William Graff of Graff Brothers was in last week from Columbus, Ohio, where he reports business in excellent condition.

F. Lautenschlager, representing Kroeschell Brothers, is about to leave on an extended Eastern trip. Horace Cheeseman returned to headquarters a few days ago at Vaughan's Seed Store from a trip through the South and Southwest and reports an increase of business above 25 per cent. over his last year's trip through the same territory.

The opening of the season, presumably preparing for the picnic between the retail and the wholesale baseball clubs, occurred at Washington Park on Sunday last.

George Asmus is on the sick list this week. P. J. Hauswirth was at Moline, Ill., for a few days, the early part of the week.

Although the new crop of amilax from the South is still soft the J. B. Deamud Company is still prepared to furnish some perfect stock out of storage.

At E. H. Hunt's the call for that little pamphlet entitled "Wise Words," and "About the Most Profitable Thing on Earth," is still going on. Send for it, and you will be repaid.

At Winterson's Seed Store everything appears to be progressing very nicely, the last car load of importations from Holland having been readily disposed of.

Edgar Sanders, who has been suffering from a slight indisposition, is now fully recovered, and is as bright and cheerful as ever.

Recent visitors included: Eli Cross and Mr. Scott of Cunningham & Scott, Grand Rapids, Mich.; A. E. Lutey, Houghton, Mich.; A. L. Glaser, Duquesne, Pa.; and S. Groot of Sluis & Groot, Enkhuizen, Holland. W. K. Wood.

Cincinnati, O. News Items.

During the past week we have been having an unusual amount of cold and gloomy weather. Roses still hold up well, but carnations are very scarce. Business is very good for May, so far.

Tuesday noon C. J. Ohmer left on the Shriner special train for Los Angeles. Postal cards from points along the route tell of snow storms.

Martin Reukauf was in the city doing lots of business during the week. He is very enthusiastic regarding the far Northwest, and says Seattle, Spokane and Portland are the places to live in and make money. "Go West, young man, go West."

I was very much pleased this morning upon picking up the Commercial Tribune to see that the efforts of the S. A. F. O. H. were bearing fruit, and that the United States Express Company, which has been charging \$1 per 100 pounds from Jersey points to New York, had been ordered to reduce same to 60 cents. So much for the Inter-state Commerce Commission. The order of the commission requires the United States Express Company to cease charging \$1 per 100 after the 15th day of June, and directs said company, on or before said date, to put in a 60-cent rate from Chatham and Somerville, N. J., to New York. Now, I hope the powers that be will not rest here, but see to it that reduced rates are given by all express companies doing business in any portion of the United States.

Here is a chance to show the knockers that the S. A. F. O. H. does amount to something, and if they are not already members, they should have pride enough to join the organization. E. G. G.

Indianapolis, Ind. News Notes.

Miss Madge Krauer, formerly with the Little Rock (Ark.) Flower Company, has accepted a position with Bertermann Brothers Company.

The Smith & Young Company is transplanting very large trees at the Cumberland establishment; the outcome is awaited with interest.

The extensive tulip and hyacinth beds in Crown Hill Cemetery, unlike most other flowers this season, have been sheltered by the surrounding thickets and are very beautiful.

The State Florists' Association held its monthly meeting at the State House, May 6. Routine business was followed by discussions on current topics.

E. A. Nelson is sporting a new motor cycle. I. B.

Chicago. News Notes.

The eccentricities produced by the weather bureau last week again broke all previous records, when on Friday a blizzard reached the city accompanied with freezing weather and about an inch of snow. The reports from all parts of Illinois and neighboring States are most discouraging as to the prospective fruit crop; and it can not be hoped that early hardy herbaceous stock, such as peonies, which constitute an important factor in this market, has fared much better. Lilac and other early shrubs have suffered severely.

E. T. Wanzler of Wheaton, Ill., was found last week preparing to grow this Summer one hundred thousand aster plants, some of which for the purpose of extending the season will be grown in hotbeds.

Anton Then will this season replace two carnation houses with roses, including Bride, Bridesmaid, Killarney and Richmond.

Heim Brothers of Blue Island have broken ground for a new house, 40x200 feet, to be devoted to carnations, including several of the new varieties.

Miss Bessie Halliday, bookkeeper for Scheiden & Schoos, has returned from her recent visit to her former home in Texas.

Canger & Gormley have taken the next store to the south of their old stand, which they used in conjunction with it at Easter time.

Work on Fred Weber's two new American Beauty houses at Bowmanville is rapidly nearing completion.

As the height of the mushroom crop draws to a close it is reported not to have been an altogether satisfactory season in this vicinity, though one concern gathered upward of 250 pounds on one day last week.

Superintendent Warden of Lincoln Park has been enjoying a fishing trip in Wisconsin.

Albany, N. Y.

Florists' Club Organized.

The Albany Florists' Club held its first annual banquet in the grille room of the Hampton on Monday, April 29, 1907. The function was attended by thirty-four representative florists in Albany and immediate vicinity. The banquet and gathering proved so successful that a permanent organization was effected, which will hold meetings monthly and from time to time conduct events of a social character.

The officers elected for the ensuing year are: President, William C. King; first vice-president, Edward F. Meany; second vice-president, Frank M. Briare; treasurer, William C. Kurth; secretary, Thomas F. Tracy; committee on by-laws and board of trustees, Patrick Hyde, chairman; Henry Barthel, Fred Henkes, Fred Goldring, and Patrick K. Morrissey.

After the members had disposed of the substantial menu speeches were in order. Fred. Henkes, president of the temporary organization which was formed of local florists last Summer, gave a review of the circumstances and incidents of the past year that led up to the banquet and formation of the permanent organization just effected. Mr. Henkes emphasized the fact that Albany is a field well adapted to the organization of a florists' club and gave an interesting account of the flourishing florists' club at Utica which annually holds a ball and a banquet which have now become functions of moment. Frederick Goldring of Slingerlands, the oldest grower in this section at the present time, gave an interesting account of his experience as a grower of flowers during the past thirty-nine years, eleven years in England and twenty-eight years in this country. Mr. Goldring's suggestion was that the club meet once a month for the exchange of ideas and experiences as well as for the purpose of hearing addresses on matters of interest to the craft.

Short addresses on the welfare of the organization were made by Fred. A. Danker, William C. Gloeckner, William C. Kurth, Frank M. Briare, Henry Barthel, Patrick K. Morrissey, Thomas F. Tracy, Edward Tracy, and others who made impromptu responses.

Those present included: Fred. A. Danker, William C. King, William C. Gloeckner, William Hannel, Watervliet; Patrick Hyde, Frank M. Briare, George Russell, Henry Barthel, James Conley, John Murnane, Jr., Frank Keeler, Thomas Snare, Edward F. Meany, William C. Kurth, Louie Marx, John Nealson, John Maloy, James J. Karins, Philadelphia; Edmund S. Hazletine, Thomas F. Tracy, Fred. Henkes, Watervliet; John Boots, Philip Warner, Newtonville; Henry Long, John Henkes, Watervliet; C. J. McDonough, Thomas McAllister, Patrick K. Morrissey, Arthur

King, John Haggerty, Henry Latham and John A. Hoye, Jr., and Fred. Goldring.

The committee in charge of the banquet was composed of Patrick Hyde, chairman; William C. Gloeckner and William C. King.

The club will during the Summer make arrangements for holding a clam bake and in addition to holding functions of a social character will endeavor from time to time to carry out measures of benefit to the members.

SAGINAW, MICH.—The Wm. Roethke Floral Company is making active preparations to improve the landscape surrounding their downtown place, corner of Michigan and Adams. The progress of the work is watched with interest. The only drawback to the success of the plan is the vicious habits of the vandals who take fiendish delight in destroying the beautiful or moving the movable. If their rapacity can be curbed the ground on three sides will become a thing of beauty.

ARE YOU LOOKING FOR TROUBLE?

The kind of trouble that comes with wooden eave plates and the all-cypress house—the kind of trouble that grabs your profits for repairs and then keeps you repairing, repairing and more repairing. If you enjoy that kind of thing and like to spend money that way, then our steel eave and roof bar bracket would last too long, it would let too much light in your house. Some day when you are ready for modern materials and construction, you'll find us ready for you. Your letter will be answered at once.

The way interior of a steel eave house looks

St. Louis, Mo.

News Notes.

Joe Marks, representing A. L. Randall Company of Chicago, spent a few days with the trade, in company of Will Smith, an old Milwaukee chum of his.

Wm. F. Adles is back in business again this time with the Foster Floral Company at its new store, 909 Olive street.

Wm. Schray's Sons furnished the decorations for the Tansig golden wedding the past week. This was one of the largest decorations made in this city for a long time. Mr. Tansig is president of the Terminal Railroad Association. Yellow flowers were in great demand on that day.

Oscar Hiele, the South Broadway florist, had his horse and wagon stolen the past week, but the outfit was returned to him the next day with but little damage.

Andrew Meyer, Jr., has again been appointed city forester by Mayor Wells. His last term only lasted one year; this time he will hold office for four years. William Jordan, son of the late J. M. Jordan, is his assistant.

George Ostertag, the present superintendent of public parks, it is said will be retained by the new park commissioner. There are a number of applicants for the position.

The trustees of the Florists' Club held a meeting last week to arrange all details for the club's twentieth anniversary. They have engaged the new Hibernian Hall at Grand and Finney avenues for the night of June 29. This being Saturday night, it will be a stag all the way through. There will be a performance with singing, dancing and speech making, which should keep the crowd until the small hours in the morning; in fact, there will be something doing every minute of the night, and those who do not come will miss the treat of their lives. Notices will be sent every member of the club.

On last Monday night a special howling match was arranged between Messrs. Beyer, Kuehn and Lorenz and Schriener at the De Soto alleys, which resulted in the defeat of Kuehn and Beyer. ST. PATRICK.

New Orleans, La.

News Notes.

At the McDonogh Day celebration by the school children of New Orleans on May 3, large quantities of flowers were used principally of outdoor growth. The designs were nearly all wreaths, the most appropriate design for such an occasion. The mound at the foot of the monument was entirely covered with bouquets.

J. F. Dubois, who is located on Green street adjoining the Carrollton Cemetery, is preparing to build two greenhouses, 100 feet long, with office and smaller greenhouse connecting.

J. A. Newsham took possession of the Half Way House Nurseries on May 1. Mr. Newsham contemplates sinking an artesian well and making other improvements.

C. Holst and Eugene Bordenit, late proprietors of the Half Way Nurseries, left for a week's visit to St. Louis, after which they will return to New Orleans, wind up their business affairs, and sail for Europe to reside there permanently. CRESCENT CITY.

Look Here, Mr. Florist and Gardener

WE have just passed through an unusually severe winter and you are apt to forget the many sleepless nights you spent worrying about the temperature of that No. so and so house.

Or the many zero nights that you spent in the boiler pit; maybe you did not have to do the stoking and firing, but **you** certainly had to do the worrying and pay the coal bills.

Now keep the vows you made on those trying occasions, **And Send for me.** I have solved the problem for others, I can do it for you; and remember, I will come recommended by some of the most prominent commercial florists and gardeners in the East, "Personal friends of yours."

Iron frame and wood Greenhouses of every type for commercial and private use.

If you contemplate building, allow me to submit sketch and estimate covering your requirements.

JOHN A. PAYNE

Horticultural Architect and Builder
33 Clendenny Ave., Jersey City, N. J.

Sash opening apparatus and all kinds of greenhouse structural material.

The STANDARD VENTILATING MACHINERY

The original machine with self closing cup; the most powerful, least complicated, very compact, with ease of operation. The New Duplex Gutter over six miles in use and highly recommended; the only drip proof gutter in the market. The Standard Return Steam Trap has no equal for simplicity or its workings. Catalogue free.

E. HIPPARD, Youngstown, O.

LAST week we said a lot about our "soaked in" method of priming our Greenhouse Material; now a word on the other painting. Did you know that all white lead which is ground with the oil in pulp form contains about five per cent. moisture, that it is this moisture in the lead that often causes mildew, makes your paint blister and peel off? This is just the point that our chemists have found out beyond all doubt, and our years of experimenting with pulp ground lead and bone-dry ground lead has proven to us that only the bone-dry lead will stand up under greenhouse conditions. Bone-dry lead is simply a lead which is thoroughly kiln-dried, all moisture excluded, then ground as fine as flour before it is mixed with the oil. This lead will then take six to eight gallons of oil to every hundred pounds, against five gallons of pulp ground lead. That means it has a covering power twenty-five per cent. more than other leads. Because it is ground so fine it mixes thoroughly with the oil and covers the wood with an air-tight enamel, thus excluding all moisture—a preventive against mildew, and when properly laid, should not crack or peel off.

We want you to know more about this paint—more about our putty. We have a booklet that tells exactly why they stay put. Send for that booklet.

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 20

NEW YORK AND CHICAGO, MAY 18, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who falls to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

AMERICAN SEED TRADE ASSOCIATION

Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

BRISTOL, PA.—The crop of Seven Top turnip, now in bloom, has been so seriously injured by the cold weather that the prospects of seed have been reduced to almost nothing.

FLORAL PARK, N. Y.—C. L. Allen, the veteran seedsmen, is on a Western trip. Though considerably past the three score and ten Mr. Allen is still as active and energetic as the youngest "drummer."

ST. PAUL, MINN.—The late Spring has already had its effect on the trade. Last year at this time seedsmen were receiving a great many filling in orders; according to reports none have been received this season so far. The country merchant therefore has not had a very active demand.

KEOKUK, IA.—O. A. Talbott & Company, who do a large wholesale trade in seeds in packets and cartons, as well as in garden and field seeds, say trade has been exceptionally good, notwithstanding that the weather conditions have been more unfavorable than in many years past.

PHILADELPHIA, PA.—Uncle Sam, responding to the city's appeal for aid to solve its backward problem, has sent here enough vegetable and flower seeds to beautify hundreds of premises. Requests for seeds were sent to Washington from the Board of Education about two weeks ago, and several congressmen have responded liberally. Receipts already embrace 150 packages of flower seeds, as well as a huge sack of turnip, cabbage and beet seeds, enough to start a mammoth truck patch.

ATLANTA, GA.—H. G. Hastings & Company say onion seed sales have been unusually heavy in Mississippi and Texas, and most other vegetable seeds also have been in great demand. The one crop upon which the South depends, viz, cotton, will be considerably reduced this season, for the lack of seed. The excessive rains last Winter caused the seeds to rot in the pod. At the present time not a pound of cotton seed is obtainable, and many hundreds of acres that were to be put into cotton will be planted to corn.

ELIZABETH NURSERY CO., Elizabeth, N. J.

RICHMOND, VA.—There is but one opinion among the seed trade in this city, which is, that the business this year has been most satisfactory, and was before the severe frosts that ruined a large acreage of the early planted vegetables making a re-planting necessary, which has reduced the bean supply, as well as the cucumber seed stocks to a comfortable size.

The President of the Seed Trade Association, Henry Wood, is exerting himself to the extent of his capability in urging a large attendance at New York, and the prospect is flattering.

CHARLESTON, S. C.—The damage by frost has been most disastrous here. Cucumbers, beans and early potatoes are a total failure. The second planting of the two latter crops has been general, but the truckers do not anticipate the profit they would have made, as they will have competition from Virginia. The potato crop failure is a heavy blow, as fully seventy-five per cent. of the crops was killed, and those living are in a sickly condition. As an antidote for the losses named, the cabbage crop has been heavy and prices good. The commission men were paying last week at the rate of thirty dollars per ton, in crates, at the depot.

AMERICAN COTTON SEED PROHIBITED.—The following statement from the secretary to the government of India gives the reason why the importation of American cotton seed is prohibited: In the exercise of the powers conferred by the sea-customs act of 1878, the governor-general in council is pleased to prohibit the bringing by sea or by land into British India of American or West Indies cotton seed, except such as has been fumigated to the satisfaction of the customs collector. The reason for the order is to prevent the introduction of boll weevil.

THE SERBIAN TARIFF.—Some changes have recently been made in the tariff rates on commodities imported into Serbia. Those affecting the seed and plant trade are as follows: Clover seeds of all kinds, free; flower seeds, 10 dinars per 100 kilos (one dinar equals 19.3 cents United States currency). On flowers in pots and tubs the duty is 15 dinars; on stems, trees, shrubs, bushes in separate receptacles or otherwise packed, bulbs and tubers, 8 dinars per 10.0 kilos. Vine slips and grafts are admitted free. Machines for sorting seeds and other products, machines for sowing are also free of duty.

IMPORTS OF SEED, ETC.—May 6. —A. H. Ringk & Company, 17 packages flower seeds, etc.; C. S. Villegas, one case plants; L. A. Fennell, two boxes live plants; Ceron, Villegas & Company, 14 boxes plants; Scott & Truxton, nine packages live plants; O. G. Hempstead & Company, six cases palm seeds. May 7. —J. P. Roosa, one case plants; Taft Brothers, 50 sacks seeds; J. Dunn, Jr., 10 packages plants; J. H. Ferdinand, one bushel garden seeds; Rooney & Spence, 20 cases plants; H. H. Berger & Company, seven cases plants; H. Bischoff & Company, eight cases plants; H. F. Darrow, 40 cases plants; C. F. Meyer, 13 cases plants; two tubs laurel trees; McHutchison & Company, 47 cases plants, 34 tubs laurel trees; Maltus & Ware, 22 tubs laurel trees, 32 cases plants, C. B. Richard & Company, 24 cases plants, 490 tubs laurel trees; Jan. Ter Kuile, 11 cases plants; Vaughan's Seed Store, 21 cases plants; Hussa & Company, 24 cases plants; American Express Company, 39 cases plants. May 8. —Paul Reinmann, seven cases hop plants; F. L. Hopkins & Company, 10 bushels seed. May 9. —Missouri Botanical Gardens, seven boxes live plants; Peck & Velsor, 15 packages Jamaica seeds.

EXPORTS OF SEEDS, ETC.—May 7. —Shipped from New York to Lagayra, 34 packages seeds, valued at \$492; May 9. —To Copenhagen, 170 bags grass seed, valued at \$1,600; three packages seed, valued at \$600.

THE SEED GROWING INDUSTRY IN GEORGIA.—N. L. Willet says the present lack of labor has absolutely paralyzed the seed growing industry in Georgia that before meant many thousands of dollars to the State. It has compelled those who were exploiters and growers to turn their attention to other lines of business. Mr. Willet says with proper labor conditions Richmond County is most favorably situated for the wholesale growing of certain seeds. Among these he mentioned asparagus, cantaloupes, watermelons, mustard, okra, seven-tooth turnips, Southern prize turnips, cat-tail millet, chufas, Spanish peanuts, cow-peas, soja beans, Mexican June corn, the various cotten seeds, appler oats, native rust-proof oats, and he believed also that vetch seed growing might be made profitable. But outside of some cotton seed growing, he says, in a crude, unscientific manner, not one of these things is to-day grown.

NEWPORT, R. I.—Seedmen are now allowed a little resting spell after the hard work of the last three or four weeks in the filling of orders, amounting in the aggregate to fully as much as those of recent years. The demand for vegetable seeds from the farmer out on the Island has increased decidedly in a few years, chiefly because of the uncertainty of the potato crop which has, with but few exceptional seasons, been variously disappointing to those devoting a large acreage to their cultivation. If disease did not attack the crop the prices were so very low at early digging that they barely paid expenses. On the other hand, with general garden truck there is a remunerative market in this city during the four months of the year, when it is easy work to have that kind of material in; besides, Fall River is so near the farmers of one section that it pays them well to ship a large proportion of their produce there. Recently several farmers have erected glass structures for the raising of vegetables and vegetable plants and have met with such success that more will follow in the same line before long.

Melons pay exceedingly well when grown to perfection for the Newport market in Summer. D. M.

CHICO, CAL.—The vast extent of the work being prosecuted at the National Plant Introduction Garden at Chico has been made public by the Chief, and the importance of the institution to the Sacramento Valley may be realized when the report is considered. To date there have been 5,200 varieties of plant and tree growth received at the garden, and these come from every corner of the globe, where special agents of the Department of Agriculture can reach.

In alfalfa, fifty-five varieties have been received, and are now under propagation at the garden. Of clovers, there have been received between eighty and ninety varieties. The Japanese matting

grass plants have been planted in the open, and will be retained until next Winter, when they will be transhipped to other parts of the United States, particularly Texas and the Carolinas.

An important experiment is being carried on with African para grass, and this may prove in time to be of the greatest benefit to certain sections of California. This grass is raised in some sections in preference to alfalfa, and being of a much hardier growth, has proven profitable. It is especially adapted to overflow sections, and in this particular may prove of value to California.

Sulla grass, from the European countries, and a rival of alfalfa, is also being experimented with. A surprising result has been obtained from a Chinese cherry. A scion was sent to the local garden by Explorer Frank Myers, from China, and it was grafted on another cherry tree. Long before there was any sign of fruit on the original tree, this branch bore fruit, and thus afforded the first ripe cherries in California.

In the line of sorghums, 380 varieties have been received, but of these only twenty-five have been used, so radical are the selections. These are doing well, and good results are looked for.

AMERICAN SEED CROPS.—There has been for some little time a general feeling among the Seed Trade, that on the whole the American crop of seeds, of practically all kinds, will turn out to be much less than the average, if not a very short one the coming season; in fact, many of our best authorities anticipate that the year 1908 will see vegetable seeds and many varieties of flower seeds of shorter crops, and consequently commanding much higher prices than in past years. Many varieties of seeds were very scarce this year, notably onion, radish, beet, and cantaloupe melon, of certain kinds; but our seedsmen have managed their seed stocks so diplomatically, that as a whole, these shortages have been comparatively little felt as yet. It is not conducive to a great seed selling season to have even as many radical shortages in standard varieties as there are this present Spring; but our troubles of to-day will be as nothing, if we should have a crop failure this Summer, which, from such indications as it has been possible to obtain thus early, would seem to be at least among the possibilities. Whenever we have a year of short seed crops, or as at the present time several more or less limited yields of seeds following each other for two or more seasons, the one crop about which we are always the most exercised is that of onion. The reports so far received from the great onion seed growing sections are far from re-assuring; on the contrary, are very pessimistic regarding the probable outcome of the crop. From California, the greatest of the onion seed growing states, comes word, that owing to the floods they have had this Spring, fully one-half the acreage has been ruined, and even were it not now too late to again set out the onion bulbs, where are the stock onions coming from? My information from other sections is also very unsatisfactory, many growers reporting that their stock onions have not kept over Winter as well as usual, and even if they had, their stocks saved for seed purposes were much less when stored last Autumn than for many years. The growers, as a whole, have so far refused to name any at all reasonable rates for the coming onion seed crop, many of them saying that they may not have any seed to sell at any price. I heard of one order being accepted by a grower, subject to pro rata delivery, at the following rates which information may help you a little to place the market at this time as regards the growing crop of onion seed for the sales of 1908. These prices were:—Southport Red Globe, \$2.25, large Red Weathersfield, \$2, extra early Flat Red, \$2.25, Yellow Globe Danvers, \$2.25, Southport White Globe, \$2.50, and several other more or less standard varieties at \$2 per pound. I would say here that \$2 per pound is the lowest reliable quotation I have so far heard of for the coming season's onion seed crop of any variety. Whatever the special causes may be in California to make the onion seed crop short for 1908, certain it is that for some years the growers there have been experiencing more trouble with every succeeding season, to get the ample crops of onion seed they used to get years ago. It is now about twenty-five years that California has been able, by its wonderfully great crops of onion seed, to practically control the price in this country; before

that time, the States of New England, especially Connecticut and Massachusetts, were the centers from which the onion seed supply mostly came. The prices in those days varied from \$2 to even \$6 and \$8 per pound, and when the crop allowed first quality onion seed to be sold to planters by the seedsmen, for not exceeding \$5 a pound, both seller and buyer were perfectly satisfied. But times have changed surely; and now if a planter cannot purchase his four or five pounds of onion seed, needed per acre, at not exceeding, say, \$2 a pound at the very most, there is fault finding and dissatisfaction of the very worst kind. In fact, it is not at all uncommon to have planters say to their seedsmen—"Well, if I cannot get my onion seed for \$2 a pound, I will not buy it, but will plant something else." The real facts of the case in this onion seed trouble, which we always have of late years the moment a short crop sends up the prices, are that foolish and unreasonable competition has gradually educated the planter until he expects his onion seed at a price, that, unless it be a year of a great crop, is very much below the cost of production. It would seem to the writer that the conditions among our onion seed growers are fast becoming such, that in future, much higher rates must prevail; this year after year, obtaining prices which are below the cost of production, surely must have an end.

I will, in my next letter, try and give you further information on the seed crop question; of course, it is very early yet to know much about the outcome, but the general feeling in this country at present would seem to indicate, that an average crop of seeds, as a whole, is not expected the coming season. Certain it is that the late and very cold Spring we are having, together with very serious floods, and probably at best a less than average acreage planted, would seem to forecast another year of high prices for seeds.—SEEDS in Horticultural Advertiser, England.

European Notes.

Between the storms, which are continuously intermittent, we dry our clothes and warm our toes by the side of fires that are still needed. The growth of our annual crops is seriously retarded, and even where as, in the case of our extra early radishes, we have succeeded in raising a good supply of plants, the wretched weather, which threatens to repeat the disasters of the past two years, has had such a depressing effect upon the growers that they are going back on their contracts and refuse to transplant. The bounty which the French government pays for the culture of hemp and the enhanced value of this article confirms the growers in their obstinacy. In the meantime, our stocks of all these articles are completely exhausted, and it is too late to make arrangements elsewhere.

The quiet season has now commenced in real earnest; at the same time, a brisk demand for mangel and rape helps us to fill up our leisure profitably.

As regards the latter article, after reaching the top notch it has gone one better and is now out of sight. This will probably affect the price next season, for, with green stuff of all kinds so abundant that it can hardly be given away, much of it will be used for sheep feed, and thus the farmers may easily be induced to allow rape, which was intended to be used for this purpose, to stand for seed. A moderate crop at present prices would be very profitable.

The Congrès Horticole of the Société d'Horticulture, Paris, is to be held in that city on May 24 and 25. Subject No. 4 for discussion is "Are the Plants of Solanum Commersonii violet and potato 'Giant Blue' distinct?" On this subject Messrs. Vilmorin write as follows: "In many trials made with these two varieties no difference worth mentioning could be found." Sutton & Sons, in an elaborate series of experiments, have demonstrated the soundness of this opinion.

EUROPEAN SEEDS.

Notes from Holland.

Our open air exhibition was opened by G. Hasveld, president of the Society for Bulb Culture. In his opening speech he said that our exhibition was perhaps one of the means to give some hints for the way in which the next quinquennial exhibition of the General Society for Bulb Culture at Haarlem could be arranged. Several persons of

Stokes' Standard Seeds.

Write me for advance prices on French and Dutch Bulbs.

Stokes' Seed Store.

219 Market St., PHILADELPHIA

distinction, among them the Commissioner of our Queen in the province of South Holland, attended the opening ceremony or came afterward to view the exhibition, which is arranged in three parts: Holland garden, French garden (Louis XIV style) and English garden. The whole is an example of good arrangement. Nurserymen of Boskoop sent or planted an abundance of their shrubs, and glass houses, purposely built for this occasion, give shelter to *Amaryllis hippeastrum*, *Lilium Harrisii*, *magnolia*, *smilax*, lily of the valley and some new varieties of narcissus and very big and fine seedlings of hyacinths.

The green sales of hyacinths are about at an end for the season. Trade was brisk and the demand very large. Prices were from 25 to 30 per cent. higher than last season's.

Green sales of tulips are going on now, and on account of the very large demand from different countries prices are considerably higher, in some cases 40 to 50 per cent. J. B.

THE DEMAND FOR BULBS.—Writing on the recent bulb show at Sassenheim, Holland, a correspondent of the Horticultural Advertiser, England says: "During the last year or two, the demand for many bulbs, especially tulips, has been fabulous, for in addition to the export trade, large stocks have been required to plant up all the new land which has been developed, and thus the grower has been in clover, while the exporter has had to supply bulbs at prices, fixed in his catalogue which, when he had to purchase supplementary stocks, left him with no margin of profit or with an actual loss. However brilliant this business may have been, our Dutch friends have a very wide open eye to the future, and the growers begin to ask themselves how will things be when the home demand drops off? They also realize that at any rate in England the demand for hyacinths for forcing in pots is not a growing, but rather a diminishing one, while year by year amateurs demand bulbs at lower prices for this culture; in our own recollection the prices paid for hyacinths for potting has gone down 50 per cent. and whereas years ago no collection for this purpose was ordered without a few novelties and expensive varieties, to-day the demand is mainly for all the lowest-priced varieties catalogued.

"No doubt the exporters are quite aware of this, and the idea of the present show is to demonstrate the value of these bulbs for bedding purposes, and the manner in which they should be planted to obtain the best effect.

"The arrangement of colors in the beds was very pleasing, one bed of *Roi des Belges*, with a border of *King of the Yellows*, was especially effective; other good beds were—*Rose à Merveille*, a good bluish hyacinth; *Prince de Ligne*, a very early yellow tulip, *La Remarquable* and *Red Pottebakker* tulips. With these exceptions, the bulk of the bulbs were old and well known varieties."

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

MISSOULA, MONT.—A. E. Oman of Washington, D. C., has been sent here by the federal government for the purpose of looking up a location for an extensive government nursery, to be used as a base of supplies for tree planting for the national forests in Western Montana and Northern Idaho.

CHICO, CAL.—F. W. Power, who has a controlling interest in the Chico Nursery Company, has disposed of his stock in the firm, and will depart in the near future for Oregon, where he will make his future home. F. X. Gouillard, E. Wightman and Ed. Harlan become the new owners of the nursery.

ST. PAUL, MINN.—All of the nurserymen in the State are through delivering and the general report is that this Spring's delivery is the largest in years; up to this writing sales are cashing up quite satisfactorily. City deliveries appear to be harder to close up than those in the country. From general reports stock has been much better, therefore deliveries have been easier to make. **PAUL.**

FOREST PLANTING LEAFLETS.—The Forest Service of the United States Department of Agriculture is distributing a series of useful leaflets on forest trees, in which such subjects as form and size, range, habit and growth, economic uses, methods of propagation, planting, cultivation and care, returns, etc., are briefly dealt with. Among the trees thus treated upon to date are: Hardy Catalpa, box elder, white willow, black walnut, tamarack, usage orange, coffee tree, green ash, yellow poplar (*Liriodendron tulipifera*), Russian mulberry, black cherry, slippery elm, sugar maple, and white oak.

Seasonable Topics.

Florists find the old favorite plant, lemon verbena (*Aloysia citriodora*), a good seller. The fragrance of its leaves is pleasing to every one, and planted in the open ground in Summer it makes a vigorous growth.

With the close of every Winter or the beginning of Spring it is always apparent to every observer how valuable nurse trees are, to protect less hardy sorts or even young trees of their own kind. Even our wild evergreen trees will be almost killed when standing alone in an open situation.

Layering is a favorite method of increasing many trees and shrubs. Where such work is in contemplation it is well to cut down the plants looked to for furnishing the shoots for layering. The vigorous growth that follows is just the kind desired.

Melia Azederach is the China tree, one variety of which, *umbraculifolia*, is a valuable shade tree where freezings are not severe. It has been said the robins become drunk feeding on the fruit when it is fresh and has just ripened.

The following seeds ripen in May or June, and require immediate sowing: *Ulmus fulva* and *U. americana*, *Acer dasycarpum* and *A. rubrum*, *Betula rubra*, *Rhus aromatica* and *Daphne Mezereum*. Any others ripening in Spring may be sown at once also, with good results.

Trumpet vines are excellent subjects to run up live or dead trees. They cling tightly to the surface of the bark, at the same time pushing out shoots that extend at times four feet from the trunks of the trees. Both the native one, *radicans*, and the Chinese, *grandiflora*, are good; the latter is rather the slower grower.

Mistletoe is not confined to any particular tree, although in some localities it seems to prefer certain trees. In New Jersey the sour gum is preferred, then the red maple, oaks in Oregon, while in Virginia and Texas it is found on quite a number of trees, even on the mesquite in Texas.

Mazzard Cherry Stock for Morrello Cherry.

Taking one thing with another there is no cherry more satisfactory than the Early Richmond. It is of dwarf growth, a prolific and regular bearer, and of a hardy nature. In the colder States it thrives where many of the sweet type will not, and this is especially the case when it is worked on the Mazzard stock instead of the Mahaleb. The latter rather dwarfs its growth, and in some cases this may be desirable. On the other hand, the fruit is larger when on the Mazzard stock than when on the Mahaleb. In the Northwest, where some experiments were made, it was found

that seedling Morello cherries gave the Early Richmond the hardest character of any stock.

The time to bud the cherry is about Midsommer; it cannot be left as late as peaches can, because the sap ceases to run earlier in the season than it does in the case of peaches.

Cherries push into growth early in Spring, and as they do not thrive well when the buds have started in advance of planting, the transplanting of them should be one of the earliest tasks of Spring, or else the work should be done early in Autumn.

Japanese Judas Tree Screen, Cercis Japonica.

To Japan and China we are indebted for a great number of the lovely shrubs that grace our lawns, and this is particularly true of those that greet us early in Spring. Think of the forsythia, weigelia, Japanese snowball, *Pyrus japonica* and many others, and we find they are from the countries named. And then to come to the *Cercis japonica*, the subject of our notes, there is another and a most valuable one for early Spring flowering.

Early flowering sorts are the most valued, they do so much to gladden our hearts after the passing of Winter, but in the case of the Japanese Judas tree it would be welcome at any time, being of so much beauty when in bloom. In color the flowers are of a deep rosy pink, exceeding in depth of color our native species, *C. cana-*

A Pine for Barren Soil.

One of our pines, *Pinus Banksiana*, is finding much favor in portions of Europe because of its adaptability for growing in barren soil. This pine is but of small growth, from 10 to 20 feet high, spreading, but making excellent fire wood. It is better than nothing for situations where nothing else would grow. But as there are other pines that will thrive in like soils and which make larger trees, it seems to us at this distance from Europe that such larger growing sorts as *P. rigida* and *P. inops* would be of more value than *Banksiana*. Many of our pines appear to prefer a sandy soil. Besides the *rigida* and *inops*, which are found in the sandy soil of South New Jersey, there is *P. mitis*; and in the South *palustris* and *teda*. The two last named would not thrive in the portions of Europe where *Banksiana* is being planted, but are mentioned as showing that many pines are denizens of barren or sandy soil.

In our country few pines except the white, *P. Strobus*, are being planted. The last named is much sought for for re-forestation and other planting, nurserymen finding a great demand for the seedlings.

In all sections of the country great attention is being paid to forestry matters, and seedlings of useful timber trees will be in demand for many years to come.

Screen of Japanese Judas Tree, *Cercis Japonica*

densis, the flowers of which are of a light pink. What adds to the attractiveness of these Judas trees when in flower is the fact that their bunches of blossoms come from old, hard shoots as well as from those of later growth. Even when they are trees many years old, it is not unusual to see a bunch of flowers appearing on the trunk near the ground, although, of course, the great display is made on the younger shoots.

One of the sights of the neighborhood is a row of the Japanese Judas trees in the grounds of Meehan's Nurseries, Germantown, Pa. When in bloom in Spring the trees are discernible in the public road a half mile or more away. The photograph gives an idea of the appearance of the row and shows how numerous the flowers are that adorn them. The trees are in a portion of the nursery known as the propagating grounds, and are valued chiefly for the seeds they produce every year.

From seeing this row of trees many have been led to consider the planting of a row on their own grounds; they are such a pleasing sight when in flower. As a division line such a row would be highly satisfactory. The row pictured had no care whatever in the way of pruning, but the trees were permitted to grow at will. Besides having no care, other shrubs have been grown near them, one such row, of *Viburnum tomentosum*, showing in the illustration. There would be a far more bushy display had the plants been pruned from year to year, or had they been allowed to grow where other shrubs did not crowd them.

The two Judas trees, *C. japonica* and *C. canadensis*, are the only ones that thrive here, excepting that there is now a white-flowered variety of the *canadensis*. The European one, *C. siliquastrum*, has not proved sufficiently hardy for cultivating north of Washington, D. C.

Magnolias for Forcing.

Spring is the time to pot magnolias intended for forcing next Winter. The plants selected should be vigorous young stock, as bushy as possible, and they should be pruned back well that a good supply of new shoots may follow. No shoots should be entirely cut away, but pruned back only, because the bushier the plant the better it will sell; and as every shoot that starts will bear a flower in all probability a bushy plant is doubly prized.

The best sorts to force, because of their free flowering and the ease with which they can be procured, are *M. Soulangeana* and *M. stellata*. The pink and white flowers of the former and the fragrant white ones of the *stellata* present a beautiful appearance on a plant in a pot; and both of these bloom when the plants are very small. *M. purpurea*, or *obovata* as its proper name is, might also be tried, but as it is naturally a later bloomer than the others mentioned it may not force as tractably as desired.

There is a newer one appearing in collections which will be in demand, called *M. Soulangeana nigra*, a name that seems unfitted for it, as its growth and flowers have no great resemblance to *Soulangeana*, neither is it claimed to be a seedling of that variety. Its flowers are larger and richer in color than those of *M. Soulangeana*, and it blooms later. It is believed to have been introduced from Japan by the Veitch Nurseries some 25 years ago. In appearance of growth this magnolia partakes somewhat of that of *M. purpurea*, its shoots being less stout than those of *M. Soulangeana*, and these two, by the way, are supposed to be its parents.

DWARF BOX

I have about 15,000 extra fine Dwarf Box to offer. Let me quote you before you buy.
C. A. BENNETT, Robbinsville, N. J.

KAISERIN ROSES

2 1/2 in. pots \$3.50 per 100; \$30.00 per 1000.
3 in. \$6.00 per 100.
Carnations all sold.
E. H. PYE, Upper Nyack, N.Y.

Grass for Name.—To settle a dispute, will you please name the sample of very dwarf grass enclosed. I find it growing all over the country, from Massachusetts down to Virginia, along roadsides, and sometimes in lawns. It appears to be native. E. M. W.

—The grass sent for identification is the low spear grass, or Summer grass, Poa annua. G. W. O.
(89) **Charcoal in Violet Culture.**—Kindly inform me how to apply charcoal to the soil to improve violets, and oblige. A. J. D.

New York.
—Charcoal is a most efficient fertilizer for all cultivated plants, especially those grown under glass. A good way to apply it for violets would be to have it broken into small pieces and mixed with the soil at the rate of about one bushel of charcoal to 25 bushels of soil. It can safely be asserted that every cultivated plant will be benefited by having charcoal mixed with the soil in which it is growing, and for potted plants charcoal can be used to advantage, in larger quantities than we have advised for violets, in the benches or beds.

CARNATIONS

2 1/2 in. pots. Enchantress, White Lawson, Candace, Fair Maid, Queen Louise, Gov. Wolcott, Prosperity, Richmond, Gem, Crane, Moonlight, Mrs. Patten, Harlowarden, at \$3.00 per 100; \$25.00 per 1000.

WE WOULD LIKE TO FIGURE ON Your Bulb Catalogue FOR SUMMER AND FALL, 1907. We would take great pleasure in being afforded an opportunity to figure on your forthcoming Bulb Catalogue for Summer and Fall, 1907. Our photographers, located at several different points, have given us quite a supply of brand new and valuable photographs, especially taken for this season's work. We can make attractive, taking covers in one, three or four colors, and working under your suggestions, can set up the designs. We have the experience, material and brains to furnish you with a catalogue that will sell your goods. It will not cost you anything to have us give you a quotation. Kindly furnish us complete specifications and our estimate will be promptly forwarded you. Samples of our work will be mailed upon request. A. T. DE LA MARE PTG. & PUB. CO. Ltd. Nos. 2 to 8 Duane St., New York

Decorative Plant Notes.

GLORIOSAS are perhaps not uncommon, but I rather think it is an uncommon sight to observe them by the hundreds on one place. I do not by that mean to infer that all these were mature plants, because they were not: the greater number were seedlings in flats. Nevertheless it is unusual to see so many in any stage on one place. Those referred to were grown by Arthur Griffin at Sea Verge, R. I., and it was there I saw them the other day. Before my attention was drawn to the hatches of seedlings I observed several in flower, but one lot especially took my eye and that before I was told that it was the choicest product of Mr. Griffin's efforts at the hybridization of these plants. The one referred to is in color a brilliant red for two thirds of each segment of the perianth, with the other third a bright lemon color. The flowers are unusually large and numerous on each plant growing in the pan.

Gloriosas do not present impossibilities to any average grower in their cultivation, and seeing them growing here in the pink of perfection it seemed that they would be well worth the attention of commercial growers, more especially when it is known that their flowers are admirably adapted for choice and elaborate decorations. **Gloriosas** from seed take two years to flower and require in the interval a period of rest, the same as mature tubers do. There are few plants that come so rapidly into bloom after potting as **gloriosas**, but it is important when they are grown with some direct object in view to have good, strong tubers, and have them all alike or as nearly so as possible in each pan. From four to a dozen may be planted in one pan, according to the size of the pan, supported as the stems grow up by wires just stout enough to hold the plant when tied thereto. Stakes would be unsightly, especially if the appearance of the plant is any consideration. The stems being weak and slim in no way detract from the usefulness of the foliage in decorative work; on the contrary I think that in the hands of a skillful manipulator the plant's slimmness would prove more advantageous than otherwise. Flowers on stiff stems are numerous enough, and what is very often wanted is something that will make up effectively and gracefully with as little artificial assistance as possible. The flowers of **gloriosas** are also capable of being used in decorative work when removed from the plant; and when unique effects are desirable the flowers may be turned upside down in the finished work.

AUCUBAS are sometimes propagated and grown for decoration in the form of filled dishes and they have answered the purpose very well; but I am of the opinion that **Dracaena Godseffiana** is much better adapted for such purposes than **Aucuba japonica**, because it is of more graceful habit at all stages of growth more especially in the early stages. The peculiar color of the foliage, which is one of the distinct characteristics of this **dracaena**, resembles that of **Aucuba japonica**, but is in the green more brilliant and spotted with clearer white. This **dracaena**, as is well known, has the other distinct peculiarity of a branching habit, with a tendency to throw numerous suckers from the base, making it for that reason also adaptable for filling baskets and dishes.

Dracaena Godseffiana is easily propagated from wood with leaves attached and from pieces of the branches devoid of leaves; they root freely when placed in the sand over bottom heat in the Winter or early Spring. They will also root during the Summer. The plants are somewhat slow of growth for a time, but after they start to make roots in the soil in the pots they grow rapidly.

DRACAENA INDIVISA is very appropriate for the center of a tub or vase standing outdoors in Summer when something tall and graceful is desired as a center plant. **Geraniums**, especially double scarlet, look well planted next to the **dracaena**, with variegated vincas for trailing vines. **Dracaena indivisa** is also a stunning plant for window boxes in conjunction with bright flowering plants.

American Carnation Society.

Department of Plant Registration.

By Mrs. Jennie P. Suow.

ANDREW CARNEGIE, a red sport of Harlowarden, a perfect glowing scarlet, good keeper and fine shipper, much freer than Harlowarden and a continuous bloomer with a perfect non-bursting calyx.

This name is used provisionally to be approved or rejected at the next annual meeting of this society.

ALBERT M. HERR, Secretary.

Horticultural Society of New York.

The International Conference on Plant Hardiness and Acclimatization to be held by this society, will take place September 30 and October 1 and 2 in the rooms of the American Institute and the Museum Building of the New York Botanical Garden.

The second day, October 1, will be devoted to some form of pleasure, possibly an excursion to some place of interest in the neighborhood.

As we are about to issue a preliminary program, my committee would be glad if you would send me at once the correct title of any communication that you are prepared to submit to the Conference.

LEONARD BARRON, Secretary.

NATURE STUDY.—The eighth annual exhibition of the Steuben County (N. Y.) Nature Study Workers in Public Schools (H. L. Drummer, manager), will be held at Bath, N. Y., under the auspices of the Agricultural Society, September 24 to 27, 1907, inclusive, Children's Day being on September 25. Prizes are offered as follows: Children's prizes \$1,000; individual work, \$550; grade work, \$450.

The schedule of premiums has been issued by Mr. Drummer. It is both unique and interesting. In addition to an enumeration of the prizes in the various classes there is given "A Talk about Weeds," of an instructive character. A feature of the schedule is formed by the prizes offered for the best and second best essays on a number of topics, collections of drawings and of insects, all to be competed for by school children. Among those contributing special prizes are Peter Henderson & Company, New York; Arthur Cowee, Berlin, N. Y.; Professor Bailey and C. E. Munn of Cornell University.

AMERICAN PEONY SOCIETY.—The next meeting and exhibition of the American Peony Society will be held at the State College of Agriculture, Cornell University, Ithaca, N. Y., on Tuesday and Wednesday, June 18 and 19, 1907.

A. H. FEWKES,
Secretary.

Bogus Advertisements.

At its last meeting the Florists' Club of Washington, D. C., discussed some unsavory practices which, it seems, are common with particular advertisers in the trade papers, looking to the provision of a remedy for the evils complained of. It was brought out in the discussion of the subject that "money had been sent in response to a tempting advertisement, only to find the articles received totally unlike those offered, and, in some instances, the money was never heard from." One member claimed that he "had sent money with an order for chrysanthemums which he had seen advertised, and heard nothing therefrom for six weeks." When he at last succeeded in receiving a response, he "was notified that the stock had been sold, and, as a compromise, was offered some celery plants!"

Practices such as these are not at all conducive either to confidence or the enlargement of one's business, and would not be carried on by any one having even the smallest smattering of what good business methods are. They are a menace to trade interests, and are sure to react on those imprudent or wicked enough to indulge in them.

The Florists' Exchange has time and again urged its advertisers to keep their offerings up to date. It has decried unauthorized substitution at all times, and has advised that when an advertiser is sold out of the stock desired by his intending customer, the money, if sent, be immediately returned to the sender, accompanied with an explanation of the exact condition of affairs.

To follow this advice is simple, and the benefits resulting from the carrying out of it must be patent to all whose desire it is to be respected, traded with, and who hope to remain in business.

We believe, however, that advertisers are not wholly to blame in every instance of this kind. There can, of course, be no excuse for the man who furnishes stock of a grade below that specified and described in his offerings, and who accepts a purchaser's cash on the understanding that what is advertised will be provided; neither can there be any extenuation of the crime of retaining one's money and neglecting to send its equivalent as ordered. And while the offer to substitute "something just as good" for the stock originally requested may be regarded by some as an evidence of the "pushing" merchant, such substitute stock should never be sent without the consent and concurrence of him who is to receive the same.

Cases may and do arise where advertisers are sold out of particular stock offered prior to the receipt of certain orders for it; and this is a condition which has undoubtedly become very much aggravated through modern (?) trade journal practices. It is not uncommon for one or more of these "enterprising" business bringers to copy from their contemporaries' advertisements, and insert them a week later than the date on which they originally appeared, "without cost and on approval." In the meantime the goods offered have been disposed of through the first and authorized advertisement. We recently heard of a case where the advertisement of a grower of verbenas had been repeated without authority in a trade paper just a year after its first appearance, with the result that when applied to, the advertiser had none of that particular stock for sale at the date of the second appearance of the advertisement.

Nothing but confusion, disappointment, lack of confidence and a complete disruption of business can proceed from such objectionable and illegitimate practices. And the worst part of it is that the blame is unjustly and unwittingly placed on the advertiser, when it belongs elsewhere.

A few strong protests, or perhaps, a damage suit or two, rather than winking at and condoning this particular grade of trade paper enterprise, would prove salutary, and save both advertisers and prospective purchasers much chagrin, cuss words, and financial loss.

As a closing word we repeat: Keep your advertisements thoroughly up to date: sit down hard on the "free" advertisement humbug, which tends to demoralize your trade relations and besmirch unjustly your business reputation; furnish only the grade of goods you offer; don't substitute without authority; return your intending customer's money, and at once, when you cannot supply him with what he orders. In short, conduct your business on the best business principles—if you hope to succeed and stay in it.

Better than riches,
A good name.

Gladiolus America.

H. H. Groff, Simcoe, Ont., sends to the Shiocton (Wis.) News a reply to the letter of Wilbur A. Christy, an extract from which appeared on page 612 of our issue of May 4, 1907. Mr. Groff says:

"My reason for not accepting your kind invitation to write of this useful variety was due to the fact that I had already done so through a Chicago trade paper, and had there met every argument advanced, by a clear statement of facts, which are still awaiting successful contravention. It will not require three columns of your valuable space to detail the actual facts, not one of which is advanced by Mr. Christy in his exhaustive but futile effort to secure credit on presumptive evidence only.

'America' as such was first seen by me in 1906, the first year it was offered for sale, and on blooming I recognized it as No. 119, and Mr. Cowee's No. 769, both selected from my commercial stock from which sales have been made for ten years or more, to growers who have voluntarily stated that they first received 'America' in my stock. Of course, these were regular buyers of my good qualities and therefore the variety was no surprise to them.

"Mr. Banning got many uncultured seedlings from me, and in his system of classification is good he might settle the question so far as he is concerned. He first mentioned the variety to me in 1904 at the St. Louis World's Fair, offering it for sale, but most emphatically declined to send me any of the stock for my inspection. He there stated that he did not know its origin. I wrote him three times on this subject, after my trial, to which he did not reply, for reasons best known to himself.

"In brief reply to the statements by Mr. Christy, I beg to say that I wrote him after my interview with Mr. Banning at St. Louis, and before I had seen 'America' as such, for the purpose of getting the facts Mr. Banning was unable to supply, and my complimentary suggestion that 'Christy' was a more appropriate name than 'Warder,' could in no way be construed as an admission, on my part, that he was the originator as the flower was unknown to me as above stated. I am surprised that Mr. Christy should bring in such flimsy evidence as this in support of his claim, when he knows that it could not possibly be of the slightest value in that regard.

"I have already stated publicly, that on trial, 'America' proved to be identical with the original stock here, and that on every point of comparison, habit of plant growth, form and coloring of the flowers, period of flowering, form and color of the corm and habit of cormel production and productiveness, (2000 to 5000 per cent annually).

"The foregoing detail is known to Mr. Christy, but he chooses to consider it insufficient evidence, and he writes three columns of irrelevant matter, without offering a fraction of the facts that I hereby submit to consideration of your intelligent readers.

Mr. Groff also kindly furnishes us the following summary of the whole matter:

Editor Florists' Exchange:

With the foregoing reply to Mr. Christy's article, prepared by me for Mr. Crawford's paper, I add the following brief summary of the situation for the consideration of your readers.

Mr. Banning, the multiplier, has admitted that he does not know the origin of "America." Christy and Allen, former and present employees of Banning, are no better informed and supply no evidence in fact.

Groff had selected it with hundreds of others just as good many years ago, had it before any of the above parties knew it at all, sold it in mixtures to growers who voluntarily report that they first got it in his stock. He also had some selected under number (my practice for purposes of observation) before he ever saw the variety bloom under its new name.

When the foregoing facts are met by some facts, the support of presumptive evidence is in order, but not before.

On my side we have live facts; the original selections are here and have been for some fifteen years. On the other side, a wish, a futile, fleeting hope, supported by the remarkable argument, my courteous suggestion of 1904, made in reply to his claim and before I had seen the variety—that "Christy" would have been a more appropriate name than "Warder." Such evidence is too ridiculous to be absurd.

"America" will bloom here this season with the original selections made at the same time, and among these hundreds of varieties—will not attract passing notice in contrast, this is why growers of critical experience in good quality have not been unduly excited over the variety when first received, quality being only a comparative essence.

H. H. GROFF.

Another correspondent (M. C.) of the same newspaper comments on the subject as under:

"If Mr. Groff sent it out it is scattered among his customers but they don't know it. If Mr. Christy sent it out he retained the bulbs, and the variety should have been appearing in his collection for five or six years, but he makes no mention of it. It was sent out as a cross between the Childsii and sandavensis. Messrs. Groff and Christy say that it has no Childsii blood in it. My experience makes me think that they are mistaken. The Blanche is a pure Childsii. I have grown it by the thousand and would recognize it anywhere. A year ago I planted nearly 1000 blooming bulbs of the 'America' and when they came into bloom it was the Blanche over again all but the color. I thought it must be a sport of the Blanche. The wonder is that a man of Mr. Groff's experience would ever send out such a grand variety in a lot of mixed stock, especially after taking notice of it and giving it a number."

Still another correspondent (B. F. White) thinks that Mr. Christy has proved his claim to being the originator of *Gladiolus Americanus*. "At any rate, the evidence he has given, and the arguments to support the evidence, cannot be set aside."

He adds: "I was not greatly surprised when I learned that Mr. Groff claimed the credit. Growers of his hybrids, both in Canada and on this side of the line, are disposed to claim everything in sight in gladioli. It would not have surprised me at all if some of them had claimed the 'Princes' as a Groff's hybrid. That would probably have been the case had not the Doctor given it a distinctive name before sending it out." Mr. White then goes on to say:

"As to its being a *gandavensis*-*Childsii* cross, I simply don't believe it. There is nothing about it that shows anything but pure, good, old *gandavensis* blood. I have crossed the *gandavensis* with the *Childsii* ever since the latter was introduced and have grown thousands of that cross, so I am well able to judge. I owe much to the introduction of the *Childsii*, and so does every other breeder of these flowers in this country. With the exception of the Lemoine, every strain or family of gladioli of any note shows abundant evidence of the *Childsii* blood, but I can see no sign of it in *Gladiolus Americanus*."

"Mr. Banning deserves much credit for seeing the value and propagating it largely, and he made a tidy bit of money out of it for which everyone ought to be thankful, but he should come forward with some proof that it is a *gandavensis*-*Childsii* cross, and tell us when, where, and how it originated. Let us have the facts."

OUR READERS' VIEWS

Deception in Advertising.

Editor Florists' Exchange:

In your last issue was mentioned the fact that a member of the Washington Florists' Club had asked if some method could not be devised by which the buyer of stock offered through the medium of the trade papers, would receive protection from misrepresentation as to the quality, etc. The writer having had some experience along the lines referred to, desires to say that it is with regret such things have to be mentioned plainly, but in justice to the customer, and paper which accepts the advertisement in good faith, the practice complained of should be suppressed. The firm or individual, which in glaring type offers stock that cannot be supplied in quality meeting with the buyer's expectations, does inestimable harm; he loses not only the confidence of his customer and destroys prospects of future orders, but works a great injustice to the paper which accepted his offer as bona fide. The trade paper is relied upon, and the firm advertising in it should also be. The blame originates and ends with the advertiser, and he cannot expect success where such deception is practiced. Our honorable profession is one well calculated to elevate and refine, but it cannot do so unassisted by personal effort. Our business career is hinged upon honorable dealing; our word should be our bond. In justice to the trade generally, let the stock sent out be at least as good as represented. By this method we not only gain and hold the confidence of our customers and protect ourselves, but do justice to our valued trade papers which accept the word of the advertiser that he can supply the goods offered. Maintain the confidence of the customer, and last but not least, the trade paper, which in good faith accepts and prints your advertisement. J.

Winter-Flowering Sweet Peas.

Editor Florists' Exchange:

In reply to Mr. Weston's communication in the Florists' Exchange of May 4, I would state that twelve years ago I might have agreed with what he says, but not to-day. The sweet pea Countess Spencer has not produced the sports he names, but all the new varieties obtained from it have been the results of its having been cross-fertilized with mixed pollen. It is a well-known fact that some varieties that have been crossed come, after several generations, the colors wanted. I myself have nine different colors from the Countess Spencer, all of which I have crossed with several of my Christmas flowering sorts, and have obtained good results. Some of the progeny assume the early flowering habit, and they are to-day just as they were the first year. Others retain the late flowering habit; the latter I have sown without adding any other pollen to them, and every year have obtained several early flowering varieties of the colors that I worked for the first year. Many might think that these new sorts are sports, but I have proof that they are the result of hybridization. The same holds true in the case of Gladys Unwin varieties.

Mr. Weston wants me to produce a yellow, a *salvia* blue or a scarlet sweet pea. These colors I think I have already on hand, and if Mr. Weston has a greenhouse suitable for the growing of sweet peas, I will be pleased indeed to send him next Fall seeds of these, and probably others, and he will then be in a position to exhibit the flowers at the Temple Show in 1908.

I do not at all think that I allow my seedlings to

go out of my hands too soon. Every one of them, before leaving my place, has at least been four years in cultivation, and each one, with the exceptions of several stray seeds, will come true.

Mr. Weston seems to be somewhat sceptical of the value of my early flowering sweet peas. All my varieties are adapted to and recommended for forcing under glass, and every florist who has once tried my varieties in the greenhouse will never grow any of the late flowering kinds by that method. Of this I feel sure Mr. Weston himself will be convinced after he has tried my early flowering sweet peas.

Bound Brook, N. J.

ANT. C. ZVOLANER.

P. S.—In response to Mr. Sim's letter in last week's issue of The Florists' Exchange, I would state that I examined the sweet peas which Mr. Weaver calls "sports," and found these independent plants, the same as is seen in any early flowering sweet pea seedling the first year when crossed by the late flowering varieties. My opinion is that what Mr. Weaver has are chance seedlings, having probably been cross-fertilized on the seed farm. Mr. Weaver failed to show me any of the white, flesh or scarlet "sports."

I accept Mr. Sim's generous offer to try my sweet peas along with those of Mr. Eglemann and the Algerian strain in his greenhouses, under the supervision of the Boston Florists and Gardeners' Club, the Massachusetts Horticultural Society or any other florist organization. I will put any of my new varieties in Mr. Sim's hands.

A. C. Z.

CLUB AND SOCIETY DOINGS.

NEW YORK FLORISTS' CLUB.—One of the most interesting meetings the club has had for some time was held on Monday evening, May 15, 1907, in the Hotel Earlington, West Twenty-seventh street. President Totty occupied the chair. The Board of Trustees and the officers recommended a life membership on payment of \$100. As this involves a change of the by-laws, the matter was held over for discussion at the next meeting. Reports of progress were made by the committees on closer relations with the S. A. F. O. H., on the permanent home and the outing, the latter committee announcing that prizes and advertising to the value of \$500 had been secured, assuring the success of this annual event, which takes place on July 2 at Witzel's Grove.

The club being at present without any permanent meeting place, the Board of Trustees were authorized to secure one as early as possible.

S. S. Skidelsky of Philadelphia read his paper on "The Proposed National Flower Show at Chicago in 1908." The paper was listened to very attentively, and Mr. Skidelsky was accorded a rising vote of thanks for what Mr. O'Mara correctly called "a careful and thoughtful analysis of the subject." The paper appears in this issue.

A lively discussion ensued on the holding of flower shows generally, and those in New York in particular. Mr. O'Mara went thoroughly into the matter of New York's exhibitions, pointing out the previous efforts made, the successes, the failures and the disadvantages under which the metropolis labored in comparison with other large cities, so far as the holding of flower shows was concerned. He eulogized the work of the private gardeners in this connection, especially those around Chicago, Philadelphia and Boston, and deprecated the lack of cohesion existing in New York and neighborhood among the trade. It was almost impossible to enlist the sympathy of the New York retailers in any flower show venture. While fully convinced of the value of exhibitions, Mr. O'Mara was under the impression that the real promoting factor in the advancement of horticulture was the market, as there the stock offered was subjected to the most crucial test.

Some of those taking part in the discussion contrasted flower show conditions existing in Europe, particularly in England and Germany, with those in America, to the advantage of the foreign countries. It was also pointed out that New York was rather unfavorably situated so far as daily newspaper exploitation being given to flower shows held here is concerned. It was thought, too, that the amateur interest in exhibitions was not fully catered to. The final outcome of the discussion was the appointment of a committee, consisting of Messrs. O'Mara, Wallace and Secretary Young, to endeavor to secure the co-operation of the Horticultural Society of New York in the matter of holding a flower show, also that the club co-operate with the Chrysanthemum Society of America at its forthcoming exhibition, to be held in this city. Those taking part in the debate were Messrs. Totty, O'Mara, Jaenicke, Guttman, Wheeler, Wallace, Burnett, J. A. Manda, Butterfield, Turner, Weston, Henshaw, Gernecht, Lenker and Marshall, Mr. Wheeler commending the younger members for the interest shown by them in club affairs.

Mr. Traendly moved seconded by John Birnie that the club subscribe \$250 toward the guarantee fund for

the proposed national flower show. This matter will come up for final settlement at the next meeting.

Mr. O'Mara made the suggestion that the club, at some date in the near future, hold a field day in the Botanical Garden, Bronx Park, which proposition was most favorably received, and will, no doubt, be acted upon soon.

An appropriation of \$50 was made to the house committee.

A vote of thanks was passed to the proprietor of the Hotel Earlington who had kindly given the use of the meeting room to the club free of charge; and after partaking of refreshments the meeting adjourned.

ST. LOUIS FLORISTS' CLUB.—One of the largest attended meetings of the florists' club was held last Thursday afternoon in the Burlington building. President Irish and his officers are much pleased at the interest taken. The meeting opened promptly at 2 o'clock with twenty members present. G. Brown was elected to, and Conrad Bergstermann made application for membership. With these two the list will again reach the hundred mark. The trustees reported that they had made all arrangements for entertaining the members in celebration of the twentieth anniversary, on Saturday evening, June 29, at 8 o'clock, in the new Hibernian Hall, Grand and Finney avenues, and that every minute of the night there will be something doing. A motion was made that the trustees be instructed to arrange for the club's annual picnic to be held some time in July, for which the club voted \$50 for expenses. A report of this affair is expected at the June meeting.

The interesting part of the evening came when the question box was opened; it contained nine inquiries. The one most discussed was fumigation. Messrs. Fulgraf and Pring of Shaw's Garden and J. F. Ammann, Edwardsville, leading the discussion. This subject, says President Irish, will again be taken up at the June meeting, and the president will map out an interesting program for that date—June 13, at 2 o'clock.

ST. PATRICK.

LENOX (MASS.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held Saturday, May 4. President Heeremans in the chair. Thomas Proctor was awarded a first class certificate of merit for two very fine plants of *Rehmannia angulata*, grown and shown for the first time at Lenox. This very beautiful half hardy herbaceous perennial comes from Central China. It is very free flowering. The blooms are borne up the stem, and are rosy purple about three inches in diameter, having a rich yellow throat dotted with purple. The individual flowers are large, striking and showy. Seed sown early in the year, the plants will flower the same year. It is a welcome addition for conservatory use. Mr. Proctor was also awarded two certificates of cultural commendation for two well grown plants of *Schizanthus Wisetonensis*, in 10-inch pots, and *Phlox divaricata* in 10-inch pans. The next meeting night will be Saturday, May 18, when important business will be brought before the society.

American Rose Society.

The executive committee of the American Rose Society will meet in executive session at the Hotel Martinique, New York, the latter part of May, and among other things will take the first steps toward preparations for next year's show at Chicago.

There have been a few life members added to the society this Spring, all of which increase its permanent fund.

W. S. Nickerson, Cambridge, Mass., who is a great rose enthusiast, a member of the American Rose Society as well as of the National Rose Society of England, offers three prizes, which created an unusual interest among the English growers. The prizes were of the amount of five pounds each, and were to be awarded to three classes of roses; the first for the best hybrid perpetual rose introduced since 1900; the second to the raiser of the best hybrid tea rose introduced since 1900, and the third to the raiser of the best tea rose introduced since 1900. The Rose Society of England selected men, both in professional and amateur ranks, to the number of sixty, which body was to decide on the awarding of these three prizes, and the result was that prize number one was forwarded to the raiser of Frau Karl Druschki, which received 54 votes out of the total of 55; prize number two went to the raiser of Dean Hole and number three to the raiser of Madame Jules Gravereaux. Such a decision should settle for some time to come which was the best acknowledged new rose of these classes, and this fact will no doubt be received with interest by the American public interested in roses.

BENJAMIN HAMMOND, Secretary.

Fishkill-on-Hudson, N. Y.

THE NATIONAL COUNCIL OF HORTICULTURE has, through James Burdett, Chicago, issued the eleventh instalment of its press service, the subjects dealt with being Valuable Herbaceous Plants, Vines for the Veranda, and a Backyard Garden.

The Proposed National Flower Show.

Read before the New York Florists' Club, by S. S. Skidelsky, Philadelphia, Monday evening, May 13, 1907.

It has been very kind of your Florists' Club, represented by the chairman of its essay committee, Mr. Wallace, to invite me to address you on a subject that it seems to me, is of absorbing interest, not only to the members of our craft having the welfare of horticulture at heart, but to every amateur, to every private gardener, to every man and woman throughout the land whose love for the beautiful and the ornamental in nature can neither be gainsaid nor ignored.

An Epoch-making Event.

The proposed national or international flower show, to be held at Chicago during the month of November, 1908, will unquestionably prove an epoch-making event in the history of horticulture.

And right here the thought occurs to me, that unless we put forth our best efforts and our utmost energies, bearing in mind that upon the success or failure of this first attempt hinges the future of an industry, involving millions of dollars; unless we stand shoulder to shoulder and work for the common good of all, each according to his means and might; unless we do this, I say, we shall have no right to enter the ranks of progressive business men.

It is nearly two years ago, at Washington, when E. G. Hill, the sage of Richmond, Ind., first broached the subject of a national flower show. His observations on the European continent, where such shows are held necessary premium guarantee fund was started. Some-

ried away by the idea, and a subscription list for the thing like \$4,000 was subscribed there and then. Thus the idea of a national flower show—the first show of the kind ever attempted upon the American continent—bids fair to become a successful reality.

I shall not attempt to portray to you the grandeur of the show itself or the magnificent hall, the Coliseum, where it is to be held. Such is not the object of this brief paper; nor indeed am I equipped to go into any details of the sort.

That American enterprise, inspired by the "go ahead" spirit characteristic of our people, will triumph despite all obstacles and despite all predictions to the contrary, is a foregone conclusion with many.

The Mission of the Exhibition.

The national flower show, it may be deplored upon, will not only come to pass, but like any other great work ever attempted by public spirited men for the benefit of a people at large, it is destined to fulfill a mission. It aims to educate our people, to enthuse them, to inspire them with a desire for all that is beautiful in nature, to show them by means of an object lesson how things can be done, how the humble object and the humble cottage of the workingman can be made as attractive in their way as the magnificent grounds surrounding the stately mansion of the millionaire. What the progressive and enterprising florist has attempted and has carried out in a small way in his own town; what public spirited individuals have accomplished by way of spreading the idea of horticulture in their own communities, the national flower show aims to do on a large scale.

element, viewed in the light of pure utilitarianism or commercialism, a national flower show, such as it is intended to hold at Chicago, must, as a matter of course, bear good fruit.

The Results of Combined Effort.

We need but recall the early struggles of the florists of a generation or two ago, men still living in the midst of us, their trials and tribulations long before a Society of American Florists and Ornamental Horticulturists sprung up, long before a Carnation Society made its appearance or a local flower show of any sort was ever thought of, to arrive at the conclusion that the progress we have achieved was due in a large measure, not so much to individual endeavor or to individual enterprise, as to a combination of efforts, having for its aim the benefit of each, individually, and of all as a body.

Whatever arguments one may advance in favor of that hackneyed injunction: "Attend to your own business," etc.; whatever success one may point at as the result of strict attention to one's own affairs, it is a fact beyond dispute that the Society of American Florists and Ornamental Horticulturists is responsible for most of our achievements in the past and, if I may venture a prophesy, for much more that we are sure to accomplish in the future. I will go further and say that the Society of American Florists, as a body composed of earnest, energetic, progressive and intelligent men, is directly responsible for the success of the very fellow, who "can't see what good it will do him to join such a society." What good? Let the history of our society speak for itself. Twenty-five years of energetic work along progressive lines has brought about the results which we see in the greenhouse, at the store, on the highways and byways throughout the land. Our improved products, the cultivation of the button-sized carnation, the measly rose and chrysanthemum, not perfect specimens of their kind, our improved facilities of marketing our products, our modernized business methods, etc., are all due to organized effort, to the Society of American Florists. "What good?" I need but cite the recent victory scored by our society before the Inter-State Commerce Commission—a victory that will compel the United States Express Company to charge reasonable rates and, incidentally, will save dollars to the man who "can't see any good" in our society. Verily "in union there is strength." We all know by experience what it means to give a local flower show; we know how these flower shows, whether financial successes or financial failures, have induced the growers to vie with each other in their efforts to display their best products; how these in turn have induced the dealers to handle the best at prices remunerative to both the growers and themselves; how, furthermore, the flower-buying public has learned to discriminate, to draw the line between the high-grade flower and the semblance of one, not marketable at any price. The demand at all times, as we all know, is for high-grade stock. To the man or woman, to whom all flowers looked alike but a few years ago, nothing but the best appeals to-day. Whence this change, this tremendous advance along progressive lines within but a comparatively short space of time? The answer is easily given: The local flower show, often held under adverse and discouraging conditions, has brought about this result; it has educated the public; it has brought the grower and the dealer together; it has induced the private gardener and the amateur to advance to the front and to improve upon past achievements.

Thanks to these shows we have ceased to dwell within our own shells, to grope in the dark, as it were, each for himself. We have learned by actual experience the lesson of combination, or "community of interests," if I may borrow the expression that has originated somewhere on Wall Street.

What has been accomplished, I repeat, by the progressive florist in a small way, in his own town; what the public spirited individuals have brought about in their own communities; what the florists' clubs have achieved by means of giving occasional flower shows, the promoters of the national flower show aim to accomplish for every florist, nurseryman, gardener and amateur of every city, town and village, in every State in the Union.

It is the aim and object of the national flower show to be held at Chicago, not only to bring forth the best there is in cultivation, both here and abroad, for the inspection of "society folks," but also to inaugurate a campaign of education for the benefit of our people as a whole; to demonstrate, if such a thing be possible, through the public press and by means of circular letters, pamphlets, etc., to the great mass of horny-handed Americans the beauties and wholesome influences of shrubs, flower beds, lawns and trees—in a word, to promote horticulture in all its branches among all the people.

The Outlook.

How often do we hear such remarks as, "horticulture in this country is still in its infancy; that the possibilities for its development are practically unlimited; that much as we have advanced during the past decade

New Store of Winterson Seed Company, Chicago

annually under the auspices of Royal and National Horticultural Societies, as in England and France for example, led him to believe that an enterprise of this sort, undertaken by the Society of American Florists and Ornamental Horticulturists and given under the auspices of the American sovereigns—the people—could not help but prove a success.

And how, I will ask in passing, could it prove otherwise?

As a matter of course, opinions pro and con were freely expressed on all sides. There were those who predicted inevitable failure, basing their predictions upon no other grounds than such as presented themselves to their distorted, pessimistic imaginations. Why, indeed, should a national flower show be thought of at all? Why? Haven't we plenty of local shows of all kinds, they reasoned, that never pay?

"And who would benefit by this national flower show anyway? Men, who have something to sell, of course. It is all nonsense, they concluded, and there is nothing in it."

There were others, however, who took a broader, a much broader view of the situation, whose mental vision was in no wise circumscribed by petty jealousies or selfish motives of one sort or another, who could see at a glance the great possibilities for the advancement of horticulture; who could realize the inestimable opportunities and advantages that would accrue to our interests; who, in brief, took a retrospective view of horticulture, comparing the present with the past and drawing their conclusions as to the future. Kindled by an enthusiasm well worthy of the cause, there soon formed a small circle of men, who was, so to speak, car-

We are all familiar, more or less, with the history of the National Cash Register Company's institution at Dayton, O. We know that Mr. Patterson, the head of that model institution, has worked long and hard to transform a wilderness into a garden spot. We have been told how rowdism that took pleasure in wanton destruction of flower beds and lawns was converted in the end to the gospel of ornamental horticulture; how unsightly cottages in the immediate vicinity of that institution were transformed into beautiful little palaces; how tin cans and rubbish heaps of all sorts disappeared, flower beds and shrubbery taking their place. To the moralist such a transformation bears another lesson, for who will question the benign and wholesome influence of beautiful surroundings upon the mind and character of the child, the youth—our future lawmaker or law-breaker?

He was a wise man indeed, who said: "Tell me your company, and I will tell you who you are." To paraphrase this saying we may put it thus: "Show me your surroundings and I will define your character and social standing in your community."

After all we are but creatures of circumstances. To the one who rises from amidst squalid and filthy surroundings and forces his way through into a world of light, there are hundreds who succumb to the darkness and wretchedness of the nether regions.

If I remember right, it was the late Benjamin Harrison, who, in a speech at one of the Indianapolis chrysanthemum shows, remarked, that "the man who loves flowers, was never known to abuse his wife"—or something to that effect.

But, to return to the subject, stripped of its moral

or two, the future development of horticulture bids fair to surpass our most sanguine expectations." If this be true, as it unquestionably is, is it not high time that we make some effort to hasten the approach of its development? Is it not within our own power to devise some means and ways in order to bring about the results desired more speedily and within our own time? Why wait until Mrs. Jones's infant daughter, playing upon a rubbish heap in that back yard, may some day, when she grows into womanhood and has a home of her own, prefer a canna bed to a bed of tin cans? Why not show to Mrs. Jones herself the striking contrast between the two, the beauty of the one and the unsightly, ugly features of the other. Is it not within the range of possibility that Mrs. Jones may turn the scales in favor of the flower bed?

Aside from the fact that the national flower show is sure to bring dollars and cents into the pockets of the very men who have neither the time nor the patience for "such innovations;" aside from the fact that a show of this kind is sure to benefit our people at large, for no industry, be it the cultivation of sugar beets or shrubbery, was ever known to prove other than beneficial to a community; aside from these obvious facts, we must not overlook the educational, esthetic and moral features of such a flower show—a benefit that can neither be over-estimated, nor can it be estimated by the usual standard of dollars and cents.

After all the future of horticulture, like the future strength and stability of our beloved republic, depends, not so much upon the favored few, able to gratify their whims and desires, as upon the great mass of the American people. The future of horticulture hinges not upon what is being or will be done at Newport, along the Hudson or at Lenox, but upon the general improvement in the conditions, environments and educational standards of our people throughout the great American continent.

Just as soon as the miner in the Pennsylvania coal regions, or the laborer in the over-crowded tenements in our cities, or the farmer in the Dakotas, will deem it a necessity to relieve the squalor and the painful monotony of his daily surroundings by the introduction of a potted plant, a flower or a shrub into his home; just as soon as this comes to pass, as come it will, the future of horticulture will be laid on a solid and most enduring foundation.

Concerted Action Necessary.

And right here I can scarcely refrain from saying a few words (although I am repeating myself) on the need of organization, on the need of concerted action in behalf of a common cause. That Chicago will have the honor as well as the herculean task to hold this first national flower show does not necessarily mean, as some perhaps are prone to think, that this is to be a Chicago affair. Not by any means. While Chicago undertakes the work—and a tremendous work it is—it will depend on the aid and co-operation of the Eastern cities and the Eastern growers. This is certain. It is likewise certain that in order to make a success

Bird's Eye View of Greenhouse Plant of Bertermann Brothers Company at East Washington Street, Indianapolis, Ind.

Photo taken from an adjoining high tower.

of this, our first attempt, there must be no division of forces, no division of interests, no geographical lines drawn. Boston as well as Milwaukee must come to the front and help share the burden of Chicago. "Let us ever remember," said the late President McKinley, "that our interest is in concord, not in conflict." Let us remember this, if we wish to see horticulture upon a plane equal to that of any other great industry in our country.

AMONG THE GROWERS

John Scott, Brooklyn, N. Y.

John Scott, the wholesale plant grower of Flathush, Brooklyn, N. Y., well known as a grower of high-grade decorative plants, has gone into bedding plants very heavily this Spring. From the appearance of his houses at the present time one would scarcely believe, that the week following Easter his whole establishment was about depleted, seeing that he now has every foot of space filled with a choice collection of bedding plants in their several kinds. He has a little over 12,000 can-

nas in the best varieties; 100,000 colens, 25,000 salvias, 6,000 heliotrope, in addition to a house filled with Crimson Rambler and Mme. Norbert Levvasseur roses. These latter will make nice stock for Memorial Day.

In addition to bedding plants, Mr. Scott has gone heavily into the raising of Asparagus plumosus and has 25,000 seedlings in 2 1/4-inch pots; also an immense stock of the popular Marguerite, Queen Alexandra. Gardenias have been one of Mr. Scott's best cultures during the last season. He was very successful with them, and during the holidays was able to furnish lots of flowers with three-foot stems that brought \$1.50 wholesale in the New York market. Notwithstanding the success he had last year, he believes he has a better method for their cultivation for next Winter flowering, and has 20,000 young plants coming along for that purpose.

There are five or six houses filled with Nephrolepis Scottii in sizes ranging from 7 to 8-inch pots, down to smaller stock planted in benches, and by next Fall he will have, without a doubt, as fine a collection of specimen plants of this fern as it is possible to get together. Among his decorative plants are included collections of Pandanus Veitchii and dracaenas of the Lindenii, Mas-sangeana and Sanderiana varieties.

Several new houses have been added to the establishment within the last year, and others are contemplated to be erected during the coming Summer. Evidently Mr. Scott is determined to have one of the largest plant growing establishments in the vicinity of New York, and his close proximity to the city gives him a convenience of delivery probably enjoyed by no other plant grower who is doing business on such a large scale. A new office has lately been added, and is in charge of Miss Jessie Scott, a sister, who arrived from Scotland a short time ago.

Bulbs in Bermuda.

Editor Florists' Exchange:

The accompanying photograph shows one of our Liliun Harrisii fields. We are pleased to say that there was no disease in our fields this year; in fact, in no one else's, so we should have a crop of good bulbs for this season, but not a large one, because very nearly every grower planted selected stock last Fall and destroyed all diseased ones and all of the hybrids that we could see, so we trust to have a good crop of Harrisii this season.

STEPHENS BROS.

The Editor's Song.

How dear to my heart is the steady subscriber, who pays in advance without skipping a year; who takes out his dollar and offers it gladly, and casts around the office a halo of cheer. Who never says "stop it, I cannot afford it" or "getting more papers each day than I read," but always says "send it, the whole outfit likes it—in fact we regard it as a business need." How welcome he is when he steps in the sanctum; how he makes our heart throb; how he makes our eyes dance; we outwardly thank him—we inwardly bless him—the steady subscriber who pays in advance.—Exchange.

One of the L. Harrisii Bulb Fields of Stephens Brothers, Bermuda

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Edwards' New Enterprise.

We are mailing you a photograph of our new place of business (reproduced herewith) which we opened March 22. The conservatory and show house is of the King Construction Company type and is located on the most prominent corner in this city. We also have a branch in the largest hotel here, the Marlborough-Bleibheim. EDWARDS FLORAL HALL Co.
Atlantic City, N. J.

HORTICULTURAL CRIME.—In the twentieth century we have become so sophisticated as to dye real flowers, and horrible possibilities are opened up by the announcement that even the innocent daffodil is being treated in this fashion, and offered for sale in London shops in a flaming scarlet tint. Once begin a horticultural career of crime, and where will the thing end?—Lady's Pictorial, London.

A Chicago florist is reported as saying that the phrase "Please omit Flowers" associated with funeral notices, causes a loss to the retail trade in that city of \$100,000 annually.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

Out of Town Weddings.

Country weddings are always popular this month, and many very pretty affairs have already taken place. The whole country side is clothed with flowering fruit trees and shrubs. Forsythia is about over, but the cherry trees are a mass of beautiful white blossoms; pears and apples will soon follow and after these come the later flowering shrubs—deutzias, Spiraea Van Houttei, bridal wreath, weigelia, syringa, Cornus americana, the common dogwood, and a host of other good material that is inexpensive but effective, and can be obtained without much trouble or expense.

It is a good plan in filling an out of town order of this kind to take a trip two or three days previous to the event and look over the surrounding country for available material. This will often save unnecessary expense both in buying the flowers in the city and paying expressage to get them to their destination. In ad-

—and low receptacles were filled with pansies, sweet peas, arbutus, etc. On the buffet, from which the lunch was served, was placed a low center-piece of lily of the valley. Large palms and bay trees were stood here and there on the piazza, the pots and tubs being covered with branches of hemlock and cherry blossoms. It is a good plan when using blossoms of any kind to have them in water as much as possible, as a very beautiful decoration can be ruined by having a lot of wilted flowers around just at the moment when they should look their best.

Funeral Work.

Some very handsome designs were seen at a prominent funeral last week, in which orchids were used in large quantities. The casket was entirely covered with Cattleya Mossiae, five or six hundred flowers being employed. No green was utilized as an embellishment, smilax and Asparagus plumosus being only used for the groundwork. Among some of the larger designs was a handsome standing cross of cattleyas, which had a low triangular base filled with the same flower. Another cross of about the same size, in which lily of the valley was used, was made very full and white, very few leaves being used in the stemming. The base was done with callas, with a background of kentia leaves.

A large standing wreath was a prominent feature in the chancel; it measured eight feet from the ground and was fully five feet across. Richmond roses and white sweet peas were the flowers employed, about two-

New Store and Conservatory of Edwards Floral Hall Company, Atlantic City, N. J.

dition to this, material obtained on the spot will always be in better condition, packing and shipping having a bad effect, especially in the case of fruit tree blossoms, that stand less handling than other flowers.

At a country wedding a few miles from New York City last week, cherry blossoms were used in great profusion. They were in perfect condition and were most effective. The room in which the ceremony took place was a perfect hower. It was low and old-fashioned, with beams running across the center. At one end of the room was arranged a background of palms; these were interspersed with blossoms tied in loose clusters with large bows of white satin ribbon. A few feet from this stood the Prie Dieu; this had been tastefully decorated with asparagus and white sweet peas. All the flowers used were in water. Tin cornucopias were hung at irregular intervals on the walls, and were filled with large branches of cherry covering the walls completely. Palms were placed in available situations and treated in a similar manner to the walls. The mantels and fire places were also filled with masses of cherry blossoms, brightened with large clusters of Richmond roses full blown, the rich red of the roses being in vivid contrast to the white flowers. This rose was the only color used and was very effective. The trussed beams were also treated with blossoms; they were started at the floor at each side of the room and allowed to meet in the center, forming complete arches of flowers. The other rooms were simply decorated with large howls and vases of Spring flowers—Gladious Blushing Bride, stocks, snapdragon, English wallflower

thirds being roses. The base was formed of Richmond roses. The wreath stood erect from the stand and was very effective from the front.

There was also a handsome wreath of lily of the valley, with a cluster of moss roses; another one of ivy leaves and cattleyas; also several pieces made of gardenias, one being a cross, with a cluster of lily of the valley at the arms. A wreath was made entirely with these flowers, no other green than their own foliage being used. A splendid combination was obtained with Franz Deegen roses and cattleyas. This piece was a pillow, and the only one seen at the funeral. The groundwork was of the rose named with a large cluster of orchids on one side and a long, plume-like spray of lily of the valley. Adiantum Farleyense formed an edging.

A feature of this funeral that impressed me was at the house. The casket rested in the center of a very large room, and although a number of floral pieces were sent to the house, the room was left entirely bare, excepting four large groups of palms, which occupied the corners, and a large cross of orchids, which rested on the casket. The crowding of the funeral designs into the room was entirely done away with.

D. RAYBUN.

Every Progressive Retailer should be represented by his card on this page. It is a sure business bringer.

ASTER SEEDS

There is ample time to sow Asters for general crop. The seeds we offer are 1906 crop and of our own growing. Several of our customers advise us that they germinate a hundred per cent.

IN EVERYBODY'S MOUTH LIKE THE BEE

A PROSPEROUS florist is never idle; do like this busy insect—the bee—take advantage of the great work the never-resting florist, Godfrey Aschmann, and his people have done since Easter, 1,000 of them swarming and enjoying their lives in Aschmann's Greenhouses. "Oh! Aschmann's flowers taste so sweet," the bees say; "we cannot stop; we have a big field to work on, 100,000 of the choicest; every hole and corner full; let us harvest." Secure Bargains now, and for Decoration Day. Please note our lowest prices.

From the lands afar, where the choicest are,
I gather the plants I supply;
Or grow my own, with care unknown,
So the best are the ones you buy.
Then send in your orders and see your trade grow,
None can surpass Aschmann's, wherever you go.

GERANIUMS, from 4 in. pots. S. A. Nutt, double crimson; La Favorita, double white; Md. Thibaud, Gloriosa, double pink; John Doyle, double red. Have eight varieties of the newer sorts, such as E. H. Trego, beautiful variegated crimson, the model of perfection, double. Telegraph, free bloomer, deep orange cerise, double. Mrs. E. Rawson, single, deep rose, free bloomer, immense large flowers. Berthe De Preally, semi-double flowers, of great strong habit, trusses silver rose. Countess d'Harcourt, best double white, large trusses; stands the sun well. Double Grant, immense large flowers. Jean de la Brete, rose carmine, shading to white, camella shaped, large trusses. Marquise de Castellana, beautiful, soft crimson trusses, as large as a hydrangea, semi-double. Above eight varieties, 4 in. pots, 15c. each; \$1.25 per doz.; \$8.00 to \$10.00 per 100.

AGERATUM, dwarf, best blue variety, 4 in. pots, \$7.00 per 100; 2 1/2 in. pots, \$3.00 per 100.

BEGONIA VERNON, finest strain, flowers as dark as blood. Seeds of this beautiful variety picked by myself from specimen plants in Zurich, Switzerland, on my trip to Europe last Summer, 1906, 4 in. pots, \$8.00 per 100; 3 in. pots, \$7.00 per 100.

BEGONIA ERFORDI, the true variety, seeds of my own gathering from specimen plants in Europe last year (1906). This is one of the finest pink varieties in cultivation; 4 in. pots, \$12.00 per 100; 3 in. pots, \$9.00 per 100.

SARLET SAGE or **SALVIA**. This is the genuine Clara Bedman or Bonfire variety of medium tall habit. It is a sight to see them bloom. It looks as if the whole bush is on fire and decorates the finest residences in England, Germany, Paris and Switzerland. Seeds of this novelty Sage collected by myself from specimen plants grown on one of the beautiful landscapes in Switzerland. Have fully 5,000 plants in 4 in. pots to sell, now in bud and bloom, of this fine variety. Price, 4 in. pots, strong plants, \$8.00 per 100; 3 in. pots, \$5.00 per 100.

HELIOTROPES, 4 in. pots, \$7.00 per 100.

NASTURTIUMS, dwarf, all colors, \$7.00 per 100.

FUCHSIAS, mixed, good varieties, 6 to 6 1/2 in. pots, 15c. to 20c. each; 4 in. pots, \$1.20 per doz.

CANNAS, 10 good varieties, 4 in. pots, \$8.00 to \$10.00 per 100.

AMPELOPIS VEITCHII, 4 in. pots staked up, 15c. each.

HONEYUCKLE, 5 in. pots staked up, 15c. each.

COBEA SCANDENS, 4 in. pots staked up, 8c. to 10c. each.

DAISIES, Queen Alexandria and Marguerite (white), 5 1/2 to 6 in. pots, 20c. to 25c. each.

DIELYTRA SPECTABILIS or **BLEEDING HEART**, planted in the Fall in 6 in. pots and plunged outside in cold frames during Winter, growing natural now, large plants, in bud and bloom, 25c. each.

PEUNIA, double, mixed, 4 in. pots, 8c. each, single California Giant, ruffled or blotched, 3 in. pots, \$4.00 per 100. Inimitable or dwarf variegated, 2 1/2 in. pots, \$2.00 per 100.

VERBENAS, all shades, 2 1/2 in. pots, \$3.00 per 100.

SPARGANGUS PLUMOSUS NANUS, 2 1/2 in. pots, \$3.00 per 100.

MAURANDYA BARCLAYANA, 2 1/2 in. pots, \$4.00 per 100.

ARAUCARIA ROBUSTA COMPACTA, Spring 1906 importation. Have about 200 of this variety, only specimens, perfect tiers. Adapted for the lawns, front porches, cottages, hotels, etc. 7 in. pots, 4-5 tiers, 5 year old, 20 to 28 in. high, as broad as long, price, \$1.75-\$2.00-\$2.50 to \$3.00 each.

ARAUCARIA GLAUCA, large specimens, 6 year old, 36 to 40 in. high, 36 to 40 in. wide, 5 to 6 tiers, \$3.00-\$4.00-\$6.00 each.

ARAUCARIA, new importation. First consignment about 5,000, now arrived (Saturday, May 4), per steamer Maniton from Antwerp, and thereafter by every steamer up to June 1. Araucaria Excelsa in their original packing, left planted in pots, 3 tiers, 10 to 12 in. high, 50c. larger sizes, 60c.-75c.-\$1.00 to \$1.25 each. Robusta, Compacta and Glauca from \$1.00-\$1.25 to \$1.50 each.

DRACAENA INDIVISA, broad leaves, imported from Belgium, now arriving, 30 to 36 in. high, 8c. to 75c.

COCOS WEDDELIANA, 3 in. pots, 16 to 18 in. high, 15c. to 20c. each.

ASTERS, Enchantress, new, large blooming varieties, 3 in. \$4.00 per 100. Victoria, 8 shades, separate or mixed, \$3.00 per 100.

DON'T FORGET WE LEAD THE WORLD IN MOON VINE!

Watch and be careful; don't buy Morning Glory for Moon Vine.

We grow only the best varieties, A. W. Smith's hybrid or Ipomea Noctiflorum, for which we have during the past 20 years a world wide reputation. We ship every Spring from 20,000 to 25,000 plants to every state and territory in America as far as Mexico, 4 in. pots, nicely staked up, 30 to 36 in. high, \$12.00 per 100; 2 1/2 in. pots, nicely staked up, \$5.00 per 100.

NOTICE!
Above Moon Vine is the earliest variety to existence, blooms freely, in big clusters, pure white; waxy flowers, very fragrant and as big as a saucer.

Cash with order please.
All goods must travel at purchaser's risk.

Washington, D. C.

The Week's News.

During the past week all Washington had cause to rejoice—two Spring days. People hunted up their trowels preparatory to planting the beds; all nature seized the opportunity to rapidly develop leaf and flower. Even the Public Gardener got busy and set men to work bedding in the various parks about the city, but, on the night of May 11, frost reappeared, though not so severe as that which occurred just twenty-four hours earlier one year ago, and which worked havoc for the early planter.

Many of the public parks have beds of pansies in profuse flower which attract much attention, as the varieties include some of the rarest and most distinct strains. Every one is anxious to plant, but decidedly sceptical concerning the weather, and as a direct result, the plant industry is suffering to a noticeable degree. Some of the growers who rely chiefly upon the sale of bedding plants at this season tell woeful tales of disappointment.

The supply of greenhouse flowers is about normal with the exception of carnations which remain scarce and command better prices than usual at this season. There is also a marked scarcity of outside grown lilac, owing to the frost which followed the rapid bud development during the torrid wave in March. Lily of the valley seems to have suffered likewise.

Chevy Chase, one of the most beautiful spots around Washington, made so by the handiwork of some of our best local landscape artists among whom may be mentioned Peter Bisset, John Robertson and others, is particularly attractive at this season. Just inside the District Line, and adjoining Chevy Chase, Md., a real estate development company has started to improve a large tract of land to be known as Chevy Chase, D. C. The improvements so far consist in trimming the natural forests, sowing grass seed, planting varieties of ornamental pines, Arbor vitas, privet hedges, etc. Some of our wealthiest citizens realizing the value of such work, are building magnificent homes there. Many Washington suburbs might profit by following the example here set forth, and greatly improve local conditions.

JAS. L. CAREY.

Buffalo.

News Items.

Wm. F. Kasting has been very busy the past week arranging for the entertaining of the German Choral Society. Buffalonians consider themselves fortunate in having this distinguished society visit our city.

R. E. Boettger expects to add another new house to his range if the weather will ever permit; this has been one of the most backward seasons we have experienced.

Phil. Breitmeyer, Detroit, called on the local trade here on Monday of this week.

Wm. Scott is up and around, and his health is improving rapidly.

Workmen have been at work grading and laying walks around the McKinley monument, which when finished will be one of our beauty spots in the floral-cultural line.

George McClure & Son have been very busy this Spring with their many contracts for tree planting, grading and general outdoor work.

PETER BROWN, Lancaster, Pa.

Plant Notes.

DAHLIAS are good for cutting, are decorative in their growing state; they are interesting in their variability as well as sometimes surprisingly novel in the product resulting from seed saved from plants grown even on the premises the year before.

ANTIRRHINUMS.—Among what are generally termed common flowers there are few more serviceable to florists through the Summer than antirrhinums; in fact a florist possessed of taste and good judgment often makes up a piece composed for the most part of antirrhinums equal to that made up of far more expensive flowers. Antirrhinums do pretty well in any kind of soil, but to get good, long spikes they require to be planted in rich soil.

LOBELIA CARDINALIS stands exposure much better than coleus or achyranthes, and when it is desirable to plant something that will give a color effect somewhat similar to the latter in exposed places Lobelia cardinalis will answer the purpose. The flowers as well as the foliage are red, as the name denotes.

BEGONIAS.—There are few plants with which it is so necessary to be careful that they are hardened off thoroughly before planting in the open ground as begonias. If they are not so hardened they will in all probability blanch and wither in two or three days after planting. They may come up from the root again, but it will take them quite a while to amount to anything. Begonia Veron is dwarf enough to be used in conjunction with alternanthera in formal bedding or in beds of geometrical design. After a week or two exposed to the sun the foliage of the begonias assumes a bronze color in keeping with the effect produced by the other kinds of plants used. Lobelia is also suitable for the same kind of work. There is occasional complaint of it damping off, but I think if Crystal Palace compacta in single plants out of pots are used there will be but little danger of damping. Pyrethrum is another good plant for this kind of work; it will stand shearing just as well as alternanthera, and in color it is such that there is nothing else to equal it, although the yellow alternanthera may be better for general effectiveness.

PHLOX DRUMMONDII.—Among the most satisfactory annuals for bedding purposes is Phlox Drummondii, especially the white. It flowers profusely all through the season and the flowers hold themselves conspicuously over the foliage that at a distance only a blaze of bloom is visible. A great many annuals are either so straggly or remain so short a time in flower that they are undesirable for formal beds, but among those that are otherwise constituted Phlox Drummondii is noteworthy.

NASTURTiums are exceedingly easy of culture and give satisfaction far in excess of what little attention they require would lead one to expect. The tall varieties are excellent for covering objectionable spots in a remarkably short time, and good also for hanging from the edges of tubs or boxes. The dwarf varieties are well adapted for beds or borders. Either grown from seed sown in the greenhouse, or seed sown right in the open ground, they go right ahead to fulfil their mission.

CINERARIAS when well grown are well worth the trouble necessary for their successful cultivation, but like many other things if they are in any way neglected they are almost useless, and seldom pay for the labor expended on them. The most essential point in the culture of cinerarias is to keep them growing uninterruptedly from start to finish, never to let them get potbound until they are in their last or flowering pots. Equally important perhaps is the keeping of them in as cool a temperature as possible when growing on, and in order to do this the plants when in pots should be grown in a cold frame on a bed of ashes, with the sashes sloping to the north.

Two sowings of cineraria seed may be made, the first in the beginning of August or a week later, and the second three or four weeks thereafter. The seed should be sown in shallow pans over a filling of sand, loam and leaf mold in equal parts, pressed firmly. The seed should be scattered thinly over the surface and covered lightly with sand

WIETOR BROS., Wholesale Growers 51 Wabash Ave. CHICAGO of Cut Flowers

and then watered carefully with a fine rose. Place the pans in a cool place immediately and attend carefully to watering until the seedlings are above ground and fit to handle, when they may be potted at once into the smallest size pots obtainable, using soil for the first potting of the same materials and proportions as for the seed. But in subsequent potting, soil composed of two-thirds good fibrous loam and one-third of sand with a sprinkling of sand added will suit them better. For the last potting it will be very beneficial if only a little leaf mold is put into the compost and in its place is afforded well-rotted cow manure without sand.

Early in October, or when there is danger of allowing the plants to remain longer in frames, they should be brought into the greenhouse, still kept cool, but somewhat moist with an occasional aid to the circulation of air by a little fire heat, especially in very damp weather. The temperature at night should not exceed 48 degrees, allowing a rise of about ten degrees with sunlight. When the flower buds appear applications of liquid manure will help the plants; but it should be rather weak, or else use the precaution of watering immediately after with clear water. Cinerarias are subject to greenfly, but the plants will stand fumigating mildly. Tobacco stems scattered among the pots will act as a preventive, also.

BEGONIA ERFFORDI.—There are very few bedding plants that invariably give so much satisfaction to the planter as *Begonia Erffordi*. When small at planting time they do not to all appearance seem to amount to a great deal, but when planted either in beds or borders in fairly rich soil they develop in a remarkably short time into large plants carrying beautiful pink flowers in gorgeous abundance. I am referring, of course, to the true *B. Erffordi*, which is pink. One thing I particularly took notice of in regard to this *Begonia* was that from the time the plants grew to meet one another in the beds until cut down by frost they never looked patchy, being always covered with bloom.

HYBRID CALCOLARIAS.—The cultivation of hybrid *calceolarias* is not difficult, but it is absolutely necessary for the production of good plants to keep them growing without the least check from the time the seedlings are pricked off until they have outlived their usefulness. The seed should be sown in shallow pans filled with soil composed of leaf mold, sand and fibrous turf; the top portion of the soil should be run through a very fine sieve. Before filling, the pans should be provided with ample drainage.

As the seed is very fine no soil is necessary to cover it, but it will be well to water the surface of the soil in the pans before sowing the seed, which may be scattered evenly on the damp surface after the water has drained away sufficiently. Cover the seed pan with glass, and it should be kept covered and the covering removed only when the soil needs watering, which should be done by dipping in a pail or tank

of water, so that there will be no danger of disturbing the seed in course of germination. When the little plants are easily discernible the glass may be removed from the pans, and when the seedlings can be easily handled they should be pricked off into flats, about an inch and a half between the plants. They may remain in the flats until they show signs of crowding, when they will require to be potted into the smallest size pots, using less sand and leaf mold and more fibrous loam with the addition of a reasonable portion of well-rotted cow manure, and continuing to increase the sustaining nature of the potting material with each successive shift.

Calceolarias will not at any stage of their growth take kindly to the full sunlight, but a thick shading is not what they want. Rather place them if possible in a situation where they can have adequate light, such as a northern exposure of a house or frame affords; in fact, a cold frame is just the place for them during a great part of their growing period. A cool temperature is essential to their proper development, just as careful watering is necessary to bring them to perfection. They can be flowered in 6-inch pots, but 7-inch pots will give better results. Liquid manure, when they are beginning to show flower, helps them considerably. When the plants are fully grown they should be placed so that the leaves of one do not touch those of another. Greenfly if allowed to attack them will soon ruin them; the safest preventive is the distribution of tobacco stems liberally around the pots. D. M.

4 inch pot roses in great variety, at \$10.00 per 1000.

THE ELIZABETH NURSERY CO., ELIZABETH, N. J.

Columbus, O.**News Notes.**

There has been no warm weather yet, and business in all lines seems to keep right along steady and good; everyone is comfortably busy, and has been so far the longest Spring on record. It has been a season without rushes, simply a steady run of business from the start. I do not think that the final outcome will be much if any behind last year.

Our recent craftsman Fred Windmiller was in town last week, and informs us that he is making a change, from the Cleveland Cut Flower Company to Madison Miesse's establishment at Lancaster, O. Mr. Miesse's specialty being the forcing of lettuce and tomatoes. Mr. Windmiller would seem to be in just his element.

The absence of the usual number of peddlers on the streets selling cut flowers at this season, has been most favorably commented upon by the craft here; but the high rates lately charged for carnations, which are mostly sold on the streets, have shut off this annoying trade interference.

The Columbus Federation of Women's Clubs has completed its yearly distribution of flower and vegetable seeds to the school children. This season the seeds used were obtained part from the Florists' Club and the remainder from the congressional quota, through our congressman from this district.

The Columbus Floral Company report a very good business indeed for their first week. This new company has a very pretty store, in a good location, and should do a fine trade.

M. B. Faxon has been invited to address some of the teachers and scholars of our public schools on the subject of planting and gardening. The children's gardening movement is gathering daily many friends, and its future is assured; although opinions do differ on the ways and means to be employed. F. W.

New York.
News of the Week.

The meeting of the New York Florists' Club, which took place in the Hotel Earlington on Monday evening, was a very enthusiastic one, and the trend of opinion of the members seems to point to another colossal flower show in New York at some future time. After the meeting, John Birnie chaperoned a party through the plant market at Canal and Washington streets, and those who participated in this jaunt speak of the occasion as one of the most pleasant experiences they have ever had. A carriage conveyed the party from the Hotel Earlington to the market, and it was 5 o'clock on Tuesday morning before all the sidelights of this euporium of New York City had been thoroughly investigated. Included in the party were John Young, John Donaldson and Sidney G. Stark, the latter a gentleman who is thoroughly familiar with the Covent Garden market in London, and he expressed his opinion that for the slick manipulation of flowering plants in boxes and other receptacles, the New Jersey growers, who supply this market, are away ahead of anything they can do in old London. We have an idea that Mr. Stark will convey to the London (England) papers his impressions of the Canal street market, with the view of giving the plant dealers over there a few hints on how they can handle their products with more facility and to better advantage to themselves.

Florists surrounding Greenwood Cemetery have had quite a loss from the frost that occurred on Saturday morning, May 11. A great many geraniums had been planted during the few days previous, and the frost was so severe that a very large number were killed. As the planting in this cemetery is done by contract, the loss to the florists comes rather heavy, as they have to replace everything.

On Sunday morning, May 12, the heavy frost on Long Island, according to reports, did thousands of dollars' worth of damage to farmers; potatoes, beans and tomatoes being ruined entirely. It is also believed that the peach crop is ruined to a large extent, particularly on the south side of the Island, the general opinion being that the crop will be less than half of what it was last year.

Burgevin's Sons, florists, Kingston, N. Y., are sending out nice souvenir postal cards on which is an illustration of their building, also showing their plant and flower display which occupies the two corner windows.

Long Island railroad officials have ordered that this year only, plants, flowers and shrubbery that are native to Long Island shall be used in the decoration of the little parks surrounding some of the stations of that railroad.

Louis G. Reynolds of Dayton, O., founder and president of the Carnation League of America, has been visiting New York. Mr. Reynolds says that the league is constantly growing, and that it is the desire of the organizers to bring about more appropriate observances of all national holidays, including the Fourth of July.

Fleischman, fleuriste extraordinaire, has, in addition to his branches in New York, Chicago, London, Paris and Berlin, opened a new store in the arcade of the United States Express building, corner Rector and Trinity place.

The suggestion of Mr. O'Mara at our last club meeting that we have a field day in the Bronx Park is a good one, and we ought to take it up some time in the near future.

E. W. Fengar of Newark, N. J., has a new range of glass almost completed on his property at Irvington, N. J. The establishment consists of about 36,000 square feet, and he expects to be ready to plant carnations, which are to form his principal crop, early in July.

W. N. Campbell, who for several years has been on the road for Vaughan's Seed Store, has resigned his position and gone to California. Mr. Campbell was held in high esteem by all who knew him, and his co-workers in the store presented him with a beautiful loving cup on Saturday last as a token of their deep regard for him.

Edwin Persson, grower for E. W. Fengar of Newark, N. J., will spend a vacation at his home in Sweden this Summer.

Samuel Henshaw, whom we reported last week as very ill in Smith's infirmary, S. I., is, we are glad to say, slightly

improved, and his relatives have hopes that he will ultimately recover from the illness that has kept him confined to his bed for some weeks.

Mr. De Grout, representative of John Scheepers & Company, left May 15 for a trip through Europe to look after the packing and filling of the orders of the firm's American customers. He will visit the Holland, Belgium, French and German growers, and make arrangements to remove the concern's headquarters, now at Arnhem, to Hillegom, Holland.

John Miesean, florist, Elmhurst, L. I., will sail for Europe some day next month, going to Germany, his fatherland.

Visitors in town this week included S. S. Skidelsky, Philadelphia, who read a very interesting paper before the New York Florists' Club on Monday evening, and S. J. Mitchell, Houston, Texas, who is on his way to Europe where he will visit the more prominent chrysanthemum growers. He sailed on the s. s. Cedric, Friday the 17th.

A. J. Guttman is back from Cuba and reports having had a very enjoyable trip.

FAYETTEVILLE, TENN., May 7.—W. A. Eogland, nurseryman at Flintville, this county, has suffered a very heavy loss on account of the frost and cold weather of this Spring. He had 37,000 cherry trees that he had sold for \$1,500. He will probably save 4,000 out of the number. He also had 50,000 peach trees, and he estimates his loss on these at \$800.

FUCHSIA

Little Beauty, 3, 2 1/2, and 5-in., 6c., 10c., and 15c. each. Mixed, standard varieties, early bloomers, 2 1/2 and 3-in., 4c. and 6c.

THE WEEK'S WORK.

Timme's Timely Teachings.

A Belated Season.

An unusually backward Spring, such as the present one undoubtedly is, may have its advantages as looked upon by the nursery concerns, the seedsman, the coal dealer and some other lines of business, but its drawbacks greatly outweigh its advantages when the truck gardener, the retail plant grower and kindred interests are considered. Sowings of the outdoor early vegetables had to be made several times and still the crops look desperately uncertain, their chances of living through the cutting May morning's frost, snow and cutting winds being mighty slim. This means an uncommonly late market for the first output, a short season and also high prices, but hardly sufficiently higher to cover the increase or loss in outlay and labor.

The grower of bedding plants, with his glass protection, fares much better in a late season than the truck farmer. Still he has his grievances, well-founded and manifold. Early stock does not move as rapidly or as soon as was reckoned upon in planning operations. That part of the stock started unusually early for the first onrush of Spring trade, has failed in its purpose and, in some few instances, has completely outgrown its usefulness.

The Care of Stock.

The many failures with seeds by the economical householder and the large class of people who love to raise their own garden plants, may this year, it is believed, greatly increase the sales of plants raised by the professional florists. Should this prove true an all around shortage of stock is likely to prevail before long, though at present the supply, filling the houses to overflowing, seems ample and larger than in previous seasons. Of geraniums there will in all probability not be too many, and good grown stock in this the most important line of bedding stock is already decidedly

scarce, bringing a better price than for years gone by. Some other things, fairly well grown, are also hard to obtain this season, and altogether the outlook for a brisk season, though of necessity a short one, is exceptionally bright.

The raising of ordinary kinds of bedding material is by no means the hardest or most perplexing part in its culture. It is much more difficult to keep salable plants in perfect condition after they have reached that stage. A gradual hardening off and exposure to sunshine and air do much toward fitting them for outdoor quarters, but do not prevent them from becoming overgrown, lanky and undesirable for the purpose they were raised for, unless the space between the plants, necessary for development, is ample and increased from time to time. But even this measure with some kinds of stock fails to keep it in fine condition for any great length of time, the pots drying out too rapidly, the hardening of the roots causing the plants to lose their thrifty appearance; such stock soon goes to utter ruin. Sinking the pots into bench soil, or mulching with some sort of loose material, lessens the labor of watering and helps to keep the plants in good condition.

Watering and Sprinkling.

In Winter the morning hours are the proper time for watering; during hot Summer it is in the evening when the work will do most good. At this the between season of the year the grower of all kinds of stock in pots, trays, benches and frames adheres to a rule much more reliable than any other. It is: "Water whenever a plant needs it, regardless of time or weather conditions; do it thoroughly and not again before the plant needs it again, never waiting, however, until it has become killing dry." It is a good old rule and one not nearly as difficult to follow as is often believed. On the proper performance of this one of the various cultural duties depends more than three-fourths of the success with plants of all kinds, more particularly with those grown for the bedding trade and filling our houses and frames at this moment. Watering should never be neglected or done in a haphazard way, and stock should never be allowed to suf-

fer for the want of this their life element.

The vigor of many kinds of plants may easily be upheld by frequent sprinkling. This and watering, done once a day as heretofore, will now barely suffice. Things dry out amazingly fast and some close watching is necessary to do justice to the needs of potted plants, augmented from day to day as the season advances. Any person unmindful of this fact, rounding out his daily course of watering as practiced earlier in the season, beginning at one end of his allotted area and throwing off his rubber boots at the other, satisfied that now all is well for the day, may find to his dismay that everlasting vigilance at just this time is of greater value than established regularity in the performance of duties connected with the culture of a multifarious lot of potted and bedding plants.

Late Cuttings.

Propagation of some of the leading kinds of florists' stock, when delayed or prolonged into the latter part of Spring, entails a greater amount of attention in care taking than was found to be needful with cuttings struck earlier. Chrysanthemum cuttings and those of some hardy perennials in particular are among those most easily harmed or lost outright at this time through any sort of neglect or forgetfulness in matters essential to successful propagation. Shading, dispensed with in the rooting of some kinds of cuttings in the shorter and cooler days of early Spring, will now be necessary. The right quantity of moisture in the sand and overhead must be maintained by an extra amount of attention to prevent wilting. The flagging or wilting of cuttings, at all seasons an ill-boding occurrence, now means little less than total loss. When cuttings show the least signs of a smart beginning in the forming of roots, it is best to pot them up. This always saves much needless trouble and makes good plants. An airy frame is now the best place for half hardy young stock.

Rust and Leaf Spot.

Stagnant plant growth during the Winter favors the development of fungoid and bacterial diseases and to some extent also the inroads of various kinds

of insects, scale and mealy bug being among the latter. Hard to combat throughout Winter, it is often a matter of surprise to see these plagues totally vanish at the approach of Spring without the least effort on the part of the ever-busy grower. Not in every instance, however, do they disappear entirely with the pulsation of renewed plant life, and the gardener's help is needed in ridding some kinds of stock of one or the other of its tenacious enemies. No better time for the task could probably be chosen than now. Some varieties of chrysanthemums, of roses and carnations, showing traces of rust after being potted up from the propagating bench, must now be seen to. Though there is nothing more certain to revivify a weak and spindly lot of young chrysanthemums than a transfer from crowded and air-stinted greenhouse quarters to clean and roomy cold frames, this measure alone cannot be relied upon as a ready remedy for rust. Recourse must be had to the usual remedies for disorders of this kind in order to forestall future trouble. One ounce of sulphide of potassium to about three gallons of water in two or three applications is most apt to rid plants of rust or leaf spot at this season. The removal of a faded leaf here and there is very light cases is sometimes all that is needed to prevent the spread of fungoid diseases, but would, in severe cases, prove a hopeless task.

A more radical way of distancing all danger from rust and allied disorders is the re-rooting of the clean and rust-free top-growths cutting away the rust-ridden lower part, and thus obtaining an entire new and often also more vigorous plant than was had before. It is a process practiced in the case of coleus, when no other way gives half as good results in freeing the stock of mealy bug. In the case of chrysanthemums, as also in that of coleus and several other kinds of stock, it is not yet too late for the conversion of any unclean batch into a respectable lot of plants. Some few varieties of carnations, badly suffering from bacterial diseases nearly every Winter, although free of them during the Summer, are not easily cured and should be discarded. FRED. W. TIMME.

REVIEW OF THE MARKET

NEW YORK.—The weather has taken a severe turn and warmer conditions are prevailing; as a consequence, cut flowers of all kinds are beginning to accumulate. American Beauty roses are still quite plentiful, and while the prices for the top grades remain fairly firm, a general weakening is felt in the lower grades. Strange to say, there is a supply of mildewed American Beauty reaching the market just now, for which it seems impossible to get any price whatsoever. Of course, this is not to be wondered at, seeing that there is plenty of good, clean stock to be had. The values of Bride and Bridesmaid roses are a trifle weaker, and it is believed that before many days the lowest prices of the season will be in force. It has generally happened that prices have gone all to pieces long before this time in previous years.

Carnations are plentiful enough for all demands, and are still bringing remunerative figures; carnation growers here certainly had an excellent season this year. Lilac is beginning to arrive from Southern New Jersey, and peonies are coming in regularly, although they are not to be seen in any quantities as yet. Traendly & Schenck are offering watsonia this week, a novelty that should meet with favor from retail buyers. Snapdragon of excellent grade is to be seen in several stores, and generally meets with a fair demand. Stocks, sweet peas, lily of the valley, and gardenias are all in full supply, and lilies are a little more plentiful than they have been for a few days.

CHICAGO.—With slight variations the market for the past week has held its own. On one of two days there has been an inclination toward lower prices, but they have not been permanent with good stock though roses of the short-stemmed sorts and carnations, if not of first quality, can be purchased at somewhat lower prices than last week.

Other flowers and green stock are fully holding their own. W. K. W. PHILADELPHIA.—There is an abundant supply of all kinds of flowers this week. The local demand is very poor, but the market is being cleaned up fairly well on shipping business at greatly reduced prices. American Beauty are plentiful, local growers cutting 400 to 500 per day. The best flowers are selling at \$3 to \$4 by the dozen, and at \$17.50 to \$20 per 100. Tea and roses are in abundant supply; \$10 is the best price obtainable for choice stock, very little being sold at that figure; general stock goes for any reasonable offer.

For carnations \$3 to \$4 per 100 is obtained for the very best stock but only on some urgent demand is this price paid; plenty of stock sells at \$1.50 and \$2 per 100. Sweet peas are very plentiful, general stock selling at 50c, and 75c per 100, a few extra choice and scarce colors at \$1 to \$1.50. Antirrhinum majus brings \$1.50 to \$2 per dozen for extra choice, 50c to 75c for general stock. Gardenias go at \$10 to \$12.50 per 100; lily of the valley, \$3 to \$4 per 100, outside valley \$1.00 per 100 with few sales. Cattleys are at \$50 per 100; daisies, \$1 to \$2.50 per 100. Smilax sells at \$18 to \$20 per 100; asparagus, 50c to 75c per string.

DAVID RUST. ST. LOUIS.—The stock of flowers coming in is considerably in excess of the demand, and prices have weakened. Trade among the wholesalers and retailers alike has been very slow, and but the only ones who are busy now are the plantmen who have taken advantage of the fine, warm weather to rid themselves of big piles of orders on hand for planting out. The retailers had to content themselves with a few orders for doctor graduates and funeral work, and the man with the big order had no trouble to make good. All of the past week and this Monday morning, the wholesale market was loaded down with extra fine quality stock in roses, carnations and almost everything else in season. In roses we find a great crop of long American Beauty, which were sold at all the way from \$2 to \$3 per dozen for the best; in the shorter grades from \$1 down to 50c per dozen; shorts, \$2 to \$3 per 100. In other varieties of roses the market is very much glutted at prices that would hardly look well in print. Carnations, too, are down in price, owing to so many coming in, the best

averaging \$3 per 100; in other grades from \$1 to \$2 per 100, quality extra fine. Harrisii and calls go at \$8 per 100, with plenty available. Sweet peas are also becoming more abundant than the demand calls for, selling at from 25c. to 75c. per 100. A lot of outdoor lily of the valley is coming in, also snowballs, peonies, Cape jasmine, Iris and other early blooming stock. In greens everything is to be had now.

ST. PATRICK. BOSTON.—Unsettled weather has continued during the past week and as a consequence there has been little or no improvement in the cut flower trade. Stock is plentiful, and while one day there may be a ready demand the next will see little call for anything. Roses are plentiful and the quality is unsurpassed; American Beauty are now better than they have been this season. Richmond still holds good, and there are some fine grades of Killarney.

Carnations remain in practically the same condition as a week ago—plenty of good flowers of all colors are to be had. Sweet peas are good; there is a great improvement in this flower this season in this market. Pansies are plentiful. Lily of the valley is of excellent quality. Lilies are not very plentiful. Gladioli are now coming in in good shape. Stocks are fine, so is snapdragon. Asparagus, although enough for the demand, is not so plentiful as it generally is. J. W. D.

CINCINNATI.—Saturday morning the thermometer dropped to 42 degrees and fires were necessary. The outlook for the farmer as well as the florist is not very encouraging. In March we had May weather; in April, March weather; and in May, December weather, if it keeps on. Grass seems to be about the only thing that is growing. Carnations that are planted out are turning yellow. Fruits and vegetables are certainly going up in price, as is everything else, barring the florists' perishable stock. This remains the same, and only an extreme scarcity of flowers will boost the price. The past week has been a little on the quiet side, and 6c. is the top notch for Bride and Bridesmaid roses. Extra fancy Richmond reach 14c. Carnations are easing up somewhat, and are selling at 14c., 2c. and 3c. Green goods in the fern line are a little scarce, selling at \$2 to \$2.50 per 1000.

The growers in the flower market are anxiously awaiting warm weather so they can fill their orders for bedding plants. May is the month that the rents come due on stands in this market, and many are renewing for another year, while some will fall out. According to location the stands rent at \$25, \$30 and \$35 per year, so you will see the growers are not overtaxed for a nice place to sell their goods; for one good market pays their rent for a whole year. No other city in the United States has a market like this one; and it is certainly appreciated by most of our florists. E. G. G.

INDIANAPOLIS, IND. — Insufficient supplies of flowers make the florist business a difficult one at present. The weather has been ideal for the production of stock, but it seems that the grower has but little variety to offer. Counter trade is extremely heavy; shipping business also has been good of late.

The cut of carnations is generally engaged several days in advance; as a rule, the quality is below that of former years at this date. The best flowers wholesale at \$4 a hundred; medium grades bring \$2.50 to \$3.

Field violets have had a splendid sale despite their many inferiorities. Sweet neas have proven a mainstay at 50c. to \$1 per hundred.

Roses are depreciating in quality and it is not always possible to be supplied with good Bridesmaid and Bride at \$7 to \$8 a hundred. Richmond is the best rose now to be had, at \$8 to \$10 per hundred. Lily of the valley is sold at \$1 per dozen; it is shipped in at \$4 per hundred. The bedding season has begun in earnest; an unprecedented number of orders is reported booked. Tomlinson Hall market is fairly flooded these days with masses of excellent bedding plants. Much anxiety is felt for Memorial Day stock, as there will be very few field flowers; it is doubtful whether there will be any peonies fit for the market. I. B.

2 DUANE STREET, NEW YORK

KALAMAZOO, MICH.—Cold, wintry weather is still with us and even so late as May 10 quite a snow-storm prevailed, followed by severe frost. Undoubtedly the fruit crop of Southwest Michigan will be very short as a large number of fruit trees of all kinds were killed during the last Fall and Winter, and the Spring months have been hard on the living ones. Certainly it makes the "oldest inhabitant" sit down and scratch his head trying to remember just how far back in the forties it was when we had such another season.

Of course this weather and the entire absence of outdoor flowers keep the wholesale prices in good order and most satisfactory to the growers, but the retail trade waits for better weather conditions. The bedding plant trade is probably the greatest sufferer and will likely not be so active as usual this season. Hyacinth and tulip beds are now in full bloom and seem to have stood the Winter well.

Notwithstanding the cold weather the growers mostly have planted carnations out in the field, and so far as I have noticed the plants look as well as usual; early planting suits them without doubt.

Memorial Day prospects for good supplies of flowers look dubious at the present writing, yet two weeks of warm weather will, I think, bring in large stocks of carnations—at least I hope so, as outdoor stock must now be counted out. S. B.

ST. PAUL.—A decided change in the weather has made a vast difference in trade. A few days ago it was so cold that nothing could be done even in planting shrubs; now we have warm weather, in fact, almost warm enough to set out bedding plants. We can expect good business from now on until after Memorial Day.

The cut flower trade has been very quiet, very little doing outside of funeral work, which with some of the dealers has been very heavy. Stock of all reasonable flowers is plentiful, and we can expect a drop in prices, as undoubtedly the fine weather will bring out the street merchants in large numbers.

Orders for Spring plants have been very slow in arriving, although efforts have been made to secure them through Spring price lists, the inclement weather being no doubt responsible for this condition. PAUL.

FIRMS WHO ARE BUILDING.

HOLLISTON, MASS.—J. E. Long has completed an addition to his greenhouse plant on Avon street.

WOBURN, MASS.—James Philbrick, Lexington street, is building a greenhouse 200 feet long and 40 feet wide.

CHANGES IN BUSINESS.

HANCOCK, MICH.—A. M. York, florist, has decided to open a branch floral store at Laurium.

YELLOW SPRINGS, O.—Howard Brown will build a greenhouse here and start in the florist business.

STOCKTON, ME.—Mrs. W. H. Follett will engage in the florist business here, ground having been broken for the erection of an extensive greenhouse.

BETHLEHEM, PA.—Mrs. S. E. Sberer, who formerly had charge of John E. Haines's store, on East Broad street, will open a new floral establishment at 68 Broad street.

COLLEGE PARK, MD.—The trustees of the Agricultural College have authorized the erection of a new greenhouse and laboratory for the horticultural department.

STANFORD, KY.—John Chrisman will begin the erection of greenhouses on the lots recently purchased in the old Fair Ground division, and will be ready for business about June 15.

SPRINGFIELD, MASS.—Lord & Burnham of New York are erecting for H. W. Field a rosehouse 242 by 33 feet, and will build extensions of 35 feet and 25 feet upon two of Mr. Field's present greenhouses.

NEW ORLEANS, LA.—Mrs. Carrie Rehm will continue the florist business for her own account at 832 Canal street, and at St. Charles and Napoleon avenues, this city, she having obtained a judgment of separation of property from her husband, William Rehm.

BUSINESS DIFFICULTIES.

GLOUCESTER, MASS.—Albert B. Tuck, florist, has filed a voluntary petition in bankruptcy. Liabilities \$2744. Assets \$220.

New Orleans, La.
News Notes.
Matthew Cook, who a few months since retired from business, left during the past week for a trip to Germany, accompanied by his daughter, Miss Carrie Cook.
J. A. Newsham, Nashville avenue rose gardens and the Half Way House Nurseries, expects in a few days a large consignment of Cattleyas gigas and Mendellii from his collector in South America. Robert Newsham is now in charge of the Nashville avenue rose gardens. I regret to have to report the serious illness of Mrs. Robert Newsham.
Richard Eichling is again with U. J. Virgin at his Canal street gardens.
There is to be seen growing in many New Orleans gardens that interesting tropical plant, Alpina nutans, (shell lily) which the writer does not remember before seeing flowering as profusely as it is this year; this he attributes to the exceeding mildness of the past Winter.

A project has been launched by Major Behrman for the holding of an International Exposition in New Orleans the year of the opening of the Panama Canal, 1915. It is proposed to make horticulture one of its strongest features, which, owing to our salubrious climate, our nearness to the tropics which allows many plants to be grown in the open that cannot be so grown farther north, and the time everyone interested will have to prepare for same, ought to be an easy matter.
CRESCENT CITY.

ALVIN, TEXAS.—The jessamine growers and dealers here are looking forward to a big crop and a big business this season. The season will be about fifteen days earlier than last, and dealers are already getting out quotations.

News Notes.
Business among the retail flower stores is generally quiet; nothing of great moment is going on. The large decorators are very busy drawing designs preparatory to the Elk's convention in July. This work will consist mostly of flags and bunting.

S. A. F. O. H. convention matters are going along nicely. The various sub-committees getting together the entertainment fund are doing good work; committee number 10—W. P. Craig, E. C. Dungan and E. J. Fancourt—were seen going around their district on Tuesday in John C. Gracey's auto. The executive committee, who will manage the convention program of our club, will be appointed this week.

Wm. J. Moore has started in this week with the S. S. Pennock-Meehan Company.

The Johnson Seed Company reports a very favorable business; orders are still coming in, many from distant points.

Moore & Simon have done a very large business. Reports received by them from the market gardeners show much damage from recent cold weather; one man lost 15,000 tomatoes, another three acres of string beans. From New Jersey they hear many potato fields had to be replanted.

Godfrey Aschmann, the well known plantsman, believes that the cold, hard winter experienced has affected the plant trade, by delaying orders, all over the country. Mr. Aschmann's experience this year also shows that the present tendency is to purchase the cheaper grades of stock.

The thermometer on Saturday night in this locality went down to 28 degrees, Sunday night to 33 degrees.

D. E. Gorman, Williamsport, Pa., was in town the end of last week. D. R.

Boston.

The Week's News.

The board of trustees of the Massachusetts Horticultural Society met at the country home of General S. M. Weld, the president, at Dedham, on Saturday and spent a very enjoyable afternoon in the Spring garden for which Mr. Weld's place is noted.

The Wahan Rose Conservatories are having an excellent cut of American Beauty roses at the present time, and indications are that they will have a large supply for the Memorial Day trade. N. Allen Lindsey went to New Bedford Monday and talked to the Horticultural Society there on the dahlia, in the growing of which Mr. Lindsey is an expert.

Don't forget the meeting of the Gardeners and Florists' Club on the 21st inst. President Westwood expects a rousing meeting, the subject he has selected being "Summer Bedding."

Wm. J. Thurston is the new manager of the Park street flower market and will enter upon his duties on Monday. J. W. D.

News Notes.
Jensen & Dekema have received
the stock of W. N. Rudd's seedlings,
168-02-A, the scarlet, and 46-04-B, a
salmon pink which has not received
quite as much prominence though fully
as worthy a production, and have now
planted the entire stock with the ex-
ception of some benches which for ex-
perimental purposes are to be grown in-
side. The plants appear to be in first
class condition and the concern was
fortunate in not starting their field
work earlier, as their neighbors have
suffered the loss of many plants which
were out during the freeze. The Win-
sor is looking well, especially some
benches of inside planted stock. Orders
have already been received for upward
of 10,000 of Rudd's seedlings.
The Illinois State Fair will be held
at Springfield from September 27 to
October 5. The schedule of premiums
is a most liberal and comprehensive one,
some \$2,300 being offered in the flor-
icultural department—the highest amount
offered by any state fair. R. O'Dwyer
is superintendent of floriculture. Some
of the principal prizes are: Collection of
stove and greenhouse plants to cover 200
square feet of space, \$60, \$40, and \$20;
fifty American Beauty, \$50, \$35, and
\$12; twenty-five American Beauty, \$20,
\$15 and \$10; fifty carnations in the
different colors specified in the schedule,
\$6 and \$4; 100 carnations, \$25 and \$10,
dinner table arrangements, \$50, \$30, and

\$20; best floral arrangement, similar
amounts; standing cross, \$25, \$15, and
\$10. The same liberality is seen in all
the prizes offered in the different classes
enumerated. Interested parties should
send to Mr. O'Dwyer for a copy of the
schedule.

The club meeting on Thursday of last
week was one of the most interesting of
the year. Louis Witthold read an en-
tertaining paper on the general treat-
ment of outside hardy and herbaceous
plants, after which the subject was taken
up for discussion by a number of those
present. The subject of a beautiful city
was also handled in an artistic oratori-
cal style by members of the committee
recently appointed to represent the club
on this matter.

It is reported that Calvert & Son of
Lake Forest, after twenty-six years of
successful business, are about to retire.
John Dekema of Jensen & Dekema,
who has been on the Pacific Coast for
his health, has improved so rapidly and
steadily that he has decided to stay
there indefinitely.

With the advent of the Spring sea-
son Foreman Collins is particularly ac-
tive at the Peter Reichberg establishment
where everything appears in fine condi-
tion.

Poehlmann Brothers state that they are
just closing up the best season since they
started in the horticultural line, and ap-
pearances bear out the statement.
A few days ago I visited Leesley
Brothers' nursery of one hundred acres
of trees and shrubs. Everything appear-
ed in good shape notwithstanding the
unfavorable weather. The movable
stock was carefully heeled in and in good
condition to set out.

Wietor Brothers are bringing in some
of the best goods they have produced this
season.

Out at Hinsdale Andrew Benson says
that he never had stock better at Bas-
sett & Washburn's at this time of year,
and he is particularly pleased with the
way the new scarlet carnation has turned
out. WILLIAM K. WOOD.

St. Louis, Mo.
News Notes.
C. Young & Sons Company have
the contract for the planting at Delmar
Garden, which is looked after in person
by William C. Young.
Fred Pape had the contract for plant-
ing the flower beds at Forest Park High-
lands, of which he made a fine job. He
is kept very busy in this line.

