welcome evidence of a good season, which is, we trust, as profitable as it is voluminous. If buyers of peas will kindly remember that the 1907 crop in Europe was a record one and help us to reduce the heavy stocks which fill our warehouses to overflowing, their kindness will be very gratefully remembered by EUROPEAN SEEDS.

Unfair Competition.

Editor Florists' Exchange:

The article and letter in a recent edition of The Florists' Exchange, under the heading of "Unfair Competition," brings to mind an occurrence in the trade not long since, that may be of interest to all your readers in general and to nurserymen in particular.

Last Autumn a news item appeared in one of the New York daily papers as a telegraphic dispatch from one of the large cities of the country near the Mason & Dixon line, that an order for planting material to the extent of several thousands of dollars had been placed by the park board with a certain well-known nursery. It stated that the department had made up its list of requirements, and having received from various firms applications for specifications, it had expected a number of bids, but only one was received—from a nursery, the owner of which is a very wealthy man; and he of course secured the award of order without competition. This wealthy owner has been for many years a client of a Boston firm of landscape architects preparing the plans and planting lists for the department in question.

An investigation showed the facts to be such that, although formal bids were invited, there could have been no competition, in so much as the department's list had been made up from the said nursery's trade list. In every instance the varieties and sizes were exactly the same and between the two there was not the slightest variation. The trade list of the nursery which secured the order—or rather, that was thus presented with it—was presumably in the hands of other firms intending to bid; but on receiving the list they naturally declined, seeing the useless waste of time and money. The department might just as well have asked for bids on an article patented and manufactured and for sale by only one firm; in neither case could there be the slightest competition.

Is it not surprising that the department's requirements for the year should happen to be only such, both as to varieties and sizes, as were listed by one particular nursery? One wonders why the city should not have been saved the expense of advertising for bids, or have invited proposals. And in this connection one asks where is the fairness, either to public departments or to nurserymen, in advertising for bids in local papers only? Every wide-awake business man in these days endeavors to keep in touch with prospective or possible customers, hence would not the ends of the department in question be served were the secretary or purchasing agent, or whoever might have the matter in charge, to send a list of requirements for quotation to such firms as had been in touch with the department, or if the laws of the city prohibit purchase without advertising, to at least advise responsible firms known to the department of the appearance of the advertisement?

In this way the tax payers of the city would be assured that fair competition was being procured and their money not being spent without proper effort to make it go as far as possible for the best results, and the nurserymen of the country assured of the chance of fair competition.

Does not this whole transaction indicate peculiar favoritism; and a farce, too, as regards competition; which every fair-minded man will admit is good for trade, if not the life of it? G. H. P.

Silver Maple.

Where can seed of the silver or soft maple tree be purchased? How long is it before trees of 1-2 inch caliper can be grown from seed, if the ground is rich and kept well cultivated?

New York. A. S.

—Any dealer in tree seeds should be able to supply silver maple seeds. Try Otto Katzenstein, Atlanta, Ga., whose advertisement will be found in our columns. These seeds ripen in May, and have to be sown as soon as they ripen when they grow at once. It would take six years to grow such trees from seeds to make 1-2-inch caliper, perhaps longer. J. M.

An Alleged Scale Killer.

Please give me your opinion on the following: A company is operating in Jamaica, L. I., in destroying the San Jose scale with a mixture they call Iodine of Mercury. One of the company came to my employer and told him that this mixture was the greatest thing out for San Jose scale and gave him the following explanation. "The mixture is very strong. By painting a ring around the tree the poison in the mixture will soak into the bark and in Spring will be carried into every part of the tree and the scale will be poisoned and fall off." What is your opinion? G. S.

—Within the last year or two several parties have made claims similar to this, but not one has proved his claim so far as known. Trees will ab-

sorb moisture through their bark, we know, to some extent, as certain oils so applied will kill them, but what effect the mixture spoken of, or any other, would have when so applied remains to be proved. Better apply a scale-killing spraying and then be sure the San Jose scale has met what it does not want. J. M.

Horticultural Notes.

Mollis azuleus are among the hardiest sorts we have. Their large flowers make them conspicuous wherever planted. A fairly moist fine, loose soil suits them best. They thrive in a sunny place when the above named conditions prevail, but their flowers last longer when they are in a situation where there is partial shade from the sun.

Purple birch, *Betula alba purpurea*, is one that was raised in the old Transon Brothers—now Barhier's—nurseries, Orleans, France. It is increased by budding it on the common white birch stock, the same as the cut leaved weeping birch is.

Lantanas make excellent plants for growing in tubs for lawn use in Summer. They thrive in heat, delighting in hot sun. There are many varieties of them, giving a choice of colors. Grown in standard shape they are particularly useful.

Lonicera fragrantissima is among the earliest of flowering shrubs, often expanding before the last of the late frosts have passed. It displays an abundance of cream-white flowers, which are quite fragrant. It is not a climber as so many *loniceras* are.

We again say that *C. speciosa* is to be preferred; at the same time, as we have seen *bignonioides* grow here in its wild state we should hesitate to say it was entirely worthless. There are, no doubt, different types of *bignonioides*, and some may be more branching than others. We recently had occasion to send a sample of our *bignonioides* seed to Mr. Brown, the expert, of Indiana. He says it does not appear true to name, but as a hybrid of *Kampferi*. *Catalpa bignonioides* is native here along our creeks, no others near it to mix with it. It has been *C. bignonioides* from the time of our earliest botanists, and from such a tree the seed was gathered.

Pyrus Americana.