George Schriefer, who is with Kuehn,
has the sympathy of a large circle of
friends in the trade in the loss of his
father, who died on Sunday last after a
long spell of sickness.
The Charity Carnival at Delmar Gar-
den the past week sold large quantities
of cut roses, donated by the different
florists throughout the city. As stock
was plentiful, the wholesalers fell into
line and also donated a big lot.

The St. Louis Horticultural Society
has issued its preliminary list for the
Fall flower show to be held in Novem-
ber. The usual Shaw premiums amount-
ing to \$500 are included in the total of
prizes, amounting to \$1,536. Special
prizes will be added to these.

President Irish will map out a pro-
gram for discussion for the next club
meeting that will be interesting to all
in the trade, especially the growers.
This will be on "Fumigation," which is
of great importance.

Frank A. Weber reports that he is at
work on preparations for attending the
annual convention of the American As-
sociation of Nurserymen, which will be
held in Detroit, Mich., June 12 to 14,
and expects a large delegation from here.
The Engelmans Botanical Club had to
postpone its Spring flower show owing
to the backward weather; it is expected
to hold the exhibition some time during
the latter part of this month or the first
week in June. ST. PATRICK.

AUSTIN, TEXAS.—We certainly ap-
preciate the effort you are making to
produce a fine trade paper. Its depart-
ments are always interesting and we can
offer no criticism.

There are two large establishments
here, besides several smaller ones.
The late cold spell has passed, some
hope, and we are now ready for our
busiest season. Business is brisk most
of the time.
Our sweet pea vines outside at pres-
ent are seven feet in height. OLAF OLSSON.

Heating.

Growers' Problems Solved by U. G. Scollay.

We tender our apologies to inquirers in this column for delay in furnishing responses, occasioned by the severe illness of Mr. Scollay. We are glad to state that that gentleman has now fully recovered his health and strength, and all questions on heating matters submitted to us will be answered at the earliest opportunity. Ed.]

Kindly tell me how many pipes it takes to heat a small greenhouse 30x11 feet. The heater is a steam boiler. Will the arrangements of the pipes as shown in the accompanying sketch be all right? A night temperature of 50 to 55 degrees in zero weather is desired. A. D.

—If you desire to use a steam heating system it will take six 1 1/2-inch pipes to acquire the temperature you wish. The arrangement as shown on your sketch will do. Personally, I would advise you to adopt a hot water system, as I know you will get better results and a steadier heat in such a small house. The boiler you have, if big enough for steam, should be plenty big enough for hot water. If you follow my advice you can put in three lines of 4-inch cast iron pipe on one side and two lines on the other. If you prefer 2-inch wrought iron pipe, put in eight lines, that is, four lines on each side. One flow and one return of 2-inch size at boiler will do very nicely for hot water. U. G. SCOLLAY.

What horse power will a tubular boiler require to heat 10,000 feet of glass to 55 degrees? The thermometer goes to 10 degrees below zero in severe weather. Houses are without glass in side walls. J. H.

—I would recommend a tubular boiler of not less than twenty-five horse power. U. G. SCOLLAY.

I have a greenhouse, 125x17 feet and 10 or 12 feet high, running southwest. I am about to add 50 feet more to the south end and am anxious to know if my heating plant (hot water) will work well as I have planned it. It is on a hillside sloping southeast; that side of the new part is about 3 feet lower than the other. The boiler room is on the east side near the center of the old house and the floor, about 7 feet below it. Now I suppose to run a 3/4-inch flow pipe into and up near the top of the house, thence through that to the new part, then down to and alongside the west side in about eight 1 1/2-inch pipes, then across the south end (with a drop of about 3 feet) and back on east side to old part, thence outside and alongside the old part and under ground back to the boiler, with a fall in that return of one or two feet. As the ground is quite sloping on that side the drainage would be good. Would I be likely to have any trouble with the flow, or with the return, two or three feet under ground outside, boxed and packed? O. P. R.

—I assume from your letter that your present house is amply taken care of, but am not quite certain whether or not you have sufficient boiler power for the new addition. If you have not the boiler capacity, a serious problem faces you, that in case you do attempt to use it with a 3/4-inch overhead main, it will undoubtedly rob your old house. Your theory of circulation is quite correct, and the job will work as far as the new addition is concerned. I would suggest that instead of running the 3/4-inch main to the near end that you run it to the extreme end of the new section dropping into two coils, one on each side of the house, bringing the return into one return main, thence back to the boiler in the manner you describe. You had better have the return main running back to the boiler the same size as the overhead main. Be sure and vent the flow main at the highest point, and on one of these two coils place a full opening 2-inch gate valve between the overhead main and the header. You will, of course, understand from this that I intend you should connect from the main to each coil with 2-inch. I would advise you to use considerable care in protecting the pipe running outside of the house back to the boiler; this is very important. For my own use I find the Wroloff patent sectional wood covering to answer all purposes. U. G. SCOLLAY.

Can you please inform me how many runs of 2-inch pipe it will take to heat a house 40x100 feet; also please state if second-hand pipe will answer and oblige. J. E. C.

—You do not give the dimensions of your house, but I presume it will be about "standard" either do you designate the temperature you wish.

Sheep Manure

Pulverized. Free from all Adulteration. In Bag, \$18.00 per Ton. **ROBERT SIMPSON Clifton N. J.**

Assuming that 55 to 60 degrees will meet your requirements, I would suggest that you place in your house 30 lines of 2-inch pipe; this, of course, is for hot water, (which you also neglect to mention). Second-hand pipe will answer if it is sound and clean. I would advise, however, that you look carefully into the history of the pipe before purchasing, to be sure as to what it has been previously used for. Poor pipe or pipe that has been used for other than steam or water purposes is not cheap at any price. U. G. SCOLLAY.

Two connected houses are to be erected for vegetable plants, each house 20x100 feet, 2 foot of glass on side. To maintain a temperature of 60 degrees at zero what method of heating would you employ, steam or hot water? I should like to retain solid beds; in such case, how would you arrange the pipes? Pa. M. G.

—Either steam or water will answer your requirements very well; however, for a range of glass of this size my

TOBACCO DUST OR SAW DUST WHICH???

211 North St. Claremont N. H. Apr 5, 07

The H. A. Stoothoff Co. New York

Dear Sirs.

Please ship mine as follows

- 100 lbs Fumigating Tobacco powder \$3.00
- 100 " Black stuff fine 2.00
- 144 sheets Aphicide, 3.50
- 10 Fumigating plates .50
- \$9.00**

Send the powder by freight, the Aphicide by express prepaid. I enclose check for \$9.00. Three or four years ago I had a bag of the Black stuff fine and it was without exception the best tobacco powder I have ever had. Since then I got some stuff from a seed house. I paid more for the article and got left on it. It was worse like sawdust than anything else. Now I am coming back to you. Yours truly C. E. Stevens.

Say, Stevens, we would sure like to know from you and others like you "why you stray away" to folks who don't know tobacco powder from sawdust. We have been telling you and others in a hundred different ways how smart we are in the way of tobacco powder; that we have been in the tobacco powder business for twenty years, and why our tobacco powder should be and is, twenty years **AHEAD OF ALL OTHERS.** Again we ask, why you let the fellows that don't know, skin you, who should know, that the **BLACK STUFF FINE TOBACCO POWDER**, for dusting, at 2c. per pound, in our bag holding 100 pounds, with our name, address and brand on each bag, sold only by us, direct to you, is the **only one. WE WOULD LIKE TO KNOW.**

AND COME-WAKE UP!

We mean a few of you growers who can't yet see anything but wooden houses! Who shut your eyes to our Iron Frame House just because you won't take the time, the trouble to go carefully into the thing and figure it out dollar for dollar. "The wooden house is good enough for you" simply because you don't know how *really faulty it is*; don't know *definitely* what repairs are costing each year. You don't know how long the Iron Frame House is good for, without a cent expended. We can give you some facts that will jolt you pretty badly, but at the end of a few years when you come to figure the thing up, you'll thank your stars that we got after you, and crowded out the old-time wooden house with our thoroughly modern Iron Frame House. Drop us a line today.

Doremus 40 ft. house.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.
Manufacturers of Heating and Ventilating Apparatus.
1170 Broadway, NEW YORK.

personal opinion is, that the apparatus could be run with less coal in using a hot water system, and possibly less attention. If you decide to use hot water put thirteen runs of 2-inch pipe in each house. Owing to the fact that you are using solid beds you may have difficulty in arranging the pipes to suit you. If you leave a path on each side of each house under the eaves it will simplify matters, as you could then hang five pipes on one side wall, four on the other, and arrange the remaining four in coils of two pipes each, one coil each side of the center bed. I have done many jobs in this way. Of course, you will understand that with this arrangement you will not require the overhead main. I am an advocate of ample boiler power in all cases, and would suggest that you have your boiler of not less than 2,200 feet of 4-inch pipe capacity. Please note that I say 4-inch pipe. I am always careful to mention this, as "capacity in square feet of radiation" does not always hold good. The flow and return connections in your case should equal one 5-inch or two 3 1/2-inch, three 3-inch. If you use steam, place not less than ten 1 1/4-inch pipes in each house. You will require a steam boiler of the same rating in square feet of glass as the hot water boiler above described. Your steam main should start from the boiler 3 1/2-inch and return not less than 2-inch. U. G. SCOLLAY.

Will you please have your heating expert tell us whether or not the 40 h. p. return tubular boiler which we now have, and which is working perfectly satisfactorily, will be large enough to heat the houses as shown on enclosed sketch, which will represent the whole plant, after a proposed addition has been made. We would like to keep the house warm enough for rose growing, and our temperature this Winter has been as low as 20 degrees below zero several times. As you will see by the sketch, there will be two houses, even span, 175x40 feet, 19 feet high at ridge, 5 1/2 feet high at eaves, with two feet of glass under eaves, and all glass in ends of houses. Also one house 80x22 feet, 10 feet high at ridge, 3-span, no glass under eaves on north side, which is 6 feet high, but with 2 feet of glass on south side under eaves and both ends all glass. All houses run east and west, and the land slopes to the south, the boiler being located below grade on the south side of houses. F. M. F.

Mess.
—Candidly I do not think your 40 horse-power boiler would show economical results, even if you did manage to get along with it. The maximum rating of this boiler would be 4,000 square feet of steam capacity, but you understand, of course, that the use of coils entails a much harder pull on a boiler than an equal amount of cast

The above represents our **Concentric Principle** of cutting Sash Bars to fit the gutters and plates.

The Bars Always Fit and no moisture collects at the connections as it does in the beveled cut; and so

iron radiators, hence it is seldom safe to count on the maximum rating. To maintain a rose growing temperature in your climate and for a range of glass such as you describe you would require a 60 horse-power tubular boiler to do the work in such a way as would be considered satisfactory from a heating standpoint. Personally, I would use no smaller boiler than the above as I know it would be money well invested. Kind-

Look Here, Mr. Florist and Gardener

WE have just passed through an unusually severe winter and you are apt to forget the many sleepless nights you spent worrying about the temperature of that No. and so house.

Or the many zero nights that you spent in the boiler pit; maybe you did not have to do the stoking and firing, but **you** certainly had to do the worrying and pay the coal bills.

Now keep the vows you made on those trying occasions, **And Send for me.** I have solved the problem for others, I can do it for you; and remember, I will come recommended by some of the most prominent commercial florists and gardeners in the East, "Personal friends of yours."

Wm. H. Lutton,

Heating Engineer

WEST SIDE AVE. STATION, JERSEY CITY, N. J.

EVERYBODY IS TALKING

about their material and each one says he has the only kind of greenhouse material that ought to be used. You read each advertisement and are at a loss to know where to buy material for your new houses. You begin to wonder which one of the advertisers is honest and will give you just what he talks about—you get right up to that question again when you begin to look over the estimates. You finally give the order to the lowest bidder or to the fellow you have the most confidence in. Now we have been doing business for forty years and have made nothing but greenhouse material—we have the largest list of satisfied customers—we have the best facilities for handling the work and hundreds of testimonials backing up our talk. If you want quality and honest value we want your order—if you don't care give it to the other fellow.

JOHN C. MONINGER CO.

CHICAGO

115 E. Blackhawk Street.

Save Greenhouse Fuel

With the Ideal Concrete Block Machine, any florist can build his own greenhouses at little cost. Saves in fuel, because the hollow block is practically frost-proof. Lowers insurance rates and ends the cost of maintenance, because Ideal Blocks are fire-proof and everlasting.

**IDEAL
Concrete Machine**

The original and only perfected Concrete Block Machine working on the face-down principle.

Enables the manufacture of Ideal Concrete Blocks from sand, gravel and a little cement at a cost far lower than that of other building materials. May be operated by any man without previous experience. Low in cost, rapid in operation, and can never wear out or break in use.

Write for catalogue and illustrations of Ideal Concrete Block construction, of practical value to every florist. Sent Free.

Prices Advertised in these Columns are for

IT was last week we talked about Pulp=Ground leads and our Bone=Dry lead and the way we ground it in oil after its thorough Kiln=Drying,

besides a lot of other things that go to make up a greenhouse paint that can be guaranteed not to mildew, peel or crack off if properly applied. Now a word about the oil we use in this paint. Perhaps you have bought the very best so-called refined, acid bleached oil. Right here is where you made a mistake! This very refining process takes certain life from the oil and leaves it with an amount of acid which attacks the lead. Every gallon of oil we use is pure, raw linseed, which is placed in immense vats, containing thousands of gallons, and there left to settle, four to six weeks; this oil is now thoroughly free from all impurities, and for some reason known only to chemists, has cured itself so it incorporates more evenly with the white lead. Then this is the kind of oil we grind with our bone-dry lead, making the kind of paint which overcomes all those discouraging things which you had to contend with.

You see the way we go into this paint question, by getting right at the bottom of the thing. That's exactly the way we do the whole greenhouse business. If it's thoroughness, endurance you want—then you'll write to us this very day for prices on this Ideal Greenhouse White Lead, and our various construction circulars, catalogs and information.

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Enchantress and Lawton types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

ROCHESTER, N. Y., May 20, 1907.

THE FLORISTS' EXCHANGE,
New York City.

Gentlemen: Please stop our regular advertisement running at present, and give us just enough of your valuable space to keep our name before the trade. We are drawing to the close of the most successful season in the florists' department we have had in years, and at the present time, while we have a reasonable quantity of about everything that florists use, we have no surpluses to advertise.

With the present to encourage us, we are "laying pipe" for future business on a bigger scale than ever before.

Yours very truly,
JAMES VICK'S SONS.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION
 Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala. second vice-president; C. E. Kendall, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

NEW YORK.—The Hotel Astor is the meeting place and headquarters of the American Seed Trade Association, the twenty-fifth annual convention of which takes place June 25-27 next. This hotel is conducted on the European plan only, and accommodations can be secured at prices ranging from \$2.50 up to \$30 per day. The hotel is centrally located, at Times square, only a short distance from the Grand Central station and convenient to the subway and all surface lines. M. H. Duryea of Henry Nungesser & Company; seedsmen, is chairman of the local committee on entertainment, from whom fuller particulars can be obtained.

The coming convention of the American Seed Trade Association promises to be one of more than ordinary interest, both in point of usefulness and in the matter of attendance. The Chicago seedsmen are wide awake—whoever saw a Chicago man asleep? At the present writing they are doubly active in their efforts to show what Chicago can do when the object is a worthy one. During the past week they have been drumming up their forces, and have concluded to charter a Pullman car and come to New York as one united family. Leonard, Vaughan and Charles Hollenbeck have the matter in charge, which is a guarantee of success.

PHILADELPHIA.—It is proposed by the Centenary Firms and Corporations of the United States, of which Burnet Landreth, seedsman, is chairman, he having conceived the organization and held the office since 1889, to hold a reunion dinner, to take place at the Bellevue-Stratford Hotel, this city, Thursday, June 6, 1907. The cost will be \$15, and checks for that amount should be mailed by intending participants to Francis Jordan, Jr., treasurer, 127 North Water street, Philadelphia, Pa. Following the dinner a revised edition of the Memoirs of Centenary Establishments will be published.

As there is only one Association of Centenary Firms in the world, membership in it is a most distinguished possession and it is worthy of note that the two ancient seed houses of Landreth and Thorburn are enrolled among the thirty-one 100-year-old firms in the United States, the former having been established in 1784, the latter in 1802. The oldest firm in the association was established in 1687, and ten others before the Revolutionary War.

GRAND RAPIDS, MICH.—Alfred J. Brown Seed Company report an active Spring business along all lines of garden and field seeds. The bean trade is a specialty, and to go through their establishment is sufficient to show they "know beans." Their apparatus for cleaning and picking is complete. The only hand-work consists in throwing out the poor seeds from an endless belt as it passes in front of the pickers. This work requires one hundred pickers for several months in the year, as the concern grows beans largely as a food product, as well as for the trade.

MEMORIAL DAY

As Memorial Day falls on Thursday, May 30, we respectfully request our advertisers and correspondents to have their "copy" in our hands not later than Wednesday forenoon, May 29. Kindly give this matter your best attention.

ST. JOSEPH, MICH.—In the clover seed case of George Phiscator vs. Dwight C. Rice, recently referred to in this column, the jury found a verdict against the defendant, fixing the damages at \$25, which carries with it court costs for the trial to be assessed against the defendant, of an amount not to exceed the judgment, under the law, so Mr. Rice will be compelled to pay as damages and costs but \$50. The case has turned out fairly satisfactory to Rice Brothers, so they claim, in that the other side will get but \$50 out of them, whereas the plaintiff hoped to get a bonanza. The suit, however, has proved expensive to them, for the Supreme court costs and attorneys' fees will run close to \$1,000.

JACKSON, MICH.—This is fast becoming a seed center along some of the more important lines, viz., beans and cucumbers, the soil being admirably adapted both for the development of types and the production of the crops. Beans are an important and leading industry in this section, and a favored locality for the growing of stock seeds. Many of the largest dealers in our country depend upon this section for their supply, and for a two-fold reason: First, and a highly important one, is the fact that whatever seed is entrusted to the earth, there is always a reasonable promise of for seed purposes is rapidly increasing.

The sample of seed is as fine as that of the best French grown. It is uniform in size, a handsome sample, and the crop is a profitable industry at less prices than the French grown seed.

The Ishell Seed Company are pioneers in this section, and report a good season's trade and satisfactory outlook.

CHICAGO, ILL.—The seedsmen here have the same "regrets" of a backward season as are in evidence all over the country. But the past few days of encouraging warmth has set the buds in operation, and growth along every line is so rapid as to be felt if not seen. This favorable condition has set the gardeners at work with an energy that knows no bounds, and the demand for seeds is all that can be desired.

W. W. Barnard & Company's retail department swarmed with customers, who are now regretting their delay in purchasing. Trade, considering the season, has been very good, both in the jobbing and retail departments.

S. E. Leonard Seed Company voice the same sentiments as all others in the trade: "The excessive cold and disagreeable weather has materially injured business, but not regarding that, our trade has been very satisfactory."

J. C. Vaughan's immense retail department is about as busy a place as one

Stokes Seed Store

219 MARKET ST., PHILADELPHIA.

MINNEAPOLIS, MINN.—Northrup, King & Company do not frown upon the slow approach of warm weather; they need not, having had a prosperous season in spite of the backward weather. They realize the fact that the demand for field and garden seeds is increasing faster than the establishments that distribute them.

were only a little more tempting, the English and Irish growers might be tempted to take tulips in hand and see what benefit would be derived from a change of soil and climate. There are several thousands of acres of land in the New Holland district of England which would suit the culture well, and the climate differs very little from that of Holland. The culture of narcissi is already carried on to a very large extent most profitably, and if the spirit of "haste for big returns" can be kept in the background, the industry should become a permanent boom to the district.

The disastrous results which have followed an injudicious use of an improper muck cart at Ollionles, Toulon, and some parts of Holland should act as a salutary warning.

While one feels in a moralizing mood, it may be permissible to remark regarding that golden "creation," the Eldorado potato, that the man through whose instrumentality it was hoomed up to \$350,000 per ton four years ago is not planting so much as one tuber this year. *Sic transit gloria mundi.*—EUROPEAN SEEDS.

HOLLAND BULB CROPS.—Advices from Holland announce that as so far there has been little disease in bulbs generally, the shorter acreage planted out may not cause any serious shortage, provided the demand is not in excess of last year's.

CATALOGUES RECEIVED.

JULIUS ROEHR'S COMPANY, Rutherford, N. J.—Catalogue of Orchids, Stove and Greenhouse Plants, and Select Nursery Stock. This is a well printed and handsomely illustrated catalogue, the enumerations in every department being very complete and comprehensive. Particularly is this so in the case of the Orchids, some 18 pages being devoted to a descriptive list of these. This is followed by interesting lists of Stove and Greenhouse Plants, Palms, Cycads, Ferns, Evergreens and Conifers, Flowering Shrubs, Bay Trees, etc. All the newest and best sorts are included in each class of plants offered. The covers also are very attractive, the front one being a reproduction, in color of a flowering spray of the charming *Dendrobium Phalaenopsis Schrodlerianum*, the back cover showing views in the firm's nurseries, reproduced from photographs. Both the distributor and printer are to be complimented on this excellent production in the way of a catalogue.

SIEBRECHT & SON, New Rochelle, N. Y.—Catalogue of New, Rare and Beautiful Plants. This catalogue, which is excellently printed and profusely illustrated, is exceedingly comprehensive in its offerings of Palms, Orchids, Tropical Greenhouse Plants, Stove and Greenhouse Bulbs and Tubers, Stove and Greenhouse Climbers and Creepers, Succulent Plants, Ferns and Selaginellas, as well as in lists of Azaleas, Rhododendrons, Roses and General Florists' Stock. All the best novelties and plants of recent introduction are included. An interesting part of the catalogue is formed by the illustrations of the firm's city stores, showing the concern's gradual development in the past 40 years, to its present mammoth proportions.

MEMORIAL DAY

As Memorial Day falls on Thursday, May 30, we respectfully request our advertisers and correspondents to have their "copy" in our hands not later than Wednesday forenoon, May 29. Kindly give this matter your best attention.

Our readers in the Seed Trade will recognize the photograph as being that of J. J. Comont, the well-known Representative of Messrs. Carter, Dunnet and Beale, London, Eng.

more than an average crop, as failure is more rare there than in any other section of our country. The next important consideration is that types particularly of beans, are more constant than in most other sections. For that reason the leading growers of bean and cucumber seeds look to this locality for their stock seed. The radish here finds a congenial home, and the production

can find outside of a beehive in June. Neither frost nor rain has dampened the ardor of the multitude seeking seeds. Here there need be no question asked as to trade conditions; the crowds of purchasers anticipate the query, as it is difficult to make way to the counters for a supply of seeds, bulbs and plants. The latter department is richly stocked with every variety of ornamental and flowering plant, shrub or vine, suitable for present planting.

Peter Hollenbeck, whose name is a household word in the trade, moves on in the even tenor of his way, having a desirable retail business. He says trade is generally good (his countenance shows it). Also that the onion set business has been exceptionally active, and prices much above the average.

IMPORTS OF SEEDS, ETC.—May 11 and 12.—R. J. Godwin's Sons, 20 packages seed; M. L. Van Dirk, 54 boxes plants; F. B. Vandegrift & Company, two cases live plants; the Wells, Fargo Company, five packages plants; Spingarn Brothers, four cases plants, etc. May 14.—H. Frank Darrow, 31 cases plants, 72 tubs laurel trees; McHutchison & Company, two tubs laurel trees, 60 cases plants; Maltus & Ware, one case plants; Smith & Bolzenthal, 72 tubs laurel trees, 15 cases plants; Jan. Ter Kuile, one case plants; Vaughan's Seed Store, 24 cases plants; Wakem & McLaughlin, six cases plants, 20 tubs laurel trees; Brown Brothers & Company, 98 sacks clover seed; J. B. Gorman, 100 sacks seed; Wakem & McLaughlin, 100 sacks seed; J. L. Hopkins & Company, five packages plants; M. Milletot, two packages plants; Botanical Garden, one case dry plants. May 15.—Maltus & Ware, seven packages plants; Agent Union Pacific R. R., six bushels flower seeds. May 16.—A. Held, three cases orchids. May 17.—A. Held, two boxes plants; Maltus & Ware, 28 cases plants.

ST. PAUL, MINN.—If there is one man happy over the conditions of the weather of the past month, it is L. L. May, who is largely in the nursery business, and such men delight in backward seasons, as it enables them to continue their shipments for a month without danger of injury from a too early start of the buds, prolonging the season vastly. L. L. May & Company have profited largely from the backward season, and their seed trade has also been very satisfactory.

THE BEAN CROP OUTLOOK.—The untimely frosts in the South, which destroyed all the early plantings, drew considerably on the surplus stocks, and the fact of a reduced acreage being planted in some sections, makes the dealers firm in their prices. In fact, some of the larger and more reliable growers now refuse to contract for 1907 crops, at the present prices for 1906 crop. For strictly reliable stocks, prices are more likely to advance than to decline.

European Notes.

The opinion of many meteorologists that the remarkable changes of temperature which we are experiencing are due to earthquakes which abound in divers places, appears to be founded on fact, for simultaneously with the outbreaks of the volcanoes Etna and Stromboli comes a heat wave that is simply killing. As it is accompanied with frequent heavy rains our cities are a fair reproduction of your City of Brotherly Love on a muggy day. Of course, vegetation simply leaps into life and is rapidly making up for lost time. In the south of England sweet peas sown in October and wintered in the open field are in full bloom, while hyacinths and tulips are still at their best in gardens near by.

The prevalence of disease among the latter is assuming serious proportions, and a warm time awaits the ubiquitous Dutchmen when they come round for their accustomed orders. If the prices

THE PERIODICAL CICADA IN 1907.—The Bureau of Entomology of a United States Department of Agriculture is distributing a circular of inquiry concerning the brood of the periodical cicada or "locust," which will occur in May and June of this year throughout the Southern States east of Texas, except Florida, northward in the Mississippi and Ohio valleys through Missouri to southeastern Iowa, and over most of central and southern Illinois and extreme northwestern Indiana. This brood covers also western Kentucky and more or less of Tennessee, with extension northeastward across the Carolinas into Virginia. A doubtful record is known from the Rio Grande in the region of El Paso, Texas, but no other records have been obtained for this State, and the El Paso record is therefore open to some question. The Bureau of Entomology wishes to obtain a complete record of the distribution of this important brood this year, and therefore a reply card is sent with the circular, on which the information relating to its occurrence in each district may be indicated.

The cicadas or "locusts" will appear between the middle and end of May—later in the northern range of the brood and perhaps a little earlier in the southern range. Records of scattering occurrence after the middle of June may apply to other species of cicadas which occur every year, and in any doubtful case it will be just as well to send specimens for determination. The brood of this year is the largest of the thirteen-year broods of this curious insect.

The periodical cicada is so well known that a general account of it is unnecessary. When it appears in great numbers, it naturally causes considerable alarm and arouses fears for the safety of shade trees and orchards. The actual damage, however, is usually slight, except in the case of newly planted orchards, and even here, by vigorous pruning back after the cicada has disappeared, much of the injury caused by the egg punctures can be obviated.

Ordinary repellent substances, such as kerosene emulsion or carbolic acid solutions, seem to have very little effect in preventing the oviposition of these insects. Some recent experience, however, indicates that trees thoroughly sprayed with Bordeaux mixture or a lime wash are apt to be avoided by the cicada, especially if there are other trees or woods in the neighborhood on which they can oviposit. The most reliable means of protecting nurseries and young orchards is by collecting the insects in bags or umbrellas from the trees in early morning or late evening, when they are somewhat torpid. Such collections should be undertaken at the first appearance of the cicada and repeated each day.

It is hoped that everyone who receives this circular will keep a sharp lookout for swarms of this brood of cicada and assist the Bureau in fixing its range accurately by sending explicit information.

Seasonable Notes.

When evergreens lose their leaders they become of very broad outline for a while, with but little addition to their height. A strong side shoot should be tied to a stake as a leader. It will form one in time; but the perfection of appearance of an evergreen depends on the retention of its original leader.

Some notes on yuccas in an old horticultural magazine, written from Mission Valley, Texas, say that *Yucca gloriosa* flowers there in March. This statement seems a mistake. Here it flowers in October. In England it blooms in July. There is a suspicion the plants are not one and the same thing.

Lawns are best freed of plantains, dandelions and other weeds, by cutting them out with a suitable knife. Taken after a heavy rain, it is not a hard task; in many cases the plants can be pulled out almost, and a good stretch of lawn can be gone over in a day.

At Cornwall, in the south of England, many eucalyptuses are quite hardy, the only place in that country of which this can be said. *E. coccifera* is considered the hardiest, but *cordata*, *urnigera*, *saligna*, *resinifera* and *viminialis* all live out. A specimen of *coccifera* there is 70 feet high. Cornwall is the southernmost part of England.

The American mist tree, *Rhus cotinoides* is a better species than the common one of Europe, *R. cotinus*. The leaves are larger, handsomer and of a pleasing green color, while the growth of the shrub is not so straggling as that of the other. It is still rather uncommon in collections.

Those who see the various forsythias in flower in Spring usually favor the Fortunei, because of its drooping habit. But with good pruning every Spring after it has done blooming, the viridissima can be made into a handsome, bushy specimen.

Clumps of daffodils are better divided occasionally, that the bulbs may become strong. When many are to-

The luxuriance of the foliage and flowers of roses is much advanced by giving the plants liquid manure water when they are growing in Spring. The same objects are obtained by a good mulching of manure in early Winter.

Regarding everblooming roses, almost the opposite system of pruning is required. It is the strong shoots that spring from the base that give the best flowers, so this class of roses require a cutting back to a degree not necessary with those that flower but once.

Planting the Tulip Poplar.

Those interested in forestry matters are giving much attention to the merits of the tulip tree, or tulip poplar, *Liriodendron tulipifera*, its wood being valuable in many ways. The difficulty some meet with in transplanting it need not be if a good pruning be given at the time. Indeed, young plants do not demand this; only those of, say, six feet and over, and in all cases the pruning depends on whether or not the trees are from transplanted blocks. But prune, anyway; nothing is lost by it, and it makes planting safe. But be sure to remember that a tulip tree planted in the North in Autumn will die. Spring is the season to move them, and Spring only.

This tree grows readily from seeds. In the forests where the seeds fall in Autumn numbers of seedlings are to be found in a season or two, showing the seeds germinate well when kept moist from the time of falling. When collecting or purchasing seed of the tulip tree do not expect all the seeds to be sound. They never are. If the half of them are viable it is a good sample; and the same holds true with sugar maple and some other seeds.

JOSEPH MECHAN.

Prunus Pseudo-Cerasus.

The two accompanying pictures are of a form of *Prunus pseudo-cerasus*, the Japanese flowering cherry, a lovely Spring-blooming shrub. One picture depicts the plant itself in full flower; the other, a branch in blossom, showing more in detail what the individual flower is like.

These Japanese flowering cherries are the admiration of the shrubbery during the early part of May, when they are in full bloom; it is astonishing the wealth of blossoms they carry. The flowers expand with the first leaves, in some cases in advance of them; they are large, pink or blush (rosy-pink in the form illustrated), often clustered, and borne on rather long pedicels. Just how really beautiful these cherries are when in flower is somewhat difficult to describe. The best way to find out is to obtain a plant; for although a picture is good in certain respects, and serves a purpose, there is nothing like viewing the natural subject itself.

Glen Cove, L. I.

JOHN F. JOHNSTON.

BOARD OF PARK COMMISSIONERS, Minneapolis Minn.—Twenty-fourth annual report. Through the courtesy of Superintendent Theodore Wirth we have been favored with a copy of this interesting document, which is profusely illustrated. We are pleased to observe the deservedly high encomiums passed on the superintendent's report by President Fred. L. Smith. Jesse E. Northrup, seedsman, is vice-president of the board.

Flowering Branch of a form of *Prunus Pseudo-Cerasus*
 Photo by J. F. Johnston.

gether they all become weak, preventing their flowering. Double flowering ones are more lasting than the singles.

Winter mulch placed around rhododendrons and similar plants, should be taken away in Spring, unless there is room to allow of an increase in the height of the soil, as it brings the roots near the surface, which is not desirable.

Pruning Hybrid Perpetual Roses.

There are two methods of pruning hybrid perpetual roses, both right according to what is desired. Those who wish a large number of flowers do not prune the bushes a great deal, while those who prefer large flowers even if but a few, cut back the shoots leaving but about a fourth of the growth. The shoots of the previous season are those that give the flowers. One-fourth cut away is ample when the shoots are strong. There will then be a nice display of fair-sized flowers.

Form of *Prunus Pseudo-Cerasus*. Blooms Early Part of May; Color, Rosy Pink

Photo by John F. Johnston.

AMONG THE GROWERS

Julius Roehrs Company, Rutherford, N. J.

Elsewhere in this issue will be found a full page illustration, in color, of the flower of that beautiful orchid, *Dendrobium Phalaenopsis Schrederianum*, as grown by the firm of Julius Roehrs Company at Rutherford, N. J. When a firm of orchid importers and plant growers takes this elaborate method of advertising its specialties, it is a sure indication of the great importance to the trade that the orchid industry is assuming, and also well illustrates the business acumen of the concern, which is sparing no effort or expense to be at the head of the procession in the importing, growing and distributing of orchids and other rare plants.

It is now some twenty years since Julius Roehrs, Sr., located at what is known as Carlton Hill, Rutherford, N. J. As his two sons grew up to manhood, and after they had received a thorough training, not only at home under their father, but in England and France at some of the largest establishments, Mr. Roehrs had the business incorporated in 1904, under the title of Julius Roehrs Company, which consists of the elder Mr. Roehrs, Julius Roehrs, Jr., and Edward Roehrs, all of whom are practical plantmen, familiar with every cultural detail, and with business capacity that has been obtained by close study and application, which gives the firm as a whole unusual advantage in the running and maintaining of a strictly up-to-date horticultural establishment. The property of the Julius Roehrs Company embraces fifty acres, about forty of which are devoted to the nursery business, where a magnificent stock of decorative trees, shrubs and plants is being developed.

One of the main specialties of the Roehrs Company is, and always has been, the cultivation and collecting of orchids. The firm has its own collectors out at all times, and is constantly in receipt of new shipments. During the year 1906 a range of glass was built especially for the cultivation of orchids, and nowhere else perhaps can be found so complete a range of glass for orchid culture as is here. The new range consists of six houses, each 150 feet long by 18 feet wide, built of all iron construction, iron and tile benches and equipped with a sprinkling apparatus in order that the paths and every part of the surface underneath the benches can be moistened by the simple turning of a faucet. The orchids grown are chiefly for cut flower purposes, and comprise one house of *Cattleya Mossia*, one house of *C. Gaskelliana*, two houses of *C. Trianae*, one house of *C. gigas* and a house of mixed varieties. We may say here that each of these houses holds 6,000 plants.

Julius Roehrs, Sr.

In addition to this range of glass, there is the old orchid range, comprising fourteen or fifteen houses, which are filled with all that is best in commercial orchids. Here is seen perhaps the finest house of *phalaenopsis* in the country. It is a well-known fact that this Philippine orchid is one of the most difficult to establish, but by the methods employed here of conserving moisture, the culture of *phalaenopsis* has been very successful. We remember seeing this house several years ago when a large importation had newly arrived from the Philippines, and the present condition of the plants fully justifies us in saying that their cultivation has been most successful, and, no doubt, exceedingly profitable, as they have become well established, and flower freely in their season. New importations of *Cattleya Mendelii*, recently arrived from Colombia, and *C. labiata* from Brazil, from

the firm's own collectors, are spread out on the surface of the benches in one house, and show signs of rapidly recuperating from their long journey.

A very interesting feature in one house is a number of seedling *cattleyas* from crosses obtained on the premises, and many good things are expected to come therefrom. Unlike the carnation hybridizer, however, who can see the results of his crossing in a single season, the raiser of *cattleya* seedlings has to wait six or seven years before the plants show flower. Here are also seen immense numbers of *Dendrobium Phalaenopsis*, *ocidiums* in variety; and particularly worth mentioning is a large collection of *Oncidium splendendum*. *Cyripediums* in variety are grown extensively, as also are *lalias*, particularly *L. purpurata*, as well as *Cattleya Schrederiana* and hybrids, among the latter being many very beautiful and valuable forms.

Speaking of the more valuable and rare orchids, there is one here, a pure white *Cattleya Mossia*, and another of the same variety of a light blush tint, which does not show any purple and yellow in the coloring. Both of these, we understand, are of extremely high monetary value.

In a tank underneath the bench of one of the new orchid houses, a school of alligators is being reared.

In addition to orchids many flowering plants are grown on the establishment, among which are gardenias, *Marguerites*, *Begonia Gloire de Lorraine*, camellias, of which a large number are raised, spiræas and roses for pots. Among the Rambler roses the variety *Lady Gay* is considered one of the best in the pinks, its points of excellence over the variety *Dorothy Perkins* being its larger flowers, its deeper color and being, if anything, a little easier to bring into flower. There is a new variety of a very pleasing light pink shade that gives promise of becoming a favorite, the name of which is *Tausend-schön*. The *Crimson Rambler* is still an old standby, and is grown in quantity.

The collection of stove, or warm greenhouse, plants here is a most interesting one, and one in which this firm does a very large and steadily increasing business. Commercially, this class of plants is not known nearly so well as it ought to be, as there are many subjects among them that can be used to great advantage in retail work, and which have a distinctiveness and luxurious effect in a retailer's store window that is not to be secured with any other class of plants. Here are *anthuriums* in many varieties, some of them with their large, noble-looking leaves being almost as decorative when not in flower as they are when in full bloom. A most magnificent subject is *Medinilla magnifica*; this large and ponderous-leaved plant is always decorative; also *Scutellaria mocciniana*, with its scarlet heads of tubular flowers; *Ficus pandurata*, another large-leaved plant, is beginning to find its way into the commercial ranks; *Rhapis flabelliformis*, always decorative, whether in large or small specimens; *crotons* in many varieties, most beautiful in their coloring many of them, and a plant that every florist should handle more of, *Pandanus Veitchii*, also *P. utilis*, the latter likely to become more of a favorite again than it has been for two or three years past. There are also *aspidistras*, plants that will do well either in a warm house or a cool one, and will stand more wear and tear in a store than any other plant known, probably; *dracenas* in all the best commercial varieties, both the wide-leaved and others. Fancy-leaved *caladiums* are also a feature, and among the plants suitable for a stove temperature, we noticed a collection of *ixoras*. While this beautiful flowering plant is not adapted perhaps for commercial purposes, no private collection is complete without it.

Of palms and other decorative plants there is a superb collection, including large specimens of *phenix*, *kentias*, *caryotas*, and *pritchardias*. In ferns, *Cibotium Schiedei* is grown very extensively, and is seen in various sizes. The old Boston fern is still a favorite and is raised in quantity, and of the newer *Nephrolepis Whitmani* is being grown in quite large numbers. For Summer flowering many large plants of *Hydrangea otaksa* are grown in tubs, and are now just beginning to show their buds. *Adiantum Farleyense* is made a specialty of, and is grown in very heavy quantities. Another specialty here is lily of the valley which is forced for cut flowers, and together with the cut flowers of the orchids, is sold through the firm's agent, W. S. Allen, 53 West Twenty-eighth street, New York. We believe we can safely say that Mr. Allen receives a supply of lily of the valley and orchids every day throughout the year from this firm.

The Julius Roehrs Company is also one of the largest, if not the largest, importers of bay trees and trained boxwoods in the United States, and the collection on hand at any time of the year is well worth a visit to the establishment; they are in all sizes and shapes, and in innumerable quantities. As an indication of the extent of the concern's orchid business, we may mention that a Chicago firm that lately entered into the growing of these specialties, received two carloads from the Roehrs Company within the last few days. Edward Roehrs, the junior member of the firm, left on Friday evening last for Chicago to see to the safe delivery of the last carload, and incidentally to sell another carload or two if possible.

Week's Work, The 707

Boston. Mass. Horticultural Society.

Though not a regular exhibition day at Horticultural Hall, Saturday, May 18, there was brought in a noteworthy display of Spring flowering plants. Chief among the exhibits was a magnificent collection of eighty-one named varieties of tulips, single and double, from R. & J. Farquhar & Company. Hardly less interesting were the displays of bulbous plants, pelargoniums, carnations, and orchids from William Whitman of Brookline (Martin Sullivan, gardener), and of eighty varieties of hardy flowering plants from the Harvard Botanic Garden by Robert Cameron, superintendent. Julius Heurlin of the Blue Hill Nurseries also brought in a large collection of fifty species and varieties of herbaceous plants, and Mrs. E. M. Gill of Medford exhibited a choice assortment of caruations, sweet peas, stocks, and tulips. The exhibition was of so much interest that the committee decided to keep it open the following Sunday. The next exhibition will be the annual Rhododendron show on Saturday, June 8. Much interest is already manifest in the circular announcing the additional special prizes offered for the chrysanthemum show in November. Copies of this list can be obtained on application to the Secretary at Horticultural Hall.

News Notes.

The Arnold Arboretum and park system are very interesting resorts these days on account of the magnificent displays of flowering trees and shrubs. The prunuses are just about past, and the many varieties of flowering crabs are now in their full glory. The most striking variety at the time of writing is Malus Niedzwetzkyana, which is one of the richest colored of all and equally if not more attractive than the variety Halleana, better known as Parkman's variety. Another pretty shrub at present which is too seldom seen is Potheringilla major. The lilacs are just beginning to show color and will be an attraction in a week or ten days. The public garden this year shows a marked change from the Spring displays of former years, and Superintendent Sullivan is to be congratulated on the many improvements he has made, especially in the color effects of the beds of tulips and other bulbous plants. The many friends of P. J. Donoghue sympathize with him in the death of his father which occurred at his home in Natick on Monday. Henry M. Robinson & Company have secured the second floor of the building they occupy at 15 Province street, thus giving them extended room for the handling of florists' supplies. Welch Brothers are prepared to do an extensive Memorial Day trade, their ample floor room and facilities making shipping easy of accomplishment. Philip Breitmeyer, Detroit, was a visitor to the Hub the past week.

Club Meeting.

The Gardeners and Florists' Club meeting on Tuesday was well attended and was a very interesting gathering indeed. Instead of a regular lecture there were short talks by several of the members on interesting topics. W. N. Craig spoke on Spring flowering bulbs and described the methods of planting and the many different varieties of narcissus, tulips, and hyacinths. Frederic J. Rea gave a brief talk on the planting of a herbaceous border, and Thos. H. Westwood described his methods of Summer bedding. Duncan Finlayson, James H. Morton, John W. Duncan and others took part in the discussion that ensued. In answer to an inquiry in the question box as to the best method of keeping over Richmond roses for two years, W. H. Elliott said that those he kept over last year were now doing finely, but did not give first-class blooms until toward Spring. He had expected they would be his best for Christmas, but the young plants were ahead of them at that time, although later they made up for lost time. On the exhibition tables were a fine vase of carnation Alma Ward from Peter Fisher, Trollius japonicus excelsior from Julius Heurlin, which received a report of merit; Gladiolus nanus Peach Blossom from R. & J. Farquhar & Company, which received honorable mention, and new rose White Killarney from the Waban Rose Conservatories which also received honorable mention.

J. W. D.

CANADIAN NEWS

LONDON, ONT.—With the bright, warm days, business is on the rush. There is a large demand for bedding plants; peonies, phlox, hydrangeas and Crimson Rambler roses have sold fairly well and of h. p. roses and clematis the sales are far ahead of those of any previous season.

About two weeks ago the florists and gardeners of London met to try and set prices on bedding plants for the Spring retail trade. The meeting was very well attended and everybody seemed to be greatly in favor of higher prices for bedding stock. The following prices were decided upon: Geraniums, 4 1/2-inch pots, \$1.50 to \$2 per dozen; coleus, 75c. to \$1 per dozen; canna, \$1.50 per dozen; heliotrope and salvia, \$1 to \$1.50 per dozen. All annuals in boxes of 18 or 20 plants to a box, 25c. a box; hanging baskets, for filling a 12-inch basket, \$1; larger baskets charged according to size. Since the meeting some of the gardeners appear to be getting cold feet, as several have gone back to the unprofitable prices of a year ago.

Gammage & Son received their usual large shipment of palms and araucarias from Belgium last week; the stock this year is nothing to be compared with that of a year ago. This year the palms are not as well shaped and the leaves are all more or less marked. It will keep us guessing to get much more than the cost price out of them. F. C.

New Hampshire Notes.

The cold weather is not only retarding the growth of vegetation, but it is seriously interfering with all kinds of business. In the White Mountains May 4, snow fell to the depth of four inches. All of the high mountains are still white and in many of the forests there was a depth of nearly two feet of snow. The last week, May 6 to 11, has been little or no better. There are few florists in northern New Hampshire and this year most of them will look southward for flowers for Memorial Day.

WEST DERRY.—Freeman M. Smith has given up his business and the property goes back to its original owner, R. G. Sawyer. Mr. Sawyer is not in the best of health and is anxiously looking for some young man with a florist's ambition to buy the property.

CONCORD.—Charles H. Barrett, who assumed the business of Frank A. Mann & Company on March 9, is making big improvements in the store. New show cases, counters, and other stock will make the store the best appearing in the State.

BERLIN.—There is only one florist directly north of Mt. Washington.—Mrs. H. E. Smith & Company. Although not a large concern it is educating Berlin people to know what flowers are. The firm consists of Mrs. Smith and Thomas Lee.

LITTLETON.—H. M. Prime is running the houses known as the Parker Greenhouses. There are two of them, each about 300 feet long, and one or two small propagating houses. Mr. Prime raises cucumbers in one house and general stock in the other.

A. R. Smith has two small houses devoted principally to vegetable plants. Next Fall he plans to raise quite a quantity of bulbs—hyacinths, narcissus and tulips.

WEST SWANZEY.—Your correspondent was shown over the private grounds of Denman Thompson (Uncle Josh) May 10. J. P. Butler, the gardener, conducted me through the greenhouses and about the grounds. The houses are small but well arranged; one is devoted to flowers and the other to vegetables. The gardener has a cosy home built at the end of one of the houses. I also met Mr. Thompson who received me very cordially. He is a hearty old gentleman nearly 74 years old, but expects to spend eight weeks next Winter on the stage.

In one of the greenhouses I visited in this State I found that worms were eating the geraniums. I opened one stalk and found it full of white worms about a quarter of an inch in length. They seem to start in the roots, working their way up and then out in the form of a black winged ant. The trouble is doubtless in the soil, and many remedies are being tried. CAROLUS.

A SPLENDID IMPORTATION

—OF—

**ONCIDIUM
VARICOSUM
ROGERSII**

JUST ARRIVED;

This Orchid is one of the most popular and free-flowering types of the *Oncidium* family. *Oncidium varicosum Rogersii* throws 3-foot stems, bearing as many as 170 blossoms of a rich, golden yellow, 2 inches and over in diameter, and can be successfully grown either on blocks of wood, in pots or in baskets, and flowers in November and December in a night temperature of 55 to 60 degrees.

Oncidium varicosum Rogersii

PRICES

Strong Plants, \$1.00 each, \$10.00 per 12, \$75.00 per 100.
Selected Plants, \$1.50 each, \$15.00 per 12, \$100.00 per 100.
Extra Selected Plants, \$2.00 each, \$20.00 per 12, \$150.00 per 100.

THE WEEK'S WORK.

Timme's Timely Teachings.

Boston Ferns.

It is time to make provision for the Summer's bench treatment of Boston ferns with a view to working up a good supply in this line for the coming season.

In selecting a bench for the purpose good light, ample drainage and plenty of overhead ventilation are points first to be considered; thrifty 3-inch stock to start with, and the proper kind of soil to plant it in being next in importance.

Moderation in watering and more especially in the matter of shading prevent flabby, soft growth, a defect so common and so objectionable in ferns of this class.

Maidenhair Ferns.

A partial rest of five or six weeks may not restore bench grown Adiantum cucumatum and its newer varieties to its former vigor, but it is the only means of bringing exhausted stock back to a state of fairly profitable production for another season.

Primulas.

The various types of greenhouse primroses, though excellent holiday stock if raised expressly as such, are good selling plants throughout the long season in which they can be had in bloom.

such be handy. Manure, unless very far from being green, and then only for older plants, should not be used in preparing the soil for primulas.

Campanulas.

Seeds of the several varieties of perennial campanulas, found to be the best sorts for field and pot culture among the many under cultivation, should now be sown, as also should those of most other kinds of hardy perennials that admit of being so raised.

Canterbury bells are biennials, raised from seeds and flowering the second year. This is the time to sow the seeds. Whether for outdoor or indoor culture their treatment during the first season is the same.

Cosmos.

Florists who grow cosmos to some extent, having fields of it that yield heavy crops of flowers in Autumn for a convenient market, claim that in spite of its coming so late it very rarely happens that the entire crop is lost by early frosts and that that part of it which is secured in time invariably pays handsomely for the time and labor expended in its culture.

IN EVERYBODY'S MOUTH LIKE THE BEE

A PROSPEROUS florist is never idle; do like this busy insect—the bee—take advantage of the great work the market is doing.

From the lands afar, where the choicest are, I gather the plants I supply; Or grow my own, with care unknown, So the best are the ones you buy.

GERANIUMS for Bedding out. 12 leading varieties, out of 4 in. pots, strong plants \$7.00 per 100.

AGERATUM, dwarf, best blue variety, 4 in. pots, \$7.00 per 100; 2 1/2 in. \$3.00 per 100.

BEGONIA VERNON, finest strain, flowers as dark as blood. Seeds of this beautiful variety picked by myself from the specimen plants in Zurich, Switzerland.

BEGONIA ERFORDI, the true variety, seeds of my own gathering from specimen plants in Zurich, Switzerland.

SCARLET SAGE or SALVIA. This is the genuine Clara Bedman or Bonfire variety of medium tall habit. It is a sight to see them bloom. It looks as if the whole bush is on fire and decorates the finest residences in England, Germany, Paris and Switzerland.

HELIOtropes, 4 in. pots, \$6.00 per 100.

FUCHSIA, mixed, good varieties, 6 to 6 1/2 in. pots, 15c to 20c. each; 4 in. pots, \$1.20 per doz.

CANNAS, 10 good varieties, 4 in. pots, \$8.00 to \$10.00 per 100.

AMPELOPSIS VEITCHII, 4 in. pots staked up, 15c. each.

HONEYSUCKLE, 5 in. pots staked up, 15c. each.

COBEA SCANDENS, 4 in. pots staked up, 5c. to 10c. each.

DAISIES, Queen Alexandria and Marguerite (white), 6 1/2 to 6 in. pots, 20c. to 25c. each.

DIELYTRA SPECTABILIS or BLEEDING HEART, planted in the Fall into 6 in. pots, and plunged outside in cold frames during Winter, growing natural now, large plants, in bud and bloom, 25c. each.

MUSK PLANTS or MIMULUS MOSCHATUS, 2 1/2 in., \$3.00 per 100.

PETUNIA, double, mixed, 4 in. pots, 8c. each, single California giant, ruffled or blotched, 3 in. pots, \$4.00 per 100. Immitable or dwarf variegated, 2 1/2 in. pots, \$3.00 per 100.

VERBENAS, all shades, 2 1/2 in. pots, \$3.00 per 100.

GODFREY ASCHMANN, Wholesale Grower and Shipper of Pot Plants, 1012 West Ontario St., Philadelphia, Pa.

KINDLY KEEP MY ADVERTISEMENT GOING, IT IS DOING WORK.

S. A. PINKSTONE, UTICA, N. Y.

down below the softer part of the cane and be stood in fresh water for at least ten hours. Although water soon revives wilted cosmos flowers it is better not to let it come to that in handling the stock for market.

FRED. W. TIMME. THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

ASPARAGUS PLUMOSUS NANUS, 2 1/2 in. pots, \$3.00 per 100.

COLEUS, Queen Victoria, Golden Bedder, Verschaffeltii, 2 1/2 in. pots, \$3.00 per 100. Fancy varieties, 2 1/2 in. pots, \$3.50 per 100.

PHLOX CHRYMMONDI, 2 1/2 in. pots, \$3.00 per 100.

IVY, English or hardy, 12 in. long, 4 in. pots, \$8.00 per 100. IVY, German or Parlor, 2 1/2 in. pots, \$3.00 per 100.

CENTAUREA OYNOCARPA or Dusty Miller, 2 1/2 in. pots, \$3.00 per 100.

CUMBER or CIGAR PLANT, 2 1/2 in. pots, \$3.00 per 100.

LOBELIA, dwarf or trailing, 2 1/2 in. pots, \$3.00 per 100.

SWEET ALYSSUM, Little Gem, have 10, them, 2 1/2 in. pots, \$3.00 per 100.

MARIGOLD, Florida, Africana and Gold Ring, dwarf, 3 in. pots, \$4.00 per 100.

VINCA, variegated or periwinkle, 2 1/2 in. pots, \$4.00 per 100. Rosea or Major, 2 1/2 to 3 in. pots, \$5.00 per 100.

COSMUS GRANDIFLORA, white, red or pink, three plants in 3 in. pot, separate colors, \$3.00 per 100.

SALPIGLOSSIS VARIABILIS (European), 2 1/2 in. pots, \$3.00 per 100.

SUMMER CHRYSAETHEMUM, Chameleon, 3 in. pots, \$7.00 per 100.

THUNBERGIA or BLACK-EYED SUSAN, 2 1/2 in. pots, \$3.00 per 100.

TOMATOES, Stone, the best varieties, transplanted in boxes, \$1.00 per 100.

MAURANDIA BARCLAYANA, 2 1/2 in. pots, \$4.00 per 100.

ARACARIA ROBUSTA COMPACTA, Spring 1906 importation: Have about 300 of this variety, only specimens, perfect tiers. Asked for the lawn, front porches, cottages, hotels, etc. 7 in. pots, 4-6 tiers, 6 year old, 20 to 28 in. high, as broad as long, price, \$1.75-\$2.00-\$2.50 to \$3.00 each.

ARACARIA ROBUSTA COMPACTA, 6 year old, 36 to 40 in. high, 28 to 40 in. wide, 6 to 6 tiers, \$3.00-\$4.00-\$5.00 each.

ARACARIA, new importation. First consignment about 5,000, now arrived (Saturday, May 4), per steamer Manhattan from Antwerp, and thereafter by every steamer up to June 1. Aracaria Excelsa, in their original packing, left planted in pots, 3 tiers, 10 to 12 in. high, 50c, larger sizes, 60c-70c-\$1.00 to \$1.25 each. Robusta, Compacta and Glauca from \$1.00-\$1.25 to \$1.50 each.

ORACAENA INDIVISA, broad leaves, imported from Belgium, now arriving, 30 to 36 in. high, 60c. to 75c.

COCOS WEDDELIANA, 3 in. pots, 16 to 18 in. high, 15c. to 20c. each.

ASTERIS, Enchantress, new, large blooming varieties, 3 in. 2.00 per 100. Victoria, 8 shades, separate or mixed, \$3.00 per 100.

DON'T FORGET WE LEAD THE WORLD IN MOON VINE!

Watch and be careful; don't buy Morning glory for Moon Vine.

We grow only the best varieties, A. W. Smith's hybrid or Ipomoea Noctiflorum, for which we have during the past 20 years a world wide reputation. We ship every Spring from 20,000 to 25,000 plants to every state and territory in America as far as Mexico. 4 in. pots, nicely staked up, 20 to 26 in. high, \$12.00 per 100; 2 1/2 in. pots, nicely staked up, \$6.00 per 100.

NOTICE! Above Moon Vine is the earliest variety in existence, blooms freely, in big clusters, pure white; waxy flowers, very fragrant and as big as a saucer.

Cash with order please. All goods must travel at purchaser's risk.

CAMPBELL VIOLETS

Healthy, sand-rooted cuttings now ready, \$1.00 per 100, by mail; 500 for \$4.00; 1000 for \$7.00, by express.

A large stock of California and Campbell field-grown, ready in August. Price on application.

ORCHID SYMBIOSIS.—Symbiosis is a term applied to a very curious association of quite different organisms for mutual benefit, and stands altogether apart from parasitic association by which one organism lives at the expense of another, and gives nothing in return. Of late years, these symbiotic alliances have received a great deal of attention, and have been found to possess an infinitely greater importance than had been dreamt of, especially in connection with beneficent bacteria in the soil, of which we treated in our recent note on soil inoculation.

A very remarkable series of experiments have been made by Professor Noël Bernard of The University, Caen, France, on orchid germination, an illustrated record of which appears on page 292, of the R. H. S. Report of the conference on "Genetics" of 1906. From this paper it is clear that many of the mysterious failures in raising orchids from seed are due to the absence of symbiotic aid afforded by special families of fungi, without whose aid the seeds can do no more than burst their coats and perish. That Professor Bernard's deduction is not a mere theory, but an absolute fact, was demonstrated at the conference by the exhibition of test tubes in which orchid seeds had been sown on jelly not impregnated with the needful fungus, the result being no appreciable germination, while on jelly impregnated with fungus derived from the same genus of orchid, healthy growth was plainly visible. This explains the fact that orchid seeds are often found to germinate freely in the pots and pans occupied by growing plants, and yet fail entirely when sown on soil derived from other sources, and hence devoid of the fungus proper to the tribe.

Different genera of orchids appear to be symbiotically associated with distinct species of fungus, and although misalliances in this connection may lead to growth, the best results are attained when the, so to speak, normal association is brought about. It has been, however, noted that some difference is induced when the fungus other than that peculiar to the parental species is associated with the seed to assist its germination, and the idea is even mooted that this effect may be at the bottom of some types of variation, a most interesting suggestion in connection with a subject regarding which we are so much in the dark. As the needful fungi appear to be present in, and procurable from the soil in which orchids are healthily growing, the essential for germination of their seeds appears to be the use of a portion of such soil for seed culture, taking care to discriminate between the soils of different species or genera in the operation. The paper we have referred to, though brief, is extremely pithy, and we cannot too strongly recommend its perusal to all orchid growers.—C. T. D. in Journal of Horticulture, Eng.

Regarding Rose Bug Remedies

"But even roses have their bugs. Will you consider us hopeless Philistines if we suggest that at last, at last, at last! a way has really been found of 'fixing' that hardened old sinner, the rose bug?"

Such is the edifying statement appearing in the June, 1907, number of the Garden Magazine, New York, among "Opportunities that Beginners are Likely to Miss." In an article on "Insecticides for June Use," in the same issue of the periodical named, occurs the following, with respect to a remedy for chewing insects:

"A much more practical substance (than Paris green) is lead arsenate; it sticks on the foliage longer, but unfortunately it gives the plants the appearance of having had mildew, because lead arsenate is white. However, this objection has recently been overcome in a specially prepared form which has a green color. This costs about twenty cents a pound, which is sufficient to make about ten gallons of solution except, of course, when you are pestered (as you are bound to be, especially if you are on sandy soil) with that arch enemy of flowers, the rose chafer. These arsenate preparation will kill the rose chafer, but they must be used at double the normal strength, and they must be used frequently right on, or in, the flowers."

The foregoing information being so completely at variance with practical experience, we submitted the matter to the Bureau of Entomology at Washington, D. C., and subjoined is the reply of Professor Marlatt, from which it will be seen that our contemporary's statement is decidedly misleading, being at the same time only partially correct. Professor Marlatt says: "I regret to inform you that it is practically impossible to control the rose chafer by means of arsenicals, and especially with arsenate of lead, in the occurrence of this insect on the rose."

In a bulletin distributed by the Division of Entomology it is stated that "The arsenites will kill the beetle, but are not of much value when the insects are abundant, because of the slow action of the poison. The blossoms are entirely destroyed before it takes effect, and the dead are constantly being recruited by others that come from the ground, or fly from neighboring places." The old-fashioned remedy of hand-picking is recommended in the case of rose bushes, also the jarring of the insects from the bushes on to sheets saturated with kerosene, but these methods are tedious and must be practiced daily in early morning or toward sundown to be effective. It is also stated that small orchards, gardens, or vineyards may be protected, at least from the first arriving hordes of the chafers, by planting about them early-flowering plants that particularly attract the beetles. Spiraea, deutzias, andromeda, magnolias, blackberries, and white roses are especially useful as counter-attractives. The beetles swarm on the flowers of these plants, and when thus massed in great numbers, their destruction by the use of collectors or other mechanical means is greatly facilitated. All ground which might serve as a breeding place, and which it is possible so to treat, should be plowed and harrowed early in May for the destruction of the larvae or pupae. The least possible amount of light, sandy soil should be left in sod, only the heaviest land being used for grass.

In a later bulletin on "Insect and Fungous Enemies of the Grape East of the Rocky Mountains," also issued by the Bureau of Entomology, May 10, 1907, occurs the following: "The rose chafer is an exceeding difficult insect to combat successfully. When the insect occurs only in moderate numbers, arsenicals may be reasonably satisfactory; but when it occurs in swarms, the plants are re-infested as fast as the insects are killed. It is possible, however, that a heavy application of arsenate of lead, say 5 to 6 pounds to 50 gallons of water or Bordeaux mixture, will largely protect the vines, and this plan should be tested by vineyardists confronted with this pest. Very thorough applications should be made upon first signs of the insects and repeated as necessary."

From the Report of the Entomological Society of Ontario for 1906, just issued, we take the following extract treating upon the rose chafer:

"It is a remarkable fact that the ordinary insecticides have little or no effect upon this pest, and it will eat blossoms sprayed with Paris green and thrive upon them. Many experiments have been tried and it is found that, where the work is to be done on a large scale, the congregated insects may be repelled by a wash made by adding about three pecks of freshly-slaked lime to a quart of crude carbolic acid in fifty gallons of water. This does not kill the insects, but the smell of the carbolic drives them away.

"Another method is to spray the masses of beetles with half a pound of fish-oil soap in a gallon of water. It is claimed that this will kill about 95 per cent. of the insects. It acts by closing up their breathing apparatus and causing death by suffocation. On a small scale much may be done by beating the insects, in the early morning when they are sluggish, into pans containing a little coal oil and then burning them; or they may be knocked off into an open umbrella and then destroyed. Choice grapes or plants may be protected with netting."

The foregoing authoritative statements, while show-

ing that arsenate of lead will kill the rose chafer, a fact which has been known for years, it is not to be recommended as a complete exterminator of this pest, and that for the "hardened old sinner," gardeners are still waiting for an effectual remedy, and will regard our contemporary's suggestion not only as Philistine, but hopelessly foolish and to a great extent fallacious.

Plant Diseases in Connecticut.

From the report of the botanist, Dr. G. P. Clinton, of the Connecticut Agricultural Experiment Station, just issued, we take the following particulars concerning plant diseases submitted to the station for diagnosis and suggested remedies during the year 1906:

CARNATION SPOT, *Alternaria* SP.—This disease was called to the writer's attention by Mr. Walden of this station, who collected specimens in the greenhouse of S. Perry Beers of Greenfield Hill. Mr. Beers had obtained his carnations already rooted from another greenhouse, where this trouble was also present. In a few cases the disease was severe enough to kill the plants outright, but usually the injury was limited to the leaves dying at their tips or to the whole top of the plant dying as the result of a girdled area beneath. Generally the injured places were of a whitish color having a rather inconspicuous black growth of the fruiting stage of the fungus. The only mention of a similar disease of carnation caused by *Alternaria* that the writer has seen is that made by Mr. Orton in the Yearbook of the United States Department of Agriculture for 1905 (p. 611). Mr. Woods, of the Department of Agriculture, who has made a special study of the fungus, in a recent letter to the writer says:

"The disease is quite serious on the softer-leaved varieties, such as those of the Lawson type, especially the Lawson and the Enchantress. The disease behaves very much like the other *Alternaria* diseases especially the one on the violet, attacking not only the leaves, but the stems, and cutting the plants back very seriously in many cases. In fact, I have seen whole houses of carnations practically stripped of their leaves and losing a large part of the top. Plants grown out of doors, exposed to rain and dew, especially in the night, are very subject to the disease and suffer seriously when the plants are moved into the house. It is, of course, then rather difficult to free the plants of the disease without cutting them back very severely and spraying them thoroughly with scap Bordeaux. The proper treatment is to spray the plants from the time they are set in the field until the time they are moved into the house, keeping the young growth well covered with Bordeaux and continuing the treatment after the plants are in the house until they become well established. If the plants are grown in the house all of the year and the leaves are not allowed to remain wet over night, the disease seldom, if ever, does much injury."

PEONY—ROOT INJURY OR ROT?—In September complaint was received from Southington of a root rot of peonies, which had gradually become quite serious. In writing of this trouble, the grower, H. R. Whitney, said: "When the plants first became established they were very beautiful, but since this disease has come upon them they do not amount to anything, some not even blooming. The first sign noticed is a discoloration of the leaves, turning to a chocolate color, accompanied by wilting, and finally death of the stalk. Sometimes the wilting occurs without any discoloration; the roots seem to rot to pieces at the surface of the ground much after the manner of the rootstock rot of iris (which, by the way, is very prevalent hereabouts, and all our iris beds are seriously affected by it). These peonies were set on a sloping hillside facing the north, and the lowest plants were the first ones affected. The disease has now spread to all. They have always had good care. I am now going to transplant them to higher ground, in fresh soil, and see what this will do."

I am not certain about the cause of this trouble. The specimens sent for examination showed a dry, rather than a wet rot, though possibly this was because they had dried out somewhat. The statement that the iris on his grounds was being injured by a bacterial rot might indicate that the same agent was at work on the peony. An examination of the roots, however, did not lead the writer to the conclusion that bacteria were responsible for the injury, though some bacteria were present in the tissues, and cultures made from the diseased parts usually gave mixed growths of bacteria and fungi. Microscopic examination of the diseased tissues showed that there was present the sterile mycelium of some fungus that looked as if it might be the cause of the trouble. The fungus was peculiar because of numerous roundish, dark reddish brown chlamydospore-like bodies that occurred in the threads. Cultures from this tissue seem to indicate that these were possibly threads of a *Torula* developing under unfavorable conditions. In this case the fungus was apparently only a saprophyte that developed in the tissue after the injury, rather than its cause. A peculiarity of the trouble, at least in the specimens sent for examination, was the sharpness with which the healthy tissue was marked off from the diseased. This may indicate that the trouble was not the result of bacterial or fungous attack, but possibly a Winter injury. Usually the injury was on one side of the root, but in some cases it

extended up into the interior, with white healthy tissue on either side. Mention of this trouble has not been found in the literature of plant diseases, though probably it has not entirely escaped observation before. Further study of injured plants is needed to determine definitely the cause.

PAMPHLETS RECEIVED.

THE NEW AGRICULTURAL-HORTICULTURAL OPUNTIAS; PLANT CREATIONS FOR ARID REGIONS. Issued by Luther Burbank, Santa Rosa, Cal. Illustrated.

While this publication is intended as a descriptive catalogue of the plants with which it deals, for sale by Mr. Burbank, he has also given a host of useful information concerning opuntias in general and the spineless sorts in particular. A history of his work with these plants is provided, as well as cultural instructions, the kinds to cultivate, while part three of the pamphlet is devoted to his "New Creations in Opuntias," "all productions of Burbank's experimental farm." Export public opinion at home and from abroad in which is recognized the "great value of spineless opuntias" is also furnished.

Mr. Burbank says:

"For more than fifty years I have been quite familiar with 'thornless cactus' of many species and varieties. In fact, one of the first pets which I had in earliest childhood was a thornless cactus, one of the beautiful phyllocactus. The phyllocactus and many of the cereus family are also thornless, not a trace to be found on any part of the plants or fruit. Thus the somewhat indefinite popular name of 'thornless cactus' has been used by persons unacquainted with these facts, for be it known that 'thornless cactus' is no more of a novelty than a 'thornless' watermelon. But among the cacti which grow to an immense size with great rapidity and which can be readily cultivated in garden, field or desert no perfectly thornless ones were known and very little interest taken in the cacti of any kind either thorny or thornless as to their agricultural or horticultural value until the work of improvement was taken up on my experiment farms and improved perfectly thornless rapid-growing varieties had been produced and made known within the past few years."

Mr. Burbank points out that the opuntias once were thornless, and "there is no reason why they should not sometimes again revert to a state of partial thornlessness, and this is exactly what they do." He says:

"In the Hawaiian Islands a partially thornless Opuntia is sometimes found, always growing, however, in places absolutely inaccessible to browsing animals. In California, Mexico, Colorado, New Mexico and Texas small patches of half thornless ones are sometimes found almost always in inaccessible crevices among rocks. And on some of the South Sea Islands where vegetation is abundant and browsing animals few, the opuntias having no use for thorns have either reverted back to thornlessness or often the thorns have become hair-like, diminished and perfectly harmless."

Mr. Burbank has devoted some twelve years to the opuntias, securing the best from several parts of the world.

"Many so-called thornless or partly thornless ones were obtained, but not one among the thousands received from all these sources was absolutely free from thorns and spicules and even worse, those which were the most promising in these respects often bore the poorest fruit, were the most unproductive of fruit or produced less fodder or were less hardy than the wild thornless species and varieties. The first work was to select the best of these, cross and raise numerous seedlings, select the best of these and so continue hoping for improvement. One of the first and not unexpected facts of importance to be observed, was that by crossing, the thorns were often increased rather than diminished, but not so with all. Some very few still became even more thornless than their so-called thornless parents, greatly increased size and quality of leaves (paquetes or slabs) and among these, the combination of the best qualities of both parents with surprising productiveness of slabs for feeding. The work is still in progress but on a still larger scale and now the improved opuntias promise to be one of the most important food-producers of this age, some of these new creations grown from the same lot of seed yielding fully ten times as much feed as others under exactly the same conditions."

It is asserted by Mr. Burbank, that the spineless character of his opuntias will remain fixed. He advises that they be fenced from stock; the leaves to be fed to the stock when most needed.

Some of the species and varieties of opuntias which are growing under test in Burbank's collection for comparison and experiment are: *Albispina*, *arbuscula*, *arborescens*, *basilaris*, *bernadina*, *brasilensis*, *camañchica*, *dearmatus*, *Emoryi*, *Engelmanni*, *formidabilis* *frutescens*, *fulgida* (*cholla*), *fragilis*, *galapagana*, *gummosa*, *humifusa laevis*, *leptocaulis*, *lurida*, *missouriensis*, *monacantha*, *macrorhiza*, *nigricans*, *papyracantha*, *phaeacantha*, *Rafinesquii*, *senilis*, *spinosois*, *tricantha*, *ursina* and numerous other species.

Opuntia Tuna Varieties.—*Amarillo*, *blanca*, *cardena* (U. S. 10179), *chavena*, *colorado*, *crystalina*, *grande*, *jarilla*, *morado*, *tapuna*, *xoconorale*, *vulgaris* and about fifty other varieties.

Opuntia Ficus Indica Varieties.—*Anacantha* (U. S. 9352), *Arizona* (white), *Arizona* (yellow), *blanco*, *Bryantiana* (U. S. 3642), *Colorado*, *gymnocarpa* (U. S. 12402), *Hayne*, *inermis*, *Malta* (U. S. 9352), *marisi* (U. S. 9350), *mission*, *monelova*, *Myers*, *Skelley*, *Watson*, (No. 1), *Watson* (No. 2), and numerous others, also *Nopalca*, *Cereus*, *Pilocereus*, *Mammillaria*, *Echinopsis*, *Phyllocactus*, and others, with twelve thousand seedlings and hybrid seedlings from the best, hardy, most nutritious and rapid-growing so-called thornless varieties.

The opuntias differ astonishingly in hardness. Some strains of the common prickly pear (*Opuntia vulgaris*) will grow readily in Alaska and several of the thorny species will endure forty degrees below zero without

injury. The best agricultural and horticultural species and varieties are not quite as hardy as the fig, yet are more so than the orange, lemon, lime or common blue gum (*Eucalyptus globulus*). Old plants are very much harder than the young soft ones. The Tapuna strain of the semi-tropical opuntias is the hardest and bears superior fruit in the greatest profusion and when quite young. The Tapunas seem to be almost as hardy as the fig and will withstand moisture better than most of the others.

OUR READERS' VIEWS

Postal Rates to Canada.

Editor Florists' Exchange:

I notice the paragraph in The Florists' Exchange that after May 7, the price of the paper to Canadian subscribers will be doubled, to cover postage. Of course, we can't blame the publishers, but isn't it up to us Canadian subscribers to make a kick to our postal department? I don't suppose any of us has the slightest idea of the department's reasons for this increase in postal rates. It cannot possibly be financial, for the Government now seems to have more money than it knows what to do with. And so far as Edmonton is concerned, it cannot be to pay for any special postal facilities. We are now a city of nearly 20,000, but we have still to stand in line at a couple of wickets at the Central and the only station to get mail.

Personally, I have written our local member a concise statement of the matter, but I am ready to join in an organized protest if necessary, provided, of course, it only applies to our trade journals, for I am certainly with the Government in any effort it makes to stop a lot of the yellow, trashy papers and fake advertising schemes from across the border, using the mails at a pecuniary disadvantage to the country.

Edmonton, Alberta.

FRED BENNETT.

[The increased rate applies to newspapers of every class that formerly enjoyed pound rates to Canada, the same as in the United States.—Ed.]

A Semi-Centennial Celebration.

Editor Florists' Exchange:

A notable meeting will be held at the Michigan Agricultural College during the last week of May. It may surprise many intelligent people to realize that the first agricultural college in this country was established just 50 years ago. A few far-sighted and patriotic men went out into the woods a few miles from Lansing, Mich., and established the first "Land Grant" college. The undertaking was not popular, for no one at that time believed in the theory that agriculture was worthy of a system of education of its own. A few strong men like Professor Abbot and Dr. Kedzie stayed by the enterprise under great difficulties and hard conditions. The war interfered with the school and farmers were very backward in giving it support. Finally it attracted attention and the Legislature, being unable to kill it off, began to give it grudging support. After the war the funds available from the "Land Grant" were applied in other states and the system was largely copied after that in Michigan. From this humble beginning there has grown a wonderful system of education, which now challenges the old classical method and has been able to meet it successfully upon its own ground. Beginning with one building and three teachers, Michigan has now nearly 50 buildings, over 100 instructors and over 1000 students enrolled.

The fiftieth anniversary will be fittingly celebrated during the entire week. To give a fair idea of the character of the celebration, it may be stated that the baccalaureate sermon will be preached by Dr. Buckingham of the Vermont University. Prof. Benj. Ide Wheeler of the University of California will speak for the West; Prof. Stinson of the Connecticut Agricultural College for the East; Prof. Henry Clay White of Georgia for the South; while Illinois, Michigan, New York and Nebraska and other states will be represented. Secretary James Wilson will speak for the Department of Agriculture and President Roosevelt will discuss the development of agricultural education and show something of its tendencies in influencing public life.

It would be difficult to estimate the material value and power which agricultural education has given to this country during the past 25 years. Not only have these colleges and experiment stations taught material things, that is, how to produce larger crops and how to make more money on the farm, but they have, in another way, helped develop character. Men who have been taught to study crops and methods with something of scientific accuracy have also been taught to study public questions as they never did before. The influence, therefore, of this form of education upon public life has begun to exert itself, and there can be no doubt that during the years to come this influence will continue and that it will in time dominate country neighborhoods and make a great change in the future of this country. It is a notable celebration, marking a period in American history of which all country people should be proud.

H. W. C.

English Horticultural Notes.

SPRING FLOWER SOCIETIES are springing up in many parts of the country. Torquay in Devonshire has had a big Spring flower show for some years, and now the southeastern counties (Sussex, Kent and Surrey) have formed a society; while Huntingdonshire, the second smallest of the counties, has also inaugurated a show. Birmingham has been the seat of a large daffodil and Spring flower exhibition for some years and to-day is regarded as the leading show of its kind, London not excepted. The foundation of shows devoted to early flowers pure and simple is significant of the increase of taste for and knowledge of, the narcissi, tulips, hyacinths, polyanthus and other things.

COMMERCIAL BULB GROWING in Lincolnshire, on the east coast facing Holland, is steadily increasing. The soil here is of a sandy-peaty nature, and the country is low-lying; indeed so like is some of it to the lands of Holland that one division of the shire has been named Holland. In Ireland the industry also progresses, and Sir Josslyn Gore-Booth, Baronet, has inaugurated bulb growing in the far west of Ireland at Sligo, in order to afford employment to the people there. The bulbs and their flowers are all very excellent, proving that quite as good material can be cultivated there as in the land of the Dutchman.

It is early yet to speak of the novelties in narcissi, but there are some gems upon the horizon. The parks are now (April 20) very gay. Thousands of daffodils and tulips are planted in the grass, while the beds are filled with hyacinths and tulips. A very telling mixture frequently seen is furnished by *Narcissus Sir Watkin* and dark blue hyacinths. The tulips flower later than the hyacinths, but the varieties of the latter that are relied on comprise *Gigantea*, pink; *Grandeur a Merveille*, creamy white; *Czar Peter* and *Grand Maitre*, light blues; *King of the Blues*, dark; *alba superbissima*, white. These are mostly in beds of one sort; sometimes a red and a white are mixed; and red, white and light blue is also favored.

HYBRIDISATION CONFERENCE REPORT.

The report of the International Conference on Genetics, about which The Florists' Exchange kept its readers acquainted last Autumn, has been published. It forms a bulky, well-printed and profusely illustrated volume, and the charge to Non-Fellows of the Royal Horticultural Society (London) is 15 shillings. There are many excellent papers by Americans, and doubtless the Editor of this journal will avail himself of them so far as space allows.

THE NEW ROSE TAUSENSCHON, shown by Wm. Paul & Son, Waltham Cross, received an award on April 24. It is a climbing decorative variety, with huge clusters of deep ruby-crimson flowers, each flower fully two inches in diameter. These last well for three weeks and fade off to a light pink. It seems like a cross between a *Wichuriana* and a red tea rose. The variety (climbing decorative) *Waltham Bride*, with a profusion of creamy clusters, is very beautiful and it sells fast.

The hybrid scented pelargonium, *Clarinda* (Cannell, Swanley), is also a magnificent success.

J. HARRISON DICK.

THE DAHIA NEWS for May, 1907, announces the following special prizes for the forthcoming dahlia exhibition to be held in Boston, Mass., conjointly by the New England Dahlia Society and the Massachusetts Horticultural Society on September 4 and 5 next:

DREER'S PRIZES.—First, \$5 for the best twelve flowers of the dahlia *Fire Rain*; second, \$3 for the second best twelve flowers of the same variety. By Henry A. Dreer, 714 Chestnut street, Philadelphia, Pa.

MICHELL PRIZE.—\$5 for the best twelve blooms of the dahlia *Mrs. Roosevelt*. Offered by Henry F. Michell Company, 1018 Market street, Philadelphia, Pa.

BRECK PRIZE.—\$5, selection left to the society to be announced later. Offered by Joseph Breck & Sons, North Market street, Boston, Mass.

BURPEE PRIZE.—\$5, selection left to the society, to be announced later. Offered by W. Atlee Burpee & Co., Philadelphia, Pa.

RAWSON PRIZE.—\$5 for the largest single bloom of a decorative dahlia (name attached). This prize can only be completed for by dahlia growers who do not make a business of either selling roots or flowers. Offered by W. W. Rawson & Company, Boston, Mass.

Dahlia news from foreign countries, and articles on "Growing Dahlias for Exhibition," and "Cactus Dahlias," as well as interesting cultural notes form features of the current issue of the periodical. Secretary Fuld, Boston, states the membership is now 150 and is steadily growing. The society is but six months old.

Memorial Day.

As Memorial Day falls on Thursday, May 30, we respectfully request our advertisers and correspondents to have their "copy" in our hands not later than Wednesday forenoon, May 29. Kindly give this matter your best attention.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO. Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLOREST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Canterbury Bells.

The Canterbury bell is Campanula medium, and it is probably the most popular of the whole group of campanulas as well as being one of the oldest. It is said to have been named Canterbury bell by Gerard, from growing plentifully in the woods about Canterbury, England. Canterbury bells are hardy biennials, and are extremely showy in shrubberies or mixed borders. Of Canterbury bells there is now a large group of very fine varieties, both double and single, in various shades of color. There is also a very interesting race of Canterbury bells called "cup and saucer," or as named botanically calycanthema. Here the calyx is colored and broadened out, forming the "saucer." Seed sown in the open border during May, June or July will furnish good plants for next season's flowering. Canterbury bells bloom well as pot plants in the greenhouse.

Glen Cove, L. I.

JOHN F. JOHNSTON.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

An Elaborate Wedding Decoration.

A wedding decoration at one of the prominent Fifth avenue hotels was perhaps the most talked about affair among the New York retail florists last week; and there has been much speculation as to how much money the fortunate florist got. The papers put it as high as five thousand dollars.

Large quantities of orchids and American Beauty roses were used, and it was no doubt a very costly affair. The reception room was the scene of the ceremony. One end of it was banked with palms; there was no set canopy, but two marble columns were utilized. A wire was stretched from column to column, from this were suspended strings of Asparagus plumosus, forming a curtain of green. This was divided in the center and tied back to either column with broad

and forming an arbor under which the guests were seated. The tables were decorated in red and white, representing the Japanese colors, the flowers employed being white sweet peas and scarlet carnations.

Funeral Work.

The retailers have been unusually busy this week with funeral work, and many fine examples have been turned out. A casket cover of white lilac is particularly worthy of notice. It was made in the form of a loose pall, and besides covering the entire casket it extended to the floor, some three or four feet, the coffin being raised to that height. A beautiful cross rested on the casket imbedded in the lilac. This cross was made of Richmond roses stemmed quite short, so that the outlines were sharp and clear.

Another fine effect was obtained with a large flat bunch of American Beauty roses over which rested a loosely made wreath of gardenias; no frame was employed, the gardenias being tied loosely together.

Prepared Magnolia grandiflora leaves also made up extremely well. The leaves are prepared, or preserved, and are to be obtained in a rich dark green and bronze. The wreath that attracted my attention was made of the green leaves, in crescent form, with a large cluster of cypress leaves arranged at the widest part of the wreath, and tied with wide, purple ribbon. No flowers were used in this arrangement.

Lavender centaureas were used in making a large cross. These flowers seem particularly adapted for funeral work, as they retain their freshness for a long time. White centaureas, with a cluster of cactleys and gardenias, formed a very beautiful wreath; this was tied with pale mauve ribbon. D. RAYBUN.

Continental Notes.

CRASSULA LYCOPODIODES.—This fresh-looking apparently tender plant, a native of South Africa, where it is found growing on dry stony ground, is being recommended by F. Fobe in a Continental gardening journal as being every suitable as a carpet bedding plant. Its name describes its appearance which is more that of a lycopodium than a crassula, and at first sight it might be taken as belonging to that genus. The plant is a good subject for employment in jardinières, in the same manner as lycopodiums, and as a pot plant, or planted out in sunny dry situations in conservatories it would be quite at home. The propagation of the plant from cuttings is easy, and a one year old plant will afford several hundreds of them. There are two other varieties of the plant which form a less dense growth of shoots, and whose leaves are of a greyish green tint.

ACACIA MOTTEANA (syn. *A. Podalyriæfolia*).—The chief merit which this plant possesses is its continuous flowering for a period of from three to four months, and in this particular it has no equal among acacias—the greatly valued *A. dealbata* scarcely remains in bloom for one month. The flowering season is from the middle of November till the end of March, and it is one of the prettiest flowers of the Winter season. The blooms are globular, lightly arranged on the spikes, and sessile. The value of the plant for cut bloom for export was well appreciated by M. Winter, of Bordighera, otherwise that cute nurseryman would not have been so strenuous in keeping it as his monopoly for so many years.—Horticultural Trade Journal, Eng.

CYANIDE OF SODIUM VS. CYANIDE OF POTASH.—Writing to the Florida Agriculturist on the subject of "Fumigation for the Destruction of Insect Pests," Professor Massey has the following to say on the comparative values of cyanide of sodium and cyanide of potash.

"The usual method has been to develop hydrocyanic gas by dropping cyanide of potash into sulphuric acid in a closed house. But lately there has been an effort made to show that cyanide of potash may be more economically replaced by the cyanide of sodium. When a nurseryman is told that 100 kilograms of cyanide of sodium will produce as much hydrocyanic gas as 132 kilograms of cyanide of potash, he is apt to at once jump at the conclusion that the sodium cyanide can be used as a cheap substitute for the potassium salt. But a test will prove that the actual amount of the gas liberated is less than the amount of gas released by the potassium cyanide, because when the sodium salt is treated with sulphuric acid, a residue forms consisting partly of solidified sulphate of soda and partly of undecomposed cyanide of soda.

"On the other hand, the residue left from the use of potassium cyanide is not a solidified mass of useless material, but crumbles to a powder. This powder is not a valueless article to the cultivator, like the sodium sulphate, but is the potassium sulphate that commands a high price as a fertilizer. This fact that the residue from the potash salt is a valuable fertilizer will of itself do away with all claims made for the superior economy of the sodium cyanide, even if the claims for a larger production of gas had to be granted, for the residue resulting from the use of the sodium cyanide is a perfectly worthless article to the cultivator, while the residue from the potash salt is sulphate of potassium in a readily available form that would command on the market over \$2.50 per 100 pounds as a fertilizer. From this we see how important it is for the grower to study all the actual facts in connection with the process."

The Canterbury Bell Makes an Excellent Pot Plant
Photo by John F. Johnston.

sashes of white silk ribbon. From this were suspended sprays and clusters of Cattleya Mossiae in reckless profusion. From the center of this arrangement was hung a large aluminum wedding bell tastefully decorated with lily of the valley and gardenias; the interior of the bell was illuminated with small electric lights, lightly veiled with asparagus and sprays of white orchids. The aisle posts were connected with white satin ribbon, the posts being wound with asparagus and finished off with bouquets of white sweet peas. The Prie Dieu was decorated with asparagus and cactleys.

Vases of flowers—American Beauty, Bride, Richmond and Mme. Abel Chateau roses—were the only decoration that was employed in the other rooms of the suite.

Luncheon and Dinner Decorations.

Society entertainments in the form of luncheons and dinners are about over so far as New York is concerned, and the Newport season will not open for a month or six weeks. But the hotels and restaurants are still busy, and some large affairs have taken place during the week. A dinner given in honor of a distinguished visitor was rather unique. The room was converted into a Japanese Summer house, the walls and ceiling being latticed with bamboo. Wistaria (artificial) covered the ceiling, hanging in graceful festoons from the lattice work. The walls of the room were almost entirely covered with branches of double flowering cherry and almond, so arranged as to look like the natural tree, some of the branches extending into the room

ROSES

FOOD REQUIREMENTS OF HYBRID CLIMBING ROSES.—A recent part of the Journal de la Societe Nationale d'Horticulture de France contains a paper by M. G. Truffaut on the food requirements of hybrid climbing roses. The author chose for his various experiments the sturdy and well-known rose Madame Ulrich Brunner, and with the assistance of M. Cochet-Cochet and other growers was able to work on a large scale. The results obtained by the various food-constituents are summarized as follows: The mixture of nitrates and phosphoric acid produced very fine growth, extra large flowers, early, and well colored. Complete manured poor in potash yielded excellent results, even in soils rich in nitrogen and in phosphoric acid. Roses should be grown in clayey or in clayey-siliceous soils, not over rich in humus. I advise, says M. Truffaut, for manuring roses in the open ground in Autumn, a little cow manure, and in Spring to spread on each square metre (rather over 3 feet) 50 grammes of precipitated bone phosphate, 30 grammes of burnt horn, 10 grammes of dried meat, 10 grammes of dried blood (1 gramme=15.4324 grains). The whole to be forked in. Then, after June 15, the plants should be watered with a solution of 1 gramme per litre (1 litre=35.2154 oz.) of the following mixture: 50 per cent phosphate of ammonia and 50 per cent nitrate of ammonia; this gives 23 per cent of nitrogen and 22 per cent of phosphoric acid. By following these directions, by appropriate pruning, and leaving a moderate number of flowering shoots, bloom will be maintained until November, the flowers being large and fragrant, the stems firm and branching, the foliage dark green and shining, thick, and resisting rust and mildew.—Gardener's Chronicle, Eng.

A RECORD TO BE PROUD OF

The Florists' Hall Association has paid 1,040 losses amounting to \$102,000.00 For particulars address,

JOHN G. ESLER, Saddle River N. J.

CLUB AND SOCIETY DOINGS.

THE COLUMBUS FLORISTS' CLUB held its May meeting Tuesday evening the 14th, in the Brent building. President Sherman F. Stephens was in the chair, and every other officer was on hand, besides a large gathering of members. The ladies were also well represented. The committee reported that they had practically selected Buckeye Lake for the outing, and that so much interest had already been manifested, that the filling of two special cars seemed assured even now. While the date of the picnic has not yet been decided upon, it will probably be in July. M. B. Faxon, for the seed committee, made a partial report, showing that up to the present time over three thousand children have been supplied with seeds for the school and home gardening work. President Stephens told of his visit to one of our largest schools, and how greatly interested all the scholars were in the work.

At this meeting, the showing of plants and flowers being the last one of the season, the members took pride in making an especially good display. The committee, Messrs. Jacob Reichert, Albert Hills, William F. Metzmaier, Charles Buëbler, and John Brust, awarded the following point prizes: For a very finely grown Bridesmaid rose, in a six-inch pot, and in bloom, John Williams received twenty points. I. D. Siebert exhibited a well-grown specimen of *Pandanus utilis*, which received fifteen points. Mrs. John Williams, for a very nicely grown Tarrytown fern, which was perhaps the choicest exhibit made, received fifteen points, also honorable mention. So much have these displays added to the pleasure of the meetings, that they will likely become a permanent part of our club evenings. After the routine business had been transacted, a very pleasing program of music and singing was arranged, and rendered by the visiting ladies, which was greatly enjoyed.

I. D. Siebert, on behalf of The Fifth Avenue Floral Company, invited the club to visit and hold the next meeting at their greenhouses, on Monday evening, June 3.

The entire craft agree that our Memorial Day business will be of record proportions. F. W.

NEWPORT (R. I.) HORTICULTURAL SOCIETY.—A regular meeting of this society was held last Tuesday evening, President Butterton in the chair. The committee on special premiums, composed of John T. Allan, Alex. MacLellan, David McIntosh and the president, reported having organized and made satisfactory progress. Col. A. R. McMahon, from the committee on the memorial for the late Congressman Adams, reported that the committee had completed its work and the contributions forwarded to Professor Wheeler. The president announced the appointment of Alexander MacLellan, John T. Allan, and Daniel Coughlin as judges for the June exhibition. The work of the inspector recently here in search of the gypsy moth came up for discussion and the unanimous expression of opinion was that the men did the work of examination thoroughly with the result that no sign of the moth was apparent nearer Newport than Bristol.

If the weather conditions do not change radically in the near future steps will be taken at the next meeting for the postponement of the rose show to a later date than that announced. D. M.

THE NASSAU COUNTY HORTICULTURAL SOCIETY met on May 8, 1907, President Mackenzie in the chair. The plans for the flower show to be held in the Fall were talked over. Mrs. Paul Dana has promised books valued at \$20, as a prize. Rickards Brothers of New York have offered \$10. W. H. Browne of Glen Cove, has given \$5 as a prize for the best dabbias shown in October. J. F. Johnston spoke on "The Best Time to Plant Evergreens." Mr. Mackenzie showed Richmond roses, Mr. Cleres American Beauty and carnations were exhibited by H. Matz and Felix Mense, besides exhibits by other members.

The meeting hour has been changed from three to seven thirty o'clock.

THE MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY held its regular meeting on May 17, President W. Kennedy in the chair. The discussion of the evening was on the chrysanthemum show, which will be held on October 31 and November 1, probably in the Lyceum, Red Bank, N. J.

Wm. Turner exhibited some grand carnations, among others, Robert Craig, with 2½-foot stems. He also exhibited seedling melons which weighed nine pounds—a really grand melon. He has three melon houses, and ripe melons can be seen there at any time of the year. He prefers his own seedling to any other variety, especially for winter forcing. The outlook for the Fall show is even better than last year. B.

Spring Show at Los Angeles.

The Spring flower show of the Southern California Horticultural Society was held in a large skating rink from the first to the fifth of the month inclusive. The place was an ideal one—large and roomy, and the roof being largely of glass gave plenty of light during the day, while hundreds of electric bulbs and two arc lights furnished a flood of light during the evening. There were few exhibitors, and the display of flowers was the smallest seen at any show the society has yet held. No premiums were offered, and as a matter of course there was no competition. The management seemed to think it best to issue but a single admission ticket to all members of the society, not even extending the courtesy to their wives, the result being to bring down the wrath of the membership upon the heads of the directors. Those of us who have been accustomed to all the privileges of such organizations have been led to wonder why this "penny wise and pound foolish" policy was adopted. Edward H. Rust, proprietor of Palm Nurseries, and Dietrich & Hnston had fine collections of palms, araucarias and other decorative plants, both for the house and garden. The Rust collection was all properly labeled which added to its value to prospective planters. Howard & Smith occupied one

Cosmos

See Timme's Timely Teachings in this issue.

entire end of the rink with their exhibit. They are giving the people of Southern California an object lesson in what may be done with bamboos, both from an artistic and utilitarian point of view. A unique idea of his firm, and one that there was money in, was hundreds of tiny hanging baskets about two inches across and an inch deep, containing a small begonia of the Vernon type in flower which sold about as fast as they could hand them out while the supply lasted.

Rising & Dunscomb had a fine exhibit of field-grown carnations, and the Whittlesey Floral Company a fine lot of cover-grown flowers. Their Prosperity measured over four inches in diameter. A beautiful exhibit was that of the Signal Hill Floral Company; it was entirely of yellow flowers—*Coreopsis lanceolata*, yellow centaureas and *Leptosyne maritima*, a native plant of great beauty. The wonder is that this plant has not been introduced to the trade and brought into cultivation long ago. The flowers are two inches in diameter, of a lemon color, borne on stems a foot or more long. At first sight they may easily be mistaken for yellow single flowering dabbias.

Theodore Payne exhibited some fine specimens of *Philocereus senilis*, and echinocactus, some one-year seedlings of the latter about the size of a walnut, did not show character. The plant thief was abroad and stole most of these small plants. Mr. Payne's exhibit of wild flowers was very fine, and being named was all the more interesting. The most attractive in the collection were two varieties of *Pentstemon*—*spectabilis* and *astranthifolius*—*Gillia achillaeifolia*, *Antirrhinum coarctatum*, *Phacelia Whitlavia*, *Audibertia grandiflora*, *Bloomeria aurea*, which resembles the flowers of *Scilla peruviana*, though yellow in color, *Collinsia bicolor*, and *Abronia umbellata*. This last named plant covers acres of sandy waste along our coast. Mr. Payne is the only seedsman on this coast who makes a specialty of native flower seeds and plants.

T. Lambert, Sierra Madre, had a fine collection of sweet peas and Spanish iris, all of which were named to the satisfaction of those who care to know the identity of varieties, and are guided thereby in future planting.

John Lewis Childs had on exhibition from his South Pasadena garden some fine blooms of the different varieties of amaryllis which are very popular on this coast where they can be grown without protection during the Winter season, and because of that fact multiply rapidly. He also showed a number of the new dwarf Phoenix Roebeleni. P. D. BARNHARDT.

Our London Letter.

By A. Hemsley.

RAMBLER ROSES.—We are still getting additions to this popular class of roses, among the latest being a German variety named *Tausendschön*, flowers larger than those of most of the type and of a pleasing shade of rose pink. It appears to be very free, and the large clusters of bloom last remarkably well, the petals drying off on the plant instead of falling off. *Hiawatha* is evidently going to prove useful for early work. J. Green, (Hobbies, Ltd.) has shown it in grand condition. *Lady Gay*, on tall standards with drooping clusters of bloom, has been grand. The old *Crimson Rambler*, however, still holds its own. Messrs. T. Rochford & Sons were obtaining 25 shillings each for some trained umbrella shape and well-flowered. Those grown erect and reaching from five to eight feet high are much in demand; they are used for the decoration of balls, staircases, etc. Where tall palms were formerly employed these roses now take their place; or sometimes they are over-topped with tall thin plants of *Cocos flexuosa*.

Among the dwarf polyantha roses we have *Aennchen Müller*; this was well shown recently by Messrs. W. Paul & Son. The flowers are of a pleasing shade of deep pink with petals curled; not by any means a florists' flower, but most effective for decorations.

CARNATIONS.—Nothing very remarkable has come forward recently. *Crimson Glow*, as shown by Messrs. Cutbush & Sons, appears to be of great promise. Compared with the President it is certainly an improvement. Robert Craig has been splendidly shown by the same firm, the pot plants being remarkably vigorous and the bright flowers of large size. *Jessica* was also well shown and gained an award of merit; this is the largest of the striped varieties I have seen.

FUCHSIAS.—In the market we get very few of the newer varieties that prove useful. Such sorts as *Ballet Girl*, *Royal Purple*, *Gertrude Pearson*, *Lady Heytesbury*, *Avalanche*, and other old sorts still remain favorites. Standards of these are now much in demand, especially for garden work; standing above dwarfier subjects they are very effective.

I find H. J. Jones has gone in for all the new hybrids of the triphylla type, and as seen in young plants they appear very promising. The foliage of many of them is very effective, and some of them come into flower quite early. Fuchsias are certainly coming to the front again, and anyone introducing improved varieties would find a ready sale for them.

PELARGONIUMS.—The show varieties of these, which were so popular a few years ago, find but little favor at the present time, yet no doubt they will soon be wanted again. As an instance I may say that while it is difficult to clear really good show varieties in the market at 12 shillings a dozen, Ivy-leaved Galilee, in well flowered plants, sell readily at 18 shillings. These from Mr. Mott are remarkably fine. Zonals are also much in demand, and we are getting good supplies of beautifully flowered plants, chiefly of the semi-double varieties, but I have not yet noted anything specially new or novel.

METROSIDEROS FLORIBUNDA.—This old plant is now a favorite and as shown by Messrs. H. Low & Company it is certainly useful; the flowers last so well, besides being most effective.

SCHIZANTHUS WISETONENSIS is another plant receiving much attention, and has been considerably improved since its first introduction.

NARCISSUS.—We continue to get further improvement in the large trumpet daffodils, and those which we had a year or two ago sustain their high quality. I have before me blooms of *King Alfred* and *King's Norton*. The latter is a trifle larger, but the first named is very rich in color and has a perfect trumpet, and it has proved as free as *Emperor*, which has long taken the lead as a yellow for market. H. J. Veitch and Van Waveren's *Giant* are other promising sorts. The poetic ornata type has received great attention. W. T. Ware's introduction, *Miss Willmott*, which recently received an award of merit, is decidedly the finest thing we have seen. The flowers are of great size, perfect in form, and have a richly colored cup. The value of new narcissus may be estimated by the price of this variety which is put up at £30 per bulb.

Poughkeepsie, N. Y.

There are a good many florists in this city. Those doing a general plant and cut flower business are W. G. Salford, Murphy & Shaumburg and M. J. Lynch, who each has an attractive store on Main street.

A. S. Fricker has a store in connection with his cut flower producing plant further out, at 635 Main street. The remainder identified with the trade here are all violet growers.

While there are a good many violets raised in Poughkeepsie all the growers yield the palm to Rhinebeck as the greatest violet producing district on the Hudson. Yet one of the most extensive establishments, where violets are exclusively grown, is that of B. Willig here, which is conceded to be the finest on the Hudson River. Mr. Willig has been growing violets for the past fourteen years. He has a model establishment consisting of four iron frame greenhouses of the Hitchings construction now in their second year. Each house is 251 x 38 feet. There are five 5-foot beds running the entire length of each house. These beds contain approximately 50,000 flowering Marie Louise violets—no other variety is grown. The plants are grown with some exceptions in solid beds about 2½ feet high. About 12 to 14 inches of the top soil is removed annually before planting the new crop which are all usually in their flowering position each year by July 4. Once every three years the entire soil is removed. As an experiment, the past season Mr. Willig has planted each alternate bench in one house on an ordinary raised bed with board bottom, using about six inches of soil. To stand at the end of one of these long houses and look down the full length of the beds, the difference in favor of the raised or board bottom benches could be seen at a glance. The plants on the raised benches looked rich and luxuriant while those on the raised solid beds in 2½ feet of soil looked a little less robust and of a paler green color.

The preparation of the soil for these benches is quite an important matter in successful violet culture. The soil used each season has undergone a two years' preparation before it ever enters the greenhouses. Soil preparation, watering, and temperature are the most important matters to be studied. A night temperature of not over 45 degrees is aimed at during coldest weather. Some ventilation is given daily the entire winter through. Rain and damp weather is more to be feared than cold. Side ventilation is given in wet weather, as the ridge ventilators open at the apex and rain entering would be harmful to the plants.

One point of interest is that Mrs. Willig and four well-trained girls attend to the entire house culture of the violets after the soil is brought in and the plants set where they have to grow and bloom. Mr. Willig attends to the soil preparation, fringing and shipping and all matters on the outside.

The week preceding Easter there were gathered from these four greenhouses 185,000 violets and for many weeks prior to and subsequent to that time the output varied but little.

The violet grower's occupation is no easy job. To pick and grade, bunch and pack that number of blooms weekly is no small task. Early and late trains have to be met so that in busy seasons six hours' rest is about as much as one gets when operating a violet producing plant of this capacity.

The packing of the flowers is also an art in itself. Deep corrugated boxes are used of sufficient depth to allow of two tiers of bunches. Those in the first tier are placed stems upward; over these is placed a rack of very light wooden material, with a leg on each corner to prevent it from pressing on the lower tier of benches. Through the openings in this rack the stems of the top tier are placed. These stems fit in between the upturned stems of the lower tier and as a matter of fact the entire shipment is in this way dovetailed. Only two tiers are used in largest shipments. Boxes are made to hold 500, 1000, 1500 and so on up to 2,500, with racks to fit. The braces of the racks prevent the violets slipping in any way, as well as preventing crushing. This system of packing is the invention of Mrs. Willig. The greater part of one house is de-

voted to propagation which begins usually in January and is kept up until late in the Spring. The girls are all adepts at this work. Each one uses a scissors in removing the runners. No pulling or tearing of the plant would be tolerated by any of these growers. The cuttings are rooted in the ordinary way on a propagating bed, and when rooted are transplanted in rows about two inches apart on beds specially prepared for that purpose. Here they remain until they are ready to transplant to the flowering benches. Pots are never used. The successful violet growers have no time to study ancient history; there are no dead men or mummies in their ranks.

J. M.

Newport, R. I.

News and Trade Notes.

As Memorial Day draws nearer the indications point to a larger business than in former years in plants and flowers. These indications are in the shape of a goodly number of orders already in the hands of florists for the placing of plants and flowers on graves and plots on that day.

For a week or two the cut flower business was rather quiet, but it has picked up wonderfully in the last few days, probably by reason of the fact that there are a number of recent arrivals of the class to which regular supplies of flowers appear in the light of necessity. After Memorial Day there will be a decided change in business conditions here, and there is no doubt but the growers in other sections will soon after feel the force of it in the number of orders they will receive from the florists who will open their stores on the avenue before that day.

It is understood that several florists are making arrangements to open early this year. Joseph Leikens has everything already fixed for an early opening. Mr. Smythe is here so often now that doubtless the matter has had his attention in detail.

Mr. and Mrs. Carl Jurgens, Jr., have returned from a visit to the Jamestown Exposition where they enjoyed themselves immensely.

J. Warren Spaulding of the J. M. Hodgson Company visited Newport last week and gave attention to urgent business of the firm.

Stock for bedding looks remarkably vigorous in the premises of dealers and private gardeners alike at this time, but there seems to be a shortage in some lines which will have to be made up from outside sources. It is very hard to tell accurately in advance the number of any one kind to be planted here, because minds change quickly and sometimes at the last moment upsetting the most carefully made guesses and calculations.

In the early Spring it was thought begonias might be in extraordinary demand for bedding this Summer, with the result that some growers sowed an abnormal quantity of seed; but the advance orders so far are no more than ordinary, which has caused one or two of the growers to cease working on begonias in the way of re-planting and potting. Now if the demand comes on good and hard those with a lot of stock, jammed in unshapely masses in flats, will not feel the benefit of it. English ivy is now in brisk demand in good size plants for planting outdoors immediately; there is a considerable quantity of the stock grown here but not nearly sufficient for the local market.

Many craftsmen in Newport, including the writer, were grieved exceedingly by the news of the serious illness of Samuel Henshaw, and the announcement last week that an improvement in his condition was noticeable was gratifying indeed. Mr. Henshaw impressed all with whom he came in contact while in Newport by his genial and kindly personality as well as with the feeling that he was a noble specimen of the best type of horticulturist. While calmly viewing some of the places here it was pleasing to note that Mr. Henshaw criticised nothing, but where any opening appeared for a word of approval he was ready to utter it, especially if the matter concerned a young man or a man working under difficulties. Mr. Henshaw is the kind of man the world is the better of because of his living in it, and it is hoped that he will be enabled to stay with us all quite a while yet.

The principal nursery ground of the Rhode Island Nurseries is located in

E. F. WINTERSON CO.

45-47-49 Wabash Ave., CHICAGO.

We will, as usual, be "headquarters" for all supplies for **DECORATION DAY**, having made special arrangements for a large supply, including **Beauties, Carnations, Roses, Jasmine, Peonies, a large variety of Spring Flowers**, also a full supply of all **Greens**, such as **Asparagus, Smilax, Ferns, Boxwood, etc.**

SUPPLIES

We have a full line suitable for **Decoration Day**, including **Cemetery Vases, Green Wreaths, Ruscus Wreaths, Immortelles, Dried Green Moss, Metal Wreaths, Cycas Leaves, Cycas Wreaths, Magnolia Wreaths, Fancy Green Sheet Moss**, and a large assortment of staple supplies.

SEND YOUR ORDERS TO THE

"Leading Western Supply House"

and you will not be disappointed.

DECORATION DAY

Carnations, Brides, Bridesmaids, Richmonds, Wellesleys, American Beauties, Stocks, Sweet Peas, Marguerites, Candytuft, Mignonette, Spiraeas, Lilies, Lily of the Valley, and all seasonable flowers.

HENRY M. ROBINSON & CO.

BOSTON, MASS.

All orders receive prompt attention.

A trial order will convince you.

Middletown on rather exposed ground making the stock grown thereon especially valuable for planting finally in likewise exposed places. Mr. Vanicek of these nurseries is thinning out his stock to an amazing extent these days; frequently his teams can be seen heavily laden on the way to the depot, or to the grounds of private residences. D. M.

RALEIGH, N. C.—Last week, in the First Presbyterian Church, Miss Emily Clara Steinmetz, oldest daughter of the well known florist, H. Steinmetz, was married to Dr. Guy Alexander Roberts. The church decorations were especially artistic and attractive. Around the pulpit rostrum and extending to the side entrance of the church were great stands of palms, ferns and choice flowers. The arrangement about the pulpit rostrum was in luxuriance, the conservatory lower effect being beautiful. In profusion were great palms, Boston and Piersoni ferns, American Beauty roses, Lilium

longiflorum, carnations, flowering spiraeas and smilax. There were festoons of smilax and ferns above the rostrum and pendant from the chandeliers at the front of the church. The steps of the pulpit rostrum were in white, banked with magnolia leaves.

The bride, who is a brunette, carried a bouquet of orchids, with a show of lily of the valley. The bouquet of the maid of honor, Miss Matilda Steinmetz, sister of the bride, was composed of Bride roses and violets. After the wedding, Dr. and Mrs. Roberts left for Washington, Philadelphia, New York and other points North for a two weeks' honeymoon trip, after which they will return to Raleigh to reside. Both are popular young people and the profusion of the most lovely wedding gifts attest the love and esteem of friends. Dr. Roberts is the assistant Professor of Zoology and Anatomy at the A. and M. College and has a host of friends, as has also his charming bride.

GERANIUMS—GERANIUMS

READY MAY 1.
In bud and bloom. S. A. Nutt, La Favorite, Beauty de Poitevine, Mary Hill, A. Ricard, John Doyle, Jean Vlaud, Marquis de Castellane, and other good varieties. 3½ in. pots, \$3.00 per 100.

A. T. De La Mare Ptg. & Co. Ltd., New York

St. Louis, Mo.

News Notes.

We have with us this week Martin Reukauf, of H. Bayersdorfer & Company, Philadelphia; he is around booming the S. A. P. O. H. meeting, which takes place in his town this year, and we have promised him a good, big delegation.

The force at the wholesale houses had a strenuous time the past week taking care of the large shipments of outdoor stock that came in. At Kuehn's the boss has to help owing to the absence of George Schriefer. The stock here was large and of extra good quality. The shipments of Ammann, Edwardsville, Bell Miller and A. C. Canfield, Springfield, Ill., and Swan Peterson were large. The Kirkwood shippers loaded up Smith & Company with sweet peas and carnations; and Wilcox of Council Bluffs sent lots of Bride and Bridesmaid roses. Augemuller's shipments from Heller Brothers and Buckbee were expensive, but with all of them prices were low. Berning, too, had large shipments from his consignors, especially those of Dunford and Jablonsky.

For the funeral of the late Mrs. Hauser, wife of Daniel Hauser, president of the Globe-Democrat Publishing Company, the past week, the west end florists had a large amount of work, Miss Newman having the family order. It was stated by the daily press that nearly \$2,000 worth of flowers were sent from the local and out of town florists.

Chairman Smith of the trustees of the Florists' Club reports that all arrangements are now completed for the club's twentieth celebration, which will take place June 29, Saturday night. Notices of the doings will be sent to the members in time, so make no engagements for that night or you will miss a good time.

C. Young & Sons Company have had a very busy Spring season in plants, bulbs and seeds. Their mail order business is very large. The cut flower department, too, has had plenty to do in funeral work.

Messrs. Kuehn, Beneke and Ellison will wind up their bowling season with the city league next week, and it is said that other florists will form a team to roll in the Desoto Summer League commencing June 15. St. PATRICK.

EL PASO, ILL.—The El Paso Carnation Company has purchased the one-half block on which their greenhouses are situated from Mrs. Charles Bingner.

CYCLAMEN

Splendens Giganteum Hybrids

This strain has no equal or better, in five true colors, including fringed varieties, twice transplanted from flats \$3.00, from 2 1/2-in. pots \$5.00, from 3-in. pots \$7.00 per 100. Satisfaction guaranteed.

CANNAS

Pres. McKinley, Chas. Henderson, Chicago, Papa, Alphonse Bouvier, Queen Charlotte Egandale, J. D. Cabos, Florence Vaughan, well grown plants from 3-inch pots, \$4.00 per 100.

GERANIUMS

Alphonse Ricard, John Doyle, Castellane, Beauty Poltevine, E. G. Hill, Jean Viand, Mme. Jaubin, S. A. Nutt, La Favorite, etc., extra well grown plants in bud and bloom from 4-inch pots, \$7.00 per 100.

PAUL MADER, Pa.
 East Straudsburg, Pa.

We are now taking orders for a grand lot of **CATTLEYA TRIANAE**, 400 bulbs to a case, at \$5.00 net cash, per case, which we expect to arrive here some time in June. Will sell cheaper if ordered in quantities. Solicit correspondence. Same established plants of **CATTLEYA GIGAS, MENDELII, SCHROEDERAE** and **TRIANAE**; from \$2.00 to \$5.00 per plant.

JOHN DE BUCK,
 Collector of Orchids,
COLLEGE POINT, N. Y.

New Orleans, La.

News Notes.

At the last meeting of the New Orleans Horticultural Society, May 16, Harry Pnpworth, president of the Metairie Ridge Nursery Company, brought a plant of the new Nephrolepis Amerpohli, which was greatly admired for its refined beauty, and which created a discussion of the wonderful sports which the old Nephrolepis exaltata has given the horticultural world since the appearance of N. bostoniensis a few years back. The opinion was expressed that the limit has about been reached, although experts say that the sport from Anna Foster which C. Pble has is even finer than N. Amerpohli, although apparently not quite so strong a grower. James A. Newsham also brought a flower of Cattleya Downina from his last importation. Mr. Newsham, who is an old-time orchid collector and enthusiast, explained the history, habitat and cultivation of this magnificent member of the orchid family. It was reported that the society's secretary, C. R. Panter, had been dangerously ill, but happily was on the mend.

J. H. Menard was found busy the past week moving some large specimen washingtonias and phenix, from one private place to another.

Cassia corymbosa, which usually flowers in the Fall here, is at the present time in full bloom, literally a mass of rich golden blossoms. This is attributed to the dry Spring having ripened the wood which had not been touched this Winter. Another attractive plant which the mild Winter spared to us and which is blooming well at the present, is Solanum Wendlandii. This probably is one of the most attractive half hardy vines grown in the South, and undoubtedly the most beautiful member of the solanum family. CRESCENT CITY.

Washington, D. C.

News Notes.

Beginning with May 15 Washington is to have each year thereafter on the same date what is to be known as Firemen's Day. Chief Belt declares his intention to see that the grave of every fireman is kept green. The decorations this year consisted of twenty, two-inch wreaths, filled with galax and studded with roses, carnations and asparagus. The pieces were especially prepared by Gude Bros. & Co.

The more seasonable weather has caused an increase generally in the sale of plants, likewise in the production of cut flowers, but the demand has lessened and prices have gone down to those which usually prevail at this season. Of carnations there is an oversupply, owing to light demand; prices have fallen correspondingly. Such conditions bid fair to prevail until Memorial Day. Owing to the backwardness of the season, indications now point to a supply that will about equal the demand on May 30, as hardy flowers such as peonies and roses, most of which are then gone, or have to be cut and held back, will come in about on time.

Considerable hail fell on Sunday evening, but so far as has been learned, no damage was done other than to a few outside plants.

Wm. F. Gude was warmly congratulated on Tuesday of last week upon his selection as a director of the Chamber of Commerce of Washington. Mr. Gude received 267 votes, the largest number polled by any candidate. J. L. C.

EAST CAMBRIDGE, MASS.—W. A. Pritchard lost all four fingers of his right hand while working in the corn mill at the Cambridge Manufacturing Company on Monday morning, May 13, 1907. Mr. Pritchard's hand was caught in the rolls, and before help could reach him, the fingers had been taken off by the machinery.

Mr. Pritchard is very well known in Cambridge, having conducted a very successful business as a florist for a number of years past, and his large circle of friends greatly regret to learn of his injury.

IOLA, KAN.—J. W. Primer, Nevada, Mo., is now the proprietor of the old Harmon greenhouse plant. He has set out 3,500 carnation plants to meet the demand for that flower.

New York.

Lecture on Water Lilies.

On Saturday, May 18, at the Botanical Garden, Bronx Park, George V. Nash delivered an interesting lecture on "Water Lilies and other Aquatic Plants; their Relation to Horticulture."

News Notes.

Next Thursday is Memorial Day, and so far as New York and vicinity are concerned, there is evidently going to be a much larger supply of outdoor flowers for this occasion than has been the case for several years.

There is being placed on the market a device, in the shape of an electric fountain, that will, no doubt, appeal to such retail dealers as like to have a nice display during the Summer months.

Carnation growers have, in the main, gotten their stock planted outdoors by this time, and the season would seem to be a particularly good one for the young plants, as the continued cool weather will give them a chance to get well established before the hot days arrive, if by any chance we are to have any of these this year.

Wm. Tricker, who for some time has been located at Lyndonville, Vt., is now in charge of landscape work at West Side Park, Jersey City.

Visitors in town this week included Philip Breitmeyer, Detroit, Mich., accompanied by the secretary of the Park Board of that city, M. T. Hurlburt, and John Gibson, Newport, R. I.

The schedule for the seventh Summer exhibition of the New York Horticultural Society has been issued, and copies of same may be obtained from Secretary Leonard Barron, 55 Liberty street, this city.

The stated meeting of the society for the election of the members and such other routine business as may be brought before it, will be held in the lecture hall of the Museum Building, New York Bot-

anical Garden, on Wednesday, June 12, 1907, at 3:30 p. m. The council meeting will be held in the director's office, New York Botanical Garden, on Wednesday, June 12, 1907, at 2:30 p. m.

Arrangements are progressing favorably for an international conference on Plant Hardiness and Acclimatization, which will be held under the direction of this society, on September 30, and October 1 and 2 of this year, probably in the rooms of the American Institute and the Museum Building of the New York Botanical Garden.

It is intended to publish the full report of the proceedings in book form as Volume II of the Memoirs. N. L. Britton, H. A. Siebrecht, Patrick O'Mara, and Leonard Barron, are the committee in charge.

The fifteenth Annandale Rose Show will be held Wednesday and Thursday, June 12 and 13. The schedule of prizes has been issued by John W. Bain, secretary, Red Hook, N. Y.

At the last club meeting there was no vocal music nor a "talk on Cuba," as had been announced in a trade paper whose local correspondent dreams the most of his "news," and whose "prophecies," plethoric in number, are as unreliable as those of the average weather man.

Charles E. Robinson, late of the F. R. Pierson Company of Tarrytown, N. Y., has within the past few days joined the ranks of the Peekskill florists.

Dean Ferris has a few nice greenhouses as well as a small nursery of herbaceous plants. He grows carnations and a general line of bedding plants.

Lemuel Haines has a fine lot of pansies and geraniums that were selling like the proverbial hot cakes.

The names of E. McCord and Sidney Smith, listed as florists here, were unknown to all members of the craft your correspondent came in contact with.

WIETOR BROS., Wholesale Growers of Cut Flowers **51 Wabash Ave. CHICAGO**

Plant Notes.

ASPARAGUS DUCHENT is a valuable plant when grown, either for its use as a decorative plant or for cutting from, and it is exceedingly well suited for private greenhouses. It is of a vigorous, climbing habit, with striking shiny green foliage.

THE ALPINIAS are pretty plants and **A. Sanderæ**, which is of recent introduction, is especially handsome, the leaves being about five inches long and tapering in a novel manner at both ends. The color of the foliage is a deep but bright green with broad stripes of white, close together, from the mid rib to the margin.

BOUGAINVILLEA GLABRA WILLIAM K. HARRIS is destined to be extensively grown for purposes for which other varieties have but seldom been used. The foliage is beautifully spotted with creamy white, the spots in such numbers that it is a question, as the plant is sometimes seen, which color predominates.

PTERIS CHILDSII is one of the most beautiful if not the best pteris in cultivation; it is a very robust grower, with large fronds and the pinnae markedly dentated and undulated. This variety does not produce spores—a fact that will militate against it becoming very plentiful for some time to come.

FIGUS BANDURATA seems to be increasing constantly in the estimation of plant growers and buyers alike. This plant is not only unique and very decorative in appearance, but it also possesses a constitution that enables it to get along in a thrifty condition under unfavorable circumstances.

THE NEW CARNATION AFTERGLOW

WE beg to announce that we will offer to the trade, the coming season of 1907 and 1908, the new carnation Afterglow, a variety of sterling merit, which is destined to be grown as universally as the Lawson in its time, as it has done exceedingly well wherever it has been tried—in all different sections of the country—the Far East, West and Middle States—and all report it as an "Ideal" commercial variety, grand in every way. It has won the S. A. F. Silver Medal, for the best flower or plant, at the Monthly Exhibition of the Cincinnati Florists' Society in 1906, and scored 91 points at quite a number of exhibitions held in different cities in the United States. It has never failed to score wherever shown. It has scored the highest of any seedlings at the exhibition of the American Carnation Society, held at Toronto in 1907, after reaching there twenty-four hours late from Framingham, Mass. In color it is everything that the name implies—a bright rosy cerise. In stem it excels any commercial variety now extant, not excepting Enchantress, being somewhat longer and always rigid. Never weak, in habit it is very vigorous, "a Grower's Delight," as it recuperates very readily after planting from the field; also from the sand. It loses no time in getting to work.

Orders now booked, to be filled in rotation for well-grown, well-rooted cuttings, at \$2.00 per dozen; \$12.00 per 100; \$100.00 per 1000

"Afterglow has been grown for the past season by the undersigned and offered by them."

California Plant Notes.

FUCHSIA PROCUMBENS.—As a basket plant or for window box culture the graceful trailing *Fuchsia procumbens* is one of the most desirable. The interesting little flowers are followed by large bright red fruit. The plant when not in bloom has a close resemblance to *Muhlenbeckia complexa*. Grown with *Asparagus Sprengeri*, it is very effective.

PASSIFLORA RACEMOSA is one of our most vigorous climbers. It began flowering several weeks ago, and at present is gorgeous with its brilliant scarlet flowers. It endures our sunlight to perfection.

I have met with a fine specimen of *P. quadrangularis* which covers a Southern California house. It is the only member of the family that blooms from early Spring until late in the Fall, but does not set any fruit.

P. laurifolia is also a vigorous grower, but will not flourish in sunshine.

P. edulis is a strong grower, producing a profusion of bloom, not very attractive, but followed by fruit in abundance which has an agreeable taste and odor. The seeds are so numerous that little pulp is found within the hard shell, yet children delight in eating what little there is.

THE TACSONIAS are also pretty, of vigorous growth and clean, dark green foliage. They do fairly well in Southern California, while around San Francisco they are of the most luxuriant growth; indeed, no home about the bay city seems complete without one or two varieties. Some varieties of these plants are preyed upon by a black caterpillar which devastates the foliage, while others are immune from its attacks.

KOCHIA SCOPARIA, while beautiful in form and foliage, is too short-lived to be of any value in this part of the country, unless it be to satisfy the curiosity of an enthusiastic amateur.

At this writing, May 10, *Grevillea robusta* is in full bloom, and a gorgeous sight it is to see a tree or a row of them. When swayed by the wind they look like a great torch, all aflame with their orange-colored flowers, which are without petals. As street trees they are desirable, but the flowering buds stand so little frost, that in the lowlands the tree is seldom seen at its best.

FOR STEEP BANKS and terraces, *Lippia repens* and *Mesembryanthemum subcompressum* are the most valuable plants we have, for the reason that they require very little water during our rainless Summers. The latter when in bloom is of the most dazzling brightness, the stems growing ten to twenty feet in length.

ONE OF THE FINEST subtropical large shrubs or small trees for high, dry elevations is *Wigandia urens*. A specimen in Hollywood is a foot in diameter at the base, with a spread of top of fifteen feet. The foliage, which is large and of a most beautiful shade of green, quite distinct in that respect from any other plant we grow here, is covered with sharp, stiff hairs, as though a protection to the plant. The flowers are of a dark purple color, borne on one-sided spikes a foot or more long.

REVIEW OF THE MARKET

NEW YORK.—The cut flower trade is exceedingly quiet just now; stock of all commercial flowers is coming in in plenty, and the demand, excepting for funeral work, is quite slow. Bride and Bridesmaid roses, together with American Beauty, are being offered in lots at prices that would seemingly tempt buyers to speculate. Slips of the tea roses, including all grades from extras down, are offered at \$2 and \$3 per 100, and the No. 2 grades alone, when they can be cleared in quantity, are let go at about 50c per 100. American Beauty are so plentiful that the street men are handling them in quantities, and this means that the flowers can be purchased at about \$10 per 100.

Carnations continue plentiful, and prices, if anything, are weaker than they were a week ago. There is quite a stock of antirrhinum coming in just now, much of it with stems two and three feet long, for which it is difficult to get more than 60c or 75c per dozen.

Home-grown lilac is beginning to reach the market in quantities, and while on Saturday last there was not enough to go around and prices were exceedingly good, since then the supply has been augmented to such an extent that it is a difficult proposition to get rid of it even when offered at from 25c to 50c per bunch. Tulips and narcissus are not nearly so much in evidence as they have been for many weeks, but sweet peas continue plentiful and clear out at some figure or other.

There is a steady supply of lilacs coming in, and from 60c. to 75c. per dozen is about the ruling price for them. Cattleyas are not over-plentiful just now, though indications point to a rather heavy supply in the near future, which will, no doubt, continue through the Summer months.

PHILADELPHIA.—There have not been quite so many flowers so far this week, except of the poorer quality of tea roses which are very plentiful. A very large quantity of stock was sold to the street men on Saturday last; third grade tea roses went at very low prices. One street man bought 20,000 flowers.

This week American Beauty are selling at \$15 to \$25 per 100 for the best grades. For teas the best price for some choice stock is \$8 per 100.

A few choice carnations have sold at \$3 to \$4 per 100, but the general stock is offered at very low prices. Lily of the valley is plentiful and sells at \$3 to \$4 per 100. Antirrhinum majus, \$1.50 per dozen for choice stock; Spanish iris, blue and yellow, \$2 to \$3 per 100. Outdoor local narcissus realize \$1 to \$2.50 per 100; sweet peas, 50c. to \$1 per 100, with supply abundant. Cattleyas bring \$50 to \$60 per 100 and the price is getting much firmer; daisies fetch \$1 to \$1.50 per 100. Queen Alexandra being in good demand. Stocks sell at \$2 to \$3 per 100; peonies, Southern stock, \$5 to \$6 per 100, \$8 being obtained for a few choice flowers.

DAVID RUST.

INDIANAPOLIS.—A greater variety and supply of flowers have made business more satisfactory the past week. General counter trade and funeral work are brisk, but decorating is almost at a standstill. Fleur de lis and snowballs, both excellent for effective work, are on hand in any quantity; the combination is seen often in the store windows.

The weather is anything but propitious for bedding as frosty temperature prevails. Orders are being booked in heavy numbers for this line of stock and it is certain that several kinds are not sufficient for the demand.

Field violets are still being sold by the store men at 15c. to 25c. per bunch. Outdoor lily of the valley has begun to arrive, selling at \$1 to \$2 per hundred. The carnation shortage has not relaxed; good ones are scarce at \$3 to \$4 per hundred. Summer roses, La France, Souvenir du President Carnet and Kaiserin Augusta Victoria have been added to the list. Select ones wholesale at \$3 per hundred; seconds and thirds as low as \$2 per hundred. American Beauty are not what they should be, going at \$5 to \$35 per hundred.

Sweet peas, ten-week stocks, candytuft, nasturtiums, swainsona and daisies are on hand in abundance. I. B.

CINCINNATI.—Business has been very quiet the past week, with plenty of good stock coming in; consequently prices have amounted to very little, as the goods had to be sold. The outlook for Memorial Day is not very flattering, still there will probably be enough stock to fill orders. Peonies are just coming in, but the big crop will miss May 30. Carnations will be off crop, too, with quite a number of the growers.

Trade in the flower market is not flourishing, the bedding season being very backward, and, of course, this is what the market gardeners look forward to.

E. G. G.

CHICAGO.—The past week has brought what might be termed the first good Spring weather Chicago has enjoyed this season, and with it stock along pretty much all lines has been in plentiful supply, especially roses. Cape jessamine are appearing in goodly numbers and of a quality somewhat better than has been seen for some years. Peonies from Southern growers are coming in but not in as large numbers as usual, owing to the fact of the army worm having destroyed many of the buds; furthermore owing to the increased demand for peony roots it is not likely as many blooms of this favorite flower will be seen in this market the present season.

Indications point to a reasonably good supply of standard items for Memorial Day, some dealers already having booked good sized orders for that occasion. W. K. W.

BOSTON.—All kinds of cut flowers are plentiful and hard to move. This state of affairs has continued for the past week and growers of all kinds of flowers are alike affected. The better grades of roses sell for \$6 and \$8, but in quantities the small grades bring from 1/2c. up. American Beauty remain in about the same condition; fairly good prices are realized for the long stemmed grades but the shorts almost go begging. Carnations, like roses, are coming in all too plentiful and are hard to move. Sweet peas sell fairly well but there are quantities of poor grades in the market. Lily of the valley holds its own. Lilies sell at from \$2 to \$6—not a big price for these flowers. Gladiolus bring \$4 and \$6. Narcissus poeticus and red tulips are the principal outdoor bulbous stock to be seen, and they sell at from 50c. to \$1. Lilacs have not yet come in.

NEW BEDFORD, MASS.—Prospects for a good Memorial Day trade are bright. Flowers from outdoors will be scarce; not much lilac will be in bloom the weather having been so backward this Spring. Tulips this year will be just right; in other words they have generally gone by at this period. Carnations will be quite scarce for this time of the year, and some of the growers will have a hard tussle to get their ten-week stocks in on time, also candytuft. Roses will be quite plentiful, they are almost as cheap as carnations. There will be plenty of geraniums, pansies, daisies, forget-me-not, etc. to help out; these are all in full bloom now, and are very nice for planting in the cemetery.

Some of the growers are getting ready to plant out their young carnation stock; the weather is rather cool as yet. HORTICO.

ST. LOUIS.—In reviewing the market this Monday morning we find conditions about the same they were all of the past week, and prices even lower than ever. The fact of the matter is that there is entirely too much stock consigned to this market. At the present time even the Chicago wholesalers are trying to unload their surplus here. Then trade among the retailers has been very quiet the past two weeks, hardly anything doing outside of funeral work and a wedding decoration for the Memorial Day next week will probably change the market somewhat, but not much, as Spring outdoor flowers are just beginning to come in, and these, with the regular consignments, will again swell the market to its utmost.

Carnations are selling cheap, and plenty of all varieties are coming in, with prices at from \$1.50 to \$2 for the

A COMPARISON OF COSTS

Is the cost of a one inch advertisement in every issue of *The Florists' Exchange* for one year, 52 issues. Total circulation, 369,200.

Is the cost of a three inch advertisement in every issue of *The Florists' Exchange* for one year, 52 issues. Total circulation, 369,200.

Is the cost of a six inch advertisement in every issue of *The Florists' Exchange* for one year, 52 issues. Total circulation, 369,200.

Is the cost of the *one cent stamp* required to mail 369,200 circulars, exclusive of the great additional cost of paper, printing, addressing, etc.

The advertisements in *The Florists' Exchange* are *ALWAYS* read. The circular generally goes into the waste basket, *without being read.*

\$46⁸⁰\$140⁴⁰\$280⁸⁰\$3692⁰⁰

best; \$3 per 100 for specials in Enchantress.

In roses everything in all grades and kinds is in the market. Bride and Bridesmaid are most plentiful, with the price for the very best not over \$5 per 100; others run along the same lines. Extra fine, long American Beauty are selling as low as \$2.50 to \$3 per dozen, with plenty left over that generally go to waste; medium and short grades are sold at one's own price.

Sweet peas are having a good call; in fact, sell better than any other flower in the market at the present time; 50c. to \$1 per 100 is the price. Lily of the valley is of extra good quality, but the demand is slow, at \$3 per 100. Harrisil lilies and callas have been very plentiful of late; \$6 and \$8 in 100 lots, \$1 a single dozen, are the prices obtained. Peonies are selling well at \$4 per 100; white especially have a good demand.

Fancy ferns have been scarce; those coming in are very poor, still the wholesalers ask \$4 per 1000 for them.

Spring weather has at last come to us, and the greenhouse men are fast unloading their big pile of orders for planting out. The weather is not any too warm, but all danger of frost is past, so that outside work can from now go on uninterruptedly.

ST. PATRICK.

FIRMS WHO ARE BUILDING.

FAIRHAVEN, MASS.—Peter Murray is erecting a greenhouse, 200 x 30 feet. H.

NEW BEDFORD, MASS.—Wm. Livezey is building a carnation house, 50 x 22 feet.

SPRINGFIELD, MASS.—Ed. Richards, Sunny Dell Greenhouses, is making an addition to his plant, 100x30 feet.

PAOLA, KAN.—The Sunnyside Greenhouse is to be enlarged and remodeled in general in a short time and will be under the management of Carl Hagemeyer, who is now located at Colorado Springs, Colorado.

CHANGES IN BUSINESS.

WESTMINSTER, CONN.—Charles M. Allen will engage in the business of raising vegetables and flowers here.

CATONSVILLE, MD.—Frederick Seidlich has purchased an acre of ground on Ingleside avenue, and will erect several greenhouses on the property.

SPOKANE, WASH.—F. X. Scully has gone to Wallace to open a flower store in that city. Mr. Scully's store will be a branch of the H. M. Sanders flower store of Spokane. No location for the new business has yet been selected.

WOONSOCKET, R. I.—Jonas Brook is now proprietor of the Summit street greenhouses, he having purchased them from Thomas H. Greene, the former proprietor. Mr. Green will devote his attention to the Woonsocket Napping Machinery Company, of which he is an official.

DAVENPORT, IA.—This city is soon to have a big cucumber industry. James W. Davis of Morrison, Ill., has purchased the greenhouses of the Allison-Pope Company for that purpose and will establish a plant this Spring.

The greenhouses were purchased for \$1,400 and the land on which they are located of Mrs. Charles Dannacher for approximately \$10,000. There are about eight acres of land connected with the greenhouses and Mr. Davis will use all of this in the growing of cucumbers. He also intends to enlarge the greenhouses and will secure more land on which to raise cucumbers and tomatoes, the two vegetables which he will grow in large quantities.

Mr. Davis now has a plant capitalized at \$30,000 located at Morrison, Ill., and another capitalized at \$25,000 at Aurora, Ill. He has decided, however, that Davenport is a good place for such an industry and hence has secured what his states is an ideal location for his business.

Los Angeles, Cal.
Trade News.

W. Haerle, Hollywood, has brought the pineapple experiment range of houses which he will devote to roses, orchids, and lily of the valley for the local cut flower trade. The range of glass is in two sections, each 75 x 100 feet, of the short span type. They will be heated by steam. Henry W. Turner, late superintendent of the Whittlesey carnation houses, is manager, which is a guarantee of success. The name of this new establishment will be El Reah Nursery. The Kuapper family, recently from Philadelphia, Pa., have moved their flower store from Spring street to 2001 Pico Heights.

The Germain Seed Company has set an example in window decoration that other seedsmen could follow with profit. Its large store windows are a pleasure to see. The stock for sale is beautifully arranged; and instead of one arrangement for the whole season, every week a new one appears, artistic in effect and attractive in appearance. The method is sure to bring its reward in increased sales, as well as educating the public in the nomenclature of seeds, plants, and bulbs.

Cut worms—the smooth, fat, light green-colored sort that do their work at night—are doing a great deal of damage to the cabbage crop of Orange county. They eat their way into the heads, leaving tunnels as large as a lead pencil. The orange groves of Riverside county are also infested with this pest, as much as twenty-five per cent of the crop in some orchards being rendered unfit for sale. They also ascend the trees, devouring the newly set fruit and young foliage. Truly, the way of the fruit grower and gardener in California is quite as hard as is that of his brother on the Atlantic Coast. P. D. BARNHAET.

Philadelphia. The Week's News.

The continued cold weather is keeping everyone on the anxious bench. The thermometer was down to 36 degrees on Monday night; there was a severe thunderstorm around this section on Sunday night and in some localities considerable hail fell. No damage is reported nearby, but reports from Chester County are to the effect that some glass was broken near Oxford; detailed accounts have not come in yet.

The Lord & Burnham Company and Adolf Farenwald, Hillside, Pa., have now satisfactorily adjusted matters in regard to the rose house that fell in on Mr. Farenwald's place early in February last. The house was built by Mr. Farenwald from plans and material supplied by the Lord & Burnham Company. Immediately after the accident that firm sent men to rebuild the house. It was among the first of the trussed houses supplied by this concern, and a weakness was found in that bolts at the ridge had pulled out. In the reconstruction this was remedied. The house being rebuilt the question of damages came up. Mr. Farenwald claimed \$1 per rose plant as representing his receipts from February 4 to the time of throwing out the plants. The matter was submitted to arbitration; Robert Simpson, Clifton, N. J., represented Lord & Burnham Company and John Burton, this city, represented Mr. Farenwald. The result was that Farenwald was awarded \$3,750 being at the rate of 46c. per plant.

W. E. McKissick being alive to business got a lot of cotton balls up from the South last week, as the Cotton Association held a convention here; he sold these readily to the retailers at \$5 per 100.

The Leo Niessen Company are handling a fine lot of flowers of Lælia purpurata.

S. S. Pennock, as president of the Florists' Club, has appointed the executive committee to manage the S. A. F. convention affairs and a meeting of the committee was held on Thursday. DAVID RUST.

WEST HOMESTEAD, PA.—The house of A. A. Bisner, a florist of Baldwin township, was robbed recently. The burglar got away with \$108 and a bundle of clothing, but dropped the bundle after being chased along the country road a mile by John Thomas, aged 64, one of Bisner's employes. Thomas gave chase in his night clothes.

KENNETT SQUARE, PA.—The Dingee & Conard Company, of West Grove, Pa., has been engaged by Mrs. Howard Gould to lay out one of the finest rose gardens in the world on her property at Lynchburg.

You'd better be an Is-Was, than a Has-Wasser; and as for a Not-Yet-But-Soon, why he is always one.—The Philistine.

News Notes.
 Ed. Assa, who recently returned from a five weeks' siege in the hospital, is hard at work, and the opticians who prophesied the loss of his eye are surprised at his rapid recovery.

H. F. Halle's new North Side store, at the corner of Sheridan road and Halstead street, is rapidly nearing completion, and will be ready for business before Memorial Day.

Quite extensive alterations are going on at Klunder's, including the installation of a balcony in the rear of the store which will give considerable more floor space.

A week ago last Saturday evening, as John Degnan, of the Winterson Seed Store was returning to his home, he was assaulted by two colored men, robbed of thirteen or fourteen dollars from his vest pocket, struck in the face, knocked down, cut in the back of the head, presumably with a razor, and generally used up according to hold-up rules; however, he is now on deck, smiling as ever.

The trade will generally regret the departure of L. H. Winterson and Mrs. Winterson for the Pacific Coast, where they intend to make their future home. Mr. Winterson has for several years been connected with the E. F. Winterson Company, of which his brother is at the head, has served as secretary of the Chicago Florists' Club, and with Mrs. Winterson has freely participated in all of the social festivities connected with the florist organizations. After a visit to an elder brother in Tacoma, Seattle will be Mr. Winterson's home, where in combination with Chicago capitalists he will represent a different line of business.

Poehlmann Brothers' stock is in excellent condition for Memorial Day.
 A. L. Randall, after a return from his fruit farm in Michigan, is satisfied that the frost did not hit him as hard as reported.

In the flower market the different craftsmen are looking forward to a successful Memorial Day, many orders having been placed in advance.

Edward Roehrs, Lutherford, N. J., was last week in Ravenswood overlooking the establishment of the new houses which George Reinberg, is to put into orchids. Foreman Arnold is much pleased with the condition of the stock as it arrived and prophesies a successful crop for the coming year.

Mr. Dickinson, of the E. H. Hunt Company, says prospects were never better for Memorial Day, and Mr. Lynch coincides.

Wieland & Risch are justly proud of the daily stock delivered at their office from their glass in Evanston.

Foreman Pesineker, of the Wietor Brothers' establishment, reports the most successful season, especially on their line of young stock.

George Collins, at Peter Reinberg's houses, claims to be better prepared for the coming holiday than ever before.

J. A. Budlong has an excellent crop of Bride and Bridesmaid roses, ready for next week, and Phil. Schupp says they are the best they ever had.

C. W. McKellar is well prepared to meet the trade with all demands for cattleyas and gardenias, of which he makes a specialty.

Zech & Mann are looking for a heavy Memorial Day business, many orders having been received in advance.

The J. B. Deamud Company is still prepared to fill all orders for fresh ferns from their new stock.

Kennicott Brothers Company are well located in their new quarters, and after some slight alterations believe they will have one of the best stores in the city.

On Sunday, May 19, The Chicago Florists' Base Ball Club, under the management of W. P. Kyle, were challenged to play a game with the Poehlmann Brothers greenhouse men, which was accepted.

Mr. Kyle and his players proceeded to Morton Grove, where instead of finding the greenhouse men as their opponents they found a hired bunch of professionals, most of whom the oldest residents of Morton Grove had never before seen. Mr. Kyle's team was trimmed by a score of 8 to 1. If Billy is going to play professionals he had better get a professional team.

Kennicott Bros. Company are handling a good line of peonies, but are not getting as good a supply from their Southern growers as usual, owing to the fact that the army worm has eaten into many of the buds.

E. C. Amling reports a big demand for sweet peas, of which he has been receiving large supplies.

E. F. Winterson Company received last week the first new crop ferns of the season, which find a ready sale; storage ferns being generally poor.
 W. K. Wood.

Indianapolis, Ind.

News Items.
 Thomas Hart has about ten frames of lily of the valley which are yielding an excellent profit.

The several show windows filled with high-grade hydrangeas, bespeak J. A. Peterson's activity in this market last week.

The Smith & Young Company is adding a six-inch well to its Cumberland establishment.

S. S. Skidelsky's paper on the proposed national flower show, read before the New York Florists' Club, has again shown his clever ability as a writer. The reference to the late President Harrison's remark at one of the Indianapolis flower shows "He who loves flowers will never beat his wife" is but one instance of the excellent thought with which the essay is filled.

Edward Bertermann is visiting in Chicago.

W. H. Elverson was a visitor this week.
 I. B.

ALEXANDRIA, VA.—Constant Ponné, a florist, whose home is at 2012 Duke street, was injured last week by being thrown from a wagon in which he was driving. The horse ran away and overturned the vehicle. Mr. Ponné was picked up unconscious and was removed to the Alexandria hospital, where it was found that he had escaped with a cut on the forehead. Later he was conveyed to his home.

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers. If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.) We can supply them at \$2.50 per 1000, or 500 for \$1.50 and can make a reduction of those prices on large quantities. At a small extra cost we can put your imprint on each leaflet. Try a thousand and see what a help they are in selling goods.

Heating.

Growers' Problems Solved by U. G. Scollay.

I have one 2-inch hot water pipe running 190 feet under a table where it enters the bottom of a manifold of five 1 1/2-inch, falling at this point back to the boiler. Can the 2-inch (starting 10 feet from the manifold) be raised overhead and fall into the top of the manifold? The flow is mostly on the uphill system; expansion tank being higher than the proposed raised 2-inch. M. Penna.

Your proposed method of connecting some additional surface for a new extension to your present house from the present 2-inch main would work, but I would strongly advise you to rearrange the whole thing, so that you may obtain the results you should get from the coal you burn. You now have about 950 lineal feet of 1 1/2-inch pipe, supplied by a 2-inch flow main. Personally, I would not think of using less than a 2 1/2-inch main for this amount of surface, and in considering the length of your house, 190 feet, I would more likely use 3-inch. Certainly in preparing to add more surface to the present amount I would use a 3-inch overhead main direct from the boiler. The present 2-inch flow I would disconnect from the top of the boiler and connect to the re-return at the bottom, using the 2-inch line as a return from your new addition. You may disconnect this 2-inch line from the present coil and plug the header, or leave it as it is at that point, placing a tee in it for return from the new addition. Either plan will be satisfactory in its operation. U. G. SCOLLAY.

I am using a 40 h.p. steam boiler for heating my greenhouse plant, but it is hardly sufficient. Would it be advisable to use a cast-iron sectional boiler to help out if the water level in both is the same? New York. F. M.

Your inquiry is a somewhat peculiar one, and I will only reply to it from my own standpoint of experience. On three different occasions I have had cast-iron boilers connected with horizontal and upright tubular boilers. In not one of these cases was my experience at all satisfactory. I tried all sorts and conditions of wiring and used various expedients in the way of piping in my efforts to secure anything like a set water line but always failed. Personally, I would not advise you to attempt such an experiment. Possibly some of the subscribers for The Florists' Exchange have had experience in this line somewhat different from mine, but I can hardly believe such to be the case. U. G. SCOLLAY.

Please explain the trouble with my heating plant, as I am unable to heat my new greenhouse properly. The main building is 80x26 1/2 feet, with addition at rear, 20x19 feet, all 15 feet high, 3 1/2 feet concrete walls and 3 1/2 feet glass, both sides. Potting shed and boiler pit are in rear of greenhouse; forcing house, 18x20 feet, south of potting shed; forcing house, 5 feet on south side and 12 feet on north side. I have five flows and seven returns under the benches; pipes, 3/4 inches, inside measure; have five open expansion tanks in east end of greenhouse; two flows and two returns, 3/4-inch pipe and one open tank in forcing house. I am obliged to cut off the heat from the forcing house in order to heat the main building. I have model five-sectional hot water heater in pit boiler, rated to heat 1,700 feet in 4-inch pipe. When mercury showed 4 degrees above zero outside, the thermometer only registered 40 degrees above zero in the forcing house, and in east end of greenhouse; 48 degrees, north end. The boiler is in pit, 7 feet below flow pipe; chimney, 12x12 inches inside and 24 feet high; smoke pipe, 12 inches. I have a fine draft. Must I put in more pipe or buy a larger boiler? H. Pa.

Assuming that you desire 60 to 65 degrees in the 35x26 1/2-foot house, I would say that you will require two additional lines of 4-inch pipe (3/4-inch inside diameter) to obtain these temperatures in zero weather. The forcing house is about right as to the amount of heating surface. The boiler you have is probably rated for 1,700 square feet of "radiating surface," but that does not always mean exactly that it will take care of a greenhouse with all its particular requirements. When a florist purchases a boiler from any one who is not a manufacturer, he should be careful to get a guarantee, or, probably, better

Dear Sirs-

Please ship me as follows

100 lbs Fumigating Tobacco powder	\$3.00
100 " Black stuff fine	2.00
144 sheets Apliedide	3.50
10 Fumigating plates	.50
	<u>\$9.00</u>

Send the powder by freight, the Apliedide by express prepaid. I enclose check for \$9.00
Three or four years ago I had a bag of the Black stuff fine and it was without exception the best tobacco powder I have ever had. Since then I got some stuff from a seedhouse. I paid more for the article and got left on it. It was worse like sawdust than anything else. Now I am coming back to you.

Yours truly
C. E. Stevens.

Say, Stevens, we would sure like to know from you and others like you "why you stray away" to folks who don't know tobacco powder from sawdust. We have been telling you and others in a hundred different ways how smart we are in the way of tobacco powder; that we have been in the tobacco powder business for twenty years, and why our tobacco powder should be and is, twenty years **AHEAD OF ALL OTHERS.** Again we ask, why you let the fellows that don't know, skin you, who should know, that the **BLACK STUFF FINE TOBACCO POWDER**, for dusting, at 2c. per pound, in our bag holding 100 pounds, with our name, address and brand on each bag, sold only by us, direct to you, is the **only one. WE WOULD LIKE TO KNOW.**

Then What Do You Do It For?

You know just as well as we do that a wide house takes half the amount for sides; no more roof and a good deal less framing than two narrow houses covering the same space; that you actually save nothing in the end, but lose by building narrow houses. Besides all this, think of the proven out economy in heating and the splendid, rightly tempered ventilation you get. There's not a better house made than our 40 foot Iron Frame one. We know it will save you money. Write us today, tomorrow you'll be too busy.

still, assure himself of the capacity of the boiler in square feet of glass to a certain temperature. I would not care to run the boiler you mention on more than 1,500 feet of 4-inch pipe and then only under the most favorable conditions. Your boiler is doing all that it is capable of doing and that means expense to you—in coal for instance. No boiler running up to its full "rated capacity" is doing economical work. Your sketch leads me to suppose that you take all your connections from the boiler to the main house, with one flow and return main. It is wrong for you to carry too much pipe for the size of the main. If you follow out my suggestion as to additional pipe, I would recommend the following: Put one extra pipe under the north and one under the south bench of the 26½-foot house. Arrange your boiler so that you can take off two flows and two returns for ¾-inch pipe, and allow one set to take care of the pipe under the north bench, and four of the pipes under the center bench, also carry the forcing house. This is absolutely necessary unless you run mains of proper size to feed the whole job, but that will be both expensive to you and will complicate the work somewhat. I think if you add the two pipes in the large house and make connections as direct, that your present boiler will work better and more heat be obtained; but for sure economy you need a new boiler.
U. G. SCOLLAY.

ALL HEART SUN DRIED CYPRESS

There is no wood its equal to resist decay when it is **FREE** of SAPWOOD and **SUN DRIED IN THE AIR**. One piece of sap in a house will cause more trouble and expense than many times the difference in cost between the best and sappy material. Kiln drying destroys the vitality of any wood.

We Guarantee Our Cypress
TO BE
Without Sapwood and Air Dried.

 GREENHOUSE CONSTRUCTION MATERIAL
 1365-79 Flushing Ave., BROOKLYN, N. Y.

EVERYBODY IS TALKING
 about their material and each one says he has the only kind of greenhouse material that ought to be used. You read each advertisement and are at a loss to know where to buy material for your new houses. You begin to wonder which one of the advertisers is honest and will give you just what he talks about—you get right up to that question again when you begin to look over the estimates. You finally give the order to the lowest bidder or to the fellow you have the most confidence in. Now we have been doing business for forty years and have made nothing but greenhouse material—we have the largest list of satisfied customers—we have the best facilities for handling the work and hundreds of testimonials backing up our talk. If you want quality and honest value we want your order—if you don't care give it to the other fellow.

Look Here, Mr. Florist and Gardener

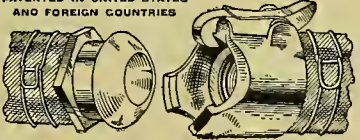

WE have just passed through an unusually severe winter and you are apt to forget the many sleepless nights you spent worrying about the temperature of that No. so and so house.

Or the many zero nights that you spent in the boiler pit; maybe you did not have to do the stoking and firing, but **you** certainly had to do the worrying and pay the coal bills.

Now keep the vows you made on those trying occasions, **And Send for me.** I have solved the problem for others, I can do it for you; and remember, I will come recommended by some of the most prominent commercial florists and gardeners in the East, "Personal friends of yours."

WRITE FOR NEW CATALOGUE

WHAT do you gain by buying your materials of one firm, boiler of another, ventilating of a third, and so on, until you have literally built your house in installments?

Now, suppose a number of these installments go wrong, or are not thoroughly satisfactory to you—you must thresh each one out with each separate firm; each firm transacting business in a different way—all that bother, all that annoyance—and then you don't get what you want in the end! The following is a strong statement and we are prepared to back it up: The firms who only furnish materials and don't do erecting, don't know the erecting faults of their materials. How can they? The firm who sells you a boiler for your greenhouse—unless that boiler was made for greenhouse heating, it won't heat your greenhouse economically. This greenhouse business is a business in itself. Its requirements are so severe, it cannot be carried as a side line by any firm and that firm give you the expert information, or furnish you the best thing for the best place in your greenhouse. Every time a house is erected our construction expert sizes it up for weak points. These weak points are immediately taken up by the factory, and the next house the man buys is minus those weak points. You see we do admit that our houses can be improved, but we don't admit that any other firm is making as many and as rapid improvements, or has the factory or equipment to do this greenhouse business, as we have.

What do you know about our Semi-Iron House? The New Truss house? That Iron Frame construction? Send for catalog.

Vol. XXIII. No. 22

NEW YORK AND CHICAGO, JUNE 1, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Echantrees and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Echantrees is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

The Florists' Exchange, 2-8 Duane St. New York,

JAMES VICK'S SONS, Seedsmen
 Rochester, N. Y., May 2-th, 1907.

Florists' Exchange, New York City.
 Gentlemen: In our letter of last week we hinted at plans for increasing our rapidly growing Wholesale Department. One of the lines along which we are working is the Fall Bulb Trade in which we are making a special feature of Import Prices on orders which are sent to us now.

For Quality our stock cannot be surpassed. The truth of this statement is supported by the fact that our Bulb business has nearly doubled in three years. If this does not show that our customers are pleased with our bulbs, we do not know what would.

If any of your readers want rock-bottom import prices we invite them to send us a list of their wants and get our quotations, or else drop us a postal for our Import Bulb List. Yours very truly,

JAMES VICK'S SONS.

XXX SEEDS

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Henry W. Wood, Richmond, Va.,
president; C. S. Burge, Toledo, O., first
vice-president; G. B. McVay, Birming-
ham, Ala., second vice-president; C. E.
Kendel, Cleveland, O., secretary and
treasurer; J. H. Ford, Ravenna, O., as-
sistant secretary.

AMERICAN SEED TRADE ASSOCIATION.

—The Hotel Astor, Times Square,
Broadway, between 44th and 45th
streets, New York, has been selected as
the headquarters for the twenty-fifth an-
nual convention of the association. Rates
are \$2.50 per day, one in a room, and
upward, for lodging. There are several
other hotels nearby, where rooms can
be had for \$1 or \$1.50 per day and up-
ward. There are eating houses in the
vicinity without number. The program
is shorter than some have been, but it
was deemed advisable to allow plenty
of time for the discussion of important
committee reports that will be presented
this year. Special attention is called
to the proposed changes in the by-laws,
one of which directly affects every mem-
ber. Special railroad rates were asked
for, but refused on account of the regu-
lar low rates that prevail in many East-
ern States. Rates may, however, be se-
cured in connection with the James-
town Exposition. C. E. KENDEL,
Secretary.

The following is the program of papers
to be read: "Reminiscences of the
Seed Trade," by F. W. Bruggerhof of
J. M. Thorburn & Company, New York;
"What the Department of Agriculture is
Doing for the Seed Trade," by Dr. B. T.
Galloway, Chief of Bureau of Plant In-
dustry, United States Department of
Agriculture; "History of the American
Seed Trade Association," by S. F. Wil-
lard of Comstock, Ferris & Company,
Wethersfield, Conn.; "The Congressional
Seed Distribution," by Alexander Forbes
of Peter Henderson & Company, New
York; "The Twentieth Century Seed
Catalogue," by J. Horace McFarland,
Harrisburg, Pa.; "Is it Advisable to
Offer Discounts from Catalogue Prices?"
by Walter P. Stokes, Philadelphia, Pa.

There will also be extended reports
of committees on seed adulteration, seed
legislation, and Government seed distri-
bution.

The changes in the by-laws include the
addition to Article 1, section 1, of the
following words: "If the personnel of
a firm or corporation is changed, mem-
bership can be continued only by unani-
mous vote of the Membership Commit-
tee." And section 3 of the same article
now reads: "Each member shall pay an
annual assessment of ten dollars, which
shall be due at the commencement of
each year."

The opening session begins at 10 a. m.,
Tuesday, June 25, 1907.

Following are the officers and commit-
tees for 1907: President, Henry W.
Wood, Richmond, Va.; first vice-presi-
dent, C. S. Burge, Toledo, O.; second
vice-president, G. B. McVay, Birming-
ham, Ala.; secretary-treasurer, C. E.
Kendel, Cleveland, O. Executive Com-
mittee.—W. H. Grenell, chairman,
Pierrepont Manor, New York; J. C.
Robinson, Waterloo, Neb.; Burnet Lan-
dreth, Bristol, Pa.; Carl C. Cropp, Chi-
cago, Ill.; M. H. Duryea, New York
City. Membership Committee.—Albert
McCullough, Cincinnati, Ohio; W. A.
Burpee, Philadelphia, Pa.; Chas. N.
Page, Des Moines, Ia. Committee on
Entertainment.—Marshall H. Duryea,
chairman; Alexander Forbes, A. L. Don,
Watson S. Woodruff, O. W. F. Randolph,
John Lewis Childs, C. L. Allen and Wil-
liam Jacot.

PHILADELPHIA, PA.—To-day (Sat-
urday, June 1) W. Atlee Burpee, ac-
companied by Mrs. Burpee and their
two sons, sail for London, England.

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE

APPRAISERS' DECISION ON IRIS ROOTS.
 —In the protest of F. B. Vandegriff & Company against the assessment of duty by the collector of customs at the port of Chicago, before Board 3, May 13, 1907, the merchandise, which was classified as nursery stock under paragraph 252, tariff act of 1897, was claimed to be free of duty under paragraph 656 as bulbs and bulbous roots not edible and not otherwise provided for, the protest was overruled, and the following opinion handed down by General Appraiser Waite: "The goods are invoiced as 10,000 dry orris roots, and were returned by the appraiser as live iris plants. * * * In a supplemental report the appraiser states that the merchandise was found upon examination to be roots of the Florentine iris which had germinated and produced sprouts from 6 to 10 inches in length; and he further states, 'the original invoice description of these roots or plants seems to have been erroneous, as they could not be dry orris roots and have germinated in transit!'"

"The importers have not seen fit to introduce any evidence. While the Florentine iris is one of the varieties of iris-yielding orris root ('Iris,' International Encyclopædia), the board can not find upon the record before it that the importation is commercial orris root; neither can it say that the roots in question are not bulbs or bulbous roots, cultivated for their flowers, and dutiable as assessed, or at least at the same rate under the provision in paragraph 251 of the act for bulbs, bulbous roots, or corms which are cultivated for their flowers."

CHICAGO.—Peter Hollenbeck is fulfilling his citizen's duties by serving a term on the Grand Jury.

Leonard Vaughan and Charles Hollenbeck, who have been selected as a committee on transportation, are desirous of hearing from parties west of Chicago who would join the delegation here and travel with them to New York to attend the meeting of the American Seed Trade Association next month. It is hoped that a sufficient number may go to warrant the engaging of a special car.

Vaughan's Seed Store reports that their correspondents in San Francisco complain of a dull trade, owing to the strike.

At Winterson's Seed Store, as they approach the close of the second month of their existence as a concern, the man-

agement express themselves as much pleased with the success which has been meted out to them. W. K. W.

European Notes.

Le Roi est Mort; Vive le Roi. That is just how we feel, Mr. Editor. The season is dead, and in a few days our balance (or the lack of it) will reveal the best and the worst. One thing is certain, there will be very few millionaires, and yet almost all are agreed that the demand has, on the whole, been good; but prices have in many cases been simply ruinous.

The expected boom in clover seeds has not materialized and many of the heavy seed merchants are much discouraged. The bankruptcy of R. David & Company, Mark Lane, London, is announced to-day. Contrary to expectation the list of creditors contains only one name from your side, and only for a trifling amount.

The exhibition of the Royal Horticultural Society on May 14 brought W. J. James out of his retirement, and a more magnificent display of his giant form of *Calceolaria hybrida* has never before been seen. The award of the committee was singularly inadequate. Carters were equally badly treated over a grand display of cinerarias. The award of the

those of Low, Veitch, Rivers, and Rochford. It is hoped that an invitation will be issued by Sutton & Sons.

At the congress of this same body to be held in Paris from the 15th to the 17th of July, one of the subjects for discussion is: "The English have started a campaign against giving discounts to

now been superseded by better forms and larger fruits. Probably Sutton & Sons, of Reading, England, have done more than any other one firm in bringing up the hothouse melon to its high standard of today.

During the past ten years considerable space has been devoted to the cultivation of forcing melons in this country; that is, in private establishments. We here have the advantage of our cousins across the Atlantic in forcing this one of the best of all fruits. With care and space at command, ripe melons can be produced all through the Winter months, which cannot be accomplished on the other side, at least in England.

The accompanying illustration shows a seedling melon, raised by me two years ago, from a cross of Sutton's Royal Favorite with Sutton's A 1. It has proved superior to either of its parents, is a robust grower, and a capital variety for Winter forcing, having free setting qualities. I have tested it with Sutton's latest introductions of last season, such as Ringleader, Superb and Superlative, and am convinced that I must hold on to the seedling, as I can get better results from it than from any other variety that I have tested.

Probably a few remarks on the cultivation of melons may be of interest. Melons need careful treatment, whether grown in Summer or Winter; but as they are more liable to go wrong during the short days than at any other time, I shall confine my remarks to the Winter treatment.

In the first place, they must not get a check at any stage of their growth. Keep a night temperature of about 70 degrees, with a rise of ten degrees during the day. This is about a happy temperature for melons. Have the house well charged with moisture until the fruit commences to ripen, when a drier atmosphere is beneficial to bring up the flavor. Some may think that by growing melons through the short days the fruits are deficient in flavor. Yes, if the plants have received a check; but by maintaining the proper temperature, being very careful with airing, watering, etc., the flavor is equal to that of the Summer fruits, only the forced ones will not be quite as large. By confining the roots somewhat, say, on a raised bench, with two feet of soil and five inches deep, with proper feeding a good crop of melons will be produced. Manure water is good for the plants after the fruit is set, that from the cow barn being preferred. A little nitrate of soda afforded, say, a couple of times, will help swell the fruit, using about a tablespoonful of soda to three gallons of water. The compost for melons does not require much manure, but sod that has been laid up for a month or so, with a liberal amount of cow manure put on in layers; then, use the sod leaving out the manure. The plant will do better than with the manure. I find this makes an ideal compost, adding a little bone meal and wood ashes. Of course, a great deal depends on the house for the Winter forcing of melons; a small house is decidedly the best for this purpose, then it is an easy matter to keep up the desired temperature.

By following along the lines mentioned there should be no difficulty in having ripe melons for Christmas and New Year, and onward. One should figure on about three months from the time the seed is sown to the obtaining of the ripe fruit. WM. TURNER.

Turner's Seedling Forcing Melon
 (Sutton's Royal Favorite X Sutton's A 1)

gold medal to James Douglas's superb collection of auriculars was a little incongruous when the relative importance of the different articles is taken into consideration.

Sweet peas of the original type were well to the fore. Breadmore had a few of the newer kinds in fine shape; Mrs. Collier was particularly good.

A mild excitement still prevails respecting the Winter-flowering strains and in the Horticultural Advertiser appears a long letter from Ant. C. Zvolanek containing all that is worth knowing about the strain—except the name of the vetch.

One pleasant result of the *entente cordiale* at present existing between England and France is an excursion to London of the Fédération Nationale des Syndicats Horticoles de France from May 28 to June 1. Beginning with the Temple show of the R. H. S. visits will be paid to the principal horticultural establishments near London, including

gentlemen's gardeners. They have done this in the name of the dignity of the gardener. How can we carry out the same idea in France? This should put fresh courage into the gallant Captain of Bloomsdale in his campaign against graft in your country. He has the sympathy of every right-minded man.

EUROPEAN SEEDS.

Melons for Forcing.

The melon has been cultivated for generations. It is a native of the hot parts of Asia. Seed was first brought by missionaries from Asia into Rome; afterward it was introduced into France in 1495, then into England. But as with all other fruit, vast improvements have been made on the melon. Take, for instance, twenty years ago, when the standard varieties of hothouse melons were Colston Basset, Victory of Bath, Gilbert's Green Flesh, Eastnor Castle, Beechwood and a few others. Those varieties have

HENRY F. MICHELL CO.

1018 Market St., PHILADELPHIA

June 1, 1907

HOLLAND BULB NOTES.—Last Saturday, Sunday and Monday we had such hot weather that hyacinths and tulips suffered very much. The temperature was 124 degrees (Fahr.) in the sun and 88 degrees in the shade. Many kinds of hyacinths burned yellow or brown and tulips, not planted in first quality ground, perished. In several kinds of tulips has appeared "stam fire," a disease not infecting the bulb, but causing an early death, so that the bulbs do not grow up to the standard. J. B.

IMPORTS OF SEEDS, ETC.—May 18 and 19.—P. O. Meanch, seven crates orchids. May 20.—Maltus & Ware, 42 cases plants; P. B. Vandegrift & Company, three bushels plants, one case plants.

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers.

If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.) We can supply them at \$2.50 per 1000, or 500 for \$1.50 and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet. Try a thousand and see what a help they are in selling goods.

I had very good results from my advertisement in your paper.

CARLMAN RIBSAM

TRENTON, N. J.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Sesger, Rochester, N. Y., secretary; C. L. Yacca, Rochester, N. Y., treasurer.

PLANT FOR NAME.—Rex.—The name of your specimen is *Cercis japonica*, the Japanese Judas tree. It can be increased from soft wood cuttings, but as the bushes seed freely when but a few feet high and seeds grow readily, rarely any other method of propagation is attempted. J. M.

GRAFTING MAGNOLIAS ON THE TULIP TREE.—Can any species of magnolia be grafted on the tulip tree? REX.

—It is probable magnolias could be grafted on the tulip tree, but as the *M. tripetala* is easily raised from seeds and it is a good stock for all other kinds, it is much used for that purpose. *M. acuminata* is also used, but as it makes fewer fibers than *M. tripetala* it does not transplant as well. J. M.

CAMPHOR INDUSTRY.—Secretary James Wilson of the Department of Agriculture, in a recent address delivered before the American Club of Pittsburg, declared that the United States was successfully experimenting in the production of camphor. He said, in part: "For years the Department has been distributing camphor tree seed and thousands of trees are now growing throughout the South and in the Pacific Coast States. Two years ago a serious effort was made to develop the manufacture of camphor from these trees. By improvements in manufacturing processes satisfactory results have been accomplished and a large manufacturing concern is now building up a camphor grove of 2,000 acres in Florida, from which it hopes to make its camphor. This firm uses more than \$500,000 worth of camphor every year.

A Japanese newspaper states that the Tokyo government has on foot a project for the extensive planting of forests of camphor trees. The demand for camphor increases, having now reached over 10,500,000 pounds annually, and it will not be long until it reaches 13,000,000 pounds, says the Japanese authority.

EVERGREEN SEEDLINGS.—A decision adverse to the government was rendered by the United States Circuit Court, Southern District of New York, on May 14, 1907, in the case of the United States against P. Ouwerkerk. The view of the court is that "Species of the laurel (*Aucuba japonica* and *Kalmia latifolia*) and of the rhododendron (*Rhododendron ponticum*), which retain their verdure throughout the year, are 'evergreens' within the meaning of paragraph 252, tariff act of 1897; and under said paragraph seedlings of these plants are dutiable as 'evergreen seedlings' rather than as 'nursery stock.'"

The case relates to three varieties of plants, designated as *Aucuba japonica* or Japanese laurel, *Rhododendron ponticum*, and *Kalmia latifolia* or American laurel, which the board held dutiable under the provision of "evergreen seedling" in paragraph 252, tariff act of 1897, rather than as "nursery stock" under the same paragraph, as classified by the collector. The government's contention as stated in the petition is that the board was in error in holding that the word "evergreens" as applied to plants covers not only those commonly known as "evergreens" but also other plants which retain their verdure through all seasons, among which are the rhododendrons and laurel in question.

Seasonable Topics.

Anjou pear still heads the list of good Winter varieties. It is a large fruit, of excellent quality and a sure bearer. Had it a good color it would be still more esteemed than it is.

Pterostyrax hispidum flowers when it reaches a height of about 8 feet. It is one of the finest of flowering small trees of Japan, almost rivaling the *wistaria*. It blooms in early June.

Ampelopsis Veitchii is planted to cover the trunks of living trees just as English ivy is. Care must be taken that it does not overlap the foliage of the tree or it will destroy it. Trumpet vine and any other self-climbing vine can also be used in a similar way.

Lespedeza bicolor, *Desmodium penduliflorum*, as it is called, is an excellent plant to set in an open wood. It delights in partial shade and the soil that woods afford it. It is of a herbaceous nature, though used as a shrub by many.

Morus alba and its variety, the Russian mulberry are grown to produce leaves for food for silk worms by those interested in that industry. Two sets of trees

are grown, the leaves being gathered from one block one year and from the other the next, so as not to weaken the trees greatly.

The American white ash of many Western nurserymen is but the green ash, *Fraxinus viridis*. It does not make so large a tree as the white ash, which is *Fraxinus alba*, or *F. americana*. Its foliage falls a little earlier in Autumn.

Japanese Judas tree is a handsomer species than our native one. The flowers are deep pink and more showy than those of the other, and it is not of as tall growth. It blooms in mid-May, when flowering bushes of its type are rare.

Winter comes, there will be a goodly number of them to be found. Such a tree, root pruned in July, would be in condition to transplant in eighteen months.

The branches of trees can often be pruned to advantage at the time the roots are, allowing for the sharpening of the trees at the same time.

In the case of small trees, it is not always necessary to dig a trench around them to find their roots; a spade thrust down will meet with them and cut them off.

Cerasus Japonica Rosa Pendula.

It is from the trees and shrubs that flower in early Spring that the most pleasure comes. It matters not how indifferent one may be to flowers the first days of Spring will be apt to find him in his garden looking about for green shoots springing from the ground. The lever of plants does more than this. The trees and bushes are visited to note if the Winter has left them in good order or not, and to see if the buds show evidence of the breath of Spring. And when a little later the buds have not only burst but flowers are expanded, there is felt a joy in living, and it is almost impossible to cease walking from hush to hush to enjoy the feast the flowers present.

There are many reasons why the Japanese weeping cherry is found in all collections; the chief ones are its weeping character, its lovely pink blossom buds and its early flowering. Its weeping habit is almost peculiar to itself. As the illustration shows, it is in the class of those that keep ascending as it grows, yet with this it has a good deal of the habit of those that do not make a leader, forming a broad, spreading growth, which is much admired. As it develops it forms a distinctly graceful tree. We think its beauty is at its height when the flower buds are just about to burst, because they are of a pink color. When expanded the white of the corolla is shown, making a greater display of flowers and clothing the tree prettily.

This beautiful weeper goes under the name of *Cerasus japonica rosea pendula*. What is really its correct name it is hard to say. English authorities call it a form of *Cerasus sinensis*; but the *C. sinensis* of our collectors has little about it resembling this weeper, neither in character of wood nor foliage. We think we can well afford to hold on to the name horticulturists know it by until it gets upset, if it ever does.

It will be noticed that the specimen before us has been allowed to branch at about three feet from the ground. When worked at six feet, as they often are, the trees form hovers grateful to those seeking shade in Summer. The foliage is ample, while not being too dense. We have seen the trees worked on mazzard stocks of over six feet in height, forming exceedingly cozy arbors.

As mentioned, the drooping character of this cherry is peculiar to itself, calling for the planting of it by everyone looking for variety, to say nothing of all the other good qualities we have mentioned.

Pruning and Transplanting Pines.

In the transplanting of pines, perhaps no more fail than would be the case in an equal number of deciduous trees. With care that the roots are not permitted to become dry there is little risk of any of them dying. In fact, the Himalayan pine, the white, the cembra and the monticola of the Pacific Coast as well as all others of the white pine section, are of easy removal, the cembra being, in nursery language, hard to kill.

Why it is that pines, having as a rule so few roots, yet succeed fairly well, is because their leaves do not lose moisture as quickly as do the leaves of deciduous trees. And if the roots are kept moist all the time while transplanting is going on and a fair pruning be given the branches, the losses will be very few. The wood of pines is so heavy that when the trees are transplanted they become top heavy, swaying about in the wind, loosening the roots, and death follows. Austrian, Scotch and pitch pines are particularly of heavy tops, and these should have a good pruning hack, but not farther back than the live needles or they may fail to break afresh properly. JOSEPH MEEHAN.

CERASUS JAPONICA ROSEA PENDULA
Japan Weeping Cherry

Late Planting of Deciduous Stock.

Do what we will there are always some deciduous shrubs and trees we have not an opportunity of planting before their leaves appear. Sometimes it is really important that they be planted, in which case it is not impossible to do the work safely. The first thing that suggests itself to many is to strip off all the leaves and plant the trees, but to do this would be wrong. A portion of the leaves should be left alone, say, from a fourth to a half of them and to prevent these left-on leaves from wilting the tree should be deluged with water for a few days. By that time new fibers will have formed, and the tree can then sustain itself, and the leaves already on the tree will be of great use to it. To transplant a tree when in leaf is a great check to it, but the check is not nearly as severe as it is when all the leaves are stripped from the tree. Trees and shrubs have been transplanted when in leaf with great success treated as recommended. The water at the roots holds them safe for a few days, by which time the warmth of the ground and the moisture have encouraged root action.

Root Pruning Trees.

Those who have large trees to be removed for selling or for any other purpose, would find it very much to their interest to root prune them two years in advance of removal. This is especially true of large trees known to be of a difficult nature to transplant, such as oaks, hickories, magnolias and the like. When treated to a good root pruning, such trees are as safely removed as maples, for wherever a root is severed a half dozen small ones take its place, and these almost ensure the trees living.

The mode of root pruning is to dig around large trees to a depth sufficient to allow of meeting all the large roots. These roots are chopped off, making as clean a cut as can be, and then the soil is refilled around the tree. The distance from the trunk is to be regulated by the size of the tree, but a good guide is to dig a little closer to it than would be done were the tree to be removed at once.

The pruning may be done in Spring, Summer or Autumn, as time allows. Some nurserymen favor July for the work, the results being very favorable, and there being less pressure of work than at any other season. New roots follow at once, and by the time

THE FLORISTS' EXCHANGE

ROSES ===== CHRYSANTHEMUMS ===== BOUVARDIA ===== COLEUS

GRAFTED ROSES

We offer this year the following assortment: Bride, Bridesmaid, Bon Silene, Ivory, Gen. McArthur, Kate Moulton, Killarney, Mme. Caroline Testout, Mme. Hoste, Marechal Niel, Richmond, Souvenir De Wootton, Tom Field, Uncle John.

During 1906 we furnished to the trade over One Hundred Thousand of the below described leaflets.

CULTURAL DIRECTIONS

Specially written for the use of your amateur customers. Send Twenty-five cents for complete sample set, which amount will be deducted from order for first thousand.

The universal favor in which these Directions are held, as shown by the many orders received therefor, encourages us in the belief that these Leaflets are just the neat little factor to help promote business and establish better relations between the dealer and his customer.

TRY SOME!

BIG BUSINESS ASSISTANT

TO SAVE TIME, QUICKEN SALES, AND AID YOU PLEASE YOUR CUSTOMER, WE HAVE PREPARED

Cultural Directions

COVERING A NUMBER OF THOSE PLANTS AND BULBS MOST LARGELY IN DEMAND

THE "CULTURALS" have been written by experts; they are fuller, and contain more detailed directions than it is possible to embrace in a catalogue. Equipped with these, just hand one out with each sale, and save yourself considerable present and future trouble, as the customer will then be able to consult the directions, grow his plants, seeds or bulbs intelligently, and so receive satisfactory results, without having to continually resort to you for advice.

The following "Culturals" are now ready:

- AMARYLLIS(Hippeastrum)
ANNALS FROM SEED
ASPARGUS
ASTERS
BEGONIA, TUBEROUS
BULBS
CABBAGE and CAULI-FLOWER

Herndon, Lester & Ivey Co., Richmond, Virginia.

THE ONION SET TRADE.—The past year has been one of great satisfaction to all engaged in this trade. There has been an increased demand and not an over abundant supply, which has caused high prices and quick sales. More than that, there has been an unusual condition in the keeping quality of the bulbs which has afforded the dealer an additional profit. Messrs. Peter Hollenback & Son, Chicago, the pioneers in this industry, say the keeping of the bulbs the past season has been unprecedented, and make the following statement: "On October 20 last, we put in store one lot of 1083 bushels, on a basis of 38 pounds to the bushel, and we shipped from this lot in March on the 32 pound basis, 1164 bushels, a gain of 81 bushels, which was our first experience along that line, as that six pound allowance rarely covers the shrinkage." They attribute this good fortune to the bulbs having been unusually well ripened, and to the steady cold weather and rare atmosphere from January to March.

OUEDLINBURG, GERMANY.—George Roemer, landscape and market gardener, died suddenly of heart failure, May 17, 1907, aged 41 years.

CARNATIONS and Novelties in **DECORATIVE PLANTS** Market and 49th Sts. **PHILADELPHIA, PA.**

THE WEEK'S WORK.

Timme's Timely Teachings.

Our Busy Season.

This week's work and that awaiting us in the following first half of June leaves but little time for lengthy discussion of perplexing subjects, so helpful at all times, or for reposeful musing, so useful to the hard worked mind or body. Spring, so it seems now, has arrived at last, bringing with it a little more than the usual amount of pressing duties to which we look forward every year as the culmination of a season's incessant activity.

Outdoor planting and the traffic in all sorts of material suitable for the purpose are now in full swing and will not come to a close for several weeks. A good opportunity to observe the trend of the plant trade, to note its tendencies and to speculate on its possibilities is now offered to grower and dealer. The grower in particular will not be long in finding out in what respect he acted wisely or otherwise when laying his plans for the season's business, a lesson to be relearned every year and never fully mastered. His judgment may have been at fault in adding a variety to his stock or in discarding another, in growing too much of this or too little of that sort of plants. The best and most far-sighted of growers is liable to make mistakes of this kind. Yes, it is even possible that he may make a still greater mistake by rashly or wrongly correcting the errors made this season in his preparations for another. It often happens that one kind of stock moves so slowly for a season or two that the grower feels justified in discarding it altogether, and then finds to his dismay that the call for it the following Spring is astonishingly great. If this particular kind of plant, though unknown and a slow seller, was really a good thing, it was sure to find its way to public favor, even if it took a year or two; and to discard it after it became better known and a thing wanted by nearly everybody, must be set down as a move in a direction right opposite to that which should have been taken.

Though it may be all true to speak of the rule of fad or fashion in the use of flowers, very little of whimsical favoritism is noticeable by anyone connected with the general plant trade. Nevertheless, it is perfectly correct to speak of some old standbys being pushed aside to make room for newer favorites and of some others just as old and long since lost sight of again coming into favor. Little of all this, however, is felt in the rush of a lively Spring trade, and only the most enterprising of florists and growers heed what to them seems valuable pointers.

One sign of to-day's progressive plant culture, however, must be unmistakably clear to everybody; it is the ever-growing call for the very best grades of whatever may be offered. Any and all plants, exceptionally well grown, find ready buyers, will outsell anything inferior in quality and lower in price. The outlook for poor growers and shabbily grown stock is not promising much for the future.

Plants and Planting.

Sturdy, vigorous stock, properly hardened off, is the right kind for outdoor planting, and this, even when not in bloom, is nowadays preferred by most buyers to flowering plants of branchless, lanky growth. Clean appearance improves a plant a hundredfold. One partly dried or dying leaf on a geranium, a fuchsia, dahlia or heliotrope spoils its looks to a greater degree than wilting does a bunch of flowers. Therefore, keep your stock clean, not only of dead leaves but also of disease spots, insects and weeds. All plants, sold or to be planted out, should be thoroughly moist at their roots when coming out of the pots; dry plants should never be sent out or set out.

The soil in which cannas, roses, pansies, verbenas, most perennials and some other things of like nature are to be planted, should contain considerable amounts of plant food in some form or other, well decayed barnyard litter being the best, inasmuch as it not only benefits the composition chemically but also mechanically by imparting porous texture. So also should the soil used in the filling

of vases and window boxes be quite rich, friable and not of a kind that easily hardens or bakes when somewhat dry. The felt-like matting of roots, sometimes found on plants when coming out of their pots, had better be loosened, torn away or cut off clean all around the ball of earth before such plants are put into the new ground. Plants shipped to or from a distance and dried out in transit must be dipped in water before being planted. A moderate degree of firmness imparted to the new soil all around the ball of roots and overspread with a layer of loose earth between the plants insures immediate headway in growth.

Hanging Baskets.

Every Spring we have calls for nicely filled hanging baskets for outdoor display. Two or three of these, suspended around a front veranda—yes, dozens of them about public buildings—present a pleasing sight, but require so much attention in the hot and dry days of Summer to keep them in good shape, that people with some experience in this phase of decorative endeavor are now rarely seen among those calling for hanging baskets. An earthenware basket especially, though alluringly fine when well filled and suspended from the rafters of a greenhouse, quickly becomes an eyesore and a nuisance when swung to the hot winds and scorching snarays of a freely exposed veranda. It is simply impossible to supply the needful amount of moisture to the roots or to hold it long enough for the common comfort of plant life or that of the veranda's owner. Hanging baskets for outdoors should be of wire, strongly made and well lined with sheet moss. Greedily feeding plants are of doubtful value for any kind of basket filling and should be avoided in selecting subjects for the purpose from the large number at our disposal suitable for such work. There is good excuse for the lavish use of Vinca major, it being the most durable of trailers; but it should be denied a place in hanging baskets, since, when confined to a small space, its rapid spread of over-voracious roots renders it the most undesirable of companion plants. One equally hardy and in many instances much more effective is the English ivy, largely made use of in Europe in all kinds of made-up combinations, where attractive creeping or hanging vines must be employed.

Hanging baskets of all makes are short-lived plant receptacles. The wooden rustic type is too frail for the hardships that hanging baskets under working contract are expected to endure. It decays rapidly, barely lasting a short season; a pity, too, for plants do well in it, and something nice might be accomplished in filling it with the least expenditure in material, skill or taste. The slightest accident in handling will break the earthenware bowl. The strongest made wire basket, unless entirely constructed of copper wire, rots away quickly, often beginning to drop one after the other of its iron ribs long before its contents are at their best. But in spite of all that might be said against the use of hanging baskets for outdoor effects, it is altogether in right line with the exactions of a flourishing retail trade to have in readiness and to furnish nicely filled baskets in whatever form, pattern or make-up they may be called for.

Memorial Day.

The trade in plants used exclusively for the decoration of cemetery lots at the close of May has gained in magnitude from year to year. Retail florists and growers of potted and bedding plants look forward to Memorial Day as one of the most important of business bringing events. It comes at a time when there is an abundance of material at ready disposal, when there is no lack of stock suitable for effective display or serviceable as fitting tokens of condolence and remembrance. Indeed, few are the plants not wholly appropriate for the occasion, if rightly placed, or failing in the fulfillment of this their most lofty mission, when offered by loving hands.

Flowering plants, mainly, and to some extent upright and trailing plants of brightly hued or deep green foliage, are most in demand by the larger class of Memorial Day customers. Of late the hardy kinds of flowering plants have come into favor as being the most satis-

factory for the purpose, while Vinca minor, Glechoma variegata and English ivies are still much used in connection with flowering greenhouse plants of all kinds. Here also, as everywhere, the geranium lends. Verbenas, lobelias and pansies are largely used. All plants in bloom find favor with the majority of buyers on Memorial Day, while the ornamental varieties of low growth used in formal bedding designs, such as coleus, cheveria, begonia, alternanthera, etc., at one time largely employed in the decoration of graves by well-to-do patrons, are not disposed of in such large numbers as formerly. The term Memorial Day, as far as the trade in plants is concerned, has a meaning not unlike that of the judicial court day, often lasting for several weeks, beginning long before and ending long after the thirtieth of May, a continuous flow of swiftly furthered business, mostly made up of small cash transactions, which nevertheless amount to considerable in the final summing up.

Stock Plants.

The good grower, or to be more correct, the grower of exceptionally good stock, loses no opportunity in making provisions for the future. He is especially anxious to secure the finest, the healthiest and most promising plants to be found among his stock-in-trade for future propagation, either as seed bearers, as producers of cuttings or as such that admit of being multiplied by runners, off-sets or division. In all collections of plants, in whatever stock we may grow commercially or for the pleasure to be extracted therefrom, there are always specimens to be found that excel the balance of the lot in some respect or other. These are the ones to be reserved for future stock, even should it be necessary to steal them away and out of sight from under the eyes of customers.

It is equally true that among any number of plants as usually grown for the general run of trade, it is never difficult to discover some that are far from being perfect, possibly so poor that they stand a slim chance of ever being purchased by anyone—a small loss in itself, but fraught with the element of mislook, so often complained of by some growers who invariably utilize these leftovers in working up a supply for a succeeding season. This is radically wrong; it fosters deterioration of stock and should never be practiced. This is an opportune time for the selection and setting aside of stock plants, the growers always bearing in mind that the very best is none too good for the purpose.

FRED. W. TIMME.

BEDDING PLANTS

We have the following stock in any size and quantity:

- SYLVIA SPLENDENS**, St. Louis and Bonfire.
- COLEUS**, in eight leading varieties.
- AGERATUM**, Dwarf Blue.
- GERMAN IVY**.
- RAMBLER ROSES**, in pots.
- HELIOTROPE**, Little Giant.

JOHN SCOTT

Rutland Road and E. 45th St. BROOKLYN, N. Y. TELEPHONE 2590 Bedford

PANSIES

THE JENNINGS STRAIN.
A few more left; strong plants at \$1 per 100, transplanted, ready to bloom. Cash with order.
E. B. JENNINGS, Lock Box 254, Southport, Conn.
Growers of the Finest Pansies

GOVERNOR HERRICK
The new single violet; foe, strong, healthy plants, from 2-in. pots, price, \$4.00 per 100; \$35.00 per 1000.
Henry A. Molitsch & Son, P. O. Box 44, Nauvut, N. Y.

ROOM WE WANT

to place our Importations of Araucarias, Palms, Rubbers, etc. Therefore we now sell our surplus stock of Bedding Plants at Cracker-Jack low prices.

- GERANIUMS**, 12 best, leading varieties, 8 new kinds, large plants, mixed or named. 4-in. pots, \$7.00 per 100.
- AGERATUM**, dwarf, best blue variety, 4 in. pots, \$7.00 per 100; 2½ in., \$3.00 per 100.
- BEGONIA VERNON**, finest strain, flowers as dark as blood. Seeds of this beautiful variety picked by myself from specimen plants in Zurich, Switzerland, on my trip to Europe last Summer, 1906, 4 in. pots, \$8.00 per 100; 3 in. pots, \$7.00 per 100.
- SCARLET SAGE** or **SALVIA**. This is the genuine Clara Bedman or Bonfire variety of medium tall habit. Price, 4 in. pots, \$3.00 per 100.
- HELIOTROPE**, 4 in. pots, \$6.00 per 100.
- NASTURTIUMS**, dwarf, all colors, \$7.00 per 100.
- FUCHSIAS**, mixed, good varieties, 6 to 6½ in. pots, 15c to 20c. each; 4 in. pots, \$1.20 per doz.
- CANNAS**, 10 good varieties, 4 in. pots, \$8.00 to \$10.00 per 100.
- HONEYSUCKLE**, 5 in. pots staked up. 15c. each.
- DAISIES**, Queen Alexandria and Marguerite (white), 6½ to 6 in. pots, 20c. to 25c. each.
- MUSK PLANTS** or **MIMULUS MOSCHATIS**, 2½ in., \$2.00 per 100.
- PETUNIA**, double, mixed, 4 in. pots, 8c. each, single California giant, ruffled or bicolored, 3 in. pots, \$4.00 per 100. Inimitable or dwarf variegated, 2½ in. pots, \$3.00 per 100.
- VERBENAS**, all shades, 2½ in. pots, \$3.00 per 100.
- ASPARAGUS PLUMOSUS NANUS**, 2½ in. pots, \$3.00 per 100.
- COLEUS**, Queen Victoria, Golden Bedder, Verschaffeltii, 2½ in. pots, \$3.00 per 100. Fancy varieties, 2½ in. pots, \$3.50 per 100.
- PHLOX DRUMMONDI**, 2½ in. pots, \$3.00 per 100.
- IVY**, English or hardy, 12 in. long, 4 in. pots, \$8.00 per 100. **IVY**, German or Parler, 2½ in. pots, \$2.00 per 100.
- CENTAUREA GYMNOCARPA** or **Dusty Miller**, 2½ in. pots, \$3.00 per 100.
- CUPHEA** or **CIGAR PLANT**, 2½ in. pots, \$3.00 per 100.
- LOBELIA**, dwarf or trailing, 2½ in. pots, \$3.00 per 100.
- SWEET ALYSSUM**, Little Gem, have 10,000 of them, 2½ in. pots, \$3.00 per 100.

- MARGOLD**, Eldorado Africana and Gold Ring, dwarf, 3 in. pots, \$4.00 per 100.
- COSMOS GRANDIFLORA**, white, red or pink, three plants in a 3 in. pot, separate colors, \$3.00 per 100.
- SALPIGLOSSIS VARIABILIS** (European), 2½ in. pots, \$3.00 per 100.
- THUNBERGIA** or **BLACK-EYED SUSAN**, 2½ in. pots, \$3.00 per 100.
- TOMATOES**, Stone, the best varieties, transplanted in boxes, \$1.00 per 100.
- MAURANDYA BARCLAYANA**, 2½ in. pots, \$4.00 per 100.
- ARAUCARIA ROBUSTA COMPACTA**, first importation. Have about 300 of this variety, only specimens, perfect tiers. Adapted for the lawn, front porches, cottages, hotels, etc. 7 in. pots, 4-6 tiers, 5 year old, 20 to 28 in. high, as broad as long, price, 1.75-\$2.00-\$2.50 to \$3.00 each.
- ARAUCARIA GLAUCA**, large specimens, 6 year old, 36 to 40 in. high, \$6 to 40 in. wide, 6 to 6 tiers, \$3.00-\$4.00-\$6.00 each.
- ARAUCARIA**, new importation. First consignment about 5,000, now arrived (Saturday, May 4), per steamer Manitou from Antwerp, and thereafter by every steamer up to June 1. Araucaria Excelsa, in their original packing, left planted in pots, 3 tiers, 10 to 12 in. high, 50c. larger sizes, 60c.-75c.-\$1.00 to \$1.25 each. Robusta, Compacta and Glauca from \$1.00-\$1.25 to \$1.60 each.
- COCOS WEDDELIANA**, 3 in. pots, 16 to 18 in. high, 16c. to 20c. each.
- ASTERS**, Enchantress, new, large blooming varieties, 3 in. \$4.00 per 100. Victoria, 3 shades, separate or mixed, \$3.00 per 100.
- DON'T FORGET WE LEAD THE WORLD IN MOON VINE!**
Watch and be careful; don't buy Morning glory for Moon Vine!
We grow only the best varieties, A. W. Smith's hybrid or Ipomea Noctiflorum, for which we have during the past 20 years a world wide reputation. We ship every Spring from 20,000 to 26,000 plants to every state and territory in America as far as Mexico. 4 in. pots, nicely staked up, 30 to 36 in. high, \$12.00 per 100; 2½ in. pots, nicely staked up, \$5.00 per 100.
- NOTICE!**
Above Moon Vine is the earliest variety in existence, blooms freely, in big clusters, pure white; waxy flowers, very fragrant and as big as a saucer.
Cash with order please.
All goods must travel at purchaser's risk.

Chr. Peek.

Chr. Peek of Haarlem, Holland, traveling man for C. J. Speelman & Sons, Sassenheim, died suddenly of heart disease at Lille, France, last week. Mr. Peek had always been a healthy man and his death came as a great shock to his family and his many friends, who did not know he was sick. He was a young man, of only 28 years of age, and was very well known, and much liked in the bulb district. He had been representing different bulb exporters in various countries and was very successful. This Spring he traveled in the United States, where he made many friends. He is survived by his parents and one sister, who mourn his loss.

Arthur Bryant.

Arthur Bryant, head of the firm of Arthur Bryant & Son, nurserymen, Princeton, Ill., died suddenly on May 13 last. He was born near Princeton on May 13, 1834, and had been in the nursery business since 1875. Among other stocks the firm devotes considerable attention to peonies, Arthur Bryant, Jr., being a member of the American Peony Society.

Mr. Bryant was identified with several horticultural organizations in his home State, having at one time filled the office of president and again of treasurer of the State Horticultural Society. He had an intimate knowledge of trees and fruits, and distributed many new and valuable varieties.

T. W. Guy.

T. W. Guy, at one time prominent as a florist in St. Louis, died on Friday at St. James, Mo., aged 76. Mr. Guy was the father of E. W. Guy of Belleville, Ill. The funeral took place on Sunday afternoon.

Mr. Guy lived in retirement on his farm at St. James. A few years back he was located at Kimmswick, Mo., where he had a number of greenhouses. As far back as 1870 the firm of Horth & Guy operated a retail establishment at 614 Olive street, St. Louis. Mr. Guy at one time took a leading part in the affairs of the St. Louis Florists' Club, and all the trade were his friends. Many of these attended the funeral and sent floral offerings. We extend our sympathy to those he has left behind to mourn his loss. S. P.

Work of U. S. Department of Agriculture.

The annual reports of the United States Department of Agriculture for the fiscal year ending June 30, 1906, have just been issued, from which we take the following extracts containing information of direct interest to our readers:

HERBARIUM OF CULTIVATED PLANTS.—The economic botanical collection of the Bureau of Plant Industry, while containing a good representation of such economic groups as weeds, poisonous plants, medicinal plants and fiber plants, have not contained an adequate representation of cultivated plants in general. During the past year a systematic plan has been developed and put into operation to supply this need. An effort has been made especially to secure specimens of cultivated plants under the names by which they are offered in the trade by nurserymen, seedsmen and florists. From the unsatisfactory treatment of cultivated plants with which one in search of information is unusually confronted in the literature of botany, it appears either that less attention has been paid by botanists to cultivated than to wild plants or that the greater difficulty in the classification of domesticated species has baffled botanical students. Certain it is that all the groups of investigators who deal with cultivated plants need better accounts of their classification. The collection now in progress should aid materially in the making of such critical studies.

BERMUDA ONION INDUSTRY.—The work which has been conducted throughout the States of Texas and Louisiana in cooperation with the Office of Farm Management Investigations has been directed chiefly to the oversight of trucking problems in Louisiana and several truck farms in Texas, in the latter State the main feature of the work being a study of the Bermuda onion industry of southern Texas. Information has been gathered in regard to the methods practiced in the cultivation of this crop in the area where it is grown, and steps have been taken to develop, if possible, a coordinate industry in the production of Bermuda onion seed. To this end a number of especially select bulbs have been secured for testing in various localities in order to determine the feasibility of producing Bermuda onion seed in this country. There is an urgent necessity for investigation looking toward the development of some region in which seed of Bermuda onions can be successfully grown in order to meet the demand of the territory now devoted to the cultivation of this crop in southwest Texas. It is hoped that the fund will be available for the establishment of testing grounds in this region which will allow experiments to be conducted looking to the solution of this problem. Work along this line should be continued until it is determined whether or not satisfactory Bermuda onion seed can be grown in any portion of the United States.

Considerable work has been accomplished in the past season in breeding greenhouse carnations. Several seedlings show new departures from the parents in long stems, well-developed calyxes, and freedom in blooming. The croton has come into use during recent years for Summer planting in parks, the richly colored foliage of this tropical shrub making it very desirable for this purpose. Several new forms which promise well have been produced in the greenhouse, being improvements over already existing varieties. Other ornamental plants which have been taken up with a view to their improvement are the chrysanthemum, hippeastrum, poinsettia, and pelargonium.

BULB GROWING.—The experimental work on the growing of Dutch bulbs has been continued along the same lines as last year. An experiment with a private bulb-growing company has demonstrated that tulips and hyacinths, at least, can not be profitably grown under the conditions prevailing at a locality in North Carolina, and it is very doubtful whether narcissus bulbs can be profitably produced in that section. The experiments with the various fertilizers indicated that certain animal fertilizers were very injurious, whereas cowpans turned out to be the most favorable. Good results were obtained with the various phosphates in this section will not be continued, but there are indications that the extreme southern part of Texas may prove very favorable for the culture of the Bermuda lily, and experiments along this line have been planned for the coming year.

VARIETY TESTS OF VEGETABLES.—Tests of vegetable varieties have been carried on this year at Chico, Cal.; Pullman, Wash.; San Antonio, Tex., and at the Arlington Experimental Farm. A large additional amount of data has been accumulated which will be useful in the preparation of standard descriptions of the principal varieties and of important new varieties as they appear in the trade. This work is meeting with the indorsement of seedsmen and it is believed to be very important that it should be carried on until completed. In connection with the work studies on the effect of environment upon the production of seed have been carried on with sweet corn and cabbage. It has been found that environment has a marked effect upon the seed, and that the seed purchased for export progressed far enough to state positively how far this effect will influence the commercial qualities of the seed.

The principle study of the year, however, has been with varieties of beans, including the dwarf pole, and Lima varieties. This work has been actively pursued by Mr. W. W. Tracy, Jr., assistant botanist, under the direction of Mr. W. V. Tracy, Sr., superintendent of Testing Gardens, and is so far along that a report embodying a complete descriptive list of varieties of beans will be prepared in the near future.

During the past fiscal year the work of the Seed Laboratory, of which Mr. Edgar Brown is botanist in charge, has been carried on along lines similar to those mentioned in previous reports. Investigations have been conducted along the following lines:

SEED TESTING.—On account of the increasing demand for seed testing it has been found necessary to limit the number of tests made for any one firm or individual. In this way the work is more widely distributed and only the more difficult samples are received. There have been received during the year a total of 7,261 samples. Of these 1,392 were sent in through the custom-houses, and 5,869 were from farmers, seedsmen, and from the seed purchased for Congressional distribution. Of the total number 3,712 samples have been tested for germination, 1,260 for purity, and 1,526 have been examined for the presence of adulterants or dodder.

EXAMINATION OF SEEDS FOR ADULTERATION.

The Laboratory has been charged, as heretofore, with carrying out the law requiring the testing of seed samples secured in the open market and the publication of the names of all dealers from whom samples found to be adulterated are obtained.

During the year 2,047 samples of orchard grass, Kentucky bluegrass, red clover, and alfalfa seed have been obtained from dealers. The results of the examination of these samples, showing the number found to be adulterated, together with the names of the firms by whom adulterated samples were offered for sale, have been published in Circulars Nos. 14, 15, and 18 of the Office of the Secretary. This work has shown that orchard grass is the farm seed most subject to adulteration, both meadow fescue and the rye-grasses being used as the adulterant, according to the relative prices of these various kinds of seeds.

Alfalfa and red clover seed have both been found to be adulterated with the seed of yellow trefoil. Alfalfa has also been found to be adulterated with the seed of bur clover. The bur clover used is not, however, the commercial seed offered for sale in the United States, but is a by-product from the cleaning of South American wool imported from Germany for this purpose. As was pointed out in a previous report the only effective way of preventing the use of such seeds as yellow trefoil, bur clover, and Canada bluegrass as adulterants would be the levying on them of a duty making the price comparable to that of the seeds with which they are mixed.

As a result of the work on adulterated seeds, seedsmen are sending large numbers of samples to the Laboratory to be examined for the presence of adulterants and are giving more attention to the quality of seeds they are offering for sale. At the same time farmers are sending a larger number of samples for testing, as they are becoming acquainted with the fact that a number of the more common farm seeds are frequently subject to adulteration.

QUALITY OF IMPORTED SEEDS.—Among the 1,392 samples of grass and forage-plant seeds received through the various custom-houses during the past year all qualities of seed, from the very best to the very poorest, were represented. Among the poorer of these seeds is included much low-grade red-clover seed which is imported for the purpose of mixing with that of better quality. The larger part of the low-grade seed could not be sold alone in our market. Its only use is for mixing with seeds of better quality in producing intermediate grades. The use of this class of seed is doubtless more detrimental to agriculture than the use of the various seeds which are usually considered as adulterants.

PLANS FOR FUTURE WORK.—During the ensuing year more attention will be given to the study of the quality of seeds offered on the market, including tests for adulteration. Observations will be made on the growing and harvesting of forage-plant seeds, in order to determine any natural mixtures which occur in the fields. The work on the vitality of seed corn will be continued. More attention will be given to the perfecting of methods of testing, with a view to aiding the State experiment stations in establishing seed-testing laboratories.

All farm seeds distributed will be accompanied by a statement of the results of the tests for purity and germination as determined by this Laboratory. In this way an opportunity will be given farmers to judge the importance of knowing the quality of seeds before sowing, which is the practical benefit to be derived from buying guaranteed seeds.

GOVERNMENT AND STATE COMPETITION.—The free seed distribution by the Department of Agriculture through Congressmen has been denounced on all hands as tending to the pauperization of the recipients and an interference with legitimate trade in seeds. This bad practice has led to other practices equally objectionable. The Vermont Experiment Station proposes to keep a nursery and to distribute forest trees through the State. We submit that the funds appropriated to the stations were intended to promote investigation and the discovery of new facts in agriculture, and this growing of trees for distribution is a perversion of the purposes of the funds and an interference with legitimate business which is without an excuse.

In like manner, the practice of the Department of Agriculture in having essays prepared and published on the raising of chickens, cattle, pigs, beans, etc., is another encroachment on business that belongs to the publishers, and is not a proper use for the department funds, but is part and parcel of the paternalism that seems now so popular in Washington. No one can object to the Department of Agriculture publishing and distributing the results of station investigations for general distribution, translated into the plain language that farmers can understand. The results of the investigations for new things in foreign lands is also a legitimate matter for the department, but the employment of writers here and there over the country to prepare handbooks or essays on all sorts of topics on which books have been published for sale, and which essays are often compilations from these copyrighted books, is a serious interference with legitimate trade, and not the proper work for the Department of Agriculture. If the government officials are to go into all sorts of business and give away the results of the expenditure of the people's money, the seedsmen, nurserymen and book publishers might as well go out of business. The government had just as well go into the manufacture of farm implements and the breeding of live stock for free distribution. In fact, with the increase of paternalism these may come in time.—Practical Farmer.

OUR READERS' VIEWS

In Re Lord & Burnham Truss Houses.

Editor Florists' Exchange:

We have come across a marked article in "Gleanings in Bee Culture" for April, relative to Harvey & Sons' truss houses that collapsed, which we think presents the subject in a rather interesting way. It occurs to us that you might feel this article will appeal to your readers, so we are enclosing copy of same, which follows:

"On page 1595 of last year I said I would try to visit the locality near Philadelphia where mushroom-growing was such a great success. Through the kindness of H. P. Pawcett, of Brandywine Summit, I spent an hour or two in looking over the mushroom-growers. The first one was where they were grown under the greenhouse-beds. The firm of Harvey & Sons makes a specialty of carnations, and they have some of the finest up-to-date glass and steel structures it has ever been my fortune to visit. A little incident of recent occurrence particularly interested me. Lord & Burnham the material, drawings, specifications, etc., for a large, up-to-date greenhouse. I have forgotten the dimensions, but it was an immense affair. Harvey & Sons decided they could put up the buildings themselves if Lord & Burnham would furnish the materials. They did so; but during one of the recent heavy snowstorms the weight of the snow broke the house down. The loss on the house and contents was something like \$2000. As they put up the building themselves, they supposed the Lord & Burnham people would not consider themselves responsible. But it was one of their happy surprises when this great company looked the thing over and decided to make good the entire loss, because the engineer who had furnished specifications for material to be used had made an error. I mention this because I am glad to say a word for a worthy manufacturing firm."

Now a word about this "engineering error" mentioned in the article; perhaps you would like to know exactly what is referred to. Let us explain:

The main trusses in the Lord & Burnham construction are secured at the ridge by a wrought iron holdfast; this holdfast in turn is lag screwed to the ridge. To give this lag screw ample grip on the wood of the ridge the hole, of course, must be bored smaller than the screw itself, but this necessary precaution was not taken in the Harvey houses. Lord & Burnham simply furnished the material for these houses, and Harvey & Sons did their own erecting.

When the unusual strain of that terrific storm came upon the roof, these lag screws pulled out, liberating the holdfasts. Truss houses which were erected by Lord & Burnham themselves, withstood this storm perfectly.

All the trouble seemed to arise from the fact that Lord & Burnham, in shipping the materials to Harvey & Sons, did not caution them particularly in reference to this lag screw matter.

As a prevention against such a thing occurring again, the method of securing the holdfast to the ridge has been modified, and now instead of the lag screw being used, a bolt is passed completely through the ridge and is fastened on the under side by the usual nut.

It is rather interesting to note that Lord & Burnham are erecting eighteen of these houses for the United States Cut Flower Company of Elmira, N. Y., which concern has already tried out four houses of other truss construction. This carries with it a rather conclusive argument.

HORTICULTURE ADVERTISING AGENCY,

New York.

Gladiolus America.

Editor Florists' Exchange:

I notice in your paper under date of May 4 extracts from one of "Neighbor" Christy's exhaustive articles; subject "probable truths" as to the origin of our new gladiolus America. Kindly publish the following in reply:

First, I wish to say "explicitly" that I suppose I am the originator of America. At least the first and original bulb was grown in our own seed beds and this from seed grown on our own place the previous year. It is supposed to be a cross between *gandavensis* and *Childsii*, the parentage having been purchased from Mr. Crawford and Mr. Childs.

I was never "a salesman" for "Neighbor" Christy, but he grew bulbs under contract for me for a few years. During that time I had his entire crop, except stock saved for planting by him. I paid him \$5 per 1000 and sold same for \$8 per 1000, and all in one common mixture. I make this statement to show the quality of stock he was growing. I never planted any of his stock but once, and then only a few bulbs left over from sales, and these were all sold in our cheap mixture the following season, not even the bulblets being saved.

Again, under date of May 18 in The Florists' Exchange I notice that Mr. Groff says that I stated to him at St. Louis in 1904 that I "did not know the origin of America." In this he is mistaken. I did not

tell him its origin, but I surely did not tell him that I did not know it myself. I could have had no object in so doing. Mr. Cowee was with him at this time. I gave them a circular, the same as the one enclosed in this letter, and after reading descriptions and examining photo halftones of the cut flowers, and showing me their exhibit that was staged at the Fair, neither he nor Mr. Cowee intimated in any way to me that they had in their collection, or had ever seen any variety like it. But Mr. Groff did say, however, very kindly that if I would ship him a few thousand of the bulbs he would plant them, examine the flowers, habit of growth, etc., and if he found it to be a variety of merit would give me his opinion to that effect, which he said would be of great value to me in disposing of my stock. I thanked him for his "kindness" and departed, but it is needless to say that I never sent the bulbs.

On January 22 of this year, Mr. Cowee called me up by 'phone from Ashtabula, O., and asked if I could fill an order for him for America bulbs; said he had bought one block of stock from Mr. Childs and wanted more. I asked him then if he did not think they should have bought America when I offered to sell same to Mr. Groff and himself at St. Louis Fair. "Yes," he said, "it is a good thing, but we did not know its value then."

If this statement does not fully cover the dispute between "Neighbor" Christy and Mr. Groff as to the "probable origin" of America, they will kindly let me know through The Florists' Exchange.

I have ignored this grab for notoriety up to the present time, but am now disposed to take a hand in the game myself.

FRANK BANNING.

Kinsman, O.

Winter-Flowering Sweet Peas.

Editor Florists' Exchange:

In replying to the communications of William Sim and Ant. C. Zvolanek, the following explanation may not be out of place; with the short note in May 11 issue of The Florists' Exchange, I had hoped my connection with this matter would cease. In the issue in question and the following one appeared articles by the gentlemen named that will bear a small amount of correction, and I trust they will pardon me if at times they find my argument a little pointed, as in order to make some things clear I find it necessary to repeat history.

The original sweet pea was a tall growing late flowering plant, then came Extra Early Blanche Ferry and Earliest of All in the pink class, and Emily Henderson and Mont Blanc in the white class, all in their time claimed to be sports. Then we had Christmas Pink and Florence Denzer, of vetch fame (Mr. Sim doubts this theory). Mr. Zvolanek, if he yet remembers, claims that Earliest of All is Christmas Pink renamed, and that Mont Blanc is Florence Denzer renamed; therefore, if what he claims can be substantiated Mr. Zvolanek and the vetch are responsible for all the Winter-flowering sweet peas in the world.

He is already reaching out and trying to discredit Mr. Engelmann by claiming that a few stray seeds of his strain managed to get in Mr. Engelmann's field before that gentleman claims to have purchased any.

Mr. Sim, why have you the right to doubt Mr. Engelmann any more than Mr. Zvolanek, inasmuch as he has failed to explain in a satisfactory manner the article alleged to have appeared on page 205, year 1902, of "Möller's Deutsche Gärtner-Zeitung"? If he discovered Florence Denzer growing among a batch of Emily Henderson, why, Mr. Sim, did not that same humble bee fix a few more seeds and have them bloom early? Why did the humble bee that was responsible for the white and pink and scarlet in the hatch of Earliest of All that I mentioned in a former article, not go a little farther and produce more seeds and scatter them broadcast? Why did the humble bee that was responsible for the lavender, which I mention, happen to fertilize only one seed and have it of the exact form and color of the original Lady Grisel Hamilton? Did you ever hear of a seedling being the exact counterpart of the parent? If this lavender sweet pea is a humble bee seedling, why does it come true the first season? Why does it not take three or four years to establish itself in its color and habit? Mr. Zvolanek seems to think it requires about that length of time to establish a variety. Thus far I have failed to find a single vine producing other than the one solid color in either the lavender, white or scarlet.

Why, Mr. Sim, have your views changed so decidedly since the tenth day of August, 1906, when you were visited by Enos W. Kohr, a grower of Lancaster, Pa., when while looking over your place a row of some half-dozen of Zvolanek's seedling peas were noticed growing side by side, and to Mr. Kohr's inquiry as to whether there was danger of the varieties mixing, you replied in the negative, and you also tried to show from the flower formation, that it was next to impossible for

an insect to procure and carry pollen from one flower to another?

Let any person who concerns himself enough to be informed, watch a humble bee or any other insect in a house or field of sweet peas, a half day or all day if he wish, and see whether Mr. Sim was right on the tenth day of August last, or whether his revised view is correct.

Further, on the same subject, you state that many of this class of sweet peas (wherein do they differ from the original?) have their pistils and pollen fully exposed. This, I must say, is entirely new to me, as barring, perhaps one in 10,000, and that one deformed and hardly capable of producing seed, I have never been able to see the pistils or pollen exposed.

Mr. Sim also stated that he has visited Mr. Zvolanek's place and there saw no sports growing. Now, Mr. Sim, did you examine the vines closely; did you get down and find out whether one branch of the plant produced purple flowers and the other pink; or did you only view the vines from the flower level? How, anyway, in the name of all that is remarkable, can you or any other person decide among 70 varieties, whether they are all seedlings or whether there are sports present?

Mr. Sim also neglects to tell us that his place has been for a number of years a trial ground for Zvolanek's new sweet peas. Perhaps we now come to a solution of this mystery. Mr. Sim is possibly not very observant, or he fears to antagonize his friend by claiming to have "sports."

As to the Captain of the Blues vines Mr. Sim has often seen growing, he neglects to inform us whether they were some of Zvolanek's stray seed or whether they bloomed late in the season (Mr. Engelmann claims his bloomed early). Late blooming vines of Captain of the Blues are common; in fact, I have never seen sweet peas growing under glass that did not have at least a few of these purple vines included.

Mr. Sim must also be using mixed seed; or will he admit that it might be possible these purple vines are sporting back to the original pea; to the same and other colors to which Mr. Zvolanek doubtless refers when he states in a pamphlet mailed with his seed last Autumn, that his seed must continually be re-selected under glass to insure it from reverting to the original late type. This is a very amusing statement so far as Christmas Pink and Florence Denzer are concerned, and any person who has visited his place during the Winter will verify my assertion, as there is no visible re-selection going on there.

Mr. Sim asks what I would have, had I made an effort to produce. This is easily answered. These sports are a fortunate beginning, and should I be so minded, by the aid of the brush and what Mr. Sim is pleased to call chance, and long enough time, I might have to my credit a long list of varieties.

Mr. Sim also says "What do you say, Mr. Zvolanek?" Mr. Zvolanek says: "I examined these vines and find they are not sports? They are individual (chance) seedlings." Gentlemen, did you read my former article aright, or have you succeeded in crossing the sweet pea with the honeysuckle, which would enable you to keep an original vine growing several seasons for examination?

Mr. Zvolanek says he failed to see the pink, white or scarlet "sports." The pink as before stated was lost; and as to the white and scarlet small wonder. The lavender was Mrs. Charles H. Totty and the others, too, might have been fortunate enough to have a name; they are here for examination, nevertheless.

In conclusion, we are coming together. "Chance" is their word, "sport" is mine. Let us define: Chance—something you get without effort, sometimes caused by a humble bee. Sport—something you get without effort, and are at least thankful for.

Rooks, Pa.

CHARLES M. WEAVER.

HAIL ASSOCIATION NOTES.—Twenty years ago the Florists' Hail Association was incorporated under the laws of New Jersey. The estimated value of the risks it is now carrying amounts to nearly \$2,000,000. It has upward of 1,400 active members at this date, and 27,000,000 of feet of glass insured. JOHN G. ESLER, Secretary.

ORIGIN OF RE-ENFORCED CONCRETE.—About forty years ago a French gardener, Joseph Monier, first conceived the idea of embedding metal in concrete in an endeavor to lessen the thickness of some flower pots he was making, and from this simple beginning, by slow stages and after much experimenting, the great system of reinforced concrete was evolved.—Cement.

NATIONAL COUNCIL OF HORTICULTURE.—The twelfth installment of the press service of this organization has been issued by James Burdett, Chicago, Ill. The subjects dealt with are: How to Grow Dahlias, Fertilizers, A Rockery for a Wild Garden, and Peonies.

Carpet Bedding.

Carpet bedding is not now popular in the sense it was some fifteen or twenty years ago. Then no private place with any claim to pretension was without one or more beds of that kind which entailed much labor on the part of the gardener and his assistants, more perhaps than the real worth of the beds completed deserved. But that was not the question under consideration; what was considered most was the necessity of conforming to the style in vogue, and that just as much in gardening as in the habiliments of the person.

The decline of this style of bedding was no more rapid in this country than it was in the countries of Europe, whence it came; but fortunately in the United States purposes were found for the material hitherto used for carpet bedding, a fact that prevented the plants so employed suffering neglect to any marked extent. In Europe, too, perhaps they are using these plants much in the same way as we are here, but in most of the countries over there the cost of production and the short duration of the seasons make the plants, relatively speaking, expensive and perhaps unanswerable for parks, cemeteries and other public places.

In this country alternantheras are used by the million for such purposes. And although, as has been noted, the style of carpet bedding has all but vanished as far as private places are concerned, the kinds of plants used in it are still grown in considerable numbers in many sections of the country for a different form of arrangement. They are planted in masses in beds and in wide and narrow borders, in different colors sometimes. Occasionally, too, borders and beds are planted of one color of alternanthera, with an edging of echeverias, pyrethrum, or lobelia; and, again, the planting of other kinds of plants is carried on so elaborately that often alternanthera is used to bring the scheme to a satisfactory conclusion. Alternanthera need not by any means be clipped in order to be decorative, although when several colors are planted in close proximity clipping intensifies both the colors and the contrasts. D.

SLUGS.—M. H. du Buysson, as cited in the "Moniteur du Jardinier," speaks very highly of the use of sulphate of iron, green vitriol. The crystals are scattered freely on the soil. The result is that the slugs are annihilated and the plants uninjured.

Bird's Eye View of Siebrecht & Son's Nurseries and Greenhouses, New Rochelle, N. Y.

AMONG THE GROWERS

Siebrecht & Son, Rose Hill Nurseries, New Rochelle, N. Y.

To a lover of trees, and particularly one who admires specimens of hardy evergreens, we would recommend a visit to the nursery of Siebrecht & Son, New Rochelle, N. Y. On these extensive grounds nearly every kind of decorative tree and shrub is to be found, and as everything seems to be grown with a view to making specimens—that is, planting them far enough apart so that each individual tree or shrub has a chance to show its true character—a ramble through the grounds is most interesting at any time, particularly so at this

time of year, when all the evergreens are pushing forth their new growth. The nursery proper is located about half a mile beyond the greenhouses, but there are several acres planted in what may be termed the "home grounds," which surround the palatial residence of Mr. Siebrecht, Sr. Here are seen only perfect specimens, arranged mostly in blocks, which include varieties of one family only, so that the visitor can easily see the decorative features of the different sorts, and is afforded the opportunity of selecting those which show the characteristics desired without having to travel over such a large area as would be necessary if this method of planting had not been made. Without specifying the subjects seen, we may say that beautiful specimens of piceas, pinus, retinisporas, together with Sciadopitys verticillata and boxwoods in many different shapes and sizes are included in the collections. Deciduous, forest and shade trees are also represented by specimens of all the commercial kinds, including Japanese maples, hawthorns, magnolias; in fact, everything necessary in trees and shrubs for the full and complete equipment of a new estate is to be found here and of a high quality that is seldom seen.

In addition to the nurseries, there is, as is well known, a very extensive range of greenhouses, and everything pertaining to the commercial and private trade is grown in large numbers. Palms and orchids have always been specialties of this firm, and probably here is to be seen a collection of large-sized palms such as cannot be duplicated at any other establishment. These include commercial varieties of kentias; we also noticed that *Areca lutescens* is grown very extensively, there being many unusually large specimens on hand. One entire range of glass is devoted to palms,

and besides those mentioned there are many tall specimens of the fish-tail palm, *Caryota urens*, and quite a large collection of *Rhapis flabelliformis*, some of the latter being immense specimens from twelve to fifteen feet high. We also noticed some quite large specimens of *Pritchardia grandis*. That many of the palms are raised on the premises is evidenced by a look into the houses where seedlings are being grown by the hundred thousand. These include *cocos*, *livistonas*, *kentias*, etc., in all stages of development from those just showing the seed leaves to plants shifted into 4-inch pots, and their numbers seem countless.

One range of glass is devoted to rose culture, and a house of the variety Killarney seems as though it would produce plenty of flowers for Summer work.

Another interesting part of the establishment is where the heat-loving decorative plants are grown. There is a very complete stock of these in all sizes almost, in which are included such plants as *Ficus paucurata*, *dieffenbachias*, *dracenas* in several varieties, *anthuriums*, *Ficus variegata* (quite a collection of these variegated rubber plants), *Panax Victoriae*, *Pandanus utilis*, *crotons*; and in flowering plants, *gardenias*, *allamandas* and *bougainvilleas*.

Ferns form another feature here, and the large collection includes such as *Cibotium Schiedei*, *pteris* in many varieties, *davallias*, *Nephrolepis elegantissima*, *N. bostoniensis* and *N. cordata*, the latter being grown quite extensively. Some of the smaller tree ferns also are to be seen, such as *Lomaria gibba* and *Blechnum braziliense*. Of the large tree ferns there are some fair-sized plants of *dicksonias*. For cutting purposes, *Adiantum Farleyense* is grown quite heavily, and many thousand *selaginellas*, in several varieties, are also in evidence. Probably the largest stock of *staghorn ferns* in the country is found here.

As is to be expected the orchid houses do not present their best appearance at this time of the year. Orchids are a chief feature, however, and house after house is filled each with its special variety. *Cattleya Trianae*, *C. Mossiae* and other commercial *cattleyas*, together with *ocnidiums*, both of the *grandiflorum* and *splendidum* types; also *cypripediums* in variety, *coelogynes*, *laelias*, etc., all of which go to make up a complete collection of orchids for commercial and other purposes.

The importing of bay trees and other evergreens and the removal of large specimen trees from branches of the firm's business which are steadily increasing.

The greenhouses and nursery are under the capable management of Wm. Siebrecht, who, at the time of our visit, was busy superintending the shipment of several carloads of plants. Besides doing a large shipping business, the firm operates two large stores in New York City and one in Newport during the Summer season, all of which are mainly supplied with stock of the concern's own growing.

Chrysanthemum Sports.

No definite conclusion has been arrived at as to the cause of these productions, but every addition to our knowledge brings us nearer to the goal. On this account we call attention to a statement by M. Clement in *Le Chrysantheme*, to the effect that, in nine cases out of ten, the change is from light coloring to a darker shade. That yellow should be prominent in these sports is only what might have been expected from the ancestry of these plants. A yellow chrysanthemum is said rarely to produce a white flower, but a white variety may show yellow flowers; a red variety will throw maroon-colored blooms, a rose-colored form will sport into a salmon-colored one.—Gardeners' Chronicle, Eng.

CLUB AND SOCIETY DOINGS.

LENOX (MASS.) HORTICULTURAL SOCIETY.—The regular meeting of the above society was held Saturday, May 18; President Heerenmans in the chair. In order to create a more lively interest in the society among the assistant gardeners and others, it was unanimously voted to reduce the initiation fee as much as possible; it is expected that this will result in a very considerable increase in membership, as many have expressed a desire to affiliate. The co-operation of all having the interest of the society and the profession at heart is cordially invited by the officers and members. Several inquiries, taken from the question box, created a very lively discussion, among the most interesting and instructive being "What causes hot water to circulate in pipes?" and "Does a moist atmosphere prevent red spider?" Judging from the remarks there would seem to be a large majority of the opinion that a moist atmosphere alone does not prevent red spider. Two very fine vases of gladiolus, Peach Blossom and Blushing Bride, were exhibited by S. Carlquist, for which he was awarded a certificate of merit. G. H. I.

ELBERON (N. J.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held on May 20. The principal feature of the evening was an able paper on "Herbaceous Plants," read by W. D. Robertson. An interesting discussion followed.

The society will hold a rose and strawberry show on June 17, and arrangements are nearly completed for the society's second Summer show, which will be held on July 24 and 25. Many of the nurserymen and seedsmen have donated prizes for it. G. M.

Meeting of the American Peony Society.

The coming meeting of the American Peony Society, to be held in the new buildings of the College of Agriculture at Cornell University, Ithaca, N. Y., June 18 and 19, promises to be a very interesting one. The reason why the interest of peony lovers centers at Ithaca

New Agricultural Building, Cornell University, Ithaca, N. Y. Where Meeting and Exhibition of American Peony Society will be Held June 18-19, 1907

flower, and no one would expect all of this vast number to bloom this season. The plants passed the Winter in very good shape, however, and it is confidently expected that a large number of them will produce first-class blossoms this season. This year the season is unusually late, there having been a heavy fall of snow as late as May 11, and this may delay the blooming season as a whole to some extent.

Various members of the society will ship in blooms, and an exhibition will be staged in the new agricultural building just completed at Cornell. The only check-list of all varieties of peonies ever published in print, with descriptions, will be out from the press in time to be used at this meeting. This check-list gives references to all descriptions and illustrations with the authentic spelling of all names. The list includes over 2,700 distinct names, and forms the foundation upon which the difficult task of straightening out the nomenclature and arranging the synonyms in their proper groups will be based. Thus, a person with the check-list in his hand and the immense library at Cornell at his disposal, may easily and quickly look up the literature and pictures of any varieties in which he may be especially interested. These facilities, together with the specimen blooms staged in the exhibition hall and the extensive collection of varieties in the field, furnish an opportunity such as has never before been offered to the student of peonies.

Aside from the peonies, however, the meeting promises to be an unusually pleasant one. Coming as it does in commencement week, the visitor will find the University in gala attire. The campus, often pronounced the most beautiful college campus in the world, will be at its best. All of the buildings will be open and inviting inspection. The visitor upon whom business does not hold too firm a grip may linger a few days and enjoy some of the rare beauties of this unique and scenic region, for within easy reach of the University he may visit Enfield Falls and Gorge, Taugannock Falls (the highest east of Rocky Mountains), Ithaca Falls, Cayuga Lake in all its beauty, Buttermilk Glen and Falls, Coy Glen, and the beautiful Cascadilla Cascades. Into the peony exhibition hall itself comes faintly the sound of the great Triphammer Falls as they roar their welcome, and Forest Walk lures the stranger to view the waters of Beebe Lake as they plunge through the rocky caverns of Fall Creek Gorge.

Taking it all in all then, whether you are bent on business or pleasure or both, this year's peony meeting and exhibition is one which you can ill afford to miss.

J. E. C.

The premium list has been issued by Secretary Arthur H. Fewkes, Newton Highlands, Mass., from whom copies may be obtained on application.

Consignments of flowers for exhibition must be addressed to the State College of Agriculture, Department of Horticulture, Cornell University, Ithaca, N. Y.

Express charges on all exhibits must be prepaid, and should be so marked on the boxes, as no charges will be paid by the Manager of the exhibition.

All entries must be forwarded so as to reach the secretary, A. H. Fewkes, Newton Highlands, Mass., not later than Friday, June 14. Exhibitors from a distance will please note the date, and mail accordingly. While we do not wish to debar any one who wishes to make an exhibit, compliance with this rule will greatly facilitate the work of arrangement.

All entries not staged by 1:00 p. m., June 18, will be disqualified from any and all competition.

At least one flower of each variety, in exhibits for competition, must be plainly labeled with the correct name of the variety, when known, or the name under which it is grown by the exhibitor.

The regular business meeting will be held at 3:00

p. m., on the first day, June 18, at which time the society will be welcomed by either President Schurman or Dean Bailey.

An address will be made by J. Eliot Coit, of the Horticultural Department, who has had immediate charge of the test collection, and a paper of much value is expected.

Professor Craig, the chairman of the Nomenclature Committee, will make a report on the progress of the work of that committee, which undoubtedly will be of much interest.

As the test collection is now in its third year a fine opportunity is presented peony growers for studying the varieties as they grow in the field, as nowhere else can so many varieties be found growing together under such favorable circumstances as will be found at Ithaca.

Judges of the exhibits will be appointed at a preliminary session held previous to the regular meeting.

The Premium List. Herbaceous Peonies.

COMMERCIAL CLASSES—DOUBLE

- Class 1. Largest and best collection of varieties, one flower each—First, \$15; second, \$10; third, \$5.
- Class 2. Collection of best twelve and most distinct varieties, six flowers each—First, \$10; second, \$5.
- Class 3. Best collection of varieties in various shades of rose pink, three flowers each—First, \$10; second, \$5.
- Class 4. Best collection of varieties, salmon and flesh colored, three flowers each—First, \$10; second, \$5.
- Class 5. Best collection of white varieties, three flowers each—First, \$10; second, \$5.
- Class 6. Best collection of varieties, cream white and light yellow, three flowers each—First, \$10; second, \$5.
- Class 7. Best collection of crimson varieties, without stamens, three flowers each—First, \$10; second, \$5.
- Class 8. Best collection of crimson varieties, with stamens, three flowers each—First, \$10; second, \$5.
- Class 9. Best collection of tricolor varieties, including flowers with guard petals, collarete and center petals of different colors, three flowers each—First, \$10; second, \$5.
- Class 10. Best fifty blooms white—First, \$10; second, \$5.
- Class 11. Best fifty blooms dark pink or rose—First, \$10; second, \$5.
- Class 12. Best fifty blooms flesh or salmon pink—First, \$10; second, \$5.
- Class 13. Best fifty blooms crimson—First, \$10; second, \$5.

There are also classes open to amateur and private growers only.

Dean L. H. Bailey College of Agriculture, Cornell University, Ithaca, N. Y.

at this time, is because of the extensive collection of varieties which is being grown upon the experiment station grounds. All of these plants were donated by peony growers in various parts of Europe and America. Each variety sent in was supposed to be represented by three plants each. In many cases, however, only one plant of each variety was contributed. In all there have been received and planted nineteen hundred and thirty-three-lots of one, two, or three plants each. Most of these were sent in under name, but some bore numbers, while a few bore no labels whatever, being unnamed seedlings. The great majority of these plants are Chinese peonies, belonging to the species *Paeonia albiflora*, yet there is a generous sprinkling of officialis forms and various other species. One European grower sent in a number of grafted roots of *P. moutan*, but these are not expected to blossom this year.

Every peony grower knows that varieties differ widely in regard to the time it takes the plants to come into

J. Eliot Coit In Charge of Peony Tests, Horticultural Department, Cornell University, Ithaca, N. Y.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLORAL CO., 1708 Broadway, J. A. Valentine, Pres't. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLORIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

BYBES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

PROPAGATING THE ORIENTAL PLANE.—Please state how oriental plane trees are propagated—from seeds or cuttings, or otherwise? H.
New Jersey.

—The oriental plane is propagated nearly altogether from cuttings, but it grows readily from seeds as well. Cuttings are made of the shoots of the same season, cut off in early Winter, made into lengths of about a foot, tied in bundles, and placed away in a cool cellar, covered with sand, and planted in nursery rows early in Spring. Seeds are sown in Autumn or early Spring. The "button balls" hanging from the trees in the Fall are the seeds and need only crushing apart to be ready to be sowed. Either way of propagating, or both, can be followed and success expected. J. M.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

Steamer Flowers.

The custom of sending flowers to friends on outgoing steamers has long been in vogue, and the business done every season in New York city has reached vast proportions, some of the leading florists having one or two wagon loads of boxes for every important sailing; and it is a poor florist indeed that doesn't get a share of steamer orders. A list of sailings is usually displayed in some attractive form. The latest idea as seen in some of the Broadway shops is to display a lithograph, or painting, of some crack ocean-going steamer, with an inscription below such as "Flowers delivered to all outgoing steamers," or "bon voyage."

Steamer orders are by no means confined to seaboard towns, and a great many of the best orders filled by New York florists are sent them by letter or telegram, by their out of town correspondents.

The value of telegraphic communication is not thoroughly appreciated by the majority of provincial florists; but there is no tangible reason why a florist in Pittsburgh or Chicago should not display his steamer sign, and with a little pushing do as much business in that line as is done in the coast towns.

The value of advertising in the trade papers cannot be too highly estimated, and a card in the retail column is undoubtedly a business getter, and most important during the migratory season, when travelers are going to Europe, whose friends wish to substantiate their farewells with floral offerings.

The custom of sending "steamer baskets," horse shoes, floral steamers, and the like, has been almost entirely done away with in the last few years, and it is only on rare occasions that one sees anything more pretentious than a bunch of roses tied with ribbon. Sometimes, as in the case of secret societies, the ribbon will be inscribed with the name of the society or club; but cut flowers, tastefully arranged in boxes, constitute the most popular form in which flowers are delivered.

A good way to arrange a box of flowers for the steamer, is to lay a handsome piece of ribbon across the empty box, and then arrange the roses or other flowers, nicely in the usual way, over the ribbon. When the arrangement is complete, take the ends of the ribbon and tie a bow over the flowers, and attach the card to one of the ribbon ends.

Another good idea is to so arrange it, that a box of flowers can be delivered every day on the voyage. Loose flowers are appropriate for both ladies and gentlemen, and if care is taken in selecting, the flowers will be delivered in excellent condition even on the last day.

Corsage bouquets are also very good for this, and invariably meet with great success. The more perishable flowers should be delivered on the first two or three days of the voyage, then American Beauty roses, cattleyas, and cypripediums will be found to last in perfect condition, even to the end of the voyage.

Boutonnieres can also be sent in this manner; a fresh one night and morning will be greatly appreciated. Flowers to be thus delivered should be sent in care of the chief steward, who will place them in the cold room and deliver according to instructions. A nominal fee paid by the florist will assure perfect satisfaction.

Occasionally an order is given to decorate a state room, or a suite; but the possibilities in this line are very limited, principally on account of the restricted space.

But if cut flowers are to be used, care must be taken to provide receptacles that will not easily tip over. The state room steward usually has a supply of papier mache vases, that are really most suitable for the purpose.

Growing plants can also be used. Orchids on blocks or in their cribs are very good, as they can be suspended from the ceiling or along the walls of the state room. Occasionally smilax or asparagus is utilized for an elaborate decoration, but is a little fussy and apt to be in the way.

There is usually such an over-abundance of flowers on the first few days of a voyage, that it is well to make a suggestion to the customer that the flowers be delivered about the third or fourth day out. They will then come as a surprise to the recipient, and will be much more appreciated.

Hardy Azaleas.

A superb display of hardy azaleas seen this week proves the value of these plants for window decoration at this time of the year, when flowering plants are particularly scarce. The window referred to was entirely filled with Azalea mollis, in colors ranging from pale yellow to deep orange. Azalea Hinoderigi and Azalea

amena were also employed in making a display that was unflinchingly attractive.

Dorothy Perkins Rose.

Dorothy Perkins rose, as a cut flower, should prove a splendid addition. The flowers sent to this market are cut from discarded pot plants, but there is nothing to equal them; the large sprays of bright pink roses being splendid for loose bouquets or vase work.

D. RAYBUN.

An Attractive Electric Fountain.

Last week, in our New York letter, we referred to a new electric fountain that had been placed on the market, at the same time calling the attention of all in the retail trade and others interested to the charming serviceable window decoration such a device would form during the Summer months, as well as for other purposes of the trade generally.

Portable Electric Fountain

a small electrical motor and a centrifugal pump, the latter placed in the interior of a basin and connected directly to the motor shaft. The pump gets the water directly from the basin and conveys it through the pipes and a multiplicity of small nozzles, thus producing cascades. The water, falling upon the dome, returns to the basin and thence again to the pump.

"Water connection—Once filled, it is not necessary to refill until the water diminishes by the process of evaporation. In the basin may be placed, besides water, scented or colored water or any disinfectant or any other thin fluid.

"The fountain being not more than 22 inches high and about 12 inches at base, may be placed in any private living rooms, private and public dining rooms and is a splendid decoration for banquets and weddings, and an attractive feature for restaurants and hotels. It may also be used for hygienic cooling and moistening of the air of rooms. It is a very attractive advertising medium. Its possibilities for decorative and utilitarian purposes are limitless.

"To produce the play of the fountain and its effects, it is only necessary to attach the wire to any circuit and turn on the switch. The dome is illuminated by an incandescent lamp, and revolves by means of a jet of water driven against flanges on the underside of the rim of the dome. In this way the most beautiful colored and prismatic effects are produced.

"The fountain is furnished complete in a number of designs and ready for use. Alternating or direct current motors are also furnished. All mechanism will be of standard sizes."

Destruction of Slugs and Snails.

A paragraph in the April number of the *Journal of the Board of Agriculture* mentions several ways in which slugs and snails may be destroyed. A quotation from a Mexican agricultural circular recommends the obvious but tedious remedy of hand-picking, and also says that, "Pieces of board smeared with fat on the underside are laid down in infested places, with room beneath for the snails to collect. Cabbage leaves with rancid butter on one side, melon rinds, and the leaves of the common acacia are useful in attracting snails. A useful trap for slugs may be made of an earthen flower-pot provided with a cover and having a row of holes round the middle. These pots are sunk in the ground so that the holes come about at the surface. The inside of the pot is smeared with beer, a small amount of which is put into a dish at the bottom. Another useful trap is a cone of galvanized iron bored with many holes, sunk in the ground and baited with pieces of potato, carrot or apple. When snails and slugs have been trapped they may be killed by being left for five hours in a five per cent solution of

BOHN SYPHON REFRIGERATOR

..FOR FLORISTS..

St. Paul, Minn., May 10, '07.
WHITE ENAMEL REFRIGERATOR CO., St. Paul.

Gentlemen:—We have now used the new show case which you installed for us about six months ago. We can say that it is everything you promised for it, and that is "perfection."

We don't know what else we could say except the first case which you built for us about seven years ago helped materially to our success. Your system is certainly ideal for keeping flowers.

The workmanship on this new case could not be better. We have had people say, "Why that is more finely finished than our piano."

Yours truly,
HOLM & OLSON.

STYLE "L" BUILT FOR HOLM & OLSON, ST. PAUL, MINN.

A Live Florist Cannot Afford to be Without a Bohn Patent Syphon Refrigerator.

Everyone who is familiar with it says 'It is the Ideal Florist's Refrigerator.'

WHITE ENAMEL REFRIGERATOR CO., St. Paul, Minn.

copper sulphate in water, or a two per cent solution of lime in water. These pests may be kept away from a garden by a rope of grass or fibre soaked in a ten per cent. solution of copper sulphate and stretched round the border. Bands of cloth soaked in this solution and fastened round the tree stems prevent the ascent of slugs and snails, while a solution of iron of sulphate twenty-five per cent to fifty per cent applied in a ring four inches wide round the trunk of the tree is also said to stop their passage. The pests may be killed in weeds, hedges, etc., by spraying with a one per cent solution of copper sulphate, or a one per cent. solution of common salt."—Gardeners' Chronicle, Eng.

Horticulture on the Pacific Coast.

This series of articles is intended to give Atlantic Coast readers of The Florists' Exchange some idea of the nursery and florists' business in Southern California. Methods of propagation, and of caring for stock in its infant stage of existence, the soil and the climate are so different from these factors in plant productions in the East, that a few statements of fact may help correct errors that prevail in the minds of at least some of the profession.

The Orange County Nursery at Fullerton, Cal., is one of considerable size, and while doing a general nursery business, makes a specialty of eucalyptus and acacia trees, camphor, Monterey cypress and pines. All of these are produced quickly, except the camphor—in from four to six months—and are sold in large numbers. The majority of this stock is transplanted from the seed bed into flats containing 100 plants, and there grown to a height of one to two feet when they are ready for the market. A great many are transplanted into quart

and pint cans and grown to a four-foot size. In "The Tales of a Traveler," which appeared in these columns several years ago, reference was made to the "can" part of the business with what appeared to the writer just a little sarcasm. There have been—and still exist—some good reasons for this kind of receptacle. When the propagation of plants was first begun here no flower pots were to be had, which was one good reason for using tin cans. When the pots were available the price was so high as to be almost prohibitive to poor tradesmen; finally, there were enough made to supply the demand at reasonable prices, but the "tin can" continues to be the "pot" for the majority of stock grown in this end of the State, and for two reasons: First, cheapness; second and the most important, because there is no evaporation from the sides of the vessel as in the case of pots, and as a matter of course the plants require less water to grow them. If not sold within a year the cans rot away; but to remove a plant from a can is the cause of more profanity than any other one thing in connection with the business.

To obviate the necessity of continual watering when plants are grown in pots, the progressive grower now plunges them in a mixture of shavings and sand, or sand alone. All pot grown plants are raised either in a lath or glass house. The dry atmosphere—sometimes as low as 12 per cent.—evaporates moisture rapidly even in partial shade.

The Hermosa Gardens, Fred. Rafferty, proprietor, Santa Ana, Cal., makes a specialty of lilies of the longiflora type, gladioli and palms. Of the lilies he now has a bed of 4,000 seedlings, grown from seed furnished by the United States Department of Agriculture. In this lot there appear to be five distinct types, some showing twenty-four flowers on the stem. They are 18 months old and have no signs of any disease. The same species

of lily does not seed here. He also has some Liliun Philippinense, which do well in partial shade. The foliage of this lily is very slender and graceful; a bed of fifteen or twenty thousand seedlings looks promising. With the thought in mind of raising calla bulbs free from disease, a lot of seeds were planted a little over a year ago. The plants are in bloom, but they too show signs of the fungoid troubles of their parents. Palms are grown in solid beds until large enough for 6 or 8-inch pots, then potted up; even made up specimens of the kentias are treated in this manner.

Experiments with Fischer Purity freesia, the stock having been obtained from a Chicago seed house, showed no difference either in color, number of flowers or length of stem from the ordinary freesia. Seeds of both kinds will be saved for further experiments.

At this place the writer recently saw for the first time some small plants of pimelea which is thought to be the variety decussata. It is of a beautiful pink color, having a terminal umbel two inches across. The plant when not in bloom, is easily mistaken for the shrubby veronica which grows to perfection and of large size about San Francisco. The pimelea has resisted all attempts at cultivating it any length of time in the open. A native of Australia, it should fill a place in some location of our landscape with its compatriots.

P. D. BARNHART.

ARTIFICIAL CHRISTMAS TREES.—The Board of General Appraisers holds that artificial Christmas trees designed and intended for the amusement of children in play are, irrespective of cost, dutiable as toys at the rate of 35 per cent. ad valorem under paragraph 418, tariff act of 1897, and not at 50 per cent. ad valorem under paragraph 425 of said act.

New York.

The Week's News.

To-day (Saturday) a meeting of the Board of Directors of the Cut Flower Exchange will be held in the offices, 55 West Twenty-sixth street.

A meeting of the executive board of the American Rose Society was held in the Hotel Martinique on Tuesday, May 28, when matters pertaining to the Chicago show of the society and other pertinent subjects were discussed.

Edward Seery, the well-known florist of Paterson, N. J., while dining at the Hamilton Club with his wife recently, was insulted by a gentleman named Archie Graham. Mr. Seery preferred charges against Graham before the club's governors and has also made a complaint before a magistrate. Graham was sent before Judge Scott for trial, but as he is the gentleman who presided over the Board of Governors of the club, Mr. Seery will endeavor to have the case tried by some other judge.

A small fire broke out at the establishment of John Young Company, Bedford Station, N. Y., on Thursday morning, May 23. The blaze was extinguished before much serious damage was done. A slight loss was occasioned in the potting shed, which is fully covered by insurance.

Philip Kessler, wholesale florist, 55 West Twenty-sixth street, leaves on Monday morning next for a ten-day visit to the Jamestown Exposition.

A new florist supply store has been opened at 48 West Twenty-ninth street by B. Rosens.

At this writing (Tuesday) the weather is severely cold, considering that it is the 28th day of May. We thought last week that the chances were good for a full supply of outdoor flowers for the annual celebration of Memorial Day. It, however, has been so cold continuously, we might say, during Spring, that outdoor flowers are conspicuous by their absence. It is "an ill wind that blows nobody good," and this dearth of outdoor material is making very excellent business for all kinds of greenhouse grown stock.

Peter Bisset, Washington, D. C., author of the new book, "Water Gardening," was in town this week attending the executive meeting of the American Rose Society.

Walter Mott, who for some time has been on the road as traveler for Bobbink & Atkins, Rutherford, N. J., leaves on June 15 for Sharon, Pa., where he will join partnership with M. I. O'Brien, the well-known florist of that place.

There seems to be little likelihood of the plantsmen securing space at the Gansevoort market, as both houses of the Legislature at Albany have signed a bill confining the use of this market to farmers and market growers by striking out the words "or dealer in farm or garden produce."

Baltimore, Md.

Cold Weather Continues.

Continued cool weather has retarded outdoor blooming plants, with the result that good prices are being had for carnations, roses and other stock.

During the past Winter and early Spring a large number of fine evergreens have severely suffered from the continued and persistent thawing and freezing weather; strange to state, the hardiest kinds have suffered the most, such as cupressus, English yew, and Arbor vites, whereas tender biotas, deodars, Cedrus libani, Cedrus atlantica, retinisporas and others are in good shape. A number of fine old specimens of the hardiest kinds have suffered irreparable damage and in many cases will have to be entirely removed.

A recent severe hail storm did considerable damage in Anne Arundel County; Lehr Brothers, Lotz and Rider's greenhouses have been badly done up.

Club News.

An interesting and well attended meeting was recently held by the Gardeners' Club. An invitation has been extended to the nurserymen of the State to become members of the club. Efforts are also making to induce the new Mayor to appoint a horticulturist or a nurseryman on the Park Board; a committee has been appointed with that object in view.

I. H. Moss has been elected captain of the bowling team in place of C. L. Seybold.

St. Louis, Mo.

News Notes.

W. P. Scheidgger has taken unto himself a wife. The marriage took place last week. Mr. Scheidgger runs quite a place in Kirkwood and grows carnations and violets for this market. Congratulations are in order.

Robert Thompson has just finished a new house for Adolph Brix at his Mead avenue place. Mr. Brix is much pleased with the work, and will order two more houses built this Summer by Mr. Thompson.

A charity church decoration was furnished the past week by Mrs. M. M. Ayers. As stock was so plentiful, all the wholesalers donated, while the firm furnished the help.

Wm. C. Young, who is State Vice-president of the S. A. F. O. H. reports that he will be at the next Florists' Club meeting and anyone wishing to join the society can apply to him. Mr. Young also states that he would like the members who are contemplating attending the meeting to send in their names as soon as they can.

Charles Kuehn left Sunday morning for St. James, Mo., to attend the funeral of his friend, T. W. Guy, who died last Friday.

Albert Peterson, Cincinnati, O., was in the city last week, representing his father, J. A. Peterson, selling plants to the trade.

John Burke's store at 605 Locust street had a busy week of it in funeral work. His stand is becoming better weekly, and he has become one of the big buyers at the wholesale markets.

Foster Floral Company will, this week, move from their old stand at Broadway and Olive streets and combine it with the new place at 909 Olive street, which is at present in charge of Wm. Adles. Fred. Foster says he will be back at the old stand when the new building is completed next Fall.

Henry Braun, until recently with A. Brix, has moved his family to Kirkwood, Mo., where Henry has gone into business, but not in the florist business.

The St. Louis Horticultural Society's executive committee met the past week in one of the leading West End hotels, to discuss plans for the Fall flower show, which they expect to hold in the new Coliseum, should the building be completed by that time. Henry Ostertag, who is chairman of the subscription fund for \$1,000 allotted to the florists, reports that the fund has been completed.

ST. PATRICK.

Kalamazoo, Mich.

Unseasonable Weather.

Cold weather still lingers with us; heavy frosts occurred last week, making planting out of tender stock a risky business. Celery growers have suffered large losses on their early crops and at present the prospects of getting it away in time to replant look decidedly small. This will seriously affect a large and industrious class of men, as three or four acres is the average celery grower's amount of land and the total acreage devoted to the growth of the vegetable runs into many hundreds.

Carnations planted out do not appear quite as happy as they might and need warmer weather to get a good start. As for outdoor flowers there are none and will not be for Memorial Day. There, however, are promises of a pretty good cut from inside, but prices will be good, as also will the cut flower trade on that day, according to advance orders being received at the stores.

Plants will be abundant, and if the weather will only get warm a rushing business will be done next week. James Fraser has a bench of elegant hydrangeas just right for the occasion as well as large numbers of all kinds of bedding plants.

Mr. Coles, Jr., Kokomo, Ind., spent a week here visiting his sister, Mrs. Meyers. While here he enjoyed the novelty of planting out carnations in a snowstorm which is something they don't do in Indiana.

John Van Bochove recently purchased a Franklin automobile, which is quite a popular make here. The firm is making nice progress with its new houses and hopes soon to have them ready for planting.

The passing out of business of the Dunkley Floral Company will shortly take place. The Probate judge has granted leave to the executors for the sale of the real estate, etc. This concern was at one time the largest plant

in Southwest Michigan, as well as being the oldest establishment in Kalamazoo and formerly did a large and lucrative business. S. B.

Rochester, N. Y.

A Backward Season.

Like the majority of cities, Rochester has had its share of frosts and cloudy weather. Only last week Saturday, frosts were reported, and several gardeners and florists were caught by being in too great haste to plant stock outdoors. Late tulips, at present writing, are still in bud, while hundreds of park visitors are disappointed to discover that lilacs, etc., are only just showing color, which usually at this time of year are in full bloom. All this backwardness is to be deplored, especially by those whose greenhouses are as full as possible, and the extra care and attention necessary to keep early plants in good condition for sale is considerable.

Such late seasons have their effect, too, on the stores, although funeral work has been plentiful. However, the approach of Memorial Day is a relief to grower and retailer alike, and according to oral reports, a good business is looked for. No stability is found in the market prices, as they fluctuate with the weather, although good stock always sells best.

With the approach of Spring weather and consequent planting season, we find in our midst the "cut rate" florist who sells geraniums at from 50c. to 85c. per dozen in full bloom. How such business can pay a grower is a mystery to us all, but we are not above a lesson or two.

Del Titus, the largest market gardener here, is adding more glass area to his present holdings, as shipments to other cities have made great inroads on his local vegetable supply.

Salter Brothers and J. B. Keller Sons anticipate the rebuilding of several houses this year, preparations for same having already been made.

There seems to be a craze for formal gardens among those who can pay for such things, and when finished, Rochester will have a chance to show visitors what can be done on some city lots.

Nurserymen and seedsmen report exceptionally fine Spring trade, some firms being sold out of various lines of shrubs, etc., of which heretofore they have had a large surplus. COCKNEY.

Newport, R. I.

Trade and News Notes.

Although the Newport season of entertaining will not commence for a few weeks yet, the number of cottagers already here make a marked difference in the condition of business for florists and growers of plants. With the latter there is always a certain degree of uncertainty until the owners arrive and make up their minds definitely to what extent they will have their grounds embellished for the Summer. This condition, of course, refers principally to owners of places where gardeners are not kept, the grounds being cared for by jobbing gardeners or landscape men, the latter term being the more pleasing, especially to the new beginner in that line of work.

The New York florists who come here for the Summer are not all possessed of greenhouses wherein to grow the material, or part of it, which they need; those who do not have greenhouses purchase a great many decorative plants from growers in New York, Philadelphia and New Jersey. Julius Roehrs supplies large numbers of plants, as does Henry A. Dreer. Among florists and gardeners alike the latter firm is noted for the excellence of the Pandanus Veitchii invariably sent out; a great many palms and ferns are also purchased of this firm.

Lily of the valley is used in tremendous quantities here during the Summer, and it would seem fitting that there should be a demand for it, since it was here that the growing of it on an extensive scale was first commenced and many years ago by Carl Jurgens, who is still not only by far the largest grower of that flower in Newport, but is also perhaps one of the largest growers of it in the country.

Indications point to a good business for Memorial Day in almost all kinds of cut flowers, with the exception of the old standby lilac, which will not be in condition for use then. Roses are coming in to the retailers in very good quality, especially American Beauty; Jurgens supplies the greater number of those called for at present.

The bedding out season will begin this week on a large scale. Mr. Vanieck has a large stock, especially of geraniums and begonias, all hardened off ready for planting. He was all last week with his full force of men hard at work planting his young nursery stock in his large nursery in Middleton. Thomas Galvin grows a large number of choice plants of all kinds for bedding and other decorative purposes; this year the stock is fully up to the average.

Gibson Brothers realize that their new location will require stock for the store of a different kind from what they grow mostly in their own greenhouses; at present they are purchasing choice decorative plants, and for the Winter they will require cyclamen, Gloire de Lorraine begonias, etc., none of which is grown in Newport for commercial purposes, although there is a good market for such stock.

It was in an article in The Florists' Exchange a year or more ago by Joseph Meehan that attention was prominently drawn to the merits of Euonymus radicans as a plant for covering walls. I wish Mr. Meehan could see that vine now on the wall along Bellevue avenue on the estate of Mr. William B. Leeds, which was until recently owned by Mr. F. W. Vanderbilt. This year this vine as it covers the wall on that estate is especially of interest on account of the English ivy having wintered very poorly. Euonymus radicans is, as most people know, evergreen; but more than a week ago it started to make luxuriant growth and that along with the unpaired foliage it carried through the Winter makes it strikingly beautiful at the present time. This wall is nearly six feet high and it is completely covered with the vine. The wall referred to is not the only object handsomely adorned with Euonymus radicans in Newport, but it is the most notable because of its extent. The gate lodge at Rockhurst, the property of Mrs. H. M. Brooks, is also partially covered with this vine and will in a year or two be fully covered. Reference to Rockhurst, which is one of the hand-somest places in Newport, leads me to remark that it was here that Clematis paniculata was first utilized for growing upon cedar posts. There was a large group made of these near Bellevue avenue and the vines planted; the effect the second year after planting, when the vines were in bloom, was gorgeous in the extreme.

The propagation of horticultural knowledge seems to be the ruling passion in all classes of society nowadays, but in Newport there is a form of endeavor in that line which perhaps is different from that carried on anywhere else. What I refer to is a class taught by Miss Anna Hunter, a Newport society leader. This class is composed exclusively of young women, members of old Trinity Church. Miss Hunter has a greenhouse where plants for decoration and for cut flowers are grown by this class under her supervision and by her instruction absolutely, and their success in the work reflects credit not only on Miss Hunter but also on the young ladies themselves.

The mansion now in course of construction for Mr. Pembroke Jones is too far from completion for the possibility of its occupancy this Summer; for that reason extensive alterations and renovations of the grounds, which will include the planting of numerous trees and shrubs, has been postponed until the Fall. The contract for this work has not yet been let, but it is understood that it will be awarded to a prominent landscape gardener.

There is now an extensive range of glass on the Anchinclose estate and a part of it is devoted to orchid growing, a number of plants have recently arrived, with more to be purchased in the near future.

Siebrecht & Son have not yet opened their Newport store, and for that reason on receiving a large order for a decoration recently it was turned over to Gibson Brothers.

A. T. Boddington, New York, shipped large quantities of gladioli bulbs to Newport recently. D. M.

BETHLEHEM, PA.—Writing on May 27, Jacob A. Fries says: "Yesterday and to-day we have been firing; the temperature for the past week has been from 42 to 46 degrees in the morning. It is seriously interfering with the production of flowers and blooming plants for Memorial Day. Bedding is at a standstill; so are sales of plants. The outlook for Spring sales is discouraging indeed."

Los Angeles, Cal.

Among Growers.

A recent visit to Pomona by the writer was a revelation to him in many ways. Here are located the grounds of the California Rose Company, one mile south of town. There are twelve acres set in young plants, in rows three feet apart, the plants six inches apart in the row, and not a weed in the entire lot. Cuttings are made of soft wood and rooted in hot beds made of stable manure, during the Summer months, and I believe this is the only nursery on this coast that uses this method of propagation for rose stock. That it is abundantly successful one only need look at the vast acreage of thrifty young plants. Some young plants of Killarney in bloom were large, single, or scarcely semi-double, and of a faded unattractive pink color. Its appearance was such that no rosarian would tolerate it in his grounds in this State. In my plant notes of about a year ago I referred to this same rose as being one of the most desirable of recent introduction because of its large pink flowers, vigorous growth, and profuse blooming qualities. At the Orange County Nurseries there is a variety grown under this same name of a light pink shade, double, with a pronounced tea fragrance, bearing no resemblance to the plant described either in foliage or flower. These three widely different varieties lead me to believe that some one in the East is all wrong on nomenclature. Mr. Howland, manager of this place, uses Rosa multiflora exclusively for stock to work such varieties as Marechal Niel, Niphetos and a few other weak growing varieties on. All other sorts are on their own roots.

At North Pomona is located the chrysanthemum grower, W. W. Marugg. His health has overtaken this plant enthusiast, who has done more to develop the cultivation of this flower in Southern California than all other local florists combined. His productions have been marvels of beauty as well as size, and have attracted the attention of professional as well as amateur growers who have attended our two Fall flower shows. Unless there is a change for the better in his physical condition soon, he will not be able to compete for a prize at the November exhibition. He sends out with every order of a half dollar or over a printed page of cultural directions suited to California climatic conditions.

The public park in the town is small but well kept, and contains a great variety of exotics, planted so closely that in five years it will be one great mass of foliage and flowers with the individuality of every specimen lost in the jungle. Why this short-sighted, expensive policy should be tolerated by a board of park commissioners or city authorities is one of the things past finding out. A profound knowledge of horticulture is entirely unnecessary on the part of any resident of this land of almost perpetual Summer to know that in a very few years, five at most, a small Cryptomeria elegans will need at least six feet of room, a good specimen of Acacia floribunda, ten feet; a Ficus australis or F. macrophylla, fifteen feet; yet all these things are set from three to six feet apart, to make "a quick show," and they do. Another deplorable feature of our parks is the dense ignorance on the part of those who care for them, of the subjects under their care. The student and lover of plant life must find out for himself as best he can the names and nativity of anything that may come under his observation in the beautiful grounds of the different places he may visit; few, if any, of the employes seem to have any higher ambition than to draw their pay at the end of the month. P. D. BARNHART.

Herkimer, N. Y.

H. A. Maxiner is the only florist here, and is situated on the corner of Park and Main streets in the business section of the town. Mr. Maxiner is successor to Jas. F. Barclay, having a short time ago bought out the latter. Mr. Barclay moved to Long Island and is no longer identified with the trade here. Mr. Maxiner has a nice stand and has some good palms and ferns for decorative work as well as a general line of plants usually found in a retail florist establishment. J. M.

Saratoga Springs, N. Y.

There is much activity among the craft at this famous resort. The cold weather, however, has delayed operations over two weeks and all seem anxious to lend a hand to put Saratoga in gala attire for the eventful season that is now close at hand.

The Triennial Conclave Knights Templar will be held here in July. This will bring a representative body of men to this city from every State in the Union. Decorations will be the order of the day and cut flowers will be in lively demand. T. J. Totten has contracts for a large number of decorations. The headquarters and reception rooms of the various commanderies from the different States will all need decorations.

The G. A. R. also has chosen Saratoga for its annual meeting place this year. This meeting will be in September. These two notable gatherings, combined with the usual heavy run of Summer visitors, should give the florists a busy season.

Henry Schrade has a fine establishment, quite new, situated on Nelson avenue, a very popular thoroughfare. The place is a model of neatness and on this account catches the eyes of all passers by. Mr. Schrade has just finished a handsome office building, 26x17 feet, in front of his greenhouses, with a broad concrete approach from the street. The building has a glass front. The floor and lower walls are of concrete; the top and outer walls are finished in green shingles with white trimmings. It has metal ceilings, and all well lighted by electricity, making a most useful as well as ornamental addition to the place. Mr. Schrade is a good carnation grower and is justly proud of his new establishment.

John Ralph is another of Saratoga's growers, making a specialty of geraniums and decorative plants. His greenhouses and office building are also located on a prominent thoroughfare—Woodlawn avenue—only a couple of blocks from the business center.

Mr. Ralph is ably assisted by his son who is popular among the young people of Saratoga. They have a good business. J. M.