Botanics that we have access to do not say why it is that the *Pyrus americana* is called mountain ash, the common name under which it goes. There is, it is true, quite a resemblance in the foliage of this *pyrus* to that of an ash, and this is why it is called mountain ash, probably; there is no other resemblance anywhere.

The mountain ash is an uncommonly attractive tree at all seasons. Take it in early Summer when full of its clusters of white flowers and there is no other tree of its size and habit to be compared with it. View the picture presented herewith, and see if our praise is not justified! Notice the numerous clusters of flowers which the tree bears; and such a show it makes every season, or but rarely fails to do so. After the flowers fade berries form, which toward the close of Summer become of a bright red color, and then the tree presents another

Pyrus Americana, American Mountain Ash.

Fruiting of the Akebia.

As a strong, rapid-growing vine, the *Akebia quinata* is well known wherever collections of vines exist. It is recognized as one considered necessary where many vines are to be used, because of its merits. These are its rapid growth, its bright green five-divided leaves, its plum-colored, sweet-scented flowers and their early opening. The fruit could well be named also in the list of merits, only it is so seldom produced. But occasionally it is seen; and then only on old vines will a fruit or two be found; rarely is one seen on a young vine. The fruit is not unlike that of the pawpaw, and is of such singular appearance that, were it to be a common occurrence for it to fruit, the vine would be often planted for this feature alone.

The *akebia* is a Japanese plant, and as with many other fruits of Japan the inhabitants are credited with eating it. Unless the vine fruits better there than here, there would be but little to be set before one at any time.

Catalpa Speciosa.

In the issue of February 2, Charles Murray has some notes on the *Catalpa speciosa* in which he agrees with me that *C. speciosa* is more tree-like, straight, and to be preferred wherever it is a choice between it and *C. bignonioides*. He goes further, however, in saying that owing to its slower growth and low spreading habit, *C. bignonioides* is not profitable to grow for any purpose.

picture, on this latter occasion the red contrasting with the green foliage instead of white and green as when it was in blossom. The clusters of berries are very handsome, and persist a long time, in fact, until Winter comes, when birds do not molest them, which they are apt to do in late Autumn.

Our illustration represents an uncommonly fine specimen of the American mountain ash, but then, as will be seen, it stands out on a lawn where nothing has interfered with its growth, on an estate in Montgomery County, Pa. Usually the tree is not seen of such good proportions, although in Maine, where it is abundant, we are told exceedingly fine single specimens may be noticed on many of the mountains.

The mountain ash is a native of the Eastern and Middle States, an entirely Northern tree, excepting the mountain regions of some Southern States.

As in the case of many other of the Rosaceae family the borer sometimes visits its trunk, but if watched well when young there is seldom any great damage done to it; and what a pleasing sight a fine, healthy tree is our illustration shows.

It differs in a desirable way too, in this, that its berries commence to color earlier in the season than those of many other berry-bearing trees. By Midsummer the color is there.

The tree that we illustrate stands on a lawn almost equidistant between the public highway and the dwelling house of the estate, and from where our artist stood to take the photograph the mansion is hidden by the tree. JOSEPH MECHAN.

LILIUM LONGIFLORUM.—Happily there is now presented to the bulb growers a new source of supply, and such as promises to far exceed the old source in quantity and quality, and at a much less cost both of initial price and cost of freight to England. I am referring to the new cultivations in Azores Islands, which are rapidly gaining considerable importance and reputation for improved quality, more especially in America. In the course of the last twelve months I have frequently come across sample growths of these new importations in England, and in all cases the quality is far in advance of anything I have seen in my experience of Japan or Bermuda bulbs. The type is quite distinct and the bulbs absolutely free from disease—a deformed bloom is absolutely unknown. The flowers are perhaps smaller than those from Japan, but they are of very solid and thick texture, with a total absence of the thin watery flowers seen on the extreme type, giving one more the impression of the giganteum type in the thickness of the petals. The stem, too, is very clean and sturdy, no canes or supports whatever are needed; and what is perhaps of the greatest value, they are more floriferous.

When the stock in the islands is worked up sufficiently large, the price will come at about half now paid to Japan. The islands are on the West Coast of Africa, in about the same latitude as the islands of Bermuda. They are possessions of the Portuguese, and as the Bermudas are to America, so the Azores are a health resort for Europeans. The labor is, of course, Portuguese, but some English and German labor is being imported. English speculators do not appear to be ahead of other countries, or even alongside them, in taking up the growing or handling of longiflorums from these islands. I am informed that already some German firms are prospecting the possibilities of the trade for the English and American markets, and if practical, sending out capital in the hands of responsible agents, with the intention of ear marking the principal cultivations; and also I know some of the leading American seed houses have made contracts with agents at the Azores for an increasing and continuous supply.—L. L. G. in Horticultural Trade Journal.

- THE GEO. H. MELLETT CO., Springfield, O.—Illustrated Catalogue of Plants, Seeds, Small Fruits, Ornamental Trees, etc., with lists of Novelties and Specialties in which latter Roses form a leading feature. Colored Plates of Aquilegia, Phlox, etc., are contained in the catalogue.
- H. BURNETT, St. Margarets Vine-ries, Forest Road, Guernsey, Channel Islands.—Catalogue of Perpetual Tree or Winter-flowering and Malmaison Carnations, including novelties in English

and American varieties. A colored plate of the new Carnation, Mrs. H. Burnett, forms an attractive frontispiece and Mr. Burnett recommends the growing of American varieties, which, "in many ways, are far superior to the English Winter-flowering Carnations."

ELBRIDGE G. WHEELER, Bridgeport, Conn.—Catalogue of Seeds, Bulbs, Plants, Supplies, etc. Contains a well-selected list of Novelties and Specialties, the general offerings being very complete. The cover designs, Roses and Nasturtiums, in color, are taking. Mr. Wheeler says: "Our seed crops have in most cases yielded abundantly, and aside from Onion and a few minor varieties which are very short, the prices have not risen, while the quality is superior. The seed crops have been harvested in splendid condition, and we are now better prepared than ever to fill every order with 'satisfaction seeds.'" The catalogue is well printed and profusely illustrated.

WM. C. KRICK, 1164-66 Green avenue, Brooklyn, N. Y.—Price list of Immortelle Letters, Inscriptions, Emblems, Monograms, etc.; also Flower Pot Handle and Hanger. Mr. Krick furnishes the following bit of history connected with this most valuable adjunct of the retail florist trade: "The first immortal letter ever manufactured for the trade was made by me in May, 1835. In June of the same year, I placed them on the market to supply the florists, and while orders did not pour in as heavily as at present, suc-

cess was assured. Encouraging communications reached me from scores of our old and most respected florists, praising these letters as a Godsend, which still holds good until the present day. Am looking forward to supply my esteemed patrons for many years to come, with the most inexpensive and labor saving device that has yet come before the florists."

PEACOCK DAHLIA FARMS, Atco, N. J.—Catalogue of Dahlia Roots, 1907; a very large and interesting collection in all the classes of this popular plant. Particular attention is called to the new Peacock hybrids, which are stated to be finer than the Century, besides being in all colors, the new Giant Fringed Century, and novelties in the show, decorative, and "Peony-flowered" sections. The firm has had 22 years' experience in growing the dahlia.

It is almost impossible to understand the passionate longing of statesmen, unknown to fame, but still on Uncle Sam's payroll, for seed. As the hart panteth for the water brook, so do they yearn for those neat little packages wherewith they have placated constituents for whom they could do nothing. We are a nation of 80,000,000 people, and yet we have not outgrown the seed statesmanship of our buccolic days. Isn't it possible to send to the House men with a little broader mental horizon, whose intellectual vision can take in something bigger and more inspiring than free-seed packages?—Baltimore Sun.

Three Grand Commercial CHRYSANTHEMUMS

HAVING raised thousands of seedlings in the last twenty years, I have three of the very best seedlings—considering fine form, color and stem for commercial purposes—in cultivation, and will offer a limited number at reasonable prices; nothing better in their season (all are certificated.)

- MRS. R. N. BIRD.** Fine glistening white, incurved, outer petals reflexed; good form and stem; mid-season.
- MRS. JOHN FREIS.** Large, early, incurved yellow, Bonnaffon type; the best early yellow to date; October 15.
- CHAS. RAZER.** Large, pure white, incurved, ivory form, fine stem and foliage; one of the best whites in cultivation; October 25.

PRICE: Each, 25c.; dozen, \$2.50; 100, \$15.00. Equal proportion of each at dozen and 100 rates.

ROSES AND CARNATIONS advertisement from Poehlmann Bros. Company, Morton Grove, Ill., listing various rose and carnation varieties and prices.

GRAND NEW CANNAS

William Saunders

The flowers are large, of splendid form and are born very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich brooze. Height, 3 1/2 to 4 feet. We believe that **Wm. Saunders** is decidedly the most perfect canna of this type that has been introduced. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Ottawa

is a strong grower, very robust and 5 to 6 feet high. The flowers are large and beautifully formed, color is carmine with tints of old rose and deep coral, add to this the silken sheen and you can imagine the effect a few plants will produce.

Note.—We had this canna on trial among the Canadian experimental stations last summer and this is the official report of their expert: Quite distinct and one of the most beautiful shades of color I ever saw in cannas. Of 70 massed in one bed during the past season, this was the most floriferous in the collection, coming into bloom early and continuing until cut down by frost, as many as 13 expanded heads of bloom being counted at one time on a plant, and not a poor one among them, all being of immense size. 50c. each; \$5.00 per doz.; \$35.00 per 100.

New York

Has the Orchid type of flower. They have much more substance than the flowers of the other varieties of this class, and will stand the hot sunshine as well as the toughest varieties of cannas. The color is a solid rich scarlet covered with a beautiful glowing sheen. The flowers are large and contrast beautifully with the dark bronze foliage. 50c. each; \$5.00 per doz.; \$35.00 per 100.

Send for our list and prices of 60 other leading varieties of cannas.

ROSES Shrubbery

Are our great specialty, 2 1/2 and 4 in. pot plants we have in great variety. Teas, Hybrid Teas and H. P. Roses on their own roots. Philadelphia Rambler, Crimson Rambler, Dorothy Perkins and other climbers in strong field plants.

in variety. Viburnum Plucatum, Spireas, Altheas, Dentzias, Weigelias, Barberry Thunbergii, Hydrangea Paa. Grandiflora, Honeysuckles, etc.

R. H. AKERS, Chatsworth, N. J.

Origin of American Beauty Rose.

(23) I understand that the rose American Beauty is really a French rose and has a French name. I shall esteem it a favor if you will tell me all about it. Who raised it, when and where; was it a seedling or sport?

Richmond, Va. T. F.
—The rose grown in the United States as American Beauty is a seedling, was raised by Ledechaux, France, in 1875, and named Mme. Ferd. Jamin. It is classified as a hybrid remontant; color, crimson.