Amsterdam, N. Y.

Each of the florists here has a city store that appears to be in keeping with even the requirements of a larger city. J. J. Hilton, one of the most progressive of the craft, is about to build a house 30x100 feet, Lord & Burnham Company construction, for carnations. He has already about 60,000 square feet of glass and with the new addition will have a plant that will rank among the best in the city.

Frank Hotaling has quite a nice range of houses in which he grows carnations, roses, and bedding plants. His houses are in good condition having been erected only a couple of seasons; to add to their durability Mr. Hotaling is to install cement benches in all his houses this Summer. In a large barn at the rear of his greenhouses he had a force of men employed making the material. He has several molds for making both the cross pieces and the slabs for bottoms of benches. The cement and crushed rock are poured into these molds and nicely leveled with a trowel. It is then allowed to stand for four days, when it can be with all safety removed from the molds and a new lot of material mixed and placed therein. The posts for the benches are made in the greenhouses where they remain indefinitely. When a bench is removed and the posts sufficiently hardened the cross pieces and bottoms are brought in and placed in position and then cemented together. A slight fall is allowed toward the center of the bench, where a space for drainage is provided for. The side pieces are cast about two inches broad at bottom and tapering to about an inch on top, the taper on the inside and about six inches high. A bench of this construction when well put together looks neat and would last indefinitely under ordinary circumstances.

George Moser has recently gone into the florist business here, but as yet does not give it his entire attention. He has a few small houses on Locust avenue, which contain a nice stock of bedding plants. J. M.

SEND FOR CATALOGUE WOOD BROS., Fishkill, N. Y.

Glens Falls, N. Y.

Dr. G. W. Little of this place is an enthusiast in plant culture, and has a nice general collection of plants in the commercial varieties. Henry Pellett, gardener, has exclusive control of the plant and does a general trade in bedding plants, decorations and funeral work. The doctor has also a collection of orchids, as yet not very well established. It is uphill work for the orchid grower to invest in newly imported plants and endeavor to establish them in houses among a general collection of plants. In cases of this kind established plants at a little more cost pay best in the end. The Little greenhouses are this season to be entirely overhauled and rebuilt. New boilers will be put in and the place put in the best possible condition for Fall and Winter trade.

H. L. Crandell has a very attractive store in connection with his greenhouses on Glen street. His establishment has a neat as well as progressive air to it. Roses and carnations are grown and a fine lot of palms and decorative stock is on hand. A new house, 100x30 feet, for roses, was nearing completion at the time of our visit.

A. J. Bialek has also a few nice greenhouses and gets his share of the trade. He grows carnations and bedding plants and carries a nice lot of decorative stock.

The florists' trade as a whole is in a healthy condition in Glens Falls. J. M.

Sandy Hill, N. Y.

This is a thrifty old settlement about three miles from Glens Falls. Sandy Hill, we are informed, was a prosperous borough when Glens Falls was a very small place. Time, however, has changed conditions as Glens Falls is now a beautiful and pushing city and Sandy Hill is regarded as a suburb.

John L. Watkins & Sons do a thriving business in plant and cut flower growing at this place and are the possessors of a very well equipped range of greenhouses. This is to be increased this Summer by an addition of a house, 100x30 feet, for carnations. The work on this house has already begun. The lower walls, of concrete, have been started. Mr. Watkins superintending this operation. J. M.

S. G. BENJAMIN, Fishkill, N. Y.

Johnstown, N. Y.

Thos. Barson and Wollager Brothers are the only two florists here; both enjoy a good trade and are popular with the plant and flower buyers in their own city as well as the smaller surrounding places.

The Wollager plant is some distance out from the business center of the city. Mr. Barson has two places—the old one, and a newer plant in different parts of the city—both of which, however, are well located from a business standpoint. The new plant is used for carnation growing and is of recent construction by the Lord & Burnham Company. Mr. Barson is making quite a success of his business and very deservedly so. J. M.

CLASSIFIED ADVERTISEMENTS

Parcels-Post Matters.

Beginning with March 1, 1907, a parcels-post arrangement was put into effect between the United States and Ecuador, while it was established with Bermuda on February 1, 1907. Other countries with which the United States already had the parcels-post interchange were Jamaica, Barbados, the Bahamas, British Honduras, Mexico, the Leeward Islands, the Republic of Colombia, Salvador, Costa Rica, Danish West India

Anton Schultheis
President N. Y. and N. J. Association of Plant Growers.

Islands (St. Thomas, St. Croix, and St. John), British Guiana, the Windward Islands, Newfoundland, the Republic of Honduras, Trinidad (including the island of Tobago), Chili, Germany, Guatemala, Nicaragua, New Zealand, Venezuela, Bolivia, Hongkong, Japan, Norway, Belgium, Great Britain, the Commonwealth of Australia (including the States of New South Wales, Victoria, Queensland, South Australia, West Australia, and Tasmania), Sweden, Denmark, and Peru. The rates to these countries and the size packages permitted, etc., are given in the United States Official Postal Guide.

The U. S. Consuls at Nice and Marseilles, France, believe that a parcels-post system instituted between the United States and that country, would be a very important factor in the creation of trade.

Consul-General R. P. Skinner, of Marseille, says:

"It is unfortunate that, although the United States Government has parcels-post conventions with 29 different political divisions, including Germany, Nor-

H. C. Steinhoff
Treasurer N. Y. and N. J. Association of Plant Growers.

way, Belgium, and Great Britain, no such arrangement has been made with France. From this country, on the other hand, it is possible to send parcels to almost every country in the world except the United States, the weight varying from 6.61 to 11.02 pounds. Parcels for domestic delivery are similarly accepted upon the following terms:

"Three kilos or 6.61 pounds, 12 or 17 cents, dependent upon delivery at railroad station or domicile; 6.61 to 11.02 pounds, 16 or 21 cents; 11.02 to 22.04 pounds, 25 or 30 cents.

"Contrary to popular opinion in the

United States, parcels sent by post in this manner are not deposited at the various post-offices, but are accepted at the railway stations, city railway offices, and offices of the subsidized steamship companies. The whole machinery is controlled by the different railroads and steamship lines, acting as agents for the State."

CANADIAN NEWS

TORONTO, ONT.—The weather this Spring has been both cold and dark. But very few plants have yet been set out, and those planted look very hard. In many places carnations are not moving at all, and nearly all look as if they would be better back on the benches. Monday we had a miniature snowstorm. The weather has been splendid for nursery planting, and business in that line has been good. Tulips have been extra good and lasted well; most of the beds in the parks are now at their best.

Roses coming in are still of high quality; the cool weather appears to suit them. Carnations are also pretty good, but not nearly as plentiful as they were a few weeks ago. Tulips and yellow narcissus are fairly abundant, also *Gladiolus Colvillei*, white stocks and sweet peas; the latter are generally very good.

Arrangements for the chrysanthemum show in November are well under way, and we expect the floral prize list will soon be published. The exhibition will be held the second week in November in the St. Lawrence Market building. This building was used last month for the Horse Show, and there is plenty of room in it for a very large exhibit; it is well lighted, and will be easily heated at that time of the year.

Dunlop is rebuilding several houses this Spring. He had part of one blown down on the 19th, but the damage was not so great as it might have been; he was just about throwing out the stock and the houses went over without breaking more than half of the glass.

The Bedford Park Floral Company are building two houses, about 300 feet long, and have them nearly ready for glazing. They are using King gutters and fixings and 20-inch glass.

Mr. Allen of Toronto Junction is building a large house for American Beauty; it will be, I think, the widest house in this locality. T. M.

Washington, D. C.

Shortly after noon on May 27, Washington was swept by a storm that broke all previous records for May. The rainfall was officially reported as 40 inches in fifteen minutes. The lightning struck several houses, and the wind attained a velocity of forty miles an hour. Much damage was done to trees, roofs, awnings, the flag poles, throughout the central and eastern portions of the city. The damage was particularly heavy to trees and shrubbery from the Capitol Grounds to Lincoln Park, and even beyond. It is estimated by Superintendent Truman Lanham, of the Parking Commission, that several hundred trees in the city parks were blown down. Florists seem to have been fortunate, their respective places being out of the path of the storm. So far as can be ascertained at present, little damage was sustained by any of them. J. L. C.

Plant Growers Organize.

The New York and New Jersey Association of Plant Growers has been incorporated with the Secretary of State, with its principal office in New York City. The object of the association is principally mutual protection. The officers elected are: President, Anton Schultheis, College Point, N. Y.; vice-president, F. L. Atkins, Rutherford, N. J.; secretary, W. H. Siehrrecht, Jr., Attorney, City; treasurer, H. C. Steinhoff, West Hoboken, N. J. Among the directors are John Scott, Flatbush, N. Y.; A. L. Miller, Brooklyn, N. Y.; H. D. Darlington, Flushing, N. Y.; L. Dupuy, Whitestone, N. Y.; and H. Schoeltzel, New Durham, N. J.

GRANDVILLE, MICH.—Writing on May 27, 1907, N. B. Stover says: "It has snowed almost all day; the thermometer this morning standing at 33."

An Orchid Exhibition

The Dutch Orchidophiles Club has existed for 20 years, and this fact was celebrated by an exhibition of orchids at Haarlem, Holland, on May 10-12.

Nearly all kinds of orchids were represented. I seldom have seen such a number of cattleyas, odontoglossums, sypripediums and vandas together.

Messrs. Jansens & Putzeys, Merxem, Belgium, exhibited some new varieties; very attractive were Odontoglossum x Loochristiense, var. magnificum, with large, yellow and brown spotted flowers.

Plant Notes.

SWEET PEAS.—The old notion that peas should be planted or sown thickly is gradually giving way in the light of the knowledge of the fact that plants grow from seeds sown very thinly are not only capable of producing finer flowers, but they also continue in a growing condition for a longer period.

MIGNONETTE.—No place, private or commercial, should be devoid of mignonette. Old fashioned, as this favorite is, it is nevertheless possessed of a perfume perhaps unequalled.

HELIOTROPE is another plant exquisite in flower and delightful in perfume. It does not stand well after being cut, but a number planted in a bed or border will scent the air with a delicate fragrance peculiar to itself.

PANSIES.—When pansies are planted in a bed or border provision should in some way be made for the furnishing and planting of something to take up the room the pansies occupy, after they are done flowering. Pansies are not satisfactory when left in their places all Summer.

HENRY EICHHOLZ, Waynesboro, Pa.

(90) Vinca variegata.—I have noticed an annoying percentage of late propagated Vinca variegata, such as I generally use for planting for my stock, blackening off after being potted from sand (well rooted). The trouble also continues after the plants have established themselves; after potting on into 2 1/2-inch pots or planting outside, it seems to cease. I have not noticed this trouble with Fall rooted cuttings. C. W. Ontario.

—This is evidently a result of leaving the cuttings too long in the propagating bench after roots have been formed. We have propagated vincas both in Winter and Spring, but do not remember to have had any trouble with the tips dying off, as mentioned. Perhaps some reader who has had a similar difficulty can throw some light on the subject.

(91) White Fly.—I have part of a house infested by a small, active, white fly. I have tried all means known to me to get rid of it, but without success, and would like an answer from some brother in the trade who has successfully stamped it out. J. F. Pa.

—Frequent spraying with some good tobacco insecticide, or with a strong solution of whale oil soap, is the best remedy we know of for keeping down the white fly when troublesome in a house of mixed plants. Spray every few days, and do it thoroughly each time, so that every part of each plant is covered with the liquid.

(92) Spent Hops.—What are the manurial qualities of brewers' hops; how can it be used in the field and would it answer (if well rotted, same condition as peat) with potting soil in the greenhouse? WHITE FLY. Pa.

—Spent hops are equal in value to 85 per cent. of stable manure, so that if the hops can be had at a nominal figure, we would certainly use them. Like stable manure, they are useful when fresh for ploughing into land, or when sufficiently decayed so that they can be rubbed through a coarse sieve, for mixing with soil for potted plants or for filling benches.

REVIEW OF THE MARKET

NEW YORK.—The continued cold weather has kept outdoor flowers backward, and there is no stock of that class coming in excepting lilac. Indications point to a good clearance of roses, carnations, and outdoor grown flowers for Memorial Day. There has been a lively call from out-of-town for carnations and many thousands have been shipped to distant points. Of course, this out-of-town trade does not call for high-priced flowers; most of these orders have varied in price from \$2 to \$3 per 100, the latter seemingly being the outside figure. Bride and Bridesmaid roses are not very plentiful, and prices are a trifle firmer than they were a week ago. American Beauty are plentiful enough for all demands, though the very special blooms are somewhat scarce, and a fair price is still obtainable for them. The shipping of 20,000 or 30,000 carnations will relieve the market to quite an extent, and the chances are, for the rest of the week, these flowers will be at a price somewhat in advance of that obtained one week ago. Sweet peas and daisies are quite plentiful, and there seems to be a fairly good demand for them. There has been quite an influx of lily of the valley, frame-grown, which is a strong competitor of the greenhouse product. Lilies are bringing slightly higher prices than they have for a week or two. There is still a full supply of gardenias; but bulbous flowers, such as tulips, narcissus and hyacinths, have greatly decreased in number.

CHICAGO.—This market within the past few days has seen another kaleidoscopic transformation for which it is justly famed, and at this writing, on Monday, with Memorial Day but three days off, it is largely conjecture to state what conditions are to be confronted during the week. Carnations are the one item on which the uncertainty rests, and with quantities of well developed buds in sight a solid week of cloudy weather has held them at a standstill until to-day it is a question whether orders already placed can be filled completely, to say nothing of what are to follow. On the other hand, a day or two of bright, seasonable weather will do much to relieve the tension. Peonies also are causing not a little worry and speculation as to the outcome. Roses generally are in supply more nearly equal to the demand, though thrips in some localities has made heavy inroads in the crop, and, of course, this staple shows a stiffening tendency in price in sympathy with the carnations.

Lilies of excellent quality are in good supply but during the day have also advanced somewhat in price. Spanish iris, German iris, some local lilac, limited quantities of peonies, jasmene and the staples above referred to, practically cover the field, and with almost nothing in the average home garden which increases the call on the commercial grower, the unfavorable weather has brought about a condition of affairs which at this writing is to say the least critical, and as one large grower and shipper said: "I could sell every flower I shall have right here for home use, and as the conditions which confront us are general throughout our shipping district our orders for shipping are correspondingly larger than usual."

Greens also are in good demand, especially ferns, which are selling according to quality all the way from \$2 to \$4 per thousand. W. K. W. PHILADELPHIA.—Memorial Day has made business very good; all kinds of flowers are selling well, as peonies, the usual standby at this time, are scarce this year. Peonies were selling on Tuesday at from \$10 to \$12 per 100 and those offered on first-class flowers. Nearly all on this market are from Virginia.

American Beauty roses realize \$3 to \$4 per dozen for the best stock; tea roses, \$10 per 100 for the best, some extra Mme. Abel Chateau and Wellsville bringing \$12.

In carnations some very choice Enchantress sold at \$8; a few Lady Beautiful, same grade, at \$5; general stock goes at from \$3 to \$4 per 100. Lily of the valley is scarcer this week and prices on it range from \$3 to \$5 per 100. Iris brings 50c. to \$2; daisies, \$2 to \$4; sweet peas, 60c. to \$1; carnations, \$1.50 to \$2 per 100 for the best.

Lilies go at \$15 per 100; callas, \$1.50 per dozen for some extra good stock. Gladioli realize \$1 to \$1.50 per dozen. Smilax sells at 20c. per string; asparagus, 50c. per bunch. All stock cleaning up well.

Shipping trade is very active. DAVID RUST.

BOSTON.—The market is at present all activity and Memorial Day orders are being shipped in large numbers. Much more flowers are used at this season in New England than at any other time during the year. This year out of door flowers are scarce, consequently growers are making a ready sale for all greenhouse products. There will, from all appearances, be plenty of all kinds of stock, however, as the past few weeks the supply has been getting gradually beyond the demand. In roses American Beauty still remain at the same price; other roses are selling at from \$2 to \$8, while Richmond bring from \$2 to \$16. Carnations realize from \$2 to \$3 and \$4 and \$5 according to grade. Lilies are plentiful and have advanced to \$8 and \$12. Lily of the valley sells at from \$2 to \$5; gladioli, \$4, \$6 and \$8. Sweet peas are plentiful at \$1, 50c and \$1. Spiraes sell at \$2 and \$3. Hardy cut ferns are scarce and there is no over-supply of any greens. J. W. D.

ST. LOUIS.—In looking over the stock this Monday morning at the four wholesale houses, we find only a very slight improvement in business. The wholesalers say the past week everything in season was in plenty, very much more so than the demand called for. Prices have advanced a little on good first-class stock, and these will continue until after Memorial Day. Trade among the retailers is reported very quiet in all lines, except funeral work. The plant trade has been brisk, as the weather has now gotten so that planting out can be done without any danger of frost.

As to stock in cut flowers, it is rather difficult to obtain extra fine grade roses, as very few come in; but with firsts, seconds and thirds, the market has been glutted all of the past week. Prices on extra long American Beauty for this week will go up to \$4 and \$5 per dozen; on other roses, such as Bride, Richmond, Killarney, Souvenir, President Capot and Bridesmaid, the best are up to \$6 and \$8 per 100; firsts, \$4 and \$5, and seconds, \$2 to \$3 per 100.

Carnations have been coming in fine, and in large quantities, more than could be disposed of. The price has gone up a cent or two on Enchantress, Cardinal and Boston Market—\$3 to \$4 for choice and \$1.50 to \$2 for the other grades. Plenty are coming in for all demands.

Fillmore is sending in a fine lot of cut candidum lilies to Kuehn, which sell well. These are from under glass, and bring 20c. per stalk. Lily of the valley should sell well this month for June weddings; there is plenty of it in at present at \$3 per 100. Peonies are coming in in large quantities, selling at \$4 and \$5 per 100. Cape jasmies are in plenty at \$7 per 100 for the extra fine grades; others sell at from 50c. to 75c. per 100.

All other outdoor stock has been dragging for want of demand. Callas and Harrisii lilies, too, have been accumulating for want of a sale. Fancy ferns are all out, and dagger ferns are now to be had at \$3 per 1000. In other greens everything is in plenty. Some very fine long smilax sells at \$15 per 100 strings. ST. PATRICK.

INDIANAPOLIS.—Florist wagons in all parts of the city heavily loaded with window boxes, roses and bedding plants, also a consignment amounting of flowers, beds and lawn decorations, indicate that the hopes for an excellent Spring trade are being realized. Contrary to most expectations, store work has improved because of the lack of dooryard flowers. The many orders for Memorial Day will surely maintain a lively business at that time. Many smaller towns are this season drawing upon the supply of the city's large greenhouses.

Peonies, which were despaired of, have come forth in a wonderful manner, and a large number will be marketable this week; they are now being wholesaled at \$7.50 to \$10 per 100. Good carnations must always be ordered in advance, at \$3 to \$3.50 per 100.

Inferior grades sell readily at \$1.50 to \$2 per 100. A large supply of Harrisii lilies is given full justice by the retailers, at \$10 to \$12.50 per 100. Candy-tuft, excellent quality, will be a mainstay for Memorial Day, at 25c. per plant. Feverfew, too, is in evidence at the same price.

The growers of Summer roses are producing fine stock at \$7 to \$8 per 100; the very short flowers fetch \$1.50 to \$2 and are readily sold for funeral work. Mme. Abel Chateau and Richmond roses are favorites with the counter trade, at \$2 and \$3 per dozen. American Beauty, too, are finding a splendid retail sale at \$2 to \$3 per dozen.

Hydrangeas and gloxinias are all there is to offer in the plant line besides the bedding stock.

Tomlinson Hall market was fairly alive with customers the past week. Outside work had been delayed so long that the first seasonable days brought out the flower lovers en masse. I. E.

ST. PAUL.—The cold, backward Spring has affected trade materially. Cut flower business has kept up nicely, but no doubt considerably more would have been done had the weather conditions been more favorable. Stock is about equal to the demand. While practically all of the dealers have their roses in full crop, there does not appear to be an over supply by any means.

Carnations are plentiful, but the inclement weather keeps the price up. The street dealers have not been able to do anything on account of the bad weather, therefore trade with the stores has been much better than at the same time last year. Spring flowers are slow in coming in. Peonies will be shipped from eastern points. The price being high, it is doubtful if many will be sold; they are now quoted at \$8 and \$10 per 100, which means, that the retailer will have to sell them for \$2 and \$2.50 per dozen, which is considered a high figure in this locality. Lily of the valley is selling at 75c. per dozen, and no drop in price can be expected until the outdoor stock makes its appearance. Some of the early varieties of tulips are on the market, but the demand for them is light; the present weather impresses one that these flowers are out of season.

Plant sales are quite active and large consignments have been shipped to outside towns the past week. From present appearances Memorial Day business will be unusually heavy; the dealers who cater to a shipping trade have booked all the orders for plants that they can conveniently take care of. Very little has been done in filling vases and boxes; about every other night we have heavy frosts, and it begins to look as though very little would be done in the cemeteries by Memorial Day. Soft plants cannot be safely planted unless they are protected. PAUL.

WASHINGTON, D. C.—Memorial Day following almost in the wake of Winter, presents a new phase to the florists. The outside flowers which usually blossom in profusion and are relied upon for decorations at this season are to be had only in most limited quantities by reason of the continued unseasonable weather; therefore, greenhouses must supply nearly all other than that which is shipped from Southern States. Peonies are just beginning to flower; and outside roses are even scarcer. Northern firms have been writing to local growers for their shipments of peonies, but the supply will fall far short of home demands at good prices, even if the weather should turn warm. Cool weather during the past week has somewhat improved the quality of greenhouse grown flowers. Trade has been better than during the two previous weeks, supply and demand about equalling each other. Pond lilies, which usually appear in the stores during the second week in May, are just being seen in limited numbers this week.

There are good prospects for a general clean up on May 30. JAS. L. CARBERY.

FIRMS WHO ARE BUILDING.

SOUTH PORTLAND, ME.—The new greenhouse in process of erection by John Minott is rapidly nearing completion. It will be devoted to roses.

WESTERLY, R. I.—S. J. Reuter is making another large addition to his plant. The new structure will be 500 feet long by 35 feet wide and will be devoted to rose culture. Mr. Reuter already has 165,000 feet under glass, and when the new greenhouse is completed he will have 200,000 feet. The several small houses, now being used for rose culture will be given up to carnations.

CHANGES IN BUSINESS.

GRINNELL, IA.—Walter Squire has bought the Willard nursery, west of town, for \$8,000; the place contains 40 acres.

WEST GROVE, PA.—Benjamin Connell, who for 15 years has been in business as a wholesale grower here, has closed out and temporarily retired from business. Mr. Connell wishes us to express his thanks to his many friends in the trade which he has made during the years he has been in business. He also informs us that he has no regrets for the money he spent with us in advertising during that time, and should he go into business again, he assures us he will turn to The Florists' Exchange in which to place his advertising.

Perplexities of a Tax Commissioner.

Governor Stokes of New Jersey has received from William K. Devereux, a member of the Monmouth County Board of Equalization of Taxes, a letter in Devereux's characteristic vein which shows the many difficulties with which a tax board has to contend in the matter of assessing gardens and greenhouses. The letter follows:

"My Dear Governor—Pardon my intruding on your valuable time, but I thought you would like to hear how your Monmouth County Board of Equalization of Taxes is coming on. To begin with, Governor, I find, as you predicted, the job of equalizing taxes is far from being a sinecure. We have been working overtime for three months, but as yet we have been unable to decide as to just what constitutes constitutional 'true value' in passing upon the assessments in the twenty-four taxing districts of Monmouth County. Our greatest trouble comes, Governor, from the show places—or freak properties—of the millionaires summering at Long Branch, Spring Lake, Elberon and Seal Beach. For instance, one of the Guggenheims, the main squeeze of the Cooper Trust, has a pretty glass-enclosed labyrinth on a portion of his estate at Elberon. Thus far, I confess with shame, I have been unable to ascertain the value of this show-front labyrinth. Labyrinths are not listed in Macy's new Winter catalogue, and Siegel-Cooper say they have never heard of them and have never carried them in stock. I asked a wiseacre friend of mine to put a fair price on a twentieth century labyrinth in prime condition, and he replied that he never ate any of it. He thought it was for Desperate, I next tackled Dominic Ballard, of Ocean Grove. To him I put the question, 'Labyrinths! Labyrinths! I am a trifle rusty, brother, on church discipline,' he replied, 'but I don't think Methodists are forbidden to play the new game, providing, of course, that there is no gambling attached to it.' Now, Governor, if they have any old sort of labyrinth down in Millville, for mercy's sake please quote me a price for one, so we can fix up the Guggenheim assessment, p. d. q. Down at Spring Lake, Marquis Martin Maloney, the gas magnate, has a famous show place containing a replica of a world-famous grotto. Now, Governor, I'm on the job when it comes to beer gardens, but I'm a mugwump if I know anything about the value of a grotto. If you ever owned one, put me wise as to its worth. The marquis also has a very elaborate iron fence around his estate. You, Governor, no doubt have built and repaired many fences in your political career; so please give me a line on their value—for taxing purposes, I mean. Another one of the Guggenheims—there are four of them—has a hot air plant underneath a portion of his garden for forcing tiger lilies to bloom outdoors in Winter. They tell me the plant—the iron pipes I mean, not the flower—cost \$30,000 to install. (On the quiet, Governor, that would have elected me Assemblyman from Monmouth last year.) What amount should we assess him for his tiger lily hobby? Then up at 'Kildysart', the Summer home of the late Daniel O'Day at Deal Beach, a small fortune was spent in laying out an Italian sunken garden. It's nothing, as you probably know, but a flower-bedded, one-mil-bellied hole in the ground. How are we to get at the intrinsic value of a big, open-air hole? "Yours for Equal Taxation of Labyrinths, etc."—Newark Evening News.

Indianapolis, Ind.
News Notes.
William Billingsley has returned from a successful fishing trip to Bass Lake.
Walter Bertermann, who superintends the outside work for Bertermann Brothers Company, is the busiest man in town just now.
John Hartje is supplying the trade with masses of candytuft.
The city florist is making admirable headway in decorating the parks, but it is painfully evident that Indianapolis does not spend enough money in this direction, as both equipment and help are insufficient for the large park area enjoyed by this city.
President Roosevelt's visit here on Memorial Day will doubtless swell the florist business, as extensive preparations are under way. I. B.

MANCHESTER, MASS.—The North Shore Horticultural Society held its regular meeting on the 17th inst. The subject under discussion was “The Gladiolus” when B. Hammond Tracy gave an interesting and instructive talk, describing the various strains and many varieties of these flowers. It was decided that the silver cup, offered by the Blue Hills Nurseries for the best collection of herbaceous perennials, would be competed for at the June show instead of at the August exhibition as printed in the schedule. A certificate of merit was awarded to W. E. Allen for superior cultivation of Enchantress carnations, and James Salter received an award of merit for phlox Miss Lingard, and White Column stocks. J. W. D.

MANKATO, MINN.—W. A. Snyder, nurseryman, 819 Baker avenue, has left town and his whereabouts are unknown.

S. S. Pennock=Meehan Co.

Chicago.

News of the Week.

C. H. Fisk has just completed the erection of a conservatory in the rear of his Ogden avenue store which is a great improvement, being three feet higher than the former structure over which the new house was built before the old one was taken down.

Four thousand graves of former Union soldiers were decorated in Cook County alone on Memorial Day.

It is stated that the recent phenomenal profits of the Board of Trade brokers have, among other things, occasioned the settlement of many florists' bills which had been 'stood off' for years.

William Hastings, representing A. H. Hews Company, Cambridge, Mass., stopped over here a few days on his Western trip.

Miss Saline of Omaha is visiting her sister, Mrs. C. H. Stewart.

Owing to the Memorial Day rush at Winterson's Miss Davidson courageously left a sick bed to fulfil her duties on the hooks during the week.

H. F. Pruyn, a railroad man who runs from Baraboo, Wis., to this city has, in connection with his son, established a cut flower business in his home town and has been purchasing plants to stock his recently completed greenhouse.

The E. F. Winterson Company has been having a very successful run on hardy ferns, the daily receipts for the past two weeks averaging eighty-five thousand from Southern Colorado and Montana.

The game of base ball between the Chicago Florists and the Roosevelts at Washington Park last Sunday afternoon was called, on account of the storm, at the end of the seventh inning, when the score stood 3 to 1 in favor of the Roosevelts. A return game will be played next Sunday.

C. W. McKellar received this week a fine lot of Spanish irises in assorted variety which in such generous quantity were a novelty in this market, proving quite acceptable to the trade.

O. Johnson, who has opened a commission stand in the store of the Chicago Rose Company, reports satisfactory encouragement for the first week.

Mr. and Mrs. Charles Heyme, 5422 Halsted street, will spend the next four or five months in Europe.

Weiland & Risch were in good crop both in carnations and roses for Memo-

CUT FLOWERS AND SUPPLIES
 76-78 Wabash Avenue, CHICAGO.

rial Day, Killarney showing up well with them as usual.
 Zech & Mann, in addition to the general line offered for the holiday trade, had a fine lot of stocks in assorted colors.

Both South and North Chicago were visited by severe hail storms on Sunday afternoon last. In the south the storm was most severe, Kidwell Brothers suffering the breakage by hail of some four or five hundred panes of glass.

A. H. Burt of Kankakee was in the city Monday, looking up Memorial Day supplies.
 William W. Abrahamson, representing E. H. Hunt, leaves next week for a two months' trip among his trade.
 Flint Kennicott felt compelled to leave a sick bed the first of the week to meet the holiday rush.

Bassett & Washburn said Monday that the prospect was that they would be short in all lines. A fine lot of lilies was one of their Memorial Day specialties.

Lacy Young of the Deamud & Young Fern Company came down last week to stay in the city until after Memorial Day, when he will return to the forest and his ferns.

The Benthey-Coatsworth Company were in good crop of roses and the first of the week were handling a large consignment of local lilac, which was about the first that had appeared.

At Vaughan's Seed Store is noted an importation of cypres stems which appear to be finding a ready market, and the demand for gladiolus bulbs continues unusually good.

The annual shipments of jasmine from Texas are now at their height and form an attractive feature of the market.
 At Peter Reinberg's salesroom they were congratulating themselves on the good fortune of having a fine crop of all varieties of roses on for the holiday.

Sinner Brothers had a splendid cut of carnations, which came in at just the right time when they were most needed, and the firm also noted quite an increase in their shipping trade.

The abandonment of the horse show will be viewed with regret by some retailers, but it will doubtless make possible a more favorable date for the flower show.

Work is quietly, but constantly going on, tending to the perfection of the plans for the flower show. The committee on premium list held a meeting at P. J. Hauswirth's on Monday afternoon. The exhibition will be held in the Coliseum, October 31 to November 6.

Every Tuesday evening at Mussey's the practice bowling goes on, and the next two and a half months are expected to develop a team well qualified to represent Chicago at the convention.

J. S. Wilson attended a Horticultural Society committee meeting on Monday, and in conversation stated that he had been so busy at Western Springs that this was his first visit to the city since February.

P. J. Hauswirth expected to move into his new store on Monday last, but was put off for a day or two, and, owing to the intervention of Memorial Day decided to postpone the removal until next week.

On Monday Vaughan & Sperry stated that they were simply snowed under with orders, particularly for carnations.

Wietor Brothers were showing the first of the week an excellent cut along all lines of their produce, both carnations and roses. Their seedling scarlet carnation is showing up remarkably well for this season of the year, when scarlets are most apt to be past.

William N. Campbell of the Vaughan Seed Store staff, recently associated with the New York department, has gone to California, where he will enter the real estate business, doubtless keeping one eye on seed products at the same time.

A good crop and an abundance of orders were the pleasing conditions surrounding the J. A. Budlong salesrooms the first of the week.

Poehlmann Brothers Co. may be justly proud of the Morton Grove products which they placed on the market this week, both as to quality and quantity.

The J. B. Deamud Company entered the week's contest backed with a fine stock of goods and favored with a nice bunch of advance orders.

Mr. Dickinson at E. H. Hunt's feels highly pleased with the success which To-hac-ine products are meeting all over the country where they are being introduced.

A. L. Randall's was a busy place early this week, where in addition to the cut flower rush the supply department was in full swing. WILLIAM K. WOOD.

Philadelphia.

The Week's News.
 All the commission houses are doing a good business this week, and the Spring plantmen report that every plant with a flower on it is being sold; some were sold out on Tuesday.

At the club meeting next Tuesday Antoine Wintzer of the Conard & Jones Company, West Grove, Pa., will speak on "The Deterioration of Forcing Roses, the Cause and the Remedy." The convention committees will have much of interest to report.

A meeting of creditors of H. T. Dumont Company and the Rosary Flower Shop was held Wednesday. The liabilities are about \$800, consisting mostly of supplies furnished to the flower store. H. T. Dumont sold out his wholesale business some three months ago, and took a position in another line of trade, but still continued the Rosary Flower Shop on Fifteenth street, which has not been successful. It is thought that everything will be paid up.

E. H. Smith of Hazletou, Pa., was in town on Tuesday last. DAVID RUST.

TOBACCO DUST OR SAW DUST WHICH??

211 North St.
Claremont N. H. Apr 5, '07

The H. A. Stoothoff Co.
New York
Dear Sirs—

Please ship me as follows

100 lbs Fumigating Tobacco powder	\$3.00
100 " Black stuff fine	2.00
144 sheets Aphicide,	3.50
10 Fumigating plates	850
	\$9.00

Send the powder by freight, the Aphicide by express prepaid. I enclose check for \$200
Three or four years ago I had a bag of the Black stuff fine and it was without exception the best tobacco powder I have ever had. Since then I got some stuff from a seed house. I paid more for the article and got left on it. It was much like sawdust than anything else. Now I am coming back to you.

Yours truly
C. E. Stevens.

Say, Stevens, we would sure like to know from you and others like you "why you stray away" to folks who don't know tobacco powder from sawdust. We have been telling you and others in a hundred different ways how smart we are in the way of tobacco powder; that we have been in the tobacco powder business for twenty years, and why our tobacco powder should be and is, twenty years **AHEAD OF ALL OTHERS.** Again we ask, why you let the fellows that don't know, skin you, who should know, that the **BLACK STUFF FINE TOBACCO POWDER**, for dusting, at 2c. per pound, in our bag holding 100 pounds, with our name, address and brand on each bag, sold only by us, direct to you, is the **only one. WE WOULD LIKE TO KNOW.**

Fernandina, Fla.

WATERBURY, CONN.—William M. Cottle, sixty-five, a florist, and Arthur G. Mieliez, aged four, were struck by a train at Brown's Crossing on the Water-town branch of the New York, New Haven and Hartford Railroad on May 22, and killed instantly. Their skulls were fractured and their necks broken. Mr. Cottle was a prominent Mason and Oddfellow, and a native of Martha's Vineyard, Mass.

DAVENPORT, IA.—The members of the Tri-City Florists' Club are planning to hold their annual picnic at Black Hawk Watch Tower and have set the date for July 11. A committee consisting of H. Bryant, Julius Staack and Henry Gaethje will make the arrangements. The committee will report at the next regular meeting of the association which will be held with Ewoldt Bros. of Davenport.

Boston.

News Notes.

In the Arnold Arboretum at the present time is seen one of the best shows of the season. The pyrauses are yet, owing to the cool weather, in fine splendor, the lilac collection is just beginning to be an attraction, and more visitors will within the next two weeks pass through this park than at any other time during the year.

Severe frosts prevailed during the past week in many localities hereabouts and not nearly the amount of Summer bedding has yet been done that is generally completed by Memorial Day.

W. H. Elliott is busy on his new house at his New Hampshire place and expects to have it ready to fill up with roses for Winter blooming.

Elijah Cartwright is building his new houses in place of those recently destroyed by fire and when complete will have a very up-to-date establishment.

At Horticultural Hall on Saturday last T. D. Hatfield exhibited a new seedling calceolaria, a hybrid between Golden Gem and a herbaceous variety. It was awarded a silver medal by the committee. A fine collection of late tulips was shown by W. N. Craig, North Easton. J. W. D.

Hilton, N. Y.

Gordon Brothers, two young men, are starting in the florist business here. They already have one good greenhouse and intend adding to it as they may find the occasion demand. J. M.

Heating.

Growers' Problems Solved by U. G. Scollay.

How much 2-inch pipe will be required for the greenhouse as described below, and how should the pipes be arranged? The walls are 100 feet long, 24 feet wide, 15 inches thick and four feet high, of stone masonry. The east corner of the greenhouse is just even with the surface of the ground; south side will be all in ground but 1 1/2 feet on southwest corner; west end will be protected by the boiler house, 15x24 feet; north side of greenhouse will be all in ground but 1 1/2 feet of exposed wall on lower northwest corner. Boiler pit 5 feet below floor of greenhouse. I wish to heat this house to 55 degrees inside with 25 degrees below zero outside. The greenhouse, which is 16 feet high from floor to ridge, will be exposed to full winds and weather and full sun. It stands on a side hill sloping to the west, a 3/4-span to the south house. I prefer to hang the pipes to outside walls by means of hook plates.

F. B. P.

New York.

—Being so specific regarding the depth of your boiler pit, I assume that it is impossible, or at least undesirable, for you to go any deeper. Under these circumstances I would advise you to pipe the house, using overhead flow mains. The heating coils should consist of 21 lines of 2-inch pipe. To this surface will, of course, be added the two overhead 3 1/2-inch mains. These mains should be supported in place, one on each side of the column supporting the ridge of the house, by means of heavy iron bracket hangers made for the purpose. The highest point of the system should be at the boiler end of the house, and should be properly air vented at that place (on both mains). Let the mains drop toward the east end at a grade of no less than one inch in ten feet. I would distribute the lines of 2-inch as follows: South wall, five lines; north wall, four lines; south raised bench, four lines; north raised bench, four lines; and center solid bench, four lines. The pipes on the solid bench may be divided into two coils, that is, two lines on each side, connecting each coil from the overhead main with 2-inch; all other coils connect up 2 1/2-inch. Place full opening gate valve on each flow connection, full size of same. As by the above arrangement of piping there are six coils, you, of course, understand the intention is to connect three to each overhead main. Your return mains to the boiler should be in the same proportion as the flow mains leaving it. Have expansion tank placed in the most convenient location near the boiler, and as high above the overhead mains as you can get it. Of course, you will understand that the coils must fall from the east end back toward the boiler, giving them all the grade that you can.

Concerning the boiler, I would advise you to purchase a regular greenhouse make of a capacity of not less than 2,000 feet of 4-inch greenhouse pipe. This boiler may seem larger than you anticipated, but it will be found to be economical, especially when you reach that 25 degrees below zero, which is not uncommon in the Adirondack section, with which the writer is quite familiar.

My only reason for laying out the job with two flow and two return mains of 3 1/2-inch size direct from the boiler, is, that I think you would find them easier to handle than to run one larger flow and return of 4-inch size into the house and branch out from that point. If you prefer to adopt this latter plan, it will give you the same results. Again, it is possible you may find it more convenient to carry each return from the coils directly into the boiler room, and connect up separately to the boiler. As many boilers can be tapped with the required number of holes, you may find it very convenient to adopt this method. Be careful, however, and have each return to correspond in size with the flow connection.

U. G. SCOLLAY.

Medium Width Houses

Some men take the stand that houses of medium width are better for them. Better because they are large enough to make heating and ventilating satisfactory, and still not so large as to be in any way unwieldy. That's why we built this range of 27 foot Iron Frame Houses for one of the largest rose growers in Madison, N. J. We would like to write you exactly why he built Iron Frame houses and tell you a few things about their arrangement, heating method, etc. If you'll write to us, we'll write to you.

GREENHOUSE GLASS
ALL SIZES
 16x24 A. & B. Double a Specialty
C. S. WEBER & Co.,
 10 Desbrosses St., New York

Schenectady, N. Y.
 The florists of this city all report good business. While there are no very large or even medium sized places here, every one seems to be satisfied.
 Jas. E. Felthousen has apparently most glass; this is used only for the production of rooted cuttings of geraniums and coleus; over 150,000 of each have been sent out the present season. Mr. Felthousen has accumulated some desirable property in different portions of the city and it keeps him busy attending to same. He is building some nice residences for rent and only keeps the greenhouses going to afford him agreeable employment in his spare time.
 J. M.

Little Falls, N. Y.
 The Overlook Greenhouses, belonging to D. H. Burrell & Company, are the most extensive here. While originally intended for a private place and still used as such, the greenhouses have been turned into commercial use and furnish the cut of blooms for the greatest part of the local trade. Wm. A. Hyde is superintendent and grower. It is with regret your correspondent learned that a brother of Mr. Hyde's, an engineer on the New York Central, was in the ill-fated wreck on the road here a few days previous, and had died in the hospital. Mr. Hyde has the profound sympathy of the entire community.
 J. O. Graham has a few well filled greenhouses in the business portion of the city and enjoys a splendid trade.
 Mrs. Mary E. Holmes has a cut flower and plant store on Second street. It is now Mary A. Holmes Kaiser; Mrs. Holmes has taken unto herself a life partner.
 J. M.

We use nothing but **SUN DRIED, ALL HEART CLEAR CYPRESS** the wood that was used for mummy cases by the ancient Egyptians and is lasting yet. If you get one of the **FOLEY GREENHOUSES** (they last a lifetime) you will get more as your business grows. They are carefully designed, every part fitting its exact place. Look Here, Mr. Florist and Gardener

WE have just passed through an unusually severe winter and you are apt to forget the many sleepless nights you spent worrying about the temperature of that No. so and so house.

Or the many zero nights that you spent in the boiler pit; maybe you did not have to do the stoking and firing, but **you** certainly had to do the worrying and pay the coal bills.

Now keep the vows you made on those trying occasions, **And Send for me.** I have solved the problem for others, I can do it for you; and remember, I will come recommended by some of the most prominent commercial florists and gardeners in the East, "Personal friends of yours."

Wm. H. Lutton, Heating Engineer
 WEST SIDE AVE. STATION, JERSEY CITY, N. J.

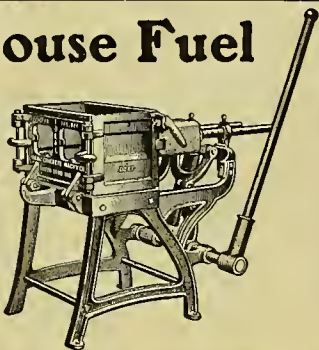

**EVERY MAN WANTS A SQUARE DEAL
 AND HE IS ENTITLED TO IT.**

There are no strings tied to any of our propositions and whatever material we furnish you will be full value for the money. We do not sell you a hundred and one things that you don't need just to make a profit—we give you just the necessary amount of material to make the right kind of a house and you will find this to be true on every order you buy of us. There's more satisfaction in having perfect houses than you know about if you have never used our material. Better order that new house from us.

Now while you are making repairs you need our instruction book. Send ten cents for copy.

JOHN C. MONINGER CO.
 CHICAGO
 115 E. Blackhawk Street.

Save Greenhouse Fuel

With the Ideal Concrete Block Machine, any florist can build his own greenhouses at little cost. Saves in fuel, because the hollow block is practically frost-proof. Lowers insurance rates and ends the cost of maintenance, because Ideal Blocks are fire-proof and everlasting.

IDEAL Concrete Machine

The original and only perfected Concrete Block Machine working on the face-down principle.

Enables the manufacture of Ideal Concrete Blocks from sand, gravel and a little cement at a cost far lower than that of other building materials. May be operated by any man without previous experience. Low in cost, rapid in operation, and can never wear out or break in use.

Write for catalogue and illustrations of Ideal Concrete Block construction, of practical value to every florist. Sent Free.

The Standard Return Steam Trap has no equal for simplicity or its workings. Catalogue free.

E. HIPPARD, Youngstown, O.

Then There's the Eave Plate,

You can't ignore that at the eaves, the weakest point in other houses, is the strongest point in ours.

— In the first place our eave plate is galvanized —that means no rust.

— It extends two inches into the house — that means it protects the fascia and absorbs enough heat to free the plate from snow and ice.

— It has a three inch extension on the outside—that means it sheds all water clear of the side.

So much for the eave plate alone and nothing said about the sash bar clasp that's screwed to it—the only clasp that really clasps—well—then a clasp talk next week.
P. S. We sell this plate with clasps attached, in any quantity you want.

Vol. XXIII. No. 23 NEW YORK AND CHICAGO, JUNE 8, 1907 One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention. Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rosa pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

JAMES VICK'S SONS, Seedsmen
 Rochester, N. Y., May sixth, 1907.
 Florists' Exchange, New York City.

Gentlemen: In our letter of last week we hinted at plans for increasing our rapidly growing Wholesale Department. One of the lines along which we are working is the Fall Bulb Trade in which we are making a special feature of Import Prices on orders which are sent to us now.

For Quality our stock cannot be surpassed. The truth of this statement is supported by the fact that our Bulb business has nearly doubled in three years. If this does not show that our customers are pleased with our bulbs, we do not know what would.

If any of your readers want rock-bottom import prices we invite them to send us a list of their wants and get our quotations, or else drop us a postal for our Import Bulb List.

Yours very truly,
 JAMES VICK'S SONS.

COLD STORAGE LILIES

ALL LIVE AND UP-TO-DATE FLORISTS GROW THEM

The forcing of cold storage lilies
is no longer an experiment. If you
have not already grown some of
these we can refer you to hundreds
of florists who make a success of
this method and have lilies "all the
year around."—The same as Lily of
the Valley.

Our lilies are bought for and
placed in cold storage for the ex-
press purpose of delivering bulbs
in the summer time.

LILIIUM LONGIFLORUM and gigan-
teum take about two months to
bloom from time of planting from
cold storage. **Speciosum** from five
to six months, so that longiflorum
wanted for Thanksgiving and Christ-
mas should be planted about Oct.
1st, and **speciosum** and auratum
about July 1st.

We have limited quantities of the
following varieties on hand and offer
subject to being unsold and at
the prices named; Will hold not later
than Oct. 1st, for our customers
without any additional charges for
cold storage. **ORDER TO-DAY.**

All cases are repacked before ship-
ment.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION
Henry W. Wood, Richmond, Va.,
president; C. S. Burge, Toledo, O., first
vice-president; G. B. McVay, Birming-
ham, Ala., second vice-president; C. E.
Kendal, Cleveland, O., secretary and
treasurer; J. H. Ford, Ravenna, O., as-
sistant secretary.

CINCINNATI, O.—J. Charles McCul-
lough, seedsman, will leave shortly for a
trip to Europe.

DES MOINES, IA.—The noted farm
seed specialist, T. R. Garton of England
has been spending several days in Des
Moines during the past week.

FRANKFORT, KY.—The Orchard
Grass Seed Commission Company, of
Jefferson county, has been incorporated
with \$2,000 capital stock. The incor-
porators are: W. J. Johnson and N. A.
Hardin, of Harrods Creek, and C. R.
Stoll and J. C. Pierce of Goshen.

NEW YORK.—Henry Nungesser,
seedsman, arrived home Wednesday from
a European trip.

M. H. Duryea, chairman of the local
committee on entertainment for the
forthcoming meeting of the American
Seed Trade Association, reports every-
thing progressing favorably, and a large
and successful gathering is fully antici-
pated.

CHICAGO.—Vaughan's Seed Store
was a busy place indeed the few days
preceding Memorial Day and an increase
of 50 per cent. over last year is re-
ported for the branches of the business
affected by this occasion.

Kauf Gundestrup, accompanied by
Mrs. Gundestrup, left this week for his
former home in Denmark and a tour of
the principal seed producing centers of
Europe.

The circular sent out by the American
Seed Trade Association announcing the
proposed increase in annual assessments
from \$5 to \$10 has not been very gra-
ciously received by some members here,
and unless a satisfactory reason show-
ing that the change is necessary is given
the proposed amendment to Article III
will be strongly opposed.

Winterson's Seed Store has received
another carload of box trees, the success
they have had in disposing of this spe-
cialty this Spring having proved very
satisfactory.

Vaughan's Seed Store has commenced
moving stock into its new building at
the corner of Halstead and Randolph
streets on the west side. There are
three stores on the street floor, the center
one of which will be occupied by the
concern as will all the rest of the
building including the basement and four
upper stories each, 65x80 feet. The
building is a handsome up-to-date struc-
ture.

Millet and other late grasses have
been in heavy demand and have increased
considerably in price. Owing to the
lateness of the season and the apparent
light crops there is much planting of
late varieties.

There seems to be a general inclina-
tion among those intending to attend
the meeting of the Seed Trade Associa-
tion in New York, June 25-27 to
travel over the Lake Shore route, and
that road has issued a circular stating
what can be secured in the way of ac-
commodations and rates of which the
following is an excerpt:
An extra sleeping car will be pro-

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

vided for the exclusive use of the party, provided eighteen or more leave Chicago on the New England Express at 1:45 p. m. Sunday preceding, arriving in New York the following afternoon Monday at 6:00 p. m.

No special rates are available for this occasion the regular rate being \$20 in each direction, except by joining together in a party of ten or more people to travel together on a solid ticket which would entitle the tourists to a rate of \$18.25 each way.

If any of the party wish to return via Jamestown a round trip ticket to Chicago may be procured for \$32.05 limited to sixty days from date of sale and good for stop-over of ten days at New York, Philadelphia, Baltimore, and Washington, good to return either via C. & O., in connection with Big Four, Pennsylvania or B. & O.

In addition to any of the above rates there will be an excess charge of \$1 which is the regular excess rate on the above train. Parties intending to join the Chicago contingent should at once notify Charles Hollenbach, 12 N. Halstead street, or Leonard Vaughan, 84 Randolph street, Chicago, Ill.

W. K. W.

BOSTON, MASS.—S. Groot of Sluis & Groot, seed growers, Enkhuizen, Holland, was a visitor this week.

J. W. D.

ONION SET GROWING IN CALIFORNIA.—Reference was made previously in these columns to the California Seed Growers Company, but without a personal knowledge on the part of the writer, who visited the farm May 18 last and learned a few things about onion set growing that may be of interest to readers of The Florists' Exchange. The location of the farm is 35 miles southeast of Los Angeles on what is known as peat lands, where the water is so near the surface that the soil may be made to quiver by the violent shaking of a heavy man standing on some portions of it. The company finished sowing on the date above named 3,400 pounds of onion seed, and began to harvest the crop of February sown seed, the plot containing about ten acres. The sets are pulled and placed in trays, 18x36 inches, and hauled to the drying ground, where our bright California sunlight completes the curing. This crop will be put on the market by July 1, thirty tons going to Dallas, Tex. The ground will be broken up and planted to a crop of bush beans for seed.

The seed used by this firm is nearly all imported, Italy and the Canary Islands furnishing the largest part. That which comes from the Islands is packed in zinc-lined boxes, hermetically sealed. The firm calculates to sow 100 pounds of seed to the acre, but the quantity put in spread out over 40 acres of ground, in rows eight inches apart. Ir-

rigation and fertilizers are not used to produce these crops, but the price of labor, which is 30 to 40 per cent. higher here than in the onion set growing districts of the East, makes the cost of production so much greater that this firm cannot compete with Eastern growers on late onion sets. Then, too, freight rates to South Atlantic States, where the bulk of the crop goes from this State, are also a factor against these people. The early maturity of the crop is the advantage that this firm has over all competitors.

The stock is shipped in crates that hold 50 pounds net. These crates they make themselves, of octagonal shape, which permits ventilation between them while in transit, no matter how they may be packed in the car. The firm has secured a patent on a ventilated crate. The ventilator runs through the center, and is made of either yucca fiber, a native product that needs no perforation, or perforated tin or pasteboard tubes of two inches diameter. Fresh fruit shippers of the northern part of the State are testing the merits of this device. The concern also has a patented cleaning table, or to be exact, hoppers with chutes leading to the operator, who picks out any foreign substances that may have previously escaped the fans and screens. The difference in the cost of cleaning is as 1 is to 4.

The estimated yield at present for the season is 200 tons, some of which goes to the pickle factory. The one great difficulty in carrying on these extensive agricultural operations on this coast is the scarcity of help. Japanese field hands are about the only ones to be had. White men do not, as a rule, take to this kind of labor, and when they do they usually proceed to get drunk Saturday evening and remain so until the next day, and when Monday comes they are physically unfit for service. When the foreign born labor agitator will provide reliable help for the farmers, fruit growers, and gardeners of the Pacific Coast, then and not till then will this class of employers agree to the exclusion of the Jap and the Chinaman.

P. D. BARNHART.

SAN FRANCISCO, CAL.—C. C. Morse & Company have leased the six story and basement, "Class B" building at 48-56 Jackson street, running through to 13-22 Clark street. They will move their offices and all of their bulk department and general packing headquarters to this building.

They will continue to operate the retail store of the Cox Seed Company at 125-127 Market street, and are having same fitted up in a very attractive manner, and a sign now appears on the front of the building, "C. C. Morse & Co., successors to Cox Seed Company." They will carry on all of the departments formerly operated by the Cox Seed Company and E. J. Bowen, but their growing department will be operated as an entirely distinct business, with T. M. Landrum and Lester L. Morse actively in charge.

European Notes.

Anything more wretched and exasperating than the weather in Northern Europe during the Whitsuntide holidays it is not possible to imagine. Hail storms and from 5 to 9 degrees of frost were sandwiched between heavy rains and a few minutes of tearful sunshine.

The early potatoes are cut down to the ground, many plantations of extra early peas, almost ready for picking, are practically destroyed, and the young flowering shoots on all our Brassicas, turnips and rutabagas, look very sickly. The full extent of the injury to these as well as the beet plants will not be known for several weeks; in the meantime, holders of good stocks of beet and rutabagas should not sacrifice them. As regards the latter the canker is spreading rapidly and the growers are powerless to check or eradicate it.

Field turnips of the Grey Stone and Aberdeen types are very short acreage and as the demand for immediate use at high prices is extra good it is not likely that any will be carried over.

It should be noted that this cold spell is the more disastrous on account of the rapid growth of vegetation under the spell of the heat wave reported two weeks ago.

EUROPEAN SEEDS.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
Orlando Harrison, Berlin, Md., president; J. W. Hill, Dea Moines, Ia., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

THE AMERICAN ASSOCIATION OF NURSERYMEN meets at Detroit, Mich., next week, June 12-14, 1907, inclusive, at Hotel Cadillac.

CAYUGA, N. Y.—H. S. Wiley & Son have been awarded the \$100 cash prize offered by Brown Brothers, Rochester, N. Y., for the best grown 100 plants of the Baby Rambler rose.

DERRY, N. H.—The manufacturing (of tree labels) business established in 1867 by Benjamin Chase will be conducted in the future by the Benjamin Chase Company. The personnel of the concern remains as before. Benjamin Chase is president and John C. Chase, treasurer.

DELAWAN, Wis.—On May 27, Adelbert P. Wilkins, president and manager of the Phoenix Nursery Company, was killed while pulling stumps. He was sixty-one years of age. The lever of a stump puller flew back and broke his skull.

DISEASED BOXWOOD: TIME TO SHEAR HEMLOCK AND OTHER SPRUCE.—I send you some sprigs of boxwood which are diseased. Will you please advise me what it is? Also, what is the best time to shear hemlock and other spruce trees.

Virginia. H. N.
—Boxwood often has the injured foliage your sprig represents after Winter is over. It usually disappears when new growth is made, and this we think will happen with yours. The foliage of your sprig has the appearance of being hurt by red spider, but it is too early in the season for this pest.

If you wish to shear hemlock and other spruce trees to make them bushy, do it now while growth is being made; there is no better time, as a half dozen shoots then take the place of one. If the shearing is but to bring the plants into shape, do it when the growth for the season is over, say, in August or September.

J. M.

Seasonable Topics.

Since it is impossible to obtain boxwood for manufacturing purposes in Europe, owing to the scarcity of the trees, the wood of the orange, to be obtained from Southern Europe and from this country, has been suggested as a substitute. Engravers and mathematical instrument makers have used the box heretofore.

The Kentucky coffee tree, *Gymnocladus canadensis*, makes so few twigs that it leads many to think it affords but little shade. This is a mistake. Its compound leaves are of great size, and when in full leafage it is one of the best of shade trees.

Buds of plums have been found to take well if set just as the sap in the stocks has almost ceased running, better than when set earlier.

The beautiful Japanese snowball, now to be found in all collections, was introduced to this country by the late Alfred Cope, of Philadelphia, records tell us.

Yellow berries of the common and of the deciduous holly have been found in a wild state. These plants would seem to be well worthy of propagation, which could be effected either by budding or grafting.

Large-Fruited Chestnuts.

The demand for something superior to others is the reason why nurserymen find such a call for large-fruited chestnuts as well as large-sized fruit of all kinds. All who are familiar with chestnuts know that the flavor of the large-fruited ones is not nearly the equal of that of the native sort. The large-fruited chestnuts are the Italian and its improved sorts and the Japanese and its varieties. Not one of all these is the equal of the native in flavor; yet when it is a matter of business, the large-fruited sorts have paid the better.

Both in the foreign and the native sorts there have been selected some bearing extra large nuts, and these have been propagated and sold to those who have set them out in orchard style as a business enterprise. Propagation is by grafting, the work being performed in early Spring, when the sap begins to flow. Grafting of all trees tends to make them fruit earlier than seedlings do, and the chestnut is no exception. Such trees of it are counted on to produce paying crops in ten years from the grafting, and there is some profit from them even before this, as they come into bearing gradually.

It may surprise some to know that within the past few years bushels on bushels of the native chestnuts have been sown by various parties looking toward a supply both of nuts and timber in future years. Every year sees more large trees chopped out, while the de-

Liriodendron Tulipifera.

Among the many beautiful trees of our country, the *Liriodendron tulipifera* is rarely surpassed in elegance of form, in size, beauty of foliage or showiness of flowers by any other tree of our forests. It is found everywhere from Canada to Louisiana, and everywhere is valued for its commercial uses as well as for its qualities already named.

There are records of trees of it of immense size. We ourselves have seen specimens of it along the banks of the Delaware River, in Delaware, 25 feet in circumference at 3 feet from the ground, and no doubt this is not uncommon, as in many woods near Philadelphia trees that will caliber 4 feet are not unusual.

The tulip tree, as this tree is called, is noted for its great height and its arrow-like trunk. In low ground, which situation it particularly desires, trees of it are to be found from 60 to 100 feet high, with straight tapering trunks.

The specimen we had photographed for the purpose of our notes shows the appearance a young tree assumes when it stands alone with ample room to grow. And what a noble appearance it makes! The leaves are handsome; so are the flowers, a photograph of which we also present. As will be seen, the name tulip tree is well bestowed, the flowers much resembling those of tulips. In color the blossoms are greenish yellow, orange within, well set in the pretty leaves. When trees are branched near the ground, as is the one of our illustration, it brings the flowers within the range of one's handling and admiring them, but when the trees are tall it is not possible to see the flowers but from a height above.

Because of so many trees on lawns and in forests being so tall many persons familiar with the trees in other respects have never seen a flower of them, which tempted us to add a photograph of a small blossoming shoot, and it illustrates as well how profusely the trees bloom. Following the flowers are the seeds, which are clustered in a sharp pointed cone, brown when ripe. A peculiar feature connected with the seeds is that but few are ever good. There may be a dozen or more in each cone, and if the half of these are sound it is thought to be very good seed.

In a commercial way the wood has much value, being fine-grained and taking on a good polish. Next to pine, cedar and cypress it is the best substitute for joists of buildings; and in the South the boards are, often used for both the exterior and interior of houses, and even for shingles. Coach, chair and trunk makers also use the wood, owing to its lightness, strength and durability.

Landscape gardeners find great use for this tree, owing to its beauty at all stages of its growth. Much disappointment has been experienced in the past by those not aware that in the Northern States the tulip tree cannot be transplanted in the Autumn. It belongs to the same natural order as magnolias, and, like them, if transplanted in Autumn it is labor lost; the trees will not live. In the South, where cold weather does not prevail, it is different; but North, the planting must be done in Spring, and be accompanied with a hard pruning in of the branches.

Popular Apples.

Nearly thirty years ago in answer to inquiries made of fruit growers in various parts of the State the Pennsylvania State Board of Agriculture published the following list of preferred apples, as shown by the answers received: Best three Summer varieties—Early Harvest, Red Astrachan, Sweet Bough; best three Fall—Maiden's Blush, Smoke House, Rambo; best three Winter—Baldwin, Greening, Spy. The consideration was for sorts for home use.

It will strike every one familiar with fruits that the sorts named would be well represented in a list prepared at the present day of apples for home use; indeed the varieties are still to be found in the collections of retail nurserymen, in connection with the later known sorts of merit. It is the case with other fruits as well, that a well tested popular sort is hard to supersede; and nurserymen are always safe in listing such sorts for their customers.

JOSEPH MEEHAN.

Liriodendron Tulipifera, Tulip Tree

mand for both the timber and the nuts is on the increase.

It is evident that no firm will go wrong in preparing for a good demand of all the species and varieties of chestnut.

Flowering Shoot of Tulip Tree

10,000 American Arbor vitae,

(THUYA OCCIDENTALIS.)

Each tree grown wide apart and splendidly developed on all sides. So bushy that for hedges or screens they will go almost twice as far apart as ordinary Arbor vitae will. They have been frequently transplanted and are supplied with an abundance of fine fibrous roots. Can be dug and shipped with ball if desired.

HIRAM T. JONES, Union County Nurseries Elizabeth, N. J.

Herbaceous Border Notes.

The hardy border this season is now beginning to become interesting, for the many different hardy plants are, owing to the lateness of the season, just coming into bloom. During the past few weeks, of course, there has been a wealth of the many varieties of hyacinths, narcissi, and tulips, and at this late date there are many showy spots embellished with blooms of late flowering sorts of the latter, together with the muscarias, scillas, etc.

There are a few of the finer early flowering border plants just gone past such as the epimediums, of which there are a goodly variety; and although their pretty little blossoms are gone for this season they still continue to have attractive foliage. Saxifraga cordifolia is one of the best early flowering plants just out of bloom.

Many of the aquilegias in hybrid varieties are just coming into flower and will prove an attraction for some time. Aquilegia glandulosa is one of the best, with its beautiful blue and white flowers.

The globe flowers are now in their full glory. Trollius europeus, the common lemon colored variety, and T. asiaticus, are both good, but by far the most attractive sort is T. japonicus var. excelsior. The last named has bright orange-colored flowers and is one of the most showy plants of the season.

Doronicum caucasicum is a bright yellow daisy-shaped flower which has been quite showy of late; and the different varieties of Centaurea montana are just at their best, with their many different colors.

Dicentra spectabilis is an old-fashioned plant which should be in every garden and although the variety eximia is not so attractive still it is worthy of a place in the border.

Linum perenne is just opening its bright blue flowers as are the polemoniums, as well as several varieties of the veronicas. Of the latter gentianoides has light blue flowers and grows about a foot high; and the varieties paniculata and teurium, each about eight inches high, have deeper blue flowers and are more attractive.

The amsonias are just becoming attractive, and while their colors are not gaudy, they have something about them that will always commend them to the lover of the hardy border.

Few of the peonies are yet in bloom although some of the earlier species are fully opened. Of these we might mention tenuifolia, Bakeria, anomala, officinalis and asiatica var. excelsior, the latter one of the best.

The many species of iris have scarcely begun to become showy; it will be a week or ten days yet before the German and other large forms will be in bloom. Iris cristata is one of the early dwarf sorts just past, missouriensis is a pretty variety, about a foot high, and obliensis is a very pretty dark colored species.

Primula cashmeriana is not always regarded hardy, but it seems to be perfectly so in some locations as well as P. japonica, which is likewise a good border plant if given a semi-shady sheltered location.

Many of the small growing or alpine plants are now at their best. Of these we have such plants as Iberis sempervirens and tenuifolia and Alyssum saxa-

tile, with its bright yellow blossoms. The globularias are attractive blue flowered little plants; and then there are the many species of viola, the most attractive at present being cornuta and cornuta papilio, lutea and its more attractive variety Golden Gem. Stellarias, Phlox subulata and many such plants are still an attraction.

J. W. DUNCAN.

SPRAYING

Spraying with To-Bak-Ine Liquid is one of the most effective and economical methods for the destruction of insect pests that attack greenhouse grown plants.

This method will positively destroy Thrip, Green Fly, White Fly, Black Fly and Red Spider, using 3 to 4 teaspoonsful of To-Bak-Ine Liquid to a gallon of water and applying with a strong force pump fitted with a misting nozzle.

To-Bak-Ine Liquid applied by this method will mean clean stock and will positively not injure, spot or discolor either the foliage, blooms or plants, in fact it can be sprayed when the crop is in full bloom.

To-Bak-Ine Liquid is sold as follows:

Table with 2 columns: Quantity and Price. 1-4 pint cans \$.60, 1-2 pint cans 1.10, 1 pint cans 2.00, 1-2 gallon cans 7.75, 1 gallon cans 15.00, 5 gallon cans 67.50

Also in 10-20-40 gallon casks. Write for prices and further information and directions about spraying.

W. W. RAWSON & CO. 5 UNION ST., BOSTON, MASS.

Chrysanthemum Society of America.

The schedule is now ready and the following prizes are offered, to be competed for at our next show, which will be held in New York City, November 6 to 8. The C. S. A. prize, silver cup, for best 10 blooms in the show any color. F. R. Pierson, Tarrytown, N. Y., offers a silver cup for 10 blooms white, 10 blooms yellow and 10 blooms pink. A silver cup is offered for 10 blooms of Miss Clay Frick on 24-inch stems. Vaughan's Seed Store offers a silver cup for best specimen bush plant, open to private gardeners only. W. W. Wells, England, offers gold, silver and bronze medals for 6 blooms of Miriam Hankey, on 24-inch stems. Nathan Smith & Son, Adrian, Mich.; offer a prize of \$25 for the best seedling or sport of American origin, commercial scale.

York, offer a prize of \$10 for 12 blooms, 4 varieties on 24-inch stems, open to private gardeners only. Henry A. Dreer, Philadelphia, Pa., offers a prize of \$15 for 24 blooms, 6 varieties on 24-inch stems. The B. G. Hill Company, Richmond, Ind., offer a prize of \$15.00 for 12 blooms President Loubet, and \$10 for 10 blooms of Mme. Armand Detroyat. Stump & Walter Company, New York, offer a prize of \$10 for best 3 blooms of Morton F. Plant. Peter Henderson & Company, New York, offer a prize of \$25 as follows. To the private gardener winning the greatest number of points at the exhibition to be determined as follows: A first prize to count 10 points, a second prize to count 5 points, and a third prize to count 3 points. DAVID FRASER, Secretary.

Chas. H. Totty, Madison, N. J., offers prizes of \$15 and \$10 for best 15 blooms 10 varieties on 24-inch stems, introductions of 1907. A. T. Boddington, New York, offers prizes of \$10 and \$5 for best 10 blooms of Beatrice May, on 24-inch stems. A. J. Loveless offers prizes as follows, for the largest bloom in the show, white, pink and yellow, \$8 each. J. M. Thorburn & Company, New

LOVELAND, COLO.—The Colorado Nursery Company have sold the nursery to Monte Kilburn, Dr. Cramer and H. A. Gooch, who expect to incorporate under the name of the Colorado Nursery Company possession to be given as soon as possible. The former owners, Shields & Noble, have been successful in making this nursery one of the most valuable in the State. Mr. Shields has been in the business here twenty-six years and is a thorough horticulturist.

ALFRED P. SMITH Madison, N. J.

ROSES

COURT DECISION ON ROSE CUTTINGS. —In the United States Circuit Court, Western District of New York, in the recent case of the United States against the American Express Company regarding the classification of rose cuttings, a decision was rendered adverse to the Government by Judge Hazel, who sustained the decision of the Board of General Appraisers, as follows:

"Rose cuttings that have been put in sand in preparation for shipment, but have never in fact been in soil, are not dutiable as 'rose plants' under paragraph 252, tariff act of 1897, but as 'cuttings of * * * shrubs, plants, * * * commonly known as nursery or greenhouse stock,' under the same paragraph."

Judge Hazel says: "The questions submitted arise upon a protest filed with the collector by the importer, who claims that the articles in question are rose cuttings and dutiable at 25 per cent. ad valorem under paragraph 252 of the present tariff act. The importation was returned by the appraiser as rose plants and assessed for duty at 2 1/2 cents each."

"I have read the testimony, together with the opinion of the Board and the former decision of the Board in G. A. 5645 (T. D. 25211), and I think the Board correctly decided upon the evidence presented that the importation consists either of cuttings of shrubs or 'cuttings of * * * plants, * * * commonly known as nursery or greenhouse stock,' and as such is dutiable at 25 per cent. ad valorem. It appears by the evidence of Mr. Carey, witness for the protestant, that the cuttings in question are put in sand in preparation for shipment, but that they have never in fact been in soil. The provisions of paragraph 252 are not absolutely clear, but the omission of Congress to specifically mention cuttings or plants of the hybrid rose persuasively indicates, I think, that a broad interpretation of said paragraph was intended. I concur in the conclusions and reasoning of the Board, whose decision is hereby sustained."

THE WEEK'S WORK.

Timme's Timely Teachings.

Asparagus Plumosus.

Preparations for a fresh start in the growing of *Asparagus plumosus* are now in order. Well drained but deeply worked and heavily enriched solid borders, with plenty of clear head space between soil and glass, are to be preferred to ordinary benches, when it is intended to grow this valuable decorative green to strings of good market value. On raised benches, if planted into rich soil and receiving proper attention, *Asparagus plumosus* may be made to produce a continuous cut of fine sprays which also find a ready market at nearly all seasons. A steady temperature during the winter months of from 55 to 60 degrees with a clear light overhead and never lacking moisture in the soil, are prime essentials to success with asparagus. Thoroughly well made beds of it may be had to retain their productiveness for several years by judicious feeding in liquid form and an occasional top dressing or mulch with rich compost, this to be worked into the surface after a time and to be replaced with a fresh layer. Wornout beds should be cleared and re-stocked with thrifty, young plants, the first half of Summer being the best time for this work.

Asparagus Sprengeri.

An even more greedy feeder than *Asparagus plumosus* is *A. Sprengeri*, and the richest kind of soil should be used in its cultivation. It is a most serviceable green and well worth growing with somewhat more in the way of proper attention than what it is compelled to put up with on the majority of smaller places. To obtain the highest priced grade of durable, thickly set and finely colored sprays for a closely distinguishing market, and this for a considerable long season of constant but judicious cutting, it is necessary to take special pains in the preparations for a new start and in the care of the plants afterward. When merely grown for home use by retail florists it will produce fairly well if afforded lots of room in large wire baskets, pots, deep boxes or shelves, regularly fed and kept in flourishing condition. But when grown in quantity for the regular morning shipments to a great market it pays to arrange growing facilities with a view to fully meeting its peculiar requirements. In a narrow bench, affording space for one or at most two rows of plants, these will have the needed room for spread and perfect development of sprays. This bench, or any number of them, should run the entire length of a well lighted properly equipped house, giving assurance of a steady rose house heat during winter. The solid ground or surface line of the house is to form the bottom of the benches—benches only in appearance, in reality a continuous line of solidly constructed boxing—this to hold the heavily enriched compost, in which the plants will find the needed amount of root room. If care is had in the daily cutting of sprays, so as not to bare the plants too closely of life sustaining foliage, and if proper attention is paid to watering, feeding and sprinkling, while the cut is heavy and to partially resting them when seemingly exhausted, such a plantation should prove good for quite a number of years. The wisdom of doing well what is worth doing at all is never better set forth than in the culture of easily grown stock, to which class *Asparagus Sprengeri* undoubtedly belongs.

Smilax.

There seems to be no noticeable falling off in the amount of smilax coming to our markets or any appreciable decrease in the demand for this delicate and extremely useful green, as was predicted some few years ago. In its cultural requirements it differs but little from the various kinds of decorative asparagus, needing probably a somewhat heavier soil and a temperature a few degrees higher than asparagus in the depth of winter. It is best when grown in the soil of a solid border, deeply prepared and liberally enriched with manure from grain fed cattle. Entirely fresh manure should not be used for the purpose, nor such too far gone in decomposition to be of lasting value. It is much easier to grow first grade, deep

green, long lasting smilax in heavy black or yellowish loam, thus highly fertilized and well worked over in its preparation before planting, than in soils of lighter or sandy nature; though it is by no means impossible to raise good smilax in almost any kind of well prepared soil. Nor is it necessary to replant with young stock every year, although by going to this trouble there is less danger of encountering partial or entire failure.

In starting anew we use good 3-inch seedling stock, selecting a house for this culture that can be relied upon to afford 60 degrees in the coldest of winter nights, and water the plants sparingly until active growth leaves no doubt as to the roots having taken to the soil. It is then time to slowly increase the amount of water and to attend without delay to the stringing of the bed—a piece of work only too often put aside in the press of other duties, thereby placing difficulties in the way of swift performance. Smilax beds may be made at any time from now until the middle or end of July.

Snapdragons.

Much attention of late has been given to the indoor culture of snapdragons for their flowers in a cut state. There is no doubt as to the value of the highly finished product on our flower markets, but considerable uncertainty still exists as to the best method of culture. There is probably nothing any easier to grow than snapdragons, but in trying to lift them from their humble position among the most ordinary of garden flowers to a state of importance in commercial floriculture, one is likely to meet difficulties not figured upon.

In the attempt to make snapdragons a profitable indoor crop we must bear in mind that they are not annuals like mignonette, asters or sweet peas, but true biennials, which, although flowering the first year, bring their main and best crop of blooms on a second growth put forth after the first has reached some degree of maturity. This first growth, with its short-stemmed and thinly set flowers, is hardly worth marketing, though lots of it is seen at all seasons and seems to meet with favor for the want of something better. In this respect plants from cuttings act like those raised from seeds. They bloom when yet small, but send up numerous sturdy suckers when reaching the proper stage in their development. It is then time to cut away the first growth, then usually at a standstill and already showing signs of failing vigor. It is now the new growth, rapidly pushing upward and gaining in strength from day to day, that requires the grower's full attention. Soon these shoots will need staking and tying, for they grow so rapidly under glass that a night's leaning over amounts to a bend in the four or five-foot stem, a defect greatly lessening the value of anything in long-stemmed cut material.

In regard to watering, sprinkling, ventilation, light and cleanliness, snapdragons demand as full a share of the good grower's attention as anything else cultivated for a discriminating market, and if this is given there need never be any fear of possible failure in the case of snapdragons, or of being unable to dispose of the output at good prices.

Young plants for next season's flowering, raised in March from cuttings or seeds, should now be ready for 4-inch pots or for the field or the bench, as the case may be. If benched now a crop of good flowers may be expected early in the Fall up until New Year. When planted in the field, housed in late Autumn and held on the cool side during the first part of winter, they will bring an immense crop of high quality in early Spring, provided they are handled carefully in bringing in from the field; for snapdragons resent being lifted, in fact should not be disturbed after the second growth has made its appearance. For this reason it is best for the attainment of fullest success to carry the young stock through the Summer in pots, giving them a shift from time to time and guarding against a too rapid or frequent drying out by mulching until a bench or solid bed can be had in readiness for them or until approaching winter makes their removal to safe quarters necessary. Snapdragons stand a deal of hard freezing, but stock intended for forcing will do better if not nipped too heavily. Any good, fairly well enriched soil will do for snap-

ORCHIDS ORCHIDS

We beg to advise our customers that we have just received the following **ORCHIDS** direct from the forests, and for which we respectfully solicit your orders, assuring you that no pains or expense will be spared in order to please you.

CATTELEYA LABIATA, in extra fine condition, well leaved; if potted now these will produce a crop of flowers late this Fall.

CATTELEYA PEBECIVALIANA. These are the finest plants ever received by us; not a leaf bruised or lost; all have strong, heavy bulbs;

if potted now these will produce a nice crop of flowers in November and December. Any of the above by the dozen or hundred or case lots.

The following good things have also arrived:
LAELIA. (**CATTELEYA**) **CRISPA**, **LAELIA PRAESTANS**, and **LAELIA DAYANA**; **MILTONIAS**, such as **Cubaata**, **Candida** and **Clowesii**. **ONCIDIUMS** **Crispum**, **Marshalliana**, **Luridum** and **Varicosum** **Rogerii**, and many more. Write for prices.

dragons, and fine results have been obtained by making them a successive crop to late chrysanthemums, using the soil in which these latter were grown.

Marguerites.

A batch of well grown marguerites or Paris daisies is worth having about a retail grower's establishment. There are certain kinds of floral make-up work in which marguerites can be used to good advantage, producing, it would seem, more fully the desired effect than anything else. Provision for an ample supply in this line of easily grown home material should now be made if not already seen to. The cuttings root willingly, needing no bottom heat or any sort of pampering in their caretaking. As soon as rooted they are potted up or, as is the common practice here and there, they are without farther ado planted into the field, where they grow into good sized flowering plants by next Fall. Care is necessary in the transfer from the field to pots, else all gained by field culture is lost in the lifting. For this reason pot culture throughout, with an occasional long shift now and then, is preferred by many growers who usually can show the finest of Paris daisies.

Cinerarias.

Not so much grown or seen nowadays as in times gone by there still seems to be ample evidence of undiminished interest in the culture of hybrid cinerarias among growers of greenhouse plants. This year splendidly grown specimens, though in small numbers, were to be seen at and after Easter, opening the eyes and the purses of plant buyers in a manner most gratifying to behold. Cinerarias, if well done, are capital stock for the Easter trade. To have them just right for that holiday next year, it is necessary to sow the seeds from about now until the end of this month.

FRED. W. TIMME.

We are now taking orders for a grand lot of **CATTELEYA TRIANA**, 400 bulbs to a case, at \$50.00 net cash, per case, which we expect to arrive here some time in June. Will sell cheaper if ordered in quantities. Solicit correspondence. Same established plants of **CATTELEYA GIGAS**, **MENDELII**, **SCHROEDERAE** and **TRIANA**, from \$2.00 to \$5.00 per plant.

Making a Herbarium.

The practice of young gardeners and florists making a herbarium is not so common in these days of specialization as it was in the "good old times," yet than this there is no branch of horticultural education the pursuit of which affords more pleasure or a greater amount of useful instruction. When a young man, the late Peter Henderson carried off the first prize offered by the Royal Botanical Society of Edinburgh, Scotland, for the best herbarium of native and exotic plants, the competition being open to Great Britain, and in after life Mr. Henderson always spoke of the enduring benefit to him, as a practical florist and seedsman, derived from this pleasurable work. So great was his enthusiasm therein, that he offered premiums through the S. A. F. for the best herbaria exhibited at the first Buffalo meeting of that society, the first prize being won by George W. Oliver, now an expert propagator in the Bureau of Plant Industry, Washington, D. C.

It was with considerable interest that we read in the annual report of the Department of Agriculture for 1906, recently distributed (See page 740 of last week's issue of *The Florists' Exchange*), that, for herbarium uses, the Department is making an effort to secure specimens of cultivated plants under the names by which they are offered in the trade by nurserymen, seedsman, and florists. For the purposes of study and identification such collections will be of untold value and benefit, and are greatly needed.

But we should like to see the practice of herbarium making by our young craftsmen revived, and believe if some one were to emulate the example of the late Mr. Henderson in offering prizes for such herbaria through the S. A. F. O. H. (the society might even do this itself), great good would result, and a much more intimate acquaintance with plants, flowers and shrubs thereby be secured than now obtains.

For the benefit of those interested in this class of work, who desire to make a beginning therein, we reproduce, from the *Journal of Horticulture, England*, the following instructive notes on the subject, written by Dr. John H. Wilson, of St. Andrews, Scotland:

"The plants gathered, pressed, and labeled by the young gardener, should be such as he is specially in-

terested in. Perhaps he ought to be interested in every plant in the garden and out of it, but for immediate progress in his profession generally, he is well-advised to make a herbarium of the wild plants of his district. He may commence with the weeds—so-called because they are a trouble in the garden. Such plants are often enough of much interest to the skilled investigator. Whenever opportunity offers in the evenings and on half-holidays, he should set out to explore the country within a radius of as many miles as his shoe leather will permit him to cover. One thing at a time, however. He must guard against bringing in more material than he can comfortably and profitably put into press.

"There are two modes of collecting. The usual one is to put the plants into a box, dignified by the name of vasculum. A good sized one will hold many specimens, if these are carefully chosen. Get them into the box without delay if the weather is hot. If they wilt, it may be necessary to place them in water for a few hours to refresh them before pressing. The other method is to pin the specimens at once between sheets of paper, which are kept fairly tightly squeezed together in a portfolio or between boards by means of straps or string. In the latter method the drying begins immediately after gathering.

"When the specimens are brought home they should be put between sheets of drying paper and sufficient pressure applied to bring the plants and the paper into very close and constant contact. The paper may simply be old newspapers, and the weights the furniture of the room. The writer has had occasion to resort to these in emergency. The secret of success in drying lies in changing the paper often, and applying plenty of pressure. It is almost imperative to change the paper every day for a time, replacing it with sheets that have been rendered as dry as possible. Drive off the last trace of moisture by hanging the sheets before the fire, if necessary. A special paper, like strong blotting-paper, is sold under the name of botanical drying-paper. It is more absorbent than newspapers. Boards and weights can easily be got in the garden. Three or four bricks will do for weights. More may be necessary if the pile of sheets is large. Pressing should be done in an airy or perfectly dry place. If the atmosphere is damp and the specimens are too long in being dried, they will become discolored, and disappointment will be the result.

"In collecting the specimens care should be taken to secure sufficiently good material to display the special characters of the plants. Sometimes the whole plant has to be taken, and it may be necessary to return later for a further specimen in the fruiting stage. Here a word of earnest advice may be given. If the plant is a rare one, and it would be a loss to the neighborhood to remove or damage it, leave it and do what you can to protect it. If a cutting or a few seeds of it can be got, take those home and grow a specimen for yourself in the garden. Realize at the outset how very much less interesting the country is when deprived of its rare and beautiful natives. Your herbarium need contain nothing that tells of vandalism and extermination.

"In preparing for putting the specimens in the press they should be rendered more easily flattened by the removal of certain parts. Further thinning and adjusting can be conveniently done at the first changing of the paper. When the specimens are dry and almost papery to the touch, they may be put away between single sheets of any ordinary paper until a number are accumulated. The mounting can be done at any time. The size of sheet used in most herbaria is 16 1/2 by 10 1/2 in., and the color white. The size admits of a great number of the plants one gathers being mounted entire. Specimens too long for the sheet may be bent to suit its size.

"The specimens can be attached to the paper by various means. If they run no risk of being roughly handled, they can be fastened by strips of gummed paper. A neat method is to pierce the sheet and pass the ends of the strips through the back and gum them there. Metal strips have sometimes been used. Where there is danger of breakage in handling, it is necessary to gum the whole specimen together. A good method is to smear a thin layer of gum on a smooth board, place the specimen by means of forceps on the gum, taking care that none of it reaches the top side of the specimen. Lift the gummed specimen by the forceps, place deftly on the sheet, press down carefully, and with a cloth remove the superfluous gum. Cover with a sheet of paper, and lay the next mount on the top of the first. When a small pile is got, apply a little pressure overnight. On the following day the mounts may be looked over, and the waddy portions fastened by gummed strips. Fish glue applied with a brush is a useful medium in mounting. The specimens should be carefully named, the names being either written on the sheets, or, better, written on labels which can be pasted on the sheets. The place and the date should be added. Before very long, three or four hundred specimens of native plants will be got.

"It is assumed that an effort will be made to acquire the means of finding the names of the specimens at the time of collecting them. It is well to procure a descriptive list of flora of the district, if such exists. In any case, a general flora of the country has to be got. Very great satisfaction is experienced by the beginner when he finds that he can follow the author's descriptions and determine his own specimens thereby. To the young gardener the ability to do this is a very important accomplishment. Indeed, and all who make a serious effort soon get up the necessary botanical terms which at first look a little formidable. A rational way to set about the task is to read the descriptions of plants one is perfectly sure of the name of already.

"Besides wild plants, it is very desirable that recognizable portions of garden plants should also be made specimens of, such as ferns, shrubs, etc., which one would like to keep in mind. Certain plants, such as orchids, succulents, etc., are difficult to dry satisfactorily.

"Nothing is so likely to impress the characters of the plant on the memory as the process necessary to preparing and mounting a specimen of it. Gardeners must come to know a great number of plants by name. It is pleasant to feel that the plants under one's charge are familiar, and can accordingly be studied, read, or written about. Interest depends the more one knows about them."

American Rose Society.

Pursuant to notice the executive committee of the American Rose Society held a meeting at the Hotel Marquette, Thirty-third street and Broadway, New York City, on Tuesday afternoon and evening, May 28, at which there were taken up matters pertaining to the Washington exhibition, Peter Bisset, President of the Washington Florists' Club, being among those present.

The minutes of the business meetings were read and recommendations for action passed at that meeting referred to the executive committee were taken up, viz.:

The recommendation that a certificate of merit be awarded to novelties which did not score the requisite number of points to receive either gold or silver medals of the society as now provided. At the Washington meeting, this subject was discussed with interest by Messrs. Craig, Elliott, Barry, Farenwald, O'Mara and others.

In accordance with the authority then vested in the executive committee, the following resolutions were offered and carried:

"Resolved that hereafter any exhibit competing for the society's medals or certificates shall consist of twelve blooms;

"Resolved that a certificate of merit be awarded to any novelty scoring 80 or more points in accordance with the recommendation made at the annual meeting in Washington in March, 1907, and that this certificate be and is hereby added to the list of medals now offered by the American Rose Society for novelties, but the certificate is not to be delivered until the variety is named;

"Resolved that a certificate of merit be awarded to the varieties Queen Beatrice, scoring 83 points; Rhea Reid, scoring 80 points; and the variety exhibited by Messrs. Myers & Samtman, Wyndmoor, Pa., scoring 81 points,

"Resolved that the following varieties of climbing roses exhibited by M. H. Walsh, Woods Hole, Mass., namely, Paradise, La Fiamma, Delight, and Juanita, be awarded a certificate of merit as recommended by the judges of the Washington exhibition, March, 1907."

These resolutions were put to vote and carried unanimously.

E. G. Hill, Richmond, Ind., advised that he would attend the convention of the American Association of Nurserymen and, if opportunity offered, bring before that body the advisability of the support by nurserymen of the Rose Society, especially in the interest of hardy outdoor roses. On this point Philip Breitmeyer, vice-president elect of the society, advocated that some recognition should be offered to induce exhibits of outdoor roses, saying: "I offered a prize when at the meeting in Washington for an exhibit of outdoor roses in bloom, say 100 or 150 plants in a group. This should be limited to outdoor roses, but not limited as to varieties. I have suggested this idea to several men who are largely interested in this class of stock, and in order to bring this matter to a head, I will offer \$200 for a first prize, and Mr. Boddington will offer \$100 as a second prize to be awarded for such an exhibit in any form that is desired."

This liberal offer provoked very much interest, calling forth the belief that so large a prize would stimulate efforts which had never been made before in this direction. Mr. Farenwald said that he had never yet seen a good show of hybrid roses in pots at any of our exhibitions, adding, "I admire the pluck of Mr. Breitmeyer in leading off as he has done in this direction, and Mr. Breitmeyer deserves thanks for his liberal offer."

The committee accepted the prizes of Messrs. Breitmeyer and Boddington with thanks.

The matter of increasing the membership of the Rose Society was brought forward and a further suggestion by Mr. Breitmeyer was favorably received; in speaking of the coming show at Chicago he said that he believed our field in the West is large and that the growers, as a rule, were in sympathy for mutual benefit.

Life memberships are greatly to be desired so that thereby a permanent fund may be acquired. A suggestion was made following the recommendation of President Simpson in his annual address, that a list of names of such men as may be eligible for life membership be distributed. Mr. Breitmeyer said he would be glad to be one of the executive committee to secure life members or to increase the membership to where it is desirable to have it. The life members who have been added this Spring, and the \$50 fee paid to Treasurer Harry O. May, are: Messrs. Robert Simpson, W. H. Elliott, Alex. J. Guttman, A. E. Asmus and Charles Henderson.

A resolution was passed directing the secretary to prepare a bulletin of the proceedings of the last annual meeting and exhibition, and to secure specimens of suitable certificates of merit and certificates of life membership.

BENJAMIN HAMMOND, Secretary.

Flahkill-on-Hudson, N. Y.

OUR READERS' VIEWS

Gladiolus America.

Editor Florists' Exchange:

Mr. Banning's article on page 741, though long delayed and long expected, unfortunately for him, appears the same week that Mr. Childs in the Shiocton News confirms his statement to me "that he did not claim to have originated America." "Its origin is a question," was his reply to my query.

Mr. Banning's story of its origin is new, and not known to either his present or former grower. How could so simple a matter have been so long concealed during all the past years, or what good reason could there be for concealing it? What year was it born?

I asked Mr. Banning for a few for trial, not "a few thousand," as he says—the statement is, however, sufficiently absurd to stultify it. He refused to let me have any for trial, although I offered to guarantee the return of all the stock with multiplication, and none for breeding purposes. I also promised a fair report, even though we did not deal.

Now why did he take this remarkable stand and why did not he bring some to St. Louis; he the originator, "explicitly" the sole owner, and possessor?

Whoever bought from a half-tone engraving, where any number of varieties of the same type look identical? The introduction of such evidence is irrelevant.

H. H. GROFF.

Raising Peonies from Seeds.

Editor Florists' Exchange:

My experiences this year are so different from those of former years that I thought I was doing this work with less labor. The results have surprised me, so I must relate them to you:

In 1906 I gathered my seed at two different times, with an interval of two or three weeks between. The first gathering was placed in paper bags, and put away until I made the final one, and then all were sown at one time. They were kept in an unheated greenhouse, and on extra cold nights the boxes, or flats, in which the seeds were sown were covered with boards; still they were frozen somewhat, and in the meantime kept moist. Judge of my surprise this Spring, when, in the flats in which I had planted the last gathered seed, beholding hundreds of them coming up, while the flats in which were planted the first gathered ones, presented an unbroken brown surface, and still maintain it. The latter were living up to their traditions, while the others were gaining a march on time. What was the cause of it? The first gathered seeds appeared all right, while of the last gathering many lacked the rich nut brown appearance judged to be the right thing. Both lots appeared plump and full.

In the case of the first lot of seed, was Nature busy trying to conserve them by hardening them up against the time of planting, while in the second lot, the germinating process was moving right on? There was no let up, and the seed came up in 1907.

South Weymouth, Mass. GEORGE HOLLIS.

Sports.

Editor Florists' Exchange:

I have read the different articles that have appeared in your columns on the above named subject and as this is a question in which I have been considerably interested for a number of years perhaps you will allow me sufficient space to make a few remarks upon it.

Your correspondent Mr. Peacock, remarks that a sport is a work of nature. It certainly is, in some cases, through natural hybridization. He then says "man can help and encourage it, yet it is beyond his control." I deny it. The hybridist can produce sports, is producing sports, greatly in excess of nature, and why can he, or rather, why does he produce them greatly in excess of nature? For this reason. That when nature has done her work the seeds are distributed by one of a thousand agencies into places where germination and growth are simply impossible, while the hybridist has them under his thumb and finger, places them in suitable conditions and surroundings for their germination and after growth. There is ample proof of this on all sides. One has only to look around and see the countless millions of seeds that yearly fail to produce their like through lack of suitable conditions and surroundings.

The production of sports by practical breeders in animal life is so common and well understood by them that it is not worth while going into that subject here. The question arises in my mind, "What is a sport?" Yet of the many writers that have touched upon this subject I do not recall one of them having looked upon it in this light. A sport either in plant or animal life, is a plant or an animal, as the case may be, differing from the one

that produced it, the result of either natural or artificial hybridizing, generally producing itself from the first to the fifth or sixth generation, sometimes even later than that. If this result is the work of an unknown agency, natural or otherwise, it is generally called a "sport." If this result is the work of the hybridist, who carefully tabulates anything and everything connected with it, then it is called a hybrid, a distinction without a difference.

Is there any horticulturalist so lacking in intelligence as to dream for one moment that either in plant or animal life a sport can be reproduced from one sex? Take for instance, as an example, the rose Bridesmaid, a sport from another variety. Is there any one foolish enough to believe that this sport was an offspring from a parent possessing unmixed blood? If so, it fully proves, by existing evidence, that it is only necessary to have one sex to breed from. Is any intelligent man going to believe that? I for one shall certainly not. The trouble with this sport business is, that it has been made by many to appear as arising from some cause other than hybridizing, while I maintain that sports are due to this alone.

Every intelligent breeder or hybridist is well aware that his work may not always show results in the first or even second or third generation. This is nothing new; it was known to the ancients. Even writers in the Old Testament refer to it when they say "I will visit the sins of the father upon the children unto the third and fourth generation." This is just as true to-day as when it was written by the ancients, and one has only to look around and see all the evidence substantiating it. I will give one or two cases out of scores at my command. I may as well say here that I am and have been for years a thorough and firm believer that when the Great Creator made this Universe he made one and only one law for one great Universe, and not one law for this continent and another for the other one; not one law for plant life and another for animal life—subject to variations that environment will produce; and I maintain that laws that govern the breeding of animals have the same power and effect on plant life.

Count Lehendorff in his "Recollections of the Breeding of the Thoroughbred," published in 1887, tabulates his experiences of results obtained from breeding, and these results as shown in the different generations were as follows:

	Success- ful.
1 Degree removed from first cross....	4
2 Degrees " " " " " " " " " "	14
3 " " " " " " " " " "	22
4 " " " " " " " " " "	21
5 " " " " " " " " " "	25
6 " " " " " " " " " "	18

These figures speak for themselves; and while it may seem a long jump from a carnation or a chrysanthemum to a race horse, I maintain that nature's laws are one and the same for both in the main principle, subject to slight variation.

Here is one more case: Some years ago one of the best known fox terrier breeders in England owned a dog that for exhibition purposes was without exception almost perfect, but one fault was sufficient to bar him from even being noticed on the bench. Being of the bluest blood, he was bred from with the most satisfactory results, his progeny making their mark on both sides of the Atlantic. But every second or third generation the defect referred to would assuredly crop out and assert itself.

It is the same with plants. When one takes into consideration the amount of cross-breeding that has been carried on during the last few years especially among chrysanthemums and carnations; when it is taken into account the enormous amount of territory the plants have been disseminated over, is it any wonder that "sports," or what is more correct "hybrids" are cropping up everywhere? This was not the case a few years ago, at least not to such an extent until the hybridist got in his work. Now hundreds of hybrids are showing themselves and will continue to show themselves; hybrids that should be called by their proper name and not by the name of "sports."

A sport cannot be produced from a plant without hybridizing or introducing other blood into it. Then why call it a sport?
Birmingham, Mich. H. J. CORFIELD.

Editor Collingwood Honored.

At the recent semi-centennial of the Michigan Agricultural College, Lansing, the degree of Doctor of Laws was conferred upon Herbert W. Collingwood, Editor of The Rural New Yorker, the first time, we believe, that such a degree has been conferred upon an agricultural editor.

Mr. Collingwood, who was graduated from the Michigan college about 25 years ago, is a native of Plymouth, Mass. Orphaned by the Civil War, he had a somewhat struggling youth, his first start in life being as office boy for Lee & Shepard, the Boston publishers. After a hard-won college course he went South, making his journalistic start as editor of a little local paper in Mississippi. About 20 years ago he joined The Rural New Yorker, becoming editor-in-chief upon the retirement of the late E. S. Carman, in 1899.

We extend our congratulations to Dr. Collingwood.

Reflections on Current Topics.

MR. EDITOR: I was much interested in your remarks on the plan proposed by Mr. Sullivan of Detroit, to the effect that florists' clubs should establish a bureau of correction and censorship, with respect to horticultural and floricultural literature appearing in the magazines and daily newspapers. But why did Mr. Sullivan not include the trade press also? It is my opinion that these bureaus could be kept busy pointing out what should have been eliminated in every issue of these "newsy" journals, in some cases correcting misstatements as to cut-flower prices; condemning in toto contributions like those of John G. Esler, John Birnie, Job, and the Ginger Jar man, to say nothing of the plethora of "flapdoodie" doled out to long-suffering readers week by week—all a waste of time to read, and reflecting severely on the "progressive and intelligent" character of those who complacently swallow the dose. Begin at home, gentlemen; for our trade papers, I think, sorely need censorship and reform.

In this connection it is a pleasure to read of the improvement, contemplated and current, instituted by your Canadian contemporary, as set forth in one of its recent issues, as follows:

"Ever since the present management assumed the publication of The Canadian Florist, it has been our endeavor to exclude from our columns everything of a personal nature to which exception might be taken. Cheap jokes of all kinds, such as those that disgrace the columns of some of the United States trade papers, and which appeared in The Canadian Florist before we took control, have been rigorously excluded. A few florists have found fault with this policy, but in the main our action has been commended.

"We hold that while jokes about 'Harry's' baby, and 'Tom's' torn pants, may be entertaining to a few florists who understand the circumstances referred to, and who know the people mentioned, yet they are not news, and that they are lost on the majority of our readers. Our space, we feel, is too valuable to be wasted in printing matter that will benefit no person, and that may hurt the feelings of some. Our idea is that items of the kind referred to, as well as bickerings of any kind between private florists, are not of general interest, and that it lowers the tone of this paper and the standing of the trade to give them publicity."

Talk like that is sensible, and meets with my hearty approval, as I have a strong desire to be classed with the "intelligent and progressive," to whom cheap jokes never do appeal. Not that jokes of any kind are entirely lost on our Canadian friends or myself, as they are on John Birnie and his race, who require a surgical operation before seeing the "point," but our tastes soar beyond "torn pants" and babies, and even the fact that Peter Fisher has removed that handsome "auburn" mustache that added so much to his dignity and personal appearance—a joke, or something worse, appearing in one of your Chicago contemporaries whose specialty appears to be to "disfigure" its columns with just such trashy stuff as your Canadian contemporary so correctly condemns. * * *

I notice that John Birnie is still bothering himself—and others—over the "origin of species," concerning which his pet phrase appears to be: "His ways are past finding out." John should adopt this as his own motto; it seems to me his communications on the geranium question amply justify such adoption. But what tickled me most in Birnie's last letter was his great familiarity with Darwinism and Mendelism, evidenced by his assertion that the latter is superseding the former. This set me inquiring as to what Mendel's theory is, as I, like Birnie, always wish to keep my knowledge up-to-date. Here is what I found: "Mendel's law is to the following effect: The gametes of a heterozygote bear the pure parental allelomorphs completely separated from one another, and the numerical distribution of the separate allelomorphs in the gametes is such that all possible combinations of them are present in approximately equal numbers. (Note that it is impossible for both members of the same pair of allelomorphs to occur together in the same gamete.)"

I am willing to concede that Birnie thinks he knows what he is talking about when he says "Mendel's theory is superseding Darwin's theory;" for the "law" as quoted would seem to deserve to supersede anything; but anyone who is actually familiar with both "theories," knows that one is not competing with the other, but each is rather supplementing the other, in an effort to arrive at improvement in plants by selection, Mendel showing, in some cases, the shorter, surer and more satisfactory cut. JON.

In view of the evident great need of the S. A. F. O. H., of numerical strength, and the excellent additions thereto which florists' clubs and other smaller horticultural associations could afford were they so minded and some satisfactory arrangement anent affiliation with the national society could be effected, why not call a conference of these bodies, to be represented by their respective officers, to discuss the matter of "closer relations" with the officers of the S. A. F. O. H. at the forthcoming Philadelphia convention of the latter society?

Stray Notes from Across the Atlantic.

The way some describe the colors of flowers is quite interesting, although it is rough when a grower buys a thing and finds it is different in color to what he expected it. I quite thought the sweet pea Coral Gem was real coral color, and it turns out to be a buff-pink. Some of you fellows (or is it the ladies?) are champions at giving things fancy names.

I am disposed to make this remark on seeing the note regarding Californian privet. We, over here, call it privet pure and simple, and everyone knows what is meant; if we want golden privet, we ask for it; that is all.

I have always observed that you speak of the potato as Irish potato. Where does Ireland come in? I really think we ought to call the sweet pea English, because it was first taken up seriously in this country. Which reminds me that some of our knowing ones have, ridiculed the term "orchid-flowered sweet pea." That's Yankee, too.

We have had a hard time of late with outdoor stock—continuous gales and very cold, until the 9th ult.; then it got really hot, only to turn bitterly cold again with more wind on the 15th. Sweet peas haven't grown at all since being planted out.

It surprises me that Mr. Zvolanek's early sweet peas have not been more known. Many growers on this side have asked me whether there were early sorts other than Mont Blanc and Earliest of All, yet until about two years ago I had never heard of Mr. Zvolanek's strain, nor have any trade growers mentioned them so far as I am aware.

The average market man relies upon standard sorts for growing under glass, although Mont Blanc has been doing well and Burpee's Earliest White promises to be a winner. It is generally accepted over here that sweet peas are not influenced by insects, and the fact that mixtures can be grown together, and the resultant seed never produces anything new seems to prove it. All the sports we have appeared out of named sorts which are grown in bulk. New seedlings, of course, are especially liable to sport for several years.

Eckford grows his plants in rows, and carefully rogues them, but it is a million to one chance against getting anything new out of his seed from named varieties. If sweet peas were not self-fertilizing one should never be able to keep varieties true. The Spenser class, with its open keel, is sometimes supposed to be affected by insects, but there is no proof, despite its sportive nature.

I am somewhat surprised to note that the Zvolanek crosses with the ordinary sorts bring about dwarf growers, considering the fact that many of our kinds, like Dorothy Eckford, can be made to touch the 14-foot mark outdoors.

Respecting tendrils, I might mention that tendrils are after all only modified leaves, and Bolton, the Lancashire specialist, showed me a blue variety which seemed to prove it; for this specimen had sported backward, so that the tendrils were really leaves. They were about one-half an inch in width and slightly curled. No true tendrils were present, and the plant had to be tied up.

Peony Officinalis Rosea Plena
Photo by J. E. Coit, Cornell University.

This shows that the manner of growth is no criterion. Dwarfness, as in the Cupid, is a growth sport. Breaks in color are probably due to seminal sports; although the ordinary sorts are constantly being hybridized, that has nothing to do with the fact that standard sorts come true.

From what I can gather, Mr. Zvolanek has to intercross self-same flowers to keep them true; ordinary sorts are only crossed for the purpose of getting new things. I might add, however, that one of our home firms quotes a lot of rubbish in its list respecting the debasing habit of the sweet pea which self-fertilizes before opening, and in offering their select (?) strains under separate colors, they calmly tell us that they hand-fertilized each color. What this means, everyone familiar with sweet peas will understand, for if the flowers are not deprived of their stamens before the blooms open, they will fertilize themselves before pollen can be introduced by hand. Selection, according to type, is sound enough; but hand-fertilizing of standard sorts—what?

Personally, I cannot quite agree with Fred. W. Timme respecting seedling pyrethrums. To be sure of really first-rate stock, one must propagate from named sorts. I have never seen seedlings equalling the named kinds, either double or single. I note that some American firms handle a few named kinds, but they are a long way behind home firms, such as Kelway. Of course,

good seed will give a percentage of fairly good flowers, but one cannot rely on getting a batch of one color.

I'm real glad to see William Sim is standing by the statements of Zvolanek. It's hard luck when a chap is set on by many; I know what it is myself. Still, there are points that Mr. Sim fails to convince me upon.

As I have already pointed out, one never knows when sports are coming. One may grow for years and never get one, while another individual has a break the first season that he handles a certain class of plant.

Mr. Sim is only echoing the remarks made by men on this side. Don't imagine you're on the fence, Mr. Sim; we have been rowing on this subject pretty much during the past two years.

It is conceded by the majority that sweet peas are self-fertilizing. The pollen is on the stamens before the buds open; therefore, any insect that forces down the keel of an open bloom, and bees often do, is too late to affect the coming seed. Even were sweet peas influenced by insects, we should not be very far wrong in terming new breaks as "sports" in reality, that would be natural crosses; some would say natural hybrids, but a hybrid proper is the result of a cross between two distinct species. If Mr. Sim has found distinct colors possessing the same earliness among Mont Blanc, etc., and they did not appear through mixing of seed, then he has had sports.

Sweet peas do not "sport" as do chrysanthemums or dahlias. I know of no annual which sends out a separate shoot bearing a different colored flower as does a chrysanthemum, but there are such things as seminal sports.

By Mr. Burpee's own showing, Thomas Gould, who first noticed the increased earliness of some of his Earliest of All, found one plant among his re-selected Earliest of All which bore pure white flowers. In every respect it was like Earliest of All save in color. Where did that white plant come from? Mr. Gould, being a careful grower, kept his re-selected Earliest of All very closely watched. The white was different from Mont Blanc, and yielded black seeds. If the bees had influenced Earliest of All there surely would have been a series of breaks, or at least several whites. But there was only one, and the seed saved from it also came white-flowered, and as far I know still continues white-flowered. As Mr. Sim doubts the sporting tendency, what brought Earliest of All, seeing that there never was so early a variety? From what I can understand, Mr. Zvolanek did not choose a late or ordinary sort for his cross with the vetch.

Can it be denied that the Cupids and Bush sorts are sports? What brought about the waviness of Countess Spenser and Gladys Unwin? Eckford and many others had been breeding and intercrossing for a quarter of a century, yet no seedling ever had wavy wings and standard. The raiser of Countess Spenser may have crossed and crossed, but nowhere could he go for waviness, and the pedigree given out shows only varieties such as Prima Donna and Triumph.

As I have already pointed out, very few knew anything about Mr. Zvolanek's varieties on this side until a year or two ago, therefore it is not surprising that the Englemann and Telémly sorts are nowhere in the United States.

It is the sportive tendency among sweet peas that makes the pure yellow, pure scarlet and pure blue possible. Dame Nature sometimes helps the hybridizer and gives him what he would like, but what he does not expect.

I think I shall have satisfied Mr. Sim regarding "sports" from the early kinds. Apart from this, all sweet peas are alike, be they early or late. The early sorts are not grown so largely and have therefore had less opportunity to sport.

Mr. Sim does not grasp the details respecting the Telémly strain. The Rev. Arkwright had but the Blanche Ferry to start with; it was given him by a gardener, who presumably had grown it prior to giving seed to Mr. Arkwright. The latter finds a sport among his plants which differs from the others. Further, no one other than Mr. Arkwright gets it or the others that followed. If insects were the cause, why have they not affected the sweet peas in other Algerian gardens?

No. Mr. Sim, the natural cross theory is too weak. Were it not for their self-fertilization, sweet peas would be always shifting in color.

To keep certain flowers true, they have to be grown apart from others of a different color; vegetables need the same care. What would happen to our stocks of Ailsa Craig onion if grown alongside your American Prizetaker and allowed to seed?

The greatest precautions are necessary to keep all the Brassica tribe true. Set a red cabbage flower anywhere near the green section and see what happens. Yet we are able to grow sweet peas next each other, and they remain true, save for the occasional sporting as stated.

Kent, England,

Bedding Plants and Bedding.

For three or four weeks many growers and dealers will be busily and profitably engaged in disposing of bedding plants in one way or another. The growers with the most extensive establishments for the production of bedding plants are not so much concerned about the final disposition of the stock they raise after it leaves their premises in good condition, as are the many small growers and retailers, many of whom find the growing of plants and the planting and care of them after setting out their principal sources of income. The former class of growers are, it is safe to say, interested in whatever has an effect one way or the other on the market, and are likewise interested no doubt in anything that tends even in the slightest degree to increase the demand for the plants they grow at the present time as well as in any movement aimed at popularizing something comparatively new but easily grown.

We may hear a good deal about what is right and what is wrong in the arrangement of bedding plants, but to the average grower the most of that kind of talk falls like water upon a duck's back; and that for one or two reasons he either has no need of such in the way of advice or if he had and were disposed to listen to it, he is invariably placed in such a position that he cannot give much heed to it because he has to plant whatever he is asked and arrange the same according to the ideas and notions of someone else, whose ideas of right or wrong he is not supposed or disposed to question in the least.

The preparing of the soil for plants is unquestionably one of the most, if not the most important consideration for the successful development of the individual subjects, as well as for the future appearance of the bed as a whole. It may have been that the beds and borders have been dug a month or more in preparation for planting; if so, just before planting begins they ought to be lightly forked and all the lumps carefully broken, leaving as little as possible for the rake to do. If no manure had been added to the soil at the first digging it will be well to give the beds a good sprinkling of horse manure or some other fertilizer now. The rake should be used only to bring the surface of the soil to the desired grade, which in all cases should not be over two inches above the level of the surrounding grass. Top-heavy beds or mounds are nothing more or less than an abomination, and it is inconceivable how any person could suppose their appearance to be pleasing.

The number of plants for a bed depends on many things. It may be desirable to plant thickly for the sake of obtaining immediate effect, but when such is not the desire it will be better to plant far enough apart to allow the plants some space for development, thus insuring lasting qualities in the plants. This applies more to such plants as geraniums, salvias, coleus and begonias, and does not bear so much on the like of alternanthera, which it may be just as well to plant so that each plant is within a little more than a couple of inches of touching at the start.

While the soil composing the balls enveloping the roots of plants should by no means be dry at planting it is not an advantage to have them soaking wet, because if they are in that condition it will be almost impossible to plant them satisfactorily, by reason of the soil being soft. The plants should be made firm; that is, the soil of the bed which is to surround the roots of the plant should by firm pressure be made to adhere to the latter, and this cannot be done without undue disturbance of the roots if the balls are soaking wet. After the plants are all set in a bed or border, if there are no indications of rain for the near future it will be well to give a good watering—not a mere sprinkling, which no matter how often done is worse than useless.

Planting will be facilitated if the man or men actually engaged in the process are not obliged to do anything else until the work is completed. If the plants have to be conveyed across a stretch of lawn by means of a handcart or barrow, it will be well to knock the plants out of the pots, starting out and at the same time removing any crocks that are in the bottoms of the pots so that none will be strewn on the lawn to do harm to mowers.

Perhaps the most satisfactory plants for all-round utility are geraniums for bedding, because they are showy and attractive from the time they are planted until frost finally settles them. But geraniums are by no means answerable for all purposes and locations, and it is just as well that they are not. Geraniums will not flower in shady places or amount to much in partially shaded spots. Begonias delight in partial shade, especially the tuberous sorts and the fact is that if these are intended for places where the sun shines brightly, a temporary shading should be erected over them and allowed to re-

main for a week and gradually removed. Begonias of the Vernon type, although not so gorgeously decorative as the tuberous-rooted ones, are nevertheless exceedingly well adapted for bedding in endless forms. These begonias are grown in immense numbers in distinct colors of red, white, and pink. They look best when planted in distinct colors, and for that matter so does everything else. Sometimes special care is taken to place in a bed or border plants not distinctly different in color, but of different shades of one color. Now, I think the one is just as bad as the other; the latter practice looks to me like an admission, partly concealed, that there was not a sufficiency of one color to complete the bed or border.

Fuchsias are now gaining rapidly in popularity, and no wonder; they are especially well suited for borders or beds in locations slightly shaded from the direct sunlight. For them to succeed well it will be necessary for the soil to be good or to be made so artificially; and, further, it will be well to keep the soil well cultivated all through the Summer.

There are many annuals and some biennials suitable for the ornamentation of grounds, but the greater number are usually planted for cut flowers; with these it will be well if possible to plant in some section, all by themselves, both for convenience of cutting and by reason of their only remaining in presentable condition for a limited time.

Carpet bedding is not nowadays practised to anything

Greenhouses of Joseph Traudt, Canajoharie, N. Y., Before Recent Improvements

like the extent it once was, but the incongruity of such arrangements of plants need not necessarily greatly concern commercial men. What they are most concerned about is a market for their plants, and for that reason they do not stop to question the propriety of any form of their disposition. Moreover, such unconcern need not in any way reflect on their own ideas regarding what is good taste.

Nowadays the rage for the so-called Italian style of gardening is making a market for large quantities of the material heretofore used in carpet bedding, and this form of gardening is creating a demand for material of other kinds in like quantities, for such things as box, clipped evergreens of various kinds and many other things of like artificial character, which would, without such uses being made of them, be in much less demand.

Herbaceous or perennial plants are used now in much larger numbers than in former years, and the fact that nurserymen and other growers are adopting the pot system of growing this class of plants enables a much more extensive use being made of them, as well as prolonging the season of their planting with certain ultimate success. In the planting of perennials, although at times circumstances may warrant if not demand mixed planting, on the whole the most satisfactory results are in evidence where species and even varieties are planted as much by themselves as possible. D. M.

CANAJOHARIE, N. Y.—Joseph Traudt has recently purchased the greenhouse property heretofore known as the Yates Floral Company, Mr. Yates having retired. Mr. Traudt is the only florist in the city and would be glad for his friends in the trade to make a note of this. "Gates," florist, as listed here, was confounded with Yates; there is now neither Yates nor Gates, and only the indomitable and affable Joseph Traudt. The place is situated in a beautiful valley overlooking the Mohawk River and well sheltered in the rear. Mr. Traudt has several improvements under way; he has just completed a new office building and cold storage room that for convenience and general appearance could not well be surpassed.

In addition to the general line of bedding and flowering plants about 1,200 good Gloire de Lorraine begonias are usually grown. J. M.

THE ROKOKO CYCLAMEN.—Moeller's Deutsche Gärtner-Zeitung, in its issue of May 25, contains an illustrated article on the Rokoko cyclamen. It is stated that this strain was obtained about six years ago by crossing *Cyclamen persicum giganteum fimbriatum* with the Belgian *Cyclamen papilio*, and introduced into commerce several years ago by the firm of J. C. Schmidt, of Erfurt, Germany. The writer of the article in question is very enthusiastic in his description of the new cyclamen. He states that the flowers, which average 11 to 12 centimeters in diameter, do not have a definite form, but rather that their beauty lies in their many sided qualities, both in form and color. The flowers are very deeply fringed, and the outer edge more brightly colored than the center. When in full bloom the foliage is hardly visible, thus giving the plant the appearance of an *Azalea indica*.

It is not claimed that the excellent qualities of the Rokoko cyclamen will drive the older forms out of the market, but the writer believes it will create a large demand, plants even now obtaining double the price of the ordinary forms.

The culture does not differ materially from that of the older varieties. For early flowers sow seed in July. Seed sown the end of August or beginning of September will produce blooms until the end of April, when there is a scarcity of flowering plants. When trans-

planting the seedlings it is advisable, in cool weather, to give a little bottom heat; in hot, sunny weather, it is necessary to give double shade, so that the rapidly growing foliage may not droop. Mornings and evenings the plants must be aired. Early buds should be removed. When the plants have become established they should be removed to a bright place, where plenty of ventilation can be given. The flowers will not stand forcing; the blooms must be allowed to develop slowly. Even when the petals have fully opened the flower is not yet finished; it keeps on growing until nearly twice the size as when first opened. During the Winter a weekly application of a liquid fertilizer will assist in the healthy development of the flowers.

Customs Decisions.

SEA MOSS—PAPYRUS FLOWERS.—In the protest of Decorative Plant Company against the assessment of duty by the collector of customs at the port of New York, before Board 1, May 21, 1907, the following opinion was rendered by General Appraiser McClelland:

"1. So-called papyrus flowers, classified under paragraph 425, tariff act of 1897, relating to ornamental flowers, etc., were claimed to be dutiable under paragraph 251, relating to natural flowers preserved, etc. These articles consist of narrow palm leaves treated and dyed, about 12 inches long, in the center and at the base of which dried and colored seeds are placed, forming a spray when tied with rubber band and attached to wood handle about two feet long. Palm leaf is the component of chief value. Assessment affirmed. Note G. A. 5800 (T. D. 25630) and *Kreshover v. United States* (T. D. 27826).

"2. Protest sustained as to sea moss on the authority of G. A. 6464 (T. D. 27670)."

ORNAMENTAL LEAVES.—In the protest of H. Bayersdorfer & Company against the assessment of duty by the collector of customs at the port of Philadelphia, before Board 1, May 21, 1907, the following opinion was rendered by McClelland, G. A.: "The protest related to stative wreaths classified under paragraph 251, tariff act of 1897, relating to natural flowers preserved, and to various other goods classified under paragraph 425 as ornamental leaves. Assessment affirmed. *Kreshover v. United States* (T. D. 27826) followed."

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. POLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLOREST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYBES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

HORTICULTURE'S GREATEST NEED.—Horticulture is affected more or less by nearly every science, and by nearly every art. Every walk in life is affected by the horticulture of the country, and in turn as we are able to take the advantage of the best of everything, we will be able to prosper. During some periods, our greatest needs lie in the direction of better methods for controlling insects. At other times, information on disease is needed most urgently. At one time we were in great need of information on fertilizers. It seems to me that what we are now needing most of all is information that will enable us to put our crops into the hands of the consumer at the least possible cost. We need a sort of horticultural political economy.—President P. H. Rolfs, Florida State Horticultural Society.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

Commencements.

Commencement exercises are claiming the attention of the busy florist just now, which spells Summer, and the wind-up of the season, as far as big events are concerned. One of the largest of these affairs was held this week at Sherry's, and the quantity of flowers seen there was a revelation. All the leading flower stores were well represented, and some very good examples was the result.

Flowers for these occasions are made up into every known form of bunch and bouquet, from loose flowers sent in boxes to the most elaborate shower bouquet.

Roses by themselves, or in combination with other flowers, seem to be the most popular; although carnations, sweet peas, lily of the valley and even orchids were there in profusion; in fact, scarcely a flower in the market that was not represented. The excellent

An Innovation in Cape Flowers.

A florists' supply house that has earned a reputation for new ideas is offering Cape flowers in sheet form. The advantage of this will be readily seen by users of this material. The flowers are glued on to sheets of pliable netting, each sheet being one yard square. They have the exact appearance of being individually stemmed on toothpicks, with the advantage that they can be cut off in smaller sheets, and fastened on to the funeral piece, pillow, or scroll, whichever it may be, where a name is to be used. The time saved in stemming would be a considerable item to a busy florist, who will quickly see the advantage of such an arrangement. This same firm is also introducing a cheap form of "coral words" for funeral work; they are cut out of wood, in one piece. The material used for covering the wood is dyed sawdust. The price is one cent per word.

D. RAYBUN.

THE CAPE JASMINE INDUSTRY IN ALVIN, TEX.—Alvin (Tex.) is becoming famous as the "Cape Jasmine City" of the coastal plains. At this season of the year all the yards in this community are ornamented with the odorous Cape jasmine, and the beautiful buds are being shipped by the tens of thousands to all parts of the country, even to the cold and icy cities in distant Canada. The buds of the Alvin Cape jasmine have crossed the Atlantic, reaching France in an excellent

Store and Employees of John F. Wood, Providence, R. I.

quality of the roses and carnations, so late in the season, is remarkable.

Pink roses seem to be the favorite color for these occasions, Bridesmaid, Mme. Abel Chatenay, Killarney, Mme. Caroline Testout and Golden Gate being most in evidence. A shower bouquet of Bridesmaid roses and white lilac, showered with pink ribbon and sprays of lilac, was very handsome. Richmond roses, which are coming in especially good just now, go splendidly with white lilac; the stems of both roses and lilac should be left full length to make a handsome bouquet.

Sweet peas in various combinations seem to be very popular for commencement work. Some designs are made with the shower effect, others empire, and a great many old-fashioned round bouquets are still to be seen, and, when made up loosely, are most effective. Sweet peas are most attractive when their various colors are combined. Pale pink, white, and crimson were used most effectively in one bouquet, narrow silk gauze ribbon being employed in the shower. The colors must be properly grouped and not mixed, otherwise a meaningless jumble will be the result. Pale lavender and white go well together, as do crimson and white. Adiantum cuneatum is the most pleasing embellishment for sweet peas; anything heavy should be avoided.

A large bouquet of white centaurea, with a cluster of the same flower in yellow, made a gorgeous affair. Centaureas make up especially well and have the advantage of being excellent keepers in hot weather.

Orchids are not generally employed for commencement bouquets, but a bouquet of Cattleya Mendellii and lily of the valley was superb. Cattleya gigas was also seen; this grand orchid has just made its appearance this season in this market, and is especially fine, being so early.

There are several of the ladies in this town who are engaged in raising and shipping these jasmynes and other flowers to the various flower markets of the North and West. Among those engaged in this pursuit are the following: Misses Cook, Cape jasmynes, violets and tuberose; Mrs. A. D. Griffith, roses, violets and jasmynes; Mrs. Weyms, jasmynes and jonquils; Mrs. A. D. Pratte, jasmynes. But C. W. Benson of Alvin is perhaps the largest dealer in Cape jasmine buds in Texas, or in the South. In addition to those which come from the ten acres which he is cultivating, he buys thousands of buds from his friends and neighbors.

The cultivation of the Cape jasmine in the Alvin community, where it seems to find its natural elements in soil and climate, appears to require no special skill or labor. The cuttings, about 12 inches in length, are planted in the ground, which should be well prepared and kept damp. After these cuttings have taken root they can be easily transplanted in the field or garden where they are wanted to grow. They are then cultivated about the same as other plants and shrubs.

The buds are gathered for market just as they begin to show white under the edges of the petals. They are placed in baskets and carried to the packing shed. Here the buds are rolled into bundles of twenty-five each and wrapped tightly in dry paper. These bundles, thus wrapped, are then dipped in water and carefully packed in boxes lined with wet paper. The boxes are of various sizes, and will hold from one to twenty-five bundles. The order to be filled determines the size of the box to be used. On Memorial Day Mr. Benson usually fills orders for more than 100,000 buds per day.

Mr. Benson has been in this business thirteen years, and he now has about 6,000 customers scattered all over the United States and Canada, to whom he makes shipments annually. He also makes some shipments into Mexico.

New York.

The Week's News.

Cold and rainy weather still prevails in this vicinity, much to the detriment of such florists as do outside work, planting flower beds, caring for lawns, etc. Memorial Day, fortunately, was favorable, and gave the cemetery florists an opportunity to dispose of a large quantity of bedding material.

The window box garden is coming more into favor and the prominent hotels of this city spare neither pains nor expense to have their window and veranda boxes ornamental all the year round. Evergreens are used for the Winter months, and flowering plants chiefly during the Summer. For a partially shaded and dusty thoroughfare, and one where the surrounding buildings are so high that it would be impossible to make any kind of a show with window boxes filled with flowering plants, we would recommend a liberal use of *Latania borbonica*. The usefulness of this palm is fully exemplified on the Broadway side of the Cafe Martin, where the window boxes have been liberally planted with *latanias*, and the tropical effect they give, together with their sturdiness in withstanding dust, wind, shade and every other thing that would seem to be against plant life thriving in a busy thoroughfare like Broadway, make them one of the best subjects possible for this style of window gardening.

The New York Florists' Club will meet on Monday evening next at the Hotel Earlington, 55 W. Twenty-seventh st., between Sixth avenue and Broadway, and as this will be the last meeting before the Summer vacation, a large attendance of the members is desirable. Among the items of interest that will come up before the meeting is the motion of F. H. Traendly, that the club shall subscribe to the guarantee fund of the coming exhibition of the S. A. F. to the amount of \$250. The outing committee has completed its work on the program to be issued, and advises that \$265 has been subscribed by advertisers and nearly \$500 for prizes. The committee hopes to distribute copies of the program at the meeting of the club on Monday evening. The committee on closer relations with the S. A. F. O. H. will meet at Traendly & Schenck's office, 44 West Twenty-eighth street, Monday, at 5 p. m.

Mr. and Mrs. Wm. H. Siebrecht, of Astoria, sailed for Holland on Wednesday.

(the 5th inst., by the Hamburg-American line, and intend to remain abroad until August.

The large tent in which the New York market florists have been doing business at Canal and Washington streets, was blown down during the severe windstorm on Sunday last. As this is about the windup of the market men's season, it is not intended to erect a tent again this year.

John Seligman, of the firm of wholesale florists, Seligmann & Company, 56 West Twenty-sixth street, is wearing a broad smile this week; his wife presented him with a daughter on Memorial Day.

Ordonez de Nave & Company, the orchid importers, received one case of orchids by way of Southampton this week.

Robert E. Berry is at Canton, O., in charge of the planting of the McKinley memorial grounds, for Wadley & Smythe, florists of Fifth avenue, to whom the contract for that landscape work was awarded.

Henry Saxon Adams, Springfield, Mass., was a visitor this week. Mr. Adams is chairman of the Committee on School Gardens of the Massachusetts Horticultural Society in which work he is greatly interested.

At the Cottage Gardens, Queens, N. Y., the peony buds are fully three weeks later than they were in 1906.

J. C. Vaughan of Chicago, is in town this week.

An "economic garden" has been established in the New York Botanical Garden at Bronx Park; it is located at the upper or northern end of the valley, which lies to the eastward of the large conservatories. The growing collections represent one or more varieties of many of the plants cultivated for their material uses which will endure our climate. Besides these, a large number of plants used by the aborigines, especially food plants, are represented. In the rivulet and the pools, many aquatics and marsh plants, such as *calamus*, cat-tail, rice both cultivated and wild, taro, and wapatoo, have been planted.

A new flower garden, adjoining the conservatories, has also been installed, and many deciduous shrubs, perennials, and some annuals planted, as well as coufers and broad-leaved evergreens.

At a V & G tabl Plant situation In an interview with a representative of the New York Times this week re-

garding the vegetable plant situation, Patrick O'Mara, of Peter Henderson & Company, said his firm had orders for thousands of tomato plants which it could not fill because the supply had been exhausted long ago. This situation had been brought about, he said, by the repeated killing of plants by the cold weather. Some growers had planted as many as three times, and even the third planting had in many instances been killed by the cold weather. Mr. O'Mara said that in his opinion the tomato crop this year would not be 50 per cent. of the normal yield, if it reached that. Conditions, he believed, were the same everywhere, judging by the reports he had received. On Long Island and in New Jersey the shortage would be particularly marked. The scarcity would extend to potatoes, egg plants, peppers, and the like, the only normal crops likely being in peas, cabbage, and similar cold weather crops. In all probability, he said, the tomatoes raised would be few and those of stunted growth.

"None of the dealers had, of course, anticipated such abnormal weather as we have had," said Mr. O'Mara, "and they did not raise more than the normal supply of plants. We have had countless calls we have been unable to fill. I had an inquiry to-day from a customer for 15,000 pepper plants, and don't know where to get them. I should say that there would be a shortage of all garden stuff this year. The situation is serious."

The conditions reported by Mr. ara were said by other dealers to represent the situation exactly. Along

Cortlandt and Barclay streets the dealers said there was an actual famine in many small vegetable and garden plants. They were all sold out, with hundreds of orders still unfilled. Letters received from representatives of the large fruit and vegetable canners throughout the country betrayed an anxiety never before shown.

St. Louis, Mo.

The Week's News.

Next Thursday afternoon at 2 o'clock the St. Louis Florists' Club will hold its regular monthly meeting in the Burlington Building. This will be a very interesting meeting for the growers, as the discussion on fumigation will be continued, and Fred. Ammann, Edwardsville, will make a report on his experience since the last meeting on the new method which was discussed. President Irish and Messrs. Fulgraff and Pring of the Missouri Botanical Garden will also give valuable information on this subject. The trustees, Messrs. Smith, Beyer and Weber, will report on the club's celebration and the annual picnic which is to be held in July. A large attendance is expected.

Charles Schroeter, who has been running a floral establishment on South Broadway, has closed up shop and left a number of creditors behind.

Fred. C. Weber's delivery wagon and a street car were in collision, which resulted in a smash-up of the wagon, and the driver being badly hurt, which will lay him up for several weeks.

ST. PATRICK.

ROOM!

We want to place our Importations of

ARAUCARIAS, PALMS, RUBBERS, etc.

Therefore we now sell our surplus stock of Bedding Plants at Cracker-Jack low prices.

GRAFTED ROSES

FINE STOCK. READY NOW.