Prepared Cycas and Magnolia Leaves.

(24) Where can I get dry cycas leaves in large quantities; also magnolia leaves—first hand? R. S. New York.

—We have not the addresses of the foreign houses who make a specialty of preparing cycas and magnolia leaves, and would recommend that the writer communicate with some of the wholesale houses who handle these materials, whose advertisements are found in our columns.

Grafting Tree Roses.

(25) What will I use for trunks or stock to graft tree roses on? Will I use wax or will raffia alone do, and where will I find the stock? Will Mme. Planter be suitable? D. H. South Carolina.

—Suitable stocks for the grafting of roses are the dog rose and the manetti; or the Mme. Planter can be used if desired. It is not necessary to use wax; just tie on the grafts with raffia, as that answers the purpose very well. As to the varieties suitable for grafting and which are to be used for flowering purposes, it would be best to refer to some reliable catalogue. To enumerate varieties here used for flowering purposes would occupy too much space.

Eulalias.

(26) How and when shall I plant seeds of the eulalias to have them germinate? I have tried them both under glass and in the open ground without success. How long after planting should the seedlings appear, and how much growth should they make the first season? UNO.

New York.
—We have had no experience in raising eulalias from seed, and believe that any such attempt would only prove unsatisfactory. The best way to get a stock of these is to procure young plants from some of the wholesale dealers; or if clumps are available, divide them into small portions and transplant, the same as is done with herbaceous stock in general.

Red Spider on Carnations.

(27) Please tell me the best and quickest way of eradicating red spider from a bench of Mrs. Lawson carnations, 3 by 100 feet. I have not syringed with water because I understood that water was not good for the plants on their foliage, at this time of the year. Have used Nicotine extract, diluted 500 times, twice a week, applied with a compressed air sprayer, but it does not seem to do the work satisfactorily. This is the first time I have had any trouble to speak of with this pest.

Wisconsin. A BEGINNER.
—When red spider gets a foothold on a bench of carnations—and it only becomes prevalent when some parts of the bench have been left too dry either at the roots or on the foliage, or both—there is no better remedy than spraying with a good force of water at every available opportunity; we can only recommend that a regular syringing be given the parts of the bench affected.

Sweet Peas Damping off.

(28) When sweet peas are planted and come up regular to the height of six inches and look healthy and then commence to damp off, or die, can you explain the reason? I have tried to grow them dry, have tried not water-

ing the foliage, just the roots, but still to no purpose.
J. D. F.
New Jersey.

—The trouble with the sweet peas is, no doubt, due to some local cause, but what that may be it is impossible for us to form an opinion, not knowing the kind of soil used for planting or the temperature at which the house is kept. The probabilities are that it is a question of a too high temperature and a too humid atmosphere. Sweet peas kept at a night temperature of 48 or 50 degrees, given a good circulation of air, not being too crowded and kept fairly well supplied with water, yet are not too wet at any time, usually grow without any trouble through the winter season.

Improving Rose Houses.

(29) Will some one offer suggestions to improve our rose houses? Can I put three-inch tile on the solid beds and use a six-inch board for edges? Would it be best to open a walk in the middle bed and run part of the returns back through it? Is it necessary to excavate and have any heat under the beds?
J. A. & S.
Iowa.

—In order to improve the lay-out of the houses in question, we would suggest that a path be opened through the middle of the center bed. Each of the solid beds should be cut down to about twelve inches above the level of the house; then place the three-inch tiles across the top of the beds already cut down; put them close enough so that the roots of the roses will not get down into the old soil, and place either a tile or a five or six-inch board around the edges to form the sides. Five inches of new soil could then be placed on the tiles, in which the roses could be planted. If the heating as arranged at present is perfectly satisfactory, we do not see that it would be necessary to run the returns through the center path.

Trouble with Hydrangeas.

(30) My hydrangeas are not doing as well this year as they did last year under the same conditions, with the exception of benching. Last year I benched them on sand, this year on sawdust. I find some of the leaves have black spots. The night temperature is 40 degrees. I would like to force the plants for Easter. I also find a little mildew on the pots. Please inform me if I am handling these plants all right for Easter blooming, and what is the cause of the black spots.
R. M.
New York.

—Without any doubt the trouble with the hydrangeas is that they have been standing on newly made sawdust. Hardly anything more injurious to plant life could have been used for plunging or for standing the pots upon. We could only recommend that the sawdust be taken away at once, and if no other material is at hand, stand the plants on the bare benches rather than on sawdust. The black spot and the mildew will all have come from the sawdust. If it is desired to have the hydrangeas for Easter, the night temperature should be increased about twenty degrees; in fact, the clusters of buds ought to be in sight before the middle of February.

A Carnation Trouble.

(31) Can you kindly tell me what the trouble is with my Mrs. Lawson carnations? I planted them in the house in the middle of September. The plants are looking well; but I did not have a flower worth speaking of. They are very small, and burst. I give the plants good treatment. I run my houses not much above 50 degrees, night temperature. We had some cold weather here that my houses ran as low as forty at night. Will this do any harm to Mrs. Lawson? I give air during bright days, and feed the plants once a week with liquid manure, if weather permits. I do not think the soil is to blame, as my Enchantress are doing well in the same soil. What is your opinion?
Connecticut.
R. O. P.

—The trouble with the carnations in the present case arises from the fact that the temperature was allowed to drop below the normal at different times, and the plants received a check from which they have not yet recovered. Seeing that they are not growing rapidly just now, we would omit the liquid feeding for a few weeks

Dreer's Summer Flowering Bulbs

The Begonias and Gloxinias offered by us are the best that skill and careful selection can produce, being grown for us by one of the most expert European specialists.