A RECORD TO BE PROUD OF

The Florists' Hall Association has paid 1,040 losses amounting to \$102,000.00 For particulars address JOHN C. ESLER, Saddle River N. J.

Foliage Plants for Outdoors.

Suburban homes are without doubt made immensely attractive by planting bright flowering plants in beds and borders on the grounds; but for the man who leads a strenuous business life in a crowded city and has time only for an occasional period of rest and relaxation in his Summer home, the florist may, if he has the option in planting, vary the outdoor decorations so that the owner may find in the contemplation of the whole something to soothe his racked nerves. For this purpose foliage plants suitable for outdoor planting are not only appropriate but they are also capable of producing soft and pleasing tropical effects, and that at a very reasonable cost.

Although cannas, as we know them now, are by no means confined in their usefulness to what their foliage can effect, still when they are planted in masses they fill that part of the bill to perfection; besides the choice blooming varieties are very desirable for their flowers, especially when beds are planted with only one variety in a bed. The common tall growing ones are, if anything, better for foliage effects.

Other plants that can advantageously be used for this kind of work are Musa Ensete (Abyssinian banana) a grand plant for massing or for single specimens; Caladium esculentum (elephant's ear), very desirable for tropical effects; Ricinus communis (castor oil plant), excellent for various situations. Aralias, crotons, dracaenas, acalyphas, are all suitable when hardened and when placed in somewhat sheltered situations. Coleus in variety are indispensable for this kind of work. D. M.

During 1906 orchids to the value of \$128 were exported from Venezuela to the United States.

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers. If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.) We can supply them at \$2.50 per 1000, or 500 for \$1.50 and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet. Try a thousand and see what a help they are in selling goods.

Gustav Pitzonka, Bristol, Pa.

REVIEW OF THE MARKET

NEW YORK.—The weather was ideal for Memorial Day, and the florists situated near the cemeteries had all the business they could possibly take care of. All kinds of bedding and flowering plants were in good demand, but in cut flowers it was the shorter stemmed stock chiefly that was called for. In the city the stores did not experience any extra rush of trade. The wholesale men were through, and the majority of them closed their stores before mid-day.

The continued cool weather seems to be good for the cut flower business, as all classes of stock are bringing much better prices than is the rule during the first few days of June. On Saturday last there was quite a brisk demand for almost everything, roses and carnations particularly clearing out well. Since then, while there has been a gradual decline in the call, prices for good stock are holding up well though, in roses, there is, as is usual at this time of the year, quite a quantity of mildewed stock, which has to be cleared out at anything the wholesalers can get for it.

Lilies are becoming much more plentiful than they were, and prices have diminished materially from last week's quotations. Lily of the valley has been quite scarce for a few days, and values have soared somewhat.

Peonies are coming in in quantity, and from 75c. to \$1.00 per dozen has been obtained for some of the best. Sweet peas are plentiful, and some very fine grade stock is reaching the market, a few lots fetching as high as 20c. per bunch. Gardenias are still plentiful, so much so, in fact, that they are at times used for funeral work. The supply of orchids is about equal to the demand, with no appreciable change in values.

CHICAGO.—This important commercial horticultural center witnessed last week one of the most sensational periods in its history, and certain it is that at this season of the year nothing approaching the prevailing conditions was ever before experienced. As at Easter when the extreme and unseasonable heat produced an unheard of holiday glut, the weather was to blame for it all, but on the recent occasion the long continued cold spell, freezes and frosts, which had so ruined, damaged, or greatly delayed all outdoor Spring flowers which generally play so important a part at this annual floral festival and the unusual absence of the May sun which deferred the development of the protected products, brought about a stringency in the market which was most bewildering even to the hardiest and most thoroughly experienced traders on the street.

The shadow of the coming events was cast several days in advance and by the close of the preceding and the opening of last week it became evident that conditions were to be wonderfully transformed from the situation which had prevailed almost uninterruptedly since Easter, but it is doubtful if the wisest prophet could have foretold much in advance the predicament in which many were placed between Tuesday morning and Thursday in the vain attempt to procure stock to fill orders already accepted, to say nothing of the constant influx of telegraphic and mail orders from all parts of the country dependent on this market and which was very generally afflicted with the same weather conditions as prevailed here.

Everything was in demand and everything was short. Rose orders were refused, cut, or in some cases jasmine or even poeticus ornatus narcissus were substituted.

Carnations, which probably were first to display evidence of the approaching paucity and which might be termed the barometer of the situation throughout advanced steadily until from Tuesday noon on, from \$4 to \$6 per hundred were the ruling prices, even splits being in demand at figures varying from \$2 per hundred for whites to \$3 and \$3.50 per hundred for Lawson and other colored sorts.

Peonies of a quality which ordinarily would fetch half a dollar per dozen when in bloom were greedily taken up at a dollar per dozen, and on Wednesday at 25c. more; and quantities which were in bud as hard as bullets were sold where three, four, or five in a bunch of a dozen showed a tendency to burst.

Apple tree blossoms, hawthorn, daisies and other wild flowers and shrubs found a ready market at prices varying with the avarice of the sellers and the exigency surrounding the purchaser.

The Spring crop of ferns which should now be sufficiently matured to

be readily available, is said to be but a few inches in height, and the few remaining in cold storage and the new growth brought to the market from new and distant sources were inadequate to fulfill requirements, and the record price of \$5 per thousand ruled on the best goods which graded down \$3 per thousand according to quality.

The market held firm throughout the week but opened Monday much weaker both in prices and demand, though some houses were very busy with shipping orders. There seems, however, to be a prospect of a continued brisk business for some time to come. Certain it is that but a small proportion of the hundreds of thousands of peonies, which generally form such an important factor, fresh and from cold storage during June and July, will be in evidence this season, and from present appearances greenhouse flowers will receive but little competition from outside products during the immediate future.

BOSTON.—Memorial Day trade was very satisfactory in this city, and prices were good for this season, all goods selling well. The weather was cool, consequently flowers kept and could be handled in much better condition than is generally the case for this trade.

There seems to be quite a lull in business among the retailers; between class days, weddings and other functions there is call for lots of flowers, and while prices have not kept up to the figures of a week ago, still they are generally satisfactory. Roses are plentiful enough, but there is most demand for the medium grades. Good grades of Richmond and Killarney are to be seen, and there are now some fine blooms of Summer sorts, like Souvenir du President Carnot and Kaiserin Augusta Victoria. American Beauty are still good, and as there is no appearance of outdoor roses, yet Beauty, of course, are in brisk demand.

Carnations still sell well and good grades of flowers are to be had. Lily of the valley is a favorite flower, having a steady demand for some of the best. Gladioli are good, and sweet peas continue plentiful. There has been a good call recently for hardy cut ferns and other greens.

PHILADELPHIA.—There was quite a good business done the past week, and the quality of flowers keeps up very well. American Beauty roses are plentiful and selling well; \$4 per dozen has been obtained for some choice stock and \$2 to \$100 is the price at which most of it is sold. Tea roses are very plentiful; most of the stock goes at from \$3 to \$8 per 100, some choice Richmond and Mme. Abel Chatenay selling at \$12 to \$15 per 100.

Carnations are plentiful and are selling at \$2 to \$4 per 100. Lily of the valley has been scarce on some days on account of shipping demands; prices range from \$4 to \$5 per 100.

Peonies have been in good demand for wedding decoration, at from \$6 to \$10 per 100; Southern stock only is on hand so far. Daisies experience a brisk call at 75c. to \$1.50 per 100. Gladioli go at \$1.50 per dozen for the best; sweet peas, 50c. to \$1 per 100, with stock plentiful and mostly of poorer grades. Cattleyas are in fair supply at 60c. and 75c. per flower. Gardenias are plentiful, selling at \$5 to \$10 per 100. Smilax sells at \$15 to \$20; asparagus, 50c. per 100.

ST. PAUL.—Memorial Day business was the largest we have had in years; in the larger stores one was reminded of an Easter rush. The call was very heavy from the country and the city trade far beyond expectations, consequently adequate preparations were not made and the majority of the dealers were in a bad way, for cut flowers especially. Carnations seemed to lead in demand and the price had to be held high, it being impossible to get only fair supply. Wholesalers got from \$50 to \$100 per 1000, the general price averaging between \$50 and \$60 per 1000, but in some cases the writer knows of retailers paying 10c. a piece for carnations, which must be admitted as exceptional for Memorial Day and by some was considered exorbitant. Roses were plentiful, averages stock selling for \$1.50 and \$2; specimen stock brought \$3 and \$4 per dozen. Early Spring flowers, such as tulips, peonies, etc., did not seem to sell very well, possibly on account of not being in good condition.

Plant sales were indeed heavy. Pansies were very scarce, the cold backward Spring and dull weather prevented them blooming and unless in flower they could not be sold at any price.

PAUL.

ST. LOUIS.—The trade experienced quite a demand on Memorial Day. The day previous quite a lot of shipping was done, and Thursday the local demand for cut flowers, bouquets and designs was, it is said, much better than last year's, with increased prices. The wholesalers had no trouble in disposing of their consignments early in the day and closed up shop in the afternoon. The plant stands at Union market did a large business in blooming plants of all kinds; also the greenhouse men opposite the cemeteries.

Stock in the best grade of roses is scarce, but there seems to be plenty of second and thirds in the market. Prices run about \$5 for the extra fancy; \$4 to \$6 for firsts and \$2 to \$3 for the short-stemmed ones. American Beauty are not of particularly good quality at present; extra long, fancy bring \$4 per dozen, shorts, quite plentiful, running from \$3 to \$10 per 100. Enchantress, Mrs. T. W. Lawson, Boston Market, when extra fine, bring \$4 per 100; other grades, \$1.50 to \$3. Cardinal is the best of the reds now coming in.

Harrisii lilies and callas are becoming scarce. There is a good supply of lily of the valley, which will be in big demand this month, as June weddings will be numerous. Cape jasmines sold well all the past week at 50c. and 75c. per 100. Peonies about here are late, and many are being shipped in which sell at \$4 to \$5 per 100. Other outdoor stock is as yet scarce, as the weather has been very cold; still this material never sells well when other flowers are plentiful.

The market is well supplied with grades of all kinds. Dagger ferns are coming in of better quality; fancy ferns are scarce. Smilax and asparagus have a good demand.

ST. PATRICK.

INDIANAPOLIS.—Memorial Day business assumed record breaking dimensions this year. Garden flowers were not obtainable, so the masses were forced to go to the florist. The cold weather, which had been so damaging to the bedding department, enabled the growers to apply the store men with unusually high grade cut flowers. Most of the stock was as fine as is generally produced in March or April. Carnations and roses, of good size and color, were on hand in liberal quantities. Several of the stores were sold out by Wednesday evening, and almost frantic appeals were made in vain as all the smaller growers retained what was on hand for retail use.

Peonies did not arrive on time. A quantity shipped from Kentucky and Tennessee brought \$8 to \$10 per 100. Immense cuttings of Harrisii filled in admirably at \$12.50 to \$15 per 100. Carnations, lavender and white, also feverfew, lasted throughout at prices higher than obtainable in the past.

Poppies, French and Spanish iris, Spiraea Van Houttei and lily of the valley, which had been grown in protected places, were welcome additions. Canterbury bells, in all the delicate shades, again proved their worth, both as cut flower and specimen plant, at this season; 75c. to \$3 a plant is a fair retail price. Many sweet peas were on hand for Memorial Day, and they sold quickly at 75c. to \$1 per 100; the demand for them continues. From \$4 to \$6 per 100 seemed like a high price for carnations last week, but all were readily disposed of; even many orders remained unfilled.

Cape Jasmines are falling into disfavor, and do not occupy the position held for so many years at this time; more salable and higher grade stock is gradually displacing them.

I. B.

Indianapolis.

News Notes.

President Roosevelt, in placing a laurel wreath upon the late President Harrison's grave at twilight Memorial Day, certainly gazed upon beautiful surroundings. The landscape at Crown Hill Cemetery, with its thousands of flower bedecked graves, presented an inspiring sight.

Clarence Green has left A. Weigand & Son's employ, and accepted a position with E. A. Nelson.

Northern wholesalers are asking for peonies from the local growers, as the season here is at least ten days in advance of that in Michigan.

Boxwood trees, also laurels, are finding many buyers this year.

I. B.

GRAND RAPIDS, MICH.—John Myers, 45 years of age, died recently of pneumonia and was buried Saturday, June 1. He was in the employ of Crabb & Hunter Floral Company for a number of years, and will be sadly missed. He formerly worked for Henry Smith, also the Grand Rapids Floral Company.

G. F.

FIRMS WHO ARE BUILDING.

ATTICA, IND.—The Attica Florists' Company will about the first of July begin building additions to the plant on North Perry Street. The present building will be enlarged by an addition 20 by 25 feet; a new building 20 by 75 feet will be erected. One of these buildings will be devoted to carnations.

CHANGES IN BUSINESS.

RENO, NEV.—Fred Fischer has built a greenhouse here and engaged in the florist's business.

MIDDLETOWN, N. Y.—The business of George S. Belding has been purchased by P. X. Dienst, who takes possession June 1.

MARYSVILLE, MO.—C. H. Hollid has sold his greenhouses to Mrs. Mary Weisenberger for a consideration of \$4,050. Mr. Hollid intends moving on a farm.

FAR ROCKAWAY, N. Y.—Mrs. Nora Fitzsimmons, florist, has leased the Peter Scouler store on Central avenue near Clark avenue, which she will open in a few days.

VAN BUREN, O.—Messrs. A. W. Turner and C. A. Keller have purchased the S. M. Hartman greenhouse, and will establish it in the southwest part of town. It will be in full operation before Fall.

BROCKTON, MASS.—The greenhouses on Copeland street owned formerly by Nicol Brothers and one time by Copeland & Cooper, have changed hands and have been bought by Wm. J. Marshall of Togus, Me.

The Deterioration of Plants by Forcing. The Cause; the Remedy.

Paper read by Antoine Winter of Concord & Jones Company, West Grove, Pa., before the Philadelphia Florists' Club at its June Meeting.

Are our roses deteriorating or is it imaginary on our part? The real or supposed deterioration of roses is the subject of considerable discussion whenever practical rose men meet at conventions or clubs.

My honest opinion is that a great many varieties of roses have deteriorated. Why have they done so? I believe the main causes to be over propagation, unnatural conditions in growing the stock plants, under and over watering, over feeding and various others too numerous to mention.

The hybrid tea roses (to the production of which rose breeders are now devoting so much attention) were an unknown factor 35 or 40 years ago. The breeders at that time were disseminating more h. p. varieties than all the other classes combined, the majority of which were introduced by Verdier of Paris.

Now what is the lesson the propagator can learn from observation? Secure the best and most healthy field grown plants for propagation; grow the cuttings from such under natural conditions and continue on this plan for a number of years and the result will be that the roses so grown will not deteriorate.

Now, in conclusion, permit me to ask how many growers there are in the business, in the position to do this? With the wholesale prices of roses where they are at present, there is surely an eternal unfitness of things in our present price of own root roses.

Philadelphia
News Notes.
Most of the retail stores are doing a good business this week, there being many weddings and commencements. The principal work has been for the Young Ladies' Seminary at Ogontz, and the Bryn Mawr Ladies' College; for these some of the stores had from 100 to 200 orders.

At the meeting of creditors of H. T. Dumont Company and the Rosary Flower Shop, each belonging to H. T. Dumont, the liabilities were given at \$2,300 and assets at \$925, book accounts about \$300 being good; and the store fixtures. Books and store fixtures were turned over to a committee of creditors, who have already realized \$300 on the fixtures, and closed the store.

Pennock Brothers have installed an ice or cold storage machine in the basement of their store, the brine tanks and pipe coils being on top of the refrigerator, in the ice receptacle. They find it very satisfactory; by running the motor one hour a day, the refrigerator is kept at from 43 to 48 degrees.

The Florists' Club meeting on Tuesday evening last was an interesting one, the attendance being very good. Six new members were elected and nine proposed for membership. The convention committees made good reports. The Julius Roehrs Company, Rutherford, N. J., exhibited a new rose, a Wichuraiana hybrid a nursery seedling, after the variety Hiawatha in form, flowers smaller but borne in large clusters. In the opinion of the committee this would make a good forcing plant for Easter. It is quite fragrant.

The paper of Antoine Wintzer, on the "Deterioration of Plants by Forcing," was listened to with great attention and brought out considerable discussion.
DAVID RUST.

Smith & Fetters vs. Gasser.

One of the finest ball games of the year was played by the Smith & Fetters and Gasser teams, at Garfield Park, Cleveland, O., Memorial Day afternoon. The Gasser team won by a score of seven to six, Smith & Fetters leading until the seventh innings. This is the first game Smith & Fetters have lost in eight years.

Boston.

News Items.

At the next meeting of the Gardeners and Florists' Club, C. H. Totty will read a paper on "The Past, Present and Future of the Chrysanthemum." This should prove a drawing card, and as it is the last meeting before the Summer vacation season and many important matters are to be brought up, there is every indication that the June meeting will be a record breaker.

The annual rhododendron exhibition of the Massachusetts Horticultural Society will be held Saturday and Sunday, June 8 and 9, at Horticultural Hall, Boston.

The annual rose and peony show will take place the following Friday and Saturday, June 14 and 15, followed on Saturday and Sunday, June 22 and 23, by the rose and strawberry exhibition.

As the season is unusually backward it is expected that these exhibitions will overlap each other somewhat, and classes not competed for on the dates assigned will be continued over to the following week, so that a series of fine weekly exhibitions is assured for the next three weeks.

James Tullis of South Sudbury, one of the leading carnation growers for the Boston market, has been confined to his home for the past three weeks suffering from Sciatica.

W. W. Rawson was chief marshal of the parade celebrations of the centennial of the town of Arlington on Saturday.

A. J. Mohegan of Cambridge is the latest to join the list of benefactors, the lucky lady being Miss Hecht of Roxbury. After a honeymoon trip to Philadelphia and Washington, they will reside in Cambridge.

Washington, D. C.

Club News.

The regular meeting of the Washington Florists' Club was held on the night of June 4, with a good attendance. D. N. Shoemaker, who recently entered the florist business as a grower of carnations, in houses formerly used by Dr. Wehber at Tacoma Park, D. C., was admitted to membership. George H. Cook moved that the club hold a chrysanthemum show next November, the date to be fixed at a subsequent meeting. The motion was carried.

One of the principal features of the evening was the exhibit by President Bisset of several of his newest seedling roses, all descendants of his original success, Queen Beatrice, and comprising the lighter shades. One, a magnificent specimen somewhat of the La France type but possessing many more points of general excellence, was highly praised. Others were attractive by reason of their exquisite shades of silvery pink; one of the latter class won so much favor with Mrs. Gardiner Hubbard, whose estate President Bisset has brought to its present far famed beauty, that she named it "Rosalie" in honor of her granddaughter. Judging from remarks made by Mr. Bisset, there are doubtless other treats in the line of rose novelties in store for the club later on.

Chicago.
 The Week's News.
 L. H. Winterson and Mrs. Winterson left on Monday night for their new home in Seattle.
 An order was received late Friday afternoon of last week from Kansas City for two thousand ferns and it was necessary to wire the party that they could not be found in the Chicago market—an incident which is unique in the history of this important center, certainly within recent years.
 Peter Reinberg is just starting to cut from a superb crop of Richmond roses, which give promise of unusual excellence for the next month or more.
 Among the June brides will be numbered Miss Bertha Dittmer of Maywood who will be married on the 26th instant to Max Awizuns of the J. A. Budlong sales department. The young couple will reside in Maywood.
 Louis Coatsworth, who is personally superintending the replanting and repairing at New Castle, was in Chicago last Saturday and reports everything progressing nicely at the firm's range in Indiana.
 William Peck of Baraboo, Wis., was in the city last week.
 George Walther made his appearance in the market district last week in a new covered automobile which appears to be well suited to his requirements in the trade. If all the wholesalers and retailers who are reported as intending to purchase horseless vehicles this season succeed in finding what they want, there will be enough owners in the trade to form quite a respectable club before Fall.
 The meeting of the Chicago Florists' Club at Handel Hall Thursday evening next will be an important one. The advertising proposition advanced at the last meeting will be further considered and other vital matters discussed.

THE FLORISTS' EXCHANGE

E. H. Hmt had a heavy Memorial Day trade in supplies, the call for immortelles and moss wreaths being unusually large.
 Weiland & Risch had a sign posted on Tuesday of last week that they were sold out. Their Memorial Day business exceeded their Christmas business of last year.
 The George Wittbold Company had a large and satisfactory business for the month of May, outside work being particularly heavy. Louis Wittbold has perfected the moulds for his new cement bench, and has already equipped one of the concern's houses with his invention, which has the appearance of being absolutely indestructible.
 John Kruchten had a busy week and with several new consignors is carrying a good stock of seasonal flowers.
 With the advent of the June weddings C. W. McKellar notes a decided increase in the demand for cattleyas.
 Business showed an unusual tendency to hold up after the holiday last week, Wietor Brothers having on Friday the largest trade they ever enjoyed in any one day not preceding a holiday, and not excepting the red letter days following the Iroquois theatre catastrophe two years ago last Winter.
 John Pochlmann of Pochlmann Brothers says the buds were right there and all that was needed was the sunshine that we did not get, to open them; consequently some late orders were necessarily cut.
 George Reinberg's houses were slightly off crop for Memorial Day he having just commenced cutting from a heavy harvest, consequently he was compelled to turn down many good orders.
 O. Johnson feels well satisfied with his first holiday at his stand in the Chicago Rose Company's store, shortage of stock being his only complaint.
 H. Cheeseman of the Vaughan Seed Store's traveling staff has returned from an extended Southern trip embracing nearly all the principal points in that section and occupying about three months. Mr. Cheeseman is very enthusiastic over the horticultural future of our Southern neighbors, and prophesies tremendous strides in the divers branches of the profession in the immediate future. Since his previous visit to that section there has been a 30 per cent. increase in the culture of bulbs for commercial purposes, growers have learned to produce as fine carnations as are turned out anywhere and consumers have ceased to rest content with the never-ending supply of outdoor flowers but demand the choicest roses of greenhouse culture for which they readily pay as much or more than is realized in many Northern cities. The business in the Southern States within the next decade, according to Mr. Cheeseman, promises to be something phenomenal, the greatest difficulty the craft have to contend with at present being the procuring of competent help, many men with references from Northern employers having proved incapable to master the situation under the different climatic conditions. Many growers, who have been systematically and scientifically at work, have produced remarkable results, and they are ready and willing to pay good money for competent assistants. Considerable complaint was found in many locations at the receipt of sleepy carnations received from Northern shippers.
 The bedding plant business has been at its height for the past two weeks and notwithstanding the cold, unseasonable and unsuitable weather has been very heavy. Plants in bloom were scarce for Memorial Day trade and many houses, especially of geraniums, where night firing was impracticable or was abandoned, show the effect of the cold nights. Prices for first class geraniums are generally higher than last year, in some cases twenty-five per cent.
 The retailers who had things much their own way at Easter suffered a decided reverse in the conditions which prevailed last week. One storekeeper in the Loop tells of paying \$6 per hundred for carnations to fill orders taken previous to the sensational and unexpected advance, at 75c. per dozen, on which basis it requires an expert mathematician to figure out a profit.
 Willis N. Rudd, after an extremely busy time in performing his duties as superintendent of Mount Greenwood

Cemetery, left on Saturday last for a two weeks' piscatorial outing at Peacock, Mich.

C. M. Dickinson is much gratified at the universal satisfaction expressed by the growers who have tried and continue to use the To-bac-line products both locally and throughout the country.

P. J. Hauswirth who, owing to his location, does not come in for a large share of the general run of Memorial Day cemetery work, had a busy time last week in other lines particularly in connection with the visit to Chicago of General Kuroki, one order being a four foot wreath of jasmine and cattleyas with a mauve ribbon bearing the inscription, "General Kuroki, May 30, 1907," which the distinguished visitor placed at the base of the Lincoln Monument on Thursday. The unique decoration at the banquet given by General Kuroki was contracted for by the Marshall Field Company who furnished the flags, subtleting the mechanical part of the pagoda to the George Wittbold Company and the floral effects which consisted of iris and other appropriate flowers to P. J. Hauswirth who also furnished the flowers for the dinner given to the oriental General by the Commercial Club on Saturday evening, when the principal flowers were American Beauty and Mrs. Marshall Field roses.

Tom Hopkinson has left the Downer's Grove Floral Company and will resume his connection with Vaughan's nursery at Western Springs.

Leonard Kill, accompanied by Mrs. Kill, left on Monday or a two weeks' sojourn at West Baden Springs, Ind. After recruiting there a trip to Louisville is planned.

A. L. Randall Company, who did much to save the market on ferns from cold storage for Memorial Day, has commenced receiving the new crop from Michigan. Mr. Randall thinks that owing to the close proximity of the river and the lake to his Michigan fruit farm the buds have not suffered as much from late frosts as was at first feared.

The first carload of palms and araucarias has been received at Vaughan's greenhouses at Western Springs.

Mr. and Mrs. O. P. Bassett reached home on Saturday morning last, from a four months' tour of Europe having enjoyed perfect health throughout the trip. Mr. Bassett studied the flower business in every large city visited, but did not find anything to compare with American stores except in Paris, where we were excelled in many ways. American Beauty roses of excellent color and quality, with the longest stems from 20 to 24 inches, retailed for \$5 per dozen, but one could procure an armful of single violets with stems twelve inches in length for a dollar.

J. A. Budlong's American Beauty roses were rested during the Winter and an excellent crop is now making its appearance. This house had a splendid holiday trade last week, shipping seventy thousand carnations in two days and other seasonable flowers in proportion.

A very close and interesting game of baseball was played last Sunday afternoon at Washington Park, between Kyle's Florist Nine and the Roosevelts, resulting in a victory for the former by a score of 8 to 7.

The J. B. Deamund Company is receiving a handsome assortment of well-grown gladioli which find a ready market.

Willie Manthey, the bright young assistant in P. J. Hauswirth's Auditorium store, left on Tuesday for New York whence he sailed on Thursday for a two months' visit to Berlin, Germany.

The E. F. Winterson Company received on Monday the first case of this season's crop of Michigan ferns. This concern was well supplied with fresh ferns from a distant source last week and helped several houses who otherwise would have had absolutely none with which to fill orders.

Vaughan & Sperry report a large increase in the Memorial Day business over last year and owing to the good quality of stock a much more satisfactory outcome. This house received a box of Eastern violets on May 31 and will shortly commence to handle John Bruckner's annual daisy crop, which Mr. Bruckner says at the height of the season will exceed fifty thousand a day.

The improvements at Fleischman's Jackson Boulevard store, turning two stores into one and doubling their present facilities, go on apace, yet it will probably be sixty days before the alterations will be complete.

Gus. Balluff has severed his connection with the Alpha Floral Company, and L. R. Bohannon has entered their employ, he having been succeeded at Fleischman's north side store by Mr. Harrison until recently with the Central Floral Company.

Percy Jones came in for his share of the good business last week; in fact, it was the general verdict of the flower market stallholders that the week was one of the best on record.

J. B. Murphy, recently in charge of the rose section of A. Lies' range at Niles Center and previously with the Chicago Rose Company, has purchased the plant and goodwill of the Manistee Floral Company, Manistee, Mich.

WILLIAM K. WOOD.

Rochester, N. Y.

News Items.

Considerable interest is manifest here concerning the possibility of the launching of a new venture by several business men to engage in the rose growing industry. The plans are to build a range of glass suitable for that purpose at a cost not to exceed \$30,000. Only one serious drawback, however, presents itself, and that is the comparatively small amount of sunshine that is recorded here. Rochester needs such an enterprise, as a great number of roses are shipped here the year round, and that the promoters may have every success in locating in a desirable spot not far from here is the earnest wish of local dealers.

In the early days of last month this city felt the dire need of a practical greenhouse foreman to care for its houses located in Highland Park. So the City Fathers decided to place the position on the list for civil service examination. Consequently in due time there appeared in the daily papers a notice that at such a date, such examination would be held for the position, applicants to be required to fill out certain papers, certified to by three reputable citizens, and also by an M. D. stating applicant to be in good physical condition and able to work.

For the benefit of those who might sometime wish to take a similar examination, here or in some other city, perhaps the publication of a few of the questions might give some clue as to what might be required of applicants.

Each question counted for 3 per cent, and there were 25 of these, the last one being "State fully your experience, and where gained, that you think would fit you for the position named herein, 25 per cent." Some of the others follow:

"Write down what you think are the duties of a greenhouse foreman, in connection with a park system." "What is a species?" "How would you propagate a species?" "Describe fully what is meant by a variety." "What is meant by the crown bud and the terminal bud on chrysanthemums?" "What coniferous evergreens can be readily grown from seed, or from cuttings?" "State how to care for same." "How would you graft the various evergreens?" "How many geraniums are required for a bed 15x30 feet?" "How many tulips are required for a bed 15x20 feet."

"How would you propagate chevérias?" "Describe fully what you know concerning the two horticultural groups of orchids." "How would you care for same?" "What are the different groups of begonias known as?" "Name six different groups of roses." "How are hybrid perpetual roses usually grafted?"

No questions relating to soil, manures, temperatures or watering were asked, consequently the four candidates heaved a sigh of relief when all papers were handed in, and after a delay of three or four weeks results were mailed as follows: Mr. Dukelon, present acting foreman, number 1. Ambrose H. Secker, number 2. Wm. Henckel, number 3. Mr. Kidder, number 4. COCKNEY.

CANAL DOVER, O.—C. Betscher says he has over 1,200 sorts of peonies, the plantation occupying about five acres. More than an average crop of bloom is in sight, he says, but as the weather is very cool the flowers may barely be right for the Ithaca (N. Y.) meeting. If, however, nothing interferes, Mr. Betscher states he will make a great showing there. He adds that peonies, generally, are not very well set with buds this year; he is informed by Western growers that they will only have 20 per cent. of a crop, or a little more.

Columbus, O.

A Cold May.

A month ago I wrote that we had experienced the coldest April in years. The same conditions prevail; this very week we have had hard freezing and quite thick snow in some sections. All kinds of planting have been much delayed, and a much larger proportion of the early sowings have rotted in the ground than ever before; for not only has it been cold, but we have had incessant rain. Conditions to date could not be worse. Very little bedding stock comparatively has been set out; this year our florists will find June a good business month.

News Notes.

The State's tribute to Mrs. William McKinley was a very large and elaborate anchor of Golden Gate and Bride roses, and blending varieties of carnations; the piece resting on an American flag of the same flowers. This splendid design was executed by the Franklin Park Floral Company.

The great interest the children are taking in school gardening, is well shown at one of our largest schools; scholars, to the number of over seven hundred, each subscribed three cents, with which money was purchased sufficient California privet to hedge the school property. Under the able supervision of the principal, the entire work was done by the children.

Mayor Badger is taking the greatest interest in the improvement of Franklin Park; he hopes to make it more beautiful than ever before. A new driveway along the north side, with a new entrance, is under consideration. The number of bedding plants to be used will also be greatly increased.

The killing frosts we have been having lately have kept everyone on the anxious seat. Night after night it has been necessary to cover what bedding stock and other tender plants had already been set out. In the fruit belt the growers have been building huge bonfires to protect the orchards.

Last week the Home For Friendless Children held its annual "poesy party," the object being to decorate the grounds with the seeds and plants donated. As usual our club sent a goodly assortment of seeds.

The Columbus Floral Company are very much pleased with the good trade they did all last week for Memorial Day. Being just started they have no previous holidays to compare with, but are satisfied. They sold entirely out of bedding plants.

Flower thieves are getting in their work in all parts of the city. Such plants as geraniums, and in fact anything that has been pot grown and therefore easily lifted and re-potted, are their favorite plunder. There is little doubt that the same plants are again sold on the market. No thief has as yet been caught.

Graff Brothers are delighted with the trade of Memorial Day; they sold everything they could get, and at good prices. William Graff calls it by far the best business ever done in Columbus, for this holiday.

The committee of experts, who will make plans for the permanent beautification of Columbus, are here. Austin W. Lord of New York is chairman; C. Mulford Robinson of Rochester is secretary; the other three members are Messrs. Albert Kelsey of Philadelphia; C. M. Lowrie and H. A. MacNeil of New York. For their plans the city has appropriated \$5,000.

C. A. Roth reports the largest business ever done on a Memorial Day. He made a special run on white stocks, of which he had an enormous quantity of his own growing; they all went at \$1.00 a dozen. Prices as a whole ruled higher than usual, owing to the shortage of hardy stock; what few peonies there were brought \$2.00 a dozen.

Mayer & Gutknecht, the selling agents here for Landreth's seeds for twenty-six consecutive years, report a most satisfactory season, although much later than ever known, on account of the weather. The department stores do not seem to have sold as many seeds as usual; one of the largest is this week offering to close, a dozen packets for eight cents.

WAREHOUSES: JERSEY CITY, N. J. LONG ISLAND CITY, N. Y.

The Moninger Company Catalogue.

An exceedingly attractive catalogue, entitled "Perfect Greenhouse Construction," has just been issued by the well known house of J. C. Moninger Company, Chicago. Beautiful half-tone reproductions of photographs of ranges of greenhouses constructed by this firm are presented; these include views of many of the largest establishments located all over the country, showing the extensiveness of the concern's business. In addition, many reproductions of drawings showing cross-sections, posts, gutters, ventilators, sash, and other parts of greenhouse equipment, including the Chicago ventilator lifter, are provided; and a host of useful information on the subject of greenhouse construction supplied.

From the catalogue we take the following bit of history concerning the founding and development of the firm, which, we feel sure, will be read with interest:

"In 1849, in Chicago, Frank C. Moninger, who was then a young man, began making hot bed sash for growing early vegetables, selling them to the farmers and truck gardeners located in and near the city. He had no factory and made the sash by hand in a small rented room. What sash he made were made well and his trade increased, the old customers re-ordering and new ones constantly coming in. After about twelve years, during which time the business had grown considerably, the idea of a greenhouse was evolved and one was built for Samuel Garland, Sr., in 1861, out of sash at Des Plaines, Ill. This house is now used for propagating carnations by Samuel Garland, Jr. Other houses were built shortly after this and the method of construction was steadily improved, until finally in 1868 Frank C. Moninger and John L. Diez formed a partnership for the purpose of making greenhouse construction material a specialty, both of them realizing that the increasing demand for better material and lighter construction would mean the specializing of the work. Sash bars were then first manufactured in Chicago and the first of these were supplied to Miller & Hunt, located north of Chicago in what is now Lake View. After these sash bars were introduced other houses were built of them by George Wittbold and Samuel Garland. Inquiries came in from other towns around Chicago and when the firm of John L. Diez & Co. was succeeded in 1892 by the late John C. Moninger, sash bar material had been furnished to florists in nearly every state in the union. On the death of John C. Moninger in 1894, after his being in the business but two short years, the present firm incorporated the business under its present name. The men now at the head of the business were formerly employed by John L. Diez & Co., and John C. Moninger, therefore were thoroughly acquainted with the work and took it up aggressively from the start. The present office and factory occupies almost an entire city block and is the largest plant in the world devoted exclusively to the manufacture of cypress greenhouse roof construction material. The yards contain the largest stock of strictly clear, open air dried, Louisiana Gulf Coast red cypress to be found anywhere outside of Louisiana. This great business has been built up through persistent, determined effort and close attention to the wants of each and every customer. Through experience the manufacture and class of material has been improved every year until now a perfect product is placed on the market at fair and reasonable prices."

Trade Notes.

W. J. Palmer & Son had the Gleney-Prentice wedding last week. While the decorations were not elaborate at the house, the church (Trinity) was decorated with Gothic arches made of laurel, and two large columns sixteen feet high, topped off with an abundance of hydrangea plants. An abundance of ribbon was used on columns and arches. The same firm had three other decorations the past week, one a table in which they used 3,000 pansies in a wreath encircling the table with a centerpiece of white and yellow daisies; another of Richmond roses and lily of the valley, making a very pretty combination, the other of Mme. Abel Chateaux roses and individual bunches of sweet peas.

W. H. G.

AMHERST, MASS.—Owing to the excessive amount of the State tax this year the committee on ways and means of the lower house of the Legislature could not see the way clear to favor the appropriation of \$22,000 for a new greenhouse for the horticultural department of the agricultural college. The bill will now be advanced to its final passage. It provides \$24,400 for completing Clark hall for the botanical department in charge of Professor G. E. Stone, whose work has been of great value to the florists and gardeners in discovering remedies for the diseases attacking plants growing under glass. He has never appeared as a competitor with producers, but always as co-laborer. With his new facilities Professor Stone will be able to do much better work than was possible under the former conditions.

OGDEN CITY, UTAH.—The Ogden Floral Society has been organized here; T. W. Stilwell was elected president and E. J. Hendershot, Jr., secretary and treasurer. Among other things the society will regulate the price of flowers, wholesale and retail, and will accept bids only through the approval of the society. In this manner, competition will be limited to a small degree which the florists claim will prove satisfactory to the public and agreeable to horticulturists.

EAST ORANGE, N. J.—The home of George Smith, the leading florist of East Orange, was blessed with an infant daughter on May 30. The wires were kept warm for a time with congratulations. Mother and infant are doing well.

News Notes.

Memorial Day will go down into history as being the first in many years when outdoor flowers did not quite cut a figure; but 1907 is an exception. Inside grown stock of all kinds had their call, and everything sold, even crimson clover. The only complaint heard is, that there was not half enough stock to supply the demand. Funerals and school commencements, with a number of "knot-tyings" will give us a nice business this month. If the flower growers in Ohio were as progressive as the vegetable growers, we would have more stock to sell.

Will Sunderman of Price Hill will build two houses, each one hundred feet long, for growing cut flowers and plants.

F. Lautenschlager, representing Kroeschell Brothers Company, Chicago, was a caller Thursday; he informs me that he has sold this week hot water boilers to heat one hundred and ten thousand feet of glass.

H. Hesse of Hamilton, O., is erecting a range of glass to grow vegetables.

J. F. Fahrenkamp, Plainville, O., is putting up twenty-seven thousand feet, iron construction greenhouses for vegetables. The Cincinnati Greenhouse Construction Company is doing this work, and Kroeschell's No. 13 hot water boiler will do the heating, with their hot water system.

Fred. Bahr, Middletown, O., is putting up a range for vegetable growing; and George F. Moore of Rushville, Ind., is building four houses, each 125 feet long, for cut flower and plant growing. So you see that vegetable growers are waking up, and will grow their products by more improved methods and in well-constructed greenhouses.

C. J. Ohmer writes me from California that it would open the eyes of the craft around Cincinnati if they could see some of the palms and geraniums grown in the Golden State. He will tour Yellowstone Park before he returns.

Roses and carnations coming into the market now begin to show the traces of Summer. Peonies will commence to come in more plentifully next week unless we have another freeze, which is not unlikely.

J. Chas. McCullough sails soon for Europe. He is one of the progressive seedsmen of the United States and is very popular with the trade.

Mrs. Samuel Batson, wife of The Florists' Exchange's correspondent in Kalamazoo, Mich., accompanied by her boys, sailed from New York, May 25, to visit her old home in Scotland, and all those who are so fortunate as to have her acquaintance, wish her a safe and pleasant voyage and a safe return.

Look Here, Mr. Florist and Gardener

WE have just passed through an unusually severe winter and you are apt to forget the many sleepless nights you spent worrying about the temperature of that No. so and so house.

Or the many zero nights that you spent in the boiler pit; maybe you did not have to do the stoking and firing, but *you* certainly had to do the worrying and pay the coal bills.

Now keep the vows you made on those trying occasions, *And Send for me.* I have solved the problem for others, I can do it for you; and remember, I will come recommended by some of the most prominent commercial florists and gardeners in the East, "Personal friends of yours."

DO YOU WANT LOW PRICES

or are you willing to pay for honest material and give what it is worth? If you believe that everybody figures on the same material just because you asked for one house so wide and so long, you are much mistaken, and that if his price is lower he is the fellow that should have the order, you are mistaken still more. Now the fact is that no two firms figure on the same quantity and size of material, though they are both estimating on the same sized house. One firm thinks wall blocking, coping and apron is not needed and puts in just a plain ordinary plank in their place—this lowers his price but you get less stuff and the construction is not as good. Our price is reasonable but we estimate on the right quantity, size and quality of material that should go into your greenhouse. You'll get full value for your money if you buy of us.

Where the Clasp Comes In

Last week we said some pretty straight things about the strong points in our galvanized angle iron eave plate—now for that clasp. It makes a dry joint just where the usual wet joint means rapid decay. It leads off all condensation, the thing that causes such havoc with other houses built other ways.

It is fastened with countersunk screws to the eave plate and strongly screwed to the bar, making not a socket but a clasp—a regular grip-joint. This structural point alone adds tremendously to the strength and life of our houses.

It's easy enough to know a house's weak points, but it's another thing to make the weak parts strong—that's our strong point. Clasp and eave plate sold in any quantity you want. Send for circular and prices.

THE FLORISTS' EXCHANGE

We are a sturdy plant that grows into a vigorous plant
 A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 24 NEW YORK AND CHICAGO, JUNE 15, 1907 One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
 Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Laween types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

JAMES VICK'S SONS, Seedsmen

Rochester, N. Y., May 21th, 1907.

Florists' Exchange, New York City. Gentlemen: In our letter of last week we hinted at plans for increasing our rapidly growing Wholesale Department. One of the lines along which we are working is the Fall Bulb Trade in which we are making a special feature of **Import Prices** on orders which are sent to us now.

For Quality our stock cannot be surpassed. The truth of this statement is supported by the fact that our Bulb business has nearly doubled in three years. If this does not show that our customers are pleased with our bulbs, we do not know what would. If any of your readers want rock-bottom import prices we invite them to send us a list of their wants and get our quotations, or else drop us a postal for our Import Bulb List. Yours very truly,

JAMES VICK'S SONS.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION

Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

"MARKETING FRUIT AND TRUCK CROPS" is the title of a very useful illustrated bulletin (116) just issued by the Maryland Agricultural Experiment Station, College Park, Md.

Bulletin No. 282 of the New York Agricultural Experiment Station at Geneva announces that the cultures for legume inoculation, sent out in dry form on cotton, are unsatisfactory. This applies to both forms of package, paste-board boxes and metal tubes, used for distributing the cultures. The bulletin will be sent without charge by the Station.

For the year ending June 30, 1906, Piedmont, Italy, shipped to the United States clover seed to the value of \$12,549 as compared with \$2,412 in 1905.

BOSTON.—Thos. J. Grey is planning a European trip this summer, the first in many years. He expects to sail on the 29th inst. and will tour the British Isles and Holland making selections of bulbs and plants while there.

New York.—Vaughan's Seed Store received at this port a big consignment of new crop of their special English mushroom spawn. This firm is closing arrangements now for several carloads of this season's crop of Kentucky blue grass.

Judging from the number of delegates, who already have secured accommodations at the Hotel Astor, Times Square, the headquarters of the American Seed Trade Association for the forthcoming convention here, there will be a gratifyingly large attendance. Arrangements for entertainment are progressing most satisfactorily under the direction of Chairman M. H. Duryea, and a pleasant as well as a profitable time is assured to all fortunate enough to be present. The committee feels that it is quite capable of attending to and carrying out its part of the program, and this it will do in the way of providing a banquet and otherwise, having in view only that which will conduce to the greatest delectation of its anticipated large number of guests.

IMPORTS OF SEEDS, ETC.—June 4.—O. G. Hempstead & Company, 10 cases plants; Maltus & Ware, 18 tubs bay trees, one case plants; Chas. F. Meyer, eight cases plants; T. C. Pollock, one case plants; Smith & Bolzenthal, 14 tubs laurel trees, 13 cases plants; Maltus & Ware, two cases plants; S. D. Crosby Company, 30 bushels garden seed; H. Frank Darrow, 12 cases plants; Knauth, Nachod & Kuhne, eight cases plants, etc.; Peter Henderson & Company, three cases plants; Hampton, Jr. & Company, two cases plants. June 5.—A. E. Outerbridge & Company, three packages plants; Maltus & Ware, eight cases plants; George Perez, two cases plants; Hensel, Bruckmann & Lorbacher, one sack seeds. June 6.—New York & Cuba Mail S. S. Company, 20 packages plants. June 7.—McKesson & Robbins, 10 bags roots, three bags seed.

COLD STORAGE LILIES

ALL LIVE AND UP-TO-DATE FLORISTS GROW THEM

The forcing of cold storage lilies is no longer an experiment. If you have not already grown some of these we can refer you to hundreds of florists who make a success of this method and have lilies "all the year around."—The same as Lily of the Valley.

Our lilies are bought for and placed in cold storage for the express purpose of delivering bulbs in the summer time.

LILIIUM longiflorum and giganteum take about two months to bloom from time of planting from cold storage. Speciosum from five to six months, so that longiflorum wanted for Thanksgiving and Christmas should be planted about Oct. 1st, and speciosum and auratum about July 1st.

We have limited quantities of the following varieties on hand and offer subject to being unsold and at the prices named; Will hold not later than Oct. 1st, for our customers without any additional charges for cold storage. **ORDER TO-DAY.**

All cases are repacked before shipment.

LILIIUM LONGIFLORUM GIGANTEUM—Cold storage.	per	per

PLANT CULTURE

The Best Book for the Plant Grower \$1.00

A. T. DE LA MARE PTG. & PUB. CO. LTD., 2-8 DUANE STREET, NEW YORK.

CHICAGO.—The Leonard Seed Company reports business as about normal for the season notwithstanding the brilliant opening with the advent of the remarkably warm weather at an unusually early date. The onion set prospect is good though somewhat backward as a good stand has been made and warm weather is all that is now required to develop the crop. The prospect for turnip seed business, which is now opening, is good.

The W. W. Barnard Company reports June 1 seed account collections as remarkably good which indicates general prosperity throughout the trade. A. H. Goodwin, vice-president of the company, has just returned from their pea fields near Sturgeon Bay, Wis., and though all pea crops are backward they show a universal good stand.

J. C. Vaughan is still in New York. At the Randolph street store, owing to the cool weather business has continued particularly good over an unusually long season.

From present indications there will be a good delegation of Chicago seedsmen at the meeting of the Seed Trade Association in New York, June 25-27, all the principal houses signifying intention of having one or more representatives there. From farther west some of the dealers who would like to be present write that owing to the lateness of the season they will be unable to leave their business.

Peter Hollenbach, after spending a few days among the onion set growers making a personal inspection of the progress of the crops, has been over in Missouri where he has other business interests.

Winterson's Seed Store is having a heavy trade in bedding plants.

W. K. W.

IOWA SEED DEALERS ORGANIZE.—The seed merchants of the State of Iowa met at the Chamberlain Hotel, Des Moines, Wednesday of last week, and formed the "Iowa Seed Dealers' Association." There were present eighteen persons representing the following firms: Hamilton Brothers, Cedar Rapids; O. A. Talbot & Company, Keokuk; Sioux City Seed & Nursery Company, Sioux City; Adams Seed Company, Decorah; M. L. Webster, Independence; Shugart-Ouren Seed Company, Council Bluffs; Younkerman Seed Company, Council Bluffs; J. W. Ratekin, Shenandoah; A. A. Berry Seed Company, Clarinda; Henry Fields, Shenandoah; N. J. Burt & Company, Burlington; E. J. Hohberger and Iowa Seed Company of Des Moines.

The organization was completed by the election of Chas. N. Page, president; Henry Fields, vice-president; W. C. Adams, secretary, and J. T. Hamilton, treasurer. The executive committee consists of the president, secretary, treasurer, and H. A. Johns of Sioux City and J. W. Ratkin of Shenandoah.

A SEEDSMAN HONORED.—At the same meeting at the Michigan Agricultural College at which the degree of Doctor of Laws was conferred upon Editor Collingwood, noted last week, the degree of Doctor of Science was conferred upon William W. Tracy, Washington, D. C., in recognition of his work for the betterment of practical seed growing. We think that, as the honor to Dr. Collingwood was the first time that the value of the work of an agricultural editor has been so recognized, so in the case of Dr. Tracy it is the first time that the really scientific character of such practical work as he has been engaged in has been thus acknowledged.

NOTES FROM DENMARK.—The cauliflower plants for this year's crop have wintered fairly well, but the cabbage planted November last, especially the Danish Roundhead (short), have been damaged by black frost; 30 to 40 per cent. of the heads died off, and this may seriously influence the crop of seeds.

A Most Extraordinary Man.

An answer to a lady who requested to know "Why a Gardener was the most extraordinary man in the World? Because no man has more business on earth, and always choosing good ground for what he does." He commands his own Thyme, is Master of the Mint, raises his own Celery every year, and it is a bad year, indeed, that does not produce him a Plum. He meets with

Dr. W. W. Tracy

more Boughs than a Minister of State, has more beds than a French King, and has in them more Painted Ladies', more genuine Roses and Lilies than are to be met at a Country Wake. He makes Raking his business more than his diversion, as many fine Gentlemen do, but makes it an advantage both to health and fortune, which is the case with few others. Though plain in his own dress, with his Bachelor's Buttons, yet he encourages Coxcombs with Princes' Feathers, and greatly admires the Pride of London, and with pleasure beholds Love-lay-bleeding under a Weeping Willow. His Wife has as much of Lad's Love and Heart's Ease as she can desire, and never wishes for Weeds. Distempers, fatal to others, do not hurt him for he thrives most with a Consumption. He is a great Antiquarian, having in his possession Adam's Needle, the Tree of Life, Jacob's Ladder, Solomon's Seal, the Holy Thorn, Venus's Looking Glass, The Arms of France, and the Crown Imperial. He is well acquainted with the Globes, and has crossed the Line oftener than any Mariner in Great Britain. He is the King of Spades, is happy with his beautiful Queen Margaret, can boast of more Laurels than Alexander the Great and of more Bleeding Hearts than your Ladyship; but his greatest pride and the world's envy is that he can have Yew whenever he pleases.—From Cannel's Floral Guide, 1907.

300,000 ASTER PLANTS Queen of the Market, in white, pink and mixed colors; late branching, white, pink, lavender and mixed colors; Ostrich Feather, Ray Aster and Victoria, strong, stocky plants, ready to plant out at \$2.50 per 1000; in 5000 lots, \$2.00 per 1000.
Gustav Pitzonka, Bristol, Pa.

BARGAIN TO CLEAR

TUBEROUS ROOTED BEGONIAS
Fine large bulbs. Single Orange, White, Red, Yellow and Mixed. Price, per 100, \$1.50, per 1000, \$14.00.

CYCAS REVOLUTA STEMS
Very profitable. Pot on for early winter. Assorted cases, 1 to 5 lbs., and 5 to 10 lbs. Price, 10 lbs. \$1.00, 25 lbs. \$1.00, 100 lbs. \$7.25, per case (300 lbs.) \$21.00.

ASPARAGUS PLUMOSUS NANUS SEED
True greenhouse grown, of good tested germination. Price, 50c. per 100, \$3.00 per 1000.

GIANT PRIMULA SEED. Finest Mixed, 1/2 trade pkt. 50c., trade pkt. \$1.00. **Kermesina Splendens**, grand crimson, 250 seeds 50c, 1000 seeds \$1.75. **Alba Magnifica**, soow white, 250 seeds 50c., 1000 seeds \$1.70. **Peach Blossom**, 250 seeds 50c., 1000 seeds \$1.70.

PRIMULA OBCONICA. Grandiflora, mixed, trade pkt. 30c. Grandiflora, Rosea, trade pkt. 40c. Grandiflora, Pure White, trade pkt. 40c.

CATALOGUES RECEIVED.

VAUGHAN'S SEED STORE, Chicago and New York.—Illustrated Catalogue of Bulbs, Seeds, Plants, etc.

J. M. THORBURN & COMPANY, New York.—Wholesale Trade Price List of Turnips, Radish, Spinach, and other Seeds.

KROESCHELL BROTHERS COMPANY, Chicago.—Illustrated Catalogue of High Grade Greenhouse Boilers. Gives much valuable information about heating and piping greenhouses. The many testimonials printed show the popularity of this firm's boilers among florists.

BILTMORE NURSERY, Biltmore, N. C.—This is one of the handsomest catalogues that has come to our desk this season. The offerings are most comprehensive, each subject enumerated being fully described, the common as well as the botanical name, native country, etc., being given, rendering the catalogue valuable as a work of reference. The pages are profusely and beautifully illustrated with half-tone engravings, specially prepared for the pamphlet, and enhance its value in a marked degree. The various groupings include Cone-Bearers or Evergreens, Deciduous Broad-leaved Evergreen Trees, Broad-leaved Evergreen Shrubs, Deciduous Shrubs, Roses, Miscellaneous Shrubs, Vines, Ornamental Grasses and Bamboos, Hardy Ferns, Aquatic and Bog Plants, Herbaceous Perennials. These are followed by the Price List and a complete index.

To be Up-to-Date

THE cultivation of Water Lilies and other Aquatics is yearly attracting more and more attention. These beautiful subjects interest **THE COMMERCIAL FLORIST** because, when in season, of their great adaptability to window display and other forms of decoration to which, in the warm Summer days, the flowers lend a cool and refreshing influence all their own, to say nothing of their many, varied, and gorgeous colors.

THE PARK SUPERINTENDENT, always alive to cater to the desires and predilections of

the people, is installing Water Gardens in these public breathing spots all over the country, thus meeting a popular demand and providing park frequenters with an unsurpassed treat in Floraldom which is highly appreciated.

THE LANDSCAPE GARDENER, the Private Gardener, and the Estate Superintendent, all acknowledge the great value and beauty of Water Lily ponds and basins in well executed garden designs, and there is now hardly a garden of any pretensions without this form of aquatic adornment.

THE AMATEUR GARDENER and plant lover generally is no less enthusiastic over this class of charming plants, the cultivation of which is so peculiarly fascinating and healthful.

In consequence of the foregoing facts, there has arisen a great demand for plain, practical instructions on the culture of Water Lilies and other Aquatics. To meet this condition we now present

THE BOOK OF WATER GARDENING

MR. BISSET, who is superintendent of the beautiful estate "Twin Oaks," belonging to Mrs Gardiner Hubbard, at Washington, D. C., has been a devoted, lifelong student of this class of plants, has originated some of the handsomest seedling Nymphaeas now in cultivation, and has under his charge at the present time one of the largest and most complete Water Gardens to be found in the United States. In this book he gives the results of his many years of experience, and it can safely be asserted that never before has the subject of Water Gardening been so concisely yet so fully and interestingly treated. The teachings of Mr. Bisset, faithfully followed, can lead but to success.

Controlling Plant Diseases and Insects.

The Maryland Agricultural Experiment Station at College Park, Md., has just issued a very serviceable bulletin (115) on the subject of the "Control of Insect Pests and Diseases of Maryland Crops." A portion of the pamphlet is devoted to brief descriptions showing how some of the more common diseases of plants may be recognized, a list of insects attacking the plants specified with illustrations, as well as setting forth suggested remedies therefor, from which we quote as under:

Aster.
YELLOW.—China asters are affected with a disease similar to peach yellows. Destroy affected plants.

Calla.
SOFT-ROT.—(*Bacillus aroidae.*) The leaves rot off near the ground. Select healthy corms for planting and change the soil of beds every three or four years.

Carnation.
DISEASES.

RUST. (*Uromyces caryophyllinus.*) Small, dark purplish brown spots breaking through the leaf surface. Destroy diseased portions and use clean stock for propagation. Spray with Bordeaux mixture adding 2 pounds soap to the barrel. Some varieties are more subject to the rust than others.

SPIONOMOSE. Many small brownish spots and yellowing of affected leaves due to aphid punctures and associated with bacteria appear on the foliage. (See methods of controlling aphids.)

LEAF MOULD. (*Heterosporium echinulatum.*) Causes dark, unsightly often ring-like spots on the leaves, etc. Spray with Bordeaux mixture every two weeks, adding soap to make it stick.

STEM-ROT. (*Rhizoctonia.*) No good remedy.

Some other less prominent fungous diseases are leaf spot, anthracnose and wilt. Also a disease in which the buds mature but fail to open, has been seen in Maryland.

INSECTS.
APHIS. (*Aphis sp.*) Plant louse, injures by sucking. Apply fir-tree oil, 1 to 20, or common soap, 5 ounces to one gallon water.

Chrysanthemum.
DISEASES.

LEAF-SPOT. (*Septoria chrysanthemi.*) Dark colored spots on the leaf. Spray with Bordeaux mixture or if it is undesirable to discolor the leaves with this spray, use ammoniacal copper carbonate or other clear fungicide.

RUST. (*Puccinia chrysanthemi.*) Dark brown, raised spots as large as a pin head scattered over the leaves. Pick off and burn rusted portions and use healthy shoots for propagation. Often quite serious.

INSECTS.
APHIS. (*Aphis sp.*) Plant louse, injures by sucking. Apply fir-tree oil 1 to 20, or common soap solution.

TWO-SPOTTED RED-SPIDER. (*Tetranychus bimaculatus.*) See geranium.

Geranium.
A rot causes the young plants to die in the cutting bed and a leaf-spot mars the foliage. Both are caused by bacteria. Use clean soil and disinfect the benches. Frequent spraying with Bordeaux mixture will keep the diseases down.

MEALY BUG (*Pseudococcus citri.*). Injures by sucking. Contact insecticide. Kerosene or soap emulsion.

RED SPIDER (*Tetranychus bimaculatus.*) Spray with soap and water or water alone, hitting both sides of leaves. The mite seems to thrive in dry atmosphere.

Lilac.
POWDERY MILDEW (*Microsphaera alni.*) gives the leaves of lilac a grayish coating in Autumn. It rarely does harm. Sulphur dust should control it.

OYSTER-SHELL SCALE (*Lepidosaphes ulmi.*) Common on this plant, see bulletin 111, of this Station. Apply 15 per cent. kerosene emulsion middle of May.

Rose.
DISEASES.

POWDERY MILDEW (*Sphaerotheca panosa.*) The leaves are somewhat wrinkled or curled and covered with a whitish powder. Troublesome in greenhouses when there is uneven temperature. It is bad on some varieties especially the Ramblers outdoors. Dust with sulphur outdoors or spray with Bordeaux mixture. Inside observe proper regulation of heat and spread sulphur paste on heating pipes.

LEAF-BLOTCH (*Actinonema rosea.*) Radiating black patches appear on the leaves and soon cause them to drop. Spray with Bordeaux mixture or one of the clear fungicides in Midsummer.

RUST, LEAF-SPOT AND ANTHRACNOSE are less troublesome.

INSECTS.
ROSE SCALE (*Aulacaspis rosea.*) Injures by sucking. Apply strong soap solution. Cut out badly infested branches.

PLANT LICE (*Aphis sp.*). Injures by sucking; apply 10 per cent. kerosene emulsion.

ROSE CHAFER (*Macrodactylus sub-spinosus.*) Hand picking. Continuous application of arsenate of lead may assist in controlling them.

Violet.
LEAF-SPOT (*Alternaria violae.*) Circular brown spots on the leaves. This and other violet diseases can best be controlled by growing only the strongest and healthiest plants that can be secured and keeping them under the best condition throughout the year, removing or burning all diseased parts and disinfecting the houses and beds.

BLACK OR BROWN APHIS (*Rhopalosiphum violae.*) Plant louse; sucks leaves. Fumigate with hydrocyanic acid gas. Seek further advice before using.

TWO-SPOTTED RED-SPIDER (*Tetranychus bimaculatus.*) See geranium.

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.
 Orlando Harrison, Berlin, Md., president; J. W. Hill, Des Moines, Ia., vice-president; George C. Scager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

HORTICULTURAL SOCIETY OF MISSOURI.—We acknowledge, with thanks, receipt of the forty-ninth annual report of this society. It is replete with information of the most valuable character to the horticulturist. Excellent portraits of the officers, and other illustrations, are included. L. A. Goodman, Kansas City, Mo., is secretary.

PACIFIC COAST NURSERYMEN'S ASSOCIATION.—The fifth annual meeting of this association will be held at Salem, Oregon, July 10, 11 and 12, 1907, in connection with the Salem Cherry Fair (under the auspices of the Marion County Horticultural Society). Many prominent horticulturists will attend, and there will be the finest display of cherries ever seen on the Pacific Coast; a large number of silver cups having been offered as premiums. The cost of annual membership is \$2.

Special railroad rates have been granted. Those intending to be present, should address either C. A. Townson, Tacoma, Wash., or F. W. Power, Oregon Nursery Company, Salem, Ore., president of the Association.

NURSERYMAN SHIPPERS' TABLE, Supplement Number 2.—This very useful document has just been issued by E. Albertson, special representative of the American Association of Nurserymen, and W. C. Reed, chairman of the association's transportation committee. It gives full information regarding express rates on plants, trees, etc., setting forth in full Classification No. 17, revised to November 15, 1906. Among other things, it is stated in regard to general special rates, that these "take the place of the special twenty per cent. off from merchandise rates which have been applied heretofore on trees, plants, etc., but have now been abolished. These general special rates will be found in almost all cases fully equal to, and in many cases, much better than the twenty per cent. off."

Regarding freight rates, the table states that, so far efforts have been unavailing in the matter of securing cancellation of the exceptions (to the Western Classification applying 16,000 min.) by the Transcontinental Freight Bureau to shipments along the Pacific coast; also as to effecting a change in the classification of apple and locust seed. These subjects are still under consideration.

Attention is called to the following matters connected with billing goods:

A mistake so often made by shippers in billing such plants as blackberry, raspberry, gooseberry, currants, shrubs, etc. (which are dormant plants and should take same rate as trees) as plants which take first-class rate, is one that should be avoided, as claims on account of same are hard to collect and usually not large enough to pay to bother with, yet in the aggregate amount to quite a heavy loss. If billed as dormant plants would take tree rate, but is more confusing than if simply billed trees, to which class they belong, and save danger of confusion.

"Another mistake often made is in not inserting the county on the billing—often there are two or more railroad or express offices of same name in state and shipments are held up till county is ascertained—this often causes losses.

"Sometimes shipments are directed to points not on either railroad or water transportation routes and sometimes billed to some nearby station (freight or express). Instead of so directing they should be marked to freight or express station, and postoffice of consignee, if different, also put on shipment so proper notice can be given on arrival of goods.

"All shipments should be plainly marked and on express shipments weights should be marked on package, while on freight shipments weight should be given on shipping bill or bill of lading.

"All shipments entitled to special rates should have marked plainly on packages contents of same.

"Where possible routings should also be marked on all shipments and bills of lading.

"By noting carefully above suggestions many mistakes, delays and overcharges can be avoided."

Fruit Injured by Bordeaux Mixture.

Fruit growers who desire to prevent or lessen injury from spraying apple trees with Bordeaux Mixture should send to the New York Agricultural Experiment Station at Geneva for Bulletin No. 287. By a very thorough series of tests it has been proven that there is such injury, and that it may sometimes, though not often, do as much harm as the apple scab the spraying is intended to prevent. The test proved very clearly that it is the Bordeaux Mixture that causes the injury, not the arsenites used with it, that weather conditions have much to do with the development of the russetting of the fruit and spotting the leaves which characterize the trouble, that an excess of lime is not a preventive of the injury, and that strong Bordeaux causes greater injury than weaker mixtures. The Station recommends spraying in dry weather, if possible; and suggests a trial of the 3-3-50 formula for Bordeaux.

Flower Spray of Apple

Seasonable Topics.

In early Summer, when the young wood of trees and shrubs is half ripened, it is a good time to make cuttings of it, placing them in a greenhouse, when they root very soon. Potted then there are nice plants by Fall, ready for planting out the next Spring.

Deutzia Lemoinei is in growth intermediate between that of *D. gracilis* and the taller kinds represented by *D. scabra*. It is a good thing, the growth fitting it for many positions, and its flower-laden shoots proving most useful for florists' use. It flowers rather later than *gracilis* and before *scabra*.

The fruit of *Columbus* gooseberry is large, greenish yellow, and it ripens in this vicinity—Philadelphia—about the first week in August.

Viburnum plicatum is without doubt the most useful one for florists to grow. Another variety, *V. rotundifolium*, has larger and whiter heads, but it is not quite as hardy as *plicatum*, sometimes losing an inch or two of the ends of its shoots in hard Winters. Where it does well it is a beauty.

The cool Spring has been a boon to the nurseryman. Usually May is one of his most trying months, because of the dry weather than generally accompanies it. This year rains have been frequent, keeping up sales until June, and enabling his own and his customer's stock to get good hold of the soil. It should mean stands of the finest stock for Autumn selling.

Memorial Day Flowers.

The cold weather of May brought about a curious combination of flowers for Memorial Day. For the first time within the recollection of the writer the Grand Army Posts were able to add lilacs to their list of available flowers. Every season shows that among hardy shrubs the old reliables are snowballs and weigelas. These are bulky and lasting, which suits for the making up of bouquets, for which purposes the Posts here use flowers. Usually the wives of the veterans meet the afternoon preceding Memorial Day and make bouquets, one for each grave, and when they are over 1,200 such bouquets required, as is the case in Germantown, Pa., something that will make a show quickly is wanted, and this want the snowball and the weigela fills. *Spiraea Reevesii* was also in good shape for cutting, as well as the snowballs. Both the old snowball and the *plicatum* were available, but neither one was in perfection, and weigela was hardly open as well as it should have been. Another flower which helped out well was the flag. Great quantities of the *Iris florentina* were used; also of the blue veronica.

A great deal of the *Viburnum tomentosum* was available, but it did not meet the requirements of the occasion. It is handsome on the bush, but quickly fades when cut, as do spiræas.

In addition to the flowers required for the cemeteries the Posts use large bouquets for the empty chairs representing the deceased comrades of the year, on the occasion of their services on the Sunday preceding Memorial Day. Quite a number of flowers are employed for this—roses from greenhouses and outdoor stock. As one Post alone had 19 empty chairs, and the bouquets are of large size, there is a big sum of money necessary to pay for all the flowers required.

Besides cut flowers thousands of pot plants are used, largely geraniums. These are contributed by children of the public schools, being bought of neighboring florists. The Germantown Post had over 1,000 such pot plants, and as the plants would represent a cost of 10c each, it gives an idea of what a call Memorial Day makes on the florist and the nurseryman.

JOSEPH MEEHAN.

An Apple Tree in Full Blossom
 As grand a sight as any afforded by our finest flowering shrubs or trees,
 and an inspiration to the horticulturist

ROSES

The weather so far has been very favorable to the rose grower; the late frosts holding back outdoor flowers of all kinds, and at the same time enabling the grower to keep his buds in good color and size though it has been necessary to have the fires going a little all the time in order to keep the stock clean.

It is still too early to think of re-planting, as for the next week or two there is a good demand for clean stock, and the prices will average much better than next Fall, so there need be no hurry about this work. Of course the larger plants have it well under way, but here it is a matter of necessity and not of choice; for if planting be not started early the work would all come at one time, and as help is usually scarce, it would be impossible to get through in time.

Keep the young plants moving; do not allow them to get potbound. If in a smaller size than 4-inch pots, they can be put into that size, and if there is danger of them becoming potbound therein, the plants can be knocked out, the ball rubbed off a little and repotted in the same pot, when they will keep on growing and be in fine shape five or six weeks later. If the tops are very bushy, pinch out the taller shoots. After this repotting give a good soaking, and then keep the plants a little dry till new roots appear, when more water can be afforded; but do not allow them to get dust dry.

On bright days, look over the front rows both morning and afternoon, and water the dry plants; as these are exposed so much they require a large amount of water. Never syringe the pot plants when the roots are dry, or a severe scalding will result. Watch out for red spider on young stock; this pest easily obtains a foothold, and is hard to dislodge, so syringe on every favorable opportunity, being careful to get at the bottom leaves and still not wash the plants out of the pots.

It is needless to say that the plants must be fumigated quite often to keep green fly in check. Remove all buds as soon as they reach the size of a pea, taking off at least one leaf with them to insure a stronger break.

The old plants, of course, do not require such great care now, only give all the food you can, and large quantities of water, keep the stems away from the glass and out of the walks; and if disbudbed, the buds will be much larger, though this work is usually neglected judging by the appearance of most places at this time of the year. PENN.

ROSE CANCKER IN CENTRAL AND NORTHERN EUROPE.—Rosarians must be on their guard against a fungus (*Coniothyrium*) which is the cause of a canker on the shoots of most descriptions of the rose, attacking the stock as well as the variety that is budded or grafted upon it, says the Horticultural Trade Journal, England. This enemy is comparatively new in Europe, and is found in widely separated places in the German Empire, Austria and Silesia, and is the most desolating malady yet known among roses. In the last-named province the disease has been remarked for the last ten years in many gardens, and is quite independent of the kind of soil, or nature of the manure applied. The only species hitherto immune are *R. rugosa* and *R. centifolia cristata*. The fungus constituted as being *Coniothyrium Wernsdorffiae*, spreads in the bark, and later infects the wood, causing brown, and eventually, black patches, and the certain death of the plant. The removal of the infected shoots, as soon as the patches are noticed, down to sound tissue and at once burning them is recommended, dressing the wounds made by the knife with grafting wax. So far, however, no certain remedy has been discovered that will stop its ravages.

THE WEEK'S WORK.

Timme's Timely Teachings.

In The Field.

Most growers with a large amount of glass-covered area have at their disposal also considerable space suitable for open air culture. Many kinds of plants and any number of species, ordinarily classed as true greenhouse stock, admit of being raised to perfection in the free soil of a well-tilled field. Though it is entirely impossible to fully meet the exact requirements of each and every one of the greatly varying kinds of plants as regards choice of situation or texture and condition of soil, the freedom of growth and unrestricted exposure, as afforded by a temporary stay in the open, alone seem to impart a degree of vigor and unwonted vitality to the plants rarely found in those continually kept under glass. Field-culture as a means of growing young stock quickly and with least expense into saleable size and perfect form gives proof of its unflinching efficiency from year to year. Thus we grow roses, carnations, hydrangeas, stevias, vincas and a number of other kinds of forcing and potted plants into flowering size and serviceable condition within the short period of but a few months. Nearly all plants of the regular greenhouse species reserved for stock should be planted out in the open field and be given plenty of space and good cultivation. While vincas, carnations and the hardier kinds of stock, including dormant roses, could and should be planted out quite early in the Spring, a host of others, such as pot-grown, greenhouse raised young roses, bouvardias, ficus, crotons and all young stock from the intermediate and tropical sections, should never be planted in the open before the season is well advanced—a mistake often made and only accounted for by the great need and prevailing scarcity of indoor and frame room in early Spring. Now, in the middle or at the end of June, it is time to attend to the removal of tender plants from house or frame to the open field. This year especially has so far proved an unfavorable one for an early exposure of half hardy or tender stock and many risks have been run, in most cases needlessly.

Good, thorough cultivation plays a great part in the making of fine stock by field raising. It includes in the first place the best of care in the preparation of the ground set aside for this particular purpose. If not naturally good, it should as far as possible be made so by adding to it those ingredients in its preparation which will improve its character and fertility. Assuming that the land is in good condition for the reception and culture of such valuable stock as here considered, good cultivation then means frequent but careful hoeing, the prevention or destruction of weeds, worms, insects and disease, the staking and tying up of some kinds and the stopping or cutting in of others, the marking or labeling of sporting or abnormal growth, the removal of premature buds or withering flowers and finally, the proper attention in the matter of watering and sprinkling. Many strips of land in garden or field stocked with plants for the greenhouse and to be benched or potted up later on, as seen here and there during the Summer, are in a condition which radically disproves the layman's opinion as to the florists' superiority in gardening. The presence of abounding luxuriant weeds in a cultivated field proves two things: a high state of fertility in the soil and un pardonable neglect on the part of the cultivator to profit thereby. Clean appearance alone does not furnish the principal reason for keeping down weeds. It is a fact, hardly ever deemed worthy of first consideration, that weeds allowed to gain foothold and headway among and about cultivated plants will, in every instance, soon get the better of these as regards moisture and nutriment from the soil and room, light and air above it. Much of the stock grown outdoors, even by professional florists, and even by such as have plenty of good land all around them, is planted with barely enough room between rows and plants for unhindered spread, too closely for anything like good cultivation.

In the Greenhouses.

We are now entering upon a season when the interior of our plant houses presents its most uninviting aspect; scattered bunches of picked over plants here and there, empty pots not yet gathered up and put away in orderly manner, benches partly or entirely bare of anything attractive in the plant line, some undergoing reconstruction, others being got ready for refilling with new stock for another season's yield. A not altogether pleasant odor pervades the establishment. Hammer and saw, now relieved from duty in the packing room, and file and chisel, industriously used in the repair or rearrangement of piping, are now or will soon be busily employed in filling the houses with clatter and clangor. This is a period of multifarious activity, when much hard but necessary work must be done, a time when clever dexterity and wise supervision do wonders in the performance of duties inevitably connected with the culture of plants under glass.

Much of the work here alluded to should be taken in hand as soon as ever possible, not as is so often the case, delayed until the latter part of Summer when we are hurried on by the near approach of an untoward season to a degree incompatible with thoroughness of workmanship or the timely housing and subsequent welfare of stock. As a matter of fact the time allowed for bench building, reconstruction and repairs of all kinds must nowadays be cut as short as possible, and is becoming more limited from year to year. Empty and non-producing glass structures, as could be seen throughout the entire Summer season in times gone by, are a standing reproach to the thrift of their owner.

Speed and despatch, however, should go hand in hand with thoroughness. Every bench before being refilled, should be examined as to its soundness, should undergo thorough-going repairs, if found to be necessary, or be re-built when any sort of patching up becomes a hopeless task. The same advice holds good when applied to any part of the heating apparatus, an entire house or a block of houses.

Stock of whatever kind coming very near to being worthless or unsalable, left-over and crippled plants of questionable value and short-lived hedging or bulbous stock now beyond its usefulness, should not be allowed to stand around in unsightly array and in the way of preparations for the coming season. Nor should such rubbish be offered for sale at any old price; it does no good, hurts your reputation as a good grower, do what you will in the way of explanation, and adds so little to your net returns and so much to the well founded reasons for complaint from quarters outside and within the trade, that transactions of this kind must seem a most inglorious ending of a most prosperous season.

Potted plants of species usually offered at holidays, having remained unsold but worthy of being kept on for next season's forcing, will with few exceptions do better during the Summer when given a somewhat sheltered and partly shaded position out-of-doors, the pots sunk into the ground or some loose material as straw, hay, tanbark or spent hops, to prevent the rapid drying out of the roots. On the other hand, we see many fine specimens from hothouse and greenhouse transferred to the open every Summer of such plants as bougainvillea, camellia, phyllocactus, epiphyllum, palms and large leaved decorative plants, which would fare far better if kept in the moderately moist atmosphere and under the lightly shaded glass roof of an airy greenhouse. Most tropical plants may be treated in like manner during the hot Summer months, thus giving room for repairs and a thorough clean up in show or hothouse.

Newly started young stock yet in flats or small pots now needs good attention as to watering, shading, transplanting and ventilation. Outdoor frames now nearly emptied by the brisk demand for all sorts of bedding material, afford the best place at present for all or most of this young stock, destined to help fill the houses anew and most easily injured by neglect.

It is now time to finish preparing borders, benches and compost for the planting of roses, chrysanthemums, violets, carnations, gardenias, amilax, asparagus, maidenhair and Boston ferns.

FRED W. TIMME.

FERNS

MY SPECIALTY

CIBOTIUM SCHEDEI, King of Ferns; looks, grows, keeps and sells good. 2-in., \$3.00 per doz; \$20.00 per 100. 4 in., 35c. each; \$4.00 per doz.; \$30.00 per doz.; \$150.00 per 100. For larger sizes, prices on application.

An Appreciation.

Editor Florists' Exchange:

Allow me to compliment you upon the splendid reproduction of the photograph of my seedling melon; it certainly made a fine picture and came out beyond my expectations. The seedling is one of the most satisfactory melons I have ever handled; for cropping, size, and quality it is O. K. Wm. Turner.

A Peony Check List.

This very valuable document has now been issued by the New York State College of Agriculture—Department of Horticulture—Cornell University. It includes the leading varieties of peonies, of which authentic descriptions can be found in horticultural literature. The number of names listed is 2,706.

We congratulate the Cornell Experiment Station and the Committee on Nomenclature of the American Peony Society, under whose joint auspices the work has been prepared; and especially are the thanks of the horticultural world in general, and of peony growers in particular, due to John Eliot Coit, of Cornell, on whose shoulders the labor of compilation has largely fallen, for his painstaking, exhaustive efforts, which have resulted in the most excellent production now presented. As Professor John Craig well says in the preface to the list, "the Committee on Nomenclature was fortunate in being able to co-operate with the Experiment Station, and the Experiment Station was fortunate in finding a man willing and equipped for the work."

It is pointed out that the check list is neither complete nor perfect. It is sent out for the two-fold purpose of giving a fairly comprehensive and accurate presentation of references to peony names and pictures, and making some attempt at a standardized method of spelling. Mr. Coit and those associated with him will welcome criticism and suggestion. Either will manifest interest in the enterprise, and this is vital.

The following particulars, taken from the introductory chapter, will give an idea of the plan and scope of the Peony List:

"The two chief purposes of the peony investigation are: (1) to bring order out of the confusion which exists in regard to the names of varieties, and (2) to offer simple but complete and accurate descriptions for the short and unsatisfactory descriptions of the earlier writers. The information which is being gathered in connection with this work falls naturally into two classes, viz., that which is gathered from books, periodicals, manuscripts, correspondence, etc., and that which is obtained from direct observation of the plants themselves. The facts presented in this check-list belong to the first mentioned class. It is intended to publish a later bulletin containing all the facts gathered from the plants themselves.

"Every looming season, scores of new seedlings receive names, many of which instead of being new have already been used over and over again with increasing confusion. This check-list should act as a guide to prevent mistakes of this kind in future. It should also serve as a standard for spelling in peony nomenclature. The spelling of the varietal names of peonies is surely in a distressingly bad condition. An average list received by us from a well known peony grower contained 14 names, 30 of which were incorrectly spelled. In nearly every case in this check-list the earliest authentic publication has been adopted as the correct spelling.

"This check-list also indicates all those varieties which have been found to be illustrated, the place where the picture may be found, and states whether the illustration is a half-tone or a colored plate.

"The success of an old variety may be estimated to some extent by a study of this list. Old varieties which have been mentioned many times in print and are represented by many plots in the Cornell Experiment (which indicates that they are to-day offered for sale by many nurserymen) may usually be accepted as successful and valuable varieties.

"To examine all current trade-catalogs has been impossible, therefore as fair a representation of them as practicable was selected, and an effort was made to secure catalogs from all those who made a specialty of peonies.

"We wish to acknowledge the valuable work of A. H. Fewkes, the secretary of the American Peony Society, who compiled the references to Kelway's early catalogs and secured the original Japanese names of many varieties which have been obtained from Japan. Each one of his references has been credited to him thus: 'Fewkes' MSS.' A. Dessert of Chenonceaux, France, has also compiled much valuable information as to early European varieties, and his list has for the past year or two circulated in typewritten form among the members of the American Peony Society serving as a check-list or guide. Many errors, due to copying, have crept into this list, yet it has been the most reliable list available up to the present time. Every entry in Mr. Dessert's list has been incorporated into this check-list and credit given to Mr. Dessert thus: 'Dessert's MSS.' These two are the only manuscripts which have been used in compiling this check-list.

"It was decided to have only one alphabetical scheme and to combine in it all varieties of herbaceous and tree peonies (moutans). References to the type species are treated as though the specific name was a varietal name as far as alphabetical position is concerned.

"This check-list is horticultural in its nature rather than botanical. It differs from a botanical check-list in several points. It is arranged alphabetically; the credit for a given variety is given to the originator (when known) instead of to the first describer as in botanical usage; few references to monographs or strictly botanical works are cited under the name of the species, such being reserved for a later descriptive publication.

"Nothing whatever is attempted in this paper toward classification or a working out of the synonymy, for the plants themselves must be made the basis for such work. All names whether synonyms or not are listed and their references given.

"In several catalogs not bearing date of publication were not considered. In some cases the dates were secured through correspondence; in other cases where the date of peony names was manifestly spurious, the catalog was rejected on the ground that it was not dated.

"We wish in this connection to call attention to a point which is often ignored by some of the growers. A varietal name should not be translated, but should retain the language in which it was first published. For example, Duc de Wellington should never be written Duke of Wellington. There is a peony originated by Guerin in France and named in French Reine (which means Queen Victoria). There is also another and very different peony originated by Kelway in England and named in English Queen Victoria. It will thus be seen that a translation of these names would lead to utter and continued confusion. A rigid adherence to this rule in the case of the Japanese and Chinese names would seem to entail a hardship on Europeans and Americans. Therefore for the sake of accuracy of record, these names are entered in this check-list in the original, while the final disposition of such names is a matter for the future deliberation of the Committee on Nomenclature.

"Another and very important source of error is the distribution of roots bearing carelessly written and illegible labels. The various shipments to the Cornell Station established this fact beyond dispute. Many of the lots bore labels which took hours of vexing and discouraging work to decipher, and many could not be read with certainty. Other lots, however, bore neatly printed labels which did not leave a shadow of doubt as to their wording. We wish to strongly urge the use of printed or at least legibly written labels, for we are convinced that a large amount of confusion may be avoided by due care in this particular.

"Another source of confusion is the common method of attaching the labels. Nearly every box of roots we received contained loose labels in the bottom, and our collection of unnam'd plants is therefore needlessly large. It is the common custom to cut off the old stalks about three inches above the crown, and to these smooth and slippery ends the labels are often loosely wired in such a careless manner that there is nothing to prevent their slipping off. In some cases the label is wired to a branch of the root. The roots, however, are very brittle and the branch bearing the label is often broken off.

"The best and most satisfactory way to label large peony roots is to use a label with a hole near one end. A stout cord is passed through the label and between the central or main forks of the root, and between the stub of the stalks, fitting closely down between the buds and securely tied. It is practically impossible for a label thus attached to become detached in any way without breaking the cord.

"Again, confusion sometimes arises directly in the nursery row itself, and this is often due to the fact that in digging, pieces of the fleshy roots are broken off and being overlooked are left in the soil to sprout up later and cause trouble. On this account it is advisable to rotate the crop and not to follow peonies with peonies the very next year.

"We regret to say that a part of the confusion exists as a direct result of the renaming of old varieties. This is done by careless, irresponsible or unscrupulous growers and dealers. These persons represent one of the greatest obstacles to our already too difficult task of bringing order out of chaos; they are a serious handicap to the horticultural progress of the day. Let us illustrate. On working over the trade catalogs, one came to hand which contained in its general list of herbaceous peonies ninety-seven names, no one of which had occurred previously in any of our lists or card indexes. No intimation was made in this catalog that any of these were new varieties, coming out of a clear sky, as it were. We grew suspicious and wrote to the firm for an explanation. Their answer was as guileless as it was interesting. 'Certainly,' they said, 'we bought a large job lot of roots without names and supplied the names ourselves that they might sell better.' It was with a large sigh of relief that we noted their catalog was not dated and on this ground it was at once consigned to the waste-basket. But in cases where the magnitude of this sin is fully realized by the offender, the spurious names may be masked and smuggled into long lists of orthodox names in such a way as to make it impossible in every case to single them out. We find that American catalogs are just as bad in this regard as the European, and the enormity of this offence should in some way be impressed on all those interested in peony growing on both sides of the Atlantic. We are placing this important matter thus boldly before the peony-loving public in order that a sentiment shall be developed which will frown down frauds of this kind. The best we can hope for is an honor system which will prevent any man smirching his own character and injuring his fellow grower by such unprofessional and dishonest action.

"As soon as the work of examining the various lists of varieties was begun, it became very evident that there was no uniformity or system whatever in the alphabetical classification commonly used. The first step therefore was to formulate a few rules for guidance which would insure uniformity and make the list easier to use. Our scheme was already worked out and in use at the time P. Rivoire's article appeared on the subject in the 'Revue Horticole' (May 1, 1905, p. 214).

If any difficulty is experienced in finding a name in the list, the following rules should be consulted:

Rules of Classification.

I. When a variety is named for a person, the surname shall be taken as the index word, followed by a comma with all the Christian names, titles, prefixes, etc., following.

Example: Guerin, Madam Jules.

II. Where a variety is not named for a person, the leading noun shall be taken as the index word.

Example: Queen, double Crimson.

III. Where all the words are adjectives or Latin words, they should be retained in the order in which they were originally published. Where the original order has changed from long usage, they should be cross-indexed.

Examples: Old double Red; Nobilissima superba alba.

IV. A possessive noun should follow the modified word with comma.

Example: Perfection, Richardson's.

V. In doubtful cases they should remain in the order in which they were originally published and be cross-indexed when necessary.

Example: Rose Brilliant.

S. A. F. O. H. Bowling Trophy

Donated by The Whillidin Pottery Co., Philadelphia, Pa.

VI. A variety which is named for an exposition at which it is shown, should be indexed under the word "Exposition" followed by the name of the exposition and any other words composing the name.

Example: Exposition de Lille, Triomphe de.

VII. After the surname the initial of the first name should be used for indexing, and if Christian names are all alike, Mr. should precede Mrs.

VIII. A varietal name should remain in the language in which it was first published until officially passed upon by this society.

"Note. One star before the name indicates that the variety has been pictured. The star is repeated in citing the reference to the place where it may be found. Two stars indicate a colored plate."

The subjoined page taken from the list will give an idea of its character generally.

OUR READERS' VIEWS

A Word With Job.

Editor Florists' Exchange:

"A little nonsense now and then
Is relished by the wisest men."

Environment not yet having overcome heredity, the human posey is still in the same old rut as when the above couplet was written, which accounts for the popularity of the intellectual treacle furnished by Job, John Birnie, the Ginger Jar Man, and occasionally by

JOHN G. ESLER.

Gladiolus America.

Editor Florists' Exchange:

We have been interested in the articles that have been appearing from time to time in your columns regarding Gladiolus America. There have certainly been some strong and telling points brought out in favor of America, and as it is such a valuable variety we are not surprised that different growers are trying to claim the credit for its production.

One of the writers, who signs himself "M. C.," makes a strong point against Mr. Christy and Mr. Groff when he says that if they had had this variety for so many years the bulblets would still be in their stock, and surely if America increases as fast as Mr. Groff claims, namely two to five thousand per cent., he would have a larger stock of it than anyone else in the world after growing it so many years.

We note what Mr. Groff says regarding his No. 119 seedling and Mr. Cowee's No. 869, and in regard to this would like to say that during the S. A. F. O. H. convention in Washington in 1905, Mr. Cowee showed our representative a seedling gladiolus that he thought might be the same as America, but after he had seen the latter staged, he changed his mind and said nothing more about it, as he plainly saw that his was an entirely different variety. If Mr. Groff is so sure that his No. 119 is identical with America wouldn't it be a good plan for him to send some gladiolus expert some of the bulbs for testing this Summer? Of course, it would be necessary for him to use the bulbs from his original stock which he has numbered 119.

He also makes the statement that a number of his customers claim to have received America in their stock during the past years. Would he have any objection to giving the names of some of these customers and let them speak for themselves? On the other hand, we know of customers who have purchased Groff's hybrids for several years and are willing to say that America was never discovered in any of these that they ever grew.

Regarding the contention of the variety being a cross between gaudavensis and Childsii, we would say that we are responsible for this part of the argument. Anyone familiar with gladioli, who has taken the trouble

to examine the bulblets as they are attached to the bulbs in the Fall, will find that they are inclined to be similar to the Saundersoni type, which species is one of the parents of the Childsii strain, and on these grounds we called it a cross between the gaudavensis and Childsii.

Floral Park, N. Y.

JOHN LEWIS CHILDS.

Reforming Trade Journalism.

Editor Florists' Exchange:

The policy of The Canadian Florist in eliminating the purely personal items from its columns, leads me to ask "what is news?" as applied to the trade journals. Is it the price lists? Or the essays (usually printed several weeks after being read)? Or the cultural articles? Or the reports of societies? These are all admirable in their way and purely impersonal, but I am extremely dubious if they will by themselves alone keep up anything but a very select circulation.

As I take it, advertising matter is the life blood of the trade journal and to secure this the subscription list becomes of paramount importance; to hold the same against all comers is doubtless a matter requiring a considerable amount of tact and ability, hence the question as to what is news must be of some interest to you and your subscribers.

My experience among florists leads me to believe that the "trade notes" (which are largely personal)

The Late Julius F. Kretschmar

form one of the chief items of interest among the craft and this is followed closely by the advertisements as we are all buyers at some time or other. Of course, personal items must be largely of local interest only, and what might interest Chicago highly may be of no moment in New York or San Francisco. But shall we on that account deny the Chicago man his little joke? For is not The Florists' Exchange national? Indeed are not there many in the trade who are known throughout the country, and who are loved and respected likewise; and are not their sayings and doings of general interest?

Again, do we not rejoice in the correspondence column and enjoy the "Homeric combats" between the mighty ones trenchant with pen and steeped in experience; and have we not time and again gained considerable knowledge of plant life and human nature thereby?

Speaking for myself, I loved to read the chatty, sunshiny articles on plant culture by our old friend Scott, so lovably human if not always wise, and deeply regret his inability to continue them. I love the direct, "toe the mark" epistles of John Birnie, Patrick O'Mara and many others whose personalities are unknown to me. I am glad when I see old "Phil" roll up a good score at the alleys, also when I learn there are occasional florists human enough to enjoy a ball game, or race-horse meet or even a pugilistic affair; and I trust it will be long before they may cease to do these things or be ashamed to have them recorded.

In conclusion, Mr. Editor, I believe the average florist to be a pretty fair sample of human nature, and the trade journals should be broad enough to swallow him down whole, giving him his journalistic food in "men's" full size doses and not "fear of giving offense capsules."

SAMUEL BATSON.

Julius F. Kretschmar.

Julius F. Kretschmar, one of the pioneer florists of the Flatbush section of Brooklyn, N. Y., died at his residence, 237 Lincoln road, on Saturday, June 8, 1907. Some years ago Mr. Kretschmar suffered a paralytic stroke, from which he never fully recuperated. He was, however, able to go around, and a day or two before his death witnessed the Sunday school children's parade in Brooklyn, returning home from which he was again stricken with paralysis and never rallied.

Mr. Kretschmar was born at Langensalza, Thuringia, Germany, on May 9, 1845. After passing through the public school, at the age of 14 years he entered as an apprentice in the business of his father, who was a florist, where he remained until he was about 20 years of age, coming to the United States in 1864, when he entered into partnership with his brother, Cuno, who had preceded him, and embarked in the florist business in Brooklyn, N. Y. In June of the same year they were reinforced by the remaining members of the family. The elder Mr. Kretschmar brought with him many European novelties in plants and seeds; among the latter being seeds of the now well-known smilax, and his firm might be said to have been the introducers into this country of that serviceable plant.

The property on which the greenhouses were built had advanced in value from \$7,000 to \$44,000 in five years, so the concern concluded to purchase other ground on East New York avenue, Flatbush, removed there in 1870, and built greenhouses. Mr. Kretschmar here began to interest himself in hybridizing petunias, producing several good double kinds. He was also the originator of the double zonal pelargonium Henry Ward Beecher.

In 1881 a change took place in the business, the deceased and his brother, Herman G., leaving the old establishment to their elder brother, Cuno, and starting a greenhouse plant at Clarkson street, Flatbush. During the occupancy of this establishment, the firm was noted for the excellence of the stock it produced, both in plants and cut flowers. Considerable attention was devoted to carnation hybridizing, one of the good varieties obtained being Ruth Cleveland. Owing to ill health, Kretschmar Brothers disposed of their plant in 1893 to Charles E. Koch, who now operates it. They then made a trip to Europe, and on their return the following year, located at West Nyack, N. Y., where they again entered the florist business. While here Mr. Kretschmar suffered his first stroke of paralysis; this was followed by others, and his health became generally impaired. Herman G., was also ill, and the Nyack place was disposed of, but through unforeseen circumstances had again to be taken over by Kretschmar Brothers, and is now being operated by two sons of Herman G.

Mr. Kretschmar was a member of the New York Florists' Club, and a life member of the S. A. F. O. H., and when in good health was a regular attendant at the meetings of each of these organizations. He was an enthusiastic bowler, having been one of the organizers of the Flatbush Florists' Bowling Society, in which he took particular interest when his health permitted. He was a pleasant, sociable gentleman, and was held in high esteem by his brother florists, and was unmarried. Funeral services were held at his late residence on Tuesday last; the body was cremated.

William Krumm, Sr.

William Krumm, Sr., seventy-six years old, who had been a resident of St. Joseph, Mo., for forty-two years, died June 2, at his home. He was formerly a contractor, but in late years had been engaged in the business of florist. He was a Mason and Odd Fellow, and is survived by several children.

Standard Roses.

In years past many attempts have been made to have success with imported standard roses, but always with unsatisfactory results. Various reasons have been assigned for the failure, the one most generally accepted being the exposure of the stems to the hot sun in Summer. There is but little doubt that this exposure is against the well doing of not only standard roses, but of many other standard trees and shrubs, the exposure of the stems being an unnatural one.

Attempts are now making to grow the standard roses grafted or budded on the Rosa rugosa stock, and so far with very promising results. This stock is an exceedingly vigorous one, and it seems likely it will endure the hot sun better than the old style stock, the Rosa canina. One thing that would add to the chance of full success would be the growing of these standards in partial shade, for, undoubtedly, it is the lack of it that adds to the difficulty of growing them.

J. M.

The Temple Flower Show, London, Eng.

The Royal Horticultural Society may be congratulated on the great success of what is now regarded as the most important horticultural event of the year. The attendance has been on the increase from year to year, and this year the receipts for admission considerably exceeded any former record. Among the visitors were about 200 nurserymen and others interested in horticulture from the continent. France, Belgium, Holland, and Germany were well represented. We were not favored with visits from any of the Royal Family, but the leading aristocracy were well represented; and the leading nurserymen from all parts of the Kingdom were there.

Taking the exhibits there were nearly 300 entries, but there was an absence of really startling novelties.

The hybrid spireas, Queen Alexandra and Peach Blossom, which were of lovely shades of pink, and came from Messrs. Gt. Van Waveren & Kruyff, Holland, were much admired and Messrs. Cuthush & Sons, who are the retail agents, hooked many orders. Among other things which sold well were the Japanese stunted trees. Messrs. Carter & Company's representative told me that they had done a larger trade than ever before.

ROSES.—These were a great feature, but in place of the large specimens of the hybrid perpetuals one used to see years ago, we now have the Ramblers and other decorative types. We have several additions to these. Paradise, single, pink with white base to petals, which are curled backwards, very free and likely to take a leading position. Aennchen Müller, a pretty pink semi-double, with twisted petals, is another which is likely to become popular; this has been well shown by Messrs. W. Paul & Sons. The new Baby Rambler from Dorothy Perkins, "Maman Levavasseur," shown by Messrs. Levavasseur & Sons, Orleans, France, was very pretty. It is a counterpart of Madame Levavasseur, with flowers of the same color as Dorothy Perkins. The same rose was shown by Messrs. Merryweather & Sons under the name of Phyllis, and as there is likely to be confusion by having two names so near alike the last would be the better name of the two. Another good rose which received an award of merit, was Dr. William Gordon, a large, full bright rosy pink variety, which should be a useful sort for cutting from. Queen of Spain, from Messrs. S. Bide & Sons, Farnham, was well shown; it is a lovely shade of blush with a rosy tint, a rose which ought to be useful either for market or the exhibition stands.

CARNATIONS.—These were never so extensively shown before at the Temple; all the leading growers came forward with really good exhibits, but nothing very special was seen in new varieties except H. Burnett's Marmion, a very large flower of a lovely shade of rosy red shading off to white. The flowers have more the appearance of a Malmaison, but Mr. Burnett says it is free flowering and a true Winter sort. The American varieties were most in evidence, and it is interesting to note that after being grown here for a year or two they improve in quality. Robert Craig, Fiancée, White Perfection and several others are much better than when first grown. Of English sorts Britannia will remain a favorite; and the Malmaisons are as popular as ever.

SWEET PEAS.—Very fine exhibits of these were made, H. Eckford maintaining his position as a leading grower. H. J. Jones had some promising seedlings; W. J. Unwin also had some very fine unnamed seedlings which we shall look forward to seeing again. C. W. Breadmore is another raiser who showed well. In many of the miscellaneous exhibits sweet peas were prominent, yet a few years ago it was rare to see them at this show.

FERNS.—These were not quite so extensively shown and there were no quite new varieties submitted. Messrs. T. Rochford & Sons staged some very fine plants of *Nephrolepis todaioides*, and from E. Neuhert, Wandsbek, Germany, came some grand plants of *Nephrolepis Whitmani*. The latter is not quite so heavy in the fronds as *N. todaioides*, but it is quite a matter of personal opinion as to which is the better; they are both good. In Messrs. H. B. May & Sons' exhibit they were both well shown, and being grown under the same conditions demonstrated their distinctness. In the same exhibit *Polypodium Mayi* and many other good things made up a grand display, well meriting the award of a gold medal, which was given. Messrs. Hill & Son also put up a fine exhibit, which included many choice things.

ORCHIDS were a leading feature and the Veitchian cup, offered for the best exhibit in the show was secured by Major Halford for a very fine group in which was included a grand variety of *Miltonia vexillaria*, considered the gem of the show. Some wonderful varieties of *Odontoglossum crispum* were shown by various exhibitors. Orchids are still very popular, yet it would seem from the results of a recent auction sale of choice sorts that, financially, their value is decreasing; but this is probably owing to the increasing number of new varieties we are getting. If some-

thing very remarkable is shown at one meeting we may see another better at the next.

TUBEROUS BEGONIAS.—These were grandly shown, and it would seem almost impossible to make further advance on what we now have, especially the double varieties as shown by Messrs. T. S. Ware, Blackmore & Langdon, B. R. Davis & Sons, J. Laing & Sons, and A. Gwillin. Those of Messrs. R. P. Kerr & Sons were of remarkable quality.

Messrs. Carter & Co., Holborn, were extensive exhibitors of calceolarias glonias, cinerarias, hegonias, and many other subjects. Messrs. Sutton & Sons, Reading, filled a large space with well grown plants of schizanthus, calceolarias, *Primula japonica* (in distinct colors), nicotianas (hybrids), and others of the highest quality.

More tent room was provided than we have previously had, and every available corner was well filled. Taking the whole, there was not an exhibit that was not worthy of its position.

ROSE FRAU KARL DRUSCHKI.—This rose is selling well in the market, and Mr. Harkness, of Hitchin, who is a large wholesale grower, tells me that he has already booked orders for 12,000 for Autumn delivery.

A. HEMSLEY.

Rose White Killarney,

Originators, Waban Rose Conservatories, Natick, Mass.
Photo. by J. W. Duncan.

New Rose White Killarney.

This new rose is a sport of the now popular variety Killarney. It originated at the Waban Rose Conservatories, Natick, Mass., and Mr. Montgomery has had an observant eye on it for the past two seasons, and is satisfied that it will make a valuable addition to the list of hybrid tea roses for forcing. It is of a beautiful pure white color and has the same free form of flower that is characteristic of the parent. It has proved a strong grower and will be introduced by the raiser, if it continues to give the satisfaction it has already given.

J. W. DUNCAN.

Stray Notes from Across the Atlantic.

The weather in the United States seems to be of a very mixed order of late and on the whole a great deal more than our own. We had no frosts in May approaching those recorded in The Florists' Exchange for May 13. Nevertheless, it has been had enough, for practically everything has stood dormant for weeks save in sheltered districts. Spring sown sweet peas, planted from pots in early April, made no growth until the latter end of May; in fact, many plants were a great deal worse at that date than when first put out, and my collection of 50 novelties and unnamed seedlings has given me a great amount of concern, for it is only natural that the most valuable sorts suffer most. Naual, I say, but it is pure cussedness. However, the change in the temperature during the past few days gives us hope.

I was much interested in the paper read by S. S. Skidelsky. A gentleman in New York recently informed me that America was quite a century behind

this country as regards gardening generally. Over here, practically every village has its own local show, and it is perhaps a matter for surprise when I say that villages of about 200 or 300 souls can run shows which yield a balance on the right side. Of course, a great deal of financial support is given by interested ladies and gentlemen. These minor shows influence the public at large, and so horticulture continues to grow.

Many of our greatest exhibitions started from very small beginnings. Shrewsbury, which is by no means a big town, although a very ancient one, runs an annual show, which requires about 60,000 superficial feet of tenting. An average of 70,000 people attend this exhibition during the three days it is open. The takings at the gate reach well over £1,000. About 90 special trains run into the town on the third day. This show grows bigger every year. Rain or fine, it is always a success. Yet it is only run by the Shropshire Horticultural Society, and is not really a national affair. York and Wolverhampton also run monster floral fetes.

There is undoubtedly sound sense in all that Mr. Skidelsky says. If you can only knock the silly and selfish ideas out of the dog in the manger sort of people, a big national show ought to and will succeed. The trade men are the men to grip hold of it. Our Temple show is almost entirely a trade show. No prizes other than medals and certificates are given, yet every one clamors for space.

From my little knowledge of American traders, I should say there are heaps of men who can help to make the Chicago idea a success. Both wholesale and retail people ought to make a splash. The public will turn up right enough, and good business will follow.

Kent, England.

T. A. WESTON.

Silk Fibre Made from Pineapple Leaves.

Vice-Consul J. K. Foster writes from Newcastle that experiments made in Queensland with the leaves of the pineapple plant have shown that there is a fiber in them which may be used in the production of a useful kind of silky cloth. As to the particulars, he adds:

"The fiber experimented upon has simply been obtained by the soaking of the leaves until the outer covering could be easily removed, and the soft, jelly-like substances around the fiber passed away. The fiber, when dried, has been found to be of fine texture and of good staple and strength. Some of it has been exhibited at Rockhampton, and a sample has also been placed in the hands of a firm of ramie dealers and spinners to discover its market value. There is a great demand for all kinds of fibers, and this may be found to be a valuable one. Possibly, there is here the utilization of a waste product. The leaves of this ground fruit have ever been destroyed as worthless, but if the fiber can be used it will be an additional source of profit to the pineapple growers. The process of extracting the fiber from the leaves need not be an expensive one, and if some new kind of silky material can be obtained it will produce no small amount of wealth. Pineapple silk may become the fashion. It will be worth while to make further experiments."

LITTER AND MANURE.—The value of manure in a great measure depends on the kind of litter used in bedding the animals. Some materials are better absorbers of the liquid manure and some of them contain a larger amount of plant food than others.

Generally the best litter for average use is straw. Next to it is chaff or dead leaves. Peat moss and pure peat, of course, are the best of all kinds of litter, but there are many parts of the country where these can not be obtained.

As between straw and dead leaves, the purpose for which the manure is needed should decide which should be used. If a great deal of nitrogen and but little phosphoric acid and potash are desired, then dead leaves are better than straw. If more potash than any of the other elements be desired then the litter should be principally straw.

W. H. Beal, of the Department of Agriculture, shows the fertilizing constituents in a ton of the different kinds of litter to be as follows:

A ton of dead leaves contains 16 pounds of nitrogen, 6 pounds of phosphoric acid, 6 pounds potash.

A ton of straw contains from 8 to 12 pounds of nitrogen, 6 pounds of phosphoric acid, 12 to 32 pounds potash.

A ton of peat moss contains 16 pounds nitrogen.

A ton of sawdust contains from 4 to 14 pounds nitrogen, 6 pounds phosphoric acid, 14 pounds potash.

A ton of peat contains from 20 to 30 pounds nitrogen.

The lack of corkiness in some sweet gum trees leads many to think there are two varieties of the tree, but as they become larger they all look alike. The same thing is noticeable in the mossy gum oak, as regards its corkiness. But in this oak the lack of corkiness in some trees seems persistent and the cups of the acorns are less mossy.

Gladiolus Praecox.

Gladiolus praecox is one of this year's novelties of great promise, and for commercial value especially, as flowering plants are produced within three to four months. This gladiolus originated with Fred. Roemer, of Quedlinburg, Germany, and was obtained by intercrossing the early flowering plants of gandaveisii, Lemoinei Childsii and manceanus.

Seeds sown in a temperate frame the first of March, will germinate in from three to four weeks. As the growth advances and weather permits ventilation should be given to get good sturdy plants. A transplanting, although not essential if seeds are sown thinly, is of great benefit to the plants. Soon the seedlings are strong enough to stand feeding, and a mulching of bone dust or pulverized sheep manure should be afforded.

During the first year the bulbs of the seedlings attain the size of that of a crocus bulb. The second year they are as large as usually offered in commerce.

As stated by the originator bulbs of Gladiolus praecox, two years old, produce two and more spikes of normal size.

Spike of Gladiolus Praecox

more spikes of normal size.

Rats.

There is no more destructive animal, none more obnoxious, either in city or town, than the common rat. Its depredations create losses of thousands of dollars annually; therefore any remedial measures looking toward its extermination are to be welcomed. A bulletin (Farmers', 297) treating on the "Methods of Destroying Rats," has just been issued by the Department of Agriculture, in which such measures for combating the brown rat, as poisons, traps, ferrets, fumigation, etc. are provided. From the document in question we make the subjoined extracts:

Poisoning.

BARIIUM CARBONATE.—One of the cheapest and most effective poisons for rats and mice is barium carbonate, or barytes. This mineral has the advantage of being without taste or smell; and, in the small quantities used in poisoning rats and mice, is harmless to larger animals. Its action on rodents is slow, but reasonably sure, and has the further advantage that the animals before dying, if exit be possible, usually leave the premises in search of water. Its employment in houses, therefore, is rarely followed by the annoying odor which attends the use of the more virulent poisons.

The poison may be fed in the form of a dough made of one-fifth barytes and four-fifths meal, but a more convenient bait is ordinary oatmeal, with about one-eighth of its bulk of barytes, mixed with water into a stiff dough; or the barytes may be spread upon bread and butter or moistened toast. The prepared bait should be placed in rat runs, a small quantity at a place. If a single application of the poison fails to drive all rats from the premises, it should be repeated with a change of bait.

STRYCHNINE.—Strychnine is a more virulent poison, but its action is so rapid that the animals often die upon the premises, a circumstance which prohibits its use in occupied dwellings. Elsewhere strychnine may be employed with great success. Dry strychnine crystals may be inserted in small pieces of raw meat, Vienna sausage, or toasted cheese, and these placed in the rat runs; or oatmeal may be wet with a strychnine sirup, and small quantities laid out in the same way.

Strychnine sirup is prepared as follows: Dissolve a half ounce of strychnia sulphate in a pint of boiling water; add a pint of thick sugar sirup and stir thoroughly. A smaller quantity of the poison may be prepared with a proportional quantity of water. In preparing the bait it is necessary that all the oatmeal should be moistened with sirup. Wheat is the most convenient alternative bait. It should be soaked over night in the strychnine sirup.

OTHER POISONS.—The two poisons most commonly used for rats and mice are arsenic and phosphorus, nearly all commercial preparations containing one or the other as a basis. While experiments prove that rats have great powers of resistance to arsenic, it may sometimes be used advantageously as an alternative poison. Preparations of phosphorus sold by druggists are often too weak to be effective; and home-made mixtures, when of sufficient strength, are dangerous, as rats may carry the baits into walls or crannies and thus cause fires. For these and other reasons the Biological Survey does not recommend preparations containing phosphorus.

POISON IN THE POULTRY HOUSE.—For poisoning rats in buildings and yards occupied by poultry, the following method is recommended: Two wooden boxes should be used, one considerably larger than the other, and each having two or more holes in the sides large enough to admit rats. The poisoned bait should be placed on the bottom and near the middle of the larger box, and the smaller box should then be inverted over it. Rats thus have free access to the bait, but fowls are excluded.

Trapping.

Trapping, if persistently followed, is one of the most effective methods of destroying rats. The improved modern traps with a wire fall released by a baited trigger and driven by a coiled spring have marked advantages over the old forms, and many of them may be used at the same time. These traps, sometimes called gullotine traps, are of many designs, but the more simply constructed are to be preferred. Probably those made entirely of metal are the best, as they are less likely to absorb and retain odors.

Gullotine traps should be baited with small pieces of Vienna sausage (Wienerwurst) or bacon. The trigger wire should be bent inward to bring the bait into proper position to permit the fall to strike the rat in the neck.

Other excellent baits for rats are oatmeal, toasted cheese, toasted bread (buttered), and sunflower or pumpkin seeds. When seed, grain, or meal is used with a gullotine trap, it may be placed on the trigger plate, or the trigger wire may be bent outward and the bait sprinkled under it.

Wire cage traps (French) also are useful for catching rats, but in the long run the kinds recommended above are much more effective. While trapping, all other food should be removed and the trap bait should be changed often. Rats are very suspicious, and baits and traps should be handled as little as possible. Increased success may be secured both in trapping and poisoning if the rats are fed for a night or two with the kinds of food to be used for bait.

Use of Ferrets and Dogs.

A ferret is useful for the purpose of driving rats out of burrows and other hiding places so that dogs can capture them. An experienced person with dogs and ferrets trained to work together can kill many rats when they are numerous. But the amateur ferreter is likely to be greatly disappointed.

Fumigation.

Rats may be destroyed in their burrows in the fields, and, still more important, in leaves and rice-field dikes, by the use of carbon bisulphid. A wad of cotton or

Conclusions.

By the persistent use of traps, occasional resort to poison, and the exercise of forethought in the construction of farm buildings so as to minimize the opportunities for harborage, farmers and others may prevent the greater part of the loss and annoyance they now experience from rat depredations. The same statement applies in great measure to city and village conditions. Hence co-operation in the warfare on rats is particularly important and can not be too strongly urged.

CLUB AND SOCIETY DOINGS.

THE COLUMBUS FLORISTS' CLUB met by special invitation at the extensive greenhouses of the Fifth Avenue Floral Company, Monday evening, June 3, and were entertained in the most enjoyable manner. President Sherman F. Stephens occupied the chair; every other officer of the club was also on hand, besides the largest gathering of members and friends seen at any meeting of the year. Especially were the ladies well represented. Perhaps the most interesting feature of the meeting was the awarding by the president of the club's prizes for the best displays of plants and cut flowers, as indicated by the largest "point totals" given by the prize committee during the past Winter season (that is, from October to May). These awards were made as follows: I. D. Sieber, with a season's total of 123 points, received the club's first prize; R. A. Currie came next; the third prize going to Sherman F. Stephens. So much pleased are all of us with the plan,

Gladiolus Praecox

other absorbent material is saturated with the liquid and pushed into the burrow, the opening being packed with soil to prevent escape of the gas. All animals in the burrow are asphyxiated. Fumigation about buildings is not so effective, as the gas can not readily be confined.

Rat-Proof Construction.

The best way of excluding rats from buildings, whether in the city or country, is by the use of cement in construction. As the advantages of this material are coming to be generally understood, its use is rapidly extending to all kinds of building. Dwellings, dairies, barns, stables, chicken houses, ice houses, bridges, dams, silos, tanks, cisterns, root-cellars, hotbeds, sidewalks, and curbs are now often made wholly of concrete. In constructing dwelling houses the additional cost of making the foundations rat-proof is slight as compared with the advantages. The cellar walls should have concrete footings and the walls themselves be laid in cement mortar. The cellar floor should be of "medium" rather than "lean" concrete, and all water and drain pipes should be surrounded with concrete. Even an old cellar may be made rat-proof at comparatively small expense. Rat holes may be permanently closed by a mixture of cement, sand, and broken glass or sharp bits of stone.

Natural Enemies of Rats.

The value of carnivorous mammals and the larger birds of prey in destroying rats should be more fully recognized, especially by the farmer and the game preserver. Chief among the animals that are useful in destroying these rodents are the fox, skunk, and weasel, and the larger species of owls and hawks. Rats destroy more poultry and game, both eggs and young chicks, than all the birds and wild mammals named combined, yet some of our most useful birds of prey and carnivorous mammals are persecuted almost to the point of extinction. An enlightened public sentiment should cause the repeal of all bounties on these animals and afford protection to the majority of them.

that there is no question about the "point awards system" being a yearly regular feature in the future. Nothing has ever done so much to build up our club as the splendid displays of plants and flowers we have had at every meeting. James McKellar, as chairman of the picnic committee, made a full report of the progress so far made; at least two special cars will be necessary to carry the party to Buckeye Lake, July 17 next. The affair will be a regular old-fashioned basket picnic; and as regards the sports and games with prizes, these features will be arranged by the committee.

M. B. Faxon made a full and final report of the distribution of vegetable and flower seeds for the children's home and school gardens. This season much more eager interest has been shown by the children than ever before, and the distribution has been much wider, more than three thousand children having been supplied with the penny packets of seeds. This work is now recognized by the community as doing a great deal of good, but it remains to be seen if the many conflicting plans of doing it can in seasons to come be brought under one head to the mutual benefit of all.

The next meeting of the club will be on Tuesday evening, June 11, when a rose and strawberry show will be held in the rooms in the Brent Building. This affair bids fair to be well attended, and the competition keen for the prizes. The coming chrysanthemum show was also discussed, and every grower especially urged by the committee and the president to do his best.

At this meeting Frank Keop, who is with the Clover Hill Greenhouses, was elected an active member; and there are still more to come. F. W.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephones, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words: each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. FOLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLOAL CO., 1705 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLOALIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLOALIST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

Indianapolis, Ind.

BERTEEMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

THE NEW JERSEY FLORICULTURAL SOCIETY.—The display of orchids at the society's rooms in Orange on June 7 maintained the same standard of excellence as has characterized its previous exhibits. Lager & Hurrell's natural hybrids attracted particular attention, especially hybrid number one, Cattleya Mossiae × C. Percivaliana, and C. Mendelii superbissima, Phalenopsis Cynthia (Schilleriana × Aphrodite) and a white sobralia (macrautha × Kunastiana). Julius Roehrs Company staged their new Rambler rose, "Julius Roehrs," pink, with a yellow center, which showed well under the electric light. George Graves (gardener, Edwin Thomas), had Odontoglossum vexillarium; three plants in five inch pans, carrying ninety flowers, were particularly fine, and Laelio-Cattleya Martinetti. Charles Hathaway,

(gardener, Max Schneider), staged Veitch's hybrid columbine, Gladiolus Peachblow and carnations Enchantress and Victory; John Crosby Brown (gardener, Peter Duff), roses Richmond and American Beauty; Stewart Hartshorne (gardener, A. T. Capara), Azalea mollis and rhododendrons; Stewart Dixon (gardener, Albert Larsen), Phoenix Roebeleni; the Colgates (gardener, William Reid), a specimen phoenix.

The rose night noticed for this evening was finally abandoned, because of the season. Schedules for the forthcoming Fall show were distributed and a dahlia night for the September meeting debated. There was no paper read, and the strenuous season showed itself in a small attendance. J. B. D.

THE NEW YORK FLORISTS' CLUB met on the evening of June 10, 1907, in the Hotel Earlington, West Twenty-seventh street. This was the last meeting before the Summer recess; President Totty occupied the chair, and there was a fair attendance.

The members decided to have a field day in Bronx Park on Wednesday, June 12, when it would then also be possible to take in the exhibition of the Horticultural

The president appointed Messrs. Scott, O'Mara and Jaenicke a committee to draw up resolutions on the death of Julius F. Kretschmar, one of the oldest members of the club; and Messrs. Wallace, O'Mara and Birnie to perform a similar duty in connection with the death of the father of E. V. Hallock.

President Totty, in urging a large representation of the club at the forthcoming convention of the Society of American Florists at Philadelphia, appointed the following gentlemen as a committee on transportation and arrangements: Messrs. F. H. Traendly, Secretary Young and J. B. Nugent, Jr. It is expected that the New York delegation will leave on the Monday afternoon preceding the opening day (Tuesday) of the convention, the first session being held at 10 a. m.

Quite a discussion ensued on the selection of a permanent meeting place for the club, in which the discontinuance of the "caotteen" came in for a share of consideration, and the matter was referred to the Board of Trustees with power to act. It is expected that some suitable room will be secured before the Fall season opens.

Among those present was J. C. Vaughan, of Chicago, who spoke interestingly on the coming shows to be held in that city, mentioning particularly the chrysanthemum show in the Fall, and the proposed national exhibition. Mr. Vaughan said that he would be glad to see a meeting of the S. A. F. O. H. general committee at some point in the East for the members to pledge themselves to take hold and push the last named exhibition forward. He spoke of the good Spring season experienced by horticulturists generally this year. He believed that the stocks planted would, in the main, do very well, and argued that horticulturists must not get too much like the farmers who are always complaining about their crops.

W. P. Craig, of Philadelphia, was also a visitor, and told of the progress making along all lines for the coming S. A. F. convention. Among other things, Mr. Craig said that it would be possible for every delegate to obtain hotel accommodation within 150 yards of Horticultural Hall. A large number of delegates were expected and all would, he was sure, go away feeling that they had been well entertained. In addition to Horticultural Hall, the theater across the street had been secured for the exhibition, which promises to be a large one.

John Birnie conveyed to the club the compliments of John Westcott, of Philadelphia, vice-president S. A. F. O. H., asking the members' presence at the coming convention.

Mr. Nugent presented a proposition from the "Little Mothers' Society" of New York, to the effect that the club hold a show in the Waldorf-Astoria some time in the Fall on behalf of that organization. The matter was referred to the exhibition committee.

The essay committee announced that when the club again reconvened they hoped to present an illustrated lecture by G. V. Nash, of the New York Botanical Garden, on "Water Lilies"; also a paper by Henry Saxton Adams, Wellesley, Mass., on the subject of "School Gardens." Mr. Adams being chairman of the Committee on School Gardens of the Massachusetts Horticultural Society, in which he is very enthusiastic, and has been extremely successful in building up in the community of Boston.

The meeting then adjourned till the second Monday of September.

Four Foot Wreath of Cape Jasmine and Cattleyas Placed By General Kuroki at Base of Lincoln Statue, Lincoln Park, Chicago, Memorial Day, 1907

Artist, P. J. Hauswirth

Society of New York. A large number signified their intention of being present.

The outing committee submitted samples of the program for the annual outing, which this year takes place on Tuesday, July 2, at Witzel's Point View Grove, L. I. There is a long list of prizes for the occasion, most of them being devoted to events in which the children will participate. There will be a ladies' bowling match, a baseball game for bachelors versus benedicts, fat men's race, married men's race, married ladies' race, etc., in all some twenty-six events. It is stated that the majority of the prizes to be given will be in gold. The affair promises to be the most enjoyable the club has ever had in this line, and the outing committee thanked the advertisers and donors of the premiums for their assistance toward that consummation.

The committee on closer relations with the S. A. F. O. H., reported that after consideration of the matter they had been unable to evolve any practical plan whereby affiliation could be effected; it was thought that the national society should submit some uniform proposition to all the horticultural organizations whose affiliation was desired, for discussion and action.

Mr. O'Mara reported progress for the committee on closer relations with the Horticultural Society of New York in exhibition matters.

Mr. Traendly stated he had been advised that the total amount of the guarantee fund in connection with the proposed National flower show at Chicago, to be held under the auspices of the Society of American Florists, had been subscribed, and he therefore withdrew his motion that the club contribute \$250 to the fund.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

Summer Window Decoration.

There is almost a general tendency among retail florists to allow their window displays, and even their stores, to have a neglected appearance during the Summer months, more especially in the larger cities, where the majority of their best customers either go to Europe or to their country homes. This is no doubt a great mistake, as nothing looks worse than a neglected window or a dusty store. One can never tell what moment one of his best customers may drop in, and if there is only one customer a day the window and store should always look bright and clean. The excuse seems to be, "it does not pay to keep a large stock during the Summer." This is an error. It may not pay to carry a large stock of cut flowers, but there are many ways of keeping a store attractive without spending a fortune on a class of stock that may have to be thrown away.

Stove or tropical plants do splendidly in the window during the warm months, and will always prove attractive on account of their unusual coloring and manner of growth. Nepenthes or pitcher plants are very suitable for suspending in the window, and if properly cared for will do well. The plants must never be allowed to get dry, and the "pitchers" should be kept filled

BOHN SYPHON REFRIGERATOR

..FOR FLORISTS..

St. Paul, Minn., May 10, '07.
WHITE ENAMEL REFRIGERATOR Co., St. Paul.

Gentlemen:—We have now used the new show case which you installed for us about six months ago. We can say that it is everything you promised for it, and that is "perfection."

We don't know what else we could say except the first case which you built for us about seven years ago helped materially to our success. Your system is certainly ideal for keeping flowers.

The workmanship on this new case could not be better. We have had people say, "Why that is more finely finished than our piano."

Yours truly,
HOLM & OLSON.

STYLE "L" BUILT FOR HOLM & OLSON. ST. PAUL, MINN.

with water. Platyceriums or staghorn ferns are always a curiosity. Phyllotenum Lindoni is a stove plant that does splendidly in the store or dwelling, although generally supposed to be very tender. Heliconia aurea striata diffeuhachias, marantas dracenas, aloccasia, Ficus elastica variegata, and Ficus Parcelli are all plants rarely seen, except in the greenhouse, and are sure to be attractive in a Summer window.

There are many tropical flowering plants that will grow and flower continuously. The anthuriums are perhaps the best. Ixoras and the flowering aroids are bound to attract. Strelitzia regina, the bird of paradise flower, is always beautiful. Rare varieties of Summer flowering orchids help greatly and show to best advantage when on the plants. A window devoted exclusively to ferns, is always good. Asplenium nidus avis, the Australian bird's nest fern, Cibotium Schiedeii, and a host of others will make a display that will seldom have to be changed.

Aquatic Displays.

Later on in the season, aquatics are particularly adaptable; a display of this order looks cool and restful to the passerby. A Broadway florist has done wonders in this line, and has a very complete display every Summer, which, besides being a great attraction, brings quite a little business for aquatics.

A large tank about twelve inches deep occupies the entire space of one large window. It has the appearance of a reservoir, the sides being banked with growing Selaginella serpens and S. denticulata. Tall growing aquatics, Cyperus alternifolius, C. Papyrus, the Egyptian paper plant, and Sagittaria latifolia, the common arrowhead, being used in the background. Water

hyacinths, duckweed, and other floating varieties will grow and do well. Then a continuous supply of cut water lilies, with their foliage, add color and are good for selling purposes. Nelumbium speciosum (the Egyptian lotus) and its varieties are very showy, and stand out of the water on good long stems. There are also several nymphæas that are very pretty with a variety of coloring. N. sulphurea, pale yellow; N. odorata, white and scarlet, scented; N. odorata gigantea, pale blue and the pink variety N. odorata rosea. The bottom of the tank is covered with small white pebbles or silver sand; a fountain rises in the center of the pond, and throws a fine spray over the whole arrangement, keeping it cool and fresh-looking. Gold fish, lizards, frogs, etc., are also introduced, and give it a touch of life.

Japanese windows, although not new, can be made very effective; in fact, a miniature landscape, if well carried out, never fails to draw a crowd, and there is always an opening for new ideas in that line. A small outlay and a little ingenuity will work wonders.

D. RAYBUN.

GROWING OF PLANTS UNDER SHADE.—In experiments the Bureau of Plant Industry of the Department of Agriculture has found that under normal climatic conditions the area at the Arlington farm enclosed by shade cloth usually carries a somewhat higher temperature and greater humidity than the surrounding air. During seasons of excessive rainfall these conditions become injurious rather than beneficial to most crops. While lettuce and gladiolus were a marked success during the past year under shade, when the humidity was excessive, the similar work on carnations was not as satisfactory as during the previous season.

Meeting of American Peony Society.

Editor Florists' Exchange:

May I call the attention of your readers to the meeting of the American Peony Society which takes place in Ithaca, N. Y., on June 18 and 19? The exhibition and meeting will be held in the new Agricultural College Hall. The exhibition will take place in the auditorium, and such meetings as are called will be held in the lecture rooms of the horticultural department.

The season is exceptionally late. This will reduce the number of blooms which the experimental plot at Cornell will be able to furnish, but I confidently hope that we shall be able to make an interesting contribution to the collection. I trust that there will be a large gathering of peony enthusiasts. They will be welcome to Cornell at this commencement period, and will no doubt be interested in many features of university life in addition to the subject-matter under consideration.

Cornell University.
JOHN CRAIG.

I wrote you yesterday that our peony meeting was fixed for June 18 and 19. It now seems more than probable that we will postpone the meeting until the 27th and 28th of June. The abnormally low temperature has so retarded the development of the flowers that it seems altogether desirable to make this postponement in order that our visitors may be able to see the maximum number of plants in bloom. Mr. Fewkes will definitely notify you of the change.

JOHN CRAIG.

* [Secretary Fewkes confirms, by a telegram received here Wednesday morning, the postponement of the meeting of the American Peony Society until the dates given by Professor Craig—June 27-28. Ed. F. E.]

Growers of the Finest Pastes

Notes from the Shrub Border.

There are few seasons like the present when flowering and ornamental shrubs attain such luxuriant wealth of bloom. The continued cool season and copious rains have materially helped in the development of the plants, and although the past Winter was severe on many species, yet the majority of them seem to have regained renewed vigor, consequently have been much more showy than they generally are. Of course, the season is late and many of the species which are generally past flowering in May are yet in their full glory. Many of the native species are more showy than their exotic brethren, and deserve to be used much more extensively for ornamental planting than they are.

In the early days of Spring we see such shrubs as the forsythias, with their wealth of golden yellow, but scarcely less showy are the native spice bush, Benzoin odoriferum, and the more rare leatherwood. *Direa palustris*, which though slow growing makes a well formed plant four feet high. The cornelian cherry, *Cornus Mas*, is a very pretty plant when a well shaped specimen is seen; last Winter in certain locations was very severe on many of its flower buds.

Among the early flowered trees are the many varieties of magnolias, and one of the most meritorious is *M. stellata*, which though having smaller flowers than any of the others is, on a lawn, much more attractive than some. Following these earlier flowering plants come the many species of prunuses and a variety which should be much more used than it is, is *triloba flore plena*. I think this plant should be always classed among the best shrubs.

The crab apples have been exceedingly fine this season and although many of the species are past, the best of them all is now in its full glory. I refer to the variety *Malus ioensis flore plena*, or as it is more popularly called, *Betche's* double flowering crab. The individual flowers of this variety are large, semi-double, of the pleasing pink color so well liked in an Enchantress carnation, and then the fragrance of the native species is far superior to any of the others. Although the double form is by far the best, still the single variety is very ornamental as well as its Eastern neighbor, *Malus coronaria*. Other early sorts which are well worth growing are the several forms of *baccata*, *floribunda*, *Halleana* or as it is perhaps better known *Parkmani*, *Neidzwetzkyana*, *toringo*, *Sargenti* and *Schiedeckeri*.

Following the crab apples the lilacs have the largest number of varieties that attract attention. As a general thing these are all past in this locality, two or three weeks earlier than they will be this season. *Syringa chinensis*, both the light and dark forms, are very attractive shrubs and are much more admired by many people than the popular hybrid varieties, many of which are of poor color and of a stiff habit, which is anything but pleasing. Some of the best double sorts, with fine large trusses, are *Louis Henry*, *Marechal de Bassompierre*, *Dr. Masters*, *Souv. de L. Thibaut*, *William Robinson*, *Compte de Kerchove*, *Prince de Beauvau*, *Dr. Stockhard*, *Condoret*, *Maxine Cornu*, and *Mme. Cassimier Perrier*. The latter variety is white and very fine. The best whites are *Marie Legraye*, *Virginalis*, *Mme. Moser*, and *alba major*. A few of the other sorts of medium or dark shades of color of much merit are *Alvin Mocquery*, *President Carnot*, *Professor C. S. Sargent*, *President Grevy*, *Souv. de L. Spath*, *Dr. Lindley*, *Caroli*, *Ambrose Verschaffel*, *amena*, *President Massart* and *Triomphe d'Orleans*.