TUBEROUS-ROOTED BEGONIAS

Single Flowered, Scarlet, Crimson, White, Yellow, Rose and Orange, 40c. per doz.; \$3.00 per 100; \$25.00 per 1000.

until better growth commences, which, as the days are beginning to get longer, will soon be apparent.

Utilizing Empty Houses.

(32) I have two greenhouses now empty. They are 14 feet wide; an 8-foot solid bed runs through the center of them. One house I wish to plant with dahlias for cut blooms, also would like some cultural advice, also a list of the best varieties for cut flowers. The other house is cooler; I can keep it at about 50 degrees night temperature. What kind of seeds can I plant for pot culture for Spring sales, or cut blooms in the open bed? Which is the best way to force German iris? I have some heavy plants that I wish to force for cut blooms.
Pennsylvania.
D. B. C.

—In the house where it is intended to grow dahlias, we would first dig up the bed and incorporate a good dressing of well-rotted manure. Then procure dahlia roots, divide them into single tubers and plant them in rows eighteen inches apart, twenty-four inches between the rows. For the best varieties, we would make a selection from some wholesaler's catalogue, choosing the colors we thought would sell best in our market. In the house where a temperature of 50 degrees can be maintained, the German iris could be had in flower by bringing in the clumps, disturbing the roots as little as possible, and planting them direct into the solid bed.

Suitable seeds that could be sown now and used for pot plants or for cut flowers during the Spring and early Summer, would be asters, stocks, dwarf marigold, Phlox Drummondii, candytuft and mignonette. Of course, you would have to be guided in your selection by what are believed would make the most salable plants and flowers in your locality.

Peonies for Memorial Day in Oregon.

(33) What varieties of herbaceous peonies would be a sure thing for Memorial Day in this locality, where flowers of officinalis rubra are usually at their best just two weeks before? Has any authority on peonies a relative scale of blooming dates?
Portland, Ore. SUBSCRIBER.

—Will some reader kindly supply the information desired?

Propagating Perennials.

(34) Timme's Timely Teachings are a valuable feature of your paper. In the issue of January 19, under the heading "When to Sow Seeds," Mr. Timme advises on the sowing of the seeds of perennials. Among other seeds, mention is made of pyrethrum, campanula, delphinium, gaillardia, digitalis, Shasta daisy, etc., the seeds of which may be sown in May. Will Mr. Timme, through your columns, kindly inform the learners—and all gardeners are learners—what perennials, if any,

will give, from seed, plants true to variety—either to the "type," or to a named variety?

Ontario. BEGINNER.
—Many kinds of hardy perennials can easily be raised from seeds, and the seedlings, as a rule, display the true characteristics of the respective species with very few exceptions. But the difference between the individual seedlings of most of the species is very great as regards habit, color and size and form of flowers. By selection and subsequent propagation by cuttings, runners or division, fixed types, new forms and distinct varieties are obtained.

To this class belong pentstemon, digitalis, tunica, boltonia, aconitum, coreopsis, platycodon, lychnis, veronica, gaillardia, tritoma, pyrethrum, campanula, Chrysanthemum maximum, Shasta daisies, hardy pinks and many others of less value to commercial florists. In trying to raise from seeds the double-flowering variety of some of the above named, such as platycodon, campanula, pyrethrum, etc., no more than fifteen or twenty per cent. of the seedlings need be expected to bear double flowers; all the rest will be singles or semi-doubles, but few of these will prove really worthless, some of them, in many instances excelling the doubles in point of beauty.

The following kinds come fairly true from seed as to type, variety or color: Primula veris, poppies, Monarda splendens, Adonis vernalis, stokesia, bellis, iberis sempervirens, achillea, Scabiosa caucasica, anthemis, heuchera, aegilegia, delphinium, Alyssum saxatile and Gypsophila paniculata.

Those that will flower the first year if the seeds are sown early are Coreopsis lanceolata, Delphinium formosum, lobelia, statice, achillea, Shasta daisies, agrostemma, gaillardia, bellis, tunica, lychnis, Corydalis leuca, etc.

Most perennials raised from seeds will not flower until the second year. Of these the most noteworthy are monarda, astilbe, pyrethrum, cassia, pinks, phlox, platycodon, tritoma, baptisia, digitalis, pentstemon, veronica, heuchera, gypsophila, iberis, Iceland and oriental poppies, Primula veris, campanula and all the Japanese species of iris.

The seeds of some perennials germinate exceedingly slow, often lying a year in the ground before they sprout unless sown as soon as ripe. Such kinds are Lathyrus latifolius, dictamnus, peonies and wild cucumber.

The following are easily and quickly multiplied by rooting cuttings: phlox, pyrethrum, Shasta daisies and the hardy sorts of dianthus, while others grow rapidly into numbers from side-runners, as mentha, bellis,

For Decoration Day SPIRÆAS

Are a most useful plant

We have an excellent lot in cold storage, extra large clumps, and offer them as follows:

- Spiræa Japonica, Per 12 60c., per 100 \$4.50, per case, about 300, \$12.00.
- Spiræa Compaiza Multiflora, Per 12 60c., per 100 \$4.50, per case, about 300, \$12.00.
- Spiræa Astilloides Floribunda, Per 12 60c., per 100 \$4.50, per case, about 300, \$12.00.
- Spiræa H. Witte (new), Undoubtedly one of the finest and most profitable Spiræas for florists. Per 12 \$1.00, per 100 \$7.50, per case, about 300, \$21.00.

POT GROWN LILACS

Extra strong and well set with buds.

- 50 Marie Le Graye, 50 Chas. X, 50 Wd. Caseler Perier, 50 Md. Lemoine, \$6.00 per dozen while they last.
- 50 Dauria Lemoine (pot grown), at 18c. each

CANNAS

- 10 varieties, dry bulbs, my selection.....\$2.00
- Garanlius, 10 varieties, my selection, 2 and 2 1/2 in. pots.....\$3.00
- Pansy Plants, small from frames \$3.00 per 1000.....50
- Asparagus Plumosus and Sprengeri, 2 in., \$1.75 per 100. Cash.

JOS. H. CUNNINGHAM, Delaware, O.

achillea, selidago, asters, monarda, anthemis, lysimachia, etc.

But the most widely practiced method of propagating hardy perennials is by division. The old stools of late flowering species are divided and replanted in the Spring; the early flowering ones in August. Those kinds that will stand dividing every year and at almost any season, even when in full bloom, are primulas, gentiana, agrostemma, veronica, pyrethrum, lychnis, pentstemon, solidago, cenothea, armeria, viola, bellis, phlox and the dwarf varieties of aster, coreopsis and aconitum.

Somewhat slow to propagate by division are poppies, statice, peonies, lupines, polygonum, acanthus, iris, helleborus, lathyrus, Gypsophila paniculata, Corydalis nobilis, Adonis vernalis, Lily of the valley, Anemone hepatica and Dicentra spectabilis. All of these dislike dividing and transplanting, some of them requiring several years for complete recovery, as for instance helleborus, gypsophila, Lily of the valley, peonies and dicentra.

Orders from unknown parties must be accompanied with cash or satisfactory references.

American Rose Society.

A meeting of the executive committee was held February 11, in Messrs. Traendly & Schenck's office, New York City. President Simpson reported that Robert Craig of Philadelphia, Wm. F. Kasting of Buffalo, and P. J. Hanswirth of Chicago had consented to act as judges at the Washington exhibition.

There also have been added to the list of special prizes a \$25 premium from W. A. Manda of South Orange, N. J., for the largest and most varied collection of cut roses of all classes, one or more blooms in a vase; Wm. H. Ernest of Washington, D. C., \$25 for a group of decorative plants covering at least 100 square feet of space; Vaughan's Seed Store, Chicago and New York, \$10 in gold, for six plants of White Baby Rambler rose grown in pots 5 inches or larger. For the best vase of yellow roses of any variety, \$10 in gold, by Siebrecht & Son, New Rochelle, N. Y. For the best 50 blooms of Golden Gate, a silver cup valued at \$25, by W. Atlee Burpee & Co. For the best 25 blooms La Detroit, \$25, by John Breitmeyer's Sons, Detroit, Mich.

The schedules covering the joint affairs of the American Rose Society and the Florists' Club of Washington were submitted, but there will be a supplementary list issued, as the list of prizes is increasing, many people having shown an interest to take part who had not been heard from until within a few days.

E. Gurney Hill, Richmond, Ind., will read a paper on "New Varieties." There will be two questions offered for discussion at the society's meeting, as follows: First, What definite work can the American Rose Society take up at this time for its members in particular, for the rose-loving public in general, that it does not now do?

Second, Granted that a large increased membership is desirable and essential to the permanency and usefulness of the American Rose Society, how may it best be accomplished; where shall we find ready response—among the professional florists and gardeners, or among what are commonly called "amateurs"?

The secretary reported that a pamphlet was now in press, covering the matters of the past, the constitution of the society, and a chapter on roses from the "Woman's Hardy Garden" by Helen Rutherford Frye. This work follows in the line of that done by W. J. Stewart a year or more ago, and the pamphlet is intended for distribution to members and others interested in becoming members of the society.

The Florists' Club of Washington is making strenuous efforts to have this show a decided success. The Arlington Hotel has been chosen as the headquarters of the American Rose Society. The official meetings of the society will be held in the exhibition hall, corner 15th and E. streets, N. W., Washington, D. C., the first meeting beginning at 8 p. m., on March 13.

Fishkill-on-Hudson, N. Y. BENJ. HAMMOND.
Secretary.

Greek Flower Association.

Editor Florists' Exchange:

Your notice on February 2, concerning the formation of a Greek flower association no doubt emanates from mere talk in wholesale flower circles, and as such you appear to offer it to your readers without a due study of the facts of the case.

Permit me to make a few corrections on your statement. In the first place, there is no immediate danger of the formation of such a cut flower association; and there is no \$30,000 fund forthcoming within three or four months, though double that amount can be subscribed in less than that time if certain other conditions are brought into play.

Second, your statement that most of the Greek florists throughout the city deal only in the lower grades of flowers might be true, not only specifically as regards the Greeks, but the entire profession in general. A great many others besides the Greeks deal in the lower grades of flowers, and this brand of enterprise is not only peculiar to the Greeks. If you had paid closer attention to the facts you would have discovered that among the Greeks are florists whose grade of flowers cannot be surpassed by any other "Un-Greek" in the flower line. A little walk around the best Greek flower stores will convince you of the correctness of this assertion.