The *loniceras* this season are better than I have ever before seen them and their flowers seem to last much longer on account of the cool weather. There are a great many varieties of more or less merit; the most showy are the forms of *tatarica* and *bella*, in almost all shades of pink and white. *Ruprechtiana* is a fine variety, and one of the

lesser known sorts of a very pleasing habit is *Kokrokowi*. *Morrowi* must, of course, not be forgotten, for it is one of the best of all the varieties.

Many of the azaleas are just beginning to make a magnificent show while some of the earlier sorts have just passed. The native sorts should be much more used than they are. One of the best has been very fine this year. I refer to *Vaseyi*, which is the earliest to flower and its beautiful delicate shades of pink are very fine. It is followed by *canescens* and *nudiflorum* which are both now in fine form, and *calendulacea* is just beginning to open. *A. Kämpferi* is a fine form of the Indian azalea which has proved perfectly hardy; and then there is *sinensis* in many shades of color and the *Ghent* hybrids which are just in bud.

The red buds, *Cercis canadensis*, has been very fine of late; the variety *alba*, which is of recent introduction, is a very good shrub. The Japanese variety is not hardy here.

Fraxinus Bungeanus is a flowering ash rarely met with; it is a large growing shrub and rather pretty at this season. The *fobergillias* are native shrubs which are rare; there are two varieties, *major* and *carolina*, with but little difference except that the former grows taller and is consequently the more showy of the two. *Cornus florida* and the variety *rubra* have not been so good here this season on account of the flower buds having been Winter-killed; last year the red variety was one of the most showy plants in our borders.

Exochorda grandiflora is very fine this season. *Staphylea colchica* makes a grand shrub when well established; it is at present very fine. *Halesia tetraptera* is the only hardy species with us, and it is a glorious mass of snow-drop like flowers at present.

Sambucus racemosa makes a showy large shrub at this season, and its flowers will be followed later by bright red fruit. *Rhodotypos kerrioides* is just in bloom, and it has the commendation of continuing to flower throughout the season. This is also true of the single and double forms of *Kerria japonica*, which though old-fashioned are both valuable when given a good setting.

Few of the *viburnums* are yet in bloom. The earliest to flower is *Lantanoides*, but it is rarely found in cultivation. *Tomentosum* is just opening, and is very attractive. I notice also that *Wrightii* is in flower, but it is not so attractive in blossom as it is when it shows its beautiful clusters of bright scarlet fruits. *Viburnum Lantana* is rather pretty in flower, and so is *prunifolium*.

Xanthoceras sorbifolia is just in bloom, and what a fine plant it is, but how hard it is to manage; you have it established and then, presto! it dies, and you cannot tell the reason. *Enkianthus campanulatus* and *japonicus* are both rather rare, having generally been considered not hardy; but they are perfectly so and are, though not imposing, rather interesting shrubs for the border.

Several of the *spiraeas* are now in bloom. The old-fashioned *prunifolium flore plena* still holds its own as one of the best. The variety *Van Houttei* is just opening. Several of the *euonymuses* are now in flower, but they are not showy; it is later on in the season, when they are in fruit, that they are attractive. *Cydonia japonica* in many colors has been showy recently. There is a dwarf species known as *pygmaea*, which was brought from Japan by Professor Sargent, and which grows about a foot high; it is a very fine dwarf shrub.

Many of the *barberies* are very pretty at the present time, and none more so than some of the hybrid forms of *vulgaris*. *Amurensis* is a large flowered form which is quite distinct, and which is very attractive when in fruit. *Thunbergii* is not showy in blossom.

Ledum latifolium is a pretty dwarf shrub; and some of the *genistas* are becoming beautiful with their bright golden hues.

Paeonia moutan, though not generally seen in the shrub border, is one of the best shrubs, and when plants once become established, they soon reach a good size and are very fine when in flower.

Only a few of the roses are yet in bloom. *Rosa arkansana* is one of the first and one of the best wild roses; it is soon followed by *spinosissima*, *cinnamomea*, *blanda*, *lucida* and many others.

Boston, Mass. J. W. DUNCAN.

Syracuse, N. Y.

The Onondaga Valley, stretching several miles out from the city, possesses now as in the past considerable interest to plant lovers. As far back as 1801 when the valley was the home of the Iroquois as well as the grand camping grounds of the Mohawks, Cayugas, Oneidas, Tonawandas and Onondagas an old resident informs me that it was an Indian squaw who first discovered the trailing arbutus in this valley and first brought it to notice. Around the old beleaguered forts in this beautiful valley it is said the first wild flowers of Central New York have always bloomed.

The establishment of P. R. Quinlan is one of the largest in this city, or vicinity and nestles snugly in the foothills of the valley on a fertile tract of land where a natural supply of water is at all times available for the requirements of a large plant growing establishment. In company with Mr. Quinlan it was your correspondent's pleasure to be shown over this well kept area of glass. The houses are all comparatively new, having seen but a few years' service, and are of the King construction.

Besides the several houses devoted to roses and carnations there is quite a range given over to plant growing. One large house, about twenty by two hundred feet, was well filled with such stock as crotonas, dracenas, kentias, orchids and Whitmani ferns. The collection of orchids was brought from Venezuela by Mr. Quinlan while on a trip there a couple of years ago; they are now well established and several handsome cattleyas were in bloom. A large house is devoted to Asparagus plumosus with one bed for elegantissima fern and another for callas. Some of the asparagus beds are allowed to run to long strings for decorative purposes, while others are used for the daily cut for both of the Quinlan stores in the city. Another large house is filled with poinsettias, rex and tuberous rooted begonias as well as gardenias.

Adiantum Croweanum is extensively grown; a large house being given up to it. The plants are growing on benches and making a splendid new growth. Fully ten thousand plants must have been in this house.

The houses of roses and carnations looked well considering the lateness of the season. The rose house is 200x104 feet, each house or section having four 6-foot beds, about twelve beds in all, two of which are devoted to Killarney, two to Mme. Abel Chatenay, and the remainder to Bride, Bridesmaid and Golden Gate. Grafted stock as well as own root plants are used; the Chatenay, however, are on their own roots.

In this house is a bed of a new rose,

a sport from Bridesmaid and several shades darker in color. It has thick leathery foliage and is a profuse bloomer as well as a rampant grower. The foliage is of such a heavy texture that it will resist mildew. Mr. Quinlan thinks well of it, but has not as yet begun to consider its introduction to the trade.

A house, 200x36 feet, is devoted to American Beauty. The carnation houses are of the same construction and dimensions as the rose department. The high gutters of this construction are very much to be desired. There is plenty of head-room for even a very tall man, to walk underneath. This coupled with the light iron posts gives the house a light, airy appearance. There is practically nothing that would obstruct the view from one end to another. The beds are all low, and while they have the appearance of solid beds are not really so, as they all have tiled bottoms resting on a brick foundation.

In the plant houses there are fully 20,000 young roses in 4-inch pots that Mr. Quinlan will shortly offer to the trade. The varieties are all desirable for commercial use. Geraniums in 4-inch pots were on hand also in large numbers.

Mr. Quinlan has about twenty acres of splendid land that he uses for his hardy stock. In a well prepared patch was a lot of 53,000 carnations that were beginning to make some growth. About half of this lot will be offered to the trade in a few months. Twenty-six thousand plants are required to fill the large carnation house.

Mr. Quinlan has been identified with the nursery and florist business in Central New York from his boyhood and while he has been eminently successful in that particular line he finds time to go out after business in other fields. He is president of the Warner Quinlan Asphalt Company and is also identified with several others of the many prominent industries of Syracuse.

Henry Morris has a city store, with ten large greenhouses at Elmwood where the greater part of his supply is produced. He has a nice stock of decorative plants, and grows ferns, roses and gardenias. His greenhouses face a prominent thoroughfare on which he has his office building and adjoining this is a very elaborate potting shed with glass front, all steam heated. Mr. Morris believes in plenty of room to work in. He has taken out quite a large excavation which he has prepared for the installation of a new eighty horse power steam boiler to heat his entire plant. The hot water boilers now in use will be abandoned after this season.

W. Wheedon, who conducted a cut flower store on Warren street has just gone out of business. This firm used to be Wheedon & Hencle; the latter gen-

leman withdrew some time last Spring and Mr. Wheedon has conducted it since that time until a few days ago when he determined to try his fortune in other fields.

Gustav Bartholome, who for some time past has conducted a greenhouse business opposite Woodlawn Cemetery, is about to make a new move. Mr. Bartholome has purchased some property adjoining his present stand and will this Summer begin the erection of a few good greenhouses on a larger and better scale. His office building and greenhouses are at present on leased land. Through years of good business and management he is now in position to have a modern place where he hopes to be able to give his patrons a larger and more varied stock to select from.

Henry Burt reports good business in the plant trade. Bannister Brothers have abandoned their store on West Genesee street and now have a good office building in connection with their greenhouses on Cayuga street.

L. E. Marquisee has a thrifty looking lot of greenhouses on Delaware street. Carnations are his hobby. He has lots of good things in store in that line for future notice and introduction.

W. Menelly & Son are also well to the front. Constant attention to business and untiring efforts to please have made them the possessors of a good growing plant and business enough to keep them at all times well occupied. J. M.

Plattsburg, N. Y.

The Winter is so severe at this point that many of the well known hardy flowering shrubs will not endure it. Viburnums, forsythias, weigelias, deutzias and California privet are no longer planted on that account. The same is true of the retinisporaa and hiotas of the choicer varieties. The short season gives the plants but little chance to get established. On June 9 lilacs were just budding, the peonies had not as yet opened. The planting of shrubs at some of the railroad stations was in progress; they looked as dormant as a birch broom. Spiraeas were chiefly used; oo tender plants had at that date been put out, the florists waiting for warmer weather. The apples were in bloom, and an apple blossom wedding was one of the features in local society that week.

Wm. Cook takes care of the best end of the Plattsburg trade. J. M.

METROPOLITAN MATERIAL CO.

Greenhouse Wreckers 1888-1408 Metropolitan Avenue, BROOKLYN, N. Y.

New York.

News of the Week.

The weather continues extremely cool for the season of the year, and planting operations of all kinds are yet in progress. The planting season this year would seem to be a record breaker, and there is no doubt that the trade in general, whether nurserymen, cut flower or bedding plant growers, the season has been a highly profitable one.

The new fern, *Nephrolepis Amerpohlii*, was shown in New York for the first time by Wm. P. Craig, Philadelphia (who, we understand, controls the stock of this fern), at the club meeting on Monday night, and everybody was much impressed with its beauty. Its delicate fronds give it a fine feathery effect which should make it a very valuable adjunct to our list of decorative ferns used for table purposes.

The Julius Roehrs Company showed a few sprays of a new single Rambler rose, which is evidently a most floriferous variety, judging from the number of clusters of buds on the few sprays exhibited. The color is a very pleasing rose pink, and the variety should prove a valuable addition to the list of roses grown for pot work. Mr. Roehrs informs us that the rose will be named Julius Roehrs.

Fred Siebentopf, driver for F. Weise, florist at Richmond Hill, Brooklyn, was found unconscious beside his wagon on Saturday last, June 8. Successful efforts were made to revive him, and it was learned that his wagon had been struck by some passing vehicle which threw him to the ground and rendered him unconscious. He had no recollection of what kind of a vehicle struck him, but the probabilities are that it was some automobile, the occupants of which did not think enough about the occurrence to stop and see what damage they had done.

The Saturday Evening Mail of June 8 showed illustrations of a few of the vine-clad dwellings and club houses in the heart of the city. Among those pictured were the residence of J. Pierpont Morgan and the building occupied by the Princeton Club, both of which are covered with ampelopsis; also the Calumet Club's building, which is covered with ampelopsis and wisteria, and the residence of Henry W. Poor, which is profusely ornamented with window and veranda boxes and bay trees, the latter being placed upon the piazzas, which opens from the second floor of the building.

The plant auction season, owing to the cool Spring, gives evidence of being prolonged farther into the Summer than is usual. Sales at present are being largely attended, and the business done is well up to the aggregate of other years.

John Weston, who for some time has been located at Patchogue, L. I., has moved to Valley Stream, N. Y., and will build two greenhouses, each 28x200 feet, of the King Construction truss style. The heating and ventilating of the new houses will be installed by Hitchings & Company.

John Birnie was recently serenaded by a band of pipers, much to his delight. If there is one instrument more pleasing to Mr. Birnie than another, although he is a great lover of any and all kinds of music, it surely is the bagpipes, the national instrument of his homeland. He recently paid a visit to Philadelphia, but whether or not the serenading was due to his safe arrival home from that speedy city we are not informed.

The venerable Samuel Henshaw, who has been ill for some time, is, we are glad to say, sufficiently improved to leave the hospital and be taken to his home.

George Darsley, the well-known florist of Jersey City, N. J., has sold his property and will retire from business.

Peter Daly, florist of New Durham, has also sold his greenhouse property there, and will devote all his time to a civil service appointment he holds from this city.

A. M. Henshaw, wholesale florist at 52 West Twenty-eighth street, will, on the 1st of July, move to more commodious quarters at 44 West Twenty-eighth street, the store directly over that occupied by Traendly & Schenck. The need of more room for his ever increasing business is the reason of Mr. Henshaw's removal.

Steffens & Company is the name of a new firm making wire designs for the trade, at 466 Sixth avenue. Mr. Steffens has for sixteen years been engaged in the wire work department of the firm of Reed & Keller of this city.

S. A. Woodrow, lately with William Starke in Twenty-ninth street, has opened a wholesale plant store at 53 West Thirtieth street. B. Ezechel is also conducting a wholesale cut flower business at the same address.

The Kervan Company, dealers in florists' greens, are using a runabout automobile for delivery purposes.

The many friends of President Stewart of the S. A. F. O. II. in this city are sorry to learn of the serious illness of Mrs. Stewart, who is suffering from an attack of pneumonia, her condition at last reports being considered serious.

Wednesday of this week was the field day of the New York Florists' Club, and a number of the members spent the afternoon in Bronx Park visiting the greenhouses and other interesting parts of the park and attending the annual meeting and exhibition of the Horticultural Society of New York.

A rumor comes from Canada of the death of John Nicol, formerly a florist in Jersey City, N. J., but we have been unable to get confirmation of the report.

A. H. Laugjahr closed his store at one o'clock as a mark of respect to his uncle, Julius F. Kretschmar, who died on Saturday last, and whose funeral services were held on Tuesday afternoon.

The officers of the Chrysanthemum Society of America held a meeting on Wednesday in the American Institute rooms to further the plans for the forthcoming exhibition, which is to take place in this city during Autumn.

Among the visitors in town this week were W. P. Craig, Philadelphia, Pa., and J. C. Vaughan, Chicago, Ill.

Mr. and Mrs. J. M. Connelley, Charleston, S. C., were in the city this week on their way to Saratoga Springs.

On Wednesday, the members of the New York Florists' Club were to hold a field day in Bronx Park, and it had been arranged to meet at Secretary John Young's office, and from there journey to the park in a body, but alas, seven members only put in appearance.

On arrival at the park, the party was met by G. V. Nash, superintendent, and escorted through the range of greenhouses. After a close inspection of the many collections of plants contained in this immense glass structure, Mr. Nash piloted the party to the Museum Building where the seventh annual Summer exhibition of the Horticultural Society of New York was holding, under the management of Adam Miller, for the Botanical Garden. On the exhibition tables were collections of single petunias, by Gertrude Barth; pyrethrum seedlings, collections of iris and flowering shrubs, cut flowers, from George Hale, Red Bank, N. J.; herbaceous peonies and flowering shrubs from F. R. Pierson Company, Tarrytown, N. Y.; orchids from Lager & Hurrell, Summit, N. J.; flowering shrubs from Wm. McCollom, Islip, L. I., and a collection of almost 300 varieties of shrubs from Julius Heurlin, Blue Hills Nurseries, South Braintree, Mass. Flowering shrubs were also shown by Howard Nichols, Yonkers, N. Y. The Garden management staged a number of native ferns; seedling irises were shown by Frank Presby.

The election of officers of the Horticultural Society was held at the May meeting with the result that all of the old board was retained in office. Two changes were made in the council board. R. Taylor and Dr. McDougall retired and F. R. Pierson and F. L. Atkins were elected to the vacancies.

Walter Mott has, with his family, moved to Sharon, Pa., to join forces with M. I. O'Brien. Mr. Mott proceeds direct to Sharon, but Mrs. Mott and the children will spend a few days at Buffalo and Jamestown en route. They left Brooklyn on Wednesday, June 12.

Julius Heurlin of the Blue Hills Nurseries after setting up his exhibit in Bronx Park Museum building, left for Detroit, Mich., to attend the convention of the American Association of Nurserymen.

SAN FRANCISCO, CAL.—On June 9 fire destroyed the wholesale houses of the Customs Seed Company.

St. Louis, Mo.

News Notes.

The trustees of the Florists' Club held a meeting at Beyer's place last Saturday night, to make final arrangements for the club's smoker to be held on the 29th, and announced that they had set the date for the Florists' Club's annual picnic for July 25, at Romona Park, the place where it was held last year, and that, as usual, there will be music, dancing and games of all kinds. The feature of the afternoon will be the baseball game between the wholesalers and retailers; this was the great drawing card last year. The trustees will have full charge, and Messrs. Smith, Beyer and Frank Weber are the right men and have the right place to make it pleasant for the members and their friends.

Charles Wors is not selling downtown now, as he has the West End Heights cut flower privilege for the Summer. He reports that he is doing quite well considering the light attendance, the nights being too cool.

It has been reported that the wholesalers are contemplating closing shop during the months of July and August at 5 p. m., and half day on Saturday.

Robert Beyer surprised some in the trade by coming downtown the past week and insisting that he could bowl as well as he used to. I promised him that I would not publish the scores, so I'll keep my word.

Chris and his trick dog Jack, who hold fort at Smith's, are preparing for a great stunt at the club's celebration on the 29th. He will be assisted by Charlie and Oscar. The wholesale quartette is also in practice.

N. Bova & Sons, who bought out James North at 616 North Vandeventer place, have named the firm the Red Bud Floral Company.

Arthur Ellison was helping out the Ellison Floral Company the past week. The company had a number of large wedding decorations, so Arthur's vacation came in handy.

Robert Tesson, well-known in the trade, as representing his mother, Mrs. Laura Tesson, has sold 20 acres of their land where the big greenhouse stood. The price paid was \$250,000. They will retain the other ten acres for a homestead. The Louisiana Purchase Exposition Company used the entire tract during the World's Fair, utilizing the greenhouses for growing plants, the rental being for the life of the exposition, \$50,000, after which the greenhouses were sold, and since that time Mr. Tesson has been out of the florist business. He still takes a great interest in it, and no doubt will some day be back in the business as a grower, for as such, none had better success than he.

E. W. Guy of Belleville called last week. He, with his mother and uncle, will settle up his father's estate at St. James next week.

Quite a number of our local seedsmen are making preparations to attend the American Seed Trade Association convention at New York, June 25-27.

Secretary Beneke reports that eight of the fourteen who attended the first meeting of the Florists' Club in 1857 will attend the celebration on June 29. They are Luther Armstrong, S. Kehrman, James S. Wilson, Wm. Ellison, Chas. A. Juengel, E. W. Guy, Alex. Waldhart and Richard Frow. No doubt it will be a great treat to the younger members to hear remarks from these gentlemen. St. PATRICK.

Newport, R. I.

News and Trade Notes.

The planting of trees and shrubs is pretty nearly finished and it seems to be generally conceded that the season has been a good one, both as far as orders were concerned and the time available for filling them. Bedding out is still in full swing. Jobbing gardeners and gardeners of private estates are alike busily engaged in the work to the exclusion of nearly everything else.

The almost utter destruction of English ivy on several of the important extensive places here and the absolute necessity of it being replaced about cleaned out the Newport growers of these plants. Ivy is used in Newport for every conceivable purpose—in narrow borders in the grass along driveways, planted thickly along the edges of shrubberies, being pegged down closely to the soil, and in many other ways.

The seed houses are sending their representatives here to look for Fall bulb orders. Last week W. E. Marshall

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers.

If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.) We can supply them at \$2.50 per 1000, or 500 for \$1.50, and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet.

Try a thousand and see what a help they are in selling goods.

The following "Culturals" are particularly seasonable for your customers at the present time:

Chrysanthemums, Dahlias, Hyacinths, Lilies, Lily Culture, Tulips, Freesia, Vegetables.

THE FLORISTS' EXCHANGE

P. O. Box, 1697 NEW YORK

CHRYSANTHEMUMS

From 2 1/2-in. pots for sale.

Pacific, Omega, Mertham's Yellow, White Coombe, Appleton, Alice Byron, Balfour, Ivory, Pink Ivory, Brutus, Chadwick, Yellow Chadwick, Maud Dean, Helen Frick, Jeannie Nonin, General Macco, \$2.00 per 100.

Cash with order.

GEO. DARSLEY, 176 Claremont Avenue, JERSEY CITY, N. J.

BEGONIA VERNON

By the thousand, in flower and bud, best of reds. SALVIA, OUSTY MILLER, at \$2.00 per 100; \$18.00 per 1000. Call or address

W. B. WOODRUFF, Florist, Westfield, N. J.

The LOW BOILER

4 ft. high. Can furnish lower if necessary. This boiler is designed and specially adapted for greenhouse service. The form of construction makes it very efficient and economical. Write for prices and booklet. Free Hose Trial, Pipe Fittings, Valve, Etc.

WM. H. KAY CO., 244 Fulton St., NEW YORK

and W. Rickards made the round of the Island.

F. M. Smythe was also here over Sunday; the Wadley & Smythe store on Bellevue avenue is open.

Joseph Leikens has had his store open for some time.

The lilac is now in full bloom and all the retail flower stores are full of it. Cut flowers in roses and carnations dropped in price considerably in a little more than a week with the quality much inferior to that seen around Decoration Day.

The Knights Templar Commanderies of Pawtucket and Westerly were entertained here last week by Washington Commandery of this city; many of the florists are members of this organization.

Alexander MacLellan contends that dahlias as a rule succeed best when planted not before the middle of June. Mr. MacLellan has had long experience, and he should know about as well as anyone.

There is a brisk demand here now for dwarf growing cannas as well as for the choice varieties of more robust growth.

NEWARK, N. Y.—Jackson & Perkins Company are establishing a specimen garden of roses which they intend shall eventually include all varieties that are sufficiently hardy for outdoor planting in Western New York. More than seven hundred and fifty different kinds were set out the past Spring, and many others will be added next season. In laying out the planting, each class of roses was placed by itself, and under each class the kinds of similar colors are grouped so as to facilitate the study and comparison of them. The garden will also be used as a place for carrying on hybridizations with a view to obtaining valuable new sorts, and special attention is to be paid to this line of work in the future.

The Largest Growers of Chrysanthemums in America

CANADIAN NEWS

MONTREAL. — Weather conditions have at last taken a turn for the better, and during the last three days the bedding plant business has been booming. Everybody wants their plants at once, and I am afraid there is considerable Sunday work going on filling window boxes, etc.

The Spring importations of palms, arriving as they did before there was any room for them, have taxed the ingenuity of the greenhouse men, especially this season, as shipments are much larger than heretofore. And this in the face of the 25 per cent. duty imposed at the request of a few florists who thought of stopping the dumping of palms by foreign growers into the auction rooms in Montreal, which, by the way, has not had the effect intended; for **Kentia Forsteriana**, five to nine feet high, were sold the other day for \$3 each—about half of what they cost to import. It seems a pity that we should pay this duty on plants that are not grown in Canada, and will not be for a long time to come.

Stocks of bedding plants are not any too large, even for a late season, and, judging from the present demand, it looks as if all will be sold. **Dominion Park**, our Summer amusement resort, will set out twelve thousand plants this season; **William Ewing & Company**, seedsmen, have the order.

Harris & Hopton have a very large stock of scarlet geraniums in prime condition, and **Mr. Hopton** reports a good demand for them.

P. McKenna & Son will shortly open a new store in what will be **Bennet's Theatre** building when completed. This stand is in the heart of the crowded St. Catherine street, West, and a good business is assured from the start.

Harris & Hopton will also open a new store shortly.

Wilshire Brothers have purchased their greenhouse property at **Outremont**, and will add to their greenhouse area at once.

Mr. Pinoteau, the city gardener, and his staff are busy planting the squares this week.

The store men report a scarcity of carnations. There is a good demand for cut flowers, and plenty of funeral work. Lots of wedding decorations are booked for June, none of them that I know of being of very great importance. **W. C. H.**

Ogdensburg, N. Y.

The **Lawrance** greenhouses are the only ones in the city. **Mr. Lawrance** had built last season two houses, 22x100 feet each, by the **King Construction Company**, one house for roses, and one for carnations. A new steam boiler has been recently added and a new smoke stack. **Mr. Lawrance** issues a plant catalogue to his retail trade, and offers a varied assortment of plants and shrubs suitable to the rigorous climate of his section. The cut flower and plant trade in and around the **Thousand Islands** is brisk during the Summer months. **Mr. Lawrance** handles a large portion of this trade. **J. M.**

Washington, D. C.

Memorial Day Exercises.

One of the chief features of public interest to Washington and vicinity on Memorial Day, was the liberation of a small boat laden with flowers donated by florists and others, which was intended as an offering to those who had perished in the waters of the Potomac, and whose bodies had never been recovered. This idea was inaugurated several years ago by a **Mr. S. R. Whitney**. The boat was permitted to drift until sunk by natural laws, and its contents distributed by wind and wave wherever chance might take them.

At **Norfolk, Va.**, a boat 13 feet long, commemorative of the 13 original states, and named in honor of **Miss Clara Barton**, whose kind acts to suffering humanity have given her an immortal name, was set adrift upon the waves loaded with flowers. It was hoped that some of the blossoms might find their way to the resting place of some hero.

J. H. Small & Sons recently prepared three large set pieces to be sent to Mississippi for the unveiling of the **Jefferson Davis** statue there. They were in charge of a special person appointed to look out for their safe delivery. One piece representing the seal of Mississippi, was made of asparagus and immortelles; a bronzed cypress leaf garland, the interior of which was filled with a Confederate flag worked in red and white immortelles, composed the second piece; while the third, an emblem of the **United Daughters of the Confederacy**, was about 50 inches square, and handsomely constructed of blue, red and yellow immortelles.

Commencements, weddings and funeral work are keeping the trade busy. The supply since last week has increased, owing to more favorable weather conditions. The excessive rains have interfered with planting. The daily increasing June demand for cut flowers is in excess of the supply. Business for the week has been very satisfactory.

June 9 was Confederate Memorial Day at **Arlington Cemetery**, several thousand people attending the ceremonies. The decorations consisted of small bunches of sweet williams, daisies, double **deutzia**, hardy roses, carnations, etc. **George H. Cooke** supplied 267 bunches, and donated some loose flowers. A large box of pansies and double **deutzia** was sent from the **White House**. A large cypress palm garland, the center of which was composed of the **Southern Cross** made of immortelles, and the lower portion filled with peonies and roses, and tied with red white and blue ribbon, produced the best display. This cross was surrounded by a living cross of about 80 young ladies dressed in white, with broad red sash across the shoulder, and each holding a red peony. The floral piece was made by **J. H. Small & Sons**, and was particularly effective. **Z. D. Blackstone** supplied a goodly quantity of the loose flowers, and also made a donation.

J. H. Small made the opening address at the laying of the foundation stone of the new **Masonic Temple** by **President Roosevelt** last week. **JAS. L. CARRERY.**

Oh when you want the business done,
By play that's strong and steady,
just take a look at old Slug Shot,
For that's the stuff that's ready.

REVIEW OF THE MARKET

NEW YORK.—The cut flower market is showing signs of a break in prices all around. Roses are not what may be termed plentiful by any means, but there seems to be such a quantity of other stock in the market, peonies in particular, that values on roses show a decided weakening. Carnations are abundant, and the falling off in the prices of these is even more marked than in the case of roses. Gardenias are quite plentiful, as also are cattleyas; just at this time the right kind of business is not forthcoming, for which these flowers can be used, and they are not clearing out at all satisfactorily. The same remarks also apply to lily of the valley, which is not bringing the prices that were obtainable a week ago. Lilies are arriving in extremely large numbers, and they can be had at a flat price of \$4 per 100, which is a very low figure when compared with what ruled two weeks ago.

Peonies are coming in very plentifully now, and while here and there efforts were made to secure prices approximating 75c. or \$1 per dozen, energetic buyers were able to get what they wanted at from \$3 to \$4 per 100. Sweet peas continue plentiful and show a general weakening in values. The demand for smilax and other greens is also somewhat slower than it has been.

CHICAGO.—It was with surprise that the firm condition of the market was viewed after Decoration Day right up to the locking of the doors on Saturday night, and though a gradual decline was anticipated last week it caused something of a shock to see prices cut in two, in many cases, on Monday morning and to follow throughout the week an inclination toward lower rather than higher values.

Carnations, which owing to the continued cool weather, appear of a quality never surpassed and seldom equalled at this season of the year, were forced on the market in quantities far in excess of demands; and tea roses, although in some cases showing the effects of ravages by thrips, were supplied in top notch grades of a superior character for June, with American Beauty, which would be classed as fancy special at any time, were all more abundant than the requirements of the trade could consume, resulting in considerable speculation in job lots of the inferior grades or held over stock. And all this in the face of a week's business which at times showed a decidedly lively aspect both in shipping and among the local purchasers.

Peony prices were more than cut in two. In some cases, reds going as low as 40c per dozen, with good white or pink holding pretty well up. 75c to \$1.25; and some, though few compared to past seasons, were placed in cold storage.

Excellent longiflorum lilies are to be had in plenty, and though the stems are not long the flowers are of remarkable size and substance. Out of door candid lilies from Indiana at \$1 per dozen spikes are offered by commission houses, though the blooms appear to show the effects of the cold weather in the absence of foliage the flowers are in good condition.

This week opened with no relief from the congestion of stock in sight; large consignments of flowers coming in from all growers, the quality being excellent. The hardy fern situation has been somewhat relieved by the receipt of large invoices, though the best goods still bring \$4 per thousand, with a prospect of a lower price during the week.

PHILADELPHIA.—All prices are ruling lower this week, there being a large quantity of flowers on hand and the demand not very good. Local business is quiet, but a good shipping trade has relieved the market considerably. American Beauty roses are far in excess of demands; \$3 per dozen is asked for the very best flowers, most of the stock being sold at \$20 per 100.

Peonies are now coming in from local growers; prices range from \$5 to \$10 per 100. The best quality tea roses sell at from \$3 to \$10 per 100. There is a very large quantity of poor stock arriving every day, which goes to the street men at low prices.

Carnations are in good supply and the quality is fully as good as in Midwinter, owing to cool nights; the best

flowers sell at \$3 to \$4 per 100. Sweet peas are in large supply; the very best only selling; 75c to \$1 per 100 are the highest prices realized. Daisies have been in good demand at \$1 to \$1.50 per 100. Gladiolus go at \$1 per dozen for the best; antirrhinum, \$1 per dozen for the long stemmed. Lily of the valley is in good supply at \$2 to \$4; cornflowers bring 50c to \$1; sweet sulcas, \$3; stocks, \$2 to \$5 per 100.

Good Asparagus plumosus fetches 50c per bunch. D. R.

BOSTON.—Business has been good for this season of the year. Stock is not so overabundant as it generally is about this time, when there is warm weather to rush plants into bloom. Roses are plentiful, but they are of good quality. There are good American Beauty and many fine Richmond. No outdoor roses will be here for two weeks yet, which helps the indoor cultivators materially. Carnations remain of excellent quality and there seems to be a good demand for them. Not many lilies are in at present. Sweet peas continue of fine quality. Lily of the valley has had a good call recently, even if much of it has been outdoor grown. Peonies are very late this season, but in another week they will be plentiful; so far only a few early varieties have made their appearance. J. W. D.

ST. LOUIS.—The trade has suffered a great deal this Spring, owing to the unseasonable weather which has prevailed here; the greenhouse men more than the retailer or wholesaler. This is about the last week of the florist season, as all social doings will be laid aside until next Fall—a long time to wait for those who have made no money; but those who have can take things easy.

Stock in cut flowers the past week was again stacked up at the wholesale houses, who report light demand. Prices were low and in order to dispose of the consignments the commission men had to resort to job lot values on carnations and roses. Of course, this has only reference to second grade stock, as extra fine select is scarce, for which a good price is still obtained. Best select roses bring from \$6 to \$8 per 100; firsts, \$4 to \$5, and seconds, \$1 to \$2 per 100; the latter are very plentiful.

Carnations, too, are down in price; selects do not realize over \$2; good firsts, \$2, and common, \$1 to \$1.50 per 100. There were more than the demand called for all of the past week. Lily of the valley is back to \$4 for the fancy, and has sold well all week. A few callas and Harrisii lilies are still coming in. Plenty of outdoor stock is now in the market at cheap prices, such as daisies, cornflowers, Cape jasmines, General Jacqueminot roses; and there are plenty of common dagger ferns; also other greens. ST. PATRICK.

MILWAUKEE.—Decoration Day business was beyond expectations and it was certainly a very profitable holiday for growers of stock under glass as there was no outdoor stock to be had in this vicinity owing to the very late season. High prices were obtained for roses, carnations and other greenhouse grown stock; in fact, prices averaged up as well as at any other holiday in the year. Warm weather, however, following Decoration Day caused quite a slump in the market. Carnations dropped to the \$1 mark. There are also plenty of tulips, lily of the valley, sweet peas and other stock coming in which is usually past before the first of June.

All varieties of bedding stock have been moving very slowly until the past week when everybody was crowded with work, the quality of both roses and carnations now is superior to anything we have had before in this market at this season of the year. P.

CINCINNATI.—Business during the past week has been good. Carnations are quite plentiful and fetch fair prices. Roses as a general thing are getting bad doses of mildew. Sweet peas are in fair supply and have a good call. Peonies are just arriving and are not in great demand; the crop will be very short and the flowers are not very perfect. Jack Frost is the fellow to blame. E. G. G.

INDIANAPOLIS.—A heavy accumulation of flowers now seems unavoidable, as warmer weather has brought

GLADIOLI

ARTHUR COWEE, Gladiolus Specialist,

MEADOWVALE FARM
BERLIN, N. Y.

forth quickly buds which have been at a standstill for a fortnight. The several divisions of the business are moving briskly and a large proportion of the surplus may be disposed of. Regular counter trade is most gratifying. Funeral work has been well apportioned among the retailers, for it kept all of them busy. Several decorations are on hand, but there seems to be an aversion to any large or elaborate affair this season.

The variety of stock is all that is to be wished for, and the quality is uniformly good.

A sharp decline in carnation prices occurred this week. The best grades are selling at \$2 to \$2.50 per 100; a few fancy bring \$3 per 100. Harrisii lilies are in excess of the demand at \$10 per 100. The calla season is practically over; the few offered bring \$12.50 per 100.

Thousands of peonies are being cut, so it will be impossible to dispose of all profitably. The present price is \$4 per 100; the anticipated one, \$1.50 to \$2 per 100. The wise growers are sending their product North in advance of the season. Roses of all kinds are plentiful and usually good. Mme. Abel Chatenay and Richmond are the choicest, with three-foot stems, at \$8 to \$10 per 100. Killarney retails well at \$2 to \$3 per dozen.

Feverfew, Ten-week stocks and hydrangeas may be had at very reasonable prices.

Sweet peas are always in demand at 50c to \$1 per 100.

The green goods market is heavily stocked with Asparagus plumosus and Sprengerii as well as smilax. Heavy shipping orders are being filled.

Tomlinson Hall market is loaded with peonies and bedding stock; business there is reported excellent. I. B.

WASHINGTON, D. C.—In commemoration not only of the dead slain in battle, but likewise of deceased relatives and friends, hosts of Washingtonians sought the various cemeteries on May 30 to strew flowers upon the graves. Despite the fact that cold weather had caused an almost unprecedented short supply of flowers from the outside, a considerable quantity was shipped from the South, and local greenhouses supplied the rest. Mock orange and weigelia, which by reason of the late season were just in their prime, afforded some relief to the situation and met with public favor. Peonies were scarce and in great demand, and with a continuation of prevailing weather conditions, these flowers will not reach the maximum crop for a week or ten days hence; all are below the average in quality thus far. Florists generally had about all they could do May 29 and 30, and owing to scarcity of the season and more bulky grades of flowers, enjoyed better sales with less labor attached to handling. Everything sold at a good price. A very noticeable coincidence of the season was a lack of the usual stagnation which takes place after a holiday; business has kept up considerably above the average. On Saturday, while one of the worst rain storms of the season prevailed, a visit to the stores revealed a brisk demand for all kinds of stock. Many weddings are somewhat accountable for this condition, as the regular Spring trade continues to suffer from the unseasonable weather. But few of the society people have left town yet, this also helps the trade to a marked degree. J. L. C.

KALAMAZOO, MICH.—Memorial Day trade certainly surpassed all records here both as regards prices and profits. No outdoor flower being available, the growers and retailers were taxed to their utmost resources, and it must be conceded to have been a most profitable business as far as concerned. Everything salable in cut flowers and pot plants was disposed of, and while the latter averaged up at about the usual prices, cut flowers soared as high or higher than the Christmas figures—a thing entirely unheard of here. As usual, carnations were in greatest demand and went at \$5.00 to \$1.50 per dozen, the latter figure representing quite a considerable percentage of the stock sold. Very few were sold at 50c, 75c, to \$1 being the usual price. Roses brought

75c to \$1.50 per dozen, jasmines, 50c. per dozen. The bulk of the business was done with the above, and when one remembers that only the week previous both roses and carnations were offered at 35c. to 50c. per dozen, the jump to \$1 and \$1.50 must have given some of our good citizens a severe jolt. However, little complaint seems to have been made, as the public realized the situation, so all are satisfied with the week's trade.

The weather continues much too cold for this season, and outdoor stock makes slow growth.

Mrs. Samuel Batson and family sailed on May 25 for a Summer's visit to her old home in the Highlands of Scotland. S. B.

ROCHESTER.—Business here the past week has been exceptional, especially the few days preceding Memorial Day. The weather still keeps cool, with reports of light frosts, and in this we seem to be in the same condition as other sections of the country, but "it's an ill wind," etc., as the growers of cut flowers can testify. With the approach of Memorial Day, the market price of cut flowers advanced, and those having any quantity to dispose of were soon sold. Roses sold at from \$4 to \$10 per 100; carnations, \$2.50 to \$4; tulips, \$2 to \$2.50; sweet peas, 60c. per 100. Cut sprays from flowering shrubs were very scarce, no snowball blossoms being offered at any of the stores; what few sprays of lilac were sold readily brought 5c. per spray. Considering the many acres devoted to nursery stock in and around Rochester, the prices quoted can be taken as near high water mark as usually at this time the market has been flooded with everything, and it may perhaps be quite a few years before cut early tulips will be offered for sale on Memorial Day. The plant trade also received its annual impetus, and from now on, as soon as tulips and other bulbs stock can be disposed of, the regular planting season will go merrily on. COCKNEY.

COLUMBUS.—For the past month plans have been making by all the craft here for a large business for Memorial Day. But even with all our preparations, a great many would-be customers were disappointed; the trade was simply enormous, nothing like it was ever known here before. The writer visited many greenhouses, beginning early on Wednesday morning, and at every one the answer given to a customer was either "little or nothing left" or "sold out." As we all expected, the practically entire absence of outdoor flowers was a great obstacle; but we had a good supply of greenhouse stock, and it all went. At one greenhouse I counted fifty-three women get out of an electric car and make a rush upon the four of five clerks of the establishment—I hope they got their orders filled. I believe that with all that was sold, twice as much more could have been had we had it on Wednesday. Roses brought from \$1.50 to \$5 for American Beauty; carnations, \$1 to \$1.25; stocks, \$1; peonies, \$1.50 to \$2; Cape Jasmine, 75c.; and callas, \$3 per dozen. Marguerites, sweet peas, and pansies, together with what snowballs, columbines, and any other hardy stock we had, were bunched together as fast as possible, and sold for 50c. to \$1 a bunch. We had a chance this year to realize what immense quantities of wild flowers are used usually; that is, flowers gathered by the public, with which the florists have nothing to do. Had we given this matter the consideration it deserved (knowing how very scarce all outdoor stock would be) every one of us would have purchased twice the quantity of cut flowers for Memorial Day that we did—and even then sold out clean. F. W.

FIRMS WHO ARE BUILDING.
ONEONTA, N. Y.—John Strong is adding to his establishment materially by the erection of three new greenhouses this Summer.
LEBANON, TENN.—The Lebanon Floral Company is enlarging its greenhouse plant to double the present size and making other improvements.

Philadelphia.
News Gittings.
The solid silver cup to be given by the Whilldin Pottery Company as a howling prize at the S. A. P. convention, has been on exhibition in the window of Bailey, Banks & Biddle on Chestnut street this past week. It is a handsome trophy. The howling committee of our club is to decide what the cup is to be offered for.
The Henry F. Michell Company will also give a prize for howling; they are having something unique made, and we hope to present a photograph of it later.
Pennock Brothers had 360 orders for the commencement at Bryn Mawr College last week; their entire force worked all night getting these out.
The Wm. Graham Company has its entire decorating force working on orders for the Elks convention which takes place here in July. In addition to decorating large stores and clubs the firm also has the contract for all bunting, flags and electrical lighting for the Court of Honor to be erected by the city which will be located on Broad street from Race to Spruce streets.
John Westcott is down at Waretown getting things in shape for the annual opening, which owing to the late season will occur late in this month.
Keller Brothers, Morristown, Pa., report a very good season in flower pots; all sizes have sold well, and no surplus of stock has accumulated.
The rhododendron display at the Andorra Nurseries is attracting numerous visitors these days. Mr. Harper considers the display unprecedented and attributes the rare beauty of the great array of rhododendrons to the late Spring, which has made the flowers slow in maturing.

SAN ANTONIO, TEX.—Chrysanthemums in bloom in the month of May was one of the peculiar conditions existing in San Antonio on account of the Fall and Winter weather which prevailed here.

HIGHLAND PARK, ILL.—Ernest Wienhoeber, the well-known Chicago florist, has bought Bobolink farm, southwest of this city, for \$27,500. He is to fix up the place finely in a landscape way and make it one of the most attractive spots on the Green Bay road. Formerly the family spent the Summer at Waukegan.

Cincinnati, O.

News Notes.
Max Rudolph has bought out his partner in the greenhouse business at College Hill, O., and will now conduct it in his own name.

I notice in the last issue of The Florists' Exchange, page 771, an article suggesting that the heads of the different florists' clubs and horticultural associations of the United States be called upon to use their best endeavors to promote membership in the S. A. F. O. H., and that the respective officers be called upon to meet in Philadelphia at the August convention. This suggestion is all right. I favor anything that will advance the interests of the mother society, and possibly you might, by calling such a meeting, get the officers in question to become members, which, to a large extent, is not the case now. Then, possibly, they might map out some scheme whereby a few of the members of the smaller organizations could be induced to come into the fold. But, to my mind, the best way to get members is for the S. A. F. O. H. to pay a first-class lecturer to visit the different societies, deliver an instructive lecture, and then and there make a plea for the grand old mother society, the S. A. F. O. H.
E. G. G.

New Orleans, La.

News Notes.
Charles Eble having purchased a portion of a square near his present location, which is situated in the heart of the garden district, will, when his present lease expires, build a modern residence and a range of glass to grow stock for his Baronne street store.

On a recent visit to Audubon Park head gardener Weller pointed out to me a plant of the new climbing Asparagus Ducheni. This is the most distinct of the newer varieties of asparagus. From a small plant received from the Botanic Garden at Washington a few months since and planted out in Horticultural Hall, it has grown to fine proportions. It might be described as a giant climbing A. Sprengeri, with glossy leaves, and no doubt will become very popular for cutting; although it can never take the place of Asparagus plumosus, where a heavier class of green is required it will be just the thing. Another plant that Mr. Weller is very proud of is that beautiful cycad, Ecephalartos Lehmanni. The plant at the park is a regal specimen and had just matured a new crown of leaves. He has also a magnificent specimen of Cycas circinalis.

The writer has noticed that in several places in this city that interesting parasitic plant dodder (Cuscuta americana) has established itself on the privet hedges, sometimes in just small patches, at others it covers the whole hedge. From a botanist's point of view it is interesting, but I am inclined to think that to the gardener it may become a nuisance.

 FOR
CUT FLOWERS AND SUPPLIES
 76-78 Wabash Avenue, CHICAGO.

Chicago.
The Week's News.
 The closing of numerous private schools on the north side and other residential sections which started in last week has added materially to the total work of the retailers in those localities.
 Paul Pavelchik, one of the oldest wire workers in Chicago, whose place of business was at 3301 Hoyne avenue and who has been furnishing the florists with wire designs for the past twenty-five years, died of brain fever at his home 3362 Hamilton avenue on June 1.
 E. H. Hunt is putting out an innovation in the form of wire in all sizes, suitable for stemming or winding bunches or sprays, wound on spools, one pound to the spool. The manufacturers are putting these up in this form at the special request of this house.
 A traveler who recently returned from an extended business trip which took him pretty thoroughly through the district dependent on this market for cut flowers, remarked a few days since that seldom did he see a box of flowers opened that there were not more or less of the heads of carnations and roses snapped off, which in the aggregate entails a considerable loss on the consignees. From personal observation I can assert that it is not owing to lack of pains on the part of the small army of young men who devote themselves to this work in Chicago; and when the above re-

marks were quoted to a well-known packer with whom a complaint on this ground is so rare that the last one has passed out of memory, he said that the remedy was very simple which he explained in the following manner: "When the box is filled ready to nail up, place a flat cleat in the center and drive it down hard on the ends of the stems to hold the flowers firmly in place, but when the upright cleats, forming the receptacle for the ice, are put in place, never press them hard on to the stems but leave ample leeway or else in the more or less rough handling of the boxes some of the heads will surely be snapped off. Let every Chicago packer try this method, and the complaints of loss from this cause will at once be eliminated."

Although prices were low compared to the previous week E. C. Amling said at the close of last week that business, referring to the amount of stock handled, had held up remarkably well.
 One more hail storm, which it is hoped may be the last of the succession, visited the north part of the city on Tuesday afternoon of last week. The stones were too small to do much damage, but the storm which was only of about two minutes' duration was very severe while it lasted, the ground being nearly covered in that short time.

E. A. Kanst, 5700 Cottage Grove avenue, will supply all applicants with the advance premium list offered for this Fall's flower show of the Horticultural Society of Chicago which will be held in the Coliseum, October 31 to November 6, inclusive. Intending exhibitors should not fail to procure a copy of this schedule of prizes and cultivate their products according to its precepts.
 Applications have been made to and are now under consideration by the South Park Board for the establishment of parks in the Hegewisch, South Deering, Grand Crossing, Dauphin Park, and South Chicago sections at a total cost of two million dollars.

The scarcity of hardy ferns has caused a scouring of the woods in the suburbs and even into Indiana, but the results generally do not compare favorably with the more distant products.
 The impression seems to prevail not only among the retailers who are unanimous, but among commission men, that such high prices as ruled here Decoration Day are a positive detriment to the trade. Retailers stated that when intending purchasers were informed of the price of goods they frequently laughed, turned on their heels and departed.

W. N. Rudd has been for a considerable time endeavoring, owing to conflicting duties, to withdraw from the position of secretary-treasurer of the Horticultural Society of Chicago, but his resignation has been refused or held in abeyance until at last, owing to his insistence, it has been accepted and resolutions commemorating of the unflinching performance of his duties and unswerving loyalty to the organization adopted with the recommendation that a suitable medal of the society be struck for him as a token of appreciation of his long continued service to the society.

The bulk of the peony harvest last year, which was of unprecedented proportions, was practically gathered and hundreds of thousands placed in cold storage some days previous to the middle of June—a decidedly different condition from that presented this season, when the storing of stock had hardly commenced at the same date.

It is said by members of the club that suggestions for a good place to hold the annual picnic are in order and Morton Grove which has been mentioned seems to be perfectly satisfactory.

N. C. Moore & Company, Morton Grove, estimate their peony crops for this season at not over one-eighth of the last year's harvest, and Vaughan & Sperry state that advices received by them from many scattered sections of the district contributing to this market place this year's product at from ten to twenty per cent. of expectations.

At the J. A. Budlong greenhouses an immense well was constructed last Summer, but as it was found to be inadequate to the requirements of the establishment another even larger, being 24 feet deep and 22 feet in diameter, is now being dug.

The growers and purveyors of young chrysanthemum plants report a business this season from all sections far in advance of anticipations and over-topping

the large trade in this branch of preceding years. Some of the growers have been short of some varieties, but as will be seen by reference to our advertising columns they are now prepared to furnish a very full list.

The Mrs. Marshall Field rose houses in the Robey street section of the Peter Reinberg range, which were planted but a few weeks ago, have made a remarkable growth and give glowing promise for the future.

A. F. Longren, traveling representative of The Chicago Carnation Company, was in the city the first of the week and visited Jensen & Dekema's establishment particularly to take a look at W. N. Rudd's new scarlet carnation which is to be put on the market by this concern next Spring. Mr. Longren expressed himself as well satisfied with the habit and growth of the new variety which has not yet been named.

The superb collection of orchids, embracing 2,700 plants of 1,000 varieties, which Harry G. Selfridge on his departure to his new home in England loaned to the Lincoln Park conservatories, is in profuse bloom and attracting thousands of visitors. The hybrid cattleya named after Mrs. Selfridge, ivory white with purple lip and throat of orange gold, one of six of the variety extant, is now in bloom, and owing to the position occupied in Chicago by its namesake is sought out by all comers.

Horace R. Hughes has a number of novel and interesting ideas which he uses successfully in attracting trade to his Van Buren street store, one of which is a small deer park adjoining the store property, in which are confined a buck and two does. One of the latter recently gave birth to a fawn and one Saturday evening, two weeks ago, as soon as the youngster was strong enough to frisk about the daily papers made mention of the unusual event in the densely populated section of a big city. Mr. Hughes estimated that as a result five thousand people visited his store on Sunday and his books showed sales for the day aggregating just five times the amount of his average Sunday's business.

The Chicago Florists' baseball nine received a trimming at Riverview Park on Sunday afternoon by Charlie's Colts. It was a good game though the score of 11 to 1 would not indicate it.

At Wieter Brothers' greenhouses carnation planting inside of stock carried in pots commenced this week, and some fifty thousand plants will be so treated, not going into the field at all.

A. O. Wild of the concern of C. & M. Wild, peony specialists, of Sarcoxie, Mo., was a Monday visitor to the market section. L. Wasserman of Muskegon, Mich., was in the city the first of the week looking up building material. J. and E. J. Bertermann of Indianapolis were noted among this week's callers in Chicago.

Former president W. F. Kasting of Buffalo, was in the city this week in connection with business pertaining to the International Flower Show, to be held here next year.

Continued improvements of an important nature are much in evidence at the Poehlmann Brothers Company's establishment at Morton Grove, among them being a cold storage cooler which is being installed at Plant B, and one is ordered for Plant A, on the completion of the new shipping house now in course of construction.

A few Chicago nurserymen attended the meeting of the American Association of Nurserymen at Detroit this week.

WILLIAM K. WOOD.

Boston.

Exhibition Notes.

The annual rhododendron show of the Massachusetts Horticultural Society was announced for Saturday last, and although there was a first class exhibition of reasonable flowers only a few rhododendrons were in the hall. The season has been so late and changeable that it has been hard to arrange proper dates for the different exhibitions. Last week's announcements have again all been changed and the regular rhododendron show will be held June 15, followed by the peony and rose show on June 22-23 and by the rose and strawberry show June 29-30.

The exhibition on Saturday was composed mostly of the late flowering Darwin and parrot tulips, herbaceous plants and tree peonies. Some new plants of exceptional merit were on exhibition noticeable among which was a fine lot of pot plants of *Spiraea Queen Alexandra*, a new variety of a pleasing soft pink color and the winner of the society's silver medal. It was exhibited by R. & J. Farquhar & Company, who also had a fine display of herbaceous plants and a splendid collection of tulips of which they exhibited many hundreds of blooms. They also staged magnificent plants in tubs of *Wistaria multiflora* which with their long pendulous blossoms proved quite an attraction.

Perhaps the finest exhibit in the hall was the collection of seedling tree peonies put up by Chas. Sander, gardener to Professor C. S. Sargent, Brookline. This collection contained many fine colors and blooms of enormous size and was well worthy of the silver medal awarded it.

Another attraction was formed by the fine plants of *Caleolaria rugosa* Golden Gem, and the new hybrid variety *Stewartii*, which recently captured the society's silver medal. These plants were exhibited by James Crosbie, gardener to Mrs. J. W. Tufts; he also exhibited a fine specimen plant of *Clerodendron Balfourii*, for the superior cultivation of which he received a first class certificate of merit.

The Blin Hills Nurseries had on exhibition a fine lot of hardy herbaceous plants, their magnificent vases of trolis in variety being a great attraction. Robert Cameron, for the Harvard Botanic Gardens, exhibited a fine collection of herbaceous plants and a table of breeder tulips which had many rich colorings in them.

W. W. Rawson & Company were also exhibitors of late tulips showing a collection of excellent blooms.

E. Johansson, gardener, to Mr. J. E. Rothwell, exhibited a table of cut orchid blooms the like of which he is famed for putting up. Other exhibitors were Martin Sullivan, gardener to Mr. W. Whitman, and J. L. Smith, gardener to Mrs. A. W. Blake, each showing azaleas. Wm. Rnst, gardener to Dr. C. G. Weld, staged lily of the valley; Mrs. E. M. Gill, a miscellaneous lot of flowers, and Warren Heustis & Son a collection of hardy shrubs. The vegetable classes were well represented notwithstanding the lateness of the season. The exhibition was open all day Saturday and on Sunday afternoon when the attendance of the public was very satisfactory.

News Notes.

Mrs. Wm. J. Stewart is seriously ill of pneumonia at her home in Winchester.

S. Wax of Wax Brothers has gone on his annual vacation; he has taken Mrs. Wax along.

Save Greenhouse Fuel

With the Ideal Concrete Block Machine, any florist can build his own greenhouses at little cost. Saves in fuel, because the hollow block is practically frost-proof. Lowers insurance rates and ends the cost of maintenance, because Ideal Blocks are fire-proof and everlasting.

IDEAL Concrete Machine

The original and only perfected Concrete Block Machine working on the face-down principle.

Enables the manufacture of Ideal Concrete Blocks from sand, gravel and a little cement at a cost far lower than that of other building materials. May be operated by any man without previous experience. Low in cost, rapid in operation, and can never wear out or break in use.

Write for catalogue and illustrations of Ideal Concrete Block construction, of practical value to every florist. Sent Free.

J. K. M. L. Farquhar has been in the Adirondacks the past week.

There is every indication of a lively meeting of the Gardeners and Florists' Club on Tuesday the 18th inst., to hear Mr. Totty on the chrysanthemum. The executive committee has been making arrangements for the annual picnic, and the time and place will be announced at the meeting. J. W. DUNCAN.

St. Paul.

Trade Notes.

L. L. May & Co. report the heaviest Memorial Day trade in years; both cut flowers and plants sold remarkably well.

This firm is just now winding up the Spring planting of nursery stock; the weather has been ideal for the nurserymen, consequently sales have been away ahead of those of previous seasons.

J. Hoffman, manager of May's retail department, will be married June 19.

C. F. Vogt reports a heavy Memorial Day trade; he says the largest in years. Unfortunately, his hands and fingers were poisoned, which makes it inconvenient for him to attend to business.

E. F. Lemke had a fine stock of lilies in bloom for Memorial Day, which sold quite readily.

Holm & Olsen handled a large business and are apparently well pleased with results. They are doing considerable in Spring planting. PAUL.

COLUMBUS, OHIO.—Samuel Graff has retired from the firm of Graff Brothers. Hereafter the large business of this floral establishment will be carried on under the name of William Graff, the senior member of Graff Brothers. Samuel Graff has gone to Chicago to live. F. W.

GLASS

100 Boxes, 12x16, second quality, double thick, ready for shipment about July 20. Also 20 boxes, 8x10, same grade. This glass will be carefully packed by experienced men. Prices, on application.

R. G. HANFORD, NORWALK, CONN.

Rome, N. Y.

W. H. Orendorff, who for some time past has conducted a florist business on Linden street, is reported to be going out of the business.

The Humphreys Floral Company is the style of a new concern that has succeeded C. B. Humphrey, the death of Mr. Humphrey causing the change. Mr. Humphrey, Jr., and a sister are identified largely with the new enterprise, and have a good stock of all that goes to make up the stock-in-trade of a well equipped retail establishment.

E. J. Byam has a large area of glass and a fine stock all in the pink of perfection. His place is a model of neatness, and business is reported as never before having been better.

William T. Hughes is a new comer into the florist ranks of Rome. He has a few well stocked greenhouses on River street and appeared to be very much enthused about the future prospects of his plant. He grows carnations and bedding plants and carries a small stock of decorative material. J. M.

Keeps Him Sold Close.

My stock in general is almost sold out, and has been kept sold up very close all the season by my advertisement in The Florists' Exchange only. DANIEL K. HERR.

Look Here, Mr. Florist and Gardener

WE have just passed through an unusually severe winter and you are apt to forget the many sleepless nights you spent worrying about the temperature of that No. so and so house.

Or the many zero nights that you spent in the boiler pit; maybe you did not have to do the stoking and firing, but **you** certainly had to do the worrying and pay the coal bills.

Now keep the vows you made on those trying occasions, *And Send for me.* I have solved the problem for others, I can do it for you; and remember, I will come recommended by some of the most prominent commercial florists and gardeners in the East, "Personal friends of yours."

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. No. 25

NEW YORK AND CHICAGO, JUNE 22, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention.
 Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

COLD STORAGE LILIES

ALL LIVE AND UP-TO-DATE FLORISTS GROW THEM

The forcing of cold storage lilies is no longer an experiment. If you have not already grown some of these we can refer you to hundreds of florists who make a success of this method and have lilies "all the year around."—The same as Lily of the Valley.

Our lilies are bought for and placed in cold storage for the express purpose of delivering bulbs in the summer time.

LILIUM longiflorum and **giganteum** take about two months to bloom from time of planting from cold storage. Specimens from five to six months, so that longiflorum wanted for Thanksgiving and Christmas should be planted about Oct. 1st, and **speciosum** and **auratum** about July 1st.

We have limited quantities of the following varieties on hand and offer subject to being unsold and at the prices named; will hold not later than Oct. 1st, for our customers without any additional charges for cold storage. **ORDER TO-DAY.**
 All cases are repacked before shipment.

LILIUM LONGIFLORUM GIGANTEUM —Cold storage. per per 7 to 9-inch bulbs, 300 in 100 1000 case..... \$8.00 \$75.00

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION
 Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

MT. STERLING, KY.—The Bluegrass Seed Company has been organized with a capital stock of \$8,000, and will build two large warehouses.

WARSAW, IND.—Rains last week devastated the lowlands about Nappanee, ruining the onion fields, the largest in the middle West. Losses are estimated at \$500,000.

WASHINGTON, IA.—The F. B. Mills Company of Rose Hill, N. Y., has, after investigation, finally decided to open a branch here. Work has commenced on a brick warehouse, 40x100 feet. The change has been made to better facilitate the work of filling the Western orders of the concern.

MARIETTA, PA.—Charles Johnson, seedsman, sails for Europe on June 27. He will make a tour of inspection of the seed growing districts in France, particularly the crops under cultivation by Denaiffe & Son. He will also visit the most prominent European seed centers.

FREDERICK COOPER, seedsmen, Wellington, New Zealand, is patriotic. In his catalogue as well as on his envelopes he uses the following sentence: "Maoriland produces the softest wool, the most tasty butter, the tenderest mutton, the toughest footballers, why not the most productive seeds?"

CHICAGO.—A. J. Pieters, president and manager of the A. J. Pieters Seed Company, Hollister, Cal., and formerly with the Department of Agriculture passed through here on his way East last week; and Howard Earl of Burpee & Company's Philadelphia house stopped off in Chicago before continuing his way West.

Winterson's Seed Store has been making some architectural changes and improvements including a stairway leading from the seed store to the E. F. Winterson Company cut flower store in the basement.

Charles Hollenbach of the committee on transportation says it looks bright for a good representation from here for the American Seed Trade Association meeting, he having nearly a carload of bookings for sleeping car accommodations, over a week in advance of the date of departure.

The elongated season keeps up the rush of business at Vaughan's Seed Store, so far making it impracticable to proceed with the annual stock taking which is generally over before this time. J. C. Willison of Wood, Stubbs & Company, Louisville, Ky., and representing the new paper, The Market Growers Journal, was in Chicago the first of the week.

J. C. Vaughan returned from New York on Monday.
 Charles P. Braslan of the Braslan Seed Growers' Company, San Jose and Coyote, Cal., was in town the first of the week and from here started East.
 W. K. W.

GOVERNMENT INSPECTION OF SEEDS.—Commenting on the beneficial work of the Department of Agriculture in improving the seed supply of the country, through tests for purity and the publication of the names of firms selling seeds that contain adulterants, the Breeders' Gazette, Chicago, points out the advantage that a firm can acquire when it avails itself of the aid of the law, in this wise: "Before us lies a circular from a western seed house advertising its alfalfa seed. This is the statement: 'Our brand has been tested for purity by the United States Department of Agriculture.' That will carry conviction. The ability to sell from a stock which has been found free from adulteration by the Department is worth many dollars to a seedsman. The only wonder is that all the reputable seedsmen did not promptly apply to the Department for its aid in protecting themselves in their purchases and in promoting sales through the stamp of purity affixed by 'Uncle Sam.' We are working toward a much cleaner condition of our seed trade and to that consummation the reputable seedsmen can lend powerful aid."

So that what was in the beginning viewed by many in the light of hardship and injustice, has turned out to be a great advantage—in an advertising way. But should the "tested brand" fall short in any particular after it has reached the purchaser, will "Uncle Sam," by his "stamp of purity," be held responsible and pay the piper?

SEEDS FOR THE UNITED STATES.—The British Vice-Consul at Kansas City reports that there is a good opening for agricultural and horticultural seeds, says the Horticultural Trade Journal, England. Doubtless American seedsmen can fill this opening.

A recent consular report states that in 1906 onion seed to the value of \$14,729 was exported from the Canary Islands to the United States. The crop of onion seed, it is said, was enormous and far exceeded the demand. It is estimated that over 40,000 pounds were left on the hands of the dealers.

NEW YORK.—The twenty-fifth annual convention of the American Seed Trade Association will be held in the Hotel Astor, Times Square, from June 25 to 27 inclusive. A large gathering is assured.

IMPORTS OF SEEDS, ETC.—June 8 and 9.—H. Nungesser & Company, 200 packages seeds; J. A. Manda, one case live plants. June 10.—J. W. Hampton, Jr. & Company, 12 double bushels grass seed, J. M. Thorburn & Company, 21 bags grass seed. June 13.—Schieffelin & Company, 16 packages deciduous plants. June 14.—Vaughan's Seed Store, nine cases bulbs.

European Notes.

The weather in Northern Europe keeps unseasonably cold although we have not as yet copied the example of New York in the matter of snowstorms. Everything in the way of cultures all over Europe is in a very backward state (fully four weeks behind), but in spite of this the plants that are alive are very promising and rains are abundant.

The culture that has the finest appearance is lettuce of which the acreage is unusually large this year. In one district more than 250 acres are standing, the bulk of the seed is for home consumption.

Radishes have tested the honor and honesty of the growers and brought defaulters to the front. Some of the merchants have had stock seed, placed in the hands of growers in February, returned to them during the past few days when it is three months too late to place it elsewhere. Of course, if there is a good crop this year there will be a great rush for the culture next season, and then some of the defaulting gentry who are now bean mad will be punished.

Mr. and Mrs. W. Atlee Burpee and two children have arrived in London—this will put the sweet pea enthusiasts on the *qui vive*. It is to be hoped that the sweet peas will be ready for the exhibition.

At the recent horticultural display in Paris one of the British firms exhibited a collection of sweet peas which was universally admired. Truly times have changed.

EUROPEAN SEEDS.

CATALOGUES RECEIVED.

RICKARDS BROTHERS, New York.—Illustrated Catalogue of Bulbs, Roots, Herbaceous Plants, Implements, etc.

W. MAUGER & SONS, Gnerney, Channel Islands.—Illustrated Wholesale Bulb Catalogue.—A very comprehensive and interesting document.

FREDERICK COOPER, Wellington New Zealand.—Price List of Vegetable, Flower, Tree, Shrub and Agricultural Seeds, Horticultural Sundries, etc. Illustrated.

THE COTTAGE GARDENS COMPANY, Queens, N. Y.—Peony Catalogue, 1907.—A neatly printed and well illustrated catalogue, containing useful cultural instructions and enumerating and describing a comprehensive list of these popular plants. The firm's stock this year, it is stated, consists of over 50,000 plants in, approximately, 400 varieties.

Mitting's Calla Bulb Packing Shed.

The illustration herewith shows the calla bulb packing shed of A. Mitting, Santa Cruz, Cal.

Mr. Mitting started in the calla bulb business four years ago. He finds after a thorough investigation that the Calla athiopia grows better in Santa Cruz and Monterey counties than elsewhere in California. The small bulbs are sown like peas, in rows 12 to 14 inches apart, and one half inch in the row. When planted the crown is covered with manure to a depth of four inches. It takes 300,000 small bulbs to plant an acre. The bulbs are dug every three years. So far no disease has appeared in the fields in the counties named.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Indiana, vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Consul Felix S. S. Johnson, of Bergen, reports, under date of May 3, 1907, that the importation into Norway of gooseberry bushes, as well as berries, is prohibited by a recent customs law.

Seasonable Notes.

Those unacquainted with the golden-leaved oak, *Quercus concordia*, can have no idea of its beauty in late Spring, when its foliage is fully displayed. The leaves are not partly, but wholly golden, and of a pleasing yellow at that. It loses much of its golden color as Summer progresses.

The maple known in nurseries as *Acer colchicum rubrum*, is worthy of being better known. It has thick, shining leaves, much divided at the margins. The name *rubrum* comes from its newly made shoots, which are of a deep red. It becomes a large, spreading tree in time.

Purple-leaved maples and all other varieties are readily increased by budding, when the bark runs freely, say about Midsummer. *Schwedleri* and *Neitenbachi* are varieties of the Norway and should be budded on it; the purple sycamore on the sycamore; and in all cases using as a stock the species most closely related to the buds.

Scraggy rhododendrons may be made of good shape by pruning them in early Spring. They will break from old wood, but it takes a little time to make specimens of them. It is thought best to head back every shoot when pruning them instead of a shoot here and there, a more regular growth following.

There is nothing better than sand for shoveling in to cover roots. It finds its way into crevices, fitting closely to the roots; and if the roots have not been allowed to become dry life is as good as assured to them. Succeeding the sand, manure or good soil should be applied.

The Carolina Hemlock.

Although the common hemlock grows in North Carolina it is not the one called Carolina hemlock. This one is the *Tsuga carolinensis*, so named by the late Dr. Engelmann, and it is quite distinct from the common *T. canadensis*. The foliage is larger than that of the other, and no one acquainted with the common hemlock would mistake it for this one.

While mentioning its distinct appearance it may be added that even the common hemlock of North Carolina is distinct from that of the North. Instead of the needles lying flat as do those of the northern one they are arranged more around the stem, showing their undersides to some extent, and as the undersides are of a lighter hue than the upper surface the whole bush has a less green appearance than that of the northern ones. It is a fast grower; and while no one would fail to call it a hemlock, those acquainted with the appearance of the common hemlock of the North would recognize it as not being that tree.

Many persons find trouble in transplanting hemlocks successfully, but those who see to it that the roots are never dry from the time of lifting until replanted, and who also are sure the soil clasps closely the roots when filled in, rarely lose these or any other evergreens.

The failure of evergreens to live comes about from neglecting to keep the roots fresh and from the other causes mentioned. An evergreen will succumb to a root-drying that a deciduous tree would survive.

The Fruiting of Wistarias.

When wistarias are in a young state and growing freely, they rarely flower to the extent they do when of mature growth, and this failure is sometimes a source of surprise to those not acquainted with the fact. Some time ago a party wrote to inquire how it was that her wistaria vine though flowering fairly well, did not bloom nearly as abundantly as one in her neighbor's garden, and, more than this, had hardly a seed pod on it later, while her friend's vine was full of them. It is a law governing all plants that flowering and fruiting is only after growth is well nigh completed. There are a number of years to be devoted to growing and developing, and not until this is accomplished can much be looked for in the way of flowering and fruiting. Wistarias are often planted to run up dead or partly dead trees, and in these cases flowering is scant until the tops of the trees are reached, after which it becomes abundant; but it is only when the vines have nothing further to cling to that fruiting sets in earnest. This is well illustrated in the case of wistarias set out as standards. Having nothing to cling to growth almost

ceases in a few years. What shoots are made are short jointed, and these bear flowers and fruit abundantly. It is, really, a grand sight to see a small standard wistaria well laden with seed pods; and it gives a practical lesson in how to secure seeds for sowing.

Hungarian Lilacs.

Under the name of Hungarian lilacs, nurserymen are listing the *Syringa Josike*, *S. Emodi*, *S. Bretschneideri* and *S. villosa*, all apparently closely allied to each other and all flowering in Spring after common lilacs are out of bloom. The *S. Josike* is properly called Hungarian lilac, Hungary being its native country. *S. Emodi* is a Himalayan species, while *Bretschneideri* is but a variety of it. *Villosa* appears but little if any different from *Emodi*. But all these lilacs named are of great value to planters because that they flower after the ordinary kinds have gone out of bloom for the season. Their growth is more upright than that of the

is no more injury from this cause. Owing to the freezing back of the succulent seedlings the first year a good straight shoot does not always follow. To remedy this, the injured shoot should be cut back to within a few inches of the ground, that a strong, straight growth may result, or when Winter approaches, the first season, a protection of some sort should be given. With a strong, straight shoot secured, there is the basis of a tree of good appearance in after years.

In States too cold to allow of the paulownia becoming a tree it is often grown for its tropical appearance. The shoots kill to the ground in Winter, making, however, strong shoots in Summer, and as its leaves are sometimes 18 inches in diameter on such shoots, its appearance on a lawn is attractive and interesting.

Myrica Cerifera.

When looking for evergreen shrubs for planting purposes the *Myrica cerifera* is greatly overlooked. It is a native shrub, often abundant in localities near the seacoast, and growing also in woods inland; but in the latter situation the plants are never as abundant as they are along the seacoast. The one illustrated is a lawn specimen, and it is a vigorous one, though but a few feet high. It is the evergreen character of this *myrica* that constitutes its chief merit for lawn planting, for there are far too few shrubs of this nature sufficiently hardy to withstand our Winters.

The flowers of this shrub are greenish white, and of no particular attraction; but following them are clusters of berries, each of which is thickly covered with a white wax; and when in this fruiting condition the shrub is very interesting to look upon. This waxy substance is an article of commerce, being the basis of the bayberry tallow and because of this, bayberry is one of the plant's common names; but another, wax myrtle, is the one under which it is better known.

Along our seacoasts the wax myrtle is usually found in open places, but to have the foliage of a deep green color it is better that the plants be in partial shade, for when in the full sun the foliage is of a brownish green, not as attractive as is the foliage of those in the shade.

When inquiries come to those who sell shrubs for something that will grow along the seashore—and such inquiries are many—the wax myrtle is always recommended. It is, certainly, good for the purpose, for it is not only at home in such a situation, but it serves so well to catch the drifting sand, so bushy is the growth it makes. Sand collects about them and although hurrying the bushes almost to their tops they do not mind it. It is a common sight to see drifts of sand 12 feet high from which but a few feet of the wax myrtle emerges, or has not been covered, at the top. And where these bushes are birds rest to eat the fruit of wild grapes and Virginia creeper; and the seeds they drop as well as the seeds of other vines and plants cast upon the heaps of sand soon grow and clothe them in masses of green.

There is a smaller growing species of the *myrica*, *M. Gale*, growing inland near ponds and lakes, but it is deciduous. On the Pacific Coast is a large growing one, *M. californica*, which attains to almost tree size. Then there is the one that used to be called *M. asplenifolia*, but now known as *Comptonia asplenifolia*, the sweet fern, the leaves of which are strongly aromatic. As a fact the leaves of all the *myricas* are sweet scented when crushed; and all in all they are worthy shrubs to plant.

JOSEPH MEEHAN.

Myrica Cerifera, Wax Myrtle.

others, their growth slower, foliage larger the leaves being of a shining green. There is a lilac odor to the flowers, but not to the same degree as in the older sorts.

The color of the *Josike* is of a rosy lilac, that of the others cream white, *Bretschneideri* with rather a shade of pink in it.

These lilacs are of a type planters would do well to consider, because of the lateness of their flowering.

These and all lilacs can be propagated from young green shoots made in Spring when the first sappy stage has passed. Placed in a greenhouse they root quickly, and grown on and encouraged through the Summer, nice plants result by Autumn.

Beauty of the Paulownia.

Wherever the paulownia does well it is esteemed as one of the most desirable of June flowering trees. As a rule, every branch bears a panicle of flowers, and as these are as large or larger than those of the trumpet vine, blue, and of delicious fragrance, it possesses more merit than any other tree, or at least any other tree of its season.

Depending on where growing, it blooms either in late May or in early June. Everyone living within a half mile of a tree of it knows when it is in flower if the wind is in the right direction, its perfume is so refreshing.

The paulownia is a Japanese tree, and in the Middle States it is quite hardy. It makes such a strong succulent growth when young that severe freezings are apt to kill it the first season, as they do some of our succulent growing native trees, such as the catalpa, but after a year or two, when the wood hardens, there

SEEDLING APPLES OF MAINE.—Bulletin 143 of the Maine Experiment Station "The Seedling Apples of Maine" is just being sent out. The purpose of this bulletin is to call attention to those varieties of Maine origin which are worthy of wider dissemination; and to record, as accurately as possible, the history of such varieties.

While Baldwin, Greening, and other standard varieties, mostly of New England origin, will doubtless remain for many years the leading market sorts, new and valuable sorts are continually appearing, and these will be most likely to excel near their native home or in their native state. The wholesale injury to orchards by the cold of the past few years is also an incentive to search out the merits of native hardy varieties.

Among the most valuable of the 38 native sorts mentioned in the bulletin, are Deane, Dudley, King Sweet, Rolfe, Starkey and Stowe. Some of those described in pomological manuals are said to be wholly or practically extinct; though at one time of considerable importance.

An effort is making at the Station to collect in a "Maine Orchard" such native seedlings as seem to merit attention, and owners of valuable seedling apples are requested to forward specimens of the fruit for examination.

10,000 American Arbor vitæ,

(THUYA OCCIDENTALIS.)

Each tree grown wide apart and splendidly developed on all sides. So bushy that for hedges or screens they will go almost twice as far apart as ordinary Arbor vitæ will. They have been frequently transplanted and are supplied with an abundance of fine fibrous roots. Can be dug and shipped with ball if desired.

HIRAM T. JONES, Union County Nurseries Elizabeth, N. J.

(93) FIGS UNDER GLASS.—Would you be kind enough to have William Turner answer a few more of my questions about figs under glass? A year ago I planted my fig trees in the house and this Spring, as he suggested, pinched the shoots at the sixth or seventh leaf; but in most cases instead of figs forming at the axils of the leaves on these shoots, new growths have started. I should like to know whether I ought to rub out this new growth, or should it be allowed to grow? The growth of the end of the branch is the strongest. Would it have been wiser not to have pinched the shoots before the figs were actually formed on the branches?
Del. H. B. M.

—It is rather difficult to answer your question intelligently not knowing the condition of the trees, whether they are growing too vigorously or not, condition of border, etc. There are different causes for the trees not offering to show fruit. The fig tree must be confined to a comparatively small border—not made rich at that—otherwise the trees are apt to go all into wood; at least, until they get thoroughly established and root-bound somewhat. Then again, Winter treatment has a great deal to do with success or failure. Supposing they did not get their proper period of rest; did the trees get a certain amount of frost, were they kept saturated at the roots instead of dry? I do not mean so dry that the wood would shrivel. The fig tree can stand having the border pretty dry and no harm will result, but benefit rather. The aim should be to get the wood thoroughly ripened, otherwise the following season you will get some beautiful long-jointed wood minus the fruit.

The only trouble that I have experienced with our fig house this season was that too many trees had set. But there is no secret in that; it arises from simply paying attention to the trees in Fall and the early part of Winter—that is, ripening up the wood.

If the fig house were a success, you would have your first crop of figs on your last season's wood; then, by pinching again you get your second crop. Where you pinch, at the sixth or seventh leaf, or at the third, should make no difference; in fact, after the trees are established we pinch according to the foliage on them. It is best to avoid overcrowding. After stopping the shoots, of course the trees naturally break away again. If there are more shoots than needed to furnish the trellis; rub off the surplus. One more suggestion: if the trees are growing too strongly, a root pruning next Winter, while they are dormant, would help to produce the desired effect—fruit.
WM. TURNER.

AMERICAN ASSOCIATION OF NURSERYMEN

J. W. HILL, DES MOINES, IA.

Elected President.

Milwaukee, Wis., chosen as Meeting Place for 1908.

President Harrison in his annual address recommended the establishing of a claim department for the settling of disputed claims between nurserymen as well as with railroad and express companies; he also recommended closer cooperation between nurserymen and their respective state experiment stations in the testing of new varieties. He referred in terms of praise to the horticultural press of this country and the great work it is doing for the nurserymen, urging at the same time the advantage of more live and instructive advertising for the nursery industry.

In regard to advancing prices on stock, President Harrison said:

"My last and most important recommendation to you, is, that we, as nurserymen, should increase the price of our trees and plants in proportion to the increased price in labor and other necessities for growing high grade nursery stock. There has been a demand for cheap trees, and the nurserymen, in their endeavors to meet this demand on the part of planters, have endeavored to furnish a cheap tree. By this we have been in error, and my observation is that the most progressive planters are demanding a higher grade of trees. This will cost the tree grower more money to produce but will also advance the price of his stock; this tendency is encouraging, as the final result will be the production of better stock, which will demand a higher price. Our business does not differ from others; there is more profit in high-grade products, than in low grade. I contend that it is imperative upon nurserymen to produce a higher grade nursery tree, for which an advanced price will be paid, and the present is opportune for emphasizing that feature of our work.

"Has the nurseryman prospered in proportion to other lines of business; if not, whose fault is it? I claim a nurseryman is entitled to as full remuneration as a man in any profession, for no man has to work harder and put in longer hours.

"Fellow-nurserymen, there are many reasons why you cannot grow trees as cheaply as you once did. Are you determined to continue to sell at the same old price? I predict that greater care will be necessary to grow good stock and more rigid inspection will be insisted on in the future. Are you preparing to meet these conditions?

"Let the nurserymen stand together. Let them have confidence and faith in each other; let them know the cost of production and charge accordingly. Let them grow good stock, study the needs of the planters, advise wisely, act conservatively, and above all so conduct their affairs as to bring credit and renown upon a business which is among the most honorable and pleasant, open to intelligent men—that of the nurseryman."

"The Committee on Uniform Inspection, through Professor Craig, its chairman, asked that a representative of the American Association of Nurserymen be elected to co-operate with the representative of the Association of Horticultural Inspectors in pushing legislation before Congress next Winter, which request was granted by action of the convention.

Preparing Nursery Land.

In speaking on the subject of "Preparing Nursery Land," R. G. Chase stated that the land should be plowed in the Fall to a depth of 10 to 12 inches, and again plowed in the Spring if planting is done with spades; where a machine is used for opening the crevice in which seedlings are placed, the compact soil of the late Fall plowing is no objection. He has found it advantageous to fertilize for roses, currants and gooseberries, no matter what the condition of the soil is. Mr. Siebenthaler said that land which had been "tired" should be planted in corn or other cultivated crop for one year in

order to get rid of all roots left in the ground. The next season sow in clover or other grass with a cover crop if necessary. Mr. Mayhew of Texas finds small grain the best to immediately precede a crop of trees, as it is out of the way early and leaves the land clean.

Growing and Grading Apple Seedlings.

In giving his experience with growing and grading apple seedlings, F. W. Watson, of Topeka, Kan., said that their seed is obtained from France, is soaked from five to seven days, planted with a drill, cultivated in rows, and when four or five inches high, brooms are fastened to the cultivators to sweep the rows and keep them clean from insects and worms. Spraying with insecticides begins as soon as the seedlings are seven or eight inches high. Digging commences the last of October,

J. W. Hill,
Pres.-elect American Association
of Nurserymen

a tree digger ten inches wide being used; the seedlings are buried in the field for fifteen to twenty days, after which they are hauled to the grading cellar, where they are graded, tied in bunches and shipped.

E. S. Welch, speaking on the same subject, said that for growing apple seedlings a soil should be selected that has sand enough in it so that it will not form a heavy crust, for it is difficult to get seedlings above the ground with a hard deep crust formed over them.

Growing Peach Trees.

W. T. Hood gave his method of growing peach trees, in brief, as follows: To prepare the bed, plow and smooth up the ground, lay off the beds three feet wide and as long as convenient, dig down about 1 to 1½ inches, spread the seed about two deep, cover about two inches deep, leave until ready to plant, which should be just as soon as some of them commence to crack in early Spring. The ground for growing trees should be prepared by plowing the Fall previous, the top worked up again in the Spring, using the disc harrow, sled or roller, having the ground as level as possible, marking it with a marker to the depth of about two inches, the rows being about 3½ feet apart. The kernels are dropped about every four or five inches, the best results being obtained with seed that is

just opening up. Budding is done from the middle to the last of July, then there is nothing more to be done until the following Spring, when the stocks should be cut off at about the time the buds are commencing to push, down to about ½ inch above the eye of the bud; after they are cut off, as soon as the sprouts commence to push, they are sprouted, requiring about three sproutings and they should be kept growing until they are about 4 to 5 feet high.

Storage of Grape Vines.

E. H. Pratt, of Fredonia, spoke on the storage of grape vines, giving the result of an experiment made in 1901, when boxes of grape vines were kept at a temperature of 33, 34 and 28 degrees Fahr., packed in sun-dried moss, for a period of three months, and on opening were found to be in the same dormant condition, with tops and roots in a perfectly fresh, healthy state. Mr. Pratt stated that he believed all kinds of nursery stock can be safely kept for eighteen months in dormant condition, if stored at the proper temperature, which means four sale seasons in the nursery trade and no loss of stock after it is matured and ready for the market.

Growing Cherry.

On the subject of "Growing Cherry," papers were read by Messrs. W. F. Heikes, of Huntsville, Ala.; J. W. Gaines, of Xenia, O., and Harry D. Simpson, Vincennes, Ind.

Mr. Heikes said that there are imported into the United States from France annually from 10,000,000 to 15,000,000 cherry stocks. Fairly trustworthy figures show that from this number of stocks the output of merchantable trees at two years old, of all sizes, is not more than one-third of the number of stocks planted, and of these not more than one-third will grade 5-8 and up. The first difficulty encountered in cherry growing is in getting a stand. So much depends upon the condition of the plants upon their arrival from France, there being various causes of injury which may happen to them from the time the plants leave the grower in France to the time of their arrival. There is more or less danger of damage from freezing or heating on the way; sometimes the plants are dug too early, or when the ground is too wet, and packed in boxes before they are separated from the mud and properly dried, thus causing a starting of growth in the boxes. In some instances the plants are grown upon land unsuited for their growth, when they suffer in health, quality and appearance.

Mr. Gaines referred to some of the essential features of successful cherry growing. He said the ideal soil for the production of top-notch cherry is a rich loamy clay, with red clay sub-soil underneath six to ten feet below the surface with gravel. Clover plowed down and followed with a crop of corn is a good preliminary method of preparing for the plant. The soil should be thoroughly pulverized and worked up to "garden" conditions. Stocks should be good one year 5 to 8 mm., dug when ripe and kept perfectly dormant until planted. The tops should be trimmed to straight stems and the roots cut back to 4½ inches. Plant as early as the ground can be put in suitable condition; cultivate right along, conserving the moisture with an effectual dust mulch. Budding can be done from July 25 to August 10, sometimes later, according to the condition of the stocks. Tying is an important matter and should be done with carpet warp or white wrapping yarn. The last of February or first of March is the best time to cut off the budded stocks. One year cherry should be pruned in February. Stocks, buds and one year trees should be sprayed throughout the season, using ordinary Bordeaux mixture, five pounds of copper sulphate to fifty gallons of water.

Mr. Simpson stated that their soil was particularly well adapted to the growing of cherry trees, being upland loam with a heavy clay sub-soil. The ground is usually prepared the year previous to setting the mahaleb by planting cow-peas and turning them under in the Fall. No commercial fertilizer is used. Stocks are planted eight inches apart in the row, the rows being three feet eight inches wide. Thorough cultivation is kept up the first season and the stocks often get five to six feet high and ¾ and up in caliper.

Papers on "Growing Ornamentals" were read by Messrs. W. H. Wyman and George C. Perkins.

Storing and Packing Small Fruits.

A paper on "Storing and Packing Small Fruit Plants" was read by W. N. Searf, of New Carlisle, Ohio. He said in part: The growing of small fruit plants is easy, but the packing, care and storage is another proposition. Each class of plants requires different treatment and what would be proper in handling one class is all wrong for some other, strawberry plants being most difficult of all to store and the results very uncertain. Our method for storing strawberries is to pack in shallow cases or flats holding about 2,000 plants each, set the plants on end, using dry moss to pack between each layer. See that the roots of the plants have but little moisture in them, at the same time protecting the roots well from the air that they do not dry out to an extent that injures them. After packing, store the flats in a dry but cool place that will freeze a little, just enough to take up any moisture that may accumulate. They can be held fairly successful in this way for early orders. However, Winter storage is not recommended for the strawberry if possible to avoid it. The next most difficult proposition is the keeping of asparagus roots; here, too, it is necessary to guard against moisture. Store in boxes or barrels that will hold about 2,000 plants each. No packing is necessary except over the top to keep out the air. Store in a dry room with the temperature a few degrees below freezing point. In storing tip raspberries, care must be taken that the roots are matured and the canes well ripened; if possible, they should be dug as late as November 15 to 20. When the roots become dry after digging, they may be packed into tight cases or barrels with a very little dry moss used in packing. Make the cases as nearly airtight as possible by paper lining them. Put a slight weight on the top, so the top layers do not dry out, as they are liable to do if this is neglected. Store the cases in a very dry, cold room, but not exposed to draughts. Blackberries, red raspberries, currants, gooseberries, grape vines and other hardwooded plants we pack in large bins built in our storage cellar. We rick them as we would so much stove wood without packing, then cover the entire bulk with well rotted sawdust which contains a little soil to give it more weight. We are careful to get a layer of several inches of dust around the sides of the rick between the roots and walls of the bins. Then cover the top with about six inches of dust so that all the roots are covered, after this we let in cold enough to freeze the dust solid, even allowing a little frost to creep in to the roots of the plants, thus holding them dormant until ready for use. Our loss in the last four years on good plants at storage time has been practically nothing.

Building a Storage Cellar.

J. M. Underwood, of the Jewell Nursery Co., Lake City, Minn., gave his method of building a storage cellar for nursery stock, his firm having recently constructed a cellar 100x200 feet, in addition to one measuring 57x127 feet constructed over twenty years ago. These cellars are built in a gravel bank, opening to the east, setting back from the brow far enough so that the only space exposed is the doorways. The new cellar is 12 feet in the ground at the sides and ends. The walls are made of stone, the posts are made of concrete and the building is lighted by skylights inserted in the roof. The cost of the entire new building was \$8,530.62.

Various Subjects.

Professor G. G. Hedgcock, United States Department of Agriculture, spoke on the subject of "Apple Crown-Gall and Hairy-Root," illustrating his talk with photographs.

A paper on "Marketing Nursery Stock," by Charles E. Greening, was read by the secretary, and a short talk on the same subject was given by George H. Whiting, of Yankton, South Dakota.

Professor John Craig of Cornell University gave an interesting lecture on "Nurseries of the United States," illustrated by lantern slides of photographs taken by himself during his visits to the various nurseries.

On the question "Shall this Association Attempt to Establish Standard Sizes and Grades of Fruit Trees?" Abner Hoopes said: We are all aware that in some sections the same varieties grow taller and not so large in caliper, while in other sections they grow short-

ROSES = CHRYSANTHEMUMS = BOUVARDIA = COLEUS

OWN ROOT ROSES

2 1/2 in. pots, \$6.00 per 100; \$50.00 per 1,000. **BRIDES, BRIDESMAIDS, RICHMOND, WELLESLEY.**

AMERICAN BEAUTY, on own roots, 2 1/2 in. pots, \$8.00 per 100; \$75.00 per 1,000; 3 in. pots, \$12.00 per 100; \$100.00 per 1,000. Ready for immediate delivery.

ASPARAGUS

PLUMOSUS NANUS

2 1/2 in. pots, \$3.50 per 100; \$30.00 per 1,000; 3 in. pots, \$7.00 per 100.

CHRYSANTHEMUMS

WHITE

Early—Polly Rose, Willowbrook, White Shaw, Ivory.

Mid-Season—Miss Minnie Wanamaker, Mrs. H. Robinson, Niveus, Queen, Alice Byron, Eureka, T. Eaton.

Late—Mrs. McArthur, Chadwick, Adelia.

PINK

Early—Glory of the Pacific, Pink Ivory.

Mid-Season—J. K. Shaw, Adela, Mrs. Perrin, A. J. Balfour, William H. Duckham, Dr. Enguehard.

Late—daud Dean, The Harriott.

YELLOW

Early—Monrovia.

Mid-Season—G. Pitcher, Col. D. Appleton, Mrs. William Duckham.

Late—Major Bonnaffon, H. W. Reiman, Yellow Eaton.

RED

Merstham's Red, Cullingfordii, Matchless. Rooted Cuttings, \$2.00 per 100; \$15.00 per 1,000.

NEWER VARIETIES

From 2 1/2 in. pots, \$6.00 per 100. Rooted Cuttings, \$4.00 per 100. **Beatrice May**, mid-season white. **Mrs. James Marshall**, mid-season pink.

Mayor Weaver, mid-season pink. **Mrs. Swinburne**, late white. **Jeannie Nonin**, late white. **Early Snow**, early white.

Bosier, early pink. **Old Gold**, late yellow.

October Frost, early white. **Mrs. Clay Frick**, (white Duckham), 2 1/2 in. pots, \$1.50 per doz.; \$10.00 per 100.

BOUVARDIA

Tumboldtii Corymbiflora, from 2 1/2 inch pots, \$5.00 per 100; \$46.00 per 1,000. This is the large white Jessamine flowered. The best variety in cultivation.

COLEUS

VERSCHAFFELII, Golden Queen, Golden Bedder, Fire Brand, Queen Victoria, fancy Coleus in variety, 2 inch pots, \$2.00 per 100; \$15.00 per 1,000.

VERSCHAFFELII, Golden Queen, Golden Bedder, 3 inch pots, \$3.00 per 100.

The above in rooted cuttings 60c. per 100; \$5.00 per 1,000.

STEVIA

2 1/2 in. pots, \$2.50 per 100; \$20 per 1,000. **SALVIA, AGERATUM, HELIOTROPE**, 2 inch pots, \$2.00 per 100; \$16.00 per 1,000.

A. N. PIERSON, CROMWELL, CONN.

er and stouter, so that a tree that is 6 to 7 feet high would be only 5-8 to 11-16 caliper, while the same variety grown in another state would be 3-4 to 7-8 and not over 4 1/2 to 6 feet in height. To avoid the inconvenience caused by such conditions, a standard grade should be established. The only way this could be done would be to select the short growers like the Seckel pear and group them in a section by themselves.

J. H. Dayton spoke briefly on "Need of Co-operation among Nurserymen," and J. W. Hill made a few remarks on "Managing Salesmen."

The following resolution was adopted:

RESOLVED, that the American Association of Nurserymen condemn the Congressional free seed distribution as now conducted, and favor the original provision of the law for the introduction and distribution of new and valuable seeds and plants by the Department of Agriculture.

Election of Officers.

Officers for the ensuing year were elected as follows:

President, J. W. Hill, Des Moines, Ia.; vice-president, C. M. Hobbs, of Indiana; secretary, George C. Seager, treasurer, C. L. Yates, both of Rochester, New York. Executive committee: J. H. Dayton, of Ohio; E. M. Sherman, of Iowa; Henry B. Chase, of Alabama. Milwaukee was chosen as the next place of meeting. E. J.

THE WEEK'S WORK.

Timme's Timely Teachings.

Cycas revoluta.

Cycads, unlike palms proper, unfold and complete within the short period of less than a month their entire season's growth in leaves, thus forming a new crown all at one time. Fine old specimens under careful conservatory treatment, well furnished with roots and firmly established in their tubs, usually are quite regular in their production of yearly crowns, pushing forth a new cluster of leaves every Spring from the center of the old one, this latter being pushed aside and downward in the process and often retaining its spotless green color for several seasons. Thus a cycas with a globular, dense and perfectly symmetrical crown becomes a truly beautiful object, highly interesting to many and of considerable value in all attempts at decorative effects.

Considered, however, as purely commercial stock, we must deal in the main with the stems as yearly imported in varying sizes and sold by weight. These stems, though bare of foliage and roots when they arrive, are brimful of dormant vitality, awaiting its opportunity for a re-awakening into active life in response to proper treatment.

In planting imported dormant cycas stems we use pots or tubs much smaller as to width than the size and hulk of the stems would seem to warrant, but look to a comparatively great depth. A good inch of space all around the stem for the ramming in of the soil used in planting, is all sufficient for stems of from four to nine pounds in weight and tolerably straight. A compost somewhat heavy in texture and containing a fair amount of lasting but easily soluble plant food, such as dry or partly decomposed cow manure or crushed bone, will be found to give good results in cycas culture, by which abundant root action and the formation of durable, heavily leaved crowns at regular intervals is understood.

With newly imported stems the grower should first induce root formation before attempting to force out a crown of leaves. Bottom heat and a temperature unreasonably high are favorable to premature top growth, a growth practically worthless, lacking in size, substance and depth of color. Given time in an ordinary warm house, the cycas will be slower in pushing forth a new crown, but having been allowed to form roots these will take an active part in crowning the plant with a vigorous, durable and finely colored top growth. This new growth, while slowly unfolding, must be guarded against bright sunshine by shading, must frequently be sprayed and the soil about the roots kept constantly in a fairly moist condition. The fronds or leaves should first be allowed to attain full size and firmness before a cycas is subjected to hardships such as plants of that character must of necessity undergo at times when banded by or hought from the commercial florist.

Dracæna terminalis.

Nowadays small or medium sized dracænas are so largely made use of in the better class of effective plant arrangements for indoor adornment, and they have proven themselves to be such good, durable and easily managed house plants, that florists have come to consider them indispensable stock for which ample provision must be made every year. None of the many varieties, old or new, as now under cultivation, surpasses *Dracæna terminalis* in point of subtle beauty, stately bearing and manifold utility.

But whether or not *Dracæna terminalis* is fully entitled to a foremost place among decorative plants depends in great part on how far the cultivator was enabled to call forth highly effective color variegation in its foliage. Under ordinary modes of culture this intermingling of harmonious tints, from richest purple to brightest red, is but sparingly or indistinctly displayed on the deep green leaves, sometimes entirely wanting. On the other hand, such violent measures as exposure to bright sunlight, an over-dry air, restricted root room, scanty nourishment or anything tending to put a halt to a normal headway in growth, should, for this very reason, not be employed as means to bring about fine coloring of foliage. Variegation, to be truly beautiful—in this instance at least—should not be an indication of impaired vigor or reduced vitality. It is an attribute not dependent on loss or lack of vital energy, but one whose charm is heightened by and, in fact, inseparable from health and luxuriance in growth.

The finest colored plants of *Dracæna terminalis* are obtained by close attention to what constitutes good culture and this especially during the Summer season. Good drainage in the bottom of the pots for large sized specimens and a kind of soil that comes nearer to being heavy than light or sandy, but which at all times should be porous and fairly rich, keeps them in fine shape for an indefinite time. Under the lightly shaded sashes of a hothed, still supplying heat from underneath and easily managed as to the proper amount of ventilation, young stock grows and colors splendidly. Where large numbers of small or handily sized plants of this useful variety are grown to supply the steadily increasing demand for this class of stock throughout the country, very much may be accomplished with greatly reduced expenses in the growing by bench culture during the Summer. Planted at right distances each way into a nice and pretty rich grade of soil, well cared for as to watering, ventilation, light and sprinkling, the plants make a wonderfully fine growth and usually show a superbly colored foliage by the time they are again potted up. In the lifting and potting it is well to avoid as much as possible any breaking or mutilation of the younger roots lest the loss of some of the lower leaves will be the consequence. If bottom heat at that juncture is available, the shift will cause hardly any break in growth.

Callas.

From about now until the middle or end of August is the season of rest for callas. Water must be withheld and the bulbs be dried off and ripened or "cured." This is necessary if bulbs, meant to produce flowers under glass from last Fall until now, are relied upon as good stock in the replanting for the coming season. Bench grown callas, now fairly exhausted, may be lifted with as much soil as will adhere to the roots and the clumps placed anywhere either indoors or out of doors where a complete drying off is not interfered with by drip or rain. Potted callas can remain in their pots, these to be put under some dry bench or laid on their sides out of doors.

By the first or second week in August a pushing of new growth is observed from the crown of all bulbs thus rested that are sound. Any not in that condition, flabby or spongy to the touch, or attacked in spots by decay, are not worth bothering with. A hard, perfectly sound bulb, on the other hand, especially one not overgrown in length but short, thick and stubby with a big and plump new crown growth, is, in my opinion, the best kind of calla root for either bench or pot culture, whether carried over from last year or found among a lot of newly bought roots.

Auction Trade Sale

As usual, will close the season, Tuesday, June 25, at noon, at which time we will offer a General Line of Stock suitable for Florists to grow on.

CATALOG NOW READY

WM. ELLIOTT & SONS, 201 Fulton St., N. Y.

In August when calla roots are ready for a new start the old earth is shaken from them, dried leaves and offsets are removed and a repotting into fresh, good soil takes place. The pots should remain outdoors for fully a month after that and even longer if white frosts and cold stay away, for during this period the calla seems to lay in its principal amount of strength for future endurance. Those intended for bench culture should, therefore, be started in like manner and planted out of pots into the bench when a strong, sturdy growth has already made some headway.

Some growers—many in fact—do not believe that there is anything at all saved or gained by carrying over old calla roots from year to year. They stock up anew every season with fresh bulbs or roots from California, which arrive here in August and September. This, perhaps, is the better and in many instances certainly the safer course to follow. Slim are the chances for success if based on a risky beginning.

Chrysanthemums.

The late and ordinary run of commercially grown stock permits of being benched as late as the end of next month and there will still be much doing for weeks in the way of repairing benches, the preparation and carting in of soil and the planting of chrysanthemums. But where the grower aims at exceptionally fine results, pins his faith in profitable chrysanthemum culture on what he may be able to accomplish in the growing of the best grades of high priced blooms, or where the main object is the desire to excel at our Fall exhibitions, it is high time that the young stock, intended to be grown with these ends in view, be planted in the benches. At the end of June, or at the latest by the tenth of July, all the better class of commercial chrysanthemums and those especially grown for exhibition purposes should be benched and well forward in taking to the soil.

The soil for chrysanthemums is usually no other than what has been found to give best results in all other kinds of mass culture for the purpose of raising as fine flowers and as large a number of them as possible on a given space. The compost used for roses, for example, cannot well be improved upon when taken for chrysanthemums. It should be firmly pounded or tramped down in the bench before and also after the plants are set out. For tall and robust growing varieties six inches of well firmed soil is none too deep. Sufficient head room for perfect development of stem and flower must be the first consideration in choosing a bench for the tall growing sorts. From eight to ten inches is the right distance between plants in the bench grown to single stem with a little more room for those grown to two or three flowers. Only selected young plants from 2, 2 1/2 or 3-inch stock should be used in stocking a bench. Not only should sorts, early and late, be planted separately, but also plants from one and the same variety, showing a difference in growth and vigor among themselves, should be divided into several lots and each one kept by itself, when planted into benches.

ROOM!

We want to place our Importations of **ARAUCARIAS, PALMS, RUBBERS, etc.**

Therefore we now sell our surplus stock of **Bedding Plants** at Cracker-Jack low prices.

GERANIUMS, 12 best, leading varieties, 8 new kinds, large plants, mixed or named. 4-in. pots, \$6.00 per 100.

AGERATUM, dwarf, best blue variety, 4 in. pots, \$6.00 per 100; 2 1/2 in., \$3.00 per 100.

BEGONIA Gloire de Lorraine, 3-in. pots, raised from leaf cuttings, \$2.00 per doz.; \$25.00 per 100.

HELIOTROPES, 4 in. pots, \$6.00 per 100. **NASTURTIUMS**, dwarf, all colors, \$5.00 per 100; 3 in., \$3.00 per 100.

FUCHSIAS, mixed, good varieties, 6 to 6 1/2 in. pots, 15c. to 20c. each; 4 in. pots, \$1.20 per doz.

CANNAS, 10 good varieties, 4 in. pots, \$7.00 per 100.

MUSK PLANTS or **MIMULUS MOSCHATUS**, 2 1/2 in., \$3.00 per 100.

PETUNIA, single California giant, ruffled or blotched, 3 in. pots, \$4.00 per 100. **Star Inimitable**, 2 1/2 in. and 3 in., \$2.00 per 100.

VERBENAS, all shades, 2 1/2 in. pots, \$2.00 per 100.

COLEUS, Queen Victoria, Golden Bedder, Verschaffeltii. Mixed, 2 1/2 in. pots, \$3.00 per 100.

PHLOX DRUMMONDI, 2 1/2 in. pots, \$3.00 per 100.

IVY, English or hardy, 12 in. long, 4 in. pots, \$8.00 per 100. **IVY**, German or Parlor, 2 1/2 in. pots, \$3.00 per 100.

CUPHEA or **CIGAR PLANT**, 2 1/2 in. pots, \$2.00 per 100.

LOBELIA, dwarf or trailing, 2 1/2 in. pots, \$2.00 per 100.

SWEET ALYSSUM, Little Gem, have 10,000 of them, 2 1/2 in. pots, \$3.00 per 100.

MARIGOLD, Eldorado Africana and Gold Ring, dwarf, 3 in. pots, \$4.00 per 100.

COSMOS GRANDIFLORA, white, red or pink, three plants in 8 1/2 in. pot, separate colors, \$3.00 per 100.

NEPHROLEPIS elegantissima, 4 in., strong enough to shift into 6 in. and 7 in., 25c. each.

PYRETHRUM aureum (Golden Feather), for edging, 2 1/2 in. pots, \$2.00 per 100.

THUNBERGIA or **BLACK-EYED SUSAN**, 2 1/2 in. pots, \$3.00 per 100.

MAURANDYA BARCLAYANA, 2 1/2 in. pots, \$4.00 per 100.

ARAUCARIA ROBUSTA COMPACTA, Spring 1906 importation. Have about 300 of this variety, only specimens, perfect tiers. Adapted for the lawn, front porches, cottages, hotels, etc. 7 in. pots, 4-6 tiers, 5 year old, 20 to 28 in. high, as broad as long, price, \$1.75-\$2.00-\$2.50 to \$3.00 each.

ARAUCARIA GLAUCA, large specimens, 6 year old, 36 to 40 in. high, 36 to 40 in. wide, 5 to 6 tiers, \$3.00-\$4.00-\$5.00 each.

ARAUCARIA, new importation. First consignment about 5,000, arrived (Saturday, May 4), per steamer "Manitou" from Antwerp, and thereafter by every steamer up to June 1. Araucaria Excelsa, in their original packing, left plants in pots, 3 tiers, 10 to 12 in. high, 60c., larger sizes, 60c.-75c.-\$1.00 to \$1.25 each. **Robusta, Compacta and Glauca** from \$1.00-\$1.25 to \$1.50 each.

COCOS WEDDELIANA, 3 in. pots, 16 to 18 in. high, 15c. to 20c. each.

ASTERS, Enchantress, new, large blooming varieties, 3 in. \$4.00 per 100. **Victoria**, 8 shades, separate or mixed, \$3.00 per 100.

Cash with order please.

All goods must travel at purchaser's risk.

POINSETTIAS

June delivery. 2 1/2 in., \$5.00 per 100; \$45.00 per 1000; 3 in., \$7.00 per 100; \$65.00 per 1000.

FUCHSIA, Little Beauty, 2 in., 4c.

FERNS, Boston, 2 1/2 and 3 in., 4c., and 8c., **Pieroni**, 3 in., 8c., **Scotti**, 2 and 6 in., 8c. and 25c., **Barrowsii**, 3, 4 and 5 in., 8c., and 25c. **ADIANTUM CROWEANUM**, 6 and 7 in., 50c. and 75c. **DRACAENA INDIANA**, 5 and 6 in., 20c. and 30c. **ASPARGAGUS Sprengeri**, 3 in., 4c. **GERANIUMS**, in bloom, Standard varieties, 3 and 4 in., 5c. and 8c. **SALLEROI**, 3 in., 4 c. **ALTERNANTHERAS**, Aurea Nana and Brilliantissima, 2 1/2 in., 2c. **CENTAUREA Gymnocarpa**, 2 1/2 in., 2c. 1000 rate on this 2 1/2 in. stock, \$17.50.

ROSES for benching. **Brides**, **Bridesmaid**, **Golden Gate** and **Ivory**, own roots, 3 in., 4c.

GODFREY ASCHMANN,

Importer, Wholesale Grower and Shipper of Pot Plants,
1012 West Ontario St., Philadelphia, Pa.

And, finally, there is nothing so helpful to the good grower in his efforts to gain success with whatever variety he may have under his care, as an abundance of both light and fresh air. Any house in which chrysanthemums are to be grown to perfection should be amply provided with means for ventilation and be one of the best lighted in the range.

Potted chrysanthemums, to be grown and trained for the exhibition in the Fall, should now be well enough forward for their last shift. The final transplanting of standard and multi-

branched specimen plants should be over with by the second week in July. The pots, usually from 9 to 12 inches in size, must be carefully provided with a bottom layer of well-working drainage material, and the soil used should be rich in plant food. Staking, tying and cutting in must still be continued.

From now until the end of July cuttings taken from dwarf, short-jointed varieties may be rooted and grown into low, single-stemmed potted plants by Fall. These are good stock when well done.

President Harrison on the Horticultural Press.

In his address at the Detroit (Mich.) meeting of the American Association of Nurserymen, President Orlando Harrison referred to the horticultural press as follows:

The horticultural papers of the country are doing a great work for the nurserymen. They are the text books for the prospective fruit grower, and the nurserymen should get in close touch with the editors and show them just what we are trying to do for the fruit grower, that they may better understand what difficulties we encounter to grow a good, sound, merchantable tree.

It is through the press we learn of the successful peach orchards of the South, the apple orchards of the West, and the great opportunities that have been overlooked in the Northern, Eastern and New England States.

I contend it is the duty of an editor to know something about the firm he is advertising in his columns, that when asked about them he can answer questions more intelligently. He should, if possible, visit the various nurseries with whom he is doing business, then he is in a position to help his customers.

The nurserymen are the poorest advertisers of any great industry and it is our own fault.

There is more real live, instructive, interesting advertising that can be gotten up, showing the many advantages the nursery interests are to a town, county or State, and the Government than in any other business that can be named. Our whole life work is a creation of the germs of horticulture, and our experience is the guide to cultivation and the foundation of prosperity. A true nurseryman is a genuine public benefactor, and because I consider it one of the choicest professions I would not exchange my occupation for any other; but I believe in order to attain the greatest success we must learn to help others.

What a small part of this country is utilized for fruit growing according to its possibilities. I am sure there is not a nurseryman here who cannot point out great opportunities for fruit growers; these opportunities must be made known to the millions of city people who are anxious for a country home.

If nurserymen will get closer to the editors of fruit and farm papers, inform them how we bend our energies to serve the fruit grower, and how certain enthusiastic, energetic fruit growers are succeeding it will inspire others to do likewise.

A NATIONAL SHOW FOR AMERICA.—We note that efforts are being made to arouse a sentiment in favor of a really National Horticultural Show in America. We wish the movement every success as exhibitions of this nature, if not too frequent so as to become common, have a most stimulating effect, and must in the long run be a benefit to all those who live by any branch of horticulture.—Horticultural Advertiser, England.

The Southern Florist, a monthly, has resumed publication, with offices at Poulan, Ga.

BOOKS RECEIVED.

THE BOOK OF WATER GARDENING, By Peter Bisset, Twin Oaks, Washington, D. C. Publishers, A. T. De La Mare Printing and Publishing Company, Ltd., New York. Price, postpaid, \$2.50.

This is a handsomely gotten up volume, and delightful in every other way, giving, as it does, in full detail all the practical information necessary to the selection, grouping, and successful cultivation of aquatic and other plants required in the making of a water garden and its surroundings, and covering all conditions from that of the amateur with a few plants in tubs to those of the large estate or park. It is profusely illustrated with 120 half tones, 17 diagrams and two double page plates, all of which were specially prepared for this work.

The taste for the cultivation of water lilies, both in this country and abroad, is a growing one, and Mr. Bisset's work comes at an opportune time, to meet a demand for practical information and instruction on the subject. The author is certainly well qualified for the task he has undertaken and carried out in such a splendid manner, he having been a devoted student of this class of plants for many years, and having under his charge at the present time one of the most complete water gardens to be found in this country.

There are in all some 22 chapters, dealing with the different phases of water gardening. Particularly instructive is the chapter devoted to ponds and basins, the securing of which forms the basis for successful aquaculture and regarding the construction of which the available information heretofore has been somewhat meager.

No less fully have the chapters dealing with the planting of the banks and borders of ponds been treated, the various subjects suitable for this purpose being described in full, and not mere enumerations or lists provided. An especially interesting part of the volume is the chapter devoted to Gold and Other Fish for Ponds, these attractive adjuncts to the water lily garden—something that has received but scant attention in previous volumes of this character, nevertheless deserving of all the space which Mr. Bisset has devoted to it in the present work.

As regards the treatment of the various nelumbiums, nymphaeas, and other water plants, we need only say that the author has omitted nothing that should or could be known in a cultural way with respect to these. And the greater value attaches to that which he vouchsafes inasmuch as it reflects the results of actual practical experience gained in many years' work among the plants in question.

To a large number of our readers, a chapter that will most forcibly appeal is that devoted to the Commercial Cut Flower Grower. In this chapter Mr. Bisset tells how to make the ponds, how to treat the plants, and furnishes a list of varieties best adapted for the decorative purposes of the florist.

In his preface the author says that what he has written is designed to supplement rather than to supplant what has previously been so ably presented on the subject; and that his aim has been to produce a volume that will form a working *vade mecum* to all interested in this class of garden subjects. That he has in each of his desires succeeded admirably, we think will readily be admitted by all into whose hands the book may fall. The typographical work is excellent, and the numerous beautiful halftone engravings and other illustrations enhance the pages to a marked degree, the whole entitling the volume to a prominent position on the library table of the most fastidious booklover.

BEAN CULTURE.—By Glenn C. Sevey, associate editor American Agriculturist weeklies. 144 pages. Cloth. Price 50 cents. Publishers, Orange Judd Company, New York.

This book takes up in a logical way and explains in simply language all the details incident to the production of a maximum crop of beans at a minimum expense. The widely separated accounts of certain phases of the industry are all brought together and put in a form to be at once available to the practical grower. The subject matter considered includes history, development, different species, cultural methods of preparing seed-bed, planting, fertilizers, cultivation, remedies for insect and fungous pests, varieties and where they succeed, etc., etc. A whole chapter is given over to the consideration of the nitrogen-gathering properties of the bean plant. The question of soil inoculation is given in detail. A special chapter on markets and marketing is provided and there is likewise a special chapter on garden beans. The book is freely illustrated. Conclusions from experiments conducted in America and all parts of the world will be found digested and given in a nutshell for the benefit of those interested in the bean plant and who wish the best complete and final information on the subject.

TOMATO CULTURE.—By Will W. Tracy, of the United States Department of Agriculture. Illustrated. 148 pages. Cloth, 50 cents. Publishers, Orange Judd Company, New York.

This is a practical treatise on the tomato which includes its history, characteristics, methods of planting, fertilization, cultivation in field and greenhouse, points about harvesting, packing, storing, and marketing, as well as the most complete account of the insects, enemies and diseases which attack tomatoes, and remedies for their control that has ever been written. The author has made a life-long study of this important vegetable, and has here embodied, for the first time, a complete story of his experiences.

Because of the increasing popularity of the tomato for general and popular use, this book is especially timely and important. It deals with every phase of the subject. Includes chapters devoted to the home garden, hothead, greenhouse, and large areas for commercial purposes. Every detail is treated under the following heads: Botany; history; general characteristics; essentials for development; selection of soil for maximum crop; exposure and location; fertilization; preparation of the soil; hothead and cold-frames; starting plants; proper distance for planting; cultivation; staking, training and pruning; ripening, gathering, handling and marketing; adaptation of varieties; seed breeding and growing; production for canning; cost of production; insects injurious to tomatoes and tomato diseases. The book is written in the most popular style for the man who wants the latest and most complete information on the subject.

PAMPHLETS RECEIVED.

CHILDREN'S GARDENS, Report of the Committee of the Massachusetts Horticultural Society for 1906.

This very interesting document, prepared by the chairman of the committee, Henry Saxton Adams, is well worthy of perusal by all who are in any way associated with the very commendable work on which the report treats, being as it is replete with valuable information on the subject. And it is a subject the true significance of which in a business way, to say nothing of its aesthetic and moral aspects, has not yet been fully grasped by those engaged in the florist industry, too many of whom, unfortunately, on account of this unfamiliarity with its worth, or of indifference to its development, have so far withheld from it their support and encouragement. As Mr. Adams well puts it: "Our interest is centered in horticulture and whatever we can do to promote it is of vital concern to us. We believe there is no better way to encourage gardening than to teach the children to love and to grow plants. Through the children we reach the parents and ultimately introduce gardening to the homes as can be done in no other way."

In his report Chairman Adams refers appreciatively to the recognition given the movement by the S. A. F. O. H., and other similar organizations. He also points out the great demand and need of experienced teachers, putting the very pertinent questions, "Shall the normal schools or the agricultural colleges take up this work? Shall they unite in this instruction? If so, where shall they get properly trained instructors? This is the great problem and one which must be thoughtfully met. When shall we have a Massachusetts School of Horticulture, with school gardening one of its main departments?"

Mr. Adams speaks optimistically of the school garden work in Massachusetts and calls attention to the great interest centering in the children's exhibitions, the one this year to be held in Horticultural Hall, Boston, Mass., Saturday, September 7.

The papers embodied in the report, which is illustrated, include, either in part or in full, those on "The Educational Value of School Gardens," by Hon. George H. Martin, Secretary State Board of Education, Boston; "Horticultural Education for School Garden Teachers," by Professor F. A. Waugh, Agricultural College, Amherst, Mass.; "School Garden Work and the Normal School," by W. A. Baldwin, Principal State Normal School, Hyannis, Mass.; "Children's Gardens and the Public," by Frank M. Marsh, Superintendent of Schools, Fairhaven, Mass.; "The School Farm at De Witt Clinton Park," by Henry G. Parsons, New York City. There are also reports of the different schools throughout the State engaging in this class of instruction—the whole forming, as we have stated, a valuable and instructive pamphlet.

Obituary

Otto Schwill, Sr.

Otto Schwill, Sr., head of the seed firm of Otto Schwill & Company, Memphis, Tenn., died suddenly on Sunday, June 10, never having rallied from a stroke of apoplexy with which he was attacked on returning from church.

Mr. Schwill was a native of Koenigsberg, Germany, where he was born 61 years ago. He came to this country when he was 15 years of age and located at Cincinnati. After receiving his education he secured employment in a bank there, subsequently entering the seed business with a brother. He removed to Memphis, Tenn., in 1869, where he established the wholesale seed firm of which he was the senior member.

The deceased was a member of the American Seed Trade Association and was interested in several local organizations; he was a member of the Business Men's Club and Merchants' Exchange, and a director in the Commercial Trust and Savings Bank. He was a Mason in high standing in the South Memphis Lodge, and also was associated with the German societies.

Mr. Schwill was highly esteemed by a large circle of friends. A widow, two sons, Otto, Jr., and Carl, and one daughter, are left to mourn his loss.

Dr. M. T. Masters.

The English gardening periodicals received here this week record the death of Dr. Maxwell Tylden Masters, F. R. S., Editor of *The Gardeners' Chronicle*, London, who quietly passed away to his rest on May 30, 1907, after an illness extending over a period of one month. Death was due to heart failure following an attack of pneumonia.

In the death of Dr. Masters the world of science and horticulture has lost one of its ablest exponents, and we join with our brethren across the Atlantic in mourning the loss of one to whom the craft in all its branches owes an eternal debt of gratitude for the grand work he has done in its behalf.

Dr. Masters was born at Canterbury, England, in 1833. He was educated at King's College, London, and after obtaining his degree from that college went to Oxford as sub-curator of the Fielding Herbarium under Dr. Daubeny. From 1855 to 1868 he was botanical lecturer at St. George's Hospital, and for some years was examiner in botany at the University of London and for the Society of Apothecaries. He became a Fellow of the Linnean Society in 1860, and in 1870 was elected a Fellow of the Royal Society. He was a corresponding member of the Institute of France, and an officer of the Order of Leopold.

Dr. Masters came of a horticultural and scientific family. He was the second son of the late Wm. Masters, J. P., who operated the nursery in Canterbury now owned by George Mount. His father was an ardent lover of natural history sciences, an excellent man of business and an accomplished landscape gardener, and from him Dr. Masters inherited the most of these qualities in a marked degree. Shortly after the death of Dr. Lindley in 1865, Dr. Masters was appointed co-editor of *The Gardeners' Chronicle* with the late Thomas Moore, curator of the Ancient Botanic Garden at Chelsea, belonging to the Society of Apothecaries, and a few years later, on the retirement of Mr. Moore, he became sole editor of the famous journal. It is safe to say that no man in modern times has left his impress so strongly on British horticulture as Dr. Masters. He may be said to have been the father of the Scientific Committee of the Royal Horticultural Society, which mainly through his advocacy was established in 1868. Over the deliberations of that body he had presided since the retirement of the late Sir Joseph Hooker. He was also chairman of the Veitch Memorial Trustees, and until recently of the Williams Memorial Fund.

Besides his work on *The Gardeners' Chronicle*, Dr. Masters was a frequent contributor to scientific periodicals, and the author of numerous monographs and papers on subjects relating to botany, vegetable physiology and horticulture, being especially interested in conifers and passifloras. Among his best known books are "Vegetable Teratology," still the standard work on this subject; "Botany for Beginners," "Plant Life" (both of which have been translated into several foreign languages). He took part in "Oliver's Flora of Tropical Africa," "Hooker's Flora of British India," Von Marten's "Flora Brasiliensis," De Candolle's "Prodromus," the "Encyclopædia Britannica," "The Pinetum Britannicum," and other works, besides preparing the second, third and fourth editions of Henfrey's "Elementary Course of Botany."

He was a man of marked conscientiousness, and his life work was characterized by absolute freedom from prejudice of any kind and from all mean or selfish motives. Of a kindly nature, his sympathies were of

the widest description, and he was always willing to assist, and active in his endeavors for any good work that came within his province, whether it was of a charitable or of an educational character. Especially was he a champion of the cause of the working gardener, and had aided the British Gardeners' Association by his presence, his advice, as well as his monetary support.

He leaves a widow and two daughters, to whom, we feel sure, the sympathy and condolence of the entire horticultural craft of America will be extended.

"Truly a great man has passed to his reward."

OUR READERS' VIEWS

Early Flowering Sweet Peas.

Editor Florists' Exchange:

I feel that I must say a few more words on this matter after perusing Mr. Zvolanek's note on page 677. He says that all the varieties from Countess Spencer are the results of its having been cross-fertilized with mixed pollen. Incidentally I may say that it is generally conceded that mixed pollen brings about no radical change from what one kind would produce; but this, by the way. Last year, after a great deal of

The Late Dr. M. T. Masters

Reproduced from *The Gardeners' Chronicle*, London, Eng.

debating, it was given out that Countess Spencer came as follows:

Lovely × Triumph (1898). The resulting seedling of this cross was crossing with Prima Donna in 1899. In 1900, Countess Spencer was in being. In 1904, it was for sale, and from this stock came many of the Spencer sorts we now have.

Now, it is understood that the Countess Spencer, sent to California for growing, was true as possible. It came back full of rogues, many of them of the ordinary type. I am willing to grant that the fresh blood caused these new breaks from Countess Spencer, but the fact remains that the Helen Lewis, etc., did not come the first season after the cross between the unnamed seedling and Prima Donna. They came afterward, and therefore can only be termed "sports." To my mind, the true varieties from a cross appear the season after crossing.

In my previous epistle, I pointed out the instability of seedling sweet peas for several seasons, and all that appear after the first year of flowering are really and truly seminal sports. In the great discussion that took place here last year, it was argued by some that it was hardly to be expected that raisers would give away the parentage of their seedlings, but it has been pointed out that there is no reliability in crosses, and Mr. Zvolanek's remarks serve to prove it.

Respecting sports proper, Darwin and other eminent botanists have made a distinction between "bud" sports,

or those that arise from buds, and "seminal" sports, or those that arise from seed. Botanists tell us that there is a similarity between vegetative buds and reproductive or flower buds. Flowers are really only modified leaves. Seeds contain a bud, and if it produces a plant different from its parent, it certainly approaches a bud variation, strictly termed a "seminal" sport, provided, of course, that cross-fertilizing was not carried out.

Bud sports in sweet peas are practically unknown, at least when a plant throws variegated or untrue flowers, which they often do, in the Autumn. I have always attributed those to be due to climatic changes, more so because these variations are inferior to the true blooms produced earlier. The fact is plain, that sweet peas can never be truly fixed. Variations are liable to appear ten or more years after their introduction; but in this respect they are not nearly so variable as other flowers that have their stigmas and stamens open to visitations from insects. Personally, I am quite convinced that neither flies nor beetles ever affect sweet peas, because the pollen is decimated before the flower opens. Fertilization takes place with amazing rapidity, a few hours sufficing to allow the pollen to send down its tubes into the ovaries.

Artificial crossing of sweet peas undoubtedly disorganizes the plant, which does not recover its normal habits, perhaps for several generations. Until it does, the successive hatches of seed may and do show the irritation set up by the mixing of foreign pollen, by producing "seminal" sports.

Before me, as I write, are several new seedlings, the parentage of which may be interesting:

1. Mrs. Walter Carter, first shown last year, result of a cross between Eric Hinton, pale pink Spencer, and Dorothy Eckford; color, lavender, shaded with silvery mauve. Spencer form.

2. Seedling from Helen Lewis (orange) × Mrs. Carter; deep crimson, overlaid with maroon, wings pure plum color.

3. Seedling Helen Pierce (blue stripe) × Mrs. Carter; bright blue wings, shaded violet; standard, a trifle paler shaded, with silvery white.

4. Countess Spencer × Mrs. Carter; a beautiful rosy lavender self.

5. Dora Breadmore (buff pink) × Mrs. Carter pure white, faintly tinted with blush at the edge of standard.

All these seedlings are of Spencer form, but it is safe to say that seed from them will produce several variations next season, and these will assuredly be "seminal" sports, brought about through the disturbance caused by crossing with foreign pollen last year.

If these four seedlings had all appeared from one cross this season they would certainly be due to the cross.

I am particularly interested in Mr. Zvolanek's remarks regarding the much wanted colors, and if his surmise is correct, I shall only be too happy to congratulate him, and make them known far and wide.

I am by no means skeptical respecting the value of Mr. Zvolanek's early strains, for the public here are cottoning on to early blooms, but with such varieties as Dorothy Eckford, King Edward, Miss Willmott, etc., we cannot get blooms before the latter end of April, at which date we realized this season from 8 to 10 cents per dozen retail, so that we should, I think, do very well a month or two earlier.

I shall only be too pleased to have a few samples of the Bound Brook varieties under my eye.

Kent, England. T. A. WESTON.

Gladolus America.

Editor Florists' Exchange:

Mr. Childs's letter on page 801 of *The Florists' Exchange* ignores my original and repeated statement that the cormels of America do not mature here excepting in a limited way. The original seedlings were discarded by me years ago, and cormels of the original selections have not been grown by me for years, therefore owing to the more rapid multiplication of other types, America was in the minority, only a few having been numbered for observation during the past few years, all bloomed stock being annually disposed of in mixture.

The species Saundersoni does not produce cormels after the habit of America; the more compact habit of the latter is one of the causes of limited maturing in our short season. However, these facts conflict with both the Banning and Christy claim as to its origin.

It seems too bad that Messrs. Childs and Banning should not be able to agree in their stories, as their divergence rather discredits other points claimed by both.

The suggestion that I supply corms of Number 119 for testing comes rather late, two months after planting, and as to supplying the names of other buyers, I am quite able to settle the matter without involving others in the controversy. Mr. Cowe did not change his mind at Washington in 1905 as stated, and America was never in the stock known as "Groff's Hybrids."

H. H. GROFF.

The Propagation of Ornamental Nursery Stock.

Read by W. H. Wyman, Mass., before the American Association of Nurserymen at Detroit meeting.

Trees of all kinds, fruit, deciduous and evergreen, are ornamental; but these will be eliminated in this discussion, although for the most part they are propagated precisely as are those popularly known as ornamental stock, viz.: broad-leaved evergreens, deciduous shrubs and herbaceous plants. All the types of broad-leaved evergreens are raised from seed while hybrids are propagated by budding or grafting the seedlings, or by the means of layering. The latter is the slower of these methods and is less frequently adopted by commercial nurserymen. Not to any considerable extent are rhododendrons grown in America. In Holland, Belgium and England, so far as our observation goes, all hybrids are grafted, for the most part, on ponticum seedlings of about two Summers' growth. This is done in the Winter, under glass. In the Spring they are planted out in beds, again to be transplanted a second time into nursery rows and the third year they are sufficiently large for sale. Our chief interest is in the propagation of deciduous shrubs and herbaceous plants.

Deciduous Shrubs and Herbaceous Plants.

Of the various methods of propagating this class of stock the following should be mentioned as the most general: By sowing seeds, the seed method, layering, cuttings, both hard and soft wood; by division and by budding or grafting.

Of all these methods the first is the most natural; but it can be adopted only so far as the propagation of types is concerned. The seeds of all hybrids cannot be relied upon, only to revert to their original types. For example, *Ligustrum Regelianum* seeds as profusely as the *ibota*, the type from which it sprang; but the seedlings will all be *ibota* with possibly some variations, but never *Regelianum*.

While the seed method of propagation is the most natural of all methods, we believe it one that requires as much painstaking study as any. Over against this in the order of naturalness is the stooling or layering method, the simplest or least difficult of any; but not much in vogue in this country, because it is too slow for commercial purposes. In Europe shade trees are to quite a considerable extent produced in this way. The advantage is uniformity of excellence in quality while seedlings admit, in some cases, of great variations. While we believe it to be true that in this country little ornamental stock is produced in this way, the writer is acquainted with one firm of repute who grow *Hydrangea paniculata grandiflora* in quite considerable quantities by this method. They are a marked exception to the general rule.

The Seed Method.

It is our opinion, that while the seed method is the most natural, it is, as before stated, as difficult of mastery as any of the methods of propagation. The first step in seed propagation is the procuring of the seeds. Then they must be properly treated. If the seeds are easily separated from pulp or chaff like those of *Syringa japonica* there is little to be done; simply to put them in a cool place safe from the ravages of mice to await the day of planting. They must not be allowed to become too dry. If the seed is encased in pulp, it is best that it be thoroughly washed out and stratified or planted immediately. Which of these two methods is the better it is impossible to say. We would recommend what we have learned by experience—the planting of a part in the Fall and the stratifying of the remaining half for Spring planting.