The real reason of the dissatisfaction of the Greek florist is not solely the appearance of speculators—a name that is odious and their practice harsh—but the general condition of the whole market. The spirit everywhere there is one and the same—unreliable, discriminating and unscrupulous in price and deed—which exasperates even the meekest nature. These reasons in general are the real ones causing such a Greek movement, which, if not acted upon at the present time, yet they compel the formation of such an organization, which might bring a new light into the minds and some regeneration into the hearts of our present captors.

New York.

[The paragraph in our February 2 issue, to which the correspondent refers, was not meant in any way to disparage the Greek florist. It simply stated that there was talk among these gentlemen about forming an association among themselves with a view of doing away with some of the existing conditions in the wholesale flower markets.

With regard to the criticism of our remarks about the kind of stock used by the Greeks, we would observe that we are quite familiar with the quality of the flowers that some of the Greek florists use in their establishments, and are free to admit that the best is none too good for these places; at the same time, we repeat that most of the Greeks deal chiefly in the cheaper grades of flowers, and that is, we presume, because their trade demands only that grade of stock. It is also true that the same remarks would apply to other florists, but as this was an organization supposed to be composed of Greeks only, we did not deem it necessary to mention any others.

We gather from the information given in the latter part of our correspondent's letter, that our report of the organization was well founded. Our correspondent says that there is real ground for dissatisfaction, and that reasons (which he mentions) are the real ones for such a Greek movement. Why a speculator in flowers should be termed odious, however, we cannot understand. He, the speculator, has to buy in the open market, and if the fact of the speculator being in the field as a buyer tends to raise the price of flowers, so much the better must the result be to the grower. Any condition that arises which helps to give flowers a higher market value should be lauded.

Our correspondent refers also to the various branches of the wholesale trade as being "unreliable, discriminating and unscrupulous." These are harsh terms, and are entirely uncalled for, from what we know of the wholesale market. The buyer who is willing and able to pay the highest price can always get the goods, and any organization that is formed for the purpose of fixing or regulating values of flowers is sure to prove abortive. It is supply and demand only that regulate cut flower values. In connection with the so-called unscrupulous dealings of the wholesalers in general, our correspondent omits to state whether it is the special and fancy grades of flowers, such as the best Greek florists use in their establishments, or the cheaper and more plentiful grades, that in their handling he accuses the dealers of being discriminating and unscrupulous.

In conclusion, we would say emphatically that we have as much respect for the Greek florist as we have for any other florist, and we would have drawn attention to an organization promoted by any other body of men just as readily as we did to this one.]

A Correction.

Editor Florists' Exchange:

Happening to glance over the heating column of your issue of January 21, 1907, I notice that in reply to W. R. C. C. of Maryland, the first sentence says: "The size of grate for your furnace should be 13x18 feet, etc." This should have read 13x18 inches. Will you kindly make the necessary correction.

U. G. SCOLLAY.

OUR READERS' VIEWS

Mixing Carnation Pollen.

Editor Florists' Exchange:

I have never used mixed pollen, because I couldn't see where any better results could be obtained by its use. It may be possible to obtain these results, but I am unable to see how it will be possible for the pollen of two different flowers to take at the same time; and if it should take, how it will be known whether the pollen of both flowers took or not. I fail to see where the Winsor carnation shows any results of mixed pollen.

Woodhaven, N. Y.

JOHN REIMELS.

Editor Florists' Exchange:

With regard to the mixing of pollen, I suppose it is all right to do so, and would be as far as seed getting and its fertility is concerned. But it would be guessing as to which was the father of the offspring. If mixing two varieties is good, why would four not be better, and so on ad infinitum? (Humburg, a la Burbank). Ask Mr. Ward to write a pedigree for such stock for a few generations.

Sharon, Pa.

JOHN MURCHIE.

Editor Florists' Exchange:

I note with interest the various opinions in regard to the parentage of carnation Winsor, and although I have never tried to use mixed pollen in hybridizing carnations I see no reason why it could not be done successfully; and I would be the last one to dispute Mr. Murray's statement. If pollen were taken from both Daybreak and Albertini, and with such grand results, it would be well for our carnation hybridizers to follow on those lines, as Winsor must be regarded as one of the best, if not the best commercial variety of carnation ever disseminated, all points considered.

Chicago.

J. E. JENSEN.

Editor Florists' Exchange:

Anent compound or polygamous pollenization, I have done a very great amount of hybridizing of gladioli, cannas, carnations, etc., more with the view of learning the underlying principles of reproduction, etc., from a scientific viewpoint, although adhering to the most direct result-getting accomplishments. In my work I have done quite a bit with the "mixed" or, we may say, polygamous rather than monistic work. In gladioli especially have I been successful in this class of work. I have done a vast amount without getting the results that I deemed I should get. Certain laws perforce intuitively passed my vision, but somehow I could not apparently prove them; however after making a series of crosses in different directions I made a very few that gave me results far ahead of all my other work. Owing to the building up of other matter I practically dropped this work for several seasons; in the meantime these particular crosses came into bloom, so that I expect to begin anew the coming season to do what looks to me like original work along this line.

The field of hybridization is practically a new one, technically or scientifically it is untilled—just in the inception period. I spent several days at the recent meeting of the American Breeders' Association expecting to learn much, but apparently very few of those fellows ever heard of Darwin, Mendel, DeVries, etc. Mr. Burbank has given us nothing scientific; Mr. Kellogg's and Mr. Harwood's recent articles regarding his work are ridiculous in the extreme.

I would advise all growers of carnations to try mixed pollen, but in doing so they should select such sorts for seed parents as Enchantress, Robert Craig, and Mrs. Thomas W. Lawson. I rarely get good results from the wry types in plants.

There is one thing in seedling growing by which one will have the highest development in the first blooming season, and that is why so many "specialists" in gladioli fall down. They pamper and culture to the limit, but when these same bits are bloomed three consecutive times or under good ordinary conditions they will prove of the most ordinary value. Too many take things for granted without going deeply into these subjects.

A lot of these verbose, perennial egoists, who are perpetually spilling their self-adulation, do not go deeply into these matters, and that accounts for much of the laxity in some of the "scientific" ideas anent the subject. Prove all things; hold fast only to the provable. Be careful of the proof. The essayist and the magazine writer are not the best informed on a subject, as a rule, and the interested Eldorado seeker is too busy to tell the little experience has taught him.

Canal Dover, O.

C. BETSCHER.

Editor Florists' Exchange:

Regarding parentage of carnation Winsor, I did notice the statements made in your last number as well as in a previous one, but I did not consider the matter of sufficient moment to warrant any controversy. I think it is generally understood among those who have made plant breeding a study that, while a carnation bloom may be pollinated with pollen from two or more varieties and each may influence the offspring, yet no one of the offspring will inherit from more than one of the pollen parents. The very process of im-

pregnation makes that a physical impossibility, as it takes only one grain of pollen for each ovule and each ovule makes one seed.

I have seen many instances where pollen from more than one variety was used on one bloom, but I never make a practice of it myself. I consider that if a cross is worth making at all it is worthy of a whole seed pod to itself, and it is then possible to keep a clear record of your crosses. If you mix the pollen indiscriminately, you will never know to a certainty the parentage of your seedlings. It would be impossible to prove that a seedling had partaken of the characteristics of more than one male parent, even if such a thing were possible. The crossing has been so general and the results from a certain cross will be so varied that it would prove nothing.

In the case of Winsor I understand pollen was used from both Daybreak and Albertini. One of these two is the pollen parent, but not both of them.

The distributor is not claiming any triple parentage for the variety; which is proven by his letter to us in response to our query as to its origin. Here are his exact words: "I understand from the man from whom we bought it, and who raised it, that the seed parent was Lawson, but he used pollen from two different varieties—Daybreak and Mme. Diaz Albertini—and of course it is impossible to state what the exact cross is."

I considered it as a trifling misstatement by one who did not know any better, and not likely to create any serious disturbance among those who had made a study of plant breeding.

A. F. J. BAUR.

Editor Florists' Exchange:

We have been much interested in the articles regarding the parentage of the Winsor carnation; and while we have never used mixed pollen in our experiments there may have been unsuccessful experiments where the pollen was mixed, for instance, when we used the same tools for making three or four experiments on the same day. All of our best seedlings have been produced from pollen taken from but one variety, and it is a question in our mind as to whether mixed pollen would hybridize or not. The chances are, from what I have noticed, that only pollen from one flower would be taken by the other. Although the pollen may be mixed, I do not think it would have any effect on the flowers one would use as the seed parent.

A. T. PYFER.

"New Creations" Once More.

Editor Florists' Exchange:

Surely your readers must be pretty well tired of this discussion of the term "New Creations." Luther Burbank needs no "defense" at my hands. He is amply justified in his use of the term "new creations." It is only fair, however, to your readers to explain that the letter from Luther Burbank, from which an extract is published on page 28 of the Farm Annual and which is quoted in your review, was not written by Mr. Burbank as in any way an answer to his critics, as your correspondent, John Birnie, would imply. The fact is, that this quotation was from a strictly private letter to me written by Mr. Burbank on October 29 in reply to a note of October 23, bearing entirely upon a separate subject, and to which I happened to add the following postscript: "Earl has just returned from a hurried trip to California where I sent him especially to see two new Lima beans that I could not possibly judge of as early as July. In presenting these I used the words new creations to which our mutual friend, Patrick O'Mara, objects so greatly, but admit that nature with her million of crosses can surpass in originating even the most skillful hybridizer! I think that even you will approve of this and that you will agree with me when I am able to send you proof sheets of photographs, etc., that it is the most remarkable find in the history of the seed trade. These two new varieties originated in 1903 as new sports, one plant of each in a field of Pole Challenger limas; they are the first Bush limas ever to have originated in California."

It was not until late in November that I telegraphed Mr. Burbank for permission to use an extract from his letter in connection with the introduction of these Bush limas. I find a copy of my note of November 20, 1906, reads as follows: "I am very much obliged for your telegram which was phoned to me to the farm as I certainly want to use your letter relative to new creations in connection with the introduction of these Bush limas, particularly at this time when there is so much discussion about the term new creations. I enclose clipping from last week's Florists' Exchange. Think you will enjoy reading 'An Open Letter to Job.'"

The above should suffice to show the consistency of Mr. Burbank in refusing absolutely to take any notice of the ridiculous criticisms that appear from time to time.

I do not want to say one word to unsettle the good old Scotch faith of your correspondent in the literal inspiration of the books of the Old Testament. Probably the majority of your readers, however, would agree with the writer that no horticulturist could believe that the first chapter of Genesis was "Divinely dictated," as John Birnie would have us believe. It is sufficient to quote these verses:

12. And the Earth brought forth grass, and herb yielding seed after his kind, and the tree yielding fruit, whose seed was in itself, after his kind: and God saw that it was good.

13. And the evening and the morning were the third day.

11. And God said, Let there be lights in the firmament of the heaven, to divide the day from the night; and let them be for signs, and for seasons, and for days, and years:

15. And let them be for lights in the firmament of the heaven, to give light upon the earth: and it was so.