The advantages of immediate or Fall planting are these: So much work is out of the way. A small matter. Secondly, the seeds are in the ground ready to begin germination at the earliest possible moment. If nothing happens to injure them, the seedlings will be larger than will be the case if in the Spring the seeds are not sown at the earliest date practicable. This method is beset with dangers, first, that field mice and moles will find the bed a very desirable habitation for the Winter, with the result that the seeds are eaten up. Then again, there is another danger which must not be overlooked, though it may seldom, if ever, occur. In the Fall of 1905, we planted all of our seeds of the various types of roses. Ordinarily, we had the right to expect a fine lot of rose seedlings the following season; but to our surprise, there was only one where there should have been a thousand—an absolute failure. The fault was not with the seeds we feel confident, but with the season. In February of that year we had an unusually mild spell of weather, lasting for several days, with the result that deciduous trees began to make new foliage. This was followed by very severe weather. It is most probable that the seeds felt the warmth of the sun and germinated only to have their little life ruined by the cold. This is a danger that may seldom arise, but as it has arisen once in our experience, we think it a matter that is deserving attention.

On the whole, the safest method is to stratify the seeds. The danger attending this method is that the seeds will not be taken from their hiding place as early

as it is necessary, and germination will already have begun and to such an extent as to render the whole mass worthless. This danger attends only those seeds that germinate in the Spring following their ripening the previous Autumn, such as barberry, sambucus and evergreen seed. But there are some other seeds, like those of *Viburnum opulis* and *Clematis paniculata*, that will not germinate in the Spring, but will do so later in the season, about September. These may or may not be planted until the last of August. If planted, they must be kept screened and not allowed to dry out. If not planted, they may remain stratified until they are about to germinate, when they may be planted. Then there are those seeds that require two or more years in which to begin growth, like those of the *Viburnum dentatum*, *Viburnum cassinoides*, which should never be planted until the late Autumn following the year of their growth. And again there are other seeds, like those of *Rhus aromatica*, that will send forth some plants the first year, more the second and still others the third year. Such seeds are the most troublesome of any with which the planter has to deal. When one has learned all of the peculiarities of the seeds he has by no means mastered the situation.

Most seeds require a rich sandy loam, so light and friable that it will not bake. It must not be too dry, or the little seedlings will burn; it must not be too wet or they will damp off. For the best results, screening is absolutely necessary in the climate with which the writer is acquainted, say New England.

Thus far all that we have said applies to propagation out of doors without glass, in frames screened with ordinary lath screens. Azaleas, kalmias and andromedas, we believe, can not be very successfully grown in this way. They should be sown under glass upon clean sphagnum moss, where the humidity desired may be carefully maintained.

Here, allow us to remark that other things being equal, the man who has land well adapted to the growing of seedlings will succeed, while the man who has not suitable land had better let deciduous seedlings alone and devote his attention to something else.

The Stooling or Layering Method.

A word relative to the stooling or layering method in addition to what has already been said will suffice. Every tree or plant has its own peculiarities. Plants are capricious. Some will lend themselves to one method of treatment and others to another. There are some varieties of ornamentals that can be more successfully propagated by stooling than by any other method. For example, the large flowering magnolias. The types can be raised from seed; but the Chinese varieties must be propagated in some other way. While we have seen the types raised from seed very successfully, we do not know of any firm in this country who has any considerable number of good stooling plants of magnolias. Why it is so we do not understand, unless it be that the most of the nurserymen are, like ourselves, too young or too ignorant about the propagation of this class of stock to get good stooling plants. So far as our observation has gone, all of the leading nurserymen in Holland have their stooling plants carefully planted and as carefully tended and a crop of young magnolias coming on each year. These stools are planted at a distance of about twelve feet apart. The same is true, as before mentioned, of limes, elms, Norway and silver maples and many other varieties of trees. It is readily seen that when once a specimen tree has been found and the same has been stooled, the entire product will be of uniform excellence.

By Cuttings.

The next method of propagation is by cuttings, both hard and soft wood. This we believe is the most general method of propagation in this country. A large number of our common shrubs lend themselves easily to this method of treatment, such as the cornels, privet, spiraea, for the most part, and many others. Hardwood cuttings should be made from wood of the previous Summer's growth cut from the stock plants after it has thoroughly ripened out, but before it has been subjected to a too low degree of temperature. This wood should be packed away in sand or moss where it will neither rot nor become too dry. At the convenience of the propagator, the wood can be worked up into cuttings which are usually tied up in bundles of one hundred each, and again packed away where they callus preparatory to root-making, when they are planted in the open.

In latitudes where it is very warm and the soil is light, as it is in France, it is necessary to plant these cuttings under bell glasses in the field, but we have never seen anyone propagating in that way in this country. It is the general method in France.

There are some varieties that cannot be worked by the hard-wood method. They will only root from soft wood, or at least take most kindly to this method—such as *Philadelphus coronarius aurea*, the forsythias, *Hydrangea paniculata grandiflora*, weigelas, *Viburnum plicatum* and many more. Here care must be exercised in taking the wood when it is not too soft or too hard; that is, when it will break short and crisp like a slender

piece of burned clay, but not when it is so tough as to bend double without breaking. The cuttings should be made larger than many propagators make them, we are convinced, just as large as they can be made from the wood in hand. They must not be allowed to wilt before nor after planting in the frame, which may be with or without greater heat. On this point there is a difference of opinion. From our observation we don't believe bottom heat is necessary. We know of one firm of very successful propagators and think they strongly advocate bottom heat, such as may be had by putting fresh horse manure in the frame pit under the sand. We also know of another equally successful propagator who never uses bottom heat and says it is not necessary. His product is just as good as is that of the other firm. When the doctors disagree, what are we to do? Judge, each man for himself, and act accordingly.

We are now at the critical point in soft wood propagation after the first cuttings have been well made and properly set in the frame. An even temperature of hot, humid air must be maintained. Here the genius of the propagator comes into play. Rules only in the most general way can be made. There must be water enough and not too much, sun enough but not too much; and when the rooting process is well under way, they must be hardened up by letting in some air, but not too much at first. The eggs in this basket must be carefully watched or the whole will be a failure. We are convinced that this is the point where the genius of the plantsman is tested as nowhere else in the whole round of propagation.

Not every man can be a successful propagator is our firm conviction. A good propagator is a born propagator. Experience perfects him, but he is not purely a manufactured product.

Propagation under Glass.

It may be necessary to note in passing that certain plants can be most successfully propagated by soft cuttings grown from forced plants under glass. This applies to a few deciduous shrubs and to many herbaceous plants. But the bulk of herbaceous plants is raised from seeds or propagated by divisions.

And this brings us to the simplest of all methods of propagation—by division. Anyone can do this. It requires only a few plants to start with, which can be broken up and planted out to become salable plants in three months' time.

Incidentally, it must be said that a few ornamentals, such as amygdalus and a few herbaceous plants, like oriental poppies and phlox, can most easily and profitably be propagated by root cuttings.

Grafting and Budding.

The last and final methods of propagation we shall mention are the methods of grafting and budding. So familiar are these methods to every gentleman present, that no word that we can offer will be of interest. One observation we have made in foreign nurseries, especially in Holland, was this: It seemed to us that if a plant could be produced by grafting, then grafted it must be, so fond are they of grafting or budding. In this country quite the opposite is true. If a tree can be produced successfully in any other way, it is not done by grafting or budding.

Feeling that we almost owe this assembly of propagators an apology for consuming so much time on a subject about which many of you are so much better prepared, by your long experience and observation to speak than ourselves, we simply have this defense to make—that we were asked by the committee to do this thing that we have attempted, and upon them rests the responsibility, and, if any, the blame for this paper.

The American Carnation in England.

So widespread has the cultivation of the American carnation in England become, that a book has just been published on the subject of "The Perpetual Flowering Carnation," the author of which has had extended practice both in the United States and in England. In reviewing this work *The Journal of Horticulture* states that "when the first of the fringe-petaled carnations was placed before the Floral Committee of the Royal Horticultural Society, it was prejudged to oblivion. Only when, by dint of public opinion, it was seen to be a favorite flower, were its merits as a thing of beauty acknowledged. Even now it is doubtful if the old school of British florists will admit that in these American types of the flower there is true beauty. But a better English style of perpetual-flowering carnation is being produced with fringed petals. Already has success attended the efforts of our raisers, and while five years ago our Transatlantic friends looked askance at varieties of the 'divine flower' from England, we believe they are now very ready to accept such notable stars as Britannia and Mrs. H. Burnett. Clearly these are superior to all except the very best that have been obtained from abroad; and they are not second to any. This would seem to be sufficient to renew our fading hopes, for it was thought that in at least one department of floriculture Britons were lagging behind. This is now changed, and to-day the floriculture of England again stands unassailed and unsurpassed."

The Chrysanthemum.

Read by Charles H. Totty, Madison, N. J., before the Boston Gardeners and Florists' Club, Tuesday evening, June 18, 1907.

The chrysanthemum in its various forms as grown to-day is essentially modern in its varieties and it is a far cry from the first Japanese introductions of K. Fortune in 1862 to the large flowered Japanese of to-day. No flower has proved so responsive to the efforts of the hybridist, and the present day types of Europe and America are far ahead of the kinds grown at this time in Japan, so far as my knowledge of Japanese varieties goes. When we stop to reflect on the progress made in a period of some fifty years with this flower, one hesitates to hazard a guess as to what the future has in store. The past history of the chrysanthemum is interesting. A chrysanthemum show was held in Birmingham, England, as far back as 1836, but no record of it is left saving the mere detail of time and place. The association that was to be the real factor in developing the chrysanthemum was organized in Stoke Newington, England, in 1846, at an old fashioned hostelry where a company of congenial spirits used to congregate evenings and over their pipes and beer discussed their favorite flower. That little society prospered in its chrysalis state and eventually evolved into the National Chrysanthemum Society, and this society by its system of historical records, classifications and nomenclature put the chrysanthemum where it is to-day.

The first seedling raised in cultivation was flowered in France about 1827, and I have no doubt the raiser was just as proud of his achievement as we would be to-day to produce Beatrice May or William Duckham.

The pompon section was produced from a small semi-double variety sent home by Robert Fortune from China in 1842. We are indebted to the French raisers for this type who christened it pompon from the real or fancied resemblance to the tuft or pompon on the French soldiers' hats of that period. The Fortune introductions of 1862 gave the greatest impetus to the cultivation of the chrysanthemum and they were the ancestors of our present large flowering kinds.

Glancing hurriedly through the American history of the chrysanthemum we find that the first seedlings were exhibited before the Massachusetts Horticultural Society in 1879 by Dr. H. P. Walcott, so that Boston in this as in so many other matters historical may rightly claim first honors. Peter Henderson previous to this had imported from Japan in 1863 some fine varieties, one of which at least, Grandiflorum, was grown until very recently. The American Chrysanthemum Society was not organized until 1889, but shows had been held for some time previous to that in the larger eastern cities. Possibly the greatest enthusiast this country ever had is the veteran John Thorpe. I had a short talk with him in Chicago last Fall and I know he is a mine of information on the early struggles to popularize the chrysanthemum in this country. Another gentleman who, while his name does not figure so much in print, did a great work in the early days, is Wm. Barr, of Orange, N. J.; he, too, is brimful of early history and furthermore is just as keen to-day in testing new kinds as he ever was. What wonderful power of fascination does the chrysanthemum possess that it can hold a man's interest for a lifetime compelling him willy nilly, to remain its slave and worshiper.

In the early 80s several Pennsylvania growers came to the front. W. K. Harris and H. Waterer left their imprint on the chrysanthemum by raising some fine varieties. New Jersey was represented by T. H. Spaulding and the late lamented firm of Pitcher & Manda. It is impossible in a paper of this description to enumerate all of the men who did yeoman service in the past, but at least two others, Fewkes and Hallock, are deserving of special mention.

Behavior of Modern Sorts.

Getting down to the present time we find that the Australian varieties in the past few years have swept our exhibition tables clear of the older varieties, giving us flowers of such splendid size and colors combined with ideal habit that there would almost seem to be an infusion of new blood into the race. The English and French seedlings are in too many cases disappointing to us, comparatively few standing the test of our climate, but the failures in the Australian kinds are few. The reason for this is because the Australian climate at flowering time is similar to ours, often running warm and bright, and if a seedling shows a large, full perfect flower in this condition it will do the same with us. An English variety may be splendid in its native home and yet be a failure here, showing an enormous eye and only some five or six rows of petals. Some of their very finest kinds act in this way here, Lady Conyers, Elsie Fulton and Mrs. F. W. Vallis being good examples. The Australian kinds, on the other hand, show up much better than they do in Europe, many of them, the sunlight here in the early Fall serving to bring out the size and breadth of the petal to greater advantage. I am often asked how it is that the Australian types are such strong growers, splendid in both

stem and foliage. Perhaps the chief reason is because in Australia they practice an outdoor system of culture entirely in the section from where we have received the finest varieties.

We should never lose sight of the fact that the chrysanthemum is almost a hardy plant and indoor culture is an unnatural condition which in time tends to degenerate the parent stock. The future will possibly see a race of American seedlings equal or superior to what we are now getting from Australia, but they will be raised outside in the great Southwest somewhere, where the hand of man has merely to guide nature in an intelligent, systematic crossing, not here in the East where with glass houses and artificial heat man must not only guide nature but also finish her product for her. Another reason why the Australian kinds are all good growers, lies in the fact that a rigid selection is kept up all the time from the first seed bed to the flowering stage. Any kind that shows an exceptionally tall, or a weak spindly habit is destroyed before the plant reaches the flowering stage, so that the temptation to keep it, should it prove to be an exceptionally fine flower, is removed. This I am informed is the policy of Mr. Pockett of the Wells-Pockett firm, and I say to-day that this firm, if they do not send us another variety, have left a mark on American chrysanthemum culture that will endure for many years to come. The most popular type of flower at the present day is the Japa-

I will go on record as saying now that 1907 will be the banner year to date from the view point of exhibitions.

What about it commercially? That can only be conjecture till we can get an idea of the quantities planted in the different sections, but last year was the best year for prices that I have known since I have studied the flower market. Climatic conditions I will concede helped somewhat to bring about this condition; but even so, people look for chrysanthemums now more than they once did in the early Fall, and I see no reason to feel pessimistic as to the future of the flower commercially.

What the Flower Accomplishes.

The chrysanthemum accomplishes every year a great work in bringing the general grower and his wares before the public at the Fall shows. How many towns ever attempt even to hold a show only in the Fall when the chrysanthemums are at their height? Spring and Summer exhibitions can be counted on the fingers of one hand, almost in the entire country, but when the Fall comes, shows spring up from one end of the country to the other, and though the chrysanthemum is the principal attraction it affords the rose men, the carnation men and the new plant men a chance to exhibit their stock to a large section of the flower buying public that could otherwise only be reached through the medium of the retail store. The average retailer is more

Partial View of Three-acre Slat House of Howard & Smith, Los Angeles, Cal., 18,000 Kentias in Solid Beds

nese incurved. This combines the largest size with the incurving petals so much sought after by the commercial grower on account of its shipping qualities.

The true Chinese type with its incurving petal is apparently too small for present day use, and is entirely crowded out of the exhibition table save in classes specially reserved for it, and to a considerable extent it is getting crowded out of the commercial grower's list. This perhaps is in some ways to be regretted, yet it is only one of the cycles of change that have served to keep alive the interest in the chrysanthemum. Every few years a new type or color appears and revivifies an interest that perhaps was waning and needed just that stimulus.

Present Status.

Some good and worthy people every once in a while tell you that the chrysanthemum is getting played out, that it don't sell as it used to in the market, people are tired of it, and so forth. Let us look at the facts and see if this is so. What do we find from an exhibition standpoint? We find every year an increased number of cities holding chrysanthemum shows. We note 20 or more local chrysanthemum societies each in a flourishing condition and holding an annual Fall show, when ten years ago not one was in existence. No signs of lack of interest there. If you were in my position as a disseminator of new varieties and knew as I know men who buy the plants with their own money, in cases when the employer is not sufficiently interested to do so, in order not to be behind at show time, you would never talk about lack of interest. I have seen several schedules for the coming Fall, and in every case the prizes are larger and far more numerous, and

interested in keeping his trade down to the staples in the trade than he is in pushing a lot of new things that he will have to sink his money into and run his chances on selling them afterward to a fickle minded public. As an aid to instructing the public and giving an impetus to the Fall trade just at that time opening up, the chrysanthemum performs a service to the florist that cannot be measured in actual dollars and cents. One of the most encouraging features to me in the chrysanthemum business is the increasing number of exhibitors. True some of the older ones drop out from one cause or other, but this is only to be expected, and the number of new men coming up is very greatly in excess of older men going out.

Work of Societies.

The various local societies have helped to bring about this condition, and I pray it may continue, for when the local interest dies and the local show is discontinued, then do we see the horticultural interest in that particular section, so far as the chrysanthemum is concerned, fading away. While I give place to none in my interest and loyalty to my local society, I believe it is the duty of every chrysanthemum lover to affiliate himself with the National Chrysanthemum Society also. In union there is strength, and I would like to see the Chrysanthemum Society with thousands of members when it now has hundreds only, for, gentlemen, members of this society should not forget that the present head of the Chrysanthemum Society is a Massachusetts man, Loveless of Lenox, and as a matter of State pride I know you will help him all you can. To a grower interested in chrysanthemums the list of varieties issued by the society is worth much more than the annual

dues amount to, not to mention the good work it does in recognizing new and meritorious varieties, winnowing the wheat from the chaff, and, occasionally, in detecting old varieties that once in a while, whether by accident or design, are renamed and offered to the trade as new varieties.

As to The Future.

And now what of the future? I am neither a prophet nor the son of a prophet, and when dealing in futures it is the unexpected that always happens. So far as one can see along the pathway at this time the future is bright, very bright for the chrysanthemum. Changes will come unquestionably; in fact, they are already looming up. I see it in a reaction in some sections from the large blooms solely. The past year has witnessed to me, a remarkable turn in favor of the single flowered types. The singles cannot be called new, for I recall we made an unsuccessful effort to have the market take them up ten years ago and the market laughed at them. True, varieties have improved greatly since then, but the market at that time was not in a receptive mood. It was merely a big flower, the bigger the better, with a stem like wire and foliage hugging the flower. Today it would seem that the artistic taste is more developed. We see it in the increasing popularity of single flowers, not only in chrysanthemums but also in roses, dahlias and other flowers. Light, graceful natural effects can be produced, impossible of duplication with the heavy large double flowers that have been the florists' ideal for so long. The single varieties now seem to be coming into their own after years of neglect, and the next year or two will see them popular. I notice that several new singles were awarded certificates in London last Fall. Such a thing would have been heresy not so long ago, and I regard it as an indication of the trend of the times. The pompons or hardy types, too, will be planted much more largely in the next few years. With the spread of the civic improvement ideas of a city beautiful instead of an aggregation of bricks and stones, demand will come for these humble but welcome flowers, blooming as they do when everything else is gone, and pointing an object lesson of hopefulness long after every other flower has succumbed to the rigors of early winter.

The Big Flower.

Will the big flowers stay? I say, yes. For large massive decorations they are unsurpassed; to make a showing in an exhibition they are indispensable and as evidences of cultural skill they tell their own story. That new types will crop up and have a share of the popularity is certain. The human mind from earliest history is perpetually craving for something different, and in this respect modern civilization differs not one whit from the ancient Greeks and Romans. The large flower in its proper place has a certain nobility about it that is not, to my mind, approached in any other flower, but its place is not stuck in a low bowl to form part of a dinner table decoration. That part of decorative art can be more artistically done with singles or pompons or other smaller flowered varieties.

That the hybridist will continue to breed to larger and larger types is certain, but size and coarseness do not necessarily have to go together. We have seen the coarseness of Timothy Eaton, for instance, eliminated and a flower equally large or larger produced in Beatrice May or D. V. West without a trace of coarseness in their makeup, and it is on these lines that the hybridist will work.

Some people in decrying size go to the other extreme and condemn a flower for its size alone. I say this is wrong. The forest tree, when a magnificent specimen, never excites anything but admiration, and if nature unlocks her storehouse of knowledge and permits us to raise a chrysanthemum two feet across, if it be perfectly proportioned, I say it would be a marvellous revelation.

Whatever the future has in store we may confidently say that the chrysanthemum will go on increasing in popularity and usefulness from year to year and adding its quota to the sum total of the world's economy and human progress.

John Hartje Retires.

John Hartje, the well-known florist of Indianapolis, Ind., is to retire from business. A local paper furnishes the following particulars regarding Mr. Hartje's future plans, his career, and other matters:

"For eighteen years John Hartje has been cultivating carnations. He has raised thousands of carnations and a few million violets thrown in for good measure, and now he will rest.

"What are my plans?" he repeated. "Well, nothing in particular. However, I expect to spend three or four months fishing—just fishing. Then I may take a trip over to Europe and look around over Germany a little. But during all this time I intend to rest."

"When Mr. Hartje began business eighteen years ago he bought some ground in North Illinois street, near Thirtieth. It cost him \$2,400. Now he holds it at \$12,000. Consequently, real estate as well as flower raising has been one of his sources of profit."

"For the last eighteen years Mr. Hartje has lived in a little one-room frame building adjoining his greenhouses. He has 'bached,' as he states it. He has had nothing to attend to except his business at-

fairs, and he has devoted his time chiefly to the cultivation of carnations.

"By crossing he has brought out four new varieties of carnations. One, the Jubilee, is of a scarlet color and has a very large stiff stem and a bright color. Another, the Snow Queen, is white and has a fine form and pure color. Two others are the Moonlight and the Candace.

"I started in business out on Illinois street, because I wanted to experiment in carnations," said Mr. Hartje. "The soil out there is carnation soil, and that's why I located there. A man wouldn't have any success trying to raise roses out there, because it isn't rose soil."

"Mr. Hartje estimates that within the last eighteen years he has raised and sold about four million carnations. The number of violets sold will run up toward ten million, according to a rough estimate."

Horticulture on the Pacific Coast.

The progress made in horticulture and floriculture this season in Southern California is in harmony with the universal prosperity of the country. Multiplied hundreds of acres are being planted to citrus fruits; the young stock of nurserymen was completely disposed of months ago at prices that have stimulated growers to greater activity than ever before.

The great demand for cut flowers and bedding plants has necessitated the enlargement of the facilities for their production. The Wolfskills have just completed a new house, 60x300 feet, and as soon as glass can be had five more houses of the same size will be built.

John Hartje

This plant is constructed in the most substantial manner—concrete foundations, surfaced lumber well painted, and the best ventilating device obtainable. A new 100 horsepower boiler will be added to the present steam heating apparatus. Crude oil is the fuel used, which is stored in a 50-barrel tank on an elevation above the boilers, giving gravity feed to the burners under the boilers. The firm has 11,500 grafted roses, and 68,000 carnations, the latter field-grown, to stock their houses this coming season. George Watson is superintendent of the range of glass, now 100,000 square feet, one acre slat house.

Howard & Smith have increased their acreage in bedding and ornamental stock. Two features in the work of this progressive firm are, first, all the land of more than three per cent. grade is made into lands or terraces of that or less grade, to facilitate irrigating and economize on water. The second is, the substituting of 1½-inch iron pipe, perforated every 12 or 18 inches, to irrigate the rows of trees or plants, for wooden troughs with holes in their sides opened and closed with plugs or tin slides. This concern has a double flowering lobelia that is of great merit—a valuable acquisition to our list of bedding plants. They grow roses by the acre all worked on manetti stocks, with the eyes cut out of the cuttings below the surface of the soil—to overcome the habit of suckering in garden plants.

Under separate cover I send a photograph (herewith reproduced) of that part of Howard & Smith's slat house in which they grow their kentia palms.

One of the most remarkable nurseries in the locality, is that of H. Hehre of Los Angeles. A basket maker by trade, a florist by inclination, he has, as a diversion, grown from seeds and cuttings collected from all parts of the world, thousands of economic and ornamental plants, having at this time the largest collection of exotics on this coast, consisting of over one thousand varieties. At this place the writer saw for the first time some young stock of *Idesia polycarpa*,

certainly the most attractive deciduous tree that has come under my observation. In shape the foliage resembles that of the catalpa; the color is of a light green, of a pleasing and peculiar shade; the petioles, which are long, and the branches, are of a bright red. If it proves to be adapted to this climate of the coast section of the State, it will be a valuable acquisition to our list of ornamental deciduous trees. A native of Japan and its humid atmosphere, the probability is that for the warm dry interior valleys it will not be suitable.

At this place is also growing a vine of the Paternoster bean, *Abrus precatorius*. The flowers are borne in clusters after the manner of the wistaria bloom, and are of a light yellow color. The seeds, being of a bright vermilion color with a jet black eye, are very pretty ornaments for the drawing room.

Bauhinias are about done flowering for this season. This class of shrubs, or small trees, because of their great beauty when in bloom, should be more extensively grown than they are. The flowers are borne on stems which grow to a foot or more in length, the buds appearing along the stem as it grows until the end of the season, the same as seen in *Ipomaea grandiflora*.

Aristolochia siphon does fine here. The foliage is large and bright. The plant is now (June 1) out of flower, while *A. elegans* will not begin to bloom for a month or two yet. The last named variety will only survive our Winters on high grounds.

In my former article (page 745, issue of June 1) there is a statement that is misleading, in regard to Fischer Purity freesia. It should read: "Experiments with Fischer Purity freesia and stock of a white variety obtained from a Chicago seed house, showed no difference," etc.

P. D. BARNHART.

CLUB AND SOCIETY DOINGS.

THE ST. LOUIS FLORISTS' CLUB on last Thursday afternoon held a largely attended and harmonious meeting. President Irish with all the other officers were on hand. The chair called for a report from the trustees to which Chairman Smith responded. The smoker to be given for the club's twentieth year celebration will take place on Saturday night, June 29, in Hibernian Hall, 3919 Finney avenue; all arrangements are completed. Every member of the club will receive an invitation. Mr. Smith in his report also stated that they had arranged the place and date for the club's annual picnic, which will be held July 25, at Romona Park. This is the same place as the picnic was held last year.

William C. Young, state vice-president of the S. A. F. O. H., who is arranging for the members a trip to Philadelphia in August, reported that rates were a little high at present, but he hoped for lower figures by August 15, just before starting time. The rate is now \$34.55 for the round trip, including a trip to the Jamestown Exposition, good returning in 60 days. He also requested the members to send in their names as soon as possible if they have any intention of attending the convention.

Conrad Bergstermann was elected to membership and Adolph Brix, the St. Louis avenue florist, made application. The treasurer's report showed a good balance on hand.

From the question box, fifteen queries were discussed. All were of great benefit to the wholesale growers and retailers. These, with the social features being introduced at each meeting by our trustees, are bringing out the members. Secretary Beneke reported that the next meeting of the club would be held July 11, when the nomination of officers would take place; the election will follow at the August meeting.

ST. PATRICK.

BOSTON GARDENERS AND FLORISTS' CLUB—Notwithstanding it was the warmest night of the summer about 150 members of the club attended the last meeting of the season on Tuesday evening and listened attentively while Mr. Doty talked on "The Past, Present and Future of the Chrysanthemum." After the lecture there was a spirited discussion and quite a little argument among some of the older club members as to who was the original grower of the large chrysanthemums around Boston.

It was decided that the club hold an outing in the Boston Parks on June 29, the party to meet at Brookline avenue and Audubon road and visit the Riverway, Olmsted Park, and Franklin Park. The party will meet at the point named at 1:30 p. m., and under the guidance of the park superintendent or his assistants will make a tour of the interesting points for landscape effects.

An invitation was also received from General Weld, president of the Massachusetts Horticultural Society, to visit his place at Dedham, and a party will avail themselves of the opportunity on Saturday next.

A communication from the Old Home Week Celebration Committee, asking the club to take part in the civic parade, was referred to a committee for action.

Eight new members were elected. There were only a few exhibits on the tables, including two pans of chrysanthemums in bloom from T. D. Hatfield; Iris Her Majesty from F. J. Rea; poppies from the Mount Auburn Cemetery; and hybrid pyrethrum from Wilfred Wheeler.

J. W. D.

FOR THE RETAILER

For reproduction on this page, we solicit from our readers engaged in the Retail Trade, good, clear photographs of subjects that are of general interest, such as store interiors, designs of different classes, new delivery wagons, etc.

An Outdoor Wedding.

At this time of year when everyone likes to be in the open, an out of door wedding is the thing, provided the function takes place in the country. Piazza decorations have a distinct charm that may never be obtained indoors. Of course, it is necessary to have a good supply of flowers and green; but at this season, when everything is in flower and the country a mass of beautiful foliage, this difficulty is easily overcome.

A wedding this week that took place a few miles from New York was a charming affair. The ceremony was performed under the spreading limbs of a giant maple that stood about eighty yards from the house. An avenue of bay trees was formed to fill in the intervening space from the piazza to the tree; these were connected by garlands of spiraea, a wide sash of white silk ribbon being tied to each bay tree stem where the garlands met. At the end of the avenue, or aisle, of bay trees, and directly under the maple, a bank of pink hydrangeas had been arranged in crescent form, the points of the crescent being brought around to connect with the avenue of bay trees.

Cibotium Schiedel in 12-inch Pot

Grower, J. F. Anderson, Short Hills, N. J.

The piazza was also brilliantly decorated. It extended around three sides of the house, and was of exceptional breadth. Large specimen palms stood at every convenient place, the spot where the bride received being a perfect bower of pale pink peonies. The bridal procession passed under arches of pink weigelia, which was used in large quantities throughout the piazza. Metal cornucopias were inserted into the tubs containing the palms; these were filled with crimson peonies, and long sprays of weigelia. Cornucopias were also suspended from the supporting columns and filled with peonies.

The table decorations were very simple and consisted of bowls filled with wild field daisies. The bride carried a large bouquet of lily of the valley tied with a broad sash of white silk ribbon, no shower effect being used. The bridesmaids wore large corsages of white sweet peas tied with white liberty silk ribbon.

At another country wedding the piazza was partially enclosed. A large number of maple saplings had been cut in lengths of from twelve to fifteen feet; these were placed against the side of the house, and at the piazza rail, and allowed to meet in the center, forming a continuous arch. Hanging baskets filled with pink peonies were suspended from the roof of the piazza at irregular heights and distances. At the front entrance to the house a bower of maple saplings was erected. Large quantities of wild azaleas were used to brighten the arrangement, and a bell of viburnum hung from the center.

Most of the material used in these country weddings was obtained locally, and being freshly cut and not handled to any extent made an effect not easily secured with material sent out from the city, which seldom arrives in good condition during hot weather.

Funeral Work.

A handsome standing wreath seen at a recent funeral attracted much attention. The wreath was about five feet in diameter, two-thirds of the circle being filled with *Laelia purpurata*, the handsomest of all the helias, and the remaining portion with *Cattleya gigas* and *Cattleya Gaskelliana alba*, and lily of the valley. The base was very loosely filled with white chrysanthemums and cut fronds of *Cibotium Schiedel*.

A flat cross composed of *Lilium Harrisii*, with a cluster of white gladiolus at the arms, was also very fine, and illustrated the value of gladiolus for funeral work, more especially the lighter colors.

A handsome sweet pea wreath, where the different shades of lavenders and purples were employed, made a beautiful offering; the shades, running from pale lavender to the darkest purples, were arranged in clusters, each color blending perfectly.

D. RAYBUN.

Cibotium Schiedel.

Among all the ferns in cultivation, of both early and late introduction, there is none that has ever equaled, much less surpassed, the beautiful fern herewith illustrated, the well-known *Cibotium Schiedel*, the lace fern, also called the "king of ferns," of which title it is well worthy. This fern has left all its brothers and sisters belonging to the *Dicksonia* family, as well as all the other tree fern varieties, in the rear, and has found its way to every lover of plants in the country. Even *Cibotium princeps*, for many years so popular, as a decorative plant, has gotten tired of the competition and is taking a long rest.

When *Cibotium Schiedel*, some years ago, was feel-

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 62 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words: each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

or sifted ashes. When large enough for potting, use a little less leaf mold and sand, but no fertilizer. When the plants reach the 4-inch pots and thereafter, they require more substantial soil, and do well in fibrous pasture loam mixed with 9 per cent. well rotted cow manure and 2 per cent. natural pulverized sheep manure. If the loam is heavy, use enough sand to give the mixture a good drainage. Take care that the pots are well drained and never over-watered. Grow shaded in a temperature of about 65 degrees at night; avoid letting the temperature run too high, especially at night, and never keep the plants crowded, or they are apt to grow lanky and lose their gracefulness. A light syringing on clear days is very beneficial to *Cibotium Schiedel* and will keep the plants free from all insects as well.

J. F. A.

You Must Have It

To be Up-to-Date

THE cultivation of Water Lilies and other Aquatics is yearly attracting more and more attention. These beautiful subjects interest **THE COMMERCIAL FLOEBIST** because, when in season, of their great adaptability to window display and other forms of decoration to which, in the warm Summer days, the flowers lend a cool and refreshing influence all their own, to say nothing of their many, varied, and gorgeous colors.

THE PARK SUPERINTENDENT, always alive to cater to the desires and predilections of

the people, is installing Water Gardens in these public breathing spots all over the country, thus meeting a popular demand and providing park frequenters with an unsurpassed treat in Floraldom which is highly appreciated.

THE LANDSCAPE GARDENER, the Private Gardener, and the Estate Superintendent, all acknowledge the great value and beauty of Water Lily ponds and basins in well executed garden designs, and there is now hardly a garden of any pretensions without this form of aquatic adornment.

THE AMATEUR GARDENER and plant lover generally is no less enthusiastic over this class of charming plants, the cultivation of which is so peculiarly fascinating and healthful.

In consequence of the foregoing facts, there has arisen a great demand for plain, practical instructions on the culture of Water Lilies and other Aquatics. To meet this condition we now present

THE BOOK OF WATER GARDENING

MR. BISSET, who is superintendent of the beautiful estate "Twin Oaks," belonging to Mrs. Gardiner Hubbard, at Washington, D. C., has been a devoted, lifelong student of this class of plants, has originated some of the handsomest seedling Nymphaeas now in cultivation, and has under his charge at the present time one of the largest and most complete Water Gardens to be found in the United States. In this book he gives the results of his many years of experience, and it can safely be asserted that never before has the subject of Water Gardening been so concisely yet so fully and interestingly treated. The teachings of Mr. Bisset, faithfully followed, can lead but to success.

HELP WANTED

WANTED—Experienced foreman for rose establishment. Salary, \$100.00 per month and dwelling house. Address, N. S., care The Florists' Exchange.

WANTED—A competent, single man to take charge of a section of tea rose houses. Good wages. Address, A. R., florist, Madison, N. J.

WANTED—Two rose growers to work under foreman. Wages \$35.00 per month. Address, N. B., care The Florists' Exchange.

WANTED—A competent florist; one who knows the business of making up bouquets and floral designs for funerals, weddings, bouquets, etc., all work pertaining to the florist business (not growers). Will give a capable man an interest in the business, as much stock as he would like to have—large or small; will give such a man the entire charge and management of the business. In a growing southern city, healthy climate, and a fine, well-established business, with a best class of trade. About a \$15,000 business last year, with a bright prospect of a large increase the coming year. This is an unusually fine opportunity for a man with some capital, who wishes to take an interest in the concern and manage a first-class florist store. Address, J. M. C., care The Florists' Exchange.

WANTED—A man to water and wash palms; married man preferred. Apply I. H. Eisenberg, 440 Albert street, L. I. City, N. Y.

WANTED—On large, up-to-date place, two young men with some experience in rose houses. Address with references, E. E., care The Florists' Exchange.

WANTED—An experienced working foreman on commercial place; must be good rose and carnation grower. Address, with references, Weeks, 366-8 West 11th street, New York City.

WANTED—A young man on commercial place, who understands propagating and greenhouse work. Address, giving references, Fancher Creek Nurseries, Fresno, California.

WANTED—By July 1, young man on private place with some experience in garden work. Wages, \$45.00 per month; board \$18.00. Permanent situation. Oscar Carlson, Box 233, Fairfield, Conn.

WANTED—Good man as grower; smilax, asparagus, vegetable plants and cold frame work. Steady position in right man; wages according to ability. Eden Nurseries, Port Allegheny, Pa.

WANTED—Experienced rose and carnation growers to take charge of sections. Give references and wages expected in first letter. Laka View Rose Gardens, Jamestown, N. Y.

WANTED—Thoroughly competent traveling salesman for the wholesale seed trade; a large salary will be paid to those who can command good trade. Address with full particulars. P. O. Box 1594, Philadelphia, Pa.

WANTED—A married man as assistant gardener on private place. Wife must be willing to do laundry work for small family. Send references and state wages expected in first letter. Address, E. L. E., care The Florists' Exchange.

WANTED IN SEED STORE—Experienced man to take charge of flower seed and bulb department. A first class, permanent situation to right party. State experience, salary wanted and whether any experience on the road. Address, Seeds, care The Florists' Exchange.

WANTED—Competent rose grower with some knowledge of chrysanthemums and violets, in the middle West. Married man preferred. State age, nationality, wages, etc. Address, G. H., care The Florists' Exchange.

WANTED—Two men to work in greenhouses; must have at least two years' experience. Single men preferred. A good, steady position in the right party. Please state wages and furnish references from former employer. Address, P. O. Box 783, Columbus, O.

WANTED—Good, all-around man, single or married, to take charge of private place. Must be sober and willing, and able to take full charge of a new place. Good position for right party. Address, Wachendorf Bros., Atlanta, Ga.

WANTED—A good grower of carnations and roses, German, married preferred. Must thoroughly understand his business as grower. To such a man I will pay \$15 per week as a start. Give references from last employer in first letter. Address, Muskogee Carnation Company, Muskogee, Okla.

WANTED—A man with several years' experience to take charge of our mail order plant trade. One who has had experience in handling both mail and express orders, also must be a good propagator. Please furnish references and state wages. Address, P. O. Box 783, Columbus, O.

WANTED—Rose grower to take charge of one house, 200 feet long x 43 feet wide. Must be able to grow first-class stock. Single man. Apply, stating wages required, enclosing copy of testimonials. Address, S. S. Bain, 463 St. Catherine street West, Montreal, Canada.

WANTED—Experienced rose growers; wages, \$45.00 per month and \$1 additional for each full Sunday and full holiday worked; also twelve days vacation during the year. State experience, age, etc. in first letter, sending references. Benjamin Dorrance, Dorrance, Pa.

WANTED—A young man to learn the florist business, growing fancy carnations and general stock. Must be intelligent, industrious and of good habits, with no outside interests. A permanent position for the right man; \$20.00 per month with board and room to start. Send references in first letter. John Curwen, Berwyn, Chester Co., Pa.

WANTED—First-class salesman for nursery stock; must have experience and understand the business and a hustler. Address, with reference and full particulars. Address, E. A. E., care The Florists' Exchange.

WANTED—The services of a well-informed gardener of good, personal presence and fluent of speech, who has retired from active work, but is able to travel around freely, to represent the advertiser, and sell his books, or half a dozen, as he is well known to half a dozen, by experts, especially written for the gardening and florist craft. Straight commission, or would give salary and commission to a competent party. Address by letter with full particulars, Horticultural, care P. O. Box 1697, New York City.

METROPOLITAN MATERIAL CO.

Greenhouse Wreckers
1388-1408 Metropolitan Avenue, BROOKLYN, N. Y.

BUFFALO, N. Y.—Wm. F. Kasting visited Chicago last week, attending the national skat convention there.

Emil Bruecker, the popular manager of the Wm. F. Kasting Company, has been confined to his home the past week with a bad attack of rheumatism.

Arthur Beyer has returned to his place of business, after having been confined to his home with the mumps.

Alex. Goldsmith Scott was unfortunately in spraining his ankle during the busy season. The accident was caused by stepping on a flower pot.

W. H. G.

The Electric Circulator

No greenhouse is properly equipped without this serviceable little device. It never fails. Read this.

Waverley, Mass., April 24, 1907.
 Mr. W. W. Castle, Boston, Mass.
 Dear Sir—It is a pleasure to recommend your Circulator for the very efficient work it does for me. I have two greenhouses, each 200 feet long, piped for steam with 1/4-inch pipes, and can operate them perfectly with hot water by using the Circulator; in a very short time it brings the returns nearly as hot as the flow. As I have two of the Circulators in use under different conditions, I am well able to judge of the work they are capable of doing, and would not like to part with either of them.

Yours truly,
 (Signed) William W. Edgar.
 Our New Steel Plate Boiler, built especially for greenhouse heating, is the best and most economical on the market. We do piping and fitting according to most approved methods and guarantee satisfaction.

HEATING ENGINEER.
W. W. CASTLE, 170 Summer St., Boston, Mass.

Greenhouses Given Away For Their Removal

I have several greenhouses that are in good condition; glass unbroken and ventilating apparatus, etc., good for years to come. I am looking for the right sort of party to give these houses to, if they will remove them *at once*. Are you that party? If so, come and see me immediately or write. Address your letter to

Mrs. Paul Bonner, STAMFORD, CONN.

Plant Notes.

ROSES.—What the Baby Rambler was and still is a dwarf full blooming red rose, well adapted for uses innumerable, it may be that Anny Müller will be as a pink rose. This latter variety in habit of growth and other ways resembles Baby Rambler. The color of the flower is a bright, strong pink. The stock of this rose is yet somewhat limited.

There is also on the market a white rose called Schneewitchen (Snow Fairy), of the same type as the foregoing.

The new hybrid tea rose, Betty, recently introduced by Messrs. Dickson & Son, Belfast, Ireland, and offered this season for sale by Henry A. Dreer, Philadelphia, Pa., seems to be one of the many that are wanted by those desirous of having good roses that will bloom for a considerable length of time outdoors in Summer and Fall, a quality among many others this rose possesses. The blooms are very large and of excellent form, being exceedingly fragrant. In color it is what might be aptly called golden rose.

One of the best all-around hybrid tea roses for retail florists for cutting in Summer, is Grass an Teplitz; it produces flowers in amazing profusion for a long time; the color of the blooms is a very rich and desirable scarlet, with beautiful dark foliage. This rose is also a splendid hedger.

When florists are in need of roses in pots for decorative purposes, they will find in Lady Gay about as fascinating a thing as it is possible to procure in roses. The buds are a delicate pink, and the fully developed flowers are of an indescribable shade of subdued white, all of which, together with the deep green foliage, make a very desirable plant for many purposes.

MARGUERITE QUEEN ALEXANDRA makes a splendid pot plant. The flowers are double or semi-double and pure white. They stand well up over the foliage, making the plant when in flower especially desirable for window boxes. Along with scarlet geraniums they make a fine showing. At the residence of Mrs. H. M. Brooks, at Newport, R. I., where window boxes and boxes for balconies are given much attention, the greater number are this year filled with scarlet geraniums and Queen Alexandra marguerites.

CALCEOLARIA GOLDEN GEM, well grown in 6-inch pots, is well worth the trouble necessary for its production. These plants do not take kindly to a very warm temperature in Summer; a cold frame placed in a northerly exposure seems to suit them about right.

HYDRANGEA ARBORESCENS GRANDIFLORA ALBA.—That this plant will before very long be much used for forcing there is no doubt; and while it is of some merit as a lawn flowering shrub, I think it will be because of its adaptability for forcing that it will gain a claim for general recognition. At the greenhouses of Mrs. H. M. Brooks, Newport, R. I., there are a number now in flower. They are not in a greenhouse, but in a cold frame, Mr. Bond wishing to prolong their flowering period as much as possible.

BROWALLIAS are useful alike for outdoor planting, where they will bloom profusely all through the Summer, and for Winter service as decorative plants. Plants for outdoor work should by this time be planted; or as it is practicable to grow them from seeds sown in the open ground, that method may have been adopted. These plants thrive well where many plants of less value find it difficult to exist. Although browallias can be successfully lifted out of the open before frost threatens them, and potted up for further use, it is still better to sow seed now and grow them right on for pot plants. It is important for their successful cultivation to keep them growing near the glass. In order that the plants may grow up bushy and compact, it will be necessary to pinch them back frequently.

There are not many plants giving blue flowers that can be made, with so little trouble, to bloom in Midwinter as browallias; at Christmas they can be had in full flower with ease.

BORONIAS when in flower are exquisitely fragrant; in addition to that quality they possess fully as much merit as many heaths that are immeasurably harder to cultivate. Those having young plants now in course of cultivation should frequently pinch the young shoots in order that they may grow into

Edw. J. Taylor, Southport, Conn.

compact bushy plants. Those a year or more old should be cut back after flowering. The three most desirable varieties are B. elatior, B. megastigma, and B. heterophylla.

RICINUS.—For quick growth there are few subjects to beat the castor oil plants. They are desirable for massing because of the tropical effect of themselves, as well as for the effectual manner in which they screen objectionable objects in front of which they may be planted. These plants may also be found very useful as backgrounds for borders of plants of dwarf habit.

It may happen that blank spaces show up in small shrubby borders now at a time when it is not feasible to fill up permanently with plants of like character to those forming the main shrubbery; but if these spaces were left bare all through the Summer they would mar the appearance of things generally. Aucubas and box in tubs can be advantageously used to fill these vacant places. Both of these plants are especially desirable if the spots to be filled are shaded slightly from the sun, because they succeed under such conditions about as well as anything we know of in the nature of a shrub.

After coleuses have become established in their permanent quarters outdoors they ought to be pinched regularly in order to strengthen them as well as to bring the bed or border into effective shape as early as possible. Achyrantes should be treated similarly, when even surfaces are desirable. The latter plants will stand clipping in much the same manner

as is usually practiced with alternanthera. Immediately after the planting of alternanthera a thorough watering should be given and then in a few days after the soil has dried up into workable condition, it ought to be scratched or stirred; if this is continued as much as possible for some little time the plants will by reason of the treatment come together much sooner than would be the case, if the soil were left untouched from the time they were planted.

It sometimes happens that there exists a scarcity of yellow coleus or yellow alternanthera at the last moment when it may be next to impossible to obtain the same. Pyrethrum would answer the purpose perhaps, and there may be quantities yet to be picked up around the place.

REVIEW OF THE MARKET

NEW YORK.—The hot wave which struck the city early in the week has demoralized the cut flower market to quite a degree. Peonies are coming in in large quantities, and so far as prices on a great many of them go, there is nothing very stable about them, for while efforts have been made to get 75c. and \$1 per dozen for some of the fancy varieties, other kinds are freely offered at from \$1 to \$2 per 100. In addition to the regular supply that is grown for this market, we notice that consignments are being sent here from Philadelphia wholesalers. This would seem that even Philadelphia has a glut of peonies on her hands this season.

Both roses and carnations have suffered severely in quality during the last few days, and this makes it possible for those who have first-class stock to move a certain portion of it at figures that are little reduced from those obtained last week. At the same time, the bulk of the stock has to be cleared out at what seems to be a very low price, indeed, as certain grades of both roses and carnations can be obtained at 50c. per 100.

Lilies are quite plentiful, and are being cleared out at prices ranging anywhere from \$2 to \$4, a very few reaching the latter figure. Sweet peas are abundant, and in the main of very good quality, but a great many of them have to be moved at 3c. per bunch, if sold at all. Gardenias are still in supply, but it would seem that through the fact of these being offered so much by the street peddlers, the best stores are not handling them; consequently prices are down. Lily of the valley is a most difficult staple to dispose of, as are orchids just now. Perhaps before the end of the month there will be another spurt in these high-class flowers. Lilac is about over, but it is not missed, seeing that we have peonies with us, and the latter, no doubt, will be here for a couple of weeks yet.

CHICAGO.—The market has assumed a full fledged Summer garb and the conditions that prevailed last week were indicative that what may be termed the end of the season has arrived. Weddings and school graduations in other places (as flowers are tabooed for the latter in Chicago) are held out somewhat for the rest of this month, but at present the influx is so great that any reasonable demand on the market makes little or no impression. Stock generally continues good for the middle of June, and it has required considerable nerve for the grower to condemn bench after bench and house after house to the dump when the plants were still in prime condition and producing thousands of flowers, which would grade well among March and April products. Yet this work has been going on to a certain extent, though much less than usual at this season, and it is doubtful if there ever was so large a bench area contributing to the market at this time of the year as at present. However, Summer, the real article, arrived with the opening of this week and bids fair to continue for a spell at least, and with the present unfavorable state of the market house cleaning will doubtless now proceed with a rush.

The peony crop is also on in full force and all that arrive in fit condition are going into cold storage.

The fern market has eased off a little, but ferns are still good property; in fact for those that have them perhaps the brightest spot in rather gloomy surroundings. W. K. W.

CINCINNATI.—The past week has seen a remarkable change in the market. Loads of stock of all kinds came in which required hard pushing to move, carnations especially. But at this writing the market is on an easier footing. Bride and Bridesmaid roses are holding up fairly well in quality, and selling at 2c., 3c., 4c. and 5c.; the best carnations bring \$1 to \$2; peonies, \$3 per 100; stocks, 2c.; snapdragon, 50c. to 75c. per bunch; sweet peas, 35c. to 50c. per 100; fine fancy ferns, \$1.50 per 1000; smilax, 12 1/2c. to 15c. Now that July is approaching it is beginning to look a little Summerish. C. E. Critchell was in Atlanta last week for a few days. C. J. Ohmer will arrive home from California and Yellowstone Park on Wednesday. E. G. G.

PHILADELPHIA.—Cut flower conditions are very bad here this week; there is a perfect glut of all kinds of stock. The warm weather is bringing out all varieties of peonies very fast; and there is practically no demand for them locally. On Monday one wholesale house received 20,000 peonies, and nearly as many came in on Tuesday. Many lots were offered to a retailer at \$1 per 100 and was refused. It is entirely out of the question to quote prices on any kind of stock; the wholesalers are satisfied if the flowers go out at any price the retailer may offer. DAVID RUST.

INDIANAPOLIS, IND.—The unusual counter trade enjoyed the past six weeks, which is attributed to cool, unseasonable weather, has quieted down. The public rapidly forgets the shop upon the arrival of Summer temperature. Funeral work and June weddings are very plentiful, so much of the avalanche of stock is disposed of. Carnations, which have maintained such a high quality this Spring, are now putting forth a wonderful crop. Prices have decreased to \$1.50 to \$2 per 100, but it is impossible to find a market for such numbers. Other flowers, such as candytuft, lilies and feverfew, are flooding the market. Peonies are not as large as customarily, but there are thousands offered as low as \$2 per 100; the store men are asking 75c. a dozen for them. Sweet peas, particularly white for wedding bouquets, are always in demand at 50c. to \$1 per 100. Swainsona sells well, at \$1 per 100 sprays.

Roses have been outselling other kinds of flowers lately on account of the numerous commencements. The local cut is not always sufficient, and many are shipped in from Chicago. Richmond has no superior at \$6 to \$10 per 100. Bride and Bridesmaid are becoming small, at \$4 to \$6 per 100. Fine Killarney are shipped here at \$6 to \$8 per 100. American Beauty, all grades, are retailing well at \$1.50 to \$9 per dozen.

Pot plants in Canterbury bells, hydrangeas, spiraeas and Rambler roses, if well grown, always find a ready market. I. E.

ST. LOUIS.—The past week business was brisk; plenty of work for school closings, weddings and funerals. This was practically the closing of the social season. The one good feature about it was that the wholesalers had plenty of everything one wanted and at a very reasonable price. Only the very extra fancy goods came high, and they were scarce. Sweet peas have become a glut, and the wholesalers had a hard time disposing of them at \$2.50 per 1000.

Carnations in all grades were in plenty, running in price from \$1 to \$3 per 100; only the extra fancy bringing the top figure. Boston Market, Enchantress and Red Lawson are selling well. In roses the fancy grades have been scarce for some time, but in the lesser grades they can be had in any quantity at from \$2 to \$6 per 100. There have been plenty of long, fancy American Beauty in the market which only brought \$3 per dozen. Richmond are coming in too far open, they should be cut closer in the bud. Some of the Killarney, Bride and Bridesmaid are most plentiful. Lily of the valley has been selling well all of this month at \$3 to \$4 per 100. Candidum lilies have been coming in fine at \$19 per 100 stalks. Smilax and other greens have had a good call. ST. PATRICK.

BOSTON.—The Summer season is on and the market plainly shows it. All kinds of flowers are now plentiful, and there are piles of them and they may be bought in thousand quantities very cheaply. Roses are plentiful enough and may be had in thousand lots at \$2.50 up to \$10 for the short grades, while better grades run up to \$40 and \$60. Sweet peas are a drug. Peonies are getting more abundant; they sell at \$4 and \$6. Lily of the valley is still in fair demand; and other flowers of all kinds sell at comparatively low prices. J. W. D.

BERLIN, N. Y.—Arthur Cowee will finish the planting of his gladioli bulbs this week; he has about 80 acres devoted to this culture.

- DELAHIE.** Brilliant deep crimson. Very full and double, interspersed with yellow stamens. Late in flowering. \$2.00 per doz., \$12.00 per 100.
- LEUCISSIMA.** One of our favorites. Well formed, large flower of delicate light rose. Medium height and earliness. \$3.00 per doz., \$20.00 per 100.
- ECLATANTE.** Solid color of beautiful deep cherry rose. Large full bloom, supported by a tall strong stem. An early variety. \$2.00 per doz., \$12.00 per 100.
- FESTIVA.** Pure waxy white with carmine spots at center, large and medium late. One of the best whites. \$2.50 per doz., \$13.00 per 100.
- FLORAL TREASURE.** Clear light pink. Strong habit and free bloomer. A fine variety for cutting. \$4.50 per doz., \$30.00 per 100.
- FESTIVA MAXIMA.** One of the choicest peonies grown. Clear white with carmine spots at center. Immense flower on a very strong stem. \$5.00 per doz., \$35.00 per 100.
- GLOBOSA.** Clear bright rose, with a full salmon colored center. Strong habit and free bloomer. \$1.50 per doz., \$10.00 per 100.
- GOLDEN HARVEST.** Outer or guard petals bluish white, center yellow and white tipped with crimson. \$4.50 per doz., \$30.00 per 100.
- GRANDIFLORA RUBRA.** Very deep red in color. Very large bloom, equalling Festiva Maxima in size. \$3.00 per doz., \$20.00 per 100.
- HUMEL.** Brilliant solid pink. Very large size and one of the latest to bloom. \$1.50 per doz., \$10.00 per 100.
- LA REINE.** Full well-formed bloom of a delicate ivory white. Dwarf habit and medium late. \$2.50 per doz., \$18.00 per 100.
- LA TULIPE.** Blush white with outer petals flaked carmine, making a tulip effect. \$4.00 per doz., \$25.00 per 100.

- LA ESPERANCE.** Vivid deep rose. Full rounded fragrant flower, and early bloomer. \$3.00 per doz., \$20.00 per 100.
- MARIE LE MOINE.** Blush white, changing to white when open. Early. Fragrant, and a free bloomer. \$3.00 per doz., \$20.00 per 100.
- MARECHAL VALLIANT.** Fine deep rose or red. Very double, and a late bloomer. \$3.00 per doz., \$15.00 per 100.
- NE PLUS ULTRA.** Large well rounded flower of clear peach tinted rose. Strong habit and free bloomer. \$2.00 per doz., \$12.00 per 100.
- OFFICIALIS RUBRA.** Commonly known as Early Red. Bright crimson. A week earlier than other varieties. \$1.50 per doz., \$8.00 per 100.
- PLENISSIMA ROSEA.** Solid brilliant rose. A very large bloom, with a very tall strong stem. One of the earliest and best. \$2.50 per doz., \$15.00 per 100.
- QUEEN VICTORIA.** Blush white guard petals, and creamy white center. A full large bloom. Medium early and a good keeper. \$3.00 per doz., \$12.00 per 100.
- ROSAMOND.** Magnificent large bloom of bright rose. Full round form. Strong habit of medium height. Among the latest to open. \$2.50 per doz., \$15.00 per 100.
- ROSEA VARIEGATA.** Soft rose with buff and carmine in center. Very large and full petaled, and strong habit, of medium height. \$2.50 per doz., \$15.00 per 100.
- RUBRA TRIUMPHANS.** Large rich bloom of brilliant crimson. A choice medium early variety. \$2.00 per doz., \$12.00 per 100.
- SYDANIA.** Solid shade of pale rose. Tall and graceful. \$2.00 per doz., \$12.00 per 100.
- VESPER.** An early, delicate bloom, with bluish guard petals, and cream yellow center. \$1.50 per doz., \$8.00 per 100.

Philadelphia.
News Notes.

At present this city is busy preparing for the Elks convention in July; one sees something going on no matter in which direction he goes, and from present indications we will have a good many florists here at that time. Some from the West will go to the seashore and remain until the S. A. F. O. H. convention.

Our own club members are now busy preparing for the latter convention. Two or three committees meet each week, and the suggestions for entertaining the S. A. F. members would fill a book. At every meeting the matter gets boiled down; and our program will soon begin to look tangible. One matter appears settled, a trip by boat to Dreer's nurseries at Riverton, N. J., on the Wednesday afternoon. All our committees are working with the object of doing all in their power to make the business sessions of the convention a success. Much legislation of importance is to come before the convention, and no matter what entertainment is planned, it will not be our fault if the members are not on hand when the president raps to order at each session.

A list of hotels will soon be ready, and we would like to know at an early date who are coming.

The peony and outdoor rose show of the Pennsylvania Horticultural Society was held on Thursday and Friday; the list of prizes will be given in next issue.

The opening of John Westcott's bungalow took place on Friday; the party, about 20, went down on the 8.20 a. m. train.
DAVID RUST.

The Week's News.
The exhibition of the Massachusetts Horticultural Society at Horticultural Hall on Saturday and Sunday was very interesting in its collections of rhododendrons, irises and other hardy plants. At the show the week previous the collection of tree peonies from the gardens of Professor Sargent formed one of the chief attractions, but this week the collection which Mr. Sander put up was in many respects far superior. A gentleman who has attended almost every exhibition of the society in the past twenty-five years told the writer that he had never before seen such a fine collection of these flowers on exhibition.
Mrs. David S. Greenough exhibited a white variety of tree peony which was exceedingly fine and well deserved the award of honorable mention it received. T. C. Thurlow was awarded first prize for his collection of German irises, Mr. Wm. Whitman (Martin Sullivan, gardener) being second. Mrs. J. L. Gardner (Wm. Thatcher, gardener) was awarded the Appleton silver gilt medal for display of orchids and foliage plants. Walter Hunnewell (T. D. Hatfield, gardener) was the chief exhibitor of rhododendrons, staging some very fine blooms. Mrs. J. L. Gardner and Mrs. R. A. Leeson also had fine collections of these flowers.

Referring to the note in June 15 issue to the effect that S. Wax has gone on his annual vacation and taken Mrs. Wax along, Mr. Wax says: "I was married June 5, and went to the Rangeley Lakes with my wife on our honeymoon for one week. My annual vacation is not till August; so you see your statement is misleading. Please correct the matter in your next issue."
The date of the annual picnic of the Gardeners and Florists' Club has been set for Thursday, July 25, and arrangements are already under way by the committee to make it a grand success.
B. J. Macklin, the Cambridge florist, has rented the greenhouses of John McKenzie near Porters station. Mr. Macklin will grow for his retail trade, disposing of his surplus at wholesale, while Mr. McKenzie will devote his entire time to his North Cambridge plant, formerly owned by W. C. Stickel & Company.

THE FLORISTS' EXCHANGE

Chicago. News of the Week.
 A recent visit to Klehm's Nurseries at Arlington Heights developed the fact that their peony crop is not nearly so seriously affected as the reports denote the condition of most fields to be which contribute to this market. The harvest will be probably a little light, hardly coming up to the ten thousand dozen which this concern shipped last year, yet the stock appears in excellent condition though from two to three weeks late. Their immense stock has been produced from one plant of a variety by the present owners of the business and their immediate progenitor who started at the work about fifty years ago. They have in addition to their nursery business large fruit interests including about 30 acres of cherry trees. It is among a few acres of the latter near their office, planted in alternate rows, that a large portion of their blooming peonies are grown and it is doubtless largely due to this protection that this season's crop was so slightly damaged by the cold, as the cherry and pear crop was practically wiped out. The Messrs. Klehm last year planted two acres of officinalis rubra or as it is locally known, Early Red, in Indiana, for the purpose of extending the season.
 Complex conditions occasionally confront the plant merchant. Recently an order was received by one of our large shippers for one hundred each Sunset and Mme. Abel Chateaux rose plants which was accompanied with a check and instructions to ship the stock to another party, all of which was duly carried out, a notice to the effect that the goods had been shipped being sent to the consignee. A few days later the Chicago parties received word from the original correspondent stating that the goods were not satisfactory and had been shipped back, criticising them for notifying the other party of the shipment, evidently not wishing him to know where

they came from, and requesting the return of the check. The writer saw the box when it was opened after a trip to New York state and return. The plants were in perfect condition, were as good value as anyone could desire for the price charged, but he could not answer the shipper when he turned around and asked, "Now what would you do in a case like that?"

Professor H. Hasselbring, botanist of Chicago University and well known to the representative of the trade through his affiliation with the Florists' Club, Horticultural Society and the State organization, will leave on August 1, to take charge of the botanical work in the Island of Cuba for the Cuban government.

The June meeting of the Chicago Florists' Club was held in Handel Hall, on Thursday evening of last week with an average attendance of members. The amendment to Article V of the constitution and by-laws deferring the nomination, election and installation of officers until dates so that they will not include the November meeting which generally falls on a date conflicting with the flower show and accordingly is adjourned without transacting any business, having gone through the prescribed forms was unanimously passed.

At the suggestion of President Bruns an informal talk was indulged in on the bedding plant business this season by Messrs. Klimmer, Hughes, and Fisher, after which the latter brought up the subject of the annual picnic suggesting Morton Grove as in every way an ideal place for the outing. T. E. Waters moved that a picnic be held at Morton Grove and that a committee be appointed to take charge of the arrangements. President Bruns appointed the following committee; Messrs. J. C. Vaughan, August Poehlmann, Geo. Asmus, Ed. Emers, A. J. Simmons, H. E. Klunder, and T. E. Waters. The picnic will probably be held on Sunday, July 21. August Poehlmann speaking for Morton Grove assured the members that they would be welcome to that beautiful suburb.

The question of arranging for the reception of the American Rose Society next Spring was discussed at length and a committee consisting of August Poehlmann, Leonard Kill, George Asmus and Phil Schupp was appointed to thoroughly canvass the subject among the growers and report.

The meeting then adjourned until September, it having been voted to omit the meetings in July and August.

The second attempt to hang himself within a week proved successful and the body of Henry Benthage, a florist in the employ of Anton Then, was found suspended on Wednesday night of last week, from a rafter in a barn in the rear of the greenhouses at 143 Winnemac street. The unfortunate man was said to have been despondent over financial matters.

Henry E. Youngquist of North Chicago will lose just one half of his 50,000 square feet of glass which is condemned by the Drainage Canal Commission, the canal passing through his property.

N. J. Rupp of the John C. Moninger Company has been at work for many months to construct a satisfactory machine for the turning out at one process of the Moninger interlocking lapped splice and is highly pleased with the perfection of the work that machine produces, and is especially gratified at the reception the new splice is receiving among the greenhouse men who appreciate the necessity of a splice which cannot get away during the continued contracting and expanding to which such work is exposed.

F. L. Tonquist of Benton Harbor, Mich., was a last week's visitor. J. M. Underwood, president of the Jewell Nursery Company, Lake City, Minn., was also in the city on business.

The first shipment of this year's crop of freesia bulbs from Bermuda arrived at Vaughan's Randolph street store this week.

The National Credit Men's Association closed their three days' session here last Saturday night with the largest banquet in point of numbers (there being nearly 1,000 persons present) ever held in the Auditorium Hotel. Hauswirth's decoration was extensive, the chief feature being 120 vases of American Beauty roses.

The nursery business may be said to be over now after a remarkably long and very successful season.

The peony harvest has been on at its height and during the present and following week hundreds of thousands of dozens will be placed in cold storage.

For the past two or three years the presentation of flowers at school graduations in this city has been prohibited by the powers that be, thus depriving an important industry of several thousands of dollars of legitimate profits. An appeal to the new mayor, who has shown a tendency to right other wrongs, elicited the information that he could not consistently interfere with this matter which rested in the hands of the Superintendent of Schools and the Board of Education. Is there not some way to reach them before next week?

Peter Reinberg is not putting up any new greenhouses at his old range this Summer, but is doing some rebuilding and will shortly start on a new range on Devon avenue.

Through an error of their shipper the unusual invoice of 400,000 ferns was received by the E. F. Winterson Company on Sunday, but owing to the scarcity of this commodity they were readily assimilated by the market with the exception of about 16 per cent., which were burned.

Captain A. J. Simmons, A. D. C. Governor's staff, went into camp for ten days with his regiment, the Seventh, on Wednesday. This interferes with business, camp not generally coming until several weeks later when the flower trade is at the lowest ebb.

Out at Highland Park, Fritz Bahr has purchased a fine property at Lincoln avenue and Green Bay road, where he will move his nursery and greenhouses, continuing the store at the old stand.

The baseball game at Monticello and Grand avenues on Sunday afternoon between the Chicago Florists and the Monarchs resulted in a victory for the latter by a score of 10 to 5.

The universal cry for Summer weather has been heeded and it came upon us in good form with the opening of this week. The market shows the effects.

Among Monday's visitors were noted George Blackman, Evansville, Ind.; J. F. Johnson, Fort Smith, Ark., and Charles A. Berg, Red Oak, Ia.
WILLIAM K. WOOD.

SPRINGFIELD, ILL.—The committee of the State Florists' Association met Saturday afternoon, June 12, at the Leland Hotel. The following members were present: Albert T. Hey, of this city, president of the association; A. B. Beal of Champaign, secretary; J. F. Ammann of Edwardsville, William Heintz of Jacksonville and W. J. Noyes of Bloomington. At the meeting the constitution of the association was revised and will be voted upon at a special meeting to be held in this city in about six weeks. An advisory committee was appointed to have charge of the appropriation of \$15,000 made by the last session of the legislature to be expended at the experiment station at the state university. The committee consists of the following: J. C. Vaughan of Chicago, J. F. Ammann of Edwardsville, Willis N. Rudd of Mt. Greenwood, Frank J. Arnold of Jacksonville and C. D. Gallentine of Morrison, Ill.

COLUMBUS, O.—The Franklin Park Floral Company has increased its capital from \$15,000 to \$18,000.

**TOBACCO DUST OR SAW DUST
WHICH??**

211 North St.
Claremont N. H. Apr 5, '07

The H. A. Stoothoff Co
New York

Dear Sirs—

Please ship me as follows

- 100 lbs Fumigating Tobacco powder \$3.00
- 100 " Black stuff fine 2.00
- 144 sheets Aphicide 3.50
- 10 Fumigating plates .50
- \$9.00

Send the powder by freight, the Aphicide by express prepaid. I enclose check for \$9.00
Three or four years ago I had a bag of the Black stuff fine and it was without exception the best tobacco powder I have ever had. Since then I got some stuff from a seed house. I paid more for the article and got left on it. It was useless like sand and than anything else. Now I am coming back to you.

Yours truly
C. E. Stevens.

Say, Stevens, we would sure like to know from you and others like you "why you stray away" to folks who don't know tobacco powder from sawdust. We have been telling you and others in a hundred different ways how smart we are in the way of tobacco powder; that we have been in the tobacco powder business for twenty years, and why our tobacco powder should be and is, twenty years **AHEAD OF ALL OTHERS.** Again we ask, why you let the fellows that don't know, skin you, who should know, that the **BLACK STUFF FINE TOBACCO POWDER**, for dusting, at 2c. per pound, in our bag holding 100 pounds, with our name, address and brand on each bag, sold only by us, direct to you, is the only one. **WE WOULD LIKE TO KNOW.**

THE H. A. STOOHOFF COMPANY,
116 West Street, New York, N. Y.

Kroeschell Brothers Company, Chicago

The Kroeschell Brothers Company of Chicago have just from the press a neat catalogue, nicely illustrated and fully descriptive of their speciality of high grade greenhouse boilers. This catalogue will be mailed to any person interested upon application to the firm, 33 East Erie street, Chicago.

It is now upward of a quarter of a century ago that Charles Kroeschell and his brothers started in a small way in the boiler business in a basement 70x20 feet, near the Northwestern Station, doing their own work, all being practical mechanics, and from this embryo establishment has grown year by year the powerful concern and the immense business, occupying to-day a boiler shop 350x100 feet, a pipe department, 192x100 feet, and a refrigerating machine department, 140x100 feet and four stories high. The Kroeschell greenhouse boiler in its 16 sizes, with its water front and back an invention of Charles Kroeschell, and other perfected appointments, is an evolution developed, one point at a time, through over twenty-five years of continual thought, experience and application.

The writer recently visited the workshops of the concern and inspected the interesting process of construction of the greenhouse fire-box, water-tube, and tubular boilers, immense tanks, and stacks here manufactured. There were there in different stages of completion 32 greenhouse boilers of different sizes, including the new Number 15, capable of heating 50,000 square feet of glass, which though recently placed on the list is proving very popular with the trade; in addition to which were noted 22 boilers all made to order and ready for shipment at the purchasers' request as they may be required during the season. The door frames to these boilers are not cast but are made here in the shop, of the best wrought iron, while the holes for the tubes are not punched but drilled and reamed with the same care as exerted in the manufacture of their high pressure (125 pounds) products for factory purposes, the whole establishment being thoroughly equipped with the latest and most perfect hydraulic and pneumatic machinery.

Ere long the refrigerating machine will be a much more common adjunct to the florist's business than at present; in fact, it is coming more into use every day. The machine turned out by Kroeschell Brothers embraces one feature which alone commends it to all investigators, namely, that by the use of carbonic gas instead of ammonia it is absolutely non-explosive. This product has been given satisfactory trial all over the country and at present one of 150-ton capacity is being installed in the Auditorium Hotel, Chicago, for the cooling of the Pompeian room and banquet hall during the Summer, being the second machine of this kind in use in that hotel.

The pipe department covers everything pertaining to that line of business, heating, power piping, in fact, every branch of piping work, while chain and other wrenches, auxiliary branches of iron and steel work have allotted space under the immense roof of the Kroeschell Brothers' establishment.

This house deems it to the advantage of both its customers and itself that the former familiarize themselves so far as possible with the manufacture and working of its products and extends a cordial invitation to all florists visiting the city to call and thoroughly inspect the works and boilers and see them in all stages of development. W. K. W.

1170 Broadway

NEW YORK

Washington, D. C.

General Notes.

While snow fell for two hours on June 12 at Fredericksburg, Va.; just 54 miles from Washington, the city was inconvenienced by four days of cold rain, and fires were not uncomfortable. Saturday and Sunday were the first two genuine Summer days since March. Such extraordinary weather conditions are beginning to cause widespread apprehension for the safety of all crops. Corn has attained a height of four inches, and is turning yellow. Farmers claim that three more weeks like the past will practically ruin all the crops.

The hay crop seems to have suffered less than all the others, but awaits warm weather for harvesting. A trip through Western Maryland and the Valley of Virginia reveals similar conditions. Many of the wheat fields in the Shenandoah Valley lowlands have been inundated and the grain ruined; on higher lands, however, the wheat has headed, and bids fair to yield an average crop, provided there is a suitable harvest season.

Tuesday the 11th, was District of Columbia Day at Jamestown; The Washington Chamber of Commerce, of which W. F. Gude is secretary, chartered one of the large boats for the occasion, and was augmented by some of the members of the Washington Florists' Club. Among the florists who so greatly enjoyed the trip were W. F. and A. Gude, George Cooke, George C. Shaffer and William H. Ernest

JAS. L. CARBERY.

Rochester, N. Y.

Trade Notes.

At last, we have had a taste of Summer, the thermometer registering 82 degrees in the shade, with hot dry winds. No rain has fallen here for quite some time, consequently flowering shrubs have not held their beauty as long as usual. The plant trade has received its expected boost, and the growers are glad. Notwithstanding the lateness of the season, and the early disposal of Easter stock, Geo. Hart, the commission dealer here, has received orders for thousands of geraniums, salvia, alternanthera, coleus, etc., the local supply having given out days ago, causing the necessary shipment of stock from Buffalo, Utica and New York. The shipped goods arrive in the pink of condition, and find a ready sale. Good S. A. Nutt geraniums from 4-inch pots sell for \$8 per 100, and supply all gone.

In the cut flower market, indoor stock is beginning to waver, and the supply of cut roses is considerably lessened by the fact of a few growers having already planted new stock for next season. No staple or fixed price is asked for this class of material; quality and quantity determine the same.

Early peonies were in the market for the first time last Saturday, and sell readily enough. Sweet peas are scarce.

Charles Suhr, Hudson avenue, is planning the tearing down of some old houses and building two modern ones to replace same.

A visit to Hiram Sibley homestead, where Steve Berry holds forth, brought to the eye as fine a specimen of glorioxia as could be wished for. This particular plant was grown from a bulb that

Mr. Berry has had and grown for 18 years, and at this time has no fewer than 75 flowers fully expanded on it. Here, too, can be seen a couple of short houses, each having about 200 musk melons hanging from the roof, and a beautiful sight they present. He expects to commence cutting in about two weeks.
COCKNEY.

St. Paul.

News Notes.

Secretary of War Taft was hanged on the 14th at the Auditorium, when 2,000 sat down to dinner. The floral decorations were simple, the tables being decorated with flat plateaus and vases of flowers. In all 100 plateaus of different colors were used, also an abundance of palms and ferns.

Colberg & Lemke have discontinued business; G. Colberg has been with Holm & Olson for some time and A. Lemke has been running the store. Expenses being indeed high, and the quiet season approaching, they thought it advisable to quit.

L. L. May & Company have had more business than they could really attend to; the demand for school graduations has been exceptionally heavy and it has kept the firm's force working night and day. J. W. Hoffman, manager of their retail department, will be married this coming Wednesday; the boys are preparing to give him a proper send off.

Look Here, Mr. Florist and Gardener

WE have just passed through an unusually severe winter and you are apt to forget the many sleepless nights you spent worrying about the temperature of that No. so and so house.

Or the many zero nights that you spent in the boiler pit; maybe you did not have to do the stoking and firing, but **you** certainly had to do the worrying and pay the coal bills.

Now keep the vows you made on those trying occasions, **And Send for me.** I have solved the problem for others, I can do it for you; and remember, I will come recommended by some of the most prominent commercial florists and gardeners in the East, "Personal friends of yours."

SEE THAT SET SCREW AND DOUBLE CLAMP? THAT MEANS THERE IS NO SLIPPING ON L. & B. VENTILATION APPARATUS ARMS.

SAME WAY WITH THE GEARS: For heavy work or long runs, it's a square shaft; in lighter work or side ventilation the round shaft is double clamped and set screwed. You see all slipping is absolutely out of the question.

Then there is still another point: The Rod Hangers—We make one that is screwed to both the face and edge of Sash, which prevents the pulling off troubles so many of you have had.

If it's the never-slips you want, write at once for prices.

FLORISTS' EXCHANGE

We are a straight shoot, aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XXIII. · No. 26

NEW YORK AND CHICAGO, JUNE 29, 1907

One Dollar Per Year

CARNATION WINSOR

The most talked about carnation at the Toronto Convention. Won first prize for best 100 pink

Winsor is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders, and have a fine lot of stock in the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor

than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market where our flowers are sold.

There is nothing on the market that approaches Winsor today in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities, in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is unusually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high quality flowers. It practically does not split at all, notwithstanding the fact that we have had the darkest, dullest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with everyone, we have not had one-half of one per cent. of split calyxes on the Winsor. In fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Anyone who fails to plant Winsor this year will regret it. Rose pink Enchantress is good, and a good many other varieties are good, but IF YOU WANT THE WINNER, PLANT WINSOR.

Strong Rooted Cuttings. \$12.00 per 100, \$100.00 per 1000.

Seed Trade Report.

AMERICAN SEED TRADE ASSOCIATION
 Henry W. Wood, Richmond, Va., president; C. S. Burge, Toledo, O., first vice-president; G. B. McVay, Birmingham, Ala., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; J. H. Ford, Ravenna, O., assistant secretary.

SABETHA, KANS.—The new seed house of Howard Lines & Company bids fair to be one of the finest in town, says a local newspaper.

CARTHAGE, MO.—A recent fire in the basement of the Carthage Seed Company's store was extinguished before any great amount of damage was done.

DES MOINES, IA—Henry Field, seedsman, Shenandoah, Ia., is, it is reported, looking for a location for a branch house, and may build in Des Moines. Mr. Field desires to establish a branch in a city nearer the center of the State, his present house being in the extreme southwest corner of the State. He deals largely in seed corn.

BOSTON, MASS.—The firm name of T. J. Grey & Company has been changed to the T. J. Grey Company. The new members of the firm are Peter Miller and J. P. A. Guerinoux both well known in the trade in this city.

Maurice Fuld of W. W. Rawson & Company has gone to New York to attend the convention of the American Seed Trade Association. J. W. D.

NEW YORK.—The following gentlemen have been appointed by the New York Produce Exchange as members of its seed committee for the ensuing year: William Jacot, Marshall H. Durvea, Ernst Whence, O. W. F. Randolph, and Chas. Wimmer.

Lawrence S. Payn, who succeeds Louis Goeppling as representative of Messrs. Andre Leroy & Company, seed growers, Angers, France, has arrived in New York on his first annual trip. His address while here will be care of Messrs. F. B. Vandegriff & Company, Kemble Building, Whitehall street, New York.

CHICAGO.—The maggot, the enemy of onion set growers, has made its appearance, some producers reporting its devastations already amounting to forty per cent, of the crop.

Arthur G. Lee of Fort Smith, Ark, was in the city last week.

F. T. Emerson, seedsman, spent some time in Chicago on his return from Mercedes, Texas, which he now calls home, and joined the delegation leaving last Sunday for the New York convention. Although until further experiments with irrigation and the climate Mr. Emerson is not ready to make any positive assertions covering the territory from Maine to California he believes he has found the ideal spot for seed growing. After the convention he will visit his former home in Boston.

John M. Clark of the Leonard Seed Company, after the convention of The American Seed Trade Association, will spend a few days at his former home on Staten Island where his mother still resides.

The party who left Chicago over the Lake Shore route at 1.45 on Sunday last for New York to attend the Seed

PREPARE FOR CHRISTMAS

Novelties, always sell during the holidays. If you have not already grown them, try some Pink or Rose Speciosums. If potted in July, will flower for Thanksgiving and Christmas. Always useful either for cut flowers or plants. Ask the leading florists in Pittsburg, Cleveland, Detroit, Buffalo, or around New York City. Order to-day. Will ship any time.
 Cold storage Liliun longiflorum and giganteum take about two months to bloom from time of potting; speciosums from five to six months, so that longiflorum wanted for Thanksgiving and Christmas should be planted about Oct. 1, and speciosums in July.

All Cases are Re-packed Before Shipment

Liliun longiflorum Giganteum, 7 to 9-in. bulbs, 300 in case, \$9.00 per 100, \$80.00 per 1000.	bulbs, 200 in case, \$8.00 per 100; \$75.00 per 1000; 9 to 11 in. bulbs, 150 in case, \$12.50 per 100; \$110.00 per 1000.
Liliun longiflorum Multiflorum, 9 to 10-in. bulbs, 200 in case, \$11.00 per 100; \$100.00 per 1000.	Liliun Speciosum Melpomene, 8 to 9-in. bulbs, 200 in case, \$9.00 per 100; \$80.00 per 1000; 9 to 11-in. bulbs, 150 in case, \$12.00 per 100; \$115.00 per 1000.
Liliun Speciosum Rubrum, 8 to 9-in. bulbs, 200 in case, \$10.00 per 100; \$100.00 per 1000.	Full cases sold at 1000 rate.

ARTHUR T. BODDINGTON, 342 West 14th St., NEW YORK CITY.

ARTHUR COWEE, Gladiolus Specialist, MEADOWVALE FARM, BERLIN, N. Y.

Trade convention, occupying a large part of the Pullman Car Brightwood, included Messrs. Peter Hollenbach, Leonard Vaughan, J. C. Robinson, Waterloo, Neb.; Lawrence Robinson, Waterloo, Neb.; E. T. Emerson, Mercedes, Tex.; S. A. Wilson, (L. L. Olds Seed Company), Clinton, Wis.; S. F. Leonard and John M. Clark, (Leonard Seed Company). The first three named were accompanied on the trip by their wives and W. F. Phillips of Toledo, O., and E. M. Parmalee of the Allen Seed Company, were expected to join the delegation at Toledo.

Vaughan's Seed Store received their first shipment of California freesia bulbs the first of this week. W. K. W.

KENDALLVILLE, IND.—Mr. Kundred, who suffered a heavy loss in his gladiolus garden, due to the heavy rain, has decided to sue the city for damages. At first he thought his loss but a few hundred dollars, but later developments show that nearly his whole crop was destroyed. Not only will Kundred lose, but also a large Eastern firm, which had sent a lot of bulbs to him for experimental purposes.

Clover SEED is now selling at the lofty price of \$9.50 per bushel, and those familiar with conditions advise those who contemplate sowing clover next Spring to buy their seed now, as it is predicted that the price may reach \$15 per bushel. It is said that there is only a small quantity of clover seed on the markets, and as the average this year is smaller than usual, the price is most likely to soar skyward.—Exchange.

Iowa's PURE SEED LAW.—The new law prohibiting the sale of goods containing noxious seeds in Iowa does not cover mail order shipments, says a local daily. The Iowa law, it is claimed, will work many hardships on dealers within the State in competition for home trade. The goods they put on the market must bear the pure seed label and come up to its standard. Iowa dealers handling seeds in bulk or packages for retail trade must also comply with these provisions. However, outside firms selling their goods by catalogue do not have to comply with it. A lower grade of seed can thus be sold by the mail order firms at a lower price than the Iowa dealers can quote on the more expensive grades which they are obliged to supply according to the law. Unless the buyers are educated to discriminate in behalf of good seeds, the Iowa business will be practically monopolized by the outside houses with their bargain counter prices. As an indication of what is being done by outside houses, the Iowa dealers give the result of an investigation made by the Iowa State College at Ames. The officials secured 150 samples of clover seed shipped into the State and analysis showed that ninety-eight of them contained buckhorn and twenty-one Canada thistle seeds.

State Dairy Commissioner Wright, who will have charge of the enforce-

ment of the pure seed law which goes into effect July 4, met with the seedsmen and explained the law. The dealers present agreed to comply with the measure despite the hardships it will impose upon them and also agreed to aid him in enforcing the measure. In addition to this, it was decided to send out 15,000 circulars to Iowa dealers calling attention to the new law and laying stress on the danger of mail order houses outside of the State attempting to flood this section with impure seeds.

"The Blossom End Rot of Tomatoes" is the title of Bulletin 3 (April, 1907) of the Massachusetts Agricultural Experiment Station, Amherst, giving the results of investigations pertaining to the cause of this trouble.

European Notes.

Three warm days in succession inspire us with the hope that Summer has arrived at last and that the cool spell stretching from Egypt to the Atlantic has at last come to an end. Already in the extreme South warm rains have fallen and benefited the cultures, and its advent in the North cannot be long delayed.

The Southern harvest of extra early cauliflower is now in full swing. The seed is, in general, well developed and the sunshine gives it the final touch. Cabbage and kohlrabi, so far as they have survived the Winter, are doing splendidly. Judging by present appearances the crop will be phenomenal, and one wonders what would become of the seed had the acreage been as great as in 1904-5. The lack of contracts from your side is in a great measure responsible for the shrinkage. Holland is the dark horse.

One crop at any rate has benefited by the dry spell and that is onion; the present appearance of this culture is simply grand. At this moment the inflorescence is visible; the hot sun is therefore doubly welcome.

The writer does not know if the culture of the Lisbon Winter onion has been a success in your country. If it has, the trade can be developed without difficulty, for seed of strong germination can be bought at a ridiculously low figure just now, and as the acreage growing is simply immense seed will be equally cheap next year. The quantity of this article sown by the market growers round London is very great. In early Spring salads it is indispensable, but as a large onion it is of very little value.

Dandelion is such an important article in France that the very great scarcity of the seed deserves to be noted here. Both the common and the improved varieties are included. During the present week one has heard of as much as 30 francs per kilo being paid for the Pull Heart, or cabbaging variety.

It is unsafe to touch upon annual crops, especially radish, at present. "Sufficient unto the day," etc.

EUROPEAN SEEDS.

NOTES FROM HOLLAND.—Seldom, if ever, have bulb crops at this time of the year been so free from disease and so little of the blight in the foliage of the tulips as is the case this year. The warm and dry weather of the last two weeks has no doubt done a great deal of good in this respect but from the present outlook a good crop of tulips may be expected, but the crocus crop which is still in its growing state is looking extremely poor and not much good of it is being expected.

Hyacinths are also looking well with the exception of some sorts that have suffered from the last very keen frost that we have had and, besides, this crop needs nearly all of the month of June to come to full maturity, and a sudden change in the weather may turn the scales very rapidly.

Narcissi are also looking well generally, but as the acreage planted out this season is considerably smaller than last season a very good crop will be needed to meet the expected demand.

The Spring planted gladioli are now nearly all well above ground and it is already very apparent that such gladioli as Colvillei will be a short crop as most of them are looking weak as if they had suffered from the severe and late Winter, while many of the rannuculus are turning yellow already before having come into bloom and have not been able to withstand the severe night frosts we had last week.—Horticultural Trade Journal.

F. W. O. SCHMITZ, Prince Bay, N. Y.

FRENCH SEED CROPS.—From what we learn from your side, the crops in California appear to be in a very bad shape as regards quantities, and we are having numerous demands from America.

In Northwest France a portion of the plantings passed the Winter badly, but in general the crops are more promising than might have been expected. When we remember the long, severe drought of last Summer when carrots, beets, mangolds and leeks could not be sown until very late, it was not supposed that the roots would ever become large enough for seed purposes. We also experienced a very severe Winter. Under these circumstances, it is to be hoped that a remunerative price will be obtained.

Cabbage will be a short crop with us; they were sown too late last Autumn, on account of the dry weather, and the plants were too weak to stand the rigors of Winter. The same remarks apply to turnips and swedes, of which we expect a short crop indeed.

The acreage of leeks planted looks pretty well up to the present time, but it was a small one, and prices are already advancing on account of the unfavorable outlook for the next crop.

Of onions there was also a very small acreage planted because of the long continued dry weather last year. Onion bulbs did not develop, most of them being small and unsuitable for planting for seed purposes. I was recently speaking with a grower who has raised onion bulbs for over 40 years, and he informed me that never before in his experience had he seen such a bad crop in this country as that of last season. Under these conditions, a short crop only is expected; and if we consider the failure of the onion crop of 1906 with the then record-breaking prices, also that most stocks are now exhausted and the 1907 crop is expected to turn out very short in France as well as in America, it can easily be realized that prices of most varieties of onion seed will advance next season. No doubt, there will be a big demand for such sorts as White Spanish, Zittau, Bedfordshire Champion, James Keeping, Danver's Globe, etc.

Carrots do not look bad, although a smaller acreage has been planted than usual here.

Beets will be a poor crop generally speaking. There was very little planted, and in most cases the plants suffered from the hard Winter.

Mangolds are looking pretty well, and a large acreage of the half sugar varieties has been set out.

The past Spring our sowings were carried out under very favorable conditions. Radishes and lettuces have lately been retransplanted, and the weather has been most suitable for this work. Now, however, it is rainy and cool, and the change to a warm temperature is very much desired for the benefit of everything in the fields. FRENCH SEEDS.

Best Quality Fall Bulbs

Henry F. Mitchell Co.

1018 Market St., Philadelphia

Newport, R. I.

News and Trade Notes.

Newport is filling up with Summer residents with amazing rapidity, and business activity is noticeable everywhere. Present indications point to one of the best seasons on record.

Gibson Brothers who conducted a florists store on Bellevue avenue for a great many years, moved to Washington square where they are apparently doing very well.

F. Zeigler has taken a store in the Derby Building on Bellevue avenue. The new store of Zeigler's is quite close to that of Leikens and not far from the Casino store of Wudley & Smythe.

The bulk of the bedding out is finished but the rush of people to their residents last week made the latter part of it the busiest, by great odds, of the season. Most growers are sold out of many kinds of plants. V. A. Vanicek of the Rhode Island Nurseries, cleared out the most of his bedding plants more than a week ago, he then went to New York in search of stock to fill his orders with.

Messrs. Wadley & Smythe, in addition to shipping many trees and shrubs from their nursery here, bought extensively of bedding stock from Galvin and others for shipment to points adjacent to the places now being laid out and planted by them.

William Jurgens is cutting good roses, and is optimistic to the extent of having under way a new house especially adapted for growing roses for the Summer trade.

Stewart Ritchie had a very successful Spring trade in bedding plants besides a demand for all the carnations he could grow for the local market. It is understood that Mr. Ritchie is thinking of adding still another to his range.

Individuals and firms making a specialty of dahlias sprung up like mushrooms this Spring and from what can be learned it seems that all of them made ends meet and a few a good deal more.

Seed houses in New York and elsewhere had representatives here last week to take whatever orders needed immediate attention. When everybody has a good deal more to think about, it might pay some of these firms to quietly send their men here a little later in the season when time is not so precious, and conclusions more likely to be arrived at.

Heretofore there have been persistent rumors of Wm. B. Leeds having decided to build a range of glass for his newly acquired estate of "Rough Point." Now is stated on good authority that this range will be built in the near future and that it will occupy the ground now covered by a rambling stable and paddock.

From the looks of things at present hothouse fruit, such as grapes peaches and nectarines, will be unusually scarce in the Newport market this season, consequently better prices may be looked for. Melons, especially early melons, bring a very good price in Newport, hothouse tomatoes are also in good demand at fair prices all through the Summer.

The exhibition of the Newport Horticultural Society has been postponed to July 9 and 10. A notable feature of nearly every exhibition held by this society in recent years has been the display of water lilies by Henry A. Dreer, Philadelphia. It is hoped that this year a like display will be put up by that firm. Julius Roehrs Company and Messrs. Lager & Hurrell are also always on hand with displays.

Roses are not only late this season but it is also feared that they will be inferior in quality to those usually seen at Newport shows, but arrangements are made, as provided for in the schedule, to have other exhibits on a scale that will in themselves make the show attractive and interesting
D. M.

MASON CITY, IA.—The flooding of Lime Creek recently inundated the grounds of Nicholas W. Fisher, who lately started in the florist business here, doing considerable damage.

PEONIES

FOR EARLY FALL PLANTING.
 Choice selection of named sorts.
 Young plants of three to five eyes.
 Apply for rates per thousand.

DELACHIE. Brilliant deep crimson. Very full and double, interspersed with yellow stamens. Late in flowering. \$2.00 per doz., \$12.00 per 100.
 LICATISSIMA. One of our favorites. Well formed, large flower, of delicate light rose. Medium height and earliness. \$3.00 per doz., \$20.00 per 100.
 ECLATANTE. Solid color of beautiful deep cherry rose. Large full bloom, supported by a tall strong stem. An early variety. \$1.00 per doz., \$12.00 per 100.
 FESTIVA. Pure wax white with carmine spots at center, large and medium late. One of the best whites. \$2.50 per doz., \$15.00 per 100.
 FLORAL TREASURE. Clear light pink. Strong habit and free bloomer. A fine variety for cutting. \$4.50 per doz., \$30.00 per 100.
 FESTIVA MAXIMA. One of the choicest peonies grown. Clear white with carmine spots at center. Immense flower on a very strong stem. \$5.00 per doz., \$35.00 per 100.
 GLOBOSA. Clear bright rose, with a full salmon colored center. Strong habit and free bloomer. \$1.50 per doz., \$10.00 per 100.
 GOLDEN HARVEST. Outer or guard petals bluish white, center yellow and white tipped with crimson. \$4.50 per doz., \$30.00 per 100.
 GRANDIFLORA RUBRA. Very deep red in color. Very large bloom, equalling Festiva Maxima in size. \$3.00 per doz., \$20.00 per 100.
 HUMEI. Brilliant solid pink. Very large size and one of the latest to bloom. \$1.50 per doz., \$10.00 per 100.
 LA REINE. Full well-formed bloom of a delicate ivory white. Dwarf habit and medium late. \$2.50 per doz., \$15.00 per 100.
 LA TULIPE. Blush white with outer petals flaked carmine, making a tulip effect. \$4.00 per doz., \$25.00 per 100.

LA ESPERANCE. Vivid deep rose. Full rounded fragrant flower, and early bloomer. \$2.00 per doz., \$20.00 per 100.
 MARIE LE MOINE. Blush white, changing to white when open. Early. Fragrant, and a free bloomer. \$3.00 per doz., \$20.00 per 100.
 MARECHAL VALLIANT. Fine deep rose or red. Very double, and a late bloomer. \$3.00 per doz., \$20.00 per 100.
 NE PLUS ULTRA. Large well rounded flower of clear peach tinted rose. Strong habit and free bloomer. \$2.00 per doz., \$12.00 per 100.
 OFFICINALIS RUBRA. Commonly known as Early Red. Bright crimson. A week earlier than the other varieties. \$1.50 per doz., \$8.00 per 100.
 PLENISSIMA ROSEA. Solid brilliant rose. A very large bloom, with a very tall strong stem. One of the earliest and best. \$2.50 per doz., \$15.00 per 100.
 QUEEN VICTORIA. Blush white guard petals, and creamy white center. A full large bloom. Medium early and a good keeper. \$2.00 per doz., \$12.00 per 100.
 ROSAMOND. Magnificent large bloom of bright rose. Full round form. Strong habit of medium height. Among the latest to open. \$2.50 per doz., \$15.00 per 100.
 ROSEA VARIEGATA. Soft rose with buff and carmine tint. Very large and full petaled, and strong habit of medium height. \$2.50 per doz., \$15.00 per 100.
 RUBRA TRIUMPHANS. Large rich bloom of brilliant crimson. A choice medium early variety. \$2.00 per doz., \$12.00 per 100.
 SYDONIA. Solid shade of pale rose. Tall and graceful. \$2.00 per doz., \$12.00 per 100.
 VESPER. An early, delicate bloom, with bluish guard petals, and cream yellow center. \$1.50 per doz., \$8.00 per 100.

PHONE 312 JAMES KING NURSERY, Elmhurst, Ill.

Marketing Nursery Stock.

Read by Charles E. Greening, Monroe, Mich., before the American Association of Nurserymen at the Detroit Meeting.

The successful marketing of nursery stock is a problem of much concern to all nurserymen. Conditions are constantly changing, new obstacles in the sale of nursery stock are continually arising. The demand for nursery products depends largely upon the results of the orchards and the general prosperity of the country. The difficulty experienced in keeping over surplus stock on account of no sale, has proven the ruin of many a nurseryman. A manufactured article may be stored away for years during a dull market; nursery stock, however, must either be sold when matured or burned. A loss occasioned in this way often eats up the profits on an entire crop of trees.

Wholesale Marketing.

This is dependent in a large degree upon the success of the retail nurseryman, and for the success of both they must work together, hand in hand. The practice of mailing wholesale prices to planters who have been in the habit of buying at retail has caused untold harm to the retail business of this country, and brought disaster and ruin to many a nurseryman. Ten-cent cherry, 6c. apple, 4c. peaches and other cheap stock advertised in agricultural papers and catalogues has done more to hurt the retail nursery business than any other thing. The farmers and large planters are being educated in buying nursery stock at wholesale prices to the great detriment of the retail business. The greatest enemies to the success of the retail business in this country are the

catalogues that are being mailed out promiscuously to farmers by nurserymen, some of whom have the nerve to pose as leaders in the nursery business, advertising that no agents are employed, that their products are sold at wholesale prices and the middle man's profit is thus saved to the purchaser. Such practices cannot fail to have a demoralizing effect on the retail nursery trade, and nurserymen should refrain from using this method of marketing their stock.

Retail Marketing.

When carefully conducted, and good reliable stock is furnished, the retail nursery business is by far the more profitable. To begin right, only reliable, honest and trustworthy agents should be employed. Local agents, selling on a commission plan, have proven the most desirable. Every order should be investigated and the agent should be given to understand that all poor orders will be thrown out. The retail prices should at all times be kept up as high as local conditions will permit. Establish a reputation for honesty and reliability. Never substitute without the consent of the purchaser. Dig, grade, store and pack so that your goods will please the customer. Refrain from digging nursery stock too early in the Fall, before trees have thoroughly ripened up. For Fall delivery, dig as late in October as conditions will permit, and make deliveries during the month of November wherever possible.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

EVERGREEN SEEDLINGS.—Plants from 2 feet to 2½ feet high, propagated or raised from the seed of the Indian "deodar" (*Cedrus deodara*), which is a forest cedar native of the Himalayas, are not dutiable as "seedlings of ornamental evergreen trees," or as "nursery stock" at 25 per cent. ad valorem under paragraph 252, tariff act of 1897, but as "evergreen seedlings" at \$1 per thousand plants and 15 per cent. ad valorem, as provided for in the same paragraph, so ruled the United States General Appraisers, New York, on June 14, 1907, in the matter of protest of Howard & Smith against the assessment of duty by the collector of customs at the port of Los Angeles.

The following is the opinion of White, General Appraiser:

"The importation consists of 1,000 evergreen seedlings. The relevant provisions of paragraph 252 of the tariff act of 1897 are as follows: '(1) Evergreen seedlings, one dollar per thousand plants and fifteen per centum ad valorem; (2) stock, cuttings and seedlings of all fruit and ornamental tree deciduous and evergreen, shrubs and vines, manetti, multiflora, and brier rose, and all trees, shrubs, plants and vines, commonly known as greenhouse stock, not especially provided for in this Act, twenty-five per centum ad valorem.'

"The testimony shows that the plants in question are propagated or raised from the seed of a forest cedar, native of the Himalayas, botanically known as *Cedrus deodara*, which is the Indian 'deodar.' Those in the importation are from 2 feet to 2½ feet high, and have been transplanted. This fact, however, does not remove them from the class of seedlings. G. A. 5305 (T. D. 24305.)

"In the opinion of the Board these plants are not 'seedlings of ornamental evergreen trees,' unless all varieties of pine and fir should be so classified. It is matter of common knowledge that the deodar is a forest tree, and while ornamental in the broad sense that applies to many other forest trees, probably is chiefly valuable for its timber. 'Deodar,' Standard Dictionary, and 'cedrus,' Paxton's Botanical Dictionary. Unless the earlier provisions for 'evergreen seedlings' in paragraph 252 covers such plants, we fail to see what application it can have. There is, moreover, doubt in our mind, in view of the comprehensive nature of the last provision in paragraph 252 and the fact that it is qualified by the words 'not specially provided for,' whether the term 'seedlings' in said provision refers to the evergreen trees therein provided for, as it would have ample scope with reference to the various other trees, plants, etc., mentioned in such provision. G. A. 5654 (T. D. 25211); *United States v. American Express Company* (T. D. 28206).

"The Board has also considered whether the last clause of section 7 of the act might not be invoked. It provides: 'If two or more rates of duty shall be applicable to any imported article, it shall pay duty at the highest of such rates.'

"Under this provision the rate of 25 per cent. ad valorem assessed by the collector in this case would be higher than the duty of \$1 per thousand plants and 15 per cent. ad valorem, which the importers claim to be applicable inasmuch as the plants are valued at \$102 per thousand. It is evident that if this were made the test evergreen seedlings would be dutiable at the former or the latter rate according as they were valued at more or less than \$10 per thousand plants. Under the doctrine of *Loggie v. United States*, decided by the circuit court of appeals for the first circuit (137 Fed. Rep., 513; T. D. 26340), it would be improper to apply section 7 under such circumstances.

"We are of the opinion that the plants in question should be classified as evergreen seedlings under the first provision in paragraph 252, and sustain the protest and reverse the collector's decision."

Seasonable Topics.

The golden-leaved privet is a beautiful shrub, but one that needs watching all the time to cut away its green shoots, which it is persistent in making. As it gets age, it appears to give up its wish to return to its green form, making less effort to produce such shoots.

Æsculus Lyoni of nurseries has rather insignificant flowers, they being small and of a pale pink color. They would indicate an alliance with the buckeye rather than with the true horse chestnut. Its leaves are of a shining green, giving a pleasing appearance to the tree.

European customers, who send here for the blue Douglas spruce mean the Colorado or New Mexican

one, it having a glaucous color lacking in the one from the Pacific Coast. Both are rapid growers, the Pacific one perhaps the faster; but it should be remembered that for planting in the Northern States the Pacific Coast one is not hardy.

The yulan, *Magnolia conspicua*, is used in Europe for forcing for indoor purposes in Spring. It requires a year or two's judicious pruning. Let grow at will, it makes but few shoots. Pruning makes it bushy, besides that the cutting back of the branches promotes a flowering tendency.

George Peabody Arbor Vita.

The variety of the American Arbor vita known as the George Peabody, and by others as *Thuja occidentalis nurea*, is one of the handsomest of its class. Its young growth is of a rich golden yellow color. It is golden at all times, but particularly so when it is growing in Spring and early Summer. Set out singly on a lawn it is particularly beautiful just as its growth is well developed, its golden edged shoots being better displayed there than in any other position.

There are other golden tinted varieties of this, the commoner Arbor vita, but none as good as this one. All golden edged evergreens are most valuable for planting. Their beauty lasts the whole season, but it is at its best when the new growth is perfecting itself. When

Tamarisk Bushes.

As tamarisk bushes are usually seen they are not shapely. When let grow at will their desire is to make long shoots, devoid of branches, and in this condition they are not at all handsome. But occasionally a bush is seen on a lawn which gives pleasure because of its bushy habit. This bushiness has been brought about by pruning; and it was the sight of such a pretty bush a few days ago that led to these notes. The bush referred to was of the *Tamarix africana*, one of the Spring flowering sorts. It had had the pruning knife used on it frequently, resulting in a well shaped bush, and being very full of its light pink colored flowers it was of a most ornamental character.

All the several species of tamarisks may be grown as small trees if desired, by cutting away all but one strong shoot; and in this shape, or as bushes, they are handsome when in flower. Their shoots are wand-like in growth, and all along their lengths are numerous light pink flowers.

T. africana and *T. gallica* flower in May; *japonica plumosa*, *odessana* and *indica* in September.

Avenue of Acalypha Musaica.

Our hot Summers make it possible to use foliage plants for bedding purposes to great advantage. The bright hot sun, with the heat, suits many plants which could

Avenue of Acalypha Musaica

grown in pots these evergreens are useful for lawn decorations and for placing in positions about a dwelling; but whether planted or in pots do not make the mistake of setting them in a shady place, for there is then a lack of the golden color which is their great charm.

Rhododendron Hybrids.

Rhododendron catawbiense flowers in early June, together with the many other kinds in cultivation. To *catawbiense* we owe the many beautiful hardy hybrids in cultivation, for all the hardiest ones partake largely of the *catawbiense* parentage for hardiness, owing their pretty colors to the tender species of the Old World. Many of our prominent sorts are not very different from *catawbiense* in color, but we overlook this because of their ability to withstand our hardest Winters. But there are many kinds of lovely colors—colors due to the Old World types—which are quite as hardy as our native sorts.

Whether native or not it is natural for rhododendrons to have shelter. They grow in masses, one protecting the other; in addition to this, they are often half shaded by forest-trees, and these conditions should be afforded them in cultivation, when there would be far less heard of their being injured in Winter.

Our native one, *R. maximum*, does not appear to have influenced many of its seedlings in the lateness of flowering, precluding it has been so used. It blooms almost a month later than *catawbiense*, yet there are no hybrids visible owing to a such a late flowering character, though some are later than others.

not be so used were the climate less favorable. An evidence of the well doing of such plants is before us in the display of the avenue of *Acalypha musaica*. When the photograph was taken the plants were in great perfection. It was at the close of a Summer which had seen an abundance of moisture and heat, and the cool nights of Autumn had not yet reached us.

The grass walk, or avenue, is much more extensive than shown in the illustration, but the lower part of it is beautiful with scarlet sage planted in much the same way as the *acalypas* are, the whole avenue presenting a pleasing picture.

As with the crotons and other exotic plants, now so much used for bedding, the weather must be warm and settled before the plants are set out; and when they are to be planted see to it that the situation is one open to the sun on all sides, for if shaded the bright colors will not be as perfect as when in the full sun.

Although the planting out of the *acalypa* and similar foliage plants cannot be done as early in the season as in the case of ordinary bedding plants, they can be left in the beds until frost threatens. The soil is warm, and in the case of the *acalypa* it is easily raised from cuttings in early Spring.

The pyramidal evergreens seen at the head of the avenue are box bushes. Those of this shape are much used now, and for positions similar to the one these occupy, there are but few evergreens as good for the purpose; they are hardy, grow slowly, submit to pruning well and when in good deep soil always look fresh and green.

ROSES

Where young stock is to be planted for the coming season, the work should be done within the next few weeks if the plants are to make much of a growth before the short days of Autumn. Nearly every place goes about the work of replanting in its own manner, but it has been my experience that where wheelbarrows can be used they are the best, though some growers still use handbarrows, boxes or baskets.

After removing the old soil do not let the house remain idle; get it cleaned, the benches whitewashed and refilled as soon as possible, for the less benches are allowed to dry out the longer they will last. What a blessing it will be when our houses are all benched with the new cement benches; they are no heavier than the wooden ones, well reinforced, and if properly made will last a lifetime; then farewell to the nasty job of repairing and carrying out rotten lumber or, worse still, blocking up in the Winter time, and crawling over the heating pipes. These cement benches are almost as cheap as good cypress ones would be, and no doubt in a very few years will be used exclusively.

In washing out the benches after the old soil is removed, make sure the job is done right; leave no old soil in the corners or in the drainage cracks. While still wet give the boards a good coating of thick whitewash, applied hot, then spread a little hay in the benches before the soil is brought in. Needless to say the soil should be well pulverized that is, so it can be well leveled. Do not try to do this work with one or two men; there is nothing so discouraging as for a few men to try and fill a house of any size, especially on a hot day. Put on as large a force as possible; it is cheaper in the end. Firm the edges of the bench well, and have from five to six inches of soil in the bed.

The plants should be set about 15 inches apart in the row, and the rows about 10 inches apart, except in the case of American Beauty, which should have at least 17 or 18 inches in the row. In planting, firm the soil well around the ball, then give the whole bed a thorough soaking to settle the soil, after which the plants must be watered very carefully, watering only the ball of the plant.

But it must be borne in mind that dry plants must never be planted, for no matter how much water they get, after benching it is almost impossible to wet the ball through, and thus the plants receive a very severe check.

Young and old plants have their champions, but with us the young plants on the average produce the most money, and that is what we are after. Of course, we have had old stock that did remarkably well, but on the average, a grower will be safer with young stock. Do not plant any poor plants; better buy nice clean stock from reliable quarters at a fair price and make a good start.

There are various methods employed to carry over old stock. The drying off process seems to be gaining in favor. This means that the plants are dried off for five or six weeks, trimmed out, usually bent, and some new soil added, then slowly started into growth again. When properly understood this is no doubt a good plan to follow, but for a beginner it would be much better to merely get his plants on the dry side, then trim out nearly all blind wood, remove the surface soil without disturbing the roots or barking the plants, add about two inches of rich compost, give one good watering, after which syringe often, without giving much water at the roots, until they begin growth in new soil. The greatest danger lies in too much water at this time, and if the supply is properly governed the plants will do very nicely. The foregoing treatment applies, of course, to tea roses only. With American Beauty, Richmond, Killarney, etc., another method should be pursued. Old plants of the latter varieties do better than young ones, as a rule, though Beauty produces more in Winter from young plants.

Allow the benches of those roses that you wish to run over to get dry, then prune back to about six inches of the soil; remove about half of the old soil, and fill up the bench with rich compost allowing only about one or two inches of the trimmed shoots to appear above

GRAFTED ROSES

On English Manetti Stock

3 in. pots; A No. 1 plants.	
Chatenay\$10.00 per 100

the soil. Then give the hench a good soaking after which give no water until the soil gets dry, all the way through. For the first four or five weeks hardly any water is required, but as the plants begin to grow, more liberal treatment should be accorded them. Treated thus, a lot of fine bottom canes will come which make an excellent foundation for the Winter's cutting. PENN.

St. Louis, Mo.

575 New Notes.
A. Nusbaumer of San Angelo, Tex., was a visitor last week. He will spend a week at his old home at Oakville, Ill., before returning home.
A. Hastings, selling flower pots for A. H. Hews & Company of North Cambridge, Mass., also called on the trade and attended the club meeting on Thursday afternoon.
Professor H. C. Irish reports that the Engleman Botanical Club will discontinue its monthly meetings during the months of July, August and September; after this the meetings will resume on the second Monday night of each month in the rooms of the Central High School. Owing to the backward season the club will not hold a Spring flower show this year.
J. F. Ammann reported at the club meeting that the big hail storm at Edwardsville the past week did but little damage to his place. Mr. Ammann is fully covered by hail insurance, but the damage being so light, he will make no claim.
Mrs. Wordy, formerly Miss Allie Ellison, and her husband Harry, who are connected with the Ellison Floral Company, left for a trip to Grand Rapids, Mich., for the health of Mrs. Wordy.

George Waldhart, son of Alex. Waldhart, left the city last week for his health.
Gustave Eggeling of the Eggeling Floral Company had a great time in Chicago a week ago; he was arranging for the stock for several big weddings he had on hand.
It has been reported that the Board of Education will run a nursery and erect greenhouses on a site owned by the board. It is the intention to grow trees and shrubs, which would be beneficial to the scholars in their study of botany. In this way the board could grow all its own plants used each year at the different schools. Wm. B. Ittner, commissioner of school buildings, has the matter in charge.
Pierre Schneider and W. J. Pilcher of Kirkwood say they were too busy with their new houses to attend the club meeting last Thursday, but will not miss the July meeting.
Frank A. Weber, one of our leading nurserymen, has been spending a few days at Detroit, attending the annual meeting of the American Association of Nurserymen. He reported that Phil. Braitmeyer was extra busy entertaining the members.
Fred. Foster, John Burke, Alex. Sigel and the Riessen Floral Company had a very busy week in all kinds of work, and transient trade is still good. Fred. Foster reports that his new location will be better than the old one when the new large department store at Tenth and Olive street opens in the Fall. J. J. Beneke, Miss Badaracco and C. Young & Sons Company also enjoyed a busy week.

Indianapolis.

News Items.
July first marks the opening of vacation time for the florist. Numerous preparations under way form the most interesting topic in the flower shops.
Mr. and Mrs. Robert Ellis visited relatives at Anderson last week.
J. A. E. Haugh, of Anderson, bought quantities of bedding stock with which to close a heavy season. Mr. Haugh states that his firm intends doing extensive remodeling this season.
J. Brown, florist for Thomas Taggart at French Lick, has resigned his position; there remains a good opening for a capable man.
Mr. Burckhardt, of Nashville, Tenn., passed through this city en route to Logansport. He has purchased greenhouses there.
W. Graham, of Terre Haute, visited the growers here; he says trade is excellent.
Chrysanthemums are nearly all housed in this section; the young plants were in prime condition.
The bedding season is rapidly drawing to a close. Although handicapped by the weather, it has been a profitable one for the growers and but a small part of the stock remains to be sold.
Charles Vollrath has completed his residence in North Gray street. He and a new partner are to take possession next month.
A. Weigand & Sons are installing a new heating system.
Henry Duderstadt is on the sick list.
Visitors: Herbert Heller, New Castle; W. W. Coles, Kokomo; E. Schapke, New York. I. B.

WE are the largest Importers and Exporters in the World of strange and curious plants and supply cheapest than Greatest of all Sellers, the Blazing Star or Blooming Bouquet Bulb Plant. Write for particulars and prices to CYPRESS GERANIUM CO., Liverpool, England.

A RECORD BREAKER

GODFREY ASCHMANN of Philadelphia, the
Well-known Araucaria Specialist of America

Watch Us Grow

1907 is now the twelfth year of our anniversary in a successful career in the importation, growing and shipping of that well-known and much admired evergreen decorative plant, the Araucaria Excelsa, Compacta, Robusta and the Glauca. Beginning with the first year (1895) with an importation of 100, this year (Spring 1907) our importation has swollen up to the enormous quantity of 6,000 in the well-known, three best varieties, the Araucaria Excelsa, Compacta, Robusta and the Glauca. Our Araucarias are so well introduced that at the present time they represent every city, county and state of America, so far as Cuba and Mexico, and from the Atlantic to the Pacific Ocean. It is always my earnest desire to improve my system in buying, raising, selling and shipping our production to such an extent, that it will yield a fair profit into the pockets of our buyers. Now is your chance and the time to fill your empty houses and make money fast, as the plants will grow into money while you sleep.

ARAUCARIA Excelsa, 5 in. pots, 10-12 in. high, 3 tiers, 2 years old, 50c each; larger sizes, 5-5½ and 6 in. pots, 2-2½ years old, 60c-70c-\$1.00 to \$1.25 each.
ARAUCARIA Compacta Robusta, 6 in. pots, 2-3½ years old, 10-12-15 to 18 inches high, 3 to 4 tiers, \$1.00-\$1.25-\$1.50-\$1.75 to \$2.00 each.
ARAUCARIA Glauca, 3-4-5 tiers, 2-3-4 years old, 10-12-15-18 to 20 in. high, 6 in. pots, \$1.00-\$1.25-\$1.50-\$1.75 to \$2.00 each. Specimen plants, Compacta Robusta, of last year, Spring, 1906 importation, 5 years old, 30 in. high, 7 in. pots, (something fine), 5 tiers (perfect), \$2.50 to \$3.00 each.

SPECIMEN Glauca, 5 perfect tiers, 36, to 40 in. high, 7-8 in. pots as broad as long, \$4.00 each (worth \$10.00).

KENTIA Forsteriana and **Belmoriana**, European stock, 6 in. pots, 25 to 30 in. high, five leaves, \$1.00 to \$1.25 each; 4 in. pots, 18 to 20 in. high, 35c each.

COCOS Weddeliana, 3 in. pots, 10-12-15 in. high, 15c-18c, to 20c each.

ARBEA Lutescens, a pot, 20c. per pot, three plants in a pot, 20c. per pot.

FERNS, Boston, 3 in., 15c.

FERNS, Whitmani 4 in., 25c.

FERNS, Elegantiissima, large, 4 in. pots, ready for 6-7 in., 20c.

BEGONIA, Gloire de Lorraine, 3 in., propagated from leaf cuttings, in bloom, 25c.

JERUSALEM CHERRIES or **SOLANUM**, large berried variety, 2½ in. pots, \$5.00 per 100.

SURPLUS STOCK OF BEDDING PLANTS:

GERANIUMS, best mixture, 4 in., 6c.
FICHSIAS, 4-5 in., best varieties, 10c. to 15c.
AGERATUM, blue, 4 in., full of flowers, 7c.
NASTURTIUMS, best mixture, 4 in., 6c.
Plants out of 2½ in. pots, \$3.00 per 100, as follows:
VERBENAS, **PILOUS DRUMMONDI**, **TRADESCANTIA**, **COLEUS**, **LOBELIA**, **GERMAN IVY**, **SWEET ALYSSUM**, **TARGETS** or **MARI-GOLD**, **PYRETHRUM**, **ARUM**, **NASTURTIUMS**, **AGERATUM**, blue; **VICTORIA ASTERIS**, all varieties.

All goods must travel at purchaser's risk.

THE WEEK'S WORK.

Timme's Timely Teachings.

Mid-Winter Tribulations.

In all our cultures carried on under glass and in artificially heated structures during the Winter, we must constantly be on guard against the assault of enemies, who take advantage of conditions favoring their onset and spread, and often entirely beyond our control. But throughout these months the watchful grower's efforts in averting and overcoming troubles of this kind, more often end in complete victory than hopeless defeat. He then has at his command well-tried remedies which, when employed in glass enclosed plant houses, hardly ever fail in showing telling effects. As such may be named in the first place clear water, than which there is nothing better for thrips and red spider. If applied with some force the well-directed stream will dislodge mealy bugs and kill the male portion of all sorts of scale and most other kinds of tenacious insects. If heated to very near the boiling point, water becomes a never-failing remedy for nearly all sorts of pests on semi-dormant hard-leaved plants, or any insect life infesting woodwork or soils. Then the grower in combating mites and aphides has his Whale Oil soap, his Fir Tree oil and any number of tobacco or nicotine preparations; he has Paris green and other arsenical poisons for rats, mice, centipedes, ants and woodlice, emulsions of various kinds and soap and brush for scale and snails and, finally, the deadly hydrocyanic gas for mite and whitefly, and all other living nuisances hard to combat in any other way.

None of these remedies is difficult to obtain, and the mode of applying them to best advantage is now so well understood by anyone in some way connected with the work in greenhouses, that there really is scant excuse for having any of these pernicious intruders about during the Winter; in fact, their presence is evidence of there being something decidedly faulty, either in the equipment or management of the place, or in the treatment of the stock.

The Summer Campaign.

During Summer, we are less likely in our labors with outdoor crops and field cultures to come out victorious in a strife offering little in the way of advantages on our side. Every one thing then growing in the open, seems to be chosen vantage ground or favorite food for some particular foe from the great army of living things that creep, glide, fly or crawl wherever anything especially nice or valuable has been planted. Not even the grass in pasture and lawn escapes unscathed. It is preyed upon by bugs, grubs and grasshoppers, and often ruined by the upheavals of ants or moles. The setting of traps, the use of a roller after every cut, and frequent sprinkling do much toward saving a lawn from ruin or disfigurement.

It becomes barely possible despite the most watchful care to prevent serious harm being done to cultivated crops in the open during the hot season. There are so many kinds of creatures, hostile to unhampered plant life, and these so varied in their characteristics as plunderers and destroyers, that, in many instances, their presence is only revealed by the damage they have been permitted to do. Thus we are kept worrying and fighting from early in the Spring until late in the Fall.

The Cut Worm.

Almost the first offender, the one that has a special penchant for newly set out plants, is the cut worm. There are several kinds of so-called cut worms, but the one most to be dreaded is a small, dust-gray affair, always curled up when caught and barely three-quarters of an inch long when straightened out. When over-abundantly present, plants are cut off nightly in untold numbers, and any sort of gardening on such a piece of ground becomes a hopeless proposition. Heavy manuring and deep and frequent cultivation of the land and untended use of

lime, scattered about the newly set out plants, will be found more effective in overcoming the trouble than handhunting at night or in the early hours before day-break. I have succeeded in entirely clearing a plot of ground of this most formidable of plant destroyers by these means, doing the plowing both in late Fall and again just before planting, using large quantities of air-slacked lime both times, and once more later on after the plants were set out. The trouble with cut worms comes usually to an end by the first week in July, the worms then being engaged otherwise.

Ants.

The common black ant, if allowed to have its own way, becomes an intolerable nuisance everywhere about the grounds of a well-regulated place. It kills large patches of plants by forming colonies in and near their rooting space, undermining the ground and laying bare every fiber. The trouble with ants is greatest in, and along strips of ground dividing the cultivated part of a garden from that forming grass land or lawn, or such that is continually robbed of moisture by the roots of nearby trees or shrubs. Where strips of this description were thought to be the proper place for a few rows or groups of peonies, as may be seen on many places, there the task of ridding the premises of ants will be a hard one. Ants just love to establish their runs and haunts near and among peonies, thus doing much damage to the plants. They overrun the bushes in countless numbers, attracted by the sweet secretions from swelling buds and opening flowers. Led by similar promptings in their search for sweet morsels, we find ants wherever aphides abound on plants in the open. Instead of being the green-fly's natural foe, as supposed by superficial observers, the ant is its closest friend, the relation between the two being not unlike that existing between the herder and his milch cows.

Ants cannot live in comfort, in fact, cannot exist at all where the ground is constantly kept saturated with moisture. Frequent soakings from the hose, therefore, or, better still, from the liquid fertilizer tank, will drive them away, if this alone is the object in view. Ant-exterminator, slug shot, Persian insect powder and poisoned sweets will kill them.

Thrips, Aphis, Red Spider, Etc.

The varying kinds of aphides in some seasons are apt to become as troublesome in garden and field as they are known to be in greenhouses. All kinds of this particular pest are great feeders and great breeders. Untoward conditions, of whatever nature, having an enfeebling effect on outdoor vegetation or causing check in smartly progressing growth, favor prompt appearance and rapid spread of aphis and red spider, and even thrips and white fly.

In trying as far as possible to keep up the vigor of the plants, and in having recourse to the usual remedies, but placing more faith in the use of lemon oil, soap and emulsions of like character than in powdered or liquid tobacco preparations for outdoor use, it becomes possible to save valuable stock from being damaged by these pests to a degree sometimes amounting to lasting disfigurement or utter ruin. Very often nothing more than a radical change in prevailing weather conditions is needed to bring all troubles from this source to a speedy and much-desired close—a few days of good rain, for instance, after a prolonged dry spell. Red spider is held in check, though seldom completely routed in the open, by frequent sprinkling.

Bugs, Beetles and Caterpillars.

All Summer long there is no end of annoyance and vexation from the tribes of warm-season insects that never fail to arrive in due time. They come in squads and squadrons, an invading army of voracious foragers, sure to look for the choicest of morsels among the most valuable of stock the gardener is trying to raise.

Among the first to arrive is the May beetle, destructive to trees and shrubs, and intent on providing future trouble by calling into existence a brood of ugly grubs. Another early caller is the June bug. Not so clumsily awkward as the former, quite slender in body, attired in black with red trimmings, daintily inclined in the choice of its food, and frisk-

THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

American Seed Trade Association

Twenty-fifth Anniversary Meeting
at New York Largely Attended

George S. Green, chosen President for 1908

The twenty-fifth annual meeting of the American Seed Trade Association opened in the small ballroom of the Hotel Astor, Times Square, New York, at 10.30 a. m., Tuesday, June 25, with a very large attendance. President Henry W. Wood of Richmond, Va., occupied the chair, and introduced the Hon. Patrick McGowan, president of the Board of Aldermen of the City of New York, who welcomed the seedsmen to the metropolis, at the same time explaining that their convention was one of the most important he had ever had the pleasure to welcome to New York. So much depending upon the work which the seedsmen were doing for the wealth, for the health and for the prosperity of the country, their coming together could not but be beneficial to the entire United States. He referred to the fact of the present year being the twenty-fifth anniversary of the organization, and hoped that the occasion would mark the opening of new ideas that would prove a welcome gift to all the people of America. (Applause.)

The Hon. Chas. P. Braslan of California responded. He referred to the fact that the American Seed Trade Association was organized in New York City, 25 years ago and it was from this point that it had its first chief support. Since then the organization had progressed from year to year, and without egotism could claim to have done as much for the good of humanity as any other line of industry. "We are giving you better food to eat, we are giving you better things to wear," said Mr. Braslan, and he closed his response with the wish that the Seed Trade Association could hold its convention yearly in the greatest city in the world—New York. He thanked President McGowan for his hearty welcome.

President's Address.

President Wood then read his address, prefacing same by complimenting the members on the very large attendance, and expressing the hope that during the next 25 years the organization would grow in corresponding ratio to what it had done in the past quarter century. He then read as follows:

I wish to congratulate the seed trade upon the generally prosperous condition which seems to prevail all over this country. I do not believe that the seed trade

President H. W. Wood.

has ever experienced a more prosperous season than the one we have just gone through. I see nothing in the future to mar the outlook for a continuance of that prosperity. Our truckers, farmers and other producers are getting good prices for their products; the population of this country is increasing rapidly, and the present indications are that we are bound to have an increased demand for all products for several years to come. The continued high prices on some lines of seeds have no doubt surprised dealers in these particular lines. This applies particularly in field seeds to clover seed, alfalfa, cowpeas, soja beans and other similar forage crops. The high prices, while primarily due to short crops, cannot be altogether attributed to this, but are quite largely due to the increased demand which exists all over the country for these seeds.

The superiority of nearly all varieties of American-grown seeds is coming to be more generally recognized than ever before. American-grown grass and clover seeds of high qualities always command a premium over seeds grown elsewhere, and the fact that European growers who grow vegetable seeds in large quantities secure American-grown seeds for their seed stocks proves conclusively the superior quality of seeds produced in this country.

Tariff Matters.

In view of the fact that the question of the revision of the tariff is likely to be a very live issue in American politics in the near future, I would suggest that the Committee on Customs and Tariff give this question their most serious consideration, so that, in case the question is brought up in Congress, they can be prepared to make intelligent recommendations as to what seeds should be free and what seeds should be dutiable, for the guidance of Congress in any revision of the tariff that may be proposed. Seeds that can be procured to advantage in this country, whether garden or farm seeds, should receive some measure of protection against the cheap European labor used in the production of seeds on the Continent, and seeds which cannot be grown to advantage in this country should come in duty free, so as to avoid, as far as possible, putting an unnecessary tax upon the seedsmen, farmers and gardeners here. Efforts should also be made, in case the question does come up, to have specific duties of so much per pound or per 100 pounds put on, instead of the ad valorem duties, as under the present laws, which, owing to differences in valuations, have caused so much trouble to the seedsmen.

Prices Should Be Advanced.

I am not by any means an advocate of cheap seeds. I am always an advocate of seeds of superior quality and anything that we can do to increase and encourage the production and dissemination of superior quality seeds should receive the most careful consideration of the seed trade. I think it is a well-recognized fact, that the prices at which a great many vegetable seeds are sold at the present time are too low, and that there should be material advances in a great many lines, in order to avoid the deterioration in quality, which is bound to result from low prices and too much competition from the producer's standpoint. The aim of every one engaged in the seed trade should be for improvement in quality of product. The price of seeds cuts a very small figure when you consider the crops produced therefrom, and that farmers and gardeners are willing to pay good prices for first-class seeds is unquestioned.

Improvement of Stocks.

Another point that cannot be too strongly impressed upon seedsmen—particularly those handling vegetable and flower seeds—is the improvement of stocks, and the attention that should be paid to the production of superior and high-grade stock seeds from which their main crops are to be grown. This is a most important matter, and seedsmen should always be willing to pay well for the production of high-grade stock seeds. The true sphere of the seedsmen's trial and seed farms should be in the producing of superior stock seeds to furnish growers, from which to grow the main supplies of seeds handled by the seedsmen.

Selling According to Germination and Purity.

Another matter which should receive the most earnest attention of the dealers in field seeds, is in regard to a system of selling seeds according to percentages of germination and purity. A great many of the wholesale dealers in field seeds, grass, clovers, millets, etc., at the present time do not make any particular analysis for impurities or adulteration, nor test for germinating the seeds which they sell, but buy and sell simply on a commercial basis from the appearance of the quality of the seeds only. I am a firm believer in the fact that the weight ought to have as little legislation for the regulation of the seed business as is consistent with the protection of the interests of both the seedsmen and the farmers and gardeners. The loss of legislation we have, the better, and the best way to avoid legislation is for the seedsmen to do business on sound business principles; and the selling of grass, clover and field seeds on a basis of the actual percentage of germination and purity is a step forward which would be of great benefit to the seed trade all over this country.

Seed Legislation.

There have been several bills introduced in the various Legislatures during the past year, for the regulation of the seed business.—Particularly stringent bills were introduced in Iowa and North Dakota, and there was also a bill introduced in the National Congress at Washington, which would have worked a serious hardship on the seed trade if it had been passed in the shape proposed. In view of this agitation, I would recommend that the Committee on Seed Legislation take under consideration very seriously the question of whether it is desirable or not to draft some bill covering the question of the sales of seed, which could be submitted as a satisfactory bill in case any legislation of this kind is taken up in the future, either by the State Legislature or by the Congress of the United States.

The most vexed question that the association had to deal with at the Toledo convention was the question of the system or method used by the United States Department of Agriculture in making reports on merchants who were found selling seeds which the Department claimed contained adulterants in the report, in a great many instances, doing manifest injustice to reputable seedsmen. Immediately upon my return from that convention, and before making the appointments of the different committees, I addressed a letter to Professor Pieters, who was then in charge of that matter, protesting against any further reports being made under the prevailing methods used by the Department of Agriculture. I also suggested at that time a meeting between representative seedsmen and the Department officials, in order to arrive at some satisfactory conclusions

in regard to the matter. I am glad to say that the effect of my letter was to bring about a conference of the special committee on Seed Adulteration, members of the executive committee and other representative seedsmen, with the Department officials, and further reports in regard to this matter were held up, pending that meeting. The results of the meeting were very satisfactory, the details of which you will have in a report from the chairman of the Adulteration Committee, Albert McCullough.

Seed Control.

I think it would be very desirable for the Committee on Experiment Stations to take up the question of having a Seed Control Station established at each of the State Experiment Stations throughout this country, where seeds could be tested both for the seedsmen and for the farmer. I am sure that any efforts on this line would meet with the hearty approval and support of the United States Department of Agriculture, and it would unquestionably be of great benefit to the seed trade throughout this country.

Weights and Measures.

I would also recommend that steps be taken by the Committee on Weights and Measures, to secure a uniform system of selling grass and clover seeds by the pound and hundred pounds, instead of by the bushel, as prevails in some of the leading markets of this country.

Postal Laws.

In regard to postal laws; the method of accepting and mailing catalogues in bulk, which was put in force last year, gives the seedsmen some relief where large numbers of catalogues are mailed. Further attempts should, however, be made to bring about a reduction of postage on printed matter, or at least on seed catalogues, to a rate of four cents per pound instead of eight cents per pound as at present; and if this matter is vigorously pressed before the present Congressional Committee on Revision of Postal Laws, I think it would meet with success.

Alex. Forbes, Essayist

Government Distribution of Seeds.

An important matter which was actively considered at the Toledo convention was the question of the Governmental appropriation for the purchase and distribution of common varieties of garden seeds. The campaign was most actively and energetically handled by the committee representing the seed trade at large, consisting of Messrs. Alexander Forbes, W. Atlee Burpee and William Henry Maule. I am sorry to say, however, that further than securing an amendment to the original act, the matter fell short of the success which we desired. Mr. Forbes, the chairman of the Seed Trade Committee, will give you some very interesting information in regard to this matter, in his address on "The Congressional Free Seed Distribution." Mr. C. F. Wood, chairman of the Seed Trade Association Committee, will also make a report as to the workings of his committee in assisting the general committee in the campaign.

I do not think it advisable to recommend that a fight be continued against the free seed distribution on the same lines as for the past two years; but that a special committee be appointed, who shall act as occasion may offer in opposition to an abuse that is detrimental to the interests of the seed trade and opposed to the policy of good government. This committee should also appear and make a proper representation of the matter before the House of Representatives Committee on Agriculture and the Senate Committee on Agriculture at the time at which they consider the bill for the usual appropriation for next year.

Transportation Matters.

In regard to transportation matters; active steps should be taken to secure better classification of existing freight rates upon various seeds. I am convinced that the existing classifications of certain seeds are entirely too high, and that if proper representations are made in regard thereto, it will result in certain seeds being placed in lower classification, thus enabling dealers to ship at lower freight rates. The question of delays in freights is also a very serious one to seedsmen, especially when shipping to distant points, and I would recommend that this association join one of the national freight-

service associations for the securing of legislation to modify the abuses existing in this connection.

Work of Registration Bureau.

In regard to registration bureau work, a special committee for which was appointed to co-operate with the Department of Agriculture the past year: I was appointed chairman of that committee at the Toledo convention, but upon being elected to the presidency, requested Mr. W. Albee Burpee to act in that capacity. Owing to press of business, Mr. Burpee advised me that he would be unable to assume the duties of the position; but after correspondence with the Department of Agriculture, I found it was impracticable to do anything in regard to this work this year, so did not make any further move in this direction. The question is a very important one, and if the Department of Agriculture is likely or willing to take up the work outlined at the Toledo convention, a committee should be appointed from the Seed Trade Association to co-operate with them in that direction.

An Improved Telegraph Code Needed.

I would strongly recommend that a special committee be appointed to have charge of the revision and getting up of an improved telegraph and cable code for the use of the seed trade at large. The present code, gotten up in 1895, has proved to be of very great benefit to the trade, but it needs revision and enlarging, and I feel that the proceeds from the sale of the code will meet the cost of undertaking this work. Even should this not be the case, however, the Seed Trade Association could not make any better appropriation of a limited amount than to secure a revised and improved code.

Future of Seed Trade.

In conclusion, I would say that I am more than ever impressed with the future of the seed trade in this country and that the seed trade is practically only developed in a very small degree, compared to the importance it is likely to reach in the future. With the increase of population, the improved methods of farming and gardening, and the increased prosperity of our agriculturists as a whole, the demand for seeds is bound to increase to a very great extent in years to come, and the seedsman who develops or plans his business with a view to taking care of this growth and development will reap the benefit. I do not know of any business that

American Seed Trade Association." Mr. Willard gave the credit of the inauguration of the association to Ethan Allen Chase of Rochester, N. Y. Among those present at this first meeting were William Meggat, Wethersfield, Conn.; Peter Henderson and B. K. Bliss, New York; J. A. Bolgrano, Baltimore; E. B. Clark, Milford, and R. A. Robbins, Wethersfield, Conn., who was elected the first president. The initial meeting was held in the Gilsey House on June 14, 1883, 33 individuals or firms being represented. It was at that meeting that the disclaimer was first adopted and the best work done was, the speaker said, the making of acquaintances. The most enduring work, in Mr. Willard's opinion, which the organization has accomplished has been in making the seedsmen know each other, elevating confidence and strengthening cordial relations between the members. The tariff had been discussed at the third, eleventh and fifteenth conventions. On this subject there has always been a great difference of opinion, the majority of the members, however, favoring a moderate duty as protection to American seed growers. The government free seed distribution matter originated

code, the expense of such revision to be borne by the association, so as to enlarge the usefulness of the code, and, at the same time, to be a source of revenue to the organization. The discussion showed that the code was not in very general use, as it was not considered up-to-date. The matter was finally referred to the executive committee.

The suggestion to establish a seed laboratory at the experiment stations throughout the country, made by the president, was also discussed. Mr. Ehling was of the opinion that these seed laboratories were not of much value on account of the technicalities contained in their report and at times the errors made in analysis. He added that if the farmer would be true to the seedsman, the seedsman would be true to the farmer.

J. Horace McFarland, Harrisburg, Pa., delivered an interesting illustrated address on the "Twentieth Century Seed Catalogue." He went into the matter very thoroughly, taking up the subjects of illustrations, paper, printing, and so forth. He advised the seedsman to look into the matter of so-called "accessories" and to limit the number of pages in their catalogue only to those which they found profitable. For the smaller seedsman, a catalogue the size 7x10 was recommended and for the larger seedsman the size 8x10, which admitted of conforming to the stringent postal regulations without an undue waste of money for postage.

Mr. McFarland advised the seedsmen to have their own photographers, and, if colored work were desired, to make a note in the field of the colors of such subjects as were desired to form illustrations. He recommended that the seedsmen persist in an agitation for a pound rate on catalogues. Even if the rate was fixed at eight cents per pound it would be a great step in advance.

Wednesday Afternoon Session.

The afternoon session was called to order at 3.45 p. m., and Mr. Alex. Forbes, of the Peter Henderson Co., New York, read a carefully prepared paper on "The Congressional Seed Distribution" (which will be reported in a later edition), following which G. B. McVay, Birmingham, Ala., as a delegate for the Association at the meetings of the American Manufacturers' Association, made his report referring particularly to the re-

S. F. Willard, Essayist

first in the question box, when not many voices were raised against it; however, the discussion continued from time to time until the strong opposition materialized last year at Washington. The Association has been the means of bringing together all the seed selling firms in the United States and Canada.

In speaking of the essays and discussions read before the association, Mr. Willard paid a high tribute to those contributed by C. L. Allen of Floral Park, N. Y., and Dr. W. W. Tracy, now of Washington, D. C. In closing Mr. Willard recommended that the secretary be requested to prepare an index of the subjects contained in the twenty-five years' reports, for publication and distribution among the members. This, on motion of Mr. McVay, was duly carried.

The secretary then read F. W. Bruggerhof's paper on "Reminiscences of the Seed Trade," after which the meeting adjourned until 10 o'clock Wednesday.

Wednesday Morning Session.

The session on Wednesday morning opened at a little after 10 o'clock. The committee on membership submitted the following list of new members: H. E. Fiske, the H. E. Fiske Seed Company, Boston, Mass.; Manitowoc Seed Company, Manitowoc, Wis.; The Herbert Coy Seed Company, Valley, Neb.; A. J. Peters Seed Company, Hollister, Cal., and M. J. Brunjes, Brooklyn, N. Y.

C. N. Page, Des Moines, Ia., read an interesting paper on the subject of postal matters, which created some discussion.

Mr. Ross, of Worcester, Mass., made a report for the committee on experimental stations, in which he suggested that the money now expended for free seeds could be put to better purpose by the government for experiment station work. He commended the efforts of the different experiment stations in their work on poultry, the furnishing of supplies for which formed an important part of the seedman's business. He protested against the method at present in force by the government in securing samples of seeds for the purpose of examination as to adulteration.

S. E. Briggs, of Toronto, Ontario, read an exhaustive report on the work of the experimental farm in Canada.

The report of the committee on obituary was read by George S. Green.

This was followed by the report of the committee on president's address, read by G. B. McVay. This committee recommended that a sub-committee of three be appointed by the next president to revise the seed trade

Walter P. Stokes, Essayist

duction that had been brought about in both passenger and freight rates in different states.

Secretary C. E. Kendel read an extensive report of the work that is being done by the National Council of Horticulture in the way of disseminating authentic horticultural articles through the daily press of the country, and, at the close of his report, the Association voted to donate to the council the sum of \$200, to help on in the good work.

Mr. Walter P. Stokes, Philadelphia, Pa., then opened the discussion on "Is it advisable to offer discounts from catalogue prices," and in the able paper that he presented to the assembled body, he brought out many forceful points in favor of doing away entirely with the discount system and also the offering of premiums. He maintained, that a catalogue is the reflection of the standing of the house issuing it and if it is gotten up carefully and true it is a pity that it has to yield to a 25 or 30 per cent. discount. The expense of all material connected with the seed business had increased materially of late, and yet seeds had not advanced in price and it was a mistake to offer discounts; many firms would give up the practice but for the fact that they must do the same as their competitors are doing. If the influence of the Association was behind such a movement, something could be done. Continuing, Mr. Stokes said that catalogues gotten up with bombastic and fulsome descriptions were no longer popular, and, it was unnecessary to offer premiums, give discounts or resort to catch-penny schemes. Several members joined in the discussion that followed after which the meeting went into executive session.

C. E. Kendel, Sec'y-Treas. A. S. T. A.

offers the same incentive to study and improvement, or that offers more profitable returns for the time and attention given to it, than the seed business. It is certainly a business that is calculated to develop those who follow the occupation, to the fullest extent. The more we know of the seed business, the more we find it to be learned, and the possibilities for development are practically unlimited. Our young men cannot choose any better business, nor a business that offers more possibilities for the future, than the seed business of to-day; and there is no business that tends to bring out more the better qualities of those engaged in it. Travel where you may, you can always find matters to interest and benefit you in the seed business, and there is nothing that broadens and develops and gives more interest to travel, than the fact that business and pleasure can be combined at the same time.

I wish to thank the members of the Seed Trade Association for the hearty support and co-operation which they have given me in the work undertaken for the benefit of the seed trade during the past year, and to pledge my best efforts for the future towards the development and the best interests of anything that may be proposed in a practical way for the advancement of the general interests of the seed trade.

Tuesday Afternoon Session.

The afternoon session opened at 3 o'clock with a talk by Dr. B. T. Galloway, Chief of the Bureau of Plant Industry, Department of Agriculture, Washington, D. C., on the subject of "What the Department Is Doing for the Seed Trade." Dr. Galloway had expected to illustrate his remarks with stereopticon views, but unfortunately no apparatus was available; it is hoped that some of the illustrations may appear in the annual report of the association.

S. F. Willard of Comstock, Ferris & Company then read a very interesting paper on the "History of the

What the Department of Agriculture is Doing for the Seed Trade.

Summary of Remarks by Dr. B. T. Galloway before the American Seed Trade Association at the New York Meeting, June 25-7, 1907.

Dr. Beverly T. Galloway, Chief of the Bureau of Plant Industry of the United States Department of Agriculture, outlined some of the more important work of his Department and explained, with the aid of fifty lantern slides and maps bearing directly upon the subjects presented, the relations of this work to the seed trade.

Dr. Beverly T. Galloway

The general duties of the Department and the policy which is pursued in all its work, said Dr. Galloway, are to acquire and diffuse among the people of the United States useful information connected with agriculture in the most comprehensive sense of that word, and to procure, propagate, and distribute new and valuable seeds and plants. In pursuing this policy, the Department often

stands in the same relation to the seedsmen as to other organized bodies whose objects are purely commercial. It is the business of the seedsmen to dispose of their products to the farmers, and it is to the interest of reputable seedsmen to work to the advantage of the purchasers. As the farmers are not organized, it comes about that the Department must frequently stand as a medium between the seedsmen and the tillers of the soil, and where an element of doubt arises the farmer must be given the benefit of that doubt. This general policy is well illustrated by the law makers of the various States and of the National Government, whose efforts aim to protect the farmer as an individual against agencies that may defraud or injure him.

After this general explanation, Dr. Galloway took up some of the more specific problems upon which the Department is engaged, and with the use of lantern slides directed special attention to several lines of work the results of which must be the upbuilding of the wealth of the country and the adoption of better agricultural practices which will in a number of ways prove of value to seedsmen.

Exploration Work.

The agricultural exploration work of the Department, as an example, calls for the services of experienced men to go into various parts of the world in search of new and promising crops. The results achieved by Mr. M. A. Carleton in securing grains from Russia and other parts of the world for use in this country were mentioned as an illustration of the importance of sending practical men upon explorations of this character. Mr. Carleton has made grains a special study for twenty years and he was able to select varieties of wheats which produced last year in the United States about 50,000,000 bushels, valued at about \$37,000,000. The work of an agricultural explorer now in China was illustrated, pictures of fields of poppies, used for the manufacture of opium, and of Chinese vegetable gardens being shown, together with interesting illustrations of the methods of handling the important soy bean crop.

Particular attention was called to the Japanese salad plant, Udo, which is handled and served much like celery and is proving a promising plant for use upon the tables of Americans.

About \$5,000,000 worth of matting is imported every year, and the Department is trying to establish the manufacture of matting from a Japanese grass which is readily grown here. As the types of juncus used for matting do not come true from seed, it has been necessary to secure a large shipment of these plants from Japan, and they are now in successful cultivation in California. Machinery has already been perfected for weaving this grass by which an American operator can produce as much matting in a day as is made by an Oriental in thirty days.

Improved Timothies.

The work upon the improvement of timothies inaugurated by Dr. A. D. Hopkins has resulted in securing some valuable types, including a mammoth form called the "Stewart" or "Mammoth," which is also an extra-early type. In all, Dr. Hopkins has grown some 60 distinct strains of timothy, one of the types being two weeks earlier than the ordinary form, and of this a second crop can be grown the same season. The Stewart variety when tested beside ordinary types has produced a crop from 10 to 25 per cent. larger.

Sorghum, Alfalfa and Cowpeas.

About 500 kinds of sorghum, particularly of the non-saccharine types, have been tested with a view to their use in the drier regions of the United States, and several types have proved sufficiently valuable to warrant general dissemination. As soon as the value of a certain kind of timothy or sorghum is determined, the Department relinquishes the work for attention by seedsmen.

The life history investigations of the Bureau of Plant Industry have resulted in the introduction of the Orel and other superior types of red clover. The Orel clover was secured from Russia, and is exceedingly hardy, long lived, perfectly smooth, and yields a superior quality of dustless hay. It promises to be of great value in the Northwestern States.

Valuable propaganda work is being carried on in connection with forage crops. An extensive exploitation of alfalfa is being made throughout the East, and farmers are encouraged to cultivate this crop. Arrangements are often made with farmers for co-operative work with the Department in growing one or two acres of alfalfa, and this results in the permanent cultivation of this crop.

Extensive propaganda work is being conducted with cowpeas, soy beans, vetches, a number of grasses, and various leguminous forage crops.

Work in the improvement of cowpeas, the use of which crop has increased greatly within ten years, has been undertaken. Mr. George W. Oliver, a master at hybridizing work, is engaged in efforts to secure types of cowpeas suited to certain specific sections of this country and having definite characteristics. It is desirable to obtain a cowpea of bush type that can be readily made into hay and that will yield a good quantity of seed and hold its leaves well. Further, it must not be subject to root-knot, leaf-rust, or other diseases. The securing of this ideal type has been undertaken through the crossing of varieties each of which has some of the characteristics mentioned. Efforts are being made to secure types of cowpeas which may be harvested by machinery and to determine some way of preventing the rapid deterioration of seed. As seedsmen well know, practically all of the cowpea seed sold this year has been of very low vitality. The Department has secured the seed of a type of cowpea from India 98 per cent. of which, though five years old, has germinated. This type has been used as a parent for several hybrids. Work of a similar nature is being carried on with vetches and other forage crops. Vetch has been used in the tobacco-growing sections of Connecticut with great satisfaction, 400 acres having been planted this year in the Connecticut Valley alone as a result of demonstrating the fact that vetch is valuable as a winter leguminous cover crop for planting in fields from which tobacco has been harvested in early September.

The China White clover and a new Adzuki bean from India were mentioned as likely to prove of special value in certain sections of this country. At the Arlington Experimental Farm, besides a good yield of hay, a variety of Adzuki bean produced about 26 bushels of seed to the acre.

Work of Seed Laboratory.

The work which probably relates more nearly than any other to that of the seedsmen is the testing of seeds by the Seed Laboratory with a view to helping both the farmers and the seedsmen to secure seeds of higher quality. The laboratory under the law collects and examines forage-crop seeds for adulterants and gives seedsmen and farmers prompt information relative to samples of seed which they find in the market. Propaganda work is carried on by this laboratory to show the value and importance of good seed, and visits to farmers' institutes are made by its representatives to deliver lectures which will result in creating a demand for a better class of seed and will teach farmers to reject seeds of low vitality and those containing dangerous weed seeds. Another important feature of laboratory work has for its object the improvement of the methods of handling seed. Special attention has been given to the harvesting, curing, and storing of certain seed crops, particularly corn and Kentucky bluegrass, on which subjects a number of publications have already been issued by the Bureau of Plant Industry. The corn work, especially, has been productive of most valuable results, it having been demonstrated in a practical way that only seed of known high vitality should be planted.

A comparison of the work of the Seed Laboratory for the past year with that of previous years is interesting. From July 1, 1906, to May 27 of this year, this labor

atory has tested seed for farmers, seedsmen, and others to the number of 5,822 samples. It has tested 1,548 samples of forage-crop seeds for adulterants and 3,825 samples of cowpea seed for vitality. It has tested 3,852 samples of corn for this year's planting, 3,000 samples of vegetable seeds bought in the open market, and 1,200 samples of seeds from custom houses, making 19,247 samples in all. The cowpea and corn work was undertaken in view of the low vitality of these crops in certain sections during the past season.

The testing of seed is now receiving more attention than at any previous time, and several of the agricultural experiment stations are arranging to take up this work. Legislation was proposed in four States during the past year, and the bill introduced in Iowa became a law.

Testing and Standardizing Vegetables.

A line of investigation which has a direct bearing on the seed trade is that of testing and standardizing American varieties of vegetables and publishing monographs on these varieties; the development of strains of sweet corn, cabbage, and other vegetables better adapted to the requirements of various localities, and the breeding of improved types of lettuce, celery, etc., which will possess desirable characteristics not found in existing types. During the last ten years the Department has tested more than 15,000 samples of commercial varieties of garden vegetables, the first tests being confined to experimental plots in the vicinity of Washington, D. C., but more recently extending to all sections of the country. Several bulletins have been published containing monographs of certain vegetables, and another, devoted to American varieties of garden beans, is now in press. The object of this testing work is to establish a standard of perfection that will be a guide in making selections of variety types.

Before publishing a monograph of a vegetable, it is necessary to determine exact differences in season, productiveness, and other characters, as well as to decide which types shall be adopted as the correct ones. The Department is endeavoring to simplify the nomenclature by adopting approved variety names and by recommending the discontinuance of confusing, long-worded, or inappropriate names.

The aggregate number of variety names used by American seedsmen is very large, but there are comparatively few whose use is at all universal. For example, in the 1906 catalogue our Mr. W. W. Tracy, Jr., finds 198 leading seedsmen offering tomato seed under 248 different varietal names, only 56 of which are used by ten or more seedsmen, while 118 are advertised by a single dealer. Sweet corn is offered under 150 names, 39 of which are used by ten or more seedsmen, while 59 are used by but one. If it were determined and widely published that fourteen names stood for practically identical stocks of the old Acmé type of tomato, it would be very easy to offer them under fourteen other names, and detection could only follow after the harm had been done. The determination of the exact type of vegetable desirable for certain conditions is of much practical importance and will do more for the betterment of seed grown and used than by merely ascertaining under what names different seed growers offer a particular type.

Effect of Local Conditions on Plants.

For a number of years the Department of Agriculture has been engaged in endeavoring to determine how far local conditions affect the character of the plants grown. Special work along this line has been carried on with sugar corn and cabbage, and the investigations give promise of very interesting and valuable results.

New Types of Lettuce.

The results of the work of the Department during the past three or four years in producing new types of lettuce by hybridizing are most promising, and the success of Mr. Oliver in crossing lettuce—something, it is believed, that has never before been attempted—has been very marked. Lettuces for growing under glass have been used for the most part, the aim being to secure types better adapted to the requirements of the Eastern United States and of the Middle West. For the Eastern States a lettuce was wanted with leaves light in color and with a good, solid, medium-sized head which would not readily top-burn and in which practically all the foliage could be used for dressing. By crossing the Grand Rapids type with a small-heading form known as Golden Queen, the results aimed for were secured, and through this same cross by a different selection an open-head type of lettuce has been obtained which is thought to be superior in a number of ways to the Grand Rapids variety. It is hoped to distribute seeds of both types next year.

Sugar Beet Work.

For several years the growth of sugar beet seed in the United States has been encouraged by the Department in every practical way, and expert breeders have been developing beets of high sugar content and heavy tonnage. During the past year, experimental work with beets raised from American-grown seed and from European seed was carried on by 49 collaborators throughout the sugar beet area. On 278 acres, the American-

grown seed yielded 14.32 tons of beets to the acre, with an average sugar content of 14.9 per cent., making a total of 4,267 pounds of sugar to the acre, while the imported seed as used by the various factories averaged a yield of 12.14 tons to the acre, with a sugar contents of 15.1 per cent., making a total of 3,666 pounds of sugar to the acre—a difference in favor of the American-grown seed of more than 600 pounds. This, on the basis of the 376,000 acres harvested in the United States in 1906, would mean an increase in the total quantity of sugar produced without additional cost of about 226,000,000 pounds. Nearly half a million dollars is now sent abroad annually for the purchase

It was then, before my time, that a host of pretenders came boasting into this country, and among them was William Cobbett, who arrived with an idea that all Republicans were humbugs; and so offensive did he become to good Americans, that he was obliged to flee to England, whence he returned as a Radical Democrat to open a seed store at 82 Fulton street, this city, where he sold ruta bagea at \$1 per pound and black pigs at \$10 each.

My first experience in the seed trade, as you know, dated from 1847, at which time ruta bagea seed, according to a catalogue of that date, did not sell at \$1 per pound, but rather at 12½c. an ounce, at which price some sixteen varieties of turnips were quoted. The item of black pigs does not appear on our lists, and I am sure they were not considered seeds in those days. (Laughter.)

In the Early Forties.

In that year, 1847, and for several years thereafter, the seed trade, in respect to flower and garden seeds, was in very insignificant proportions through all of this country, and my records show that the actual seedsmen did not exceed in number fifteen or sixteen, and these were all of very modest pretensions, and scattered among the cities of New York, Philadelphia, Baltimore, Rochester, Boston, Cincinnati, New Orleans and St. Louis. Many garden seeds were grown, however, in Wethersfield, Conn., as well as in Lebanon, N. Y., and vicinity; in the latter case by the Shakers. In the small towns garden seeds were sold principally by druggists, hardware merchants and grocers.

Probably many of you are of the opinion that in those bygone days the varieties of different classes of seeds were small, but such really is not the case; and you will be surprised to find that in the catalogue of Grant Thorburn, 1822, there are quoted some nine varieties, of snap beans, and among them you will see Six Weeks, White Kidney and Refugee.

Now, as regards pole beans: they also appear in some six varieties, such as Dutch Case Knife, Red Cranberry, Scarlet Runner, Large Lima, etc.

Among the cabbages, I find there were twenty varieties; such well-known favorites as Early York, Early Sugar Loaf and Globe Savoy appearing.

Now, in 1847 catalogues were increasing in size, and varieties of vegetables in proportion. This catalogue of 1847 shows a corn list of seven varieties, some of which are very well known at the present day, like the Early Golden Canada, Early Burlington, Early Tuscarora, Early Dutton, etc.

Now, in 1864 other varieties are added to this corn list, like Early Dwarf, Darlings, Eight Rowed, Asylum and Stowell's Evergreen, Sugar etc.

Even in 1847, the list of peas was quite an extensive one, there being at least thirty sorts catalogued, but of these only two sorts were wrinkled. These were the Tall and Dwarf Knights, and British Queen, and the next year brought us that famous old pea, the Champion of England. In 1864, a dozen more wrinkled sorts were added, and among them was the Advancer. Up to a period beginning about with our Civil War, nearly all garden peas were imported from England, and they were indeed beautiful samples.

In the Fifties and Sixties.

Up to 1850, and for some years thereafter, all such imported seeds came by sailing vessel; peas and other articles in five-bushel casks, costing a guinea a piece. Later on, however, they were shipped in very heavy double sacks, which were returned to the old country, and used over and over again for several seasons.

Our catalogue of 1864 contained a long list of most of the leading vegetables of to-day, and what strikes me as being very peculiar is, and it may be something equally curious to you gentlemen, that the prices of those days averaged about the same as the prices of the present day; the only marked exception to these prices was that of the Advancer pea, which had only been recently introduced as a very fine wrinkled sort, and it was quoted at \$1 a quart, while all other varieties were listed at from 20c. to 60c. a quart.

A Word as to Prices.

The high retail price for seeds began in 1867, and continued for some ten or eleven years, during which

period the ruling price for Valentine, Mohawk and Refugee beans was \$10 per bushel. Beets were then quoted at from \$1 to \$2 per pound; cabbage from \$2.50 to \$8 a pound; leek, from \$4 to \$7 a pound; lettuce, from \$3 to \$5; onions, from \$3 to \$6; peas (the common sorts), \$10 per bushel; Little Gem, \$28 per bushel and \$1 a quart; Yorkshire Hero, \$18 per bushel; Champion of England, \$10 per bushel; peppers, from \$5 to \$7 a pound; radish, from \$1 to \$1.50 a pound; turnips, from \$1 to \$2 a pound.

In 1869, all onions were quoted at \$6 per pound. It was in 1870 that the Egyptian beet was a novelty, and seed of it sold at 50c. an ounce. In 1873 I found Conover's Colossal asparagus listed at 50c. per ounce; Trophy Tomato, \$10 a pound, while the other varieties of tomato were quoted at from \$3 to \$4 per pound. Queen onions I find listed at \$10 per pound, and even up to a period as late as 1875, Carter's Premium Gem peas were quoted at \$1.50 a quart; the Blue Peter variety at \$1.25 a quart. The Beauty of Hebron potato was first offered for sale in 1878, according to Thorburn's catalogue of that date.

This disparity of prices applied only to seeds, and certainly not to the Holland bulbs, for I have before me now a small invoice dated 1806 rendered by our house, a photographic copy of which has been preserved, showing hyacinths charged at three shillings and six pence sterling each, and tulips at two shillings sterling each. It is also interesting to note that

F. W. Bruggerhof

of sugar beet seed which could readily be grown in America.

Three years ago efforts for the production of a sugar beet seed having a single germ were inaugurated, and at the present time beets yielding from 45 to 50 per cent. of single-germ seed and having a very satisfactory sugar content have been obtained.

Investigations in Lily Disease.

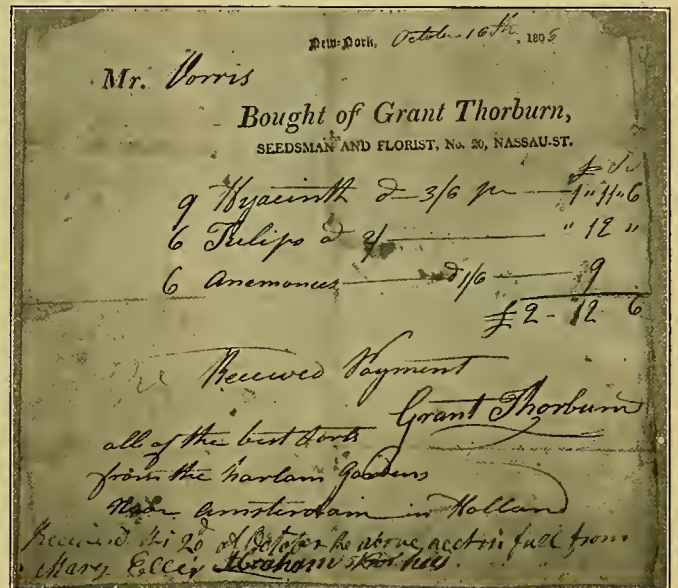

In connection with the investigation of the Bermuda lily disease, the commercial production of bulbs in the United States was investigated. It has been shown that the disease mentioned can be controlled by resorting to nature's method of reproduction, which eliminates the diseased stock—by seed—and the Department has published the results of its work along this line. The production of varieties of tulips, narcissus and hyacinth on the Pacific Coast is being encouraged, and three gardens having this work as their object are maintained in the State of Washington, all promising excellent results. The climate of Puget Sound is especially favorable to the development of tulip and narcissus bulbs, and it is probable that the cornerstone of the American bulb industry will soon be laid in that region.

(To be continued.)

Reminiscences of the Seed Trade.

Read by F. W. Bruggerhof, President of J. M. Thorburn & Company, before the American Seed Trade Association at the New York meeting.

I cannot let pass an opportunity like the present when I am called upon to relate the reminiscences of sixty years in the seed trade, to first call your attention to part of an extraordinary advertisement which was copied from the New York Commercial Advertiser by the Boston Courier in 1845. It shows clearly that the reminiscences of that advertiser, Grant Thorburn, are much more curious and interesting than mine, since they date back to 1799, at a time when he was practically the only seller of seeds in this city. His advertisement goes on to say that he started with three pots of geraniums, a monthly rose and fifteen dollars' (\$15) worth of seeds, and he makes the further statement that the seeds grew until they filled the whole continent; the rose blossomed until it spread into a tree, and the little birds formed their nests under its branches.

Photographic Copy of Invoice referred to in F. W. Bruggerhof's Paper

at the date of the invoice mentioned English money was the only currency used here.

It seems curious, too, that in our catalogue of that date the Brussels Witloof was listed so many years ago, yet it seems scarcely known by anybody even at the present date, though quite large quantities of it are imported weekly from France, and we all know how easily it may be cultivated in our own gardens either for salads or for cooking.

Comparison of Catalogues.

Considering the many voluminous and many beautiful catalogues issued by our seed houses to-day, our modest pretensions of some sixty years ago seem plain and even insignificant. The increase in the size of the present catalogues, comprising as they do so many novelties and new and beautiful things, goes to show how our education and tastes in such matters are increasing from day to day, and how of all the luxuries and industries, that of the cultivation of flowers and vegetables is the most innocent. It is productive not only of many gratifications, but of many advantages also of a permanent character. The care of a garden is likewise a recreation, and conduces materially to health, promotes civilization and softens the manners and tempers of men. In their growth, from the tender shoots which rise from the earth through all the changes which they undergo to the period of their utmost perfection, man beholds the wonderful works of creative power. He views the bud as it swells, and looks into the expanded blossom, delights in its rich tints and fragrant smell, but above all he feels a charm in contemplating the movements and regulations before which all the combined ingenuity of man dwindles into nothingness.

The Banquet Wednesday Night.

The banquet tendered to the visiting delegates was given in the spacious dining room in the eighth floor of the Hotel Astor, and many ladies were noted among those present. The menu provided was an elaborate one. Mr. Patrick O'Mara, of the Peter Henderson Co., officiated as toastmaster and, needless to say, that office was filled to the delight of everyone present. Other speakers were Henry W. Wood, president of the Association; Capt. Burnett H. Landreth, Philadelphia, Pa.; C. L. Allen, Floral Park, N. Y.; Prof. Johnson, of The American Agriculturist; W. J. Stewart, Boston, Mass.; Chas. P. Braslan, San Jose, Cal.; Albert McCullough, Cincinnati, Ohio; Mr. Briggs of the Steele-Briggs Co., Toronto, Ont.; W. P. Stokes, Philadelphia, Pa.; Chas. N. Page, Greenc, N. Y.; S. F. Willard, Wethersfield, Conn.

An Automobile Ride.

On Thursday morning automobiles were provided and a trip was made to Coney Island, giving all the visitors a splendid opportunity of "seeing" New York and Brooklyn en route.

The Congressional Free Seed Distribution.

BY ALEXANDER FORBES, OF PETER HENDERSON & COMPANY, N. Y.

What is known as the Congressional Free Seed Distribution is a rare old plant which first saw the light of day in 1839. It was a modest little specimen when first introduced. Congress at that time appropriated \$1,000 for the purchase of new, rare and valuable seeds, etc., to be distributed throughout the United States, for the purpose of increasing the output of agriculture. There was no Department of Agriculture in those days, so the fund was placed in the hands of the Commissioner of Patents, and as far as can be learned, the distribution was conducted wisely and in accordance with the intent of the framers of the measure.

Dr. Galloway, chief of the Bureau of Plant Industry, in writing to a Congressman within the past year, says:

"When this distribution was first undertaken, a great many years ago, there is no doubt but that it accomplished much good, because at that time the seed industry was not as thoroughly organized as it is today. The practice of ordering through the mails from seed catalogues was not then in vogue, and it was extremely difficult for a person living in an isolated locality to secure good garden seeds."

The Doctor wisely adds:

"This condition has changed, however, and today it is quite possible for anyone to buy garden seeds of the same varieties as we distribute."

The appropriation was modestly increased by Congress from year to year, in keeping with the expansion of the country, until 1865, when it amounted to \$61,000. The distribution remained in the hands of the Commissioner of Patents until that year, when the Department of Agriculture was organized, with a Commissioner of Agriculture as its head. The Hon. Jeremiah Rusk was the last Commissioner of Agriculture and the first Secretary of Agriculture, with a seat in the Cabinet.

With the exception of the years 1867, 1881 and 1882 (when the appropriation was over \$100,000), it rarely exceeded \$80,000. In 1885, however, it again reached the \$100,000 mark, and has steadily increased during the past twenty years, until it reached the enormous sum of \$290,000 in 1905. So long as Congress kept within reasonable bounds, there was very little complaint on the part of the people. Over twenty years ago, there was an effort made by the seedsmen under the guidance of the late Mr. James Vick, Jr., to stop this Congressional Free Seed Distribution, but it met with very little success. Not more than five members of the House voted for its discontinuance. Since then, one large house in the Middle West attempted, single-handed, to fight the distribution, claiming that Congress had no legal right to distribute common, ordinary varieties of garden seeds, when the act called for new, rare and valuable sorts; in other words—that it was unconstitutional. This case, however, was never brought to a test.

Then, about six years ago, a delegation of seedsmen, representing the leading Eastern houses, waited on the Agricultural Committee of the House, and laid their views before it. After hearing what the delegation had to say, the Hon. James W. Wadsworth, who was the chairman, informed the delegation that he did not blame the seedsmen for trying to stop this Congressional Free Distribution as then conducted, but that as Congress and the majority of the committee were in favor of it, he could not hold out any hope for a change.

I was a member of that delegation and well remember that when we got back to the hotel and took up the afternoon papers, we found, to our surprise, that while

we were having this interview with the Agricultural Committee of the House, Senator Tillman of South Carolina succeeded in getting an appropriation for an extra \$100,000 through the Senate for free seeds. We felt there was no hope and came to the conclusion that there was nothing for us to do but to let Congress increase the appropriation until the evil became so glaring that it would right itself.

In the early part of 1906 there came a change. Up to this point, I have stated briefly the origin, history and growth of the Congressional Free Seed Distribution. It has cost the country many millions, but so long as it was confined to the distribution of new, rare and valuable varieties, as was originally intended, it performed a useful purpose, and was considered well worth what it cost the country, but as it is and has been conducted for many years, it is a ridiculous failure. Never was this more clearly demonstrated than during the past year.

In February, 1906, the Agricultural Committee of the House recommended leaving out of the Appropriation Bill the item for free seeds. This was a purely voluntary act on the part of the Committee, and was as much of a surprise to the seed trade as it was to the country at large. The Agricultural Committee of the Senate was also in favor of the change. Even the Department of Agriculture endorsed the recommendation of the two committees. The seed trade thought it was the least they could do to wait on the Agricultural Committees of both Houses and do what they could to strengthen their hands. To this end representatives of the leading seed houses held a meeting in Washington, D. C., on the fifth day of March, 1906, and appointed a committee with power to act. A fund was raised, and the services of Mr. Wm. Wolf Smith, of Washington, were secured to look after their interests and keep track of what was going on at the Capitol with regard to free seeds. Very soon this became a live issue throughout the country. The seedsmen had a hearing before the Agricultural Committee of the Senate, May 11, 1906, and also before the Agricultural Committee of the House, December 12 and 13, 1906. Those of you who have not copies of the reports of these hearings would do well to get your Congressman to send them to you. You will find them very interesting reading. They are certainly unique, and Mr. Wm. Wolf Smith and all connected with them deserve the thanks of the American Seed Trade Association for the manner in which they presented their case.

When the matter was finally fought out on the floor of the House, our representatives, by a majority of about 136 to 84, voted for a continuance of the old plan. Never was there a more striking instance of the inability of the House to overcome its prejudices and give up a cherished custom—that of handing out annually to their constituents a paltry political package of five papers of common garden seeds, which, according to Dr. Galloway, cost the Government one-half a cent a piece, and which could certainly be procured without difficulty at any crossroad store.

We are told the farmers demand them, that Congress has done very little for the farmer, anyway, and that the least we can do is to allow our members of Congress to hand out to their farmer friends, once a year, with their compliments, this miserable little package of garden seeds of varieties that have been before the public for ten, twenty, thirty and forty years, and which are not worth the cost of transmitting them through the mails.

If Congress must do this, let them send the farmers something that will tend to educate them. Let them send new and rare varieties that will fill up a blank in the existing list, but don't let them send out these common varieties which cost them next to nothing and which cannot accomplish any useful purpose whatever.

Looking at it from the standpoint of the American seed trade, is there any excuse for the existence of the Congressional Free Seed Distribution to-day, or has there been any for the past forty years? Has the American seed trade been so behindhand in its methods and so inattentive to business, as to need the fostering hand of the Government to help it to place what is even new, rare and valuable, before the farmers and gardeners of the country? I think not! On the contrary, as a trade, as a body of men, they have shown marked ability, a strong desire to keep abreast of the times, to find new, rare and valuable plants, seeds and bulbs wherever they were to be found the world over, and have endeavored to adopt the most up-to-date and approved methods that could be found. Indeed, it would be hard to find a body of men in any walk of life that has displayed more resource, intelligence, activity and sound business management than this very trade which Congress is competing with under the guise of helping the farmer.

Looking at it from the farmers' standpoint, is there any excuse for the distribution of common varieties of garden seeds? What good is it doing the farmer? It has been clearly shown by the largest body of farmers, known as the National Grange, with its 800,000 members, that they would rather have new, rare and desirable varieties that will suit their section and their soil, than the common kinds that have been sent out.

(To be continued next week.)

M. H. Duryea, Chairman Entertainment Committee and First Vice-President Elect

Thursday Morning's Proceedings.

The result of the election was as follows:

- Mr. George S. Green, of the Illinois Seed Company of Chicago, was elected president.
- Mr. M. H. Duryea, of Henry Nungesser & Co., New York, was elected first vice-president.
- Mr. F. W. Bolgiano, of Washington, D. C., was elected second vice-president.
- Mr. C. E. Kendel, of Cleveland, Ohio, was re-elected secretary-treasurer.

Invitations for the 1908 meeting were received from Bismarck, N. D., Niagara Falls and Detroit. This question will be decided by the executive committee at their meeting in January next.

Among Those Present.

The following were present in person, or were represented at the convention:

- Adams, T. Lee, Kansas City, Mo.
- Allen, C. L., Floral Park, N. Y.
- Allen, Linnaeus, Floral Park, N. Y.
- Bolgiano, F. W. & Co., Washington, D. C.
- Bolgiano, J. & Sons, Baltimore, Md.
- Braslan, Chas. P., San Jose, Cal.
- Brill, Francis, Hempstead, L. I.
- Buffington, J. J. & Co., Baltimore, Md.
- Cadwell & Jones (by Mr. Jones), Hartford, Conn.
- Chidie, J. Lewis, Floral Park, N. Y.
- Clark, A. N., Milford, Conn.
- Clark, O. W. & Son, Buffalo, N. Y.
- Clark, The E. B. Co., Milford, Conn.
- Comstock Ferre & Co. (by S. E. Willard), Wethersfield, Conn.
- Crosby, S. D., New York.
- Emerson, Frank T., Fremont, Neb.
- Faxon, M. E., Columbus, O.
- Fiske, H. E., Boston, Mass.
- Flower, S. W. & Co. (by C. S. Burge), Toledo, O.
- Forbes, Alex., New York.
- Galloway, Professor, Washington, D. C.
- Greenell, W. H., Pierrepont Manor, N. Y.
- Harvey Seed Co., Buffalo, N. Y.
- Holmes, Harry, Holmesburg, Pa.
- Hollenbach, Peter, Chicago, Ill.
- Iowa Seed Co. (by C. N. Page), Des Moines, Ia.
- Isbell, S. M. & Co., Jackson, Mich.
- Kendel, C. E., Cleveland, O.
- Landreth, Burnett, Philadelphia.
- Leonard, S. F., Chicago, Ill.

CLUB AND SOCIETY DOINGS.

THE COLUMBUS FLORISTS' CLUB held its annual rose and strawberry show on June 11, in the Brent Building. As the regular monthly meeting was also held, the attendance was the largest since the annual meeting. President Sherman F. Stephens was in the chair, and every other officer was present. It would be very hard to say which of the displays were the feature of the evening, the roses or the strawberries. Both were pronounced by all to be the best ever brought together for an exhibition of this kind. To describe the roses fully in detail would take so much space, that I will simply tell you that all seasonable greenhouse varieties were well represented; the whole making a most gorgeous showing. There were no outdoor roses, owing to the late season; and as waiting any longer to hold the show would injure materially the displays of both indoor roses and the strawberries, the club decided to go ahead as planned and have the exhibition. The committee on roses was composed of Jacob Reichert, Gustave Ackerman, and Albert Hills, who made the following awards:—First prize to James McKellar for a grand vase of Uncle John; second, I. D. Siebert for Golden Gate; third, Sherman F. Stephens for a very fine display of Bride. Besides these prize exhibits, large general displays were made by the Fifth Avenue Floral Company, Clover Hill Greenhouses, and Graf Brothers. The latter firm's display consisted of some especially fine American Beauty, and were universally admired.

The affair opened with our regular meeting; it was voted, however, to award the prizes for the Winter displays of plants and flowers. The committee on entertainment, consisting of Mr. and Mrs. M. B. Faxon, I. D. Siebert, and A. Wedemeyer, took charge of the social side. A fine collation had been provided, and among other good things the prize winning strawberries were tested by everyone present. Music, games and sports filled in what was certainly a glorious good time. A three-legged race, in which Messrs. Hills and Bauman, Williams and Metzmaier, and Reichert and Siebert took part, was the evening's feature; the prize going to Messrs. Hill and Bauman. Before adjournment the picnic committee made the announcement that every detail for the Buckeye Lake outing, on July 17, had been made; and that by an arrangement of special cars, the round trip and all expenses would cost adults 60c. and children 30. The affair will be an old-fashioned basket picnic, and for entertainment a hall game, foot races, boat race, three-legged race, dancing, etc., has been arranged, with suitable prizes. At a very late hour we adjourned to meet again June 25. Our club is certainly in a very prosperous condition. All the exhibits, both roses and strawberries, were sent to the hospitals; and the club is also especially indebted to Graf Brothers, for furnishing a large quantity of carnations for this special purpose. We had with us as the guest of the evening W. A. Sperling, representing the Stumpff & Walter Company of New York; and greatly did Mr. Sperling help us to carry out our program, as he kindly acted as judge of the games.

F. W.

HORTICULTURAL SOCIETY OF CHICAGO.—The preliminary premium list has been issued for the annual exhibition to be held from October 31 to November 6, 1907. Copies of the list may be obtained from E. A. Kanst, assistant secretary, 5700 Cottage Grove avenue, Chicago. The prizes to be awarded are, as usual, most liberal. For vase of 50 blooms chrysanthemums, white, pink, yellow, and any other color, first, second and third prizes, respectively, of \$35 and \$15, and \$10 will be given. For best specimen chrysanthemum plant, any color, the premiums are \$40 and \$20; for five standards, \$50 and \$25; five specimen plants, \$40, \$25 and \$10; and for best group of chrysanthemum plants arranged for effect, to occupy not less than 100 square feet, three prizes of \$50, \$30 and \$20 are offered.

The miscellaneous plant classes are also well provided for. The prizes for best collection of orchids are \$50, \$30 and \$20; for best group of foliage plants, to occupy 100 square feet of space, \$50 and \$25; and for group of palms and decorative plants, \$50 and \$35.

Liberal premiums are also offered in the other cut flower classes. For best collection of cut orchid blooms the prizes are \$50, \$30 and \$20; for 100 American Beauty roses, \$75, \$50 and \$25. A silver cup, valued at \$25, will be given for the best 12 blooms of a new rose never exhibited in this country previous to this season.

The carnation classes are well looked after, the prizes for vases of 100 blooms being \$12, \$7 and \$4. The latter as well as the new varieties are to be competed for largely under the color classification of the American Carnation Society, the fifty bloom classes being mainly for specified varieties. The color classification is as follows:

Flesh pink: Being those shades of pink of a flesh or salmon type.

Light-pink: Being those lighter shades of pink, verging on the true pink and lighter than Lawson.

Dark pink: As dark or darker than Lawson, includ-

ing all so-called cerise, not dark enough to be classed as red.

There is also a class for best 100 American Beauty roses, arranged for effect, from which growers are barred, the prizes being \$100, \$75 and \$50. Silver cups valued at \$25 are offered for best seedling carnation and best seedling chrysanthemum, respectively; from each of these competitions are excluded such varieties as have been exhibited previous to this season.

LENOX (Mass.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held Saturday, June 15, President Heeremans in the chair. The effect of lowering the initiation fee has been to induce seven young men to become members of the society. Owing to the late Spring, it was unanimously voted to abandon the June exhibition. At our previous meeting the following questions were asked and were well discussed: "How do plants take up food in solid or liquid form?" "What is capillary attraction, especially in relation to soils?" "Is nitrate of soda a plant food or merely a stimulant; what is its special action on plant growth?" "Is lime of any benefit to the soil at all, or is lime of any benefit to the soil in any locality?" Judging from the opinions expressed, lime is considered of material benefit to soil. G. H. I.

E. A. Seidewitz
Elected President Baltimore Florists' Exchange

MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY.—The June meeting of this society was a very interesting one. A paper on "Melon Culture under Glass" was read by Robert Tyron of Florham Park, and a very able paper it was—clear, concise and well defined. A Herrington had on the exhibition table a collection of twelve varieties of German iris, for which he received a certificate of merit, and samples of muskmelons Royal Jubilee and Sutton's Ringleader. They received a certificate of merit. His lettuce, Little Gem, got a cultural commendation. John Heeremans had four vases of new sweet peas, Nora Unwin, Frank Dolby, Fairy and Mrs. Alfred Watkins, judged a certificate of merit. They are four good kinds and were well grown. A dish of Stone tomato from the same grower received a cultural certificate. James Fraser, superintendent at Cedar Court, had on exhibition his famous set of new colons, Lucania, Daisy Wonder, Mohawk, Combination and Red Boy. They are of the fancy type, sturdy, erect and as beautifully marked as a Rex begonia. They are to be disseminated in 1908 by C. H. Totty in his novelty list. A certificate of merit was awarded for them.

President Vince is absent on his European trip. Robert D. Foote of Morristown, N. J. offers a first prize of \$50 for twenty-five chrysanthemum flowers in twenty-five varieties, twelve inch stems; no strings to it. As it is an open class, we ought to have great competition in this class. O. H. Kahn of Cedar Court offers a silver cup for two vases of chrysanthemums; one of six flowers white and the other of six flowers pink, for members of the society. This gives all the small growers a chance to come in, and ought to be a leader.

The next show will be held in Madison, October 31 and November 1 next. The schedule is ready for the printers; \$500 in cash prizes is listed. E. R.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.—The annual June exhibition of this society was held in Music Hall, 18th Inst. Roses and strawberries, which are generally the leading features at this show, were very scarce, there being only one exhibit of the former, and two of the latter. Cut flowers from shrubs and perennials were numerous and of excellent quality, and the exhibit of vegetables surpassed that of any previous June exhibition. A fine collection of plants and cut flowers from the P. R. Pierson Company made a grand display; notable among the cut flowers was an excellent collection of peonies. The judges awarded a certificate of merit to this exhibit. Scott Brothers showed quite an assortment of hybrid rhododendrons in pots. Geo. Middleton was awarded the prize for strawberries. Howard Nichols won out for 12 varieties of vegetables, and John Elliot for six varieties of vegetables; other prize winners were: George Wiltinger, for sweet peas; W. H. Waite, flowering shrubs; Wm. Grierson, perennials. Special prizes were awarded to George Middleton for greenhouse grapes, peaches, figs and melons; and to Robert Angus for grapes and tables of decorative plants; to George Wiltinger for greenhouse grapes; D. McFarlane for melons and vegetables; Jas. W. Smith and W. H. Waite for perennials, and to John Woodcock for roses. On account of the late season for roses the judges did not award the J. H. Troy cup for the best collection, the cup to be won three years in succession. Francis Gibson also received an award for perennials.

Notwithstanding the fact that the door receipts were donated to the hospital fund, the attendance was very slim. D. M.

PAMPHLETS RECEIVED.

DINGLEY TARIFF BILL, 1897, revised to July 1902. Price, 50c.

Messrs. F. B. Vandegrift & Company, 15-25 Whitehall street, New York, the well-known customs brokers and forwarders, have issued a pocket edition (Vandegrift's Digest) of the Tariff Bill. In addition there is given considerable valuable information regarding the shipment of goods and other matters. Wm. W. Rich, president of the concern named, who is the compiler and editor of the booklet, has produced something that should prove of great utility to importers and others interested.

LOCALITE.—This is a monthly bulletin being published by the Ideal Concrete Machinery Company, South Bend, Ind., for distribution among its customers. By this means the company keeps its patrons posted on its new manufactures and on other matters relating to concrete generally. The idea is quite an ideal one, and is but another example of this well-known concern's enterprise.

Armine Relyea,

Armine Relyea, a well known florist of Orchard Place, Poughkeepsie, N. Y., met a most distressing death Thursday afternoon of last week, when he was struck by a switch engine at the Central New England station and killed almost instantly. His body was badly mangled.

He was about sixty years old. A widow and large family survive him. He also had a son associated with him in business. Mr. Relyea was a member of Triune Lodge, F. and A. M.

John Nicol.

John Nicol, formerly a florist at Oak street, Jersey City, N. J., died about a month ago at the residence of his brother in Owen Sound, Canada, whither he had gone last year in ill health; he had for some years suffered from locomotor ataxia, which had incapacitated him from active work.

Mr. Nicol was born in Aberdeenshire, Scotland, in 1834. He was apprenticed as a gardener in his native town, and later worked for some time under John Bruce, now a seedsman of Hamilton, Ont., at that time foreman gardener to Viscount Arbutnott, Arbutnott House, near Bervie, Kincardineshire, Scotland. On his arrival in this country over fifty years ago, Mr. Nicol secured employment as gardener to Mr. Sprunt of Throgg's Neck, L. I., and subsequently at Newport, R. I. In 1861 he went to Jersey City where he erected a greenhouse establishment, growing plants for the New York market.

Mr. Nicol was at one time president of the New York Market Florists' Association. He was a typical Scot, with all the good traits characteristic of the race, and was held in the highest esteem by all who knew him. He leaves a widow and two sons.

Modern Horticultural Instruction.

Quite recently the editor of a New York horticultural journal, in reviewing a book written by a practical gardener, deprecated the fact that that worthy individual, speaking generally, was, in his writings for the public, too prone to overlook the minute details connected with gardening operations, so necessary to success with all classes of plants. And so in his own journal, when purveying that class of information, he sees to it that "minute instructions" are furnished his readers. Here is a sample of what he evidently considers the real thing, and it is written by a practical gardener, who takes up about four pages of the periodical in question telling how to make a flower bed.

"If the bed has been thoroughly prepared, it will be an easy matter to make the holes for each plant, as the ground is quite loose. Hold the handle of the trowel in your right hand (this would not apply to the Benjamites, who, you remember, were all left-handed), with the blade pointing downwards, as you would a dagger. (Evidently he had Dagoes in mind). Drive this into the ground directly on the top of the line with one stroke. At the same time hold your plant in your left hand. Pull the trowel and soil toward you and before the soil has time to fall back into the hole thus made, put the plant into it. (Rather ambiguous, this; whether is it the soil or the hole into which the plant is to be put?) It is the work of a second. (Amazing rapidity.)"

And so on the "minute instructions" go, sometimes in the most crudely expressed and hazy diction imaginable.

Such literature reminds us of the "Mother Hubbard" sermon, depicting modern methods of ministers, we used to laugh over in our boyhood days. This particular discourse went somewhat as follows:

"Brethren, old Mother Hubbard, she went to the cupboard, to get her poor dog a bone." You will observe that Mother Hubbard went to the cupboard; she did not run or leap, or fly; she slowly went. And what did she go to the cupboard for? To get her poor dog a bone! Yes, the old lady believed her larder was not empty; she thought there was a bone in it," etc., etc.

After reading this gardener's rudimentary and, we think, quite unnecessary instruction so far as any one having a garden is concerned, need we wonder why "amateurs" pine for something more substantial and seek to secure the trade papers in order to get it?

A very full report of the meeting of the American Seed Trade Association will be found on pages 864 to 868.

American Seed Trade Association.

This organization has just rounded out a quarter century of existence, and it was most fitting that, its foundation having been laid in New York, it should commemorate this epoch in the same city.

Through its membership, its ramifications, and its clientele, it represents more of value to America than any other of our many leading business enterprises. Its work is all for peace, for the betterment of man, for the substantiality of the country—May it long continue foremost in good works.

The Horticulturist's Literary Diet.

It is certainly amusing, if nothing else, to read the egotistic ebullitions frequently appearing in our Boston contemporary, prating on the high class standard of the reading matter it is furnishing, and arrogating to itself the credit for the betterment of trade journal methods as these disclose themselves from time to time. Our good friend in the Hub seems to overlook that advancement and emendation has been a concomitant of trade journalism ever since it had its being, and loses sight of the fact that no one factor is responsible for this progress, but that it is due to the demands of the times. It is folly to imagine, far less state, that a new journal conducted on lines which are but replicas of those in existence to an exceedingly large extent, falling far short of long-established periodicals in some features, and surpassing them in none, can in any way influence or improve existing methods. To think so is but unpardonable conceit, and he who clothes himself therewith is unwise, and immediately becomes a laughing stock.

We regret, too, for his own sake, that the Editor of our esteemed contemporary continues to insinuate that the men and women engaged in this business are so devoid of intellectuality that they cannot appreciate and assimilate the best literary feast that can be provided them. True, there may be some who are, or who, like our contemporary, may consider themselves superior in intellectual calibre to their fellows; but, taken as a whole, as regards the quality spoken of, those engaged in the florist industry, as well as in those trades identified with it, to which the trade press caters, will measure up well with, if they do not excel, craftsmen in other lines of business; and it is an insult to their intelligence to intimate that they only are satisfied with the class of news at which our contemporary sneers, and which, in greater or less degree, he is at the same time furnishing.

If our egotistical co-worker in the horticultural literary field is making a success of his journal by pursuing his own imagined sublime methods, let him continue to pursue them. That is his affair; and as we wish everybody to succeed, we are pleased to learn he is succeeding. If other journals, by their methods, are progressing in every way to suit themselves, that is their business, and they seem to be managing things quite satisfactorily—at least to those most vitally concerned. The appearance of their advertising pages and the large and increasing number of names on their subscription lists, all of which was in evidence before and has continued since our contemporary made its advent, are the best indications of approval or disapproval of their clientele; and mere boasting of ultra-excellence by competitors either in the way of self-boost or adverse criticism of others, is futile against such conditions. It is merit, not words, that wins.

Our own opinion is, that the publisher of a trade paper, like a merchant, must cater to each and every one of his patrons as far as he can. Some of these like one kind of reading matter; others, another; and a large number can relish everything that is set before them. It is, though, an impossibility to please everybody. The sensible man, however, will read what suits his taste and let the rest go, being at the same time considerate and liberal-minded enough to believe that what he discards, others may approve of and enjoy.

There is nothing like one minding his own business; it generally, to succeed therein, demands all his attention, and affords him little time for poking his nose into that of other folks. Condemnation or captious criticism of a neighbor's goods is no criterion of excellence in one's own; and, in relation to the latter, as we have said, it needs more than mere self-laudation to stamp them with the hall mark of superiority.

To Destroy Rats.

Editor Florists' Exchange:

Take slaked lime and alum and put the mixture under or on benches, around poultry yards or greenhouses, and you will get rid of all rats. I had them so bad that they destroyed my geraniums and carnations. The rat is very fond of water, and when it goes along on this preparation it gets its claws full, rubs its nose, then runs for water; and as soon as it gets water the animal is destroyed.

For ants and slugs, the mixture named cannot be beaten by anything on the market. I have nine greenhouses, and have not a slug or ant in the place.

Hartsdale, N. Y.

JOHN BURFEIND.

Gladiolus America.

Editor Florists' Exchange:

Since Mr. Banning kindly gives permission to those who dissent from him to use your columns, I will assume that I have yours also, which is much more essential.

I find in his statement absolutely nothing new, relevant, or material, that has not already been fully considered, and, I think, refuted. In my first article upon the subject, in the Shiocton News, and in part republished in The Florists' Exchange, I assumed the existence of his claim, though at that time it had not been openly made, and showed that from circumstances of the case it could not be accepted as valid. The mere fact of putting this claim into print does not add anything to its credibility. If it were preposterous before, it remains so still. No one can, by clothing them with printer's ink, give to incredible things an acceptable character. On its actual merits this claim must be judged, and some aids to such a judgment I will endeavor to furnish.

I note, in passing, that Mr. Banning bestows on me the title of "neighbor." Why he does this I do not know; but I might hence infer that his feelings must have undergone a change since the time when he prevented your leading Eastern growers, who were then at his place and expressed a wish to visit me, from doing so, by telling them that I lived so far out that they could not possibly do so. I was not then near enough to be entitled to "neighborly" treatment—and the distance remains as it was. But let that pass.

He also denies having been my selling agent. Well, we need not quarrel over the name, when in his next sentence he admits having done the things a selling agent would be expected to do. I might add, that besides bulbs he also sold on joint account, cut flowers and seed. Does he wish me to put in evidence the written agreement, book accounts and correspondence of that period? But this, too, is immaterial.

I note also his attempt to belittle the character of my stock. It is rather unfortunate for his argument that it is so very unlike his high-flown descriptions of the same stock, when he was seeking to sell it, and that it was bought and handled by the best and largest seed houses, East and West, in constantly increasing quantities; and that when, as he would have us believe, he sought to replace it with something better, he should have gone back to the identical growers from whom I had my stock, and from whom neither he nor anyone else could obtain any better than I had obtained from them. This, too, is an "aside," but it serves to show the animus of his entire article.

Further, he states that he did not make use of any stock grown by me, in starting his collection. This statement is flatly contradicted by statements of parties who certainly ought to have known, parties who planted the bulbs in question for him and were familiar with all the circumstances. Moreover, I was informed of this by them at the time, simply as a matter of news; at a time when there was none of the present spirit of contention, strife and rivalry, to influence their statements. Which is the more likely to be correct, is a point to be considered in the light of these attending circumstances.

But now a few serious words, to the main point of discussion. If any readers of this article have ever been called upon for jury service to decide a controverted case in the face of conflicting testimony, they will be the better fitted by such experience to decide in this matter. At least they will have learned, from the charge given from the bench, if not elsewhere, that they must be governed in reaching a decision by the preponderance of evidence. And this preponderance is to be determined, not by the length or loudness of testimony, but by such considerations as these: Is the evidence consistent with itself, or with other known facts, or with previous statements of the same witness? Is it in harmony with the attending circumstances? Is it in accord with the probabilities of the case, or is it within the limits of natural possibility? And does it involve incredible or unreasonable corollaries? Or does it commend itself to sound judgment and good common sense? Suppose we follow for a little this line of study. Here is such a case. Here is conflicting testimony enough, certainly. One may be the truth; all cannot be. It is for the public to determine which most commends itself to favor.

To Mr. Groff's claim I have already referred somewhat fully elsewhere. How, then, does Mr. Banning's statement meet the above requirements? Is it consistent with itself and his previous utterances? This is, so far as known, the first and only occasion on which he has made such a claim. Previous to this he had always stated that the origin of America was unknown to him. He stated this to Mr. Groff, in Mr. Cowe's presence, as all three aver, and both he and his grower have repeatedly stated to citizens of this place the same thing. If he demands affidavits, I have no doubt he can be accommodated. Here is certainly inconsistency. If the former statements be correct, as I believe, then the later claim is unfounded. And, on

the other hand, if the last is the true one, how account for the fact that for years a course of prevarication had been followed, apparently without motive? Does not everything point to the conclusion that the late claim is simply an afterthought, which he has attempted to substitute for the former statements, all too clumsily to gain our assent?

Does this claim involve any impossible conclusions? We note this, that if Mr. Banning has discovered a method by which a single gladiolus seed can be developed into "four hundred thousand number 1 bulbs," to say nothing of smaller sizes and bullets, within the time specified, he is in possession of a secret of far greater value than the new variety he claims to have thus developed. Such a story may do for "tell to the marines," but practical growers, with experience and knowledge of the capabilities of the species, can not thus be deluded. They will continue to believe that this can not be done, and has not been done. Where is the preponderance of evidence in this matter? As the case now stands, my first statement remains uncontested in any essential point, in accord with all the known facts, and in conflict with none, substantiated by the statement of the present owner of America, who is a disinterested party; and it seems to me the preponderance of evidence ought to give a decision in its favor, as I believe it will.

Kinsman, O. WILBUR A. CHRISTY.
Editor Florists' Exchange:

We note Mr. Groff's article in your issue of June 8, and we cannot see that he has proved anything as yet. Regarding his reference to Mr. Banning's article and ours appearing at the same time, we would say that we still state that Mr. Banning did not say to us that he raised the first bulb, but that was nothing unusual, as we did not ask him. We realized that he had the stock of the best gladiolus that had ever been raised, and it being entirely new we were induced to buy the stock. Why does Mr. Groff keep this question going unless he can produce some proof of his being the originator of America? He cannot deny the fact that if he had produced it ten years ago, growers and florists all over the country would have it in their stocks at the present time, if he has sold such great quantities as he claims, and we do not find that there is anyone coming forward to say that they ever saw America before we put it out. It seems to us that the spirit that prompts anyone to make capital out of someone else's success is a very selfish one.

JOHN LEWIS CHILDS.
Editor Florists' Exchange:

I notice in Mr. Childs's article the statement is repeated which first appeared in the Shiocton News and concerning which I sent both to him and to that paper a full explanation. It is fair to presume that the article in The Florists' Exchange was already in the hands of the printer when Mr. Childs received my explanation, else he would not have repeated a statement already shown to be groundless.

The statement referred to is that if America originated, as claimed, in my seedling bed, I would still be in possession of the bullets, even after parting with the original bulb, hence should also have had a stock of it.

So far, this is the only objection raised to my claim, which has any weight whatever, even if true, and all its apparent force is dissipated by the simple explanation already furnished Mr. Childs, and which I repeat here for the benefit of your readers. It is that at no time, either then or since, has it been my practice to preserve or make any use of bullets from untested seedlings, as I do not consider them as a class worthy of propagation. Every grower of experience will at once admit their great inferiority to any good mixture, and that they would deteriorate any such mixture if incorporated with it. I do not know the practice of other growers on this point, but will say that if they propagate from the bullets of the mass seedlings without selection, it is not to their credit. As one great object of my work has been to improve the quality of my stock, I have never taken such a backward step as this. On the contrary, the ground between the rows of my seedlings under test, is literally carpeted every year with the plants pulled up by the root, because of lack of merit. I do not admit that this indicates a low quality in my seedlings as compared with others. Growers all know that only a small percentage of seedlings, even of the very best parentage, manifest superior merit, and the remainder are of all grades of inferiority. Hence I have never propagated from such stock. This explanation will, I think, be sufficient answer to the objection stated by Mr. Childs.

Our London Letter.

By A. Hemsley.

THE LATE DR. MAXWELL TYLDEN MASTERS, F.R.S.—Almost everyone throughout the world, who has any connection with horticulture or scientific botany, will mourn the loss of the late Editor of the Gardeners' Chronicle. Most readers of The Florists' Exchange will have heard of his death before these lines can be published, yet I would like to pay a tribute to one who was the greatest friend I had during the first part of the

time I became a writer for the horticultural press, and who had always shown me much kindness since. During the past few years I have come in closer contact with him, and I have always found him most generous and considerate. It is only those who come in close contact with the Editors of the horticultural papers who can understand, in the least, what it is to hold such a position. The heaps of papers they have to wade through is trouble enough, but the letters from disappointed contributors is even worse. Dr. Masters was most careful to encourage and help anyone, and if compelled to reject their contributions, he always gave a kindly word of encouragement and good advice to those who needed it.

In regard to his personal attainments as a practical writer and an exponent of scientific principles it is not necessary for me to dwell, for all interested in the matter are aware that he was always ready to give his valuable advice and assistance to anyone on any subject connected with horticulture. In his death many have lost a kind and sympathetic friend, and horticulture one of its most valuable members.

AT THE ROYAL BOTANIC GARDENS, REGENTS PARK.—The most important exhibit at the Summer show was the large tent of rhododendrons which Messrs. J. Waterer & Sons, Ltd., Bagshot, filled so well. It was the opinion of all that it was one of the finest exhibits of rhododendrons ever seen. In taking note of the best varieties I found the name of Waterer frequently occurring, Gomer Waterer, named after the present head of the firm, being one of the best. Mrs. John Waterer, Michael Waterer and Kate Waterer were also noted. Pink Pearl was in grand condition, and if there is one rhododendron finer than all others it is this variety. J. Henry Agnew, Mr. Tom Agnew, Mrs. H. Agnew, Mrs. Holford, Lady Hillington, Princess Mary of Cambridge and Mrs. C. E. Stirling were other varieties of note. The large undulating banks were relieved with tall plants of acers and other suitable foliage. Kalmias, viburnums, etc., also afforded a little relief to the showy rhododendrons.

SWEET PEAS.—We are still getting further additions in the way of new varieties. H. J. Jones, Lewisham, has recently exhibited some distinct forms. C. W. Breadmore, Winchester, also staged some promising new varieties, but before pronouncing definitely on them I should like to see them later in the season.

While about sweet peas, I may say that I have noted the remarks of your various correspondents. Mr. Weston says I do not understand the rules of the classification classes, but in this he is wrong, for it is because I do see the error of putting one variety before another that I object, and when certain varieties have to be included in classes, I have found that some exhibitors are inclined to think that where the special colors are open for any variety, it is policy to put up those included in the classification classes. If anyone likes to offer a special prize for any particular variety, it may be all right, and in the classes some may be given as types regarding color, etc.; but now that the varieties are getting so numerous, there should be no restriction for this may lead to confusion. We will suppose someone raises an improvement on any of these classification varieties, it cannot be shown except under the name given. There is one thing I would suggest, and that is, that certain colors should be given and no names attached except such as "Jones's White," "Burpee's Pink," or "Eckford's Yellow," etc. We should then get to know who has the best types of the different colors. I remember the time when we had named cinerarias, named herbaceous calceolarias, and all tuberous begonias of any quality; also gloxinias were all named, but the two first mentioned are never seen under names now, and gloxinias are rarely named. Some of the best begonias, both double and single, may be bought under color names only.

While about names I may once more refer to the nephrolepis. At a recent show I made careful comparisons, and have also inspected the stock in several of the leading fern nurseries, and I think that though there is some distinction to be seen among the varieties, Todaeoides, elegantissima and Whitmanii, it would puzzle many people to sort them out if the plants were mixed together. I suppose it is in the interest of the trade to keep giving new names to plants, but it would be much better if we established a definition of colors and let each grower append his name to any improvement.

ROSES.—I have written so much about the Ramblers that I hardly like to refer to them again, yet the splendid plants of Hiawatha I have recently seen, compel me to say that it is one of the finest decorative plants we have. And I find that the florists who do decorative work fully appreciate the value of all of the Rambler varieties. Lady Gay will want something good to succeed it. In market and at shows it has been one of the best, and it flowers so well from all the lateral shoots when grown erect, where most of them require to be twisted round to get the lower portion of the long growths to break out well.

THE ROYAL HORTICULTURAL SOCIETY.—The fortnightly meetings continue to grow in importance. The very large increase in the number of visitors gives a great inducement to all growers to exhibit, and taking

the last three meetings they have excelled anything we have previously seen at the same period, both in regard to exhibits and attendance. There may be a little falling off in really new introductions. This is not surprising, considering all available ground has been gone over so many times.

We get a good many improved garden varieties and hybrids. Orchids have received their full share of attention and many remarkable hybrids have been shown. Among other subjects, the revival of older introductions, which had nearly been lost, has been remarkable, and I believe there is still more to be done in the way of looking up plants which were introduced before we had the facilities we now have for growing them.

There is not the demand for choice stove plants now, as there was formerly, but there are some which were grown in heat and under shade which are found to do better with more exposure. The begonias are an example of the errors committed years ago; those which were grown in the stove are now found to do well in the open ground.

The trade for food plants of decorative value increases, but there has been a great falling off in the demand for botanical curiosities, or for such as have only the merit of being rare; yet even now there are some who value plants because they are rare.

HYDRANGEA ARBORESCENS GRANDIFLORA.—This plant was well shown by Messrs. G. Paul & Son, Cheshunt, and gained an award of merit. Though hardy, the plants appeared to have been grown under glass. They were bushy, with numerous heads of clear white blooms, and should make useful market plants. The species was introduced about 170 years ago. I cannot say how much superior the variety grandiflora is to the parent.

MYOSOTIDUM NOBILE.—This is another old plant worthy of attention. Though a hardy herbaceous plant it is fine for pots. J. Douglas exhibited some fine specimens. It has rather large, fleshy leaves and hold clusters of small blue flowers—a sort of magnified myosotis. It was introduced nearly fifty years ago, but does not appear to have received much attention.

Chrysanthemum Society of America.

The executive committee in charge of the annual exhibition of the C. S. A., to be held in the American Institute rooms, New York City, on November 6-7-8, consisting of A. Herrington, C. H. Totty and Wm. Duckham, met on Wednesday, June 12, 1907. Mr. Herrington as chairman of the committee reported that final arrangements were completed. Dr. Hexamer informed the committee that all efforts to secure larger accommodations had proved unsuccessful; consequently it was decided to make it exclusively a chrysanthemum show, thereby insuring room for the exhibits in the hall of the Institute.

President A. J. Loveless presented a premium list, which includes four gold, silver and bronze medals and many good cash prizes, also a number of valuable prizes to be offered by the Institute, all of which should bring out spirited competition and insure a good show.

It was found necessary to make some slight changes in the schedule as previously published, in order to avoid a duplication of classes, and also to make it possible for every grower of chrysanthemums to participate in the competition.

The exhibition promises to be the largest in the history of the society. The schedule is in the hands of the printer and will be mailed to members in due course; all interested exhibitors can obtain a copy by applying to the secretary.

DAVID FRASER, Secretary.

Class A—C. S. A. prize, silver cup for best 10 blooms any variety, long stems.

Class B—F. R. Pierson Company prize, silver cup, for best 10 blooms white, yellow, and pink, long stems respectively.

Class C—Special prize, silver cup, for 12 blooms Miss Clay Frick, long stems.

Class D—J. C. Vaughan prize, silver cup, for best specimen plant any variety. Open to private gardeners only.

Class E—W. Wells & Company prizes, gold, silver and bronze medals, for 6 blooms Miss Miriam Hankey, long stems.

Class F—E. G. Hill Company prizes for 12 blooms President Loubet, first, \$10; second, \$5. For 10 blooms Mme. Armand Detroyat, \$10.

Class G—Henry A. Dreer prizes, for 24 blooms 6 varieties, 4 blooms to a vase, 24 inch stems, first, \$10; second, \$5.

Class H—Stumpp & Walter Company prize, for 3 blooms, Morton F. Plant, 24-inch stems, \$10.

Class I—J. M. Thorburn & Company prize, for 12 blooms 4 varieties, 3 blooms to a vase, 24-inch stems, \$10. Open to private gardeners only.

Class K—A. T. Boddington prizes for 10 blooms Beatrice May, long stems, first, \$10; second, \$5.

Class L—Chas. H. Totty prize for 12 blooms, 12 varieties, 12-inch stems; introductions of 1907, first \$15; second, \$10.

Class M—Nathan Smith & Son prize, for best 6 blooms seedling or sport of American origin, commercial scale, first, \$15; second, \$10.

Class N—Special prizes for largest bloom white, yellow, pink and any other color, \$5, respectively.

Peter Henderson & Company prize, \$25, to the private gardener winning the greatest number of points to be determined as follows: any first prize to count 10 points; any second prize to count 5 points; any third prize to count 3 points.

FOR THE RETAILER

Summer Decorations.

Summer decorations as seen at Newport, Bar Harbor and other fashionable colonies, where our wealthy patrons spend the warm months, differ in many ways from the more elaborate affairs that are given during the Winter season. There is a tendency toward simplicity, and although at Newport dinners are given where orchids, lily of the valley, and indoor roses are used, the general demand is for garden flowers, which cannot be obtained in the Winter time. There is in Summer always a generous supply of these, at least at Newport and Bar Harbor, where the climate is admirably suited for growing of outdoor flowers.

The apparently clumsy hollyhock is one of the many sources of supply for luncheon and dinner decorations; these are not used on the stalk, except when employed for large decorative effects, but the individual flowers are taken from the stems and wired separately. Both the pink and the white varieties are good for this purpose and make up very prettily with *Adiantum cuneatum*. The flowers when taken from the plants have little or no stem, but this may be overcome by making a short hook at the end of the stemming wire and passing the straight end through the top of the flower. The hook will be found sufficient to hold the bloom in place, and the remainder of the wire forms the stem, which may be inserted into the moss.

Gladiolus are splendid for large effects, the bright scarlet varieties being especially brilliant for daylight functions. Gladiolus and *Hydrangeas paniculata* go splendidly together and have a tendency to bring out the color. *Lilium speciosum rubrum*, alium, and roseum are hard to excel for hot weather, the lasting quality of the flowers being one of their recommendations. Flat table decorations done in these flowers may be made very beautiful, as they look especially well laid on the table in festoons with *Adiantum cuneatum*, or strings of *Asparagus plumosus*. They are equally good for high decorations, and look well in tall vases. If the flowers are to be laid on the cloth, they should be detached from the main stalk. It should always be the aim of the decorator to give a customer something different. You may not be able to find it in your own garden, but by doing a little foraging it will often surprise you what can be picked up. It often takes a man a whole day to get enough of one special flower for a large decoration at Newport or Bar Harbor. A lady saw a plant of *Agapanthus umbellatus* outside a shop at Newport one morning and gave an order for a large dinner decoration. It seemed impossible at the time but nearly two hundred spikes were obtained in two days and a most unique and beautiful decoration resulted. *Allamanda Williamsii* is another favorite at that resort and makes up beautifully with *Adiantum Farleyense*.

Gloxinias, which are grown largely by the private gardeners, take a prominent place in home decorations and some results obtained with these multi-colored flowers might well be imitated by their more experienced

Portion of Rhododendron Exhibit of J. Waterer & Sons, at Royal Botanic Gardens Show, London, Eng., June 10, 1907

Antirrhinums in separate colors or in different combinations are very popular at Newport, the yellow shades being especially so. The darker shades show up better if the white varieties are used with them.

Iceland and Shirley poppies are really beautiful and make a most dainty arrangement, but they are very frail and should be put on the table a few minutes before dinner is served. I saw a very nice arrangement last Summer at a luncheon. Shirley poppies were used in all their varying shades; the table was entirely covered with thick fresh green lump moss and the poppies so arranged that they appeared to be growing, *Adiantum gracillimum* being used as an embellishment. This beautiful variety of maidenhair fern is peculiarly adapted where light airy effects are desired, but it is not generally grown, and is often difficult to obtain.

Sweet peas are general favorites and are perhaps one of the most satisfactory flowers for Summer. Their fragrance is always refreshing, and their great variety of coloring makes them useful for all occasions. Nearly all of the colors blend well, and are generally most effective when used in that way. The crimson varieties go well with white, and some of the pink shades may be introduced in the same arrangement. All varieties, from white lavender to the deepest purple, give a very rich effect, but mixing must be avoided. They should be so arranged that the different colors blend one with the other. It is surprising how the number of shadings that may be introduced without a clashing of colors, and there are few flowers with a greater variety of these than sweet peas.

brothers, who make decorations their business.

The later Autumn flowers are perhaps more in demand at these resorts than the earlier Spring flowers. The height of the season being August and September, when dahlias are at their best, some magnificent varieties being used for table work. *Salvia splendens* and, in fact, any thing that has a flower, is seized upon for decorative purposes—from rare orchids, to blazing sun-flowers.

D. RAYBUN.

Books Received.

CELERY CULTURE.—By W. R. Beattie, Bureau of Plant Industry, United States Department of Agriculture. Fully illustrated. Cloth, 148 pages. Price, 50 cents. Publishers, Orange Judd Company, New York.

This book is the result of many years' experience in celery growing, both for home use and for market. The author has also had the benefit of acquaintance with many of the most successful celery growers, and has had abundant opportunity to study their methods. The work is complete in every detail, from sowing a few seeds in a window-box in the house for early plants to the handling and marketing of celery in carload lots.

Complete cultural directions are included, together with estimates of the cost for equipment and running expenses, and a fair estimate of returns from one acre. There is perhaps no other garden crop that requires or that will justify so liberal a use of fertilizers

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

New York.

YOUNG & NUGENT, 42 West 23th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Washington, D. C.

GUDE BROS., 1214 F Street, N. W. We excel in high-class flowers and design work of every description; quick service, reasonable charges and liberal treatment have placed us on top. Try us.

Milwaukee, Wis.

THE C. C. FOLLWORTH CO., Wholesale Florists, will take care of all your Retail orders for the delivery of flowers anywhere in Wisconsin.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Cincinnati, O.

HARDESTY & CO., 150 East Fourth, sell the best grade of flowers grown. Retail orders from distant points for delivery in Cincinnati or surrounding territory will receive prompt attention. Telegraph us.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Dallas, Texas.

LANG, THE FLOREST, the largest flower store in the South. Floral designs and all flowers in season; personal supervision and prompt service in Oklahoma, Texas, Louisiana. Mail and telegraphic orders solicited.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Albany, N. Y.

EYES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

as celery; complete information is given regarding the value, kind and quantity of fertilizers to apply; also as to the home mixing of fertilizers for the celery crops.

Among the other subjects treated are the following: Areas adapted to celery culture; preparation of land; fertilization; production of plants; planting in field and garden; cultivation, irrigation, diseases of celery; insects and animals injurious to celery; blanching; storing; marketing; varieties; profits derived from celery culture; production of celery seed; celery growing for health, pleasure and profit.

SAVE GREENHOUSE FUEL

WITH the Ideal Concrete Block Machine, any florist can build his own greenhouses at little cost. Saves in fuel, because the hollow block is practically frost-proof. Lowers insurance rates and ends the cost of maintenance, because Ideal Blocks are fire-proof and everlasting.

IDEAL CONCRETE MACHINE

*The original and only perfected Concrete Block
Machine working on the face-down principle.*

ENABLES the manufacture of Ideal Concrete Blocks from sand, gravel and a little cement at a cost far lower than that of other building materials. May be operated by any man without previous experience. Low in cost, rapid in operation, and can never wear out or break in use.

WRITE for catalogue and illustrations of Ideal Concrete Block construction, of practical value to every florist. Sent Free.

JOHN C. HATCHER, Amsterdam, N. Y.

Plant for Name, J. H. & Son.—Kochia scoparia.

(94) **Peonies not developing.**—Can you inform me of the reason for so many buds on peonies refusing to develop after having grown large enough to be seen. Is it a blight? Do ants cause the damage, or is it another of those peculiarities hard to explain? Some buds develop beautifully, others on some plants are stunted. Why?
 New York. A. H. S.

—The continued wet weather following the setting of the buds is no doubt the cause of so many of them failing to fully develop.

(95) **Pierstoni Fern Reverting.**—Kindly tell me why the Pierstoni fern comes the same as its parent, the Boston fern. Some of mine were beautiful, but all of the new fronds are coming plain like the Boston. Please state what treatment I should give.
 Penn. A. M. E.

—Under some conditions the fern mentioned will revert to the original type. The best treatment to give, in order to avoid any reversion, is to keep the plants growing all the time. Give them a good, rich soil; do not allow them to become root-bound in the pots, and cut away all the fronds that are of the parent type as soon as discovered.

(96) **Commission Methods.**—Why not expose the commission man and his methods? May 31 we telephoned for 200 carnations, and the price was 4c. to 5c. June 6 we shipped same dealer 700, and the price allowed was a shade over 1/2c. When will this treatment of growers cease?
 N. J. A. B.

—Inquirer should give us fuller particulars. Who was the commission man? What grade of carnations was bought, and what were the grade and varieties consigned?

(97) **Agaricus Subrufescens.**—Will some reader who grows the mushroom. Agaricus subrufescens, or who knows where spawn of that variety of mushroom can be obtained, be kind enough to oblige this office with the information asked?

AGERATUM, dwarf blue, 2 1/2 in. pots, \$2.50 per 100; 3 1/2 in. pots, \$6.00 per 100.

LACER & HURRELL, Summit, N. J.

Herbaceous Border Notes.

A week of more seasonable weather has made a vast difference in the hardy border, and already the glories of Summer verdure are apparent everywhere. The German irises are the most attractive plants at present, and where a good collection of varieties is planted there are many rich and pleasing flowers to be seen. It has been said and truly that the iris is to the garden what the orchid is to the greenhouse, and nowhere can this be better proved than where a fine collection of German irises is in bloom. There are a great many varieties, and they are like many of the other hardy flowers, the peonies for instance, so mixed up that the only way to get a good collection is to make selections when the plants are in bloom. There are several different types also of these flowers, such as the florentina or the pallida, and these divide into many varieties. Iris florentina is one of the earliest to bloom of a fine whitish color. Among the pallida forms Dalmatica is considered the best. It is tall growing, of a beautiful shade of blue. Pallida speciosa is of a lighter shade, and the true pallida is still lighter. Iris squalens includes many of the yellow or brownish shades of color. Iris flavescens is a fine yellow and Canary Bird is a named variety of a similar type of a very pleasing color as the name implies. Iris plicata is another form which has many pleasing variations and Iris aurea is one of the finer yellow forms. There are many of the named hybrid forms which are exceedingly fine; a few of the better ones are Queen of May, which has a tinge of reddish in its colorings, Mme. Newhoner, a very fine yellow sort, macrantha one of the best dark ones, Gracelius and Robert Burns both good yellow varieties. Maori King a splendid yellow sort, light blue, Garrack, light blue with darker falls, and spectabilis, a fine dark variety. Iris sibirica, both light and dark colored, are just coming into bloom. These Siberian varieties grow taller than the German iris, and they are well worth a place in the border. Iris pseud-acorus is a moisture loving variety and does best when planted by the edge of a pond or stream. Its color is yellow, and when water gardens are

given a natural appearance at their edges this iris is indispensable.

In the border now are many of the hybrid aequilegius. Some of the California hybrids are very fine, but the true cornelia is, in my opinion, one of the best of them. Several of the lychuis are now showy. L. viscaria, viscaria alba and viscaria splendens are all good. Lychuis bos-cuuli and its white form are also good as is also Lychuis diurna rosea, taller growing than those mentioned and a good variety.

Old fashioned but showy are the rockets, Hesperis matronalis. There is a great variety of color and they brighten up wonderfully at this season.

Some of the hemerocallis are now in bloom. Dumortieri and Middendorfi, with its pretty yellow flowers, are the earliest. Dietamnus fraxinella and the white variety are both splendid border plants, about two feet high, which are in full bloom at present; and one of the best plants is Baptisia australis, with its beautiful blue, lupine-like flowers, above its pretty deeply cut foliage. There is a white form of this also which is good.

The oriental poppies are some of the most showy of plants, and they are now in their glory; but they do not last long and their location will have to be filled up with annuals if some other later blooming plant has not been mixed with them. The Iceland poppies, (Papaver nudicaule) are good, of many colors, and small as compared with the oriental varieties.

The lupines are now in bloom and are well worth growing; polyphyllus and its varieties are considered the best. The centaureas, montana, rosea and alba, continue to bloom in profusion. The hybrid pyrethrums are just in flower; there are many fine varieties among them, but many people do not grow them as they fail to do well with them. They are the better for being cut back and transplanted just after they are through blooming.

Achillea tomentosa is a dwarf growing form, with bright yellow flowers; and Salvia pratensis in different colors is just getting showy. Incarvillea Delavayi is a beautiful plant of rather recent introduction. It has been called the hardy gloxinia on account of its flowers being shaped like those of that plant. It seems perfectly hardy and should be in every collection.

Aster alpinus has commenced to bloom; it is the earliest of the hardy asters. Some of the verbascurus are rather pretty, especially Phonicum which has several colors.

There are a host of dwarf growing plants yet in bloom, but these are generally in the rock garden. Among them we have lots of the violets, anemones, primroses, saxifrages, rock roses and many others.

Very imposing plants at present are the eremurus; their beautiful large spikes of bloom are very attractive. The best varieties are himalaicus and robusta. Bungeanus is a later variety with smaller yellow flowers.

Only a few of the peonies are yet in bloom; it will be ten days before they are in their glory, although the old double form of officinalis is just out, and reminds one of the old garden of grandmother's time.

Boston, Mass.
 (These notes were crowded out of last week's issue.)

A. N. PIERSON, CROMWELL, CONN

Baltimore, Md.

Our peonies and roses are now in full bloom with a tendency toward the decline by the end of the week, on account of the heat. At present there is a great glut in the market; the Exchange is piled up high with peonies, roses, carnations, sweet peas and various other cut flowers. Prices are a way down and stock is excellent; it is surprising how the Exchange manager, J. J. Perry, is getting rid of as much cut flower stock as he does under present conditions.

The club will have an outing to the private estate of Mr. Wm. Lanahan at Woodbrook. Mr. Lanahan's property is one of the best kept and most beautiful in this vicinity. Jacob Kepplinger is the gardener, and his work shows for itself.

Another beautiful spot is Uplands, the property of Mrs. Henry Barton Jacobs; Geo. Morrison is the gardener and manager of this estate, and has the property in an exquisitely fine condition.

Our boys are looking forward with great anticipation toward the S. A. F. Convention, and a goodly number of Baltimoreans and other Marylanders are sure to attend.

The Florists' Club held its regular meeting on Monday, June 24. President Fred. C. Bauer tendered a luncheon and smoker to the 40 members present; all of whom enjoyed the president's hospitality to the fullest extent. The question of exhibits and decorations at the Jamestown Exposition came up and was discussed at length. R. Vincent, Jr., gave an interesting talk on several topics which have been before the Gardeners' Club for some time; he also treated the members to an exceptionally well delivered biographical illustration of his life-work as a horticulturist. Mr. Vincent laid particular stress on the necessity of more harmonious action to further the various horticultural interests in the state of Maryland.

Phil. B. Welsh exhibited an exceptionally fine collection of gladioli.

The cut flower market continues in poor shape, more on account of excessive supply than anything else. The weather is very hot and the effect of it is beginning to show in the somewhat inferior quality of the flowers now coming in.

J. J. Perry and Mrs. Perry have gone to the Jamestown Exposition.

C. L. S.

NEW BEDFORD, MASS.—There is a regular glut of flowers in this market just now. This week some peddlers were seen selling carnations at 20c. per dozen, and later in the day, 10c. per dozen. Roses are getting rather scarce, owing to most of the growers having planted young stock or drying off the old plants. There is plenty of Ten-week stocks on the market.

E. H. Chamberlin at 4 Purchase street had a bargain sale of carnations Saturday last at 25c. per dozen, retail. Mr. Chamberlin's lease on W. Y. Kroeber's place runs out next month. We understand that he will not renew it again.

There is some talk of James Cleary, manager for Wm. P. Pierce on Union street, buying out the business of E. S. Haskell on Pleasant street. This ought to make a good place with the right man in back of it. We all wish him success in his new undertaking.

HORTICO.

Seed Trade Notes

PROVIDENCE, R. I.—A notice from the trustees to the creditors of Rennie & Thomson says: "Very much to the gratification of all concerned, we are able to report that the plan to liquidate the business of Rennie & Thomson, dealers in seeds, garden implements, etc., 135 and 137 Washington street, proposed in a circular dated April 15, 1907, has been successful. More time was taken to convert the stock into money than was at first anticipated, but this delay has been due to the backwardness of the season, which has affected the seed business generally throughout the country.

"The firm of Rennie & Thomson will soon be dissolved, George C. Thomson retiring, but Mr. Rennie may continue the business and, if so, will inform you later of his location and business connections.

"We think it is due to Mr. Rennie and Mr. Thomson to say that they have done all in their power to make this settlement possible, and we bespeak for them on this account your favorable consideration in the future in any business dealings they may have with you."

Providence, R. I., June 25, 1907.

Hail Storms.

JOPLIN, Mo.—A hail storm swept this district on June 14, breaking much glass in the greenhouses of H. A. Hall. The plant of Edward Teas was in the storm's path, but escaped without so much as a broken pane.

ST. PAUL.—Business has begun to lag to a large extent. June weddings appear to be all over, and cut flower sales have dropped off materially. Funeral orders seem to be about all that is left, and some of the trade has had considerable work in that line of late. A great many orders for designs were received for the funeral of one of our prominent men who died a few days ago, but as the family objected, the different florists were requested to cancel the orders. Stock is, of course, plentiful, and the dealers have shown an inclination to accept almost any reasonable offer for it.

Bedding stock is beginning to play out; about all that seems to be left are geraniums; some establishments have a great many of these and quote special prices to close them out. A great many stores are still carrying heavy stocks of blooming plants, but as the demand is light, a considerable number is lost.

10,000 VINCAS—5,000 ROSES

Fine Vincas, from 2 1/2 in. at \$2.50 per 100; or \$22.50 per 1000.

BRIDE and BRIDESMAID ROSES, from 3 in. pots, at \$4.00 per 100; or \$25.00 per 1000. Good stock. Cash with order.

W. T. HILLBORN, 314 1/2 STREET NEWTOWN, PA. GARDENS.

Warrensburg, N. Y.

S. E. Prosser controls the entire florist business of this section. His nearest competitors are at Glens Falls. The Prosser plant consists of several well filled greenhouses, chiefly bedding plants. The demand for geraniums, vincas, and vines of all kinds for the hotels and Summer resorts along Lake George is considerable. Mr. Prosser gets a large portion of this trade. He has added a new house this Spring, and is to build two more additions as soon as he gets his bedding stock sold. Two new boilers will also be installed.

Buffalo, N. Y.

What is the matter with the Florists' Club getting together and appointing a committee to arrange for the annual picnic? By starting early we can have our outing the latter part of July or first part of August. The days are longer then than later in the season, and the excursion would be more enjoyable in every way.

PITTSBURG, PA.—Crossed electric wires in the basement of the store of Breitenstein & Flemm, Market street and Liberty avenue, last week caused a fire, resulting in \$100 damage.

WASHINGTON.—Summer came with a rush on June 15, and high temperature has prevailed ever since. With the advent of hot weather prices went down on all kinds of cut flowers, and the supply has increased. June 19 was one of the season's busiest days for the florist, as several of the high schools held their commencement exercises on that day; quantities of flowers were used. These commencements practically end the busy season, and with the expiration of June and the few weddings set for that month, the dull season will be on, and business slack until Fall.

John H. Davis, florist, of Chain Bridge Road, D. C., has been serving as a member of the Jury trying the celebrated cotton leak cases in this city. J. L. C.

BOHN SYPHON REFRIGERATOR

..FOR FLORISTS..

St. Paul, Minn., May 10, '07.
WHITE ENAMEL REFRIGERATOR Co., St. Paul.

Gentlemen:—We have now used the new show case which you installed for us about six months ago. We can say that it is everything you promised for it, and that is "perfection."

We don't know what else we could say except the first case which you built for us about seven years ago helped materially to our success. Your system is certainly ideal for keeping flowers.

The workmanship on this new case could not be better. We have had people say, "Why that is more finely finished than our piano."

Yours truly,
HOLM & OLSON.

STYLE "L" BUILT FOR HOLM & OLSON, ST. PAUL, MINN.

A Live Florist Cannot Afford to be Without a Bohn Patent Syphon Refrigerator.

Everyone who is familiar with it says 'It is the Ideal Florist's Refrigerator.'

New York.

News of the Week.

From the advance sale of tickets, it is evident that the seventh annual outing of the New York Florists' Club is to eclipse all previous records. The steamer Isabel will leave the dock at Thirty-first street and East River at 10 a. m., Tuesday, July 2. As all preparations are now made, and tickets purchased by those intending to go, the only thing that can mar the event will be a day of had weather—a very unlikely happening at this time of year.

With the end of this week come the close of the school season and commencement exercises, and so far as this city is concerned, the retail business is about over for the time being. It is a noticeable fact that the graduation exercises of the various schools do not bring so much grist to the florist mill as was the rule in former years. Time was when baskets and bouquets were made by the thousands and sent by wagon loads, one might almost say, to many of the surrounding towns; but the present heads of our educational establishments do not favor, in fact, many of them prohibit altogether, the giving of flowers to graduates, not be-

cause flowers are not thought to be appropriate gifts on such occasions, but chiefly, we believe, because they are the cause of many sad moments to those graduates who have not a circle of friends wealthy enough to remember them with flowers on their graduation day.

Phil. Kessler, who recently went to Jamestown, Va., to take in the exposition, returned very much disappointed with what he saw. He thinks that one day there is a long enough visit for any one to see everything that is to be seen, and that by the first of September the exposition will perhaps be worth paying a visit.

Louis Lundberg, a youth of 16 years of age, has been arrested for stealing \$60 out of the safe of James McHutchison, 17 Murray street. The theft occurred on May 10. The young man having advertised for a position, secured one with Mr. McHutchison; he stole the money out of the safe the first time he was left alone in the office while the safe was open. Other charges of a similar nature were proved against him, and he has confessed to working the scheme on other employers with whom he secured positions through advertising in the daily press.

The greenhouses so long owned and operated by Edward L. Cook, Madison, N. J., are being torn down and removed. Mr. Cook having discontinued his rose growing business entirely.

John Nash of the firm of Moore,

Hentz & Nash, wholesale florists, is spending the Summer at Sea Cliff, L. I., with his son-in-law, John Kral, who is with the same firm, is summering at Port Chester, and on Monday, July 1, he will place in commission his motor boat which he has owned for several years.

Henry Rickards, one of John Raynor's employees, met with a very painful accident on Sunday last. A number of the young men of the wholesale district went to Winfield, L. I., on that day to enjoy a friendly game of baseball, and a foul ball from the point of the bat struck Mr. Rickards squarely in the eye making a very serious and dangerous wound. It is hoped that his sight will not be permanently injured, although the results cannot as yet be fully ascertained.

Friends of John Miesem, the florist of Elmhurst, L. I., have received souvenir cards dated from Cherbourg, France, informing them of his safe arrival there. Mr. Miesem intends to spend the Summer making a tour of Europe.

Anton Schultheis, College Point, L. I., leaves next Tuesday, July 2, on the Kaiser Wilhelm der Grosse for an extended trip through Europe.

J. S. Fenrich was in Boston last week in company with Charles H. Totty, and reports having had a delightful time among the craft there, enjoying particularly an automobile ride through the park system.

Several weeks ago Mrs. Chamber

Prentice, the wife of a Chicago doctor, died on board the Koenigen Luise while voyaging from Europe to this country, and the funeral took place at sea. On the return trip from these shores the captain of the vessel took a magnificent box of flowers, and when the liner passed the spot where the body of Mrs. Prentice had been cast into the sea, the flowers were silently lowered and sent adrift over the unmarked grave.

The Stump & Walter Company, seedsmen, 50 Barclay street, have been making a fine display of strawberries in their show windows this week.

Henry Kallen, representative of H. Frank Darrow, will sail for Holland on Wednesday, July 3, to assist in selecting and packing their Fall shipments.

W. F. Ross, traveler for F. R. Pierson Company, Tarrytown, N. Y., leaves today (Saturday) on the steamer Columbia for a visit to Edinburgh, Scotland.

At the annual trade auction sale of plants for growing on purposes at Wm. Elliott & Sons, which was held on Tuesday, June 25, the attendance from out of town was large and unprecedented, buyers coming from such distances as Holmsburg, Philadelphia and other points in Pennsylvania, and from Rhode Island. The sale itself consisted of much choice stock, and was the biggest annual trade sale on record. W. J. Elliott, the popular auctioneer, feels much gratified with the success he has had since introducing this annual event, and notes with great pleasure its ever increasing popularity.

Prices Advertised in these Columns are for THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

REVIEW OF THE MARKET

NEW YORK.—The flower business is undergoing its usual transition into summer dullness, and demands are exceedingly light. There has been a little call for flowers for commencement purposes this week, but so few were they compared with the extravagant demands that used to obtain during the last week in June, and the market was so overloaded with stock of almost every kind, that prices have steadily gone downward.

Peonies are in overwhelming quantities, and such a thing as a fixed value for them is entirely out of the question; buyers are urged to take them out of the way and make their own prices. Roses are very little better as a general thing; 7,000 excellent roses of Number one grade throughout, and perfectly fresh, were sold one morning this week for \$21, that gives a better idea of conditions than any other thing we know of. American Beauty of special grade are not plentiful, consequently prices on these have not suffered to the extent they have done in the case of other varieties; 20c. each was the asking price during the week, though 15c. was taken.

Carnations are as yet extremely plentiful and of excellent quality, considering it is almost July and we are having a genuine hot wave; \$1 per 100 has been the outside price for the best, and from that values have ruled down to 25c.

Lilies are another commodity that have gone down in popularity, and are bringing \$1 and \$2 per 100 only. Sweet peas also are too plentiful, and 1 1/4c. and 2c. a bunch is considered good sales.

Stocks, snapdragon and lily of the valley are all in heavy supply for the demand, and no fixed prices obtain. A few gladioli are arriving, but there seems to be no call for them as yet; 50c. per bunch of twelve is being asked for them.

Summer is here in earnest. The weather is hot and early closing is the rule. A sign on W. H. Siebrecht's stand in the Cut Flower Exchange reads to the effect that the stand will be closed for two weeks dating from July 6.

ST. LOUIS.—The season for social affairs, weddings and school closings is now at an end, and the trade can go ahead and make preparations for the next season without being disturbed. The week just past was a good one for business—the last one of this season, we might say. The last of the wedding and school work was made up; also a number of large floral designs for funerals were reported. There is no trouble to get stock for any kind of a job just now, as the wholesaler is loaded down with fairly good stock of all kinds and everything that is in season. About the only scarcity in fancy stock is roses; other grades, though, are plentiful, with prices very low. The best roses bring only from \$2 to \$5 per 100 in large lots; from 50c. to \$1 per 100 for seconds. American Beauty have good stems, but poor blooms; the best only bring \$3 per dozen; other grades from 50c. to \$1.50 per dozen.

Carnations are also more abundant than the demand has any use for and are selling very cheap; extra fancy bring \$2, with others at from 50c. to \$1 per 100.

Sweet peas are a great glut, coming in 10,000 lots, mostly from our Kirkwood growers. Prices can hardly be quoted as all the commission men are loaded down with the stock, with no heed of holding them over for next day, as the fresh ones would sell first.

Lily of the valley had a good call last week, but it is now slackening up. Everything in greens sells well; fancy ferns are again in this market at \$2.50 per 1000. ST. PATRICK.

PHILADELPHIA.—The flower market condition is a very poor one; there is a perfect glut of all kinds of stock. The commission men report that they are throwing away more flowers than they are selling. Under such conditions prices are really not worth reporting. Carnations are selling at from \$2.50 to \$4.00 per 1000, thousands remaining unsold even at those figures. Sweet peas are about in a similar state. Plenty of flowers cannot be put into water, being kept in the boxes, and if not sold the first day are thrown out. D. R.

CHICAGO.—To any inquiry as to the condition of the market within the past week the stock reply of the dealers has been, "There is no market." The annual glut was on, and it was all and more than the word implies. Roses, carnations and peonies were overwhelming the market at every point and it seemed impossible to get relief because shipments were constantly piling in. The local trade made but little impression on the stock, and though many goods were shipped it was to the vendors, the job lot bunters, that dealers were compelled to look for relief.

The week of genuine Summer weather has made a decided impression on the quality of goods arriving the opening of this week, showing a very decided decrease in quantity, especially of good stock, which on Sunday and Monday found a ready market. W. K. W.

INDIANAPOLIS, IND.—The large quantities of flowers in this market last week have lessened perceptibly the past few days. The weather remains favorable, but the plants have bloomed themselves out so that another overproduction is not probable this season. Funeral work constitutes three-fourths of the business, as counter trade is very light. The last week of the wedding month calls for numerous decorations and bouquets. White sweet peas, lily of the valley and white roses are in constant demand for these occasions.

Carnations, which have held up so admirably, are depreciating rapidly in quality and price. Several of the growers are preparing to empty their houses. The best grades of carnations are bringing \$1.50 to \$2 per hundred. Summer roses are much superior. Kaiserin Augusta Victoria, La France and Souvenir du President Carnot of excellent quality, wholesale at \$4 to \$3 per hundred; short ones for funeral work often find a ready market at \$1.

The peony season, just ended, was not a profitable one, as the expenses were not realized. Field grown sweet peas henceforth will constitute the staple article, at 50c. to 75c. per hundred. Generally they are retailed at 25c. per bunch of thirty. Callas and Harrisii lilies are not to be had, though there is constant demand for them. Field daisies find favor with amateur decorators as they are cheap and effective. Good fern leaves are still a problem as many of those on hand are very coarse. I. B.

ST. PAUL.—Trade continues good, and so far it begins to look as though this June will be the best we have had in years. The late Spring has helped wonderfully and up to the present time we have had nothing whatever in the way of outdoor flowers, with the exception of a few lily of the valley, which are not good. Funeral work has also been very heavy and comes at a time when stock is plentiful, consequently good profits are made. Roses of all varieties are indeed plentiful and are quoted by the growers at very low prices; the retailers have not reduced their figures as yet. Carnations are also quite abundant, but are beginning to get much smaller. The trade has not as yet found it necessary to drop the price below 75c. per dozen and they buy carnations at \$1.50 and \$2 per 100. Considerable planting is still being done and at an increased price over last year. Public institutions are doing more in this line than ever before; furthermore the railroads have adopted a plan of planting beds and vases at nearly all their prominent depots, which greatly increases the demand. PAUL.

NEWPORT, R. I.—Business was better all through last week than it has been since Easter. Stock though plentiful is not so to the extent of glutting the market; in fact occasionally there is even some difficulty in filling orders for roses and carnations of the best quality. Prices are good.

Palms and foliage plants are scarce and higher in price than usual; there is a strong demand for large keas and specimen plants of the various forms of nephrolepis. Pandanus Veitchii and well-colored crotons and dracaenas are also called for. All the large plants of hydrangeas in tubs have been picked up quickly. Bay trees will be called for in large numbers in a few days. D. M.

BOSTON.—Business last week was fairly good for this season. On the whole, it has been better than during the previous week. Of course, there is an abundance of flowers of all kinds. Some very good American Beauty roses have been in the market and there has been a good demand for certain grades. Other good roses at present are Richmond, Wellesley, Souvenir du President Carnot and Kaiserin Augusta Victoria, but many roses can be bought very cheaply. Carnations continue to be good, several growers making a specialty of having them in fine shape at this season.

Peonies are very plentiful, and there has been a fairly good demand for the better grades. Lily of the valley has been good. Spanish Irises have been used a good deal. Sweet peas are plentiful, though none from out of doors yet. J. W. D.

BUFFALO, N. Y.—The weather the past week has been fine. This is what all the greenhouse men have been waiting for, as they have been complaining about the slowness of the season being along. However, greenhouse people report the best business in years. All the prominent dealers are buying bedding stock by the hundreds to fill orders. It has only been the weather which has held trade back, and now everybody is rushed. Mr. Newland has experienced the largest trade in his line this year, which is composed principally of cemetery vases and bedding stock. The Wm. Scott Company reports a similar brisk business. Robert Aerts of West Seneca reports business exceedingly good in the plant line.

The racing season opening in Buffalo was the cause of the local florists trimming their windows for the occasion. W. J. Palmer showed a racing saddle made entirely of flowers. S. A. Anderson had a picture of a horse in a frame trimmed with flowers and small lights. W. J. Palmer's branch showed a handsome horseshoe made of carnations. W. H. G.

KALAMAZOO, MICH.—Business is still moving along at a nice pace, although last week saw the finish of the bedding plant trade. Trade has been most satisfactory as far as volume is concerned, and the number of plants disposed of will equal or exceed the sales of any previous year; but I am doubtful if the ratio of profit is maintained.

Cut flowers are still in considerable call for funeral and other uses and the retailers seem satisfied with business done; with the school commencements just now at hand there will no doubt be quite a strong demand during the balance of the month. Prices have dropped now to Summer values and roses and carnations are offered at 50c. and 25c. per dozen.

Planting in of roses is now being pushed vigorously and by the next week this laborious job will be over with most of the growers. The field-grown stock, like asters and carnations, is making a nice growth and the prospects for decent stock of the latter for planting becomes more encouraging as the season advances. The fruit crop, however, will be a small one in Western Michigan, and city dwellers are likely to pay dear for all kinds of fruit this year, with the possible exception of grapes.

The Dunkley Floral Company is busily engaged in closing out its entire stock of plants, etc., previous to dismantling the buildings. S. B.

CHANGES IN BUSINESS.

BANGOR, ME.—The Main street flower store of the Mt. Desert Nurseries has been opened for the season.

FRUITDALE, ALA.—The Floral Company and the Buckatunna branch has been merged into one, with the entire plant here.

PORTLAND, IND.—The Portland Nursery Company has been incorporated, capital, \$10,000; directors, Mary A. Wright, J. M. Snade and J. A. Showalter.

MAYWOOD, ILL.—The Albert F. Amling Company has been incorporated, capital, \$50,000; nursery and greenhouse business; incorporators, Albert F. Amling, William Collatz, Caroline Amling.

EL PASO, ILL.—A. H. Wolk and Fred Crane will engage in the florist business, building greenhouses, each 100x200 feet. Carnations will be a specialty of the firm, which hopes to erect more houses at an early date.

CHADWICK, ILL.—Floyd Davis has closed his greenhouse here and returned to his home in Polo, N. Y. Lambert of Savanna now owns the building and will soon tear it down and move it to Savanna.

LACON, ILL.—S. S. Holman will again engage in the florist business here. Mr. Holman, while in this city before, became afflicted with what was said to be gangrene of the foot and it was thought for a time an amputation would be necessary, but we are pleased to say that he is now almost as well as ever.

ROSTERN, SASK.—The Duck Lake Nursery Company with a capital of \$30,000 is being formed with Hillard Mitchell, a well known Duck Lake citizen as president. The company already has one hundred and fifty thousand fruit trees planted. The nursery is located half a mile from Duck Lake Station.

BRIDGEPORT, CONN.—Julius Reck has removed his business from 25 Astley street to Brooklawn avenue, a short distance northeast of Brooklawn Park. Increasing trade demands more room and better facilities; space is also afforded at the new location for the growing of a complete assortment of hardy plants, which in future will form an attraction on the grounds.

DES MOINES, IA.—Charles Worth of the Bloomfield Coal Company and D. H. Kooker of the East Des Moines Commercial League have organized the Grandview Nursery and Orchards Company and capitalized the organization at \$50,000. Title to property south of Grand View Park has been secured and will be devoted to growing fruit trees. H. P. Holmes is named as one of the incorporators with Mr. Kooker and Mr. Worth.

NEW BEDFORD, MASS.—James H. Cleary, manager during the past five years for William P. Peirce, florist, has bought out the business of Edward S. Haskell at 7 Pleasant street, and will start in at once in his new field of labors. Mr. Cleary is well advanced in his vocation, having been employed eight years by William Peirce, five years by H. A. Jahn and five years by William P. Peirce. A specialty will be made in the bird and fish supply line.

SCHOOLCRAFT, MICH.—The Schoolcraft Forcing Houses is the name of a new concern, organized by a Grand Rapids Company, to build greenhouses for the purpose of raising flowers and all kinds of fancy Winter vegetables to compete with the Southern growers. Leo Cropsion and Chauncey Simonds, two young men who received their training at the M. C., will build two greenhouses, 23x100 feet, this Summer and they expect eventually to cover several acres with greenhouses. It is expected that the first vegetable crop will be ready for December or early January trade.

FIRMS WHO ARE BUILDING.

PARIS, O.—C. M. Mitchell is building a greenhouse here.

NORTH TEWKSBURY, MASS.—Jessie Tull will erect this Summer, a greenhouse, 30x150 feet.

LINCOLN, ILL.—The Gullet Company is tearing down two of the old greenhouses and will replace them with new modern structures.

MADRYEN, N. H.—Wm. H. Elliott is putting in the foundation for another mammoth greenhouse; the new building will be erected alongside of the first one.

LAFAYETTE, IND.—Fred Dornier & Sons Company have broken ground for the erection of five greenhouses, each 200 feet long and 28 feet wide. All will be completed.

ATHOL, MASS.—George W. Sutherland is about to erect another new greenhouse, 100 feet long and 17 feet wide, to be used mostly in the cultivation of chrysanthemums. This will make six large greenhouses on his place.

BUSINESS DIFFICULTIES.

CAMBRIDGE, MASS.—Arthur Clark, florist, has filed a voluntary petition in bankruptcy. His liabilities amount to \$4,795, of which \$117 is secured. There are about 70 unsecured creditors and no assets.

FOND DU LAC, WIS.—Carl H. Johansen, who filed a petition in bankruptcy at Milwaukee recently, wishes it understood that the South Main street florist store with which he is connected in this city is not involved in the proceedings. The local store is conducted in the name of G. Johansson and has no connection with the Milwaukee business which is now in the courts.

Visitors to the Elks and S. A. F. Conventions

To all FLORISTS and members of allied trades, the S. S. PENNOCK-MEEHAN CO. extend a cordial invitation to make their headquarters with them where telephones, stenographers and general information regarding points of interest, etc., will be at their command.

A. T. De La Mare Ptg. and Pu b. Co. Ltd., N. Y.

Cincinnati, O.

News Notes. Hail smashed, at the lowest estimate, one-third of the glass of W. K. Partridge, Lockland, O., which consists of one hundred thousand feet, wrecking all northern exposures and ruining the stock underneath. This storm passed over Lockland, and especially Mr. Partridge's greenhouses, at about 4 p. m., Friday, June 21. Stones as large as walnuts caused the destruction, and one hour after the ground was still well supplied with the icy pebbles. Mr. Partridge did not carry hail insurance. (John G. Esler, please take notice.) The total damage will reach close to \$8,000.

We are all working like Trojans now every morning putting away stock and selling all we can. Carnations are in heavy supply, and are selling at 25c., 50c., 75c., \$1 and \$1.50 per 100; it is impossible to move them all before they become tired and sleepy. Saturday last the thermometer registered 90 degrees in the shade. It is useless to name prices on stock. Roses (good ones) are getting just a little scarce now, but as business is also slow, it matters not. Bedding stock is becoming scarce, as the growers are well sold out. C. J. Ohmer returned last Monday evening from the Pacific Coast and Yellowstone Park.

E. G. G.

SAN FRANCISCO, CAL.—Referring to the alleged attack on a Japanese horticulturist at Berkeley, Thomas G. Walker, representing the Japanese Association of America, states that it was a trivial affair. Some boys had thrown a few stones at a greenhouse belonging to a Japanese, but the damage was slight, and the association would take no action in regard to the incident, leaving the local authorities to deal with the offenders. The daily press alleged that the damage had resulted in "the destruction of a greenhouse and other property. This has fanned the flame of indignation already strong here, and has served to confirm the popular belief that violence of the kind is not accidental, but the result of a deeply rooted feeling against the Japanese."

TOLEDO, O.—Searles Brothers are suing Arthur Cowdrick for \$10,000. They allege that because of his inefficiency and delay when employed to superintend the erection of their greenhouse, they lost an entire crop of lettuce and cucumbers. Cowdrick has brought suit for \$4,500 as his compensation for superintending the work, but the greenhouse proprietors set up a counter claim for \$10,000 for the loss of the crops and because of the alleged inferior character of the work.

Chicago.

The Week's News.

C. B. Knickman, representing McHutchison & Company, New York, was in Chicago on a business visit last week.

The number of carnation plants benched directly from pots in this section this year will largely exceed those similarly treated heretofore. From general reports it appears that the plants in the fields have not, so far, made a favorable growth in many localities.

H. E. Klunder has had a very attractive window in his State street store for the past week. A tank about a foot deep occupies nearly the entire surface and is completely filled with the choicer varieties of water lilies and their foliage, while two three year old alligators, sporting among the flowers and foliage, aid to draw the attention of those passing by.

Although it has never been possible to procure a unanimous agreement among retailers to close early during the Summer months it has been customary for many of the leading stores to do so, and the proprietors as well as the clerks will welcome the 7 o'clock daily and 12.30 Sunday rule which goes into effect next week.

At George Reinberg's six houses have been wrecked and new and larger structures will be erected in their places, and nine houses are being added to the range for the cultivation of orchids, adiantum, etc. Two carloads of cattleyas are al-

ready in place and another carload embracing other popular commercial sorts will arrive later, forming unquestionably the largest commercial collection of orchids in the West.

Anton Then has withdrawn his interest in the flower store in the North-western depot and all endeavors of the family are now centered in the greenhouses and the Larabee street store. The atmospheric conditions at the depot are not favorable, and the health of Mr. Then's daughters, who managed the store there, was considerably impaired. One of them, who has been confined to her room for several weeks, will spend the Summer in Michigan recuperating.

Those two ardent piscatorial enthusiasts, N. J. Wietor and John Sinner, started on Tuesday for their annual cruise to Tomahawk and neighboring lakes in Wisconsin. Mr. Wietor has made this trip every Summer for the past decade and says that for no consideration would he be deprived of it; and while this is Mr. Sinner's second visit he is equally fervent in his admiration of the locality and the sport.

With the opening of Summer on Saturday last the bedding plant season might under ordinary conditions be supposed to be about closed, but this year the business, though not heavy, continues to be a factor in trade. After the reported scarcity early in the season it is surprising to find a sufficiency of geraniums still in the market. One dealer says he had several fair sized lots offered him last week and attributed their still being available to the fact that growers, realizing the short crop early in the season, placed wholesale prices so high that in many gardens cheaper and more abundant plants had been substituted for the ever popular geranium.

The following sub-committees have been appointed by the general committee in charge of the arrangements for the Florists' Club picnic which will be held at Morton Grove on Sunday, July 21: music and dancing, Ed. Enders; transportation, August Poehlmann; refreshments, A. I. Simmons; printing, George Asmus, P. Schupp; sports, T. E. Waters, H. E. Klunder, Chas. Balluff, John Degnan; distributing and collecting tickets, George Asmus, P. J. Hauswirth, prizes, H. Bruns, Ed. Enders, P. J. Hauswirth, J. C. Vaughan. All evidences now point toward a successful outing as much interest is being manifested.

Peter Reinberg has purchased the range of houses on Northwestern avenue near Lincoln avenue which have been run for vegetable growing by different parties and will remove the glass, pipes and heating apparatus to his farm property on Devon avenue.

John Stuppy, who has been visiting New York, stopped off here last week on his way home to St. Joseph, Mo.

Notwithstanding the general report of backwardness of carnations in the field Sinner Brothers, who this Spring procured a choice piece of new land for their planting, state that their stock was never before better at this season of the year.

J. A. Peterson, Westwood, Cincinnati, accompanied by Mrs. Peterson, was in the city last Saturday. He accompanied a shipment of decorative plants for the Winterson Seed Company, which included some handsome, large specimens of Hydrangea otaksa.

Mr. Forbes, until recently of the firm of Martin & Forbes, of Portland, Ore., has disposed of his florist interest in that city and, while en route to his old home in Scotland, has with his wife and daughter been spending a few days enjoying the sights of Chicago and its environs.

Bassett & Washburn's seedling scarlet carnation, which as Number 20, has attracted a good deal of attention among the trade, has proved to them its thorough worthiness and having been christened in honor of the senior member of the concern, O. P. Bassett, will be disseminated next Spring.

Among recent visitors were noted, Nelson Coles and James N. Coles, Peoria, Ill.; John Robinson, representing J. B. Rice & Co.; John F. Wilcox, Council Bluffs, Ia.

Richard F. Gloede, Evanston, will be compelled to vacate his valuable property at no very distant date as the Chicago drainage canal will take the whole area, the middle of the waterway, which will be 100 feet wide, being in an exact line of his greenhouse chimney and the right of way, which is 660 feet across, will include the entire estate. Mr.

THE FLORISTS' EXCHANGE
 2 Duane St., New York

Gloede has made a proposition which the commissioners have under consideration, setting a price on the property with the privilege of remaining on it until August, 1908.

The hot weather of last week deluged this market with peonies the quantity received being much larger than anticipated, and though some high grade stock arrived the result of the late freezes is said to be more noticeable in the quality rather than quantity, as many of the flowers do not develop perfectly; some doubt also being expressed as to many shipments having substance enough to stand the strain of the cold storage treatment which immense quantities are now undergoing.

A scarcity of medium sized well grown Boston feros in 6 and 7-inch pots is generally noticeable at this season, but is now more evident than in previous years.

Manager Kyle's Chicago Florists' baseball team was victorious on the grounds corner of Forty-seventh avenue and Lake street, defeating the Orioles by a score of 6 to 2. The club having been considerably strengthened, more victories are looked for in the future.

C. L. W. Snyder, manager of the El Paso Carnation Company, El Paso, Ill., was in the city last Saturday.

The dearth of hardy ferns has been relieved and considerable stock is now going into cold storage.

H. Bornhoff, formerly in the retail business in Chicago, has been visiting here after a ten years' absence. He is now located in Seattle, and is very sanguine as to the horticultural as well as the general commercial future of that city.

S. A. Sandahl, seedsman and florist of Seattle, Wash., stopped off for a few days in Chicago on his way, accompanied by his wife, to London, England, on a visit.

With the dull season at hand and the assurance that Chicago will be the last large city to be affected, not much worry is felt by the trade here over the general telegraph operators' threatened strike, though, of course, after past experiences such interruptions to business are not anticipated with pleasure.

Louis Heidtmann, president of the Gardeners and Florists' Union, until recently employed in Chicago's West Side parks, and now rose grower for the Chicago Carnation Company, was married on Wednesday of last week to Miss Alma Miller at her home, 697 Elk Grove avenue. Mr. and Mrs. Heidtmann will make their home in Joliet.

W. K. W.

New Orleans, La.

News Notes.
 A. Alost, the Gentilly avenue florist, has sold a portion of his estate consisting of swamp lands to the Louisville and Nashville R. R., for eight thousand dollars.

James A. Newsham is cutting some fine Cattleya Dowiana flowers at the present time.

A fine display of Cattleya Mossiae was to be seen in the store window of the Metairie Nursery Company during the past week.

U. J. Virgin supplied the palms for the planting of the neutral ground of Canal street; Washingtonia robusta was the sort used; it took several hundred to fill the bill. After they have made a few years growth the effect of this magnificent boulevard will be very striking. Mr. Virgin has turned his home grounds into a very attractive spot, and as they can be seen by people going to cemeteries, lake resorts, etc., they call forth a great deal of admiration.

The New Orleans Horticultural Society held its monthly meeting on the 20th; as the annual election of officers takes place at the next meeting, several members were placed in nomination, but the list is to remain open until the night of the election, the following were nominated: For president, Charles Eble; vice-president, A. Alost, Henry Cook, Claude Ory; secretary, C. R. Panter; treasurer, John Eble.

The German Gardeners' Club of New Orleans had its annual outing and dinner on the 19th. Little Woods on the shores of Lake Pontchartrain was the objective point and a very pleasant day was spent.

CRESCENT CITY.

OF COURSE YOU KNOW GREENHOUSE BUILDING

but there's a lot we know about it, that you don't. Don't know because your business is growing flowers—our's, building greenhouses. For just this reason, when you get ready to build, the best thing you can do is, write us or call at our Sales Offices; then we can go over the matter with you thoroughly and advise what our experience has proven to be best. We want to take up with you not alone the matter of right construction, but also that important question of economy of arrangement and planning for your houses' future additions. Write today—or call any day.

HITCHINGS and COMPANY

GREENHOUSE DESIGNERS AND BUILDERS. Manufacturers of Heating and Ventilating Apparatus
1170 Broadway, New York

Boston.

News of the Week.

The exhibition at Horticultural Hall on Saturday and Sunday last was scheduled as the Rose and Peony show, but roses were conspicuous by their absence and while there was a goodly display of peonies there was not nearly the number of fine blooms that might have been expected. This season the Massachusetts Horticultural Society has been holding its shows weekly and they have proven very popular, especially on Sunday afternoon. The rose show is scheduled for Saturday and there is every indication that there will be a splendid exhibition, and several of the large growers of peonies will also make exhibits.

There were some very fine collections of hardy flowers at Saturday's exhibition especially the herbaceous plants from the Blue Hills Nurseries, from Fred. J. Rea and R. & J. Farquhar & Company. Displays of peonies were made by E. J. Shaylor, Mrs. E. M. Gill, and William Nicholson, who had two fine vases of the variety Lady Bramhall. George Hollis made a display of herbaceous plants as did J. R. Clark & Company; the latter firm being the only exhibitors of sweet williams.

In the prize collection the Blue Hills Nurseries were both first and second for the collection of thirty bottles. For the vase of twenty-five blooms of white peonies the Blue Hills Nurseries were first, Mrs. E. M. Gill second and E. L. Lewis third. Blue Hills Nurseries were also first for vase of twenty-five pink and second for vase of twenty-five red, E. L. Lewis being first. Wm. Whitman was first for vase of twenty-five, any color, and Blue Hills Nurseries, second. Other exhibitors were Wm. Thatcher, gardener and Charles W. Parker, the latter exhibiting *Iris pallida Dalmatica* in fine shape.

The firm of H. A. Stevens & Company, Dedham, which has come into prominence as carnation growers during the past five years, has been dissolved by mutual consent, H. A. Stevens retiring. A new firm has been formed to carry on the business by James Wheeler, Mr. Stevens's former partner and J. Flood. The name of the new concern will be Flood & Company.

Peirce Brothers, Waltham, are building an auto truck which will add greatly to their facilities for getting their enormous products to market.

Noticeable among the Mystic Shriners who took part in the celebrations of the twenty-fifth anniversary of Aleppo Temple on Monday were Robert Montgomery of Natick and Alex Montgomery of the Waban Rose conservatories.

Stephen Quinn and wife have been visiting New York this week and expect to make a trip to Jamestown in the near future.

P. J. Dolansky, Lynn, sailed on Tuesday for a three months' trip to Germany. Other Europe-bound craftsmen are James Silman of Waltham, who has started for England, and A. Leuthy and Thos. Roland both of whom expect to sail next week.

W. B. Arnold, who came into prominence as the raiser of the variegated Lawson carnation, is happy over the arrival of a baby girl at his home in Rockland.

The Electric Circulator

No greenhouse is properly equipped without this serviceable little device. It never fails. Read this.

Waverley, Mass., April 24, 1907.

Mr. W. W. Castle, Boston, Mass.

Dear Sir—It is a pleasure to recommend your Circulator for the very efficient work it does for me. I have two greenhouses, each 200 feet long, piped for steam with 1½-inch pipes, and can operate them perfectly with hot water by using the Circulator; in a very short time it brings the returns nearly as hot as the flows. As I have two of the Circulators in use under different conditions, I am well able to judge of the work they are capable of doing, and would not like to part with either of them.

Yours truly,
(Signed) William W. Edgar.

Our New Steel Plate Boiler, built especially for greenhouse heating, is the best and most economical on the market. We do piping and fitting according to most approved methods and guarantee satisfaction.

Elijah Cartwright is sending in some very fine Mrs. Lawson carnations at present to the Music Hall market.

Fletcher of Auburndale is having a run on sweet peas Henry Eckford, which are very fine.

Chas. J. Boyle has resigned his position with Galvin's Bank Bay shore.

Some of the best peonies coming into Boston are the *Festiva maxima* being sent to the Park street market by Elijah A. Wood.

Arthur E. Fewkes starts this week for Ithaca to attend the meeting of the American Peony Society.

Daniel Leamey, formerly with the Waban Rose Conservatories, has added the name of Nichols of Providence, R. I., to the list he sells for in the Music Hall market.

J. A. Pettigrew is laid up with appendicitis at the Faulkner hospital, where he was operated on Tuesday morning. We are glad to note that his condition is as favorable as might be expected and a speedy recovery is looked for.

The Gardeners and Florists' Club will make a trip through the Boston park system on Saturday afternoon. Members will meet at Audubon road and the Riverway at 1.30, reached by Ipswich street cars on Brookline avenue, or Beacon street cars to Audubon road. The picnic arrangement committee has been organized as follows: Duncan Finlayson, chairman, Robert Edgar, Peter Miller, Maurice Fuld, J. W. Duncan, H. M. Robinson,

LET'S face this boiler question square in front and see if there is any worth in our fire channel talk.

Take a look at the cuts and see that deep water way directly over the hottest spot. Those water ways are conical in shape, one to each section. When the sections are placed together, they make a fire channel between each water way, which not only pockets the hottest flames and greatly increases the direct fire surfaces, but leads these flames to the side flues before they begin their travel, back and forth three times the boiler's length. Now the economy point is, that these channels prevent the burning gases from rushing to back of boiler, directly into the fire travel as in other boilers, but lead them to the side flues, making every point of the direct surfaces equally efficient.

What you had better do, is, send for that new catalog just printed. It gives you boiler facts from A to Z, along with plenty of illustrations to show just what we are talking about.
